book contains so many soy-related recipes that we cannot possibly list all of their names. So here are two samplers of such recipes to give a feeling of their diversity, extent, and inviting names. (1) Salad dressings and salads: Creamy miso-mustard coleslaw (p. 178). Tofu mayonnaise (p. 190). Creamy tofu Russian dressing (p. 191). Creamy tofu ranch dressing (p. 191). Lemon-tahini dressing (with soy sauce, p. 192). Creamy miso-mustard dressing (p. 193).

(2) Tempeh recipes: Tempeh strips (p. 31). Tempeh breakfast links (p. 32). Baked Italian tempeh (p. 38). Tempeh burgers (p. 39). Skewered tempeh with orange-nut crust (mini kebabs, p. 61). Maple-pecan tempeh (p. 98). Baked corn-tempeh hash (p. 98-99). Picadillo (Latin American sloppy Joes with tempeh, p. 99). Tempeh mushroom stew (p. 100). Asian grill (with marinated tempeh, p. 101). Tempeh kebabs (p. 102). Shish kebab in a bag (p. 103). Tempeh-bean chili (p. 114-15).

In Part III: Mentor, one entire chapter is dedicated to soyfoods ("5. In praise of soybeans," p. 408-29). The contents of that chapter: Introduction. Soy's special assets. The phytochemical furor. Protein plus. Soy fiber. Vitamins and minerals. Soy concerns. Soy food selection (incl. Western-style dairy and meat alternatives; soy cheese, soy ice cream, "soy-based imitation meat"). Stick with traditional soy foods: Tofu, tempeh, soy milk, soy nuts, whole soybeans (incl. edamame or green soybeans), soy sprouts, soy flour, soy grits, soy sauce, miso, okara (soy fiber), natto. Soy for health: Introduction, cancer (breast, prostate, and other hormonally influenced cancers), heart disease, diabetes, osteoporosis, women and soy, infant feeding. Nikki's dialog boxes: Mixing and matching soy protein. Just because they call it "milk": Nondairy vs. dairy. The question of salt. How to acquire your anti-cancer soy intake. Twenty-five grams of soy protein a day?

Soybeans are also mentioned in Chapter 6, "The beauty of beans" (see p. 431, 434). The 43-page bibliography of current scientific information on the health benefits of foods is worth the price of the book.

In the chapter titled "Controversial carbohydrates" is a long section about the glycemic index of foods titled "G-Force: A new perspective on carbohydrates" (p. 280-89); it includes a 6-page table showing G-force [glycemic index] ratings for individual foods. "Foods with a high G-Force [55 and above, bad] raise blood sugar levels quickly; this is usually matched by a rapid rise in insulin. Foods with low G-Force cause blood sugar levels to rise gradually. in which case insulin is usually released more evenly." Foods that tend to have a high G-Force are: Desserts and sweets (doughnut 108, graham crackers 106), foods made from refined flours (baguette 136, bagel 103, white wheat bread 100), sweet and refined breakfast cereals (puffed rice 132, Cornflakes 119, Cheerios 106), sugars (maltose 150, glucose 137, sucrose 92). Foods groups that tend to have low G-force are: Fruits (apple 54, apple juice 58, orange juice 63, but watermelon

103), legumes (soybeans 25, chickpeas 47), dairy products (yogurt 20, milk 46). vegetables (non-starchy). Address: Woodstock, New York.

3114. Marandino, Cristin. 1998. Would you like tempeh with that? *Vegetarian Times*. Sept. p. 16. [1 ref]

• **Summary:** Mark Tsai, a 53-year-old Taiwanese immigrant, owns a fast-food restaurant in Covina, California. A devout vegetarian, he bought a Tastee Freez franchise in 1984, but 9 years ago he converted it to an all-vegetarian menu—and renamed it Tastee Covina. His chili is made with crumbled tempeh, his hot dogs are all soy, and his burgers all start with “veggie.” A color photo shows the front of the restaurant.

3115. *Soya & Oilseed Bluebook*. 1998-- . Serial/periodical. Bar Harbor, Maine: Soyatech, Inc. Peter Golbitz, publisher and editor. Frequency: Annual.

• **Summary:** Preceded by Soya Bluebook Plus. A directory and information book for the soybean processing and production industries. The first issue (shipped Sept. 1998) is subtitled “The annual directory of the world oilseed industry.” On the cover, below a map of the world is printed the date “1999” in large letters, followed by “A Soyatech Publication.” Crops featured on the front cover and inside are “soya, corn, cottonseed, canola, rapeseed, sunflowerseed, palm kernel, palm, coconut, and peanut.”

Contents (the four main sections are marked with a fold-out tab): Translations of oilseed terminology (English, German, French, Spanish, and Portuguese). Organizations and government agencies: Complete listings by country. Oilseeds and oilseed products: White pages (Index, individual crops), catalog pages, yellow pages (complete company listing by country). Equipment supplies and services. Oilseed statistics. Oilseed reference: Oilseed glossary, standards and specifications, oilseed technical charts and tables. Indexes: Comprehensive index, internet address index, brand name index, advertiser index.

Soy-related terms appearing in the translation section (p. 9-15) are: (1) Oilseeds and products: dairy analogs, lecithin—edible, lecithin industrial, meat analogs, miso, organic soy products, soy distillate, soy fiber, soy flakes—defatted—edible, soy flakes—full fat, soy flour—defatted, soy flour—enzyme active, soy flour—full fat, soy flour—low fat, soy flour—roasted, soy flour—textured, soy grits, soy isoflavones, soy livestock feed, soy oil margarine, soy oil shortening, soy oil—crude, soy oil—edible, soy oil—hydrogenated, soy oil—industrial, soy oil—refined, soy oil-based fuel, soy protein concentrate, soy protein isolate, soy protein—hydrolyzed, soy protein—industrial, soy sauce, soy sterols & tocopherols, soy-based foods—other, soybean fatty acids, soybean hulls, soybean meal, soybean meal—full fat, soybean seed breeder, soybean seed (for planting), soybean soapstock, soybeans—food grade, soybeans genetically modified, soybeans—green vegetable, soybeans—identity preserved, soybeans—non-gmo, soybeans—

organic, soybeans, whole dry, soymilk beverages, soymilk powder, soynuts, tempeh, tempeh starter cultures, textured vegetable protein, tofu & tofu products, tofu powder. (2) Equipment & services: Coagulants for tofu, soymilk & tofu processing equipment, sprouting equipment. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

3116. **Product Name:** Tempeh Burger.

**Manufacturer's Name:** Sun Foods Ltd.

**Manufacturer's Address:** 115 McCormack St., Toronto, ON M6N 1X8 Canada. Phone: 416-766-8214.

**Date of Introduction:** 1998. September.

**New Product—Documentation:** Letter (fax) from Jon Kessler of Sunergia Soyfoods. This new product was shown at the Natural Products Expo East at Baltimore, Maryland (Sept. 9-13). The company president is Harry Ha. Fax: 416-766-8309.

3117. Heskamp, M.L.; Barz, W. 1998. Expression of proteases by *Rhizopus* species during tempeh fermentation of soybeans. *Nahrung (Die) (East Germany)* 42(1):23-28. [32 ref. Eng]\*

Address: 2. Inst. fuer Biochem. und Biotech. der Pflanzen, Westfaelische Wilhelms- Univ. Muenster, D-48143 Muenster, Germany.

3118. Byrd, Deborah. 1998. Soy what? Once-bland products touted as tasty, hearty protein sources. *Contra Costa Times*. Oct. 21. p. G1, G9. [9 ref]

• **Summary:** Includes a brief review of nine new books that contain soy recipes, a discussion of the health benefits of soyfoods, a talk with William Shurtleff of Soyfoods Center, a glossary and brief description of several soyfoods (edamame, dry soybeans, tofu, tempeh, miso), and 5 recipes: Luscious lemon pie (with silken tofu). Tempeh simmered in red wine with *herbes de provence*. Tofu teriyaki. Chocolate velvet pudding (with silken tofu). Mushroom almond spread (with firm silken tofu). A huge color photo shows Chocolate velvet pudding in a stem glass with a sliced peach. Address: California.

3119. Black, Pam. 1998. Is soy the recipe for what ails you? *Business Week*. Oct. 26. p. 162-E18.

• **Summary:** The soybean gained prominence as a health food in the 1970s. Now even former junk-bond king Michael Milken is “promoting soy’s potential to fight prostate cancer...” During the past decade, scientists have discovered estrogen-like active substances named isoflavones or phytoestrogens which may be responsible for “soy’s health effects.”

Researchers have proven that soy has cardiovascular benefits, primarily by lowering low-density lipoprotein, or LDL (“bad cholesterol”). The mechanism is not clear; the

soy may keep LDL from being oxidized to form plaques that clog arteries. Soy increases flexibility of the arteries, which stiffen and harden with age. Thomas Clarkson, professor of comparative medicine at Wake Forest University School of Medicine (Winston Salem, North Carolina) emphasizes that some amount of soy protein must be consumed for the phytoestrogens to exert cardio-protective benefits. Isoflavone pills alone will not be effective. Scientists recommend consuming 30 to 60 mg of isoflavones per day with 7-10 gm of soy protein. A table shows good sources of soy protein, plus their content of isoflavones (mg) and protein (gm): Solgar Iso-Soy powder (1 oz) 103 / 12. GeniSoy natural protein powder (1 oz) 74 / 24. White Wave baked tofu (3 oz): 52 / 19. White Wave tempeh (3 oz) 47 / 18. Edensoy original drink (soymilk, 8 oz) 41 / 10. Soyboy Not Dogs (1.5 oz per dog) 35 / 7.

Soy's effects on cancer are less conclusive; most researchers doubt that soy is harmful. Soy has great appeal to women approaching or past menopause. Nutritionists think soy phytoestrogens may be safer than Premarin—which may increase the risk of breast cancer.

“And for those of you who’ve always turned up your noses at tofu, there is good news: Soy is available in such guises as hot dogs, burgers, cheeses, and ice cream.”

3120. Cowley, Geoffrey; Underwood, Anne; Springen, Karen; Davis, Alisha. 1998. Cancer & diet: Can you eat to beat malignancy? A controversial diet book is just one sign of the revolutionary new thinking about food and health. *Newsweek*. Nov. 30. p. 60-66. [3 ref]

• **Summary:** This cover story discusses the many phytochemicals in foods which may reduce risk of various cancers. On the cover is a huge fork piercing a piece of broccoli. The cover text reads: “Eating to beat the odds: What you need to know.” On the top half of page 60 is a large color photo of a “low-risk dinner,” ready to serve on a table. One of the three portions on the plate is a mixture of beans and tofu cubes. An arrow points to this portion; the caption reads: “The fiber in beans fights colon cancer. And the genistein in tofu appears to pack a disease-preventing wallop.” On the facing page (61) is a “high-risk dinner” with advice to omit the grilled steak, french fries, cheesecake, soda, butter on white bread, and salad dressing. The article overstates the health benefits of soy and gives no scientific references for its many glowing assertions.

By 1986 laboratory researchers were already discovering many new chemicals in foods; in test tubes these obscure compounds were showing remarkable ability to disrupt the formation of tumors. Some expert oncologists believe that the future of cancer prevention is food. Yet the cancer death rate in America is roughly the same today as it was in 1970. Americans die of breast, colon, and prostate cancer at five to 30 times the rate of people in many parts of the world. Take breast cancer: The death rate in Thailand and Sri Lanka is

2-5 per 100,000 women; in the USA it is 30-40 per 100,000.

A comprehensive analysis published last year by leading cancer researchers concluded that “poor eating habits account for a third of all cancer—roughly the same proportion attributed to smoking.” A spate of brash new books, some by physicians, argue that anyone can eat to reduce cancer risk. They offer specific advice, “from eating the right fats to upping your intake of soy.” The best selling of these how-to books is *The Breast Cancer Prevention Diet*, by Dr. Bob Arnot, a nonpracticing physician who covers health and medicine for NBC. It now tops the *New York Times* best-seller list. But Fran Visco of the National Breast Cancer Coalition calls it “incredibly irresponsible.” All these new books offer medical advice that is not backed by solid scientific evidence.—And so does this *Newsweek* article! But interesting questions arise: “Should we live on cheeseburgers until the case for soy burgers is seamless?” Most experts answer “no.” If people who eat in accordance with what we know today, cancer rates would definitely drop.

A sidebar titled “Eating to beat the Big Four” gives three statistics on each of America’s four leading malignancies: Estimated number of U.S. cases this year, percentage of Americans diagnosed during their lifetime, and potential reduction through diet and lifestyle. Prostate cancer: 184,500 / 17% / 10-20%. Breast cancer: 180,300 / 14% / 33-50%. Lung cancer: 171,500 / 7% / 90-95%. Colon/rectal cancer: 95,600 / 6% / 66-75%. “Breast cancer risk may be lowered by eating soy foods.” “Weapons against colon cancer include calcium and fiber.”

Tumors arise through a three-step process: initiation, promotion, and progression. Preliminary evidence suggests that compounds found in particular foods can interfere with each of these steps. A two-page sidebar shows each step graphically. (1) Initiation occurs when something alters a cell’s genetic makeup, causing it to divide more than it should. The most common cause of such DNA damage is oxygen, from highly reactive oxygen molecules called free radicals. They steal electrons from other molecules, setting off a chain reaction that can damage DNA. Food tips: Antioxidants help neutralize free radicals. Garlic contains allyl sulfides which help limit the production of cancer-causing phase I enzymes, which are produced in the liver and break down procarcinogens. Cruciferous vegetables (such as broccoli) boost production of protective phase II enzymes that cart away chemical debris. (2) Promotion occurs when the damaged cell (a precancerous lesion) multiplies out of control to create a tumor. It soon sends out a network of blood vessels to deliver nutrients and oxygen necessary for further growth. Food tips: Tumor cells seem to grow less aggressively on low-fat diets than on high-fat. But Many experts now agree that, for cancer, the type of fat is as important as the amount. Some types of polyunsaturated fats are protective, others probably harmful. Omega-3 (alpha-linolenic) fatty acids may thwart tumor growth, whereas

omega-6 (linoleic) fatty acids may promote it. “Trans fats: Artificially processed polyunsaturates, they are the worst for heart disease, and one study linked them to increased breast-cancer risk. Found in packaged snacks” [and many margarines]. “Soy products contain... isoflavones, which act as weak estrogens, and leave less room for strong ones. One color photo shows cubes of tofu, with the caption “Soy may protect reproductive tissues.” Another shows estrogen receptors on the surface of a cell. (3) Progression occurs when the tumor (a mass of rapidly dividing cells) builds itself a blood supply and starts to invade surrounding tissues. The body’s own estrogen promotes fast growth of breast cells in women. “Tumor cells release growth factors that promote the development of new blood vessels a process known as angiogenesis.”

A sidebar shows four cancer survivors and their diets: Any Grove of Intel, a prostate cancer survivor, has a daily glass of orange juice with green-tea extract and soy protein. Mike Milken is also a prostate cancer survivor. “A soy fanatic, he eats tofu dogs, ‘not-meat’ loaf, and soy cheese,” plus smoothies spiked with vitamins. Christine Pirello, hostess of PBS’s ‘Christina Cooks,’ was diagnosed with leukemia in 1983. She went macrobiotic, loading up on brown rice, cabbage, tofu, and beans, with no dairy or animal products, except for fish.

On page 66 is a long section of text on soy: “Soy foods are another good bet, especially if you’re worried about breast or prostate cancer. One of the strongest promoters of reproductive tumors is estrogen. Women exposed to high levels of the hormone—through early menstruation, late childbearing, late menopause, or obesity—suffer far more than their share of breast cancer. Soy contains weak estrogens, or isoflavones, which compete with the full-strength hormone for access to cells. Isoflavones bind with cell receptors that would normally attract the body’s own estrogen, but the growth signal they deliver is only one thousandth as strong. That means less cell division and, presumably, less risk that a small lesion will become cancerous. No one has tested that assumption in a controlled clinical trial, but population studies suggest that tofu, tempeh, and soy milk could have some of the same benefits as the prescription drug tamoxifen, without the side effects. Chinese women on high-soy diets had only half the breast cancer incidence of women on low-soy diets.” Soy also contains “compounds known as Cox-2 inhibitors, which can impede the growth of new blood vessels.” At least in a test tube, tumor cells doused with Cox-2 inhibitors stop producing growth factors that trigger growth of blood vessels.

This is another article about “magic bullets.” But the big, new message from Newsweek seems to be their realization that low-fat plant-based diets can reduce one’s risk of cancer—as well as heart disease, stroke, and obesity. The article ends: “The real gamble is to stick with fast food [or a standard American diet] and assume you’ll be all right.”

Note: This is the earliest (and only) English-language document seen (April 2003) that uses the term “soy fanatic.”

3121. *Newsweek*. 1998. Perspectives: Tofurky. Nov. 30. p. 23. Typed, without signature.

• **Summary:** This is a page of quotable quotes. “Since we didn’t have the anatomy to limit us, we decided everyone can get a drumstick.”

Source: “An unnamed employee at Turtle Island Foods, which makes Tofurky, a stuffed roast made from tofu and wheat gluten, with gravy and four drumsticks.” Note: The drumsticks are made from tempeh.

3122. Fisher, Kate. 1998. Soy isoflavones charge onto supplement scene: Disease-preventing compounds are available in tablets. *Soybean Digest*. Nov. p. 24.

• **Summary:** Soy isoflavone tablets are now available from many supplement companies. Novasoy, a soy isoflavone compound made by Archer Daniels Midland Co., is the active ingredient in many of them. While many studies have shown the health benefits of soyfoods and soy protein products, few studies have been done using isoflavone tablets as supplements.

Soy isoflavones are fairly stable and able to withstand normal cooking without breaking down. There is presently no recommended daily allowance, but 30-50 mg per day seems to be beneficial, especially for post-menopausal women.

A bar chart from the University of Kentucky shows the isoflavone content of soybeans and various soyfoods (in mg per serving (svg)): Mature soybeans (170), roasted soybeans (165), green soybeans (70), tempeh (60), soy isolate (57), soy flour (45), tofu (35), textured soy protein (30), soy beverage (20), and soy concentrate (15).

3123. Oser, Marie. 1998. *Soy of cooking: Easy-to-make vegetarian, low-fat, fat-free, and antioxidant-rich gourmet recipes*. New York, NY: John Wiley & Sons. xviii + 264 p. Nov. Illust. Index. 23 cm. [55 ref]

• **Summary:** The contents of this book is identical to that published by Chronimed in Oct. 1996. John Wiley & Sons began publishing it in Nov. 1998. Talk with Marie Oser. 2000. Oct. 4. The book is now in its 7th printing. John Wiley has excellent distribution and is doing a fine job with the book. Address: Agoura Hills, California 91391. Phone: 818-707-7353.

3124. Denter, Jutta; Rehm, H.J.; Bisping, B. 1998. Changes in the contents of fat-soluble vitamins and provitamins during tempeh fermentation. *International J. of Food Microbiology* 45(2):129-34. Dec. 8. [21 ref]

• **Summary:** The total amount of vitamin E remained constant during fermentation, but the content of free tocopherols decreased. Figure 3 (bar chart) shows the

decrease in vitamin K-1 (34 hours vs. 96 hours) in 7 different *Rhizopus* strains during tempeh fermentation. Address: Institut fuer Mikrobiologie, Westfalische Wilhelms-Universitaet Muenster, Germany.

3125. Hills, Benjamin. 1998. New developments at Lean Green Foods in Hawaii, and moving to Chico, California (Interview). *SoyaScan Notes*. Dec. 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Benjamin calls from Walnut Creek, California, and would like to visit. We have lunch together, and enjoy his Ginger Teriyaki Tempeh Burger. In June of this year, Benjamin moved his tempeh manufacturing operations to Oregon, where Seth Tibbott of Turtle Island is now making all of Benjamin's tempeh. He intended to keep Lean Green Foods in Hawaii as a tempeh importer and distributor. He is making more money now than when he was making the tempeh himself in Hawaii—but not enough money to live on.

After 6 years in Hawaii, he is planning to move to Chico, California. He will keep his involvement with soy, but not as a manufacturer. He may try to market tempeh burgers at concerts on the West Coast. His girlfriend, Jean Green, a Rolpher and dancer in Hilo, plans to sell her house there and move to Chico with Benjamin.

Tempeh burgers have lost market share to the meat alternative burgers from Gardenburger and Worthington largely because of fat content, but also a little because of flavor, price, and availability (in supermarkets). Though the price difference is small, the meat alternative products are sold at a much bigger margin, which allows the manufacturers to spend much more advertising their products.

His son Bo (Bodhi), age 22, won a full athletic scholarship to Gonzaga University in Spokane, Washington, where he now plays shortstop on the baseball team. He fully expects to get drafted into the major leagues this year after graduation. He has been an outstanding athlete since he was a child, including an excellent tennis player. Address: Lean Green Foods, P.O. Box 534, Volcano, Hawaii 96785. Phone: 808-985-8563.

3126. Calhoun, Pat. 1998. New developments at White Wave (Interview). *SoyaScan Notes*. Dec. 31. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave's capacity is always being pushed to the max nowadays. Baked Tofu has really taken off in popularity, and the company is also doing more with seitan; they will soon have a line of dinners containing seitan.

White Wave still makes basic tempeh but they have decided to discontinue their line of tempeh burgers, including their popular Lemon Broil Tempeh (introduced Oct. 1986), Veggie Life Burger (May 1993), and Chicken and Prime Burgers (Oct. 1995). They have to focus on their strongest products and make best use of their production capacity.

Pat is already looking for a new building, but they probably won't need it for another two years. Major issues are: Will it be in Boulder or not. Water quality and disposal.

Jonathan Gordon of England left the company after basically promising to stay. White Wave helped him prepare his papers so he could get a Green Card. Address: Chief Financial Officer, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

3127. Astuti, Mary. 1998. Soy and heart disease—Effects independent of cholesterol reduction: The role of tempe on liquid profile and lipid peroxidation (Abstract). *American J. of Clinical Nutrition* 68(6S):1522S-23S. Dec. Supplement.

• **Summary:** As well as being a good source of protein and vitamin B-12, tempe is also a source of iron, antioxidant isoflavonoids, and the enzyme superoxide dismutase (SOD). In vitro studies show that tempe is able to inhibit lipid peroxidation.

The effect of tempe on lipid profile and peroxide of 21 male anemic rats was also studied in vivo, by feeding 1/3 of them with tempe, unfermented soybeans, or casein diets for 11 days. Then the lipid profile, SOD enzyme, and malondialdehyde (MDA) were analyzed. In the blood serum rats fed with tempe and unfermented soybeans, the total cholesterol and triglyceride concentrations were lower than in the rats fed a casein diet. Thus tempe and unfermented soybeans both had a hypolipidemic effect. The lowest concentration of MDA was found in the rats fed tempe, and low concentration of MDA was correlated with greater activity of SOD enzyme.

The relation of tempe diets and iron to lipid profile and peroxidation was investigated using 36 rats of the Wistar strain. Diets were formulated to have high, normal, and low levels of iron. In these diets, the protein sources were tempe, casein, and a mixture of tempe and casein. After 1 month, lipid profile, iron, and MDA levels in the rats were analyzed. "The results showed that total cholesterol, triglyceride, and MDA levels decreased with the increasing amount of tempe in the diets. These studies indicate that tempe may contain substances that inhibit lipid peroxidation." Address: Faculty of Agricultural Technology, Gadjah Mada Univ., Bulaksumur, Yogyakarta, Indonesia.

3128. Golbitz, Peter. 1998. Proposed labeling rule may turn soy to gold. *Newsletter of the Soyfoods Association of North America (Washington, DC)*. Dec. p. 1-2.

• **Summary:** A proposed health claim for food labeling, now under review by the S.S. Food and Drug Administration (FDA), would authorize the use of a health claim on food products which contain soy protein. The rule, published for comment in the U.S. Federal Register on 10 Nov. 1998, resulted from a petition originally filed on 4 May 1998 by Protein Technologies International (PTI) of St. Louis, Missouri. This petition summarizes years of clinical studies

related to the cholesterol-lowering effects of consuming products that contain a significant amount of soy protein. The comment period ends on 25 Jan. 1999.

According to FDA, “studies show 25 grams of soy protein per day have a cholesterol-lowering effect. Therefore, for a food to qualify for the health claim, each serving of the food must contain at least 6.25 grams of soy protein, of one-fourth of the 25 gram amount shown to have the cholesterol-lowering effect. The exact wording to be allowed on packages won’t be finalized until after the comment period ends, but an example of how the health claim might be used on a package is: “Diets low in saturated fat and cholesterol that include 25 grams of soy protein per day may reduce the risk of heart disease. One serving of (name of food) supplies \_\_\_\_ grams of soy protein.”

Since a typical serving of most soyfoods (such as tofu, soymilk, tempeh) etc. contain the required 6.25 grams of soy protein, manufacturers and marketers of these foods will clearly benefit if the rule is approved. But perhaps even more important, food processors will probably consider including soy protein products as an ingredient in a wide variety of foods ranging from breakfast cereals to pasta.

The last four proposed health claim rules were all approved by the FDA, which has up to 540 days from the original filing date to complete action on the proposal. So the two key dates to watch are January 25 and late October 1999.

3129. Arends, Hardy. 1998. Untersuchung der sekundaeren Metaboliten der mit drei neuentwickelten Inocula fermentierten Sojabohnen (Tempeh) [Investigation of the secondary metabolites of soybeans (tempeh) fermented with three newly developed inocula]. PhD thesis, Rheinische Friedrich Wilhelms Universitaet zu Bonn. 65 leaves. 30 cm. [Ger]\*  
Address: Germany.

3130. Allison, Karen Hubert. 1998. The vegetarian compass: New directions in vegetarian cooking. Boston, Massachusetts: Little, Brown & Co. xiii + 383 p. Illust. Index. 24 x 20 cm.

• **Summary:** One chapter (p. 163-210) is titled “Tofu, tempeh, and seitan.” The index contains 28 entries for tofu, 23 for tempeh, 17 for seitan, 2 each for miso and for texturized vegetable protein (TVP), and 1 each for milk–nondairy and for soy grits.

On the inside rear dust jacket is a portrait photo of the author and a brief biography. Karen “was the former owner, with her husband, Len Allison, of the three-star New York City restaurant Huberts. She taught at the Culinary Institute of America and was the author of the novel *How I Gave My Heart to the Restaurant Business* (1997). She lived in New York and Maui until her death in 1997.” She is the mother of three children. Address: New York and Maui.

3131. Astuti, Mary. 1998. Wanita dalam mata rantai perdagangan dan industri tempe: Laporan penelitian [Women in tempeh production and marketing (in Indonesia): Research report]. Yogyakarta, Indonesia: Lembaga Penelitian, Universitas Gadjah Mada, Departemen Pendidikan dan Kebudayaan. vii + 41 leaves. Illust. 29 cm. [Ind; eng]\*

• **Summary:** Mary Astuti was born in 1948. Includes bibliographic references (leaf 41).

3132. Burnham, Trudie. 1998. Innovative soy cooking. Freedom, California: The Crossing Press. 95 p. No index. 15 x 18 cm.

• **Summary:** Contents: Preface. Introduction. Appetizers, snacks, and side orders. Salads. Dressings and toppings. Main dishes. Beverages. Desserts and treats.

The introduction begins: “Let’s face it. In a society like ours, obsessed with fast, low-fat food, tofu is the ultimate answer.” This is a “user-friendly guide to a soya-based vegetarian diet. Many recipes are vegan, or use a minimum of dairy foods.

The glossary of ingredients includes kelp, kudzu, lecithin, mirin, miso, nutritional yeast, oils (use expeller pressed), sea vegetables, seeds (Sunflower, pumpkin, poppy and sesame are used for eating; alfalfa, radish, red clover, and fenugreek are for sprouting), slippery elm powder, soy milk, soy sauce, soysage, sweeteners, tahini, tempeh, tofu, umeboshi plums, vinegars.

“Missing egg salad: I invented this and word seemed to travel fast and wide, because I saw it in a California deli a year later with the same name.” Address: New Zealand.

3133. Fike, Rupert. ed. 1998. Voices from The Farm: Adventures in community living. Summertown, Tennessee: Book Publishing Co. xii + 164 p. No index. 23 cm.

• **Summary:** This excellent book (a collection of short vignettes written by various Farm members) captures the spirit and essence of The Farm, a large spiritual in Summertown, Lewis Co., Tennessee—a community that has changed the world (for the better) in many areas.

The Farm traces its roots to the late 1970s with “Monday Night Class,” which was led by Stephen Gaskin, an English teacher at San Francisco State College, in California. He held free, open meetings which focused on putting the shared psychedelic experiences of those who attended into the perspective of the world’s major religions. He emphasized eternal spiritual values—compassion, self-reliance, development of personal character, and an awareness of the interconnectedness of all life. After talking, Stephen answered questions from the floor, and these sometimes led to broad-ranging discussions. At each meeting there was meditation and often chanting to quiet the mind and nourish the spirit. By 1969 several thousand people were regularly attending this weekly class, and a core group of them began to consider Stephen as their spiritual teacher.

In the winter of 1969 the American Academy of Religion held its meeting in San Francisco. A group of ministers and theologians happened to wander in; they stood at the back of the class and were moved by what they saw and heard. After the meeting several of them stepped forward to invite Stephen to speak at their own congregations and classrooms across America—believing that he might be able to help heal the rift between generations. Stephen agreed and a tour was arranged. Two hundred or so of his students asked if they could come along; any who could put together living quarters on wheels joined the tour. In brightly painted school buses, Volkswagen vans, trucks and campers they left San Francisco in 1970, following Stephen as he spoke on college campuses and in churches from coast to coast. Along the way the group attracted other young people who “were searching for identity, mission, and tribe.” After four months and thousands of miles, the Caravan (as it was called) returned to San Francisco. But after their shared Odyssey, the group had become a tightly-knit community—a church. They agreed to pool their money, head back to Tennessee, and buy some land.

Thus, in May 1971, at the height of the counter-culture movement, several hundred young people drove their school buses into Lewis County, southern Tennessee. They had been given permission to park (free of charge) on the Martin Farm until they could find their own land. They stayed on the Martin Farm all that summer, then in the fall purchased the Black ranch (1,000 acres)—less than ¼ mile away. They founded America’s largest modern-day intentional community—The Farm. It soon became known and admired by people around the world.

It is said that The Farm had two phases—the Letting Go, which was Monday Night Class, the Caravan, and the Martin Farm. Then there was the Taking Hold—everything after that.

Farm members organized themselves on a communal basis according to a passage in the Bible’s *New Testament, Book of Acts, 2:44-45*, which says: “And all that believed were together and had all things in common; and sold their possessions and goods, and parted them to all as every man had need.” Each member of the community had to sign this vow of personal poverty. They ate a vegetarian diet—in fact a vegan diet, which contained no animal products, and showed many others how such a diet could be healthful, delicious, and ethical. They started a “Soy Dairy” and used soyfoods (such as soymilk, tempeh, tofu, soy yogurt, soy flour, and whole cooked soybeans) as a key protein source in their diet. They generally used what extra money they had to help impoverished people around the world—both in Third World countries and in the USA. In the late 1970s they worked with people in the village of Solola, Guatemala, to build an innovative Soy Dairy (see p. 78-80, by Doug Stevenson), then helped others start soyfoods businesses in the Caribbean. They did pioneering work in spiritual midwifery, publishing, and many other areas.

By 1977, there were 1,100 farm members and 14,000 visitors—many of whom spent the night. At the peak of its population in 1982, The Farm was home to over 1,500 optimistic young people and the young at heart; about half of these were children, since The Farm offered to raise the child of any woman who was considering an abortion. The community received 20,000 visitors that year alone, as many as 200 on any given night.

But The Farm had one major problem: How to financially support its many members, visitors, and activities. By the late 1970s The Farm had a large and rising debt, and the interest on that debt was starting to get out of hand. By 1980 morale was definitely beginning to suffer. In 1983, after much soul-searching, The Farm decided that no longer would all things be held in common, except for the land. Many people left; it was a diaspora. Each family (or person) who remained would now be responsible for its own economic survival.

From its beginnings in San Francisco in 1970, The Farm has been an experiment in spiritual communal living. This book tells the story of that experiment (up to the early 1980s) in 66 short chapters, told by many different community members. It’s a magnificent, moving story, told in an “energy-based” language invented by The Farm but easily understood by all. Some members recount more than one chapter. Note: This book could be greatly improved by an index. Address: P.O. Box 99, Summertown, Tennessee 38483. Phone: 1-888-260-8458.

3134. Keuneke, Robin. 1998. Total breast health: The power food solution for protection and wellness. New York: Kensington Publishing Corp. xxviii + 416 p. Foreword by Lendon Smith, M.D. Index. 24 cm. [200+\* ref]

• **Summary:** The key to total breast health (and preventing breast cancer) is a healthy traditional diet and lifestyle. Chapter 7, “Soybeans protect against breast cancer, has this contents: Two pro-soy quotations. Introduction. Some phytochemicals in soy and their properties. Phytic acid. Other benefits of soy for women: Osteoporosis, symptoms of menopause, symptoms of PMS, heart disease, anti-aging benefits, gallstones. Update on the politics of soybeans: Will quality be sacrificed for commercial purposes? Fermented soy foods are especially beneficial. The magic of miso: Folklore was right. The National Cancer Institute is spreading the word about soy’s ability to protect against breast (and prostate) cancer. Phytochemicals in soy: (1) Inhibit the growth of tumor cells. (2) Convert cancer cells back into normal cells. (3) Block the entry of estrogen into breast cells; this is beneficial in preventing cancer. “Research shows that soy isoflavones may protect against high levels of synthetic estrogen in the diet.” Soy foods include: tofu, tempeh, miso, edamame, soy sauce, soymilk, natto (fermented soybeans), soybeans and second-generation soy foods such as cheese, textured vegetable protein, and meat

alternatives such as soy breakfast links.

Contains over internationally inspired 125 recipes, incl. Tofu Cote D'Azur, and Dilled Salmon in Miso-Lemon Sauce.

A portrait photo of Robin (a woman) appears on the inside rear dust jacket. The last page of the book (unnumbered) is "About the author." Address: Norwalk, Connecticut.

3135. Ling, Kong Foong. 1998. *Food of Asia: authentic recipes from China, India, Indonesia, Japan, Singapore, Malaysia, Thailand and Vietnam*. Singapore: Periplus. 160 p. Illust (color). Index. 31 cm.

• **Summary:** A very attractive book printed on glossy paper with at least one color photo on almost every page. The introduction and essays are by Kong Foong Ling. The index, which is poor, makes the book hard to use if you are looking for particular foods found throughout Asia such as soybeans, soy sauce, miso, salted / fermented black beans, yuba [bean curd skin], etc.

Contents: The flavors of Asia. Ingredients. The Asian kitchen. China. India. Indonesia. Japan. Malaysia & Singapore. Thailand. Vietnam. Appendix.

The "Ingredients" section includes: Bean curd (incl. cotton or momen tofu, silken bean curd, deep-fried bean curd or aburage, grilled bean curd or yakidofu, fermented bean curd or nam yee). Bean curd skin [yuba]. Black beans, salted (and fermented). Hoisin sauce ("A sweet sauce made of soy beans, with spicy and garlicky overtones"). Miso (incl. red miso and white miso). Salted soy beans (incl. "yellow bean sauce"). Soy sauce (incl. light soy sauce, black soy sauce, red soy sauce, Kikkoman, tamari, thick sweet soy sauce (kecap manis—Indonesian)). Tempeh. Also: Red beans (dried azuki). Seaweed (incl. dried kelp, golden kelp, mozuku, salted dried kelp, laver or nori, wakame). Sesame (black and white seeds, tahina {tahini}). Sesame oil. Sesame rice crackers.

Beancurd or bean curd is mentioned on pages 12, 29-30, 34, 36, 88, 94, 101, 155.

Fermented bean curd: p. 25.

3136. Marcus, Erik. 1998. *Vegan: The new ethics of eating*. Ithaca, New York: McBooks Press. xi + 211 p. Illust. Index. 23 cm. [406 endnotes\*]

• **Summary:** An excellent, very important book. The New Four Food Groups (p. 194-95) are vegetables, whole grains, fruit, and legumes. Legumes includes soy milk, tempeh, texturized vegetable protein, and tofu.

Dedicated to Henry Spira, a tireless defender of animals. Eric Marcus was born in 1966. Address: Bay Area, California.

3137. Rinzler, Carol Ann. 1998. *The healing power of soy: The enlightened person's guide to nature's wonder food*. Rocklin, California: Prima Publishing. xiv + 194 p. Illust.

Index. 24 cm. [119 endnotes]

• **Summary:** Contents: Preface. Introduction: Not your ordinary bean, the first soybeans (history), how to talk soy (glossary of soyfoods—miso, soybean oil, soy concentrates, soy flour, soy isolates, soy milk, soy "nuts," soy sauce {shoyu, tamari, teriyaki}, tempeh, texturized soy protein {TSP}, tofu). 1. The nutritional wonder bean: Vitamins, minerals, proteins, fats, carbohydrates, fitting soy into your diet, summing up. 2. Something special in the bean: Hormones and people and plants, fabulous phytoestrogens, the safety of phytoestrogens, summing up. 3. Soy and your heart: Heart Disease and its victims, cholesterol and your heart, soy versus cholesterol, soy's cholesterol busters, beyond cholesterol, summing up. 4. Soy, the cancer fighter: The statistics of cancer, diet and hormone-related cancers, the Asian experience, how soy fights cancer, is soy safe?, a practical guide to your personal war on cancer, summing up. 5. Building better bones with soy: Your hormones and your bones, the hormone dilemma, soy and your bones, getting the calcium you need, summing up. 6. Hot news about hot flashes: What a hot flash is, soy and hot flashes, other plants that may relieve hot flashes, vitamins, minerals and hot flashes, simple lifestyle changes, summing up. 7. Cooking with soy: The joy of soy, whole soybeans, tofu, tempeh, texturized soy protein (TSP), soy flour, soy milk, soy sauces, soybean oil, miso. Appendix A: Shopping for soy through the mail. Appendix B: Directory of soy manufacturers. Appendix C: Directory of soy researchers whose studies are included in this book. Sources.

The author has written seventeen books, including *Nutrition for Dummies* (IDG) and *Estrogen and Breast Cancer* (Hunter House Books). A frequent contributor to publications such as *American Health*, *Woman's Day*, and the *New York Times*, she lives in New York.

Note: Another quick, generic book about soy and good health by one who is not very familiar with the subject—though the footnotes show that she consulted many publications; nothing new. The history chapter is full of errors. Address: New York.

3138. Solomon, Charmaine; Solomon, Nina. 1998. Charmaine Solomon's encyclopedia of Asian food. Boston, Massachusetts: Periplus Editions. xiv + 480 p. Color illust. ([28] p. of plates). 29 cm. [67\* ref]

• **Summary:** An outstanding book; the color illustrations of many ingredients are spectacular and very informative. The author has an insatiable curiosity.

Contents: List of illustrations. Introduction. How to use the *Encyclopedia of Asian Food*. Acknowledgements. A-Z of Asian Food. Bibliography. Illustrated index of selective ingredients. Index of recipes. Index of alternative words and main entries.

Soy related entries: Bean curd (p. 26-28, incl. all the different types, yuba, deep-fried tofu types, fermented tofu

incl. ch'ou doufu: "Despite its overpowering aroma, slimy texture, unappetizing color and the unfortunate odor it leaves on the breath, those brave enough to partake of it consider it a delicacy").

Bean paste, sweet (p. 29. The three colors and types are red {from adzuki beans}, yellow {from mung beans, husked and split}, or black {from black soy beans}. "The pastes are usually available ready-made sweetened in cans. It is possible to make your own, starting out with dried beans." Name in Chinese: dow sa, tau sa {sweet bean paste}).

Bean paste, yellow (p. 29. Despite what the label says, this thick, salty condiment is brown, not yellow, in color).

Bean sauces (p. 29. "Made from fermented soy beans," they range in color from yellow to brown to black [sweet black bean paste]. Their consistency is more like a paste that must be spooned from the jar than pourable tomato ketchup).

Beans, salted yellow (p. 31. Canned yellow soybeans which have been salted and fermented).

Beef (p. 31-37 incl. Teriyaki steak, Sukiyaki, Beef with black bean sauce, incl. "2 tablespoons canned salted black beans [soy nuggets]").

Black bean (p. 43-44. Black soy beans which are fermented and salted. "Some are sold in cans in a salty liquid, others in plastic bags, covered with salt crystals." Also called "preserved black beans").

Flours & starches (p. 157-61). Incl. soy flour, which is "used mostly in Japan [where it is called kinako] and China. In Korea roasted soy bean flour and fermented soy bean flour are used to make a variety of bean pastes."

Legumes & pulses (p. 206-18). A long and interesting section. All entries have a scientific name. Many have an illustration. Those found in many Asian countries (e.g., green bean, green pea) have the name in each country. Includes: Introduction, adzuki bean, asparagus bean (see winged bean), asparagus pea, black-eyed pea (a variety of cowpea), black gram, blue pea, broad bean, butter bean (see lima bean), chick pea, cowpea (see yard-long bean), fenugreek, green bean, green pea, hyacinth bean (see lablab bean), lablab bean, lentil, lima bean, long bean (see yard-long bean), moong bean (see mung bean), moth bean, mung bean, parkia, peanut, pigeon pea, red bean (see adzuki bean), red kidney bean, rice bean, sataw bean (see parkia), snow pea, soy bean (short entry), sugar snap pea, tamarind, white gram (see black gram), winged bean (China: su-ling dou; India: Goa bean; Indonesia: kecipir; Japan: shikakumame; Malaysia: kacang botor; Philippines: sigarilyas; Sri Lanka: dara-dhambala. Thailand: thua pu). Yard-long bean (this is the fresh bean known by a host of names). Recipes: Adzuki bean soup.

Master sauce (p. 232). "Also known as 'flavour pot' or 'lu,' this sauce has a base of soy sauce, water, sugar and Chinese wine or sherry, with a few variable additions..." Cooking with it is similar to 'red-cooking.'

Miso (see soy bean products). Mushrooms & fungi (p.

237-40, incl. recipe for Braised bean curd, cloud ear and vegetables, and Braised soy mushrooms). Natto (see soy bean products).

Oils (p. 258-59, incl. coconut oil, gingelly oil [sesame oil], mustard oil, palm oil, palm kernel oil, peanut oil, perilla oil, sesame oil). Note: Soy oil is not mentioned here! Okara (see soy bean products). Salads, incl. recipe for Indonesian vegetable salad (gado-gado), that calls for 4 oz. fried bean curd. Shoyu (see soy sauce).

Soy bean, dried (349). China: da dau, wong dau, hak dau, tai dau. Indonesia: kacang kedelai. Japan: daizu. Korea: jaa jang. Malaysia: kedelai. Philippines: utaw. Thailand: thua lueang.

Soy bean, fresh. China: mao dau. Indonesia: kacang soja. Japan: edamame. Malaysia: kacang soja. Recipe: Fresh soy beans with bean curd.

Soy bean products (p. 350): Miso (incl. recipe for miso soup). Natto. Soy bean paste (go). Soy milk. Tahuri (Philippine fermented tofu). Tokwa (tokwan; very firm square tofu).

Soy bean sprouts, with recipe for soy bean sprout salad. China: dai dau nga choi. India: bhat. Indonesia: kacang kedele, taugh. Japan: daizu no moyashi. Korea: Kong namul. Malaysia: kacang soja, taugh. Philippines: utaw. Thailand: thua-lueang.

Soy sauce (p. 351-52). Chinese soy sauce: Dark soy sauce. Light soy sauce ("Usually labeled 'superior soy'"). Mushroom soy sauce (Dark soy sauce that has been flavored with straw mushrooms). Japanese soy sauces: Koikuchi (regular shoyu), tamari, usukuchi. Korean soy sauce ("About the same colour as Chinese light soy sauce, but not as fiercely salty and with a sweet malted aroma"). Thick and flavoured soy sauces: Kecap asin ("A dark, salty soy sauce, from Indonesia, a little thicker than the dark soy of China"). Kecap manis (A thick, sweet soy sauce from Java, Indonesia). Kicap cair: "The Malaysian equivalent of light soy sauce." Kicap pekat: "The Malaysian equivalent of dark soy sauce, though thicker than the Chinese version, but not as thick as kecap manis." Ponzu shoyu. Toyo mansi (p. 352): "A soy sauce used in the Philippines soured with kalamansi juice."

Tempeh (p. 386). Incl. recipes for Savoury Tempeh and Thai style tempeh. Tofu (see bean curd).

Also discusses: Adzuki bean, agar-agar (incl. almond bean curd, awayuki), almond, amaranth, cowpea, crab in black bean sauce (recipe at crab), daikon, millet, monosodium glutamate ("I would strongly recommend omitting it"), Nonya (pronounced 'Nyonya.' The unique cookery found in Malaysia and Singapore resulting from the fusion of Malay and Chinese cuisine during the last century), peanut, peanut sauce, sago (this palm flowers only once in its life, at about age 15. Just before flowering, it builds up a large reserve of starch in the pith. The tree is felled, the pith scooped out, ground and washed to make sago starch),

seaweed (incl. agar-agar, hijiki, kombu / konbu, mozuku, nori / laver, wakame), sesame paste, sesame seed, vegetarian meals ("By far the most important vegetarian food in the Far East... is bean curd"). Address: Australia.

3139. Yeager, Selene. 1998. *The doctor's book of food remedies: the newest discoveries in the power of food to cure and prevent health problems, from aging and diabetes to ulcers and yeast infections*. Emmaus, Pennsylvania: Rodale Press. xiv + 610 p. Illust. Index. 24 cm.

• **Summary:** The chapter titled "Soy foods: Help for your hormones—Healing power" (p. 490-95) notes in the subtitle that these foods "Can help: Prevent heart disease, relieve menopause symptoms, reduce the risk of breast and prostate cancer." Contents: Introduction. In the kitchen (using tofu). Good for your heart. The joy of soy: Brief definitions of meat substitutes, soy flour (kinako—made from roasted, ground soybeans), soy milk, tempeh, texturized soy protein, tofu. Turning down the heat (hot flashes and menopause). Powerful breast protection. Protection for men (prostate cancer). Nutritional extras (Good sources of protein and other nutrients). Getting the most: Add soy products last when cooking, shop for power (it's best to eat soy foods in their unadulterated form), look for full-fat soy milk—which contains 50% more phytoestrogens than the low-fat kind. Two recipes: Soy fruit smoothie (with soymilk). Mocha tofu pudding.

Also contains chapters on sea vegetables (p. 477-81), and Thyroid disease: Foods for hormonal health (p. 528-31).

3140. Warmuth, Manfred. 1999. A quick and easy way to make a week's supply of tempeh at home using a closet as the incubator (Interview). *SoyaScan Notes*. Jan. 15. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• **Summary:** Manfred was born and grew up on a farm in Germany. He is interested in microbiology, likes to make his own tempeh at home, and has developed a very efficient way to do this using a closet as an incubator. He pressure cooks the soybeans to 10 psi, drains them, spreads them out on dish towels to dewater and cool, inoculates, puts into plastic (Tupperware) containers then puts into a closet. The closet should not be too small—so it is well buffered to avoid heat buildup. It is essential to put a fan in the closet to cause air circulation, leading to even heat distribution. Never grow onchom in the same place as tempeh; the onchom mold (*Neurospora*) is a terrible contaminant that is almost impossible to eradicate.

He uses a special thermostat used in growing houseplants or mushrooms that has a probe (30-inch capillary tube with sensing bulb) to measure the air temperature and can be plugged into any electric heater. He uses the GC-1 Gro-Control Thermostat assembly (\$44) made by: Pro-Grow Supply Corp., 12675 West Auer Ave., Brookfield, Wisconsin 53005. Phone: 1-800-331-0590 or 414-781-1150. Fax: 414-

781-6907. Temperature setting: 40-100°F. Has a 6-foot cord with a series tap plug. The plug handles heaters up to 720 watts.

Talk with John Prasser, plant manager at Pro-Grow. 1999. Jan. 27. This thermostat, which sells for \$44, is most widely used with a heat blanket, made by Pro-Grow, to regulate soil temperature for starting seeds in greenhouses and nurseries; the probe is put into the soil and the heat pad is put under the containers of soil. It is also used to control water temperature in an aquarium or fish hatchery, or air temperature in a terrarium (reptile tank). Address: Professor, Computer Sciences, 111 Overlook Dr., Santa Cruz, California 95060. Phone: 831-425-0461 or manfred@cs.ucsc.edu.

3141. Golbitz, Peter. 1999. Re: Follow-up letter concerning FDA proposed health claim for soy protein. Letter (fax) to members of the Soyfoods Association of America, Jan. 25. 1 p.

• **Summary:** This fax is on Soyfoods Association letterhead. "It has been brought to our attention that the proposed rule would exclude soy products that don't fit FDA's definition of 'low fat,' which is equivalent to 3 grams of fat per serving. Unfortunately, this would exclude most tofu sold in the market today, as well as soymilks that have more than 6 or 7 grams of protein per serving. This is due to the soybean's natural ratio of approximately 2:1 for protein to fat. Naturally processed soyfood products that have the minimum 6.25 grams of soy protein per serving are likely to have at least 3 grams of fat per serving. Tofu, soymilk, tempeh and soy flour products that contain more than 7 grams of protein per serving might not be able to get the proposed health claim. I don't believe that this was the original intention of FDA in proposing this rule, as they actually used tofu and soymilk in their example of products that may qualify for the health claim."

