Order form sent by Cynthia Bates of The Tempeh Lab. 1993. Jan. 27. The company now carries 4 product lines: 1. Tempeh starter in 4 weights from 250 gm to 4 kg (250 gm, which costs \$35 + postage, will inoculate 500 lb cooked beans). 2. Tempeh spore powder in 4 weights from 50 gm to 800 gm (50 gm, which costs \$32.50 + postage, will inoculate 500 lb cooked beans). 3. Two types of tempeh kits. A book titled *Tempeh Cookery*. With each product one must pay, in addition to the product price, the shipping plus a COD fee of \$2.20 (USA only). The order form states that "Volunteers at the Institute world only for necessary subsistence and inoculum is sold at production cost, without profit. It is our goal to foster the widespread use of tempeh and other healthful; soy products in order to help humans live lightly on the Earth." The "Institute" referred to above is the "Global Village Institute of Appropriate Technology," a non-profit tax-exempt corporation which was founded in 1984 but is apparently now defunct since information about it on the Order form is crossed out. This form is written in a typeface that is so small it is very difficult to read.

1667. **Product Name:** [Tempeh Spread (Vegetable)].

**Foreign Name:** Tempeh Spread (Groenten).

**Manufacturer's Name:** Witte Wonder.

**Manufacturer's Address:** Slachthuiskade 10–2685 Poeldijk, Netherlands.

**Date of Introduction:** 1984.

**Ingredients:** Paprika: Soybeans\*, water, *Rhizopus oryzae*, apple vinegar\*, olive oil, sunflowerseed oil\*, sea salt, barley malt syrup, paprika, tomato puree. \* = Organically grown (van biologiese teelt).

**Wt/Vol., Packaging, Price:** 350 gm jar.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Label. 1986? 6 by 1.5

inches. red or green, tan, and white. Use for bread, crackers or toast, or in sauces.

1668. Bhumiratana, Amara. 1984. ASEAN Protein Project, 1974-1984. Bangkok, Thailand: ASEAN Subcommittee on Protein. 111 p. Illust. 29 cm. [Eng]

• **Summary:** The ASEAN nations are Indonesia, Malaysia, the Philippines, Singapore, and Thailand. Contents: 1. Malnutrition problems in ASEAN countries (incl. Soy-based products as a solution to malnutrition). 2. Administration of the ASEAN Protein Project. 3. Objectives. 4. Methodology. 5. Results of ASEAN member country research: Soy products developed (high-protein, low-cost foods for infants and children, soy milk and soy milk powder, full-fat soy flour), fermentation products developed (tempe: from shophouse business to modern factory, oncom chips and flour, soy sauce, the ASEAN culture collection), other related projects, exchange of information (incl. details on the 15 ASEAN protein workshops held between July 1975 and Oct. 1984, and the publications resulting from each). 6. New ASEAN projects. 7. Conclusion.

This book, which contains many color photos and focuses on soybeans, describes one of the most successful ASEAN programs, emphasizing cooperation among the ASEAN nations in an attempt to solve the problem of malnutrition common to the region. The project, conceived in Aug. 1971, receives major funding and technical assistance from the Australian government. In May 1978 the ASEAN Full-Fat Soy Flour (FFSF) Factory in Chiang Rai, Thailand, was completely installed and has been producing continuously since then. It has a capacity of 100 tons/month. Numerous photos of the facility are shown. A pilot plant has produced up to 50 tons/month of Kaset Infant Food, which has been well accepted in 573 health centers throughout Thailand and is being evaluated in other ASEAN countries. A photo of the package (plastic bag) is shown. Address: Bangkok, Thailand.

1669. Bloodroot Collective; Beaven, Betsey; Furie, Noel; Miriam, Selma. 1984. The second seasonal political palate: A feminist vegetarian cookbook. Bridgeport, Connecticut: Sanguinara Publishing. xli + 242 p. Illust. Index. 23 cm. [35 ref]

• **Summary:** An excellent book and cookbook with a crystal clear explanation of why feminists should also be ethical vegetarians. The "Prefatory material" includes sections on "Feminism in the eighties," "Ethical vegetarianism," "Soyfoods," and "On collectivity and work."

The glossary includes brown rice, hoisin, koji, queso blanco, shiro miso, shoyu (correct name for tamari), tahini, and tofu.

The index contains 27 entries for tofu, 19 for miso, 10 for tempeh, 4 for soymilk, and 1 each for okara and soysage. Address: 85 Ferris St., Bridgeport, Connecticut 06605.

Phone: 203-576-9168.

1670. Clergeaud, Chantal; Clergeaud, Lionel. 1984. *Mystères et secrets du soja* [Mysteries and secrets of soya]. Paris: Editions La Vie Claire. 134 p. Illust. 21 cm. [Fre]

• **Summary:** Contents: 1. A little history, the properties of soya, soybean culture, soya and animal feeding, recipes based on whole soybeans (*fèves de soja*). 2. Soy flour, soy proteins, recipes based on soy flour and soy proteins. 3. Soy sprouts, recipes based on soy sprouts. 4. Soy oil, recipes based on soy oil. 5. Soymilk, recipes based on soymilk. 6. Tofu, recipes based on tofu. 7. Fermented soy products: miso, recipes based on miso, tamari, tamari-shoyu, recipes based on tamari and tamari shoyu, tempeh, recipes based on tempeh. 8. Other [fermented] soy-based products consumed in the world: Chee fan (fermented tofu), Hamanatto, ketjap (Indonesian soy sauce), Meitauza (fermented okara tempeh), Sufu (fermented tofu). Address: Naturopathes-Ostéopathes, France.

1671. GEM Cultures. 1984. Food cultures from around the world / and more [Mail order catalog]. 30301 Sherwood Rd., Fort Bragg, CA 95437. 4 p. [4 ref]

• **Summary:** Contents: 1. Powdered cultures for soy crafters: Powdered starter cultures for tempeh, miso, amazake, shoyu, and tamari. In home and commercial sizes. Rice koji. 2. Koji starter kits. 2. Fresh self-renewing cultures: Viili starter, sourdough starter, kefir grains, natto starter, living tempeh starter. 3. Coagulants for tofu making (nigari, Terra Alba calcium sulfate in 1 lb or 5 lb bags).

4. Some helpful books. 5. Sea vegetables from the Mendocino Sea Vegetable Co. Our purpose. How to order. Address: Fort Bragg, California. Phone: 707-964-2922.

1672. Gerras, Charles. ed. 1984. Rodale's basic natural foods cookbook. Emmaus, Pennsylvania: Rodale Press. xi + 899 p. Illust. Index. 24 x 20 cm.

• **Summary:** This book, containing over 1,500 recipes, does not use salt or white sugar, but does use meats, poultry, and fish. It was also published by Simon & Schuster as "A Fireside Book." It contains extensive information on and many recipes for soyfoods, including whole dry soybeans, tofu, soy ice cream, soy flour and grits, miso, soymilk, soy oil, okara (soy pulp), soy sauce, tamari, and soy sprouts. Address: Pennsylvania.

1673. Ko Swan Djien. 1984. Fermentation of foods by moulds. In: Robert A. Samson, Ellen S. Hoekstra, and C.A.N. van Oorschot, eds. 1984. Introduction to Food-Borne Fungi. 2nd ed. Baarn, Netherlands: Centraalbureau voor Schimmelcultures. 248 p. See p. 236-42. [47 ref]

• **Summary:** Contents: Introduction. Species used for fermentation. Natural inoculation. Traditional starters: Chinese yeast, tane koji, tempe inoculum. Fermented foods

and mycotoxins. Roles of the moulds: Synthesis of enzymes, mould growth, synthesis of colouring compounds, protection of the product. Conclusion. Address: Bandung Inst. of Technology, Indonesia, and Agricultural Univ., Wageningen, Netherlands. Present address: Tarthorst 333, 6708 HL Wageningen, The Netherlands.

1674. Kronenberg, H.J. 1984. Mycological and biochemical characterization of meitauza, an indigenous Chinese fermented food. MS thesis, Cornell University, Ithaca, New York. \*

Address: Cornell Univ., Ithaca, New York.

1675. Marusan-Ai Co., Ltd. 1984. Myônichî no shoku seikatsu o ninau. Atarashii daizu tanpaku shokuhin. Marusan sukoyaka tenpe [A new soy protein food for tomorrow. Marusan's healthful tempeh]. Okazaki city, Aichi prefecture, Japan: Marusan-Ai. 27 p. [Jap]

• **Summary:** Contains 7 recipes.

1676. Medwid, Richard Daniel. 1984. Survival and germination of *Rhizopus oligosporus* sporangiospores. PhD thesis, Colorado State University. 190 p. Page 1384 in volume 45/05-B of Dissertation Abstracts International. \*

Address: Colorado State Univ.

1677. Photographs of the Arcata Tofu Shop in Arcata, California (1980-1984). 1984. Arcata, California.

• **Summary:** Twenty-two color photos (most 4 by 5 inches), numbered with captions, were sent to Soyfoods Center on 24 Sept. 2002 by Matthew Schmit, founder and owner of the Arcata Tofu Shop. They were taken in Arcata between 1980 and 1984. Nos. 3-12 were taken in Dec. 1980. They show: (1) Oct. 1980—Inside of building in Arcata during complete remodeling of previous insurance offices (1,000 square feet). (2) Oct. 1980—Outside of same building at 768 18th St. Lease just signed. Newspapers in windows in preparation for remodeling. (3) Open for business. Large wooden sign above door reads "The Tofu Shop: Soy Deli and Whole Grain Bakery." (4) Putting up sign over door. All people standing on sidewalk or ladder have their backs to the camera. Bottom left (standing on sidewalk): Paul Kusterman, who loaned money to help shop open; a truck driver for United Naturals, he had been selling tempeh burgers at local fairs since 1978. On ladder: Matthew Schmit. Bottom right (standing on sidewalk): Jackson Hollomon and wife Valerie. Jackson gave Matthew Schmit his first taste of tofu in the winter of 1973-74. In 2001 Jackson finished 3-year Buddhist retreat. On roof holding sign—On left: Man who created the sign. On right: Daniel Schmit (Matthew's brother). (5) Grocery section inside The Tofu Shop, with bottles of sauces, packages of Miso Cup, and an issue of *Soyfoods* magazine on wooden shelves, with a "What is Tofu?" pamphlet on the wall. (6) Suzanne Kosciolk Schmit stocking specialty

grocery shelves. A Learning Tree Tofu Kit is now visible. (7) Suzanne Kosciolk Schmit holding The Tofu Shop's tiled logo (a writhing blue dragon on four white tiles in a wooden frame) next to the first shipment from United Naturals: Soybeans (from Arrowhead Mills), nigari, barley malt, natto miso, sea vegetables, etc. (8) Looking in the front door of The Tofu Shop; six shelves of special groceries, tempeh kits, etc. (9) Matthew Schmit dressed in white apron with "first batch grin." Deli store front counter area is in the background. (10) Back wall of shop with supplies and custom forming box table with adapted "load bar" presses (idea from *Soyfoods* magazine). (11) Cutting first batch of tofu in stainless steel sink. (12) Close-up of The Tofu Shop's first printed tofu labels in Arcata atop a deli take-out carton. Color and design are similar to those from Telluride—Blue on white, with a dragon in a circle. (13) 1981—Steve Rhine setting presses on metal forming boxes. (14) 1981—Matthew Schmit ladling *gô* from cooking pots to hand-screw apple-cider press used as a soymilk press. (15) 1982—Workers sitting on brick bench in front of shop. Left to right: Matthew Schmit. Stephen Lyons, tofu maker. Amy Pujanawski, deli worker. Tom Nawrocki, maker of tofu and tempeh. Rob Earhardt, tofu maker. John Hendricks, tofu maker. (16) 1982—Matthew Schmit packing tofu in take-out boxes on shelf of shop's back wall. (17) 1983—Linda Redfield behind Tofu Shop table, promoting soyfoods at Arcata Co-op event. (18) 1983—Deli worker Jeannie Penn behind Tofu Shop table World Food Day at Arcata Co-op. Jeannie was one of the few female tofu makers ever employed by the shop. (19) 1982—Tofu Shop booth at Gemini Distributors Food Show, Fortuna, California (in the middle of cow country), attended by Matthew Schmit and Linda Redfield. Prepared dishes with signs on red checkerboard tablecloth: Creamy herb & onion tofu dressing. Marinated and baked tofu cutlets. Most early labels were rubber stamped on pre-printed generic Tofu Shop adhesive labels. (20) Soyfoods books and magazines on tablecloth at Gemini Food Show. Two signs: Introducing tofu, and The Tofu Shop. (21) Different view of table, with sign: "The Tofu Shop Specialty Foods, Arcata, CA. We specialize in freshmade soyfoods." (22) 1984—Shawn White at food demo in a store. Address: Arcata, California.

1678. PUSKOPTI (Pusat Koperasi Produsen Tempe Tahu Indonesia). 1984. The planning programmes of PUSKOPTI 1983–1984. Jalan Falatehan 1/6–8 Kebayoran Baru, Jakarta Selatan, Indonesia. 18 p. 29 cm. [Eng]

• **Summary:** Contents: Introduction. Policy and steps of realization. Planning programmes: The Division of Organization, Div. of Effort and Production, Div. of Finance. Target indication of programmes 1983/1984. Budget 1983/1984.

KOPTI is the Production Cooperative of Tempeh and Tofu Producers of Indonesia. PRIMKOPTI and PUSKOPTI work together for the prosperity and profitability of its

members. Address: South Jakarta, Indonesia. Phone: 733083–733230.

1679. Rosengarten, Frederic, Jr. 1984. The book of edible nuts. New York, NY: Walker and Company. xxv + 384 p. See p. 324-27. Illust. Index. 26 cm. [330\* ref]

• **Summary:** The chapter titled “Soybeans” (p. 324-27) contains a brief discussion of soybean oil, soybean meal, tofu, miso, tempeh, and soy sauce, plus more detailed information on soynuts, which are attractive nut substitutes. Soynuts are whole soybeans that have been processed to look and taste like nuts, and be used like nuts. With a crunchy texture and no cholesterol, they have more than twice the protein content of most tree nuts and are relatively inexpensive. The author explains that large-seeded vegetable-type soybeans are used for soynuts. He describes how they are processed and the different flavors and brands that are available.

One major reason for the vast increase in soybean production in the USA is the ease with which the crop can be fully mechanized. Address: Associate in Economic Botany, Botanical Museum, Harvard Univ. [Massachusetts].

1680. Samson, Robert A.; Hoekstra, E.S.; Oorschot, C.A.N. eds. 1984. Introduction to food-borne fungi. 2nd ed. Baarn, Netherlands: Centraalbureau voor Schimmelcultures. 248 p. Index. 30 cm. [164\* ref]

• **Summary:** Contents: Introduction. 1. Identification: Zygomycetes, Ascomycetes (*Aspergillus*), Deuteromycetes (*Monascus*, *Mucor*, *Rhizopus*), Yeasts, References. 2. The detection and quantification of fungi in food, by B.J. Hartog. 3. Fungal growth on foodstuffs related to mycotoxin contamination, by M.D. Northolt & P.S.S. Soentoro. 4. Mycotoxins, sampling and chemical detection, by H.P. Van Egmond. 5. Heat resistance of yeast cells and fungal spores, by W.I. Baggerman. 6. Food preservatives, by E. De Boer. 7. Fermentation of foods by moulds, by Ko Swan Djien. Appendix. Glossary of used mycological terms. Special literature on food mycology. Index of the taxa described in chapter 1. In the Identification chapter, details and good illustrations (line drawings) and photos are given for the genera of molds used with soyfoods mentioned above. Address: Netherlands.

1681. Shurtleff, William; Aoyagi, Akiko. comps. 1984. Soyfoods labels, posters & other graphics: 3. Tempeh and tempeh products. Lafayette, California: Soyfoods Center. 115 p. No index. 28 cm.

• **Summary:** This book is a collection of black-and-white photocopies of materials ranging in date from 1976 to 1984. The books in this series, each a unique collection of graphic materials, are designed for a number of purposes: (1) To serve as a source of ideas, ingredients, inspiration, legal specifications, and basic guidelines for companies in the

process of developing their own products, designing their own graphic materials, and conceiving their own marketing strategies. (2) To document the tremendous diversity of soyfoods products and the way that each is presented and marketed. (3) By arranging the materials in chronological sequence, to help document the development and history of new product categories and soyfood types, and with them the rise of the soyfoods industry and market in the Western World. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1682. Steinkraus, K.H. 1984. Solid-state (solid-substrate) food/beverage fermentations involving fungi. *Acta Biotechnologica* 4(2):83-88. [13 ref]

• **Summary:** Contents: Summary. Introduction. Oriental food fermentation: Tempeh, miso, soy sauce, tape ketan. Address: Inst. of Food Science, Cornell Univ., Geneva, New York 14456.

1683. Suparmo, -. 1984. Evaluation of tempeh prepared from germinated soybeans. MSc thesis, Michigan State University. 81 p. Page 97 in volume 23/01 of Masters Abstracts. \* Address: Michigan State Univ.

1684. Wood, B.J.B. 1984. Progress in soy sauce and related fermentations. *Progress in Industrial Microbiology* 19:373-409. M.E. Bushell, ed. Modern Applications for Traditional Biotechnologies. [100 ref]

• **Summary:** Contents: Introduction. Soy sauce: Introduction, raw materials and koji, the *unami* taste, defatted soybean meal, microbiological considerations, moromi stage of fermentation, refining of and properties of shoyu, patents, work with Japan. Miso. Tempeh. Conclusions.

Tables show: (1) Glossary of terms used in soy sauce and similar fermentations: *Koji*, *miso* (*hatcho*, *mame*, *mugi*, *genmai*, *kome*), *moromi*, *shoyu* (*koikuchi*, *usukuchi*, *tamari*, *shiro*, *saishikomi*), *tamari*, *teriyaki*. (2) Recently published national standards for soy sauce, miso, etc. (cites 8 standards, 5 from Taiwan and 1 each from Thailand, Malaysia and USA). (3) Recent patents relating to shoyu and miso production and processing: Japanese 1980 shoyu (13 patents), Japanese 1981 shoyu (11), USA 1979 (2), USA 1980 (2), Japanese 1979-1981 miso (8), USA tempeh 1979-1980 (3 patents). (4) Japanese journal titles and their English translations (11 journal frequently cited in FSTA–Food Science and Technology Abstracts). Address: Applied Microbiology Div., Dep. of Bioscience and Biotechnol, Univ. of Strathclyde, Glasgow, G1 1XW, Scotland.

1685. *Caribbean Contact*. 1984? Canadians experiment with soybean in Jamaica.

• **Summary:** In Jamaica, Plenty Canada is “conducting an integrated soy foods programme involving the growing of soybeans and other food crops and the introduction of

soyfoods such tofu, soy milk, and tempeh to householders. The project, which began in Sept. 1983, is currently assisting over 40 farmers in the growing of soybeans... and has produced soy foods at nearly 30 demonstrations to well over a thousand Jamaicans.” Plenty has conducted variety trials for over 200 varieties of soybeans with the Hillside Farmers Association. “Plenty is working with six schools in St. Ann parish to supply materials and training for establishing school gardens. The produce from these gardens will be used in the school lunch programmes...”

“Generally, two types of demonstrations are provided. First the people are shown how to cook with tofu and soy milk and are given samples of the foods prepared. In the second demonstration, the actual production of these products is shown, and instruction sheets provided...”

“Plenty Canada is currently seeking funding from the Canadian International Development Agency for a three year extension of the project in Jamaica. During this time, a small production facility for soy foods will be set up, nutritional study and training undertaken, and further school lunch programmes developed...”

“Plenty Canada is also conducting projects in Antigua, Dominica, St. Lucia, and St. Vincent in the Caribbean and Lesotho in Southern Africa.”

1686. Thomas, Patrick. 1984? Early work with soyfoods on The Farm in Summertown, Tennessee (Interview). *SoyaScan Notes*. Conducted by William Shurtleff of Soyfoods Center.  
 • **Summary:** Patrick founded the milling operations on The Farm in the spring of 1972. He made various types of flour, including soy flour, which was used to make soymilk and tofu. His mill was a large, commercial steel-roller corn mill driven by a 7.5–10 horsepower motor. In about 1977 The Farm started to sell its soy flour and split soybeans that could be used for making tempeh. Address: Historian, The Farm, Summertown, Tennessee.

1687. Sierra, Edward. 1985. Re: Plenty’s work with soybeans in the Caribbean. Letter to William Shurtleff & Akiko Aoyagi at Soyfoods Center, Jan. 11. 2 p. Typed, without signature on Plenty letterhead.  
 • **Summary:** Thanks for joining Plenty with a kind donation. Plenty was founded in Oct. 1974. PAS stands for Plenty Ambulance Service.

On page 8 of the Tenth Anniversary Newsletter [about Oct. 1984] the top photo shows our soy tech and a rasta friend looking over *The Book of Tofu*. We have taken to heart your suggestion for spelling “soyfoods” as one word—an appropriate industry standard.

Plenty’s work with soybeans and soyfoods in the Caribbean is going well. On Jamaica, Plenty Canada is funding some agricultural work with variety trials of soybeans and other vegetables.

“On St. Lucia, as a result of our work last year, there

are 135 farmers now growing soybeans and plans call for setting up a “Soy Shop” [to sell soyfoods] there soon. The first Soy Shop is on the island of Dominica where Plenty volunteers Sara [sic, Sarah] & Norman Ayerst have launched an integrated soy program (agriculture, variety trials, soy demonstrations, etc.) which, last year, flowered into the Soy Shop. Sara, who did the soy demonstrations on Dominica, found that there was a popular and tasty food called “rootis” (pronounced ‘roadie’), which are sauce & meat wrapped in dough and fried. She whipped together a tasty tofu recipe and popped that in, and they’re a great success! I quote to you from Norman’s most recent letter:

“The soya shop is still doing quite well. We sell about 800 accras (fritters) per day (25 cents ea.). We’re open Mon. thru Fri.—can’t handle the weekends yet. Ice cream is also a big seller and when we get our own machine we have requests for wholesale lots of the ice cream. We recently put tempeh on the market and it sells slowly (but steadily), at this point—along with the tofu and bottled soymilk. We are planning for some promotion of these last three products—milkshakes, sandwiches, etc. Once the folks taste some appetizing dishes they’re much more willing to take the product home in its raw form. There are a lot of vegetarians here and people interested in health, and everyone seems to have a great love of good food.

“We’re operating out of a big house in the Newton district of Roseau... A friend of ours has reopened our old shop under the name of “Soy Kweyole”. The new shop is its own entity [self owned by the local folks, which was one of our original goals for the project... ed.] but we have provided backup in many ways and we supply the basic raw materials for the soyfoods they sell. They’re going into baked goods—high protein breads, cakes, pies, etc. It looks like they are going to do very well.

“We are just gearing up to go into soyflour production and sales—it’s probably going to be a big seller, judging from our initial marketing survey. Soy fever has definitely hit these parts...It seems as though people are starting to see the economic benefits to soy (not to mention nutritional value) and our project has gotten its feet on the ground. People want to help move things in a positive direction.”

“One of the heart connections that has come of our work with soy in the Caribbean, is with the rastas. Many of them have long ago vowed to “not eat no flesh mon!” stick with “Ital”—godfood, pure stuff. Many were into soy but had none. One fellow, Ras Bongo on St. Vincent, had been given four soybean seeds by one on another island. Ras Bonga planted them, and carefully saved the seed each year, until he could afford to try some. Meanwhile, he asked around for soy, how to use it, recipes, ideas for growing them, but found little. When we showed up we were able to supply him with more seeds and show him how to cook soyfoods. This is one of the intangible rewards that come with the work.” Address: Plenty USA, P.O. Box 90, Summertown, Tennessee 38483.

Phone: (615) 964-3992.

1688. Harayama, Fuminori; Yasuhira, Hitomi. 1985. *Rhizopus-zoku ni yoru miso jôzô ni tsuite. I. [Application of the genus Rhizopus for miso manufacturing. I. Studies on fermented soybean food manufacture using various molds]. Nippon Jozo Kyokai Zasshi (J. of the Brewing Society of Japan)* 80(4):281-86. [17 ref. Jap; eng]

• **Summary:** Two strains of *Rhizopus* with high protease activity and low spore-forming capacity, *R. oryzae* IFO 5418 and *R. japonicus* IAM 6002 were used instead of *Aspergillus oryzae*. Miso obtained had more lactic acid and lower pyroglutamic acid contents, less creaminess, harder consistency, more clear color, and flavor with unique aroma compared with ordinary miso. Address: Shinshu-Miso Research Inst., 469-6 Nakagoshô, Nagano-shi, Nagano-ken 380, Japan.

1689. Jayawardene, Ellen. 1985. Soyabean recipes and preparatory techniques developed for use in Sri Lanka. In: 1985. Sri Lanka Soybean Utilization Training Program and Workshop: Proceedings. See p. 422-52.

• **Summary:** Recipes use soy flour, whole or split soybeans, soymilk, tofu, tempeh, okara ("soya milk residue"), and soynuts. Address: Instructress, Soybean Foods Research Center.

1690. Mwale, J.M.; Luhgu, E.M.; Mutinta, M.; Mabusya, S. 1985. The state of soyabean utilization in Zambia: A brief summary. In: 1985. Sri Lanka Soybean Utilization Training Program and Workshop: Proceedings. See p. 458.

• **Summary:** "Soyabean Utilization in Zambia dates back to 1971 when a Netherlands team conducted seminars in various provinces in the country to demonstrate and popularise the various products that can be made from Soyabeans. Agriculture production started around 1975 when about 500 tons of soyabeans were grown." Since then soyabean "growing has increased steadily and at present 1984/85 projected yields are estimated at 15–20,000 tonnes."

In recent years soyabeans are "reported to be used in bread, and breakfast and cereal preparations. At the National Council for Scientific Research (NCSR), it is used in experimental formulations in preparation of weaning foods in which maize flour, full fat soya flour and other nutrients are incorporated... It is also used in the preparation of biscuits by the country's Dairy Product Board (DPB)."

"Although traditional dishes do not normally incorporate soyabeans there is sufficient justification to believe... that dishes such as soymilk, tofu, tempeh, etc., would find acceptability in the country..." Address: Zambia.

1691. **Product Name:** Tofu, Tofu Products, and Tempeh.

**Manufacturer's Name:** Nutrisoy Pty. Ltd.

**Manufacturer's Address:** 255 Forest Road, Arncliffe 2205,

NSW, Australia. Phone: +61 2 597-4120.

**Date of Introduction:** 1985. January.

**New Product–Documentation:** Communication from Tony Wondal of Nutrisoy. 1987. May. He started Jan. 1985. Total production is 900 lb/week.

Soya Bluebook '94. p. 66. Contact Tony Wondal, managing director. The company makes simulated meat products (analogues); soyfoods, tempeh, tofu & tofu products, other soy-based foods. Exporter: Whole soybeans; split, dehulled. Importer: Organic soybeans.

1692. Hermana, -. 1985. Pengaruh konsumsi bahan makanan campuran dengan kedelai atau tempe terhadap anak balita penderita kurang kalori-protein [Effect of the consumption of food mixtures containing soybeans or tempeh on children under the age of 5 suffering from protein-calorie malnutrition]. Presented at Seminar Nasional Hasil Penelitian Perguruan. Held on 25-28 Feb. 1985 in Bandung, Indonesia. [Ind]\*

• **Summary:** Based on Hermana's 1983 PhD thesis.

1693. Kawashima, Noriko. 1985. Tenpe ryôri no are kore [Various aspects of tempeh cookery]. *Daizu Geppo (Soybean Monthly News)*. Feb. p. 32-35; March. p. 40-43; May. p. 36-41. [Jap]

• **Summary:** This 3-part article contains numerous tempeh recipes (Japanese-, Indonesian-, and Western style) and black-and-white photos of them. Address: Tenpe Ryori Kenkyuka (Wife of Kawashima sensei).

1694. Langley-Danysz, Pernette. 1985. L'entrée discrète du soja en Europe [The discreet / cautious entry of soya into Europe]. *Revue Laitière Française* No. 438. p. 16-20. Feb. [Fre]

• **Summary:** An illustration on the cover shows an American cowboy-like man, wearing a cowboy hat and cowboy boots, smoking a cigarette, and carrying a briefcase on which is written ASA. He appears to be emerging from a garbage can labeled "soya" and from his briefcase are flying several cartons of soymilk. The article begins: "Two soy products, milk and tofu, were at the center of a conference organized in September 1984 at Amsterdam [Netherlands] by the American Soybean Association (ASA)."

Gives data on the chemical composition and nutritive value of soy beverages, soymilks, and tofu. Discusses the products recently introduced in Europe. Consumption of soy products in the E.E.C., principally as soy protein concentrates or isolates, has never exceeded 40,000 tonnes/year. Consumption of traditional East Asian soyfoods such as tempeh, miso, sufu, and soy sauce, is still low in Europe, but consumption of tofu and soymilk is growing significantly. Nutritional composition of cow's milk and soymilk are compared, and various commercial soy products are discussed.

Soy ice creams (including Ice Bean and Tofutti) are discussed in detail on page 19, col. 1. The pioneer of these soy ice creams (*ces ice cream au soja*), named Ice Bean, was developed by Farm Foods in Tennessee. Today there are a dozen other brands of tofu ice cream (*glaces au tofu*). One of these ice creamers (*ces crèmes glacées*), Tofutti, made by the company Tofu Time and presented at SIAL in 1984, took the first place last fall on the hit parade of dairy products from the United States.” Note: This is the earliest French-language document seen (March 2007) that mentions soy ice cream which it calls *ice cream au soja*, or *glaces au tofu*, or *crèmes glacées*.

Photos show the following products, each in a Tetra Brik carton: Nestle Bonus Soya Bean Milk, Plamil Soya Milk Concentrated, Morinaga Ever-Fresh Silken Tofu, Yeo’s Soya Bean Drink, Alpro Soya Drink. Address: France.

1695. MacDonald, Sandy. 1985. Designer beans: Soybeans aren’t stuck down on the farm anymore. High-protein, low-calorie soyfoods have gone gourmet. *New Age Journal* (Boston, Massachusetts). Feb. p. 53-59. [2 ref]

• **Summary:** An excellent introduction to soyfoods and soyfoods companies in America today. Photos show Chandri and Gary Barat of Legume, Akiko Aoyagi and William Shurtleff “parents of the soy boom,” and Tom Timmins president of Tomsun Foods.

Note: This is the earliest document seen (April 2011) that contains the term “designer beans.” Though this interesting term is used in the title of this article, it does not appear in the body of the article itself. The author appears to mean that the soybean can be made into hundreds of “ingenious” and imaginative (often delicious) foods from ice cream to lasagna, from burgers to creamy dips and dressings—and industrial products, including spun soy protein fibers invented by Robert Boyer, a Ford Motor Company employee, and first put to use in the upholstery of Ford cars; they were later used to make bacon bits and meat alternatives. Address: Brighton, Massachusetts.

1696. Shurtleff, William; Aoyagi, Akiko. 1985. Brief history of Imagine Foods (Arkansas) and Rice Dream non-dairy frozen dessert (Document part). In: Shurtleff and Aoyagi. 1985. Tofutti & Other Soy Ice Creams: The Non-Dairy Frozen Dessert Industry and Market. Vol. 1. 145 p. See p. 88-89.

• **Summary:** “In June 1984 Robert Nissenbaum and David Carlson of Imagine Foods, a small rural Missouri company that also made tempeh and miso, introduced Rice Dream, one of the most creative non-dairy frozen desserts to appear in America in decades. It was based on *amazake* (literally “sweet sake”) a creamy-thick, subtly-sweet, low-alcohol precursor of Japanese sake, made by fermentation of rice koji in water. Koji, used to make rice miso, is made by fermenting rice with the koji mold (*Aspergillus oryzae*) (Shurtleff and

Aoyagi 1983). The company made its own koji and amazake. Unlike most other non-dairy ice creams, Rice Dream was extremely low in calories, since it originally contained no added oil or fat. Most of the product’s sweetness came from the natural sweetness of amazake, but small amounts of Grade A maple syrup were also used. A nutritionist’s dream, containing only 132 calories and 18 mg of sodium per ½ cup serving, Rice Dream was advertised with a lovely full-page color ad in various natural foods magazines. As demand grew, production of the amazake was moved to California and the hard-pack frozen dessert was made at Peninsula Creamery in Palo Alto, California. Thereafter a small amount of safflower oil had to be added for functional reasons, and Chico-San’s rice syrup replaced the prohibitively expensive maple syrup. The only soy in the product was soy lecithin. By January 1985 there were 16 distributors for the product nationwide. Originally made in hard pack, it was also sold as a soft-serve mix starting in early 1985.”

Note: At the time of this writing, the author was not aware that Rice Dream was no longer being made from koji, and that commercial enzymes were being used instead of the enzymes from koji. Address: Lafayette, California.

1697. Sutardi, -; Buckle, K.A. 1985. Reduction in phytic acid levels in soybeans during tempeh production, storage and frying. *J. of Food Science* 50(1):260-61, 263. Jan/Feb. [18 ref]

• **Summary:** Less than 10% of the phytic acid originally found in the soybeans remained after tempeh fermentation, storage for 72 hours, and deep-frying. Address: 1. Faculty of Agricultural Technology Gadjah Mada Univ., Yogyakarta, Indonesia; 1-2. School of Food Technology, Univ. of New South Wales, P.O. Box 1, Kensington, NSW 2033, Australia.

• **Summary:** A photo shows trays of tempeh being made by a Marusan worker. Address: Japan.

1699. Kawamura, Noriko. 1985. Dai san kai tenpei ryôri kyôshitsu [Tempeh cooking class number 3: recipes]. Tokyo: Unpublished manuscript. 6 p. March 27. Unpublished manuscript. [Jap]

1700. Birch, Renee E.W.; Swanson, B.G. 1985. Tempeh fermentation and protein quality of beans (*Phaseolus vulgaris*). *Annual Report of the Bean Improvement Cooperative* 28:72-73. March. [2 ref]

• **Summary:** The authors made soy tempeh, soy-corn tempeh (using 3 ratios of soy:corn), small red bean (SRB, *Phaseolus vulgaris*) tempeh, and SRB-corn tempeh (3 ratios). The soy-corn tempeh (1:1) had the highest protein quality as

measured by PER (3.11), followed by soy-corn tempeh (2:1) with a PER of 3.03. Casein, by comparison, had a PER of 2.59. SRB tempeh had the lowest PER, 1.69. Address: Dep. of Food Science & Human Nutrition, Pullman, Washington 99164-6330.

1701. Byrne, Maureen. 1985. The future for soyfoods. The first European Soyfoods Workshop was held in Amsterdam by the American Soybean Association, and papers covered subjects from marketing to microbiological standards. *Food Manufacture (London)* 60(3):49, 51, 53. March.

• **Summary:** Contains an interesting full-page table in which Oriental soyfoods are classified into two types: Non-fermented and fermented. The non-fermented soyfoods are: Fresh green soybeans, soybean sprouts, soynuts, soymilk, soy flour, soy protein-lipid film (yuba, tou-fu-pi), soybean curd (tofu). For each food is given the local names, description, and uses.

The fermented soyfoods are: Soy sauce, miso, tempeh, natto, fermented tofu, and soy nuggets. For each fermented soyfood is given the local names, organisms used, description, and uses.

Soy sauce includes chiang-yu from China, shoyu from Japan, ketjap from Indonesia, kanjang from Korea, toyo and see-ieu from Southeast Asia.

Soy nuggets include tau-shih from China, tao-si from the Philippines, tau-cheo from Malaysia, tauco from Indonesia, and Hamanatto from Japan.

1703. **Product Name:** Garlic Tempeh.

**Manufacturer’s Name:** Nectar Tempeh. Later? changed to Nectar Soy Products.

**Manufacturer’s Address:** 4/13 Glamis St. (P.O. Box 969), Geelong, VIC, 3220, Australia. Phone: 05-221-4458.

**Date of Introduction:** 1985. March.

**New Product–Documentation:** Letter (fax) from Ross Hamilton and Mike Manser. 1990. Sept. 13. This was the company’s second product, introduced in March 1985.

1704. Nout, M.J.R.; Bonants-Van Laarhoven, T.M.G.; Dreu, R. de; Gerats, I.A.G.M. 1985. The influence of some process variables and storage conditions on the quality and shelf-life of soybean tempeh. *Antonie van Leeuwenhoek* 51(5/6):532-34. March. [2 ref]

• **Summary:** Tempeh is made commercially in the Netherlands by Dutch makers, but its popularity is hindered by its limited shelf life. Address: Dep. of Food Science, Agricultural Univ., De Dreijen 12, 6703 BC Wageningen, Netherlands.

1705. Okada, Noriyuki; Hadioetomo, R.S.; Nikkuni, S.; Itoh, H. 1985. Isolation of bacteria producing vitamin B-12 from fermented soybean tempeh from Indonesia. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 46. p. 15-20. March. [20 ref. Eng; jap]

• **Summary:** Eighteen samples of tempeh were gathered various from places in Indonesia: Bogor, Ciomas, Cisarua, Pacet Cianjur, Cicurug, Kedunghalang, and Semplak. Bacteria isolated from these tempeh samples were identified. 13 of 33 isolates were identified as *Klebsiella pneumoniae*—which is known to produce vitamin B-12. Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

1706. Public Sector Consultants, Inc. 1985. The potential for expanding the Michigan soyfoods industry. In: 1985. The Potential of Food Processing for Economic Development in Michigan. PCS, Knapp’s Centre, 300 S. Washington Square #401, Lansing, MI 48933. See p. III-45 to III-67. 28 cm. [47 ref]

• **Summary:** Michigan soyfoods manufacturers include Michigan Soy Products (Royal Oak; Tofu, soymilk; 1,650 lb/week of tofu), Oryana Soy Shop (Traverse City; Cooperative. Tofu, tempeh, soysage; 275 lb/week of tofu), The Soyplant (Ann Arbor; Cooperative. Tofu, tempeh, tempeh burgers, soymilk, dofugan, soysage; 7,500 to 10,000 lb/week of tofu), INARI Ltd. (Mason; Soynuts), Michigan Farm (Bitely; Miso), Hercules, Inc. (Harbor Beach; HVP), Eden Foods (soymilk importer, which hopes to build a soymilk plant in Michigan), and Midwest Natural Foods (Ann Arbor).

“Hercules produces nonfermented soy sauce and sells its product to large final producers, such as La Choy and Beatrice Foods, located outside Michigan for sale under their labels.” This report was prepared for the Michigan Dept. of Agriculture. March 15. Address: Lansing, Michigan.

1707. Rabie, C.J.; Lubben, A.; Schipper, M.A.A.; Heerden, F.R. van; Fincham, J.E. 1985. Toxigenicity of *Rhizopus* species. *International J. of Food Microbiology* 1(5):263-70. March. [21 ref]

• **Summary:** *Rhizopus* species are among the most common fungal contaminants in high-moisture grains. The toxigenicity of 14 isolates representing 14 species of *Rhizopus* isolated from sorghum malt, fermented foods and various other foodstuffs were evaluated in ducklings and rats. The mold was grown for 21 days at 25 and 37°C. The molded product constituted 50% of the test diet. Toxigenic strains of the following species were isolated: *R. chinensis*, *R. formosanesis*, *R. japonicus*, *R. javanicus*, *R. microsporus*, *R. nigricans*, *R. oryzae*, *R. rhizopodiformis* and *R. tonkinensis*. *R. oryzae* and *R. japonicus* were much more toxic when cultured on maize than on soy-beans. Tempeh is mentioned only in passing. Address: 1,2&5. National

Research Inst. for Nutritional Diseases, South African Medical Research Council, P.O. Box 70, Tygerberg 7505, South Africa; 3. National Chemical Research Lab., CSIR, P.O. Box 395, Pretoria 0001, South Africa; 4. Centraalbureau voor Schimmelcultures, Baarn, The Netherlands.

1708. Roozen, J.P.; Groot, J. de. 1985. Electrophoresis and assay of trypsin inhibitors in different stages of tempe production. *J. of Food Biochemistry* 9(1):37-48. March. [21 ref]

• **Summary:** "The way of extraction has a tremendous influence on the trypsin inhibitor activity determined for the different stages in tempe fermentation. The endproduct contains about 5% residual trypsin inhibitor activity of different origins." Address: Dep. of Food Science, Agricultural Univ., Wageningen, Netherlands.

1709. Shurtleff, William; Aoyagi, Akiko. 1985. The book of tempeh: The delicious, cholesterol-free protein. 2nd ed., revised & updated. New York, NY: Harper & Row. 175 p. March. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [374 ref]

• **Summary:** Contains 130 Western-style and Indonesian recipes. Appendix A: "A brief history East and West," is extensively revised from the earlier Professional Edition, and discusses the world's earliest known reference to tempeh in the *Serat Centini* manuscript, which was probably written in about A.D. 1815. The history of tempeh in the Europe, Australasia, in the United States has also been updated and expanded.

Appendix B: "Tempeh makers in the West" has also been updated and expanded. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549 USA.

1710. Tanuwidjaja, Lindayati; Roestamsjah, -. 1985. Preparation and utilization of powder form inoculum for tempeh fermentation. *ASEAN Food Journal (Malaysia)* 1(1):22-24. March. [4 ref]

• **Summary:** Studies on the preparation of powder form inoculum utilizing *Rhizopus oligosporus* ITB L36 (obtained from the Bandung Institute of Technology) and various substrates (white polished rice, tapioca waste, mixture of tapioca waste and soybean flour) showed that rice inoculum produced more spores and had a longer shelf-life. Further studies utilizing the rice inoculum in tempe fermentation indicated that the inoculum concentration affected the texture, appearance, soluble solid, soluble nitrogen as well as ammonia content of the tempe produced. Address: National Inst. for Chemistry, Indonesian Inst. of Sciences, Bandung.

1711. Vaidehi, M.P.; Annapurna, M.L.; Vishwanath, N.R. 1985. Nutritional and sensory evaluation of tempeh products made with soybean, ground-nut, and sunflower-seed combinations. *Food and Nutrition Bulletin (United Nations*

*Univ.)* 7(1):54-57. March. [15 ref]

• **Summary:** 100% soy tempeh was not favored by the taste panel. The sunflower-soy combination in tempeh curry and fried chips was highly acceptable. The cost of preparing 1.5 kg of tempeh was less than 1 U.S. dollar. Therefore it is a very economical and nutritious plant food.

In addition, tempeh was prepared with and without the addition of bakla (*Vicia faba*) to soybeans in various ratios to obtain a tempeh of acceptable quality and nutritional value. Bakla tempeh at a 1:1 ratio was found to be crisper and more palatable than plain soybean tempeh, but at 3:1 the tempeh had a mushroom odour. Address: Dep. of Rural Home Science & Dep. of Agricultural Microbiology, Univ. of Agricultural Sciences, Hebbal, Bangalore 560 024, India.

1712. Flinders, Carol. 1985. Tempeh replace meat in tasty way: Laurel's Kitchen, vegetarian cookery. *Mercury News (San Jose, California)*. April 3. [3 ref]

• **Summary:** Contains an introduction to tempeh and vegetarianism, with two recipes: Tempeh a la king, and Tempeh cacciatore. Address: Co-author of 'Laurel's Kitchen,' a vegetarian cookbook, Petaluma, California.

1713. Nabben, Alexander. 1985. Re: New soy dairy making tofu and tempeh about to open at Dornhausen, West Germany. Letter to William Shurtleff at Soyfoods Center, April 3. 2 p. Typed, with signature. [Eng]

• **Summary:** Alexander and friends have moved from Munich 150 miles to the north of Bavaria and rented a farm in a small village. From the cow stable they are making a nice soy dairy. Very soon they will be "offering tofu, tempeh, and soy sprouts in different recipes and ways." An enclosed leaflet (single sided, in German) shows that he and friends are organizing a meeting for soyfoods makers. "In the last two years they went up to 10 or more, from around 4-5." Their idea is to cooperate more with one another "so that the soy-boom can get through easier." In Sept. of this year a good book publishing company will bring out Alexander's book about soyfoods.

The leaflet titled "Invitation" bears the logo of The Farm in Tennessee, and the organization in Dornhausen is named "Farm-Gemeinschaft e.V." (The Farm Community). The get-together is scheduled for 1-2 June 1985. There is an agenda of 11 items for the meeting. At the bottom of the leaflet is a list of the companies and individuals to whom the invitation is being sent: Sojafoederring, Sojaquelle, Sojastern, Svadesha, Jamato [Yamato]-Tofu-Haus, Garten Eden, Atlantis, Lukas Kelterborn, Rolf Badhoff, Albert Hess, Fa. [Firma] Byodo, Fa. Morgenland, Hamburger Tofu-Manufaktur, Verein Freunde der Erde e.V., and Naturkost e.V. Address: Morgenland-Naturkost/Farm-Gemeinschaft e.V., 8821 Dornhausen 29, W. Germany.

1714. Soyfoods Center. 1985. Catalog: Publications &

materials by William Shurtleff & Akiko Aoyagi [mail order]. P.O. Box 234, Lafayette, CA 94549. 20 panels. April 3.

• **Summary:** This catalog, folded like a road map, is printed with brown and rust (brownish pink) light blue ink on white paper. 10,000 copies were printed by Hunza in Berkeley. Address: Lafayette, California. Phone: 415-283-3161.

1715. Stechmeyer, Betty. 1985. Re: Thanks for book. New developments. Letter to William Shurtleff at Soyfoods Center, April 11. 1 p. Typed, with signature on letterhead. [2 ref]

• **Summary:** "Thanks so much for the new edition *Book of Tempeh*... Things are quiet here. Gordon is teaching microbiology at College of the Redwoods and we hope to teach the Soyfoods Workshop next semester. Penny Billiter of Star Soyfoods, Sandpoint, Idaho, was our student. Before the Workshop she hadn't even heard of tempeh, just tofu. She came over just before leaving town to spend a day of intense note taking and talking and a month later was selling tofu pudding to Safeway!

"I've enclosed our most recent catalog. Since we have 20+ of the first *Book of Tempeh* we'll keep with it for now.

"I'm now selling tempeh on a special order basis to local restaurants. Koji, rice and barley, goes to coops on the same basis. I even had a special order for natto!

"Hope all is well with you. You've obviously been very busy as always! Best regards,..." Address: GEM Cultures, 30301 Sherwood Rd., Fort Bragg, California 95437. Phone: 707-964-2922.

1716. Praskin, Laurie Sythe. 1985. New developments at The Farm and with Plenty (Interview). Conducted by William Shurtleff of Soyfoods Center, April 15. 3 p. transcript.

• **Summary:** Laurie has just returned from a Plenty Board of Directors meeting at The Farm in Tennessee. Only 300 people are living there now—it has a deserted feeling. But the Plenty meeting was good. Plenty is doing some excellent work with soyfoods in the Caribbean (especially on Dominica), and in Lesotho. There were color slides shows of each program. Their soy dairies there are selling soyfoods.

The Farm Soy Dairy in Tennessee is now run by Ron Maxen and Michael Lee. They sell 100 lb/week of tofu, half of it off The Farm in 1-gallon plastic bags that hold 5 cakes each, or in tubs. On The Farm it sells for \$0.90/lb. Off The Farm it sells for \$0.75/lb in bulk or \$0.85 in tubs. Their yield averages 2 lb of firm tofu from 1 lb of soybeans. They do all their own distributing. They also make 150 gallons/week of soymilk sold as such plus another 4,500 to 5,000 gallons/month for ice bean (2 runs a month). Twice a month they load it into a milk truck and ship to an ice cream company near Memphis. Also 15-20 gallons/week of soy yogurt and 80-90 lb/week of tempeh is sold on The Farm.

The soy dairy in Lesotho is beautiful, housed in a traditional stone hut with a thatched roof. Inside are white

walls, a concrete floor, and drains. It is making a little soymilk and soymilk ice cream. It has a nice little Okita stainless steel mill that runs off a generator and also a bicycle-powered mill. They are also growing some soybeans now. Address: 17969 Oak Dr., Los Gatos, California 95030.

1717. Estella, Mary. 1985. Natural foods cookbook: Vegetarian dairy-free cuisine. Briarcliff Manor, NY, and Tokyo: Japan Publications. 250 p. April. Color plates. Index. 26 cm. [22 ref]

• **Summary:** This macrobiotic cookbook, though free of dairy products, uses fish in many recipes. In the chapter titled "Getting Started" there is a section on "Soy Foods" (p. 26-27) which begins by stating that "Soybeans, the king of beans, are ironically not often eaten as whole beans, but instead are processed into miso, shoyu, tofu, tamari, and tempeh." Each of these foods are discussed briefly. Three types of soy sauce are defined: Shoyu, tamari, and commercial soy sauce (which is said to be artificially colored and processed). Chapter 7, titled "Whole grains, beans, tofu and tempeh" contains 7 tofu and 7 tempeh recipes. There are a large number of soy-related recipes throughout the book, including those using miso, black soybeans, and tamari.

1718. Hasil simposium. Daftar peserta [Recommendations of the symposium, and directory of participants]. 1985. In: Hermana and Karyadi, eds. 1985. Simposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi [Symposium on Tempe Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 8-19. Held 15-16 April 1985 in Jakarta. [Ind; Eng]

• **Summary:** There are 8 recommendations for policy decisions and operational action. Within the recommendations for research there are 7 for technology research, 2 for nutrition research, 5 for health research, 2 for socio-economic research, and 3 for socio-cultural research. Among the latter: "In-depth study of the history of tempeh to conserve traditional wisdom."

The directory gives the name and organization or address for 93 attendees. Address: Indonesia.

Held 15-16 April 1985 in Jakarta. [3 ref. Ind]

• **Summary:** Figures from the Central Bureau of Statistics show the average, urban, and rural consumption level of tempeh in 13 provinces in grams/person/day. Consumption is highest in Java. Provinces with the highest average consumption are Yogyakarta (34.2 gm), Central Java (24.7), Jakarta (19.5), East Java (19.4), Lampung (16.2), East Kalimantan (11.0), West Java (9.3), and Bali (8.4). The higher consumption in urban compared with rural communities is probably due to the higher purchasing power and also the easy access to soybean supply for home industries. Tempeh is popular among people in both high- and low-income groups. Address: Fakultas Pertanian-IPB.

1725. Shurtleff, William; Aoyagi, Akiko. 1985. Soyfoods industry and market: Directory and databook 1985. 5th ed. Lafayette, California: Soyfoods Center. 220 p. Index. April. 28 cm. Updated every 1-3 years with a bibliographic supplement. [360 ref]

• **Summary:** Contents: 1. Introduction. 2. Directory of soyfoods manufacturers. 3. Directory of soyfoods support industry: Goods & services. 4. The many types of soyfoods. 5. Historical: Historically most important books and serials, earliest references to individual soyfoods. 6. Year in review. 7. Soyfoods industry and market in the U.S. 8. Tofu industry and market in the U.S. and Canada. 9. Soymilk industry and market: Worldwide and in the U.S. 10. Tempeh industry and market in the U.S. 11. Soy sauce industry and market in the U.S. and Japan. 12. Miso industry and market in the U.S. and Japan. 13. Soynut industry and market in the U.S. 14. Natto industry and market in Japan. 15. Statistics on fermented soyfoods in East Asia. 16. Soyfoods in restaurants, delis & cafeterias. 17. Soybean crushing industry in the U.S. 18. Soy oil industry and market in the U.S. 19. Soy flour and cereal-soy blends industry and market worldwide. 20. Modern soy protein products industry and market in the U.S. 21. Soyfoods terminology and standards. 22. Names of soyfoods in major foreign languages (incl. Chinese / pinyin; Hoisin sauce = haixian jiang). 23. Soybean production worldwide and country-by-country. 24. Key institutions working with soyfoods worldwide. 25. Measures, weights, and equivalents. 26. About the Soyfoods Center & soyfoods consulting services. 27. Bibliography.

In February 1977 a Gallup poll in America showed a remarkable shift in the public's awareness of and attitudes toward soyfoods. The sampling of 1,543 adults across the

nation found that: 33% believe that soybeans will be the most important source of protein in the future—ahead of fish at 24% and meat at 21%. 55% believe that “soy products have a nutritional value equal or superior to that of meat.” 54% reported that they “had eaten foods containing soy protein as a prime ingredient within the past 12 months.” Younger age groups living in large cities and those with college or university educations had the most favorable attitudes toward soy protein, indicating that support for soyfoods is likely to grow in the future. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1726. Shurtleff, William; Aoyagi, Akiko. 1985. The tempeh industry and market in the USA. In: William Shurtleff and Akiko Aoyagi. 1985. Soyfoods Industry and Market: Directory and Databook 1985. 5th ed. Lafayette, California: Soyfoods Center. 220 p. See p. 86-95A.

• **Summary:** All statistics in this chapter (see next 3 pages) are based on original Soyfoods Center surveys of the tempeh industry. Contents: 1. Introduction. Historical. Market size and growth rate. Tables: (1) Number of tempeh companies by major countries and regions (1975-1985; not including Indonesia, Malaysia, and Singapore). In Europe and the United States, the number increased from 7 in 1975 to 93 in 1985, with 55 of the latter in the USA, 21 in Western Europe, and 4 in Canada.

(2) Largest tempeh manufacturers in the United States. The columns are: Rank in 1984. Rank in 1983. Company name & state. Year started making tempeh. Average weekly production (lb/week) in May 1982, May 1983, and Jan. 1984. Of the 18 manufacturers listed, the top 5 are:

(2a) Quong Hop / Pacific Tempeh, CA, started 1980, 7,000 lb/week in Jan. 1984

(2b) White Wave, CO, started 1979, 5,850 lb/week.

(2c) Soyfoods Unlimited, CA, started 1981, 5,800 lb/week.

(2d) The Tempeh Works, MA, started 1979, 5,500 lb/week.

(2e) Appropriate Foods, NY, started 1981, 2,000 lb/week.

Largest tempeh manufacturers in Canada. Only one company, Thistle-down Soyfoods, BC, is listed. They make 200 lb/week.

Detailed yearly analysis of the tempeh industry in the United States (1981, 1982, 1983).

Graph of number of tempeh manufacturers in the USA and the Western World.

Major market segments and retailing outlets. Varieties of tempeh and amounts produced: Regular soy tempeh, soy & grain tempehs, second generation tempeh products. Tempeh starter. Pricing. Packaging and refrigeration. Popular uses and recipes. Special distribution arrangements. Outlook and forecast: Second generation products, mainstream marketing with nutritional emphasis, institutions before supermarkets,

watch Japan, with the Netherlands. Books on tempeh published in the United States (10 books from 1979-1984). U.S. Media coverage of tempeh (1971-1984). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1727. Siagian, Uhum L.; Sofia, Gustina. comp. 1985. Tempe: Bibliografi beranotasi [Tempeh: An annotated bibliography]. Indonesia: Pusat Penelitian dan Pengembangan Gizi; Badan Penelitian dan Pengembangan Kesehatan; Departemen Kesehatan RI. 80 p. April. Author index. 28 cm. [273 ref. Ind]

• **Summary:** By far the best bibliography of Indonesian-language publications on tempeh, compiled by Mr. Siagian and Ms. Sofia, and published jointly by the Nutrition Research & Development Center, The Institute for Health, Research and Development, and the Indonesian Ministry of Health. 200 copies were printed, and distributed by the Nutrition Research and Development Center (Jalan Dr. Sumeru, Bogor). The publication was sponsored by the World Health Organization (WHO), the Institute of Health, Research and Development, and the Center for Health and Medical Information Network and Scientific Documentation (Jaringan Informasi dan Dokumentasi Ilmiah bidang Kesehatan Kedokteran, Pusat). All entries have an Indonesian summary / abstract.

Contents: Preface by Dr. Darwin Karyadi (1 April 1985). Directions for use of the book. Abbreviations. 1. Preparation of tempeh from peanut presscake (onchom), velvet beans (*benguk*), rubber seeds (*biji karet*), coconut presscake (*bongkreng*), mixed ingredients (*campuran*), okara or soy pulp (*gembus*), Cajanus cajan (*Kacang gude*), Vigna radiata (*Kacang hijau* [mung bean]), winged bean (*kecipir*), soybean (*kedelai*), Canavalia ensiformis (*Koro pedang*; [jack bean]), Leucaena leucocephala (*lamtoro*), Lupinus angustifolius (*Lupinus*), and soy flour (*Tepung*). 2. Tempeh microorganisms and inocula. 3. Nutritional value: Iron, lipids, protein, vitamins, tempeh formula (Vitempo). 4. Toxins: Aflatoxin, cyanide, bongkreng toxins, others. 5. Preservation. 6. Inhibitors: Phytic acid, antioxidant, trypsin inhibitors. 7. History. 8. Standards. 9. Consumption. 10. Author index. 11. Names and addresses of major tempeh-related research organizations in Indonesia.

This bibliography contains references for 85 Indonesian-language documents relating to soybean tempeh, from 1962 to 1985; some 43 of these were published after 1979.

Page 80 lists 17 Indonesian libraries in six cities (Bandung, Bogor, Jakarta, Semarang [Central Java], Surabaya, Yogyakarta) that contributed to this bibliography of tempeh.

Note: We are indebted to this fine bibliography for many of our Indonesian language tempeh records. Our thanks to Peter Ananda of the University of California, Berkeley, South & Southeast Asia Library. Address: Bogor, Indonesia.

## NUMBER OF TEMPEH COMPANIES BY MAJOR COUNTRIES AND REGIONS

Year	Total	West	Latin	Austral	Indian	Middle				
January	West*	USA	Europe	Americ	Canada	NewZeal	subcon	Africa	East	Other
1975	7	3	4							
1976										
1977										
1978										
1979	19	13	4		1					
1980	24	18	4		1					
1981	42	32	6	0	1	2				
1982	58	44	8	0	2	3				
1983	79	56	15	0	4	3				
1984	82	53	18	0	4	5	0	0	0	1
1985	93	55	21	0	4	9	0	0	0	4

\* Not including Indonesia, Malaysia, and Singapore.  
 But including all other countries worldwide, such as Japan, etc.  
 "Other" are all Japan.

## LARGEST TEMPEH MANUFACTURERS IN THE UNITED STATES

Rank 1984	Rank 1983	Company Name & State	Year Started	Average Weekly Production (lb/week)		
				1982 May**	1983 May**	1984 Jan**
1	1	Quong Hop/Pacific Tempeh, CA	1980	5,000	4,500	7,000
2	4	White Wave, CO	1979	1,900	4,750	5,850
3	3	Soyfoods Unlimited, CA*	1981	3,000	5,000	5,800
4	2	The Tempeh Works, MA*	1979	4,250	5,000	5,500

## DETAILED YEARLY ANALYSIS OF THE TEMPEH INDUSTRY IN THE USA

	1981	1982	1983
Number of tempeh mfgrs. in the US at end of year	44	56	53
Number of larger manufacturers	15	16	18
Thousand pounds of tempeh made per week by larger mfgrs. (chart)	19.06	25.59	34.68
Number of smaller manufacturers	29	40	35
Avg. weekly prod per small mfgr (lb)	90	98	100
Thousand pounds of tempeh made per week by smaller manufacturers	2.61	3.9	3.5
Thousand pounds of tempeh made per week by all US manufacturers	21.67	29.59	38.18
Million pounds of tempeh made during year by all US manufacturers	1.127	1.533	1.985
Metric tons of tempeh made during year by all US manufacturers	511.2	695.3	900.4
Production growth rate during year		36%	29%
Yield: pounds of tempeh from one pound of soybeans	1.75	1.75	1.75
Metric tons of soybeans used during year by all US tempeh makers	292.1	397.3	514.5
Avg price per pound, ex-factory (\$)	1.06	1.20	1.30
Avg price per pound, wholesale (\$)	1.39	1.56	1.70
Avg price per pound, retail (\$)	2.04	2.30	2.50
Lowest price per pound retail (\$)	1.60	1.65	1.70
Yearly value (million \$), ex-factory	1.19	1.84	2.58
Yearly value (million \$), retail	2.30	3.52	4.96
Avg. no. of employees, larger mfgr.	5	6	7
Avg. no. of employees, smaller mfgr.	1	1.5	2
Total number of employees	94	161	196
Market share of top four manufacturers	65%	64%	63%
Market share of top eight manufacturers	76%	77%	78%
Market share of "larger" manufacturers	87%	86%	91%

NUMBER OF TEMPEH MANUFACTURERS IN THE USA AND THE WESTERN WORLD

1728. Soetrisno, Uken S.S. 1985. Beberapa prinsip alternatif penggunaan tempe dalam peningkatan status gizi golongan rawan gizi. 3. Tempe dalam pemenuhan kebutuhan gizi ibu menyusui [Several alternative principles in the utilization of tempeh to improve the nutritional status of the malnourished / those in critical nutritional condition. 3. Tempeh in fulfilling the nutritional needs of breastfeeding mothers]. In: Hermana and Karyadi, eds. 1985. Simposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi [Symposium on Tempeh Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 44-52. Held 15-16 April 1985 in Jakarta. [8 ref. Ind]  
Address: Pusat Penelitian dan Pengembangan Gizi, Bogor, Indonesia.

1729. **Product Name:** Soy Tempeh, and Tempeh Bits.  
**Manufacturer's Name:** Soy Feliz.  
**Manufacturer's Address:** 17802 N.E. 21st St., Gainesville, FL 32609. Phone: 904-485-1527.  
**Date of Introduction:** 1985. April.  
**New Product–Documentation:** Talk with Jose Caraballo. 1990. July 27. He started making these tempeh products at his home in May 1990 and selling them locally. In Spanish “Soy Feliz” means “I am happy.”

Talk with Jose Caraballo. 2001. July 23. In April 1982 he started making tempeh at home and selling it to his local friends. In April 1985 he started selling tempeh and tempeh bits to a local co-op distributor, who distributed them to retail co-ops.

1730. **Product Name:** Tofu, Soymilk, Tempeh.  
**Manufacturer's Name:** Soy Shop, Inc.  
**Manufacturer's Address:** 210 Laredo Dr., Decatur, GA 30030. Phone: 404-377-8433.  
**Date of Introduction:** 1985. April.  
**New Product–Documentation:** Talk with Mr. Kich Lam. 1989. Nov. 8. He bought this business from Steve and Sarah Yurman in April 1985, and moved it to Decatur. He now makes tofu, soymilk, and tempeh. He is Chinese.

1731. Steinkraus, K.H. 1985. Trends and current knowledge in tempe research. In: Hermana and Karyadi, eds. 1985. Simposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi [Symposium on Tempeh Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 138-48. Held 15-16 April 1985 in Jakarta. [20 ref. Eng]  
• **Summary:** Contents: Introduction. Indonesian tempe kedelai (with 10 essential steps for tempe production). Traditional tempe fermentation (the basic traditional process). Industrial production of tempe (details of the commercial process and improvements made during the past 25 years, many originating in the USA by Steinkraus, Martenelli and Hesseltine, plus Gandjar, etc. Summary of the tempeh industry and market in the USA {Shurtleff & Aoyagi

1984}. Summary of the tempeh industry and market in Indonesia, with Table 1 {Winarno 1976}). Acidification—An essential step in the tempe fermentation (without this step, tempe makers in temperate climates are taking a risk of food spoilage and/or toxin development). Research needs (study differences between traditional acidified and non-traditional non-acidified tempeh fermentation processes). Address: New York State Agric. Exp. Station, Geneva, New York 14456.

1732. Sumantri (Soemantri), Ag.; Sudigbia, I. 1985. Upaya penanggulangan diare kronik dengan mempergunakan formula makanan dengan tempe [Management of chronic diarrhea with a tempe-based formula]. In: Hermana and Karyadi, eds. 1985. Simposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi [Symposium on Tempeh Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 128-33. Held 15-16 April 1985 in Jakarta. [5 ref. Ind]

• **Summary:** Tempeh was shown to be effective in controlling diarrhea. Address: 1. Lembaga Penelitian—UNDIP; 2. Rumah Sakit Dr. Karyadi—UNDIP.

1733. Surjaningrat, Suwardjono. 1985. Sambutan menteri kesehatan Republik Indonesia [Opening remarks by the Minister of Health, Republic of Indonesia]. In: Hermana and Karyadi, eds. 1985. Simposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi [Symposium on Tempeh Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 3-5. Held 15-16 April 1985 in Jakarta. [Ind]

• **Summary:** Surjaningrat noted that this Symposium on Tempe, which he inaugurated, was an important historical event in the progress of research and development of tempeh. Address: Minister of Health, Indonesia.

1734. Tarwotjo, -; Suaspendi, -; Martini, -. 1985. Tempe dalam program kesehatan dan gizi nasional [Tempeh in the national health and nutrition program]. In: Hermana and Karyadi, eds. 1985. Simposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi [Symposium on Tempeh Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 53-59. Held 15-16 April 1985 in Jakarta. [7 ref. Ind]  
Address: Direktorat Bina Gizi Masyarakat.

1735. Tjiptoherijanto, Prijono. 1985. Aspek ekonomi dari usaha tempe tradisional: Pendekatan usaha tani kedelai [Economic aspects of the traditional tempeh producer: An appraisal from the soybean producer]. In: Hermana and Karyadi, eds. 1985. Simposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi [Symposium on Tempeh Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 97-113. Held 15-16 April 1985 in Jakarta. [7 ref. Ind]

• **Summary:** This article contains the following graphs: Soybean exports from Indonesia (1977-82); Soybean imports to Indonesia (1978-82); Production and consumption of soybeans and soyfoods in Indonesia (1971-82; soyfoods given for only 1978 and 1980); Per-capita consumption of soybeans, tofu, tempeh, and soy sauce (kecap) by province and total, 1978 and 1980. In 1980 the figures for Indonesia as a whole were soybeans 0.16 kg per capita, tofu 4.66 kg, tempeh 4.87 kg, soy sauce 1.61 bottles. The average consumption of tempeh for Indonesia as a whole was 11.6 grams/person/day in 1978 and 13.3 gm in 1980. Source: Central Bureau of Statistics. Address: Dr., Lembaga Demografi–UI.

1736. Watanabe, Tadao. 1985. The tempe technology in Japan. In: Hermana and Karyadi, eds. 1985. *Symposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi* [Symposium on Tempeh Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 134-37. Held 15-16 April 1985 in Jakarta. [2 ref. Eng]

• **Summary:** Contents: The tempe industry in Japan (no statistics or details are given). The manufacture of tempe in Japan. Cooking of tempe for marketable products (sold in blocks, minced, or sliced and flavored). Some biochemical properties of tempe: Antioxidative activities, volatile compounds in tempe, triglyceride profiles of Tempe Chips (from Indonesia). Address: Kyushu Univ., Japan.

1737. Winarno, F.G. 1985. Tempe–Peningkatan mutu dan statusnya di masyarakat [Tempeh–Improvements in quality and in its public status]. In: Hermana and Karyadi, eds. 1985. *Symposium Pemanfaatan Tempe Dalam Peningkatan Upaya Kesehatan dan Gizi* [Symposium on Tempeh Utilization in Efforts for Improving Health and Nutrition]. 148 p. See p. 69-84. Held 15-16 April 1985 in Jakarta. [23 ref. Ind] Address: Prof. Dr., Pusat Penelitian dan Pengembangan Teknologi Pangan–IPB.

1738. *Toyo Shinpo (Soyfoods News)*. 1985. Sukoyaka Tenpe kôhyô. Marusan-Ai [Marusan-Ai's "healthy tempeh" gets good acceptance]. May 1. p. 4. [Jap; eng+]

• **Summary:** This tempeh is being sold at the Seibu Department Store in Ikebukuro (Tokyo), and at Mitsukoshi Department Stores in Nihonbashi (Tokyo).

1739. Siriwardena, T.D.W. 1985. Re: Requesting visit. Letter to William Shurtleff at Soyfoods Center, May 9. 1 p. Typed, with signature on letterhead.

• **Summary:** Mrs. F. Hwavitharana, a research worker attached to his center, expects to visit Canada in early July, 1985. She holds B.Sc. and M.Sc. degrees and is a research bio-chemist who has 3 years experience as a research worker at the Soybean Center.

He is writing to Shurtleff to expedite possibilities for

her to visit Soyfoods Center to learn about making tempeh, tofu, and soy beverage. He proposes that she spend about 2 weeks at Soyfoods Center. A few visits to tofu and tempeh manufacturing centers in California would also be useful. Address: Sri Lanka Soybean Project, Dep. of Agriculture, Soybean Foods Research Centre, Gannoruwa, Peradeniya, Sri Lanka.

1740. Kushi, Michio; Kushi, Aveline. 1985. Re: Thank you for sending *The Book of Tempeh*. Letter to William Shurtleff at Soyfoods Center, May 10. 1 p. Typed, with Michio's signature on letterhead. [Eng]

• **Summary:** "Dear Bill and Akiko, Thank you for sharing the new edition of the *Book of Tempeh* with us. It should be of great benefit in spreading the use of tempeh both among individual families and in the health food market.

"Thank you for this significant contribution to one peaceful world.

"We send you our best regards and warmest wishes for your continued health and happiness. Sincerely,..." Address: 62 Buckminster Rd., Brookline, MA [Massachusetts] 02146. Phone: (617) 232-6869.

1741. Murata, Kiku. 1985. Re: Thank you for sending *The Book of Tempeh*. Letter to William Shurtleff at Soyfoods Center, May 17. 1 p. Typed, with signature on letterhead. [Eng]

• **Summary:** "Many thanks for sending to me a copy of the new second edition of 'The Book of Tempeh,' which includes A Brief History of Tempeh in an Appendix A.

"History of Tempeh,' you had kindly sent to me last year and this edition (easy to read) have gave me much knowledge of tempeh and people in the past and present.

"I have greatly impressed your energy to devote your life for soybean products, especially for tempeh from various stand points.

"I am sorry that we could not able to invite you to attend 'Non-salted Soybean Fermentation' to be held July 15-17, 1985. The financial situation is very difficult.

"If possible and if you don't mind, I would like to advertise the new second edition of 'The Book of Tempeh.'

"People who attend the Symposium will also [want] the knowledge of History of Tempeh.

Thank you again for your kindness to send me the results of your energetic, useful and wonderful work.

"With very best wishes to you. Sincerely yours,..."

Address: Teikoku Women's Univ., 173-6 Thodacho, Moriguchi City, Osaka, Japan. Phone: 06-902-0791.

1742. Shurtleff, William; Aoyagi, Akiko. 1985. History of tempeh: A fermented soyfood from Indonesia. 2nd ed. Lafayette, California: Soyfoods Center. 91 p. May. 28 cm. [402 ref]

• **Summary:** A slightly revised and updated version of the

July 1984 edition.

This book is now (as of April 2011) available free of charge on Google Books, in full view. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1743. Shurtleff, William; Aoyagi, Akiko. 1985. History of tempeh in Europe (Document part). In: W. Shurtleff and A. Aoyagi, Akiko. 1985. History of Tempeh: A Fermented Soyfood from Indonesia. 2nd ed. Lafayette, California: Soyfoods Center. 91 p. See p. 27-31. [402 ref]

• **Summary:** “As noted previously, all of the references to and articles about tempeh written between 1875 and the early 1950s were written by Europeans, most of them Dutchmen. Senior authors of references prior to 1940 included Gericke and Roorda (1875, 1901), Prinsen Geerligs (1895, 1896), Boorsma (1900), Vorderman (1902), Heyne (1913), Jansen (1923, 1924), Ochse (1931), van Veen (1932, 1933, 1934, 1935, 1936, 1938), Mertens (1933), Amar and Grevenstuk (1935), and Burkill (1935).

“Yet, perhaps because Dutch was not a widely read or spoken language and tempeh was not known in countries more famous for soyfoods such as Japan and China, tempeh was rarely mentioned in the numerous articles about soyfoods published in French, German, and English prior to the 1950s. Nor are there records of tempeh being made in Europe during this time. The only two European works in English that mentioned tempeh during this period were those by Ochse (1931) and Burkill (1935), and both were encyclopedic works about the foods and plants of Malaysia and Indonesia; Ochse’s work was originally published in Dutch.

“Relatively little was published about tempeh in Europe between 1940 and 1959, and most articles focused on its role in prisoner of war camps in Southeast Asia. There were articles by van Veen (1946, in Dutch), Roelofsen (1946, in Dutch), de Bruyn et al. (1947, in Dutch), Tammes (1950, in Dutch), van Veen and Schaefer (1950), Smith and Woodruff (1951), Grant (1951), Dupont (1954), and Autret and van Veen (1955); the latter five articles were all in English. Most of these have been discussed earlier at Indonesia. Boedijn (1958) reported that *Rhizopus oligosporus* can always be isolated from tempeh, implying that it is the primary organism in tempeh.

“All of the first tempeh companies in Europe were started in the Netherlands by immigrants from Indonesia. The earliest of these, called ENTI, was founded in April 1946 by a Dutch couple whose last name was Wedding. They had learned to make tempeh while living in Indonesia. Bringing their starter culture and tempeh culture to the Netherlands, they began to make Europe’s earliest known tempeh on a home scale for friends and relatives. Gradually ENTI grew and become a commercial operation, making 2,000 lb of tempeh a day by the early 1970s. In about 1974 the Weddings sold the company (located in Zevenhuizen)

to Mrs. L.J. Duson, who ran it until January 1984, when she closed it. Firma E.S. Lembekker, founded in January 1959 in Amsterdam, then became Europe’s oldest existing tempeh company.

“Interest in tempeh in Europe began to increase starting in the 1960s. Articles were published by Roelofsen and Thalens (1964; changes in B vitamins), Stanton and Wallbridge (1969; a tempeh-like product made from cassava but with improved nutritional value), Thio (1972, 1975, small scale production and recipes), Jensen and Djurtoft (1976; a large report from Denmark on legume and cereal grain tempehs), Djurtoft and Jensen (1977, tempeh from various African grains and beans), Andersson (1977, volatile components and yellow pea tempeh, from Sweden), and Bahi El-Din et al. (1977; Sudanese researchers at Wageningen, Netherlands). Among these researchers, Thio Goan Loo from Indonesia was especially active in teaching people in Third World countries about tempeh. In 1972 he wrote about tempeh for use in Zambia (Africa) and spent three months in 1979 teaching tempeh production and recipes in Sri Lanka.

“The earliest known popular article on tempeh was an excellent 7-page feature story with nine photographs published in 1982 in *Le Compas* in French. In 1982 *Soja Total*, a translation of *The Farm Vegetarian Cookbook* (Hagler 1978), containing 13 pages of information on tempeh, was published in Germany. In 1985 *Das Tempeh Buch*, an updated and expanded translation of *The Book of Tempeh* (Shurtleff and Aoyagi 1979), will be published in Germany. Thus by 1984 there was more information on tempeh available in German than in any other continental European language, including Dutch. However the absence of a center of focused research efforts and a good source of tempeh cultures, such as the centers at Geneva and Peoria in the US, restricted the development of widespread popular interest in tempeh in Europe.

“Europe’s largest tempeh company, Tempe Production Inc. (called *Handelsonderneming van Dappern* until 1983) was founded in 1969 by Robert van Dappern, with the help of his Dutch father (Herman), his Indonesian mother (Aveline), and his Dutch-Indonesian wife. He paid the Dutch-Indonesian sailor (who had founded Firma ENTI) a substantial sum of money to teach him how to make tempeh. By 1970 they were making tempeh in a small warehouse in Rotterdam. Initially they sold all of their tempeh to a couple of Holland’s many Indonesian stores, but then they hired his wife’s father, a well-known Indonesian, to deliver to the wider Indonesian community. The company began to grow, but all of the tempeh was being consumed by Indonesians living in the Netherlands.

“In about 1972 or 1973 they moved the thriving company to Kerkrade, in southern Holland near the family home in Heerlen, rented a bigger building, and started mass production. Ed van Dappern, the second brother, joined the company as an equal partner. In 1979 Robert sent his

wife's brother, Ike van Gessel, to Los Angeles to set up a tempeh plant there. Ike rented a building but, because of the European recession during the early 1980s and the need for capital to expand the business in the Netherlands, he had to cancel the lease and call off the project, at a substantial financial loss.

"In about 1980 or 1981 the company bought a \$1 million modern factory in Kerkrade and expanded again. By mid-1982 Tempe Production Inc. was producing 6,000 to 8,000 pounds of tempeh a week, making it the largest tempeh company in the world. By early 1984 production had increased to 13,200 pounds a week, and an estimated 10% of this was consumed by non-Indonesians. The family developed their own proprietary method for making tempeh starter culture. They developed a leaflet on tempeh, gave demonstrations on making and cooking with tempeh, and got tempeh to be sold at the Central Market, with the result that more and more of the greengrocers, who buy their vegetables there early each morning, started selling tempeh (and tofu). The company exported tempeh and tempeh products to England, Germany, Belgium, and Luxembourg via a major distributor. Robert's Indonesian mother, Aveline, was in charge of preparing these (van Gessel 1982; Welters 1982; van Dappern 1984, each personal communications). By 1984 Tempe Production Inc. was the world's second largest tempeh manufacturer, after Marusan-Ai in Japan.

"Prior to early 1981 all of Europe's tempeh companies were located in the Netherlands and run by older Dutchmen catering largely to an Indonesian clientele. Europe's first generation of "New Age" tempeh shops was started from 1981 by young people interested in natural foods and/or macrobiotics. Europe's earliest known New-Age tempeh company was Paul's Tofu & Tempeh, which was in operation by January 1981 at 155 Archway Rd., Highgate, in London. JAKSO, the first New Age shop in the Netherlands, started in July 1981. By January 1982 there were 7 tempeh shops operating in Europe; by January 1984 there were 18. Of these, 7 were in the Netherlands, 3 in Austria, 2 each in England and West Germany, and 1 each in Belgium, France, Italy, and Sweden. Total tempeh production in the Netherlands was about 4,500 kg a week (10,000 cakes of 1 pound each) in 1982, rising to 12,000 kg a week in 1984.

"By 1980 another center of interest in tempeh had developed at the Department of Botany and Microbiology, University College of Wales, Aberystwyth, Wales, UK. There Dr. J. Hedger and Mr. T. Basuki (from Indonesia) were planning to start a tempeh factory, had produced a 4-page leaflet on "Tempe-An Indonesian Fermented Soybean Food," and had written a script for a BBC program "Tomorrow's World," on tempeh, which was broadcast in the summer of 1979. At that time tempeh was also occasionally sold in London, but the name of the manufacturer was not given (O'Neill 1980). In 1982 Hedger wrote a brief article on tempeh production." Address: Soyfoods Center, P.O. Box

234, Lafayette, California 94549.

1744. Shurtleff, William; Aoyagi, Akiko. 1985. History of tempeh in Australia (Document part). In: W. Shurtleff and A. Aoyagi, Akiko. 1985. History of Tempeh: A Fermented Soyfood from Indonesia. 2nd ed. Lafayette, California: Soyfoods Center. 91 p. See p. 31-32. [402 ref]

• **Summary:** "Australian interest in tempeh began in about 1977, when McComb published an excellent BS thesis on the use of sweet narrow-leafed lupins to make tempeh. It contained one of the best summaries of the literature to date, plus much original research. A summary of this work was given by Kidby et al. (1977).

"The earliest known Australian tempeh companies were started in about 1980, and by March 1981 there were three small ones, all run by young 'New Age' people, interested in natural foods, meatless diets, and alternative lifestyles. The first two to start were Dharma, part of Earth Foods in Waverley, run by Swami Veetdharma, and a small shop at Bodhi Farm in Channon, New South Wales, run by John Seed. Cyril and Elly Cain founded Beancoast Soyfoods in Eumundi, Queensland, and started making tempeh in July 1982. In March 1982 *Ziruiz* magazine published a long popular article "Terrific Tempeh" by Shurtleff and Aoyagi. By early 1983 Earth Angel was making okara tempeh. By 1984 there were five tempeh companies in Australia, all quite small.

"Because of Australia's proximity to Indonesia, both countries could learn much from each other about traditional and modern tempeh making." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1745. Shurtleff, William; Aoyagi, Akiko. 1985. Early commercial tempeh shops in the United States (Document part). In: W. Shurtleff and A. Aoyagi, Akiko. 1985. History of Tempeh: A Fermented Soyfood from Indonesia. 2nd ed. Lafayette, California: Soyfoods Center. 91 p. See p. 38-39. May. [402 ref]

• **Summary:** "It is not known for sure when the first commercial tempeh was made in the US. After the long and bloody war that drove the Dutch out of Indonesia and led to Indonesian independence in 1949, tens of thousands of Dutch and Dutch-Indonesian families were uprooted. Most tried to go to Holland, but the country was too small and the native Indonesians found it too cold. The United States set a quota in 1950 allowing 25,000 of these refugees to immigrate. Only about 10% were culturally native Indonesian; the rest were "Indos," i.e. Dutch-Indonesians or Chinese-Indonesians. Most went to warm areas such as California and Florida. In 1950 an estimated 500 of these settlers arrived in California. The first of these known to have started a tempeh shop was Mary Otten, who in 1961 began making tempeh in her basement on Stannage Avenue in Albany, California. She sold it to her friends and served it at parties that she catered.

For starter culture she used *ragi* (an Indonesian starter that comes in small cakes) flown in from Java, until she learned how to make her own in 1973. In 1967 she started Java Restaurant and served many tempeh dishes. Then in 1974 she and her daughter, Irene, started Otten's Indonesian Foods, which by 1981 was making tempeh plus a full line of Indonesian tempeh-based foods under the brand name Joy of Java. These foods included Sweet & Sour Tempeh and Sayur Lodeh Tempeh.

"The second earliest known tempeh shop in California (and in the USA) was Runnels Foods, which opened in Los Angeles, California in 1962. Also in Los Angeles, Toko Baru started in 1969 and Bali Foods started in 1975. Thus America's first generation of tempeh shops were all located in California and all run by Indonesian-Americans." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1746. Shurtleff, William; Aoyagi, Akiko. 1985. The Americanization of tempeh (1970 to 1980s) (Document part). In: W. Shurtleff and A. Aoyagi, Akiko. 1985. History of Tempeh: A Fermented Soyfood from Indonesia. 2nd ed. Lafayette, California: Soyfoods Center. 91 p. See p. 39-43. May. [402 ref]

• **Summary:** "The 1960s, a decade of creative scientific research on tempeh, laid the foundation for the 1970s, when tempeh began to enter the American diet. The main forces spurring increased production and consumption of tempeh after 1970 were the three closely related movements working to popularize natural foods, meatless and vegetarian diets, and soyfoods. From the late 1970s on there was a rapid growth of interest among many Americans in health, nutrition, and fitness, in low-cost protein sources, meatless diets, and world hunger, in ecology, and simpler, more satisfying lifestyles. Specific factors popularizing tempeh were the various promotional efforts, books, media coverage, and increased availability of good fresh tempeh. By the early 1980s the growing mainstream concern with cholesterol and saturated fats, had also become a significant factor.

"During the 1960s the Cornell University group under Dr. Steinkraus and the USDA Peoria group under Dr. Hesseltine and Dr. Wang had completed most of their basic research on tempeh. But a few important discoveries remained to be made during the 1970s. At Cornell, the most important findings concerned the production of significant amounts of vitamin B-12 during tempeh fermentation. In 1977 Liem, Steinkraus and Cronk showed tempeh to be one of the best vegetarian sources of vitamin B-12. Curtis, Cullen and Steinkraus (1977) showed that the B-12 was produced by the bacterium *Klebsiella*. (Nutritional analyses of commercial tempeh done by independent scientific laboratories during the late 1970s and early 1980s showed that typical samples contained an average of 8.8 micrograms of vitamin B-12 per 100 gram portion, or 293% of the US Recommended Daily Allowance of 3 micrograms.)

"The most significant research work on tempeh done by the Peoria group during the 1970s concerned the development of improved, larger scale methods for making tempeh starter cultures. The group showed that rice or a mixture of rice and wheat bran yield the most viable spores, and they developed methods whereby individuals or tempeh manufacturers could make good quality tempeh starter by themselves.

"But much more important than the research work of these two groups during the 1970s and early 1980s was their 'extension' work. Members of both groups summarized the results of their research on tempeh in at least 35 articles, both scientific and popular. They also gave many speeches. This brought tempeh to the attention of many more scientists and lay readers. Starting with the *Mother Earth News* in May 1976, a number of major magazine articles listed the USDA NRRC at Peoria as America's only source of tempeh starter. Over the next few years the Peoria group sent out some 25,000 tempeh starter cultures and instructions for making tempeh, free of charge, to people and organizations requesting them; by 1981 the number had reached 35,000. Partly to stem the flood, in June 1977 Wang, Swain and Hesseltine wrote "Calling All Tempeh Lovers" for *Organic Gardening* magazine (circulation 1,350,000) describing an easy method for making this rice-based tempeh starter at home. Steinkraus organized a Symposium on Indigenous Fermented Foods, held in Bangkok, Thailand, in November 1977 in conjunction with the fifth United Nations-sponsored conference on the Global Impacts of Applied Microbiology (GIAM V), and attended by over 450 scientists from around the world. There 17 papers were presented on tempeh, more than any other single food. In 1983 Steinkraus edited the monumental *Handbook of Indigenous Fermented Foods*, containing 94 pages of information about tempeh, much of it from the 1977 Symposium. Hesseltine, Wang, and Steinkraus also did a great deal to help America's first generation of Caucasian tempeh manufacturers start their businesses and deal with their production problems. They patiently answered hundreds of phone calls and letters from young entrepreneurs trying to educate themselves in the basics of applied microbiology—all in the best tradition of using tax dollars to serve the people and promote American agriculture and business. For their two decades of pioneering research, more than 65 publications on tempeh, and highly effective extension work, the US tempeh industry owes the Peoria and Cornell groups an immense debt of gratitude.

"Also in America during the 1970s, many other researchers published on tempeh. Chen, Packet, and co-workers (1969-72) at the University of Kentucky published three papers on antioxidants in tempeh. In 1970 Noznick and Luksas of Beatrice Foods were granted a patent on a powdered tempeh made by liquid submerged fermentation. Kao (1974) at Kansas State University wrote his PhD dissertation on tempeh made from chick-peas (*garbanzos*),

horsebeans (broad beans), and soybeans. James Liggett of Foundation Foods developed a tempeh meat analog containing sesame seeds (*Soybean Digest* 1975). Jurus and Sundberg (1976) were the first to convincingly demonstrate that the tempeh mold hyphae penetrated deep into the soybeans; this helped explain the rapid physical and chemical changes during tempeh fermentation. Beuchat (1976) in Georgia, studied peanut presscake tempeh. Charles and Gavin (1977) from the Biotechnology Research Center at Lehigh University, Pennsylvania, used a creative engineering approach to investigate the microbiological, biochemical, physical, and nutritional changes occurring during tempeh fermentation. Other studies were done by Souser and Miller (1977, *Rhizopus* lipase), Aramaki (1978, acceptability of tempeh made from bulgur wheat, millet, and azuki beans), Zamora and Veum (1979, fermentation improved the quality of tempeh protein), Gomez and Kothary (1979, tempeh from red kidney beans), Yueh et al. (1979, patent assigned to General Mills Inc. for a process for producing a soy & potato fried tempeh snack food), Rathbun and Shuler (1982, 1983, heat and gas transfer during tempeh fermentation),

“During the early and mid-1970s, in addition to the groups at Cornell and Peoria, there were four other main groups that played leading roles in introducing tempeh to America: The Farm in Tennessee, The Soyfoods Center in California, Rodale Press in Pennsylvania, and the food- and counter-culture media.

“A great deal of the credit for introducing tempeh to the American public goes to The Farm, a large spiritual and farming community of ‘long-hairs’ living on 1,700 acres in Summertown, Tennessee. People at The Farm pronounced the name of this food as TEM-pi, instead of the standard TEM-pay. In late 1971 Alexander Lyon, a member of The Farm with a PhD in biochemistry, learned about tempeh while doing library research on soy-based weaning foods. In 1972 he helped The Farm to set up a small ‘soy dairy.’ While serving as its first manager, and using starter culture and literature supplied by Drs. Hesseltine and Wang at the USDA in Peoria, Illinois, he worked with Dianne Darling to make an occasional small batch of tempeh for the soy dairy crew. In 1972 or 1973 Dianne wrote a ten-step kitchen method for making tempeh using spore suspension for inoculum. Soon Deborah Flowers made two large batches of tempeh, incubated in the boiler room at the Canning and Freezing plant, and many Farm members had their first taste. The group developed a method for growing tempeh starter on chopped, sterilized sweet potatoes with cultures in test tubes. This was America’s first Caucasian-run tempeh shop, although it was not a commercial shop. Tempeh was an immediate hit in The Farm’s vegan or total vegetarian diet—a diet containing no dairy or other animal foods. In 1974 Stephen, The Farm’s spiritual teacher, visited Amsterdam on a European trip and came back with a new realization of the potential of tempeh for The Farm and for a new industry in

America.” Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1747. Shurtleff, William; Aoyagi, Akiko. 1985. The Americanization of tempeh (1970 to 1980s) (Continued—Document part II). In: W. Shurtleff and A. Aoyagi, Akiko. 1985. *History of Tempeh: A Fermented Soyfood from Indonesia*. 2nd ed. Lafayette, California: Soyfoods Center. 91 p. See p. 43-46. May. [402 ref]

• **Summary:** Continued. “In 1974 Cynthia Bates joined the Soy Dairy crew and learned the basic lab techniques for making tempeh starter from Alexander. She built a tempeh incubator out of an old refrigerator and by November 1974 was making 20-30 pound batches of okara tempeh, using the soy pulp (okara) left over after making soymilk. By January 1975 The Farm Tempeh Shop was making 80-200 pounds of tempeh a week. The incubator was expanded into a used bean dryer and sporulated okara tempeh (dried and ground) started to be used as a starter. In 1975, in order to share their discovery with people across America and around the world, the community (now having 1,100 members) featured a section on tempeh (written by Cynthia Bates) in their widely read *Farm Vegetarian Cookbook*, including the first tempeh recipes to be published in any European language (Farm 1975).

“In 1975, after Wang, Swain and Hesseltine at the NRRC published their paper on mass production of tempeh spores, Bates set up a little laboratory and began making tempeh starter for use on The Farm. The starter was grown on rice, using the syringe inoculation technique and a spore suspension of starter sent periodically and kindly by Dr. Wang. By 1976 powdered pure-culture tempeh starter, made by Bates at the Tempeh Lab, was being sent out or sold to interested people. Publications were now needed to explain how to use the starter to make tempeh, then how to cook the tempeh. In 1975 or early 1976 Alexander Lyon typed up a three-page flyer titled ‘Tempeh Instructions,’ which contained the first instructions in any European language for making tempeh at home, and listed The Farm as a source of tempeh starter. Bates wrote and The Farm printed a 2-page flyer titled ‘Tempe,’ which described how to make five pounds of tempeh and contained four recipes, including the world’s first Tempeh Burger recipe. This flyer was distributed with the starter, along with ‘Fermentation Funnies,’ cartoons introducing tempeh. In 1976 Bates and co-workers wrote a 20-page article titled ‘Beatnik Tempeh Making’ (later retitled ‘Utilization of Tempeh in North America’) for the Symposium on Indigenous Fermented Foods in Bangkok.

By Sept. 1976 the Tennessee Farm community, with Suzie Jenkins as tempeh production manager, was making at least 60 pounds of tempeh a day, and they were using a centrifuge (Cynthia Bates’ idea) to dewater the soybeans after cooking and before inoculation—a technological breakthrough that soon caught on among commercial tempeh

makers.

Also by 1976 The Farm's satellite farms had established commercial tempeh shops in San Rafael, California, and Houma, Louisiana. A number of America's early tempeh shops (such as The Tempeh Works in Massachusetts or Surata Soyfoods in Oregon) were started by people who learned the process on The Farm. America's first soy deli, set up in August 1976 at the Farm Food Company's storefront restaurant in San Rafael, featured tempeh in Tempeh Burgers, Deep-fried Tempeh Cutlets, and Tempeh with Creamy Tofu Topping, the first tempeh dishes sold in an American-style restaurant.

"The media blitz for tempeh that began in 1977 created a booming little business on The Farm for tempeh ingredients. A January 1977 article in *Organic Gardening* listed The Farm as the only known source of split, hulled soybeans. Orders began to arrive. Soon Dr. Wang at the USDA in Peoria, flooded by orders for tempeh starter, was forwarding many of them to The Farm. Then articles by The Farm (Cynthia Bates and Deborah Flowers) about tempeh in *Mother Earth News* (Sept. 1977) and *East West Journal* (July 1978) led to a surge of orders for both starter and split soy beans.

"In 1977 Farm Foods was founded; it took over marketing of the tempeh starter, together with hulled soybeans and revised editions of the tempeh instructions (1977, 1978). The three items were sold nationwide as America's first Tempeh Kit by mail order and in some natural food stores. The starter was also sold separately with the leaflet. During 1978 Farm Foods promoted its tempeh starter and tempeh kit by serving grilled tempeh at numerous natural foods trade shows. A large sidebar in the February 1978 issue of *Organic Gardening* magazine listing Farm Foods as the best source of tempeh starter and split beans, followed by letters of referral from Rodale Press thereafter, stimulated sales. Also in 1978 Hagler edited a revised edition of the *Farm Vegetarian Cookbook*; it contained 12 pages on tempeh, including many recipes. In 1982 Farm Foods began actively advertising and selling bulk, powdered tempeh starter to America's growing number of tempeh shops, and by 1984 they had captured a majority of the market. Prior to 1979 tempeh had been available on The Farm only on special occasions. In that year, however, a Tempeh Trailer, developed in Louisiana by John and Charlotte Gabriel, was brought to The Farm. The tempeh incubator was moved out of the Canning and Freezing building and made into a walk-in incubation room in the trailer. John Pielasczyk became head tempeh maker, and thereafter any Farm member could go at almost any time to the Farm store, open the freezer, and take home tempeh. In 1981 Margaret Nofziger, Farm nutritionist, wrote an article on 'Tempeh and Soy Yogurt,' with five tempeh recipes, for *Vegetarian Times*.

"In late 1983 and early 1984 The Farm underwent a major financial restructuring. Farm Foods became financially

independent from The Farm and in May 1984 the Tempeh Lab (under the directorship of Cynthia Bates) became independent of Farm Foods. Both became 'for-profit' companies. In March 1984 The Farm published *Tempeh Cookery*, America's fourth popular book about tempeh and the first with full-page color photos (Pride 1984). To promote this book (and tempeh), in June 1984 Farm Foods and its sister company, The Book Publishing Company, served samples of deep-fried tempeh and several tofu dishes to 20,000 attendees of the American Booksellers Association Convention in Washington, D.C. Farm Foods was also planning to have one or more large tempeh companies (perhaps one on each coast of the USA) make private labeled tempeh, which would then be sold nationwide through the company's extensive soymilk ice cream (Ice Bean) distribution channels. Farm Foods could then also use the tempeh, the starter, and the book to promote each other." Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1748. Shurtleff, William; Aoyagi, Akiko. 1985. The Americanization of tempeh (1970 to 1980s) (Continued—Document part III). In: W. Shurtleff and A. Aoyagi, Akiko. 1985. History of Tempeh: A Fermented Soyfood from Indonesia. 2nd ed. Lafayette, California: Soyfoods Center. 91 p. See p. 46-49. May. [402 ref]

• **Summary:** Continued. "William Shurtleff and Akiko Aoyagi of The Soyfoods Center in California were also active in helping to introduce tempeh to America. They first became aware of and interested in tempeh in March 1975 in Tokyo after reading *The Farm Vegetarian Cookbook*. In their *Book of Tofu* (1975), they included a recipe for homemade tempeh and seven Indonesian-style tempeh recipes (learned from an Indonesian tempeh maker in Tokyo), the first such recipes ever published in English. This whole section was published in *Mother Earth News* in May 1976. In late 1976, during a two-week visit to The Farm in Tennessee, they wrote (with Cynthia Bates) a 4-page pamphlet titled 'What is Tempeh?' which they enlarged and published in early 1977. In May 1977 they spent a month in Indonesia studying tempeh, and in June their article "Favorite Tempeh Recipes" was published in *Organic Gardening* magazine. In January 1978 William Shurtleff presented a paper and demonstration on how to make tempeh from winged beans at an International Seminar on Winged Beans in the Philippines.

"In July 1979 Harper & Row published their *Book of Tempeh*, the first book in the world devoted entirely on tempeh. It contained the first sizeable collection of American-style and Indonesian tempeh recipes (130 in all), the first illustrated descriptions of making tempeh, tempeh starter, and onchom (ontjom / oncom) on various scales in Indonesian tempeh shops, the first history of tempeh, detailed discussion of tempeh in Indonesian culture and of the many varieties of Indonesian tempeh, and the first

recommendations for commercial names for the more than 30 types of tempeh that could easily be made in the West. It also contained chapters and reviews of the literature on tempeh nutrition and the microbiology and biochemistry of tempeh fermentation, plus the largest bibliography on tempeh to date (including many new Indonesian references), an annotated listing of 61 people and organizations around the world connected with tempeh, and the first list of tempeh companies in the West. By early 1984 16,600 copies of the paperback edition and 960 copies of the enlarged professional hardcover edition had been sold. Between 1976 and 1982 they wrote eight articles on tempeh for popular and trade magazines.

"In March 1980 The Soyfoods Center published *Tempeh Production*, the first book describing how to start and run a commercial tempeh plant in industrialized or Third World countries. In 1981 Shurtleff and Aoyagi wrote a book on tofu, miso, and tempeh that was published in Mexico in Spanish, and in 1982 they published books containing bulk tempeh recipes and tempeh labels. Starting in 1982 Shurtleff did extensive annual surveys of the tempeh industry and market in the USA, which were published yearly by The Soyfoods Center in *Soyfoods Industry and Market: Directory and Databook*. The Center also developed and sold color slide sets on "Tempeh," "Tempeh Production in the USA," and "Tempeh Production in Indonesia." In 1985 The Book of Tempeh will be published in German as *Das Tempeh Buch*.

"Another early pioneer of tempeh in America was Rodale Press in Emmaus, Pennsylvania, best known as the publisher of *Organic Gardening* and *Prevention* magazines. In the spring of 1975 Rodale's R&D department decided to follow up on the work with tempeh done by Hesseltine and Wang at Peoria. In early 1976 R&D food technologist Mark Schwartz began to work with Dr. Wang in Peoria to develop a simple, inexpensive way to make tempeh at home. They devised a tempeh kit including an incubator made from an inexpensive Styrofoam picnic cooler heated by a light bulb. For a Reader's Research Project, they sent the kit with instructions and a questionnaire to 60 readers across the country, and asked for feedback. The unanimous response was that people found the new food easy to make and delicious (Podems 1976). This R&D work led to five major articles in 1976 and 1977. In March 1976 Brenda Bortz in 'The Joys of Soy' introduced tempeh and Rodale's tempeh research to readers of *Organic Gardening* (OG). In January 1977 OG ran 'Tempeh Keeps 'em Coming for More Soybeans.' Jack Ruttle, a Rodale staffer, summarized the results of Rodale's research on tempeh to date and gave detailed instructions for making tempeh at home. This was the first major popular article on tempeh published in America. In June *Prevention*, the largest health-food magazine in America, ran a cover story and editorial by Robert Rodale titled 'Tempeh, a New Health Food Opportunity.' He visited America's first Caucasian-owned

tempeh shop (run by Gale Randall), encouraged others to start tempeh shops and to 'get in on the ground floor of a new industry,' and predicted that tempeh might well become America's most popular way of using soybeans as part of the 'coming soy boom.' 'Tempeh is on its way up,' he wrote. 'Before long it will be eaten widely and lovingly across this land of ours.' Also in June OG published Shurtleff and Aoyagi's 'Favorite Tempeh Recipes' and Wang, Swain, and Hesseltine's 'Calling all Tempeh Lovers.' In addition Rodale Press published books with extensive information on tempeh: *Home Soyfood Equipment* (Wolf 1981) and *Tofu, Tempeh, & Other Soy Delights* (Cusumano 1984). Wolf's book included a new method for making tempeh at home using unsalted soynuts, which took less time and cost only about 28% (10 cents) more per pound than the traditional method. Detailed plans for making a home tempeh incubator were given. *Organic Gardening* (March 1982) summarized Wolf's quick tempeh method.

"Starting in 1971, the American media first began to take an interest in tempeh, when Food Processing magazine, in its 'Foods of Tomorrow' section did an article on 'Specialty Fermented Foods,' discussing their potential acceptability in the American market. It concluded: 'But of all fermented foods, tempeh, with its high ratings in taste, nutritional benefits, and simple, low cost processing techniques, appears to be the most likely candidate for Americanization . . . Tempeh may be one of the next to appear in the US market place.' In May 1976 *Mother Earth News* (Issue #39) ran a long excerpt on tempeh from *The Book of Tofu* by Shurtleff and Aoyagi. Media coverage expanded significantly in 1977. First came the three major Rodale Press articles mentioned above. In September *Mother Earth News* featured 'How we Make and Eat Tempeh Down on the Farm,' and in November *Vegetarian Times* ran 'Tempeh.' In July 1978 *East West Journal* ran its first tempeh story, 'Make Your Own Soyburger' about the Farm's tempeh. These many articles contained recipes and detailed instructions for home preparation, and some gave the address of the NRRC in Peoria, Illinois as a source of free tempeh starter. In less than 18 months, over 25,000 people requested starter and began making tempeh at home. This early media coverage for tempeh was a veritable blitz for a largely unknown food, and most of the publications had large circulations. In addition descriptions of tempeh began to appear in popular books, such as Beatrice Hunter's *Fermented Foods and Beverages* (1973).

"The first commercial Caucasian American tempeh shop was started in the winter of 1975 by Mr. Gale Randall in Unadilla, Nebraska." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1749. Tanaka, Nobumasa; Kovats, S.K.; Guggisberg, J.A.; Meske, L.M.; Doyle, M.P. 1985. Evaluation of the microbiological safety of tempeh made from unacidified

soybeans. *J. of Food Protection* 48(5):438-41. May. [10 ref]  
 • **Summary:** Pathogens were added to either the soybeans before fermentation by *Rhizopus oligosporus* or the tempeh after fermentation and steaming. In the latter method, the inoculated products were incubated at several different temperatures (5, 10, 15 and 25°C). Describes the growth and toxins produced by *Clostridium botulinum* (types A and/or B), *Staphylococcus aureus*, *Salmonella typhimurium*, and *Yersinia enterocolitica*. All of the pathogens evaluated grew well and produced toxins under at least some conditions. "Results of these studies indicate the need for maintaining: (a) a high level of sanitary practices during production and (b) good refrigeration (less than or equal to 5°C) of the product following fermentation until it is used."

Note: It is also very important to acidify the soybeans before fermentation. Address: Food Research Inst., Univ. of Wisconsin, Madsion.

1750. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Thomas Tempeh.

**Manufacturer's Address:** 167 Tagensvej, DK-2400 NV Copenhagen, Denmark.

**Date of Introduction:** 1985. May.

**Ingredients:** Incl. organic soybeans.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Thomas Andersen of Urten's Tofu. 1990. May 24. He founded this company at this address and started making tempeh in May 1985. It was Denmark's first tempeh company. The tempeh was made with organically grown soybeans from the very beginning. On 1 Jan. 1986 he moved the business to Soendergade in the city of Toelloese, Denmark. The business was still named Thomas Tempeh.

1751. Torii, Yasuko. 1985. The Book of Tôfu to no deai: Amerika no tôfu buumu no haikēi [My encounter with The Book of Tofu (by Shurtleff & Aoyagi): The background of the tofu boom in America]. *Daizu Geppo (Soybean Monthly News)*. May. p. 31-35. [Jap]  
 Address: Nihon Yuki Nogyo Kenkyukai Jonin Kanji.

1752. Roger, Patrick. 1985. [Re: New developments with soyfoods in France, and the Association Rurale des Travailleurs sur Soja]. Letter to William Shurtleff at Soyfoods Center, June 12. 3 p. Typed, with signature. [1 ref. Fre; eng+]

• **Summary:** "Many of the farmers in my region have told me that they grew soybeans during World War II. It seems that this was a sort of culture (tax or duty on which the farmers were owing/in debt), for the German occupants considered the soybean to be a strategic commodity.

"More recently, in 1974, it is under the impetus of Mr. Jean Claude Sabin, sometimes called 'Mr. Soja,' that

the culture of soya has taken off again in France, starting with the Department of Tarn. Mr. Sabin is presently president of various organizations actively involved with popularizing soybean culture in France. I'd like to point out the little newsletter edited by l'ONIDOL (Office of Oilseed Development) titled *L'Inoculum*. It contains extensive useful information on the culture of soya in France. Subscriptions are free. Write: L'Inoculum, 17 rue Fleurance, 31400 Toulouse, France.

"Finally a little history of l'ARTS. Our association was officially created in December 1983 by Olivier Attie, who is today its president, by Jacques Isnard and Alain Lacombe, who manage SOJADOC, which makes tofu and tofu products, and by myself who am now director. The base of the association is now widened to include other members. Those in charge of businesses such as Mrs. Sakaguchi, Colin, Wintzer, Garcia; people working in public organizations; soy researchers; wholesalers. Presently the three of us most actively involved are (1) Olivier, who is most particularly interested in the development projects in Africa. (2) Anne Caderas de Kerleau, who is collecting important documents and writing a book on soya, and (3) me, who keeps people connected by publishing *La Lettre de l'ARTS* and does investigations as on markets, adapted varieties of soybeans, etc.

"By the way, we have a project to launch in the near future the idea of a European Soyfoods Manufacturers Assoc. (but there is no good equivalent for the word 'Soyfoods' in French). We are in the process of working out the laws but the divisive political and linguistic context in Europe makes these things very delicate. In this body we will try to work together to establish standards for production and labeling, to protect soyfoods from the attacks of the dairy lobbies, and to publish a 'Soyfoods Letter' in English and French...

"Here is a list of recent arrivals on the market in France: Sojadoc (fresh tofu and tofu cuisine), Sojagral Ouest (tofu), La Maison du Tofu (tofu), L'Athanor (tempeh), Sapov (soymilk, natural or deodorized)... It seems that 1986 will be the boom year for soy products in France...

"Our training session on tofu took place in November 1984 at Penne and Corbarieu. It has been followed by Mani Coulibali of Senegal, who has since been sent by AGROPOL [Association pour le Développement International Agronomique et Industriel des Proteagineux et des Oléagineux] as a soya expert for Africa, and by Koffi Aquereburu, who is looking for partners/financiers for a tofu project in his country, Togo.

"I have previously set up a shorter session in the same way (at the same time) a dossier of study (in Spanish) for Hidegar Garcia of Venezuela in view of setting up an experimental shop in that country. I have had no news from him since then.

"The next stage, organized by Olivier Attie, will take place in July by a person from Burkina Faso (formerly Upper

Volta) in view of implementing a low technology shop in his country.” Address: Director: 1. La Guitarde, 82370 Corbarieu, France; or 2. ARTS (Association Rurale des Travailleurs sur Soja), Presbytere de Saint-Paul-de Mamiac, 81140 Penne du Tarn, France. Phone: 63/56 34 09.

1753. Malafia Granhao, Sergio. 1985. Re: Work with soyfoods in Portugal. Letter to William Shurtleff at Soyfoods Center, June 13. 2 p. Handwritten. [Eng]

• **Summary:** “I am a student at the Chemical Engineering Department of the University of Porto (Porto, Portugal). “I am getting a degree in Bioengineering and I’m doing a preliminary project about soyfood.”

“Here are the names and addresses of institutions in Portugal that work with soyfood: (1) Piramide, Rua do Breimer 50, 400 Porto, Portugal. Piramide already produces some kinds of soyfood but is going to start to make tempeh; (2) Suribachi, Rua do Bonfirm 136/40, 4300 Porto, Portugal; (3) Trigramma, Rua do Centro Cultural, 5-r/c, 1700 Lisboa, Portugal. Address: Rua da Cruz 111 r/c esq., 4200 Porto, Portugal.

1754. Takamine, Kazuhiro. 1985. Re: Thanks for new edition of book. Glad to see history of tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, June 25. 2 p. Typed, with signature on letterhead.

• **Summary:** “I was delighted to hear from you and received your kind complimentary copy of new edition, *The Book of Tempeh*.

“I felt so happy to know that what I talked with you in Lafayette was introduced” in the history section of this book [p. 153-54]. That section “reminded me of the time I spent in your house and many ideas of promotion of tempeh in Japan given through Akiko-San’s cooking and talks with your friends.

“I have some additional information on our tempeh factory. Torigoe started to make tempeh at new factory from July 1984. This factory has a capacity of 100 tonnes of a plain tempeh a month. Torigoe determined to build a new factory at the end of 1983 in order to meet the expectation of demand in the future. We designed the fermentation room to be controlled automatically, direct shock freezing system and also purification facility for sewerage disposal controlled under microbes and so on.

“We hope tempeh business will grow steadily year by year and your activity will spread out all over the world through tempeh.

“Please give my best regards to Akiko-San. Sincerely yours,...” Address: Torigoe Flour Milling Co., Ltd., Yoshii-machi, Fukuoka-ken 839-13, Kyushu, Japan. Phone: 094375-3121.

1755. Aoki, Sadao. 1985. Nattô oyobi tenpe no seizô ni tsuite [Natto and tempeh production]. *Daizu Geppo* (Soybean

*Monthly News*). June. p. 10-18. [Jap]

Address: Hakko Shokuhin Bucho, Tochigi-ken Shokuhin Kogyo Shidosho.

1756. Hesseltine, C.W.; Featherston, C.L.; Lombard, G.L.; Dowell, V.R., Jr. 1985. Anaerobic growth of molds isolated from fermentation starters used for foods in Asian countries. *Mycologia* 77(3):390-400. May/June. [18 ref]

• **Summary:** Ragi (in Indonesia), murcha (in north India and Nepal), look pang (in Thailand), bubod (in the Philippines), and Chinese yeast or chiu-chu (in Taiwan and China) are used as starters for a number of fermentations based on rice and cassava in the Orient. The starter consists regularly of certain species of *Mucor*, *Rhizopus*, and *Amylomyces* and not of other molds, even though the production of starters is often made under unsanitary conditions. The peculiar ability of these molds to grow under anaerobic conditions is found to explain why these starters can be made to be so free of contaminating molds even though the conditions under which they are made are so unsanitary. Address: 1-2. NRRC, Peoria, Illinois, 61604; 2-3. Anaerobic Bacteria Branch, Center for Infectious Diseases, Centers for Disease Control [CDC], Atlanta, Georgia, 30333.

1757. Karyadi, Darwin. 1985. Cornell menyelidiki tempe [Research on tempeh at Cornell University]. *Intisari* (Indonesia). June. p. 57-60. [Ind]

Address: Bogor, Indonesia.

1758. Kushi, Aveline; Jack, Alex. 1985. Aveline Kushi’s complete guide to macrobiotic cooking: For health, harmony, and peace. New York, NY: Warner Books. xvii + 414 p. June. Illust. Index. 23 cm. [36 ref]

• **Summary:** Index entries include: Miso 61, Tofu 50, Tamari 19, Tempeh 17, Whole dry soybeans 6, Natto 3, Soymilk 3, Yuba 1. This book calls ganmodoki “Tofu Croquettes” and further states that “*Gan* means ‘crane’ and *modoki* means ‘looks like.’” Among the 31 chapters are ones titled Beans (incl. basic black soybeans, and brown rice with black soybeans); Tofu, Tempeh, and Natto (including yuba); Sea Vegetables; Condiments and Garnishes (incl. miso), and Fish and Seafood.

Under “Black Soybeans” (p. 257) were read: “These nice shiny beans are also called Japanese black beans. They have a strong, delicious taste. Their juice is said to make the voice clear and beautiful. Throughout Japan, mothers prepare their children for music tests and singing lessons with this dish. Black soybeans are also used medicinally to help discharge animal toxins from the body.” Note: This is the earliest macrobiotic cookbook seen that uses the term “Black soybeans” in a recipe title. All previous macrobiotic cookbooks called them “Black beans.”

Contains recipes for homemade tofu, tempeh, and natto. Address: Brookline, Massachusetts.

1759. *Natural Foods Merchandiser*. 1985. Refrigerated/frozen foods get a blast from the past. June. p. 1, 54-59.

• **Summary:** Includes excellent discussions of tempeh, soymilk, and non-dairy frozen desserts including Tofutti, Ice Bean, and Rice Dream. One retailer says: "We've never had a product line like Tofutti, where customers practically tell us they'll bomb our store if we don't carry it." Tofutti continues to show strong sales, but it is facing competition from other soy-based frozen desserts (such as Ice Bean), as well as ice cream facsimiles made from fruit (such as Yodolo) or rice (such as Rice Dream).

On the same pages as the article are color ads for Rice Dream and Legume "Enlightened Entrees with Tofu."

1760. **Product Name:** Tempeh.

**Manufacturer's Name:** Noble Bean.

**Manufacturer's Address:** R.R. 1, McDonalds Corners (near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-2305.

**Date of Introduction:** 1985. June.

**Ingredients:** Soybeans, water, culture.

**Wt/Vol., Packaging, Price:** 12 oz perforated plastic bag (not vacuum packed).

**How Stored:** Frozen.

**New Product–Documentation:** Talk with Allan and Susan Brown of Noble Bean. 1998. June 22-24 (which see). In June 1985, after about 5 years in Toronto, they bought ten acres of land near McDonalds Corners (not far from The Farm in Lanark, Ontario), and moved Noble Bean onto that land. There, in their third location, they once again started to manufacture commercial tempeh. Remember: They began in Lanark in June 1979 and continued in Toronto in June 1980.

1761. **Product Name:** Tempeh Burgers, and Tofu Burgers.

**Manufacturer's Name:** Sooke Soy Foods Ltd.

**Manufacturer's Address:** 2625 Otter Point Rd., R.R. 2, Sooke, Vancouver Island, BC, V0S 1N0, Canada. Phone: 642-3263.

**Date of Introduction:** 1985. June.

**Ingredients:** Tofu (or tempeh), natural soy sauce, herbs and spices.

**Wt/Vol., Packaging, Price:** Tofu: 8 oz. Tempeh: 6 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Labels. 1985. 3 inch diameter. Self adhesive. Brown (Tofu) or Green (Tempeh) on beige. "Ready to serve, or steam for 5 minutes. Meatless."

1762. Sutardi, -; Buckle, K.A. 1985. Phytic acid changes in soybeans fermented by traditional inoculum and six strains of *Rhizopus oligosporus*. *J. of Applied Bacteriology* 58(6):539-43. June. [12 ref]

• **Summary:** "Tempeh was prepared from Delmar variety soybeans inoculated with the traditional Indonesian inoculum

(*usar*) and 6 pure culture strains of *Rhizopus oligosporus*. The strains BTU3K1 and CT11K2 produced the best quality tempeh. The phytic acid content of soybeans was reduced from 1.07% in whole dry soybeans to 0.67-0.75% in tempeh. Most mould strains did not have a significantly different effect on reducing the phytic acid content in tempeh." Address: School of Food Technology, The Univ. of New South Wales, P.O. Box 1, Kensington, NSW 2033, Australia.

1763. Tsen, Hau-Yang; Tong, Chii-Gong. 1985. [Changes in enzymatic activity and biochemical constituents during the fermentation of defatted soybean meal with *Rhizopus thailandensis*]. *Chung-Kuo Nung Yeh Hua Hsueh Hui Chih (J. of the Chinese Agricultural Chemical Society, Taiwan)* 23(1-2):111-18. June. [20 ref. Chi; eng]

• **Summary:** "After one day's fermentation with *R. thailandensis*, the phytate content in the soybean meal changed insignificantly. However, in the fermented soybean meal, the crude fiber content decreased and the contents of proteins, amino type nitrogen as well as the free amino acids increased. In addition, the oligosaccharides, such as raffinose and stachyose were removed during fermentation and the molecular weight of most proteins in the fermented product decreased to less than 10,000. Therefore, with the view point of nutrition, for example, the efficiency of its digestion, absorption and utilization in the digestive tracts of animals, the fermented soy bean meal is more nutritious than the unfermented soybean meal if the effect of phytic acid was not considered." Address: Dep. of Food Science, National Chung Hsing Univ. Taichung, Taiwan, Republic of China.

1764. Vaidehi, M.P.; Vijayalakshmi, D.; Annapurna, M.L. 1985. Consumer evaluation of tofu, tempeh, curd, and "Meal Maker" in urban areas. *Indian J. of Nutrition and Dietetics* 22(6):190-93. June. [15 ref]

• **Summary:** Rural Indian consumers (mostly housewives, predominantly of middle and low income) preferred tempeh and tofu curries to Meal-Maker (textured soy flour) in appearance, flavor, aroma, and after taste, while urban consumers preferred Meal-Maker curry, followed by tempeh and tofu curries. Soy curd (like yogurt) was least preferred by both rural and urban consumers. Address: Univ. of Agricultural Sciences, Hebbal, Bangalore 560 024, India.

1765. **Product Name:** Quinoa Tempeh.

**Manufacturer's Name:** White Wave, Inc.

**Manufacturer's Address:** 1990 North 57th Court, Boulder, CO 80301.

**Date of Introduction:** 1985. June.

**New Product–Documentation:** Label. 1985, undated. 5 by 6.5 inches. White, yellow and black on red background. Tempeh Mock Chicken Salad recipe. Quinoa is a high protein grain from the ancient Incas of Peru. Interview with Lonnie Stromnes. 1987. Aug. 31.

1766. Sheraton, Mimi. 1985. International pot luck: Variety spices the country's rich culinary life. *Time* 126(1):98-99. July 8.

• **Summary:** This article is part of a special issue of *Time* magazine about immigrants. It notes that as Americans learn about new ethnic cuisines, they are also "busy naturalizing foreign ingredients into native dishes: tofu, the cheeselike soybean curd, as the base for burgers and ice cream... Tempeh, the Oriental fermented soybean cake, is here formed and flavored to simulate bacon and pastrami."

"How long can it be before Benihana is joined by chains with names such as Tacorama, the Piteria, Dim-summy and even Tofusion."

A photo captioned "A sundae kind of love," notes that "there is not one drop of dairy product in the tofu-based 'Ice cream.'" Developed for Jews who observe kosher laws and cannot combine dairy and meat products in the same meal, this creamy soybean-based frozen dessert also satisfies those on low-calorie diets."

Note: This is the earliest known article in *Time* magazine that mentions tempeh.

1767. Tsujimura, Katsura. 1985. Re: Thinking about tempeh, salted koji, and natto. Letter to William Shurtleff at Soyfoods Center, June 12. 2 p. Typed, with signature. [Eng]

• **Summary:** He thanks Mr. and Mrs. Shurtleff for their present of the new edition of 'The Book of Tempeh,' and makes a few observations about the symposium "Non-Salted Soybean Fermentation" to be held July 15-18 at Tsukuba Science City.

He is interested in understanding the connection between the microorganisms of kinema, thua-nao, natto, and onchom merah of Indonesia (*Neurospora*).

"You have mentioned a food named 'Tou Chiah Ping (soy bean fried cake),' reported and photographed at Beijing [China] in 1931. (p. 155)" Is its Chinese characters [three handwritten characters]?

"Unfortunately you could not get new information by asking 10 Chinese. None of them knew about it. This means that the food was lost or was eaten only by lower classes.

"You have referred to the relation of tou ching ping and tempe. I also imagine tou-chiah-ping was one of the original types of the consumption of soybean-koji, before it was used for enzyme reaction, as in the case of miso production. Salted koji (in Japan it is known variously as Tera-natto, Daitokuji-natto, Hama-natto or Shiokara-natto) is another type of consumption. It improves preservation and serves as an appetizer of boiled rice. From it miso and soya sauce were developed.

"At present grain-koji (made of rice or wheat) is usually used for miso and soya-sauce production. Soybean protein is hydrolyzed by grain-koji. Grain-koji itself is never eaten directly. It is also used as enzyme preparation to hydrolyze

starch to make 'Amasake' or as the raw material for 'Sake' making. Whether grain-koji was eaten in ancient time or not, I have no information.

"Natto and 'Oncom merah' are unique products utilizing *Bacillus* and *Neurospora* respectively. I suppose both might developed from failed production of molding.

"There are two kinds of onchom, black onchom and red onchom; the former is made using *Rhizopus*, and is the analogue of tempeh. You have classified this as a type of tempe..."

"Natto resulted from the failure of soybean-koji production, I suppose. Natto developed in northeast Japan, where the climate was cooler than in southeast. One must maintain warm temperature to grow *Aspergillus* to get koji. So they packed the cooked soybean in the straw parcel, and this resulted in the growth of *Bacillus* instead of *Aspergillus*. The wet condition on the surface of boiled soybean may benefit to the *Bacillus* (unfortunately I have no experimental evidence).

"I am interested that the process of the development of natto and onchom (red onchom), which seem to be resemble each other. Sincerely yours,..." Address: Prof. of Nutrition, Higashi Nakano 2-5-5, Nakano-ku, Tokyo 164, Japan.

1768. *Asahi Shinbun (Asahi Daily News, Tokyo)*. 1985.

"Mirai shoku"—nattô: Tsukuba de kokusai shinpojiumu [Food of the future—Natto: International symposium in Tsukuba]. July 13. [Jap]

• **Summary:** While focusing on the international symposium on non-salted fermented soybean foods, held in Tsukuba, Japan, this article discusses tempeh as a type of natto. A map shows the natto—kinema—thua nao—tempeh triangle joining Japan, Nepal, Thailand, and Indonesia. Address: Japan.

1769. *Toyo Shinpo (Soyfoods News)*. 1985. '85 Ajia "muen Hakko Daizu" Kaigi 7/15-16 oite Tsukuba Kenkyû Gakuen Tosh Kôryû Sentaa [1985 No-Salt Fermented Soybean Conference, July 15-16 at Tsukuba Research Center]. July 21. p. 9. [Jap; eng+]

• **Summary:** Representatives from 15 overseas countries attended. Natto and tempeh's "International Symposium" opens. 350 people attended; they had active discussions. Thua-nao (*chuana*) from Thailand was discussed.

1770. *Toyo Shinpo (Soyfoods News)*. 1985. Nyûjô kyaku 5,000 nin ni apuroochi [Nearly 5,000 people attended]. July 21. p. 8. [Jap; eng+]

• **Summary:** About the 1985 No-Salt Fermented Soybean Conference, July 15-16 at Tsukuba Research Center. Natto products were exhibited at a vegetable protein fair. It was sponsored by the Dep. of Agriculture and Forestry (*Nôsuisho*), from Aug. 26 to Sept. 7 at their building. Vegetable protein is a basic part of our daily life. At that time the Japanese Natto Association introduced tempeh, and they

took a poll of 140 people. 4.9% of women were aware of tempeh. Mr. Kanasugi introduced tempeh foods to people. Samples of tekka miso, croquettes, fried tempeh, and tempeh burger were served. People like the flavor of these.

1771. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo, Evening ed.*). 1985. "Nattô"—sekai ni shinshutsu ["Natto" is spreading out across the world]. July 24. [Jap]

• **Summary:** About the international symposium on non-salted fermented soybean foods held in Tsukuba, Japan. Discusses tempeh as well as natto. Photos show: (1) A man making tempeh in Indonesia. (2) A Japanese woman holding a plate of tempeh snacks. Address: Japan.

1772. Harrison, Slater. 1985. Re: The state of soybean usage in Bangladesh. Letter to William Shurtleff at Soyfoods Center, July 25. 3 p. Handwritten, with signature on two aerogrammes. [1 ref]

• **Summary:** There are now four MCC people working with soybeans. George Horlings is an extensionist working almost exclusively with soybean at the farm level. He has been having lots of trouble getting the seed to last from one harvest to the next time of planting. Carl and Ilean Bergan are food technologists; they recently replaced Ron Martins. Their only soyfood project is supervising the pilot soymilk plant started by Ron Martins. Slater is the fourth person working with soybeans although that is not part of his job description. He is trying to entice the Bergans with tempeh; they have never tasted it.

Slater and his wife are active food gardeners. They have grown soybeans for "edamame"—so well known in Japan—and they really love them. They have gotten hold of the very tiny seed that farmers are being encouraged to plant. There is said to be a really spectacular variety named PB (Punjab) that has tested well in Bangladesh. Address: c/o Mennonite Central Committee, Box 785, Dhaka 2, Bangladesh.

1773. Bhatnagar, P.S. 1985. Re: Thanks for 2nd edition of book. New developments with soybean in India. Letter to William Shurtleff at Soyfoods Center, July 30. 1 p. Typed, with signature on letterhead.

• **Summary:** "I am highly obliged for the second edition of your book 'The Book of Tempeh.' The publication is indeed of great value. I am sure my colleagues among the staff as well as students working on soybean would be greatly benefitted..."

"The project on soybean utilization approved under Indo-US Sub-Commission on Agriculture, is yet to be implemented. I would keep you informed about the progress. I wish if you could come to India under the provisions made in this project. A suggestion to this effect has already been made.

"The growth of soybean in India is continuing primarily for oil extraction and export of defatted soya flour. For

sustained growth we have to develop products based on defatted soya flour and create consumers awareness for increasing domestic consumption of this high protein by-product of soya oil industry. With kind regards,..." Address: Project Coordinator, All-India Coordinated Research Project on Soybean, G.B. Pant Univ. of Agriculture and Technology, Pantnagar (Uttar Pradesh), India. Phone: 291-292 Rudrapur.

1774. Asian Symposium on Non-Salted Soybean Fermentation: Tempe, Kinema, Tua-nao, Natto. The roots of biotechnology in monsoon Asia (Abstracts). 1985. Tsukuba, Japan: Tsukuba Center for Institutes. 85 p. Held 15-17 July 1985 at Tsukuba, Japan. 26 cm. [Eng]

• **Summary:** For each paper there is a Japanese-language abstract (p. 1-38), and an English-language abstract (p. 43-85). On pages 39-41 are full-page ads for Kume-Natto, Marusan Sukoyaka Tenpe [Tempeh], and Torigoe Tenpe. Address: Japan.

1775. Karyadi, Darwin. 1985. Nutritional implications of tempe in Indonesian rural community. Paper presented at Asian Symposium "Non Salted Soybean Fermentation." 18 p. Held 15-17 July 1985 at Tsukuba, Japan. [22 ref]

• **Summary:** A valuable discussion of numerous recent studies which show that tempeh consumption is increasing in Indonesia, that it lowers blood cholesterol, aids in rehabilitation and recovery from chronic diarrhea and diarrheal diseases, and has a protein complementary effect as a food supplement. The production of second generation products is encouraged to help tempeh reach more people, especially nutritional target groups, preschool children, and pregnant and lactating women. Concludes that tempeh has considerable untapped potential for developing countries.

Table 1 shows the per capita consumption of tempeh (in grams per person per day) in 13 Indonesian provinces (Source: Central Bureau of Statistics, 1981). Yogyakarta has the highest consumption (34.3 gm), followed by Central Java (27.7 gm), Jakarta (19.6), and East Java (19.4). Address: Nutritional Research & Development Centre, Ministry of Health, Indonesia.

1776. Plenty Canada. 1985. Sri Lanka Soy Utilization Project. R.R. #3, Lanark, ONT, K0G 1K0, Canada. 10 p. Unpublished manuscript.

• **Summary:** The 5-year project, aimed at increasing consumption of soyfoods in Sri Lanka, proposes to establish four soya nutrition centers in Kandy, Colombo, Vavuniya, and Tanamalwila. Each center will have equipment to make soymilk, tofu, soy ice cream, tempeh, and soy flour (to use to fortify wheat in rotti, pittu, etc.). Each center will conduct demonstrations and training classes to community groups. Address: Lanark, ONT, Canada. Phone: 613-278-2215.

1777. Soyfoods Unlimited, Inc. 1985. Introducing—Special

prices. Order now (Leaflet). 14670 Doolittle Dr., San Leandro, CA 94577. 1 p. Single sided. 8½ by 14 inches. July.

- **Summary:** This long leaflet, printed with black ink on yellowish orange paper, is offering reduced prices on two books: (1) *The Book of Tempeh*, by Shurtleff & Aoyagi. (2) *Tempeh Cookery*, by Colleen Pride. Address: San Leandro, California.

1778. Soyfoods Unlimited, Inc. 1985. Nutrition of tempeh (Leaflet). 14670 Doolittle Dr., San Leandro, CA 94577. 1 p. Single sided. 8½ by 11 inches. July.

- **Summary:** At the top of the letterhead is the Soyfoods Unlimited 3-leaf logo. Contains seven paragraphs, with eight footnotes, about tempeh nutrition, with emphasis on the vitamin in tempeh, and the reduction in oligosaccharides (which cause flatulence) during the tempeh fermentation. At the bottom of the leaflet, in bold white letters on a black background: "Discover the little known pleasure of Indonesian cuisine—enjoy Tempeh!" Address: San Leandro, California. Phone: 415-352-1320.

1779. Shurtleff, William. 1985. Re: Computerizing card catalog. Thank you for tempeh materials. Letter to Yasuko Torii, Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan, Aug. 1. 1 p. Typed, without signature (carbon copy).

- **Summary:** "Dear Torii-san. We are right in the middle of computerizing our Soyfoods Center library card catalog. Already this summer we have keyed in 7,000 cards into the computer. A very talented Stanford student is doing the actual data entry and I am preparing and then proofing every card as it is printed out. It keeps me working 12 hours a day, 7 days a week just to keep up with him. So, this will have to be brief.

"Above all I want to thank you for all of the wonderful things that you have sent me, the letters about the conference, the symposium brochures, the clippings, and your good letters. They are very, very interesting to me. I also look forward to hearing whatever tapes you send. I'll return the *Tofu-yo* [Okinawan fermented tofu] video cassette and the tapes to you by the end of September, and write more at that time when I'm a little more free. I'm also sending you \$20 to (hopefully) cover expenses (postage, etc.).\* You are such a *kichinto-shita hito*! [accurate, precise, punctual, neat and tidy person]. Both Akiko and I greatly appreciate this! Sincerely,...

"\* To make it as easy as possible for you (though it doesn't seem as much like a real gift or money), we are deducting the \$20 from your invoice. Akiko said if we sent you a \$20 bill it would at be *mendokusai* [a nuisance] to go to the bank to cash it. I hope that's okay." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

- **Summary:** Tempeh made from cowpeas has been introduced into Nigeria; remarks by Robert Djurtoft. Summary of the lecture, Part I.

1783. Becker, Robert. 1985. Tofu is out, tempeh is in, she says. *Progress* (Charlottesville, Virginia). Aug. 22.

- **Summary:** A photo shows Eileen Judge, whose company, Kingdom Foods, makes tempeh. For the past two years, she has been making 300 lbs/week of tempeh in her Charlottesville, Virginia, warehouse. Ms. Judge first learned about tempeh while working in Washington, DC, for an agency for the U.S. State Department. She was doing some research for the *League for International Food Education*.

1784. Mahmud, Mien K.; Hermana, -; Karyadi, D. 1985. A preliminary study on the use of tempeh-based formula in the dietary treatment of chronic diarrhea. *Majalah Kedokteran Indonesia* (J. of the Indonesian Medical Association) 35(8):443-46. Aug. 31. [10 ref. Eng; Ind]

- **Summary:** Seventy-nine children under age 5 with chronic diarrhea were treated using tempeh-based formula compared to 32 children who were treated using milk-based infant formula. The group of children fed the tempeh-based formula had were afflicted with diarrhea for a significantly shorter time than those who were fed the milk-based formula. Address: Nutrition Research & Development Center, Bogor.

1785. Barrett, Clare. 1985. A practical guide to soyfoods. *Vegetarian Times*. Aug. p. 33-40. No. 96. [14 ref]

- **Summary:** An overview of fresh green soybeans, whole dry soybeans, soynuts, soy sprouts, soy flour & soy grits, soy oil, soy protein isolates, soymilk, okara, tofu, tempeh, soy sauces, miso, natto. Concludes with a list of 14 recommended books on soyfoods.

1786. Eckett, Alison. 1985. Beating the protein crunch: A growing number of people are discovering the range of soyfoods, both traditional and modern, that can be made from this bean. *Food Processing* (UK) 54(8):25-28. Aug.

- **Summary:** "The term 'soyfoods' is a recent generic

expression that has been used to describe the complete range of soy products prepared for human consumption. It covers both high technology, modern products such as soy [protein] fibres, concentrates and isolates which are mainly used as ingredients by food manufacturers... and includes the traditional low technology products of soymilk, soy sauce, miso, natto, tofu, tempeh and soy sprouts that have formed part of the staple diet in East Asia for thousands of years.”

Soyfoods are divided into non-fermented and fermented. Photos show: (1) Miso Dip (front of two packages). (2) Cubes of tofu under water. (3) Nasoya Tofu Vegi-Dip. (4) Sliced cakes of tempeh. (5) The front of four tempeh packages, made by The Tempeh Works. (5) White Wave tempeh, a tempeh burger, and a promotional piece. (6) A box of Tofu Lasagna, made by Legume, Inc. (7) The front of a package of “6 All Natural Vanilla Ice Bean Sandwiches,” made from Ice Bean by Farm Foods.

1787. Gipson, Beckilynn. 1985. Processed proteins: Markets, developments. Business Communications Co., Inc., 9 Viaduct Rd., P.O. Box 2070C, Stamford, CT 06906. 112 p. Aug. Report GA-043R. \*

1788. Hesseltine, C.W. 1985. Fungi, people, and soybeans. *Mycologia* 77(4):505-25. July/Aug. [92 ref]

• **Summary:** In this Mycological Society of America Annual Lecture, presented on 7 Aug. 1984 at Colorado State University (Fort Collins, Colorado), Dr. Hesseltine gives a nice history of the research conducted by him and others at the Northern Regional Research Center (NRRC) on Asian soybean fermentations, including fermented tofu (Frank Meyer, early USDA plant explorer, in a letter dated 21 Nov. 1916, states: “Parcel No. 125c contains first quality Chinese soybean cheese: please taste a little on the point of a knife; it is extremely appetizing.”), sufu, shoyu, miso, tempeh, Chinese black beans (soy nuggets), natto, and “the use of lactic acid bacteria to produce a yogurt product from soybeans.” He also studied non-fermented tofu.

Dr. Hesseltine pays a nice tribute to the work of Dr. A.K. Smith of the NRRC (p. 506-07). After his trip to East Asia shortly after World War II, Dr. Smith (a protein chemist) made great efforts to promote cooperation between the USDA, particularly the NRRC, and Japan in conducting research to understand how our exported soybeans were used for food. He had the foresight to recognize the importance of studying soybeans used in such huge quantities for processing into human food. Dr. Smith was instrumental in arranging for two Japanese scientists (Dr. Tokuji Watanabe and Dr. Kazuo Shibasaki) to come to the NRRC to do research on tofu and miso. “This really began a new era of research on use of Oriental methods to produce foods from soybeans” (p. 507).

“My first real involvement in fermentation of soybeans was the arrival [in Oct. 1958] of Professor K. Shibasaki

of Tohoku University to study the miso fermentation. He was sponsored by the American Soybean Association and USDA’s Foreign Agricultural Service. When he arrived, I was told that since I was curator of the mold collection and since the *Aspergillus oryzae* strains used in the miso process were in my charge, I would be the person he would work with. I had no background and no interest in soybean fermentations, but this was a fortuitous happening because it acquainted me with Oriental food fermentations. All my background was in conventional liquid agitated pure culture fermentation. The miso fermentation introduced me to two new concepts in fermentation: (1) solid state fermentation, and (2) use of mixed pure culture inoculum” (p. 510).

“Probably my interest in fermented foods would have abated had it not been for the acceptance of Mr. Ko Swan Djien of Indonesia, who came to us in 1960 for practical training. In my first discussion with him, we talked about the kind of work he would do. Since I knew that a fermentation was conducted in Indonesia using soybeans and reportedly the fermentation organism was a species of *Rhizopus*, I asked him if he was familiar with the product; his answer was yes, that he often ate it, but he knew nothing about how the fermentation was conducted. It was decided that during his 6 months at Peoria this might be an interesting subject to study, especially since he could obtain samples of the tempeh cake from his wife, who was in Java and could tell good tempeh from bad. Dried samples were quickly obtained; from these cakes, four species of *Rhizopus* were isolated” (p. 514-15). Eventually many strains of *Rhizopus* were isolated and investigations showed that *Rhizopus oligosporus* strain NRRL 2710 produced especially good tempeh.

Photos show four famous Japanese scientists (see next page) who studied fermented foods: (1) Prof. Teizo Takahashi. (2) Ryoji Nakazawa. (3) Kin-ichiro Sakaguchi. (4) Kendo Saito. Address: NRRC, ARS/USDA, Peoria, Illinois.

1789. Leneman, Leah. 1985. Tomorrow’s world [soyfoods]. *Vegetarian (The) (England)*. July/Aug. p. 21-24.

• **Summary:** There are now 8-9 brands of soya milk sold in Britain. “It is a shame that most people’s introduction to tofu is in the form of Morinaga silken tofu which... is now found in most health food stores. Silken tofu is pleasant and nutritious, but is much softer than regular tofu and is therefore much less versatile. Following recipes meant for firm tofu with it can be frustrating.

“*Granose* is the first big-name health food manufacturer to feature a line of tofu-based products (imported from Denmark). Two of the three tinned convenience meals seem to me less than ideal. The tofu adds nothing special to either the Tofu and Tomato Sauce nor to the Tofu in a Savoury Bean Sauce; they might just as well have used tvp. However, the Chinese-Style Tofu is really excellent, with a nice balance of tastes and textures, including the cubes of tofu—

FIG. 1. Four famous Japanese scientists who studied fermented foods: (a) Prof. Teizo Takahashi, (b) R. Nakazawa, (c) Kin-ichiro Sakaguchi, and (d) Kendo Saito.

just about the nicest tinned convenience meal around.

“The first national distributor of tofu (to the best of my knowledge) was *The Regular Tofu Company*... Like all other national distributors, their tofu is vacuum-packed, which considerably lengthens its shelf-life... *Paul's Tofu* (The Old Brewery, Wheathampstead House, Wheathampstead, St. Albans, Herts.) produces another vacuum-packed firm tofu, which is available in London and South-East England...

“*Bean Machine* (Station Road, Crymmych, Dyfed) produces not only tofu but also a range of ‘soysage’ foods made from okara... They also make ‘Soyannaize,’ a dairy-free dressing. *Duchesse All-Natural Tofu Dressing and Dip* (made by St. Giles Foods Ltd, St. Giles House, Sandhurst Road, Sidcup, Kent DA15 7HL) is another mayonnaise-type product...”

She is writing *The International Tofu Cookery Book* for Routledge & Kegan Paul. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

1790. *Natural Foods Merchandiser*. 1985. New products, changing diets propel soyfood sales. Aug. p. 1, 39-40, 42-44.

• **Summary:** “The soyfoods revolution is being fueled by several powerful trends... Many consumers are attracted to soyfoods because they are an excellent no-cholesterol ‘replacement’ for meat and dairy products. Soyfoods are also growing with the rising tide of macrobiotics, which promotes the use of various soy products. And there are now enough soyfoods on the market to create synergy within the category: consumers buying soymilk try tofu, and go from tofu to tempeh.

“Tofu is by far the best-selling product in the soyfoods category, according to figures provided by the Soyfoods Association [and Soyfoods Center]. An estimated \$60 million worth of tofu is produced and sold in the U.S. annually, while frozen tofu desserts, entrees, and prepared products account for approximately \$25 million. Soymilk sales have jumped from near zero a few years ago to \$10 million today, while tempeh is an emerging growth category at 5 million in yearly sales.” All of the retailers interviewed by NFM indicated that the soymilk category is experiencing major growth. Most of the growth has been in six-ounce aseptic individual serving packages supplied by such companies as Westbrae, Ah Soy, Vitasoy and Eden. Health Valley’s Soy Moo has recently been repackaged in a 8.45-ounce package.

“Tempehworks produces approximately 7,000 pounds of tempeh a week during peak months, including that used in its processed tempeh products, such as Fakin’ Bacon, New York Style Strami and Kansas City Barbecue.”

Includes “A directory [sic, glossary] of soyfoods terminology” that defines tofu, tempeh, soybean, miso, soymilk, shoyu/tamari, TVP or TSP, soy protein isolate, defatted soy flour, and “secondary” soyfoods products.

1791. **Product Name:** [Tempeh].

**Foreign Name:** Tenpe.

**Manufacturer’s Name:** Nisshin Shokuhin, Ltd.

**Manufacturer’s Address:** 1-29-2 Tachibana, Sumida-ku, Tokyo, Japan.

**Date of Introduction:** 1985. August.

**New Product–Documentation:** Toyo Shinpo. 1985. Aug. 21. p. 5.

1792. Noguchi, Kazuko. 1985. Tenpe ryôri–Nihonjin no shikô ni awasete [Tempeh cookery–adapted to Japanese tastes]. *Daizu Geppo (Soybean Monthly News)*. Aug. p. 9-17. [Jap]

• **Summary:** Contains numerous Japanese-style tempeh recipes plus some nutritional analyses. Address: Saga Joshi Tanki Daigaku Kyoju.

1793. O’Leary, James. 1985. Tempeh Mexicana. 50+ protein rich recipes. Vancouver, BC, Canada: Benedict Books, 115-8675 French St., V6P 4W5. 48 p. Aug. No index. 14 cm. [5 ref]

• **Summary:** Contents: What is tempeh? Tempeh: Deepfried, mockfried, smallfried. About all. How to make. Recipes. Addresses, books, other important matters.

Note: This little cookbook shows how nicely tempeh and Mexican food work together. Address: #115-8675 French St., Vancouver, BC, Canada.

1794. **Product Name:** Okara tempeh.

**Manufacturer’s Name:** Soy City Foods.

**Manufacturer’s Address:** 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada.

**Date of Introduction:** 1985. August.

**New Product–Documentation:** Interview with Jon Cloud. 1985. Aug. Talk with Lorraine Guardino of Soy City Foods. 1992. Feb. 18. The company still makes two types of tempeh.

1795. Soy City Foods. 1985. I love Soy City’s vac pac soy foods: Tofu, Soy Pro, tempeh (Bumper sticker). 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada. 15 x 35 cm.

• **Summary:** This bumper sticker is green, red, orange, and yellow on white. A heart stands in place of the word “love.” Address: Ontario, Canada.

1796. Steinkraus, Keith H. 1985. Book review: *The Book of Tempeh*, 2nd ed. Revised & updated, by W. Shurtleff & A. Aoyagi. *Food Technology*. Aug. [1 ref]

• **Summary:** A substantial, favorable review. Address: Prof., Microbiology, Cornell Univ., Geneva, New York.

1797. Sugiyama, Masanori. 1985. “Tenpe” shain shokudô funsen-ki [Tempeh–Report of a hard struggle to introduce tempeh into a company cafeteria]. *Daizu Geppo (Soybean*

*Monthly News*). Aug. p. 18-21. [Jap]  
Address: Mitsui Bussan (K.K.) Kagaku-hin Sokatsu-bu  
Kacho.

1798. *Whole Foods*. 1985. Source book 1985-86. 8(8):1-136.  
Aug. Illust. Index. 28 cm.

• **Summary:** This is the 5th edition of this directory.  
Contents: Publisher's page. NewsLinks Wholesalers /  
distributors: Alphabetical address directory. Wholesalers /  
distributors: Geographical directory. Product directories: A  
list of product manufacturers: Foods (p. 33-48—soy-related  
categories include: Bean products, beans, coffee substitutes,  
cultures, ice cream, macrobiotic, milk, miso, sauces, soy  
products, soy sauce, tamari, tempeh, tofu), vitamins and  
supplements, cosmetics & personal care, herbs. Trade name  
index: An alphabetical listing of products by their brand or  
trade names. Brokers. Publishers. Associations. Alphabetical  
listing of manufacturers / importers. Advertisers' index.

Note: The listings related to soy products are full of  
errors. This Source Book contains many interesting ads.  
Whole Foods claims prominently and repeatedly to have the  
largest circulation in the natural foods industry. Address:  
South Plainfield, New Jersey.

1799. Karyadi, Darwin. 1985. Re: New interest in and  
developments with tempeh in Indonesia. Letter to William  
Shurtleff at Soyfoods Center, Sept. 17. 1 p. Typed, with  
signature on letterhead.

• **Summary:** "It was a great pleasure to see your continuous  
interest in tempeh. The computerized soya data-base set  
up is also an excellent effort to facilitate the management  
information system on soyfoods.

"Indeed it was a pity that the tempeh bibliography  
we published for the Symposium was not 'enriched'  
with English translation. We'll re-edit later on, also the  
Proceedings of the Symposium will include the English  
Abstracts.

"Enclosed you'll find 2 papers which highlight the  
new breakthrough and new perspectives on tempeh 'Second  
generation products' in the field of medicine, public health  
and famine relief, world-wide! Therefore I want to share  
with you some thoughts [about] how we can mobilize the  
technological, economical resources from the North (USA  
and Japan) to the South (Third World) to meet the challenge  
to overcome millions [of] malnourished and hungry people.  
Can the international and American banks with American  
Expertise and technology and Indonesian traditional tempeh  
technology through the UN systems or either business  
channels start with such a big endeavour.

"I would propose to start such an effort from Indonesia  
since tempeh was originated and historically inherited from  
here, moreover to popularize and disseminate the 'Second  
generation products' will be much easier from here. Do you  
know interested key people from the 'Soybean business

world' in the US who are interested to collaborate? Do you  
have any suggestion?

"Sincerely yours,..." Address: Nutrition Research  
Development Center, Komplek Gizi, Jalan Dr. Semeru,  
Bogor, Indonesia. Phone: (0251) 21763.

1800. *Cultivar*. 1985. Le soja en alimentation humaine [Soya  
in human nutrition]. No. 186. p. 77-78. Sept. [Fre]

• **Summary:** A brief introduction to tofu, soymilk, soy  
sauce, tempeh, miso, soy flour, soy protein isolates, and  
concentrates. Address: France.

1801. **Product Name:** [Big Dream Time Powdered  
Tempeh].

**Foreign Name:** Taimu Taimu.

**Manufacturer's Name:** Nakasho Bussan.

**Manufacturer's Address:** Japan.

**Date of Introduction:** 1985. September.

**Wt/Vol., Packaging, Price:** Bottle.

**New Product—Documentation:** Toyo Shinpo (Soyfoods  
News). 1985. Sept. 21. p. 8. "New tempeh product  
announced. Nakasho Bussan to sell it [powdered tempeh]."  
This new product called Taimu Taimu (Time + Big Dream)  
was developed by the Japan Natto Assoc. It is their first  
commercial product. A 450 gm (1 lb) bottle sells for 6,000  
yen (\$26.67). Use it in miso soup, milk, juices or just mix  
with hot or cold water.

1802. **Product Name:** [3 Grain with Soy Tempeh (Soy &  
Barley & Millet & Brown Rice)].

**Manufacturer's Name:** Noble Bean.

**Manufacturer's Address:** R.R. 1, McDonalds Corners  
(near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-  
2305.

**Date of Introduction:** 1985. September.

**Ingredients:** Organically grown millet, barley, brown rice,  
soybeans, rhizopus culture, apple cider vinegar.

**Wt/Vol., Packaging, Price:** 227 gm.

**How Stored:** Frozen.

**New Product—Documentation:** Label. 1985, undated. 4.5  
inches square. Brown on yellow. At bottom of front panel:  
"Culturing fine tempeh since 1979." On the back are three  
recipes in English: Honey Curry Bake, Indonesian Fried  
Tempeh, North Atlantic Tempeh; Letter from Allan Brown.  
1985. Aug. 7. 8 oz for \$1.65. Letter (fax) from Allan Brown.  
1998. Jan. 21. This tempeh was first sold in Sept. 1985.

1803. Patni, Manmath. 1985. Soybean—Present situation and  
future possibilities. *Poultry Guide (India)* 22(9):53-62, 85-  
90. Sept.

• **Summary:** This paper was presented at the Zonal  
Agricultural Research Station, College of Agriculture,  
Indore. Contents: Miraculous tiny seed. Source of vital  
goodness. World leader soybean. Processing of soybean.

Effect of heat treatment on nutritive value / functionality. Basic protein food from soybean. Soya protein concentrate. Soy protein isolate. Texturized protein product. Whole soybean products: Soya milk, tofu, tempeh. Full fat soya flour. Miracle crop of many uses. Present situation and future possibilities.

“For over 5,000 years this tiny seed has been the staple food of certain parts of the East, including North China, Japan, Korea and some areas of India. The ancient Yogis, who were among the world’s first vegetarians, placed great faith in the soya bean as a supplement to their meatless diet. In fact it became known as, and is still in the Far East referred to as, ‘The Meat of the Soil.’”

Note: In a letter to William Shurtleff of Soyfoods Center dated 21 May 1997, M. Patni states that the source of his information about ancient yogis and soybeans was a book titled *About Soya Beans*, by G.J. Binding (1970, p. 10).

“Source of Vital Goodness: Soybean is not new to India. Black soybean has been cultivated for ages in the low hills of Kumaon and Garhwal regions of U.P. [Uttar Pradesh] as well as on the foot hills of the Himalayas and in some scattered pockets of central India. However, strangely enough the crop has not so far become popular in the Indian sub continent and other tropical countries.”

The Soybean Processors’ Association of India is opening a Research & Development cum-Training Center at Indore. Address: Product Development Manager, Prestige Group of Industries, Indore.

**1804. Product Name:** Vegetarian Gourmet Traditional Pot Pie with Tempeh.

**Manufacturer’s Name:** Soy Source (Kenish, Inc.). Appropriate Foods Inc.

**Manufacturer’s Address:** 137 New Hyde Park Rd., Franklin Square, Long Island, NY 11010.

**Date of Introduction:** 1985. September.

**Ingredients:** Water, whole wheat flour, durum wheat semolina, unbleached wheat flour, tempeh, mixed vegetables (carrots, peas, potatoes, onions, stringbeans, lima beans, okra), soy oil, tamari, herbs, spices.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Frozen.

**New Product–Documentation:** Label. 1985. Sept. 3 by 3.5 inches. Self adhesive. Black on orange. Interview with Robert Werz. 1987. Sept. 9.

1805. Torii, Yasuko. 1985. Book review: *The Book of Tempeh*, 2nd ed. Revised & updated, by W. Shurtleff & A. Aoyagi. *Hikari*. Aug/Sept. p. 46. [1 ref. Eng]

• **Summary:** A substantial, positive review, showing the cover of the book and one recipe. In a box below the review we read:

“Several natural food restaurants in the Tokyo area offer tempeh on their menus. Among them are Healthy Kan

(see this month’s restaurant review); Alicia, at Daini Suzuki Biru, Kitazawa 2-9-23, Setagaya Ku, tel. 03-485-3681; and Mamenoko at 2-24 Nakamachi, Omiya Shi, Saitama Ken, tel. 0486-44-1323.

“Prepared tempeh is sold at the Aoyama and Kichijoji Natural Houses, and Nihonbashi Mitsukoshi Dept. Store, frozen foods section.

“*The Book of Tempeh* and Tempeh starter is available from Y. Torii, who can answer any questions on availability or manufacture of tempeh. Call her at 0467-76-0811, or contact her at 324 Kamitsu- chidana Ayase, Kanagawa 252.”

Note: On page 41 is a review of Healthy-Kan (*Herushi-kan*) natural foods, which was started in Nov. 1984 by Ikuyo Imuta, who says her mother was an excellent cook. “She chose to include tempeh on her menu not only because of its nutritional qualities, but because it’s such a versatile protein source which can be used to make anything from cake to curry.” Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

1806. *Toyo Shinpo (Soyfoods News)*. 1985. Natto no peeji: Tenpe no jidai. Tenpe wa ayumi chakujitsu-ni [The natto page: The age of tempeh. Tempeh steps very steadily] Oct. 21. p. 6. [Jap; eng+]

• **Summary:** An interview with Goro Kanasugi about tempeh and the Japanese Natto Association. Small photos show: (1) Portrait photo of Mr. Kanasugi. (2) Pieces of tempeh.

**1807. Product Name:** [Delicious Tempeh].

**Foreign Name:** Le Delicieux Tempe.

**Manufacturer’s Name:** Athanor.

**Manufacturer’s Address:** 4, rue Toiras, 34000 Montpellier, France. Phone: (67) 58 41 81 or 67.87.06.08.

**Date of Introduction:** 1985. October.

**Ingredients:** Organic soya, water, starter.

**Wt/Vol., Packaging, Price:** 250 gm doubled plastic bag. FOB price is 10.50 FF.

**How Stored:** Refrigerated, 6 weeks shelf life at 4°C.

**Nutrition:** Per 100 gm: Energy 182 calories, phosphorus 233 mg, calcium 82 mg, magnesium 6.6 mg, iron 5.2 mg, zinc 1.0 mg, manganese 1.4 mg, copper 0.6 mg.

**New Product–Documentation:** Letter from Luis Garcia. 1985. March 12. “Hi. We are a couple from South America that moved to this side of the earth... We are trying hard to get going a tempeh cottage industry, to hopefully supply the southern area of France. We have been doing test batches for the last 8 weeks (aided by The Book of Tempeh) with ups and downs, and thought that The Book of Tempeh II can be very helpful.”

Letter from Patrick Roger of Arts. 1985. June 12. Luis Garcia makes tempeh. Two Labels. 1985, dated. Photocopy black on green. “Produit du soja biologique fermenté.” With three recipes.

Letters from Cilica Chlimper. 1985. Oct. 2 (5 p.

handwritten) and Oct. 28 (2 p. handwritten on letterhead). Luis Garcia is her husband. "We are now half way installed and producing about 150 x 250 gm packages per week (only enough to pay the rent)." She helps him with sales and promotion. They are doing cooking demonstrations and using tempeh in French-style recipes. They would like to make a ready-to-eat *saucisson* product (like salami). They are in close contact with Patrick Roger at Olivier of Arts.

Leaflet with recipes. 4 p. Sent by Luis Garcia and Cilica Chlimper. Le Compas. 1986. March-April. p. 34.

Form filled out by Luis and Cicilia for each of Athanor's commercial soy products. 1988.

1808. **Product Name:** Tempeh Delites [Mild Cutlets, or Sticks; Spicy Cutlets, or Sticks].

**Manufacturer's Name:** Harvest Earth Foods.

**Manufacturer's Address:** 2789 Steamboat Springs, Rochester, MI 48063.

**Date of Introduction:** 1985. October.

**Ingredients:** Tempeh. Batter and breading: Certified organically grown corn, hard red spring and winter whole wheat, brown rice, barley malt, tofu, soybean oil, bicarbonate of soda, rare herbs, imported spices.

**Wt/Vol., Packaging, Price:** 6 per 16 oz pack.

**How Stored:** Frozen.

**New Product–Documentation:** Spot in Natural Foods Merchandiser. 1985. Oct. Made from certified organically grown soybeans and whole grains. Leaflet. 1985, undated. "Create a main course or sandwich! Fully cooked–Just heat & serve."

Product Alert (Naples, WY). 1986. March 17. "16. Frozen misc. foods." Tempeh Delites from Harvest Earth Foods of Rochester, Michigan, comes in four varieties. Mild Cutlets and Spicy Cutlets with 6 per pack. Mild Sticks and Spicy Sticks with 9 per pack. All four are in 16 oz size.

Talk with Charles J. Leonardi, owner. 2001. May 18. Harvest Earth Foods is now located at P.O. Box 816, Sterling Heights, Michigan 48316. Phone: 810-469-1730. Charles bought the company from Dr. Jerry Skrocki, the founder.

1809. *Point Soja–Soyfoods*. 1985. L'intérêt du Club de Dakar pour le soja [The Club of Dakar's interest in soybeans]. Autumn. p. 3. No. 3. [Fre; Eng]

• **Summary:** The Club of Dakar is a non-governmental organization, unique in the sense that it is composed of about 200 people from both inside and outside Africa. Their purpose is to develop efficient solutions in the fields of cooperation and development. Three years ago, when the Club got involved with the soybean and saw its real usefulness for African countries, it requested an overview of the situation. Two young Africans, M. Gomes and M. Toumbi, were asked to make the first survey of soybean cultivation in Africa and of information available regarding the development of soybeans in Africa. The

main conclusions of the report are: Soya is not unknown in Africa, but it has undergone an uneven and discontinuous development. The only perspective that would allow the development and prosperity of Africa's soybean complex would be in cooperation with Europe. Also new soyfood products such as tofu, tempeh, and flavored soymilk must be tested in Africa. A great deal of work on soybean cultivation has been done by the IITA in Ibadan, Nigeria, and by various institutes in Senegal. For more information and to order publications on soy in Africa and on Biotechnics, contact The Club of Dakar, Administrative Secretary, 4 Avenue Hoche, 75008 Paris, France. Phone: 42-67-16-00.

1810. Roger, Patrick. 1985. Interview de Jean Claude Sabin, Président du CIS-ONIDOL [Interview with Jean Claude Sabin, President of CIS-ONIDOL]. *Point Soja–Soyfoods*. Autumn. p. 1-2. [Fre; Eng]

• **Summary:** Concerning the history of soybeans in France, cultivation on a national scale dates back to 1973 after CETIOM had done some research in the preceding years. Before that, soybeans were widely grown during World War II, sometimes even with strong pressure from the Vichy government. Soybeans used to be roasted to make coffee.

"During the 1960s experiments with soybean cultivation were conducted, one of them initiated by M. Dolfuss, who made an unsuccessful attempt at the time at being elected a deputy. He used a pamphlet together with a documentary film on soybean cultivation. But at the time there were no guidelines for growing soybeans, and no seeds were available. "I became interested in soybeans in 1965, because of the large amounts being imported for animal feed. Around the same time, heads of the French oil industry asked the Ministry of Agriculture to start a research program... So CETIOM conducted experiments in soybean cultivation and microbiological research on the inoculum. Without the 1973 American soybean embargo, there still would not be any soybeans grown in France. President Pompidou became angry in the middle of a Council of Ministers meeting, and a research mission was sent to the U.S.

"On the cultivation level, the pioneer areas [departments] were Tarn, Haute-Garonne, and Gers [all located in the southwest of France], with some experiments in Bas Rhône. Later the growing expanded northwards... Around 1965 the GATT accords were signed. The U.S. allowed corn to develop, but locked up soy growing. Since that time, there have been no custom duties on oilseed products in Europe. And until the embargo, none of the politicians ever noticed that fact! Then, after 1979, and the new soy *reglementation* [system with strict regulations for growing soybeans], this crop has been in steady expansion." Mr. Proudon has played a key role in this process.

France needs to reduce its surpluses of cereals (such as wheat), expand production of oilseeds, and use the two to balance crop rotations. "I am quite a believer in soyfoods.

Our western food habits are out of balance. People are starting to look for a different way of feeding themselves... I do think that tofu and tempeh have very good prospects.”

• **Summary:** “Identification tests were performed on those bacteria which were isolated from Indonesian tempeh and produced more than 10 nanograms/(cells in 5 ml of culture) of vitamin B-12. Thirteen out of 33 isolates were identified

as *Klebsiella pneumoniae*. Two isolates were identified as *K. pneumoniae* subspecies *ozaenae* and *Enterobacter cloacae*. Twelve isolates closely resembled either *K. terrigena* or *K. planticola*. Others included gram-positive rods (4 isolates), Gram-negative, oxidase-positive rod (1 isolate) and Gram-negative, oxidase-negative rod (1 isolate).” This work was sponsored by the Joint Japan-Indonesia Project on the Development of Tropical/Subtropical Microbial Resources, under the direction of the Science and Technology Agency of Japan and BPPT of Indonesia.

Note: A gram-positive bacterium is one that holds the purple dye when stained by Gram’s stain. Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

1815. Praskin, Laurie Sythe. 1985. *The Farm soy history: An overview*. Part I. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• **Summary:** “In 1971, a unique group of people settled in the Tennessee backwoods to live an alternative lifestyle, committed to living collectively off the land. The community of 200 people came to be known as The Farm and over the years grew to 1,500 residents, gaining international and domestic fame for its community ideals, lifestyle, alternative technologies, [midwifery], and vegetarian diet based on soybeans. Soy technologies practiced and developed on The Farm became the seed for many tofu and tempeh shops that sprang up around the world in the years that followed. Community members started the first [sic, sixth] commercial soy ice cream company, and the first soy ‘deli.’ Some went on to start several of the major tempeh shops across the United States and Canada and others helped start a network on international soy programs in underdeveloped countries. Innovative recipes developed by Farm members led to the publication of three cookbooks which have made a large contribution to the growing acceptance of soybeans and tofu in the American diet.

“When The Farm was first settled in 1971, most of the people were already vegetarians. There were a variety of reasons for their personal choices: (1) an unwillingness to kill in order to live (feelings which stemmed from religious beliefs similar to the Buddhist religion, as well as pacifist attitudes deepened during the Vietnam War); (2) a growing awareness that meat was too costly to produce and that if more people at lower on the food chain there would ultimately be more food to go around in the world; (3) evidence of the healthful benefits of a vegetarian diet; (4) a belief that the dairy industry practiced cruel and exploitive methods on animals and a reluctance to support that system.

After the community was established, the entire membership decided to adhere to a complete vegetarian [vegan] diet devoid of all animal products, including eggs and dairy. They wanted to create a self-sufficient community, eating primarily what they grew on the land. They also

wanted to be an example of how people could eat foods lower on the food chain to help create a larger supply of food in the world. During the search for a nutritionally sound vegetarian diet, they settled on soybeans as the main form of vegetable protein, as soybeans have one of the highest and most complete protein contents and are more versatile than any other vegetable protein. Many of the members had already been eating tofu and other soy products before The Farm, but acquiring these foods in the middle of the Tennessee woods was not an easy job. Soybeans were readily available, as they were used as local cattle food, but the challenge was how to create healthy and appetizing foods from them. Besides the Asian population and some Seventh-day Adventists, there weren't many people in the U.S. at the time actually eating soybeans, let alone trying to use them as the main source of protein.

"There were not many physical resources available as the people arrived with few possessions, lived in buses and tents, and had little capital to work with (a typical Third World situation). Some people owned Corona hand mills and occasionally ground soybeans to make fresh milk or tofu, using the recipe in the Seventh Day Adventist's Ten Talents cookbook. Fearn Instant Soya Powder was purchased and used for making soymilk, tofu, yogurt, and 'soy butter'. Just a few families owned pressure cookers so people cooked large communal pots of soybeans, taking turns 'watching the pot,' since they boiled them for 16 to 20 hours, to be sure they were digestible.

"By 1972 the Farm had its own flour mill that ground soybeans into full-fat soy flour and soy grits. The community was then able to make fresher soymilk, and tofu, as well as add soy flour to baked goods for added protein. They developed a curded soy flour base that was spiced and used as a sandwich spread, and they also baked soy flour 'souffle.'

"During these early days while the diet was still being worked out, the young children were given eggs for their protein source. Margaret Nofziger, the Farm's dietician, wanted to provide the babies and young children with a soy formula as a weaning food. She asked Alexander Lyon, a Farm member with a Ph.D. in microbiology, to research how the community could make the formula. He began an extensive research both in libraries and through correspondence. Fortunately, there were studies available about the uses of soy for human food consumption. Alexander, (Dr. Lyon) contacted Dr. Hesseltine and Dr. Wang of the Northern Regional Research Center in Peoria, Illinois, and Dr. Steinkraus of Cornell University in New York. These researchers provided a treasure of information to Dr. Lyon and to the soy technicians that followed. Other scientists who should be credited for their early and helpful research are Dr. Harry Miller with Loma Linda Foods and Malcolm Bourne with Cornell University.

"All of the information gathered by Dr. Lyon led to the start of the Farm Soy Dairy in 1972. After learning the

basic processes involved in soy milk preparation, Alexander began collecting used equipment that could be adapted for the use of making soymilk. The original soy dairy was very small, with a production capacity of 20 gallons of soymilk a day, and expanded over the years as the soy technicians were able to find and add new equipment to their dairy. This dairy became a cross between a Japanese tofu shop and American ingenuity. The Farm Soy Dairy had no capital to start operations and no investors beside the Farm itself. Cash was hard to come by and as with all other commodities on the Farm, the products were distributed freely to community members. For these reasons, the soy technicians had to be creative and imaginative in how they obtained equipment and how they adapted such equipment to their needs. Over the years, they went to auctions, scrap metal yards and used restaurant equipment houses. They bought, bartered and traded for their equipment. They designed their own systems in their welding shop and then re-designed them to make improvements and to increase production. They became a school, learning as they went along. In 1975, Laurie Sythe Praskin, one of the early workers in soy dairy, succeeded Dr. Lyon in managing the operation. Over the next 4 years, with David Handel and Michael Halpin as equipment developers, weekly production increased to 800 gallons of soymilk, 600 lbs. of tofu, 80 gallons of soy yogurt, and a varied amount of soy ice cream." Continued. Address: 17969 Oak Dr., Los Gatos, California 95030.

1816. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part II. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• **Summary:** Continued: In 1975, Farm members started a company to promote the use of soybean products in the America diet. The company, named simply Farm Foods [Farm Food Company], began sales on the East Coast with full-fat soy flour (ground fresh on The Farm), TVP (texturized vegetable protein), Good Tasting Nutritional Yeast, split soybeans, and Tempeh Starter Kits (developed by Cynthia Bates and Dr. Lyon). In 1976, under the management of Leticia Coate and Robert Pepper, Farm Foods began participating in national health food trade shows. At the time, they were one of the only companies representing soyfoods. Along with their packaged products, they sold cookbooks and served free samples of tempeh, TVP chili, and nutritional yeast crackers.

"The products and recipes developed over the years led to the publication of three cookbooks: *The Farm Vegetarian Cookbook* (1975) and *Tofu Cookery* (Oct. 1982), edited by Louise Hagler, and *Tempeh Cookery* (March 1984), edited by Colleen Pride. These books made a major contribution in westernizing recipes previously Oriental in origin. They were available in all natural food stores throughout the country.

"The work with soy products on The Farm also inspired members to start two vegetarian restaurants; the Farm

Foods Cafe [opened Aug. 1976], in San Rafael, California, managed by Robert Dolgin, was the first “soy deli” in the United States. Everybody’s, located in Nashville, Tennessee [opened July 1980], was managed by Judd and Diane Hoffman.

“The acceptance by the public of Farm Foods Cafe was overwhelming, and although it only operated from 1976 to 1977, it pioneered the path for many tofu delis that have followed since. The unique characteristic of this deli was the tofu and tempeh shop producing fresh products located in the rear of the store. The Farm Foods Cafe also became the first [sic] company to market a non-dairy ice cream made from soybeans. This frozen dessert, marketed under the name of ‘Farm Foods Ice Bean,’ is still being sold in health food stores nationwide.

“In 1977-78, The Farm Foods Cafe closed, and the soy processing equipment was moved to San Francisco. Farm Food Company began wholesaling soy products throughout California under the management of Robert Pepper. They continued marketing Farm Foods Ice Bean, and added tofu salad [like eggless egg salad], ‘tofu cheesecake,’ a frozen soy yogurt dessert, and the first firm-pressed tofu to hit the California market. In 1980 it was decided to drop the perishable tofu business and concentrate on the nationwide distribution of Farm Foods Ice Bean. The plant in San Francisco was closed, and large scale production began in a Memphis, Tennessee, dairy and ice cream factory. This new location gave the company easier access to East Coast distributors, and they soon established additional warehouses in Connecticut and California.

By 1984, under the management of Ron Maxin and Michael Lee, the weekly production of The Farm Soy Dairy [in Summertown, Tennessee] was 1,000 lb of tofu, 150 gallons of soymilk, 20 gallons of soy yogurt, 20 gallons of soy ice cream, 400 ice cream sandwiches, and 90 lb of tempeh. Today, the Soy Dairy produces an average of 5,000 gallons of soymilk a month for Farm Foods to use in Ice Bean production. The soymilk is shipped by tanker truck to the Ice Bean production plant [in Memphis], and the Farm Soy Dairy also markets its products in Nashville and Columbia, Tennessee.

“The Farm’s uniquely controlled vegetarian diet led to two official studies of its effect on the children. In 1979, Dr. Jeffrey Hergenrather, et al., conducted a study on the pesticide levels in the breast milk of vegetarian nursing mothers on the Farm. He submitted a letter of his findings to the editor of the *New England Journal of Medicine*, March 26, 1981. His letter challenged a previous article written by Rogan, et al, (New England Journal of Med. 1980) which stated that ‘there are no obvious dietary predictors’ of chemical pollutant in human milk. Rogan went on to say ‘For certain fat-soluble chemicals, nursing infants can be regarded as living at the top of the food chain and are exposed to much more than background levels.’ Dr. Hergenrather’s

study included 12 women whose breast milk was analyzed for 17 chemical substances. When compared to the seven contaminants studied by Rogan, in all but one of the contaminants, which showed no difference in contaminant levels, the milk of the vegetarian women had lower levels of contamination.

“The second study was conducted by Jean Roberts Fulton in 1980 and was published in the *Journal of the American Dietetic Association*. She studied a group of the Farm nursery school children and found their amino acid and iron intake to be adequate. (The diet was low on calories, however.)

“The innovative methods used by the Farm soy technologists inspired many groups and individuals to start all over the world to train in the Farm Soy Dairy, and many who couldn’t come personally were encouraged through correspondence. In 1977, Plenty, the non profit relief organization founded by the Farm, established an international training program whereby people from other countries could come and train in soybean processes and other technologies that The Farm had to offer. The Farm Soy Dairy received its first trainees from Guatemala and Mozambique.

“From the beginning days of the Farm Soy Dairy, the technicians realized the value that soybeans could have in Third World countries. Eventually they were able to share their knowledge and training in the field of soybeans by starting a dairy in an impoverished country. In 1979, Plenty Canada and Plenty USA sent Farm Soy Dairy technicians Laurie Sythe Praskin, Suzy Viavant and Richard Decker to Guatemala to help establish Plenty’s first international soy dairy/tofu shop. Other technicians who trained on the Farm have gone on to help start soy programs with Plenty Canada in Lesotho (in Southern Africa, 1979-present), Jamaica (1983-present), St. Lucia (1983-present), and Dominica (1984-present).

“Many of the people who lived on The Farm and trained in the Soy Dairy or with Farm Foods have started their own soy companies or are working in underdeveloped countries. The common goal felt by all has been to provide healthful, delicious foods for all people, rich and poor alike. Because soybean products can be presented as gourmet dishes, yet can also be prepared very simply, they continue to be accepted by all classes of people.” Continued. Address: 17969 Oak Dr., Los Gatos, California 95030.

1817. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part III. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• **Summary:** “The Farm soy dairy was started in 1972. The original equipment consisted of a 15 gallon electric coffee pot to cook the [soy] milk, a washing machine [whose spin cycle was used] to extract the milk from the okara, and a peanut grinder to grind the dry soybeans into fine grits.

The dry soy grits were added to the boiling water, cooked, and then poured into a bag that was placed in the washing machine. As the washing machine spun, the milk was extracted by the bag by centrifugal force. The soymilk was distributed immediately in glass gallon jars, as there was no refrigeration system available. The capacity of this operation was around 20 gallons a day at this time, the soy dairy was located in the sorghum mill, a split-level, cement block building with concrete floors.

"In 1973, a Farm member's parents donated some used dairy equipment that they had used on their goat farm. The soy dairy made its first technological leap. Included in the equipment was a 45 gal. electric pasteurizer/cooker, a drip system plate cooler, and a 90 gal. refrigerated milk tank. The washing machine was too inefficient and unsanitary, and a simple hand-lever press was constructed, modeled after a Japanese-style press observed by Lesli Jordan in 1973. Lesli apprenticed for one week in a small Stockton Tofu company where she compiled information on procedures for making tofu and age pouches and also took photographs. When she returned to the Farm, her husband Darryl built the soy dairy's first tofu box. The new presses were made from two galvanized wash tubs with holes on the bottom. These were placed on a strong wooden stand and lined with a light cotton cloth bag. Wooden racks were placed on the bottom to keep the bag off the hole, allowing the milk to flow from the tubs freely. The milk was pumped into the bags from the cooker. The filtered milk flowed into buckets, which were then carried and poured into the small holding tank of the plate cooler. The slightly cooled milk was then carried by bucket to the refrigerated milk tank, where it was cooled to 30 degrees Fahrenheit and stored until delivery to the store. The milk was transported in 10 gal stainless steel milk cans to the store where it was distributed. The okara in the bags was pressed to extract all of the milk using a lever system come-along. At this time, the beans were being ground into dry grits at the Farm Flour mill. The capacity of the soy dairy was now 90 gallons of soymeal [not defatted] a day. Occasionally, large blocks of sour milk cheese were made, and 12 to 16 gallons of acidophilus yogurt were made daily. The yogurt was made in one gallon glass jars, incubated in an old refrigerator, and stored in a conventional refrigerator. Tempeh was also being experimented with, using the okara left over from soymilk production. Soy ice cream was being made on a very small scale, using two table top ice cream machines with one quart capacity. Alexander Lyon was still managing the soy dairy. By this time, the Farm was no longer producing sorghum, and the soy dairy had taken over two levels of the three level building. Only cold water was available, so pots of water were carried to the second floor, where they were heated on a stove to be used for cleanup. During the cold winters, a pot belly stove was added to the array of equipment and centered right in the middle of the production room.

"Early in 1975, Alexander left the soy dairy and Laurie Sythe Praskin took over managing production. David Handel and Warren Jefferson stepped in as full-time equipment men to help improve the operation and increase production. Laurie began doing research on how to improve the flavor of the milk, which was very cereal-tasting because of the dry grits. She and David added an industrial Hobart meat grinder to the system and began soaking their beans and grinding them fresh each day. The beans were initially soaked in a bath tub and later in one of the copper lined sorghum tubs. The tub was placed on the second level, so the beans could gravity feed into the grinder. The flavor was greatly improved, but the grinding was very slow and the grind was not very fine.

"They began working on new ideas for a press that could omit the bag and muscle needed to press with the come-along. David devised a system using an upside-down bumper jack mounted over a stainless tank. Inside the tank was a stainless cylinder with holes drilled in the bottom and sides. The milk was pumped or bucketed into the inner cylinder and flowed out the holes when vibrated. The cylinder was vibrated with a rubber mallet. A stainless press plate was placed on top and jacked down to press out all the milk. This system was slow and the okara had to be shoveled out after each batch.

"In late 1975, it was decided to move the soy dairy to The Farm's cannery building so that it would be in a more central location to the Farm's growing population and to make use of the steam boiler that was located there. Even though it had a wooden floor, it was a great improvement for the dairies production. They immediately added some steam jacketed cooking kettles acquired from a scrap yard and production capacity doubled to 150 gallons of soymilk a day. The slow points of operation were now the grinding, separation of milk and okara and cooling of the milk. They began hot blanching the soy beans before grinding for improved flavor. A 150 gallon refrigerated milk tank was added to handle the increase in milk production. While looking for an improved separating system, one that could be continuous, David and Laurie started eyeing some equipment that had been scrapped by one of the Farm's crews. The equipment came from an old evaporated milk plant and included a vibrating separator and a tubular heat exchanger. The separator was converted for the use of the wet soymilk separation. A stainless frame was built to fit in the vibrator with a cloth secured around it. The milk was bucketed and later pumped over the screen while the vibrator was on. The milk flowed through the screen and out the end into a holding tank. The pulp was sprayed with a little water to wash out the milk and the pulp was deposited into buckets. The tubular heat exchanger was converted to be used as a pre-cooler. Cold tap water was run through jacket that surrounded inner stainless tubing that the milk was pumped through. A wet corn masa mill was made by Michael Halpin to be used to

grind corn for tortillas and to grind the soybeans for the dairy. Now the grinding time was no problem and production increased to 200 gallons of milk a day. Tofu was still not being made on a community scale as the milk came out of the separator too cold to curd properly. Laurie was also making thirty to forty gallons of yogurt a week.” Address: 17969 Oak Dr., Los Gatos, California 95030.

1818. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part IV. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• **Summary:** Continued: “In 1977, Laurie visited her home town in California. She went to visit her favorite Japanese tofu shop and ran into Bill Shurtleff and Akiko Aoyagi outside the closed shop. They were delivering a copy of their *Book of Tofu* to the owner and tofu maker of the shop. Bill took Laurie to the tofu makers’ home and helped arrange for Laurie to observe in his shop for one day. Upon returning to the Farm, Laurie immediately set up the Farm’s first tofu shop in a small corner of the soy dairy. She set up a very simple shop using one of their cooking kettles and designating it for cooking milk only for tofu. A wash tub was mounted on a stand with a simple lever for pressing out the milk. The tub was lined with a coarsely-woven bag, and a sawed-off whiskey barrel was placed underneath to catch the milk. A finer nylon cloth was stretched over the top to strain out the finer pulp [okara]. Hot milk was bucketed into the press, the bag twisted shut, and a heavy wooden press plate placed on top. The original wooden tofu box was finally in use as well as two additional round stainless boxes made by Michael Lovett. The tofu was pressed with cement blocks or buckets of water. Tofu was made in the whiskey barrel and a 20 gal [gallon] aluminum Hobart bread bowl. The tofu shop’s capacity was 200 lb of tofu on a production day. In total, about 600 lb/wk in addition to 800 to 1000 gal/wk of soymilk. Most of the tofu went to people with special dietary needs.

“It seemed very energy inefficient to run a separate tofu and soymilk operation, so technicians started designing a separator that could service both operations. Michael Halpin, one of the Farm’s equipment technicians, designed a hydraulic press which cost less than \$1500 to build. This was the first large amount of money spent by the dairy for equipment. The inspiration for the money came from the delicious tofu produced in the small shop. Once everyone realized how good it was, the decision to invest community money for improved nutrition followed. The idea of the press was good, but all of the bugs were never worked out. It was supposed to require no bag. The milk was pumped into a stainless cylinder that was drilled with holes and set inside another stainless holding tank. Then with press plate and gasket, the hydraulic ram came down from above, squeezing out the milk. When pressed, there was a trap door at the bottom that was opened, and the pulp pressed right

out into a container. The trap door shut, and the press was ready for another batch. The system was supposed to work easily and efficiently. It never did. Gasket failures were a problem, spewing hot soymilk and pulp all over the dairy. In addition, the trap door never worked easily. In an expedient measure to get the dairy back in operation, Laurie removed the cylinder and replaced it with a Japanese pressing sack. The hot soymilk and pulp pumped into the bag which was set down in the stainless holding tank. There was a stainless rack on the bottom to keep the bag off the hole and a stainless plate was set on top of the bag after it was filled. The hydraulic ram came down and pressed the bag. This worked all right, but the bag had to be lifted out by hand, and the position was very awkward and left many sore backs. The milk went directly into a curding barrel or was pumped through the tubular heat exchanger. The capacity jumped to 300 gal of milk and 250 lb of tofu approximately 4 days/wk. At this time, the dairy had concrete floors and was starting to get sheetrocked. Yogurt production became unsuccessful because of the close proximity of the cannery, and vegetable contamination was airborne. Tempeh was also in the cannery and experiencing the same difficulties. Ice cream was very popular and being produced in large commercial soft-serve machines. Production of ice cream was varied, but its popularity was unquestionable.

“While the Farm was piecing together its operation, a small settlement of Farm members began in Northern California. In 1976, they opened a small commercial soy deli in California under the management of Robert Dolgin. To supply the deli, a small soy dairy and tempeh shop was set up in the back room. This consisted of Japanese equipment specifically designed for the purpose of making soymilk and tofu. They had a Japanese grinder, 45-gal pressure cooker, and a small, efficient hydraulic press. It was a nice small kit which they took out a loan to buy. The deli’s business was excellent and lasted over one year before it closed and relocated to San Francisco (SF) in order to expand production and market products throughout the health food store industry in California. So with more investment and loans and a warehouse in SF, Farm Foods re-opened. The building was fixed up to meet all the strict California codes, and the equipment was improved for increased output. They continued cooking with the 45-gallon pressure cooker but went for a continuous separator. This was a Brown, an orange juice extractor, and a vibrating screen to remove the finer pulp. They got a plate heat exchanger to cool the milk and a state-of-the-art Mark 25 continuous ice cream maker. They were running an extremely sophisticated operation complete with walk-in coolers and freezers. The Farm management council sent many of the Farm’s trained technicians, business managers, and distributors out to SF to operate the business. In total, 60 Farm residents moved to support the growing business, which was under the direction of Robert Tepper and Daniel Lloyd. They started the first

commercial soy ice cream company that marketed Soy Ice Bean. Laurie Praskin and her husband were sent to help run the shop and perfect the ice cream recipe. In April 1979, they left to work on the Guatemala soy program and were replaced by Michael and Deborah Lovett and Bobby and Michael Bonnickson. Because of the high cost of operating a business in downtown SF and the increased interest of Ice Bean nationwide, Farm Foods decided to move the Ice Bean production to Tennessee. The Farm Soy Dairy purchased the continuous extractor from the SF Soy Dairy and once installed, it immediately increased the production to 1500 lb/day of tofu and 300 gal/day of soymilk—enough for everyone.

“The soy dairy is now under the management of Michael Lee and Ron Maxin and consists of a 400 gallon bean soak tank and a one-and-a-half horse-powered Japanese grinder. Beans are ground with hot water, and the resulting slurry is pumped into one of three 60 gallon stainless kettles. Direct steam injection cooks this milk. When done, it is pumped into the brown extractor. It flows over a second vibrating-screen filter and is gravity-fed to a 45 gal stainless holding tank where it is tapped off into curding barrels or pumped through the same heat exchanger which now has chilled water running through it for more efficient cooling. A chilled water system also provides cold water to cool and store our tofu. When cooled, the tofu is transferred to 40 gal plastic tubs and wheeled into a walk-in cooler where it awaits distribution. (For more information on the Farm Soy Dairy as it is today, contact Ron Maxin or Michael Lee.)” Address: 17969 Oak Dr., Los Gatos, California 95030.

1819. Friedman, Martin. 1985. New entries crowd health food market: Even more tofu desserts and frozen entrees. *Adweek East (New York)*. Dec. 9.

• **Summary:** Discusses various new products. As “reports of weakening sales of frozen tofu desserts are filtering in, there were a half-dozen new tofu dessert items that were being confidently introduced to the health food market.”

“Tofu items are becoming so popular that they have a section of their own at health food shows. Legume’s success with frozen entrees is spawning such imitators as Walker & Wilks Tofoods (sweet and sour, Bar-B-Q and teriyaki) and Lamp Lite Natural Foods’ six Italian tofu entrees... Harvest Earth Foods offers Tempeh Delites, fully cooked cutlets and sticks that are made from cultured organic soybeans; and Light Foods sampled Light Links (tofu hot dogs) and Tofu Bagel Links. In the frozen dessert arena, Tofu Today presented Tofruzen, while Tofreezi was sampled by Melta [sic, Metta] Tofu Products. Other new low-calorie and low-cholesterol desserts promoted were Imagine Foods’ Rice Dream and Nouvelle Sorbet.”

1820. Burns, Bob. 1985. Re: Mennonite Central Committee (MCC) is now making tempeh experimentally. Letter to William Shurtleff at Soyfoods Center, Dec. 17. 1 p. Typed,

with signature on MCC letterhead. [1 ref]

• **Summary:** “M.C.C. (Mennonite Central Committee) is a small church-related development agency with which I am serving a three-year term here in southern Bangladesh. Some of our expatriates have begun exploring tempeh making for themselves as well as considering introducing it to the people here as we are also extending soybeans as a potential new crop and protein source. (M.C.C. is the only organization presently actively promoting soybean in this country).

“Thus far starter has been procured, as well as a copy of your ‘Book of Tempeh’ and several batches of tempeh have been made at two of our expatriate residences; we are now trying to make the starter.”

He then asks about making leuceana tempeh from the seed of the ipil-ipil tree, and how to deal with the mimosine toxin. He has a considerable amount of ipil-ipil seed at his disposal. Address: MCC Horticulturist, c/o MCC, Box 13, Feni, Feni District, Bangladesh.

1821. Geslewitz, Gina; Wittenberg, Margaret. 1985.

Soyfoods: The age of soy literacy. *Health Foods Business* 31(12):33-34, 36, 38-44, 46-47. Dec. [15 ref]

• **Summary:** Contains a market study largely pirated from Shurtleff & Aoyagi’s *Soyfoods Industry and Market*. Address: New York.

1822. **Product Name:** [Tempeh (Fresh, or Canned), and Tofu & Tempeh Pate (Spreads, 8 Varieties)].

**Manufacturer’s Name:** La Sojeria, S.C.

**Manufacturer’s Address:** Carretera de Vic Km. 30, 08180 Moia (near Barcelona), Spain. Phone: (93) 830 1123.

**Date of Introduction:** 1985. December.

**Wt/Vol., Packaging, Price:** Can.

**New Product–Documentation:** Letter from Javier Arocena of Zuaitzo, Spain. 1992. Dec. 14. He knows of three other soyfoods manufacturers in Spain: Natur-Soy, Vegetalia, and La Sojeria, all near Barcelona.

Form filled out by Laura Cami and Mario Rimoldi of La Sojeria. 1993. Feb. 13. Their company began making soyfoods in Dec. 1985. These products were introduced at that time. They now make about 200 lb/month of fresh and canned tempeh. The spreads are preserved in glass, with a twist-on lid, and sterilized.

Leaflet sent by Allan Brown of Noble Bean, Ontario Canada. 1998. Jan. “Tempeh de Soja.” Contents of this Spanish-language leaflet: Telephone: 340 43 62. Que es? Cuáles son sus cualidades? Cómo prepararlo? Recipes for: Tempeh frito. Rellenos. Tempeh hervido o al vapor. Tempeh a la crema. Tempeh cacciatore. Allan writes: “These folks make fresh tempeh in Barcelona.” They learned how from The Farm and from Allan in Canada. Form filled out by Mario Rimoldi. 2001/07. His company still exists at the above address but he stopped making tempeh in March 1996.

1823. Ransom, Ruth. 1985. Alternatives to four food groups: Meal plan. *Vegetarian Journal* (Baltimore, Maryland) 4(12):2. Dec.

• **Summary:** “A. Protein Foods: 1-2 servings per day. One serving equals: 1½ cups cooked dried beans or peas. 8 oz. tofu. 4 ounces tempeh. 2 cups fortified soy milk. ½ cup almonds, cashews, walnuts, pecans...”

Note: On page 1 we read: Editors: Debra Wasserman, Charles Stahler. Ruth Ransom, R.D. P.O. Box 1463, Baltimore, MD 21203. (301) 752-VEGV. Address: R.D. [Registered Dietitian].

1824. Zenkoku Natto Rengokai, Tenpei Fukyukai [Japan National Natto Association, Tempeh Popularization Group]. 1985. 21 seiki no kenko shokuhin wa kore da! [This is the health food of the 21st century (Leaflet)]. Japan: Zenkoku Natto Kyodo Kumiai Rengokai. 3 panels each side. Front and back. Each panel: 22 x 9 cm. [Jap]

• **Summary:** A color leaflet (see next page for recipes). “Tempeh is a distant relative of natto.” Contains recipes (with tempeh) for: Curry rice. Gyoza (Pot stickers). Tempeh kabayaki domburi. Tempeh banana donuts. Happosai. Potato croquettes. Seafood salad.

A nice chart compares the nutrients in tempeh and beef.

1825. **Product Name:** Jay and Lisa Sommers Tofu and Tempeh?

**Manufacturer's Name:** Unknown.

**Manufacturer's Address:** Latrobe, Tasmania.

**Date of Introduction:** 1985-1988.

**New Product–Documentation:** Talk with Trishala Shub. 1998. Jan. 18. As far as she knows, the first people to make tofu commercially in Tasmania were Jay and Lisa Sommers. They started in about 1985-88 in a small factory in Latrobe, near Bernie, in Tasmania. They also made tempeh. Trishala is still in touch with Jay and Lisa, who still live in Tasmania; she will ask them if they will write the story of how they founded Tasmania's earliest known tofu and tempeh manufacturing company. The Sommers later sold their equipment to a church group, which some years later sold it to Trishala and her former husband. She sold the equipment in June 1997 to the people from Organic Choice.

1826. **Product Name:** Tempeh (Marketer-Distributor).

**Manufacturer's Name:** Cauldron Foods Ltd.

**Manufacturer's Address:** 4, Conduit Place, Lower Ashley Rd., St. Paul's, Bristol BS2 9RL, England.

**Date of Introduction:** 1985.

**New Product–Documentation:** Soya Bluebook. 1985. p. 100. Talk with Philip Marshall, owner of Cauldron Foods. 1990. March 29. Cauldron Foods has never manufactured tempeh; they sold it at one time on behalf of someone else, but they have discontinued it. The manufacturer was a woman, probably in Chippenham, who owned a small company that has since gone out of business. It was not Paul's Tempeh.

1827. Kawai, Kumiko; Kikuchi, Kyoji; Aoki, Sadao. 1985. Tenpe hakkō katei ni okeru seibun no henka [Change in nutrients during tempeh fermentation]. *Tochigi-ken Shokuhin Kogyo Shido-sho Hokoku* (Tochigi Prefecture Food Industry Leadership Group Report) p. 1-5. [Jap]\*  
Address: Tochigi-ken Shokuhin Kogyo Shido-sho.

1828. Ko Swan Djien. 1985. Growth and toxin production of *Pseudomonas cocovenenans*, the so-called 'Bongkreik Bacteria.' *Asian Food Journal* 1:78-84. \*  
Address: Bandung Inst. of Technology, Indonesia; Agricultural Univ., Wageningen, Netherlands.

1829. Kronenberg, Hananya J.; Hang, Y.D. 1985. A puncture testing method for monitoring solid substrate fermentation. *J. of Food Science* 50:539-40. \*  
Address: Dep. of Food Science, Cornell Univ., Ithaca, New York 14853. Present address: Soy Systems, 1418 N.W. 179th St., Ridgefield, Washington 98642.

1830. **Product Name:** Gomasio Tempeh Chips (Gomashio is Sesame Salt).

**Manufacturer's Name:** Light Wave Wholefood.

**Manufacturer's Address:** 21 Gilbert St., Newton, Adelaide,

#### ■ギョウザ (4人分)

〈材料〉

- ギョウザの皮…2枚  
 テンペ…100g ネギ…中1本  
 キャベツ…100g  
 ニラ…80g シイタケ(もどした物)…4枚  
 とろけるチーズ…50g しょうが…1かけ  
 にんにく…1かけ  
 ② 塩…小1/2 砂糖…小2 正油…小1  
 胡麻油…小1 コシヨウ…少々  
 サラダ油…焼き油として

〈作り方〉

- ①Aの材料を全部みじん切りにしてよく手でまぜ合わせお好みの調味料を加えて更によくまぜ合わせる。  
 ②①をギョウザの皮でつつみ焼き上げる。

## おいしいテンペ料理いろいろ テンペの使用法はごくかんたん。

- 揚げても、炊めても、煮てもおいしい
- フライ・カレー・から揚げ・シチュー・  
テンブラ・スパゲッティ・サラダ・和えもの  
おつまみ・ケーキ……何でもOK!
- テンペは万能の料理素材なのです。

#### ■カレーライス (4人分)

〈材料〉

- ご飯…800g テンペ…150g マグロツナ缶詰…1缶  
 玉ねぎ…中2コ にんじん…100g ジャガイモ…2コ  
 しょうが(みじん切り)…1かけ  
 (カレー粉…大1/2  
 小麦粉…大2  
 スープ…3 $\frac{1}{2}$ カップ  
 ② 塩…小1/2 ハチミツ…小3  
 (ウスターソース、ケチャップ、しょうゆ各大1  
 バター…大1  
 サラダ油  
 植物性生クリーム又はヨーグルト適量

〈作り方〉

- ①テンペは1.5cm角に切って油で揚げておく。  
 ②にんじんはいちょう切り、じゃが芋は1cm角切り玉ねぎは薄切りにしておく。  
 ③厚手鍋にサラダ油を熱し、しょうが、玉ねぎが色づくまで炒め、野菜を加えて更に炒め、Aを加える。  
 ④スープを加えて③の調味料を加え煮込む。  
 ⑤煮込後に1分間、ツナ缶をほぐして④と共に入れ煮詰め煮込をかけ、上にご生クリームかヨーグルトをかける  
 (クリームをかけたら、まろやかな味になる)

#### ■テンペ蒲焼丼 (4人分)

〈材料〉

- テンペ…100g  
 小麦粉…大2  
 水…大2  
 ② 塩…大5  
 砂糖…大4  
 (砂糖はできるだけ三益糖を使用)  
 みりん…大2  
 水  
 ダシの素…少々  
 焼酎…少々  
 木の芽又は粉サンショ  
 ご飯

〈作り方〉

- 1.テンペは5mmの厚さに切る。  
 2.小麦粉、水で衣を作りフライパンに少し多めの油を入れ、少し焼き色がつくまで焼く。  
 3.鍋にAの調味料を入れ、ほんの少し煮つめえを入れて、一息立ちしたらすぐ火をとめる。  
 4.熱にご飯を盛りおききた焼酎をかけ、蒲焼テンペをのせ、粉サンショをかける。  
 ★木の芽が手に入ったら、葉を手でたたいて香りをだして上に熱るとよい。

#### ■テンペバナナドーナツ

〈材料〉

- テンペ…(100g・みじん切り) 卵…1  
 ホットケーキの素…(225g)  
 ② 牛乳又は水  
 /ツナ…2本(3分してレモン汁をかけておく)  
 揚げ油

〈作り方〉

- ①Aの材料を混ぜる。牛乳又は水を加える量は普通のドーナツより量かくなる程度入れる。  
 ②中火よりややよい油(150)でスプーンに油をつけて、①をすくっておとしながら、ゆっくりと色がつくまで揚げる。

企画監修/永山久夫 料理/川嶋則子

South Australia.

**Date of Introduction:** 1985.

**Ingredients:** Tempeh, gomasio [gomashio], olive oil.

**Wt/Vol., Packaging, Price:** 50 gm.

**How Stored:** Shelf stable.

**New Product–Documentation:** Label. 1985, undated. 4.5 by 5 inches. Black on yellow.

1831. **Product Name:** Pre-seasoned Tempeh.

**Manufacturer's Name:** Light Wave Wholefood.

**Manufacturer's Address:** 21 Gilbert St., Newton, Adelaide, South Australia.

**Date of Introduction:** 1985.

**Ingredients:** Soybeans, herbs, spices, tempeh starter.

**Wt/Vol., Packaging, Price:** 250 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1985, undated. 4.5 by 5 inches. Black on green.

1832. **Product Name:** Rice & Soy Tempeh.

**Manufacturer's Name:** Light Wave Wholefood.

**Manufacturer's Address:** 21 Gilbert St., Newton, Adelaide, South Australia.

**Date of Introduction:** 1985.

**New Product–Documentation:** Label. 1985, undated. 4.5 by 5 inches. Black on blue.

1833. **Product Name:** Sweet & Sour Tempeh Lumpia (Vegetarian Spring Roll).

**Manufacturer's Name:** Light Wave Wholefood.

**Manufacturer's Address:** 21 Gilbert St., Newton, Adelaide, South Australia.

**Date of Introduction:** 1985.

**Ingredients:** Pan-steamed tempeh, onions, lotus root, cabbage, soya and/or mung sprouts, carrot, tamari, miso, tamarind, maple syrup.

**New Product–Documentation:** Label. 1985, undated. 2

by 5.5 inches. Dark blue on light blue. "No eggs, synthetic additives or any animals and not deep fried."

1834. **Product Name:** Margaret's Tempeh.

**Manufacturer's Name:** Margaret's Tempeh.

**Manufacturer's Address:** P.O. Margaret River, W.A., Australia.

**Date of Introduction:** 1985.

**New Product–Documentation:** Label. 1985, undated. 4 inches square. Black and green on white. 250 gm.

1835. Nasoya Foods. 1985. A "tempeh-tation" for healthy sandwiches and entrees (poster). Mechanic St. Ext. (P.O. Box 841), Leominster, MA 01453. 4.25 by 11 inches,

• **Summary:** Horizontal, on card stock. A large color photo in the center shows two halves of a tempeh sandwich, with sprouts and lettuce. A black olive and cucumber are on the side. The printing is black on white. "High in protein. Rich in B vitamins." A color photo shows two packages of Nasoya Foods tempeh. Note: Nasoya is now making its own tempeh. Address: Leominster, Massachusetts.

1836. **Product Name:** [Whole-Grain Pizza {With Tempeh}].

**Foreign Name:** Vollkorn Pizza.

**Manufacturer's Name:** Natuerliche Lebensmittel. Paul Stuart Zacharowicz.

**Manufacturer's Address:** Staudgasse 70, A-1180 Vienna, Austria. Phone: 0222/48 50 03.

**Date of Introduction:** 1985.

**Ingredients:** Whole wheat flour, tempeh (cultured fresh soy product), cheese, homemade Paradise Sauce, vegetables, herbs, sea salt, cold pressed oil (kaltgepresstes Oel).

**New Product–Documentation:** Label. 1987. 5.5 x 4 inches. Black, gold, and red on white card stock. "Natur. Whole grain pizza is already baked. Warm for about 5 minutes in the oven. Contains no chemical colorings or preservatives."

1837. **Product Name:** One World Foods Tempeh Sandwiches.

**Manufacturer's Name:** One World Natural Foods.

**Manufacturer's Address:** 188 Old St., London EC1V 9BP, England. Phone: 01-490 0749.

**Date of Introduction:** 1985.

**New Product–Documentation:** Interview with Joe Simpson, the owner, conducted by Anthony Marrese. 1992. March 28. In 1985 the company launched Tempeh Sandwiches, plainly wrapped with no individual labels; they were discontinued in 1989 due to Joe's lack of interest in doing more secondary production and distribution.

1838. **Product Name:** [Tempeh Salad (Indonesian Style)].

**Foreign Name:** Tempeh–Salate (Nach indonesischer Art).

**Manufacturer's Name:** Pro Natura.

**Manufacturer's Address:** Elisabethenstr. 10, D-6074 Roedermark, West Germany. Phone: 06074-97437.

**Date of Introduction:** 1985.

**Wt/Vol., Packaging, Price:** 330 gm glass.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Leaflet from Tofuhaus Tiefenthal, a distributor. 1988. "No preservatives are used. They are sterilized to make them non-perishable."

1839. **Product Name:** [Tempeh Sandwich Spread (Yugoslavian)].

**Foreign Name:** Tempeh–Aufstrich (Jugoslawisch).

**Manufacturer's Name:** Pro Natura.

**Manufacturer's Address:** Elisabethenstr. 10, D-6074 Roedermark, West Germany. Phone: 06074-97437.

**Date of Introduction:** 1985.

**Ingredients:** Incl. tofu, tempeh, spices.

**Wt/Vol., Packaging, Price:** 180 gm glass.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Leaflet from Tofuhaus Tiefenthal, a distributor. 1988.

1840. Siagian, Uhum L. 1985. Bogor: Pusat Penelitian dan Pengembangan Gizi. 2 p. [Ind]\*  
Address: Bogor, Indonesia.

1841. **Product Name:** Tempeh.

**Manufacturer's Name:** Soy Power (Marketer-Distributor). Made in South San Francisco by Quong Hop & Co.

**Manufacturer's Address:** 2811-A Ocean Park Blvd., Santa Monica, CA 90405.

**Date of Introduction:** 1985.

**New Product–Documentation:** Talk with Kevin Cross. 1988. Sept. 22. Made by Quong Hop. Introduced in about 1985.

1842. **Product Name:** Meatless Burger. Marinated Soy Tempeh.

**Manufacturer's Name:** Soyfoods Unlimited, Inc.

**Manufacturer's Address:** 14670 Doolittle Dr., San Leandro, CA 94577.

**Date of Introduction:** 1985.

**Ingredients:** Soy tempeh (made with cultured soybeans organically grown in accordance with the California Health and Safety Code, Section 26569.11), soy sauce, garlic, onion, and spices.

**Wt/Vol., Packaging, Price:** 6 oz vacuum packed.

**How Stored:** Frozen or refrigerated.

**New Product–Documentation:** Label. Undated. "All the Sizzle... None of the steak. Ready to eat in 3 minutes." This product, introduced in September 1981, was originally called "Tempeh Burgers."

1843. **Product Name:** Tempeh Burgers (Marinated).

**Manufacturer's Name:** Western Soy Complements.

**Manufacturer's Address:** 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-479-05968.

**Date of Introduction:** 1985.

**New Product–Documentation:** Talk with Jeremiah Ridenour. 1988. Aug. 31. This product was launched in 1985.

1844. Affandi, Erwin; Mahmud, Mien K. 1985. Pengujian aktifitas antibakterial pada tempe terhadap bakteri penyebab diare [Tests of the antibacterial activity of tempeh against bacteria causing diarrhea]. *Penelitian Gizi dan Makanan* 8:46-56. [3 ref. Ind]

1845. Aubert, Claude. 1985. Les aliments fermentés traditionnels: Une richesse méconnue [Traditional fermented foods: An unrecognized richness]. Paris: Terre Vivante. 261 p. Index. 21 cm. Series: Collection les Vrais Aliments d'Aujourd'hui et de Demain. [173\* ref. Fre]

• **Summary:** The author gives good, brief introductions to the fermented soyfoods tempeh, miso, miso pickles, shoyu, tamari, sufu, natto, soy idli, and hamanatto. Related foods that are also discussed include koji, amazake (amasaké), and ontjom. See especially chapter VII: The fermentation of legumes (p. 73-78). Part IV (p. 153-216) is a dictionary of fermented foods and beverages, in which they are listed alphabetically; basic information and references for each are given. Instructions are given for preparing many of these foods on a home scale, and for some foods (such as tempeh) even recipes are given (fried tempeh, tempeh goreng). The book contains many beautiful illustrations and an excellent bibliography. The author acknowledges his extensive use of the material in *Handbook of Indigenous Fermented*

*Foods* (1983) edited by K.H. Steinkraus. Address: Ingénieur agronome de formation, France.

1846. Botton, B.; Breton, A.; Fevre, M.; Guy, P.; Larpent, J.P.; Veau, P. 1985. Moisissures utiles et nuisibles: Importance industrielle [Industrial importance of useful and harmful molds]. Paris: Coll. Collection Biotechnologies. 364 p. [150 ref. Fre]\*

• **Summary:** Contains a discussion of popular fermented soyfoods, including soy sauce, tempeh, and miso.

1847. Bradford, Peter; Bradford, Montse. 1985. Cooking with sea vegetables: A collection of naturally delicious dishes using to the full the bountiful harvest of the oceans. Wellingborough & New York: Thorsons Publishing Group. 144 p. Illust. by Sue Reid. Index. 22 cm. [8 ref]

• **Summary:** The Bradfords have spent considerable time studying food in Japan and are especially well qualified to present this vegan, macrobiotic cookbook. It contains recipes using tofu, tempeh, miso, shoyu (soy sauce), and seitan. Address: UK.

1848. Brody, Jane E. 1985. Jane Brody's good food book: Living the high-carbohydrate way. New York & London: W.W. Norton & Co. xxviii + 700 p. Foreword by Pierre Franey. Illust. (line drawings by Ray Skibinski). Index. 24 cm.

• **Summary:** Advocates a diet with more complex carbohydrates and starches—including whole grains and beans.

The section titled "Soy, the queen of beans" has the following contents: Soy protein, the meat of the East. Soy oil, a boon to blood vessels. A selection of super soy foods: Tofu—fast track to soy nutrition, tempeh—a treat from Indonesia, soybean sprouts—growing nutrients, soy flour—a protein boost, textured vegetable protein, for more recipes.

"Soy, the Queen of beans. The soybean may be the single most important food produced in the world today. It is certainly the most versatile." A praiseful introduction to soy protein, soy oil, soy grits, flakes and flour, soy powder (isolate), soy milk, soy nuts, tofu, tempeh, soy sprouts, and textured vegetable protein... by one of America's most widely read food writers.

Dr. C.R. Sirtori and collaborators at the University of Milan found that a diet rich in soy protein is considerably more effective in lowering cholesterol than is the traditional low-fat "prudent" diets. Even when 500 milligrams of cholesterol—the equivalent of two large egg yolks—were added to the soy diet, blood cholesterol levels did not rise, the study showed.

On the inside rear dust jacket is a portrait photo of Jane Brody and a brief biography. Born in New York City, she received her B.S. degree from Cornell University [Ithaca, New York] and her M.S. in Journalism from the University

of Wisconsin School of Journalism. She lives with her family in Brooklyn, New York.

Note: This book is not vegetarian; meat, fish and poultry are used extensively, but not as extensively as in many cookbooks. Address: Food writer for The New York Times.

1849. Culioli, J. 1985. Les procédés de texturation des matières protéiques végétales: Aspects technologiques [The processes of texturization of vegetable protein materials: Technological aspects]. In: B. Godon, ed. 1985. Protéines Végétales [Vegetable Proteins]. Paris: Technique et Documentation—Lavoisier : APRIA. xxvi + 629 p. See p. 489-522. [99 ref. Fre]

• **Summary:** Contents: Introduction. Traditional foods based on textured soy protein: Tofu, dried-frozen tofu, yuba, sufu (fermented tofu), tempeh. The principles of protein texturization. Spinning: Historical, processes, aptitude of proteins for spinning, the texture and structure of spun proteins, the techniques of spinning derived from the Boyer process. Cooking—extrusion. Other processes for texturization of protein. Conclusion. Address: Institut National de la Recherche Agronomique, Station de Recherches sur la Viande, Theix 63110 Beaumont, France.

1850. Findlater, Evelyn. 1985. Making your own home proteins: Tofu, tempeh, soft cheeses, yoghurt and sprouted seeds. London: Century. 151 p. Illust. 20 cm. \*

1851. Hermana, -. 1985. Pengelolaan kedelai menjadi berbagai bahan makanan [Management of soybean for foods]. In: Kedelai [Soybeans]. Bogor: Badan Penelitian dan Pengembangan Pertanian Bogor (Agency for Agricultural Research and Development, Bogor). [Ind]\*

1852. Holt, Helen. 1985. Eten zonder vlees: dat kan! [Eat without meat: It's possible!]. Den Haag, Netherlands: De Nederlandse Vegetariërsbond. 38 p. Illust. Index. 15 x 21 cm. [9 ref. Dut]

• **Summary:** A vegetarian cookbooklet. Soy-related foods are mentioned on the following pages: Miso (sojapasta, p. 6-7). Soy bits / morsels (probably chunks of textured soy flour; Sojabrokjes, p. 12, 32). Soybeans (sojabonen, p. 12, 15). Tempeh (tempé, p. 2, 3-4, 12, 22). Tofu (tahoe, table of contents, p. 3-4, 7, 12, 18, 20, 28).

Also discusses: Azuki beans (adzukibonen, p. 11, 15). Quark (kwark, p. 7). Sesame salt (sesamzout, gomasio, p. 6) Sesame tahini (sesampasta, tahin, p. 6-7)

Note: This is the earliest Dutch-language document seen (Jan. 2005) that mentions azuki beans, which it calls *adzukibonen*. Address: Larensweg 26, 1221 CM Hilversum, Netherlands.

1853. Hume, D.J.; Shanmugasundaram, S.; Beversdorf, W.D. 1985. Soyabean (*Glycine max* (L.) Merrill). In: R.J.

Summerfield and E.H. Roberts, eds. 1985. Grain Legume Crops. London: Collins. xvi + 859 p. See p. 391-432. Illust. Index. 24 cm. [192 ref]

• **Summary:** Contents: Introduction: History, current status and future projections. Principal economic yield and uses of crop products. Principal farming systems. Botanical and agronomic features: Symbiotic nitrogen fixation potential. Principal limitations to production and yield: Developing countries, developed countries. Fertiliser requirements. Quality of seed constituents. Germplasm resources. Principal breeding strategies: Adaptation to new geographic areas, breeding methodology, breeding objectives, seed quality, pest and disease tolerances, current trends in soyabean breeding. Avenues of communication among researchers (INTSOY, AVDRDC, IITA, FAO). Prospects for larger and more stable yields.

Tables: (1) Area (1000 ha), yield (kg per ha), and production (1000 tonnes) of soyabeans from 1969-71 to 1982. (2) Maturity durations and productivity potentials of soyabeans in selected countries. (3) *Glycine* species collections around the world. (4) Sources of resistance among soyabeans to selected insect pests. (5) Sources of resistance among soyabeans to selected diseases.

Table 9 shows that there are soybean germplasm collections in 15 countries. This table has 4 columns: Country, location (city), curator, and no of accessions. AVRDC in Taiwan has the largest germplasm collection in one location (10,400 accessions, Tainan), followed by USA (9,648, Illinois and Mississippi), India (4,000, Pantnagar; 1,800 Amravati), Japan (3,541, Tsukuba; 200, Morioka), USSR (3,000, Leningrad), China (3,000 Jilin; 3,000 Hubei; 2,930 Shadong [sic, Shandong {W.-G. Shantung}]; 2,500 Beijing; 960 Heilungjiang [Heilongjiang]). Also: Australia 400, France 500, Nigeria 1,300, Indonesia 600, South Korea 2,833, North Korea 300, South Africa 600, Sweden 1,200, and Thailand 1,686. Address: 1&3. Univ. of Guelph, Dep. of Crop Science, Guelph, Ontario N1G 2W1, Canada; 2. Asian Vegetable Research and Development Centre (AVRDC), PO Box 42, Shanhua, Tainan 741, Taiwan, Republic of China;.

1854. Kushi, Aveline; Esko, Wendy. 1985. The changing seasons macrobiotic cookbook. Wayne, New Jersey: Avery Publishing Group, Inc. xii + 265 p. Illust. Index. 28 cm. [43 ref]

• **Summary:** The recipes are arranged by the four seasons. The index contains 43 entries for miso, 39 for tofu, 35 for tamari, 18 each for seitan and tempeh, 3 for natto, and 1 each for Japanese black [soy] beans, and for soybeans (dry).

Also contains entries for amazake, amazake pudding, azuki beans, brown rice, hiziki [hijiki], kuzu, mochi, and sea vegetables. Address: Brookline, Massachusetts.

1855. Lembaga Kimia Nasional-LIPI (National Chemistry Institution). 1985. Membuat oncom [Preparation of onchom].

Bandung, Indonesia: Kerja Sama, LIPI-INKUD. 20 p. Undated. 22 x 28 cm. [Ind]

• **Summary:** An informative, practical booklet, with illustrations (line drawings) on every page, showing how to make onchom. With an introduction by Ig. Suharto, director of LKN-LIPI. Address: Bandung, Indonesia.

1856. Lembaga Kimia Nasional-LIPI (National Chemistry Institution). 1985. Membuat tempe [Preparation of tempeh]. Bandung, Indonesia: Kerja Sama, LIPI-INKUD. 22 p. Undated. [Ind]

• **Summary:** An informative, practical booklet, with illustrations (line drawings) on every page, showing how to make tempeh and tempeh starter in Indonesia. With an introduction by Ig. Suharto, director of LKN-LIPI. LIPI is an acronym for Lembaga Ilmu Pengetahuan Indonesia. Address: Bandung, Indonesia.

1857. McConnaughey, Evelyn. 1985. Sea vegetables: Harvesting guide & cookbook. Naturegraph Publishers, Inc., P.O. Box 1075, Happy Camp, California 96039. xi + 240 p. Illust. Index. 22 cm. [53\* ref]

• **Summary:** An excellent book by an expert on the subject, with years of experience. Sea vegetables: *Alaria* (wakame). *Analipus japonicus* (fir needle; matsumo in Japan). *Cystoseira* (chain bladder). *Desmarestia* (color changer). *Egredia menziesii* (feather boa). *Gracilaria* (ogo). *Halosaccion* (sea sac; add to soup and stir fries). *Laminaria* (kelp; kombu in Japan). *Macrocystis* (giant kelp). *Nereocystis* (bull kelp or bullwhip kelp). *Pelvetiopsis* (stir fry seaweed) and *Fucus*. *Pleuroficus* (sea spatula). *Polyneura* (use in soups and as a garnish). *Porphyra* (nori). *Postelsia* (sea palm). *Sargassum* (add to soups). Other sea vegetables. Commercial and imported sea vegetables. Note: Some recipe titles contain the word "vegetarian," but some also use meat.

Soy-related recipes: Frozen tofu (p. 85). Miso (p. 93). Soybeans (p. 205). Tempeh (p. 71, 72, 81, 82, 92, 94, 96, 155, 179, 205). Tofu (p. 72, 78, 93, 147, 151, 155, 171, 206, 207, 208).

Contains many excellent illustrations (line drawings by Wendy Lou Manley) and photos. Address: Oregon.

1858. Moeljopawiro, Sukarti. 1985. Bioavailability of iron and zinc in fermented soybeans. PhD thesis, University of Missouri-Columbia. 193 p. Page 1001 in volume 49/03-B of Dissertation Abstracts International. \*

• **Summary:** Trials were conducted using lactic acid fermented soybeans and tempeh fed to rats. The relative biological value (RBV) of iron and zinc in boiled non-fermented soybeans was the lowest among the products evaluated. The RBV of iron was increased from 60.1% in boiled non-fermented soybeans to 86.7% by lactic acid producing organisms and to 87.5% by *Rhizopus oligosporus* fermentation (ferrous sulfate = 100%). Fermentation also

significantly increased the RBV of zinc from 73.0% in boiled non-fermented soybeans to 84.5% in lactic acid fermented soybeans and to 89.0% in tempeh (zinc sulfate = 100%). Results of this investigation suggest that fermentation by lactic acid producing organisms and *Rhizopus oligosporus* increases the RBV of iron and zinc in soybeans. Address: Univ. of Missouri–Columbia.

1859. Nabben, Alexander. 1985. Soja-Kueche: Vielseitig und gesund [Soya cookery: Versatile and healthful]. Schaaflheim, West Germany: Pala Verlag. 144 p. Illust. Index. 21 cm. [Ger]

• **Summary:** Contents: Soya, the wonderbean (*die Wunderbohne*). A cultural history of the soybean. A little soybean botany. Soya is versatile. The world market and world hunger. Health through proper nutrition and diet. Product types and buying tips. Recipes. About the author (autobiographical, with photo; he was born in 1953 in Viersen. Since 1978 he has worked in a whole-grain bakery, a soya kitchen, and in a vegetarian restaurant in Munich).

This vegan cookbook contains a large number of tofu and tempeh recipes, as well as recipes for most of the other types of soyfoods. Note the following German terms: *Ganze Sojabohnen* (*getrocknete gelbe Sojabohnen*) = whole dry soybeans. *Vollsojamehl* = Whole soy flour. *Sojasauce* = soy sauce. *Miso* (*Sojapaste*) = miso. *Okara* (*Sojakleie*) = okara. *Tofu* (*Sojaquark oder -käse*) = tofu. *Tempeh* (*Soja-“Brie”*) = Tempeh.

On the last page of the book (p. 144) is an advertisement for Morgenland Naturkost, located at: Aus dem Anger 3410 Northeim 19, West Germany. Phone: 05551-64592. They offer tofu and tofu dishes, seitan and seitan products, and utensils for the production of tofu and tempeh.

Apparently a second edition or printing appeared in 1988 (ISBN 3-923176-35-x). Address: Morgenland Naturkost, Auf dem Anger 2, 3440 Northeim 19, West Germany.

1860. Salunkhe, D.K.; Kadam, S.S.; Chavan, J.K. 1985. Postharvest biotechnology of food legumes. Boca Raton, Florida: CRC Press. 160 p. Illust. Index. 26 cm. [25 soy ref]

• **Summary:** Contents. 1. Introduction. 2. Seed structure, production, and distribution (Soybean, p. 8-10, 17-18). 3. Chemical composition. 4. Nature and causes of losses. 5. Harvesting, threshing, and drying (Soybean, p. 69-70). 6. Storage. 7. Processing and utilization (Soyfoods, p. 121-36). 8. Food legumes in protein crisis.

Chapter 7, “Processing and utilization,” discusses tofu, tempeh, soy flour, soymilk, miso, shoyu, natto, hamanatto, and cereal-soy blends. Address: 1. Vice-Chancellor; 2. Prof. of Food Science & Technology; 3. Asst. Food Science & Technol. All: Mahatma Phule Agricultural Univ., Rahuri, Maharashtra State, India.

1861. Steinkraus, Keith H. 1985. Bio-enrichment: Production of vitamins in fermented foods. In: B.J.B. Wood, ed. 1985. Microbiology of Fermented Foods. Vol. 1. Essex, England: Elsevier Science Publishing Co. xx + 371 + 14 p. See p. 323-43. [60 ref]

• **Summary:** Contents: Introduction. Enrichment/fortification. Sources of vitamins (bio-enrichment through fermentation, incl. Indonesian tempe and tape ketan). Summary.

During the tempeh fermentation, riboflavin doubles, niacin increases 7 times, and vitamin B-12 activity increases 33 times. Thiamine unfortunately decreases. Address: Inst. of Food Science, Cornell Univ., Geneva/Ithaca, New York 14456.

1862. Wood, Brian J.B. 1985. Miscellaneous food-related fermentations. In: B.J.B. Wood, ed. 1985. Microbiology of Fermented Foods. Vol. 1. Essex, England: Elsevier Science Publishing Co. xx + 371 + 14 p. See p. 213-35. [27 ref]

• **Summary:** Contains a good overview of tempeh, ontjom, and “New substrates for old technologies,” as chickpeas for miso and tempeh, or soybeans for idli. Address: Dep. of Bioscience & Biotechnology, Univ. of Strathclyde, Glasgow, Scotland, UK.

1863. Simas, Luiz; Joels, Bobbi. 1986. Re: Miso, tempeh, shoyu, and macrobiotics in Brazil. Letter to William Shurtleff at Soyfoods Center, Jan. 7. 2 p. Typed, with signature on letterhead. [Eng]

• **Summary:** “When we returned to Brazil from the USA in Nov. 1981, we decided to hold a series of classes on natural foods processing, including a class on making tempeh at home. (Tempeh was completely unknown around here at that time.) We also began to make tempeh for our own consumption, but ended up setting up a small shop in our apartment. Because of the limited space, our tempeh production never went beyond 50 pounds per month, in spite of the large demand. So after a year or so, as we had originally planned, we handed the business over to a couple of friends who, unfortunately, for many reasons, were not able to continue tempeh production.

“However there is now another group of people making and selling tempeh here in Rio: Jurema and Mariá Paulinho, Rua Raimundo Correia, 27, apt. 504, 22.040 Rio de Janeiro (RJ), Brazil. Phone: (021) 237-7897. We will always be available for providing any kind of information about or classes on tempeh. One of our dreams is to see tempeh introduced in Brazil’s tropical northeast, where an incubator would not be necessary.

“At present we are involved in setting up miso and koji production in our house in the mountains of Minas Gerais for the coming year (1986). It’s an old dream, but it looks like it will finally come true. At first it will be a small-scale farm-house style production.

“Miso and shoyu, as well as tofu, are soy products with

a long history in Brazil, mainly due to the large number of Japanese immigrants in Sao Paulo. There are many shops there and some here in Rio which sell Oriental products, including miso, shoyu, tofu and natto. Nevertheless, they are usually semi-industrialized and include sugar, preservatives, etc. among the ingredients.

“Production and consumption of quality miso, shoyu, tofu and natto only began with the arrival of Tomio Kikuchi, a student of George Ohsawa’s and one of the first people to introduce macrobiotics to Brazil. Until today the best known good quality miso and shoyu are the miso and shoyu distributed by Kikuchi’s Instituto Princípio Unico. There are, however, other good misos as well.

“Instituto Princípio Unico, Sao Paulo (SP); Arma-Zen Produtos Naturais Ltda., Rio de Janeiro (RJ); Terrazul, Nova Friburgo (RJ).

“We’re sure there are many, many small producers of quality miso and shoyu all over Brazil, but we don’t know their addresses. There is also a large company which claims to devote part of its production to naturally-fermented miso and shoyu, with no sugar. The company’s name is Tozan. Their factory address is: Bairro Carlos Gomes s/nº, Campinas (SP); phones: (011) 278-2495 or (011) 278-5826.

“There are also two individuals who have a lot of experience in making miso and koji at home. They are available to provide information as well. They are: Dr. Sakae Maki, Praia de Botafogo, 428, s/304, Rio de Janeiro (RJ), phone: (021) 266-0503; Edson Hiroshi Seó, Fazenda Escola, 45.260 Poços (BA), phone: (073) 431-1108.

“We will continue to give classes on making homemade miso here in Rio, and we plan on eventually turning our small miso shop in the mountains into a school. We will always be available for any type of assistance or information concerning soy products.

“Several years ago the Brazilian Government tried to introduce soybeans in the public’s diet. It was a complete fiasco, mainly because of the lack of information on the part of the authorities. They simply tried to introduce soybeans as a substitute for the traditional black (turtle) beans, and soy milk as a substitute for cow’s milk. It didn’t work.” Address: Rio de Janeiro, Brazil.

**1864. Product Name:** [Tempeh Vegetarian Pâté (Natural, or with Olives)].

**Foreign Name:** Pâté végétale à tartiner au Tempé, Pâté végétale à tartiner aux olives et Tempé.

**Manufacturer’s Name:** Athanor.

**Manufacturer’s Address:** 4, rue Toiras, 34000 Montpellier, France. Phone: 67.87.0608.

**Date of Introduction:** 1986. January.

**Ingredients:** With Olives: Tempeh, brown rice, onions, green olives, soy sauce, soy oil (4%), natural aromas and binders, sea salt.

**Wt/Vol., Packaging, Price:** 120 gm glass jar with Crown-

type cap (removable with bottle opener). FOB price 7.05 FF.  
**How Stored:** Shelf stable for 3 years; refrigerate after opening.

**Nutrition:** With Olives: Moisture 73.3%, lipids [oils/fats] 8.7%, protein 8.6%, carbohydrates 6.0%, total Nitrogen 1.3%, iron 2 mg/100 gm, magnesium 50 mg/100 gm, calcium 131 mg/100 gm, energy 202 calories/100 gm.

**New Product–Documentation:** Labels. Received 1988. May. 5 by 1 inch. Green or brown on beige. “Rich in protein. No cholesterol. Best if consumed within 3 years of date printed on lid.” Soyfoods Center product evaluation. 1988. May. Nothing special. This lid is very difficult to remove without a bottle opener, a device no longer widely available in America.

**1865. Product Name:** [Tofu, Smoked Tofu, Tempeh, and Tofuburger].

**Foreign Name:** Tofu, Tofu Fumé, Tempeh, Galette: Petit Roti Végétal.

**Manufacturer’s Name:** Gaec de La Lix: United Macrobiotic Company.

**Manufacturer’s Address:** 32260 Tachaires–Seissan, France. Phone: 62.65.35.04.

**Date of Introduction:** 1986. January.

**New Product–Documentation:** Form filled out for Anthony Marrese. 1989. Sept. These four products were introduced as follows with the amount presently produced shown in parentheses: Tofu (80 kg/week) and Soyaburger (800 pieces/week), Jan. 1986. Smoked Tofu (8 kg/week), June 1986. Tempeh (40 kg/week), Oct. 1986. Anthony visited the community in mid-Oct. 1989 and noted: “They are a small group similar to Terre Nouvelle, but doing more with soya. Very nice kitchen production (see color slide), which is growing. They sell through markets and through 10 stores, which helps them to educate people. They are all Germans who came to France about 5 years ago mainly because land prices were lower in France. They also make small quantities of miso (experimental stage) and 4 kg/week of koji for amazake and miso.

Labels for all 4 products. 1989. 4 by 2.75 inches. Each photocopied with black handwritten letters on pastel color paper, and each with the Nature et Progres logo indicating organically grown. Each label has a description of the food on the back.

For details and an update to 1989 see the letter from Gaec de La Lix: United Macrobiotic Company to Anthony Marrese, of Sept. 1989.

**1866. Product Name:** [Tempeh].

**Manufacturer’s Name:** Jurema and Mariá Paulinho Tempeh.

**Manufacturer’s Address:** Raimundo Correia, 27, apt. 504, 22.040 Rio de Janeiro (RJ), Brazil. Phone: (021) 237-7897.

**Date of Introduction:** 1986. January.

**New Product–Documentation:** Letter from Luiz Simas and Bobbi Joels. 1986. Jan. 7. “There is now another group of people making and selling tempeh here in Rio.” The above name, address, and phone number is given.

1867. Plenty Canada. 1986. The Soya Centre (Calendar). Castries, St. Lucia.

• **Summary:** This is the head of a calendar, 8½ by 11 inches. On the top three-fourths of the page is a large black-and-white photo of the Soya Centre, looking from the outside in through two open doors—on each of which is written “Soya Beans” in large diagonal letters, above an illustration of a soya bean plant. Inside are about 10 local black people. On the back right is a food retail counter and snack bar, staffed by several women. On the back wall is a blackboard with a price list and menu written on it in chalk.

On the bottom quarter, in large black letters is written “The Soya Centre” in an arch. A laughing Santa Claus on the left is holding the word “The.” Below the arch is written the Center’s address: “19 Grass St., Castries, St. Lucia. Tel: 26421.” To the right of the arch is a line drawing of a dove, and below it: “With the Compliments of Plenty Canada and the Staff of the Soya Centre.” The calendar itself is missing.

Talk with Maya Clarke of Ontario, Canada. 1998. June 25. Maya worked for 7 years as a nutritionist and soyfoods instructor/technician for Plenty Canada at this Soya Centre in St. Lucia. She remembers this calendar well but does not have a copy. “There could possibly be one in the Plenty archives” at Lanark, but she is not too sure. Plenty made a calendar like this for two years, and this was the first of the two. It was designed by Plenty and printed in Castries (the capital city, by the person who prints *The Voice* newspaper) in December 1985 and presented on 1 Jan. 1986 as a New Year’s gift to the Center’s popular customers and friends. The calendar had a photograph as the head, then one page for each month below. The soya bean plants on the two big doors were painted by a Rastafarian man named Papa. Many of the people shown in the picture, the same as those who came to the Centre, were Rastafarians, who are vegetarians (very important) and consider themselves members of the lost tribe of Israel. They esteem Marcus Garvey, who they consider one of their forerunners. Note: *Webster’s Dictionary* (1985) defines Rastafarian (derived from *Ras Tafari*, the precoronation name of Haile Selassie), a word first used in 1955, as “an adherent of Rastafarianism.” The latter word, first used in 1968, is defined as “a religious cult among black Jamaicans that teaches the eventual redemption of blacks and their return to Africa, employs ritualistic use of marijuana, forbids the cutting of hair [it is worn in long braids called dreadlocks (first used in 1960)], and venerates Haile Selassie as a god.”

The Soya Centre, which was constructed specifically for this purpose by the team just before Maya (John Baranni and Christine Kilgour from Plenty with local labor), was

located in the middle of a black ghetto in Castries, and there were lots of social problems in the area. In the back of the Centre was a soyfoods factory. The factory was used to train all the people who subsequently opened up soyfoods businesses in St. Lucia. “What went on with soyfoods in St. Lucia was very significant—much more so than what happened in Jamaica, etc. At any given time, up to ten local people worked (for pay) at the Centre. The Centre was self-sufficient, so the money from the foods they sold went to pay the workers. Two guys would start very early in the morning (about 4:00 a.m.) to make soymilk and tofu. Then a crew of ladies would come in about 7:00 a.m. and use the tofu and soymilk to make second generation products from soymilk, tofu, and okara—such as “bakes” (like a little doughnut) and “accras” (like a fritter, in which the traditional salt cod was replaced by okara). The use of okara made the products more affordable. Tempeh was made at time, but it did not catch on as well as tofu and soymilk, and it was somewhat hard to get the spores. “Tofu caught on almost immediately “The local people just took it up; they just seemed to know what to do with it.” Soymilk ice cream was one of the most popular products. Soymilk, imported soy flour, and okara were used to make little breads. Many people would bike or walk to the Centre to buy tofu in bulk over the counter—which was also a snack bar. The Centre was both a business and an education/training center. Many local Seventh-day Adventists came to cooking classes at the center, and Maya also taught classes in their churches, schools, and homes. Maya remembers that one day a 13-year-old kid named Sooner knocked on the door of the Center at 7 o’clock in the morning and said to her: “I want to know everything there is about soyfoods.” She happily invited him in, and began to teach him. For a while there was a “Comments Book” at the Centre; in it people wrote soy poems and soy songs—some of which Maya still has.

At one time some 10-12 soyfoods businesses were started in St. Lucia by local people who had first trained at Plenty Canada’s Soya Centre. About 6 of those businesses are still in operation. A good example is La Soyarie. The reasons the others did not survive had nothing to do with local acceptance of soyfoods; they failed largely for reasons related to money or business management skills.

St. Lucia is a very small (27 miles long) independent country; It was granted self-government by the British in 1967 and attained independence on 22 Feb. 1979. The population is about 160,000 (1998). About 90% of the population is of African descent, with a small minority of Europeans and a few Carib Indians. Bananas are the chief crop. The official language is English, but Creole is the language most widely spoken. It is largely an oral culture.

Note: This is the earliest calendar seen (Oct. 2001) that mentions soy. Address: 19 Grass St., Castries, St. Lucia. Phone: 26421.

1868. Sig, Marie. 1986. Soja: la protéine du futur [Soya: The protein of the future]. *Physic*. Jan. p. 32, 34-35, 110. [Fre]  
 • **Summary:** A brief introduction to tempeh, miso, tamari, tofu, soymilk, and soy flour from a macrobiotic viewpoint. One recipe is given, from the forthcoming French-language book, *Mysteries and Secrets of Soya*, by C. and L. Clergeaud. Address: France.

1869. **Product Name:** Chili Con Tempeh.  
**Manufacturer's Name:** Surata Soyfoods.  
**Manufacturer's Address:** Eugene, Oregon.  
**Date of Introduction:** 1986. January.  
**Ingredients:** Incl. Soy tempeh, spiced meatless chili, tomato sauce.  
**How Stored:** Refrigerated.  
**New Product–Documentation:** Food Report (Lehmann). 1986. Jan. Ready to eat.

1870. Durfee, Roy. 1986. Santa Fean offers recipe for health: Fortunes of his soyfood business ride on growing public awareness of tofu, tempeh. *Journal (Albuquerque, New Mexico)*. Feb. 2. p. G1, G4.  
 • **Summary:** Jennings bought Southwest Soyfoods in July 1982. He now makes about 1,500 lb/day of tofu and has 6 employees. The tofu retails for \$0.89 to \$1.39.

Note: Talk with Richard Jennings. 1989. Aug. 22. He has renamed his company to The Food Plant. His main product is organic salsa. Soyfood products include tofu, tofu tamales, and a burrito filling. He stopped making tempeh in about June 1986. Photos show: Two workers making tofu tamales. Richard Jennings operating a soymilk extractor.

1871. Djurtoft, Robert. 1986. Re: Work with tempeh. Letter to William Shurtleff at Soyfoods Center, Feb. 3. 1 p. Typed, with signature on letterhead. [Eng]  
 • **Summary:** "Thank you for sending me the 2nd ed. of 'The Book of Tempeh.'"

"Because of your interest, I have also gone back to my files and found copies of some reports (mostly in English) I originally sent to DANIDA who has sponsored most of the work [with tempeh in Africa] from 1970 to 1983. DANIDA stands for Danish International Development Agency and is part of the Danish Ministry of Foreign Affairs." Address: Prof., Dep. of Biochemistry and Nutrition, The Technical Univ. of Denmark, Building 224-DK-2800 Lyngby, Denmark.

1872. *Toronto Star (Ontario, Canada)*. 1986. Tempeh new to Toronto. Feb. 6. p. F5.  
 • **Summary:** "Soy based foods are available at more and more restaurants, specialty stores, and supermarkets, in response to a growing demand for lighter and meatless protein foods. For example, there has been a rapid rise in the popularity of tofu (soybean curd) and tofu based products.

"Once only for 'those who dare,' tofu is now available in all major supermarkets and in many major restaurants in Toronto.

"Moving quickly on the heels of tofu is tempeh, and Indonesian culinary delight."

Two varieties of tempeh (traditional soy tempeh and a lighter grain tempeh) is now being made by Soy City Foods in Toronto. They are served at: (1) Vegetarian Restaurant, 542 Yonge St.; (2) West End Vegetarian Restaurant, 2849 Dundas St. West.

Gives a recipe for Barbecued tempeh.

1873. Vogel, Lothar S. 1986. Re: Growing interest in tempeh. Letter to William Shurtleff at Soyfoods Center, Feb. 25. 4 p. Handwritten. [Eng]

• **Summary:** "I'm sure you will remember me. We first met when I was hitch-hiking from Berkeley to Marin [California], studying Sanskrit, reading the Vivekachudamani [famous work by Adi Shankara that expounds Advaita Vedanta philosophy].

"Then I visited with Candle [lady's name] and went cross country teaching people about tempeh."

"It seems I have at last found an area I like and possibly will try to continue and do my work. I was in Hawaii for a while, then in Europe, and now in San Diego. My last workshop in Honolulu was the best one I have had yet, and the ones I am planning here feel promising.

"Besides contacting the 'alternative community' I contact schools, newspapers, radio stations, etc. I plan to hold a workshop entirely for restaurant chefs and cooks.

"As you see, I have a goal to put out *The International Tempeh News*, a publication I envision to be sort of open to all tempeh fans, but [directed] more to lay people than professional producers." Address: 2019 Granada Ave., San Diego, CA 92014. Phone: (619) 233-8273.

1874. Karta, Susani K. 1986. Tempeh—The gem of the vegetarian diet. Paper presented at International Convention of "Prospects for Soybean Utilization." 8 p. Organized by Soyabean Processors Assoc. of India on 15-16 Feb. 1986 at Indore, MP, India. [1 ref]

• **Summary:** A good overview. "Although soy tempeh is by far the most popular type, there are more than thirty varieties of tempeh which can be grouped into five basic types. They are as follows:" 1. Legume. 2. Grain and soy tempeh. 3. Grain tempeh. 4. Presscake tempeh. 5. Nonleguminous seed and legume tempeh (e.g. sesame seed and soy tempeh). Address: India.

1875. **Product Name:** Harvest Light Tempeh.  
**Manufacturer's Name:** Northern Soy Inc.  
**Manufacturer's Address:** 30 Somerton St., Rochester, NY 14607. Phone: 716-442-1213.  
**Date of Introduction:** 1986. February.

**Ingredients:** Organically grown soybeans, filtered water, apple cider vinegar, live tempeh culture.

**Wt/Vol., Packaging, Price:** 8 oz vacuum packed. Not frozen. Steamed.

**How Stored:** Refrigerated, 45 day shelf life.

**New Product–Documentation:** Manufacturer's catalog. 1987. Oct. Talk with Andy Schecter. 1988. Feb. 17. This is the brand for their steamed, vacuum packed, non-frozen tempeh. The separate brand idea started with their vacuum packed tofu; previously all of their tofu had been fresh and unpackaged in bulk.

1876. Rocheman, Marc. 1986. Les aliments fermentés dérivés du soja [Fermented foods derived from soya]. *Biofutur* No. 43. p. 34-42. Feb. [8 ref. Fre]

• **Summary:** Gives the composition and nutritive value of various soy products: tofu, fermented tofu (sufu), miso, natto, shoyu, and tempeh. Describes the possibilities for use of koji, as a source of proteases and peptidases, in the production of these fermented foods.

1877. *Watashi no Kenko (My Health)*. 1986. Neba neba shinai Java natto, tempeh wa: Shibô no sanko o fusegu seijin-byô yubô saku [Non-sticky natto from Java: Tempeh is a food to prevent geriatric diseases]. Feb. p. 102-04. [Jap]

• **Summary:** A general introduction to tempeh. Address: Japan.

1878. Bailey, Simon. 1986. Re: Work with tempeh in Trinidad. Letter to William Shurtleff at Soyfoods Center, March 11. 1 p. Typed, without signature.

• **Summary:** "I am at present producing Tempeh here in Trinidad on a small (community) scale and attempting to encourage the greater use of soya and other vegetable-based foods here. In a month's time we will be organising a small seminar for a group of local farmers on soya cultivation and basic processing. Response is gradual and in order to maintain a livelihood I am preparing vegetarian / macrobiotic lunches for sale in Port of Spain in the capital. I visited the Plenty soya project on Dominica and that experience was very inspiring." Address: c/o Valdez, 21 Sun Valley Dr., La Pastora, Upper Santa Cruz, Trinidad, West Indies.

1879. Stromnes, Lonnie. 1986. Tempeh production increasing at Soyfoods Unlimited (Interview). *SoyaScan Notes*. March 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Production of tempeh at Soyfoods Unlimited grew 25% in 1985. Address: Soyfoods Unlimited, 14670 Doolittle Dr., San Leandro, California 94577.

1880. Tibbott, Seth. 1986. Update tempeh at Turtle Island (Interview). *SoyaScan Notes*. March 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Turtle Island is now making 800 lb/week of tempeh. Address: Turtle Island Soy Dairy, 1 Main St., Husum, Washington 98623.

1881. *Toyo Shinpo (Soyfoods News)*. 1986. Tenpe no hansoku ni hongoshi. Zenkoku Nattô Rengôkai Tenpe Fukyûkai tairyô na panfu o sakusei [They're putting real effort into promoting tempeh. The Japan Natto Assoc. Tempeh Popularization Group has published many pamphlets]. March 21. p. 10. [Jap; eng+]

• **Summary:** Pamphlet title is "This is the health food of the 21st century." Goro Kanasugi is head of the Tempeh Popularization Group. Address: Kyoto, Japan.

1882. *Toyo Shinpo (Soyfoods News)*. 1986. Tenpe no jidai. Daizu hakkô shokuhin "tenpe" ni tsuite. Jiaru-san e no teikôsei tsuyoshi [The age of tempeh. About this fermented soyfood. It has a strong resistance to thiosulphuric acid?]. March 21. p. 10. [1 ref. Jap; eng+]

1883. Steiner, Mary P. 1986. Tofu, tempeh also good in dinner entrees: Third of series. *News (Bluffton, Ohio)*. March 27.

• **Summary:** This is the third part of a series on a class in Bluffton Family Recreation class in cooking with whole foods. "The instructors include many recipes using tofu and tempeh, both of which are soybean products." Gives recipes for: Almond tofu. Chili con tofu. Tempeh stroganoff. Orange pudding. A photo shows Hans Houshower stirring tofu in a wok.

1884. Great Life Enterprises Unlimited. 1986. Principles of tempeh production and making tempeh starter: Workshop XII with Lothar S. Vogel, M.A. (Leaflet). San Diego, California: East West Center for Macrobiotic Studies. 1 p. Single sided. 28 cm. [Eng]

• **Summary:** "Lothar has been studying the relationship of Food-intake and Well-being, and has been professionally involved in the food service industry since 1956, serving five-star hotels..." Cost: \$25.00.

Workshop sponsored by Great Life Enterprises Unlimited. Address: East West Center..., 3436 30th St., San Diego, CA 92014. Phone: (619) 233-8273.

1885. **Product Name:** Tempeh Delites [Mild Sticks, or Spicy Sticks].

**Manufacturer's Name:** Harvest Earth Foods.

**Manufacturer's Address:** 2789 Steamboat Springs, Rochester, MI 48063.

**Date of Introduction:** 1986. March.

**Wt/Vol., Packaging, Price:** 9 per 16 oz package.

**How Stored:** Frozen.

1886. **Product Name:** Tempeh Delites Breakfast Naturals

(Meatless Breaded Tempeh Sausages).

**Manufacturer's Name:** Harvest Earth Foods.

**Manufacturer's Address:** 2789 Steamboat Springs, Rochester, MI 48063.

**Date of Introduction:** 1986. March.

**Wt/Vol., Packaging, Price:** 6 oz vacuum pack bags.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Food Report (Lehmann). 1986. March.

1887. Katoh, Kiyoaki; Ohta, Teruo. 1986. Quality assessment of tempe products—Triglyceride profile of tempe and onchom chips of Indonesia: Notes. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 48. p. 86-90. March. [4 ref. Eng; jap]

• **Summary:** “Eight samples of tempe and oncom chips were collected in Java, and the crude fat contents and triglyceride profiles of extracted oil were examined. Tempe chips samples included famous souvenir brands of Sri Umbi (No. 1) and Zogor Sari (No. 2) from Bandung, and other three samples purchased in Pasar Bogor (Nos. 6, 7 and 8). Oncom chips tested were Souvenir brands Reno (No. 4) and Gouw (No. 5). Sambel Goreng (No. 3) was a specialty product of mixed fries of tempe and hot chilli.” Address: Tsukuba, Japan.

1888. **Product Name:** The Soy Deli Tofu-Tempeh Burgers.

**Manufacturer's Name:** Quong Hop & Co.

**Manufacturer's Address:** 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.

**Date of Introduction:** 1986. March.

**Ingredients:** Organic tofu, organic tempeh, fresh carrots and onions, sesame seeds, sunflower seeds, currants, safflower oil, sea salt, garlic powder.

**Wt/Vol., Packaging, Price:** 7 oz (199 gm) vacuum pack.

**How Stored:** Refrigerated.

**Nutrition:** Per 3.5 oz.: Calories 268, protein 18.6 gm, carbohydrate 9.3 gm, fat 17.3 gm.

**New Product–Documentation:** Leaflet. 1986. 8½ by 11 inches, color. “There is Quality & Variety after 80!” Shows all products. Pre-cooked, they are quick and easy to prepare by toasting, broiling, frying, or microwaving. Labels (front and back). 1987. 5 inches square. Orange and brown on white film. “High in protein. No cholesterol, contains no meat. Pop ‘n serve.”

Product Alert (Naples, WY), 1986. March 17. “27. Misc. foods.” Soy Deli Tofu-Tempeh Burgers were spotted “at a recent health food show.”

1889. **Product Name:** The Soy Deli Pacific Tempeh Burger [Original, or Marinated].

**Manufacturer's Name:** Quong Hop & Co.

**Manufacturer's Address:** 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.

**Date of Introduction:** 1986. March.

**Ingredients:** Marinated: Organic soy tempeh, water, shoyu (natural soy sauce), lemon juice, natural herbs and spices, safflower oil.

**Wt/Vol., Packaging, Price:** 7 oz (199 gm) vacuum pack.

**How Stored:** Refrigerated.

**Nutrition:** Marinated: Per 3.5 oz. Calories 247, protein 18 gm, carbohydrates 12.1 gm, fats 13.75 gm, sodium 13 gm, vitamin B-12 2.2 mg.

**New Product–Documentation:** Labels for both. 1987. 3.5 inches diameter. Front and back. Front is full color, with orange, yellow and red lettering. Photo of a round burger with onions rings on top, on mushrooms, lettuce and tomato. “Pop ‘n Serve. Meatless. Delicious. High Protein. No Cholesterol. Good food in minutes.”

1890. **Product Name:** The Soy Deli Pacific Tempeh.

**Manufacturer's Name:** Quong Hop & Co.

**Manufacturer's Address:** 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.

**Date of Introduction:** 1986. March.

**Ingredients:** Water, organically grown soybeans, tempeh starter (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 8 oz vacuum pack.

**How Stored:** Refrigerated.

**Nutrition:** Per 4 oz.: Calories 190, protein 20 gm, carbohydrates 14 gm, fat 9.7 gm, sodium 10.5 mg, vitamin B-12 2.5 mg.

**New Product–Documentation:** Note: Pacific Tempeh was acquired by Quong Hop & Co. in South San Francisco on 1 July 1984. Label. 1987. 3.75 by 4.25 inches. Full color, with orange, yellow and red letters. Photo of a dish of fried tempeh on rice. “Cultured soyfood. Delicious. High protein. Easy to cook. No salt.”

1891. Winter, Dorothy. 1986. The substitute foods industry—New directions. Business Communications Co., Inc., 9 Viaduct Rd., P.O. Box 2070C, Stamford, CT 06906. 186 p. March. Report No. GA-052. \*

• **Summary:** Table of Contents lists the following: The Tofu Market Scene. Description, Manufacturer's and their products. Markets, sales, and outlook. Tables: Percentage of Tempeh Sales by Type. Largest Tofu-Tempeh-Miso Manufacturers in the U.S., 1984. Tofu/Tempeh/Miso Industry in the United States, 1984 and 1990. Much of this material seems to be taken without permission from *Soyfoods Industry & Market* by Shurtleff & Aoyagi.

Other chapters: The role of protein in substitute foods, Meat (extenders and analogs). Dairy substitutes. Regulation in the substitute foods industry. Address: Stamford, Connecticut.

1892. Harrison, Slater. 1986. Re: Work of the Mennonite Central Committee (MCC) with soybeans in Bangladesh.

Letter to William Shurtleff at Soyfoods Center, April 3. 1 p. Typed, with signature on MCC letterhead. [1 ref]

• **Summary:** George Horlings' book [report] on soybeans in Bangladesh—summarizing his work and that of others on soybean utilization and production—should be published within 2 months.

A Japanese nutritionist, Dr. Yoshimiko Kobayashi (a soyfoods expert), is now helping MCC; she is with a volunteer organization of Japanese doctors.

Bob Burns got 9 large seeded vegetable type soybeans for “edamame.” He planted them and got a second generation of quite a few more. Both Bob and Slater make tempeh regularly. Several immigrants from Hong Kong are making tofu in Dhaka. Address: c/o MCC, P.O. Box 5, Maijdi Court, Noakhali, Bangladesh. Phone: 317065 or 316461.

1893. Bailey, Simon. 1986. Re: Work with tofu and tempeh in Trinidad. Letter to William Shurtleff at Soyfoods Center, April 28. 1 p. Typed, with signature.

• **Summary:** “I hope you received my letter dated 11th March. I didn't receive a reply yet so am writing again in the meantime.

“I'm British and since mid-1984 have been in Trinidad Cooking natural foods and beginning to make tempeh on a small scale. In conjunction with tofu producer, Susan Lee Hem, I am seeking to communicate more about soyafoods, improve and increase production of tempeh and act as a focus for farmers interested in growing beans in Trinidad. I would like to receive information about establishing a Soyafoods Centre here.

“If you have names and addresses of any tempeh producers in Surinam those would also be useful. Also any information on suppliers of soyabeans in Brazil, Venezuela, or Belize.”

“I would like to obtain the professional edition of The Book of Tempeh, please let me know the price.

“With the original letter I sent some U.S. currency with a request for Tempeh pamphlets and a media package.

“Once again, I trust you received it and await a reply

“Best wishes, Simon Bailey.” Address: c/o Valdez, 21 Sun Valley Dr., La Pastora, Upper Santa Cruz, Trinidad, West Indies.

1894. **Product Name:** [Tempeh Cuisine (A preserve)].

**Foreign Name:** Conserves Tempé–Tempé Cuisine.

**Manufacturer's Name:** Athanor.

**Manufacturer's Address:** 4, rue Toiras, 34000 Montpellier, France. Phone: 67.87.0608.

**Date of Introduction:** 1986. April.

**Ingredients:** Tempeh, water, salt.

**Wt/Vol., Packaging, Price:** 165 gm glass jar with Crown-type cap (removable with bottle opener). FOB price 9.35 FF.

**How Stored:** Shelf stable for 2 years; refrigerate after

opening.

**Nutrition:** Per 100 gm: Energy 120 calories, protein 12.8 gm, lipids 6.4 gm, carbohydrates 2.8 gm, calcium 31.1 mg, magnesium 11.2 mg, iron 1.9 mg, vitamin A < 0.5 mg, vitamin B-1 0.011 mg, vitamin B-2 0.038 mg, vitamin C < 0.02 mg.

**New Product–Documentation:** Athanor Price List. 1988. Labels. 1988. The front one: Nature et Progres logo. CINAB logo. “Protein 100% vegetable. Tempeh–Fermented soya.” The back one: Suggestions for use and Italian recipe. Best if consumed within 2 years of date printed on lid.

1895. **Product Name:** [Tempeh Salad].

**Foreign Name:** Tempé en Salade.

**Manufacturer's Name:** Athanor.

**Manufacturer's Address:** 4, rue Toiras, 34000 Montpellier, France. Phone: 67.87.0608.

**Date of Introduction:** 1986. April.

**Ingredients:** Tempeh (Fermented soybeans rich in protein), onions or leeks, carrots, virgin olive oil, cider vinegar, water, garlic, sea salt.

**Wt/Vol., Packaging, Price:** 160 gm glass jar with Crown-type cap (removable with bottle opener). FOB price 9.95 FF.

**How Stored:** Shelf stable for 2 years; refrigerate after opening.

**Nutrition:** Per 100 gm: Energy 100 calories, protein 4.1 gm, lipids 6.8 gm, carbohydrates 4.3 gm.

**New Product–Documentation:** Label. 1988. 2.75 inch diameter. Black, orange, dark green and white on light green. “Fermented Soya.”

1896. Bhatnagar, P.S. 1986. All India Coordinated Research Project on Soybean (Indian Council of Agricultural Research). National seminar & seventeenth annual workshop: Proceedings & technical programme 1987-87. G.B. Pant University of Agriculture & Technology, Pantnagar-263145, India. iv + 247 p. Held 22-25 April 1986 at MACS (Maharashtra Assoc. for the Cultivation of Science) Research Institute, Pune, Maharashtra, India. No index. 27 cm.

• **Summary:** Recommendations concerning food uses of soybeans include: A domestic market for defatted soy flour should be created. The production and use of tofu, soy beverage, and full-fat flour in weaning (human and cattle calves) should be encouraged. Utilization research is taking place mostly at Sehore (oil, flour), Pantnagar (flour, milk, oil, isolate, tofu), and Bangalore (tempeh, soy yogurt, soy cheese). A directory of researchers is given at the back of the proceedings. Address: Coordinator, All-India Coordinated Research Project on Soyabean (ICAR), G.B. Pant Univ. of Agriculture & Technology, Pantnagar, UP, 263145, India.

seitan: La viande de blé [The vegetable trilogy. 1. Tofu or soy cheese. 2. Tempeh or fermented soya. 3. Seitan or wheat meat]. *Compas (Le) (France)* No. 26. p. 31-35. March/April. [10 ref. Fre]

• **Summary:** Each of the three sections gives a description of the product, with black-and-white photos, the nutritional composition, several recipes by Viviane Camo, a list of manufacturers (with the address and phone number of each), and a list of books on the subject. Address: France.

1898. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Christian Nagel Tofumanufaktur.

**Manufacturer's Address:** Oelkersallee 14a, D-2000 Hamburg 50, West Germany. Phone: 040/89 49 37.

**Date of Introduction:** 1986. April.

**Ingredients:** Sojabohnen aus kontr. biolg. Anbau, Rhizopus oligosporus.

**Wt/Vol., Packaging, Price:** 200 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Form filled out by Christian Nagel. 1988. Jan. Product was introduced in April 1986.

They are now making 60-100 kg/month. Label. 1988. 4 by 3 inches. Black on blue.

Bernd Drosihn. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38. Says the company, "Tofumanufaktur Christian Nagel," makes fresh tempeh and tempeh burgers.

www.tofunagel.com/tempeh.htm. Retrieved 2001. April 22. Three pages of information about the company's tempeh.

1899. *Compas (Le) (France)*. 1986. Des saucisses de soja [Soy sausages]. No. 26. p. 26-27. March/April. Interview with Eric Dewilde of De Hobbit. [Fre]

• **Summary:** About the tempeh and tempeh sausages made by De Hobbit in Belgium. Three photos show the company cooking and centrifuging the soybeans to make tempeh, adding the tempeh starter culture, and forming the tempeh sausages. De Hobbit is located at Waterstraat 4, B-9980 Sint Laureins, Belgium. Phone: 091/79.96.22. Their distributor in France is Traditions du Grain, 16 avenue Jean-Jaurès, 94200 Ivry, France. Phone: (1) 46.71.89.88. Address: France.

1900. Givant, Marlene. 1986. Soy foods come of age on Long Island: No reason to resist tempeh-tation at Appropriate Foods. *Whole Life*. April. p. 63-64.

• **Summary:** Robert Werz and Shelley Martin, the owners, make 2,500 lb/week of tempeh and 150 gallons/week of soymilk. They also distribute some 200 other purely vegetarian and kosher products.

1901. Ho, Coy Choke. 1986. Identity and characteristics of *Neurospora intermedia* responsible for *oncom* fermentation in Indonesia. *Food Microbiology* 3(2):115-32. April. [25 ref]

• **Summary:** Seventy-one *Neurospora* cultures were isolated from *Oncom tahu* [okara onchom] based on soybean residues [okara] the in Jakarta-Bogor and from Onchom based on peanut presscake in the Lembang-Bandung regions of West Java. Tests for meiotic sterility of hybrids showed the onchom cultures to be *Neurospora intermedia* Tai and not *N. sitophila* as previously assumed and reported.

First presented at the IFS-UNU workshop on "Development of indigenous fermented foods and food technology in Africa." Held 14-18 Oct. 1985 at Douala, Cameroon.

"Went (1901), based on asexual hyphal and conidial characteristics, named the *oncom* fungus as *Monilia sitophila* (Mont.) Sacc. Shear and Dodge (1927) discovered the sexual ascospore state of *Monilia* and thus named it as a new genus, *Neurospora*. Furthermore, the old *Monilia sitophila* was not a monospecific species but can be divided into four species namely, *Neurospora crassa*, *N. erythraea*, *N. sitophila* and *N. tetrasperma*.

"Since the classical investigations of Went, there have been little detailed studies on the *oncom* fungus and it has appeared erroneously as *N. sitophila* in current literature (Dwidjoseputro 1961). This paper describes the traditional process of *oncom* fermentation and the isolation of the responsible *Neurospora* from *oncom* from numerous sites in West Java." Address: Dep. of Genetics and Cellular Biology, Univ. of Malaya, Kuala Lumpur, Malaysia.

1902. **Product Name:** [Tempeh].

**Manufacturer's Name:** Les Sept Marches.

**Manufacturer's Address:** Les Creusettes, Poisy, 74330 La Balme de Sillingy, France. Phone: 50.22.13.45.

**Date of Introduction:** 1986. April.

**New Product–Documentation:** Le Compas. 1986. March-April. p. 32.

1903. Maeda, Toshiie. 1986. Miso no furusato [The homeland of miso]. Tokyo: Kokon Shoin. 258 p. April. Illust. 20 cm. [124 ref. Jap]

• **Summary:** Contents. 1. The homeland of miso: The birthplace of miso. Cultural factors that gave birth to miso. 2. The paths of dissemination of miso: Southern and northern paths in China. The arrival of miso in Japan and its spread there. History of miso in Japan. 3. The taste and nutritional value of miso: Theories of change in miso. Miso in our lifestyle. 4. Miso as a commercial product: The movement of miso from producer to consumer. The price of miso. Future prospects for miso culture. Present status of changes in miso culture. Explore these new miso products from the principles of changes in miso culture. Proposal for the future of miso culture.

This creative book discusses miso's history, the present status of the Japanese miso industry, the future of miso in the westernized Japanese diet, and the fact that the use of

miso mainly in miso soup presents a big problem. The first solution to the problem is to use miso in thick ketchup-like sauces. The second is to return to the non-salted fermented foods such as Japanese natto, Nepalese kinema, Indonesian tempeh, and Chinese soy nuggets (shi), which are the ancestors of miso. He emphasizes tempeh, which he feels is a wonderful food that can be used in various ways, and is nutritious and healthy. He explains that tempeh is becoming popular in the USA and Europe, and concludes that tempeh alone can be used to start a food industry. Address: Sozosei Kaihatsu Kenkyusho Shusai.

**1904. Product Name:** [Marusan Tempeh & Shrimp Crackers].

**Foreign Name:** Marusan Tenpe Ebi Senbei.

**Manufacturer's Name:** Marusan-Ai Co., Ltd.

**Manufacturer's Address:** Aza-Arashita, 1 Jungi-cho, Okazaki city, Aichi prefecture 444-21, Japan.

**Date of Introduction:** 1986. April.

**Ingredients:** Potato powder, sweet potato powder, tempeh, shrimp, kombu (seaweed), shoyu (soy sauce).

**Wt/Vol., Packaging, Price:** Poly bag, with window.

**How Stored:** Shelf stable.

**Nutrition:** Per 100 gm: Moisture 4.4%, protein 6.5%, fat 0.9%, carbohydrates 83.5%, ash 4.7%, calories 368, calcium 193 mg, iron 2.9 mg.

**New Product–Documentation:** Label. 1986, undated. 4.5 by 9.5 inches. Red, dark brown, and orange on white. Contains 10 crackers.

1905. Sheikh, I.A.; Arshad, M.; Aslam, M.; Adil, Razia. 1986. Preparation and nutritional evaluation of weaning food based on wheat, rice and soybean (Soylac). *Pakistan J. of Scientific and Industrial Research* 29(2):151-54. April. [9 ref. Eng]

• **Summary:** Soyloc (its brand name) is based on a blend of wheat, rice, and soybean flour (free of trypsin inhibitors), and fortified with essential vitamins and minerals. Of high nutritive value and conforming to the FAO/WHO/Protein Advisory Group's specifications for weaning foods, it contains 20% protein, costs less to make, and has better nutritive value than similar products named Protocex and Protolac. Address: PCSIR Labs., Karachi, Pakistan.

1906. Stahl, H.D.; Sims, R.J. 1986. Tempeh oil—Antioxidant(?). *J. of the American Oil Chemists' Society* 63(4):555-56. April. [10 ref]

• **Summary:** Previous workers have claimed that tempeh oil contains a potent fat antioxidant. These claims were based solely on measurements of peroxide value during accelerated storage of tempeh oil alone or as an additive to other unsaturated oils. Oxygen absorption rate measurements indicate that tempeh oil actually has weak prooxidant activity. Fermentation of soybeans to produce tempeh

generates high levels of free fatty acids. FFA promote rapid decomposition of peroxides so that the levels in the oil never increase substantially during oxidation. Consequently, PV is a poor index of oxidation rate in oils which are high in FFA. Our experience with tempeh oil does not confirm earlier observations of its efficacy as an antioxidant. Address: General Foods Corp., Technical Center, White Plains, New York 10625.

1907. Usmani, Naseem F.; Noorani, Radia. 1986. Studies on soy bean tempeh. I. Optimization of factors affecting fermentation in commercial production of tempeh with respect to pilot plant studies. *Pakistan J. of Scientific and Industrial Research* 29(2):145-47. April. [4 ref]

• **Summary:** Stainless steel trays with a holding capacity of 25 kg and housed in a stainless steel chamber, were designed and fabricated for the commercial production of soybean tempeh. *Rhizopus oligosporus* was used for fermentation process and factors affecting pilot plant fermentation, i.e. fermentation time, humidity (RH), pH, temperature, and aeration were optimized 25-26 kg of good quality tempeh (16% protein, 66% moisture, 14% ash) was made from 15 kg of soybeans. Address: PCSIR Lab., Karachi, Pakistan.

1908. Usmani, Naseem F.; Noorani, Radia. 1986. Studies on soybean tempeh. II. Propagation and preservation of *Rhizopus oligosporus* spores for commercial production of tempeh from soybean. *Pakistan J. of Scientific and Industrial Research* 29(2):148-50. April. [9 ref. Eng]

• **Summary:** Spores were produced from a *Rhizopus oligosporus* NRRL 2710 culture and used for producing a sporulated mass by fermenting processed soybeans. The sporulated mass (with a viable count of 890,000,000/gm) was dried at 50-55°C, packaged in polyethylene bags and stored at -4°C. In tempeh production there was no appreciable difference in the fermentation process when processed soybeans were inoculated with tempeh (tempeh-to-tempeh method) or with the sporulated mass thawed for 30-40 minutes at room temperature (25-28°C). The viability of the spores was not greatly reduced even after 15 months' storage. Address: PCSIR Labs., Karachi, Pakistan.

1909. *Toyo Shinpo (Soyfoods News)*. 1986. Kanai kôgyô de tenpe tsukuri. Nihon no shikô ni tekigô saseru [Making tempeh as a home industry. Making it suitable for Japanese tastes]. May 1. p. 3. [Jap]

1913. Business Trend Analysts, Inc. 1986. The health and natural food market. 2171 Jericho Turnpike, Commack, NY 11725.

• **Summary:** Section VII is titled "The Market for Soyfoods." It is a combination of material taken without permission from Shurtleff & Aoyagi's *Soymilk Industry and Market* (especially the overview on page 96) and little bits and pieces for various sources that fail to give an accurate picture of this market. The report repeatedly speaks of the "soyfoods market" without defining which product types it is including. Part of the information is said to be based on "A special survey of 5,000 households, providing up-to-date information on changing consumer attitudes and buying patterns with respect to soyfood products." The results of this survey include consumption levels by household income, type of retail outlet, geographic region, race, age and presence of children. They project manufacturers' sales of soyfoods to be \$499.5 million in 1995, assuming a compound annual growth rate of 15.3% from 1985 to 1995. Generally a disappointing study, especially for the price. Address: Commack, New York.

1914. Miller, Susan. 1986. Tempted by tempeh: This Indonesian specialty tantalizes Western palates. *East West*. May. p. 18-19. [1 ref]

• **Summary:** A good introduction to tempeh. The article starts: "Fragrant, delicious, and versatile, tempeh (pronounced TEM-pay) has become one of the most important protein foods in America's move toward a meatless, natural, and nourishing diet. It joins such notables as camembert, Brie, and Roquefort cheeses, classic Japanese misos, and naturally brewed soy sauce in the panoply of mold-cultured foods that have found acceptance in an

evolving American cuisine."

It concludes: "*The Book of Tempeh* contains many recipes, as well as detailed instructions for making tempeh at home and sources of tempeh starter.

"Whether you make your own or purchase it from a natural foods store, tempeh is sure to become a favorite in your household. As you come to know its qualities of versatility and convenience, you may even begin to find it indispensable." Address: Freelance writer, New York City.

1915. Okano, Tadashi. 1986. "Shoku" no tanken ryokô. Otona no tame no esniku ryôri [A trip to explore food and eating. Ethnic cookery for adults]. *Signature (Japan)*. May. p. 28-32. [Jap]

• **Summary:** Tempeh (*Tenpei*) is discussed on p. 32. A photo shows a plate of tempeh chips.

1916. Perez, Oswaldo. 1986. La soya en la alimentacion humana [Soya in human nutrition]. *La Era Agricola (Merida, Venezuela)* No. 0. May. p. 14-15. [1 ref. Spa]

• **Summary:** Shows how soya makes most efficient use of the earth's ability to produce protein. Address: Granja Tierra Nueva, Aldea San Luis, La Azulita, C.P. 5102, Estado Merida, Venezuela.

1917. Bailey, Simon. 1986. Notes on soya in Trinidad & Tobago. Upper Santa Cruz, Trinidad, W.I. 2 p. June 1. Unpublished typescript.

• **Summary:** "Soyabeans do not have a long history here. It is not clear whether any of the indentured Chinese immigrants coming to Trinidad about 150 years ago brought any soya with them and there is certainly now no evidence of cultivation on any considerable scale by the Chinese community."

There seem to have been two soyabean experiments by the Ministry of Agriculture. The first [in 1913] failed from poor management. The second, "initiated and originally funded by the Government of West Germany, included variety trials at the Chaguaramas Agricultural Development Project (ADP) and has resulted in the annual maintenance of germplasm for the varieties Pelican Improved & Jupiter. The seed has been grown for about ten years using a mechanised methods with a yield much lower than US averages. The ADP produced a recipe booklet in 1977 encouraging the use of soya by Trinidadians and incorporating soyafoods in recipes with a local flavour. The recipes rely mainly on the use of boiled (or pressure-cooked) soyabeans. There does not seem to have been any investigation by the ministry into the use of traditional soyafoods (e.g. tofu, tempeh etc).

"Sales of soyabean seed to farmers from this source have been slight. Small amounts may have been purchased out of curiosity & for backyard use and user response is not effectively monitored. In the last few years there have been some demand from consumers for beans surplus to ADP's

requirements although ADP's brief is to produce seed for farmers. There are signs that, since the failure of the 85-86 crop due to poor storage and low germination of seed, the ADP project may be abandoned altogether unless a policy decision is taken to reactivate it.

"At the same time an oil extraction plant is being constructed by National Flour Mills, a government subsidiary, on the Port of Spain waterfront to handle cargos of imported soyabeans for production of cooking oil & secondary products; the presscake to be used for livestock feeds, replacing existing imports of defatted soya.

"In the marketplace we can find soya/beef burgers, dehydrated soya chunks, fortified powdered "Soyamel", some surrogate boxed and canned soyafoods (imported by Seventh Day Adventists) and the raw beans themselves. Susan Lee Hem has sold tofu on a small scale until recently, but at present all of her tofu production is going into pastelles, a steamed, corndough-wrapped local snack food. I am catering with, and selling, tempeh also on a small scale. The levels for acceptance for soya and vegetarian food in T&T are high, due partly to the dietary codes of Hindus, Adventists & Rastafarians and it is out of these groups that the majority of "health food" businesses have been formed." Address: c/o Valdez, 21 Sun Valley Dr., La Pastora, Upper Santa Cruz, Trinidad, West Indies.

1918. *Toyo Shinpo (Soyfoods News)*. 1986. Tenpe kaihatsu no jigyo. Zen Nôren. Gyôkai no takakuka to kasseika e [Tempeh project development report from Japan Natto Association. To make the industry more versatile and active. Second generation products are hoped for]. June 21. p. 9. [Jap; eng+] • **Summary:** The techniques of making tempeh are already well established. The water content and cracking/dehulling the beans are the two key subjects. This report was presented to Japan's Department of Agriculture (*Nosuisho*) in April 1985 by the Japan Natto Assoc. The total budget was 18.1 million yen (\$80,000). The project was done at Takashin Shokuhin Ltd. in Tokyo. Members of the research project were Goro KANASUGI and Haruo NITTA (President of Teito Shokuhin KK), Mitsuaki YAMANAKA (Head of Takashin Research Lab.). Head researcher was Makio TAKATO (President, Takashin). Address: Kyoto, Japan.

1919. Kislingbury, Graham. 1986. Tempeh. It's a soy food rich in protein and vitamin B-12, but most people have never heard of it. *Democrat-Herald (Albany, Oregon)*. June 24. [1 ref]

• **Summary:** Janet Foudray, a Corvallis resident, and her husband Larry Klein own a small business named Food-Ray Tempeh that makes and markets tempeh in Corvallis. Foudray distributes her tempeh to First Alternative C-op in Corvallis, which also carries Surata Tempeh from Eugene, Oregon. Surata also distributes to Waremart in Corvallis.

Foudray's first exposure to tempeh was in 1975 through

The Farm, a self-sufficient spiritual and farming community in Summertown, Tennessee. She started making her own tempeh nine years ago in South Dakota, her home state.

She moved to Corvallis seven years ago to study nutrition and dietetics at Oregon State University; she received her bachelor's degree last year.

She continued to make tempeh, and two years ago decided to go into business when the co-op agreed to carry her tempeh. She makes the tempeh in a state-licensed kitchen in her Corvallis home.

A photo shows Janet and her husband, standing by a barbecue. She is holding a bag of tempeh and a plate of tempeh shish kebab. He is holding a spatula above four cakes of tempeh on the grill. Address: Democrat-Herald Writer, Oregon.

1920. **Product Name:** Bean Supreme Tempeh.

**Manufacturer's Name:** Bean Supreme Ltd.

**Manufacturer's Address:** P.O. Box 78-084, Grey Lynn, Auckland, New Zealand.

**Date of Introduction:** 1986. June.

**Ingredients:** Whole soybeans, water, Rhizopus culture.

**Wt/Vol., Packaging, Price:** 300 gm poly bag, vacuum packed.

**How Stored:** Refrigerated.

**New Product-Documentation:** Label. 1986, undated. 6 by 8 inches. Orange and brown. "High protein. Cholesterol and lactose free." Form filled out by Trevor Johnston, Marketing Director. 1989. April. This product was introduced in June 1985. They now make 800 lb/month. Label. 1989. 3.75 by 4.5 inches. Blue and white. Self adhesive on seam-sealing plastic bag. "High protein. No cholesterol. Rich in B-12. Keep refrigerated. Slice and fry. Bake or steam. (Black spores on surface are normal and beneficial to the flavor and quality)."

1921. Belleme, Jan; Belleme, John. 1986. Cooking with Japanese foods: A guide to the traditional natural foods of Japan. East West Health Books, 17 Station St., Brookline, MA 02146. xi + 220 p. Illust. Index. 25 cm. [45 ref]

• **Summary:** A good study from a macrobiotic viewpoint, with more than 200 macrobiotic recipes. The authors studied in Japan and speak Japanese. Contents: Foreword. Acknowledgements. Introduction. Fermented Foods: miso, shoyu, tamari, brown rice vinegar, sake, mirin, koji, amazake, pickles, umeboshi, ume su, medicinal teas, ume extract, bonito flakes, natto. Noodles: cooking noodles, udon, soba, somen, clear noodles. Grains, incl. rice, mochi, seitan, fu gluten cakes, hato mugi [*hatomugi*] (Job's tears), rice syrup, rice bran. Vegetables: shiitake, daikon, Hokkaido pumpkin, Chinese cabbage, burdock, jinenjo, lotus root. Sea vegetables: kombu, nori, wakame, hijiki and arame, kanten (agar). Beans: azuki beans, black soybeans, tofu. Condiments: kuzu, dark (toasted) sesame oil, goma (sesame

seeds), tekka, shiso momiji (shiso leaf condiment), wasabi. Teas. Cooking utensils. Appendix: Composing meals, pronunciation guide, suppliers. Bibliography.

Amazake (p. 39-45). Contains a ½ page description plus good instructions for making basic amazake (thick “pudding” and thinner beverage), both from glutinous (“sweet”) rice. Also recipes for Vanilla Amazake Pudding, Amazake Cream Puffs, Neapolitan Parfait, Carob Amazake Brownies, Bob’s Coconut Amazake Macaroons, Amazake Bread (yeasted), and Unyeasted Amazake Bread. Perhaps the most lengthy information on amazake available in English up to this time.

*Hato mugi* (“Job’s tears,” p. 93) “resembles barley, but it is actually a member of the rice family. An easily digestible whole grain with only the tough outer husk removed, hato mugi contains less vitamin B-1 than brown rice but approximately twice as much protein, iron, vitamin B-2, fat, and slightly more calcium.” It has long been used in China and Japan as a medicinal food, “for strengthening the stomach, purifying the blood, and restoring health. Since it is so effective in helping the body to discharge toxins, people who are sick and weak, and women who are pregnant, nursing a baby, or menstruating should eat it sparingly.” Address: Rutherfordton, North Carolina.

**1922. Product Name:** Megaspore Tempeh Starter.

**Manufacturer’s Name:** Cultured Products.

**Manufacturer’s Address:** 1418 N.W. 179th Street, Ridgefield, WA 98642-9690.

**Date of Introduction:** 1986. June.

**New Product–Documentation:** Leaflet. 1986. June. Aug. 1986. New Address: 5916 N.W. 179th St., Ridgefield, Washington 98642-9682. Phone: 206-574-4707.

**1923. Product Name:** Food-Ray Tempeh.

**Manufacturer’s Name:** Food-Ray Tempeh Co?

**Manufacturer’s Address:** Corvallis, Oregon.

**Date of Introduction:** 1986. June.

**New Product–Documentation:** Kislingbury. 1986. Democrat-Herald (Albany, Oregon). June 24.

**1924. Product Name:** Curry Tempeh Pies.

**Manufacturer’s Name:** Nectar Soy Products.

**Manufacturer’s Address:** 57 Vincent St., Daylesford, VIC, 3460, Australia. Phone: 053-48-2051.

**Date of Introduction:** 1986. June.

**New Product–Documentation:** Letter (fax) from Ross Hamilton and Mike Manser. 1990. Sept. 13. This was the company’s third product, introduced in June 1985 after the company had moved from Geelong to Daylesford in May 1985.

1925. Owen, Sri. 1986. Indonesian food and cookery. 2nd edition, revised and enlarged. Prospect Books, 45 Lamont Rd., London SW10 0HU. 268 p. First edition was 1976.

Illust. by Thao Soun. Index. 23 cm. [20 ref]

• **Summary:** In the chapter titled “Essential ingredients” are sections on “Kecap or soya sauce” (p. 42-43) and tauco (p. 44). Also contains a chapter titled “Tahu and tempeh” (p. 216-28) with good information and recipes on tofu and tempeh. Address: Mustika Rasa, 96 High St., Wimbledon Village, London SW19 5EG. Phone: 01-946-7649.

**1926. Product Name:** [Soy Tempeh, Marinated and Vacuum Packed].

**Foreign Name:** Soj-Tempeh.

**Manufacturer’s Name:** Sojvita Produktions GmbH.

**Manufacturer’s Address:** Hauptplatz 1, 2493 Lichtenwoerth, Austria. Phone: 02622/75494.

**Date of Introduction:** 1986. June.

**Ingredients:** Sojabohnen, Edelpilzkultur.

**Wt/Vol., Packaging, Price:** 300 gm vacuum pack.

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter from Norbert Brunthaler. 1988. Jan. 4. Gives date of introduction as June 1986. Label. 1987. 3.5 by 3 inches. Dark green, light green, orange, and black on white. “Durch Edelpilzkultur fermentierte Sojabohnen, marinert. Tempeh is a versatile food that is rich in protein and vitamin B-12. It is suited for frying (plain or with breaded batter) or cooking, or for use raw.”

1927. Wadud, Surruya; Ara, Hussan; Kosar, Saida. 1986. Studies on the preparation of tempeh and tempeh kababs [kabobs]. *Pakistan J. of Scientific and Industrial Research* 29(3):222-26. June. [8 ref]

• **Summary:** Boiling soybeans for 30 minutes resulted in complete destruction of the trypsin inhibitor. After fermentation another type of trypsin inhibitor was released which was completely destroyed by boiling the fermented material for 20 minutes in water, or deep fat frying. Procedures are described for the preparation of tempeh and food preparations, i.e. simple tempeh (fried), salted tempeh (fried) and tempeh kabab. Address: PCSIR Lab., Karachi, Pakistan.

1928. Wilson, Abigail. 1986. Tempeh Works making money—but not a profit. *Recorder (Greenfield, Massachusetts)*. July 18.

• **Summary:** Tempeh Works had sales of \$550,000 in 1985 and Michael Cohen anticipates they will reach \$650,000 in 1986. “The company’s potential is proven but money is scarce. Cohen has been able to secure \$325,000 in seven years in both state and federal loans. But while the money helped him buy property and move into a new facility, most of it could not be used to meet two critical needs of his business: marketing and working capital.” He has found that money for R&D is impossible to find.

“The single financier who invested \$50,000 in Tempeh

Works for a high-risk venture—Tofu Pups, a soybean hotdog with no cholesterol or nitrates—gave birth to a product that in one year has brought in 65 percent of the company's sales.”

Cohen now plans to raise \$500,000 through a public stock offering. Half that sum will go to marketing.

1929. *Toyo Shinpo (Soyfoods News)*. 1986. Okara ni tenpe kin [Making okara tempeh. Japan patent application No. 155,358 of 24 August 1983 by Susumu Oshikiri]. July 21. p. 15. [Jap; eng+]  
Address: Kyoto, Japan.

1930. **Product Name:** Sesame-Wheat Tempeh (Sausage Shaped).

**Manufacturer's Name:** 21st Century Foods Inc.

**Manufacturer's Address:** 30A Germania St., Jamaica Plain, MA 02130. Phone: 617-522-7595.

**Date of Introduction:** 1986. July.

**Ingredients:** Organic soybeans, purified water, bulghur wheat, roasted sesame seeds, fresh *Rhizopus* culture.

**Wt/Vol., Packaging, Price:** 8 oz or 16 oz flat, or 8 oz roll.

**How Stored:** Refrigerated, 21 day shelf life.

**Nutrition:** Per 4 oz.: Calories 197, protein 23 gm, carbohydrate 15 gm, fat 5 gm, fiber 3.45%.

**New Product—Documentation:** Label. 1987. 6 by 8 inch plastic bag. Orange, blue, yellow, black, and white. “Whole food for a healthy world. Low calories. Low sodium. No cholesterol. No preservatives. What is Tempeh? (Lengthy description on back). Dark areas may occur on our tempeh, which indicates ripeness, and are normal on foods naturally cultured.” Talk with Rudy Canale. 1988. Sept. 13. The invoice for printing the labels for this product is dated July 1986.

1931. American Soybean Association. 1986. Soya Bluebook '86. St. Louis, Missouri: American Soybean Assoc. 278 p. July. Index (bold face type indicates advertiser). 22 cm.

• **Summary:** Contents: Index of advertisers (p. 4). Soybeans: Your profit opportunity, by Dr. Kenneth L. Bader, CEO, ASA (p. 5). Organizations (by country, within each country alphabetically): For each gives the name, address, contact person, year founded, number of members, objectives and activities, publications. Countries are: USA, Australia, Austria, Bangladesh, Belgium, Brazil, Canada, England, Germany (Federal Republic of), Finland, France, Hungary, India, Indonesia, Italy, Ivory Coast, Japan, Malaysia, Mexico, Netherlands, Norway, Philippines, Portugal, Senegal, Spain, Sweden, Taiwan, Turkey, Yugoslavia, Zaire, Zimbabwe. U.S. agricultural education, research & extension (by state; mainly state agricultural / land-grant colleges), ASA international offices and world regions (colored world map and photo of each country director), government trading agencies.

Soy directory: Oil extraction plants / refineries

(alphabetically by state in USA, then by country), soyfoods / edible soy products manufacturers (lecithin, soy flour, soy grits, soy protein concentrates & isolates, textured soy protein, binders, extenders, simulated meat products, soy oil products {margarine, shortening, cooking / salad oil, salad dressings}, soyfoods—beverages [soymilk], frozen desserts, soy sauce, tempeh, tofu, whole soybean snacks {soynuts}, other soy-based foods), within each product by country, producers of soy products for industrial manufacturers (by products, etc.): Industrial lecithin, industrial soy flour / soy protein, industrial soy oil, soy sterols and tocopherols, soybean fatty acids.

Soybean manufacturing support industries:

Manufacturing equipment & supplies, soybean processing equipment & supplies, manufacturing services. Marketing and auxiliary services: Brokers, financial services, forwarding agents, marketing consultants, trading companies, transportation, warehousing—export / import.

Soy statistics (tables & graphs): Soya conversions [weights & measures], metric conversions, temperature conversions. U.S. soybean planting and harvesting dates (by state). U.S. soybean acreage, yield and production, 1925–1985 (by year). U.S. soybean planted acreage by state (1970–1985). U.S. soybean harvested acreage by state (1970–1985). U.S. soybean yield by state (1970–1985). U.S. soybean production by state (1970–1985). U.S. soybean production major crops (1920–1985): One graph each for soybeans, corn, wheat, and cotton. U.S. harvested acreage of major crops (1920–1985): One graph each for the big 4. U.S. yield per acre of major crops (1920–1985): One graph each for the big 4. Argentine soybean area, yield and production by province (1975–1986). Brazilian soybean area, yield and production by province (1975–1986). Canadian soybean production: Acreage, yield, production, farm price and value (1950–51–1984–85). Canadian soybean production and utilization (1950–1984, year beginning Aug. 1): Production, imports, supplies, exports of beans, processed for oil and meal, soy oil produced, soybean oilcake produced. World soybean production: Area and production in specified countries and the world total (1980/81–1985/86). Soybean production by major countries (one graph, 1925–1985): U.S., Brazil, PRC [China], Argentina. Share of world soybean production [percentage] by major countries (one graph, 1925–1985): Big 4. Soybean acreage by major countries (one graph, 1925–1985): Big 4. Share of world soybean acreage [percentage] by major countries (one graph, 1925–1985): Big 4. U.S. soybeans: Supply, disposition, acreage, yield and price (1970–1986). Soybean usage in the U.S. for crush and exports (one graph, 1925–1985, million bushels). U.S. soybean exports: Percent of total usage (one graph, 1925–1985). Argentine soybeans and products (oil and meal): Supply and disposition (1975/76–1986/87). Brazilian soybeans and products (oil and meal): Supply and disposition (1975/76–1986/87). Prices of U.S. soybeans, No. 1 yellow:

Average price per bushel, Illinois country shipping points (by year and month, 1950–1984, dollars). Prices of U.S. soybeans received by farmers: Average price per bushel (by year and month, 1950–1984, dollars). U.S. soybean price support operations (1945–1985, incl. CCC). U.S. soybean crop value: U.S. and major producing states (1925–1985): Illinois, Iowa, Indiana, Ohio, Missouri, Minnesota, Arkansas. Fold-out color map of U.S. soybean acreage by county. U.S. farm marketings of soybeans: Percent of open market farm sales by month (1975/76–1984/85). Map of U.S. soybean processing plants. Value of U.S. soybean products per bushel and crush margin (1950–1984): Soy oil, soybean meal, soybean price (received by farmers, No. 1 yellow Illinois), margin (ditto). U.S. soybean meal: Prices paid by farmers—44% protein, dollars per 100 lbs, by year and month (1950–1984). U.S. soybean meal: Average wholesale price—44% protein, dollars per ton, bulk Decatur, Illinois, by year and month (1950–1984). U.S. soybean meal: Beginning stocks, production, exports and domestic disappearance, by year and month, thousand short tons (1978/79–1984/85). U.S. soybean cake and meals: Supply, disposition and price (1977–1985): Soybean, cottonseed, linseed, peanut. Major world protein meals: Supply and utilization (1981/82–1985/86; Production, exports, imports, consumption, ending stocks): Soybean, cottonseed, rapeseed, sunflowerseed, fish, peanut, copra, linseed, palm kernel. World major oilseeds: Supply and utilization (1981/82–1985/86). World major vegetable and marine oils: Supply and utilization (1981/82–1985/86). Prices of U.S. soybean oil: Soy oil, domestic crude, average cents per pound in tank cars at Midwestern mills, by year and month (1950/51–1984/85). U.S. soybean utilization, by year (1960–1984): Food—Shortening, margarine, cooking and salad oils, other edible, total. Nonfood—Paint and varnish, resins and plastics, fatty acids, other inedible (incl. soap), total. Total domestic utilization. U.S. soybean oil value as percent of total soybean value (1930–1985). Note: Peaked at about 55% in 1930, fell to about 32% in 1980–81. U.S. soybean oil: Supply, disposition and price (1960–1985). U.S. edible fats and oils: Supply and disappearance (1978–1985): Coconut, corn, cottonseed, lard, palm, peanut, soybean, sunflower, tallow (edible). U.S. exports of soybeans, by year and month (1953–1984). U.S. soybean exports by port and country of destination (Sept. 1984–Aug. 1985): Ports are—St. Lawrence Seaway, Lakes, Atlantic, Gulf (by far the largest), Pacific, Interior. U.S. exports: Soybeans—Volume of exports by country of destination (in metric tons) and total value (1981–1985). U.S. exports: Soybean oil—Volume of exports by country of destination (in metric tons) and total value (1981–1985). U.S. exports: Soybean oilseed cake and meal—Volume of exports by country of destination (in metric tons) and total value (1981–1985). Map of U.S. soybean exports by port areas: Sept. 1984–Aug. 1985 (1,000 bushels). U.S. exports of soybean, cottonseed and sunflowerseed

oils: U.S. commercial and P.L. 480 exports—Volume of exports by region and country of destination (in metric tons) and total value (1979/80–1984/85; year beginning in October). U.S. exports: Soybean oil—P.L. 480, Title I and III, volume (in metric tons) and value (in \$1,000) by country of destination (FY 1981–1985). U.S. exports of soybean and cottonseed oils: U.S. commercial and P.L. 480 exports (1950–1984, million lbs; incl. P.L. 480 as a percentage of the whole). Brazilian exports of soybeans and products to major countries (1,000 metric tons; 1976–1984). Graph of soybean & product exports by major countries (U.S., Brazil, Argentina) (soybean equivalent; 1970–1985). Graph of world share of soybean & product exports by major countries (U.S., Brazil, Argentina) (1970–1985). Note: U.S. share has fallen from 95% in 1970 to about 50% in 1984.

Glossary: General terms, soy protein terms. Standards & specifications: NSPA, Association of American Feed Control Officials (AAFCO), USDA (definitions and grades). Index. Address: P.O. Box 27300, St. Louis, Missouri 63141.

1932. Bean Supreme Soyfoods. 1986. Price list. P.O. Box 78 084, 1 Wallingford St., Grey Lynn, Auckland, New Zealand.

• **Summary:** The company makes Tofu, Tempeh, Cottage Spread, Soymilk, Soysage, and Non-Dairy Frozen Dessert. Address: Grey Lynn, Auckland, New Zealand.

1933. Bean Supreme Soyfoods. 1986. Tofu (Leaflet). Box 78-084, Grey Lynn, Auckland 1, New Zealand. 3 panels each side. Front and back. Each panel 21 x 10 cm. Undated.

• **Summary:** Printed with purple ink on beige paper. On the front panel, below the large, bold letters “Tofu,” is written (on a purple background): “High protein. No cholesterol. Low fat. Low calorie. Ingredients: Soybeans, water, natural coagulant (nigari). No preservatives. The bottom half of panel 1 is about “Bean Supreme tofu.” Panel 2 contents: Nutritional content. Low fat and cholesterol. Weight watchers. Vitamins and minerals. Storage. Let’s eat... There are 11 recipes, starting with Chili con tofu, accompanied small illustrations from *The Book of Tofu*, by Shurtleff & Aoyagi. After the last recipe: “Bean Supreme Soyfoods: manufacturers of Tofu / Tofu Cottage Spreads, Tempeh—Fermented Soybean Cake. Below that is an order form for 4 books on tofu and tempeh. Address: Auckland, New Zealand.

1934. Cox, Peter. 1986. Why you don’t need meat. Thorson’s Publishing Group, Wellingborough, England. 240 p. July. \*

• **Summary:** A convincing, health oriented popularization of the case against meat. Tofu, tempeh, and tamari are mentioned in the nutritional tables. Cox, who was the first chief executive of the Vegetarian Society of the United Kingdom, is very familiar with both the scientific and popular literature on the subject.

Thorsons states in an ad: “There is mounting scientific proof that the meat we eat today actually *causes* heart

disease, cancer, obesity and other degenerative diseases. The author exposes the black market in animal growth hormones, looks at the unregulated use of antibiotics in animal feed, and shows why a meat-oriented diet can actually be nutritionally deficient.”

Note: According to Vegetarian Times (Sept. 1987, p. 35), this book “has become a best seller in the U.K. and was selected by the Booksellers’ Association of Great Britain as ‘best paperback non-fiction campaign.’” See this issue of VT for more on Cox, Chrissie Hynde, and Reprieve! Address: England.

1935. Iwashina, Susumu. 1986. Tenpe kakô shokuhin e no kitai [Expectations for second generation tempeh products]. *Daizu Geppo (Soybean Monthly News)*. July. p. 18-24. [Jap] Address: Nôgaku Hakase, Meiji Seika K.K. Torishimari-yaku Kaihatsu Bucho.

1936. **Product Name:** Fresh Organic Tempeh.  
**Manufacturer’s Name:** Nutrisoy Pty. Ltd.  
**Manufacturer’s Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1986. July.

**Ingredients:** Organic soybeans, water, cider vinegar, and culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 250 gm in plastic bag.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label with date sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling this product in July 1986. Brown, red and white on yellow. Front panel: “No cholesterol. Source of protein and vitamin B12. Complete protein food. Excellent meat substitute. Fry, bake, grill or steam for a quick and easy meal. Fitness food. Bermutu Tinggi.”

1937. Okada, Noriyuki. 1986. Tenpe bisei-butsu-gaku no shinpo. I. [Microbiology of tempeh. I.]. *Nippon Jozo Kyokai Zasshi (J. of the Brewing Society of Japan)* 81(7):464-69. [Jap]

Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

1938. **Product Name:** Tempeh.

**Manufacturer’s Name:** POLBAR (POL-BAR) Food Products.

**Manufacturer’s Address:** P.O. Box 23234, 91231 Jerusalem, Israel. Phone: 972-2-862566.

**Date of Introduction:** 1986. July.

**Ingredients:** Soybeans, apple cider vinegar, *Rhizopus* starter.

**Wt/Vol., Packaging, Price:** 250 gm.

**How Stored:** Frozen.

**New Product–Documentation:** Letter from Roxana Dann.

1986. June 22. They are starting small scale production of tempeh and hope to soon reach production of 200 lb/week. “As there is no one else in Israel currently producing tempeh, we hope to be able to greatly increase production as we reach more of the population.” Address: Ramot 20/25, 97725 Jerusalem.

Letter from Roxana Dann. 1988. May 25. “We have been producing tempeh for almost 2 years... We have now reached the stage where we are hoping to scale up the business into a viable enterprise.”

Label in letter from Roxana Dann. 1988. May 25. 6.5 by 4.25 inches. Black on blue. In both English and Hebrew. “No cholesterol. No salt. No Kosher-Pareve.” “We have been producing tempeh for almost 2 years.” Leaflet in English and Hebrew. “A winning formula: Soybeans + fermentation = Good nutrition. Complete protein. No cholesterol. Low fat. Low calories. Easily digested. Vitamin B-12. Easy preparation. Rich in minerals.”

1939. Shurtleff, William; Aoyagi, Akiko. 1986. Tempeh production: A craft and technical manual. Lafayette, California: Soyfoods Center. 176 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [28 ref]

• **Summary:** The table of contents of this edition is the same as that of the original 1980 edition. Major changes have been made in the ads at the back of the book and small changes in several other parts of the book.

Print history: Pre-publication: 100 photocopy copies. 1980 March 15: 1,021 paperback and 150 hardcover. 1986 July: 330 paperback. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1940. Katoh, Kiyoaki. 1986. Tenpe no shôraisei wa? Tônyû ni tsugu kenkô shokuhin dai-2 dan ni [What is the future of tempeh (in Japan)? The number two health food after soymilk]. *Toyo Shinpo (Soyfoods News)*. Aug. 21. p. 6. [1 ref. Jap; eng+]

• **Summary:** He cannot imagine how tempeh will be accepted by the Japanese. Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

1941. Ho, C.C.; Ten, S.K.; Chuah, B.H.; Lee, G.S.; Kok, C.H.; Chen, Y.F. 1986. Microbiology of traditional fermented food in Malaysia and surrounding countries. In: V.H. Potty, et al. eds. 1986. Traditional Foods: Some Products and Technologies. 292 p. See p. 134-35. Aug. Presented at the UN University Workshop on “Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies.” Held June 1983 at CFTRI, Mysore, India.

• **Summary:** “Soy sauce, tempeh, onjom, tapai and ubi are the fermented foods on which laboratory studies and extensive field work have been carried out in Malaysia.

Tempeh and tapai are traditional fermented foods of Malaya and also the Indonesians. Soy sauce manufacture is the largest fermentation industry in Malaysia, technology for which was introduced by the Chinese...

“Offensive odour development in the fermentation process results in spoilage of tempeh and tapai. *Bacillus subtilis* causes this problem. A strain of *B. subtilis* (H4052) has been isolated. It has been found that it inhibits the growth of *Rhizopus oligosporus* and *R. oryzae* through the likely production of antimycotic antibiotics.” Address: Univ. of Malaya, Kuala Lumpur, Malaysia.

1942. **Product Name:** Tempeh Burger.

**Manufacturer’s Name:** Nutrisoy Pty. Ltd.

**Manufacturer’s Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1986. August.

**Ingredients:** Organic soybeans, water, soy sauce, sunflower oil, cider vinegar, spices, herbs, and culture (*Rhizopus oligosporus*). “Black spots are normal sporulation and do not indicate spoilage.”

**Wt/Vol., Packaging, Price:** 200 gm in plastic bag.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label with date sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling this product in Aug. 1986. Orange, green, yellow, black and white on red. “Sandwich filling. Ready to serve, hot or cold.”

1943. Okada, Noriyuki. 1986. Tenpe bisei-butsu-gaku no shinpo. II. [Microbiology of tempeh. II.]. *Nippon Jozo Kyokai Zasshi (J. of the Brewing Society of Japan)* 81(8):526-30. [46 ref. Jap]

Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

1944. Potty, V.H.; Shankar, J.V.; Ranganath, K.A.; et al. eds. 1986. Traditional foods: Some products and technologies. Mysore, India: Central Food Technological Research Inst. (CFTRI). 292 p. Aug. Papers presented at the UN University Workshop on “Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies” held June 1983 at CFTRI, Mysore. 25 cm.

• **Summary:** This publication contains 27 papers presented by scientists from countries of Asia, Africa, Europe, and the Americas. Chapters related to soy are cited separately. The traditional foods of the following countries are discussed specifically: Ethiopia, Nigeria\*, Sudan, Senegal, Pakistan\*, India, Nepal\*, Burma\*, Thailand\*, Malaysia\*, Indonesia\*, Philippines, Korea\*, China\*, Japan\*, and Mexico\*. Countries with foods related to soy are followed by an asterisk (\*). Address: Central Food Technological Research Inst. (CFTRI), Mysore–570 013, India.

1945. Shah, F.H. 1986. Fermented foods of Pakistan. In: V.H. Potty, et al. eds. 1986. Traditional Foods: Some Products and Technologies. 292 p. See p. 44-48. Aug. Presented at the UN University Workshop on “Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies.” Held June 1983 at CFTRI, Mysore, India. [7 ref]

• **Summary:** In the section titled “Fermented foods from different raw materials,” the subsection on Legumes states that “Soybean meal, left after extraction of oil, can be used for producing a variety of foodstuffs,” including soy yogurt, soy-cheese (tofu, apparently fermented), and tempeh.

Concerning “Soy-cheese: Cheese produced from soybeans has cream white colour, delicate flavour, pleasant taste and texture. It is a low-cost high quality protein, free from cholesterol and with minimum amount of saturated fats.” Address: Food Technology and Fermentation Div., PCSIR Laboratories, Lahore, Pakistan.

1946. Shurtleff, William. 1986. Safety of fermented foods (Letter to the editor). *Vegetarian Times*. Aug. p. 4.

• **Summary:** “I am concerned about the safety of eating tempeh and other fermented products. Rumor has it that these molds are potential carcinogens, but no one I know can cite the source of the data claiming it’s dangerous. Please address this issue.—Nancy Lampka Simpson, Amherst, New York 14226.

“Editors Note: Bill Shurtleff, director of The Soyfoods Center and author of *The Book of Tempeh* writes this response:

“The Soyfoods Center has the world’s largest computerized database of information about soyfoods, listing more than 13,700 publications. Of these, 590 are about tempeh. Not one of these publications even suggests a possible link between soy tempeh or the tempeh molds (*Rhizopus* species) and cancer

“It has been well known since the early 1960s that several of the *Aspergillus* molds (especially *Aspergillus flavus*) produce aflatoxins, which are potent carcinogens. There are numerous reports in the literature of aflatoxins being produced on poorly handled peanuts, especially in tropical countries. A fermented peanut product from Indonesia called *onchom* has been shown, in some cases, to contain aflatoxins.

“Because the molds used to produce soy sauce and miso (*Aspergillus oryzae* and *A. soyae*) are of the same genus as *Aspergillus flavus*, a tremendous amount of research has been conducted worldwide over the past 20 years to see if aflatoxins are produced in soy sauce or miso. A vast body of literature shows that not in a single instance have aflatoxins been found in any commercial product.

“In conclusion, thousands of years of daily use and many decades of testing by microbiologists have shown

fermented soyfoods to be completely safe.” Address: Director, The Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

• **Summary:** Contents: Introduction. Tempe. Oncom. Tauco and soy sauce. Tape (tapeh) and its products. Brem wine. Brem cake. Terasi. Salted eggs and pindang. Pindang (made from salted fish). Address: Food Technology Development Centre, Bogor Agricultural Univ., Indonesia.

1949. Arocena, Javier. 1986. Re: Brief history of the soyfoods company Zuaizto in Spain. Letter to William Shurtleff at Soyfoods Center, Sept. 10. 2 p. Typed, without signature on letterhead. [Eng]

• **Summary:** “I’ve been working for the last 4 years making tofu, seitan, and tempeh, in a craftsman way, in the North of Spain, in the Basque country. Unfortunately in all of Spain we are only two people making those kind of products, even if slowly, slowly, people are asking us more and more for them every day. I have graduated in biology, and so have a background in what I am doing. I’ve really found myself useful for the rest of the world, and enjoy my life and work... I’d like to ask if there is any possibility of working for a short time (a summer or a month) in a place where I could learn how to make miso, tamari, natto, sufu, and soynuts.” Address: Zuaizto, Correria, 39-01001 Vitoria-Gasteiz, Spain. Phone: 945/28 86 30.

1950. Bhatnagar, P.S. 1986. Summary of the present situation with soya in India. Tape prepared for William Shurtleff at Soyfoods Center, Sept. 15—in reply to specific questions. 3 p. transcript. Unpublished manuscript.

• **Summary:** William Shurtleff was away during this team’s visit, so Akiko took care of them. William left questions

about soy in India which he asked them to answer.

All visitors in his team were impressed with Soyfoods Center and its work—“overwhelmed.”

Soybean has a bright future in India. The increase in acreage from 300 ha in the late 1960s to the present 1 million speaks for itself. Initially there were several obstacles. The most important opposition was from India’s groundnut lobby. The groundnut is an important oilseed in India. When soybean was introduced, they feared it might replace groundnut. Various people expressed apprehension. They said: Soybean is not good for health, it has toxins and soybean trypsin inhibitors (which are very widely discussed), antinutritional factors, and cause flatulence. They will disturb the commodity balance, etc.

But with time and effort, it has been established that these were not valid criticisms. Soybean would not disturb the commodity balance, as the land required would not be suited for groundnuts. Since all food is well cooked, there is no problem with trypsin inhibitors. Chickpeas, and green and black gram also cause flatulence, but no one bothers about it. They have been eaten since time immemorial.

With these facts: (1) The lobby against soy weakened. (2) At the same time the Indian government realized the importance of soy, especially in decreasing imports of edible oil.

Initially black seeded soybeans were cultivated in India from very early times. Then yellow soybeans were introduced in late 1960s to 1970s to use as a low cost source of protein. Farmers grew it but could not sell it so they stopped. For a while it looked as if soybean would never take off in India. However, then the edible oil industry saved the day. Expansion of acreage has been mainly a result of its use for oil. (3) An oil industry grew up and created a market. (4) The agricultural feasibility of growing soybean in different parts of the country was established, as was its economic viability and place in cropping system... through the All-India Coordinated Project on Soybeans.

Then more industry and new expanded cultivation.

Madhya Pradesh is the center of soybean cultivation and industry. New entrepreneurs are now also going there since the supplies are established. But now soybean acreage is saturated in Madhya Pradesh. However, a little is still available. Now his efforts are to expand areas that are not reaching their full potential.

A cause of worry now is that most of (95% of) the soybean protein (defatted soybean meal) is being exported as livestock feed. This situation is rather dangerous. The Indian oil industry is dependent on foreign countries. If the soybean meal were not sold abroad, the Indian industry would crumble. So the need is to develop products in India based on defatted flour and popularize these. To do this, there are two essentials: (1) The cost of the product should be low compared to other similar products. (2) The taste should not be drastically different from traditional products. Indian food

habits are very conservative, orthodox, and rigid. Also, use of the whole soybean must be encouraged in soya dairylike products at the home, village, and cottage industry levels.

Among soya dairylike products, tofu is one product that will definitely become popular subject to (1) High quality. (2) The profit margin is so small that the price difference between tofu and milk panir is small. He prepared some panir for us. Panir is very popular, especially in North India. All who can afford it would like to buy it. It is used for many curries, snacks, and other dishes. All are considered to be luxury dishes. Only the rich can afford them. The cost of panir is about \$3 per kilogram, or 36 rupees per kilogram. Average monthly income is 250-300 rupees per month in India. As a result, only a few in the upper middle class can afford it. Tofu must sell for 7-8 rupees per kilogram. He calculated tofu production cost to be 3-4 rupees per kilogram. He feels this will catch on rapidly in North India.

With this in mind, many entrepreneurs have shown interest in tofu and soymilk. One big plant, Noble Soya, is starting in Bhopal. Another is United Soya. Plants are also planned in Kanpur and Delhi. So tofu has a good future. But Dr. Bhatnagar's worry is that small producers are making a poor quality product, which turns off consumers forever. Already many people have developed a negative prejudice. He also noticed this prejudice about soy in the USA.

To summarize: Prospects to narrow the oil gap are bright. The future of soy as food is also bright.

Tempeh has not yet been tried in a sincere sense, but he feels it has a good future.

In India, isolates, concentrates, and lecithin are now being extracted on a very small and limited scale. In a few areas, soy is taking land away from rice cultivation. Due to a slump in the international market for soybean meal, farmers' prices dropped, which led to a decrease in acreage the next year. It seems temporary. Government has set a minimum support price. On the initiative of Rajeev Gandhi, a technical mission of oilseeds has been established. The main goal is to increase oilseed production in India. Imports are now huge. India should become self sufficient in oilseeds, as she has become self sufficient in food grains. Soybeans are included in the mandate of this technology mission. Increase of production is planned, in both horizontal (area) and vertical (yield, presently very low—0.7 metric tons per hectare) growth. There will be a new thrust with government support.

The main idea is to reduce, then cut, foreign dependence on soya as (1) imported oil, and (2) imported meal. Solution: use defatted soybean meal for foods in India, and use whole soybeans in dairylike soybean products.

Closes with thanks to Akiko. He will send Bill some of the papers Bill needs. He looked through his manuscript briefly and made some suggestions. Send it to him for a careful read after the next update. He will check with literature he has in India. Let him know of companies that make plants for soy oil and lecithin, etc. He wants Akiko

to come to India too. Address: PhD, Coordinator, All-India Coordinated Research Project on Soyabean (ICAR), G.B. Pant Univ. of Agriculture & Technology, Pantnagar, UP, 263145, India.

• **Summary:** Contents: Introduction. Tempe. Some tempe products. Flavor and color of tempe. Tempe and wholesomeness. Tauco. Kecap (soy sauce).

“Tempe was formerly considered an inferior food in part because of its costs, compared to other protein foods such as meats, fish and eggs. Over the last 15 years the attitude towards tempe has changed. Today, more attention has been given to tempe because it is an inexpensive source of proteins, vitamins and calories. The total annual production of Indonesian tempe is about 500,000 tons. However, tempe production is still a household art. Most of the 41,000 small cottage industries that make fresh tempe daily are family run and employ about 128,000 workers. Each small cottage industry employs about 3 workers, and uses approximately 11 pounds (5 kg) of dry soybeans per day to produce 21 pounds (10 kg) of fresh tempe. The larger cottage industries employ 10 to 20 workers and use 600 to 1,000 pounds (500 kg) of dry soybeans per day to produce tempe. The average retail price of tempe is about US \$0.25 per kg in 1985.”

Figures: 1. Usar made using traditional Hibiscus leaves. 2. Flow sheet: Indonesian tempe process. 3. Material balances in pilot plant process for production of tempe. 4. Flow sheet of tauco processing. 5. Flow sheet of kecap processing. Address: Food Technology Development Center, Bogor Agricultural Univ., P.O. Box 61, Bogor, Indonesia.

und Sojaprodukte fuer die Welternaehrung [Significance of the soybean and soya products for world nutrition]. *Schriftenreihe aus de Fachgebiet Getreidetechnologie* No. 8. p. 9-23. Sojaprodukte: Herstellung und Verwendung. [15 ref. Ger]

• **Summary:** Discusses history of the soybean, cultivation and composition, the world industry for soybean production, consumption, and products, world production of soy oil and competing oils, trends in the use of soy products (incl. soymilk and soymilk products, soy sauce, tofu, miso, and tempeh; table based on Shurtleff & Aoyagi 1983), results of Hamburg poll (American Soybean Assoc. 1982) on attitudes of German consumers toward qualities and use of soya (e.g., price, nutritional value, good protein source, versatile, healthful, recommended by a doctor, good for young people), conclusion. Address: American Soybean Assoc., Hamburg, West Germany.

1957. **Product Name:** Spicy Tempeh Chili.

**Manufacturer's Name:** Hain Pure Foods.

**Manufacturer's Address:** Los Angeles, Calif.

**Date of Introduction:** 1986. October.

**Ingredients:** Incl. Tempeh, soy sauce.

**Wt/Vol., Packaging, Price:** 15 oz can. \$1.69.

**How Stored:** Shelf stable.

**New Product–Documentation:** Interview with Lonnie Stromnes. 1987. Sept. 3. He helped Hain develop the product. Hain was owned by Ogden for 4-5 years. Now it is owned by Pet of St. Louis, Missouri, a huge conglomerate.

1958. Ito, Hiroshi. 1986. Tenpe no nihon ni okeru kenkyû no ayumi. I. Tenpe to wa nani ka? [The course of tempeh research in Japan. I. What is tempeh?]. *Daizu Geppo* (Soybean Monthly News). Oct. p. 20-24. [Jap] Address: Norin Suisan-sho Shokuhin Sogo Kenkyu-jo, Biseibutsu Riyo Kenkyushitsu-cho [Tsukuba, Ibaraki-ken, Japan].

1959. Moll, Lucy; Barrett, Mariclare. 1986. Then and now: Authors of the best [vegetarian] cookbooks. *Vegetarian Times*. Oct. p. 26-31, 46, 54. [10 ref]

• **Summary:** Includes: The Hurd's and Ten Talents, Ed Brown and The Tassajara Recipe Book, Francis Moore Lappé and Diet for a Small Planet, Louise Hagler and The Farm Vegetarian Cookbook plus Tofu Cookery, Annemarie Colbin and The Book of Whole Meals, Mollie Katzen and The Moosewood Cookbook, William Shurtleff & Akiko Aoyagi and The Book of Tofu, Laurel Robertson and Laurel's Kitchen, Kathy Hoshijo and Kathy Cooks Naturally, Anna Thomas and Vegetarian Epicure. Address: Chicago, Illinois.

1960. **Product Name:** Lemon Broil Tempeh.

**Manufacturer's Name:** White Wave, Inc.

**Manufacturer's Address:** 1990 North 57th Court, Boulder, CO 80301.

**Date of Introduction:** 1986. October.

**Ingredients:** Soy rice tempeh (cultured soybeans, water, brown rice), olive oil, soy oil, soy sauce, concentrated lemon juice, granulated garlic, onion powder.

**Wt/Vol., Packaging, Price:** 6 oz. Plastic wrapped.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1986. 3 inches square. Yellow and white on blue background. "Great on Sandwiches or Add to Stir Fry or Grill on Barbecue. Heat and serve. Pareve." Soyfoods Center product evaluation. Delicious! Interview with Lonnie Stromnes. 1987. Aug. 31. New Label. 1989. April. Ingredients: Soy Rice Tempeh, olive oil, soy oil, soy sauce, concentrated lemon juice, granulated garlic, onion powder.

1961. Demos, Steve. 1986. Deal to acquire Soyfoods Unlimited, Inc. New developments at White Wave (Interview). *SoyaScan Notes*. Nov. 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Steve plans to finalize the deal to acquire Soyfoods Unlimited (a tempeh maker in San Leandro, California) on Thursday, Nov. 20. Then he plans to go to India for a 25-day meditation intensive.

Why does he want to buy Soyfoods Unlimited? Mainly to get a distributorship in the California market, to establish White Wave's name and market position in California, and, above all, to get other White Wave products out there. Lonnie Stromnes will continue to work at Soyfoods Unlimited. Steve will visit California soon. Shurtleff invites him to visit Soyfoods Center (which is also in the Bay Area).

Steve's business is doing well. Tempeh sales are up 30% this year. He now sells more units of tempeh than of tofu. People in Boulder like it better. White Wave is strong and growing steadily. Address: Boulder, Colorado.

1962. Seminar on Traditional Foods and Their Processing in Japan. 1986. Tokyo: NODAI Research Institute, Tokyo Univ. of Agriculture. 4 p. Held on 13-25 Nov. 1986 at Tokyo University of Agriculture, Tokyo, Japan. [Ger]

• **Summary:** This document, which is an announcement of the seminar, contains two parts: (1) The 1-page introductory letter (28 cm), and (2) The 3-page Agenda (26 cm). The proceedings were published in 1987, edited by Fujiharu Yanagida.

The Agenda gives the opening session (Room A): Chairman I. Uritani. 11:00–11:30. Opening address by the chairman of organizing committee, Dr. Izuru Yamamoto, Director, Nodai Research Inst. Welcoming address by Dr. Takao Suzuki, President, Tokyo University of Agriculture. Address by representative of Japan Society for the Promotion of Science. (JSPS). Address by the president of the Society for Agricultural Education–Research Development Abroad

(SAEDA), Dr. Jiro Sugi, Emeritus Professor, Tokyo Univ. of Agriculture.

11:30–11:45. Keynote address, Dr. Hiroyasu Fukuba, Professor, Ochanomizu University.

The following soy-related papers, which were published in the 1987 proceedings, are cited separately: Onchom, by Dedi Fardiaz. Miso, by Hisao Yoshii. Tofu, by Tokuji Watanabe. Indigenous fermented foods in Nepal, by Tika Karki. Improvement in traditional soy sauce fermentation, by Sri Hartadi. Address: Tokyo, Japan.

1963. Barrett, Mariclare. 1986. The cook's glossary of soyfoods. *Vegetarian Times*. Nov. p. 28-35. [10 ref]

• **Summary:** Gives good definitions, with a full-page color illustration by Emily Soltanoff, of: Soybeans, soynuts, soy flour and grits, soy oil, textured vegetable protein, soymilk, okara ("the pulp that remains after the soymilk has been strained"), soy yogurt and soy cheese, tofu, fermented soyfoods, tempeh, miso, natto, soy sauce.

The article begins: "For 60 seconds on a national television commercial, a small, round soybean rolls past a lineup of infant formula, bread, pizza, chili, salad dressing, ice cream [Tofutti], soymilk and cubes of tofu; meanwhile the narrator intones, 'The newest development in nutrition is actually one of the oldest foods known to man.' Through advertising, the concept of soyfoods is brought home to millions of Americans by the soy giant, Archer-Daniels-Midland Company." Address: Staff.

1964. Kawabata, Makoto; Taguchi, Kuniko; Ohtsuki, Kozo. 1986. Okara o shokuryo toshita natto oyobi tenpe no shokuhin kagaku [Food chemical evaluation of fermented okara products, okara-natto and okara-tempeh]. *Kyoto Furitsu Daigaku Gakujutsu Hokoku (The Scientific Reports of the Kyoto Prefectural University (Natural Science and Living Science))* 37(Series B):9-15. Nov. (Chem. Abst. 107:38312). [13 ref. Jap; eng]

• **Summary:** Okara, a residue of water-extracted ground soybeans, is produced in large amounts as a by-product of commercial production of tofu and soymilk. Although it contains a large amount of dietary fiber plus 4.8% high quality protein, it has a poor taste and rough texture, and is relatively indigestible.

In this study, natto and tempeh were prepared from okara by fermentation with *Bacillus subtilis* (natto) and *Rhizopus oligosporus* (or *R. oryzae*).

Natto is a sticky paste with the characteristic flavor and odor of natto. Okara tempeh has a sausage-like texture, bound together by the fragrant white *Rhizopus* mycelium, which also covers its surface. Because of its good, bland flavor and because of its high content of dietary fiber, it can be fried in oil and used as a fiber-rich food; powdered or minced tempeh can be used to add fiber to cookies, bread, muffins, etc.

The riboflavin content of both products rose dramatically during fermentation; 33.1 times for okara natto and 32.7 times for okara tempeh. Vitamin B-6 also increased in both foods. Address: Lab. of Food Chemistry, Dep. of Food Science, Kyoto Prefectural Univ. [Japan].

1965. *Vegetarian Times*. 1986. Top entries in the Vegetarian Times soyfoods recipe contest: The winners! Nov. p. 36-39.

• **Summary:** Some 125 recipes were submitted to the contest. The full recipe for each of the winners is given. For main dishes, the first prize went to Messina Valley Tempitas (with tempeh), the second prize to Tofu Slices with Mushrooms, and the third prize was a tie between Kid's Favorite Tofu Loaf, and Tofu Manicotti with Sesame-Miso Sauce.

For desserts, the first prize went to Tofu Cheesecake, the second prize to Cranberry-Walnut Baked Apples with Maple-Custard Sauce (with soymilk), and the third prize to Creamy Peach Rice Pudding (with tofu).

In the "Other" category, first place winner was Smoked Tofu with Dipping, 2nd place was Bombay Chowder, and 3rd place was Tofu-Shallot Dip.

A color photo by Katherine Phelps shows the dish that won first place in each category.

1966. Aida, Kô; Ueda, Seinosuke; Murata, Kiku; Watanabe, Tadao. eds. 1986. *Ajia no muen hakkô daizu shokuhin* [Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation]. Japan: Takeshima Shigeru. 319 p. Held July 1985 in Tsukuba, Japan. Illust. (some color). No index. 27 cm. [400 ref. Eng; Jap]

• **Summary:** A pioneering symposium featuring tempeh and natto. About 70% of the book is in English and 30% in Japanese. A number of chapters are in Japanese with no English translations. Contains many typographical errors in the English sections.

Those interested in the early history of natto and other East-Asian fermented foods will find the discussion (in Japanese) on pages 174-78 to be very interesting. Address: Tsukuba, Japan.

1967. Asano, Machiko. 1986. *Nihonjin no nattô, tenpe ni taisuru shikô chôsa* [Survey of Japanese acceptance of natto and tempeh using taste tests]. In: Kô Aida, et al. eds. 1986. *Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation*. Japan: Takeshima Shigeru. 319 p. See p. 285-90. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, p. 79. [Jap]

• **Summary:** Percentage of people in different age groups who say they like natto/tempeh: Students (36.4/4.2), age 20-29 (39.5/15.8), age 30-39 (58.2/32.9), age 40-49 (61.3/38.7), age 50-59 (63.9/33.7), age 60+ (62.5/56.3). Also compares likes and dislikes by region. Address: Teikoku Joshi Daigaku.

1968. Djurtoft, Robert. 1986. Tempe from cowpeas

introduced in Nigeria. In: Kô Aida, et al. eds. 1986.

*Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation*. Japan: Takeshima Shigeru. 319 p. See p. 144-64. Held July 1985 at Tsukuba, Japan. [Eng]

• **Summary:** First contact with Nigeria was made in 1974 by collaborator Mr. Jens Stoumann Jensen. The author visited Prof. A. Amolulu, Head of the Dept. of Human Nutrition, Univ. of Ibadan in June 1980. In 1981 DANIDA (Danish International Development Agency) granted the funds for a project called "Introduction of tempe products in West Africa." The real project began in Feb. 1981. Women in a Yoruba village were taught tempeh preparation. It was well received. Address: The Technical Univ. of Denmark, DK-2800 Lyngby.

1969. Fukukara, Noriko. 1986. *Shûdan kyûshoku ni okeru tenpe no riyô* [Use of tempeh in group feeding or institutional foodservice programs]. In: Kô Aida, et al. eds. 1986. *Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation*. Japan: Takeshima Shigeru. 319 p. See p. 291-97. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, 80. [Jap]

• **Summary:** Contains seven tables showing how students and faculty rate the following tempeh dishes on odor/smell, overall appearance, texture, flavor, congeniality with other foods, overall impression: Karinto (sweet), tempeh sandwich, Tatsuda-age (fried), tempeh soup, tempeh dog (like hot dog), tempeh salad, tempeh on noodles (Katsudon-fu). For every dish, the faculty liked it better than the students, which were consistently on the "dislike" side of neutral. The faculty liked the tempeh dog and tempeh sandwich best, but not that much. Address: Teikoku Joshi Daigaku [Japan].

1970. Haytowitz, David B.; Matthews, Ruth H. 1986. *Composition of foods: Legumes and legume products*. Raw, processed, prepared. *USDA Human Nutrition Information Service, Agriculture Handbook* No. 8-16. 156 p. Dec. See p. 126-152. By Nutrition Monitoring Division. [29 ref]

• **Summary:** Data are presented for 133 legumes and legume products. Of these, only 53 were included in *USDA Agriculture Handbook* No. 8, published in 1963. The following soy-based foods are included: Simulated meat products (bacon, meat extender, and sausage), raw soybeans, cooked boiled soybeans, roasted soybeans, dry-roasted soybeans, soybean products: miso, natto, tempeh, full-fat soy flour (raw, and roasted), defatted soy flour, low-fat soy flour, defatted raw soy meal, fluid soy milk, soy protein concentrate, soy protein isolate, soy sauce (shoyu, tamari, and HVP), raw tofu (firm {p. 147}, regular, dried-frozen/koyadofu, and fried) [Note 1. Tofu is called "tofu" and at "Soybean curd" it says, see "tofu." Note 2. Footnote 2 states that the calcium content of tofu curdled with calcium sulfate is 683 mg/100 gm, compared with 205 mg/100 gm for tofu curdled with nigari. As of May 1997 Soyfoods Center

believes that both these values are far too high; the two figures should be about 159 mg/100 gm (range 128-168) and 45 mg/100 gm respectively], okara, salted and fermented tofu (fuyu).

For each food the following information and number of values are given: Vertically: Proximate (7 values), Minerals (9), Vitamins (9), Lipids (Fatty Acids [Saturated (9), Monounsaturated (5), Polyunsaturated (7)], Cholesterol, Phytosterols), Amino acids (18). Horizontally: Amount in 100 gm edible portion (mean, standard error, number of samples), amount in edible portion of common measures of food (e.g. ½ cup or 1 cup), amount in edible portion of 1 lb of food as purchased.

Minerals include calcium, iron, magnesium, phosphorous, potassium, sodium, zinc, copper, and manganese (not aluminum).

Vitamins include ascorbic acid, thiamin, riboflavin, niacin, pantothenic acid, vitamin B-6, folacin, vitamin B-12, vitamin A.

Amino acids include tryptophan, threonine, isoleucine, leucine, lysine, methionine, cystine, phenylalanine, tyrosine, valine, arginine, histidine, alanine, aspartic acid, glutamic acid, glycine, proline, and serine.

For Adzuki beans (raw, cooked boiled, canned sweetened, and Yokan {yōkan—sugar-sweetened confection}) see p. 24-27.

For peanuts (all types raw, cooked boiled, oil-roasted, dry-roasted, Spanish raw, Spanish oil-roasted, Valencia raw, Valencia oil-roasted, Virginia raw, Valencia oil-roasted) see p. 109-18. For peanut butter (chunk style, smooth style), defatted peanut, and low-fat peanut flour, see p. 119-22. Address: USDA Human Nutrition Information Service.

1971. Hesseltine, C.W. 1986. Genus *Rhizopus* and tempeh microorganisms. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 20-26. Held July 1985 at Tsukuba, Japan. [12 ref]

• **Summary:** The genus *Rhizopus* belongs to the family Mucoraceae of the order Mucorales in the subclass Zygomycotina of the class Zygomycetes. The order mucorales is a group of filamentous, typically saprophytic fungi. The members of the Mucorales are among the most common fungi encountered. Address: NRRC, Peoria, Illinois.

• **Summary:** The text is the narration of a slide show but the slides are not shown. Address: Inst. for Physiological Chemistry, Univ. of Bonn, Nussallee 11, D-5300, FRG [West Germany].

1974. Jutono, -. 1986. The microbiology of usar, a traditional tempe inoculum. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 50-60. Held July 1985 at Tsukuba, Japan. [8 ref]

• **Summary:** The traditional tempeh inoculum, usar is still widely used for tempeh preparation in Indonesia (Java). Usar prepared from the leaves of *Hibiscus similis* is considered the best, followed successively by those of *Hibiscus tiliaceus*, *Tectona grandis*, and *Bambusa species*. *Rhizopus* species are the dominant organisms.

Photos show: (1) The underside of *Hibiscus similis* leaf (with 5 cm scale). (2) A piece of usar prepared from *Hibiscus similis* leaf. The whitish area at the center of the leaf consists of mycelia, and the black dots are mostly sporangia of *Rhizopus* spp.

Tables: (1) Growth of *Rhizopus* spp. on leaves of several plant species (in the usar ecosystem). (2) Associations among usar's microorganisms. (3) Acid production by bacteria and yeast from usar. (4) Formation of chlamydospores by *Rhizopus* spp. in liquid cultures. (5) The appearance of usar in general and mould colonies in particular during storage. (6) The microbial population of usar. (7) The utilizability of usar for tempe fermentation after storage. Address: Faculty of Agriculture, Gadjah Mada Univ., Yogyakarta, Indonesia.

Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 210-18. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, p. 69. [12 ref. Jap]

• **Summary:** Details from chromatographic analysis of volatile compounds in boiled soybeans, homemade tempeh incubated at 31°C or 38°C, commercial tempeh. Address: Takasago Koryo Kogyo K.K.

1979. Murata, Kiku. 1986. Formation of antioxidants and nutrients in tempe. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 186-98. Held July 1985 at Tsukuba, Japan. English summary in conference abstracts. [10 ref. Eng]

• **Summary:** Contents: Introduction. Preparation of tempe in our laboratory. Discovery of antioxidants in tempe. Effect of isoflavone Factor 2 in vitro and in vivo. Increase of B vitamins and free amino acids.

Why did Dr. Murata start work on the antihemolytic and antioxidative factors during her study at Dr. P. Gyorgy's laboratory in Philadelphia, Pennsylvania? The United Nations Protein Advisory Group (PAG) and FAO had chosen tempe as one of the best soybean foods for use as a vegetable protein source. When she visited Dr. Gyorgy's laboratory, rat feeding tests on stored tempe and unfermented soybean powder were underway. The tempeh in their laboratory was made using a modification of the pilot plant process described by Steinkraus, Van Buren, Hackler and Hand (1965).

Contains 5 tables and 15 figures (mostly graphs). Most of these appeared in previous publications. Address: Teikoku Gakuen, Moriguchi City, Japan.

1980. Nakao, Sasuke. 1986. Minzokugaku-sha to shite deatta koto domo [An ethnologist's recollections (on fermented soyfoods)]. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 179-83. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, p. 64. [Jap]

• **Summary:** In 1962 the author was first introduced to kinema, a non-salted fermented soybean food, in eastern Nepal. Before that time on trips he had noticed that soybeans were commonly planted on the levees of paddy fields in Nepal, Sikkim, and Bhutan. In 1972 he proposed the hypothesis of the "triangular distribution" of non-salted fermented soybean foods, also known as the "natto triangle." Since proposal of the hypothesis, many other examples of non-salted fermented soybean foods in the area have been reported. They are "Soeda" of Bhutan, "Pe-Boutsu" of Burma, "Thua-nao" of northern Thailand and many other examples in China proper (PRC) and in the Miao Tribe of Kweichow (Guizhou) Province of China. "In these examples, the local names are much different and no common word is found. This may suggest that the existence of fermented soybeans is not the result of recent dispersals from a central place of origin, but may have happened in rather ancient times. Then I came to the further assumption that within the triangular area there may have been a complex common human culture from olden times.

"In processing the non-salted fermented soybean, the artificial inoculation of the boiled soybean is sometimes practiced like in tempe. In Bhutan it is reported that the starter for fermentation is the same one which is prepared for the fermentation of alcoholic beverages. The fundamental method of making alcoholic beverages in the Himalaya and southeastern Asia is to inoculate the boiled cereals with the starter and then the main fermentation takes place in solid state, not in water. The process in making the non-salted fermented soybean and the alcoholic beverages can be understood to be a similar one. So they must have originated from the similar culture complex."

Note: This is the earliest document seen (Dec. 2001) concerning "Soeda" of Bhutan, or "Pe-Boutsu" of Burma, both non-salted fermented soyfoods. Address: Professor Emeritus, Osaka Prefectural University.

1981. Noguchi, Kazuko. 1986. Tenpe no chôri-Nihon de no kokoromi [Tempeh cookery-Trials in Japan]. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 274-84. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, p. 78. [Jap]

• **Summary:** Gives numerous tempeh recipes suited to Japanese tastes, and a nutritional analysis of each.

1982. Soewito, Agustina. 1986. The cooking of tempe—Indonesia. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 270-73. Held July 1985 at Tsukuba, Japan. [4 ref. Eng]

• **Summary:** Discusses and classifies ways tempeh is used in Indonesian cookery: Fried tempeh as a snack or side dish, Tempeh soups, Stewed Tempeh, Tempeh Barbecue, and Sambel. Gives a recipe for Sambal Goreng Tempe. Address: Indonesian Embassy.

1983. Steinkraus, Keith H. 1986. Production of vitamin B-12 in tempe. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 205-09. Held July 1985 at Tsukuba, Japan. [12 ref. Eng]

• **Summary:** “All commercial tempe samples tested to date have contained vitamin B-12 activity as shown by test assays either with *Ochromonas malhamensis*, a phagocytic protozoan whose growth is proportional to the amount of ‘true’ vitamin B-12 in the growth medium, or *Lactobacillus leichmanii*, whose growth is proportional to the amounts of both ‘true’ and ‘pseudo’ vitamin B-12 present in the medium. Vitamin B-12 is not a single chemical entity but consists of at least 4 closely related chemical structures each of which has specific physiological reactions within the human and other animals. Tempe producers and consumers should not place too much emphasis on the reported concentrations of vitamin B-12 in samples of tempe and the method of assay should always be stated. Although it may be assumed that the vitamin B-12 being assayed in tempe is cyanocobalamin, there is a need for a research study to determine the relative amounts of the 4 principal cobalamins that make up the vitamin B-12 group as they may or may not exist in tempe.” Address: Prof. of Microbiology, Inst. of Food Science, Cornell Univ., Geneva, New York.

1984. Steinkraus, Keith H. 1986. Manufacture of tempe—Tradition and modern. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 9-19. Held July 1985 at Tsukuba, Japan. [14 ref]

• **Summary:** Largely a summary of existing literature. Address: Prof. of Microbiology, Inst. of Food Science, Cornell Univ., Geneva, New York 14456.

1985. Tanuwidjaja, Lindajati. 1986. Large scale tempe inoculum production. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 305-09. Poster session. Held July 1985 at Tsukuba, Japan. English summary in Conference Abstracts. [7 ref. Eng]

• **Summary:** Contents: Abstract. Introduction. Methods and materials: Microorganism, substrate, starter preparation, inoculum production, viable microorganism (“The viable mold propagule and bacterial count were determined by plate count method”), analysis. Results and discussion.

Making a large quantity of starter / inoculum accelerated mold growth and minimised contamination. Varying the pH of the starter from 3.0 to 6.0 had no effect on the quality of starter produced. To dry the starter down to 10% moisture took 15 hours at either 40°C or 50°C.

Tables show: (1) Total mold propagules and total bacterial count in the inoculum. (2) Growth of *Rhizopus oligosporus* LKN M3 on rice substrate. (3) Mold contamination during tempe inoculum production.

Figures show: (1) Effect of drying temperature (40°C or 50°C) on the moisture of the inoculum. (1) Effect of drying temperature (40°C or 50°C) on the drying rate of the inoculum. Address: National Inst. for Chemistry, Indonesian Inst. of Sciences, Bandung, Indonesia.

1986. Tsubaki, K. 1986. Historical survey of the studies on Mucorales in Asia. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 28-30. Held July 1985 at Tsukuba, Japan. [Eng]

• **Summary:** This is a survey of the major species of mucorales which are useful in applied microbiology. Taxonomically, they are classified in the sub-division Zygomycotia of the division Eumycota. Names of the genera include *Absidia*, *Mucor*, and *Rhizopus*. They are included in the Phycomycetes in older textbooks. “So far as I know, the first investigation of Mucorales from Asia was made by a French mycologist, Calmette, who first described an interesting species, *Amylomyces rouxii*, in 1882... His isolates came from the Chinese yeast. This species has been called *Mucor rouxii* in most textbooks so far.” Two years later, in 1884, Eijkman considered this fungus to be a species of *Mucor*, but used a trinomial name, *Mucor amylomyces rouxii*. “Then many other important species of *Mucor* have been published including, *M. javanicus*, *M. praini*, etc. In the case of *Rhizopus*, the first species from Asia is *Rhizopus japonicus* so far which was isolated by Vuillemin in 1902. In Japan, studies of the mucoraceous fungi started by Saito in 1904. After that, Hanzawa reported a taxonomic study of *Rhizopus* in 1912 and 1914 describing twelve species. Hanzawa’s work was continued by many mycologists.” Address: Dep. of Biological Science, Univ. of Tsukuba, Japan.

1987. Winarno, F.G. 1986. Tempe making on various substrates—including unconventional legumes. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 125-43. Held July 1985 at Tsukuba, Japan. [42 ref]

• **Summary:** Discusses tempeh made from soybeans, winged beans, *Mucuna puriens* [velvet beans], *Canavalia ensiformis* [jack bean], *Leucaena*, sweet lupine, yellow peas, broad beans, cowpeas, horse beans, chickpeas. From bean fractions: okara, mungbean starch. From cereals: wheat, barley. And mixtures of the above. Also discusses oncom (onchom) and *usar* (traditional inoculum). There is a discussion in Japanese at the end. Address: Director, Food Technology Development Center–IPB, P.O. Box 61, Bogor, Indonesia.

1988. Yoshida, Shuji. 1986. Minzokugaku kara mita muen hakkô daizu to sono shûhen [The origin of non-salted fermented soybeans from the viewpoint of ethnology]. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 166-78. Held July 1985 at Tsukuba, Japan. English-language summary in Symposium Abstracts, p. 62-62. [20 ref. Jap]

• **Summary:** “Two of the earliest kinds of fermented soybeans were *shì* and *dòu-jiàng*. The former antedates the latter, because *shì* can be traced to the Han Dynasty (206 BC–A.D. 200), whereas *dòu-jiàng* does not emerge until the description in *Qimin Yaoshu* (A.D. 536–550). Good descriptions of *shì* and *dòu-jiàng* are given in *Qimin Yaoshu*. *Shì* is made as follows: A yellow mold is permitted to grow on boiled beans, which are then washed and wetted, after which they are fermented in a cellar for 10–12 days. *Shì* was eaten as a condiment.

“However, *shì* as a food would have appeared prior to *shì* as a condiment. *Sake* which was made from grain through mold fermentation, was originally not for drinking, but rather for eating. Such a primitive *Sake* is still used in Yúnnán. I suppose that a primitive *shì* also was eaten, and that the place of origin of *shì* was South China, according to the description in *Bencao Gangmu* (*shì* was commonly made in South China), and *Bówùzhì* (*shì* was exotic).

“*Dòu-jiàng*, which may have been first mentioned in *Bencao Gangmu* (1596), was a simple mold bean and was technologically more primitive than *shì*, although the existence of *dòu-jiàng* or a similar substance cannot be traced in the literature before *Qimin Yaoshu*. It seems that the first product of fermented beans would be *dòu-jiàng*, or a similar substance, and that its making would have been influenced by *sake* production. Later, *shì* as a food would have appeared and then *shì* as a condiment was produced, as we see from the *Qimin Yaoshu*.

“On the other hand, *dòu-jiàng* was developed from *ròu-jiàng*, preserved meat... *Natto*, *kinema* and *tempeh* would be identified as a substance similar to *dòu-jiàng*, which was a primitive fermented soybean product. Boiled beans became *dòu-jiàng* if they were covered by *Imperata cylindrica* grass, *kinema* if covered by certain leaves, *tempeh* if covered by leaves of *Hibiscus tiliaceus* or banana leaves, and *natto* if

covered by ricestraw.

“We know that various kinds of plants are used for making *sake* or mold bran. The species used varies by place. Fermented soybeans occur within the *sake*-making area and only at the margin of the distribution. That means several new fermented soybean products like *shì* and *dòu-jiàng* were made in the center of the fermented soybean distribution, and the area gradually expanded toward the margins. They were accepted in areas close to the center, but the most primitive forms would have remained only in the marginal places, where new ones were not accepted.”

A large chart (p. 169) shows the relatives and development of soy nuggets (*shì*); it includes the names of various unsalted fermented soyfoods and soy condiments (with their geographical area in parentheses). Relatives (fermented soyfoods made from yellow soybeans): Akuni (Sema Naga, in the Himalayas in northeast India), kinema (Limbu, in eastern Nepal), pe-bout (Shan, in eastern Burma), itohiki natto (Japan), and tempeh (Indonesia). Stage 1. Itohiki natto became Chon Kujjiang [perhaps *chungkuk jang*, Korean-style natto] of the Zhanguo Warring States period (475–221 BC) in China. Stage 2A: Unsalted soy nuggets were originally used as a food, rather than as a seasoning. To these unsalted soy nuggets, koji was added to create homemade unsalted soy nuggets (*doushi*, of China), Stage 2B: Salt was added to the unsalted soy nuggets to make various salted foods (each with a firm texture like raisins): Daitokuji natto (Japan; with wheat flour added), *pe-ngapi* (upper Burma), and *seang* (Cambodia). Stage 3. Unsalted soy nuggets (*doushi*) developed into closely related danshi. Koji was added to danshi to make *rul-kre* (of Bhutan). Cooked soybeans were shaped into balls and fermented naturally to make miso-dama (“unsalted miso balls” [meju], Korea and Japan). Then salt was added to the miso-dama to make various seasonings (each with a consistency like applesauce or paste / miso): Korean soybean jang (*doen jang*), Korean soy sauce (*kan jang*), or soybean miso (*mamé miso*, Hatcho miso, Japan). Stage 4. Salt was added to unsalted soy nuggets (*shì*) to make salted soy nuggets, from which developed inyu (a fermented soy sauce made with black soy beans, in Taiwan), *inshi* (meaning unclear, of Taiwan), and taucho (*tauco*, of Indonesia). Stage 5. Koji was added to salted soy nuggets to make *shì* for food use, and *doushi* (of Sichuan, China). Stage 6. Flour was added to salted soy nuggets to make red pepper jang (*kochu jang*, Korea) and spicy soy nuggets (*doubanshi*, China).

Note: This chart may be easier to understand when viewed in chart form, however the logic and some of the products seem a bit unclear. It is also unclear which products are fermented with bacteria (like natto). Soyfoods Center has an English-language translation of this chart. Address: National Museum of Ethnology, Osaka (Kokuritsu Minzokugaku Hakubutsukan).

1989. Yuan, Gwo-Fang; Jong, Shung-Chang. 1986. The new species *Rhizopus azygosporus* for manufacture of tempeh. In: Kô Aida, et al. eds. 1986. Proceedings of the Asian Symposium on Non-Salted Soybean Fermentation. Japan: Takeshima Shigeru. 319 p. See p. 311. Poster session. Held July 1985 at Tsukuba, Japan. Originally published in 1984 in *Mycotaxon* 20:397-400. [1 ref]

• **Summary:** ATCC 48018 is characterized by the abundance of azygospores, while zygozospores are wholly lacking. It was originally isolated by J.N. Hedger in Bogor, Java, Indonesia in 1976 from tempeh. It is the first obligate azygosporus strain found in the genus *Rhizopus*. Address: Mycology Dep., America Type Culture Collection, Rockland, Maryland.

1990. Zakaria, Fransiska; Muchtadi, Tien Ruspriatin. 1986. The role of tofu processing in development and the alleviation of malnutrition in West Java. *Food and Nutrition Bulletin (United Nations Univ.)* 8(4):32-41. Dec. [16 ref]

• **Summary:** The contribution of tofu to the diet, especially of low-income families in West Java, is reviewed. Suggestions are made for technological improvements (sanitation, production efficiency, yield, and diversification of soy-cake [tofu] utilization, chiefly as a food supplement).

"In West Java, as is common in Indonesia, people first buy rice as their staple food. If they have money left, they then buy other foods. Those that are generally chosen, in order of price from the cheapest to the most costly, are salted fish, tofu and fermented soybean products such as tempe and oncom, vegetables, fresh fish and other seafoods, poultry, milk and milk products, and meat and meat products." In West Java, people with an income of less than \$40/month consumed 20 gm/person/day of tofu; the amount increased to 50 gm for those earning \$100-\$200/month, but was about 45 gm for those earning \$300-\$400/month. In West Java, tofu contains an average of 10.45% protein, compared with 17.0% for tempeh. Tofu and tempeh contribute 53% of the protein from side dishes in the diet of West Javanese people with incomes of less than \$40/month, and 44% of the side dish protein for those with incomes of \$100-\$200/month. Address: Food Technology & Development Center (FTDC), Agricultural Univ., Bogor, Indonesia.

1991. **Product Name:** [Sojachouette {Roasted Snack Coated with Soya Grits}].

**Foreign Name:** Sojachouette. Soja Grille.

**Manufacturer's Name:** Athanor (Marketer).

**Manufacturer's Address:** 4, rue Toiras, 34000 Montpellier, France. Phone: 67.87.0608.

**Date of Introduction:** 1986.

**Ingredients:** Soybeans, peanut butter 15%, vegetable oil 3%, onion powder, potato starch 2%, sea salt.

**Wt/Vol., Packaging, Price:** 50 gm or 75 gm plastic bag.

**How Stored:** Shelf stable, 8 month shelf life.

**Nutrition:** Protein 40%, oil 26%, carbohydrates 24%, raw

fiber 4%, water 2%, sea salt.

**New Product-Documentation:** Athanor Price List. 1988.

Label. 1986. 3.25 by 2.25 inches. Red on white. "Organically grown" (*Issue de culture biologique*). Concerning the product name, it is a combination of "Soja" plus "chouette," which is a colloquial term meaning "fine" or "marvelous."

1992. Bean Supreme. 1986. Tofu, tempeh, soysage: Quality vegetable protein (Poster). P.O. Box 78084, 1 Wallingford St., Grey Lynn, Auckland, New Zealand. 59 x 42 cm.

• **Summary:** This large, glossy poster, dark purple on white, shows a sliced chub of soysage, two packs of tempeh, add a cake of tofu plus a knife, some soybeans, and a prepared dish. At the lower left: "Bean Supreme-The protein source. All natural. Cholesterol and lactose free. Low sodium. Low calories. No preservatives." Address: Auckland, New Zealand.

2003. **Product Name:** [Lima Tempeh in Shoyu].

**Foreign Name:** Lima Tempeh Shoyu.

**Manufacturer's Name:** Lima Foods (Marketer). Made

from Tempeh made in Belgium by Jonathan.

**Manufacturer's Address:** Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.

**Date of Introduction:** 1986.

**Ingredients:** Tempeh-Shoyu: Organically grown soybeans, water, and tempeh culture-starter. Packed in water with shoyu and herbs.

**Wt/Vol., Packaging, Price:** 200 gm of product in a 340 gm glass jar.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Leaflet. 1986. Lima Natural Gourmet Recipes from Europe. Contains a color photo of all products. Label reads: “Tempeh in soy sauce with ...” Eden Foods catalog. 1987. Nov. p. 18. “Lima tempeh is a Flemish country version of the traditional Indonesian delicacy.”

Lima catalogue, price list, and color product brochure. 1989. Shows a color photo of a 200 gm jar labeled Tempeh.

Label sent by Anthony Marrese. 1990. March 22. 7.75 by 2.25 inches. Light green, orange brown, and dark brown on beige. CINAB organic certification symbol. Nature et Progres organic certification symbol. “Fermentation of organically grown soybeans. Use: Baked or fried, with vegetables, whole rice, spaghetti, in soup or on pizza. The black spots are due to the natural fermentation.”

2004. **Product Name:** [Lima Tempeh].

**Foreign Name:** Lima Tempeh Nature.

**Manufacturer's Name:** Lima Foods (Marketer). Made in Belgium by Jonathan.

**Manufacturer's Address:** Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.

**Date of Introduction:** 1986.

**Ingredients:** Organically grown soybeans, and tempeh culture-starter.

**Wt/Vol., Packaging, Price:** 200 gm / 7 oz glass jar.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Leaflet. 1986. Lima Natural Gourmet Recipes from Europe. Contains a color photo of all products. Label reads: “Tempeh in soy sauce with ...” Eden Foods catalog. 1987. Nov. p. 18. “Lima tempeh is a Flemish country version of the traditional Indonesian delicacy.”

Lima catalogue, price list, and color product brochure. 1989. Shows a color photo of a 200 gm jar labeled Tempeh.

2005. **Product Name:** BLT with Fakin' Bacon (Tempeh).

**Manufacturer's Name:** Martha's Sandwiches.

**Manufacturer's Address:** Putney Rd. Brattleboro, VT 05301. Phone: 802-254-4778.

**Date of Introduction:** 1986.

**How Stored:** Unrefrigerated and perishable.

**New Product–Documentation:** Talk with Martha Brown. 1988. Aug. 31. This product was introduced in 1986. The Fakin' Bacon was purchased from Lightlife Foods. She sold the sandwiches only at Llama, Toucan & Crow in

Brattleboro, Vermont.

2006. Martoyuwono, Trisusanto D. 1986. The utilization of lablab beans for human foods (Abstract). *Dissertation Abstracts International*, B 46(9):2893-B.

• **Summary:** These beans were found to contain large amounts of haemagglutinin (HG) and trypsin inhibitor (TI), both antinutritive factors. Tempeh made from lablab beans had considerably reduced HG and TI, and phytic acid and stachyose were reduced by 30% and 60% respectively. Globulin was the major protein present in the beans. Address: Univ. of New South Wales, Kensington, NSW, Australia.

2007. Moslehuddin, A.B.M. 1986. The effect of fermentation by *Rhizopus oligosporus* on the nutritional value of *Lathyrus sativus*. Nutrition Research and Development Center, Ministry of Health, Indonesia. (Internal Report). \*

• **Summary:** *Lathyrus sativus* is the Lathyrus pea or chickling vetch.

2008. **Product Name:** [Marinated Tempeh Cutlets].

**Foreign Name:** Tempeh Bratling Mariniert.

**Manufacturer's Name:** Natuerliche Lebensmittel. Paul Stuart Zacharowicz.

**Manufacturer's Address:** Staudgasse 70, A-1180 Vienna, Austria. Phone: 0222/48 50 03.

**Date of Introduction:** 1986.

**Ingredients:** Fried (gebratenes) tempeh marinated in soy sauce, spices/seasonings.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987. 5.5 x 4 inches. Black, gold, and red on white card stock. "Keep refrigerated. Can also be frozen. Tempeh cutlets are ready to serve (tellerfertig), cold as a snack or warm as a main course. Contains no chemical colorings or preservatives."

2009. **Product Name:** [Marinated Soy Tempeh].

**Foreign Name:** Soja Tempeh Mariniert.

**Manufacturer's Name:** Natuerliche Lebensmittel. Paul Stuart Zacharowicz.

**Manufacturer's Address:** Staudgasse 70, A-1180 Vienna, Austria. Phone: 0222/48 50 03.

**Date of Introduction:** 1986.

**Ingredients:** Tempeh marinated in soy sauce.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987. 5.5 x 4 inches. Black, gold, and red on white card stock. "Keep refrigerated. Can also be frozen. Marinated tempeh is well suited for frying, baking, steaming, smoking, or grilling. Tastes excellent with vegetable and grains, or cold on bread. Contains no chemical colorings or preservatives."

2010. **Product Name:** Tempeh.

**Manufacturer's Name:** Nature's Miracle Food Manufactory.

**Manufacturer's Address:** P.O. Box 23, Earlwood, NSW 2206, Australia.

**Date of Introduction:** 1986.

**New Product–Documentation:** Label. 1986, undated. 5.5 by 7 inches. Brown, yellow and red. "High protein. Rich in vitamin B-12. You'll love it. Complete protein food. Excellent meat substitute. Nature's miracle."

2011. **Product Name:** Noble Bean Tempeh and Tahini Spread (Savory Spread for Sandwich or Dip with Umeboshi Plums).

**Manufacturer's Name:** North Coast Tempeh Co.

**Manufacturer's Address:** 18320 Euclid Ave., Cleveland, OH 44112.

**Date of Introduction:** 1986.

**Ingredients:** Tempeh (Organic soybeans, water, *Rhizopus culture*), tahini, onion, parsley, barley miso, lemon juice, umeboshi paste, cider vinegar, olive oil, garlic powder.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987. Oval 4 by 2.75 inches. Blue, red, green, and yellow on white. Jeff Narten. 1987. "History of North Coast Tempeh and its Products." 4 p. Dec. 7.

2012. **Product Name:** Noble Bean Bogie Roll (Pita Pocket with Tempeh).

**Manufacturer's Name:** North Coast Tempeh Co.

**Manufacturer's Address:** 18320 Euclid Ave., Cleveland, OH 44112.

**Date of Introduction:** 1986.

**Ingredients:** Whole wheat pita, dill pickle, Tempeh and Tahini Spread (Tempeh [organic soybeans, water, *Rhizopus culture*], tahini, onion, parsley, barley miso, lemon juice, umeboshi paste, cider vinegar, olive oil, garlic powder), and sprouts.

**Wt/Vol., Packaging, Price:** 5 oz.

**How Stored:** Unrefrigerated and perishable.

**New Product–Documentation:** Label. 1987. Oval 4 by 2.75 inches. Red, green, blue, and yellow on white. Jeff Narten. 1987. "History of North Coast Tempeh and its Products." 4 p. Dec. 7.

2013. **Product Name:** Noble Bean Tempeh Chili.

**Manufacturer's Name:** North Coast Tempeh Co.

**Manufacturer's Address:** 18320 Euclid Ave., Cleveland, OH 44112.

**Date of Introduction:** 1986.

**Ingredients:** Tempeh, tomato sauce, kidney beans, water, tomatoes, whole wheat flour, onion, green pepper, tamari, sesame oil, parsley, garlic, spices.

**Wt/Vol., Packaging, Price:** 16 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987. 4.25 inches diameter, self adhesive. Blue, green, yellow, and red on white, with logo of Jack and the Beanstalk. “No Cholesterol.” Jeff Narten. 1987. “History of North Coast Tempeh and its Products.” 4 p. Dec. 7.

2014. **Product Name:** Noble Bean Swedish Tempeh Balls.  
**Manufacturer’s Name:** North Coast Tempeh Co.  
**Manufacturer’s Address:** 18320 Euclid Ave., Cleveland, OH 44112.

**Date of Introduction:** 1986.

**Ingredients:** Tempeh, whole wheat flour, vegetable soup stock, soymilk, corn oil, onion, tamari, parsley, spices.

**Wt/Vol., Packaging, Price:** 16 oz.

**New Product–Documentation:** Label. 1987. Ink stamp. Jeff Narten. 1987. “History of North Coast Tempeh and its Products.” 4 p. Dec. 7.

2015. **Product Name:** Noble Bean Garbanzo Tempeh.  
**Manufacturer’s Name:** North Coast Tempeh Co.  
**Manufacturer’s Address:** 18320 Euclid Ave., Cleveland, OH 44112.

**Date of Introduction:** 1986.

**Ingredients:** Incl. organic garbanzo beans.

**New Product–Documentation:** Jeff Narten. 1987. “History of North Coast Tempeh and its Products.” 4 p. Dec. 7.

2016. **Product Name:** Noble Bean Black Soybean Tempeh.  
**Manufacturer’s Name:** North Coast Tempeh Co.  
**Manufacturer’s Address:** 18320 Euclid Ave., Cleveland, OH 44112.

**Date of Introduction:** 1986.

**Ingredients:** Incl. organic black soybeans.

**New Product–Documentation:** Jeff Narten. 1987. “History of North Coast Tempeh and its Products.” 4 p. Dec. 7.

2019. **Product Name:** Sloppy Mo (Made with 4-Grain

Tempeh; Later Renamed Tempeh Sloppy Joe).

**Manufacturer’s Name:** Southwest Soy Foods.

**Manufacturer’s Address:** 2889 Trades West Rd., Santa Fe, NM 87501. Phone: 505-471-8979.

**Date of Introduction:** 1986.

**Ingredients:** Tempeh (pulp [okara] from organically grown soybeans, rolled oats, bulghur, sunflower seeds, vinegar, *Rhizopus oligosporus* culture), water, wheat, onions, celery, green peppers, tomato paste, molasses, safflower oil, vinegar, herbs, spices, salt.

**Wt/Vol., Packaging, Price:** 20 oz.

**How Stored:** Frozen in tofu tubs.

**New Product–Documentation:** Talk with Richard Jennings of Southwest Soyfoods. 1990. Aug. 2. This tempeh-based version of Sloppy Joe was launched in one flavor in about 1986. Made with the scraps from the tempeh burger, crumbled.

Label for “Tempeh Sloppy Joe” brought by Richard Jennings. 1990. Sept. 20. 3.5 by 3 inches. Self adhesive. Reddish brown on yellow. Illustration of burger-like product between two buns. “Real Fast Foods. All natural ingredients. Heat & serve.”

2020. **Product Name:** Bar-B-Q Tempeh Burgers.

**Manufacturer’s Name:** Southwest Soy Foods.

**Manufacturer’s Address:** 2889 Trades West Rd., Santa Fe, NM 87501. Phone: 505-471-8979.

**Date of Introduction:** 1986.

**Ingredients:** Tempeh (pulp [okara] from organically grown soybeans, rolled oats, bulghur, sunflower seeds, vinegar, *Rhizopus oligosporus* culture), water, tomato paste, molasses, tamari (water, soybeans, salt), vinegar, safflower oil, herbs, spices, natural smoke flavor.

**Wt/Vol., Packaging, Price:** 10 oz.

**How Stored:** Frozen or refrigerated.

**New Product–Documentation:** Talk with Richard Jennings of Southwest Soyfoods. 1990. Aug. 2. This was an unfried, square tempeh burger, launched in about 1986, and marinated in a barbecue sauce. The tempeh was fermented in trays. Richard made a roll with many spikes protruding (sort of like a lawn aerator), which he would roll across the tempeh to perforate it in many places to facilitate absorption of the thick marinade. After being marinated, it was baked, cut, packaged, and frozen. It was introduced at the same time as Sloppy Mo; the broken pieces and scrap tempeh from the burgers were used in the Sloppy Mo/Joe.

2021. Taguchi, K.; Kawabata, M.; Ohtsuki, K.; Tanaka, Y. 1986. [Changes in dietary fiber of natto and tempeh during fermentation]. *Nihon Eiyo Shokuryo Gakkai-shi (J. of the Japanese Society of Nutrition and Food Science)* 39(3):203-08. [15 ref. Jap; eng]\*

• **Summary:** Total dietary fiber in both natto and tempeh decreased slightly during fermentation. Pectic substances

in natto increased 14%, and the relative amounts of the component sugars (arabinose, galactose and galacturonic acid) increased during the fermentation, while no significant change was observed in the amount of dietary fiber and the component sugars in the oxalate insoluble residues. The hemicellulose fraction decreased in the tempeh during fermentation, but a marked increase of glucosamine was observed in the oxalate insoluble residues. The increase may reflect the contribution of mycelia polysaccharides to the dietary fiber of tempeh. Address: Dep. of Food Science, Kyoto Prefectural Univ., Kyoto 606, Japan.

2022. Truesdell, Delores Desear. 1986. Vitamin B-12 content of miso and tempeh. MSc thesis, Florida State University. vi + 74 leaves. 29 cm. \*

• **Summary:** Includes bibliographic references (leaves 58-74).

2023. **Product Name:** [Tempeh, and Tempeh in Jars (in Broth)].

**Foreign Name:** Tempe, Tempe Estofado.

**Manufacturer's Name:** Vegetalia, S.L.

**Manufacturer's Address:** Sant Andreu, s/n, Castellcir, Barcelona, Spain. Phone: 93/866-8298.

**Date of Introduction:** 1986.

**Wt/Vol., Packaging, Price:** In glass jar.

**New Product–Documentation:** Booklet titled *Recetario* published in 1992 by Vegetalia. It gives the company address and phone as “Castellcir, Tel. 93-866 61 61.” The introduction states that Vegetalia was formed in April 1986 by Salvador Sala, Carmen and Tomás. As of 1992, the company is 6 years old. These products are listed on p. 32.

Form filled out by Salvador Sala. 2001. May 29.

Vegetalia, S.L. began making tempeh 15 years ago.

2028. Colbin, Annemarie. 1986. *Food and healing*. New York, NY: Ballantine Books. 351 p. Foreword by Robert S. Mendelsohn, M.D. Index. 23 cm. [207\* ref]

• **Summary:** A very interesting, wholistic look at food trips and philosophies—with a preference for macrobiotics. Discusses miso, natto, tempeh, and tofu. Pages 169-72 discuss beans, including soybeans. Beans are said to be contractive, acid-forming, warming, and a buildup food. “Folklore has it that appreciable quantities of soybeans and their products, especially tofu, can lower, or cool, sexual energy. Research done at the universities of Illinois and Kansas has shown that soybeans may interfere with the absorption of zinc. As zinc is one of the minerals most strongly associated with the healthy functioning of the sex glands, this bit of folk wisdom appears realistic.”

Chapter 12, titled “Food as Medicine,” discusses healing foods and tells how to prepare them, including miso soup (p. 253; contractive, alkalinizing, warming, breakdown). Miso soup is considered a good food to help cure the common cold, to neutralize the negative effects of excess sugar

consumption, and to combat problems of inflammation of the digestive tract (ulcers, colitis, spastic colon, etc.); ulcers are problems of excess acidity.

Chapter 14, titled “The Effects of Food on Sex,” notes that “Scientific studies have found that individual foodstuffs have an effect on sexuality via their chemical constituents... soybeans (including tofu) contain traces of antithyroid factors; as the thyroid regulates sexual desire, activity, and fertility, when consumed in large enough quantities these foods could possibly inhibit sexuality by lowering thyroid energy. Oriental folk rumor, which I’ve been unable to verify, has it that tofu ‘cools the sex organs’ and is used by monks for the specific purpose of aiding them in maintaining celibacy. In this light, it’s interesting to note that the traditional Japanese diet, high in thyroid-depressing soybean products, also contains appreciable amounts of seaweeds, rich in thyroid-stimulating iodine.”

In the Foreword, Dr. Mendelsohn writes: “Coming from a background of modern medicine, I, as well as hundreds of thousands of other M.D.s, was carefully educated in nutritional ignorance—indeed in disdain for food. The hospital ‘dietician’ was not—and is not even today—a teacher of physicians. The dietician’s traditional purpose in life has always been to serve as a ‘referral’ for a patient who bothered the physician with too many questions about food. The very title of this book *Food and Healing* represents a joining of two concepts that most doctors regard as unrelated.”

A photo (p. 351) shows Annemarie, who was born in Holland and brought up in Argentina on a European vegetarian diet. After her arrival in the United States in 1961, she was introduced to macrobiotics. She lives in New York City with her two daughters, and directs the Natural Gourmet Cookery School there. Address: 365 West End Ave., New York City, NY 10024. Phone: 212-580-7121.

2029. Committee for Soybean (The). 1986. The Philippines recommends for soybeans. Los Baños, Laguna, Philippines: Philippine Council for Agriculture and Resources Research and Development. 111 p. Technical Bulletin Series No. 14A. Revision of 1976 edition. [51 ref. Eng]

• **Summary:** Written by The Soybean Committee (Dr. Florendo C. Quebral, a plant pathologist at UPLB, chairman), this work focuses on recent technologies for soybean production. A foreword by Ramon V. Valmayor, Executive Director of PCARRD, notes: “The importance of soybean has been stressed continuously. To encourage its widespread production, the Ministry of Agriculture and Food (MAF) launched the Soybean Production Program in Mindanao. Likewise, PCARRD initiated and coordinated the implementation of Soybean Pilot Production Project in 1983 to demonstrate the feasibility of growing soybean profitably in Luzon.”

Contents: Foreword. Acknowledgments. The Soybean

Committee. Introduction. Production management.

Marketing. Soybean cropping system. Crop protection. Seed production. Processing and utilization: Raw materials for industry, soybean as food. References. Appendixes. List of tables. Lists of figures.

Table 1 shows soybean production in the Philippines from 1974 to 1985. Area in hectares grew from 2,780 ha in 1974 to a peak of 11,250 ha in 1976 and was 8,479 ha in 1985. Production grew from 2,214 tonnes in 1974 to a peak of 11,466 tonnes in 1982 and was 8,430 tonnes in 1985. Yield grew from 0.80 tonnes/ha in 1974 to a peak of 1.05 in 1982 and was 0.99 in 1985. Local production does not begin to supply local demand. In 1984 380,691 tonnes of soybeans and products were imported. Most of the imports were soybean meal.

Table 2 shows imports and exports of tausi (salted, fermented soybeans), oil cake (huge imports), soy sauce (large exports), soy oil (refined; large imports), soybean paste, tahu (soymilk curds, often sold topped with a little brown sugar), bean cheese (tokwa [tofu]), hypoallergenic soy food, crude soy oil. Page 50 shows all current uses of soybeans in the Philippines, and p. 51 gives the nutritional composition of Philippine soyfoods. Note the terms Geerligs cheese (Tahu; 92.7% moisture and 2.9% protein), Soybean curd (Tahuri; 61.3% moisture and 11.4% protein), Fermented soybean cheese (Tausi; 51.5% moisture and 13.8% protein), and Soybean cheese (Tokwa; 77.0% moisture and 12.9% protein).

Recipes are given for preparing soy sauce, miso, tahu (soymilk curds), tokwa (soybean cheese, or firm tofu), tao-si (salted, fermented soybeans), soybean milk, and soybean coffee. Descriptions are given for sufu, tempeh, soy flour and grits, soy protein concentrates and isolates.

Note: In the section on nutritional composition, two words are incorrectly defined. The term “Tahuri” actually refers to tofu in brine, and “tausi” refers to salted, fermented soybeans. Address: PCARR.

2030. Frost, G.M. 1986. Commercial production of enzymes. *Developments in Food Proteins* 4:57-134. Chap. 3. (B.J.F. Hudson, ed. London and Englewood, New Jersey: Applied Science Publishers). [197\* ref]

• **Summary:** The production of isolated enzymes on an industrial scale began less than 100 years ago. However the action of enzymes (fermentation) for changing and preserving foods has been exploited for thousands of years. Many traditional fermentations involve digestion by extracellular enzymes prior to fermentation by whole organisms. Enzymes are sold mainly to the food, beverage, and detergent industries. The present world market is valued at approximately £200 million. Most applications now involve hydrolytic enzymes, but future growth of other types seems probable. Most commercial enzymes are made by submerged cultivation of highly developed strains

of microorganisms using specially optimized processes. Industrial enzymes, though rarely highly purified, are manufactured to exacting microbiological specifications. Enzymes for diagnostic and pharmaceutical use require more sophisticated purification methods.

The first artificial use of an enzyme was probably the addition of calf stomach extract to milk to cause coagulation when making cheese. In the West, the main use of fermentation is in making alcoholic beverages—wine, beer, etc. In East Asia, traditional fermentations are more concerned with improving the nutritional value, flavor, and texture of various foods—such as tempeh.

During the past century Asian and Western applications have been merged. For example, in 1894 Takamine in Japan used *Aspergillus oryzae*, the main organism in the soy sauce fermentation, to make Takadiastase, “an amylolytic enzyme which was first used for human consumption as a digestive aid.” Takamine also established a business in the USA and new applications for his enzymes were found. His company still exists (though under a different name) and is still marketing essentially the same enzyme preparations.

Includes a long section on “Enzymes used in food.” Address: John & E. Sturge Ltd., Selby, North Yorkshire, UK.

2031. Gandjar, Indrawati. 1986. Soybean fermentation and other tempe products in Indonesia. *Mycologia Memoir* No. 11. p. 55-66. Chap. 4. (C.W. Hesseltine and Hwa L. Wang, eds. Indigenous Fermented Food of Non-Western Origin. Berlin & Stuttgart: J. Cramer.) Previously published in 1981 in USDA Miscellaneous Publication FL-MS-333. [14 ref]  
**• Summary:** Contents: Introduction. Kecap (Indonesian soy sauce). Taoco (Indonesian chiang, a yellowish-brown porridge that is very popular in Western Java). Soybean tempe (*tempe kedelai*). Tempe gembus (okara tempe). Non-soybean tempe—made from velvet beans (*tempe benguk*), jack beans (*tempe koro pedang*), winged bean (*tempe kecipir*), pigeon pea (*tempe gude*), wild tamarind (*tempe lamtoro*), peanut presscake (*tempe bungkil kacang*), and coconut presscake (*tempe bongkreng*).

“Tempe is an important source of protein in the Indonesian diet. At present the intake of soybean tempe per person per day is within the range of 40 to 50 g while the recommendation is 100 g per person per day... The awareness of the people that soybean tempe is nutritious results in a higher demand of this product. In the city of Jakarta, about 6000 tonnes of soybeans are processed monthly; 2500 tonnes for soybean tempe [tempeh], and 3500 tonnes for tahu [tofu].”

Table VI shows the nutritional composition of some leguminous seeds and tempe products. Table VII shows the amino acid content of the seeds and the tempeh of 4 non-soybean legumes. Address: Dep. of Biology, Faculty of Mathematics and Natural Sciences, Univ. of Indonesia, Jakarta, Indonesia.

2032. Hesseltine, C.W.; Wang, H.L. 1986. Indigenous fermented foods of non-Western origin. *Mycologia Memoir* No. 11. 351 p. Berlin and Stuttgart: J. Cramer. Published for the New York Botanical Garden in Collaboration with The Mycological Society of America. Illust. Index. 24 cm.  
**• Summary:** Contains 18 chapters by various authors. Each chapter that mentions soy is cited separately. Address: NRRC, Peoria, Illinois.

2033. Hesseltine, C.W. 1986. Microorganisms involved in food fermentations in tropical Asia. In: Susono Saono and F.G. Winarno, eds. 1986. Proceedings of International Symposium on Microbiological Aspects of Food Storage, Processing and Fermentation in Tropical Asia. x + 344 p. See p. 189-204. Held 10-13 Dec. 1979 at Cisarua, Bogor, Indonesia. Illust. 24 cm. [18 ref]

**• Summary:** Three pioneers of the taxonomy of molds used in fermented foods were Drs. R. Nakazawa, K. Saito, and C. Thom. Fermentations can be classified as Homofermentations (only one species of microorganism is necessary to produce the product; e.g. natto, onchom, tempeh, fermented tofu), Heterofermentations (more than one is required; e.g. Chinese yeast, or ragi), Homomultifermentations (two or more strains of the same species are used together; e.g. miso, shoyu, soy yogurt).

Tables show: (1) Representative strains of cultures in Oriental food fermentations: Miso—*Aspergillus oryzae*, *A. sojae*, *Saccharomyces rouxii*, *Pediococcus halophilus*. Tempeh—*Rhizopus oligosporus*. Sufu—*Actinomucor elegans*, *Mucor dispersus*. Address: NRRC, Peoria, Illinois.

2034. Hesseltine, C.W.; Wang, Hwa L. 1986. Food fermentation research and development. *Mycologia Memoir* No. 11. p. 9-22. Chap. 1. (C.W. Hesseltine and Hwa L. Wang, eds. Indigenous Fermented Food of Non-Western Origin. Berlin & Stuttgart: J. Cramer). [13 ref]

**• Summary:** The following fermented soyfoods are discussed: Miso, shoyu, natto, hamanatto, sufu, tamari, ontjom, tempeh. Address: USDA/NRRC, 1815 N. University St., Peoria, Illinois 61604.

2035. Hesseltine, C.W. 1986. Future of fermented foods. *Mycologia Memoir* No. 11. p. 303-16. Chap. 17. (C.W. Hesseltine and Hwa L. Wang, eds. Indigenous Fermented Food of Non-Western Origin. Berlin & Stuttgart: J. Cramer.) Previously published in 1981 in USDA Miscellaneous Publication FL-MS-333. [11 ref]

**• Summary:** Contents: Introduction. Positive factors for increased use of fermented foods. Trends in production of fermented foods. Factors that may effect the wider use of fermented foods in the West. Literature cited. Address: USDA/NRRC, 1815 N. University St., Peoria, Illinois 61604.

2036. Hoshijo, Kathy. 1986. The art of dieting without dieting! Recipe and guidebook. The Self-Sufficiency Association, 2525 South King St., Honolulu, Hawaii 96826. Or: P.O. Box 1122, Glendale, California 91209. xiv + 729 p. Illust. Index. 24 cm.

• **Summary:** A whopper of a cookbook, with 300 easy-to-prepare lacto-vegetarian recipes (no eggs) from the star of the PBS television series “Kathy’s Kitchen.” Kathy has 6 healthy children (see color photo on rear cover) and 5 years of experience on television teaching Americans how to eat healthy foods. Each recipe contains a detailed (full-page!) nutritional analysis.

This book contains a wealth recipes using soyfoods. For example, the index lists 57 recipes for tofu and tofu mayonnaise, 13 recipes for tempeh, 9 recipes for yuba, 6 recipes for miso, and 4 recipes for soybeans (including soymilk). One section titled “Soyfriends” (p. 63) explains: “In eliminating meat from my diet, one food that has become a real friend in the kitchen is soybeans and by-products made from soybeans. From a nutritional standpoint, soybeans are a good nutritional replacement for meat as they are the only legume which contains all essential amino acids... Soybeans by themselves have a Net Protein Utilization about equal to that of beef and chicken.” Address: Honolulu, Hawaii; and Glendale, California.

2037. McCarty, Meredith. 1986. American macrobiotic cuisine. Turning Point Publications, 1122 M Street, Eureka, CA 95501-2442. 110 p. Illust. Index. 28 cm. [6 ref]

• **Summary:** Page 7 and Chapter 7, titled “Beans and Soyfoods,” give basic descriptions of tempeh, miso, soy sauce, soymilk, and tofu. Recipes include Summer’s Mixed Vegetable Quiche (with tofu), Tofu Egg Foo Young, and Baked Tempeh with Lemon-Mustard Sauce. Tofu recipes elsewhere in the book include Green Goddess Dressing, Nutty Noodle Bake, Pasta Patricio, and Sour Cream. Also contains information on sea vegetables. Address: Eureka, California. Phone: 707-445-2290.

2038. McDougall, Mary A. 1986. The McDougall health-supporting cookbook. Vol. 2. Piscataway, New Jersey: New Century Publishers. iii + 157 p. Index. 23 cm.

• **Summary:** This is a vegan cookbook whose 250 original recipes are designed to support The McDougall Plan, which is a diet low in fat and sodium, high in complex carbohydrates. Since soyfoods are relatively high in fat, they are used sparingly and the recipes are marked by a symbol of a crown. Low sodium soy sauce is used in many recipes. Soy-related recipes include: Scrambled tofu (p. 2-3). Tofu salad dressing (p. 7-8). Dijon tofu dip (p. 9). Onion soup dip (with tofu, p. 9). Dilly tofu dip (p. 9-10). Miso soup (p. 39). Creamed tofu soup (p. 41). Tempeh Creole (p. 62-63). Rice-tofu stuffing mix (p. 88). Tempeh and grain casserole (p. 91).

Tofu loaf (p. 96-97). Baked tofu cubes (p. 97-98). Spinach-tofu burgers (p. 99-100). Where’s the meat loaf? (with tofu, p. 101-02). Oat burgers (with tofu, p. 102-03). TVP stuffing mix (p. 109). Okara cookies (p. 126). Tofu banana pudding (p. 132). The section titled “Update on ingredients” (p. 133-35) includes a description of: Worcestershire sauce (Sharwood’s—natural and without anchovies), umeboshi plum sauce, tamari or soy sauce, okara, tempeh, kombu, and tahini. A portrait photo on the rear cover shows Mary McDougall.

Note: Not long after this book was published, New Century Publishers changed its name to New Win Publishing, Inc. and moved to Clinton, New Jersey. As of 2000 this book is published by Putnam/Penguin. Address: P.O. 14039, Santa Rosa, California 95402.

2039. Pierson, M.D.; Reddy, N.R.; Odunfa, S.A. 1986. Other legume-based fermented foods. In: N.R. Reddy, M.D. Pierson, and D.K. Salunkhe, eds. 1986. Legume-Based Fermented Foods. Boca Raton, FL: CRC Press. 254 p. See p. 219-31. Chap. 13. [43 ref]

• **Summary:** Contents: Introduction. Ugba. Inyu and Kecap. Waries. Kenima. Meitauza. Philippine Tao-si. Fermented cowpeas and chickpeas. Address: 1-2. Dep. of Food Science and Technology, Virginia Polytechnic Inst. and State Univ., Blacksburg, VA; 3. Dep. of Botany, Univ. of Ibadan, Ibadan, Nigeria.

2040. Rachim, Abdul. 1986. Indonesia: Notes on the soybean food industry under producers’ co-operatives in Indonesia. *CGPRT* No. 4. p. 244-54. Includes 7 tables and figures.

• **Summary:** Contents: Background. Indonesian soybean foods. Fermented products: Tempe, oncom, tauco, kecap. Non-fermented products: Tofu, soymilk. Function and role of Kopti (and BULOG). Traditional processing industry: Current situation of small-scale home industry, further studies on the food industry / marketing system.

The Food Balance Sheets of the Central Bureau of Statistics show that 90% of Indonesia’s soybeans are used for food. Most of the human consumption is in the form of a variety of popular processed foods: tempe, tahu (tofu), tauco, and a number of other less popular foods: soybean sprouts (tauge), sere in Bali, yuba, soybean milk, fried soybeans (eaten as a snack), beans boiled in the pod (also a snack), and the beans cooked as a vegetable or as an ingredient in soups. Only one factory (Sari Hasuda, in Yogyakarta) produces soybean milk. It is enriched with nonfat dried milk, vitamins, and minerals.

To coordinate and improve the economic viability of the small tofu and tempeh producers, a cooperative system, called Kopti (*Koperasi Produsen Tempe dan Tahu Indonesia*; Indonesian Tempe / Tofu Processors’ Co-operative) was founded in 1979. The main function of Kopti is to procure and distribute soybeans to its members, the number of which has increased from 25 in 1980 to 286 in May 1985. It handles

about 407,160 tons/year. The purchase price of soybeans is as follows (Rupiah/kg): From USA 415, from China 425, from Indonesian farmers 475-80. Certificate [certified] seeds cost 550-75.

Tofu, tempe, kecap, tauco and oncom processing is primarily done in small factories. 3 studies have been made on the size of these factories and the quantities they process: as part of the 1974 Industrial Census of the Central Bureau of Statistics (CBS); by Winarno, et al., in 1976; and by the study team on Soybean Commodity System (SCS) in the Garut area of West Java in 1984. The findings of these 3 studies are presented in Table 2.

"We should be cautious in comparing their results, however, because of biases in the collection of the information. The CBS study, for instance, was part of an industrial census, which divided processors into two categories: small-scale industries (5-19 labourers), and home factories (1-4 labourers, some of whom may be family members). However, there may also be wide variations in the industry in different parts of the country.

"Despite these limitations, it seems that the volume of soybean processed by each unit has increased appreciably, probably reflecting a favorable growth of the industry. Yet the number of labourers per unit has remained small, and is probably diminishing. This may be because of the use of mechanical crushers or dehullers for both tempe and tofu productions." Address: Research Asst., ESCAP CGPRT Centre, Bogor, Indonesia.

2043. Wang, H.L.; Fang, S.F. 1986. History of Chinese fermented foods. *Mycologia Memoir* No. 11. p. 23-35. Chap. 2. (C.W. Hesseltine and Hwa L. Wang, eds. Indigenous Fermented Food of Non-Western Origin. Berlin & Stuttgart: J. Cramer.) Previously published in 1981 in USDA Miscellaneous Publication FL-MS-333. [6 ref]

• **Summary:** Discusses the early history of numerous types of chu [ch'ü] (similar to koji, with a substrate of wheat, barley, millet, and/or rice), chiang [jiang] (salted sauce), shi or tou-shi (fermented beans) [soy nuggets], chiang-you, tou-yu and shi-tche (the liquid from shi [soy nugget sauce]; "It is a very dark but clear liquid and was the most popular seasoning in the sixth century"), tou-fu-ru (fermented tofu or sufu), La-pa-tou (Mucor fermented beans), Mei-tou-tcha (Meitauza, fermented okara), tsu (vinegar), yan-tsai (salted vegetables).

The three main sources of early information on fermented soyfoods are: (1) *Shih chi* [pinyin: *Shiji* by Sima Qian] (90 B.C., historical record). (2) *Ch'i-min yao-shu* [pinyin: *Qimin yaoshu*, by Jia Sixie, AD 544, "Important arts for the people's welfare"] (+6th century agricultural encyclopedia). (3) *Pen-ts'ao kang-mu* [pinyin: *Bencao gangmu*, by Li Shizhen, AD 1596, "The great pharmacopoeia"] (16th century botanical encyclopedia).

Concerning shi or tou-shi [soy nuggets]: The first written record "appeared in the *Shi-chi* (the historical records) written by Szuma Chien in the second century B.C., which stated that shi as sold next to salt, indicating shi was already a popular food seasoning." In the *Qimin yaoshu* (6th century AD) the method of preparing shi is described in detail. Temperature is said to be the most important factor in making shi, and June was found to be the best month for preparing this fermented seasoning. A detailed description of the process is given.

The *Bencao gangmu* (16th century AD) described many types of shi made at different localities, and give the medicinal use of each.

"In more recent times, shi can be classified into three general types." (1) *Aspergillus oryzae* mold type, which is the traditional type, also known as tou-shi, and is the most common type, prepared as described above, but using pure cultures of *Aspergillus oryzae*. Today the fermentation is carried out at 25°C in wooden barrels. "In some areas, the washed, molded beans are mixed with 16-18% salt and fermented at 35°C for 30 days." (2) *Mucor* mold type, which is usually made in Szechuan in wooden trays. The process is described. The mold is *Mucor racemosus* Fresenius. (3) *Bacillus* bacteria type, called shui-tou-shi [pinyin: shui-dou-chi], is probably the same product as natto in Japan [except that it is salted]. To make shui-tou-shi: Clean, soak, and boil soybeans until soft. Place in a cloth bag and cover with straw [an excellent natural source of *B. subtilis*]. After incubation for 1-2 days at 25-30°C the soybeans will be

covered with viscous substances. The quality of the product is ascertained by the stickiness of the beans. Mix the sticky soybeans with minced ginger and salt, then pack tightly into jars, and age for one week. They are now ready to consume. "The organism responsible for this fermentation has been identified as *Bacillus* species.

Note: Is the third type salted? If it is, it would seem to be an intermediate form between tou-shi (soy nuggets, salted) and natto (unsalted). If it is not, it would seem to be Chinese natto. Address: 1. USDA/NRRC, 1815 N. University St., Peoria, Illinois 61604; 2. Inst. of Microbiology, Academia Sinica, Beijing, China.

2044. Wang, H.L.; Hesseltine, C.W. 1986. Glossary of indigenous fermented foods. *Mycologia Memoir* No. 11. p. 317-44. Chap. 18. (C.W. Hesseltine and Hwa L. Wang, eds. Indigenous Fermented Food of Non-Western Origin. Berlin & Stuttgart: J. Cramer). [29 ref]

• **Summary:** The section titled "Fermented Legume Products" defines chao (Vietnamese fermented tofu), chiang-chu (Chinese koji), ch'ou-toufu and ch'ou-toufu-ru (fermented tofu), Damsuejang and doenjang (Korean miso), furu, sufu, hon-fan or red sufu (fermented tofu), in-shi ("Fermented black soybeans from China" [soy nuggets]), in-yu (Type of Chinese soy sauce made from black soybeans), kanjang (Korean soy sauce), kenima [sic, kinema], ketjap or kecap (Indonesian soy sauce from black soybeans), meitauza or mei-tou-cha (fermented okara), meju (maiju or maeju; Korean soybean koji), natto, oncom (onchom or oncom), see-iu (see-iew; Thai soy sauce made from whole soybeans); soy sauce, soybean paste, tahuri (tahuli; Filipino fermented tofu. See sufu), tao-chieo (tao-jiao; Thai miso), taohu-yi (Fermented tofu from Thailand. See sufu), taokoan, tempe (many types), thua-kab (dry thua-nao), thua-merk (wet and cooked thua-nao), thua-nao (Thai natto), tosufu (see sufu), toufu-ru (fermented tofu), tsue-fan (tsui-fan, chee fan; fermented tofu).

Note 1. This is the earliest English-language document seen (July 2011) that contains the term "Fermented black soybeans" or "Fermented black soybeans from China," or that uses these terms to refer to *in-shi*.

Under "Fermented Cereal-Legume Products" we find: chiang, chiang-yu (chau-yu, Chinese soy sauce), fermented soybeans (soy nuggets), hamanatto, kochujang (kochu chang), miso, shoyu, tamari, taotjo (tao-tjo, tao dji; Fermented soybeans from Indonesia or Thailand [No! *Tao-tjo* is Indonesian-style miso and *tao dji* is Indonesian soy nuggets]), tao-tjung or tou-chiang (chiang), tao-yu (tou-yu; Chinese soy sauce), tauco (taocho, taoco, tauchio; Indonesian miso), tou-pan-chiang (Chinese fava bean miso), tou-shi (toushih; Chinese soy nuggets), toyo (Filipino soy sauce). Note 2. This is the earliest English-language document seen (March 2009) that uses the word "taocho" to refer to Indonesian-style miso.

Fermented Vegetable Products include: Chiang-tsai (chiang-tsai; Vegetables in China pickled in chiang or soy sauce or tien-mien-chiang), miso-zuke. Address: USDA/NRRC, 1815 N. University St., Peoria, Illinois 61604.

2045. Wang, Hwa L. 1986. Nutritional quality of fermented foods. *Mycologia Memoir* No. 11. p. 289-301. Chap.

2050. *Kecamatan Tempeh dalam Angka (Statistics on Tempeh by Districts, Indonesia)*. 1986? Serial/periodical. Published in Indonesia by Kantor Statistik Kabupaten Lumajang, Mantri Statistik Kecamatan Tempeh (Lumajang Statistics Bureau, Statistics Administrator of Tempeh District). Frequency: Annual. 21 cm. [Ind]\*  
 • **Summary:** Gives statistics on tempeh production in Indonesia.

Note 1. Lumajang is an ancient city located in East Java province, Indonesia. It shares a border with Malang on the west. Administration: Lumajang is divided into 21 sub-districts and 202 smaller areas.

Note 2. Concerning administrative divisions of Indonesia from large to small. (a) A province (Indonesian *Provinsi*) is headed by a governor. As of May 2011 Indonesia has 33 provinces, five of which have special status. Provinces include West Java, Central Java, Yogyakarta, East Java, Bali, etc. (b) Regency (Indonesian: *Kabupaten*) and City (Indonesian: *Kota*) is a local level of government beneath that of province. Both regency and city are the same level, having their own local government and legislative body. The difference between a Regency and a City lies in differing demographics, size and economics. Generally the regency has larger area than city, and city has a non-agricultural economic activities. A regency is headed by a regent (Indonesian: *Bupati*), and a city is headed by a mayor (Indonesian: *Walikota*). Regent or mayor and members of representative bodies are elected by popular vote for a term of 5 years. Indonesia has 405 regencies and 97 cities. (c) Sub-district: Each regency or city is divided into sub-districts. Each sub-district (Indonesian: *Kecamatan*) is headed by a "Camat." Camats are civil servants. Indonesia has 6,543 sub-districts. (d) The next smaller level is the village (*desa*) or *kelurahan*. The village has rural connotations. Each village is headed by a village head (Indonesian: *Kepala Desa*), who is elected by popular vote. The *kelurahan* is more urban, has less power than a village, and is headed by a *Lurah*, who is a civil servant. Indonesia has 75,244 villages or *kelurahans*. Address: Indonesia.

2051. **Product Name:** [Meatless Tempeh Meatballs].  
**Foreign Name:** Tempeh-Bulleten.  
**Manufacturer's Name:** Morgenland Pflanzenkost.  
**Manufacturer's Address:** Kurze Strasse 1, D-3406 Lengler, West Germany.  
**Date of Introduction:** 1986?

**New Product–Documentation:** Manufacturer's catalog. 1987. Kleine Warenkunde. Yellow. 4 pages. Describes each of the 13 soyfood products. "Tempeh is an Indonesian specialty soyfood that is fermented with a special mold culture. Easily digested and rich in protein and vitamin

B, tempeh enables you to conjure up the most interesting recipes. Tempeh Buletten are made with rice, whole wheat flour, vegetables, sunflowerseeds, and exotic seasonings. Sold 2 per pack."

2052. **Product Name:** [Tempeh Chips].  
**Foreign Name:** Tempeh-Chips.  
**Manufacturer's Name:** Morgenland Pflanzenkost.  
**Manufacturer's Address:** Kurze Strasse 1, D-3406 Lengler, West Germany.  
**Date of Introduction:** 1986?  
**New Product–Documentation:** Manufacturer's catalog. 1987. Kleine Warenkunde. Yellow. 4 pages. Describes each of the 13 soyfood products. "Thin tempeh strips are fried until crisp, and vacuum packed."

2053. **Product Name:** [Tempeh].  
**Foreign Name:** Tempeh.  
**Manufacturer's Name:** Svadesha R. Urban. Made in Munich by Byodo Naturkost.  
**Manufacturer's Address:** Ostpreussenstr. 22, D-8000 Munich 81, West Germany. Phone: 089 / 93 90 05.  
**Date of Introduction:** 1986?  
**How Stored:** Refrigerated.  
**New Product–Documentation:** Talk with Svadesha R. Urban, company founder. 1990. June 13. After moving to Ostpreussenstr., he started selling tempeh, which was made by Byodo Naturkost.

2054. **Product Name:** [Tofu Spread with Tempeh].  
**Foreign Name:** Tofu Pastete mit Tempeh?  
**Manufacturer's Name:** Svadesha R. Urban.  
**Manufacturer's Address:** Ostpreussenstr. 22, D-8000 Munich 81, West Germany. Phone: 089 / 93 90 05.  
**Date of Introduction:** 1986?  
**How Stored:** Refrigerated.  
**New Product–Documentation:** Talk with Svadesha R. Urban, company founder. 1990. June 13. After moving to Ostpreussenstr., he introduced new versions of the product, one with herbs and one with tempeh. He also started selling tempeh, which was made by Byodo Naturkost.

2055. Schlimper, Cilica. 1987. What is tempeh? *Soyfoods (ESFA)* 1(1):18-20. Jan. [Eng]  
 • **Summary:** Contents: Introduction. Qualities (Incl. tables showing vitamins and minerals). Tempeh production. Second generation products. Address: Director, Sales and Promotion, Athanor Co.

2056. *Soyfoods (ESFA)*. 1987. ESFA objectives. 1(1):31. Jan.  
 • **Summary:** 1. To prevent consumer deception, ESFA encourages soyfoods producers to establish voluntary standards for the various soyfoods. 2. To work with regulatory agencies in laying out the basis of requirements

for the soyfoods on labeling, marketing, and health issues. 3. To provide reliable information to dietitians, press people (the media), and generally speaking to all people looking for information on soyfoods. 4. To promote utilization of soyfoods for their food value. "By soyfoods, we refer among others to the oriental traditional products directly derived from the soybeans, such as soybean milk, tofu, tempeh, soya sauce, and soybean sprouts."

Those interested in joining the European Soy Foods Association should contact Guy Coudert, ESFA, 12 Avenue George V, 75008, Paris, France. Subscriptions to *Soyfoods* magazine (published by ESFA), 4 issues per year, are 300 French francs. Address: Paris.

2057. Vandemoortele, Philippe. 1987. Editorial. *Soyfoods (ESFA)* 1(1):2. Jan.

• **Summary:** Contents: What are soyfoods? Why was the Association founded? What will the Association do to achieve its goals. What can a member expect from the Association?

"Soyfoods cover all products deriving from the whole soybean produced according to a traditional process and manufactured into soya milk, tofu, tempeh, miso, soya sauce, soya sprouts and other products. Why was the European Soyfoods Assoc. founded? Until only a few years ago, only industrial soya protein such as defatted and fullfat flour, concentrates, isolates, and textured protein were used in the food industry. They are mainly used for their functional properties rather than for their nutritional characteristics." Now there is a growing interest in soyfoods. The ESFA will organize a Soyfoods Conference every 2 years. Address: President of the ESFA (European Soyfoods Assoc.).

2058. *Toyo Shinpo (Soyfoods News)*. 1987. Kôji-kin baiyô okara aji, kaori, shokkan ryôkô. Okara shori ni idomu. Okara hanbaagu tanpaku na aji de katasa yoshi (ryo) [Culturing okara with koji molds. The taste, fragrance, and texture are good. Processing okara by chilling. Okara hamburger—light taste and good firmness]. Feb. 2. p. 2. [Jap; eng+]

• **Summary:** In this experiment, raw okara, white rice, bran, and konnyaku powder were cultured with koji molds (*Aspergillus oryzae*), *Rhizopus* molds (*kumonosu kabi*), and one other type. Afterwards, the mixture was used in deep-fried tofu burgers (*ganmo*), croquettes, and hamburgers. The best results occurred when ground pork was mixed in to make a hamburger. The end product had a light taste and a nice firm texture.

2059. Flinders, Carol. 1987. Tempeh is cholesterol-free substitute for chicken. *News (Indianapolis, Indiana)*. Feb. 11.

• **Summary:** A brief introduction to tempeh with two vegetarian recipes: Tempeh a la king. Tempeh cacciatora [cacciatore]. Note: *Cacciatore* means "hunter" in Italian. A small photo shows Carol Flinders. Address: Petaluma,

California 94952.

2060. Lytel, Laurie. 1987. Soy Plant bankruptcy: collectivism gone haywire. *Crain's Detroit Business*. Feb. 16. p. 1, 6.

• **Summary:** The collective, established in 1976, filed for Chapter 7 bankruptcy in early January. The company has lost money for at least 4 years, the result of disorganized management. Last year's revenues were \$168,000 and expenses \$180,000. The company makes 8,500 lb/week of fresh tofu, plus tempeh and soymilk.

2061. Flinders, Carol. 1987. Laurel's Kitchen. *Washington Post*. Feb. 18. p. E3.

• **Summary:** A vitamin B-12 deficiency is a rare but very serious problem. "Another way to get vitamin B-12 is to eat tempeh or miso every day"—although neither is a completely reliable source. "Other fermented foods, such as natto and even shoyu, may contain B-12, but it shouldn't be counted upon." Address: [California].

2062. Appropriate Foods, Inc. 1987. Eat Appropriately! [Catalog and price list]. 292 Liberty Ave., Brooklyn, NY 11207.

• **Summary:** The following lines are carried and distributed: Appropriate Foods, New York Soy Deli, The Soy Source, Emperor's Best, Cedar's Mediterranean Foods, Grainaissance (amazake and mochi), Infinity Foods (amazake puddings), Integrity Baking Co., Jofu, Maine Coast Sea Vegetables, Malka's Foods (Blueberry Tofu Pie), Miso Master, Nasoya Foods, New England Country Dairy, Ray's Seitan Wheat Meat, Soya Kaas, Stonyfield Farms (Yogurt), Sunshine Burgers. Address: Brooklyn, New York.

2063. Ismunadji, M.; Zulkarnaini, I.; Somaatmadja, S. 1987. Nutritional disorders of soybean in Indonesia. *CGPRT* No. 10. p. 167-74. Feb. J.W.T. Bottema, F. Dauphin, and G. Gijsbers, eds. Soybean Research and Development in Indonesia. [11 ref]

• **Summary:** Nutritional disorders of soybean are common in Indonesia. Visual symptoms, such as leaf chlorosis (potassium deficiency), stunted growth, and malformation of leaves are often observed in the field. Molybdenum and phosphorus deficiencies, aluminum toxicity, and acid mineral soils (corrected by careful liming) are common problems on specific soil types.

Soybean is the most important grain legume crop grown in Indonesia. It is used for food and feed and plays an important role in the Indonesian diet as a source of protein. Soybean protein is much cheaper than protein from animal sources. Soybean-based food such as tempe, tahu, soy sauce and tauchō are very popular. Indonesia is not yet self-sufficient in soybean and imports are close to a half million tons/year. The Government is promoting soybean production

by acreage expansion and intensification. Address: Bogor Research Inst. of Food Crops (BORIF).

2064. Moeljopawiro, Sukarti; Gordon, D.T.; Fields, M.L. 1987. Bioavailability of iron in fermented soybeans. *J. of Food Science* 52(1):102-05. Jan/Feb. [24 ref]

• **Summary:** Soybeans contain appreciable amounts of iron but its availability is poor, in part because of phytic acid and fiber present in the plant. The relative biological value (RBV, a measure of bioavailability) of iron increased from 60.1% in boiled nonfermented soybeans to 86.7% by lactic acid producing microorganisms and 87.5% in tempeh. Thus fermentation increases the bioavailability of iron. This is probably because the enzymes from the microorganisms hydrolyze the complex form and/or insoluble form of the iron. Tempeh molds produce active phytase, which hydrolyzes phytic acid, which in turn reduces iron availability. Address: Dep. of Food Science & Nutrition, Univ. of Missouri, Columbia, MO 65211.

2065. Murata, K.; Kusakabe, I.; Kobayashi, H.; Akaike, M.; Park, Y.W.; Murakami, K. 1987. Studies on the coagulation of soymilk-protein by commercial proteinases. *Agricultural and Biological Chemistry* 51(2):385-89. Feb. [5 ref. Eng]

• **Summary:** 17 proteinases from microorganisms, plants, and animals were tested as coagulants for soymilk. Those which did coagulate soymilk were bromelain, papain, trypsin and proteinases from *Bacillus amyloliquefaciens*, *B. subtilis*, *B. polymyxa*, *Streptomyces griseus*, *S. caespitosus*, *Aspergillus oryzae*, *A. sojae*, *Endothia parasitica*, *Rhizopus* species, and *Mucor miehei*. Ineffective were rennin, pepsin, and proteinases from *Aspergillus saitoi*. Soymilk clotting activity fell as the pH rose from 5.9 to 6.7. Temperature optima for the enzymes varied from about 50°C for *Rhizopus sp.* to 85°C for *Bacillus subtilis* and *B. thermoproteolyticus* and as high as 95°C for papain. Address: Research Development Sect., Kibun Food Chemifa Co. Ltd., Takinogawa 7-38-15, Kitaku, Tokyo 114, Japan.

2066. **Product Name:** Organic Tofu [Smoked], Organic Tempeh.

**Manufacturer's Name:** Oasis Wholefoods.

**Manufacturer's Address:** Unit 3C, Dart Complex, Steamer Quay Rd., Totnes, South Devon, England.

**Date of Introduction:** 1987. February.

**Ingredients:** Cultured soya beans.

**Wt/Vol., Packaging, Price:** 8 oz (227 gm).

**How Stored:** Frozen.

**New Product–Documentation:** Letter from Simon Bailey. 1988. Oct. 10. Company name is now Oasis Wholefoods. Phone: 0803-863167. They now make Organic Tofu (plain & smoked), Tofuburger, Organic Tempeh. In Dec. 1987 Francis Checkley sold the company to I.J. Mohammed.

Letter from I.J. Mohammed. 1991. Sept. 30. The smoked

tofu was introduced in Feb. 1987 and the organic tempeh in Aug. 1987.

Label for Organic Tempeh sent by I.J. Mohammed. 1991. Sept. 30. 4 by 8 inches. Green on yellow. Illustration of palm trees. "Cultured soya beans. Low in saturated fats. High in protein. Cholesterol free. Salt free." Three recipes are given in condensed form in small type.

2067. **Product Name:** Tofu, Pressed Tofu, Herbal Tofu, and Tempeh.

**Manufacturer's Name:** Okanagan Soyfoods.

**Manufacturer's Address:** Lumby, BC, Canada. Phone: 604-547-2257.

**Date of Introduction:** 1987. February.

**New Product–Documentation:** Talk with company.

1989. March 7. Talk with Greg Lundh. 1989. April 28. This company went out of business 10 days ago. Greg Warry of BC started the company. He bought a lot of equipment, then couldn't make the payments. He sold the company in the autumn of 1988 to his ex-partner. Several people ended up running it; a man named John from California, who had an Oriental wife, and a lady named Bee (Beatrice Berry?). Talk with a lady who hopes to buy the company. 1989. Oct. 30. Okanagan Soya Foods, located in a small place out in the country and run by Beatrice Berry, now makes about 2,000 cakes/month of tofu. The new owners want to make about 2,000 cakes/week when they start.

2068. Samson, R.A.; Kooij, J.A. van; Boer, E. de. 1987.

Microbiological quality of commercial tempeh in the Netherlands. *J. of Food Protection* 50(2):92-94. Feb. [13 ref]

• **Summary:** A total of 110 samples were examined. Most (98%) of the samples had an aerobic plate count above 10 million CFU/gm (Colony forming units per gram). Numbers of *Enterobacteriaceae* exceeded 100,000 CFU/gm in 67% of the samples, whereas numbers of lactic acid bacteria exceeded 10 million CFU/g in 81% of the samples. *Staphylococcus aureus* was found in 13%, *Bacillus cereus* in 11% and *Escherichia coli* in 3% of the samples at levels of 100,000 CFU/gm. *Yersinia enterocolitica* was found in 6 samples, whereas *Salmonella* was absent in 25 g of all the samples examined. Many (69%) of the samples had a yeast count above 100,000 CFU/g. *Trichosporon beigeli* was the most frequent yeast species. Besides *Rhizopus oryzae* and *Rhizopus oligosporus*, which obviously represent the mold species responsible for the fermentation, *Mucor indicus* was often associated with the mycoflora of the tempeh. The reasons for the poor microbiological quality are discussed and some recommendations are proposed. Address: 1. Centraalbureau voor Schimmelcultures, P.O. Box 273, 3740 AG Baarn, Netherlands; 2. Food Inspection Service, The Hague, Netherlands.

2069. Layton, Lyndsey. 1987. Tempeh maker changes name

to LightLife Foods. *Recorder (Greenfield, Massachusetts)*. March 10. p. 3.

• **Summary:** Effective April 1, Tempehworks will be known as Lightlife Foods Inc. The 8-year-old company recently began its product expansion when it introduced Cookie Heaven, a ready to bake cookie batter made from whole wheat dough, without sugar or preservatives and sweetened with fruit juices. Address: Recorder staff.

2070. Smith, Susan. 1987. From tofu to Tofruzen. . . White Wave of Boulder finds uses for soybeans. *Daily Camera (Boulder, Colorado)*. March 17.

• **Summary:** Founded in 1977, White Wave now has 25 employees and expects revenues of \$1.6 million in 1987, growing to \$5 million by 1990. It is America's largest producer of tempeh. Tofruzen Inc. of Denver recently raised \$1.6 million in a public stock offering. White Wave plans a public stock offering later this year. Address: Camera Business Writer, Boulder.

2071. Cooper, Derek. 1987. Tempeh—"the greatest food since yoghurt." *Listener (The) (London)*. March 26. p. 20. [2 ref]

• **Summary:** "This July, nutritionists from all over the world will be converging on Java for a teach-in on the scientific and culinary aspects of tempeh, organized by the United Nations University." Address: UK.

2072. Brown, Judy. 1987. Suiting America's tastebuds: The new American soyfoods. *Whole Foods*. March. p. 37-40, 42-43. [1 ref]

• **Summary:** An overview, drawing heavily (with acknowledgment) on Shurtleff & Aoyagi's *Soyfoods Industry and Market* for statistics. Address: Alban & Associates, San Francisco, California.

2073. Imuda, Ikuyo. 1987. Jidai o sakidori suru tenpe ryôri. Machi no chiisana resutoran kara [Tempeh recipes that are ahead of their time, from Healthy Kan, a small natural foods restaurant in Tokyo]. *Daizu Geppo (Soybean Monthly News)*. March. p. 39-41. [Jap]

• **Summary:** The restaurant is two blocks (3 minutes) from the Ichigaya Station on the Sobu Line in Tokyo. Phone: 263-4023. Tempeh recipes include "Tempeh jiru teishoku" (¥800). Tempeh is a tasty, nutritious soybean food from Indonesia. The menu includes "Brown rice, soup with fried tempeh, side dishes." The restaurant also serves a tofu cheesecake for ¥300. Address: Restaurant owner and nutritionist.

2074. **Product Name:** Organic Tempeh, Organic Seasoned Tempeh.

**Manufacturer's Name:** Nutrisoy Pty. Ltd.

**Manufacturer's Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1987. March.

**Ingredients:** Seasoned: Organic soybean, water, cider vinegar, sea salt, garlic, coriander and culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 300 gm in plastic bag.

**How Stored:** Refrigerated.

**New Product–Documentation:** Labels with dates sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling these products in March 1987. Seasoned: Blue, yellow and red on white. On the front panel: "Nutritious. Cholesterol free... For a high energy breakfast, quick lunch, or hearty main meal. No artificial flavouring, colouring, or preservatives. Improved quality. Fitness food."

2075. **Product Name:** Emperor's Best Amaranth Tempeh (With Soybeans).

**Manufacturer's Name:** Soy Source (Appropriate Foods, Inc.).

**Manufacturer's Address:** 292 Liberty Ave., Brooklyn, NY 11207.

**Date of Introduction:** 1987. March.

**Ingredients:** Organic soybeans, amaranth, *Rhizopus oligosporus* culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987. March 1. 3 by 4 inches. Black on silver. Soya Newsletter. 1987. 1(3):6. 8 oz for \$1.40 retail. Interview with Robert Werz. 1987. Sept. 9.

2076. **Product Name:** Emperor's Best Garbanzo Tempeh (Contains No Soy).

**Manufacturer's Name:** Soy Source (Appropriate Foods, Inc.).

**Manufacturer's Address:** 292 Liberty Ave., Brooklyn, NY 11207.

**Date of Introduction:** 1987. March.

**New Product–Documentation:** Label. 1987. March 1. 3 by 4 inches. Black on gold. Soya Newsletter. 1987. 1(3):6. 8 oz for \$1.89 retail. Interview with Robert Werz. 1987. Sept. 9.

2077. **Product Name:** Emperor's Best Rye Caraway Tempeh (with Soybeans).

**Manufacturer's Name:** Soy Source (Appropriate Foods, Inc.).

**Manufacturer's Address:** 292 Liberty Ave., Brooklyn, NY 11207.

**Date of Introduction:** 1987. March.

**Ingredients:** Organic soybeans, rye, caraway seeds, *Rhizopus* culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987. March 1. 3 by 4 inches. Black on yellow. Interview with Robert Werz. 1987. Sept. 9.

2078. **Product Name:** Emperor's Best Brown Rice Tempeh (Contains No Soy).

**Manufacturer's Name:** Soy Source (Appropriate Foods, Inc.).

**Manufacturer's Address:** 292 Liberty Ave., Brooklyn, NY 11207.

**Date of Introduction:** 1987. March.

**Ingredients:** Brown rice, Rhizopus culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987. March 1. 3 by 4 inches. Black on pink. Interview with Robert Werz. 1987. Sept. 9.

2079. **Product Name:** Amaranth Tempeh.

**Manufacturer's Name:** Soyfoods Unlimited, Inc.

(Marketer). Made in Boulder, Colorado, by White Wave, Inc.

**Manufacturer's Address:** San Leandro, CA 94577.

**Date of Introduction:** 1987. March.

**Ingredients:** Organic soybeans (grown in accordance with Section 26569.11 of the California Health and Safety Code), amaranth, barley, millet, water, tempeh culture (Rhizopus oligosporus).

**Wt/Vol., Packaging, Price:** 8 oz (227 gm). In perforated plastic big inside printed plastic bag.

**How Stored:** Refrigerated or frozen.

**Nutrition:** Per 4 oz.: Calories 184, protein 16 gm, carbohydrates 20 gm, sodium 23 mg, fat 4 gm.

**New Product–Documentation:** Label. 1987, undated. 5.5 by 6.5 inches. Green letters with yellow printed on plastic bag. "Foods for Health. Amaranth. Legendary Aztec staple food. Delicately nutty seed. High in amino acid lysine. Recipe for Amaranth Tempeh Stroganoff on back." Interview with Lonnie Stromnes. 1987. Aug. 31.

2080. **Product Name:** Tempeh Temptations: Marinated Tempeh Filets.

**Manufacturer's Name:** Western Soy Complements, Inc.

**Manufacturer's Address:** Santa Cruz, CA 95062.

**Date of Introduction:** 1987. March.

**Ingredients:** Soybean tempeh (made with organic soybeans and brown rice according to CA Health and Safety Code Section 26569.11), shoyu (a natural soy sauce), fresh ginger, garlic, spices, peanut or safflower oil.

**Wt/Vol., Packaging, Price:** 7 oz vacuum packed. Retail for \$1.69 (8/88 Berkeley, CA).

**How Stored:** Frozen.

**New Product–Documentation:** Label. 1988. 2.5 by 3.25 inches. Orange, black, and white. "A cutlet. A burger. For salad. Stir fries. Heat 'n' eat. Complete protein. Delicious cold, too! Perfect for toaster or microwave." Talk with Jeremiah Ridenour. 1988. Aug. 31. This is a fried and marinated product that was launched in March 1987.

Product with Label purchased at Safeway supermarket in Lafayette, California. 1990. Dec. 3. The ingredients have changed: Soy-rice tempeh is used instead of soy tempeh, and canola oil instead of peanut or safflower oil. It is now a 6 oz. vacuum pack that retails for \$1.79.

2081. **Product Name:** Santa Cruz Tempeh. Soy-Rice [Three Seed with Sunflower, Sesame & Poppy Seeds].

**Manufacturer's Name:** Western Soy Complements.

**Manufacturer's Address:** 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-479-05968.

**Date of Introduction:** 1987. March.

**Ingredients:** Organically grown\* soybeans, filtered water, organically grown\* brown rice, sunflower seeds, sesame seeds, poppy seeds, brown rice flour, Tempeh culture (R. oligosporus), vinegar. \* = Organically grown in accordance with section 26569.11 of the California Health and Safety Code. safflower oil.

**Wt/Vol., Packaging, Price:** 8 oz vacuum packed. Retail for \$1.59 (8/88 Berkeley, CA).

**How Stored:** Frozen.

**New Product–Documentation:** Products with Labels purchased in Berkeley, California. 1988. Aug. 30. 2.75 by 5 inches. Black, white and brown. "A cultured soyfood. Preparation: Use as a protein-rich staple food: slice, fry, bake, or steam. Season to taste. Occasional black or grey spots are part of the tempeh culture and not indicative of spoilage."

Note that this company is at the same address as Wildwood Natural Foods of Santa Cruz.

2082. **Product Name:** Sea Veggie Tempeh.

**Manufacturer's Name:** White Wave, Inc.

**Manufacturer's Address:** 1990 North 57th Court, Boulder, CO 80301.

**Date of Introduction:** 1987. March.

**Ingredients:** Organically raised soybeans, water, hiziki [sic., hijiki] and arame (sea vegetables), culture (Rhizopus oligosporus grown on a vegetable medium).

**Wt/Vol., Packaging, Price:** 8 oz perforated plastic bag in a printed plastic bag.

**How Stored:** Refrigerated or frozen.

**Nutrition:** Per 4 oz: Calories 184, protein 16 gm, fat 4 gm, sodium 36 mg, carbohydrates 16 gm.

**New Product–Documentation:** Label. 1987, undated.

5.5 by 6.5 inches square. Pea green and white on turquoise background. Pareve. Back panel reads: "This tempeh is well suited for stir-fry dishes, stews, and soups, imparting just a subtle flavor of the sea." Recipe for Tempeh & Vegetable Stir Fry on back. Interview with Lonnie Stromnes. 1987. Aug. 31.

2083. **Product Name:** Sesame Peanut Tempeh.

**Manufacturer's Name:** White Wave, Inc.

**Manufacturer's Address:** 1990 North 57th Court., Boulder, CO 80301. Phone: 303-443-3470.

**Date of Introduction:** 1987. March.

**Ingredients:** Tempeh (made with soybeans organically grown in accordance with section 26569.11 of the California Health and Safety Code and brown rice), natural soy sauce, garlic, onion, spices.

**Wt/Vol., Packaging, Price:** 6 oz (170 gm). Vacuum packed in poly pouch.

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per 3 oz.: Calories 190, protein 9 gm, carbohydrates 6 gm, fat 3 gm, sodium 466 mg.

**New Product–Documentation:** White Wave Order Form. 1988. April. Talk with Steve Demos. This product, whose main ingredient is soybeans, was introduced at the same time as Sea Veggie Tempeh. He chose the colors for the artwork in the airport in New York on his way to India.

2084. Anfiteatro, Dominic. 1987. Tempeh in Australia (Interview). *SoyaScan Notes*. April 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Dominic began to make tempeh commercially in very early 1980 at his Clear Light Wholefoods, a vegetarian restaurant in Adelaide. Started in 1977, it was the first “health shop” in Adelaide. Tempeh was his first commercial soyfood product. He learned how to make it from Shurtleff & Aoyagi’s books. He made tempeh in a little room next to the restaurant and sold it over the counter. Once he saw the potential of tempeh he sold the restaurant to Ananda Marga and specialized in making tempeh. He started his company Light Wave Wholefoods in 1983. He has spoken to many people and thinks his was the first commercial tempeh in Australia. According to the History of Tempeh (Shurtleff & Aoyagi), commercial production began in Australia in 1980. He does not know Cyril and Elly Cain, who were making tempeh by July 1982.

He says the biggest tempeh company in Australia, the Mighty Bean Company in Queensland, produces about 2 tons a month. Dominic now makes about 50 kg/week in Adelaide. Address: Adelaide, Australia.

2085. Bhavanishankar, T.N.; Rajashekaran, T.; Murthy, V.S. 1987. Tempeh-like product by groundnut fermentation. *Food Microbiology* 4(2):121-25. April. [10 ref]

• **Summary:** Peanuts were partially defatted using a hydraulic press, then the skins were removed. After being soaked and drained, the seeds were autoclaved at 15 lb pressure for 20 minutes, then cooled to room temperature and inoculated with tempeh starter (*Rhizopus oligosporus* culture). The tempeh fermentation increased the nutritive value of the peanuts by increasing the soluble solids, amino nitrogen, and soluble nitrogen. Address: Dep. of Microbiology and Sanitation, Central Food Technological Research Inst. (CFTRI), Mysore 570 013, India.

2086. Business Communications Co., Inc. 1987. Mass merchandised “healthy” foods. 25 Van Zant St., Norwalk, CT 06855-1781. 162 p. April. Price: \$1,500.

• **Summary:** In this expensive (\$1,500) market study, there is a chapter titled “The Soyfoods Market,” which has the following segments: Summary of market segment. The tofu market. Soy-based frozen desserts. Soy-based beverages. Soy-based yogurt-like products. Other soy-based prepared foods. Fermented soy products. “A move toward the consumption of convenient, good-tasting foods with a healthful image is the food trend of the eighties. There is a strong relationship between healthful foods and the consumer’s need for convenience. In the future, food manufacturers can expect the growth of ‘healthy’ foods to outpace that of the total food market, as more consumers pursue a healthful lifestyle...”

“BCC defines the ‘healthy’ food market as those segments of food categories that are generally accepted by the consumer as having a healthful image. Total retail sales of all product segments included in this analysis were estimated to have reached \$88 billion in 1986.” Address: Norwalk, Connecticut. Phone: 203-853-4266.

2087. Koritala, S.; Hesseltine, C.W.; Pryde, E.H.; Mounts, T.L. 1987. Biochemical modification of microorganisms: A preliminary survey. *J. of the American Oil Chemists’ Society* 64(4):509-13. April. [17 ref]

• **Summary:** Some soybean oil was consumed by many microorganisms, and some was also hydrolyzed to free fatty acids. *Aspergillus oryzae*, two strains of *Amylomyces rouxii*, and *Rhizopus oligosporus* hydrolyzed the oil completely (95%). Address: USDA/NRRC, Peoria, Illinois 61604. Phone: 309-685-4011.

2088. Nout, M.J.R.; de Dreu, M.A.; Zuurbier, A.M.; Bonants-van Laarhoven, T.M.G. 1987. Ecology of controlled soyabean acidification for tempe manufacture. *Food Microbiology* 4(2):165-72. April. [12 ref]

• **Summary:** The acidification during soaking can be controlled by recycling part of the soak water from a previous batch as an inoculum, resulting in a soak water pH of 4.1 to 4.9 depending on the soaking temperature and recycling rate. Soaks at 19°C and 25°C were dominated by *Lactobacillus plantarum*. Isolates of *L. plantarum* added as an inoculum to freshly started soaks were able to acidify the beans to pH less than or equal to 4.30 yielding tempeh of a good quality in which bacilli and *Enterobacteriaceae* could not be detected. *Pediococcus* species dominated the soaks at 37°C, and though able to acidify soybeans, inhibited the growth of *Rhizopus oligosporus*; hence no tempeh could be formed. “Our findings indicate that a simple recycling process can result in predictable acidification during soaking of soyabeans, contributing to the shelf-life and safety of

tempe.” Address: Dep. of Food Science, Agricultural Univ., De Dreijen 12, 6703 BC Wageningen, Netherlands.

2089. *Soya Newsletter (Bar Harbor, Maine)*. 1987.

Tempehworks becomes Lightlife Foods. March/April. p. 4.

• **Summary:** On 1 April 1987 Tempehworks, Inc. of Greenfield, Massachusetts, changed its name to Lightlife Foods, Inc. President Michael Cohen said that the new name “represents the broader range of natural, low-calorie, cholesterol-free food products that will embody the focus of our manufacturing and marketing efforts over the coming years.”

2090. *Soya Newsletter (Bar Harbor, Maine)*. 1987. White Wave acquires Soyfoods Unlimited. March/April. p. 4.

• **Summary:** The acquisition took place on 1 Dec. 1986. Manufacturing will be consolidated at White Wave’s plant in Colorado. Soyfoods Unlimited’s offices in California will serve as a sales and distribution center for both companies’ products. “White Wave, founded in 1977, now employs 25 people and distributes tofu and tempeh products nationwide.” Sales were over \$1 million in 1986, and expected to be \$1.6 to \$2 million in 1987. “The company recently signed an exclusive 5 year supplier agreement with Tofruzen, a Colorado-based distributor of nondairy frozen desserts.”

2091. Truesdell, Delores D.; Green, N.R.; Acosta, P.B. 1987. Vitamin B-12 activity in miso and tempeh. *J. of Food Science* 52(2):493-94. March/April. [17 ref]

• **Summary:** The U.S. Pharmacopoeia microbiological assay with *Lactobacillus leichmanii* (ATCC 7830) was used to determine vitamin B-12 activity in light rice miso, dark rice miso, barley miso, tempeh, and tempeh burger. Unpasteurized misos had the highest B-12 content, averaging 0.21 micrograms/100 gm. Vitamin B-12 activity in miso ranged from a high of 0.25 micrograms/100 gm in barley miso to a low of 0.15 micrograms/100 gm in light rice miso.

Pasteurized tempeh contained 0.12 micrograms/100 gm and tempeh burger contained 0.06 to 0.11 micrograms/100 gm. The variation in vitamin B-12 activity found in these products may be due to different conditions used or produced during fermentation. Collaborative studies and assessment of vitamin B-12 pseudoform (analog) activity are needed before these foods can be considered a source of vitamin B-12. Address: Dep. of Nutrition & Food Science, College of Home Economics, Florida St. Univ. Tallahassee, FL 32306.

2092. *Toyo Shinpo (Soyfoods News)*. 1987. Miete kita tenpe buumu [Tempeh boom becoming more noticeable in Japan]. May 1. p. 7. [Jap; eng+]

• **Summary:** In Tokyo, Marusan Ai’s tempeh is sold in the Mitsukoshi department store. There has been no tempeh sold in the Kyoto-Osaka (*Kansai*) area before January of this year. After the 1985 Asian Symposium on Non-Salted

Soybean Fermentation, professor Murata went to the Mitsukoshi department store in Osaka, which is 314 years old and one of the biggest department stores in Japan. With Murata’s strong persuasion, the manager of the Mitsukoshi food department decided to sell tempeh in their freezer case starting in January of 1987. It is currently selling in small numbers, but has attracted some regular customers. The manager said, “Even if we don’t sell many of them [tempeh cakes], we would like to carry them just for the few regular customers.” He wants the manufacturers to promote tempeh more forcefully. Mitsukoshi sells tempeh for ¥250/250g in a special film-package designed for frozen foods. The Marusan Ai tempeh is made in their main plant and is shipped to the Mitsukoshi store by frozen transportation.

2093. *Toyo Shinpo (Soyfoods News)*. 1987. Shitte okitai tenpe no chishiki [Important tempeh information that we should know]. May 1. p. 7. [Jap; eng+]

• **Summary:** This article explains what tempeh is, why it is important, its uses, nutritional value, and some information on tempeh use in the U.S. This would be all new to most Japanese readers.

2094. **Product Name:** [Bio Mets Athanor Vegetable Curry {With Tempeh}].

**Foreign Name:** Bio Mets Athanor Curry Végétal.

**Manufacturer’s Name:** Athanor SARL.

**Manufacturer’s Address:** ZAE La Biste “Atelier 9,” 34670 Baillargues, France. Phone: 67 87 0608.

**Date of Introduction:** 1987. May.

**Ingredients:** Tempeh, onions or leeks, carrots, white turnips, cauliflower, raisins, soy sauce, pure sunflowerseed oil, spices and aromas, unrefined seasalt.

**Wt/Vol., Packaging, Price:** 250 gm plastic tray in a paperboard box. FOB Price 12.35 FF.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm: Calories 111, lipids 7.9 gm, protein 6.0 gm, carbohydrates 3.9 gm.

**New Product–Documentation:** Label. Received 1988.

May. Paper box, 5.5 by 4 by 1 inches. Multi-colored illustration of curry on front panel with sun logo. “100% Plant Protein. Preparation based on tempeh and vegetables. Ready in several minutes.”

2095. **Product Name:** [Bio Mets Athanor Vegetable Blanquette (Tempeh Stewed in White Sauce)].

**Foreign Name:** Bio Mets Athanor Blanquette Végétal.

**Manufacturer’s Name:** Athanor SARL.

**Manufacturer’s Address:** ZAE La Biste “Atelier 9,” 34670 Baillargues, France. Phone: 67 87 0608.

**Date of Introduction:** 1987. May.

**Ingredients:** Tempeh, carrots, onions or leeks, mushrooms, soymilk, apple cider, arrowroot, sunflowerseed oil, aromas, unrefined seasalt.

**Wt/Vol., Packaging, Price:** 250 gm plastic tray in a paperboard box. FOB price 12.95 FF.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm: Calories 171, lipids 15.9 gm, protein 4.2 gm, carbohydrates 2.7 gm.

**New Product–Documentation:** Label. Received 1988. May. Paper box, 5.5 by 4 by 1 inches. Multi-colored illustration of blanquette on front panel with sun logo. “100% Plant Protein. Preparation based on tempeh and vegetables. Ready in several minutes.”

2096. **Product Name:** [Bio Mets Athanor Vegetable Ragout {With Tempeh}].

**Foreign Name:** Bio Mets Athanor Ragoût Végétal.

**Manufacturer’s Name:** Athanor SARL.

**Manufacturer’s Address:** ZAE La Biste “Atelier 9,” 34670 Baillargues, France. Phone: 67 87 0608.

**Date of Introduction:** 1987. May.

**Ingredients:** Tempeh, haricot beans, carrots, onions or leeks, tomato paste, aromas, soy sauce, sunflowerseed oil, unrefined seasalt.

**Wt/Vol., Packaging, Price:** 250 gm plastic tray in a paperboard box. FOB price 12.15 FF.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm: Calories 92, lipids 6.3 gm, protein 6.1 gm, carbohydrates 2.6 gm.

**New Product–Documentation:** Note: *Webster’s Dictionary* defines ragout (derived from the French *ragoût*, and first used in about 1664) as “Well-seasoned meat and vegetables cooked in a thick sauce.”

Label. Received 1988. May. Paper box, 5.5 by 4 by 1 inches. Multi-colored illustration of ragout on front panel with sun logo. “100% Plant Protein. Preparation based on tempeh and vegetables. Ready in several minutes.”

2097. **Product Name:** [Bio Mets Athanor Vegetable Bolognaise {With Tempeh}].

**Foreign Name:** Bio Mets Athanor Bolognaise Végétal.

**Manufacturer’s Name:** Athanor SARL.

**Manufacturer’s Address:** ZAE La Biste “Atelier 9,” 34670 Baillargues, France. Phone: 67 87 0608.

**Date of Introduction:** 1987. May.

**Ingredients:** Tempeh, onions or leeks, carrots, tomato paste, soy sauce, sunflowerseed oil, aromas, unrefined seasalt.

**Wt/Vol., Packaging, Price:** 250 gm plastic tray in a paperboard box. FOB price 11.85 FF.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm: Calories 54, lipids 2.5 gm, protein 5.6 gm, carbohydrates 2.3 gm.

**New Product–Documentation:** Label. Received 1988. May. Paper box, 5.5 by 4 by 1 inches. Multi-colored illustration of Bolognaise on front panel with sun logo. “100% Plant Protein. Preparation based on tempeh and vegetables. Ready in several minutes.”

2098. **Product Name:** [Bio Mets Athanor Mixed Salad {With Tempeh}].

**Foreign Name:** Bio Mets Athanor Salade Composée.

**Manufacturer’s Name:** Athanor SARL.

**Manufacturer’s Address:** ZAE La Biste “Atelier 9,” 34670 Baillargues, France. Phone: 67 87 0608.

**Date of Introduction:** 1987. May.

**Ingredients:** Tempeh, carrots, onions or leeks, cider vinegar, olive oil, garlic, unrefined seasalt.

**Wt/Vol., Packaging, Price:** 250 gm plastic tray in a paperboard box. FOB price 11.65 FF.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm: Calories 100, lipids 6.8 gm, protein 4.1 gm, carbohydrates 4.3 gm.

**New Product–Documentation:** Label. Received 1988.

May. Paper box, 5.5 by 4 by 1 inches. Multi-colored illustration of the tempeh salad on front panel with sun logo. “100% Plant Protein. Preparation based on tempeh and vegetables. Ready in several minutes.”

2099. Bhatnagar, P.S. 1987. Project coordinator’s report.

In: All India Coordinated Research Project on Soybean (India Council of Agricultural Research). Eighteenth annual workshop: Proceedings & Technical Programme. National Research Centre for Soybean, Khandwa Road, Indore 452 001, India. See p. 2-23. Held at Univ. of Agricultural Sciences, Dharwad (Karnataka) 1-3 May 1987.

• **Summary:** In 1985-86 some 994,000 tonnes of soybeans (1.3 million hectares) were produced in India. The yield was 755 kg/ha, far below the world average of 1,700 kg/ha. Of this, 78.7% was produced in Madhya Pradesh, and 15.6% in Uttar Pradesh. Yet soybean demand in India is 3.5 million tonnes, due largely to the rapid growth of the soybean oil industry. This is helping greatly in reducing India’s dependence on imported oil. He summarizes progress in soybean research, genetics, breeding, seed production, production technology, seed physiology, microbiology, plant pathology, entomology, utilization, and economics. Address: Director, NRCS.

Processing and utilization. In: J.R. Wilcox, ed. 1987.

Soybeans: Improvement, Production, and Uses. 2nd ed.

Madison, Wisconsin: American Society of Agronomy. xxii + 888 p. See p. 819-66. Chap. 21. [154 ref]

• **Summary:** Contents. 1. Soybean oil. 2. Soybean protein. 3. Soybean processing. 4. Soybean oil processing. 5. Food uses of soybean oil. 6. Nonfood uses of soybean oil. 7. Defatted soybean protein processing. 8. Utilization of defatted soybean protein products. 9. Full-fat soybean products. Address: 1-2. NRRC, Peoria, Illinois; 3. USDA-ARS, Beltsville, Maryland.

2101. Paredes-López, O.; Harry, G.I.; Montes-Rivera, R. 1987. Development of a fermentation procedure to produce a tempeh-related food using common beans as a substrate. *Biotechnology Letters (Kew, England)* 9(5):333-38. May. [19 ref]

• **Summary:** Common black beans (*Phaseolus vulgaris*) were found to be an acceptable substrate for making tempeh using *Rhizopus oligosporus*. The initial pH of the substrate was 5.8. The fermentation was conducted at 37°C with a relative humidity of 70% for 72 hours. Address: 1. Unidad Irapuato, CIEA-Inst., Politecnico Nal., Apdo. Postal 629, 36500 Irapuato, Gto., Mexico; 2-3. Centro de Investigaciones Agrícolas de El Bajío, INIFAP, Celaya, Gto., Mexico.

2102. *Soybean Update*. 1987. American Soybean Association and three Indonesian groups organizing soyfoods workshop in Jakarta July 16 to promote first class image for soyfoods. June 15. p. 3.

• **Summary:** The Indonesia Hotel and Restaurant Association, the Food and Beverage Association, and the University of Trisakti are joining forces with ASA. Staff from leading hotels, restaurants, and caterers are expected to attend. They will learn innovative ways to incorporate soyfoods such as tempeh and tofu into menu items. First class restaurants rarely feature soyfoods.

2103. Kennedy, Shawn G. 1987. A soy-based business flourishes in Brooklyn [Appropriate Foods]. *New York Times*. June 24. p. C6.

• **Summary:** Robert Werz, a carpenter, started making tempeh patties in a corner of the kitchen of a friend's catering business. After 6 months he set up in Nassau County. Today, with 6 employees, he produces about 10,000 lb/month of tempeh. Half is sold to health food distributors and half delivered to 100 stores in Metro New York. The company also makes soymilk and tofu products (quiches, tortellini, and salads). In March the company moved from Franklin Square, Long Island, to an East Brooklyn Industrial Park; there was more space at lower rent.

When Mr. Wertz became a vegetarian more than 14 years ago [i.e., before 1970], the only place he could buy tofu was in Chinatown. Appropriate Foods is owned by Robert Werz and Shelley Martin.

2104. Jahnke, Pamela. 1987. It's not burger, it's Betsy's Tempeh—and it's new on mid-Michigan market. No cholesterol, high in protein, say producers. *State Journal (Lansing, Michigan)*. June 29.

• **Summary:** Betsy Shipley and her husband Gunter Pfaff are both vegetarians. She is a library clerk at MSU [Michigan State University] and he is a retired MSU employee. They hope to produce 500 lb/month of vegetarian hamburger. Added barley gives tempeh a nuttier flavor. Address: Michigan.

2105. Ariyaratne, K.G.S. (Mrs.). 1987. Tempeh—The soya health food. *Soyanews (Sri Lanka)* 9(1):6-8. Jan/June. [1 ref]

• **Summary:** Discusses: Tempeh nutrition, how to make tempeh, how to store or preserve tempeh, preparation of foods with soy tempeh. The favorite preparation is to prepare tempeh like dry fish with tomatoes and other condiments. Address: Agricultural instructress, Sri Lanka.

2106. Bhatnagar, P.S. 1987. All India Coordinated Research Project on Soybean (Indian Council of Agricultural Research). Project coordinator's report & summary tables of experiments 1986-87. National Research Centre for Soybean, Khandwa Rd., Indore 452 001, India. xxii + 336 p. 27 cm.

• **Summary:** Contents: Project coordinator's report: Desired production of soybean is within our reach, by Dr. P.S. Bhatnagar (p. i-xxii). Summary tables of varietal trials (breeding and genetics, p. 1-144). Station trials. Agronomy. Seed physiology. Soil microbiology. Plant pathology. Entomology. Agricultural economics. Quality aspects and utilization. Appendixes. Summary reports. Breeding trials: Northern hill zone, northern plain zone, central zone, southern zone. Agronomy trials: Northern hill zone, northern plain zone, southern zone. Soil microbiology. Plant pathology. Entomology. Preliminary performance of some germplasm lines. Pest complex of soybean crop at Indore. Uniform method of disease rating. Statement showing staff position in the project. Budget allotment, expenditure and percent utilization in the project.

The National Research Centre for Soybean, Indore, has under it five main centers: 1. G.B. Pant University of Agriculture and Technology, Pantnagar, UP. 2. J.N. Krishi Vishwa Vidyalaya-Regional Research Station, Sehore, MP. 3. University of Agricultural Sciences, Bangalore, Karnataka. 4. Indian Agricultural Research Institute, New Delhi. 5. Marathwada Agricultural University, Parbhani, Maharashtra. In addition, there are 10 Sub Centres and 5 Voluntary Centres.

This report is largely about soybean breeding, variety development, and agronomy, with almost nothing about utilization. The utilization chapter contains 3 reports, only the last of which has any conclusions! (1) "Studies on feeding of tempeh to determine its effect on growth and blood picture of pre-school children." The tempeh was made with 55 parts sunflower seeds and 45 parts soybeans. It was most acceptable to children when coated with sugar syrup. (2) "Studies on the partial substitution of ground meat preparations with edible grade defatted soybean meal." (3) "Studies on the acceptability of soymilk blended dahi." 60 parts soymilk were blended with 40 parts cow's milk and made into yogurt using various pure cultures. Address: Indore, India.

2107. Johnson, Kirk. 1987. Hidden fats in whole foods diets.

*East West*. June. p. 62-68.

• **Summary:** A full-page table (p. 65) titled “How the substitutes stack up” shows total fat and serving size for the following categories: Dairy products. Substitute dairy products. Meat. Substitute meat products. Frozen dinners. Miscellaneous. The substitute dairy products include: Tofu Cream Chie (21st Century). Soya Kaas (soy cheese from American Natural Snacks). Tofutti (Tofu Time). Le Tofu (Brightsong Foods). Ice Bean (Farm Foods). Tofu, silken (Nasoya). Tofu, soft (Nasoya). Tofu, firm (Nasoya). Soybean margarine (Willow Run). Soymilk (Edensoy). Soymilk (Health Valley). Soymilk (Vitasoy).

Substitute meat products include: Fakin’ Bacon (Tempehworks). Tofu Wieners (Yves). Tofu Pups (Tempehworks). Vegie Burger (Bud, Inc.). Tofu Burger (Bud, Inc.). Gardenburger (Wholesome & Hearty). Tofu Sausage (Vegetable Protein Co.). Tempeh, 3-grain (Tempehworks). Seitan (“wheat meat”).

Meatless frozen dinners include: Tofu Lasagna (Legume). Meatless Pepper Steak with Kofu & Noodles (Legume). Sweet and Sour Tofu (Legume).

Miscellaneous products include: Nasoyannaise (Nasoya Foods). Salad dressing, Creamy Tofu (Nasoya). Miso.

2108. Kokke, Robert; Sudo, Narini. 1987. Indonesia no kenko shokuhin, tenpe [Indonesia’s health food, tempeh]. *Daizu Geppo (Soybean Monthly News)*. June. p. 4-18. [50 ref. Jap]

• **Summary:** Contains a lengthy and well documented history of tempeh plus an original bibliography of 50 references. Perhaps the best publication on tempeh seen to date in Japanese. Address: 1. United Nations University (Kokusai Rengo Daigaku), Development Programming; 2. Consultant.

2109. Monteiro, Shri P. Vincent. 1987. Studies on feeding of tempeh to determine its effect on growth and blood picture of pre-school children. In: All India Coordinated Research Project on Soybean. 1987. Project Coordinator’s Report & Summary Tables of Experiments 1986-87. See p. 257-58.

• **Summary:** Tempeh was prepared using a blend of soybean and sunflower seeds (45:55). It was made into hot chips, coated with sugar powder or sugar syrup. The latter was more acceptable. Address: Bangalore, Karnataka, India.

2110. **Product Name:** Betsy’s Tempeh. Vegetarian Patties (Meatless Burgers).

**Manufacturer’s Name:** S&P Farm.

**Manufacturer’s Address:** 14780 Beardslee Rd., Perry, MI 48872. Phone: 517-675-5213.

**Date of Introduction:** 1987. June.

**New Product–Documentation:** Label. 1986, dated. 4 by 5 inches. Red and green on yellow background. “Cultured soybeans with barley. 12 easy-to-use, pre-cooked patties. Cholesterol free. Preservative free.” Plant opened 21 June

1987.

Letter from Betsy Shipley. 1988. March 3. “Enclosed are two articles from the local papers (Towne Courier, 24 June 1987, p. 5) from our open house and an article from the New Alchemy Institute (Journal, spring 1987, p. 7). Sales to date are slow. I have the product in two food co-ops and a local Krogers store;... My next step is to set up demonstrations in people’s homes with interested people. When giving out samples of the tempeh in a pasta sauce, people like it and usually buy a package; unfortunately there doesn’t seem to be a lot of repeat business. We will continue to plug away at it.”

Talk with Gunter Pfaff. 1990. Sept. 11. The soy and barley patties sell better than the grated tempeh, and the barley aids the production process. His company hopes to take the burger national, and expand their plant or build a new one. They are starting a research project with state funding in cooperation with a local university.

Recipe cards (photocopied on beige paper with black ink) for Tempeh Patties sent by Betsy and Gunter. 1991. Aug. 19. Sweet & sour tempeh (with 4 x 2 oz). Tempeh Patties, cubed. Tempeh stew. Betsy’s Tempeh Patties are easy to use: Marinade, burgers, fastest pattie. On the back of each card is a different interesting message.

2111. **Product Name:** Betsy’s Tempeh. A Vegetarian Alternative for Ground Meat (Grated Tempeh).

**Manufacturer’s Name:** S&P Farm.

**Manufacturer’s Address:** 14780 Beardslee Rd., Perry, MI 48872.

**Date of Introduction:** 1987. June.

**New Product–Documentation:** Label. 1986, dated. 4 by 5 inches. Red and green on yellow background. “Cultured soybeans with barley. Grated. Easy-to-use. Pre-cooked. Cholesterol free. Preservative free. Use in soups, chili, lasagna, spaghetti sauce, sloppy joes, spreads, tacos.” Plant opened 21 June 1987.

Recipe cards (photocopied on beige paper with black ink) for Betsy’s Grated Tempeh, sent by Betsy and Gunter. 1991. Aug. 19. Gunter’s Bavarian tempeh. Dim sum. Betsy’s chili. Sarah’s stuffed peppers. Easy spaghetti, easy pizza, easy on the Earth. Party spread (non-dairy). Tempeh sloppy joes. Anne’s quick enchiladas. Betsy’s tempeh, grated—is easy to use. Seasoned tempeh, seasoned tempeh marinade.

2112. **Product Name:** Curried Rice Salad with Tempeh.

**Manufacturer’s Name:** Western Soy Complements.

**Manufacturer’s Address:** 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-479-05968.

**Date of Introduction:** 1987. June.

**New Product–Documentation:** Talk with Jeremiah Ridenour. 1988. Aug. 31. This product was launched in June 1987 for the Santa Cruz market. It Sept. he started private labeling it for Wildwood Natural Foods. Label. 3 by 2

inches. Metallic red and black on gold. Logo of birds flying over a forest silhouette. "Ready to eat foods, naturally."

2113. Torii, Yasuko. 1987. New developments with tempeh in Japan (Interview). Conducted by William Shurtleff of Soyfoods Center, July 1. 2 p. transcript.

• **Summary:** Torigoe-Seifun stopped making tempeh in mid-1987. They had a hard time popularizing it. Marusan's tempeh is not selling well. They, too, are thinking of stopping. Mr. Kanasugi and the Natto Assoc. are trying to cooperate with Marusan. They suggest selling "tempeh miso," made as follows: Mix 10 kg tempeh, 10 kg barley koji or rice koji, and 1 kg salt. Grind in a meat grinder and let stand at room temperature in the summer for 1 month. The result is a sort of Finger Lickin' Miso. Barley koji works best, and the resulting tamari is delicious. Mr. Kanasugi hopes some miso maker will make this. Only Mr. Kanasugi is doing tempeh research. He makes this miso in his restaurant daily. He also makes a spread like peanut butter. Mr. Ose is still making tempeh but his business, Udai, is not doing well. No one is left at the Ministry of Agriculture with an interest in tempeh: Mr. Katoh went to work with FAO in Rome and Ohta went to Showa Seiyu.

Why did tempeh fail to catch on in Japan? 1. It was poorly marketed. 2. The ads and Torigoe aimed at the older generation who still know how to deep fry foods. 3. It is not clear whether the attempted tie-in with natto was helpful or harmful. Natto is a convenient fast food. Now tempeh is not even sold at Natural House, the natural foods supermarket. Organic soybeans from Living Farms are now widely used in Japanese miso and natto. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

2114. Gleason, Jane. 1987. Survey of consumers and extension personnel who have been trained in home-level soy processing. *Soybean Marketing in Sri Lanka, Monthly Report*. July. p. 1.

• **Summary:** Soyfoods are desired by many vegetarians and because they are less expensive than fish, eggs, and meat, for which they are seen as an alternative. They are not seen as a substitute for other legumes. Every person interviewed purchases TVP (or Soya Meat) on a regular basis. Those with low incomes purchase it for its economy and taste, and even those with more money who can afford fish and meat buy it for its taste. "This product has become very well integrated into Sri Lankan diets." The soyfoods taught at the SFRC training program are not as often consumed on a regular basis. The soyfoods most often prepared at home by extension workers are pittu, roti, and the soy mixture; tofu, tempeh, and soymilk are less likely to be prepared. Regular consumers are less likely to prepare soyfoods at home. For rural people the major constraint on soyfood preparation is inaccessibility of ingredients. Soy flour and soy splits are not available anywhere outside of Gannoruwa. Products in which

there is the most interest if they were available are soy-fortified kola kanda (an indigenous drink made of rice flour, green leaves, and coconut), soy dhal, and snack foods. Soy flour is liked in roti and string hoppers.

2115. **Product Name:** Homestyle Tempeh Vegetarian Sandwiches [Tempeh "No Chicken," or Tempeh "No Chicken" Sub].

**Manufacturer's Name:** Homestyle Foods (Formerly Sonoma Specialty Foods).

**Manufacturer's Address:** Santa Rosa, CA 95403.

**Date of Introduction:** 1987. July.

**Ingredients:** Sandwich: Wholewheat bread, Homestyle Tempeh "No Chicken" Salad, sprouts, eggless mayonnaise. Note: Sub adds lettuce.

**Wt/Vol., Packaging, Price:** 7.5 oz (sandwich) or 6 oz (sub).

**How Stored:** Refrigerated.

**New Product–Documentation:** Labels. 1987. 2 by 3 inches. Black or red on white.

2116. **Product Name:** [Taifun Tempeh, and Smoked Tempeh].

**Foreign Name:** Taifun Tempeh, und Tempeh geraeuchert.

**Manufacturer's Name:** Life Food.

**Manufacturer's Address:** Stuehlinger Strasse 9, D-7800 Freiburg, West Germany. Phone: 0761/50 61 55.

**Date of Introduction:** 1987. July.

**Ingredients:** Smoked: Organically grown soybeans, tempeh starter, smoke.

**Wt/Vol., Packaging, Price:** 200 gm poly bag. Retail for DM 4.50.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label sent by Anthony Marrese. 1989. Nov. 3.5 by 1.5 inches. Dot matrix printed on a white self-adhesive label. Refrigerate at 4°C or below. Marrese notes that they currently make 20 kg/week of tempeh.

Note: This is the world's earliest known smoked tempeh.

2117. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Sojatopf. Renamed Soto in April 1989.

**Manufacturer's Address:** Friedrich-Ebert-Str. 40, D-8323 Trostberg, West Germany. Phone: 08621-62538.

**Date of Introduction:** 1987. July.

**Wt/Vol., Packaging, Price:** 200 gm.

**New Product–Documentation:** Letter (fax) from Harry Whitford. 1990. May 30. Gives full details on product based on interview with Gerhard (Oskar) Schramm. The company currently purchases its tempeh from Byodo. On 1 Jan. 1990 the company moved to Wolfbergerstr. 47, D-8211 Breitbrunn am Chiemsee, West Germany.

2118. **Product Name:** Homestyle Tempeh “No-Chicken” Salad.

**Manufacturer’s Name:** Homestyle Foods (Formerly Sonoma Specialty Foods).

**Manufacturer’s Address:** 2317 Bluebell Dr., Santa Rosa, CA 95403.

**Date of Introduction:** 1987. August.

**Ingredients:** Tempeh (organic soybeans, culture), celery, soy oil, soy milk, relish, soy sauce, mustard, vinegar, garlic, parsley, spices, and honey; Improved recipe (1988). Tempeh (organic soybeans\*, culture), celery, soy oil, soy milk, mustard, tamari, vinegar, sesame, relish, garlic, parsley, natural spices and honey. \* Grown in accordance with CA H&S Code 26569.11.

**Wt/Vol., Packaging, Price:** 8 oz plastic tub.

**How Stored:** Refrigerated.

**Nutrition:** Per 2.66 oz.: Calories 155, protein 7.5 gm, carbohydrates 7.4 gm, fat 10.7 gm, fiber 2.0 gm, sodium 0.25 gm, cholesterol 0.

**New Product–Documentation:** Label. 1987. 4.5 inches diameter. Red and blue on white plastic lid. “Natural. Non-Dairy. Cholesterol Free. No Preservatives. Use on sandwiches, in Dips and Salads.” Interview with Benjamin Hills. 1987. Sept. 7. In 8 oz plastic tubs. Label. 1988. In both 8 and 15 oz tubs. Red, black, and yellow on white. “New! Non-Dairy. Cholesterol-Free. Ready to Eat. Natural. No Preservatives. Nutritious.” Spot in Health Foods Business. 1988. April.

2119. Ito, Hiroshi. 1987. Tenpe no nihon ni okeru kenkyū no ayumi. III. Tenpe to onchomu no chigai [The course of tempeh research in Japan. III. Differences between tempeh and onchom]. *Daizu Geppo (Soybean Monthly News)*. July/Aug. p. 26-30. [2 ref. Jap]

• **Summary:** Describes how to make onchom from okara, peanuts, and velvet beans, and discusses its biochemistry and fermentation, cookery, digestion, and nutritional composition. Address: Tokyu Nogyo Daigaku Kyoju, Jozoka, Chomi Shokuhin Kenkyushitsu.

2120. Nout, M.J.R.; Beernink, G.; Bonants-van Laarhoven, T.M.G. 1987. Growth of *Bacillus cereus* in soyabean tempeh. *International J. of Food Microbiology* 4(4):293-301. Aug. [6 ref]

• **Summary:** This bacterium can cause spoilage in tempeh. But acidification of the soybeans during soaking to pH 4.85 using natural acidification from the fermentation, or to pH 4.4 by addition of lactic acid prevented its growth. Acidification to pH 5.5 by addition of acetic acid inhibited both *B. cereus* and *R. oligosporus*, the desirable tempeh mold. Mixed inocula of *R. oligosporus* and either *Lactobacillus plantarum*, *L. casei subsp. alactosus*, or *L. fermentum* produced tempeh of excellent quality. Mixed inocula containing lactobacilli were, however, unable to

prevent *B. cereus* growth and subsequent spoilage when added to unacidified soybeans of pH 6.6. Thus soybean acidification by biological or chemical means is essential. Address: Agricultural Univ., De Dreijen 12, 6703 BC Wageningen, Netherlands.

2121. Nout, M.J.R.; Bonants-van Laarhoven, T.M.G.; Jongh, P. de.; Koster, P.G. de. 1987. Ergosterol content of *Rhizopus oligosporus* NRRL 5905 grown in liquid and solid substrates. *Applied Microbiology and Biotechnology* 26(5):456-61. Aug. [22 ref. Eng]

• **Summary:** Ergosterol content has been suggested as a measure of mycelial growth in solid substrate fermentations (SSF), including soybeans. However, since ergosterol content was influenced by the substrate composition, the amount of aeration, and the growth phase of the mycelium, it was concluded that ergosterol should actually not be used as a chemical index for the quantification of biomass growth in SSF with limited mass transfer, as in tempeh or oncom production. Address: Dep. of Food Science, Agricultural Univ., Veghel, Netherlands.

• **Summary:** Contains 71 recipes: 40 tempeh recipes, 28 masa recipes, and 3 tofu recipes. Contents: Acknowledgments. Introduction. What is tempeh? Nutritional information. How to prepare and cook tempeh. 1. Tempeh. 2. Corn masa. 3. Algae. Address: Jamaica Plain, Massachusetts.

2124. Shurtleff, William. 1987. History of Appropriate Foods Inc. and The Soy Source. Lafayette, California: Soyfoods Center. 3 p. Unpublished manuscript, based on a interviews with Robert Werz, Sept. 9.

• **Summary:** “Appropriate Foods was founded by Robert Werz in the fall of 1980 as a tempeh manufacturer. Born on 29 Dec. 1952, he had been a vegetarian since about 1970. Quite early he developed an affinity for soyfoods. He had been enjoying tofu since the early 1970s, when it was only available from Chinatown. He first heard about tempeh in 1975 from a friend in California, then first tasted it in about 1977. In 1979 he began to make tempeh part time at home in Sea Cliff, New York, for himself and a few friends while

working as a carpenter and a boat builder. He also sold some of this tempeh to one store, Rising Tide, as a test market.

"In 1980 Werz decided to try making tempeh as a part time business. So in October 1980 he founded Appropriate Foods, Inc. He rented a small kitchen (down 2 long flights of stairs in the Bayside Jewish Center) from a friend who was a kosher caterer in Bayside, New York. Commercial production of Tempeh Brothers Tempeh started there in Nov. 1980. When Werz first made tempeh at home and at the temple, he had a partner, David Sibek; friends called them "tempeh brothers." Hence the product name. The only other tempeh sold in the area was that made by The Tempeh Works in Greenfield, Massachusetts.

"In the spring of 1981 Werz and Sibek decided to make tempeh a full-time business. They were distributing their products to about 10 health food stores and making about 20 pounds of tempeh each batch, 200 pounds a week. So they rented an old meal packing plant, complete with tile walls and floor drains, at 137 New Hyde Park Rd., Franklin Square, Long Island, New York.

In Feb. 1982 tempeh production started at the new location, and soon the company had two small distributors in New York. But now there were 12 tempeh brands on the market. In about June the distributors dropped 'Appropriate Foods' products. So they built an insulated box in the back of a pickup truck and began to deliver their own products. From this painful experience Werz learned a key lesson: "In the food business, distribution is everything." If a company does not have control over the distribution of its products, it is extremely vulnerable.

Werz and Sibek quickly realized that they had to expand their product line, so in June 1982 they started making three new products: (1) Tempeh Brothers brand Soyfurters, a cake of tempeh sliced lengthwise into 4 sticks, marinated, and seasoned with liquid smoke, to sort of resemble hot dogs; (2) No Cow brand Soymilk (the soybeans were ground in a motor-driven Corona mill) in plain, cinnamon-honey, and carob-honey flavors; and (3) Tempeh Brothers brand Tempehbunners.

In the summer of 1982 the company added Tempeh Brothers brand Super Tempeh and Soy-Rice-Sesame Tempeh, and dropped the Soyfurters. Dave Sibek left in early 1983."

"In Feb. 1984 Werz and a partner, Shelley Martin, started a second business, The Soy Source, to allow Appropriate Foods to start selling their products, under The Soy Source Brand, to supermarkets. Their first products were shoyu (Japanese-style soy sauce) and tamari (wheat-free soy sauce). The first new tofu product in the new line (launched in Feb. 1985) was Perfect Pasta brand Tofu Tortellini (frozen). The tofu was purchased from Nasoya and the product made by the pasta maker. In Sept. 1985 Vegetarian Gourmet Traditional Pot Pie with Tempeh and Tofu Quiche, both frozen, were added to the new line."

"On 1 Dec. 1986 Appropriate Foods completed its move to a larger building in the East Brooklyn Industrial Park at 292 Liberty Ave., Brooklyn, New York. Production began there in March 1987. In mid-March four new tempehs were launched as gourmet items, with silver and gold labels, under the Emperor's Best Brand: Garbanzo Tempeh (with no soy), Soy & Amaranth Tempeh, Rye-Caraway-Soy Tempeh, and Brown Rice Tempeh (with no soy). A nice article in the *New York Times* (24 June 1987) noted: "Today, with six employees, the company produces about 10,000 pounds of tempeh a month. About half is sold to health food distributors and the rest is delivered to about a hundred stores and restaurants in the metropolitan area.

"As of September 1987 products made under the Appropriate Foods brand include Soy Tempeh, Super Tempeh, Soy-Rice-Sesame Tempeh, Tempeh Burgers, Soymilk, and Tofu Salads. Garbanzo Tempeh and Amaranth Tempeh are sold under the Soy Source gourmet brand. Soy Source is still an independent company with its own books. The distribution arm of the company, called Appropriate Foods Distributing, is trying to broaden its line. The future seems to lie in 'crossover products,' sold in supermarkets."

The company is now one of America's largest tempeh manufacturers. They have developed many innovative tempeh and tofu second generation products. Address: Lafayette, California.

2125. **Product Name:** [Tempeh].

**Foreign Name:** Tempi.

**Manufacturer's Name:** Centro de Soya, Soy Dairy.

**Manufacturer's Address:** Barrio San Bartolo, Molino Belen, Solola, Guatemala; Apartado Postal 118, 07091 Solola.

**Date of Introduction:** 1987. September.

**Ingredients:** Soybeans, water, vinegar, Rhizopus culture.

**Wt/Vol., Packaging, Price:** Packaged in 1 and 2 lb. plastic bags (doubled). Retail for Q. 2.50 per lb.

**How Stored:** Blanched and frozen.

**New Product-Documentation:** Interview with Laurie Praskin. 1987. Nov. 30. Tempeh was introduced in 1987 and is made by Amado and his partner, Felipe. Letter from Amado del Valle. 1988. March 16. The product is called "tempi" (mis-pronunciation through The Farm influence). 100 lb have been made to date. "Production has been stopped momentarily, but at the beginning of April it will start again as we will then have an adequate amount of spores and the necessary equipment. We have insistent orders from various restaurants."

Note: Plenty International (Jan. 1994) notes that this company is now named Alimentos San Bartolo, located at Apartado Postal 118, Solola, San Bartolo, Guatemala. Phone: 502-514896.

2126. *Ie no Hikari*. 1987. Mamenoko osusume no nattô ryôri

[Natto dishes recommended by the Mamenoko restaurant]. Sept. p. 68-70. [Jap]

• **Summary:** This restaurant, specializing in natto and tempeh cookery, is run by Mr. Goro Kanasugi of the Japan Natto Assoc. The restaurant's cute name means "Child of the Bean."

2127. *Plenty Bulletin (Summertown, Tennessee)*. 1987. Business school grads help build soy dairy in the Caribbean. 3(3):1-4. Sept.

• **Summary:** A food processing kitchen and soy cafe was constructed on the northeast coast of Dominica on the Carib Indian Reserve by locals with help from 8 MBA volunteers from the Wharton School of Business [at the Univ. of Pennsylvania in Philadelphia]. Carib farmers are now selling soybeans to the Plenty Soy Center in Roseau, Dominica's capital. Each week the Center produces 100 lb of tofu, 25 lb of soysage, 20 lb of tempeh, 30-50 gallons of soy ice cream, and 30-40 gallons of soymilk. Most of these soyfoods are sold through two co-ops that are managed by Plenty-trained Dominican staffs: the Ebenezer Women's Co-op in Marigot and the Kairi Soy Co-op on the outskirts of Roseau.

At the Soy Development Center in Roseau, Plenty Canada offers 2 six-week classes each year in home, village, or small industrial scale soyfoods processing. The staff also conducts two 16-hour training courses on other parts of the island mainly for home preparation of soyfoods. Fifteen farmers are growing ¼ acre each of soybeans. In Jamaica, Country Farmhouse Lifeline, a soyfoods production center in Kingston, makes 150 lb/week of tofu.

2128. **Product Name:** Fresh Tempeh.