"I urge all of you to carefully examine your product's nutritional profiles, and if you feel it is important to your company, please send a comment to FDA regarding this potential problem right away... today!" Address: Soyatech, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

3142. Wasserman, Debra; Mangels, Reed. 1999. *Simply vegan: Quick vegetarian meals*. 3rd ed. Baltimore, Maryland: Vegetarian Resource Group. 224 p. Illust. General index. Index of tables. Jan. 23 cm. 1st ed. March 1991. 2nd ed. June 1995. [29 ref]

• **Summary:** More than a cookbook (with over 160 vegan recipes that can be prepared quickly), this is a guide to a non-violent, environmentally sound, humane life-style. Contents: Acknowledgments. Definition of vegan. Foreword. Time-saving cooking suggestions: Microwave cooking. Introducing fat as a percentage of daily value. Sample

menus: Menu analysis. Top recipes for calcium and vitamin C. Top recipes for iron. Recipes: Beverages, breakfasts, sandwiches, snacks, salads, soups, side dishes, main dishes (pasta dishes), soy products (tempeh dishes, tofu dishes), desserts. Food definitions. Herbs and spices. Vegan nutrition: Introduction, nutrition is a science, recommendations for vegans, calories, weight gain, and weight loss, protein, fat, calcium, iron, zinc, vitamin D, riboflavin and vitamin B-6, vitamin B-12, sources of vitamins and minerals, pregnancy and the vegan diet, lactation and the vegan diet, feeding vegan kids, nutrition glossary, recommended reading list. Cruelty-free shopping by mail: Vegan food through the mail, cruelty-free cosmetics, environmentally sound household products, clothing containing no animal products, personal care vegan products, educational materials, vegan books and cookbooks, vegetarian groups and internet resources. The vegetarian resource group. Address: Vegetarian Resource Group, P.O. Box 1463, Baltimore, Maryland 21203. Phone: 301-366-8343.

3143. White Wave, Inc. 1999. Soyfood recipes for the American table: Favorite dishes from the folks at White Wave—America's soyfood company since 1977. Summertown, Tennessee: The Book Publishing Co. 96 p. Illust. with full-page color photos. Index by product. General index. 23 cm. [13 ref]

• **Summary:** Contents: About White Wave: Brief company history ("Entrepreneur Steve Demos founded White Wave, Inc., in 1977..."), healthy soil means healthy food (White Wave has supported organic farming practices for over 20 years). About soy. About White Wave products: Tofu, tempeh, Silk soymilk, Silk dairyless soy yogurt, Soy A Melt (cheese alternative), Seitan. Breakfast. Appetizers. Soups. Salads. Main dishes. Desserts.

A very disappointing, overly commercial "quickie" book with two main problems. (1) Every recipe calls for the use of "White Wave" soy products. (2) Many of the recipes in this book are taken from other 11 other books published by The Book Publishing Company—but we are not told which recipes are copies and which are original, or (on each page) where a particular copy came from. The color photos are attractive. This book would be fine if it were given away by White Wave to promote its products. Address: Boulder, Colorado.

3144. Soyfoods Association of North America. 1999. Soyfoods Association of North America celebrates April as Soyfoods Month (News release). Washington, DC. 2 p. Feb. 15. 28 cm.

• **Summary:** According to HealthFocus, a research firm located in Des Moines, Iowa, that tracks consumer trends: (1) In 1998 some 16% of U.S. shoppers use soyfoods such as tofu, tempeh, tofu hot dogs, etc.—up from 13% in 1996. (2) 10% of shoppers in 1998 are eating more soy specifically because they believe it will reduce their risk of disease—this

is an increase of 3% from 1996 data.

What forces are driving this increased interest in soyfoods? (1) The double-digit increase of Asians in America. (2) Baby boomers (now in their 50s and more interested in longevity and health) fighting death, disease, and aging. (3) More and more teens and young adults are vegetarians or partial vegetarians, choosing more plant-based foods. An ADM survey found that 97% of colleges and universities now offer meatless entrees on their menu. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

3145. Demos, Steve. 1999. New developments with seitan and tempeh entrees at White Wave (Interview). *SoyaScan Notes*. Feb. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** White Wave will be introducing an aseptically packaged entree line based on seitan or tempeh. The value-added tempeh product will be tempeh in a marinara sauce for use on pastas. White Wave is still making tempeh, but it has become a "back burner" product. Now, with all its value-adding equipment (ovens, texture processors, coders, flavor adders, etc.), White Wave will begin working more with tempeh.

White Wave dropped their Lemon Broil Tempeh (launched in Oct. 1986) because the product's life cycle had somewhat spent itself. The company dropped out of the burger and cutlet businesses because the competition was too fierce. White Wave wants to go more after the center of the plate rather than the luncheon-type products. "We feel the center of the plate is up for grabs. People put rice or noodles down, then what do they put on top of it?" To date, the answer has been stir-fries and sauces with proteins. White Wave will be giving them some new alternatives. In the past, the company has made the basic protein ingredient—such as tempeh—then had the rest of the product made outside of White Wave by value-added companies. In the future, they will try to make the whole value-added product in-house. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

3146. Jack, Alex. 1999. Let food be thy medicine: 750 scientific studies, holistic reports, and personal accounts showing the physical, mental, and environmental benefits of whole foods. 3rd ed. Becket, Massachusetts: One Peaceful World Press. 304 p. Index. 23 cm. [8 ref]

• **Summary:** This book, organized alphabetically by subject, is a very original and creative source of information, with hundreds of interesting bibliographic references. The author believes in a natural, whole-foods diet. Includes the following subjects: Alternative medicine, amasake (amazake), Asia Diet Pyramid, azuki beans, bovine growth hormone, cancer, cholesterol, coffee, complex carbohydrates, dairy food, estrogen, evolution, exercise and fitness, fats,

fiber, genetically engineered food, genetic model of health and disease, genistein, global warming, heart disease, hiziki, hunza diet, isoflavones, Japanese diet, kombu, kuzu, lignans, longevity, macrobiotics, Mad Cow Disease, meat, menopause, microwave cooking, miso, mochi, natto, nori, osteoporosis, Paleolithic diet, phytochemicals, phytoestrogens, polyps, potatoes, Price–Weston, prostate cancer, protein, rice, Schweitzer–Dr. Albert, sea vegetables, seitan, sesame, shoyu, soy foods, tempeh, tofu, umeboshi plum, vegans, vegetarians, wakame, wartime restricted (diets, incl. World War I and II), whole grains. Resources. About the author. Address: Box 10, Becket, Massachusetts 01223. Phone: (413) 623-5742.

3147. Nutrisoy Pty. Ltd. 1999. Nutrisoy: Certified organic (Sell sheet). Banksmeadow, New South Wales, Australia. 1 p. Front and back.

• **Summary:** A large color photo on the top two-thirds of the front panel shows a young man and woman holding hands, walking in the woods, looking at each other. Below that, the text reads: One of the healthiest foods in the world. Across the bottom are three color photos, each 2½ inches square, showing the company's tofu, tofu dessert, and tempeh products.

On the back: "Nutrisoy: Fitness food." There is a brief history of the company and information about the health benefits of soyfoods. "Nutrisoy is an Australian family-owned company dedicated to producing high quality, good tasting, healthy foods. It was established in 1984." Color photos show: (1) The company's tofu and tempeh products. (2) The outside of the brick factory with three delivery vans. (3) Three stainless steel sinks containing cakes of tofu cooling in water. (4) Tofu being packaged in a heat-sealing machine. (5) A secretary typing at a computer.

Letter from Tony Wondal of Nutrisoy. 2007 Aug. 3. This leaflet was published in Feb. 1999. Address: Lot 1, 19a Baker St., Banksmeadow, NSW 2019, Australia. Phone: +61 2 9316 5171.

3148. Nutrisoy Pty. Ltd. 1999. Nutrisoy: Fitness food (Sell sheet). Botany, New South Wales, Australia. 1 p. Feb. Front and back. 30 cm.

• **Summary:** A large color photo on the bottom half of the front panel shows the company's tofu and tempeh products. Three paragraphs above that are titled: Nutrisoy. Tofu. Tempeh.

The back is titled "Nutrisoy products range." A color photo shows each of the company's products, by category. Plain and pre-marinated tofu: Plain Firm Tofu, Tofu Vegies, Tofu Tempeh, Tofu Herbs. Pre-cooked tofu and tofu burger: Tofu Spicy, Tofu Teriyaki, Tofu Vegies Burger, Tofu Tempeh Burger. Tofu deserts and silken tofu: Tofu cups in strawberry, apricot, mango, and tropical flavors. Silken tofu. Tempeh and tempeh burger: Plain Tempeh. Seasoned Tempeh. Mildly

Spiced Tempeh. Tasty Tempeh (marinated in ginger and soy sauce). Tempeh Burger.

An attached, 1-page product list, gives the name and weight of all the company's products, including those under special or private labels such as Soyco, Nutal, and a few Indonesian names. They also sell hommus (hummus), chickpea veg. burger, spirulina juice, and berry juice.

Letter from Tony Wondal of Nutrisoy. 2007 Aug. 3. This leaflet was published in Feb. 1999. Address: 15 Hannon St., Botany NSW 2019, Australia. Phone: +61 2 9316 5171.

3149. Nutrisoy Pty. Ltd. 1999. Tofu & tempeh: For a high energy breakfast, quick lunch, or hearty main meal (Leaflet). 255 Forest Road, Arncliffe 2205, NSW, Australia. 3 panels each side. Feb. Front and back. Undated.

• **Summary:** This undated color leaflet contains recipes for tofu and tempeh, and shows color photos of the front panel of the company's products. One panel is dedicated to a short company history and descriptions of tofu and tempeh.

Letter from Tony Wondal of Nutrisoy. 2007 Aug. 3. This leaflet was published in Feb. 1999. Address: Arncliffe, NSW, Australia.

3150. Nutrisoy Pty. Ltd. 1999. Tofu & tempeh: The healthiest foods. Recipes (Leaflet). 15 Hannon St., Botany NSW 2019, Australia. 3 panels each side. Feb. Front and back. Undated.

• **Summary:** This undated color leaflet (Nutrisoy's 2nd) contains recipes for tofu and tempeh, and shows color photos of the front panel of the company's products. One panel is dedicated to a short company history and descriptions of tofu and tempeh. A color photo on the front panel shows a young man and woman holding hands, walking in the woods, looking at each other.

3151. Stevens & Associates, Inc. ed. and comp. 1999. U.S. 1999 soyfoods directory. Lebanon, Indiana: Indiana Soybean Development Council. 48 p. 28 cm. [23 ref]

• **Summary:** This is the fourth edition of the U.S. Soyfoods Directory. Page 2 states: "And a special thanks goes to the Soy Protein Partnership for sponsoring this project." For a list of farmers and companies that grow soybeans organically, see p. 28. This 1999 Soyfoods directory is now available online at [www.talksoy.com](http://www.talksoy.com). Address: Stevens & Associates, 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

3152. Warmuth, Manfred. 1999. Experiments using *Neurospora intermedia* instead of *Rhizopus* mold for making tempeh (Interview). *SoyaScan Notes*. March 14. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Manfred was born and grew up on a farm

in Germany. He is interested in fermented foods and has managed to get some *Neurospora* culture from a friend who uses it for genetic experiments. He found that Americans generally like the taste of tempeh made with *Neurospora* better than that made with the typical *Rhizopus*—because the tempeh has a nutty, more bland flavor. Americans like bland tastes; that is why they import mostly bland European cheeses (which Europeans call “green” cheeses) rather than the more strongly flavored, ripe European cheeses. Manfred believes that most U.S. tempeh is sold “green” to get around the stronger taste. Moreover, there is not much orange sporulation on *Neurospora* tempeh; sporulation generally occurs only under adverse conditions—when the fermentation undergoes stress. *Neurospora* also has another advantage: it prefers to grow at a lower temperature (30°C) than *Rhizopus* (34°C). Manfred found that tempeh made with a mixture of *Neurospora* and *Rhizopus* is also very nice; if allowed to sporulate, it becomes orange rather than black.

Why don't Indonesians make tempeh with *Neurospora*? Perhaps because they like the stronger flavor produced by *Rhizopus*.

Manfred found that it is very hard to obtain *Neurospora*, perhaps because of the belief (which Manfred thinks is an “old wives’ tale”) that it is potent contaminant, and that once it gets started in a laboratory or business, it is almost impossible to eradicate.

Note: *The Old Wives’ Tale* is the title of a novel by Enoch Arnold Bennett, published in 1908.

Update: Talk with Manfred. 1999. April 10. He has just finished experiments growing *Rhizopus* and *Neurospora* molds on peanuts. Neither mold would grow well on whole peanuts. So he sliced the peanuts. *Rhizopus* grew well and fast on the thin peanut slices. *Neurospora* grew more slowly but Manfred found the final taste to be better. However, the big problem for someone wanting to make a commercial product is that peanuts, even when purchased in bulk, are about twice as expensive as soybeans. Address: Professor, Computer Sciences, 111 Overlook Dr., Santa Cruz, California 95060. Phone: 831-425-0461 or manfred@cs.ucsc.edu.

3153. Brown, Allan. 1999. Brian Stutt of Gilford Marketing in Canada is interested in Buying Noble Bean and taking tempeh to mainstream markets (Interview). *SoyaScan Notes*. March 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Allan and Susan Brown have put a price tag of \$300,000 on their company but they do not really want to sell it; they like the work. They sell about \$50,000 of tempeh a year and about 40% of that (\$20,000) is profit. The company is worth about \$100,000 on the books. Instead of selling the company, Allan plans to work as a consultant (at \$150/hour) for Brian to teach him about how to make tempeh; in exchange Brian will agree not to compete with

Noble Bean in the organic market. Brian now buys Noble Bean tempeh from a distributor for about \$3.25/kg; he wants to create a larger tempeh factory to get the price down.

Brian now works with a company named Commensal which is big in fresh entrees (both vegetarian and non-vegetarian); Brian is helping them get into frozen entrees to reach bigger markets. He is also talking with airlines about serving these meals. Cara Foods owns Beaver Foods, which is a huge distributor to supermarkets. Two companies that are big in frozen vegetarian entrees and private-labeled vegetarian products (such as meatless franks made by Yves) are President’s Choice and Too Good to Be True—apparently both owned by the same people.

Allan has discovered one trick about making better tempeh; he blows air through the soybeans to reduce their moisture content before dehulling them. This makes it easier to dehull in a mill, and it also improves the quality of the final tempeh—for some reason that Allan does not understand clearly. Address: Co-founder, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3154. Gustafson, Karen. 1999. Tempeh: This protein-packed fermented soyfoods can lower your cholesterol. *Natural Health*. March. p. 136.

• **Summary:** Contents: What it is. Nutritional value. Health claims. Evidence. How it works (soy protein plus isoflavones). Recommended serving (70 gm or 13 oz of soy protein a week). A photo shows two cakes of tempeh on a plate. A table gives the nutritional composition.

Note: Most tempeh made in the USA does not contain grains and is not a reliable source of vitamin B-12. Address: Freelance writer and M.P.H., Riverside, Illinois (near Chicago).

3155. Liu, KeShun. 1999. Oriental soyfoods. In: C.Y.W. Ang, K. Liu, and Y-W. Huang, eds. 1999. *Asian Foods: Science & Technology*. Lancaster, Pennsylvania: Technomic Publishing Co., Inc. 546 p. See p. 139-99. Chap. 6. March. [60 ref]

• **Summary:** Contents: Introduction. Soymilk. Tofu. Soymilk film (yuba). Soybean sprouts. Green vegetable soybeans. Other non-fermented soyfoods: Okara, roasted soy powder. Fermented soy paste (Jiang and miso). Soy sauce (Jiangyou or shoyu). Japanese natto. Indonesian tempeh. Soy nuggets (Douchi or Hamanatto). For a biography of Liu see p. 544. Address: PhD, Soyfoods Lab., Hartz Seed, A Unit of Monsanto, Stuttgart, Arkansas.

3156. Mangels, Reed. 1999. *Vegetarian Journal’s* guide to tofu and tempeh. *Vegetarian Journal* (Baltimore, Maryland) 18(2):20-21. March/April.

• **Summary:** A full-page table gives the nutritional composition of many different brands and products per 3 ounce serving. Data is given for calories, protein, fat,

calcium, and iron. Tofu brands/makers include: Azumaya, Kikkoman, MoriNu. Nate's Easy Tofu (smoked), Nasoya, Smoke & Fire, SoyBoy Baked and seasoned (all varieties), White Wave, Whole Foods. The three tempeh makers are: Lightlife, SoyBoy, and White Wave.

For tofu: Calories range from 30 (MoriNu Lite) to 130 (Nate's). Protein ranges from 20 gm (White Wave baked) to 4 gm (MoriNu Soft). Fat ranges from 1 gm (MoriNu Lite) to 9 gm (White Wave baked). Calcium ranges from 600 gm (Nate's) to 20 gm (MoriNu—4 types). Iron ranges from 0.7 gm (MoriNu—4 types) to 9 gm (Nate's). Address: PhD, RD.

3157. Warmuth, Manfred. 1999. Update on vitamin B-12 and tempeh (Interview). *SoyaScan Notes*. April 1. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• **Summary:** Manfred just talked with Dr. Keith Steinkraus who said he isolated a harmless strain of *Klebsiella pneumoniae* that produced vitamin B-12 in tempeh, and had it tested in a medical laboratory. Then he sent samples to people at The Farm in Summertown, Tennessee, but they never added it to their commercial tempeh starter—for fear that something might go wrong and they would be held responsible and possibly sued.

Manfred found 5-6 recent articles on MEDLINE concerning tempeh and vitamin B-12. Apparently *Bacillus subtilis* [the main bacterium used in the natto fermentation] can also produce vitamin B-12.

Update: Talk with Manfred. 1999. April 10. Manfred just finished experiments using a mixed inoculum (containing approximately equal parts of *Rhizopus*, *Neurospora*, and *Bacillus subtilis*) to try to make soy tempeh at three different fermentation temperatures (29°C, 34°C, and 41°C). At the lower two temperatures, the tempeh came out very nicely, but at the higher tempeh the *Bacillus* predominated. Manfred has not yet measured the vitamin B-12 content of the three types of tempeh. One basic question arises: If such an inoculum is used and grown on tempeh at 32-34°F, will the *Bacillus* eventually mutate so they grow well at the lower temperature and take over the fermentation, ruining the tempeh? For a case study of this type of problem, see the following article, which describes a terrible problem experienced by a tempeh manufacturer in 1982. Shurtleff, William; McBride, G.; Robertson, G.V.J.; Burgeson, T. 1982. "Dealing with tempeh contamination." *Soyfoods*. Winter. p. 29-32. Address: Professor, Computer Sciences, 111 Overlook Dr., Santa Cruz, California 95060. Phone: 831-425-0461 or manfred@cs.ucsc.edu.

3158. Simonds, Nina. 1999. A spoonful of ginger: Irresistible, health-giving recipes from Asian kitchens. New York, NY: Alfred A. Knopf. xii + 322 p. April. Illust. Index. 24 x 21 cm. [53 ref]

• **Summary:** This beautiful hardcover book and cookbook, printed on glossy paper with many color and black-and-white

photos, looks at food in two ways: As medicine, and as the source of delicious recipes. The Asian holistic approach is relaxed and non-rigid; it emphasizes balance. Soyfoods appear throughout. Tofu is used to "increase body energy, produce fluids, and lubricate the system. It is said to have yin, or cooling, properties" (p. 23). Miso chicken soup with snow peas and tofu (p. 34). Grilled miso fish fillets (p. 66). Pan-seared halibut with garlicky black bean sauce ("Seasonings: 3 tablespoons fermented or salted black beans, rinsed, drained, and minced, 2 tablespoons minced garlic, 2 tablespoons minced fresh ginger,... p. 71; "Black soybeans have been used by the Chinese for medicinal purposes for over 2,000 years"). Baked black bean shrimp (with fermented black [soy] beans, rinsed and drained, ginger, garlic, and dried chile [chili] flakes, p. 75). Stir-fried saucy shrimp (with sweet bean sauce or *jiang*, one of the earliest Chinese seasonings; if unavailable, substitute hoisin sauce, p. 81). Grilled hoisin scallops (with ½ cup hoisin sauce, p. 83). Spicy grilled squid with warm greens (with ½ cup hoisin sauce, p. 86-87). Broccoli or cauliflower with a soy-lemon dressing (p. 173). Grilled leeks in a garlic-soy dressing (p. 174). Grilled wild mushrooms with a teriyaki dressing (p. 178). Black bean acorn squash (with fermented black [soy] beans. Describes how to make "black bean sauce," p. 179).

One chapter, titled "Soybeans and tofu" (p. 192-215), begins with a discussion of the work of Dr. Albert Leung, author of various books on Chinese herbs and food, and creator of a computerized database on Chinese herbal medicine for the National Cancer Institute. "Like a growing number of doctors, Dr. Leung feels strongly that an integrated approach should be taken in the treatment of many diseases, one that draws from the strengths of both conventional and alternative therapies. He also concurs with Henry Lu that fortifying the immune system is critical to good health. 'Our immune system is the key to health and longevity and there are many factors that throw off our yin/yang balance,' Dr. Leung says. 'When this happens, Traditional Chinese Medicine often uses herbal tonics and food to help restore the balance.'

"Tofu is such a food. Chinese doctors classify its nature as cool and sweet. It is credited with clearing heat from the body, detoxifying the system, and strengthening the spleen and stomach."

A full-page color photo (p. 192) shows tempeh being fried. Simonds notes that the earliest known recorded use of black soybeans dates back to the middle of the eighth century.

A table titled "Soybeans and their byproducts" (p. 196) lists ten products, how each is used, and how long they will stay fresh in a refrigerator. The foods are: Fresh soybeans [as a green vegetable appetizer], soybean sprouts, miso, soybean milk, silken tofu, soft tofu, firm tofu, extra-firm tofu, 5-spice pressed tofu, and tempeh. Recipes are from many Asian countries": Japanese-style silken tofu. Soybean sprouts

and leeks in hot chile sauce. Rainbow salad with spicy peanut dressing (and tofu). Spicy garlic bean curd noodles. Vegetarian roll-ups (with tofu). Fragrant steamed pearl balls (with tofu and glutinous rice). Spicy ma po tofu. Cantonese style tofu in black bean sauce (incl. fermented black beans, garlic, ginger and hot chile paste). Vegetarian kung pao with broccoli and peanuts (with tofu. Note: Kung pao is a style of food preparation associated with Szechuan and Hunan). Curried tofu. Braised cinnamon tofu. Simmered tofu with black mushrooms. Fried tempeh with sweet and sour sauce. Spicy stir-fried tempeh with basil. Ginger teriyaki tempeh.

Also: Chicken-black bean brown rice (with fermented black [soy] beans, garlic, and fresh ginger, p. 231; Dr. Albert Leung says that making fermented black beans is a complicated process, in which small black soybeans are first soaked in water with mulberry leaves and wormwood herb, then they are fermented with salt). Vegetarian pad thai (with tofu, p. 245). Almond soy jelly with litchees and melon (with soy milk, p. 266). Two-spice vanilla tapioca pudding (with soy milk, p. 269; Soy milk lubricates the body, clears the lungs, and is often prescribed for urinary disorders and constipation). Coconut rice pudding with berries (with soy milk, p. 272). Address: Salem, Massachusetts.

3159. Seshan, Sekhar. 1999. No milk—we're veg! *Business India*. May 3-16. p. 158.

• **Summary:** Dakini Health Foods, run by Seemo (H. Shapira) and Kairava (J. Spaelstra), has a gleaming new plant on the outskirts of Pune [Puna], where they make vegan products—peanut butter, brown and white tahini, and the soy foods tempeh and tofu. All are high protein, natural and healthy. They also use none of the “Permitted Class II preservatives.” Shapira notes that the unusual versatility of tempeh, which can be textured like any meat, enables it to be used as a meat substitute in a wide range of Indian, western, and oriental-style recipes. Dakini produces two tonnes per year (tpy) of tempeh, 5 tpy of peanut butter, and 6 tpy of tahini.

Shapira is an Israeli who was being groomed to be an admiral, “escaped” and got into catering, especially vegetarian foods, in Germany, before coming to India. There he tried his hand at making New Age jewelry, but got bored after a few years, and the “business got too serious.” In 1995 he decided to get into the food business in India; he noticed that although India is a vegetarian country, many of the good vegetarian foods found in the West are not available in India. He started with tempeh, then expanded into peanut butter. Dakini is now expanding its tofu production capacity to be 100 tpy by June, and tempeh to be 12 tpy by the end of 1999. Dakini now also has a recipe book. Marketing is not a problem, insists Shapira. He sells mainly to the import substitution market, like “Osho-ites” [disciples of Rajneesh] and other transient foreigners who want vegetarian food but can't get the quality they are used to. Moreover, a network

of hotels all over India contacts him for non-perishables. His perishable foods, like tempeh and tofu, he sells locally.

A photo shows Shapira and Spaelstra (his female partner) seated at a table behind samples of their many innovative products. The caption: “Health is a major commitment for Shapira (and Spaelstra).”

Note: Dakini does not yet have a recipe book.

3160. Nilsen, Laura. 1999. The best to soy. *Veggie Life (Concord, California)*. May. p. 22-28.

• **Summary:** Their “Cooking with Soy” department debuted in May 1996. This article begins: “Soy is hot. Like a cult movie that eventually shows up on prime time TV, soy has become a mainstream American commodity, an ingredient in everything from hot dogs to apple pie... The boom goes on, and for good reasons—Nutrition and taste; versatility and economy... It's no fairy tale—soy is a magic bean worth swapping a cow for.” This article is a collection of recipes from other sources, or from back issues of *Veggie Life*. Address: Food editor, *Veggie Life*.

3161. Schinner, Miyoko Nishimoto. 1999. Japanese cooking: Contemporary & traditional—Simple, delicious, and vegan. Summertown, Tennessee: Book Publishing Co. 176 p. Illust. Index. 21 cm.

• **Summary:** Contents: Introduction (incl. Japanese attitudes towards nutrition, vegetarianism and animal rights, the recipes, the Japanese meal). Sample menus (by season). Glossary: Ingredients, kitchen concepts, and tools. Rice dishes. Soups and stews. Cooking with tofu. Fried dishes. Salads and cold vegetables. Noodles. Meals in a pot. Stewed and braised dishes. Meals in a bowl. Everyday favorites. Nouvelle Japanese cuisine.

Terms in the Glossary include: Abura-age, agar agar, atsu-age, azuki, fu (made from wheat gluten), goma (sesame seeds), goma-dofu (a tofu-like cake made from sesame butter), hijiki, Inari-zushi (sushi), kanten, konbu, kuzu & kuzu-ko, miso, mochi, natto, nori, okara, sesame oil (goma abura), shoyu, soba, soy sauce, tofu (“Perhaps the most misunderstood food in Japan... American might call it bland; the Japanese prefer to think of it as delicate in flavor”), umeboshi, wakame, yaki-dofu, yuba.

This vegan cookbook is filled with many soy-related recipes, both traditional and new. Examples of new: “Fishy Tempura Tempeh. Crispy Fried Tempeh (Kara-Age).

“Trying to dine out in a strictly vegan fashion in Japan can present challenges. Although dairy products are not found in traditional Japanese cuisine, fish-based stocks appear in a range of dishes from appetizers to soups to entrees... My advice to vegan or vegetarian visitors to Japan: find a temple or restaurant that serves traditional *kaiseki*-style *shojin-ryori* (Buddhist vegetarian cooking)—and splurge big time. You won't regret it” (p. 10).

On the rear cover is a biographical sketch of Miyoko.

“She was born in Yokohama, Japan, and graduated from St. John’s college in Maryland. Her bilingual bicultural background has endowed her with the creativity and originality of the West and the aesthetic sense of the East.” She has been a vegetarian since age 12. Address: Owner, Now and Zen Bakery and Vegetarian Restaurant, San Francisco.

3162. Shurtleff, William; Aoyagi, Akiko. 1999. *The book of tofu*. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. May. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]

• **Summary:** This edition contains a completely new “Appendix B—Directory of Tofu Makers” (p. 313-316, updated to 1 Aug. 1998). The page “About the Authors” (autobiographical) has been updated, and the original photograph has been replaced with two more recent ones—reflecting the fact that Bill and Akiko separated in Nov. 1993 and their marriage ended in May 1995.

After the first printing in Oct. 1998, the Preface was quite extensively revised (but not updated) to include more about how this book came into being (early dates and names), including the important contributions on Jeffrey and Gretchen Broadbent, and of Nahum and Beverly Stiskin. These Preface changes first appeared in the second printing of May 1999.

On page 336 is “The Best of Vegetarian Cooking from Ten Speed Press” (descriptions of eight cookbooks, with price and ISBN). The inside rear cover has been updated, and now includes current information about SoyaScan, the unique computerized database produced by Soyfoods Center. This database now contains more than 55,000 records from 1100 B.C. to the present, and more than 73% of all records have a summary / abstract averaging 128 words in length. A description of the four different types of records (published documents, commercial soy products, original interviews and overviews, and unpublished archival documents), and the number of each type, is given.

The front and rear covers, title page, table of contents, and the first page of each section have been redesigned to give the book a much more contemporary look. Still contains 500 vegetarian recipes—both western and eastern style.

Ten Speed Press gave this book a new ISBN: 1-58009-013-8. Yet despite the many changes described above, the authors preferred not to have this called a “new edition” or “revised edition.” Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3163. Tibbott, Seth. 1999. Adventures in tempehland: American tempeh maker visits the motherland [Indonesia]. *Vegetarian Journal* 18(3):8-9. May/June.

• **Summary:** Seth, who has been making tempeh professionally for 18 years, was invited to present a paper on the American tempeh market at a recent International

Tempe Symposium in Bali. He traveled there with his wife, Sue, and 5-year-old son, Luke. The symposium was held at the Five-star Kartika Plaza Hotel on Kuta Beach, Bali. He learned that one-sixth of the world’s languages are spoken in Indonesia, the world’s fifth most populous country. Two factors distinguish Bali from the rest of Indonesia: (1) It’s cultural roots are Hindu, whereas the rest of Indonesia is predominantly Muslim. (2) The impact of tourism is greater.

In the conference keynote address, Mr. Joop Ave, the Indonesian Minister of Telecommunications and Tourism, tried to create a new image for tempe “He told of a recent movement to ‘Indonesianize’ the presidential palace and proudly serve tempe to heads of state as an example of Indonesian ethnic food. He fervently extolled the virtues of eating tempe and tahu (tofu).”

While in Indonesia, Seth visited three different sized tempe shops. The smallest, in Ubud, Bali, makes about 100 lb/day of tempe. The middle-sized shop, Tempe Murni, in Denpasar, Bali, makes 1,650 lb/week (about 275 lb/day). The largest, Pak Pedro Sudjono’s factory in Yogyakarta, Java, makes 5,000 lb/day in a 1,500 square foot area. Seth gives details on each shop he visited, and on the Pasar Bedang market in central Denpasar. He found that, on a per ounce basis, relative to average per capita income, tempe in Indonesia is about four times as expensive as it is in the USA.

At the symposium, Seth learned that Yogyakarta has the highest per capita consumption of tempe of any city in Indonesia—200 gm/week compared with only 75 gm/week on Bali. He found the local market in Yogyakarta to be “totally inundated” with a large variety of tempe products, but uncooked cakes of tempe and prepared tempe in various sauces. The main supplier of these products is Pedro Sudjono, a local actor and politician, as well as the owner of the most innovative tempe factory Seth visited. A unique barter system exists here. The main business is run by a paid staff of 24 people, but the filling of inoculated soybeans into small plastic bags is almost all done by local women who sit on the floor as they fill, then seal the bags—sometimes over an open flame. The women then load the packages onto their bicycles, pedal home, incubate them for several days, then take the finished tempe to market and sell it! Address: CEO, Turtle Island Foods [Hood River, Oregon].

3164. Clute, Mitchell. 1999. Breaking the mold with tempeh: Praise from the chorus for *Rhizopus oligosporus*. *Natural Foods Merchandiser*. June. p. 71, 74.

• **Summary:** At Avogadro’s Number, a restaurant in Fort Collins, Colorado, Jon Long now makes 700 lb/month of tempeh; he supplies several local eateries with fresh tempeh patties.

“As a result of recent health bulletins about the benefits of soy, as well as changing dietary habits, the world seems awash in soy foods of every stripe—soy milk, soy proteins,

and of course, the ubiquitous tofu. But American palates have been slower to embrace tempeh, the Cinderella of soy foods.”

Long has many years of experience as a baker; he used to run his own business, Jon’s Natural Bread, but he never considered making tempeh until restaurant owner Rob Osborne suggested it. He is now in the “postexperimental stage.” The process he uses is described in detail.

His fascination with tempeh had led him to create a Web site ([www.home.att.net/~tempehinfo/](http://www.home.att.net/~tempehinfo/)) devoted entirely to information about tempeh. Contains a recipe for Barbecued Southern Tempeh. A color photo shows Jon Long carrying two trays of freshly made tempeh.

3165. Seemo (H. Shapira). 1999. Re: Dakini Health Foods Pvt. Ltd. recently moved into a new factory in Pune/Puna, India. Letter to William Shurtleff at Soyfoods Center, July 29. 1 p. Typed, without signature on letterhead.

• **Summary:** Seemo (Mr. H. Shapira from Israel), Kairava (Mrs. J. Spaelstra from the Netherlands), and the “Dakini crew” have been “intensively busy setting up our factory.” They raised money through loans, brought in a new partner, got all the required government approvals, bought a plot of land, “navigated between impossible contradicting rules and regulations and corrupt officials.” Then, with the help of an architect, they put of a 6,000 square foot building. They dug the first foundation in May 1998 and moved in in Feb. 1999. The process has been frustrating at times. To get an electrical connection, for example, took months, involved hundreds of signed documents, and “thousands of dollars in baksheeshes” [bribes].

They set up a pressure cooker plant for making tofu, first tested it on 17 July 1999, and “got a huge fantastic delicious cake of tofu.” They plan to do a “soft launch” on Aug. 2 to some hotels, restaurants, institutions, etc., while getting their packaging systems ready. They plan to start selling to the retail trade in about two months. Their tofu production capacity is now about 200-400 kg/day.

“All this time we kept our little incubator busy supplying a small but loyal and growing clientele about 10-30 kg of tempeh weekly.” Their new incubation room (12 by 11 feet) started operation today, with the first 15 kg batch of tempeh. They estimate a capacity of 60-70 kg maximum and are planning to start with 20-25 kg batches. They also have new clients waiting. Le Meridian in Pune has already put tempeh on their buffet, and will soon include it on their menu; now they want tofu as well! “It’s a great adventure.” Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

3166. Murphy, Patricia A.; Song, T.; Buseman, G.; Barua, K.; et al. 1999. Isoflavones in retail and institutional soy foods. *J. of Agricultural and Food Chemistry* 47(7):2697-2704. July.

[27 ref]

• **Summary:** Gives the content of daidzein, genistein, glycitein. Isoflavone levels ranged from 1 microgram per gram in soy sauces to 540 micrograms per gram in tempeh. “Soymilk and tofu represented the major portion of the soy foods evaluated.”

Also includes: Tofu, different kinds (raw and cooked), soy sauce, miso (white and red), tempeh (raw and cooked), FriChik (soy chicken, raw and cooked), meatless frank (raw and cooked), Harvest Burger (raw and cooked), Meatless links (raw and cooked), Soy/beef burgers (raw and cooked). Address: 1-4. 2312 Food Science Building, Food Science & Human Nutrition Dep., Iowa State Univ., Ames, Iowa 50011.

3167. Kairava (J. Spaelstra); Seemo (H. Shapira). 1999. Re: Update on Dakini Health Foods Pvt. Ltd. in Pune / Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 22. 1 p. Typed, without signature on letterhead.

• **Summary:** Gives details on their work with tofu and tempeh. They do not yet have a recipe book nor do they vacuum pack their tempeh. They are, however, developing a nice label. They have contacted Raj Gupta of ProSoya by e-mail about soymilk equipment.

“The nutrition situation in this country and on all income levels is no good—from severe protein deficiency on the lower income rungs to fancy diseases for the rich. Developing soyfoods production here is most crucial, urgent, and possibly also a good investment!

“At a later stage, to avoid spreading ourselves too thin right now, we are interested in trying our hand at more fermentations such as Tauchō, Miso, Soysauce. We are looking for more material to study.” A copy of the recent article from *Citadel Pune* (full of errors) is attached. Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

3168. Seemo (H. Shapira). 1999. Re: Another update on Dakini Health Foods Pvt. Ltd. in Pune / Puna, India. Letter (fax) to William Shurtleff at Soyfoods Center, Aug. 24. 1 p. Typed, without signature on letterhead.

• **Summary:** Their company started business in April 1996 making white tahini. Sometime later they introduced peanut butter.

The third partner in their business is Bodhi Yahaan; they call him Yahaan, and he has been with the company for nearly two years. Like Seemo, he is from Israel where his name was Mr. Natan-Ran Diamant; now he lives in Pune. He does not work in the factory, but he does get the computer to work. He brought in the much-needed finance and also organizes loans when the banks fail. “He owns 50% of the company’s shares and a very good friendship is growing.”

“Mr. Donnelly (our Indian partner) resigned near the end of 1996, and since last year we got all government

permissions to run the company without any Indian partner.”

In Goa, “a friends couple of ours, Lisa Camps and her French friend Richard, are making tofu and tempeh on a small but interesting scale. This year they are growing and opening their own retail outlet with a delicatessen counter and a salad bar. We managed to convince them to invest in a good grinder, a small screw press, and a simple dehulling device for their tempeh. Also, I am building them an incubation cabinet so they will no longer mysteriously lose so many cakes of tempeh. Also, since last year, we are supplying their tempeh starter, and, from this year, their soybeans. Their address: Lisa Camps, H.S. No. 1684 Ounechem Baht, Anjuna Bardez, Goa, India.” Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, India. Phone: +91 20-613985.

3169. Tapuria, Nidhi. 1999. Nourishing, nutritious & natural. *Citadel Pune (India)*. Aug. p. 76-78.

• **Summary:** The subtitle reads: “They are adding a new flavour to the Indian taste buds. Dedicated to manufacture quality natural foods, they propagate the healthy way of living that has taken the world by storm. ‘Citadel’ has a slice of the action at Dakini Health Foods.”

Besides tahini, sesame butter, and peanut butter, Dakini manufactures a product range that includes soya foods like tempeh and tofu. Contains a brief description of tempeh.

Seemo tried his hand at everything before getting bitten by the vegetarian bug. He used to have the best-selling felaful shop in Israel, but he gave it up and moved to Germany where he finally got into catering vegetarian food. When he came to India he learned patience. The response from his customers has been very encouraging, especially from the Oshoites at Koregaon Park, who keep thanking him for making foods that are not available in India, and asking him to make more. In Pune, a restaurant named Zen has at least 20 items on their menu made from tempeh. Seemo wants to expand his tofu capacity to 100 tons per year; that will make big news. He believes that Indian food lacks the proteins which tofu can supply—in a vegetarian form. Five photos show Seemo, Kairava, and their new food factory.

3170. **Product Name:** Vegetarian Entrees: Sloppy Joe Sandwich Filling.

**Manufacturer’s Name:** White Wave, Inc.

**Manufacturer’s Address:** 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.

**Date of Introduction:** 1999. August.

**Ingredients:** Water, soy tempeh (cultured organic soybeans, water), seitan...

**Wt/Vol., Packaging, Price:** 10 oz box.

**New Product–Documentation:** Leaflet (color) sent by Mia Fox, Marketing Manager of White Wave. 1999. Aug. “Easy and delicious vegetarian entrees—Just heat ‘n’ eat!” A color

photo of each product appears on the front of the leaflet. The ingredients are listed on the back.

3171. **Product Name:** Vegetarian Entrees: Tempeh Marinara.

**Manufacturer’s Name:** White Wave, Inc.

**Manufacturer’s Address:** 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.

**Date of Introduction:** 1999. August.

**Ingredients:** Water, tomatoes, soybeans, brown rice, organic raw cane crystals...

**Wt/Vol., Packaging, Price:** 10 oz box.

**New Product–Documentation:** Leaflet (color) sent by Mia Fox, Marketing Manager of White Wave. 1999. Aug. “Easy and delicious vegetarian entrees—Just heat ‘n’ eat!” A color photo of each product appears on the front of the leaflet. The ingredients are listed on the back.

3172. Grogan, Bryanna Clark. 1999. Soyfoods cooking for a positive menopause. Summertown, Tennessee: Book Publishing Co. 192 p. Sept. Index. 23 cm. [31 + 49 websites ref]

• **Summary:** On the front cover: “Reduce the discomforts of menopause naturally. Lower your cholesterol. Reduce your risk of heart disease and cancer. Over 150 family pleasing recipes.” Eating a diet rich in soyfoods may alleviate many of the discomforts of menopause.

Content: Introduction. Glossary. 1. The soy prescription. 2. Soy for strong bones and weight loss. 3. Preventing the number one killer of women—heart disease. 4. Can soy prevent cancer? 5. A soyfoods primer. 6. Baking and cooking with soyfoods. 7. Breakfast foods and beverages. 8. Condiments, sauces, dips, dressings, and spreads. 9. Appetizers, salads, and soups. 10. Lunch, supper, and side dishes. 11. Dinner entrees. 12. Desserts. Bibliography and websites. Sources for ingredients.

3173. Ontario Soybean Growers. 1999. Canadian soybeans (Ad). *Soya & Oilseed Bluebook* 2000. p. 104.

• **Summary:** This one-third page black-and-white ad states: “High quality, food grade soybeans for the production of tofu, miso, natto, soymilk, soy sprouts, soy sauce, tempeh and other soya products. Soybeans for the crush market. Identify preserved (I.P.)—Specialty soybeans. Organic and transitional soybeans. Container—Bag/bulk. Bulk vessel.

“Trusted, reliable, supplier of soybeans to the world for over 25 years.

“For more information or a list of suppliers contact: Canadian Soybean Export Association.” Address: P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

3174. Food and Drug Administration, U.S. Department of Health and Human Services. 1999. FDA Approves new

health claim for soy protein and coronary heart disease. *FDA Talk Paper* T99-49. Oct. 20.

• **Summary:** “On October 26, 1999, the FDA will authorize use of health claims about the role of soy protein in reducing the risk of coronary heart disease (CHD) on labeling of foods containing soy protein. This final rule is based on the FDA’s conclusion that foods containing soy protein included in a diet low in saturated fat and cholesterol may reduce the risk of CHD by lowering blood cholesterol levels.

“Coronary heart disease, one of the most common and serious forms of cardiovascular disease, is a major public health concern because it causes more deaths in the U.S. than any other disease. Risk factors for CHD include high total cholesterol levels and high levels of low density lipoprotein (LDL) cholesterol.

“This new health claim is based on evidence that including soy protein in a diet low in saturated fat and cholesterol may also help to reduce the risk of CHD. Recent clinical trials have shown that consumption of soy protein compared to other proteins such as those from milk or meat, can lower total and LDL-cholesterol levels.

“Foods that may be eligible for the health claim include soy beverages [soymilk], tofu, tempeh, soy-based meat alternatives, and possibly some baked goods. Foods that carry the claim must also meet the requirements for low fat, low saturated fat, and low cholesterol content except the foods made with the whole soybean may also qualify for the health claim if they contain no fat in addition to that present in the whole soybean.

“Scientific studies show that 25 grams of soy protein daily in the diet is needed to show a significant cholesterol lowering effect. In order to qualify for this health claim, a food must contain at least 6.25 grams of soy protein per serving, the amount that is one-fourth of the effective level of 25 grams per day. Because soy protein can be added to a variety of foods, it is possible for consumers to eat foods containing soy protein at all three meals and for snacks.

“An example of a health claim about the relationship between diet and the reduce risk of heart disease is:

“Diets low in saturated fat and cholesterol that include 25 grams of soy protein a day may reduce the risk of heart disease. One serving of (name of food) provides \_\_\_\_ grams of soy protein.

“This new health claim rule responds to a petition submitted to the FDA by Protein Technologies International. This rule is based on the proposed rule that was published in the Federal Register on November 10, 1998, and comments received by the FDA. Use of the claim in food labeling is authorized immediately.” Address: Public Health Service, 5600 Fishers Lane, Rockville, Maryland 20857.

3175. Riccardi, Victoria Abbott. 1999. Enjoying soy: You know it’s good for you. Now learn to like it. *Boston Globe*. Oct. 20.

• **Summary:** When people hear the word “soy,” different images come to mind. “For devotees of sushi, it might be emerald green soybeans. For the Woodstock generation, it could be custardy blocks of tofu. And for juice bar addicts, it might be soy milk for smoothies.” But whoever you are, soy has “likely crossed your radar screen. And pretty soon its going to be on every channel.”

Peter Golbitz, president of Soyatech Inc. (Bar Harbor, Maine) has just completed a market study. In 1998 total soyfoods sales were \$1.78 billion, up 18% from 1997. They are projected to be \$2.6 billion by the year 2000.

Gives a good profile of two local mom-and-pop companies: Health-Trip Foods Inc. of Concord, owned by Eileen Moriarty and Dan Sanford, makes soynut butter. 21st Century Foods Inc. of Jamaica Plain, owned by Rudy and Lovin Canale, makes 800 lb/day of tofu. Before coming to the USA, Rudy ran a health food restaurant in Italy. He came here in 1977 to study macrobiotics at the Kushi Institute in Becket, Massachusetts. In 1981 he and an Italian friend started making tempeh in Brookline. Soon they added tofu products, using tofu made by another company. When the cost of the tofu became prohibitive, they started making their own. Now he and his wife, Lovin, do all the work and delivery. Last year they had \$175,000 sales, and even with no advertising they make a profit.

3176. Egan, Jeanette Parsons. 1999. Soy! Soy! Soy! Enjoy soyfoods’ benefits in delicious recipes. Tucson, Arizona: Fisher Books. xxx + 162 p. Oct. Illust. Index. 23 cm. Simply Healthy Series.

• **Summary:** This is a soyfoods cookbook. Contents: Dedication. Acknowledgments. Why I love soyfoods: Why eat soyfoods?, soy’s health benefits, reduces heart disease, helps prevent cancer, soy for your bones (osteoporosis), to flash or not to flash (menopause), what about soyfoods allergies, how much soy should I eat? (soy protein, isoflavones), where to purchase soyfoods, how to add soy to your diet, important notes about eating soy. A soyfoods glossary: Black soybeans and yellow soybeans, green soybeans (edamamé), meat alternatives or analogs, miso, soy cheeses, soy cream cheese, soy flour, soy grits, soy milk (soy beverages), soybean oil, soynuts, soynut butter (roasted soybean butter), soy protein concentrates, soy protein isolates, soy sauces (tamari, shoyu), soy yogurt, tempeh, textured soy protein (TSP), tofu. Appetizers. Soups. Salads. Main dishes. Side dishes. Breads. Breakfast dishes. Desserts. Mail order sources for soyfoods. Other sources.

Contains 8 full-page color photos showing recipes. This is not a vegetarian cookbook. Recipes call for the use of chicken (4 recipes), ground beef, ham, crab meat, etc.

3177. Fallon, Sally; Enig, Mary G. 1999. Nourishing traditions: The cookbook that challenges politically correct nutrition and the diet dictocrats. 2nd ed. Washington, DC:

New Trends Publishing Inc. xvi + 668 p. Illust. by Marion Dearth. Subject index. Recipe index. Menu index. 26 cm. [200\* ref]

• **Summary:** Contains over 700 recipes. Contents: Preface. Introduction: Politically correct nutrition, fats, carbohydrates, proteins, milk & milk products, vitamins, minerals, enzymes, salt, spices & additives, beverages, about food allergies and special diets, parting words, guide to food selection (nourishing traditional foods, compromise foods {such as tofu}, newfangled foods {such as soy protein isolates and commercial soy milk}), a word on equipment, kitchen tips & hints, references (188). Mastering the basics. Great beginnings. The main course. A catalog of vegetables. Luncheon and supper foods. Grains & legumes. Snacks and finger foods. Desserts. Beverages. Feeding babies. Tonics and superfoods. Appendixes (A-F). About the authors.

Some of the basic recommendations in this book fly in the face of modern nutritional science: Eat more meat. Eat dairy products made from raw milk; pasteurization harms the milk. The worst fats are *trans* fatty acids, produced by hydrogenation; cholesterol and saturated fats do not cause heart disease. Consume plenty of enzymes. Meat should be eaten raw, rare, or braised in stock. Moreover, the authors propose a conspiracy in which doctors, researchers, nutritionists, and spokesmen of various government agencies are giving bad nutritional advice to the American public (p. 2). The authors wish, sentimentally, for the return of the small American farm. Moreover, they do not examine some of the non-dietary issues related to a diet based on meat and dairy products: What is its impact on the environment? How would it affect the ability of the Earth to feed more than 6 billion people? What right do humans have to kill animals?

However the authors also make a number of recommendations that many people would agree with: Eat more natural, traditional, fresh, and unrefined foods instead of refined and processed foods. Avoid sugar and hydrogenated fats. This book is strongly influenced by the observations of Dr. Weston Price, a dentist, whose important book *Nutrition and physical degeneration: A comparison of primitive and modern diets and their effects*, was published in 1939.

Concerning soyfoods, the authors favor the use of small amounts of fermented soyfoods (such as traditionally fermented soy sauce and miso) but are strongly opposed to the use of non-fermented soyfoods such as tofu and soymilk.