**Manufacturer's Name:** Plenty Canada Soya Utilization Project.

**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.

**Date of Introduction:** 1987. September.

**Ingredients:** Split soybeans, tempeh culture.

**Wt/Vol., Packaging, Price:** 300 gm plastic bag retails for Rs. 4/50.

**Nutrition:** 19% protein.

**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see *Chocolate Milk* (Aug. 1987).

2129. Snyder, Harry E.; Kwon, T.W. 1987. Soybean utilization. New York, NY: Van Nostrand Reinhold Co. xii + 346 p. Illust. Index. 23 cm. An AVI Book. [381 ref]

• **Summary:** Contents. Preface. 1. Production, marketing, and sources of information: Introduction, agricultural production, marketing, sources of information. 2. Morphology and composition: Morphology, chemical composition. 3. Processing of soybeans: Preparation, flaking,

expellers, solvent extraction, oil refining, protein products.

4. Quality criteria for soy products: Protein and oil products.

5. Functional properties of soy proteins: Interactions of soy proteins with water, interactions of soy proteins with lipid, foaming, commentary on functionality. 6. Nutritional attributes of soybeans and soybean products: Inherent attributes of soybeans, changes due to processing.

7. Oriental soy food products: Traditional nonfermented soybean food products, traditional fermented soybean food products. 8. Soybean-supplemented cereal grain mixtures: Protein-rich food mixtures containing soy flours, composite flours containing soy flour, cereal blends containing soybeans. 9. Soy protein food products: Baked goods, meat products, dairy products, other foods containing soy protein. 10. Soybean oil food products: Salad and cooking oils, mayonnaise, and prepared salad dressings, shortenings, margarines and related products, soybean lecithin products. 11. Grades, standards, and specifications for soybeans and their primary products: Grades of soybeans, specifications for soybean meals and flours, trading specifications for soybean oils, specifications for lecithins, standards for the use of soy protein products in other foods. References in each chapter. Glossary.

This book is well written (though largely a repetition of previous works) in the area of modern soy protein products. It is weak and poorly researched in the area of "Oriental Soy Food Products," which comprises only 1 chapter (22 pages) of the total, making the book unbalanced. The author of this chapter seems to be almost completely unaware of the many major developments in the Western world during the past 10 years.

Note the following Korean soyfood terms: Fresh soybean = Put Kong. Toasted soy powder = Kong Ka Ru. Soy sprouts = Kong Na Moal. Soymilk = Kong Kook or Doo Yoo. Yuba (Soymilk film) = no name. Tofu (Soy curd) = Doo Bu. Tempeh (Fermented Whole Soybeans) = no name. Natto = Chung Kook Jang. Soy sauce = Kan Jang. Miso (Soy Paste) = Doen Jang. Fermented tofu (Fermented Soy Curd) = no name. Fermented okara (fermented soy pulp) = no name.

Note: This is the earliest English-language document seen (Dec. 2005) that uses the term "Toasted soy powder" to refer to roasted soy flour. Address: 1. Prof., Food Science Dep., Univ. of Arkansas, Fayetteville, AR; 2. Principal Research Scientist, Div. of Biological Science & Engineering, Korea Advanced Inst. of Science and Technology, Seoul, South Korea.

2130. Kelly, Gerald R. 1987. Island dining: Fast needn't mean junk. *Martha's Vineyard Times (Vineyard Haven, Massachusetts)*. Oct. 8.

• **Summary:** Mark Ripa is the proprietor of Vineyard Natural Foods, where over 50 different sandwiches are made every day for sale to regular customers or passers by. The standard soup is miso soup. Lynn Burkhart, who creates the gourmet

part of the store, plans to serve Tofu Vegetable Pies, a kind of quiche made without eggs, and a light bean and spinach soup made with tempeh—a soybean product. The menu features Indonesian curried tofu. Ripa says “that soy milk is the natural food store’s bestseller because of the number of people who cannot—or will not—tolerate milk from cows.”

Photos show: (1) The Smoothie bar inside the store. (2) The menu, showing the ingredients in Indonesian curried tofu.

2131. *Toyo Shinpo (Soyfoods News)*. 1987. Ichi nichu 1000 shoku mo deru nattô ryôri. Nattô ryôri senmon ten “Mamenoko” [One thousand natto dishes sold daily. Natto cookery specialty shop—Mamenoko]. Oct. 11. p. 2. [Jap; eng+]

• **Summary:** Goro Kanasugi is president of Kanasugi Shokuhin Kogyo Ltd. at Shimomachi 3-6, Omiya-shi, Saitama-ken, Japan. Phone 0486-41-1425. He opened this restaurant, Mamenoko, in 1975. His son is currently running the business. The natto menu consists of natto croquettes, natto gyoza (pot stickers), tororo natto soup, yamaimo no natto age (fried natto with glutinous yam), maguro no natto kake (with tuna) and ika natto (natto with squid). He serves 1,000 of these dishes a day at the restaurant. He also has a health foods shop next to the restaurant and sells second generation tempeh products such as brown rice bread with tempeh, dango, croquettes and kabayaki teishoku. About 10 of these items are sold daily. His tempeh saka manju, which sells 500-600 (sometimes 1,000) cakes a day, goes for 60 yen per cake. The article includes a photo of the shop.

2132. Schecter, Andy. 1987. Early history of Northern Soy (Interview). *SoyaScan Notes*. Oct. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Zen Center kitchen at Rochester, New York used to import tofu from Toronto [in Ontario, Canada]. Then in about 1975 Jay Thompson, who worked in the kitchen, saw an article by William Shurtleff in *Mother Earth News* offering a free chapter from a book in progress describing how to make tofu. When the chapter arrived, the kitchen crew started making tofu in the Zen Center kitchen. The tofu makers were Jay Thompson, Martha (last name unknown), Greg Weaver, Greg Mello, and Andy Schecter. They would make about 20 pounds of tofu once or twice a week.

After 3-4 months they moved the operation in the basement of the Zen Center, where it was more efficient. Again they made about 20 pounds of tofu a batch, at least once a week and during sesshins [sic] as often as 2-3 times a week. All of the tofu was consumed within Zen Center. None was sold commercially.

Then in late 1976 Greg Mello and Greg Weaver started talking about starting a commercial business independent of Zen Center and outside of it. They took their tofu to Oriental food stores and the owners showed interest. So they bought

a large stainless steel cooking pot and other utensils. But in late 1976 there were some arguments, so Greg Weaver suggested that Greg Mello do it alone. So they parted.

At that point Andy Schecter was planning on leaving the Zen Center staff. He got together with Greg Mello and they found a 900 square foot space at 277 North Goodman Street in Rochester. In January 1977 they established the company called The Tofu Shop and began construction of the plant. They bought an oil-fired boiler, built a platform for the cooking pot, built presses, curding barrels, etc. In May 1977 production began. Their first product was tofu, followed shortly by a generic (unbranded, unlabeled) soymilk in plain and carob-honey flavors, put up in quart canning jars.

In late 1977 Greg Mello decided to leave. So in January 1978 Andy brought in Greg Weaver. In mid-1978 Weaver and Schecter realized that tofu sales were slow since most people did not know what it was or what to do with it. So they decided to open a soy deli to introduce prepared tofu dishes to the public. Weaver took charge of the deli, which opened in November 1978 under the name “The Tofu Shop” at 686 Monroe Ave. The startup costs were about \$20,000. Since the manufacturing branch of the partnership was now without a name, they decided to call it Northern Soy. And since Schecter felt that he would need more managerial help in running Northern Soy, he brought a third partner, Norman Holland, in around November 1978.

The three partners all owning two businesses didn’t get along very well, so they decided to separate the two businesses. Weaver would own the deli as an independent business, while Schecter and Holland would own Northern Soy. Since the name The Tofu Shop legally belonged to Northern Soy, Weaver was asked to find another name. After briefly trying “The Tofu Gardens,” he settled on “The Lotus Cafe.” This deli, the fifth soy deli to open in America, was a pioneer in developing delicious tofu and tempeh recipes and marketing them in an attractive way. Featured in a cover story in the first issue of Soycraft (later Soyfoods) magazine (summer 1979), it offered both sit-down (20 seats) and take-out service, featuring hot vegetarian lunches and dinners. By 1982 it was the largest soy deli in America in terms of average weekly sales (\$4,800) and maximum weekly sales (\$6,500). Names of 30 of its most popular tofu and tempeh recipes are given in the books *Tofu & Soymilk Production* (1979) and *Report on Soyfoods Delis, Cafes & Restaurants*, both by Shurtleff and Aoyagi.

Tempeh production was started [in about Nov. 1977] by Earl Lepper in his home. Then at some point in 1979 or 1980 he moved the operation into a corner of The Tofu Shop. Eventually he decided to sell his tiny business to The Tofu Shop so he could move to California.

The Lotus Cafe closed in August of 1984 or 1985, in debt and after Weaver’s unsuccessful attempt to sell it. Weaver went to work for a computer literacy firm. All 3 are still bachelors. Address: 30 Somerton St., Rochester, New

York.

2133. East West Journal. comp. 1987. Shopper's guide to natural foods. Garden City Park, New York: Avery Publishing Group. x + 204 p. Illust. Index. 28 cm. [66\* ref]

• **Summary:** The book from the editors of the *East West Journal* is mainly a series of articles published in *East West Journal* or special articles by individual authors. Contents: 1. Introduction to natural foods. 2. Grains. 3. Breads, pastas & seitan. 4. Vegetables. 5. Sea vegetables. 6. Labeling and standards. 7. Fruits. 8. Seeds & nuts. 9. Beans (incl. tofu, tempeh, miso, azuki). 10. Beverages. 11. Condiments (incl. tamari, shoyu, vinegar, salt, umeboshi). 12. Cooking ingredients. 13. Pressure cookers. Address: New York; Massachusetts.

2134. **Product Name:** Organic Soybean Tempeh.

**Manufacturer's Name:** Eat Your Beans.

**Manufacturer's Address:** Route 1, Box 83, Williamsport, TN 38487.

**Date of Introduction:** 1987. October.

**Ingredients:** Soybeans, vinegar, cultured rhizopus oligosporus.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987, undated. 3 by 5 inches. Black on beige, photocopy.

2135. **Product Name:** Joan's Tempeh [Millet & Soy, and Rice & Soy].

**Manufacturer's Name:** Joan Anderson & Co.

**Manufacturer's Address:** 414 Seaside St., Santa Cruz, CA 95060. Phone: 408-425-4666.

**Date of Introduction:** 1987. October.

**New Product–Documentation:** Talk with Joan Anderson. 1988. Aug. 27. She has made tempeh at home for about 10 years, but first started to sell it to friends in the fall of 1987. Sales are growing and she hopes to expand. She has no labels yet. She prefers grain & soy varieties; does not make a basic soy, feeling that it is too heavy.

2136. **Product Name:** Tempehworks Garden Vegetable Tempeh.

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302. Phone: 413-772-0991.

**Date of Introduction:** 1987. October.

**Ingredients:** Organic soybeans, water, green pepper, sweet red pepper, carrots, celery seed, sea salt, tempeh culture.

**Wt/Vol., Packaging, Price:** 8 oz vacuum pack. Retail for \$1.79.

**How Stored:** Refrigerated, 45 day shelf life. Or frozen.

**Nutrition:** Per 4 oz.: Calories 142, protein 17.9 gm, fat 4.5 gm, carbohydrates 8.6 gm.

**New Product–Documentation:** Leaflet (see next page) and Label. 1987. 3 by 6.25 inches. Dark green, light green, yellow, orange, and white. Soya Newsletter. 1987. Sept/Oct. p. 6. Spot in Natural Foods Merchandiser. 1988. Jan. p. 49.

2137. **Product Name:** Tempehworks Macro Power Tempeh.

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302.

**Date of Introduction:** 1987. October.

**Ingredients:** Organically grown soybeans, carrots, sea vegetables, scallion, aduki beans, sesame, miso.

**Wt/Vol., Packaging, Price:** 8 oz vacuum pack. Retail for \$1.79.

**How Stored:** Refrigerated, 45 day shelf life. Or frozen.

**New Product–Documentation:** Leaflet. 1987. Lightlife Foods. "New Products Coming From Lightlife this Fall." Soya Newsletter. 1987. Sept/Oct. p. 6.

2138. **Product Name:** Tempehworks Quinoa Tempeh with Sesame.

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302. Phone: 413-772-0991.

**Date of Introduction:** 1987. October.

**Ingredients:** 7/92: Organically grown soybeans\*, water, quinoa, sesame seeds\*, tempeh culture. \* = Grown in accordance with Section 26569.11 of the California Health and Safety Code.

**Wt/Vol., Packaging, Price:** 8 oz. vacuum pack. Retail for \$1.59 (7/92, Maryland).

**How Stored:** Refrigerated or frozen.

**Nutrition:** Per 4 oz.: Calories 198, protein 19 gm, fat 8 gm, carbohydrates 14 gm.

**New Product–Documentation:** Leaflet showing Label.

1987. The National Academy of Sciences has called quinoa (pronounced KEEN-wa) "one of the best protein sources in the vegetable kingdom." The Incas [of Peru] called Quinoa "the mother grain."

Product ("Organic Quinoa-Sesame Tempeh") with Label purchased at Fresh Fields, Rockville Pike, Maryland. 1992. July. 20. Label is 4 by 9.25 inches. Green, orange, and black on light greenish-yellow. "Low in fat. Low in sodium. Zero cholesterol. 1% for peace. UPC indicia. May be sold frozen six months after date. Occasional gray spots on tempeh are a result of the natural culturing process and do not affect the quality of the product."

2139. Mozzer, Patricia. 1987. Vegetarian cooking for diabetics. Summertown, Tennessee: The Book Publishing Co. 144 p. Illust. Index. 23 cm. [28 ref]

• **Summary:** Containing over 100 vegetarian dishes and many color photos of recipes, this vegan cookbook features many based on tofu, tempeh, and soybeans. These foods are

NEW NEW NEW

A delicate blend of green pepper, sweet red pepper, carrots, celery seed, soybeans and a pinch of sea salt. This tempeh is as flavorful as it is colorful and is great fried, or in combination with a sauce over rice or pasta. Garden Vegetable Tempeh is packed 12 x 8 oz./case.

only from

introduced in a section on legumes (p. 20-21). Soy-related recipes include: Tofu salad I and II (p. 71). Tofu potato salad (p. 72). Tofu vegetable soup (p. 76). Tofu tomato soup (p. 78). Tofu sandwiches (p. 80-81). Tofu pita pizzas (p. 81).

In the recipe section on Main Dishes, a section titled "Tofu, tempeh, and soybeans" (p. 84-99) contains: Cashew-carrot Parmesan (with tofu). Far East fried rice (with tofu or tempeh). Savory tofu casserole. Tofu-vegie pie. Oriental tofu. Tofu-mushroom pot pies. Tofu quiche. Tofu pizza. Tempeh stuffed eggplant. Soybean-mushroom pilaf. Soyburgers with mushroom stuffing. Tempeh Parmesan. Tofu lasagne. Tofu macaroni and cheese. Sesame tofu. Crepes with tofuratouille filling (p. 112).

Diabetes mellitus affects about 11 million Americans. There is no known cure. "Proper diet is the cornerstone for any successful diabetes management plan. Generous intakes of starchy foods rich in fiber are essential to good diabetes control."

2140. Murrieta Foundation. 1987. Murrieta Hot Springs vegetarian cookbook. Revised and expanded including Spa Cuisine. Summertown, Tennessee: The Book Publishing Co. 232 p. Color plates. Index. 23 cm.

• **Summary:** This is a vegetarian (but not a vegan) cookbook. The index contains listings for 26 tofu recipes, 5 miso recipes, and 2 tamari recipes. There are definitions of "liquid aminos" (HVP), miso, tamari, tempeh, and tofu. Many of the recipes are favorites from the Oasis Restaurant at the Hot Springs, where the three basic lacto-ovo vegetarian diets (as taught by Dr. Randolph Stone, 1890-1982, founder of Polarity Therapy) are The Purifying Diet, The Health Building Diet, and the Gourmet Vegetarian Diet. Address: Murrieta Hot Springs, California.

2141. Northern Soy Inc. 1987. Products: Names and ingredients. 30 Somerton St., Rochester, NY 14607. Manufacturer's catalog.

• **Summary:** Lists 8 tofu or tempeh products, Soyboy or Harvest Light brands. Address: Rochester, New York.

2142. **Product Name:** Tempeh Sticks (Deep-fried without Batter).

**Manufacturer's Name:** Plenty Canada Soya Utilization Project.

**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.

**Date of Introduction:** 1987. October.

**Ingredients:** Fresh tempeh, chicken soup cubes, white flour.

**Wt/Vol., Packaging, Price:** Each stick is 6 inches long and retails for Rs. 1/-.

**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987).

2143. Shurtleff, William. 1987. History of White Wave, Inc. Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.

• **Summary:** A detailed history of this pioneering, very creative, and rapidly growing company. Contains production and sales statistics at each major phase of growth. Early days: White Wave was founded and started making tofu in September 1977 by Steve Demos in Boulder, Colorado.

Born on 24 April 1949 in Philadelphia, Pennsylvania, Demos attended Bowling Green State University in Bowling Green, Ohio, majoring in political science and philosophy and graduating in the fall of 1970. He was introduced to tofu in the summer of 1970, when he was traveling in a van in northern California with a friend, who bought some at an Oriental food store. Demos found it to be a good source of protein, and liked the flavor.

Right after graduation Demos took two trips to India. During the first in 1971, with Pat Calhoun, he became a vegetarian after witnessing the meat bazaar in Afghanistan. In early 1972 he took a longer trip to India, again with Pat Calhoun. It included 10-day Buddhist meditation course with a teacher from Burma, Goenka, who became his spiritual teacher. He also lived for 1-3 months in a cave near Rishikesh (in the foothills of the Himalayas in northern India), doing Hatha Yoga and meditation. There were monkeys in the forest trees, tame peacocks, a stream 10 yards in front of the cave that dropped into a bathing pool, and many sadhus (Indian holy men) practicing in other caves nearby. Then in 1974 he started a health food store [named Touch the Earth] in La Haska, Pennsylvania, where he grew acquainted with many new foods such as miso, sea vegetables, and *gomashio* (sesame salt). After 9 months he sold the store and returned to India again. He was now actively involved in meditation.

After that trip, Demos started living on the East Coast in New Hampshire. By 1974 he began buying tofu in Boston, Massachusetts, then made it a few times in the kitchen and used it in cooking for a yoga studies group, which had purchased a farm. He was in charge of food and he had learned how to make tofu from the *Ten Talents* cookbook. In March 1976, after a trip to India, he was in Santa Barbara, California, at a 76-day meditation retreat with teacher Robert Hover. He made tofu, starting at 4:00 each morning in a commercial kitchen, for 100-150 people, using *The Book of Tofu*. During this retreat Demos conceived of and developed the idea of starting a tofu company, including the name and logo. Three months later he found himself, a hippie with long hair, in Boulder, Colorado. He had an idea but no capital, and was living on food stamps. By good fortune he met a man named Anton Rogers (a talented architect and builder), who loaned him \$2,000 startup capital, after having known him less than a month. So in the summer of 1977 Steve

began buying equipment for making tofu. His new company was not yet officially established or registered—though he probably opened a checking account at a local bank.

Demos started making tofu at White Wave on 27 September 1977. “At 11:30 a.m. I sold my first block. I’m staring at the astrological chart which sits next to my desk. That was when I translated the effort to a dollar.” The company began as a sole proprietorship, located in very small (300 square foot) rented quarters at 1738 Pearl Street in Boulder, Colorado. The front one-third of the shop was used for a retail deli and the back two-thirds for food production. From day one, the tofu was made from organically-grown soybeans. Each 14-ounce block of tofu was sold, floating in water, in Chinese food take-out cartons. For details on White Wave’s early use of organically grown soybeans, see SoyaScan interview with Steve Demos (Aug. 1998). The first batch of tofu was used to feed the participants in a ten-day meditation retreat in Boulder.

One direct competitor was the Spinning Kitchen, which had started 9 months earlier, in about January 1977. They had the Boulder market locked up when White Wave started.

White Wave had three products from the opening day: Nigari Tofu, Black Walnut Mushroom tofu, and Lemon Herb tofu. The latter two innovative flavored tofus were made by mixing the natural flavorings into curds at a specific point before pressing. Shortly White Wave expanded into making sandwiches, which led to salads, drinks, pies, cakes, and muffins. One of the first stores in Boulder to sell Steve’s tofu was Green Mountain Grainery, owned and run by Bruce Macdonald. Pat Calhoun (formerly Demo’s wife), arrived in December from the Pacific Coast Bakery in California, bringing all their recipes. Recipes for baked goods (such as cinnamon rolls and cookies) were adapted.

By early 1978 soymilk (plain, honey-sweetened, or carob-maple) was introduced, sold out of a jet spray juice cooler or in quarts, and also used to make Coconut Cream Pie and Tofu-Agar Pies filled with various fruits (apples or whole strawberries, peaches, or blueberries). At about the same time the okara from the tofu started to be used to make one of America’s earliest brands of Soysage. This spicy Vegetarian Soysage (shaped like a sausage) was distributed with the tofu. Before long White Wave was making a host of delicious and innovative tofu deli products which were sold only at the Pearl Street deli. These included Macro Pizza with Tofu, Mexican Entrees, Okara Granola, and Tofu Dogs and Sauerkraut (very firm tofu cut into long rectangles and marinated broth). Soy Sannies (Miso-tahini Sandwiches) were also sold at nearby health food stores.

To help attract customers, the deli also sold an assortment of then largely unknown food products: 10-15 varieties of Japanese and American miso, many sea vegetables, shoyu, kudzu, umeboshi plums, and the like, many of the same products Demos had sold 4 years earlier at his health food store in Pennsylvania. Most of these were of

great interest to macrobiotic devotees, though Steve had little personal interest in that subject.

Tofu was quickly recognized as a tremendously versatile, all-American ingredient. Now new people started coming into the company. Some were cooks and they helped to develop new products. In 1978 White Wave began to distribute a number of its most popular deli-type products to other retailers. These were among America’s earliest commercial second generation tofu products: Missing Egg Salad (America’s first, named by Trudy Stuart), Tofuna Salad (Vegetarian Tuna Salad), and Tofu Turnovers (with spinach and feta cheese filling). Other innovative second generation products sold or used only at the Pearl Street deli included Tofu Treats or Creamies (in banana-coconut, peanut-carob, or carob mint flavors), Miso Salad Dressings (hearty or mellow), and Tofu Mayo (eggless mayonnaise used in the Missing Egg Salad). Address: Lafayette, California.

2144. Shurtleff, William. 1987. History of White Wave, Inc. (Continued—Document part II). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.

• **Summary:** Continued: At the same time White Wave started making nut and seed products in the same little shop, starting with gomashio (sesame salt), tamari-coated sunflower seeds and almonds, and nut butters.

Just a year after opening, White Wave was forced to expand out of the tiny Pearl Street shop by the demand for its deli products from outside retailers, such as Arati and other natural food stores in Boulder. Demos recalls:

“We acted with very little foresight. It was more like ‘What do you want to do today? Let’s make something new.’ Finally we couldn’t get out the front door. We had to step over the top of buckets of tofu, presses, and boxes used to deliver our little Chinese fish cartons of tofu, stacked up so high we couldn’t see out the window. It was chaotic. We were making money and business was booming, but we were only paying ourselves \$1.42 an hour.”

On 28-30 July 1978 a meeting of tofu manufacturers from across the USA was held in Ann Arbor, Michigan. The meeting was organized by Steve Fiering, Jerry MacKinnon (plus coworkers at The Soy Plant) and Bill Shurtleff, and hosted by The Soy Plant. Steve attended this historic meeting, and ended up rooming with Tom Timmins, head of the New England Soy Dairy. “I thought I was rooming with one of the idols of the industry. Just by virtue of association, I was going to do well.” At this meeting the Soycrafters Association of North America (SANA) was established, with Larry Needleman as executive director of the new trade association. Steve was elected to be one of six members of SANA’s steering committee. Various photos of the meeting show Steve, with long hair and mustache, leading and participating in the discussions. A yellow lined sheet titled “Tofu Sales” was circulated to all attendees; Steve wrote that

White Wave was making medium-firm bulk and packaged tofu, which wholesaled for \$0.65 and \$0.74 per pound, f.o.b. plant. Several days after the Ann Arbor meeting, William Shurtleff and Wataru Takai visited Demos, and saw how he made tofu at his tiny shop on Pearl St. in Boulder. They sampled and enjoyed the various creative offerings in the deli, and Shurtleff took home a label from each product.

At Walnut Street: In September 1978, after just a year at Pearl Street, the tofu company had long since outgrown its minuscule 'back room' space. So manufacturing operations were moved to a 3,000 square feet converted warehouse at 3869 Walnut Street. It felt like they had moved into a castle, with ten times as much space. Now there was great pressure to expand the business to use up the extra space. The company began to make new products (such as tempeh, ice cream, and new deli foods) and look for new markets.

The deli remained at Pearl Street, and was given a new name, The Cow of China (a term from *The Book of Tofu*). The name "White Wave" was reserved for the tofu manufacturing company. But there was only one set of books, under White Wave. The company now changed to a partnership, with seven equal partners, all active. Demos was president and Pat Calhoun did the bookkeeping, and only these two were interested in meditation.

Right after the move, to announce The Cow of China as a retail outlet and its vegetarian deli products, Demos did his first real advertising, using three charming posters. The first read: "White Wave Through the Cow of China Offers Food from The Kingdom of Plants. We make it all here in Boulder. 100% Dairyless." It then listed 14 soyfoods plus some non-soy desserts, almond-, cashew-, and peanut butters, and tahini. A second poster showed a soybean, with head, tail, and legs like a cow and dotted lines to delineate the choice butcher cuts. But instead of rump roasts and flank steaks were Soysage, Miso Dressings and the like. A third showed Jack, standing under a giant beanstalk, about to trade in his cow for the magical beans at which he is gazing in wonder. The caption: "We've got an alternative. White Wave Soy Dairy." The latter two posters were used as catalog advertisements with a growing number of natural food distributors.

The tofu plant now consisted of an open kettle, VCM grinder, and hand press for the curds on the end of a swinging levered bar. White Wave started to deliver product to some Denver health food stores and in late 1978, not long after the move to Walnut Street, they landed their first supermarket chain, King Soopers supermarket chains, which began to order 100 cases. As business expanded, so did the need to improve packaging and marketing, and to control costs.

New packaging: White Wave couldn't get its tofu into supermarkets unless it was sold in water-packed film-sealed plastic tubs (trays); the Chinese carry-out food/fish cartons were not acceptable. So Demos bought a little hand-packing

machine that allowed one person to pack one block of tofu at a time in water in a plastic tray, then seal the tray with a film lid. Steve remembers first using this machine at the Walnut St. plant. Initially, he would seal the tofu tray with clear, unprinted film, then run one of their oval labels (the one with a hint of green color in it, used previously on the Chinese cartons) through a gluing machine (which was less expensive than buying pre-glued labels), and slap the label on the clear plastic film. This was White Wave's "first true commercial mass market package." The new marketable package led to many new accounts. After King Soopers the company got into the City Markets chain, then about a year later into Safeway, followed by a host of other chains in outlying areas. As business expanded, White Wave could afford pre-printed film labels for its tofu in plastic trays. The label design, though rectangular, was basically the same as the old oval. The ingredients new read: "High protein soybean cake contains: Soybeans grown without the use of herbicides or pesticides, filtered water, and nigari (salt bitterns). No more no less!" Soon a variety of textures were available: Extra firm press, firm organic, extra firm, and sift.

New sources of soybeans: White Wave had made its tofu from organic soybeans from day one. When the company first moved into Walnut Street, they were still buying these soybeans from Green Mountain Grainery in Boulder. But in the fall of 1978 Steve drove to a meeting of the Organic Growers Association in Iowa. He spoke about the demand for organic soybeans and met Marvin Kurpkeweight, who was already growing soybeans organically in eastern Nebraska. Steve visited Marvin's farm and contracted with him to buy organic soybeans direct from the farmer. Address: Lafayette, California.

2145. Shurtleff, William. 1987. History of White Wave, Inc. (Continued—Document part III). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.

• **Summary:** Continued: White Wave's tofu production was growing nicely. It rose from 120,000 lb. in 1978 (2,308 lb/week), to 179,000 lb. in 1979 (3,442 lb/week, up 49%), to 279,000 lb. in 1980 (5,365 lb/week, up 56% over 1979).

In February 1979 a major new product line was started: tempeh. Chip McIntosh was the first tempeh maker, followed by Chris O'Riley. An old kitchen refrigerator, warmed by light bulbs, was used as the incubator. The first two products were Soy Tempeh and Soya Rice Tempeh, the latter being America's first multi-ingredient, soy-and-grain tempeh.

At about the same time, a third new product was launched: Polar Bean. It was a soymilk based non-dairy frozen dessert, made in a soft serve machine but sold in hard-pack pints. The first flavor was Banana-carob. Later strawberry, chocolate, carob mint, and orange flavors were added. In about 1984 a soft serve version called Polar Softie was introduced but did not prove successful.

Also in 1979 Richard Leviton visited White wave and the Cow of China, and did an in-depth study of their operations and products, published in the 1979 issue of *Soycraft* magazine. Soyfoods sold both at “The Cow” and for wholesale distribution to other retailers included: Organic Nigari Tofu, Soymilk (Honey-Vanilla or Carob-Maple), Soysage, Tempeh, Missing Egg Salad, Tofu Mayo, Baked Savory Tofu Cutlets, Sweet Bean Tofu Pie, Miso Salad Dressings (Mellow or Hearty), and Tofu Treats or Creamies (Banana-Coconut, Peanut Carob, or Carob-Mint; squares of creamy baked tofu blend on a healthful oats-coconut-flour crust).

Other ready-to-eat items sold only at “The Cow” included Soysage Pate, “Macro” Pizza (with tofu), Tofu Spinach Dill Turnovers, Tofu Cinnamon Rolls, Hot Tofu Meatballs and Meatball Sandwiches, Sloppy Joe Sandwich (made with TVP), Tofu Cream Cheese & Black Olive Sandwich, Tofuna Sandwich (like tunafish), Strawberry Tofu Pie, Soy Sesame Bars, and Tofu Butternut Squash Pie. In mid-1979 bulk recipes for about ten of these products were published, with permission, in *Tofu & Soymilk Production* by Shurtleff and Aoyagi.

Leviton noted: “The Cow of China is surely one of the nation’s most ambitious and energetic soyfoods companies.” It was just about breaking even with weekly gross retail sales of \$1,000, three-fourths of which came from soyfoods. Concerning the growth of the still totally unmechanized little company Demos, now the self-styled “beneficent dictator,” always frank and candid, added:

“It was a hell of a struggle, especially for an undercapitalized small business. But I certainly wouldn’t discourage anybody because we started with nothing, and we’ve been going since then, and we’ve been able to make it all meet. We’ve just rigged, we’ve improvised, we’ve done everything imaginable, as I’m sure many other people in this industry have. We cut our salaries back, we did without a lot, but its own momentum kicked in. I suppose we consider ourselves alchemists in turning sweat into money. So, let me express my gratitude to everybody and everything, seen and unseen, who have helped us pull this together.”

In August 1979 Gary and Chandri Barat arrived in Boulder and spent several days studying the Cow of China. They had met Demos at the Second Annual Soyfoods Conference in Amherst, Massachusetts (July 26-29, 1979). They were driving around the country, studying tofu and developing a business plan in preparation for starting a soyfoods company, which later became Nature’s Inn, then Legume. As they studied The Cow of China and Demos invited them for dinner several times. He and his wife, Ginny, served a tofu spinach feta pie and mushroom caps stuffed with tofu. Later Barat told Demos more than once how much this visit has influenced him in starting a company based on tofu entrees. The lineage of Legume’s early products (Tofu Cream Pies, Tofu Spinach Pies) can be traced

back to The Cow of China.

Barat encouraged White Wave to do a feasibility study on converting The Cow of China into a fast food restaurant named The Family Diner and moving into a vacated A & W root beer stand three blocks from The Cow in a very attractive location. The study was done, a potential menu was developed, but financial backing did not come through.

A White Wave catalog published in December 1979 included several new products: Doufu (extra firm Chinese style tofu), Savory Baked Tofu, and Tamarind Nuts and Seeds (Almonds, Cashews, Spanish Peanuts, Sunflower Seeds, Nut Mix).

The Cow of China deli was doing well. By February 1980 sales were \$1,700 to \$2,000 a week and there were often lines out the door. By the summer of 1980, according to *Soyfoods* magazine, the Cow of China had been renamed the Good Belly Deli, with the slogan “Real Food, Real Fast” and White Wave was producing 7,500 pounds of tofu and tofu products a week. The new deli, an expanded and Americanized version of “The Cow,” continued to serve as an excellent showcase for the White Wave’s innovative ready-to-eat soyfood products. Working with a friend who was an advertising agent, Demos had dropped the line of assorted health foods (miso, sea vegetables, etc.), expanded the deli items, and installed a stand-up counter bar to eat at and a few tables and chairs. Formerly it had been all takeout. Hot and cold fast food was served. The deli attracted lots of business (there was still usually a line out the door), the products were very innovative and they were praised by the natural foods community in Boulder. Address: Lafayette, California.

2146. Shurtleff, William. 1987. History of White Wave, Inc. (Continued—Document part IV). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.

• **Summary:** Continued: But White Wave was growing by leaps and bounds, as were sales of tempeh and Polar Bean soy ice cream. White Wave was doing all its own delivery in its own trucks to Boulder and Denver. And the business had not been capitalized, except for one new \$3,000 loan that brought in a silent partner. A loan of \$4-5,000 was outstanding from the IRS, in unpaid taxes

The Good Belly Deli lasted only 5-6 months. Though it was doing well and was probably making money (though the financial records were poor), it increasingly became a thorn in Demos’ side, for it was getting out of control. It was a drain on his time and energy, more than he could handle, and it seemed to be less important than the manufacturing end of things. So one day in the spring of 1981 he walked in and announced that he was closing a business that had lines around the corner. He wanted to focus on his main goal: to become the largest tofu manufacturer in his region. In retrospect it was a good decision, but he adds, “We were

operating on a lot of idealism in those days, and not much practical business sense.” In October 1980 White Wave changed from a partnership to a corporation, with 5 active and one silent stockholders.

After closing the deli, the first real money came into the company. With a bank loan, they paid off the IRS, then soon paid back that loan. Then in the fall of 1981 Demos landed a \$69,900 SBA loan (SBA approved a bank loan) to buy new equipment and \$100,000 worth of equipment from Mountain High, a public company which made ice cream and yogurt, and needed to get out of their Boulder ice cream plant at North 57th Court.

At North 57th Court: In September 1981 White Wave moved again, this time to Mountain High’s former ice cream plant in an industrial park at 1990 North 57th Court. *Soyfoods* magazine reported that Demos threw a huge “factory-warming” party for several hundred friends and customers, serving Polar Bean and many favorite tofu and tempeh recipes. This represented a huge, key expansion. The square footage increased six to seven-fold, initially to 6,000 square feet including 22,000 cubic feet of walk-in cold storage space. Big new equipment was purchased with the SBA Loan. The number of stockholders was now reduced to three: Demos, Pat Calhoun, and Chip McIntosh. The business was able to survive because of loans. Demos cut his hair.

The percentage of sales generated by the various product lines was tofu 50% or more, ice cream 10-15%, tempeh 20-25%, and nut butters 10-15%.

For several years Demos had been urging King Soopers to move his product out of the produce section into the dairy section. In mid-1982, after studying a report on “The Tofu Market: Overview of a High-Potential Industry,” published in May 1981, King Soopers made the move, in part due to customer demand. Initially sales were unchanged, since customers couldn’t find the product. But there was a big advantage to King Soopers: no shrinkage from spoilage because of the lower temperature. The margin initially went down to 15%, the same as for dairy products. This brought the price down. Later they got smart and raised the margins for tofu. Not it’s higher than milk but still less than produce. “I’m glad to see them making lots of money on our products,” noted Demos.

In May 1983 White Wave made a major decision: to vacuum package their firm tofu. They bought a used Tiromat vacuum packager from a beef-jerky company in Los Angeles. Thereafter everything went wrong, so much that that one machine “almost broke the company’s back.” Demos later called it “the curse of the devil,” and his production manager would often ask only half in jest, “Do you think we are sitting in vacuum packaging hell?” They found that tofu is a very difficult product to vacuum pack, though firm tofu is easier than soft. They concluded that 30% of the problems were caused by the machine, 30%

by the product, and 30% by the operator, “and the rest was absolute karma.” The process was very unforgiving, as was the machine’s maker, which gave White Wave almost no support. They tried to disown the fact that Demos got stuck with a lemon. So White Wave had to solve all the problems by themselves.

Tempeh was now doing very well. In about 1982 White Wave began to make its own starter culture in order to get better quality control and save money: Alexander Lyon, who happened to be in town, spent a week teaching them the intricate process for \$100. They also began to sell all tempeh frozen, after steaming. The product line was steadily expanded. By 1983 the company had introduced a Tempeh Burger and 5 Grain Tempeh (with soybeans, millet, wheat, oats, and barley). By 1984 the burgers were the company’s best-selling tempeh product (48% of tempeh sales), followed by frozen soy tempeh (28%), soy & rice tempeh, then 5-grain tempeh. Accounting for one-fourth of White Wave’s sales in 1984, tempeh was now the company’s most profitable line of products. Making 5,850 pounds a week, White Wave had become America’s second largest tempeh producer (after Quong Hop & Co.) and distribution had reached California. In fact, tempeh had now passed tofu as White Wave’s most important product.

Polar Bean was also doing well. In 1984 it won a silver award in the annual Natural Foods Merchandiser contest, and that summer a Polar Pal ice cream sandwich was introduced.

“By 1983-84 White Wave broke the 10,000 pounds-of-tofu a week barrier and became a regional company, shipping tofu via many distributors throughout the midwest: Chicago [Illinois], Detroit [Michigan], Dallas [Texas], Salt Lake City [Utah], and Phoenix [Arizona].

Financial Crisis and Recovery: For most of its history, White Wave had been profitable, with plenty of cash and good financial records. Though the move to North 57th Court quadrupled their overhead, the company continued to make money for the first 2 years there, running a very tight ship. Then they started to encounter major equipment problems: a compressor breakdown and major non-stop vacuum packager nightmares. A maintenance team had to be hired. White Wave was growing into a company that needed management, but the sales volume could not support that. Sales were good, profits were small, and overhead was skyrocketing. This led to a slow tailspin, losing \$1,000 a month during 1983-84. These were not considered major losses but the upward trend had been reversed.

By August 1984 White Wave was \$40,000 in debt and people were burned out. Decisive action was needed. In September Demos hired Lester Karplus to take charge of daily operations while he started to do a business plan to raise equity. But in the following months losses increased dramatically, to \$10-\$15,000 a month. White Wave lost a total of \$60,000 during the next 6 months. Finally in February 1985, amidst his first real crisis, Demos fired

Karplus and McIntosh, and took over the whole company himself. His four-part strategy was cut overhead to the bone, bring in new cash quickly, hold creditors at bay as long as possible, and implement a system of data collection (which Karplus had helped develop) to generate better production and financial reports. Address: Lafayette, California.

2147. Shurtleff, William. 1987. History of White Wave, Inc. (Continued—Document part V). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.

• **Summary:** Continued: First, he laid off all managers (who were not producing day-to-day results). Future plans were put on hold.

In October 1984 Jason Bois, who had been around the health food business for many years, approached White Wave to discuss having White Wave make him a soft serve soy ice cream. Demos advised against soft serve, but when Bois persisted, Demos developed a new soft serve formula for him, containing tofu and spray dried soymilk. Launched in January 1985 and marketed under the name Tofruzen, they failed within four months, for lack of a market. Bois quickly returned to Demos and beseeched him to develop Tofruzen in hard pack pints so that Bois could use these products to raise equity capital in a public stock offering. Demos had all the hard-pack formulas for Tofruzen developed in 30 days, using an improved version of his Polar Bean as the base mix but with totally new flavors (chocolate, strawberry, vanilla-almond). After Tofruzen launched the new products mid-1985, they realized that they didn't really own anything. So Demos, with some unexpected luck and seeing a way to bring in new cash quickly, proposed Tofruzen buy the title to the formulas for \$25,000 cash, plus \$25,000 in 6 months, plus interest. And White Wave would have an extensive supply contract. Tofruzen agreed.

In December 1985 Tofruzen, Inc. raised \$1.6 million net in a public stock offering, and at that time paid White Wave its first cash. Tofruzen Bars followed in May 1987 and low-calorie Tofruzen Light in August. Once Demos saw that Tofruzen would be a successful product, he downplayed marketing of his Polar Bean. Tofruzen sales rose from \$91,000 in fiscal 1986 to \$158,000 in 1987.

Shortly after Karplus left, White Wave started selling its tofu in a colorful box. Karplus served as an agent to negotiate with advertisers and designers. The new package helped sales.

In mid-1985, to consolidate its business focus and bring in more cash, Demos sold White Wave's nut butter business to an employee for \$35,000. White Wave retained 5% interest in the company, which is now called Naturally Nuts.

To turn the tide of loosing money and get some badly needed breathing space, Pat Calhoun came up with a plan where she and Demos would call all the creditors and say, "Either we file bankruptcy or you allow us to pay off our

debts to you over a one year period." All creditors agreed to this plan.

In July 1985, the moment of truth, the turning point, arrived. The company was \$100,000 overextended (60 days behind in payments) and could not borrow money. Everyone was disheartened. Demos and Calhoun started regular sitting meditation again, recommitting himself to spiritual practice as central and profitability as essential. He recalls, "Once I got my priorities straight, things started to go well." Within 90 days White Wave had started to generate a positive cash flow. By mid-1986 the \$100,000 debt had been paid off, and White Wave was once again accumulating cash and savings.

Heady with the feeling that he could save a struggling small company, transforming it into a winner, Demos decided to try his approach on another company, Soyfoods Unlimited, a major tempeh manufacturer, which he had been offered an opportunity to buy. Having started tempeh production in February 1981 in San Leandro, California, Soyfoods Unlimited had grown to be America's third largest tempeh manufacturer by 1984. White Wave didn't have any extra money, but the offer made sense as a way to get distribution for White Wave products in California and the West Coast, and to increase production volume. So on 1 December 1986 White Wave made its first acquisition. The buyout took place over a period of time, with some cash down. By mid-1987 Soyfoods Unlimited had been turned around and was a profitable, wholly owned subsidiary. White Wave owned all the stock and had signed a supply agreement with Soyfoods Unlimited to supply them with everything. This acquisition, with all tempeh production for both brands done at White Wave in Boulder, helped boost weekly output to 17,000 lbs. a week by the fall of 1987, making White Wave the biggest tempeh manufacturer in the USA. Growth of tempeh was strong and its future looked very promising.

White Wave has long been one of America's most innovative tempeh companies, in part because of its faith in the potential and future of tempeh. Tempeh continued to be the company's most profitable product. During 1985-88 the tempeh line was expanded with a number of original and delicious varieties: Quinoa (6/85), Lemon Broil (10/86), Amaranth and Sea Veggie (both 3/87), Peanut Sesame (3/88), and Teriyaki Burger (8/88). These also gave his product line more shelf space, a key consideration.

At King Soopers and Safeway, White Wave now had three shelves with tofu and tempeh right in the middle of the dairy section.

Tofu production was also strong, averaging 15,000 lbs. a week in mid-1987. A future high priority was the plan to pasteurize their tofu to give longer shelf life. After several years of selling tofu vacuum packed in a box, White Wave introduced a water pack without the box for the Asian-American market and some Caucasians since they are not used to the vacuum pack, and they prefer softer tofu, which

cannot be vacuum packed.

By mid-1987 White Wave was back into high gear and growing nicely. Their space grew from 6,000 to 20,000 square feet. White Wave was one of the few Caucasian-run soyfoods companies that has been able to grow without selling most of the company. Demos' family has supported him to a large degree. He had borrowed roughly \$25,000 from friends and family. The company still owed one-third on its SBA and Mountain High loans, and some to family. Assets were now about \$300,000 and liabilities are \$200,000. Since May 1987 White Wave had money in the bank and a growth rate above 30%. The 1987 sales projection was \$2 million, of which 8-14% was expected to be profit.

In December, projected revenues for 1988 were \$3 million. The company was in the midst of a private placement offering for \$500,000 and the banks had approved equipment loans for \$600,000. They have put in a bid to purchase an old (built in 1978) meat processing house on 2.4 acres in Boulder.

The Future: New products to be launched in 1989 include several meat analogs (tofu hot dogs/franks, due in March, aimed at the mainstream market concerned with cholesterol) and a soy yogurt.

Demos has set a number of goals for White Wave. First, to become the major primary soyfoods ingredient manufacturer in the region, and to maintain a profit margin of at least 10%.

Second, to make the concept of a clearly delineated and identified "Soyfoods Section" in the dairy case, succeed at King Soopers and Safeway. Set off with plastic dividers between yogurt and milk products, the section would be filled out with second generation soy products. This new concept would allow him to compete with larger tofu manufacturers (such as Azumaya and Hinode) who are lower priced but sold in the produce section. Address: Lafayette, California.

2148. Shurtleff, William. 1987. History of White Wave, Inc. (Continued—Document part VI). Lafayette, California: Soyfoods Center. 11 p. Oct. Unpublished manuscript, based on interviews with Steve Demos from June 3 to Oct.

• **Summary:** Continued: Third, after (and only after) the Soyfoods Section concept does succeed, to approach other chains with the same idea and ultimately to get into the whole Kroger chain of 400 stores in the Midwest.

Fourth, to develop new tofu-dairy blends to reach the mainstream. For example, a vacuum packed tofu sold next to cheese, that tastes like cheese (it doesn't have to melt); it could be mixed with cheese or flavored like cheese. Or a tofu cheesecake made of half tofu (or tofu cream cheese) and half cream cheese, that was virtually identical in flavor and texture to all-dairy cheesecake but was lower in cholesterol, saturated fats, and calories.

Fifth, to give major attention to tempeh product

development. Demos thinks that tempeh represents a vast future potential because Americans like it better than tofu (though it is largely unknown), it offers good profitability, and the competition is not as severe as with tofu. Address: Lafayette, California.

2149. *SoyaScan Notes*. 1987. New Trend: Many of the new soyfoods are being developed and marketed as all-American and fun: Tofu and tempeh burgers, tofu hot dogs, soymilk shakes, soy ice creams, tofu chocolate bars (Overview). Oct. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** This is part of the larger trend of the Americanization of soyfoods.

2150. Praskin, Laurie. 1987. Recent developments with soyfoods in Guatemala (Interview). *SoyaScan Notes*. Nov. 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** El Centro de Soya, the soy dairy at Solola, is up and running as a commercial enterprise. They are making tofu, most of which is sold to Seventh-day Adventist vegetarian restaurants that cater to tourists in Panajachel, Guatemala City and Antigua (a big tourist center and the former capital of Guatemala). In the community of Solola, they spend a lot of time teaching people how to cook with the products, which they offer at a discount to community members. This has spurred a big increase in sales of tofu and soymilk to the community. A new product in 1987 is Paletas de Soya (Soy Sticks or soymilk popsicles) made with their own popsicle machine. The only flavor is chocolate. Two employees and one independent broker with carts sell them. Agostine Xoquic is manager of the dairy. Amado Del Valle is project coordinator of the whole program, including the agricultural parts, the demos, and the dairy. They make soymilk but only for those who bring a container to the dairy.

Amado and his partner Felipe are making tempeh, which is sold to restaurants. The business is still subsidized; Plenty pays the salaries of Amado and Augustine, and also buys new equipment. But profit from the sale of soy products pays dairy employees' salaries and operating expenses. And they do make a little "profit." They are also now running a soyfoods training center/demo program. In Quiche they have a home demo program, and women grow soybeans and make soymilk and tofu at home. The main thing is adding ground soybeans to corn to make tortillas.

After Plenty had to leave Guatemala in 1980, the Soy Dairy continued making tofu and soy ice cream, without outside funding, until 1983. Larry McDermott visited in April 1985 and production started again in mid-1985. Address: 17969 Oak Dr., Los Gatos, California 95030. Phone: 408-353-2649.

2151. Barrett, Mariclare. 1987. Soyfoods almanac. *Vegetarian Times*. Nov. p. 35-38, 40. [3 ref]

• **Summary:** An overview and introduction to tofu,

tempeh, miso, soy sauce, etc. with summary of some new developments. Photos show Betsey Shipley & Gunter Pfaff, Jan Belleme, Henry Ford wielding axe against trunk of car made of soybeans.

2152. Eden Foods, Inc. 1987. Product description: Eden Foods quality natural foods. 701 Tecumseh Rd., Clinton, MI 49236. 21 p. Plus 6 pages of inserts. Catalog.

• **Summary:** The catalog lists the following soyfoods: Edensoy (Original, Vanilla, Carob; shown on page 1. “Edensoy is the best tasting, best selling, best made natural soymilk on the market”), black soybeans (they “have a hearty yet sweet taste. In Japan, black soybeans are always prepared for the New Year’s celebration as they are a symbol of health.”), organically grown soybeans (usually Corsoy or Amsoy), Eden tekka (“a hearty, nutritious condiment made from hacho miso, carrots, burdock, ginger root, and unrefined sesame oil; 2.8 oz), dried tofu (actually dried-frozen; 5.8 oz), barley (mugi) miso, brown rice (genmai) miso, buckwheat (soba) miso, light (shiro) miso, rice (kome) miso, hacho (100% soybean) miso, natto miso “Kinzanji,” shoyu, organic shoyu, low-sodium shoyu, wheat-free tamari, tamari-roasted nuts and seeds wheat free (pumpkin seeds, sunnies [sunflower seeds], almonds, cashews, mixed nuts), and Lima Tempeh.

Some interesting non-soy foods listed in the catalog include quinoa (16.2% protein), kudzu-kiri, kudzu root starch, adzuki beans, mochi (100% brown rice, with mugwort, or with millet), sea vegetables, organic amazake, barley malt syrup, and Lima seitan.

In the spring of 1986, Eden Foods became General Agent for North America for the Lima Company of Belgium. Lima soyfood products include Lima Tempeh. Note: This catalog was still in use in Jan. 1989. Address: Clinton, Michigan. Phone: 517/456-7424 or 800/248-0301.

2153. Gleason, Jane; Weliwita, S.M.A. 1987. Home and village level soyabean utilization training in Sri Lanka: Accomplishments, constraints and potential. INTSOY/DARP/SFRC, Sri Lanka. 14 p. Unpublished manuscript.

• **Summary:** A detailed analysis with many summary statistics. This paper argues that because of the large amount of time and fuel required, and general difficulties of making foods at home from whole soybeans, they will not be widely made there. From 1978 to Nov. 1987 SFRC trainers have directly trained over 30,000 people in soya utilization. Of these, almost 27,000 were trained at outstation demonstrations, while over 4,000 were trained at SFRC.

However, because of processing difficulties and time requirements, it questions the premise that widespread home level utilization of whole soyabean will occur.

The instructors were asked what types of soyafoods are most likely to be integrated into Sri Lankan diets. Soya-fortified kola kenda, a traditional drink made from coconut,

rice flour, and leaves of a variety of herbs was most often mentioned as 21 of 48 respondents placed kola kenda in their top three choices. After kenda, the instructors ranked soya-fortified pittu (18), roti (13), snacks (13), waddhi (12), and curry (11) as foods most apt to be part of Sri Lankan diets. Ten respondents stated that soymilk could easily become popular.

The responses of the instructors show that soya will most likely be integrated into local diets through fortification of already popular foods. Many commented that soya flour should be made available for this purpose. Traditional soyafoods from other parts of Asia, for example, tofu in East Asia and tempeh in Indonesia, were not highly ranked as foods easily accepted by Sri Lankans. Only four respondents thought that tofu and none of the respondents thought that tempeh could become important in Sri Lanka.

Table 6 indicates “What characteristic makes soya appropriate for villagers?”—Nutrition, 42 respondents; Low cost, 20 respondents; Taste, 5 respondents. Table 7 indicates “Price per unit protein of common foods in Sri Lanka”—Soyabean, 0.04; Chicken, 0.21; Dried fish (fat poor), 0.11; TVP, 0.16. Table 7 also indicates “What constrains soya consumption?”—Unreliable supply of soya, 23 respondents; Odd flavour, 22 respondents; Lack of preparation knowledge, 18 respondents; Difficult to prepare, 14 respondents.

Interpretation of the evidence—Three important points can be gleaned from the information provided by the extension workers and the villagers: 1. Thousands of Sri Lankans are aware of the benefits of soya. For the average consumer, the most important consideration when purchasing food is taste, not nutrition. 2. Therefore, soya will most likely be consumed in a form that is already familiar to villagers. 3. It is significant that more instructors consumed TVP than all other types of soya products. Conclusion—The best method of making soya products available to consumers is to work towards greater commercial application of soya utilization technologies.

Training should, therefore, emphasize extension to entrepreneurs. Address: Sri Lanka.

2154. Goldbeck, Nikki; Goldbeck, David. 1987. The Goldbeck’s guide to good food. New York, NY: New American Library. xi + 563 p. Illust. Index. 24 cm.

• **Summary:** The all-new version of their *Supermarket Handbook*, which originally sold 850,000 copies. Chapter 12 (p. 143-51), titled “Soyfoods: World Class Protein,” discusses tofu, frozen tofu, tempeh, soy flour and grits, high-tech soy (soy concentrates and isolates), textured soy protein products. There is also considerable information on soyfoods in other chapters throughout the book: Soy flour (p. 79). Soy nuts (p. 159, 163). Soy milk (p. 184-85). Soy yogurt (p. 190-91, 195). Soy cheese (212, 217-18). Soy protein concentrates or isolates (p. 233, 451, 483, 527). Soy oil (p. 144, 264, 288, 292-93). Meatless burgers and soy sausages (p. 394). Soy ice

cream (p. 452-53, 455). Soy sauce (510-11, 515). Miso (p. 511-12, 515). Worcestershire sauce (p. 512).

The section titled "Soy Yogurt" gives a nutritional analysis of cultured Soygurt, made by Cream of the Bean; per 8 oz. it contains 255 calories, 6.7 gm protein, 45.2 gm carbohydrates, 5.3 gm fat, no cholesterol, 20 mg sodium, and 7% of the US RDA for calcium. The text reads: "Those who must avoid milk will be interested in nondairy soy yogurt. A new arrival in natural food stores, this yogurt is made from soymilk and bacterial cultures. Gelatin is added to some brands to maintain the typical yogurt consistency. There is no need, however, for the quality to be compromised by the addition of high fructose corn syrup, isolated soy protein, salt, and several thickening agents, as has been done in at least one brand we have encountered."

The section titled "Soy Cheese" states: "Cheese based on soy milk has recently added a new category of cheese products to the market. In terms of calories, protein, and overall fat content soy cheese competes quite favorably with animal cheeses... It is both lactose- and cholesterol-free and the sodium content is about average for cheese. Note, however, that soy cheese is held together with vegetable gums and will contain either the milk derivative calcium caseinate (in which case it is not dairy free) or isolated soy protein." Page 218 gives a nutritional analysis of Soya Kaas (soy cheese). Per 1 oz. it contains 78 calories, 6.7 gm protein, 5.6 gm fat, no cholesterol, and 168 mg sodium. Address: R.D. 1, Box 495, Woodstock, New York 12498 914-679-8561.

2155. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** La Finestra sul Cielo S.r.l.

**Manufacturer's Address:** Via Brandizzo 416, 10088 Volpiano (Torino), Italy. Phone: 011/9951818.

**Date of Introduction:** 1987. November.

**Wt/Vol., Packaging, Price:** Plastic packets.

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter from Giovanna F. Mazzieri. 1993. Oct. 6. As far as she knows, the first and only company that has ever sold tempeh commercially in Italy is La Finestra Sul Cielo S.r.l., an important macrobiotic center, located at Via Brandizzo 149, 10088 Volpiano (Torino [Turin]). Phone: 011/9951818.

Letter (fax) from Carlo Guglielmo, founder of La Finestra sul Cielo. 1993. Nov. 5. This product was introduced in the fall of 1987 and was the first tempeh made commercially in Italy. Carlo and Lucio de Berti developed the process; Lucio actually made the tempeh. For details, see the full text of this letter. Note: La Finestra sul Cielo means "A window to the sky."

2156. Moslehuddin, A.B.M.; Hang, Y.D. 1987. Effect of processing methods on the nutritional value of *Lathyrus*

*sativus* seeds. *Nutrition Reports International* 36(5):1099-1103. Nov. [11 ref]

• **Summary:** The seeds of *Lathyrus sativus* (Lathyrus pea / chickling vetch) were cooked, inoculated with *Rhizopus oligosporus*, and fermented to make tempeh. During the process, the vitamin B-12 contents increased significantly. Amino acid levels were also measured. Address: Dep. of Food Science & Technology, Cornell Univ., Geneva, New York 14456.

2157. **Product Name:** Tempeh.

**Manufacturer's Name:** Northern Soyfoods.

**Manufacturer's Address:** 36 Lime St., Newcastle upon Tyne, NE5 2PN, England. Phone: 091-274-4932.

**Date of Introduction:** 1987. November.

**New Product–Documentation:** Letter from Peter R. Burn. 1987. Nov. He and T. Thompson are the proprietors. They started making tempeh in October or November 1987. Second letter. 1988. July 14. Talk with Peter Burn. His office address is 19 Lanercost Drive, Newcastle upon Tyne, ND5 2DH.

2158. *Vegetarian Times*. 1987. Brother Ron's friendly foods. Nov. p. 42-44, 46, 48-50, 52. [1 ref]

• **Summary:** Brother Ron Pickarski, a Franciscan friar and a world class vegetarian chef, won bronze medals in both the 1980 and 1984 Culinary Olympics. Now he is testing recipes to enter in the 1988 Olympics, and writing his first cookbook titled "Brother Ron's Friendly Foods." Brother Ron is believed to be the only vegan who is also a certified executive chef, a title shared by 1,400 other American chefs. Most of his favorite recipes included in this article feature soyfoods: Alsatian onion pie (with soymilk and tofu). Primavera of vegetables (with tofu). Tofu bonne femme (with soymilk). Sweet & sour tempeh. Color photos show Brother Ron and several of his preparations.

2159. *Whole Foods*. 1987. Sensational soyfoods. Nov. p. 62. [5 ref]

• **Summary:** This basic introduction is designed to be photocopied by natural food retailers for distribution to their customers.

2160. *Toyo Shinpo (Soyfoods News)*. 1987. Seidai ni Pari de kenkô shokuhin ten. Oshu de nobiru tônyû [Successful health food exposition in Paris helps to introduce Europe to soymilk]. Dec. 1. p. 1. [Jap; eng+]

• **Summary:** Soymilk, tempeh, and tofu are becoming more popular in Europe thanks to a recent soyfoods exposition in Paris. There were soymilk desserts, vanilla and chocolate, and Cacoja's soymilk, Soja, received a lot of attention at the event.

2161. Narten, Jeff. 1987. History of North Coast Tempeh and

its products. 1088 Ivanhoe, Cleveland, OH 44110. 4 p. Dec. 7. Unpublished manuscript.

• **Summary:** North Coast Tempeh started in house in August 1979, started using the facilities of Cleveland Tofu to make tempeh in 1980, incorporated in Sept. 1981, moved to 18320 Euclid in 1982, and opened the Noble Bean Deli on 12 Nov. 1982. Learned a lot from Lotus Cafe. Moved in 1987 to 1088 Ivanhoe in Cleveland for production of tempeh and products. The deli moved to 2246 Lee Rd., Cleveland Heights. "We now distribute to western Pennsylvania, Detroit, and most of Ohio. Our aim is to be a strong Midwest regional tempeh maker with a diverse in-house production. Our deli has become able to support itself and continues to offer great feedback for product development." They now produce about 650 lb/week of tempeh, and production is growing. Address: Cleveland, Ohio.

2162. Santa Cruz, Diego. 1987. Soyfoods in Chile (Interview). *SoyaScan Notes*. Dec. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Diego just returned from 1 month in Chile. The only activity he saw related to soyfoods was by Dr. Eduardo Barriga at Chanalfonso outside Santiago. He is making tofu and donating some of it to the "Ollas Communes," or common pots for the poor. He is also trying to introduce tempeh. Diego is considering starting production of soyfoods in Chile. Address: San Rafael, California. Phone: 415-465-1045.

2163. *Toyo Shinpo (Soyfoods News)*. 1987. Kenko shokuhin toshite dô kôken suruka. Murata Kiku kyôju o kakonde [How does tempeh contribute as a health food?]. Dec. 21. p. 3. [Jap; eng+]

• **Summary:** This article discusses the 5th Japan tempeh conference that was held in Hyogo-ken on December 19, 1987. The following topics were discussed: 1. Tempeh's anti-mutagenic properties (*kohenigen-sei*). Kyoko Ebata gave a lecture on current experiments which focused on tempeh's resistance to the salmonella bacterium; 2. How the Japanese people are accepting tempeh and foods made from it. Lecture given by Goro Kanasugi and Makio Takato; 3. Hyogo High School's experiments on cooking with tempeh, tempeh recipes, and tempeh's acceptance. Lecture by Kojima.

2164. *Toyo Shinpo (Soyfoods News)*. 1987. Tenpe de "Mura Okoshi" jigyo [Development of a village—using tempeh]. Dec. 21. p. 1. [Jap; eng+]

• **Summary:** The 5th tempeh meeting and study group, held in Kasuga-cho, Hyogo-ken on December 19, 1987, drew 40 people, including Dr. Tadao Watanabe and Mr. Goro Kanasugi. The inhabitants of one village are trying to revitalize their village using tempeh. In Kenritsu Hyogo High School (Food Processing Dept.) experiments are being done with various foods made from/with tempeh, including

bread, cookies, rice crackers, and jams. This high school was formerly an agricultural high school and they are very interested in making a product that might make their village famous.

2165. Robertson, Gary. 1987. Soyfoods Unlimited's most important tempeh innovations (Interview). *SoyaScan Notes*. Dec. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** First, applying Hananya Kronenberg's ideas for an in-house laboratory making tempeh starter culture so that they work in a commercial tempeh company. His consulting cost a little less than \$2,000 plus about \$5,000 in lab equipment, including a \$25,000 autoclave. The method for making silica gel crystals (the heart of Kronenberg's PhD thesis, he adapted from Columbia Univ. project) was very important. The mother culture tempeh spores were stored on these crystals to keep them dry and viable until they were later grown out on petri dishes. Kronenberg's starter produced better tempeh than did the NRRL culture.

Second, the design of the incubation room. It went up to an inverted V at the top so the hot air would collect there and be blown out into a plenum on top by fans. The room was also surrounded by a plenum. Cool air came in from below and entered the room through cracks in the walls when the fan blew hot air out.

Third, the dry dehulling was that developed by the University of Illinois. It was all gravity feed and very clean and efficient. Fourth, the method of making burgers using plastic rounds. Fifth, a moveable, portable pump that pumped the beans out of the kettle after cooking. Concerning White Wave, Gary feels that their tempeh is no longer as good as SUL's was. Steve Demos did not take the time to learn the starter or tempeh process properly and he will be in a real bind when he runs out of crystals and Kronenberg's culture. Address: Soyfoods Unlimited, San Leandro, California.

2166. Brown, Judy. 1987. Tempeh sales plateau in natural foods market. Marketers looking at new varieties and product areas for growth. *Soya Newsletter (Bar Harbor, Maine)*. Nov/Dec. p. 1, 8-9. [2 ref]

• **Summary:** White Wave (Boulder, Colorado), which projects sales of \$2 million for all products in 1987, produces 15-20,000 lb/week of tempeh, making the company America's largest tempeh producer. Tempeh products under the White Wave label include Soy, Soy-Rice, 5 Grain, Quinoa, Amaranth, Lemon Broil, Tempeh Burgers (two styles) and Sea Vegetable Tempeh. The Soyfoods Unlimited line includes Soy, 3 Grain, 5 Grain, Burgers, and Cutlets. Lightlife Foods (Greenfield, Massachusetts) is the second largest, producing 7,690 lb/week [up 40% over Jan. 1984]. The company's line has diversified from standard Soy Tempeh and 3-Grain Tempeh to Soy with Caraway, Quinoa, Sesame, Garden Vegetable, Macro Power, Fakin' Bacon,

and Tempeh Burgers. Lightlife's sales of all products was \$800,000 for 1987, projected to rise to \$1.2 million for 1988. The decision to diversify from tempeh only products was made after the company's tempeh sales plateaued in 1983. Competition became severe and supply outgrew demand.

Appropriate Foods (Brooklyn, New York) notes that "sales surged between 1980 and 1984, but have since flattened out." Brown estimates that "approximately 2 million lb of tempeh will be produced in the U.S. in 1987, with manufacturers' sales pegged at \$2.7 million and retail sales at around \$5 million." These sales and production figures show no growth in the industry since Soyfoods Center did its survey of manufacturers in early 1984. Average retail prices for an 8-oz package of plain soy tempeh ranged from \$1.00 to \$1.30; for multi-grain varieties from \$1.10 to \$1.40; and for burgers and newer exotic products from \$1.30 to \$1.70... The top two tempeh producers are confident of the marketplace and believe strongly in the potential of tempeh.

2167. Golbitz, Peter. 1987. 1987 new product count: At least 217 new soyfood products for retail sale. *Soya Newsletter (Bar Harbor, Maine)*. Nov/Dec. p. 3.

• **Summary:** Of the 217 new products, the leaders in the 8 product categories were Nondairy Frozen Desserts (50), Entrees (44), Beverages (35), Snacks/Desserts (35), Cheese Alternatives (19), Frozen Entrees (17), and Condiments (16). The leaders among the 8 primary soy ingredients were tofu (133), soymilk (32), textured soy protein (19), isolated soy protein (12), soynuts (10), tempeh (6) and miso (1). Tofu was the only primary soy ingredient used to make at least one product in all categories. A complete listing of these products broken down by primary soy ingredient and by category, and which also lists flavors, company name, city, and state, is available from *Soya Newsletter* for \$25 (or \$35 in Canada). Address: Soyatech, Bar Harbor, Maine.

2168. Golbitz, Peter. 1987. Soya interview: Bill Shurtleff, noted soyfoods author, speaks on the trends and future of soyfoods. *Soya Newsletter (Bar Harbor, Maine)*. Nov/Dec. p. 4-5.

• **Summary:** Shurtleff sees seven positive trends showing that the soyfoods industry is in a healthy growth pattern: 1. The remarkable growth in the number of new soyfoods products, 273 to date in 1987. 2. The increasing quality of these products and the sophistication with which they are marketed. 3. The growing consumer interest in soyfoods as reflected in the steady increase in media coverage. The SAA clipping service has received 1,145 clips on soyfoods so far this year. 4. The increasingly positive image of soyfoods in the Western world (though a Roper poll in mid-1986 found tofu to be America's "most hated" food). 5. The growing scientific and consumer awareness of the health dangers of the standard American meat-centered diet. 6. The increasing interest in natural foods, in vegetarianism, and in reducing

consumption of red meat. 7. The historically unprecedented extensive and positive coverage given to dairylike soyfoods by dairy magazines. He also discusses the probable effects of a large food company, such as Kraft, starting to make and market tofu aggressively. Address: Soyatech, Bar Harbor, Maine.

2169. **Product Name:** Organic Tofu [Plain, or Smoked], Tofuburger, and Organic Tempeh.

**Manufacturer's Name:** Oasis Wholefoods.

**Manufacturer's Address:** Unit 3C, Dart Units, Steamer Quay Rd., Totnes, South Devon TQ9 5AL, England. Phone: 0803 863167.

**Date of Introduction:** 1987. December.

**New Product-Documentation:** Note from Simon Bailey. 1988. Oct. 10. Formerly Lifestream Wholefoods, owned by Francis Checkley, this business was sold in Dec. 1987 to Mr. I.J. Mohammed.

Letter from I.J. Mohammed. 1991. Sept. 9. He makes tofu, tofu burgers, tempeh, miso, breads and cakes on a community scale. He has been making these foods for the last 5 years, all by hand.

2170. **Product Name:** Chinese Tempeh Rolls.

**Manufacturer's Name:** Plenty Canada Soya Utilization Project.

**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.

**Date of Introduction:** 1987. December.

**Ingredients:** Fresh or dried tempeh, chilies, onions, spices, salt, white wheat flour, soya flour, biscuit powder, pepper.

**Wt/Vol., Packaging, Price:** Each roll, 3.5 inches long and 1 inch diameter, retails for Rs. 3/-.

**New Product-Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see *Chocolate Milk* (Aug. 1987). The product is adapted from a local recipe for a deep-fried food.

2171. **Product Name:** Tempeh.

**Manufacturer's Name:** Southern Soy.

**Manufacturer's Address:** P.O. Box 22.471, Christchurch, New Zealand. Phone: 810-736.

**Date of Introduction:** 1987. December.

**Ingredients:** Soybeans, water, rhizopus.

**New Product-Documentation:** Talk with Seth Tibbott. 1990. Aug. 15. Seth visited Nigel Harris, the owner, in New Zealand in Dec. 1987. He made tempeh at that time, and perhaps tofu. Seth has a label for his tempeh. Note: A letter written to this company at the above address in Feb. 1992 was returned. Nor did Christchurch telephone directory assistance have any listing for the company. Seth Tibbott does not have a more current address.

2172. *Soyanews (Sri Lanka)*. 1987. Plenty Soya centre opens in Kandy. 9(2):1-2. Dec.

• **Summary:** "One of the main objectives of the project is to have the Soya Centre act as a central point from which all of the soya products available in Sri Lanka can be obtained at a reasonable cost and in consistent supply. Another major objective is to assist community groups and small businessmen to set up their own small scale soya processing operations." The opening took place on 28 September 1987. Mr. Ian Taylor of Plenty Canada is the director.

"This is the first stage of a five year soya promotion project funded by the Canadian International Development Agency (CIDA) and implemented by Plenty Canada in collaboration with the Soybean Food Research Centre (SFRC) at Gannoruwa and various local non-governmental agencies." The Soya Food Centre is equipped to manufacture a wide range of soya based products including ice cream, stuffed rotis, soya watalappam, fresh as well as dried tempeh and cutlets. One of the main objectives of the project is to have the Soya Centre act as a central point from which all of the soya products available in Sri Lanka can be obtained at a reasonable cost and consistent supply.

The Plenty Soya Food Centre is open from Monday to Saturday and is located on the main floor of the Y.M.C.A. at No. 88A, Kotagodella Vidiya, Kandy. The project is a result of a collaboration with Plenty's Field Director, Mr. Ian Taylor in November, 1986.

2173. Suparmo, -; Markakis, P. 1987. Tempeh prepared from germinated soybeans. *J. of Food Science* 52(6):1736-37. Nov/Dec. [11 ref]

• **Summary:** The contents of oligosaccharides (sucrose, raffinose, and stachyose) and of phytate in soybeans were reduced by 12-24 hours of germination. Fermentation of these soy sprouts to make tempeh caused a further decrease in oligosaccharide, phytate, and fat content, and an increase of the proportion of protein in tempeh solids. Soybean lectins were not affected by germination but were inactivated during preparation of tempeh. The adjusted PER for regular tempeh was 2.19 vs. 2.26 for tempeh made from soy sprouts.

Table 2 shows the oligosaccharide and phytic acid contents of dormant [whole dry] and germinated soybeans, and tempeh made from them. The raffinose content of dormant/dry soybeans (percentage of dry weight) was 0.2; it decreased to 0.1 in soybeans germinated for 24 hours, and in tempeh made from regular or germinated soybeans. The stachyose content of dormant/dry soybeans was 3.8; it decreased to 3.3 in soybeans germinated for 24 hours, to 1.8 in soy tempeh, and to 0.5 in tempeh made from soybeans germinated for 24 hours. The phytic acid content of dormant/dry soybeans was 1.3; it decreased to 1.2 in soybeans germinated for 24 hours, to 0.8 in soy tempeh, and to 0.6 in tempeh made from soybeans germinated for 24 hours. Address: Dep. of Food Science & Human Nutrition,

Michigan State Univ., E. Lansing, MI 48824-1224.

2174. **Product Name:** No Chicken Salad (With Tempeh in a Pita Pocket), Tofu Salad (in a Pita Pocket), and Nori Rolls (With Tofu Filling).

**Manufacturer's Name:** Terra's Specialty Foods.

**Manufacturer's Address:** R.D. 1, Box 317, Vernon, VT 05354. Phone: 802-254-5242.

**Date of Introduction:** 1987. December.

**New Product-Documentation:** Talk with Bari Madwin. June 29 and Aug. 28. Susan Quinn sells tofu and tempeh sandwiches in Brattleboro. She bought an existing company in 1988. She uses about 12 lb/week of tofu.

Talk with Susan Quinn. 1988. Aug. 30. She bought this company from Martha Brown in Aug. 1987. It was named Martha's Sandwiches, but she renamed it Terra's Specialty Foods in Feb. 1988. At the time, Martha had a line of sandwiches, including Eggless Tofu Salad (in a sandwich, 8 oz) and BLT with Fakin' Bacon (made from tempeh). Susan introduced her three products in December 1987. The tofu salad in a pita pocket weighs 4 oz. The tofu in the nori rolls is marinated, broiled, then put in with the veggies. She buys her tofu from the food co-op. It is a part-time business.

2175. **Product Name:** Tempeh Tabooli.

**Manufacturer's Name:** 21st Century Foods Inc.

**Manufacturer's Address:** 30A Germania St., Jamaica Plain, MA 02130.

**Date of Introduction:** 1987.

**Ingredients:** Organic sesame wheat tempeh, cracked wheat, carrots, cabbage, parsley, onions, olive oil, wood aged apple cider vinegar, 100% pure natural lemon juice, garlic, sea salt.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product-Documentation:** Label. 1987. 3.5 inch diameter. Green and black on yellow. "New! 100% natural. No preservatives." Posner. 1987. 21st Century Whole Foods Cook Book. Inside rear cover.

2176. **Product Name:** Sesame Wheat Tempeh Burgers.

**Manufacturer's Name:** 21st Century Foods Inc.

**Manufacturer's Address:** 30A Germania St., Jamaica Plain, MA 02130.

**Date of Introduction:** 1987.

**Ingredients:** Organic soy tempeh, bulghur wheat, roasted sesame seeds, tamari, natural hickory smoke, lemon juice, herbs, spices.

**Wt/Vol., Packaging, Price:** 5.5 oz.

**How Stored:** Refrigerated or frozen.

**New Product-Documentation:** Label. 1987. 3 inch diameter. Black and red on yellow. "New! All natural. Gourmet."

2177. Berghofer, Emmerich. 1987. Nutzung

aussereuropaisches fermentierter Lebensmittel fuer heimische Zwecke [Application of non-European fermented foods for domestic uses]. *Ernaehrung (Die)* 11(1):14-22. [Ger]\*

• **Summary:** The author has made tempeh from fava beans (*Vicia faba*, Ackerbohnen) on a laboratory scale. Address: Inst. fuer Lebensmitteltechnologie der Universitaet fuer Bodenkunde.

2178. **Product Name:** [Tempeh Salads].

**Manufacturer's Name:** De Hobbit.

**Manufacturer's Address:** Waterstraat 4, B-9980 St. Laureins, Belgium.

**Date of Introduction:** 1987.

**New Product–Documentation:** Soya Bluebook. 1987. p. 95.

2179. **Product Name:** [Tempeh].

**Manufacturer's Name:** Granja Tierra Nueva.

**Manufacturer's Address:** Aldea San Luis, La Azulita, C.P. 5102, Estado Merida, Venezuela.

**Date of Introduction:** 1987.

**New Product–Documentation:** Letter from Ing. Oswaldo Perez. 1987. July.

2180. Mahmud, Mien K. ed. 1987. Applied research and training on tempe. *U.N.U. [United Nations University] Tempe Newsletter* 1:2-6. \*

• **Summary:** Note: The following was retrieved from <http://archive.unu.edu/unupress/food/8F101e/8F101E0d.htm>: “Tempe newsletter: In 1986 a first course of applied research and training on tempe was held at the Nutrition Research and Development Centre, Bogor, Indonesia. The training participants were ten scientists from Asia and Africa. Funding was provided by the United Nations University.

“Participants pointed out the following benefits from the training: Tempe technology is an appropriate technology for processing legumes (not only soybeans) into palatable, safe, and nutritious food. The significant health effects of soybean tempe, especially the complementary value of tempe protein for cereals and other carbohydrate sources and the high content of dietary fibre and its effect on diarrhoea [diarrhea], are very important for developing countries. Tempe can be used in nutrition improvement programmes.

“The transfer of tempe technology to developing countries will! help promote the nutritional status of their populations. This can be achieved only if the trainees disseminate the knowledge and skill gained from the training in their own countries.

“To keep the participants aware of developments in tempe technology, a Tempe Newsletter, funded by the United Nations University, is being published four times a year by the Nutrition Research and Development Centre. Those interested in further information should write to the Nutrition

Research and Development Centre, Komplek Gizi Jl. Dr. Semeru, Bogor 16112, Indonesia.” Address: Indonesia.

2181. **Product Name:** Quinoa Tempeh.

**Manufacturer's Name:** Noble Bean.

**Manufacturer's Address:** R.R. 1, McDonalds Corners (near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-2305.

**Date of Introduction:** 1987.

**How Stored:** Frozen.

**New Product–Documentation:** Letter (fax) from Allan Brown. 1998. Jan. 21. This tempeh was first sold in 1987.

2182. **Product Name:** Noble Bean Eggless Tempeh Salad.

**Manufacturer's Name:** North Coast Tempeh Co.

**Manufacturer's Address:** 1088 Ivanhoe Rd., Cleveland, OH 44110.

**Date of Introduction:** 1987.

**Ingredients:** Tempeh (Organic soybeans, water, *Rhizopus* culture), imitation mayonnaise (soy oil, water, honey, cider vinegar, lemon juice, natural spices, kelp, onion powder), celery, pickles, onion, parsley, shoyu, mustard, garlic powder.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1987. Oval 4 by 2.75 inches. Blue, red, green, and yellow on white. Jeff Narten. 1987. “History of North Coast Tempeh and its Products.” 4 p. Dec. 7.

2183. **Product Name:** The Soy Deli Gourmet Fresh Almond Veggie-Nut Butter (Tempeh-Based).

**Manufacturer's Name:** Quong Hop & Co.

**Manufacturer's Address:** 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.

**Date of Introduction:** 1987.

**Ingredients:** Organic tempeh (water, organic\* soybeans, *Rhizopus oligosporus*), apple cider, carrots, pinto beans, water, raw almonds, corn oil. \* Grown in accordance with Calif. Health & Safety Code 26569.11.

**How Stored:** Refrigerated.

**New Product–Documentation:** Labels. 1987. 3.5 inch diameter. Salmon tan and black on white. “Master Tofu-Makers Since 1906.”

2184. Ratnamani, A. 1987. Acceptability, nutritive value and shelflife study of tempe prepared with sunflower seed and soybean dhal. MSc thesis, University of Agricultural Sciences, Bangalore. \*

2185. Samish, Shlomith. 1987. Tempeh-like fermented food product from soybean. Research Development Company of The Hebrew University of Jerusalem, P.O. Box 4279, Jerusalem 91042, Israel. 1 p. F-0097.

• **Summary:** “The innovative process and resulting products developed are economically and nutritionally superior, require less time, energy, and labor, and pose no pollution problems. The process requires a short cooking time, or the product can even be prepared without cooking. It obviates the need for soaking and dehulling. The yield is 2.37.”

Address: Dep. of Biochemistry and Human Nutrition, Faculty of Agriculture, The Hebrew Univ. of Jerusalem. Phone: 02-699033.

2186. Samish, S. 1987. An improved method for producing tempeh from soybeans. In: Book of Abstracts, 7th World Congress of Food Science and Technology. Raffles City, Singapore: Institute of Food Science and Technology. See p. 145. Held Sept. 1987 in Singapore. \*

2187. **Product Name:** [Tempeh, and Tofu].

**Foreign Name:** Tempeh, Tofu.

**Manufacturer's Name:** Soleil de Lalise.

**Manufacturer's Address:** Domaine de Galise, 32260 Tachares, France. Phone: 62.65.35.63.

**Date of Introduction:** 1987.

**New Product–Documentation:** Letter from Jean-Luc Alonso of Gaia in Graulhet, France. 1994. May 16. In 1987, a company named Soleil de Lalise (meaning “the sun of Lalise”), located near Agen, also began to make tempeh and tofu. These products are still sold by this firm. Their address is: Domaine de Galise, 32260 Tachares, France. Phone: 62.65.35.63.

2188. Wang, Hwa L. 1987. Technical aspects of whole soybean use. In: Jacqueline Dupont and Elizabeth M. Mosman, eds. 1987. *Cereals and Legumes in the Food Supply*. Ames, Iowa: Iowa State Univ. Press. See p. 97-118. Proceedings of the Iowa State Univ. Nutritional Science Council Symposium, “Roles of Cereals and Legumes in the Food Supply.” 1983. [33 ref]

• **Summary:** Contents: Introduction. Traditional uses of whole soybeans as food. Hydration of whole soybeans. Tofu. Tempeh. This article focus mostly on to tofu and tempeh, which are made by two simple processes for converting soybeans into interesting and attractive foods.

Table 8.1 lists 6 Oriental nonfermented soybean foods, and Table 8.2 lists 6 Oriental fermented soybean foods. Address: NRRC, Peoria, Illinois.

2189. Albert, Rachel. 1987. *Gourmet wholefoods: Vegetarian and macrobiotic cuisine*. Grain of Salt Publishing, 2211 N.E. 50th, Suite #12, Seattle, WA 98105. xi + 176 p. Illust. by Rebecca Rickabaugh. Index. Introduction by Karl Mincin. 21cm.

• **Summary:** This vegan cookbook contains no recipes calling for eggs or dairy products. At last, a macrobiotic cookbook without fish. This book has a brief, unstuffy

introduction to macrobiotics and tasty, creative recipes. Includes 11 recipes featuring tofu, 4 with tempeh, 1 using black soybeans, and many using miso and shoyu. Note the correct use of the term “shoyu” throughout. Also has recipes for “amasake” and “amasake frosting.” Address: Washington.

2190. Arraj, Tyra; Arraj, James. 1987. *The treasures of simple living: A family's search for a simpler and more meaningful life in the middle of a forest*. Chiloquin, Oregon: Tools for Inner Growth. 212 p. See p. 65-68, 72-73, 144-48, 199-200. Illust. Index. 22 cm. [6 ref]

• **Summary:** Chapter 14, titled “Tofu and Tempeh,” begins: “I make tofu once a week and the result of half an hour of work is four tofu meals and at least as many tempeh made from soy pulp.” A description of the process using a blender is given. Tofu recipes include Celestial Chicken (meatless), Tofu Fish (meatless), Sweet & Sour tofu. Okara tempeh recipes are for Spaghetti Tempeh (the favorite), and Tempeh Tacos. Address: Tools for Inner Growth, Box 520, Chiloquin, Oregon 97624.

2191. Bartholomai, Alfred. ed. 1987. *Food factories: Processes, equipment, costs*. Weinheim, West Germany: VCH Verlagsgesellschaft mbH. xv + 289 p. 24 cm. [Eng]

• **Summary:** Includes chapters on tofu plant by Takai Tofu & Soymilk Equipment Co. (Japan) (p. 157-59, Chap 22), surimi plant by K.L. Holmes and C. Riley (p. 207-14), protein recovery plant by J. Lyle (p. 223-27), soybean oil extraction plant by K. Weber (p. 231-35), and soymilk plant by Takai Tofu & Soymilk Equipment Co. (Japan) (p. 279-81, Chap. 41).

Within each chapter are the following sections: Introduction, economic considerations, social impact, plant design basis (capacity), plant layout and floor plan, process description. Takai has recently supplied/sold the following plants: (1) Tofu plants to Natural Inc. (Maryland, USA 30 kg/hour), Tempe Production BV (Netherlands, 30 kg/hour), and Castle Trading (Australia, 60 kg/hour). (2) Soymilk plants to Namyang Company (Korea, 2,000 liters/hour), Seou Industrial Company (Korea, 1,000 liters/hour), Guilin Sweets and Food Factory (China, 1,000 liters/hour), Jinan Soymilk Factory (China, 1,000 liters/hour). Address: 570 Stanhope Rd., Sparta, New Jersey, 07871.

2192. Bates, Dorothy R. 1987. *Kids can cook: Vegetarian recipes kitchen-tested by kids for kids*. Summertown, Tennessee: The Book Publishing Co. 120 p. Illust. Index. 23 cm. Spiral bound.

• **Summary:** The index of this vegetarian cookbook contains listings for 4 tofu recipes and 1 miso recipe, plus definitions at the Ingredients sections of tofu, TVP (Texturized Vegetable Protein), tempeh, and miso. Dorothy Bates is the mother of Albert Bates, a lawyer at The Farm, and a patron of The Book Publishing Co. Address: Tennessee.

2193. Beuchat, Larry R. 1987. Food and beverage mycology. 2nd ed. New York, NY: Van Nostrand Reinhold. xiii + 661 p. Illust. Index. 23 cm. [20+ soy ref]

• **Summary:** Contents: Contributors. Foreword. Preface. Classification of food and beverage fungi, by E.S. Beneke and K.E. Stevenson. Relationships of water activity to fungal growth, by Janet E.L. Corry. Fruits and fruit products, by D.F. Splittstoesser. Vegetables and related products, by R.E. Brackett. Meats, poultry, and seafoods, by James M. Jay. Dairy products, by Elmer H. Marth. Field and storage fungi, by C. M. Christensen. Bakery products, by J.G. Ponte, Jr. and C. C. Tsen. Traditional fermented food products, by L.R. Beuchat. Alcoholic beverages, by G. G Stewart. Edible mushrooms, by W.A. Hayes. Poisonous mushrooms, by Donald M. Simons. Fungi as a source of protein, by A. J. Sinskey and C.A. Batt. Fungal enzymes and primary metabolites used in food processing, by R. Bigelis and L.L. Lasure. Mycotoxins, by N.D. Davis and U.L. Diener. Methods for detecting mycotoxins in food and beverages, by L.B. Bullerman. Methods for detecting fungi in foods and beverages, by B. Jarvis and A.P. Williams. Appendix. Regulatory action levels for mold defects in foods.

Chapter 9, "Traditional fermented food products, has a section on koji and a long section on fermented soybean foods that discusses: Shoyu, miso, natto (incl. itohiki-natto, yukiwari-natto, and hama-natto / hamanatto; called tu su by the Chinese and tao-si by the Filipinos), sufu, meitauza, and témpé [tempeh]

Tables show: (9.1) Some fermented foods of fungal origin. For each food is given: Product name, geography, substrate, microorganisms, nature of product, and product use. Soy-related products include: Chee fan, Chinese yeast, Hamanatto, kecap, kinema, ketjap, meitauza, meju, miso (incl. Chiang, jang, doenjang, tauco, tao chieo), natto, soybean milk, soy sauce (incl. Chiang-yu, shoyu, toyo, kanjang, kecap, see-ieu), sufu (tahuri, tao-kaon, tao-ju-yi), tao-si, taotjo, tauco and témpéh. Address: Dep. of Food Science, Agric. Exp. Station, Univ. of Georgia, Experiment, GA 30212.

2194. Campbell-Platt, Geoffrey. 1987. Fermented foods of the world: A dictionary and guide. London and Boston: Butterworths. xxiii + 291 p. 26 cm. [25 soy ref]

• **Summary:** The author classifies fermented foods into 9 groups: Beverages, Cereal products, dairy products, fish products, fruit and vegetable products, legumes, meat products, starch crop products, and miscellaneous products. Fermented legume products are particularly important in the diets of East Asia, Southeast Asia, and the Indian subcontinent. He has sections on many fermented soyfoods: Dawadawa, hama-natto, kenima [sic, kinema], miso, natto, tempe (incl. tempeh, tempe bengook, tempe bongkreik, tempe gembus [okara tempeh], tempe lamtoro, tempe mata kedele),

and sufu (incl. teou-fu-ru). He lists major areas consumed, related terms, how consumed, types, how produced, microbiology and biochemistry, and a few key references. His research began in Ghana with dawadawa made from the African locust bean. Address: National College Prof. of Food Technology, Dep. of Food Science & Technology, Univ. of Reading, Reading, Berkshire, UK.

2195. Downes, John. 1987. Soy source: A practical guide to cooking with soy foods. Chatswood, NSW, Australia: Nature and Health Books. Co-published in 1987 by Prism Press, 2 South Street, Bridport, Dorset DT6 3NQ, England. Distributed in the USA by Avery Publishing Group. 127 p. No index. 22 cm. [21 ref]

• **Summary:** Contents: Introduction, Nutrition & Soyfoods, Ingredients & Techniques, Glossary, Appetizers & Dips, Marinades & Accompaniments, Soups, Soup Noodles, Main Courses, Salads & Dressings, Desserts, Bibliography. A cookbook containing very little information about soyfoods in Australia. The author was born in 1949. Address: Australia.

2196. Fardiaz, Dedi. 1987. Oncom: Fermented peanut pressed cake, a unique Indonesian traditional fermented food. In: Fujiharu Yanagida, ed. 1987. Traditional Foods and Their Processing in Asia. Tokyo: NODAI Research Institute, Tokyo Univ. of Agriculture. vii + 235 p. See p. 25-31. [10 ref]

• **Summary:** Contents: Introduction. Processing of oncom. Fermentative changes: Liberation of fatty acids, solubilization process, degradation of phytic acid, reduction of oligosaccharides. Nutritive values and wholesomeness of oncom. Address: Faculty of Agricultural Engineering and Technology, Bogor Agricultural Univ., Bogor, Indonesia.

2197. INTSOY. 1987. Home and village soyfood preparation (Leaflet). Champaign, Illinois. 6 panels.

• **Summary:** Contents: Overcoming protein deficiencies. INTSOY basic processing concepts. A practical approach. Products and processes: Soy flour, tofu, tempeh, soy milk, roasted and fried soybeans [soynuts], curries, sweets. Record of achievement (in Sri Lanka, incl. training more than 20,000 people). Address: International Soybean Program, Univ. of Illinois at Urbana, 113 Mumford Hall, 1301 W. Gregory Dr., Urbana, Illinois 61801. Phone: 217-333-6422.

2198. Karim, Mohamed Ismail Abdul; Hassan, Zaiton. 1987. Traditional fermented foods of Malaysia. In: Fujiharu Yanagida, ed. 1987. Traditional Foods and Their Processing in Asia. Tokyo: NODAI Research Institute, Tokyo Univ. of Agriculture. vii + 235 p. See p. 210-18. [12 ref]

• **Summary:** The authors discuss the preparation of a number of Malaysian fermented soyfoods, including tempeh, kicap kacang soya (soy sauce), and tauco (soybean paste). They

also discuss other Malaysian fermented foods: budu or kicap ikan (fish sauce), cinaluk (fermented shrimp), belacan (fish/shrimp paste), pekasam (fermented freshwater fish), tapai (fermented rice or cassava), tempoyak (fermented durian), tairu/taire/taina (fresh cow's milk fermented by bacteria equivalent to sour milk or yogurt), dadeh (made from fermented buffalo milk), arak beras (rice wine), toddy (palm wine), idli (steamed pudding), dosai (pancake), dadeh (fermented sweetened milk), and jeruk buahbuahan & sayur sayuran (pickled fruits and vegetables). Address: Faculty of Food Science and Biotechnology, Universiti Pertanian Malaysia, Malaysia.

2199. Mahmud, Mien K. 1987. Penggunaan makanan bayi formula tempe dalam diit bayi dan anak balita sebagai suatu upaya penanggulangan masalah diare [Using tempeh based infant formula in the diet of babies and infants under 5 years old as a means of treating diarrhea]. PhD thesis, Bogor Agricultural University. [Ind]\*  
Address: Indonesia.

2200. Nichterlein, Karin. 1987. Huelsenfruechte [Legumes]. Bonn, Germany: AID (Auswertungs- und Informationsdienst fuer Ernaehrung, Landwirtschaft und Forsten). 20 p. Illust. 21 cm. [10 ref. Ger]

• **Summary:** The section on soybeans (p. 14-16) discusses soya oil, lecithin, soybean meal, soy protein concentrates, soya bread, low-fat soy flour, Sojamark (Soya meat), TVP, soya milk, tofu, soy sauce (shoyu, tamari), miso, tempeh, sufu (fermented tofu), natto, and soy sprouts. Address: Institut fuer Pflanzenbau und Pflanzenzuechtung I, Giessen, Germany.

2201. NODAI Research Institute. 1987. Traditional foods and their processing in Asia. Tokyo: NODAI Research Inst. vii + 235 p. Seminar held Nov. 13-15, 1986 at the Tokyo Univ. of Agriculture, Tokyo, Japan.

• **Summary:** Contents include: Oncom: Fermented peanut pressed cake, by Dedi Fardiaz. Mochi: Rice Cake, by Akiko Kawabata. Miso: Bean paste, by Hisao Yoshii. Chemistry and technology of tofu and its derived products, by Tokuji Watanabe. Indigenous fermented foods in Nepal, by Tika Karki. Improvement of traditional soy sauce fermentation mold, by Sri Hartadi and Siti Kabirun. Address: Tokyo Univ. of Agriculture, 1-1-1 Sakuragaoka, Setagaya-ku, Tokyo 156, Japan.

2202. Passmore, Jacki. 1987. Asia: The beautiful cookbook. Los Angeles, California: Knapp Press. 256 p. Illust. (color). Index. 37 cm.

• **Summary:** This is a stunningly beautiful, oversized book—a feast for the eyes, filled with elegant color photos (many full page), authentic recipes and many insights about Asian cookery. Each recipe is accompanied by one or more photos,

Contents: Japan: Simplicity and elegance. Korea: Warm and sustaining. China: From the beginning of time. Philippines: East meets West. Thailand: Titillating, tantalizing. Laos and Kampuchea: Unforgettable foods. Vietnam: Herbaceous overtones. Singapore and Malaysia: A blending of cultures. India: Southern fire, northern serenity. Burma: Exotic offerings. Indonesia: Symphony of flavors. Sri Lanka: Gems from an enchanted isle. Glossary. Acknowledgments.

Japan: Yudofu (Simmered bean curd, with 3 cakes tofu {bean curd}, p. 31). Tofu dengaku (Grilled bean curd on skewers, with 2 lb {1 kg} momen tofu and white miso, p. 31). Ton-negu no teriyaki (Teriyaki pork rolls, p. 38). Miso-shiru (Miso-flavored soup with bean curd).

Singapore and Malaysia: Popiah (with ¼ cup (about 2 oz / 60 gm) compressed bean curd cake, shredded, p. 155, 148-49). Tempe lemak (Tempe in coconut milk, p. 166). Hokkien mie (Hokkien style noodles, with 2 cakes compressed bean curd, p. 168). Laksa ayam (Chicken with laksa noodles in coconut sauce, with 2 squares / cakes compressed bean curd, p. 169).

Indonesia: Kecap manis is a sweetish soy and chili sauce (p. 218). Babi kecap (Pork in sweet soy sauce, p. 227).

Glossary (p. 252-54) includes short definitions of: Azuki beans. Bean curd. Bean pastes and sauces. Kecap manis (“based on dark soy sauce, sugar and spices”). Kombu. Nori. Paneer (India). Sesam. Wakame.

2203. Riet, W.B. van der; Wight, A.W.; Cilliers, J.J.L.; Datel, J.M. 1987. Food chemical analysis of tempeh prepared from South African-grown soybeans. *Food Chemistry* 25(3):197-206. [33 ref]

• **Summary:** Processing of soybeans into tempeh improved nutritional value including a reduction in phytic acid concentration, starch and the flatulence-causing oligosaccharides stachyose and raffinose. Thiamin concentration was reduced, and riboflavin and nicotinic acid contents increased during fermentation. Tempeh was found to be an acceptable product for South Africa which would increase soybean consumption. Address: National Food Research Inst., CSIR, P.O. Box 395, Pretoria 0001, South Africa.

2204. Roozen, Jac. P.; Groot, Jolan de. 1987. Analysis of low levels of trypsin inhibitor activity in food. *Lebensmittel-Wissenschaft + Technologie (Zurich)* 20(6):305-08. [14 ref. Eng]

• **Summary:** A method which utilizes affinity chromatography was developed and applied to the following soy products: Soybeans (dry, soaked or steamed), tempeh (fermented for 24 or 48 hours), soy flakes (defatted or heated), dry soy meat (textured vegetable protein), dry isolated soy protein, and tofu. Results are detailed. The specific trypsin inhibitor activity varied widely in the soy products but was always less than 1900 trypsin

inhibitor units/mg protein. Address: Dep. of Food Science, Agricultural Univ., De Dreijen 12, 6703 BC Wageningen, Netherlands.

2205. Shannon, Sara. 1987. Diet for the atomic age. Wayne, New Jersey: Avery Publishing Group Inc. xviii + 316 p. Introduction by Ernest J. Sternglass, PhD. Index. 23 cm. [400+\* ref]

• **Summary:** The subtitle on the cover reads: "How to protect yourself from low-level radiation." This book, written from a macrobiotic viewpoint, contends that various foods, including miso and sea vegetables, can protect people from radioactivity. Chapter 6, "Diet for the Atomic Age," discusses miso, tofu, tempeh, and sea vegetables at length as foods that can protect us from radiation (p. 130, 145-55). The story of how miso protected Dr. Akizuki and his staff from the radiation of the atomic bomb dropped on Hiroshima is told on pages 77, 116, 148-49.

Chapter 8, "Recipes" (p. 193-234) includes many macrobiotic-style soy-related recipes and a special section titled "Tofu and Tempeh." The chapter contains 13 tofu recipes, 7 miso recipes, and 4 tempeh recipes. The author received her degree in nutrition from the State University of New York. Address: Practicing nutritionist and health counselor, New York City.

2206. Singleton, Paul; Sainsbury, Diana. 1987. Dictionary of microbiology and molecular biology. 2nd ed. Chichester, New York, Brisbane, Toronto & Singapore: John Wiley & Sons, Ltd. xii + 1019 p. Illust. 25 cm. A Wiley-Interscience Publication.

• **Summary:** Contains entries for: fermentation, fermented foods, fermenter (fermentor), miso, natto, nitrogen fixation (dinitrogen fixation), ogi, oncom, shoyu (see Soy sauce), soy paste (see Miso), soy sauce (shoyu), sufu, tempeh, tofu (an intermediate in Sufu production).

2207. Yntema, Sharon K. 1987. Vegetarian children: A supportive guide for parents. Ithaca, New York: McBooks Press. 169 p. Index. 22 cm. [188 ref]

• **Summary:** Though not a cookbook, this book work is especially useful for parents who need help in making a vegetarian transition for their children. Contains health and nutrition answers for vegetarian children of all ages—from feeding your baby to school lunches. Discusses tofu (p. 62-63, 98, 147-48) and tempeh (93, 148). Excellent bibliography.

"The author received an M.A. in Early Childhood Special Education from George Washington University. Before her son was born in 1978, Ms. Yntema worked as a child development specialist at the Day Care and Child Development Council of Tompkins County in Ithaca, New York." Address: Ithaca, New York.

2208. Brunthaler, Norbert. 1988. Re: Soyfoods made and sold by Sojvita. Letter to William Shurtleff at Soyfoods Center, Jan. 4. 1 p. Typed, with signature on letterhead. [Eng]

• **Summary:** "Thank you for your letter of Dec. 10." He gives the year and month that his company started to make and sell the following products: Tofu, Tofu marinated and baked, Tempeh, Sojanaise, Tofuburger, Tempeh vacuum packed and stable, Tofu spread (4 kinds), Sojella (enriched soymilk), Soyoghurt with fruits, Natto.

"These are only our soy-products which we sell by ourselves or through distributors in Austria. (Furthermore we produce rice-wafers, seitan, gomasio {sic, gomashio, sesame salt}, mochi.) We cannot say, which company is the largest in Austria, but we have the most different kinds of soyproducts. Our next competitor is: Sojarei in Baden and a smaller one is Tofurei in Wels. Furthermore there is only one Tempeh-producer in Vienna who sells tempeh and different cookies. These are all soy-producers in Austria. We hope we could help you with this information. With best regards. N.S.: Red miso and barley miso is in development since 1984." Address: Sojvita Produktions GmbH, Hauptplatz 1, Lichtenwoerth, Austria. Phone: 02622 / 75494.

2209. Margulis, Marlyn L. 1988. Specialty of the house: Tempting palates with tempeh and tofu. *Courier-Post (Camden, New Jersey)*. Jan. 10.

• **Summary:** Richard's Natural Foods Restaurant in Voorhees (NJ) caters to the tastes of vegetarians and people on macrobiotic diets in South Jersey, says owner Richard Wessel. Tempeh burgers and stir-fried tofu are two of the nutritious items he sells.

2210. Shurtleff, William. 1988. New soyfood product introductions skyrocket during 1980s. Tofu, tempeh, soymilk, soy ice creams are most popular (News release). Soyfoods Center, P.O. Box 234. Lafayette, CA 94549. 4 p. Jan. 11.

• **Summary:** "The 'lighter eating' revolution has catapulted soyfoods into one of America's fastest growing food categories. A record number 330 new soyfood products were introduced in the United States during 1987, an increase of over 635% since 1977... These latest figures, part of a 30-year-long food industry trend, are tracked by SoyaScan, the Center's computerized database. It lists more than 4,630 soyfood products from 1546 A.D. to the present.

"During the 1950s, an average of 11 new soyfood products were launched each year in the U.S. This number increased to 16 during the 1960s, and 26 during the period 1970-75. Most of these new introductions were based on modern, high-tech soy protein products, such as soy protein isolates and concentrates, or textured soy flour.

"Then in the late 1970s the number of new products began to rise rapidly with the advent of the soyfoods movement. It reached 78 in 1976, 162 in 1979, 224 in 1982,

296 in 1985, and an all-time high of 330 in 1987.” A graph shows “Number of New Soyfood Products Introduced, 1950-1987.”

This release was carried by the Associated Press Financial Wire (Jan. 12 as “Soy-Based Foods Gain from Lighter Eating” and widely syndicated\*), World Food & Drink Report (Jan. 21), Investor’s Daily (Los Angeles, Jan. 12), San Francisco Examiner (Jan. 12), Oakland Tribune (Feb. 1), Natural Foods Merchandiser (Feb.), Food & Drink, Oil Mill Gazetteer (Feb.), *Journal of the American Oil Chemists’ Society* (JAOCS, March, p. 319), Vegetarian Times (April, p. 9), Food Distributors Magazine (April), Dairy and Food Sanitation (April, p. 204), Whole Foods (April, p. 9), Health Foods Business (April), Adweek’s Marketing Week (April, p. 6, 49), Restaurants & Institutions (April 29), East West (May, p. 10), Food Merchants Advocate (May with graph), Soyaneews (Sri Lanka, July-Sept. p. 5). 2211. Ebata, Junko. 1988. Tenpe wa hatsugan busshitsu ni kiku. Osaka-shi Dai Ebata Jokyôju ga jikken. Tenpe no henigensei to kôhenigensei [Tempeh contains antimutagenic substances that can help prevent cancer. Experiments conducted by Asst. Prof. Ebata of Osaka City University]. *Toyo Shinpo* (Soyfoods News). Jan. 21. p. 3. [Jap]

• **Summary:** Experiments showed that tempeh controlled the mutagenic activities of AF<sub>2</sub>, a powerful carcinogen, used during the 1970s in Japan as a tofu preservative. Address: Prof., Faculty of Science of Living, Osaka City Univ. Sugimoto 3-3-138, Sumiyoshi-ku, Osaka 558, Japan. Phone: 06-605-2811.

2212. Van den Berg, H.; Dagnelie, P.C.; Staveren, W.A. van. 1988. Vitamin B-12 and seaweed. *Lancet* i(8579):242-43. Jan. 30. [6 ref]

• **Summary:** “Neither in fermented soya products (tempeh, shoyu, tamari, rice miso, barley miso, tofu), nor in other fermented products (amasake rice, umeboshi prunes) did we find measurable B-12 (all below 0.02 micrograms per 100 g).” Tests done using both radioassay and *Lactobacillus leichmanii* showed that Spirulina and Nori (*Porphyra tenera*) were the two best vegetarian sources tested. But the B-12 in the nori does not appear to be available to the body. Its presence may be due to corrinoid-like B-12 analogues.

This study showed a tendency toward vitamin B-12 related anemia (not iron-related) in macrobiotic children who are generally vegan. A deficiency of vitamin B-12 in children can result in serious neurological damage. Address: 1. TNO-CIVO Toxicology and Nutrition Inst., 3700AJ Zeist, Netherlands; 2-3. Dep. of Human Nutrition, Agricultural Univ., Wageningen, Netherlands.

2213. Okada, Noriyuki. 1988. Tenpe-Indonesia no daizu hakkô shokuhin [Tempeh-An Indonesian fermented

soyfood]. *Shokuryo: Sono Kagaku to Gijutsu* (Food: Its Science and Technology) No. 27. p. 65-93. Jan. [1 ref. Jap]

• **Summary:** Contents: Origin of tempeh. Chronology of tempeh (Both taken largely from *History of Tempeh* by Shurtleff and Aoyagi). Methods of making tempeh (with a chronology of their development). Microorganisms that have been isolated from tempeh and its starter. Changes taking place during tempeh fermentation. Protein efficiency. Antioxidants in tempeh. Ways of eating tempeh. Conclusion. Address: Oyo Biseibutsu-bu, Biseibutsu Riyo Dai-ichi Kenkyu-shitsu (Norinsho, Tsukuba, Japan).

2214. Perez, Oswaldo. 1988. El tempey: La soya en la alimentación human [Tempeh: Soya in human nutrition]. *La Era Agrícola* (Merida, Venezuela) No. 4. Jan. p. 11. [Spa]

• **Summary:** A brief overview describing tempeh, its nutritional value, and ways of cooking. Address: Granja Tierra Nueva, Aldea San Luis, La Azulita, C.P. 5102, Estado Merida, Venezuela.

2215. Shurtleff, William; Aoyagi, Akiko. comps. 1988. Marketing soyfoods—Labels, ads, posters, and other graphics: Tempeh and tempeh products. Lafayette, California: Soyfoods Center. 175 leaves. Illust. No index. 28 cm. Series: Marketing soyfoods.

• **Summary:** This book is a collection of black-and-white photocopies of materials ranging in date from 1976 to 1987. The books in this series, each a unique collection of graphic materials, are designed for a number of purposes: (1) To serve as a source of ideas, ingredients, inspiration, legal specifications, and basic guidelines for companies in the process of developing their own products, designing their own graphic materials, and conceiving their own marketing strategies. (2) To document the tremendous diversity of soyfoods products and the way that each is presented and marketed. (3) By arranging the materials in chronological sequence, to help document the development and history of new product categories and soyfood types, and with them the rise of the soyfoods industry and market in the Western World. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2216. Specker, Bonny L.; Miller, D.; Norman, E.J.; Greene, H.; Hayes, K.C. 1988. Increased urinary methylmalonic acid excretion in breast-fed infants of vegetarian mothers and identification of an acceptable dietary source of vitamin B-12. *American J. of Clinical Nutrition* 47(1):89-92. Jan. [16 ref]

• **Summary:** Urinary secretion of methylmalonic acid in elevated amounts is one indicator of vitamin B-12 deficiency. The authors analyzed blood serum and urine samples of 169 macrobiotic adults and children from the Boston area. Of 110 adults, 51% had B-12 levels below the so-called threshold level of 200 picograms of B-12 per milliliter of blood serum,

[1 picogram = 1 trillionth of a gram]. And there was a rise in a metabolic breakdown product (urinary methylmalonic acid [UMMA], which increases as B-12 levels decrease) in the urine of children breast-fed by vegan mothers. Two infants showed signs of possible neurological damage, which was quickly corrected by B-12 supplementation.

Certain seaweeds were found to have levels of vitamin B-12 comparable to beef liver (35-41 micrograms/100 gm wet sample; wakame had 23-61 and kombu had 17-49 mcg/100 gm wet sample). But tempeh, which was thought to have high levels contained only 0.4-0.7 micrograms/100 gm wet sample.

The authors found surprisingly low levels of vitamin B-12 in 4 samples beef liver, which is supposed to be one of the most concentrated sources of this vitamin—only 3.9 mcg/100 gm. Note: The test used, a radioassay with pure intrinsic factor as binder, has been challenged by some researchers who claim that it degrades as much as 60% of the real vitamin present in the samples. Yet the addition of 60% to the 3.9 mcg figure would only bring it to 6.24 mcg/100 gm. Are the tests faulty or is the level of vitamin B-12 in our food supply dropping? And, if so, why? Address: Asst. Prof. of Pediatrics, Univ. of Cincinnati Medical Center, Cincinnati, Ohio 45267-0541.

2217. Demos, Steve. 1988. New developments at White Wave (Interview). *SoyaScan Notes*. Feb. 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** “We are in the process of doubling the capacity of our tempeh operation on a single shift. We are rebuilding the entire plant: tempeh, tofu, ice cream. We plan to stay in this plant and are shooting for a building of our own by the mid-1990s. We gave up on acquiring the dairy and a meat company nearby. We’re growing so fast, I can’t tell you how big we’re going to be. Right now we have 20,000 square feet; by the end of this year it will not be enough.

“We will soon have a semi-automatic tempeh process. We have effectively automated the filling of the containers and made the rest of the process much easier. We took the grunt out of it. But we still use rolling racks in an incubation room. A conveyerized incubation system is still a ways off. Recently Peter Golbitz asked me how much tempeh we were making. I told him I did not want to say any more than that it was in the tens of thousands of pounds per week. He told me he wanted to say “15-20,000 lb/week” and I said that he had no basis for those figures.” Address: Boulder, Colorado.

2218. Bernardini, Lorenzo (Bern). 1988. Tasty treats at Wildwood Natural Foods Deli. *News (San Rafael, California)*. Feb. 17-23.

• **Summary:** This article is in the section titled “Dining Out in Marin.” A dietary genius named Bill Bramblett along with partners Paul Orbuch and Frank Rosenmayr have created a huge success story at Wildwood (A fourth partner, Jeremiah

Ridenour, operates a tofu factory in Santa Cruz). Wildwood makes or distributes 90 different products. In addition to Wildwood Natural Foods Deli in Fairfax, the company conducts a thriving wholesale business in nine Bay Area counties, with additional outlets from Eureka to Los Angeles. For the past eight years Wildwood has experienced a 30 to 50% annual growth. The company distributes fifty thousand products weekly. Wildwood has nine delivery vehicles on the road.

A photo shows Chef Narayana, owner Bill Bramblett and maitre d’ Daniel Spear; they not only serve vegetarian fare on the premises but also operate a brisk take-out business. The following products are mentioned: Tempeh Fiesta, Tabouli, Japanese Noodles, Tofu Dill Salad, Spinach Seitan Salad (Wildwood makes the seitan), Cream of Potato-Dill Soup (dairyless), Enchilada con Salsa. Address: Restaurant features.

2219. *Recorder (Greenfield, Massachusetts)*. 1988. ABC films Greenfield firm [Lightlife Foods]. Feb. 18.

• **Summary:** Lightlife makes tempeh and tofu hot dogs, using tofu bought from nearby Tomsun Foods. The company will appear on ABC’s “World News Tonight” with Peter Jennings, featured in a series “Health Food of the Future.” Michael Cohen will be shown making tempeh dishes.

2220. *Recorder (Greenfield, Massachusetts)*. 1988. Lightlife Foods Inc. applying for ZBA expansion permit. Feb. 20. p. 3.

• **Summary:** The company is applying to the Zoning Board of Appeals for a permit to expand its 74 Fairview Avenue location. The ZBA hearing is scheduled for March 3. Lightlife does a little more than \$1 million worth of business a year.

2221. Muendel, H.-H. 1988. Soybeans: Current status and potential. *Agriculture Canada Research Station, Lethbridge, Weekly Letter* No. 2819. Feb. 24. 1 p.

• **Summary:** “Over the past decade a number of southern Alberta growers have tried growing small areas of soybean. Yields have been variable, depending on variety, time and depth of seeding, weed control, and harvesting equipment. In excess of 2 tonnes per hectare (30 bushels per acre) were achieved commercially. The major problem encountered was the lack of ready markets at sustained attractive prices.

“Several early maturing varieties suitable for production under irrigation in southern Alberta have been released in recent years: Maple Ridge and Maple Amber from the Agriculture Canada Research Station at Ottawa and KG20 by King Grain Limited.

“Research by Agriculture Canada at the Lethbridge Research Station and Vauxhall Substation and by Alberta Agriculture at Brooks and Bow Island has determined some of the agronomic requirements and characteristics of soybean.

"A number of commercial enterprises are now showing interest in Alberta-grown soybean. Recent developments of test processing and whole bean extrusion for animal feed are encouraging and other commercial processing interests as well as marketing into the tofu-tempeh human food markets are being explored. Whereas farmers in southern Alberta had no ready market for their soybeans in the past, this major obstacle to local production may soon cease to exist."

Note: As of April 1991, Dr. Hans-Henning Muendel was on official leave with an assignment to the organization of BARD project (Barani [Rainfed] Agricultural R&D) in Pakistan, administered by Agriculture Canada. He is at G.P.O. Box 1785, Islamabad, Pakistan. Address: Plant Breeder, Lethbridge, ALB, Canada. Phone: 403-327-4561.

2222. *E. Bridgewater Star (Bridgewater, Massachusetts)*. 1988. Be creative: Make it a tofu day! Feb. 25.

• **Summary:** Robert Bergwall, vice president of Nasoya Foods said, "Today, in the United States, tofu is recognized as a nutritional and tasty alternative to protein foods, but contains absolutely no cholesterol and is low in saturated fat, sodium, and calories, and is high in calcium. At Nasoya, we produce between 90,000 and 100,000 pounds of tofu a week." For tofu and tempeh recipes, contact the Dept. of Food and Agriculture, 100 Cambridge St., Boston, Massachusetts 02202.

2223. Golbitz, Peter. 1988. Whole bean soy products. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 325-31.

• **Summary:** Discusses: Tofu. Soymilk. Yuba or soymilk film. Fresh green soybeans. Whole dry soybeans. Soynuts. Soy sprouts. Tempeh. Soy sauce. Miso. Address: Soyatech, Bar Harbor, Maine.

2224. **Product Name:** Impulse Soyfoods Tempeh.

**Manufacturer's Name:** Impulse Foods.

**Manufacturer's Address:** Radnor Business Centre, Radnor Rd., Horfield, Bristol BS7 8QS, England. Phone: 0272 41690.

**Date of Introduction:** 1988. February.

**Ingredients:** Soya beans, rice flour, *Rhizopus oligosporus* culture, cider vinegar.

**Wt/Vol., Packaging, Price:** 8 oz in poly bag.

**How Stored:** Frozen.

**Nutrition:** 157 calories per 100 gm.

**New Product-Documentation:** Note from Simon Bailey. 1988. Sept. 29. "Producers of tempeh." Letters from Cathy Higginson. 1988. Oct. 5 and Oct. 21. "I started producing tempeh as Impulse Foods in Feb. 1988. I presently produce about 250 lb/week of tempeh, which sells throughout England." Label. 1988. 3.5 inches square. Black on orange.

"100% organic. Keep frozen. Serving suggestions: Slices or cubes of tempeh can be deep or shallow fried, steamed or baked, and used in casseroles, stir fries, etc. See recipe leaflet for more information." Leaflet. 1988. "Impulse Foods Tempeh. A traditional Indonesian food made by culturing cooked soya beans into a delicious, savoury soya bean cake." With color photo.

Recipe leaflet. 1989. 2.75 by 4 inches, 6 panels. Black on orange. "Cooking with tempeh. Five [actually seven] quick and easy recipes for this exciting new soya bean product: Crispy fried tempeh. Tempeh burger. Tempeh & vegetable stew. Tempeh tempura. Tempeh, egg & onion saute. Tempeh kebabs with peanut sauce. Spaghetti sauce with tempeh."

Talk with Philip Marshall of Cauldron Foods. 1990. July 9. This company, run by a lady in Bristol, seems to be doing all right. The company has changed hands about 3 times.

Letter from Linda Perfect of Impulse Foods (Typed with signature on letterhead). 1990. "I am producing Tempeh here in the UK, and you will be pleased to know that sales are increasing slowly but surely." Requests information about the vitamin B-12 content of tempeh.

Letter from Alison J. Clark of Culture Foods Ltd., a cooperative in Nottingham, England. 1991. June 17. "The only tempeh distributed in this area is made by Impulse Foods of Bristol."

Spot in Health Food Business (England). 1992. July. p. 17. The company is now named Impulse Foods.

2225. **Product Name:** Joan's Tempeh [Oat & Soy].

**Manufacturer's Name:** Joan Anderson & Co.

**Manufacturer's Address:** 414 Seaside St., Santa Cruz, CA 95060. Phone: 408-425-4666.

**Date of Introduction:** 1988. February.

**New Product-Documentation:** Talk with Joan Anderson. 1988. Aug. 27. This product was launched in Feb. 1988.

2226. Matthiesen, Livia C. 1988. Soja? So ja! Das grosse Soja-Kochbuch fuer Feinschmecker [Soya? Well yes! The big soy cookbook for epicures]. Bern, Switzerland: Humata Verlag Harold S. Blume. 128 p. Illust. Recipe index. 24 cm. [Ger]

• **Summary:** At the top of the cover: "Wholefoods recipes with soya, the giver of super protein. 132 recipes with tofu, okara, tempeh, soybeans, and soybean grits." Plus 16 color photos of prepared dishes. Tofu is used in many of these German-style recipes. Contains instructions for making tofu, okara, and tempeh at home.

2227. McGowan, Christina. 1988. An analysis of the market for soya-based products. Dublin, Ireland: Centre for Marketing Studies, University College Dublin. 37 p. Feb. 28. Unpublished typescript. 30 cm.

• **Summary:** This is the earliest survey seen of the soyfoods

market in Ireland. It is full of interesting statistics. The summary states that the market for soya-based products in the Dublin area is miniscule [minuscule]. These products account for only 1-5% of total health food sales. Annual sales of such products are roughly £200,000–£240,000 according to Kelkin, Ireland's leading wholesaler. However if general trends in the health food industry can be relied on, there will be a steady increase in demand for soya products. The two main types of consumers are those suffering from lactose intolerance, and vegetarians. The most popular product is soya milk due to increased publicity and frequent references by doctors. Possible new products would be soy cheese, ice cream, or yogurt. A total of 23 retailers were interviewed and only 23 stock soya products.

A survey was conducted on 103 respondents outside health food stores. Of those who had tasted soya-based products (only 15% of the total): 71% buy for health reasons. 81% buy in health stores. 94% buy for themselves.

51% of the respondents became aware of soya products through word of mouth, 23% through in-store displays, and 23% through magazines/print. The most popular product quoted by respondents was soya milk (62.5% indicated they purchased it). Approximately 50% said they bought soy-based desserts, 20.2% bought tofu, 11.5% purchased soy cheese, 5.4% purchased tempeh, and 2.7% bought soy yogurts.

Companies involved with soya are Sunrise (under license here), Spiral Foods of Cork (Tempeh), and Irish Sea Greens (Tempeh). Some people are making tofu in the Swords area and an Asian man was making tofu locally. Wholesalers that handle soya foods are Wholefood Wholesale (import 20 tonnes a year of soya milk worth £15,000 [Irish pounds] wholesale value), LifeForce (import £30,000 to £40,000 of soya milk), Paragon Distributors (imports 3-4 tons of soya foods worth £10,000), Perrans (sells £12,000 worth of soya milk per year), and Kelkin Naturproducts (sells £150,000/year of soya milk and £50,000 desserts/year). Address: Dublin, Ireland.

2228. Sutardi, -; Buckle, K.A. 1988. Characterization of extra- and intracellular phytases from *Rhizopus oligosporus* used in tempeh production. *International J. of Food Microbiology* 6(1):67-79. Feb. [18 ref]

• **Summary:** This *Rhizopus* mold produced both extra- and intracellular phytases. The enzymes were isolated, partially purified, then characterized. Address: Dep. of Food Science & Technology, Univ. of New South Wales, P.O. Box 1, Kensington, NSW 2033, Australia.

2229. **Product Name:** Sloppy Joe Tempeh, and Meatless Country Stew.

**Manufacturer's Name:** Turtle Island Soy Dairy.

**Manufacturer's Address:** P.O. Box 218, Main St., Husum Falls, WA 98623. Phone: 509-493-2004.

**Date of Introduction:** 1988. February.

**Wt/Vol., Packaging, Price:** 15 oz recyclable plastic tubs.

**How Stored:** Refrigerated, 60 day shelf life.

**New Product–Documentation:** Spot in Natural Foods Merchandiser. 1989. Feb. p. 14. And April. p. 48. Fully microwavable. Voice of the Turtle 1989. Feb. p. 3. These products were introduced on 25 Feb. 1988. Products listed in Fowler Brothers catalog. 1991. Jan. Each in 9 oz and 15 oz.

2230. **Product Name:** [Tofu, Tempeh, Natto, Okara Croquettes].

**Foreign Name:** Tofu, Tempeh, Natto, Croquettes d'Okara.

**Manufacturer's Name:** Gaïa Enterprise. Officially registered in Jan. 1992.

**Manufacturer's Address:** Rue Principale, 66130 Corbere, France. Phone: 68.84.86.28.

**Date of Introduction:** 1988. March.

**New Product–Documentation:** Form filled out for Anthony Marrese. 1989. Nov. These three products were introduced in March 1988 by Odile Corbel & Dan Ludington. The following amounts are presently produced: Tofu 3 kg/week (sold fresh), tempeh 3 kg/week (non-pasteurized), natto 2 kg/month, and okara croquettes 2 kg/month. Odile started making her own tofu for 2 people each week, then for friends. A friend (Pauline Schaft) supplied her with tempeh, natto, and koji for amazake. In 1986 she went to the Kushi Institute in the USA. She returned to France at the end of 1987 with Dan and began her own small production daily.

Letter from Daniel S. Ludington. 1992. Feb. 7. He has been making tofu, tempeh, and miso for sale for 3½ years. He learned to make them using books by Shurtleff and Aoyagi. Now he would like to order their books *Miso Production*, and *Tofu & Soymilk Production*.

Letter from Dan. Ludington. 1992. March 3. "Gaïa Enterprise was officially registered with the Chambre de Metiers of the Pyrenees Orientales in Jan. 1992. (She had been unofficially in existence using the same name for nearly four years)." Dan's father was a 20-year career cook in the U.S. submarine service. He died instantly of a heart attack at age 54. Dan is the oldest of 4 boys. He received a degree in chemical engineering from MIT in 1977, then worked for Intel Corp. in their factory making silicon chips for 5 years, then for Toshiba USA for another year. When his father died, he kept a 10-year promise to himself to hitch-hike around America. In about Loveland, Iowa, his chemical engineer's eyes saw how chlorinated hydrocarbons enter the food chain, and decided to stop eating meat. About 6 months later he was introduced to macrobiotics. 2½ years later he went to the Kushi Institute in Boston, Massachusetts, to see if he could find a better balance in his diet. There he met Odile Corbel, a French woman with a 12 year-old son named Xavier and 10 years of macrobiotic experience. They were married, and returned to France. 18 months later Dan got a Green Card. While Odile was in the USA, Pauline Schaft had stopped

making tempeh, and a weekly, organically grown products market had started in Perpignan. So he and Odile started making tofu, tempeh, and macrobiotic pasties and selling them at this market. The business has grown until today sales are \$400/week. He and Odile are still married with 2 children of their own. Pauline Schaft now goes by her maiden name of Van Marle; she is now more involved with her yoga practice than with making food. The company now sells 12-15 kg/week of tofu, 3-5 kg/week of tempeh, and 4 kg/week of miso, all direct and without the use of labels, marketing, or distribution.

**2231. Product Name:** Homestyle Ravioli [Tempeh Marinara, Tofu with Spinach, or Cheese Italiano].

**Manufacturer's Name:** Homestyle Foods (Formerly Sonoma Specialty Foods).

**Manufacturer's Address:** 2317 Bluebell Dr., Santa Rosa, CA 95401. Phone: 707-525-8822.

**Date of Introduction:** 1988. March.

**Ingredients:** Tempeh: Whole wheat durum and semolina flours, water, tempeh, tomatoes, onion, soy oil, garlic, miso, honey, natural herbs and spices. Tofu: Whole wheat durum and semolina flours, water, Homestyle Tofu Cottage Salad, Spinach, whole wheat bread crumbs, herbs, garlic and spices.

**Wt/Vol., Packaging, Price:** 14 oz 48 ravioli.

**How Stored:** Frozen.

**New Product–Documentation:** Interview with Dennis Hughes. 1988. Feb. 15. This product will be out shortly.

Sales to local stores of all products are about \$165,000, which is about half of the company's total sales. Of the \$165,000 roughly 1/3 is products made by Homestyle; 2/3 is complementary products (mostly soyfoods) made by other companies. Roughly 3/4 of their total products are soyfoods. The company started distributing other manufacturer's soyfoods in about August 1985. Before that (7 years ago) they started to distribute a local pasta and gourmet sauce.

**Label.** 1988. March. Paperboard box. 10.5 by 7.5 by 3/4 inches. Red, green, and black on white. Front panel has a red, black, and green drawing of a plate of ravioli with a wine glass and salad. "No eggs. All natural. No artificial ingredients or preservatives. Non-dairy. Cholesterol free."

Leaflet from World Vegetarian Day in San Francisco. 1990. Oct. 6. Cheese Italiano is a new flavor in the ravioli line. It contains cheese but no eggs.

Talk with David Burns of Homestyle. 1990. Oct. 9. This product was introduced in about May or June of 1988. The name of the manufacturing side of the company changed from Sonoma Specialty Foods to Homestyle Foods in Oct. 1987.

2232. Homestyle Foods. 1988. 1988 Catalog. 2317 Bluebell Dr., Santa Rosa, CA 95403. 20 p.

• **Summary:** This company also distributes soyfoods made by several other companies, including Quong Hop and White Wave tempeh products. Address: Santa Rosa, California.

2233. Leneman, Leah. 1988. Leaders of the soya revolution. *Vegan (The) (England)*. Spring. p. 20-21. [7 ref]

• **Summary:** The author, "herself an established authority on culinary applications of the soya bean, looks at the work of William Shurtleff and Akiko Aoyagi, the unsung heroes of the soya revolution." "It is possible that the books they have written which are not known to the general public may have had an ever greater influence than those which are—books like *Tofu & Soymilk Production*... Their books have provided the wherewithal for eager young entrepreneurs to move confidently into soya foods production, and the growth rate in this industry has been quite phenomenal, not only in the USA but on the continent and in Great Britain as well." Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

2234. Lubbe, James. comp. 1988. Abbreviated history of the Bountiful Bean Plant, Madison, Wisconsin. Bountiful Bean, 2049½ Atwood Ave., Madison, WI 53704. 23 p. Unpublished manuscript. [4 ref]

• **Summary:** The company was founded in 1978. 1. History table by year showing accounts, products, equipment, number of people, wages, other. 2. Newsletter and newspaper ads and articles. 3. Brochures, product announcements & job application descriptions. 4. Product labels.

Ad. circa 1983-84. Bountiful Bean Soyfood Deli. Macrobiotic dietary principles. Offers: fresh tofu, tofu pies, tabooli, toasted tofu, nori rolls, 4 soymilk flavors, 4 varieties of bulk miso, millet / tofu pudding, nutburger sandwiches, tempeh books, mini-tours of plant, spicy tofu, more! And: lowest soyfood prices in town, free samples and recipe sheets, managed by the workers. low-cost carry-out foods. 903 Williamson St. 251-0595. from: 7-6 Sun-Fri.; 7-4 Mon.; 10-4 Sat.

Update talk with Deborah Bachmann and Elizabeth Hanson. 1991. Nov. 1 and 11. In March 1990 Bountiful Bean Soyfoods moved from Madison, Wisconsin, to 620 Main St., Ridgeway, Wisconsin. Richard Kraemer and Elizabeth Hanson began to produce soyfoods during the last week in June, renting from the cooperative, then they purchased the business on 21 Aug. 1991. Richard and Elizabeth are married with a son, are in their late 40s, and come from Oseola, Wisconsin; he is a carpenter (and was a pastor) and she a nutritionist. They are both very enthusiastic about tofu and the business. The co-op has now been changed to a private business. They work full time and they have three employees—1 full time and 2 part time. They are thinking of re-launching tempeh and soy yogurt. The cooperative got what they felt was a good price for the business. People who worked more than 6,000 hours (Chris Burant [8 years], Deborah [almost 10 years], and a woman named Solie) each got a large chunk. Another 11 people who had worked in the past were also given part of the money. The smallest amount of money distributed was \$250.00. Deborah and James

Lubbe are no longer with the company. Bountiful Bean Soyfoods now makes tofu, Herb Tofu, plain or vanilla soy milk, Tasty Tofu, Hummus with Tofu (and garbanzo beans), and Taboolie with Tofu (salad, which also contains bulgar). They have discontinued tempeh and soy yogurt.

Update: Talk with Roger Bindl. 1993. April 15. Richard Kraemer would like to sell Bountiful Bean in Ridgeway and Roger is considering buying it. 85% of the company's sales are in Madison, Wisconsin. Address: Madison, Wisconsin.

2235. *Soyanews (Sri Lanka)*. 1988. Consumers prefer processed soya foods. 10(1):1-2. Jan/March.

• **Summary:** Jane E. Gleason and S.M.A. Weliwita of International Soybean Program, University of Illinois (USA) and the Soybean Food Research Centre, Peradeniya (Sri Lanka) are convinced that the promotion of pre-processed soyafoods should replace the home utilization of whole soyabeans if the soyafoods industry is to make progress in Sri Lanka. They came to this conclusion after a survey of the home and village level Soyabean Utilization Training Program, which has been in operation since 1978. Even though the program had conducted 3668 training sessions attended by 76,363 trainees, mostly housewives, it was found that the utilization of soyabeans in local cuisine was negligible. Several reasons have been adduced for this, but it would appear that the main barrier to greater soya consumption is that it is not available in processed forms acceptable to consumers.

To assess the market potential for pre-processed soya foods, a soya foods marketing experiment has been initiated in a village near Peradeniya. A single family in this village has been marketing a variety of soya-foods. The six best selling products were coffee, Kola Kenda, chilli snacks, sweet snacks, fried nuts, and dried tempeh, in that order. The price per unit of common foods in Sri Lanka is as follows (in rupiahs): Soyabean, 0.04; ground nut, 0.05; cowpea, 0.07; green gram, 0.07; dried fish (fat poor), 0.11; TVP, 0.16; lean beef, 0.16; chicken, 0.21. In a survey on what constrains soya consumption the top 5 answers were, in order: Unreliable supply of soya, 23 respondents; odd flavor, 22; lack of preparation knowledge, 18; difficult to prepare, 14; unaware of benefits, 10.

2236. *Daily Camera (Boulder, Colorado)*. 1988. Soy sensation: White Wave introduces new products for 1988. April 5.

• **Summary:** Coming this year from White Wave are sesame-peanut tempeh, teriyaki tempeh burger, sloppy joe tempeh, and a soy-based hot dog. Last year, White Wave reached \$2 million in revenue.

2237. Vansickle, Janice. 1988. Soys take root in organic market. *Windsor Star (Essex County, Ontario, Canada)*. April 9.

• **Summary:** Jon Cloud is a transplanted “dirt farmer” from mountainous Vermont and now the production manager for Soy City Foods. Their products include soymilk, tofu, tempeh, falafels, burgers, and granola. Cloud became a [Vietnam] war protestor while in college, and opted into being a 60’s back-to-the-land disciple after burning out in the urban jungle. The Organic Crop Improvement Association in Ontario has attracted 300 members during its five years of existence and 50 now have their farms certified as organic. A photo shows Jon Cloud with company products such as Soyettes, Grain Tempeh, and Falafels. Address: Star Agricultural Reporter, Ontario, Canada.

2238. Layton, Lyndsey. 1988. County’s health food industry is still strong... despite some producer setbacks. *Recorder (Greenfield, Massachusetts)*. April 29.

• **Summary:** Tempeh Works attempts to borrow \$500,000 for future expansion of the company’s plant. The tempeh company is just pulling out of a three-year slump period of heavy losses to enjoy a 40% annual growth rate. It would like to double the size of its Fairview Street plant from 6,000 square feet to 12,000 square feet. But the company’s recent shaky past, combined with the Tomsun/Country Dairy experiences, have made it tough to win confidence from lenders. Tomsun will stay in operation despite the fact the 11-year-old company filed for protection earlier this month under Chapter 11 of the U.S. bankruptcy code. Last week, Tomsun secured a \$150,000 loan from the Springfield based Bank of Western Massachusetts to pay some of its debts and keep the operation going. Tomsun executives blame the company’s troubles on recent challenges in its northeast tofu market by two tofu makers from outside the region. Currently, Tomsun has 50% of that market.

Tofu has become a commodity where the person who can turn out large amounts can sell it the cheapest. In 1982, Tomsun was the 3rd largest tofu maker in the nation; it has now dropped to 4th place. South River Miso Co. produces about 300,000 lb of miso each year in 5 to 8 different varieties. Annual sales hover around \$40,000. Tempeh Works has only one serious national competitor that is based in Boulder, Colorado.

2239. **Product Name:** Pacific Gardens Original Tempeh Pasta Sauce with Chunky Vegetables, and Garlic & Mushroom Pasta Sauce with Marinated Tempeh.

**Manufacturer’s Name:** Associated Cooperatives, dba Twin Pines Distributing (Marketer-Distributor).

**Manufacturer’s Address:** 322 Harbour Way, Suite 25, Richmond, CA 94801. Phone: 415-232-1111.

**Date of Introduction:** 1988. April.

**Ingredients:** Original Tempeh: Italian plum tomatoes, tomato paste, water, tempeh, fresh onions, fresh celery, fresh bell peppers, fresh carrots, fresh zucchini, apple cider vinegar, natural herbs and spices.

**Wt/Vol., Packaging, Price:** 32 oz jar. 12 per case.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Soya Newsletter. 1988.

March/April. p. 8. Garlic & Mushroom contains the above

ingredients plus marinated tempeh, soy sauce, garlic, and

mushrooms. Talk with Terry Baird of Assoc. Co-ops. 1988.

July 15. The products will be introduced July 1. Pacific

Gardens is the brand and Twin Pines is the distributor.

Tempeh is made by White Wave. It emphasizes organic. The

products are made by a co-packer. Labels. 1988. Sept. Sent

by Lonnie Stromnes. 13 by 3 inches. Red, yellow, green, tan,

black, and white. “100% Natural. Better for you. Garden

Style Recipe. No added salt, No oil, No sugar, No animal

products. Nutritious tempeh in every bite!”

Talk with Knute Loken of Surata. 1990. March 6. Surata makes the tempeh for this product. Associated Co-ops has moved to Las Vegas.

2240. Lang, Kerri-Sue. 1988. A growth market for organic foods. *Country Guide (Winnipeg)*. April. p. 20-22.

• **Summary:** In 1980, the USDA defined organic farming as “a production system that avoids, or largely excludes, the use of synthetically compounded fertilizers, pesticides, growth regulators and livestock feed additives to the maximum extent feasible. Organic farming systems rely upon crop rotations, animal manures, legumes, green manures, off-farm organic wastes, mechanical cultivation, mineral bearing rocks, and aspects of biological pest control to maintain soil productivity and tilth, to supply plant nutrients, and to control insects, weeds and other pests. The Organic Foods Production Association of North America (OFPANA) was founded in 1985. About 25 farmers contract organically-grown soybeans with Toronto-based Soy City Foods.

Organic food producers feel strongly that organic foods are healthier and more nutritious than conventionally grown foods, but scientific data does not yet support this claim. Ontario farmers requesting organic certification must have abstained from using prohibited fertilizers for at least one year and pesticides for 3 years. Prohibited fertilizers include anhydrous ammonia, ammonium nitrate, diammonium phosphate, most sewage sludge, triple superphosphate, muriate of potash, and potassium chloride. Prohibited soil additives include quick lime and slaked or hydrated lime.

Certified organic growers are inspected annually at their own expense (\$150). They also sign a licensing agreement and pay a fee to use the Ontario association’s logo. The logo fee is based on gross sales. Organic soybean yields last year were about 20% below the normal provincial average. Jon Cloud, part-owner of Soy City Foods in Toronto, says most of his contract growers experience a 25% yield reduction in their first 3 years of organic production. But a premium for the beans, along with reduced input costs, brings net returns to at least the level that could be expected under conventional crop management.

Last year, about 25 farmers grew organic soybeans on about 320 acres under contract with Soy City Foods. Highest yield was 45 bushels per acre; average was 32 bushels. Right now, says Cloud, the company could use 2,000 acres of organically-grown soybeans. Premium prices for organic beans are \$8.50 a bushel. The firm produces several soy-based foods for human consumption. These include soy burgers, falafel (spicy patties traditional in some parts of the Middle East), a base for soy pate, tempeh, tofu, and soy milk. Contract growers are supplied with seed because Soy City wants beans with high protein and low oil content. Organic farmers don't spend \$40 an acre on herbicides. Nor do they put tonnes of commercial fertilizer on their fields. And they sell their crops at a 15% to 20% premium. Weeds, he adds, are controlled by non-chemical procedures such as crop rotation and cultivation, which cost little.

Hugh Martin, a soils and crops specialist with the Ontario Ministry of Agriculture and Food says organic farming will be a significant part of agriculture in the future. Most organic growers he works with have an ingrained stewardship ethic and are concerned about soil conservation. He says, "After about 5 years of organic farming, the organic matter content of soil increases. Improved porosity allows water to penetrate quickly. There's less runoff."

2244. Witzel, Ruby. 1988. Tempeh in your future. *Bestways*. April. p. 18.

• **Summary:** Describes how to make tempeh at home, and gives recipes for Broiled Tempeh Cutlets, Barbecued Tempeh, and Breaded Tempeh Cutlets.

2245. Cusick, Heidi Haughey. 1988. The Cinderella of soy. *San Francisco Chronicle*. May 11.

• **Summary:** Tempeh is a staple at Milly's, a San Rafael, California, restaurant that specializes in making vegetarian cuisine appealing to non-vegetarians. The chef is Dennis Malone. He describes tempeh as having a light, cheesy flavor, because it is made similarly to cheese, but it can also taste chickeny or veal-like, depending upon how it is cooked. Tempeh cakes are firm and 'meaty'. Tempeh is one of the foods credited with actually reducing cholesterol in the body. Contains a Tempeh Goreng recipe from *The Book of Tempeh*.

2246. Layton, Lyndsey. 1988. Pass the mustard: Meatless franks spice of life for Greenfield firm. *Recorder (Greenfield, Massachusetts)*. May 20. p. 21, 25.

• **Summary:** Introduced in 1985, Tofu Pups are meatless frankfurters made from tofu without nitrates, preservatives or cholesterol. Owners of Lightlife Foods Inc., formerly known as Tempeh Works, believe the soybean creation is on the verge of becoming a national hit. "It's an alternative to red meat that is low-calorie, low-sodium, has no cholesterol or preservatives, which is what more and more people in this country are looking for," says Michael Cohen, founder

of Tempeh Works. Lightlife's sales figures confirm Cohen's optimism. The first year on the market, sales of Tofu Pups were \$230,000. The next year, sales jumped to \$405,000—a 76% increase. Executives expect 1988 to be the first year combined tofu and tempeh sales top \$1 million, at an annual growth rate of about 40%. To keep pace with an expanding market, Lightlife wants to double the size of its 6000-square-foot Fairview Street factory in an ambitious \$730,000 expansion plan.

In 1983, the operation moved from an old gas station on French King Highway to its current Fairview Street plant. To finance this transition and buy some new machinery, the company borrowed heavily from Shawmut Bank and fell into the red for the next three years. "We went from having \$3000 in interest payments to \$35,000," says Cohen. In the Northeast the tofu franks are also sold in supermarket chains such as Stop & Shop, Purity Supreme, Finast and Big Y. The firm now has 15 full-time employees.

At present Lightlife produces the flavoring, which Cohen calls the Tofu Pups "soul". The other food processor blends the flavoring with tofu and stuffs it into casings. If things go as planned, Lightlife will make its own Tofu Pups from scratch once the company expands its plant. But the Tofu Pups cost more than their traditional counterparts—\$2.49 to \$2.99 for a 16-ounce package of 10 tofu franks. Meat wieners typically cost \$1.49 to \$2.39. A photo shows Chia Collins and Michael Cohen of Lightlife.

Tomsun International recently declared bankruptcy. They tried to grow too quickly and couldn't keep up with demand for Jofu [a yogurt alternative made from tofu]. Address: Recorder staff.

2247. Arocena, Javier. 1988. [Re: Brief history of soyfoods manufacturing company Zuaitzo]. Letter to William Shurtleff at Soyfoods Center, May 27. 2 p. Typed, with signature on letterhead. [Spa; eng+]

• **Summary:** "In 1982, we started working on a family production level and in 1984 on an industrial one. We started selling tofu and seitan in March of 1984 and tempeh in Nov. of 1987. We also produced tofu and Seitan Burgers and tempeh pâté, both in Nov. of 1987, though not as much was sold. A brief history: We opened a store in Vitoria-Gasteiz and manufactured a great variety of products, including tofu and seitan. I learned how to make tofu in France with Dominique Lagadec and how to make seitan in Barcelona. A key moment in my story was in beginning to use vacuum packaging, as before products were sealed in sanitary, plastic water containers, 15 cm wide, 30 cm long, and 20 cm tall. With the vacuum packaging and further pasteurization, I was able to respond to the challenge of increasing the life of the product and expand the radius of my commercial activities.

"It is important to point out, looking ahead, that manufacturers with an investment of 250,000 pesetas can compete in the market with the advantage that you work

unhampered by bank charges. You make a pan of 180 liters with a 2 meter by 1 meter stainless steel plate, fired with domestic butane gas and heat diffusers, a second hand deep sink, and as a mill, one used for cereal groats to which you adapt a motor using a washing machine pulley. Last and most expensive, a second hand vacuum machine from the many companies who reject them in exchange for newer technologies.

"Since I have always worked alone with my wife and daughter, I set the price of tofu and seitan at 860 pesetas per kilogram in the beginning. Later on, with more sales and no competition in all of Spain, I lowered the price to 700 pesetas per kilogram—its current price—offering paid freight in next day deliveries, gathering and crediting any old material (month and a half old or spoiled by any other cause). The successful introduction of the products was due to the fact that the work was done in the same location from which it was sold. But above all, it has been a success with those who are ill; one local doctor here in Vitoria is prescribing it! I have also given cooking classes over the past several years. At the same time, I personally do all the deliveries in the city and its surroundings. In other big cities, I have distributors who carry other products besides mine. In the long run I have been successful and today I ask myself if I should lower the prices, especially with the tofu. Tempeh had a better price from the beginning; everything going very smoothly. I set the price at 220 pesetas for a 275 gm jar of tempeh.

"Nonetheless, the social commitment is large and with the profits I have purchased a shop that carries chemical-free products. My cooking classes are free and I am encouraging soy agriculture in the region."

Note: The original of this letter is typewritten in Spanish with Javier's signature. Someone has done a three page handwritten translation, which is included. Address: Zuaitzo, Correria, 39-01001 Vitoria-Gasteiz, Spain. Phone: 945/28 86 30.

2248. Bruce, Gene. 1988. The myth of vegetarian vitamin B-12. *East West*. May. p. 44-55. Summarized by Judy Brown in *Soya Newsletter*. 1988. May/June. p. 7. [4 ref]

• **Summary:** Although the requirement for B-12 is the lowest of all vitamins and the body can store a supply to last many years, alarming deficiencies of vitamin B-12 have been found in vegetarian children leading to serious physical and mental retardation, and neurological damage. The effects begin with numbness and tingling of the hands and feet. Although numerous studies have shown fermented foods made in traditional societies to have significant B-12, when these foods are made under sanitary conditions in industrialized countries, the B-12 is generally lost. Recent studies suggest the presence of a false B-12 or B-12 analogue that some laboratory tests (such as the microbiological assay using *Lactobacillus leichmanii*) have mistaken for the real thing. Bonny Specker, PhD at the Univ. of Cincinnati, Ohio,

and J. Gorstin at Vanderbilt Univ. in Nashville, Tennessee have studied B-12 levels in tempeh, miso, and tamari. Only negligible to trace amounts were found. Significant amounts were found in sea vegetables and spirulina. Specker analyzed blood serum and urine samples of 169 macrobiotic adults and children. Very low levels of B-12 were found. At the Agricultural Univ. of Wageningen in the Netherlands, Peter Dagnelie was undertaking a similar project, checking the blood of 50 macrobiotic children. He found deficiencies of vitamins B-12, D, and B-2, plus protein, calcium, iron and calories.

U.S. tempeh makers, when asked to recheck their tempeh, found that it presently contained no B-12. Most are taking claims about vitamin B-12 off their labels after conducting their own tests and obtaining similar results. According to Dr. Keith Steinkraus, the most probable explanation for the loss of B-12 in U.S. tempeh is improved sanitation and the fact that the B-12 producing bacterium cannot compete with the abundant mold in properly inoculated tempeh.

Good non-flesh sources of B-12 are milk (whole or nonfat, 0.9 micrograms/8 oz), cheese (0.9 micrograms/3 oz), and egg (0.6 micrograms/large egg). In conclusion, lacto-ovo vegetarians are probably getting enough B-12. Strict vegetarians (vegans) are advised to take a B-12 supplement. Without further research concerning B-12-analogues in sea vegetables and microalgae, there are no reliable vegetable sources of B-12. Address: Boston, Massachusetts.

2249. Murata, K. 1988. Antioxidative stability of tempeh. *J. of the American Oil Chemists' Society* 65(5):799-800. May. [7 ref]

• **Summary:** Discusses the antioxidant activities of 6,7,4-trihydroxyisoflavone, an isoflavone isolated from tempeh. Fatty acids liberated from soybeans during the fermentation of tempeh promote rapid decomposition of peroxide. Address: Research Inst. for Education, Teikoku Gakuen, Moriguchi City, Osaka 570, Japan.

2250. *Plenty Canada News (Lanark, Ontario, Canada)*. 1988. Soy promotion project in Sri Lanka. Spring. p. 3.

• **Summary:** Soy promotion project in Sri Lanka. Plenty Canada's soy utilization project in Sri Lanka is designed to assist Sri Lankans to use soy products for human consumption. This is achieved by using an integrated approach learned through Plenty Canada's experience in Central America, the Caribbean and Africa. The first stage of this five-year project was to set up a Soy Centre in Kandy to retail, and thereby popularize soy-based products. Soy Centre in Kandy was officially opened on Nov. 13, 1987. Plenty Canada's two volunteers and eight Sri Lankan counterparts have been busy producing a wide range of soyfoods for retail and wholesale consumption (flour, dhal, flakes, splits, dried tempeh and cocktail snacks).

At the Centre people can also learn methods of processing, retailing, and ways to set up their own income-generating activities. Demonstrations are given in near village communities. Address: R.R. 3, Lanark, ONT, Canada K0G 1K0.

• **Summary:** Includes a photo of products. Address: 161 Beacon St., South San Francisco, California 94080. Phone: 415-761-2022.

2252. Shimoda, Keiki. 1988. Naijiria de no nattô shishokukai—Osegere-mura, Zonkuwa-mura no rei [Natto tasting meeting in Nigeria. Examples of Osegere village and Zonkuwa village]. *Daizu Geppo (Soybean Monthly News)*. April/May. p. 32-35. [Jap]

• **Summary:** The first natto taste test in Nigeria was in Lagos. 7 women, ages 30-40, at the Department of Agriculture tried plain, unheated natto. They disliked the sticky/slimy texture, saying that it reminded them of rotten food. But the strong smell of natto was not foreign to them, since they knew dawa-dawa.

The next taste test was in the village of Zonkwa, located 50 km southeast of Kaduna. It had 200 inhabitants of which 10 tasted natto, but the village head tasted first and his response may have influenced that of the other villagers. These people know and consume dawa dawa soup, so the natto was used in a similar soup in place of dawa dawa. The result looked like a thick porridge. In this form, the natto was liked very much. A table compares natto and dawa dawa for appearance, smell, texture, and taste—on 5 levels of like and dislike. In each characteristic dawa dawa scored only slightly higher than natto. Natto received the highest score for its taste (very tasty: 8 vs. 9 for dawa dawa) and the lowest for its mouthfeel (4 vs. 9). All tasters said that natto soup more “sticky” or mucilaginous (*nebatte-iru*) than dawa dawa soup, and that it reminds them of okra soup with corn.

Then at Zonkwa natto was served Japanese-style on white rice (probably seasoned with shoyu and thinly sliced leeks (*negi*)). The “brave young people who ate it said it as very tasty.”

The last taste test was in the village of Osegere, located about 20 km east of Ibadan. A tempeh experiment had been conducted there by the Denmark Ministry of Development starting in 1981. This time the local people (who did not speak much English) were asked to make natto soup using freeze-dried natto, plus the usual palm oil, pepe, etc. About 10-12 people tasted it and 90% said they liked it very much; 40% said they found it “sticky.” Address: Tsukuba Univ., Shushi Katei Kankyo Kagaku Kenkyu-ka.

2253. *White Wave News*. 1988-- . Serial/periodical. Boulder,

Colorado: White Wave, Inc. Vol. 1, No. 1. April/May 1988. Bimonthly.

• **Summary:** Issue No. 1. shows the new White Wave Soyfoods logo. It describes the change in packaging and brands in phasing out the Soyfoods Unlimited brand and replacing it by the White Wave brand. There is an in-store deli recipe for Tempeh Mock Chicken Salad and a consumer recipe for Tofu Sandwich Steaks. There is a brief discussion of tempeh, which is called “The Cultured Vegetarian.” Address: 1990 N. 57th Ct., Boulder, Colorado 80301. Phone: 303-443-3470.

2254. **Product Name:** Tempeh Cutlet.

**Manufacturer’s Name:** White Wave.

**Manufacturer’s Address:** 1990 North 57th Court., Boulder, CO 80301. Phone: 303-443-3470.

**Date of Introduction:** 1988. May.

**Ingredients:** Tempeh (made with soybeans organically grown in accordance with section 26569.11 of the California Health and Safety Code and brown rice), natural soy sauce, garlic, onion, spices.

**Wt/Vol., Packaging, Price:** 6 oz (170 gm). Vacuum packed in poly pouch.

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per 3 oz.: Calories 190, protein 9 gm, carbohydrates 6 gm, fat 3 gm, sodium 466 mg.

**New Product–Documentation:** Label. 1988, May. 2.75 by 3.75 inches. Blue on beige with rainbow border. “Perishable. Keep frozen or refrigerated.” Formerly under the Soyfoods Unlimited brand and weighing 7 oz. All White Wave products are certified Kosher-Pareve by Rabbi Mordecai Twerski of the Talmudic Research Institute in Denver. The symbol looks like an M with the central leg bent to the left.

2255. Maeda, Toshiie. 1988. Mura okoshi–Tenpe sonjuku [Revitalizing a village–the tempeh village school. I.]. *Toyo Shinpo (Soyfoods News)*. June 1. [Jap; eng+]

• **Summary:** The author, a representative of the school, wrote a book titled Homeland of Miso (*Miso no Furusato*). He discussed the fact that the use of miso mainly in miso soup presents a big problem. The first solution to the problem is to use miso in thick ketchup-like sauces. The second is to return to the non-salted fermented foods such as Japanese natto, Nepalese kinema, Indonesian tempeh, and Chinese soy nuggets (shi), which are the ancestors of miso. He emphasized tempeh, which he feels is a wonderful food that can be used in various ways, and is nutritious and healthy. He explained that tempeh is becoming popular in the USA and Europe, and concluded that tempeh alone can be used to start a food industry.

“Because of this book, I received a visit from 2 people from the “Vitalizing Village Committee” of Kasuga-cho, Hyogo-gun, Hyogo-ken. They asked me to give a lecture on tempeh, for they wanted to consider whether tempeh

could be used to help vitalize the village. I accepted the offer, but realized I needed more information on the subject. So I contacted Murata sensei, professor emeritus at Osaka Shiritsu Daigaku, who played a key role in organizing the first international Asian Symposium on Non-Salted Soybean Fermentation in Japan. She and others at the university sent me an encouraging letter, four articles on tempeh, and information on tempeh cookery from the university.

“In late August 1987 I used these material to give a 40 minute lecture on tempeh followed by 20 minutes of questions. It was decided to have a follow-up meeting for tempeh tasting. Through Dr. Murata’s introduction I received 2 kg of free tempeh from a maker in Aichi-ken. The sampling was a big success and was written up in the newspaper in a big way. The local Hyogo prefecture high school food processing department started to experiment with tempeh, and a women’s group, the Kasuga-cho Commerce and Industry Group, began to experiment with tempeh cookery. At the end of Sept. 1987 one of the teachers at the high school succeeded in making tempeh, which made the news. Then they started to make second generation tempeh products, such as confections and breads. At their local school festival in October 1987 he presented the products and gained a good reputation.”

2256. *Soybean Update*. 1988. Indonesian poultry industry is expanding at a rate of 10% a year. June 6.

• **Summary:** ... with about 90% of the total commercial feeds and concentrates manufactured in the country being used for poultry. Aquaculture is also on the rise. Carp feeding with floating feed has been very successful. Soymeal is the key for continued expansion in the aquaculture industry. Thomason says soybeans are popular for human foods in Indonesia, with tempeh, a fermented soyfood, consumed by both humans and livestock for its anti-bacterial properties.

2257. Maeda, Toshiie. 1988. Mura okoshi–Tenpe sonjuku: Tenpe zukuri ga hajimaru [Revitalizing a village–the tempeh village school: Tempeh production gets started. II.]. *Toyo Shinpo (Soyfoods News)*. June 11. [Jap; eng+]

• **Summary:** In Nov. 1987 there was serious discussion of having an international tempeh symposium in the town of Kasuga-cho. This was the idea of Prof. Dr. Tadao Watanabe of Kyushu Univ. Though the idea eventually had to be dropped for lack of funding, the Fifth Tempeh Meeting was held in the village of Kasuga-cho on 19 Dec. 1987. Many prominent tempeh experts attended: Dr. T. Watanabe, Dr. Murata, Mr. Kanasugi, and Mr. Takato. The latter two are also involved with natto. After this meeting, some people wanted to start making tempeh in the village. Taking the initiative were Mr. Kenji Takami (a potter), Mr. Kazumasa Takami (a wood sculptor), and later another Mr. Takami (a horticulturist). They wanted to include tempeh in their lunch program. They started to build a tempeh factory on part of T.

Takami's pre-school, Meitoku Hoiku-en. Dr. Nishira Hiroshi of Kobe University, Dept. of Agric. Chemistry, advised on how to make tempeh starter. Experiments were conducted at Kyoto Tanki Daigaku (Junior College).

In mid-January 1988 the group started to call itself Tenpe Sonjuku: Kenko Shokuhin Tenpe Kenkyu Sakuru (Tempeh Village School: Health Food Tempeh Study Circle). They bought the best equipment for making tempeh starter. Because of limited capital, they built the plant simply and improvised. For dehulling, they used a tofu shop mill. For separating the hulls by aspiration, a *tomi* developed during the Edo period. For the incubation room, an inexpensive rice sprouting room. For dewatering the beans, a used washing machine centrifuge. For mixing in the tempeh starter, a tofu burger (ganmo) mixer. For incubation trays, used rice sprouting boxes. Address: Kobe Women's Junior College, food processing.

2258. Noble Bean. 1988. Noble Bean Tempeh Products (Ad). *Vegetarian Times*. June. p. 70.

• **Summary:** "Coast to coast. Cultured, organic soybeans and grains. An excellent source of protein. Made with TLC [tender loving care] & country fresh spring water. Culturing fine tempeh since 1979."

Note: This is the earliest document seen (Sept. 2011) concerning Noble Bean (the company) or its tempeh. Address: R.R. 1, McDonalds Corners, ONT, K0G 1M0, Canada. Phone: 613-278-2305.

2259. Peluso, Michael R. 1988. The nutritional value of soy. *Health World (Burlingame, California)* 2(4):26-28. May/June.

• **Summary:** This introductory article discusses whole soybeans, soy flour, soy protein products (isolates, spun fibers, TVP), soy milk, soy cheese (tofu), tempeh, miso, and soy sauce. Table I shows the composition of most of these is given. The author is especially interested in soy oil as a good source of vitamin E and of the essential fatty acids, linoleic and alpha linolenic acids. He is critical of the hydrogenation process. Table II gives a nutritive comparison of soy oil and selected food fats. Table III gives a nutritive comparison of soy foods and selected animal foods. Address: P.O. Box 606, Occidental, California 95465.

2260. Shurtleff, William; Aoyagi, Akiko. 1988. *Das Tofu-Buch: Herstellung, Verwendung, Ernahrungswert, Rezepte* [The book of tofu: Preparation, uses, nutritional value, recipes]. Munich, West Germany: Goldmann Verlag. 384 p. Illust. by Akiko Aoyagi Shurtleff. Index. 18 cm. [Ger]

• **Summary:** A pocket book edition of the original 1980 German edition of *The Book of Tofu*. Contains 300 recipes. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2261. *Soya Newsletter (Bar Harbor, Maine)*. 1988. New trypsin inhibitor found/Work on high B-12 tempeh. May/June. p. 10.

• **Summary:** A new trypsin inhibitor in soybeans has been found and work is being done to characterize it. Also, research is being conducted to help produce a high-vitamin B-12 tempeh, a fermented soybean product. Address: P.C. Markakis, Food Science Dep., Michigan State Univ., East Lansing, MI.

2262. Maeda, Toshiie. 1988. Mura okoshi-Tenpe sonjuku: Mura okoshi was kore kara da [Revitalizing a village—the tempeh village school: Now begins the village development. III.]. *Toyo Shinpo (Soyfoods News)*. July 1. p. 4. [Jap; eng+]

• **Summary:** On 31 Jan. 1988 the group held the first formal meeting of its members. In February work on the equipment began, and by Feb. 20 the tempeh starter room were finished. In March, after many failures and trials, good tempeh starter was produced, and from it the first good tempeh. Big success! By mid-April the tempeh plant, with a production capacity of 2 tonnes a month, was completed.

The purposes of the group: 1. To provide real good foods to the household table. 2. Especially to provide nutritious tempeh for the table to change people's food life. And to popularize tempeh as a food to maintain a healthy food life. Therefore they are collecting information on nutrition and trying to develop second generation tempeh products. Mr. Maeda works as a food technology technician. Cooking experiments are done by the wives of the members. They use organically grown soybeans from Mr. Otsuki, a tofu shop owner. Address: Kobe Women's Junior College, food processing.

2263. Bubny, Paul. 1988. Venerable soybean sprouts new uses. *Health Foods Business* 34(7):72, 74, 76, 108. July.

• **Summary:** Lonnie Stromnes, national sales manager of White Wave Soyfoods in Boulder, Colorado, reports that White Wave recently "upscaled" the packaging on its tempeh products; the new graphics depict tempeh in use, so that customers do not have to bring a thorough knowledge of the food into the store with them. Mitoku-USA, based in Albany, New York, imports some 20 varieties of miso. At least one manufacturer, the Asheville, North Carolina-based Great Eastern Sun, saw its miso sales increase by 20% last year. Bruce Sturgeon, the company's vice president, said Great Eastern Sun's volume on miso alone was \$400,000 in 1987. Shoyu and tamari are frequently aimed at the gourmet market as well as the natural foods / specialty foods market. Owner Dale Kamibayshi of Alfalfa's Market in Boulder, Colorado said, "I think many people are still intimidated by (soyfood's) preparation." To help overcome the intimidation factor, Alfalfa's has scheduled a soyfood tasting fair for July 16; the first such fair which the store has devoted to soy.

Gary Barat, chairman of Legume, Inc. said, "I see the

natural foods and gourmet markets coming together,” said Barat. “And the smart marketers are realizing that.” People who shop specialty stores have both eyes turned toward quality. Soy companies are increasingly making use of organically grown soybeans. There is also a trend toward using specific soybeans for specific products, a sign of a maturing industry. The trend is more prevalent in the U.S. than in Far East Asia. Westbrae, for example, uses Vinton beans for its Westsoy soy beverage. As the currency in Japan remains strong against the dollar, you’re going to see more and more (soy) products produced in America. Also there will be greater growth in so-called “second-generation” soy products—dairy analogs with soymilk, soy cheese, soy ice cream and soy yogurt. Address: Associate Editor.

2264. Fertia. 1988. Prijlist. 1 Juli 1988. Milieu vriendelijke levensmiddelen [Price list. 1 July 1988. Environmentally friendly foods]. Koolhaaspark, 3864 PW Nijkerkerveen, Netherlands. 49 p. 30 cm. [Dut]

• **Summary:** Contains products from: Dr. Vogel (p. 20). Huegli (mostly bouillon, p. 20). Japanese soy products (shoyu, tamari, may types of miso, nigari, kuzu, wheat gluten, mochi, p. 30-33). Fertia soy products (p. 34). Yakso (tofu, tempeh, soy sauce, p. 34). Witte Wonder (tofu, seitan, p. 35). Orido (amesake, p. 35). Liza (rice drink, p. 36). Living Foods (soya drink, p. 36). Provamel (9 soy drinks and 6 soy desserts [puddings], p. 36). Jonathan (1 bottled soy drink, p. 36), Lima (shoyu, tamari, soymilk), Eden (no soy, p. 37). Address: Nijkerkerveen, Netherlands. Phone: 03495-72844.

2265. Mitchell, David A.; Doelle, H.W.; Greenfield, P.F. 1988. Agar plate growth studies of *Rhizopus oligosporus* and *Aspergillus oryzae* to determine their suitability for solid-state fermentation. *Applied Microbiology and Biotechnology* 28(6):598-602. July. [14 ref]

• **Summary:** Both organisms grew well on cassava starch as their sole source of carbon and energy, although growth was stimulated by addition of yeast extract and peptone. Neither organism utilized ungelatinized starch effectively. Growth of *R. oligosporus* was inhibited by NaCl (table salt) at greater than 0.5% (w/v), while *A. oryzae* was unaffected by up to 4% NaCl. Colony radial growth rate for *R. oligosporus* was far superior to that obtained for *A. oryzae*. *R. oligosporus* was chosen as the more suitable organism for future studies of protein enrichment of cassava by solid-state fermentation. (A further advantage of *R. oligosporus* is that it has been consumed as a food, in the form of tempeh for centuries, showing its acceptability and safety.). Address: Biotechnology Unit, Univ. of Queensland, St. Lucia, QLD 4067, Australia.

2266. Spence, Cathie Slater. 1988. Tennessee’s ghost farm: A personal odyssey back to a pioneering alternative

community. *East West*. July. p. 46-53.

• **Summary:** The best report seen to date of changes at The Farm following “the changeover” in the Farm’s economy in 1983 away from a communal form. The change required that everyone pay their way. A \$200,000 debt was paid off and the land was owned free and clear but less than a third of the population stayed thru the changeover. Many who had invested a decade of their lives left with nothing—but bitterness, feeling betrayed. Stephen Gaskin feels betrayed and angry. Roberta Kachinsky is preparing to market her tofu cheesecake nationally. Address: Cambridge, Massachusetts.

2267. *Watashi no Kenko (My Health)*. 1988. Atarashii nattô tenpe wa kôshite taberu. Indonesia no kusakunai nattô [Here’s how you eat the new natto, tempeh. Indonesia’s natto that doesn’t smell]. July. p. 147-62. [Jap]

• **Summary:** A popular introduction to tempeh containing nutritional information and recipes.

2268. **Product Name:** [Tempeh Doeloe, and Tempeh Poesta].

**Foreign Name:** Tempeh Doeloe, and Tempeh Poesta.

**Manufacturer’s Name:** Yakso.

**Manufacturer’s Address:** Zoutstraat 17, Groningen, Netherlands.

**Date of Introduction:** 1988. July.

**Wt/Vol., Packaging, Price:** 170 gm.

**New Product–Documentation:** Fertia price list. 1988. July. p. 34. Doeloe and Poesta are apparently Indonesian food terms that are not translatable into English. Doeloe means “past” or “old.”

2269. Bailey, Simon. 1988. Soya-based products. *Natural Choice*. Aug. 15.

• **Summary:** “The food of the future. The soya bean is a protein-packed food which is increasingly used as a dairy or food substitute in today’s search for a healthier diet.” Discusses soya milk, dairy free desserts, tofu, tofu-based foods, soya flour, soya sprouts, tempeh, soya sauce, miso, and high-tech soya foods including TVP and soya protein isolates. Address: 138 Randolph Ave., London W9 1PG, England. Phone: 01-289-7364.

2270. Keith, Hogetsu. 1988. Re: Making soymilk and tempeh at Shasta Abbey. Letter to William Shurtleff at Soyfoods Center, Aug. 16. 2 p.

• **Summary:** In this Soto Zen Buddhist monastery (Rev. Roshi Jiyu-Kennett, abbess), having about 50 year-round residents, they make 9-14 gallons/week of soymilk and 20-24 lb/week of tempeh. They would like to make tofu but don’t have the time or labor, so they buy it from Ashland Soy Works in Oregon. They have been making soymilk for nearly 2 years. Address: Shasta Abbey, P.O. Box 199, 3612 Summit Dr., Mt. Shasta, California 96067. Phone: 916-926-4208.

2271. Ridenour, Jeremiah. 1988. Monterey Bay Soyfoods, Western Soy Complements, and Wildwood Natural Foods (Interview). *SoyaScan Notes*. Aug. 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Jeremiah got interested in soyfoods in June 1977 because of his interest in vegetarianism and because his parents grew soybeans on their farm. In July 1979 he established Monterey Bay Soyfoods, a sole proprietorship, in Santa Cruz, California. Initially it was a company that allowed him to do research. Then he began to making tempeh, which was first sold commercially in February 1980. But for about 9 months he produced tempeh out of his garage and sold it out of the house in ½ and 1 pound quantities without a label or a brand name. This was the first commercial tempeh made in Santa Cruz.

At about this time (late 1979 or early 1980) Buddy Hamel started a company named Clearway Soyfoods on 17th Ave. in Santa Cruz, making tofu. In Feb. 1981, Jeremiah wrote an article on transforming a dead refrigerator into a tempeh incubator, and in July 1981 another article about using a honey extractor for dewatering soybeans for tempeh; both were published in Soyfoods magazine.

In April 1981 a new company was formed named Western Soy Complements (WSC). A corporation with four stockholders, including Jeremiah, it was located in Jeremiah's garage at 335 Pennsylvania Ave. and made tempeh brand-named Santa Cruz Tempeh. "We grew the best tempeh ever in my garage. It has never been quite as good." Then in Nov. 1981 WSC moved into the back of the Well Bean Deli, where they cooked and incubated the tempeh. Tempeh of the Sea (with nori) was launched in about 1982. After about 18 months, in June 1984, WSC was moved to 1560 Mansfield Dr., Suite D in Santa Cruz. Then marinated tempeh burgers came in about 1985. In March 1987 they brought out the Tempeh Temptations (fried and marinated) and Three Seed Tempeh, and in June Curried Rice Salad with Tempeh (and carrots), which in September started to be private labeled for Wildwood. WSC has always made only tempeh.

In Sept. 1985 Jeremiah began a joint venture in Santa Cruz with Wildwood Natural Foods. Monterey Bay Soyfoods sort of became part of Wildwood. Wildwood had distributed WSC's tempeh in northern California. Buddy Hamel and Clearway, a tofu manufacturer, had just gone out of business. Wildwood wanted to make tofu in Santa Cruz. The first product (tofu) was sold in June 1986. Jeremiah now owns some of the stock in Wildwood Natural Foods of Santa Cruz. Wildwood has outgrown its space, so they are planning to find a new location for WSC (maybe one building away) and let Wildwood fill its space. Jeremiah is working on adding vitamin B-12 to his tempeh. Address: Santa Cruz, California. Phone: 408-476-4448.

2272. **Product Name:** Organic Tempeh.

**Manufacturer's Name:** Kaiora Natural Ltd.

**Manufacturer's Address:** CPO Box 3007 (180 Victoria St. West), Auckland 1, New Zealand. Phone: (09) 370 454.

**Date of Introduction:** 1988. August.

**New Product–Documentation:** Letter from Austin Holden. 1988. Dec. This August they began to produce a wider range of soy products, including tempeh. They use locally grown organically certified soybeans ("Biogro" certified by IFOAM).

2273. Klaper, Michael. 1988. *Vegan nutrition: Pure and simple*. 2nd ed. P.O. Box 959, Felton, CA 95018-0959. Or 8563 Empire Grade, Santa Cruz, CA 95060. iii + 72 p. Illust. 27 cm. [137\* ref]

• **Summary:** An excellent, highly readable introduction to the subject by a physician. The Acknowledgments page (p. 69) reads like a "Who's Who" of vegetarianism in the USA in 1988. Dr. Klaper gives special thanks to "Cynthia Pararo Klaper, for her indispensable editing suggestions, tireless efforts, and loving support." Soyfoods (especially tofu, soymilk, and tempeh) are mentioned and discussed throughout this book. Soy-related recipes include: Tofu yogurt. Bran muffins (with soymilk). Tofu omelette. Tofu tahini dressing. Blond miso dressing. Tofu eggless salad. Miso soup. Hot miso dressing. Tofu cutlets. Tofu loaf.

Note: Dr. Klaper is a graduate of the Univ. of Illinois College of Medicine, with post-graduate training and experience in surgery, anesthesia, obstetrics, and general practice. Since 1972 his emphasis has been on applied nutrition. Until recently his practice was in central Florida. Address: Felton, California. Phone: 408-423-6643.

2274. McSweeney, Daniel. 1988. Consumer survey 1988. *Whole Foods*. Aug. p. 27-28, 30, 32, 34.

• **Summary:** Natural/organic food purchases. Percentage of respondents who purchased a type of product during the past year: 1988 all/1987 all (1988 women / 1988 men). NA means "Not Available." The following are ranked in descending order of the percentage of consumers buying the product in 1988: Tofu: 63.5/83.4% (55.6/63.5%); Tamari 55.6% / NA (57.8/50.0%); Soy sauce 47.6%/NA (46.7%/50%); Miso 41.8/69.7% (42.2/38.9%); Tempeh 30.2/NA (35.6/16.7%); Soymilk 28.6%/54.5% (31.1/22.2%). Note the sharp declines between 1987 and 1988 for soymilk -47.6%, miso -40%, tofu -24%. All soyfood products for which there are statistics for both years declined, a serious trend.

Note: The "1986 and 1987 surveys statistics were generated through a reader questionnaire in East West magazine. The 1988 Consumer Survey was handed out to shoppers at 13 different retail stores throughout the country. Due to this variance in the survey base, some statistical discrepancies may have resulted."

2275. *Nutrition News (Riverside, California)*. 1988. Soy: King of the mountain. 11(8):1-4. Aug. [1 ref]

• **Summary:** An overview and introduction to soyfoods nutrition, tofu, tempeh, miso, shoyu and tamari, and soymilk. Note: This magazine was formerly located in Pomona, California.

2276. **Product Name:** Fakin' Bacon, Lettuce & Tomato Sandwich (With Tempeh).

**Manufacturer's Name:** Rademacher-Worley Farms of Sonoma County.

**Manufacturer's Address:** Box 5184, Santa Rosa, CA 95402. Phone: 707-792-2208.

**Date of Introduction:** 1988. August.

**New Product-Documentation:** On sale in Berkeley. 1988. Aug. 30. Talk with Peter Worley of RW Farms. 1988. Aug. 30. The product was introduced 3 weeks ago, in early August, and was an instant hit. He is already selling 700 sandwiches/week.

2277. Schnell, Hannelore. 1988. Kleine Bohne, ganz gross [Small bean, very big]. *Natur (Munich, West Germany)*. Aug. p. 75-83. [3 ref. Ger]

• **Summary:** Discusses soymilk, tofu, soy sauce, miso, tempeh, Soyastern, Svadesha Tofurei, Alpro, and DE-VAU-GE. Concludes with a detailed discussion of newly recognized potential dangers with HVP products. Vegetable seasonings made by companies such as Maggi may contain carcinogenic chloropropanols, such as dichloro propanol. Maximum limits on these are now being established.

2278. *Soya Newsletter (Bar Harbor, Maine)*. 1988. U.S. soyfoods production to use 62 million pounds of soybeans in 1988. July/Aug. p. 10.

• **Summary:** This figure was the result of a recently soyfoods industry survey conducted by Soyatech, Inc. The soyfoods included in this projection are tofu, soymilk, tempeh, soy sauce, miso, and soynuts. When asked how they expected their demand for soybeans to grow over the next 5 years, 4.8% of soyfoods manufacturers surveyed expected it to remain the same, 52.4% expected it to grow slowly, 42.9% expected it to grow considerably, and none expected it to decrease.

2279. **Product Name:** Teriyaki Burger (Made with Tempeh).

**Manufacturer's Name:** White Wave.

**Manufacturer's Address:** 1990 North 57th Court., Boulder, CO 80301. Phone: 303-443-3470.

**Date of Introduction:** 1988. August.

**Ingredients:** Tempeh (made with soybeans organically grown in accordance with section 26569.11 of the California Health and Safety Code and brown rice), natural soy sauce, garlic, onion, spices.

**Wt/Vol., Packaging, Price:** 6 oz (170 gm). Vacuum packed in poly pouch.

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per 3 oz.: Calories 190, protein 9 gm, carbohydrates 6 gm, fat 3 gm, sodium 466 mg.

**New Product-Documentation:** Talk with Steve Demos. 1988. Dec. 20. The product was introduced in Aug. 1988. Label. 1989. April. 4 by 4.5 inches. Yellow, white, and black on red. Large photo of a tempeh, lettuce & tomato sandwich, with a slice of tomato and 2 slices of dill pickles on top, cheese slices and lettuce below. "All the sizzle... none of the steak. Ready to eat in 1 minute. Makes a delicious sandwich or entree—just brown in a lightly oiled pan or microwave 1 minute high power." Leaflet. 1989. April. "Make your sales sizzle with White Wave."

2280. Stromnes, Lonnie. 1988. New developments with tempeh and tofu at White Wave (Interview). *SoyaScan Notes*. Sept. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Tempeh sales are up 30-35% over last year because of new products and expanded distribution into new markets. White Wave tofu will be coming into California starting in October. Lucky supermarkets will have a 12-foot organic produce section starting this month or next. Address: White Wave, Inc., 14670 Doolittle Dr., San Leandro, California 94577. Phone: 415-352-1320.

2281. Stromnes, Lonnie. 1988. New developments with tempeh and tofu at White Wave (Interview). *SoyaScan Notes*. Sept. 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave hopes to start fortifying their tempeh with vitamin B-12 producing cultures. They have gotten patented formulas from ATTC: *Arthrobacter* species #31263; *Propionic* bacteria #13673; and *Streptomyces* bacteria #11009.

White Wave is now actively trying to sell their tempeh and tofu to companies that produce other foods: Their tofu is used in Amy's Pot Pie and their tempeh in the Co-op line of Spaghetti sauces. Address: White Wave, Inc., 14670 Doolittle Dr., San Leandro, California 94577. Phone: 415-352-1320.

2282. Cross, Kevin. 1988. Brief history of Soy Power Company, Inc. of Santa Monica (Interview). *SoyaScan Notes*. Sept. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The company started business in Santa Monica, California, in April 1981, with Tom Binder and Kevin Cross as partners. They distributed tofu and soymilk made by Wy Ky in Los Angeles. They first started distributing other people's products in about July 1982, starting with Vegetable Jerky from Maple Meadows. When Edensoy was launched in 1983, it started to hurt their sales so they decided to get in

on the action. They soon became America's leading seller of Edensoy. In April 1986 they moved the company to Marina del Rey, then in September 1988 back to Santa Monica. Today they market and distribute about 11 soyfoods products under their own brand (all made by other companies), and they distribute another 350 products from other companies. Address: 1602 Stanford St., Santa Monica, California 90404. Phone: 213-829-2331.

2283. Murata, Kiku. 1988. Re: New Tempeh Study Group planned in Japan. Letter to William Shurtleff at Soyfoods Center, Sept. 24. 1 p. Typed, with signature. [Eng]  
 • **Summary:** "After the Asian Symposium on Non-Salted Soybean in 1985, we had the 4th and 5th Tempeh Conferences (*Danwakai*). We are going to start a Tempeh Study Group (*Kenkyukai*) soon in Japan. At some meetings reports will be presented. Membership is ¥2,000/year. The first meeting of the Study Group will correspond to the 6th *Danwakai*. We will be sending announcements to about 200 people, and hope that 25-50% will join." Address: 608 Honyakushi, Nara City 630, Japan.

2284. Elliot, Rose. 1988. The complete vegetarian cuisine. New York, NY: Pantheon Books. 352 p. First American edition. With many lovely full-page color photos. Index. 28 cm.

• **Summary:** Visually, this is a beautiful book. The author makes minimal use of soybeans or soyfoods in her vegetarian cookbooks. She has apparently not learned that very few cultures that use soya as a traditional part of their diet use either soybeans as such or soy flour. In "Learning to love the soybean" (p. 16) she notes: "Soybeans and soy flour are rich sources of nutrients, but, in my opinion, so difficult to make palatable! However sprouted soybeans are delicious and make an excellent crunchy addition to salads, stir-fries, and sandwiches... Creamy soy milk (p. 106) and tofu (p. 108), which can both be made at home, are other palatable ways to eat soy."

Pages 38-39 contain a marvelous 2-page spread color photo of 30 different leguminous seeds (including soybean and soy flour), each with a brief description, followed by a longer description on pages 40-41. The section titled "Soybean *Glycine max*" states: "Soybeans have a strong flavor and need powerful condiments, such as curry, tomato and garlic, to make them taste good. I think they're nicest when sprouted (p. 207) and added to salads and stir-fries.

"Many products, such as miso, soy sauce, tempeh, soy milk and tofu, are made from soybeans and are described in other sections of this book.

"Soy flour is high in protein and low in starch, so it cannot be used to make a normal white sauce, although it can be stirred into savory sauces and gravies to add bulk and nutrients and is sometimes added to flour as a dough improver, in the proportion 8 parts flour to 1 part soy flour."

Pages 104-05 contain another 2-page spread color photo of dairy and nondairy ingredients, with a brief description of each, including tempeh, seitan, dried deep-fried tofu, aromatic dried tofu [probably five-spice pressed tofu = *wu-hsiang toufukan*], smoked tofu, firm tofu, soft tofu, textured vegetable protein (chunks or chopped), soy milk, and soy cream. A longer explanation is given on pages 106-06. The author does not like the strong soybean flavor or stodgy texture of tempeh. Page 108 gives a brief description of how to make tofu, and has a sidebar titled "Ideas for using tofu and vegetarian protein foods." A good but brief description of soy sauce is given on p. 184, and a poor description of "How to make soy milk" (with added vanilla, honey, and oil) is given on page 280.

Soy-related recipes include: Miso soup with bean curd (p. 133; a variation includes wakame). Vegan ice cream (uses soy milk instead of dairy milk, p. 280). Thus, only 1 recipe in the 352-page book uses tofu and none use tempeh.

Originally published in Great Britain as *Rose Elliot's Vegetarian Cookery* by William Collins Sons & Co. Ltd., London and Glasgow. "Rose Elliot, a vegetarian since the age of three, is one of England's most popular cookbook authors. Her many best-selling books include *Vegetarian Cooking from Around the World*, *The Festive Vegetarian*, and *The Vegetarian Mother and Baby*. An active food consultant, she has appeared often on television and radio in Britain. She lives in Hampshire, England." She was born and educated in England. Address: Hampshire, England.

2285. Herbert, Victor. 1988. Vitamin B-12: Plant sources, requirements, and assay. *American J. of Clinical Nutrition* 48(3S):852-58. Supplement. Sept. Proceedings of the First International Congress on Vegetarian Nutrition. Held 16-18 March 1987 at Washington, DC. [22 ref]

• **Summary:** This very interesting and important paper states: "Many of the papers in the literature give values of vitamin B-12 in food that are false because as much as 80% of the activity by this method is due to inactive analogues of vitamin B-12."

This vitamin is not found in plant sources. "There is no active vitamin B-12 in anything that grows out of the ground; storage is found only in animal products, where it is ubiquitous and where it is ultimately derived from bacteria."

Confusion has arisen because the standard US Pharmacopeia (USP) assay for vitamin B-12, measures on the growth of a bacterium (*Lactobacillus leichmannii*). Unfortunately substances that are active vitamin B-12 for bacteria are not necessarily active B-12 for humans. As much as 80% of the activity by this method is due to inactive analogues of vitamin B-12. Note also that vitamin B-12 is one of the few nutrients absorbed primarily from the lower half of the small bowel.

Nobody needs more than 1 microgram per day of real B-12 (cobalamin). "Fermented products, such as soy

products like tempeh, do not contain substantial amounts of B-12... We studied several types of tempeh, including Original Soy Tempeh, a *Rhizopus oligosporus* culture with a label claim of 160% of the US RDA for vitamin B-12 per 4 oz. Using the differential radioassay we found there was practically no vitamin B-12 in it (Herbert et al. 1984). Vegans must get a source of vitamin B-12.

What is the RDA for vitamin B-12. Definitely less than 2 micrograms/day, and probably more like 1 microgram. Address: Mt. Sinai School of Medicine, New York, New York.

**2286. Product Name:** [Tempeh Burgers].

**Manufacturer's Name:** La Sojeria, S.C.

**Manufacturer's Address:** Carretera de Vic Km. 30, 08180 Moia (near Barcelona), Spain. Phone: (93) 830 1123.

**Date of Introduction:** 1988. September.

**Wt/Vol., Packaging, Price:** Vacuum packed in plastic bags.

**New Product–Documentation:** Letter from Javier Arocena of Zuaizto, Spain. 1992. Dec. 14. He knows of three other soyfoods manufacturers in Spain: Natur-Soy, Vegetalia, and La Sojeria, all near Barcelona.

Form filled out by Laura Cami and Mario Rimoldi of La Sojeria. 1993. Feb. 13. Their company introduced these products in Sept. 1988. They now make about 150 lb/month. The burgers are sold in vacuum-packed plastic bags.

**2287. Product Name:** [Tempeh].

**Manufacturer's Name:** Le Bol en Bois.

**Manufacturer's Address:** 35, rue Pascal, 75013 Paris, France. Phone: 707-272-4.

**Date of Introduction:** 1988. September.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Alain Bitton, who calls from France. 1993. Sept. 28. He is the tempeh maker at Le Bol en Bois. He has been making and selling tempeh there since about Sept. 1988, when Le Bol en Bois started to make tempeh. He is looking for a dehuller (dry or wet) to dehull the soybeans to make tempeh.

**2288. Product Name:** Organic Tempeh [Mildly Spiced, or Tasty].

**Manufacturer's Name:** Nutrisoy Pty. Ltd.

**Manufacturer's Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1988. September.

**Ingredients:** Mildly Spiced: Organic soybean, water, cider vinegar, sea salt, spices, herbs, and culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 300 gm in plastic bag.

**How Stored:** Refrigerated.

**New Product–Documentation:** Labels with dates sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling these products in March 1987. Seasoned: Blue,

yellow and red on white. On the front panel: "Nutritious. Cholesterol free... For a high energy breakfast, quick lunch, or hearty main meal. No artificial flavouring, colouring, or preservatives. Improved quality. Fitness food."

**2289. Shurtleff, William; Aoyagi, Akiko.** 1988. Das Tempeh-Buch: Nahrung fuer alle Band 3 [The book of tempeh: Food for mankind. Vol. 3]. Ahorn Verlag, Irmingardweg 10, D-8210 Prien, West Germany. 256 p. Illust. by Akiko Aoyagi Shurtleff. Index. Sept. 23 cm. Translated by Christiane and Dr. Peter Heningsen, and by Flora Yap. [292 ref. Ger]

• **Summary:** Contents: What is tempeh? Preface.

Acknowledgments. How to use this book. Part I. Tempeh: Food for all. 1. Soybeans: Protein source of the future. 2. The nutritional value of tempeh.

Part II. Cooking with Tempeh (162 recipes). 3. Getting started–Preparation, principles, and basic recipes. Favorite tempeh recipes. 4. Western-style tempeh recipes. 5. Indonesian tempeh recipes.

Part III. Making tempeh. Making tempeh at home, in a community, or on a commercial scale. 7. Other types of tempeh and onchom. 8. Making tempeh starter. 9. The Indonesian tempeh shop.

Part IV. Tempeh history and research. 10. The history of tempeh East and West. 11. The microbiology and chemistry of tempeh fermentation. Part V. Appendixes: Tempeh contacts throughout the world. Bibliography. Glossary. List of illustrations. About the authors and their work (autobiographical).

Published in a hardcover edition only—6 years after the project started. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

**2290. Soyaneews (Sri Lanka).** 1988. Soya foods at Katugastota Mahapola. 10(3):5. July/Sept.

• **Summary:** "In the second week of August, 1988, the Plenty Canada Soya Food Centre extended its popularising activities to the Mahapola held at St. Anthony's College, Katugastota with great success. Those who visited the Plenty Canada Soya Stall had the choice of a wide array of snacks to choose from, including cutlets, rolls, dhall, tempeh sticks, soya toffee, aluwa and coffee.

"Freshly prepared soya coffee proved to be one of the most popular drinks... Because of its good taste and affordable price, almost everyone who visited the stall had a cup of coffee and took a packet home."

**2291. Soyaneews (Sri Lanka).** 1988. Harnessing the sun for better nutrition. 10(3):1. July/Sept.

• **Summary:** "Tempeh, produced in Indonesia for hundreds of years, has recently found favour in Sri Lanka as a high quality substitute for dried fish. It has also proven popular in dishes calling for eggplant, baby jack and chicken." When dried to a moisture content of 12%, it has a long shelf

life without refrigeration. Now Plenty Canada, working in cooperation with the Intermediate Technology Development Group (I.T.D.G.) and Sarvodaya, have developed a low cost solar powered cabinet dryer, which dries tempeh in less than half the time of traditional techniques with no losses to birds or insects. Plenty Canada hopes to introduce their new solar powered dryers to village and farm groups interested in the production of commercial quantities of dried tempeh.

2293. Schecter, Andy. 1988. History of Northern Soy (Interview). *SoyaScan Notes*. Oct. 10. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In August 1975 Jay Thompson, who was on the kitchen staff at the Rochester Zen Center, read a notice on tofu that William Shurtleff had written to *East West Journal*. He wrote Shurtleff in Japan requesting instructions for making tofu. Shurtleff sent him a basic recipe. In September, having had good results, he wrote back asking for a larger scale recipe. Shurtleff sent him a chapter of a book he was writing on *Tofu & Soymilk Production*. Soon members of the kitchen staff (Thompson, Martha Gifford, Debbie Lebeaux, and Andy Schecter) were making tofu on the large kitchen stove (using a Corona Mill) for members of the community.

Several months later, when they had showed that the process was practical and wanted to expand, they set up a small tofu shop in the basement of Zen Center, cooking over a candy stove. At that time several volunteers, Greg Weaver and Greg Mello, who were members of the Center but not of the kitchen staff, also began making tofu in the new basement shop. This tofu was used only by members of the Center, and was not sold commercially.

Then Weaver and Mello decided to start a commercial tofu shop, so they formed a partnership and rented space at 277 N. Goodman St. in Rochester. Greg Weaver got some checks printed on which the business name was given as Flying Cloud Tofu. When Greg Mello saw that name he was so upset that they had a big fight and decided they didn't want to work together. Greg Weaver went off to work in landscaping, and Greg Mello asked Andy Schecter to come in as a partner. After several months (when the checks were used up), the business name was changed to The Tofu Shop.

In about October 1977 Greg Mello decided to leave. Greg Weaver took his place as Andy's partner. Norman Holland came in the following year, in 1978.

In Nov. 1977 Earl Lepper started making tempeh in his home in Rochester and having a rough time. He would take

it out of the incubator and walk it over to the Genesee Co-op, where it was sold. He decided to drop the business and leave town, so Northern Soy decided to make him a generous offer for basically his technique and equipment—he didn't have much of a business. Shortly he returned to Rochester and went to work for Northern Soy making their tempeh.

In 1978 The Tofu Shop decided to open a soy deli in Rochester. They transferred to it the name The Tofu Shop and changed the name of the manufacturing company to Northern Soy. Greg Weaver ran the deli operation, which opened in Nov. 1978.

In the summer of 1979 the company moved to 30 Somerton St. which had 3,000 square feet (plant plus office space). On 1 Sept. 1985 the company changed from a 50:50 partnership between Schecter and Holland to a corporation in which the two each owned 50% of the stock. In July 1988 the company moved to its present address, 545 West Ave., where they have 16,000 square feet total (plant plus office plus storage). This now seems like too much space, so they plan to expand their soyfood product line. Tofu prices are now lower than anyone would like, and the company is having a hard time paying the interest on their loans. Address: 545 West Ave., Rochester, New York 14611. Phone: 716-235-8970.

2294. Holzapfel, Robert. 1988. The Farm in Tennessee and The Book Publishing Company (Interview). *SoyaScan Notes*. Oct. 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Yellow Sun Co-op in Amherst, Massachusetts, opened in about 1970. Tom Timmins, who was not one of the founders, applied to be the manager and was hired in about 1971. Robert worked with him.

There are now about 250 people living on The Farm, including 100-125 adults. Only about one-fifth of the men have long hair. All Farm members own the 1,700 acres of land together, and none pay rents on houses they live in. All houses are now single family dwellings. The Farm was about \$600,000 in debt in October 1983, the time of the reorganization, when they changed from a collective to a cooperative. This was greater than the assets. Most Farm members are still vegetarians. Stephen no longer gives any Sunday morning raps/sermons. Granted that some Farm members had worked for years to build The Farm and left empty handed, but they also left behind this \$600,000 debt.

Books that have sold well for The Book Publishing Company: *Big Dummy's Guide to CB Radio* (1.5 million copies sold to date), *Tofu Cookery* (150,000 to 200,000; 25,000 a year now), *Tempeh Cookery* (25,000 total), *Tofu Quick & Easy* (13,000 a year now). There are no records on sales of *The Farm Vegetarian Cookbook*, but it has sold very well since 1975, when it was published (maybe 170,000 copies). Annual sales in 1988 are expected to be 10,000 to 15,000 copies worth \$300,000. The company almost went under in 1984. Dorothy R. Bates (the mother of Farm

Lawyer Albert Bates) has been instrumental in the company's comeback. Address: President, The Book Publishing Co., P.O. Box 99, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: 615-964-3571.

2295. Barat, Chandri. 1988. Recent developments at Legume, Inc. (Interview). *SoyaScan Notes*. Oct. 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Chandri has just returned from SIAL (the international food exposition held on alternate years with ANUGA) in France, where they showed their Barat tofu chocolate line in the American Pavilion. The response was tremendous. They set up distribution all over the world. There were a lot of soyfoods companies at the expo, including Cacoja and a French tempeh producer. They spoke to thousands of people at the expo and were surprised to find that a good 50% knew what tofu was, and their attitude toward tofu was generally very positive. There were few with negative attitudes.

Products they now sell in addition to the chocolate line include the Tofu Lasagna, Manicotti (they changed the name of Cannelloni Florentine to Manicotti Florentine since many people thought Manicotti meant meat), Stuffed Shells Provençale. These are sold mostly to the natural food trade with some crossover into the kosher market. Now in California they have a kosher distributor who gets them into major supermarket chains; he puts the product on the shelves himself; there is no slotting allowance and the product is not in the store's computer. Kosher has proved to be a key attribute of the products.

During the last year which ended in June 1988, sales rose 20% and the loss went down from \$1.3 million to \$500,000. They withdrew from most frozen supermarket distribution (it never became profitable due to constant large costs to stay in). They stayed only with profitable frozen distribution, mostly health food or kosher chains, with sales presently about \$1.1 million/year. They also dramatically cut overhead. They have a shot at making a profit this quarter and will definitely do so the January quarter. The future looks good.

Several years ago, in about Oct. 1986 at the ashram in South Fallsburg, New York, Gurumayi Chidvilasananda, Muktananda's successor, told them several times jokingly (she calls them the "tofu people") to make tofu candy. That idea led to the launch of the Barat Bar, a non-dairy chocolate bar, about 10 months later. Though the salad dressing didn't make it, the tofu chocolate was designed as a product that could be distributed through much broader channels... drug stores, etc. Concerning other products copying the Barat Bar, they have a lead on the market and they have a license with Sucanat; Sucanat will not sell their sweetener to a similar product. Also, The Barat Bar was the first product containing Sucanat to be launched, and Legume has done a lot of publicity for Sucanat. So a loyalty and friendship

has developed. Address: 170 Change Bridge Rd., 2nd Floor, Montville, New Jersey 07045. Phone: 201-882-9190.

2296. Karta, Susani K. 1988. Market trends in the development of traditional soyfood. Paper presented at the ASEAN Food Conference '88: Food Science and Technology in Industrial Development. 18 p. Held 24-26 Oct. 1988 at Bangkok, Thailand.

• **Summary:** Contents: Introduction. Traditional soyfood. Market situation and trends. Indonesia. Singapore. Malaysia. Thailand. Constraints in the market development of soyfood (in each of the above 4 nations). Major trends in the development of traditional soyfoods. Marketing strategy of soyfood. Tables: 1. Traditional non-fermented soyfood products. 2. Nutritional composition of traditional non-fermented soyfoods. 3. Description and uses of traditional fermented soyfood products. 4. Nutritional composition of traditional fermented soyfoods.

5. 1987 estimated consumption of soybeans as foods in the Far East [total and per capita in East Asia]. China, 1,062 million population, 7,325,000 tonnes, 6.9 kg/capita. Japan, 122 million population, 1,141,000 tonnes, 9.3 kg/capita. South Korea, 42.1 million population, 330,000 tonnes, 7.8 kg/capita. Taiwan, 19.6 million population, 260,000 tonnes, 13.3 kg/capita.

6. Southeast Asia soybean consumption for food. From 1983 to 1989 the increase in 1,000 metric tons was: Indonesia 927 to 1,600. Singapore 14 to 26. Malaysia 32 to 70. Thailand 40 to 150. Philippines 9 to 24. Total 1,022 to 1,870 (increase of 82.9% in 7 years).

7. Per capita soybean consumption for food in Southeast Asia. From 1983 to 1989 the increase in kg/person was: Indonesia 6.0 to 8.8. Singapore 5.6 to 10.5. Malaysia 2.1 to 3.7. Thailand 0.8 to 2.6. Philippines 0.2 to 0.5. Average total: 3.8 to 5.9 (increase of 55.3% in 7 years).

8. 1987 estimated consumption of soybeans as foods in Southeast Asia [total and per capita]. Indonesia, 175 million population, 1,575,000 tonnes, 9.0 kg/capita. Thailand, 53.6 million population, 118,000 tonnes, 2.2 kg/capita. Malaysia, 16.1 million population, 55,000 tonnes, 3.4 kg/capita. Singapore, 2.6 million population, 20,000 tonnes, 7.7 kg/capita. Philippines, 61.5 million population, 18,000 tonnes, 0.3 kg/capita.

9. Indonesian soybean production, imports, and consumption as food (in tonnes). From 1983 to 1989, production rose from 536,000 to 1,250,000, imports decreased from 391,000 to 350,000, and the amount consumed as food increased from 927,000 to 1,600,000. About 50% of the soybeans used for foods in Indonesia go to make tempeh, and 40% are used to make tofu.

10. Singapore soybean consumption as food. From 1983 to 1989 the amount increased from 14,000 tonnes to 26,000 tonnes. Most of these soybeans are used to make tofu and soymilk. 11. Malaysia soybean imports and consumption

as food (in tonnes). From 1983 to 1989, production rose from 182,000 to 440,000, and the amount consumed as food increased from 32,000 to 70,000. 12. Thailand soybean production, and consumption as food (in tonnes). From 1983 to 1989, production rose from 113,000 to 490,000, and the amount consumed as food increased from 40,000 to 150,000. Only in 1988 were soybeans imported—40,000 tonnes. This growth of soyfood consumption is due partially to the Government of Thailand's interest in promoting the awareness and utilization of soyfood products. The Thailand Agricultural Extension Service program and other institutions have been actively advocating of soyfoods into the food industry and the human diet, especially in rural areas. The government controls soybean imports by issuing licenses.

In summary: The soybeans with the highest per capita soybean consumption for soyfoods are: Taiwan 13.3 kg, Japan 9.3 kg, Indonesia 9.0 kg, Singapore 7.7 kg, South Korea 7.3 kg, and China 6.9 kg. The greatest potential for growth lies in China, where it is very common to find markets running out of soyfoods early in the morning. There is also great potential for growth in Malaysia, Thailand, and the Philippines. Address: American Soybean Assoc., 541 Orchard Rd., #11-03 Liat Towers, Singapore 0923, Republic of Singapore.

2297. Liebman, Bonnie. 1988. Vegieburgers: Stalking the perfect VLT. *Nutrition Action Healthletter*. Oct. p. 10-11.

• **Summary:** A rating of meatless burgers based on taste and fat content. A table shows product, maker, serving size, calories, fat (% calories, uncooked), sodium, and taste. "If the first ingredient is tofu, the fat content is high—probably around 55% of calories (compared with 58-66% for beef)... None of the burgers made with tempeh as a major ingredient supplied nutrition information. But tempeh gets only 35% of its calories from fat—an advantage, at least nutritionally. But palate pleasers they're not. Our testers quickly learned to identify the tempeh burgers by their 'sour' or 'glutenous' taste, and invariably tossed them into the 'bad' category. They come across as poor imitations of the imitation meat-burgers.

The five best rated products were: 1. Gardenburger (Wholesome & Hearty Foods, Portland, Oregon). 2. Nature's Burger, Original (Fantastic Foods, Novato, California). 3. Nature's Burger, Pizza (Fantastic Foods). 4. Nature's Burger, Barbecue (FF). 5. Tofu Burger (FF; the cook supplies the tofu). Soy products by White Wave, Quong Hop, Natural, Inc. and Bud, Inc. are listed in the table.

2298. Yu, R. 1988. Incorporation of lupin into human foods. In: Saipin Maneepun, Pivan Varangoon, and Bulan Phithakpol, eds. 1988. Food Science and Technology in Industrial Development: Proceedings of the Food Conference '88. 2 vols. Bangkok, Thailand: Institute for Food Research

and Product Development, Kasetsart University, Thailand. See p. 24-26. Held 24-26 Oct. 1988 in Bangkok, Thailand. \*

• **Summary:** Research in Australia has shown that lupin seed (*Lupin angustifolius*) can be used to make acceptable tempe. The writer stated that lupin was a better substrate for fermentation than soybean, and that taste panelists preferred the nutty flavor and golden color of lupin tempe.

Literature reports indicate a faster growth of lupin sprouts (36% greater yield) than for soy and mung bean, and that the crispier lupin sprouts have a high acceptability rating compared to soy sprouts.

Note: Lupin grain was sold into Indonesia for tempe manufacture from about 1985 to 1995, however trade was abandoned during the tumultuous years of political change and the Indonesia monetary crisis. There has been renewed interest in the use of lupin for tempe (Jayasena and Quail, 2004).

2299. Harris, Ron. 1988. A history of Grain Dance, one of America's earliest seitan manufacturers (Interview). *SoyaScan Notes*. Nov. 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ron arrived in San Francisco in about 1975, having studied macrobiotics previously in Ohio from 1974. As far as he knows, he was the first person to make seitan commercially as a real business in America. Before he started, a woman in Marin made seitan at home and sold it at 1-2 stores for a few months. She had no business name. She had learned how to make seitan from Roy Steevensz, a macrobiotic teacher in Los Angeles who also made and sold tempeh. Lima Foods in Belgium started to import a small bottled seitan product long after Ron started. He never had any competition from other seitan makers on the West Coast. When he began, no one had ever heard of seitan. The Kushis and the Aiharas both made and taught others how to make seitan on a home scale.

Ron first learned about and tasted seitan in Key West, Florida, in 1975. A woman named Martha, who was a macrobiotic (originally from Los Gatos, California) was giving a cooking class. His ex-wife Shiwa took the class, then Ron tasted the seitan from the bottom of the pot. He loved it. Shiwa then taught Ron the basic process for making seitan, then he ended up developing some variations on that process and recipe. Shiwa had a small business making pastries (such as date bars) out of her home in San Francisco and selling them at Rising Sun, a macrobiotic food store on Judah St. in San Francisco, owned by Mr. Noboru Muramoto. She suggested that Ron start making seitan to expand the family's line of foods. Ron first began to make seitan out of their home at 187 Downey St. (in the upper Haight-Ashbury district), San Francisco. He sold the first product in bulk at Rising Sun. It was in small dark brown chunks (about 6 pieces/chunks per pound), stored refrigerated in a 5-gallon plastic bucket or earthenware

crook. On the bulk container was written the word “seitan” followed by the ingredients. After about a year he started to sell it in individual packages. To the label he added the pronunciation “SAY-tahn” and the phrase “A high-protein food made from wheat.” He always sold only one product in one flavor. The ingredients were organic hard red winter whole wheat (always freshly ground), spring water, tamari (actually shoyu), ginger, and onions. He was one of the few seitan makers to use whole wheat; most others used unbleached white flour, which gave a higher seitan yield. Initially he ground the wheat by hand using a French Samap mill that he bought from Jacques DeLangre’s son, Tom. Later he bought his wheat from Joe Schwinn of Deaf Smith–Vital Vittles, who milled his own wheat fresh each day.

Originally Ron’s seitan company had no name. He coined the company name “Grain Dance” at about the time he began packaging in individual containers—round plastic deli containers with a snap-on lid. First he sold it by the pound, then in 8 oz packs. Later the name was expanded to Grain Dance Natural Foods. The company was never incorporated. From his first address, Ron moved to another home-based kitchen, then in about 1980 he subletted his first legal commercial space mornings in the kitchen of the Real Good Karma Cafe on Dolores St. in the Mission district. Finally in about 1982 he moved into a commercial space at 422 Haight St. between Fillmore and Webster in the lower Haight Ashbury. By 1987 he was selling seitan to about 100 stores in the greater San Francisco Bay Area. They made seitan 3 or 4 days a week, making 80 pounds of finished seitan each day. Grain Dance introduced seitan to thousands of Californians who were looking for an alternative to meat. At fairs he served deep-fried seitan; it was dipped in a spiced wheat-flour batter and breaded with cornmeal. People loved its meaty texture and savory flavor. Ron’s personal favorite was freshly cooked seitan, right out of the pot in his unique broth.

Initially Ron distributed the product himself, then Paul Duchesne distributed it after he was pushed out of Wildwood and started his own distribution company, then when he went out of business, Wildwood distributed it; Wildwood also used seitan in some of their sandwiches. Later David “Devo” Knepler came in as a partner (Devo now works with Wildwood Natural Foods). They had one employee.

For ten years Ron made seitan by hand. He really enjoyed the hand kneading, putting handmade energy into the food, and focusing on quality. By 1987 the business was growing, rents in San Francisco were skyrocketing, and he would have to mechanize the shop in order to expand. The business never made much money. “It was a labor of love, and it really enjoyed making seitan and turning people on to good food and helping them in any way I could.” So in 1987 Ron began to phase out the business. He started doing attorney service work (which he is still doing) several days a week, then made seitan on several other days. Initially

Wildwood wanted to continue it, so Ron went there and taught a few people how to make seitan. They did it for a while, but found it too labor intensive, and gave it up. There has never been another seitan maker on the West Coast. Address: San Mateo, California. Phone: 415-347-1378.

2300. Belleme, Jan. 1988. Fabulous finger foods. *East West*. Nov. p. 32, 34, 36-39.

• **Summary:** Includes recipes for: Tempeh Salad Tea Sandwiches. Walnut-Miso Dip. Deep-Fried Tempeh with Tofu-Mustard Topping. Address: Rutherfordton, North Carolina.

2301. Maeda, Toshiie. 1988. Atarashii daizu hakkô shokuhin bunka no sai sôzo o mezashite: Mura okoshi “tenpe sonjuku” [Aiming to recreate a new fermented soyfood culture: Revitalizing a village—the tempeh village school]. *Daizu Geppo (Soybean Monthly News)*. Oct/Nov. [Jap] Address: Kobe Women’s Junior College, food processing.

2302. Murata, Kiku. 1988. Re: New developments with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, Dec. 4. 1 p. Typed, with signature. [Eng]

• **Summary:** “Since I wrote you on Sept. 24, I visited a Tempeh Village Group (*Tempeh Sonjuku*; the chief of the group is Mr. T. Maeda) and attended a sampling party at the ‘Foods and Green Exhibition,’ Hyogo prefecture, Sasayamaguchi.”

“After returning from my trip [to Australia] I had tried to start a ‘Tempe Study Group.’ Since I am now retired from the university and only give a lecture on nutrition once a week, I have no place to do scientific research on tempeh. So I now volunteer my time and money to establish the study group. We now have about 50 members. We plan to have ‘The 1st Tempe Research Meeting’ in Tokyo, February 1989.” Address: 608 Honyakushi, Nara City 630, Japan.

2303. Kanasugi, Goro. 1988. Re: Update on work with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, Dec. 26. 3 p. Handwritten, on lined paper. [Jap]

• **Summary:** He saw the article in *Daizu Geppo* (Dec. 1988) about the work of Shurtleff and Aoyagi. He is still making and selling tempeh. Each day he makes: 1. Tempeh miso. 2. Vegetable steamed buns (Yasai no manju) with cabbage and tempeh. 3. Steamed bread (Mushi-pan). 4. Tekka miso with tempeh. 5. Sui chikuwa. 6. Onchom—skewered or cylindrical.

In Sept. 1988 he started making and selling a Tempeh bentô (lunchbox); it sells well. He sells about 1,000 tempeh dishes a day at his restaurant and sandwich shop. Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan.

PhD dissertation, Dep. of Human Nutrition, Wageningen Agricultural University, the Netherlands. 144 p. [Eng]\* Address: Dep. of Human Nutrition, P.O. Box 8129, Wageningen Agricultural Univ., 6700 EV Wageningen, the Netherlands.

2306. Golbitz, Peter. 1988. Soyfoods sales projected to reach \$750 million by 1990. *Soya Newsletter (Bar Harbor, Maine)*. Sept/Dec. p. 1, 6.

• **Summary:** The estimated retail value of soyfoods in the USA in 1988 was \$682 million. The various soyfoods had the following market shares: soy sauce 67.3% (est. \$460 million retail store valuation), tofu 11.3% (est. \$77 million), second generation products 9.5%, soymilk 5.3%, miso 4.1%, soynuts 1.7%, tempeh 0.8%.

All of the 1980 figures used in this study for comparisons and growth rates were taken, without permission, from *Soyfoods Industry & Market: Directory and Databook* by Shurtleff & Aoyagi. Address: Soyatech, Bar Harbor, Maine.

2307. Harayama, Fuminori; Yasuhira, Hitomi. 1988. *Aspergillus-zoku to Rhizopus-zoku no daizu tanpaku bunkai sayô no hikaku* [Comparison of hydrolytic action on soybean protein by the genus *Aspergillus* and *Rhizopus*]. *Nippon Jozo Kyokai Zasshi (J. of the Brewing Society of Japan)* 83(12):828-33. Reprinted in Shinshu Miso Kenkyusho Kenkyu Hokoku (Report of the Shinshu-Miso Research Inst.). No. 30. p. 94-99. [19 ref. Jap; eng]

• **Summary:** Changes in protein during manufacture of miso and fermented soybeans using fungi of the genera *Aspergillus* and *Rhizopus* were examined by SDS-polyacrylamide gel electrophoresis. The protease activity, especially of *Rhizopus*, was largely inactivated by ethanol in salt-free miso containing 5% ethanol. *Aspergillus* hydrolyzed soybean protein to products of low molecular weight, whereas *Rhizopus* only slightly hydrolyzed it, leaving mostly middle and high molecular weight substances. Address: The Shinshu-Miso Research Inst., 469-6 Nakagosho, Nagano City, Japan 380.

2308. Langley, Gill. 1988. Vegan nutrition: A survey of research. The Vegan Society Ltd., 33-35 George St., Oxford OX1 2AY, England. x + 121 p. Dec. Index. 21 cm. [255\* ref]

• **Summary:** Contents: Foreword by Dr. Barrie M. Margetts. Introduction. Guidelines on vegan diets. Symbols & abbreviations. Tables. Vegan nutrition: 1. Protein and energy. 2. Carbohydrates. 3. Fats. 4. Vitamins: Vitamin A (retinol and beta-carotene), the B Group vitamins—Vitamin B-1 (thiamin), vitamin B-2 (riboflavin), niacin (nicotinic acid and nicotinamide), vitamin B-6 (pyridoxine), folic acid (folate, known as folacin in the USA), pantothenic acid and biotin, vitamin B-12 (cobalamins), daily requirement of B-12—a controversy, vegan sources of B-12, vitamin B-12—the vegan experience, occasional B-12 deficiency, vitamin C (ascorbic acid), vitamin D (ergocalciferol D-2, cholecalciferol D-3), vitamin D deficiency, vitamin E (tocopherols), vitamin K, summary of vitamins.

5. Minerals: The major minerals—Calcium (meat, protein, and calcium balance, calcium balance and other nutrients, calcium and vegan diets, osteoporosis), iron (iron balance and other nutrients, iron and vegan diets), magnesium, phosphorus, sodium and chloride, potassium, sulphur. The trace elements—Zinc, selenium, iodine, copper, cobalt, chromium, manganese, fluorine, summary of minerals. 6. Milk and health. 7. The general health of vegans. 8. Vegan diets as therapy. 9. Conclusions. Further reading.

This book brings together in a concise, carefully researched, and well documented manner all that is currently known about vegan nutrition. It is the “most comprehensive survey ever undertaken of scientific research on vegan diets. *Vegan Nutrition* shows that a vegan diet can provide all the essential nutrients for health and fitness at any age, without the need to take supplements, as long as a few elementary rules are observed. This proviso is particularly relevant to infants and young children.”

Table 12 shows portions of selected vegan foods that provide 100 mg of calcium: Spinach 17 gm, tofu 20 gm (4 times as much calcium as in the same weight of whole cow's milk), molasses 20 gm, parsley 30 gm, figs (dried) 36 gm, almonds 40 gm, soy flour 44 gm, and watercress 45 gm. Calcium is the most abundant mineral in the body. About 99% of it is in the bones and teeth in the form of calcium phosphates. The 5-10 gm of calcium not in the bones and teeth are required for muscle contraction, for the functioning of the nerves, for the activity of several enzymes, and for blood clotting. The British RDAs for calcium are 600-700 mg a day for children and teenagers, and 500 mg for adults (vs. 800 mg in the USA)—rising to 1,200 mg in pregnancy and during lactation. “There have been no reports of calcium deficiency in vegans; the exclusion of meat and the slightly lower amounts of protein in their diets may protect against this.”

Concerning vitamin K: This vitamin is fat soluble, and is widespread in plant foods such as spinach, cabbage, cauliflower, peas, and grains. It is provided in roughly equal proportions by diet and from bacterial activity in the gut. Vitamin K is needed for normal clotting of the blood. Vegans

are unlikely to suffer a dietary deficiency. Note: The author, whose first name is pronounced Jill, is a woman. Address: Hitchin, Hertfordshire, England.

2309. Nowak, J.; Steinkraus, K.H. 1988. Effect of tempeh fermentation of peas on their potential flatulence productivity as measured by gas production and growth of *Clostridium perfringens*. *Nutrition Reports International* 38(6):1163-71. Dec. [15 ref]

• **Summary:** “Although the exact nature of the tempeh factor inhibiting flatulence is unknown, it can be shown that it is a substance soluble in water that inhibits growth of *Clostridium* strains. It is likely an antibacterial compound formed by the molds during tempeh fermentation. The factor does not survive steaming pea tempeh cake for 15 min. It corresponds with the substances described by Wang et al. (1969). We found that steamed tempeh fermented with *R. oligosporus* 2710 produced even more gas than unfermented pea.” Address: Inst. of Food Science, Cornell Univ., Geneva, New York 14456.

2310. **Product Name:** B-L-T Brown Rice Sandwich (With Tempeh, Tofu Mayo & Tomatoes).

**Manufacturer’s Name:** Paul’s Organic Food Works.

**Manufacturer’s Address:** P.O. Box 431, Fairfax, CA 94930. Phone: 415-453-2360.

**Date of Introduction:** 1988. December.

**Ingredients:** Short grain brown rice\*, spring water, sprouted wheat tortilla\*, Fakin’ Bacon (smoked tempeh), Tofu Mayonnaise, tomatoes\*, sunflower sprouts\*, arugula\* or mizuni\*, sesame oil\*, shoyu\*, leeks\* or scallions\*, lettuce\*. \* = Organically grown per Cal. Health Code Sec. 26569.11.

**Wt/Vol., Packaging, Price:** 12 oz. Retail for \$4.25 (8/89, northern California).

**How Stored:** Refrigerated.

**New Product–Documentation:** Label sent by Paul Duchesne. 1989 Aug. 11. 5.5 by 2 inches. Black on purple paper. “12 happy ounces. For the best taste, remove from refrigeration one hour before eating. To eat: Open bag–Tilt sandwich in bag–fold bag down.” Illustration of animated product, with smiling face on tortilla, arms, and legs. On the back is the statement, “What is mind? No matter. What is matter? Never mind.” The statement is changed weekly. Note: Arugula or arrugula, (pronounced uh-RUE-guh-luh, an Italian term), an ingredient in this product, is a plant of the mustard family resembling a fancy, slightly bitter lettuce grown in Salinas, California. It is expensive and can be replaced with parsley. It is also called “rocket” or “garden rocket” after the French word *roquette*. Mizuni (pronounced mi-ZU-ni) is a mustard green, which is grown in California. It is not listed in any Webster’s Dictionary.

2311. Tenpe Kenkyu-kai. 1988. Tempe Kenkyû-kai: Kaiin meibo [Tempeh Research Society: Directory of members

(Brochure)]. Japan. 3 p. [Jap]

• **Summary:** On 31 Dec. 1988 there were 58 members, each with his or her address listed, but no phone numbers. An appended sheet shows that by 10 Feb. 1989 the number of members had increased to 72.

2312. **Product Name:** Soy Tempeh.

**Manufacturer’s Name:** Bakita Tempeh.

**Manufacturer’s Address:** Parque Industrial Julio N. Matos, Lot 36 (P.O. Box 1828) Carolina, PR 00984. Phone: 809-722-6192.

**Date of Introduction:** 1988.

**New Product–Documentation:** Letter from Betty Stechmeyer. 1993. Nov. She says Daniel Padro makes tempeh. Form filled out by Daniel Padro. 1993. Dec. 1. He started making tempeh in 1988.

2313. Beddows, C.G. 1988. The old fashioned way with soya. *Food Science & Technology Today* 2(1):12-15. [6 ref]\*

• **Summary:** The following soybean products are described briefly: soymilk, bean curd, tofu, tempeh, natto, sufu, miso, shoyu, and yuba. Protein yields are given for a range of plant crops versus milk and beef, e.g. soybeans 3500 kg/ha/annum versus 75 kg/ha/annum for beef. Recipes are included for miso cream cheese dip and deep fried tofu and miso soup. The marked rise in consumption of soybean products in the USA in recent years is noted. Address: Dep. of Applied Sciences, Leeds Polytechnic, Leeds LS1 3HE, England.

2314. Ko Swan Djien. 1988. Recollection of tempeh. *Onko Chishin* No. 25. p. 42-48. [11 ref. Eng]

• **Summary:** A brief review of the author’s involvement in fundamental tempeh studies. During the late 1950s the author taught Technical Microbiology at the Bandung Inst. of Technology in Indonesia. In 1960 he was granted a sabbatical to study antibiotics and related fermentation processes at the Northern Regional Research Center (Peoria, Illinois) under Dr. Clifford W. Hesseltine. “Dr. Hesseltine’s background was in conventional liquid agitated pure culture fermentation. But when Ko arrived, he had just finished his first experiments with a solid substrate fermentation process of an Asian soybean food, by studying aspects of miso fermentation with Dr. K. Shibasaki of Tohoku Univ. Dr. Hesseltine became utterly fascinated with the use of solid substrates and the application of pure mixed cultures in miso fermentation. This made him curious to know more about other non-Western fermented foods which were still unknown to many people in the Western world. During our first conversation, Dr. Hesseltine asked me cautiously, whether I was familiar with an Indonesian food which was made by fermentation of soybeans with a certain mould species. I immediately assumed that he had ‘tempe’ in mind. Since tempe is a regular ingredient in the Indonesian menu, it was not difficult for me to tell him about the culinary aspects

of tempe. However, knowledge of the microbiological aspects was minimal, because basic background information was not yet available.

“Instead of discussing the latest developments of fermentation technology which was the purpose of my visit to the U.S.A., Dr. Hesseltine and I theorized about tempe fermentation and we became more and more fascinated by the still unknown aspects. We soon agreed that it might be more interesting to study fundamental principles of tempe fermentation during my period of practical training rather than starting a study of one of the many detailed aspects of a modern fermentation process. At that time we could not foresee that this decision was a contribution to sparking a wave of research activities with world wide interest.”

This research by Ko and Hesseltine led to the discovery that *Rhizopus oligosporus* was the principal species of mold used for traditional tempeh fermentation in Indonesia. This led to development of a pure-culture tempeh starter/inoculum. “An important aspect during these studies was the unexpected publicity given by the Indonesian press. It aroused curiosity and was a great stimulus to other universities and research institutes to study various aspects of tempe fermentation.”

In 1968 the author joined the Agricultural University, Wageningen, Netherlands, where his research showed that *R. oligosporus* does not produce aflatoxins, and actually inhibits their production. A photo shows Ir. Ko Swan Djien. Address: Bandung Inst. of Technology, Indonesia, and Agricultural Univ., Wageningen, Netherlands.

**2315. Product Name:** Tempeh with Sea Veggies.  
**Manufacturer's Name:** Noble Bean.  
**Manufacturer's Address:** R.R. 1, McDonalds Corners (near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-2305.  
**Date of Introduction:** 1988.  
**How Stored:** Frozen.  
**New Product–Documentation:** Letter (fax) from Allan Brown. 1998. Jan. 21. This tempeh was first sold in 1988.

**2316. Product Name:** [Tempeh].  
**Manufacturer's Name:** Restaurante Lotus.  
**Manufacturer's Address:** Rua da Boavista 55, 3º, 1000 Lisboa, Portugal. Phone: (1) 60.72.83.  
**Date of Introduction:** 1988.  
**New Product–Documentation:** Letter from Miguel Azguime, owner of Miso Producoes. 1989. Nov. 30. This company started making soyfoods in Portugal in 1988 and is currently in operation.

**2317. Shipley, Betsy; Pfaff, Gunter; Reed, Harry.** 1988. [Betsy Shipley and Gunter Pfaff demonstrate the manufacture of Betsy's tempeh, a product made from organically grown Michigan soybeans (Sound recording;

reel-to-reel tape)]. S&P Farm, 14780 Beardslee Rd., Perry, MI 48872. \*

• **Summary:** Elizabeth Shipley was born in 1933. Address: Perry, Michigan. Phone: 517-675-5213.

[Betsy Shipley and Gunter Pfaff discuss Betsy's tempeh, manufactured in Perry, Michigan appealing to vegetarians and coronary patients (Sound recording; reel-to-reel tape)]. S&P Farm, 14780 Beardslee Rd., Perry, MI 48872. 10 minutes. \*

• **Summary:** Broadcast on WILX (Lansing, Michigan). Elizabeth Shipley was born in 1933. Address: Perry, Michigan. Phone: 517-675-5213.

**2319. Product Name:** [Tempeh (Regular Soy, or Marinated)].  
**Foreign Name:** Tempeh Natur, Tempeh Mariniert.  
**Manufacturer's Name:** Sojarei Ebner-Prosl (Marketer-Distributor). Made in Austria by Natuerliche Lebensmittel (Paul Stuart Zacharowicz).

**Manufacturer's Address:** Augasse 2, A-2500 Baden bei Wien, Austria. Phone: 02252/85101.

**Date of Introduction:** 1988.

**Wt/Vol., Packaging, Price:** 250 gm.

**New Product–Documentation:** Brochure sent by Sojarei Ebner-Prosl. 1989. Oct. 12. “Fresh products. Tempeh: The fermented soya product for frying, grilling, or baking.” In the company's Jan. 1989 price list are listed Tempeh Natur and Tempeh Mariniert, each 250 gm.

Talk with Guenter Ebner of Sojarei Ebner-Prosl. 1990. May 28. This tempeh is made by Paul Stuart.

**2320. Sojarei Ebner-Prosl.** 1988. Tofu aus der Sojarei [Tofu from the Sojarei (Leaflet)]. Baden bei Wien, Austria. 6 panels. [Ger]

• **Summary:** This full-color orange and red leaflet explains that the company makes and sells many fresh soy products, mostly tofu and tofu products, but also tempeh and soy sprouts. They sell tamari, shoyu, miso, gomashio (sesame salt), many types of vegetables, flakes, and legumes. They also have a soya recipe brochure and a tofu cookbook.

This young family-run business, founded in 1984, focuses on fresh soyfoods of the best quality—pure and natural. Sojarei tofu is described as the culinary wonder child in unpretentious clothes, but with many talents. Tofu is sold in slices, diced, or in strips. It can be pressed or pureed. There are color photos of the two owners and their wives, of tofu, and of 5 tofu dishes. Address: Augasse 2, A-2500 Baden bei Wien (near Vienna), Austria. Phone: 02252/85101.

2331. Wood, Rebecca T. 1988. The whole foods encyclopedia: A shopper's guide. New York, NY: Prentice Hall Press (Simon & Schuster). xv + 218 p. Foreword by Michio Kushi. Illust. 28 cm. [200\* ref]

• **Summary:** This book is mistitled. It should be titled “Rebecca Wood's Macrobiotic Views on Natural Foods.” The parts on quinoa, teff, amaranth, and many “macrobiotic foods” provide good information. There is extensive information on soyfoods, all from a macrobiotic viewpoint, but with many errors or undocumented controversial assertions never seen before in the literature, such as the following: “Cold Tofu. Foods that are cooling, like tofu, tend to reduce the fire in the lower organs. This explains why tofu was eaten by Buddhist monks to abate their sexual desires. This is not a prescription against tofu. Well-cooked tofu is less cooling. For optimum health, we need a balance of warming as well as cooling foods. However, if you are feeling cold, or if it is a cold day, or if you have strenuous activities planned, then you may opt for salmon over tofu.”

Foods discussed are: Cheese (imitation soy), ice cream and frozen desserts (soy or tofu ice cream), miso, natto, nigari, soybeans (black, yellow, and “just harvested green soy”), soy flour, soy protein isolate, soy milk, soy nut (“Those oversalted, beggarly little crunches found in everything from trail mix to salads are soynuts,...”), soy oil, soy sauce (“Also known as *Shoyu* and *Tamari*), and soy

yogurt, tempeh, tofu, and TVP (texturized vegetable protein {textured soy flour}).

Note: This is the earliest English-language document seen (Feb. 2005) that contains the term “cooling food.” Address: P.O. Box 30, Crestone, Colorado 81131. Phone: 303 (or 719) -256-4939.

2332. Shipley, Betsy. 1988? Cooking with Betsy’s tempeh. Perry, Michigan: S&P Farms, 14780 Beardslee Rd., Perry, MI 48872. [6] p. Undated. 28 cm. \*

• **Summary:** Includes a sheet of handwritten information on tempeh plus a folded sheet or recipes. Address: Perry, Michigan. Phone: 517-675-5213.