Soy-related recipes and information: Commercial soy formulas are low in saturated fats and devoid of cholesterol (p. 6). Today most of the fats in the American diet are polyunsaturated and derived from vegetable oils such as soy (p. 10). The cheapest oils, such as soy oil, are often hydrogenated; this creates *trans* fatty acids (p. 14-15). Cows lose valuable Activator X when fed high-protein soy-based feeds. Lecithin is found in butter (soy, the main source of lecithin worldwide, is not mentioned). Mother's

milk is high in cholesterol because it is essential for growth and development (p. 16-17). Omega-6 (bad) and omega-3 (good) fatty acids in soybean oil (p. 19). Fermented soy foods contain compounds that resemble vitamin B-12 but they are not absorbed by humans (p. 28). Isolated protein powders made from soy are usually obtained by a high-temperature process that over-denatures the proteins to such an extent that they become essentially useless, while increasing nitrates and other carcinogens. These isolated soy proteins can cause osteoporosis (p. 29). Beef should not be fed soy meal for protein, but rather animal parts (p. 31). Avoid farm raised fish [aquaculture] that have been fed soy meal (p. 32). Cultured soybean products from Asia, such as natto and miso, are a good source of food enzymes if they are eaten unheated (p. 47). The natural glutamic acid in soy sauce and miso gives these foods their rich, meat-like taste (p. 49). Many processed foods contain MSG or hydrolyzed protein, "especially soy-based concoctions" (p. 50). Heavily yeasted foods, such as soy sauce and Worcestershire sauce, often exacerbate the symptoms of chronic yeast [candida] infection (p. 56). Beans cause digestive problems because they contain two complex sugars, farrinose [sic, raffinose] and stachyose (p. 60). The macrobiotic diet and soybeans: Use only as fermented products like miso, natto, and tempeh. Problems with tofu, soy milk, and phytoestrogens in soy (p. 62). The sickening effect of soy on ruminants (p. 87). In Japan, a typical meal contains miso, soy sauce, and pickles, all fermented products. In Indonesia, they eat tempeh (p. 94). Ode to naturally brewed tamari soy sauce and teriyaki sauce (p. 147). Soy products increase the body's need for vitamin B-12 (p. 164). Soy in Chinese history. Miso soup. Tofu in fish stock and soy sauce broth (p. 201). Macrobiotic diets (p. 343). Soy foods block zinc absorption (p. 348). Eat natural salmon; farm-raised salmon are fed inappropriate soy meal (p. 418). Problems with soy flour and modern soy products: phytates, antinutrients, omega-3 fatty acids, disagreeable taste, phytoestrogens, phytic acid, enzyme inhibitors (p. 477, 495). Soybeans are low in two essential amino acids (p. 496). Textured soy protein contains three antinutrients: Phytic acid, trypsin inhibitors, and isoflavones (p. 502). Person fed soybean milk as an infant had a spleen filled with ceroid (p. 546). Infants should not be fed soy-based formulas which contain phytic acid and estrogen compounds (p. 599, 603-04).

Note: The first edition was apparently published in 1995 by ProMotion Publishing (San Diego, California). Address: California. Phone: (877) 707-1776.

3178. *Nutrition Business Journal* (San Diego, California). 1999. Soy protein is big news for suppliers. 4(10/11):5-6. Oct/Nov.

• **Summary:** The health claim for soy protein, approved Oct. 26, was granted under the Nutritional Labeling and Education Act (NLEA). The claim was submitted in 1998

by Protein Technologies International (PTI), a company of DuPont. On the day the claim was approved, PTI ran full-page ads in the *New York Times* and *Wall Street Journal*—a good idea since neither paper ran the story. Both Kellogg and General Mills are rumored to be developing a breakfast cereal containing soy protein.

In 1998 sales of soyfoods totaled an estimated \$1.7 billion and should reach over \$2 billion in 1999. During 1998 sales of soy milk grew to almost \$200 million (up 20%), tofu to \$200 million (up 15%), and tempeh \$17 million (up 5%)—according to Peter Golbitz of Soyatech Inc. In 1999, with interest in soyfoods skyrocketing, Golbitz predicts overall growth of 20%, with soymilk up nearly 40%, and meat alternatives, tofu, and other prepared foods containing soy gaining between 20% and 50%, depending on the product.

3179. Turtle Island Foods, Inc. 1999. Tofurky: America's #1 turkey alternative. Now with Wishstix and Tofurky "Giblet" Gravy (Ad). *Vegetarian Times*. Nov. p. 52.

• **Summary:** This one-third page vertical color ad introduces Tofurky with new features. Color photos show: (1) Tofurky sliced and served on a silver platter. (2) Three hands holding Wishstix. (3) Three packages of Tofurky Deli Slices in Original, Hickory Smoked, and Peppered flavors.

Note: The word "giblets" (pronounced JIB-luts), a word first used in the 15th century, refers to the edible viscera or entrails of a fowl / bird. Address: Hood River, Oregon. Phone: 888-TOFURKY or tofurky.com.

3180. Tibbott, Seth. 1999. Update on Tofurky (Interview). *SoyaScan Notes*. Dec. 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Sales of Tofurky (vegetarian turkey alternative) are up about 20-23% over last year. Seth expects to sell about 56,000 to 58,000 by the end of the year, up from about 45% last year.

His new product, Tofurky Deli Slices, are doing surprisingly well, with total sales almost equal to those of Tofurky. His slices are based on tofu, whereas most competing products are based on soy protein isolates, which is not as natural an ingredient.

The "slow roast" is new way to cook Tofurky for the best flavor. Seth learned this from a customer. Put diced potatoes and carrots inside, and baste them with the Tofurky. Wrap in foil, then bake at 300°F for 2 hours.

Seth gets lots of e-mail about Tofurky. Hot issues: (1) I've been a vegetarian for 15 years and I don't like it because it tastes too much like turkey. (2) Its too expensive. Seth's response: Ounce for ounce it is less expensive than Gardenburgers. (3) Does it contain genetically-engineered soybeans? (4) I like the new gravy. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: 541-386-7766 OF.

3181. Tibbott, Seth. 1999. How Seth got interested in tempeh (Interview). *SoyaScan Notes*. Dec. 7. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Seth now runs one of the largest tempeh manufacturing companies in the United States. He makes and private-labels tempeh for many other companies. Seth was born in 1951 in Washington, DC, at Columbia Hospital for Women. He attended Wittenberg University in Springfield, Ohio, but took a year off and worked at a nature center and in natural history programs in Yellow Springs. He also attended Antioch University in Yellow Springs, Ohio, for several semesters and studied outdoor education. His focus was elementary education with a strong background in environmental education. In 1974 he graduated from Wittenberg. Soon his main interest shifted to outdoor education, where he worked for 8-9 years before becoming a tempeh maker.

In 1977 he was living in Oregon working as a teacher-naturalist. He had read Steven Gaskin's books and knew about The Farm in Summertown, Tennessee. He was on their mailing list. He had read in their mailings about tempeh and he had been making soyburgers out of soy grits; he fried them in oil and they tasted awful, but they were one of his main foods. In the summer of 1977 he went to eastern Tennessee, not to visit The Farm but rather to work as a naturalist (officially an "environmental resource specialist") for the Tennessee Valley Authority's Youth Conservation Corps, located outside Greenville, Tennessee on Lake Nolichucky. He was a vegetarian, very interested

in vegetarian diets and very interested in The Farm—but had never been there. He and several friends (coworkers) showed up at The Farm one weekend—just to meet the people and see what they were doing. He saw nothing related to soyfoods or tempeh. The Farm had just gotten a truckload of gluten steaks, which Seth helped them devour.

After his visit, he ordered some tempeh spores from The Farm. He followed the directions, dehulled the beans by hand in their tent kitchen (it took about 2 hours to do 2 pounds), cooked then inoculated them, spread them on a stainless steel

tray, covered the tray with aluminum foil, perforated the foil, and put the tray out in a field for about 24 hours. The warm Tennessee summer weather at Lake Nolichucky was perfect for an incubator. “The next day we were just blown away to see what had happened to these beans. There was some discussion whether we should eat ‘em or not. But we fried ‘em up with okra and sweet corn. Man, it was just incredible. It was some of the best tempeh I’ve ever tasted. It was a religious experience.”

At the end of the summer Seth returned to Oregon to continue his work as a teacher-naturalist. Over the next few years he visited The Farm briefly during drives across the United States to visit his parents in Washington, DC. But, again, he never saw or tasted tempeh or soyfoods at The Farm; nor did he ever visit their Soy Dairy.

During these years he ordered more tempeh spores from The Farm, and made tempeh at home and for other people (retreat groups) at a retreat center in Oregon. By this time Seth had put together an incubator from an old refrigerator in a barn heated by light bulbs. By about 1980 he had obtained and started to use copies of *Tempeh Production* and *The Book of Tempeh* by Shurtleff and Aoyagi.

In 1980, when President Reagan came into office, many government natural history programs began to be cut. Seth realized how of much his income was tied to government programs. Seth wanted to see his poorly-funded retreat center survive, so he decided to go into business making tempeh in order to make a lot of money, which he would use to find the environmental education program at the center. The idealism of the 1970s! Seth had just gotten back from Alaska, where he worked as a naturalist in the summer of 1980. In the fall he began accumulating tempeh-making equipment, investing \$2,500 of his savings. He worked out a deal with the Hope Co-op in Forest Grove, Oregon, that he could use the space in their cafe during off-hours to make tempeh. He hoped to make tempeh another successful hippie food—like granola and yogurt. His first product, introduced in Dec. 1980, was Soy Tempeh. It was made from organically-grown soybeans (purchased from Applegate, in Oregon). The tempeh starter was purchased from The Farm in Tennessee. The tempeh was made in a perforated 8-oz bag, then sold packaged in a second outer bag—for \$0.74 wholesale and \$0.99 retail. Getting the labels printed was a big problem, because the minimum run on roll-stock was 1,000 labels—far too many. So Seth found a guy who printed bumper stickers, so he had several tempeh labels printed on each piece of bumper sticker stock. Unfortunately, it took a long time to peel each label off the bumper sticker. His next printed job was “Tempeh Information and Recipes.” Seth was the company’s sole employee for the first year; he did everything! Then he hired Belinda Hanley, followed by Alexander Lyon.

In 1982 Seth moved his tempeh company into an empty elementary school house which he rented in Husum, Washington, a little town of about ten houses, about 10 miles

north of Hood River, where Seth’s company is now. The school had a perfect kitchen for making tempeh; they stayed there for ten years.

In about 1986, while working as a struggling tempeh maker and still unmarried, Seth lost the lease on his rental house after a big party. Looking for a place to live, he decided to rent a piece of land (for \$30/month) and build a tree house up in four Douglas firs. It took about a year to build (of and on), and Seth did most of the work himself—when he was not making tempeh. The main room (bottom floor) was 11 by 16 feet with a deck surrounding it. It was very cozy, heated by a wood stove, and well insulated. Above that was a sleeping loft, with a little cupola (the size of a phone booth) on the third floor; it had a little window seat that folded out into a bed.

In about 1987-88, while living in his tree house, Seth started to hear about other people living in tree houses. Unable to find a book on the subject, he started to write one. He found a professional photographer, and soon wrote an article about tree houses in the *Whole Earth Review*. The article mentioned his book and encouraged other tree house dwellers to contact him. Eventually Seth and the photographer traveled around the USA, interviewing people and taking photos. While he was on the road, other people ran the tempeh company. In about 1989 Seth took his ideas and materials to various small publishers, including Ten Speed Press in Berkeley, California. They all turned him down, so the book was never finished or published. Another fellow, Peter Nelson, a tree house builder, was writing a book on the same subject at the same time. Peter found a major publisher, got an advance, and had his book published in the early 1990s.

Seth lived in this tree house for about five years—as his tempeh company steadily grew. In 1991 he married Suzanne Spowart, moved out of his tree house, and into her house at Trout Lake. In May 1992 Seth moved his company across the river to Hood River, Oregon. In June 1992 Seth and Suzanne had their first child. In about 1996 his wife, Suzanne, became the tempeh company’s bookkeeper, financial officer, etc.

A photo, taken in the summer of 1977 at Lake Nolichucky, shows Seth Tibbott—having fun, goofing off. Address: President and Founder, Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

**3182. Product Name:** Tonzu Organic Tempeh.

**Manufacturer’s Name:** The Organic Soy Company, Ltd.

**Manufacturer’s Address:** Unit A, 2 Corban Ave., Henderson, Waitakere City, Auckland 0612, New Zealand.

**Date of Introduction:** 1999.

**Ingredients:** Certified organic whole soybeans, *Rhizopus* culture.

**Wt/Vol., Packaging, Price:** 250 gm, vacuum packed inside

paperboard box.

**How Stored:** Refrigerate at 4°C or less.

**New Product–Documentation:** Label sent by Elizabeth Chalmers, owner. 2007. Jan. 22. The product was introduced by this company in 1999, but it was first sold in this paperboard box in 2006. They started using the Tonzu brand name in 2002. 5.75 by 4.75 by 1 inch. Color photo of snowy mountains beyond a deep green valley, on a bamboo green background. Superb label design. Certified Organic logo. On side panel: “Tempeh is a traditional high protein Indonesian soy food and one of the few vegetarian sources of vitamin B12. It is an excellent alternative to red meat, chicken, eggs or fish... Consume within 24 hours once opened. Can be frozen.”

Letter (e-mail) from Elizabeth Chalmers. 2007. Jan. 22. “Today, after incubation in perforated plastic bags, we cool the tempeh down to 4°C, vacuum pack it, then pasteurize / blanch it in boiling water in the cooker for 15 minutes. We have had a few problems with shelf life. Tempeh can blow up like a football on the chiller shelf in and even on occasion has jumped off the shelf—tempeh with an attitude! We are a bit puzzled as to why the occasional packet does this.”

3183. Astuti, Mary. 1999. History of the development of tempeh. In: Sapuan, Noer Sutrisno, and Jonathan Agranoff, compilers and translator. 1999. *The Complete Handbook of Tempe: The Unique Fermented Soyfood of Indonesia*. Singapore: American Soybean Association. xiv + 186 p. See p. 2-15. [17 ref. Eng]

• **Summary:** A superb, landmark history of tempeh in Indonesia. The best seen to date! Contents: Introduction. The origin of soybeans in Indonesia. The origin of tempe. Origin of the tempe inoculum. Consumers and producers of tempe. The development of tempe processing technology. Development of tempe inoculum: Leaf inoculum, semi-pure powdered tempe inoculum, pure strain *Rhizopus oligosporus*. Conclusion.

The origin of soybeans in Indonesia: “The modern Indonesian name for soybean is *kedelai*, but according to Winstedt’s (1960) dictionary, *kedelai* comes from the Tamil language in southern India. Similarly Wilkinson’s (1955) dictionary cites *kedelai*, to mean soybean or mung bean (Tamil).”

“In Javanese literature, the word *kedelai*, (written as *kadele* in Javanese), was first recorded in the Serat Sri Tanjung manuscript, believed to have been written in the 12th or 13th centuries. The manuscript describes the story of Sri Tanjung, wife of Ki Sidapaksa. In the story, Sri Tanjung was accused of committing adultery and, to prove her innocence, she threw herself into the river, from whence rose a beautiful fragrance, proving her innocence. As a reminder, the place where Sri Tanjung lived was given the name Banyuwangi, which means ‘fragrant water.’ The Sri Tanjung Manuscript (*Serat Sri Tanjung*) represents a legend of the

town of Banyuwangi, and includes the mention of soybeans as illustrated in the excerpt below (in ancient Javanese):” A 3-line excerpt, which includes the word “*kadele*,” is given.

“A rough translation of the above is as follows: “The dwelling place of the teachers and the hermits was very beautiful, as were the gardens that were planted with peanuts, taro and sugarcane, soybeans and beans. There were tubers and ivory bananas beside them and ‘cintamani’ sugarcane as well as ‘gunting’ bananas that were also laid out in rows.”

The word for “soybeans” is also found “in the Serat Centhini manuscript. This manuscript tells the story of Tambangraras, daughter of the king of Giri (a region of East Java near Surabaya), who fled with her brother from Giri when it was threatened by the armies of Mataram under Sultan Agung Anyakraksuma in the 16th century. They traveled with their servant, Centhini, throughout Java. Tambangraras told stories of their experiences and observations on the philosophy and culture of the Javanese which were recorded by Centhini. These stories, or Serat Centhini are also known as Suluk Tambangraras (after the daughter of Sunan Giri) and contain highly detailed analyses of the Javanese people, now regarded as reference works for the basis of Javanese knowledge and culture. In these accounts, they describe not only the regional cultures they came across in different parts of Java, but also the wide range of different foods that they were presented with. Although very little information was documented about how these foods were prepared, the ingredients are described in detail. As skills are largely handed down from generation to generation in Javanese society rather than being formally written down, it would not have been usual for a detailed recipe to be described. The original manuscripts were transcribed by Ronggo Sutrasno of the Palace of Surakarta by the order of Sultan Amengkunagara III. It was quite common at the time for such stories to be recorded by royal families in different areas and this one was also transcribed into verse in the Javanese calendar year 1724, (1814 AD).

“The word for soybeans appears first in section two of the Serat Centhini. This section describes the travels of Cebolang, son of Seh Akadiyat, from Purbalingga to Mataram, stopping at the home of Ki Amongtrustha. Here he was served dinner that consisted of a selection of foods including soybean porridge. In Mataram, Cebolang also obtained information about a special offering that was prepared by parents about to marry off a child. One such ceremony, witnessed by Sriyanto was about the *kacar-kucur*. Kacar-kucur contained kawak beans and mature soybeans, yellow rice, aromatic flowers and shiny metal coins. According to this well preserved ceremony, soybeans had been used in the kacar-kucur for traditional ceremonial purposes for a long time. It also reveals that the savory rice dish *nasi udeg* cooked with coconut for serving with chicken, was also served with fried black soybeans. Black soybeans evidently have a deep significance in Javanese culture.”

“Etymology may also hold a clue for us.” In Chinese (Cantonese), beans are called *tau* or *tao*. Therefore, in Indonesia, many foods made from beans have names with the prefix *tau* (or *ta*) such as: (1) *tauci* / *taosi* / *tau-dji* (modern and former spellings) (salted black soybeans). (2) *tauco* / *taucho* / *tautjo* (Indonesian-style miso). (3) *taugé* (bean sprouts). (4) *taujiong* / *tau-jiong* (soybean jiang). (5) *tahu* (tofu, by shortening *tau-hu*). (6) *tahua* (a by-product of tofu similar to yogurt in consistency). (7) *takua* (firm spiced tofu). Another fermented Indonesian soybean product is *kecap* / *ketjap*, which is *ke tsiap* in its native China. Notice that tempe, whose name is not derived from Chinese, does not start with the prefix *tau* / *tao*.

“The origin of tempe: The earliest written record of the word *tempe* comes from the Serat Centhini manuscript, Chapter 3. The excerpt of the manuscript describes the journey of Mas Cebolang when he traveled between Prambanan temple and Pajang, via Tembayat in Klaten regency (in Central Java). Here, Cebolang was served a hefty lunch by the prince of Bayat, which is described in its entirety, to include: *jae santen tempe*, a dish of tempe in coconut cream, and *asem sambel lethokan*, the main ingredient of which is over-fermented *tempe lethokan*. *Sambel lethok*, also known as *sambel tumpang* is nowadays still frequently made by the Javanese.

“Tempe made from soybeans was again mentioned in the Serat Centhini in chapter 12, which describes the journey of Jayengresmi and his group at Bustam village. Here they were hosted by Ki Arsengbudi, who served them a banquet which included *Kadhele tempe srundengan*.

“From the descriptions of the travels through Java of the Giri children and Cebolang, plus the numerous banquets served by their hosts, it can be seen that soybeans and tempe only appeared in Central Java. This was in the region of Mataram which includes the villages of Mataram, Mbayat and Bustam. In West Java (Bogor) fish was largely served as it was also in Surabaya (East Java).”

Origin of tempe inoculum: “The method of making ragi tempe was first described by Widagdo in a local magazine called *Guru Desa* (The Village Teacher), published in 1915, from Kulon Progo. According to Widagdo, making ragi tempe was easier than making ragi tape, and that one had to use pre-existing ragi tempe to make more ragi tempe. How the first ragi tempeh came to be is still a mystery...” Continued. Address: Gadjah Mada Univ., Faculty of Agricultural Technology, Jalan Socio Yusticia, Bulaksumur, Yogyakarta, Indonesia.

3184. Astuti, Mary. 1999. History of the development of tempeh (Continued—Document part II). In: Sapuan, Noer Sutrisno, and Jonathan Agranoff, compilers and translator. 1999. The Complete Handbook of Tempe: The Unique Fermented Soyfood of Indonesia. Singapore: American Soybean Association. xiv + 186 p. See p. 2-15. [17 ref. Eng]

• **Summary:** Continued: “The theory that tempe originates in Java is supported by the fact that tempe can be found in every corner of the island, with variation only in terms of the type of substrate used to manufacture it. The Javanese are both producers and consumers of tempe, both on Java as well as in other regions where they live. So strong is this bond between tempe and the Javanese that the two have become inseparable. Wherever there are Javanese, there is sure to be a source of tempe too.

“An extension of this Javanese tempe society can be seen amongst the Javanese community in Tondano, North Sulawesi. This community descended from a group of Javanese lead by Kyai Mojo, a Javanese Islamic leader who was exiled by the Dutch in 1835. Information gathered from this community revealed that when they first arrived, they were desperate to make tempe but did not bring the essential inoculum. Initially they tried making tempe by boiling soybeans then wrapping them in the leaves of the palambayan tree. These leaves are similar to the hibiscus used in Java, having hairs on the under surface. They succeeded in growing a type of tempe by wrapping the beans in leaves even though they no inoculum, which shows that naturally occurring wild fungi such as those found on leaves can produce tempe and provides evidence that tempe may have originated in this way.

“The spread of tempe outside Java began with the migration of Javanese to other regions, both within Indonesia as well as abroad... The Dutch took indentured labourers from Java to work in their plantations in Suriname, South America. These migrant Javanese brought with them their traditions as well as the know-how of tempe production. As a result, tempe manufacture can now be found in Suriname, Malaysia and Thailand, the latter two countries also have Javanese communities who make tempe.

“Within Indonesia, the spread of tempe is also associated with the movement of the Javanese, the majority of whom have traveled as transmigrants to other areas. Many transmigrants from Java settled in Lampung, Sumatra and brought with them their tempe technology. Interestingly, even though the Javanese passed on their knowledge of making tempe to the natives of Lampung, the industry failed to develop among them, illustrating the specific ethnicity that only the Javanese seem to have with this food” (p. 9).

“Before Indonesian independence in 1945, tempe was produced largely from black soybeans. However, preferences shifted to the yellow soybean when they began to be imported from China and America, and the black traditional variety almost disappeared. Other beans are also occasionally fermented into tempe, and in certain pockets of Java such as the area of Wonogiri and Gunung Kidul, tempe made from lamtoro (*Leucaena glauca*), a leguminous tree can be found. Lamtoro seeds are extremely cheap compared to soybeans, and as these areas are very poor, soybeans and koro beans are too expensive and the people have adapted to using cheaper

local materials” (p. 10).

“The method [of making tempe] reported by Widagdo in his 1915 article is as follows: ‘First of all, the whole soybeans are boiled until cooked, then allowed to cool. When cool, the hulls are removed by treading under-foot several times until they float easily to the surface of the water. The hulls can then be easily separated and discarded, more water being added to clean the soybeans. The beans are then left to soak overnight until the soakwater begins to smell bad. At this stage they are boiled until soft, drained and left to cool on a bamboo or woven leaf mat. When cool they are mixed with the ragi on a hibiscus leaf. This is done by tearing up the hibiscus leaf with its mold into tiny pieces and placing this on a clay pot which is heated above the fire, without letting it burn. When the leaf dries out, the pieces are agitated until the mold becomes detached. They are taken and mixed up with the cooled soybeans. After this they are wrapped in leaves and fermented in a gunny sack for 48 hours until they become tempe.’ This particular variation is illustrated in Table 1, variation V” (p. 11).

Leaf inoculum: “Ragi tempe which is sold in the form of sporulating mold stuck to the underside of hibiscus leaves is called ‘usar,’ because in order to inoculate soybeans with this, the leaves are wiped over the beans to spread the spores; the word *usar* means ‘to wipe,’

“Near Yogyakarta in central Java is a village well known for its ragi producers. This is Kamal village in the Seyegan township of Sleman regency. One 75 year old descendent of a ragi making family could remember his mother and grandmother, when she was 70 years old, still making ragi. They used black soybeans that were fermented on hibiscus leaves. Usar was therefore made by the people in this area at least as early as 1845, and probably long before that too.”

Semi-pure powdered tempe inoculum: “Ragi tempe is not only available in the form of usar on leaves, but also as a powder. This powdered commercially available product has been produced by the Lembaga Ilmu Pengetahuan Indonesia-LIPI (Indonesian Institute of Sciences) in Bandung, West Java since 1976 (Prof. Suharto, 1995, personal communication), and is widely used by the tempe makers belonging to the Indonesian co-operative of tempe and tahu makers (KOPTI). This powdered tempe inoculum is produced from a pure strain of *Rhizopus oligosporus* which is grown on a cooked rice medium, and dried and ground into a powder. It therefore contains a much more restricted range of *Rhizopus* molds than are found in the more wild ‘usar’, although not a single pure strain.”

Conclusion: Tempeh probably originated in rural Java, “certainly before the 16th century.” Initially, it was probably prepared from black soybeans. Address: Gadjah Mada Univ., Faculty of Agricultural Technology, Jalan Socio Yusticia, Bulaksumur, Yogyakarta, Indonesia.

uses in iron deficiency anemia. In: Sapuan, Noer Sutrisno, and Jonathan Agranoff, compilers and translator. 1999. The Complete Handbook of Tempe: The Unique Fermented Soyfood of Indonesia. Singapore: American Soybean Association. xiv + 186 p. See p. 41-45. [10 ref. Eng]

• **Summary:** Contents: Introduction. Extent of iron deficiency anemia in Indonesia. Tempe in the management of iron deficiency anemia. Address: Indonesia.

3186. Astuti, Mary. 1999. Antioxidant properties of tempe: Prospects for prevention of degenerative diseases. In: Sapuan, Noer Sutrisno, and Jonathan Agranoff, compilers and translator. 1999. The Complete Handbook of Tempe: The Unique Fermented Soyfood of Indonesia. Singapore: American Soybean Association. xiv + 186 p. See p. 71-78. [16 ref. Eng]

• **Summary:** Contents: Introduction. Process of oxidation and cellular damage. Antioxidants as protective agents in the body. Premature aging as a degenerative disease. Antioxidants in tempe—Can they slow degenerative diseases? SOD (superoxide dismutase). Conclusions. Address: Indonesia.

3187. Bladholm, Linda. 1999. The Asian grocery store demystified: A food lover’s guide to all the best ingredients. Los Angeles, California: Renaissance Books. 234 p. Foreword by Jonathan Eismann. Illust. Index. 23 x 13 cm. Series: A Take it With You Guide.

• **Summary:** An original, well-researched and well-written book—though some of the terminology (such as “beancurd”) is outdated. Soyfood products include: Beancurd noodles (p. 38). Kinako (p. 47). Soy sauce, mushroom soy sauce, kecap manis (p. 53). Hoisin sauce (p. 54).

Chapter 10, titled “Soybean products” (p. 93-99) includes: Black bean sauce, dried soybeans, tempeh, beancurd (pressed beancurd, deep-fried beancurd, savory grilled beancurd {yaki-tofu}, freeze-dried beancurd {koyadofu}, bean curd sheets {yuba}), fermented beans (preserved black beans {tau see}, bean sauce, toen-jang, chili/hot bean sauce, fermented beancurd), okara, edamame, soybean sprouts, soy milk.

Note: This is the earliest English-language document seen (March 2009) that uses the word “toen-jang” (or “toen jang”) to refer to Korean-style soybean jang (miso).

Concerning preserved black beans: “Also called salted or fermented black beans or ‘tau see,’ this is made by steaming small black soybeans, then fermenting them with salt and spices. Used in a variety of dishes to add a pleasant rich aroma and salty taste... Crush or mash beans slightly to release more flavor or mix with garlic, fresh ginger, or chilies. Available in small glass jars, cans, and plastic bags. They should feel soft and not be dried out... Look for Pearl River Bridge brand labeled ‘Yang Jiang Preserved Beans’ in a 1-pound yellow canister, and Koon Chun Sauce Factory,

Double Parrot, and Zu Miao Trademark brands all in 8-ounce bags.” Note: This is the earliest English-language document seen (Oct. 2008) that uses the term “tau see” to refer to Chinese-style soy nuggets (preserved black beans).

Concerning bean sauce: “Varieties of this Asian staple include yellow bean sauce, brown bean sauce, bean paste (tau jeong), or sweet bean condiment. All are made from yellow or black soybeans, fermented with salt and in the sweet Northern Chinese type, with sugar-sweetened crushed yellow [soy] beans. Two forms are found: whole beans in a thick sauce and bean paste, which is mashed, ground or pureed beans. The whole bean type has a rounder flavor and adds texture, while the pastes are very salty and should be used sparingly... The yellow bean paste is tau cheo... Sold in glass jars and cans. Look for Koon Chun Sauce Factory, Kon Yick Wah Kee bean sauce, Amoy, or Yeo’s.

Chapter 18, titled “Japanese food products” (p. 168-81) includes: Tsukemono (pickled in miso), miso paste, shiromiso, akamiso, mamemiso, natto, miso soup, noodle dipping sauce base (memmi), tamari sauce, teriyaki sauce, tonkatsu sauce.

Interesting non-soy products include: Sesame paste (p. 57). Satay sauce (with peanuts), gado-gado-dressing (p. 58). Peanut oil (p. 64). Sesame oil (p. 65). Amaranth (vegetable, p. 72). Winged beans (p. 76). Pickled wheat gluten (p. 108). Sesame seeds, peanuts, roasted peanuts (p. 118). Red/azuki beans, agar-agar (p. 121). Wheat gluten (p. 127). Sesame candy, peanut roll (p. 136). Sesame seed and peanut cookies (p. 137). Sweet red bean paste (azuki *an*, p. 139). Coix seed (Job’s tears, p. 165). Japanese seaweed and kelp (p. 169-70). Umeboshi (p. 171). Fu (dried wheat gluten cakes), mochi (p. 177). Address: Writer, designer, illustrator and photographer, Miami Beach, Florida.

• **Summary:** Contents: Introduction. Influence of diet on blood lipids. The effects of tempe on blood lipids (“The components within tempe thought to have cholesterol lowering effects include the following: protein, polyunsaturated fatty acids {PUFA}, fibre, niacin, vitamin E, carotenoids, isoflavones, and antioxidants”). Summary and recommendations.

Graphs show: (1) Average decrease in triglycerides after experimental diet. (2) Average decrease in total cholesterol after experimental diet. (3) Average decrease in LDL cholesterol after experimental diet. (4) Average increase in HDL cholesterol after experimental diet. (5) Average decrease in the ratio of plasma total cholesterol to HDL cholesterol after experimental diet.

Six illustrations show hypothesis for the development of atherosclerosis and methods of intervention. There are 7 risk factors including smoking, hypertension, hypercholesterolemia, obesity, etc. To address these: Stop smoking, make 6 dietary changes, and increase physical activity. Address: Nutrition Lab., Universitas Airlangga, Indonesia.

3189. Davidson, Alan. 1999. The Oxford companion to food. New York, NY and Oxford, England: Oxford University Press. xviii + 892 p. Illust. by Soun Vannithone. Index. 29 cm. [1500+\* ref]

• **Summary:** The 2,650 alphabetical entries in this excellent encyclopedia and cornucopia represent 20 years of Davidson’s work. The 175 illustrations by Laotian artist Soun Vannithone are superb. There are 39 longer entries about staple foods such as rice, noodles, and apples. A comprehensive bibliography provides access to further information. The book does not contain recipes.

Soy-related entries include: Bean sprouts (p. 64). Black beans, fermented (*chi*, p. 79). Kecap (Indonesian soy sauce, made “basically from soya beans and palm sugar only.” “The word ‘kecap’ has passed into the English language as catchup or catsup and then as Ketchup, which now means something quite different.” p. 429). Ketchup (“probably via the Malay word *kechap*, now spelled *kecap*, which means soy sauce. The word was brought back to Europe by Dutch traders who also brought the oriental sauce itself. The sauce has changed far more than has the word, although the name has appeared in a large number of variations such as catchup and catsup.” Discusses tomato ketchup, mushroom ketchup, and ketchup made from oysters, mussels, walnuts, etc., p. 430-31). Koji (p. 435). Lecithin (p. 447). Miso (p. 509). Natto (p. 530). Soybean (p. 739). Soy milk (p. 739-40). Soy sauce (p. 740). Tempe (or tempeh, p. 788). Tofu (p. 798-99). Yuba (p. 860-61).

Also discusses: Alfalfa (p. 10). Almond (p. 12-13, incl. “almond milk”). Amaranth (p. 13). American cookbooks, history (p. 15-17). Azuki beans (p. 44-45). Barley, barley breads, and barley sugar (p. 58-60). Beef-BSE (mad cow disease, p. 68). Chia (p. 166). Cowpea (p. 230-31). Chufa (p. 185). English cookery books, history (p. 276-80). Five grains of China (p. 305). Gluten (p. 341). Groundnuts (or peanuts, p. 356-57). Hemp (p. 377-78). Hydrogenation (p. 391). Japanese culinary terms (p. 415-17). Kudzu (p. 437). Linseed (p. 454-55). Lupin (p. 463). Margarine (p. 478-79). Mung bean (p. 518). Nori (p. 534). Noodles of China (p. 537, incl. “Gan si {soya bean noodles}” and “Fen si {also fen-szu} {mung bean vermicelli}”). Oncom (p. 553-54). Quark (p. 644). Quinoa (p. 645). Seaweeds (incl. hijiki, kombu/konbu, nori, wakame, etc., p. 712). Sesame (p. 713). Shortening (p. 721-22). Sprouts (no listing). Tahini (p. 779). Toast (p. 797, incl. Melba toast). Ume and umeboshi (p. 817). Winged bean (p. 849). A brief biography and nice portrait photo of Alan

Davidson, a man of extraordinary knowledge in the world of food, appear on the rear dust jacket.

Note: The paperback edition of this book (2002) is titled *The Penguin companion to food*. Address: World's End, Chelsea, London, England.

• **Summary:** “Tempe is extremely popular in rural areas, where it is served as a complementary food in the daily menu, as well as throughout Java’s cities, especially in Central Java. Both village and urban tempe consumers share several well known recipes. Tempe may be boiled, for *tempe bacem*, cooked with vegetables (*oseng-oseng tempe*), fried to dryness (*kering tempe*) and even left to become over-ripe before it is cooked (*tempe bosok*). In addition, it may be served as an accompaniment to the main meal (*luwah*) or served as a snack (*nyamikan*). The most popular dish in an area depends on the taste and preference of the particular social group concerned and what learned behaviour they have acquired. In rural areas, tempe has already spread into all sectors of society and is eaten by everyone, from the highest socio-economic classes to the very lowest. In towns and cities, things are a little different and here more tempe is consumed among the middle and lower classes.

“In rural society, although tempe is readily eaten as an addition to the daily menu, it is nevertheless regarded as a food of low status and may lower one’s position or social standing. For example, a member of a particular community may put down the social status of a group who do not have status symbols or prestige, by calling them ‘the tempe group.’ Similarly, if a rich family were to serve tempe at a family wedding for instance, it would be seen as highly inappropriate to their social and economic status.

“As in rural areas, urban societies also have their own views. Here, tempe is not consumed equally by all social

groups, but is generally served as a variation to the menu of middle and lower class families. As in rural areas, it is almost unheard of to serve tempe at formal receptions and dinners among the middle and upper classes, who instead prefer to serve European or American style food, the same as Europeans or Americans might serve ‘exotic’ Indonesian food in the same circumstances.

“In urban areas, particularly in central Java, the word ‘tempe’ was used in the past to refer to things of low or trivial value, as well as being an insult to put down something as inferior. Over the years, expressions have appeared like ‘tempe nation,’ ‘tempe mentality,’ and ‘tempe class’ to refer to something of lower prestige or of lower quality as it implies being only as cheap as tempe.

“Among all the foods available in a society, there are some that have important significance and symbolism (Koentjaraningrat, 1987). Tempe is one such food. A food’s social value is linked to socio-economic factors, whereas the ritual, or cultural significance of a food relates to its use in religious ceremonies, festivals and life events. All of these aspects influence people’s attitudes and perceptions of tempe and in some areas it is held as a food of great socio-cultural significance. In certain rural areas, especially around Cilacap and Poerwokerto in Central Java, and Bantul and Wonosari in Yogyakarta province, tempe is served at an important feast, or *selamatan* known locally as *kenduri* as well as at a ceremony where offerings are made (*punjungan*). This is a type of Thanksgiving ceremony for the cycle of life and is represented by tempe made into sacred offerings according to local beliefs. A *selamatan* may be held for a birth or in coastal areas, as an offering to the spirits of the sea.

“In the last few years, the position of tempe in society has improved dramatically and more people, particularly in towns and cities as well as those abroad already enjoy eating tempe. This move has been brought about largely through increased knowledge and awareness about food and nutrition. Many academic institutions, universities and nutrition authorities, both governmental and independent, within Indonesia and abroad, have publicized their findings on tempeh via scientific journals, lectures, and the press.” The main nutritional benefits of tempeh are listed. Address: Gajah Mada Univ., Yogyakarta, Indonesia.

3198. Lwin, Claudia Saw. 1999. The food of Burma: authentic recipes from the land of the golden pagodas. Boston, Massachusetts: Periplus; North Clarendon, VT: [Distributed by] Tuttle Pub. 120 p. Introductory articles by Wendy Hutton, San Lwin and Win Pe. Illust. (color photos by Luca Invernizzi Tettoni). Index. 21 x 23 cm.

• **Summary:** Contains 75 recipes collected from all over Myanmar. A glossy, full-page photo is on every other page. The most populated “upcountry” region of Myanmar is the Shan Plateau. One of the main foods grown here is soya beans. The soups from this area are often “thickened with

powdered soya bean. One example of this is a Shan version of Burmese noodles (*kyaukswe*), which is based on pork in a soup thickened with powdered soya bean..." (p. 12-13).

"The Shan tribes also make a fermented soya bean product similar to the Indonesian *tempe*, which is often dried, pounded and used as a seasoning" (p. 13).

"The soya bean, a native of China, appears in many guises in Myanmar: soy sauce, fermented soya beans (sometimes pressed into a cake and dried) and beancurd [tofu]." The Shan people also make a unique type of tofu from chickpeas. Sprouts are made from several types of beans, including soya beans and mung beans (p. 15).

In Part II, "Cooking in Myanmar," the section on "Burmese ingredients" has three soy-related entries (p. 35): "Soya bean cake (*pè bya*): Dried soya beans are steamed, fermented, and made into cakes or wafers, which are roasted or pounded to a powder. This powder is added to curries and soups, or mixed with tomatoes to make a dish similar to Myanmar curried *ngapi*." A small color illustration shows soya bean cake. "Soy bean preserve (*pè ngapi*): Fermented soya beans are made into a paste and used as a condiment. Tinned soya bean paste is sold outside Myanmar and can sometimes be used as a substitute for the fermented soya bean products.

"Soy Sauce (*pe nganpya yay*):" Light and dark soy sauce are both used in Burmese recipes; the light sauce is saltier and paler in colour.

Soy related recipes: Khayanchinthee pantwepyaw (Tomato sauce, with "2 slices dried fermented soya bean cake, 7 cm (3 inches) in diameter," p. 37). Wether ahchochet (Pork balls cooked in sweet soya bean sauce, with "2 tablespoons sweet soya bean sauce," p. 96-97). Kailun gyaw (Stir-fried kailan, with "1 tablespoon light soy sauce," p. 108).

Note: This is the earliest English-language document seen (Sept. 2010) that contains the term "sweet soybean sauce."

3199. Mowe, Rosalind, ed. 1999. Southeast Asian specialties: A culinary journey through Singapore, Malaysia, and Indonesia. Cologne, Germany: Culinaria Koenemann. 319 p. Illust. (color photos by Günter Beer). Index. 26 x 22 cm.

• **Summary:** Translated from the German. Includes headings in Chinese. This book is a feast for the eyes, printed on glossy paper with informative color photos on almost every page. The structure and content are also creative and very interesting; it has caught the heart and spirit and nuances of the culture. On some pages, however, the type is too small to read. The name of most recipes and ingredients is given in their native language. A 2-page map of Southeast Asia appears near the front. The basic structure: Singapore (p. 12-109). Malaysia (p. 110-215). Indonesia (p. 216-301). Glossary (p. 302-04). Introduction to Chinese nutritional

theory, by Andrea Fülling (p. 305-06): Introduction, yin and yang, the three warmers, the warming effect of foods (the five energy states are hot, warm, neutral, refreshing, and cold), the five elements. Acknowledgements. Photo credits. Index.

The contents includes: Healing herbs (p. 26-29). Soup as medicine (p. 30-33). Soybean (in Singapore, p. 40-47): Introduction (familiar forms are sprouts, soy sauce, beancurd, tempeh; new disguises are "vegetable protein," emulsifier, "lecithin," "vegetable oil" which are found in dairy products, canned fish, candies, desserts, and much more), in the West soybeans are "often grown as monocultures, with the disadvantages that this entails, such as the use of chemical fertilizers and pesticides," and genetically engineered soybeans, great nutritional value yet rarely used as whole dry soybeans, most of the harvest in SE Asia is processed into beancurd and tempeh, importance of fermentation, soy milk resembles cow's milk and is an excellent substitute, soy sauce is used throughout this cuisine. Photo of green soybean plants with green pods.

Soybean sprouts: "Black soybeans are imported from Thailand and Myanmar (Burma)." After washing, the beans are spread out in deep baskets and kept in the dark for 6 days. "Before the baskets of sprouts can be sold, the top layer if green leaves is trimmed off. They are used as feed for chickens and ducks. One basket yields 154 lb (70 kg) and the output of a medium-sized business is 60 baskets a day." Soybean "sprouts should never be eaten raw, nor should they be cooked for too long." Mung bean sprouts are better known than soy sprouts, but both can be bought fresh.

Dou ban jiang ("Salted soya bean sauce." Photo of jar and Sinsin label). Dou chi ("Black bean sauce." Photo of jar and Sinsin label). Note: Typically Dou chi are named "Salted black beans." Photo of five glasses showing how dry soybeans are transformed into soymilk, then curds.

Tofu: Meat from the fields (p. 42-44). The best tofu is made from special types of soybeans that are different from those that are crushed to make oil and meal. Most of the tofu in Singapore is made from soybeans imported from Canada. Describes the basic process for making commercial pressed tofu or soft tofu, with 7 photos showing the steps. Implies that making yuba is part of the process for making tofu; it "is eventually sold as dried beancurd sticks (*fu chok*).

Soy milk products: Fu pei—dried tofu skin [yuba]. Fu chok—dried tofu sticks [dried bamboo yuba]. Tim chok—sweet tofu pieces [sic, sweet yuba / ama-yuba]. Tofu fa—soft tofu as a dessert [tofu curds]; a little tapioca flour may be added. "Served warm or cold with a syrup flavored with almond extract." Color photo shows yellow yuba atop hot soymilk, and a woman removing a slab pressed tofu from its mold.

Tofu recipes for every taste (p. 44-45): "Tofu on its own is rather bland in taste, but this is precisely its strength, since when it is combined with different ingredients and condiments it tastes new and different every time. Recipes:

Niang dou fu (Fried beancurd pockets). Xia ren dou fu (Stir-fried beancurd with jumbo shrimp). Hong shao dou fu (Braised beancurd). Sui rou zheng dou fu (Steamed soft beancurd with ground pork). Dou hua (Sweet beancurd dessert). Zha fu pi jian (fried beancurd skin [yuba] roll). Color photos show the 2nd and last recipes.

Soy sauce (p. 46-47): A naturally fermented product made with mold cultures of *Aspergillus oryzae*. Describes the process for both light and dark; the koji is made in shallow round trays, ready after 4 days. It is “then transferred into fiberglass tanks [or earthenware jars], covered with brine, and left to ferment for 3 months,” after which the 1st extraction of crude soy sauce takes place [but not through pressure]. More brine is added and a second extraction takes place 1 month later; this process is repeated for the third extraction. “At this point, the paths of the different soy sauces diverge.” The saltier, light-colored soy sauce is mixed with a preservative, pasteurized, “and stored in tanks to clarify before bottling.” The dark soy sauce is mixed with both a preservative and caramel coloring, is allowed to mature for an additional 4 weeks, then is pasteurized and bottled. Note: What happens to the 2nd and third extractions? Color photos show five steps in the process, but a traditional earthenware vat is shown instead of the fiberglass tanks. Dark soy sauce is thicker than light. Recipes: Jiang you ji (Chicken in soy sauce, with marinade). Hong shao niu nan (Braised shoulder of beef).

Oyster sauce (contains no soy). Sesame oil (p. 49, with 7 photos).

Condiments (p. 50-51): Color photos show the front and label of 15 separate jars and bottles with a substantial description under each. Those containing soy are: Hoisin sauce. Dou chi (Fermented bean dried). Dou ban jiang (Tou cheong). Fu ru (Beancurd preserved). Jang qing (light soy sauce). Hei jiang you (Dark soy sauce). Tian jiang (Sweet sauce).

Peking duck (p. 62-65; soybean paste {no Chinese name is given} and Hoisin sauce are ingredients in the sauce). One key is the crisp skin. It is served in thin Mandarin pancakes.

Suckling pig (p. 86-87): Piglets are bred in Hunan province. Slaughtered at the age of 3-4 months. After a dead piglet has been patted dry, it is brushed with soy sauce, then coated with a marinade that includes fermented red bean curd and light soy sauce. As with Peking Duck, suckling pig is prized for its crisp, tasty skin. Six photos show the skewered baby pig.

Symbolic foods (p. 98-101): One of these is Moon Cakes from the mid-autumn festival (15th day of the 8th lunar month). “Traditional fillings include sweet black bean or lotus paste.” Is the sweet black bean filling made from soy beans?

Instant cup noodles [instant ramen] (p. 48): Note: Wikipedia says at Momofuku Ando: ORS [Order of the Rising Sun], (lived March 5, 1910–Jan. 5, 2007) was the

Taiwanese-Japanese businessman who founded Nissin Food Products Co., Ltd. He is famed as the inventor of instant noodles and cup noodles, which he launched on 25 Aug. 1958 (at age 48) under the name Chikin Ramen—after months of trial and error experimentation to perfect his flash-frying method. On 18 Sept. 1981 he launched his most famous product, Cup Noodle.

Beansprouts (p. 154-57): With a long introduction, a description of the process, beautiful photos, and recipes: Taugeh goreng kucai (Fried beansprouts with chives). Taugeh masak kerang (Fried beansprouts with baby clams). Tahu goreng (Fried tofu with beansprouts). Bihun goreng (Fried rice noodles). Urap taugeh (Fried beansprouts with grated coconut).

Nasi tumpeng (rice cone) (p. 220). Served with sambal goreng tempe (crisp-fried marinated strips of tempeh). Gudeg (rice with green jackfruit cooked in a sweet sauce, p. 221) is served with a side dish of tahu goreng bacem (tofu cooked with spices, then fried).

Tempeh (p. 228-29), soybeans fermented with *Rhizopus oligosporus* mold. Indonesians consume more tempeh than tofu. The process is described, with 4 color photos: Recipe: Tempe goreng (fried tempeh).

Glossary (p. 302-04) includes: Fermentation. Soy sauce (“Probably the best-known Asian seasoning agent,...”). Sticky rice (also known as glutinous rice). Tahu (Indonesian; tofu). Tempeh. Tofu (beancurd, incl. hard, soft, and smoked).

• **Summary:** A very interesting chapter about two key organizations. Contents: Introduction. History of KOPTI. The role of BULOG (National Logistics Office) in the development of Kopti. Pusat KOPTI or PUSKOPTI. Contributions of Kopti to the tempeh industry: Institutional aspects, business and capital, the managerial position, social welfare for its members. Achievements of Kopti in tempe development: Quality improvement, processing of waste products and environmental constraints, soybeans, tempe marketing. Challenges of Kopti and future prospects: Organizational targets, business challenges, industrial and technological challenges, investment capital challenges, challenges for human resourcement management (“to improve the image of and respect for the tempe industry as a skilled profession and to develop managerial skills”).

“One of the key institutions involved with the tempe industry is KOPTI, the Co-operative of tempe and tahu makers of Indonesia. After a difficult start in the early 1980s, KOPTI has been successful in bringing the tempe industry into the cooperative structure it is in today.”

"Kopti began its origins in 1975 in Jakarta, in response to the difficulties met by the tempe and tofu makers in obtaining soybeans. At that time they had to purchase soybeans from the open market which had unstable prices and supplies were temperamental, having to be bought from the only wholesale market in Jatinegara [a subdistrict {*kecamatan*} of East Jakarta, at the far western end of Java] which had a monopoly. In essence, there was no guaranteed soybean supply at a stable price. Those manufacturers who lived far from Jatinegara found it very inconvenient and incurred great expense to transport beans back to their factories. There was also a great variety of soybean grades; Ampenan, Lampung, Medan, Hijau, Balong, Argentina, America, China, Burma, Sumbawa and Aceh.

"In 1975/76, a group of leading tempe makers decided to form a body that would resolve the problems in obtaining their raw materials, and between 1976-1978 plans were made to put this into effect. Tempe makers from Pekalongan, Central Java joined together to devise a way by which soybean supply could be improved and also so that they could communicate their ideas and exchange information on tempe more readily.

"This first organization they formed was called the Federation of Indonesian Tempe and Tahu makers (HIPTI). However, in December 1978, HIPTI was disbanded, largely for legal purposes as it was necessary to re-form the organization in an official capacity as a co-operative that was recognized by the government. In the beginning of January 1979, a new co-operative of tempe and tahu members was created. The aims of the co-operative were primarily to serve the needs of the tempe and tahu makers and at that time it was represented only in the four districts of Jakarta. At that time, KOPTI was based in Utan Panjang II, Kemayoran, Jakarta Pusat [central Jakarta] with Achmad Rouzi Noor as its head, a man who was also director of the company P.T. Sangga Buana.

"The objectives of KOPTI were assigned as follows:

"a. To facilitate the supply of soybeans.

"b. To avoid extortion by middlemen.

"c. To obtain government assistance for legal protection and advice.

"d. To improve the poor image and status of tempe makers so that they may become respected members of society and their profession regarded as a craft passed on down the generations.

"e. Increase product quality and productivity.

"f. To aim to produce tempe and tahu at a price easily affordable by the general population.

"The Role of BULOG (National Logistics Office) in the Development of Kopti: Officially, Kopti was inaugurated on 11th March 1979 in Jakarta. Since 1977, however, the National Logistics Office (BULOG) had the responsibility for the procurement and supply of soybeans, which was to become the responsibility of Kopti, to the tempe and tahu

manufacturers, KOPTI activities really only took off between 1979-1980, when 29 primary Kopti units were set up as its first offices and membership totaled 9,387. Although BULOG had a monopoly on soybean procurement, there were several reasons why they were interested in supporting the formation of Kopti.

"The tempe making technology employed by almost all the tempe makers was largely traditional and static in nature. The product also was well below any standard for quality and safety, and there was little regard for using clean water or a modern industrial environment.

"Tempe makers had a very weak position with regard to capital or collateral. As a result, they had a very poor bargaining position over the price of soybeans. This was because the soybeans available at that time were sold on the free market where the price fluctuated widely. Ultimately, the tempe maker was always in a loss making position with minimal profit on each transaction.

"In general, the capital available for use in the production process was very limited. The very poor were at the mercy of their creditors to lend them money to continue their businesses, which were largely unsuccessful. This situation continued for quite a long time and created a bad impression of the tempe industry. Moreover, the conditions under which the tempe makers themselves lived had a lot to be desired, living, as many of them did, in slums that were highly inappropriate for a food industry with a high risk of contamination."

"To become a member of Kopti, one has to fulfill the requirements of being a tempe or tahu maker as well as to adhere to the statutes of the primary co-operatives.

"Both social and economic benefits have been realized, including training and welfare programs, savings schemes and subsidized housing for its members."

Tables: (1) Growth in human resources of Kopti (until April 1993). The table is divided into 5 columns: Region. Total Primkopti, total members, total worker members, total Kopti employees. Kopti is now composed of 73 Primkopti, with 40,621 members, 117,487 worker members, and 1,473 Kopti employees. The largest (by far) of the six regions into which Indonesia is divided is Central Java which has 35 Primkopti, 21,360 members, 64,017 worker members, and 375 Kopti employees. It is followed by West Java (10,572 total members), Jakarta (4,450 total members), Yogyakarta (2,750 total members), etc. Palembang is by far the smallest of the six regions.

(2) Total capital belonging to KOPTI in Indonesia (up to April 1993). In the same six regions, KOPTI has Rp 23.031 billion of total working capital, R 44.554 billion of total investment capital, and Rp 71.575 total capital.

(3) Housing funds. In the same 6 regions, Kopti as a total of Rp 14.731 billion in housing funds in 10,465 housing units.

• **Summary:** See next page. The title page states: Compiled by Dr. Sapuan and Dr. Noer Sutrisno. In collaboration with The Indonesian Tempe Foundation (*Yayasan Tempe Indonesia*, Jakarta). The copyright page states: Copyright of English edition: 1997. Limited edition printed and distributed by American Soybean Association. Note: This is an English-language translation of an Indonesian-language book by the same authors titled *Bunga Rampai Tempe Indonesia*, published in 1996 in Jakarta, Indonesia, by Yayasan Tempe Indonesia.

Contents: Preface by the Indonesian Tempe Foundation. Preface by the American Soybean Association, Southeast Asia Regional Office. Foreword, by Dr. Jonathan Agranoff. Introduction and summary: Sapuan and Agus Saifullah.

Chapter One: Historical and cultural. 1. History of the development of tempe, by Mary Astuti. 2. Socio-cultural aspects of tempe in Indonesia, by Kodiran. 3. The development of tempe across five continents.

Chapter Two: Nutrition and health aspects. 4. Composition and nutritional value of tempe, its uses in the improvement of the nutritional value of food. 5. Tempe in the treatment of infant diarrhea in Indonesia. 6. Iron availability of tempe and its uses in anemia. 7 Tempe and infection. 8. Cholesterol lowering effect of tempe. 9. Antioxidant

properties of tempe.

Chapter Three: Technology and microbiology. 10. The development of tempe technology. 11. Microbiological aspects of tempe.

Chapter Four: The tempe economy. 12. Tempe consumption patterns. 13. The scale of the Indonesian tempe business. 14. KOPTI, the tempe and tofu co-operative. 15. Making tempe in Indonesia. 16. The politics of developing a national tempe industry.

Chapter Five: Conclusions. 17. Conclusions. List of contributors. Address: Indonesia.

3203. Sapuan, -; Saifullah, Agus. 1999. Conclusions. In: Sapuan, Noer Sutrisno, and Jonathan Agranoff, compilers and translator. 1999. *The Complete Handbook of Tempe: The Unique Fermented Soyfood of Indonesia*. Singapore: American Soybean Association. xiv + 186 p. See p. 176-79. [Eng]

• **Summary:** "In the last few years, a great deal more scientific attention has been paid toward tempe, both in Indonesia and abroad. One way by which tempe has attracted attention is through the media and in Indonesia a government campaign entitled 'I Love Indonesian Food' has provided some momentum. Distributing information on tempe, therefore, has gone hand in hand with promoting native Indonesian foods. In the case of tempe, this has been carried further by the publication of this book through the efforts of the Indonesian Minister for Food Affairs.

"Tempe, at its basic level, is still regarded merely as a side dish at the Indonesian dinner table. Over time and with the developments that have taken place in society, its function has changed in many ways, recipes have been created and its various characteristics have changed. Even though it has now become a popular modern snack food, it has retained its traditional position and, to the majority of Indonesians it is still served fried, generally in the home as a side dish to the main meal.

"The fact that tempe is a unique food made from fungal-fermented soybeans, has brought it considerable attention by a various experts, both from Indonesia and abroad who have conducted extensive research on the food. These studies and research findings have provided much supportive evidence for the many different qualities this food possesses..."

Address: Secretary to the Minister and Chairman, Indonesian Tempe Foundation.

of infant diarrhea. Effects of tempe supplementation on infant growth rate following diarrhea.

Tables: (1) Research data showing the influence of tempe supplementation to the diet of infants suffering from diarrhea. (2) Weight gain and nutritional status three months post-diarrhea.

Illustration (bar chart): Growth expressed gain over a 3 month period following recovery from diarrhea. Address: Indonesia.

3205. Sulaeman, Suhendar. 1999. The scale of the Indonesian tempe business. In: Sapuan, Noer Sutrisno, and Jonathan Agranoff, compilers and translator. 1999. *The Complete Handbook of Tempe: The Unique Fermented Soyfood of Indonesia*. Singapore: American Soybean Association. xiv + 186 p. See p. 134-43. [5 ref. Eng]

• **Summary:** Contents: Introduction. Optimalisation of scale of operation. Production capacity for tempe processing. Cost and benefit. Opportunities for developing the tempe business. Conclusions.

The larger the scale of a business, the greater the benefit per unit made in terms of profit and efficiency. "However, for the local tempe market, and to supply the customers directly, a small to medium scale of operations is most appropriate as the product cannot be stored. Production figures in the region of 150-200 kg/day are ideal."

"The very small 'household' scale tempe makers who process less than 50 kg of soybeans per day... should join a communal group such as a tempeh co-operative Kopti." This would help them to increase their production to 50-100 kg/day and to become more efficient and profitable.

"The tempe industry in Java is the largest in Indonesia and, especially in the province of Yogyakarta where the market is relatively saturated, the only opportunity would be to process tempe further into secondary value added products... The future really lies in developing secondary products from tempe."

Tables show: (1) Gross profit and profit of kg of soybeans per month from three different production capacities in three provinces, 1994. (2) Monthly expenditure and revenue of tempeh makers for three different levels of tempe production. For each maker in a particular region or city gives (in rupiah or kg): Fixed costs, variable costs, market costs, total costs, tempeh production (kg), sales revenue, price (Rp per kg of tempe). The three regions or cities are South Sumatra, Lampung, and Yogyakarta.

(3) Fixed and variable costs for each kg of tempe produced in three sample districts (Rp/kg). The three districts are South Sumatra, Lampung, and Yogyakarta. Address: Indonesia.

of Tempe: The Unique Fermented Soyfood of Indonesia. Singapore: American Soybean Association. xiv + 186 p. See p. 156-65. [1 ref. Eng]

• **Summary:** Contents: Introduction. Tempe marketing networks. Production cost analysis in the marketing of tempe. Summary.

"It is no surprise that tempe, which is the product of an ancient civilization, has a long history in the economy of Indonesia. This is especially true in the smaller towns and villages, deep in the Indonesian countryside and far from the big cities, and is where tempe's true identity lies. Nowadays, however, with rapid and intense urbanization that has occurred with modern industrialization, tempe has far from been left behind and has managed to penetrate not only into the cities, but also into the hotels and restaurants as proof of the steps forwards it is making in society.

"From a political viewpoint, tempe was also a symbol of backwardness and social stagnation in the 'Old Order' of Indonesian politics under the first President, Sukarno. In his classic speeches, Sukarno is noted to have referred to the cheap status of tempe as in 'Don't let us become a tempe nation!' meaning to move forward and away from backwardness. It was a rather unfortunate choice of words and the negative perception of tempe has remained for many years.

"The position of tempe in society has changed a great deal since then. Originally, tempe was very much respected as an important food in society, without any negative connotations. Many years ago, long before the modern Indonesian nation was formed, tempe was an important and highly respected food in society, even being used in certain Javanese religious ceremonies. When the old Javanese kingdoms faded from power and a new society emerged under the Dutch East Indies and later Indonesian independence, tempe's status in society fell and it became an object of political ridicule.

"Today, tempe's status has risen once again to regain its respect in society, and moreover, has become the subject of serious scientific attention in other countries. Perhaps we should see this as a new dimension in the history of tempe, as it emerges once again as one of Indonesia's unique foods for all the levels of society.

"Tempe is generally produced in small household factories and it is a long journey to get from here to the customer's dinner table, street stall or hotel / restaurant. Nevertheless, tempe has managed to penetrate into all parts of Indonesia to supply the snack food industry there. In fact, wherever the Javanese have settled, there is sure to be tempe too. This is a crucial aspect to tempe's distribution and marketing as it is largely through the Javanese that tempe is distributed, something that is not usually documented by researchers. There are many intricate details like this in the way tempe is produced and distributed in Indonesia, and this knowledge underlies the successful marketing of tempe" (p.

156).

The medium scale producers sell a larger proportion, about 50% of their capacity direct to local markets, and the remainder is also sold via intermediate vendors. The small scale producers, on the other hand, work very much for the local market and sell about 70% of what they produce directly to the market customers, another 10% or so is sold around the area from the back of a bicycle, and the remaining approximately 20% is sold via local outlets such as other small traders, local warungs etc.

“One aspect of this marketing hierarchy is that large scale tempe makers in Java not only produce mature tempe for sale, but also sell ‘ready mixed’ soybeans that have been inoculated but not yet fermented to maturity. This ‘ready to ferment’ product makes it easier for some small tempe makers to sell tempe and act as the agents for the large factories who produce too much for their own local market.

“Based on this study, it was apparent that tempe is still an industry of the Javanese and even in South Sumatra and Lampung, almost 100% of the tempe makers were of 100% Javanese origin” (p. 159).

Summary: “The tempe industry is labor intensive and each of its workers are equally treated and have the same respect in the factory. It displays characteristics of a fair and socially conducive environment to work in, both in providing income earning opportunities as well as providing training for new recruits and profit sharing.”

A diagram (Fig. 1) shows the tempe marketing network. Soybean traders and KOPTI are at the top of the supply chain and the market is at the bottom.

Tables: (1) Comparison of the composition of costs in the tempe industry. For large, medium, and small manufacturers in South Sumatra, Lampung, and Yogyakarta. For each is given: Fixed costs, variable costs, production costs, marketing costs, expenditure, income, and profit (%). The percent profit for large makers is 32.08% in South Sumatra, 19.69% in Lampung, and 27.22% in Yogyakarta.

(2) Conversion of soybeans to tempe according to factory size. 1 kg of soybeans makes from 1.65 to 2.00 kg of tempeh. The yield of 2.00 kg is by large makers in Lampung.

(3) Proportional composition of non-fixed costs in different sizes of tempe factories (%). For large, medium, and small manufacturers in South Sumatra, Lampung, and Yogyakarta. The components of non-fixed costs are soybeans, inoculum, packaging, fuel, wages, and other. For large makers, soybeans account for 85-93% of non-fixed costs. Address: Indonesia.

3209. Wild Oats Community Market; Alfalfa's Markets. 2000. The joy of soy: Resolve to evolve. This millennium, pick up a good habit. Your guide to soyfoods—True health food. Colorado. 8 panels. [10 ref]

• **Summary:** This is a chain store newspaper (published from time to time; copyrighted 1998), with this issue devoted to soyfoods. It contains ads for many soy products sold at the store, many of them on sale. “Soy strategy: 3 New Year’s resolutions. 1. Get healthy. 2. Lose weight / cut down on bad fats. 3. Help protect the environment.

A sidebar titled “Cool beans! Top ten reasons to enjoy soy” states: “1. Soy protein helps reduce cholesterol levels, thereby reducing the risk of coronary heart disease, which accounts for more than 500,000 deaths in the U.S. per year.

“2. The soybean is the only vegetable to offer a complete protein profile, equal to both meat and eggs in its protein content.

“3. As a complete protein, soy contains all nine essential amino acids. (The human body needs twenty amino acids, only eleven of which are produced by our bodies).

“4. Soybeans are higher in essential, healthful fats than most vegetable foods.

“5. Soybeans are a good source of several vitamins and minerals, including calcium, zinc, copper, magnesium, iron and many of the B vitamins.

“6. One acre of soybeans provides about 30 times more protein than one acre devoted to raising beef.

“7. Soy is also the richest dietary source of isoflavones, which act as phytoestrogens that may help protect against cancer, osteoporosis and menopause.

“8. Soy may increase bone density and reduce the risk of osteoporosis.

“9. Soy may reduce menopausal hot flashes in women—good news for those women who do not wish to take hormone replacement therapy.

“10. Other heart-healthy benefits of soy include low saturated fat, high calcium content, high essential fatty acid (EFA) content, high vitamin E content and no cholesterol.”

There are definitions of and information about: Miso, shoyu, tamari, tofu, tempeh, soy milk, soy yogurt, soy cheese, soy desserts, soy oil, soy flour, texturized soy protein, soy grits, soy nuts, edamame (soy in the pod), and meat alternatives.

3210. Purvis, Kathleen. 2000. Say soy! New foods and drinks keep sprouting from these magic beans. *Post-Dispatch* (St. Louis, Missouri). Feb. 14.

• **Summary:** Perhaps the tastiest form of soy is edamame. These green soybeans, boiled, salted, and served chilled, are the “latest craze in the chi-chi [“chic”] cocktail set.” In Japan they are served as snacks with beer or sake.

In the six months before June 1999, sales of soyfoods have grown 34.4%, according to data from SPINS. Sue Havala notes that soymilk is now available at mainstream food stores / supermarkets. A full-page color photo shows bright green edamame, with the pods both opened and closed. Contains four recipes and a glossary of the following: Green soybeans, soymilk, soy flour, soy nuts, canned soybeans, soynut butter, miso, tofu, tempeh, soy sauce. Address: Knight Ridder Newspapers.

3211. Erickson, Marsha. 2000. Soy foods may lower cholesterol: In season. *News-Tribune* (Duluth, Minnesota). Feb. 17.

• **Summary:** “Editor’s note: The American Heart Association has designated February as American Heart Month. Throughout the month, In Season is focusing on the ‘right stuff’ to feed your heart. Today the spotlight is on soy foods. Coming next week: Whole grains.”

Soyfoods are good for the heart. They “are rich in special plant chemicals called isoflavones. These isoflavones may directly lower blood cholesterol. In addition, soy foods are low in saturated fat, high in soluble fiber, cholesterol-free and contain high quality protein.

“Food sources of soy include soynut butter, roasted soynuts, soy flour, miso, tofu, tempeh, textured soy protein and soymilk.”

A black and white photo has a border of “green soybeans,” both in the pods and shelled. The text, titled “Great soy sources,” states: The FDA now allows products that contain at least 6.25 grams of soy protein per serving to say on the label that the product may reduce the risk of heart disease. Products that are good sources of soy protein per serving are:

4 ounces of firm tofu contains 12 grams of soy protein.  
4 ounces of soft tofu contains 9 grams. 1 soy burger contains 10-12 grams. 8 ounces [1 cup] soymilk contains 10 grams.  
½ cup cooked soybeans contains 16 grams. ½ cup green soybeans [shelled edamame] contains 10 grams. ½ cup tempeh contains 19 grams. ½ cup roasted soy nuts contains 39 grams. Address: Registered Dietitian, Miller-Dwan Medical Center; Duluth representative of the Minnesota Dietetic Association.

• **Summary:** This guide is available only on a limited basis to dietitians and health professionals. Contents: Health: Add soy to diet to reduce heart disease (FDA recommends 25 grams of soy protein a day to reduce blood cholesterol levels), sample day soy meal planner (easy ways to add 25 grams of soy protein). Daily soyfood guide pyramid. Soy and your health—Scientists are learning about soy’s health benefits: Isoflavones, heart disease, menopause & osteoporosis, cancer, allergies, diabetes & kidney disease, fat. Soyfood Descriptions: Meet the bean: Green vegetable soybeans (edamame), hydrolyzed vegetable protein (HVP), infant formulas, soy-based, lecithin, meat alternatives (meat analogs), miso, natto, nondairy soy frozen desserts, soy cheese, soy fiber (okara, soy bran, soy isolate fiber), soy flour (50% protein), soy grits, soy protein concentrate, soy protein isolate (isolated soy protein, 90% protein), soy protein, textured (flour or concentrate), soy sauce (tamari, shoyu, teriyaki), soy yogurt, soybeans, soymilk, soy beverages, soynut butter, soynuts, soybean oil & products, sprouts (soy), tamari (see soy sauce), tempeh, Teriyaki sauce (see soy sauce), tofu & tofu products, whipped toppings, soy-based, yuba. Helpful charts: Soyfood substitutions, soyfood isoflavone content. Soyfoods web site. Soyfood composition. Recipes using: Meat alternatives, textured soy protein, whole soybeans, soy flour, soynut butter, soymilk, tofu. Address: 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

3214. Potter, Susan. 2000. Soy: Good news for the heart. *Healthy & Natural Journal* 7(2):68-71. April.

• **Summary:** While experts are not sure exactly how soy protein works, they are convinced that a significant improvement in America’s cardiovascular health can be achieved by the consumption of as little as 25 grams/day of soy protein. A large color photo shows a tall glass of soymilk, a white bowl of dry soybeans, a cake of tempeh broken in half, and a cake of tofu—all on a wooden cutting board, placed on a woven cloth mat.

Note: Until recently, Dr. Potter was with the Dep. of Food Science and Human Nutrition, University of Illinois, Urbana, Illinois. Address: PhD, Research Scientist, Director of Nutrition Science, Protein Technologies International.

3215. Schlieske, Ingrid. 2000. *Soja, Tofu & Co.: Vom Fleisch, das auf dem Felde waechst* [Soya, tofu & company: From meat that grows in the fields]. Bietigheim, Germany: Turm Verlag. 231 p. April. Illust. Recipe index. 25 cm. [Ger]

• **Summary:** A very handsome book, with a full-page color photo on almost every other page, printed on glossy paper. Contents: Foreword. General information: What is healthful eating?, vegetarian diets taste good and are good for you, making food look attractive, textured soy protein, introduction to ingredients (incl. azuki beans, seitan), which fats are suitable for cooking, vegetables, sea vegetables, herbs and salt, pumpkins and squash, nuts, avocados, and mushrooms, brief glossary of foods.

Recipes: Tofu (p. 30-105). Textured soy protein (Soja-Hack, p. 106-31). Soja-Ragout (p. 132-65). Soja-Schnetzel (p. 166-71). Sojetten (p. 172-85). Chickpea meal (Kichererbsenmehl, p. 188-209). Azuki beans and mung beans (210-19). Seitan (*Saitan*, p. 220-21). Tempeh (p. 222-23). Salad dressings (p. 224-25). Address: Germany.

3216. *Vegetarian Times*. 2000. Glossary. April. p. 119.

• **Summary:** Five of the seven entries are for soyfoods: Hoisin sauce, edamame, miso, tempeh, and tofu. The pronunciation of each is given.

3217. Jacobi, Dana. 2000. *The joy of soy: 75 delicious ways to enjoy nature's miracle food*. Roseville, California: Prima Publishing. xii + 244 p. May. Illust. Index. 22 cm. Series: *The natural kitchen*. [16 ref]

• **Summary:** This is basically a reprint of Dana's 1996 book titled *Soy! 75 Delicious Ways to Enjoy Nature's Miracle Food*, also published by Prima Publishing. It contains no new text and no new recipes; a few small errors have been corrected and the design of both covers and the title page is new. Address: Food writer, New York, NY.

3218. Sears, Barry. 2000. *The soy zone*. New York, NY: HarperCollins (ReganBooks). x + 338 p. Index. 25 cm. [216 ref]

• **Summary:** Contents: Acknowledgments. Introduction. 1. The health benefits of soy. 2. Enter the soy zone. 3. Zoning your kitchen. 4. Soy zone cooking tips. 5. Soy zone meals. 6. Modifying your favorite recipes. 7. Fine-tuning the soy zone diet. 8. Your longevity report card: The tests you want to pass. 9. Insulin: Your body's Dr. Jekyll and Mr. Hyde. 10. Soy science. 11. How the soy zone diet stacks up against the traditional vegetarian diet. 12. Frequently asked questions. 13. World health implications for the soy zone diet. Appendixes. A. Technical support. B. Zone validation

studies. C. Calculation of lean body mass. D. Zone food blocks for making soy zone meals. E. Synthesis of DHA. F. Glossary of terms. G. Resources. H. References.

Note: This book has all the hallmarks of a "quickie" written by a person who does not know his subject. Moreover, we believe the nutritional science and dietary philosophy are seriously flawed. Address: Ph.D., Swampscott, Massachusetts.

3219. ConAgra, Inc. 2000. *ConAgra acquires Lightlife Foods* (News release). Omaha, Nebraska. 2 p. July 14.

• **Summary:** Today (July 14) ConAgra, Inc. (NYSE: CAG), "one of the world's leading food companies, and Lightlife Foods, Inc., a leading developer, manufacturer, and marketer of premium vegetarian and soy products... announced that ConAgra has purchased all assets of Lightlife. Terms of the transaction were not disclosed.

"Twenty-one-year-old Lightlife Foods [www.lightlife.com] is the leading refrigerated brand of vegetarian and soy-based food products in the United States. Lightlife manufactures a variety of meatless products including hot dogs, burgers, deli slices, ground meat substitutes, as well as popular vegetarian items like tempeh and seitan."

"ConAgra, Inc., (www.conagra.com) a \$25-billion-plus food company, is North America's largest foodservice manufacturer and second-largest retail food supplier. The company employs more than 80,000 people worldwide. In 1988, ConAgra developed Healthy Choice, a brand that brought the concept of healthy eating into the mainstream. Advantage 10, another ConAgra brand that was developed two years ago, is a full line of vegetarian foods and is endorsed by noted physician Dean Ornish, M.D." Address: Omaha, Nebraska.

3220. Botschaft der Republik Indonesien [Indonesian Embassy]. 2000. *Tempeh* [Tempeh]. Bonn, Germany: Botschaft der Republik Indonesien Bildungs- und Kulturabteilung [Indonesian Embassy]. 27 p. July 1. Illust. 21 cm. [10 ref. Ger]

• **Summary:** This booklet, which has a gray cover, was published in conjunction with Tempeh Promotion Day, held on July 1 at the Indonesian Embassy in Bonn, Germany. The rear cover shows that the booklet (and event) were sponsored by Garuda Airways of Indonesia, Viana, and Haus Java restaurant. On the cover is a color photocopy collage of two cakes of tempeh, three tempeh dishes, and a line drawing of an Indonesian woman from *The Book of Tempeh*. The cover price is 5 German marks.

Contents: Greetings from the Indonesian Ambassador. Tempeh. Tempeh—A food that helps promote good health. How to make tempeh at home. Tempeh as a raw material for making tempeh milk and tempeh sausage. Tempeh recipes. Tempeh links on the World Wide Web. Small bibliography. Directory of manufacturers and other sources of tempeh.

Address: Bonn, Germany.

3221. International tempeh symposium [International tempeh symposium]. 2000. Bonn, Germany. 27 p. Held Saturday, 1 July 2000 at the Indonesian Embassy, Bernkasteler Str. 2–Bonn, Bad Godesberg. [10 ref. Ger]

• **Summary:** Contents: Recipes. Greetings from the Indonesian Ambassador, by Izar Ibrahim (p. 2-6). Tempeh: A blessing for vegans and vegetarians (p. 7-10). Tempeh—food that promotes good health (summary of lectures by Dr. Hem Chandra Jha, Bonn Univ., p. 11-12). The significance of tempeh in Indonesia (summary of lectures by Dr. Suyanto Pawiroharsono, BPPT, Jakarta, p. 13-14). How to make tempeh at home, by Dr. Suyanto Pawiroharsono (p. 15). Tempeh as a raw material for the production of tempeh milk and tempeh sausage, by a research project of Brawijaya Univ. in Malang, East Java (p. 16-17). Tempeh recipes (p. 18-23). Tempeh links on the Web (p. 24). Small bibliography (p. 25). Sources of tempeh in Europe (p. 26; Viana Naturkost GmbH, Euskirchen, Germany. Alberts Tofuhaus, Lautersheim, Germany. Lima, Maldegem, Belgium). Publication and edition of this booklet. Nutritional composition of tempeh and 14 related foods. Address: Bonn, Germany.

3222. Saltspring Tempeh. 2000. Saltspring Tempeh. Rainbow Rd., Ganges, Saltspring Island, BC V8K 2K3, Canada.

• **Summary:** Letter (e-mail) from Henry Schmidt, founder of Henry's Tempeh. 2011. Jan. 12. In 1998 he helped his daughter, Katrina Schmidt Reimer, to start a tempeh company on Saltspring Island, but he never worked there afterward. Ganges was the main town on Saltspring where this tempeh was sold. It was a sole proprietorship, owned by her, that made only one kind of tempeh from July 2000 to June 2004—when it ceased doing business; it was not sold. He has none of the labels left. Address: Saltspring Island, BC, Canada.

3223. Tempeh promotion day: Samstag, 01 Juli 2000 09:00–18:00 Uhr [Tempeh promotion day: Saturday, 1 July 2000, 9 a.m. 6 p.m. (Leaflet)]. 2000. Bonn, Germany. 6 panels. Held at the Indonesian Embassy, Bernkasteler Str. 2–Bonn, Bad Godesberg. [Ger]

• **Summary:** Contents: A vegetarian food. The program. A food with many benefits. Nutritional composition. Illustration. Contact information. Address: Bonn, Germany.

3224. Yap, Bwee Hwa Flora. 2000. Re: Tempeh Promotion Day in Germany. Good tempeh now sold in Germany at a reasonable price. Letter to William Shurtleff at Soyfoods Center, Aug. 7. 1 p. Typed, with signature.

• **Summary:** This year Tempeh Promotion Day was held on July 1, in Bonn, in the Indonesian Embassy, sponsored by Garuda Airways. The day was successful, with about

150 people in attendance, thanks to Miss Birgit Steffan of the cultural department of the embassy. Lectures about tempeh were given by Dr. Suyanto (Director of Bioindustrial Technology, Agency for the Assessment and Application of Technology, Jakarta) and Dr. Jha (a cancer researcher at the Univ. of Bonn). On the walls were pictures of the different stages of tempeh making. The lunch, consisting of tempeh dishes, was served outdoors in tents by the Java Restaurant (of Koeln). After lunch there were more lectures and a show of Indonesian dances.

Dr. Suyanto will come to Germany again this August or September. Flora plans to go with him to Maldegem, Belgium, where there is a very modern tempeh factory—previously owned by De Hobbit.

In Germany, very nice frozen white tempeh, made in Holland, is now sold in Asian Shops for DM2.50 for 250 grams—a very reasonable price. The tempeh sold in natural food stores retails for about DM6.00 is made by Viana (owned by Bernd Drosihn). Bernd plans to move his factory to the Eifel.

A second letter, dated Aug. 15, accompanies two new books on tempeh. Flora adds: “It is a pity that German people still have not learned to appreciate tempe. Tofu is sold in supermarkets, also soymilk and desserts.” Spreads for bread made of soy, are found mostly in natural food shops (Naturkost Laden). One of the reasons that tempe is not made in households is that the starter is difficult to buy in Germany. Address: P.O. Box 4132, D-66386 St. Ingbert, Germany. Phone: 6894-53609.

3225. Elliott, Julia. 2000. Simply soy: Nature's own antidote. Clifton, Virginia: Pocol Press. xiv + 112 p. Aug. Index. 22 cm. [37 ref]

• **Summary:** Contents: Prologue. The problem: Menopause—a natural event, causes... and effects, my own changing. The solution: The soybean—a little bean with a big history, soy—nature's own alternative, the benefits of soy. The program: Soy food products, cooking with soy, soy recipes, cooking with tofu, tofu recipes. Guideposts for the journey: Warning, risks, and wisdoms, vitamins, minerals, and water, herbal alternatives, meditation, massage, and acupuncture. Epilogue. Appendices: Readings and resources (women's health resources, books about menopause, menopause web sites, books about soy and tofu, general information sources, soy product sources, soybean web sites), source notes, bibliography. About the author. Address: 10 Guyton St., Kingston, New York 12401. Phone: 914-338-6368.

3226. Seemo (H. Shapira); Kairava (J. Spaelstra). 2000. Re: Photos of the new Dakini Health Foods Pvt. Ltd. food processing facility in Pune / Puna, India. Letter to William Shurtleff at Soyfoods Center, Sept. 2. 1 p.

• **Summary:** This packet contains no letter, only 13 color photos of the new food plant. Most of these photos show

the Indian employees working with the modern- and very sanitary-looking equipment, making tofu and soy tempeh, in a clean plant with white walls, a high roof, and a tile floor.

Four of the photos show: (1) Two Indian men cooling the soybeans on a tray before inoculation to make tempeh. (3) Joined by a woman, they measure the inoculated soybeans into plastic bags. (3) A list of products sold by the company: White tahini paste. Sesame butter. Peanut butter. Soy-tempeh. Tofu. (3) Kairava (J. Spaelstra) standing by a sink with a glass in her hand. Address: Dakini Health Foods Pvt. Ltd., S.N. 33, Bhoiwasti, Keshavnagar, Mundhwa, Pune / Puna 411 036, Maharashtra, India.

3227. Hagler, Louise. 2000. Soja: Wandelbarste Bohne der Welt. Eine 'coole' Proteinquelle [Soya: The most versatile bean in the world. A 'cool' source of protein]. Aitrang, Germany: Windpferd. 140 p. Illust. Index. 18 cm. [Ger]  
**• Summary:** Foreword by Peter Golbitz. Foreword by Louise Hagler. Introduction by Dr. Mark and Virginia Messina. Basic soyfoods. Feeding babies and children soyfoods. Breakfast, brunch & bread. Whole soybeans. Sauces, spreads, dips & dressings. Soup & salad. Main dishes. Desserts. Drinks & yogurt.

No dairy products or eggs are used; honey is called for in some recipes. Address: The Farm, Summertown, Tennessee.

3228. Mangels, Reed. 2000. Nutrition hotline: The phytate component of soy products. *Vegetarian Journal* (Baltimore, Maryland) 19(5):2. Sept/Oct.

**• Summary:** "Phytates interfere with the absorption of minerals, but do not completely prevent us from absorbing minerals like calcium and iron. The presence of phytates is not a good reason for avoiding soy products. Whole grains and other dried beans also contain phytates."

"Fermented soy products, including tempeh and miso, have a lower phytate content so that zinc from these foods is better absorbed than from unfermented soy products like tofu and soymilk." Address: PhD, R.D., Baltimore, Maryland.

3229. Turtle Island Foods, Inc. 2000. Talkin' Tofurky (Color videotape). Hood River, Oregon. 6:40 minutes.

**• Summary:** This seven-minute video was released in Sept. 2000. It was developed by Turtle Island mainly for stores that might be interested in carrying the Tofurky line. Also, it could be sent to TV stations who request video footage before Thanksgiving or Christmas. It describes briefly how the company got started (in 1980 in Forest Grove, Oregon, making tempeh at night), then tells about the origin of Tofurky, how it has developed, and its market niche. It shows a family preparing a Thanksgiving dinner, when their vegetarian kid calls, saying he's coming home for Thanksgiving. Horrors! What to do? They also have some good footage of when Christina Applegate, a movie star,

brought Tofurky on the Tonight show—as well as other TV show footage. Address: P.O. Box 176, 601 Industrial Ave., Hood River, Oregon 97031. Phone: 541-386-7766.

3230. **Product Name:** Shipping and display carton for various types of tempeh and Tofurky Deli Slices.

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** Hood River, Oregon. Phone: 541-386-7766.

**Date of Introduction:** 2000. September.

**Ingredients:** -

**New Product–Documentation:** This brown cardboard carton may contain any of the following products made by Turtle Island Foods, Inc. (1) Soy Tempeh, 10 x 8 oz. (2) Five Grain Tempeh, 10 x 8 oz. (3) Wild Rice Rhapsody, 10 x 8 oz. (4) Low Fat Millet Tempeh, 10 x 8 oz. (5) Original SuperBurgers (TM), 10 x 6 oz. (6) BarBQ SuperBurgers (TM), 10 x 6 oz. (7) TexMex SuperBurgers (TM), 10 x 6 oz. (8) Tofurky Deli Slices Original. (9) Tofurky Deli Slices Smoked.

"Remember Folks 'Brown is Beautiful.' Please recycle this unbleached dioxin free box." "The superior taste since 1980. #1 premium, northwest tempeh."

3231. Singh, J. 2000. Re: Making tofu and soymilk in Belgium, and tempeh in The Netherlands. Letter (fax) to William Shurtleff at Soyfoods Center, Oct. 2. 1 p. Handwritten with signature on letterhead. [Eng]

**• Summary:** This company makes tofu and soya milk in Belgium, and they also own a tempeh factory (the biggest in Europe) in The Netherlands. They make about 20,000 kg/week of tofu and 8,000 kg/week of tempeh.

The tempeh company is: Tempé Produkten B.V., Tunnelweg 107, 6468 EJ Kerkrade, Netherlands. Another name of the company is YIP Soya Products (Bolda, Holland). Mr. Singh purchased the tofu company in Belgium in 1986, and the tempeh company in Holland in 1990. Address: Benelux Soya N.V. Factory: Industrieweg 3, 2320 Hoogstraten, Belgium. Phone: 03-314-5632.

3232. Rose, Bruce. 2000. How Bruce got involved with natural foods, soyfoods, Rosewood Products, Inc. and Tofu International Ltd. (Interview). *SoyaScan Notes*. Oct. 15. Conducted by William Shurtleff of Soyfoods Center.

**• Summary:** In 1967, while enrolled at Wayne State University in Detroit, Michigan, Bruce got involved with macrobiotics. His main education came from "street school." He would drive to Ann Arbor for the fun of it, and there he discovered Eden Foods, a little upstairs co-op that was the first he found that sold brown rice. He would buy foods, and take them back to the little center which was in Detroit. Michio Kushi visited their center several times and gave lectures.

One of his childhood friends was Tim Redmond, whom

he later met during his college years and then at Eden Foods. Redmond's dad invested money in Eden Foods on the condition that they cease to be a co-op. Michael Potter later contributed money "from spurious sources in tune with the times." Potter's attitude has long been "It's Mike against the world."

Many of the food co-ops were started by potheads; most were in university towns and part of the counterculture—a mix of politics and natural foods.

From time to time, usually when some problem or opportunity arose, Eden Foods would run out of money and call on Bruce. He loaned them money (once \$12,000) and they paid it back each time. In 1978 Bruce started to work for Eden Foods at their warehouse on Platt Road in Ann Arbor. They were already a fairly big food distribution company with large semi trucks [semitrailers]. Soon Bruce learned about the Soy Plant, which was a co-operative on Ann Street in Ann Arbor. He started to visit their deli. In 1979, Bruce and his family moved to a town about 20 miles north of Ann Arbor—before the fire.

Then in Nov. 1979 the Eden warehouse at 4601 Platt Road was destroyed by a large fire. Bruce was a manager at the time. He is quite sure that the fire was *not* caused by arson. If it was arson, it certainly was not done by the owners. They definitely didn't burn down the company to collect on the insurance. The main reason is that Eden was greatly underinsured; they lost a lot more than they got back or than could ever have gotten back. In the best case, insurance pays you 80% of what you're insured for. To this day, nobody knows for sure what caused the fire. The fire almost put Eden out of business; they lost a lot of money. They were able to stay in business because of the help of their friends. Before the fire, the insurance companies were always trying to get Eden to buy more insurance coverage—but they never did.

The fire was devastating for Bruce as well. He had been working on some automatic packaging equipment for Eden; it all melted. So after the fire, he decided to leave the company. They owed him \$15-30,000 at the time. He sat down with Potter and his good friend Redmond and made them an offer. You can forget the debt if you will give me just 15% of the stock in Eden Foods. Potter said "Yes" and Redmond said "No."

Cliff Adler, who had joined the company before the fire, had a profound effect on its recovery. After the fire, he converted a \$100,000 loan into stock so that in 1980 he owned 34% of the company. "Cliff was great. He was an upper management mover and shaker and eased the company's debt burden. He moved the company forward."

At one point Bruce considered starting a company to make tofu, but he didn't want to compete with the Soy Plant. Then he happened to meet Ben Wenzel who was delivering (by contract) the Soy Plant's tofu out of the Ann Arbor area and outside of Michigan. "He was delivering cider and

tofu in his old hippie van." So Bruce decided to go into the raw milk cheese business. He got into it by accident by misunderstanding the difference between markup and profit margin. "Had I known the difference, I never would have gone into the business." So in Aug. 1980 he started a distribution company named Rosewood Products, Inc. After about a year, he started to distribute the Soy Plant's products along with his cheese. Then the Soy Plant got into trouble financially. Bruce tried to help them. He said: "I had a long history with the Soy Plant and this looked easy. Making tofu sounds exciting. East meets West type products was the reason I went in. I never dreamed I'd be packing tofu for 20 years. You never know what life has to offer you."

Bruce ran the Soy Plant for 3 months before they went bankrupt. Then he bid on the company when they were in bankruptcy, and won the bid. He tried to keep all the employees but they came from a co-op background. "I was a pretty traditional business guy. I wasn't smoking dope any more, had short hair, hard working. A lot of the co-ops wouldn't work for me. I found the best workers were good old meat-eaters. The idealists would do great for three months, and then peter out."

For years after he took over the company, people who had loaned the Soy Plant \$100 or so, came to Bruce and said they wanted their money back. He tried to explain that the Soy Plant had declared bankruptcy and their debts were not his. But that didn't satisfy most of them. Bruce estimates that The Soy Plant paid back about half of the roughly \$10,000 they borrowed from members of the community.

In the end, Bruce merged the Soy Plant, a pioneer soy company, into his Rosewood Products, then later renamed it Tofu International Inc.

Update: Letter (fax) from Bruce Rose. 2001. May 22. Bruce says Rosewood Products no longer makes tempeh. They bought from White Wave from 1990-1998, but now buy their tempeh from Lightlife. They sell mostly bulk tempeh burgers. The Soy Plant started making tempeh in 1977. Rosewood started in 1987, stopped about 1995. Address: Founder and President, Rosewood Products, Inc., 738 Airport Blvd., Suite 6, Ann Arbor, Michigan 48108. Phone: 734-665-2222.

Address: 1. Centre of Women's Studies, Gadjah Mada Univ., Bulaksumur, Yogyakarta, Indonesia; 2. International Health and Development Unit, Faculty of Medicine, Monash University, Melbourne, Victoria, Australia.

3240. Garlock, Lori A. 2000. The effect of various acidic solutions on the concentration of genistein in tempeh. Master's thesis, University of Wisconsin—Stout. [ix] + 58 p. Dec. Online version: <http://www.uwstout.edu/lib/thesis/2000/2000garlock.pdf>. [70 ref]

• **Summary:** The use of various acidic solutions in making tempeh decreased the final concentration of genistein in the tempeh.

“Additional research should be conducted to determine whether or not the fermentation process is responsible for the increased level of genistein in tempeh.”

3241. Huang, H.T. 2000. Science and civilisation in China. Vol. 6, Biology and biological technology. Part V: Fermentations and food science. Joseph Needham series. Cambridge, England: Cambridge University Press. xxviii + 741 p. Illust. Index. 26 cm. [200+ soy ref]

• **Summary:** This is the most important book on soyfoods in China ever written, and it is especially good on their origins and early history in China. It is also one of the best books seen on food in Chinese culture and history.

The section titled “Soybean processing and fermentation” (p. 292-378) comprises 14.3% of the book’s text, and has the following contents: Introduction. Soybean sprouts. Soybean curd and related products: The origin of bean curd, transmission of *tou fu* to Japan, products associated with *tou fu* (soymilk {*tou fu chiang*}, tofu curds {*tou fu hua* or *tou fu nao*}, pressed tofu sheets {*ch’ien chang* or *pai yeh*}, yuba {*tou fu i* or *tou fu p’i*}, deep-fried tofu {*yu tou fu* or *tou fu p’ao*}, pressed tofu {*tou fu kan*}, five-spice pressed tofu {*wu hsiang tou fu kan*}, plain dried tofu [pressed tofu] {*pai tou fu gan*}, smoked tofu {*hsün tou fu*}, dried tofu soaked in brine and fermented {*ch’ou tou fu kan*}, frozen tofu {*tung tou fu*}, making fermented tofu {*fu ju*}, comparison of *tou fu* and cheese, addendum. Fermented soybeans, soy paste, and soy sauce: *Ferments* for food processing, fermented soybeans—*shih*, fermented soy paste—*chiang*, fermented soy sauce—*chiang yu*, soy fermentations in China and Japan.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the term “hsün tou fu” [pinyin: *xun doufu*] to refer to smoked tofu. Soy is also discussed in other parts of the book. Address: Alexandria, Virginia.

3242. **Product Name:** [Smoked Tempeh].

**Foreign Name:** Smoked Temeph.

**Manufacturer’s Name:** De Hobbit.

**Manufacturer’s Address:** Nijverheidslaan 7, 9980 Maldegem, Belgium. Phone: 050 71 70 20. Food for Freedom makes.

**Date of Introduction:** 2000.

**Ingredients:** Soy\*, sea salt, rhizopus must ferment.

**Wt/Vol., Packaging, Price:** 170 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Form filled out by Mr. Frederik Dossche and two leaflets sent by fax. 2001. June 7. Food for Freedom and De Hobbit seem to have merged. Both make tempeh at: Nijverheidslaan 7, 9980 Maldegem, Belgium. Phone: 050 71 70 20. De Hobbit makes Tempeh,

Smoked Tempeh, and Tempeh Bacon. Leaflet index card.

De Hobbit. Product cluster: Tempeh. A photo shows smoked tempeh. “Description: Smoked in a natural way. How to use: Together with raw vegetables and salads. Warm in pizza, in spaghetti sauce.”

Label for Smoked Tempeh sent by Seth Tibbott of Turtle Island after trip to Netherlands to study tempeh 2009. April 22. 170 gm. The maker is: De Hobbit, n.v., Nijverheidslaan 7-9, B-9990 Maldegem, Belgium.

3243. **Product Name:** [Smoked Tempeh].

**Foreign Name:** Smoked Temeph.

**Manufacturer’s Name:** Food for Freedom.

**Manufacturer’s Address:** Nijverheidslaan 7, 9980 Maldegem, Belgium. Phone: 050 71 70 20. Food for Freedom makes.

**Date of Introduction:** 2000.

**Ingredients:** Tempeh, sea salt, smoke of wood chips.

**Wt/Vol., Packaging, Price:** 180 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Form filled out by Mr. Frederik Dossche and two leaflets sent by fax. 2001. June 7. Food for Freedom and De Hobbit seem to have merged. Both make tempeh at: Nijverheidslaan 7, 9980 Maldegem, Belgium. Phone: 050 71 70 20. Food for Freedom makes Tempeh and Smoked Tempeh. De Hobbit makes Tempeh, Smoked Tempeh, and Tempeh Bacon.

3244. **Product Name:** [Tempeh, Amazake, Miso].

**Foreign Name:** Tempeh, Amazake, Miso.

**Manufacturer’s Name:** Rui Rato Tempeh.

**Manufacturer’s Address:** Bairro da Coopalme, Lote 291, 2727 Algueirao, Portugal. Phone: +351 21 920 2798.

**Date of Introduction:** 2000.

**New Product–Documentation:** Talk with Roy Kamiki of Nutrideas, Portugal. 2001. June 10. Ricardo currently makes tempeh, amazake, and miso, but does not have a company name. He has only one customer. He sells tempeh frozen to a big organic co-op—BioCoop—An organic farming Product Co-op is Lisbon.

“Mr. Rui Rato is a fan of yours and a great appreciator of your books. He has nearly all your publications, but does not depend on soyfoods production for his source of income. He has another steady job and makes soyfoods in his spare time.”

3245. **Product Name:** Barbecue Burger.

**Manufacturer’s Name:** Vermont Soy

**Manufacturer’s Address:** 44 Foundry St., Waterbury, VT 05676. Phone: 802-244-5400.

**Date of Introduction:** 2000.

**Ingredients:** Organic tempeh (organic soy beans, vinegar, culture), organic tomato sauce, water, soy bean oil, organic onion, honey, unsulphured molasses, organic garlic, tamari,

organic lemon, chipotle pepper, spices.

**Wt/Vol., Packaging, Price:** 10 oz (285 gm).

**New Product–Documentation:** Form filled out and two labels sent by Megan Treadwell. 2001. June. Vermont Soy is at 44 Foundry St., Waterbury, Vermont 05676. Phone: 802-244-5400. Label for Barbecue Burger is 4 by 4 inches. Self adhesive. Green on white. “An organic cultured soy product.”

3246. Adams, M.R.; Moss, M.O. 2000. Food microbiology. 2nd ed. Cambridge, England: Royal Society of Chemistry. xiv + 479 p. + 16 pages of unnumbered plates. Illust. 24 cm. [439\* ref]

• **Summary:** This book focuses on general principles, and does not try to mention every fermented food. Chapter 9.12, “Mould fermentations” (p. 363-68) discusses tempeh, soy sauce and rice wine [saké], koji (a mould enzyme preparation), miso, and Chinese chiang [jiang].

Ochratoxin may result from contamination of soya beans by *Aspergillus* species. Address: Univ. of Surrey, Guildford, UK.

3247. Davis, Brenda; Melina, Vesanto. 2000. Becoming vegan: The complete guide to adopting a healthy plant-based diet. Summertown, Tennessee: The Book Publishing Co. v + 281 p. Index. 25 cm. [153 ref]

• **Summary:** An excellent vegan sourcebook (not a cookbook) by two registered dietitians. Contents: Acknowledgements. From the authors. 1. Vegan roots. 2. Perspectives on vegan health. 3. Plant protein. 4. Big fat lies. 5. The two faces of carbohydrates. 6. Prospecting for minerals. 7. Vitamins for vegan vigor. 8. Phytochemicals. 9. The vegan food guide. 10. Building vegan dynamos. 11. Growing vegans. 12. The prime of life. 13. Overweight. 14. Eating disorders. 15. Underweight. 16. The vegan athlete. 17. Vegan diplomacy.

This book begins with a good history of veganism and contains (throughout the book) a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus Adventist Health Studies, dietary fiber, phytochemicals and sea vegetables. Address: 1. Kelowna, British Columbia; 2. Langley, British Columbia. Both: Canada.

3248. Evans, K. Lee; Rankin, Chris. 2000. Giant book of tofu cooking. New York, NY: Sterling Publishing Co., Inc. 256 p. Illust. (color photos). Index. 28 cm.

• **Summary:** A beautiful vegetarian cookbook, with many color photos on glossy paper, excellent use of standard terminology (except for “freeze-dried tofu”), and 350 healthful, delicious recipes. Contents: Introduction. Tofu basics and techniques: Getting started (buying tofu {soft

tofu, form tofu, extra-firm tofu, silken tofu, marinated tofu, smoked tofu, freeze-dried tofu, fermented tofu}, storing tofu, preparing tofu for your recipes {draining and blotting, pressing, freezing and thawing, blending, cubing and dicing, crumbling, shredding / grating, marinating, boiling slightly sour tofu, frying, deep-frying}), other soy products (edamame, meat alternatives, miso, soy cheese, soy flour, soy ice cream, soy milk, soy sauce, soy sprouts, soy “yogurt,” soynut butter, soynuts, tempeh, textured soy protein, whole dry soybeans), tofu and a healthier you (introduction, protein, heart disease, cancer, menopause, osteoporosis, our planet), simple ingredient substitutions (eggs, milk, cheese, butter, salt, sugar {honey, molasses, maple syrup, rice syrup, barley malt syrup}). Ingredient glossary: Incl. arrowroot, balsamic vinegar, bamboo shoots, barley malt syrup, fermented Chinese black beans, filé powder, galangal, garam masala, garbanzo beans, Hoisin sauce, liquid smoke, mirin, miso, nutritional yeast, phylo or filo, pickled ginger, quinoa, rice noodles, rice papers, rice syrup, sake, shoyu, tahini, toasted sesame oil, vegetarian gelatin, vegetarian Worcestershire sauce (“Just like the original, it is made of soy, vinegar, and spices, but without the anchovies”), wakame, wheat germ. Breakfast. Appetizers. Soups. Salads. Lunch and dinner. Dressings, sauces, and spreads. Desserts. Metric conversion chart. Acknowledgments.