2333. Theses on soybeans and soyfoods: Dissertation Abstracts (Database search report). 1989. 234 p. Jan. 20. 28 cm. Unpublished manuscript. [1106 ref]

• **Summary:** The Dissertation Abstracts database contains virtually every American PhD dissertation accepted at an accredited institution since 1861. A search yielded 1,106 theses on soybeans and soyfoods not including records with the terms pathogen\*, Disease\*, weeds, or insect\* in the title or abstract. \* = truncated term.

It contained the following number of theses on soyfoods: Soymilk 9-14, tofu 6, tempeh 6, miso 4, soy sauce 3, and natto 2.

The most valuable records for us are in the subject categories Food Science & Technology; Health Sciences, Nutrition; and Economics, Agricultural. Other subject categories include: Agriculture (Agronomy, Animal Culture & Nutrition, General, Plant Culture, Plant Physiology); Biochemistry; Botany; Chemistry (Agricultural and Biological, Analytical); Engineering, Chemical; Entomology.

A count of the records in which we were interested by state where the thesis was written shows the following: Illinois 128, Iowa 68, Indiana 37, New York 30, Missouri 28, Michigan 26, Minnesota 25, and Ohio 17.

2334. **Product Name:** Tofu, Tempeh, and Soymilk.

**Manufacturer’s Name:** Gabriella Benjis Soyfoods.

**Manufacturer’s Address:** Johannesburg, South Africa.

**Date of Introduction:** 1989. January.

**New Product–Documentation:** Talk with Paul Cohen, her friend. 1989. Oct. 27. Gabriella has been making these 3 products at home since about Jan. 1989. She also works at a natural food store, where she sells them, and distributes them through the Organic Soil Association. There is a Chinese tofu manufacturer in South Africa, but Paul does not know the company name, address, or year started.

2335. **Product Name:** [Natto, and Fried Tempeh].

**Foreign Name:** Natto, Tempeh Frit.

**Manufacturer’s Name:** Gaec de La Lix: United Macrobiotic Company.

**Manufacturer’s Address:** 32260 Tachaires–Seissan, France. Phone: 62.65.35.04.

**Date of Introduction:** 1989. January.

**New Product–Documentation:** Form filled out for Anthony Marrese. 1989. Sept. The natto was introduced in Jan. 1989, and 6 kg/week are produced at present. The fried tempeh was launched in June 1989, and 7 kg/week are now produced. Anthony visited the community in mid-Oct. 1989 and noted: “They are a small group similar to Terre Nouvelle, but doing more with soya. Very nice kitchen production (see color slide), which is growing. They sell through markets and through 10 stores, which helps them to educate people. They are all Germans who came to France about 5 years ago mainly because land prices were lower in France.

Label for Fried Tempeh. 1989. 4 by 3 inches. Black photocopy on pink. “Aliment fermenté de soya.” Nature et Progres logo. 200 gm. On the back is information about tempeh.

2336. **Product Name:** Soy Tempeh, and Sesame-Soy-Rice Tempeh.

**Manufacturer’s Name:** Natural Pacific.

**Manufacturer’s Address:** P.O. Box 11001, Hilo, Island of Hawaii, HI 96721. Phone: 808-935-3220.

**Date of Introduction:** 1989. January.

**Ingredients:** Soy: Soybeans, okara, water, rice vinegar, tempeh culture. Sesame: Soybeans, okara, brown rice, sesame seeds, rice vinegar, tempeh culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1989, Dec.

Received. 2.5 by 2.75 inches. Rounded top. Self adhesive. Green and orange on white, or Purple and red on white. Illustration of sun over mountains. “Made with organically grown soybeans.” The soy was introduced in Jan. 1989, the Sesame-Soy-Rice in July 1989. Talk with (call from) Benjamin Hills on the Island of Hawaii. 1993. May 28. This company, run by Tyler (Ty) Katibah, makes refrigerated tempeh. Benjamin offered to work for Ty and after 30 minutes of talking Ty offered to sell Benjamin the entire company. Benjamin declined the offer.

2337. *Plenty Canada News (Lanark, Ontario, Canada)*. 1989. Volunteers receive recognition. Winter 1988/89. p. 1.

• **Summary:** “Five Plenty supporters are soon to receive a certificate acknowledging their ‘significant contribution’ to Plenty’s work. These certificates, to be signed by the President of CIDA, are being given to many Canadians across the country in celebration of 20 years of voluntary sector and Canadian government partnership in international development.

“The five Plenty supporters are: Allan Brown, Jim Creighton, Percy Henkelman, Kathleen Purdy, Valerie Unwin.”

“Allan Brown, from McDonald’s Corners, Ontario, a founding member and the first Executive Director of Plenty Canada who has continued his support of the organization ever since.”

Note: Allan Brown, and his wife Susan, founders of Noble Bean in Sept. 1979, were pioneer tempeh makers in Canada. Address: R.R. #3, Lanark, Ontario K0G 1K0, Canada. Phone: (613) 278-2215.

2338. Shurtleff, William; Aoyagi, Akiko. comps. 1989. Bibliography of tempeh and tempeh products: 1,416 references from 1815 to 1989. Lafayette, California: Soyfoods Center. 177 p. Subject/geographical index. Author/company index. Partially annotated. Printed Jan. 19. 28 cm. [1416 ref]

• **Summary:** The most comprehensive bibliography on the subject. Contains all known commercial products. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

2339. Sojarei Ebner-Prosl. 1989. Preisliste [Price list]. Augasse 2, A-2500 Baden bei Wien, Austria. 10 p. Manufacturer’s catalog. [Ger]

• **Summary:** The company has two catalog/price lists: one (green) for food processors and one (yellow) for retail stores. Products made by the company have been marked by the author with an “S.” In the front of each catalog is an organic certificate. The retail catalog contains 20 fresh products, 3 books, and 30 non-fresh products. Fresh products made by the company include Tofu Natur, Tofu Mariniert, Tofu Geräuchert, Tofu Pastete Siddhartha, Tofu Pastete Toscana, Tofu-Burger, Soja-Getreide-Laibchen, Gruenkern Laibchen, Dinkel Laibchen, Reis-Laibchen, Weizengluten Laibchen, Weizengluten, Badener Bratwuerstchen, Badener Grillwuerstchen, Brotaufstrich “Rusticana”, Brotaufstrich “Holzknecht.” Fresh products sold but not made by the company include soy tempeh, marinated tempeh, and soy sprouts. The company sells 3 recipe books: (1) Their own recipe book *Wichtig für Ernährungsbewusste* (Important for understanding of nutrition); (2) *Tofu: Essen mit Zukunft* (Tofu: Eating with the future) by Brigitte Vogenreiter and Clemens Kuby, and (3) *Schlank mit Tofu* (Slim with tofu; 117 recipes) by A.W. Dänzer.

The company also sells many non-fresh products including yellow soybeans (organically grown), soya flakes (*Sojaflöcken*, not defatted), whole soy flour, tamari, shoyu, barley miso, Hatcho miso, brown rice miso, soba (buckwheat) miso, nigari, Bonsoy soyadrink (natural and cacao), Pinoccio Soybean coffee, and soynuts.

In the catalog for food processors, for example, the regular tofu, marinated tofu, and smoked tofu are each sold in 1 kg, 30 kg, 60 kg, 100 kg, and 200 kg amounts. Address: Baden (near Vienna), Austria.

2340. Ritterband, Vicki. 1989. Lightlife Foods receives

loan for expansion projects. *Recorder* (Greenfield, Massachusetts). Feb. 20. p. 2.

• **Summary:** The \$756,000 loan package, which came from four sources (including the state and a local bank) will be used to double the size of Lightlife Foods’ 6,000-square-foot plant, expand its product line and buy new equipment. The 10-year-old Fairview Street company, best known for its “Tofu Pups,” has grown 35% annually for the past two years. The expansion will allow the company to make Tofu Pups in Greenfield.

2341. Agosin, Eduardo; Diaz, D.; Aravena, R.; Yañez, E. 1989. Chemical and nutritional characterization of lupine tempeh. *J. of Food Science* 54(1):102-04, 107. Jan/Feb. [21 ref]

• **Summary:** Tempeh was made from bitter lupine and sweet lupine grits (full-fat). The product had a Net Protein Ratio of 1.72, compared with 3.98 for casein, and a digestibility of 86-88%. Fried lupine tempeh was well accepted by a Chilean taste panel. “... these results clearly indicate that lupine tempeh has a potential as a food for the Chilean population.” Address: Instituto de Nutricion y Tecnologia de los Alimentos, INTA, Universidad de Chile, Casilla 15138, Santiago 11, Chile.

2342. Mulyowidarso, Robert K.; Fleet, G.H.; Buckle, K.A. 1989. The microbial ecology of soybean soaking for tempe production. *International J. of Food Microbiology* 8(1):35-46. Feb. [27 ref]

• **Summary:** “Soybeans soaked in tap water for 26 to 36 hours at 20, 30 or 37°C underwent a natural fermentation that was characterized by the growth of microorganisms to 100 million to 10,000 million colony forming units (cfu) per ml (depending on the temperature) and a reduction of pH from 6.5 to 4.5. *Lactobacillus casei*, *Streptococcus faecium*, *Staphylococcus epidermidis* and *Streptococcus dysgalactiae* dominated the fermentation but, significant contributions were also made by *Klebsiella pneumoniae*, *Klebsiella ozaenae*, *Enterobacter cloacae*, *Enterobacter agglomerans*, *Citrobacter diversus* and *Bacillus brevis*, and the yeasts *Pichia burtonii*, *Candida diddensiae* and *Rhodotorula rubra*. Fermentation of surface-decontaminated beans in sterile water with pure cultures of these isolates showed *L. casei*, *Strep. faecium* and *Staph. epidermidis* to be the main species responsible for the pH reduction. Soybeans were the main source of microorganisms for the fermentation. Boiled beans did not undergo an acid fermentation.” Address: Dep. of Food Science and Technology, The Univ. of New South Wales, Kensington, NSW, Australia.

2343. Tenpe Kenkyushu-kai. 1989. Dai ikkai Tenpe Kenkyû shûkai: Kôen yôshi [Tempeh Research Society: First meeting lecture outline]. Kobe Park City 2-1110, 6-2-1 Minatojima, Chuo-ku, Kobe 650, Japan. 5 p. [Jap]

• **Summary:** The first meeting took place on 25 Feb. 1989 at the offices of the Yuki-jirushi (Snow Brand) Milk Co. in Shinjuku, Tokyo. Three talks on tempeh were presented: Yasuko Torii, a natural foods expert, presented "Report on the Natural Foods Expo: Soyfoods in America and Australia," focusing on the Anaheim Expo (April 1988) with its Soyfoods Pavilion and tempeh. Noriyuki Okada of the National Food Research Inst. (Tsukuba) discussed "Searching for the origin of useful genes." And Toshiie Maeda of Hyogo prefecture talked about "Revitalizing a village with a tempeh industry."

The second meeting took place on 24 June 1989 in Osaka. Masahiko Terajima of Fuji Oil Co. Research Dept. spoke on "The present status of soy protein and soy protein foods in Japan." Eihachiro Kato of Meiji Univ. discussed "Low-pressure frying of tempeh." And Nobu Kawabata of Kyoto City Univ. spoke on the "Okara tempeh and its usage." Address: Kobe, Japan. Phone: 078-302-7065.

2344. *Voice of the Turtle* (Husum, Washington). 1989. A brief history of Turtle Island Soy Dairy. 1:1. Feb.

• **Summary:** This is first issue of the Newsletter of Turtle Island Soy Dairy (see next 2 pages). "Turtle Island was founded by Seth Tibbott on December 1, 1980 in Forest Grove, Oregon. Seth had been making tempeh for family and friends for two years" starting [in the summer of 1977] in Tennessee.

"Hope Co-op Cafe: Seeing that no one was making the product in Portland and that his tasted better than the commercial varieties on the market, Seth quit his job as a naturalist and set up shop in the kitchen of the cafe at Hope Coop in Forest Grove. The cafe was open from 11 am to 4 pm and the tempeh shop was open from 4 pm on (sometimes all night). It had it's drawbacks and many a night Seth spent crashed out in the day care pen while he waited for that last batch to ripen. In the end, those long nights allowed Seth to take his product from a hobby to a business with a minimal investment of 2,000 dollars.

"In the early days tempeh was very new to the natural food market and sales grew quickly. For Thanksgiving that year, (1981), Seth created the nation's first multi-grain tempeh calling it Five Grain Tempeh. When nearly every other manufacturer in the country followed suit, he knew he was onto something.

"Seth then took on four new partners, Belinda Hanley,

 (509) 493-2004

## Voice of the Turtle

Newsletter of Turtle Island Soy Dairy

Volume I -- February, 1989

Alex Lyon, and two silent partners. Alex, the George Washington of American Tempeh, was largely responsible for bringing the product out of the scientific journals and into the production kitchens.

"On to Husum: In 1982, Seth approached the White Salmon School board about renting out the vacant school building in Husum, Washington. Husum is a small town of about 200 in the White Salmon River Valley, 65 miles east of Portland, Oregon. When the board accepted his offer (after a snack of tempeh salad), Turtle Island moved into the 10,000 square foot facility. In many ways it was the perfect home. The location, an hour and a half drive from a large urban area, assured the turtles that their products would be made with plenty of fresh air and clear water. (Seth had read that in Indonesia, the best tempeh came from the mountain regions, so he figured that the same might apply here.) The area also met Seth's personal desire to live and do business from a rural base.

"Here, on the banks of the White Salmon River (designated a National Scenic River in 1986), Turtle Island has prospered. Since moving here 6 years ago, sales have increased on the average of about 20% a year. Turtle Island has become a major social and commerce center in the valley."

"Turtle Island currently makes tempeh six days a week. Since it is a two-day process we put in batches on Monday, Wednesday and Friday and harvest on alternating days. One day a week we load up a truck with our products and drive to Portland, Oregon where we ship to distributors from Los Angeles to Seattle. Turtle Island is the leading manufacturer of tempeh products in the Pacific Northwest. We take great pride in making high quality tempeh from our rural locale. It's a little more inconvenient, but a lot more satisfying."

The newsletter goes on to note that as of 1 Nov. 1988 all of the company's products are sold in 100% recyclable plastic. Sloppy Joe Tempeh and Meatless Country Stew were launched on 25 Feb. 1988. Tests show that Turtle Island Tempeh contains 2.5 to 5.4 micrograms of vitamin B-12 per 4 oz portion.

Talk with Seth Tibbott. 1990. During 1989 the company almost doubled its production by creating a few new products and getting into new markets via a few new distributors. They have now outgrown their building. This year has been one of slower but steady growth. Over 3 years the average growth has been about 30% a year. They are now making 2,000 to 3,000 lb/week of tempeh. Their basic promotional vehicle is in-store demos. Address: #1 Turtle Lane, P.O. Box 218, Husum, Washington 98623. Phone: 509-493-2004.

2345. Calvert, Ken. 1989. Utilisation of low grade wheat. Report on laboratory production of tempeh in Southland. Renertech, R.D. 2, Winton 9662, New Zealand. 3 p. March 20. Unpublished manuscript.

• **Summary:** Dr. Richard Beyer at Otago Univ. in Dunedin suggested that waste of low grade wheat and breadcrumbs might be minimized if they were made into tempeh. An Indonesian student of his had made tempeh from these substrates. Soy Foods of Christchurch makes commercial soy tempeh. Calvert has spent the last 3 months 4-8 hours/week using a variety of locally grown materials to make tempeh. Address: Winton, New Zealand.

2346. Ashenafi, Mogessie; Busse, Martin. 1989. Inhibitory effect of *Lactobacillus plantarum* on *Salmonella infantis*, *Enterobacter aerogenes* and *Escherichia coli* during tempeh fermentation. *J. of Food Protection* 52(3):169-72. March. 1 fig., 4 tables. [20 ref]

• **Summary:** Lactic acid bacteria have long been used in food fermentations to improve flavor and palatability, to preserve foods and to suppress undesirable microorganisms by lowering the pH of the food. "Inoculation of unacidified soybeans with *L. plantarum* at a level of  $10^6$  per gram resulted in a complete inhibition of the 3 tests organisms which are known to cause food poisoning. Even a much lower level of inoculation ( $10^2$  per gram) was enough to show a complete inhibitory effect. Conclusion: "The lowering of the pH in fermenting [soy] beans by *L. plantarum* might have played a role in the destruction of the test microorganisms. Address: Bakteriologisches Institut, Sueddeutsche Versuchs- und Forschungsanstalt fuer Milchwirtschaft Weihestephana, Technische Universitaet Muenchen, 8050 Freising, Weihestephana, Germany.

2347. Colbin, Annemarie. 1989. The natural gourmet: Delicious recipes for healthy, balanced eating. New York, NY: Ballantine Books. x + 325 p. March. Illust. by Laura Hartman Maestro. Index. 24 cm. [16 ref]

• **Summary:** Pat McNees of *The Washington Post* has called Annemarie "The Julia Child of natural foods cooking." Her photo, in color, graces the cover. The book incorporates "The Five Phases of Food" theory from China, based on a book by John W. (Jack) Garvey (1983), as an aid to meal balancing. Below each recipe name is given the major phase and minor phase that it represents. Soybeans, tofu, tempeh (as well as brown or white rice and mochi) are metal (declining state), while black soybeans are water (maximum rest before growth).

Page 27 notes: "You will not find any recipes in this book with whole soybeans; I find their taste too unpleasant, and tend to believe some research that indicates they may contain oxalates and other elements that prevent nutrient absorption. Soybean products such as miso, shoyu (the

natural soy sauce made with wheat), tamari (a wheat-free natural soy sauce), tofu, and tempeh, on the other hand, are delicious; tofu and tempeh are good protein sources when combined with the grains. You will also find the condiments miso and shoyu or tamari used in many of the recipes."

Soy-related recipes include: Black and white aioli dip (with tofu, p. 49; Note: "Aioli" is derived from the French words for "garlic" + "oil." Aioli sauce is made from crushed garlic, egg yolks, olive oil, and lemon juice). Tofu and spinach turnovers (Spanakopitas, p. 66-67). Bean-of-the-Orient miso soup (p. 74-75). Shoyu consommé with enoki mushrooms (p. 77). Collard miso soup (p. 78-79). Carrot-beet soup with tofu sour cream (p. 83-84). Tofu sour cream (p. 84-85). Baked [kidney] beans with miso and apple butter (p. 136). Vegetable-tofu sauté (p. 154-55). Tofu mushroom stroganoff with bulgur (p. 155). Tofu sour cream (p. 156). Broccoli-tofu quiche with wild mushrooms (p. 157-58). Open herbed tofu sandwiches (p. 158-59). Tempeh with shallots and white wine (p. 160-61). Tempeh in sweet and sour sauce (p. 161-62). Tempeh with creamy horseradish sauce (p. 163). Stir-fried bak choy with marinated tofu (p. 169-71). Green peppers with miso (p. 182-83). Spinach-nori rolls with tofu and wild mushrooms (p. 186-87). Green salad with miso-coriander dressing (p. 203). Red and white cabbage salad with miso-onion dressing (p. 208). Radish-watercress salad with soy-sesame dressing (p. 209; with ½ tablespoon black sesame seeds and ¼ cup toasted sesame oil). Salad of wilted collard greens with yellow peppers and white miso dressing (p. 210). Spiced glazed pears with tofu cream (p. 271-72). White miso and orange dressing (p. 285).

Note: This is not a vegetarian cookbook. There is a chapter of fish recipes, and other recipes for the use of alcoholic beverages/seasonings (wine, mirin). Address: Founder and director, Natural Gourmet Cookery School / Inst. for Food and Health, 365 West End Ave., New York City, NY 10024.

2348. GEM Cultures. 1989. Catalog [Mail order]. 30301 Sherwood Rd., Fort Bragg, CA 95437. 4 p. March. [4 ref]

• **Summary:** Contents: 1. Powdered cultures for soycrafters: Powdered starter cultures for tempeh, miso, amazake, shoyu, and tamari. In home and commercial sizes. Rice koji. 2. Cookbooks with culture (lists 4 books). 3. Coagulants for curdling tofu: Natural nigari or Terra Alba calcium sulfate in 1 lb or 5 lb bags. 3. Self renewing cultures: Viili, sourdough, kefir, miso. 4. Sea vegetables from the Mendocino Sea Vegetable Co. 5. Recyclables: Cheesecloth, super sealers (lids).

"We at GEM Cultures are a husband and wife team, Gordon & Betty, with between us 37 years of professional experience in culturing microorganisms and teaching people about them. In 1980 we set up GEM cultures with the goal of providing dependable, low cost cultures and related items for the growing number of people who wish to have a hand

in creating a healthier diet through cultured foods.” Address: Fort Bragg, California. Phone: 707-964-2922.

2349. Harayama, Fuminori; Yasuhira, Hitomi. 1989. *Aspergillus*-zoku to *Rhizopus*-zoku no kakushu kôso kassei no hikaku [Comparison between several hydrolytic enzyme activities of the genus *Aspergillus* and those of *Rhizopus*]. *Shinshu Miso Kenkyusho Kenkyu Hokoku (Report of the Shinshu-Miso Research Inst.)* No. 30. p. 100. [Jap]  
Address: Shinshu-Miso Research Inst., 469-6 Nakagoshô, Nagano-shi, Nagano-ken 380, Japan.

2350. **Product Name:** Barbeque Chili with Tempeh.  
**Manufacturer's Name:** Homestyle Foods (Formerly Sonoma Specialty Foods).  
**Manufacturer's Address:** 2317 Bluebell Dr., Santa Rosa, CA 95401. Phone: 707-525-8822.

**Date of Introduction:** 1989. March.

**Ingredients:** Tempeh (organic soybeans\*, culture), tomatoes, onions, soy oil, mustard, lemon juice, molasses, tamari, apple cider vinegar, natural herbs and spices. \* Made in accordance with California H&S Code 26569.11.

**Wt/Vol., Packaging, Price:** 8 oz plastic tub.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1989. 4.5 inches diameter. Plastic lid. Red and black on white. Illustration of a cottage. “Microwaveable. New! Non-dairy. Cholesterol free. Heat or ready to eat in sandwiches & salads as an entree. Natural. No preservatives. Nutritious. Delicious. Kosher.”

Talk with Benjamin Hills. 1989. June 6. The product was launched in March. He is now working on a Tropical Pudding. The company seems to be going downhill.

Product served at World Vegetarian Day in San Francisco. 1990. Oct. 6. Note that Homestyle's products are now made by White Wave in their plant at 1990 N. 57th Ct., Boulder, Colorado.

2351. Okada, Noriyuki. 1989. Role of microorganisms in tempeh manufacture—Isolation of vitamin B-12 producing bacteria. *JARQ (Japan Agricultural Research Quarterly)* 22(4):310-16. March. [12 ref. Eng]

• **Summary:** The vitamin B-12 content of tempeh made in Indonesia was found to be 4.6 micrograms (mcg) per 100 gm fresh weight, much higher than any other vegetarian food tested. But this was based on one sample transported slowly from Indonesia to Japan and its smell was no good when the value was measured. A sample brought quickly from Indonesia with good smell contained 0.7 mcg/100 gm. A sample prepared in Japan with tempeh starter from Indonesia contained only 0.05 mcg. And tempeh prepared in Japan with *Rhizopus oligosporus* NRRL 2710 contained 0.03 to 0.06 mcg/100 gm. Other vegetarian foods containing significant amounts of vitamin B-12 were thua-nao (Thailand) 1.5 mcg and fermented tofu (Singapore, also called Sufu) 1.1

mcg. Flesh-based foods with a high B-12 content included Ka-pi shrimp paste (Thailand) 5.3 mcg, fermented shrimp (Thailand) 2.5 mcg, and fish sauce, 3 month fermentation (Thailand) 2.4 mcg. The vitamin B-12 in vegetarian foods is produced by the fermentation process and it increases during fermentation. Flesh foods contain their own B-12. The daily requirement of vitamin B-12 for adults is estimated to be 3 mcg.

Bacteria that produced vitamin B-12 in tempeh were isolated and identified. The most prolific producer was *Klebsiella pneumoniae*, which had a maximum relative B-12 productivity of 1350. All prolific producers were members of the genus *Klebsiella* but some *Bacillus* species also produced B-12. The author suggests that intraspecific cell fusion techniques might be used to transfer this ability to *Bacillus natto*, the natto bacterium, which is presently unable to produce vitamin B-12. Address: Dep. of Applied Microbiology, National Food Research Inst., Tsukuba, Ibaraki 305, Japan.

2352. Tüncel, G.; Nout, M.J.R.; Rombouts, F.M. 1989. Effect of acidification on the microbiological composition and performance of tempe starter. *Food Microbiology* 6(1):37-43. March. 3 tables. [19 ref. Eng]

• **Summary:** The microbiological quality and the acceptance of tempeh are influenced by the initial lactic fermentation of the substrate (rice, soybeans) and by the addition of certain lactic bacteria to the fermentation. Address: Dep. of Food Science, Agricultural Univ., Wageningen, Netherlands. G. Tüncel is presently at: Faculty of Engineering, Ege Univ., Izmir, Turkey.

2353. Brown, Judy; Bates, Dorothy R. 1989. Judy Brown's guide to natural foods cooking. Summertown, Tennessee: The Book Publishing Co. 160 p. Index. With 8 pages of color photos. 23 cm.

• **Summary:** This natural foods, vegan cookbook, which does not require the use of dairy products or eggs, includes more than 200 recipes, many of which contain soyfoods. In the chapter titled “The Natural Foods Pantry” is a sub-chapter titled “Soy Foods,” which gives brief introductions to tofu, tempeh, miso, soy milk, soy cheeses, soy yogurt, soy flour, and soy pulp or okara. There are also sub-chapters on sea vegetables, sprouts (including soy sprouts), organic foods, macrobiotics (which is “heavily emphasized in this book”), more natural foods ingredients (which, under soy sauce, discusses the differences between shoyu and tamari).

The number of recipes featuring various soyfoods are: Tofu (15), tempeh (5), miso (4), soymilk (1), shoyu (1), and okara (1; soysage).

The author, a specialist in consumer education, presently organizes culinary carnivals and natural foods tasting fairs. She has written extensively on natural foods and holds a Master's degree in Consumer Economics from the Univ.

of Maryland. She is president of Judy Brown Enterprises, a public relations company for natural foods products. Address: 9 Dovetree Court, Indian Head, Maryland 20640. Phone: 301-753-6548.

2354. Flinders, Carol. 1989. Tofu and tempeh: Back to basics. *Vegetarian Times*. April. p. 76, 78-79.

• **Summary:** An introduction with six recipes. Address: Petaluma, California 94952.

2355. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Le Caméléon.

**Manufacturer's Address:** 12 place de Lenche, 12002-Marseille [Marseilles], France. Phone: 91-56-69-71.

**Date of Introduction:** 1989. April.

**New Product-Documentation:** Letters from Girard and Marie Forgue. 1989 Nov. 19. and 1990 Jan. 15. They own this macrobiotic restaurant that started making its own tempeh in April 1989. They now sell their tempeh at the restaurant and at 2-3 other places, and plan to expand the scale of production. They live at 154 boulevard de la liberation, 13004-Marseille. Phone 91-48-20-54.

2356. **Product Name:** Sloppy Joe Tempeh, and Tempeh Chili. Renamed Vegetarian Sloppy Joe, and Vegetarian Chili in about June 1990 (Both still made with Tempeh).

**Manufacturer's Name:** White Wave, Inc.

**Manufacturer's Address:** 1990 North 57th Court, Boulder, CO 80301.

**Date of Introduction:** 1989. April.

**Ingredients:** Soy rice tempeh (cultured soybeans, water, brown rice), tomato paste, textured vegetable protein (soy flour), green pepper, soy oil, dehydrated onion, soy sauce, water, honey, apple cider vinegar, molasses, spices, garlic powder, salt.

**Wt/Vol., Packaging, Price:** 15 oz cup. Changed to 10 oz cup. Retail for \$2.89 to \$3.19 each.

**New Product-Documentation:** Talk with Steve Demos. 1989. May 13. Sloppy Joe Tempeh, and Tempeh Chili were introduced in April 1989 in 15 oz. tubs. Talk with Lon Stromnes. 1989. May 15. Clarifies names. The White Wave booth, with all its new products and T-shirts, was the hit of the NFM show at Anaheim last April. Soya Newsletter. 1989. May/June. p. 8.

White Wave News. 1991. Vol. 4, No. 1. June. "White Wave debuts new Size Vegetarian Sloppy Joe and Vegetarian Chili." The new size is a 10 oz. reclosable plastic tub. The products are made with diced White Wave Soy Rice Tempeh. Recommended retail price: \$1.69 to \$2.19.

Letter from Lon Stromnes. 1991. July 30. The new 10 oz package was launched in June 1991. White Wave color postcard. 1992. Aug. "Think fast. For no-meat heat & eat, we serve the All-American favorites. Vegetarian Sloppy Joe.

Vegetarian Chili. All the sizzle... None of the steak." The product appears to be sold in a red plastic tub, like tofu.

2357. **Product Name:** Tempeh Barbecue.

**Manufacturer's Name:** White Wave, Inc.

**Manufacturer's Address:** 1990 North 57th Court, Boulder, CO 80301. Phone: 303-443-3470.

**Date of Introduction:** 1989. April.

**Ingredients:** Soy tempeh (cultured soybeans, water), tomato paste, soy oil, honey, soy sauce, water, molasses, concentrated lemon juice, onion powder, granulated garlic, spices, salt. Our soybeans are organically grown in accordance with Section 26569.11 of the California Health and Safety Code.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated or frozen.

**New Product-Documentation:** Talk with Steve Demos.

1989. May 13. These tempeh products were introduced in April 1989. Talk with Lon Stromnes. 1989. May 15. Clarifies names. The White Wave booth, with all its new products and T-shirts, was the hit of the NFM show at Anaheim last April. Label. 1989. April. Black, white, and yellow on red. "All the sizzle... None of the steak."

Soya Newsletter. 1989. May/June. p. 8.

2358. Wood, Rebecca. 1989. Quinoa the supergrain: Ancient food for today. New York, NY: Japan Publications Inc. Distributed by Kodansha International USA/Ltd. 202 p. April. Illust. Index. 26 cm. [51 ref]

• **Summary:** Quinoa (pronounced KEEN-wa; scientific name *Chenopodium quinoa* Willd.) originated in the *altiplano*, the high plains of the Andes in Peru and Bolivia. It was called the "mother grain" by the ancient Incas. The protein content of quinoa seeds ranges from 7.5% to 22.1%. The two men most responsible for creating a quinoa market in the USA are Stephen Gorad and Don McKinley of the Quinoa Corporation in Boulder, Colorado.

Note: *Webster's Dictionary* defines quinoa (derived from Spanish, via the Quechua *quinua*; the term was first used in 1625) as "a pigweed (*Chenopodium quinoa*) of the high Andes whose seeds are ground and widely used as food in Peru."

Chapter 8, "All about cooking quinoa," contains many recipes. A number of these use soyfoods, including natural soy sauce or tamari (p. 65): Star canapés with tofu-caper topping (p. 88-89). Noodle salad with fresh soy mayonnaise (with soymilk, p. 110). Tofu, quinoa, and dulse salad (p. 114-15). Sweet and sour quinoa tempeh (p. 129-30). Address: Crestone, Colorado.

2359. Ridenour, Jeremiah. 1989. Recent developments at Wildwood Natural Foods (Interview). *SoyaScan Notes*. May 4 and 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Wildwood is now a distributor, carrying 80

products including about 30 of their own products based on soy, plus amazake, mochi, salsa, rocket cheese, and juices, etc. They claim to be the only full-service distributor in the Bay Area. With their 11 trucks (from Wildwood North) they deliver their own products directly to northern California stores—including Safeway supermarkets—rather than going through the central Safeway warehouse. They stock the shelves, set their own retail prices, have a vendor number in Safeway's computer, have bar codes on some products, yet do all this without paying any slotting allowances. Service and quality are considered to be the keys to success. A number of these products are now in 30 California Safeway supermarkets; the salsa played a key role in getting them in. The company got into its first supermarket about 18 months ago. At the Safeway in Lafayette, California, 9 products are sold in the dairy case, between the yogurt and cottage cheese, and the bacon. In some stores they have 8 feet of shelf space.

"We go in with confidence. We just say 'either we get this or we don't come in. We know your customers want no-cholesterol, low-fat foods, don't they?' And the buyers are forced to agree with us, but they don't even know what we are selling. We tell them 'This is it. This is the best on the market. It's the freshest. We'll deliver. What more can you ask for?' At the Mission Safeway in Santa Cruz, we do about \$800 to \$900 a week. They have let us put in our own refrigerated case, titled Wildwood Natural Foods, as have two other stores, in premium spots such as right next to the dairy case or end of aisles. We started by getting in anywhere, even in the produce section. Then after we were in, we'd explain that we didn't want to be in produce since it was too warm and was a risk to both parties and consumers. So we asked for 2 feet in the dairy case. When sales were good there we went back and told them, 'Look, we've got this whole line of products.' Some agreed to let us try it; others didn't."

Wildwood can no longer produce all the tofu they need for second generation products, so they buy some tofu from Gary Stein at San Diego Soy Dairy. Wildwood Santa Cruz, Wildwood Fairfax, and Monterey Bay Soyfoods (the tempeh company) are three separate companies. All three use about 350 acres x 30 bu/acre x 60 lb/bu = 630,000 lb/year of Vinton soybeans. They get about 1.6 to 1.8 lb of firm tofu from 1 lb of these soybeans, thus about 20,000 lb/week of tofu. They make only nigari tofu, none with calcium sulfate. Their main problem in making tofu is the curdling step. The main variable affecting curdling is the soybean variety. Wildwood Santa Cruz has 40 employees, which are the equivalent of 20 full-time employees. A major problem is rapid growth, which they now control by raising prices. There is lots of duplication of managers, equipment, etc. between Wildwood north and south.

Note: Soyfoods Center has heard from a source that asked not to be mentioned that Wildwood's gross sales are presently estimated to be \$5 million a year. Two-thirds

of that is estimated to come from products the company sells but does not make, such as Mrs. Wiggly's juices, Rademacher's sandwiches, solar tacos, salsa, etc. They try very hard to get an exclusive on everything they distribute. Address: Santa Cruz, California. Phone: 408-476-4448.

2360. Library of Congress, Subject Cataloging Div., Processing Services. 1989. Library of Congress subject headings. 12th edition. Washington, DC: Cataloging Distribution Service, Library of Congress. 3 volumes.

• **Summary:** This 12th edition (LCSH 12) contains approximately 173,000 headings established by the Library through Sept. 1988. The book was available on 3 May 1989. Approximately 10,000 headings were added since the 11th edition in 1988. Among these headings are 139,000 topical subject headings, 22,000 geographic subject headings, 10,000 personal names (incl. 9,000 family names), 2,600 corporate headings. This book should be used with the Subject Cataloging Manual (1989. 3rd ed.).

These subject headings have been accumulated by LC since 1898 and the first edition of LCSH was printed between 1909 and 1914. Subject headings are listed in boldface type. Approximately 40% of headings are followed by LC class numbers, which are added only when there is a close correspondence between the subject heading and the provisions of the LC classification schedules.

References show the relationship between terms: (1) The equivalence relationship: Use of UF (Use for) references. (2) The hierarchical relationship: Broader terms (BT) and narrower terms (NT). BT and NT function as reciprocals. A term appearing as a BT must be matched by the reversed relationship as an NT (e.g., Motor Vehicles. BT Vehicles. NT Trucks). (3) The associative relationship: Related terms (RT. Ornithology. RT Birds). May Subd Geog (MSG) = May subdivide geographically. Soy related subject headings, listed alphabetically, are:

Fermented soyfoods (MSG). BT Food, Fermented. Soyfoods. NT Fermented soymilk. Miso. Natto. Soy sauce. Tempeh.

Fermented soyfoods industry (MSG). BT Soyfoods industry. NT Miso industry. Nattô industry. Soy sauce industry. Fermented soymilk (MSG). BT Fermented soyfoods. Soymilk.

Hydrogenation [QD281.H8]

Information storage and retrieval systems—Soyfoods.

Lecithin [QP752.L4 (Physiology), or RM666.L4 (Therapeutics)]. UF Phosphatidylcholine. BT Phospholipids. NT Lysolecithin. Also: Lecithinase.

Margarine (MSG) [TP684.M3 (Manufacture)]. UF Butter, artificial, Margarin, Oleomargarine. BT Oils and fats, edible. NT Vanaspati. Margarine industry (MSG) [HD9330. M37-374] BT Oil industries. NT Vanaspati industry.

Meat substitutes [TX838]. BT Food substitutes. Vegetarianism.

Miso (MSG) [TP438.S6 (Manufacture)]. UF Paste, Soybean. Soybean paste. BT Fermented soyfoods. NT Cookery (Miso).

Miso industry (MSG). BT Fermented soyfoods industry.

Nattô (MSG) [TP438.S36 (Manufacture)] [TX558.S6 (Nutrition)]. BT Fermented soyfoods.

Nattô industry (MSG). BT Fermented soyfoods industry.

Natural food restaurants (MSG). UF Restaurants, Natural food. BT Restaurants, lunch rooms, etc. RT Food, Natural.

Natural foods industry (MSG) [HD9000-HD9019]. UF Health foods industry. BT Food, Natural. Note: Natural food (Use Food, Natural). Natural food cookery (Use Cookery (Natural foods)).

Nonfermented soyfoods.

Nonfermented soyfoods industry.

Shortenings—Use Oils and fats, edible.

Soy ice cream (MSG). Here are entered works on no-dairy frozen desserts in which soy protein largely or completely replaces the dairy proteins. UF Ice cream, Soy. Soymilk ice cream. Tofu ice cream. BT Non-dairy frozen desserts. Nonfermented soyfoods.

Soy ice cream industry (MSG) [HD9330.S63-HD9330.S633]. BT Nonfermented soyfoods industry.

Soy sauce (MSG) [TP438.S6 (Manufacture)]. [TX407.S69 (Nutrition)]. UF Sauce, Soy. Soy. Soya Sauce. BT Fermented soyfoods. NT Cookery (Soy sauce).

Soy sauce industry (MSG) [HD9330.S65-HD9330.S653]. BT Fermented soyfoods industry. NT Strikes and lockouts—Soy sauce industry.

SOYA (Information retrieval system [SoyaScan from Soyfoods Center]) [Z695.1.S68]. BT Information storage and retrieval systems—Soyfoods.

Soybean (MSG) [QK495.L52 (Botany)]. [SB205.S7 (Culture)]. UF Glycine max. Soja bean. Soja max. Soy-bean. Soya. Soya bean. BT Beans. Forage plants. Oilseed plants.

Soybean—Diseases and pests (MSG). NT Diaporthe phaseolorum. Heterodera glycines [Nematodes]. Soybean mosaic disease. Soybean rust disease.

Soybean as feed [SF99.S]. NT Soybean meal as feed.

Soybean flour. UF soya flour. BT Flour. Soybean products.

Soybean glue. BT Glue. Soybean products.

Soybean industry (MSG) [HD9235.S6-HD9235.S62]. BT Vegetable trade. NT Soybean oil industry.

Soybean meal (MSG). UF Soybean oil meal. Soybean oilmeal. BT Meal. Soybean products

Soybean meal as feed [SF99.S]. BT Soybean as feed.

Soybean mosaic disease (MSG) [SB608.S7]. UF Soybean chlorosis. Soybean leaf curl. BT Soybean—Diseases and pests. RT Soybean mosaic virus.

Soybean mosaic virus. BT Plant viruses. RT Soybean mosaic disease.

Soybean oil (MSG) [TP684.S]. UF Bean oil. Chinese

bean oil. Soy oil. BT Drying oils. Soybean products.

Soybean oil industry (MSG) [HD9490]. BT Soybean industry.

Soybean oil mills (MSG). BT Oil mills. Soybean processing plants.

Soybean processing plants (MSG). BT Factories. Food processing plants. NT Soybean oil mills.

Soybean products (MSG). NT Soybean flour. Soybean glue. Soybean meal. Soybean oil. Soyfoods.

Soybean rust disease (MSG) [SB608.S7]. UF Rust disease of soybean. BT Fungal diseases of plants. Soybean—Diseases and pests. RT Phakopsora pachyrhizi.

Soyfoods (MSG). [TX401.2.S69 (Nutrition)]. [TX558.S7 (Composition)]. UF Soybean as food. BT Food. Soybean products. RT Cookery (Soybeans). NT Fermented soyfoods. Nonfermented soyfoods.

Soyfoods industry (MSG) [HD9235.S6-HD9235.S62]. BT Food industry and trade. NT Fermented soyfoods industry. Nonfermented soyfoods industry. Soymilk industry.

Soymilk. UF Beverages, Soy. Milk, Soy. Milk, Soybean. Soy beverages. Soy milk. Soybean milk. BT Nonfermented soyfoods. NT Fermented soymilk.

Soymilk industry (MSG) [HD9235.S6-HD9235.S62]. UF Soy milk industry. Soybean milk industry. BT Soyfoods industry.

Tempeh (MSG) [TX558.T39]. UF Bongkreng. Tempe. BT Fermented Soyfoods. RT Cookery (Tempeh).

Tofu (MSG).

Note: Changes in this edition from the 11th edition. Changed: Soybean as food to Soyfoods. Changed: Soybean milk to Soymilk. Changed: Soybean milk industry to Soymilk industry. Added: Soyfoods industry. Added: Fermented soyfoods. Added: Fermented soyfoods industry. Added: Nonfermented soyfoods. Added: Nonfermented soyfoods industry. Added: Fermented soymilk. Address: Washington, DC.

2361. Preisnitz, Heidi. 1989. Between the cracks: Making tempeh a family business—A series of profiles about people who are living the art they believe in. *Natural Life (Ontario, Canada)* Spring.

• **Summary:** A photo shows “The Noble Bean family: producers of tempeh and growers and distributors of Shiitake mushrooms at their home-based workplace near Elphin, Ontario.” All are standing on an old pickup truck.

2362. **Product Name:** Tempeh Lasagna, and Herbal Garden Tofu (With 6 Herbs & Spices in the Curds).

**Manufacturer’s Name:** San Diego Soy Dairy.

**Manufacturer’s Address:** 1330 Hill St., Suite B., El Cajon, CA 92020. Phone: 619-447-8638.

**Date of Introduction:** 1989. May.

**New Product—Documentation:** Talk with Gary Stein. 1989. Feb. 17. He expects that these products will be launched

in about Aug. 1989. Talk with Gary Stein. 1989. Oct. 25. Tempeh Lasagna was introduced in May, 1989. It contains Pizsoy soy cheese (\$1.60/lb). He also distributes the cheese. He also does a private labelled version for Heart & Soul, as well as own label. Herbal Tofu is expected out by the end of November, 1989. He will soon be putting out an iced herbal tea (non-soy).

2363. Mann, Oscar. 1989. Re: Problems in trying to introduce tofu to Kenya. Letter to William Shurtleff at Soyfoods Center, June 7. 2 p. Typed, with signature on letterhead.

• **Summary:** "I was making my own tofu for a while, then supplying friends and now a main deli/grocery in town. It's little known here but sales are steadily growing and are now at around 20 kg/week. I'm also producing soysage and have just begun okara Tempeh."

The main problems are: 1. Very strict government health regulations; all products must undergo strict government testing. 2. Poor quality soybeans and concern with aflatoxins on soybeans. "I have one person whose job it is to sit and sort soaked beans—particularly any that look moldy or infected in any way. We actually discard 20-30% of our raw stock... For some reason Kenya is having a hard time producing soy beans. The market has been low but their main problem is that the beans rot as soon as they are ready, necessitating 2 or even 3 pickings per day! Beans on the market currently come from Uganda or Tanzania and are old. I buy what I can (at around \$0.50/lb) and there are never two loads the same which makes control and scientific methodology difficult." 3. Local coagulants are expensive. Lab grade calcium sulfate, the least expensive, costs \$1.66/lb. So the cost of producing tofu is about \$0.95/lb (with labor costing only \$0.50/hour); it wholesales for \$1.25 and retails for \$1.66/lb. 4. Tofu and other soyfoods are not well known.

"I am holding a tofu-making class this coming week end and will have samples of tempeh and soysage to try. Next is a tofu cooking class, a small recipe book and a soya festival with one of the largest restaurants."

"My analysis of the situation soy-wise here is that probably the most accepted products will be flavored soy milk in tetra bricks, burgers, soysage, and dried frozen tofu for the various hunger and famine-relief projects. (I actually thought I had invented this stuff before finding it in your books. I use it as my main staple on safari and have given samples to trekking companies.) I would like to see a full-scale soy dairy in operation." Address: Kenya Natural Products Development Co., P.O. Box 20360, Nairobi, Kenya. Phone: 60099.

Address: Cornell Univ., New York.

2371. Welters, Sjon. 1989. Soyfoods in Europe: Influenced

by a colonial past. *Soya Newsletter (Bar Harbor, Maine)*. May/June. p. 1, 12-15. [1 ref]

• **Summary:** This is a historical overview of the introduction of soyfoods to Europe since 1945. The Indonesians who immigrated to the Netherlands after World War II played a major role in introducing soyfoods (especially tofu, tempeh, and a sweet soy sauce called ketjap) to that country and to Europe. Ketjap was the most popular soyfood in Indonesia. Asian immigrants started small manufacturing companies, restaurants, and importing companies (such as Conimex and Heuschen Schrouff). The macrobiotic movement also played a key role in introducing soyfoods, especially soy sauce, miso, and tofu. In Belgium, the Gevaert family founded Lima and began to make miso on a large scale, but a fire and other financial problems soon forced them to close the plant. Only recently have they started to make miso again.

During the 1970s, especially in Belgium and the Netherlands, inspired by the macrobiotic movement and with information from books by Shurtleff and Aoyagi, a new generation of non-Asian tofu makers emerged. "The first tofu shop in Europe owned and operated by non-Orientals was Manna Natuurvoeding. Opened in Amsterdam in 1977, Manna was a macrobiotic manufacturer, distributor, and retailer run by a non-profit foundation. Soon after opening, Manna was visited by entrepreneurs from Germany, England, Portugal, Denmark, France, Sweden, Austria, and Italy, hoping to learn about making tofu."

During the early 1980s, tempeh was rediscovered. "Yakso Farms in the Netherlands was one of the first non-Oriental companies to produce tempeh, made from organic soybeans, and to process it into spreads, paté, sauces, and marinated products."

In the mid-1980s the focus shifted from production to marketing and to second-generation soyfoods. Most European soyfoods are made with organic soybeans. Address: President, Craft International Consultants, 21 Wetherbee St., Acton, Massachusetts 01720. Phone: 617-264-9511.

2372. Ebata, Junko. 1989. History of Japan's Tempeh Discussion Society and Tempeh Research Society (Interview). *SoyaScan Notes*. July 3. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The first meeting of the Tempeh Discussion Society (*Tenpe Danwa-kai*) was held on 30 Jan. 1984 at Kyushu University. The most active founding members in the following years were Dr. Tadao Watanabe and Dr. Kiku Murata.

The purpose of the society was to establish a platform for discussion of matters related to tempeh. The first meeting was held at Kyushu University, the second in Tokyo, the third at Osaka Teikoku Joshi Daigaku, the fourth at Marusan-Ai in Okazaki, and the fifth at *Kasuga-cho Shoko-kai* (Hikami-gun, Kasuga-cho, Kuroi, Hyogo-ken). Most

of the group's members were affiliated with a university, a food manufacturing company, or a government research laboratory. In 1988 the group changed its name to Tempeh Research Society (*Tenpe Kenkyu-kai*) in order to establish a more formal, research-oriented feeling and to attract new members. The 16 founding members of the new society were: Goro Kanasugi (Takuma-kai), Makio Takato (Takashin Shokuhin), Yasuko Torii (Shizen Shoku Hyoron-ka), Masaharu Horii (Norinsho Sogo Kenkyujo), Teruo Ohta (Fuji Seiyu K.K.), Eiichi Kimura (Daizu Kyokyu Antei Kyokai), Gyo Nikaido and Mikitoshi Iwatsuki (Marusan-Ai K.K.), Hajime Kashio (Nagoya Eiyo Senmon Gakko), Kiku Murata (Teikoku Gaku-en, Kyoiku-ken, Moriguchi City, Osaka), Toshiie Maeda (Tempeh Sonjuku), Machiko Asano (Teikoku Joshi Daigaku), Teijiro Miyamoto (Osaka Shidai), Tadao Watanabe (Torigoe Seifun and Kyushu Univ.), Kazuko Noguchi (Saga Joshi Tandai), Asao Matsuoka (Kassui? Joshi Tandai), and Naokazu Ohta (Kumamoto Joshi Daigaku).

The first meeting under the new name was held on 25 Feb. 1989 in Tokyo. Talks on tempeh were presented by Yasuko Torii, Nobuyuki Okada, and Toshiie Maeda. On 31 Dec. 1988 the Society had 58 members, increasing to 77 by Feb. 1989. During 1989 meetings are planned on June 24 at Osaka City Univ. and on September 1 at Teikoku Joshi Daigaku (Moriguchi city, Osaka prefecture). The group will attend the Second Asian Non-Salt Fermented Soybean Symposium at Jakarta, Indonesia. Address: Prof., Faculty of Science of Living, Osaka City Univ. Sugimoto 3-3-138, Sumiyoshi-ku, Osaka 558, Japan. Phone: 06-605-2811.

2373. Perez Baez, Oswaldo. 1989. Re: New developments with soyfoods in Venezuela. Letter to William Shurtleff at Soyfoods Center, July 10. 3 p. Typed, with signature on letterhead. [Eng]

• **Summary:** "In my last visit to Caracas I contacted: Prof. Makie Kodaira and Prof. Amaury Martinez of the 'Instituto de Ciencia y Tecnología de Alimentos, Facultad de Ciencias, U.C.V.' (Universidad Central de Venezuela) who are very interested in offering a theoretical and practical course about soyfoods, using their pilot plant (the second of importance in Venezuela). Prof. Kodaira studied in Hiroshima, Japan in 1977 and she is a specialist on seafoods. They would like the 'Centro de Alimentos de soya de Venezuela' to organize this course.

"I think this is the time to offer in Venezuela a complete course about soyfoods and I have thought to invite you to come to Venezuela. I am thinking about 2 courses:

"(a) One oriented to Institutional level (Instituto Nacional de Nutrición, Fundación Polar, CIEPE, Universidades, Industry, etc.) for professional people. This course could be in Caracas, Instituto de Ciencia y Tecnología de Alimentos, U.C.V.

"(b) Another one oriented to the general public (not necessarily professional level). This course could be here in

La Azulita which is a rural and beautiful place, epicenter of the Venezuelan movement for alternative lifestyles.

"I have thought of the following content for these courses: (1) Soymilk. (2) Tofu. (3) Tofu and soy milk ice cream. (4) Miso. (5) Tempeh. (6) Shoyu.

"I am working on a book about soyfoods, and am enclosing an outline of the contents: I. Introduction. II. Agronomic aspects. III. Soya and food security. IV. The most important soyfoods. V. Industrial potential of the soybean. VI. Bibliography. VII. Index." Address: Ing., Centro de Alimentos de Soya de Venezuela, Granja Tierra Nueva, Aldea San Luis, La Azulita, Estado Merida, C.P. 5102, Venezuela.

2374. Turtle Island update: Plastics and recycling. 1989. P.O. Box 218, Husum, WA 98623. 6 p. July 10. Unpublished manuscript. 28 cm.

• **Summary:** Turtle Island started its plastics recycling program in Nov. 1988. The company has gotten an enthusiastic response from the many customers who have sent in plastic tempeh wrappers and requested information on how they could recycle plastics in their home towns. Turtle Island is recycling its plastic wrappers into milk jugs and yo-yos. Contains a directory of national and state (Washington, Oregon, California) organizations involved with recycling, plus suggested reading (books and periodicals). Address: Husum, Washington. Phone: 509-493-2004.

2375. Welters, Sjon. 1989. Re: A brief history of Yakso in the Netherlands. Letter to William Shurtleff at Soyfoods Center, July 24. 1 p.

• **Summary:** "Yakso Farms (originally named Jakso Farms) in the Netherlands was founded by Tomas Nelissen in about 1980; he was joined by Peter Dekker in 1982. The organization was basically a farm with several hundred acres of land, upon which was a food processing plant. Yakso was one of the first non-Oriental companies to produce tempeh, starting in early 1982. It was made from organic soybeans

Their fried and marinated tempeh products were introduced in early 1983 and their tempeh spreads in the fall of 1983. The farm part of Yakso was sold and its name and products were taken over by Kees Middelwert, who runs the company now. Initially he ran it from another facility in the province of Groningen, but now is in the process of moving it into a new and much larger facility in Wollega. He is not the sole owner any more—if he ever was. Frans Andringa, who owns an organic cheese company, invested substantially in the company.

"On 2 July 1989 De Morgenstond, the tofu making company, moved into the same building as Yakso, expanding its production capacity and switching to a Takai high pressure cooker system. De Morgenstond is now owned by Frits Steunenbeg and Mank DenBok."

Sjon adds in March 1990: Yakso is now one of the

leading soyfoods companies in the Netherlands. They make a lot of Indonesian-style soyfood products. Tomas Nelissen is now living in Vienna, Austria, making his living by shiatsu. Address: Craft International Consultants, 21 Wetherbee St., Acton, Massachusetts 01720. Phone: 508-264-4011.

2376. Business Trend Analysts, Inc. 1989. The health and natural food market: A product-by-product marketing analysis and competitor profile. 2171 Jericho Turnpike #342, Commack, NY 11725. 280 p. Price \$950.00. \*

• **Summary:** Section 6 of this report is titled "The Market for Soyfoods" (24 pages). It projects 6.2% growth for the soyfoods industry, and contains the following (much of it provided by Soyatech, Inc. and Soyfoods Center): Analysis and summary. Manufacturers' sales of soyfoods. Manufacturers' sales of soyfoods to major outlets. Manufacturers' sales of soyfoods, by type of outlet. The top six soymilk producers in the U.S. U.S. per capita consumption of soymilk. Retail sales of soyfoods. Retail sales of soyfoods at major outlets. Retail sales of soyfoods, by type of outlet. Graph: Product mix of U.S. soyfood sales. Estimated mix of distribution channels used to market various soyfoods. U.S. soybean production. Characteristics of women's use of soy sauce. Quick Tamari tips. Selected 1988/89 new product introductions: Soyfoods.

Under "Report Highlights and Special Features" we read: "Soyfoods continue to gain popularity with mainstream consumers, as sales are expected to top the \$380 million mark, at the wholesale level, by year-end. At the retail level, sales of tofu alone are currently pegged at \$77 million, with supermarkets capturing close to 60% of dollar volume."

Overall report Contents: 1. Executive summary. 2. The overall market for health and natural foods (including Soyfoods 1979-1988, with forecast to 1998). 3. The market for health and natural dairy foods. 4. The market for health and natural grocery products. 5. The market for health and natural snack food products. 6. The market for soyfoods. 7. The market for health and natural grains and cereals. 8. The market for health and natural frozen foods. 9. The market for herbal products. 10. Distribution channels. 11. Factors affecting demand. 12. Trends in organic farming. 13. Competitor profiles: Alta-Dena Certified Dairy, Arrowhead Mills, Barbara's Bakery, Celestial Seasonings, Golden Temple, San-J International, Thompson Kitchens. Tivall U.S.A./Garden Gourmet, U.S. Mills (partial list). 14. Directory of more than 200 health and natural food producers. Address: Commack, New York. Phone: 516-462-2410.

2377. Coffey, Rory. 1989. Lupins as an energy-rich protein source for feed and food. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p.

See p. 410-14.

• **Summary:** Contents: Abstract. Introduction. Lupin consumption and usage. Dehulled lupin. Human consumption: Lupin concentrate, miso soup, lupin tempeh, lupin flour.

Miso soup: Although about 200,000 tons of soybeans are used each year in Japan to make miso soup, there is a problem with oxidation, which causes discoloring. The Shinshu Research Institute has investigated the use of lupins as a substitute for soybeans in an attempt to solve this problem. Oxidation does not occur with lupins and to date results have been encouraging. Table 8 shows a sensory evaluation of the two types of miso (high score is more favorable): Color–Lupin 12, soy 0; Taste–Lupin 10, soy 2; Aroma–Lupin 7, soy 5; Texture–Lupin 6, soy 6.

Lupin tempeh: In 1986 an Indonesian company began to investigate the feasibility of using lupins as a substitute for soybeans in making tempeh—with the assistance of the Grain Pool of Western Australia and R. Yu of the Victorian Food Research Institute. Despite some problems at the beginning, the efforts by all 3 parties have proved successful and the Indonesian company is now using a significant tonnage of lupins to make tempeh.

Lupin flour: In 1987, the Grain Pool initiated an evaluation of lupin flour in human food products.

Lupins have been grown and used in Western Australia for over 30 years. After extensive genetic engineering, the composition of the present day varieties is far superior to those grown originally. Over 90% of the lupins grown in Western Australia, and all that are available for export, are varieties from the species *Lupinus angustifolius*, a sweet, white, narrow leaf lupin.

In terms of world lupin production in 1985, Australia has the largest area (606,000 ha), followed by the USSR (280,000), and Europe (148,000). In the USSR and Eastern Europe much of the lupins are grown for forage or green manure; not much grain is harvested. A photo shows R. Coffey. Address: Grain Pool of Western Australia, Grain Pool Bldg., 172 St. George's Terrace, Perth 6000, Western Australia, Australia.

2378. Natufood B.V. 1989. Prijs-bestelboek [Natufood price list and catalog, July-Sept. 1989]. Fahrenheitstraat 18, 3840 BN Harderwijk, Netherlands. 73+ p. [Dut]

• **Summary:** This catalog of a Dutch natural foods distributor lists the farming method (organic or not), wholesale and retail prices for each product: Page 8: Witte Wonder tofu spreads (mushroom, chili, green peppercorn, garlic, paprika, celery), Lima Limapast contains sunflower seeds, miso, and soy flour. Page 30. Joannusmolen roasted soy flour. Page 31. Natufood defatted soy flour (sifted). Ad for the Vetara line of ready-to-eat foods, many of which contain TVP. Page 33. Avita soybeans (Avita Natufood's organic food line). Natufood soybeans. Ad from Nutricia for canned powdered

infant foods. Nutri-Soja complete infant food based on soy. Nutri-Soja Plus based on soy for infants that have been weaned. Page 34. Nutricia infant formulas: Nutrisoja in 400 gm or 1000 gm and Nutrisoja-Plus in 900 gm. Page 35. Avita little soybeans (regular and large, organic).

Page 36. Witte Wonder soybeans in tomato sauce. Ad for Vetara organic tofu, which is produced by Heuschen-Schrouff B.V. in a completely new facility under extremely sanitary conditions. It is made with organic soybeans with a natural coagulant (Serempi) in the traditional way. "Best quality, lowest price." The product label (250 gm) is shown. Page 37. Refrigerated miso products made in Europe. Lima barley miso and rice miso, both unpasteurized. Page 38. Meat replacers. Seitan is sold by Vetara, Witte Wonder, Yakso, and Manna. Vetara herb tofu, Napolitan tofu, rice tofu, bali tofu, rames tofu, rames tempeh, Tjap Tjoy. Witte Wonder tofu in curry/pineapple sauce, and in peanut sauce. Ad for Vetara vegetarian burgers, frankfurters, and schnitzels.

Page 39. Soya meat replacers and vegetarian mixes: Lists 11 Vetara products based on or containing TVP (textured soy flour) or HVP (hydrolyzed vegetable protein). Nutana meat replacers (9 products). Jonathan natural tofu. Cenovis and Huegli bouillon tablets (14 types, probably contain miso). [Sjon Welters adds that Huegli, a multi-million dollar Swiss food company, owns a major part of Natufood B.V.]. Western bouillons (Miso): Lima barley and rice misos. Heiwa Hatcho miso and instant miso soup. Huegli ad.

Page 42. Vegetarian refrigerated products: Vetara smoked tofu, natural tofu (EKO mark), saté tofu, vetaburgers with pineapple, with cheese & onion, natuburgers. Soyadrinks and desserts: Provamel (8 drinks and 6 desserts [puddings]). Lima (3 drinks).

Page 44. Witte Wonder organic tofu dressings (Italian, Mexican, Garden herbs, or Natural). Mayonnaise and Tofunaise: Witte Wonder organic tofunaise (regular or with lemon).

Page 52. A. Vogel products: Vogel Sojaforce. Page 67. Natufood non-organic soynuts (natural, paprika, curry, or onion). A photo of the soynuts is given at the bottom of the page. Page 69. Non-organic soynuts in bulk (same 4 flavors as page 67). Page 73. Bulk defatted soy four, and soybeans (organic or non-organic). Ad for Vetara Vegetable Bouillon, which probably contains soy. Address: Harderwijk, Netherlands. Phone: 03410-23240.

2379. **Product Name:** [Vetara Tempeh Rames, and Tjap Tjoy (Indonesian-Style)].

**Foreign Name:** Vetara Tempeh Rames, Tjap Tjoy.

**Manufacturer's Name:** Natufood B.V.

**Manufacturer's Address:** Fahrenheitstraat 18, 3840 BN Harderwijk, Netherlands.

**Date of Introduction:** 1989. July.

**Ingredients:** Organic.

**Wt/Vol., Packaging, Price:** 325 gm.

**New Product–Documentation:** Natufood Catalog. 1989. July/Sept. p. 38.

2380. **Product Name:** Soy Deli Tofu Burgers [Barbecue Style, Cajun Spice, Curry Spice, Garden Style, Italian Spice, Original, Taco Spice, Tofu-Tempeh, or Teriyaki].

**Manufacturer's Name:** Quong Hop & Co.

**Manufacturer's Address:** 161 Beacon St., South San Francisco, CA 94080. Phone: 415-873-4444.

**Date of Introduction:** 1989. July.

**Wt/Vol., Packaging, Price:** 6.1 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Ad, quarter page black-and-white, in Whole Foods. 1989. Sept. p. 132. "Make a healthy choice. New! From Soy Deli. The original organic tofu burger. Nine organic meals in a minute. Strengthen your health food line with the nine new international flavors of Soy Deli organic tofu burgers. All natural ingredients, no preservatives, made from the finest nigari tofu. Pre-cooked with a delicious blend of natural spices. Simply heat and serve, or add to your favorite recipes in place of meat. Good shelf life. High protein, low sodium, no cholesterol, meat or dairy products. Refrigerated or frozen." A photo shows the label. Note: Quong Hop & Co. first introduced a tofu burger in Jan. 1979.

Talk with Ben Lee of Quong Hop. 1989. Sept. 1. These products were launched in July 1979. The full-color label is printed using a 6-color process. The company hopes the new product will make the transition to the typical deli case in delis; they are not shooting for the deli case in supermarkets. Soyfoods Center product evaluation. 1989. Sept. 9. So-so. Quite dry and crumbly, not juicy. Poor cohesiveness. No instructions for cooking in microwave oven. Flavors are okay, but what is the need for so many? It is not clear whether or not the product is fried.

Spot in Whole Foods. 1989. Nov. p. 83. Available in 9 international flavors. "The burgers are pre-cooked in high-oleic safflower [oil]... contain no meat or dairy products." Ad (5 by 7 inches, black and white) in Whole Foods. 1990. Feb. p. 36. "Make a healthy choice. New! From Soy Deli. Nine organic meals in a minute." Lists the 9 flavors.

2381. Winarno, F.G. 1989. Production and utilization of tempeh in Indonesian foods. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 363-68. Contains 1 table and 2 pictures. [18 ref]

• **Summary:** Contents: Abstract. Introduction. Tempeh.

Tempeh making: Microorganisms involved, starter for tempeh production. Tempeh preparation: Traditional, pilot plant production, losses and yields. Utilization and storage stability: Harvesting and storage. Tempeh in Indonesian foods: Nutritive value, storage stability. Problems of contamination.

"The total annual consumption of tempeh is about a half million tons... Most of the 41,000 cottage industries that make fresh tempeh daily are family run and employ about 128,000 workers. Each small cottage industry employs about three workers and uses approximately 11 lb (5 kg) of dry soybeans per day to produce 21 lb (10 kg) of fresh tempeh. The large cottage industries employ 10 to 20 workers and use 600 to 1,100 lb (500 kg) of dry soybeans per day to produce tempeh. The average retail price of tempeh is about US \$0.25 per kg (1)." A photo shows F.G. Winarno. Address: Food Technology Development Center, Bogor Agricultural Inst., Kampus Darmaga, P.O. Box 61, Bogor, Indonesia.

2382. *SoyaScan Notes*. 1989. Brief history of Witte Wonder in the Netherlands (Overview). Aug. 12. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The main sources of this information are letters from and interviews with Sjon Welters and Richard Leviton. In 1979 a non-profit natural foods foundation called Stichting Natuurvoeding den Haag was started by Cees van Rest as the framework within which to start a store that sold natural and macrobiotic foods. Many of the early Dutch natural food companies were set up as non-profit foundations based on the idea and model started by Manna (Stichting Natuurvoeding Amsterdam). The foundation was governed by a board of directors, in which van Rest and his father and wife played key roles. The store was located at Piet Heinstraat 80, 2518 CK Den Haag (The Hague). The foundation soon decided to expand its activities from retailing to include food manufacturing. So it established Witte Wonder Products as its food manufacturing division and registered Witte Wonder as its brand. For a logo, they used an illustration of a traditional tofu master taken from *The Book of Tofu* by Shurtleff and Aoyagi. In April 1981 they began to make 100 kg/week of tofu and tempeh, plus seitan, in the back of the retail store. In Nov. 1983 Nico van Hagen and his wife Loes Witteman were the principal tofu makers. They made 900-1,200 kg/week of tofu, plus 500 kg/week of seitan.

At one point, they changed the store into a restaurant with a space to give classes, but kept making soyfoods there. Then they started to make tofu dips at another shop. Finally they sold the restaurant and consolidated the two soyfood production operations. By Oct. 1984 they were making 2,000 lb/day of tofu.

In about 1985 Witte Wonder moved into a new plant at Gelreweg 4b, 3843 AN Harderwyk, Netherlands. They needed more money to make the move successful, so they invited Solnuts B.V. to join Witte Wonder as a source of

capital. But the capital needs increased and Solnuts agreed to provide the additional capital in exchange for a controlling interest in Witte Wonder. This put the van Reests in a difficult position, but without much choice. So on 1 April 1986 Witte Wonder was acquired in an unfriendly silent acquisition by Solnuts B.V. Cees van Rest and his father owned 50% of the company's stock plus one majority vote. Solnuts owned the other 50%. The majority vote changed hands at the moment Solnuts made a new investment in Witte Wonder. With this the van Rests lost the controlling interest. Cees van Rest resigned as a director, becoming unemployed.

In late March 1990 Solnuts B.V. was just completing an agreement to sell the company back to Wim Bakker, who had been running it for them since 1986. Solnuts considered Witte Wonder to be too far away from their core activities.

2383. Ebata, Junko. 1989. Antimutagenicity of tempe (Abstract). Abstract of a lecture presented at the 14th International Congress of Nutrition of Nutrition, Seoul, Korea. 1 p. Held 20 Aug. 1989. [1 ref. Eng]

• **Summary:** "The antimutagenicity of tempe toward AF2 was examined using the streptomycin-dependent strain SD100 of *Salmonella typhimurium*. Tempe in the process of fermentation was antimutagenic as the number of spontaneously reverted colonies on the tempe-test plate was fewer than that on the tempe-free control plate. The same inhibitory effect was also found in both pan-fried and deep fat-fried tempe-samples... The antimutagenic activity... increased with fermenting time and reached a maximum at 20 hours, then decreased."

**Note:** In July 1989 Prof. Ebata traveled the USA to attend several symposia on Mutagens & Carcinogens in Diet, and on Genetic Toxicology in Developing Countries. She is now preparing a paper on antimutagenic activity in tempeh to present at the 14th International Congress of Nutrition in Seoul, Korea (20-25 Aug. 1989). Address: Faculty of Science of Living, Osaka City Univ., Osaka, Japan.

2384. **Product Name:** Lightlife Lemon Grill (Tempeh Burger).

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** 74 Fairview St., Greenfield, MA 01301. Phone: 413-774-6001.

**Date of Introduction:** 1989. August.

**Ingredients:** Organic soy-rice tempeh (organically grown soybeans, brown rice, water, tempeh culture), fresh lemon juice, soy sauce, canola oil, olive oil, granulated garlic, onion powder.

**Wt/Vol., Packaging, Price:** 5.5 oz (155 gm) vacuum pack.

**How Stored:** Refrigerated or frozen.

**New Product-Documentation:** Talk with Richard McKelvey, sales manager of Lightlife Foods. 1990. June 20. This round tempeh burger was launched in Nov. 1989. It is marinated in pure lemon juice as a opposed to lemon

concentrate. The product is doing very well and growing. "If you try the Lemon Grill, you'll love it. So the company is working to get people to try it."

Label sent by Richard McKelvey. 1990. July 20. 4.25 by 5 inches. Green, yellow, and white on black. "Meatless. All natural. Two tempeh cutlets. Delicious as an entree or in a sandwich. Just grill in a lightly oiled pan, under the broiler or on a grill. Microwavable: 1-2 minutes."

2385. **Product Name:** Tempeh [Sari Ayam—Chicken Flavour].

**Manufacturer's Name:** Nutrisoy Pty. Ltd.

**Manufacturer's Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1989. August.

**Ingredients:** Organic soybeans, water, cider vinegar, chicken flavour (salt, maltodextrin, flavour enhancer {621}, wheat starch, chicken fat, chicken meat, beef fat, yeast extract, onion powder, spices), and culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 250 gm in plastic bag.

**How Stored:** Refrigerated.

**New Product-Documentation:** Label with date sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling this product in Aug. 1988. Red, green and white on yellow. Front panel: "Delicious. Nutritious. Fitness food. Fry, bake, grill or steam for a quick & easy meal. Fitness food. Bermutu Tinggi."

2386. **Product Name:** [Viana Tempeh].

**Foreign Name:** Viana Tempeh.

**Manufacturer's Name:** Viana Naturkost GmbH.

**Manufacturer's Address:** Neusserstr. 199, D-5000 Cologne 60, West Germany. Phone: (02233) 41323.

**Date of Introduction:** 1989. August.

**Ingredients:** Whole soybeans\*, apple vinegar\*, *Rhizopus oligosporus*\*\*. \* = Organically grown. \*\* = Beneficial/edible fungus (*Edelschimmelpilz*).

**Wt/Vol., Packaging, Price:** 200 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter from Anthony Marrese. 1990. March 22. This company was started by Bernd Drosihn after he left Soyastern.

Talk with Bernd Drosihn, founder of Viana. 1990. April 7. He started to make tempeh in about Aug. 1989 after leaving Soyastern. He makes 3 types of tempeh, 2 tempeh burgers, and 2 tempeh spreads (introduced in 1990). The burgers and spreads are selling well. The basic tempeh is going slower.

Bernd Drosihn. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38. Says the company makes fresh tempeh from whole soybeans, tempeh fritters, tempeh salad, tempeh burgers, tempeh spreads, and tempeh in a glass. A source of tempeh starter culture. The company also makes seitan.

Tempeh Label sent by Bernd Drosihn. 1990. April 14. 4.75 by 2.75 inches. Self adhesive. Reddish-purple, black, beige, and light purple. "Fresh, unpasteurized. A whole-food fermented soy product. Contains much vitamin B-12, Rich in bulk/fiber. Easily digested. Free of cholesterol. Try Viana tempeh cut into thin slices and roasted or fried until crisp or crunchy. Delicious!" The company address is now 5030 Huerth 6, West Germany.

Brochure. 8.5 by 11 inches. 6 panels. Black and brown on white. The front panel reads: "Sometimes you should say loud and clear, 'Tempeh!'" Gives an explanation of tempeh and how it is made, plus nutritional information and 2 recipes.

Note: This is the earliest record seen (Feb. 2003) concerning Viana Naturkost GmbH of Germany. However Bernd Drosihn, the founder of Viana, was an owner of Soyastern by 1987.

2387. **Product Name:** [Viana Deep-fried Tempeh].

**Foreign Name:** Viana Fritierter Tempeh.

**Manufacturer's Name:** Viana Naturkost GmbH.

**Manufacturer's Address:** Neusserstr. 199, D-5000 Cologne 60, West Germany. Phone: (02233) 41323.

**Date of Introduction:** 1989. August.

**Ingredients:** Soybeans\*, water, shoyu\*, *Rhizopus* culture, vegetable oil, sea salt. \* = Organically grown.

**Wt/Vol., Packaging, Price:** 200 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Bernd Drosihn. 1989.

Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38. Says the company makes deep-fried (fritierter) Tempeh.

Label sent by Bernd Drosihn. 1990. April 8. The company address is now Schmittenstr. 106, D-5030 Huerth 6, West Germany. 4.75 by 1.5 inches. Self adhesive. Reddish-purple, brown, and yellow. Dot-matrix printed.

2388. **Product Name:** [Viana Tempeh Salads].

**Foreign Name:** Viana Tempehsalate.

**Manufacturer's Name:** Viana Naturkost GmbH.

**Manufacturer's Address:** Neusserstr. 199, D-5000 Cologne 60, West Germany. Phone: (02233) 41323.

**Date of Introduction:** 1989. August.

**New Product–Documentation:** Bernd Drosihn. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38. Says the company makes Tempehsalate. But these have been discontinued by May 1990.

2389. *SoyaScan Notes*. 1989. Sixty-five books on tofu have been published in the Western World since 1970 (Overview). Sept. 17. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Definition: The work must be more than 48 pages long, must have the word "tofu" or its equivalent in the title, and must be written in a non-Asian language. It may be either a popular or a professional/technical work.

By country of publication, 40 of these books (61% of the total) have been published in the USA, 6 in Canada, 5 in Switzerland, 5 in Japan (but written in English for sale primarily outside of Japan), 3 in West Germany, 3 in France (but 2 of these were published simultaneously and primarily in Quebec, Canada), 2 in England, and 1 each in Italy, Sweden, and Brazil. By region of publication: North America 46 (71% of the total), Europe 15, East Asia 5, and Latin America 1.

By language, 49 of these books (75%) have been published in English, 7 in French, 6 in German, and 1 each in Italian, Portuguese, and Swedish.

By year of publication, the first of these books was published in 1974; eleven (17% of the total) were published from 1974 to 1979, forty (62%) from 1980 to 1984, and fourteen (22%) from 1985 to 1989. The peak years of publication were 1981 and 1982, when 12 books on tofu were published each year.

The best sellers among these books have been *The Book of Tofu* by Shurtleff & Aoyagi (1975, Ballantine Books, Autumn Press, and Ten Speed Press, about 450,000 copies sold in English editions and 9,000 in foreign editions), *Tofu Cookery* by Louis Hagler (1982, The Book Publishing Co., about 175,000 copies sold), *The Tofu Cookbook* by Cathy Bauer and Juel Andersen (1979, Rodale Press, 105,500 copies sold, still in print), *Cook with Tofu* by Christina Clarke

(1981, Avon Books, 57,500 copies printed; still in print), and *Tofu, Tempeh, & Other Soy Delights* by Camille Cusumano (1984, Rodale Press, 25,688 copies sold; out of print). These best-sellers have sold a combined total of 822,700 copies, and all tofu books have probably sold over 1 million copies.

2390. Gaec de La Lix: United Macrobiotic Company. 1989. Re: Work with soyfoods and seitan in France. Letter from Ben of Gaex to Anthony Marrese, Sept. 25. 1 p. Typed, with signature on letterhead. [Fre]

• **Summary:** “Since October 1985 we have been building up our project. We are 20 adults and meanwhile three children. Four years ago we bought a very nice farm in the beautiful landscape of the Pre-Pyrenees 80 kilometers southwest of Toulouse. Today we work on more than 90 hectares of land.

“At the beginning we started by establishing a common macrobiotic kitchen. We worked mainly in the garden and in the fields, trying ideas of permaculture and those of Masanobu Fukuoka. In this behalf we were assisted by Thomas Nelissen, who lived for some time at Fukuoka’s farm in Japan, and Declan Kennedy, the most important teacher of permaculture in Europe...

“This is our fourth year growing soybeans. We have a garden of one and a half hectares, mostly for self-sufficiency.

“With a status as ‘transformateurs’ we set up a stand on the organic market (“marche bio”) at Toulouse, shortly after we started to make tofu for ourselves. In time we began to make tempeh, natto... certain types of soyaburgers, sushis and vegetable rolls. Today we deliver our products to more than 40 biological [organic] health stores in the surrounding 100 kilometers...

“We teach the making of tofu and seitan, amasake, mochi and tempeh as well as giving macrobiotic cooking classes and agricultural seminars.”

A 1989 leaflet titled “What are Tofu, Tempeh, Seitan, Kombu?” in French (4 panels) is included with the letter. A color slide showing five people from the company waving is taped to the letter. Address: 32260 Tachaires-Seissan, France. Phone: 62.65.35.04.

2391. Bates, Dorothy R. 1989. The tempeh cookbook. Summertown, Tennessee: The Book Publishing Co. 96 p. Contains 11 color photos and some line drawings. Index. Sept. 26 cm.

• **Summary:** This is a vegetarian (but not a vegan) cookbook. Contents: Introduction to tempeh: Nutritive values, how tempeh is made, storing tempeh, cooking tempeh. Ingredients and suggestions: Discusses soymilk, soy oil, and tamari. Making tempeh at home. Appetizers. Salads. Soups. Sandwiches. Main dishes: Oriental, Italian, Mexican, American, International. Dessert. Contains 100+ recipes. Address: Summertown, Tennessee.

2392. **Product Name:** Organic Soybean Tempeh, and Soy

& Cracked Wheat Tempeh.

**Manufacturer’s Name:** Central Soyfoods.

**Manufacturer’s Address:** 11 W. 14th St., Lawrence, KS 66044. Phone: 913-843-0653.

**Date of Introduction:** 1989. September.

**Wt/Vol., Packaging, Price:** 6-8 oz vacuum pack. Retails for \$3.50/lb.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Tom Ballew of Central Soyfoods. 1990. March 24. This product is pasteurized but not frozen. Only a small amount of the soy & cracked wheat variety is made. Tom started working with the company in Sept. 1987. Label sent by Tom Ballew. 1990. March. It is a combination leaflet and label. 4 panel, with each panel 4 by 5.5 inches. Photocopied black on white on both sides. States that the company was established in 1978. “Made with a pure culture of *Rhizopus oligosporus* and organically grown soybeans. From the land of Kansas. Approximate weight: 6-8 ounces. Best if used by: The inside 2 pages contain a description of tempeh and the *Rhizopus* fermentation, how Central Soyfoods tempeh is made (the beans are steamed, not boiled); “the mature tempeh is then steam pasteurized to deactivate the enzymes and vacuum packed to ensure freshness.” There are recipes for Sweet & Sour Tempeh, Tempeh with Indonesian Peanut Sauce, and Curried Tempeh.

Talk with Jim Cooley. 1990. April 3. This product was introduced in Sept. 1989. The tempeh is vacuum packed, then this combination label and recipe leaflet is slipped in between the tempeh bag and an outer poly bag, which is sealed with a twist tie.

Champaign-Urbana, IL: American Oil Chemists’ Society. vii + 401 p. See p. 12-29. Chap. 2. Proceedings of the Short Course on Food Uses of Whole Oil and Protein Seeds held at Makaha, Hawaii, May 11-14, 1986. [35 ref]

• **Summary:** Contents: Introduction: Introduction. Oriental nonfermented products: Yuba, kinako Thai desserts (tofu guan, med khaon), Thai foods (protein crisp, cooked baby food, canned evaporated soybean milk, taow-huey, kanom ping kaset). Fermented foods: Natto, hama-natto, tao tjo (a miso-type product made in Indonesia and Thailand), ontjom (made from peanuts, coconut press cake, or okara), kochu chang, ketjap, sufu, yogurt-type products, tauco, soy sauce, miso, tempeh. Western world type products. Full fat soy flour (enzyme active, heat treated). Soybean hulls. Whole soybeans in animal feed. Chapatty [chapati]. Full fat soy grits. Heat treatment of soybeans. Heat treatment and texturizing. Low-fat products. Snacks (soynuts—dry roasted or oil roasted, plain or seasoned). Soybean sprouts. Soy butter [soynut butter]. Combinations of soybeans and cereals.

Soybeans as vegetables (mao-tou, edamame, or fresh green soybean). Defatted products. Nutrition. Soybean handling and equipment considerations. Solvent plant considerations. Address: Food Ingredients (Minnesota) Inc., 2121 Toledo Ave. North, Golden Valley, Minnesota 55422.

2394. Lusas, Edmund W.; Erickson, D.R.; Nip, Wai-Kit. eds. 1989. Food uses of whole oil and protein seeds. Champaign-Urbana, Illinois: American Oil Chemists' Society. v + 401 p. Proceedings of the Short Course on Food Uses of Whole Oil and Protein Seeds held at Makaha, Hawaii, May 11-14, 1986. No index. 24 cm. [300+ ref]

• **Summary:** Of the 24 chapters, the first 10 are entirely about soybeans and soyfoods, and 5 of the remaining 14 chapters are partly about soya. Many individual chapters are cited separately. Address: 1. Protein R&D Center, Texas Engineering Experiment Station, The Texas A&M.

2395. Winarno, F.G. 1989. Production and uses of soybean tempeh. In: E.W. Lusas, D.R. Erickson, and Wai-Kit Nip, eds. 1989. Food Uses of Whole Oil and Protein Seeds. Champaign-Urbana, IL: American Oil Chemists' Society. vii + 401 p. See p. 102-17. Chap. 7. Proceedings of the Short Course on Food Uses of Whole Oil and Protein Seeds held at Makaha, Hawaii, May 11-14, 1986. [35 ref]

• **Summary:** Contents: Introduction and early history. Methods of preparation: Active microorganisms, tempeh starter, tempeh making/production. Material balances, losses, and yield. Shelf life of tempeh and tempeh products. Conclusions. Address: Food Technology Development Center, Bogor Agricultural Univ., P.O. Box 61, Indonesia.

2396. Marrese, Anthony. 1989. Re: Soyfoods in France. Letter to William Shurtleff at Soyfoods Center, Oct. 28. 2 p. Handwritten. [Eng]

• **Summary:** The author conducted a soyfoods market study in France for William Shurtleff of Soyfoods Center, sending out forms which were filled out by 12 companies, visiting or interviewing 9 companies, and visiting 5 companies at the Diet Expo '89 held 21-23 Oct. 1989 in Paris. It seems like there are 4 types of companies working with soya in France:

1. Independents, both large and small, mainly in primary soymilk, tofu, or tempeh production, or in second generation burgers, smoked products, or desserts production, with either organic (biological) or non-organically grown products. Examples: Le Ferme du Jas, Innoval/Sojalpe, Société Soy, Le Bol en Bois/Tama/Daizou, La Maison du Tofu, Les 7 Marches, Boulangerie Artisanale des Maures, Odile Corbel & Dan Ludington [named Gaia Enterprises by Feb. 1992], Communauté de la Lix (United Macrobiotic Company), Tofu Kuehn.

2. Non-Independents owned by large companies or agricultural co-ops: Gerblé, Bonnetterre/Triballat, Sojadoc, Cacoja (C.A.C.), Renaitre.

3. Bean or cereal (agricultural) companies: Celnat.

4. Specialty manufacturers for the Asian-European (Japanese, Chinese, Korean, etc.) markets: Yamato.

"I had some very good talks with Bernard Storup of Société Soy, the Bol en Bois people, Celnat, Bonnetterre, Gerblé and others. In general the market and usage seem to be going nowhere but up and it is still in the very early stages of 'real consumer' type foods, not just health store specialties. Some French soybeans are used but a lot are imported... Real quantity information is not available since it is changing so fast (mainly in an upward direction and mostly with secondary processed products which use tofu or soya in them)." Address: c/o Terre Nouvelle, Eourres, 26560 Séderon, France. Phone: 92.65.10.95.

2397. Kuo, J.C.; Wang, S.Y.; Peng, A.C.; Ockerman, H.W. 1989. Effect of tempeh on properties of hams. *J. of Food Science* 54(5):1186-89, 1233. Sept/Oct. [26 ref]

• **Summary:** Hams made with meat plus 2% or 3.5% tempeh were not as acceptable as hams made without tempeh; they also had a lower moisture and cooking yield. and TBA values were slightly lower than the all-meat ham after 30 days. Address: 1-2. Dep. of Food Science, Tunghai Univ., Taichung, Taiwan; 3. Dep. of Horticulture; 4. Dep. of Animal Science. Last 2: The Ohio State Univ., 2001 Fyffe Court, Columbus, Ohio 43210.

2398. **Product Name:** Lightlife American Grill (Vegetarian Tempeh Burger).

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302. Phone: 413-774-6001.

**Date of Introduction:** 1989. October.

**New Product-Documentation:** This product is similar to their original tempeh burger, but it has been renamed and the ingredients changed slightly.

Talk with Michael Cohen. 1991. Sept. 17. This tempeh burger has a regular hamburger-like flavor. It is marinated.

2399. Lima N.V. 1989. Lima: Tarif détaillant [Lima Foods catalog and price list]. Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium. 9 p. [Fre]

• **Summary:** This macrobiotic food catalog was bound into the back of the Bonnetterre catalog at a 1989 food expo in Paris. Lima sells the following soyfoods, each proceeded by its product category: Fresh products: Skewered seitan/tofu, Presto natural tofu, Presto tofu legumes/vegetables, Presto tofu cheese. Legumes: Yellow soybeans. Sprouts: Green soy/mung (500 gm or 5 kg). Flours: Roasted soy flour. Vegetarian preparations: Lima soy sauce (500 ml or 1 liter), tofu, natural tempeh, tempeh with shoyu. Dressings: Salad dressing with soy and tomato, Salad dressing with soya herb. Specialties: Organic miso (1 month), Hatcho miso, Barley miso (organic or regular), Rice miso (organic or regular), Heiwa brand

Instant miso soup (regular or red, From Japan), Tamari (250 ml, 1 liter, 18 liters), Mansan Tamari from Japan, Shoyu (250 ml, 1 liter, 18 liters), Sakai shoyu from Japan. They also carry one book titled “Tofu dans le Cuisine Macrobiotique” (Eddie Hara, 1982).

Accompanying the catalog is a packet of individual full-color sheets with of photos of products in a folder titled Lima: Quality is our passion.” There are sheets titled “Vegetable products rich in protein,” “Tamari and shoyu,” “Japanese specialties (incl. Heiwa brand shoyu and tamari),” and a brochure titled “Lima: 30 years as a producer of organically grown (biological) foods.” It describes the life and work of Edgar Gevaert (poet, artist-painter, ecologist, and a leader of the European peace movement). Address: Sint-Martens-Latem, Belgium.

2400. Demos, Steve. 1989. White Wave’s strategy for marketing soyfoods in America as cholesterol-free protein foods (Interview). *SoyaScan Notes*. Nov. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** “White Wave welcomes the movement of tofu, a potentially hazardous food, out of the produce case. I think were are positioned and prepared as well as we possibly could be for this kind of change. This is what we’ve been waiting for! Years ago, White Wave designed its boxed, vacuum-packed tofu with a 60 day shelf life to sell in the dairy case. The disruption of an existing habit pattern opens up to opportunities for innovative companies.” Demos does not see, even in the short term, any major loss of sales. At least 2/3 of White Wave’s tofu is already out of the produce case and into either the dairy case or temperature controlled cases. He feels the best place to sell tofu is next to yogurt, ideally between yogurt and the deli meats in the dairy/deli case. White Wave conceives of itself as selling a new category of foods, “cholesterol free protein foods.” This category should be well defined unto itself. Eventually Demos would like to see this heart/smart concept evolve into the “soyfoods section.” Since signs identifying sections are generally not allowed in supermarket cases, the section/category might be partitioned off with plastic dividers at each end, like the Pillsbury Doughboy category. King Soopers has already pioneered this idea, starting in about 1983, putting tofu between the yogurt and the milk (with no plastic dividers), on the basis of the demographics, then building the concept by adding other soyfoods and soymilk. But tempeh, a slow mover, is now in the frozen foods case, and the meatlike products (such as hot dogs) are next to Armour in the deli meats.

Safeway seems to have made a top level decision to aggressively promote soyfoods. This year they called White Wave and said, “We don’t know what you make, but give us everything. Then in August, in their two largest new classy “Safeway Marketplaces” in Boulder (and maybe in a few newer or college-oriented stores in Denver), entirely on

their own initiative, they installed temperature controlled end-aisle cases at the end of the produce section facing the cash registers. The location is very prominent—an impulse location. Each case has the word “Tofu” in large letters on it. Many different types of soyfoods (and nothing but soyfoods) are sold in these cases—tofu, tofu dressings, tofu hot dogs, soy cheeses, Stir Fruity (soy-based yogurt), etc. All White Wave soyfood products in these 2 stores are sold in the Tofu case. Demos feels that “Tofu” this is the best title for the case. Also the “Approved by Healthmark” with the Healthmark logo on each display case identifies these as healthy foods. Only foods that are low in cholesterol, fat, and sodium get the Healthmark. Each case, constructed like an open dairy case, 5 feet wide by 6 feet high, has a temperature range of about 35-40°. Demos would definitely prefer to have his products sold in these cases rather than any other location in the store. White Wave’s main strategy is to “identify a category,” and to group foods in that category together. Again, the current category definition is cholesterol-free protein foods, but the long term goal is to have the category defined as “soyfoods.” It is too early to say how the new isolated cases are affecting sales, but preliminary signs all look very positive.

White Wave started pasteurizing its tofu in Dec. 1988. Since then they have not had a single complaint of spoilage or sourness. Pasteurization does effect the tofu texture, making it firmer, but it also makes tofu much more profitable. White Wave makes both a 16 ounce vacuum packed and a 10-ounce single serve water-pack tofu. He prefers the vacuum pack and has worked the bugs out of his Tiromat so that it is no longer a significant source of problems. Tree of Life on the East Coast sells un-boxed vacuum-packed White Wave tofu very successfully, but Demos strongly prefers to box it. He has a whole new tofu plant at his new facility with automatic cooking and curdling, conveyORIZED press tables and pasteurization.

Concerning the competition: Demos compliments Morinaga on a brilliant strategy. The net result is to help in the Americanization of tofu by identifying it clearly as a protein food and therefore forcing it out of the produce case. The irony is that when the dust settles, Mori-Nu Tofu may be the only brand left in what becomes an outdated, foreign location—with the oriental vegetables instead of with the protein foods. Azumaya and Hinode are rooted in the produce distribution network. Getting kicked out of the produce section will be very hard on them and their reaction will probably be to fight it rather than use it to their advantage. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3485.

2401. **Product Name:** [Deep-fried Tempeh Coins].

**Foreign Name:** Tempeh Taler.

**Manufacturer’s Name:** Life Food GmbH.

**Manufacturer’s Address:** Robert-Bunsen-Strasse 6,

D-7800 Freiburg, West Germany. Phone: 0761/50 61 55.

**Date of Introduction:** 1989. November.

**New Product–Documentation:** Talk with Klaus Kempff. 1990. May 9. The tempeh is made in sausage skins. The resulting tempeh sausages are sliced into rounds, cold marinated, then deep-fried, and sold 2 pieces at a time. It was first developed in May 1989, but really launched in Nov. 1989, with a brochure. The product is delicious, and has become the company's best-selling tempeh product.

2402. McCarty, Meredith. 1989. Fresh from a vegetarian kitchen. Turning Point Publications, 1122 M Street, Eureka, CA 95501-2442. ii + 263 p. Illust. by Bernice Kagan. Index. 28 cm.

• **Summary:** A macrobiotic cookbook containing over 450 recipes, many using tofu (at least 20, including many innovative sauces and dressings), tempeh, miso, amazake, soy sauce, soymilk, and amazake. A section titled "Soyfoods: Tofu and tempeh" (p. 151-55) contains 6 recipes and several variations. On page 202 is a recipe titled "Amazake-Soymilk" in which 3/4 cup soymilk is mixed with 1/4 cup plain amazake. The author has co-directed this natural health center in northern California since 1977. Address: Eureka, California.

2403. **Product Name:** [Tempeh with Tomato].

**Foreign Name:** Tempé à la Tomate.

**Manufacturer's Name:** Société Soy.

**Manufacturer's Address:** 1 rue du Crêt de la Perdrix, 42400 Saint-Chamond, France. Phone: 77.31.24.42.

**Date of Introduction:** 1989. November.

**Ingredients:** Tempeh 90% (water, soybeans\*), selected cultures (ferments), sunflowerseed oil, tomato sauce (5%; tomatoes\*, onions\*, carrots\*, soy sauce, spices and aromatics). \* = Organically grown.

**Wt/Vol., Packaging, Price:** 180 gm.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm.: Protein 18.1 gm, fats (lipids) 10.7 gm, carbohydrates (glucides) 6.4 gm, calories (Kcal) 194 (812 kJoules).

**New Product–Documentation:** Form filled out for Anthony Marrese by Bernard Storup. 1989. Nov. The product will be launched in Nov. 1989.

Label sent by Bernard Storup. 1990. Dec. 26. 3 by 5.5 inches. Red, green, yellow, purple, and brown or white. Illustration of palm trees in front of purple mountains. "A world of equilibrium. Biona certification symbol. Nature et Progres organic certification symbol. Dehulled soya is cooked and inoculated with a mold (champignon; *Rhizopus oligosporus*). From this fermentation is born tempeh, with such a savory flavor. Reheat in a saucepan (casserole) over low heat, stirring (remuant) from time to time."

2404. Krieger, Verena. 1989. Soja als Nahrungsmittel:

genutzt oder missbraucht? [Soya as a food: Used or misused?]. *Zum Beispiel (Switzerland)* No. 12. p. 15-17. Dec. 21. [Ger]

• **Summary:** Soybeans can be fermented to make miso, soy sauce, tempeh, or natto. Or the protein can be extracted in traditional ways to make soymilk, tofu, or yuba. One can also make soy sprouts. In the Western world, soybeans are mostly misused to make high-protein meal for livestock fodder, and vegetable oil. Address: Lucerne, Switzerland.

2405. Kuntjoro, Sri Utami; Kusnadi, N.; Sayogyo, -. 1989. Demand for corn, cassava and soybean in human consumption: A case study in Java, Indonesia. *CGPRT Working Paper* No. 2. xvii + 116 p. Dec. 25 cm. [19 ref]

• **Summary:** Contains much original, detailed information and statistics on consumption, demand, and demand elasticity for secondary food crops (*palawija*) in Indonesia. The main secondary food crops are soybeans (including the soybean products *tahu* {tofu}, *tempe* {tempeh}, *kecap* {soysauce}, and *tauco* {Indonesian-style miso}), corn, cassava, and peanuts. "Pulses, soybean in particular, represent (after cereals) the most important source of vegetable protein for the people of Indonesia. On the whole, soybeans are consumed in the form of tahu (bean curd), tempe (fermented soybean) and kecap (soysauce). Among low-income households, tahu and tempe, which are relatively cheap in price, are (after cereals) a major source of vegetable protein. According to Sayogyo (1985), tempe is also popular among people in the high income groups.

The National Socio-Economic Survey (Susenas), conducted by the Central Bureau of Statistics, collects socio-economic data from a large number of households throughout Indonesia. The use of chemical fertilizer on soybeans has increased from 5.19 kg/ha in 1973 to 80.39 kg/ha in 1982. Per capita consumption of soybeans has risen from 3.28 kg/year in 1968 to 4.45 kg/year in 1983. In the peak year, 1979, it was 5.33 kg/year.

Table 4.2 shows protein consumption from secondary food crops in 5 Javanese provinces in 1981. The amount of protein contributed daily per capita to the Indonesian diet by soyfoods (in the forms of tempeh, tofu, soybeans, soy sauce [kecap], and miso [tauco]) is greatest in Yogyakarta (22.57 gm; 61.1% of total protein consumption), followed by Central Java (14.57 gm; 37.4% of total), Greater Jakarta (13.78 gm; 33.3% of total), East Java (12.96 gm; 32.8% of total), and West Java (6.44 gm; 14.9% of total). As people's income rises, they tend to consume more soyfoods. Soyfoods provide Tempeh makes the greatest contribution to protein intake in every province, followed by tofu, soybeans, soy sauce (kecap), and tauco (Indonesian miso). Tempeh makes the greatest contribution in Yogyakarta, where it provides 17.86 gm/capita/day of protein, or 60% of the protein supplied by secondary crops, and more than any other single source. The amount of daily protein per capita contributed

by tempeh is next most important in Central Java (11.48 gm/day), followed by East Java (9.28), Greater Jakarta (8.98), and West Java (4.16). Tofu makes its greatest protein contribution in Greater Jakarta (4.54 gm/day), followed by Yogyakarta (3.57), East Java (3.49), Central Java (2.80), and West Java (1.99). Address: Agricultural economists, Bogor Univ. of Agriculture.

2406. Altemeier, Klaus; Bottema, J.W.T.; Adinugroho, B.; Daris, N. 1989. Quality and price determinants of secondary crops in Indonesia. *CGPRT Working Paper* No. 1. 57 p. \*  
**• Summary:** This paper reports on extensive research conducted in East and West Java covering grain quality and implicit prices of maize, soybean and groundnut. Government quality standards are compared to traders practices and the quality checks run by animal feed and Tahu and Tempe industries. It is concluded that domestic quality of maize, soybean and groundnut falls below quality of imported grains. Floor prices are indicated to be of theoretical value only, because domestic prices never move below floor prices. It is suggested a policy on nutritional standards be considered, which could have a beneficial effect for all participants in the market system.

2407. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Atlantis Tofurei.

**Manufacturer's Address:** Insterburgerstr. 7, D-6454 Bruchkoebel, near Frankfurt, West Germany. Phone: 06181/71438.

**Date of Introduction:** 1989.

**New Product–Documentation:** Bernd Drosihn. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38.

2408. **Product Name:** [Tempeh Chips].

**Foreign Name:** Tempehchips.

**Manufacturer's Name:** Byodo Naturkost GmbH.

**Manufacturer's Address:** Hirschbergstr. 9, D-8000 Munich 19, West Germany. Phone: (089) 16 85 70.

**Date of Introduction:** 1989.

**New Product–Documentation:** Bernd Drosihn. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38. Says the company makes fresh tempeh from whole soybeans, tempeh burgers, and tempeh chips. A source of tempeh starter.

 Address: The Technical Univ. of Denmark, DK-2800 Lyngby.

2410. **Product Name:** [Tempeh, and Okara Tempeh].

**Foreign Name:** Tempeh, Okara Tempeh.

**Manufacturer's Name:** Ferme de Jas.

**Manufacturer's Address:** Eourres, 26560 Séderon, France. Phone: 92.65.10.95.

**Date of Introduction:** 1989.

**New Product–Documentation:** Letter from Anthony Marrese. 1989. May and June 7. The company presently makes 50 kg/week of tofu. They plan to introduce okara tempeh and soy tempeh in 1989. Marrese will be actively involved with the tempeh.

Letter from Michel Claude and Joël Pichon in response to questions from William Shurtleff of Soyfoods Center. 1996. July 4. "Our production of Tempeh and Okara Tempeh (same names in French) was on a small scale and limited in time; it stopped with the departure of Anthony Marrese."

2411. Grzeskowiak, B.; Berghofer, Emmerich. 1989.

Production of a stable, fried snack food containing tempeh. In: Book of Abstracts, International Conference on Biotechnology and Food. Stuttgart, Germany: Hohenheim University. Held 20-24 Feb. 1989 at Stuttgart, Germany. Poster session 4. \*

Address: Inst. fuer Lebensmitteltechnologie der Universitaet fuer Bodenkunde.

2412. **Product Name:** Tempeh.

**Manufacturer's Name:** Haiku Foods.

**Manufacturer's Address:** 1, Sydenham Rd., Cotham, Bristol.

**Date of Introduction:** 1989.

**Ingredients:** Soya beans, brown rice, Rhizopus oligosporus culture, cider vinegar.

**Wt/Vol., Packaging, Price:** 8 oz (227 gm).

**How Stored:** Frozen.

**New Product–Documentation:** Label. 1990. Received from David Greenslade. 4.5 inches square. Black on tan paper. Illustration of a house and trees by a stream. "100% organic." Talk with British Consulate in San Francisco. 1990. Feb. 9. Can't find this company. Call international operator. The area code is 272. Not listed anywhere in the British Isles.

2413. **Product Name:** Tofu, Soy Milk, Tempeh, Soy Ice Cream, Soy Punch.

**Manufacturer's Name:** Natural Cafe. Expanded to include La Soyarie by June 1994.

**Manufacturer's Address:** Mailing address: 73 Chaussee Rd., Castries, St. Lucia, West Indies. Plant: Union Hilltop Choc, Castries. Phone: 809-452-6421.

**Date of Introduction:** 1989.

**New Product–Documentation:** Plenty International. 1994. Jan. A Guide to Growing and Using Soybeans for Food. p.

30. This company makes fresh soyfoods.

Form filled out by Johnson Clarke, Manager. 1994. May 25. The plant is now located at Union Hilltop Choc, Castries, and the phone number is 809-450-2570. The company was founded in 1989. The founders were Johnson Clarke, Maya Clarke, and Ignatius Longville. The original purpose was to work as a group to produce high-quality foods at an affordable price and to educate the populace about soybeans. There have been no changes in the company address or ownership. Milestones: (1) When Johnson built a proper structure of concrete for processing; and (2) When CIDA (Canadian International Development Agency) gave the group a grant to purchase some equipment in 1991. Reasons for success: "I am the only person on the island that is processing [soybeans] on a commercial scale, and I take pride and joy in what I'm doing." The company makes tofu, soy milk, and tempeh, and it buys and markets Vitasoy soymilk, miso, soy oil, Mori-Nu tofu, and soy powder. They make about 100 lb/week of tofu, and they use about 7 gallons of soy milk to make soy ice cream and soy punch. The company's three best-selling products (in descending order of dollar value) are tofu, soy punch, and soy ice cream. The company now employs 6 people. Their factory is 14 x 30 feet. Offices are in a separate building. Net sales last year were "not much" and the net worth of the business is "not much." "We are a small group of six and just making ends meet. We still have a long way to go in making the population of St. Lucia realize the true potential of soybeans. I don't know if we can continue since we are poorly equipped for processing the beans and packaging the products to sell at supermarkets and shops. We are presently selling only at one small outlet we own. We could sell at hotels, supermarkets, and shops if we had proper packaging equipment such as a vacuum packer." Note: This is the earliest known commercial soy product made in St. Lucia.

2414. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Renaitre.

**Manufacturer's Address:** 860 Ave d'Ardus, 82000 Montauban, France. Phone: 63.03.49.45.

**Date of Introduction:** 1989.

**New Product–Documentation:** Order from Mr. Petitel of Association Renaitre, La Longagne Valprioude, 46800 Montcuq, France. 1988. June 15.

Letter from Renaitre, 860 Ave. d'Ardus, 82000 Montauban, France. Phone: 63.03.49.45.

Letter from Jean-Luc Alonso of Gaia in Graulhet, France. 1994. May 16. "In 1989, a new attempt [at producing tempeh] was made by the firm named Renaitre (meaning "to be reborn") close to Cahors. Another failure. One year later the business closed its doors."

2415. **Product Name:** [Tofu, Tempeh].

**Manufacturer's Name:** SoyaLab.

**Manufacturer's Address:** Zagreb, Croatia.

**Date of Introduction:** 1989.

**New Product–Documentation:** Talk with Zlatko Pejic of BioVega in Zagreb, Croatia. 1998. March 17. This company, which was started by Nad Miljenko (pronounced Nadj Milyenko), makes tofu and tempeh.

2416. **Product Name:** [Tempeh Burger].

**Foreign Name:** Tempehburger.

**Manufacturer's Name:** Tofumanufaktur Christian Nagel GmbH.

**Manufacturer's Address:** Osdorfer Landstrasse 4, D-2000 Hamburg 52, West Germany. Phone: 040/89 49 37.

**Date of Introduction:** 1989.

**New Product–Documentation:** Bernd Drosihn. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38. Says the company, "Tofumanufaktur Christian Nagel," makes fresh tempeh and tempeh burgers.

2417. **Product Name:** [Viana Tempeh Burger].

**Foreign Name:** Viana Tempehburger.

**Manufacturer's Name:** Viana Naturkost GmbH.

**Manufacturer's Address:** Neusserstr. 199, D-5000 Cologne 60, West Germany. Phone: (02233) 41323.

**Date of Introduction:** 1989.

**New Product–Documentation:** Bernd Drosihn. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38. Says the company makes Tempehburger.

Talk with Bernd Drosihn, founder of Viana. 1990. April 7. He started to make tempeh in about Aug. 1989 after leaving Soyastern. He makes 3 types of tempeh, 2 tempeh burgers, and 2 tempeh spreads (introduced in 1990). The burgers and spreads are selling well.

2418. **Product Name:** [Viana Tempeh Spreads (Regular, or Chutney)].

**Foreign Name:** Viana Tempeh Pastete, Tempeh Chutney.

**Manufacturer's Name:** Viana Naturkost GmbH.

**Manufacturer's Address:** Neusserstr. 199, D-5000 Cologne 60, West Germany. Phone: (02233) 41323.

**Date of Introduction:** 1989.

**Ingredients:** Chutney: Tempeh\*, apple-pear puree\*, rolled oats\*, shoyu\*, spices, sea salt. \* = Organically grown.

**Wt/Vol., Packaging, Price:** 200 gm.

**New Product–Documentation:** Bernd Drosihn. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. p. 38. Says the company makes Tempehaufstriche (Tempeh Spreads).

Talk with Bernd Drosihn, founder of Viana. 1990. April 7. He started to make tempeh in about Aug. 1989 after leaving Soyastern. He makes 3 types of tempeh, 2 tempeh

burgers, and 2 tempeh spreads (introduced in 1990). The burgers and spreads are selling well.

Label sent by Bernd Drosihn. 1990. April 8. The company address is now Schmittenstr. 106, D-5030 Huerth 6, West Germany. "4.75 by 1.5 inches. Self adhesive. Reddish-purple, black, gold or orange, and light purple. A fruity, sharp spread for bread." Ingredients for the pastete are: Organic tempeh, onions, shoyu, herbs, spices, and sea salt. "A spicy spread for bread."

2419. Acuff, Steve. 1989. Das makrobiotische Gesundheitsbuch [The macrobiotic health book. 2nd ed.]. Munich, West Germany: Goldmann Verlag. 256 p. Recipes by Karen Acuff. [Ger]

• **Summary:** This book of macrobiotic philosophy and cookery contains 5 tempeh recipes, and also mentions miso, tofu and tamari. Flora Yap (4/92) notes that the author travels from town to town, lecturing and selling his book. Certain groups are inviting him to speak, renting a place for him to lecture and doing the publicity (paid admission). Address: Idaho, USA.

2420. Cituk, Kathy; Finnegan, John. 1989. Natural foods and good cooking. Elysian Arts, 20 Sunnyside Ave. Suite A161, Mill Valley, CA 94941. 122 p. No index. 22 cm. [64 ref]

• **Summary:** This non-vegetarian cookbook contains considerable introductory information about and recipes using amazake (p. 16, 41, 56, 91, 98-99, 103), miso (p. 43), soymilk (p. 43), mochi (p. 44, 54), tamari soy sauce (p. 46), tofu (p. 46, 51, 80, 88, 96), tempeh (p. 46). Numerous references are made to a book by John Finnegan (1989) titled "Amazake Rice Nectar." Address: Mill Valley, California.

2421. Drosihn, Bernd. 1989. Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft [Tempeh: A traditional food with a future]. Viana Naturkost GmbH, Neusserstr. 199, D-5000 Cologne 60, West Germany. 38 p. No index. 21 cm. Spiral bound. [Ger]

• **Summary:** Contents: Introduction. 1. Tempeh: The soybean, production of tempeh, the nutritional value of tempeh, advantages and qualities (easily digestible), rich in protein, a whole food, free of cholesterol, helps in reducing cholesterol, rich in vitamins and minerals.

2. Tempeh recipes, incl. how to make tempeh at home, soups, salads, main courses, glossary. Appendixes: 1. Addresses of 4 tempeh producers in West Germany (Atlantis, Byodo Naturkost GmbH, Tofumanufaktur Christian Nagel, Viana Naturkost GmbH). 2. Tempeh importers and wholesalers (Arche Naturkost, Biogarten).

A color photo of deep-fried tempeh chips graces the cover of this attractive booklet. Address: Cologne, West Germany. Phone: 0221/733437.

2422. Echols, John M.; Shadily, Hassan. 1989. An

Indonesian-English dictionary. Third ed. Ithaca, New York, and London: Cornell University Press. xix + 618 p. 24 cm. [Ind; Eng]

• **Summary:** Soy-related words include: (1) bijan (sesame; also wijen or bijen). (2) bungkil kedelai (soybean meal). (3) kacang (pea, bean, peanut), including kacang asin (salted peanuts), kacang atom or kacang ganéfo (peanuts fried in batter), kacang goréng (peanuts fried crisp), kacang hijau or kacang ijo (mung bean), kacang kedelai (soybean), kacang tanah (peanut). (4) kécap (soy sauce; kecap ayam {chicken prepared with soy sauce}). Note: kecap manis is not mentioned here or at "manis." (5) kecipir (four-sided bean eaten as a vegetable [winged bean; *Psophocarpus tetragonolobus*]). (6) kedelai, kedelé (soybean). (7) oncom (fermented cake made from soybean sediment). (8) ragi (yeast, fermentation agent). (9) tahu (tofu, soybean curd), including tahu goréng (fried tofu), tahu isi (tofu filled with meat), tahu kuning (firm yellow tofu), tahu pong (deep-fried puffy tofu), tahu témpé (tofu and tempeh).

(10) tahua (a by-product of tofu similar to yogurt in consistency). (11) takoa, takoah (see takua). (12) takua (firm spiced tofu). (13) taosi (see tauci [soy nuggets]). (14) tapai, tapé (sweet cake made of slightly fermented rice or tubers). (15) tauci, tauco, taucyo (fermented bean paste [like miso] used as a condiment).

Note: This is the earliest (and only) English-language document seen (Feb. 2009) that uses the word "taucyo" to refer to Indonesian-style miso. "Taoci" probably refers to soy nuggets, not to miso.

(16) taugé (bean sprouts). (17) témpé (fermented soybean cake, tempeh; something trivial and unimportant or low grade in quality; *Dlm jaman penjajahan org Indo témpé pribumi* = "During the colonial times the Eurasians considered the natives to be no better than tempeh"). Address: 1. Ithaca, New York; 2. Jakarta, Indonesia.

2423. Fukushima, Danji. 1989. Historical development of soy sauce and soy nuggets in China (Document part). In: K. Steinkraus, ed. 1989. Industrialization of Indigenous Fermented Foods. New York and Basel: Marcel Dekker, Inc. xii + 439 p. See p. 2-8.

• **Summary:** "1. Chiang. In 1979, Kinichiro Sakaguchi proposed a unique hypothesis regarding the origin of soy sauce and miso as a result of historical biochemical investigations, and this hypothesis was later introduced by this author in English (Fukushima, 1985a, 1986b). However, new literature on the origin of soy sauce and miso appeared based on more detailed historical evidence (Pao 1982a, 1982b; 1984a, 1984b). According to these papers, soy sauce was derived from a Chinese food called 'chiang' ('hishio' in Japanese).

"Chiang is a tasty mash product and does not come in a liquid form. Therefore chiang belongs in the category of 'miso' in Japan. The first record of chiang can be found in

the book entitled *Chou-li* (*Shurai* in Japanese) by Chou-kung (*Shuko* in Japanese), which was published around 1,000 B.C. in the Chou (*Shu* in Japanese) dynasty (1,222 BC to 249 BC). This book covers the matters on the early years of the Chou dynasty in ancient China (about 3,000 years ago). According to this document, *chiang* was made by the following procedure. First, yellow aspergilli were grown on millet. (Such mold-grown cereals are called 'koji' in Japanese.) Then the millet koji and the meat of fish, flesh, or fowl and salt were mixed with a good liquor in a bottle and kept for 100 days. Soybeans were not used in this *chiang*. The first literature in which soybeans appeared as a substitute for meat in *chiang* was the *Ch'i-min Yao-shu* (*Saimin-Yojutsu* in Japanese) by Chia Ssu-hsieh (Ka Shikyo in Japanese), the world's oldest encyclopedia of agriculture, published in 535 AD in China. This indicates that the *chiang* in which soybeans was used originated sometime between the Chou and Han dynasties, when the cultivation of soybeans prevailed. The meats in the *chiang* described in *Chou-li* were gradually replaced by soybeans in the course of time and further cereals such as wheat, barley, and rice came to be used instead of millet, resulting in the production of many types of *chiang*. In the process of making *chiang* during these periods, soybeans were not used as a raw material in koji; rather they were added to the harvested koji prepared from the other cereals. The soybeans were digested by the enzymes of the koji. This digestion mixture was the final product, which was in the form of a mash. The liquid products which belong to the category of soy sauce did not appear in the literature before the later Han dynasty (about 25-220 A.D.).

"There is a description of the liquid product which was made by separating the liquid portion from the *chiang* in *Ssu-ming Yueh-ling* (*Shimin-Getsurei* in Japanese), published by Ts'ui Shih (Sai Shoku in Japanese) in the later Han dynasty. This liquid was called *chiang ch'ing* which means 'clear *chiang*.' The manufacturing processes of *chiang* and *chiang ch'ing* are shown in Figs. 1 and 2. *Chiang ch'ing* is a prototype of soy sauce but it differs from '*chiang-yu*' which means literally *shoyu* or soy sauce in the Chinese characters. The first appearance of the name of *chiang-yu* was in *Shan-chia Ch'ing-kung* (*Sanya-Seikyo* in Japanese) by Lin Hung (Rin Ko in Japanese) in the Sung dynasty (960-1127 AD).

"The first record indicating use of all the raw materials to prepare koji for soybean *chiang* appeared in the *Nung-sung I-shin Ts'o-yao* (*Noso-Ishoku-Satsuyo* in Japanese) by Lu Ming-Shan (Ro Meizen in Japanese), published in the Yuan (Gen in Japanese) dynasty (1271-1368 AD). The flow sheet of this soybean *chiang* is shown in Fig. 3." (In this process, soybeans are roasted, dehulled, cooked, then mixed with wheat flour and spontaneously molded to form koji. The koji is dried in the shade, winnowed, and pounded, then mixed with spices and salt water to form a mash, which is insulated and aged to make the soybean *chiang*.) The *chiang-*

*yu* described in *Pen-ts'ao Kang-mu* (*Honso-Komoku* in Japanese), published in 1590 by Li Shih-chen (Ri Jichin in Japanese) in the Ming (Min in Japanese) dynasty, was also made with koji manufactured by using soybeans and cereals (Fig. 4). (In this process soybeans were cooked in water, mixed with wheat, and spontaneously molded to form koji. Salt water was mixed in with a paddle, then the mash was insulated and aged. Finally it was filtered to make *chiang-yu*.) The ratio of soybeans to wheat in the koji making was 3:2. This ratio is very close to that used in making regular Japanese *shoyu*, which is made by using equal amounts of soybeans and wheat, as will be described later. The general manufacturing methods of soy sauce in the Ch'ing (Shin in Japanese) dynasty are recorded in *Ch'ing-yuan Lu* (*Seienroku* in Japanese), written by Li Hua-nan (Ri Kanan in Japanese). Cooked soybeans and uncooked wheat were the raw materials used in koji making. The resultant koji was mixed with brine. After aging, the soy sauce was collected by pressing a deep bamboo colander into the aged mash and ladling out the liquid which had accumulated.

"The original *chiang* was a mash-type product made with a koji that had been prepared from wheat, barley, rice, etc., and not from soybeans. Therefore, the soybean constituents were only changed through the in vitro biochemical reaction by the enzymes from the mold grown on the cereals. Accordingly, the degree of change of the soybean constituents was not very great and most of the soybean proteins were partially hydrolyzed into polypeptides through the in vitro enzyme action. The degree of liquefaction was not very large and the flavor was not as strong. In the case of *chiang-yu*, however, mold is grown on both the soybeans and cereals and, as a result, the soybean constituents are changed largely through the biochemical reaction both in vivo and in vitro by the mold throughout the entire process of manufacturing. Accordingly, much of the soybean constituents can be liquefied. The soybean proteins are hydrolyzed to single amino acids and, therefore, the flavor is sharp and strong in *chiang-yu*. Thus, it can be concluded that (a) the progenitor of *miso* is *chiang*, originated in China about 3,000 years ago; (b) the progenitor of soy sauce is *chiang ch'ing*, originated in China about 2,000 years ago; (c) *chiang ch'ing* had developed into *chiang-yu* in China and the regular type of *shoyu* called *koikuchi* in Japan at least 1,000 years ago.

"It is an amazing fact that the Chinese had utilized the enzyme action of mold in food manufacturing as early as 3,000 years ago. They deliberately selected yellow aspergilli from many types of aspergilli because they best facilitated the manufacture of *chiang*. If the definition of 'biotechnology' is to make the products necessary for the welfare of humans by using life phenomena, it can be said that people in ancient China had already produced foods by biotechnology as early as several thousand years ago. In this sense, it is not an exaggeration to say that soy sauce was a

pioneer of the actual application of biotechnology.

“2. Shih. Shih is a fermentation product of soybeans, the form of which is a tasty nugget with or without salt. Shih is classified into five types by the kind of microorganism used in its manufacture. Those are *Aspergillus* type (called shih in the areas of Pei-ching, Hu-nan sheng, and Taiwan; and called hamanatto in Japan), *Mucor* type (shih in the area of Shan-tung sheng and natto in Japan), *Rhizopus* type (tempeh in Indonesia), *Bacillus* type (shih in the area of Shan-tung sheng and natto in Japan), and *Neurospora* type (oncom in Indonesia). The shih described here is the shih of *Aspergillus* type, which relates to soy sauce.

“The earliest literature in which shih appeared is *Shih-chi* (*Shiki* in Japanese) by Ssu-ma Ch’ien (Shiba Sen in Japanese), which was published in 85 BC. Shih is also described along with chiang in *Shuo-wen Chieh-tzu* (*Setsubun-kaiji* in Japanese) by Hsu Shen (Kyoshin in Japanese), the oldest dictionary in China published in 121 AD in the later Han dynasty. The raw material of the shih is soybeans as shown in Fig. 5. (In the process described in the *Shi-ching* by Hsie Feng (which survives only in the *Ch’i-min yao shu*), soybeans are washed, soaked, drained, and steamed. The cooked soybeans are cooled, then spread, furrowed, and piled. The last 3 steps are repeated 3 times a day for 3 days until the beans have become spontaneously molded. The resulting soybean koji is mixed with soybean cooking liquid, barley koji, and salt, put into an earthen pot, sealed, and insulated. It is then dried in the shade, mixed with a mulberry leaf extract, and steamed. The last 3 steps are repeated 3 times, resulting in salted soybean shih. In the second process described in the *Ch’i-min yao-shu*, soybeans are winnowed, cooked, drained, and cooled. They are piled, the temperature is measured, and then they are stirred. The last 3 steps are repeated 3 times until they are spontaneously molded. They are then spread and furrowed to make soybean koji. This is winnowed, washed, drained, dried, moistened, piled, fermented, and dried to give unsalted soybean shih.) Therefore the resultant shih (soybean nugget) contains a high amount of protein. In shih, much of the soybean constituents are present in a liquid state. The soybean proteins are hydrolyzed to single amino acids and, therefore, the flavor is sharp and strong. The flavor constituents of shih can be extracted easily by a salt solution. The original shih was served as nuggets; the brine extract came to be used as a seasoning gradually. In *Chi-min Yao-shu* (535 AD), there is a description of about 70 kinds of cookeries using shih extracts. It should be mentioned that shih and its brine extract developed into today’s tamari shoyu in Japan.” Address: Managing Director, Kikkoman Corp., Chiyoda-ku, Tokyo, Japan.

2424. Harris, David R.; Hillman, Gordon C. eds. 1989. Foraging and farming: The evolution of plant exploitation. London: Unwin Hyman. xxxiii + 733 p. Index. 24 cm.

“Results of a symposium held at the World Archaeological Congress, held in Southampton, England, in Sept. 1986.”

• **Summary:** Soybean fermentation is mentioned briefly in: Stahl, Ann B. 1989. “Plant food processing: implications for dietary quality.” p. 171-94 (See p. 178, 180).

Contains some very interesting papers on the origins of agriculture (See Chapters 1-2). There is a “continuum of interaction” and the assumptions of the model are ecological and evolutionary. The basic transition is from hunting and gathering (dependence on wild foods) to agriculture (dependence on domesticated plants and animals). In 1936 and 1942 Gordon Childe set forth the seminal concept of the “Neolithic Revolution” as a relatively abrupt event. But in recent years the earlier rigid dichotomy between hunter-gatherers and agriculturists has become blurred, for in the past people exploited both wild and domesticated plants and animals. For plants: Casual gathering, systematic gathering, limited cultivation, developed cultivation, and intensive cultivation.

Note: Domestication of animals for food (herding, especially rugged goats and sheep in the Middle East) probably came long before domestication of plants for food.

Two interesting chapters (although they do not mention soy) are: 41. “Prehistoric agriculture in China,” by An Zhimin (p. 643-49; 12 refs.). 42. “Coastal adaptation, sedentism, and domestication: a model for socio-economic intensification in prehistoric Southeast Asia,” by Charles Higham and Bernard Maloney. Address: Dep. of Human Environment, Inst. of Archaeology, University College London, UK.

2425. Hesseltine, C.W. 1989. Fermented products. In: Ruth H. Matthews, ed. 1989. Legumes: Chemistry, Technology, and Human Nutrition. New York and Basel: Marcel Dekker, Inc. x + 389 p. See p. 161-85. [29 ref]

• **Summary:** Contents: Introduction: Fermented legume products. A table lists about 85 products with the vernacular name, legume from which it is made, country, and microorganism(s) used. Products made from soybeans include: Miso (bean paste), Shoyu (soy sauce), Sufu (Chinese cheese), Ontjom (Oncom), Hamanatto, Idli (with and without soy), Natto, and Tempeh. Address: Human Nutrition Information Service, USDA, Hyattsville, Maryland (and NRRC, Peoria, Illinois).

2426. Hoshijo, Kathy. 1989. Kathy cooks: Vegetarian, low cholesterol. New York, NY: Simon & Schuster (A Fireside Book). 728 p. Illust. Index. 24 cm.

• **Summary:** Previously published as *The Art of Dieting Without Dieting* (1986). A whopper of a cookbook, with 350 easy-to-prepare vegetarian recipes from the star of the PBS television series “Kathy’s Kitchen”—which airs in 180 cities nationwide. Each recipe contains a detailed (full-page!) nutritional analysis.

This book contains a wealth of recipes using tofu, tempeh, soymilk, miso, and whole soybeans.

2427. Leneman, Leah. 1989. *The single vegan: Simple, convenient and appetizing meals for one*. Wellingborough, Northamptonshire, England: Thorsons Publishing Group. 127 p. Illust. Index. 21 cm.

• **Summary:** Vegan recipes for one, grouped seasonally, and within each season by day of the week, with weekly shopping lists and staples to be kept on hand. Soy-related recipes include: Smoked tofu à la king (with smoked tofu and soymilk, p. 21). Strawberry cheese (with plain soy yogurt, p. 29). Spaghetti stir-fry (with tofu, p. 34). Mediterranean-style potato salad with yogurt dressing (with soy yogurt, p. 37). Savoury mushroom bake (with tofu, soy yogurt, and miso, p. 38). Tofu and green pepper savoury (p. 44). Bean and potato salad (with soy yogurt and vegan mayonnaise, p. 47). Courgette (zucchini) and tomato flan (with tofu, p. 48). Tofu and vegetable stew (p. 51). Tofu pot pie (p. 53). Scalloped tofu au gratin (incl. soymilk, p. 58). Nasi goreng (with tofu, p. 63). Chilled cream of tomato soup (with soy yogurt, p. 65). Cream of cauliflower soup (with soymilk, p. 69). Scrambled tofu and leek (p. 79). Irish stew with frozen tofu (p. 84). Tempeh and sweetcorn roast with tahini/mushroom sauce (p. 92-93). Tempeh and mushroom stew on a mashed potato base (p. 98). Sweet tofu 'omelette' (incl. soymilk, p. 105). Curried tofu (p. 107). Mushroom miso gravy (p. 115; shows a pack of Sunwheel brown-rice miso). Tropical blancmange (with soymilk, p. 116).

Note: Soymilk and soy sauce are used in small amounts in many other recipes. This book is distributed in the USA by Sterling Publishing Co. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

2428. Leneman, Leah. 1989. *Slimming the vegetarian way*. Revised and reset ed. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 144 p. Index. 20 cm. 1st ed. 1980.

• **Summary:** The menus in this natural-foods, vegan cookbook are designed for 1 person and the daily calories intake is kept at about 1,000 calories. The book takes a positive attitude toward dieting by focusing on those foods you can eat, rather than those you should avoid. Each "menu" consists of breakfast, lunch, and dinner for 1 day. For each meal there is one column for Imperial (Metric) measurements, one for American measurements, and one for calories, with a calories for each meal and for the day. There are menus for each of the four seasons plus chapters on crash diets, desserts, and a vegetarian wholefood calorie chart.

The preface to the new edition notes: "The greatest change which has occurred since the first edition of this book appeared has been the phenomenal proliferation of soya foods (soyfoods in American parlance). Tofu is arguably the best friend a slimmer ever had, for no other food so low in

calories and high in protein is as versatile as tofu. Tempeh is another fine soya food for slimmers, though as it is not as readily available as tofu, I have confined its use to only one recipe. Since soya milk and yogurt are now so easy to obtain, I have given them as alternatives to the dairy versions, so that vegans, and others trying to cut down on dairy produce, will be able to use the book in the same way as lacto-vegetarians."

Soy-related recipes include: Pineapple tofu salad (p. 36). Tofu celery loaf (p. 39). Tofu-stuffed aubergine (eggplant, p. 66). Scrambled egg or tofu, sausalata and tomato (p. 89, 118). Tofu slices on toast with creamy gravy (p. 98). Miso soup with tofu (p. 102). Spaghetti with tempeh and mushroom sauce (p. 127). Vegetable charlotte with smoked tofu (p. 129). Soya milk and soya yogurt are always listed as alternatives to skim milk or yogurt from cows. TVP is used as an ingredient in many recipes, and "Tamari (soy sauce)" is widely used as a seasoning. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

2429. Quong Hop & Co. 1989. *The Soy Deli: Good food for healthy living* (Leaflet). South San Francisco, California. 1 p. 28 cm.

• **Summary:** This black on beige leaflet shows the front panel of ten soy products made by Quong Hop & Co., including tofu burgers, tempeh burgers, baked five-spice tofu, baked savory tofu, and hickory smoke flavored baked tofu. Address: 161 Beacon St., South San Francisco, California 94080. Phone: 415-761-2022.

2430. Reddy, N.R.; Salunkhe, D.K. 1989. Fermentation. In: D.K. Salunkhe and S.S. Kadam, eds. 1989. *CRC Handbook of World Food Legumes: Nutritional Chemistry, Processing Technology, and Utilization*. Vol. III. Boca Raton, Florida: CRC Press, Inc. 323 p. See p. 177-217. [233\* ref]

• **Summary:** Contents: Introduction. Soy sauce: Types of soy sauce, preparation of *Shoyu* composition, safety. Miso: Preparation, composition, nutritional quality, miso-like products. Sufu: Preparation, microorganisms, biochemical changes and composition, toxicology, method of preparation, chemical composition, physical properties, nutritional quality. Tempeh: Preparation, nutrient composition, nutritional quality, antinutritional and/or toxic factors, *tempeh* and *tempeh*-like foods from other legumes. Address: 1. Community Research Service, Atwood Research Facilities, Kentucky State Univ., Frankfort, Kentucky; 2. Dep. of Nutrition and Food Sciences, Utah State Univ., Logan, Utah.

2431. *SoyaScan Notes*. 1989. Terms related to soyfoods, soybeans, and the soybean industry: Library of Congress subject headings and call numbers (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Two different types of call numbers are used by

American libraries for cataloging their books. Most larger libraries use the Library of Congress call numbers (LC numbers, which start with two letters) and many smaller libraries use the Dewey Decimal System (Dewey numbers, which contain only numbers).

The following are from the Library of Congress Subject Headings (12th ed. 1989) and the Library of Congress Classification Schedules. The first edition of Class S (Agriculture), for example, was published in 1911, and the 4th edition in 1982. BT = Broader terms. NT = Narrower terms. UF = Use for. May Subd Geog = May subdivide geographically, e.g., Soy sauce industry-Japan.

Class H is Social sciences and economics. Class Q is science. Class S is agriculture (SB is plant culture. SB205 is field crops, legumes). Class T is technology (TX includes nutrition). Class Z is bibliography and library science.

The following soy-related terms have a subject heading but no LC call number: Miso industry, Natto industry, Soy sauce, Soybean flour, Soybean glue, Soybean meal, Soybean milk, Soybean products.

2432. Steinkraus, Keith H. ed. 1989. Industrialization of indigenous fermented foods. New York, NY: Marcel Dekker.

xii + 439 p. 24 cm.

• **Summary:** This book contains the following chapters on soyfoods: 1. Industrialization of fermented soy sauce production centering around Japanese shoyu, by Danji Fukushima. 2. Industrialization of Japanese miso fermentation, by Hideo Ebine. It also contains chapters on the industrialization of the production of sake, tapai, African beers, magehu, ogi, and gari. The final chapter is titled “Industrialization of indigenous fermented food processes: Biotechnological aspects.”

The book is dedicated “To the memory of Prof. Andre G. van Veen, a pioneer in the study of indigenous fermented foods.” Address: Inst. of Food Science, Cornell Univ., Geneva, New York.

2433. Vegan Restaurant (The). 1989. January. New soyfoods restaurant or deli. 115 Baldwin Ave., Paia, Maui, Hawaii 96779.

• **Summary:** Talk with Michael Klapner. 1990. Feb. Gentle World has recently opened this vegan restaurant on Maui. Menu sent by Jeanie Greenbaum of Gentle World in Alachua, Florida. 1991. March 13. The restaurant is now open for dinner only. Soyfoods on the menu include: Tofu eggless salad. Tofu eggless salad sandwich. The vegan burger (with seitan and tempeh). Entrees (\$5.95 to \$6.95): Lasagna tofucci. Tofu loaf. Lemon broiled tempeh with scalloped potatoes. Side orders: Tofu roll (with broccoli, onions and seasonings, wrapped and baked). Crispy tofu chunks. Desserts: Rice Dream Sundae. Assorted Barat Tofu Chocolates. Smoothies: Float with a scoop of Rice Dream. Address: Paia, Maui, Hawaii. Phone: 808-579-9144.

2434. Byodo Naturkost GmbH. 1989? Tofu & tempeh: Traditionelle japanisch, indonesisch, in handwerklicher Herstellung [Tofu & tempeh: Traditional Japanese and Indonesian, made by hand (Poster)]. Hirschbergstr. 9, D-8000 Munich 19, West Germany. Undated. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. [Ger]  
 • **Summary:** This large and colorful poster, 19.5 inches wide by 27.5 inches high, has the company name in the top one-third of the space, the text in the bottom third, and a color photo in the middle. The photo shows a cake of tofu and a cake of tempeh on a bed of soybeans in front of two sacks of organic soybeans. Address: Munich, West Germany. Phone: (089) 16 85 70.

2435. Broom, Maria. 1990. Serulada Spiritual Foundation in Uganda, and soybeans (Interview). *SoyaScan Notes*. Jan. 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** This foundation is a spiritual, vegetarian community of about 200+ people who live on the land at Sseesamirimbe, near Masaka, Uganda. They grow a lot of soybeans and eat them as such; they do not do any processing, but are interested in making tofu, soymilk, and

tempeh. Maria gave them three Soyfoods Center books on these subjects. She has visited the community twice, for 1 month each time. They have been together for about 15 years, have an African spiritual master named Bambi Baaba, but their spiritual practice resembles East Asian practices. They have a city address too: P.O. Box 5374, Kampala, Uganda.

Maria visited Dr. D. Warren Harrison of Africa Basic Foods. He hopes to contact the community and teach them more about soyfoods. Address: 1728 Linden Ave., Baltimore, Maryland 21217. Phone: 301-462-5370.

**2436. Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Flora Yap Tempeh.

**Manufacturer's Address:** Am Muehlenwaeldchen 1a, W-6670 St. Ingbert, Germany.

**Date of Introduction:** 1990. January.

**New Product–Documentation:** Letter from Flora Yap. 1993. April 23. After 17 years work at a chemical/pharmaceutical firm (Chephasaar) in Rohrbach, St. Ingbert, she was laid off in 1987 when the firm had financial problems. She did some translation work then used this money to buy an incubator to prepare tempeh starter. Her original cultures came from the Centraal Bureau voor Schimmelcultures in Baarn, The Netherlands. Then she started making tempeh herself in her home and selling it to "Mutter Erde" in Saarbruecken (beginning on 28 Jan. 1990). Then she started introducing tempeh in German cooking courses concerning whole foods ("Vollwert Ernährung").

**2437. Product Name:** [Tempeh, Ready-to-Eat Tempeh, Marinated and Grilled Ready-to-Eat Tempeh. Tempeh with Fines Herbes, Tempeh Saté].

**Foreign Name:** Temeph, Tempeh Away, Tempeh–Plus Away, Tempeh met Kruiden, Tempeh Sate.

**Manufacturer's Name:** Food for Freedom.

**Manufacturer's Address:** Nylense [Nijlense] Steenweg 72, B-2270 Herenthout, Belgium. Phone: 014 / 51 7237.

**Date of Introduction:** 1990. January.

**Ingredients:** Basic tempeh: Organically grown soybeans, water, Rhizopus starter.

**Wt/Vol., Packaging, Price:** 200 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter, label, and leaflet sent by Lucio de Berti, owner of Food For Freedom. 1992. Jan. 4. This product, called simply "Tempeh," was introduced in Jan. 1990. The company now makes about 80 kg/week of tempeh. "Our company is meant to be mainly a fresh tempeh producer, since we believe that tempeh is the best way to use soybeans for mankind. Our second goal is to help spread the use of soya products integrated into a more philosophical lifestyle, based on macrobiotics." Note: Lucio started making tempeh in Italy in the fall of 1987 with La

Finestra sul Cielo; he was Italy's first tempeh maker.

Labels. 3 by 4 inches. various pairs of colors. In Dutch and French.

Leaflet (in French). "Fresh tempeh." Contents: What is tempeh? Why does the fermentation of tempeh make it a unique food? Why fresh tempeh? How we make Food for Freedom tempeh. When did Food for Freedom start? For more information. Four tempeh recipes.

Form filled out by Mr. Frederik Dossche and two leaflets sent by fax. 2001. June 7. Food for Freedom and De Hobbit seem to have merged. Both make tempeh at: Nijverheidslaan 7, 9980 Maldegem, Belgium. Phone: 050 71 70 20. Food for Freedom makes Tempeh and Smoked Tempeh. De Hobbit makes Tempeh, Smoked Tempeh, and Tempeh Bacon.

Label sent by Sjon Welters. 2004. March. "Tempeh. 100% Bio." 4.5 by 3 inches. Blue, white, green and black on orange. 300 gm. Maldegem. In Dutch.

**2438. *Indonesia Times*.** 1990. Prospect of non-salted soybean fermentation is good. Feb. 14.

• **Summary:** This article is about the Second Asian Symposium on Non-Salted Soybean Fermentation, held 13-15 Feb. 1990 in Jakarta, Indonesia. It covers lectures or papers presented by Prof. Darwin Karyadi (chairman of the symposium), M. Adhyatma (Indonesia's Health Minister), etc.

Moreover: "In Japan, Dr. Kiku Murata, together with a number of scientists and industrialists, have established the Tempeh Club, to encourage research on tempe and to popularize it there."

**2439. Stromnes, Lonnie.** 1990. New developments at White Wave (Interview). *SoyaScan Notes*. Feb. 14. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** It now looks like the White Wave line may get into west coast Safeway supermarkets. Safeway will start them off in the hot regions like Berkeley, San Francisco, Marin, and Santa Cruz—and let them try to prove themselves. In a year or two, there will be more distribution. In late Dec. 1989 White Wave decided to stop having Wildwood Natural Foods distribute their line of tofu and tempeh products; there were too many conflicts of interests. Rock Island, a major California natural foods distributor, picked up the White Wave line on Jan. 5 and distributes it to 120 Safeway stores, as well as to most natural foods stores. When Rock Island took on the White Wave line, Rock Island also dropped the Island Spring and Quong Hop lines (Lonnie had nothing to do with this), and asked White Wave (as part of the deal) to drop 3 other smaller distributors, including Wildwood. With this move, White Wave became Rock Island's leading line of soyfoods products. Lonnie thinks that Island Spring was a headache to Rock Island, the numbers were not there, and maybe some products were late. Rock Island was always very upset with Quong Hop because the latter cherry picked

the best accounts in Northern California and delivered everything with their own trucks. Rock Island doesn't like to play second fiddle and pick up the fringe markets. Safeway in California now sells Wildwood, Quong Hop, and Azumaya. White Wave is now on a roll—they are the hot soyfoods company, and they are shooting for the big time. White Wave hopes to at least double sales in 1990 compared with 1989.

Steve Demos is now on the Board of Directors of the Soyfoods Assoc. Address: White Wave, Inc., 14670 Doolittle Dr., San Leandro, California 94577.

2440. Achter-Theiss, Elke. 1990. Speise statt Futter [Food instead fodder]. *Oeko-Test Magazin (Frankfurt, West Germany)*. Feb. p. 57-59. [Ger]

• **Summary:** Discusses whole dry soybeans, soybean meal, soy sauce, soymilk, tofu and silken tofu, tempeh, and miso.

2441. Arbianto, Purwo. 1990. Preliminary studies on the genetic system of *Rhizopus* Sp. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 33-47. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [Eng]

• **Summary:** When amino acids are "released" by enzymes

during fermentation they become free amino acids. Some authors have proposed that the large amount of free amino acids in tempeh contributes to its nutritional value.

"This report gives an actual overview about the results of a number of tempe fermentations with different strains of *Rhizopus oryzae*, *R. stolonifer*, and *R. microsporus* var. *oligosporus* isolated from Indonesian tempe samples in our lab, regarding the amino acid pattern and release. Some data about the acidification of soaking water by bacteria, which is the first step of traditional tempe fermentation, are also presented."

There is no significant change in the amino acid pattern between soybeans and tempeh. It is likely that there is now de novo [new] synthesis of amino acids but only a degradation and consumption of soy protein by the fermenting fungus.

Contains 20 bar charts and two graphs (the 1st of the latter showing the pH of the soaking water of soybeans inoculated with one strain of *Rhizopus*). Address: Institut für Mikrobiologie, Corrensstr. 3, D-4400 Muenster, Federal Republic of Germany.

2444. Down to Earth Natural Products Ltd. 1990. Some companies start out really small and then... they grow! (Leaflet). Penrose, Auckland, New Zealand. 2 p.

• **Summary:** "Which is why we've changed our name from Bean Supreme to Down to Earth—to make room for things to come.

Bean Supreme will remain as the brand name for our existing and expanding range of traditional soy products—Tofu and Tempeh.

"Our new company name Down to Earth Natural Products Ltd reflects our intended diversification into new areas of product development and marketing. We believe the name will speak directly to our core group of consumers, those with increasingly convergent interests in health and the environment.

"Our first product launch [soymilk] under our new name is imminent. In fact we'll send you some in the post! Until then—goodbye from Bean Supreme. More to follow from Down to Earth.

"From the directors—Paul and Trevor Johnston and all of the team, best wishes for 1990."

Brands: Bean Supreme, Nice 'n' Healthy, Lite Licks, Bio Farm, Spiral Foods. Address: Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: (09) 590 592.

2445. Fardiaz, Srikandi; Pangestu, W.; Suliantari, -. 1990. A study of the bacterial flora of overfermented soybean tempe. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 14-19. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [6 ref. Eng]

• **Summary:** “In some areas of Indonesia, particularly in Central Java, fermentation tempe is prolonged” to produce a particular flavor and texture, “and the overfermented tempe is used as a flavor ingredient in some foods such as mixed vegetable soup / curry (sayur lodeh), hot sauce (sambal tumpang) and other foods.”

“Samples of tempe were collected from different area in Bogor, and divided into two parts, on part was put into polyethylene bags and the other part was wrapped in banana leaves. All tempe samples were stored at room temperature and analyzed every two days for chemical and microbiological characteristics.”

“There was no significant difference in the gram positive bacterial counts (about 10 million to 10 million CFU {Colony Forming Units} per gram), but significant increases in gram negative bacterial counts and *Staphylococcus* counts were detected—though they were far below the counts that usually cause food poisoning. For each graph or table, one data set is for tempe in polyethylene bags and another for tempe in banana leaves.

Figures show: (1) Graph—“Changes in pH, moisture and total volatile nitrogen of tempe during prolonged incubation at room temperature [in Indonesia] for four days.” (2) Bar chart—“Changes in gram negative bacterial counts of tempe during prolonged incubation at room temperature for four days.” (3) (2) Bar chart—“Changes in *Staphylococcus* counts of tempe during prolonged incubation at room temperature for four days.”

Tables show: (1) Number of isolates identified as gram negative bacteria after 0, 2, and 4 days. (2) Identified bacteria isolated from overfermented tempe: *Escherichia coli*. *E. freundii*. *Enterobacter aerogenes*. *Staphylococcus*. *Vibrio cholerae*. *Proteus morgani*. *P. vulgaris*.

Note: Most pathogenic bacteria in humans are gram-positive organisms. Classically, six gram-positive genera are typically pathogenic in humans. Two of these, *Streptococcus* and *Staphylococcus*, are cocci (sphere-shaped bacteria). The remaining organisms are bacilli (rod-shaped bacteria) and can be subdivided based on their ability to form spores. The non-spore formers are *Corynebacterium* and *Listeria* (a coccobacillus), while *Bacillus* and *Clostridium* produce spores. The main gram-negative bacterium that is a pathogen for humans is *Escherichia coli* (Source: Wikipedia May 2010). Address: Dep. of Food Technology and Human Nutrition, Bogor Agricultural Univ., Bogor, Indonesia.

Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 4-13. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [Eng]

• **Summary:** A very technical article. Contains 6 tables and 8 figures. Address: Inst. of Physiological Chemistry, Univ. of Bonn, Federal Republic of Germany.

2449. Karta, Susani K. 1990. The market prospective for tempe in the year 2000. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 94-104. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [11 ref. Eng]

• **Summary:** A very interesting paper. Contents: Introduction. Market situation for tempe in Indonesia. Health and nutritional significance of tempe. Tempe for weaning food. Constraints and trends in the market development of tempe. Recommended guidelines and strategies. Ideas for the diversification of tempe utilization (Tempe as a food ingredient, new tempe food opportunities).

Tempe “is a key protein source in the rice-diet of the people of Indonesia. It is consumed by millions of people of various ages and socio-economic status. It has gained popularity in the Netherlands, Japan, Malaysia, Singapore

and other areas where Indonesians have settled. It has also slowly been making its way into the American diet, particularly, in the vegetarian, cholesterol-free and low-fat food product markets.”

“Indonesia with a population of 177 million people (in 1988) and an annual population growth rate of 2%, is the largest tempe producer in the world and has the largest soyfood market in the region. In 1983, Indonesians consumed about 0.9 million MT [metric tons] of soybeans as food, which increased to about 1.5 million MT in 1988 (Table 1). About 50 percent of the total soybeans consumed was in the form of tempe, 40% as tofu and the remaining 10% was used for making soy sauce and tauco (a fermented whole soybean condiment). In 1988, the estimated soybean consumption for tempe was around 764,000 MT which amounted to an average per capita consumption of 6.45 kg of tempe (equivalent to 4.3 kg soybeans). In the past five years the consumption of soyfood has increased by an average of 10% annually.”

“Acute diarrheal disease is one of the leading causes of childhood mortality and morbidity in developing countries and is a major contributor of malnutrition. Approximately 25% of the growth differential between children in selected developing countries can be explained by diarrhea. The mortality and morbidity data from a total of 193 surveys carried out in 49 countries since 1981 by WHO (1986) indicate that, on average, a child under 5 years of age suffer 3.5 episodes of diarrhea per year and that about one-third of deaths in this age group are diarrhea associated.

“Investigations worldwide have found diarrhea incidence peaking between the ages of 6 months to 3 years.”

Tables: (1) Indonesian soybean production, imports, and consumption as food, 1983-1988. Soybean production increased from 536,000 tonnes (metric tons) in 1983 to 1,179,000 tonnes in 1988—more than double. Soybean imports, which were 391,000 tonnes in 1983, rose to a peak of 400,000 tonnes in 1984, then decreased to 350,000 tonnes in 1988. Consumption of soybeans as food increased from 927,000 tonnes in 1983 to 1,528,000 tonnes in 1988. Per-capita consumption figures are not given. Source: ASA estimates and BULOG statistics. (2) Nutritional composition of tempe (100 gm edible portion). (3) The essential amino-acid composition of tempe compared with the FAO/WHO reference pattern (expressed in milligrams per gram of nitrogen). (4) Fatty acids in soy tempe. (5) Global and regional population in 1980 and estimated number (millions) and distribution of diarrheal diseases. (6) Household Health Survey illness data by different age groups in Indonesia. (7) Potential demand for tempe flour in weaning food in the year 2000, Indonesia. (8) Demographic estimates for Asian developing countries. (9) Estimated number (millions) of children under age 5 in Asian developing countries. (10) Projected potential use of tempe flour in weaning food in Asian developing countries in the year 2010. Address:

American Soybean Assoc., Singapore.

[8 ref. Eng]

• **Summary:** This article is about the preparation and evaluation of okara tempeh. Figures show: (1) Photograph of okara tempeh, sliced diagonally to show inner surface. (2) Scanning electron micrographs of okara and okara tempeh. (3) Comparison in composition between okara and okara tempeh. (4) Sensory evaluation of okara tempeh powder by a panel of 20 female students, ages 21-22 (four pie charts); it was neither liked nor disliked. (5) Water holding, oil retention and emulsifying capacity of several powders. (6) Antioxidant action of soybean foods. (7) Volume of biscuits containing okara tempeh (OT). (8) Rheolometric parameters and water absorption rate of biscuit containing OT. (9) Antioxidant action of OT in biscuit fat.

A table shows ingredients of the high-fiber biscuit. Address: Gifu Women's Univ., Gifu, Japan.

2452. Mead, Nathaniel. 1990. Where's the B-12? *Solstice* No. 39. p. 10-15. Feb. [2 ref]

• **Summary:** Sylvia Ruth Gray, a macrobiotic mother in Salt Lake City, Utah, is trying to discover why the vitamin B-12 content of our foods is decreasing. She has commissioned independent studies by a California laboratory which show zero B-12 in Swiss cheese, chicken breast, beef heart. But

100 gm of tempeh (made by Turtle Island Soy Dairy) was found to contain 4.6 mcg of B-12; the test was conducted using the protozoan *Ochramonas malhamensis*. She feels that many of the key issues in this debate are not being discussed.

2453. Murata, Kiku; Asano, Machiko; Fukakura, Noriko. 1990. Activities of Tempe Study Group and popularity of tempe in Japan. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 1-3. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [13 ref. Eng]

• **Summary:** In 1985 the First Asian Symposium on Non-Salted Soybean Fermentation was held in Tsukuba, Japan. In 1988 the Tempe Study Group was started in Japan by various people interested in tempe. "Seventy seven people became regular members (for a membership one has to pay ¥2,000/fiscal year) and 12 supporting members. In 1989 fiscal year there are 85 regular and 10 supporting members (who have to pay at least ¥10,000/fiscal year).

"The Tempe Study Group had the first Tempe Study Meeting at a lecture hall of Yukijirushi Milk Co. Ltd. in Tokyo, Feb. '89. The second Meeting was held at Kenkyu Koryu Center of Osaka City University in Osaka, in June 1989. The third Meeting was held at Teikoku Gakuen, together with the regular meeting of Kansai Cereal Science Study Group in September 1989, having party serving various tempe dishes. Each time there were 70-100 participants from all over Japan who were very active in discussions. The subjects and speakers were as follows:

"For the first meeting, 1. Y. Torii; About her visit to Natural Foods Expo at Los Angeles, California, in April 1988. 2. K. Okada; Studies on Isolation of Specific Gene from Tempe. 3. T. Maeda; Works on Tempe in our Village.

"For the second Meeting, 1. M. Terashima; The Status quo on Soyprotein and its Foods in Japan. 2. E. Katoh; On Frying Tempe in Reduced pressure. 3. S. Kawabata; Tempe made of Tofu Residue [Okara] and Its Utilization. 4. M. Matsuo; High Fiber Biscuit Adding Tempe made of Tofu Residue.

"For the third Meeting, 1. T. Watanabe; Science of Tempe. 2. K. Murata; Chemistry of Tempe and Its Edible Value. 3. M. Iwatsuki; Problem on Production and Selling Tempe on the Market.

"However, according to our survey of 3,000 people in 27 groups only 10% knew tempe. Among them, in 7 groups, 20-25% of the people liked tempe, as shown in Table 1. Therefore, I feel that we need more efforts to let people know tempe and how to handle or eat tempe." A table shows the results of the survey of 3,000 people as described above. In the 7 groups, 50% knew about tempeh, but only 20-25% of the total said they liked it. Address: 1. Research Inst. for

Education, Teikoku Gakuen; 2. Teikoku Women's Univ., Moriguchi City. All: Osaka, Japan.

2454. Onghokham, -. 1990. Historical and social roots of tempe. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 71-76. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [12 ref. Eng]

• **Summary:** He begins by admitting that this is a field that he knows almost nothing about. Originally tempe, like eggs, was a low-class food in Indonesia. The late President Sukarno denounced tempe by appealing to Indonesians not to be a tempe nation (*bangsa tempe*)—meaning servile, weak, and inefficient. Yet Sukarno loved to eat tempe, as does the current President Suharto. And his remark had no effect on tempe consumption in Java.

Indeed things have changed since Sukarno's time, and tempe has nowadays become such a part of the Javanese diet that even the middle and upper classes eat it. And every market eating stall (*warung*) as well as every big restaurant (such as Handayani) that serves Javanese food must serve at least one tempe dish—if not more. Address: Univ. of Indonesia.

2455. Pawiroharsono, Suyanto; Siregar, E.; Matondang, T.H. 1990. Investigation of isoflavone and microorganisms in tempe. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 77-82. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [8 ref. Eng]

• **Summary:** The aim of this investigation is to determine the interrelationship between the microorganisms present in tempe and its content of biologically active substances, mainly of the isoflavonoid compound, Factor-2.

Tempe samples were taken from 14 towns and cities throughout Java and Sumatra. Tables show: (1) Isoflavone analysis of tempe by TLC (thin layer chromatography). Based on 26 samples from many places, values are given for daidzein, Faktor-2, genistein, and glycitein. (2) Microorganisms isolated from 20 tempe samples. For each gives the number of strains of bacteria, yeasts, fungi, and total. (3) Data recapitulation of 20 tempe samples. Tempe with the highest content of Factor-2 as made with inoculum from LIPI (National Chemistry Institution).

"2. Most of the tempe samples inoculated with inoculum from LIPI contain relatively more strains of yeast and fewer strains of bacteria and mold. This may relate to the raw materials used in the production of LIPI inoculum, which is steamed rice.

"3. The other types of inoculum, particularly those from Tegal and Pekalongan, contain fewer strains of yeasts and more strains of bacteria." Address: Indonesia.

2456. Slamet, Dewi Sabita; Enliza, A.; Komari, -. 1990. Tempe spread. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 91-93. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [6 ref. Eng]

• **Summary:** Describes how to make a tempe spread supplemented with grated carrots. The carrots (in the proportion of 4 tempe to 2 carrots) add an attractive color plus the nutritional value of carotene. Citric acid and sugar are also added.

Tables: (1) Results of organoleptic test of tempe spread (percentage). (2) Moisture, protein, carotene and pH of tempe spread (in 100 g wet basis). (3) Mineral content of tempe spread (4:2). Address: 1. Nutrition Research and Development Center, Bogor; 2. Academy of Nutrition, Jakarta, Indonesia.

2457. **Product Name:** [Tofu, and Tempeh].

**Foreign Name:** Tofu, Tempeh.

**Manufacturer's Name:** Soy & Rice.

**Manufacturer's Address:** Via A. Canale 8/c, 10078 Venaria Reale (TO), Italy. Phone: 011-402-0380.

**Date of Introduction:** 1990. February.

**Ingredients:** Tempeh: Soya, water, *Rhizopus oligosporus*.

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter and Label for Tempeh sent by Bosco Franca and Garafola Carmelo of Soy & Rice. 1992. Feb. 2.75 by 4 inches. Black on white. Self adhesive. The logo is that developed by Mitoku which states in Japanese characters “*I Shoku Dô Gen*” (Medicine and food come from the same source, or Your food is your best medicine). Store at 4°C [39.2°F]. The company began to make these products in about Feb. 1990. They now make 40 kg/week of tempeh.

2458. Sudigbia, I.; Sumantri, Ag.; Karyadi, D. 1990. The use of tempe in medical practice. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 105-09. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [7 ref. Eng]

• **Summary:** Contents: Introduction. Tempe in oral rehydration treatment. Tempe in nutritional therapy (use of a tempe formulated food in nutritional management of chronic diarrhea). Discussion.

Tables: (1) Composition of tempe formulated food and its nutritive value. (2) Effect of tempe formulated food on acute diarrheal cases. (3) The mean values of body weight gain and nutritional status in 3 months evaluation. (4) Nutritional impact of food mixtures.

Figure 1 shows the growth velocity of children fed with four different foods every 3 months after diarrhea. Address: 1. Child Health Dep., Medical Faculty, Diponegoro Univ.; Nutrition Research and Development Centre, Ministry of Health.

2459. Timotius, K.H.; Farley, Peter. 1990. Extracellular enzymes of *Rhizopus oligosporus*, a review. In: Hermana, Mien K.M.S. Mahmud, and Darwin Karyadi, eds. 1990. Second Asian Symposium on Non-Salted Soybean Fermentation. Bogor, Indonesia: Nutrition Research and Development Centre. vii + 116 p. See p. 57-62. Held 13-15 Feb. 1990 in Jakarta, Indonesia. 23 cm. [9 ref. Eng]

• **Summary:** Contents: Introduction. Amylase. Protease. Lipase. Contains 7 graphs and one bar chart. *Rhizopus oligosporus* “produces extracellular enzymes such as amylase, protease, and lipase. These enzymes are also very important, because they make the substrate into a more digestible food. Soluble substances increase during tempe fermentation.” Address: Faculty of Biology, Satya Wacana Christian Univ., Salatiga 50711, Indonesia.

2460. **Product Name:** [Soy Tempeh].

**Foreign Name:** Soja Tempeh.

**Manufacturer's Name:** Yap Bwee Hwa Tempeh Co.

**Manufacturer's Address:** Am Muehlenwaeldchen 1a, W-6670 St. Ingbert-Rohrbach, Germany. Phone: 06894 / 53609.

**Date of Introduction:** 1990. February.

**Ingredients:** Soybeans\*, vinegar, Edelpilz (*Rhizopus oligosporus*). \* = Organically grown (Kontrollierter biol. Anbau).

**Wt/Vol., Packaging, Price:** 200 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter and Label sent by Bwee Hwa “Flora” Yap, founder. 1992. March 16. She is now a member of the “Kneipp Verein” and is introducing tempeh to their cooking courses. “In order to give the people a chance to continue cooking with tempeh, I started selling fresh tempeh on a small scale. A health food shop in Saarbruecken sells it for me (monopoly). In Germany people are very strict. So, I have things officially registered including applying for a health certificate. Since 18 Sept. 1990 I have owned a ‘tempeh firm’... To my knowledge, right now there are only 4 places where fresh tempeh is made in Germany. Two of them make it solely for their own use in a café-restaurant.” Label. 2.75 by 3.75 inches. Black on white. Self adhesive. “According to the literature: Contains vitamin B-12. No cholesterol. Low in saturated fatty acids. High in polyunsaturated fatty acids. Contains trace elements and high-quality protein. Low in calories. Refrigerate at 6-8°C.” Letter from Flora Yap. 1992. April 5. On 11 Feb. 1990 she first officially sold tempeh to “Mutter Erde” a natural food shop in Saarbruecken. The tempeh sold

for DM3.20 per 200 gm and she sold 7 pieces per week, increasing to 10 pieces per week. But since March 1989 she had sold tempeh unofficially to friends and given it away free at festivals.

2461. Kempff, Klaus. 1990. Brief history of Life Food GmbH–Taifun Tofurei (Interview). *SoyaScan Notes*. March 14. Conducted by Anthony Marrese in Germany.

• **Summary:** Klaus, known as Dhanya, lived in Miami, Florida, for 5 years and has an American wife, although they are separated. His interest in soyfoods began in America. After returning to Germany, in 1985, Klaus bought a little sprout business in a basement/cellar at Wallstrasse 3 in Freiburg. When he bought it, it had no name and was run by a commune of Bhagwan Rajneesh devotees as a Sannyas business.

Since April 1985 the commune had been making various sprouts (not including soy sprouts). Klaus named the business Life Food, and in July 1985 he and several others started producing tofu. In the spring of 1986, in Germany, he got a copy of *The Book of Tofu* by Shurtleff and Aoyagi which helped his work. He sold the tofu along with various sprouts (mung, alfalfa, radish, chick peas, wheat) at the market place. Looking for a way to use his okara, Klaus developed a Soy Burger and started selling it in about Nov. 1985.

Then health officials told them to move or be shut down. While struggling with the decision, a new place (a little grocery store at Stuehlinger Strasse 9, D-7800 Freiburg) became available and an order for one hundred 400 gm packs/week of tofu came along, so in Dec. 1985 they decided to go for it and start making tofu on a larger scale. The business grew steadily and in May 1989 they moved into their present location, a larger, new and modern facility that was previously occupied by a catering service. They purchased a new pressure cooker for making the soymilk for their tofu.

Klaus had a friend named Wolfgang Heck (not a follower of Rajneesh), who was an organizer (*Veranstalter*) of international events. The two began to work together in late 1986. In May 1987 Wolfgang started a business named Taifun that cooked Life Food's tofu for the people in the nearby Market Hall for gourmet foods. Taifun had a small walk-up tofu lunch bar at an indoor market. Here they sold their products and tried out new second generation products.

Klaus and Wolfgang decided to merge their two companies. So on 1 Jan. 1990 Life Food GmbH was formed, with 5 shareholders, including Klaus and Wolfgang. Life Food GmbH bought Taifun (the brand name and equipment) and discontinued operation of the Taifun in the market hall. Taifun became the brand name for many of Life Food's products. But some confusion between Life Food and Taifun still remains. For example, today outside the tofu plant there is a big sign that says "Taifun Tofurei" in big letters and

under it in small letters the name of the company, Life Food GmbH.

Life Food GmbH now employs 15 people. Present products they make are tofu burgers (3 types, each 90 gm, 1,250/week), tofu (500 kg/week, started Dec. 1985), tempeh (10-20 kg/week, started July 1987), Tofu Terrine Sausage (just starting; they are terrific). They made samples of white miso in March 1989 and are in the process of bringing it into production. Although most of their okara goes to farmers, some is used in their tofu burgers and the Hop Sing Bratlinge (burger dough for restaurants). Life Food is the only tofu producer in Freiburg, where they control the whole market. They have a 60 kg/hour Takai pressure cooker, a Takai hand okara press, and a meat-type grinder for the soybeans. They make tofu in 10-12 kg batches. They also import and sell a little miso and shoyu.

Follow-up interview by William Shurtleff. 1990. May 9. The company presently makes 800-1,000 kg/week of tofu and 10-15 kg/week of tempeh. They are hoping for a big standing order of 500 kg/week from the student dining hall at Freiburg Univ. The dining hall has already been buying tofu and tofu products for a long time. Their best selling product is tofu, followed by Smoked Tofu, then the Tofu Terrine (made by pressing tofu, mixing it with vegetables, and baking it in a baking pan; it resembles a goose liver pâté).

Update. 1990. May. Bernd Drosihn says Klaus Kempff is no longer in charge; Guenter Klein and Wolfgang Heck have taken over. Address: Founder, owner and manager, Life Food GmbH, Robert-Bunsen Strasse 6, D-7800 Freiburg, West Germany. Phone: (0761) 50 61 55.

2462. Urban, Gyandeva. 1990. Recent developments at Svadesha–Vegetarische Feinkost (Interview). *SoyaScan Notes*. March 14. Conducted by Anthony Marrese in Germany.

• **Summary:** Svadesha (Ruediger Urban) is manager/owner of the company, and Gyandeva (his son) is manager of soya products (secondary). Svadesha is presently in the hospital. He rarely comes to the plant any more. Svadesha and Gyandeva are both followers of Rajneesh. Svadesha began making tofu in 1979. Then he took a 6-month trip to India, entrusting the company to another person while he was gone. The company fell apart during this time, but it was re-started in 1980 and has grown since then. The company moved to Munich in 1984. Recently the name was changed to Feinkost from Svadesha Tofurei, and now sells as Vegetarische Feinkost using a logo of a sun behind a breaking wave.

They presently have 7 full-time and 5 part-time employees who produce 10 batches (each 250 kg) per day, or 1,250 kg per week—more in winter, less in summer. They are closed in August. Their second generation products include tofu burgers in mushroom or seaweed flavors, and a wine and herb spread. They also make tempeh burgers, buying the tempeh from Byodo in Munich. Address: Ostpreussen 22,

D-8000 Munich 81, West Germany. Phone: 089-939005.

2463. Steyer, Bernd. 1990. History of Byodo Naturkost (Interview). *SoyaScan Notes*. March 21. Conducted by Anthony Marrese in Germany.

• **Summary:** The company was founded in about 1983-85 by Harry Whitford (an American) with Herman Conran [Hermann Konrad], and Michael Mossbacher. Whitford left to go to Soyastern (he later left Soyastern also). Mossbacher is now in charge of the company's wholesale distribution. The company's first products were burgers made from purchased tofu and tempeh. In 1984 they started to make their own tempeh. Steyer, now tempeh production manager, built the company's first tempeh incubator. In 1984 they began to make their own tempeh. Production is now 50 kg/week plus 500 burgers/week.

Bernd is very much working for world food transformation and has invited Marrese for a visit. He will send a set of labels.

Interview with Bernd Drosihn. 1990. April 7. Byodo was founded by Lukas Kelterborn. Harry Whitford came a little after it was founded.

Talk with Klaus Gaiser of Yamato. 1990. May 8. Byodo was bought by a butcher, Rottmueller Naturkost, several weeks ago. The butcher, which now owns 55% of the company, runs a "Naturland" company—a grower's association like Demeter, Bioland, etc.

See also Harry Whitford's 1990 early history of Byodo. It is probably the most accurate on the early history.

Note: On 9 Aug. 1990 Soyfoods Center received an enquiry from Tofurei Rotmueller at Hirschbergstr. 9, D-8000 Munich 19, West Germany. Address: Hirschbergstr. 9, 8000 Munich 19, West Germany. Phone: (089) 168570.

2464. Westra, Marianne. 1990. Early history and current work of Vanka-Kawat B.V. (Interview). *SoyaScan Notes*. March 29. Conducted by William Shurtleff of Soyfoods Center. Followed by letters on 1 June and 2 July 1990.

• **Summary:** This company was founded in 1958, and has been in business for 33 years. They began as both an importer and a manufacturer. The original products they made were tofu (tahoe) and soy sauce (both sweet and salty varieties). In 1958 they began to make the following types of soy sauce: Ketchup Kaki Tiga, Ketjap A, Ketjap Benteng Manis, Ketjap Benteng Asin, Yellow Label Soy, and Tiger Brand Soy. They were still making all of these varieties in 1990.

At the time they started the business, they think there were other manufacturers of soy products in the Netherlands, but they don't remember the names of any companies or individuals. There were small, local Chinese companies that made tofu before they did, and at least one company that made soy sauce before they did. Their mailing address and head office address have not changed since 1958. The

mailing address is: Dr. Augustijnlaan 40, 2283 CH Rijswijk, Netherlands (near The Hague). In 1984 Vanka-Kawat was thought to be the second largest tofu maker in Europe and in the Netherlands (after Heuschen-Schrouff), producing 10,500 kg/week. They discontinued tofu production in March 1985 after coming to an agreement with Heuschen-Schrouff, because it was more economical for Vanka-Kawat to let Heuschen-Schrouff (which had all the equipment and knowledge) produce the tofu which Vanka-Kawat sold. They now buy their tofu from Heuschen-Schrouff. They also make sambals, and other foods. They have never made taotjo or miso, but they do import it. And they have never made tempe/tempeh, but they do buy it from the "first Dutch Tempeh factory" and then sell it.

They are not related to Linn Oriental Products (also called Soy-Lin or Lin Tahoe) in Westbroek, but they think that company started in about 1970. The company still exists; the owner is Chinese, but they do not know if it is Mr. Lin. Mr. G.L. Van Kasteren is the best man to talk to about soyfoods. He speaks good English.

This company, which is run by Indonesian-Dutch, imports foods from throughout Asia, though they started with Indonesia, and exports to West Germany, Belgium, France, England, and the USA.

Note: Anneke de Weerd says (April 1991) that the two most popular types of soy sauce in the Netherlands are ketjap manis and ketjap benteng; ketjap asin is not well known. Address: Head Office: 3e van de Kunstraat 18, 2521 BB Den Haag (The Hague), Netherlands. Phone: 70-388-8804.

2465. Welters, Sjon. 1990. Heuschen-Schrouff, the largest tofu and tempeh company in Europe and the Netherlands (Interview). *SoyaScan Notes*. March 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The largest tofu manufacturer in Europe and the Netherlands is Heuschen-Schrouff (pronounced HEW-shun Shrooff; "HEW" rhymes with "who" and "Schrouff" rhymes with "roof"). They make an estimated 35,000 to 40,000 kg/week (75-90,000 lb/week) of tofu. The company's production manager or director of operations, Han van der Hayden, visited Sjon in 1989 (Sjon took him through Nasoya's plant in Massachusetts and spent quite some time with him) and told him these figures. At the time, Heuschen-Schrouff wanted to upgrade their tofu production line from one they built themselves to a Takai or a Sato system. Sjon recommended Sato. They have not yet bought the new system.

Mr. Schrouff is the company's owner. In the early 1960s, Mr. Heuschen had a tofu company and Mr. Schrouff had a tempeh company (or perhaps vice versa). Sjon thinks they merged, then split up, then Mr. Schrouff bought Mr. Heuschen's business. Mr. Heuschen is no longer an owner, but he became the tofu production manager. Later Han became his supervisor.

Prior to the mid-1980s, Heuschen-Schrouff concentrated almost solely on the Indonesian market. After that time they started to make tofu for natural foods companies. They make tofu for Natufood, which is one of the largest distributors of natural foods in Holland. Natufood then created a separate division named Vetara which makes and sells a line of vegetarian protein products, such as TVP, Soy Schnitzels, mixes containing TVP used to make meat analogs—plus their Vetara Tofu. Natufood has a little newsletter, which they are expanding into a magazine for natural foods retailers in Holland. It is a good source of information on soyfoods.

In late 1989 Heuschen-Schrouff hired a new president and also bought another large tempeh company, perhaps Van Dappern's Tempeh Production Inc. So now Heuschen-Schrouff is Europe's largest manufacturer of both tofu and tempeh. Heuschen-Schrouff does a lot of private labeling for other companies; their tofu is sold under ten different brand names. They also export a lot of tofu from the Netherlands. Their biggest market is West Germany, followed by Belgium. Heuschen-Schrouff does not yet make second-generation tofu products; they may make some in the future or they may focus on making basic tofu. The next time Sjon goes to the Netherlands, he will probably be able to see the inside of the company. Address: Craft International Consultants, 21 Wetherbee St., Acton, Massachusetts 01720. Phone: 508-264-9511.

2466. Areekul, S.; Pattanamatum, S.; Cheeramakara, C.; Churdchue, K.; Nitayapabskoon, S.; Chongsanguan, M. 1990. The source and content of vitamin B-12 in the tempehs. *J. Med Assoc Thai* 73(3):152-56. March. \* Address: Dep. of Tropical Radioisotopes, Faculty of Tropical Medicine, Mahidol Univ., Bangkok, Thailand.

2467. Carantino, Sabine. 1990. Le soja perd son amertume [Soya loses his bitterness]. *Management et Technologies Alimentaires* No. 2. March. p. 65-66. [Fre]

• **Summary:** Last Oct. 7 companies that process soybeans joined to create AFISA (Association Francaise des Industriels du Soja), the French soyfoods association (5 Blvd. de la Méditerranée, 31400, Toulouse, France). This article uses the term "soyfoods" and discusses soymilk, tofu, tofu products (desserts, prepared foods). ONIDOL is involved, as is GEVP (*Groupement d'Études sur les Protéines Végétales*, 10-A rue de la Paix, 75002, Paris, France; founded in 1975). It has been decided to finance a market study (which will be completed this year) of 4 European countries: Belgium, France, Great Britain, and West Germany. They may develop a "French Soya" logo. At the same time, ONIDOL is organizing an Interprofessional Committee for Soy Proteins Destined for Human Consumption. It will coordinate scientific studies, communication, and information on vegetable proteins and "soyfoods."

In Europe, the degree of advancement of use of soy

protein in human foods differs considerably from one country to the next. The UK and Germany started earlier than France. In Germany, soyfoods are positioned on the "battlements of the dietetic market" whereas in France they are more oriented toward the mass market. In France, the high consumption of dairy products has not favored soymilk. 3-5 million liters of soymilk were produced in 1988, and the amount had roughly doubled by 1989. The new technologies allow production of soymilk with almost no bitter (beany) flavor, and it can be used to make good yogurts and desserts.

The first soy beverages and flavored desserts were launched only 5 years ago by Alpro (a division of Vandemoortele). The movement was then expanded with the creation of new brands, Celia (Laiterie Saint-Hubert-de-l'Hôtel) and Cacoja (Coopérative agricole de Colmar). Triballat created Soja Sun, a line of soy desserts. In 1988 the cooperative of Valence launched the Innoval line. Others include [Société] Soy, Sojadoc (Richemont) and Sojal. Many of the leaders are dairy companies, but they position their products very differently from dairy milk. Also in the French market are Lima from Belgium (with tempeh and tamari). Tonidoc makes soynuts sold as an aperitif. The French company Bunge, a third party, and Sofiproteol (Sofiprotéol) have created Sogip, which produces soy protein concentrates for use as both calf milk replacers and in human foods.

Concerning regulations, the definitions and uses of soy protein are set forth in a circular of 27 Aug. 1975, which related to another document of 12 Oct. 1972 for terminology. Finally a new circular of 1986 replaced the earlier ones. The Codex Alimentarius will finish its work on these areas in 1991.

A sidebar describes Innoval and its goals. Address: France.

2468. Gray, Sylvia Ruth; Rogers, Sherry A.; Cohen, Gary Martin. 1990. Here's the B-12!. *Solstice* No. 40. p. 10-13. March.

• **Summary:** "In a follow-up to last issue's cover story, three macrobiotic researchers offer their perspectives on diet and the elusive vitamin B-12." S.R. Gray believes that B-12 deficiencies may be linked to "cobalt-deficient soils and habitual use of various soy products... Recent tests on the tempeh from Turtle Island Soy Dairy were a breakthrough: comparative testing (between *L. leichmannii* and *O. malhamensis*) suggested the absence of analogues and B-12 findings of 5.5 micrograms/120 gm (4 oz.), which is excellent—a far cry from Specker's mean of 0.05 micrograms/100 gm on six tests of tempeh!

"My barometer for good quality miso is that it promotes a substantial rise in bread. Ohsawa America, South River and Yamazaki all produce dark misos which make our 50 percent whole grain bread rise beautifully... One good miso was tested and was found to have B-12 levels four times higher than that found by the Dutch researchers last year. Future

tests may prove even this figure to be falsely low; miso testing is tricky, since high salinity affects B-12 extraction processes...

Will the addition of B-12-making bacterial cultures be helpful in the process of making tempeh? "Actually, since the B-12 content of foods such as tempeh mirrors the cobalt content of the substrate, I suspect no amount of *Rhizopus oligosporus* or *Klebsiella pneumoniae* can make B-12 in the absence of cobalt. In fact, the addition of *K. pneumoniae* to a tempeh culture may actually *decrease* final B-12 content because of competition for resources."

G.M. Cohen notes that B-12 deficiency may be caused by chronic mercury poisoning from dental amalgam fillings. Address: Strictly Macrobiotic, 315 First Ave., Salt Lake City, Utah 84103. Phone: 801-521-7936.

2469. Ontario Soybean Growers' Marketing Board. 1990. A profile of the Canadian soyfoods market—Characteristics and potential. Box 1199, Chatham, ONT N7M 5L8, Canada. vi + 40 p. March. 28 cm. Spiral bound.

• **Summary:** Contents: 1. Introduction: Background, study objectives. 2. Research procedures: Data limitations, data collection (data sources). 3. The soyfood market: Soyfood production and utilization, domestic production, imports and exports (introduction, whole soybeans, soy flours and meals, soy oil, soy sauce, protein substances, cream and other substances, bran & soy hulls, soy meal oil cake), balance, conclusions regarding opportunities.

4. Soybeans for food purposes: Natto beans (background, market characteristics, market potential), whole bean soyfoods (introduction, soynuts, full fatted soy flours, soymilk, tofu, soy sprouts, tempeh, miso, natto, soy sauce), foods from soy ingredients (introduction, defatted soy flakes, soy protein concentrate, soy protein isolates, textured soy protein, consumption and imports). 5. Organic soyfoods: Introduction, organizations (major players, labelling requirements, certification), organic soybeans, organic soyfoods, market opportunities, recommendations.

6. Market estimates: Introduction, conversion rates, market characteristics (introduction, ethnic characteristics, immigration trends, implications), soyfood consumption (production). 7. Soyfood products: Introduction, new products (whole bean products, products from soy components), existing products (products with potential for growth). 8. Marketing strategy: Introduction, respondent requests (background), market opportunities (traditional soyfoods, new products), systems development (system information needs, human resources, production research), institutional needs.

This study was commissioned by the Ontario Soybean Growers' Marketing Board to provide a description of the Ontario soyfood industry. "Production and utilization: In the 1988 crop year, approximately 1.12 million tonnes of soybeans were produced on 1.28 million acres in Ontario.

Approximately 86% of the soybeans were sold through the Board, with the remainder being fed or retained on the farms where they were grown. In 1988, 860 thousand tonnes of soybeans were crushed in Canada to produce soybean meal and soy oil, and 272 thousand tonnes were exported.

"Imports and Exports: Canada had a negative balance, a deficit, of almost \$190 million in the value of soybeans and soy products traded. This is just over half a million dollars per day. Our largest single area of exports is whole soybeans for human foods. The percentage of these beans going to the major markets in 1988 were: USA, 37%; Pacific Rim Countries, 34%; and Europe and other 29%. Our greatest imbalance in exports and imports is in soybean meal or oil cake. Canadian crushers are unable to maximize their sales of oil cake because of difficulties in selling surplus soybean oil in the US. Soy oil being sold into the US presently faces a tariff of 18% which is decreasing at the rate of 2.25% per year as per the Canada United States Trade Agreement...

"Institutional development: We suggest the Board initiate the establishment of a Soyfood Development Association similar in structure and function to the Canola Council of Canada... There is a need to begin to bring all industry stakeholders together to systematically identify problems, information and research needs; develop data bases; and cooperatively promote the soyfood industry."

Soybeans for food purposes: The total volume of soybeans consumed as soyfoods in Vancouver (BC), Toronto (Ontario), and Montreal (Quebec) was estimated at about 6,000 tonnes, and imports were estimated to be equivalent to 8,000 tonnes of soyfoods.

Miso: One large Vancouver producer and one Toronto producer estimated that the volume of soybeans used to make miso in Canada is only about 35 tonnes/year.

Modern Soy Protein Products: Soy flour, concentrates, isolates, and textured soy protein products. Roughly 2,400 tonnes of soybeans are used in Canada for the production of these products, and 5,600 tonnes of soybeans are used to make the imported products (only bakery flour and extruded flour are made in Canada). Almost 1,000 tonnes of soy protein concentrates and isolates, and 400 texture soy proteins were imported, 83% from the USA. Total exports were 800 tonnes, of which 578 tonnes went to the USA. Soy flour (full-fat): The term "flour" generally signifies that the material has been ground finely enough to pass through a 100-mesh screen. Only relatively small volumes of full-fat soy flours are used directly as human foods. Some are used in bread, crackers, and pastry products. 5 companies in Canada make 1,538 tonnes of soy flour worth \$495,000.

Natto: Canadians sells roughly 8 to 10 thousand tonnes of natto beans in Japan each year. Natto-type beans are "created by screening out the small beans from among regular food grade soybeans which have white hilums" (p. 15). In Japan about 100,000 tons/year of soybeans are used to make natto. Recently, Canada (via 3 companies—First Line

Seeds, W.G. Thompson, and King Grain) has supplied about 10% of this market. Ontario produces about 8,000 to 10,000 tonnes of natto beans. Competition is expected to increase from U.S. seed breeders.

**Soymilk:** There are presently no large Canadian soymilk manufacturers. A plant is being built by an international trading company near Vancouver (YHS Pacific Fruit Concentrates Ltd., owned by Yeo Hiap Seng). It will supply both the local market and the Western U.S. market when it goes on stream later this year. A high proportion of imported soymilk is organic. Two brands account for 3/4 of all imports: Edensoy and Vitasoy. A high proportion of all soymilk imports are certified organic. This emphasis makes it difficult for Canadian producers to compete because of the shortage of organic soybeans in Canada. Consumption of soymilk is increasing at about 10% a year. Prices range from \$1.50 to \$2.75 per liter, with the organic product commanding the higher prices. Just under 100 tonnes of soybeans are used to produce soymilk in Canada: Vancouver 42 tonnes, Toronto 30 tonnes, Montreal 25 tonnes, plus imports 240 tonnes. 1 kg of soybeans produces 16.5 kg of soymilk.

**Soynuts:** The volume of soynuts made in Canada is quite small. One Toronto company [Grove Country Foods Canada, Inc.; they were in business 1-2 years, but were out of business by Jan. 1991], which began operation in Nov. 1988, sells a line of roasted nuts, which are roasted in the USA and chocolate-dipped in Ontario. Production was only a few tonnes in 1989 and is estimated to be about 10 tonnes in 1990.

**Soy sauce:** In 1986, according to Statistics Canada data, 2,503 tonnes of soy sauce were produced by 6 firms. The value was \$2,161 per tonne for a total of \$5,411,000. In 1988 Canada imported 5,680 tonnes of soy sauce valued at \$4 million, primarily from China, the United States, Hong Kong, and Japan. Exports were 58 tonnes valued at \$65,000. The major Canadian producers are China Lily and Sun Fresh in Toronto, Wong Wing and VH in Montreal, and Golden Dragon in Vancouver. The value of Toronto production is currently estimated to be about \$5 million.

**Soy sprouts:** One Toronto manufacturer uses 20-25 tonnes of soybeans per year.

**Tofu:** About 3,300 tonnes of soybeans are used to produce tofu in Canada, more than any other soyfood. The volume of soybeans used is estimated at 1,400 tonnes in Toronto, 1,200 tonnes in Quebec (when a relatively large operation in Hull [La Soyarie, Inc.], near Ottawa, which exports to Ontario is included), 625-700 tonnes in Vancouver, and 125 tonnes for imported tofu. 1 kg of soybeans produces 2.4 kg of tofu.

**Tempeh:** Only about 33 tonnes of soybeans are used to make tempeh in Canada, and an estimated 15-20 tonnes in Ontario. Imports are relatively small. 1 kg of soybeans produces 1.6 kg of tempeh. Very few firms produce tempeh

in Canada. One producer claims to have over half the Ontario market. A major distributor suggested they sold 4-5 times as much tofu as tempeh.

**Soybean crushing:** Since 1986 the number of firms crushing soybeans and producing soy oil has decreased from 3 to 2 [Central Soya owns two plants; in 1990 they bought the Canadian Vegetable Oil Processing (CVOP) plant in Hamilton, Ontario, formerly owned by Canada Packers Inc. They purchased Victory Soya Mills in Toronto in early 1985. So now 2 firms own 3 plants]. In 1986 the three plants made 95,108 tonnes of crude soy oil worth \$57,271,000. Two firms made deodorized soy oil, but the volume and value were confidential. Less than \$2 million of any type of soy oil is imported.

Consumption of soyfoods in Canada is strongly linked to Asian-Canadians. A table (p. 32) shows that according to the 1986 census, there were about 444,000 people of East- and Southeast Asian origin living in three major Canadian cities: Vancouver (155,105 people comprised 11.2% of the city's population), Toronto (234,325 people comprised 6.8%), and Montreal (55,585 people comprised 2.4%). Thus Toronto was by far the largest market, but Vancouver had the highest density of Asian-Canadians. A similar table (p. 33) updates the previous table to 1988. Immigration has increased sharply since then.

**Note:** This is the earliest document seen (Feb. 2002) that uses the term "food grade" (or "food-grade") in connection with Canadian soybeans (see p. 15). Address: Chatham, ONT, Canada.

2470. Vaidehi, M.P.; Rathnamani, A. 1990. The shelf-life of soy-sunflower tempeh and its acceptability to Indian children. *Food and Nutrition Bulletin (United Nations Univ.)* 12(1):53-56. March. [8 ref]

• **Summary:** One hundred school children ages 5-7 years from a rural school were given tempeh products in small quantities to test their acceptability. The products were ranked from best liked to least liked.

"Acceptability: All the blended [soy + sunflower] tempeh products showed a high percentage (90%) of acceptability. The toffee scored the highest (100%). Only 6% of the children disliked the sweet chips, 4% the salted chips, and 2% the stew."

Soy-sunflower tempeh costs 60% less than lamb and 35% less than chicken. Its energy content is much higher than that of either meat. It has high protein and fat content and no cholesterol. "Unlike most meats, there is no wastage in tempeh in the form of bones or undesirable fat."

**Conclusion:** India needs a tempeh industry. Small-scale tempeh makers, as in Indonesia, can improve the economic status of the rural population while improving the diets of both children and adults. Agricultural extension services should make intensified efforts to promote and make this popular product. Address: Dep. of Rural Home Science of

the Univ. of Agricultural Sciences, Bangalore, India.

2471. Krohn, Joni. 1990. Standard Industrial Classification (SIC) Codes: SIC classification ended in about 1984; SITC (Standard International Trade Classification) is now in use (Interview). *SoyaScan Notes*. April 5. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** *The Standard Industrial Classification Manual* is published by the Office of Management and Budget (OMB), which also publishes the SIC codes. Another related publication is *The Numerical List of Manufactured and Mineral Products*, and its *Alphabetic Index*, both published by the Census Bureau (within the Department of Commerce); these documents expand the basic 4-digit SIC codes to 7-digits to give more detail: Our industry is most aptly characterized by 2075A = Soybean products.

0116 = Soybean farms. Any industry that starts with zero is agricultural.

2024-071 = Mellorine and similar frozen desserts, incl. those made with tofu.

2026-717 = Products which substitute for fluid milk products [probably includes soymilk].

2026-718 = Other perishable dairy product substitutes [probably includes soy yogurts & cheeses].

2035 = Pickled fruits and vegetables.

2035-234 = Other finished pickles and pickled products [incl. mixes, relishes, peppers, onions, and mushrooms; probably includes miso].

2035-351 = Other sauces, incl. Worcestershire, soy sauce, horseradish, meat, vegetable, etc.

2075 = Soybean flour, grits, meal, cake, and soy oil (unrefined).

2079 = Soybean cooking and salad oil.

2084 = Soybean fibers.

2099-955 = Tofu (Bean curd).

2099-998 = Other perishable prepared foods, sold in bulk or packages, not frozen [probably includes tempeh].

Note: in May 1984 the "Primary SIC" code assigned to tofu manufacturers by Dun & Bradstreet was either 2075 (Soybean Oil Mills), or 2099 (Food Preparation Nec.).

Examples of SITC numbers: Soya bean flour and other protein substances, textured 098.09. Soya bean flour, defatted (excl. protein concentrates) 081.31. Soya bean flour, non-defatted 223.9. Bean curd 098.09... Soya sauce 098.04. Soybean—see soya bean 098.04. Address: Dep. of Commerce, Bureau of the Census, Economic Surveys Div., Industry & Commodity Classification Branch, FOB-3, Room 2744, Washington, DC 20233;. Phone: 301-763-1935.

2472. Drosihn, Bernd. 1990. The founding and history of Viana Naturkost GmbH in Cologne (Interview). *SoyaScan Notes*. April 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bernd started to make tempeh in Cologne

in about Aug. 1989 after leaving Soyastern. He moved the company to his present address in Huerth, and started making soyfoods there in Jan. 1990. He makes 3 types of tempeh, 2 tempeh burgers, and 2 tempeh spreads (introduced in 1990). The burgers and spreads are selling well, but the basic tempeh is going more slowly since it is a little unknown to the German consumer—not as well known as tofu. The only other tempeh company in Germany is Byodo in Munich—they also make tofu. Both Bernd's company and Byodo make about 200 kg/week of tempeh. They each make their own tempeh starter. Recently Bernd wrote a little tempeh cookbook titled *Tempeh: A traditional food with a future* (1989, Viana).

The founder of Byodo was Lukas Kelterborn. Harry Whitford came a little after it was founded. Whitford left Soyastern about 6 months ago and since then has been unemployed, living in Dorsten (100 km away; Alleestr. 13a, D-4270 Dorsten 1, West Germany. Phone: 02362-43493), where he runs a Zen Center.

Bernd feels that the future looks bright for his company, in part because he is also making second generation tofu products, including 2 tofu spreads, and 1 tofu sweet cream dessert, all launched in 1990. He buys the tofu from Tofuhaus Tiefenthal because the quality is excellent, better than from Soyastern although the price is higher than that from Soyastern.

He is now also making two short-term misos (a rice miso and chick-pea miso), fermented for 3-4 months, plus a miso spread. He started to sell these 6 weeks ago and they are selling well. His company address used to be Neusserstrasse 199, D-5000 Cologne 60, but he has recently moved. Address: Founder and president, Viana Naturkost GmbH, Schmittenstr. 106, D-5030 Huerth 6 (Fischenich), West Germany. Phone: (02233) 41323.

2473. Toronto Star. 1990. Next week in the Star: The future of food—Wednesday (Ad). *Toronto Star (Ontario, Canada)*. April 28. p. E37.

• **Summary:** "Set your cooking appliances to the 21st century as Marion Kane presents a futuristic look at some new-age recipes. From tempting tempeh to fabulous fajitas, you'll discover how to be environmentally friendly and health conscious without giving up any good, old-fashioned flavor. The food section lands Wednesday."

2474. Bates, Jonathan. 1990. West Coast tofu industry: Soybean market outlook for Malheur County, Oregon. Oregon State University, Corvallis, Oregon. 33 p. [12 ref]

• **Summary:** Contents: Introduction. Soybean market: World and domestic. The low technology soyfoods industry. Processor requirements. Assessment of producing soybeans in Malheur County. Conclusion. West Coast tofu and soyfood processors: California, Oregon, Washington. Bean warehouses and cleaners. Selected soybean brokerages and

growers. Other information. Literature.

“There is interest in Malheur County, Oregon in introducing soybeans as an alternative rotation crop in place of wheat.” Research is being done at the Malheur Experiment Station. These would be food grade soybeans destined for the West Coast soyfood processing industry. “The purpose of this report is to investigate the west coast food grade soybean market. Particular emphasis is placed on the tofu market in Portland and western Oregon, Seattle (Washington), and San Francisco (California). The main objectives of the study are: 1. To determine the requirements and/or preferences of soyfoods processors in regards to soybean quality, bean variety, growing regimes (organic or regular), packaging and delivery, and method of purchase. 2. To determine the economic feasibility of using soybeans as a rotational crop in the county in place of wheat. 3. To consider the competitive advantages, if any, of growing soybeans in Malheur county as opposed to the more traditional growing areas of the Midwestern and Southeastern United States.

Information on soybean consumption is given for the following tofu and soyfoods manufacturers, ranked here in descending order of soybean usage. All produce tofu and/or soymilk unless otherwise noted.:

Pacific Foods Inc., Tualatin, Oregon (57,700–77,000 lb/week [expressed as 3–4 million lb/year] of nonorganic and organic soybeans from midwest brokers, bulk and bagged, for soymilk. “Growth is expected to slow unless soymilk can be marketed to the general public”).

Azumaya Inc., San Francisco, CA (48,000–60,000 lb/week of Vinton and Corsoy purchased from broker. Market growing at 3–4% annually).

House Foods & Yamauchi, Los Angeles, CA (54,000 lb/week of nonorganic Corsoy and Vinton purchased from broker-grower association. Steady growth. Expanded capacity in 1987).

Mighty Soy, Los Angeles, CA (11,000–12,400 lb/week of mainly Corsoy and Vinton, half organic and half not, purchased from brokers or growers associations).

Wy Ky, Los Angeles, CA (7,800–9,000 lb/week of nonorganic Corsoy, purchased from growers. 5% annual growth).

Island Spring and Soy Resources Inc., Vashon, WA (5,400–6,000 lb/week of organic Corsoy, purchased broker. 3–5% annual growth).

Surata Soyfoods, Eugene, Oregon (3,000–4,200 lb/week of organic Vinton and Corsoy purchased from broker-grower).

Silver Sprout, San Francisco, CA (3,000–3,600 lb/week of nonorganic Corsoy and Vinton purchased from broker, bagged or bulk).

Dae Han & Co., Portland, Oregon (2,400–3,000 lb/week of organic Vinton purchased from Midwest grower association. Steady growth).

Turtle Island Soy Dairy, Husum, WA (2,100–2,400 lb/

week of organic Corsoy and Vinton purchased from Iowa broker for tempeh. 5% annual growth).

Arcata Soyfoods, Arcata, CA (1,200 lb/week of organic Corsoy purchased from grower).

Fuji Tofu Co., San Jose, CA (1,200 lb/week of organic varieties purchased from broker).

Ashland Soy Works, Ashland, Oregon (1,800 lb/week of organic Vinton and Corsoy, purchased from growers. Steady growth).

Hoven Foods Co., Seattle, WA (1,655 lb/week of Lee 74 purchased from Jacob Hartz Seed Co. 5% annual growth).

Tacoma Soyfoods, Tacoma, WA (1,200 lb/week of Vinton, Corsoy, Davis, Lee, and Holland, organic and inorganic, purchased from Midwest Soy International [grower assoc.]. 5% growth last year).

Kobayashi’s Soybean Products, Ontario, Oregon (420–540 lb/week of Corsoy purchased from Midwest growers). Address: Graduate research asst., Oregon State Univ., Corvallis, Oregon.

2475. Leigh, Roberta. 1990. Soyfoods: Why their popularity is growing. Special advertising section. *New Age Journal (Boston, Massachusetts)* 7(2):100–. March/April.

• **Summary:** Since the 1920s, Americans have been taught that they need at least two servings of meat and two glasses of milk each day to get enough protein. Many people switching to vegetarian diets or reducing their meat consumption feel most comfortable if they continue to plan at least some of their meals around a high-protein food.

“Consequently, the popularity of soyfoods has boomed during the past two decades... They can also be prepared in a number of ways, such as tofu and tempeh, that mimic ‘meatiness’ in terms of eating satisfaction.

“Shoyu and tamari, both fermented soy sauces, and miso, a fermented soy paste, are often used as bases for soups, gravies, and sauces; many people feel they impart a rich flavor to meat stock. Soy milk and soy cheese are popular with people who want to minimize or eliminate dairy products from their diets. There are even smokey-flavored imitation bacon products made from soy.

“Tofu is a cheese-like product containing the protein, oil, and soluble carbohydrates from whole soybeans that have been crushed and cooked...—Roberta Leigh.”

2476. Moran, Victoria. 1990. Weight training for vegetarians: Pumping iron on plant power. *Vegetarian Times*. April. p. 34–39. [3 ref]

• **Summary:** About vegetarian body builders. Spice Williams is a vegan who likes tofu and tempeh. She played a female Klingon in *Star Trek V*. Two photos show Williams, one as a Klingon. Also features Bill Pearl, Andreas Cahling (each with a photo), and Ron Weston.

2477. **Product Name:** Multi-Grain Tempeh Italiano.

**Manufacturer's Name:** Surata Soyfoods.

**Manufacturer's Address:** 302 Blair Blvd., Eugene, OR 97402. Phone: 503-343-8434.

**Date of Introduction:** 1990. April.

**Ingredients:** Sprouted organically grown soybeans, rice, millet, water, apple cider vinegar, tempeh culture (*Rhizopus oligosporus*). Plus: Organic oregano, garlic, basil, and other Italian herbs and spices.

**Wt/Vol., Packaging, Price:** 10 oz in poly bag.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Form filled out by Shevah Lambert. 1990. July 2. Surata now makes about 625 lb/month of this product. Production started in April 1990. It is the multi-grain tempeh with 6 different herbs and seasonings incl. oregano, basil, garlic, onion powder.

Label sent by Shevah Lambert. 1991. Jan. 16. Same as the Multi-Grain Tempeh label with a 2 inch diameter round stick-on label, red and green on white, that says: "New! Italiano. Richly seasoned with organic oregano, garlic, basil, and other Italian herbs and spices." On the back are recipes for Tempeh stroganoff, Tempeh burgers, and Tempeh spaghetti balls.

2478. **Product Name:** Tempeh [Soy, Wild Rice Rhapsody, Indonesian Style, or Five Grain].

**Manufacturer's Name:** Turtle Island Soy Dairy.

**Manufacturer's Address:** P.O. Box 218, Husum, WA 98623. Phone: 509-493-2004.

**Date of Introduction:** 1990. April.

**Ingredients:** Soy Tempeh: Organic soybeans, well water, apple cider vinegar, *rhizopus oligosporus*.

**Wt/Vol., Packaging, Price:** Soy Tempeh: 8 oz package.

Retails for \$1.29. Wild Rice Rhapsody: 8 oz package. Retails for \$1.59. Indonesian Style: 10.5 oz package. Retails for \$1.89. Five Grain: 8 oz package. Retails for \$1.49.

**How Stored:** Frozen or refrigerated.

**New Product–Documentation:** Soya International. 1990. April/June. p. 24. Contact: Seth Tibbott. Wild Rice Rhapsody ingredients: Same as Soy Tempeh plus long grain rice, short sweet brown rice, wehani rice, black japonica rice, wild rice. Indonesian Style ingredients: Same as Soy Tempeh but with a firmer texture. Five Grain ingredients: Same as Soy Tempeh plus rice, millet, sunflower, sesame seeds. Products listed in Fowler Brothers catalog. 1991. Jan.

New Packages/Labels for all four products sent by Turtle Island. 1991.

Leaflet. 1992. "Discover Turtle Island." "Indonesian Style Tempeh. A special recipe using traditional methods! It's thicker, whiter tempeh, which can be cut very thin without falling apart."

New Package/Label for Indonesian Style Tempeh sent by Dave Wampler, business manager of Turtle Island. 1993. May 20. 5.5 by 8.5 inches. Yellow, black, green and white. At the bottom of the front panel are two windows.

One is transparent so the user can see the tempeh. The other contains an illustration of a Javanese shadow puppet by Akiko Aoyagi from *The Book of Tempeh*. Front panel: "Reusable / Recyclable bag. Since 1980. The superior taste. A good source of vegetarian protein. Certified organic soy beans. Versatile meat substitute. Recipe and recycling offer on back. Keep frozen." Back panel: "Made in the Cascade Mountains." There is a recipe for Sambal Goreng Tempeh and a recycling offer for a Wham-O Frisbee. The company's address is now P.O. Box 176, 601 Industrial Drive, Hood River, Oregon 97031. Phone: (503) 386-7766.

2479. **Product Name:** Wild Rice Rhapsody Tempeh.

**Manufacturer's Name:** Turtle Island Soy Dairy.

**Manufacturer's Address:** P.O. Box 218, Husum, WA 98623. Phone: 509-493-2004.

**Date of Introduction:** 1990. April.

**Ingredients:** Organically grown soybeans, long grain brown rice, sweet brown rice, wehani rice, black japonica rice, wild rice, cascadian well water, vinegar, *rhizopus oligosporus* (Tempeh starter).

**Wt/Vol., Packaging, Price:** 8 oz package. Retails for \$1.59.

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per 4 oz.: Calories 193, protein 14 gm, carbohydrate 19 gm, fat 8 gm, cholesterol 0 mg, sodium 2 mg.

**New Product–Documentation:** Soya International. 1990. April/June. p. 24. Contact: Seth Tibbott. Label sent by Seth Tibbott. 1990. July. 4 by 5 inches. Yellow and red on black. Illustration shows turtle logo. "Made in the Cascade Mountains. Keep refrigerated. May be frozen."

2480. **Product Name:** [Tempeh Pasta Pockets].

**Foreign Name:** Tempeh Teig Taschen.

**Manufacturer's Name:** Viana Naturkost GmbH.

**Manufacturer's Address:** Schmittenstr. 106, D-5030 Huerth 6, West Germany. Phone: (02233) 41323.

**Date of Introduction:** 1990. April.

**New Product–Documentation:** Letter from Bernd Drosihn, founder of Viana. 1990. May 10. This fresh product, which has no label, was introduced in April 1990.

2481. Whitford, Harry M., III. 1990. Re: Early history of Byodo Naturkost GmbH. Letters (faxes) to William Shurtleff at Soyfoods Center, May 11 and June 8. 2 p.

• **Summary:** "Byodo Naturkost was founded in the summer of 1984 by Lukas Kelterborn (whose idea it was), Hermann Konrad, and myself. I contributed the name—Byodo is the Japanese Buddhist term meaning "eternity," or with extended vowels (Byôdô) "equality" as implied in the perfection of indifference. The full original name was "Byodo Naturkost, Lukas Kelterborn, Hermann Konrad & Harry Whitford." It's legal status was a "GbR" ("Gesellschaft buergerlichen Rechts"—a "Personen Gesellschaft"), that is, a company

made up of individuals who carry full personal responsibility for the debts and assets of the company. In Germany, such a company must include the names of all owners in the company name. Hermann and I were both cooking at Keyno Vegetarian Restaurant, where I was in charge of soyfoods production and quality. We made our own tofu and tempeh at the restaurant.

“Byodo started as a tempeh company. The first product was Frisches Tempeh (Fresh Tempeh, in English). Production started in about Sept. 1984. Originally we were in the Thalkirchnerstr. in Munich in a former bakery together with the Italian Aikido-teacher and Tofu maker Georgio Sapia. I don’t remember the exact address. Lukas left a few months after we started in about Oct. 1984 to take over a health food store (Reformhaus). We started making a Tempeh Burger (Tempehburger) later that fall after we realized we couldn’t keep the company going only on tempeh.

“A Tofu Burger (Tofuburger) followed shortly afterwards that fall and Lukas’ last service to the company was to establish the tie to Soyastern, which was unable to fry burgers due to complaints by the neighbors. We started buying tofu from Soyastern in Cologne to make burgers for them—at a distance of 400 miles!

“On 2 July 1985 Byodo Naturkost was transformed into a new company with a new structure, Byodo Naturkost GmbH. GmbH stands for “Gesellschaft mit beschränkter Haftung” (“Company with limited liability”), which is comparable to a “Co. Ltd.” in the USA. Michael Mossbacher entered the company at that time, and the base capital was used to move to Hirschbergstr. 9.

“In the fall of 1985 we started making tofu after a scandal: We had been buying tofu from Sapia to make our burgers for the Munich market. But he bought conventionally grown beans and sold the tofu as bio [organic]!

“In early 1986 (winter) we made tofu spreads (Tofu Brotaufstrich). There were 3 kinds: Paprika, horseradish & green pepper (Paprika, Meerrettich & Gruenerpfeffer). We also started making Vegetable Tofu (Gemuese-Tofu), which is tofu with chopped veggies pressed into it—ready to fry. Somewhere along the way we started to make tofu to sell also. I don’t know when.

“I left Byodo in September 1986 after unsolvable differences became ridiculous and intolerable. Another reason I left was that none of the others at Byodo had ever had anything to do with spiritual practice.

“I worked part time at Svadesha making tofu until I could clear up my debts enough to be able to accept Soyastern’s offer and make the move to Cologne. I started advising Soyastern ‘unofficially’ in Jan. 1987. The move and work permit finally came together on July 15, 1987.

“Soyastern is now basically bankrupt, with debts of DM300,000 (US\$150,000), whereas the German legal limit is DM50,000.” Address: Eurosoy consulting, Alleestr. 13a, D-4270 Dorsten 1, West Germany. Phone: 02362/43493.

2482. Demos, Steve. 1990. Pasteurization, packaging, and freezing of tempeh (Interview). *SoyaScan Notes*. May 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave, America’s largest tempeh manufacturer, pasteurizes all of their tempeh using a steam blanch. The details of the process are a trade secret, however it is not at all difficult for any company to figure out a good method, which extends the refrigerated shelf life to 16 days from less than 5 days, and which results in only a very slight lowering (almost negligible, except for connoisseurs) of the product’s quality.

The basic idea is to take the tempeh as soon as it comes out of the incubator (at White Wave it is in individual perforated plastic bags) and put it on racks in a sealed chamber. This might be a large metal box that fits down over the rolling rack or an oven-like box. Live steam is run into the chamber for a certain typical of time (say 15 minutes) and temperature for pasteurization until the core of the tempeh is pasteurized. Steam quickly transmits its heat to the tempeh core.

Steve feels strongly that tempeh should not be vacuum packed, a process which he feels compacts the tempeh into a mush, greatly lowering its quality and appearance. However Lightlife Foods run by Michael Cohen, America’s second largest tempeh maker, vacuum packs it, as does Northern Soy. Pacific Tempeh also vacuum packed. Vacuum packing a clean, pasteurized tempeh will probably give a shelf life of least 30-45 days. And if the tempeh is blanched in a vacuum package, the shelf life would be much more than 45 days. The potential from botulism under these conditions is extremely small due to competing organisms in the tempeh. White Wave is experimenting with a number of other ways other than blanching to extend shelf life under refrigeration.

All White Wave tempeh is shipped frozen from the factory. Some White Wave tempeh is now sent to the East Coast and exported to Europe. Freezing does decrease quality a little but it also greatly extends shelf life if the tempeh is shipped over a long distance. Steve feels that the main determinants of tempeh quality precede pasteurization—sanitation, starter, cooking, incubation, etc. White Wave recommends that retailers sell their tempeh out of the refrigerator, where it sell much faster and at lower cost than it does out of the freezer. In each case is a “merchandising slip” that tells the retailer to place the tempeh in his refrigerated case next to the yogurt in between the tofu, and to expect it to last at least 16 days. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3485.

2483. Andersen, Thomas. 1990. History of pioneering work with tempeh and tofu in Denmark (Interview). *SoyaScan Notes*. May 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Thomas, a native of Denmark who speaks flawless British English (in part because of his extensive travels), got interested in macrobiotics in about 1982-83 and, looking for work, traveled to London to study at the Community Health Foundation (founded in 1976 to teach macrobiotics). There from Simon Brown (the expert on soyfoods, who taught classes on how to make tofu and tempeh), Jon Sandifer, Roger Green (presently in Australia), and Andrew Leech, he learned how to make tempeh. There was a small commercial tempeh shop in the kitchen of the Community Health Centre; it started after the kitchen's closing time. He returned to Denmark and in 1985 he started the country's first tempeh shop, named Thomas Tempeh, located on Tagens Vej in Copenhagen. He had two problems. First, since many of his customers were interested in macrobiotics, they did not want the tempeh frozen, and it had a shelf life of only 8 days fresh. Second, the market was very small. So Thomas realized that if he wanted to survive working with soyfoods, he would have to make tofu as well as tempeh.

The two earliest tofu companies in Denmark were Dansk Tofu (owned by Ted Goldberg and some other guys) and Soy Joy in the Valby district of Copenhagen. [Note: Tofu Denmark in Valby was started in March 1982 by Per Fruergaard from Christiania]. The owners of Soy Joy were very idealistic. They never got a packaging machine for their tofu; they just delivered it in bulk in water, which the Danish health authorities, who are very strict, did not like. They were only in business for about 3-6 months. In late 1985 Thomas bought most of the tofu equipment owned by Dansk Tofu, which had been in business for about 1 year. The company was owned by Ted Goldberg, and they had stopped making tofu about 6 months earlier. At this time, Dansk Tofu simply disappeared. And now Thomas started making tofu and marinated tofu, still at Tagens Vej. On 1 Jan. 1986 he moved the business to Soendergade in the city of Toelloese, Denmark. The business was still named Thomas Tempeh. He quickly expanded his product line to include Tofu Pâtés and Smoked Tofu. All of his products were always made with organically grown soybeans. Then he ran into problems with the health inspectors. They did not like the fact that he was making tofu and tempeh in the same place, that he was smoking the tofu himself, and that there were problems with the tofu pasteurization. Moreover, Thomas was overworked (18 hours a day) and undercapitalized. He and one employee were making 500 kg/week of soy products. So in September or October 1986 he sold his business to Urtekraemmeren (pronounced ur-te-KRAH-mer-en), which had previously imported soyfoods from Japan but had never manufactured any.

Then Thomas went to Switzerland to help out with a tofu factory named Berner Tofurei, located in Bern and owned by Infinity, a macrobiotic group. In about Dec. 1986 Urtekraemmeren moved their newly acquired tempeh and

tofu company to its present location in Soeborg, Denmark, and renamed it Urten's Tofu, and stopped making tempeh since the health inspectors didn't want tofu and tempeh to be made in the same room. Tempeh was selling, but not enough to justify buying a separate room and equipment for it. In April 1988 Thomas returned to Denmark and began to work as a tofu maker for Urtekraemmeren at Urten's Tofu, the company he had founded. The company was in bad shape: there were constant problems with the health inspectors, the equipment was old and bad, a long pressing time led to bacterial contamination, etc. In late 1988 or early 1989 Urten's Tofu started selling their tofu to Nutana, a large manufacturer of vegetarian foods owned by the Seventh-day Adventist church. This was a turning point in the history of the business. In about May 1989 Thomas told Urtekraemmeren that if they invested in new equipment he could make the company successful. They liked the idea so Thomas went to the SIAL food fair in Paris, met Takai, and bought their largest pressure cooker (220 liters), new pressing tables, a pasteurizing tank, etc. The next big development came in Sept. 1989 when Urten's Tofu got their tofu into the Irma supermarket chain in Denmark. Then tofu began to sell better on the health foods market as well. Thomas, Tom Kristoffersen, and one other man now make the tofu at Urten's. But it is hard work and wages are low. There are no tofu books in Danish.

Today Urten's Tofu is the only tofu company in Denmark. They make, on average, 750 kg/week of tofu (range: 500 to 1,500 kg/week). Their three products are tofu, marinated tofu, and tofu pâté. Production is growing nicely but varies widely from week to week.

A new tofu company named Oy Soya Ab is now being starting in Ekenäs, Finland, by people there who import macrobiotic foods from Japan. One of the people is named Elizabeth. Thomas will work as a consultant for this new company. Address: Urten's Tofu, Hoeje Gladsaxe Torv 2, DK-2860 Soeborg, Denmark. Phone: 31 67 41 90.

2484. Macfarlane, Bruce J.; Riet, W.B. van der; Bothwell, T.H.; et al. 1990. Effect of traditional oriental soy products on iron absorption. *American J. of Clinical Nutrition* 51(5):873-80. May. [28 ref]

• **Summary:** Various soy products (silken tofu, tofu, tempeh, natto, different types of miso, sufu, and soy flour) were fed to 242 women. Blood levels of iron were then compared. Silken tofu, tempeh, natto, and the misos showed better iron absorption than tofu and sufu. The authors speculated that because tofu is higher in calcium, it might be this calcium that is inhibiting iron absorption. Silken tofu, coagulated with GDL, has a much lower calcium content than silken tofu. Address: MRC Iron and Red Cell Metabolism Unit, Dep. of Medicine, Univ. of Witwatersrand, Johannesburg; Div. of Food Science and Technology, CSIR, Pretoria; and the Dep. of Medicine, Univ. of Natal, Durban, South Africa.

2485. **Product Name:** Tempeh Burgers.

**Manufacturer's Name:** Soy Feliz.

**Manufacturer's Address:** 17802 N.E. 21st St., Gainesville, FL 32609. Phone: 904-485-1527.

**Date of Introduction:** 1990. May.

**New Product–Documentation:** Talk with Jose Caraballo. 1990. July 27. He started making and selling tempeh burgers at his home in May 1990. In Spanish “Soy Feliz” means “I am happy.”

2486. Vanka-Kawat B.V. 1990. Topmerken in de Aziatische levensmiddelen: Prijslist [The top brands in Asiatic foods: Price list]. 3e v.d. Kunstraat 18, 2521 BB Den Haag, Netherlands. 22 p. [Dut]

• **Summary:** The subtitle is “Import-Export Asian Food Specialties.” Imported items are listed by country of origin. Non-imported are listed by product type: China: Pearl River mushroom soy, soy superior, and superior soy. Philippines: Silver Swan soy sauce. Hong Kong: Best black soy, Best light soy, Best soy light, Best soy sauce, Black soy, Black soy yellow label, Hoi sin sauce Meechung, Taotjo bean sauce. Japan: Akamiso, Kikkoman menmi, Kikkoman shoyu, Kikkoman steak sauce, Kikkoman teriyaki sauce, Marukin soy sauce, Morinaga silken tofu, Nagatani-en aka-miso, shiro-miso, Teriyaki sauce. Ketjap: Ketjap kaki tiga, Ketjap A, Ketjap ‘A’ manis, Ketjap benteng asin, Ketjap benteng manis, Ketjap vital, Superior soy, Tiger brand soy, Yellow label. Singapore: Salted soy beans sin sin, Taotjo bean sauce, Taotjo flower brand, Taotjo taksan. Taiwan: Black beans fermented [soy nuggets], Soy sauce ve wong, Tahoe amigo, Tauge [sprouts]. Fresh products: Vacuum packet fresh tofu. Fresh tempeh. Address: The Hague, Netherlands. Phone: 070-388- 88 04.

2487. **Product Name:** Azuki Brown Rice Tempeh.

**Manufacturer's Name:** White Wave, Inc.

**Manufacturer's Address:** 1990 North 57th Court, Boulder, CO 80301.

**Date of Introduction:** 1990. May.

**Ingredients:** Soybeans, rice, azuki beans.

**New Product–Documentation:** Talk with Alex Press. 1990. Feb. 28. He calls to ask how to spell azuki/adzuki/aduki on the product label. The product should be out by mid-April. Talk with Steve Demos, president of White Wave. 1990. May 20. This product was launched 1-2 weeks ago.

Ad in Natural Foods Merchandiser. 1991. Jan. p. 61. “Tempting tempeh sale.” 15% off Azuki Brown Rice Tempeh.

2488. Urban, Svadesha Ruediger. 1990. The history of Tofurei Svadesha, West Germany's first tofu manufacturer (Interview). *SoyaScan Notes*. June 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ruediger Urban was born in about 1940. After 3-4 years of studying photography, in about 1969, he began working in a restaurant named Hotel Brauneberg that had been started by his brother in the city of Traben-Trarbach on Mosel (Moselle) River. At the restaurant he came across a large, high quality cookbook (covered in white silk) by Werner Fischer [or perhaps Alfred Walterspiel] titled *Meine Kunst in Kueche und Restaurant* (My Art, Kitchen, and Restaurant) that contained 2-3 pages of information in German about how to make tofu. He started to buy the ingredients, but he was so overworked that he had no time to really start experimenting with tofu.

Then he went to work in a “Macro-Shop” in Deggendorf, in the Bavarian Forest, but he did not do anything with tofu there. Meanwhile he sold arts and crafts at marketplaces for several years to support himself and his two sons.

Then, in about 1979, he started on the side to make tofu in a little farmhouse at Winterlehen 1½, Einweging, in the Bavarian Forest (Bayerischer Wald). He ordered a copy of *The Farm Vegetarian Cookbook*, from which he learned more about tofu. He made only one product, tofu, using organically grown soybeans and nigari coagulant. Initially he tried making the tofu without removing the okara, but he soon filtered the milk to removed the okara. He made the tofu using a gas stove, which he sometimes used in the kitchen and sometimes moved out into the garden. The tofu was sold under his name Svadesha (he was a disciple of Bhagavan Sri Rajneesh) but he had no officially registered business. On weekends his two sons, Premdeva (the elder) and Gyandeva, helped with the tofu business. Twice a week he produced about 30-40 kg of tofu, which he packed in small plastic tubs, loaded into his car? and drove more than 200 km (120 miles) into Munich. There he personally delivered it to a handful of the new generation of natural food stores (*Biolaeden*) that sold all of his tofu. These pioneer natural foods shops included Erdgarten (the first), and Macro-Shop on Amalienstrasse. While still in Einweging he introduced his second product, Kraeuter Tofu (Herb Tofu), made by mixing and mashing herbs into finished pressed tofu to make a sort of seasoned tofu cottage cheese.

After about a year making tofu at this location, he decided to go to India for 6 months, so he entrusted his small business to another person while he was gone. The company fell apart during this time. Upon his return from India, Svadesha moved the business to Aeussere Koetzingenstr. 52a, D-8492 Fuerth im Wald, very near the Czechoslovakian border, and farther away (about 200 km or 120 miles) from Munich. He knew a woman friend there where he could work and stay. This new tofu shop began operation on 1 March 1981 and, because of pressure from retailers who needed official invoices, he registered the company under the name Svadesha Pflanzen-Feinkost. By mid-1982 was using 20 lb of soybeans each time to make tofu 3 times a week. In

Furth im Wald he introduced a new product, Tofu Pflanzarl, a special kind of Bavarian meatless meatballs or “Bolleten.” Soon he was getting more and more orders.

So in 1983 Svadesha moved his company into Munich, his main market, and set up shop in Das Werkhaus at Leonrodstr. 19. Alexander Nabben’s tofu shop was in the same building, but Alexander kindly offered to stop making tofu at that time. Svadesha changed his company’s name to Tofurei Svadesha Naturkost Produkte. During this period, at meetings of Germany’s various German tofu makers, the question arose as to which company had started first. It was clearly decided and agreed that Svadesha had been the first. Other early companies were Alexander’s Tofu Shop (an underground business founded by Alexander Nabben at the Werkhaus on Leonrodstr. in Munich; started tofu production by Jan. 1981), and Auenland Tofu und Soja Produkte (founded by Peter Wiegand at Prien-Chiemsee; started tofu production in March 1982). Svadesha thinks (but is not sure) that Biogarten sold tofu made by other companies (including Svadesha’s) but never made their own. Note that all of West Germany’s early tofu companies started in southeastern Germany in the area around Munich.

In Munich, Svadesha kept making improved versions of his regular tofu, herb tofu, and tofu meatless meatballs. He also launched a new Tofu Pastete (Tofu Spread), and Raeucher Tofu (Smoked Tofu, in 3 flavors).

In 1985 Svadesha moved again, this time to a suburb east of Munich near Denning, into a former butcher shop (at Ospreussenstr. 22, D-8000 Munich 81), the company’s present location. There the company really started to earn money. They introduced a new type of Tofu Pflanzarl, new Tofu Pastete (one with herbs, and one with tempeh), Tofu Burgers, Spice Tofu, Tofu Spring Rolls, and Tofu Schnitten (Tofu Slices) marinated in shoyu then fried, and Sauerkraut Schnitten (Tofu slices filled with sauerkraut). He also started selling tempeh, which was made by Byodo Naturkost.

On 1 June 1990 Svadesha sold his company for a good price to Robert Mayer and Erhardt Schwartz. He had learned 1 year before that he had cancer of the cheeks. At that time the company acquired a new structure and the name became Tofurei Svadesha Naturkost Produkte GmbH. The new owners agree with Svadesha’s philosophy and have solid business experience, so the future looks promising. The company’s best selling products are now, in descending order of popularity: Plain Tofu, Tofu Pflanzarl, Smoked Tofu, Tofu Schnitten (marinated, deep-fried slices), and Tofu Spring Rolls.

Aside from being the first tofu company in Germany, Svadesha feels that his other major innovations were being the first to make smoked tofu, Tofu Pflanzarl (tofu meatless meat balls), Herb Tofu, Tofu Schnitten, and Sauerkraut Schnitten. Address: Home: Waldstr. 4, D-8015 Ottenhofen, West Germany.

2489. McKelvey, Richard. 1990. New developments at Lightlife Foods in Greenfield, Massachusetts (Interview). *SoyaScan Notes*. June 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Richard was the sales manager at Tomsun Foods while the company was growing rapidly and at the time it went bankrupt. New products at Lightlife Foods include Foney Baloney (Aug. 1989), Lemon Grill (Tempeh Burgers) (Nov. 1989), and Lean Links (April 1990). Lightlife now buys its tofu from Nasoya. About half the company’s sales come from tempeh and tempeh products, and about half from tofu products. The best-selling products are (1) Tofu Pups, (2) Lightlife Tempehworks Soy Tempeh, and (3) Fakin’ Bacon. The company is trying to get away from the pure Tempehworks products and to include Lightlife on every label. The new soy tempeh labels will read as shown above. He feels the Grills and the Lean Links have the greatest potential. The Lean Links are very close in concept to their meat counterparts. Address: Sales Manager, Lightlife Foods Inc., 74 Fairview St., Greenfield, MA 01301. Phone: 413-774-6001.

2490. Cardenas, Danilo C. 1990. Status of the Philippine soyfood industry. Paper presented at the International Conference on Soybean Processing and Utilization. Held 25-29 June 1990 at the Jilin Academy of Agricultural Sciences, Gongzhuling, China. \*

Address: Supervising Science Research Specialist, Philippine Council for Agriculture, Forestry, and Natural Resources Research and Development (PCARRD), Los Baños, Laguna 3720, Philippines.

2491. **Product Name:** [Tempeh].

**Manufacturer’s Name:** Fonte della Vita S.r.L. (La).

**Manufacturer’s Address:** Via Monviso 18, 12049 Trinita (Cuneo), Italy. Phone: (0172) 66 397.

**Date of Introduction:** 1990. June.

**New Product–Documentation:** Talk with Michael Brenger, production manager at Fonte della Vita. 1990. July 18. This product was introduced 1 month ago.

2492. Tenpe Kenkyushu-kai. 1990. Tenpe Kenkyûshû-kai: Koen yoshi [Tempeh Research Society: Highlights of the year’s first meeting]. Kobe Park City 2-1110, 6-2-1 Minatojima, Chuo-ku, Kobe 650, Japan. 18 p. [Jap]

• **Summary:** The forth or fifth meeting of this group, and the first in 1990, was held at Meiji University in Tokyo. An insert announces that Mr. Goro Kanasugi, a tempeh pioneer in Japan, died on 5 June 1990. Address: Kobe, Japan. Phone: 078-302-7065.

2493. Michael, Brenger. 1990. History of La Fonte della Vita S.r.L., Italy’s largest manufacturer of tofu and seitan (Interview). *SoyaScan Notes*. July 18. Conducted by William

Shurtleff of Soyfoods Center.

• **Summary:** This company was founded in Feb. 1985 by Mr. Demontis and his wife, Ms. Borello, on Via Matteotti?, in Fossano, about 35 miles south of Torino (Turin). He joined the company in the fall of 1985 and became a partial owner. He learned to make tofu from *The Book of Tofu* by Shurtleff & Aoyagi. Today the company is owned by 5 people, with the DeMontis owning the largest share; Mr. Mario Cozio joined later. Originally the company made only nigari tofu, but by autumn they had introduced 4 tofu spreads (tofu pâté), and soymilk. In April 1986 the company moved about 15 miles further south to Via Circonvallazione 87, 12049 Trinita (Cuneo), Italy. They are still at the same location but the street was renamed in about 1987? so that their present address is Via Monviso 18, 12049 Trinita (Cuneo). After the move, they introduced two types of seitan (plain and fried), fried tofu, tofu with herbs, then two tofu burgers (one with sea vegetables, and one with seitan). They used to make soymilk but after it grew to a certain level they stopped making it and began buying it from a company in Belgium [probably Alpro], so that they could focus on expanding tofu production. In June 1990 they began making tempeh.

Today they are the largest among 5 tofu manufacturer in Italy. They make about 2,500 kg/week of tofu and have 23 employees. The company's best-selling product is fried seitan, followed by natural seitan and regular tofu (about equal), tofu burgers, and tofu spreads. During the last year sales have grown about 30%, due in part to an aggressive program to introduce 2-3 new products a year. New products are tempeh and seitan burgers. Address: Via Monviso 18, 12049 Trinita (Cuneo), Italy. Phone: (0172) 66 397.

2494. Cohen, Michael. 1990. Re: Enclosing new labels. Letter to William Shurtleff at Soyfoods Center, July 20. 1 p. Handwritten, with signature on letterhead.

• **Summary:** "Dear Bill—Attached please find our labels for the newest products available at Lightlife.

"As for the Tomsun dates, I am going on vacation..."

Address: Lightlife Foods, Inc., P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 413-774-6001.

2495. Gerner, Bob. 1990. Best-selling soyfoods at Berkeley Natural Grocery Co. in Berkeley, California (Interview). *SoyaScan Notes*. July 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** By far the best selling soyfood product type at Bob's store is soymilk, accounting for 50-65% of total soyfoods sales. The best selling brands, in descending order of sales volume, are Vitasoy (about 40% of soymilk sales, and rising; his store promotes it more in part because he sees sales reps longer and in part because the Vanilla Vitasoy is his favorite soymilk product), Edensoy (30-35% and falling; it used to be the best seller), Westsoy and Westbrae Malted (20% and rising), Pacific Soy (from Tree of Life), and Other

(Wildwood Yosoy, Quong Hop, Soy Moo, AhSoy, 5%).

The next best selling soyfood type is tofu (accounting for about 20% of total soyfoods sales, and rising), followed by soy sauce & tamari (10%, stable), soy cheeses (4%, rising), tempeh (2%, falling), soy ice cream (1%, stable or falling), and miso (1%, falling).

Total per capita purchases of soyfoods have risen steadily since the mid-1970s. There have been no plateaus or declines.

Bob dislikes (but understands) the way soymilk manufacturers discount their products, basically forcing him to buy very large quantities—typically 60 cases at a time. This policy favors large retailers, ties up a lot of his capital up-front, and takes up a lot of space in his warehouse. So 95% of the time he buys Vitasoy and Edensoy soymilk when they are on sale at discount prices, then he sells these at discount/sale prices—a practice that he does not like since it seems to contradict the idea of a "sale." Customers won't buy soymilk any more at "regular" prices. Bob would rather buy what he needs from week to week, then sell all products at a regular price most of the time, then have promotions once in a while. Vitasoy has played a lot of games with distributors to try to get them to buy more at one time, and Bob has heard that this is hurting the distributors and that they don't like it. They can't make money selling at an 8% margin, which they often must do. Edensoy's discount is constant whereas Vitasoy has on and off discounts—which makes buying harder for Bob. Westbrae/Vestro has a more typical discount policy and Bob sells Westbrae products at a regular price most of the time. Address: Owner, Berkeley Natural Grocery Co., 1336 Gilman St., Berkeley, California 94706. Phone: 415-526-2456.

2496. Best, Daniel. 1990. Fermentation opportunities ripen. *Prepared Foods* 159(7):86-88. July. Address: Senior Editor/Technology Analyst.