3249. Fruehschuetz, Leo. 2000. Soja [Soya]. Schaafheim, Germany: Bio Verlag. 144 p. With recipes by Judith Braun. Illust. Index. 15 cm. [12 ref. Ger]

• **Summary:** Contents: Forward: Portrait of the soybean: From China to the entire world, the composition of whole beans, does soya help with cancer?, protein and oil for the world economy. The original soybean and what followed: Introduction (there is not much to improve on in the soybean), the “labor-bean” (Monsanto and Roundup-Ready soybeans), the results for farmers, for the environment, for health, politics without results, for trade and the end-users, the forgotten results, soya in animal feeds. Organically grown soya—without genetic engineering and pesticides. Versatile: Soya in the wholefoods kitchen: Soybeans: whole, ground, and sprouted, the fluid bean—milk, yogurt (fermented), and oil, tofu—the meat without bones, tempeh—the noble cultured food from Indonesia, soy sauce—aged in wooden vats, miso—soya for soups, soyameat—saved from the wolf. Recipes: Soymilk, soy flour and flakes, tofu, tempeh, soy meat and granules, miso, soy sprouts. Address: News journalist for natural foods and long-lived people, co-worker with Schrot&Korn.

3250. Holtzman, Rachel. 2000. Trader Joe’s soy foods: Answers to commonly asked questions. Nutrition information (Leaflet). Needham Heights, Massachusetts: Trader Joe’s. 3 panels each side. Front and back. Each panel 9 x 26 cm. Folded.

• **Summary:** Question and answer format. Contents: What is soy anyway? Why should I include soy in my diet? Does soy have fat? Some soy products say soy wards off heart disease. What does this mean? What are isoflavones and where can I find them? What is the difference between isoflavones and soy protein? How can I include soyfoods in my diet? Ans: Trader Joe's carries soymilk, tofu, tempeh, soy nuts, edamame (soybeans), soy protein powder, meat substitutes, soybean butter. What is tofu and how can I use it? How much soy should I eat? Ans: About 25-50 grams per day. Address: R.D., Needham Heights, Massachusetts.

3251. Hu, Jiang. 2000. Isolation and quantitative analysis of soybean saponins by high performance liquid chromatography. MSc thesis, Iowa State University. 96 leaves. Illust. 29 cm. \*

3252. Kornfeld, Myra. 2000. The voluptuous vegan: more than 200 sinfully delicious recipes for meatless, eggless, and dairy-free meals. New York, NY: Three Rivers Press. [xi] + 305 p. Illust. (by Sheila Hamanaka). Index. 24 cm.

• **Summary:** A vegan cookbook with some macrobiotic flavor. The excellent glossary includes: adzuki beans, agar-agar, almond butter, barley malt, barley miso, carob powder, edamame, gluten, haricots verts, Hass avocado, hijiki, Hokkaido pumpkin (kabocha squash), kanten, koji, kombu, kudzu, maple sugar (crystallized maple syrup), mirin, miso, MSG, nori, oden, Rice Dream, rice syrup, sambal (Indonesian word for chutney), sea salt, seitan, shiitake, shoyu, soybean, soy milk, Sucanat, tahini, tempeh, umeboshi paste, wakame, wheat gluten, Yannah coffee. The index contains 29 entries for tofu, 9 for seitan, 5 for tempeh, 2 for miso, 1 for "Cheese"—tofu (p. 214), "Sour cream"—tofu (p. 25), and teriyaki vegetables. Note: Soy milk is called for in many recipes. Address: Professional Chef, New York City.

3253. Liberty, Anne. 2000. Super soy! Protect yourself against bone loss, heart disease, cancer, menopause, high cholesterol. Boca Raton, Florida: American Media Mini Mags Inc. 66 p. 14 cm. [1 ref]

• **Summary:** This mini-book (only 5½ inches high) was sold (for \$1.19) next to the tabloid magazines at the checkout stand at Longs Drug Store in Lafayette, California. On the little cover is a color photo of a grey-haired and healthy-looking lady holding a glass of soymilk. Contents: All about soy: Inside the soybean (phytoestrogen, isoflavones, genistein, protease inhibitors), eight of soy's top health benefits (antioxidant protection from free radicals, breast cancer protection, cholesterol control, colon cancer protection, strong bones, hot flash reduction, a strong immune system, and kidney disease prevention), different soy products (green soybeans, hydrolyzed vegetable protein {HVP}, infant formula {soy-based}, lecithin, meat alternatives, miso, non-dairy frozen soy ("soy ice cream"),

soy cheese, soy flour, soy grits, soy protein (incl. TSP = textured soy protein = textured soy flour), soy sauce, soy yogurt, whole soybeans, soy nut butter, soy nuts, soy oil, soy sprouts, tempeh, tofu, whipped soy-based topping, yuba), nutritional value, how much do you need? Bone loss. Heart disease and cancer: Heart disease, cancer (genistein, isoflavones, phenolic acids, phytates, protease inhibitors). Menopause. Cholesterol. Cooking with soy products: Soy flour, miso, soy milk, soy protein, tofu, tempeh. Delicious soy recipes.

The author frequently refers to Earl Mindell, PhD, but has no real scientific references. Many of the recipes were provided by the United Soybean Board. On the last page are two sources of more information and recipes: The United Soybean Board website [www.talksoy.com](http://www.talksoy.com) and the Indiana Soybean Board website [www.soyfoods.com](http://www.soyfoods.com).

3254. McMann, Mary Carol. 2000. Soy protein: What you need to know. New York, NY: Penguin Putnam Inc. (Avery). 60 p. Index. 22 cm. Avery's Nutrition Discovery Series. [74 ref]

• **Summary:** Contents: Introduction. 1. What makes soy so special? 2. Cardiovascular disease. 3. Cancer. 4. Osteoporosis. 5. Menopause and menopausal symptoms. 6. Incorporating soy (protein) into your diet. Conclusion. Glossary. References. About the author.

Note: This book is copyrighted by Protein Technologies International. Address: MPH, RD, LD, Houston, Texas.

3255. Rose, Robert. ed. 2000. Beans, lentil & tofu gourmet. Toronto, Ontario, Canada: Robert Rose, Inc. 192 p. Illust. Index. 26 cm.

• **Summary:** This is an unusual but attractive book, with no real author or publisher. It was written by "The editors of Robert Rose" and published by Robert Rose Inc., with financial support of the government of Canada. Basically, it is a collection of recipes from other cookbooks. Except in the chapter titled "Meatless" (p. 145-62), many recipes contain meat, poultry, fish, or seafood. The section titled "Contributing authors" lists eight authors, with photos and descriptions of their cookbooks, and statements such as "Recipes from this book are found on pages 23, 38, 69, and 180." The book contains 12 full-page color photos of dishes prepared from the recipes.

Contains 13 tofu recipes and one tempeh recipe: Malay vegetable-stuffed fried bean curd with spicy sweet-and-sour sauce. Bak choy noodle and tofu chicken soup. Curry-fried tofu soup with vegetables and udon noodles. Mixed vegetable herb broth with soft tofu. Chickpea tofu stew. Braised stuffed bean curd. Braised roasted pork with tofu and green onions. Steamed shrimp-stuffed tofu with broccoli. Hoisin stir-fried vegetables and tofu over rice noodles. Barbecued tempeh with basil, hyssop and ginger. Chickpea tofu burgers with coriander mayonnaise. Thai dry vegetable

curry (with tofu, p. 162). Pea tops with pancetta and tofu. Soy-braised tofu, cabbage and ginger with cellophane noodles (with soya sauce, p. 172-73). Address: 120 Eglinton Ave. E., Suite 1000, Toronto, ONT Canada. Phone: (416) 322-6522.

3256. Glenville, Marilyn. 2001. Natural alternatives to HRT\* (\* hormone replacement therapy) cookbook: Understanding estrogen and foods that benefit your health. Berkeley, California: Ten Speed Press. 192 p. Illust. Index. 24 x 21 cm. [37\* ref]

• **Summary:** Every woman who experiences menopause has probably experienced unpleasant symptoms such as joint pains, mood swings, weight gain, hot flashes, etc. Yet these symptoms can be avoided, or at least alleviated—by simple and safe changes in diet to include more phytoestrogens and isoflavones. This book tells and shows you how. Already a best-seller in the U.K. with over 20,000 copies in print.

Although this is not a vegetarian cookbook (recipes call for the use of fish and shellfish such as crab, mussels, salmon, tuna, etc.), there is extensive discussion of the benefits of soyfoods in a diet for menopausal women and many recipes that use soy (especially tofu). The chapter titled “What you need to eat at menopause” contains a good discussion (p. 17-18) of the benefits of isoflavones / phytoestrogens and natural soyfoods. It is known that “legumes contain good levels of isoflavones, and soy ranks the highest.” Phytoestrogens are also good for bone health, and soy protein helps to reduce cholesterol (p. 25).

In the “Introduction to the recipes” is a section on “Soy products” (p. 47) that discusses miso, soy milk, soy sauce, tempeh, and tofu (which is “wonderfully versatile”). Soy-related recipes include: Scrambled tofu (p. 71). Tofu vegetable quiche (p. 90). Russian salad deluxe with tofu dressing (p. 96). Vegetable, bean sprout and tofu stir-fry (p. 104-06). Tofu and mushroom stroganoff (p. 106-07). Herby tofu and oat sausages with nutty mash (p. 112). Austrian bean salad with tofu dressing (p. 130-132). Deluxe kebabs (p. 136). Apricot tofu ice-cream (p. 156). Tofu cheesecake (p. 157). Mixed berry fool (p. 159). Miso broth (p. 176). Soy mayonnaise (p. 179). Sesame tofu dressing (p. 180). Tofu dip for raw vegetables (p. 180). Mocha tofu cream (p. 183). Tofu cream (p. 183).

Marilyn Glenville, PhD, earned her doctorate at Cambridge University and is Chair of the Governing Council for the British Association of Nutritional Therapists. She has practiced nutritional therapy in the U.K. and U.S. for more than twenty years, and specializes in the natural approach to female hormone problems. She practices from three private clinics in London and Kent, including the prestigious Hale Clinic. Address: PhD, nutritional therapist, UK.

3257. Hagler, Louise. 2001. Miso cookery. Summertown, Tennessee: The Book Publishing Co. 96 p. Illust. Index. 23

cm.

• **Summary:** Contains 70 recipes (each with a nutritional analysis) that use miso as an ingredient, and four full-page color photographs. Contents: Introduction. It's alive!!!! (visit to American Miso Co. in North Carolina). Soups. Spreads. Salads and dressings. Sauces and gravies. Vegetables. Main dishes. Side dishes. Sweet things.

Many recipes call for the use of tofu as an ingredient, and some call for the use of edamame, gluten, soymilk, soy yogurt, tempeh,

On the rear cover is a color photo of Louise Hagler; her vegetarian cookbooks have sold over 750,000 (or 742,000) copies worldwide. Address: Summertown, Tennessee.

3258. Simmons, Marie. 2001. Edamame dearest: The popular Asian soybeans are fun to eat (and good for you). *Bon Appetit*. Jan. p. 150-51.

• **Summary:** This article, in the section titled “Cooking for health,” begins: “Just when we thought we knew—and loved—everything about soy, something new pops onto the scene. Move over, tofu and tempeh: This year the buzz is all about the beans themselves, otherwise known as *edamame*.”

Contains four recipes: Edamame and carrot salad with rice vinegar dressing. Tomato, edamame and corn sauté with cumin and cilantro. Edamame and sautéed vegetable soup. Brown rice and chicken stir-fry with edamame and walnuts.

A beautiful color photo shows edamame (in the pods) mounded on a rectangular Japanese dish, shelled edamame in a shallow bowl, and an opened green pod showing the three beans inside.

3259. **Product Name:** Bulk Tempeh, Bulk Soy & Rice Tempeh.

**Manufacturer's Name:** Acorn Foods.

**Manufacturer's Address:** 2128 Ferndale Rd., Arroyo Grande, CA 93420. Phone: 805-489-1850.

**Date of Introduction:** 2001. March.

**Ingredients:** Soybeans, culture.

**Wt/Vol., Packaging, Price:** 2 lb bulk.

**How Stored:** Refrigerated.

**New Product—Documentation:** Talk with Todd D'Alessio, founder. 2001. Nov. 6. He had friends who were in the Upfull and Right partnership, which dissolved. He bought their equipment and accounts, then in March 2001 started making bulk tempeh, which he sells to restaurants and deli departments. He has built a commercial kitchen on the property where he lives. It will be inspected in Jan. 2002. He is working on a business plan, has not attempted to expand the business, is developing value-added products, has not yet decided on the future direction of the business.

3260. Stephens, Roger; Stephens, Jane Ade. ed. and comp. 2001. Soyfoods guide 2001: Helpful tips and information for using soyfoods. Indianapolis, Indiana: Stevens & Associates,

Inc. Distributed by the Soy Protein Partners. 24 p. Illust. No index. 28 cm. [23 ref]

• **Summary:** This guide is available only on a limited basis to dietitians and health professionals. Contents: Foreword. Keep your heart healthy: Super soy protein smoothie. Beans, beans, good for the heart: The more you eat, the better your chances of lowering your blood cholesterol levels. Cholesterol: What's in a claim. Sample soy meal planner (4 meals a day for 5 days, to get 25+ grams/day of soy protein). Dietary guidelines for Americans. Composition of soyfoods (table). The healthy bean: Isoflavones, heart disease, menopause and osteoporosis, allergies, diabetes and kidney disease, fat. Isoflavone content of soyfoods (table). The state of soy research. Protein content of soyfoods (table). Soy resources: Web sites, books. Soyfood substitution chart. Descriptions of soyfoods: Traditional soyfoods, soy-based products, soy ingredients. Recipes: Meat alternatives. Textured soy protein. Soy flour. Whole soybeans. Soymilk. Tofu. Soy snacks and smoothies. Soy—Good for your heart.

The Foreword (p. 2) states: “The 2001 *Soyfoods Guide* is distributed by the Soy Protein Partners. Partners include state soybean boards from: Alabama, Arkansas, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, North Carolina, South Dakota, Tennessee, Texas, Virginia, and Wisconsin. Industry partners include: American Soybean Association, Archer Daniels Midland Company, Central Soya Co., Minnesota Soyfoods Association, Protein Technologies International, Soy Protein Council, Soyfoods Association of North America, Soyfoods Council and the United Soybean Board.” Address: 4816 North Pennsylvania Street, Indianapolis, Indiana 46205. Phone: 317-926-6272.

• **Summary:** Letter (e-mail) from Henry Schmidt, founder of Henry's Tempeh. 2011. Jan. 12. A year after SoyKasha Tempeh was introduced, Henry launched his second tempeh product, SoyOnly Tempeh. Address: Kitchener, Ontario, Canada.

3263. Shurtleff, William; Aoyagi, Akiko. 2001. The book of tofu. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. May. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]

• **Summary:** This edition contains an updated “Appendix B—Directory of Tofu Makers” (p. 313-316, updated to 22 Feb. 2001). The copyright page and inside rear cover have also been updated. The preface has been expanded. Numerous other small changes have been made throughout the book. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3264. Drosihn, Bernd. 2001. Genetically engineered soybeans and soyfoods in Europe (Interview). *SoyaScan Notes*. July 23. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In Europe, soybeans are still not familiar and not many are grown in Europe, so no European government would say to the population that they should eat more soy protein or make a health claim like that from the FDA in late 1999. Most of the soybeans now used to make foods in Europe come from South America or China; no more than 10-15% are grown in Europe. Imports from the USA and Canada have dropped dramatically because of the issue of genetically engineered (GE) soybeans.

For consumers, it has become a question of image; the image of North American soybeans is very bad in Europe. “Our customers ask us, ‘What kind of soybeans do you use?’ If we say that we use American or Canadian soybeans, then they will not trust our tofu.” Even though Bernd makes his tofu from organic soybeans, he regularly tests all the soybeans he uses. He generally finds less than 1.01% are GE. Europe is definitely ahead of the USA in their awareness of GE issues.

Note: Since President George W. Bush took office, Europeans seem to be increasingly upset with U.S. unilateralism on a wide range of issues, from global warming to missile defense. They seem to be venting their frustration in the way they buy soybeans as well.

Talk with Jim Skiff, President of U.S. Soy, LLC. 2001. July 23. Jim has repeatedly observed exactly what Bernd described above. European consumers are upset with and distrust the USA; they reflect that in the way they buy soybeans. The U.S. government continues to try to force the Europeans to purchase our soybeans, which just makes matters worse. They don't understand the basic law of marketing—you have to give consumers what they want.

Christian Nagel no longer makes soyfoods; he now buys his tofu from Sojafarm (Lothar Stassen, Trechtingshausen, in central Germany). Tempeh is a very, very small product in Europe; not many companies currently make it.

In September Bernd plans to visit White Wave in Colorado. Address: Founder and president, Viana Naturkost GmbH, 54578 Wiesbaum / Vulkaneifel, Germany. Phone: +49 06593-99670.

3265. Dillman, Erika. 2001. The little soy book. New York, NY: Time Warner. xiii + 190 p. Index. 15 x 16 cm. [58 ref]

• **Summary:** Contents: Introduction. 1. It's soy time. 2. Why eat soy? Health benefits of soy? Soy foods: Soy milk, soybean oil, soy sauce, soy meat alternatives, tofu, tempeh, miso, whole soybeans, edamame, soy nuts, soy nut butter, soy sprouts, soy ice cream, soy yogurt, soy cheese, soy flour and grits, textured soy protein (TSP), soy protein concentrate, soy protein isolate, hydrolyzed vegetable protein, infant formula, lecithin, natto, yuba, soy fiber, Cooking with soy (recipes). Notes [references]. Resources [Directory]. Glossary. Address: Seattle, Washington.

3266. Tibbott, Seth. 2001. Update on Turtle Island (Interview). *SoyaScan Notes*. Aug. 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Seth's factory is 11,000 square feet in size and about half of it is devoted to tempeh production. However tempeh sales have been down about 5-10% over the past 6 months; this was a shock to Seth. Seth's gross revenues now consist of about 1/3 holiday business (Tofurky and related products at Thanksgiving, Christmas, and New Year's), 1/3 Tofurky products (such as Deli Slices and Jerky) during the rest of the year, and 1/3 tempeh. The problem is that the tempeh takes up lots of space. It doesn't take much space to make a lot of Tofurky.

Another problem: Why black spots sometimes appear on tempeh? Indonesian-Americans, who are an important market for Seth, often return tempeh on which black spots appear. They should be the first to know that a black spot does not mean spoilage. But they believe that good tempeh should always be white. We need an albino spore. Address: President and Founder, Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

3267. Jacobi, Dana. 2001. *Amazing soy: A complete guide to buying and cooking this nutritional powerhouse*, with 240 recipes. New York, NY: William Morrow. An imprint of HarperCollins Publishers. xiv + 364 p. Aug. Index. 24 cm. [50 ref]

• **Summary:** Contents: Introduction. Ingredients and techniques. Breakfast. Smoothies and drinks. Dips and starters. Soups and breads. Salads and dressings. Wraps, burgers, and savory pies. Pizzas and pastas. Stews, casseroles, and chilis. Steaks, chops, skewers, and meat loaf. Stir-fries and curries. Seafood. Mainly vegetables. Desserts. Sources. Bibliography. Address: Food writer, New York, NY.

3268. Shurtleff, William; Aoyagi, Akiko. 2001. *The book of tempeh: A cultured soyfood*. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 176 p. Aug. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [374 ref]

• **Summary:** See next page. This revision has completely new front and rear covers, designed and illustrated by Akiko. It contains a completely new "Appendix B—Directory of Tempeh Makers" (p. 157-58, updated to 16 June 2001).

The page "About the Authors" (autobiographical) has been updated, and the original photographs have been replaced with more recent ones—reflecting the fact that Bill and Akiko separated in Nov. 1993 and their marriage ended in May 1995.

The last page, "Soyfoods Center," has been updated.

On page 176 is "The Best of Vegetarian Cooking from Ten Speed Press" (descriptions of eight cookbooks, with price and ISBN).

The inside rear cover has been updated, and now includes current information about: (1) *Tempeh Production*, a book published by Soyfoods Center about how to start and run a company making tempeh on any of four scales and budgets in North America, and on either of two scales in tropical developing countries. (2) *Tempeh and Tempeh Products: Bibliography and Sourcebook*, published by Soyfoods Center. (3) SoyaScan, the unique computerized database produced by Soyfoods Center. This database now contains more than 62,000 records from 1100 B.C. to the present, and more than 76% of all records have a summary / abstract averaging 146 words in length. A description of the four different types of records (published documents, commercial soy products, original interviews and overviews, and unpublished archival documents), and the number of each type, is given.

The title page, copyright page, and table of contents have been redesigned and updated to give the book a much more contemporary look. Other small changes have been made throughout the book. Still contains 130 vegetarian recipes—both western and Indonesian.

Ten Speed Press gave this book a new ISBN: 1-58008-335-8. Yet despite the many changes described above, the authors preferred not to have this called a "new edition" or "revised edition." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

3269. Thym, Jolene. 2001. A twist on tofu: New, tastier food products put the joy in soy. *Oakland Tribune*. Sept. 5. Bay Area Living section. p. 1, 6.

• **Summary:** This front-page story contains a long interview with Dana Jacobi, author of *Amazing Soy*, plus a large color photo showing ten different types of soyfoods. The writer has discovered that "there's a whole lot more to soy than plain tofu." A sidebar titled "Name that food" is a glossary including: Edamame, silken tofu, miso, tempeh, fermented bean curd, fried tofu balls, yakidofu, yuba, soynuts, soy sauce, soy milk. Contains four recipes from Jacobi's book. Address: Staff writer.

3270. Carter, Rachel; Kistner, Stephanie. eds. 2001. *The soy alternative*. Vancouver, BC, Canada: Whitecap Books Ltd. 240 p. Illust. (color). Index. 26 cm.

• **Summary:** This is an attractive book, with a full-color photo on almost every other page. However it is edited by a

Second Edition

"AN INVALUABLE HANDBOOK."  
East West Journal

# THE BOOK OF TEMPEH

*A Cultured Soyfood*

*Updated List  
of Tempeh Makers*

*130 Tempeh Recipes*

WILLIAM SHURTLEFF & AKIKO AOYAGI

team of people who apparently don't know much about the subject, since it contains many factual errors. It has no real author and many publishers, the main one being Murdoch Books, a division of Murdoch Magazines Pty. Ltd. (Sydney, Australia).

Contents: The soy story. Glossary of ingredients. Soy for breakfast. Breakfast in a glass. Soy for lunch. Soy for Sunday lunch. Soy for vegetarians. Note: The rest of the book is not vegetarian, containing recipes for beef, lamb, chicken, pork, etc. Soy for dinner. Soy for parties. Soy for dessert. Soy at teatime. Cookery terms. Address: 351 Lynn Ave., North Vancouver, BC, Canada V7J 2C4.

3271. Krizstan, Jan. 2001. Update on work with tofu and soybeans in Slovenia (Interview). *SoyaScan Notes*. Oct. 11. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Jan and Mirko live about 100 km apart in Slovenia. Jan presently earns his living in desktop publishing, working with computers. Mirko lives with his wife, Jan's sister, on a farm, where he makes the best tofu in Slovenia; he has about 75% of the Slovenian tofu market. All his tofu is still made with nigari, which he buys from Natur Garten, located just across the border in Gamlitz, Austria.

Jan plans to move to Croatia (where his girlfriend lives) and start a new company there making tofu and tempeh. There are already several tofu makers in Croatia but Jan thinks the quality of their tofu is not very good; they grind their soybeans with blenders, which is very slow and inefficient.

It is now illegal to import kombu into Slovenia because of the high arsenic levels it contains. Jan believes there are two types of arsenic—good and bad. He thinks kombu has the good type. Kombu is an important ingredient in making seitan. Address: Mestni trg 22/1, 68330 Metlika, Republic of Slovenia. Phone: (386) 068 59 481.

3272. *SoyaScan Notes*. 2001. Chronology of major soy-related events and trends during 2001 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** April 12—Bill Bolduc, founder of Eden Foods and natural foods pioneer, dies in Southern California.

April 17—Martha Stewart, on her popular nationwide TV program *Living*, has a very positive segment on South River Miso Co.

April 18—Richard Rose, a soyfoods pioneer, sells Rella Good Cheese Co. to Tree of Life. He retains his company HempNut, Inc. in Santa Rosa, California. His Hempheh (hempseed tempeh) still contains soy.

May 11—The Kerry Group (of Wisconsin and Iowa) purchases Iowa Soy Specialties, LLC of Vinton, Iowa.

June 12—The Hain Celestial Group acquires Yves Veggie Cuisine (Vancouver, BC, Canada).

Aug. 24—Wildwood Natural Foods (Fairfax and Santa Cruz, California) and Midwest Harvest, Inc. (Grinnell, Iowa)

merge to form Wildwood Harvest, Inc. Iowa Agricultural Finance Corporation (IAFC) invests \$3.3 million in the new company, and the Iowa Farm Bureau Federation (IFBF) invests an additional \$700,000. This investment will be used to build and equip a 20,000 square foot soyfoods plant in Grinnell and to remodel and equip another 20,000 square foot soyfoods plant in Watsonville, California.

Aug. 3—Bunge, in its initial public offering (IPO), raises \$278 million by floating 23% of its shares on the New York Stock Exchange. Bunge has been a private grain trading company since it was founded in 1818 in the Netherlands by Johann Peter Gottlieb Bunge.

Sept.—SunRich's new soymilk plant in Wyoming starts production. By Nov. the plant is at full capacity and expansion begins.

Oct.—The Coca-Cola Co. acquires Odwalla, Inc. of California for \$181 million. Odwalla has annual sales of about \$130 million, mostly in fresh, refrigerated juices plus some delectable soy beverages.

Oct. 21—The U.S. National Organic Program and its standards take effect.

Nov. 4–7—Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease held at San Diego, California. General chairpersons and proceedings editors: Stephen Barnes and Mark Messina.

Dec. 10—The Hain Celestial Group, Inc. acquires Lima NV, the leading Belgian natural and organic foods manufacturer and marketer, and its Biomarché operations. Hain appoints Lima's Chairman, Philippe Woitrin, as Managing Director of Hain Celestial Europe. Lima is also a European pioneer in macrobiotic foods and soyfoods.

Dec. 11—Ralston Purina Co. (St. Louis, Missouri, a soy pioneer) is acquired by Nestle SA for \$10.1 billion cash; on this date the deal is approved by the U.S. Federal Trade Commission. The new company is named Nestlé Purina. The merger brings together such household names as Ralston's Dog and Cat Chow and Nestle's Friskies cat food and Mighty Dog brands.

Dec. 24—The Federal Trade Commission approves the merger of Dean Foods and Suiza Foods Corp. (which owns 14% of Horizon Organic Dairy). A federal judge throws out White Wave's lawsuit arguing that White Wave has the right to buy back its own stock at the market price before the merger.

In 2001, for the first time in modern history, the USA lost the distinction of supplying more soybeans and soybean products (oil and meal) than all other countries combined. This year it supplied about 46% of the world's soybean exports. South America (mainly Brazil and Argentina) now supply more than 50%. Devalued currencies in Brazil (the *real*) and Argentina (the *peso*), plus the strong U.S. dollar, make it difficult for U.S. exporters to compete based solely on price. To compete in the future, U.S. growers must find a new strategy, which will focus on soybean quality.

3273. Weed, Susan S. 2001. *New menopausal years: The wise woman way*. Woodstock, New York: Ash Tree Publishing. xxiii + 280 p. Dec. Illust. Index. 22 cm. [102\* ref]

• **Summary:** Soy is discussed throughout this book but sources are rarely cited. When they are cited, we insert them below. For heavy bleeding (flooding) during the menopausal years: To nourish and tonify, avoid tofu, soy drinks, and soy protein powders (p. 9-10). For uterine fibroids: Consume lignans, which are anti-estrogenic phytoestrogens, found in all whole grains and beans—including soy (p. 15). Building better bones: Exercise regularly, eat calcium-rich foods, and avoid calcium-leaching foods such as soy “milk,” tofu, coffee, alcohol, and white flour products (p. 24). Calcium: Caution—“Unfermented soy (e.g. tofu) is especially detrimental to bone health being protein-rich, naturally deficient in calcium, and a calcium antagonist to boot (p. 28). Beware of calcium antagonists, foods that interfere with calcium utilization. Avoid consistent use of unfermented soy products, including tofu, soy beverages, and soy burgers (p. 29; see p. 163).

Phytosterolic, phytoestrogenic foods: Whole grains and beans are good sources. “Caution: Beans must be cooked or fermented to remove anti-nutritional substances. Tofu and soy ‘milk’ are not recommended” (p. 70).

Red clover has ten times more phytoestrogens than soy, as well as much more bone-building minerals, such as calcium and magnesium (p. 71). Sea vegetables are second only to flax in concentration of lignans. Seaweeds, not soy, are the real secret of health in the Japanese diet (p. 72). “The phytoestrogens in dong quai, like those in soy, promote the growth of cancer cells in petri dishes” (p. 73). Phytoestrogenic herbs: Fermented soy products (miso, tamari, tempeh), ground flax seeds, whole grains, etc. are rich in hormonal precursors and phytoestrogens. Use daily to ease menopausal symptoms, prevent cancer, and lower heart disease risk (p. 94). Lack of vitamin B-12 doubles the risk of severe depression for older women; tofu and soy beverages interfere with its absorption (Fallon 1999) (p. 114).

Preventing breast cancer: 75% of all breast cancers occur in women over age 50. Reduce use of seed oils, such as soy oil. For each 5 gm of polyunsaturated fat (from vegetable oils), risk of breast cancer rose by 70% (Wolk 1997 [sic, 1998]) (p. 145). Eat more beans: “There is a relationship between the large amount of *fermented* soy products (miso and tamari) in the Japanese diet and low incidence of breast cancer. But no relationship has ever been shown between the consumption of processed, fake, imitation soy foods, and breast cancer reduction. Soy beverage is used moderately, or not at all, depending on the specific Asian country” (p. 146).

Herbal allies: Red clover is everything you thought soy would be with none of soy’s drawbacks. It contributes to bone health, normalizes the thyroid, and prevents and

counters breast cancer. “So do miso and tamari, but not other soy foods. Red clover contains more active phytoestrogens in greater quantity than soy... Red clover contains all four of the major estrogenic isoflavones; soy has only two of them. A cup of red clover infusion (not tea) contains ten times more phytoestrogens than a cup of soy beverage, is richer in calcium, has less calories, and contains no added sugars” (p. 161).

The section titled “Soy” (p. 163-64) praises fermented soy foods (miso, tamari, tempeh, natto) but is quite critical of tofu, soy milk, and “fake soy foods” (burgers, hot dogs, soy cheese, etc.). Soy can reduce hot flashes and prevent heart disease; fermented soy foods can protect against breast cancer. Soy is not a good source of calcium and it is deficient in fats needed for healthy brain/memory functioning. “Soy protein isolate, textured vegetable protein, isolated isoflavones—processed soy foods come in more forms than I can list. I eat miso and tamari freely, tofu and tempeh occasionally, and other soy products not at all. Dosage: 50-200 grams of isoflavones per day, preferably from food. Caution: Excess soy can cause liver damage and is said to feminize men. Soy may be difficult to digest, may cause allergic reactions.”

Interstitial cystitis: Tofu may cause problems (Ford 1999).

Heart healthy: Soy, whole grains, vitamin E (from foods), essential fatty acids, and seaweeds are helpful (p. 210).

Osteoporosis risk factors: Being a vegetarian or vegan who eats a lot of tofu or soy beverage (p. 218). “Eliminate soy products except tamari and miso. (Unfermented soy prevents you from utilizing calcium.)” (p. 220).

Aching joints: A tofu poultice may help (p. 229).

Vitamins and minerals for the menopausal years: Vitamin B-12, calcium, and iron are depleted by unfermented soy products (p. 248, 250-51).

Note: The author does not cite a single scientific publication to support her many criticisms of soyfoods. In fact, the scientific literature does not support her criticisms. It is well known that the author is an admirer of Sally Fallon. Address: P.O. Box 64, Woodstock, New York 12498-0064.

3274. **Product Name:** [Tempeh Bacon].

**Foreign Name:** Temeph Bacon.

**Manufacturer’s Name:** De Hobbit.

**Manufacturer’s Address:** Nijverheidslaan 7, 9980 Maldegem, Belgium. Phone: 050 71 70 20. Food for Freedom makes.

**Date of Introduction:** 2001.

**Ingredients:** Tempeh\*, cornsyrup\*, shoyu\*, sea salt, yeast extract, cane sugar\*, spices\*, red fermented rice.

**Wt/Vol., Packaging, Price:** 120 gm.

**How Stored:** Refrigerated, 10 weeks shelf life.

**New Product–Documentation:** Form filled out by Mr.

Frederik Dossche and two leaflets sent by fax. 2001. June 7. Food for Freedom and De Hobbit seem to have merged. Both make tempeh at: Nijverheidslaan 7, 9980 Maldegem, Belgium. Phone: 050 71 70 20. De Hobbit makes Tempeh, Smoked Tempeh, and Tempeh Bacon. Leaflet index card. De Hobbit. Product cluster: Tempeh. A photo shows Tempeh bacon. "Description: The vegetarian alternative for ordinary bacon. How to use: Fry golden brown on both sides or can be prepared like regular bacon, with cheese, eggs, etc., but very healthy."

3275. Frost & Sullivan Inc. 2001. U.S. soy-based meat alternatives market. New York, NY: F&S. \*

• **Summary:** Contents: Market overview. Overview and definitions. Market drivers. Market restraints. Challenges. Forecasts and trends. Revenue forecasts. Demand analysis. Market and technology trends. Pricing trends. Competitive analysis. Competitive structure. Market share analysis. Product analysis. Recommendations and evaluation. Meat analogs market. Tofu market. Tempeh market.

Heavenly chocolate cupcakes (with soymilk, p. 109). Tofu cheesecake (p. 112). Homemade soymilk, rice milk, almond milk (p. 115). Homemade tofu (p. 115). Tofu recipes on the Web (p. 116). Homemade soy yogurt (p. 116). Homemade wheat gluten & seitan (p. 116). What is tempeh? What is TVP (p. 119). Vegetarian mince or meatless ground beef (p. 120-21). vegetarian and soy cheeses

(p. 121). Tofurky (meatless turkey, p. 122-23). Tofutti (non-dairy soy ice cream) and vegan eggnog (p. 125). Soy-based vegan candles (p. 126). Using tofu (p. 129-31). Tofu cream cheese (p. 131). Soymilk and soy creamer (p. 132). Soy buttermilk and soy mayonnaise (p. 133). Feeding an infant with soy formula (p. 154). Are the phytoestrogens in soy formula safe? (p. 155). Helping kinds to switch to soymilk from cow's milk (p. 156). Address: 1. Baltimore, Maryland; 2. R.D.

3280. Davis, Brenda; Grogan, Bryanna Clark; Stepaniak, Joanne. 2001. *Dairy-free & delicious*. Summertown, Tennessee: The Book Publishing Co. 160 p. Index. 21 x 18 cm.

• **Summary:** Contains over 100 creative vegan recipes for managing milk allergy and lactose intolerance. Nutritional information by Brenda Davis, R.D. Recipes by Grogan and Stepaniak. Contents: Introduction. 1. Lactose intolerance. 2. Milk allergy. 3. Building strong, milk-free bodies. 4. Superb substitutes. 5. Dairy-free dining: Travel tips. Natural foods for dairy-free cooking [glossary]: Agar, arrowroot, brown rice syrup, liquid smoke, mirin, miso, nutritional yeast, seitan, soy flour, soy protein isolate powder, soy sauce (tamari), tahini, tempeh, tofu. Dairy-free & delicious recipes: Homemade dairy-free spreads, uncheeses, and milk. Sauces. Breakfast. Salads and dressings. Soups. Main dishes. Desserts.

With this book, you can make any "dairy product" you can imagine without using dairy. The most widely used ingredients are: Tofu (used in more than 70 recipes!). Soymilk, rice milk, and other dairy-free milks. Nutritional yeast.

3281. Geiskopf-Hadler, Susan; Toomay, Mindy. 2001. *The complete vegan cookbook: Over 200 tantalizing recipes plus plenty of kitchen wisdom for beginners and experienced cooks*. Rocklin, California: Prima Publishing. xvi + 318 p. Illust. Index. 22 cm.

• **Summary:** Contains more than 200 vegan recipes, including many recipes for miso (3 recipes), soy cheese (9), tempeh (7), tofu (regular, 22), tofu (silken, 6), and soy yogurt (2). The "Glossary of special ingredients" contains definitions of miso, soy mayonnaise, soy milk, tempeh, and tofu. For nutritional information about soy foods, see p. 20-21. Tamari soy sauce is frequently used as a seasoning.

Contents: Acknowledgements. Introduction. 1. Cooking fundamentals. 2. Stocking the vegan pantry. 3. Menus for entertaining and everyday meals. 4. Appetizers. 5. Salads. 6. Soups and stews. 7. Vegetable side dishes. 8. Pasta dishes. 9. Grain and bean dishes. 10. Sautés and stir fries. 11. Baked and grilled entrées. 12. Sandwiches and wraps. 13. Morning meals. 14. Deserts. 15. Frequently used ingredients. Appendix: Nutrition fundamentals. Glossary of Specialty ingredients. Address: Northern California.

3282. Green, Shia. 2001. *Tempeh: La mejor proteína vegetal [Tempeh: The best source of vegetarian protein]*. Barcelona, Spain: Océano Grupo Editorial, S.A. 144 p. Illust. 20 cm. Series: La naturaleza cura. [Spa]

• **Summary:** Contents: What is tempeh?: Brief history of tempeh, soybeans—protein source of the future. How to make tempeh at home. How to make a tempeh incubator. Preparatory techniques. Tempeh recipes: Easy recipes to start with, Western-style recipes, Asian-style recipes. Appendixes: I. Other types of soyfoods (glossary). II. Useful contacts in Spain: Natursoy, S.L. (Barcelona). Vegetalia (Barcelona), BioSpirit, S.L. (Girona).

Describes the secrets of preparing recipes that are delicious, nutritious, and healthful.

3283. Hayter, Kurumi. 2001. *The soy for health cookbook: Recipes with style and taste*. Alexandria, Virginia: Time-Life Books. 144 p. Illust. (color). Index. 25 x 19 cm.

• **Summary:** This is a beautiful and strange book, designed and produced by Quintet Publishing Ltd. (London). Beautiful in that almost every other page is a stylish full-color photo of a recipe. Strange in that: (1) Tofu is probably the most common soy ingredient used, yet it does not even appear in the index. Nor does tempeh which is also called for. Yet miso is in the index. (2) A number of the soyfood terms are bizarre and unconventional—such as "beancurd pouches" [abura-age or deep-fried tofu pouches], "sticky beans (natto)." (3) On the inside front cover, the book's title is given as "The Tofu for Health Cookbook."

Contents: Introduction: Nutrition and health, lactose (dairy intolerance), prevention against heart disease, prevention against cancer, prevention of other disorders. How to use this book. Glossary of soyfoods and other ingredients. Basic recipes. 1. Soups and stews. 2. Salads and appetizers. 3. Main dishes. 4. Snacks and side dishes. 5. Desserts.

This book is not vegetarian; some recipes call for beef, pork, chicken, fish, etc.—but none call for dairy products.

3284. Lemlin, Jeanne. 2001. *Vegetarian classics: 300 essential recipes for every course and every meal*. New York, NY: HarperCollins. ix + 294 p. 25 cm. Index. Reprinted in 2003 by Quill (New York).

• **Summary:** One chapter is titled "Tofu and tempeh" (p. 189-202). Soy related recipes include: Edamame (p. 41). Miso (p. 10-11, 55-56, 73-74).

Jeanne Lemlin, who has been writing about vegetarian food for more than a decade, has won a prestigious James Beard Cookbook Award. Address: Great Barrington, Massachusetts.

3285. Marcus, Erik. 2001. *Vegan: The new ethics of eating*. Revised ed. Ithaca, New York: McBooks Press. xi + 211 p.

Illust. Index. 23 cm. [432 endnotes\*]

• **Summary:** Very well researched and written. Widely considered to be the best current introduction to Veganism. Contents: Foreword, by Howard Lyman. Introduction. I. Part I: To your health. 1. The beat goes on. 2. Cutting your cancer risks. 3. Eat well to weigh less. 4. The perfect food isn't. 5. How now, mad cow. II. Part II: The truth about food animals. 6. Rescued! 7. Chickens and eggs. 8. Pigs. 9. Milk and beef. 10. The killing business. III. Part III: Beyond the dinner table. 11. World hunger. 12. American rangeland. 13. Awakening. Appendix A: The new four food groups.

The New Four Food Groups (p. 194-95) are vegetables, whole grains, fruit, and legumes. Legumes includes soy milk, tempeh, texturized vegetable protein, and tofu.

On the cover is written boldly: "Urgent. What we eat has devastating effects. Heal our planet and your body."

The chapter on mad cow disease gives a brief but good history of the problem. In Jan. 1997 the U.S. Foods and Drug Administration proposed regulations to prohibit the feeding of cattle parts back to food and dairy cattle. In June 1997, the proposal was passed into law. "If the resultant ban is seriously enforced, it could essentially eliminate the possibility of a British-style mad cow epidemic." However the new legislation still allows livestock producers to take risks with America's food supply by feeding other animal by-products back to farm animals. Pig and chickens have been shown to have developed spongiform diseases. Yet the new law exempts rendered pigs, chickens, horses, milk, blood, and gelatin from the ban.

British BSE researcher Stephen Dealler has tried to calculate how many Britons may actually die from Creutzfeldt-Jakob disease—the human form of mad cow disease. He has calculated 21 scenarios, each of which he considers equally likely. Fifteen of these show at least 140,000 people at high risk of developing the disease, and the six worse predict that over 32 million people in Britain have already been exposed to a potentially fatal dose. The wide range of numbers results from several unknowns: (1) The rate of transmission from infected of beef to humans that eat it; the issue of crossing the species barrier. (2) The human body's resistance to BSE prions. (3) The incubation time and distribution of the infection in humans. A closely related question is how many humans will die from spongiform encephalopathies contracted from infected animals other than cattle—such as pigs, chicken, etc.

Eric Marcus was born in 1966. Address: Vegan.com, P.O. Box 432, Albion, California 95410.

3286. Northrup, Christiane. 2001. *The wisdom of menopause: Creating physical and emotional health and healing during the change*. New York, NY: Bantam Books. xi + 589 p. Illust. Index. 28 cm. Revised and expanded in 2006.

• **Summary:** "This book is dedicated to the pioneering spirit embodied in the women of the baby boom generation." The

stories in this book reflect authentic situations in the lives of the thousands of perimenopausal women Dr. Northrup has seen in her practice. She has "integrated advanced medical techniques with the best natural remedies, offering readers specific guidance on choosing the right approach for themselves."

In this book "Dr. Northrup once again challenges convention. 'The change' is not simply a collection of physical problems to be 'fixed'—whether with hormones or herbs—but a body-mind revolution that brings the greatest opportunity for growth since adolescence... [This] book examines the connection between menopause and a woman's emotional and spiritual life And it stresses how the choices a woman makes now—from the quality of her relationships to the quality of her diet—either secure her health and well-being for the rest of her life, or put her at future risk."

Candid and reassuring, [this book] elucidates the changes women should expect from ages 40 to 55, and how these changes can be wonderfully life-affirming. Instead dreading menopause as a time of loss, women will hear the real message their bodies are sending—that this is a time of personal empowerment and positive energy... and a time for women to break free and thrive." Contains a very positive and accurate section on the ability of soyfoods to relieve menopausal symptoms. But the benefits are dose-dependent. Discusses: Soy and menopause (p. 125). Bone loss (p. 164). Soy capsules or pills (p. 173). Soy and menopausal symptoms, dose dependency, genetic engineering (p. 179-84). Vaginal resiliency / moisture (p. 286). Alzheimer's and dementia (p. 321). Skin and wrinkles (p. 345). Breast health (p. 422). Summary (p. 548-49).

About the author: "Christiane Northrup M.D., trained at Dartmouth Medical School and Tufts New England Medical Center before cofounding the Women to Women health care center in Yarmouth, Maine... Board certified in obstetrics and gynecology, she is past president of the American Holistic Medical Association." Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

3287. Sabaté, Joan; Ratzin-Turner, Rosemary. ed. 2001. *Vegetarian nutrition*. Boca Raton, Florida: CRC Press. [xiv] + 551 p. Index. 24 cm. CRC Series in Modern Nutrition. [1732 ref]

• **Summary:** The best scholarly book seen to date on this subject. Consists of a Prologue (by Mervyn Hardinge) plus 21 chapters, in five sections, by various authors.

This book contains extensive information on soyfoods as follows: Vitamin B-12, homocysteine, meat analogues and soya milks (p. 47). Summary of epidemiologic studies of soy / tofu intake and breast cancer risk (p. 80-81). Vegetarian diets and soy in the prevention of osteoporosis, diabetes, and neurological disorders (p. 120-21, 125). Iron and soy (p. 202-03). Guidelines to achieve an optimal ratio of essential fatty acids in the diet (p. 203; soy is rich in  $\alpha$ -linolenic

acid). Zinc, calcium and soy (p. 206). Women's reproductive function, menopausal symptoms, phytoestrogens and soy (p. 232-34, 244). Health advantages of a vegetarian diet for the elderly—and soy (p. 254-55). Vegan children, protein and soy (p. 302). Iron and soy (p. 304; "While the percentage of iron absorbed from soy may be low, the total amount of iron absorbed is adequate, because soy beans naturally contain relatively large amounts of iron" (p. 304-05)). Phytoestrogens and soy (p. 312-13). Macrobiotic diets (p. 313-15). Calcium and soy (p. 316). Vitamin B-12, miso and tempeh (p. 319-22). Iodine and soy (p. 323). Health-promoting phytochemicals beyond the traditional nutrients—soyfoods and isoflavones (p. 342-45; One table shows the isoflavone content (genistein, daidzein, and glycitein) of soybeans, roasted soyflour, roasted soynuts, TVP, tofu, tempeh, miso, and soy milk). Another shows the isoflavone content of commercial soy products by the weight of a typical serving, in descending order of isoflavone content (cooked soybeans, dry TVP, dry roasted soy nuts, tofu, soy flour, soy protein isolate, soymilk, SoyBoy Breakfast Links, soybean chips, tempeh, miso, soy cheese, Ice Bean, Green Giant Harvest Burger, soy noodles, Tofutti, soy sauce, soy oil). Protection against cancer and soy (p. 346-47). Help for menopause and bone loss (p. 347-48). Protective substances and soy foods (p. 397-98). Calcium fortified products such as soy (p. 421). Consuming a wide range of vegetable oils from intact plants—soy (p. 421). Developing a vegetarian food guide—Legumes, lentils and peas (p. 428-29; "Among legumes, the soybean possesses unique nutrient characteristics." Many food guides place soy beverages in the milk-dairy category). Table: Comparison criteria for evaluating soy and grain-based beverages (p. 430). The water efficiency of food production—and soy (p. 449; "The water intensity of animal production is much larger than the water intensity of crops. For instance, per gram dry weight, soybeans require about 0.75 liters of water" compared with about 20 liters for cattle). Note: Joan Sabaté is a man. The series editor is Ira Wolinsky, PhD, Univ. of Houston, Texas. Address: 1. Prof. of Chair, Dep. of Nutrition, and Prof. of Epidemiology, Loma Linda Univ., Loma Linda, California.

3288. Singleton, Paul; Sainsbury, Diana. 2001. Dictionary of microbiology and molecular biology. 3rd ed. Chichester, New York, Weinheim, Brisbane, Singapore & Toronto: John Wiley & Sons, Ltd. xi + 895 p. Illust. 25 cm.

• **Summary:** Contains entries for: fermentation, fermented foods, fermenter (fermentor), fungi, miso, natto, ogi, oncom, shoyu (see Soy sauce), soy paste (see Miso), soy sauce (shoyu), sufu, tempeh, tofu (an intermediate in Sufu production). Address: London.

3289. The Mail Order Catalog for healthy eating. Winter 2002. 2002. P.O. Box 180, Summertown, TN 38483. 36 p.

• **Summary:** The book section of this mail order catalog

contains listings for an excellent selection of vegetarian and vegan cookbooks, vegetarian soyfood cookbooks, plus books on food nutrition & health, alternative healthcare, women's healthcare, native Americans and their cultures, animal rights, and sustainability.

The vegetarian food products section offers TVP granules and chunks, Response textured soy protein concentrates (misleadingly called "Response TVP flakes"), miso soup mixes, wheat free soy pasta, soy & rice pudding mixes, soy & nondairy beverages and beverage mixes, soy protein powders & shake mixes, soynut butters, sea vegetables, vegetarian jerky, soynuts, plus foods from Worthington and Loma Linda, Jyoti India Cuisine, and Dr. John McDougall. Address: Summertown, Tennessee. Phone: 800-695-2241.

3290. Huang, Timothy; Krueger, Carol Ann. 2002.

Chronology of work with soyfoods (1972-1980) (Interview). *SoyaScan Notes*. Feb. 15-24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** 1950 Dec. 25—Born in Detroit, Michigan.

Growing up in a Chinese-American family, Tim naturally ate tofu (mostly at restaurants) and other soyfoods. At college in Michigan he started to prepare some of his own meals and began to cook with store-bought tofu.

1972—Tim leaves the University of Michigan (he studied architecture, then natural resources/ecology) to join "The Farm," an intentional community in Summertown, Tennessee, where he is exposed to vegetarianism and new uses of soybeans as food. Tim becomes a complete vegetarian (vegan). On The Farm, all of the soybeans were eaten as pressure cooked soybeans; a little oil was added to keep the hulls from clogging up the pressure valve. Stephen Gaskin, The Farm's teacher, expresses an interest in learning more about tofu.

1953 July 5—Carol Ann is born in Medford, Wisconsin. In the fall of 1973, at age 19 and after graduating from high school, she first visits The Farm in Tennessee. In Jan. 1974 she moves there to live.

1973—Tim researches how to make tofu for The Farm by interviewing family acquaintances. He built a forming box, got some cheesecloth, bought all the ingredients necessary to make tofu and made a batch in his family kitchen (West Bloomfield, Michigan—a suburb of Detroit) using soybeans from an Asian food store (in Royal Oak, Michigan), and lemon juice as a coagulant. His parents laughed. However neither Tim nor anyone at The Farm used this information to actually make tofu.

1974 spring—Tim and Carol Ann meet at The Farm in Tennessee. Approximately 600 people are living on The Farm at that time. Tim is a woodcutter and chain saw mechanic. Carol Ann works in the community kitchen and soy dairy—where she learns (briefly) how to make tofu and soymilk.

1974 fall—Tim and Carol Ann move to the “Wisconsin Farm,” a sister community of The Farm. The Wisconsin Farm was smaller and better organized than the Tennessee Farm. James Taft is a key person there.

1975 March 9—Tim and Carol Ann are at the Wisconsin Farm; Stephen Gaskin comes up from the Tennessee Farm to marry six couples in one ceremony. Tim’s parents are distraught; his father barely escaped from Communist China and now he was losing his son to a commune. Carol Ann (who is a good cook and likes to cook) works with the canning and freezing crew, and becomes involved in making soy milk and tofu regularly for that community; Tim, who is on the wood-cutting crew, helps her occasionally.

1976 Nov. 1—Ethan, the Huang’s first child, is born on the Wisconsin Farm.

1977 fall—Tim and Carol Ann leave the Wisconsin Farm and move to Detroit, Michigan, to establish their own business. When they leave, Tim’s parents give them some money with which they purchase a Dodge Caravan van. They move into a rented apartment. After several months (with financial help from Tim’s parents), they buy and start to make payments on a house on the east side of Detroit.

1977 fall—Tim enrolls in an EMT (Emergency Medical Technician) training program associated with Wayne State University, at Detroit General Hospital; this would qualify him to drive an ambulance. Carol Ann wants to start a business making tofu and/or tempeh.

While looking for work on the side, Tim meets a Mr. James Coleman, a wheeler-dealer, who wants Tim to distribute his breads to Detroit from Ann Arbor. Tim begins distributing the bread but quickly realizes he needs a line of products if his route is to be profitable. He soon adds breads from Wildflower Community Bakery. One night at dinner Coleman tells Tim that he should meet Steve Fiering who is part of the 4th Avenue Food Co-op and who started (in about the spring of 1977) a worker’s cooperative making tofu next door in the Wildflower Community Bakery in Ann Arbor.

1978 Feb. or March—Tim and Carol Ann meet Steve Fiering of The Soy Plant worker’s cooperative making tofu in Ann Arbor, Michigan. Steve’s co-op is now located in the small room in the basement of Eden Foods’ restaurant in Ann Arbor. It is agreed that rather than create a competing soyfoods production business, that a cooperative business arrangement between the two companies be formed. The Yellow Bean Trading Co. is established by Tim and Carol Ann in Detroit to distribute soy products for The Soy Plant in the metropolitan Detroit area. In Chinese, *Huangdou* or “yellow bean” means soybean.

1978 July—Tim and Carol Ann attend the first meeting of the Soy Crafters Association of North America in Ann Arbor, Michigan, hosted by The Soy Plant. They sign the register as: Yellow Bean Trading Co., 4414 Buckingham, Detroit, Michigan 48224. The conference boosts their interest making a business out of soyfoods. Tim, who is now taking some

science classes at Wayne State University, has to decide between two careers: A medical technician or doctor, or a soyfoods entrepreneur. He chooses the latter.

1978 Sept.—Tim starts to distribute refrigerated soy products (tofu, tempeh, soy milk, etc.) made by The Soy Plant in Ann Arbor. He would drive the 40 miles from Detroit to Ann Arbor, would pick up the soy products at about noon, drive them to his home in Detroit in his unrefrigerated van, pack them into a refrigerator in the garage for overnight storage, then deliver them to stores along a distribution route he created in Detroit the next morning. The lack of refrigerated storage space and of a refrigerated van becomes an immediate problem. So Tim soon buys an inexpensive second van, insulates the back, and installs a refrigeration unit. He gradually adds more natural-food products to his line.

1978 late—With Tim realizing the need for a walk-in cooler and Carol Ann wanting to start a soy deli, the Huangs begin to rent a storefront at 15309 Mack Ave. in Detroit—a former natural foods restaurant. Tim borrows some money from his parents to make the rental payments.

1978 Nov. 17—The Huang’s second child and first daughter, Eva, is born.

1979 March—The deli named Yellow Bean Vegetarian Foods opens at 15309 Mack Ave in Detroit. Yellow Bean also bought tofu from The Soy Plant and used it to create “secondary soy products” including tofu eggless salad, tofu cream pies, and vegetable-tofu pockets.

1980 July 19—The Huang’s third child, Emma, is born.

1980—Tim helps The Soy Plant relocate to a larger plant on Airport Blvd. in Ann Arbor.

1981—The Huangs sell the distribution route and trucks to The Soy Plant and sell the store to a private party. Tim decides to finish his undergraduate degree, working in food science and technology. They move to Davis, California.

1982—They separate in California. Carol moves to a ranch in Pima, Arizona; their divorce is finalized. She continues living in Arizona and raises their kids. She starts making jewelry. Address: 1. 155 Ridge Grove Rd., Kerrville, Texas 78028; 2. 438 South Star Ave., Tucson, Arizona 85719. Phone: Tim—830-792-3797; Carol Ann—520-740-0393.

3291. Hirsch, J.M. 2002. Tofu not the only way to get benefits of soy; try using miso. *Advocate (Baton Rouge, Louisiana)*. Feb. 21.

• **Summary:** “The vegetarian love affair with tofu has done as much harm as good for the reputation of the rather mild-mannered soybean.” But tofu is not the only source of healthy soy protein. Miso is another tasty source, best known as the primary ingredient in Japanese miso soups. Contains a recipe for “Shish kebabs with miso sauce” from *The Book of Miso*, by Shurtleff and Aoyagi (Ten Speed Press).

Other soy products besides tofu include: Tempeh, toasted and salted soy nuts, soy milk, breakfast cereals and

breads that contain soy, soy flours, soy protein powders, and edamame (fresh soybeans still in the pods; often served at Asian restaurants).

Also appeared in the Press (Ashbury Park, New Jersey). Address: Associated Press.

3292. Tibbott, Seth. 2002. Update on Tofurky (Interview). *SoyaScan Notes*. Feb. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Sales of Tofurky roasts grew nicely during the past year from 82,000 in 2000 to 105,000 in 2001—an increase of 28% during a recession year in the American economy. The product is sold in two forms: Tofurky Roast, and Tofurky Feast (the 26-ounce stuffed roast plus four Tempeh Drumettes, 14 oz. Tofurky “Giblet” Gravy, and Tofurky Jurky Wishstixs). In recent years, Tofurky has been made for Turtle Island in California. Now Seth is planning to move production in-house, which should enable him to reduce production costs dramatically. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: 541-386-7766 OF.

3293. Northrup, Christiane. 2002. Looking to shed some pounds? Try soy. *Dr. Christiane Northrup's Health Wisdom for Women*. Feb. p. 4-6. [17 ref]

• **Summary:** Revival is Dr. Northrup's favorite soy product; she is certain that her daily serving of Revival has been a significant factor in helping her avoid midlife weight gain. Many Americans regularly eat high-stress, low-quality foods such as refined flours and sugars, and trans fats, which actually stress the body causing it to produce excessive amounts of insulin. This leads to insulin resistance and weight gain. Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

3294. Turtle Island Foods, Inc. 2002. Tempeh goes organic! New packaging celebrates 20 years in business (Leaflet). P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. 1 p. Front and back. 28 cm.

• **Summary:** On the front (see next page) are colorful new labels of Soy Tempeh, Five Grain Tempeh, and (New!) Veggie Tempeh. The ingredients are given in large letters below each package. “Organic ingredients. New Four-color package. Vacuum packed for freshness and longer shelf life.” For more information and recipes [www.tofurky.com](http://www.tofurky.com). Address: Hood River, Oregon. Phone: (800) 508-8100.

3295. Krueger, Carol Ann. 2002. Re: History of work with soyfoods, 1982-2004. Letter to William Shurtleff at Soyfoods Center, April 4. 5 p. + 2 menus. Handwritten, with signature.

• **Summary:** 1982—After Carol Ann and Timothy Huang were divorced, Carol Ann lived in Arizona with her kids and started making jewelry. She was director of the Graham County Food Buying Club, grew a huge organic garden,

and began traveling to craft fairs, Grateful Dead shows, and festivals where she sold her jewelry. Dealing with rheumatoid arthritis put her on the path of natural healing and interest in diet and nutrition. She found that stress, overwork, lack of sleep, lack of water, lack of green leafy vegetables, and a poor, non-organic diet all made her arthritis worse (it flared up), while their opposite made it better. From 1982 to 1989 she lived on a ranch in Pima, Arizona. In 1982 she met and married Richard Sansom.

1989—Carol Ann and Richard are divorced; she moved to Boulder Creek, California, where she lived for the next 4 years.

1990 June—She met her third life partner, Wild Bill, at the Health and Harmony Festival. He was part of the original Renaissance Festival in Northern California, and he played for a belly dance troupe. They began to co-create the Casbah Tea House. He had created a Bedouin-style tent—40 by 32 feet; he would set it up and serve tea, coffee, and treats. Musicians would play and belly-dancers perform. Carol, who now had a long history of feeding people, began to add more food. Soon they became a traveling tea house on the summer festival circuit, serving an organic vegetarian menu based on the foods she had been involved with for the past 20 years. They served a Middle East type menu—hummus, tabouli, pita sandwiches, Greek salads, etc.—which were very refreshing at a hot festival. However many regular meat-eating Americans couldn't relate to the food. So they added tempeh burgers, vegetarian chili and chili cheese soup, veggie dogs, organic french fries, and tempeh fries—which could serve a wider array of people. Carol bought her basic foods in bulk (e.g., 24 pounds of tempeh) from Mountain People's Warehouse, a natural foods distributor.

1995—They rented a building on 4th Avenue in the university district of Tucson. They put their crafts/imports into a shop in front called the Creative Spirit Gallery. In the back they developed the tea house concept. Over the past six years they have become a full service restaurant with evening entertainment of music and belly dance. “It is a beautiful international scene that embraces many cultures from around the world. It is decorated with low hand carved chairs from Afghanistan, brass trays from India, a bronze gong and carved wooden statues from Bali, and carpets from Persia. The tea house comes into fruition during the International Gem and Mineral Show when Buddhist, Muslim, Hindu, Christian, and pagan people from around the world come together and be at peace drinking tea and sharing a meal... It is a vision of the beauty and diversity of this world in its fullness.”

1997—Carol and Bill split up. He went into retirement and she had a new tent made from hemp fabric and ropes. She continued to travel with the Casbah Tea House on the festival circuit each summer, serving a menu based largely on soy.

1999—The hand-written Casbah Tea House Festival

Menu includes Middle Eastern favorites plus: Veggie Dog, Veggie Chili Cheese Dog, Vegetarian Chili, Tempeh (Soy) Burgers, and Tempeh Reuben.

2001 Feb.—The typeset Casbah Teahouse Tour Menu includes some new Middle Eastern favorites plus: Tofu Veggie Stir Fry, Vegetarian Chili, Tempeh Pita, and three types of soy burgers served with blue corn chips and a dill pickle: Tempeh Burger, Tempeh Cheese Burger, and Tempeh Reuben Burger. Veggie Hot Dogs (made from soy and seitan). Veggie Chili Cheese Dogs, and Tempeh Fries. A color photo (8 by 4½ inches) shows the colorful Casbah Tea House tent outdoors at the 2001 Seattle Hemp Fest (Washington state).

2002 spring—Carol Ann expanded, moving the gallery down the street to 549 N. 4th Ave., where it has three times as much space—the fullness to be a real store. The teahouse is now expanding into being a deli, bakery, and cafe in the front of the building. They make a lot of desserts that are vegan and sugar free, using tofu in their frostings. “We struggle with being a commercial operation trying to survive and holding to our values of providing as much organic high quality ingredients as we can.

“All three of my kids are now grown up, ages 21, 23, and 25. Emma attends the University of Arizona in the art department; she is our main baker and cake decorator. Eva is attending Pima College in graphic computer arts and is our main cook. Ethan is a part-time cook. Today I walked in here and there were nine gorgeous girls running around. They’re all in their 20s, all vivacious and healthy and beautiful. Emma’s assistant in the bakery is Rebecca, who is making tofu cheesecakes; her parents worked with us at Yellow Bean in Detroit, Michigan, when Rebecca was 5 years old. It’s pretty neat how everything has come around.

“We are developing are wholesale aspect slowly, providing the co-op with packaged food items that we make. We’ll see how it all evolves. What a long strange trip its been. One love.” Address: 438 South Star Ave., Tucson, Arizona 85719. Phone: 520-740-0393.

3296. Treloar, Brigid. 2002. Tofu. Singapore: Periplus Editions (HK) Ltd. Printed in Singapore. 112 p. Illust. (color). Index. 25 x 24 cm. Series: The Essential Kitchen. • **Summary:** This is a beautiful book, with stylish and informative full-page glossy color photos on every other page. It is well researched, comprehensive, and generally uses standard tofu and soyfoods terminology. It is also strange: We are not told in which country the publisher is located (perhaps Hong Kong or Singapore) or where the author lives. It is distributed in North America, Japan and Korea by Tuttle Publishing. On the inside rear dust jacket: [www.tuttlepublishing.com](http://www.tuttlepublishing.com). It is clearly targeted at a world market.

Contents: Introduction. Tofu glossary (introduction, firm and soft tofu, firm and regular tofu, fresh tofu, silken

tofu, soft tofu, extra firm tofu, powdered tofu {or instant tofu or soy milk powder}, nigari tofu, flavored or dessert tofu, grilled tofu {yaki-dofu}, deep-fried tofu {age}, freeze-dried tofu {koya-dofu}, thin deep-fried tofu {aburaage or usuage}, thick deep-fried tofu {atsuage or namaage}, seasoned tofu pouches {for *inari-zushi*}, tempeh). Creating texture and flavor. How to use tofu: How to cut tofu, making a chrysanthemum flower, how to remove excess moisture, how to change soft tofu into firm, how to prepare tofu for cooking (marinating, grilling, pureeing or blending, parboiling / braising, panfrying / stir-frying, scrambling, steaming, deep-frying, smoking, how to reconstitute freeze-dried tofu, how to prepare deep-fried tofu for cooking, substituting tofu in recipes). Appetizers Snacks and light meals. Soups. Baked dishes. Stir-fries. Grilled dishes. Noodles, couscous and rice. Vegetables. Salads. Desserts. Glossary (of general ingredients, incl. soy sauce, Teriyaki sauce). Guide to weights and measures.

Note: This is not a vegetarian cookbook. Some recipes call for pork, chicken, fish (salmon, trout, tuna), etc.

Talk with representative of Tuttle Publishing, Vermont. 2004. May 8. Brigid lives in Australia. Periplus, created in 1997 by Tuttle, is located in Singapore and a sister company of Tuttle. Address: Food writer, stylist, consultant, and cooking instructor [Australia].

3297. Annapurna. 2002. Annapurna: zdrava hrana [Annapurna: Healthy food (Leaflet)]. Zagreb, Croatia. 1 p. Front only. Each panel 15 x 10.5 cm. [Cro]

• **Summary:** This small leaflet is printed in dark green ink on beige paper. On the front panel, below the name of the company, Annapurna, are listed four tofu products, tempeh, and 3 seitan products; no weights or prices are given. Address: Zumberacka 36, Zagreb. Phone: (01) 3010 915.

3298. Meeks, Bob. 2002. Daybreak Cafe: A successful restaurant featuring soyfoods in Arcata, California (Interview). *SoyaScan Notes*. Sept. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Bob purchased The Tofu Shop, a soy deli and restaurant, from Matthew Schmit, in 1993. It is an alternative restaurant that features soyfoods, all organic ingredients, and mostly local foods. Approximately 75% of his customers are vegetarians. Bob went to culinary school and has spent his life in the restaurant business. He has owned and run his own restaurants for almost 25 years, and has worked in restaurants for almost 32 years.

More than 20 items on his menu include soyfoods or soy substitutions—not including soymilk as a beverage, in coffee, or in smoothies. His most popular menu items that include soyfoods (in descending order of popularity) are: Vegan Florentine (with cashew gravy). Tofu Scrambler (Bob also sells the a packaged dry seasoning mix for Tofu Scrambler). Omelets with tofu instead of eggs. Other specials

include Tofu Veggie Scrambler, stir fries with tofu, and curry rice with tofu. He also serves a number of tempeh recipes. Some local farmers that grow organically are too small to be certified. This restaurant is doing very well as a business. An important part of its success is the energy that Matthew put into it before Bob arrived—even though Matthew wasn't really a restaurateur—but rather an excellent tofu-maker. Bob gets all of his tofu from Matthew. After people read his menu they are free to color it!

Bob continues to make a new version of the Tofu Turkey that Matthew used to make in Arcata. Bob blends the tofu with seasonings, then stuffs it with bread, and bakes it in a bowl shape in large, medium, and small sizes. It comes with either cashew gravy or a mushroom-miso gravy. It comes out of the oven ready to go, then customers bake it again at home and baste it. "Tofu Turkeys are a pretty big thing in Arcata." He sells it at the restaurant and also wholesales it to a few food outlets in Arcata. He likes keeping it small and local. "With Matthew's tofu its just awesome." His best year he sold about 1,200 Tofu Turkeys from Thanksgiving to Christmas; last year the number was about 300-400. Tofurky changed so that it was more similar to Bob's product; they now have it in a bowl shape, blended and its stuffed. Bob thinks he saw Tofurky spies some years ago at his restaurant trying to steal his secrets. Address: Owner, Daybreak Cafe, 768 18th St., Arcata, California 95521. Phone: 707-826-7543.

3299. Schmit, Matthew. 2002. Tofu turkey in Telluride, Colorado, and Arcata, California (Interview). *SoyaScan Notes*. Sept. 24. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** The first tofu turkey that Matthew is aware of was made in Telluride, Colorado, in 1978 at Thanksgiving by Craig Boyken, a longtime close friend of Matthew's who loaned him \$250 to help start The Tofu Shop in Telluride in the fall of 1977. Craig is an amazing, sort of Renaissance man—an artist, mountain climber, musician—among other things. 1978 Craig and his wife, Anne, were living in Telluride in a studio they had built inside an old deserted brick school building. He used to have big banquets in his studio. Shortly before Thanksgiving of 1978 Matthew brought Craig two large blocks of firm nigari tofu, which he sculpted into the shape of a turkey, basted it with soy sauce and oil, baked it in an oven, and continued to baste it from time to time. He probably fashioned some kind of drumsticks on the side. Matthew does not recall any stuffing inside the turkey. As the turkey baked, it shrunk/contracted and lost its distinctive turkey features. It was carved and served with a vegetarian gravy and probably cranberry sauce and stuffing on the side. It was a potluck Thanksgiving vegetarian banquet, with about 30-40 people present, including all people who worked at The Tofu Shop. It was probably the first "Tofu Turkey Thanksgiving" in American history.

After starting The Tofu Shop in Arcata, California, Matthew continued the turkey tradition each year from Thanksgiving to Christmas, starting in about 1982 or 1983. It was a major event. They started carving the turkey from two large blocks of tofu; they would hollow each out, fill the space with stuffing, then put them together and bake them. It would come out like a loaf; when you sliced it you would get a combination of the white meat plus the stuffing inside. The Tofu Turkey came in three sizes (small, medium, and large—which fed 24 people) and was sold as a special-order product via the deli—either for take-home or as a hot plate (sliced, with gravy, stuffing, and cranberry sauce) to eat at the deli; it was not sold to other retail stores. Their record year, they sold \$4,000 worth of Tofu Turkeys including mushroom gravy, and a custom stuffing with okara and miso. People could also special-order tofu pumpkin pies, cranberry sauce, etc.—a full meal. The product was last sold by The Tofu Shop in 1993. Bob Meeks now makes it at the Daybreak Cafe in Arcata, but he has improved the recipe. Also, the Arcata Co-op, which has a service deli named Spoons, has for many years made their own Tofu Turkeys in house.

Matthew met Seth Tibbott of Turtle Island Foods (home of Tofurky) years ago when he came down through Arcata doing in-store food demos for his tempeh products, and Matthew has talked with him periodically over the years.

To this day, Matthew is asked to bring Tofu Turkey to his extended family's get-together on Thanksgiving in Arcata—for the vegetarians in the family. Address: Tofu Shop Specialty Foods Inc., 65 Frank Martin Court, Arcata, California 95521. Phone: 707-822-7401.

3300. Murphy, Patricia A.; Barua, K.; Hauck, C.C. 2002. Solvent extraction selection in the determination of isoflavones in soy foods. *J. of Chromatography. B, Analytical Technologies in the Biomedical and Life Sciences* 777(1-2):129-38. Sept. 25. \*

• **Summary:** Acetonitrile is better than acetone, ethanol or methanol in extracting the 12 phytoestrogenic soy isoflavone forms found in foods.

Gives the content of daidzein, genistein, and glycitein for soy flour, tempeh, tofu, TVP [textured soy flour], and soy germ. Address: Dep. of Food Science and Human Nutrition, Iowa State University, 2312 Food Science Building, Ames, Iowa 50011, USA. pmurphy@iastate.edu.

3301. Schmit, Matthew. 2002. Soy pioneers: Where are they now? Part V (Interview). *SoyaScan Notes*. Aug. 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Continued: In about 1983 Tom Nawrocki was hired by The Tofu Shop as a tofu maker, but he arrived with an interest in tempeh. Later he asked Matthew if he could rent a portion of the space to make tempeh; Matthew liked the idea. Tom built an incubator, founded Arcata Soyfoods Co., and made tempeh at the shop for 2-3 years. He may also

have made a tempeh salad. After leaving Arcata, he lived in Japan for several years. The last Matthew heard, Tom was working in a bike shop in Santa Cruz, California.

The company's logo has always been a small tofu shop on stilts, with an Oriental-style roof with the ends of the rafters curving upward, facing westward on a cliff above the Pacific Ocean, with a tree arching overhead. It was Matthew's dream of the perfect tofu shop and location. In 1999 Matthew met Yevonne Reynolds, a local watercolor painter and graphic artist, who designed their present colorful and impressionistic watercolor logo—based on her interpretation of their earlier logo.

That earlier three-color illustration (blue, green, gold) was done by Bernice Kagan in about 1983 based upon some prints and drawings that Matthew gave her, which he felt captured the essence of the Tofu Shop. "When Bernice Kagan and I were discussing the new logo, I requested that it include those classic Japanese waves, as symbolic of tofu arriving on our shores from across 'the big lake.' In reality, much of the coastline up here is exactly like that, steep, rocky cliffs with moss and pine. I think it was Bernice's idea to put it on stilts. Do we have tsunamis in Humboldt (our county) and Mendocino? Absolutely. A sizeable tsunami wrecked the Crescent City harbor (80 miles north); it was the Alaska tsunami of March 27, 1964. We have in Humboldt a tsunami warning system and hold periodic tsunami drills." Note: A real tofu shop built that close to the ocean could be destroyed by a tsunami, but this illustration was of an idealized tofu shop.

In Oct. 1999 The Tofu Shop introduced its first new labels plus a series of three promotional signs; across the bottom of each is printed: "Tofu Shop Specialty Foods. The company conducted a major signage campaign in all of their accounts to inform customers of the new labels.

A series of recipe cards began with two spring recipes in the spring of 2001. Two more were added each season.

They owned the Tofu Shop deli until 1992; they were manufacturing tofu and other products in the back. In July 1992 they moved the tofu-manufacturing part of the business from 768 18th St. to a small business food incubator (an economic development project), joining about ten other small local companies. The company's new name and address were: Tofu Shop Specialty Foods, Inc., 100 Ericson Ct., Suite 150, Arcata, CA 95521. At that time they remodeled the vegan deli into more of a sit-down restaurant, called The Tofu Shop. Matthew tried to manage both places for about a year and was unable to keep up with it. So he ended up selling the restaurant in 1993. It was on sale for a while, then he had to shut it down, which lowered the sale price quite a bit. It was purchased by experienced local restaurateurs—a husband, a wife, and a partner. The partner, Bob Meeks, ended up buying out the other two. They reopened on the same location (768 18th St. in Arcata) as the Daybreak Cafe. They used a lot of the Japanese decor and

kept the theme. They added some fish and a little chicken to the menu but they feature local, organic ingredients. They offer a vegan alternative to just about everything from eggs to meat. They advertise heavily and are very successful. They use a lot of Matthew's soy products in their recipes. The new owner is Bob Meeks (phone: 707-826-7543).

Talk with Linda Redfield. 2002. Sept. 23. She admires Matthew a lot. "He is very disciplined, determined, and focused. The Tofu Shop takes most of his life, energy and time." Address: Tofu Shop Specialty Foods Inc., 65 Frank Martin Court, Arcata, California 95521. Phone: 707-822-7401.

3302. Noble Bean. 2002. Tempeh—Noble Bean (Leaflet). McDonalds Corners, Ontario, Canada. 2 p. 6 panels. Front and back. 28 cm.

• **Summary:** The front 3 panels of this color leaflet are printed with black and yellow on a green background: (1) About the company in English, with an oval color photo of Casey, Marty, Susan, and Allan. "Noble bean is a family-run cottage industry nestled in the rolling hills of the Ottawa Valley. Here on 10 acres of land we produce 100 lbs. of tempeh a day." In 1979 the company was started. (2) Six tempeh products (packages and labels) made by Noble Bean, plus one old and two new photos of the family at work. (3) About the company (in French) with a cartoon illustration of the outside of the shop.

The inside 3 panels contain recipes for Tempeh Salad and Tempeh Teriyaki, plus an early photo of Allan and Susan making tempeh. Address: RR#1, McDonalds Corners, ONT, Canada K0G 1M0. Phone: (613) 278-2305. Fax (613) 278-0173.

3303. *Observer (London)*. 2002. Om: Top ten tips to beat high cholesterol. Oct. 13. p. G64.

• **Summary:** Tip #3 is "Eat soya products. Studies suggest that soya helps to reduce low density lipoproteins (LDL) cholesterol. Try portions of tofu, tempeh (fermented tofu [sic]), and soya milk."

Note: Tempeh and fermented tofu are two completely different foods made from soybeans.

3310. Lee, Cherl-Ho; Lee, Sang Sun. 2002. Cereal

fermentation by fungi. In: George G. Khachatourians and Dilip K. Arora, eds. 2002. Applied Mycology and Biotechnology. Vol. 2. Agriculture and Food Production. Amsterdam, New York: Elsevier. 428 p. See p. 151-70. [50 ref]

• **Summary:** Contents: Summary. Introduction. Fermentation starters: History of solid state fermentation starters in northeast Asia, cereal alcoholic fermentation starters, soybean fermentation starters. Fungal fermented foods: Cereal alcoholic products (rice wine, rice beer, alcoholic rice paste, alcoholic rice seasoning), fermented soybean products (Korean kanjang and doenjang, Japanese shoyu and miso, tempe, Chinese sufu), other fermented products (Chinese red rice {Anka}, enzyme foods). Hygienic aspects of fungal fermented foods: Mycotoxins in fermentation raw materials, mycotoxin formed during fermentation. Conclusion.

Page 162: "... soybean sauce, *kanjang*, and soybean paste, *doenjang*, have been used in Korea for more than 2000 years and formed the characteristic flavor of Korean cuisine. The term "Shi" [soy nuggets], the Chinese letter indicating *meju*, first appears in *Jijiupian* written in the Han period (206 B.C. to 208 A.D.) of China. *Bowuzhi* of Jin (265-420 A.D.) of China describes that *Shi* [soy nuggets] originated in a foreign country, and the letter is a dialect. *Xintangshu* of the Tang period (618-807 A.D.) in China names Shi as a special product of Balhai or Bohai (688-826 A.D.), a nation founded by the refugees from defeated Kokuryo (37 B.C. to 668 A.D.).

"It is generally recognized that Koreans were the first to experiment with soybean fermentation, sparking the beginning of the soy sauce culture of the Orient (Lee 2001). Their traditional fermentation technology was so advanced that they taught their techniques to neighboring countries."

Page 162-63: "*Meju* [soybean koji], the fermentation starter for Korean soysauce, *kanjang*, is made from soybean... The ripening of *kanjang* mash in the brine is ended in 1-2 months."

Figures: (12) A combination diagram and flowsheet showing the process of making Korean kanjang and doenjang. Address: 1. Graduate School of Biotechnology, CAFST, Korea Univ., Seoul, 136-701, Korea; 2. Dep. of Biology, Korea National Univ. of Education, Chungbuk, 363-791.

3311. Ling, Kong Foong. 2002. Food of Asia: authentic recipes from China, India, Indonesia, Japan, Singapore, Malaysia, Thailand and Vietnam. Singapore: Periplus. 192 p. Illust. (color photos). Index. 31 cm.

• **Summary:** This oversized paperback book, loaded with glossy color photos, is an expanded version of the original 1998 edition. The introduction and essays are by Kong Foong Ling. The index, which is poor, makes the book hard to use if you are looking for particular foods found throughout Asia such as soybeans, soy sauce, miso, salted /

fermented black beans, yuba [bean curd skin], etc.

Contents: The flavors of Asia. Ingredients. The Asian kitchen. Burma. China. India. Indonesia. Japan. Korea. Malaysia & Singapore. The Philippines. Sri Lanka. Thailand. Vietnam. Appendix.

The “Ingredients” section (p. 10-17) includes: Bean curd (incl. cotton or momen tofu, silken bean curd, deep-fried bean curd or aburage, grilled bean curd or yakidofu, fermented bean curd or nam yee). Bean curd skin [yuba]. Black beans, salted (and fermented). Hoisin sauce (“A sweet sauce made of soy beans, with spicy and garlicky overtones”). Miso (incl. red miso and white miso). Salted soy beans (incl. “yellow bean sauce”). Soy sauce (incl. light soy sauce, black soy sauce, red soy sauce, Kikkoman, tamari, thick sweet soy sauce (kecap manis–Indonesian)). Tempeh. Also: Red beans (dried azuki). Seaweed (incl. dried kelp, golden kelp, mozuku, salted dried kelp, laver or nori, wakame). Sesame (black and white seeds, tahina {tahini}). Sesame oil. Sesame rice crackers.

Korea (p. 109+). Page 110: There are also many fermented pastes and sauces for dipping, called *chang*. Every restaurant and home has its own formula for making *chang*. Based on a fermented mash of soy beans, the three most common varieties are *kan chang* (dark and liquid), *daen chang* (thick and pungent), and *gochu chang* (fiery and hot).

Soybean is mentioned on pages 8, 11, 68, 89.

Beancurd or bean curd is mentioned on pages 8, 10, 11, 26, 32, 33, 35, 36, 40-42, 68, 70-71, 74, 89, 90, 92, 93, 94, 96, 100, 102, 104, 107, 111, 112, 113, 119, 120, 127, 133, 158, 172, 175, 185, 189, 190, 191, 192.

Bean curd skin [yuba] is mentioned on pages 11, 35, 36.

Bean paste and bean paste sauces, p. 8, 32.

Fragrant soy sauce is mentioned on page 128.

Also: Red bean paste, p. 46 (canned, azuki).

3312. Treloar, Brigid; Inge, Karen. 2002. *Healthy soy: Cooking with soybeans for health and vitality*. Hong Kong: Periplus Editions (HK) Ltd. Printed in Singapore. 112 p. Illust. (color). Index. 24 x 22 cm.

• **Summary:** This is a beautiful book, with stylish and informative full-page glossy color photos on every other page. It is well researched, comprehensive, and generally uses standard soyfoods terminology. It is also strange: We are not told in which country the publisher is located (perhaps Hong Kong or Singapore) or where the authors live. It is distributed in North America, Japan and Korea by Tuttle Publishing. On the inside rear dust jacket: [www.tuttlepublishing.com](http://www.tuttlepublishing.com). It is clearly targeted at a world market.

Contents: Introduction. The health benefits of soy: The heart, cancer, menopause, osteoporosis, weight control, allergies, lactose intolerance, the nutritional value of soy, protein, phytoestrogens, fats, calcium, soluble fiber, vitamins and minerals, energy, carbohydrates, how much soy do we need? (as an exchange for meat), how to use the nutrition

table. Nutrition table (for various soyfoods). Soybeans: Green soybeans—fresh and frozen, dried soybeans, how to buy and prepare soybeans (selecting and storing dried soybeans, preparing dried soybeans, soaking, pan-roasting, boiling, pressure cooking, canned). Soy foods: Tofu (selecting and using, storing, freezing), bean curd sheets (yuba), deep-fried tofu (age; seasoned tofu), miso, tempeh, soya sauce (shoyu; regular, low-salt, light, tamari, ketjap manis), soy milk, soy flour, soy nuts, soy germ powder, soy oil, soybean sprouts, soybean paste (fermented), natto, soy dairy products (soy butter, soy spread {margarine}), soy cheese {plain or flavored}, cream cheese, yogurt, mayonnaise, soy meats (meat alternatives), others (soy breads, cereals, pasta, chocolate, chips, health bars, desserts, tofu ice creams), soy grits, tips (tofu, soy dairy products). Compatible soy flavors. Preparation and cooking techniques: Draining and pressing tofu, cutting tofu, deep-frying tofu, how to reconstitute yuba, how to use deep-fried tofu pouches, how to use miso, miso tips. Soups. Appetizers and dips. Light meals and snacks. Main dishes. Seafood. Vegetables. Salads. Desserts. Soy drinks. Glossary. Guide to weights and measures.

Note: This is not a vegetarian cookbook. Some recipes call for chicken, fish (swordfish, tuna, salmon), shrimp, etc. Address: 1. Food writer, stylist, consultant, and cooking instructor [Australia]; 2. Nutritionist and nutrition correspondent for *Good Morning Australia*.

3313. Stalzer, Dan. 2003. A tempeh pioneer improves the process for making tempeh at home (Interview). *SoyaScan Notes*. March 28. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Dan has been making tempeh since 1976. He learned the process from Rodale Press then bought a Tempeh Kit from The Farm (Tennessee). On 30 May 1980, while living in Chicago, he attended a talk and color slide show about tempeh given by Shurtleff and Aoyagi in the suburb of Evanston, Illinois. He now lives in Fort Bragg where he makes “greenwood furniture” and is friends with Gordon McBryde and Betty Stechmeyer of GEM Cultures. His innovations are:

(1) Dehulling the soybeans: To get every hull off of every bean, soak 4 cups soybeans overnight in water, then drain well. Have ready a cloth bag / sack home-made of coarse cotton (like a dishtowel) about 14 inches wide and 22-24 inches long. Turn the bag inside out so the seams are on the outside. Now pour the drained beans into the bag, distribute them soybeans evenly in the bottom, then roll it up tightly from the bottom to form a cylinder. Put this on a clean kitchen floor or in the bathtub. Take off shoes and socks. Step on top of the bag, with both feet closely together facing parallel to its axis and both heels at one end. With most of your weight on your heels, tread the beans underfoot, moving slowly the length of the cylinder until your heels are

at the other end. Now repeat, walking the length of the bag / cylinder in the same direction. Unroll the bag and roll it up again tighter. Repeat the process of walking its length twice. Sponge any moisture off kitchen floor. Pour the beans from the bag into the cooking pot and proceed to cook for 30-40 minutes in plenty of water, then drain and spread on a clean towel to dry. Meanwhile, take the empty bag outdoors, turn it inside out, and shake it so the residue flies off; then launder it.

(2) Leave the hulls mixed in with the beans when making the tempeh: This saves the time otherwise required to remove the hulls from the cotyledons, gives finished tempeh which is a whole food with more dietary fiber, and the hulls cause no reduction in the firmness of the finished tempeh. Dan can slice his tempeh into strips 1/16th inch thick and wave them; they hold together nicely.

(3) Perforating Ziploc bags: Staple all bags together, atop one another, near the 4 corners of the stack of bags, with each staple parallel to the side to which it is nearest, about ¼ inch in from each side, and ½ inch in from each end. Get a hatpin with a large round head and grasp it between the thumb and forefinger of your right hand. While seated, use the base of your right hand press the unstapled mouth end of the bags against your right thigh near the knee. Now grasp the bags at the other end with your left hand and pull them tight over the space between your legs. Use the needle to poke about 50 holes in the half of the bags nearest your left hand. Rotate the bags 180 degrees and poke 50 more holes in the other half of all the bags. Remove the staples carefully so as not to tear any large holes. The perforated bags are now ready to fill with soybeans.

(4) Add bulgur wheat before incubation to improve the tempeh's flavor: Add 1 cup coarsely cracked bulgur wheat to 1 cup boiling water in a saucepan. Cover and return to boiling. Turn off heat and, still covered, let stand for 30 minutes. During fermentation, enzymes in the starter will convert starches in the wheat into natural grain sugars.

(5) Add seasonings to soybeans and bulgur before fermentation to make seasoned tempehs: Italian blend—Stir in 3-4 tablespoons fennel seeds, 3-4 tablespoons oregano, and 6 cloves of freshly crushed garlic. The garlic increases the tempeh fermentation time by 4-5 hours—but its worth the wait! Mexican blend: Substitute 3-4 tablespoons of cumin seeds for the fennel seeds. Make sure the garlic is well crushed and well mixed with the spices, and that the mixture is well distributed into the beans (or bean-grain mixture). Mix in 2 tablespoons of white vinegar. Add starter and mix well again.

(6) An incubator requiring no thermostat: This works in Ft. Bragg, California, which is near the Pacific Ocean and has mild winter and summer temperatures, within 10 degrees F. of each other. Use your oven as an incubator with the inoculated mixture in perforated bags on the middle rack. Start with a 40 watt light bulb as a heat source on the oven's

bottom. Put a pie plate over the bulb to disperse its heat. After 12-14 hours, replace the 40 watt bulb a 15-watt bulb. The tempeh will be ready after about 30 hours, or when cake is firmly bound with a white mycelium.

Note: Fort Bragg is a Mecca for woodworkers from all over the world. There is a school there, The Fine Woodworking Program at The College of the Redwoods, which began in 1980 when James Krenov agreed to relocate to Fort Bragg from Stockholm, Sweden, to be the inspiration and head instructor of a small school devoted to, as he puts it, "going into the wood." He is well known in the craft and art world for making one-of-a-kind pieces of furniture which express his own esthetic sense, and for "designing as you build," or feeling your way to the most pleasing solution to any design situation. He is famous for making and using wooden planes (with carbon steel blades) in his work. Krenov retired last year but still makes beautiful furniture in his shop at home.

In Aug. 1987 Dan Stalzer relocated to Fort Bragg from Chicago; there he studied with James Krenov and the program's staff for 2 years. In addition he also practices "Green Woodworking" which he learned in 1985 in a traditional chairmaking class taught by Drew Langsner and John Alexander in North Carolina. Green Woodworking means the wood is shaped into project parts before it is seasoned, while it is still "green." In this condition, the wood is easily shaped with hand tools such as the drawknife using a shaving horse, a foot operated workbench and vise which the woodworker sits on. When the pieces are roughed out, the wood is allowed to cure (which it does quickly), then the pieces are finished and joined into furniture. Address: Dan's Workshop, P.O. Box 1321 (221 N. Whipple St.), Fort Bragg, California 95437. Phone: 707-964-9328.

3314. *ASA Today* (St. Louis, Missouri).2003. Soyfoods enjoy growing popularity. 9(6):4-page insert after p. 2. April.

• **Summary:** Attractive (with 5 color photos), interesting, and original. This is the first such insert in this 4-page newsletter, and the first time this newsletter has contained a significant amount of information about soyfoods. Below the title is printed: "A special publication from the American Soybean Association." On the back page we read: "ASA thanks the sponsors of this publication...: Solae [DuPont & Bunge], Soyatech, and White Wave. Below the logo of each company is 4½-inch-long column describing the company, its history and activities.

Contents of the insert: Introduction. Soyfoods become mainstream. The most common [widely used] soyfoods. U.S. consumers more aware of soyfoods. The push for soymilk in schools. Soyfoods for the future. Export demand for food ingredient beans.

It begins: "No longer are soyfoods considered unusual or hard to find. No longer are they considered the kind of foods only eaten by so-called 'granola-crunchers' or 'health

fanatics'... The menu at the recent American Soybean Association (ASA) awards banquet featured a serving of delicious edamame (sweet green soybeans) that soybean growers and guests alike enjoyed with enthusiasm."

3315. Hobbs, Suzanne Havala. 2003. Nutrition hotline: Alternate Protein Products (vegetarian) in the government's Child & Adult Care Food Program. *Vegetarian Journal* (Baltimore, Maryland) 22(2):2, 5.

• **Summary:** Federal funding of the Child & Adult Care Food Program (CACFP) supports daily meals and snacks for 2.6 million children and 74,000 adults at home day care programs, day care centers, after-school care programs, and shelters. USDA's Food and Nutrition Service (FNS) administers the program at the federal level; at the state level it is administered by state education and health departments. Modifications to the "Vegetable Protein Products" requirements were finalized in March 2000. With the latest group of changes, "Vegetable Protein Products" were renamed "Alternate Protein Products" (APP). The cap on the amount of APPs that can be used in menus was removed, and the new regulations no longer require that APPs be fortified. Tofu and tempeh don't qualify as APPs because they don't meet the requirement in Appendix A that APPs must contain at least 18% protein by weight when fully hydrated or formulated. Soymilk and soy yogurt don't count as APPs either—even though dairy yogurt does.

3316. **Product Name:** Edamame Veggie Tempeh.

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 2003. April.

**Ingredients:** Beer Brats: Tofu (non genetically modified soybeans, water, magnesium chloride or nigari) vital wheat gluten, expeller pressed non genetically modified canola oil, shoyu soy sauce (water, soybeans, wheat, salt, culture), Full Sail Amber Ale, herbs and spices, water.

**Wt/Vol., Packaging, Price:** Four vegan hot dogs in 14 oz pack. Suggested retail price: \$3.89 to 4.29.

**How Stored:** Frozen or refrigerated.

**New Product–Documentation:** Spot in *Vegetarian Journal*. 2003. April. Issue No. 2, rear cover. The makers of Tofurky have introduced "the first tempeh made with high protein organic Edamame soybeans." Sweeter than regular soy tempeh, it is presently available only on the West Coast.

3317. Jones, Christina. 2003. Making tofu in Australia (Interview). *SoyaScan Notes*. May 15. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** She and her partner have been making tofu for a short time and selling a little of it. But they were not the first ones in Tasmania to make tofu commercially. The pioneers

were people who made and sold tofu in their restaurant. She plans to order *Tofu & Soymilk Production* and *Tempeh Production* published by Soyfoods Center.

Update. Talk with Christina. 2003. June 11. She first sold tempeh in May 2003. Address: 124 Fourfoot Rd., Geeveston, Tasmania 7116, Australia. Phone: (3) 6297 1293.

3318. Henry's Tempeh. 2003. Tempeh Burger. Scott St., Kitchener, ON N2H 0A3, Canada.

• **Summary:** Letter (e-mail) from Henry Schmidt, founder of Henry's Tempeh. 2011. Jan. 12. In May 2003 Henry introduced Tempeh Burger. which was discontinued in April 2004. He made tempeh, then ground it in a meat grinder, seasoned it with dry seasonings and spices (no marinade), put it into a patty machine, made patties, and shaped it into patties—very labor intensive. "It was brutal, just brutal." He no longer has any labels for the tempeh burgers. Address: Kitchener, Ontario, Canada.

3319. Katz, Ellex Sandor. 2003. Wild fermentation: The flavor, nutrition, and craft of live-culture foods. White River Junction, Vermont: Chelsea-Green Publishing Co. xv + 187 p. July. Illust. by Robin Wimbiscus. Index. 26 cm. [78 ref]

• **Summary:** This book introduces readers to fermented foods from around the world. Contents: List of recipes. Foreword, by Sally Fallon. Acknowledgments. Introduction. Cultural context: The making of a fermentation fetish. 1. Cultural rehabilitation: The health benefits of fermented foods. 2. Cultural theory: Human beings and the phenomenon of fermentation. 3. Cultural homogenization: Standardization, uniformity, and mass production. 4. Cultural manipulation: A do-it-yourself guide. 5. Vegetable ferments. 6. Bean ferments. 7. Dairy ferments (and vegan alternatives). 8. Breads (and pancakes). 9. Fermented-grain porridges and beverages. 10. Wines (including mead, cider, and ginger beer). 11. Beers. 12. Vinegars. 13. Cultural reincarnation: Fermentation in the cycles of life, soil fertility, and social change. Appendix: Cultural resources. Notes. Bibliography. Index.

Chapter 6, "Bean ferments," includes details on miso, miso pickles, koji, tamari, and tempeh—with instructions for making them at home plus recipes. Other chapters discuss: Kefir, cultured soymilk, and Sunflower sour cream (p. 90). Amazake (p. 118-20). Walt Whitman's poem on compost (p. 162). Von Liebig, whose 1845 monograph "laid the groundwork for the chemical agricultural methods that have become standard practice and that are rapidly depleting soils everywhere."

The author believes strongly that fermented foods have helped him and several friends to survive AIDS—a fascinating hypothesis! Address: Short Mountain Sanctuary, in the hills of Tennessee.

3320. Book Publishing Co. 2003. Fall 2003 fall catalog (Mail

order). Summertown, Tennessee. 64 p. 25 cm.

• **Summary:** Contains sections titled Soyfoods Cooking (p. 14-17, including books on tofu, miso, tempeh, soyfoods, meatless burgers, meat substitutes, and TVP), Healthy World Cuisine (Chinese, Japanese, Korean, Indian), Vegan Cooking (p. 24-32), Vegetarian Cooking (p. 33-36), Native Voices (Native American books and authors) (p. 45-61). Address: P.O. Box 99, 415 Farm Road, Summertown, Tennessee 38483. Phone: 1-888-260-8458 or 931-964-3571.

3321. HeartHealth Partnership. 2003. Turning over a new leaf: Your heart-healthy living guide (Vol. 4, No. 2). Health Drivers Publishing. 29 p. Illust. No index. 19 cm. [26 ref]

• **Summary:** This booklet gives basic information is for people who want to reduce their blood cholesterol levels. It contains ads and touts specific brands. The National Cholesterol Education Program (NCEP) estimates that 52 million Americans are being treated for high cholesterol levels.

“Cholesterol is a soft fat-like substance, which in moderate amounts is essential for good health. It is part of the makeup of all cell membranes, is found in body tissue, and can be made into various hormones. Cholesterol comes from two sources. Your body produces it naturally, mostly in the liver (about 1,000 milligrams a day). The other source is the food you eat, such as meat, poultry, fish, egg yolks, and dairy products. Fruits, vegetables, nuts, seeds, and other plant-based foods do not contain cholesterol and, in fact, some of these foods have been shown to actually reduce blood cholesterol” (p. 2).

HDL (High Density Lipoprotein) is “good” cholesterol. It contains very little cholesterol in its core, but as it travels through the bloodstream it carries LDL or “bad” cholesterol away from the arteries to the liver, where it is either recycled or excreted.

LDL (Low Density Lipoprotein) is “bad” cholesterol. Its makeup is the opposite of HDL cholesterol; its core is almost all cholesterol. “If LDL levels are abnormally high, as it travels through the bloodstream it builds up on the artery walls. When LDL cholesterol combines with other substances, a plaque-like substance is produced that can clog the arteries.

“The ugly: Triglyceride is a form of fat found in food, body fat, and is also carried in the blood as part of the cholesterol molecule. The visible fat on chicken or steak is actually triglyceride. If you are overweight, your body stores the extra calories you eat as triglycerides. People with high triglyceride levels often have low HDL or ‘good’ cholesterol levels and this combination is considered by many experts to be associated with an increased risk of heart disease.”

Fats in your diet and the role they play. Saturated fats, which are higher in meat, dairy products, palm and coconut oils, tend to contribute to LDL (bad) cholesterol levels. Monounsaturated fats are liquid at room temperature but will

start to become solid when refrigerated. They can be found in almond, canola, olive, and peanut oils, and seem to have the effect of lowering bad LDL without lowering protective HDL cholesterol. Polyunsaturated fats are found in corn, soybean, safflower, and sunflower oils. They are liquid at room temperature and remain liquid when refrigerated. They may lower bad LDL cholesterol levels and, if used in large enough quantities, they may also reduce protective HDL levels as well. Trans fatty acids “are fats that do not occur naturally in other words, they are created” by hydrogenation. “Hydrogenated fats act like saturated fats.” Look for them on labels; effective Jan. 1, 2006, the FDA will be putting trans-fats content on nutrition labels.

Consider substituting healthier alternatives for the following: Mayonnaise, sour cream (use fat-free), milk (try “soy-milk”), cream, cheese (“many varieties of low-fat soy cheese”), egg yolks, meat (switch to extra lean cuts), butter, and cooking oils (“Almond, canola, olive, and peanut are considered best”).

Glossary of label terms related to calories, fats, and cholesterol: Example—“Fat free” means less than ½ gram of fat per serving. Plant sterols and stanols actually help lower LDL (bad) cholesterol.