2497. Karta, Susani K. 1990. The market prospective for tempeh in the year 2000. In: Ontario Ministry of Agriculture and Food, ed. 1990. Soybean Buyers Mission from New Markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. July. See p. 19-33.

• **Summary:** Contents: Introduction. Market situation for tempeh in Indonesia. Health and nutritional significance of tempeh. Tempeh for weaning food. Constraints and trends in the market development of tempeh. Recommended guidelines and strategies. Ideas for the diversification of tempeh utilization: Tempeh as a food ingredient, new tempeh food opportunities.

Tempeh flour (dried, ground tempeh) used in weaning foods could dramatically reduce the diarrheal diseases among children in Indonesia and other countries. The author estimates the potential demand for tempeh flour in weaning foods used for this purpose in the year 2000 to be

27,720 tonnes in Indonesia and 470,880 tonnes in all Asian developing countries. This assumes average tempeh flour consumption of 10 gm/day per child or 3.6 kg/year per child.

In 1983 Indonesians consumed about 927,000 tonnes of soybean as food, increasing to 1,528,000 tonnes in 1958. About 50% of these soybeans were used to make tempeh, and 40% to make tofu; the remaining 10% were used to make soy sauce and “tauco” (a fermented whole soybean condiment [Indonesian miso]). In 1988 the average Indonesian consumed 6.45 kg/year of tempeh (equivalent to 4.3 kg of soybeans). In the past 5 years, consumption of soyfoods in Indonesia has increased by an average of 10% annually.

According to a 1988 report from the Indonesian Ministry of Agriculture, the average daily per capita consumption of calories is still below the recommended Indonesian guidelines. In 1988, calorie consumption was only 1,794 calories/capita/day, or about 28% below the recommended 2,500 calories. Protein intake was about 43.3 grams/capita/day, or about 21% below the recommended 55 gm. “Consumption levels of traditional soyfood such as tempeh will continue to grow as the population attempts to meet its protein needs. Moreover, in view of the purchasing power of the average Indonesian consumer, we can expect a continuing increase in the demand for tempeh as it is widely available at a much more affordable price than animal protein... For tempeh manufacturing, imported soybeans are preferred because they are larger and cleaner.” Address: MSc, RD, Manager, P.T. Indofood Interna Corp., Jl. Ancol No. 4-5, Ancol Barat Jakarta Utara 14430 Indonesia. Phone: 690-1365.

2498. Loh, Michael. 1990. An overview of export opportunities in the new markets. In: Ontario Ministry of Agriculture and Food, ed. 1990. Soybean Buyers Mission from New Markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. July. See p. 10-12. [Eng]

• **Summary:** It has been almost 20 years since the first container load of soybeans grown in Ontario was shipped to Japan. By the end of 1989, Ontario was exporting more than \$25 million worth of soybeans to Japan, Hong Kong, Malaysia, and Singapore. Now the new markets for Ontario soybeans are Korea, Taiwan, the Philippines, and Indonesia.

In Korea, trade restrictions have eased on soybeans and other agricultural products. With hefty trade surpluses, Korea is under pressure to balance trade. Korea soybean imports jumped from only 428,000 tons in 1979 to 1,100,000 tons in 1989. About 120,000 tons of the imported soybeans are for food use, as follows: Tofu 100,000 tons (83% of the total), soymilk 17,000 tons, and soy sprouts 2,000 tons. Nearly all of Korea's soybean imports come from the USA.

Taiwan ranks second, after Japan, in terms of best prospects for agricultural exports. The strong Taiwanese

currency has made exports less expensive. Burgeoning trade surpluses have led to increasing pressures from trading partners, like the USA, to balance trade. So Taiwan has liberalized imports by lowering tariffs and eliminating non-tariff barriers. “U.S. soybean exporters took advantage of their dominant market position in Taiwan to expand sales. Backed by aggressive trade negotiators, the American soybean industry has enhanced its competitive position by securing a 5-year supply agreement contract with the Government of Taiwan. The agreement calls for the purchase of 5.7 million tons of U.S. soybeans over a five-year period from July 1, 1986 to June 30, 1991. As a result the United States has over 75% of the market share. Taiwan's annual requirements of food soybeans are estimated at 250,000–300,000 tons. With recent market opening measures announced by the Taiwanese government, direct sales of food soybeans to end-users are now permitted.”

Philippines: In Feb. 1987 Michael led a mission to the Philippines, and contacted a buyer. Ontario soybeans were first shipped to that country later in 1987. The Philippines import about 10,000 to 15,000 tons/year of soybeans for food use, and this is expected to increase in the near future. Filipro, Inc., which is the Philippines' licensee for Nestle S.A., reported increasing market acceptance of its re-launched powdered soya milk product Vita (chocolate flavor), and a soy-based baby cereal named Ceresoy.

Indonesia: Ontario soybeans (worth \$4.2 million) were first sold to Indonesia in 1980 after Canada's first mission there that year. 90% of the 1.7 to 2.0 million tons of soybeans required by Indonesia are used for food. Tempeh is a delicious Indonesian food and Indonesia requires over 750,000 tons/year of soybeans to make tempeh. Address: Senior Representative, Asia/Pacific Region, Ontario Ministry of Agriculture and Food (OMAF), Tokyo, Japan.

2499. Matsumoto, Isao; Imai, Seiichi. 1990. Tenpe seizô n okeru daizu shori [Processing of soybeans for manufacture of tempe]. *Nippon Shokuhin Kogyo Gakkaishi (J. of the Japanese Society of Food Science and Technology)* 37(7):497-504. July. 4 fig. 6 tables. [16 ref. Jap; eng]

• **Summary:** To obtain the best quality tempeh: Dehull the soybeans, then soak in a 0.2% solution of acetic acid for 3-4 hours to reduce their load of microflora. Drain, then allow to stand and dry (*étuver*) for 3-7 minutes. Address: Food Research Inst., Niigata prefecture, Kamo-shi, Niigata, Japan.

2500. Matsuo, Masako. 1990. Okara tenpe no seishitsu ni oyobosu kokenuka no eikyô [Effects of rice bran on properties of “okara tempe”]. *Nihon Nogei Kagakkai Shi (J. of the Agricultural Chemical Society of Japan)* 64(7):1237-39. July. [6 ref. Jap; eng]

• **Summary:** The addition of 10% rice bran to okara which is then fermented by *Rhizopus oligosporus* modifies the enzymatic activity, the vitamin content, and the

physicochemical properties of the resulting product. The emulsifying capacity and the taste of the fermented product are improved. The addition of rice bran also improves the nutritive value of okara tempeh.

Okara tempeh has a texture that is harder and less elastic than that of white bread. The capacity for water retention and the absorbability of oil, and the emulsifying properties are greater than those of wheat flour. The antioxidant activity is equivalent to that of soybean miso. Address: Lab. of Chemistry, Faculty of General Education, Gifu Women's Univ., Taromaru, Gifu 501-25, Japan.

2501. Matsuo, Masako. 1990. Okara tenpe [Suitability of "okara tempe" as a foodstuff]. *Nihon Nogei Kagakkai Shi (J. of the Agricultural Chemical Society of Japan)* 64(7):1235-36. July. [2 ref. Jap; eng]  
Address: Lab. of Chemistry, Faculty of General Education, Gifu Women's Univ., Taromaru, Gifu 501-25, Japan.

2502. MT Plate. 1990. July. New soyfoods restaurant or deli. 641 N. Palm Dr. (P.O. Box 3243), Palm Springs, CA 92263-3243.

• **Summary:** Letter from Tanya Malch. 1990. Sept. 11. This restaurant opened on 17 July 1990 with completely vegetarian (except rennetless cheeses) lunch and dinner menus consisting of Pasta, Pizza, and Pacific Rim foods. The dinner menu represents 8 countries. They have a young, full-time French chef who adds style and presentation and is doing great things with the tempeh. They make their own tempeh, presently for use at the restaurant only, and lite-soy-millet. For lunch they serve tempeh burgers, tacos, Tempehting Garden Salad, and a wonderful tempeh paté on a bed of greens with basmati rice. For dinner, appetizers include (from Thailand) Thai Stix, which are skewers of tempeh to dip in a south seas peanut sauce, and (from Japan) aged tofu. Entrees include Tempeh Scallopini with Shallot and Shiitake-Sake Sauce. Everyone loves the tempeh. "We have tempeh addicts who never knew the word before we opened." Her partner is Mona.

Menu. 1990. 8.5 by 11 inches. 1 page, two sided. Black on yellow.

Talk with Tanya. 1991. March 7. She tells how tennis star Martina Navratilova came repeatedly to her restaurant before and during the local Virginia Slims tennis tournament and loved the tempeh, then after winning the tournament, Martina stopped her press conference to talk about what a great food tempeh is! (see separate record). Tanya uses about 48 cups of soybeans a week to make tempeh. She mixes 3 parts of soybeans with 1 part millet and makes only soy & millet tempeh—her favorite. She feels that fresh tempeh is far superior to its refrigerated or frozen counterpart. She also teaches a cooking class on tempeh.

M.T. Plate then moved to 43 North Pacific Coast Hwy #201, Redondo Beach, California 90277. This restaurant was

on the second floor of a building. Then the rent tripled and investors balked. So Tanya closed it in mid-1993. Now she wants to make tempeh. Address: Palm Springs, California. Phone: 619-323-9686.

2503. Ontario Ministry of Agriculture and Food. 1990. Soybean buyers mission from new markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. 30 cm. Saddle stitched. [Eng]

• **Summary:** This conference took place in Ontario, Canada. On the mission were two buyers each from Indonesia (P.T. Indofood Interna Corp., BULOG), Philippines (Universal Robina Corp., Paritas Trading Corp.), and Taiwan (Sun Ford Mfg. Corp, Great Wall Enterprise Co.). Michael Loh of OMAF/Tokyo was the mission leader. Contents: Background and purpose. Mission members. Itinerary. Seminar agenda. Canada's soybean industry, by Fred Brandenburg of OSGMB. An overview of export opportunities in the new markets (Korea, Taiwan, Philippines, Indonesia), by Michael Loh of OMAF, Tokyo. Role of Taiwan Soybean Importers, by Laurence Hsiao of Sun Ford Conglomerate Corp. Soybean market in Indonesia, by A. Saifullah of BULOG, Indonesia. The market prospective for tempeh in the year 2000, by Ms. Susani K. Karta, manager, P.T. Indofood Interna Corp. (Indonesia). Appendix: 1. Ontario soybean suppliers (directory of 15 exporters). 2. Useful contacts. 3. Ontario soybean oil crushers (ADM, Victory Soya Mills, Central Soya of Canada). 4. Role of the Ontario Soybean Growers' Marketing Board. 5. Development of soybean varieties (incl. Harovinton for tofu, Canatto, Nattawa, and Nattosan for natto). 6. Market trends in the development of traditional soyfood, by Susani K. Karta (ASA, Singapore; Originally presented at the ASEAN Food Conference, Oct. 1988, Bangkok, Thailand). 7. Reference materials for doing business in Asia/Pacific. Address: Tokyo, Japan.

2504. Saifullah, Agus. 1990. Soybean market in Indonesia. In: Ontario Ministry of Agriculture and Food, ed. 1990. Soybean Buyers Mission from New Markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. July. See p. 16-18. [Eng]

• **Summary:** Contents: Market size. Major soybean products. Sources of imports. Domestic prices. Addendum: BULOG's objective and functions.

The size of the Indonesian soybean market is about 1.7 to 2.0 million tonnes. From 1985 to 1989 soybean production in Indonesia grew from 870,000 tonnes to 1,275,000 tonnes (about 11.6% per year), imports grew from 330,000 tonnes to 384,000 tonnes (with a peak of 475,000 tonnes in 1988), and soybean consumption grew by 7.8% per year. About 90% of total soybean consumption is used for food, and the remaining 10% is crushed for oil or used for feed. Of the soybeans used for food, about 90% are used for tempeh and tofu.

Since 1986 China has been the major source of soybeans imported to Indonesia, followed by the USA and Vietnam. Soybeans can only be imported by BULOG (the National Logistics Agency) to protect Indonesian soybean producers from low world market prices. Imports are used only to make up for shortfalls in domestic production—not to lower prices.

In 1986 and 1987 the price of soybeans imported from China was lower than the price of soybeans imported from the USA; but from 1988 to 1990 the price from the USA was lower than that from China. In 1990/91 the average import price of soybeans (in US dollars per metric ton, C&F) from various countries was: China \$277.70, USA \$253.00, and Vietnam \$294.20.

To stimulate domestic soybean production, the Indonesian Government sets floor prices for soybeans. In 1990 the price is Rp.400 per kg or about \$220 per ton. However the producer price has been well above the floor price for many years. In the central producing area in East Java, the producer prices is presently about Rp.800 per kg (US\$440 per tonne), while the wholesale price in the Jakarta market was Rp.950,000 per tonne (US\$527.8 per tonne) in early June, 1990.

BULOG's main objectives are to reduce price instability and to stimulate domestic production of rice, sugar, wheat, and secondary crops including soybeans. The Agency maintains a national reserve or buffer stock. Address: Market & Price Analysis Bureau, BULOG, Badan Urusan Logistik, Jl. Jend. Gatot Subroto 49, Jakarta, Indonesia. Phone: 489-5499.

2505. Sullivan, Nardia. 1990. Don't lose your tempeh—eat it! *Midland Express (Victoria, Australia)*. Aug. 28. p. 7, 40.

• **Summary:** Tells the story of Mike Manser (who is shown holding up 2 packages of his tempeh in a large photo) and his tempeh company named Nectar Soy products in Daylesford, Victoria, Australia. "The Daylesford resident was the first in Australia to manufacture tempeh." The company distributes its Nectar tempeh from Melbourne to Darwin.

"An engineer by profession, Mike first became interested in tempeh after he gave up his job in Ford's engine development laboratory in Geelong. 'At around the same time I stopped working as an engineer, I became a vegetarian,' Mike said. 'I soon discovered there was nothing on the market equal to meat for the vegetarian...'

"There are now four outlets manufacturing tempeh in Australia. 'There is one company in Sydney operating on a larger scale,' he said. 'But I get by on quality and flavor.'" Address: Australia.

2506. GEM Cultures. 1990. Catalog [Mail order]. 30301 Sherwood Rd., Fort Bragg, CA 95437. 9 p. Aug. [4 ref]

• **Summary:** This catalog celebrates the company's tenth anniversary. Contents: 1. Powdered cultures for soycrafters: Powdered tempeh starter, PTS (11 gm [\$2.25, makes 5+ lb

of tempeh], 35 gm, 500 gm, 1000 gm). Starter cultures for miso, amazake, shoyu, and tamari. Introductory koji kits. Commercial spore packets for miso or shoyu. Powdered natto starter. Rice koji (cultured rice) for light misos, amazake, pickles. Most in home or commercial sizes. 2. Cookbooks with culture (lists 4 books). 3. Natural salts for curdling tofu: Natural nigari or Terra Alba calcium sulfate in 1 lb or 5 lb bags. 3. Self renewing cultures: Fresh viili culture, fresh kefir curds, fresh sourdough culture, seed miso. 4. Sea vegetables from the Mendocino Sea Vegetable Co. 5. Handy reusable items: Super sealers (lids for canning), cheesecloth (grade 60), gauze drawstring bags (for spices in mulled cider, whole herbs, etc.). Address: Fort Bragg, California. Phone: 707-964-2922.

2507. Torii, Yasuko. 1990. [Re: New developments with tempeh and natto in Japan]. Letters to William Shurtleff at Soyfoods Center, Sept. 2 and 23. 2 p. Handwritten and typed, with signature. [Jap; eng+]

• **Summary:** In Japan, tempeh has not become popular. Marusan-Ai has stopped making tempeh. What a shame that Mr. Kanasugi, who was so enthusiastic about tempeh, has just passed away. The Tempeh Study Group (Kenkyukai) is still meeting 2-3 times a year and trying to popularize tempeh.

On the other hand, natto is becoming very popular and production is increasing rapidly. Natto groups are sponsoring various events to help popularize natto outside Japan.

Mrs. Torii traveled to Budapest, Hungary in early September to attend an IFOAM Conference on organic farming, which is spreading in Eastern Europe. There she enjoyed tasty chilled tofu (*Hiya-yakko*) and met a person who knows a lot about tofu. At an international agricultural fair, she found that soyfoods were becoming popular. The booths offering roasted soybean snacks and soya burgers were crowded. She saw an attractive soy cookbook containing color photos, and met a man who is translating *The Book of Tofu* into Hungarian. The Kombinat was doing a lot to develop and popularize soyfoods.

In Feb. she went to Indonesia with other members of the Tempeh Study Group to attend a symposium on soybean fermentation. It was very interesting. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

2508. Sand, Avraham. 1990. Pioneering soyfoods and natural foods in Israel (Interview). *SoyaScan Notes*. Sept. 9. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Avraham first went to Israel in 1975 and stayed for about a year. During this time he and Avraham Leider and one other person founded Israel's first natural foods company, named Amud Ha Shachar (Pillar of Dawn) and located in Jerusalem. The first product they made was granola, followed by whole wheat flour, bulgur wheat,

brown rice (which they packaged), and date bars. With this company established, a number of Americans and other westerners who had recently immigrated to Israel and were connected with the company approached the Sachnut, the Jewish government agency which helps finance Jewish cooperative settlements. They asked to be given a moshav. A moshav is like a kibbutz (a cooperative agrarian, rural settlement) except that the families have their own homes and land, and the children live at home. In 1976 the Sachnut gave the group a piece of land, infested with scorpions, upon which nine other groups had tried and failed since 1948 to establish a successful community. The Sachnut also financed a small natural foods factory and bakery on the moshav, complete with an oven and a packaging machine. The moshav was named Moshav Me'or Modi'im, located at Doar Na Hamercaz, in the Judean Hills between Jerusalem and Tel Aviv, Israel.

Avraham returned to North America for several years. While living in a community of 5-6 people in Nova Scotia, Canada, he was introduced to tofu by people who made tofu for the community, but he did not make tofu there himself.

Between 1975 and 1990 Avraham has spent a total of 8 years in Israel. The rest of the time he was in the USA or Canada or travelling. Avraham returned to the moshav in 1978 and that year he established Israel's earliest known tofu shop as part of Pillar of Dawn. The tofu was made in the same bakery room as the granola, especially in the evenings when the granola wasn't being made. Originally the community scale shop was established solely to make tofu for the 25 or so families living on the Moshav. Tofu production was small, averaging 50 lb/day of tofu one day a week, using a Corona mill grinder powered by a washing machine motor. The tofu was curdled using bittern (nigari) from a salt factory on the Dead Sea. The Moshav owned the tofu company collectively and financed it. Avraham was the motivating force that got the operation started with temporary help initially from Yaacov Sack and Moshe Reuben. About 3-6 months after tofu production began, they started to make tempeh. Then Ben Zion Solomon joined Avraham 6-12 months after the company started and they worked together like equal partners for several years as the tofu and tempeh makers. Solomon was also making quite a bit of miso on the moshav (with a little help from Sand). They also introduced soymilk. At some point, they began to sell their tofu and miso at a few health food stores in Jerusalem. As far as Avraham knows, his was the first company to make tofu, tempeh, miso, or soymilk in Israel. They developed a 1-page informational pamphlet, written in Hebrew on one side and English on the other, explaining what tofu was and how it was made, plus some recipes. At that time Israelis, other than recent immigrants from America, didn't know what tofu was.

They reached the point where they decided to buy large scale equipment (from Takai) and set up a real commercial

shop on the moshav that could produce 500 to 1,000 lb/day of tofu. The Sachnut indicated that they would be willing to help set up this new business. So in about 1979 or 1980 Avraham traveled to the USA and did a lot of study to learn about tofu equipment, products, and processes in small to medium sized shops. He visited about 20 tofu shops nationwide (most were very open and helpful) and collected information in a notebook. He worked at the Soy Plant in Ann Arbor, Michigan, for approximately a year in about 1980. From time to time he shared information with his father, Ralph Sand, who was doing research on non-dairy cheese and tofu at Anderson Clayton at the time. At the last minute the Sachnut pulled out and decided not to finance the project, so the expansion never took place. They continued to make tofu on a small scale. But the moshav was suffering economically so in about 1981 Avraham and his wife, unable to make a living there, left and returned to the USA. The little soyfoods plant dissolved but shortly thereafter a commercial operation (probably Golden Jerusalem Tofu) started in Jerusalem and the people on the moshav bought their tofu from Jerusalem.

During the time that Avraham made soyfoods in Israel (1978-81) there was a lot happening with soya. There was a man called the "Soya King" ("Hamelech Soya," probably Eliahu Navot) who was famous in Israel as the country's soybean pioneer. Avraham thinks he lived in Herzliya/Herzliyya, just north of Tel Aviv, but he died in about 1979 or 1980 several months before Avraham was able to meet him. Avraham went to his home town and met his widow, who told him a little about her husband's work with soya.

The most popular food use of soybeans in the late 1970s was in textured soy flour (like TVP). These products were made in Israel by 1 or 2 big companies and sold in supermarkets in very stylish packages indicating that the manufacturers were well established. There were several flavors and large amounts were sold. He does not know the name or address of the manufacturer, but he got the feeling that Eliahu Navot had at least helped inspire these products; he may have helped to develop them.

In America, Avraham set up a soy deli named Sand-Munches in Madison, Wisconsin. They bought tofu from Bountiful Bean in Madison and made and sold tofu sandwiches, nori rolls, tofu salad, tempeh salad, various tofu spreads. They sold to health food stores and had a sandwich cart on the campus.

Avraham was in on the soyfoods wave at the very beginning, but after it became more established and mainstream he felt that his work had been done in that area, so he moved into the field of aroma therapy, inhaling aromatic essential oils from herbs, where he has been working for the last 8-9 years. It is a very powerful form of herbal medicine. He has developed several product lines under the Tiferet brand (a term taken from the Tree of Life in the Cabala) which he markets in health food stores in the

USA and overseas. Address: 210 Crest Dr., Eugene, Oregon 97405. Phone: 503-344-7019.

2509. Hamilton, Ross; Manser, Mike. 1990. Re: History of Nectar Soy Products in Australia. Letter (fax) to William Shurtleff at Soyfoods Center, Sept. 13. 2 p.

• **Summary:** Nectar Soy Products is located at 57 Vincent Street, Daylesford, Victoria 3460, Australia. Phone: 053-48-2051. The present owner and founder, Mike Manser, provided this information. The company was founded in March 1981 to provide a full meat equivalent vegetarian food source. The company began commercial production of soyfoods in June 1981 at 4/13 Glamis St. (P.O. Box 969), Geelong, VIC, 3220, Australia. The company's first two products were Tempeh-Nectar (March 1981) and Garlic Tempeh (March 1985). In May 1985 the company moved from Geelong to its present address in Daylesford. Main reasons for the move were to get pure water (no chlorine or fluoride) and a cleaner environment, to reduce overhead on product transportation, and to have room for a walk-in cooler. It then introduced Curry Tempeh Pies (June 1986) and Lupin Tempeh (Sept. 1990). Manser has always been the sole owner, and is one of the two production workers. Manser believes "I was the first in Australia to manufacture and market tempeh." According to Soyfoods Center records, this is the oldest existing tempeh manufacturer in Australia, but it was the third commercial tempeh company in Australia, after Dharma (c/o Earth Foods, Waverley, NSW; started 1980) and Bodhi Farm Tempeh Co. (Channon, NSW; 1980). It was the first Australian company to produce lupin tempeh commercially and to assist the Food Research Lab at Melbourne University (Weribee, Victoria). The owner feels that the main reason for the company's success is high product quality and painstaking customer contact. Indonesian-Australians confirm this.

Today the company makes about 1,500 lb/week of tempeh. The three best-selling products, in descending order of sales, are soy tempeh, curry tempeh pies, and garlic tempeh. The company employs 2 people in a 1,500 square foot building. The company growth rate has been about 30% a year over the past 2-3 years. Last year's sales were \$160,000. The net worth of the business is not known. Address: R.W. Hamilton & Associates Pty. Ltd., Marketing Consultants, 36 Castlemain Rd., Maldon, VIC, 3463, Australia. Phone: 054 75 2884.

2510. **Product Name:** Lupin Tempeh.

**Manufacturer's Name:** Nectar Soy Products.

**Manufacturer's Address:** 57 Vincent St., Daylesford, VIC, 3460, Australia. Phone: 053-48-2051.

**Date of Introduction:** 1990. September.

**New Product-Documentation:** Letter (fax) from Ross Hamilton and Mike Manser. 1990. Sept. 13. This was the company's fourth product, introduced in Sept. 1990.

2511. Ornish, Dean. 1990. Dr. Dean Ornish's program for reversing heart disease: The only system scientifically proven to reverse heart disease without drugs or surgery. New York, NY: Random House. xxxi + 638 p. Sept. Index and recipe index. 17 cm. [288\* ref]

• **Summary:** This is a landmark, pioneering book—indeed a classic. In addition to carefully documented information on how to reverse heart disease, it offers 100 pages of vegan recipes, including a 21-day menu. It focuses on a low-fat, low-cholesterol diet, regular moderate exercise, stopping smoking, stress management through meditation and yoga, and (ideally) a support group.

Contents: Author's note. Foreword. Introduction—Heart and soul. Part one: Opening your heart. Part two: The opening your heart program. Part three: Opening your heart recipes. Introduction to the recipes by Shirley Elizabeth Brown, M.D., and Martha Rose Shulman. Twenty-one days of menus. The recipes. Epilogue. Appendix: Nutrient analysis of common foods. Selected references.

In the chapter titled "Introduction to the recipes" a long section on "Soybean products" gives basic information about the following: Whole soybeans, soy flour, soy milk ("It is much higher in fat, lower in vitamin B-12, and lower in calcium than nonfat cow's milk."), soy sauce, tamari, miso, soy cheeses, tempeh, textured vegetable protein (TVP), isolated soy protein, and tofu ("Tofu is a miracle food; it is very easy to digest, very high in protein, low in calories and fat, economical, and extremely versatile").

In the chapter titled "Recipes" is a long section on "Tofu Dishes," which begins with a good introduction: "Tofu is one of the most versatile foods." "Tofu is very high in protein and the perfect substitute for cheese and eggs." Eleven recipes follow: Tofu cheese with fresh herbs. Marinated tofu. Scrambled tofu and vegetables. Lydia's Mexican casserole. Tofu stew with miso. Sweet and sour wok-cooked vegetables with tofu. Chinese eggplant and tofu. Steamed fresh vegetables and tofu with soba noodles (and Misoyaki sauce). Stuffed manicotti (with Marinara sauce).

At the start of each chapter are great quotations. The 288 selected references, listed chapter by chapter at the back, are a valuable addition. As early as 1972 Dr. Ornish was learning meditation and yoga techniques from Swami Satchidananda; these evolved into the stress management program described in chapters 7-9. In 1975 he first became interested in conducting research on heart disease, when he was a medical student at Baylor College of Medicine in Houston, Texas. In 1977 he had the privilege of studying with Dr. Michael DeBakey, assisting in the operating room when he performed bypass surgery. Though his surgical skill was amazing, Ornish began to see the "limitations of technological approaches that literally and figuratively *bypassed* the underlying causes of the problem. It was the difference between temporizing and healing." Most bypass

patients “would go home and continue to do the same things that led to the problem in the first place. They would smoke, eat a high-fat, high-cholesterol diet, manage stress poorly, and lead sedentary lives.”

For details on this book and its significance, see MacNeil/Lehrer Newshour. 1990. Dec. Address: M.D., Preventive Medicine Research Inst., Sausalito, California 33658. Phone: 415-332-2525.

2512. Scotton, Ken. 1990. Virginia Soyworks. Route 1, Box 193, Faber, VA 22938. 4 p. Sept. Unpublished manuscript.  
**• Summary:** This business is now for sale (for \$8,000) and this document describes the history and financial status of the company, including assets, rent, etc. Just over half the sales are in tofu which is sold mostly in bulk. Sales for the last 10 months of 1989 were \$39,435, and for the first 6 months of 1990 they were \$22,800. “I bought the business in March of 1989. Both the tofu and tempeh business had been shut down for 3 months. I chose not to invest in starting up the tempeh part of the business... About half of my sales are to the Integral Yoga Natural Foods store in Charlottesville... I bought the business for \$10,600, and have spent almost \$1,000 since in additional equipment.” There are 5 photos of the inside of the shop and equipment. Address: Faber, Virginia. Phone: 804-361-1543.

2513. Wildwood Natural Foods. 1990. Re: Labels of all current Wildwood products. Letter to William Shurtleff at Soyfoods Center, Oct. 11. 6 p. On letterhead.  
**• Summary:** On 11 Oct. 1990 someone at Wildwood in Fairfax sent Soyfoods Center all of Wildwood’s current labels affixed to 6 pages of Wildwood letterhead. There is no cover letter but the postmark on the envelope shows the date and origin. Most of the colorful labels are for Wildwood’s ready-to-eat tofu products. There are also labels for Yo Soy! [organic soymilk] in Rich, Cocoa, Maple, and Honey Vanilla flavors, Rice Pudding (dairyless, with organic soymilk), Curried rice salad with tempeh, Wildwood seitan (made the “Say-Tahn” Ron way). Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax, California 94930. Phone: 415-459-3919.

2514. Starr, Sara M. 1990. Soyfoods: Are they a hit at last? More meat eaters switching to soy sometimes, says study. *Food Business*. Oct. 22. p. 37.  
**• Summary:** “According to data from a new nationwide study by HealthFocus, a consulting firm specializing in the healthful foods market, about one in 10 food shoppers said they eat soyfoods once every two weeks or more... Twice as many people eat soyfoods regularly as are vegetarians... Sales of aseptically packed soymilk are expected to reach \$75 million in 1991, up from \$46 million in 1989, according to Soyatech Inc., publisher of a soy industry source book.”

A photo shows 6 tempeh products made by Lightlife

Foods. The company’s sales are growing at a rate of about 30% annually. Address: Vice president, HealthFocus Inc., Emmaus, Pennsylvania. Phone: (215) 967-2233.

2515. Bosisio, Matthew J. 1990. The Northern Regional Research Center: From penicillin to oatrim, the impact of the NRRC in Peoria, Illinois, has been significant, far-reaching, and enlightened. *World & I (The)*. Oct. p. 308-15.

**• Summary:** A good history of the NRRC, which opened in Peoria in 1940. Discusses penicillin, xanthan gum (a thickener discovered by NRRC, and made by fermenting corn sugar), superslurper (a cornstarch-based water-collecting polymer), dextran (blood volume extender), cornstalks and wheat straw treated with hydrogen peroxide, oatrim (made from oat bran and oat flour), vitamin B-12, Corn-Soy Milk and other Food for Peace products containing soy protein, tofu and tempeh, the USDA’s Agricultural Research Service (ARS) Culture Collection (with its 80,000 strains of yeasts, bacteria, and molds is the world’s largest microbial culture collection of agricultural significance), kenaf, soybean ink, the 1986 Federal Technology Transfer Act designed to encourage cooperation between the private sector and government. In 1990 the NRRC had an annual budget of \$18.5 million. The center’s new director is Richard Dunkle. Later this year work will begin on a 10-year renovation program at NRRC. Address: Publisher, *New Mexico Senior Digest*, Albuquerque; Formerly an information officer with the USDA in Peoria, Illinois.

2516. Raley, Wade. 1990. This Elphin business is full of beans! *Lanark Era (The)*. Nov. 12. p. 9, 20.

**• Summary:** About the Noble Bean, a tempeh manufacturing company owned and run by Allan and Susan Brown near Elfin, in Ontario, Canada. They make the tempeh in a trailer next to their home.

“We turn 10 to 12 tons of dry soybeans into 50,000 eight and 10-ounce packages of tempeh annually,” said Allan. “We’ve been getting busier every year since we started the business 11 years ago.”

“A Toronto native, Allan met Susan, who was from Tennessee, in 1969 while he was living in the United States.

“The couple were introduced to tempeh shortly after they became vegetarians in 1970.

“We learned how to make it from other vegetarians, but didn’t consider mass producing tempeh until 1979,” said Allan, who moved to this area in 1976. “Susan and I started very small; our first shop was a two-bedroom apartment we were renting in McDonald’s Corners.”

“A year later, Allan and Susan moved their fledgling business to the famous Kensington market area in Toronto because ‘that’s where the market for tempeh was.’”

The Browns bought their first equipment from a 60-year-old man [Robert Walker] for \$200. They are still using it today. Allan spent the first 5 years distributing his tempeh

himself. They started producing 48 pounds a day, but that amount has steadily increased. By 1985 they were making 120 pounds/day. An outside distributor had also begun to introduce Noble Bean products to eastern Canada.

"Today, The Noble Bean is a thriving company. It generated over \$50,000 in sales last year and employs two part-time staff, Susan Barrett and Debbi Bova, in addition to Allan and Susan."

"The couple have introduced a secondary product to the market called Casey's Maple Pecan and Honey Walnut Cookies. The all-natural cookies are named after their 11-year-old son. The couple have a second son, Marty, age two."

Allan and Susan made Casey's Cookies in two flavors (Maple Pecan and Honey Walnut) for 1½ years in 1990 and 1991. Ingredients in Maple Pecan: Organic whole wheat flour, pecans, maple syrup, canola oil. Address: Lanark, ONT, Canada.

2517. Jack, Alex. 1990. Soviets embrace macrobiotics: Special report from Moscow and Leningrad. *One Peaceful World* (Becket, Massachusetts) No. 6. p. 1, 7-10. Autumn/Winter.

• **Summary:** Physicians in the USSR are using miso to try to cure radiation sickness from the Chernobyl nuclear disaster which took place on 26 April 1986 in the Ukrainian SSR.

A sidebar on page 7 titled "Miso protects against nuclear radiation" states: "Scientists in Hiroshima reported this summer that in laboratory tests mice fed miso every day were five times more resistant to radiation than those not eating miso. The research, carried out by Prof. Watanabe at Hiroshima University, is the latest data showing that macrobiotic foods can bind and eliminate radioactive material from the body." A photo shows Cary Wolf offering miso soup to people in Moscow. Address: Box 10, Becket, Massachusetts 01223. Phone: (413) 623-5742.

2518. **Product Name:** Moonbean Tempeh (Most Types Use Soybeans as the Main Ingredient) [Peanut-Soy, Okara-Soy, Sunflower-Soy, and Peanut Sesame [No Soy]].

**Manufacturer's Name:** Leo Risin' Foods.

**Manufacturer's Address:** c/o Pywacket's Cafe, 10 East 9th St., Lawrence, KS 66044.

**Date of Introduction:** 1990. November.

**Ingredients:** Hand-split black soybeans, hand-split organic yellow soybeans, a pure *Rhizopus oligosporus* culture, umeboshi vinegar.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Clayton McHenry, founder and owner of Leo Risin' Foods. 1994. Feb. 21. He started making tempeh in Nov. 1990. Letter and Labels sent by Clayton McHenry. 1994. Feb. 22. From Nov. 1990 until Dec. 1991 he used the kitchen at Pywacket's Cafe (10 East 9th St., Lawrence, Kansas 66044) at night

to produce dozens of varieties of tempeh, which were sold as "Moonbean Tempeh" to the Cafe and to the Community Mercantile (a co-op grocery store in Lawrence). Four varieties of tempeh were introduced in November and December of 1990: The three soy-based varieties shown above plus a peanut-sesame tempeh which contained no soy.

Talk with Clayton McHenry. 1994. March 7. Followed by a letter. In 1988 Clayton was introduced to tempeh by a friend who used it in spaghetti sauce. Clayton was just becoming a vegetarian and was studying modern religious movements at the University of Kansas at the time; he learned of The Farm (in Summertown, Tennessee) and their connection with tempeh, ordered a tempeh kit from them, made it following instructions in the kit and in one of the Farm's books, ate it, and was hooked. He was intrigued by this beneficial culture, the low cost of making tempeh for himself and his friends, and the self-satisfaction he felt when making tempeh. Also in 1988 Clayton began reading and collecting books by Shurtleff and Aoyagi—he first came across them in the library of the student housing co-op in which he lived. Semi-macrobiotic friends and other research fueled the fire.

2519. Nout, M.J.R.; Rombouts, F.M. 1990. Recent developments in tempe research: A review. *J. of Applied Bacteriology* 69(5):609-33. Nov. [122 ref]

• **Summary:** Contents: Introduction and background.

Manufacturing processes. Microbial ecology:

Microbiological composition of tempe, traditional soaking, problems during 'modern' soaking, risks associated with use of unacidified beans, accelerated acidification, effect of boiling prior to inoculation, inoculation, fungal fermentation stage (properties of *Rhizopus oligosporus*, effect of initial bean pH, effect of lactic acid bacteria, effect of Enterobacteriaceae), heating prior to consumption. Starter development: Tempe fungi, starters (natural starters, pure culture starters, semi-pure culture starters, mixed-strain starters). Kinetics of fungal growth. Biochemical changes. Nutritional quality. Versatility. Challenges. Address: Dep. of Food Science, Agricultural Univ., Bomenweg 2, 6703 HD Wageningen, Netherlands.

2520. **Product Name:** [Tempeh, and Tofu].

**Foreign Name:** Tempeh, Tofu.

**Manufacturer's Name:** Cafe Restaurant Zollhaeusle.

**Manufacturer's Address:** 7730 VS-Zollhaus, Germany. Phone: 07721/21289.

**Date of Introduction:** 1990. December.

**New Product–Documentation:** Menu (Undated) sent by Flora Yap. 1992, April 5. It lists 5 tempeh dishes. The owner is Hartmut Rainer Hauser. Flora was told that he is now closed, but she is not sure if this refers to the restaurant or the food factory. Letter from Flora Yap. 1992. May 16. She received the menus mentioning seitan, tofu, and tempeh on

24 Dec. 1990 from a friend who had been to this place. In Jan. 1991 she phoned Hartmut Hauser. He had purchased the tempeh incubator from Byodo. It was a rebuilt old refrigerator. Hartmut makes his tempeh in perforated plastic bags; she suggested that he use plastic bags for better growth. In the autumn of 1991 she heard from the same friend that Hartmut had closed his restaurant, but the friend did not know whether Hartmut continued to make seitan, tofu, and/or tempeh. Hartmut likes to work on ecology projects, teaching people about protecting the environment. In May 1992 Flora tried to find Hartmut Hauser's phone number in the telephone directory. Zollhaus should be a suburb of Villingen-Schwenningen, located in the Black Forest, not far from the Swiss border. "Life Food," which is located nearby in Freiburg, might have more information about Hartmut and Cafe Restaurant Zollhaeusle.

2521. Cederquist, Natalie; Levin, James. 1990. A vegetarians ecstasy: A healthy gourmet celebration of over 250 no cholesterol, no dairy, lowfat recipes devoted to long life and good taste. Glo, Inc., 2406 Fifth Ave., San Diego, CA 92101. 332 p. Dec. Illust. by Natalie Cederquist. Index. 28 cm. [13 ref]

• **Summary:** In this is innovative vegan cookbook, each recipe occupies 1 page and is accompanied by an illustration (line drawing). The glossary of ingredients mentions liquid aminos, miso, seitan, seaweeds, tamari, tempeh, and tofu. Page 28 is devoted to singing the praises of soy products. "Dairyless and eggless: With optimum health in mind, I have chosen to use soy products and egg replacer rather than dairy and eggs. Dairy is mucus forming, it contains cholesterol, fat and hormones, in addition to the pesticides and antibiotics used in the farming and dairy industry.

"Soy and seed cheeses, soy yogurts, soy cream cheese, soy sour cream, soy and rice based ice creams are delicious non-dairy products in the natural markets for you to try which are cholesterol free and low in fat."

The book contains 28 recipes for tofu, and 12 for tempeh. Other interesting recipes are: Sprouted soy salad (with 3 cups soy sprouts steamed for 3 minutes, p. 76). Orange miso dressing (p. 99). Miso soup (p. 162). Miso sesame rice (p. 206). Aduki bean and brown rice pot (p. 212). Féjoada (with soy sausages, p. 213). Mushroom seitan in wine sauce with wild rice (p. 241). Seitan sauté (p. 267). Amazake carob pudding (p. 290). Address: 2. M.D., San Diego, California. Phone: 1-800-854-2587.

2522. Ali, Salma Amina. 1990. An evaluation of the chemical and sensory characteristics of tempeh from pigeon pea and soybean. MSc thesis, University of the West Indies, St. Augustine, Trinidad and Tobago. xi + 147 leaves + 7 leaves of plates. Illust. (some color). 29 cm. \*

• **Summary:** Supervisor: Mrs. Gail Baccus-Taylor. Address: Faculty of Engineering, Dep. of Chemical Engineering,

Mona Campus.

2523. **Product Name:** [Tofu, and Tempeh].

**Manufacturer's Name:** Amirim Vegetarian Village.

**Manufacturer's Address:** Amirim 20015, Israel.

**Date of Introduction:** 1990.

**New Product–Documentation:** Letter from Arik Tal of Amirim. 1990. June 1. "We are living in Amirim, the only vegetarian village in Israel. We are running a small shop preparing tofu and tempeh. We have your 1979 book Book of tofu and Book of Tempeh."

2524. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Bilkis S.c.r.l.

**Manufacturer's Address:** S.S. 186 Ponte Catena, 90040 Pioppo (Palermo), Italy.

**Date of Introduction:** 1990.

**New Product–Documentation:** Talk with then letter from Mr. Suresh Nath (his spiritual name; His birth name is Giampiero Spadafora). 1990. June 18 and 19. They have been making tofu for their small restaurant near Palermo since 1982. Now they want to expand their operation.

"We are a community of 14 people, living together with the mutual interest on yoga and spiritual evolution. We live 20 km far from Palermo, on a hard, quiet mountain, and there we make tofu, bread, seitan, sprouts, cakes, tempeh, etc. on a small scale, and sell them in our Centre in town, the 'Centro di Cultura Rishi' which hosts the health food store of the co-operative, and a vegetarian restaurant as means to help all those who wish to improve their diet and don't know what or how to cook... the core of this Centre are the yoga lessons held by our master, Aruna Nath Giri."

Address: Dep. of Basic Science, Awassa College of Agriculture, Addis Ababa Univ., Awassa, Ethiopia.

2531. Atlas, Nava. 1990. Vegetarian celebrations: Menus for holidays and other festive occasions. Boston, Massachusetts: Little, Brown and Co. [xii] + 276 p. Illust. (by Atlas). Index. 24 x 19 cm.

• **Summary:** The recipes are organized by holiday, and the main holidays are arranged chronologically: 1. The New Year. 2. Valentine's day. 3. Easter and St. Patrick's Day, etc.

Soy related: Silken tofu pudding (p. 15). Chinese cabbage with bean curd soup and mushrooms (with "1/2 pound tofu (bean curd), cut into 1/2-inch dice," p. 78). Tofu and potato kebabs (with "2 pounds firm tofu," p. 98). The vegetarian barbecue—Tofu, tempeh and seitan (with a description and discussion of each, p. 106-08). Sweet and savory grilled tofu. Grilled tofu teriyaki. Grilled tempeh teriyaki. Sweet and savory grilled tempeh. Curried grilled tempeh. Grilled seitan teriyaki. Seitan and grilled vegetables teriyaki. Sweet and savory grilled seitan. Teriyaki marinade (with "natural soy sauce," p. 113). Tofu in black bean sauce (with "1/3 cup fermented black beans, rinsed and chopped," p. 212-13. Note: They are made from soy beans). Soy and

honey nuts (with natural soy sauce and 4 cups shelled nuts—a mixture of peanuts, cashews, and almonds is very good, p. 237-38). Tofu mayonnaise (p. 257).

2532. *CGPRT Working Paper*. 1990. CGPRT crops in Indonesia: 1960-1990. A statistical profile. No. 4. xv + 63 p. 25 cm.

• **Summary:** Contains a wealth of statistical data indicating progress of maize, soybean, groundnut, mungbean, cassava, sweet potato, and rice is presented. It draws upon a newly established statistical database and provides unique data sets such as district level development in production over 20 years in selected provinces in Indonesia. Moreover, it presents wholesale and farmgate prices movements based on monthly averages of major crops. The report presents a fraction of the data available in the database of the Centre. Supplementary data can be made available on request.

Table 5 shows that soybean production in Indonesia has increased from 339,000 tonnes in calendar year 1957 to 1,151,000 tonnes in 1987. During this time, the yield has grown from 646 kg/ha to 1,056 kg/ha.

Table 15 shows that Indonesia's top soybean producing provinces in 1987 were East Java (413,394 tonnes), Central Java (135,907), Lampung (117,698), and Aceh (102,402). Within East Java in 1987, the top soybean producing districts were Jember (71,675), Banyuwangi (44,675), Pasuruan (35,686), and Lumajang (30,909).

Tables 36 and 37 shows the retail prices of tofu and tempeh each month in Rp/kg from 1981 to 1988 in Surabaya. The prices have more than doubled during this period. Retail prices for these foods in Bandar Lampung are shown in tables 40 and 41.

Table 43 shows Indonesian imports and exports of soybeans and soybean cake from 1963 to 1988. Soybean exports, which reached a peak of 36,000 tonnes in 1973, have been at or near zero since 1978. Soybean imports have climbed dramatically since 1971, reaching a record 465,839 tonnes in 1988. Thus imports that year were equal to about 40% of domestic production. Exports of soybean cake have always been negligible but imports have risen steadily since 1975, reaching a peak of 306,716 tonnes in 1986, then dropping to 72,323 tonnes in 1988.

Table 50 shows the total supply and domestic utilization of soybeans in Indonesia from 1968 to 1987. In 1987, of the 1,411,000 tonnes available, 3% was used for seed and the rest was used for food. None was used for feed or use in non-food industrial products. Per capita availability of soybeans increased from 3.28 kg/year in 1968 to 7.76 kg/year in 1987. In the peak year, 1986, it was 8.80 kg/year.

Table 56 shows consumption per capita of GCPRT crops in Indonesia from 1981 to 1987. Tofu consumption has increased from 74 gm/week in 1981 to 82 gm/week in 1987, while tempeh consumption has decreased from 95 gm/week in 1981 to 86 gm/week in 1987. Address: CGPRT Centre, Jl.

Merdeka 145, Bogor 16111, Indonesia.

2533. Darmosuwito, Suhadi. 1990. Hasil penelitian keragaman dalam proses fermentasi tempe [Results of research on diverse tempeh fermentation processes]. Yogyakarta, Indonesia: Laboratorium Mikrobiologi, Fakultas Pertanian, Universitas Gadjah Mada. iv + 31 leaves. 28 cm. [Ind]\*

• **Summary:** This national government publication includes bibliographic references (leaves 17-18).

Note: Another translation of the title might be: "Result of diversity in tempeh fermentation process research."  
Address: Yogyakarta, Indonesia.

2534. Facciola, Stephen. 1990. Cornucopia: A source book of edible plants. Vista, California: Kampong Publications. ix + 678 p. Indexes (six!). 28 cm. [522\* ref]

• **Summary:** "In your hands is one of the most remarkable efforts to come out of the struggle to preserve the genetic diversity of our planet... Steve Facciola has put together an easy-to-understand, easy-to-use compendium of the diversity of food plants available to consumer, gardener and scientist" (from the Preface). The largest and most comprehensive work of its kind, this book gives details on 3,000 edible plant species and 7,000 varieties.

Contents: Preface, by Noel Vietmeyer. Introduction. Acknowledgements. Botanical listings: Alphabetical listings of plant families (*Glycine max* and *Glycine tabacina* are listed in the family Fabaceae, pronounced fuh-BAY-see), fungi families, algae families, bacteria families. Cultivar listings (by common name for the most important and popular crops, e.g., shiitake, soybean, spinach, sprouting seeds). Sources (names, addresses and phone numbers of firms that sell seeds, plants, etc.: Domestic commercial, domestic non-commercial, overseas commercial, overseas non-commercial). Bibliography. Indices and appendixes: Index of principal vernacular names. Index of vernacular and other names occurring elsewhere in the text. Index of usage and edible parts. Index of species native to or naturalized in North America. Index of species not listed in Kunkel [Gunther Kunkel. 1984. Plants for human consumption. Koeltz Scientific Books, Germany]. Index of families and genera. Appendix A: Abbreviations used—For type of product offered, for annotated bibliographical citations, in descriptions for sources. Appendix B: Endnotes used in the cultivar listings.

As of Aug. 1994 an electronic version of this book is now available. It runs on Microsoft Windows and uses more than 25,000 hypertext links to cross reference information.

The main information on soybeans is found on pages 91 (Botanical listings for *Glycine max* and *Glycine tabacina*), p. 219 (*Aspergillus oryzae* culture), p. 221 (*Actinomucor elegans* culture for fermented tofu or sufu, and *Rhizopus* cultures for tempeh), p. 224 (*Bacillus subtilis* culture for

natto), p. 482-83 (for "field soybeans," lists 5 black-skinned cultivars, and 7 yellow-skinned cultivars; plus 11 "vegetable soybeans"—Agate, Butterbeans, Envy, Extra Early, Fiskeby V, Hahto, Hakucho Early, Kanrich, Okuhara Early Green, Prize, and White Lion), p. 485-87 (sprouting seeds including soybean sprouts with directions for sprouting), and p. 500 (Soyfood cultures).

Additional information on food uses of soybeans is found throughout the book. Tofu: p. 9 (In Indonesia, a salt derived from the fruit of *Rhus javanica* (*Nurude*, *Mu-yen*) is used to coagulate tofu), p. 61 (In Japan the seeds of *Cannabis sativa*, called *asanomi*, are used in deep-fried tofu burgers (*ganmodoki*)), p. 76 (A vegetable curd similar to soybean tofu can be made from the seeds of the bottle gourd or calabash (*Lagenaria siceraria*)), p. 92 (The seeds of the Bonavista bean or hyacinth bean (*Lablab purpureus*) can be prepared as tofu), p. 127 (The seeds of okra, gumbo, or lady's finger (*Abelmoschus esculentus*) can be made into tofu or tempeh). Kecap (Indonesian soy sauce): p. 9 (In Indonesia, the plant tuberose (*Polianthes tuberosa*) is added to the substrate in making kecap), p. 191 (In Indonesia, fresh leaves of kaffir lime, also called ichang lime, makrut, or djeruk purut (*Citrus hystrix*) are used to flavor kecap). Miso: The following can be used as a substrate for miso—p. 88 (Peanuts), p. 94 (seeds of the velvet bean, also called cowitch, cowhage, benguk (*Mucuna pruriens*)), p. 155 (barley (*Hordeum vulgare*)), p. 156 (proso millet (*Panicum miliaceum*)). Address: 1870 Sunrise Dr., Vista, California 92084. Phone: (619) 726-0990.

2535. Heiser, Charles B., Jr. 1990. Seed to civilization: The story of food. New ed. Cambridge, Massachusetts: Harvard University Press. vi + 228 p. Illust. Index. 24 cm. [83\* ref]

• **Summary:** An outstanding work, written for the general reader. "This is a classic book about the origins of agriculture and the influence of its discovery on the development of civilization"—Ghilleen T. Prance, Director of the Royal Botanic Gardens [England; on rear cover].

The Preface notes that this is a book about the plants (and animals) that stand between humans and starvation. The main subjects are ethnobiology, the study of plants and animals in relation to humans, and ecology, the study of organisms in relation to their environment. We humans "get all of our carbohydrates and nearly three-fourths of our protein from plant sources. Moreover, nearly all of the food we get from animals is in turn derived from plants. After all, life depends on photosynthesis; chlorophyll has been referred to as the green blood of the earth."

Table 5-1, "Estimated production of world's 32 major food crops" (p. 63) lists the top ten as (\* = member of grass family; units in million metric tons): Sugar cane\* 932. Wheat\* 536. Corn\* 481. Rice\* 476. Potato 309. Sugar beet 286. Barley\* 180. Manioc 137. Sweet potato 110. Soybean 95. Source: *FAO Production Yearbook*, 1986.

Chapter 7, “Legumes: The meat of the poor,” contains a section on “Soybeans” (p. 129-33). It notes that there are no archaeological records of the soybean to help us determine when it was first cultivated, but it was mentioned in Chinese literature before 1000 B.C. Unlike most legumes, the beans are seldom eaten directly, but are used to make many different foods including bean sprouts, miso, tofu, soymilk (such as Vitasoy), tempeh, and soy sauce.

“The widespread cultivation and utilization of soybeans in the United States in the space of a few decades must be one of the most spectacular success stories in the recent history of agriculture.”

Photos show: (1) A field of soybeans in the USA planted in rows, free of weeds. (2) Soybean plants ready for harvesting. (3) Soybean seeds. (4) A John Deere combine harvesting soybeans.

Note: Previous editions of this book were copyrighted in 1973 and 1981. Also discusses: Peanuts (p. 126-29). Potatoes and their remarkable history (p. 134-39). Tomatoes and their unusual history (p. 181, 206). Address: Distinguished Prof. Emeritus of Botany, Indiana Univ.

2536. Moosewood Collective (The). 1990. Sundays at Moosewood Restaurant: Ethnic and regional recipes from the cooks at the legendary restaurant. New York, NY: Simon & Schuster. 734 p. Illust. Index. 24 cm. A Fireside Book. [55\* ref]

• **Summary:** Since it opened in 1973 in Ithaca, New York, Moosewood Restaurant has become famous for its creative semi-vegetarian cuisine (fish are included on the menu and in this book) with a healthful emphasis. The restaurant is run by a group of 18 women and men, most of whom have worked together for nearly 10 years. Major decisions are made collectively. This is the Collective’s second vegetarian cookbook. Each section, corresponding to the cuisine of 17 different geographical regions (e.g. Eastern Europe, Japan) and one ethnic group (Jewish) is written by a different member of the collective. The book contains many soy-related recipes: Tofu (20 recipes), tempeh (1), miso (1), soybeans (1), tamari roasted nuts (1), etc. The extensive “Guide to ingredients, techniques, and equipment” (p. 649-87) describes: Beans (incl. soy), chick pea flour (besan flour), dashi, Hoisin sauce, miso, seitan, soy sauce (see tamari soy sauce), light soy sauce, tempeh, tofu, vegetable oil (incl. soy oil), Worcestershire sauce (“The formula remains a well-guarded secret, but we do know that the Lea and Perrins product contains molasses, anchovies or sardines, sugar, garlic, tamarind, soy sauce, vinegar and spices”). Address: Ithaca, New York.

2537. Morningstar, Amadea; Desai, Urmila. 1990. The ayurvedic cookbook: A personalized guide to good nutrition and health. Santa Fe, New Mexico: Lotus Press. 351 p. Foreword by Yogi Amrit Desai. Introduction by Dr. David

Frawley. Illust. by Amadea Morningstar. Index. 23 cm. [40 ref]

• **Summary:** This is a lacto-ovo vegetarian cookbook based on Ayurvedic principles. Contents: Part I: General Information. History of Ayurveda. Nutrition from an Ayurvedic perspective. Discovering your constitution. Attributes and nutritional needs of each constitution. How to imbalance your constitution. Understanding Ayurvedic nutrition: Taste. Digestion. Food combining and preparation. Balancing *Agni*. The digestive organs. The *chakras* and dietary change. Eating with the seasons. Getting ready to cook. Planning balanced meals easily. Menus: *Tridoshic*, *Vata*, *Pitta*, *Kapha*. Part II: Recipes. Part III: Appendices. 1. Most frequently asked questions and answers. 2. Enlarged food guidelines for basic constitutional types (many soyfoods are included). 3. Some basic information about nutrients. 4. Glossary of English and Sanskrit terms. 5. Food name equivalents in Latin, Sanskrit, Hindi. 6. Bibliography. About the authors (autobiographical).

The three Vatas (tridosha, three doshas, constitutional or body types) are Vata (pure air, head/wisdom), Pitta (pure fire, action), and Kapha (pure water, love/heart). Tridoshic foods or herbs are suited to all 3 constitutions; these include ghee, basmati rice, and asparagus. Concerning soya: “Many *Vatas* handle certain well-spiced soy products well, like tofu or liquid soy milk. Some do not. Let your gut be your guide. Dairy is very calming to Vata, especially when it is warm” (p. 14).

“*Pittas* are often attracted to high-protein foods, and do seem to need a little more protein than other constitutions. Goat milk, cow milk, egg white souffles, tofu, tempeh, and the aforementioned cottage cheese are all effective in balancing Pitta. Most beans—with the exception of heating lentils—are excellent” (p. 16).

Anything which stimulates elimination tends to relieve *Kapha* (barley and beans being classic examples). Aduki beans are especially good, as are black turtle beans, though the latter are more difficult to digest. Soy beans and soy products are recommended less frequently. Over half of tofu’s calories come from fat, surprisingly, while only 4% of black beans’ do. Still, soy products like soy milk tend to be less *Kapha*-enhancing than dairy products” (p. 19).

“Examples of oily food include ghee, vegetable oils, animal fats, soybeans, many vegetables and citrus. Dry foods include corn, buckwheat, rye, millet, most beans and dark leafy greens, to list a few. These latter foods will need moistening of some sort to be more easily digested by most people” (p. 28).

In the menu section, under each constitutional type (dosha, such as Vata), recommended menus are given by season for each meal. For example, soy-related foods included in Vata menus are: Summer: None. Fall: Dinner—Miso tofu, Amasake. Winter: None. Quick day: Breakfast—soymilk. Beverage—Amasake. Weekend day: Nothing. On the

road (when travelling): Dinner' Chinese vegetables and rice (with tofu, if well tolerated).

Each recipe in the recipe section tells which constitution type it suits, how long it takes to prepare, in what seasons it is most healing, and how many it serves. For example, –Vata means that it calms Vata, + Vata means that it aggravates or increases Vata, and 0 Vata means that it is neutral for Vata. For brevity, we will give only Vata examples in the following. Soy-related recipes: About tofu (p. 102): Tofu and liquid soy milk tend to be cool and heavy, yet oilier than most other bean products. This oily lubricating quality helps their digestion, as does the pre-processing they have undergone as legumes... Eaten in excess, they will increase *Kapha*. Warming preparation, in the form of heat or warming spices such as ginger, tamari, cumin, turmeric, cinnamon or mustard seeds, aid their healthy breakdown in the system. Beans can be idiosyncratic in effect though; if your experience doesn't match the descriptions given here, trust your direct experience first. Some people have a hard time digesting tofu in almost any form; an allergy to soy may be present. It was popular in the sixties and seventies to serve tofu cold, cubed and plain at health food-type salad bars. This is about the most difficult way to try to consume an already chilling food. Try tofu marinated, spiced and cooked, then make up your mind about its digestibility for you."

Miso tofu (p. 102, –Vata). Tofu mushrooms (p. 104, –Vata). Tofu pesto (p. 104, –Vata). Sauteed tofu and vegetables (p. 105, –Vata, but mildly + Vata with frozen tofu). East Indian lima beans (with tofu, p. 114). Spicy rice and yogurt (with soy milk, p. 131, –Vata; "Made with soy milk, which is lighter and cooler than yogurt, it is suitable for Pitta and Kapha as well"). Vegetable barley soup (with tofu, p. 188, 0 Vata).

About oils (p. 202-03): "Ghee is the highly preferred fat in Ayurveda, being light, easy to digest and potentiating to many of the foods with which it is served." Sunflower oil is the next best choice, being agreeable to all doshas. "Sesame oil is specifically recommended when a warming effect is needed. It grounds Vata... The vast majority of oils are warming and heavy in quality, including..." soy oil. "Margarine is cold and difficult to digest and not often recommended by Ayurvedic physicians."

About condiments: Salt, tamari, miso, and pickled ginger all heat up a meal and stimulate agni (fire). A detailed discussion is given of the medicinal function of sea vegetables in Ayurveda (p. 216-17).

About soy milk: Liquid soy milk can be a good alternative to cow's milk, if you are sensitive to the latter. It is also less *Kaphagenic* (imbaling to *Kapha*) than cow's milk, when properly prepared. Lighter than cow's milk in its effect on the body, it cooks up easily in recipes. Like most high protein foods it promotes building, not cleansing. It is best used in restorative and maintenance programs. It can be warmed with cinnamon, cardamom, nutmeg or ginger

and black pepper. Some *Vatas* do not tolerate it well. Dried soy milk powder and soy protein powder are much more difficult to digest than the whole liquid soy milks. Only the most stalwart *Pitta* is likely to be able to consume them without gas, as they are cold, heavy and dry. Whole soybeans and tempeh are often gas-producing as well. For adequate digestion they require much cooking and spicing, good *agni*, and a *Pitta* constitution. Hot soy milk (p. 264).

Scrambled tofu (p. 281, –Vata).

In appendix II (p. 293). The following legumes, in moderation, calm Vata: Aduki beans, soy cheese, soy milk (liquid), tofu, black lentils, mung beans, red lentils, and tepary beans. But these aggravate Vata: Soy beans, soy flour, soy powder, tempeh, garbanzos and most other beans. Among beverages, icy cold drinks and many others aggravate Vata. Beverages that calm Vata are soy milk (well spiced and hot), miso broth, many herb teas. Tofu is calming to Pitta and mildly aggravating to Kapha. Cool in action, some *Vatas* tolerate it well, others do not.

Aduki beans are mentioned on p. 19, 106, 109, 116, 124, 293, 306. Address: 1. Faculty member, The Ayurvedic Inst., Albuquerque, New Mexico; 2. Wife of Yogi Amrit Desai, member of Kirpalu Center for Yoga and Health, Lenox, Massachusetts.

2538. Nene, Y.L.; Hall, Susan D.; Sheila, V.K. eds. 1990. The pigeonpea. Oxon, England: CAB International for; Patancheru, AP, India: International Crops Research Institute for the Semi-Arid Tropics (ICRISAT). x + 490 p. Illust. Index. 25 x 20 cm. [500+\* ref]

• **Summary:** Contents (18 chapters, including): Foreword. Contributors. Acknowledgements. 1. Geography and importance. 2. Origin, history, evolution and taxonomy. 16. Nutrition and products. 17. Markets and outlook.

Pigeonpea (*Cajanus cajan* (L.) Millspaugh), a major grain legume, is widely grown as a backyard subsistence crop by small farmers in the semi-arid tropics. Worldwide, it ranks sixth in area and production compared with other grain legumes. All evidence indicates that the pigeonpea originated in Peninsular India. Today India produces more pigeonpeas than all other countries combined. The word "pigeonpea" probably originated in the Americas, where it arrived in the 15th century, because pigeons were fond of the seeds.

Chapter 16, "Pigeonpea: Nutrition and products," by D.G. Faris and U. Singh (both of ICRISAT; 126 refs = many tables and photos) includes the following contents: Introduction. Nutrition. Supplementation value of pigeonpea in cereal-based diets. Nutritional quality of vegetable pigeonpea. Cooking quality. Human food: Whole dry seed (the tough seed coat results in a long cooking time "but is free from the lipoxidase that causes off-flavours in soybean..."), dhal, other products from dry seed (freshly sprouted seed {sprouts}, tempeh {made with a combination of pigeonpea and soybean; see photo}, pigeonpea sauce

(ketchup) is a replacement for soysauce in Indonesia, canned whole dried seed, pigeonpea flour, extruded food, clear noodles). Vegetable (green seed {used as a green vegetable, often in place of green garden peas}, green pods). Animal feed. Medicinal uses ("There is a considerable folk medicine and ayurvedic listing of the curative effects of various parts of the pigeonpea plant"). Future. Address: 1. Deputy Director General, ICRIAT, Hyderabad, India.

**2539. Product Name:** Sandhill Tempeh.

**Manufacturer's Name:** Sandhill Farm.

**Manufacturer's Address:** Route 1, Box 155, Rutledge MO 63563. Phone: 660-883-5543.

**Date of Introduction:** 1990. January.

**Wt/Vol., Packaging, Price:** 8 oz perforated plastic bag.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Rebecca Bloom of Sandhill Farm. 2001. June 18. Sandhill Farm is a community, which has existed for 27 years, in the northeast corner of Missouri, near Iowa and Illinois. They grow organic soybeans on their farm. They make and sell about 400 x 8 oz. pieces of tempeh/month, some to a vegan restaurant, some to a grocery store and natural foods store in Columbia, Missouri. Their label is a paper insert with a recipe, slipped in between the perforated inner bag and the non-printed outer heat-sealed bag. Rebecca is not sure when they started to make tempeh. It could have been much earlier.

**2540. Tahu tempe:** Pembuatan, pengawetan dan pemanfaatan limbah [Tofu and tempeh: Production, preservation and waste usage]. 1990. Bogor, Indonesia: Pusat Penelitian dan Pengembangan Teknologi Pangan, IPB. 33 p. Illust. 23 cm. [Ind]\*

Address: Bogor, Indonesia.

**2541. Wagner, Lindsay; Spade, Ariane.** 1990. *The high road to health: A vegetarian cookbook*. New York, NY: Simon & Schuster / Prentice Hall Press. xv + 288 p. Foreword by E. Lee Rice. Index. 24 cm. [54 ref]

• **Summary:** Lindsay Wagner, whose lovely color photo appears on the cover, first achieved widespread television in the early 1970s as "The Bionic Woman." Recently she starred in the Academy-Award winning film *The Paper Chase*. This vegan cookbook uses no meat, dairy products, or eggs. A section titled "Raising the Dairy Question" (p. 13) discusses problems with milk and concludes: "A terrific substitute for milk products comes from that little marvel, the soy bean. Soy milk has the look and consistency of milk, and some brands even taste like it. Try some on your breakfast cereal, top your pies with our creamless Whipped Cream, spread your sandwiches with eggless Mayo Spread and enjoy Huevos-less Rancheros for brunch. You'll never look at another carton of milk."

Chapter 4, "About the ingredients," includes discussions

of Braggs Aminos, cold-pressed oil, kuzu, lecithin, miso, mochi, nori, soy milk, soy sauce, tempeh, tofu. Soy-related recipes include: Huevo-less rancheros (with tofu and soy milk, p. 65). Vegetarian "salami" (with firm tofu, p. 82-83). Mayo spread II (with soy milk, p. 88). Ginger tamari dressing (p. 131). Creamy oil substitute (with soy milk, p. 134). Tofu sour cream (p. 134). Eden cheesy sauce (with soy milk, p. 136).

Chapter 10 (p. 141-59) is titled "Entrées for the meat lover"; most of the recipes are based on soyfoods: Marinated tempeh (p. 141). Marinated tofu. Barbecued tofu or tempeh. Tempeh marinade. Teriyaki tofu. Polynesian tofu. Tofu piquant. Tofu ribs. Grilled tofu with summer vegetables. Japanese eggplant and tofu Romano. Pecan herb loaf (with tofu and soy flour). Easy tofu burgers. Easy easy burgers (with Marinated tempeh or tofu). New Age Italian sausage I (with Marinated tempeh and Marinated tofu). New Age Italian sausage II (with Marinated tofu). Spicy tempeh stir fry. Tofu cacciatore.

Lasagna with zucchini and mushrooms (in Light sauce with soy milk, p. 166). Manicotti stuffed with zucchini and tofu cheese (p. 175). Tacos (with Marinated tofu and tempeh, p. 187). Eggplant al forno (with tofu, p. 213). Banana-strawberry tofu pudding (p. 231). Italian cheesecake (with tofu, p. 243). Coconut-mocha cream frosting (with soy milk, p. 260). Tofu fruit sauce (p. 261). Mock whipped cream (with soy milk, p. 262).

An interesting last chapter titled "Afterword: Meat—We can live without it! Here's why" discusses the role of an "animal-based diet" on destruction of the environment. Address: 1. California; 2. Woodland Hills, California.

**2542. Zeffertt, Wendy.** 1990. *Cultured foods*. Gentian Services, P.O. Box 2140, Olympic Valley, CA 95730. 151 p. Illust. by Nanct Zeffertt. Index and recipe index. 28 cm. Spiral bound. [32 ref]

• **Summary:** This book is a good introduction to the many kinds and benefits of cultured or fermented foods. Many chapters (and all soyfoods chapters) contain recipes. Chapters related to soyfoods are 1. Why cultured foods? 2. Cultured dairy products. 3. Miso. 4. Tamari and shoyu (soy sauce). 5. Amazake, sake and mirin. 6. Tempeh. Where to order starter cultures. Glossary.

Note: This is not a vegetarian book; poultry and fish are used in some of the recipes. Address: Olympic Valley, California.

**2543. Kneipp Verein.** 1991. *Vollwertkochkurs: Leitung und Rezeptstellung—J. Schwarz* [Whole foods cooking course: Guidance and recipe collection by J. Schwarz]. 3 p. Jan. 30. Unpublished typescript. Fourth evening. [Ger]

• **Summary:** This collection of five recipes includes: Tempeh salad with green beans. Waldorf salad with tempeh pieces. Tempeh chips with brown rice.

2544. Agranoff, Jonathan. 1991. Tempe—The unique soyfood of Indonesia. *Garuda Indonesia* 11(1):31-32, 34, 36. [1 ref]  
**• Summary:** This article is in the in-flight magazine of Indonesia's national airline. The author "has been researching indigenous fermented foods in Indonesia and London University since 1985. A graduate of Food Science, he has worked for the Green Indonesia Foundation in West Java, subsequent to beginning research on tempe at the Nutrition Research and Development Centre in Bogor." Contents: Introduction, High quality protein source. What is tempe? A well travelled food (history of tempeh). Village "biotechnology." Red onchom and other varieties. Contains 6 photos related to tempeh. Address: Overseas Development Natural Resources Inst., England.

2545. Ashenafi, M.; Busse, M. 1991. Production of *tempeh* from various indigenous Ethiopian beans. *World J. of Microbiology and Biotechnology* 7(1):72-79. Jan. [25 ref]  
**• Summary:** Tempe was prepared from peas, chick peas, and soybeans (acidified and unacidified). Changes in pH, in temperature during the fermentation, in yield, in composition, and in organoleptic properties were studied. The quality of the tempeh was acceptable. Address: Dep. of Basic Science, Awassa College of Agriculture, Addis Ababa Univ., Awassa, Ethiopia.

2546. Fowler Brothers. 1991. Catalog: January 1991. P.O. Box 2324, San Rafael, CA 94912. 79 p. 28 cm.  
**• Summary:** The company is a "distributor of natural foods." The following makers, distributors, and brands of soyfood products are listed: I. Bulk Products: Miso (American Miso, 8 products), Soy foods (Turtle Island tempeh and Soy Deli tofu burger). Soy Sauce & tamari (San-J domestic shoyu and tamari, Westbrae Johsen shoyu), Tofu (Quong Hop, 6 products).

II. Packaged products: Ah Soy (Westbrae, 7 soy drinks), Eden Foods (Edensoy, 6 soy drinks), Pacific Soyfoods (6 types of soysage), Pacific Tempeh (4 products), Quong Hop (11 soymilk and 4 tofu products), San-J (tamari crackers, 14 soy sauce & tamari products), Soy Deli (Quong Hop, 5 soy foods, 8 vacuum pack tofu), Sweet Earth (3 veggieburgers), Turtle Island (10 tempeh products), Vitasoy (7 soy drinks), Westbrae (2 instant miso soups, 14 soy drinks, 14 types of soy sauce and tamari). Address: San Rafael, California. Phone: 415-459-3406.

2547. **Product Name:** Moonbean Tempeh (Most Types Use Soybeans as the Main Ingredient) [Black Soybean, Okara, Almond and Sesame, Garbanzo and Toasted Sesame, Shiitake Mushroom, Hot and Spicy, Amaranth & Black Pepper].

**Manufacturer's Name:** Leo Risin' Foods.

**Manufacturer's Address:** c/o Pywacket's Cafe, 10 East 9th

St., Lawrence, KS 66044.

**Date of Introduction:** 1991. January.

**Ingredients:** Black soybean (1991): Hand-split black soybeans, hand-split organic yellow soybeans, a pure *Rhizopus oligosporus* culture, umeboshi vinegar.

**How Stored:** Frozen.

**New Product—Documentation:** Talk with Clayton McHenry, founder and owner of Leo Risin' Foods. 1994. Feb. 21. He started making Tempeh in Nov. 1990. Letter and Labels sent by Clayton McHenry. 1994. Feb. 22. From Nov. 1990 until Dec. 1991 he used the kitchen at Pywacket's Cafe (10 East 9th St., Lawrence, Kansas 66044) at night to produce dozens of varieties of tempeh, which were sold as "Moonbean Tempeh" to the Cafe and to the Community Mercantile (a co-op grocery store in Lawrence). Substrates used: Black beans, black soybeans, black-eyed peas [cowpeas], chickpeas, peanuts, bulgur wheat, amaranth, teff, quinoa, rice, couscous, barley, sesame (white and black), wild peppergrass seed, buckwheat noodles, whole-wheat noodles, almonds, dried shiitake, sun-dried tomatoes, okara, sunflowerseed, hijiki, ground hempseed, millet, and many dried herbs and spices. In January 1992 Clayton named his business Leo Risin' Foods and set up a certified and inspected kitchen in his home at 1525 Rhode Island, Lawrence, Kansas 66044. From Jan. 1992 until May 1993 he produced tempehs for more restaurants, the Community Mercantile, and Clearly Nature's Own, a natural food store in Kansas City, Missouri. In 1988 Clayton began reading and collecting books by Shurtleff and Aoyagi.

Clayton sent the following labels (ingredients are shown in parentheses after each): Hot & Spicy (Hand split organic black soybeans, black and cayenne pepper, a pure *Rhizopus oligosporus* culture, umeboshi vinegar); Garbanzo and Toasted Sesame (Hand split organic soybeans and garbanzo beans, toasted sesame seeds, a pure *Rhizopus oligosporus* culture, umeboshi vinegar); Shiitake Mushroom (Hand split organic soybeans, shiitake mushrooms, a pure *Rhizopus oligosporus* culture, umeboshi vinegar); Black Soybean (Hand split organic black soybeans, hand split organic yellow soybeans, a pure *Rhizopus oligosporus* culture, umeboshi vinegar); Almond and Sesame (Hand split organic soybeans, sliced almonds, sesame seeds, umeboshi vinegar, a pure *Rhizopus oligosporus* culture); Amaranth and Black Pepper (Organic soybeans, organic amaranth, fresh ground black pepper, *Rhizopus oligosporus* (tempeh culture), umeboshi vinegar). The following text appears on most labels: "Unlike most commercial tempehs, this tempeh is not pasteurized and must be cooked for at least 10 minutes before eating. Your tempeh will last for 3-4 days if refrigerated or 3-4 months if frozen. Grey or black spots on the surface of your tempeh are harmless and occur naturally in the making of this product. Moonbean tempehs are handmade in Lawrence and offer an alternative to the relatively small [number of] varieties currently available. This here tempeh was born on

[date it was made]. Live lightly in Lawrence. Clayton. Label is printed on 100% recycled paper. Outer bag is 100% plant cellulose—not plastic.” Note: Clayton’s work with tempeh and the graphics on his labels are extremely innovative and original. He purchased the outer tempeh bags (which he no longer uses) from Earth Care Paper Products. They are made of a transparent cellophane (wood pulp) material through which the consumer could see the tempeh. They were more attractive than plastic since they were glossier. They biodegrade well. One drawback of the bags is that they become brittle after 1-2 years.

**2548. Product Name:** Tofu with Tempeh.

**Manufacturer’s Name:** Nutrisoy Pty. Ltd.

**Manufacturer’s Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1991. February.

**Ingredients:** Tofu and tempeh.

**New Product–Documentation:** Letter (e-mail) from Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling Tofu Tempeh in Feb. 1991. Note: He invented this interesting product.

**2549. Product Name:** Meatless Healthy Bacon (Made with Tempeh).

**Manufacturer’s Name:** White Wave, Inc.

**Manufacturer’s Address:** 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.

**Date of Introduction:** 1991. February.

**Ingredients:** Soy tempeh (cultured organic soybeans, water), soy sauce (water, soybeans, whole wheat, salt), miso (soybeans, water, salt), dried yeast, beet powder for color, dehydrated onion, granulated garlic, natural liquid hickory smoke and spices.

**Wt/Vol., Packaging, Price:** 6.5 oz (184 gm) plastic pouch.

**Nutrition:** Per 1 oz.: Calories 27, protein 4 gm, carbohydrate 4 gm (incl. 3.3 g, dietary fiber), fat 1 gm, cholesterol 0 mg, sodium 310 mg.

**New Product–Documentation:** White Wave News. 1991. Vol. 4, No. 1. June. A photo shows the label. Like all White Wave products, Meatless Healthy Bacon is made with soybeans grown in accordance with Section 26569.11 of the California Healthy and Safety Code [i.e. organic soybeans]. A comparison of 1 oz. broiled/fried bacon (pork) with Meatless healthy Bacon shows: Fat: 14 gm vs. 1 gm. Saturated fat: 4.95 gm vs. 0.15 gm. Cholesterol: 24 mg vs. 0 mg.

Label sent by Lon Stromnes. 1991. July 30. 4.5 by 10.25 inches. Plastic pouch. Red, black, and yellow on white. “Cholesterol-free! Vegetarian breakfast strips. A great-tasting choice.”

**2550. Malch, Tanya.** 1991. Martina Navratilova and tempeh (Interview). *SoyaScan Notes*. March 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Tennis star Martina Navratilova was recently in Palm Springs for a week to compete in the Virginia Slims tennis tournament. Martina is very careful about her diet, and she came repeatedly to the MT Plate restaurant before and during the tournament and loved the tempeh served in the “Vegetarian Plate” and the “Tempeh Paté.” To make the Vegetarian Plate, Tanya sautees cubed tempeh in olive oil, adds seitan and seitan broth plus vegetables, garlic, ginger and a glaze, then simmers it. During the week, Martina brought in many friends for parties and had them try tempeh. At practice, she wore the MT Plate T-shirt. She gave Tanya box seats for the tournament on Sunday. After winning the tournament, Martina stopped her big press conference and said “You have to go to this local restaurant named the MT Plate and try their tempeh.” She talked about what a great food tempeh is! Before she left Palm Springs to fly back home to Aspen, Colorado, she called Tanya from the airport, and asked if Tanya could send her fresh tempeh by Federal Express to Aspen. Her coach added: “She will!”

Follow-up talk with Tanya. 1991. June 28. Martina, who is not a vegetarian but who does not eat red meat, has never ordered any tempeh from Colorado. MT Plate restaurant will be closing in a few days and opening a larger facility in the Los Angeles area. Follow-up talk with Tanya. 1992. July 17. She makes seitan daily in her kitchen and serves it at

her restaurant. Address: Owner, MT Plate restaurant, 641 N. Palm Dr. (P.O. Box 3243), Palm Springs, California 92263-3243. Phone: 619-323-9686.

2551. Davey, C.L.; Peñaloza, W.; Kell, D.B.; Hedger, J.N. 1991. Real-time monitoring of the accretion of *Rhizopus oligosporus* biomass during the solid substrate tempeh fermentation. *World J. of Microbiology and Biotechnology* 7(2):248-59. March. [61 ref]

• **Summary:** Tempeh was made from soybeans, lupins, and quinoa. The authors describe a new method for the real-time estimation of the accretion of biomass during the solid substrate fermentation based on measurements of the dielectric permittivity at radio frequencies. Address: Dep. of Biological Sciences, University College of Wales, Aberystwyth, Wales, UK.

2552. Krusong, Warawut; Yongsmith, Busaba; Sanchez, P.C. 1991. Note: Increased vitamin B-12 level in a modified tempeh process. *Philippine Agriculturist (The)* 74(1):89-94. Jan/March. [21 ref]

• **Summary:** The moisture content of soybeans should be 55-57% for best production of vitamin B-12 production. When *Rhizopus oligosporus* was used alone as an inoculum for making tempeh, either as powdered or spore suspension, the result was only a small quantity of vitamin B-12 (40 nanograms per 100 gm); this is not significantly different from the initial vitamin B-12 content of soybeans. "However, with bacterial co-fermentation using *Propionibacterium shermanii* 1250, the yield of vitamin B-12 was tremendously increased to 185.3 ng/100 gm." Address: Thailand.

2553. **Product Name:** Organic Tempeh.

**Manufacturer's Name:** Soya Dairy (The).

**Manufacturer's Address:** Unit 16, Chaucer Yard, Countess Road, Sheffield S1 4TE, England. Phone: (0472) 796586.

**Date of Introduction:** 1991. March.

**Ingredients:** Organic soya beans, *Rhizopus oligosporus*, organic brown rice flour, organic cider vinegar.

**Wt/Vol., Packaging, Price:** 8 oz (227 gm).

**How Stored:** Frozen.

**New Product–Documentation:** Letter from Andy McAuley of The Soya Dairy. 1992. Oct. 23. "I am writing to you on behalf of a small business making, and promoting the virtues of, tempeh. As part of our promotion, we are trying to persuade hospitals and schools to take on tempeh as part of their meals service." Note: Sheffield is in the north of England, directly east of Manchester, and the center of the British cutlery industry.

Letter and Label from Andy McAuley. 1992. June 11. Andy and Dave Carless founded this company. Andy was a member of the Sheffield Wholefood Cooperative, trading as Bean Beanie, from Feb. 1988 to Nov. 1990, and he came across tempeh while working there. Dave Joined the Co-

op in June 1990, after working in a similar operation in Ipswich named Fruits of the Earth. While at Fruits, Dave had run a small-scale tempeh kitchen for about 3 years named Tempeh Foods. Andy was keen to promote tempeh and to do something other than simply buying and selling food. Dave taught Andy how to make tempeh, and they began commercial production in March 1991. They switched to using a new tempeh label in Jan. 1992. The present owners of the Soya Dairy are Andy and Gen Harrison. Gen became involved through her interest and experience in making tofu, which the company continues, though not on a commercial scale—simply as a source of fresh tofu, okara, and okara tempeh for friends and associates.

Label. First used in Jan. 1991. 5.75 by 8 inches. Paper. Black on tan. "A delectable Oriental food made from the fermentation of organic soya beans with the culture *Rhizopus Oligosporus*. Ideal for vegetarians, vegans and those who prefer a gluten free diet."

2554. *Voice of the Turtle (Husum, Washington)*. 1991. World's best tempeh now available in reusable, recyclable bag. 3:1. March.

• **Summary:** A photo shows four of the company's products. Since Nov. 1988, Turtle Island has had its own in-house recycling program based on the principles of "reduce, reuse, recycle, reorder." The new bag is made from only one type of plastic, low-density polyethylene, which is highly recyclable.

If you return 10 cleaned plastic bags from any products made by Turtle Island Foods, Inc. the company "will recycle the bags and send you a beautiful (and fun!) yo-yo made from 100% recycled plastic along with our plastics recycling guide." Address: #1 Turtle Lane, P.O. Box 218, Husum, Washington 98623. Phone: 509-493-2004.

2555. Wasserman, Debra; Mangels, Reed. 1991. Simply vegan: Quick vegetarian meals. Vegetarian Resource Group, P.O. Box 1463, Baltimore, MD 21203. 224 p. March. Illust. General index. Index of tables. 23 cm. [117 ref]

• **Summary:** A vegan cookbook. Contents: Foreword. Time-saving cooking suggestions: Microwave cooking. Sample menus: Menu analysis. Top recipes for calcium and vitamin C. Top recipes for iron. Recipes (one section is titled Soy Products: Tempeh Dishes, Tofu Dishes). Food definitions and origins. Herbs and spices. Vegan nutrition (written by Reed Mangels, PhD, RD. Each of the 18 topics is followed by a bibliography; includes a section on each major nutrient, pregnancy, lactation, feeding vegan kids, nutrition glossary, recommended reading list). Cruelty-free shopping by mail.

The Vegetarian Resource Group. The group also publishes a bimonthly magazine, *Vegetarian Journal*, and is considered by dietitians to be a good source of nutrition information for vegans.

This book contains more than 20 tofu recipes and 6 tempeh recipes. Address: VRG, Baltimore, Maryland. Phone:

301-366-8343.

2556. Ashenafi, B.; Busse, M. 1991. Growth of *Bacillus cereus* in fermenting tempeh made from various beans and its inhibition by *Lactobacillus plantarum*. *J. of Applied Bacteriology* 70(4):329-33. April. [12 ref]

• **Summary:** *Bacillus cereus* contaminates and in 40 hours totally degrades unacidified tempeh made from horse beans. The inoculation of *Lactobacillus plantarum* into this type of tempeh has no effect. The acidification of the horse beans during soaking and their inoculation with *L. plantarum* strongly reduces the growth of *B. cereus* during the fermentation. In associated cultures, *B. cereus* is completely inhibited by *L. plantarum* at pH 5.5. *Bacillus cereus* does not alter the tempeh made from peas, chick peas, or soybeans. Address: 1. Dep. of Basic Sciences, Awassa College of Agriculture, Addis Ababa Univ., Ethiopia; 2. Bakteriologisches Institut, Technische Universität München, Germany.

2557. Ashenafi, M.; Busse, M. 1991. The microflora of soak water during tempeh production from various beans. *J. of Applied Bacteriology* 70(4):334-38. April. [17 ref]

• **Summary:** The microflora in the soak water was studied during the soaking of horsebeans (*fève*), peas, chickpeas, and soybeans for tempeh production. Lactic streptococci dominated the flora in both unacidified and acidified soak water. Coliforms and yeasts were found only in unacidified soak water. The growth of microorganisms in acidified and unacidified soak water lowered the pH of the cooked legumes. Microbial acidification during soaking is considered to be important in tempeh production. Address: 1. Dep. of Basic Sciences, Awassa College of Agriculture, Addis Ababa Univ., Awassa, Ethiopia; 2. Bakteriologisches Institut, S.V.F.A., Weihenstephan, Technische Universität München, D-8050 Freising, Germany (FRG).

2558. Horowitz, Norman H. 1991. Fifty years ago: The Neurospora revolution. *Genetics* 127(4):631-35. April. [21 ref]

• **Summary:** "This year marks the fiftieth anniversary of the publication of one of the pivotal works of modern biology, the first *Neurospora* paper of Beadle and Tatum (1941). This brief paper, revolutionary in both its methods and its findings, changed the genetic landscape for all time. Where previously there existed only scattered observations (albeit with some acute insights) on the relation between genetics and biochemistry, this paper established biochemical genetics as an experimental science, one in which progress would no longer be limited by the rarity of mutants with biochemically knowable phenotypes, but where such mutants would be generated at will and where findings could be repeated and hypotheses explored, as in other experimental sciences. This paper was the first in a series of fundamental advances

in chemical genetics that by 1953 had bridged the gap between genetics and biochemistry and ushered in the age of molecular biology." Address: Biology Div., California Inst. of Technology, Pasadena, California 91125.

2559. *Plenty Bulletin* (Davis, California). 1991. A visit to the soy dairy in Guatemala. 7(1):3. Spring.

• **Summary:** "In 1979, at the peak of Plenty's integrated village development program in Guatemala, we bought 3,200 sq. meters of land (0.8 acre) in the village of San Bartolo in the central highlands. With the help of local Mayan volunteers a soy dairy was built on that land. In February of 1980, the dairy was open and running. Eleven years later it is still going and producing tempeh, tofu, soy flour, soy milk and soy ice-cream which are sold in nearby markets and in Guatemala City."

Alan Praskin, at the invitation of the village, returned to Guatemala and on 7 March 1991 signed title to the land over to the community and "Alimentos de San Bartolo," which is now the name of the soyfoods enterprise. The community of San Bartolo and the managers and staff of the soy dairy are Cakchiquel Mayas.

Three photos shown: Alan surrounded by San Bartolo elementary students, some of San Bartolo's soy-fed children, and a Guatemala highland family enjoying soy ice cream cones.

2560. Drosihn, Bernd. 1991. Re: New developments at Soyastern and Byodo Naturkost in Germany. Letter to William Shurtleff at Soyfoods Center, May 5. 1 p.

• **Summary:** "In Germany the market is on the move, but I'm sure you know that already through your worldwide Tofu-FBI. Soyastern stopped producing tofu and the brand has been taken over by Huegli, which now controls 60% of the tofu market in German natural food stores. Likewise, Byodo Naturkost in Munich is now owned by Svadesha.

Viana has started to produce tofu too, because our production of tempeh is still very small. We are planning to pasteurize tempeh in the future. Address: Founder and president, Viana Naturkost GmbH, Schmittenstr. 106, D-5030 Huerth 6 (Fischenich), West Germany. Phone: (02233) 41323.

2561. **Product Name:** Tempeh.

**Manufacturer's Name:** Genesis Wholefoods.

**Manufacturer's Address:** P.O. Box 19, Balgovan, Natal 3275, South Africa.

**Date of Introduction:** 1991. May.

**New Product-Documentation:** Letter from Paul Fleischack, owner. 1991. May 26. "I started producing tofu under the 'Genesis Wholefoods' label in Jan. 1991. Tempeh is now also made on a community scale and I hope to produce shoyu and miso during this year."

2562. Leneman, Leah. 1991. Travelling in the land of tempeh. *Vegan Views (Bournemouth, England)*. Spring. p. 7. [1 ref]

• **Summary:** The author, a vegan, found Indonesia a fascinating place to visit but also found it difficult to obtain vegan dishes at Indonesian restaurants. "It was disappointing to find that the country that created tempeh is such a difficult place for a vegan to travel in." Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

2563. **Product Name:** Lightlife Barbecue Grill (Vegetarian Tempeh Burger).

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302. Phone: 413-774-6001.

**Date of Introduction:** 1991. May.

**New Product–Documentation:** Talk with Michael Cohen. 1991. Sept. 17. This tempeh burger has a barbecued flavor. It is marinated and packed with marinade in the package.

2564. Starr, Sara. 1991. Soyfoods: Pleasing to the palate, easy on the planet. *Health Foods Business*. May. p. 34-39. [1 ref]

• **Summary:** "Based on data from the nation-wide study, 1990 HealthFocus on U.S. Consumers, about one in ten health active food shoppers say they eat soyfoods once every two weeks or more." Address: Vice President, Health Focus Inc., Emmaus, Pennsylvania.

2565. *Contact (Plenty Canada)*. 1991. The promise of soy foods: Sri Lanka. 1(3):1-3.

• **Summary:** A photo shows Muttiah Jeyabalan, a native Sri Lankan, who is Plenty Canada's Program Officer for Asia and the Caribbean. Since 1985 he has taken a major part in developing Plenty Canada's program that provides two benefits to Sri Lankans: nutrition and economic opportunity. Plenty Canada's project has recently received \$4.7 million funding from CIDA, the Canadian International Development Agency, as it enters its second 5-year phase. In the first 4-year phase of the Soya promotion program, two soy centers were established, one in Kandy and one in Colombo. The emphasis was on training, including extension programs, that assisted women's groups in starting income-generating soy-related businesses. In Sri Lanka, food is traditionally a woman's business. Soya products needed to be popularized and marketed to the general public. The key soyfoods were soy nuts, tofu, ice cream, popsicles, cakes, fried beans, yogurt, curries and tempeh. "Thirty Sri Lankan enterprises, mostly women-run, were initiated and are now self-sufficient." Soyfoods were incorporated in traditional local dishes. Soy ice cream is very popular. Janine Dudding is a Plenty Canada advisor to the Sri Lanka project. Peter Dudding is project director. Address: R.R. #3, Lanark, ONT, K0G 9Z9, Canada. Phone: (613) 278-2215.

2566. Sumaratunga, P.A.; Dasanayake, D.M.W.T. 1991.

Potentials and problems of income and employment generation through small-scale processing of coarse grains, pulses, roots and tubers in Sri Lanka. *Palawija News (Bogor, Indonesia)* 8(2):13. June.

• **Summary:** "Sri Lanka is an agricultural country with 52% of its labour force involved in agriculture and 31% of the total land area under agricultural crops. Total agricultural production constitutes 20% of the annual Gross Domestic Product, of which three fourth covers food crops and one fourth covers the export-oriented plantation sector.

Agricultural production in Sri Lanka is adapted to suit the annual bimodal rainfall pattern. In the wet (*Maha*) season, the whole island receives rain. In the dry (*Yala*) season, only the southwestern quarter of the island [around Colombo, the capital] experiences substantial rainfall.

Tables: (1) Labor productivity and land utilization of CGPRT crops in Sri Lanka. The five columns are: Crop type, GDP (million rupees), number of farm families, area cultivated. The 3 crop types are roots and tubers (incl. potato, manioc, sweet potato, other yams, which contribute the most to the GDP), pulses (including soybean, cowpea, greengram, blackgram, and groundnut, which have the largest cultivated area) and coarse grains (incl. maize and kurakkan).

(2) Area cultivated and production of CGPRT crops in Sri Lanka (1985-1989). For soybean in 1985: 2,780 metric tons were produced on 2,400 ha. In 1989: 2,910 metric tons were produced on 4,700 ha.

(3) Population and labour force statistics for Sri Lanka. The four columns are sector, population labour force, and unemployment. The population of Sri Lanka is presently 16.9 million of which 36% are economically active. 72.2% is rural, 25.5% is urban, and 6.3% is estate (lives on an estate).

(6) Labour requirements for cultivating and processing different crops (per acre). (7) Total labour cost for cultivating and processing different crops (per acre). (8) Total annual labor use and wage bill of CGPRT crop production.

A section titled "Producing soya-based products" states: "However the income and employment generation potential could be higher than that of pulses since soy products are higher priced and processing needs more labour. Nevertheless products such as tofu and tempe can fetch higher prices only when they are more widely accepted in Sri Lanka."

"Conclusion:... a clear potential exists for generating employment and income in the rural sector by promoting small-scale processing of GCPRT crops. To achieve this potential," for suggestions are given to planners.

Note: An editorial (p. 3) by Seiji Shindo, Director, CGPRT Centre, is largely about the Soybean Yield Gap Analysis Project (Phase II). Address: 1. Agricultural economist; 2. Provincial director (UVA province). Both: Dep. of Agriculture, Sri Lanka.

2567. *INTSOY Newsletter (Urbana, Illinois)*. 1991. Popularity of soyfoods receives major boost in Sri Lanka. No. 43. p. 1-2. July.

• **Summary:** “Efforts by Plenty Canada to popularize processed soybean foods for improved nutrition and as a new income source are showing widespread success in Sri Lanka.” The Canadian International Development Agency (CIDA) has agreed to fund the project with \$4.7 million (Canadian) for 5 years. The program in soybean utilization is carried out in collaboration with the Sri Lankan Ministry of Agricultural Development and Research, and the Ministry of Planning Implementation.

“Plenty Canada has now completed Phase I of the project, which links more than 150 producers and retail outlets into an integrated marketing network. Two processing and retail centers are operating—one in Kandy and the other in Colombo. Retail outlets operating in Kandy, Colombo, and 9 other districts currently sell more than 35 processed soybean products. Sales for 1991 are projected at more than \$Canadian 100,000...

“Products that are available include: soy ice cream, soy yogurt, tempeh, soy meat, soy instant dhal, soy-cereal mix, soy cocktail mix, and soy flour... Because of the increased demand for these products, Plenty Canada is considering setting up its own processing facility by the end of the year.”

Photos show: (1) People lined up at a Sri Lanka Soya Utilization Project mobile kitchen. (2) Many of the packaged soy products that are sold.

2568. Messina, Mark; Messina, Virginia. 1991. Increasing use of soyfoods and their potential role in cancer prevention. *J. of the American Dietetic Association* 91(7):836-40. July. [56 ref]

• **Summary:** Contents: Abstract. Introduction. Historical perspective. Soybeans and the US food supply: Soy protein products, retail soyfoods sales. Nutrient contribution of soyfoods. Soybeans and cancer risk: Experimental studies (isoflavones, protease inhibitors, epidemiology, breast cancer, colorectal cancer). Conclusions. Implications.

“Soybeans contain, in relatively high concentrations, several compounds with demonstrated anticarcinogenic activity. Two of these compounds—protease inhibitors and phytic acid—have traditionally been viewed as antinutrients... It may not be appropriate to evaluate soybeans on nutrient content alone; dietitians need to know about the nonnutritive dietary compounds, called phytochemicals, which may have anticarcinogenic effects... Overall, the epidemiologic data suggest that soy consumption may lower colorectal cancer risk, whereas there is only moderate support for the role of soy in reducing breast cancer...”

Table 1 (p. 838) gives the “Proximate composition and selected nutrient content of various soyfoods in common serving sizes and in 100-gm edible portions” (based on

Haytowitz 1986). The soyfoods are: Miso, natto, okara, roasted soybeans (dry- or oil roasted), soy sauce (tamari), tempeh, firm tofu (raw), regular tofu (raw). Address: 1. Diet and Cancer Branch, Div. of Cancer Prevention and Control, National Cancer Inst., Bethesda, Maryland 20892; 2. Registered Dietitian, private practitioner, Washington, DC.

2569. Spaid, Elizabeth Levitan. 1991. Give me a burger—Hold the meat: A widening variety of dishes enliven the plant-based diets of today’s vegetarians. *Christian Science Monitor*. Aug. 1. p. 14.

• **Summary:** Vegetarian diets are no longer bland or uninteresting (if they ever were). Today’s vegetarians enjoy a rich variety of flavors, and sound nutrition. A new generation of vegetarian adults are raising their kids on healthy vegetarian or vegan diets. They also know more about nutrition. And a much wider variety of vegetarian foods and cookbooks are easily available. Almost every supermarket now carries tofu, frozen meat alternatives, all kinds of fruits and vegetables, breakfast cereals, etc. There are now alternatives to almost every meat, dairy, or egg product—from tofu dogs to soy cheese, from eggless mayonnaise to fake bacon made of tempeh—not to mention soy milk and soy ice cream. In short, there are a great many more things to eat in the plant kingdom than in the animal kingdom.

“Many people wince when they hear the word ‘vegetarian,’ thinking tofu (a cheese-like food made from soybeans) and salad are the staples of such a diet.” But vegetarians know this is a myth.

For many people discovering the rich, varied, and delicious flavors is a big discovery, a real and happy surprise. When many people decide to “go green” they also decide to give up meat, which is so destructive to the environment. Others believe it is ethically wrong to kill and eat animals. Still others believe that a vegetarian diet is more healthful.

Tofu can be used in a remarkable number of ways, and made to blend in so one doesn’t even know its tofu. Delicious sauces can be made out of “silken tofu and miso,” and people think they are eating some type of rich cream sauce.

2570. Tara, Bill. 1991. Pioneering macrobiotics and soyfoods in London (Interview). *SoyaScan Notes*. Aug. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Starting in the late 1960s, the pioneering work with soyfoods in London was done by Craig and Greg Sams. They and their parents were Americans, and they had gone to college in America. Their father was employed by the U.S. armed forces as an historian; they spent a lot of their time growing up between America and England. Greg fell out of a tree while going to college in Berkeley in the late 1960s and was paralyzed from the waist down, so he was confined to a wheelchair, but was still very active and innovative. In the late 1960s they set up a macrobiotic natural foods cafe/

restaurant on Portobello Road in London, then changed it into Ceres Grain Shop, a natural foods retail store. As volume increased, they began to distribute their products out of the back of their shop, and in about 1971 founded Harmony Foods Ltd. as a distribution company located in a warehouse on Ladbroke [sic, Latimer] Road. The model and evolution was similar to that of Erewhon in Boston. Harmony Foods was the first natural foods distributor in England, and probably the second in Europe after Lima Foods of Belgium. Soon they were importing macrobiotic foods from Japan, and distributing organically grown grains from England and from The Camargue (a marshy island in the delta of the Rhone River in the south of France), etc.

Among their early Japanese imports were bulk miso and “tamari” (actually shoyu), imported from Muso in wooden kegs. They repackaged the miso and shoyu in glass bottles under the Harmony Foods label in London. This was the first Japanese miso and shoyu sold in England. In about 1972, as soon as Erewhon started having miso and shoyu packed in Japan, the Sams had the same thing done with theirs, then they applied their own labels in London. But they continued to import in bulk as well. A Chinese company in London made tofu and [mung] bean sprouts, then sold the tofu to the Sams brothers; they sold it unpackaged in open trays in water. At that time, tofu was not emphasized much in macrobiotic circles so not much was sold; it was considered too yin. The Sams also sold deep-fried Rissoles filled with TVP instead of meat; as early as 1970 the Rissoles were being made by an Israeli guy (name?) who owned a shop (name?) by the Hempstead Heath. Marigold Foods also used TVP in the mid-1970s.

In 1970 Bill Tara, then a vice president at Erewhon in Boston, passed through London on his way to India. One purpose of his trip was to scout out the possibility of Erewhon setting up a distribution point or center in England. Paul Hawken was president of Erewhon at the time, and Erewhon was importing miso and tamari from both Muso and Mitoku in Japan. Bill and Paul had been roommates in a warehouse in San Francisco, then they took over the Erewhon food store from Evan Root, Paul starting 2-3 months before Bill. In London, the Sams brothers were just opening a new natural foods restaurant in the Notting Hill area so Bill and Paul Petrofsky spent 2 weeks fixing it up. Paul later started Baldwin Hill Bakery with Hy Lerner. Bill stayed in London 2-3 months during this first visit.

In about 1972 Bill returned to London with Russel Demerais, on the Erewhon payroll, again to start an Erewhon distribution center. But Erewhon went through a cash crisis and Harmony foods had grown dramatically. So Bill and Peter Bradford (an Englishman who had come to American in about 1970 and worked for Erewhon doing organic agriculture at Erewhon Farms near Keene, New Hampshire) began to work for the Sams brothers both at Ceres Grain Shop (the retail store) and Harmony Foods (in the

warehouse). Bradford, who now has a very successful natural food store in England named Clearwater Natural Grocer, has been one of the most important promoters of soyfoods in the UK. At this time, Craig Sams set up a bakery. By now, miso and tamari sales had increased; Harmony was still affixing its own label to unlabeled packs.

In 1974 Bill and Peter established Sunwheel as a natural food/macrobiotic distributor. They picked up exotic Japanese imports that Harmony found unprofitable and wanted to drop—so there was little or no competitive feeling with the Sams. By late 1974 Sunwheel Hatcho Miso, Mugi Miso, and Tamari were on the market, imported from Muso (Yuko Okada) in Japan. Sunwheel also made granola and peanut butter. Sunwheel never sold any other soyfood products; they had very limited warehouse space and no refrigeration.

Note: On 17 Aug. 1975 Renée Tara wrote William Shurtleff in California. She was living at 30 B Market St., Bradford-on-Avon, Wilts., England. She is writing a European Macrobiotic Cookbook. She requests information on miso and invites Shurtleff to visit.

In about 1977 Sunwheel acquired a retail store that had been started in and by the Community Health Foundation. By 1979 Sunwheel was very successful, but it needed to be recapitalized or sold. So the partners decided to sell it to a larger health food company; Peter kept the retail store.

In Nov. 1975 Bill established the Self Health Center which by 1976 grew into the Community Health Foundation (CHF). By 1976 CHF was offering classes in soyfoods. Paul Jones was the key man with tofu; he taught classes and started making tofu out of his home in the Highgate area. Paul Jones was definitely the first Caucasian to pioneer tofu in England. Simon Bailey, a baker who was originally with one of the first natural foods stores in England, located in Bath, taught about tempeh. These people were experimenting in the kitchen with soyfoods and taught in a sort of an apprenticeship program. Jon Sandifer, who is still with CHF, learned tempeh from Simon Bailey. CHF sold some tofu and tempeh through its own sit-down restaurant named The Seven Sheaves, then renamed The Natural Snack and changed to a cafeteria. A few people did experiments with miso but it never got to a commercial scale in part because of persistent rumors that Lima Foods was going to start making it.

By the late 1970s soyfoods were growing in popularity in the UK. Two separate groups promoted them; the vegetarians and animal rights people (who liked TVP), and the natural foods and macrobiotic people. Marigold Foods also used TVP in the mid-1970s.

Much of important pioneering commercial work with soyfoods in Europe was done by macrobiotic groups in the Netherlands and Belgium. Bill often went there to teach in 1974-79. Tofu, and later tempeh, were emphasized by groups such as Manna in Amsterdam and De Brandnetel in Antwerp. Macrobiotics was much more active in the Lowlands than in

England.

The Sams brothers later started Whole Earth as a marketing company for their jams. They sold it fairly soon. Greg Sams (disabled) is no longer in the food business; he runs The Chaos Shop in London which sells photographic reproductions of computer-generated chaos patterns. Craig started Realeat Co. and now may be with the Haldane Foods Group. Address: Director, Nova Inst., P.O. Box 4648, Estes Park, Colorado 80517. Phone: 303-586-6265.

2571. Stackler, Ben. 1991. Macrobiotics and soyfoods in the Soviet Union (Interview). *SoyaScan Notes*. Aug. 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The macrobiotic movement in the West has recently been very active in Eastern Block countries. The leaders there are mostly medical doctors. They are treating Chernobyl radiation patients using macrobiotics. Two areas of greatest activity in the USSR are Leningrad (now named St. Petersburg), and a city in the Ural Mountains (east of Moscow) named Chelyabinsk (also spelled Cheliabinsk; a subdivision of the Russian S.F.S.R.). The St. Petersburg doctors have many ambitious plans. They want to manufacture miso and tempeh on a commercial in cooperative with a brewery in St. Petersburg. A year ago there was a macrobiotic conference in Yugoslavia; 500 people from all over Europe attended and Michio Kushi was the featured speaker. In October 1990 Ben went to Moscow and St. Petersburg with 6 macrobiotic people. He had hundreds of pounds of donated miso sent by airlift to the USSR. The *One Peaceful World* newsletter, published by the Kushi Institute in Massachusetts, did a story on his October trip; it includes the names and addresses of the interested people. He will be making a second trip to the USSR within one week, revisiting people he met before.

Note: The MacNeil/Lehrer Newshour reported on 14 Feb. 1992 that a top-secret Soviet nuclear weapons complex is located near the city of Chelyabinsk. It is one of ten which together produced all of the former Soviet Union's nuclear weapons. Address: 1400 Shattuck Ave. #7-2, Berkeley, California 94709. Phone: 415-527-9389.

2572. Drosihn, Bernd; Hess, Albert; Nagel, Christian. 1991. The tofu industry and market in West Germany (Interview). *SoyaScan Notes*. Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bernd is in the USA with Albert Hess of Das Tofuhaus. They just had a nice visit to Northern Soy in Rochester, New York. Svadesha Vegetarische Feinkost bought Byodo Naturkost in April 1991 and is now in financial trouble because the owners do not understand the tofu market; they are trying to sell Byodo, which is now also having trouble.

Since Huegli bought Soyastern and Yamato, the two companies have steadily lost market share. For the past

two years, Soyastern's quality has been very poor, and they have sometimes been unable to fill orders—but that has improved somewhat since they were bought by Huegli (a Swiss company). In 1988 Soyastern alone had 35-40% of the German tofu market, and now it is 20-25%. Soyastern's actual output of tofu stayed about constant but the market as a whole is growing well. Yamato has always been well organized. Another problem is that Huegli is seen by natural food store owners as a "big food company" and these owners do not want to support such companies by buying from them.

Roughly 20 tonnes/week of tofu are now made in Germany, and that is growing at 10-15% a year. Of total sales, roughly 35% is plain tofu and 65% is tofu products. There are many more tofu products. Tofu and tofu products now have much more shelf space in food stores, and many stores that used to carry only one brand of tofu now carry 3-5. Roughly 90% of the tofu sold in Germany is made with organically grown soybeans; Hensel is one major company whose tofu is not organic. A rapidly growing proportion of these organic soybeans are now grown in Europe. The main countries supplying organic soybeans for tofu in Germany, in descending order, are: USA, France, Austria, Hungary, and Germany (the latter grows 20-30 tonnes/year). Some smaller companies (such as Taifun, Albert Hess of Das Tofuhaus, and Christian Nagel) have all been growing well. The largest tofu manufacturers in Germany are: (1) Huegli with 40% of the German tofu market—composed of Soyastern, Yamato, and KMK—is by far the biggest; they also have some brands in the Reform market, and in canteens. Hensel, which has strong connections with Huegli, is not a manufacturer; their tofu is produced at KMK (Kurbessische Molkerei Kassel) in Kassel, which is owned by Huegli. In early 1990 Huegli purchased Heirler, the biggest distributor of fresh health foods in West Germany, and also a brand name in 2,000 Reform Houses in Germany; (2) DE-VAU-GE (GranoVita brand), with 10% of the market, is big in the Reform market; (3) Christian Nagel Hamburg Tofu Manufaktur, 7-8%; (4) Geestland in Bremerhaven, 7-8%; (5) Das Tofuhaus in Lautersheim, 7-8%; (6) Taifun; (7) Svadesha; (8) Soto. Bernd's company is still small but he now makes much more tofu than tempeh, and his sales are growing fast. He got his tofu equipment from Tofurei Jutta Schoenemann near Nuremberg—which was run by a housewife and her husband. They bought their equipment in Japan, made 100-200 kg/week of tofu, and went out of business about 2 years ago. He is not aware of any companies that have gone out of business during the past year, although Svadesha and Byodo are having a hard time.

A major change is that KMK is now producing the tofu for Soyastern and Yamato. Yamato's plant will be closed at the end of this year. It is less expensive for Huegli to produce all of their tofu at one place. Thus by early 1992 KMK will be the largest tofu plant in Germany. It is not clear what will happen to Klaus Gaiser; he does not want to move

away from Tuebingen. Thomas Karas is probably living in Cologne; he was very lucky to be able to sell his company to Huegli though he had debts of about 1 million marks. Huegli assumed only one-fourth of these debts. Soyastern's two main sources of capital (one bank and the man who sold him the chicken factory) took over one-fourth of the debt. Another one-fourth was taken over by his supplier of soybeans, and Thomas took on the last one-fourth himself.

The price of tofu in the USA is much lower than in Germany, except for Heuschen-Schrouff tofu, which is sold in Asian food stores. Tofu sold in Asian food stores in Europe is generally much less expensive than that sold in natural food stores. Huegli is trying to recover the market share they have been losing by selling their tofu less expensively; this will probably bring down all tofu prices in Germany—but Bernd hopes it does not fall to the American level.

The organic German Soyfoods Association has had a struggle. People are now encouraging Klaus Gaiser to establish an association of all soyfoods manufacturers in Germany. Another big question is how soyfoods manufacturers will relate to the unified European Community in 1992. Address: 1. Founder and president, Viana Naturkost GmbH, Cologne; 2. Owner, Das Tofuhaus; 3. Owner Hamburger Tofu Manufaktur. All: Germany. Phone: (02233) 41323 or 221-121175.

2573. Drosihn, Bernd. 1991. Tempeh in West Germany (Interview). *SoyaScan Notes*. Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Viana now makes more tofu than tempeh, but their tempeh business is also growing nicely. They started pasteurizing their tempeh about 2 months ago, and that has helped sales. Byodo Naturkost was the first company to make tempeh in Germany, and tempeh has been their flagship product, but their production seems to have decreased substantially. Christian Nagel also makes tempeh. Address: Founder and president, Viana Naturkost GmbH, Cologne, Germany. Phone: (02233) 41323 or 221-121175.

2574. Kane, Marion. 1991. The cutting edge: Sink teeth into vegetarian fare. *Toronto Star (Ontario, Canada)*. Aug. 28. p. C3.

• **Summary:** At the seventh annual Vegetarian Food Faire at Harborfront's York Quay Centre, there will be plenty of mouth-watering food and info to get your teeth into. But there won't be any meat.

The Faire will be held on Sept. 7 and 8, from 11 a.m. to 6 p.m., sponsored by the Toronto Vegetarian Association. It "addresses what the group calls the 'four cornerstones of a vegetarian lifestyle: health, animal rights, environmental concerns and the elimination of world hunger.'" Soy City Foods will be there to prepare barbecued veggie burgers, tempeh stew, vegetable curries, tofu pot pies, and non-dairy brownies.

Dr. David Jenkins, of the Univ. of Toronto's nutrition department will explain the nutritional benefits of a vegetarian diet.

A large photo shows Penny Cassel of Soy City Foods as she shows off her Tempeh Reuben sandwich, a vegetarian delight. "Tempeh is an Asian food prepared by fermenting soybeans."

2575. Soyfoods Center. 1991. Soyfoods information catalog: Publications by William Shurtleff & Akiko Aoyagi Shurtleff [mail order]. P.O. Box 234, Lafayette, CA 94549. 20 panels. Aug. 30.

• **Summary:** This catalog, folded like a road map, is printed with dark blue and pea green ink on white paper. This is the first catalog in which the prices are printed on a separate sheet of paper. 5,000 copies were printed by AMP Printing Inc. in Pleasanton, California.

Note: This was the last catalog Soyfoods Center ever had printed on paper. Future catalogs appeared on the Center's website. Address: Lafayette, California. Phone: 415-283-3161.

2576. **Product Name:** Organic Tempeh.

**Manufacturer's Name:** Culture Foods Ltd.

**Manufacturer's Address:** 4 All Saints Workspaces, 75 Raleigh St., Nottingham NG7 4DL, England. Phone: (0602) 788963.

**Date of Introduction:** 1991. August.

**Ingredients:** Organic soya beans, organic cider vinegar (trace), *Rhizopus oligosporus* (tempeh culture).

**Wt/Vol., Packaging, Price:** 8 oz (227 gm) aluminum foil container with paperboard sleeve. Retail for £0.99.

**How Stored:** Frozen.

**New Product—Documentation:** Label sent by Alison J. Clark of Culture Foods Ltd. 1991. Aug. 23. 5.76 by 4.5 inches. Orange and turquoise blue on white. Heavy paper sleeve. Logo resembling the Vegetarian Society's "V" but with a sunflower growing out of it. "No animal ingredients. A delicious, versatile and high protein food. Fry, steam or bake and use in place of meat in all your favorite recipes." A letter adds that the company, a worker's co-operative, sold its first order on 8 Aug. 1991.

Letter from Nadine Cook of Culture Foods Ltd. 1994. Jan. 14. The company is at the same address shown above, and they are still making tempeh and tempeh products.

2577. **Product Name:** Tempeh Chasseur.

**Manufacturer's Name:** Culture Foods Ltd.

**Manufacturer's Address:** 4 All Saints Workspaces, 75 Raleigh St., Nottingham NG7 4DL, England. Phone: (0602) 788963.

**Date of Introduction:** 1991. August.

**Wt/Vol., Packaging, Price:** 12 oz (340 gm) aluminum foil container with paperboard sleeve. Retail for £1.89.

**How Stored:** Frozen.

**New Product–Documentation:** Label sent by Alison J. Clark of Culture Foods Ltd. 1991. Aug. 23. 5.76 by 4.5 inches. Orange and turquoise blue on white. Heavy paper sleeve. Logo resembling the Vegetarian Society's "V" but with a sunflower growing out of it. "No animal ingredients. Tempeh and vegetables in a rich red wine and tomato sauce. No artificial additives of any kind. Tempeh is a versatile high protein soya product." A letter adds that the company, a worker's co-operative, sold its first order on 8 Aug. 1991.

2578. **Product Name:** Tempeh in Wine and Lemon Sauce.

**Manufacturer's Name:** Culture Foods Ltd.

**Manufacturer's Address:** 4 All Saints Workspaces, 75 Raleigh St., Nottingham NG7 4DL, England. Phone: (0602) 788963.

**Date of Introduction:** 1991. August.

**Wt/Vol., Packaging, Price:** 12 oz (340 gm) aluminum foil container with paperboard sleeve. Retail for £1.89.

**How Stored:** Frozen.

**New Product–Documentation:** Label sent by Alison J. Clark of Culture Foods Ltd. 1991. Aug. 23. 5.76 by 4.5 inches. Orange and turquoise blue on white. Heavy paper sleeve. Logo resembling the Vegetarian Society's "V" but with a sunflower growing out of it. "No animal ingredients. Tempeh and vegetables in a white wine, lemon and herb sauce. No artificial additives of any kind. Tempeh is a versatile high protein soya product." A letter adds that the company, a worker's co-operative, sold its first order on 8 Aug. 1991.

2579. **Product Name:** Indonesian Style Tempeh.

**Manufacturer's Name:** Culture Foods Ltd.

**Manufacturer's Address:** 4 All Saints Workspaces, 75 Raleigh St., Nottingham NG7 4DL, England. Phone: (0602) 788963.

**Date of Introduction:** 1991. August.

**Wt/Vol., Packaging, Price:** 12 oz (340 gm) aluminum foil container with paperboard sleeve. Retail for £1.89.

**How Stored:** Frozen.

**New Product–Documentation:** Label sent by Alison J. Clark of Culture Foods Ltd. 1991. Aug. 23. 5.76 by 4.5 inches. Orange and turquoise blue on white. Heavy paper sleeve. Logo resembling the Vegetarian Society's "V" but with a sunflower growing out of it. "No animal ingredients. Tempeh and vegetables in a coconut milk and fresh coriander sauce. No artificial additives of any kind. Tempeh is a versatile high protein soya product." A letter adds that the company, a worker's co-operative, sold its first order on 8 Aug. 1991.

2580. Gray, Sylvia Ruth. 1991. Vitamin B-12: A disappearing act? *Gold Mine Gazette* (San Diego, California). Summer. p. 1, 6. [5 ref]

• **Summary:** Theorizes as to why the vitamin B-12 content of our foods may be decreasing. "In the 1960s, tests using the protozoan *Ochromonas malhamensis* showed B-12 values for beef liver, beef heart, Swiss cheese and chicken breast to be 122, 14.2, 1.71, and 0.5 mcg/100 gm, respectively. Tests in 1989 by the same protozoan and procedure identified no B-12 in any of these foods and only 2.19 mcg/100 gm in "natural" beef heart—little more than one-seventh of the previous value. Similarly in the 1960s, tests using the bacterium *Lactobacillus leichmannii* showed B-12 values for egg yolk and canned tuna to be 9.26 and 2.8 mcg/100 gm. Tests on these same foods by the same bacterium and procedure in 1990 revealed B-12 values of 1.28 and 0.5 mcg/100 gm," respectively.

"Happily a number of foods used in the macrobiotic and vegetarian communities appear superior to their flesh food counterparts. Wakame, kombu, and nori showed B-12 levels above 9 mcg/100 gm, while mekabu and alaria were approximately 2. (Note: Since bacterial synthesis of vitamin B-12 occurs mostly on the sea vegetables' surface, they are weighed dry and tested unwashed. Findings need to be divided by four to obtain mcg/100 gm cooked portion, and consumers should strain and use the rinse water in cooking.) Aside from sea vegetables, one brand of tempeh was above 4 mcg/100 gm of B-12 and three quality misos ranged between 0.74 and 0.16 mcg/100 gm."

Vitamin B-12 was the last of the vitamins to be discovered (in 1948). It can only be produced in nature by bacterial synthesis. Address: Strictly Macrobiotic, 315 First Ave., Salt Lake City, Utah 84103. Phone: 801-521-7936.

2581. **Product Name:** Tempeh: Fermented Soya Beans.

**Manufacturer's Name:** Magic Tops.

**Manufacturer's Address:** 16 Manahambre Road, Princes Town, Trinidad, West Indies. Phone: 1-809-655-3230.

**Date of Introduction:** 1991. August.

**Ingredients:** Fermented soya beans.

**Wt/Vol., Packaging, Price:** 454 gm (1 lb) plastic bag.

**How Stored:** Frozen.

**New Product–Documentation:** Leaflet sent by Deolal S. and Kamla Ramnarine, joint directors. 1991. Oct. 8. "Enjoy tempeh." This 6-panel leaflet, printed in blue and red on tan paper, contains 4 recipes with illustrations plus information about tempeh (taken from "What is Tempeh?" and "The Book of Tempeh" by Shurtleff and Aoyagi). "Fermented soya beans. Eat right with every bite. Join the soya food revolution as tempeh comes to the Caribbean. Tempeh is super food." In an accompanying letter Deolal notes that he is diversifying his small ice cream business to include tempeh. He is being guided by the Caribbean Industrial Research Institute, St. Augustine, Trinidad. He would like to visit 1-2 tempeh manufacturers, preferably in Florida.

Letter and Label sent by Deolal Ramnarine. 1991. Nov. 21. They have been making and selling tempeh since 28 Aug.

1991. It got off to a slow start until they did more aggressive marketing. “We are now supplying the health shops. We are also in contact with vegetarian groups making presentations on how to use tempeh. The Seventh-day Adventists of Trinidad and Tobago make a variety of crushed soya bean foods which do not contain tofu or tempeh.”

Label is 7 by 3 inches printed on the front and back of a 10-by-5-inch plastic bag. Orange, blue, and white. A wreath surrounds a see-through window. “Tempeh is a low-cost, high-quality vegetable protein and an excellent diet food & low in saturated fats. Tempeh is a rich source of vitamin B12. Tempeh also contains other vitamins, minerals and fibre, and essential amino acids. Tempeh is highly digestible, and is suitable for young children and the elderly. Free of cholesterol.” On the back of the label are recipes for: General preparation of tempeh (pan fried with seasonings). Stewed tempeh relish. Tempeh (cheese) burger.

2582. McSweeney, Daniel. 1991. Consumer survey 1991. *Whole Foods*. Aug. p. 34-36, 39, 41.

• **Summary:** This survey was conducted at 18 natural foods stores throughout the USA. Product purchases. Percentage of respondents who purchased a type of product at a natural foods during the past 12 months: Cheese substitute 28%, meat 34%, miso 34%, sea vegetables 33%, soy milk 51%, soy sauce 36%, tamari 52%, tempeh 33%, tofu 57%, yogurt (dairy) 64%.

2583. Pickarski, Ron. 1991. *Friendly foods: Gourmet vegetarian cuisine*. Berkeley, California: Ten Speed Press. 277 p. Illust. Index. 23 cm. [23 ref]

• **Summary:** This is a stylish vegan cookbook, with a wealth of sophisticated and delectable soyfoods recipes. The author recommends only high-quality ingredients. Brother Ron grew up in Michigan and during high school spent time in the restaurant business flipping hamburgers. Later he became a Franciscan monk (OFM). A look at his own health revealed the need to change his diet. So Brother Ron changed to a natural vegetarian diet and experienced weight loss and renewed energy. Now he considers himself a food missionary—helping people transform their lives through food. Friendly foods are “foods that are friendly to our bodies, our pocket books, our busy schedules, and our environment.”

In the section on dairy-like products, the author recommends soy milk and some “tofu ice creams.” He recommends use of soy cheeses sparingly since they are high in fats (especially the softer types). He considers nondairy creamers to be a less healthful than their dairy counterparts, since they are high in saturated fats and artificial additives. “Typically, nondairy creamers contain corn syrup solids, partially hydrogenated vegetable oil (including coconut oil, cottonseed oil, palm oil, or palm kernel oil), sodium caseinate, sodium phosphates, mono- and diglycerides,

sodium silico aluminate, and artificial color. I do not consider this type of product to be an example of a high-quality food.”

Soy-related recipes include: Marinated vegetables with marinated tofu (p. 41). Shish kebabs (with marinated tofu, p. 42). Marinated tofu with scallions (p. 43). Gefilte tofu with horseradish and charoset sauce (p. 49-50). Zucchini bisque (with tofu, p. 66). Tofu wakame salad (p. 82). Tofu cottage cheese (p. 89). Vegan sour cream (with soy milk, p. 90). Soy mayonnaise (with tofu, p. 90). Silken tofu mayonnaise (p. 91). Lemon cream dressing (with tofu, p. 92). Oil-less miso dressing (with soy milk and white miso, p. 96).

In the chapter on entrees, there are detailed descriptions of tofu, tempeh, and seitan. Soysage (with cooked soybeans and soymilk, p. 105). “Meatballs” (with cooked soybeans, p. 107). American loaf (with silken tofu, p. 112-13). Tofu spinach pie (p. 120). Auberge Hanfield pie (with silken tofu, p. 121). Russian vegetable pie (with silken tofu and tofu cottage or ricotta cheese, p. 122). Greek moussaka (with tofu topping, p. 128-9). Sweet and sour tempeh (p. 133). Southern fried tofu (p. 134). Tofu Swiss steak (p. 135). Tempeh stew (p. 136). Thanksgiving day tofu (p. 137). Tofu Jamaican run down stew (p. 138). Tofu paneer (p. 139). Seitan (p. 140-43). Seitan à la Normandie (p. 144). New England boiled dinner (with tofu or seitan, p. 145). Seitan Parmesan (with vegan cheese made with tofu, p. 147-48). San Francisco stir-fry (with seitan or tofu, p. 151). Berner platte (with protein accompaniments made with tofu and Soysage, p. 155-56). Vegan Béarnaise sauce (with silken tofu, p. 161). Miso sauce (p. 164-65). Tahini lemon sauce (with silken tofu, p. 165). Steamed kale with lemon miso sauce (p. 176).

In the dessert section, there is mention to tofu chocolate as an alternative to chocolate. Carob cake (with tofu chocolate, p. 217). Chocolate cream couscous cake (with filling made with silken tofu, p. 220). Silken tofu chocolate “cheesecake” (p. 221). Key lime shamrock torte (with silken tofu, p. 222). Raspberry sabayon sauce (with silken tofu, p. 232). Tofu chocolate “buttercream” icing (p. 234). Tofu chocolate ganache (p. 234-35). Mocha grain coffee (with any grain coffee substitute, cocoa, brown rice syrup, and soy milk, p. 238). Christmas soy nog (with soy milk and lecithin granules, p. 238).

The last section of the book, titled “The Culinary Olympics,” gives recipes that Brother Ron prepared while competing in these Olympics, starting in 1978. These Olympics are held every four years at Frankfurt, Germany, by the International Cooks Society. The American Culinary Federation is the U.S. organization that promotes the competition. “In 1978 I won a gold medal in the national competition, which qualified me to compete in the 1980 Culinary Olympics. In 1980 I founded the American natural foods team and, with this team, international competition to gain widespread competition for vegetarian cuisine. In that year, I became the first professional vegetarian chef to compete in the Olympics and win a medal for totally

vegetarian foods. I also competed in 1984 and 1988... My team won bronze and silver medals in all three years that we entered the competition." Soy-related recipes dominate this section, and include: Baked tofu pâtés (spinach, tarragon, or carrot, p. 241-42; won a bronze medal in 1984). Tofu and sea vegetable quenelles (beet, spinach, or carrot, p. 243-45; won a silver medal in 1988). New York cima roll (with tofu, p. 248-49; won a silver medal in 1988). Tofu seitan Wellington (p. 250-51; won a bronze medal in 1984). Vegan London broil (with seitan, miso, and tamari, p. 251-52; won a bronze medal in 1984). Southern blackened tempeh with tomato-apricot-ginger coulis (p. 253-54; won a silver medal in 1988). Carrot cream in squash shell (with soy milk and tofu, p. 255-56; won a silver medal in 1988). Chocolate squash confection (with Tofu Chocolate Ganache, p. 259-60; won a silver medal in 1988). Address: O.F.M., St. Anthony's Shrine.

2584. Shama, Gilbert; Hall, George M. 1991. Tempeh foods. *European Food and Drink Review (UK)*. Summer. p. 27-28, 31. [12 ref]

• **Summary:** The authors propose the following definition to cover all the different kinds of tempeh: "Tempeh results from the overgrowth by moulds, predominantly those belonging to the genus *Rhizopus*, of hydrated and partially cooked plant materials which have first undergone a primary bacterial fermentation." The plant materials are generally legumes, especially soybeans, however other plant sources, such as coconut press cake, also yield acceptable results. Molds of the genus *Mucor* may play a secondary role in the tempeh fermentation. Other legumes traditionally used to make tempeh in Indonesia are the winged bean, velvet bean, jack bean, pigeon pea, and lamtoro seed.

The authors describe the process for making tempeh, its biochemical aspects, and its future potential. They are evaluating 11 different legumes for their suitability in making tempeh. Address: Lecturers in Biotechnology and Food Engineering, Dep. of Chemical Engineering, Univ. of Loughborough, UK.

2585. Stepaniak, Joanne; Hecker, Kathy. 1991. Ecological cooking: Recipes to save the planet. Mobilization for Animals, Pennsylvania, Inc., P.O. Box 99762, Pittsburg, PA 15233. 228 p. Index. 23 cm.

• **Summary:** This vegan cookbook contains 500 recipes, including many using tofu, tempeh, miso, and soymilk. Almost all the recipes are uncomplicated, and the directions are short and simple to follow. Many can be prepared quickly. Sales and proceeds benefit Mobilization for Animals. Reviewed by Debra Wasserman in *Vegetarian Times* (May 1992, p. 97).

Note: The author self-published this book for a while, then the Book Publishing Co. in Summertown, Tennessee, became the publisher. Address: Pittsburg, Pennsylvania.

2588. Spear, Bill. 1991. Soyfoods in Yugoslavia (Interview). *SoyaScan Notes*. Sept. 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bill just returned from a 1-week macrobiotic summer camp at Kumrovec, Croatia, Yugoslavia; 75 people plus staff attended—during the current civil war. Last year he attended the same event, along with 600 other people. There are presently an estimated 5,000 to 10,000 macrobiotic people in Croatia. The major activity is in Zagreb. Croatia has most of the money and industrial productivity in Yugoslavia and that is a major reason that Croats want independence. The Serbians are a relatively poor majority.

There are two commercial and at least three home-based soyfoods manufacturers in former Yugoslavia. The best contact is Ivan Jugovac (about 40 years old), owner of Anyo located at Skolska Ulica 43A, 51215 Kastav (near Rijeka), Croatia, Yugoslavia. Ivan knows the names of the other soyfoods companies in Yugoslavia and is part of a loosely-knit soycrafters network there. Anyo, which started about 2-3 years ago, makes 250-300 kg/week of tofu (100 kg/day in 4 or 5 batches) and 150-200 kg/week of seitan. From the tofu they also make smoked tofu, grilled tofu, deep-fried tofu, and tofu spread (with okara). The tofu is made in a 100-liter steam jacketed kettle and the nigari is imported from Japan. Their soybeans (which are not organically grown) come from Becej (pronounced BECH-ay) in Serbia, Yugoslavia. The business is doing well. Ivan makes natto for his personal use. He wants to start making miso and amazake commercially, and is looking for sources of koji and koji starter.

A second soyfoods shop in Belgrade, Serbia (name, address, and contact person unknown) makes tofu, seitan, and tempeh on about the same scale as Anyo. It probably started at about the same time as Anyo. There are 1-2 small tofu shops in Zagreb, and one in Novi Sad, Serbia; in each, the tofu is made in a home kitchen. In Slovenia, a tofu company that will be the largest in Yugoslavia is nearly ready to begin operation in Slovenia, but the current civil war has delayed their opening. They plan to make 100 kg/day of tofu.

The man who knows the most about soyfoods in Yugoslavia is Zlatko Pejic, a peace activist who is president of the Society for the Improvement of the Quality of Life and head of the macrobiotic community in Zagreb. His wife is a cooking teacher. He invited Bill to Yugoslavia, has been to

the USA, and lectures throughout Yugoslavia. He has visited most of the soyfoods companies in Yugoslavia, has a fax, and like Ivan speaks pretty good English.

Basically all of the interest in soyfoods in Yugoslavia grew out of macrobiotics. Several of the people who started companies attended the Kushi Institute in London. Two years ago, others attended the International Macrobiotic Institute in Kiental, Switzerland. In both places there are classes in soyfoods production (miso, tempeh, tofu, etc.) taught by various macrobiotic teachers such as Roberto Marrocchesi. Most companies have some books from Soyfoods Center. Bill is still actively affiliated with The Bridge in Connecticut and is a teacher of macrobiotics. Address: North Road, Bantam, Connecticut 06750. Phone: 203-567-0554.

2592. Cohen, Michael. 1991. Early work with soyfoods, The Farm, Laughing Grasshopper, New England Soy Dairy, and The Tempeh Works (Interview). *SoyaScan Notes*. Sept. 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Michael's interest in soyfoods began in about 1971-72 when he became a vegetarian, while living communally with friends in Boston. He was interested in Eastern religions and philosophies, Ram Dass, Be Here Now, Hatha Yoga, etc. He probably tasted a little tofu at this time.

In early 1972, Michael took a trip to California, first met Stephen Gaskin, and got introduced to Stephen's Monday Night Class—a week before Stephen's community left (on 10 Feb. 1971) for Tennessee to buy the land that in Sept. 1971 would become The Farm. Michael returned to Boston and worked for the next 9 months to save money. In 1973 he left the USA for a year to travel on an undirected personal spiritual adventure to India, Israel, and the Middle East. While he was in India, various people in Boston with whom he was living communally got more closely involved with The Farm in Tennessee.

In the summer of 1974 Michael moved from Boston to Amherst, Massachusetts, where he got involved in a vegetarian, natural foods restaurant named Equinox. It was a 4-person partnership founded by Judy Roberts (who later

married Tom Timmins); Michael was their first employee. Eventually he became a partner. The main dishes in this small natural foods luncheonette were soups, sandwiches, and salads. They occasionally prepared a soy burger from soybeans or a stir-fry tofu dinner entree. Michael worked there for about a year until there were 6-7 partners, then he and his girlfriend (Shelley Moore, who was also working there and was to become his first wife) decided (as did Judy Roberts) to leave. The restaurant soon moved into very large quarters, took on large debts, and eventually went bankrupt.

Michael and Shelley (who was from Memphis, Tennessee) left for a short tour of the southeastern United States. For most of the next 2 years he lived on The Farm in three different locations. Starting in late 1974 he and Shelley lived for 7 months on the 40-acre Virginia Farm, a satellite of the Tennessee Farm in Louisa, Virginia. During that time Michael and Shelley were married. Soybeans were grown along with vegetables and corn on this farm, and the women made soymilk in the kitchen at least twice a week and (as a treat) tofu and/or soyburgers (from mashed soybeans) every week or two. All meals were strictly vegetarian, with no dairy products or eggs. Soymilk was a staple in the diet.

Then they moved to Brattleboro, Vermont, and lived for 1-2 months with Tom and Judy Timmins in their home. Tom was working for Llama, Toucan & Crow, a worker-owned natural foods distributor. Michael then got a job working for Llama. About 6 months later, Llama (which was not making it financially) sold out to their current owner, Barclay McFadden of Stow Mills. At the time of the sale, Tom left Llama and went into partnership with Ira Leviton and Kathy Whelan in the Laughing Grasshopper Tofu Shop.

By this time Michael and Shelley had become much more interested in tofu; they were eating it frequently, had gotten a copy of *The Book of Tofu* by Shurtleff and Aoyagi, and were thinking/dreaming about starting their own small tofu plant in Brattleboro—40 miles from Laughing Grasshopper Millers Falls. Tom Timmins convinced Michael to become a partner in Laughing Grasshopper rather than becoming a nearby competitor. So Tom left Llama, made a couple of runs into Boston driving the Laughing Grasshopper van to distribute the tofu and feel out the company, and in Feb. 1977 paid \$2,000 to \$2,500 to become a partner in Laughing Grasshopper. He did mostly production, but also delivered tofu to Boston and went to stores to try to pick up new accounts. Tom was more the "numbers person" and Ira fancied himself to be "the tofu master." It all worked pretty well. The company had only one product—nigari tofu. Michael does not recall them making or distributing any tofu pies or cheesecakes.

During this period, from early spring until June, Michael and his family lived on a local satellite of The Farm in Montague, Massachusetts, next to Millers Falls.

In Nov. 1977 Laughing Grasshopper moved to Greenfield and changed its name to New England Soy Dairy.

At that time Steve Hassell was brought in as a controlling partner; he invested \$40,000 in the company—money which the company needed and did not feel it could obtain from a bank. On 20 November 1976 Michael and Shelley had their first child. Ira told Michael, “I just hope you have your child on a Saturday so that it doesn’t interfere with work.”

Shortly after the move to Greenfield, before the company got back into tofu production, Michael decided to take a temporary leave of absence from the company, in part because he and Shelley decided they wanted to have their second child (soon to be born) on The Farm in Summertown, Tennessee. Michael left in June 1978 and Joshua was born in September. They stayed on The Farm until Nov. 1978. After living in Summertown for several weeks Michael and Shelley (as was the custom) donated all of their savings (about \$5,000) to The Farm—permanently.

On The Farm, because of his experience at Laughing Grasshopper, Michael was considered to be a fairly knowledgeable soy person, so he went to work in the soy dairy, where the main product was soymilk (fortified with vitamin B-12 and usually sweetened with sugar); a little tofu was made occasionally. After Michael arrived, the soy dairy started making much more tofu for the 1,850 Farm residents. Typically they now made tofu twice a week, and 500 pounds each time. The people loved it. No single person in the Soy Dairy was particularly knowledgeable in making soyfoods; it was run by a rotating crew. Tempeh was made in a separate building, the Lab, by Cynthia Bates and Alexander Lyon. Michael had first learned of tempeh when he, Ira, and Tom had visited Dr. Keith Steinkraus at Cornell Univ. But at The Farm he first had a chance to taste it (“It knocked my socks off”); unfortunately, he never had a chance to make tempeh on The Farm. Michael found the experience at The Farm, with its many equipment breakdowns, extreme poverty, and wasted time to be very frustrating; he was used to running a business efficiently.

After 5-6 months, in Nov. 1978, Michael and his family left The Farm—penniless. Returning to live briefly at the Montague Farm and work at New England Soy Dairy, he found that there was no solid position for him, so he was put in a temporary R&D position. But after a month or two, the Soy Dairy no longer felt like the place he wanted to live and work. Fortunately in Jan. 1979, Michael’s father offered to lend him \$30,000 to start his own business. A year earlier, Bernie Cohen at the Montague Farm had invited Michael to join in starting a tempeh business, but Michael declined saying, “It will never fly.” But this time, within a few weeks, Michael decided to establish The Tempeh Works. The Soy Dairy partners were supportive of Michael’s leaving, especially since they planned to focus on dairylike products and no longer planned to make tempeh. In March of 1979 Michael rented a space for the business in Greenfield and he made his first batch of tempeh there in July it was served at the annual Soycrafters Convention in Amherst. The

company began regular production in September 1979. The Tempeh Works was America’s first Caucasian-run company to make only tempeh in a commercial building. Address: President, Lightlife Foods Inc., P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 413-774-6001.

2593. Cohen, Michael. 1991. Recent developments at Lightlife Foods (Interview). *SoyaScan Notes*. Sept. 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Since it began making soy tempeh as The Tempeh Works in 1979, Lightlife Foods has evolved into a company that each year receives about half its income from tempeh and half from tofu. At the peak of hot dog season, 65-70% of sales may come from Tofu Pups and other tofu-based products. In response to tempeh burgers and 5-grain tempeh air-freighted in from California, The Tempeh Works launched 3-Grain Tempeh in May 1982, New England Tempeh Burgers in July 1982, and a line of early Tempté spreads in early 1984. Based on projected growth in sales, the company borrowed \$250,000—a large amount for relatively small company. They moved into a new building in the summer of 1984, and actually purchased it in the summer of 1985. This is the building they are located in now.

With new large payments of interest and principal, the company experienced increase competition from other tempeh companies (Appropriate Foods, Soyfoods Unlimited) plus a slowing in growth of the total tempeh market. To try survive with minimal capital investment, Michael proposed to Bob Davis of Light Foods that The Tempeh Works serve as a master distributor of Bob’s Light Links (a tofu hot dog made in Sacramento, California, and shipped frozen to Massachusetts). Michael sent the Light Links to his distributors along with orders for his tempeh products. Soon problems developed. First, Light Links contained eggs and Michael was getting many requests for eggless tofu hot dogs. Second, in the peak summer season, many of Michael’s orders for Light Links were either not fulfilled or delayed 2-3 weeks; this created a bad relationship for him and the accounts that carried his tempeh. Third, Light Foods did very little promotion of its Light Links by offering discounts, whereas Tempeh Works did lots of discounting—creating more problems with retailers or even lower margins for Michael on the Light Links. In addition, as soon as Michael started to sell a lot of tofu hot dogs and realized what low margins he was earning, he started to think about making such a product himself. One day Tom Timmins of New England Soy Dairy (a large local tofu maker) and Michael sat down at Tom’s kitchen table and worked out a plan for Tempeh Works making their own tofu hot dog. But since he had no money to buy equipment, Michael then went to the National Rural Development and Finance Corp., a federally-funded economic development organization in Washington, DC. They had picked Massachusetts as one of their 4 demonstration states. Michael got a loan for \$50,000

based on a plan to build the tofu hot dog to a point where he could carry the debt of increasing the size of their plant buying their own equipment. The plan went like clockwork. Lightlife Meatless Tofu Pups were launched in Sept. 1985. For the first 2-2½ years, they were co-packed at a plant about one hour away, then they were made entirely in-house. On 14 Oct. 1987, reflecting the new diversification, the name of The Tempeh Works was changed to Lightlife Foods, Inc. After a year's work, Michael pulled together a \$750,000 loan package in May 1988, rolling his former \$250,000 loan into it. Today the company is in good shape.

Today, the company's best tempeh products are: (1) The 3-product line of tempeh grills (marinated tempeh burgers, in American, lemon, and barbecue flavors); the three outsell soy tempeh two-to-one. The 18-burger institutional packs, 3 packs per case, also sells very well to natural foods restaurants, retail stores with a lunch counter, and colleges. (2) Soy tempeh (both in a retail and institutional sizes). Many colleges use it in a stir fry, stroganoff, breaded cutlets with mushroom gravy, etc. During the last year Lightlife has had a full-time sales person developing the institutional market. (3) Fakin' Bacon. In addition, Lightlife has just picked up its first airline account. People like tempeh but its unsightliness (mold on the surface) is a big barrier. So second-generation tempeh products are the answer to this problem.

Of Lightlife's tofu products, Tofu Pups are by far the best-seller. They are a "mega-product" for the company. The next best seller is Lean Links Italian, then Foney Baloney.

Looking at the company as a whole, it is in great shape. The past year "has been an absolutely superb year for us." Sales are rising every month and the future looks bright. The big gambles that Michael has taken with large loans have really paid off. The company is now well organized and tight at all levels, especially the core group of around 8 people. "We run a tight ship and we don't spend a dime that is not going to make us money. We're careful. We've taken it slow. One big mistake was taking on a frozen natural cookie dough, totally outside the company's field. We almost lost our shirts on it in a big way. We're committed to bringing out 3-4 new products a year. We're also realizing that the natural foods business is a good one. We're not as interested as we once were in banging our heads against a wall trying to get into supermarkets. If they want us, we're glad to go in, but we're not going to pay them \$5,000 to \$10,000 per product to get in."

Looking at the next 5 years, the growth appears to lie in prepared (second-generation) products, both in the retail and institutional markets. Address: President, Lightlife Foods Inc., P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 413-774-6001.

2596. **Product Name:** Chia's Chili (Meatless; With Tempeh).

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302. Phone: 413-774-6001.

**Date of Introduction:** 1991. September.

**Wt/Vol., Packaging, Price:** 13 oz deli container.

**How Stored:** Refrigerated, 60 day shelf life.

**New Product—Documentation:** Talk with Michael Cohen. 1991. Sept. 17. This was introduced last week at the NFM trade show in Baltimore, Maryland. Ad and Spot in Natural Foods Merchandiser. 1992. Feb. p. 24 and 38. Ad is titled "Chill out and get sloppy." "Lightlife introduces two great new heat & eat vegetarian entrees: Chia's Chili and Classic Sloppy J. Flavor too fresh to find in a can."

2597. **Product Name:** Classic Sloppy J. (Meatless; With Tempeh).

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302. Phone: 413-774-6001.

**Date of Introduction:** 1991. September.

**Wt/Vol., Packaging, Price:** 13 oz plastic deli container.

**How Stored:** Refrigerated, 60 day shelf life.

**New Product—Documentation:** Talk with Michael Cohen. 1991. Sept. 17. This version of Tempeh Sloppy Joe was introduced last week at the NFM trade show in Baltimore, Maryland. Ad and Spot in Natural Foods Merchandiser. 1992. Feb. p. 24 and 38. Ad is titled "Chill out and get sloppy." "Lightlife introduces two great new heat & eat vegetarian entrees: Chia's Chili and Classic Sloppy J. Flavor too fresh to find in a can."

2598. Nishimoto, Miyoko. 1991. *The now and Zen epicure: Gourmet cuisine for the enlightened palate*. Summertown, Tennessee: The Book Publishing Co. 250 p. Color photos. Index. 24 x 21 cm.

• **Summary:** This is a gorgeous, delightful vegan cookbook (though it uses honey), loaded with color photos. Most recipes, designed for entertaining, embody an atmosphere of elegance with a sense of fun, capturing the best of traditional European cuisine, offering gourmet recipes with an element of Japanese style, simplicity, and flavor. Each recipe is accompanied by a nutritional analysis, and most are remarkably low in fat.

The author is founder and owner of the Now & Zen Bakery (1838 Golden Gate Ave., San Francisco, CA 94115) which is well known for its tofu cheesecakes and other delights, and which sells dried okara. She is also a jazz vocalist and vegetarian chef. Born in Japan to a Japanese mother and an American father, she moved to Mill Valley, California, with her parents when she was age 7 and became a vegetarian at age 12. A photo on the rear cover shows Miyoko Nishimoto. She shows great virtuosity in the use of soyfoods—and wheat gluten. The section on ingredients contains excellent, detailed information on miso, nut milks and creams (almond milk and cashew milk, which the author prefers for some uses to soymilk), agar, okara, soy milk and soy cream, soy sauce, soy sour cream, soy yogurt, tamari, tempeh, tofu, frozen tofu, and pressed tofu.

Soy-related recipes include: Tofu “cheese” (p. 32). Tofu “boursin” or herb-garlic cheese ball (p. 33). Tofu “feta” cheese (p. 35). Tofu cream cheese spread with herbs (p. 36). Eggplant and tofu pâté (p. 51). Smoked tofu, mushroom, and garlic canapés (p. 53). Tofu “mornay” sauce (p. 65). Tofu aioli (p. 82). An introduction to quick and tasty tofu cream soups is given on p. 108. Each of the following cream soups contain tofu. Cream of pumpkin soup (p. 109). Cream of corn soup (p. 110). Cream of green pea soup (p. 111).

Mediterranean eggplant and tofu gratin (p. 115). Tofu burgers suprême (p. 118). Creamy tempeh curry (p. 119). Tempeh mexicali (p. 121). Sweet and sour tofu (p. 122-23). Whole cabbage with hearty tempeh stuffing (p. 124-25). Herbed soybean casserole or stew (p. 132). Savory tempeh and vegetable stew (p. 134-35). Tofu bourguignon (p. 138-39). Homemade tofu pasta (p. 142-43). Ginger tempeh with green peppers (p. 145). Homemade gluten, Tempeh and gluten burgers, and the Great gluten turkey with dressing (p. 150-160). Tempura tofu (p. 163). Marinated tofu (p. 164). Smoky marinated tofu (p. 165). Believable bacon (with tofu, p. 166). Beans and “bacon” casserole (with tofu, p. 167). Orange-soy dressing (p. 177). Tofu sour cream (p. 179). Tofu mayonnaise (p. 180). Tofu thousand island dressing (p. 182). Tropical coconut banana ice cream or sauce (with tofu, p. 212). A different pumpkin ice cream (with tofu, p. 213). Italian cheese-less cake (with tofu, p. 216). Cashew cheesecake (with tofu, p. 217). Tofu crème (p. 218).

For a lengthy and very positive review of this book by Carol Flinders, see *Vegetarian Times* Nov. 1991, p. 86-87. Address: San Francisco, California.

2599. Njoku, H.O.; Ofuya, C.O.; Ogbulie, J.N. 1991. Production of tempeh from the African yam bean (*Sphenostylis stenocarpa* Hams). *Food Microbiology* 8(3):209-14. Sept. [32 ref]

• **Summary:** A tempeh-like product was produced from the African yam bean by fermentation with *Rhizopus microsporus* var. *oligosporus*. The African yam bean contains 21-29% protein, and its lysine and methionine levels are comparable to those of the soybean. The resulting tempeh was found to be organoleptically acceptable. It was used as the filling for a pie. The fermentation caused significant changes in the crude protein and total carbohydrate content of the bean seeds. Address: Dep. of Microbiology, Food and Industrial Microbiology Div., Univ. of Port Harcourt, PMB 5323, Port Harcourt, Nigeria.

2600. Gilbert, Linda C.; Starr, Sara M. 1991. Natural foods companies broaden their horizons: Organic, vegetarian, convenience dominate industry. *Food Business* 4(20):44. Oct. 21.

• **Summary:** Discusses these three industry trends, plus San-J International, White Wave, and Lightlife Foods.

San-J will be introducing its OCIA organic certified tamari gold label in November. The 10-ounce product will sell for the same price as its non-organic counterpart. “While the majority of White Wave’s \$3 million sales still come from tofu, tempeh products reportedly are not far behind. The company says it is growing at about 30 percent annually, and its first and second generation tempeh products are achieving more than 100 percent growth. White Wave’s latest offering is a soy yogurt product called Dairyless that is made with live active yogurt cultures, including acidophilus and bifidus. Lightlife Foods, another major soy foods company, has redesigned its logo and added two new products, a vegetarian chili and a sloppy joe mix, both made with tempeh.” Address: 1. President; 2. Vice president. Both: HealthFocus Inc., Emmaus, Pennsylvania. Phone: (215) 967-2233.

2601. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer’s Name:** Jiangdou Nutritive Food Factory.

**Manufacturer’s Address:** Jongdou, Jongdou County, Jiangsu Province, China.

**Date of Introduction:** 1991. October.

**New Product–Documentation:** Letter from Dong Min-sheng, Dept. of Food Science, Nanjing Agricultural University, Nanjing, Jiangsu Province, China. 1992. April 24. “The first tempeh factory in China, Jiangdou Nutritive Food Factory, is located in Jongdou, Jongdou County,

Jiangsu Province, China. It first started to sell tempeh in Oct. 1991. Production capacity is 1,000 kg/week.” Mr. Dong, who conducted the first research on tempeh in China, played a key role in the establishment of this tempeh factory.

**2602. Product Name:** [Tempast {Vegetarian Tempeh Spread}].

**Foreign Name:** Tempast.

**Manufacturer’s Name:** Lima Foods (Marketer).

**Manufacturer’s Address:** Edgar Gevaertdreef 10, B-9830 Sint-Martens-Latem, Belgium.

**Date of Introduction:** 1991. October.

**Ingredients:** Water, tempeh\*, sunflower seeds\*, whole meal bread\*, sunflower oil\*, miso, free range eggs, onion\*, pumpkin\*, dulse (seaweed), ume [plum] vinegar, sea-salt, herbs. \* = Organically grown.

**Wt/Vol., Packaging, Price:** 150 gm glass jar. Retails for DM 6.70 (10/91, Bremen, Germany).

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Label sent by Anthony Marrese of Bremen, Germany. 1991. Oct. 7. 9.25 by 1 inches. Paper. Black on light orange. Color photo of the spread on a slice of bread, topped with a slice of radish and cucumber. CINAB organic certification symbol. Nature et Progres organic certification symbol. Ingredients are listed in Dutch, French, German, and English.

**2603. Product Name:** Organic Tempeh (Frozen).

**Manufacturer’s Name:** Tempeh Foods.

**Manufacturer’s Address:** Felin Geri, Cwm Cou, Newcastle Emlyn, Dyfed, SA38 9PA, Wales, UK. Phone: 0239 87 891.

**Date of Introduction:** 1991. October.

**Ingredients:** Organically grown soya beans, *Rhizopus oligosporus* (tempeh culture).

**Wt/Vol., Packaging, Price:** 8 oz 227 gm.

**How Stored:** Frozen.

**Nutrition:** Per 100 gm (3.5 oz). Calories 165, Protein 18.3%, fat 10.2%, carbohydrates (incl. fiber) 9.4%, calcium 145 mg, phosphorus 240 mg, iron 5 mg, vitamin B-1 0.28 mg, vitamin B-2 0.65 mg, niacin 2.52 mg.

**New Product–Documentation:** Talk with (call from), followed by a letter and Label, from Tom Wells, now a partner / owner with Louise Tonkin of Tempeh Foods in West Wales. 1992. June 26 and July 22. The company has changed hands. The former owners were Graham Lanman and Jennie Greenhalgh, but they stopped making tempeh several years ago. Tom and Louise started production in Wales in Oct. 1991, after their move from London, where they acquired the name and equipment of Tempeh Foods from an acquaintance of Graham and Jenny who had been interested in setting up on his own account but never really got going. Tom and Louise currently produce only one product, soy tempeh, which is sold only in Wales at wholefood shops. They plan to purchase an old unused schoolhouse, which will serve

as both a residence and tempeh shop. That address, which will probably be active by late 1992 will be: Yr Hen Ysgol, Abercych, Boncath, Dyfed, Wales/Cymru, UK SA37 OEX. Phone: 0239-87891.

Label. 4.75 by 4 inches. Green and yellow on white. Front and back self-adhesive labels attach to a plastic bag. “A natural soya delicacy. No preservatives. No cholesterol. Gluten free. High protein. A natural soya delicacy. Delicious easy to use sliced or diced, can be fried, boiled or steamed. A versatile and nutritious food.” Below a V-shaped logo: “Approved by the Vegetarian Society.” On the back panel are recipes for and illustrations (line drawings) of a Tempeh Burger, Crispy tempeh slices, and Tempeh Pate. “Any grey/black spots are the natural result of the culture forming its seeds which enhance the flavour of the Tempeh, much like the blue veins in some cheeses.”

**2604. Tribe, Sushila. 1991. Tofu and other soyfoods in Greece (Interview). *SoyaScan Notes*. Nov. 21. Conducted by William Shurtleff of Soyfoods Center.**

• **Summary:** Tofu is no longer available in Athens. Until recently there was a man who made tofu at home in Athens and sold it only at the Alpha-Beta supermarket. People would line up to buy it. He only made about 10 kg a week. But he died several years ago. Sushila would like to start a tofu company in Athens. She knows an investor who is willing to put up money, perhaps as much as \$500,000. She wants to make organic tofu, ready-to-eat tofu products, and maybe tempeh. Address: Thoukididou #50, Alimos 17455, Athens, Greece. Phone: 1-98-45-894.

**2605. Baumber, Derek. 1991. New developments with tofu and tempeh in New Zealand (Interview). *SoyaScan Notes*. Nov. 24. Conducted by William Shurtleff of Soyfoods Center.**

• **Summary:** Recently 2 new Chinese-run tofu shops have begun operation in Auckland, and a third has purchased a large, automated tofu-making machine for \$100,000 and will soon start production. Their tofu is lower priced than that of Bean Supreme, which is New Zealand’s largest tofu maker. Bean Supreme also makes an excellent soy ice cream, as well as tempeh (though they no longer advertise the latter). At least one of the Chinese companies is buying tempeh from Bean Supreme and selling it under their own label.

Derek has been making tempeh on a small scale for himself and friends for the past 4-5 years. He plans to start commercial tempeh production soon. After that, he would like to make a soy yogurt. Address: Choice of Foods, 334 Mt. Albert Rd., Mt. Roskill, Auckland, New Zealand. Phone: 629-0665.

**2606. Van Gessel, Ike. 1991. Tofu and tempeh in the Netherlands (Interview). *SoyaScan Notes*. Nov. 24. Conducted by William Shurtleff of Soyfoods Center.**

• **Summary:** Van Dappern Tempeh Co., which started in Rotterdam in 1969 and is now located in Kerkrade, owned and run by Robert van Dappern, changed its name to Tempé Produkten B.V. (Tempeh Products Inc.) in April 1983. The company now makes only two products: Soy tempeh and regular tofu. They started to make tofu in June 1985, shortly after they changed the company name. They are still by far the largest tempeh manufacturer in the Netherlands. The only other tempeh companies are very small. But the interesting news is that they are now also the largest tofu manufacturer in the Netherlands, producing 10,000 cakes/week of tofu. Their tofu plant is totally automated; they developed a machine based on the design of one that is made in Japan, but better than it. Next year, Tempeh Products expects its tofu production to double because of a major contract they have with Albert Heijn, a very large food store chain in the Netherlands; that is where they now sell most of their tofu. Heijn also owns several stores in the USA. Heuschen-Schrouff B.V., located in Landgraaf (several blocks from where Ike lives) used to be the largest tofu manufacturer in the Netherlands, but about 1 year ago they started to have some managements problems, and now they make only about 5,000 to 6,000 cakes/week of tofu. Heuschen-Schrouff is now the second largest tofu manufacturer in the Netherlands (all the other tofu makers are very small) but Heuschen-Schrouff may still be the largest company in the Netherlands selling Asian food products.

Ike's wife is Robert van Dappern's sister. Ike works as a quality manager for a steel company in the Netherlands. He was born in Indonesia; his mother is Dutch and his father Japanese. Address: Dr. Calsstraat 50, 6372 AB Landgraaf, Netherlands. Phone: 045-319-422.

2607. Morell, Tania; Schultz, J.J. 1991. Harmonium Foods tempeh report: Prepared for Armand Asher, owner Harmonium Foods. Ithaca, New York. 66 + 15 p. Nov. 26. Unpublished manuscript. No index. 28 cm. [2 ref]

• **Summary:** This report was prepared for Armand Asher (owner, Harmonium Foods, 117 Auburn Ave., Ithaca, New York 14850), who wanted to start a tempeh company in Ithaca. The consumer study was conducted at the Greenstar Co-op, which subsequently burned down, but re-opened in Oct. 1992. The conclusion of the study was that the market for fresh tempeh in Ithaca was too small to support a tempeh shop, but that production of consumer ready tempeh products might support a small shop. Contents: I: The counseling report (p. 1-19). Executive summary. Introduction: Purpose, scope, and limitations, sources and methods, report organization. The small market for plain tempeh: Taste of plain tempeh unappealing to consumers, usage of plain tempeh confusing to consumers. Wave of the future—Consumer ready products: Two consumer ready products, consumer ready tempeh had higher financial return over fresh tempeh. Financial analysis: Producing only the

fresh tempeh for retail, producing and selling a consumer ready product, purchasing the tempeh and then producing a consumer ready product. Conclusions and recommendations.

II: The supplementary materials (p. 20-43). Contents. Marketing information (75 lb/week of tempeh is sold in Ithaca; the main retailer is Greenstar Food Co-op at 30 lb/week). Financial analysis information.

IIA: Handwritten information. Copy of original business plan. Actual consumer survey.

III: The original proposal. Executive summary. Business highlights. Proposal. Consultant skills. Appendix A: Marketing. Appendix B: Kitchen. References & sources.

A bar chart (Part II, p. 23) shows why consumers do not purchase tempeh: It has no taste 9. Do not know what to do with it 6. High cost 3. It has a strange appearance as a fungus 2. It takes too much time to prepare 1.

A bar chart on page 22 shows that 85% of the consumers polled were tofu users, 45% were tempeh users, 45% would purchase locally made tempeh over the brand they currently purchase, 20% have purchased consumer ready tempeh products (burgers, bacon, etc.). Address: 19A Gaslight Village Apt., Ithaca, New York 14850. Phone: 607-257-8438.

2608. Fujimoto, Toshio. 1991. Nattô wa onshû o koete: Zen sekai ni nattô o haken shiyô [Natto transcends love and hate: Let's send natto throughout the whole world]. *Daizu Geppo* (Soybean Monthly News). Oct/Nov. p. 21-25. [Jap]

• **Summary:** Page 25 contains a sidebar announcing the Tempeh Research Society's Fukuyama Forum. Address: Chikyû Nattô Kurabu, Daihyo [World Natto Club, Representative].

2609. **Product Name:** [Tofu, Tempeh, and Natto].

**Manufacturer's Name:** La Buona Terra.

**Manufacturer's Address:** Corso Buenos Aires 36, 16129 Genoa (Genova), GE, Italy. Phone: 010/313241.

**Date of Introduction:** 1991. November.

**New Product—Documentation:** Letter from Gianni Viglino (Via Mignone, 1/15, 17100, Savona, SV, Italy). 1991. Nov. 21. The only tofu shop in his area is La Buona Terra at the address and phone number given above. The organization is a macrobiotic center which offers these products fresh each week. Letter from Gianni Viglino of Italy. 1991. Dec. 20. "This macrobiotic center has stopped selling tofu, tempeh, and natto which they produce only for use in their restaurant."

2610. Noguchi, Kazuko. 1991. Tenpe was Saga ni netsuku ka? Tsukuba (1985) kara Saga (1991) made [Will tempeh take root in Saga? From Tsukuba in 1985 to Saga in 1991]. *Daizu Geppo* (Soybean Monthly News). Oct/Nov. p. 26-31. [Jap]

Address: Prof., Saga Joshi Tanki Daigaku [Saga Women's Junior College].

2611. Britt, Jenny. 1991. Breaking new ground: First a restaurant and now a booming wholesale business, Ploughshares is a vegan, organic food company aiming to feed the world. *Here's Health (England)*. Dec. p. 56-57.

• **Summary:** Ploughshares is a highly successful vegan, organic food company based in Glastonbury, Somerset-Britain's "New Age capital." A photo shows Michael O'Connell, the company founder, holding up a large tray of cakes. He and his vegan co-workers are deeply committed to an animal-free and more environmentally sensible way of eating. Since 1986 they have established a restaurant (recommended by the Egon Ronay rating service), followed by a wholesaling business, and then last year a cookery school. Michael is both a vegan and a "formidable environmental activist, who runs his own mobile information service called "Spirit of Conservation on the Move"... Formerly a professional musician and record producer with his own band, Michael has been one of the main driving forces behind Ploughshares. Until recently he owned it outright, having put in most of the finance, but in recognition of the equally valuable contribution of others in the business, he has converted it into a co-operative... The core group, who are the main shareholders, are Michael, sisters Fiona and Miranda Bruce, mother and daughter Sophie and Sally Pullinger and Lalita Gordon. Several of this group are musicians who had worked with Michael in the music business. A few years ago, feeling no longer fulfilled by professional music, they set up as an extended family on a smallholding in the Essex countryside and, to help make a living, acquired a mobile catering truck... an eight-tonne kitchen-on-wheels which had previously done service on location feeding hordes of extras in the film Gandhi. They renamed it The Emperor Liu An's Tofu Palace, in honour of the Chinese feudal lord attributed with the invention of tofu, and took to open air shows and festivals, serving vegan food and demonstrating tofu-making."

The key people then moved to Glastonbury to start a restaurant (on High Street) as a permanent base for their vegan cuisine. The restaurant was sold in 1991 as more of the company's energy went into developing and marketing its range of nutritious, often organic cakes. The company has found a building in Glastonbury, which it hopes to convert into an innovative factory—if the money can be raised. The Ploughshares cookery school now teaches 3 students a week on average. They study for a City and Guilds qualification in dairy-free and special diet cuisine. "A Ploughshares Diploma includes tofu and tempeh making on both a domestic and cottage industry scale..." Another feature of the course is the production and use of a leaf protein concentrate (nettles are now used as the raw material) in the form of a nutritious curd named Leafu. Michael became interested in it as a "substitute in British vegan diets for soya beans, whose transportation from abroad uses precious energy. [A company brochure

titled "Leaves for Life: Leafu, a high protein food made from leaves" notes that "Leaf fractionation is a way of producing more protein from indigenous plants than any other process. It is highly efficient in terms of energy use and in quantity of protein produced per acre." Leaf curd contains "proportionally more protein, vitamins A and E, iron, and calcium than is found in meat, eggs, or beans."]

Michael, a man with big dreams, can be contacted at Ploughshares Organic, Vegan Food Company, 54 Roman Way, Glastonbury, Somerset, BA6 8AD, England.

Note: This is the earliest document seen (May 2005) that mentions "Leafu" (a word probably derived by merging the words "leaf" and "tofu") or that discusses a commercial food use of leaf protein.

2612. **Product Name:** Redwood Vegetarian Rashers (Tempeh Bacon).

**Manufacturer's Name:** Redwood Company (The). Div. of JRJ Trading (Importer-Marketer-Distributor). Made in America.

**Manufacturer's Address:** 243 The Broadway, Muswell Hill, London, N10, England.

**Date of Introduction:** 1991. December.

**Ingredients:** Tempeh, shoyu, malt syrup, sea salt, yeast extract, mixed spices, fermented red rice.

**Wt/Vol., Packaging, Price:** Retails for £1.99.

**How Stored:** Refrigerated or frozen.

**New Product-Documentation:** Health Food Business (London). 1992. Jan. p. 12. "Vegetarian breakfast treats with JRJ's organic bacon." This bacon-like product made with organic tempeh retails for £1.99. The tempeh is made from organic soybeans with red rice added to give an authentic color; red rice gives much better color retention than the usual beetroot color. Salt is also added.

Talk with Jeremy Duncan, owner of The Redwood Co. 1992. June 16. This product was introduced in late 1991. About 6 months ago the company moved to its present address: Unit 4, West Burrowfield, Welwyn Garden City, Hertfordshire, AL7 4TW, England. He owns both The Redwood Co. and JRJ Trading, which is an import company. Nowadays he no longer thinks of Redwood as a division of JRJ Trading.

Spot in SoyaFoods. 1992. Autumn. p. 5. "Tempeh alternative to bacon." This may be England's first vegetarian alternative to bacon.

2613. Rondot, Pierre; Sudaryanto, T.; Djauhari, A.; Anwarhan, H. 1991. Soybean utilization, processing, and production policy in Indonesia. *Palawija News (Bogor, Indonesia)* 8(4):1-6. Dec.

• **Summary:** "More than 80% of the households in Java consume soybean. The next highest consumption rate is in North Sumatra where 55% of the households eat soybean regularly. In Java, annual soybean consumption per capita

varies from 11 to 16 kilograms compared with one to six kilograms in other areas of Indonesia. Java, which produces 47% of Indonesia's soybean, is also its greatest consumer.

"Average soybean consumption for the whole of Indonesia increased from 3.42 kg/cap/year in 1969 to 5.78 kg/cap/year in 1985. Consumption per capita of processed soybean is higher in urban areas than in rural areas."

"The Indonesian 'poultry revolution' has given rise to the modern animal feed-mill industry,... As Indonesia did not have a crushing industry until 1988, the meal had to be imported to regulate the national demand and to sustain the development of the 'poultry revolution'".

In 1987, according to SYGAP survey data, Indonesians consumed 749,600 tonnes of tempeh (86 gm/week), 714,700 tonnes of tofu (82 gm/week), and 48,200,000 liters of kecap (ketjap; Indonesian soy sauce). Per capita consumption of onchom was 4 gm/week. Address: 1. Agricultural Economist, ESCAP/CGPRT Centre, SYGAP Project, Bogor, Indonesia.

2614. **Product Name:** Tempeh Pâté.

**Manufacturer's Name:** Big Carrot Natural Foods Store (The).

**Manufacturer's Address:** Toronto, Canada.

**Date of Introduction:** 1991.

**Ingredients:** Incl. tempeh, carrots, tamari.

**New Product–Documentation:** Talk with (call from) RoseAnn Lawrence of Santa Rosa, California (Phone: 707-573-0596). This is the best natural foods store and deli she has ever seen. They even have their own cookbook—but it doesn't contain the recipe for this product. The pâté is made and sold in the store's deli. The recipe is a secret but the ingredients are on the label. It is sold in the form of a big loaf, like meatloaf, and the tempeh adds a chunky consistency. It is delicious spread on pita bread.

2615. Dong, Min Sheng; et al. 1991. [Tempeh—A protein-rich vegetarian meat substitute]. Paper presented at the Chinese Symposium on Food Fermentation. [Chi]\*

• **Summary:** Note: Mr. Dong, born 23 Aug. 1961 in Hubei province, is one of the few people in China ever to do research on tempeh. He earned his BSc in Agriculture in 1982 and his MSc in Microbiology in 1985. Since 1988 his department has been doing research on tempeh, including the manufacturing process, nutritional value, and safety. This work has been financed by his government. How he has helped to establish the first tempeh-producing factory in China! He would like to go abroad in order to get more research experience in food fermentations. Address: Vice-Chief of the Tempeh Research Group and Instructor of Food Microbiology, Dep. of Food Science, Nanjing Agricultural Univ., Nanjing, Jiangsu province, China.

2616. Jiang, Hanhu; Dong, Minsheng. 1991. [Isolation, screening, and identification of thermotolerable tempeh-

producing strain RT-3]. In: 1991. Proceedings of the Annual Meeting of the Chinese Microbiological Society (Jiangsu, 1991). See p. 20. [Chi]

• **Summary:** A thermotolerable *Rhizopus* species strain RT-3 was isolated from tempeh. It was identified as *Rhizopus oligosporus* saito. Tempeh prepared using this mold had a good flavor and attractive appearance. The protein digestibility as measured by biological methods was up to 94.4%.

Note 1. This was the first research on tempeh ever reported in China. Note 2. In the Chinese title of the article, tempeh is written in both Chinese and English. The characters for the Chinese term are pronounced "danbei." Address: 1. Prof. and Head, Dep. of Food Science; 2. Instructor of Food Microbiology, Dep. of Food Science. Both: Nanjing Agricultural Univ., Nanjing, Jiangsu province, China.

2617. Sibarani, Sujana. 1991. The effect of tempeh on preventing diarrhea of rabbits against *Escherichia coli*. PhD thesis, University of Indonesia. \*

2618. Sudigbia, I. 1991. The use of tempe in the management of pediatric diarrhoeal cases. Child Health Department of Medical Faculty of Diponegoro University. Unpublished manuscript. \*

Address: Child Health Dep., Medical Faculty, Diponegoro Univ., Semarang Univ., Indonesia.

2619. Chelf, Vicki Rae. 1991. Cooking with the right side of the brain: Creative vegetarian cooking. Garden City Park, NY: Avery Publishing Group Inc. viii + 283 p. Illust. incl. many color plates. Index. 28 cm.

• **Summary:** This vegetarian cookbook, which contains over 500 healthful recipes, shows a strong macrobiotic influence. The extensive glossary of ingredients includes good descriptions of adzuki beans, many sea vegetables, amaranth, amasake, gluten, gluten flour, koji, kudzu, miso, mochi, natto, natto miso, okara, quinoa, seitan, shoyu, silken tofu, soybeans, tamari, tempeh, tofu, and T.V.P. (Textured Vegetable Protein). All of these ingredients are used in recipes. There are at least 26 tofu recipes, 6 seitan recipes, and 4 tempeh recipes.

The author, who also illustrated this book, has been a vegetarian for 16 years. While living in Quebec, Canada, she wrote several French-language vegetarian cookbooks. The right side of the brain controls thoughts and actions that are creative, intuitive, spontaneous, and artistic, whereas the left side controls more logical, concise, analytical, and scientific thinking. Conventional education encourages development of the left side of the brain. This book encourages creative experimentation and improvisation with the recipes given.

2620. Dieudonne, Marie-Paul; Dieudonne, Pascal; Saulnier,

Alain; Ferrenbach, J.P. 1991. Les nouveaux aliments: Soja-algues [The new foods: Soya and sea vegetables]. Editions S.A.E.P., Ingersheim 68000, Colmar, France. 95 p. Color photos. Index of recipes. 22 cm. Series: Delta 2000. [Fre]  
 • **Summary:** Contents: Part I of the book (p. 4-53) is about sea vegetables, by Marie-Paul and Pascal Dieudonne; Part II (p. 54-91) is about soya, by Alain Saulnier and J.P. Ferrenbach. Introduction. Economic aspects: Soybean production (worldwide, USA, France), world production of protein from various sources in million tonnes (FAO 1976; wheat 51, soya 24.9, rice 23.5, corn 23.4, meat 21.9, fish 11.8, cow's milk 6.7), protein yield, nutritional composition of various protein sources. Main nutritional characteristics of soya. Products made from soybeans: Tofu, tempeh, soymilk (*le jus de soja*), soy sprouts, shoyu or soy sauce. The causes of this explosion [of interest in soya]. Recipes: Of the 35 recipes, 33 feature tofu, 1 features tofu and soymilk, and 1 features soy sprouts. A number of the recipes include fish.

At the end is a glossary (p. 92-93) and a recipe index (p. 94-95). This book, which contains many beautiful color photos, is probably published by or in cooperation with Sojinal (formerly Cacoja) of Colmar and Issenheim. Address: Colmar, France.

2621. Fukushima, Danji. 1991. Recent progress of soybean protein foods: Chemistry, technology, and nutrition. *Food Reviews International* 7(3):323-51. [29 ref]

• **Summary:** Contents: Abstract. Introduction. Chemistry: Chemical composition of soybeans (Soybean globulins composed of four major components—2S, 7S, 11S, 15S), importance of three-dimensional structures of soybean protein molecules in food processing, influence of biologically active substances in soybeans on food processing. Technology: Traditional soybean protein foods and recent progress in their technology (soy milk {remove the hypocotyl and hull to remove off flavors; Soyasaponin A as the strongest off flavor}, tofu, kori-tofu, yuba), fermented soybean protein foods: Application of bioreactor for soy sauce production, nontraditional soybean protein foods and recent progress on their technology, recent progress on new soybean protein foods in which soybean proteins are the key material (modified abura-age, modified ganmodoki, deep fried texturized soy protein nuggets). Nutrition: Recent progress on nutritive values of soybean proteins (Soybean proteins have an amino acid score of 100 for persons more than 2 years old), physiological function of soybean proteins (they lower cholesterol levels when used to replace animal proteins). Future of soybean protein foods (Kikkoman fermented soy sauce is well on its way to becoming a universal seasoning. Tofu and tempeh also seem to have a bright future).

“The most important chemical reactions during the process of soybean protein foods are the intermolecular reactions among the residues exposed on the surface of

the protein molecules through the denaturation process. In native soybean protein molecules, most amino acid residues responsible for the reactions—such as cysteine (-SH), cystine (S-S), and hydrophobic amino acid residues—are buried in the inside region of the molecule, inaccessible to water. These residues become reactable with each other through the exposure from the inside by heat denaturation during processing. The unique textures of soybean protein foods, such as tofu, kori-tofu, yuba, and texturized products produced by extruder, etc., are the results of both the intermolecular interchange reaction between the exposed -SH and S-S groups and the intermolecular hydrophobic reaction among the exposed hydrophobic amino acid residues. The exposure of amino acid residues is also important for the hydrolysis of soybean proteins by enzymes, through which soy sauce is produced, because the cleavage of the peptide bonds is carried out after binding between the active sites of the enzymes and the enzyme-specific amino acid residues exposed through denaturation.” Address: Kikkoman Corporation, 1-25 Kanda Nishiki-cho, Chiyoda-ku, Tokyo 101, Japan.

2622. Hesseltine, C.W. 1991. Peoria, an international center of fermentation excellence. *Transactions of the Illinois State Academy of Science* 84(1-2):1-11. [11 ref]

• **Summary:** This paper was presented on 28 Sept. 1989 as the after-dinner address for the 50th Anniversary Celebration of the Peoria (Illinois) Branch of the American Chemical Society. Contents: First fermentations. Hiram Walker Co. (1816-1899; for many years they operated the world's largest bourbon whiskey plant in Peoria). Takamine. Northern Regional Research Center. Penicillin & Dr. Andrew Moyer. Penicillin—others (incl. Dr. Kenneth Raper). USDA's Agricultural Research Service (ARS) culture collection (which dates back to 1904). Polysaccharides. Mycotoxins. Fermented foods (especially soyfoods such as miso, shoyu, and tempeh). Fermentation in Peoria today (ADM uses the old Hiram Walker distillery to make fuel alcohol from corn). Honors and awards. References.

“Dr. Jokichi Takamine was the father of commercial enzymology and one of the pioneers of biotechnology. He was born in 1854 in Japan and received his Doctor of Pharmacology and Ph.D. in Engineering. He became very interested in Western concepts that would be useful to the Japanese but he also was interested in Japanese contributions to the West in science, industry and culture. In 1884 he married an American girl whose father helped him financially start the Takamine Ferment Company in Peoria in 1890. This company's business was to produce ‘diastase,’ a mixture of glucoamylase and  $\alpha$ -amylase. This mixture of amylases was produced by the koji molds (*Aspergillus oryzae* and *A. soyae*) and it was here in Peoria that fungal amylase was first introduced to the West. In the production of alcohol from grain it is necessary to break down the starch to

sugar, which is then fermented to alcohol. Up to this time the starch conversion step of grain was brought about by the use of malt produced by the germination of grains.

"In the Takamine process the malt was replaced by fungal  $\alpha$ -amylase and, therefore, was a process in direct competition with malt utilization. Apparently this new innovation was greeted with apprehension by the malt manufacturers. There was labor agitation and a propaganda campaign against Takamine. In 1894 the distillery where he worked was burned to the ground. Arson was suspected but never proven. The distillery which used fungal amylase was rebuilt, but the company dissolved the Takamine corporation and Takamine left Peoria in 1894. In 1894 Takamine obtained a U.S. patent on his enzyme diastase preparation called Taka-diastase.

"Later Takamine founded the Takamine Laboratories in the East [Clifton, New Jersey] and the Sankyo Pharmaceutical Company of Tokyo. He also isolated crystallized adrenaline at the same time that this was done by J. Abel at John Hopkins. Takamine obtained patents on adrenaline. He is also known for arranging for three thousand cherry trees for planting at the Tidal Basin in Washington. Recently a book on Dr. Takamine was prepared and printed by the Miles Company, which some years ago bought the Takamine Laboratories. The book contains his writings translated into English along side the original Japanese."

"The ARS Culture Collection is one of only two large culture collections in the USA, and its primary function is to find and maintain useful or potentially useful microbial and genetic taxonomic material. This collection dates back to 1904 when Charles Thom was hired by the USDA to investigate the mold cheeses. In making these studies, Thom secured several hundred strains of *Penicillium* and *Aspergillus* which became the nucleus of the ARS Culture Collection. At first Thom was at the Connecticut Agricultural Experiment Station, but in 1913 he moved to Washington, DC, taking his cultures with him. The oldest mold culture in the Collection is a strain of *Actinomucor elegans* isolated in 1892. Thom's collection had no formal recognition, and the story is told how Thom worked in the Laboratory on weekends to transfer his collection. In 1940 when the Fermentation Laboratory was established at NRRC, the Thom Collection was moved from Washington, DC, to Peoria and was formally recognized as one of the fermentation groups with Dr. K. Raper in charge. Dr. J. Wickerham joined the group to be curator of the Yeast Collection, and W.C. Haynes was selected to maintain a Bacterial Collection. Since then the number of curators has increased from 3 to 6. Some famous private collections were added in 1940, including the Harvard Collection which had strains isolated before 1900." Address: 5407 Isabell, Peoria, Illinois 61614.

2623. Hesseltine, C.W. 1991. Zygomycetes in food

fermentations. *Mycologist (The)* p. 162-69. [17 ref]

• **Summary:** Contents: Introduction. Tempeh. Ragi and similar starters (Chinese yeast, bubod, murcha). Amylo process. Miscellaneous food uses employing Zygomycetes. Uncertain uses of Zygomycetes in food fermentation.

"Chinese cheese sufu—This important Chinese food is made by the fermentation of tofu with *Actinomucor elegans* (Eidam) C R Benj & Hesselt, or with *Mucor* species, especially *M. dispersus* Hagem in home processes. *Actinomucor elegans* was the mould used in all the commercial preparations investigated by Wai (1964). However, in his paper Wai called it *R. chinensis* var. *chungyuen* but later Chang & Wai (1967) corrected the identification.

"*Actinomucor* appears to be a monotypic genus intermediate between *Rhizopus* and *Mucor*."

An illustration (line drawing) shows *Actinomucor elegans*. Sporangia, columellae and sporangiophore (from Zycha and Ziepmann, 1969).

The amylo process is used in the saccharification of cereal flour mashes in the production of sugar to be converted into ethanol (ethyl alcohol). The process involves soaking the grain for several hours in water followed by cooking to solubilize the starch. The acidified mash is cooled to 38-40°C, then inoculated with a mucoraceous mold such as *Mucor rouxii*, *Rhizopus japonicus*, *R. tonkinensis*, *R. delemar*, or *R. boulard*. Air is blown through the mash for 24 hours at 38°C, then the mash is cooled to below 33°C and inoculated with yeast. The molds produce saccharifying enzymes as well as some alcohol. According to Schipper (1984) *Rhizopus japonicus*, *R. tonkinensis*, and *R. delemar* are synonyms of *Rhizopus oryzae*. Address: NRRC, Peoria, Illinois.

2624. Mardjuki, Sandra. 1991. Nutritional characteristics and use of dehydrated tempeh in food products. MSc thesis, California Polytechnic University, San Luis Obispo, California. xvii + 170 leaves. Illust. 28 cm. \*

• **Summary:** Includes bibliographic references (leaves 139-150). Address: 6381 Via Arboles, Anaheim, California 92807.

2625. Passmore, Jacki. 1991. The encyclopedia of Asian food and cooking. New York, NY: William Morrow. 320 p. Illust. by Jan Smith. Index. 24 cm. [44 ref]

• **Summary:** The most complete book of its type seen to date (May 2010), with many helpful cross references (sometimes flawed). Soyfoods are mentioned throughout. Unfortunately, for Chinese foods, the author does not distinguish between Mandarin and Cantonese, or between pinyin (newer) and Wade-Giles (older) styles of romanization. For some of the "Also known as" it is not clear to which of several previous entries this refers (see "Soybean").

Ame (ah meh, Japan): A sweet jelly made from millet.

Azuki bean (*Phaseolus angularis*). Native to China; used in China since the Han Dynasty (206 BC–AD 220): An [or anko] (Japan): A sweetened paste of ground azuki beans available in smooth (koshi-an) and crunchy [chunky] (tsubu-an or tsubushi-an). Sarashi-an: A flour of ground azuki beans. Also known as hong dow (China), dried red beans, red beans [adzuki beans, aduki beans]. See also: Red bean paste, sweet.

Bean curd: Also known as dou-fu, dow foo (China); tahu (Indonesia), momen tofu, tofu (Japan); ta hu, ta hua (Malaysia); tahure (Philippines); tauhu kau (Thailand); dau hu, dau hu chung (Vietnam); bean custard, soybean cake. Illust of: Fried bean curd, pressed bean curd. Almond bean curd (non-soy). Bean curd “brains”: Also known as doufu nao (China); taho (Philippines). “Cotton” bean curd: Also known as momen tofu (Japan). Freeze-dried bean curd: Also known as char doufu, doufu pok (China); agedofu, atsu-age, nama-age (Japan); tauhu tod (Thailand), dau hu chien (Vietnam). Fried bean curd pouches: Also known as aburage, usuage (Japan). Gan modoki. Grilled bean curd: Also known as doufu kan [sic], gone (China); yakidofu (Japan). Instant bean curd. Okara. Pressed bean curd: Also known as doufu kan (China), taukwa, tauhu kuning (pressed yellow bean curd) (Indonesia, Malaysia); tokwa (Philippines); tauhu leong (Thailand); dau hu ki (Vietnam). Silk bean curd: Also known as kinugoshi tofu (Japan), shui doufu (China), taho (Philippines). Contains a recipe for homemade “Bean Curd” plus 3 recipes.

Bean curd by-products: Bean curd skin [yuba], bean curd sticks: Also known as fu jook pin, gee jook (China), yuba (Japan), forng ta ohu [tauhu] (Thailand); rolled bean curd, second bamboo.

Fermented bean curd: Also known as foo yu, fu-ru, narm yu (China), tahoe, tahu (Indonesia, Malaysia), tausi (Philippines), bean curd cheese, Chinese cheese, pickled bean curd, red bean curd, soybean cheese.

Moldy bean curd. Bean curd cheese: See bean curd by-products (fermented).

Bean pastes and sauces: Shih and jiang from China: (1) Bean sauce (jiang) also known as taucheo or tau sa (Malaysia, Nonya and Singapore cooking), mien see [mian shi] (China), taoco [Pron. = tao-cho] (Indonesia), tuong ot (Vietnam), bean paste, brown bean sauce, yellow bean sauce. (2) Black bean sauce (a recent addition to the family of Chinese sauces. A major ingredient is puréed fermented black beans with a hint of garlic and star anise. It tastes best when freshly made). (3) Chili bean paste (in addition to chopped dried chilies, it sometimes contains fermented black beans): Also known as lat chu jeung, as lat chu jeung yau (Garlic) (China); kochujang (Korea); bean paste with chili; hot bean paste; Sichuan hot bean paste. (4) Dhwen-Jang (Korea). See also miso. (5) Hoisin sauce (China): A sweet, thick, reddish brown sauce. One ingredient is fermented soybean paste. Not to be confused with the Chinese barbecue sauce called sha cha jang. Also known as hoi sin cheung

(China); barbecue sauce. (5) Soybean paste. Also known as mean see jiang (China). (6) Sweet bean paste. In this context it is not the sweet bean paste made from azuki beans, but rather a sweet, thick, dark brown sauce made of ground fermented soybeans and sugar. Its salty-sweet flavor is used in marinades and roast meats. Also known as tim mean jiang (China).

Bean sprout: Mung bean sprouts, silver sprouts (mung bean sprouts with the roots and seed pods removed), soybean sprouts. Also known as: Daai dau nga choy (soybean sprout), ngunn nga choy (silver sprouts), nga choy, sai dau nga choy (mung bean sprout) (China); tauge (Indonesia); moyashi (Japan); kacang ijo, kacang djong, kacang padi (Malaysia); togue (Philippines); taun gawk (Thailand); gia (Vietnam); bean shoots.

Beijing duck sauce (recipe with ½ cup sweet bean paste). Vietnamese-style Beijing duck sauce (with ½ cup sweet soy sauce–kecap manis).

Black bean: See Fermented black bean. Black bean sauce: See Bean pastes and sauces. Fermented black bean sauce. Black soybean: See soybean.

Broad bean paste. Broad bean sauce: “The best is made in Pixian, a city in Sichuan province, where it is used instead of soybean-based seasoning sauces.”

Brown bean sauce: See Bean pastes and sauces.

Che hau sauce (Che how, China): See Bean pastes and sauces (Hoisin). Chick-pea.

China: Has the “oldest and most well-documented cuisine in the world.” Chinese cheese: See Bean curd by-products (fermented). Chinese hot bean paste: See Bean pastes and sauces.

Dau hu (Dow hoo, Vietnam): See bean curd. Dau hu chien (Dow hoo chee-ian, Vietnam): See Bean curd, fried. Dau hu chung (Dow hoo chee-ung, Vietnam): See Bean curd. Dau hu ki (Dow hoo kee, Vietnam): See Bean curd, pressed.

Dengaku (plus recipe).

Dhwen-jang (Dwen-jang, Korea). Similar to Chinese soybean paste or Japanese akadashi miso. Also known as Korean bean paste. Doufou Kan [doufu gan], China: Bean curd (grilled, pressed). Dou-fu (Dau-fu, China). See Bean curd. Doufu nao (Dau-fu-nou, China): See Bean curd “brains.” Doufu pok (dau-fu pork, China). See bean curd, fried. Dow foo (dau fu, China): See Bean curd.

Edamame (e dah ma meh, Japan): See soy bean.

Fermented bean curd: See Bean curd by-products. Fermented bean curd cake. See Bean curd by-products; tempe.

Fermented black beans (Shih, China). With recipe for “Fermented black bean sauce” (p. 106). Also known as dau see (China), black beans, dried black beans, preserved black beans.

Fermented red rice. Flours and thickeners: Kuzu (Japan). Mung bean flour. Soy flour (incl. kinako). Foo yu (Fu you, China). See Bean curd by-products (fermented). Forng Tao

Hu (Fong tao huu, Thailand). See Bean curd by-products, bean curd sticks. Fu jook pin (Fu juk pin, China): See bean-curd by-products, bean curd skin. Fu-ru (Fu yue). Gee Jook (Ji Juk, China): Bean curd sticks.

Gluten: Kau fu, kohana fu, matsutake fu, mein jin pau, nama fu, su tang, yaki fu. Also known as: Kau fu, mianjin, mein jin pau, su tang (China), kohana fu, yaki fu (Japan).

Gochujang (Korea). See also: Chili paste, chili sauce. Korean barbecue sauce.

Grilled bean curd: See Bean curd, grilled.

Hatcho miso: See miso, Hatcho. Hot bean paste. Hot black bean sauce. Inaka miso: See miso.

Japan: "Japanese cooks revel in the artistry of their craft. The Japanese love of nature is a challenge to present each ingredient as reminder of its origins: to bring nature to the table...." Regional cuisines are not of great importance in Japan; cooking methods (incl. Dengaku), salting (incl. Teriyaki), cutting and slicing techniques.

Kecap asin (Ket-chup a-seen, Indonesia): See Soy sauce, sweet and salty. Kecap cair (cha-ear, Malaysia): See soy sauce, light. Kecap hitam (Indonesia): See soy sauce, sweet and salty. Kecap ikan (Indonesia): See Fish sauce. Kecap manis (mah-niece, Indonesia): See Soy sauce, sweet and salty. Kecap petis (pet-is, Indonesia): See fish sauce. Kinugoshi tofu (Japan): See Bean curd, silk.

Kochujang (go-choo jang, Korea): See Bean pastes and sauces; chili pastes.

Koikuchi shoyu (Japan): See soy sauce. Continued. Address: Author of several books on Asian cuisine.

2626. Passmore, Jacki. 1991. The encyclopedia of East Asian food and cooking (Document part II). New York, NY: William Morrow. 320 p. Illust. Index. 24 cm. [44 ref]

• **Summary:** Continued from p. 153: Korean bean paste: See Dhwen jang. Koshi-an (Japan): See Azuki beans (an). Koya tofu (Japan): See Bean curd, freeze-dried [sic].

Kuzu (Japan): See Flours and thickeners. Lentil (*Lens esculenta*): Red lentil, Red mung beans.

Light soy sauce: See Soy sauce.

Lu soy (lo shui, China): See soy sauce.

Maltose: Made by fermenting germinated grains of barley. When used to glaze foods, may have soy sauce and red food coloring added. Also known as: Malt sugar, [barley malt syrup].

"Ma-po" dofu [Mabo-dofu]: See beef.

Mean see jiang [mian shi jiang] (min see jiang, China): See Bean pastes and sauces.

Mein jin pau [mien jin pau] (China): See Gluten.

Mianjin (China): Gluten.

Mien see (mien-si [mian shi], China): See Bean pastes and sauces.

Miso (Japan): (1) Hatcho-miso. (2) Inaka miso or Sendai miso. Also known as Red miso. (3) Shinshu miso. (4) Shiro miso.

Mochi. Monosodium glutamate. Also known as: Mei jing (China); aji-no-moto (Japan); servuk perasa (Malaysia); ve tsin (Vietnam), M.S.G., taste essence, taste powder.

Moyashi (Japan): See Bean sprout.

Mung bean. Also known as moong ke dal (India); kacang djong, kacang eedjo [hijau, katjang idjo] (Indonesia); kacang hiau (Malaysia); tau ngok (Thailand); dau xanh (Vietnam); green gram.

Nama-age (nah-mah ah-geh, Japan): See Bean curd, deep fried.

Nama fu (Japan): Raw / uncooked wheat gluten.

Natto (Japan). See soybean.

Noodles: (1) Bean curd noodles (China). Also known as Soy noodles, soy vermicelli.

Oils and fats: Soybean oil. (2) Bean curd skin noodles (China) [yuba noodles].

Peanut (with many foreign names and recipes).

Preserved black beans: See Fermented black beans.

Pressed bean curd: See Bean curd (pressed).

Red bean paste, sweet: "An important ingredient in Chinese and Japanese cooking, sweet red bean paste is made by boiling the red azuki bean and mashing it to a paste with lard or oil, then cooking it until it is fairly dry or thick. In Japan, red bean paste is made in two textures: the smooth purée is koshi-an and the chunky version, with the beans only partly crushed, is tsubushi-an. It is a filling for cakes and sweet buns, and is used in several desserts." Also known as hong dow sar (China), an (Japan). Contains a recipe for Sweet red bean paste.

Red rice: See Fermented red rice.

Rice: Many type of glutinous and non-glutinous.

Rolled bean curd: See Bean curd sticks [dried yuba].

Seaweed: Many different types. Seaweed gelatin or Seaweed jelly: See agar agar.

Sendai miso (Japan): See miso.

Sesame seed: Black sesame seed, sesame oil, sesame paste, white sesame seed.

Shinshu miso (Japan). Shui doufu (China): See bean curd (silk). Silk bean curd: See Bean curd (silk).

Soybean (*Glycine max*): (1) Black soybeans. (2) Fresh soybeans [edamame]. (3) Yellow soybeans. Soybean cheese: See Bean curd, fermented [fermented tofu]. Soybean condiment: See Bean pastes and sauces. Soybean milk. Also known as tau cheing, tau ni (China). With homemade soymilk recipe. Soybean noodle: See Noodles, bean curd. Soybean oil: See fats and oils. Soybean paste: See Bean pastes and sauces. Soybean sprout: See bean sprout. Soy flour: See Flours and thickeners.

Soy sauce: "An ancient seasoning, first used in China more than 3,000 years ago. Known in its original form as *shih*, it was a thin salty liquid in which floated fragments of fermented soybeans." "Soy sauce is to Chinese and Japanese cooking what the pungent, salty fish sauce known as nam pla or nuoc mam is to Thailand and Vietnam respectively." (1)

Dark soy sauce. Also known as jang yau, see yau (China); koikuchi shoyu, tamari (Japan), kecap pekat (Malaysia); mushroom soy. (2) Light soy sauce: Thinner, saltier, and lighter in color and flavor. It is used in cooking where its light color will not spoil the color of the ingredients. Also known as sang chau, see yau (China), shoyu, usukuchi shoyu (Japan), kecap cair (Malaysia), toyo (Philippines), nam siew (Thailand), xi dau (Vietnam), thin soy sauce. (3) “Lu soy (China) is a ‘master sauce’ based on soy sauce with sugar, ginger, and five-spice. It is used for simmering poultry and other meats to give a rich flavor and to color the food a deep brown. Also known as lu shui (China).”

Soy sauce, sweet and salty: (1) “Kecap asin (Indonesia) is a thick, salty, dark soy-based sauce used to impart a strong color and flavor. Its sweet counterpart is *kecap manis*. It is similar to, but thicker than, several dark soy sauces used in Chinese cooking.” (2) Kecap hitam (Malaysia) is a sweet dark soy sauce. Slightly less spicy than kecap manis. (3) Kecap manis (Indonesia) is a sweet, dark, thick, aromatic soy sauce, especially widely used with satay. “It is similar to, though finer in flavor than, Chinese sweet soy sauce” [tian mian jiang]. Also known as kecap bentang manis (Indonesia); sweet soy sauce. (4) “Sweet soy sauce (China) is a dark, sweet sauce combining soy sauce, sugar, and malt sugar. Its distinctive malt-like taste goes well as a dip for fried snacks, poultry, and seafood.” It appears frequently on the table in homes and restaurants in Fukien province, opposite Taiwan on the coast of south-eastern China. For a recipe, see Sweet soy sauce pork (p. 230). Note: This is not generally a commercial product. (5) Tim cheong (Malaysia) is a thick, sweet, black soy sauce, similar to that used in China. In Malaysia it is served with poh pia. Its flavor is closer to that of kecap hitam than to kecap manis.

Sprouts, soybean. See Bean sprout, soybean. Sushi (describes many types, with recipes). Sweet bean paste or Sweet bean sauce: See Bean pastes and sauces.

Taho (Philippine bean curd brains). Tahoe (Indonesia or Malaysia, fermented bean curd). Tahu (Malaysia bean curd). Ta hua (Malaysia bean curd). Tahure (Philippine bean curd).

Tamari (Japan): See soy sauce. Taucheo (Malaysia or Singapore, bean pastes and sauces). Tauge (Indonesia bean sprout). Tauhu kao (Thailand bean curd). Tauhu kuning (Indonesia and Malaysia bean curd pressed). Tauhu leong (Thailand bean curd, pressed). Tauhu tod (Thailand bean curd, fried). Taukwa (Indonesia and Malaysia bean curd pressed). Tau sa (Malaysia bean paste and sauces). Tausi (Philippines, bean curd products, fermented).

Tempe (Indonesia, Malaysia): Fermented soybean cake [tempeh]. Oncom [Ontjom]. Tokwa (Philippine bean curd pressed).

Tosa soy sauce (Japan): The classic sashimi accompaniment. Recipe given.

Tsukemono: Takuan, umeboshi.

Usu-age (Japan): See Bean curd (fried) purses.

Winged bean. Yuba (Japan).

Brief biography: “For more than twenty years she has been professionally involved with Asian food as a writer, teacher, publicist, researcher, consultant, and, of course, cook. She has traveled extensively in Asia and lived in Hong Kong for more than ten years, working as a food writer on a number of newspapers and magazines, which led to a career as a food consultant. Her most recent book, *Asia the Beautiful Cookbook* was listed by *Publishers Weekly* as one of the best books of 1987.” Address: Author of several books on Asian cuisine.

2627. Soy City Foods vegetarian cookbook. 1991. Toronto, Ontario, Canada: The Golden Age Food, Ltd. 145 p. 28 cm.

• **Summary:** Contents: Dips, spreads & sauces. Soups & salads. Side dishes. Quick & easy recipes. Harvest dinner main dishes. Tempeh main dishes. Tofu main dishes. Other main dishes. Breakfast & brunch. Desserts. Holiday recipes. Glossary. Products made by Soy City Foods: Harvest dinner patties. Falafels. Grain tempeh. Tofu. All soybeans are organically grown, and certified by OCIA.

Some history: In 1975, The Golden Age Food Limited opened the Vegetarian Restaurant in downtown Toronto. In order to produce healthy soy-based products from organically-grown soybeans, the restaurant created its own production facility, Soy City Foods. Address: 2847 Dundas Street West, Toronto, ONT M6P 1Y6, Canada. Phone: (416) 762-1257.

2628. The Mail Order Catalog. Fall–winter 1991-2. Quality books. Vegetarian food products. 1991. P.O. Box 180, Summertown, TN 38483. Catalog.

• **Summary:** The book section of this mail order catalog contains listings for an excellent selection of vegetarian cookbooks, and books on animal rights, diet and nutrition, ecology, and native American cultures.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called “Response TVP flakes”), soy powder (powdered soymilk), tempeh starter, nutritional yeast, and instant gluten flour. Address: Summertown, Tennessee. Phone: 800-695-2241.

2629. Tremblay, Yvon. 1991. La santé de la terre: le petit guide santé des années 1990: le soya et ses dérivés (lait de soya, tempeh, miso, etc.) ainsi que le sarrasin et le seitan [The health of the earth: the little health guide for 1990: soybeans and soyfoods (soymilk, tempeh, miso, etc.) as well as buckwheat and seitan]. Rosemère, Quebec, Canada: Presses Libre-choix. 157 p. Illust. by Mario Gailloux. 21 cm. [Fre]\* Address: Que.

2630. Wasserman, Debra; Stahler, Charles. 1991. Meatless meals for working people: Quick and easy vegetarian

recipes. Baltimore, Maryland: Vegetarian Resource Group. 96 p. Illust. No index. 22 cm. [10 ref]

• **Summary:** In this vegetarian cookbook, the section titled "Soy dishes" (p. 48-53) contains the following: Tofu mayonnaise dip. Fried tofu. Fried tempeh sandwiches. Spaghetti and tempeh sauce. Tofu "eggless" salad. Tofu pie and quick crust. Tofu burgers. Summer tofu salad. Curried tofu with peanuts. Tofu spinach dip. Address: Baltimore, Maryland.

2631. Yokotsuka, Tamotsu. 1991. Proteinaceous fermented foods and condiments prepared with koji molds. In: Dilip K. Arora; K.G. Mukerji; E.H. Marth, eds. 1991. Handbook of Applied Mycology. Vol. 3: Foods and Feeds. New York, NY: Marcel Dekker, Inc. x + 621 p. See p. 329-73. Chap. 11. [118 ref]

• **Summary:** Contains a great deal of very interesting information. Contents: 1. Introduction. 2. Fermented soybean foods in East and Southeast Asia: A. Douchi (China), Hamanatto (Japan), and in-yu (Taiwan). B. Shuidouchi (Shandong province, China), thua-nao (Thailand), kinema (Nepal), and natto (itohiki natto) (Japan). C. Tempe [Tempeh] and Oncom [Onchom] (Indonesia) (Making soybean tempe, volatile flavor of tempe, chemical composition and nutritional value of tempe, tempe bonkreik). D. Fermented tou-fu (soybean curd) products: Sufu (China and Taiwan), Tofu-yo (Okinawa, Japan).

3. Fermented salty condiments in a slurry or paste made from soybeans and cereals: A. Doujiang (touchiang) (China) and Tauco [tauchou] (Southeast Asia). B. Doubanjiang (Toupanchiang). C. Tianmianjiang (Tienmienchiang). D. Gochujiang and Doenjang (Korea). E. Hishio (Japan). F. Miso (Japan) (Production and consumption of miso, making rice miso and barley miso).

4. Fermented salty liquid condiments made from soybeans and cereals: A. Japanese shoyu (Manufacture of koikuchi and usukuchi shoyu, manufacture of tamari shoyu). B. Soy sauce produced in east and southeast Asian countries other than Japan (Korea, Taiwan, Hong Kong, Singapore, Malaysia, Indonesia, Thailand, People's Republic of China {the process, acid hydrolysis illegal until recently}, chijhi or whole soybean soy sauce still made in the basins of the Zhujiang {Pearl} River and the Huanghe {Yellow} River).

5. Biochemistry involved in shoyu and miso manufacture: A. Selection of raw materials. B. Contribution of improved cooking methods of raw materials to increase the enzymatic protein digestibility. C. Selection and improvement of koji molds. D. Improvement in koji making. E. Microbial and chemical control of salty mash fermentation. F. Flavor evaluation of koikuchi shoyu. G. Stability of color of pasteurized shoyu. H. Nutritional concern about shoyu and miso (salt content). Safety of koji molds and shoyu (aflatoxins).

6. Conclusion.

Tables show: (1) Chemical composition of kinema, thua-nao, and douchi. (2) Changes in nitrogenous compounds during Natto Fermentation. (3) Changes of nitrogen compounds in sufu making. (4) Constituents of some types of miso. (5) Chemical composition of various kinds of genuine fermented shoyu in Japan. (6) Effect of cooking conditions of thoroughly moistened defatted soybean grits on the enzymatic digestibility of protein. (7) Differences between *A. oryzae* and *A. sojae* used for shoyu fermentation. (8) Proteinases produced by *Aspergillus sojae*. (9) Enzyme composition of koji as influenced by the difference of material. (10) Various metabolic patterns by lactobacilli in shoyu mash. (11) Digestibilities of protein in shoyu, miso, natto, and tempe fermentations. (12) Results of quantitative analysis of flavor constituents in koikuchi shoyu.

Figures show: (1) Flow sheet of tempe making. (2) Flow diagram of sufu making. (3) Diagram of rice-miso fermentation. (4) Diagram of koikuchi shoyu fermentation. (5) Tamari-shoyu fermentation. (6) Microflora changes in shoyu mash fermentation. (7) Classification of *Aspergilli*. (8) Fermented foods and condiments made from soybeans mixed with or without cereal grains or flour.

Concerning *shuidouchi*: Boiled soybeans are inoculated with *Bacillus subtilis* and incubated at high humidity and at 30-40°C. This preference for a high temperature may be why the *Chi-min yao-shu* (6th century China) recommended that, when making douchi [soy nuggets], the temperature during incubation be kept rather low. In Shandong, China, salted soy nuggets are made as follows: Clean, soak, and boil soybeans until soft. Place in a cloth bag and cover with straw, which is the best natural source of *B. subtilis*. After incubation for 1-2 days at 25-30°C the soybeans will be covered with viscous substances. Mix the sticky soybeans with minced ginger and salt, then pack tightly into jars, and age for one week. They are now ready to consume (See references 5 and 6). Address: Research Div., Kikkoman Corp., Noda City, Chiba prefecture, Japan.

2632. **Product Name:** [Tempeh].

**Manufacturer's Name:** Berliner Tofurei.

**Manufacturer's Address:** Luebbenerstr. 4, D-1000 Berlin 30, West Germany. Phone: 030/612-7931.

**Date of Introduction:** 1991?

**New Product-Documentation:** Letter from Anthony Marrese based on an interview with Detlef Dorow. 1992. Jan. 13. This company tried making tempeh for a while (the date of introduction) is not given, but sales were too slow so they discontinued it.

2633. Die Tofurei mit vegetarischer Kueche. 1991? New soyfoods restaurant or deli. Krefelderstr. 2, D-1000 Berlin 21, Germany.

• **Summary:** Letter and menu sent by Anthony Marrese. 1992. Jan. 13. This tofu manufacturing company now

owns a restaurant at the same address as its production facility. A leaflet describing it is titled “Die Tofurei jetzt mit vegetarischer Kueche” (The tofu shop now with a vegetarian kitchen), printed black on orange. It serves a variety of soy-based snacks, drinks, salads, cakes (kuchen), desserts, main courses, and soups. Most are made from tofu, but tempeh and seitan are also on the menu. The company apparently makes the following soy products for sale both at the restaurant and elsewhere in Berlin: Natur-Tofu (loose and vacuum packed), Gewuerz Tofu, Kraeuter Tofu, Algen Tofu, Mariniertes Tofu, Getrockneter Tofu, Fritierter Tofu, Raeucher Tofu (regular and marinated), Champignon-Tofu (regular and marinated). All are vacuum packed. Address: Berlin, Germany. Phone: 030 / 393 0927.

2634. Dorow, Detlef; Hoffmann, Ralf. 1992. Update on Die Tofurei in Berlin (Interview). Conducted by Anthony Marrese in Berlin, Jan. 7. 2 p. transcript. Handwritten. Followed by a letter from Detlef Dorow on 17 Feb. 1992. • **Summary:** In Aug. 1989 the name of the company was changed from Berliner Tofurei to Die Tofurei. In June 1991 the company moved to its present address at 2 Krefelderstr. 2 in Berlin. The original and last address was Luebbenerstr. 4, 1000 Berlin 36. The company was established 3 years ago to make tofu. The founders were Detlef Dorow, Ralf Hoffmann, and Misha Wolff. [Note: According to the magazine *Die Geschaefsidee* (1989, Dec. p. 33) this company was started in Aug. 1988 by 4 friends who liked to make tofu: Detlef Dorow [Dorow], Ralf Hoffmann, Shi-Jong Chen, and Michael Wolff [or Wolf]. The original company name may have been “Die Benjamine.” But Detlef now says that the original company name was Detlef Dorow–Erste Berliner Tofurei.] Over the years, Detlef’s friends left one by one: Michael Wolf in 1989, Shi-Jong Chen in 1990, and Ralf Hoffmann in late 1991—because of too much work and not enough money.

While at its original location, the company made Tofu, Tofu-Burger, Okara-Burger, Tofu Variationen, Mungo Sprossen Snack, Tofu Schnitzel, and Sushi-Reisroellchen. The company has also made Tempeh and Seasoned Tofu (with Vegetables, Herbs, Seaweed, or Smoked). Tempeh was discontinued after a while due to sluggish sales. Presently the company makes 200 to 400 kg/week of tofu (production varies widely), and about 250 Veggie Burgers (Tofu Burgers) each week.

The company has 3 full-time partner employees (each with equal ownership) and 2 part-time workers. Growth has been unstable. The building is about 18 by 10 meters, divided into 4 rooms. Gross sales are about DM 250,000 per year. Net worth is unknown. In Aug. 1991 the company started a restaurant at the same address as its production facility. A leaflet describing it, titled “Die Tofurei jetzt mit vegetarischer Kueche” (The tofu shop now with a vegetarian kitchen), printed black on orange, is enclosed. It serves a

variety of soy-based snacks, drinks, salads, cakes (kuchen), desserts, main courses, and soups. Most are made from tofu, but tempeh and seitan, which are also on the menu, are purchased from either Viana Naturkost GmbH in Cologne, or Tofumanufaktur Hamburg.

Comments: All is not well at Die Tofurei and they may be out of business very soon for several reasons, the main one being disagreements between the partners. Detlef sees his job as working 8 hours a day, whereas Ralf and Misha feel they are working for a cause which they want to make grow. Low sales and high overhead have forced the issue to a head. Within a year of moving to their last location and having to renovate, a second move was required due to problems with the landlord. This then required a second renovation at the present location. Money for the renovations was borrowed from the bank and the company is already behind in its payments. Sales are low because (1) Their tofu prices are high (DM 7/kg wholesale) due to high overhead; (2) Several tofu companies from Freiburg, Hamburg, Stuttgart, Cologne, etc. have entered the Berlin natural-foods market; (3) Oh Tofurei, which is run by an Asian-German, has the entire Asian foods market in Berlin, including Asian restaurants. Its tofu retails for DM 5/kg. The owner of Oh Tofurei was not willing to be interviewed. He speaks no English (only broken German) and is probably producing several hundred kg of tofu per day.

Ralf and Misha are ready to call it quits after 3 years of hard labor. Detlef wants to keep the restaurant and maybe to distribute tofu made by some other company.

Follow-up letter from Detlef Dorow. 1992. Feb. 17. “Ralf Hoffmann has just left the company, so I rule it by myself with a good worker. Ralf managed the finances for the last 6 months, but it was a big catastrophe. I hope I can reduce the damage. I have had so many problems with the company and my partner Ralf; he managed Die Tofurei for the last 6 months and I managed the “Vegetarische Kueche” restaurant. They run more or less separately. Now I am increasingly forced to make snacks (Sushi-Reisroellchen, Tofu Burgers, Gruenkern Burger, Tofu Baelchen mit Spinatfuellung, Tofu-Speiss) because our company is too small to compete with large companies. Our tofu is made mostly by hand, so it is a lot of work and not much money.” Address: Die Tofurei: Krefelderstr. 2, D-1000 Berlin 21, Germany. Phone: 030-393-0927.

2635. **Product Name:** Tempeh Starters, and Miso Starters.

**Manufacturer’s Name:** Future Foods.

**Manufacturer’s Address:** 3 Tai Madog, Stablau, Llanrug, Gwynedd, LL55 3PH, Wales, UK. Phone: (0286) 870606.

**Date of Introduction:** 1992. January.

**New Product–Documentation:** Letters from Owen Smith of Future Foods. 1992. Oct. 27 and Dec. 2. He has a small company selling unusual seeds of food plants as well as tempeh and miso starters. He obtains the cultures from GEM

Cultures in California, and started selling them in Jan. 1992. His company is planning to start making its own tempeh starter using the method described in books on tempeh by Shurtleff and Aoyagi.

**2636. Product Name:** Tempeh-Lettuce-Tomato Sandwich, Tempeh Burger, Bar-B-Q Tempeh, Tempeh Curry with Coconut Milk (and Rice), Dolphin Safe Tempeh Salad (Mock Tuna Salad).

**Manufacturer's Name:** Leo Risin's Foods.

**Manufacturer's Address:** 1525 Rhode Island, Lawrence, KS 66044. Phone: 913-832-1521.

**Date of Introduction:** 1992. January.

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter and Labels sent by Clayton McHenry, founder and owner of Leo Risin's Foods. 1994. Feb. 22. In January 1992 Clayton named his business Leo Risin's Foods and set up a certified and inspected kitchen in his home at 1525 Rhode Island, Lawrence, Kansas 66044. Starting in January 1992 he produced five deli foods with tempeh for the Community Mercantile, and Clearly Nature's Own, a natural food store in Kansas City, Missouri. The weights of and ingredients in these products are as follows (\* = organically grown): Tempeh-Lettuce-Tomato Sandwich (6 oz): Wheat bread, tempeh\*, lettuce\*, tomato, tofu mayo, sesame oil, spices. Tempeh Burger (7 oz): Wheat bun, handmade tempeh\*, lettuce\*, onion\*, tofu mayo, spicy pickle\*, mustard, hot sesame oil. Bar-B-Q Tempeh (6 oz): Wheat bun, handmade tempeh\*, rice malt sweetened barbecue sauce, red onion\*. Tempeh Curry with Coconut Milk (and Rice, 8 oz): Basmati rice, handmade tempeh\*, coconut milk, red chili, onion, cashew, green chili, spices, salt. Dolphin Safe Tempeh Salad (Mock Tuna Salad, 8 oz): Tempeh\*, Noyonaise, green onion, parsley\*, sunflower seeds, spices.

**2637. *Voice of the Turtle* (Husum, Washington).** 1992. Turtle Island to open new plant: March 1992–Hood River, Oregon. 4:1. Jan.

• **Summary:** After 8 prosperous years making tempeh in Husum, Washington, the company has outgrown the kitchens of the old Husum Elementary School on the banks of the White Salmon River. During this time, the company has grown more than tenfold in this town of 200 people. In moving across the river to a new state, Turtle Island will be taking over a 6,000 square foot fruit processing facility; a small part will some day serve as a retail outlet. Address: #1 Turtle Lane, P.O. Box 218, Husum, Washington 98623. Phone: 509-493-2004.

**2640. O'Connell, Michael.** 1992. History of Ploughshares Foods Ltd. in Glastonbury, England (Interview). *SoyaScan Notes*. Feb. 27. Conducted by Anthony Marrese in England.

• **Summary:** This company was founded in 1984 in the Essex countryside by Michael O'Connell and Fiona Bruce under the name "The Emperor Liu An's Tofu Palace." Liu An was the legendary inventor of tofu in China. The business was an 8-tonne mobile catering truck and kitchen on wheels which went to open-air shows and festivals; its purpose was to serve vegan organic food (including tofu), demonstrate tofu-making, and promote veganism. They started operating the truck in Aug. 1984. Recipes prepared in the mobile restaurant in 1984/85 included tofu blueberry mock cheesecake, tofu mayo, tofu sweet cream, tofu lasagna, tofu pudding, tofu ice cream, tofu burgers, tofu gulash, and tofu pizza. In 1985/86 they launched okara steam pudding with dates, okara shepherd's pie, and okara burgers.

In Aug. 1986 the company moved to Glastonbury, started a non-mobile restaurant, and changed the company name to Ploughshares Foods Ltd. (after the Old Testament Biblical expression from The Book of the Prophet Isaiah 2:4 "They shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn/study war any more").

In 1988 the restaurant introduced tofu quiche (onion and mushroom), okara veggie roll, okara tempeh, okara tempeh Bolognese/moussaka, and braised tofu in miso sauce. In 1989 they launched soya cream cheese with chives, and in 1991 okara tempeh with leaf protein added.

In 1991 the company structure changed from a partnership to a cooperative. Other current members of the co-op are Miranda Bruce, Sophie Pullinger, and Lalita Gordon Milverton.

The company was a pioneer in introducing tofu and new ways of using it to vegan restaurants. Uses included burgers, pies, dressings, creams, main dishes, salads, soups, etc. They introduced foods that were free of dairy products, wheat/gluten, and/or sugar, and developed a leaf protein product named Leafu (i.e. tofu from leaves). Their vegan cooking school was the first such school to receive the "City and Guild" qualification to those who graduate from their residential diploma course teaching vegetarian, organic, and

special diet foods. The company provides a friendly working environment, as for single working parents, and is involved in the wider issues of improving society.

The main reasons for the company success are a commitment to delicious, aesthetic, nutritious food, customer loyalty, and a commitment to research, development, and innovation.

Anthony Marrese adds: "All of their products are good, and their people are especially nice. I spent about 18 months helping with the tofu production and restaurant in 1987/88." Address: 54 Roman Way, Glastonbury, Somerset, BA6 8AD, England. Phone: 0458-831182 or 835233.

2641. *Natural Foods Merchandiser*. 1992. Soyfoods' major role in cancer prevention subject of major study: Marketers expect positive results to boost sales dramatically. Feb. p. 20. [1 ref]

• **Summary:** "Top researchers believe soyfoods such as tofu and tempeh might help prevent cancer and have begun a three-year, \$3 million study to confirm their hypothesis.

"The study was funded in October by the National Cancer Institute (NCI) in Bethesda, Maryland, after a panel of 13 scientific experts concluded more research is needed on cancer-fighting compounds found in soybeans. It is the first time soyfoods have received such attention—and funding—from the institute...

"Although it's too early to say that soyfoods prevent cancer, several compounds with anticarcinogenic activity are found in relatively high concentrations in soybeans, Messina says. Called phytochemicals, they are distinguished from nutrients—some are actually considered anti-nutrients because they make it harder for the body to absorb what it needs. The compounds include isoflavones, protease inhibitors, phytic acid, saponins, phytosterols and phenolic acids."

Includes an interview with Mark Messina, PhD, program director for NCI's Diet and Cancer Branch, about beneficial phytochemicals (non-nutritive dietary components) in soybeans and soyfoods.

2644. *SoyaScan Notes*. 1992. The advantages and disadvantages of wheat gluten and seitan compared with soyfoods such as tofu and tempeh (Overview). March 19. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Advantages: 1. Wheat gluten and seitan can be made to have more of a meatlike texture and flavor in vegetarian food products using simple technology. 2. They are lower in fat and have a lower percentage of calories for fat.

Disadvantages: 1. Wheat gluten and seitan are much more expensive per unit of weight or unit of protein. 2. The process by which gluten is made is hard on the environment, unless they are made from vital gluten. If made from whole wheat, the wheat starch cause such severe water pollution and clogs up municipal sewage pipes to such an extent that many municipalities will not allow manufacturers to continue operation. 3. The process for making them is very wasteful, since wheat contains only about 14% protein. The rest of the wheat (mostly starch) is wasted—almost as if it were fed to livestock. 4. Gluten is a major allergen; many people are allergic to it. In fact many foods advertise that they are "gluten-free" and many gluten-free cookbooks and other books have been published. 5. Celiac (coeliac) disease and celiac sprue are serious disorders. Most people afflicted with them are advised to follow a gluten-free diet. 6. The quality of their protein is lower.

In summary, in countries such as China and Japan, where both gluten products and soy products have been known and consumed for centuries, soy products pervade the diet and are a significant source of protein, whereas gluten products are used in very small amounts as minor specialty products. In China, they are best known in vegetarian restaurants.

2645. Bounds, Sarah. 1992. The subject of soya. *BBC Vegetarian Good Food (England)*. Spring. p. 28-29, 31-32.

• **Summary:** An introduction, with many color photos, to soyfoods, including TVP, tofu, soya milk, soya flour, soya oil, soy sauce, miso, tempeh, fresh soya [green vegetable soybeans; "soya beans can be eaten fresh straight from the pod, served green and tender..."], and whole dry soybeans. Contains considerable incorrect information.

• **Summary:** A nice history of the subject based on a review of the literature. Contents: Early history in East Asia (industrial uses, chiang and miso, natto, tempeh, soymilk, tofu, shoyu). Emergence of U.S. soybeans (early soybean mills, ADM, Glidden). Chemical understanding of soybean protein (major components/fractions). First industrial applications (oil and meal). Soy protein-based plastics (Henry Ford). Chemurgic movement (U.S. Regional Soybean Industrial Products Laboratory, Northern Regional Research Center, Glidden). Soy protein adhesives (I.F. Laucks). Paper coatings and sizings (Glidden). Soy fiber spinning (Ford, Azlon, Drackett). Other industrial uses. Address: Center for Crops Utilization Research, Iowa State Univ., Ames, Iowa 50111.

2649. Yap, Bwee Hwa Flora. 1992. Tempeh activities. Promotion of tempeh. St. Ingbert, Germany. 3 p. April 5. Unpublished manuscript.

• **Summary:** These are two chronologies of her work to help introduce tempeh to Germany. The following is a sampler of activities, in chronological order: 1989 Feb. 18—Start experiments for tempeh starter production. 1989 March 31—First tempeh made. 1989 May 12—Make and serve Tempeh Croutons for about 150 people at the “Bali Evening” in the Saarbruecken high school (*Volkshochschule*). 1989 June 23—Sample of tempeh starter sent to Bernd Steyer of Byodo in Munich. 1989 Dec. 7—Fried tempeh made and served to about 80 people at the “Open door” Maya’s tourist office.

1990 Jan. 28—First tempeh delivered for commercial sale to “Mutter Erde” (Mother Earth) natural food shop in the Saarbruecken. Each 200 gm cake sells for DM 3.20. 7 cakes a week are sold, later increasing to 10. 1990 Sept. 18—Report to the Gewerbe Amt of St. Ingbert. Her tempeh kitchen is inspected by 2 persons from the hygiene control (*Gesundheitspolizei*) division. Eventually she gets official permission to make tempeh in her home kitchen. 1990 Nov. 2—Resume deliveries to “Mutter Erde” with package and label. 1990 Nov. 12—First cooking of tempeh for the cooking club of the Kneipp Verein of St. Ingbert.

1991 Jan. 30—Start whole-foods cooking course at the Kneipp Verein of St. Ingbert. They hold a “Tempeh Evening”

and at least 15 people attend. 1991 Sept.—Promoting “Das Tempeh Buch.” A recipe is now attached to each piece of tempeh.

A note about the Kneipp-Bund (a German national organization) and its state-level Kneipp-Vereins. The Kneipp Bund was founded in 1891 by father Sebastian Kneipp, a catholic priest who lived 1821-1897. The organization is devoted to the promotion of the health of the body-mind-soul through prevention by natural means, including water, fresh air, herbs, diet and lifestyle. Today there are about 150,000 members nationwide. The headquarters and publishing offices are in Bad Wöerishofer. Flora has actively worked with this organization to introduce tempeh to its members and leaders. Address: Am Muehlenwaeldchen 1a, W-6670 St. Ingbert, Germany. Phone: 06894 / 53609.

2650. Dong, Minsheng. 1992. Re: Tempeh and soy nuggets (douchi) in China. Letters to William Shurtleff at Soyfoods Center, April 24 and June 18. 1 p. and 2 p. respectively. Typed. [Eng]

• **Summary:** “The first tempeh factory in China, Jiangdou Nutritive Food Factory, is located in Jongdou, Jongdou County, Jiangsu Province, China. It first started to sell tempeh in Oct. 1991. Production capacity is 1,000 kg/week. Tempeh has various Chinese names such as danbei, tianpe, tianpei, or doufu [Chinese characters are given for each], which were chosen to sound like “tempeh.” Some scholars call tempeh “Indonesian Tou Chiah” [i.e. *doushi* or *douchi* (pinyin) or *tou-ch’ih* (Wade-Giles) = soy nuggets] because they think tempeh is similar to Chinese *douchi*, a fermented soyfood made with specific molds. But I think tempeh is different from Chinese *douchi* in three respects: 1. In making *douchi*, it is not necessary to dehull the soybeans; in fact the hull should remain intact; 2. *Douchi* is fermented with *Aspergillus oryzae*, *Micrococcus* species, and/or *Mucor* species, never with *Rhizopus* species; 3. *Douchi* is composed of separate black particles; it is not a white cake.

“You mentioned that in 1931 William Morse observed a tempeh-like product in Beijing, China, which he called *tou chiah ping* (“soybean cake fried”). I have never heard of *tou chiah ping* [Chinese characters are included]. China has not previously produced tempeh. Very interestingly, I found tempeh to be very analogous to the koji used to make *douchi*, yet this koji is not usually used as food.

In 1991 Jiang Han-hu and Dong Min-sheng (both of the Dept. of Food Science, Nanjing Univ.) presented a paper on tempeh titled “Isolation, screening, and identification of a thermotolerable tempeh-producing strain RT-3.” It was published in Chinese in the Proceedings of the Annual Meeting of the Chinese Microbiological Society (1991, Jiangsu, p. 20).

Dr. C.W. Hesseltine, one of America’s leading microbiologists and experts on East Asian fermented foods notes (personal communication 24 May 1992) that he has

never heard of Tou Chiah, but he would guess that it is a Hamanatto-like food [such as *douchi*].

In response to a letter asking what “Tou Chiah” is, Dong replies that “tou chiah” is written as “douchi” or “dou chi” in pinyin. There are two types of douchi [soy nuggets] in China: (1) *Xian douchi* [also called *yanshi*] is the salted variety, which is made throughout China. To prepare it, black (or yellow) soybeans are soaked in water, cooked and made into koji. The koji is washed, and fermented, then salt and spices are added. It is aged, then sprayed with water then dried to give *xian douchi*. (2) *Dan douchi* [*danshi*] is the unsalted variety, which is made only in certain parts of Shandong (Shantung) and Hunan (Hunan) provinces. To prepare *dan douchi*, black (or yellow) soybeans are dry steamed in a cooker, cooled, inoculated with *Aspergillus oryzae*, and made into koji. The koji is washed with water, fermented, then aged with distilled wine. Address: Dep. of Food Science, Nanjing Agricultural Univ., Nanjing, Jiangsu Province, China.