Fiber (also called roughage or bulk) is the “part of plant foods that cannot be digested or absorbed by the body, yet it plays an important role in promoting good health and protecting against some diseases—such as heart disease. Men consuming 29 grams of protein a day have been shown to have a 40% reduction in heart attacks compared to men with the lowest fiber intake. The National Academy of Sciences recommends the following daily fiber consumption: Women ages 19-50 = 25 gm. Women over age 50 = 21 gm. Men ages 19-50 = 38 gm. Men over age 50 = 30 gm. More than 90% of Americans don’t meet these recommendations; they average only about 15 gm of fiber a day (p. 12).

Physical exercise “is very likely to lower your risk of heart disease and enhance your overall sense of health and well being.” Almonds can help lower blood cholesterol. In July 2003 almonds received a qualified health claim from FDA (p. 16).

“Soy-anara cholesterol: Research has shown that consuming soy protein, rather than animal protein (meat, poultry, milk, cheese, eggs) can decrease your overall LDL (bad) cholesterol.” In 1999 the FDA ruled in favor of “heart healthy” labeling for certain soy products. “The most familiar forms of soy protein are those found in Asian cuisine; tofu, tempeh, and miso. To make soy proteins more familiar to Americans, products have been developed that closely resemble meat, poultry, and fish, in taste and texture. One of the great things about soy is that it can be flavored and shaped in an infinite number of ways.” On the facing page is a full-page color ad for Boca Burgers and other “Boca meatless products.”

3322. **Product Name:** Tofurky: A Delicious Vegetarian Holiday Feast.

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 2003. November.

**Ingredients:** Roast: Water, vital wheat gluten, tofu (water, non genetically engineered soybeans grown without chemical fertilizers, pesticides, or herbicides, magnesium chloride and/or nigari), white beans, garbanzo beans, non-GE corn starch natural vegetarian flavor, expeller pressed non-GE canola oil, shoyu soy sauce, spices, lemon juice, calcium lactate from beets. Stuffing: Water, organic brown rice, bread cubes...

**Wt/Vol., Packaging, Price:** 3 lb 8 oz (serves 4).

**How Stored:** Frozen. But can be kept refrigerated for 30 days.

**New Product–Documentation:** Product (in box) sent by Seth Tibbott. 2003. Nov. 27. This is a very attractive and well-designed box / label. 8.5 by 6.5 by 4 inches deep. The top is covered with a color photo of Tofurky, sliced in half, served on a white plate with salad. A gold and black seal, ensuring that the box has not been opened, states: "100% vegan. vegansociety.com." Below the product name: "New & improved." Below the product name: "Feast includes a tender, juicy stuffed tofu roast, 8 delicious cranberry-apple dumplings, rich Tofurky "giblet" gravy, and our signature Tofurky Jurky Wishstixs. Net weight 3 lbs. 8 oz. (1.59 kg). Keep frozen. diameter. On the front of the box: "America's #1 turkey alternative since 1995." On the right end panel is a brief company history and a section titled "Travels with Tofurky" showing 3 color photos of Tofurky in Minnesota, India, and above Niagara Falls, Canada. On the back panel are Nutrition Facts and a large panel giving ingredients. On the left end panel are "Preparation Instructions"—quite complex.

Talk with Seth Tibbott. 2003. Dec. 3. The Tofurky is designed to be put into the oven next to a regular turkey on Thanksgiving or Christmas. The Drumettes were not included in this years Tofurky Feast for 3 reasons: (1) They contained isolated soy protein which is made using hexane (a volatile petroleum derivative); Turtle Island has a goal of using only natural ingredients. "The hypocrameter was getting a little too high," says Seth. (2) They took a lot of time to make at a time when Turtle Island is very busy. (3) The dumplings are delicious and could be made by another company. However Seth is getting feedback on the company Website that quite a few people like the tempeh from which the Drumettes were made, so he is looking for a more natural way to make them.

3323. Azeke, Marshall Arebojie. 2003. Characterization and improvement of the nutritional value of African yambean

(*Sphenostylis stenocarpa*) by non-traditional processing methods. Aachen: Shaker Verlag GmbH. xiii + 160 p. Illust. 21 cm. [Ger]\*  
Address: Germany.

3324. Emmons, Didi. 2003. Entertaining for a veggie planet: 250 down-to-earth recipes. Boston, Massachusetts: Houghton Mifflin. viii + 470 p. Illust. Index. 23 cm.

• **Summary:** A friendly vegetarian cookbook. The index contains 35 entries for tofu, 19 for tempeh, 5 for edamame, 4 for seitan, 3 for miso

Recipes also call for: Adzuki beans, sesame seeds, and tahini.

The section titled "A friendly guide to unfamiliar ingredients" is a glossary with entries including: Adzuki beans. Asian fish sauce (not vegetarian; usually made of an extract of fermented anchovies. Can be replaced by Lee Kum Kee's Vegetarian Stir-Fry Sauce). Barley miso (See Miso). Black beans, Chinese fermented (See Chinese fermented black beans). Black sesame seeds. Brown miso (See Miso). Chinese fermented black beans ("They are often very salty; do not rinse them, just salt your dish less... They keep indefinitely in the fridge"). Edamame ("Young, blanched soybeans." They are commonly eaten in the pods as a snack; the pod is inedible. Also sold podless for cooking). Hatcho miso (See Miso). Miso: The five types are: Barley miso (*mugi miso*), Brown miso (*genmai miso*), Hatcho miso (made from soybeans only), Red miso (*aka miso*), White miso (*shiro miso*). Sesame seeds. Sesame tahini. Tempeh (see also p. 231, "Tempeh: the next great frontier"). Tofu (see also p. 217, "Tofu: the other white meat"). TVP (texturized vegetable protein). Vegetarian oyster sauce (Amoy brand). Vegetarian stir-fry sauce (not as sweet as vegetarian oyster sauce. Look for the Lee Kum Kee brand). Address: Author of the book Vegetarian Planet and the chef of Veggie Planet, a restaurant in Cambridge, Massachusetts.

3325. Farnworth, Edward R. 2003. Handbook of fermented functional foods. Boca Raton, Florida: CRC Press. 390 p. See p. 227, 295. Index.

• **Summary:** An overview, with two chapters on fermented soyfoods (natto and miso) cited separately. Chapter 1, titled "History of fermented foods" (p. 1-25) includes brief and vague histories of "Soy foods" including (p. 18-19) soy sauce, miso, tempeh, natto, and sufu [fermented tofu].

Chapter 4, titled "Kefir: A fermented milk product" (p. 77+) states (p. 85-86) that kefir can be made by growing kefir grains in soybean milk (Abraham and de Antini 1999, p. 327-33).

Chapter 9 is "Natto—A food made by fermented cooked soybeans with *Bacillus subtilis* (natto)," (p. 227-245).

Chapter 11 is "Miso: Production, properties, and benefits to health" (p. 277-87). Chapter 12 is "Korean fermented foods: Kimchi and doenjang" (p. 287-305). Soyfoods

mentioned on page 289 include ganjang (soy sauce), doenjang (fermented soybean paste), chongkukjang (quick fermented soybean paste), and gochujang (hot chili pepper soybean paste); each of these is a major condiment in Korean cuisine. Address: PhD, Senior Research Scientist, Food Research and Development Centre, Agriculture and Agri-Food Canada, St. Hyacinthe, Quebec, Canada.

3326. Gusman, Jill. 2003. *Vegetables from the sea: Everyday cooking with sea greens*. New York, NY: William Morrow. ix + 131 p. Illust. (color). Index. 24 x 22 cm.

• **Summary:** Learn to identify, buy and prepare sea vegetables. Contents: Introduction: How to use this book, for time-conscious cooks, deep-sea treasures, the history of sea vegetables in world cuisines, how seaweed is cultivated and harvested, sea vegetables in your kitchen. Meet the sea vegetables: Agar, alaria, arame, bullwhip kelp, dulse, fucus tips, grapestone, hijiki, Irish moss, kombu, laver, nori, sea lettuce, sea palm, wakame. Appetizers and meal starters. Soups and stews. Salads, Entrees. Side dishes. Rolls, wraps and sandwiches. Condiments. Sweets and treats. Beauty secrets from the sea. Mail-order sources.

Soy-related recipes include: Soy sauce and tamari (p. 21). Classic miso soup (with wakame and silken tofu, p. 40). Sweet-and-sour tofu stir-fry (with arame, p. 70-71). Age tofu [aburage] in sea palm (p. 77). Hijiki with deep-fried tempeh (p. 82). Contain a large color photos of each of the sea vegetables and each of the recipes. Address: Teacher, Chef's Training Program, Natural Gourmet Cooking School, New York City.

3327. Brown, Allan; Brown, Susan. 2004. *Tempeh tofu and other new developments* (Interview). *SoyaScan Notes*. March 20. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** They recently had a visitor who makes "tempeh tofu" commercially in Australia. Tempeh is probably pasteurized then crumbled and added to the tofu curds before they are pressed into tofu. When you slice the tofu, there is a marbled effect with tempeh in the middle. The visitor is sending Allan the labels. "What a great, original idea!" It is widely distributed and Australians love it because it has more flavor than tofu and it is not as heavy as tempeh."

In Vancouver, BC, a company named Gaia Enterprises Inc. makes natto and sells the spores. Noble Bean has been thinking about making natto, but Shurtleff warns against letting natto spores (a strong contaminant) get near tempeh.

Two years ago, Soy City Foods joined with another company, Second Nature, to become Sol Cuisine. They still make lots of good tofu but they have stopped making tempeh; they made only okara tempeh (to add value to the okara left over from making tofu) and only for the institutional market (mostly university cafeterias). The nutritional profile and consistency were both poor. Sol Cuisine is using certified organic soy isolates to make meat

alternatives (incl. ground round, hot dogs, etc.), thereby challenging Yves, which uses regular isolates—perhaps made using hexane. The sales manager at Sol Cuisine is a close friend of Allan and Susan's from The Farm. Sol Cuisine wanted Noble Bean to private label tempeh for them. Allan now wants to talk with them about making "tempeh tofu."

The Farm in Summertown, Tennessee, is now a good, reliable source of tempeh spores. Noble Bean gets all its tempeh spores from the Farm.

Sooke Soyfoods has become Green Cuisine in British Columbia; established in 1989, they have a vegan restaurant and also make a line of soyfood products. Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3328. **Product Name:** [Soy Spread (Garlic), Tempeh, Tofu Mayonnaise].

**Foreign Name:** Tofu Namaz (Cesnjak), Tempeh, Tofu Majoneza.

**Manufacturer's Name:** Annapurna.

**Manufacturer's Address:** Nehajska 42, 10000 Zagreb, Croatia. Phone: 01 3385 533.

**Date of Introduction:** 2004. May.

**Ingredients:** Garlic spread: Tofu, water, oil, vinegar, salt, garlic, herbs. Tempeh: Soybeans, water, tempeh starter. Mayo: Tofu, water, oil, vinegar, salt, spices.

**Wt/Vol., Packaging, Price:** Spread: 150 gm vacuum packed. Sells for 8 kn. Tempeh: 300 gm vacuum packed. Sells for 52kn/kg. Mayo: 200 gm vacuum packed. Sells for 8 kn.

**How Stored:** Refrigerated.

**New Product—Documentation:** Labels sent by Vlatka Kuzmic. 2005. June 6. She wrote the introduction date and English translation of the product name on the back of each 2½ by 3¼ inch label. Self adhesive. Blue, green, and orange. Color photo of yellow soybeans against a blue background. Product name in white letters on light green background. The dates of introduction in 2004 are: Soy Spread (Garlic)—April. Tempeh—May. Tofu Mayonnaise—June.

3329. **Product Name:** [Grilled Tofu, Soy Burger, Marinated Tofu, Tofu Spread (Mediterranean, or Red Pepper / Paprika), Tofu with Vegetables].

**Foreign Name:** Tofu Grill, Burger Soja, Tofu Marinirani, Tofu Namaz (Mediterrano, or Paprika), Tofu s Povrcem.

**Manufacturer's Name:** Annapurna.

**Manufacturer's Address:** Nehajska 42, 10000 Zagreb, Croatia. Phone: 01 3385 533.

**Date of Introduction:** 2004. May.

**Ingredients:** Grilled: Tofu, soy sauce, salt, oil. Burger: Soybeans, carrots, onion, oak flakes, breadcrumbs, salt, spices, herbs, oil.

**Wt/Vol., Packaging, Price:** Grilled: 250 gm vacuum packed. Sells for 56kn/kg. Burger: 148 gm vacuum packed.

Sells for 54kn/kg.

**How Stored:** Refrigerated.

**New Product–Documentation:** Labels sent by Vlatka Kuzmic. 2005. June 6. She wrote the introduction date and English translation of the product name on the back of each 2½ by 3¼ inch label. Self adhesive. Blue, green, and orange. Color photo of yellow soybeans against a blue background. Product name in white letters on light green background. The dates of introduction in 2005 are: Grilled Tofu–Feb. Soy Burger–March. Marinated Tofu, Tofu Spread (Mediterranean, or Red Pepper / Paprika), and Tofu with Vegetables–April. The soy burger contains okara.

3330. Schweitzer, Peter. 2004. Re: Soybeans and soyfoods in Nicaragua, at the Huichol Center in Mexico, and in Iraq. Letter sent to *Plenty Bulletin* subscribers, June 21. 2 p. Typed, with signature on letterhead.

• **Summary:** “We’re not doing a full Bulletin this time, just an update about what’s happening with Plenty.” After 30 years, “I have come to recognize that what we do together might be described, very simply, as ordinary magic. Where people are connected by their love for each other, miracles are commonplace.”

“As you know from the most recent Bulletins, we are working on a new project involving four different organizations—two in Guatemala, one in Managua, Nicaragua and the Huichol Center in Mexico, which have requested Plenty’s assistance for their soyfoods and nutrition education efforts. We call it CAFSI (Centra American Food Security Initiative). Through CAFSI we will be purchasing soy processing equipment, and we will help the groups install it, and do trainings in the use and maintenance of the equipment and different ways of preparing soyfoods and making soyfood products for sale. Two of the organizations will be growing soybeans, so seed variety trials have to happen and growing and harvesting techniques learned.”

“Thanks to another grant from the Better World Fund, we were able to help the Mayan Soy Dairy operated by ADIBE in San Bartolo near Solola, Guatemala open a shop in a near-by town where they can sell their products. Remember, the ADIBE Soy Dairy is the original Mayan Soy Dairy built by Plenty and the Cakchiquel Maya of San Bartolo in 1979. That Mayan Soy Dairy is 25 years old this year, and they’re still making soymilk, tofu, soy ice cream and tempeh using mostly the same equipment we took down in ‘79. Using your individual donations to Plenty, we were able to provide the funding to upgrade the dairy floor and roof. Now we’re raising money to upgrade the equipment.”

“The purpose of the Iraq Soy Food Group (ISFG) is to assist economically disenfranchised families improve their access to good planting seed and high nutrient, low cost foods. Plenty is acting as the fiscal sponsor for ISFG. Long-time Plenty soy technician, Charles Haren, is overseeing the project, and Lou Morgan, a Plenty donor for 25 years,

has been providing start-up funding. ISFG is working to help families and communities in Iraq improve nutrition intake and financial income by increasing local production, processing, marketing and consumption of soybeans, other dry legumes. Beginning in March ISFG representatives Martin Edwards and Salam Onibi started working with a few farming families and agriculture scientists to re-establish soybean production capabilities (most planting seed has been lost due to the war). The Iraq Soy Foods Group is now seeking funding to establish a Soy Foods Center that will help address immediate and long-term food needs for impoverished populations in Iraq.” Address: Executive Director, Plenty, P.O. Box 394, Summertown, Tennessee 38483. Phone: (931) 964-4864.

3331. **Product Name:** Tempeh.

**Manufacturer’s Name:** Rhapsody Natural Foods.

**Manufacturer’s Address:** 28 Main St., Montpelier, VT 05602. Phone: (802) 229-6112.

**Date of Introduction:** 2004. June.

**Ingredients:** Certified organic soybeans, filtered water, *Rhizopus oligosporus* culture.

**Wt/Vol., Packaging, Price:** 8 oz (227 gm) laminated, printed plastic bag.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Talk with Sjon Welters. 2008. March 31. Sjon began making tempeh in his restaurant, Rhapsody, in June 2004, after Todd Pinkham stopped making tempeh in Vermont. Initially he made it only for use in his restaurant, but shortly thereafter he started selling and delivering it to natural food stores in the area—such as Hunger Mountain Co-op in Montpelier, Buffalo Mountain Co-op in Hardwick, City Market in Burlington, and Healthy Living in Burlington. He has always used only organic soybeans and recently they have been grown in Vermont. He has always made this tempeh in his restaurant kitchen; Initially it was made one day a week, but now it is being made two days a week, using 300 lb/week of whole dry soybeans. He now also has a distributor, Black River

Produce. He and his family own 14 acres of land, and he plans to build a tempeh shop on the land, build rooms for two workers above the shop, and then to make tempeh in that shop.

Sjon has just sent a new label (6 by 8 inches) printed in color featuring Rhapsody Tempeh in white and black on red, with faint green edamame in the background. He started using this label / package in Dec. 2007.

New label sent by Sjon Welters. 2008. March. Pea green on white with edamame faintly in the background of the front panel.

Letter (e-mail) from Sjon Welters. 2009. March 6. Our tempeh business is contributing tremendously to the health of our business and sees us through otherwise uncertain times. As of yesterday we are in 12 Whole Foods stores with our tempeh bringing an additional buffer of money.

**3332. Product Name:** Tofurky Deli Slices [Italian Deli, Cranberry & Stuffing, or "Philly Style" Steak].

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 2004. June.

**Ingredients:** Philly Style Steak: Water, wheat protein, tofu (water, organic soybeans, magnesium chloride, calcium chloride), natural vegetarian flavors, non genetically engineered canola oil, non genetically engineered corn starch, white beans, garbanzo beans, spices, lemon juice from concentrate, calcium lactate from beets, autolysed yeast.

**Wt/Vol., Packaging, Price:** 5.5 oz (156 gm) vacuum pack.

**How Stored:** Refrigerated.

**New Product–Documentation:** Glossy color sell sheet for Tofurky Deli Slices sent by Seth Tibbott. 2008. Jan. 1. "New look!" Photos show the front and back panels for six flavors. "Oven Roasted" was introduced in 1998 as "Original." Hickory Smoked was also introduced in 1998.

Letter (e-mail) from Seth Tibbott. 2009. Jan. 25. These three products were first sold commercially in June 2004.

**3333. Liu, KeShun.** 2004. Edible soybean products in the current market. In: KeShun Liu, ed. 2004. Soybeans as Functional Foods and Ingredients. Champaign, Illinois: AOCS Press. xii + 331 p. See p. 23-51. [76 ref]

• **Summary:** Contents: Introduction. Soybean oil. Traditional soyfoods: Nonfermented soyfoods (soymilk, tofu, variety and current market, nutritional value and health benefits, general processing, soymilk film {yuba}, okara, soybean sprouts, vegetable soybeans, roasted {soynuts} or cooked whole soybeans), fermented soyfoods (fermented soy paste {jiang and miso}, soy sauce, Japanese natto, tempeh, sufu or Chinese cheese, soy nuggets {douchi or Hamanatto}). Soy protein products: Soy flour, soy protein concentrated,

soy protein isolate, textured soy proteins. Modern soyfoods. Soy-enriched products. Functional soy ingredients / dietary supplements: Soy lecithin, oligosaccharides, isoflavones, tocopherols, phytosterols, trypsin inhibitors.

Figures: (1) Photo of traditional soyfoods. (2) Photo of soy flour and defatted meal after crushing. (3) Bar chart of U.S. soyfood sales since 1992. (4) General flow chart of processing soybeans into various edible products. (5) Flow chart of a traditional Chinese method for making soymilk and tofu. (6) Bar chart of U.S. tofu sales since 1980.

(7) Photo of natto, a fermented Japanese soyfood. (8) Flow chart of natto production outline. (9) Photo of soy protein products. (10) Photo of meat analog made by high-moisture extrusion of soybean protein. (11) Photo of new generation of soyfoods in the market. (12) Photo of soy-enriched bakery products. (13) Photo of concentrated soy isoflavone product.

Tables: (1) Classification of various edible soy products in the current market. Address: Univ. of Missouri, Columbia, Missouri.

**3334. Nout, M.J.R.; Kiers, J.L.** 2004. Tempeh as a functional food. In: KeShun Liu, ed. 2004. Soybeans as Functional Foods and Ingredients. Champaign, Illinois: AOCS Press. xii + 331 p. See p. 239-247. [38 ref]

• **Summary:** Contents: Introduction. Production of tempeh. Functional properties: History of use, predigestion of nutrients, antimicrobial effects, protection against diarrhea, intestinal growth and proliferation, antioxidative properties of fermented soybeans, chronic degenerative diseases. Novel applications.

Figures: (1) Photo of cross section of tempeh showing the fungal mycelium penetrating the mass of soybeans. (2) Simplified process diagram of tempeh manufacture. (3) Bar chart of *in vitro* inhibition of adhesion of enterotoxigenic *Escherichia coli* to intestinal brush border membranes.

Tables: (1) Nutrient comparison of tempeh and chicken egg and vitamin synthesis in tempeh during its fermentation. (2) Changes in *in vitro* absorbability and digestibility as a result of tempeh fermentation. Address: 1. Lab. of Food Microbiology, Wageningen University, 6700, EV Wageningen, The Netherlands.

**3335. GEM Cultures.** 2004. Catalog [Mail order]. 30301 Sherwood Rd., Fort Bragg, CA 95437-4127. 10 p. Undated. [4 ref]

• **Summary:** Contents: Greetings from Northern California. Soycrafters section: Powdered tempeh starter, natto starter, koji starters, fresh koji, seed miso, tofu boxes [kit], coagulants. Bread and crepe cultures: Cultured crepes, cool rise natural leaven, rice or rye sourdough. Dairy cultures: Fil mjolk (subs for piima), viili, kefir. Tea fungus–kombucha. Kitchen items: cheesecloth, super sealers. Ordering information. Address: Fort Bragg, California. Phone: 707-

964-2922.

3336. Iowa Soybean Promotion Board. 2004. Simply soy: Recipes celebrating nature's perfect bean. Urbandale, Iowa: Iowa Soybean Promotion Board. 151 p. Illust. Index. 23 cm.  
**• Summary:** A gorgeous book, filled with elegant, mouth-watering full-page color photos of prepared recipes. Contents: Introduction, by Linda Funk, Executive Director, The Soyfoods Council. 1. The magical bean: Soy to the world, soy and health, the soyfoods pantry (glossary incl. soybean oil, soymilk, tofu, tempeh, edamame, soynuts, soy flour, textured soy protein, canned soybeans, miso, soy protein powder {soy protein isolates}, dried soy flakes {MicroSoy}, soy yogurt and smoothies, soy pasta {ADM}). Soyfood nutrient chart. 2. Start it up with soy: Appetizers and nibbles. 3. On the sidelines: Sides and salads. 4. Spoon fed: Comforting soups and stews. 5. Vegetarian anyone? 6. Teamwork: Pork, beef, chicken, seafood and soy. 7. The bread box: Breads and muffins. 8. Desserts: Soy and spice and everything nice. 9. Cooking with kids. Resources (Directory of members of The Soyfoods Council and their soy products; Directory of state and national soybean boards).

A smoothie (p. 133) is made at home by combining 1 cup soymilk (plain or vanilla), ½ medium banana (may be frozen, if desired), and optional nondairy ingredients, such as chocolate syrup, peanut butter, fruit juice concentrate, or frozen fruits (alone or in combinations—pineapple, orange, cranberry, raspberry, etc.). "Many of the soy smoothies and soy yogurts on the market today are probiotic, meaning they contain active, live cultures that are beneficial to intestinal health." Address: 4554 N.W. 114th Street, Urbandale, Iowa 50322-5410. Phone: 866-431-9814.

3337. **Product Name:** [Yakso Rice Tempeh].  
**Foreign Name:** Yakso Rijst Tempeh.  
**Manufacturer's Name:** FZ Organic Food Faan Zuidhorn b.v.  
**Manufacturer's Address:** Wolvega, Holland. Phone: E-mail info@fzorganicfood.com.  
**Date of Introduction:** 2004.  
**Ingredients:** Soybeans\*, water, rice\*, rhizopus culture. \* = Organically grown  
**Wt/Vol., Packaging, Price:** 300 gm.  
**How Stored:** Refrigerated.  
**New Product–Documentation:** Label sent by Sjon Welters. 2004. March.

3338. **Product Name:** [Tempeh].  
**Foreign Name:** Tempeh.  
**Manufacturer's Name:** Natural Vegetarian Food b.v.  
**Manufacturer's Address:** Netherlands. Phone: E-mail info@fzorganicfood.com.  
**Date of Introduction:** 2004.

**Ingredients:** Soybeans, water, culture.

**Wt/Vol., Packaging, Price:** 425 gm.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label sent by Sjon Welters. 2004. March. Green, yellow and black on white. Only the large "V" in "vegetarian" is green. Phone: +31 (0)321-380606.

3339. Atlas, Nava. 2004. The vegetarian family cookbook. New York, NY: Broadway Books. 339 p. Illust. Index. 23 x 21 cm. [15 ref]

**• Summary:** Contains 275 vegetarian recipes, many of which are vegan; a vegan option is provided for almost all of the recipes that are vegetarian.

The index contains 47 entries for tofu (incl. silken, soft, firm, extra firm), 13 for seitan, 4 each for tempeh, soy mayonnaise, and soy milk, 3 for soy yogurt, 2 each for edamame and miso, 2 each for soy nut butter, soy allergy, soy products, and 1 each for soy Canadian bacon, soy cheese, soy cream cheese, soy hot dogs, and soy pasta.

About the author: Nava Atlas is the author of eight previous vegetarian cookbooks. Her website, www.vegankitchen.com, is one of the most widely visited culinary websites on the Internet. She lives in the Hudson Valley with her husband of 25 years (Chaim "Rocky" Tabak) and their two sons, Adam and Evan. A photo (p. 339) shows Nava Atlas. Address: Author and illustrator, New Paltz, New York.

3340. Ceré, Sybille. 2004. Verarbeitung von Rapsschrot zu Tempeh [Processing of rapeseed into tempeh]. PhD thesis, Hochschule Wallis (HEVs), Sitten. [Ger]\*  
 Address: Germany.

3341. Elliot, Rose. 2004. New vegetarian cooking: 120 fast, fresh, and fabulous recipes. New York, London, Toronto, Sydney: Simon & Schuster. 192 p. Illust. (color). 28 cm. Index.

**• Summary:** Contains many full-page color photos, mostly of dishes prepared from recipes. Chapter 1: Why I'm a vegetarian: Being a healthy vegetarian or vegan, get slim and stay slim, eating for two, nurturing the next generation, look younger, live longer. Chapter 6 is titled "Tofu, tempeh, and seitan" (p. 138-61). Other soy-related recipes and info include: Soy milk (p. 13, 20, 21, 23, 188). Green soybeans [frozen edamame] (with soba, p. 60, 61). Tofu mayonnaise (p. 66). Breakfast smoothie (p. 118, with soy milk, rice milk, or almond milk). Soy yogurt (p. 119, 188). Soy sauce (p. 153, 188). Soy creamer (p. 169, 188). Also discusses: Sea vegetables (arame, hijiki). Quinoa.

3342. Grimaldi, Polly. 2004. Quick and easy soy and tofu recipes. Hayward, California: Bristol Publishing Enterprises. (A Nitty Gritty book). iv + 155 p. Illust. Index. 14 x 21 cm.  
**• Summary:** Contents: 1. An introduction to tofu and soy. 2.

Breakfast. 3. Entrees. 4. Side dishes. 5. Salads. 6. Soups. 7. Sauces, spreads, dips and snacks. 8. Breads. 9. Drinks. 10. Desserts. Address: Hayward, California.

3343. Hottinger, Greg. 2004. The best natural foods on the market today: A yuppie's guide to hippie food. Vol. I. Asheville, North Carolina: Huckleberry Mountain Press. 223 p. Index. 23 cm. [94 ref]

• **Summary:** This book looks very commercial because it mentions many natural products by brand name. We wonder if companies paid to be mentioned. Contains scattered recipes for branded products, and scattered sidebars titled "Hippie wisdom." Discusses: Almonds, almond butter, almond milk, American Miso Co., antibiotics (used in agriculture in 4 different ways; prevention, treatment, and control of disease, and growth promotion. In 1998 the European Union banned the use of antibiotics to promote growth in livestock. In Oct. 2000 the FDA proposed a ban on two antibiotics also used to treat humans), antioxidants, Bifidobacterium (bifidus), bovine growth hormone, bovine somatotropin (BST), Bragg Live Foods, Bragg Liquid Aminos, breast cancer, calcium, canola oil, celiac disease, cereal & Kellogg Brothers, cheese alternatives, dulse, edamame, Eden Foods (says "Eden Foods opened shop in 1968. By 1969 they were grinding their own flours and bottling their own oils and nut butters"), FDA, flaxseed oil, Galaxy Foods (says they "started in 1972 when founder Angelo Morini invented a new way to make a cheese product free of saturated fat, cholesterol, and the milk sugar, lactose"), genetically engineered foods, ghee, ginger, gluten sensitivity, glycemic index, GMO [genetically engineered] crops, Graham-Sylvester, heart disease, hippie foods, Horizon Organic, hormones, Lactobacillus, lactose intolerance, Lappe-Francis Moore, Lightlife Foods, magnesium, Maine Coast Sea Vegetables, Messina-Mark, milk-problems with, miso, Miso Master brand, nutritional yeast, oils, olive oil, omega-3 and omega-6 fatty acids, organic farming, palm oil, phytochemicals, phytoestrogens, prostate cancer, protein, Red Star nutritional yeast, quinoa, saturated fat, sodium, soymilk, soy products, soy sauce, soy supplements and concerns, soy yogurts, spelt, Stonyfield Farm, tahini, tamari, tempeh, trans fats (hydrogenated oils), WholeSoy Company. Near the back are many color coupons for the companies mentioned in the book by name. Address: MPH, RD, Asheville, North Carolina.

3344. Kozaki, Michio. 2004. Tempe production in Japan. In: Keith H. Steinkraus, ed. 2004. Industrialization of Indigenous Fermented Foods. 2nd ed. Revised and Expanded. New York, NY & Basel, Switzerland: Marcel Dekker. xix + 796 p. See p. 637-45. Chap. 12. [12 ref]

• **Summary:** Contents: Circumstances and background of tempe. Starters for tempe production. Tempe *Rhizopus* is derived from hibiscus. Production of tempe. Nutrition and

secondary processing of tempe. Future of tempe in Japan.

Before 1998, the origin of the *Rhizopus* mold used to make tempe in Indonesia was unknown. Research on the subject by K. Tsubaki, S. Tokumasu, and H. Konno, based on investigation of the percentage of mold genera isolated from fresh *usar* and wild hibiscus leaves in Indonesia and Japan, showed that *Rhizopus* was by far the predominant genus. Their results, shown in tables 1 and 2, were published in 1998 in the *Journal of the Japanese Tempeh Society* (vol. 3, no. 1).

Commercial tempeh production in Japan began in the 1980s. However it has gradually decreased until today it has stopped. However total annual production of about 30 tons is now continued in agricultural communities in Okayama and Saga. Address: Tokyo Univ. of Agriculture, Tokyo, Japan.

3345. Kuswanto, Kapti Rahayu. 2004. Industrialization of tempe fermentation. In: Keith H. Steinkraus, ed. 2004. Industrialization of Indigenous Fermented Foods. 2nd ed. Revised and Expanded. New York, NY & Basel, Switzerland: Marcel Dekker. xix + 796 p. See p. 587-635. Chap. 11. [88 ref]

• **Summary:** Contents: Introduction. Production and consumption. History of tempe. Outline of essential steps in fermentation: Cleaning the beans, soaking and hydration, boiling, dehulling and washing, steaming or boiling, inoculation, packaging, incubation or fermentation. Indigenous processes: Raw materials used in ancient times and today. Modern industrial and commercial processing methods. Changes from indigenous to modern processing methods: Treatment of raw material, starter culture, packaging and incubation, sanitation and waste management. Major problems in industrialization. Microbiology and biochemistry of fermentation. Optimum fermentation conditions. Biochemical changes during fermentation. Starter culture. Effect of processing on nutritive value. Forecast for future fermentation.

Contains 30 figures and 8 tables. Photos (unless otherwise stated) show: (1) Screening of soybeans to remove foreign matter (at Tempe Murni in Yogyakarta). (2) Whole soybeans, hulls, and dried dehulled beans. (3) Velvet beans and their tempe product (*tempe benguk*). (4) Winged beans and their tempe product (*tempe kecipir*). (5) *Phaseolus lunatus* and their tempe product (*tempe koro*). (6) Soy curd (tofu) solid waste and its tempe product (*tempe gembus*). (7) Tempe bongkreng from Purwokerto. (8) Hand dehuller machine. (9) *Usar* starter culture for tempe. (10) Tempe wrapped in banana leaves. (11) Flow sheet: traditional small scale Indonesian tempeh production method. (12) Flowsheet: modern large scale tempeh production process (Marusan Ai Company, Japan). (13) Flowsheet: small scale tempe production (The Farm, Summertown, Tennessee). (14) Flowsheet: large scale tempe production (The Farm, Summertown, Tennessee). (15) Soaking whole soybeans

before boiling in the traditional way. (16) Soaking soybean cotyledons after dry dehulling. (17) The first boiling of cotyledons, after the first soaking. (18) The second boiling of cotyledons, after the second soaking. (19) Transferring the boiled cotyledons [in sacks using a pulley]. (20) Draining and cooling tray. (21) Package of Raprima inoculum from Bandung, Indonesia. (22) Inoculation of boiled beans with “ragi tempe.” Note electric fan. (23) Inoculation with spore solution. (24) Wrapping the cotyledons in banana leaves at village level. (25) Packing in perforated plastic bags. (26) Packing in plastic trays covered with perforated plastic. (27) Incubating in bamboo baskets. (28) Incubating tempe on bamboo racks. A package of Tempe Murni in a perforated plastic bag. (29) Tempe wrapped in plastic bags. (30) Flowsheet: tempeh processing at Tempe Murni, Yogyakarta, Oct. 2002.

Note: The source of much of the information on the history of tempeh is incorrectly cited. Address: Gadjah Mada Univ., Yogyakarta, Indonesia.

3346. Petrovna, Tanya. 2004. *The Native Foods Restaurant cookbook*. Boston, Massachusetts: Shambhala Publications, Inc. xxiv + 328 p. Foreword by Deborah Madison. Illust. by Stephen Brogdon. Index. 23 x 19 cm.

• **Summary:** The author is co-owner of this chain of four restaurant in southern California. All the recipes are vegan. The index contains 22 entries for soy, 18 for tofu, 17 for tempeh, 16 for seitan, 7 for cheese–nondairy, 6 for soybeans, 5 each for edamame and soy cream cheese, 4 each for meat alternatives and miso, 2 each for soy milk, soy protein textured, soy sour cream, and textured soy protein, 1 each for milk–soy and soy sauce.

On the color cover is a fine photo of Tanya holding out a shallow basket of vegetables. Address: Co-owner and head chef, four Native Foods Restaurants in southern California (in Los Angeles, Palm Springs, Desert Springs, and Costa Mesa).

3347. Steinkraus, Keith H. ed. 2004. *Industrialization of indigenous fermented foods*. 2nd ed. Revised and expanded. New York, NY & Basel, Switzerland: Marcel Dekker. xix + 796 p. Illust. Pseudo-Index. 24 cm. Series: Food Science and Technology No. 136. [508 soy ref]

• **Summary:** This book contains the following chapters on soyfoods: 1. Industrialization of fermented soy sauce production centering around Japanese shoyu, by Danji Fukushima. 2. Industrialization of Japanese miso fermentation, by Hideo Ebine. 4. Industrialization of Japanese natto, by Kan Kiuchi and Sugio Watanabe. 11. Industrialization of tempeh fermentation, by Kapti Rahayu Kuswanto. 12. Tempe production in Japan, by Michio Kozaki. It also contains chapters on the industrialization of the production of sake, tapai, African beers, magehu, ogi, gari, Mexican pulque, Thai fish sauce (nam pla), Thai

fermented fish and related products, and Myanmar fish paste and sauce.

The final chapter is titled “Industrialization of indigenous fermented food processes: Biotechnological aspects.”

Soy-related chapters are also cited separately.

Note: Cornell Prof. Emeritus Keith H. Steinkraus died on 13 Nov. 2007 at age 89. He was a specialist in indigenous fermented foods and food microbiology. Address: Inst. of Food Science, Cornell Univ., Geneva, New York.

3348. Cadwallader, Keith R.; Klein, Barbara P.; Sullivan, Cheryl L.; Nash, Marilyn; Khanna, Pradeep; Weingartner, Karl E. 2005. *Soy for the last minute chef*. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 63 p. Illust. No index. 24 cm. Series: Soy in the American Kitchen.

• **Summary:** Contents: Illinois Center for Soy Foods. Bringing soy foods to the American table, the international way. Why eat soy? Soy foods: Soy flour, soy protein isolate, soymilk, tofu (sidebar: What can you do with half a carton of tofu?), textured vegetable protein, edamame, black soybeans, soy nuts, tempeh, miso, soy analogs. Nutrient information. Purchasing soy foods. Recipes. One recipe per page. Contains many excellent full-page color photos (by David Riecks) of prepared dishes. Photos (p. 57) show: Marilyn Nash, Barbara Klein, Cheryl Sullivan, Megan Puzey, and David Riecks. Address: 1. PhD, Director, Illinois Center for Soy Foods, 170 National Soybean Research Center, 1101 Peabody Dr., Univ. of Illinois, Urbana, IL 61801. About us: Nutrisoy is a family owned company established in 1984. "In 1992 Nutrisoy attained the standards set down by Biological Farmers of Australia to become a certified processor of organic tofu and tempeh.

"Nutrisoy uses only the finest Australian Grown Soybean (free from genetically engineered soybean) which is a rich source of isoflavones / phytoestrogens, a substance that could offer protection against and help reduce the risk of a wide range of disease in men and women including prostate, breast and skin cancer, osteoporosis, hot flushes, and heart diseases." A large color photo shows Nutrisoy's many products.

Nutrisoy products: The colorful front panel of each of the following is shown: Plain firm tofu. Tofu vegies [sic]. Tofu tempeh (This tofu has chunky tempeh in it and has been marinated in shoyu and ginger). Tofu herbs. Tofu spicy. Tofu teriyaki. Tofu vegies burger. Tofu tempeh burger. Strawberry tofu (dessert in a cup, with real fruit sauce on top). Apricot tofu (dessert in a cup).

Note: Nutrisoy is the inventor of Tofu tempeh, and Tofu tempeh burger. Address: 15 Hannon St., Botany (suburb), Sydney, NSW 2019 Australia. Phone: +61 2 9316 5171.

3354. Wondal, Tony. 2005. Major events of Nutrisoy Pty. Ltd. (Chronology). Letter to William Shurtleff at Soyinfo Center, April 26. 1 p. On color letterhead.

• **Summary:** 1984 March–Nutrisoy Pty Ltd is incorporated. The address is 225 Forest Road, Arncliffe, NSW 2205,

Australia.

1984 Nov.–Starts making and selling tempeh.

1986 Aug.–Starts making and selling flavoured tempeh.

1989 Dec.–Starts making and selling tofu.

1990 June–Starts making and selling pre-cooked tofu.

1992–Attains the standards set down by Biological [Organic] Farmers of Australia to become a certified processor of tofu and tempeh.

1993 Sept.–Starts making and selling tofu dessert.

1994 July–Starts selling tofu and tempeh to supermarket chain stores.

1994 Nov.–Moves to a larger factory (1,000 square meters). The address is 15 Hannon St., Botany NSW 2019, Australia.

1999 Dec.–Starts making and selling tofu dip.

2002 Jan.–Starts making and selling silken tofu.

2003 March.–Starts exporting soyfoods to New Zealand.

2004 July.–Starts exporting soyfoods to New Caledonia.

2005 Feb.–Moves to a larger factory (3,000 square meters). The address is Lot 1, 19a Baker St., Banksmeadow, NSW 2019, Australia. Address: Founder and President, Nutrisoy, New South Wales, Australia. Phone: +61 2 9316 5171.

3355. Jacobi, Dana. 2005. 12 best foods cookbook: Over 200 delicious recipes featuring the 12 healthiest foods. Emmaus, Pennsylvania: Rodale Press. xv + 336 p. April. Illust. (color photos). Index. 23 cm. [2 soy ref]

• **Summary:** Among these 12 foods rich in nutrients and phytonutrients, the author considers soy the best of all. 28 of the 200 recipes include soyfoods.

In Chapter 1 is a section on Soy (p. 17-24) which includes: Introduction. Everyday ways ("Soy is the easiest Best Food to enjoy every day..."). Benefits at a glance. Soy protein in selected foods (Tofu, miso, edamame, soybeans, soynuts, tempeh, soymilk, cultured soy yogurt, soynut butter, soy flour, soy pasta, soy protein powder, soy drink mixes). Guide to soy products: Soymilk, soymilk cooking secrets, more soy dairy (soy cream cheese, soy sour cream, soy cheese, frozen dessert), terrific tofu (regular tofu, silken tofu, baked or smoked tofu), tofu cooking secrets, other soyfoods (black and yellow soybeans, edamame, meat analogs, miso, soy flour, soynuts, soynut butter, soy protein powder and soy drink mixes, soy sauce and tamari, tempeh), baking with soy, cooking with soy.

Chapter 8, titled "Eggs, beans, and soy," contains recipes (p. 196-203). for: Black soybean and butternut squash stew. Black soybeans. Braised black beans with red wine. Braised tofu with kohlrabi and pears. Broccoli, black mushrooms, and edamame with black bean sauce. Asparagus, red pepper, and curried tofu.

Other soy-related recipes: Finger lickin' edamame (p. 50-51). Black bean hummus (with tofu, p. 57). Mushroom crostini (with tempeh, p. 61). Black bean soup (with dried

black soybeans, p. 79). Mushroom consommé with sake (and tofu, p. 88). Double miso soup (p. 89). Nine a day salad (with soynuts, p. 100). Southwestern three bean salad (with canned black soybeans, p. 107). Curry dressing (with silken tofu, p. 115-16). Pepper ranch dressing (with soft silken or regular tofu, p. 116-17). Creamy herb dressing (with tofu, p. 118-19). Blue cheese dressing (with tofu, p. 118). Cracked mustard dressing (with tofu, p. 119). Citrus miso splash (p. 119). Soy and honey drizzle (with reduced-sodium soy sauce, p. 151). Whole wheat linguine with arugula and edamame (p. 164-65). Dirty rice (with tempeh, p. 194). Tempeh, lettuce, and tomato sandwich on rye (p. 207). Honey soynut butter sandwich (p. 208). Grilled pizza (with tofu, p. 210). Soycolash (with shelled edamame, p. 238-39). BBQ collard greens with edamame (p. 240). Miso mashed potatoes (p. 241). Key lime tartlets (with tofu, p. 250-51). Blueberry-lemon trifle (with lemon soy yogurt and soy cream cheese, p. 252-53). Brown rice crisp treats (with salted, roasted soynuts, p. 282). Wild blueberry trail mix (with salted soynuts, p. 283).

On the rear cover is a photo of the author and a brief bio. "After apprenticing at three-star restaurants in France, Dana Jacobi opened a catering business and marketed her own line of gourmet sauces. She has since authored five cookbooks..." Address: Food writer, New York, NY.

3356. Camps, Lisa. 2005. Re: History of work with soyfoods in Goa, India. Letter (e-mail) to William Shurtleff at Soyfoods Center, May 15. 2 p.

• **Summary:** 1984–Lisa came to Goa to nurse a friend back to health; he was a vegetarian. While in India she discovered so many alternative styles of life, so many people from all over the world with a similar consciousness related to healthy body, mind, and spirituality. All "seemed to care about the planet, nature, peace, yoga, natural healing, vegetarianism, etc. India is a whole country of vegetarians, but in Goa, a former Portuguese colony, the inhabitants are mostly Christians who eat meat." That year, Lisa became a vegetarian.

She returned to America, only to yearn to come back to India. So she spent 7-8 years coming and going, whenever finances permitted. When in the USA, she worked with food, in restaurants, hotels, night clubs, made good money, then left again. She took many courses in the health and nutrition at community colleges. She had seen many unhealthy vegetarians and wanted to learn how to be a healthy, vigorous vegetarian. Having helped to deliver 4 children by natural child birth in Goa, she was interested vegetarian diets for children and natural healing.

1982–While in Goa, Lisa met an Australian woman, Diane [Froggatt], who was making her own tofu, because it was not available, and all were tired of Dal (lentils). "I asked her to teach me, and she did... I happily made it for myself to fill the protein gap. Along with Tofu also comes Soy Milk

and Okara! A bonus! Made soysausage, soya burgers, etc., but only at home at that time."

1986-87–Lisa attended a Michio Kushi Institute in Switzerland; she learned macrobiotics and shiatsu, which she practiced for about a year, then decided that macrobiotics was "excellent for healing purposes, but not for daily life, simply because any diet so extreme and tasteless is doomed to opposite extremes." She observed that most people who regularly ate a macrobiotic diet "craved massive amounts of Chocolate, or some other form of 'naughtiness.'"

1989-90. Lisa decided to settle in Goa. It had really become her home and it was too expensive to fly back and forth. But how to make money in India? Her many Indian women friends adored lingerie. So she did all the necessary paperwork and started a business named Ooh-La-La-Lingerie Pvt. Ltd., importing undergarments from Europe and traveling all over India to sell them to major department stores. The business went well for 2-3 years until the suppliers and buyers connected–leaving her out.

At the same time, Lisa was selling soya burgers, hummus brown bread, and 4 flavors of soy milk in the Flea market [in Anjuna], where she had a food stall; she made these in her home kitchen. "Then a few people started asking me if I could make them some Tofu! So, I thought why not, since I'm doing it for myself anyway." "All our production started in a small room (in my house), which I converted into a special tofu room, with ventilation above a false ceiling, a sink, stainless steel tables, and extreme hygiene. It was about 3 meters on a side with white tiles. We used (and still use) Aqua Guard water filter systems for all production and packing. So I started by making 2-3 kg at a time, squeezing the milk through a cloth by hand, actually burning my hands on a regular basis, until I decided to build a press. Made some wooden tofu boxes, and did the grinding on a grinding stone. Ouch, too much time and labor! We were selling only to shops and Five-Star hotels.

"As time passed and orders got bigger, my friend and now partner, Richard Chabin, helped me get some machinery. Then, I wanted to learn about Tempeh, and how to make it. There was an American fellow named Joseph Papa who had a book and an interest, so I traded him my shiatsu massages for the method on how to make Tempeh. My interest in Tempeh was the vitamin B's only found in Tempeh. Important if you don't eat beef liver.

"So now I knew many soy foods, and was happily cooking for many friends daily. I enjoy cooking, and they enjoyed eating.

"Then I tried to market the tofu to the local market and restaurants, but as they were not familiar with it, they were afraid, even after I gave them many recipes" and even showed them how to prepare it Indian style–like paneer. "That's when I decided to open a small sandwich shop."

1999–The sandwich shop, named Bean Me Up, Soya Station, Salad Bar, was a "raging success from the

beginning.” It became too big for the original premises, and there were long lines at peak season. Note: The restaurant name derives from a famous catchphrase from the movie *Star Trek*, “Beam Me Up, Scotty!”

2004 Oct. 31–Lisa took on large premises with 14 rooms to rent and a small health food shop and restaurant. The commercial foods (tofu, tempeh, soymilk, etc.) are made in a separate building (a small factory) on the compound. It opened on Halloween with a costume party. The “real point is the restaurant” (which kept the same name); it is a unit of Ooh-La-La Ling. When people discover that they can get fresh safe salads, Tofu, Tempeh, Seitan, soya ice cream, Tofunaise, etc. after traveling in India, they are so Appreciative. That is a reward in itself! I truly believe that to introduce people to a more healthy diet, and to given up meat, the alternative must taste good, or why would they consider changing? Hence, our theme is ‘The Tasty Alternative.’ Lisa, now an established businesswoman, has a new source of income from her 14-room hotel!

Two months later, on 24 Dec. 2004 (Christmas eve), a mob of 150 people, escorted by two policemen (for the mob’s protection!) went to the Anjuna-Chopra beach belt and rudely demanded that certain restaurants and shops close down. Why? Because their owners were of foreign origin. No matter that Lisa, of American origin with an Indian passport, had lived in Goa for 23 years and had all the legal papers required to run her business. The agitation was probably initiated by indigenous restaurant / shop owners who resented the foreigners’ success and had the blessings of local politicians—a familiar theme worldwide. Fortunately, Lisa had some friends with the National Press, *Times of India*, so she and her fellow foreigners showed no fear, followed the procedures, and made a big noise; the actions of the mob were clearly illegal. Her restaurant was never shut down and the problem appears to have gone away.

Lisa is a member of the Vegetarian Society of India, and occasionally they call on her to give seminars for the members.

Note: Diane Frogatt died a few years ago from cancer.

Photos sent by Ratan Sharma in 2010 and taken by him in Jan. 2005 show the entrance to and the inside of this remarkable soy restaurant and salad bar. They serve only soy-based recipes. They also have a branch in Hyderabad. Note: Lisa does not own a SoyaCow. Address: Owner, Bean Me Up, 1629 Deulvaddo, Anjuna / Vagator, Goa, India 403-509. Phone: 0091-(0)832-227349.