2651. Gabriel, John. 1992. Current work with soya in Nicaragua (Interview). *SoyaScan Notes*. April 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** John (age 55) and his wife Charlotte (who is now a well-known maker of psychedelic tie-dye clothing) used to make tempeh in Houma, Louisiana, in about 1977. Recently John was in Nicaragua and he plans to do work there, starting in several years, with soyfoods such as tempeh, tofu, and soymilk. He is now working with Chuck Haren of Plenty USA, to put together a grant proposal for a project and funding.

The two best known people involved with soya in Nicaragua are Luci Morren and Anne Souter. Luci is a Danish nun who has founded an organization named Asociación Soya de Nicaragua (popularly known as Soynica, located at Apartado Postal 4451, C-164 Managua, Nicaragua). Now in her 50s, Luci has been involved with soyfoods for at least 8 years, working with a women’s collective of about 5 women and promoting their use (especially as a source of nutrients for poor and malnourished children) in the barrios of Managua. The group now makes tofu using rudimentary equipment; they don’t even have a press, so they must squeeze out the soymilk by hand. Luci would now like to start a commercial soy processing operation to make soymilk, tofu, and tempeh. She would like to sell these to restaurants, hospitals, schools, small retail outlets, etc., but she needs both technical and financial help. John is in communication with Luci on a regular basis. Luci is known by most development people in Nicaragua. John describes her as a very dedicated, indeed holy woman—like Mother Teresa of India. According to the SoyaScan database, in the mid-1980s, Luci was working in Mexico, teaching the people about Soya; she was with Cargua at San Cristobal Las Casas, 75 Real de Guadalupe,

29230 Chiapas, Mexico.

Anne Souter is now back in Nicaragua working full time with soya in the area of Matagalpa. She has yet to produce a successful crop of soybeans in Nicaragua.

A development group working with soyfoods in Nicaragua is Alianza Para Comunidades en Acción. Based in the USA (contact Richard Schopfer, director, P.O. Box 30154, Bethesda, Maryland 20814. Phone: 301-229-1742), they have an office in Managua run by Richard’s son, Don Schopfer (Aptdo. Postal C-144, Managua. Phone: 72022), and a soy project in Rivas, located 2 hours drive south of Managua near the border with Costa Rica. There Sal Piazza is in charge of a soybean utilization project. He works with several women’s groups that have community kitchens. Most of Alianza’s major projects are in the fields of health, food production, water, and housing.

Shurtleff & Aoyagi first met John and Charlotte Gabriel on 4 Jan. 1977 in Houma, Louisiana. They had constructed a tempeh trailer and were making tempeh for their own use. At that time they planned to start commercial tempeh production, but they never actually did. Rather they took the tempeh trailer back to The Farm in Summertown, Tennessee, and it was used there to make tempeh for members of The Farm.

Update: Talk with John Gabriel. 1993. Oct. 6. John and Charlotte are in the process of moving permanently to Nicaragua where they hope to arrive in about Feb. 1994 to work with the people to make soymilk, tofu, and tempeh. They plan to learn Spanish first in Guatemala. Chuck Haren says that quite a lot of soybeans are grown in the department of León, Nicaragua, but the yields are not very high; the rainy season requires that short-season varieties be cultivated. Leaf protein concentrate (made from cowpea leaves) is now being added successfully to lemonade in Nicaragua. Chuck Haren has married a Nicaraguan lady named Casta Calderon, who managed Luci Morren’s office.

Note: Plenty International (Jan. 1994) notes that Soynica (a non-governmental organization or NGO) is now located at: Apartado #RP-05, Managua, Nicaragua. Address: 11668 Blackberry Place, Nevada City, California 95959. Phone: 916-265-5100.

2652. Boysen, Hans-Juergen. 1992. Soja [Soya]. *Schrot & Korn (Germany)*. April. p. 16-20. [Ger]

• **Summary:** An introduction to soybeans and soyfoods, including whole dry soybeans, soy oil, soymilk, soya meat (Sojafleisch, TVP), Whole soy flour, tempeh, and soy sprouts.

Note: This magazine is sold in German natural food stores (Naturkost-Laden).

2653. Perkins, David D. 1992. Neurospora: The organism behind the molecular revolution. *Genetics* 130(4):687-701. April. [225 ref]

• **Summary:** “Under the title ‘Fifty Years Ago: The Neurospora Revolution,’ Horowitz (1991) has celebrated an anniversary of the epochal 1941 paper of Beadle and Tatum, which reported the first mutants with biochemically defined nutritional requirements. Horowitz’s account and others (Horowitz 1973, 1985, 1990; Lederberg 1990) have focused on the people who were involved, the genesis of their ideas, and the role of the 1941 results in transforming biology. The present essay will be concerned mainly with the research organism that was so important to the success of the initial experiments.” Address: Dep. of Biological Sciences, Stanford Univ., Stanford, California 94305-5020.

2654. **Product Name:** KISS (Keep It Simple Stirfry) [Lemon Teriyaki, Garlic Italian, or Spicy Szechuan].

**Manufacturer’s Name:** Turtle Island Foods, Inc.

**Manufacturer’s Address:** P.O. Box 176, Hood River, OR 97031. Phone: (503) 386-7766.

**Date of Introduction:** 1992. April.

**Wt/Vol., Packaging, Price:** 15 oz package. Each retails for \$2.79.

**How Stored:** Frozen.

**New Product–Documentation:** Leaflets from Natural Products Expo West at Anaheim, California. 1992. April 10-13. “KISS.” and “Discover Turtle Island”—since 1980. To make Lemon Teriyaki KISS, soy-brown rice tempeh is marinated in a zesty teriyaki sauce with lemon. Sold refrigerated or frozen in reusable/recyclable tubs, it is ready to stir-fry when you are! It is great for stir-fries, soups, pasta salads, and hors d’oeuvres. For Garlic Italian KISS, soy tempeh spiced with Italian herbs is marinated in an oil and vinegar based garlic sauce. Perfect for spaghetti, lasagne, pizza, or pasta dishes. For Spicy Szechuan KISS, soy tempeh with cashews is marinated in a spicy red sauce from Northern China. Ideal for stir-fries, sweet & sour, and other Oriental dishes.

2655. Wilson, Lester A.; Murphy, Patricia A.; Gallagher, Paul. 1992. Soyfood product markets in Japan: U.S. Export opportunities. Ames, Iowa: MATRIC (Midwest Agribusiness Trade Research and Information Center). x + 64 p. April.

• **Summary:** Contents: Figures. Tables. Acknowledgments. Introduction. I. Soybean processing (by Wilson and Murphy). Food from soybeans: Soybean chemical composition, environmental influences on soybean composition. Soyfood manufacture: Soymilk, tofu, momen tofu, kinugoshi tofu, packed tofu, aseptically-packaged tofu, deep-fried tofu, kori tofu. Tofu-related research: Recent studies at Iowa State University, summary, future research. Other nonfermented soyfoods: Yuba, kinako, texturized soy protein foods. Fermented soyfoods: Miso, shoyu, natto, tempeh. Japanese Agricultural Standards (JAS). Identity preservation and transportation. U.S. soybean quality and the Japanese market: Grain quality, judging quality, potential

new markets.

II. Japanese soyfood markets (by Gallagher).

Demand and growth prospects: Consumption patterns, demand analysis, forecasts. The U.S. share of the food soybean market: Sources and uses, market share analysis, determinants of relative prices, prospects. Trade and trade barriers: Soybeans, processed products. Summary and recommendations.

Appendixes: A. Excerpts from specifications and standards of food additives, etc.—Manufacturing and storage of tofu. B. Excerpts from standards and certification systems in Japan. C. Additional agricultural standards for soybeans. References.

Table 2.1 shows soybean use for soyfood production in Japan; actual (1986) and projected (2000). Soybeans for tofu are expected to increase from 524,000 to 609,700 tonnes. Soybeans for miso are expected to decrease from 156,000 to 101,600 tonnes. Soybeans for natto are expected to increase from 92,000 to 118,600 tonnes. Figures 2.1 to 2.4 show Japanese per capita consumption of tofu, natto, miso, and soy sauce from 1965 to 1988. Tofu: Japanese annual per capita consumption of tofu has risen since 1965, except that it fell during 1973-1977. In 1965 about 3.6 kg/capita of soybeans were used to make tofu, increasing to 4.4 kg/capita in 1988. If 1 kg of soybeans yields 2.8 kg of tofu, then per capita tofu consumption in 1988 was 12.32 kg or 27.1 lb.

Natto: Japanese annual per capita consumption of natto has risen steadily, from a little less than 0.4 kg in 1965 to 0.6 kg in about 1968, to 0.8 kg in 1988.

Miso: Japanese annual per capita consumption of miso fell from 8 kg in 1965 to about 5.4 kg in 1985, then it began to rise to about 5.7 kg in 1986.

Soy sauce: Japanese annual per capita consumption was about 12 liters in 1965. It fell to 11 liters in 1967, rose to 13 liters in 1973, then fell to 9.8 liters in 1985, after which it rose for 1 year. Address: 1-2. Prof. of Food Science and Human Nutrition; 3. Assoc. Prof. of Economics. All: Iowa State Univ. Phone: 515-294-0160.

2656. *SoyaFoods (ASA, Europe)*. 1992. Helfex ‘92. 3(2):4. Spring.

• **Summary:** “The International Health Food Exhibition, Helfex ‘92, was held at Wembley, London on 26 and 27 April. Over 160 companies concerned with health, diet, fitness and nutrition exhibited and several new soya products were launched.

“The Haldane Foods Group displayed their new range including a new Light Soya Milk, a new Soya Creem, a vegetarian cheese spread, burger and sausage mixes, and 6 new varieties of tinned products. JRJ Trading (The Redwood Company) had an interesting and tasty range of tempeh-based products including dips, spreads, patés and vegetarian rashers. Soya milks and desserts from Granovita, Haldane, Sojasun (Triballat), Vitasoy were also on display. Berrydales’

No Cream Ices, made from fresh organic tofu and soya milk, introduced their new 4-pack which will allow consumers to purchase four different ices in one pack. Plamil Foods launched a new non-dairy chocolate bar, *Martello* and Marigold Health Food, manufacturers of canned braised tofu and other delicacies, also had a stand.”

2657. *Whole Foods*. 1992. Source book 1992. 15(5):33-294. May. Illust. Index. 28 cm.

• **Summary:** Contents: How to use this book (p. 8). Wholesalers/distributors alphabetical listing. Wholesalers/distributors geographical listing. Brokers. Publishers. Associations. Consultants/service companies.

Product directories: A listing of manufacturers/importers/growers by products: Foods (p. 77-111—soy-related categories include: Beans/bean products, cheese substitutes, coffee substitutes, cultures, miso, soy products, soy sauce, soymilk, tamari, tempeh, tofu, tofu entrees), vitamins and supplements, herbs, cosmetics/personal care, miscellaneous products. Brand names. Product index. Manufacturers/importers/growers alphabetical listing.

Note: The listings related to soy products are full of errors. Address: South Plainfield, New Jersey.

2658. **Product Name:** Impulse Foods Organic Tempeh, Herb and Garlic Organic Tempeh, Organic Dried Tempeh, Smoky Slices (Bacon-like).

**Manufacturer's Name:** Impulse Foods.

**Manufacturer's Address:** Radnor Business Centre, Radnor Rd., Horfield, Bristol BS7 8QS, England. Phone: 0272 41690.

**Date of Introduction:** 1992. June.

**Wt/Vol., Packaging, Price:** 227 gm.

**How Stored:** Frozen.

**New Product—Documentation:** Ad in *Health Food Business* (England). 1992. July. p. 17. The first 2 products come in 8 oz cakes. The dried tempeh, launched in June 1992, comes in 4 oz packs. The smoky slices (organic) were launched at the same time in the same weight.

Label for Organic Tempeh sent by Anthony Marrese. 1994. May. 5 by 5 inches. Green on white. The company address is now: Islington, Workshops, Bristol BS3 1QB, England. “A delicious cultured soya bean product. Tempeh’s distinctive flavor and texture make it ideal as the mainstay of a non-meat diet. After thawing, slices or cubes of tempeh can be deep or shallow fried, steamed or baked. Grey or black mould is the natural result of the culture forming its seeds and enhances the flavour of the Tempeh. The process can be likened to the blue veins in some cheeses.” Sell by Aug. 1993.

Spot in *Soyafoods* (ASA, Europe). 1994. Spring, p. 5. “A tempeh based alternative to bacon.” Smoky slices are a frozen tempeh product. A 114 gm pack retails for £1.30.

2659. McGlasson, Linda. 1992. Soyfoods in the next century: Feeding the world one bean at a time. *Health Foods Business* 38(6):30-34, 36. June. [1 ref]

• **Summary:** A table gives estimated retail sales of soyfoods in the USA in 1990, in descending order of sales (million dollars): soy sauce \$395.5, tofu \$94.1, second generation products (such as dips, dressings, entrees, non-dairy desserts, cheeses, yogurts, and imitation meat products) \$81.6, soymilk (not including infant formulas made with isolated soy proteins) \$60.0, miso \$44.5, soy nuts \$9.7, tempeh \$7.5. Total \$657 million. Source: Soyatech in Bar Harbor, Maine. The two fastest growing segments are soymilk (increasing at 20% a year) and second generation products (15-20% a year). “Soyfood sales are expected to grow steadily through the next decade as health and environmental concerns become increasingly important factors in food purchasing decisions... an estimated 33 to 50% of all adults are reducing their intake of meat, yet they still have the craving.

Protein Technologies International of St. Louis, Missouri, is developing a line of structured proteins, which are look-alike meat components. There are versions that look and feel like ground beef, crab meat, and chicken.

Angelo Morini, founder of Galaxy Foods, began trying substitutes for the real cheese he was using in his pizza business. He left the pizza business in 1968 and began making soy cheese full-time. The company began slowly by selling to food service customers, then they started marketing the cheese nationally in 1984. In 1985 Galaxy started in the health food industry with a new line, Soyco. Following a fire, the company has relocated in a new 55,000 square foot state-of-the-art manufacturing facility in Orlando, Florida. They are now producing soy cheese products and are scheduled to launch 30 new items this year.

One sidebar, titled “Quickie Dictionary of Soyfoods,” defines tofu, miso, tempeh, soymilk, and shoyu. Another says “Soyfoods Take Spotlight in New Infomercial.” The infomercial is based on Dr. Michael Klaper’s education seminars for doctors and other health professionals titled “Let Food Be Your Medicine.” Klaper (a noted physician, author, environmentalist and nutritionist [and vegan]) is co-founder and director of the Institute for the Advancement of Nutrition Education and Research. The tentative title for the new infomercial is “The Nutrition for the 90s, a Transition to Health.” It will begin airing in July on cable TV. Radio’s Top 40’s Countdown host Casey Kasem will emcee the show with Dr. Klaper. The show will feature top scientists and doctors, plus testimonial interviews with many celebrities and famous athletes. Address: Managing editor.

2660. Bersky, Kamil. 1992. Re: Work with soyfoods, seitan, and amazake in Czechoslovakia. Letter to whom it may concern, July 30. 1 p. Typed, with signature.

• **Summary:** “We are now producing 5 varieties of seitan, 5 varieties of tempeh, amasake, tofu, and we can offer

barley malt. Our plan is to start koji and miso production, open a macrobiotic center with a year-round program, a kindergarten, and a small restaurant with a shop." Address: M.D., The Macrobiotic Centre of Czechoslovakia, Mlynska 659, 51 801 Dobruska, Czechoslovakia. Phone: 42 443 21578 (fax).

2661. Martin, Claire. 1992. Regardless of poll, bland food's sales rise. *Denver Post*. Aug. 6.

• **Summary:** About Steve Demos and White Wave Soyfoods Inc. Photos show: (1) Worker David Kremin labeling and stacking tofu on a conveyor belt. (2) A carousel curdling machine inside White Wave's tofu plant in Boulder, Colorado. Sales of White Wave tofu grew only slowly from 1977 (when Demos started the company) until 1985. But in 1985, when Demos decided to market "second-generation soy products—cooked tempeh burgers, soy hot dogs, soy yogurt... Customers literally ate it up. Sales doubled that year, and kept growing. White Wave's growth rate last year was 30 percent. (Its stock is privately held.) This year, Demos expects sales to meet or exceed \$5 million, and to produce 7 million pounds of tofu and soy products in all 50 states. The No. 1 seller? Raw tofu—despite the yuck factor. Part of the answer may be that shoppers in the United States are shifting their focus from price and convenience to health and nutrition."

Demos is now "contemplating a product [a hot dog?] that combines tofu and meat. 'The meat industry thinks that's sacrilegious. The tofu industry thinks that's sacrilegious. I don't think its sacrilegious. It's one way to get someone to make the transition from meat to soy.' Another way is creative advertising. Inspired by the presidential campaign, White Wave marketing director Paul Chasnoff came up with a six-word publicity campaign, perfect for bumper stickers: 'I eat tofu and I vote.'" Note: These bumper stickers can be ordered from White Wave for \$2 each. Address: Denver Post Staff Writer.

2662. *Toyo Shinpo (Soyfoods News)*. 1992. Kyôto de Tenpe kenkyû-kai sôkai [General meeting of the Tempeh Study Group in Kyoto]. Aug. 21. p. 1. [Jap]

2663. GEM Cultures. 1992. Catalog [Mail order]. 30301 Sherwood Rd., Fort Bragg, CA 95437. 9 p. Aug. [4 ref]

• **Summary:** This catalog celebrates the company's 12th anniversary. The first section is titled "Powdered cultures for soycrafters." On page 1: "Powdered Tempeh Starter, PTS: Tempeh is a delicious. Indonesian, cultured soyfood with a chewy texture. Whether your Interest is in exotic foods, eating lower on the food chain for health, social or economic reasons, or cutting back on meat, cholesterol, or calorie consumption, tempeh fills the bill. A vegetarian source of Vitamin B12, this versatile food can be fried in the traditional manner or baked, broiled, steamed, or barbecued. Easily

cultured without special equipment, homemade tempeh tastes and smells wonderful, slices better, and costs far less than commercial tempeh.

"The tempeh mold, *Rhizopus oligosporus*, that binds the cooked soybeans together into a sliceable cake, is grown on an entirely vegetable medium. Mature spores are harvested and combined with sterile organic rice flour for easy and accurate measuring on every batch. Complete culture directions and recipes are included. One pound of dry soybeans prepared as directed will make 1 3/4 pounds of tempeh. Preparation time—less than 2 hours. Incubation time—about 24 hours at 85 F (32 C). Kept cool and dry, PTS has at least a 6-month shelf life at full potency.

"Kit PTS, 11gm, three 1-pound batches (makes 5+ pounds). \$2.50 each.

"Big PTS, 35 gm, ten 1-pound batches (makes 18 pounds). \$4.00 each.

"Half Kilo PTS, 500 gm, packaged in bulk. \$35.00 each.

"Full Kilo PTS, 1000 gm, packaged in bulk. \$65.00 each.

"Powdered Natto Starter: Called *Natto* in Japan and *Thau-nao* in Thailand this cultured soyfood has a strong, somewhat persistent, unique flavor. The bacteria, *Bacillus subtilis* var *natto*, that culture the cooked soybeans make a sticky, viscous polymer during the 6-12 hours of incubation which creates wispy threads evident when the cultured soybeans are pulled apart. A good source of protein, this robust soyfood adds zest to any grain or noodle dish, soup or sandwich. A little goes a long way, so what is not intended for use in a day or two may be easily frozen.

"Natto Starter Kit: This packet contains complete culture directions, recipes, and enough spore to start 3 recipes of natto, each making 5 cups or 1 1/2 pounds.

"Bulk Natto Starter: A concentrated spore preparation, this vial has sufficient spore to start 48 pounds of dry soybeans. Prepared according to the included directions it will therefore make about 86 pounds of natto.

"Natto Starter Kit: Makes 4 1/2 pounds. \$2.50.

"Commercial Natto Starter: Makes 86 pounds. \$10.00."

Also: Amazake, miso, shoyu, and tamari starters from Japan. Five types of *tane koji* (koji starter) imported from Japan. Commercial miso and shoyu koji spore packets. Organic light rice koji. Natural salts for curdling tofu: Natural nigari, Terra Alba calcium sulfate. Self-renewing cultures: Kombucha tea fungus. Fresh sourdough. Seed miso. Fresh fil mjolk, fresh viili, fresh kefir curds. Cookbooks with culture. Sea vegetables from the Mendocino Sea Vegetable Co. Kitchen culture items. Address: Fort Bragg, California. Phone: 707-964-2922.

2664. McSweeney, Daniel. 1992. 10th Annual Whole Foods Consumer Survey: Getting to know your customers. A profile of an aging and affluent consumer emerges from the survey. *Whole Foods*. Aug. p. 32-34, 36, 38, 43-44.

• **Summary:** A table titled “Food purchases” (p. 43) shows the percentage of respondents who purchased a type of product at a natural foods during the past 12 months, in descending order of popularity (also shows percentages for 1991 and 1990): Tofu 52%. Soy milk 42%. Tamari 38%. Soy sauce 29%. Miso 28%. Tempeh 25%. Cheese substitute 19%. Sea vegetables 17%. Note: The sample size is not given.

2665. **Product Name:** Tofu Tempeh Burger, Tofu Vegies Burger.

**Manufacturer’s Name:** Nutrisoy Pty. Ltd.

**Manufacturer’s Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1992. August.

**Ingredients:** Organic soybean (non genetically modified), water, soy sauce, sunflower oil, spices, natural nigari (magnesium chloride), culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 200 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label and letter (e-mail) from Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling these two products in Aug. 1992. Note: He invented this interesting Tofu tempeh Burger.

2666. *Toyo Shinpo (Soyfoods News)*. 1992. Kyôto de sôkai hiraku. Rainen kaisa-chi (Tôkyô, Meiji-dai) kimeru [Tempeh Study Group’s general meeting was held in Kyoto. Next year’s general meeting place was decided–Meiji University in Tokyo]. Oct. 1. p. 2. [Jap]

2667. *Toyo Shinpo (Soyfoods News)*. 1992. Kenkyû seika no happyô mo. Kyôto furitsu-dai de. Tenpe-ken sôkai hiraku [General meeting of the Tempeh Study Group was held at Kyoto University. Research results were reported]. Oct. 1. p. 1. [Jap]

2668. Dong, Minsheng. 1992. Re: Tempeh products and “oncom” in China. Letter to William Shurtleff at Soyfoods Center, Nov. 30. 1 p. Typed. [Eng]

• **Summary:** “We are presently busy in developing a series of tempeh foods. These foods are going on the market.

“We would like to develop a new Indonesian fermented food–‘Oncom’ [onchom] in collaboration with you or your center. China, as you know, has a very large population and a low protein intake, but 900,000–1,200,000 tons per year of defatted groundnut presscake are used as fertilizer and animal feed. If we can change them into ‘oncom,’ these wastes could be of great economical and social value.”

Address: Dep. of Food Science, Nanjing Agricultural Univ., Nanjing, Jiangsu Province, China.

2669. **Product Name:** Skinny Dippers (Spreads and Dips) [Spring Garden, Bretonne, Hawaiian, Aztec, Spicy Greek, or Chinese].

**Manufacturer’s Name:** Redwood Company (The). Div. of JRJ Trading (Marketer-Distributor). Made in America.

**Manufacturer’s Address:** P.O. Box 1298, London, N20 0YT, England. Phone: 81 / 368 2638.

**Date of Introduction:** 1992. November.

**Ingredients:** Incl. tempeh, soymilk, miso.

**Wt/Vol., Packaging, Price:** 120 gm pack retails for £1.20.

**How Stored:** Refrigerated.

**New Product–Documentation:** Spot in *SoyaFoods*. 1992. Autumn. p. 5. “Skinny Dippers spreads and dips.” Four flavors are based on tempeh: Spring Garden, Bretonne, Hawaiian, and Aztec. Two are based on soymilk: Spicy Greek, and Chinese. Other soya ingredients used, depending on the flavor, include soya bean sprouts and miso.

2670. *Voice of the Turtle (Hood River, Oregon)*. 1992. Hood River plant opens. Nov. p. 2.

• **Summary:** Since 15 May 1992 Turtle Island Foods, Inc. has been making all of its food products out of its spacious plant in Hood River, Oregon, overlooking the Columbia River. The loading dock is 2 minutes from interstate I-84, 65 miles east of Portland. The company is in a building previously occupied by companies that made tortillas and canned fruit. Address: P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

2674. *Opzij* (Netherlands). 1992. Inkomsten dankzij de

sojaboon [Income thanks to the soybean]. No. 12. p. 37. Dec. [Dut]\*

• **Summary:** This Dutch feminist monthly magazine, whose title means "move over," reports that a foundation in the Netherlands named Stichting Krakti Gotong Rojong ("Cooperation-Makes-Strong Foundation") teaches 25 women in Suriname (in the Commewijne district) how they can grow soybeans in an environmentally-friendly way. The women—who are all bread-winners and have little children—learn the work from agricultural experts at Wageningen, The Netherlands. They can borrow from the Foundation small agricultural equipment. They get their soybean seeds from Dutch traders, who see this as a potential new market. After harvest, the soybeans are processed to make tempeh and tahoe (tofu), which are excellent alternatives to meat. And there is much demand for these soy products in Suriname, where meat has become too expensive for many people because of the bad economic situation. To give more women the chance to advance economically, the Foundation wants to expand the project.

Those who want to support this project can send donations to bank account number 51 78 67 621 to the attention of the Stichting Krakti Gotong Rojong in Delft. For information, phone 015-144721.

• **Summary:** "A thermo-tolerable *Rhizopus* sp. strain RT-3 was isolated from tempe [tempeh]. It was identified as *Rhizopus oligosporus* Saito. Tempe prepared by using this fungus has a good flavor and attractive appearance. Its true digestibility measured by biological methods was up to 94.4%, analogous to animal protein. This research was first reported in China." Address: Dep. of Food Science, Nanjing Agricultural Univ., Nanjing 210014, Jiangsu province, China.

2678. Vegetalia. 1992. Recetario [Recipe book]. Castellcir

(near Barcelona), Spain. 32 p. 21 cm. [Spa]

• **Summary:** The Introduction to this handsome color booklet (which contains many color photos), was written by Salvador Sala. It states: "Thanks to you, this year in 1992 we will celebrate the 6th year of Vegetalia's existence. It has not been easy to get to where we are now, but it has been very satisfying, especially for me. When, in April 1986, together with Carmen and Tomás, we decided to form Vegetalia, our dream was to facilitate the improvement of the quality of life, in the ecological way."

For each of the following foods there is an introduction, a nutritional analysis, then several recipes: Seitan, tempe (a color photo shows tempeh sold in perforated plastic bags, and immersed in a broth in jars), tofu (a color photo shows tofu sold in self-sealing bags and immersed in a liquid in jars), pickles, amasake [amazake], gomasio [gomashio], and Algas Klamath (a type of sea vegetable), and Vegetalin (made with whole wheat, olive oil, sea salt, natural leavening, and sesame). Page 32 notes that the company makes seitan, tempe, tempe estofado, tofu, tofu tres delicias, paté -de tofu y miso, etc. It also sells an large line of natural foods made by other companies, including: Soyicisse (a type of soy frankfurter). Tofume (smoked tofu). Biosoy (soymilk). Postre de Soja (Soymilk desserts, in hazel-nut/filbert, vanilla, chocolate, apricot, strawberry, and pear flavors). Soy yogurt (natural and low fat). And Vegetalia is working to help the Third World via CEPAN in Brazil.

Note: This is the earliest Spanish-language document seen that mentions amazake, which it calls "amasake." Address: Castellcir (near Barcellona), Spain. Phone: +34 3-866 61 61.

Address: Native of Indonesia.

2680. Berk, Zeki. 1992. Technology of production of edible flours and protein products from soybeans. *FAO Agricultural Services Bulletin* No. 97. 178 p. [173 ref]

• **Summary:** Contents: Foreword. 1. The soybean: Background, production, marketing, agricultural characteristics, physical characteristics and morphology of the soybean, chemical composition (moisture, proteins, lipids, carbohydrates, minerals). 2. Utilization of soybeans: Utilization options for soybeans, whole bean utilization, the oil mill route (utilization of the oil fraction, utilization of the meal fraction). 3. Oil-mill operations: The expeller (operation principles, advantages and disadvantages of the expeller process, equipment), the solvent extraction process (operation principles, receiving and storage of soybeans, preparation for extraction, solvent extraction, post-extraction operations). 4. Edible soybean flours and grits: Introduction, definitions, composition and quality parameters

(definition and classification of edible soy flours and grits, composition, quality standards), full fat soy flour and grits (production processes, utilization), defatted soy flours and grits (production processes, utilization). 5. Soybean protein concentrates (SPC): Introduction, definition, composition, types, production processes (the aqueous alcohol wash process, the acid-wash process, heat denaturation/water extraction process), utilization (basic considerations, use in bakery products, meat products, other uses). 6. Isolated soybean protein (ISP): Introduction, definition, composition, types, production processes (conventional process, problems in conventional processing, alternative processes), utilization (meat products, seafood products, cereal products, dairy-type products, infant formulas, other uses). 7. Textured soy protein products: Introduction, spun-fibre based texturization, extrusion texturization, steam texturization, utilization (meat extenders, meat analogs, other applications). 8. Soymilk and related products: Introduction, composition and classification, production processes (the traditional process, the Soya Technology System (STS) Process, the INTSOY (Illinois) process, the Buhler Process for soy micro-powder), soymilk related products. 9. Tofu, tempeh, soysauce and miso: Introduction, soy sauce, miso, tempeh, tofu (Introduction, regular and silken tofu, kori-tofu, deep-fried tofu, fermented tofu). Appendixes: I. Standards and specifications. II. Organizations and government agencies. III. Manufacturers and suppliers of soybean processing plants and equipment. IV. Sample budget quotations for complete soy processing or soybean related food manufacturing plants. Address: Technion-Israel Inst. of Technology, Haifa, Israel.

2681. Cardenas, Danilo C.; Legaspi, Benjamin M. 1992. The status of soybean production and utilization in the Philippines. In: *Increasing Soybean Production in Asia: Proceedings of a Workshop*. 1992. Bogor, Indonesia: CGPRT Centre. 187 p. See p. 119-35. Held 21-24 Aug. 1990 at Phitsanulok, Thailand. [8 ref]

• **Summary:** Contents: Introduction. Production situation: Production trends, economics of soybean production, price trends, marketing of soybean. Philippine foreign trade situation: Soybean imports, soybean exports. Soybean utilization. Government policies/programs affecting the industry: Policies, programs. Major problems besetting the local soybean industry. Conclusions.

The soybean, also know locally as "utao," has become an increasingly important economic crop in the Philippines. Yet in 1987 (the latest year for which figures are given) only 5,698 tonnes (metric tons) were harvested from 6,490 hectares, having a value of 45,169,000 pesos. This represented only 0.02% of the total Philippine quantity of agricultural production, and only 0.05% of total farm area and value. Philippine soybean production peaked at 11,466 tonnes in 1982. Most of the country's soybeans are grown

in the southern Mindanao region (72.1%), followed by northern Mindanao (10.0%) and central Mindanao (9.4%). Imports of soybeans and products have steadily increased since Philippine farmers do not produce enough soybeans to meet local demands; the value (FOB US\$) rising from \$61,989,000 in 1980 to \$127,981,000 in 1988. The main imports are soybean meal (accounting for 86.87% of total import value), refined soybean oil (5.19%), soybeans (4.18%), and crude soybean oil (223%). Before March 1986 the National Food Authority (NFA) had the sole authority to import soybeans, but with the introduction of the trade liberalization program, importation has reverted to private firms. In 1989 the country's major sources of imported soybeans were China (which supplied 42% of total imports), Brazil (34%), and the USA (15%). Exports, which are negligible, have grown from \$136,000 to 1,123,000 during the same period. The main exports are soy sauce (accounting for 91.03% of total value), salted and fermented soybeans (tausi, 3.34%), and soybeans (2.65%).

Table 7 lists and describes "Soybean-based food products popularly used in the Philippines." Fermented products include soy sauce, salted and fermented soybean (*tausi*), tempe (tempeh), soybean paste (miso), and soybean curd (fermented tofu cubes; a soft cheese-type product with a salty but mild flavor, eaten as a relish or cooked with meat and vegetables). Non-fermented products include soybean sprouts (*toge*), soybean cheese (*tokwa* [tofu]), Geerlings cheese (taho, soymilk curds; a sweet dessert or snack food for children), soybean milk, and roasted soybean (soy coffee).

"In terms of food usage, Filipinos, unlike other Asians, have not developed a taste for soya-based products... Most of the soy products available in the market are either made at home or in family-operated shops.

"It is interesting to note from the report of Co (1987) that small scale food processors engaged in manufacture of taho and tokwa preferred locally grown beans to imported ones. They claimed that local soybeans have a distinctive 'fresh' quality which imparts a finer and smoother texture to their finished products providing a longer shelf life than that produced from imported beans.

"Recently, several developments in the local economy have signaled a revival of interest in the use of soybean as food. In 1980 Nestle Philippines Incorporated began commercial production of powdered soymilk products and later a baby soya-cereal food formulation and a soya-based meat extender which is produced primarily for export to other Asian countries. Today Nestle Philippines, in co-operation with the Land Bank of the Philippines, the Regional Offices of the Department of Agriculture and PCARRD is encouraging local production of soybean and had adopted a no importation policy.

"Some years ago, the use of TVP also gained a permanent foothold in the local processing industry. It is

used in the manufacture of ground meat products and as a meat extender. Almost all TVP used in the country is imported except for the locally manufactured full-fat TVP which is being produced by the Vitarich Corporation, one of the biggest feed millers in the country. The company has built a full-fat soya processing plant capable of utilizing 900 MT [metric tons] of soybean per month. Unfortunately, all its raw soybean requirements are imported from the U.S. and China.

"Soybean flour, protein concentrate and protein isolates are the newest soya-based products and are now used extensively in the country for the formulation of meat emulsion products. All raw materials are imported and there is no local manufacturing capability at present."

"Programmes: As early as the 1970s, the government tried to involve itself to some degree in boosting national soybean output, despite the low priority it accorded to soybean in general. It was an involvement borne out of an urgent need to meet the growing requirements of the local feed milling and livestock industry, rather than of a need to address the high incidence of malnutrition among Filipinos. Accordingly, the government launched a number of programmes to improve soybean production, most of which failed to achieve their goals. At present, only the PCARRD-coordinated Soybean Pilot Production Programme continues to function. This programme was initiated in late 1983." Address: 1. Supervising Science Research Specialist, Philippine Council for Agriculture, Forestry, and Natural Resources Research and Development (PCARRD); 2. Dep. of Agriculture Bureau of Plant Industry, Los Baños National Crop Research and Development Centre. Both: The Philippines.

2682. Leneman, Leah. 1992. The tofu cookbook.

Hammersmith, London, England: Thorsons—An imprint of HarperCollins Publishers. 127 p. Illust. Index. 24 cm.

• **Summary:** "These no-meat, no-dairy, cruelty-free recipes foster health and a healthy environment by replacing meat and dairy products in traditional recipes with tofu... and soy milk. From bouillabaisse and guacamole to lasagna, curries, and ice cream, here are delicious new takes on your favorite international recipes." The copyright page notes: "Many of these recipes previously appeared in *The International Tofu Cookery Book* and *Soya Foods Cookery*."

Contents: Introduction. Types of tofu. Other soya (soy) foods: Soya milk, soya yogurt, soya mayonnaise, bean curd sticks or sheets, tempeh, soy sauce, miso, soya cheese (such as Veeze). Notes on recipes. Making tofu at home. 1. Soups and dips. Note: Ingredients for every recipe are given in both Imperial/Metric and American units. 2. Salads. 3. British- and American-style dishes. 4. Mexican-style dishes. 5. Mediterranean-style dishes. 6. Indian-style dishes. 7. Chinese- and other Far Eastern-style dishes. 8. Desserts. Recipe reference chart (for quick and easy recipes, recipes

suitable for a single portion, and recipes for a dinner party).

Note: *Webster's Dictionary* defines bouillabaisse (pronounced bu-yuh-BAYZ, a term derived from the French and first used in 1855) as a highly seasoned fish stew made with at least two kinds of fish. See also: Potpourri. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

2683. Margen, Sheldon. 1992. The wellness encyclopedia of food and nutrition: How to buy, store, and prepare every variety of fresh food. New York, NY: Rebus. 512 p. Illust. Index. 26 x 21 cm.

• **Summary:** Soy-related information appears on the following pages: Soybeans, illustrated and described (p. 60). Sprouts, including soybean and adzuki bean sprouts (p. 158-60). "Soybean sprouts contain small quantities of toxins that can be harmful, if eaten in large quantities" [uncooked, see p. 356]. Legumes (p. 348-58), incl. soybeans, "soy nuts," soy milk. Legumes are "by far the best plant source of protein..." Per half 3½ ounces (½ cup cooked) soybeans contain more calories, fat, protein, iron, and calcium than any other of the 15 legumes listed (p. 351). How to avoid the gas problem. Tofu, miso, and tempeh (p. 357, sidebar). Non-dairy frozen desserts (made from tofu, p. 461). Soy cheese (p. 469). Soybean oil and margarine (p. 497-98).

Concerning vitamin K, see p. 16, 27, 30. The RDA for adults is 45-80 mcg. The body stores this fat-soluble vitamin for a relatively long time. Without this vitamin, blood would fail to clot. Preliminary studies suggest it also plays a role in maintaining strong bones in the elderly. Bacteria in the body's intestines manufacture about 80% of the vitamin K we need, and the rest comes from the diet. Deficiencies are almost unknown, and they are usually caused by an inability to absorb the vitamin, rather than an inadequate intake. Sources: Cabbage, cauliflower, spinach and other leafy vegetables, cereals, soybean oil and other vegetable oils. Address: School of Public Health, Berkeley, California.

2684. Sass, Lorna J. 1992. An ecological kitchen: Healthy meals for you and the planet. New York, NY: William Morrow and Company, Inc. xv + 492 p. Index. 26 cm. [35+\* ref]

• **Summary:** This excellent vegetarian (actually vegan), ecological cookbook, proves that the most environmentally sound diet is also the healthiest and, for many, the most delicious and economical. It emphasizes whole grains, fruits and vegetables, focuses on unprocessed and minimally packaged foods, use of regional and seasonal foods, efficient menu planning, and creative recycling of leftovers. Delightful quotations relevant to the book's subject are scattered throughout.

The chapter titled "Tofu and tempeh" (p. 217-31) contains basic information and many recipes. Other soy-related recipes include: Thai vegetable soup (with tofu, p. 39). Ten-ingredient lo mien (with tofu, p. 165-66). Triple

bean maybe it's chili (p. 186-87). Black soybeans (p. 191-92; keep the skins on by adding salt). Curried mustard green with tofu (p. 255). Chinese-style stir-fry of kale, onions, and marinated tofu (p. 258). Tahini-miso spread (p. 315). Sun-dried tomato dip (with tofu, p. 318). Brilliant beet dip (with tofu, p. 319). Onion upside-down cornbread (with tofu, p. 323-24). Tofu whip (like whipped cream or whip topping, p. 398).

The very fine chapter / glossary "Ingredients A to Z" (p. 399-468) includes: Aduki / azuki beans, agar, almond butter, almonds, amaranth, amasake (incl. koji), arame, barley malt syrup, black beans—fermented (salty black beans), Bragg liquid aminos (like soy sauce, but not fermented, making it an ideal seasoning for those who suffer from yeast sensitivities), daikon, dulse, gomashio, hijiki, job's tears, kombu, kuzu (kudzu), kuzu kiri, lupins, miso, mochi, natto, nigari, nori, peanut butter, peanuts, quinoa, rice—brown, rice cakes, rice syrup, sea vegetables, tamari-roasted seeds, seitan (wheat gluten), sesame butter (tahini), sesame oil, sesame seeds, shoyu, soybeans, soybeans—black, soy cheese, soy flakes, soy flour, soyfoods, soy grits, soy ice cream, soy milk, soynuts, soy oil, soy powder (powdered soy milk), soysage, soy sauce, soy yogurt (fermented), tahini, tamari soy sauce, tempeh, tofu, umeboshi plums, wakame, wasabi, winged beans. Note: Also contains recipes for many of these glossary items.

A color portrait photo on the inside rear dust jacket shows Lorna Sass—with a brief biography; she is a culinary historian, cookbook author, and food writer. Address: Box 704, New York City, NY 10024.

2685. Toomay, Mindy; Hadler, Susan Geiskopf. 1992. The best 125 meatless pasta dishes. Rocklin, California: Prima Publishing. xvi + 318 p. Illust. Index. 22 cm.

• **Summary:** This vegetarian pasta cookbook contains information about tofu, tempeh, and miso, plus 7 tofu recipes, 2 tempeh recipes, and 2 miso recipes. Agé (puffy deep-fried tofu) is used in: Soba in broth with fried vegetables and agé. Soy sauce is used in various broth recipes.

2686. Adebayo, Catherine A. 1993. Re: Request for *Rhizopus oligosporus* inoculum. Letter to William Shurtleff at Soyfoods Center, Jan. 1 p. Typed, with signature. [Jap]

• **Summary:** "I wish to seek your assistance as regards the supply of the above mentioned organism from your Institution. This will enable me to carry out my final year project work on Tempeh production at the Department of Microbiology..." Address: Faculty of Science, Dep. of Microbiology, Ondo—State University, Ado—Ekiti, Ondo State, Nigeria.

2687. Shipley, Betsy; Pfaff, Gunter. 1993. Major breakthrough for tempeh! Major soyfoods processing

opportunity! (Leaflet). Perry, Michigan. 1 p. Single sided. 28 cm.

• **Summary:** This leaflet was sent to all tempeh makers in Jan. 1993. The letterhead reads: "Betsy's Gourmet Tempeh—a handcrafted cultured soyfood. We stake our future on the bean!"

"We have developed a novel way of making 'Indonesian BeanSteak'—Betsy's Tempeh. This tempeh has mainstream potential... We offer our production patent (pending) and our trademark for sale. At this point we are open to any and all ideas as to how Betsy's Tempeh can go national/international as soon as possible... In 1991 we grew 48% by word of mouth." Address: S&P Farm, 14780 Beardslee Rd., Perry, Michigan 48872. Phone: 517-675-5213.

2688. White Wave, Inc. 1993. White Wave mission statement, company overview, and list of products currently sold (News release). 1990 N. 57th Court, Boulder, CO 80301. 2 p. Jan.

• **Summary:** "White Wave's mission is to creatively lead the full integration of low technology soyfoods into the average American diet. Our interest is in promoting the use of foods we consider the world better off with, rather than without."

"White Wave employs approximately 60 people and projects sales of over \$4 million for 1992. Under the guidance of founder and president Steve Demos, White Wave has grown more than 20% annually for the last 5 years and was named the 1992 Small Business Manufacturer of the Year by the Boulder County Chamber of Commerce."

White Wave has six product lines: Tofu (7 products), tempeh (8), marinated tempeh (4), Dairyless soy yogurt (8), prepared foods—heat and serve (7), and Soya A Melt soy cheese (5 flavors plus 2 flavors of soy singles). Address: Boulder, Colorado. Phone: 303-443-3470.

2689. Badani, Bernard. 1993. Edible soybean mission report, Korea, Indonesia, Taiwan, February 1993. Ottawa, Ontario, Canada: Agriculture and Agri-Food Canada. iii + 14 + 17 p. 28 cm. Spiral bound.

• **Summary:** Contents: Foreword. Acknowledgements. Mission members: Tino Breuer, Ron MacDougall, Dr. Gary Ablett, Jim Lowe, Bernard Badani. 1. Visit to Korea: Executive summary, report, conclusions, recommended follow-up. 2. Visit to Indonesia: Executive summary, report, background, price structure, quality requirements, conclusions, recommended follow-up. 3. Visit to Taiwan: Executive summary, report, background, price structures, conclusions, recommended follow-up. Appendix A. List of contacts (photocopies of business cards of people met on the trip). List of 26 invitees for Canadian soybean seminar in Seoul (15 Feb. 1993), including academic researchers, government, soybean crushers, soy sauce association, tofu association, food-related media, soybean milk manufacturers (Kwangja General Foods Co., Namyang Dairy Co., Lotte-

Chilsung Beverage Co., Samyuk Foods Co., Dong-A/Otzka Co., Dr. Chung's Foods, See Joo Industry Co.). List of participants for Indonesia and business cards from Indonesia (incl. Primkopti, Sarpindo, Ikapti, Yeo's-P.T. Salim Graha). Business cards from Taiwan. Address: Oilseeds Div., Grain Marketing Bureau, Grains and Oilseeds Branch, Agriculture Canada, Ottawa.

2690. Murphy, Patricia A.; Wang, Huei-ju. 1993. Total genistein and daidzein content of soy foods. *FASEB Journal* 7(4, Part II):A742 (Abst. #4283).

• **Summary:** "The major soy isoflavones, genistein and daidzein, inhibit tyrosine protein kinase, are weakly estrogenic, have moderate antioxidant activity and may have an anticarcinogenic effect by preventing oxidative damage." Heat processing changes the distribution of glucosides but not the total isoflavone content. Twenty commercial soyfoods and 10 institutionally prepared foods were evaluated for isoflavone content by HPLC photodiode array detection. Total genistein and daidzein ranged from 20 to 1,550 ppm and 0 to 750 ppm (dry weight basis), respectively. High protein soyfoods, such as whole dry soybeans, textured soy flour (TVP), tempeh, and soymilk yielded total isoflavone contents that may provide an anticarcinogenic dose (0.7 to 2.0 mg per gm of food). Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, Iowa 50011.

2691. **Product Name:** Tempe Indonesia (Nutrisoy).

**Manufacturer's Name:** Nutrisoy Pty. Ltd.

**Manufacturer's Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1993. February.

**Ingredients:** Soybeans, water, cider vinegar, and culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 250 gm.

**How Stored:** Refrigerated.

**New Product—Documentation:** Label with date sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling this product in Feb. 1993. Red and black on white. Front panel: "Fresh—Baru!"

2692. *Schrot & Korn (Germany)*. 1993. Tempeh: wenn Sojabohnen und ein Pilz zusammentun [Tempeh: When soybeans and a mold come together]. Feb. p. 26-27. [Ger]

• **Summary:** A nice introduction to this Indonesian fermented soyfood, including a brief history, description of how tempeh is made, nutritional value, ways of using it in cooking, and varieties of tempeh. The work of Flora Yap to introduce tempeh to Germany is discussed.

2693. White Wave, Inc. 1993. White Wave Soyfoods—The conscious choice (Ecology and nutrition information cards). 1990 N. 57th Court, Boulder, CO 80301. 1 p. 3 by 5 inches.

• **Summary:** These creative, colorful, and informative cards were available at the Natural Products Expo West at Anaheim, California. 1995. March. Each 3 by 5-inch card is printed on both sides. On the front is a title, a subtitle, a cartoon, and a brief message. On the back are more details. The titles are: "A hot flash about tofu" (Consumption of soyfoods may help Japanese women relieve the symptoms of menopause). "Soy protein is complete" (Soyfoods such as tofu and tempeh provide all 8 of the amino acids our bodies need). "Veggie protein saves petrol" ("One unit of energy can produce 39 times more protein from soybeans than from meat. So, a vegetarian diet helps our resources last far into the future"). "Soyfoods save water" ("It takes over 5,000 gallons of water to produce a pound of beef, but only 25 gallons to produce a pound of wheat").

Note: These are the earliest information cards seen (Oct. 2001) that mention soy. Address: Boulder, Colorado. Phone: 303-443-3470.

2694. White Wave, Inc. 1993. Quick & easy recipes (Recipe cards). 1990 N. 57th Court, Boulder, CO 80301. 3 by 4 inches.

• **Summary:** These colorful recipe cards were introduced in Feb. 1993 and were available at the Natural Products Expo West at Anaheim, California. 1995. March. Each 3 by 4-inch card is printed on both sides. On the front, at the top is written "Quick & Easy Recipe." Below that is the recipe name, a brief description of the recipe by Leonardo, White Wave Corporate Chef, and a large White Wave logo. On the back is the recipe itself.

There are cards for: Tempeh mock chicken salad. Tempeh Reuben. Lemon broil [tempeh with] pasta sauce. Almost Chinese hot & sour soup. Sizzling savory tofu steaks. Pepper tofu steak sandwich. Address: Boulder, Colorado. Phone: 303-443-3470.

2695. Pinault, Pascal. 1993. Re: Work with tofu and tofu products in Martinique. Update on soyfoods in the Caribbean. Letters to William Shurtleff at Soyfoods Center, April 2 and 27. 4 p. and 5 p. Handwritten, with signature. Plus list of his products and prices, resumé, and photos of his home, equipment, and Morne-Vert.

• **Summary:** Pascal saw and ate tofu for the first time in May 1980 when he was living in India, while visiting some friends in Poona (Maharashtra). He bought 1 pound of tofu at a tofu shop but he is not sure if they were making the tofu in a back room of the shop or at some other place. "I suppose this tofu manufacturing plant in Poona was an offshoot of the Rajneesh Ashram, which was very active at that time and place." Pascal lived in Goa, south of Bombay, from 1976-1980; there he baked bread leavened with palm wine. He learned most of what he knows about soyfoods while living and working, mostly in health food stores or health farms (see attached resume), in the Catskill Mountains area of New

York from 1981 to 1987. There he learned to make tofu for his personal use (not for sale) by adding lemon juice to hot soymilk then pressing it in a cloth. During two other trips to India in 1982-83 and 1986 he found and bought chunks of a dry soy protein product resembling TVP which must be cooked in water. He found this soy protein product very interesting for a country like India which has such a shortage of protein, however the price was high—about 10 rupees/kg compared with 2½ rupees/kg for wheat.

In Jan. 1988 he and his family moved to Martinique. "I was compelled to make tofu for myself and my family because there was no other vegetable protein available in Martinique, except for this chunky TVP. I was still using lemon juice instead of nigari and making 2 pounds of tofu at a time. Then in 1991, as I started to import Japanese food products from France (umeboshi, seaweeds, amasaké, etc.), I ordered a small booklet on making tofu using nigari. Plus I had an excellent book (*Les Aliments Fermentés Traditionnels*, by Claude Aubert [1985]) in which I found recipes and nutritional details on many foods like tofu, okara, sufu, tempeh, amasaké, and, in general, all the foods subjected to lactic acid fermentation. In Martinique he has been making an average of 12 to 20 pounds of tofu every week since Oct. 1991 when he moved with his family to mountainous Morne Vert. Occasionally he makes larger amounts for a health food store that sells it or when he caters for groups. His main work is to introduce and popular tofu and soyfoods in Martinique. He would like to expand his tofu and vegetarian "traiteur" (catering) business; his main problem is lack of funds, so he plans to apply for financial aid.

The water he uses to make his tofu comes straight from a spring a mile up in a beautiful mahogany forest. He also makes sprouts—mostly alfalfa, mung bean, and clover, but sometimes wheat grass. He uses most of the tofu he makes to produce second generation products such as tofu mayonnaise, hot squash pies with miso-tofu topping, tofu & cocoa (or carob) sweet pie, tofu salad, spring rolls (*Nems*).

"I know of two vegetarian restaurants in town (Fort-de-France) that make their own tofu and serve it to customers, but no one in Martinique uses tofu as extensively as I do, thanks to my 7 years' stay in the Catskill Mountains. In fact, it takes a long time to get people used to tofu in an island where Creole culinary habits are still well-established."

One of the restaurants that makes tofu is Le Second Souffle, owned by Mr. Gerard Sainte-Rose (27 Rue Blenac, 97200 Fort-de-France, Martinique, FWI 0033. Phone (596) 63-44-11). He has owned this vegetarian restaurant for quite a while now and is mostly interested in reviving the consumption of local fruits and vegetables. "Gerard is the only person in Martinique that I actually saw growing and harvesting soy beans. That was 2 years ago. He had grown soybeans on a piece of agricultural land in Ducos, a town near Le Lamentin, which is not far from the capital

city of Fort-de-France (Martinique). He got the soybean seeds from a friend in St. Lucia (a Caribbean island just south of Martinique). Mr. Sainte-Rose harvested only a few soybeans; they were small but healthy looking. He is an organic gardener who sells his products out of his restaurant. He presently has a 6 hectare farm where he grows organic vegetables for his restaurant. Two years ago we had an agreement to set up a tofu plant together in his restaurant. He promised me a job (that's when I gave him my recipes), and he even started to acquire some material for making tofu. But he never followed through. That's when I started making tofu by myself, even without the proper material setting. He even bought some of my tofu. I think he would probably be interested in growing more soy, if approached very tactfully, and if he sees financial interest without having to pay a counterpart. He is an interesting person with a lot of good ideas," but he tends to be hard to work with as a partner.

On St. Lucia one can find the "Soy Place" in Castries, the main town in St. Lucia. They make tofu there, sell it, and cook it for the food-counter [take-out] part of the shop. People grow soy beans on St. Lucia and on Dominica, maybe with help from Canadians. They make tofu and cook it. One "Ital" rastafarian restaurant in Roseau, Dominica, serves tofu pâté and deep-fried, plus "accras" (fried okara dumplings). "In Dominica I heard of two other places where they make and serve tofu. Ital food, which has absolutely nothing to do with Italian food, is the name that the Rastafarians give to the main dish of their mostly vegetarian diet (except for fish). In this main dish, chunky textured vegetable protein is sometimes used in place of fish. "In the Caribbean, including Martinique, Ital food is available in quite a few Rastafarian places, which they call their 'ghetto.' These are restaurants open day and night that include reggae 'sound systems. The chunky TVP remains the main vegetable protein they use; they also use it in other dishes such as vegetarian cous-cous, etc. They are, in my experience, a bit hostile to tofu, seitan, or other such new foods, at least in Martinique; maybe when it comes from a white person they presume it is not vegetarian." He has heard of (but has not seen or tasted) smoked tofu dried over a fire using green banana leaves.

Pascal is interested in vegetarianism and macrobiotics. He likes tempeh and would like to start now to make and introduce it to Martinique, where it is totally unknown.

Concerning seitan: "I first started to make seitan in Martinique under the same circumstances as tofu—lack of vegetable proteins other than beans. Not having ready-made gluten, I first made it by washing white-flour wheat dough. That was a very long and messy process but was well worth it. Then I found wheat gluten in the Tama catalogue—the company I mentioned that specializes in Japanese products. That's when I started to sell seitan—though there is not much demand for it. I learned to make seitan while living in the Catskill mountains of New York from a macrobiotic British girl friend who also taught me how to make amazake.

Update of April 27, 1993. "Since my family sent me tempeh starter (thanks for giving them the address), I have started small-scale production."

Update of July 17, 1993. "I first made amazaké, in Martinique, in 1992. Even though I gave samples to quite a few people, nobody has seemed to be interested in this product, or to realize the versatility of it! So, I keep ordering it from Tama, packed in glass jars, and make my own once in a while, using 'Cold Mountain' starter. I've been a bit disappointed by this non-reaction. Amasaké being one of my favorite sweeteners, which I value more than any breakfast or desert cereal. My youngest daughter ate it as a first 'solid' food when she was only 5 months old, along with bananas."

"If you allow me a personal remark about my work in Martinique, I find it extremely ungratifying. The public here is highly suspicious of anything new and foreign. My little business doesn't allow me to assume my financial obligations, and I sometimes consider going back to the U.S. But I still want to try harder, at least for a few months."

Note: This is the earliest English-language document seen (Oct. 2010) that uses the term "amasaké" to refer to amazake. Address: "Caplet," 97226 Morne Vert, Martinique, French West Indies 0033. Phone: 596 55-56-57.

2696. Yap, Bwee Hwa Flora. 1993. Re: Work to introduce tempeh to Germany. Reasons that many Germans dislike soybeans. Letters to William Shurtleff at Soyfoods Center, April 3 and April 23. 2 p. each. Typed, with signature.

• **Summary:** After leaving the United States, Flora worked (with a scholarship) for 7 years at a wine institute in Wuerzburg (*Bayerische Landesanstalt für Wein, Obst und Gartenbau*). After they were unable to extend the fellowship any longer, she found work at a chemical/pharmaceutical firm (Chephasaar) in Rohrbach, St. Ingbert. There she worked for 17 years doing hygienic control, lab work, literature research and foreign correspondence, until she was laid off in 1987 when the firm had financial problems. On the waiting list for retirement, she got social benefits for 5 years until 1992 and now she is receiving "retirement" payments.

After becoming unemployed in 1987, she did some translation work then used this money to buy an incubator to prepare tempeh starter. Her original cultures came from the Centraal Bureau voor Schimmelcultures in Baarn, The Netherlands. This same organization delivered tempeh starter (*Rhizopus*) to Byodo, a tempeh maker in Munich, but it was very expensive—about 300 German marks for 100 gm. Byodo was the only German tempeh maker that Flora knew of and they did not want to buy her starter, so she started making tempeh herself and selling it to "Mutter Erde" in Saarbruecken (beginning on 28 Jan. 1990). Then she started introducing tempeh in German cooking courses concerning whole foods ("Vollwert Ernährung"). But she found little interest among Germans interested in whole foods, since they generally preferred raw foods.

Flora is currently very busy inviting people who are interested in tempeh making to come to her home to learn how. This has become the focus of her work. Recently she visited Bernd Drosihn of Viana and found that his tempeh was “overripe” (*busuk*). The older people in Germany, including many leaders of cooking classes, are against the soybean. Their reasons are: (1) Many people still regard soya as cattle feed. They had to consume soya during wartime [World War II] and they think it is a low-class food; (2) Many persons do not want to consume soy, because they think that they are taking away the food from the people of the third world; (3) The ‘Vollwert’ fans do not want soy because it is not domestic. This is not true; in 1982 (or earlier) they started in Hohenheim near Stuttgart with the cultivation of soybeans. Now they are boycotting U.S. soy. “The last 3 weeks I started making tempeh from sunflower seeds (to meet people’s request), but it is not sold by ‘Mutter Erde.’ Now I have stopped doing that. (4) One lady teacher of a cooking course has had the courage to tell me why she cannot accept tempeh. Besides the above mentioned reasons, she said tempeh is too much ‘prepared’. She means that in the Vollwert kitchen the best way is to serve the food as raw as possible (vegetables, fruit, etc.). She is against the addition of mold (I asked her what about bread, yoghurt, sauerkraut, cheese, etc.).” Address: Am Muehlenwaeldchen 1a, W-6670 St. Ingbert, Germany. Phone: 06894 / 53609.

2697. Maurelli, Nancy A. 1993. Soy simple, soy good at Twin Oaks in Louisa: A community effort in Louisa makes soy good for vegetarians. *Times-Dispatch (Richmond, Virginia)*. April 21. p. E1, E3.

• **Summary:** “More Americans are discovering what Asian peoples have known for centuries: Soybeans are good food. They are the best source of protein from the vegetable kingdom, with all eight essential amino acids.”

“Central Virginia has its very own soy shop, producing more than 2,100 pounds of tofu and 25 pounds of tempeh weekly. Originally called Virginia Soyworks, the business was acquired in March 1991 by Twin Oaks, a self-sustaining community of about 100 people in Louisa County. Each member of Twin Oaks contributes more than 40 hours weekly to enterprises that support the community.” The author visited Twin Oaks, and she describes in detail how tofu is made there. Contains a recipe for Cleo’s Famous Tofu Loaf. Photos show: (1) The inside of the tofu shop where a worker, Iowa Richmond, is cutting a large block of tofu into cakes. (2) Nancy Maurelli. Address: Columnist, *The Vegetarian Way*.

2698. Herian, Anne M.; Taylor, S.L.; Bush, R.K. 1993. Allergenic reactivity of various soybean products as determined by RAST inhibition. *J. of Food Science* 58(2):385-88. March/April. [16 ref]

• **Summary:** RAST stands for “radioallergosorbent test.”

Soybean allergy is a common childhood food allergy, although it is less common than allergies to cow’s milk, eggs and peanuts. Food allergies are generally more common in children than in adults. In this study of atopic adult patients, using RAST inhibition as a measure, the allergenicity of a variety of soy products was compared to that of whole soybeans. Results indicated that, when expressed on a per protein basis, although extracts of tofu, miso, tempeh, and fermented soy sauce were allergenic, they were as little as one tenth as allergenic as extracts of whole soybeans. Address: 1. Dep. of Food and Research Inst., Dep. of Food Microbiology and Toxicology, Univ. of Wisconsin, Madison, Wisconsin 53706; 2. Dep. of Food Science and Technology and Food Processing Center, Univ. of Nebraska, Lincoln, Nebraska 68583-0919, address inquiries to second author.

2699. Leneman, Leah. 1993. 365 plus one vegan recipes: Delicious meals and ideas for every day of the year.

Hammersmith, London, England: Thorsons—An imprint of HarperCollins Publishers. 144 p. April. Index. 24 cm.

• **Summary:** Chapter 1 of this book, titled “The Vegan Dairy,” gives recipes for homemade soya milk, mock cream (from soya milk), soya flour cheese, yogurt cheese (from soya yogurt). There are also recipes for cashew or almond milk, cashew cream, and cashew cottage cheese.

Chapter 11 (p. 85-100), titled “Tofu and other Soya Foods,” contains a long introduction plus the following recipes: Home-made tofu. Tofu and onions. Sweet and sour tofu and vegetables. Sea-flavored crisp tofu slices. Mushroom stroganoff. Tofu kebabs. Tofu casserole. Warming winter stew (with tofu). Korean-style kebabs (with tofu and miso). Tofu and green pea bhajia. Tofu ‘scrambled eggs.’ Scrambled tofu and mushrooms. Tofu piperade. Spicy tofu scramble with red pepper and tomato. Tofu knishes. Tofu and pea curry. Tofu burgers. Swiss steak (with frozen tofu). Savoury tofu ‘mince’ (with frozen tofu). Crispy fried sea-flavoured frozen tofu. Tofu goulash. Smoked tofu stew. Smoked tofu, courgette and sweetcorn risotto. Smokey duvec (with smoked tofu). Pease pudding and smoked tofu bake. Smoked tofu pasties. Steamed savoury smoked tofu pudding. Smoked tofu charlotte. Lek and smoked tofu au gratin. Smoked tofu and mashed potato cakes. Tempeh croquettes with mushroom sauce. Tempeh hash with potatoes. Indonesian-style tempeh. Tempeh stroganoff. Japanese-style tempeh kabobs. Tempeh burgers. Tempeh chilli. Mock ‘ham’ (with dried bean milk sheets [yuba]). Mock ‘chicken’ (with yuba). Mock chicken cooked Indonesian style.

Chapter 13 is entirely about sea vegetables, and a number of the recipes contain tofu, tempeh, miso, or soya milk. A number of other recipes throughout the book also use soyfoods as an ingredient. Address: 19 Leamington Terrace, Edinburgh EH10 4JP, Scotland.

2700. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Pascal Pinault.

**Manufacturer's Address:** "Caplet," 97226 Morne Vert, Martinique, French West Indies 0033. Phone: +59 6 55 56 57.

**Date of Introduction:** 1993. April.

**New Product–Documentation:** Talk with Pascal's sister, Marie, who called from Orange County, California, to enquire about a source of tempeh starter for Pascal. 1993. March 17. Pascal has been very involved with soyfoods for many years. He has been making tofu and tofu products out of his home in Martinique for several years; he sells these mostly to restaurants. He would like to start making tempeh.

Letter from Pascal Pinault. 1993. April 27. "Since my family sent me tempeh starter (thanks for giving them the address), I have started small-scale production, photocopied information from a 1985 book by Claude Aubert titled *Les Aliments Fermentés Traditionnels* plus a few recipes and circulated it, along with a piece of tempeh, for sampling. So far I sold only 2 lb of it to 2 customers, yesterday. I went this morning to a carpenter and ordered 3 large trays for making tempeh. I hope this marvelous vegetarian protein will win some people's hearts and stomachs, just like it did mine!" For background details see letter from Pinault, April 1993.

2701. Demos, Steve. 1993. Tempeh at White Wave and in America. (Interview). *SoyaScan Notes*. May 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Tempeh is still White Wave's most profitable product line—despite the fact that for the past two year's most of the company's attention has been going into developing dairylike products. And tempeh is a much easier product to make than many of the company's other products. Its more fun and less problems. White Wave currently makes about 18,000 to 22,000 lb/week of tempeh and they are looking at automating one part of the process. White Wave is the largest tempeh maker in America, followed by Lightlife Foods, with Turtle Island Foods a distant third—its presence is mostly on the West Coast. He also hears about Santa Cruz Soyfoods (Wildwood), Betsy's Tempeh, Cricklewood, and a few others here and there.

On the East Coast (which is White Wave's weakest market), his basic tempehs are priced 20% higher than that of Lightlife, yet it sells very well. People seem to prefer White Wave quality. Rather than reducing costs, Steve plans to elevate and promote the product more with Chef Leonardo and an enclosed Chef Leonardo recipe. He will advertise it in *Vegetarian Times* and *Natural Health* (formerly *East West Journal*). Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2702. *SoyaScan Notes*. 1993. New Trend: Specialized manufacturers of tofu and tempeh become manufacturers of many types of soyfoods (Overview). May 22. Compiled by

William Shurtleff of Soyfoods Center.

• **Summary:** The first soyfoods manufacturer in America to make a wide variety of different types of soyfoods was White Wave of Boulder, Colorado. They began as a tofu manufacturer in Sept. 1977, but by 1978 had introduced Soy Sannies (sandwiches with miso-tahini spread) and Soymilk (in 3 flavors). In 1979 they launched Soy Tempeh, Polar Bean (a soymilk-based soy ice cream, which they also made from Tofu Today / Tofruzen starting in 1985), Soya Rice Tempeh, Vegetarian Soysage, Tamaried Nuts, and a host of deli-type ready-to-serve tofu products such as Missing Egg Salad, Tofu Cheesecake, Tofu Cinnamon Rolls, etc. In Jan. 1989 White Wave began its move into dairylike products in a big way with Soy A Melt (a soy cheese with casein) followed in May 1991 with White Wave Dairyless (a soy yogurt in 5 flavors and the company's most successful product ever). New flavors of soy yogurt were introduced in 1992 and 1993. Note: White Wave was also the first post-1975 soyfoods company in America to grow by acquiring other companies—Soyfoods Unlimited (a tempeh manufacturer) in Dec. 1986; and Laudisio Veggie Life, a maker of veggie burgers, in March 1993.

Lightlife Foods in Greenfield, Massachusetts (named The Tempeh Works before April 1987) started as a tempeh manufacturer in Sept. 1979. In May 1984 they started to make Weissman's Original Tofu Sausage for John Weissman of the Vegetable Protein Co. In Sept. 1985 they launched Lightlife Meatless Tofu Pups (meatless hot dogs), and in Oct. 1987 they launched Lightlife Party Pups (meatless frankfurters—cocktail size Tofu Pups; Renamed Tofu Party Pups by Feb. 1988). Today Lightlife makes a wide range of tempeh and tofu products.

Sharon's Finest in Santa Rosa, California (named Brightsong Tofu from June 1978 to June 1980; Redwood Valley Soyfoods Unlimited until June 1982; Brightsong Light Foods until June 1987; Rose International until 1990) started as a tofu manufacturer in June 1978. By Aug. 1980 they were making and selling soymilk. Their diversification began in 1984 with Mix Plus+ (a liquid mix to make tofu frozen desserts) and LeTofu (non-dairy soy ice cream in hard pack and soft serve). Related ice cream products followed. In early 1986 Richard Rose reformulated Soy-O, a soymilk yogurt for Brown Cow West. In May 1986 the company launched Fruit D'Lite (a fruit-sweetened sorbet/mousse liquid soft serve mix) in 4 flavors using isolated soy protein as the soy ingredient. The move into soy cheese began in June 1986 with Mozzarella Style Tofu-Rella (an organic tofu-based cheese analog with casein). In July 1987 the company launched Le Yogurt (a dairy-based soft-serve frozen yogurt dry mix). In Jan. 1992 they launched Heart's D'Lite (a fat-free cheese alternative in various flavors) with organic tofu and casein and tofu as the main ingredients. By 1992 Sharon's Finest was primarily a marketer of soy cheeses; they sold their cheese to many other food companies

and even exported them to the UK.

2703. Albert-Matesz, Rachel. 1993. Tempeh temptations! *Vegetarian Journal (Baltimore, Maryland)* 12(3):22-25. May/June.

• **Summary:** An introduction to tempeh with 6 recipes. Address: Freelance writer, Seattle, Washington.

2704. **Product Name:** Organic Soybean Tempeh.

**Manufacturer's Name:** Dreamhill Delights.

**Manufacturer's Address:** 170 Dreamhill Dr., Williams, OR 97544. Phone: 503-846-7120.

**Date of Introduction:** 1993. May.

**Ingredients:** Cultured organic soybeans, vinegar, water.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Letter from Judy Iwata-Smith. 1994. May 1. Her company bakes about 100 loaves of bread and makes about 40 tempeh patties a week.

Form filled out and Label sent by Judy Iwata-Smith. 1994. June. Her company started making Organic Soybean Tempeh in May 1993. They now makes 60 lb/month. This is their only soy product. The so-called patties are simply 8-ounce square cakes of tempeh. Label is 2.5 by 4.25 inches. Black on white. "Excellent source of fresh vegetarian protein. This label is printed on recycled paper. Tempeh may have small black or gray spots which is normal of the tempeh culture. Tempeh has a pleasant mushroomy aroma. Store unstacked in refrigerator if using within a week or freeze for longer shelf life." Gives serving suggestions.

2705. **Product Name:** Tempeh.

**Manufacturer's Name:** Lean Green Foods.

**Manufacturer's Address:** P.O. Box 534, Volcano, Island of Hawaii, HI 96785.

**Date of Introduction:** 1993. May.

**New Product–Documentation:** Talk with (call from) Benjamin Hills on the Island of Hawaii. 1993. May 28. He started making tempeh commercially, out of his palatial home, on 8 May 1993. He now sells it to his friends but soon he will start selling it at a local farmers' market. His business has no name yet. His main competition is White Wave tempeh, imported frozen from the mainland. Benjamin imports his soybeans from Midwest Soya International on the mainland.

Talk with (call from) Benjamin Hills on the Island of Hawaii. 1993. Sept. 23. The name of his company is now Lean Green Foods.

Letter from Benjamin Hills. 1994. Jan. 26. "Lean Green Foods became official with the state of Hawaii in August 1993. Production got rolling this week and the product bag with Label are enclosed." He is making two products: Soy Tempeh with Lupin and plain soy tempeh for the local Indonesian people. His business card reads: "Lean Green

Foods—Hilo, Hawai'i. Protein for the Future. Benjamin Hills, P.O. Box 10562, Hilo, Hawai'i 96721-5562. Phone: (808) 985-8563."

Talk with Benjamin Hills who calls From Hawaii. 1994. May 31. Susan Wallace (who started Surata Soyfoods with him) is now working with him in Hawaii making tempeh. They are in the process of developing a Ginger-Teriyaki Tempeh Burger.

2706. Library of Congress, Subject Cataloging Div., Processing Services. 1993. Library of Congress subject headings. 16th edition. Washington, DC: Cataloging Distribution Service, Library of Congress. 4 volumes.

• **Summary:** For the basic idea, words and LC call numbers see the 12th edition (1989). Address: Washington, DC.

2707. *Voice of the Turtle (Hood River, Oregon)*. 1993. Yo yos are out, frisbees are in!. May. p. 2.

• **Summary:** "After three years of sending out hundreds of yo yos to customers who have sent us 10 wrappers from our packages for recycling, we are changing our offer a little bit. Our new tempeh packages, due out in June, will offer a classy, 130 gram Wham-O Frisbee made from recycled plastic in exchange for 5 wrappers, plus \$4.95 shipping and handling." On the Frisbee is written: "Reflyer—Made from recycled plastic." Address: P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

2708. Perkins, David D. 1993. Why do scientists study *Neurospora* (Interview). *SoyaScan Notes*. June 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** *Neurospora* is a model organism and today much more is known about it than almost any other fungus. Species of *Neurospora* have been widely used in genetical and biochemical studies. The best known are *N. crassa* and *N. sitophila* both of which are eight-spored and heterothallic. *Neurospora* was probably the first member of the Pyrenomycetes, those with 8-spored asci, to have the sexual cycle worked out in the 1920s by people who were interested in basic problems of genetics recombination. Then it was chosen in 1941 as the first biochemical nutritional mutant, which ushered in the age of molecular genetics.

The reasons why *Neurospora* has proved so useful as a tool in biochemical and genetical research are that (1) Wild-type strains have simple nutritional requirements (a carbohydrate source, simple mineral salts, and one vitamin—biotin). This makes it ideal for getting mutations that had growth factor requirements; (2) Mutations can be induced readily by irradiation of conidia; (3) Growth and sexual reproduction is rapid; and (4) The tetrad analysis by means of ascus dissection is relatively easy. For these reasons, *Neurospora* has become mother of all the new developments in DNA and molecular biochemistry. It has a lot of relatives that are plant pathogens, others that are used in commercial

applications, and one food use in onchom.

He will send a review that outlines these advantages.  
Address: Dep. of Biological Sciences, Stanford Univ.,  
Stanford, California 94305. Phone: 415-723-2421.

2709. Messina, Mark. 1993. Welcome to *The Soy Connection. Soy Connection (The) (Chesterfield, Missouri—United Soybean Board)* 1(1):1-2. [7 ref]

• **Summary:** Discusses the growing interest in soyfoods (such as tofu, tempeh, soymilk, and miso) in America. They are becoming more mainstream. An estimated 2/3 of all tofu is sold in traditional supermarkets. Tofu consumption in America has doubled during the past 10 years.

2710. **Product Name:** Blue Mountain Country Farm Tempeh, and Tempeh Burgers.

**Manufacturer's Name:** Naturama.

**Manufacturer's Address:** 84 Kloof St., Gardens, Cape Town 8000, South Africa.

**Date of Introduction:** 1993. June.

**Ingredients:** Tempeh: soybeans, tempeh starter. Burgers: Soybeans, tempeh starter, tamari, 100% pure apple juice, virgin olive oil.

**Wt/Vol., Packaging, Price:** Tempeh: 300 gm. Tempeh Burgers: 200 gm.

**How Stored:** Frozen.

**New Product—Documentation:** Letter from Michael Tidd, founder and owner of Naturama. 1993. July 25. "I have just begun a small-scale tempeh shop here in South Africa and I am just about to start some Amazake experiments." By using your "Book of Tempeh" "I have been able to start selling tempeh and tempeh burgers on the local market with increasing success." Letter and Labels sent by Michael Tidd. 1993. Aug. 12. He began producing tempeh and tempeh burgers on 28 June 1993. Concerning soyfoods companies in South Africa, "there are only a couple of home kitchen size tofu makers in so far as I can see whom I shall try to locate so as to send you their particulars. I think due to various reasons the wholefood movement has definitely been slow off the mark here compared to the U.S. and Europe, but nonetheless its only a matter of time before it spirals upwards."

Both tempeh Labels. 3.75 by 5.5 inches. Black ink on white paper (photocopied). Tempeh serving suggestion: "Indonesian Fried Tempeh: Thaw tempeh, soak pieces of fresh tempeh in brine (4 tsp. salt in 4 cups water) for 20 minutes. Pan fry in oil or margarine or deep fry till golden brown. Try it topped with sauce, baked on pizza or in sandwiches."

Tempeh burgers serving suggestion: "Thaw burgers then either pan fry for 3-4 minutes each side or grill for 2 minutes each side. Serve in a wheat-free roll with lettuce, tomato, and pickle."

Letter from Michael Tidd. 1994. Nov. 11. He "lived for a

couple of years in South Africa until April 1994." He sold his business, Country Farm Foods, which was making tempeh and amazake in South Africa, to Bobby McLean, and he is now living in Reading, England. "I am about to have a go here in England."

Talk with Michael Tidd, who calls from Reading, England. He will soon start making and selling tempeh as Tidd's Tempeh.

2711. *Newsletter of the Soyfoods Association of America (Libertytown, Maryland)*. 1993. Thank you to the American Soybean Association. 4(2):2.

• **Summary:** "The American Soybean Association has awarded the SAA [Soyfoods Association of America] a grant for \$27,625.00 to develop and distribute educational materials on soyfoods and to produce periodic press releases. The grant will be used to produce a 4-color brochure on soyfoods and eight individual, camera-ready fact sheets on tofu, soymilk, tempeh, miso, texturized vegetable protein, soy flour, soy-based meat analogs, and soy oil. Materials will be made available to state soybean boards for distribution to consumers and volunteer soy promoters, to state level cooperative extension nutritionists for distribution to consumers through county home economics offices, and to health professionals for use in health and nutrition education programs. The first two fact sheets—on tofu and soymilk—will be available this month. All of the materials will be completed by Fall, 1993."

2712. Shurtleff, William; Aoyagi, Akiko. comps. 1993. *Tempeh and tempeh products—Bibliography and sourcebook, 1815 to 1993: Detailed information on 616 published documents (extensively annotated bibliography), 423 commercial tempeh products, 216 original interviews (many full text) and overviews, 247 unpublished archival documents. Lafayette, California: Soyfoods Center. 449 p. Subject/geographical index. Author/company index. Language index. Printed June 4. 28 cm. [2078 ref]*

• **Summary:** This is the most comprehensive book ever published about tempeh and tempeh products. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of this subject. Its scope includes all known information about tempeh, worldwide, from 1815 to the present, plus detailed information on each of the following four closely related subjects—the first three of which are popular Indonesian foods:

1. Onchom (125 records; also spelled ontjom or oncom; peanut presscake or okara fermented with *Neurospora*). *Neurospora* is the single most important mold used in genetic and biochemical research;
2. Tempeh bongkrek (49 records; made from grated coconut or coconut presscake).
3. Non-soy relatives of tempeh (54 records, such as winged bean tempeh).
4. Early studies on *Rhizopus* molds in which tempeh is not mentioned (43 records).

This book is also the single most current and useful source of information on each of these five subject, since 79% of all records contain a summary/abstract averaging 125 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 35 different document types, both published and unpublished; every known publication on the subject in every language—including 175 in Japanese, 140 in Indonesian, 96 in German, 68 in Dutch, etc.; 216 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of tempeh and related products from their earliest beginnings to the present.

The bibliographic records in this book include 616 published documents and 247 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

It also includes details on 423 commercial tempeh products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

**2713. Product Name:** SuperBurger (Made with Tempeh).

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, Hood River, OR 97031. Phone: (503) 386-7766.

**Date of Introduction:** 1993. June.

**Ingredients:** Aug. 1994: Certified organic soybeans (grown in accordance with Section 26569.11 of the California Health and Safety Code), brown rice, Wehani rice, wild rice, water, shoyu (soy sauce), lemon juice, onions, garlic, vinegar, starter culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 3 oz. patty.

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per patty (85 gm): Calories 122, calories from

fat 14, total fat 1.5 gm (1% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 339 mg (14%), total carbohydrate 15 gm (dietary fiber 8 gm, sugars 0 gm), protein 12 gm. Vitamin A 110%, calcium 8%, vitamin C 0%, iron 2%. Percent daily values are based on a 2,000 calorie diet.

**New Product–Documentation:** *Voice of the Turtle* (Hood River, Oregon). 1993. May. p. 1. "New for June: Look! In your refrigerator! Its SuperBurger." "After 13 years of effort, we have created a new burger that is low in fat (1.5 grams per 3 oz. patty) and high in flavor." A black-and-white photo shows the burger on a bun with trimmings.

Product with Label purchased at Berkeley Natural Grocery Co. 1994. Aug. 20. The product is now named "Superburgers." Two 3-oz. marinated tempeh patties are sealed in a plastic pouch, and packaged inside a paperboard sleeve. "The Ultimate Vegetarian Burger Experience." Each patty contains only 1.5 gm of fat.

**2714. Product Name:** Low Fat Millet Tempeh.

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, Hood River, OR 97031. Phone: (503) 386-7766.

**Date of Introduction:** 1993. June.

**New Product–Documentation:** *Voice of the Turtle* (Hood River, Oregon). 1993. May. p. 1. "Also new in June: Low Fat Millet Tempeh." This tempeh, which uses more grains and less soybeans than usual, derives only 9% of its calories from fat.

**2715. Xu, Zeng Quan.** 1993. Tempeh in America and molded soybeans in China (Interview). *SoyaScan Notes*. July 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** He is a native of China but is now making tempeh in Michigan. Tempeh reminds him somewhat of a food named *mei dou* ("molded + beans") which his mother and other housewives used to make in Jiangsu province near Shanghai. The warm weather there makes it easy to produce. His mother (and other housewives) then used the *mei dou* to make soybean jiang (similar to Japanese miso). The Korean word *meju*, also referring to mold-fermented soybeans, was probably derived from the Chinese *mei dou*.

He has never seen tempeh in China nor heard of 'Tou chiah ping' [soybean fried cake] observed, described, and photographed by William Morse in Beijing, China, in 1931. Address: Rosewood, Ann Arbor, Michigan.

**2716. Katoh, Kiyooki.** 1993. Current status of tempeh in Japan (Interview). *SoyaScan Notes*. July 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Third Asian Symposium on Non-Salted Soybean Fermentation and the International Soybean Food Fair will be held in Akita, Japan, on 4-6 June 1994. There is a legend in Japan that natto originated in Akita, and there is also a large natto manufacturer there. Many countries in

Southeast Asia will participate. He is still very involved in tempeh issues in Japan, and maintains a close contact with Indonesian tempeh researchers. The Tempeh Study Group (*Kenkyu-kai*) has its regular meeting twice a year and 60-70 people (including himself) typically attend. A very good and popular restaurant in Shibuya, Tokyo, named Jembatan Merah (Red Bridge), features many delicious tempeh dishes. They feature ethnic foods, including Thai and Vietnamese cuisines. The chef of the restaurant used to work with Torigoe Seifun. Their tempeh is made by the village cooperative shop in Hyogo prefecture (initiated as part of a local community activation program). This tempeh shop ships their tempeh all over Japan, including to the Indonesian embassy in Tokyo, several Indonesian restaurants in Tokyo, and to individuals who order it. The only other tempeh shop, also part of a village activation program, is led by Prof. Kazuko Noguchi (a woman) of Saga. When Mr. Kanasugi died, the natto people discontinued their interest in tempeh. All the large private companies (Marusan, Torigoe Seifun) also stopped. Address: Tajimaya rice company, International Affairs, Japan.

2717. Katoh, Kiyoaki. 1993. New developments with soyfoods in Africa (Interview). *SoyaScan Notes*. July 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mrs. Yasuko Torii is very involved in efforts to introduce soyfoods to southern Africa and South Africa, especially Capetown. Katoh joined FAO (the Food and Agriculture Organization of the United Nations) in 1987 and was a biotechnology officer there for 2 years and very much committed in Africa. He was active in work with soybeans in Nigeria, Cameroon and other countries. He has written about that work. The crucial question is how to interest African people in using soyfoods. There is now increasing South-South cooperation. For example, Indonesian people are very interested in transferring tempeh technology to Africa. The German government is sponsoring such a program on tempeh and Dr. Darwin Karyadi is leading the Indonesian work; the minister of Science and Technology, Dr. Habibi, is very keen on this. The best man to contact concerning soya in Africa is Dr. Shiv R. Singh (pronounced Sin), who used to work with IITA at Ibadan, Nigeria, and is now Director of the Western Africa Department of the World Bank in Washington, DC. He is the key man with soya in Africa. Address: Tajimaya rice company, International Affairs, Japan.

2718. Pfaff, Gunter. 1993. Apparatus for culturing plant materials as foods. *U.S. Patent* 5,228,396. July 20. 16 p. Application filed 20 April 1992. 8 drawings, 6 drawing sheets. [23 ref]

• **Summary:** Describes an incubator apparatus and method for making tempeh. The apparatus uses an incubator comprised of a water bath. The tempeh is incubated in

shallow metal trays which are supported on racks. Address: 14870 Beardslee Rd., Perry, Michigan 48872.

2719. Karyadi, Darwin. 1993. Re: Novel substances in tempeh. Letter (fax) to William Shurtleff at Soyfoods Center, July 31. 1 p.

• **Summary:** It is known that tempeh (which is free of cholesterol) contains isoflavones and an anti-diarrhea compound. The latest discovery is that it contains superoxide-dismutase (SOD) enzymes which scavenge free radicals. Address: Nutrition Research Development Center, Jl. Dr. Semeru No. 63, Bogor 16112, Indonesia. Phone: (0251) 321763-326348.

2720. Executive Committee Secretariat. 1993. The Roots of Biotechnology in Monsoon Asia: The Third Asian Symposium on Non-Salted Soybean Fermentation and International Soybean Food Fair. Akita Cultural Center, Akita City, Japan: 4-6 June 1994 (Leaflet). Akita, Japan. 2 p. July.

• **Summary:** The executive committee for this event is: Chair: Prof. Tadao Watanabe. Vice-Chair: Prof. Fumio Yamauchi. Indonesia Advisor: Dr. Darwin Karyadi. United Nations University (UNU) Food and Nutrition Programme Advisor: Dr. Abraham Besrat.

The symposium hopes to focus on South-South cooperation for technical transfer of soybean technologies (koji, tempe, natto) to Africa in order to alleviate an impending protein crisis beyond the year 2000.

Program outline: Part I: International Soybean Food Fair—Industrial/commercial exhibition and cooking demonstration of ethnic cuisine using soybean products. Part II: Public Symposium—World soybean overview with perspectives for international technical cooperation in Africa. Part III: The Third Asian Symposium on Non-Salted Soybean Fermentation. Session 1. Koji for fermented soybean (Kikkoman, Nagano Miso Institute, China, Korea, Akita). Session 2. Natto in Asia—Microbiology, enzymology, health-medical studies. Kinema of Nepal, Tuanao [Thua-nao] of northern Nepal, Bhutan. Session 3. Tempe (Overview by Dr. Darwin Karyadi, contributions from Indonesia, Germany, USA, Japan and others—on microbiology, biochemistry, nutrition, physiology, medical studies, cooking, and industrial development). Part IV: The Role of Soybeans in Africa—The Perspective beyond 2000 (organized in cooperation with UNU Food and Nutrition Program). Sessions: Agriculture of Sub-Saharan Africa and soybean development (World Bank, IITA, JICA). Tofu technology adapted to West Africa (Dr. Nakayama, IITA). Indigenous fermented legumes in West Africa. Introduction of soy into Sub-Saharan African diet. Achievements of UNU Tempe Training Program (Indonesia/UNU; with Poster presentation of UNU funded research). Proposal on South-South cooperation.

Technical tours will be organized from three participating countries: Indonesia, USA, Germany. Address: c/o Akita International Assoc., Aidex Building 8th floor, 2-1-60 Sanno, Akita City, Japan 010. Phone: 0188-64-1181.

2721. Haren, Chuck. 1993. Maya soy Guatemala. *Plenty Bulletin* (Davis, California) 9(2):1-2. Summer.

• **Summary:** “I spent two mornings at Alimentos San Bartolo (ASB), the Mayan owned and operated soy dairy near Solola that Plenty helped to create in 1979-1980. Alimentos San Bartolo is a business that is owned by the community of San Bartolo. A board of eight directors, who are the Community Development Directors for the village, watch over the operations. Our old friends Elena and Augustine continue to work there. ASB has a total staff of eight people.

“They sell about 2,000 frozen ice creams and fruit flavored milk bars every month during the six-month dry season. Also, each month they sell 700-800 lbs. of tofu and 60-80 lbs. of tempeh to stores in Antigua (Guatemala), Panajachel and Guatemala City. Some packaged soybeans and soy flour are sold and a small amount of milk is delivered to individual homes that like it. The prices of all these products are slightly lower than comparable foods on the market. The business is just making enough now to cover the small wages they are receiving and the other basic operating costs. They are not making enough to repair major equipment failures or to replace equipment when needed. All the equipment has been very well-maintained by the staff and the sanitation standards are very high.

“One thing that was obvious was the need to establish a small restaurant outlet in Solola if the ASB is going to develop a wider market for soybean foods among the Mayan people. They need a place near the center of Solola. They need an opportunity to show people the variety of delicious ways soybeans can be included into traditional foods at a very low cost and also educate the populace about the nutritional value of soybean foods. Now the local people only buy the frozen milk/fruit bars, ice cream and a small amount of milk. Why?—because they are not expensive and are sold in forms that are similar to foods they are accustomed to. Almost all of the tofu and tempeh is sold to stores catering to tourists... Now virtually all of the okara is used as compost to fertilize the gardens... Soybeans used at ASB are grown near the coast. They are purchased in Guatemala city. Inappropriate varieties, technical methods and lack of infrastructure used earlier limited soybeans from becoming a cash crop among farmers at the altitude of Solola (6,000-7,000 ft). Some people say soybeans cannot be established as a crop in this area because of the costs of fertilizer, fungus [fungicides] and insecticides needed, and the lack of sunlight during the rainy season.”

“Fundadase is a Mayan NGO with a paid staff of about 25 people that supports community development work in areas surrounding Chichicastenango and Chimaltenango.

They receive the majority of their funding from a Danish NGO.”

In March of this year Haren participated in a successful 9-hour soybean workshop in Chichicastenango attended by more than 100 men and women from surrounding villages. “This group is very well organized.” A meal was served which included soy harina drinks, okara stir-fried with vegetables and potatoes, and soymilk with vanilla. Then a practical demonstration of soybean processing was conducted. Finally several hundred pounds of soybean were sold to interested attendees in one and two pound packets. Of the 9 million people living in Guatemala, about 6 million are indigenous Maya. A 1991 United Nations study found that 6.5 million Guatemalans are living in extreme poverty. Photos show: A Mayan woman straining soymilk to make tofu at Alimentos San Bartolo. Two women preparing corn and soya tamales for the FUNDADASE demo. Address: Program Director.

2722. Matsuo, Masako; Hitomi, Eri. 1993. Suppression of plasma cholesterol elevation by okara tempe in rats. *Bioscience, Biotechnology, and Biochemistry* 57(7):1188-90. July. [18 ref]

• **Summary:** Okara tempeh is rich in soy fiber and also contains some soy protein. Isolated soy protein and casein contain no fiber. In comparison to casein, cholesterol levels in rats consuming isolated soy protein decreased by approximately 20%, whereas those consuming fermented and non-fermented okara decreased by about 30%. Address: Gifu Woman's Univ., 80 Taromaru, Gifu 501-25, Japan.

2723. **Product Name:** Native Tempeh (With Soy & Millet). **Manufacturer's Name:** Native Foods. **Manufacturer's Address:** 71485 Painted Canyon Rd., Palm Desert, CA 92260. Phone: 619-346-2939. **Date of Introduction:** 1993. July.

**Ingredients:** Organic soybeans, organic millet, water, rice starter, vinegar.

**Wt/Vol., Packaging, Price:** 1 lb plastic bag.

**New Product—Documentation:** Talk with (call from) Tanya Malch. 1994. Feb. 4. She started commercial production of Soy and Millet Tempeh at this new company which she founded. She sells mostly to restaurants and is looking for packaging and sealing equipment. Soy Power distributes Lightlife tempeh in the Los Angeles area and offers bulk discount, but White Wave is the main brand. Tanya used to run a restaurant named The MT Plate.

Label sent by Tanya Malch. 1994. Feb. 4. 5.5 by 8 inches. Photocopy black ink on chartreuse paper. An illustration of two natives, flying at a 45 degree angle above 3 palm trees, one with a spear, both with rings in ears and nose. One is saying “A native food from Bali,” the other “Save our Earth!” The text below the product name reads: “A clean, controlled, ‘come on’ food.” Another flyer notes that

under the name Chef Tanya Petrovna she teaches cooking classes using TVP, tempeh, and seitan in southern California.

Spot in Vegetarian Times. 1996. March p. 112. Amy O'Connor writes that Tanya Petrovna is owner of Native Foods, Smoke Tree Village, 1775 E. Palm Canyon Dr., Palm Springs, California. Phone: 619-416-0070. She makes her own tempeh, seitan, and TVP.

2724. Centa, Roland A. di. 1993. Re: Introducing tempeh and tofu to Italy. Letter to William Shurtleff at Soyfoods Center, Aug. 9—in reply to inquiry. 4 p. Typed, with signature. Followed by a letter of Sept. 10 answering questions.

• **Summary:** Roland was one of the first people to introduce soyfoods to Italy. He was very interested in macrobiotics and was a close friend of Michio Kushi. “My interest in food was to heal people with food and I had a lot of success using a holistic approach to help people with major diseases. For all these cures I used a lot of miso, tempeh, and tofu. Good miso was available. However tempeh and tofu had to be locally produced. I cured people from 1980 until about 1985.

“As I am a businessman I was always business minded in order to produce, make a profit, and be able to realize my ideas—which always cost. I am educated in international law and advise corporations who want to expand abroad.

“Tempeh: There was only tempeh available for Paris, made by a lady there named Anita Dupuy, who delivered and sold it to Le Bol en Bois (a macrobiotic restaurant in Paris) and to some consulates and embassies (such as the Philippines). As I was busy elsewhere I sent Giovanna Mazzieri (of Milan, Italy) to Paris [for 1 week in Feb. 1983] to study the process. She was a very busy lady and a fan of macrobiotics after I healed her husband of a very difficult disease. She was very smart and she produced tempeh in Milan in about 1980 [actually mid-1983]. It was perfect and of very good quality. It was sold in a few health food stores. (Letter from Roland of Sept. 10 says Giovanna’s tempeh was never sold commercially in stores; she produced tempeh only non-commercially from Feb. 1983 until today. Roland taught her to make tofu in June 1982; she started to make and sell it shortly thereafter).

“Actually it never took off commercially and eventually was used only for selected people, me and my patients. At that time I was very strict in eating macrobiotic. I was very sensitive to the quality of tempeh: I didn’t like the acid taste. On the island of Bali I once ate some tempeh which was very acid. Therefore I used to deep freeze it in order to have it ready when we wanted tempeh with perfectly good taste. Today it is no longer produced, or only in small quantities, for the use of the family of Giovanna and some friends in Italy. As I am no longer living in Italy and I stopped curing people, unfortunately I don’t use tempeh any more myself. I was interested to find out whether it worked in curing people. It did! However in order to make a profession and profit-making enterprise, I preferred to do other jobs.

“Tofu: Tofu was produced by myself. I am sure I was the only one who produced it on the basis of your teaching the first time in Italy in 1978. After seeing an ad in the *East West Journal*, I ordered your *Book of Tofu* by mail.

“Tofu already existed in Italy in Chinese restaurants in all the major cities. They called it Tau-Fu. After studying your book, I went to many kitchens in order to observe how it was produced, and with the cooks I ate the okara which was never offered to the clients of the restaurants but was seasoned very hot for themselves. The main restaurant I studied at was “La Muraglia,” which means “The Wall” and which still exists.

“I then bought the Tofu Kit [made by Larry Needleman of The Learning Tree] which was advertised in the *East West Journal*. With this kit I started to make my first tofu. It was at once of very good quality.

“I started to make the equipment following the instructions in your book and twice a week produced 10 kg of tofu, which was used by my family, and sold in health food stores and later to my patients. I sold the tofu also in bakery shops where I offered the clients free samples to taste before they eventually bought it. I had a few sales. I produced the tofu in the kitchen of my apartment on Via Maffei in Milan. I got up very early and at 8 A.M. the kitchen was clean—you couldn’t see anything left of the production. My wife [who was Vietnamese] didn’t want to have a mess in the kitchen when she got up.

“Before I going to work as a consultant in the morning, I delivered the tofu to various shops. I didn’t sell as a company because the quantity was too small to justify a commercial set-up yet. After about a year, when the whole business was working well, I transferred everything to a friend of mine who was looking for a job. He did it also in his apartment, but had problems with the neighbors who saw the kettles steaming on his balcony and they wondered what he did in his place. As nobody knew what tofu was, he said he was making some kind of cheese. The neighbors thought he might even have cows in his flat, and they managed to kick him out of his rented apartment after he had been making tofu there for about one year.

“When we heard that a company from Rimini [located 200 miles southeast of Milan and run by Gilberto Bianchini] had also started to produce tofu, we stopped production. I didn’t get the feedback in profit from this business; I preferred to use my time in other operations and buy the tofu made by Gilberto Bianchini at health food stores in Milan. I am sure I would have had success in Italy if I had continued. But I didn’t have the support of my family, even though my wife was Vietnamese, and therefore I oriented myself to other activities. Someone who makes 10 kg of tofu in his kitchen before going to work must be a bit crazy—right?

“Nowadays in France I eat tofu about 2-3 times a week, as does my companion, Barbara, and our 4-year-old Carolina.

“Tofu-Kit: In about 1979 I produced about 100 tofu kits, which I sold for 30,000 liras to friends and other people who were interested in making their own tofu. As it was actually a copy of the American tofu-kit which I bought in the U.S., I wanted to see whether there was a real interest in this product before marketing it in Italy. Since it didn’t sell very well, I didn’t go ahead with it. Eventually I planned to buy the copyright from the tofu-kit people in the U.S. In 1979 I also published booklets in Italian and French titled “Tau-Fu Kit” and Tofu Kit” respectively. One was sold with each tofu kit; they were not sold separately.

“You have been for me a kind of guru, without knowing each other, because I have a lot of admiration for your approach. You are probably successful because you did only this: Writing about things related to soya.” Address: 3, Boulevard d’Aguillon, 06600 Antibes, France. Phone: (33) 07-80-70.

2725. Obis, Mariclaire Barrett. 1993. Take another look at soyfoods. *Vegetarian Times*. Aug. p. 54-56, 58, 60, 62, 64, 66. [8 ref]

• **Summary:** A good introduction to soyfoods including whole dry soybeans, fresh green soybeans, soy flour and grits, soy sauce, soy oil, textured vegetable protein, soymilk, okara, soy yogurt and cheese, tofu, tempeh, and miso. Address: Contributing editor, *Vegetarian Times*.

2726. Sakaguchi, Noboru. 1993. Re: Early history of tempeh in France. Making good nigari tofu in France. Letter to William Shurtleff at Soyfoods Center, Sept. 3—in reply to inquiry. 1 p. Handwritten. [Jap; eng+]

• **Summary:** “In 1981 Anita [Dupuy] started making tempeh with a man named Jean-Luc Alonso. Anita was in charge of the commercial aspects of the business and Jean-Luc did the production. The company is no longer in business. I recently talked with Jean-Luc and I think he will be sending you more details. His address is presently “Gaia,” 11 rue François Chancel, 31190 Auterive, France. Anita is now in the Netherlands.

Concerning our tofu production, in August 1985 we moved to a suburb of Paris named Champigny and changed the name of our company to Daizou. We have been producing tofu ever since. I am beginning to understand that making good tofu using natural nigari is based on getting good soybeans, so I have become very interested in agricultural issues and have begun to study agriculture. The key question is whether we can grow good soybeans in Europe.

Note: The letterhead and envelope read: Tama—Distribution de Produits Naturels. Address: Tama, 883 rue de Bernaü, Z.I. du Plateau, 94500 Champigny-Sur-Marne, France. Phone: 49 83 79 94.

2727. Mazzieri, Giovanna Fosso. 1993. Work with soyfoods

in Italy (Interview). *SoyaScan Notes*. Sept. 17. Conducted by William Shurtleff of Soyfoods Center. Followed by a 4-page typed letter of 6 Oct. 1993.

• **Summary:** Giovanna was in touch with Soyfoods Center in 1985 when she was interested in having *The Book of Tofu* translated into Italian. That project was not successful because she was unable to find a publisher.

Giovanna thinks she was the first person in Italy to ever make tempeh. Roland di Centa asked her to go to Paris; she went there for one week in February 1983 and Anita Dupuy taught her how to make and cook with tempeh. At the time, Anita was definitely selling her tempeh to many shops in Paris, including Le Bol en Bois, other natural food or macrobiotic shops, and also to the Indonesian Embassy in Paris. She was also making and selling tempeh sandwiches. Anita told Giovanna that she had been in Indonesia for a long time, and that she had learned how to make tempeh there. Giovanna still has Anita’s business card. It shows that Traditions du Grain was located at 16, Avenue Jean-Jaures, 94200 Ivry. Phone: 671.89.88. Anita’s personal residence was 25 rue du 18 Juin 1940, 94400 Vitry. Phone: 681.85.41.

Giovanna returned to her home in Milan, and in May/June 1983 she started making tempeh non-commercially for Roland and six other people. She gave away most of her tempeh free of charge; just a few people paid for it. She never sold tempeh commercially because it takes official authorization and lots of money to open a shop. She could not afford to do it legally and she did not want to take the risk of doing it illegally just to earn a little money. But she is still making tempeh at her home for her friends and herself. She orders her tempeh starter from GEM Cultures in the USA. In June 1983 she also wrote and published a 7-page booklet in Italian, titled “Tempeh,” to teach people how to cook with tempeh. It contained nutritional information plus 14 recipes. She also gave tempeh classes at which she distributed this booklet. To date, no books on tempeh have been published in Italian. As far as she knows, the first and only company that has ever sold tempeh commercially in Italy is La Finestra Sul Cielo S.r.l., an important macrobiotic center, located at Via Brandizzo 149, 10088 Volpiano (Torino). Phone: 011/9951818. She thinks they started to sell tempeh in 1992/1993.

Concerning tofu: She learned how to make tofu from Roland di Centa, who was her master, in June 1982. She also never sold tofu commercially for the same reasons she did not sell tempeh. She helped to popularize tofu in Italy through classes and the distribution of tofu recipes. She knows of four books about tofu in Italian that are now in print: *Il Libro della Soia* (1989, published by Mediterranee), *La Soia in Cucina* by W. Pedrotti (1990, published by Casa Verde), *Il Tofu* by Martha Fischer (1992, published by Mistral Demetra), *La Soia* by W. Pedrotti (1993, published by Mistral Demetra).

Giovanna knows Gilberto Bianchini (pronounced bee-

an-KEE-nee) very well. He was a very early tofu producer in Italy, starting in Milan in about 1982 or 1983 (she thinks) at about the same time as Giovanna. In Milan at that time there was only one vegetarian food retail shop and they did not like to sell tofu; they encouraged people to eat cheese instead. So Gilberto had a very hard time. Giovanna is sure that Gilberto started making tofu in Milano and then he moved to Rimini. Gilberto did very active and good work with tofu in Italy and he made a product of fine quality, but she thinks he is not producing it any more. Gilberto is now living at Via Cuoco 7, 47037, Rimini, Italy. Phone: 0541/373670.

Other people who pioneered in introducing soyfoods to Italy were Ferro Ledvinka in Florence. He worked for Mitoku in Japan, and is now a macrobiotic consultant in Florence. Phone: 055/217204. Also Carlo Guglielmo and Elena Roggero, macrobiotic consultants in Turin at the same address as La Finestra Sul Cielo.

She is aware of the following companies producing and selling tofu commercially: (1) Fonte Della Vita, Via Monviso 18, Cuneo, Italy. Phone: 0172/66397. (2) Soyab, Via B. Cellini 48N, 50020 Sambuca Val di Pesa (Firenze). Phone: 055/8071268.

Giovanna is still active promoting and teaching about soyfoods in Italy. There is a growing interest in soyfoods compared to 10 years ago. Now consumers ask for them. Address: Via Santa Tecla 3, 20122 Milan, Italy. Phone: 02 8646 1747.

• **Summary:** Surata Soyfoods Cooperative announces a move to new quarters at 325 West 3rd Ave., Bldg. A, Eugene, Oregon 97401-2524. The worker-operated co-op makes hand-crafted tofu and tempeh using organically grown soybeans.

2731. Vaidehi, M.P. 1993. "Tempe"—A biotechnological boon for nutritionally rich foods. *Beverage & Food World (Bombay)* 20(4):35-36. Sept.

• **Summary:** Although Indians prepare many fermented foods (such as idli, dosa, dhokla, kadabu, curds, etc.), it was not until the author visited Indonesia that she realized there are many fermented foods of which Indians are unaware. "Tempe" is the "most impressive fermented food nationally adopted for improving nutrition and health of the children of Indonesia." The author learned about tempeh when she was offered a fellowship by the United Nations University to participate in a food fermentation technology and training/research course at the Nutrition Research and Development Centre, Bogor, Indonesia. After an extensive tour of many tempeh production places in Java, she concluded that tempeh is a food with great potential, and that in all countries it can be used "to improve the socio-economic, nutritional and health status of the great majority of the population."

A table shows the nutritional value of different types of tempeh and tempeh powders. A flow sheet for tempeh production is also given. Address: Dr., Prof. and Head,

Dep. of Rural Home Science, Univ. of Agricultural Sciences, Bangalore, India.

2732. White Wave, Inc. 1993. White Wave soyfoods food service product list (Leaflet). Boulder, Colorado. 1 p. Single sided. 28 cm.

• **Summary:** Lists six categories of products: (1) Tofu: Vacuum pack organic hard style tofu (2/5# pouches). Meatless tofu steaks (2/4# pouches).

(2) Dairyless Soy Yogurt: Lemon kiwi (6/2# tubs). Organic plain quarts (6/2# tubs).

(3) Soy A Melt Soy Cheese: Cheddar style (4/7.25# loaves). Mozzarella style (4/7.25# loaves). Monterey jack style (4/7.25# loaves). Garlic herb style (4/7.25# loaves).

(4) Meat Substitutes: Meatless healthy franks (10# cases). Meatless healthy bologna (10# cases). Vegetarian sloppy joe (19# buckets). Traditionally seasoned seitan (2/6# pouches). Diced traditionally seasoned seitan (2/6# pouches).

(5) Veggie burgers: Tempeh burger (60/3 oz. cases). Teriyaki tempeh burger (60/3 oz. cases). Veggie life burger (48/3.5 oz. cases). Lemon broil tempeh (90/2 oz. cases). Tempeh cutlet (60/3 oz. cases).

(6) Tempeh: Original soy tempeh (20/8 oz. packs). Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2733. White Wave, Inc. 1993. White Wave soyfoods retail product list (Leaflet). Boulder, Colorado. 1 p. Single sided. 28 cm.

• **Summary:** Lists six categories of products. \* = Also available in food service pack: (1) Tofu: Reduced fat organic tofu. Organic tofu\*. Snack'n savory tofu. Meatless tofu steaks\*. Spicy szechuan stir fry. Tofu in garlic sauce stir fry.

(2) Dairyless Soy Yogurt: Raspberry. Strawberry. Blueberry. Peach. Apricot mango. Lemon kiwi\*. Vanilla. Organic plain quarts\*.

(3) Soy A Melt Soy Cheese: Cheddar style\*. Mozzarella style\*. Monterey jack style\*. Garlic herb style\*. Mixed variety case. Fat free cheddar style. Fat free Mozzarella style. American soy singles. Mozzarella soy singles. (4) Meat Substitutes: Meatless healthy franks\*. Jumbo meatless healthy franks\*. Meatless healthy links. Meatless healthy bologna\*. Meatless healthy bacon. Vegetarian sloppy joe\*. Vegetarian chili. Tempeh barbecue. Traditionally seasoned seitan\*.

(5) Veggie burgers: Tempeh burger\*. Teriyaki tempeh burger\*. Veggie life burger\*. Lemon broil tempeh\*. Tempeh cutlet\*.

(6) Tempeh: Original soy tempeh\*. Soy rice tempeh. 5-grain tempeh. Wild rice tempeh. Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2734. Soyfoods Association of America; American Soybean Association. 1993. Good news about soyfoods. San

Francisco, California. 16 p. 19 cm.

• **Summary:** This attractive booklet, containing 6 color photos, introduces soyfoods. Produced jointly by the Soyfoods Association of America and the American Soybean Association, it represents a first in cooperation between these two organizations. Contents: Soyfoods—A healthy choice: Soyfoods lower blood cholesterol, and fight cancer. Adding soyfoods to your menu: It's easy! The soyfoods family: Soybeans and edamame or fresh green soybeans, soy flour, texturized soy protein (TSP), soymilk, tofu, tempeh, miso, meat analogs, soy oil (a brief description is given of each). Soy recipes: Miso soup. Tofu chocolate cream pie. Creamsicle spritzer (with soymilk). Banana pancakes (with soy flour, soymilk, and soy oil). Sloppy joes with texturized soy protein. Barbecued tempeh. Nutritional value: Gives the composition of tofu (soft, silken, firm), meat analogs, soy oil, miso, texturized soy protein, tempeh, soymilk (regular or lite), and soy flour (full fat or defatted). Address: 1. One Sutter St., Suite 300, San Francisco, California 94104; 2. American Soybean Assoc., 540 Maryville Centre Drive, Suite 390, St. Louis, Missouri 63141-9200. Phone: 1. (415) 393-9697; 2. 1-800-Talk-Soy.

2735. Sudigbia, I. 1993. Tempeh for nutritional treatment of childhood diarrhoea [diarrhea]. Paper presented at the XV International Congress on Nutrition. Held 26 Sept. to Oct. 1 at Adelaide, Australia. \*

• **Summary:** Tempeh is suitable for use in nutritional treatment during and after episodes of diarrhea, whether in clinical or community use.

Note: This paper was published in the ASA [American Soybean Association] Technical Bulletin series (MITA(P) No. 518/12/92 Vol. HN20 1993) (Available from ASA, Singapore). Address: Child Health Dep., Medical Faculty, Diponegoro Univ., Semarang Univ., Indonesia.

2736. Guglielmo, Carlo. 1993. Re: Introducing tempeh and amazake to Italy. Letter (fax) to William Shurtleff at Soyfoods Center, Nov. 5—in reply to inquiry. 2 p. [Eng]

• **Summary:** "I feel honored to receive an enquiry from you about tempeh. The books by you and your wife have been wonderful companions for many years. Yes, we have really been the first to introduce tempeh to Italy, even if we didn't continue with that activity for a long time. Let me tell you briefly our story.

"Together with my wife, Elena, and my friend Adriano Poggin, I founded the East-West Center "La Finestra sul Cielo" in Torino [Turin], Italy, in 1978. The address was Via Saluzzo 23 in Torino. The center offered classes on healing, cooking, shiatsu, etc. and I worked as a macrobiotic counselor. A little later we also opened a natural food store (at Via Berthollet 4) and a macrobiotic restaurant (at Via Massena 1).

"The store and the restaurant are still in operation, even

if we are not involved with them any more. I closed the center in 1992 to have enough time to continue my activity as a macrobiotic teacher and to work in the company. (Also, after 15 years, I had enough of that activity.)

“‘La Finestra Sul Cielo’ import and distribution company was founded in 1987 in Volpiano (near Torino) by Elena, Adriano, and me. We started making that same year, in the fall of 1987 at Via Brandizzo 416, Volpiano. The name of the product in Italian was ‘Tempeh.’ On the label was a brief description of the product—which was totally unknown at that time. The tempeh was pasteurized in plastic packets and could keep for about 1 month in a refrigerator. I personally worked on developing the production process, together with a friend named Lucio de Berti, who actually produced the tempeh. We learned to make tempeh from your books. My wife and I had the opportunity to try tempeh while staying in Boston, Massachusetts [studying macrobiotics], during 1980 and 1981. We felt the importance of introducing this wonderful food to Italy. But it took several years to realize that goal. We continued to make tempeh for about one year, then unfortunately, we discontinued the production. After that time we did not distribute soyfoods any more, since other companies specialized in making and distributing them.

“Later Lucio married a Belgian woman and moved to Belgium where he is still making tempeh and other soyfoods. His company name is Food for Freedom. We started importing amazake from Holland in 1987 or 1988. We were the first company to introduce amazake to Italy and we still import it.

“We are now planning to include fresh soyfoods distribution (not production) in our activity again; we plan to start in the first months of 1994.” Address: La Finestra Sul Cielo s.r.l., Via Brandizzo 149, 10088 Volpiano (Torino), Italy. Phone: 011-988.55.21.

2737. *SoyaScan Notes*. 1993. Chronology of the American Soybean Association’s growing interest in promoting soyfoods in America. Nov. 5. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** 1992 Jan.—Keith Smith of ASA calls Mark Messina PhD, at the National Cancer Institute and asks what Mark knows about possible cancer-preventing substances in soybeans. ASA was getting a lot of enquiries on the subject, which was Mark’s specialty at NCI.

1992 Dec.—ASA decides to allocate a large portion of their 1993 research funds for health-related research. The 1993 budget contains \$1,200,000 in funding for three 2-year projects which each received \$400,000 over the 2 years. One project by Stephen Barnes involves soy and prostate and breast cancer, one by Maurice Bennink of Michigan State involves soybeans and colon cancer, and a third by William Wong involves cholesterol metabolism in soy.

1993 March—ASA allocates \$27,625 for the Soyfoods Association of America (mainly Ginny and Mark Messina) to

develop and distribute educational materials on soyfoods and to produce periodic press releases. The grant will be used to produce a 4-color brochure on soyfoods and eight individual fact sheets on tofu, soymilk, tempeh, miso, texturized vegetable protein, soy flour, soy-based meat analogs, and soy oil. These materials will be made available to state soybean boards.

1993 June—*The Soy Connection*, a quarterly newsletter on the nutritional benefits of soyfoods, starts to be mailed to 70,000 registered dietitians across the U.S. This high-quality publication, edited by Mark Messina, contains articles by experts in their fields, plus some good recipes.

1993 Oct.—Dr. Mark Messina is officially hired by ASA as a consultant. He gave about 12 public speeches on soy, diet, and chronic disease prevention in 1993, and has 15 more planned for 1994. Messina also coordinates nutrition research for a group named the North Central Soybean Research Program. As part of this, Steve Sonka of the University of Illinois is conducting a \$43,000 economic impact analysis to determine the market potential for soyfoods and its effect on soybean consumption. The report is expected out in Dec. 1993. USB only has 3 paid employees and 60-65 volunteers, so they hire the ASA to do projects using money from USB and everything that ASA does is approved by David Thomas.

1993 Oct.—USB has a booth (probably its first) at the annual 3-day conference of the American Dietetic Assoc. attended by roughly 10,000 people. ASA and Dr. Messina were there. Evans Food Group, ASA’s big food-related public relations firm in Seattle, Washington, was also there. The booth was geared mostly toward soy oil, but most of the interest from dietitians was in soyfoods. Fact Sheets on soyfoods and a brochure prepared by the Soyfoods Association and Evans Group were distributed. Soynuts were served but they ran out in the first 2 hours. Messina encouraged USB to have enough good soy-based snacks to last for 3 days for next year’s show.

1993 Nov.—*Good News About Soyfoods*, an attractive 16-page booklet, prepared jointly by the Soyfoods Association of America (Ginny Messina) and USB, featuring information about and recipes for soyfoods is mailed to about 3,000 to 5,000 key media contacts.

1994 Feb.—The First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease is held in Mesa, Arizona, organized by Dr. Mark Messina and sponsored by the United Soybean Board as well as soybean growers from Nebraska and Indiana.

1995—The United Soybean Board (USB) begins to sponsor dietitian seminars on the health benefits of soy in 26 cities across the USA. The budget for each seminar is \$8,000. Manufacturers can exhibit products at seminars for a fee of \$75 per table.

1996 Jan.—The Indiana Soybean Development Board introduces *Soyfoods USA*, the world’s first e-mail newsletter

on soyfoods. It is sent monthly to e-mail addresses free of charge. By Feb. 1997 there are 1,200 subscribers.

1996–USB creates and develops the theme “Soybeans—Designed for Life.” When someone phones one of the state soybean associations or boards, music with these words plays in the background while he or she is on hold.

1996 Sept.—The Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease is held in Brussels, Belgium, again organized by Dr. Mark Messina. Sponsors contributing more than \$15,000 include: American Soybean Association, Nebraska Soybean Board, United Soybean Board, Ohio Soybean Board, Indiana Soybean Development Council. Other sponsors: Illinois Soybean Association and Illinois Soybean Program Operating Board, Soyfoods Association of America, Minnesota Soybean Research and Promotion Council, Iowa Soybean Promotion Board, and Michigan Soybean Promotion Committee.

1997 Jan.—USB announces 11 more Soy Connection Dietitian Seminars that will be held in major cities across America during 1997, from April 4 to Sept. 12.

1997 Feb. 25—The Illinois Soybean Assoc. (ISA) mails a form letter to all known soyfoods manufacturers in the USA, stating that it has recently teamed up with a number of industry leaders and researchers to examine the feasibility of a cholesterol health claim for soy protein products. The letter asks that each manufacturer send ISA (by March 5) nutritional labels for each soyfood product that it makes or distributes.

2738. Olson, Paul. 1993. Update on Bountiful Bean Soyfoods (Interview). *SoyaScan Notes*. Nov. 17. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Paul created a corporation named Vermont West Inc. which purchased Bountiful Bean Soyfoods from Richard Kraemer and Elizabeth Hanson on 3 Sept. 1993. Richard and Elizabeth will continue working at the company until Feb. 1994, then Richard plans to go back into the ministry.

A follow-up letter (19 Nov. 1993) and leaflet (titled “About Bountiful Bean Soyfoods Products”) shows that the company now makes tofu, herb tofu, tasty tofu (marinated and baked herb tofu), tempeh, soymilk, hummus, and taboolie [tabbouleh].

Paul also encloses “Bountiful Bean Soyfoods Newsletter.” Issue 1. Nov/Dec. 1993. 4 pages. It includes articles titled “New ownership of Bountiful Bean Soyfoods Announced” (The company currently employs 8 people.) “Who is Paul Olson and what is Vermont West?” (Paul has had 9 years prior experience working in the computer industry with Apple Computer. He is 27 years old and lives near the family farm where he grew up). Address: 620 Main St., P.O. Box 329, Ridgeway, Wisconsin 53582-0329. Phone: 608-924-1703.

2739. Wilson, Don. 1993. The pioneering work of Aqua Agra in Florida with sprouts and soyfoods. Part II (Interview). *SoyaScan Notes*. Nov. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** “When we started talking about making tofu, it became very evident to me that we would need a bigger space, so in about March or April of 1977 we moved over to 100 Highline Dr., Longwood, Florida 32750. We went from 4,000 square feet of floor space to 50,000 square feet. We outgrew our plant on Seminola Blvd. in about 4-5 months.” In June 1977 Don’s first child, a son, was born. On Highline Drive, Don built rooms to grow the various sprouts and also diversified the company into chopping and packing huge amounts of fresh vegetables; there was a separate packet of sauce (such as teriyaki) in each bag for making stir-fries. All that was needed was some tofu to complete the stir-fry. Don bought his tofu equipment used from Robert and Mary Brooks, whose company Swan Foods in Miami had gone out of business. The purchase became a mess because Robert had failed to inform Don about the liens that were against his equipment due to Robert’s unpaid bills. So Don started to make tofu in 1978. He sold it chiefly to the chain stores—first to Albertson’s (the smallest group), then to Publix, and then to Winn Dixie (the biggest chain). He did not deal with restaurants or health food stores. At the height of production, Aqua Agra was making at least 25,000 to 30,000 lb/week of tofu. He was the first person to introduce tofu to supermarkets in Florida.

In the summer of 1979 Don attended the second annual Soycrafters Conference at Amherst College in Massachusetts. “I will never forget that as long as I live. Some of the major U.S. food companies, such as General Mills and a few others, sent representatives in 3-piece suits. I was standing in the back of the auditorium where these guys were and I’ll never forget listening to their comments as they talked about what a bunch of dingdongs they had been sent to observe, and how this had absolutely no place in the American food chain whatsoever. I can remember walking away from that conference thinking to myself, ‘I sure am glad these big guys think this way because all it would take is one big corporation to get involved in this and a lot of small businesses would soon go down the drain.’”

Aqua Agra grew rapidly. Many of his employees were Asian-Americans and they were wonderful workers. the copycats that tried to compete with him couldn’t. About 2 years after Aqua Agra started making tofu, the *Sentinel Star* newspaper did a rather nice story on the company in 1980.

In early 1981 Don started making soymilk, which he sold in bulk to the nearby Seventh-day Adventist Florida Hospital—but not to any of the chain stores. He sold about 300 gallons a week.

At about the same time he started making soy yogurt in individual unprinted cups with a pressure sensitive label. Most of his sales were of plain yogurt, but he also sold

strawberry, peach, and blueberry flavors. The yogurt was sold to local health food stores, to Del Champs in Alabama, and to a broker in New York named Marty Grossman, who sold a lot.

In late 1981 Aqua Agra began to make soy tempeh. They sold less than 100 lb/week, and only to a few health food stores in Orlando who had asked for it.

Don and his wife had to close the company in about mid-1982, after 6 years in business. At that time they were making about 75 products. He and his wife were each working 100 hours a week. "The doctor gave me a choice. He said, 'You can either get rid of that business and live, or you can keep it and die! But you're gonna do one of the two.'" Don was so sick and tired of everything at that time that he decided not to even sell the company—just to shut it down and walk away.

Don feels that he was a little bit before his time. "People found it amusing that a sergeant in the United States Marine Corps. was involved in making hippie food." Address: 2321 Virginia Dr., Altamonte Springs, Florida 32714.

2740. Drosihn, Bernd. 1993. Re: New developments with soyfoods in Germany. Letter to William Shurtleff at Soyfoods Center, Nov. 29. 2 p. Typed, with signature on letterhead.

• **Summary:** Viana has done a lot of work to improve the design of its labels and packaging. In Germany the soyfoods market is not growing at present, but neither is there a big recession. Germany's biggest soyfoods manufacturer, DE-VAU-GE, stopped production of tofu in early 1993 and now buys its tofu products from Heuschen-Schrouff B.V. in the Netherlands. That should make Heuschen-Schrouff one of the largest tofu manufacturers in the world. DE-VAU-GE plans to stop soymilk production in early 1994.

Some newer, small soyfoods manufacturers have recently started in Germany: Tofuhaus Eisenreich (Steinmetzstrasse 4, 93049 Regensburg, Germany. Owner: Mrs. Eisenreich. Phone: 0941/27 01 27), and Topas GmbH (Bollbergsr. 41, 72116 Moessingen [near Tuebingen], Germany. Owner: Klaus Gaiser. Phone: 07473/25515). Our old friend Klaus Gaiser, once the largest tofu manufacturer in Germany, is trying to make a comeback.

The market for soyfoods in Eastern Europe is developing very quickly. Bernd has had contact with a Polish company named Polsoja. Yesterday a person from Slovenia visited Viana. He wants to make tempeh there and he told Bernd that there are some soyfoods manufacturers in the former Yugoslavia. In Slovenia, which is relatively untouched by the war, there is one existing tofu company and more than 30 natural food stores.

Albert Hess (owner of Das Tofuhaus in Lautersheim) and Bernd are in the process of founding a new company, named Sojarella, which will start to make and sell soy cheeses in early 1994. The address will be the same as

Viana. They have developed a method for making soy cheese products that contain no casein. Address: Founder and president, Viana Naturkost GmbH, Willi Graf Str. 88, 33881 Euskirchen-Kuchenheim, Germany. Phone: 02251-56076.

2741. Coward, Lori; Barnes, N.C.; Setchell, K.D.R.; Barnes, S. 1993. Genistein, daidzein and their beta-glycoside conjugates: Antitumor isoflavones in soybean foods from American and Asian diets. *J. of Agricultural and Food Chemistry* 41(11):1961-67. Nov. [31 ref]

• **Summary:** This is a very important article. Isoflavones were first extracted with alcohol (80% aqueous methanol) and then the fat was removed from the extract with hexane solvent. Details of the isolation process are given. The results showed that most Asian and American soy products, with the exception of soy sauce, alcohol-extracted soy protein concentrate, and soy protein isolate, have total isoflavone concentrations similar to those in whole soybeans. Asian fermented soyfoods contain mainly isoflavone aglucones, whereas in nonfermented soyfoods of both Asian and American origin isoflavones are present mainly as beta-glycoside conjugates. The estimated daily intake of these isoflavones by Asians is similar on a body weight basis to the isoflavones in soy-containing diets which inhibit mammary tumorigenesis in animal models of breast cancer. Therefore, it is possible that dietary isoflavones are an important factor accounting for the lower incidence and mortality from breast cancer in Asian women.

"The concept of reducing cancer risk by chemoprevention has become an important aspect of current cancer research. It has been suggested that two so-called phytoestrogens, lignans and isoflavones, may play a role in the prevention of estrogen-dependent breast cancer and colon cancer.

Three tables show the isoflavone concentrations in various types of soyfoods. For each food, the content of the following is given: Conjugated genistin, conjugated daidzin, genistein aglucone, daidzein aglucone, total isoflavones, D/G ratio, percentage of genistein aglucones, and percentage of daidzein aglucones. After each food listed below we will show the total concentration "as is" and then (if given) on a dry weight basis.

Table 1 shows isoflavone concentrations (in mg per gram) in basic nonfermented Asian soyfoods: Soymilk (0.252 / 3.256), Tree of Life tofu (0.417 / 2.031), Mori-Nu tofu (0.494 / 3.827), soy flour (1.338), soy powder (1.748), and soy nuts (2.363).

Table 2 shows isoflavone concentrations (in mg per gram) in fermented Asian soyfoods: Tempeh (0.430 / 1.130), miso (0.920 / 1.379), rice miso (0.404 / 0.721), barley miso (0.721 / 1.195), Shiromiso soup mix (0.708), Akamiso soup mix (0.882).

Table 3 shows isoflavone concentrations (in mg per gram) in other soyfoods: Soy sauce (0.023 / 0.090), soy

cheese (0.050 / 0.105), Tofutti soy ice cream (0.032 / 0.092), Ice Bean soy ice cream (0.117 / 0.360).

Although flavonoids are found in many plants, vegetables, and flowers, isoflavones such as genistein and daidzein are found in just a few botanical families. This is because of the limited distribution of the enzyme chalcone isomerase largely to tropical legumes. Partly for this reason, isoflavones are a very minor part of American or British diets. Address: Depts. of Pharmacology and Biochemistry and Comprehensive Cancer Center, Univ. of Alabama at Birmingham, Birmingham, Alabama 35294, Mass Spectrometry Lab., Children's Hospital Medical Center, Cincinnati, Ohio 45229.

2742. Havala, Suzanne; Dwyer, Johanna. 1993. Position of the American Dietetic Association: Vegetarian diets. *J. of the American Dietetic Association* 93(11):1317-21. Nov. [24 ref] • **Summary:** Contents: Introduction. Position statement. Vegetarianism in perspective. Implications for health promotion. Nutrition considerations vegetarians. Groups with special needs. Meal planning.

Introduction: "A considerable body of scientific data suggests positive relationships between vegetarian diets and risk reduction for several chronic degenerative diseases and conditions, including obesity, coronary artery disease, hypertension, diabetes mellitus, and some types of cancer.

"Position statement: It is the position of the American Dietetic Association vegetarian diets are healthful and nutritionally adequate when appropriately planned."

A half-page table titled "Daily food guide for vegetarians" (p. 1318) suggests that 2-3 servings per day come from the "Legumes and other meat substitutes" food group. Serving sizes: 4 oz tofu or tempeh, 8 oz soy milk. Address: 1. MSc, RD; 2. DSc, RD.

2743. Kelley, Hubert W. 1993. Always something new: A cavalcade of scientific discovery. *USDA Agricultural Research Service, Publication No. 1507*. 150 p. Nov.

• **Summary:** This book is filled with photos and commemorative stories about the research discoveries and breakthroughs in the field of crop utilization at the four regional USDA's Agricultural Research Service (ARS) labs during the 50 years since they were established.

Chapters include: Introduction. Gambling on science. Penicillin and the war years [World War II]. Midstream changes and corrections. Frozen foods. Soybean oil (p. 85-88). Vegetable oils in Industry (p. 89-91). Food safety (p. 97-104; Aflatoxin, other mycotoxins). Food for Peace (p. 116-18). Fuels from agriculture (p. 118-19). Proteins in milk, grains, and oilseeds (p. 125-20). Peanuts (p. 131). U.S. crops in Asian foods (p. 132-33; Tofu, tempeh, soy sauce, sufu). Microorganisms (p. 134-36; Incl. the ARS culture collection). Focus on the future (p. 147-50; soy oil printing inks).

The most important work of the Northern regional laboratory in Peoria was the development of penicillin starting in June 1941. A brief chronology: 1941 Dec.—Andrew J. Moyer, a chemist at the Northern lab, developed the basis for the industrial process—deep vat fermentation. 1942 March—Only enough penicillin is available to treat a single case. 1942 Dec. 31—Seventeen U.S. pharmaceutical companies are working on penicillin. 1944 June 6—Thanks to the combined efforts of many people, enough penicillin is available in quantity by D-Day (invasion of Normandy, France) to treat wounded allied soldiers. Penicillin was the world's first commercial antibiotic. By the 1950s, hundreds of antibiotics were on the market. Address: Director (retired), Information Staff, USDA Agricultural Research Service (ARS).

2744. Keuth, Sylvia; Bisping, B. 1993. Formation of vitamins by pure cultures of tempe moulds and bacteria during the tempe solid substrate fermentation. *J. of Applied Bacteriology* 75(5):427-34. Nov. [30 ref. Eng]

• **Summary:** Describes the synthesis of vitamins B-6, B-12, riboflavin, thiamine, nicotinic acid and nicotinamide by different strains of *Rhizopus stolonifer*, *R. arrhizus*, and *R. oligosporus*. Also discusses the influence of the presence of bacteria (*Citrobacter freundii*, *Klebsiella pneumoniae*, *Pseudomonas fluorescens*, *Streptococcus sp.* etc.) on the production of vitamins. Isolates of *R. oligosporus* were generally the best vitamin formers. The molds did not produce physiologically active vitamin B-12. But the addition of bacteria, which had been selected in a screening for vitamin B-12 production, resulted in an increase of physiologically active vitamin B-12. *Citrobacter freundii* and *Klebsiella pneumoniae* showed the best formation capabilities.

The influence of *R. oligosporus* on vitamin B-12 formation by *C. freundii* was also studied. The vitamin content of tempeh fermented with a mixed culture of mold and bacteria was three times as high as that in a control fermentation of the beans with *C. freundii* only. In addition, the growth of *C. freundii* in mixed fermentations was tripled. Address: Institut fuer Mikrobiologie, Westfaelische Wilhelms-Universitaet, Muenster, Germany.

2745. Wheatley, Georgia. 1993. An American vegetarian resource directory: Some signposts on the journey towards a healthier, more ethically and environmentally balanced lifestyle. Ferguson, Missouri: WheatSong Press. 94 p. Nov. Index. 22 cm.

• **Summary:** Contents: 1. Audio/Visual resources: Audio, video, tape producers/distributors. 2. Cookbooks (248 citations). 3. Electronic resources: Internet sources (America Online, Compuserve, Public Dialup Internet Access List compiled by Peter Kaminski), vegetarian sources accessible from the Internet (rec.food.veg, fat-free, veggie {send

email to the Internet address [listserv@gibbs.oit.unc.edu](mailto:listserv@gibbs.oit.unc.edu)}, granola, world guide to vegetarianism, AR-Talk, AR-News), other electronic vegetarian sources (Genie, Prodigy). 4. Family and children's resources: Audio, activities, books, cookbooks, periodicals, video. 5. Mail order products. 6. Organizations and groups: National, local organizations listed alphabetically by state and city, starting your own group. 7. Periodicals, journals, and newsletters. 8. Publishers/distributors. 9. Radio/television resources: Radio, television. 10. Resource books. 11. Travel resources.

Note 1. This is the earliest document seen (July 2007) that mentions the Internet in connection with soyfoods or vegetarianism. Note 2. A new edition was published in Aug. 1996. Address: P.O. Box 35009, Ferguson, Missouri 63135. Phone: (314) 524-0894.

2746. Demos, Steve. 1993. More on White Wave's early ownership structures, sources of capital, and employees (Interview). *SoyaScan Notes*. Dec. 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Steve started White Wave as a sole proprietorship in a small space on Pearl Street. He hired employees to help make tofu and tofu products. The first employee was Pat Calhoun. The company changed to a partnership after about 1 year at about the time of the move to Walnut Street. "The motivation wasn't money—nobody had any. The motivation was commitment. You can either use sweat equity or you can use money to accomplish the same thing. My intention was to get people equitably involved and committed to the project, and to have them take on responsibility. It is very hard to find people who really understand what that means. It is very important to understand the change to a partnership in the context of the values and mentality of the 1960s and 1970s. I was just trying to take the mentality and apply it to business. The 'small is beautiful, everybody's equal, group decision making process'—all those romantic concepts were very influential. It was the old leftover tribe mentality." The original partners were all employees at the time the partnership structure was created, and it grew out of discussions among Steve and the employees as to the best way to shift gears. Steve decided that "the philosophically correct position for running a late 1970s company was to get out of sole proprietorship and into a new structure." He conceived of and offered the idea of the partnership, with a commitment of both time and money. During the early years the company was making money—enough money to finance the move to Walnut Street and everything else. It was the third move (to the old ice cream factory) that challenged the profitability of the company. The money was not something the needed for a specific purpose; for example, George Hamel contributed part of his money in the form of an old Honda that the company used as a delivery vehicle. There is absolutely no question about the fact that the money was less

important than getting people involved with the company and committed to it.

Chip McIntosh was not one of the partners, but he was the first employee who arrived after the partnership began. "I'll never forget it. He came in with a bandana strapped on top of his head. He looked me in the eye and said: 'I want to learn how to do this, and I'm the right person for your company.'" Chip arrived while we were installing equipment at Walnut Street, before White Wave started making tempeh. I believe Chris O'Riley was our first tempeh maker. Chip has always been our 'food man' so to speak. He is now back with White Wave as quality assurance manager; he returned about 6 months ago.

Note: Shurtleff and Aoyagi spoke twice in Boulder. The first program, on 18 or 19 Jan. 1976, was sponsored by Spinning Kitchen [or maybe David Bolduc and Green Mountain Grainery] at the Unitarian or Presbyterian Church located at Spruce and Pine streets. The second program, on 17 May 1980, was in the Boulder Theater, sponsored by White Wave in order to introduce soyfoods and their company to Boulder. In addition, Shurtleff visited Boulder with Wataru Takai in early August 1978, saw the White Wave tofu shop and deli in operation on Pearl Street, and met Steve Demos for the first time. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2747. Demos, Steve. 1993. New developments at White Wave (Interview). *SoyaScan Notes*. Dec. 19. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave is about to rent the Boulder Theater for a town party in May 1994 to show the people of Boulder what the company is doing. "We're renaming Boulder 'Tofu Town.'"

Steve recommends that Shurtleff go to Whole Foods Market's store in Berkeley, California, where there is now a White Wave Vegetarian Cuisine Center. They have a "shelf set" developed as the first prototype for the United States. The set is fully integrated into the store's dairy case; it is not a stand-alone unit. In Berkeley, the set is placed in between amazake and tortillas. There may or may not be dividers on both sides. It contains about 46 facings of White Wave products in an organized fashion, in groups such as meat alternatives, dairy alternatives, cheese alternatives, tofu, tempeh, etc. The term "Vegetarian Cuisine," which does not contain the word "soyfoods" or the word "protein," opens the products to a broader category and it elevates the foods to a higher level than just basic proteins. White Wave has had a dozen cartoon characters made up for the set; they deliver the basic information on soyfoods and ecology, soyfoods and cancer, soyfoods and heart disease, etc. There are individual 3 by 5 inch info-cards printed on both sides. Sources of more information are given on each card. White Wave installed their first sets during the first week in November in the 3

Whole Foods stores in the Bay Area—Berkeley, Palo Alto, and Mill Valley. Berkeley is the best of the three. During the first month, the lowest increase in sales was 160% and the highest was 1,000%.

“We are calling this ‘category management’ or ‘category shelf management.’ This is what Walmart is. This is the science of merchandising and marketing. It’s a whole new game—and so exciting. We spent a year taking photos of natural and health food stores around the United States, and we realized that there was no organizational schematic to the evolution which has taken place as products evolved from tofu to tempeh to soymilk, to second generation soy products, and now a new generation of vegetable protein products in which various proteins are blended/extended—e.g. wheat protein and soy protein, or products resembling milk or ice cream (like Rice Dream) made from rice.

White Wave will soon be coming out with a new line of gluten-based luncheon slices; another company will make some of these products. White Wave may perhaps buy another company.

“Concerning our new shelf set, we’re going into natural and health food stores and saying ‘We occupy 18 square feet (or that many cubic inches). Our turn rate is X, our profitability factor is Y, and our average sale price is Z. Here’s our product mix and here’s what we’re doing.’ You’ll see national ads on this in February.

“We’ll be ready to go into supermarket chains when they call us and say ‘We want your products and you don’t have to pay slotting fees.’ We will not pay slotting fees. You invest in either a pull or a push. I am against the push mentality. When the chains call you, it means that the market is ready for your products. If you push in, you run the risk of being premature. Legume is a good example of that.

Steve has visited a number of Safeway stores in California and he feels Safeway is very interested in his products and shelf set. Each set costs about \$500–\$700 per store in time and hardware and logo—not including the food products. So Steve must proceed slowly and carefully in getting into supermarkets. He will probably start with supermarkets in college or university towns. From there he will gather statistics on sales and profitability. He will move very slowly, starting with stores in markets with the right demographics, first down the West Coast, then across the Sun Belt, then over to the East Coast and up. Steve will probably have 3 sizes of sets. The smallest set will contain only the fastest moving items. Steve can get into the dairy case of a supermarket only if he can prove that he can deliver more profit per unit of shelf space. They will take a 30–35% margin, and he hopes to do \$60,000 in sales per store per year.

Right now the company is shut down and they are installing all new equipment. The equipment is made by a variety of manufacturers (some from Takai, some American, some German), and it will have a capacity of 1 ton/hour of

tofu. They have just installed what is probably the largest curding carousel in the United States. They made tofu on Dec. 16–17 to test the equipment, and Steve is very optimistic that the learning curve will be short. “Wataru Takai is arriving in Boulder today. Tomorrow all the big-time pasteurization and spiral chilling equipment will be installed. I’ve never seen a soyfoods company that uses this type of equipment. We also have fancy packing machines, a lot of vacuum packing and water packing machines.

“Sales of White Wave’s basic seitan, sold in a tub, are increasing rapidly. We are already selling thousands of pounds a week.”

White Wave is now right in the middle of their wastewater nightmare. Fortunately the city of Boulder has given us the okay for our new construction and equipment. The plant will be done by the middle of January. The last phase is the solar employee lounge out front. The city has beaten up on us for the last year on environmental issues. Only Pat Calhoun’s persistence got us through it by wearing out the city’s bureaucracy. One day they threw their hands up and gave us all the permits.

“We are at a critical mass point as of 1 Jan. 1994. We have a new factory (high-output and very sanitary), a new production system, and a new marketing scheme and schematic in place based on reproducible, verifiable numbers. We are ready for takeoff. I’m very excited. We’re all dressed up for the party. I now have what we were dreaming about 15 years ago.”

Note: In the opinion of Soyfoods Center, White Wave is currently, and has been for at least the past 5 years, the most innovative soyfoods company in America. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2751. Atlas, Nava. 1993. *Vegetariana: A rich harvest of wit, lore and recipes*. Revised and updated. Boston, Massachusetts: Little, Brown and Co. [xii] + 233 p. Illust. by Nava Atlas. 23 cm. [62 ref]

• **Summary:** A new and expanded edition of the original 1984 classic vegetarian cookbook with quotes on vegetarianism and historical anecdotes. Featuring over 80 new recipes.

One chapter (p. 117-26) is titled “Tofu and tempeh.” Contains 20 recipes that call for tofu, 6 that call for tempeh, and 5 that call for miso. Also contains recipes for adzuki beans, seitan, and soy sauce. Address: Adam Enterprises, 65 Prospect St., New Paltz, New York 12561-1143.

2752. Boots, Gypsy; Arthur, Mike; Hopkins, Jerry. 1993. *The Gypsy in me! How to look younger and have more energy as you grow older*. Camarillo, California: Golden Boots Co. vi + 102 p. Illust. No index. 22 cm.

• **Summary:** Contents: Dedication and thanks. Introduction, by Charlie Fox. 1. Natural beginnings. 2. Living in nature. 3. Love and marriage. 4. Hollywood meets health nut. 5. Semi-stardom with Steve Allen. 6. Never too late to rejuvenate. 7. Exercise is a way to live. 8. Vital foods. 9. Eat and drink to your health. 10. Recipes for a healthier you. 11. Traveling through life.

In Chapter 8, titled “Vital foods,” the section on legumes includes soy milk, tofu, tempeh, and texturized vegetable protein. Here Gypsy notes that he has always been a vegetarian. Eggs and dairy products once formed a major part of his diet, but now he rarely eats those foods.

Chapter 10, titled “Recipes for a healthier you,” contains the following soy-related recipes: Scrambled tofu. Baked soy bean casserole. Tofu mushroom loaf. Tofu burgers. Soy burgers. Soya-rice flour coffee cake (with soy flour). Shakes (with seed, nut, rice, or soy milk). Many other recipes are seasoned with soy sauce. The Gypsy Boots smoothie (p. 93) calls for: 1 cup fresh apple or orange juice. 1 ripe banana. 1 tablespoon Kyo-Green. 1 date or a few raisins.

Contains many photos, both in black-and-white and color of Gypsy Boots, alone, or with family (p. iii, 19), friends, and celebrities. On the cover is a color photo of Gypsy in short pants standing barefoot on rocks in a stream. Eight unnumbered pages of color photos of Gypsy and friends on glossy paper follow page 70. This book has an unusually commercial tone. Throughout the book, Gypsy discusses the benefits of garlic supplements, wears Wakunaga’s Kyolic T-shirts in photos, and plugs Kyolic garlic quite a bit. Address: Camarillo, California.

2753. Bud, Robert. 1993. *The uses of life: A history of biotechnology*. Cambridge, MA; New York, NY: Cambridge University Press. xvii + 299 p. Illust. Index. 24 cm. [557 ref]

• **Summary:** Contents: List of illustrations. Foreword by M.F. Cantley (Concertation Unit for Biotechnology in Europe {CUBE}). Acknowledgements. Introduction. 1. The origins of zymotechnology: Introduction, the chemical roots of zymotechnology, from zymotechnology to organic chemistry, the biological alternative, agriculture, brewing, zymotechnics as trademark (zymotechnology, fermentation, the Zymotechnic Institute of Chicago [Illinois]). 2. From zymotechnology to biotechnology. 3. The engineering of nature. 4. Institutional reality. 5. The chemical engineering front. 6. Biotechnology—the green technology. 7. From professional to policy category. 8. The wedding with genetics. 9. The 1980s: between life and commerce. Epilogue. Notes. Sources.

Chapter 1, a fascinating history of the early days of biotechnology, discusses: Emil Christian Hansen, Berlin’s *Institut für Gaerungsgewerbe*, Louis Pasteur (p. 6-7), the German father of chemistry and Prussian court physician Georg Ernst Stahl (1659-1734), his interest in phlogiston, zymotechnics and practical teaching of brewing, in 1762 the word *zymotechnie* entered the exclusive dictionary of the Académie Française (p. 8-9), Mary Shelley and her novel *Frankenstein* (published in 1817; Frankenstein’s teacher, Professor Walden, admired the results of chemistry), the 1928 synthesis of urea by Friedrich Woehler caused the distinction between natural and chemical products to blur and almost disappear, the implications were explored by his friend, the brilliant chemist, teacher, and publicist Justus Liebig who shared Stahl’s faith in practical applications, Liebig came to be increasingly identified with the chemistry of agriculture and physiology, and organic chemistry, his pupils August Hofmann and James Muspratt, Adolf Baeyer who was Liebig’s successor at Munich created a school based on the study of natural products (p. 10-11), Emil Fischer, Baeyer’s greatest pupil, explored the carbohydrates and proteins, competition in Germany between organic chemistry and biochemistry, German Professor Julius Wiesner and his book *Raw Materials of the Plant World (Die Rohstoffe des Pflanzenreiches)* (p. 12-13).

“In 1857, Pasteur demonstrated that lactic acid

fermentation was the result of the action of live microbes. Through the next decade, he debated increasingly hotly with Liebig who insisted on the purely chemical origins of fermentation phenomena. Pasteur constructed a new scientific discipline based on his understanding of microbes, ‘microb-iology’. Where chemistry was characterized by the balance, the new science had its own central instrument, the microscope” (p. 14).

The 19th century in Europe saw the rise of major cities such as Paris and London, and the expansion of the industrial revolution in Britain. “Academic leaders argued that they should play their part in helping a development of the society that would avoid the division into a declining agricultural sector and an impoverished industrial proletariat.

“The first German agricultural college was established in the year of Prussia’s humiliation at the hands of the French, 1806, by a practical agriculturalist much impressed by British achievements, A.E. Thaer. His academy at Möglin was combined with the newly established University of Berlin in 1810. Largely inspired by Thaer’s example, twenty agricultural colleges were founded in German-speaking lands between 1818 and 1858. The development of trades traditionally closely associated with agricultural development would also enable organic change.”

“So far the emphasis was on teaching. However, all over Europe research followed.

“In France, Boussingault founded his private agricultural research laboratory at Bechelbronn in 1835, and Lawes and Gilbert established their laboratory at Rothamsted near London in 1842. These initiatives inspired, in Germany, the foundation of a research laboratory at Möckern (Moeckern), in 1851. Two years later, another followed in Chemnitz. By 1863, there were seventeen and, by 1877, fifty-nine so-called research stations in Germany. In the United States, the Morrill Act of 1863 and the Hatch Act of 1887 sustained the development of land grant colleges and associated agricultural research stations [sic, experiment stations] (p. 16-17).”

Brewing was an agricultural industry and increasingly big business in Germany and Britain, the foundation of the world’s first major chemical association, the Chemical Society of London in 1841 was driven by the energies of Robert Warington, German leaders were J.J. Steinmann (1799-1833) and Carl Balling—who espoused the term *Zymotechnik* in the 4th volume of his classic text on brewing (*Account of the Progress of the Zymotechnic Arts and Sciences*). “Just as agricultural centres had moved from a purely educational role to a greater influence on research, so this process could be observed in the special case of brewing. The first great centre, established in 1872, was at the school at Weißenstephan near Munich where brewing had been taught for more than twenty years. Its formation was driven by the entrepreneurial pharmaceutical chemist Carl Lintner, who within three years of arriving at Weißenstephan in 1863

had founded his journal, *Bayerische Bierbrauer*. In the first volume, Lintner ran a series of historical articles about the life of Balling, as the first of the founders of zymotechnics ‘for future cultural historians’ (p. 18-19).”

Emil Christian Hansen and the damaging effects of wild yeasts, Balling identified the role of yeast in brewing before Pasteur, debate over use of the words zymotechnology vs. Pasteur’s microbiologie (p. 20-21). Alfred Jorgensen popularized the word “zymotechnics,” John Ewald Siebel started a journal titled *Zymotechnic Magazine* in Chicago and in 1901 he founded the Zymotechnic Institute. “Siebel was widely respected and sufficiently renowned to be the focus of a 1933 *History of Brewing in America*.

Chapter 2 (p. 48-49) discusses William J. Hale, Henry Ford, and the rise of Chemurgy in America. “Hale did not distinguish too fastidiously between the boundaries of chemistry and used his word rather as others had employed ‘zymotechnology.’” A photo shows “Henry Ford demonstrating the strength of a car body made from soya bean-based plastic in 1941.”

Chapter 5 (p. 106-09) discusses Japan as the dominant center of the fermentation industry by the 1960s, and the koji mold. “In Japan, the development of microbiology was closely related to agricultural development and found an institutional home in the Agricultural Chemistry Society established in 1924. So, for all the special features of Japanese culture, the concept of a microbiology harnessed to agriculture closely paralleled chemurgy in the United States. There is a strange irony in this, since the promoters of chemurgy were strongly nationalistic and particularly anti-Japanese.

In 1936, the key appointment of Kin-ichiro Sakaguchi as professor of agricultural chemistry at the University of Tokyo established the reputation of the nation’s premier department of industrial microbiology.”

The Danish firm of Novo Industri emerged as the world’s largest enzyme manufacturer. Not until 1974 did Novo and Gist Brocades in the Netherlands develop cheap and effective methods for using enzymes to convert the glucose in corn to fructose (glucose isomerase). Otto Röhm (Roehm) patented an enzyme preparation for washing in 1913, and his company Röhm & Haas marketed their presoak product ‘Burnus’ for about 50 years.

The subsection titled “Biogas and gasohol” (p. 132-33) notes that in 1974, a sugar magnate in Brazil, Urbano Stumpf, persuaded the country’s president that alcohol made from sugar could by itself power all Brazil’s cars, replacing petroleum. Brazil committed great resources to this program and by 1980 was seen as a model to the world. America, too, was interested in reviving what Hale had called “agri-crude” and what was coming to be called “gasohol.”

The subsection on “single-cell protein” (p. 133) discusses chlorella, tempeh, soya texturized to make an artificial meat, and growing microorganisms on petroleum

for food. Max Delbrueck had called yeast an “edible mushroom.”

Monsanto and the Plant Variety Protection Act of 1970 (p. 195). Address: The Science Museum, London, U.K.

2754. Escano, Crisanto R.; Gaddi, Virgilio Q. 1993. Country report 11–Philippines. In: N. Chomchalow & P. Narong, eds. 1993. Soybean in Asia: Proceedings of the Planning Workshop for the Establishment of the Asian Component of a Global Network on Tropical and Subtropical Soybeans. Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 92–108. RAPA Publication (FAO), No. 1993/6. [12 ref]

• **Summary:** Contents: (1) Introduction. (2) Production: Status, major growing seasons and cropping systems, constraints, resolving constraints. (3) Processing, utilization and marketing: Status, supply and demand, exportation of soybean products, constraints, resolving constraints.

Figures: (1) Trend in soybean production, Philippines, 1980–90. (2) Soybean area harvested, Philippines, 1980–90. (3) Trend in the soybean yield, Philippines, 1980–90. (4) Regional shares of total production, Philippines, 1990. (5) Soybean and soybean product shares in importation, Philippines, 1990. (6) Country of origin, soybean meal import, Philippines, 1990. (7) Country of destination, soysauce export, Philippines, 1990.

Tables: (1) List of soybean-based food products popularly used in the Philippines. (2) Volume and value of soybean imports, 1980–90.

Soybean production increased from about 9,800 tonnes (metric tons) in 1980 to a peak of 11,466 tonnes in 1982, then decreased to 5,614 tonnes in 1990. Area planted to soybeans increased from about 10,000 ha in 1980 to a peak of about 11,000 ha in 1982, then decreased to about 7,000 ha in 1990. The average yield for the period 1980–1990 was 920 kg/ha, but has generally been falling since 1983. Southern Mindanao has been the single most important soybean producing region in the Philippines for more than a decade, accounting for about 67% of total Philippine soybean production in 1990; Central Mindanao comes next with about 23%.

A brief history of soybean production in the Philippines from 1983 to 1990 appears on pages 99–10. Popular soyfoods products in the Philippines include: A. Fermented products: Soy sauce (toyo), fermented soybean curd (tausi [sic, salted, fermented black soybeans]), tempeh (tempe), soybean paste (miso), soft fermented soybean curd (tahuri). B. Non-fermented products: Soybean sprouts (toge, tauge), soybean cheese [curds] (tokwa), Geerlings cheese (taho [tofu]), soybean milk (soymilk), and roasted soybean powder (soy coffee).

Philippine imports of soybeans and soybean products have increased rapidly since 1980, yet 93% of these imports in 1990 were soybean meal, of which 38% comes from India,

33% comes from the USA, 22% from China, and 7% from others.

In April 1991 the General Milling Corporation’s soybean solvent extraction plant began operation in Tabango, Batangas. It is expected to reduce the country’s imports of soybean meal but increase the imports of raw soybeans.

2755. **Product Name:** Tempeh Delites [Cutlets (Regular, or Spicy), Sticks (Regular, or Spicy), or Nuggets (Regular, or Spicy)].

**Manufacturer’s Name:** Harvest Earth Foods.

**Manufacturer’s Address:** P.O. Box 816, Sterling Heights, MI 48316. Phone: 810-469-1730.

**Date of Introduction:** 1993. January.

**How Stored:** Frozen.

**New Product–Documentation:** Talk with Charles J. Leonardi, owner. 2001. May 18. Harvest Earth Foods is now located at P.O. Box 816, Sterling Heights, Michigan 48316. Phone: 810-469-1730. Charles bought the company from Dr. Jerry Skrocki, the founder, in 1993. The plant has never moved. The company was making Tempeh Nuggets when Charles bought it, but he does not know when the nuggets were introduced. They make six tempeh SKUs.

2756. Pitchford, Paul. 1993. Healing with whole foods: Oriental traditions and modern nutrition. Berkeley, California: North Atlantic Books. xxii + 656 p. Illust. Index. 26 cm. [536 ref]

• **Summary:** Contents: 1. Origins. Part I: The roots of diagnosis and treatment. 2. Yin-yang and beyond. 3. Qi vitality. The six divisions of yin and yang: 4. Heat/cold–The thermal nature of food and people. 5. Exterior/interior: Building immunity. 6. Excess and deficiency.

Part II: Essentials of nutrition. 7. Dietary transition. 8. Water. 9. Protein and vitamin B-12. 10. Oils and fats. 11. Sweeteners. 12. Salt. 23. Condiments, caffeine, and spices. 14. Vitamins and supplements. 15. Calcium. 16. Green food products. 17. Survival simplified. 18. Enjoyment of food. 19. Food combinations. 20. Fasting and purification. 21. Food and children.

Part III: The five element and organ system. 22. Five elements: Seasonal attunement and the organs in harmony and disease. 23. Therapeutic use of the five flavors. 24. Wood element. 25. Fire element. 26. Earth element. 27. Metal element. 28. Water element.

Part IV: Diseases and their dietary treatment. 29. Blood sugar imbalance [diabetes]. 30. The stomach and intestines. 31. Blood disorders. 32. Cancer and regeneration diets. 33. Other degenerative disorders.

Part V: Recipes and properties of vegetal foods. 34. Vibrational cooking. 35. Grains. 36. Breads. 37. Legumes–Peas, beans, and lentils: Healing properties of legumes,

improving the digestibility of legumes, techniques for cooking legumes, miso, tempeh, tofu. 38. Nuts and seeds. 39. Vegetables. 40. Sprouts. 41. Salads. 42. Seaweeds: Agar-agar, dulse, hijiki and arame, kombu and kelp, nori, wakame, Irish moss and Corsican (*Alsidium helminthocorton*; it is sold as a tea and discharges worms. 43. Soups. 44. Sauces. 45. Condiments: Chutneys and relishes. 46. Spreads and patés. 47. Pickles. 48. Grain and seed milks (incl. sesame seed milk, almond milk, almond milk shake, sprouted grain milk {oats, rice, millet, barley}, cooked grain milk). 49. Rejuvelac and yogurt. 50. Fruit. 51. Desserts. Appendixes: Recipe locator. Bibliography (180 references, mostly alternative; Oriental philosophy. Chinese medicine: Theory and foundations. Chinese dietary therapy. Ayurvedic and Tibetan medicine. Western approach to nutrition. Healing the spirit and mind. Chinese herbology. Western herbology. Healing with food. Green foods. Amaranth. Seaweeds. Vegetarian, macrobiotic, vegan. Children. Ecology, politics, and ethics of food. Degenerative diseases and immunity. Toxins and radiation. Cookbooks. Food catalogs, guides, and references. 2763. O'Brien, Jim. 1994. Can tofu stop cancer? Research shows soy foods cut risk of breast, prostate cancers *Your Health*. Jan. 25. p. 21-22. [1 ref]

• **Summary:** Mark Messina, PhD, a nutritionist and former researcher at the National Cancer Institute for 5 years, states that "There's strong evidence to indicate that soy can lower cancer risk, especially of the breast and prostate." Messina says that "soy may contain 'anti-estrogens,' compounds that perform many of the necessary and beneficial functions of real estrogen, but not the harmful stuff (for example estrogen is vital for reproductive health, but researchers believe it may spur growth of many breast cancers).

In Japan, where the diet is rich in soy [and much lower in fat], the breast cancer rate is much lower than in the USA. Every year in Japan roughly 7 women per 100,000 die of breast cancer and 28 per 100,000 are diagnosed with the disease; the corresponding figures for U.S. women are 27 and 105.

Japanese men also have low rates of prostate cancer. 3.5 per 100,000 Japanese men die of this disease every year but it kills 15.7 per 100,000 American men—also nearly a fourfold difference.

2764. **Product Name:** Soy Tempeh with Lupin.

**Manufacturer's Name:** Lean Green Foods.

**Manufacturer's Address:** P.O. Box 10562, Hilo, Island of Hawaii, HI 96721-562. Phone: (808) 985-8563.

**Date of Introduction:** 1994. January.

**Ingredients:** Certified organic soybeans (grown in accordance with sec. 26569.11 of the California Health and Safety Code), sweet white lupin, cider vinegar, tempeh culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated or frozen.

**New Product—Documentation:** Letter and Label sent by Benjamin Hills. 1994. Jan. 26. "Lean Green Foods became official with the state of Hawaii in August 1993. Production got rolling this week and the product bag with label are enclosed." He is making two products: Soy Tempeh with Lupin and plain soy tempeh for the local Indonesian people. His business card reads: "Lean Green Foods—Hilo, Hawai'i. Protein for the Future. Benjamin Hills, P.O. Box 10562, Hilo, Hawai'i 96721-5562. Phone: (808) 985-8563."

Label. Plastic bag printed with green ink. 5¼ by 7

inches. Illustrations of the Island of Hawaii with a 5-pointed green leaf (resembling a marijuana leaf) at the center, palm fronds, and a "Made in Hawai'i" logo. "Sweet white lupin is a recently developed legume increasingly grown by Native Hawaiian peoples. It has higher protein content and dietary fiber than soybeans, making it firmer than traditional all-soy tempeh." On the back of the bag is a large recipe for Tempeh with Barbecue Sauce. "Black spots may appear, but are safe to eat. They are mature spores and do not indicate spoilage."

2765. Plenty International. 1994. A guide to growing and using soybeans for food. Davis, California. 37 p. Jan. Illust. 22 cm.

• **Summary:** Contents: Foreword. Introduction. Growing soybeans: Planning, land preparation, planting, plant growth, field sanitation, insect and disease control, harvest, threshing, storage, vacuum packing for seed storage, calculating growing costs. Home preparation of soybeans: Cooking soybeans, soy flour, soy coffee and nuts, ingredients for making soy milk, tofu and tokara, kitchen tools, soy milk, tokara (tofu with the okara still in it), tofu, tempeh, storing soybean foods, costs of processing soybeans for market, expected yields of primary soybean foods, recipes. Nutritional information. Resources and contacts. Acknowledgments.

Businesses Plenty has worked with that make fresh soyfoods and are listed on pages 30-32 include: Alimentos San Bartolo (San Bartolo, Guatemala). Survival Foods and Nature Island Foods (Roseau, Dominica, West Indies). Natural Cafe and Health Plaza (Castries, St. Lucia, West Indies). Kay Cuisine (Kingstown, St. Vincent, West Indies). Country Farmhouse Soy Products (Kingston, Jamaica). Deagbo Industries (Ibadan, Nigeria). Address: P.O. Box 2306, Davis, California 95617. Phone: (916) 753-0731.

2766. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Soyfoods industry and market—Bibliography and sourcebook, 1985 to 1993. Lafayette, California: Soyfoods Center. 361 p. Subject/geographical index. Author/company index. Language index. Printed 11 Jan. 1994. Published Jan. 1995. 28 cm. [1985 ref]

• **Summary:** This is the second of the two most comprehensive books ever published on the soyfoods industry and market worldwide.

In May 1982 the first study of the burgeoning soyfoods industry in the Western world was compiled by Shurtleff and Aoyagi, and published by Soyfoods Center. In April 1985 the fifth edition of that book, titled *Soyfoods Industry and Market: Directory and Databook* (220 pages), was published. It contained statistics through 1984, the market size and growth rate for each soyfood type, rankings of leading soyfoods manufacturers of each soyfood type and the amount each produced, analyses, trends, and projections. This book is published to update the 1985 market study.

In the decade since 1984 the soyfoods market has continued to grow at a very healthy rate, with some soyfood types (such as soymilk) growing at a truly astonishing sustained rate—in both the USA and western Europe—as the statistics in this book show so vividly. In 1975 only 75 new commercial soyfood products were introduced in the USA, yet that number skyrocketed to 217 in 1979, reaching an amazing 422 new products in 1987.

During the decade from 1984 to 1994, Soyfoods Center has invested most of its time and resources in the production of SoyaScan, the world's largest computerized database on soyfoods, which contains more than 44,500 records as of Jan. 1994. This database also includes a wealth of carefully researched statistics and analyses of the soyfoods market; those from the start of 1985 to the end of 1993 are contained in this book. Its scope includes all known information on this subject, worldwide. Its focus, however, is statistics, analyses, and trends concerning the soyfoods industry and market in the United States and Europe.

In May 1990 Soyfoods Center conducted an in-depth study of the tofu market in Europe (137 pages), and in July 1990 of the soymilk market in Europe (261 pages). All original interviews and published records from both of these market studies, plus a summary of each study, are included in the present book.

The SoyaScan database is composed of individual records. One record might be an original interview with the head of the largest soymilk company in Europe, on the size and growth of the soymilk market in Europe, and new trends in that market, conducted by William Shurtleff of Soyfoods Center. Another might be a published article or an unpublished document concerning the growth of the market for soy yogurts or soy sauce in America.

This book documents the growth of each product category in every country worldwide. The book contains three extensive and easy-to-use indexes: A subject/geographical index, an author/company index, and a language index. These allow you to find the exact information you need on the soyfoods industry and market quickly and easily. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

2767. United Soybean Board; Nebraska Soybean Program. 1994. Designed for life: A closer look at the versatile soybean's contribution to human health (Brochure). Lincoln, Nebraska. 12 panels. 23 x 10 cm each. [1 ref]

• **Summary:** Contents: Soybean fiber. Soybean protein (in soy flour, isolates, concentrates). Soybeans: The newest and oldest of designer foods. Finding and using soybeans: Miso, tofu, natto, tempeh, full fat flour, soymilk, soynuts, soy sauce. Soybean oil: 85% unsaturated fat, no cholesterol, high in polyunsaturates, hydrogenation and *trans* fatty acids. Once upon a time ("circa 1500 BC, Yu Xi-ong and Gong Gang-shi, who were either bandits or warlords depending on your

perspective...” discovered the soybean. Note: This story has no basis in historical fact). The soybean: Health insurance in a pod.

Photos show: Two hands holding up a large Chinese bowl of miso soup containing squares of tofu. A table set with dishes of various East Asian soyfoods. Charts: Bar charts showing percentage of saturated, monounsaturated, and polyunsaturated fatty acids in soybean oil and other oils and fats. Nutritional analysis of 1 cup of cooked soybeans.

Note: This brochure was developed for the United Soybean Board (USB) by the Evans Group in Seattle, Washington. It was mailed mostly to food manufacturers. Address: Lincoln, Nebraska.

2768. United Soybean Board. 1994. Soybeans: Unlocking the secret to good nutrition. Healthcare guide. St. Louis, Missouri. 8 p. 28 cm. [5 ref]

• **Summary:** Contents: A critical food source from the dawn of history. The only vegetable that contains complete protein. World soybean production (1992/93, bar chart). The most versatile food on earth. Health benefits of soy foods (discusses only soybean oil!). Nutritional analysis of soybeans, kidney beans, and peanuts. Bar chart showing the fatty acid composition of soybean oil and other oils and fats (soybean oil is “the balanced oil”). Hydrogenation and health. Cis and *trans* fatty acids. Soybean oil’s place in the diet. Whole soybeans foods: Tofu, tempeh, miso, natto, soy sauce, full fat soy flour, soy “nuts” and soymilk. Soybean fiber (the outer hull). Soy protein products: Defatted soy flours, soy isolates, soy concentrates. Isoflavones (incl. Genistein). Soybeans, the “All American” legume. For more information call 1-800-Talk-Soy.

Note: This brochure was developed for USB by the Evans Group in Seattle, Washington. It was mailed mostly to dietitians, nutritionists, and members of the food industry. It focused more on soy oil than on soy protein. Address: St. Louis, Missouri.

2769. Asbridge, David D. 1994. Agricultural importance of soybeans. In: Mark Messina, ed. 1994. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease: Abstracts. Chesterfield, Missouri: United Soybean Board. 27 p. See p. 6. Held 20-23 Feb. 1994 at Mesa, Arizona.

• **Summary:** “Soybeans are omnipresent in American life... Last year, the average American consumed only four pounds of soyfoods in the form of soy protein products, tofu, soymilk, tempeh, miso, soy sauce, and soynuts. They consumed over 40 pounds of soybean oil in the form of margarine, salad dressings, cooking oils, and shortening. They consumed 204 pounds of meat, poultry, and eggs. Soybean meal, the most widely used processed feed ingredient in the U.S., is the leading source of protein for meat and poultry animals. To meet this huge demand for

soybeans, vast resources are needed. In 1992, 440,000 U.S. farmers planted 59 million acres of soybeans. That’s enough to nearly cover the entire state of Arizona. The farm value of the 2.2 billion bushel crop was more than \$12 billion dollars. Once farmers sold the 1992 crop, the majority of the soybeans were either crushed into meal and oil, or exported. The meal and oil were valued at \$6 billion and \$3 billion, respectively. Exports, which historically make up one-third of the U.S. soybean crop, directly reduced the U.S. trade deficit by almost \$4.5 billion dollars and indirectly employed 126,600 people. It has been estimated that since 1975, the value of the soybean crop has been about \$275 billion in nominal terms. The multiplier effect brings the total impact to the US economy of soybean production to \$800 billion.” Address: American Soybean Assoc., 540 Maryville Centre Drive, Suite 390, P.O. Box 27300, St. Louis, Missouri 63141-1700.

2770. Badani, Bernard. 1994. Edible soybean mission report, Indonesia, Taiwan, Korea, February 1994. Ottawa, Ontario, Canada: Agriculture and Agri-Food Canada. 23 p. 28 cm. Spiral bound.

• **Summary:** Contents: Foreword: Mission objective, countries visited, main goals, conclusion. Acknowledgments. Names of the 8 mission members. Visit to Indonesia (Jakarta): Background, visits (Nestle soymilk plant in Surabaya, BULOG), conclusions, market potential (short, medium, and long term). Visit to Taiwan (Taipei, Taichung, Tainan, Kaohsiung): Background (the pro-American soybean lobby), visits (Taiwan Tofu Manufacturers Assoc., Tet Union Corp., Great Wall Enterprises, Hereng Yih), conclusions, market potential (short and medium term). Visit to Korea (Seoul): Background, visits (Hyosung Corp., AFMC, Korean and Seoul Tofu Manufacturing Co-operatives, conclusions, market potential (short and medium term). List of contacts by country (photocopies of business cards). Note: Mr. Badanai works for this federal organization in Ottawa.

This mission, whose coordinator was Michael Loh, took place between Feb. 25 and March 10, 1994; it was organized by OSGMB with assistance from the Canadian Embassies in Jakarta and Seoul, and the Canadian Trade Office in Taipei. The overall objective of the mission was to open these 3 markets to the sale of Special Quality White Hilum (SQWH) soybeans from Canada for use by their soy food industries.

Indonesia imports about 700,000 tonnes of soybeans each year, mostly grade #1 from the USA, to supplement its local production of about 1.3 million tonnes. About 250,000 tonnes of the imports are used to make soyfoods such as tempeh (which accounts for about 80% of the total), tofu, tauchu (Indonesian miso), and soybean milk. The majority of their domestically grown soybeans are also used to make soyfoods. All Indonesian soybean imports are handled by BULOG, a government agency which determines yearly requirements and allocates the resulting imports to

various companies under a complex price structure formula apparently designed to maintain the competitiveness and full utilization of the domestic crop whose internal prices are very high by international standards. Sarpindo is the largest Indonesian soybean crusher. Nestle operates a soymilk plant in Surabaya that makes 12,000 tonnes/year and is completing a second one of 20,000 tonnes capacity in Jakarta. Much of Nestle's production, especially for the new Jakarta plant, is oriented toward the export market, with the Philippines as their top priority.

Taiwan grows only 12,000 tonnes of soybeans domestically, but they import 2,400,000 tonnes per year. Their main suppliers are the USA (1,938,000 tonnes, 80.8% of the total), China, 297,000 tonnes), and Argentina (6,000 tonnes). Imports are handled mostly by a small number of major crushers, which then select a portion of the #2 soybeans imported, bag them, and sell them to Taiwanese soyfood manufacturers. About 8% of the total imports (200,000 tonnes) are handled in this way. Tofu is by far the most important soyfood in Taiwan, with consumption of 49.79 kg/capita/year. Most tofu is made by very small companies. The main problem facing Canadian exporters is the almost total control that the pro-American soybean lobby has shown so far in Taiwan. This lobby includes the main local crushers/importers of U.S. soybeans (which have a strong interest in maintaining the present import and distribution systems that make local tofu manufacturers dependant on them), and the American Soybean Association (ASA) office (with a staff of 15) in Taipei. Tet (Ttet) Union Corp. in Tainan is the largest crusher in Taiwan. Fwusow (Fwu Sow) is a large edible oil company. Taiwan's largest tofu manufacturer is Heng Yih Food Industrial Co. of Kaohsiung. The 13 year old company has two plants, 14 minutes drive apart.

Korea imports between 1 and 1.1 million tonnes of soybeans a year to supplement domestic production of about 200,000 tonnes. Approximately 200,000 tonnes of the total imports and 20,000 tonnes of domestically grown soybeans are used to make soyfoods, mostly tofu. All soybeans destined for this purpose are purchased by AFMC, the Agricultural and Fisheries Marketing Corporation, a state-owned corporation and government monopoly under the Ministry of Agriculture. that resells soybeans to food processors according to their needs, charging a very high markup over the import purchase price. This markup, in turn, allows AFMC to subsidize purchases of domestic soybeans which it buys at prices close to 5 times the international price but which it resells to tofu manufacturers at the same price as the imported soybeans. It is expected that AFMC will loose its importing monopoly on food grade soybeans by 1997 due to the GATT agreement. An immediate market potential for Canadian soybeans seems to exist for sprouting soybeans, of which Korea purchases about 6,000 tonnes a year. Address: Grains and Oilseeds Div., International Markets Bureau,

Agriculture and Agri-Food Canada, Ottawa.

2771. *Toyo Shinpo (Soyfoods News)*. 1994. Ajia no nattô—sono genryû o saguru. Biruma, Nepaaru nado e kuruma de tôsa. Ajinomoto Shohu (hin) no Bunka Fooramu no josei de. Tenpe-ken Watanabe zen kaichô ra 3 shi. 6 gatsu ni kenkyû seika happyô [Trying to find the roots of natto in Asia. Three researchers went to Burma and Nepal by car in search, helped by Ajinomoto Food Company's Cultural Forum. Among them was Tadao Watanabe, former head of the Tempeh Research Society. They are planning to present their results in June]. March 21. p. 1. [Jap]

• **Summary:** Photos show the three researchers who went on the trip: Tadao Watanabe, Yoshiko Yoshida, and Toshiie Maeda.

2772. Minnesota Soybean Growers Association; Minnesota Soybean Research & Promotion Council. 1994. Cooking with soy. North Mankato, Minnesota. 45 p. March.

• **Summary:** Talk with Christie Metzger of the MSRPC. 1996. Jan. 4. The first edition of this book was published in March 1994. Some of the recipes came from the winners of a contest. Address: 360 Pierce Ave., Suite 110, North Mankato, Minnesota 56003. Phone: 507-388-1635.

2773. *Palawija News (Bogor, Indonesia)*. 1994. International Soyfoods Fair and the Third Asian Symposium on Non-Salted Soybean Fermentation: June 4-6, 1994, Akita City, Japan. 11(1):16. March.

• **Summary:** For further information contact: Symposium Executive Committee Director, Seiha Yamada, c/o Akita International Association Aided Bldg., 8F, 2-1-60 Sanno, Akita, Japan 010.

Note: This symposium took place, but the symposium proceedings were apparently never published.

2774. **Product Name:** Superfresh Baked Tempeh [Sandwich].

**Manufacturer's Name:** Superfresh Foods!

**Manufacturer's Address:** P.O. Box 883551, San Francisco, CA 94188. Phone: (415) 282-4438.

**Date of Introduction:** 1994. March.

**Ingredients:** Incl. tempeh.

**How Stored:** Refrigerated.

**New Product-Documentation:** Talk with lady from Superfresh. 1995. March 16. This product was introduced in about March 1994.

2775. Althoff, Susanne. 1994. Meatless muscle: Vegetarian bodybuilders bulk up just fine without the beef. *Vegetarian Times*. April. p. 69-70, 72, 74-75.

• **Summary:** Vegetarian bodybuilders include Andreas Cahling ("Mr. International," weighs 210 lb, from Cardiff by the Sea, California) and Bill Pearl (four time "Mr. Universe."

He was a vegetarian when he won his titles in 1967 and 1971), Spice Williams (vegan actress and stuntwoman), and Beth M. Ley.

“Twenty-five years ago there were virtually no professional bodybuilders who were vegetarian,” says James E. Wright, at editor at Muscle & Fitness magazine (Woodland Hills, California). “Now there are several.”

A table gives typical daily menus for Bill Pearl, Andreas Cahling (incl. Tofu Burrito and Rice pudding made with soymilk), Spice Williams (10 oz. shake with soymilk, water, and soy protein powder, 8 oz. tempeh burger, 2 cups cooked TVP (textured vegetable protein)).

Pearl, age 63, is still a vegetarian but no longer competes. “Spice Williams turned vegetarian as part of a program to get her life back on track after overdosing on drugs.”

Photos show the muscled bodies of (1) Bill Pearl. (2) Spice Williams. (3) Andreas Cahling.

2776. Kath. Gemeinden St. Johann und St. Joseph. 1994. Soja fuer Ghana [Soya for Ghana]. Duisburg-Hamborn, Germany. 24 p. Illust. 21 cm. [Ger]

• **Summary:** Each year this group of German Catholics has one development-help project in Ghana. In 1991 and 1992 it was trees for Ghana. In 1993 it was soya for Ghana. Contents: Development help? by Gottfried O. Praem. Africa’s need (incl. population growth, demographics, per capita GNP, and infant mortality). Our new project: Soya for Ghana. Why soya? Yields a variety of foods, healthy, ethical (in relation to eating animals and protecting the environment), good for agriculture. History of the soybean plant. Food products from the soybean: Soymilk, tofu, soy protein, soy sauce, miso, tempeh, soy oil, soy sprouts. Cultivation of soybeans in northern Ghana. Planting and harvest. Ghana—the land and its agricultural products. Teaching hygiene in Ghanaian. Dear money: Where does it come from and how is it spent? Past projects in Ghana and the 1993 Soya for Ghana project. The Bole mission station in northern Ghana (90,000 inhabitants of which 4,000 are Christian). Recipes. A talk with Brother Rudolf, age 62, during his visit to Hamburg in Sept. 1993. Address: Duisburg-Hamborn, Germany.

2777. Bean Supreme Ltd. 1994. Wholesale price list. P.O. Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. 2 p. May 1. 28 cm.

• **Summary:** The company sells the following soyfoods: Tofu (firm bulk and vacuum pack), Tofu Luncheon (3 flavors), Soysage, Tempeh (vacuum pack), Soymilk (Nice ‘n’ Healthy), Lite Licks Non-Dairy Frozen Dessert (6 flavors in 2 liter size, 3 of those flavors in 475 ml size, and bulk packs of 9 liters and 16 liters).

It also sells the following non-soy foods: Biofarm organic yoghurts (3 flavors), Malabar goat yoghurt, Cyclops

acidophilus yoghurt (5 flavors), Koromiko cheeses (10 flavors), Olive grove Middle Eastern foods (falafel mix, hoummus, Middle Eastern sauce, tahini), herbal teas (3 flavors), and Pacific Harvest sea vegetables (Karengo fronds, flakes, and shaker, and kelp shaker). Address: Penrose, Auckland, New Zealand.

2778. Elliott, Tom. 1994. Update on The Farm Soy Dairy (Interview). *SoyaScan Notes*. May 1.

• **Summary:** Tom, who has lived on The Farm for almost 20 years, and his wife Barbara, purchased this company in July 1991 from Michael Lee. Michael was going to simply close the company and he had let it run down. Tom’s background is in the excavating business and his wife is a nurse. He has not introduced any new products since he bought the company, but he did change the company name to FarmSoy Company. The company’s main product is pasteurized tofu; they produce 1,500 to 1,600 lb once a week. They also make a little soy yogurt, soymilk, and tempeh, which is sold mostly to people living on The Farm. The company has 2 adult employees and has a positive cash flow.

People on The Farm no longer all get together like they used to when it was run communally. Stephen no longer to talks like he used to.

Update on the change of company name: Talk with Tom. 1998. July 8. Tom and Barbara incorporated their company on 2 March 1994 in the state of Tennessee. At that time they changed the company name to FarmSoy Company from The Farm Soy Dairy. Tom and Barbara are the only shareholders in the corporation. Address: 156 Drakes Lane (P.O. Box 96), Summertown, Tennessee 38483. Phone: 615-964-2411.

2779. Alonso, Jean-Luc. 1994. Re: History of his pioneering work with tempeh in France. Letter to William Shurtleff at Soyfoods Center, May 16. 4 p. Handwritten. [Fre]

• **Summary:** “Mr. Sakaguchi has forwarded to me the letter which you sent him on 15 Aug. 1993. You were asking him for information about the first producers of tempeh in France. You mentioned the existence of a woman. In fact, she and I were associates. Her name at the time was Anita Dupuy. We began producing tempeh in September 1981 in Paris. [Note: Soyfoods Center records indicate that this company did not start production until about May or June of 1982].

Since then Anita was divorced and has remarried to a Dutchman; she lives in Holland, and goes by a different name. I do not know her address. She is teaching French, which is what she was doing before she left France.

A brief history: While staying in the United States for the purpose of studying at the Kushi Institute of Boston [Massachusetts], I came up with the idea of producing tempeh in France. Upon returning to France, I began experimenting with its production and began looking for material and a place to produce it. Mutual friends introduced me to Anita Dupuy who also wanted to make tempeh. Thus

we became associates for this adventure. We rented an old butcher shop. The small business was named *Traditions du Grain*. We were producing 100 to 200 cakes of tempeh (each weighing 300 gm) per week. Anita was in charge of the business while I took care of making the tempeh. Except for fried tempeh and sandwiches, we did not make any second generation products. This may explain our lack of success. For two years we did not receive a salary. In addition, understanding between Anita and me went downhill for several reasons.

After two years, I quit the business. Anita continued for a while, then sold the company to another person, who continued for a year or two and then finally stopped.

In 1985, another business in Montpellier named Athanor started producing tempeh, plus a pâté with tempeh and amasake as the main ingredients. This company was not much more successful than *Traditions du Grain*—It closed its doors in 1987. I do not know the names of the owners of this business.

In 1989, a new attempt was made by the firm named Renaitre (meaning “to be reborn”) close to Cahors. Another failure. One year later the business closed its doors.

During that time, in 1987, a company named Soleil de Lalise (meaning “the sun of Lalise”), located near Agen, also began to make tempeh and tofu. These products are still sold by this firm. Their address is: Domaine de Galise, 32260 Tachares, France. Phone: 62.65.35.63.

“As for myself, I produced tempeh at the communal level from 1987 to 1989, within the framework of a macrobiotic center. Then the center closed down. I continued alone for a small local micromarket (friends and acquaintances). In late 1989 and early 1990 I was in contact with you. I was planning to make tempeh on a large scale. I almost bought the business Renaitre that I mentioned earlier.

“The most amusing aspect is that while visiting the Renaitre plant, I recognized equipment or material that I had purchased for *Traditions du Grain*. Renaitre had bought it when *Traditions du Grain* closed down. In the end, the deal did not go through. In the meantime, my wife [Rachel] and I moved to a new location.

“In October 1992 we began producing Essene bread and other baked goods. This business [Gaia, in Graulhet] is going very well.

“In France, tempeh did not meet with large success because nobody invested energy and money in *information*. For now we are dedicating ourselves to making Essene bread but we have not given up on the idea of producing tempeh. We are just waiting until we have the means to do things seriously.” Address: Gaia, 7, rue du Mail, 81300 Graulhet, France. Phone: 63 42 16 03.

2780. Keuth, Sylvia; Bisping, Bernward. 1994. Vitamin B-12 production by *Citrobacter freundii* or *Klebsiella pneumoniae* during tempeh fermentation and proof of enterotoxin

absence by PCR. *Applied and Environmental Microbiology* 60(5):1495-99. May. [34 ref. Eng]

• **Summary:** “A decrease in fermentation temperature from 32 to 24°C led to a decrease in vitamin B-12 formation.”

This study “supports the suggested use of these two strains to form vitamin B-12 during tempeh fermentation in Indonesia.” Address: Institut fuer Mikrobiologie, Westfaelische Wilhelms-Universitaet, Muenster, Germany.

2781. Melina, Vesanto; Davis, Brenda; Harrison, Victoria. 1994. *Becoming vegetarian: A complete guide to adopting a healthy vegetarian diet*. Toronto, Canada: Macmillan Canada. x + 262 p. Foreword by Louise Lambert-Lagacé. Index. 26 cm. [20 ref]

• **Summary:** An excellent vegan sourcebook and cookbook by three registered dietitians. For the Contents and details, see the 1995 revised American edition.

Talk with Vesanto Melina. 1996. July 22. This book has presently sold about 25,000 copies in Canada alone. A revised U.S. edition was published in Nov. 1995 by The Book Publishing Co. in Summertown, Tennessee. Address: Canada.

2782. Kushi, Aveline. 1994. Early work with tempeh (Interview). *SoyaScan Notes*. June 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Her first son, Norio, was born on 15 Dec. 1954. Her youngest son, Hisao, was born in 1965. Then she and Michio moved from Wellsley to Boston, Massachusetts, and started Erewhon in April 1966. In Aug. 1969 Aveline moved to Los Angeles (California), where her youngest son, Hisao, underwent traditional Japanese treatment for a bone problem. After about 2 years she and her son returned to the Boston area. At about this time, she and Michio took their first or second trip to Europe. During a visit to Amsterdam, Netherlands, she was with Adelbert Nelissen (who was a student of macrobiotics and is now running a Kushi Institute there), who took her and Michio, after a seminar, to an Indonesian restaurant. There she tasted tempeh for the first time, realized it was made from soybeans, and liked it very much—in fact much better than natto. She also realized that most Americans would like tempeh better than natto—another fermented soyfood. She told Adelbert: “You must learn how to make tempeh.” After returning to America, she sent an American man to Amsterdam to learn how to make tempeh. She also brought back tempeh and started to show it to people, and to use it, in her cooking classes in Boston. Everybody liked it. And it was easy to make. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6869.

2783. **Product Name:** Tempeh.

**Manufacturer's Name:** Stanley Darby.

**Manufacturer's Address:** P.O. Box 7248, Agat, Guam

96928. Phone: 671 565-2059.

**Date of Introduction:** 1994. June.

**New Product–Documentation:** Talk with Stanley Darby of Guam. 1995. June 14. He is a Seventh-day Adventist, who has been making tempeh by hand for about one year and selling it to Seventh-day Adventists who have a large get-together each Saturday after church. He has brought tempeh starter culture back from Indonesia several times.

Stanley calls again from Guam. His address is now P.O. Box 8389. He still makes tempeh for SDAs and still has no company name.

2784. Traugot, Michael. 1994. A short history of The Farm [of Summertown, Tennessee]. Summertown, Tennessee: Self published. 78 p. No index. 30 cm.

• **Summary:** Contents: Early roots: Stephen Gaskin. Monday night class: Attention equals energy, Holy Man Jam. The Caravan: Busted, we give up acid (LSD), back to Tennessee. The Martin Farm: Ina May Gaskin, the first garden, busted again. The Farm (Lewis County, Tennessee): The Black Swan Ranch, family and sex, households, sex and reproduction, natural birth control, gender roles, health care and home birth, the farm economy, vow of poverty, work, income, the spiritual aspect of economy, meetings and services, government, diet—you are what you eat (vegetarian diet, soybeans, tofu, tempeh—p. 37-38), appropriate technology, education—The Farm school, the pony crew, recruiting, the Gate, other Farms. Plenty: Guatemala, the Soy Project (p. 48). Agriculture on The Farm: Florida Farm. Changes: Stephen goes to jail, changes in government, *mazing Tales of Real Life*, causes of the crisis. The changeover (from communal living arrangements). Political activity: Ragweed Day, the FBI file. The Farm today: Stephen and Ina May, business and projects on today's farm, Martin Farm 2—the sequel, alumni and networking. Community and society: The Farm—Success or failure? The Farm children. Names and addresses for contacting Farm organizations. Address: 84 The Farm, Summertown, Tennessee 38483. Phone: 931-964-2587.

2785. Bianchini, Gilberto. 1994. Re: Early history of tofu and seitan in Italy. Letter to William Shurtleff at Soyfoods Center, July 16—in reply to inquiry. 3 p. Typed. [Eng]

• **Summary:** “I started to make tofu and sell it officially in October 1979 in Rimini, Italy, at Via Cuoco 9 (Community Food). I first learned how to make tofu in London at the Community Health Foundation, Old Street 98, in 1976 or 1977. Then I gained additional experience in making Japanese-style nigari tofu from Centers and individuals in France and Belgium. I first visited the United States in late 1978 and early 1979. On 9 Feb. 1979 I visited you [William Shurtleff and Akiko Aoyagi] at New-Age Foods Study Center in Lafayette, California, having a good impulse in tofu pioneering, to talk about making tofu in Italy.

“In 1980 I visited a friend, Mr. Franco Pagliano, in Milan; that city had many Chinese restaurants. Mr. Pagliano had learned how to make tofu from Mr. Roland di Centa. was supplying these Chinese restaurants with a small quantity of tofu (he made it the Chinese way, with calcium sulfate), but he was soon forced to stop production because he had difficulties producing, unofficially without the proper permits, in his apartment. It was a really good experience for me to get to know Chinese and Japanese people; Franco was very skillful and shared many secrets with me. Then after several months he called me to say that he was going to stop tofu production and that he could introduce me to his clients—which he did, including a Japanese restaurant, Suntory Italia, which had not previously accepted his Chinese-style tofu. I had contacts in Milan and met Mrs. Giovanna Mazzieri at a conference in Milan, where tofu was presented to the public and the press, together with the Italian Chefs' Association. I remember that on that occasion I first had a large number of tofu kits sold through Mrs. Mazzieri.

“I survived financially making tofu for the first couple of years. I sold my tofu to the Chinese restaurants of Milan, driving there once a week from Rimini in my small refrigerated car (280 km each way). I soon got tired of the trip, but actually I was motivated and satisfied and full of curiosity for the Chinese and Japanese atmosphere. Meanwhile, I was stopping to deliver my tofu at all of the macrobiotic and natural food shops and restaurants along the way (in Cesena, Forlì [Forlì], Faenza, Bologna, Modena, Reggio Emilia, Parma, etc.). During those years I did promotion for soyfoods, including cooking classes.

“In July 1982 I attended the Soyfoods Conference in Seattle, Washington (we met again) because of my interest in large-scale production and in making a report on soyfoods, together with a lady dietitian from Bologna (I forget her name) supported by the University of Bologna. She continued introducing the many good qualities of soyfoods to those in her field, medical doctors and nutritionists. For more information on this, contact the Sunsoy Food company in Bologna.

“After my 1982 trip to the USA (now having with me color slides, literature, and information), I developed contacts with the largest food distributing company in Italy, Coop Italia, but the people in charge believed that it was too early to distribute tofu widely in Italy—the market was not yet ready... maybe in the future. Even though they were open to innovative ideas, the negative answer was disappointing.

“I remember there was a time in 1983 when I had the luck of meeting a Japanese girl, Fusako Aoki, who was just passing through Rimini—a very rare occasion. She helped me in tofu-making classes for about 3 months, in Rimini and other cities. Meanwhile many people visited me to learn about making and selling tofu (future competitors)!

“I had enough technical skills to develop and build (mostly by myself) a stainless steel continuous open-air

steam cooker (not pressurized! a secret for good tofu), a second-hand Weston (from the USA) vibrating screen, a good stainless steel hammer mill. This was really good equipment for those times, the only equipment of its kind in Italy that I knew of.

"I was in charge of everything—production, sale, promotion, and new product development. Unfortunately I was not able to grow from the individual to the team aspect of the work. I exhausted myself, ending production in June 1988. In that year I was supplying centers in cities like Rome, Firenze [Florence], Torino [Turin], Bologna, Treviso, and Ravenna—mostly in northern and central Italy. The demand was growing and it reached the point that in places like Florence, Rome, and Torino people started companies to make soyfoods. At that point, I could survive only by diversifying products, improving packaging, moving into a larger factory at a new location, and expanding the company and the number of employees.

"I could not do this, and after a project of moving in Toscana near Florence, to live and work there, I had to discontinue my activities. The other reason was that my family was growing rapidly; I had 2 children in 1985 and 1987, and I did not want to jeopardize or endanger my family's personal financial situation. Looking back, I think I made the right choice, but I feel good when someone remembers me for my good tofu. I sold my equipment at a low price to a company named Food for All in Verona, then helped them with my knowledge of making and selling tofu. They are connected to the Ananda Marga Society, are supporting activities in India, and are really nice people.

"While in business, I was producing: Tofu (vacuum packaged or in bulk), tofu spreads (various flavors), tofu burgers, tofu mayo (fresh or long-life, in glass jars), seitan, seitan burgers, spreads, soymilk (sometimes, and only fresh), and various tofu desserts (fresh and perishable). I only made small batches of tempeh, for personal use and experimentation (not sold commercially) using cultures from the USA. Near the end of my activities, I produced 400 kg (and up to 600 kg) of tofu (base product); officially I had only one (maximum two) part time workers, with good help from my relatives.

"The only company (apart from the person of Mr. Pagliano) I know that made tofu before I did was the Poporoya company in Rome, which produced and sold it at his branch in Milan, the Poporoya-shop, a Japanese shop.

"People introducing soyfoods in Italy were the macrobiotic centers: Mr. Ferro Ledvinka from Rome, Mr. Alois Grassany from Bologna, and Mr. Roberto Marocchesi from Torino.

"I still see an opportunity in the future for making and selling tofu and tofu products in Rimini; this would be for me and my friends, but it would work only if it was connected with a larger project of a vegetarian cultural center. Who knows? Now I am a 'natural wood' carpenter." Address: Via

Cuoco 9, 47037 Rimini, Italy.

2786. Harron, Hallie. 1994. Timeless tempeh: A chef returns to Indonesia to bring us the delights of a vegetarian staple. *Vegetarian Times*. July. p. 48-54.

• **Summary:** The writer, a consultant for Minneapolis' only Indonesian restaurant, has a professional interest in tempeh; each year she journeys to the islands of Java and Bali for 3 weeks to learn more about it. On Bali, she rides on the back of her Balinese guide's motorbike to visit a small family-run tempeh plant in a village above Ubud. At night, in the city of Jogjakarta / Yogyakarta, Java, she goes out after the street merchants have gone home to enjoy special and favorite tempeh dishes.

Recipes: Gado-gado. Spring rolls with lime-mustard sauce. Spicy citrus broiled tempeh. White chili with tempeh. Hot and tangy peanut sauce. Saté tempeh with sambal tomat. Sweet and sour tempeh stew. Tempeh tumis bunchis.

Photos show: Various tempeh recipes. A stone statue of a seated Buddha, hands in a mudra, at Borobudur, near Jogjakarta. Address: Food writer, cookbook author, and executive chef of Premier Crew Restaurant Services, Minneapolis, Minnesota, a restaurant consulting, management and real estate company.

2787. **Product Name:** [Tofu, Tempeh, Soymilk, Okara Croquette, Soy Ice Cream].

**Manufacturer's Name:** Nutrem Soy Shop.

**Manufacturer's Address:** Managua, Nicaragua.

**Date of Introduction:** 1994. July.

**New Product–Documentation:** John Gabriel. 1995. Plenty Bulletin (Summertown, Tennessee). 11(3):4. Fall. "A Plenty volunteer in Nicaragua writes."

Chuck Haren. 1995. Nov. 8. SoyaScan Notes. "Soyfoods, Soynica, and Nutrem Soy Shop in Nicaragua" (Interview).

Note: This is the earliest known commercial soy product made in Nicaragua.

2788. *Soyfoods (ASA, Europe)*. 1994. U.S. soyfoods consumption predicted to grow. 5(2):3. Summer.

• **Summary:** A U.S. study titled *An economic analysis of the use of soybeans as human food* predicts that domestic increases in consumption of soyfoods could use an additional 100 to 240 million bushels of soybeans each year. The study was conducted for the North Central Soybean Research Program by researchers at Agricultural Education and Consulting in Savoy, Illinois (Phone: 217-352-1190).

The study found that the following food categories which have the greatest potential to use soya as an ingredient (listed in descending order of projected use levels): (1) Flour products—bread, bakery products, pasta, and pizza dough. 2. Meat products—ground beef and processed meats. 3. Dairy products—liquid milk replacements, processed cheeses

and yogurt. 4. Snack foods—crisps, extruded snacks, snack nuts and meat snacks. 5. Soyfoods—tofu, soymilk, tempeh, soy sauce, and miso. 6. Fresh vegetables—green vegetable soybeans.

However there will be tradeoffs. For example, increased use of soya to make meatlike products will ultimately lead to less need for soybean meal to feed livestock animals. But overall, the researchers believe that net crop income, at least for the North Central Region of the United States, will rise from nearly 8% to over 30%.

2789. Dovgan, Alexander; Dovgan, Tamara. 1994. Re: Interest in making tofu and tempeh in Russia. Letters to William Shurtleff at Soyfoods Center, Aug. 18-22. 3 p. Handwritten. [Eng]

• **Summary:** Alexander and his family (wife Tamara and daughter Sasha) are Russian Canadians who came to Canada almost 5 years ago. “First of all, thank you for your books and we learnt a lot with them and they helped us to survive with a very small amount of money! We plan to return to the Soviet Union and we have a dream to start our own tofu-tempeh business, as it would help so many to regain their health and save animals, the environment, etc. We were very unhealthy as we had very poor nutrition in Moscow partly because of total ignorance as the grains and legumes were widely available but nobody knew anything about sprouting, combining, etc.

“We always make our own tofu, and now we are trying to make tempeh and to bake okara breads using whey, etc.”

Tamara is a professional pianist, who works in the Opera Theater and in the Yamaha School of Music. Alexander is a photographer. They are both lucky to have jobs now.

Bill Shurtleff of Soyfoods Center suggests that they talk with Jon Cloud, which they do, and meet Alexander Podobedov. He sends them photocopies of articles about the SoyaCow in Russia.

Letter No. 2. Alexander is concerned that soyabeans are not available in Russia “as they were used only to make chocolate and oil.” They have saved some money in Canada but they have no place to live in Moscow since their family moved to the USA. “That’s why we’re thinking about starting in St. Petersburg, as its cheaper and its one of the most beautiful cities... Sasha makes Russian tofu at home (it’s hard and cheeselike with herbs) as Russians wouldn’t eat traditional plain tofu. But all our Russian and Canadian friends like it, so we’d be happy to be pioneers in that field in our native land.”

Letter No. 3. Sasha plans to go to Moscow soon to find out everything about soybeans. Their 6-month-old son, Daniel, likes tofu very much. Address: 2350 Dundas West #2813, Toronto, ON M6P 4B1, Canada. Phone: (416) 534 8896.

2790. *Provender Journal* (Eugene, Oregon). 1994. Member

news. 11(2):7. Summer.

• **Summary:** “Turtle Island Foods, Hood River, Oregon, says, ‘One year after introducing them, Superburgers are our #1 selling product!... Look for Son of Superburger later this year. We now also private label manufacture all tempeh products in the Wildwood Natural Foods line.’”

Tofu Palace Products has a new address and a toll-free phone number: Box 50085, Eugene, Oregon 97405. Phone: 1-800-600-TOFU.

2791. Wang, Huei-ju; Murphy, Patricia A. 1994. Isoflavone content in commercial soybean foods. *J. of Agricultural and Food Chemistry* 42(8):1666-73. Aug. [28 ref]

• **Summary:** Isoflavones are one class of phytochemicals and are found in soybeans in large amounts. Twelve isomers of isoflavones were quantified: three aglycons and nine glucosides. Soybeans contain two major isoflavone aglycons, genistein and daidzein, and a minor one, glycitein. In the seed, the isoflavones are present primarily as beta-glucosides. The nine glucosides are: daidzin, genistin, glycitin; 6”-O-acetyldaidzin, -genistin, or -glycitin; and 6”-O-malonyldaidzin, -genistin, or -glycitin.

This paper gives data on the concentration and distribution of isoflavones in 29 commercial soybean foods, grouped into three types: Soy ingredients, traditional East Asian soy foods, and second-generation soyfoods. Four values are given for each product in micrograms per gram, on an “as is” basis: daidzein, genistein, glycitein, and total isoflavones.

(1) Soy ingredients: Vinton 81 90: 600, 954, 82, 1636. Vinton 8191: 240, 648, 107, 995. Green vegetable soybeans: 546, 729, 79, 1354. Soy flour: 226, 810, 88, 1124. TVP #1: 473, 707, 202, 1382. TVP #1: 484, 702, 156, 1342. Soy isolate #1: 77, 273, 115, 466. Soy isolate #2: 115, 392, 102, 610. Soy isolate #3: 122, 393, 99, 615. Soy concentrate: trace, 13, 42, 56.

(2) Traditional soy foods: Roasted soybeans: 563, 869, 193, 1625. Instant soy beverage #1: 311, 617, 109, 1037. Instant soy beverage #4: 407, 665, 111, 1183. Tofu (73% moisture): 146, 162, 29, 337. Tempeh: 273, 320, 32, 625. Bean paste (ko chu jang in Korea): 272, 245, 77, 593. Fermented tofu: 143, 224, 23, 390. Honzukur miso (rice and soybeans): 79, 177, 38, 294.

(3) Second generation soyfoods: Soy hot dog: 34, 82, 34, 150. Soy bacon: 28, 69, 24, 122. Tempeh burger: 64, 196, 30, 289. Tofu yogurt: 57, 94, 12, 164. Soy Parmesan: 15, 8, 41, 65. Soy Cheddar cheese #1: 2, 5, 27, 34. Soy Cheddar cheese #1: 34, 40, 35, 109. Soy mozzarella cheese: 11, 36, 30, 76. Flat soy noodle: 9, 37, 39, 85.

Some manufacturers use ethyl alcohol extraction to prepare soy protein concentrates; this process removes a substantial portion of the isoflavones. The products examined for this paper which had the lowest content of isoflavones (all less than 100 micrograms per gram) were: soy cheddar

cheese A 34, soy protein concentrate 56, soy Parmesan 65, soy mozzarella cheese 76, flat noodle 85.

“Proposed anticarcinogenic doses of soybean isoflavones range from 1.5 to 2.0 mg per kg of body weight per day (Hendrick et al, 1994). There are a number of soy food choices that will fit this dose requirement without the need to consume unusual amounts of these soy foods.”

Isoflavone standards and extraction of isoflavones: Authentic standards of daidzein and genistein were obtained from commercial sources (ICN Pharmaceuticals, Plainview, New York, and Calbiochem Corp., San Diego, California). Daidzein and genistein were from previous work in the laboratory (Murphy 1981). The starting material for extracting isoflavones was defatted soybean flour. It was, in turn, extracted with acetonitrile (ACN) and 0.1 N HCl [hydrochloric acid] (1:5:1 w/v/v) according to the procedure of Murphy 1981. Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, Iowa 50011.

2792. Gabriel, John. 1994. Current work with soya in Nicaragua (Interview). *SoyaScan Notes*. Sept. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** John and his wife, Charlotte, just returned from Nicaragua where they helped to establish the country's first commercial shop that manufactures tofu, tempeh, and soft-serve soy ice cream (made from soymilk). The shop is located in Managua (in a district named Las Mercedes, near the airport). Lucy Morren of Soynica is in charge of the new company. The tofu was introduced in August 1994, and \$400 worth of tofu was sold that month. Chuck Haren is writing an article about the new company to appear in the next issue of *Plenty Newsletter*. Address: 11668 Blackberry Place, Nevada City, California 95959. Phone: 916-265-5100.

2793. Kisling, Matthew. 1994. New developments at Jerusalem Tofu in Israel. Also tempeh in Israel (Interview). *SoyaScan Notes*. Sept. 16. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Matthew, age 26, is the son of Susan Ergas who owns and runs Jerusalem Tofu, Israel's largest tofu manufacturer. He is looking for sources of organic soybeans in America. The business is flourishing and Susan wants Matthew to play the lead role in expanding the company. He has been working there, making tofu, recently. He would estimate they make over 600 kg/week. He plans to go back and work as production manager so Susan can take a vacation and maybe retire. The company recently moved to Moshav Aminadav from Moshav Orah (which is nearby in Jerusalem). The tofu company is now in a large building that was formerly a chicken laying factory. The phone number is now 434-830. Karen Freedland is no longer with Jerusalem Tofu; she is back in the USA.

The other big tofu company in Israel is Mikor Hateva

located just outside Tel Aviv, about 45 minutes drive from Jerusalem. It is run by “Black Jews,” black Americans who moved to Israel. This company is Jerusalem Tofu's biggest competitor, though they are smaller. They also make tofu ice cream. They have been around for a long time, but they recently changed their name to Mikor Hateva. and recently started making tofu. They now have an Israeli partner. The Macrobiotic Center in Tel Aviv also makes some tofu, but mostly for people at the center.

There is now a commercial tempeh shop in Israel, in Beersheba [Be'er Sheva] (Israel's 4th largest city), run by Roxanne, an America woman from Colorado. Tivol [Tivall] is also doing a lot with soy in meatlike products; they are the big boys on the block. Address: Binghamton, New York.

2794. Mann, Sue. 1994. Tempeh, tofu, and soymilk in Ecuador (Interview). *SoyaScan Notes*. Sept. 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Sue, who has lived in Quito for 6 years, is interested in making tempeh commercially in Ecuador, South America. She went to Ecuador originally as a teacher in an American school. Some people at Ambato Votec College [a Vocational-Technical College about 3 hours bus ride from Quito] in Ecuador are making quinoa tempeh, supposedly on a commercial scale; they sell it mostly in Quito.

Also some Chinese or Korean people make tofu in Quito and sell it at one stall of an outdoor Oriental foods market. They make the tofu somewhere else and sell it twice a week fresh, from a bathtub, at the stall. They also make a pressed tofu. A lot of the health food stores in Quito occasionally sell fresh tofu; she has never asked where it is made.

She also knows a Baha'i person who makes soymilk in Ecuador. Address: c/o Donna Lewen, Cassilla 17-12-578, Quito, Ecuador. Phone: 593 2-570-600.

2795. Business Trend Analysts, Inc. 1994. The health and natural food market: Past performance, current trends, and opportunities for growth. 2171 Jericho Turnpike #342, Commack, NY 11725. 325 p. Sept. Price \$995.00. \*

• **Summary:** Chapter 3 of this report, the first of seven chapters that discuss individual product categories, is titled “The Market for Soy Foods: An in-depth analysis of historical, current, and projected sales. Trends in the U.S. market for soy foods. Manufacturers' total sales of soy foods. Manufacturers' sales of soy foods, by distribution channel. Total retail sales of soy foods. Retail sales of soy foods, by distribution channel. Retail sales of soy foods, by type: Soy sauce, tofu, second generation, soymilk, miso, soynuts, tempeh. Worldwide soybean production, total and per capita. U.S. production of soybean oil. New product introductions in the market for soy and vegetarian foods, including names of manufacturers, brand names, and product descriptions.

Under “Report Highlights and Special Features” we read that after the 3-year recession, most product categories

posted strong gains, but “several segments failed to cash in on the growth bonanza. Manufacturers’ sales of soyfoods were up a meager 2½%, while the market for frozen health foods declined slightly... One-third of consumers under the age of 35 feel it is extremely important that the food products they purchase are natural; the percentage is even higher among older consumers. Over 40% of adults believe they will contract heart disease or cancer.” Today 68% of adults are overweight, up from only 58% a decade ago.

Overall report Contents: 1. Executive summary. 2. Overall market dynamics (including Soyfoods). 3. The market for soy foods. 4. The market for herbal teas. 5. The market for dairy foods. 6. The market for grains and cereals. 7. The market for frozen foods. 8. The market for snack foods. 9. The market for groceries. 10. The health food consumer. 11. The health/natural food store industry. 12. Competitor profiles. 13. Industry directory. Address: Commack, New York. Phone: 516-462-2410.

2796. Haren, Chuck. 1994. Alimentos San Bartolo. *Plenty Bulletin (Summertown, Tennessee)* 10(3):1-3. Fall.

• **Summary:** “Tempeh, tofu, flavored [soy] milk cicles, [soy] ice cream, soy milk, and toasted soy flour are sold daily from this village processing facility. It was great to see that since last year ASB had built a small room to cook the tempeh (a cultured soy food). The quality of tempeh they were making had improved considerably.”

Photos show: (1) Two Guatemalan young people in traditional Mayan dress, holding two soy ice cream cones each, and standing outside the window of Alimentos San Bartolo (ASB—San Bartolo Foods). Caption: “Soy ice cream has been enjoyed in San Bartolo since 1979.” (2) Three Mayan staff people in traditional dress at ASB package tofu for market.

2797. **Product Name:** Tempeh.

**Manufacturer’s Name:** Kafri-Bari Mashak-Wyler.

**Manufacturer’s Address:** Tal-Shachar 96, 76805, Israel. Phone: 972-8-349-263.

**Date of Introduction:** 1994. September.

**New Product—Documentation:** Form filled out by David Wyler, the person in charge at Kafri-Bari. 1995. July 26. The company began making tempeh in Sept. 1994. They now make 40-80 lb/month of tempeh.

2798. Parks, Thomas R.; Bindon, J.N.; Bowles, A.J.G.; Golbitz, P.; Lampi, R.A.; Marquardt, R.F. 1994. Methodologies for processing plant material into acceptable food on a small scale, phase II. Moffett Field, California: National Aeronautics and Space Administration, Ames Research Center. x + 219 + 21 p. Sept. Illust. No index. 28 cm. Technical Report. NASA CR-177647, A-94130. Govt. Doc. No.: NAS 1.26:177647. [10 ref]

• **Summary:** A study of simple processing equipment for the

foods to be used by NASA in closed ecological life support systems (CELSS) on a space station under micro-/zero-gravity conditions. Most nutrient requirements can be met by four crops, which were studied: Soybeans, wheat, white potatoes, and sweet potatoes.

The section titled Soyfoods (p. 171-96) has the following contents: Introduction (composition of dried soybeans, best foods for CELSS, processing equipment), soymilk, tofu, okara, tempeh, edamame (immature green soybeans), soy sprouts, processing by extrusion/expelling (oil), expeller pressed soy oil, whole fat soy flour, soymilk beverages, tofu-based meat replacers, tempe-based meat replacers, soy yogurt (fermented), frozen desserts, textured soy flour, extrusion impact on functional properties, materials balance. The production of wheat gluten from wheat, and the biomass culture of mushrooms are also discussed (p. 160).

Tables and figures show: (T7) Soyfoods—Composition and nutrient content (based on USDA Handbook No. 8-16, full page). (F78) Chart of modern soyfoods, divided into: Soya-based dairy alternatives and Soya-based prepared foods. (F79) Four methods of soymilk production: Traditional, Cornell, Illinois, ProSoya. (F80) Modified ProSoya system with pressure plate and centrifugal basket for okara removal. (F81) Flow chart for regular tofu production. (F82) Flow chart for tempeh production. (F83) Flow chart for soybean processing by extrusion/expelling. (F84) Flow chart for soymilk yogurt. (F85) Flow chart for soymilk ice cream. (F86) Processing soybeans for primary soyfood products with extruder. Address: Food and AgroSystems, Inc., 1289 Mandarin Dr., Sunnyvale, California 94087.

2799. Demos, Steve. 1994. How White Wave selects soybeans to make tofu, tempeh, and soy yogurt, and to create value-added products (Interview). *SoyaScan Notes*. Oct. 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave now uses 3 varieties of soybeans: A blend of two varieties for making tofu, and one different variety for tempeh. Steve selected these varieties over a number of years by a trial and error process—but he would like to be able to select them in a more scientific way. For making soy yogurt, Steve is looking for a new variety, which must have a low flavor profile (i.e. little beany flavor). Within the last year, he began talking with a soybean breeder who approached Steve saying that he had one soybean with a low lipoxigenase content (which is thought to give soymilk with little beany flavor), and another with a low fat content. Steve is looking for better flavor and lower calories because he is trying to develop value-added products out of former commodities for his Vegetarian Cuisine line. The key to doing this is developing products that taste better.

For many years, soyfoods consumers were willing to sacrifice taste for ideology or price. Tofu and tempeh have traditionally been bought and sold as commodities,

so manufacturers of these foods have traditionally paid more attention to yield and functional properties than to flavor—since the flavor quickly gets lost in the surrounding water. “Most tofu makers won’t use only Vinton soybeans because they are too expensive and that added expense cannot be passed on to the consumer. Yet everyone knows that vegetable-type soybeans produce a superior product—bigger, glossier curds, meatier texture. Vintons also give a superior tofu yield—but Steve does not know why and he would be very interested in knowing the science and theory behind this phenomenon. Is more of the protein in the bean extracted in the soymilk? Does it have a higher nitrogen solubility index? Do the curds trap more water? I think U.S. tofu makers totally disregard flavor when buying soybeans for tofu; they are concerned mostly with the quality and texture of the curd—the size, firmness, and elasticity of the curd. The majority of consumers believe that tofu has no taste anyway.” But value-added products are judged in a totally different way than commodities; consumers demand good taste. White Wave’s way of making soyfoods is capital intensive; therefore he would prefer to sell value-added products rather than commodities. So Steve is now studying how to transform his commodities into value-added products that command a premium price and have consumer loyalty. White Wave’s low-fat tofu is sold as a value-added product, and it has recently become the company’s best-selling tofu product. It allows him to “add a couple of higher gross margin points to his profit.” Adding *Bifidus* also adds value. A major opportunity is to associate soyfoods with medical benefits [as by showing that eating soyfoods reduces one’s risk of a major disease, or by adding genistein—which Steve had not heard of].

The main factor moving White Wave in this direction is the “organic problem” that is emerging in America; high prices and limited supplies. For a number of years, Steve has contracted for his soybeans with a broker (also called a consolidator) at a certain time of year each year; the name of the broker and the time of year are confidential. Steve contracts for specified amounts of certain identity-preserved soybean varieties at a specified price, to be delivered over a specified period of time. He also specifies the maximum moisture content, foreign material, etc. The broker then contracts with soybean growers and the broker stores the soybeans after harvest until delivery. The broker takes the risks associated with reduced yield or crop failure. It is much easier to contract with farmers if they are located nearby; but the farmers who end up growing Steve’s soybeans are all far away. It would be hard (and too much trouble) for him to keep in touch with weather conditions far away, and to visit the farmers from time to time. The organic business used to be based on affidavits issued by the farmer; now it is changing to third-party certification, and that change should be finished after about one year. Having soybeans certified by a third party raises their cost to the manufacturer

by about 25%. It is virtually impossible to pass that on to the tofu consumer, since tofu is seen as a commodity. The federal organic law may be different in particulars from the California organic law—which has been the standard. All the tofu Steve now produces is made from organically grown soybeans, but soon he will offer both a low-cost regular (non-organic) tofu, and a certified organic tofu that retails for about \$0.15 per pound more. Then the consumer will have a choice. This has never really been done before.

In the future, Steve would like to work much more closely with soybean breeders and seed companies to help solve his problems, improve the flavor of his products, develop new products, and learn more about the theory and science that connects soybeans and soyfoods. In addition he is planning to set up an in-house R&D department; White Wave already has a test kitchen and a food technologist on staff. A key function of the R&D department will be to develop value-added products. White Wave is already conducting in-house taste panels but is selecting soybeans “from a grab-bag mentality rather than from an organized, scientific project mentality... There is absolutely no question that the long-term strategic development of soyfoods requires this approach.” The timing is perfect and Steve would like to establish such a relationship with a seed company as soon as possible. White Wave is now in the process of strategic planning for the next 5-7 years. But a company must be big enough (as White Wave now is) to devote the focused mind time and invest the resources to follow through for the seed companies this way. As a company gets larger it has a greater need and ability to base its choice of raw materials on a solid scientific foundation. Smaller companies might agree to work with seed companies but it would be hard for them to do it properly over the long term.

In the past, White Wave has chosen one or two soybean varieties and then stopped looking for better ones for several years. But that will change as soon as the new R&D department begins operation. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

2800. Joachim, David. 1994. The joy of soy: Welcome to the kitchen of Dorothy Bates—soyfoods pioneer. *Vegetarian Gourmet (Montrose, Pennsylvania)* No. 11. Autumn. p. 28-33.

• **Summary:** Dorothy, age 73, graduated from Iowa State University with a degree in food, nutrition, and journalism. Then she began her career as a home economist for Swift & Company, a Chicago-based food company. In 1945 she married and moved to Hawaii, where her two children were born. In 1968 [actually about 1973 or 1974] her daughter-in-law Cynthia prepared a few simple dishes at Dorothy’s home in Connecticut using tofu, tempeh, soy sauce, and textured vegetable protein. This had a profound effect on the direction of Dorothy’s life. Sensing a story, Dorothy called the food

editor from the local newspaper [Elizabeth Squires of the Wilton Bulletin in Wilton, Connecticut] to photograph the dishes and write about soy products. Now age 50, and a lover of the rich desserts of French cuisine, Dorothy had little idea that she would eventually be writing vegetarian cookbooks—such as *The Tempeh Cookbook*, and *The TVP Cookbook*.

Contains 9 soyfoods recipes, including: Super-easy chocolate mousse (with silken tofu), and Whipped topping (with firm tofu).

A sidebar (p. 31-32) discusses soybeans, diet, disease prevention, and genistein.

**2801. Product Name:** Tempeh.

**Manufacturer's Name:** M/S Ng Keng Huat.

**Manufacturer's Address:** Block 6018, Bedok Industrial Park C #01-1890, Singapore 1647. Phone: 242-0053.

**Date of Introduction:** 1994. October.

**New Product–Documentation:** Form filled out by Mr. Ng Pang Hua. 1994. Oct. This company began making tempeh in October 1995. They now produce 15,525 lb/month. Note: This makes the company one of the largest tempeh manufacturers in the world.

**2802. INTSOY.** 1994. Soybean processing and utilization. May 17-June 15, 1995. An international training program (Brochure). Urbana, Illinois. 12 panels. Each 22 x 10 cm.

• **Summary:** Contents: Basic topics to be presented in the 1995 course: Basic processing concepts, nutrition and functionality, oil extraction, extrusion technology, soymilk and dairy analogs, Oriental soybean foods (tofu, tempeh, etc.), animal feed applications, quality control, global overview of the soybean industry, economics and marketing of soy products. Professional opportunities. Cost and travel information (the course costs \$3,900 plus an estimated \$1,900 for room, board, and other local living expenses. INTSOY is unable to offer scholarships).

The course time consists of 35% lectures, 45% hands-on exercises, and 20% industry visits. This is the 15th offering of the training program. Some 155 persons from 26 countries have attended the course. Danny Erickson is the training officer in charge. Facilities at the University of Illinois include the largest public university library in the United States, the nation's largest supercomputer complex, and the National Soybean Research Laboratory. Address: International Soybean Program, Univ. of Illinois, 169 Environmental and Agricultural Sciences Building, 1101 West Peabody Drive, Urbana, Illinois 61801. Phone: (217) 333-6422.

**2803. Product Name:** Hempeh Burger (Soy Tempeh Burger With Hemp Seeds).

**Manufacturer's Name:** Sharon's Finest (Product Developer-Marketer).

**Manufacturer's Address:** Sharon's Finest, P.O. Box 5020

(616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

**Date of Introduction:** 1994. November.

**Ingredients:** Organic soybeans, water, organic brown rice, hemp seeds, onion, vinegar, *Rhizopus* culture. Marinade: Water, pineapple juice, soy sauce, ginger, garlic, roasted sesame oil, black pepper, spice.

**Wt/Vol., Packaging, Price:** 6 oz. (2 patties).

**New Product–Documentation:** Sample label mechanical sent by Richard Rose, CEO of Sharon's Finest. 1994. Oct. 27. Richard conceived of and has developed this unique product. "Barely legal. No THC, but hemp seeds do have essential fatty acids. Contains 10% legal hemp seeds. 5% of profits go to N.O.R.M.L. Yes, we're the HempRella "cheese" folks. To prepare: Cook it up on the grill, broiler, or pan 'till happy... Or use like meat!"

Leaflet from Natural Products Expo West at Anaheim, California. 1995. March. "Hemp Food: As legal as Coca-Cola, as American as apple pie." A good overview of the value of hemp as a crop. Hempeh Burger, which is a soybean and rice tempeh burger, contains 10% whole hemp seeds.

Ad (p. 18) and spot (p. 56) in Natural Foods Merchandiser. 1995. Sept. Spot: "Sharon's Finest introduces Hempeh Burger, made from soy/rice tempeh with 10% legal hemp seeds added. Hempeh Burger is high in essential fatty acids and GLA,... is 100% vegan, and is drug free." Ad: "Absolutely no drugs here, just wholesome, nutritious food from seeds that have been in the human diet (including Buddha's) for centuries." For more information: Sharon's Finest. (707) 576-5070. [hemp@rella.com](mailto:hemp@rella.com).

Talk with Seth Tibbott of Turtle Island Foods. 2001. May 15. The Hempeh Burger is now starting to sell well.

**2804. Hills, Benjamin.** 1994. Re: New developments at Lean Green Foods on the Big Island of Hawaii. Letter to William Shurtleff at Soyfoods Center, Dec. 1 p.

• **Summary:** "Holiday Greetings! What a year! It has seen the birth and infancy of a soyfood company determined to make a difference in the protein supply of the Pacific Rim. So far it is quite local, with color pictures of ginger teriyaki tempeh burger popping up all over restaurant tables of the Big Island to sold out accounts on Kauai. Soon I will be consulting to soy operations in the Philippines, Siberia, Italy, and India, and traveling to those places. Also exploring export possibilities to Australia and New Zealand.

"It has been a tremendous amount of work, but with daily rewards from the enthusiasm of satisfied customers. Mine are truly products to believe in...

"I have been blessed further by the presence of a soy angel, the original in my life, Susan Wallace, from Oregon... Her ever-resent enthusiasm and support for Lean Green Foods has helped immensely in the development of my life in soy."

Update: 1997. Dec. 8. Talk with Rosie Sison, who (with

a friend) recently visited Benjamin at his shop in Hilo. 1998. Dec. 8. His location is beautiful, right next to the ocean, with lagoons and waterfalls nearby. He made them some delicious tempeh dishes from his freshly-made tempeh. Address: Lean Green Foods, P.O. Box 534, Volcano, Hawaii 96785. Phone: 808-985-8563.

**2805. Product Name:** Ginger Teriyaki Tempeh Burger.  
**Manufacturer's Name:** Lean Green Foods.  
**Manufacturer's Address:** P.O. Box 534, Volcano, Island of Hawaii, HI 96785. Phone: (808) 985-8563.  
**Date of Introduction:** 1994. December.  
**Ingredients:** 1998/12: Certified organic soybeans (grown in accordance with sec. 26569.11 of the California Health and Safety Code), ginger juice, soy sauce (water, wheat gluten, soybeans), mustard, lemon juice, vinegar, fructose, sesame oil, guar gum, tempeh culture.  
**Wt/Vol., Packaging, Price:** 6 oz. (170 gm) vacuum pack.  
**How Stored:** Frozen.  
**New Product–Documentation:** Christmas letter sent by Benjamin Hills. 1994. Dec. Lean Green Foods is now making a ginger teriyaki tempeh burger. Color pictures of it are “popping up all over restaurant tables of the Big Island to sold out accounts on Kauai.” One secret to the flavor is the 24-hour soak in cold marinade—not hot!

Label brought by Benjamin Hills. 1998. Dec. 21. 3.5 inches diameter. Self adhesive. Green on white. Logo says “Made in Hawaii.” “100% vegetarian. 2 patties—Keep frozen. Try our tempeh chili. To cook: This precooked burger may be grilled, fried or microwaved.” Address is now: P.O. Box 10562, Hilo, Hawaii 96721.

2815. LeShane, Patricia. 1994. Vegetarian cookery for people with diabetes. Summertown, Tennessee: The Book Publishing Co. 143 p. Index. 21 cm.

• **Summary:** This is a vegan cookbook. Approximately 12 million Americans have diabetes, but only about 50% of them are currently aware that they have it. The index contains 21 entries for tofu, 2 for soybeans (p. 106, 107), 1 for soy yogurt, and lots for soymilk.

2816. Ontario Soybean Growers' Marketing Board. 1994. New uses for soybeans (Leaflet). Ontario, Canada. 2 p. Undated. 28 cm.

• **Summary:** Contents: Soy diesel. Premium building materials (such as Environ). Industrial solvents. Anti-chronic disease agent (isoflavones and protease inhibitors from tofu, miso, and tempeh). Road dust suppressants. Asphalt and concrete release agents. Lubricants and hydraulic fluids. Biodegradable plastic utensils. Soy oil based inks. Soy textile fibres (can be used for erosion control on landscape projects, for peat pots, fishing nets, and "soy silk" in clothing). Soy adhesives (for plywood products and composites). Address: Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

2817. Stepaniak, Joanne. 1994. The uncheese cookbook: Creating amazing dairy-free cheese substitutes and classic "uncheese" dishes. Summertown, Tennessee: The Book Publishing Co. 192 p. Index. 21 x 18 cm. [16 ref]

• **Summary:** This is an excellent, very creative cookbook with a poor index, developed especially for people who, due to choice or chance, have eliminated cheese from their diet. The recipes are well designed to satisfy any compelling cheese fantasies you may have.

Contents: Introduction. Cheezes, spreads & dips. Soups and chowders. Fondues & rarebits. Sauces, pestos & dressings. Pizzas, polentas & breads. Quiches, casseroles & entrées. Sweets. Glossary. Mail order suppliers of natural foods.

Tofu is used as a major ingredient throughout this cookbook. For example: Muenster cheese (p. 23). Chunky Roquefort dip & dressing (p. 24). Tofu cottage cheese (p. 27). Tofu ricotta (p. 27). Betta feta (p. 28). Brie (p. 31). Liptauer käse (p. 32). Boursin cheese (p. 33). Tofu cream cheese—rich or light (p. 34-35). Kefir cheese (p. 36). Garbanatto (p. 39). Hot Parmesan artichoke dip (p. 41). Pecan cheese (p. 42). Egg-free (vegan) mayonnaise (p. 89). Tofu sour cream (p. 90). Calzones (p. 100-10). Tofu tetrazzini (p. 122) Tofu devonshires (p. 140). Mattar paneer (p. 146). Tofu cheezecakes & cream pies (ten varieties, p. 164-74). Tofu whipped topping (p. 172).

Many other recipes also call for "low-fat, dairy-free (vegan) milk" which is defined (p. 183) as "a generic term which refers to any creamy beverage such as soymilk, nut milk, or rice milk that is produced from non-animal products.

Interesting products in the glossary (p. 180-184) include: Agar, barley malt syrup, brown rice syrup, liquid aminos, mirin, miso, seitan, tahini, tamari, tempeh, toasted sesame oil, tofu, umeboshi plum paste, vegan milk, yeast—nutritional (*Saccharomyces cerevisiae*).

2818. Rosas, Juan Carlos; Young, Roberto A. 1994? El cultivo de la soya. Quinta edición [The cultivation of soya. 5th ed.]. *Departamento de Agronomía (Zamorano, Honduras)*, Publication No. AG-9603. 68 p. Undated. [Spa]

• **Summary:** Contents: 1. Overview: Economic importance, chemical composition, history, taxonomy. 2. Morphology of the soybean plant. 3. Physiology of the growth and development of the soybean plant: Stages of development. 4. Environmental factors that affect the cultivation of soya: Soil, water, irrigation, light / photoperiod, temperature, period of growth. 5. Practical cultivation: Preparation of the soil, time of planting, density of planting, quantity of seeds, systems of cultivation, control of weeds (methods of weed control, chemical control). 6. Mineral nutrition of soybeans (and inoculation). 7. Diseases that affect the cultivation of soybeans and their management: Bacterial, fungal, viral, other, seed treatment. 7. Insects that attack soybeans. 8. Harvest and storing. 10. Improvement of soybeans. 11. Processing and utilization: Industrial processing (extraction of oil, soy flours, soy protein concentrates {*concentrados proteicos de soya*}, soybean cake). Direct consumption: In the Far East, the soybean is consumed in the form of fermented and non-fermented foods. Fermented foods include shoyu, miso, mato [sic, natto], and tempeh, while non-fermented foods include soymilk (*la leche de soya*), tofu, yuba (*juba*), and kinako. 12. The cultivation of soya in Honduras (history).

In 1972, the Ministry of Natural Resources (*Ministerio de Recursos Naturales*) reported the initiation of commercial soybean production on a small scale in various departments of the country (Olancho, El Paraíso and Comayagua). Three varieties were used at that time: Biloxi, Hardee and Jupiter. However, before these reports were made, at the Panamerican Agricultural School (*la Escuela Agrícola Panamericana (EAP)*), some hectares had already been planted with the varieties Jupiter and Pelican. Discusses additional developments in 1974, 1982, 1986, 1987, and 1988. Address: 1. PhD; 2. PhD.

2819. Oates, Bill. 1995. History of The Good Life, and Llama, Toucan & Crow (Interview). *SoyaScan Notes*. Jan. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** It was Bill's idea to start The Good Life, which opened in March 1971 as a natural food retail store at 80

Main Street in Brattleboro, Vermont. Brattleboro was a very active center of the counterculture in the late 1960s and 1970s. In 1964-65 he had lived in Indonesia, where he was doing research for his PhD dissertation on a peasant revolt in West Java, and he grew to be very fond of tempeh. Back in the USA, he entered academia at Lyndon State College in Lyndon, Vermont, teaching Chinese and Southeast Asian History during the Vietnam War. Bill was partners in The Good Life with Peter Strong and Patricia Perry. Bill and Peter were hippies at the time. Peter, who had been a student of Bill's, had worked with David Hatch, who owned and ran Hatch's, in Saint Johnsbury, Vermont. Hatch's may have been the earliest natural food store in Vermont; they did not carry supplements. For a while Peter Strong ran Hatch's.

When the three partners opened The Good Life in March 1971 they sort of used Hatch's as a model. Many of their original employees came from the Total Loss Farm Commune at Packer's Corners in Halifax, Vermont. The commune still exists (they used to make many baked goods for The Good Life), and a book was written about the group. There were some problems in getting good quality natural foods. The Good Life didn't carry vitamins or supplements. Like Hatch's, they would buy some foods from Erewhon in Boston, Massachusetts (Paul Hawken served as a wise advisor for them), and they would also drive a van farther south to New York City, where they would buy from Richter Brothers, Bazzini Nut Co. and others. In New York they would go to Chinatown and buy tofu from a Chinese manufacturer on Mott St. [probably Fong-On]. Prices of some goods were lower in New York City, Erewhon didn't carry everything, and "frankly they were very disorganized as a business. Paul Hawken was more of a thinker than a manager—a fascinating person." They were buying hard red winter wheat (organically grown) from Ted Whitmer in Montana. They would pay 8-9 cents a pound for the wheat plus 7 cents a pound to have it shipped to Vermont. Ted Whitmer said that if they bought a truckload of 40,000 lb, they could have it shipped on a back-shipment under an exemption for agricultural products; the ICC was still setting rates for freight shipments. So The Good Life took the plunge and in June or July of 1971 bought a 40,000 lb shipment of winter wheat from Whitmer, and paid only 2¼ cents per pound to have it shipped to Brattleboro. So the cost delivered to their store was about 11¼ cents per pound—a great price, compared with the 19-20 cents per pound they would have to pay for Deaf Smith organic wheat from Erewhon [purchased by Erewhon from Arrowhead Mills in Texas]. Ted Whitmer gave The Good Life his list of all his wheat customers (about 25, including a nunnery and some co-ops) in the New England area to help his customers reduce freight costs. So The Good Life contacted all of Ted's customers and started selling their organic wheat to other food stores and groups for 14-15 cents per pound. Most of the stores picked up the orders of wheat at The Good Life,

but some of it was delivered to the stores. All the wheat was sold within a month. The origin of Llama, Toucan & Crow can be traced directly to this shipment of wheat. Bob Swanson joined The Good Life as an employee after the first big shipment of wheat, and he used to do a lot of the driving. By the second year, the Good Life contracted with Ted Whitmer to buy 500,000 lb of his wheat, with payment in advance.

Since The Good Life was selling wheat to a growing number of stores, they wanted to buy other foods as well. They drove to New York and picked up several thousand pounds of food each week at special discounted prices, as the retail store thrived. They began to sell some of this food from New York at wholesale prices to customers who purchased wholesale wheat. So they soon found themselves in the wholesale business, and by early 1972 they were delivering foods at wholesale to more than 5 accounts. Then they discovered that the commodities law that enabled them to ship large amounts wheat inexpensively from Montana, would also allow them to ship other foods, such as dried fruits from California, at ridiculously low prices. So they put together a 40,000 lb shipment of dried fruits from California, consisting mostly of dried organic dates, then used organic raisins and other fruits to make a total of 40,000 lb. Now they were really in the wholesale business. Bob Swanson's job expanded from just delivering the food to taking the orders and ordering the food. By the end of 1972, The Good Life found itself with a thriving wholesale business, doing about \$3,000 to \$4,000 a week—about the same as the retail store. They were making two delivery runs a week, one north to Vermont and New Hampshire, and one south to Connecticut and Massachusetts. And people still came to The Good Life to pick up their supplies—at excellent prices. The tail was now wagging the dog. By this time Peter had gone off to Nepal—to discover himself. Patricia and Bill were running the retail store, which had always carried, in addition to natural foods, imported cheese and wines. They sold no vitamins until many years later. Bill and Patricia decided that, as from the outset, they wanted to be in the retail store business, so they said to Bob Swanson, "If you want this wholesale business, it's yours, free of charge." Why free of charge? "It was right, and it was the right thing to do. You've got to remember, this was the early 1970s."

Bob accepted their offer, and in Jan. 1971 he began running the business out of the cellar of The Good Life for several months, until he located a very tumble-down warehouse facility for his new company in Brattleboro, at 21 Frost Street. The building has since been demolished. It had been owned by DeWitt Beverage Company, a beer distributor, and Swanson's business occupied only one floor of about 5 floors. Swanson operated out of this location for about 8-9 months, then he moved the company down to Greenfield.

Bill has no idea how to contact Bob Swanson now;

later Bob went to his home town in Woodbury, Connecticut, where he helped a friend run a natural food store. Then he may have moved to Colorado. Peter Strong, who is now somewhere in Texas, might know how to reach Swanson.

When Barclay McFadden purchased Llama, Toucan & Crow, he had no background in the natural food business. Bill thinks that he was in the military, perhaps either a career officer or he may have been a graduate of West Point.

Bill and his wife now have a consulting company that works with country inns and bed-and-breakfasts in Vermont—mainly helping them to get started or to buy. Address: Box 1162, Brattleboro, Vermont 05302. Phone: 802-254-5931.

2820. Drosihn, Bernd. 1995. The soyfoods market in Germany. New developments at Viana Naturkost (Interview). *SoyaScan Notes*. Jan. 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bernd's company, Viana, is now one of the two largest tofu manufacturers and soyfoods marketers in Germany. The other large company is Life Food in Freiburg. Their brand name is Taifun, and they have been growing rapidly for the last two years.

The tempeh market is very small in Germany. There are only two manufacturers: Hamburger Tofu Manufaktur (Christian Nagel, in Hamburg) and Viana. There is now only one real miso manufacturer in Germany: Kanta Kozaki GmbH in Urbach near Stuttgart. Viana stopped making miso 2 years ago, however Viana sells miso made by Kanta Kozaki in glass jars under the Viana label. A Japanese man (Hiroshi Kozaki) and a German man (Karl Selgmann) run the company together. They have been making miso for 3-4 years. Viana also sometimes makes koji for Kanta Kozaki.

Bernd and Albert Hess are planning to attend the Natural Products Expo West in Anaheim, California, March 10-12, 1995. Address: Founder and president, Viana Naturkost GmbH, Willi Graf Str. 88, 53881 Euskirchen-Kuchenheim, Germany. Phone: 02251-56076.

2821. De Reu, Johan C. 1995. Solid-substrate fermentation of soya beans to tempe: Process innovations and product characteristics. PhD thesis, University of Wageningen Agricultural University, Netherlands. 155 p. Illust. No index. 24 cm. [227 ref. Eng; dut]

• **Summary:** This is a bound and published PhD thesis. On the cover is an illustration (line drawing) of a rotating drum reactor. The directors of his research were F.M. Rombouts and M.J.R. Nout. Contents: Abstract. General introduction. Temperature control in substrate fermentation through discontinuous rotation. A model for solid-substrate fermentation of *Rhizopus oligosporus* in a packed-bed reactor. The influence of acidity and initial substrate temperature on germination of *Rhizopus oligosporus* sporangiospores during tempe manufacture. The effect of oxygen and carbon dioxide on the germination and growth

of *Rhizopus oligosporus* on model media and soya beans. Changes in soya bean lipids during tempe fermentation. Protein hydrolysis during the soya bean tempe fermentation with *Rhizopus oligosporus*. Consistency, polysaccharidase and non-starch polysaccharides content of soya beans during tempe fermentation. General discussion. Summary. Samenvatting. Curriculum vitae. Address: Wageningen, Netherlands.

2822. Mindell, Earl. 1995. Earl Mindell's soy miracle. New York, NY: Simon & Schuster. A Fireside Book. 256 p. Index. 22 cm. [97 ref]

• **Summary:** Contents. Part I: Soy—The miracle food. 1. The soy story: explaining the miracle. 2. Soy by any other name. 3. Does soy prevent cancer? 4. Heart and soy. Part II: Soy for special needs. 5. Just for women: Rx for menopause and osteoporosis. 6. Just for men: Rx for prostate problems. 7. Kids, cancer, and heart disease. 8. Tips for vegetarians. Part III: Not by soy alone. 9. Thirty-seven miracle foods from the Pacific Rim. Earl's pearls: A guide to vitamins and minerals. Part IV: Get more soy in your life. 11. Savvy substitutions. 12. Cooking with soy. 13. Breakfast the soy way. Part V: Seventy super soy recipes (p. 149-230). Glossary. Resources. Selected bibliography.

Pages 12-13 note that soybeans are an abundant source of many different types of phytochemicals, including isoflavones, genistein, protease inhibitors, and phytic acids.

Chapter 2 describes the different types of soy foods. Traditional soy foods: Soy milk, tofu (firm tofu, silken tofu, yakidofu, koyodofu [sic, koya-dofu]), okara, natto, tempeh, miso, soy sauce, kinnoko [sic, kinnako] flour. Soy protein products: Soy protein concentrates, soy protein isolate, soy flour, texturized soy protein, meat analogs. Other soy products: Soy fiber, soybean oil, lecithin. Questions about soy foods. Page 33 asks the question: "If phytochemicals in soybeans are so healthy, why can't they be extracted from food and made into a pill like a vitamin?" Answer: Researchers are not yet certain which phytochemicals are the most important. "There may even be other beneficial compounds in soy that have yet to be identified. Your best bet is to eat the real food." A section titled "Soy's top ten benefits" (p. 36-38) discusses: 1. Antioxidant. 2. Breast cancer. 3. Cholesterol lowering. 4. Colon cancer. 5. Hip fracture. 6. Hot flashes. 7. Immunity. 8. Kidney disease. 9. Lung cancer. 10. Prostate cancer.

Chapter 3, titled "Does soy prevent cancer?" discusses six compounds which cancer researchers believe may be effective in cancer prevention: Isoflavones, genistein, daidzein, protease inhibitors, phytic acid, and saponins. A long section later in the chapter discusses each of these, with special emphasis on genistein.

Note: The author has also written *Earl Mindell's Herb Bible* and *Earl Mindell's Food as Medicine*. He is a newcomer to this field. This book may appeal to those who

are looking for miracles from the foods they eat. Most of the information contained in this book can be found in Mark and Virginia Messina's outstanding *The Simple Soybean and Your Health* (1994), and the *First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease: Proceedings from a symposium held in Mesa, Arizona, on February 20-23, 1994*, published in full in *The Journal of Nutrition* Vol. 125, No. 3S, March 1995 Supplement. It was from this symposium and the outline published before the symposium that Mindell got his idea for this popular book.

Dr. Mindell is an R.Ph. (Registered Pharmacist) with a PhD in Nutrition from Pacific Western College in Renton, Washington.

According to a review of *Earl Mindell's New and Revised Vitamin Bible*, by James A. Lowell, PhD. (Nutrition Forum, June 1986) "Mindell claims to hold valid credentials in nutrition. Although he does have a bachelor's degree in pharmacy from the University of North Dakota, his Ph.D. is from the University of Beverly Hills, an unaccredited school which lacks a campus or laboratory facilities." Mindell helped to found the Great Earth chain of vitamin and health food stores, numbering about 200 in 1986, America's second largest such chain. Address: R.Ph, PhD, registered pharmacist and Prof. of Nutrition at Pacific Western Univ. in Los Angeles. He lives in Beverly Hills, California.

2823. Minnesota Soybean Growers Association; Minnesota Soybean Research & Promotion Council. 1995. *Cooking with soy*. Revised 2nd ed. North Mankato, Minnesota. 48 p. Jan. 22 cm.

• **Summary:** Contents: Introduction. Tofu facts. Soy milk facts. Soy flour facts. Miso facts. Tempeh facts. Texturized soy protein facts. Meat analog facts. Soy oil facts. Whole (dry) soybean facts. Whole (green) soybean facts. How to cook whole soybeans.

Recipes: Appetizers & snacks. Dips & dressings. Beverages. Salads & soups. Breads. Main entrees. Cakes, cookies & desserts. Substitutions.

Talk with Christie Metzger of the MSRPC. 1996. Jan. 4. The revised edition of this book was published in Jan. 1995; the first edition was published in March 1994. Address: 360 Pierce Ave., Suite 110, North Mankato, Minnesota 56003. Phone: 507-388-1635.

2824. Rana, Nita. 1995. Comparative studies on the soyabean-tempeh and tempeh like products using Bengalgramdal and groundnut by using *Rhizopus oligosporus* (Abstract). In: Proceedings of the Eighty Second Session of the Indian Science Congress—Calcutta, Jan. 1995. Part IV (late abstracts). Section of Biochemistry, Biophysics & Molecular Biology. See p. 50.

• **Summary:** Tempeh-like products can be made using locally available beans and nuts, such as Bengalgramdal and groundnut. The proximate analyses were conducted.

Tempeh made from groundnuts had a higher PER than raw groundnuts, but tempeh made from Bengalgramdal had about the same PER as raw Bengalgramdal. The specific activity of aminotransferases (GPT and GOT) from rat liver showed increases in all three cases. Address: Biochemistry Dep., M.S. Univ. of Baroda, Baroda, Gujarat, India.

2825. *Voice of the Turtle (Hood River, Oregon)*. 1995. Wildwood Natural Foods and Turtle Island join forces. Jan. p. 1.

• **Summary:** "Since January 1, 1994 Turtle Island has been manufacturing all tempeh sold under the Wildwood label in the San Francisco, California, market area... We now manufacture Wildwood's Soy Rice, Onion Herb, Tempeh of the Sea, Temptations and bulk tempeh." Wildwood distributes Turtle Island's SuperBurgers. Address: P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

2826. Wildwood Natural Foods. 1995. Price list—January 9, 1995. Fairfax, California. 5 p.

• **Summary:** Wildwood's own product lines include: Sandwiches (7 products, incl. burritos and sushi), salads (17), tofu and tofu products (13), soymilk (2), hot dogs (1), tempeh (4).

Wildwood also distributes products made by other companies: Red Wood Foods (16 products), Mrs. Wiggles Rocket Juice (12), Grainaissance (17; amazake, pudding, and mochi), Sonoma Salsa (7), Yves Veggie Cuisine (9), Lightlife Foods (13), Turtle Island Foods (1), NuTofu soy cheese (3), Señor Felix's (8), Heart & Soul (5, Trim Slices), Natures Babies (10, baby foods). Address: 135 Bolinas Rd., Fairfax, California 94930. Phone: (415) 459-3919.

2827. Wildwood Natural Foods. 1995. WildWood Natural Foods: Responding to your needs for high quality, nutritious, ready to eat foods... Naturally! (Leaflet). Santa Cruz, California. 6 panels.

• **Summary:** Contents: Introduction (to the company, soybeans, and soyfoods). About tofu. What is tempeh. Nutritional information about tofu. Partial list of Wildwood Natural Foods Products: Ready to eat. Our purpose. Our mission. Our core values and beliefs. Address: 1560 Mansfield St., Santa Cruz, California 95062. Phone: (408) 476-4448.

2828. Mann, Sue. 1995. Re: Tempeh, tofu, and miso in Ecuador. Letter to William Shurtleff at Soyfoods Center, Feb. 4. 4 p. Typed, with signature, and handwritten.

• **Summary:** A woman, who is about to get some kind of degree in soyfoods/nutrition and who is Quito's top macrobiotic teacher/cook/storeowner, already makes her own tofu and miso, and is interested in tempeh. Sue will be talking with her soon.

"I have been making tempeh for friends, and in about

3 weeks will start moving toward commercial production. With three restaurants waiting and friends no longer willing to take it without paying, prospects are good.” She orders a copy of the book *Tempeh Production*, by Shurtleff & Aoyagi, to be sent to Andrew McCallum in Rochester, New York. On a separate handwritten sheet she gives details on 3 commercial soy products from Ecuador and Colombia. Address: c/o Donna Lewen, Cassilla 17-12-578, Quito, Ecuador. Phone: 593 2-570-600.

2829. Arnold, Kathryn. 1995. The joy of soy. *Delicious!* (Boulder, Colorado). Feb. p. 34-36. [3 ref]

• **Summary:** The soybean “has long been revered by vegetarians as a nutritional powerhouse. However, the real secret is that soyfoods may help prevent disease.” They are cancer fighters and good for the heart. A table (p. 36) lists 12 different types of soyfoods and their uses: Tofu, tempeh, okara, miso, natto, TVP, soymilk, soy grits, soy flour, soy cheese, soy sauce, soy yogurt.

Note: This periodical, which began publication in about 1983, is published for natural products consumers by New Hope Communications in Boulder, Colorado. As of March 1998 some 425,000 copies of *Delicious!* are distributed each month to over 900 health food retail stores throughout the United States.

2830. Messina, Mark; Messina, Virginia. 1995. Soybeans linked to health benefits. *Vegetarian Voice* (Dolgeville, New York) 20(4):10-11. Winter.

• **Summary:** Contents: Introduction. Soy and heart disease. Soy and cancer. Other roles for soy. What if you can’t tolerate soy. The whole diet approach.

A table shows the isoflavone content of selected foods: Soymilk (1 cup) 40 mg. Tofu (½ cup) 40 mg. Tempeh (½ cup) 40 mg. Miso (½ cup) 40 mg. TVP, cooked (½ cup) 35 mg. Soy flour (½ cup) 50 mg. Soybeans, cooked (½ cup) 35 mg. Soy nuts (1 ounce) 40 mg. Isoflavones (unlike vitamins) are not destroyed in conventional cooking methods.

2831. *Tufts University Diet and Nutrition Newsletter*. 1995. Scientists spotlight phytoestrogens for better health. 12(2):3-6. Feb.

• **Summary:** This article, which discusses the health benefits of phytoestrogens in detail and portrays soy in a very favorable light, contains a 3/4- page sidebar titled “Is there soy in your future?” Breast cancer is the number two killer of women in America and prostate cancer is the number two killer of men. Some scientists now believe that both men and women can take the same step to reduce their risk of succumbing to these diseases—change their diets to include phytoestrogens. This change of diet will probably also have a profound effect on menopausal symptoms such as hot flashes and mood swings. There are several classes of phytoestrogens: Isoflavones (which “are especially

prominent in soy—apparently the most potent food in terms of its estrogen-like effects on the body”), coumestans, and lignans.

“Understanding the hypothesis behind the protective effects of the phytoestrogens in soy and other foods can be a bit tricky, especially when it comes to women, because it relies on seemingly contradictory concepts that have to do with whether a woman is pre- or postmenopausal.”

The sidebar on soy discusses tofu, tempeh, and miso.

2832. White Wave, Inc. 1995. White Wave mission statement, company overview, list of products currently sold, and product fact sheets (News release). 1990 N. 57th Court, Boulder, CO 80301. 12 p. Feb.

• **Summary:** “White Wave’s mission is to creatively lead the full integration of healthy, natural, vegetarian foods into the average American diet. Our interest is in promoting the use of foods we consider the world better off with, rather than without.”

“What do you call a man who started a company in a bucket 17 years ago and grew it into an \$8 million business?” White Wave employs over 60 people and has the capacity to produce 13 million pounds of tofu per year.

White Wave has nine product lines: Tofu (4 products), baked tofu (7), tempeh (5), veggie burgers (5, four made from tempeh), Dairyless soy yogurt (8), prepared foods—meat substitutes (8), seitan (3), heat and serve (1), and Soya A Melt soy cheese (6 flavors). Address: Boulder, Colorado. Phone: 303-443-3470.

2833. Conklin, Rebecca. 1995. Top dog in meatless market: Litelife’s growth has been steady. Success with vegetarian fare has swept Lightlife Foods into mainstream. *Boston Globe*. March 1.

• **Summary:** Lightlife Foods of Greenfield, Massachusetts, has a growing line of meat alternatives which are now starting to be sold to mainstream consumers in supermarkets. What began in 1979 as a hippie food business operated out of a former car wash building has developed into a thriving vegetarian food company with 25 products and 50 employees. Company sales reached \$4.1 million in 1994, up 37% from \$3 million in 1993. And revenues are projected to be \$5.5 million in 1995. Also in 1994 Lightlife sold 1.6 million meatless hot dogs.

“Lightlife has managed to reconcile two seemingly opposite interests—the concern for healthy eating and the popularity of the All-American hot dog. President Michael Cohen and vice president Chia Collins, who are partners in life and business, see no end to the growing demand for meatless products.” Lightlife markets its products as low in fat, and free of cholesterol, additives, and preservatives. They are all-natural tasty alternatives to meat. Cohen is a vegetarian and he has focused his company on vegetarian fare. “His and Collins admittedly lofty philosophical goals

are to teach people healthy eating, to protect the animal world and, ultimately, to help end world hunger. Cohen summed up the goals in a simple sales pitch: ‘You can eat these foods and feel good.’”

Lightlife products are beginning to elbow their way onto grocery stores, where they usually end up right next to the real thing in the meat and deli sections. Two years ago when Lightlife moved into about 600 New York and New Jersey supermarkets, their Smart Dogs were sold in the meat sections. Stop & Shop sells Lightlife’s Wonderdogs (hot dogs for kids) next to regular hot dogs.

Lightlife’s financial history has been a series of trips to the well. Cohen and a friend started the company (named Tempeh Works) in 1979, making only tempeh. Collins joined the company a year later. Neither she nor Cohen have formal business training nor college degrees. By 1984 Tempeh Works had outgrown the car wash building but had no cash to buy real estate. Cohen and Collins persuaded the owner of a small building near Route 2 to lease the property for a year with an option to buy. They then spent the year raising \$270,000 in loans guaranteed by the Small Business Administration and a low-interest loan from a federal community development block grant. At the same time they decided to produce more than just tempeh—focusing on familiar alternatives to meat. In 1985 Tempeh Works changed its name to Lightlife Foods and introduced Tofu Pups, a tofu hot dog, made by another company using Lightlife’s formula. The product took off and in 3 years Lightlife had to return to the well for expansion funding. This time five private and public lenders put together a \$750,000 package. Lightlife used the funds to add a hot dog factory to its building, enabling the company to make Tofu Pups in-house. As soon as this factory began operation, the company started to be profitable.

Within 3 months after Smart Dogs were launched in June 1992, they were outselling Tofu Pups, which had been the company’s first major success. A second boom had started. A \$1.2 million SBA-guaranteed loan from Greenfield Savings Bank in 1993 funded Lightlife’s latest expansion, which nearly tripled the size of the building from 11,000 to 30,000 square feet. Wonderdogs were launched in 1994 with a mild flavor, cartoon superhero mascot, and 1 gram of fat per serving; they are designed to appeal to kids’ taste buds, imagination, and nutritional needs.

A photo shows Michael Cohen and Chia Collins.

2834. Krizstan, Jan. 1995. Re: Work with seitan and soyfoods in Slovenia. Letter to William Shurtleff at Soyfoods Center, March 1. 2 p. Typed, with signature.

• **Summary:** Jan phoned on 6 January 1995, then wrote a long letter dated March 1. His first name is pronounced “Yan.” He was born in 1967 in Ljubljana, the capital of Slovenia, where he now lives. He worked for two years on Slovenian television, then in 1992 he quit because of

unhealthy working conditions. He had already been a vegetarian for 2 years and he knew that many people are looking for and need healthy food, but they don’t know how to get it. So he started a small private company named “Izvor” (“The Source”) and in Sept. 1992 started (together with friends) to publish a magazine in Slovenian titled *Bio Novice* (“Bio News”) that would connect these people. The main subjects were growing plant foods in accordance with Nature, healthy diets, ecology, alternative medicine, and the culture of peace and non-violence. “It was very difficult, because we started with almost no money, but we published 15 issues of *Bio News*. In December 1994 we had to stop publishing because of big financial problems.

“One of my friends [Vesna Crnivec] translated some paragraphs from *The Book of Tofu* about preparing home made tofu and made an article. We published her translation, a summary of the Introduction, and some of Akiko’s illustrations in one of the first issues of *Bio News* (See issue 5/6, letnik 1993, p. 40-44). Some readers (especially women) showed great interest in it! Later I translated some paragraphs from *The Book of Tofu* and published them (together with Akiko’s good illustrations) in issues 14 and 15 of *Bio News*. At the end of the article I gave the address of Soyfoods Center for all people interested in ordering your books.

“Last year I was attracted to making seitan and tofu from organic wheat and soybeans. Mr. Mirko Trampus is my very good friend. He has an organic farm in Metlika (1 km from the border with Croatia, in southeastern Slovenia). He has been growing wheat, soybeans, and daikon organically for the last 6 years with very good results. We decided to make a kitchen in his house for transforming Mr. Trampus’ soybeans, wheat and daikon into tofu, tempeh, natto, soymilk, seitan and pickled daikon.

“A few days before New Year 1995 I visited all Ljubljana’s bookshops, because I wanted to find some information about tofu and seitan. What a surprise! There was your *Book of Tofu*. I found it once again and bought a copy. I was so happy. Not far away I found the book *Cooking with Seitan* by Barbara and Leonard Jacobs, with a foreword by Aveline Kushi.

“Now (at the end of February 1995) we are making about 50 kg of seitan per week by hand. We sell it in some 20 healthy food shops all over Slovenia.” He would like to start making tofu, soymilk, natto, and tempeh. Later he would like to make miso too. “Our aim is preparing 100% vegetarian foods of the highest possible quality, made from organically grown soybeans, wheat, and daikon. Now we need more information. Presently Mr. Trampus grows about 12,000 kg of wheat and 9,000 kg of soybeans per year. Prof. Spanring is our good friend. He helped Mr. Trampus to choose the best varieties of soybeans for making tofu and the wheat with the highest gluten content for seitan. Now we use hard winter wheat. We mill it into flour in our own mill with stones.

From 100 kg of wheat flour we get about 23 kg of very dark brown seitan.

“Up until now, all of the starch has been rinsed by hand, but we have constructed an automatic rinsing machine which will be prepared for use very soon. We presently rinse using only warm water at about 30°C. We discard all the starch (putting it on compost heaps on the fields), but later we will use it as an ingredient in cooked soymilk puddings.”

Jan would like to order *The Book of Tempeh*. He is looking for a source of tempeh starter. Tempeh is largely unknown in Slovenia, but he would like to introduce it because it is a healthy food and tastes very good. Address: Mestni trg 22/1, 68330 Metlika, Republic of Slovenia. Phone: (386) 068 59 481.

2835. Gruenwald, R. Jay. 1995. Update on The Simple Soyman, The Bountiful Bean, Long Life Foods in Minnesota, and Kyoto Food Corp. (Terre Haute, Indiana) (Interview). *SoyaScan Notes*. March 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Jay has been with The Simple Soyman for 12 years. On 23 Sept. 1994 The Simple Soyman bought The Bountiful Bean, moved it from Ridgeway to Milwaukee, and merged it into The Simple Soyman. In Dec. 1994 he moved the new larger company to a new address: 3901 North 35th St. (P.O. Box 16677), Milwaukee, Wisconsin 53216. Phone: 414-444-TOFU. Simple Soyman still produces Hummus and Taboulie [both contain tofu], tempeh, and tofu under the Bountiful Bean brand. The Simple Soyman will continue to make its Deepockets (Calzone-style [Italian] and Empanada-style [Mexican]; both contain frozen tofu), dips, spreads, etc. Most are made with soy. The company does a lot with frozen tofu, using it in place of TVP, which causes intestinal gas. The business is still struggling, “but hopefully with the addition of The Bountiful Bean business and distribution in Madison, we’ll get going. Being in this for 12 years now, we’ve got to start making a living at it pretty soon. Basic tofu is still not very profitable. We started working out of the Magic Bean’s kitchen with one product. When they went bankrupt we basically bought their equipment and moved to 4877 N. Green Bay Ave., Milwaukee, Wisconsin. The building we are in now is 4,500 square feet. The factory is nicely laid out.”

R. Jay has heard from a packaging company that a new tofu company named Long Life Foods is scheduled to start in Perham, Minnesota. They are said to be using a special type of package (not water pack) which gives the tofu a very long shelf life.

Kyoto Food Corp. (KFC) in Terre Haute, Indiana, declared bankruptcy in about May or June 1994. He heard that KFC had a verbal agreement from a big chain like Kroger to carry their tofu, then Azumaya, which was the brand Kroger was carrying, lowered their price. So Kroger stayed with Azumaya and that dealt the death blow to KFC

[not true; see March 1995 interview with William Roach]. They were trying to sell their building and plant (which they owned and designed to make tofu) for about \$1.3 million. He thinks that the company was run by a couple, an American man and a Japanese woman [William and Toni Roach]. Bruce Rose is thinking of buying the company. Address: Owner, The Simple Soyman, 3901 North 35th St. (P.O. Box 16677), Milwaukee, Wisconsin 53216. Phone: 414-444-8638.

2836. Gokavi, Sumangala S.; Vaidehi, M.P. 1995. Acceptability of assorted tempe based products. *Beverage & Food World (Bombay)* 22(2):10-12. March. [14 ref]

• **Summary:** This study was conducted to introduce various types of tempeh and their products to India so they can be adopted by Indian housewives; they were evaluated by a trained panel of judges. Soy combined well with maize, jowar, wheat. Well accepted made from maize-soy were: Chips, toffees, beverage, biscuit, chapati, laddoo, porridge. From jowar-soy: Toffees, curry. From wheat-soy: Biscuit. From: Rice-greengram-carrot: Chips, toffees, beverage, biscuit, laddoo, porridge. Address: Dep. of Rural Home Science, Univ. of Agricultural Sciences, Hebbal Campus, Bangalore 560 024, India.

2837. Golbitz, Peter. 1995. Traditional soyfoods: Processing and products. *J. of Nutrition* 125(3S):570S-572S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease. [9 ref]

• **Summary:** Contents: Introduction. Soymilk. Tofu. Tempeh. Miso. Soy sauce. Address: Soyatech, Inc., Bar Harbor, Maine 04609. Phone: 360-379-9544.

2838. Hutchins, A.M.; Slavin, J.L.; Lampe, J.W. 1995. Soybean feeding and urinary isoflavonoid phytoestrogen and lignan excretion in healthy men (Abstract). *J. of Nutrition* 125(3S):802S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.

• **Summary:** Urinary isoflavonoids (genistein, daidzein, O-desmethylangolensin [ODMA] and equol) were greater and urinary lignans (enterodiol and enterolactone) were lower in soy-supplemented diets. However isoflavonoid and lignan excretion were similar between diets in which a fermented soy product (tempeh) and unfermented soybean pieces were fed. Thus fermentation of soybeans apparently does not effect these excretions. This research was supported by the Minnesota Soybean Research and Promotion Council. Address: Dep. of Food Science and Nutrition, Univ. of Minnesota, St. Paul, MN 55108.

2839. Rose, Richard. 1995. Sharon’s Finest is moving towards hemp products (Interview). *SoyaScan Notes*. April 3. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Richard first introduced the idea of using hempseed protein in natural food products in America. His is still the only company making such products, and demand for them is growing rapidly. "Our business is moving toward hemp." He recently published a brochure titled "Hemp Food," that explains the many benefits of growing hemp. Many people still do not realize that hemp is not the same as marijuana; they are different plants.

Sharon's Finest now makes HempRella (a non-dairy cheese alternative containing 5% milled hemp seeds) and Hempeh Burger (a soybean and rice tempeh burger containing 10% whole hemp seeds). The future of Hemp Foods lies in sprouting hemp seeds then processing them to make milk (similar to making soymilk from the soybean), yogurt, ice cream, tofu, cheese, meat alternatives, and the like. Address: President, Sharon's Finest, P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

2840. Krizstan, Jan; Trampus, Mirko. 1995. Re: Update on work with seitan and soyfoods in Slovenia. Letter (fax) to William Shurtleff at Soyfoods Center, April 28. 3 p.

• **Summary:** "The Slovenian people are really very happy to be out from under the oppressive rule of Yugoslavia and Belgrade now.

"Mirko was very busy during March and April mounting ceramic tiles all over our tofu and seitan kitchen walls, preparing the soil for soybeans, and experimenting with an interesting sort of spring wheat. He's almost finished now. The gas line and outdoor gas tank are already installed. Next week he will be mounting tiles on the floor. Our new kitchen (5 by 6 meters, formerly a garage) is attached to the old one (3.5 by 5 meters), which we still use for making seitan. We hope to put all equipment in our new kitchen and go to Austria to buy natural nigari at the end of next week." They will use the old kitchen for storing soybeans and wheat.

Jan and Mirko would like to buy tofu and soymilk equipment from Wally Rogers of Bean Machines but it is too expensive for them. In the new kitchen they plan to have: one caldron for cooking seitan, two pressure cookers for making tofu, some stainless steel working tables, a semi-automatic machine for rinsing starch out of wheat dough for seitan production, 2 chambers for cooling pressed tofu, a curdling barrel, and vacuum packaging machine—all of them second hand, except the rinsing machine which Jan designed.

Jan first made seitan in August 1993 on a very small scale and by hand at his home kitchen. "It was sold 'wild' on the market—only in healthy food shops in Ljubljana, whose owners dared to sell it without legal permission." For details on this history and development of this seitan product see Izvor 1993.

"I was strongly interested in macrobiotics for some time. I first heard about it at a macrobiotics course organized by a middle-aged woman, who became one of my best friends.

But I've always been very curious. So I asked myself: 'Is there any better way of eating and living than macrobiotics?' I tried a vegetarian diet without milk, fish, eggs, or honey, and with a lot of fresh fruits, nuts and wholesome bread (all organically grown) for a while. It was even better than macrobiotics and it took less time for food preparation." Now Jan eats only fruits and nuts, and sometimes seitan or tofu. Address: Mestni trg 22/1, 68330 Metlika, Republic of Slovenia. Phone: (386) 068 59 481.

2841. Messina, Mark. 1995. Fiber, soyfoods, and health. *Soy Connection (The) (Chesterfield, Missouri—United Soybean Board)* 3(2):1-2. Spring. [3 ref]

• **Summary:** "Fiber has been extensively studied in connection with the risk of chronic disease, particularly diseases related to the colon. Americans currently consume about 10-12 grams of fiber per day, far less than the recommended 20-35 grams per day... Populations consuming plant-based diets often consume 50 grams or more of fiber per day." People in traditional societies consuming such a diet often have little or no intestinal disease.

Dr. Denis Burkitt, a pioneer in studying the role of fiber in disease prevention, considered diverticulitis to be a deficiency disease of Western civilization. Research supports the role of fiber in preventing diverticulitis. Dr. Burkitt coined the phrase "the bigger the stools the smaller the hospital."

"Although there is some disagreement, evidence suggests fiber intake is inversely related to risk of colon cancer. Data also suggests fiber decreases breast cancer risk, perhaps by binding estrogens in the intestine and thereby preventing their re-absorption.

It is safer to get one's fiber from whole foods rather than from fiber supplements. "First, there are many different types of fiber in the foods we eat. Each can have a different physiological function and there are examples of different fibers [such as wheat bran and psyllium] acting synergistically to reduce risk of disease. Fiber supplements are often limited to one type of fiber.

"Second, in many cases it is not clear whether it is the fiber per se in foods, or some fraction/component closely associated with the fiber that is responsible for the reported beneficial effects. In some instances it is probably a combination of both. Although tofu and soymilk are low in fiber, two good sources of fiber are whole beans and tempeh." Address: PhD.

2842. Walker, Morton. 1995. Concentrated soybean phytochemicals. *Healthy & Natural Journal* 2(2):58-60. April. [12 ref]

• **Summary:** Contents: Introduction (Designer Foods Symposium III). Cancer inhibitors in soybeans. Prostate cancer cured by fermented soybean drink (Haelan 851). The therapeutic characteristics of Haelan 851. Note: The address,

phone number, and fax number of Haelan Products Inc. in Metairie, Louisiana, is given.

Soybeans contain five different types of anti-cancer agents: protease inhibitors, phytate, phytosterols, saponins, and isoflavones. The latter are plant estrogens with strong inhibiting effects in hormone-related malignancies such as prostate, ovarian, cervical, and breast cancers. Isoflavones are found in a variety of soy foods, including soy milk, tofu, tempeh, miso, textured vegetable protein, soy flour, soy nuts, and soybeans. "The isoflavone component which most excites the medical research community is genistein. It's an overpowering suppressor of the oncogene enzymes that ordinarily stimulate pathological cell growth." Address: Medical Journalist, 484 High Ridge Road, Stamford, Connecticut 06905-3020.

2843. Hutchins, Andrea M.; Slavin, J.L.; Lampe, J.W. 1995. Urinary isoflavonoid phytoestrogen and lignan excretion after consumption of fermented and unfermented soy products. *J. of the American Dietetic Association* 95(5):545-51. May. [57 ref]

• **Summary:** Healthy men were fed diets containing either tempeh or pieces of unfermented whole dry soybeans for 9 days. Urine samples were analyzed for isoflavonoid and lignan content. Although fermentation of soybeans led to a loss of isoflavones, the isoflavones in tempeh appeared to be more available to humans than did the isoflavones in unfermented soybeans. This discovery suggests that fermentation increases the availability of isoflavones in soy.

Gives the content of daidzein, genistein, daidzin, genistin. Address: 1-2. Dep. of Food Science and Nutrition, Univ. of Minnesota, St. Paul, MN 55180; 3. Assoc. in cancer prevention, Div. of Public Health Services, Fred Hutchinson Cancer Research Center, 1124 Columbia St., MP702, Seattle, Washington 98104.

2844. Liu, Keshun; Orthoefer, Frank; Thompson, Keith. 1995. The case for food-grade soybean varieties. *INFORM (AOCS)* 6(5):593-96, 598-99. May. [10 ref]

• **Summary:** Contents: Introduction. Food beans vs. oil beans. Traditional soyfoods: Soymilk, tofu, toasted full-fat soy flour [kinako], soy sprouts, soy sauce, miso, tempeh, natto. Soy protein ingredients: Soy grits and flour, soy protein concentrates, soy protein isolates. Soyfood nutrition. Current size of food bean market. Breeding of food beans. Conclusions.

"Oil/meal beans include all the commonly produced soybeans." The oil is typically used for food and the meal for livestock feed. However the "new varieties of food soybeans" are generally exported to countries in East Asia for preparation of Oriental soyfoods. Table 3 compares the attributes of food beans vs. oil beans. Seed size: Large vs. small to large. Seed uniformity: High vs. no preference. Hull color: White-yellow vs. yellow. Hull quality: Thin, firm vs.

no preference. Hilum color: Clear to buff vs. clear to blank. Protein content: High vs. medium to high. Oil content: Low to high vs. high. Cleanliness: U.S. Grade 1 or better vs. any grade. Major applications: Tofu, soymilk vs. oil, defatted meal.

In addition to their use in making traditional soyfoods, the "new food-grade varieties," especially those with high protein content, have been marketed for preparation of toasted full-fat soy flour, defatted soy flour, and soy protein concentrates and isolates.

Photos show: (1) Keshun Liu, Frank Orthoefer, and Keith Thompson. (2) Color and size comparison of soybeans for food use and those intended for crushing (color). The "food beans" are larger than the "oil beans."

Note: This is the earliest English-language document seen (July 2001) that contains the term "oil beans" or the term "oil/meal beans," both used in contrast to "food beans" or "food soybeans." This is also the earliest English-language document seen (July 2001) with the term "food-grade" (or "food grade") used in the title to refer to soybeans or soybean varieties. Address: 1. Project Leader, Soyfood Lab., Jacob Hartz Seed Co. Inc., 901 N. Park Ave., Stuttgart, Arkansas 72160; 2. Vice President for research and development, Riceland Foods Inc., P.O. Box 927, Stuttgart, AR 72160; 3. Vice president, International Soyfood Sales, Jacob Hartz Seed Co.

2845. Packaged Facts. 1995. The meat and dairy alternatives market. New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.

• **Summary:** In 1994 retail sales of these products reached an all-time high of \$286 million, and these sales are projected to top \$660 million in 1999. This very interesting report can be ordered from Packaged Facts, 625 Avenue of the Americas, New York, NY 10011. Phone: 212-627-3228. Price: \$2,150. The authors were Sarah and Peter Starr, though their names do not appear in the report. The product director was David Lumis.

Contents: Part I: The products. Scope of the report (Vegetarian products sold as meat or dairy alternatives, products not covered), history of the industry (an emerging market, part of the vegetarian movement, soybeans—an ancient food of Asia, soybeans arrive in the new world in the 18th century, Kellogg family starts health foods industry, makes first meat analogs, Seventh-day Adventists and others produce tofu and meat alternatives in the 1920s, Henry Ford early proponent of soybeans, meat analogs commercially developed in the United States in the 1940s, non-dairy beverages, growth of "Americanized" meat and dairy analogs booming), product definition (foods used to replace meat or dairy products, description of ingredients—tofu, tempeh, soymilk, okara, soy protein concentrates and isolates, textured vegetable protein, wheat gluten and seitan), product categories (three main categories of meat and dairy

alternative products, meat alternatives, dairy alternatives, prepared meals), government regulations (the FDA and FTC, NLEA labeling considerations {went into effect in May 1994, making the USA the world's first country to have mandatory nutrition labeling}), soy protein allowed in meat products without special labeling, bovine growth hormone), industry associations (the Soyfoods Association of America, the American Soybean Association, the Vegetarian Awareness Network).

Part II: The Market. Introduction (Retail sales of meat and dairy alternative products by category–1989-94–graph, retail sales of dairy alternatives products by segment–1989-94–graph), market size and growth (market is difficult to monitor, 1994 retail sales estimated at \$286 million, dairy alternatives surpass \$142 million, meat alternatives soar to \$132 million, prepared meals grow steadily to over \$12 million, estimated retail sales of meat and dairy alternative products by category–1989-1994–table, growth in milk substitutes segment leveling off but still in double digits, cheese alternatives segment also experiences slight slow-down in 1994, non-dairy desserts—a slow-growth segment, estimated retail sales of dairy alternative products by segment–1989-1994–table), factors in market growth—overall market (maturing population and interest in nutrition, new dietary guidelines, medical community accepts plant-based diet, studies show vegetarian diet equals a healthier—longer life, soy might help to prevent heart disease and cancer, consumers now approve of vegetarian diets, increased demand for vegetarian foods, youth adopts meatless meals, exposure through foodservice, mass market begins to support meat and dairy alternatives, products in wider distribution, innovative new products, improved technology equals better taste, increased funding for soyfoods through foreign capital, pricing continues to limit market, image—taste and texture still a problem), factors in market growth—meat alternatives (concern about health hazards of meat, fat calories targeted by labeling law, an alternative to chicken and fish, ecological and social considerations will propel meatless meals, meatless meals difficult to handle by foodservice), factors in market growth—dairy alternatives (milk substitutes enter dairy case, awareness of lactose intolerance on the rise, taste profile limits acceptance, cheese alternatives—are they healthier?, projected retail sales of meat and dairy alternative products by category–1994-1999–graph {p. 34}, projected retail sales of dairy alternative products by segment–1994-1999–graph {p. 35}), projected market growth (overall market to reach \$662 million in 1999, meat alternatives and prepared meals to lead growth, projected retail sales of meat and dairy alternative products by category–1994-1999–table, growth of milk substitutes and other dairy alternatives expected to slow somewhat by 1999, projected retail sales of dairy alternative products by segment–1994-1999–table), market composition (meat alternatives will outsell dairy alternatives, share of

sales by product category—meat and dairy alternatives—graph, soy-based ingredients most frequently used in meat-like products, protein ingredients used in meat-like products by number of products made with ingredient–1990-1992–table, bulk of dairy alternative sales from milk substitutes, share of sales by product segment–1989 vs. 1994–graph, sales by retail outlet, share of sales by retail outlet—meat and dairy alternatives–1994–graph).

Part III: The marketers. The marketers (About 30 significant marketers—most small, major companies move into the market, meat alternatives—other mass-market players, meat alternatives—natural foods players, the leaders in milk substitutes, cheese alternative market leaders, the leaders in non-dairy desserts, prepared meals market leaders, selected marketers and brands of meat and dairy alternative products—chart), market and brand shares (mass-market leader Worthington Foods challenged by ADM/Pillsbury Green Giant Harvest Burger, wholesome and hearty growing fast, Boca Burger boogies by the Bystanders, marketer and brand shares of meat alternative products sold through supermarkets–1993 vs. 1994–table, natural foods sales of meat alternatives more fragmented, Worthington is leader in natural foods stores, White Wave and Lightlife hold second and third place, estimated marketer and brand shares of meat alternative products sold through natural foods stores–1994–table, many small regional players capture local markets, Eden Foods leads in milk substitutes, estimated marketer and brand shares of milk substitute products mass-market and natural foods stores–1994–table, Imagine Foods' Rice Dream is leading rice beverage, other vegetable beverages, Tree of Life's Soya Kaas holds leading share of cheese alternatives market, estimated marketer and brand shares of cheese alternative products sold through natural foods stores–1994–table, Tofutti holds top market share in frozen desserts, Fairmont Foods establishes lead in supermarkets, marketer and brand shares of prepared meals sold through supermarkets–1994–table, natural foods prepared meals—many brands and no one leader), competitive situation—overall market (marketers compete primarily through new product introductions, growth through mergers and acquisitions). Continued.

2846. Packaged Facts. 1995. The meat and dairy alternatives market (Continued—Document part II). New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.

• **Summary:** Contents: Continued from p. vi. Part III: The Marketers. Competitive situation—meat alternatives (Worthington pioneers Seventh-day Adventist vegetarian market, Miles Laboratories acquires Worthington—places Morningstar Farms in mass market, tofu drives natural foods market, soy frank marketers exploit tofu opportunities, tempeh—another meat alternative ingredient gains interest, wheat-based alternative seitan expands presence, Worthington places tofu patties in natural foods

stores—changes hands again, Wholesome and Hearty develops foodservice distribution, meatless burger market heats up, pattie competition fierce in natural foods arena, ADM/Pillsbury alliance brings soy burgers to mass market, Worthington fights back, category differentiates in the early 1990s, soy attacked by soy-free burger companies, meat alternative marketers cut the fat, low-fat sausages and franks, tightly targeted vegetarian fun foods and snacks, mass-market companies introduce ground meat analogs, natural product companies follow suit, Wholesome and Hearty seeks retail growth, others seek lucrative foodservice market), competitive situation—milk substitutes (early market limited to ethnic community, Edensoy a big hit—Vitasoy responds, new lines introduced, competition—domestic manufacturing and larger containers bring down soy beverage prices, flavors and packaging distinguish early products, Westbrae introduces first low-fat soymilk, fortification has become key selling point, Eden's fortified product suits strict vegetarians, new package sizes expand market, re-closable—easy to pour, rice beverages—line extensions grab shelf space, Wholesome and Hearty's almond beverage, 100% organic products, a fresh—new market—some products shift to dairy case, mass-market interest), competitive situation—cheese alternatives (Seventh-day Adventists start category, first natural foods cheese alternative not dairy-free, handful of marketers compete on price in natural foods arena, new products parallel dairy-based mass market, a move toward lower fat and fat-free, seeking the most melt-able cheese, Sharon's finest finds innovative ingredients, marketers target vegan market), competitive situation—non-dairy desserts (Toffutti dominates, dairy-free puddings—one major player, non-dairy yogurt has yet to catch on), competitive situation—prepared meals (flavored tofu and seitan expanded into meals, Legume is early innovator, cheese alternatives in prepared meals, other companies dive into prepared meals, action has been in natural foods, supermarket products have not succeeded), competitive profiles (The Archer Daniels Midland Co.—Grand Metropolitan PLC—Pillsbury division partnership, Amy's Kitchen Inc., A&A Amazing Foods Inc., Boca Burger Co.—Sun Foods, Eden Foods Inc., Fairmont Foods of Minnesota Inc., Fantastic Foods Inc., The Hain Food Group Inc., Imagine Foods Inc., Lightlife Foods Inc., Sharon's Finest, Tofutti Brands Inc., Vestro Natural Foods Inc., Vitasoy—USA Inc., White Wave Inc., Wholesome and Hearty Foods Inc., Worthington Foods Inc., Yves Veggie Cuisine Inc.), marketing trends (updated packaging, burger market segmenting into natural and mass market, Worthington—a master at working both markets, hamburger look-alikes crossing back into natural foods, veggie patties crossing into mass market, nostalgia—creating brand loyalty, marketers expanding into other categories, moving into the frozen breakfast section, retail displays, pushing into new distribution channels), new product trends (new—improved packaging, light and healthy, product

names emphasize healthy, fat-reversal—mass-market burger-substitutes gaining fat, ground meat alternatives, new flavors and varieties—many gourmet and upscale, ethnic—especially Mexican and Southwestern, convenience, technology produces better mimics, mixing soy with grains and other ingredients, mainstreaming health foods, natural ingredients preferred—organic even better, selected new product introductions—meat and dairy alternatives—1994–March 1995—chart), advertising expenditures (most advertising not measured, specialty magazines are preferred medium, radio is another alternative, little consumer advertising, Worthington outspends competition, ADM-Pillsbury spends millions to launch Harvest Burger in 1994, Edens Foods targets mass market, Fantastic Foods' first major spending), advertising positioning (good health is overlying theme, and fat is prime concern, vegetables are a solution to a bad diet, milk substitutes advertised to lactose-intolerant market, highlighting a sense of the familiar, foods children love, traditional burger images used to woo mass market, vegetarian appeal used for meatless patties, organic is important feature in natural foods, examples of consumer advertising), consumer advertising (consumer promotions not heavily used, money-off coupons from several companies, new lines offer more generous rebates, recipes and books educate consumers, in-store promotions—the White Wave Center, marketers join forces in advertorial, sponsoring sports events—a healthy fit, 25 years of earth day, non-profit tie-ins, Turtle Island's recycling program, other types of promotions, examples of consumer promotions), trade advertising and promotions (three key trade publications, trade ads also used as consumer ads, trade ads scheduled to run in convention issues, trade ads announce growing business, editorial promotions, reaching retailers, example of trade ads). Continued.

2847. Packaged Facts. 1995. The meat and dairy alternatives market (Continued—Document part III). New York, NY: Packaged Facts. xii + 162 + 42 + 6 p. May. 28 cm.

• **Summary:** Contents: Continued from p. x. Continued Part IV: Distribution and retail. Distribution (Two distinct channels, mass-market products—warehouse delivery used most, natural foods products—independent distributors used most, distributors offer wide range of services, direct buying, several large distributors dominate health food channel, margins for the two channels differ, brokers support marketers' sales efforts, marketers' sales forces work with brokers), at the retail level—natural foods stores (the leading outlet—natural foods stores, soy-based products the heart and soul of natural foods store, products sold in several locations, stores adding refrigerator and freezer space, margins, product price comparison, meat alternatives—table, milk substitutes—table, cheese alternatives—table, frozen non-dairy desserts—table, prepared meals—table, in-store demos are top promotional activity, an increase in store

advertising, examples of retail promotions), at the retail level—mass market (most products not in mass market, store placement of meat alternatives varies, store-within-a-store, increased selection and space, targeting the vegetarian consumer, margins, warehouse clubs, *Cergro* pricing data). Part V: The consumer. Consumer use—soyfoods (About 25 million U.S. adults use soyfoods, natural foods shoppers more likely to purchase soy products, demographics of meatless burger consumers, use by type—tofu and soy burger use most common, other types of soyfoods used by about 2% of consumers, types of soyfoods eaten five or more times in the past year—table), the vegetarian consumer (what is a vegetarian, 12-22 million vegetarians and growing, small number of strict vegans, meat restrictors—a broader target of 77 million, who are vegetarians, demographic characteristics of vegetarians—table), consumer attitudes (main reason for choosing vegetarian foods, most important reason for becoming a vegetarian—table, concern about health higher among semi-vegetarians, most important reason for choosing vegetarian foods—table, cholesterol-fat primary health concerns, primary health concern when becoming a vegetarian—table, grocery store shoppers more influenced by doctor's orders, health also key reason given by restaurant diners, fat-salt-fiber and cholesterol top health concerns for meatless burger consumers, environment pollution tops list of other social concerns of vegetarians, vegetarians considered nutrition advisors, a slow transition to vegetarianism, attitudes about meat alternatives, room for improvement on taste, consumers have a positive image on soy, more interest in soymilk from natural foods shoppers). Appendix I: Examples of consumer and trade advertising and promotions [photocopies of ads]. Appendix II: Addresses of selected marketers.

Scope of the report: This is a study of vegetarian foods made to resemble meat and dairy products and sold at retail, mostly through supermarkets and health and natural food stores. These products include meatless burgers and luncheon slices, soymilk and rice milk, cheese alternatives, non-dairy desserts (usually non-dairy ice creams), and prepared vegetarian meals containing meat and dairy alternatives as major ingredients.

Products not covered: (1) Bulk and packaged tofu, unflavored tempeh—However products such as tofu- or tempeh burgers are covered. (2) Margarine, non-dairy creamer, non-dairy whip toppings, and egg substitutes. Although the first three of these categories are alternative to dairy products, they have become well accepted in the American diet and are not necessarily purchased by consumers wishing to avoid dairy products. “Also, the sheer size of these categories—each of which is many times larger than the overall meat and dairy alternatives market—would drastically skew the market numbers and trend information away from the products that are the focus of this report. For similar reasons, egg substitutes are also excluded.”

2848. Krizstan, Jan; Trampus, Mirko. 1995. Re: Update on work with seitan, tofu, and shoyu in Slovenia. Letter (fax) to William Shurtleff at Soyfoods Center, June 19. 3 p.

• **Summary:** Jan and Mirko have received and enjoyed reading copies of *Tofu & Soymilk Production*, *The Book of Tempeh*, and *The Simple Soybean and Your Health* sent by Soyfoods Center. We made our first two cauldrons full of tofu on the night of June 12—52 kg of very sweet, aromatic and full bodied firm natural nigari tofu from 32 kg of Mirko's dry organic soybeans. We were so happy. We supply all of our retail outlets (34 of them as of today) with copies of simple introductory ads (some information about what is seitan and tofu, the way of Mirko's organic farming, and some recipes for preparing tofu and seitan). Each customer who comes to a healthy food shop and buys our organic (or other' regular) seitan or tofu gets such a copy for free. We already have very positive feedback—people say that our recipes are very simple and understandable and the meals taste good. Making tofu and seitan is becoming a kind of meditation to us and we agree with the sentence in your *Tofu & Soymilk Production* that ‘When the master becomes selfless, the tofu makes itself.’ Of course, we found that we are apprentices—the real master is Tofu.

“Since May 19 some very ill people from Republic of Croatia have come here to Metlika to buy our tofu and seitan. We gave them some tofu, seitan and shoyu plus information for preparation of meals using tofu and seitan. Most Slovenian (and Croatian) people have never heard of shoyu or tamari until now. It feels so nice to help ill people with healthy foods.” Address: Mestni trg 22/1, 68330 Metlika, Republic of Slovenia. Phone: (386) 068 59 481.

2849. Jacobi, Dana. ed. 1995. The natural health cookbook: More than 150 recipes to sustain and heal the body. New York, London, Toronto, Sydney, Tokyo, Singapore: Simon & Schuster. 271 p. . June. 25 cm.

• **Summary:** This is a selection of the best recipes published in *East West Journal*, compiled by Dana Jacobi, Dan Seamens, and the editors of *Natural Health* magazine. The recipes are generally low in fat, free of white sugar and other refined foods, and nutrient dense, based on grains, legumes, and vegetables; some contain fish and shellfish. Chapter 4 is titled “Seitan, tempeh, and tofu.” Miso and soy sauce are used throughout as seasonings.

Contains recipes for Amasake dressing (p. 153), and Amasake scones (p. 191). Amasake (or Amazake) is defined in the Glossary of ingredients (p. 243). Address: New York City, NY.

2850. Soyfoods Association of America. 1995. A consumer profile of the soyfoods shopper. San Francisco, California. 100 p. \*

• **Summary:** Contents: Executive summary. Overview.

1. U.S. population—Awareness of soyfoods: Number of consumers who have heard of soyfoods (most have heard of tofu, few have heard of tempeh), demographics of soyfood-aware consumers (consumers under age 60 more aware of soyfoods, soyfoods-aware consumers are more affluent, greater number of Easterners but awareness is nationwide, more likely to be married).

2. Soyfoods consumers—Demographics: Use of soyfoods (about 26 million soyfoods consumers—15 million eat tofu, consumers who use one kind of soy product more likely to use another type), demographics (younger households and baby boomers, household incomes skew higher, more than two-thirds are college-educated, employed in white-collar professions, women in soyfoods households less likely to be in clerical jobs, men working full-time—some self-employed, busy women in a variety of employment situations, one-third of soyfoods consumers have children at home, most in the east—proportionately more in the west, proportionately more in pacific, live in areas of greater population density, living the American dream, mostly home-owners).

3. Soyfoods consumers—Shopping and eating patterns: Frequency of eating types of soyfoods (most eat soyfoods infrequently, soy cheese used more frequently, regular users use soyfoods—especially soymilk—a lot, consumers of one type use other types more), where consumers buy soyfoods (groceries/supermarkets stores of choice for tofu, natural foods store shoppers more dedicated soyfoods consumers, meat substitutes purchased in mass-market, other soyfoods in natural foods stores, soymilk customers split between grocery and natural foods, miso popular in Asian stores), future purchase plans (more than 6 million consumers plan to use soyfoods more, soy hot dog—cheese and frozen dessert consumers most enthused about eating more soyfoods), the soyfood shopper's diet (seek low-fat/cholesterol/sodium/sugar foods, health interests vary by types of soy products tried), other red meat alternatives (most list fish and poultry as red meat alternatives, vegetarian foods favored by consumers of specific soy products).

4. Soyfoods consumers—Attitudes about soyfoods: Attributes of soyfoods (a positive opinion of soyfoods' health benefits—consumers approve less of taste and ease-of-use, soymilk and soy hot dog consumers most likely to agree that soyfoods are healthy, few consumers have negative health image of soyfoods, soy products users believe in soyfoods' special nutrients, soyfoods easier to use than public thinks, familiarity breeds affection, users of various soy products see cost savings, those who use specific soy products—especially tempeh—cannot find them where they shop, consumers of various types do not feel soyfoods are a problem for allergies), importance of organically grown (more than one-third of soyfoods consumers seek organically grown, attitudes about organic stronger among users of specific products).

5. Soyfoods consumers—Sources of product information:

Where consumers first learned of soyfoods (word of mouth is primary source, promotion works for packaged products), why consumers first began to eat soyfoods (novelty and health are the prime motivators, soymilk consumers more concerned about specific health and lifestyle issues—soy burger consumers seeking low-fat meat substitutes), why consumers currently eat soyfoods (consumers less sure why they currently eat soyfoods, tofu—soymilk—and soy burger consumers more likely to have specific reasons), familiarity with health connections (consumers unfamiliar with some of soyfoods' health benefits—familiar with soyfoods' link to cholesterol and heart disease, both users and interested non-users aware of link to cholesterol and heart disease, core consumers not well-informed about other health benefits), sources of information (magazines and newspapers most common source of health information).

6. U.S. population—Why consumers aren't eating more soyfoods: Who is interested in eating more types of soyfoods (consumers would like to try new soyfoods), what would get consumers to eat more soyfoods (taste and lack of cooking suggestions are barriers to use, soy hot dog consumers seeking lower prices—soymilk shoppers seeking more outlets—tofu consumers want recipes, rural—southern and consumers seek lower cost—more affluent seek better taste).

7. Children and soyfoods: How often children eat soyfoods (among soyfoods households—two-thirds of kids age 2-12 eat these products, households with children age 2-12 eat more soy burgers—soymilk, children age 13-18 more likely to be infrequent soyfoods consumers, households with older children tend to choose same products as soyfoods consumers overall), children's attitudes about soyfoods (children's attitudes toward soyfoods are mixed—many parents cannot speak for their children).

8. The tofu shopper: Ways consumers use tofu most often (tofu use most often in stir-frys), why consumers eat tofu (consumers say they eat tofu because it is healthy), what influences brand choice (price—freshness and taste), why consumers aren't eating more tofu (tofu consumers are looking for new ways to use tofu), demographics (most tofu users are 30-59—those 60 and over avoid it, higher household incomes, tofu household heads are highly educated and have executive jobs, household size and marital status similar to average American, concentrated in more populated areas—East and West coasts).

9. The soymilk shopper: Ways consumers use soymilk most often (most often used as a beverage), why consumers use soymilk (non-specific health features and convenience attract soymilk users), what influences brand choice (freshness, quality, taste drive soymilk sales), why consumers aren't using more soymilk (cost and availability hinder use), demographics (younger households use soymilk, more affluent households, education and occupation, more multiple-person households, more Westerners and those in mid-size MSAs).

10. The soy-based meat alternatives shopper: Why consumers use soy-based meat alternatives (because they are healthier), what influences brand choice (taste and price), why consumers aren't buying/using more soy-based meat alternatives (cost, unfamiliarity, taste and availability hinder use, cost and availability factors are higher among users of specific products), demographics (soy burger users and interested non-users are younger, household income somewhat higher among meat alternatives users, college educated and graduates, white collar employees, two person households for some products—soy burgers mirror U.S. population, soy bacon use higher in East—burgers higher in central region, variations by types of products used).

11. The soy-based dairy alternatives shopper: Why consumers used soy-based dairy alternatives (for health reasons), what influences brand choice (taste primarily), why consumers aren't buying or using more soy-based dairy alternatives (cost and unfamiliarity hinder use), demographics (older and more affluent, educated and professionally employed, smaller size households—more singles, live in moderately populated areas, more concentrated in east and west).

12. Other soyfoods shoppers—Soy flour, tempeh, and miso: Demographics (soy flour consumers older—miso consumers most affluent, soy flour, tempeh and miso found in educated households, occupation status similar to other soyfoods shoppers, smaller households and more singles use tempeh, more soy flour users in low-density areas, east and west coasts for miso and tempeh).

Methodology. Questionnaire. Continued. Address: One Sutter St., Suite 300, San Francisco, California 94104. Phone: 510-935-9764.

2851. Soyfoods Association of America. 1995. A consumer profile of the soyfoods shopper. II. Methodology of collecting information. San Francisco, California. 100 p. \*  
**• Summary:** This survey was conducted by Market Facts, Inc., a market research firm based in Chicago, Illinois. Project directors for this report were Tim Redmond (American Soy Products) and Peter Golbitz (Soyatech, Inc.). Fieldwork was done by Sheri Hoffenberg (Market Facts). Analysis and Report: Sara M. Starr and Peter Starr (Starr Track). Price: SAA members \$475. Nonmembers: \$975.

The survey was conducted in two parts. In the first part a questionnaire was mailed to 20,000 people in the Market Facts database. Of these, 17,715 people mailed back responses, and of these 15,168 were completed and usable. Three questions related to soyfoods: 1. Have you ever heard of: Ten types of soyfoods are listed—Tofu, soymilk, soy flour, tempeh, miso soup stock paste, soy burgers, soy hot dogs, soy bacon or breakfast sausage, soy cheese, and soy frozen desserts. The respondent is asked to check those that he or she has heard of. 2. Which of these ten soyfoods have you eaten 5 or more times in the past year? The same list is

repeated and the consumer is asked to check as indicated.

3. "I would eat more soyfoods if... (1) They were more accessible where I shop for food, (2) I knew better what to do with them, i.e. recipes, (3) I was better informed on the health benefits; (4) I thought they tasted good; (5) They were less expensive. Check all that apply.

Part II. From the 15,168 people who mailed back completed and usable responses to part I, 750 people were chosen to participate in a follow-up survey, which consisted of a 4-page questionnaire containing in-depth questions about consumption of and attitudes toward ten different types of soyfoods, purchasing motivations and patterns, and questions about children's attitudes toward soyfoods. The sample was divided into 3 groups. A questionnaire was mailed to a representative sample of 626 people (anyone who indicated they had eaten soyfoods at least 5 times in the past year). An over-quota sample of 67 soymilk users and 57 respondents who indicated that they were soy cheese users. This was done in order to ensure enough completed questionnaires among people who used soymilk and soy cheese. To ensure the sample quality, consumers were again asked about their use of various kinds of soyfoods. Consumers who responded affirmatively to using at least one kind of soyfoods were retained in the mail survey sample. Address: One Sutter St., Suite 300, San Francisco, California 94104. Phone: 510-935-9764.

2852. Webster, Donovan. 1995. Green days: How I became a vegetarian for one trying month and changed my life and health forever. *Men's Health*. June. p. 116-20.

• **Summary:** The author struggled through a vegetarian diet for one month, losing 9 pounds and the roll of fat around his belly. He ate quite a few meat alternatives. When it was over he felt like he was "on the horns of a dilemma. Vegetarianism had, obviously, been good for me—and it hadn't been that difficult. Yet I also knew that, long term, the carnivorous pleasures of meat-based life would drag me back into the darkness of their cave. So I struck myself a bargain. For two months out of every year, one in the spring and one in the fall, I would be a vegetarian. The rest of the year I'd eat meat when I wanted to, but I'd still endeavor not to do it all the time."

A sidebar by Greg Gutfeld titled "The Meatless Market" begins: "Time was, a vegetarian had to make do with sprouts, tofu, and voting for McGovern. But new to the supermarket shelves are numerous meatless items mimicking our favorite animal-derived pleasures—even things like hot dogs, hamburgers, bacon and deli meat." The following products were tasted and are evaluated as "Hey, not bad": Worthington Chik Stiks, Worthington Stripples, Garden Gourmet Vege-Nuggets, Boca Burger (the best liked), Worthington Stakelets, Lightlife Fat-Free Meatless Smart Dogs, Garden Mexi Patties.

The rest were "No, thanks, we'll pass": Worthington

Meatless Salami, Natural Touch Lentil Rice Loaf, Yves Veggie Tofu Wieners, Yves Veggie Pepperoni, Lightlife Italian Lean Links, Lightlife Organic Three Grain Tempeh, Bearitos Vegetarian Chili.

2853. Brewster, Elizabeth. 1995. The joy of soy: But will it play in Peoria? *Food Processing (Chicago)* 56(7):36. July.  
**• Summary:** The editorial begins: “Up till now, I’ve never had a good reason to overcome my fear of tofu, the squishy, slimy white stuff that serious vegetarians love to tout as a wonder food. But I may have to eat all my anti-tofu words—and a little tofu, to boot—in the wake of the newfound love affair between soyfoods and health researchers... There’s been an explosion of new research results released in the past few months, all headed toward the conclusion that soyfoods are the greatest thing to hit the food chain since sliced bread.”

Products like tofu, tempeh, TSP (textured soy protein) and miso “are known—if they’re known at all—as exotic Oriental foods eaten by counter-culture vegetarians, not red blooded Americans.” Address: Managing Editor.

2854. **Product Name:** Tempeh.

**Manufacturer’s Name:** G.B.Z. s.r.o.

**Manufacturer’s Address:** Uherske Hradiste, Czech Republic. Phone: +42 632 636 16.

**Date of Introduction:** 1995. July.

**New Product–Documentation:** This company is making soy products in the Czech Republic. They have the book titled *Tempeh Production* by Shurtleff & Aoyagi. Now they would like to introduce some new products such as seitan, amazake, koji, soy yogurt, natto, and cheese alternatives.

Talk with a company representative who speaks German. 1997. Feb. 3. The company now makes tempeh and natto. They introduced each product about 18 months ago. They would like to introduce tofu and seitan as soon as possible.

2855. **Product Name:** Tempeh (Soy & Short-Grained Brown Rice).

**Manufacturer’s Name:** Marcus Tribelhorn Tempeh. Renamed Upfull and Right in Oct. 1997.

**Manufacturer’s Address:** 1535 10th St., Los Osos, CA 93402. Since Oct. 1997: 1216 2nd St., Los Osos, CA 93402. Phone: 805-528-2080.

**Date of Introduction:** 1995. July.

**Ingredients:** Soybeans\*, short grain brown rice\*, water, apple cider vinegar, and *Rhizopus oligosporus* (Tempeh culture). \* = Organically grown and processed in accordance with the California.

**Wt/Vol., Packaging, Price:** 8 oz pack. Retail for \$1.49 locally.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with (call from)

Marcus Tribelhorn. 1994. March 13. He would like to make tempeh near San Luis Obispo. Talk with Marcus. 1997. Oct. 31. He started making this tempeh out of his home in June or July 1995, and made it there for about 2 years. He sold it to only one account, Natural Flavors vegetarian restaurant in nearby San Luis Obispo; this restaurant is no longer in business. He recently gave his little company a name (Upfull and Right) and moved it into a commercial space at 1216 2nd St. in Los Osos, California 93402. They currently make 100 to 150 lb/week of tempeh, in 8-oz packages. It is sold locally, unpasteurized, mainly at 3 natural food stores in San Luis Obispo and at the salad bar in the university cafeteria. He still works full time with his regular job—to provide a steady source of income while he is building the business. He would like to make an “Autumn Tempeh” with grains representing the autumn colors.

Label and Recipe List #2 (with 3 recipes) sent by Marcus Tribelhorn. 1997. Nov. 6. Label: 3 by 3.75 inches. Black on beige. A tiny logo shows soy and rice holding hands. “Organic, local tempeh. Unpasteurized. Best kept frozen up to 4 months or refrigerated up to 4 days. Ripe dark spots enhance flavor and do not indicate spoilage.”

At the bottom of the recipe sheet is written: “Upfull and Right Tempeh is brought to you locally by Marcus Tribelhorn and Sean Hendifar. Upfull is how you feel when you eat it and right is how it’s grown.”

Talk with Tod Dalessio. 2001. April 30. Last month he acquired the assets of Upfull & Right, which made tempeh for a few local accounts, probably never more than 400 lb/month. The former owners wanted to see the business continue. He plans to move the business to a new location and rename the company Acorn Foods. He and his wife have been making tempeh for the last month or two.

2856. Hamlin, Suzanne. 1995. Do you speak tofu or miso yet? *New York Times*. Aug. 9. p. C2. Living section. Wednesday. [1 ref]

**• Summary:** Tofu is a “spongy white block that is a major part of Asian diets... Asian restaurants have increased the popularity of tofu, which sustained much of the Woodstock generation. Still there is notable resistance to the chalky soybean derivative that is often called ‘the cheese of Asia.’

“Johanna H. Dwyer, director of the Frances Stern Nutrition Center at the New England Medical Center Hospitals in Boston [Massachusetts], discovered this resistance during a four-year study on soy protein and estrogen levels in women. She couldn’t find subjects that were willing to consume enough tofu to make the study valid.” So she ended up using a concentrated soy protein in the study. Dr. Dwyer still feels that “tofu is a good part of a healthy diet, even if by itself it doesn’t prove to be a magic bullet. And a good diet is one that is low in saturated fat, high in fiber, and rich in fruits and vegetables.”

Each of the following common soybean products is

defined: Soy milk, tofu, tempeh, miso, soy flour, textured soy protein.

2857. Mountain Ark Trading Company. 1995. Catalog—September-December 1995 [Mail order]. Fayetteville, Arkansas. 30 p. 27 cm.

• **Summary:** Soy-related products in this mail order catalog include: Miso, soy sauce, tempeh, tofu, black soybeans, yellow soybeans, tofu dressings, natto miso. Also: Sea vegetables, amaranth, quinoa, teff, blue corn. The general manager is Nick Masullo. Address: P.O. Box 3170, Fayetteville, Arkansas 72702. Phone: 1-800-643-8909.

2858. Orthoefer, Frank T.; Liu, Keshun. 1995. Soybeans for food uses. *International Food Marketing & Technology (Germany)* 9(4):4-8. Aug. [5 ref]

• **Summary:** Contents: Introduction. Traditional soy foods: Soy milk, tofu, toasted whole soybeans and full-fat soy flour, soybean sprouts, yuba, soy sauce, tempeh, natto, miso. Soy protein ingredients: Soy grits and flour, soy protein concentrates, soy protein isolates. Soy nutrition: Soy protein, fat and calories, phytochemicals. Food bean market. Summary.

Two “different types of soybeans have emerged: oil beans and food beans. This is particularly true in the US soy market...”

Of the fourteen phytochemicals, seven are present in soybeans. These seven are phytates, isoflavones, carotenoids, coumarins, triterpenes, lignans, and phenolic acids. Phytochemicals have been shown to affect human health as much as vitamins and minerals, and many of them have anti-cancer properties. The discovery of phytochemicals may change how the nutritional value of food is assessed.

The world market for soybeans for food use is estimated at about 1 million metric tons (tonnes). In Japan alone about 830,000 tonnes are made into soyfoods as shown in a pie chart as follows: Tofu (552,000 tonnes, 63.4%), miso (180,000 tonnes, 21.5%), natto (90,000 tonnes, 10.7%), soymilk (10,000 tonnes, 1.2%), soy sauce (5,000 tonnes, 0.6%), and others (22,000 tonnes, 2.6%). In the USA the food bean market is estimated at 50,000 tonnes. Other major markets for food beans are in Korea, China, Taiwan, Hong Kong, Singapore, Malaysia, and Thailand. Food-grade soybeans can be sold by that the growers at a premium of 5-20% above the base price. The demand for food beans is increasing steadily. Address: 1. Vice President, R&D, Riceland Foods, Stuttgart, Arkansas; 2. Project Leader, Soy Food Lab., Jacob Hartz Seed Co., Stuttgart, Arkansas.

2859. Stevens, Jane Ade; Stevens, Roger. ed. and comp. 1995. U.S. soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 31 p. 28 cm.

• **Summary:** This first edition of the directory contains more than 270 company listings. The cover is checkerboard red

and white. Contents: Forward [sic, Foreword]. How to use the Soyfoods Directory (incl. Internet access). Soyfood descriptions (alphabetical): Edamame (Sweet beans), food use soybeans (whole soybeans), organically grown soybeans, isolated soy proteins, lecithins, meat analogs (meat alternatives), miso, natto, nondairy (soy) frozen desserts, okara, soy cheese & yogurt, soy flour & grits, soy grits, soy meal & flakes, soynuts, soyoil, soy protein concentrates, soy sauces (tamari, shoyu, teriyaki), soymilk, tempeh, textured soy proteins, tofu & products. Composition and nutrient content of soyfoods (large table, p. 7). Soybean products chart: From whole soybeans, from soybean meal, from soyoil and lecithin. Soyfood companies by product (products listed alphabetically).

Soyfood companies (alphabetical by company name; Each listing contains address, contact, phone, soy products, product names, distribution, to locate product, classification). Soyfood companies by state (alphabetical by state; California has by far the most). Professional associations and industry information resources. U.S. soybean facts. Soyfoods directory survey.

This directory's address on Internet's World Wide Web is <http://www.in.net/soy>. For more information or suggestions, call 1-800-275-7679. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 1-800-275-7679.

2860. Viavant, Suzi Jenkins. 1995. Recetas de soya [Soya recipes]. Guatemala City, Guatemala: Plenty USA. 28 p. 22 cm. [Spa]

• **Summary:** Contents: Introduction. Why soya? Useful advice. Utensils and equipment. Recipes with tempeh (10). Recipes with tofu (14). The first page (unnumbered) states: “This book was developed to help the company Alimentos San Bartolo to introduce soyfoods into the diet of the highlands of Guatemala. It is also designed to teach the reader various methods of preparing delicious dishes using tempeh and tofu.” The contributors included Elena and Agostine Xoquic, Yelin and Yatun Reanda, Marion Moore, Alice Hashimoto, and Alimentos de San Bartolo.

Talk with Suzi Jenkins Viavant. 1996. Aug. 15. Plenty USA published this book in Guatemala City, with financial aid from Food for All. It was available in about August 1995. The tofu recipes are based on the very, very firm tofu made by Alimentos San Bartolo in Guatemala. Address: 3967 South 900 E., Apt. 13, Salt Lake City, Utah 84124. Phone: 801-268-2717.

2861. **Product Name:** Naturally Tofu Drinks, Tempeh Burger, Vegetarian Chili, Meatless Healthy Bologna, Vegetarian Sloppy Joe.

**Manufacturer's Name:** Wellwide International Ltd. (Importer).

**Manufacturer's Address:** Room 2905 Wah Yin House,

Wah Kwai Estate, Hong Kong. Phone: 852/2549-1173.

**Date of Introduction:** 1995. August.

**New Product–Documentation:** Listing in '95-96 Soya Bluebook, p. 100. The company is an importer. Contact Della Leung, Director.

2862. Fallon, Sally W.; Enig, Mary G. 1995. Soy products for dairy products? Not so fast. *Health Freedom Newsletter (Monrovia, California)* 14(5):12-20. Sept. [35 ref]

• **Summary:** Contents: Introduction. History of the bean. Fit for human consumption? Marketing the soybean? Processing denatures and dangers remain. Soy formula not the answer. Fabricated soy foods. Cancer preventing or cancer causing? Soy products are not complete. Only fermented soy products are safe. Another look at milk. Processing is the problem [that transforms healthy milk products into unhealthy ones]. Quality dairy products are available. Butter is a healthy food. Homemade formula best for babies. Contains two recipes for homemade formula: Milk based formula (based on unhomogenized raw organic milk plus lactose, cod liver oil, coconut oil, etc.). Milk free formula (based on 3½ cups of homemade broth, made from beef, lamb, chicken, or fish).

This article is written to scare people “who have turned to soy products as substitutes for dairy products,” and to sing the praises of natural (fresh, raw, and organic) dairy products. It is loaded with so much incorrect information and false conclusions about soybeans and their alleged dangers to human health that one does not know where to begin in starting to refute them. To take just a few such statements: (1) “The Chinese did not eat the soybean as they did other pulses (legumes) such as the lentil, because the soybean contains large quantities of a number of harmful substances.” Fact: The soybean, processed into a host of soyfoods using simple technologies, has been the main legume consumed in China since ancient times. It has long been referred to as “The cow of China.”

(2) Trypsin inhibitors in soybeans are “not completely deactivated during ordinary cooking and can produce serious gastric distress, reduced protein digestion and chronic deficiencies in amino acid uptake.” Facts: The SoyaScan database contains 386 articles on trypsin inhibitors. When active, these proteins inhibit trypsin, a digestive proteolytic enzyme secreted by the pancreas, which helps us to digest proteins. Fortunately, trypsin inhibitors are almost completely deactivated by the typical cooking of soybeans to make soyfoods. There is no scientific evidence that the small percentage remaining has any adverse effects on human health, digestibility, or amino acid absorption. A considerable body of research, starting in the 1970s, shows that trypsin inhibitors have anti-cancer properties.

(3) “The soybean also contains hemagglutinin [sic, hemagglutinins], a clot promoting substance that causes red blood cells to clump together.” Fact: Like trypsin inhibitors, hemagglutinins are inactivated by ordinary cooking and have

been a non-issue in the scientific literature for at least 10 years.

(4) Soybeans are high in phytic acids or phytates, which can cause health problems. “Only a long period of fermentation will significantly reduce the phytate content of soybeans.” “Oriental children who do not get enough meat and fish to counteract the effects of a high phytate diet, frequently suffer rickets, stunting and other growth... Parents would do well to ask their six-year old boys whether they would prefer to be six-foot-one or five-foot-seven when they grow up, before substituting tofu for eggs, meat, and dairy products.” Fact: Phytates and phytic acid are a two-edged sword. They appear to inhibit mineral absorption by forming tight chelates with a variety of polyvalent metals such as calcium, zinc, and iron. By virtue of forming a unique iron chelate, they suppresses iron-catalyzed oxidative reactions and may serve a potent antioxidant function in the preservation of seeds. By the same mechanism, dietary phytic acid may lower the incidence of colonic cancer and protect against other inflammatory bowel diseases. Twelve records in the SoyaScan database show phytic acid to have anticancer activity. In addition, they are one source of dietary phosphorus in the soybean.

(5) Aluminum content of soy formula is 10 times greater than milk-based formula, and 100 times greater than unprocessed milk. Aluminum has a toxic effect on the kidneys of infants, and has been implicated as causing Alzheimer’s in adults. Fact: Aluminium is the most abundant metal in the earth’s surface. It is harmless to humans except for infants with kidney failure—who should not drink soymilk. There is no solid scientific evidence indicating that aluminum causes Alzheimer’s disease; that theory, advocated by a few scientists 10 years ago, is no longer being pursued.

(6) Allergies to soy are almost as common as those to milk. Fact: Roughly 10 to 15 times as many infants are allergic to cow’s milk compared to soymilk. Since 1910 soy-based infant formulas have saved the lives of many infants whose mothers could not breast feed and who were allergic to cow’s milk

The authors conclude that only traditional fermented soy products such as miso, natto, and tempeh, are safe.

About the authors (autobiographical): Sally W. Fallon, M.A. lives in Washington, DC, with her husband and 4 children. A member of the Price Pottenger Nutrition Foundation Advisory Board, she is a regular contributor to their quarterly journal. Mary Enig, PhD, is an expert in the field of lipid chemistry who has conducted many studies on *trans* fatty acids. She is also well known for a career of anti-hydrogenation and anti-margarine research and writing, with funding from the dairy industry. A large percentage of America’s margarine is made from soy oil.

Update: Printout of website named Mercola.com sent to Soyfoods Center by Sjon Welters of Cabot, Vermont. 1998. Nov. 6. The title of this 6-page website is “Avoid

soy: Concerns regarding soybeans.” On the last page we read: “The above information was abstracted from an article written by Sally Fallon and Mary Enig, PhD. (an international expert renown [sic] in the field of lipid chemistry) for Health Freedom News in September of 1995.” Address: 1. M.A.; 2. PhD. Phone: 818-357-2181.

2863. Lamport, Rick. 1995. Soy to the world. *Granary News* (Sarasota, Florida). Sept. p. 1, 3, 10-11, 14-15, 18-19. [1 ref]  
**• Summary:** A humorous, fun-poking potpourri and overview of soyfoods and some of the new research on their medical benefits. “In reputation, tofu, tempeh, and miso are the Gabor sisters of natural foods, i.e., thought to have bad taste and serve no purpose. But in reality, they are more like the Bridges brothers. They take on many roles and always give an unusually good performance. Pity the poor bean curd. It deserves our consideration, use and approval. Tofu is not really an acquired taste. It is more an acquired texture.”

The author then coins some new soy words and phrases—which sound best pronounced with a Yiddish accent: Soyloiloquy, psycho-soymatic, Moonlight Soynata, Soyviet Union, soylent majority, soyentific validation, lunasoy, soyonara.

A photo (p. 1) shows the rear end of a “Soyota” [Toyota] automobile bearing the license plate “Tofu Me—Florida Granary.”

2864. Lorente, Carol Wiley. 1995. Meals that make the grade. *Vegetarian Times*. Sept. p. 45-49.

**• Summary:** Students in the nutrition science class at Walt Whitman High School in Bethesda, Maryland, have developed vegetarian recipes for their school cafeteria. First they conducted a poll of students to find out how many were vegetarian (11 of 93 = 12% said they were) and whether they would purchase a vegetarian option (75 of 93 = 81% said they would). The 8 vegetarian recipes they developed are given. Walt Whitman Chili uses tempeh as a major ingredient. Photos show the students and some of the dishes prepared from their recipes. Address: VT special projects editor.

2865. **Product Name:** [Tempeh].

**Manufacturer’s Name:** Sue Mann Tempeh.

**Manufacturer’s Address:** San Jose de Oyambarillo (near Quito), Ecuador.

**Date of Introduction:** 1995. September.

**Ingredients:** Soybeans, starter culture.

**New Product—Documentation:** Talk with Sue Mann. 1995. Dec. 27. She is still living in Ecuador, near Quito. She has been making tempeh on the ranch where she is living for about the last 6 months, and about 3 months ago she began selling it to expatriate friends and a few restaurants in Quito. It is not labeled, and her business has no official name. She gave some to her Korean acupuncturist who can see and feel

energy fields. He said tempeh is excellent for freeing blocked energy in the digestive system.

2866. SunRich. 1995. SunRich (Ad). *Soya Bluebook Plus* 1995-96. p. 59.

**• Summary:** This one-third page black-and-white ad lists three categories of products: (1) Identity preserved specialty soybeans and grains: IP corn; Food quality soybeans available for soymilk, tofu, tempeh, miso, natto, sprouts, and soy sauce; Shipments available in containers, rail or bulk barge.

(2) Soyamilk powders: Spray-dried soymilk and tofu; Soy/dairy milk.

(3) Sweet Beans: Frozen green soybeans; Podded (*edamame*) or peeled (*mukimame*).

\* Certified organic soybeans & products available.

Address: P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976 or 507-451-3316.

2867. Wilson, Lester A. 1995. Soy foods. In: D.R. Erickson, ed. 1995. *Practical Handbook of Soybean Processing and Utilization*. Champaign, Illinois: American Oil Chemists’ Society Press; St. Louis, Missouri: United Soybean Board. viii + 584 p. See p. 428-59. Chap. 22. [41 ref]

**• Summary:** Contents: Introduction. Soybean chemical composition. Unfermented soy foods: Soymilk, tofu (momen, kinugoshi or silken, packed tofu, aseptically packaged tofu, deep-fried tofu, kori tofu or dried-frozen tofu), other nonfermented soy foods (yuba, kinako or roasted whole soybean flour, fresh {edamame} and canned soybeans, texturized soy protein-based foods). Fermented soy foods: Miso, shoyu (soy sauce), natto, tempeh, sufu. Japanese Agricultural Standards. Identity preservation and transportation. Soybean quality characteristics: Overview, judging quality (tofu, miso, natto). Note: This is the earliest English-language document seen (Dec. 2005) that contains the term “roasted whole soybean flour.”

Tables: 1. Nonfermented soy food products and common names by country. 2. Fermented soy food products and common names by country. 3. Chemical composition of soy foods. 4. Per capita annual consumption of soybeans (kg) in selected Asian countries (China, Indonesia, Japan, Korea, Malaysia, Philippines, Thailand; for the years 1968, 1978, 1988, 1994).

Figures: 1. Flowchart of refrigerated and shelf-stable soymilk production. 2. JAS seal of approval. 3. Diagram of equipment used in large scale tofu production (each piece of equipment is numbered and labeled). 4. Flowchart of regular tofu production. 5. Graph showing percent transmittance of whey versus coagulant concentration for soymilks at 6% solids made from Weber, Vinton, and Amsoy soybeans. A concentration of 0.023 N was selected as the optimum coagulant concentration, since it gave the most transparent whey. 6. Graph showing percent transmittance

of whey versus coagulant concentration for Amsoy soymilk at concentrations of 4, 5, and 8% solids. Concentrations of 0.018N, 0.019N, and 0.035N, respectively, were selected as optimum coagulant concentrations. 7. Flowchart of kinugoshi (silken) tofu production. 8. Flowchart of packaged tofu production. 9. Flowchart of aseptically packaged tofu production. 10. Flowchart of kori (dried-frozen) tofu production. 11. Diagram of equipment used in large scale production of dried-frozen tofu (each piece of equipment is numbered and labeled). 12. Flowchart of miso production. 13. Diagram of the interactive factors producing the characteristic attributes of miso. 14. Flowchart of tempeh production. Address: Iowa State Univ., Ames, Iowa.

2868. Jenkins, Suzi. 1995. The politics of soyfoods in San Bartolo, Guatemala (Interview). *SoyaScan Notes*. Oct. 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Alimentos San Bartolo now employs 6 people, 3 or 4 of whom have worked there for 15 years. The plant operates two days a week, Monday and Wednesday. About 65-75% of the products are sold to expatriates, and the remainder are sold to native Guatemalans. The approximate percentage of sales by product are as follows: Tofu 40%, soy ice cream 30%, tempeh 10%, soymilk 10%, soy flour atole (10%; pronounced ah-TOL), and whole soybeans 5%. Yet the soy flour atole probably earns the company more profit than any other product. It is made by roasting whole soybeans, then grinding them, and mixing about 3 parts of this roasted soy flour with 1 part of cornmeal. The product is sold as a dry mix in a plastic bag, and is served by adding several tablespoons to a cup of hot water, like traditional atole. It is expensive, costing about 2½ times as much as an equal weight of white wheat flour. People are willing to pay the price because they have learned that it is an excellent source of protein, and it tastes good. It is consumed by both infants and adults.

In about 1989 or 1990 the situation at the soy dairy in San Bartolo changed dramatically. Plenty Canada came in, took the keys to the building, and installed a new committee as the "board of directors in charge of the company. Then Plenty Canada pulled out and has never returned. Since that time the Dairy has received no outside funding. Local politics became a big part of the daily operations of the business, and there is now an ongoing political struggle. The leadership did not like the former employees and they continue to discriminate against them. Only one member of the workforce is on the committee." Elena and Agostine Xoquic are in pain. For example, Agostine is made to haul 50-100 lb of tofu and ice water on a long route that goes as far away as Guatemala City, changing buses many times, while the much younger and stronger new manager sits with his feet up on the table. The Dairy does not have its own vehicle.

Plenty USA has no control over the new committee.

In addition, most of the people living in San Bartolo are jealous of the 6 people who work in the Soy Dairy, so for a number of years they have been boycotting the Dairy and its products. Suzi is inevitably associated with the old regime, even though she is very close to many people in the community. She has visited at least once a year, usually paying her own way, to check in and see how things are going. When she has worked there in recent years, it has usually been as a volunteer. This was one cause of the divorce process she is now in. She lived in Panajachel, an expatriate community about 15 minutes away by car; her daughter went to school there. She has no plans to go back there as a worker, though she would dearly love to if she could find a way to support herself.

She sees the next steps for the Dairy as trying to get the Guatemalan government to support use of the atole in the village school lunch program, and starting a restaurant in San Bartolo. She believes this basic concept or model could be duplicated and succeed elsewhere in Third World countries. She has had offers to go elsewhere in Guatemala, at good pay, to help start soy dairies. Address: 3967 South 900 E., Apt. 13, Salt Lake City, UT 84124. Phone: 801-268-2717.

2869. Albertson, Ellen. 1995. Super soy: The newest miracle food. *Self*. Oct. p. 148-151, 204. [1 ref]

• **Summary:** The subtitle continues: "Okay. One more time. Scientists are telling us they've found the nutritional Holy Grail, a simple food that prevents heart disease and cancer. Do we believe them? Yes!"

"Soy may be so effective that it actually crosses the line from nutritional to medicinal."

This article begins with a summary of the meta-analysis by Dr. James Anderson published in the *New England Journal of Medicine* (3 Aug. 1995). It reported soy in the diet can significantly lower high cholesterol." It also notes that: (1) "Genistein, a powerful natural chemical unique to soy," may stop the growth of cancer cells. (2) The natural estrogens in soybeans may "help alleviate postmenopausal symptoms." In Japan, where soy is typically eaten daily, there is no word for "hot flashes."

Photos and definitions of various soyfood products are given: Tempeh, soy flour, tofu, textured vegetable protein, soy milk. A section titled "15 delicious ways to add soy to your diet," gives serving suggestions for these and other soyfoods at breakfast, lunch, snack, and dinner.

2870. Barnard, Neal D. 1995. Natural defenses against chemicals. *Good Medicine (PCRM, Washington, DC)* 4(3):16-17. Fall. [10 ref]

• **Summary:** One of the most surprising discoveries of modern medicine is that enzymes in the liver "can take the most powerful and dangerous chemicals, and, in an instant, render them totally harmless and show them to the door." It takes certain foods to boost or activate these enzymes, which eliminate toxic chemicals in two steps. In phase 1, an enzyme in the liver cell grabs hold of a toxic molecule and attaches oxygen to it. In phase 2, a second enzyme hooks the toxic molecule onto a carrier molecule, such as glutathione, which carries it away via the urine or feces.

The key is to have plenty of phase 2 enzymes. According to Dr. Paul Talalay of Johns Hopkins University, one of the best sources natural chemicals that cause the liver cells create large amounts of these enzymes is broccoli and other cruciferous plants, such as white cabbage, Brussels sprouts, cauliflower, and kale. "Soybean products, such as tofu, tempeh, and soy milk, also contain natural compounds that stimulate your body to make more of these helpful phase 2 enzymes, which may be part of the reason why Asian countries have especially low cancer rates." Address: M.D.

2871. Bloyd-Peshkin, Sharon. 1995. A labor of love: A group of vegetarians has spent two dozen years trying to change the world one acre at a time. *Vegetarian Times*. Oct. p. 66-73, 75.

• **Summary:** The Farm is a back-to-the land vegetarian community located about 75 miles southwest of Nashville, Tennessee. They have "spent a quarter century quietly pursuing what have become major trends of the 1990s... In the food business they are on the forefront of healthful eating. They produce tofu, tempeh, and soymilk;... publish vegetarian cookbooks; and run a vegetarian mail-order business that sells hard-to-find vegetarian foods. They've been instrumental in introducing soyfoods to the United States, as well as using them to assist people in developing nations." Their experiment in communal living began in 1971, but they began to come together at Stephen Gaskin's Monday Night Class, a course in the Experimental College at San Francisco State University, where love, tolerance, and compassion were the main tenets. In 1969 Gaskin went on a speaking tour of liberal churches across the country and

invited along any members of the class who cared to join him. Seven months and 7,000 miles later a caravan of 300 people in school buses returned to San Francisco. In 1971 the caravan again hit the road, bound for Tennessee. They rented a tract of land in Lewis County, one of the poorest in the state, and began farming. Others could join if they agreed not to smoke cigarettes, drink alcohol, eat meat, use weapons, or be violent in any way. If they decided to stay, they had to turn over all of their money and property to the community bank—except for tools, musical instruments, and clothes. Now they were part of a community dedicated to living a spiritually meaningful life.

Several years later a 1,000 acre tract of land became available next door to the land the community was renting. They purchased it for \$70/acre and began to build a village and a soy dairy. For the first 10 years they had no running water and only battery-powered lighting. Now 10,000 hippies a year came to visit, and some stayed. When 750 more acres of land adjacent to the original farm came on the market, the community quickly bought it.

"But the Farm members' mission was more than just to build a community: They wanted to save the world. With its own basic needs for food and shelter barely met, the Farm sent volunteers to help with disaster relief after an Alabama tornado in 1974. This was the beginning of Plenty, the Farm's charitable relief and development agency. When an earthquake hit Guatemala in 1976 [Feb. 4], Plenty sent a construction crew to help rebuild the homes of poor Mayans... They also found a strain of soybeans that thrived in the local soil, and helped build a soy dairy that still produces tofu, soymilk, and soy ice cream. After the experience in Guatemala, Plenty made soy technology a regular part of its strategy for assisting people in developing countries. Other relief agencies have followed Plenty's lead, discovering that raising soybeans for soyfoods is one of the surest routes out of starvation and into self-sufficiency."

In 1978, after a few years of terrible financial losses, the Farm decided to keep its agricultural operations small scale and organic. By 1980 the population of the Farm had risen to about 1,500 and resources were stretched thin. The population of the Farm began to decline. There was a shift from the idealism of the 1970s to the materialism of the 1980s. The grumbling and discontent escalated, as did the Farm's debt of \$1.2 million owed to local banks and merchants. In 1983, after much research and soul searching, the board decided the Farm should cease being a commune and become a cooperative instead. Members would still own the land in common but they would earn and spend their own money. "Food and medical care would no longer be free, and members would pay monthly dues in order to pay off the community's debt and maintain community property, such as roads and utilities. All adult members would ratify each year's budget and decide other major issues affecting the community."

"In the wake of this metamorphosis, known as the Changeover, more people left; by 1986 only 400 residents remained... Many of the people who left were bitter, feeling they had put everything into the community and were left with nothing." To pay its debts, the Farm sold off some of its communal assets, including Ice Bean, a nondairy ice cream. After 3 years, the Farm was debt free, and local businesses were thriving.

"The soy dairy, begun in order to feed thousands of hungry hippies, has been revived as the Farm Soy Company by founding residents Barbara and Tom Elliott, who today churn out 1,600 pounds of tofu and 10 to 15 gallons of soymilk daily with the help of two part-time employees and cleaning help from four teenagers. The Tempeh Lab, which pioneered U.S. production of this soyfood in 1974, is now owned by Cynthia Bates, who provides tempeh culture to individuals and businesses that make tempeh worldwide. Mushroompeople, owned by Frank Michaels," grows and sells shiitake mushrooms.

"The community's Book Publishing Company, which pays a staff of seven full-time and four part-time Farm members, has made these foods and vegetarian cooking accessible to the mainstream. The company also publishes information on midwifery and the nutritional aspects of a vegetarian diet. The Mail Order Catalog, owned by Cynthia and Bob Holzapfel, is a source of vegetarian foods that are difficult to obtain outside of major metropolitan areas."

Today the Farm owns its land outright and has about 185 residents, about half of them teenagers—who provide living proof that a vegan diet is healthy for children.

2872. Gabriel, John. 1995. A Plenty volunteer in Nicaragua writes. *Plenty Bulletin (Summertown, Tennessee)* 11(3):4. Fall. [1 ref]

• **Summary:** After studying Spanish full-time in Guatemala for 5 weeks, John and his wife Charlotte arrived in Managua in mid-April 1994. They worked with Soynica's leaf protein concentrate facility near Granada, Nicaragua, and the future Nutrem Soy Shop. He and Charlotte spent 2½ months helping to clean and paint the Nutrem shop, supervising and doing electrical and plumbing work, designing and making various pieces of equipment and fixtures. Charlotte also began training the crew to make tempeh and new varieties of tofu.

Chuck Haren and Casta Calderon (Plenty soy technicians) arrived one day before John and Charlotte were to return to the USA, "and at the perfect time to do some serious training of the three-person crew in tofu production. Chuck also put together the walk-in cooler." Charlotte and John returned to Managua at the beginning of October and worked there for the next 2½ months on the Nutrem Soy shop. They left in mid-December to travel and study Spanish for 5 weeks in Guatemala, then returned again at the beginning of February, 1995, and spent most of the next two

months working at Nutrem. Rita, a Swiss volunteer, worked with Zaraya, the manager.

2873. Paine, Heather. 1995. Processing trends in Europe. Paper presented at the Third Bi-Annual SoyAfrica Conference. 14 p. + 11 p. of tables, charts, and graphs. Held 3-5 Oct. 1995 at Johannesburg, South Africa. Organized by Aproma. [10 ref]

• **Summary:** Contents: Introduction. History and production. The benefits of soya: Nutrition, functional properties. Products & applications: oil-based products (soya bean oil, soya lecithin), soya protein products (full-fat soya flours, defatted soya flours, soya concentrates, soya isolates), soya fibre products (incl. soy bran), whole soybean products or soya foods (soya milk or drink, tofu, yuba, soya sauce, miso, tempeh, natto). Trends and problems: Growing market for soy protein ingredients, U.S. soyfoods market, soymilk sales, problems of quality and image and legislation. Address: Editor, Soyfoods, England.

2874. Pfaff, Gunter; Shipley, Betsy. 1995. New technology for making tempeh, a cultured soyfood. Paper presented at Third National Symposium on New Crops, New Technologies. 5 p. Held Oct. 1995 at Purdue University. [5 ref]

• **Summary:** During the last 8 years they have developed and patented a new process for making a consumer friendly tempeh and have market tested it in the U.S. Midwest. The new process incubates the substrate (organically grown soybeans and barley) on stainless steel trays using water as the heating/cooling medium. A simplified drawing of the incubator/pasteurizer shows the stainless steel tray, tempeh, insulated lid, exit hole for air, tray supports, circulating waterbath, injected air, and overflow. Address: Betsey's Tempeh, 14870 Beardslee Rd., Perry, Michigan 48872. Phone: 517-675-5213.

2875. *Plenty Bulletin (Summertown, Tennessee)*. 1995. La soya continua, Guatemala, 1995. 11(3):1-2. Fall.

• **Summary:** "In the summer of 1995, with funding provided by Food for All, Onaway Trust, and Plenty donors, Suzi Jenkins returned to Solola in the highlands of Guatemala to work again with her Mayan friends. The soy dairy she helped develop in 1980 looks the same as when she left fifteen years ago. Most of the staff are people she and Laurie Praskin trained. Many of the little kids that once lined up eagerly at the dairy window for soy ice cream are now parents. This time the program Suzi directed was somewhat different in format, but the purposes were the same—to increase the use of soyfoods in Guatemala and to develop a market for the products of Alimentos San Bartolo (ASB). To do this, Suzi would focus on three tasks—holding cooking classes in Mayan cooking classes in Mayan communities around Solola and San Bartolo teaching methods of preparing foods

using tofu and tempeh, holding similar cooking classes at restaurants which are now, or will be, purchasing products from ASB, and, finally, creating and publishing a cookbook of recipes from the cooking classes. Assisting the program were two volunteers, Steve Karian and Jennifer Relin of Tufts University School of Nutrition, and Elena Paula Xoquic and Micaela Coj of San Bartolo... Thirty five cooking classes were held, and two thousand copies of the cookbook were printed. One immediate result of Suzi's work has been an increase in sales of soy products at ASB, both to individuals and stores. ASB now maintains its own store on the square in Solola."

Photos show: (1) A soy foods cooking class in San Bartolo. (2) Mayan kids sitting on a bench, enjoying the results of a cooking class. (3) Micaela Coq, a Mayan woman, leads a soy foods cooking class near Solola. (4) Mayan women showing a strong enthusiasm for soyfoods. (5) Agostine Xoquic cleans soybean grinding stones at Alimentos San Bartolo (ASB). These are the same stones originally installed in 1980. (6) A Mayan woman making tofu at ASB. (6) Marcelino Cortez is the new manager of ASB.

2876. *Soy Connection (The) (Chesterfield, Missouri—United Soybean Board)*. 1995. Foodservice recipes with soy. 3(4):2-page insert. Fall.

• **Summary:** Features five meatless recipes: Sweet 'n sour tempeh and vegetables (50 servings, created by Ken Bergeron, Kensington, Connecticut). Black soybean ragout (16 servings, created by Mark T. Buckley, certified executive chef, Bloomington, Illinois). Tofu fried rice. Hot and sour soup (with soft tofu) (each 50 servings, submitted by The Vegetarian Resource Group, Baltimore, Maryland). Barbecue meatballs—total vegetarian (240 x 1-inch meatballs, submitted by Dr. Kenneth Burke, Loma Linda Univ., Loma Linda, California). Address: PhD.

2877. **Product Name:** Tofurky: A Delicious Vegetarian Holiday Feast.

**Manufacturer's Name:** Turtle Island Foods, Inc.; Simple Living Network (Distributor).

**Manufacturer's Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Distributor: P.O. Box 233, Trout Lake, WA 98650. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 1995. October.

**Ingredients:** Each Tofurky includes: (1) 2 lbs. seasoned, baked & basted organic tofu roast: Organic tofu (organic soybeans\*, water, nigari), nutritional yeast, poultry seasoning, salt, tamari, fresh ginger, organic pear sweetener; (2) 8 tempeh-wild rice & cranberry drumettes: Textured soy protein (soy flour and water), soy tempeh (organic soybeans\*, water, apple cider vinegar, starter), grated carrots, organic wild rice\*, malt extract, natural flavor, dried

cranberries, vegetarian Worcestershire sauce, isolated soy protein, carrageenan, herbs and spices. (3) 1 pint golden nutritional yeast-mushroom gravy: Water, nutritional yeast, chopped fresh mushrooms, canola oil, unbleached white flour, diced onion, shoyu soy sauce, salt, spices; (4) Stuffing: Organic whole wheat bread cubes\*, onion, celery, walnuts, dried cranberries, canola oil, sesame oil. \* = Organically grown in accordance with Section 26569.11 of the California Health & Safety Code.

**Wt/Vol., Packaging, Price:** 3 lb 12 oz or 2¼ lb.

**How Stored:** Frozen.

**New Product—Documentation:** Audrey Van Buskirk. 1995. Nov. 10. Willamette Week. "A different drumstick." About Tofurky.

Polly Timberman. 1995. Nov. 15. Hood River News. "Soy be it! Tofurky provides a holiday feast for vegetarians."

Leaflet for Thanksgiving 1995. 8½ by 3.75 inches. Printed black on orange paper. No gravy. Two sizes: 2 lb., and 3 lb 12 oz.

Leaflet for Christmas 1995. Same size and color. Now comes with gravy. Two sizes: 2 lb 12 oz, and 4 lb 4 oz.

Ad (2¼ inch square, black and green) in *Vegetarian Times*. 1996. Nov. "Vegetarian Times Buyers Mart."

Unnumbered pages at back of magazine. "100% vegan. Cooks in minutes. Serves 8 hungry adults. At local natural stores or via mail order. Call Toll Free: 888-Tofurky. Next day US delivery: \$49.95 + \$7 S&H [shipping and handling]."

Talk with lady from Simple Living Network (SLN). 1996. Oct. 31. This product, made by Turtle Island Foods (in Hood River, Oregon), was launched in October 1995, before Thanksgiving last year. Tofurky is also described on and can be ordered from the SLN Web site: <http://www.slnt/CIP/Tofurky>. There are 3,000 pages on this Web site.

Talk with Seth Tibbott, founder and owner of Turtle Island Foods. 1996. Nov. 1. See interview titled "History of Tofurky." Talk with (call from) Seth. 1996. Nov. 5. Tofurky will appear on the Today Show on Nov. 12 (Tuesday morning TV).

Leaflet #1 or "rack card" (3 5/8 by 8½, color) titled "Tofurky: A delicious vegetarian holiday feast." Tells all about the product in a question and answer format. Leaflet #2 (8½ by 11 inches), printed black on gray, titled "Tofurky! The meatless stuffed tofu roast." "Tofurky! consists of 3 pounds of basted and baked organic tofu in a 9-inch pie pan filled with a herbed, whole wheat bread crumb" stuffing. "The tender tofu slices can be cut into 8 generous servings."

Press release. 1996. Oct. 20. "Will that be turkey or Tofurky?"

Box with Label sent by Seth Tibbott. 1996. Nov. 6. The outer box is 13¼ by 10½ by 3¼ inches. Printed red on cardboard color. New weight: 5 lb 15 oz. "The original Tofurky: A delicious vegetarian feast. 100% vegan. Cooks in minutes. Serves 8. Keep frozen or refrigerated. 1% of all

sales from this product to Farm Sanctuary Adopt a Turkey Program.” The inner box is white. The label is printed black on white. Net weight: 2 lbs. 12 oz. On the label are printed two logos and addresses, and a UPC. The Higher Taste, 2402 SE Belmont Ave., Portland, Oregon 97214. Turtle Island Foods, Inc., PO Box 176, Hood River, Oregon 97031. Vegetarian Journal. 1996. Nov/Dec. p. 8. “Tofurky.”

Dinner with Bob & Pattie Gerner to test and give feedback on Tofurky 97. 1997. May 10. A delicious sliceable roast, made mostly of gluten and tofu, may replace the former marinated baked tofu. The roast ingredients are: Water, vital wheat gluten, organic tofu, natural vegetarian seasoning, wild rice blend, shoyu soy sauce, fresh onions, granulated garlic, tomato sauce, molasses, sea salt.

Talk with Seth in early 1997. He sold 800 Tofurky in 1995 and 4,000 in 1996.

2878. United Soybean Board. 1995. Introducing the soy-a-mid: How soybeans fit into the eating plan described in the USDA's Food Guide Pyramid (Brochure). Chesterfield, Missouri: USB. 6 p. 29 cm.

• **Summary:** This food pyramid emphasizes dairy products (the “Milk, Yogurt and Cheese Group”) and meats (the “Meat, Fish, Poultry, Dry Beans, Eggs & Nuts Group”), plus products made with soybean oil. “Right now you’re probably eating a ½ cup’s worth of soybeans every day without even realizing it.”

“Plant foods in the Meat Group, such as beans, peas, lentils and nuts, provide protein, but this protein is not ‘complete.’ Animal protein is ‘complete,’ that is, it contains all of the eight amino acids required for proper nutrition. Plant proteins—with the exception of soybeans—need to be combined with grains or animal proteins to provide all the eight amino acids. Soybeans and soybean products, such as tofu and soybean flours, are one of the few plant protein sources that contain complete protein.

Soybeans belong to “The Pod Squad—legumes,” which are not easily classified into one food group. “The soybean is something of a nutritional superstar, even among members of the Pod Squad... New medical research suggests that certain non-nutritive components in soybeans may work to reduce the risk of cancer. Many foods that come from soybeans are derived from the various components of the bean... Soy protein is extracted from the bean to be used in a host of manufactured foods from surimi to pancake mixes. Foods derived from whole soybeans, such as tofu and tempeh, are used as a primary protein source in many Asian countries. Tofu is also a good source of calcium in Asian diets where milk and milk products are seldom consumed. In fact, a Food Guide Pyramid in China or Japan would see tofu playing a major role in the third tier of the diagram.

“Think Soybeans?—Whether you’re spreading soybean margarine on your pancakes fortified with soybean flour, or experimenting with tofu in your stir-fry, remember that

soybeans are a versatile food that can play an important role in your personal food guide pyramid.”

An excellent illustration shows a whole soybean, divided like a pie chart into its major macronutrients. Address: P.O. Box 419200, St. Louis, Missouri 63141-9200.

2879. United Soybean Board. 1995. Soybeans: How a little bean becomes an ingredient in thousands of products from margarine to tofu to chicken feed (Brochure). Chesterfield, Missouri: USB. 12 panels + poster. 23 cm.

• **Summary:** This attractive color publication is folded so that the first 12 panels are a brochure. However when fully unfolded, a large color poster appears. The brochure notes: In 1992/93 the USA produced 51% of the world’s soybeans. An early history of the soybean in the USA [full of errors]. America livestock (including poultry) consume about 22.5 million tons of soybean meal a year. How soybeans are grown. Composition of the soybean. Foods made from soybeans: Edamame, miso, natto, soy milk, soy sauce, tempeh, tofu or soybean curd, full fat flour. Photos (each incorrect) in the brochure show: “1904: The famous American chemist George Washington Carver discovers that soybeans are a valuable source of protein and oil. 1920s: Combines first used to harvest soybeans. 1922: First U.S. soybean processing plant opens. 1929: Soybean pioneer William J. Morse spends two years in China, gathering more than 10,000 soybean varieties for U.S. researchers to study. 1940: Henry Ford takes an ax to a Ford car body to demonstrate the strength of the soybean plastic he has developed.”

The color poster (16 by 27 inches) is a cartoon showing how soybeans are processed into various products, including full fat flakes, crude and degummed soybean oil, soy concentrates, soy isolates, soy flours, and defatted soy flakes. A soybean utilization/processing diagram at the bottom of the poster shows 137 different products that can be made from the soybean, including 33 whole soybean products (“Traditional soyfoods” incl. tofu, soymilk, miso, tempeh, soy sauce, natto), 33 soybean meal products (26 edible uses + 7 feed uses), and 71 soy oil products (13 edible uses, 19 industrial uses, and 18 applications for lecithin). The seven types of lecithin applications are: Emulsifying agent (4 applications), nutritional (medical use, dietary use), anti-spattering agent (in margarine manufacture), stabilizing agent (in shortening), anti-foam agent (yeast manufacture, alcohol manufacture), dispersing agent (in paint, ink, and rubber manufacture, and in insecticides), and wetting agent (in cosmetics, paint pigments, and calf milk replacers).

Accompanying the brochure/poster is a note pad with the same slogan across the top of each sheet: “Soybeans—Designed for life.” Across the bottom is written: “United Soybean Board—Investing check-off dollars.” Address: P.O. Box 419200, St. Louis, Missouri 63141-9200.

2880. Ribbens, Bob. 1995. Traditional Foods Cooperative was changed to Earth Fire Products Co. in Feb. 1994 (Interview). *SoyaScan Notes*. Nov. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The change in name was accompanied by a change in ownership and structure—from a cooperative (which was a corporation) to a non-stock corporation. Bob made the change to reorganize the company's decision-making process. It was sort of like a bankruptcy. Prior to the change, Bob was funding the company but other people were running it. They didn't want to include him in the decisions. When he asked them to put up as much risk as he was putting up, as long as they wanted to make the decisions, they decided they didn't want to do that. They made an agreement about reducing risk on a new product, but they didn't keep their side of the agreement and ran down cash funds by a large amount. Bob is now owner. The stock is not owned by the workers. None of the former workers are with the business any more. There have been many changes during the last 6 months.

Bob Mandel and Cindy Wiar made the first products, tofu and tempeh, on their own in May 1984. Bob Ribbens thinks that the date of Nov. 1986 is too early for seitan; he thinks the introduction date should be 1989. He never saw tempeh on sale in the community before 1989. In 1989 they decided to stop making tofu and tempeh commercially, and to switch to making seitan and miso. The meeting for interested people took place in 1988, not in 1989. The organization formalized in the summer of 1989.

Bob's company presently has the following products on the market: Long-term barley miso (started selling in Feb. 1995). Seitan in 14 oz retail and 5 lb bulk pack. Brown rice miso, Kickapoo chutney, mellow white miso. They plan to start selling their mellow barley miso at a local co-op this month (Nov. 1995). They also plan to introduce a barbecue seitan. They also sell miso by mail order. They no longer make tofu or tempeh—those markets are too competitive. Address: P.O. Box 92 (Corner of Grove and North Railroad Streets), Gays Mills, Wisconsin 54631. Phone: 1-800-267-6918.

2881. Haren, Chuck. 1995. Soyfoods, Soynica, and Nutrem Soy Shop in Nicaragua (Interview). *SoyaScan Notes*. Nov. 8. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The Nutrem Soy Shop started making and selling small amounts of soyfoods in Managua, Nicaragua, in about June or July 1994. They are managed by *Soynica* (*Organizacion Soya de Nicaragua*), an organization of women working to improve the lot of children and women in the barrios of Managua by providing nutrition and health education and by supplementing the nutritional needs of more than 4,000 children and 500-600 pregnant and nursing mothers. Nutrem is in the process of introducing fresh soyfoods to the marketing sector in Managua. They are also

teaching their people how to make these foods on a very small scale. Even when John Gabriel was working to prepare the shop for opening, his wife Charlotte was teaching women how to make tempeh. Plenty USA helped them obtain a grant from the InterAmerican Foundation, to purchase equipment for the plant and pay for people the first year; Chuck is sure this grant money has run out, but they may have had follow-up grants. There will be a big program there soon with Soynica as the center of it; the Belgians or the Austrians are going to fund it. It will include extruders (such as the InstaPro) to make dry products. Chuck thinks several more years will be required before Nutrem can stand on its own; less time would be required if they were just a food business, rather than an educational center with a broad program. The women of Soynica have been making and selling soyfood products for a long time, and helping different women in the barrios on a micro-business scale. Nutrem is an educational center as well as a small producer of foods.

Nutrem now makes small amounts of the following soy products: Tofu, tempeh, soymilk, soy ice cream, and okara croquettes (a mixture of okara, tofu, flour, herbs, and spices). John does not know how many people are employed by Nutrem; it is owned, managed and operated by women, though they may have some technical help from men.

Nutrem's soy products are sold at about 7 different very small health food stores in Managua; some of these shops focus on herbs and one is macrobiotic. The products are consumed almost entirely by Nicaraguans, not by foreigners. Nutrem has started to sell a little tofu to hospitals. Some of the Soynica women take home soy products made at the shop and sell them in their neighborhoods. Some of these women have micro-businesses in their homes. They will make soyfoods at home with several neighbors in the morning, then sell these fresh in the neighborhood.

Luci Morren, a former Belgian nun, has long been a spearhead for the program. Plenty met her in Chiapas, Mexico, when the Guatemalans fled in the early 1980s. She has been in Nicaragua since about 1981. Casta, Chuck's wife, was the administrator of Soynica; Luci is now the vice president; she was the president. Soynica has a paid staff of about 25 women and a board of directors, which includes people from the Nicaragua National University, a woman judge, etc. Soynica is a group of people who were Sandinistas during the 1980s; they were trying to maintain good nutrition in the country and were teaching people how to use soybeans. Some people in the government didn't like this since the soybeans had to be imported from the USA, but when they started getting the soybeans from Mexico and Brazil, and showed the importance of their work, the government let them continue. Soynica was formed and registered in 1988-89 shortly before the election of Violetta Chamorro in Feb. 1990. Chuck estimates that Soynica has at least 500 members and volunteers. Their most important is *olla comunales* or communal eating pots. While educating

people in the barrios about nutrition and soyfoods, they organized local groups into which they selected the most needy children and pregnant and nursing mothers. Six mornings a week Soynica offers these people a nutrition supplementation program in the form of an extra meal from the communal pot. Some of the soyfoods made at Nutrem may go into these communal pots. Nicaragua's economy is in pretty bad shape.

Nutrem was not the first tofu shop in Nicaragua. Before Chuck arrived in Nicaragua in 1990, he thinks there was a small tofu shop at the Ben Linder house—or perhaps somewhere else. There is another group named Tonalí (pronounced toe-nah-LEE), a women's cooperative which Chuck helped in starting to make soyfoods; they have a bakery in Managua where in about 1992 they started making and selling tofu and soymilk. They also used the okara in their breads.

For details, write Luci Morren, Soynica, ERP-05, Managua, Nicaragua. To phone Nicaragua, where the time is 2 hours later than California: 011 +505-2-73360. Address: 3625 South 1st St. #110, Austin, Texas 78704. Phone: 512-912-1429.

2882. Buskirk, Audrey Van. 1995. A different drumstick. *Willamette Week (Oregon)*. Nov. 10.

• **Summary:** "Only in Oregon... Two Oregon vegetarian outlets joined forces to produce Tofurky. The 'bird,' created by The Higher Taste, a Portland vegetarian caterer, is made with seasoned organic tofu, filled with a stuffing of cranberries, walnuts and bread crumbs, basted with a honey, ginger and tamari sauce and baked until golden. It comes with four 'dark meat drumettes' made by Hood River's Turtle Island Foods, a soy foods manufacturer, with grated organic tempeh, wild rice and carrots shaped into drumsticks. Think this sounds great? Awful? Taste it for yourself this Saturday, Nov. 11, between 11 and 4 pm, at Food Front, 2375 NW Thurman St."

A large cartoon shows a mother serving a turkey on a platter to her husband and son, seated—with knives and forks upraised—at the table.

2883. Timberman, Polly. 1995. Soy be it! Tofurky provides a holiday feast for vegetarians. So what if its flat? There's a stuffed creation just waiting for vegetarians to add the gravy and cranberry sauce. *Hood River News (Oregon)*. Nov. 15. IIA. Kaleidoscope section.

• **Summary:** Tofurky is a joint venture between Portland's The Higher Taste (a vegetarian sandwich maker and caterer) and Hood River's Turtle Island Foods (a soy-foods manufacturer whose primary product is tempeh). Formerly located in Husum, Washington, Turtle Island later moved to the Graf building in Hood River's Diamond complex.

Vegetarians now have a centerpiece for their Thanksgiving dinner. "Looking for a way to make this

happen, [Seth Tibbott, president of] Turtle Island, scouted its customers. The company found that Hans and Rhonda Wrobel of The Higher Taste had developed a product, Tofurky, that had been marketed in Portland to a growing band of followers for the past two years. Turtle Island added its own touch, several tempeh drumettes, and is marketing the Tofurky package to stores. Two sizes are available." "Six thousand drumettes were formed in Portland last week for inclusion in Tofurky packages. Directions are included for a mushroom gravy that Tibbott says pulls the whole thing together."

A sidebar titled "Why vegetarian?" discusses the ethical, world hunger, nutritional, and other reasons people choose this diet. Note: This is the earliest article seen that mentions Tofurky.

2884. Gordon, Jonathan. 1995. Work with soyfoods in England and Australia (Interview). *SoyaScan Notes*. Nov. 16. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• **Summary:** Jonathan's PhD thesis was titled "Improved lactic fermentation of soymilk for the preparation of soya bean curd," a subject closely related to soy yogurt. He submitted this thesis in 1992 at the University of Strathclyde [Glasgow, Scotland], working under Brian Wood. When he was midway through writing his thesis, he won a *Monbusho* [Ministry of Education] scholarship to Japan. Just as he was preparing to go, he and his wife had a baby and he decided not to go. Prior to that the University of Strathclyde had applied for a patent on the process he discovered in his thesis. When he didn't go to Japan, the university did not finish the patent application process. Its present status is unclear. He discovered how to do a lactic fermentation of soymilk that gave a good, low pH in a reasonable period of time. Brian Wood was an expert in lactic acid fermentations; he developed a 6-week miso and soy sauce process which he sold to Nestle. He was very unhappy with the outcome of this sale, because Nestle shut him out of involvement with the company. He expected to be actively involved with the company.

Jonathan's interest in tofu goes back to the late 1970s. A native of England, he spent two years (1979-1981) at Findhorn, a spiritual community in Scotland, where he first heard of tofu and he helped to make tofu once a week. Jonathan thinks that Jacques (a French Canadian) started the tofu operation in Findhorn, before Jonathan arrived. Jacques and Allen (British) were making tofu in 1979 when Jonathan was there. Each Thursday after dinner they would take over the kitchen and make about 30-40 lb of tofu, which was served in the communal dining room the next day. Jonathan left Findhorn in March 1981 and arrived in Australia in about July or August 1981. He traveled in Australia with a girlfriend (Karen James of California, who had just finished a professorship at UCLA) and they lived together at the Homeland Foundation in Upper Thora, Bellingen, New

South Wales, where they made tofu with other members of the community. Karen also made tempeh. Upper Thora is a little town in the Bellingen (pronounced BEL-ing-un) valley. Some community members had already been making tofu for a long time before he arrived; the tofu company was a completely established local business, with customers and delivery routes, when he arrived. They made about 300 lb/week of tofu and delivered it themselves to nearby communities in insulated cold boxes (called “Eskis,” short for Eskimos) in a van. Homeland was also making tempeh at the time, but Jonathan was not a tempeh maker. He left Australia in 1982 to return to England.

In 1982 Jonathan became the foreman and tofu maker for The Regular Tofu Company (RTC) Ltd. in England, owned by John Holt. Jonathan was not with RTC when it started. John Holt was a “Premmie,” a disciple of Guru Maraji, the young guru from India. His tofu shop was located in a house adjacent to the Premmie community house or ashram. He converted the small community kitchen (about 14 feet square) into a tofu shop. It had 2 cauldrons and a grinder. This was John Holt’s private business; it was not a source of food and income for the Premmie community. John had a family at the time and he employed Premmies to do his work. At this time the tofu was made in a caldron. Guru Maraji came to that part of England many times. Leicester is one of the “Asian centers” of England; it has the largest immigrant population of any city in the country and there were 2 or 3 “Premmie” houses there. Maraji has a large Indian following, in addition to his Western disciples.

Jonathan also helped John Holt design his new factory in at Hayhill Industrial Estate (Unit 25, Sileby Rd., Barrow Upon Soar, Leicestershire LE12 8LD, England), into which Holt moved in about 1984. John Holt lived in Sileby, the town adjacent to Barrow Upon Soar.

Note: This company began making tofu in Dec. 1981 at 75 Chandos St., Leicester, LE2 1BU, England. In June 1984 (now located at 16 The Halcroft, Syston, Leicester, England LE7 8LD) they introduced 4 soy products under the Soyboy brand. John Holt had venture capital in the business, but they weren’t getting a sufficient return on their money so John had to sell the company to another rather small company named something like Rainbow (they were making soup and burger dry mixes), which later sold it to Haldane.

Jonathan probably has John Holt’s home address in Leicestershire. After Holt sold his business, he bought a franchise in a restaurant business (something like a pancake house) in Northampton or Nottingham, England. Jonathan has heard of Michael Cole of Manchester, but he does not know whether or not Michael ever worked for John Holt. Cole won the Entrepreneur Award of something like £50,000, and that enabled him to build a factory. In the early days only two companies in England were distributing semi-nationally—John Holt’s and Michael Cole’s. Address: Director of Operations, White Wave Inc., Boulder, Colorado.

Phone: 303-443-3917.

2885. Kushi, Michio. 1995. Guide to standard macrobiotic diet: Kushi Macrobiotics Corp. edition. Becket, Massachusetts: One Peaceful World Press. 64 p. Nov. Illust. No index. 22 cm.

• **Summary:** Introduction. Part I—Basic principles of standard macrobiotic diet. Part II—Summary of daily dietary recommendations. Part III—Standard macrobiotic dietary practice: Whole grains, soup (incl. miso soup), vegetables, beans (incl. azuki beans, black soybeans, tofu, dried [frozen] tofu, tempeh, natto, okara), sea vegetables, fish and seafood, fruit, pickles, nuts, seeds snacks, condiments, seasonings, garnishes, desserts, beverages, modifications, helpful eating hints. Part IV—Proposed one week meal planner. Macrobiotic resources: The Kushi Institute, The One Peaceful World Society. Kushi Macrobiotics Corp. background (formed in May 1994 to market a line of natural, macrobiotic foods). Michio Kushi: Brief biography (Age 69, he is Chairman of the Board and Director of Research of Kushi Macrobiotics Corp.). On the rear cover is a portrait photo of Michio Kushi with his autograph in both English and Japanese.

Note: This book is designed to promote the Kushi Cuisine line of macrobiotic foods. A half-page black-and-white photo of that line of foods is shown facing the inside rear cover. The slogan is: “Perfect replacements for imperfect foods.” Kushi Macrobiotics Corp. is located at Three Stamford Landing, Suite 210, Stamford, Connecticut 06902. Phone: 203-973-2929. Address: Becket, Massachusetts.

2886. Melina, Vesanto; Davis, Brenda; Harrison, Victoria. 1995. Becoming vegetarian: A complete guide to adopting a healthy vegetarian diet. Summertown, Tennessee: The Book Publishing Co. x + 262 p. Foreword by Suzanne Havala. Index. 26 cm. [20 ref]

• **Summary:** An excellent vegetarian and vegan sourcebook and cookbook by three registered dietitians. Contents: Acknowledgements. Foreword. Introduction. 1. What is a vegetarian? 2. The evidence is in. 3. Without meat—exploding the myths. 4. Without dairy products. 5. Veganism: More food for thought. 6. Fats and oils: A balancing act. 7. Fiber: The gift from plants. 8. The vegetarian food guide: Putting it all together. 9. Vegetarian nutrition in the growing years. 10. Vegetarian diplomacy. 11. From market to meals. 12. Recipes: Simple treasures. Appendixes: 1. Glossary. 2. Nutrition recommendations.

This book contains a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, miso, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus wheat gluten, seitan, rice milk, sea vegetables, adzuki beans (p. 66, 162), quinoa, amaranth, macrobiotics, phytochemicals, plant estrogens found in tofu and other soy products (p. 75;

they may contribute to positive calcium balance and have a protective effect on the bone health of Chinese and Japanese women), dietary fiber.

Talk with Vesanto Melina. 1996. July 22. This book was originally published in Canada in May 1994 by Macmillan Canada in Toronto. A revised U.S. edition was published in Nov. 1995 by The Book Publishing Co. in Summertown, Tennessee. Address: Canada.

2887. Turtle Island Foods, Inc. 1995. Discover Turtle Island: Tempeh recipes and product information guide. Hood River, Oregon. 21 p. 22 x 10 cm.

Address: P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

2888. Ledvinka, Ferro. 1995. Introducing macrobiotics and soyfoods to Italy (Interview). *SoyaScan Notes*. Dec. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Ferro was a pioneer of macrobiotics in Italy. In the process he also helped to introduce soyfoods, especially to Florence. He first learned about macrobiotics when he read a book on macrobiotics in Italy. He started eating a macrobiotic diet. In Rome there was a macrobiotic center founded and run by Marquesa Parvolo, who had been cured of leukemia or a blood disease by George Ohsawa several years before. In 1971 he heard a lecture at this center in Rome by Rob Dobrin, who gave him Michio Kushi's address in Boston, Massachusetts. In the summer of 1972 he traveled to Boston to study macrobiotics, and there he learned how to make tofu and seitan. After leaving the USA, he returned to Italy, living in Rome. From there he worked to spread macrobiotic food and philosophy to all major Italian cities.

In Jan. 1977 Ferro went to Japan to work with Mr. Kazama at Mitoku, exporting macrobiotic foods to Italy and other European countries. The first Italian company to order these foods (including Japanese miso and tamari) was ProBios in Florence. They were followed by two Italian Macrobiotic Centers, located in Rome and Milan. In Oct. Ferro left Japan, returned to Italy, lived in Rome for a while, then moved to Florence, where he established the pioneering Fondazione Est-Ouest at via de Serragli 4, in Florence. This was a combination macrobiotic restaurant and macrobiotic study center. Ferro also worked for a while with ProBios. He taught various people to make tofu, seitan, and tempeh—but none of the restaurant customers would buy or eat these strange new foods. So Ferro decided to fry them and serve them as a snack, free of charge, before each meal. A Tuscan proverb says that "Even a slipper, if fried, tastes good." In this way people in Florence started to eat these new foods. The restaurant made and served these foods from about 1982 to 1985. Then people who were working in the restaurant moved to another place, became independent, and they started a small food factory named Soyablab. The founder of Soyablab, Matteo Iacovelli, is now the chairman of the Kushi

Institute in Milan. Another person who helped a lot on the way was Alfredo Ingannamorte. These people learned how to make tofu and tempeh in Boston. Alfredo studied at the Kushi house in Becket. Matteo worked at a macrobiotic restaurant (Open Sesame) in Brookline Village. Address: Via Pellicceria 6, 50123 Firenze (Florence), Italy. Phone: 055-827 274.

2889. Behling, Ann. 1995. Soybeans: A natural cancer fighter. *Soybean Digest*. Dec. p. 26a.

• **Summary:** A recent study by the National Cancer Institute [Howe et al. 1992, published in *J. of the National Cancer Institute*, 84:1887-96] shows that the risk of colon cancer in the USA could be reduced by about 31% with an average increase in fiber intake of about 13 grams per day. The current average U.S. per capita intake of dietary fiber is only about 11 grams per day, while the recommended intake is 20 to 35 gm/day. Joanne Slavin, a professor in the Department of Food Science and Nutrition, University of Minnesota, says that whole soybeans offer the best source of soy fiber, followed by soy flour, miso, and tempeh.

2890. Klus, Klaus. 1995. Biotransformation von Sojabohnenisoflavonen und Bildung von Polyhydroxyisoflavonen durch Tempeh-bildende Mikroorganismen [Biotransformation of soybean isoflavones and formation of polyhydroxylated isoflavones from the microorganisms that make tempeh]. PhD thesis Münster (Westfalen) University. 133 leaves. [Ger]\* Address: Germany.

• **Summary:** Gives levels of daidzein and genistein in Infant formulas: Isomil (ready to feed), Nursoy (liquid concentrate), Prosobee (liquid concentrate). Soy flours (Central Soya—Soyafluffy), Centex, Promax, Promax plus, ADM—Nutrisoy, TVP, Acron-F, Acron-S, Cargill Protein Products -200/20, 200/70, Arrowhead, Molly Farm, Sun Ridge Farm, Soy drink, Tempeh, Soy concentrates (Procon, Promine), TVP (Response).

2892. Albert's Tofuhaus. 1995. The white side of life... und seine Vielfalt! [The white side of life—and its diversity!]. Lautersheim, West Germany. 10 p. Manufacturer's catalog and price list. 28 cm. [Ger]

• **Summary:** Contents: Listing of products by category. Description of individual products by category, with prices, weights, and order number. Map and ordering information.

The products and their categories are: Tofu products (natural, smoked, marinated, etc.), fried products, spreads for breads, pasteten, salads, sauces, grilled products (hot

dogs, made by Viana), products made from wheat (tempeh, seitan, skewered seitan, made by Viana), pasta products, full-fat soy flour. On the cover is a cake of tofu, with a laughing face and two arms held out to the sides. The company logo is adapted from *The Book of Tofu* by Shurtleff & Aoyagi.

Two sheets of the company's letterhead are enclosed in the catalog. Address: Hauptstrasse 13, 67308 Lautersheim, West Germany. Phone: 06351-43718.

2893. Alexander, Victoria; Harris, Genevieve; Dyson, Sharon. 1995. *A taste of Australia: the Bathers Pavilion cookbook*. Berkeley, California: Ten Speed Press. xiii + 122 p. See p. 36, 72, 78. Illust. (color, incl. photos by Rodney Weidland). 27 cm.

• **Summary:** Bathers Pavilion is a restaurant fronting the beach in Sydney, New South Wales, Australia. "Thick, sweet soy sauce (kecap manis) is mentioned on pages 36, 72-73, and 78-79. In the headnotes to the recipe for "Marinated pork fillet with peanut sauce" we read (p. 72): "Kecap manis is a thick, sweet soy sauce from Indonesia. It is sweetened with palm sugar and flavoured with star anise and salam leaves (a little like bay leaves). Do not substitute for kecap manis as no other soy sauce will produce the same results."

Tofu is mentioned on pages 18, 30, and 45.

On pages 78-79 is a recipe for "Venison, tamarind and tempe hot pot," whose headnote begins: "Tempe is made from the remaining soy bean solids after they have been pressed to make soy milk. The solids are then compressed and fermented. Tempe has a wonderful nutty flavour..." Note: This is a description of okara tempe; most tempe is made from whole, dehulled soybeans rather than from okara.

The word "soy" is used to refer to soy sauce on pages 30 (light soy sauce), 42 (Japanese soy sauce), 43, and 52 (dark soy sauce). Address: 1. Owner, The Bathers' Pavilion.

2894. Hagler, Louise. 1995. *Lighten up! Tasty, low-fat, low-calorie vegetarian cuisine*. Summertown, Tennessee: The Book Publishing Co. 160 p. Illust. Index. 23 cm.

• **Summary:** This is a vegan cookbook containing over 130 easy-to-prepare recipes, including many soyfoods recipes: about 26 tofu recipes, 5 tempeh recipes, 7 textured vegetable protein recipes, and 3 miso recipes, plus recipes using wheat gluten and quinoa.

Contents: Introduction. Snacks and appetizers: Dips and spreads, salsas, finger foods, fresh juices. Salads and dressings: Salads as a main dish, light salads, salad dressings, sauces and pestos. Soups: Main dish soups, light soups. Mainly beans. Mainly grains. Mainly pasta. Mainly tofu, tempeh and: Textured vegetable protein. Vegetables: Greens of all kinds, spring and summer vegetables, fall and winter vegetables. Lighter sweet things: Lighter pies, cakes, tarts and cookies, lighter sweet toppings, fruit treats.

A color photo on the rear cover shows "Louise Hagler, best-selling author and editor of *Tofu Cookery*, *Tofu Quick*

and *Easy*, and the original *Farm Vegetarian Cookbook*, has been a creative vegetarian since 1969." Address: Summertown, Tennessee.

2895. Herbst, Sharon Tyler. ed. 1995. *The new food lover's companion: Comprehensive definitions of over 4000 food, wine, and culinary terms*. 2nd ed. Hauppauge, New York: Barrons. xvi + 715 p. 18 cm. 1st ed. published 1990. *Barron's Cooking Guide*. [325\* ref]

• **Summary:** This carefully researched and well written dictionary of food terms also contains 21 useful appendixes and a good bibliography. All enquiries should be directed to: Barron's Educational Series Inc., 250 Wireless Blvd., Hauppauge, New York 11778.

Soy and related entries can be found under the following headings: Adzuki bean (also azuki), agedashi, cheese-imitation cheese (generally includes tofu and lecithin), Fermented black beans (also called Chinese black beans and salty black beans), flour-gluten flour, kecap manis / ketjap manis, kudzu, milk (see soy milk), miso, natto, okara, queso fresco (also called queso blanco), quinoa, seitan, shoyu (Japanese for soy sauce), soybean, soybean oil, soy flour, soy milk, soy pea (see soybean), soy sauce (light soy sauce, dark soy sauce, Chinese black soy, tamari), tempe or tempeh, tofu (also called soybean curd and bean curd).

2896. Holzen, Heinz Von; Arsana, Lother. 1995. *The food of Indonesia: Authentic recipes from the spice islands*. Singapore: Periplus Editions; Clarendon, VT: Distributors, United States, Charles E. Tuttle. 120 p. Introduction by Wendy Hutton. Illust. (color photos). Index. 21 x 23 cm. Series: Periplus World Cookbooks.

• **Summary:** Recipes by Heinz von Holzen & Lother Arsana; food photography by Heinz von Holzen. Facing each recipe is a full-page glossy color photo. One recipe per page (usually). For each recipe, the Indonesian name is given first, in bold caps, above the English equivalent. The section titled "Indonesian ingredients" (p. 34-39) includes soy sauce (the two types are thick sweet soy sauce-*kecap manis*, and the thinner, saltier light soy sauce-*kecap asin*), and tempeh—a Javanese creation.

Soy related: *Sambal kecap*—Sweet soy sauce sambal (with 2 tablespoons sweet soy sauce, p. 44). *Sambal tauco*—Salted soy bean sambal (with ½ cup salted soybeans {tauco}, p. 45). *Gulai tempeh & Sambal goreng tempeh*—Tempeh stew (with 4 fermented soy cakes {tempeh}) & Hot spicy fried tempeh (with 2 fermented soybean cakes, p. 68).

Note: This book calls for an unusually large proportion of meat, fish, and poultry.

2897. Holzen, Heinz Von; Arsana, Lother. 1995. *The food of Bali: Authentic recipes from the island of the gods*. Singapore: Periplus Editions. 132 p. Introduction by Wendy Hutton. Illust. (color). Index. 20 cm. Series: Periplus World

Cookbooks.

• **Summary:** Tempeh is mentioned in the text on pages 6, 15 and 16—but it is not mentioned in the glossary of ingredients (p. 25-33) and is not called for in any recipes. The Glossary (p. 35) says that the two types of soy sauce used are “sweet soy sauce (*kecap manis*), and “thin soy sauce (*kecap asin*). As an alternative to sweet soy sauce use dark black Chinese soy sauce, and add brown sugar to sweeten it.

Recipes by Heinz von Holzen & Lothar Arsana; food photography by Heinz von Holzen. Rich in graphics; poor in content. Address: 1-2. Grand Hyatt Bali.

2898. Kirchner, Bharti. 1995. *The bold vegetarian: 150 inspired international recipes*. New York, NY: HarperPerennial. xii + 286 p. Illust. (by Barbara Balch). Index. 24 cm.

• **Summary:** The author, a woman, draws on her Indian background for seasonings, but has been strongly influenced by her home in North America and world travels. The index contains 6 entries for tofu, 4 for tempeh, and 2 for miso—plus 1 for Soy-glazed napa cabbage (from Japan, with low-sodium soy sauce. p. 114-15). Address: Seattle, Washington.

2899. Mindell, Earl. 1995. *Earl Mindell's soy miracle cookbook: 70 simple, tasty ways to add soy protein to your diet*. New York, NY: Simon & Schuster. A Fireside Book. 91 p. No Index. 22 cm.

• **Summary:** The title page states that the recipes in this book were previously published in *Earl Mindell's Soy Miracle* (1995). At the end of each recipe is the source. Many of the recipes were developed by Judith Eaton, M.S., R.R., and Karen Lefkowitz, M.S., who have been tofu advocates for many years. “Judith and Karen run Nutrition Services, a consulting firm in Pomona, New York.

Contents: Salads. Spreads, dressings and sauces. Soups. Main dishes. Breads and breakfasts. Desserts.

The main soyfoods used—in descending order of predominance—are: Tofu (in 47 recipes). Soymilk (13, incl. Vitasoy and Edensoy). Tempeh (8). Texturized soy protein (3). Soy flour (3). Natural Touch okara patties (2) Miso (1). Soy sauce is used here and there as a seasoning.

Note: This is not a vegetarian cookbook. Ground beef, chicken, crabmeat etc. are used in a relative small proportion of the recipes. Address: R.Ph, PhD, registered pharmacist and Prof. of Nutrition at Pacific Western Univ. in Los Angeles. He lives in Beverly Hills, California.

2900. Northrup, Christiane. 1995. *Heal your symptoms naturally*. Potomac, Maryland: Phillips Publishing Inc. 18 p. 28 cm.

• **Summary:** In the section titled “Natural healing for menopause” (p. 1-3) Dr. Northrup advises women to take natural progesterone, since their body stops producing its own progesterone during menopause. This supplement

provides relief from both hot flashes and mood swings for many women. “For two weeks out of every month, use a little progesterone cream on the soft areas of your skin, changing sites often... Another form of natural progesterone is plant progesterone. There are many sources. The most common are soy foods and yams (not sweet potatoes).” Also take a safe form of estrogen—estriol. It can be applied as a vaginal cream and may protect against breast cancer. “Natural estrogens such as estriol have been in use for over 50 years, and are considered generic. Although these natural hormones aren’t very common in the U.S., estriol is one of the more popular estrogens in Europe.” To find a U.S. source call the Women’s International Pharmacy at 1-800-279-5708.

“Natural plant hormones with estrogen-like effects are found in soy products, such as soy milk, tofu and miso, in addition to cashews, peanuts, oats, corn, wheat, apples and almonds. Japanese women go through menopause more easily than American women, partly because their diet is so high in the natural estrogens found in soy products. (Note: If you still have your uterus, never take estrogen of any kind without balancing it with progesterone.)”

In the section titled “Natural healing for breast cancer” (p. 6-7) notes that you can lower your risk through diet. “Eat soy products, You can also protect your breasts with tofu. A study published in the September 1994 issue of the *American Journal of Clinical Nutrition* demonstrated that women who ate 60 grams of soy protein per day (about 2 ounces) had changes in the estrogen levels that were similar to the effects of tamoxifen—an antiestrogen drug that is undergoing study as a possible prophylactic agent in women who are at high risk for breast cancer.

“The effects of soy protein on hormonal levels are thought to be from estrogen-like substances in soybeans called isoflavones. These behave like partial estrogen agonists/antagonists, which means they help increase the effects of estrogen in women who have estrogen levels that are too low, while helping to decrease the effects of estrogen in women whose estrogen levels are too high.

“While we’re waiting for more research on the subject, I’d recommend adding soy protein to your diet regularly. In addition to tofu, soy protein is found in tempeh, miso and natto. These products are sold in many grocery stores and in almost all health food stores.” Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

2901. Plenty International. 1995. *From the global kitchen: A collection of vegetarian recipes*. Summertown, Tennessee: The Book Publishing Company. 124 p. Illust. (57 photos). Index. 21 x 18 cm.

• **Summary:** Contents: Foreword, by Virginia & Mark Messina. Introduction. Local ingredients—Cooking tools. Description of uncommon ingredients. Recipe notes: Flours (incl. soy flour), tofu, grating tofu and tempeh, replacing okara with grated tofu or tempeh, cooking, breaking and

dehulling soybeans, hand mills and blenders. 1. North America: The Bronx, Native Americans (Oglala Lakota people at Pine Ridge Reservation in South Dakota), recipes (main dishes, salad, breads, desserts). 2. The Caribbean: Introduction (Jamaica, Dominica), recipes. 3. Central America: Introduction (Belize, Guatemala, Nicaragua, Costa Calderon's first experience with soy foods in Nicaragua), recipes. Africa: Introduction (Lesotho, Liberia), recipes. Sri Lanka: Introduction, recipes.

This remarkable, first-of-its-kind book by Plenty International tells the story of the pioneering work they have done over a period of several decades to introduce soyfoods to the Third World. The many vegetarian recipes in each section (each containing at least one soy ingredient, and based mostly on traditional soyfoods) are innovative and well adapted to that region. The 51 black-and-white photos, plus 6 color photos on the front and rear covers, add joy and a human face to the book. Much of the text is by Chuck Haren. Address: P.O. Box 394, Summertown, Tennessee 38483. Phone: (615) 964-4864.

2902. Zibart, Eve. 1996. The very fertile vegan field. *Washington Post*. Jan. 26. p. N24. Weekend section.

• **Summary:** The article begins: "It's not unusual anymore for non-vegetarians to eat at such green hot spots as the Health Zone, Food for Thought or Planet X (which is turning into the caterer-of-choice for veggie and vegan alternative rock types). Likewise, it's easier and easier for vegetarians to find foods they like at new nutrition-conscious restaurants such as Felix, Greenwood, etc.—as well as at mainstream spots.

Today, more and more restaurants are offering vegan dishes, which contain no animal products whatsoever. A vegan diet precludes not only meat, poultry and seafood, but dairy products, eggs, butter, lard and other animal fats, cream sauces, cheese, etc. Yet that still leaves plenty of room for fine dining.

Most Asian cuisines (except Korean and Filipino) limit the use of dairy products and eggs. Malik, a downtown Thai restaurant, has a dozen vegetarian / vegan entrees, "including several featuring that heart-healthy favorite tofu" in various sauces such as red curry, black bean sauce, and peanut curry.

The Vegetable Garden in Rockville is the only wholly vegan Chinese restaurant in the area, although most Chinese eating places have a good variety of choices. The key words are "mock" and "Buddha." Mock chicken and mock pork are nicknames for tofu and other soy-based meat alternatives. The word "pork" sometimes refers to seasoned tempeh dishes. Since Buddhists are also vegans, correctly labeled "Buddhist delights" contain no animal products.

Most Japanese restaurants offer hot or cold tofu and "lightly salted soybean pods called edamame."

Ends with a directory of ten restaurants in the Washington, DC, area that offer a good selection of

vegetarian or vegan dishes.

2903. GEM Cultures. 1996. Catalog [Mail order]. 30301 Sherwood Rd., Fort Bragg, CA 95437. 10 p. Jan. [4 ref]

• **Summary:** New additions include *The Simple Soybean and Your Health*, by Virginia and Mark Messina, and a maple tofu kit. Contents: Soycrafters Section: Tempeh, natto, koji starters, miso, koji, tofu boxes, tofu coagulants (natural nigari, Terra Alba naturally occurring calcium sulfate or gypsum). Books. Bread cultures. Dairy cultures. Tea fungus—Kombucha. Sea vegetables. Kitchen items. Ordering information. Address: Fort Bragg, California. Phone: 707-964-2922.

2904. *Health Naturally (Ontario)*. 1996. The tempeh of the times. Dec. 1995 / Jan. 1996. p. 44.

• **Summary:** "Terrific tempeh is made right here in Canada by Noble Bean, a small family-run business in the Ottawa Valley. Noble Bean uses only organically grown soybeans in its plain tempeh, combined with other organic grains (such as quinoa, rice, barley and millet) in its blended tempeh."

"Look in the freezer section for Noble Bean tempeh, available in health food stores in central and eastern Canada (Noble Bean, phone/fax 613/278-2305).

A photo shows the packages and labels of six different Noble Bean tempeh products.

2905. INTSOY. 1996. Soybean processing and utilization. June 4-28, 1996. An international training program (Brochure). Urbana, Illinois. 12 panels. 22 x 10 cm each.

• **Summary:** Contents: Basic topics to be presented in the 1996 course are the same as for the 1995 course. Professional opportunities. Cost and travel information (the course costs \$4,300 plus an estimated \$1,600 for room, board, and other local living expenses. INTSOY is unable to offer scholarships). This is the 16th offering of the training program. Some 170 persons from 26 countries have attended the course. Danny Erickson is the training officer in charge. Address: International Soybean Program, Univ. of Illinois, 169 Environmental and Agricultural Sciences Building, 1101 West Peabody Drive, Urbana, Illinois 61801. Phone: (217) 333-6422.

2906. Lukin, Anne. 1996. Tempeh temptations: Festive vegetarian dishes for the holidays. *Ontario's Common Ground Magazine (Canada)* Winter 1995/96. p. 16, 18-19.

• **Summary:** An introduction to tempeh, with five recipes. Tempeh makers in Ontario include Noble Bean (uses organically grown soybeans) and Soy City (in Toronto, Lorraine Guardino). A photo shows six tempeh products (packages and front panel labels) made by Noble Bean: Tempeh, Quinoa Tempeh with Sesame, Tempeh with Sea Veggies, 3 Grain Tempeh with Soy, Tempeh Burger, Tempeh.

2907. Napier, Kristine. 1996. The one food that could save your life: Long a favorite of vegetarians, the soybean is now touted as a potent cholesterol cutter. Why its not just another dietary fad. *Good Housekeeping*. Jan. p. 101-02.

• **Summary:** This article begins with a summary of the meta-analysis by Dr. James Anderson of Kentucky, published in the *New England Journal of Medicine* (Aug. 3), showing that soy protein can lower blood cholesterol. Contains two recipes: Hearty pasta & vegetables (with textured soy protein), and Thai tofu stir-fry. A sidebar titled "Where's the soy?," gives a brief description of tofu, tempeh, isolated soy protein, soy flour, soya powder, textured soy protein (TSP), and soy milk. Address: R.D.

2908. Soyfoods Center archival collections, from the 1600s ongoing. 1996. Lafayette, California. [6313 ref]

• **Summary:** As of 1 Jan. 1996 the Soyfoods Center Archives contains 6,313 unpublished archival documents—mainly correspondence, interviews, photographs, and unpublished manuscripts relating chiefly to the history of soybeans and soyfoods, and to a lesser extent, the history of vegetarianism and natural foods.

Main subject areas include: early history of soybeans and soyfoods; modern soy protein products; soyfoods industry and market; industrial utilization of soybeans; soy pioneers in the U.S., Europe, and worldwide; major U.S. soybean crushers; Seventh-day Adventists worldwide; pioneer U.S. soy protein companies; pioneer U.S. natural food companies and distributors; soybeans, soyfoods, Third World nations, and world hunger; nutritional and medicinal value of soybeans and soyfoods; and soybean production, trade, and marketing.

Document level access is available through the repository's SoyaScan information retrieval system.

Most important specific subject areas: Miso, natural foods, Seventh-day Adventists, soy sauce, soybean, soybean industry, soybean products, soyfoods, soyfoods industry, soymilk, tempeh, tofu, vegetarianism. Address: P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

2909. Connolly, Maureen. 1996. Have you had your tofu today? For the health-conscience, soy has become the superfood du jour. Is it all it's cracked up to be or the next incarnation of oat bran? *Women's Sports and Fitness* 18:62-63. Jan/Feb. [3 ref]

• **Summary:** Studies show that soy can reduce your risk of coronary disease. A 1990 study by the National Cancer Institute identified five anticarcinogens present in soybeans. As little as 25 gm/day of soy protein can be beneficial to health, and many soy products are now on the market. The author talks about "soy's new celebrity" and asks her readers "why not try tofu?"

A sidebar titled "A smorgasbord of soy" (p. 63) gives a brief description of the following soy products: Isolated soy

protein, miso, soybeans, soy flour, soy milk, tempeh, textured soy protein (TSP), and tofu. Address: New Jersey.

2910. Hagler, Louise. 1996. Soyfoods cookery: Your road to better health. Summertown, Tennessee: The Book Publishing Co. 160 p. Illust. Index. 21 cm. Introduction by Mark and Virginia Messina.

• **Summary:** Contents: Foreword, by Louise Hagler. Introduction, by Mark Messina and Virginia Messina: Introduction, soybeans—a powerhouse of nutrition, soy and cancer (soybeans—a phytochemical factory, genistein and non-hormone cancers, soy and cancer treatment, isoflavones in the diet), soyfoods and heart disease—beyond cholesterol, soyfoods and bone health, soyfoods and kidney disease, menopause, perspective on soyfoods, about the Messinas. Basic soyfoods (glossary): Whole soybeans, fresh green soybeans, soymilk, okara (soy pulp), soymilk powder, soy protein concentrates, soy protein isolates, tofu, freeze-dried tofu, tempeh, textured vegetable protein, miso, soy flour or grits, yuba or bean curd stick or sheet, natto, soy sauce, soy oil, soy lecithin, convenience soyfoods (frozen soyburgers, frozen tamales and burritos, frozen soy hot dogs or wieners, frozen fat-free soy ground meat replacement, frozen soy pizza, tempeh burgers, frozen tofu lasagne, stuffed shells, manicotti, tortellini or ravioli, frozen soy breakfast links or "sausages" or tempeh "bacon," "ground" tofu, meatless chili mixes, meatless burger mixes, soy "cheeses," eggless soy mayonnaise, tofu salad dressings, soy ice creams, frozen pot pies, frozen pocket breads, instant miso soup, eggless soy cake, quick bread, pancake and waffle mixes, liquid soy coffee creamer, smoked or baked tofu). Feeding babies and children soyfoods. Breakfast, brunch & bread. Whole soybeans. Sauces, spreads, dips & dressings. Soup & salad. Main dishes. Desserts. Drinks & yogurt.

No dairy products or eggs are used; honey is called for in some recipes. Optional microwave instructions are sometimes included. Address: Summertown, Tennessee. Phone: 615-964-3571.

2911. Messina, Mark; Messina, Virginia. 1996. SoyFacts No. 9: Soyfoods & nutrients (Leaflet). Lebanon, Indiana: Indiana Soybean Development Council. 2 p. Front and back. 28 cm.

• **Summary:** Contents: Introduction. Macronutrients in soybeans: Protein, fat, fiber. Micronutrients in soyfoods: Calcium, iron, other. A table shows the nutrient content of the following soyfoods: Soybeans (½ cup, cooked). Tempeh (½ cup). Textured soy protein (½ cup cooked). Soynuts (¼ cup). Tofu (½ cup). Soy flour, defatted (¼ cup). Soy milk, plain (1 cup). For each food the following are given: Calories, protein, carbohydrate, fat, saturated fat, niacin, vitamin B-6, folic acid, calcium, iron, magnesium, copper, zinc.

Note: One version of this leaflet was developed for consumers and another for dietitians. The project was funded by the Indiana Soybean Development Council. Address: 1.

PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2912. Stacy, Michelle. 1996. Can soy save your life? Michelle Stacy separates hype from hope. *Food & Wine*. Feb. p. 88-94, 96. [1 ref]

• **Summary:** This story is based on the study by Dr. James Anderson in the *New England Journal of Medicine* (Aug. 1995). "In its cholesterol-busting guise, soy bears an eerie resemblance to another unglamorous food: oat bran."

"A growing body of evidence suggests that it [soy] may help prevent certain cancers, slow calcium loss from bones and moderate symptoms of menopause. Many of these effects, researchers posit, are due to natural substances in soy called isoflavones, which resemble the hormone estrogen and may replicate the many protective effects of estrogen without any of its drawbacks."

But many marketers, including Ronald Paul (president of Technomics, a food-consulting firm in Chicago) believe that soy has a bad image. "It's going to be a marketing challenge to change the public's view of it. I always like to say that if you can make the kiwi a success you can make anything a success." Will companies start to promote their products by advertising on the package "Excellent source of soy!"? Another obstacle to acceptance for some people that tofu reminds them of the health-food era of the 1960s.

Photos show the following packaged soyfoods, each with a brief description: Edamame, soy sauce, soy milk, soy flour, miso, tempeh, roasted soybean powder, tofu. Contains the following recipes, each accompanied by a color photo: Grilled tofu salad. Miso-carrot dressing. Tempeh sandwiches. Chili con tofu. Miso-clam soup. Fried tofu with mushroom gravy. Miso-stuffed chicken. Silken tofu in ginger syrup. A full-page color photo shows green vegetable soybeans in and around one large pod. Small photos show most of the recipes, plus a field of soybeans, and a farmer holding a young soybean plant. Address: Author of *Consumed: Why Americans Love, Hate, and Fear Food* (Simon & Schuster).

2913. The Mail Order Catalog. Spring-summer 1996. Catalog of books and food. 1996. P.O. Box 180, Summertown, TN 38483. 24 p.

• **Summary:** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, and animal rights.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), Harvest Direct vegetarian broth, and Protean, instant gluten flour (regular or flavored), seitan "chicken" or "sausage" mix, Mori-Nu silken tofu, Soja instant soy beverage, organic

low-fat soymilk powder, Red Star nutritional yeast, Beano, and tempeh starter. Address: Summertown, Tennessee. Phone: 800-695-2241.

2914. Tibbott, Seth. 1996. Strong growth at Turtle Island Foods, Inc. (Interview). *SoyaScan Notes*. March 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Turtle Island has benefited strongly from the rapid growth of interest in meat alternatives. The company's best-selling product is the Superburger, which is sold mostly at natural- and health food stores. During 1995, sales for all Turtle Island's products were up about 30-35% over 1994, and in 1994 they were up about 20% over 1993. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

2915. O'Connor, Amy. 1996. Native Foods: It's not a mirage. *Vegetarian Times*. March. p. 112.

• **Summary:** Tanya Petrovna is chef and owner of Native Foods, which opened in Palm Springs in May 1995. She makes her own tempeh, seitan, and textured vegetable protein. Popular items include the Jerk Burger, a spicy grilled seitan steak marinated in Jamaican spices, Japanese-style Yakisoba made with stir-fried buckwheat noodles, and the Moby Dick, a flash-fried seitan fish sandwich.

2916. Joyce, Michael. 1996. Update on tempeh in Australia (Interview). *SoyaScan Notes*. April 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Michael is still in business making tempeh. Address: Tempeh Manufacturers Pty. Ltd., MS. 84, Nambour 4560, QLD, Australia. Phone: 074-467-342.

2917. Astuti, Mary; Marseno, Djagal W.; Marsono, Y.; Gitawati, Iswani. 1996. Development of antioxidant enzyme superoxide dismutase in soybean tempe. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 399-402. [12 ref]

• **Summary:** "The purpose of this study was to observe the development of antioxidant enzyme Superoxide Dismutase (SOD) during soybean tempe fermentation using inocula of *Rhizopus oligosporus*, *Rhizopus oryzae* and commercial. Soybean was fermented for 0-72 hours and the activity of SOD in crude extract was evaluated using the nitrite method. In the early stage of fermentation (0-12 hours), SOD activity was not detected, but after 12 hours of fermentation, SOD activity gradually increased up to 60 hours then decreased. The highest activity was in tempe fermented with *Rhizopus oryzae* followed by commercial culture and *R. oligosporus*. Tempe was a good source of natural antioxidant and all the

incocula showed similar patterns of producing SOD during tempe fermentation.”

Oxygen is vital for the life of many creatures, but it is also potentially toxic. Superoxide anions are known to be capable of stimulating lipid peroxidation. “One of the terminal products of lipid peroxidation is malondialdehyde which can reach into cells and tissues which cause not only damage to lipid molecules but also non-lipid biomolecules such as protein that cause cell mutation. Since lipid peroxides are suggested as one of the substances responsible for degeneration diseases, more attention should be paid to foods which have a beneficial effect on lipid peroxide prevention.”

Note: Organic peroxides tend to decompose easily to free radicals, which can damage living cells and cause unnatural aging. Address: 1-3: Faculty of Agricultural Technology, Gadjah Mada Univ., Yogyakarta, Indonesia; 4. Badan Tenaga Atom Nasional, Yogyakarta, Indonesia.

2918. Buchanan, Alex. ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. Illust. No index. 30 cm. [Eng]

• **Summary:** The first international conference of this type was held in Jilin, China, in 1990. Contents: Foreword, by Dr. Saipin Maneepun, Chairman, Scientific Committee. Scientific committee (13 members plus 2 secretaries). Executive summary, by Alastair Hicks. Keynote address. Part I: Crop technology related to processing (2 plenary papers, 2 regular papers, and 13 poster sessions). Part II: Post-production systems (1 plenary paper, 4 regular papers, and 2 poster sessions). Part III: Food processing technology (1 plenary paper, 7 regular papers, and 21 poster sessions). Part IV: Food science and nutrition (1 plenary papers, 5 regular papers, and 7 poster sessions). Part V: Tempe (6 regular papers, and 1 poster session). Part VI: Feed technology (2 plenary papers, and 7 regular papers). Part VII: Marketing technology (1 plenary paper, and 2 regular papers). Part VIII: Industrial technology (1 plenary paper, 4 regular papers, and 5 poster sessions).

This conference was organized by the Department of Agricultural Extension, Ministry of Agriculture and Cooperatives, Thailand. In collaboration with Institute of Food Research and Product Development, Kasetsart Univ., Thailand. Supported by FAO, American Soybean Association, and United Soybean Board.

On the rear cover, below a logo of an orange soybean superimposed on a globe inside a yellow square, is written: “Soybeans and soyfoods: Green, clean and healthy.” Address: Bangkok, Thailand.

2919. Charoenthamawat, Pornthip. 1996. Tempeh research and activities in Thailand. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 395-97. [12 ref]

• **Summary:** Contents: Introduction. Research review: Varieties of material, product development, supplementation, nutritional therapy. Consumption promotion.

“Tremendous work on peanut tempeh has been conducted over the past ten years under the Peanut Collaborative Research Support Program at the Department of Product Development, Faculty of Agro-Industry, Kasetsart University.” A great deal of additional research and development has also been conducted on okara tempeh, made by fermenting the residue from tofu or soymilk production.

“The main obstacle to promotion of tempeh consumption is the need to integrate tempeh products into the Thai culture and life style.” Address: Researcher, the Inst. of Food Research and Product Development, Kasetsart Univ., Bangkok 10900, Thailand.

2920. Goulart, Frances Sheridan. 1996. Oh, soy! *Fit* (New York). March/April. p. 77-79.

• **Summary:** On the section titled “A nutritional wonder,” the authors notes that soymilk has 15 times more iron than dairy milk, 50% less fat, and no cholesterol. Tofu is one of the two best sources of calcium (yogurt is the other) recommended by the Osteoporosis Foundation for meeting adult calcium needs (1,000 mg/daily). One 4-oz. serving of tofu provides twice as much calcium as one cup of plain yogurt. Soybeans provide the antioxidant vitamins A and E.

A sidebar titled “Your soy shopping list” gives brief definitions of tofu, tempeh, miso, natto, soy milk, soy cheese, soy sauce, and textured vegetable protein (TVP). Address: Connecticut.

2921. Hermana, -; Karmini, Mien; Karyadi, Darwin. 1996. Health significance of tempe for human nutrition. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 391-94. [15 ref]

• **Summary:** Contents: Introduction. Nutritive value of tempe: Overview, tempe and infective diarrhea, hypocholesterolemic effect, inhibition of fatty acid peroxidation.

Throughout Indonesia tempe is consumed by people of

low as well as high socio-economic level. Tens of thousands of tempe makers produce tempe at home using 10-150 kg of soybeans daily. The largest tempeh maker uses 2 metric tons of soybeans daily. Producers are united in the Koperasi Produsen Tempe Tahu Indonesia (KOPTI; Cooperatives of Producers of Tempeh and Tofu in Indonesia).

"In the future more people are expected to consume tempe because there has been training in tempe technology by the Nutrition Research and Development Center in Bogor in 1986 and 1990." The two training workshops "were sponsored by the United National University and attended by 22 fellows from 10 countries in Asia and Africa." Address: Nutrition Research and Development Centre, Bogor, Indonesia.

2922. Husin, Adinan; Ahmad, Hasimah Hafiz. 1996. Soybean as a consistent industrial resource. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 497-507. [30 ref]

• **Summary:** Contents: Abstract. Introduction. Processing of soybean. Food uses of soybean. Processing of soybean oil. Processing of protein products: Flours, protein concentrates, protein isolates, textured protein products. Unfermented soy products: Soy curd/tofu, soymilk, snacks. Fermented products: Tempe, soy sauce, cheese (Commercial cheese alternatives claim to taste, melt, and stretch like regular cheese. Soy cheese now comes in Jalapeno Jack style, Cheddar style, mozzarella style, Garlic-herb style, and Monterey Jack style). Non-food uses ("Soy oils are used in non-food applications such as in the preparation of soaps, paints, varnishes, resins, plastics, lubricants and agrochemicals"). Promoting the use of soybean. Conclusion. Address: Food Technology Research Centre, MARDI, G.P.O. Box 12301, 50774 Kuala Lumpur, Malaysia.

2923. Krusong, Warawut; Yongsmith, Busaba. 1996. Factors affecting acid formation in soymilk from high vitamin B-12-tempeh. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 403-07. [10 ref]

• **Summary:** Cooked, dehulled soybeans were inoculated with both *Rhizopus oligosporus* and with *Propionibacterium shermanii* then incubated to make a "high vitamin B-12 tempeh (HVT)."

Vitamin B-12 is produced only by microorganisms. *Propionibacterium shermanii* is widely used in large-scale

production of vitamin B-12 (Florent and Ninet, 1979). Krusong et al (1991) reported that non-sequential mixed fermentation of *Rhizopus oligosporus* and *Propionibacterium shermanii* was able to produce vitamin B-12 in tempeh, called high vitamin B-12 tempeh (HVT); this tempeh contained 10 times as much vitamin B-12 per gram as the original soybeans.

In this article, the HVT tempeh was used to prepare HVT soymilk, and "lactic soydrink" was prepared from the HVT soymilk using a mixed culture of appropriate lactic cultures, a mixed culture of *Lactobacillus bulgaricus* and *Streptococcus thermophilus* at 5% concentration. No sucrose was added to the HVT soymilk during its lactic acid fermentation. It was fermented for 16 hours to attain the highest acid production. Address: 1. Dep. of Agro-Industry, Faculty of Agricultural Technology, King Mongkut's Inst. of Technology, Ladkrabang, Bangkok 10520; 2. Dep. of Microbiology, Faculty of Science, Kasetsart Univ., Bangkok 10903, Thailand.

2924. Maneepun, Saipin. 1996. The role of formulated soyfoods and their enrichment. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 291-99. [10 ref]

• **Summary:** Contents: Abstract. Introduction. Using full-fat soyflour (FFSF) in formulated soyfoods: Traditional full-fat soyflour production, processing technology for full-fat soyflour production, baby food products (and conclusions of a metabolic study), cookies, concentrated soymilk, formulated cereal-soy snackfoods (made by an extrusion cooker), soynoodles (using 10% FFSF with wheat flour). Using defatted soy flour (DSF), soy concentrates and isolates. Development of tempeh flour as a food ingredient. Conclusion.

Tables show: (1) Protein content and protein score in various cereal-soy combinations (wheat, corn, or rice unfortified or fortified with soy). (2) Ingredients for six high-protein snacks. (3) Proximate analysis of these 6 high protein snacks. (4) Nutritional evaluation of 8 high protein snacks. (5) Composition of four commercial formulated soyfoods (supplementary baby food, cookie, concentrated soymilk, soynoodle). Address: Director, Inst. of Food Research and Product Development, Kasetsart Univ., P.O. Box 1043, Bangkok 10903, Thailand.

2925. Osho, S.M. 1996. Fortification and enrichment of African diets using soybeans. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing

Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 314-21. [15 ref]

• **Summary:** Contents: Abstract. Introduction. Materials and methods: Research was conducted to incorporate soybeans, on a household scale, into traditional root and tuber crops (e.g., cassava), cereals (e.g., maize, sorghum, millet, rice), developed appropriate processing techniques for making tofu and soy tempe [tempeh] based products, used an extruder to develop commercial products containing soy, disseminated the technologies developed to rural households and small-scale companies.

Results and discussion: A good example of how soybean has improved nutritional values is by fortification of cassava and gari, quality and acceptability of local soft cheese (*warankashi*, made by coagulating cow's milk with an aqueous extract from the leaves of the sodom apple (*Calotropis procera*)), and soybean curd (tofu), tempe is a nutritious Oriental food.

Tables: (1) Nutrient composition of local gari and fortified soybean gari. Four columns. (a) Nutrients. (b) Control gari. (c) 75% cassava + 25% soybean milk residue [okara]. (d) 75% cassava + 25% whole soybean paste.

(2) Sensory evaluation of soygari compared with local gari. Gari fortified with okara (overall acceptability 6.7) was almost as well accepted as traditional gari (6.8).

(3) Chemical composition of local cheese (*warankashi*) and soybean curd (tofu).

(4) Sensory evaluation scores for *warankashi* (overall acceptability 6.4) and tofu (5.0).

(5) Chemical composition of tempe-fortified maize based weaning foods (dry weight basis).

“Conclusion: Through aid from the International Development Research Centre (IDRC) Canada, the International Institute of Tropical Agriculture (IITA) is collaborating with national programs in Nigeria and recently Ghana, Cote d'Ivoire and Benin to develop household and small-scale processing techniques for soybean. The project is also planning to extend coverage to other African countries. The future of soybeans looks bright in Africa.” Address: International Inst. of Tropical Agriculture, Oyo Rd., PMB 5320, Ibadan, Nigeria.

2926. Robertson, Robin. 1996. 366 healthful ways to cook tofu and other meat alternatives. New York, NY: Penguin/Dutton. 406 p. Index. 24 cm. A Plume book. Nutritional analyses provided by Ed Blonz, PhD.

• **Summary:** Contents: Introduction. 1. Appetizers, hors d'oeuvres, and sandwiches. 2. Stews and hearty soups. 3. Pasta dishes. 4. Casseroles, gratins, and risottos. 5. Stir-fries. 6. Burgers, loaves, and savory pies. 7. Under wraps, stuffed, and skewered. 8. Sautéed, seared, and grilled. 9. Main-dish salads. 10. One-dish meals.

The three main meat alternatives used in the recipes in

this book are tofu, tempeh, and seitan. Other soy and related foods are used in recipes are: Adzuki beans, soy milk, and TVP. The author is a woman. Address: Professional chef and cooking instructor, Virginia Beach, Virginia.

• **Summary:** Contents: Abstract. Background. Tempe production and marketing system. Tempe industry products. Challenges and future of tempe industry.

Originally tempeh was made only in a limited area in Central and East Java. Today, there are more than 93,000 home industry units recorded as tempe makers throughout Indonesia; they employ more than 265,000 workers.

Tempe makers often employ a number of tempe vendors—often friends or relatives—to distribute and sell their products—either finished tempe or half-fermented tempe. Under this system, job seekers can enter the market quickly and easily with almost no experience or capital. This has helped tempe production to expand quickly.

The fact that tempe makers require water and produce waste can create difficulties in dense urban settings. This problem first arose in the mid-1970s as tempe makers migrated into big cities such as Jakarta, and it caused them to organize themselves and to attract government attention. By early 1980, makers of soyfoods, especially tempe and tofu, began to organize cooperatives of tempe and tofu producers, starting in the big cities. Today there are 111 primary cooperative societies (KOPTI) organized by tempe and tofu makers; these have joined into a National Federation of Tempe and Tofu Producer Cooperatives (GAKOPTI).

In Indonesia there are only few large tempeh manufacturers. The largest production capacity reported so far is less than 3,000 kg of soybeans per day, while the average capacity is 50-200 kg of soybeans per day. Address: Faculty of Industry Technology, Parahyangan Catholic Univ., Jalan Gunung Mas c-11, Bandung 40142, Indonesia.

2928. Suharto, Ign. 1996. Global transfer of food technology in small scale tempe industry. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 377-81. [2 ref]

• **Summary:** Contents: Abstract. The development of low cost protein food. The problems of technology transfer in

small-scale tempeh industries. The population triangle. Vertical patterns of transfer in small-scale tempeh industries: Role of foreign countries, modern tempe industries, supply of production equipment. Conclusions. Address: Faculty of Industrial Technology, Catholic Univ. of Parahyangan (Unpar), Ciumbuleuit 94, Bandung 40141, Indonesia.

2929. Vaidehi, M.P. 1996. Soya-maize tempe biscuits and porridge mix for the growth and health of 0-5 year children. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 382-90. [8 ref]

• **Summary:** The first step is to make tempeh using 700 gm maize grits and 300 gm soybeans. The finished tempeh is then sliced, steam blanched for 15 minutes, dried (in an oven or in the sun), powdered into a desired grit size, then packed in polyethylene pouches for future use in biscuits. When making porridge, se 650 gm maize grits and 300 gm soybeans.

“Soya-maize porridge and biscuits were fed in comparison with existing supplementary food in the national programme for malnourished children. The tempeh fed group improved in weight and height gain significantly in 3 months compared with the control. Porridge contained 11.6 gm protein and 400 calories per 100 gm mix with whole wheat, milk and sugar. A similar experiment with biscuits prepared with tempeh showed significant improvement among malnourished children compared with the DFS blended biscuits fed group. Many B-complex clinical deficiency symptoms disappeared after feeding test tempe products. Both porridge and biscuits had good shelf life, low cost, high protein and acceptability.” Address: Prof. and Head, Div. of Rural Home Science, Univ. of Agricultural Sciences, Bangalore, Karnataka State-560 024, India.

2930. DeAngelis, Lissa; Siple, Molly. 1996. Recipes for change: Gourmet wholefood cooking for health and vitality at menopause. New York, NY: Dutton Signet. A Div. of Penguin Books USA Inc. xvi + 400 p. May. Index. 25 cm. [34\* ref]

• **Summary:** In the upper right corner of the front cover we read: “Feel great without hormone replacement therapy!” This is a book, with a natural foods and macrobiotic slant, about using foods in place of hormone therapy to help deal with nine problems that occur around the time menopause: Premenstrual syndrome, hot flashes, fatigue, heart palpitations, memory lapses, mood swings, irritability and depression, weight gain, waning interest in sexuality, hypothyroidism. All menu suggestions are divided into two choices: Vegetarian and non-vegetarian (but with

many vegetarian dishes). Pages 4-5 note that science has found active ingredients in foods that promote good health during menopause. Soybeans and soy products are “rich in phytohormones... sometimes called phytoestrogens.” Four types of food are “off the menu” = should not be consumed: Refined sugars, caffeine and coffee, processed oils, and refined white flour and refined grains. The subsection titled “Phytohormones” (p. 16) lists ten foods, including tofu and brown rice, as good sources. The benefits of phytohormones and soyfoods are also discussed in the section on “Breast cancer” (p. 55-56).

Soy-related recipes include: Miso soup (p. 90). Bean basics (p. 120-23). Tofu teriyaki with vegetables (p. 123-24). Tempeh, green beans, and carrots with mustard sauce (p. 132-33). Tempeh slices for sandwiches (p. 148-49). Tofu alfredo sauce (p. 303).

The recipes also call for: Adzuki beans, almond butter and tahini, almond milk, kudzu, and plums (umeboshi). The last page is titled “About the authors.” Photos of Lissa DeAngelis and Molly Siple appear on the inside rear dust jacket. Address: 1. Private nutrition consultant, North Edison, New Jersey; former Assoc. Director of the Natural Gourmet Cookery School in New York City for 10 years; 2. Registered Dietitian, Los Angeles, California.

2931. Messina, Mark; Messina, Virginia. 1996. The dietitian’s guide to vegetarian diets: Issues and applications. Gaithersburg, Maryland: Aspen Publishers, Inc. xi + 511 p. Index. 24 cm. [1939 ref]

• **Summary:** Contents: Preface. Acknowledgments. Part I: An overview of vegetarian diet. 1. Demographics and definitions: History of vegetarianism, profile of vegetarians, types of vegetarian diets. 2. Health consequences of vegetarian diets: Differences in dietary components of vegetarian and nonvegetarian diets, cardiovascular disease, hypertension, cancer, diabetes, obesity, kidney disease, renal stones, gallstones, diverticular disease, other conditions, the dairy connection, phytochemicals, conclusion.

Part II: Vegetarian nutrition. 3. Protein: A historical perspective on protein, protein requirements, vegetarian diets and protein digestibility, assessing protein quality, plant proteins and nitrogen balance, protein complementarity, conclusion. 4. Calcium: Osteoporosis, calcium and osteoporosis, calcium absorption and the RDA, calcium excretion, bone health of vegetarians, meeting the calcium RDA on plant-based diets, plant sources of calcium, other factors that affect bone health/fracture rate, conclusion. 5. Minerals: Iron, zinc, selenium, copper, magnesium, phosphorus, manganese, iodine, sodium, chloride, potassium, fluoride, chromium, molybdenum. 6. Vitamins: Vitamin B<sub>12</sub> (cobalamin), riboflavin, vitamin D, vitamin B<sub>6</sub>, vitamin B<sub>1</sub> (thiamin), niacin, folate, biotin, pantothenic acid, vitamin C (ascorbic acid), vitamin A, vitamin E, vitamin K. 7. Food guides for vegetarians: A history of food guides, developing

food guides for vegetarians, vegetarian food guides, appendix 7-A—food guides for vegetarians (food guide for lacto-ovo vegetarians and vegans, the 1-2-3-4-5 vegetarian food guide, American Dietetic Association's vegetarian food guide, the vegetarian food pyramid, the vegetarian food pyramid, macrobiotic food guide).

Part III: Vegetarian diets throughout the life cycle. 8. Pregnancy and lactation: Weight gain and calorie needs in pregnancy, weight gain in pregnant vegetarians, meeting nutrient needs of pregnancy on a vegetarian diet, meal-planning guidelines, adolescent pregnancy, potential complications of pregnancy, common conditions of pregnancy, vegetarians and lactation, appendix 8-A—food guides for pregnant and breast feeding vegetarians (food guide I, food guide II). 9. Vegetarian diets in infancy: Growth in vegetarian infants, vegetarian diets during the first six months of infancy, solid foods for vegetarian infants, comparison of sample menu plans for 9-month old vegan and omnivore infants, potential concerns in infant feeding, macrobiotic diets in infancy, fatty acids in the diet of vegetarian infants, conclusion. 10. Preschool and school-age children: Growth of vegetarian children, diets of vegetarian children, protein, fat, calcium, vitamin D, vitamin B<sub>12</sub>, iron, zinc, guidelines for meal planning for vegetarian children, milk in the diets of vegetarian children, counseling parents of vegetarian children, vegetarian diets for school-age children, school lunch, bag lunch, appendix 10-A—meal-planning guidelines for children (other food guides). 11. Vegetarian diets for adolescents: Growth of vegetarian adolescents, nutrient needs of vegetarian adolescents, meal-planning guidelines for vegetarian adolescents, eating disorders. 12. Vegetarian diets for older people: Dietary status of older vegetarians, nutrient needs of older vegetarians, meal planning for older people.

Part IV: Practical applications for counseling vegetarians. 13. Counseling vegetarian clients: Dietary assessment, counseling clients to plan menus based on vegetarian food guides, vegetarian diets as dietary therapy, reducing fat in vegetarian diets, reducing food costs on vegetarian diets. 14. Diabetes: Diet therapy for diabetes, vegetarians and diabetes, the diabetic exchange lists, appendix 14-A—exchange lists for meal planning. 15. Vegetarian diets for athletes: Vegetarian diets and athletic performance, nutrition needs of athletes, risks of amenorrhea in female vegetarians and female vegetarian athletes. 16. Vegetarian food preparation: Preparing grains, preparing beans, using tofu, using textured vegetable protein, using egg substitutes, cooking with sweeteners.

Glossary of vegetarian foods. Resources on vegetarian diet: Vegetarian resources for dietitians, resources for vegetarian clients, on-line services, mail-order vegetarian foods.

Appendixes. A. Fiber, cholesterol, and macronutrient intakes of adult vegetarians and nonvegetarians. B. Lipid

levels in adult vegetarians and nonvegetarians. C. Blood pressure of adult vegetarians and nonvegetarians. D. Anthropometric data of female adult vegetarians and nonvegetarians. E. Anthropometric data of male adult vegetarians and nonvegetarians. F. Intake ratios of N-6 to N-3 fatty acids on vegetarian and non-vegetarian diets. G. Protein, calcium, phosphorus, sodium and potassium intakes of adult vegetarians and nonvegetarians. H. Iron intake and status of vegetarians and nonvegetarians. I. Mineral intake of adult vegetarians and nonvegetarians. J. Water soluble vitamin intake of adult vegetarians and nonvegetarians. K. Fat soluble vitamin intake of adult vegetarians and nonvegetarians. L. Fiber, cholesterol, and macronutrient intakes of vegetarian and nonvegetarian school-age children and teenagers. M. Water soluble vitamin intakes of vegetarian and nonvegetarian school-aged children and teenagers. N. Fat soluble vitamin intake of vegetarian and nonvegetarian school-aged children and teenagers. O. Mineral intake of vegetarian and nonvegetarian school-aged children and teenagers. P. Fiber, cholesterol, and macronutrient intakes of elderly vegetarians and nonvegetarians. Q. Water soluble vitamin intake of elderly vegetarians and nonvegetarians. R. Mineral intake of elderly vegetarians and nonvegetarians.

The information on vitamin K is excellent and extensive (despite one small error): Table 6-12 (p. 197) gives the vitamin K content of selected foods. The content of soybean oil is 77 micrograms per tablespoon (not milligrams as stated). Other rich sources are (per ½ cup cooked): Lentils (261 mcg), kale (179 mcg), spinach (141), broccoli (119). The source of these statistics is: USDA Provisional table on vitamin K content of foods. 1994. Hyattsville, Maryland: USDA.

Index listings for individual soyfoods: Tofu: p. 38-82, 392. Tempeh: p. 391. Soymilk: p. 214-15, 284-85, 391. Miso: p. 389. Soy cheese, soy flour, soy yogurt, soybeans, soynuts, Take Care (fortified soy protein beverage sold in powdered form), tamari: p. 391 (Glossary of vegetarian foods). Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, Inc., 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2932. **Product Name:** Tempeh.

**Manufacturer's Name:** Plain Foods. Renamed Vermont Soy in May 1997.

**Manufacturer's Address:** Box 248, Johnson, VT 05656.

**Date of Introduction:** 1996. May.

**New Product—Documentation:** Call from Todd Pinkham, founder and owner. 1996. July 10. He is an organic dairy farmer who, with his partner (Megan Treadwell), milks 30 cows. They feed the cows organically grown feeds, and he has been shocked to learn how much grain is typically fed to cows. In May 1996 he and his partner started making and selling tempeh.

Call from Todd Pinkham. 1997. Sept. 18. In May 1997 he and Meg left their farm, moved to a new location (44 Foundry St., Waterbury, Vermont 05676. Phone: 802-244-5400), and into a commercial building (formerly Green Mountain Coffee Roasters) with several other small food processors. At the same time they changed the business name to Vermont Soy from Plain Foods. They still make only plain tempeh (distributed refrigerated the day after it is packed) and there is a strong demand for the product. He would like to add a burger and some other tempeh products to their line.

Form filled out and two labels sent by Megan Treadwell. 2001. June. Vermont Soy is at 44 Foundry St., Waterbury, Vermont 05676. Phone: 802-244-5400. They now make Tempeh, and Barbecue Burger, both organic.

2933. Raymond, Jennifer. 1996. *The peaceful palate: Fine vegetarian cuisine*. Revised ed. Calistoga, California: Heart & Soul Publications. Published by the author. Distributed by The Book Publishing Co., Summertown, TN. 159 p. Illust. Index. 28 cm.

• **Summary:** A vegan cookbook, with a substantial section on vegan nutrition. Contains 11 tofu recipes and 1 recipe for tempeh sandwich. A portrait photo (p. 159) shows Jennifer Raymond.

Talk with Jennifer Raymond. 1996. May 30. The new enlarged edition was available on 2 May 1996. There are new recipes and with each recipe is a nutritional analysis. The book is still available from the author, as well as nationwide because it is distributed by the The Book Publishing Company in Summertown, Tennessee. She is now working closely with Dr. Dean Ornish, and adds: "He is at the center of where things are happening related to vegetarianism, diet, and health. His work has had a more profound impact on the way that the medical profession and people in general view vegetarianism than that of almost any other person. It has allowed vegetarianism to turn a really big corner." Address: 1418 Cedar St., Calistoga, California 94515. Phone: 707-942-2180.

2934. Jacobi, Dana. 1996. *The soy of cooking: Throw out your old ideas about soy—These innovative recipes bring out the delicate, sophisticated flavor of soy. Natural Health*. May/June. p. 76-81, 138-44.

• **Summary:** Contents: Introduction (incl. health benefits and isoflavones). Soy, the next generation. Soymilk: Cooking tips, how to buy. Tempeh: Cooking tips, how to buy. Fresh green soybeans: Cooking tips, how to buy. Soy meats: Cooking tips, how to buy. Newfangled tofu: Cooking tips, how to buy. Recipes include: Soymilk smoothie. Thai salad with savory tofu. Garlic tempeh croutons. Green soybeans with pickled cabbage and ginger. Barbecued beans and tempeh bacon or tofu franks. Chili with black soybeans. Chocolate pote de crème.

A sidebar discusses: Powdered soymilk, soycheeses, soy

sour cream, soy yogurt, soy-based cream cheese, margarine substitute (Spectrum Spread containing canola oil and soy isolate). Address: Food writer, New York, NY.

2935. Hunter, Jean B.; Steinkraus, K.E.; Drysdale, A.E.

1996. Value of fermented foods for lunar and planetary stations. Paper presented at 26th International Conference on Environmental Systems. SAE Technical Paper 961416. Held July 1996 at Monterey, California. [35 ref]

• **Summary:** Contents: Abstract. Introduction: What is food fermentation, brief description of the BLSS (bioregenerative life support systems) diet without fermented foods, prior work on CELSS (closed ecological/environmental life support systems—an acronym increasingly replaced by BLSS), diets and menus, escaping the constraints of the CELSS diet, alternatives to food fermentations, particular opportunities for fermented foods, upgrading edible biomass, improved hedonics, convenience advantages, nutritional advantages, top dozen food fermentations for the space program (in descending order of total score): Yeast-raised wheat bread, single-cell lipids (from *Apiotrichum curvatum*; formerly *Candida curvata* D), amasake [amazake] (sweetener), mushrooms from residues, tempeh & related products—tempeh gembus (meatlike texture), vinegar, tapé/tapuy [tapeh], pickled vegetables, idli/dosa breads, dawadawa/natto (meaty flavor), rice wine, soy yogurt (sogurt) and other soy dairy replacers (dairylike).

This paper begins: "Three significant problems with food supply in bioregenerative lifesupport systems are addressable through use of fermented foods. The quantity of inedible and marginally edible biomass can be reduced; the hedonic quality of the diet can be enhanced; and food storage constraints can be relaxed due to the superior keeping qualities of fermented products."

"The crew diet for the lunar and planetary stations is likely to be based on four crops—wheat, soy, and white and sweet potato—which will make up the majority of calories consumed. Rice, salads and a few vegetable crops will add micronutrients and some variety. No animal foods or sugar crops will be produced, and no fruits except possibly strawberries."

"At the lunar station we expect that 85% of calories will be produced on site, with only 15% supplied from Earth. The resupply must include all flesh and dairy foods, spices and flavorants, luxury foods such as coffee and chocolate, imported fats and sweeteners, fruits, nutritional supplements and religious foods to be consumed in the CELSS."

"We are aware of only two sets of work on CELSS menus. Frank Salisbury has published an instructive and highly relevant survey of vegan and vegetarian dietary practices in the context of the space program, based on his 1994 workshop at JSC. One key point is that vegan cuisine and its ingredients—including fermented ingredients—deserve greater attention by CELSS planners because of

their importance to high-closure lifesupport systems.”

Address: Cornell Univ., Dep. of Agricultural & Biological Engineering, Room 218 Riley Robb Hall, Ithaca, New York 14853. Phone: 607-255-2297.

2936. *Soybean Quarterly (Nebraska Soybean Board, Lincoln, Nebraska)*. 1996. Soy reduces effects of osteoporosis. 2(3):2.

• **Summary:** Research indicates that consuming soy as part of a healthful diet may be one way to low risk of osteoporosis. This disease affects 15 to 20 million Americans, especially women. “High protein diets are associated with an increased loss of calcium in the urine. When it comes to protecting bone health, decreasing loss of calcium from the bones may be more important than consuming more calcium. Soy protein offers excellent quality protein, with less calcium loss compared to the same amounts of animal protein.

“Estrogen replacement therapy may reduce the risk of bone fractures by 50 percent.” Soybeans and most soyfoods are a unique source of isoflavones, which mimic estrogens and may help promote bone health. In animal studies, isoflavones have been found to inhibit bone fracture and stimulate bone formation.

Many soyfoods, especially calcium-set tofu and calcium-fortified soymilk, but also soybeans, textured vegetable protein, and tempeh are good sources of calcium that are well absorbed by the body.

2937. McCord, Holly; Yeykal, Teresa A. 1996. Menopause naturally: Got hot flashes? get soy! *Prevention (Emmaus, Pennsylvania)*. Aug. p. 65-70. [1 ref]

• **Summary:** About 75% of American post-menopausal women experience hot flashes and night sweats, along with sleep disturbances and mood swings. Until now, the only antidote for these unpleasant symptoms has been hormone-replacement therapy (HRT), a prescription medicine the replace the estrogen that women’s bodies start making less of. But recently researchers have found that the foods made from the soybean may offer a practical alternative.

“The trail of evidence linking soy with a hot-flash-free menopause starts in Asia.” There isn’t even a word for hot flash in Japanese. Sherwood Gorbach, M.D., at Tufts University School of Medicine, in Boston, Massachusetts, was one of the first to suggest that the reason for this may lie in the Asian diet, which is rich in soyfoods that contain isoflavones—a natural plant form of estrogen. In one day, a typical Asian woman—who eats about a quarter pound of soyfoods—may be getting 30 to 50 milligrams of isoflavones from her food.

Three clinical studies are now under way to see if and how soy isoflavones work to relieve menopausal symptoms. At Bowman Gray School of Medicine of Wake Forest University (Winston-Salem, North Carolina), Gregory Burke, MD, heads a study of 240 women over age 45 experiencing hot flashes or night sweats. Every day for 2 years the women

will drink an 8-ounce soy beverage containing either 1 mg, 34 mg, or 50 mg of isoflavones without knowing which level of isoflavones they’re receiving. Researchers will see if more isoflavones relieve their menopausal symptoms or anxiety or mood swings.

Two studies at Tufts University, in Dr. Gorbach’s department, are following 60 women with hot flashes. For 3 months, these women will eat either two specially designed almond- or chocolate-flavored soy breakfast bars that each contain 20 mg isoflavones (for a daily total of 40 mg isoflavones) or two placebo bars without isoflavones. Researchers will track the women’s reports of hot flashes and night sweats, and their levels of estrogen and other hormones. Though these studies have not been completed, preliminary data look promising says Dr. Gorbach.

A table (p. 67) shows the amount of isoflavones (in mg) in a typical serving of various soyfoods. In descending order: Nutlettes breakfast cereal\* (½ cup): 122 mg isoflavones + 140 calories. Beef(Not) textured soy protein granules\* (¼ cup dry): 62 mg + 70 calories. Roasted soy nuts (¼ cup): 60 mg + 195 calories. Tempeh (½ cup): 35 mg + 165 calories. Low-fat tofu (½ cup): 35 mg + 54-75 calories. Regular tofu (½ cup): 35 mg + 105-120 calories. Take Care High Protein beverage powder (Protein Technologies International; 2 scoops): 35 mg + 100-130 calories. Regular soymilk (1 cup): 30 mg + 130-150 calories. \* = Available from Dixie USA, 1-800-347-3494.

Even if this research doesn’t show positive results, other studies show that soy lowers cholesterol and may prevent breast cancer and osteoporosis. “A serving of soy every day could turn out to be a good bet,” says Dr. Gorbach. Researchers recommend consuming in the range of 30-50 mg/day of isoflavones. More than 100 mg/day could be harmful, so its is best to get your isoflavones from food instead of pills. Contains two recipes: Creamsicle Cooler (shake with soft tofu; 35 mg of isoflavones). Southwestern Skillet (with Beef(Not); 62 mg of isoflavones).

2938. Messina, Mark. 1996. Soyfoods and soy pills. *Soy Connection (The) (Jefferson City, Missouri)* 4(3):1. Summer. [4 ref]

• **Summary:** Argues convincingly that, in most cases, it is better to eat soyfoods as part of a healthy, balanced diet, than to take soy pills. “Without question the one group of phytochemical, in particular the isoflavones, is responsible for most of the recent research focus on soy. This is because of the observed biological properties of isoflavones (such as the estrogenic activity) and because, for practical purposes, soyfoods are the only natural dietary sources of these compounds.” However since several companies are now marketing soy/isoflavone pills, one need no longer eat soyfoods to get isoflavones.

“Individual pills provide as much as 20 mg of isoflavones; that’s quite a bit considering that there are

about 30-40 mg of isoflavones per serving of soyfood. As the research spotlight continues to shine on isoflavones, it is probable that these soy pills will find an enthusiastic market.

“Of course, there are at least two obvious reasons for promoting soyfoods, rather than soy pills. One, is that there are other phytochemicals in soyfoods, such as phenolic acids and saponins that may exert beneficial effects and that are not present in significant amounts in the pills. Two, for most people, incorporating soyfoods into the diet will lead to diet lower in saturated fats and cholesterol and higher in fiber (in the case of soybeans, tempeh, TVP). Taking pills does nothing to encourage a change in overall eating, but eating soyfoods does. There is another consideration—there are potentially critical differences in isoflavone composition between the soy pills and soyfoods. The health implications of these differences need to be addressed.

“But what if, for example, research establishes that isoflavones are directly responsible for inhibiting bone resorption [osteoporosis] and relieving menopause symptoms (night sweats, hot flashes)? What then should be the response of a woman who consumes a healthy diet and who wishes to use soy pills to relieve menopausal symptoms? I don’t think there are any easy answers to such questions. As a general approach, foods are always preferred, but in specific situations phytochemical pills may be an alternative that has some merits.” Address: PhD.

2939. Wang, Huei-Ju; Murphy, Patricia A. 1996. Mass balance study of isoflavones during soybean processing. *J. of Agricultural and Food Chemistry* 44(8):2377-83. Aug. [45 ref]

• **Summary:** Discusses: Soybeans (Vinton 81, 1992), soybeans, (Vinton 81, 1993), soybean flour, products made in the lab—Tempeh, soymilk, okara, tofu (momen or cotton, CaSO<sub>4</sub> coagulant), whey, soy protein isolate, defatted soy flour, daidzein, genistein, glycitein. Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, IA 50011.

2940. Sheridan, Margaret. 1996. Is tofu ready for the big leagues? *Los Angeles Times*. Sept. 26. p. H8, H10, H11.

• **Summary:** The article begins: “Tofu, the spongy off-white soybean cake that spells B-O-R-I-N-G for so many people, is about to get a marketing makeover. Slick packaging, toll-free consumer hotlines, new products, and a blitz of cookbooks created by chefs rather than earnest vegetarian activists are some of the strategies tofu companies plan to use to bring tofu into the mainstream.” A number of second generation tofu products found in supermarkets, and forthcoming cookbooks are listed.

“But some advertising and marketing professionals say that’s not enough.” The author talks with many such people who dislike tofu for various reasons: “Tofu is a joke... Tofu is a sissy. Bland, white, boring. It needs to take a stand.

Become something. And that name! Its terrible.” “Tofu goes against the American palate... Very little in American food, except baby food or gelatin, has that texture. Even buying tofu is alien. What else do you buy floating in water? And Americans love convenience. Bean curd is anything but. It’s not an open-and-eat product.” “I buy tofu but it just sits there, floating in my refrigerator. It makes me feel stupid and guilty. What do you do with it? I end up tossing it out.” Hinoichi is America’s largest tofu manufacturer. In March 1997 the company plans to move from its present 50,000 square foot plant in Los Angeles to a facility three times that size in Garden Grove. Harry Tanikawa, Hinoichi sales manager, notes that tofu and soy have been helped by good research and press from the medical community. He adds: “When you see fast-food places such as Panda Express in the shopping malls adding more tofu items to the menu, when you can buy a tofu hot dog at Dodger Stadium, you know tofu has arrived.” Note: Dodger Stadium is a major league baseball park in Los Angeles.

Worthington Foods has experienced a sales rush in meat alternatives; the category went from nothing four years ago to \$150 million a year. The company’s best-selling items, sold under the Morningstar Farms brand, are breakfast patties, sausage links, garden burgers, and spicy black bean burgers—according to Don Burke, executive vice president of sales and marketing. The people who buy Worthington products are “the masses, people who want to cut down a little on meat and saturated fat. Most are aging baby boomers who want taste, convenience, and a health benefit.”

Tofu “recipes for the mainstream” include: Red flannel hash. Mushroom scrambler. Tofu-stuffed French toast. Tofu slaw. Tofu citrus shake. Tofu cheesecake (p. H11).

The article ends with two sidebars: 16 “Tofu do’s and don’ts.” Soy food: Its many looks (p. H11)—Defines different soyfoods: Tempeh, miso, textured vegetable protein (TVP), soy milk, soy flour, soy cheese, soy sauce, tamari. Address: Times staff/food writer.

2941. Hastings, Carl. 1996. Soybean products in human foods. Paper presented at Regional Workshop on Soybean Processing and Utilization for Central America and the Caribbean. 4 p. Held Sept. 15-18 in Jamaica.

• **Summary:** Contents: Introduction. Soy sprouts. Whole soybeans: Cooked green beans, cooked soybeans, roasted or deep fat cooked soybeans (soy nuts—salted, flavored, etc., candy coated, salad topping, bakery ingredient or topping, soynut butter, soy coffee) fermented soybeans (tempeh—*Rhizopus*, natto—*Bacillus*, hamanatto—*Aspergillus*). Cereal blends: CSM (Corn-Soy-Milk), WSB (Wheat-Soy-Blend), other (bulgur, oat, sorghum grits).

Refined soy oil: Solvent extracted, physically extracted, uses, lecithin. Soy protein: Soy flour (full fat, defatted), concentrates, isolates, textured, uses. Hulls. Soy fiber. Soy milk: Liquid, powder, uses (plain, flavored, fortified, blends,

instant formula, nutritional beverages, tofu, soy cheese, frozen desserts, yogurt, soymilk film (yuba)). Soy sauce. Soy paste (miso). Soy pulp (okara). Address: Reliv, Inc., Chesterfield, Missouri.

2942. The Mail Order Catalog. Fall-winter 1996. Catalog of books and food. 1996. P.O. Box 180, Summertown, TN 38483. 24 p.

• **Summary:** The book section of this mail order catalog contains listings for an excellent selection of vegetarian and vegan cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, and animal rights.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), Harvest Direct vegetarian broth, and Protean, instant gluten flour (regular or flavored), seitan "chicken" or "sausage" mix, Mori-Nu silken tofu, Soja instant soy beverage, organic low-fat soymilk powder, Red Star nutritional yeast, Beano, and tempeh starter. Address: Summertown, Tennessee. Phone: 800-695-2241.

2943. Jacobi, Dana. 1996. The natural kitchen: Soy! 75 delicious ways to enjoy nature's miracle food. Rocklin, California: Prima Publishing. xii + 244 p. Oct. Index. 22 cm. Series: The natural kitchen. [16 ref]

• **Summary:** Contents: Preface. Acknowledgments. Introduction: Soy and health. All about soyfoods: Traditional soyfoods (tofu, miso, tempeh, soy sauce, soymilk), other Asian soyfoods (okara, yuba, kinako, natto), second-generation soyfoods (soy dairy products, soy deli foods, textured vegetable protein {TVP}, textured soy protein {TSP}, soy isolate (isolated soy protein)), more soy choices (fresh soybeans, dried black soybeans, soy flour, soy grits, soy flakes, soy nuts), cooking with soyfoods (tofu {pressing, freezing, marinating, sautéing and pan-crisping, frying, braising, pureeing, parboiling, storing and handling tofu}, miso, tempeh, soymilk, other soy dairy foods), cook's notes (herbs, spices and flavorings, nuts, oils, produce, stock, sweeteners).

Soups, appetizers, and first courses. Main dishes. Pasta and light dishes. Side dishes and sauces. Salads, burgers, and kebabs. Desserts. Breakfast and beverages. Mail order sources.

The Preface states: "If you are new to soy, you will find descriptions of soyfoods, from tofu to soymilk... If you already cook with soyfoods, the approximately 75 recipes in this book and their variations will expand your repertoire. These recipes will take you across lines that people who cook with soy rarely approach. The dishes bring familiar and satisfying textures along with flavors that are full and deep. Whether ethnic or classic, they are dishes with verve and elegance." The author first tasted tofu, with her parents, in

1953, "at the precocious age of eight," at The Great Shanghai on 125th St. in Manhattan, New York City. Address: Food writer, New York, NY.

2944. Oser, Marie. 1996. Soy of cooking: Easy-to-make vegetarian, low-fat, fat-free, and antioxidant-rich gourmet recipes. Minneapolis, Minnesota: Chronimed Publishing. xviii + 264 p. Illust. Index. 23 cm. [55 ref]

• **Summary:** This is a very nice gourmet vegan cookbook with 16 full-page color photos. Contents: Dedication. Notice: Consult a health care professional. Grateful acknowledgment to. Foreword, by Neal D. Barnard, M.D. Preface, by Marie Oser. Introduction, by Suzanne Havala. Soyfood for thought. A healthy kitchen. The soyfoods pantry (short definitions of generic and brand-name soy products). A quick guide to ingredients. Substitutions. Spices: The variety of kitchen life. Techniques.

Recipes: Sensational starters. Soups, stews, and salads. Bountiful breads. Exceptional Entrées. Soyful sides. Pizza and pasta. Delectable desserts.

Resource guide (Names and addresses of 23 companies selling soy and soy-related ingredients). Recommended reading (15 books). Bibliography (40 journal articles). Address: Agoura Hills, California 91391. Phone: 818-707-7353.

2945. United Soybean Board. 1996. National report on consumer attitudes about nutrition. Seattle, Washington. 8 p. Oct. 28 cm.

• **Summary:** This report, commissioned by USB, was conducted by a an independent research firm. It included telephone interviews with 1,000 consumers and primary household shoppers of all ages throughout the USA. They were asked a series of up to 23 questions. The standard margin of error for the study is  $\pm 3.2\%$ .

Popularity of soy products: A bar chart shows the following, listed in descending order of popularity. The first number indicates the percentage of the population who are familiar with each product; the second number indicates the percentage of those who are familiar with the product that have tried it. Tofu—76% of Americans are familiar with tofu, and 53% of these have tried tofu. Veggie burger—69% / 53%. Soybean oil—65% / 28%. Soy milk—58%—35%. Infant formula [soy-based]—53% / 36%. Soy protein—42% / 32%. Soy flour—41% / 30%. Miso—17% / 58%. Tempeh 14%—45%.

"How healthy are soy products? 40% of the population acknowledge that soy has positive health attributes. Half of those believe soy is a high protein source. 13% of the respondents cited soy as an option for lactose intolerance, 13% as a low fat food and 11% as a cholesterol reducer."

Consumer concern and confusion about nutrition terms: Trans fatty acids—37% of the population are familiar with the term; 38% of those who are familiar are concerned about

trans fatty acids; 51% of those who are familiar are confused about trans fatty acids. Hydrogenation: 36% are familiar, 39% of those are concerned, and 46% of those are confused. Address: 190 Queen Anne North, Seattle, Washington 98109. Phone: 1-800-TALK-SOY.

2946. Tibbott, Seth. 1996. History of Tofurky (Interview). *SoyaScan Notes*. Nov. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** King Harvest Natural Foods was a vegetarian sandwich company, deli, and juice shop in Portland, Oregon. They made a fresh Tofurkey Sandwich—which was just tofu, slightly browned, maybe marinated in some turkey-like seasoning, with some trimmings. In 1980, when Seth started delivering his tempeh to stores in Portland, he first saw this sandwich, which he enjoyed eating in Portland-area stores. That was when he first heard the word “Tofurkey.” In about 1982-83 King Harvest discontinued their Tofurkey Sandwich; they never made it again, though they are still in business making other sandwiches and food products.

The ancestor of Tofurky was created in 1991 by Hans and Rhonda Wrobel of The Higher Taste—one of Seth’s customers—a caterer and food manufacturer in Portland, Oregon, with a little deli; they make tempeh & lettuce sandwiches and tofu sandwiches. They started making a vegetarian stuffed Tofu Roast with gravy for their customers at Thanksgiving. They sold about 30 units the first year, 1991, largely to a local audience—including Seth. It was tofu in a pie pan with stuffing in the middle, then another layer of tofu on top. It was baked and tasted good—but it sold for \$30. Seth saw this as a meat alternative that had potential at Thanksgiving. The vegetarian recipes for making mock turkey are too long and complicated for the typical cook.

Seth wanted to use the name “Tofurky” (which he coined) for his new product idea. But before he did, he called the folks at King Harvest and asked them if they had a trademark on or any other rights to the name. They said “No.” He then asked them for permission to use that name. They said “Fine—” “No problem”—in part because they hadn’t made the product for more than ten years.

In October 1995 Turtle Island, together with The Higher Taste (in an informal and unwritten joint venture), introduced the first “Tofurky.” Higher Taste made the product’s centerpiece, a dome-shaped layer of marinated tofu with a whole wheat stuffing inside. Seth had been developing a tempeh burger that tasted more like turkey than burgers, so he got a drumstick form (Holomatic) and started making tempeh drumsticks. He added four of these to the Higher Taste Tofu Roast, and included a recipe for Nutritional Yeast Gravy. Turtle Island, which had good distribution for its tempeh, was responsible for marketing the product. Seth test marketed it as a frozen product in 24 natural food stores and co-ops on the West Coast; it retailed for \$24.99

to \$27.99 and weighed 3 lb 12 oz. There as also a 2 lb 4 oz size. Seth sent out some press releases and product attracted extensive local media coverage. No products were sold by mail order. Most natural food stores (such as Nature’s), to which Seth introduced the product enthusiastically, predicted that it would never sell. But Seth had a strong belief in it. Somebody at the Puget Consumers Co-op (PCC) in Seattle, Washington, took the product, even though they doubted it would do well. Then “it caught fire” at the PCC’s seven upscale stores in Seattle. They had to install a special telephone line—a Tofurky Hotline—for all the Tofurky special orders they were getting. Turtle Island did demos in PCC stores which further stoked the demand. After Thanksgiving, Turtle Island was flooded with calls and letters (“fan mail”) from happy customers who said things like “Wow! I’ve been waiting 20 years for this.” Usually food manufacturers only hear from customers when they are upset. “The customers believed in the product more than the savvy retailers—who had completely missed this niche.” Feedback cards were included in every product, and this feedback indicated that the gravy (originally created by The Farm in Summertown, Tennessee, but greatly improved on by Seth) was what made the product delicious, but consumers wanted the gravy itself—not just the recipe—included with the product. In 1995 about 800 Tofurkys were sold, mostly at Thanksgiving but some at Christmas (with gravy).

Realizing that the product had real potential, Seth contacted a lawyer and registered “Tofurky” as a trademark. This year (1996) the tofu is made by Island Spring in Vashon, Washington. When extra firm tofu was seasoned then baked, it froze quite well. The tofu is sent out in 8-oz blocks (each 3½ by 5 by 3/4 inches)—not in the shape of a turkey or drumsticks. The drumettes are a little spicier, and come with cranberries, wild rice, carrots. This year the product is frozen but they are also test marketing it refrigerated. Several West Coast distributors carry the product. Now the whole package weighs 5 lb 15 oz; the wholesale price is \$24.95 to \$25.60, so it retails for about \$33-\$36. Last week, Seth sent out 50 press releases to print, radio, and TV sources. This year (1996) more than 800 have been sold already, and Seth expects total sales to reach 2,000 to 3,000. The 1996 ingredients in the Golden Mushroom gravy are: Water, nutritional yeast, expeller pressed canola oil, unbleached flour, chopped fresh mushrooms, diced onion, shoyu, herbs, spices, non-dairy lactic acid culture. Note: This gravy is delicious! Note: The following number of Tofurkys were sold: 800 in 1995, 4,000 in 1996, 15,000 in 1997, 45,000 in 1998, and an estimated 55,000 to 59,000 in 1999.

Who coined the word Tofurky? Seth didn’t, though he was the first to spell it in that way, without an “e”—for two reasons: First, it was the right number of letter for a phone number. And second, he spelled it wrong the first time he wrote it and then kept repeating his mistake. Most people who hear the word for the first time spell it “Tofurkey” so

Seth has had to purchase a second Internet domain name spelled "Tofurkey.com." Seth was also the first to register the name (by any spelling) as a trademark.

But at least four other people and groups probably coined the word "Tofurkey" before Seth coined "Tofurky." (1) Jeremiah Ridenour believes that he coined it many years ago. (2) Peter Golbitz sent Seth a photo showing him with long hair and some Tofurky he made. (3) King Harvest Natural Foods in Portland, Oregon (see above). (4) A group of Rastafarians, black from inner-city Tacoma, Washington, had developed a very delicious barbecued tempeh, so Seth was exploring a co-packer arrangement. After the first Tofurky season, when they heard on the news that Seth made Tofurky, they sent him a flaming e-mail saying it was bad karma for him to rip them off because they had invented the word "Tofurkey." They refused to shake Seth's hand. They now took him to be the white devil, so he left under that cloud. Jeremiah and Peter were friendly about it, but Jeremiah likes to joke with Seth about how Seth owes him several million dollars in royalties for use of his name "Tofurky." Seth now sometimes jokingly calls his business "Tofurky Island." Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: 541-386-7766 OF.

2947. Zibart, Eve. 1996. The joy of soy. *Washington Post*. Nov. 15. p. N26. Weekend section.

• **Summary:** The article begins: "The more nutritionists look into soy products, the more they like them. Diets including soy allegedly head off several types of cancer, osteoporosis, high cholesterol levels and heart disease." Soyfoods are easily digested and could be a good bet for folks getting over the flu or winter whatever. Soyfoods are fairly high in calcium, so they can help replace dairy products in vegan and lactose-intolerant regimes.

Discusses the various soyfoods and restaurants that serve them in the Washington, DC, area: Edamame (a bowl of boiled and salted soybeans in the pods) at Tachibana in McLean. Tofu in the hot pot at Tin Yang in Adams-Morgan. Fried white tofu with red chili sauce at Rabieng in Baileys Crossroads.

The most widely available forms of soy are tofu and tempeh. "Tofu is among the best non-meat sources of protein, and relatively low-fat..." Tofu is much less expensive than other protein foods, which making dining a bargain as well as healthful.

"To understand the real versatility of soy products, however, it's worth visiting the Vegetable Garden in Rockville, which... is beginning to get national attention from magazines that follow healthful eating. Its menu follows strict Buddhist rules, so there are no dairy products, garlic or onions," and, of course, no meat, poultry, fish, shellfish or eggs.

Ends with a directory of four restaurants in the

Washington, DC, area, that feature soy: Harmony Cafe, Ivy's Place, The Vegetable Garden, and The Feed Bag.

2948. **Product Name:** [Tofu, Tempeh, Soymilk, Soyshakes / Smoothies, Soysages].

**Foreign Name:** Tofu, Tempeh, Soymilk, Soyshakes / Smoothies, Soychicha.

**Manufacturer's Name:** Organica-ecotienda.

**Manufacturer's Address:** Xicotencatl 653-18, Col. Centro, Veracruz, VER 91700, Mexico. Phone: 29-31-30-83.

**Date of Introduction:** 1996. November.

**New Product-Documentation:** Letter and form filled out by Pat Hayward. 2000. Aug. 25. This company, managed by Pat Hayward and Claudia Gutierrez, makes and sells the above five soyfood products, which they introduced in Nov. 1997. Production of each in kg/month is as follows: Tofu 50. Tempeh 2. Soymilk 40. Soyshakes/Smoothies 40. Soychicha 10.

2949. Hager, Stacy. 1996. What the heck are tofu and tempeh? Here's a dictionary of healthy soyfoods. *Soybean Digest*. Dec. p. 14-15. In "Soyfoods Special Report" section.

• **Summary:** Gives a brief description of tofu, tempeh, textured soy protein (TSP), isolated soy protein, soy milk, soy flour, green vegetable soybeans, and roasted soy nuts. The article begins: "No, tofu's not a martial arts method, tempeh's not an Arizona city, and TSP isn't an abbreviation for teaspoon."

2950. Holin, Fae. 1996. Getting sneaky with soy: How to use tofu without a family strike. *Soybean Digest*. Dec. p. 23, 27. In "Soyfoods Special Report" section.

• **Summary:** Describes how registered dietitian Anne Patterson slowly introduced tofu to her family, starting with desserts. She and her husband, Jim, own corn and soybean acreage in Illinois. Jim "doesn't really like to see white tofu," so Anne always disguises it—as by putting it in lasagna in place of ricotta cheese, or in other baked or main dishes to reduce the amount of oil or eggs used. She notes that the new lite or low-fat tofus are excellent. Also describes how to use tempeh, soy flour, soy beverage (soy milk) and TSP (TVP). Her family also likes the commercial soy burgers now widely sold in mainstream grocery stores.

Contains recipes for: Strawberry tofu fruit dip. Tofu basil pasta sauce on fettuccine.

2951. **Product Name:** Christmas Tempeh (With Soy & Red Lentils).

**Manufacturer's Name:** Marcus Tribelhorn Tempeh.

**Manufacturer's Address:** 1535 10th St., Los Osos, CA 93402. Phone: 805-528-2080.

**Date of Introduction:** 1996. December.

**Ingredients:** Soybeans, red lentils, barley, local Postelsia (sea palm; a sea vegetable).

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with (call from) Marcus Tribelhorn. 1997. Oct. 31. He made 2-3 batches of this tempeh during December 1996. He sold all of it to Natural Flavors, a vegetarian restaurant in nearby San Luis Obispo—they were buying about 35 lb/week. this restaurant is no longer in business. The product had no label, so the name “Christmas Tempeh” did not actually appear on the product.

2952. *Vegetarian Times*. 1996. Soy–Humble bean; rich benefits. Dec. p. 20-21.

• **Summary:** This is a summary of several of the more important studies presented in September at the International Soy Symposium in Brussels. Soy and cholesterol: Dr. James Anderson reported that people who eat generous amounts of soy protein may lower their risk of heart disease, because soy significantly decreases LDL (“bad”) cholesterol, which can block arteries and even seep into blood vessels, causing atherosclerosis or thrombosis. “Other dietary changes, such as increasing fiber and decreasing saturated fat intake, can also help to lower LDL cholesterol. But unlike most other foods, soy can also raise HDL (“good”) cholesterol levels. Good cholesterol gobbles up the bad cholesterol that accumulates along artery walls.” Moreover, phytochemicals in soy can prevent the oxidation of bad cholesterol. Oxidation makes arteries clog more easily. Eating as little as 1¼ cup of tofu or tempeh a day could reduce blood cholesterol by about 10%.

Women’s cholesterol and bone health: Susan Potter of the University of Illinois reported that soy protein lowers blood cholesterol in post-menopausal women, but the effects went beyond those of a low-fat diet. After the 6-month cholesterol study, those women who ate soy protein had a significantly greater bone mineral content and density. Potter found “actual increases in bone density” among the women who ate soy. The researchers believe that this important increase is caused by two isoflavones in soy, genistein and daidzein, which have properties similar to those of the hormone estrogen. “Estrogen supplements are often prescribed to women after menopause as a way to prevent osteoporosis.”

Prostate cancer: Several studies have shown that the soy isoflavone genistein inhibits the growth of human prostate cancer cells in the laboratory. This research prompted Dr. Stephen Barnes and other scientists at the University of Alabama to launch a pilot study to see if eating soy can prevent prostate cancer in elderly men with a genetic risk for prostate cancer. Results are expected by the spring of 1997.

In this same issue, see sidebar titled: “Soy and breast cancer: A debate rages.”

Development in a Modern Food Industry. Gadjah Mada University, Yogyakarta, April 15-16, 1995. [17 ref. Eng]\* Address: Gadjah Mada Univ., Faculty of Agricultural Technology, Jalan Socio Yusticia, Bulaksumur, Yogyakarta, Indonesia.

2954. Gelles, Carol. 1996. 1,000 vegetarian recipes. New York, NY: MacMillan. [vii] + 598 p. Index. 24 cm.

• **Summary:** In the Introduction, a section titled “Soy products” (p. 17-18) includes brief definitions of soybeans, bean curd (tofu), miso, seitan, soy flour, soy milk, soy nuts, soy sauce and tamari, soy sprouts, tempeh, and textured vegetable protein (TVP).

In the chapter on “Entrees” is a section (p. 217-27) is titled: “Tofu, tempeh, seitan, and textured vegetable protein (TVP).”

The index contains 20 entries for tofu, 5 each for tempeh and soybeans, 4 for textured vegetable protein (TVP), 3 for seitan, and 1 for miso.

A table (p. 14) gives the time to cook various types of beans (that have been soaked overnight, the soak water discarded, and fresh water added) in a pot or saucepan (not in a pressure cooker); the adzuki bean takes the shortest time (45 to 90 minutes) while the soybean takes by far the longest time (2½ to 3½ hours [which is not nearly long enough]). Herein lies one key reason that Asians strongly prefer soyfoods to whole soybeans. Address: Author, food stylist and recipe tester, New York City.

2959. South Dakota Soybean Research & Promotion Council. 1996. Soyfoods: A healthy profile. Sioux Falls, South Dakota. 33 p. Illust. No index. 23 cm. [1 ref]  
 • **Summary:** This is an original and colorful soyfoods cookbook, with many full-page color photos of prepared recipes. Near the bottom of the front cover: "As technology advances, science is discovering that unique compounds found in soyfoods help prevent or even treat some of society's most serious diseases." Contents: Health benefits of soyfoods: Heart disease, cancer prevention, osteoporosis, diabetes, kidney health, menopause. Incorporating soy into your diet. Nutritional benefits of soyfoods: Phytochemicals, phytoestrogens, protein, fiber. Guide to modifying recipes: A one-to-one substitution of soyfoods for animal products and white flour. The diabetic exchange list. Recipes (p. 4-31). Introducing soy into your diet: Buying and storing tofu, types of tofu, tips on using tofu, textured soy protein (TSP), isolated soy protein, soy flour, soy milk, tempeh.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in 1996. It was later reprinted by the Nebraska Soybean Board, with their Nebraska logo on the back. Address: 3801 S. Western Ave., Suite #105, Sioux Falls, South Dakota 57105. Phone: (605) 330-9942.

2960. Steinkraus, Keith H. ed. 1996. Handbook of indigenous fermented foods. 2nd ed., revised and expanded. New York, Basel, and Hong Kong: Marcel Dekker, Inc. xii + 776 p. Illust. Index. 26 cm. Food Science and Technology Series, Vol. 73. Index. 26 cm. [350 + soy ref]  
 • **Summary:** This 2nd edition is about 108 pages longer than the original 1983 edition. Contents: Introduction to indigenous fermented foods. (1) Indonesian tempe and related fermentations: Protein-rich vegetarian meat substitutes. (2) Indigenous fermented foods involving an acid fermentation: Preserving and enhancing organoleptic and nutritional qualities of fresh foods. (3) Indigenous fermented foods involving an alkaline fermentation. (4) Indigenous fermented foods in which ethanol is a major product: Type and nutritional significance of primitive wines and beers and related alcoholic foods (incl. Chinese koji (big *qu* {bricklike in shape and made from barley or wheat and soybeans, inoculated with *Aspergillus* molds), and small *qu* ({spherical, plate-circular or rectangular in shape and made

from rice or rice bran with various herbs, inoculated with *Mucor* and/or *Rhizopus* molds}, p. 449), Japanese amazake (p. 480-81).

(5) Indigenous amino acid / peptide sauces and pastes with meatlike flavors (p. 509-654): Introduction.

(A) Soy sauces: Japanese shoyu: Koikuchi, usukuchi, and tamari; Chinese chiang-yu, by Tamotsu Yokotsuka (p. 511-17). Biochemistry of *Saccharomyces* (*Zygosaccharomyces*) *rouxii*, by Steinkraus, Franta, and Ayres (p. 517-24). Umami flavor, by Kawamura and Kare (p. 524-28). Chinese fermented product related to soy sauce (big *qu*, small *qu*, and jiang, by Chen & Ho, p. 528). Taiwanese soy sauce, by Liu (p. 528-33). Malaysian soy sauce: Kicap, by Ong, Mercian, Poesponegoro and Tanuwidja (p. 531-39). Indonesian soy sauce: Kecap, by Saono, Poesponegoro and Tanuwidja (p. 539-43). Korean soy sauce, by Chang (incl. homemade kanjang and meju, p. 543-44). Taiwanese black bean sauce: Inyu, by Jan et al. (p. 544). Philippine taosi, by Steinkraus (p. 544-45).

(B) Fermented soybean pastes: Japanese miso, by Ebine, Shurtleff and Aoyagi (p. 545-56). Indonesian tauco, by Saono et al. and Winarno (p. 556-59). Korean Doenjang and kochujang, by Chang, Shurtleff and Aoyagi (p. 559-64).

(C) Fermented fish-shrimp sauces and pastes (p. 565-606).

(D) Fish-soy sauce and fish-soy paste, by Ismail, p. 607-11).

(E) Miscellaneous Oriental fermentations. Japanese natto (itohiki natto), by Hayashi and Ota (p. 611-24). Japanese Hama-natto (hamanatto) and related products (incl. yukiwari natto, p. 624-26). Chinese red rice: Anka (Angkah), by Lin, Su and Wang, Sooksan and Gongsakdi, and Pichyangkura (p. 626-33). Chinese sufu, by Su and L.-P. Lin (p. 633-41). Preserved duck eggs / Century eggs, Chinese pidan (p. 641-42). Pidan are made by a chemical process, not by fermentation. Note: Chapter 5 contains about 240 references. Much of the text in this chapter is similar to that in the original 1983 edition, although this chapter is 7 pages longer and contains 3-4 new sections.

(6) Mushrooms: Producing single-cell (microbial) protein on lignocellulosic or other food and agricultural wastes.

(7) General papers related to indigenous fermented foods. Address: Inst. of Food Science, Cornell Univ., Geneva, New York.

2961. Winter, Ruth. 1996. Super soy: The miracle bean. New York, NY: Crown Publishers Inc. 192 p. Index. 21 cm. [106 ref]

• **Summary:** On the cover is written: "This wonder bean can help fight cholesterol, high blood pressure, blood sugar, cancer, ease menstrual and menopause symptoms, and keep a colon healthy. Includes a cookbook of 50 soy recipes from New York's Natural Gourmet Cookery School."

Contents: Introduction: The Cinderella bean. 1. How soy protects the heart and blood vessels: Full of fiber, the Eskimo secret omega-3 fatty acids, lecithin and vitamin E, preventing strokes, magnificent magnesium, soy and the Mediterranean diet, foam to wash out cholesterol?, cholesterol competitors—phytosterols, is it thyroid hormone [when thyroxine levels rise, cholesterol falls]?, amino acid at work?, could it be the B's?, is it the flavonoids?, the bean and obesity, high blood pressure and the bean, could it be just avoiding meat and dairy products?, summing it up. 2. How soy protects against cancer: Protease inhibitors, trypsin inhibitors, plant estrogens, polyphenols, terpenes—antioxidants, fighting phytates, maybe it's due to low-count amino acid, saponins, inositol—the cancer-fighting phytic acid, which soy products have the most anticancer potential?, potential adverse effects of soybeans. 3. How soy helps ease digestive problems: Promoting regularity, calcium and soybeans. 4. How soy is beneficial in diabetic diets. 5. How soy is proving beneficial to women: The soy and the cycle, other hormonal benefits, magnesium, PMS and pregnancy, contraceptive or fertility inducer?, so “B” it, the bones need it, magnesium and bones, boron and bones, it could be the phytates. 6. Soy and men: Soy and sex, protein power. 7. Soy products and their nutritional value: Soybeans, edamame, soybean sprouts, tofu (also known as bean curd and dou fu-tofu), tempeh, soy milk, yuba, soy cheese, okara, soy yogurt, soy sauce, soy oil, soybean lecithin, soy nuts, miso, natto, soy flour, soy powder, soy protein isolates, concentrates and grits, texturized soy protein, convenience of soy foods. 8. Easy ways to add soy to your diet: Some other easy ways to add soy to your diet, sensible soybean use. 9. Recipes: Appetizers, soups, salads, main dishes/entrées, side dishes/breakfast, sauces/dips, desserts. Glossary. Where to get more information. References. Address: M.S., Health and science writer, Short Hills, New Jersey.

2962. Blazek, Zdenek. 1997. Re: G.B.Z. is preparing soy products in the Czech Republic. Letter to William Shurtleff at Soyfoods Center, Jan. 13. 2 p. Handwritten, with signature. [Eng]

• **Summary:** His company is making soy products in the Czech Republic. They have the book titled *Tempeh Production* by Shurtleff & Aoyagi. Now they would like to introduce some new products such as seitan, amazake, koji, soy yogurt, natto, and cheese alternatives.

Talk with a company representative who speaks German. 1997. Feb. 3. The company now makes tempeh and natto. They introduced each product about 18 months ago. They would like to introduce tofu and seitan as soon as possible. Address: G.B.Z. s.r.o., 68606 Uherske Hradiste, Czech Republic. Phone: +42 632 636 16.

2963. Stevens & Associates, Inc. ed. and comp. 1997. U.S. 1997 soyfoods directory. Lebanon, Indiana: Indiana Soybean

Development Council. 47 p. 28 cm. [29 ref]

• **Summary:** This second, expanded edition of the directory contains more than 270 company listings. Contents: Forward. How to use the Soyfoods Directory (incl. Internet access). Daily soyfood guide pyramid (color). Soyfood descriptions (alphabetical): Introduction, green vegetable soybeans (edamamé), hydrolyzed vegetable protein (HVP), infant formulas—soy based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen dessert, okara (see soy fiber), soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour, soy grits, soy protein concentrate, soy protein isolate, soy protein—textured, soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk (soy beverages), soynut butter, soynuts, soyoil & products, sprouts—soy, tempeh, tofu & tofu products, whipped toppings (soy based—“similar to other nondairy whipped toppings, except that hydrogenated soyoil is used instead of other vegetable oils”), yuba. Soybean products chart: From whole soybeans, from soybean meal, from soyoil and lecithin. Soyfood companies by product (products listed alphabetically).

Composition and nutrient content of soyfoods (large table, p. 14). Soyfood companies (alphabetical by company name; Each listing contains address, contact, phone, soy products, product names, distribution, to locate product, classification). Mail-order soyfoods: Soyfood mail order companies (listed alphabetically by company). Soyfood companies by state (alphabetical by state; California has by far the most). Soybean promotion & research organizations (national, and state). Professional associations and industry information resources. Soy cookbooks (19). Soy resource books (10). Soyfood fact sheets and recipes: 1-2 pages each for meat alternatives, miso, soyoil, soy flour, soymilk, tofu, textured soy protein, whole soybeans. Soyfoods directory survey.

This directory is on the Internet's World Wide Web at <http://www.soyfoods.com>. For more information or suggestions, call 1-800-301-3153. The Internet version of the Directory continues to improve. “The first year saw hits to our site increase from 1,000 the first month to more than 8,000 per month now. We have added a new search engine that makes it easier to find information and a new monthly e-mail newsletter, *Soyfoods USA*, designed to inform media sources, dietitians and consumers about the latest soyfoods information. To subscribe to this popular newsletter, just send an e-mail message to [soyfoods@ind.com](mailto:soyfoods@ind.com) with the words “Subscribe Soyfoods USA” in the body or subject field.”

Talk with Roger Stevens. 1997. March 10. The 1997 directory was first available in January 1997. About 100,000 copies of this directory were printed, and all but 7,000 have already been sent out free of charge. About 77,000 copies were sent to registered dietitians nationwide; all are members of the American Dietetic Association. Another 10,000

copies were sent to the American Association of Family and Consumer Sciences—basically extension personnel at the Cooperative Extension Service in each county; these people provide a lot of consumer information about foods and agriculture. About 500 copies were sent to each of the 20 state soybean development councils. The remaining 6,000 copies were sent to callers who left their name and address at a toll-free answering service. The next step is to do a media tour in Indiana. Traveling with a registered dietitian, they expect to generate a lot of requests from citizens of Indiana. One of the goals is to show other states that if you promote soyfoods in this manner, you will get a lot of interest. Roger hopes to encourage other states to take a more active role in promoting soyfoods. The directory has generated a tremendous amount of information on the part of dietitians who call the toll-free number and have many questions about soyfoods; Roger tries to refer them to people who have the answers—such as 1-800-Talk-Soy. The Indiana Soybean Council has had to hire a new person just to handle the requests for this directory.

Next Roger plans to do a survey of registered dietitians to learn more about their responses to the 1997 directory. He might ask: Did you receive the book? Do you use it? If so, in what way and how often? How many people do you influence with regards to soyfoods as a result of this book? So if each of the 77,000 dietitians influences, on average, 10 people a year, the directory has reached more than 750,000 people. One major goal of this book is to help dietitians include more soyfoods in their own diets and in the diets of their clients. How can we better help you do this? Do you want a cookbook? A starter kit? Shall we include coupons?

From the focus groups he has already conducted, Roger thinks that future editions of the directory will be presented more like a cookbook or recipe book, with the directory in the back. “People really like the recipes. They just hand them out to their clients. We get requests for 100 books at a time from dietitians, who give the entire book to their clients at classes, in their offices, etc.” Roger has the funds to do the research to find out exactly what dietitians want in the way of soyfoods recipes and how they want them organized.

Other possible questions: Which part or parts of the book do you find most valuable? Which do you find least valuable. Is there any information which is not in the book that you wish were included?

Roger would also like to develop for the next edition of this book a graphic presentation of the inside of a typical supermarket showing all the different products which contain soy.

Note: The word “soyoil” is used instead of “soy oil” throughout this directory. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

2964. Sullivan, Cheryl; Rhodes, Kathy. 1997. *Simply soy: A*

variety of choices. Williamsburg, Virginia: Virginia Soybean Association. 118 p. Undated. Illust. Recipe index. 26 cm.

• **Summary:** Contents: Introducing soyfoods into your diet. The healthful soybean. Exploring soyfoods: Dried soybeans, fresh green soybeans, soy milk, tofu, textured soy protein, soy flour, soy grits, tempeh, miso, soy meat analogs. Where to find soy products. Nutrient information. Recipes: Breakfast, beverages, breads, appetizers & snacks, salads, soups, sandwiches, side dishes, main dishes, desserts.

Talk with Susan Haller of the Virginia Soybean Assoc. 2000. Nov. 9. This undated book was published about 3-4 years ago.

Talk with Cheryl Sullivan. 2002. Aug. 12. She wrote this booklet for the Michigan Soybean Promotion Committee; it was published in about Jan. 1997. It was never sold and is now available online at [www.soyfoods.com/SimplySoy](http://www.soyfoods.com/SimplySoy). Address: 1. M.A., R.D., Sullivan Nutrition Inc.; 2. PhD, R.D., Preventive Cardiology Program, Univ. of Michigan; c/o 151 Kristiansand Drive, Suite 115 E & F, Williamsburg, Virginia 23188. Phone: (757) 564-0153.

2965. **Product Name:** Tempe.

**Manufacturer's Name:** Toko Ramé Indonesian Restaurant.

**Manufacturer's Address:** 17155 Bellflower Blvd., Bellflower, CA 90706. Phone: 562-920-8002.

**Date of Introduction:** 1997. January.

**Ingredients:** Incl. soybeans, tempeh starter.

**New Product–Documentation:** Talk with Daniel Ungerer, food industry consultant. 1997. Dec. 9. Ms. Vera Yuliansyah started making tempeh at this restaurant about 6-9 months ago. Bellflower is in southern California, directly south of Los Angeles between Paramount and Norwalk.

2966. Indonesian Tempe Foundation (Yayasan Tempe Indonesia). 1997. *International Tempe Symposium: “Reinventing the hidden miracle of tempe.”* Jakarta, Indonesia. 8 panels. 21 cm. [Eng]

• **Summary:** This brochure (first circular) announces the International Tempe Symposium to be held on 13-15 July 1997 at Denpasar, Bali, Indonesia. The symposium fee for participants (if paid before 15 May 1997) is \$250.00. For those presenting a paper it is only \$150.00. Accompanying persons pay \$100.00. A tentative program and rates at 3 hotels are given. There will be a pre-symposium tour of Denpasar, Bali.

The second circular for this symposium, sent by e-mail on March 21, gives details on the papers to be presented at each of the sessions. Session I: Global prospects of tempe in the world—5 papers. Session II—8 papers. Session III—8 papers. Parallel session IIIA: Socio-economic aspects of tempe—7 papers. Parallel session 3B: Processing—8 papers. Total: 36 papers.

Another handsome second circular (printed, 4 panels each, front and back) arrived 7 June 1997. It also included

a registration form and a leaflet about Yayasan Tempe Indonesia. Address: Gd. Bulog II, 2nd floor, Jl. Kuningan Timur M.2/5, Jakarta 12950, Indonesia. Phone: 062-021-520-7239.

2967. Mangels, Reed. 1997. Vegetarian Journal's guide to breakfast "meats." *Vegetarian Journal* (Baltimore, Maryland). Jan/Feb. p. 24-25.

• **Summary:** A large table gives a nutritional comparison of breakfast meats and meat alternatives in three categories: Bacon (2 alternatives), Canadian bacon (1), and sausage (9). The meatless meat alternatives are made from tofu, tempeh, and textured soy protein concentrate and wheat gluten. Address: Ph.D., R.D.

2968. Shurtleff, William; Lingle, Sheila. 1997. Readers like Soyfoods Report. *Soybean Digest*. Mid-Feb. p. 66.

• **Summary:** Since Soyfoods Center was omitted from the "Soyfoods Special Report" in a previous issue of *Soybean Digest*, Shurtleff writes about the Center and its resources. A Texas reader thanks the Digest for writing about tofu and tempeh, which he has eaten for the past 30 years as he worked as an agronomist. Address: 1. Director, Soyfoods Center, Lafayette, California; 2. Indiana Soybean Development Council.

2969. Wight, Karen James. 1997. Work with tempeh and tofu at Homeland Foundation in Australia (Interview). *SoyaScan Notes*. March 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Karen arrived at Homeland Foundation in Australia in either late December 1981 or early 1982 (she no longer has her passport from that era). She lived in Australia for 6½ months, during which she lived at Homeland Foundation for 3½ months. Homeland was located at Upper Thora, in the Bellingen Valley, about 40 miles inland from Coffs Harbour, near the east coast of New South Wales. The area was incredibly lush, green, and fertile.

She left southern California in August 1981 (after leaving a professorship at UCLA), spent 2 months in Hawaii studying body work, then flew to Sydney (the capital of New South Wales), arriving in about October 1981. She met Jonathan Gordon at a community in a hotel just outside of Sydney, where they stayed for about a month. Then they stayed at a community in Victoria for about 1 month. They spent Christmas in Melbourne—where the only thing offered to eat was meat. Then they went directly to Homeland. They wanted to go there because Jonathan had been to Findhorn (a spiritual community in northern Scotland), and he knew some of the Findhorn people who had started Homeland.

Karen is sure the company that made tofu, tempeh and sprouts (mainly alfalfa and mung bean sprouts; no soy sprouts) had a name (but she cannot remember what it was) because they sold products commercially outside

the community in order to earn income for Homeland Foundation. The equipment was new and gorgeous; the sprouting room was very modern, sanitary, and well organized. The company made good use of the okara—a by-product from making tofu; they used it to make delicious okara granola and soysage. These two products were consumed mostly in the community and by friends; they were not sold.

Karen has no idea when Homeland was established or when they started to make tempeh and tofu. She would guess they had been making and selling soyfoods for at least a number of months, and perhaps a year or two. She thinks it is fairly likely that they were making tempeh by January 1981. They had clearly built it into a very productive and well-organized operation. Karen is quite sure that they started making tempeh after tofu production was well established.

The tofu and tempeh were made in the same small room, but each was made by different people; Karen made tofu more than tempeh. They made tempeh in an incubator that was the size of a refrigerator—about 30-40 pounds at a time, approximately twice a week. Tofu was made daily. Only soy tempeh was made. They may have learned both the tempeh and tofu processes from one of the many people who came regularly from Findhorn. The various people who were head of the community had all been to Findhorn. Karen remembers getting up at 2:00 in the morning to make tempeh. She wishes Jonathan would write a book about spirituality, service, cooking, and food. Address: 2333½ Rodriguez Rd., Santa Fe, New Mexico 87501. Phone: 505-982-4765.

2970. Danival. 1997. Price List—Danival: 1 March 1997. Mezin, France. 21 p. 30 cm. [Eng]

• **Summary:** Contents: Unrefined Atlantic sea salt. Tomato preserves. Vegetable preserves (incl. azuki with hijiki sea weed). Mushroom preserves. New condiments. Fruit purees with no added sugar (but 35% corn syrup for sweetness). Cereal sweeteners (barley malt, wheat syrup, corn syrup, rice syrup, apple syrup). Desserts and fruit juice. Fruit desserts. Agen prunes. Danival's macrobiotic food range: "Europe's leading manufacturer of organic macrobiotic food products. Produced in France, traditional Japanese manufacture. Non genetically engineered soya, grown by Mr. Berjon from his own seed beans since 1991." Brown rice miso\* (unpasteurized, 4 sizes), barley miso\* (unpasteurized, 4 sizes), young shiro miso\* (unpasteurized, 2 sizes), shoyu\* (unpasteurized; 5 sizes), tofu\*, smoked tofu\*, tempeh with shoyu and wakame\*, seitan with shoyu and hijiki\*, gluten powder\*. \* = Organically grown, certified by AB-Ecoconcert.

A 4-page French-language color insert (dated March 1997) contains color photos of many of these products, sealed in glass jars—incl. "Bio Miso (*Orge/Gerst*), Sauce Bolognaise Seitan, Raviolis (*Farcies au Seitan*), and Bio

Shoyu.” Address: Moulin d’Andiran, 47170 Mézin, France. Phone: +33 5 5397 0023. Fax 5 5397 0010.

2971. Fairbrother, Anthony; Petterson, David. 1997. *Tempe—a nutritious food for developing countries. Food Chain (Intermediate Technology, England)* No. 20. March. p. 13-15.

• **Summary:** A good introduction to tempeh and its production in developing countries. Contains recipes for Tempe Goreng and Tempe Bacem. Photos show. (1) Four cakes of finished tempeh of different sizes. (2) People packing inoculated soybeans into small plastic bags of 200 gm each. (3) Tempeh being made in long plastic tubes, 3 cm in diameter; when done, these are cut into ½ kg and 1 lg portions. Address: 1. Curtin Univ. of Technology, GPO Box U 1987, WA [Western Australia] 6001, Sydney, Australia; 2. Agriculture Western Australia, Baron-Hay Court, S. Perth, WA 6151, Australia.

2972. Parks, Thomas R.; Lampi, R.A.; Marquardt, R.F. 1997. Development of technology base needs for processing in an advanced life support (ALS) system. Moffett Field, California: National Aeronautics and Space Administration, Ames Research Center. 62 + 63 p. March 24. Illust. No index. 28 cm. Final report. NASA CR-6816SN. [16 ref]

• **Summary:** This final report covers five crops: Soybeans, rice, wheat, peanuts, and white potatoes. The section titled “Process investigations—Soybeans” (p. 1-25) discusses five products made from soybeans: Soy flour, tempeh, soymilk (plus okara), soy yogurt (fermented), and tofu. Descriptions are given of each food and the process used.

Figures show: (1) General flow schematic—Soybean products. (2) Flour from dehulled soybeans. (3) Concept sketch—Soybean dehuller. (4) Water elutriation column to classify/separate particles by settling rate differences (Input: Dehulled beans and hulls). (5) Flow chart of tempeh from dehulled soybeans. (6) Flow chart of tempeh from beans with hulls. (7) Flow chart of soymilk from dehulled beans. (8) Flow chart of soymilk without prolonged soaking. (9) Flow chart of soymilk (Shurtleff & Aoyagi procedure). (10) Flow chart of tofu from beans with hulls. (11) Flow chart of tofu from dehulled beans. (12) Flow chart of yogurt from dehulled beans. (13) Label of Redi-Set Culture from Chr. Hansen Laboratory, Milwaukee, Wisconsin.

Color photos show: (1) Vertical plastic tube described in Fig. 4. (2) Soybean hulls and cotyledons following flotation separation using the prototype device shown above. (3) The K-Tec mill used in preparing the various flour products for this project. (4) Plastic bag filled with full fat soy flour prepared from dehulled beans. (5) Tempeh in perforated plastic bags, made according to “The Tempeh Lab” procedure. (6) A glass of soymilk produced by modified Shurtleff & Aoyagi procedure. (7) Freshly made okara on a blue dish. (8) Freshly prepared tofu; one sample was made from dehulled soybeans, the other from beans with hulls.

Table 1 shows yield data for different food products: Soymilk 11:1. Tofu 1.77:1. Soy yogurt 10.2:1. Tempeh (dehulled beans) 1.59:1. Tempeh (beans with hulls) 2.32:1. Okara (dehulled beans) 1.64:1. Okara (beans with hulls) 2.19:1. Soy flour (dehulled beans) 0.62:1. Address: Food and AgroSystems, Inc., 1289 Mandarin Dr., Sunnyvale, California 94087. Phone: 408-245-8450.

2973. Pirello, Christina. 1997. *Cooking the whole foods way: Your complete, everyday guide to healthy, delicious eating with 500 recipes, menus, techniques, meal planning, buying tips, wit & wisdom.* New York, NY: Berkeley Publishing Group (HPBooks). xii + 525 p. March. Illust. Index. 24 cm. In 2003 a CD was made in Princeton, New Jersey by Recording for the Blind & Dyslexic. [38 ref]

• **Summary:** This is basically a macrobiotic cookbook. It is largely vegetarian, but has one long chapter of fish recipes (p. 189-220). No red meat or sugar is used. One long chapter, titled “Tofu, tempeh, & seitan” (p. 157-88) contains many recipes. Other soy-related recipes include: Basic miso soup (p. 38). Miso millet stew (p. 78). Minute miso soup (p. 102). Black soybean relish (p. 136; as black soybeans are simmered, they create their own gravy). Baked beans with miso & apple butter (p. 143). Tofu cheese (with miso, p. 162). Lemon miso sauce (p. 422). Also contains recipes for amasake, azuki beans, and sea vegetables.

The recipe for “Tofu cheese” (p. 162), which is very creative and delicious, was developed by Christina many years ago, but the method was kept a secret—until now! Basically extra firm tofu is fermented / pickled in white miso. This recipe is for those who can’t stand to give up cheese, and the resulting fermented soy cheese can be used in place of dairy cheese in many recipes, ranging from creamy white sauces to thin squares on a cracker. The tofu can be fermented in the miso anywhere from 12 hours to 4 days—depending on how strong you would like the flavor to become.

2974. *Travelin’ Light (Lightlife Foods, Greenfield, Massachusetts).* 1997. Reset your (body) clock! Spring/summer. p. 1-2.

• **Summary:** The lead article is a summary of information about aging. On the left half of the front page is a quotation from Dr. Benjamin Spock, M.D., pediatrician and author of the best-selling book *Baby and Child Care*. In 1991 Dr. Benjamin Spock gave up eating meat and dairy products—after a series of illnesses that left him weak and unable to walk unaided. In his own words: “When I was 88 years old, I gave up meat entirely and switched to a plant-foods diet following a slight stroke. During the following months, I not only lost 50 pounds but gained strength in my legs and picked up stamina. Now, at 93, I’m on the same plant-based diet and I don’t eat any meat or dairy products. I either swim, walk, or paddle a canoe daily and I feel the best I’ve felt

since my heart problems began.”

Note: The source of this quotation is given as *Nutrition Advocate*, April 1996. Born on May 2, 1903, Dr. Spock died on 15 March 1998 at his home in San Diego.

Also in this issue: List and brief description of 19 Lightlife products. “Light bites”—Short pieces about soybeans, vegetarianism, health, and the environment. “Ask Lightlife”—Questions and answers (including: (1) Soy and menopause. (2) A long answer about Monsanto’s genetically engineered Roundup Ready soybeans; Lightlife is looking into this issue. In the meantime, the company suggests that consumers buy products made from “certified organically grown” soybeans such as Lightlife Organic Tempehs. (3) Lightlife contributes at least 5% of its profits to non-profit organizations—such as the new Greenfield Teen Center). Coupons. Recipes. Ad for Lightlife T-shirt. Nutritional comparison of Lightburger and Beefburger. Fakin’ Bacon now has a new name: Marinated Smoky Tempeh Strips.

2975. Viana Naturkost GmbH. 1997. Preise und Neues [Prices and new products]. Euskirchen, Germany. 28 p. 30 cm. [Ger]

• **Summary:** This impressive, stylish/classy color catalog from Biofach, March 1997, consists of two parts. The 20-page smaller format (26.5 cm) black-and-white insert gives the prices of all products for 1997. The larger color catalog describes new products. The price list contains the following product categories: Basic and seasoned tofu products. Fresh tofu spreads. Tofu hot dogs. Wheat gluten products. Tofu cutlets. Tempeh. Seitan. Burgers and snacks. Spreads in glass jars. Soy sauce and miso products (organic shoyu, organic tamari, barley miso, brown rice miso). Fresh patés. Deli salads. Soya mayonnaise (Vianaise). Rice drink. Noodles. Fresh pasta stuffed with tofu fillings (Tortellini, Maultaschen). Frozen products (incl. Chili con tofu and spring rolls). Sprouts (11 types & products, not incl. soy sprouts). Spreads from Noka. Canned products (*Konserven*). Address: Willi-Graf-Str. 88, 53881 Euskirchen-Kuchenheim, Germany. Phone: 02251-9446-0.

2976. **Product Name:** Tempeh: Fermented soya bean “cake.”

**Manufacturer’s Name:** Dakini Health Foods Pvt. Ltd.

**Manufacturer’s Address:** Vidyut Nagar, Plot A2, Kawdewadi, Pune 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

**Date of Introduction:** 1997. April.

**Ingredients:** Soybeans, water, starter culture.

**Wt/Vol., Packaging, Price:** 400 gm or 250 gm. Retail at the shop for 65 Rupees or 43 Rupees respectively (1997/05).

**How Stored:** Frozen or fresh.

**New Product—Documentation:** Letter (fax) from Sjon Welters. 1997. May 11. Seemo and Kairava own this company. “They are making soybean tempeh but have

trouble producing rice tempeh. They need technical assistance. They hope to find it in your books on tempeh.”

Letter (fax) from Seemo and Kairava in response to questions from William Shurtleff of Soyfoods Center. 1997, May 12. They started selling tempeh last month (April 1997) to friends and to two shops and to Osho (Omune International) in Pune [Puna]. Soon it will appear on the menus of several restaurants also. Note: This is the earliest known commercial soybean tempeh made in India. Seemo is Mr. H. Shapira from Israel and Kairava is Mrs. J. Spaelstra from the Netherlands. Seemo is in charge of tempeh, Kairava in charge of tofu & soymilk. They got their first starter culture from *Centralbureau voor Schimmelcultures*, in Baarn, the Netherlands. Now they use this as a mother culture to make their own starter. Other foods they now make include white tahini, brown tahini, peanut butter, and hummus (made from chickpeas with tahini). They are experimenting with tofu and soya milk, but they don’t presently have enough space to go commercial with these. No articles have been published about their company; they haven’t done much publicity yet due to limited space and production capacity. They came to India to be at the ashram of Sri Rajneesh in Pune. Though the master [who was called “Osho” = great master in Japanese] has died (on 19 Jan. 1990 in Pune), they continue to stay and to supply the ashram with good, wholesome foods. They started their company because they were missing certain foods in India, and after staying there for several years it became clear that if they didn’t make these foods themselves, nobody would. Seemo’s first interest was tahini. He learned how to make tempeh from one chapter in the *Handbook of Indigenous Fermented Foods*, edited by Dr. Keith H. Steinkraus. Books by Shurtleff and Aoyagi were also mentioned there. It took him about 8 months of trials to attain the perfect quality. Of course, Kairava knew tempeh from the Manna shops and Tokos (often run by Indonesians) in Holland. Kairava studied tofu from *The Book of Tofu*, which her brother sent her from Holland. Last week he sent her *The Book of Miso*. They have been unable to locate *The Book of Tempeh*. In the future they hope to make a good quality soy sauce. “You wouldn’t believe what they dare to sell and call soya sauce here. It usually isn’t even brewed [fermented] at all. Just some colors, taste and a few other ingredients blended together.”

Labels for 250 gm and 400 gm sent by Seemo. 5 by 3.25 inches. “Dark spots—if any—are part of the fermentation process and are absolutely harmless and edible. Tempeh is rich in proteins, easily digested, an excellent source of all B-vitamins including B-12.” Includes 6 preparation ideas. “2-5 min. deep-frying or 10-12 min. steaming is sufficient for consumption—cut in thin slices and fry crisp and serve with soya sauce.”

Letter from Seemo. 1997. May 14. “About our tempeh. We use dry dehulling, using a motorized corn mill at loose setting. The hulls are floated and removed and the

bean soaked for 12-22 hours (depending on season). The remaining hulls are removed. The beans are washed and drained, then cooked in a steel pressure cooker until pressure builds, for 2-5 minutes, then let stand for 10-20 minutes (total time in pot from start to end is never more than 40-45 minutes). Then into a colander for some 30 minutes, then the beans are dried in a big mixing pot using an old German hair dryer; this way they are not exposed too long to air and also a perfect degree of moisture/dryness balance can be achieved (the beans also cool faster). The spore mixture is then mixed well and then put into plastic bags. After the bags are sealed, they are pierced on both sides (by hand, with an ice pick; ready-perforated bags are hot on the agenda), then put into the incubator (set at 32°C) for 20-21 hours. After 10-11 hours, the door is opened to let heat out. When ready, each bag is packed into a bigger plastic bag with the label inside.

"The tempeh is sold fresh or frozen. Since we are getting orders from far-off places, we will also introduce it in a dry form in the future (we have a good 9,000-volt hot air oven already). We are also thinking about supplying spore powder in Goa where about a dozen foreigners know how to make homemade tempeh, but have to get their spore from abroad. I got this idea from an American woman who lives there. I was trying to get some of her precious spore, and finally got 1-1½ grams (of her total 15 grams), on the promise that I will supply her with spores later on. Anyhow, this will be a very small market, but since we already supply our nut paste [peanut butter], this could be a nice little extra service. Wish you all the best, Seemo."

Letter with Label from Seemo. 1997. Oct. 15. Contains 5 samples of their new and attractive label, printed on glossy paper. The product name has changed to "Soy Tempeh: Delicious fermented soy bean 'cake.'" 5¼ by 4 inches. Read and black on tan. A photo shows many soy beans. "Zero cholesterol. Tempeh is rich in proteins (appr. [approximately] 20%), easily digested, an excellent vegetarian for vitamin B-12. Ingredients: Choice soy beans, no preservatives. Dark spots (if any) are part of the fermentation process, absolutely normal and perfectly edible." Gives six ideas for preparation: (1) 2-5 minutes deep frying or 10-15 min. steaming or boiling is sufficient for consumption. (2) Slice or fry crisp or golden, serve with soy sauce or chutney. (3) Slice or cube, dip in salt water (garlic/coriander), fry golden, use in cooking just as paneer or meats. (4) Saute with mushrooms, onions, vegetables, etc. (5) Cut and cook in your favorite stew/soup. (6) Steam/boil with your spice mix and fry/broil. etc., etc., etc." The letter adds: "Tempeh is happening nicely... Sales are growing, and so are we (our little company as well). We have found a little plot of land a short distance from here and as soon as the formalities are done, we will start contracting for our structure." For the last two months they have been wet-dehulling the soybeans, which gives a much better texture. They soak the soybeans a long time with no vinegar, as this gives the best flavor.

Letter from Seemo. 1999. July 29. In Feb. 1999 Dakini Health Foods Pvt. Ltd. moved into a new and much larger factory at S.N. 33, Bhoiwasti, Keshavnagar, Mundwa, Pune/Puna 411 036, India. There they have continue making tempeh. Two articles about their tempeh recently appeared (which see).

2977. Elliott, Julia. 1997. With a little help from the soybean. New York, NY: SCB—Published by the author. 62 p. No index. 28 cm. Lay-flat comb bound. April.

• **Summary:** Contents: Facts and information (p. 1-8): Why the soybean? Areas of health that soy may affect: Heart disease and cholesterol, cancer, osteoporosis, kidneys, Alzheimer's disease, menopausal symptoms. Soyfoods (p. 9-13): Soy milk, tofu, soybeans, soy flour, miso, tempeh, texturized soy protein, soy protein isolates. Isoflavone contents. Recipes (p. 14-61): Appetizers, main dishes, desserts, tofu.

Note 1. There are no references to back up the many medical statements and claims on pages 1-8 of this book.

Note 2. This is not a vegetarian cookbook; ingredients include 1 lb. ground beef (p. 14), 6½ oz. minced clams (p. 15), 1 lb. sweet or hot sausage (p. 16). Address: 10 Guyton St., Kingston, New York 12401. Phone: 914-338-6368.

2978. Labbé, Max. 1997. Ces étonnants aliments végétaux fermentés et lacto-fermentés [Those astonishing fermented and lactic-fermented vegetable foods]. Auvers sur Oise, France: Published by the author. 116 p. Preface by Richard Hwei-Ming Bau. Illust. No index. 21 cm. [Fre]

• **Summary:** Part III of this popular book, titled "Asiatic Specialties," contains the following sections and subsections (p. 77-103): Chinese and Japanese fermented foods: Shoyu and tamari, miso, umeboshi, nuka pickles, natto, sufu. Characteristics and way of tempeh: Definition, preparation, arrangement of grains before inoculation. Indonesian tempeh: Preparation of the cakes, preparation of the inoculum. Javanese tapé (tapeh) and its culture. American-style tempeh. A color photo on the rear cover shows Max Labbé. Address: 3 rue Emile Level, F- 75017, Paris.

2979. **Product Name:** Smoky Tempeh Strips (Marinated, Vegetarian): Fakin' Bacon.

**Manufacturer's Name:** Lightlife Foods, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302. Phone: 1-800-274-6001.

**Date of Introduction:** 1997. April.

**Ingredients:** Soy tempeh (organic soybeans, water, brown rice, tempeh culture), water, soy sauce, vinegar, honey, spices, beet powder, natural vegetable flavor, salt, natural hickory flavor.

**Wt/Vol., Packaging, Price:** 6 oz (170 gm) vacuum pack. Retail for \$1.99 (1998/02, Lafayette, California).

**How Stored:** Refrigerated or frozen.

**Nutrition:** Per 3 slices (57 gm): Calories 80, calories from fat 25, total fat 2.5 gm (7% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 230 mg (9%), total carbohydrate 6 gm (dietary fiber 1 gm, sugars 0 gm), protein 8 gm. Calcium 9%, iron 5%, vitamin A 2%, vitamin C 1%. Percent daily values are based on a 2,000 calorie diet.

**New Product–Documentation:** Product with Label purchased at Safeway supermarket in Lafayette, California. 1998. Feb. 22. Price: \$1.99. The product is a marinated cake of tempeh, about 2½ by 7½ inches, cut lengthwise into thin slices. The bold name at the top of the back panel is “Fakin’ Bacon.” Label: 4 by 9 inches. Plastic shrink wrap. Red, yellow, and white on brown. Front panel: “Low fat. Cholesterol free.” Back panel: Lightlife Fakin’ Bacon has no cholesterol, 90% less fat than bacon, 60% less sodium, and no nitrates!

2980. *Might (Canada)*. 1997. Tracking Dead fans through the world without Jerry: Things to do in Telluride when Jerry’s Dead. No. 15. March/April. Music section.

• **Summary:** This article is written for fans of the rock group Grateful Dead, whose famous and beloved guitar player Jerry Garcia died on 9 Aug. 1995. “Things to do in a parking lot, any parking lot... Eat tempeh burgers... Eat veggie burritos.”

2981. Noble Bean. 1997. Tempeh–Noble Bean (Leaflet). McDonalds Corners, Ontario, Canada. 2 p. Front and back. 28 cm.

• **Summary:** The top three-fourths of the front of this black-on-tan leaflet shows six tempeh products (packages and labels) made by Noble Bean. On the bottom quarter is a brief description (left column in French, right in English) of tempeh. On the back is a very brief description (in French and English) of Noble Bean and its history since 1979, an illustration of the countryside production facility (in a trailer), and a recipe for tempeh teriyaki. Address: RR#1, McDonalds Corners, ONT, Canada K0G 1M0. Phone: 613-278-0173.

2982. *Nutrition News (Riverside, California)*. 1997. Soy tsunami: The wave of the future. 21(4):1-4. April. [1 ref]

• **Summary:** Contents: A wave is coming (introduction). East soy and save your life. Soy vs. cancer. Top ten benefits of soy—According to Earl Mindell’s Soy Miracle. Genistein is unique to soy. Soy vs. heart disease. The pause that refreshes: a soy shake. And, by the way, save your planet too. Get on the soy train! If you are a first timer, jump in there with tofu and/or isolated soy protein.

Where the good stuff is—table showing nutritional composition, including isoflavones of 1 serving of: miso, cooked soybeans, soy flour, soymilk, soy nuts (dry roasted), soy protein isolate, tempeh, firm tofu, low fat tofu (aseptic pack), extra firm tofu (aseptic pack), textured soy protein. Note: Good sources of isoflavones provide 30-50 mg per

serving.

“This issue of *Nutrition News* is dedicated to partners William Shurtleff and Akiko Aoyagi and to Frances Moore Lappe, pioneers in the promotion of soyfoods and of the concept of kindness of eating.”

2983. Hunter, Jean B. 1997. Research on foods for lunar and planetary stations (Interview). *SoyaScan Notes*. May 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In late 1996 Jean received a \$500,000 grant from NASA (North American Space Administration) to study foods for lunar and planetary stations. They are going to hire a dietitian; they already have a chef and a link with an institutional food manager. They are going to develop vegan and near-vegan recipes, food processing equipment, and menus suitable for use in the future of space exploration in bioregenerative life-support systems.

The basic assumptions are that crews rotate in and out every 6 months—as on the Russian space station *Mir*; 85 to 90% of the food must be produced in outer space, but 10-15% may be supplied by re-supply operations. These latter foods include fats and oils (incl. as butter), sweeteners, hard cheeses, egg whites, etc. Anchovies and bacon bits will be used as condiments. There will be no live food animals (such as chickens or fish) on board. She will continue her research on fermented food. Foods in which both she and Soyfoods Center are interested include Amazake (sweetener), tempeh—made from whole soybeans or okara (meatlike texture), dawadawa/natto (meaty flavor), soy yogurt (sogurt; dairylike) and other soy dairy replacers, and soy nuggets (salt-cured black beans). She is also studying tofu. Jean has recently become a vegetarian (but not a vegan).

This type of research traces its roots back to the 1960s when food uses of algae were studied. Address: Cornell Univ., Dep. of Agricultural & Biological Engrg., Room 218 Riley Robb Hall, Ithaca, New York 14853. Phone: 607-255-2297.

2984. Spaelstra, J.; Shapira, H.; Donnelly, H. 1997. Re: Introducing Dakini Health Foods Pvt. Ltd., in Pune/Puna, India. Letter to William Shurtleff at Soyfoods Center, May 7. 1 p. Handwritten.

• **Summary:** The letter begins: “To whom it may concern: We are a young company. Just started one year ago and very enthusiastic. I have come across your *Book of Tofu* and loved it. Started experiments and love it even more now. My friend and partner in business [Seemo] came across some American book [*Handbook of Indigenous Fermented Foods*, edited by Keith Steinkraus] that had 1 chapter about tempeh production. Out of this he developed the way to make tempeh here in India, which was quite difficult at times because the info was far from complete. Meanwhile our plans have changed because of all this and the very wholesome atmosphere that we sense around working with

soybeans (and consuming the different products)—the same atmosphere we are picking up from your books too which is very inspiring to us.”

They order three books—tofu-, tempeh-, and miso production, plus *The Book of Tempeh*—all by Shurtleff & Aoyagi. “We would really like to set up a complete soyfood line now. So please get in touch!” Signed: J. Spaelstra (Holland), H. Shapira (Israel), and H. Donnelly (Indian). Address: Dakini Health Foods Pvt. Ltd., Vidyut Nagar, Plot A2, Kawdewadi, Pune / Puna 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

2985. Seemo (H. Shapira). 1997. Re: History of Dakini Health Foods Pvt. Ltd., in Pune/Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, May 13—in reply to inquiry. 7 p. Handwritten.

• **Summary:** Seemo is Mr. H. Shapira from Israel and Kairava is Mrs. J. Spaelstra from the Netherlands. Seemo is in charge of tempeh, Kairava in charge of tofu & soymilk. They are making the earliest known commercial soybean tempeh in India. For their first letter see Dakini (1997).

Both Seemo and Kairava are devout disciples of Osho (formerly called “Sri Rajneesh”), he since 1984 and she since 1986. They arrived in Pune to stay in about 1988/89. Initially to support themselves, they had a gem and crystal shop, a wholesale new-age jewelry operation, and a motor bike repair shop. Now they have finally found what they want to do for work. “It’s love and Zen.” Osho died in Pune on 19 Jan. 1990; they returned to India the next day; the fire was still burning at the burning ghat. In the year before his death, his discourses were mostly about Zen. He died in Pune due to heavy metal poisoning and radiation damages done to him by U.S. marshalls in an Oklahoma jail cell, where he was kept unlawfully in 1985.

Their company started with the idea of making white tahini and possibly Turkish halva [halvah] (in which white tahini is a main ingredient). It was extremely difficult to get started. As foreigners doing business in India, they had to register a “Pvt. Ltd.” company. Then they could not find a space for the company, since Pune is a rapidly growing city. So Seemo pulled down the back garden in his rented house, constructed a shed with a floor area of 25 square meters, and moved his bedroom up to the second floor. This gave him an additional 24 square meters where the bedroom used to be. They also have a 25 square meter storeroom where they make the tempeh. He got electrical connections then waited for 8 months while a colloid mill (copy of a 1940 model), hot air oven, and filling machine were delivered. The mill proved to be a technical nightmare; he had to totally rebuild it. Finally their small factory started operation. Then they added peanut butter and brown tahini to their product line—with no additives or preservatives. They had to set aside their plan to make halva.

Spicer College, run by Seventh-day Adventists, is

located in Pune. They have a health food store and they make peanut butter—nearly edible, with too much sugar and salt, plus other ingredients. Their sesame butter (brown tahini) is gritty, rancid, and inedible. They also produce grape juices (very, very sweet), pastries (Mmmm good). And they make and bottle soy milk in plain and chocolate flavors, but it is loaded with white sugar and Class II permitted preservatives! They also make pretty good tofu; Seemo used to eat it now and then for the last 8 years. “Besides being actually able to taste the Bible in it, I had no reason to complain.” This tofu is now served at the Osho commune. “Pune old timers told me that once—20 years ago—the place was managed by an enthusiastic old American woman and the quality of their products was very good.

At Dakini, they now also make hummus in their kitchen, 15 kg/week in summer and 60 kg/week in winter. They pack it in 200 or 400 gm cups and sell it at various shops in town to foreigners and Indians. They like it.

Seemo started developing the tempeh about 8 months ago. Last year a friend of his found a book titled *Handbook of Indigenous Fermented Foods*, edited by Dr. Keith H. Steinkraus, in a pavement stall for 400 rupees (US\$13.00). Since he had been to Bali, Indonesia, many times, he tried making some of the foods but rarely got any edible products. So before leaving Pune, he gave the book to Seemo as a gift. As he read it, Seemo got really excited. He had grown up in a meat-eating family. Even while traveling and living in Europe, he continued to eat meat and junk foods. “Then I understood it was not good for me on all levels, and went vegetarian.” Living in Holland later on, he started to learn about tofu, and then tempe, tamari, etc. “So now I was a healthy, well-fed vegetarian.” Then he moved to India, but after some years of eating fried foods, lentils and lots of dairy products, he started to eat meat again, 2-3 times a month. “It did not feel too good, but I had no idea how to manage my diet, and living on mostly dairy products did not suit my body. So when Dr. Steinkraus’ book fell into my hands, I got excited and realized that it might be possible to make tempe here in India at a small, affordable investment.

“So I first got a small incubator built; its actually like a cool box ½ meter wide and 1½ meters high, made of galvanized sheet metal with insulation and 8 shelves (of which I now use only 3).” At the bottom are heaters, which give 250-540 watts of heat. Two old computer cooling fans distribute the heat, and a thermostat regulates it. “It’s not a perfect machine but I can do 5-12 kg/day when I want and, most important, I can produce in it excellent spore powder—since it is difficult to import anything here. Actually, I nearly gave up the project, because I was making sporulated tempeh, then sun-drying it and running in through my spice grinder. The powder looked great. The tempe cakes used to get hot, then very hot, then smelly with funny colors (no white mold). I double-checked everything. In the end, only the grinding was left, so I bought a small hand-turned grain

mill (500 rupees = US\$15.00). Since then, perfect tempeh has been happening.

“For starter, I first got a packet of spores from Holland. Later I got 1 gram of white tempe starter from an American friend in Goa (she used to make her own supply down there), and playing with it I found it a bit more suitable for my use. So most of my spore stock now is from this starter, and some is mixed. I still have to study how to make tempe and starter during the different seasons here. Now it is very hot and dry. Next month is monsoon (wet), followed by a month that is hot and humid, and then the 3-month ‘cold’ season.”

About half of all tempe produced is sold frozen; the other half is sold fresh. Seemo also plans to try making dry tempeh. He gives away lots of tempe as samples; most people love it. Starting this July, it will appear on the menu of one restaurant, possibly two—first as Tempeh Stroganoff and Tempeh Shashlik (steamed, then spiced, then barbecued). “When I get *The Book of Tempeh* I will introduce it to more places. Meanwhile, I have totally forgotten about eating meat. I feel strong and light. I find my vision benefits too; I haven’t noticed that with tofu. Now that I am a bit more confident working with the mold, I hope to raise some capital, move to a suitable place (possibly well out of town), and then start to make tamari shoyu, and definitely some miso too. So that’s a little of our story. Thank you.” Address: Dakini Health Foods Pvt. Ltd., Vidyut Nagar, Plot A2, Kawdewadi, Pune / Puna 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

2986. Osho, Sidi M. 1997. Work with soyfoods in Nigeria (Interview). *SoyaScan Notes*. May 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Sidi Osho was born on 19 Aug. 1959 at Ibadan, Western Nigeria; ethnically she is Yoruba. The family spoke mostly Yoruba (but some English) at home; in Nigerian schools only English was spoken. Her first name, Sidi, means “Truth” in Yoruba. Her second name, Modupe, means “I thank God.” She was the second child (and the first girl) in the family of 3 boys and 3 girls. Her father (born on 22 May 1927) was a civil engineer, educated in Lagos, Nigeria, at Yaba College of Technology; he has been in the construction business since 1959. Both of her parents believed strongly in the importance of education. They spent all of their money to educate their children, sending four of them to the United States for college and higher education. Sidi received no scholarships to help in her higher education. Today, with the change exchange rate between the U.S. dollar and the Nigerian naira, it is even more expensive for a Nigerian to get an education in America. “After we receive this education, he always reminds us—‘Any education you have, if you don’t apply it and offer other people opportunities, then it has been a waste of time.’” So Sidi decided to return to Nigeria after she earned her MSc degree at Ohio State University, and to look for work oriented toward

development.

In Jan. 1983 she entered Nigeria’s National Youth Service Corps (NYSC) as a volunteer. She was assigned to work at IITA (International Institute of Tropical Agriculture) at Ibadan as a biochemist in the root and tuber improvement program. Then from Jan. 1984 to Aug. 1985 she was employed as a Field Work Specialist with women’s groups in Nigeria. She first got interested in soybeans in 1987. Many of the people with whom Sidi worked at IITA were not enthusiastic about her work to teach Africans food uses of soybeans. She always felt under pressure. “They believed that soybeans should be fed to animals. That was one of the reasons my contract was not reviewed. Now IITA is not doing anything on soybeans. Whatever you see in annual reports is descriptions of work they have done before that is just being repeated. The problem is not so much IITA as an organization as specific individuals within the organization; some of these are Americans.

Concerning the proceedings of the Second International Soybean Processing and Utilization Conference: The proceedings have not yet been published—but they probably will be soon. The editor is Alex Buchanan of Australia. The proceedings for the First such conference, held in China, were apparently never published. The second conference was better organized than the first.

Sidi is very interested in both tofu and tempeh. She and a Japanese researcher found a new coagulant to transform soymilk into tofu—the leaves of the *Calotropis procera*, a bush which has long been used as a coagulant of animal milks to make cheese. This was a major discovery since calcium sulfate and nigari are not available in Nigeria, especially in the rural areas.

Sidi has set up a soybean processing center in a market in Ibadan. She would like to use this as a model and set it up in every market in Nigeria.

Chicken is now more expensive than red meat in Nigeria. Address: Forest Hill Estate, G.P.O. Box 38619, Ibadan, Nigeria. Phone: 234-2-241-3993.

2987. Tibbott, Seth. 1997. The tempeh market in the United States (Interview). *SoyaScan Notes*. May 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** A total of about 55,000 lb/week of tempeh is now made in the USA, compared with 34,700 lb/week in Jan. 1984 (based on a Soyfoods Center survey, published in *Soyfoods Industry and Market*, 5th ed.). This is the result of a major phone survey that Seth has just completed; he interviewed each of the major U.S. tempeh makers by phone, on the condition that their individual production figures would not be revealed—only the aggregate. Seth plans to present this information at a tempeh conference in Bali, Indonesia, on July 17. Seven U.S. companies make more than 1,000 lb/week of tempeh. The top 3 manufacturers are Lightlife Foods, White Wave, and Turtle Island (in

that order). Of these three, Turtle Island has experienced the greatest percentage growth since 1984. The next four are Quong Hop, Surata Soyfoods, Northern Soy, and Cricklewood. In 1984 the four largest tempeh makers had 63% of the U.S. market (by weight); now they have 84%. The best-selling type of product is soy tempeh in an 8-oz package; it sells even better than tempeh burgers.

The average retail price of an 8-oz package of tempeh in the USA is \$1.81. Shurtleff suggests that Seth compare this with the price in Indonesia. The yearly per capita income in Indonesia is \$560 compared with \$18,690 in the USA. The U.S. figure is 33.37 times as large as the Indonesian. Dividing \$1.81 by 33.37 we see that if tempeh sold for 5.42 cents per 8 oz in Indonesia, it would be the same relative price as tempeh in the USA.

In terms of packaging, 80% of the tempeh in America is vacuum packed—even though most manufacturers admit that vacuum packaging lowers the product quality by imparting a slightly bitter flavor and less desirable texture. Seth's company is one of the few that does not vacuum pack its tempeh.

By product type, there are: 13 different burgers on the market, 9 soy tempehs, 6 multi-grain tempehs (soy plus several cereal grains), 5 bulk soy tempehs, 4 soy & brown rice tempehs, 2 soy & sea veggie tempehs, 2 soy & wild rice tempehs, 2 soy & millet tempehs, and 2 sloppy joe tempehs.

Seth plans to take his family to the Conference in Bali (he will be there July 11-20; the conference ends July 15), and then to travel to Malang to study how tempeh is made there. They will leave Indonesia on July 29. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

2988. Liu, KeShun. 1997. Fermented Oriental soyfoods. In: KeShun Liu. 1997. Soybeans: Chemistry, Technology, and Utilization. Florence, Kentucky: Chapman & Hall. xxvi + 532 p. See p. 218-96. Chap. 5. Index. [127 ref]

• **Summary:** Contents: Introduction. Fermented soy paste (*jiang* and miso): Varieties of miso and *jiang*, koji and microorganisms involved, koji starter and its preparation, Chinese *jiang* preparation (traditional household method, pure culture method, enzymatic method), Japanese miso preparation (rice koji preparation, treatment of soybeans, mixing and mashing, fermentation, pasteurization and packaging), principles of *jiang* and miso preparation, major factors in *jiang* and miso making (raw materials, cooking temperature and time, conditions during koji preparation, proportions of ingredients, fermentation conditions, novel processing for special products). Soy sauce (*jiangyou* or shoyu): Varieties of soy sauce, soy sauce processing (traditional Chinese household method, modern Chinese method, processing of Japanese shoyu, comparison of soy sauce and *jiang* or miso preparations), principles of making soy sauce (action of koji enzymes,

fermentation by lactic bacteria and yeasts, color and flavor formation, glutaminase and glutamic acid), chemical soy sauce, progress in soy sauce preparation (use of defatted soy grits or flakes, improvements in treating soybeans, development of an automatic koji-making system, application of microorganisms with specific activities, techniques to shorten production time, improvements in soy sauce clarification), chemical composition, quality attributes and standardization, mycotoxins. Tempeh: Varieties of tempeh, preparation (traditional method, pilot plant method, petri dish method), microorganisms involved, factors affecting tempeh fermentation (starter, dehulling and aeration, moisture, temperatures, acidity, losses of solids), changes during fermentation (general changes, protein, lipid, carbohydrates and other constituents), production of vitamins, storage, nutritional value. Natto: Preparation, microorganisms involved, factors affecting natto quality (raw material, soybean cooking conditions, storage), changes during fermentation, trends in research on natto and *B. natto* (development of novel strains of *B. subtilis*, purification and characterization of key enzymes, studies into genes encoding key enzymes of *B. subtilis*, studies of possible physiological roles of natto). Soy nuggets (douchi or hamanatto). Sufu: Preparation, types of sufu, microorganisms involved, effect of mold growth, effect of brine aging, references. Address: PhD, Soyfood Lab., Hartz Seed, a Unit of Monsanto, P.O. Box 946, Stuttgart, Arkansas 72160-0946. Phone: 870-673-8565.

2989. Messina, Mark; Messina, Virginia. 1997. Soy: Good food for good health. *Veggie Life (Concord, California)*. April/May. p. 48-50, 55.

• **Summary:** Contents: Introduction. Heart disease. Osteoporosis. Menopause. The many faces of soyfoods: Soybeans, soy flour, soymilk, textured vegetable protein, tempeh, soynuts, miso, tofu.

2990. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Svenska Tempeh [Swedish Tempeh].

**Manufacturer's Address:** Maraigatan 20A, S-41471 Goteborg, Sweden. Phone: 031-428976.

**Date of Introduction:** 1997. May.

**Ingredients:** Soybeans, walter, culture.

**How Stored:** Frozen.

**New Product–Documentation:** Call from Betty Stechmeyer of GEM Cultures in Ft. Bragg, California. 1997. Feb. 18. Hans Hulten plans to start making tempeh commercially in Sweden in about March 1997.

Call then letter (fax) from Hans Hulten. 1998. June 5.—He is looking for a European source of tempeh starter. Goteborg is on the west coast of Sweden. His fax states that he started in May 1997 and sold his shop in Goteborg. At

first he borrowed a professional kitchen to make tempeh. Now he uses a part of his house, equipped with the necessary machines, which reduces his costs. He makes about 250 kg/month, but there is more demand than he can fulfill, and it is growing. One third of his output is regular soy tempeh, about 20% is millet tempeh, and two-thirds are fried and marinated. He also makes burgers and bits. All are sold frozen. He is now looking for distribution in Scandinavia. "Then a lot of things will go faster and more people can eat this fantastic food."

2991. Tibbott, Seth. 1997. Estimates of the retail markets for tofu, soymilk, and tempeh market in the United States (Interview). *SoyaScan Notes*. June 13. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Tofu: Steve Demos, founder and president of White Wave, thinks that the retail value of tofu sold as tofu in the USA in 1996 was about \$110 to \$130 million. Peter Golbitz estimated that in 1990 the U.S. retail tofu market was \$89.6 million, rising to \$116 million in 1996. He also estimated that in 1990 the U.S. retail soymilk market was about \$54 million, rising to \$125 million in 1996.

Tempeh: A total of about 55,000 lb/week of tempeh is now made in the USA, compared with 34,700 lb/week in Jan. 1984 (based on a Soyfoods Center survey, published in *Soyfoods Industry and Market*, 5th ed.). The average retail price of an 8-oz package of tempeh in the USA is \$1.81. Thus the retail value is  $55,000 \times \$1.81 \times 52 = \$5.18$  million.

Note: A detailed survey conducted by Soyfoods Center in Feb. 1984 and published in *Soyfoods Industry and Market* (5th ed., 1985, p. 41) found the U.S. retail value of tofu and tofu products to be \$46.08 million, of soymilk and soymilk products (including soy-based infant formulas) to be \$221.97 million; about 6.7% of that value or \$14.9 million was "adult soymilk." And of tempeh to be \$4.96 million. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

2992. Bean Supreme Ltd. 1997. Price list with sale. Auckland, New Zealand. 1 p. Single sided. 30 cm.

• **Summary:** Effective 20 June 1997. Black on yellow. The products are listed in categories except for the first, which is soyfoods. For each is given the product name, weight, price, barcode, outer, and price. Tofu bulk organic. Tofu firm vacuum pack. Tofu firm vacuum pack organic. Tofu soft Asian. Tempeh vacuum pack. Tempeh fr. frozen. Soysage. Luncheon [Traditional, Cajun, Smoke]. Tempeh pattie frozen. Meatfree sausage.

Soymilks: Soyplus 1 liter. LiteLicks [soy ice cream] (Honey Vanilla, Wildberry, Maple Walnut, Chocolate, Fruit Fiesta, Almond Fudge, Bulk packs) (9 or 16 liters).

Biofarm yoghurts (5 flavors). Malabar goat yoghurt. Olive Grove: Falafel mix, hoummus, Souvlaki sauce, tahini. Koromiko cheese (11 types, of which the first 4 are

vegetarian). Koromiko wax selection (private bin). Pacific Harvest: Agar, kelp and karengo granules, fronds, or flakes. Address: Box 12082, 140 Hugo Johnson Dr., Penrose, Auckland, New Zealand. Phone: 64 09 579 0592.

2993. Seemo, -. 1997. Re: Update on tempeh made by Dakini Health Foods in Pune, India. Letter to William Shurtleff at Soyfoods Center, July 16. 1 p. Typed, with signature.

• **Summary:** "Our tempeh work is going great." Dakini tempeh is now sold in two shops. They are trying to introduce it to the Osho ashram, but the price is too high. Seemo is trying to find a new location for their shop, but real estate is terribly expensive and making a deal is tricky. He is also starting to make contact with soybean farmers in Madhya Pradesh. "It is very difficult to find soybeans, and when we find them they are mostly of bad quality and high price, and the price gets even higher after the sorting and cleaning are done." He asks about Dr. Keith Steinkraus. Address: Dakini Health Foods Pvt. Ltd., Vidyut Nagar, Plot A2, Kawdewadi, Pune / Puna 411 001, India. Phone: 0091-212-63-1990 (phone and fax).

2994. Mueller, Ed. 1997. Brief history of Takoma Soy Inc. (Interview). *SoyaScan Notes*. July 21 and 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Takoma Soy was incorporated on 5 March 1992 and started operation on 1 April 1992—sharing the same space as Olive Tree Works in Takoma Park, Maryland. Takoma Soy purchased tofu from Spring Creek Natural Foods (Spencer, West Virginia) and sold it at cost to Olive Tree. Takoma Soy is now a full-line natural foods distributor, carrying products which include Spring Creek Tofu (from Spencer, West Virginia), Miso Master miso (from North Carolina), and tempeh from Cricklewood (Mertztown, Pennsylvania). They recently purchased (using a bank loan) a property that used to be a Bible camp. On the property are a 12,000 square foot building, a lodge house (with 5-8 bedrooms), and 3 cabins. At its peak the camp had 300 to 500 day campers and up to 150 overnight guests. Ed would like to convert the main building into a tofu factory. He is working on a joint venture that would probably set up a new company, with Twin Oaks and Olive Tree involved as partners. Twin Oaks plans to stop making tofu, buy their tofu from Takoma Soy in Maryland, and focus on making second generation tofu products.

Ed was a Peace Corps volunteer in Sierra Leone. His vision for the property is to develop a center where people can come to learn agricultural skills, including how to make tofu, bake bread, etc. Address: 11 South Pennsylvania Ave., Hancock, Maryland 21750. Phone: 301-678-5283.

2995. Tibbott, Seth. 1997. Re: Tempeh in Indonesia (Color postcard). Letter to William Shurtleff at Soyfoods Center, July 19. 1 p.

• **Summary:** “Over here in the Tempeh Kingdom where the tempeh in the market costs 500 Rupiah (\$0.20) for 250 grams. After speaking with the owner of the Murni Tempeh Shop in Denpasar, Bali, I determined that an Indonesian tempeh worker has to work 72 minutes to buy a 250 gram cake of tempeh, where a worker at Turtle Island can earn one in 14 minutes (at USA retail price).

“The [Tempeh] Symposium was fantastic—well worth the trip—lots of papers on isoflavones & anti-diarrheal properties as well as vitamin B-12 production using mixed cultures. In Ubud [a little town that does arts and crafts in the mountains of Bali] now, then Yogyakarta to visit Pedro’s tempeh shop that makes 2½ tons/day employing 3 people + 20 “helpers” with whom he trades work for tempeh. Best regards—Seth.”

A color photo on the other side shows “The exciting kecak dance performed at Tanah Lot temple on Bali’s western shore.”

Talk with Betsy Shipley of Perry, Michigan. 1997. Nov. 28. She and Gunter Pfaff went to this 2½ day tempeh symposium; the proceedings are scheduled to be published soon. Bali was overrun by tourists and overcrowded. All the tempeh production they saw was done under very trying, unsanitary conditions.

Talk with Seth Tibbott. 1997. Dec. 8. Pedro (H. Pedro Sudjono) is a remarkable guy with a remarkable tempeh shop. His shop and office are located at: Jalan Hos Cokroaminoto 136, Yogyakarta. Phone: (0274) 564-378. Seth took photos of the shop. An actor and a politician, he is a character and a real presence in the world of tempeh in Indonesia, involved with many associations. He doesn’t incubate any of the tempeh at his shop. Mostly women come in and seal the perforated plastic bags, then they throw the bags into empty soybean sacks, take them home on their bicycles, incubate the tempeh in the bags, then sell the tempeh. They pay him for the bagged, inoculated soybeans then they keep whatever they can make selling the tempeh. It’s a clever marketing guy. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

1996. Brody, Jane E. 1997. Diet may be one reason complaints about menopause are rare in Asia. *New York Times*. Aug. 27. p. B10. Health section (Natl).

• **Summary:** A table (from the scientific journal *Obstetrics and Gynecology*) shows the content of phytoestrogens (in milligrams) in various soyfoods: Roasted soybeans 165.2. Textured vegetable protein 138.2. Green soybeans 135.4. Soy flour 112.4. Tempeh 62.5. Tofu 33.7. Tofu yogurt 16.4. Soy hot dog 15.0. Soy noodles (dry) 8.5.

1997. Little Tokyo Service Center. 1997. L.A. Tofu Festival, August 9-10. Los Angeles, California. 22 p. Illust. 26 cm. Saddle stitched (stapled).

• **Summary:** Contents: 1997 LA [Los Angeles] Tofu Festival committees and volunteers. Schedule of events, Aug. 9-10. Map of events. Letter from Little Tokyo Service Center, with thanks to House Foods / Hinoichi Tofu as the Title Sponsor. List of sponsors by rank. Honorary chairpersons: Sandy Gooch and Rob Fukuzaki. Health education and health benefits of tofu. Tofu: A 2,000 year old health food miracle, compiled by William Shurtleff of Soyfoods Center. 1997 LA Tofu Festival restaurant profiles (20 restaurants, p. 7-9): Aloha Food Factory (Alhambra, CA, started Oct. 1990—Tofu specialty dish: Tofu with cha-shu on stir fried vegetables). Berth 55 (Long Beach, 1988—Tofu poke dish). Buk Chang Dong Soon Du Bu (LA, April 1996—Spicy tofu casserole with oyster, shrimp & clams). Chez Sateau (Arcadia, 1981—Tofu cheesecake, Tofu Caesar Salad. Chef Sato was “Chef of the Year of Los Angeles” and 1980 Chef of the Year of southern California.” He was also a member of the 1980 U.S. Team for the Cooking Competition in the Culinary Olympics). Curry House (Beverly Hills, Aug. 1996—Tofu steak {marinated in soy sauce}, Tofu cheesecake). Furaibo (LA, Aug. 1994—Tofu salad with original ginger). Indo Cafe (Los Angeles, 1993—Stuffed tofu cake {tofu filled with ground chicken and shrimp}, Fried tofu {marinated in turmeric and candlenut}). Jozu Restaurant (LA, Dec. 1, 1996—Fried tofu with marinated porkchops). Little Tokyo Lion’s Club (LA, 1974—Tofu miso soup, Futomaki sushi). Mr. Ramen (LA, Oct. 1993—Vegetarian {with tofu} ramen). Ocean Seafood Restaurant (LA, 1990—Mabo tofu, Tofu with mixed vegetables, Tofu in clay pot). Papa Jon’s Cafe (Long Beach, 1990—Greek tofu salad, Tofu lentil salad, Potato-tofu salad, Sesame tofu salad, Tofu spinach, Lasagna, Tofu broccoli stir-fry, Spaghetti and tofu balls, Tofu/lettuce/tomato {TLT} sandwich, Tofu scramble {breakfast}, Tofu dessert pies, Tofu frosting {on cake}, Tomato basil w/tofu, Teriyaki tofu, and Spinach mushroom pasta w/tofu). Pat Greenberg, “Fitness Gourmet” (Beverly Hills, Renowned instructor of the “Joy of Soy” cooking classes). Southern California Cuisine (LA, 1994—Tofu ravioli served with Curry sauce or traditional marinara sauce). Suehiro Cafe (LA, 1972—Stir-fried eggplant, Bell peppers with tofu braised in miso sauce, Deep-fried tofu with sauce). Three Brothers Restaurant & Catering (Harbor City, 1983—Chinese tofu salad, Tofu seafood salad). Tofutti Brands Inc. (Cranford, New Jersey, 1982—Non-dairy frozen desserts, Tofutti tortellini, Mini ravioli, Tofutti cookies). Unique Catering (Chino Hills, 1995—Tofu patty with shiitake sauce, String beans with tofu dressing, Inari-sushi). Vegetarian Delight (San Gabriel, 1991—Veggie fish in hot braised sauce). Wild Oats Community Market (Santa Monica, 1984—Tofu tempeh deli salad).

Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1600.

2998. *SoyaScan Notes*. 1997. How different types of bacteria reproduce and the amount of heat required to kill them (Overview). Sept. 28. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** What are bacteria? They are tiny, one-celled organisms that can usually be seen only with the aid of a microscope. Millions of them would fit on the head of a pin. Bacteria (and blue-green algae) are distinguished from other living things because of their cell structure: they have no distinct nucleus—that is, their nuclear matter is not enclosed by a cell membrane or wall, and they lack most of the internal cell structures found in the cells of higher organisms. All bacteria have a cell wall surrounding a cell membrane, inside of which lies the unbound nuclear matter and other material. There are three types of bacterial cells, based on shape: spherical (coccus), rodlike (bacillus), and spiral (spirillum). In terms of evolution, bacteria are the most successful of all creatures.

Are all bacteria bad? No! Some bacteria (popularly called germs) cause disease and sickness. Others are responsible for the spoilage of food. Yet many types of bacteria are essential in making foods—called fermented (or cultured) foods—such as yogurt, sour cream, buttermilk, many fermented cheeses, vinegar, sauerkraut, dill pickles, natto, etc. Other bacteria are decomposers of the biosphere; in nature they cause the decay of stumps, logs, leaves, and other vegetation, which eventually would literally choke our forests and fields. Indeed, without bacteria, there would be no plant or animal life on earth.

How do bacteria multiply? Most bacteria reproduce by dividing in the middle to form two cells. After these cells reach maturity, they divide again to make four. In some species of bacteria, such divisions may occur as often as every 15 minutes. Thus billions of bacteria may be formed from a single bacterium in 24 hours. Others divide only once every 16 hours.

What are bacterial spores? Bacteria of the genera *Bacillus*, *Clostridium*, *Desulfotomaculum*, *Sporolactobacillus* (rods), and *Sporosarcina* (rods) share the ability to form a type of spores, called endospores. Of primary interest to food microbiologists are the spore-forming species of the genera *Bacillus* (aerobic) and *Clostridium* (anaerobic). Endospores, which are formed within the bacterial cells, are very resistant to heat. They are a survival mechanism for the bacteria, because when they germinate, new bacteria are formed—even if the bacteria (vegetative cells) have been killed by heat.

How much heat is required to kill bacteria and their endospores? The heat resistance of microorganisms is usually expressed in terms of their *thermal death time*, which is defined as the time it takes a certain temperature to kill

a stated number of organisms (or spores) under specified conditions. The heat resistance of vegetative cells of bacteria varies widely with the species, but even the most difficult to kill (the thermophiles) are killed in several minutes at 80 to 90°C. Generally, the higher the optimal and maximal temperatures for growth, the greater the resistance to heat. Bacteria which clump considerably or form capsules are more difficult to kill than those which do not. Thermal death times of some common bacterial cells: *Gonococcus*: 2-3 minutes at 50°C. *Staphylococcus aureus*: 18.8 minutes at 60°C. *Escherichia coli*: 20-30 minutes at 57.3°C. *Staphylococcus thermophilus*: 15 minutes at 70-75°C. *Lactobacillus bulgaricus*: 30 minutes at 71°C.

Thermal death times of some common bacterial spores: Time (in minutes) to kill all at 100°C: *Bacillus anthracis*: 1.7 minutes. *Bacillus subtilis* (the natto bacterium): 15-20 minutes. *Clostridium botulinum* (causes botulism): 100-330 minutes. *Clostridium caliditololerans*: 520 minutes. Flat sour bacteria: Over 1,030 minutes (17.1 hours). These hard-to-kill bacterial spores are usually killed by heating in a retort (pressure cooker) which raises the temperature.

Heat resistance of enzymes: Although most food and microbial enzymes are destroyed at 79.4°C, some may withstand higher temperatures, especially if high-temperature short-time heating is employed.

Bacterial growth in different foods: Very few bacteria grow in acid foods, dry foods, salted foods, or very sweet foods. Thus, it is relatively easy to can tomatoes because they are an acid food. Jams and jellies are protected by their high content of sugar, and often acid. But the amount of heat required to successfully can nonacid foods is very high because of the need to destroy thermophilic bacteria and the very heat-resistant bacterial spores.

Letter from Dr. Keith H. Steinkraus, Prof. of Microbiology, Cornell University, Ithaca, New York. 1997. Nov. 15. "One of the most interesting areas of microbiology today is the 'extremophiles' isolated from volcanoes, and deep pockets in the oceans. Some extremophiles will grow at temperatures above boiling water, for example 220°F. They are proving to be a good source of enzymes operating at high temperatures.

"Regarding the thermal death times of spores: Using a spore concentration of 60 billion spores/ml of *Clostridium botulinum* (suspended in buffer at pH 7.0) the minutes required to kill them are as follows: 100°C—360 minutes, 110°C—36 minutes, or 120°C—5 minutes."

"D-value-decimal reduction time or the time required to destroy 90% of the organisms (their spores) at 120°C (250°F): *Bacillus stearothermophilus*—4.0-5.0 minutes, *Clostridium thermosaccharolyticum*—3.0-4.0 minutes, *Clostridium nigrificans*—2.0-3.0 minutes, and *Clostridium botulinum*—0.1-0.2 minute.

"Source of the above figures—*Modern Food Microbiology*, James M. Jay (D. Van Nostrand, 1978). There

are later editions but it is unlikely that the basic figures have changed much.

“Bacteria suspended in water are more easily destroyed. Suspended in oil or fats or in dried smears are much more resistant to destruction.

“Regarding your inquiry concerning heat treatment of brown rice at 15 psi for 35 minutes, it is very unlikely that any microorganisms in your environment or on the brown rice will survive that treatment. Will it taste ‘freshly made’ after two weeks in the pot at summer temperatures? Unlikely but only a taste test will answer your question.”

One of Dr. Steinkraus’ MSc students did her research on “tea fungus–kombucha,” and another did his on tempeh bongkrekin toxin. He found that bongkrekin toxin is formed only in the presence of rather high levels of fat as you would find in coconut residue (left after the extraction of fresh coconut milk with water).

2999. Zacharowicz, Paul Stuart. 1997. Re: Recent developments. New company name, and incorporation. Letter (fax) to William Shurtleff at Soyfoods Center, Sept. 30. 2 p. Handwritten, with signature.

• **Summary:** Paul’s company has a new name: “Paul Stuart’s Food Garden GmbH.” The logo has also changed, and the company is now incorporated. The address in Vienna has not changed. It has developed immensely since we were last in contact. “Basically we primarily produce tempeh (soy), marinated tempeh, as well as burgers, roundies, and different veggie spreads and snacks... We will be opening our first fast-food vegetarian restaurant in Vienna next spring in which we intend to really get tempeh mainstream, and out of only being in the Birkenstock natural food stores.”

Note: This company, which began making tempeh in Sept. 1983, was originally named “Paul Stuart Zacharowicz.” Renamed “Vollwert und Wertvoll” by June 1984. Later renamed “Natuerliche Lebensmittel.” Named “Von Anfang an Natur, Paul Stuart’s” by Dec. 1992. Address: Paul Stuart’s Food Garden GmbH, Staudgasse 70/14, A-1180 Vienna, Austria. Phone: +43 (1) 408 50 03.

3000. Bean Supreme Ltd. 1997. Soy kids: Easy family recipes with children in mind (Brochure). Auckland, New Zealand. 6 panels each side. Front and back. Each panel 10 x 14 cm. Undated.

• **Summary:** On the cover, red on pink, is an illustration of 7 happy kids before a large rayed sun. The first 2 panels are about the health benefits of soyfoods. Then come 6 pages of recipes and tips for using Bean Supreme’s Soyplus soymilk, tofu, and Lite Licks frozen dessert (soy ice cream). The company also makes tempeh and Tofu Luncheon. The back panel lists the company’s soy products, has a statement about the goodness of soybeans, and states: “Bean Supreme brings happiness.” Address: Box 12082, Penrose, Auckland, New Zealand.

3001. Lightlife Foods, Inc. 1997. Now your soy set can be as effective as it is appetizing: Introducing Lightlife’s “Eating Healthy Can Be Soy Easy” merchandising program (Leaflet). Greenfield, Massachusetts. 1 p. 28 cm.

• **Summary:** This full-color, glossy leaflet shows a shelf set of all of Lightlife’s soy products in the produce section, flanked on both sides by celery, lettuce, tomatoes, artichokes, bell peppers, and mushrooms. Products (from top to bottom) include: Smart dogs!, Wunderdogs, Tofu Pups, Lightburgers, Marinated Grilles (barbecue, lemon, tamari), Smart Deli, Lean Links (Italian, breakfast), Soy Gourmet, Gimme Lean (meatless), Tempeh, Savory tempeh strips, and Nasoya tofu. At the top is a booklet (1997) titled “Eating healthy can be soy easy.”

The text reads: “As many as 120 million people are on meat restrictive diets—and just about everybody else wants to cut cholesterol and fat. Soyfoods, for many of these people, are becoming one of their basic food groups. These consumers are spending more of their food dollar in the produce department and that’s why Lightlife soy set in your produce section makes sense—and sales. Only Lightlife provides a fully integrated, complete merchandising system.”

“As a leading producer of meatless soy based products, Lightlife delivers satisfying flavor through an entire line of mouthwatering vegetarian replacements for hot dogs, burgers, sausage, luncheon meats, ground meat, and tempeh.”

“Why lightlife? Proven category leader. Merchandising support. No spoilage.” [www.lightlife.com](http://www.lightlife.com). Address: P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 1-800-274-6001 Ext. 129.

3002. Lightlife Foods, Inc. 1997. Eating healthy can be soy easy (Brochure). Greenfield, Massachusetts. 12 p. 22 cm.

• **Summary:** On the cover of this full-color, glossy brochure is a color photo of a meatless burger (between buns, with onion, tomato, and lettuce), a hot dog (in a bun, with a bead of mustard on top), and a plate of stir-fried tempeh with veggies. In the background are rolling soybean fields. In the foreground are three pods of green vegetable soybeans, and 15 whole dry soybeans.

Contents: Ten reasons to include soyfoods and soy protein in your diet (p. 2-3): 1. You will be in good company. 2. Lower your cholesterol. 3. Lower your risk of cancer. 4. Menopausal symptoms. 5. Soyfoods are nutritious. 6. A quality protein source. 7. Save our precious resources. 8. A variety of alternatives and greater availability. 9. Better quality. 10. Soyfoods are “in.”

Glossary of common vegetable protein foods (p. 4-5): Tofu, tempeh, meat analogs, soymilk, soy cheese, soy flour, soy protein, textured vegetable protein (TVP), seitan, miso. A table shows each Lightlife product, serving size, and grams of soy protein (soy tempeh has the most at 24 gm per 4 oz

serving, followed by Gimme Lean at 18 gm per 4 oz).

Products (with a brief definition of each) and mission statement (p. 6-7): Smart dogs. Tofu pups. Wunderdogs (The first low-fat vegetarian hot dog just for kids). Smart deli slices (fat free). Foney baloney (Kids love it). Lean links sausages. Gimme lean (fat free). Marinated smoky tempeh strips ("Fakin' Bacon"). Fakin' bacon bits. Marinated tempeh "grilles" (soy tempeh patties in Tamari, Lemon, and Barbecue flavors). Lightburgers (fat free). Lightsausages (fat free). Tempeh (in 5 varieties—Soy, Three Grain {millet, brown rice, barley}, Garden Vegetable, Quinoa-Sesame, and Wild Rice), Savory seitan, Vegetarian request (100% vegetarian, all-natural entrees). A color photo shows many products in their packages.

Getting started (p. 8-10; how to use key products). About Lightlife (since 1979). Address: P.O. Box 870, Greenfield, Massachusetts 01302. Phone: 1-800-274-6001 Ext. 129.

3003. Milligan, Patti Tveit. 1997. Experience the powerful benefits of soy: Part one of two. *Health Counselor*. Aug/Sept. p. 43-45, 60.

• **Summary:** Focuses on the health benefits of phytoestrogens in soy, especially genistein and daidzein. A table (p. 44) shows the content of genistein + daidzein, protein, calories, and calcium in a serving of tofu, soy flour (low-fat), tempeh, cooked soybeans, and green vegetable soybeans (fresh or frozen). Address: M.S., R.D. Corporate dietitian at Henry's Marketplace, a health food chain in California.

3004. Ontario Soybean Growers' Marketing Board (OSGMB). 1997. Overview of the Canadian soyfoods market. Chatham, Ontario, Canada: OSGMB. 44 p. 28 cm.

• **Summary:** This excellent, complete, and accurate market study was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The field research was conducted between Jan. 15 and Aug. 31, 1997. The first study of the Canadian soyfoods market was published in March 1990 (vi + 40 pages).

Contents: Acknowledgments. Summary. Introduction. Research procedures: Methodology, limitations (of the 100 companies in this study, over 75% were visited, interviews were conducted in person, and product samples were collected). The Canadian soyfoods market: History, structure of the Canadian soyfood industry, market highlights by region (The Maritimes, Quebec, Ontario, the Prairies {Manitoba, Saskatchewan, and Alberta}, British Columbia), factors influencing the soyfoods market (A closer look at Canadian demographic trends, a closer look at Canadian immigration trends, a closer look at vegetarianism and family food expenditure trends, research on soyfoods and their health benefits, the American influence). Supply and

demand of soybeans for use in soyfoods: Soybean production in Ontario, imports and exports of soybeans, imports and exports of soy products, the soybean crushing industry in Ontario, consumption of whole soybeans by soyfood processors. Opportunities in the Canadian soyfoods market. Soyfood processors and their needs. Market opportunities for food-grade soybeans. Summary comments. Bibliography.

Tables show: (1) Major soyfood companies established in the province of Quebec (p. 13). (2) Major soyfood companies established in the province of Ontario (p. 16). (3) Major soyfood companies established in the province of British Columbia (p. 19).

(4) Percentage of change in units and sales (p. 21). (5) Percentage distribution of population—Canada (p. 22). (6) Percentage distribution of age groups—Canada (p. 22; In the 15-24 age group, 19% did not eat meat in 1992, down from 23% in 1986).

(7) Percentage of population who do not eat meat & share of budget spent on meat, Canada 1986 and 1992 (p. 28). (8) Canadian soybean: Supply and disposition (September–August crop year)—in metric tons (p. 31). (9) Canadian soybean exports by country of destination (p. 32). In 1997-98 some 325,000 tonnes went to the European Union, 145,000 to the USA, 85,000 to Japan, 40,000 to Hong Kong, 75,000 to other Asia, and 15,000 to other places).

(10) Imports and exports—All countries, dollar values (p. 33). The leading imports are soybean meal \$202.7 million, crude soybean oil \$16.75 million, and whole soybeans for oil extraction \$12.59 million. The leading exports are protein concentrates and textured protein substances \$9.1 million, soybean meal 6.5 million, and brans, sharps and other residues \$4.3 million).

(11) Soybean crushing facilities in Canada (p. 34). All are located in Ontario province; ADM Agri-Industries Ltd., Windsor. Capacity: 3,600 tonnes/day of raw soybeans. CanAmera Foods, Hamilton, 3,000. Helin Oil Packers, Whitby, 250. Started crushing in 1997. Cold Springs Farm Ltd., Thamesford, 100. Started 1995. Sunfield Oil Seeds, Wingham, 100. Started 1994. Dennis Jackson Seeds Services Ltd., Dresden, 40. Started 1994. Tri County Protein Corporation, Iroquois, 100. Not in operation yet).

(12) Estimated quantities of soybean utilized by soyfood processors—1996—metric tons (p. 35). Total volume of whole soybeans consumed: 9,650 tonnes, of which 4,780 are for soymilk, 4,775 are for tofu, and 95 are for other soyfood products). Total volume of whole soybeans consumed by province (by soyfood processors): British Columbia 3,825 tonnes, Ontario 3,050 (excluding crushing plants), the Maritimes and Quebec 2,535, and the Prairies 240.

(13) Major foreign companies in the Canadian soyfood market (p. 37). Soy cheese: Soyco Foods, Sharon's Finest, Cemac Foods Corp. {Nu-Tofu}. Frozen desserts: Tofutti Brand, Inc. Tempeh: Turtle Island Foods Inc. Tetra Pak packaged soymilk: Westbrae Natural Foods, Cenat, Pacific

Select, Vitasoy USA Inc., Eden Food Inc. Tofu: Mori-Nu, Vitasoy USA Inc. Prepared dishes: Amy's, Sharon's Finest. Meat analogs: Fantastic Food Inc. MGM Brands, Northern Soy, Soy Boy, Turtle Island Foods Inc. Salad dressing: Nasoya Foods. Soy sauce: Eden Foods Inc., Kikkoman Foods Inc.).

The Prairie Provinces (Manitoba, Saskatchewan, and Alberta) contained about 16.6% of Canada's population (4.5 million persons) in 1995. "The province of Alberta [Capital = Edmonton] is different from the other two Prairie provinces, due mainly to its larger population base, its growing Oriental population and its proximity to Vancouver. Calgary [a large city in Alberta province] and Edmonton have their own Chinatowns, including small Oriental-owned tofu and soymilk production facilities." Note: According to the Canadian Soyfoods Directory (1997, p. 14), there are 7 soyfoods companies in Alberta province, 2 in Manitoba, and none in Saskatchewan. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

3005. Rahardjo, Grace. 1997. Making tempeh in Canada (Interview). *SoyaScan Notes*. Oct. 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Grace, who was born in Indonesia, has been making tempeh at her home in Canada for the last 5 years (i.e. since about 1992). She sells it to her friends and church members, but not in stores. Her emphasis is on quality: it has a whiter mycelium and is more juicy than commercial tempeh. She comes from central Java, about 200 km from Yogyakarta. She will soon be visiting Java and would like to meet Dr. Sastroamijoyo. Address: 1442 West 33rd Ave., Vancouver, BC V6M 1A5, Canada. Phone: 604-264-0181.

3006. Sinzinger, Keith. 1997. Tempeh turkey heads east: Vegetarian innovations. *Washington Post*. Oct. 8.

• **Summary:** Until recently, when a roasted bird has been the centerpiece of a holiday feast, vegetarians have either cried fowl, settled reluctantly for side dishes, or perhaps even compromised their principles. But this year several West Coast entrepreneurs are expanding distribution of their "turkey alternatives" eastward. Precooked, stuffed, and sliceable dishes, they contain no animal ingredients, but have a taste, texture, and appearance much like the real bird.

Rhonda Wrobel of Portland, Oregon, offered samples of Tofurky—a tofu and seitan roast—at the Natural Products Expo in Baltimore, Maryland, last month. Wrobel and her husband Hans, a former banquet chef in New Jersey, invented Tofurky in the early 1990s, and have improved their formula each year. This year they have downsized Tofurky to a 26-ounce roast with a stuffing of rice, bread, and sunflower seeds, intended to serve 3 or 4 people. Their company, Turtle Island Foods, is anticipating nationwide retail sales this year of 15,000 to 20,000, up from about 5,000 last year.

Miyoko Schinner, founder of Now & Zen restaurant in San Francisco, first prepared a seitan-based bird one Thanksgiving. Later she published a recipe for her UnTurkey, then began selling it at her restaurant several years ago. Last year she sold about 1,000 UnTurkeys in the Bay Area, and is hoping for sales of 10,000 this year. Address: Washington Post staff writer.

3007. **Product Name:** Tempeh.

**Manufacturer's Name:** Bean Me Up, Soya Station, Salad Bar, div. of Ooh-La-La Ling [Lingerie].

**Manufacturer's Address:** 1684 Ouneachem Baht, Anjuna Bardez, Goa, Goa, India 403-507. Phone: 0091-0832-2273648.

**Date of Introduction:** 1997. October.

**Ingredients:** Soya beans, Rhizopus spores, vinegar.

**Wt/Vol., Packaging, Price:** 250 gm. 60 rupees.

**How Stored:** Refrigerated.

**New Product—Documentation:** Letter (e-mail) from Lisa Camps of Goa. 2005. May 15-16. This product was introduced in about Oct. 1997. Tempeh went on sale approximately in the season of 1996; seasons here are from October to April. It was vacuum packed with a small table model packer, then that was placed in an outer plastic bag to protect it from moisture in the fridge or deep freeze.

Letter (e-mail) from Lisa Camps. 2005. July 16. Lisa is not aware of anyone who sold tempeh in Goa before she did. \*

3008. Book Publishing Co. 1997. Complete '97 fall catalog (Mail order). Summertown, Tennessee. 48 p. 22 cm.

• **Summary:** Contains many books about vegetarian cookery (p. 14-29), including books on TVP, gluten and seitan, tempeh, soyfoods, and tofu. Address: P.O. Box 99, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: 1-800-695-2241 or 615-964-3571.

3009. Madison, Deborah. 1997. Vegetarian cooking for everyone. New York, NY: Broadway Books. x + 742 p. Oct. Illust. Plus 24 full-page color plates. Index. 26 x 21 cm. A tenth anniversary edition was published by Broadway Books in 2007, featuring a new introduction by the author.

• **Summary:** One of the most comprehensive vegetarian cookbooks ever published; Contains 1,400 recipes. One chapter, titled "The Soy Pantry" (p. 593-609) has the following contents (with many recipes): Introduction (The soybean is the cow of the Orient). Soy milk. Tofu. Tempeh. A sidebar (p. 594) lists more recipes that include soyfoods, by chapter.

Soy-related recipes (not including those on p. 593-609) include: Soy oil (p. 43). Bechamel sauce (p. 53; dairy-free variation uses soy milk). Tofu "mayonnaise" (p. 60). Tofu garlic "mayonnaise" (p. 60). Sesame sauce with tofu (p. 67). Peanut-tofu sauce (p. 69). Spring rolls with napa cabbage

and tofu (p. 107). Tofu salad spread (p. 129). Marinated tofu sandwich (p. 130). Tempeh on rye sandwich (p. 130). TLT–Tempeh, lettuce, and tomato sandwich (p. 130). Buckwheat noodle salad with grilled tofu and roasted peppers (p. 178). Green goddess dressing (p. 190; dairy-free variation with silken tofu). Miso soups (about, plus 5 recipes; p. 231–33). Mushrooms with paprika and sour cream—variation with tofu (p. 255). Thai tofu and winter squash stew (p. 257). Winter vegetable pot pie (p. 259; dairy-free variation can use soymilk). Mushrooms and tofu in Hoisin sauce (p. 269). Stir-fried broccoli, mushrooms, and peppers with caramelized tofu (p. 270). Dried mushroom, leek, and tofu stir-fry with Chinese barbecue sauce (p. 270). Goat cheese enchiladas with corn and red mole (p. 292; silken tofu can replace a portion of the goat cheese to give a less rich version). Soybeans (about; p. 314). Somen in broth with silken tofu and spinach (p. 482–83). Soba in broth with spinach, purple dulse, and silken tofu (p. 483). Udon with stir-fry and five-spice tofu (p. 484). Smoothies (p. 594). Protein drink for breakfast (p. 617, with soy milk). Breakfast burritos with tofu (p. 625). Scrambled tofu (p. 627). Scrambled tofu with herbs and cheese (p. 627). Scrambled tofu with tomatoes and salsa (p. 627). Multigrain waffles (with soy flour, p. 633).

Also used in the recipes are: Quinoa. Sea vegetables. A color photo on the cover shows Deborah Madison.

The dust jacket (and *Jessica's Biscuit Cookbook Catalog*, spring 1998) says: "What Julia Child is to French cooking and Marcella Hazan is to Italian cooking, Deborah Madison is to contemporary vegetarian cooking. At the Greens restaurant in San Francisco [California], where she was the founding chef, and in her two acclaimed vegetarian cookbooks, Madison elevated vegetarian cooking to new heights of sophistication... Madison received the M.F.K. Fisher Mid-Career Award in 1994... She has been a board member of the Santa Fe Area Farmers' Market for the past six years in Santa Fe, where she lives with her husband, Patrick McFarlin."

Marion Cunningham, author of Beard Award winners *The Fannie Farmer Cookbook* and *The Fannie Farmer Baking Book*—"If I could have only one book on the subject of vegetables, *Vegetarian Cooking for Everyone* would be it."

Letter (fax) from Dana Jacobi. 1998. April 26. This cookbook just won the IACP/Julia Child award as the "cookbook of the year" for 1998—the highest honor given, out of 432 books nominated—and a tremendous honor for vegetarianism as well as for Deborah Madison. Note: IACP is the International Association of Culinary Professionals. This book also won the IACP/Julia Child award as the best general cookbook of the year (out of 54 cookbooks nominated, and beating out the new 1997 edition of *The Joy of Cooking*). Two major sets of cookbook awards are given each year: The IACP/Julia Child awards (given in April at a different location each year) and the James Beard awards

(given in May in New York City). Each set offers awards in something like 10 different categories. There is surprisingly little overlap among the nominations for both in each category. Address: Santa Fe, New Mexico.

3010. *Soya Bluebook Plus*. 1997. Oilseed glossary:

Definitions and terms commonly associated with oilseed products or processing. 1998. p. 354–60.

• **Summary:** Acidulated soapstock, activated, amino acids, antioxidant, biodiesel, biotechnology, bleaching, bleaching earth, bolls, Bowman-Birk trypsin inhibitor, bran, break material, cake, canola, canola meal, catalyst, coconut, coconut—desiccated, coconut milk, coconut meal, cold pressed soy oil, cold test, confection sunflower, cooking oil, copra, copra meal, corn bran, corn feed meal, corn flour, corn germ meal (wet milled), corn gluten feed, corn gluten meal, corn grits, cotton linters, cotton plant by-product, cottonseed—glandless, cottonseed cake (or cottonseed flakes)—mechanical extracted, cottonseed meal—solvent extracted, cottonseed screenings, cotyledon, cracked corn, cracking, crude cottonseed oil, crude soy oil, defatted soy flour, degermed, dehulled—dehulling, degummed soy oil, degumming, deodorized, desolventizer-toaster, diglyceride, drying oil, edamame, edible crude soy oil, edible refined soy oil, emulsifier, endosperm, esterification, expanded—expanding, expeller, extracted—mechanical, extracted—solvent, extruded, extruder, extrusion, fat, fatty acid, feed (feedingstuff), feed grade, fermented—fermenting, flaking, flour, free fatty acid (F.F.A.), full-fat soy flour (enzyme active or heated/toasted), fully refined soy oil, genetic engineering, germ, ghee, gossypol, grain, green vegetable soybeans, grits, groundnut, gumming, high-fat flour, hilum, hulls, hydrogenated vegetable oil, hydrogenization [sic, hydrogenation], hydrolyzed corn protein, hydrolyzed soy protein, isolated soy protein, kibbled soybean meal, Kunitz trypsin inhibitor, lecithin, lecithinated soy flour, linseed meal, linters, lipoxxygenase, low gossypol cottonseed meal, low-fat soy flour, malto dextrins [maltodextrins], margarine, maturity groups, meat analogs [meat alternatives], meat extenders, melting point, methyl esters, miso, monoglyceride, natto, nutraceuticals, oil, okara, once refined soy oil, oxidation, palm kernel oil, palm olein, palm stearin, peanut hulls, peanut meal, peanut skins, pellets, polymerization, processing or extraction of oilseeds (also called "crushers" or oil mill operations—solvent extraction, continuous pressing, batch pressing), protein, pulses, raffinose, rancidity, rapeseed meal—mechanical extracted, refining, refractive index (R.I.), rolled or rolling, salad oil, shortening, soapstock, solvent extracted, solvent extracted soybean flakes, soy flour, soy grits, soy protein concentrate, soy protein isolate, soy sauce (incl. that hydrolyzed with hydrochloric acid), soy sprouts, soya, soya lecithin, soybean(s), soybean ground, soybean cake, soybean curd, soybean fatty acids, soybean feed—solvent extracted, soybean flakes and 44% protein

soybean meal, soybean flakes and high protein or solvent extracted soybean meal, soybean hay sun-cured ground, soybean hulls (or seed coats), soybean meal, soybean meal–dehulled–solvent extracted, soybean meal–dehulled–mechanical extracted, soybean mill feed, soybean mill run, soybean processor, soybean protein product–chemically modified, soybean seeds–extruded ground, soybean seeds–heat processed, soybean solubles–condensed, soybean solubles–dried, soyfoods, soymilk, soynuts, spinning (to texturize soy protein isolate for food or industrial use), stachyose, steepwater, sterols, sunflower hulls, sunflower meal–dehulled–mechanical extraction, sunflower meal–dehulled–solvent extracted, sunflower meal–mechanical extracted, sunflower meal–solvent extracted, sunflower seed–oil varieties, technical grade refined soy oil, tempeh, textured soy concentrate, textured soy flour, textured soy protein, toasting, tofu, transgenic, triglyceride, trypsin inhibitors, unsaponifiable matter, unsaturation, vanaspati–vegetable ghee, wet-milled, whole-pressed cottonseed–mechanical extracted, winterized oil, yuba. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

**3011. Product Name:** Tempeh Drumettes: Delicious Vegan Protein from the famous Tofurky.

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031.

**Date of Introduction:** 1997. October.

**Ingredients:** Textured soy protein (soy flour and water), soy tempeh (non-genetically modified soy beans grown without chemical fertilizers, herbicides or pesticides, water, apple cider vinegar, starter culture), grated carrots, wild rice, malt extract, natural vegetarian flavor, dried cranberries, vegetarian Worcestershire sauce, isolated soy protein, carrageenan, herbs and spices.

**Wt/Vol., Packaging, Price:** 12 oz (340 gm)–4 drumettes.

**How Stored:** Frozen.

**Nutrition:** Per 3 oz (85 gm): Calories 105, calories from fat 14, total fat 2 gm (3% daily value; saturated fat 0.5 gm), cholesterol 0 mg, sodium 380 mg (16%), total carbohydrate 11 gm (dietary fiber 4 gm [16%], sugars 2 gm), protein 11 gm. Calcium 2%, iron 2%. Percent daily values are based on a 2,000 calorie diet.

**New Product–Documentation:** Product with Label sent by Seth Tibbott, owner of Turtle Island Foods. 1997. Dec. 13. 8 by 6 by 1 inch. Paperboard box. Orange, black, green and white on peach. Color photo shows four baked drumettes on a bed of lettuce with cherry tomatoes. “Low fat. Cholesterol free.” One circular logo shows three soybeans in an open pod with 3 non-soy leaves in the background. Two of the soybeans are golden yellow, the third is a miniature Planet Earth. Across the top of the logo is written: “The Wide World of Soy.” Across the bottom: “Have you had your soy today?”

**3012. Product Name:** Tofurky ‘97: A Delicious Vegetarian Holiday Feast.

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 1997. October.

**Ingredients:** Each Tofurkey includes: (1) 26-ounce tofu roast, seasoned and stuffed: Water, vital wheat gluten, tofu (water, soybeans, calcium sulfate), white beans, garbanzo beans, natural vegetarian flavor, canola oil, tamari, spices, lemon juice, calcium lactate from beets, salt. Stuffing: Brown rice, wild rice, bread cubes (whole wheat, water, salt, yeast), onion, celery, natural vegetarian flavor, sunflower seeds, roasted garlic powder, seasoning; (2) 4 Drumettes: Textured soy protein (soy flour and water), soy tempeh (non-genetically modified soy beans grown without chemical fertilizers, herbicides or pesticides, water, apple cider vinegar, starter culture), grated carrots, wild rice, malt extract, natural vegetarian flavor, dried cranberries, vegetarian Worcestershire sauce, isolated soy protein, carrageenan, herbs and spices. (3) Golden Mushroom Gravy: Water, nutritional yeast, expeller pressed canola oil, unbleached flour, chopped fresh mushrooms, diced onion, shoyu soy sauce (water, soybeans, wheat, salt), herbs, spices, non-dairy lactic culture.

**Wt/Vol., Packaging, Price:** 3 lb 4 oz (serves 4).

**How Stored:** Frozen.

**New Product–Documentation:** Product sent (without box) and color poster by Seth Tibbott. 1997. Dec. 13.

Full-color glossy leaflet (8½ by 11 inches). 1997. Oct. “We have it! Tofurky—A delicious vegetarian holiday feast” (which see). Box with Label sent by Seth Tibbott. 1997. Dec. 24. This is a very attractive and well-designed box, 10 by 6.5 by 4 inches deep. The top is covered with a color photo of Tofurky, sliced in half, served on a plate, with tempeh drumettes, a gravy boat to the right, and a basket of fruits in the upper left. A snipe across the upper left corner states: “100% vegan.” In the lower left is written: Contains: Specialty seasoned stuffed tofu roast. 4 hearty tempeh drumettes. Heavenly golden mushroom gravy. Keep frozen. Net weight 3 lbs. 4 oz. (1474.4 gm). In the lower right corner is a circular logo 1½ inches in diameter. Across the top is written: “The Wide World of Soy.” Across the bottom: “Have you had your soy today?” In the middle are three soybeans in pod; the two end ones are yellow and the middle one is a tiny Planet Earth. Behind them are three soybean leaves. On the back are three sets of ingredients and nutrition facts for: Drumettes, Golden mushroom gravy, and Stuffed tofu roast. On one end is information about Farm Sanctuary (Watkins Glen, New York); Turtle Island donates 1% of the gross sales from Tofurky to the Farm Sanctuary’s Adopt-A-Turkey program. One side states that “The Wide World of Soy” is a line of natural soyfoods: Tofurky,

Tempeh Drumettes, Vegetaballs, and Now Burgers. "Today, soyfoods are receiving renewed interest from scientists and nutritionists from their supply of isoflavones, a unique type of phytoestrogen (a plant chemical)."

Update: Talk with Seth Tibbott of Turtle Island. 1998. Nov. 18. Last year they sold 15,000 Tofurkys; this year they have already sold 35,000 and expect to sell 50,000 by Dec. 31. The media coverage this year has been even more amazing than last year. White Wave has dropped its tempeh burgers (incl. Lemon Broil) because its tofu business is growing so fast.

3013. Turtle Island Foods, Inc. 1997. We have it! Tofurky—A delicious vegetarian holiday feast (Leaflet). Hood River, Oregon. 2 p. Front and back. 28 cm.

• **Summary:** The text at the bottom front reads: "As seen on: ABC (Good Morning America), NBC (Today Show), and CBS (This Morning)." On the front is a full-color photo (on a blue background) of a Tofurky sliced in half, on a bed of lettuce with sliced carrots, on a silver plate, with the drumettes and gravy in a silver gravy boat. In the upper left is a basket with a sunflower, pumpkin, pear, and cherry tomatoes.

On the back is a detailed description of the product: "After three years of product development, testing and listening to customers... We've taken tofu and blended it with vital wheat gluten to create a savory, sliceable roast filled with our own meatless stuffing." Tofurky includes two levels of promotional support. "Option #1: Vegan Super Holiday Demo. Order 25 mixed cases of Tofurky and Tempeh Drumettes plus 3 cases of any size Rice Nog by Grainnaissance Natural Foods and receive a \$60 demo of Tofurky, Tempeh Drumettes and Rice Nog." "Watch for upcoming blurbs in November Bon Appetit and New Woman magazines. In addition we will again be sending out over 750 press releases to major US media organizations. In-store posters and brochures available at no cost. 1% of all gross sales of Tofurky go to the Farm Sanctuary's Adopt A Turkey Program." Suggested retail price: \$19.95 to \$24.95. Address: P.O. Box 176, Hood River, Oregon 97031. Phone: 1-800-508-8100.

3014. Adnan, M.; Sudarmadji, S. 1997. Contribution of tempe for the economy and health of Indonesia. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 11-21. [9 ref]

• **Summary:** Contents: Abstract. Introduction. Tempe and people's economy: Tempe is a daily necessity, continuity of supplies, simple technology, low cost, wide marketing distribution, income for the people. Contribution to health. Tempe and anemia. Processing consideration. Support for

development. Efforts "to reengineer tempe processing into a large scale, sophisticated, high cost and high profit operation must be carefully considered, because it may remove the involvement of the low income population... Tempeh is an example of a food commodity which provides nutritional and health security for the people" (p. 11). Address: Faculty of Agricultural Technology, Gadjah Mada Univ., Yogyakarta, Indonesia.

3015. Agranoff, J.; Markham, P. 1997. Fatty acid components of tempe (and tapeh). In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 205-10. [6 ref]

• **Summary:** During the fermentation of soybeans into tempe, the proliferating mycelium has high lipolytic and proteolytic activity. Fatty acids are liberated [transformed into free fatty acids] during fermentation; over 30% of the neural lipid is hydrolyzed, with a preferential utilisation of alpha-linolenic acid.

"Changes in fatty acids were investigated during the fermentation of both whole soybean and oil extracted (cold-pressed) soya meal into tempe, using pure *Rhizopus* sp. inoculum (ragi), commercial Indonesian ragi, a mixture of ragi with *Mucor javanicus* and pure *Mucor javanicus*, and the fermentation of cassava to tapeh." All fermentations reduced linolenic acid and alpha-linolenic acid, and increased the levels of acid; this suggests conversion by a monosaturase enzyme. The levels of palmitic and stearic acid were largely unchanged.

"Pressed soya meal fermented solely with *Mucor javanicus* indicated a significant rise in gamma-linolenic acid (GLA)." Address: Dep. of Microbiology, Kings College, London Univ., United Kingdom (Present address: 27, Oman Avenue, London NW2 6AX, UK e-mail 100712.2274@compuserve.com).

3016. Agranoff, Jonathan. 1997. Introducing tempe to non tempe-eating societies. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 235-38.

• **Summary:** Contents: Introduction. Key questions that must be addressed: Cultural acceptability, need, cost, practicality, sustainability, market.

"First, it is important to appreciate that tempe is a food only native to the Javanese people as well as to those who have lived on the island of Java. It is also not widely accepted throughout Indonesia except among the Javanese communities in other islands. Transferring a food from one society [or culture] to another is not an easy task."

Many other Asian cultures have tastes similar to those of

the Javanese. In Southeast Asia, tempe has been introduced to Thailand, Burma, and Vietnam on an experimental scale with good acceptability. "In Malaysia, the racial distinction between bumiputera Malays [native-born Malays] and Chinese, segregates tempe along with poorer sectors of the society. It is known as a cheap inferior food of Indonesian immigrants and Malays, therefore it already has a negative connotation."

In the USA, Europe and Australia, tempe is known to the Dutch through the large Indonesian community in Holland. It is also known to and enjoyed by the vegetarian, vegan and health food groups in these three regions. Address: Dep. of Microbiology, Kings College, London Univ., United Kingdom.

3017. Astuti, Mary. 1997. Superoxide dismutase in tempe, an antioxidant enzyme, and its implication on health and disease. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia*. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 145-156. [22 ref]

• **Summary:** Contents: Abstract. Introduction. Free radicals and lipid peroxidation in the body. Tempe as a source of superoxide dismutase. The role of tempeh on the modulation of superoxide dismutase in the body. Conclusion. Address: Faculty of Agricultural Technology, Gadjah Mada Univ., Yogyakarta, Indonesia.

3018. Astuti, Mary. 1997. Effect of tempe on iron availability of bologna sausage (Abstract). In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia*. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 263.

• **Summary:** Sausage has a high cholesterol content, which lowers its consumption. Tempe, which contains no cholesterol, and actually lowers serum cholesterol in humans, was added to bologna sausage at levels of 0, 5, 10, 15, and 20%. With increased tempe levels, the flavor, texture, and slicing characteristics all improved, as did the shelf life, but the availability of iron decreased. Address: Faculty of Agricultural Technology, Gadjah Mada Univ. Yogyakarta, Indonesia.

3019. Astuti, Mary; Kartika, Habsari Esti. 1997. Effect tempe powder on the physical and organoleptic properties of cookies (Abstract). In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia*. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 263.

• **Summary:** When 15% of the wheat flour in cookies is replaced by tempe powder, the taste and crispness of the

cookies are acceptable, and the protein, crude fiber, lipid, and ash (mineral) content were all increased. Address: Faculty of Agricultural Technology, Gadjah Mada Univ. Yogyakarta, Indonesia.

3020. Banner, Bob. 1997. Food forum report. *Hope Dance (San Luis Obispo, California)*. Nov/Dec. p. 29-30. No. 7.

• **Summary:** On Sept. 19 a very successful and festive Food Forum took place at the Community Room of the San Luis Obispo Library. It was billed as "Simplifying our food: Keeping it healthy, local, and sustainable." The various speakers included Professor Bud Evans and "Ed Bruehl, co-ordinator of Natural Flavors, one of the healthiest restaurants in the County [now out of business as we go to press]... Ed not only spoke passionately about his food concerns but about the local contribution in this county from local organic growers, persons making tempeh, soy milk..."

Note 1. Marcus Tribelhorn, a local tempeh maker from Upfull and Right, was there to promote tempeh. Note 2. This magazine is subtitled "Making a Difference in San Luis Obispo County." Three is a full-page ad for "Buy Nothing Day: A 24 hour moratorium on consumer spending" and an editorial on voluntary simplicity.

3021. Brady-Robbeau, C.B.; Sutardi, -; Ismoyowati, D.; Fairbrother, A.H.; Boughton, T.J.; Petterson, D.S. 1997. Acceptability of lupin-based (Abstract). In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia*. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 261-62.

• **Summary:** Research in Australia has shown that lupin seed (*Lupin angustifolius*) can be used to make acceptable tempe. Yu (1988) stated that lupin was a better substrate for fermentation than soybean, and that taste panelists preferred the nutty flavor and golden color of lupin tempe. Address: Curtin Univ. of Technology Perth Western Australia (e-mail cbrobeau@health.curtin.edu.au). Phone: 6189-351-2771.

In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia*. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 187-98. [29 ref]

• **Summary:** "Few studies have been done to investigate the effect of soybean on uric acid, and the product of purine metabolism. It was assumed that foods containing purine increase uric acid level... The average purine content of beans varies from 50 to 150 mg per 100 gm." Address: Indonesian Tempe Foundation Nutrition, Dep. Faculty of Medicine, Airlangga Univ., Surabaya, Indonesia.

3023. Gandjar, Indrawati; Santoso, Iman. 1997. The role of *Rhizopus* spp. in biotechnology. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 55-63. [37 ref]

• **Summary:** Contents: Abstract. Introduction. Soybean tempe. Moulds. Tempe and bioconservation of the genus *Rhizopus*. The nutrition of tempe. Biotransformation by *Rhizopus* spp. Enzymes produced by *Rhizopus* strains. *Rhizopus* spp., agroindustrial wastes, and non-soybean tempe. *Rhizopus* and related genera in biotechnology.

Early studies on tempe conducted before World War II and reports by Gandjar in 1960 showed that *Rhizopus oryzae* and *Rhizopus arrhizus* were the two dominant mold species isolated from the two types of tempe most highly preferred in Java for their delicious taste: Tempeh Malang and Tempe Purwokerto. "However, since Dr. Ko Swan Djen (1961) from the Bandung Institute of Technology went to Peoria [Illinois, USA] to study tempe fermentation at the laboratory of Dr. Hesseltine, and brought with him tempe samples from West Java, *Rhizopus oligosporus* (now: *Rhizopus microsporus* var *oligosporus*) was claimed to be the best tempe mould. This mould was then used by many Indonesian microbiologists for their studies on tempe... At present an inoculum for tempe, composed of *Rhizopus oryzae* and *Rhizopus oligosporus* has been developed by the National Chemistry Institute-Indonesian National Institute of Science (LKN-LIPI) and distributed to tempe makers to prevent failure of their products. This is, of course, a very great success for Indonesia..." Address: Dep. of Biology, Faculty of Science and Mathematics, Univ. of Indonesia, Depok 16424, Indonesia.

Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 163-173. [4 ref]

• **Summary:** A new and improved type of inoculum was developed using the *Rhizopus oligosporus* mold and two

species of bacteria that produce vitamin B-12: *Klebsiella pneumoniae* and *Citrobacter freundii*. These bacteria are contaminants that find their way into the fermentation during the stage of soybean cooking. This study also showed that tempe made with the mixed inoculum resulted in better growth of experimental rats than regular tempe. Address: Center for Nutrition Research and Development, Ministry of Health, Bogor 16112, Indonesia.

• **Summary:** Making second generation food products, which use tempeh as an ingredient, offers to opportunities for using tempeh and expanding production. Address: S.P., Research Development Centre for Applied Chemistry, Indonesia Inst. of Sciences.

3028. Jha, H.C.; Kiriakidis, Serafim; Hoppe, M.; Egge, H. 1997. Antioxidative constituents of tempe. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 73-84. [15 ref]

• **Summary:** Abstract: "The present paper deals with the overall antioxidative activity of tempe constituents and its implication for the human health. An exhaustive investigation of the antioxidative activity of tempe isoflavonoids and their derivatives revealed that they are potent inhibitors of the oxidation of oils and fats, the reduced derivatives of the isoflavonoids being the most active antioxidants. It could be also established that the other constituents of tempe exert synergistic effects on the antioxidative effects of the tocopherols present in tempe.

"We have been able to show that the lipid peroxidation of microsomes and mitochondria could be inhibited by the

tempe constituents and their derivatives. The LDL-oxidation, which aggravates arteriosclerotic risks could be inhibited by tempe constituents.

“Tempe constituents, especially the isoflavonoids function as lipoxygenase and cyclooxygenase inhibitors. The antioxidative role of the tempe constituents has far reaching effect in controlling the proliferation of tumor cells.”

Introduction: “Tempe is well known for its antioxidative constituents. The research in this field was initiated by Gyorgy and Murata (1964), after they had isolated a new isoflavone, viz., 6,7,4'-trihydroxyisoflavone from tempe. In the mean time some other antioxidants have been isolated in our laboratory (M. Kolvenbach 1994, M. Hoppe 1993, Hoppe, Jha & Egge 1997) and elsewhere (Esaki et al. 1996) and now it can be definitely said that the antioxidative activity of tempe is the result of the synergistic effect of the individual substances on each other. The hitherto known antioxidants of tempe taking part in the synergistic reaction are: vitamin E, vitamin E-dimer, mixture of a nino acids (Seher & Loschner 1986), isoflavonoids, and 3-hydroxyanthranilic acid.”

Contains 6 tables and 7 figures. Address: Inst. of Physiological Chemistry, Univ. of Bonn, Nussallee 11, 53115 Bonn, FRG [Germany].

Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 64-72. [10 ref]

• **Summary:** Tables show: (1) Name, number and origin of mold cultures used. Six species of *Mucor* and five species of *Rhizopus* from the Wageningen Culture Collection were tested. (2) The potential to create a tempe using different moulds and substrates. Based on growth and fermentation time until spoilage and/or sporulation.

(3) Increase in total free amino groups per gram of tempe after maximum fermentation time. For soybean, cowpea, and greenpea. (4) *In vitro* digestibility of samples from the different processing stages.

Conclusion: Soybeans make the best tempeh—by far. Address: Dep. of Food Technology and Nutritional Sciences, Agricultural Univ., Bomenweg 2, 6703 HD Wageningen, The Netherlands.

3033. Marseno, Djagal W.; Astuti, M.; Wastoni, A.T. 1997. Intracellular distribution and characterization of superoxide dismutase from tempe fermented by *Rhizopus oligosporus* (Abstract). In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 264.

• **Summary:** The superoxide dismutase (SOD) was mainly distributed in the cytosolic fraction. Note: The cytosol or intracellular fluid is the liquid found inside cells. Address: Faculty of Agricultural Technology, Gadjah Mada Univ., Jl. Socio Yusticia, Bulaksumur, Yogyakarta, Indonesia.

3034. Messina, Virginia K.; Burke, Kenneth I. 1997. Position

of the American Dietetic Association: Vegetarian diets. *J. of the American Dietetic Association* 97(11):1317-21. Nov. [44 ref]

• **Summary:** Contents: Introduction. Position statement. Vegetarianism in perspective. Health implications of vegetarianism. Nutrition considerations for vegetarians. Vegetarianism throughout the life cycle. Meal planning for vegetarian diets. Food guide pyramid for vegetarian meal planning.

Introduction: "Scientific data suggests positive relationships between a vegetarian diet and reduced risk for several chronic degenerative diseases and conditions, including obesity, coronary artery disease, hypertension, diabetes mellitus, and some types of cancer."

"Position statement: It is the position of the American Dietetic Association (ADA) that appropriately planned vegetarian diets are healthful, are nutritionally adequate, and provide health benefits in the prevention and treatment of certain diseases."

Other features of the paper include: (1) A paragraph on why people choose vegetarian diets, including ethical reasons. (2) A food guide pyramid for vegetarian meal planning, including "zero to three servings of milk, yogurt, and cheese." (3) A list of food sources for certain nutrients, including iron, zinc, calcium, vitamin D, B-12, and linoleic acid. (4) Nutritional considerations for vegetarians and vegans. For example, vegans may have lower calcium requirements than the general population because their diets contain less protein and are more alkaline; high acid diets cause more calcium to be lost in the urine as the body tries to neutralize that acid with calcium from the bones. (5) The position paper once again restates that combining proteins is not necessary and that protein intake in both lacto-ovo-vegetarians and vegans appears to be adequate.

A full-page table (p. 1319) shows food sources of important nutrients. Soyfoods are shown as sources of the following, with the number of milligrams per serving shown in parentheses: (1) Iron: Tofu, ½ cup (6.6), soybeans, ½ cup cooked (4.4), tempeh, ½ cup cooked (1.8), soymilk, 1 cup (1.8). (2) Zinc: ½ cup of the following cooked: Tempeh (1.5), textured soy flour (1.4), tofu (1.0), soybeans 1.0.

(3) Calcium: soymilk, fortified, 1 cup (250-300), tofu, ½ cup (120-350), soynuts, ½ cup (252), soybeans, 1 cup cooked (175), soymilk, 1 cup (84), textured soy flour, ½ cup (85), tempeh, ½ cup (77). (4) Vitamin D: Fortified soymilk or other nondairy milk, 1 cup (1.0 to 2.5 micrograms). (5) Vitamin B-12: Fortified soymilk or other nondairy milks, 8 oz = 1 cup (0.2 to 5.0 micrograms).

(6) Linolenic acid: Soybean oil, 1 tablespoon (0.9 gm), soybeans, ½ cup cooked (0.5 gm), tofu, ½ cup (0.4 gm).

3035. Nout, M.J.R.; Kiers, J.L. 1997. Microbiology of the tempe process, and prospects for utilization. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden

Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 36-46. [16 ref]

• **Summary:** Contents: Abstract. Manufacture of traditional tempe, and its utilization. Microbiological issues of importance for the wholesomeness of the product, as well as for the successful growth of the fungi: Bacterial interactions, fungal growth. Process and product developments and new uses for tempeh.

Tables: (1) Survey of commercial tempe in the Netherlands (110 samples; Samson et al. 1987). Six genera and species were found including *Staphylococcus aureus* and *Bacillus cereus* which occurred at 10<sup>5</sup> per gram in 13% and 11% of the samples respectively. Lactic acid bacteria dominate during the soaking stage of the traditional product. (2) Effect of carbon dioxide on biomass growth. 5-10% stimulates mycelial growth but levels higher than 25% have an inhibitory effect.

Figures: (1) Traditional tempeh making process (flow chart). (2) Accelerated acidification by "back-slopping" (inoculation of the soak water with 5% soakwater from a previous batch). (3) Mechanism of spore germination (Breeuwer 1996).

(4) Effect of nonanoic acid [nonanoic acid] on pH. (5) Development of substrate temperature in static uncontrolled (traditional) tempe fermentation, compared with discontinuously agitated temperature-controlled fermentations in a rotating drum bioreactor (De Reu et al. 1995). (6) Effect of oxygen on biomass growth. It stimulates it, especially when used in small amounts, but that stimulation levels off as the amount of oxygen increases. Address: Dep. of Food Technology and Nutritional Sciences, Agricultural Univ., Bomenweg 2, 6703 HD Wageningen, The Netherlands.

3036. Ontario Soybean Growers' Marketing Board (OSGMB). ed. and comp. 1997. Canadian soyfoods directory. Chatham, Ontario, Canada: OSGMB. 27 p. 28 cm.

• **Summary:** This excellent, complete, and accurate directory was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The first Canadian soyfoods directory was published in April 1994 (22 pages).

Contents: Foreword—Ontario Soybean Growers' Marketing Board (OSGMB). Acknowledgements from researchers. Table of contents. Soyfood product descriptions: Green vegetable soybeans—Edamamé, meat analogs, miso, natto, okara, soy cheese, soy flour, soy frozen desserts, soy grits, soy isolate fibre, soy lecithin, soy oil, soy protein concentrate, soy protein isolate, soy pudding, soy sauce, soy sprouts, soy yogurt, soymilk (soy drink and soy beverage),

soynuts, tempeh, textured soy flour–TSF, texturized soy protein, tofu, whole dry soybeans, yuba. Soyfoods for your health: Heart disease, cancer, osteoporosis, other conditions. Composition and nutrient value of soyfoods. Soyfood companies by product. Soyfoods companies by province: Alberta (7), British Columbia (21), Manitoba (2), Nova Scotia (2), Ontario (54), Quebec (20). Soyfood companies (105 companies that make or market wholesale soyfoods)—complete listings (address, phone and fax numbers, contact person, products). Soyfoods distributors—complete listings (13). Soybean distributors—complete listings (28). Research information sources—complete listings (24). Soyfoods information sources (23). Canadian soyfoods directory questionnaire.

Spot in *Ontario Soybean Growers' Marketing Board Newsletter*. 1997. Dec. p. 5. The Canadian Soyfoods Directory was launched in November after a two-month delay. "The project was undertaken following numerous information requests from consumers, processors and health professionals." Funded by the Board of OSGMB, it has been mailed to all Registered Dietitians across Canada, and it will soon be available on the Board's website. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

3037. Pawiroharsono, Suyanto. 1997. Prospect of tempe as functional food. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia*. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 22-27.

• **Summary:** Contents: Abstract. Introduction. From traditional to the future via modern: Development of food industry, key words for the 21st century. Conclusion.

The processing and marketing of soybeans in the modern world involves modernization and mechanization, larger scale, the mass market, speed, hygiene and novelty. "However in the 21st century the key words such as healthy, safety, and environment will be much more important..." (p. 22). She believes that our "priority for the 21st century is not always technology-oriented progress like the 20th century." People may prefer to have a more comfortable and peaceful life as human beings (p. 26-27). Note: This embodies the "Small is beautiful" idea of Schumacher and satisfying or fulfilling work. Address: Tokyo Metropolitan Food Technology Research Center, 9-1 Kanda-Sakuma-cho, Chiyoda-ku, Tokyo 101.

3042. Siregar, Effendi; Pawiroharsono, Suyanto. 1997. Inocula formulation and its role for biotransformation of isoflavonoid compounds. Jakarta, Indonesia: Indonesian

Tempe Foundation. xi + 280 p. See p. 85-98. [7 ref]

• **Summary:** The addition of *Brevibacterium epidermis* and *Micrococcus luteus* to the tempe fermentation increased the content of isoflavonoids in the finished tempe. Address: Directorate for Industrial Processing technology, Agency for the Assessment and Application of Technology, Jakarta, Indonesia.

3043. Soenarto, Yati; Sudigbia, I.; Hermana, -; Karmini, M.; Karyadi, D. 1997. Antidiarrheal characteristics of tempe produced traditionally and industrially in children aged 6-24 months with acute diarrhea. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 174-186. [23 ref]

• **Summary:** Consumption of tempe was effective in treating acute diarrhea. Breast milk also appears to have a protective effect against the negative impact of diarrhea.

3044. Soetrisno, Noer; Sulaeman, Suhendar. 1997. The cooperative production of tempe in Indonesia. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 247-55. [5 ref]

• **Summary:** Contents: Abstract. Background. The development of tempe industry. Strategy for modernizing the small scale producer: Increase the scale of production, improvement of processing technology (technological improvement), institutional setting. The Cibitung pilot plant. Conclusion.

The writer is interested modernizing, mechanizing, speeding up and enlarging tempe plants in Indonesia. He believes that large scale of production is the best solution to solving many problems in the tempe industry, however traditional or small-scale tempe makers should continue to exist and to develop according to market demand.

"The Cibitung Project, located about 20 miles east of central Jakarta, is an integrated training center for soy product development. Therefore the center is named the Center for Soy Product Development." Located on 3.4 hectares, its present priority is tempe. It consists of a training center, laboratory, secretariat office, and an integrated plant for making tempe and tempe products. The plant is the result of engineering work done by the Ministry of Food Affairs in cooperation with Parahyangan University of Bandung. "During the preparatory process the project benefitted from the active participation of experts from the Indonesian Tempe Foundation."

Tables: (1) Cost structure of tempe production for different size and mode of production. Mode means individual vs. group. (2) The comparison of benefit from

different mode of tempe production. The three modes are individual, group, and factory. The factory appears to have all the advantages, but invested capital is very high and operating capital is high. Address: 1. Office of the Ministry of Food Affairs; 2. Agency for Cooperative and Small Enterprise Research and Development Ministry of Cooperative and Small Enterprise Development. Both: Jakarta, Indonesia.

3045. Sudarmadji, Slamet; Suparmo, -; Raharjo, Sri. eds. 1997. Reinventing the hidden miracle of tempe: Proceedings, International Tempe Symposium, July 13-15 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation [Yayasan Tempe Indonesia]. xi + 280 p. No index. 26 cm. [293 ref]

• **Summary:** The cover (see next page) states: This symposium was organized by the Indonesian Tempe Foundation, in cooperation with the Ministry of Food Affairs (Republic of Indonesia), Indonesian Institute of Sciences, and American Soybean Association. The introductory section consists of: Foreword. Symposium highlights. Welcoming address, by Dr. Sapuan. Opening remarks by the Minister of Food Affairs of the Republic of Indonesia at the opening ceremony of the International Tempe Symposium, Bali, 14 July 1997, by Excellency Mr. Joop Ave. 24 papers by various authors (each cited separately), were presented at this conference. They were arranged under the following categories: The global prospects of tempe (5). Progress in tempe fermentation research (4). Development in tempe processing technology (4). Bioactive compounds and health benefits of tempe (8). Socio-economic aspects of tempe (4). In addition, there were ten poster presentations, each with an abstract. Appendixes: List of presenters at the International Tempe Symposium. List of participants in the International Tempe Symposium (directory of 82 people). Address: Indonesian Tempe Foundation, Bulog II building, 2nd floor, Jl. Kuningan Timur M 2/5, Jakarta 12950, Indonesia.

3046. Suharto, I. 1997. Bioprocessing and equipment in the modern tempe industry in Indonesia. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. total quality management (TQM), and HACCP. This will give Indonesian tempe access to the international market. Address: Faculty of Industrial Technology, Parahiyangan Univ., Bandung 40141, Indonesia.

3047. Susanto, Tri; Sawitri, Meita; Widaryanti, Eni. 1997. Research on the utilization of tempe as raw material in the production of milk and tempe sausage. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium*, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 125-132. [7 ref]

• **Summary:** To produce good quality tempeh sausage: Cut and grind fresh tempeh to yield 100 gm. Add 3.5% egg white, 2.5% wheat flour, 10 ml water, 1 gm garlic, and spices. Mix well, then mix in 40 gm vegetable oil, fill into a casing, and steam at 100°C. Cool and serve. Contains 17.3% protein.

To make tempeh milk: Dice fresh tempeh, steam for 3 minutes, add 2 parts boiling water, grind, and extract the soymilk. Filter the milk and mix in a 0.08% agar (to reduce sedimentation) plus 4% skim milk and 7% sugar. Heat to 90°C for 5 minutes, filter, bottle, pasteurize at 90°C for 15 minutes, and cool. This soymilk contains 3.25% protein. Address: Research Centre on Traditional Foods, Brawijaya Univ., Malang, Indonesia.

3048. Suyitno, -; Astuti, Mary; Basir, L.I.S. 1997. Moisture sorption isotherm and critical water activity of cookies supplemented with tempe (Abstract). Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 262.

• **Summary:** "The critical water activity of cookies was 0.57 (equivalent to critical moisture content of 7.70% db), above which" the cookies lose their crispness. Address: Gadjah Mada Univ. Yogyakarta, Indonesia.

3049. Syarief, Rizal. 1997. Production and marketing of small scale tempe industry in Indonesia. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium*, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 221-34. [8 ref]

• **Summary:** "Urban population growth has stimulated a rise in the number of tempe processors in many cities throughout the country. Migration from rural areas to urban centres has created a daily need among many working people to eat outside the home. Demand for relatively inexpensive, ready-to-eat food has increased as people, especially women, have

less time to prepare meals.

"The significance of the tempe industry has often been ignored because it is considered part of the informal sector. Previously, the informal sector was thought to symbolize a lack of economic development that would and should disappear with modernization. Until more permanent jobs could be provided by the modern sector, the former was expected to absorb unskilled workers who migrated to the city from rural areas.

"However, this phenomenon has lasted longer and may be less transitional in nature than previously anticipated. The informal sector in the urban areas to be growing more rapidly than the formal sector of many countries. Because of the rapid rise in urban populations and increasing awareness of the limited employment generated by large-scale industries, planners are beginning to acknowledge the importance of the informal sector, including small scale tempe industry.

"Tempe was formerly considered an inferior food in part because of its costs, compared to other protein foods such as meats, fish and eggs. Over the last 15 years the attitude towards tempe has changed. Today, more attention has been given to tempe because it is an inexpensive source of proteins, vitamins and calories. However the quality of tempe products should be developed in order to increase the segment market of the product such as supermarket." Address: Community Services Inst., Bogor Agricultural Univ., Bogor, Indonesia.

3050. Tanuwidjaja, Lindajati. 1997. Study on the effect of inoculation techniques in tempe fermentation (Abstract). In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium*, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 261.

• **Summary:** Using a powdered inoculum, compares two inoculation techniques, namely the dry inoculation and the wet inoculation methods. "There was no significant difference in appearance, taste, texture and aroma of tempeh produced by these two methods." Address: Research and Development Centre for Applied Chemistry, Indonesian Inst. of Science.

In: Sudarmadji, Suparmo and Raharjo, eds. 1997. *Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium*, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 28-35. [7 ref]

• **Summary:** This paper is particularly valuable for its update of tempeh history and the tempeh market in North America from 1985 to May 1997.

Contents: Abstract. History of the North American

tempeh market. Current US tempeh market—May 1997: Basic statistics, who is the typical tempeh consumer?, where is tempeh sold?, how is tempeh packaged?, how is tempeh used by the consumer in North America?, what is the future of tempeh in North America?, factors that affect future growth of tempeh (health benefits of soy and label claims, consumer education, development of the food service and industrial market, development of Indonesian cuisine and restaurants in America).

In 1984 some 53 companies in the US made approximately 34,000 pounds/week of tempeh. At that time tempeh was the fastest growing soy product in the US, growing by about 28% a year.

As of May 1997 there are ten tempeh manufacturers in the USA; seven of these produce more than 1,000 lb/week of tempeh, and only one produces less than 200 lb/week. All ten US companies make an estimated 55,580 lb/week of tempeh, and these 7 largest companies make about 95% of the total. Canada has only 3 tempeh makers and they produce a total of about 1,100 lb/week. In Mexico, there are only a few tempeh makers, mostly in tourist areas. All of the 7 largest US and the 3 largest Canadian tempeh manufacturers are owned and operated by Caucasians. Caucasians also consume an estimated 95% of the tempeh made in the USA. In North America, tempeh is marketed in a variety of forms and flavors, of which soy tempeh is the most popular, followed by tempeh burgers and soy & grain tempehs. All of the existing tempeh shops in the USA and Canada trace their roots to The Farm, a spiritual community in Summertown, Tennessee.

By contrast, tofu is much more popular in North America than tempeh. More than 70 manufacturers produce over 1.5 million lb/week. Three of the four largest manufacturers are owned and operated by Asian Americans. Whereas 75% of all Americans know what tofu is, only 14% know what tempeh is.

Although tempeh sales grew very rapidly during the 5-year period from 1980 to 1984, they were stagnant during the next five years, from 1985 to 1989. This was caused in large part by competition from more sophisticated meatless burgers, such as the Gardenburger, launched in March 1985 by Wholesome & Hearty Foods of Portland, Oregon. Also microwavable and ready-to-eat foods became more popular. The period of stagnant sales led to a great consolidation within the industry. By 1990 there was renewed interest in tempeh, which paralleled the new interest in the health benefits of soy, and the rise new “meat alternatives” category. Today, tempeh sales are growing at 10-20% a year. And most Americans still like tempeh very much when they taste it. All US tempeh makers agree that education is the crucial need.

In 1984 about 20% of US tempeh was sold vacuum packed, compared with 70% today. Main advantage of vacuum packing: Longer shelf life. Main disadvantage: Imparts a somewhat bitter taste to the tempeh. A 1992 survey

of 400 tempeh users by Turtle Island showed that the number one use was in stir-fried recipes, usually with rice and vegetables.

Tables show: (1) Tempeh market statistics (USA): Average retail price per 8 oz cake of soy tempeh: \$1.81. Percentage of tempeh sold refrigerated: 80% (the rest is sold frozen). Total retail dollars spent on tempeh: In 1983 = \$4.96 million. In 1996 = \$13.15 million. Spent (retail) on tofu in 1996 = \$116 million. Spent (retail) on soymilk 1996 = \$100 million. Market share of the four largest tempeh makers in 1983: 63%, In 1997: 84%. (2) Number of brands of different types of tempeh on the US market in May 1997: Tempeh burgers 14, soy tempeh 9, multi-grain (mostly 3 or 5 grains) 6, bulk soy tempeh 5, soy & brown rice tempeh 4, sea veggie tempeh 3, wild rice tempeh 2, soy millet tempeh 2, sloppy Joe tempeh 2, other 8.

Talk with Seth Tibbott of Turtle Island. 1999. Dec. 6. The existing tempeh companies with the strongest ties to The Farm in Tennessee are (1) Lightlife Foods (Michael Cohen; see Sept. 1991 interview) and (2) Turtle Island (Seth; in 1977 he learned how to make tempeh at The Farm in Tennessee). Those with weaker ties are (3) Wildwood Natural Foods (Jeremiah Ridenour; he lived at The Farm for a while, has a lot of Farm history, and one of his kids was born on The Farm), (4) White Wave (In about 1980 Alexander Lyon was hitchhiking through Boulder, Colorado, and had no money. He taught Steve Demos how to make starter culture for something like \$20 and a good meal), and (5) Surata Soyfoods (Benjamin Hills learned how to make tempeh from his former wife, who learned it from The Farm in Tennessee).

Turtle Island now makes tempeh for: Lean Green Foods (Hawaii; Benjamin Hills), Wildwood Natural Foods, and Quong Hop. It starts out when you're at a trade show and “people saddle up to you” and say “Uh, we're not sure exactly which way we're going with our tempeh, but do you have any extra plant capacity? It's just a thought.” Then “If you give any kind of encouragement to them, the next week they're begging you on their hands and knees, they'll pay anything to have you make it for them. It's such a hassle and they have to devote plant space to it. Tofu is now growing so much faster than tempeh, they just keep tempeh to fill out their product line.” Seth expects that White Wave and Surata will come to him next, begging him to make tempeh for them. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031.

• **Summary:** Contents: Introduction. Market and utilization. Soya in the diet: Protein, fat, carbohydrates, minerals and trace minerals, vitamins. Overview—Soy products: Whole soybeans, soy sprouts, soy oil, soy beverage, tofu, natto, sufu, tempeh, soy sauces, miso, soy lecithin, soy sausages, TVP. Processing soybeans. Soy ingredients and additives: Soy protein isolate, concentrate, soy bulk / fiber (*sojaballastoffe*), fatty acids, lecithin, vitamin E (tocopherol). Product safety. Genetically engineered soybeans. Tips for buying and storing. Recipes. Address: Konstantinstr. 124, 53179, Bonn, Germany.

3060. Kiriakidis, Serafim. 1997. Untersuchungen zur

antibakteriellen- und antitumor-Wirkung von Inhaltsstoffen aus fermentierten Sojabohnen (tempe) [Investigation of the antibacterial and antitumor effects of the constituents of fermented soybeans (tempe)]. Thesis, Bonn University, Germany. 96 + [7] p. 30 cm. [Ger]\*

Address: Inst. of Physiological Chemistry, Univ. of Bonn, Nussallee 11, 53115 Bonn, Germany.

3061. Messina, Virginia Kisch; Messina, Mark. 1997. Soy to the world. In: 1997 Medical and Health Annual. Published by Encyclopedia Britannica, Inc. See p. 197-202.

• **Summary:** In the section titled "Diet and Nutrition" is a long subsection on "Soy to the world." Contents: Introduction. Sacred crop (history). Varied and versatile: Whole soybeans (incl. green vegetable soybeans), traditional soyfoods (soymilk, tofu, okara, yuba, tempeh, miso, soy sauce or shoyu), modern soy products (textured soy flour or TVP), "second-generation" soyfoods. One of nature's most nutritious foods. Health benefits: the evidence so far: Cancer, heart disease, osteoporosis, kidney disease, menopause. Tofu on your table (how to incorporate soy into American diets; incl. TVP, soymilk, soy flour, soy nuts). Address: 1. M.P.H., R.D.; 2. Ph.D. Both: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

3062. Nabben, Alexander. 1997. Kochen und Backen mit Tofu: Vegetarische Rezepte ohne tierisches Eiweiss [Cooking and baking with tofu: Vegetarian recipes without animal protein]. Darmstadt, Germany: Pala-Verlag. 139 p. Illust. Recipe index. 21 cm. [Ger]

• **Summary:** Contents: Tofu—versatile and healthful. The soybean: Cultural history, production, the world and the soybean, nutritional value of soybeans, soyfood products (soy sauce, miso, tempeh, okara, soy coffee, soynuts, soy sprouts, modern western soy protein products—soybean flour, flakes, textured soy flour, soy protein isolates, defatted soybean meal, industrial soy products), genetically engineered soybeans. Tofu. Tips, tricks, and useful information. How to make soymilk at home. How to make tofu at home. Tofu recipes and marinades. Raw foods and salads. Dressings. Sauces. Soups. Main dishes. Soufflés. Pasta. Patties / burgers. Spreads. Party snacks. Cooking and baking. Desserts and sweet delicacies (*süsse Leckereien*). Ice cream. Address: Weigandufer 38, 12059 Berlin, Germany. Phone: 30 / 6808 0686.

3063. Nutrition Education Service, Sanitarium Health Food Company. 1997. Sensational soy cookbook. Sydney, London, Vancouver, New York: Murdock Books. 64 p. Illust. Index. 20 cm. [32 ref]

• **Summary:** A saddle-stitched vegetarian cookbook on glossy paper loaded with color photos and lightweight text. The author and nutritionist is Cathy McDonald of Sanitarium. Recipes developed by Wendy van der Veer of

Sanitarium. Contents: The story of soy. The soy family: Miso, soy beans, soy breads & cereals, soy cheese, soy drink, soy flour, soy grits & soy flakes, soy 'meats,' soy pasta, soy sauce, soy snacks, tempeh, TVP, tofu, tofu desserts (ice cream and yoghurt). Breakfasts. Soy for health (isoflavones, menopause, breast cancer, osteoporosis, prostate cancer, heart disease). Light meals. The secrets of soy. Main meals. Soy in perspective. Desserts. Sensational soy (sample menus). Snacks. Know your nutrients. Bibliography. Estimated isoflavones in soy foods (table). Address: 1 Sanitarium Drive, Berkeley Vale, NSW 2261, Australia.

3064. Passmore, Jacki. 1997. The vegetarian table: Thailand. San Francisco, California: Chronicle Books. 160 p. Illust. (color photos). Index. 24 cm.

• **Summary:** The author dedicates this book to Isobel, her daughter, friend and critic, "who can't pass a day without tofu."

The Introduction notes that Thailand has a strong and living Buddhist tradition. Since Nature provides plenty of food, Thai cuisine has evolved with a moderate use of red meat, following "the Buddhist precepts on the slaughter of animals." But many Thais make an exception for seafood, with this charming rationale: "If a fish is stupid enough to swim into a trap and die, then we may as well eat it!"

This book relies heavily on tofu as a meat alternative. The index has 28 entries at "Tofu," so we will list only a few representative examples below. Contains a wealth of full-page color photos. In place of widely used fermented shrimp and fish pastes, this book uses various salt-fermented soy products such as yellow bean sauce, Chinese bean pastes, fermented tofu in brine, and tempeh (p. 11).

The Glossary defines the following that contain soy: Chili bean paste, fermented tofu, Hoisin sauce, kecap manis, soy sauce (3 types), tempeh, tofu (tao hoo in Thailand); "The soybean is singularly one of the most important food plants in the world." Few other food products can match the versatility and goodness of tofu. Incl. firm tofu, soft tofu, fried tofu and "bean curd sheets" or sticks [yuba], yellow bean sauce.

Soy-related recipes include: Classic Thai rice soup (with 6 oz. firm tofu, p. 74). Sweet and sour pomelo salad (with ¼ cup {3 oz.} cubed tempeh, p. 78). Green vegetable chu chee curry (with tofu or tempeh, p. 97). Vegetarian jungle curry (with fried tofu, p. 102). Tofu and beans with red curry paste (with fried tofu, p. 105). Clay pot of fried tofu and vegetables in brown sauce (p. 107). Stir-fried tempeh with garlic and pepper (p. 108). Stir fry of wheat gluten or tofu with straw mushrooms (p. 109). Tofu & tomato stir fry (p. 131). Thai fried rice with tofu and egg (p. 135). Pineapple fried rice (with firm tofu or tempeh, p. 136). Glutinous rice with peanuts and mushrooms (with diced fried tofu or tempeh, p. 141).

3065. Rombauer, Irma S.; Becker, Marion Rombauer; Becker, Ethan. 1997. *The joy of cooking*. New York, NY: Simon & Schuster / Scribner. xiv + 1136 p. Illust. Index. 24 cm.

• **Summary:** Soy-related subjects include (\* = recipe): Soy sauce butter\* (p. 77). Asian black bean sauce\* (with “3 tablespoons preserved black beans” [soy nuggets], p. 83). Japanese wasabi soy sauce\* (p. 83-84). Ginger soy sauce\* (p. 84). Soy and sherry marinade\* (p. 85). Description of miso soups and their role in the Japanese diet (p. 107-08). Light-colored miso soup with simmered vegetables and dark-colored miso soup with sautéed vegetables and Mongolian Hot Pot—a miso soup based dish\* (p. 108). Ginger soy vinaigrette\* (p. 238).

One long chapter is titled “Beans and Tofu” (p. 270-294). Lentils with spinach and soy sauce\* (p. 280). The section titled “soybeans” (p. 287) discusses their nutritional value, health benefits (“They contain substances thought to help prevent breast and other cancers, as well as Omega-3 fatty acids, which reduce the risks of heart disease”), how to cook yellow and black soybeans, how to dry-roast [to make soynuts], many ways of processing, soy milk, okara, fermented black beans, soy sauce, tamari, miso, soy cream cheese, soy sour cream, and soy cheese. There are also substantial subsections describing the following soyfoods: (1) Soy milk, including a recipe for making it at home (p. 287-88). (2) Tofu, including silken tofu, cottage tofu, frozen tofu, sautéed or fried tofu, and smoked tofu (p. 288-89). Recipes containing tofu include: Szechuan spiced tofu, Southeast Asian curried vegetable stew, Smoked tofu burgers, and Brown rice tofu salad with orange sesame dressing (p. 289-90; the latter recipe calls for toasted sesame oil and adzuki beans, with smoked tofu being optional). (3) Tempeh, including recipes for Moo shu tempeh and Szechuan-style “hacked” tempeh. (4) About soy protein, describing textured vegetable protein and textured soy concentrate, with recipes for Dinner loaf Tex-Mex style and Lion’s head (p. 292). This is followed by a subsection describing seitan and with recipes for Root vegetable and seitan stew, and Seitan kibbe (p. 293-94).

Asparagus with mustard miso\* (p. 343-44). Baby bok choy with soy ginger sauce\* (p. 349). Steamed scallops or shrimp with soy sauce\* (p. 513). Grilled or broiled whole red snapper with ginger soy vinaigrette\* (p. 548-49). Small fish, fillets, or steaks poached in soy sauce\* (p. 555-56). Chinese soy-braised chicken\* (p. 601-02). The chapter titled “Know your ingredients” (1059-87) includes short descriptions of bean sauce, Hoisin sauce, miso, nori, salted and fermented black beans, sesame oil, sesame paste, soy sauce, tamari, tonkatsu sosu (dark spicy sauce based on soy), wakame, wasabi, vinegars from fruit and grains, margarines (mentions trans fatty acids, but not soy), and shortenings (p. 1065-69).

Subjects related to vegetarianism include: Discussion of vegetarian diets (positive and accurate, in Chapter 1, p.

3). List of vegetarian side-dishes and main courses in this edition (27 recipes, p. 20). Vegetarian chili\* (p. 283). Dairy-free chocolate cake\* (vegan, p. 932). Ultra-orange cake\* (vegan, p. 932-33).

Irma Rombauer (the grandmother of Ethan Becker) first wrote the *Joy of Cooking* in 1931, “when domestic help was fast becoming a thing of the past and women all over the country were once again heading to the kitchen.”

Note: This cookbook was written by a committee of experts, put together by Maria Guarnaschelli. Many controversies and clashes of opinion arose out of this arrangement. Address: 3. Cockaigne, Cincinnati, Ohio.

3066. Sullivan, Cheryl; Rhodes, Kathy. 1997. *Soyfoods: A healthy profile*. Revised ed. Sioux Falls, South Dakota: South Dakota Soybean Board. 118 p. Illust. Index. 22 cm.

• **Summary:** Contents: Introducing soyfoods to your diet. The healthful soybean. Exploring soyfoods: Dried soybeans, fresh green soybeans, soy milk, tofu, textured soy protein, soy flour, soy grits, tempeh, miso, soy meat analogs. Where to find soy products. Nutrient information. Recipes: Breakfast, beverages, breads, appetizers & snacks, salads, soups, sandwiches, side dishes, main dishes, desserts. Guide to modifying recipes: A one-for-one substitution.

Talk with Betty Hansen at South Dakota Soybean Board. 2000. May 15. This cookbook (which is undated) was first published in 1996, and revised in 1997. It was reprinted by the Nebraska Soybean Board with their name and phone number on the rear cover.

Talk with Cheryl Sullivan. 2002. Aug. 12. This booklet is basically *Simply soy: A variety of choices*, with a new cover and title, plus a few pages of additional information added by the South Dakota Soybean Board in Sioux Falls. Address: 1. M.A., R.D.; Ph.D., R.D.

3067. Sunarlim, N.; Anwarhan, H. 1997. A synthesis of agronomic results of SYGAP II in Indonesia. In: Napompeth, Banpot, ed. 1997. *World Soybean Research Conference V: Proceedings*. Soybean Feeds the World. Bangkok, Thailand: Kasetsart University Press. xxiv + 581 p. See p. 500-02. Held at Chiang Mai, Thailand, 21-27 Feb. 1994. [5 ref]

• **Summary:** SYGAP is the soybean yield gap analysis; it was conducted in three locations in Indonesia. The objectives were to identify and alleviate yield constraints and to develop a package of improved practices—which is described.

In Indonesia, about 70% of the soybeans are used for human consumption, mainly in the forms of tempeh, tofu, soy sauce, and tauco (fermented whole soybeans). Address: Bogor Research Inst. for Food Crops, Tentara Pelajar 3A, Bogor, Indonesia.

3068. Lang, Susan. 1998. Extraterrestrial food is cooking in lab. *Cornell Chronicle (Ithaca, New York)*. Jan. 15. p. 7.

• **Summary:** “To help NASA plan the cuisine for future

lunar and Martian space colonies, and Cornell chef, nutritionist, food engineer and vegetarian cooking teacher are collaborating to develop and test tasty, nutritious and economical recipes that astronauts can prepare from a limited set of 15 to 30 crops to be grown in future space habitats. Wheat and potatoes are the staples to be complemented with rice, soy and peanuts, salad crops and fresh herbs, all to be grown hydroponically in artificially lit, temperature-controlled space farms.

“The fare now being tested at Cornell by weekly taste-testing panels composed of students, faculty and staff includes seitan tacos with lettuce and tomato sprinkled with earthmade cheese, carrot ‘drumsticks,’ tempeh sloppy Joes, basil pesto with soy nuts, pasta primavera and tofu cheesecake.

“Our goal is to develop a database of food-processing information and a menu of at least 100 primarily vegetarian recipes of familiar and new menu items based on crops raised in a bioregenerative life support system,” said Jean Hunter, the food and biological engineer and associate professor of agricultural and biological engineering at Cornell who is heading up the project.” Also working on the project are David Levitsky (professor of nutritional sciences and psychology), Rupert Spies (a chef and lecturer in food and beverage management in the Cornell School of Hotel Administration), and Adriana Rovers (formerly a caterer and a teacher of vegetarian cooking who prepares the recipes and runs the tasting panels). The researchers launched the project 6 months ago, with a \$507,000 three-year grant from NASA. A photo shows Jean Hunter with some hydroponically grown plants for the project.

Talk with Jean Hunter. 1998. Jan. 22. A news release was issued (which Jean sent) and this story got picked up by the Microsoft News Service, MSNBC Web News, and by Yahoo Web News; both appeared on the Web. The *Cornell Chronicle* article, with photos in color, was also put on the Web at <http://www.news.cornell.edu/Chronicles/1.15.98/NASAfood.html>. A recent experiment included a 91-day closed-chamber study with 4 crew members at Johnson Space Center. It was checking an advanced life support system which included some air regeneration by plants. For ten days they fed the crew of four vegan foods—including tempeh, tofu, and many other soyfoods. A copy of the menu is available. The crew said it was so satisfying to have food that looked, tasted, and smelled fresh. “It made all the difference.” NASA needs to develop meals that can be created from foods grown in space because the cost of transporting food from Earth on long missions is “astronomical.”

Note: It costs roughly \$1,000 to \$10,000 to transport one pound of anything to the moon.

3069. Boyle, Alan. 1998. Recipes for beyond a small planet: Researchers help NASA develop menus for moon, Mars

(Web article printout). *MSNBC Web News*. Jan. 19.

• **Summary:** This article, based on a news release from Cornell University, appeared on the Web at <http://www.msnbc.com/news>. It begins: “Carrot drumsticks? Soybean sloppy Joes? Tofu cheesecake? It sounds like a vegetarian’s dream and it could be an astronaut’s reality on Mars or the moon, if food experts from Cornell University have their way. The Cornell team is developing recipes for long-duration spaceflights as part of a program funded by NASA.” Address: MSNBC.

3070. Weber, Thomas E. 1998. Takeout food: NASA is seeking recipes that travel really well. *Wall Street Journal*. Jan. 27. p. B1.

• **Summary:** The article begins: “That’s one small step for man. One gigantic leap for tofu.” A group at Cornell University (Ithaca, New York) is working under a NASA grant to develop meals that can be prepared almost exclusively from vegetables that grow well in space. For long space missions, like a flight to Mars, spacefarers may not be able to carry enough food to last the trip, so they will need to grow and cook their own. Trying to produce meat during the mission is too inefficient. “That has set off a space race to develop vegetarian meals that astronauts can stomach. The researchers believe they have found the right stuff” including tempeh, “a sort of super-tofu made from soybeans, and seitan, a gluten extract from wheat.” Jean Hunter, a Cornell professor heading the project, says that Creamed tempeh, cooked in soy-milk sauce, “takes a little getting used to.” Includes a recipe for Sloppy Joe Tempeh. Address: Staff reporter.

3071. Welters, Sjon. 1998. Re: Move to Cabot, Vermont. A seitan and a tempeh company in Vermont. Letter to William Shurtleff at Soyfoods Center, Jan. 29. 3 p. Handwritten. [1 ref]

• **Summary:** Sjon and his family have moved to central Vermont and purchased a farm. He will be planting oats this year for a local organic farm. The family mail order business, Bread & Stuff, relocated with them. Sjon also opened a sushi bar and natural foods deli (named The Wrap) in Montpelier, Vermont’s capital. Nearby are Sheffield Seitan of Lydon, Vermont, and Vermont Soy of Waterbury, Vermont, “which makes the best organic tempeh I’ve tasted so far in the U.S.”

3072. Berghofer, Emmerich; Grzeskowiak, B.; Mundigler, N.; Sentall, W.B.; Walczak, J.J. 1998. Antioxidative properties of faba bean-, soybean- and oat tempeh. *International J. of Food Sciences and Nutrition* 49(1):45-54. Jan. [42 ref]\*

• **Summary:** Tempeh fermentation increased the antioxidative effects in all three raw materials, but the largest increase was obtained with flour derived from faba beans. Address: Institute of Food Technology, University of Agricultural Science, Muthgasse 18, A-1190, Vienna,

Austria.

3073. Golbitz, Peter. 1998. *Tofu & soyfoods cookery: Delicious foods for a healthy life*. Summertown, Tennessee: Book Publishing Co. 176 p. Illust. (3 photos). Recipe index. General index. 21 cm.

• **Summary:** Contents: Preface and acknowledgments. The history of soyfoods. A closer look at soybeans. Soybeans and health: Introduction, malnutrition, cardiovascular disease, cancer, osteoporosis, menopause, more to come. Using soyfoods: Whole dry soybeans, tofu, soymilk, soy flour, textured soy protein, green vegetable soybeans, tempeh, miso, soy sauce, soy protein concentrate, soy protein isolates, natto, soybean oil, second generation soyfoods, meat alternatives, cheese alternatives, soy yogurt, nondairy frozen desserts, mayonnaise and dressings, instant soups and other dry mixes, margarine, lecithin, soynuts and soynut butter, soy sprouts, okara or soy pulp. Basic recipes. Breakfast. Bread. Salads & dressings. Soups & sandwiches. Main & side dishes. Desserts & drinks. Glossary. U.S. & Canadian soyfoods companies. Sources of information on soyfoods. Nutrients in soyfoods.

Contains 125 of Peter Golbitz's favorite recipes, selected from the works of some of "the world's leading soyfoods chefs." A list of these "leading vegetarian and soyfoods pioneers" (all of whose books have been published by The Book Publishing Co.) appears on the rear cover. Peter (born in 1952) lives with his wife, Sharyn Kingma, and son on a beautiful island off the coast of northern Maine. A color photo of the family appears on the rear cover. Twenty years ago (in 1978) Peter was "first introduced to tofu and the wonders of soyfoods." A photo of Peter with his book appears in the Book Publishing Catalog of Jan. 1999. Address: President and Founder, Soyatech, Inc., Bar Harbor, Maine. Phone: 207-288-4969.

3074. Greenberg, Patricia; Hartung, Helen Newton. 1998. *The whole soy cookbook: 175 delicious, nutritious, easy-to-prepare recipes featuring tofu, tempeh, and various forms of nature's healthiest bean*. New York, NY: Three Rivers Press (Crown Publishers / Random House). ix + 221 p. Illust. Index. 24 cm.

• **Summary:** Contents: Acknowledgments. Introduction. All about soy: Health benefits of soy (reduces the risk of heart disease, lowers the risk of breast cancer, eases the symptoms of menopause, protects against prostate cancer, prevents digestive disorders {when using whole soybeans or soy products containing high levels of fiber}, eliminates the problem of lactose intolerance, prevents the problems of milk allergy, beneficial in diabetic diets), cooking with soy products (meat analogs or meat substitutes {soy sausage, soy bacon, hamburgers and hot dogs}, miso, okara, soy cheese, soy milk, soy sour cream, soy yogurt, soy flour, whole soybeans, soybeans-green, soybeans-roasted, tempeh,

textured vegetable protein (TVP), tofu & silken tofu; Soy-based foods (containing little or no protein): Egg replacers, soy margarine, soy mayonnaise, soybean oil, soy sauce) how to get optimum nutrition from soy (protein, carbohydrates, fat, cholesterol, fiber, sodium), nutrition information. Sample menus (for 3 meals a day, 7 days a week). Recipes: 1. Appetizers, dips, and spreads. 2. Salads and vegetables. 3. Brunch and breads. 4. Pizza and sandwiches. 5. Soups and stews. 6. Main dishes. 7. Pastas and grains. 8. Desserts.

This books contains almost 200 delicious and easy ways to add that essential 25 grams of soy protein to your diet. These recipes (each of which includes a nutritional analysis) are based on more than ten years of experience and experimenting (p. 2). Address: P.O. Box 10853, Beverly Hills, California 90213. Phone: (310) 474-4539.

3075. Lehnert, Dick. 1998. Specialty soybean varieties bring premiums for a price: Markets for food-grade varieties are growing. *Soybean Digest*. Jan. p. 64-65, 68.

• **Summary:** About 120,000 tons of specialty soybeans are now shipped from the USA to Japan each year—about 10% of the food-grade soybeans the Japanese buy. The soybeans must always be kept separate—"identity preserved." Growers typically get more dollars per bushel, but sometimes get fewer bushels per acre. The soybeans are made into foods such as tofu, tempeh, natto, or miso.

Kim Nill, deputy director for international marketing at the American Soybean Association, keeps tabs on the growing opportunities for specialty soybeans. He says seed companies are finding niche markets for food-grade soybeans.

Last year, Dupont introduced a variety that produces oil high in oleic acid (naturally lower in saturated fats and more heat stable without hydrogenation). Dupont is now working on a low stachyose bean. Pioneer Hi-Bred International grew 7,000 acres of low-linolenic oil beans for a market similar to that of high-oleic acid beans.

A photo shows a combine harvesting specialty soybeans that will be made into tofu.

3076. Mitchell, Paulette. 1998. *The complete soy cookbook: More than 150 simple recipes for good health and great taste*. New York, NY: Macmillan Publishing (A Simon & Schuster Macmillan Co.). xlix + 270 p. Illust. Index. 24 cm.

• **Summary:** A very attractive vegetarian cookbook. Each recipe is marked with one of three symbols: V = vegan, lo = lacto-ovo vegetarian, and l = lacto vegetarian. Contents: Preface: An ancient Asian secret isn't a secret anymore. Introduction: The whys (cancer, heart disease, osteoporosis, menopause, diabetes), the hows, soy food ingredients (soybeans, sweet beans {edamame}, tofu, tempeh, texturized vegetable protein {TVP}, soy milk, soy flour, soy oil, soy sauce), other soybean products (soybean sprouts, okara, miso, roasted soynuts, isolated soy protein {ISP}, dairy

and meat analogs), a note on food allergies. Soy success: Stocking your refrigerator and pantry, using the recipes, kitchen equipment. 1. Appetizers. 2. Soups. 3. Salads. 4. Entrees. 5. Desserts. Appendix: Recipes listed by soy food categories (and within each category by recipe type—such as salads, soups, desserts): Whole soybeans (32 recipes), sweet beans (green vegetable soybeans, 7 recipes), tofu (96), frozen and thawed tofu (14, all entrées), pressed tofu (12), tempeh (14), textured vegetable protein (TVP, 4), soy milk (14). Note that tofu was used in by far the most recipes (96), followed by whole soybeans (32).

Paulette, who lives in Minneapolis, Minnesota, is a cooking instructor, restaurant consultant, and lecturer. Paulette is the author of many Macmillan books, including *The 15-Minute Vegetarian Gourmet*, *The 15-Minute Single Gourmet*, and *The Complete Book of Dressings*. This book is dedicated to her 14-year-old son, Brett. Address: Minneapolis, Minnesota. Phone: 612-941-7576.

**3077. Product Name:** Smoked Tempeh [Savory Herb, Spicy Peanut, Sweet & Tangy].

**Manufacturer's Name:** Smoke & Fire Natural Foods.

**Manufacturer's Address:** 1885 North Main St., Sheffield, MA 01257. Phone: 413-528-6891.

**Date of Introduction:** 1998. January.

**Wt/Vol., Packaging, Price:** 6 oz vacuum pack. Retail for \$2.15 (1998/07, Massachusetts; Range: \$1.89 to \$2.50).

**How Stored:** Refrigerated, 90 day shelf life (at 34-36°F).

**New Product—Documentation:** Talk with then form filled out and Label sent by José Antunes (pronounced jo-ZAY ahn-TU-nays), founder and president, who is Portuguese. 1998. June 29. The idea for this pioneering product was sort of a logical extension of smoking tofu. José likes tempeh very much and he wanted to have more products in his line. An invoice [sent to Soyfoods Center] shows that the Savory Herb flavor was first sold on 26 Jan. 1998 and the Spicy Peanut on March 9. A case of six wholesaled for \$12.60 (for each product).

Note: This is the first smoked tempeh product seen worldwide.

Leaflet (8½ by 11 inch) from Natural Products Expo East (Baltimore, Maryland). 1998. Sept. 9-13. The company's new registered trademark is "Soy with Sizzle." Gives the ingredients and product specifications for all the company's products including a new product: Sweet & Tangy Smoked Tempeh. Talk with José. 1998. Sept. 16. His company has discontinued the Spicy Peanut and added a new flavor, Sweet & Tangy Smoked Tempeh, which was launched at the Baltimore show. It is now on the market. Its ingredients: Organic soy tempeh (organically grown soybeans, water, tempeh culture), organic shoyu soy sauce, organic apple cider vinegar, organic ground mustard seeds, organic evaporated cane juice, lemon juice, organic orange rind, granulated onion, granulated garlic, spices & natural

wood smoke.

**3078. Heskamp, Marie-Luise; Barz, W. 1998.** Expression of proteases by *Rhizopus* during tempeh fermentation of soybeans. *Food / Nahrung* 42(1):23-28. Feb. [Eng]\* Address: Germany.

**3079. Indiana Soybean Board. 1998.** Indiana soyfoods locator guide: A guide to finding soyfoods in the supermarket and health food store. Lebanon, Indiana: Indiana Soybean Development Council. 48 p. 28 cm.

• **Summary:** This is the first edition of this Guide. On the cover is a paper grocery bag resting on a bed of soybeans and chock full of foods: Veggie Slices (soy cheese), soynut butter, veggie burger, tofu, soymilk, soy flour, plus carrots, celery, and cooking oil. Contents: Food pyramid. Soyfoods descriptions—Meat the Bean: Introduction, green vegetable soybeans (edamame), hydrolyzed vegetable protein (HVP), infant formulas—soy based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen desserts, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour, soy grits, soy protein concentrate, soy protein isolate (isolated soy protein), soy protein—textured (textured soy protein, textured soy flour), soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk—soy beverages, soynut butter, soynuts, soybean oil & products, sprouts—soy, tempeh, tofu & tofu products, whipped toppings—soy-based, yuba. A taste for health—Scientists are learning about soy's health benefits: Heart disease, osteoporosis, menopause, cancer, isoflavones. Soyfood icon chart. Soyfood facts & recipes: Meat alternatives, soybean oil, textured soy protein, whole soybeans, soy flour, soymilk, tofu. Composition and nutrient content of soyfoods. Soyfood conversion charts: description of one serving of soyfoods, guide to modifying recipes, soyfoods substitution chart. Mail order soyfood companies. Soyfoods Web site packed with information. Soy cookbooks. Soy resource books. 1-800-talksoy. Soyfoods market search map; where to find soyfoods in the supermarket (a two page color layout of a supermarket displaying where soyfoods are located). Soybeans... they're in almost everything. Finding soyfoods at the supermarket (store listings by county). Address: Indianapolis, Indiana 46205-1744. Phone: 1-800-275-7679.

**3080. INTSOY. 1998.** INTSOY course: Soybean processing and utilization. May 26 to June 19, 1998 (Brochure). Urbana, Illinois. 2 p. 8 panels. 22 x 10 cm each.

• **Summary:** Contents: Topics to be presented in the 1998 course: Basic processing concepts, nutrition and functionality, extrusion technology, oil extraction, soymilk and dairy analogs (soymilk, soy yogurt, soy ice cream), Oriental soybean foods (tofu, tempeh, etc.), animal feed applications, quality control, animal feed applications, overview of the soybean industry, economics and marketing

of soy products. Cost and travel information (the course costs \$4,300 plus about \$1,600 for room, board, and other local living expenses. INTSOY is unable to offer scholarships).

The course time consists of 35% lectures, 45% hands-on exercises, and 20% industry visits. This is the 18th offering of the training program. Some 200 persons from 41 countries have attended the course. Danny Erickson is the training officer in charge. E-mail [intsoy@uiuc.edu](mailto:intsoy@uiuc.edu). Address: International Soybean Program, Univ. of Illinois, 35 Environmental and Agricultural Sciences Building, 1101 West Peabody Drive, Urbana, Illinois 61801. Phone: (217) 333-6422.

3081. Lindsay, Shirley H.; Claywell, Lora G. 1998. Considering soy: Its estrogenic effects may protect women. *Lifelines (Association of Women's Health, Obstetrics and Neonatal Nurses) (Hagerstown, Maryland)* 2(1):41-44. Feb. [14 ref]

• **Summary:** Contents: Introduction. Understanding soy. Soy and menopause. Effects on osteoporosis. Soy & breast cancer. Effects of cholesterol. One sidebar, titled "A look at popular soy foods," gives a brief definition of miso, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), roasted soy flour, tempeh, tofu.

A second sidebar, titled "One woman's experience," states that author Shirley Lindsay has been a near vegetarian for two years, using soy protein as her main protein source, but also an occasional serving of fish. She consumes one 14-oz. glass of soymilk and 5-8 oz. of low-fat silken tofu daily. Her diet contains approximately 70 mg/day of isoflavones. She also eats a very low-fat diet that includes low-fat dairy products, egg whites, fruits, vegetables, and olive oils. Lindsay also bakes with soy products and flax seed; the latter is rich in lignans.

"Lindsay has successfully eliminated 90 percent of her menopausal symptoms, as well as decreased her serum lipids. When she began the diet, she eliminated animal proteins except skim milk and egg whites, and within 10 days she noted a 90 percent decrease in hot flashes and night sweats. At one point, Lindsay only ate isolated soy protein powder supplements, but her menopausal symptoms returned because a significant amount of phytoestrogen is lost in the processing of powders." Address: 1. Asst. Prof. of Maternal-Newborn Nursing; 2. Director, Associate of Science in Nursing program. Both: Deaconess College of Nursing, St. Louis, Missouri.

3082. Stevens & Associates, Inc. ed. and comp. 1998. U.S. 1998 soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 47 p. 28 cm. [33 ref]

• **Summary:** This third edition of the U.S. Soyfoods Directory was produced for the Indiana Soybean Board by Stevens & Associates.

Note: Nasoya Foods has its own listing but Azumaya

does not. Azumaya is listed under Vitasoy USA Inc. as a brand. Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

3083. Carrasquillo, Fausto. 1998. Masao's Kitchen in Cambridge, Massachusetts, wants to make fresh tofu (Interview). *SoyaScan Notes*. March 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Fausto was a soyfoods pioneer in Puerto Rico. Nature Foods Inc., a company he founded and ran in Santurce, Puerto Rico, started making Organic Tofu Rico in Sept. 1980 and Tempeh in Jan. 1981. For the last year, he has been in the United States, working at Masao's Kitchen (run by Masao Miyagi), a macrobiotic restaurant in Cambridge, Massachusetts. Now he and this restaurant would like to make fresh tofu, for in-house used and to distribute elsewhere. He plans to stay at Masao's Kitchen in the USA for at least several more years. Address: Masao's Kitchen, P.O. Box 3812375, Cambridge, Massachusetts 02238. Phone: 617-776-7198.

3084. Schweitzer, Peter. 1998. Plenty International (Interview). *SoyaScan Notes*. March 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Plenty International is now the official name of their organization. This is the named under which they are registered with the United Nations, Canadian International Development Agency, and other government organizations. But "it's a mouthful," so they usually call it just "Plenty" for short. In the past, however, Plenty has sometimes used two names at the same time. In about 1982-83, after the original Plenty split up, the U.S. half usually called itself Plenty USA vis a vis Plenty Canada. In early 1998 the Board officially changed the name to Plenty International, and the organization is incorporated under that name with the state of Tennessee. They had to re-do the by-laws.

There is now also a Plenty Spain in Barcelona started by a guy from Argentina who worked with Plenty in the USA and Lesotho for many years. They do many projects but none of them are soy-related.

Bisi Iderabdullah, the founder and director of the Imani House project and soy program in Liberia, is currently in Brooklyn, New York, trying to raise grant money for her program in Liberia. Plenty recently sent their clinical director to Senegal for medical training. The work is ongoing, run by their local staff people, in Liberia, and Bisi plans to return soon.

Plenty Canada has gone through major changes. They moved their headquarters to an Indian reservation for a while and their whole board of directors was Native Canadian for a while. Peter is trying to find out what is going on; he has heard that some of the original people are now coming back into the organization.

Of Plenty's various soy projects around the world, the one in Guatemala is currently by far the most successful and active. The soy dairy is now on a solid financial footing, managed by Agostine and Elena Xoquic (pronounced cho-KEEK), who have been actively involved since about 1995. Amada del Valle, who worked with Plenty Canada and was close friends with Laurie, is no longer involved. Laurie has worked with both Plenty Canada and Plenty USA. The soy dairy is under the auspices of the *Comité de San Bartolo*, which is the village committee. They have struggled and hung in there during the difficult times, and now things are going much better. Their biggest market is the tourist restaurants in Panajachel and Antigua (Guatemala), but they do have 3-4 outlets in Guatemala City. They now have an outlet right on the village square in Solola, where they sell soy ice cream, tofu, and a soymilk popsicle that is very popular. Suzi and Peter went down to offer assistance in recent years. Plenty bought them a truck so they could start doing deliveries instead of riding buses with their buckets of tofu, and also helped them with some Spanish-language publications. Suzi did many soy demos in restaurants in Panajachel. Chuck Haren has been going there several times a year. Plenty has gotten them grants of roughly \$10,000 a year so they could upgrade broken equipment and refrigeration. They have developed some new products, and they are now making tempeh. The ongoing outside help has been essential to their survival, but they have learned how to operate—though they are not that ambitious. Chuck believes they could be much more successful. He feels they have an unlimited market. They earn enough money to pay the staff and put some back into the village. They operate a little nutritional outreach program.

Peter notes that the work with soy has always been very prominent through the history of Plenty's activities worldwide. "It's always been a part of the programs that people seem to like. I see a really healthy future for it."

Plenty had one 3-year period when Chuck was really well funded, with about \$50,000 from three public welfare foundations. New programs started in many places, including Liberia. Address: Executive Director, Plenty International, P.O. Box 394, Summertown, Tennessee 38483. Phone: 931-964-4864.

3085. Demos, Steve. 1998. New developments with soymilk and other soyfoods at White Wave. Part II (Interview). *SoyaScan Notes*. March 30. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Sales of White Wave's baked tofu are growing at 38% a year, while plain tofu is growing at 18-21% a year. White Wave is the leader nationally in the baked tofu category, with more than 60% of the market share. Plain dairy yogurt in America still outsells dairy yogurt with fruits and flavors, but it was the fruit yogurts that introduced consumers to the plain product. Baked tofu seems to be

playing the same role with respect to plain tofu. White Wave is about to invest very heavily in the automation of baked tofu. If a company's plant capacity is 250,000 units per week, it makes much more sense to produce baked tofu at \$1.80/unit instead of block tofu at \$0.70/unit. White Wave is trying to turn the tofu market from block to flavored, in order to gain market share and position—in exactly the same way the company has been trying to turn the soymilk market from aseptic to refrigerated.

One key question concerning baked tofu remains unanswered? How do consumers eat it? Steve thinks they are eating it in the car on the way home from the store as a salted snack food—or perhaps on sandwiches. Until White Wave can be sure of how it is used, they don't want to commit to positioning it against some other product—such as cheese or meat.

White Wave's first goal was to establish its products in the refrigerated dairy section. Whereas many companies still sell tofu to the produce section, White Wave never sells to the produce section any longer. Everything is refrigerated, controlled temperature during distribution and sale. Only rarely does a White Wave product end up being sold in any produce section; they are usually sold in the juice cooler or in the dairy section. 80% of White Wave's revenues come from the natural foods sector, and in natural foods stores all White Wave products are in the dairy section—as part of their shelf-set program, which has been very effective in establishing a beachhead in the refrigerated section. Around that now Lightlife and Yves each have their own sections. So the vegetarian category is emerging, usually located in the store around dairy cheeses, milk, yogurt, and eggs.

The most interesting insight Steve has gained in the last few years is the one that says consumers are picking four product categories that they want to see in supermarkets. So White Wave has been reducing the number of products it offers; it has dropped hot dogs, sausages, all burgers except tempeh burgers and lemon broil. The company is actively evaluating what consumers want and where they want to find it in the store. One new program will be to give consumers a free half-pint carton of Silk asking them to "Try this—It's the new milk."

Steve is very happy with Silk's sales performance over the past two years. "It's been exceptional, but it cost \$400,000 just to launch the product." According to data from SPINS, during the May-June 1997 period, the market shares for soymilk brands in the U.S. natural foods market were as follows: Westbrae 34%, Edensoy 32%, Vitasoy 16%, and Silk 7%. Silk's share is now 10%. Sales of Silk grew by 170% during the past year. The soymilk market grew by 21% during the same period, Edensoy grew at 30%, Rice Dream dropped 0.4%, and the rice beverage market contracted by 0.2%.

Tree of Life (which does not share its sales figures with SPINS) is no longer the biggest distributor in the USA.

United Naturals is now the biggest (after they bought Stow Mills) with sales last year of \$650 million vs. \$520 million for Tree. United Naturals also owns Mountain People's, Mountain People's Northwest (which was NutriSource), Rainbow—Chicago (Illinois), Rainbow—Denver (Colorado), Cornucopia, and Cornucopia—Atlanta (Georgia).

ConAgra is trying again to get into the natural foods industry. They recently tried to buy one big privately owned natural foods manufacturer, and were turned down! ConAgra launched a new "Advantage 10" line of frozen entrees (many of which contain gluten products) that is backed by Dr. Dean Ornish. White Wave is supplying them with some of these gluten products. ConAgra had a huge presence at the Anaheim show—yet they don't understand how natural foods shoppers think and see the world. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

3086. Bertran, Magda. 1998. Pioneros de la soja en España: Locos por la macrobiótica [Pioneers of soya in Spain: Crazy about macrobiotics]. *Vital*. March. p. 66-69. [Spa]

• **Summary:** This is the story of a community of about 20 adults and children who live in southeastern Spain, just north of Barcelona, in Moianés, near the towns of Castellerçol and Castellcir. Tofu, tempeh, veggie burgers, and other soyfoods (*derivados de la soja*) form an important part of their diet. Members of the community have created new food companies such as Vegetalia and Natursoy, and become pioneer soyfood processors in Spain. More recently, Luz de Vida has started to import high-quality natural products into Spain.

"The history of the production of soyfoods has diverse origins, according to the version of the protagonists. It can be said that it started about 20 years ago in the little village of Tavertet, due to the efforts of Josep M. Villagrasa, a person who was crazy about macrobiotics (*un "loco por la macrobiótica"*). We must also remember the pioneering work of Javier Arozena [sic. Arocena] and his company Zuaizto (*Arbolito*) in Vasco region.

In addition, two couples who were also "crazy," Joan Mateu and Lluïsa Playà, and Josep Maria Clapés and Sandra Cano, came together to share a house and experiences in La Floresta (Barcelona). Lluïsa (along with others) was running the restaurant Macrobiotic Zen, the first macrobiotic restaurant in the city of Barcelona, while in the kitchen Joan was preparing tofu for the restaurant, helped by Sandra and Josep Maria. The latter also worked as a homeopathic doctor. Lluïsa maintains that the first tofu manufactured in Spain was made in 1978, in the kitchen of that house named La Floresta.

Little by little the production of tofu grew, and Joan started to make seitan for the first alternative food shops that were created in Barcelona, and then throughout Spain. Address: Spain.

3087. Book Publishing Co. 1998. Catalog—1998 (Mail order). Summertown, Tennessee. 48 p. 23 cm.

• **Summary:** This catalog has a glossy color cover with five books pictured on a gold background. In the center is Tofu Cookery. Contains many books about vegetarian cookery (p. 14-29), including books on TVP, gluten and seitan, tempeh, soyfoods, and tofu. Address: P.O. Box 99, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: 1-888-260-8458.

3088. Seemo (H. Shapira); Kairava (J. Spaelstra). 1998. Re: Exciting new developments at Dakini Health Foods Pvt. Ltd. in Pune/Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, April 10. 1 p. Typed, without signature on letterhead.

• **Summary:** "Hello Bill. Greetings from hot, hot India, and some gossips too. 3 months ago we managed to close a deal on a 17,000 square foot plot about 7-8 km from our present place.

"We dug a bore well and found a good spring!!! And yesterday we got our electricity connection—a Big story in India.

"We are trying now for building permits and planning to have 5,000 square feet ready by next year some time. About half of the space will be for our soy project—tofu, soy milk, soyogurt drink, tempeh—and hopefully more. We can get nearly all the equipment built locally—steam boiler, cooking pots, refrigeration, etc. We also want to fabricate a pressure cooker, an okara press, etc.

"For grinders some hammermills are available but I think we prefer to get a sanitary stone grinder so please if you have the address of some manufacturer / stocklist of these. Models sold without motors are best. We will be happy to know as this type of equipment has never evolved in India and importing is the only solution. Taiwan, Japan, or the U.S. are all OK. We may possibly buy a small one for hummus production as well.

"All the best, with love. Seemo & Kairava.

P.S. Tempeh production is running smoothly, 60-80 kg per month, 7-10 per batch for now. Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

3089. Brown, Susan; Brown, Allan. 1998. The Noble Bean. *Food for Thought: Newsletter of the Ontario Natural Food Co-op (Canada)* No. 17. p. 6. April.

• **Summary:** "Noble Bean is owned and operated by Susan and Allan Brown. We manufacture our products out of a 750 sq. ft. production facility on 10 acres of land near Elphin, Ontario, in the Ottawa Valley. We are 22 miles from the town of Perth and 60 miles from Ottawa. Originally we were based in Toronto 18 years ago. Previously, we had spent many years living in the country and after establishing our market in the city, we had an excellent cottage industry that

we could carry on from afar.”

“Tempeh had been a part of our diet for years and once we learned how to make this amazing food, we started commercial production in 1980. We made our first major purchase of cooking equipment from a 60-year-old gentleman in Port Perry who had been stocking a few Toronto natural food stores with tempeh for a year. He had a stroke and could no longer continue. With a \$500 loan, we paid \$200 for a large custom-made cooker, a colander, racks and utensils, which we still use today.

“It was slow going at first, turning the industry and the public on to a new protein source. We made about 48 pounds per day, 4 days a week. While we were based in Kensington Market, we serviced the Toronto stores ourselves. Our production rate steadily increased as people became familiar with this new food. In 1985, when we did make the jump out of the city back to the land, we started producing 120 lbs. per day. It was at this time we took on our first distributor and our product got out much further.

“Through all of these times we were fortunate to be able to make a living at home. Children changed our lives immensely. Our two boys were raised with this business and home-schooled for years as they were growing. They are an integral part of the production line whenever they like and have the opportunity to make some serious pocket money.

“As the demand increased so did our production. We now make 200 lbs. per day, 3 days per week. We offer 6 different tempeh products all made from organically grown ingredients.”

Contains 3 tempeh recipes: Ginger tamari tempeh. Lemon broil. Tempeh salad—Our summer favorite! A sidebar describes “What is tempeh?” Address: Owners, Noble Bean, RR# 1, McDonalds Corners, ONT, Canada K0G 1M0. Phone: 613-278-0173.

3090. Haedrich, Ken. 1998. Feeding the healthy vegetarian family. New York, Toronto, London, Sydney, and Auckland: Bantam Books. 305 p. Index. 24 cm.

• **Summary:** A lovely vegetarian cookbook. Soy-related recipes include: Mom’s hot soy milk (p. 13). Tempeh barbecue, avocado, and Monterey Jack burritos (p. 79). Oriental tofu Reuben (p. 80-81). Tempeh barbecued sandwich topped with coleslaw (p. 82). Baked or grilled vegetable packets (with tempeh, p. 129-30). Spaghetti with tempeh tomato sauce (p. 148-49). Tempeh, onion, and cheese enchiladas (p. 181-82).

We especially like p. 292, titled “Mindful eating, smiling grace.” Ken Haedrich is a winner of the Julia Child Cookbook Award. Address: Rural New Hampshire.

3091. Ryan, Nancy Ross. 1998. Oh, boy! soy! Top chefs celebrate the diversity of soyfoods with 8 show-stopping dishes. *Vegetarian Times* No. 248. April. p. 36-43.

• **Summary:** Chefs from stylish restaurants sing the praises

of tofu and offer their favorite recipes: Jump start smoothie (with soymilk). Veggie Peking ‘Duck’ (with frozen, dried sheets of yuba). Miso risotto. Curried tofu and sweet potato wakaya. Barbecued tofu. Sweet-and-sour tempeh with cucumber and cauliflower. Golden-fried bean curd with tomatoes. Sauteed eggplant with miso sauce. Note: The word “soyfoods” is misspelled as “soy foods” throughout this article. Address: Chicago.

3092. Sass, Lorna J. 1998. The new soy cookbook: Tempting recipes for tofu, tempeh, soybeans & soymilk. San Francisco, California: Chronicle Books. 120 p. Illust. (25 color photos by Jonelle Weaver). Index. 21 x 23 cm.

• **Summary:** Contents: Introduction—The soy of cooking (descriptions of soybeans, black soybeans, soymilk, tofu, tempeh, miso, soy sauce). Appetizers and soups. Entrées. Soy on the side: Vegetables and grains; Salads, slaws and dressings; Scones and a few desserts. Mail order sources. Table of equivalents. A black-and-white photo shows the author. Note: This is not a vegetarian cookbook. Ingredients include swordfish, shrimps, mussels, codfish, clam chowder, etc.

Letter (fax) from then talk with Lorna Sass. 1996. Sept. 8. This trade paperback book, with many full-page color photos, is scheduled to be published in the spring of 1998. Chronicle Books is now publishing a series of books titled *The Vegetarian Table*, with each book featuring the vegetarian cookery of a different country. Address: 46 West 83rd St., New York City, NY 10024. Phone: 212-799-1085.

3093. Sass, Lorna J. 1998. Sensational soyfoods. *Delicious! (Boulder, Colorado)* 14(4):50-52, 54-55. April.

• **Summary:** Contains recipes using tempeh, silken tofu, black soybeans, and soymilk—excerpted with permission from her latest book, *The New Soy Cookbook*.

Note: The Delicious! website address is written at the bottom of every other page. Readers are invited to visit this website at 7 p.m. Mountain Standard Time for an online chat with soyfoods expert Lorna Sass. Address: Culinary historian, New York.

3094. Soyfoods Association of America. 1998. Soyfoods once a day for life! (Special advertising section). *Vegetarian Times*. April. 12-page color insert after p. 58.

• **Summary:** Contains large color ads by Nasoya (tofu and TofuMate), Morningstar Farms (Chik Nuggets), Eden Foods (organic black soy beans) Vitasoy (creamy original natural soy drink), Westbrae (Westsoy soymilks), Westbrae (Vigoraidd nutritional drink), Sno Pac (frozen Sweet Beans—organic green vegetable soybeans), and GeniSoy (soy protein bars). On the rear cover are additional small ads (each with a logo) for Lightlife Foods, Lisanatti, Monsanto, Soyco Foods—Div. of Galaxy Foods Co., Soyfoods Association of North America, and United Soybean Board.

Interspersed with the ads is advertorial text and “Soy facts.” The text on page 1 begins: “Miracle food. Health insurance in a pod. Nutritional powerhouse. The bean supreme. Nutritionists, physicians, researchers, chefs, and food experts of all kinds are raving about the healthfulness and great taste of soyfoods, and it’s no wonder; soy truly is a nutritional and culinary gift from nature.

“Soyfoods are delicious, convenient, and versatile. At breakfast, soy can make an appearance in the form of soymilk, scrambled tofu ‘eggs,’ or soy ‘sausages.’ A soy shake or veggie burger makes a great lunch. Try a tempeh stir-fry, or perhaps a creamy tofu dessert.

“So dig in... with the huge variety of soyfoods available at your local natural foods store, it’s easy to get your daily intake of soy, and reap the many benefits of the bean supreme.”

The inner contents: Food as medicine. Heart health. Fighting cancer. Menopause? What menopause? Strawberry smoothie. Protein punch.

Soy cooking tips (p. 4): Easy ways to incorporate soy into your baking: Use soy flour in your baking. Be aware that soy flour contains no gluten, and therefore yeast breads will not rise without the addition of some gluten-containing flour. About ¼ cup of soy flour per cup of unbleached white flour is recommended for breads, pastas, and pastries. In place of olive oil, try adding a few ounces of Nasoya Silken Tofu and a dash of lemon juice to mashed potatoes. Try mashing miso into your root vegetables in place of butter. When adding miso to dishes, add roughly 1 tablespoon per four servings. Add GeniSoy Natural Vanilla Soy Powder to your baked goods such as muffins or pancakes. Buy Eden Organic Soybeans in a can and use them the same way you would any other canned bean: over rice, with pasta, in stir-frys, etc.

It’s not only what you eat; it’s also what you don’t eat. Making healthy eating taste great. Soy fact: soybeans were traditionally considered one of five sacred crops in China.

No time to cook? Try these quick ways of getting soy in your diet.

Strong bones... a matter of calcium retention. Miso.

Soy fact: there is no word for “hot flash” in Japan. Soy beverage.

Miraculous tofu. So soy convenient. Soy fact: Western culture discovered tempeh through the Dutch colonization of Indonesia. Soy fact: tofu was unknown to most people in the United States until Chinese immigrants came to this country in the 1800’s. Tofu.

Tempeh. By the handful. Soy fact: miso was developed in China about 2,500 years ago. Where to find it. Address: Washington, DC.

3095. Brown, Allan; Brown, Susan. 1998. The origin of Plenty Canada (Interview). *SoyaScan Notes*. May 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In the late summer of 1974, having met and

become engaged on the Wisconsin Farm, Allan and Susan hitch-hiked to The Farm in Summertown, Tennessee, where they were married later that year. Allan was the founder and first director of Plenty Canada. Plenty USA had access to money from the Canadian International Development Agency (CIDA) for their carpenters in Guatemala who were rebuilding after the 1976 earthquake there. But before Plenty could get this money, they had to establish a branch or chapter of Plenty USA in Canada. Allan happened to be the person on the other end of the line when someone from Plenty USA phoned from Tennessee. He and Susan were living on a little farm outside of Halifax, so in about March of 1976, as they passed through Halifax on their way to Lanark, Ontario, Allan incorporated the organization as “The Plenty Relief Society of Canada”; it later came to be known as “Plenty Canada.” After doing the required paperwork, Allan and Susan went to Lanark to live on a piece of land with four friends who wanted to help Plenty: Bob Leviton, Ormond Lee, and Larry and Nancy McDermott. There was no “Farm” yet in Lanark and the four friends did not come from the Farm in Tennessee, but they felt akin to it. Starting immediately and for the next two years Allan ran “Plenty Canada” out of his bedroom in Lanark. But he didn’t know what to do. So he and Susan would hitchhike 60 miles each way into Ottawa in winter to talk with the Mennonites about what to do and what an NGO (non-governmental organization) is. When the first money came in after about 6-8 months it brought tears to Allan’s eyes; it was \$50 for an individual donor who had been referred to Allan by The Farm in Tennessee. Allan worked on getting Plenty’s credentials and making the organization “respectable.” In early 1977 (it was winter) Allan and friends organized a “Plenty Jamboree” (a large benefit for Plenty) in a rented hall at McDonalds Corners (which was 6 miles from the Farm). Not long thereafter, money began to flow from CIDA to Plenty USA’s work in Guatemala. In the spring of 1977 the papers for the Canada Farm in Lanark were finalized and signed in Tennessee. The land was in Larry McDermott’s name.

In the spring of 1978 Allan stepped down as director of Plenty Canada. Norman Ayerst, Allan’s closest and most trusted friend, took the job for the next two years. After that Larry McDermott became the director and continued for many years. In 1984 the Canada Farm disbanded. Larry and Nancy McDermott kept the land (since it was in their name) and continued to live on it.

In the late 1980s, Plenty had a great reputation for delivering good development projects. Adequate salaries were paid to those who put their life into Plenty and the need for additional funds necessitated a shift in focus. More projects were needed to raise more money to pay for an increase in expenses, and Plenty got those projects because of its shining reputation. But soon Plenty became too big for its management to handle. Communication and management

skills were lacking, and Plenty's effectiveness was greatly diminished during this time.

Allan and Susan now own ten acres of land near McDonalds corners and what used to be The Farm in Lanark. They run Noble Bean, a tempeh shop. Allan has been making tempeh commercially since mid-1979. A map of the area (in southeastern Ontario province) looks like this: Lanark is 16 miles east of McDonalds Corners, and Noble Bean is about 8 miles west of the Corners, past Elphin. To get to Plenty (on the former Farm) from McDonalds Corners, drive east about 3 miles, then turn north and drive 3 more miles. The nearest main towns are Perth (on Hwy. 7—Trans-Canadian Southern Route) and Lanark. Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3096. Roblin, Lynn. 1998. Asian staple soy good for you. *Toronto Star (Ontario, Canada)*. May 20.

• **Summary:** Discusses the health benefits of soyfoods, which may be caused by their rich content of isoflavones, soy sterols, and soy protein. Various soyfoods are discussed: Tofu, soy beverages (brands include So Good and ProSoya So Nice), soy cheese, texturized soy protein (TSP, such as So Soya made by Bay Hill Impex Ltd. and TVP Meatfree made by Health Haven: A Vegetarian Place), tempeh, and most soy flours.

3097. Hainer, Cathy. 1998. Oh, 'soy' wonderful! Shucking its hippie image, the bean goes mainstream. *USA Today*. May 29. p. 08.D. Final edition.

• **Summary:** "Over the years, soy products, particularly tofu, have been derided as weird hippie food. But now the soybean is a nutritional star, and baby boomers are integrating soy products such as miso and tempeh into their upscale cooking."

Also discusses miso, tempeh, soynut butter, tofu burgers and soy cheeses.

3098. *Travelin' Light (Lightlife Foods, Greenfield, Massachusetts)*. 1998. It was twenty years ago today... or thereabouts. Spring/Summer. p. 1-2.

• **Summary:** This is a nice history of the Tempehworks / Lightlife Foods. "In the late 1970s, in the hill towns of western Massachusetts, a unique mix of socially responsible, alternative lifestyle cottage industries were springing up. Frances Moore Lappé's influential book *Diet for a Small Planet* had just come out, articulating the benefits of a non-meat-based diet on both personal and planetary health. A founding partner in one of America's first natural foods tofu companies, Laughing Grasshopper Tofu, Michael was often asked by customers if anyone was producing tempeh. Sensing opportunity, Michael set out on his own to learn the craft of making tempeh and start a very small business. Initially called Tempehworks, the business was born in early

1979 in an abandoned car wash and soy tempeh was the sole product.

"When Chia Collins joined Tempehworks in 1980 there was no business plan and little structure to the organization. Chia's talents were an immediate asset to the upstart company."

"In the early years of the company, tempeh was still an unusual and unknown food and vegetarian diets were not common or well understood. Struggling to pay the bills, Chia and Michael suddenly realized that utilizing tempeh alone to accomplish their mission of converting people to a plant based, rather than meat based diet would take a tremendous amount of consumer education—far beyond the company's meager budget for such marketing activities. Their innovative solution to this dilemma was marketing products that were already familiar to their customers while still bearing the benefits of protein from plants. Enter, meatless alternatives to America's favorite foods: hot dogs and hamburgers.

"So, in 1984 the company changed its name to Lightlife Foods, moved to a larger location (this time a retired trucking terminal) and Tofu Pup hit the market. A delicious vegetarian hot dog made from tofu, Tofu Pups were an immediate success and Michael and Chia knew that they were onto something big. Vegetarian products were here to stay and the two soy entrepreneurs were more determined than ever to make Lightlife the leader in the field. In 1988 the company took a leap of faith, and with considerable support from the local community, received financing to expand its operations to meet the growing demand. Tofu Pups were soon followed by Smart Dogs, the first fat-free hot dog (and today, the country's best-selling meatless frank) and Smart Deli Slices, Lightburger and more."

Old black-and-white photos show: (1) Michael Cohen holding a jar of tempeh starter Culture, 1980. (2) Employees of the Tempehworks circa 1980. (3) Making tempeh at Tempehworks circa 1980. 3099. **Product Name:** Tofurky Deli Slices [Hickory Smoked, Original Style, or Peppered].

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 1998. May.

**Ingredients:** Hickory Smoked: Water, vital wheat gluten, tofu (water, soybeans grown without herbicides, pesticides,

or chemical fertilizers {and calcium sulfate coagulant}), white beans, garbanzo beans, natural vegetarian flavor, expeller pressed canola oil, shoyu (water, soy beans, wheat, salt), spices, lemon juice, calcium lactate from beets, salt. No nitrates or MSG.

**Wt/Vol., Packaging, Price:** 5.5 oz (156 gm) vacuum pack. Retail for \$2.49 (2002/03, Lafayette, California).

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per 1.5 oz (43 gm) serving.: Calories 120, calories from fat 15, total fat 1.5 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 286 mg (12%), total carbohydrate 14 gm (dietary fiber 2 gm [8%], sugars 0 gm), protein 13 gm. Calcium 2%, iron 7%. Percent daily values are based on a 2,000 calorie diet.

**New Product–Documentation:** Leaflet (8½ by 11 inches, color) sent by Seth Tibbott. 1998. Published in May. “The famous Tofurky. Now available in Deli Slices.” The product comes in two flavors: Original and Hickory Smoked. The back contains information on ingredients, nutrition facts, and quotes from satisfied consumers.

Postcard (color, 4 by 6 inches) sent by Seth Tibbott. 1998. “New! Tofurky Deli Slices. 100% vegan. Low fat.” The text on the back reads: “Now you can enjoy the great taste and texture of the Famous Tofurky all year long!” Talk with Seth Tibbott. 1998. Nov. 18. Original and Hickory Smoked were introduced in May 1998. The Hickory is smoked in a real smoke house. Product with Label sent by Seth Tibbott. 1998. Dec. 16. Both flavors. 5 by 8 inches. Hickory Smoked is black, yellow, red and white. Original style is Red, black, white, and yellow. At top of front panel: “Low fat. 100% vegan.” At bottom: “Tastes great cold or hot.”

Product (Hickory Smoked) with Label purchased at Safeway supermarket in Lafayette, California. 2002. March 11. Product evaluation: Excellent taste, texture, and packaging.

Letter (e-mail) from Seth Tibbott. 2009. Jan. 25. Peppered Deli Slices were first sold commercially in Sept. 1998.

3100. White Wave, Inc. 1998. White Wave (Website printout–part). [www.whitewave.com](http://www.whitewave.com). Printed June 21.

• **Summary:** Contents: Home page. 1. About White Wave (Mission statement, brief history; 1 p.). 2. About soy (Nutritional benefits; 1 p.). 3. Related sites/links (Vegetarian / soy / natural foods, sites about Boulder, Colorado; 1 p.). 4. What’s new. 5. Product info, questions and answers (Name of all products with nutritional, ingredient, and package view information; Frequently asked questions; Questions about allergies; How do I cook with this stuff; 6 p. total). 6. Where to find our products (Directory of retail stores). 7. Special offers (Books and bumper stickers which can be ordered from White Wave; 1 p.). 8. Recipes (8 pages of recipes for tofu, tempeh, and Silk soymilk on 3 x 5-inch cards).

“White Wave’s mission is to creatively lead the full integration of healthy, natural, vegetarian foods into the average American diet. ‘Our interest is in promoting the use of foods we consider the world better off *with*, rather than without.’ Steve Demos, president of White Wave.

“Founded 20 years ago in 1977 as a small tofu company, White Wave, Inc. has grown to become one of the largest soyfoods manufacturers in the United States and a leader in the vegetarian foods industry. White Wave’s reputation for quality, consistency and innovation has led its sales to grow 20% annually over the last 6 years.” Address: 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

3101. Brown, Allan; Brown, Susan. 1998. Making tempeh and other natural foods at McDonalds Corners, Ontario, Canada (Interview). *SoyaScan Notes*. June 22-24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In June 1985, after about 5 years in Toronto, they bought ten acres of land near McDonalds Corners (not far from The Farm in Lanark, Ontario), and moved Noble Bean onto that land. There they started to make tempeh.

Throughout the 1980s, Allan and Susan trained Plenty volunteers at Noble Bean to make tempeh; these volunteers then took that knowledge abroad—mostly to developing countries. Maya Clarke took it to St. Lucia, Peter Dudding to Sri Lanka, a Canadian lady to Lesotho, and Mario and Laura Rimoldi [not Rimaldi] to Barcelona, Spain. Allan and Susan had met the Rimoldis on The Farm in Lanark in 1983; they later started making tofu as well in Barcelona.

Also during the 1980s, the Browns started some new businesses to bring in additional income. First came a natural cookie company named Casey’s Cookies—after their firstborn son, Casey. Soon they were selling 40 to 60 dozen organic Casey’s Maple Pecan and Honey Walnut cookies into the Ottawa market. In 1990 they sold the cookie company and took a trip/vacation to Mexico in their camper. On the way, they stopped by The Farm in Summertown, Tennessee, where they stayed with their old friends Cynthia and Albert Bates—who had taught them how to make tempeh and tempeh starter in 1974. Now the Bates were “deep into the Mushroom People trip. They were pumpin’ the spores into logs out in front of their home with major rock and roll going on in the woods.” Again the Bates taught the Browns a new occupation—how to grow shiitake mushrooms. Back home in Ontario, the Browns grew shiitake on about 25 logs outside their home—but mainly for their own consumption, because it was a very labor-intensive process. Soon, however, they were buying and re-selling shiitake—which they do to this day. Later, they started an incense import business named Soul Scents, which soon became the most profitable of all.

The Browns now make 600 lb/week of tempeh, working 3 days each week. It is still a very hands-on process. Allan and Susan are both active in the tempeh-making process (they also share child care), but now they have hired a

woman who does much of the physical tempeh work. Most of Larry's time is focused on Soul Scents. Allan has always believed that vacuum packaging lowers the quality of tempeh. Their business has not grown in the last 5 years. He thinks it is because of the influx of meat analogs. Seth Tibbott did a survey before the Bali conference which showed that tempeh production in the USA peaked in 1989 or 1990. But several years ago Allan and Susan started an import business which has sales of \$250,000 last year, so they are now in good shape financially. Two other tempeh companies in Canada are Soy City Foods in Toronto (they make mostly tofu; their tempeh is sold mostly in large cakes to foodservice) and Sooke Soyfoods in Vancouver, BC (owner Wayne Fatt gets plenty of competition from Seth Tibbott's Turtle Island Foods in nearby Oregon). Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3102. Clarke, Maya. 1998. Learning how to make tempeh at Plenty Canada and introducing it to Sri Lanka (Interview). *SoyaScan Interview*. June 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Maya learned how to make tempeh at Noble Bean in Toronto during a two-week training program in the summer of 1984. She had been close friends of Norman and Sarah Ayerst, who worked with Plenty in Dominica, and who lived in back of the old Kensington Market in Toronto. Through Norman and Susan, Maya first met Susan and Allan Brown in Toronto, and specifically asked for that training—it was her idea, and that idea may have started a new program. She worked about 8-hours a day and soon was able to do the full production cycle. "Allan and Susan were very good teachers and really wonderful, interesting people." Maya went to Sri Lanka in September 1984; there she made tempeh and taught others how to make it. Maya thinks that she may have been the first person to be trained by Noble Bean to make tempeh in a developing country. Chuck Haren was also trained in about 1984, but probably on The Farm in Tennessee. Address: Sun & Sky Foods, 859 Dundas St., London, Ontario N5W 2Z8. Phone: 1-888-441-6680.

3103. Tamang, J.P. 1998. Role of microorganisms in traditional fermented foods. *Indian Food Industry (Mysore, India)* 17(3):162-67. May/June. [22 ref]

• **Summary:** This article is mainly about the benefits of fermentation and fermented foods. Contents: Introduction (main microorganisms are filamentous fungi, yeasts and bacteria, especially LAB = lactic acid bacteria). Biopreservation. Bioenrichment. Microorganisms that produce enzymes. Microorganisms that destroy undesirable components. Enrichment of the diet. Mixed starter culture. Traditional fermented foods of medicinal value (koumiss, kvass). Conclusion.

The following fermented soyfoods are mentioned:

Kinema, hawaijar, miso, natto, shoyu, tauco, and tempe [tempeh]. Koji is also mentioned.

"Fermented foods are defined as foods that have been subjected to the action of selected microorganisms by which a biochemically and organoleptically modified substrate is produced, resulting in an acceptable product for human consumption." Address: Microbiology Research Lab., Dep. of Botany, Sikkim Government College, Gangtok, Sikkim-737 102, India.

3104. *Vegetarian Times*. 1998. I can't believe it's not turkey: The name Tofurky may be funny, but its taste sure isn't. June. p. 18.

• **Summary:** The name "Tofurky" was designed to be amusing, but the flavor is no laughing matter—it's great. Tibbott, age 46, donates 1% of the company's \$1.2 million gross income to the Adopt-a-Turkey program run by Farm Sanctuary, an animal welfare group. Contains a brief history of Turtle Island Foods, which takes its name from Native American Folklore. During 1997 Turtle Island Foods saw a 196% increase in sales over the previous year. Color photos show: (1) Seth Tibbott, with beard and glasses. (2) Sliced Tofurky. Note: Seth Tibbott's name is misspelled as "Tibbot" throughout this article.

3105. Bramblett, Billy. 1998. Company history: Wildwood Natural Foods (Continued—Document part II). Fairfax, California. 10 p. Unpublished typescript.

• **Summary:** "The evolution: On January 2, 1982, there was a major flood in Marin County." The company was hit hard. By February Bramblett and Rosenmayr had attended a computer seminar and were convinced the company had better get computerized. "By March the new structure was set. Mr. Orbuch was in charge of production and distribution; Mr. Bramblett was in charge of tofu production, accounting, and administration."

Meanwhile Orbuch and Bramblett continued toward their goal of building sales to \$10,000 per week "and started looking into other small manufacturers that made similar products. Our first 'other distributed' product was the Solar Taco made by Rademacher/Worley Farms in Cotati. This product had been on the market for a year or two, but they did not have their distribution together. We also found some sub-distributors to take our products to West Marin and Sonoma County."

Bramblett "arranged for the purchase of an Apple computer along with accounting, spread sheet, and word processing software. The bookkeeping was transferred to the computer and soon Wildwood had timely financial reports that were used to analyze the operations. One of the main sources of financial loss were the returns. Wildwood had a policy from the get-go to guarantee sales. That meant that any product not sold by its 'pull-date' was credited to the store to which it had been sold. It was the job of the

distribution department (Mr. Orbuch & the route drivers) to keep this return rate low by correctly estimating how many sandwiches (and other products) would sell before their respective pull dates and deliver that amount to each store on each delivery day. Unfortunately, this was a difficult task and the return rate was about 15%, which was way too high for WNF to make a profit. Mr. Bramblett tried using the spread sheet program to analyze old sales data in order to make accurate predictions for the future. The computer did not have enough memory to accomplish this task. Fortunately, we had a sandwich maker who was a computer programming school grad and who agreed to write a program for the computer which would do all our invoicing and sales tracking as well as predict future sales and help us lower the return rate. He did so and, although the prediction part was way too cumbersome to deal with, Wildwood soon had a billing and sales analysis tool that we still use today.

“Meanwhile, we increased our product line to include baked and vacuum packed tofu, broadened the sandwich line to include avocado and cheese sandwiches as well as bean and rice burritos, and varied flavors of the BRT. We also refined the salad line and expanded the routes into the peninsula and Santa Cruz areas. By 1984 we were profitable enough to have bought out Mr. Duchesne, return the extra \$2500.000 that Mr. Bramblett, Mr. Orbuch, and Mr. Rosenmayr had kicked in, as well as pay a dividend of \$12,000 to each remaining partner, effectively returning the entire investment in five years, which is equal to a 20% per year return on investment. The partners decided to form a new partnership to buy a piece of property in Fairfax, on which they could expand WNF. And so they did, right down the street, at 31 Bolinas Road.

“The property was a three lot parcel, which housed a funky car repair facility and which was a major eyesore. The actual purchase and all the trials and tribulations we went through with the town is a-whole-’nother story. Suffice it to say that, it was a major pain in the ass which is well documented in the local paper of the day *The Fax*. We also endured major problems from Sherman Chickering, who lived in a neighboring house, but I won’t bore you with that story either.

“Also during 1984 we met Jeremiah Ridenour, who owned a major piece of Santa Cruz Tempeh and who aspired to make ‘local tofu’ in Santa Cruz. He had seen our products and wanted to join up with us in creating a mid-size tofu operation in Santa Cruz to replace one that was about to fail. He had space for such a project in the building that housed the tempeh factory. The concept was also to be able to bolster tofu production output, which was nearing the limit in Fairfax.

“So a new corporation was formed which included Mr. Orbuch, Mr. Bramblett, Mr. Rosenmayer, and Mr. Ridenour. This was called Wildwood Natural Foods, Santa Cruz, Inc. So, while Frank was renovating 31 Bolinas in Fairfax,

Jeremiah was renovating the Mansfield Ave., Santa Cruz, location to house a new, steam cooking, pump-moving, ass-kicking modern hi-tech, but still hand-made, tofu factory.

“We soon realized that the Santa Cruz location would also serve as a distribution point and so it did, and still does. WNF (or ‘north’) maintains an office and several employees in Santa Cruz and operates four routes from that location. The downside of this whole Santa Cruz trip was that it took twice as long and cost twice as much to get underway as originally planned. Wildwood Natural Foods, Santa Cruz, Inc. did not produce a profit until 1991. Since it was a ‘Subchapter S’ corporation, the partners were able to take a tax loss on this project, but the grim reality was that north supported south and gave away many things to help it along (e.g. the very profitable soymilk production). This became a bone of contention between the partners.

“Meanwhile, north flourished, saleswise. Taking on new product lines for its distribution line, willy-nilly, sales grew incredibly. Mrs. Wiggles Rocket Juice led the way. Solar Tacos extended their product line and several different salsa lines were tired, with varying success. We also started distributing Brightsong Tofu products, most notably various salads to Diet Centers and a new soy cheese product called Tofurella. We also picked up Grainaisance’s mochi and amazake products. These ‘distributed’ products or ‘manu prods,’ as we called them, yielded low margins, 15% to 20% and it became increasingly difficult to manage the inventory. Additional walk-in space was built and purchased. The philosophy was to fill up the trucks that were going to the stores already to maximize the delivery efficiency. The short sighted part of this was that it began to take the drivers much more additional time to drive the route. The upside was that we began to have more clout in the stores and could get more and better shelf space.

“Growth takes a toll on cash flow and, in fact, the lack of that foresight nearly wiped Wildwood out during this incredible growth period. Time and again short term, no interest loans were made by the partners to bolster cash flow while we grew sales to \$100,000.00 per week. The administrative burden became much heavier during this period and the office space became cramped and unworkable. Mr. Bramblett left the company in early 1990 and Mr. Orbuch ran the north for the next two years. In 1990, the north suffered losses of nearly \$100,000.00 and nearly failed. Mr. Orbuch tried to make the company appear profitable in 1991, by eliminating key positions and programs, e.g. product development and product control. This did effectively save money but the infrastructure was severely damaged.” Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax California 94930. Phone: 415-485-3940 X-47.

3106. Leading Edge Group. 1998. The health and natural food market: Past performance, current trends, and strategies for the future. 2171 Jericho Turnpike, Suite 200, Commack,

NY 11725. 330 p. July. Price \$1,995.00. \*

• **Summary:** Three past editions of this report have been published by Business Trends Analysts, Inc. (BTA), which is located at the same address as The Leading Edge Group. BTA is the parent company. Since it was founded 20 years ago, it had published reports under two brand names, each of which has a different style. Business Trends Analysts Reports tend to contain mostly secondary research, with an abundance of charts and graphs, and less text and analysis. Leading Edge Reports are conducted by a person with a specialty in that area. The report contains much more primary research and in-depth analysis, and is roughly twice as expensive. This report was conducted by Melina Laverty.

Chapter 5 of this report is titled "Soyfoods and alternative meat products: Market dynamics.

Overall report—Contents: 1. Executive summary. 2. Overall market dynamics (including Soyfoods). 3. The market for soy foods. 4. The market for herbal teas. 5. The market for dairy foods. 6. The market for grains and cereals. 7. The market for frozen foods. 8. The market for snack foods. 9. The market for groceries. 10. The health food consumer. 11. The health/natural food store industry. 12. Competitor profiles. 13. Industry directory. Address: Commack, New York. Phone: 516-462-2410.

3107. Robertson, Robin. 1998. *The soy gourmet: Improve your health the natural way with 75 delicious recipes*. New York, NY: Penguin/Putnam/Dutton. xv + 191 p. July. Introduction by James W. Anderson, M.D. Index. 21 cm. A Plume book.

• **Summary:** Contents: Foreword. Introduction: Health benefits of soy protein, by James W. Anderson, M.D. 1. The soy solution. 2. Soy what? (soybeans, tofu, tempeh, textured soy protein or TVP, soy milk, miso, soy sauce, soy flour, dry-roasted soybeans or soy nuts, soy convenience foods, egg replacers). 3. Making soy protein work for you. 4. Breakfasts. 5. Let's do lunch. 6. What's for dinner? 7. Desserts. 8. Shakes and more. 9. Sample menus. Glossary (In addition to the soy foods described at Chapter 2: Gomasio, soy cheese, soy protein powder, and tamari soy sauce).

The author, who is a woman, worked as a professional chef during the 1980s, when she used large quantities of meat, eggs, and dairy products to prepare dishes in classic cuisines, such as French and Italian. In 1987 she made a dramatic change in her life, when she decided to stop working in professional kitchens, and start to pursue a healthier lifestyle, becoming a vegetarian, eliminating all meat and dairy products from her diet. Having lost both parents to heart disease and stroke, she had a personal interest in helping people learn how to cook and eat properly. Using soy products such as tofu, tempeh, and soy milk, she was able to recreate her favorite old recipes—sautéed dishes with cream sauces, rich pasta dishes, and even delicious cheesecakes—all without cholesterol. But these soy foods

actually offered a double benefit, for recent scientific studies show that they actually reduce cholesterol levels.

3108. Yayasan Tempe Indonesia (Indonesian Tempe Foundation) (Leaflet). 1998. Jakarta, Indonesia: Yayasan Tempe Indonesia. 3 panels each side. Front and back. Each panel 21 x 9.5 cm. Undated. [Eng]

• **Summary:** The inside left panel states: "Yayasan Tempe Indonesia (Indonesian Tempe Foundation) was founded in Jakarta on April 11, 1995 by Emmy Hartati Yunizar, S.H. Solicitor.

"Founders: 1. Prof. Dr. Mochamad Adnan. 2. Prof. Dr. Darwin Karyadi. 3. Dr. Sapuan. 4. Dr. Noer Soetrisno. 5. Dr. Mary Astuti. 6. Akil Dermawi.

"Advisory board: 1. Prof. Dr. Mochamad Adnan. 2. Prof. Dr. Darwin Karyadi. 3. Akil Dermawi.

"Executing board: 1. Dr. Sapuan. 2. Dr. Noer Soetrisno. 3. Dr. Mary Astuti. 4. Dr. Suyanto Pawiroharsono. 5. Dr. Hermana.

"General Secretary: Tri Hesti Murti. Secretary I : Kiki Partini. Secretary II : Dr. Suparmo. Secretary III : Mifta Roswita. Secretary IV : Eddy Sukmono. Treasurer 1: Mohamed Hartono. Treasurer 2: Hartini.

"Members: 1. Prof. Dr. Soeharto. 2. Prof. Dr. I. Sudigbia. 3. Dr. Arsiniati M. Arbai. 4. Dr. Slamet Sudarmadji. 5. Danaswara Madjid. 6. Dr. Mien Karmini."

The inside right panel states:

"The objectives: (1) To encourage community attention about the positive value of tempe as a healthy and nutritious food based on economical basis. (2) To encourage the modernization of tempe industry which meet the requirement of general manufacturing practices (GMP) and environmental adaptive. (3) To disseminate knowledge of tempe and its aspects. (4) To accomplish tempe product industrial development in all kinds, even as a first generation, second generation, and third generation. (5) To communicate the information exchange between the experts side and the industrial side. (6) To organize the rewards for people who put the greater interest on tempe development.

"Board activity: (1) To publish the regular issues, books, and to collect the references of tempe on related aspects. (2) To execute discussion, seminars, and meetings at national and international levels. (3) To make an inventory of tempe processing steps, problems faced and proposed solutions. (4) To make an inventory of tempe researches and distribute its related information to the interest groups. (5) To support research initiatives concerning many aspects of tempe. (6) To promote the establishment of industrial tempe plant which has awareness of environmental aspects. (7) To popularize tempe menu through a tourism promotion activity. (8) To organize the event of tempe exhibition in national and international levels. (9) To support training programs for tempe processors, particularly for the new tempe producers. (10) To promote research activities on tempe related matters

for the university graduate students.”

The inside center panel concludes: “Tempe is also known as a low-cost source of protein, which traditionally produced by small and medium scale home industries, and characterized as the industry that only required less capital, simple management, and poor handling practices which might neglect standard hygiene requirements.

“More than hundred thousands of tempe producers which are scattered all over Indonesia are able to provide job opportunities in the processing as well as marketing activities. With regards to the attempt of meeting the consumers demand for a modified non-conventional tempe product which is ready to eat, it is recognized that the further development of the tempe in the down stream industry scale plant has a greater prospect.

“Considering these reasons, The Yayasan Tempe Indonesia (Indonesian Tempe Foundation) is established, as the organization of experts and practitioners who put concerns and awareness of the promotion of tempe, through developing its scientific knowledge, industrial aspects and nutritional value.”

The back panel shows an overhead view of: “The Center of Legume Product Development, Cibitung Bekasi, West Jawa [Java], Indonesia.

Note: This undated leaflet was sent to Soyfoods Center on 14 Aug. 1998 by Dr. Sapuan. A cover letter was typed with signature on Yayasan letterhead. This English-language leaflet could well have been published as early as 1995 or (more likely) 1996. Address: Sekretariat: Bulog II Building, Jl. Kuningan Timur M.2/5, Jakarta Selatan 12950, Indonesia. Phone: (021) 520-7239; email amirh@indo.net.id.

3109. Castillo, Joaquín; Dunn-Meyell, Catalina Mary. 1998. Re: Three pioneering soyfoods companies in and around Barcelona, Spain. Letter to William Shurtleff at Soyfoods Center, Aug. 17. 3 p. Handwritten, with signature. [Eng; Spa] • **Summary:** This letter was written first in Spanish, then sent back with an English translation done by Joaquim’s wife, Catalina, who is English. For the last ten years Joaquim has been involved in the sale of a variety of ecological products, such as recycled stationary. He is currently contemplating a change in career and is looking at production of organic foods, which appears to be a very promising field in Spain. The region of Catalunya, of which Barcelona is the capital, has always been the pioneer in Spain with respect to organic products.

The three companies are: (1) Vegetalia S.L., c/ Placa de l’era S/n. 08183 Castellcir (Barcelona). Phone: 93 866-6161. Fax: 93 866-8298. Sr. Salvador Sala. They make tofu, tempeh, seitan, tofu paté, tofu hamburgers. 20 workers. Products sold mostly in health food shops.

(2) Natursoy, c/ Josep Galles, No. 36-52, 08183 Castell Tercol (Barcelona). Phone: 93 866-6042. Fax: 93 866-6250. Sra. Carmen Ascension. Vegetalia and Natursoy used to be

the same company, but they separated a few years ago. They make different types of tofu, seitan, hamburgers, etc. They also import organic products; cereals, biscuits, fruit juices, etc.

(3) La Sojeria—also situated in Barcelona. “I have been unable to obtain information about them, but their distributors are: Nutresco S.L., c/ Mossen Lluís David, No. 69. 08180 Moia (Barcelona). Phone: 93 830-0166. Fax: 93 820-8404. Sr. Dionis Guiteres.

Macrobiotic community: Ecole Cuisine et Santé, Fondation Macrobiotique, Pont de Valentine, F. 31.800 St. Gaudens, France. Phone: 61 89-7514. Fax: 61 89-3607. Run by M. René Levy, disciple of G. Ohsawa. The organization continues Ohsawa’s work and endeavours to make known the benefits of macrobiotics. Tofu is only produced for use within the community, which has been in existence for nearly 20 years. It is situated in a beautiful spot in the southeast of France. Address: Partida Rosers 26, E-03750 Pedreguer (Alicante) Spain.

3110. Ndungi Khoto, Aubry. 1998. Contribution a l’avant-projet d’une usine de production de *lait de soja* en poudre a Lubumbashi [Contribution to the rough draft for a factory for the production of soymilk at Lubumbashi, Congo]. Civil Engineer thesis, University of Lubumbashi, Polytechnic Faculty, Dep. of Industrial Chemistry. v + 154 + 16 p. Illust. 30 cm. [73 ref. Fre]

• **Summary:** Preface and dedication. Introduction. Part I: Review of the literature. 1. General information about soya and proteins: 1.1. The soybean (Botanical, origin and history, soybean production and commerce worldwide, soya in the Democratic Republic of the Congo {Congo, formerly Zaire}, structure and composition of soybean seeds, utilization of soybeans {with diagram}, food uses of soybeans {oil and meal, soy flour (4 types), soy concentrates and isolates, textured soy proteins {TVP, thermoplastic extrusion, spun fibers}, soymilk, tofu, other uses (shoyu, miso, tempeh, yuba)}, industrial uses of soybeans {linoleum, plastics, paints, varnishes, etc.}). 1.2. Proteins (in the human body, in foods), the structure of proteins (amino acids, ionization and acid-base properties of amino acids), protein bonds, denaturation. 1.3. Soya proteins (glycinin or globulin 11S, globulin 7S, hemagglutinins or lectins, protein inhibitors and other antinutritional factors, amino acid composition of soy protein). 1.4 Factors affecting the food value of soya: Acceptability problem (food value of raw soybeans), intolerance to soy proteins, off-flavors in soya and their source, inactivation of lipoxygenase, other treatments affecting the food value of soya: Alkalies.

2. Preparation and properties of soymilk. 2.1. Properties. 2.2. Advantages and disadvantages of soymilk compared with cow’s milk. 2.3. Preparation. 2.4. Commercial / industrial production using the Alfa-Laval process.

3. Reminder of certain operations required for the

preparation of soymilk powder: 3.1. Homogenization. 3.2. pasteurization and sterilization. 3.3. Concentration by evaporation. 3.4. Drying by atomization. 3.5. economies of energy in dewatering operations.

4. Some ideas on the methods of sensory evaluation: 4.1. The different methods. 4.2. Results and interpretations.

5. Important ideas in the study of the market, in determining the capacity of production, and in the economic evaluation of a project: 5.1. Study of the market. 5.2. Determining the capacity of production. 5.3. Economic evaluation of a project, incl. estimating fixed capital by adding capital costs.

Part II: Experimental, industrial calculations, economic calculations. Introduction. 6. Origin and characterization of the raw materials, trials for inactivation of lipooxygenase. 7. Determination of the optimal conditions for the preparation of soymilk. 8. Results of pilot plant trials. 9. Market study and determination of the capacity of production. 10. Description and calculations for the installation. 11. Economic evaluation of the project. General conclusion.

Tables show: (1) Number of people that can be supported for 1 year by the production from one acre devoted to certain crops and animals. Fewest: Beef 190. Pork 319. Poultry 457. Most: Potatoes 5,329. Split peas 6,901. Soybeans 9,075. Algae 43,200–154,000. Yeast 3,275,000. (1.1) Leading soya producing countries in 1985 (worldwide, with area, production, and yield; USA, Brazil, China, Argentina, India). (1.2) Leading soya producing continents in 1985 (North and Central America, South America, Asia, USSR, Europe, Africa, Oceania). (1.3) Leading soya trading countries in 1985. Importers: Japan, Netherlands, R.F.A. (Republique Federal Allemagne = Germany), Spain, Italy. Exporters: USA, Brazil, Argentina, China, Paraguay. (1.4) Production of soya in the Congo, by province 1970-1978 (the leading producer by far in 1978 was Western Kasai). (1.5) Production of soya in Katanga [formerly Shaba, before that Elisabethville] (1990-1994; by far the leading producer is Tanganyika). 1.6 Total production of soya in the Congo (1,000 metric tons) from 1970-1995 (increased from 1.7 in 1970-74 to 18 in 1995). (1.7) Average composition of different parts of the soybean seed. (1.8) Physico-chemical composition of soybean seed (ranges and average). (1.9). Mineral content of soybeans. (1.10). Vitamin content of mature soybean seeds and soybean meal. (1.11) Fatty acid composition of soybean oil. (1.11A) Enzymes in the soybean: Lipoxidase, urease, lipases, beta-amylase. (1.12) Properties and characteristics of the water-soluble fractions of soybean seeds. (1.12A) Variations in the solubility of proteins from defatted soy flour at various pH levels. (1.12B) Amino acid composition of soybean protein. Address: Lubumbashi, Katanga Province, Congo.

3111. **Product Name:** Tempeh.

**Manufacturer's Name:** Avogadro's Number.

**Manufacturer's Address:** 605 S. Mason St., Ft. Collins, CO 80521. Phone: (970) 493-5555.

**Date of Introduction:** 1998. September.

**How Stored:** Refrigerated.

**New Product–Documentation:** Clute, Mitchell. 1999.

“Breaking the mold with tempeh: Praise from the chorus for *Rhizopus oligosporus*.” *Natural Foods Merchandiser*. June. p. 71, 74. At Avogadro's Number, a restaurant in Fort Collins, Colorado, Jon Long now makes 700 lb/month of tempeh; he supplies several local eateries with fresh tempeh patties.

Form filled out by Rob Osborne, owner. 2001. May. Rob has been the owner of this restaurant for 21 years. He began making tempeh in Sept. 1998. In early 1999 he began to sell his tempeh to other restaurants in Ft. Collins. His restaurant uses tempeh in regular menu dishes such as Tempeh Lasagna (vegetarian, with spinach, basil, cheeses, etc.), and Veggie Steak Sub on a homemade baguette. Each day they also have a tempeh special; today it is Tempeh Quesadilla, which is grilled tempeh with onions, cheese, put into a quesadilla, with avocado on top.

3112. Ginsberg, Beth; Milken, Mike. 1998. The taste for living cookbook: Mike Milken's favorite recipes for fighting cancer. Santa Monica, California: CaP CURE. Distributed by Time-Life Books. 118 p. Illust. Index. 26 x 27 cm. [2 ref]

• **Summary:** This is a gorgeous, low-fat vegetarian cookbook in which about half the recipes use soy as a major ingredient. It is loaded with color photos (many full page), playful graphics, and good advice. Note: 100% of the proceeds from this book are used to fund prostate cancer research. The book is available at bookstores nationwide, or it can be ordered by dialing toll-free 1-877-884-5433 (LIFE). Contents: Introduction, by Michael Milken. Preface, by Beth Ginsberg. Four nutritional principles of CaP CURE to fight prostate cancer and other hormonal cancers: (1) Limit dietary fat to 15% of total energy intake (calories). (2) Eat 5 or more fruit and vegetable servings per day. (3) Consume 25 to 35 grams of dietary fiber a day. (4) Consume 40 to 60 grams of soy protein a day. “Americans have a five times higher incidence of prostate cancer than people living in Asia and eating a traditional diet. Soups. Exercise. Entrees. Soy and soybeans. Sandwiches and sides. Cruciferous vegetables. Breakfasts and shakes. Desserts. Healthy pantry. Afterword, by Donald S. Coffey, PhD, President of the American Assoc. for Cancer Research and Professor of Urology, Oncology, Pharmacology and Molecular Sciences, Johns Hopkins Hospital, Baltimore, Maryland: We are what we eat, how does food cause or protect us from cancer (ROS = reactive oxygen species), how did we lose our way?, how did our diet change (“The great apes were primarily vegetarian, consuming great quantities of vegetables that are high in fiber”), what should we do? About CaP CURE.

Soy-related recipes include: French onion soup (with

soy cheese and soy sauce, p. 20). Broccoli potato soup (with grated nonfat cheddar-style soy cheese, p. 22). Shiitake miso soup (with silken tofu and low-sodium tamari sauce, p. 22). Taco salad with a chili lime dressing (with 1½ lb fat-free soy meat, p. 26). Chinese roasted tofu salad (p. 33). Orange ginger dressing (with white miso and tamari, p. 33). Chef's salad with miso shallot dressing (and Soy Deli Slices, p. 34-35). Thousand island dressing (with tofu, p. 34-35). Chopped vegetable salad (with 1 cup edamame, p. 36). Teriyaki tofu bowl with Chinese vegetables (p. 40). Tofu dog casserole with a pretzel crust (p. 42). Soy and Soybeans (with a sidebar on "understanding tofu," p. 44-45). Lasagne with "soysage" (with fat-free vegetarian sausage, silken tofu, and soy cheese, p. 46). Spinach cannelloni with fresh tomato sauce (plus soy milk and low-fat tofu, p. 48-49). Vegetable fritatta with roasted tomato salsa (and 2 lb tofu, p. 54-55). Enchilada pie with ranchero sauce (and 1 lb soy cheese). Greek spinach pie in a phyllo nest (with tofu, p. 61; remake of spanakopita). Homemade vegetable pizza with soy cheese (p. 62-63). Vegetable reuben (with tempeh bacon strips, p. 68). Tofu egg salad sandwich (p. 72). New Deli (fat-free hot dog, p. 75). VLT with herb mustard (and fat-free tofu bologna slices, p. 76). Broccoli in soy cheese sauce (p. 78-79). Fruit shake (with soy protein isolate, p. 84). Blueberry banana multi-grain pancakes (with soy milk, p. 87). Strawberry shortcake (with soy milk, p. 96). Carrot cake (with silken tofu, p. 100-01). Devil's "fool" cake with cocoa frosting (plus silken tofu, p. 104). Tofu cheesecake with fresh berry topping (p. 106-07). Banana cream pie (with 3 cups vanilla soy milk, p. 108). Old fashioned chocolate pudding (with 2 cups cocoa soy milk, p. 109). Maple flan (with 2 cups soy milk, p. 110). Address: CaP CURE, 1250 4th St., Suite 360, Santa Monica, California 90401. Phone: 310-458-2873.

3113. Goldbeck, Nikki; Goldbeck, David. 1998. *The healthiest diet in the world: A cookbook and mentor*. New York, NY: Dutton (Penguin/Putnam Inc.). xiii + 561 p. Sept. Illust. General index. Recipe index. 25 cm. [840+\* ref]

• **Summary:** This is an excellent book, with a wonderful title that lives up to its promise. Both authors are real professionals, with 25 years in the field. Contains extensive information about the importance of a wholefoods, natural foods diet, with plenty of fresh fruits, vegetables, beans, and soyfoods as sources of the many recently-discovered phytochemicals, which offer promising health benefits. The authors are fans of soyfoods, which are featured in both the text and recipes throughout the book.

In Part I: Goldbeck's Golden Guidelines, No. 5 is "Super Soy Foods" (p. 14-15) which encourages readers to "Make soy foods a regular part of your diet."

Part II is the recipe section, titled "In Nikki's kitchen: Healthiest diet recipes." The main soyfoods used in recipes are tofu (48 recipes!), tempeh (15), soy milk (14), miso (8), soybeans, whole dry (3), and soy flour (2). This