3357. Bean Me Up, Soya Station, Salad Bar. 2005. Welcome to the Soya Station (Menu). Anjuna/Vagator, Goa, India. 10 p.

• **Summary:** Contents: Welcome. Starters: Side dishes (incl. Spiced tofu {deep fried} with peanut or chilly sauce. Tofu or tempeh {pan fried} with peanut or tahini. Baked potato with sour cream, butter, or tofu cream cheese). Just for kids: 12

years and under (incl. Tofu bolognese, served over spaghetti. Tempeh sandwich with tortilla chips). New York Pizza (incl. Indonesian special {tempeh & pineapple}. Veg. special {tofu, onion, capsicum, mushroom & olives}, Additional toppings–tofu, tempeh). Salad bar (Tofu salad–Beet root, carrots, onions, cucumber, tofu cubes & tofunaise {vegan}, Side order of tofu or tempeh, with choice of tahini, peanut, or tomato sauce).

Good morning–Breakfast (incl. Tofu {scrambled w/ onion capsicum or butter fried w/soya sauce}, Soysage {4 pieces}, Add 10 rupees for soymilk with any breakfast dish). Desserts: Vegan (non-dairy) or dairy. Vegan includes: Soya ice cream in coconut, chocolate, banana, coffee, or berry (seasonal) flavors. Tofu brownie. All desserts served with soya whipped cream. Beverages (incl. soy milk {hot or cold}–Plain unsweetened, vanilla, chocolate, cardamom). Sandwiches (incl. Soya burger, Tofu burger, Tofu (butter fried), Tofu cream cheese {made with garlic & Herbes de Provence}, Tofu scrambled, Tofulafel. Tempeh {fried} in sesame oil & soy sauce. Seitan fried in onion). Dinner menu: All dinners are served with choice of brown rice, baked potato, or spaghetti, and vegetables of the day. Three broad choices (each with one or more of three symbols by it–vegan, dairy, hot ‘n’ spicy): (1) Tofu–Khadi tofu, Tofu bolognese, Tofu lasagne, Tofu nori roll, Vegetable tofu quiche. (2) Tempeh–Tempeh potato patties, Thai style tempeh with cashew nuts, Indonesian sampler. (3) Seitan–Seitan scallopini in cream sauce (served over spaghetti). Address: 1629 Deulvaddo, Anjuna / Vagator, Goa, India 403-509. Phone: 0091-(0)832-227349.

3358. Brewster, Elizabeth. 2005. Beans to go: adding soy to the deli case. *Iowa Soybean Review* (Iowa Soybean Association, Urbandale, Iowa) 16(7):12k of 12-page insert after p. 14. Spring.

3359. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer’s Name:** Tempeh Bungkus.

**Manufacturer’s Address:** Av. Aztecas #427, Col. Ajusco, Delegación Coyoacán, C.P. 04300. Mexico D.F., Mexico. Phone: (5255) 5610 4557.

**Date of Introduction:** 2005. May.

**Ingredients:** Soybeans, culture.

**New Product–Documentation:** Call (followed by e-mail) from Luisa Velez. 2005. Sept. 7. She and Yosafat Sainz started making tempeh in May 2005. They deliver to the Indonesian and Malaysian embassies, and to the vegetarian community. “Tempeh has been successfully accepted in Mexico and we are very interested in promoting it widely in our country.” e-mail: tempeh\_bungkus@yahoo.com.mx. The story of how she got interested in tempeh is on file at Soyfoods Center.

2003 Aug.–She arrives in Jakarta, Indonesia, having

received scholarship to study dance in Indonesia. Her boyfriend (Yosafat) decides to go with her. Their first contact with Tempeh is in Yogyakarta. They greatly enjoyed tempeh recipes, especially tempeh manis [sweet tempeh].

2004 Jan.—They return to Mexico. She enters the university (UAM) to study nutrition. They miss tempeh. For a class in biochemistry she has to study a legume fermentation; she chooses tempeh. Her mother got her starter from Belgium.

May 2005—After finishing the investigation, she thought it would be a good idea to sell tempeh to the Indonesian embassy; the embassy people “went crazy” when they saw tempeh in Mexico after so many years. They were her first clients.

3360. Asociacion Soya de Nicaragua (La). 2005. [Soynica (Website printout—part)]. [www.sdnicc.ni/soynica](http://www.sdnicc.ni/soynica). Printed July 12. [Spa]

• **Summary:** Home: Inicio (Introduction). Sobre Soynica (About Soynica, incl. a list of commercial products, a history of the company, and a mission statement). Programas (Programs). Boletin (Bulletin). Contacto (Contact information). Enlaces (links).

Soynica is a small company that makes foods derived from soymilk and other sources that it sells under the Nutrem brand. It was established on 16 October 1994.

Nutrem products: 11 fresh, incl. 4 flavors of soymilk and 4 types of tofu; 11 dry, incl. Soyavena and soy flour; and 11 alternative meals—incl. tempeh.

History of Soynica: In Nov. 1979 Dr. Arturo Aldama and his wife, Dulce, representative of the organization Friends of the Earth (*Amigos de la Tierra*) in Mexico, and Luci Morren, a Belgian woman, organized a group of 8 volunteers who arrive in Nicaragua with the only mission of sharing their knowledge of home preparation of soyfoods. They brought with them only 20 kg of soybeans, because they had been told that soybeans were widely grown in Nicaragua.

But it was not so. So the engineer Alexander Fernandez helped to find about 60 quintals of soybeans with a producer in Esteli, and demonstration plots were started. And so it began. Address: Managua, Nicaragua.

3361. Cadwallader, Keith R.; Klein, Barbara P.; Khanna, Pradeep; Chen, Dejun; Nash, Marilyn; Puzey, Megan; Sullivan, Cheryl L. 2005. Around the world with soy. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 62 p. Illust. No index. 24 cm. Series: Soy in the American Kitchen.

• **Summary:** Contents: Illinois Center for Soy Foods. Bringing soy foods to the American table, the international way. Why eat soy? Soy foods: Soy flour, soy protein isolate, soymilk, tofu, textured vegetable protein, edamame, black soybeans, soy nuts, tempeh, miso, soy analogs. Nutrient information. Purchasing soy foods. Recipes. One recipe per

page. Contains many excellent full-page color photos (by David Riecks) of prepared dishes.

Photos (p. 61) show: Marilyn Nash, Dejun Chen, Megan Puzey, and David Riecks. Address: 1. PhD, Director, Illinois Center for Soy Foods, 170 National Soybean Research Center, 1101 Peabody Dr., Univ. of Illinois, Urbana, IL 61801. Phone: (217) 244-1706 or [www.soyfoodsillinois.uiuc.edu](http://www.soyfoodsillinois.uiuc.edu).

3362. Haren, Chuck. 2005. Sustainable community food production: Central American Food Security Initiative (CAFSI). *Plenty Bulletin* (Summertown, Tennessee) 21(2):1-2. Summer.

• **Summary:** On the cover (p. 1) of this issue are large photos showing people and modern sanitary equipment producing soymilk at four locations in Latin America: (1) ADIBE, Molino Belen, Solola, Guatemala. Agostin Xoquic. (2) UPAVIM, Guatemala City, Guatemala. (3) Huichol Center, Huejuquilla, Mexico. (4) Soynica, Managua, Nicaragua.

Molino Belen is a Mayan village near Solola. “Soynica has become widely known for its work with mothers and children and for promoting use of locally produced soy foods to help address nutrition and economic development issues. During March and April of this year Plenty representatives worked for five weeks helping staff managing Casa Nutrem (Soynica’s food processing facility) to purchase, install, and learn to use new cooking, packaging, and refrigeration equipment.” A photo (p. 2) shows Elena Xoquic pouring soymilk into a bottle. She and her husband, Agostin, both Cakchiquel Maya, “have been managing the Mayan ‘Soyaria’ near Solola, Guatemala since Plenty set it up in 1980.”

A cover letter from Peter Schweitzer, executive director of Plenty International, notes that Louise Hagler has been working with the Huichol people of Mexico, helping them integrate soy-based foods into their diet. The “Soyaria” near Solola, Guatemala, makes “soymilk, tofu, tempeh and soy ice cream using the very same stainless steel equipment we brought down in an old school bus in 1980! Plenty is helping them renovate the original building and upgrade the equipment. Profits from the Soyaria have been used to fund community development projects such as a new water system and an outdoor basketball court for the school.”

Note from Chuck Haren (via Lisa Wartinger, Programs Manager, Plenty International). 2005. Oct. 1. Average weekly sales for the Soyaria at Molino Belen are: Soymilk 400 half-liters. Tofu 260 lb. Tempeh 70 lb. Pinole (dry corn and soy drink mix) 50 lb. Soy ice cream cones 300. Okara 200 lb.

“Plenty has stepped up its technical support to the four CAFSI partner organizations in 2005, and that support will continue in 2006.” Address: CAFSI Program Director.

3363. Warmuth, Manfred. 2005. Efficient tempeh making. Santa Cruz, California. 6 p. Unpublished typescript. Sept. 21. [1 ref]

• **Summary:** Manfred, after more than 6 years of working to develop better ways of growing tempeh at home, has made major improvements on the method for making tempeh at home as given in *The Book of Tempeh*, by Shurtleff and Aoyagi. These are: Crack 1½ lb dry soybeans using a Champion juicer or grain mill. Put cracked beans and hulls in a hemispherical bowl. Remove the hulls outdoors by blowing / winnowing with a blow dryer (used to dry hair). Soak. Pressure cook for 20 minutes with ½ cup warm water, 2 tablespoons vinegar and 1 cup dry millet. Add 1 teaspoon of *Rhizopus oligosporus* spores and mix with an egg beater. Fill into a pan, spread evenly, compact slightly.

Prepare the incubator, which is a plastic tub, filled to a depth of several inches with water, heated with an aquarium thermometer. Float pan of inoculated soybeans on water, then cover incubator with plastic cover. Keep water temperature at 32°C = 85°F. Insulate if ambient temperature is low. Incubate for about 26 hours. Flip tempeh out of pan onto cutting board. Cut into pieces. Store in fridge for a week or in freezer for months. For details, Google: efficient tempeh making manfred, or manfred@cse.ucsc.edu.

Note: As of May 2011: Manfred is “UCSC professor of Computer Science with a wide range of hobbies: bee keeping, growing natto, tempeh, onchom, miso, mushrooms, fruit trees, spirulina, meat rabbits. I try to learn new skills and pass them on to others.” Address: Professor, E2, Dep. of Computer Science, Univ. of California, Santa Cruz, California 95064.

3364. **Product Name:** Mock Chicken Tempeh Salad, Curried Ginger Tempeh Salad.

**Manufacturer’s Name:** Mediterranean Delights.

**Manufacturer’s Address:** P.O. Box 749, 14 Warner Center, Saxtons River, VT 05104. Phone: 1-800-347-5850.

**Date of Introduction:** 2005. September.

**Wt/Vol., Packaging, Price:** 8 or 16 ounces.

**New Product–Documentation:** Spot in *Vegetarian Journal*. 2005. Sept. (Issue 3). p. 30. “Introducing two incredible ready-to-eat tempeh salads.” Visit [www.mediterraneandelights.com](http://www.mediterraneandelights.com). Note: These products are not listed on their website on 2 Sept. 2006.

3365. Shurtleff, William; Aoyagi, Akiko. 2005. *Doufu zhi shu* [The book of tofu]. Taipei, Taiwan: Persimmon Cultural Enterprise Co., Ltd. viii + 270 p. Sept. 1. Illust. by Akiko Aoyagi. No index. 26 cm. [Chi]

• **Summary:** A very attractive, complex character, Chinese-language edition of *The Book of Tofu* (2nd ed. Ten Speed Press). Address: 1. Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

3366. Santoso, Sinta; Santoso, Sugeng. 2005. *History of Primasoy* [Tempeh maker in Australia]. Victoria, Australia. 1 p. Dec. 13.

• **Summary:** Both Sinta (a woman) and Sugeng (her husband) were born and raised in Malang, East Java, Indonesia. They grew up in Indonesia, where they enjoyed “Tempe Malang” as a staple food, eaten with meals at least once or twice a week. Sugeng writes: “I could remember as a child I was taken by my father, who spoke fluent English, to accompany an American to visit the tempeh village near Malang to see the tempeh production. This must have been in the sixties. I wonder if it was you.”

Sinta graduated as a food chemist from Braunschweig University, Germany, and Sugeng as a process engineer from Cologne, Germany. They migrated to Australia in 1982, and were married there in 1983. They initially opened an Indonesian restaurant in Melbourne, where Sugeng met Michael Manser, the first tempeh maker in Melbourne as far as he knows. Michael has since retired; he never went to Indonesia but made excellent tempeh. After the restaurant, they worked for large companies in their professional fields. Sugeng worked for a big supermarket as a quality officer; he realized that he was not destined to work in the corporate world and began researching the tempeh industry in Australia. He came to the conclusion, after Michael retired, that there was no good quality tempeh on the market; he believes that vacuum packing and the addition of vinegar makes the tempeh brown, chewy, watery, and bitter. “This has damaged the image of tempeh in Australia, and therefore tempeh is not very popular here now. I would really like to do some more research to extend the shelf life of tempeh so I can distribute my product interstate within Australia without using vacuum packaging.” They spent months perfecting the method of making Tempe Malang in order to produce a high quality, sellable product.

“There are several tempeh manufacturers in Australia at the moment. The last of these, Nutrisoy, is owned by an Indonesian born operator. Then there are smaller operators

such as Tally Ho, and Simply Soy and Blue Lotus in Melbourne. There may be more smaller manufacturers in other states which I am not aware of.”

2004 July—They rent a small suburban store, close to their home at 2 Dunoon Court, Mulgrave, Victoria; they convert it into a tempeh manufacturing kitchen. The tempeh is made solely by Sinta and Sugeng.

2005 Feb.—Primasoy has its first public debut at *The Age* ‘Harvest Picnic at Hanging Rock,’ a food festival designed to promote locally made food and beverages. About 30,000 visitors circle the various food stands. Their tempeh was very well received by the public as a new and exciting product.

2005 March—Following the Harvest Picnic success, Primasoy begins promoting their product in selected organic food shops around Melbourne.

2006 Dec.—Sinta and Sugeng are still making tempeh commercially at Primasoy. “Things are very good. We are still experimenting with the MAP vacuum packaging. MAP stands for Modified Atmosphere Packaging. Depending on the product, the atmosphere in the packaging is either nitrogen, carbon dioxide, oxygen, or a mixture of these gases in various ratios. Our experiments show that a mixture of oxygen and nitrogen looks promising. Currently we found pasteurization and light vacuum might be the way to go, but we have not yet validated it. We have been busy doing cooking demos lately and have not been concentrating on shelf life extension.” They are now writing a book about tempeh. And they will have two new tempeh products early next year: (1) Tempeh with tamari, ginger and sesame oil. (2) Tempeh with roasted garlic and coriander. “Next project will be okara tempeh (*tempe gembus*) and tempeh burger. I have a leaflet with recipes and I will send it to you.”

They have lost touch with Mike Manser; last they heard he was planning to move to Tasmania. Address: 2 Dunoon Court, Mulgrave 3170, Victoria, Australia.

3367. Nakajima, Nobuyoshi; Nozaki, N.; Ishihara, K.; Ishikawa, A.; Tsuji, H. 2005. Analysis of isoflavone content in tempeh, a fermented soybean, and preparation of a new isoflavone-enriched tempeh. *J. of Bioscience and Bioengineering (Japan)* 100(6):685-87. Dec. \*

• **Summary:** By adding soybean germ (hypocotyl) that contained a large amount of isoflavone, the writers prepared a new isoflavone-enriched tempeh in the form of a granular fermented soybean-based food, which can serve as a nutritious supplement, e.g. for the elderly.

Gives levels of daidzein, genistein, and glycitein in tempeh—made from yellow soybeans, black soybeans, and defatted yellow soybean germ, plus isoflavone-enriched tempeh. Address: 1. Graduate School of Health and Welfare Science, Okayama Prefectural University, Kuboki, Soja, Japan.

3368. Richmond, Akasha. 2005. Hollywood dish: More than

150 delicious, healthy recipes from Hollywood’s Chef to the Stars. New York, NY: Avery—A member of the Penguin Group (USA) Inc. xi + 310 p. Illust. Index. 25 x 20 cm. [125 ref]

• **Summary:** One of the most original and interesting cookbooks seen in decades. This book, originally titled *Healthy Hollywood*, is much more than just a collection of superb recipes and stories about Hollywood celebrities and glitterati. In carefully researched and well-written sidebars, it documents the history of health foods in Hollywood and southern California. The introduction to each chapter tells the history of that type of food, and every recipe has a long and interesting historical headnote. The acknowledgments show vividly Chef Akasha’s high and wide circle of Hollywood friends. The introduction—“The Road to Hollywood” tells the story of how Akasha got interested in and researched this subject. History is woven into every page of this book—in the most palatable way. In short, this is a cookbook with a remarkable tale to tell—one to read and study—as well as one to cook from.

Sidebars and illustrations: (1) “The stars and the Hollywood Diet”—Sue Carol (lovely future wife of Alan Ladd) on the cover of *Motion Picture* magazine, Oct. 1929. (2) Mildred Lager (1908-1960). (3) Harry Chandler (1864-1944). (4) Granola (Layton Gentry, Adelle Davis, Dorothea Van Gundy Jones). (5) Photo of silent film star Anita King eating Sun Maid Raisin Pie, 1916. (6) Adelle Davis (1904-1974). (7) Clarke Irvine, 1892-1975. (8) Photo of Radiant Radish health food store, owned by Beach Boy Brian Wilson, Los Angeles, 1969. (9) Otto Carque, 1867-1935, with a photo of his health wagon, around 1912. (10) Gayelord Hauser (1895-1984). (11) “Nature Boy”—Bill Pester and the 1948 hit song by Eden Ahbez. (12) The Ashram—Hollywood restaurant founded by Anne-Marie Bennstrom. (13) The Hollywood diet, with a photo of page 1 of the “18-Day Diet” from *Motion Picture* magazine, Oct. 1929. The sidebar begins: “The first best-selling diet book in America, *Diet and Health, with a Key to the Calories*, was written by Los Angeles-based Dr. Lulu Hunt Peters in 1918, and sold over 2 million copies. The book introduced the concept of counting calories.” (14) Alan Hooker (1902-1993). The grandfather of California cuisine, he opened the Ranch House restaurant in 1956 in Ojai, California. (15) Gloria Swanson—Hollywood’s Green Goddess. She “was the highest paid and most popular, influential star of the 1920s.” (16) Jim Baker (1922-1975). A pioneering organic restaurateur, he opened the Aware Inn in 1957, then the Source restaurant in 1969. (17) Raw, raw, raw (Arnold Ehret, Vera and John Richter, and raw foods). (18) Photo of silent film star Mary Pickford drinking orange juice made with Sunkist fruit and juicer. (19) The godfather of fitness—Jack LaLanne. Master chef Danny Kaye (1913-1987). (20) The Farmer’s Market in Los Angeles, started in 1934. (21) Paul Bragg (1881-1976), with photo of Rita Hayworth on the cover of his *Health Builder* magazine.

(22) Books and cooks—"150 Recipes of the Stars (1928), Helen Evans Brown. (23) Health foods—Dr. John Harvey Kellogg, the rise of health food sections in the late 1800s in L.A. department stores, the rise of health food stores, Sandy Gooch. (24) Mae West (1893-1980). Gypsy Boots (1914-2004). Photo of Boots and Paul Bragg. (25) Food and film. (25) Photo of Donna Reed and Paul Bragg, sometime in the 1950s. (26) Bernarr Macfadden (1868-1955). (27) Celebrity stew and Leo Pearlstein. (28) Vegetables, fruits, and nuts (incl. Frieda Caplan, Albert's Organics). (28) Rancho La Puerta and the Golden Door. Photo of young Burt Lancaster baking bread at La Puerta. (29) Fred Waring (1900-1984), the blender, and smoothies. (30) Hain Pure Foods. "Harold Hain opened his first health food store in downtown Los Angeles on October 17, 1926." (31) Swamis and yogis. Paramahansa Yogananda arrived in L.A. in 1925; he advocated a healthy vegetarian diet, including in his magazine *East West*, first issued in 1926. On 8 April 1951 he opened SRF India Café at his India House compound on Sunset Boulevard. "Yogi Bhajan (1930-2004) came to Los Angeles in 1969, bringing the teachings of Kundalini Yoga and his own unique style of Indian and Ayurvedic cooking. In 1974 his students opened Golden Temple Conscious Cookery in Los Angeles. I [Akasha] was a cook there from 1979 to 1984..."

Soyfoods are used in recipes (and recipe titles) throughout this book: Edamame or fresh green soybeans (used in 2 recipes), miso (1 recipe), soymilk (many, especially in place of milk in desserts, incl. "Chocolate Jack Daniel's soy gelato" and "Soya chocolate" milk), soy flour (1, Bill Baker's bread), soybeans (whole, 1, "Soybean casserole"), tofu (10), and tempeh (4).

Also discusses: Sophie and Harry Cubbison (p. 47), El Molino Mills (p. 106). Early veggie burgers (p. 106). Silk soymilk and Steve Demos (of White Wave, p. 266).

The recipes in this book are largely vegetarian (including 17 vegetarian main dishes), all call for organically grown ingredients, and many are dairy-free (using soymilk instead of cow's milk). However: Beef (used in 2 recipes, incl. "Fillet mignon Japanese"). Pork (used in 1 recipe, "Citrus roasted pork chops with rosemary potatoes"). Chicken (used in 6 recipes, incl. "Endive petals with curried chicken salad"). Turkey and duck (3 recipes). Fish (many recipes as for cod, halibut, salmon, whitefish). Shellfish (crab, scallops, shrimp).

Talk with Akasha Richmond, who calls. 2005. Dec. 7. Her favorite parts of the book are: The smoothie story. Otto Carque. Gloria Swanson. Yogis and Swamis, Granola. She is very happy with everything about the way the book and its promotion turned out ("It looks great")—except she wishes she could have included more photos. Address: Los Angeles, California.

3369. Bennett, Beverly Lynn; Sammartano, Ray. 2005. The complete idiot's guide to vegan living. New York, NY:

Alpha. 360 p.

• **Summary:** "It's not a diet—it's a lifestyle." The vegan lifestyle means compassion for all living things. It means eliminating animal foods and animal products from one's diet. True vegans avoid the use of honey, and don't wear animal skin (leather, suede) or fur. Many avoid silk, made by suffocating silkworms inside their cocoons.

Contents: Part 1: Compassion for all. 1. Why be vegan? 2. Vegan 101 (incl. famous vegetarians and vegans, the Vegetarian Society of the UK, the Vegan Society emerges, Donald Watson, coming to America—Dr. Catherine Nimmo and Rubin Abramowitz, Jay Dinshah, ahimsa). 3. Key to good health. 4. Starting your vegan transition. Part 2: Clearing up misconceptions. 5. But you need meat for protein. 6. But you need dairy for calcium. 7. But carbohydrates make you fat. 8. Vegans are all weak and sickly.

Part 3: A vegan survival guide. 9. Nourishing yourself. 10. Seeking supplementation. 11. Raw foodists: Raw and uncut. 12. Oh baby! Bringing up baby. Part 4: Veggin' it; Tips for maintaining a vegan lifestyle. 13. Handling family and friends. 14. Dining, vegan style. 15. Supporting your ideals. 16. Buying your vegan eats.

Part 5: Substitution is the mother of invention. 17. Using protein alternatives (incl. Demistifying soy products: soy sauce, the incredible tofu, tempting with tempeh, playing tricks with TVP). 18. Doing without dairy and cheese. 19. Vegan baking substitutions. Part 6: Vegan food for the soul. 20. Breakfast ideas. 21. Lunch and lighter fare. 22. Main and side dishes. 23. Baked goods and desserts.

Part 7: Vegan lifestyle choices. 24. Body care and personal items. 25. Dressing to impress. 26. Other things to consider. Appendixes: Glossary, resources.

The index contains 17 entries for tofu, 16 for soybeans, 7 for tempeh, 3 for seitan, 2 for TVP, and 1 each for edamame, nondairy milk substitutes, shoyu, soy milk, tahini, tamari, and tofurky.

"This book offers a vegan food pyramid, fifty vegan recipes, tips on finding animal-free products and hints for reading ingredient lists and other labels to find 'hidden' animal ingredients or byproducts" (publisher's statement). Address: 1. Vegan chef and author, Eugene, Oregon; 2. Musician, web developer, and Beverly's life partner.

3370. Hellmiss, Margot. 2005. Mit Soja durch die Wechseljahre [Using soy through the menopause years]. Munich, Germany: Suedwest Verlag. 96 p. Illust. (color). Index. 20 x 18 cm. [Ger]

• **Summary:** An attractive book, with many fine color photos on glossy paper. Contents: Soybeans—Tradition and history (Healing plant from China): Productive source of protein, tofu—quark with a longer tradition, triumphal procession around the world, great economic significance, soya and genetic engineering. Fundamental changes of the menopause

years (What happens during these years?): Hormonal changes, the right attitude helps, the new understanding of women, many hormones influence the body, men also experience menopause, questionable preparations, Hormone Replacement Therapy—Pros and cons. Natural help from soy isoflavones (remarkable phytoestrogens): The active agent of plant hormones, the effectiveness of isoflavones, natural SERMs, safeguard against osteoporosis, estrogen protects the circulatory system, soy hormones as free-radical catchers, the end of hot flashes, strong powers of resistance and smooth skin, isoflavones will take good care of you.

Soyfoods that contain isoflavones (A great variety): Whole dry soybeans, soymilk, tofu, soy oil, soy flour (*Sojamehl*), soy flakes (*Sojaflocken*), soy bran (*Sojakleie*), tempeh, natto, soy granules, soy sauce, shoyu and tamari, miso, lignans. Soybeans: A powerful package for your health (Plant protein as an alternative): Indispensable protein, lecithin, minerals, B vitamins for strong nerves, vitamin E—the fountain of youth. Recipes for enjoying soya (Basic recipes): Hors d'oeuvres and salads, soups, pasta, main dishes, sauces, dips, and bread spreads, mueslis, desserts, and backed goods, beverages.

3372. Marcus, Erik. 2005. Meat market: Animals, ethics, and money. Ithaca, New York: Brio Press. xi + 211 p. Illust. Index. 23 cm. [432\* endnotes]\* Address: Vegan.com, P.O. Box 432, Albion, California 95410.

3373. Moskowitz, Isa Chandra. 2005. Vegan with a vengeance: Over 150 delicious, cheap, animal-free recipes that rock. New York, NY: Marlowe & Co. 258 p. Illust. (color photos). Index. 23 x 18 cm.  
• **Summary:** The praise for this innovative book is almost as interesting to read as the book itself. The book is great fun to read—a really fine writer. The index contains 1 entry for edamame (in samosas with coconut-mint chutney), 1 entry for miso (Stewed tofu and potatoes in miso gravy), 6 entries for seitan (incl. homemade), 8 entries for tempeh, 22 entries for firm tofu and 7 for silken tofu, and 3 entries for textured vegetable protein (TVP).

The section titled “Get rid of eggs—Veganize it!” (p. 195-97) begins: “Replacing eggs is the most challenging aspect of vegan baking. Those suckers bind, they leaven, and they give structure to our baked goods. However, like a bad boyfriend, they can be replaced, and with pleasing

results.” The first replacer discussed is flaxseeds. Second is silken tofu. “How to use it. ¼ cup blended silken tofu = 1 egg. Whiz in a blender until completely smooth and creamy, leaving no graininess or chunks. You will want to add other wet ingredients, to this mixture to get it to blend properly. I recommend... extra-firm silken tofu, such as Mori-Nu.” Another egg replacer is soy yogurt. ¼ cup soy yogurt = 1 egg. “Soy yogurt works a lot like whizzed tofu as an egg replacer. It makes things moist and yummy.”

She uses the creative word “sammiches” instead of “sandwiches.” Address: Co-host of The Post Punk Kitchen, New York City.

3374. Nout, M.J.R.; Kiers, J.L. 2005. Tempe fermentation, innovation and functionality: update into the third millennium. A review. *J. of Applied Microbiology* 98(4):789-805. [114 ref]

• **Summary:** A good review of the literature on tempeh fermentation from about 1990 to the present. Contents: Summary. Introduction. Manufacturing processes. Microbial aspects. Chemical and nutritional changes. Functionality and safety of soybean tempe. Conclusion. Address: 1. Lab. of Food Microbiology, Wageningen Univ., Bomenweg 2, 6703 HD Wageningen; 2. • **Summary:** A far-ranging interview on his remarkable innovations and success making and marketing tempeh in the Netherlands. Address: Director, Quality, Pulmuone USA, southern California.

3378. Gandhi, A.P. 2006. The ‘greater bean’: Scientists continue to find new food and industrial uses for soybeans. *World Grain* 24(2):59-62. Feb.

• **Summary:** About 70% of world soybean production is crushed to make oil and meal, 20% is used directly for food, and the rest for seeds. Soybean meal used for human food “must be devoid of residual solvents that may cause

various psychological disorders in humans. The International Standard Organization (ISO) recommends a maximum level of 50 parts per million (ppm) of residual hexane, which is used in the solvent extraction process.”

A pie chart shows world soybean production in 2004.

3379. Turtle Island Foods. 2006. Turtle Island (Website printout—part). www.tofurky.com. 5 p. Printed March 22 and May 29.

• **Summary:** Home: Products: Deli Slices, Sausages, Tofurky Franks, SuperBurgers, Tempeh, Tofurky Jurky, Tofurky holiday products. Food service products. Purchasing. Recipes. About us: Contact us, Where is Turtle Island, Company background, GMO's & organics, A “curd” of a different feather. Fun stuff: Travels with Tofurky. Essay contest winners, Classic Tofurky TV, Award winning Tofurky, Tofurky in the wild, Tofurky family album.

Company background: “Turtle Island Foods was founded in 1980 by Seth Tibbott in Forest Grove, Oregon. Seth had been making Tempeh for family and friends for 3 years out of an incubator made from an old refrigerator heated by a string of Christmas tree lights. He felt there was a future in American for this product and decided to quit his career as a teacher-naturalist and began working nights at the Hope Coop in Forest Grove.

“Seth made hundred pound batches of Tempeh in 3 flavors: Soy, Five Grain and Tempehroni (a spiced log which we no longer make).

“In 1982 the company expanded with the help of loans from Bob and Betty Tibbott, Seth's brother and mother, and moved to an abandoned schoolhouse with a beautiful commercial kitchen in Husum, Washington, 75 miles east of Portland, Oregon.

“Working days now, the company expanded and became the 3rd largest Tempeh manufacturer in the United States which began to stress among other things the water supply of the tiny (population 50) town of Husum.

“In 1992, Turtle Island moved across the Columbia River to Hood, Oregon, where it renovated an old cannery building where it is housed today. The 8,000 square feet of manufacturing space overlooks the Columbia...

“In 1995, the company introduced the Tofurky Vegetarian Feast... The response was overwhelming...”

Photos show: (1) Seth in about 1980 with his first Tempeh incubator in Forest Grove, Oregon. (2) Seth in the mid-1980s inside a tempeh incubator in Husum, Washington. (3) Two young men making tempeh in Indonesia. (4) Seth with his mother and brother before her death in Aug. 2002. Address: P.O. Box 176, Hood River, Oregon 97031.

3380. **Product Name:** Tempeh (bulk for Restaurants and Institutions).

**Manufacturer's Name:** Arto Moro Inc.

**Manufacturer's Address:** 125 N.W. 23rd Ave. #17,

Gainesville, FL 32601. Phone: 352-226-5561..

**Date of Introduction:** 2006. March.

**Ingredients:** Organic soybeans, water, tempeh culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** Frozen: 5 x 4 lb cakes, or 10 x 2 lb cakes (20 lb per package).

**New Product—Documentation:** Talk with Sam Guy.

2008. Dec. 29. His son is Art and the tempeh business was Art's idea. First Art bought a microbrewery, then a small restaurant in the early 1990s. He started making tempeh for the restaurant. The tempeh did well, so he sold the restaurant (which is still in business) to focus on the tempeh. For the first 3-4 months they sold their tempeh only locally, in Gainesville; then they expanded to Jacksonville and Tallahassee. His son delivers his tempeh locally on a bicycle—which has attracted media attention. The business provides detailed nutritional, health inspection, and microbiological info on its product; this has made it possible to attract large customers, such as Aramark food service, a university cafeteria, Mexican restaurants, and vegetarian restaurants. Their tempeh is frozen but not pasteurized. Sam's two favorite ways of serving tempeh: (1) Saute squares in olive oil with miso. (2) Little chunks of crispy fried tempeh in a salad with Mandarin orange pieces, cranberries, walnuts, and Veganise.

Artie's Tempeh Burgers color postcard. The front has a bold heading with a large photo of the burger and a rayed sun in the background. Text: “Artie's Tempeh is made the traditional way, using a slow fermentation method unlike any other commercial varieties.” On the rear is a “Nutritional facts” panel, the company address (factory) and phone number, the ingredients, and round logo, and “12 oz. A vegan food.”

3381. Top Cultures. 2006. Tempeh.info (Website printout—part). www.tempeh.info. 8 p. Printed May 20.

• **Summary:** Home (What is tempeh? Tempeh history. Tempeh books; 4 p.). Make your own tempeh (soy tempeh, mixed tempeh, user feedback, make your own incubator; 2 p.). Tempeh health. Recipes with tempeh. Get your tempeh starter (a package of 25 gm of [dry] tempeh starter type A sells for US\$12.50 plus postage; 5 p.). Fermentation (basic, soy fermentation, lactic acid fermentation, alcohol fermentation, acetic acid). Tempeh FAQ.

Interview with Manfred Warmuth of Univ. of California at Santa Cruz. 2006. May 21. Manfred ordered tempeh starter culture from this website and used it to make tempeh. It grows at about half the speed of regular tempeh starter but the mycelium is very thick and completely white. It does not sporulate or produce black spore spots unless it is allowed to stand in a refrigerator for a long time. Address: Doorlan 16, 2980 Zoersel, Belgium. Phone: +32 47 964 4899.

3382. Annapurna. 2006. Annapurna: zdrava hrana (Website

printout-part). www.annapurna.hr. 4 p. Printed May 22.

• **Summary:** A very creative and lovely website—in Croatian. The company makes tofu, seitan, soy yogurt, tempeh, and 5 tofu dips or spreads. Color slides show each of the company's soyfoods products in a large window. Clouds in a blue sky move from left to right. An orange lady bird beetle flies and walks over the homepage. As one's cursor hovers over a new button, it makes a soft "bong" sound. Address: Klanjec 30a, Rakitje, 10437 Bestovje [Croatia]. Phone: +385 (0) 1 3385 533.

3383. Benner, Peter. 2006. Turning to tempeh: The Brown family has been making tempeh since the late seventies. They're having lots of fun with it and still marvel at the process of turning organic soybeans into a fermented food that is high in complete protein and fibre, yet contains no cholesterol. *Canadian Organic Grower (The)* 3(2):14-18. Spring. [4 ref]

• **Summary:** Contents: Introduction. Turned on to tempeh. Slow food, soyfully. Tempering tempeh traditionally (how the Browns make tempeh). Fomenting a fermented sustainability.

For about 12 years the Browns made about 200 lb/day of tempeh. Recently they have increased their volume to 300 lb/day and soon plan to be producing 400 lb/day of certified organic tempeh. They focus on the process and paying attention. They've joined a slow food convivium in Perth. Photos show: (1) Michell Larin, Susan Brown and Allan Brown at the end of a work day at Noble Bean Tempeh Shop. (2) Susan loading trays for incubation. (3) Michelle bags soybeans while Jake mixes beans for inoculation. (4) Jake cooks the beans. Address: Journalist and salesperson for Monteagle Herbs, living in a solar-powered intentional community named Morninglory Farm in Killaloe, Ontario.

3384. *Indonesian Newsletter (Melbourne, Australia)*. 2006. Old and new a delicious combination: Primasoy. 16(4):7. May.

• **Summary:** The article begins: "Who would ever have imagined that in the quiet Melbourne suburbs the application of modern technology to an age-old tradition would produce premium quality (and mouthwatering) results?" There Mrs. Sinta Santoso of Primasoy is making "the finest quality organic tempeh products from Australian organically grown soybeans." Describes how the tempeh is made, without vinegar. Gives recipes for Tempeh curry and Tempeh salad. Photos show both dishes and the front of the Primasoy Organic Tempeh label. Note: This newsletter is published by the consulate general of the Republic of Indonesia, Melbourne.

3385. Mescher, Kelly. 2006. Indonesia: Aquaculture and soyfoods are key selling points. *Iowa Soybean Review (Iowa Soybean Association, Urbandale, Iowa)* 17(7):14. Spring.

• **Summary:** "In Indonesia, the aquaculture industry is huge and growing. And aquaculture's No. 1 source of protein is soybean meal." In fact, "aquaculture is the fastest growing use of soybean meal right now."

The market for soyfoods in Indonesia is also huge and growing. They consume 2 million tons a year of soybeans. Since they have no soybean crushing plants, the soybeans are imported largely for food use. "Tempeh producers are the biggest customer of whole soybeans in Indonesia." No. 2 is tofu makers. Both tempeh and tofu are basic foods in the Indonesian diet.

Photos show: (1) Directors of the Nebraska Soybean Association observing undersea aquaculture cages. (2) Many cakes of tempeh produced in the backyard of a small mom and pop shop in Indonesia.

3386. *Vitality (Toronto's Monthly Wellness Journal)*. 2006. Healthy product news: Tempeh, the soyfood with culture. May. p. 98. [2 ref]

• **Summary:** Based on a 25th anniversary news release from Noble Bean, "Canada's largest and oldest tempeh producer." "Noble Bean is a family-run cottage industry nestled in the rolling hills of the Ottawa Valley. There, on 10 acres of land, Allan and Susan Brown and friends produce from 250 to 400 pounds of tempeh a day." They firmly believe that "small is beautiful."

"After using certified organic ingredients for over 20 years, Noble Bean is now an OCPP (Organic Crop Producers and Processors) certified facility."

3387. Noble Bean Tempeh Shop. 2006. Noble Bean: 25th anniversary. Thank you tempeh lovers everywhere (Leaflet). McDonalds Corners, Ontario. 1 p. Single sided. 28 cm.

• **Summary:** The Canadian original. Certified organic / OCPP. Naturally pure water. Fresh frozen / Not pasteurized. Tasty traditional tempeh. Genuine slow food. The right half is in French. Printed with black ink on mottled tan paper. Two smaller versions (22 cm) are in either English or French, printed with black ink on a cardstock light green background. A pressure sensitive logo in light green, black and white on a dark green background is affixed to the top one-third of each.

3388. Warmuth, Manfred. 2006. Re: Studying tempeh and oncom [ontjom] production in Indonesia. Letter (e-mail) to William Shurtleff at Soyfoods Center, Aug. 22. 1 p.

• **Summary:** "I visited a number of tempeh production facilities in Bali and Malang. Most people now use plastic bags as well as starter from a lab. I am collecting starter cultures. There is one main factory in Bandung.

"Most tempeh makers boil the soybeans twice and use wet dehulling. Tomorrow I am visiting somebody in Yogyakarta who does dry dehulling.

"I am also connected with some university people: Profs. Kuswanto Kopti and Mary Astuti from Gadjah Mada

University [Indonesian: Universitas Gadjah Mada or UGM].

“Going to Bandung next... I am curious to find out about oncom. Do you know Prof. Suharto from the Padjadjaran University in Bandung? He is supposed to be a specialist in oncom.

From an internet cafe in Jogja [Yogya]. Address: Prof., Dep of Computer Sciences, Univ. of California at Santa Cruz, California 95060.

3389. Hymowitz, Ted. 2006. Why did the West (Europe and the Middle East) know so little about China in the 12th and 13th centuries? (Interview). *SoyaScan Notes*. Sept. 1. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Because the Arabs blocked most European travel over the Silk Road / Route from about the 7th century until the 12th or 13th century. The Arab conquest blocked the overland route, in part to control the trade. There were actually two phases in the history of the Silk Road. The first phase ended in about the 6th or 7th century, before the origin of Islam.

Note: Both of these “Silk Roads” was actually a series of interconnected routes that ran from about Xian (Chang’an) in eastern China, along the northern part of China, branching into today’s Central Asia, south of the Caspian Sea, through today’s Turkmenistan, Iran (formerly Persia), and Iraq, to Damascus (today’s Syria) and Antioch (in today’s Turkey). The first famous and documented Chinese traveler, Zhang Qian (W.-G. Chang Ch’ien) led two expeditions to the Western Regions in the 2nd century BC, during the Former / Western Han dynasty.

As early as the 1st century AD, there were already some oceanic routes that were part of the “Silk Road.” They hugged the coast from central China, around India, into the Persian Gulf and the Red Sea, then on to Italy!

This Arab blockade was one of the reasons for the search for a water route to China. The blockade began to fail as sea routes were developed. For example, in May 1498, Vasco da Gama was the first European to discover a sea route to India.

Another reason it took so long for information about the soybean to reach Europe from China was that the soybean is unlike rice, wheat, and maize / corn, where the product of the crop is associated very closely with what is growing in the field; everyone knows what rice, wheat and corn look like because they are so widely consumed as food. The main products of the soybean, especially those in commerce (such as soy sauce), bear no resemblance to the seed or plant from which they are made. It took a long time before Europeans realized that soy sauce (for example), which was known in Europe by the late 1600s, was made from the soybean—which did not arrive in Europe until the late 1730s. Even in Asia, the various names of the soybean were very different from the names of its major products. For example in China: Soybean is *dadou* or *huangdou*, soy sauce is *jiangyou*, tofu is *doufu*, and soymilk is *dounai* or *doujiang*. In Japan:

Soybean is *daizu*, soy sauce is *shoyu*, tofu is *tofu*, soymilk is *tonyu*, miso is *miso*, natto is *natto*, and green vegetable soybeans are *edamamé*. In Indonesia, *tempé* is *tempeh*. Even in the Western World today, many of these traditional foods and condiments do not have “soy” as part of their name. Moreover, the foods look totally different from the seed / bean from which they are made.

The first European to understand the connection between the soybean and its products was Engelbert Kaempfer; he made this clear in his book *Amoenitatum exoticarum...* vol. 5. Yet most Westerners did not understand this connection until more than a century later, and quite a few even today don’t realize that tofu (for example) is made from soybeans.

Ted is convinced that Marco Polo and the various early Western missionaries who traveled to China probably tasted soyfoods over and over again—but they didn’t realize they were made from soybeans. A good example is milk. The early Western travelers in China often mentioned that Chinese drank milk; in some cases they were probably drinking soymilk. Address: Prof. of Plant Genetics (retired), Dep. of Crop Sciences, Univ. of Illinois, Urbana, Illinois.

3390. Mateljan, George. 2006. Healthy foods: Tempeh, the soyfood with culture. *Healthy Directions (Ontario’s Natural Health & Nutrition Guide)*. Aug/Sept. p. 37.

• **Summary:** A nice introduction to tempeh. Note: Two business cards photocopied with the article show: (1) Noble Bean’s 25th anniversary. (2) Noble Bean, “Culturing fine tempeh since 1979. Allan and Susan Brown.”

3391. Weil, Andrew. 2006. How foods can affect cancer. *Time*. Nov. 20.

• **Summary:** The article begins: “What do steak, tofu and sushi have to do with cancer? Plenty, it seems, if several” new studies are to be believed. One study found a disturbing association between red meat consumption and cancer. A epidemiological study showed that Asian women consuming diets rich in soy have significantly lower rates of breast cancer than Western women have.

The report that interested Dr. Weil most examined the association between breast cancer and “soy-based foods” [soyfoods]. This has become a controversial subject because “soy contains isoflavones;” some of these, in an “isolated form, can stimulate the growth of estrogen-receptor-positive breast-cancer cells. That’s why many Western doctors warn women against eating soy.” Yet the epidemiological evidence looks promising: Asian women who consume “diets rich in soy have significantly lower rates of breast cancer than Western women have.”

Dr. Weil was particularly pleased to see a new study of Asian-American women done by the National Cancer Institute. It studied women who ate a lot of soy-based foods as children, adolescents and adults. “The strongest and most consistent association was among women who ate the most

soy-based foods from ages 5 to 11.” Their risk of developing hormone-fueled breast cancer was only 58% as much as the women who ate the least soy-based foods. Women who ate a lot of soy as adolescents or adults reduced their risk by 25%. “Regular, moderate consumption of whole-soy foods (such as soynuts, edamame, soymilk, tofu and tempeh) probably affects the development of breast tissue in young females, possibly making it more resistant to carcinogens, including estrogenic agents in the environment.”

Dr. Weil believes that women who have a history of breast cancer should be introducing their kids to soy foods at as early an age as possible. “Substituting soy milk for cow’s milk is one way to start.” He believes the same thing will be shown to hold true for boys; a diet that includes soy foods may reduce their future risk of prostate cancer.

A large color photo shows a white bowl filled with edamamé (green vegetable soybeans in the pods). A sidebar across bottom of article, titled “What we eat,” states: (1) In 2004, U.S. per capita consumption of red meat was nearly 120 lbs. (2) In 2005 Americans ate, on average, 5 oz. of soy protein (equivalent to 12 oz. of soybeans), including ½ gallon of soy milk and 7 oz. of tofu. (3) In 2004 the average American ate 16½ lbs. of fish and shellfish.

Note: This is the 2nd earliest known article in *Time* magazine that mentions tempeh. Address: M.D.

3392. Stechmeyer, Betty. 2006. New developments at GEM Cultures (Interview). *SoyaScan Notes*. Nov. 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Since Gordon McBride, Betty’s long-time partner, died about 3 years ago (2 Nov. 2003) of heart failure while on a hunting trip, Betty has a very full life trying to run GEM Cultures by herself, and take care of her house and property on the California Coast. She stopped selling commercial tempeh starter in about Sept. 2006 (2 months ago). She feels that the tempeh starter made by Cynthia Bates and Vicki at the Tempeh Lab on The Farm in Tennessee is very good quality.

She is now in the process of giving (actually selling for \$1) GEM Cultures to her daughter (Lisa) and his husband (Russell Dunham) who live in Tacoma, Washington. They are in their 40s, have a lawn care business and 3 kids, and are eager to continue GEM Cultures. The only product they will discontinue is the commercial tempeh starter (for businesses). Betty hopes to write a book on Supermarket Botany (the little green thing atop a strawberry is called the “calyx”), and to finish a cookbook. She is an active volunteer in the local food bank (where people in need can come to pick up a bag of free groceries), where she also teaches nutrition (including the health benefits of fermented foods and soyfoods) and donates large amounts of the kefir she makes. George Carlin, the comedian, is part of the local community and food bank. It is a thriving community doing lots of good work, and Betty feels blessed to be alive and

part of it. Address: GEM Cultures, Ft. Bragg, California 95437-4127.

3393. Northrup, Christiane. 2006. The wisdom of menopause: Creating physical and emotional health and healing during the change. Revised ed. New York, NY: Bantam Books. xvii + 631 p. Illust. Index. 24 cm. [36 soy ref]

• **Summary:** This revised edition contains a very positive and accurate section on the ability of soyfoods to relieve menopausal symptoms. But the benefits are dose-dependent. Discusses: Soy and menopause (p. 188-93; “Each of the following servings contains approximately 35-50 mg of soy isoflavones: 1 cup soy milk, ½ cup tofu, ½ cup tempeh, ½ cup green soybeans (edamame), available fresh or frozen, 3 handfuls roasted soy nuts”). Brain foods: Omega-3 fats [fatty acids], and DHA, soy and Japan (p. 337-38). Beautiful skin and soy (p. 364-66). Bone building and soy (p. 407-08). Eating for breast health and soy; Why soy is safe for breast tissue (p. 450-53). Heart health and soy (p. 524-25). Resources—Soy (incl. Revival Soy, p. 549).

At least 36 scientific studies on soy and women’s health are cited, each with a full bibliographic record in the notes, chapter by chapter.

“Is there a soy-thyroid connection?” (p. 189-90). “Here’s the bottom line: there is no convincing evidence that soy intake increases the risk of hypothyroidism during perimenopause. However, women often begin increasing their intake of soy during perimenopause, a time when they often get their thyroid function checked for the first time as well. And given that fully 25 percent of perimenopausal women have a thyroid problem, many believe that soy is responsible. If you have any doubt about your thyroid function, get it tested. Make sure you test for TSH (thyroid-stimulating hormone) along with T3 and T4, the two thyroid hormones. It’s a simple blood test, and it will put your mind at ease.” Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

3394. Kuzmic, Vlatka. 2006. Update on Annapurna’s work in Croatia (Interview). *SoyaScan Notes*. Nov. 29. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Annapurna now has 27-29 products. They are the biggest tempeh maker in Croatia; there is one other maker, which is smaller. Seven people working at Annapurna, plus Vlatka’s husband who is the owner. Six of them work in production and one person is in their shop in Nehajska 42, Zagreb, which opened in June 2006. The biggest chain of health food stores in Croatia says that they sell more of Annapurna’s products than those of any other Croatian manufacturer, and that Annapurna is among the top 15 suppliers worldwide in terms of sales. All is going well. Address: Klanjec 30a, Rakitje, 10437 Bestovje, Croatia. Phone: +385 1-3639-092.

3395. Feng, Xin-Mei. 2006. Microbial dynamics during barley tempeh fermentation. PhD thesis, Swedish University of Agricultural Sciences, Uppsala. 52 p. Illust. (some color). 24 cm. [194 ref. Eng]

• **Summary:** The writer has successfully made barley tempeh from pearled barley, without the use of soybeans (see p. 15). “Introduction of food-grade lactic acid bacteria (LAB) and yeasts to tempeh fermentation may enhance tempeh nutritional and hygienic quality.

“The abilities of LAB and yeasts to grow together with *R. oligosporus* during barley tempeh fermentation and their possible effects on tempeh quality were studied. The LAB *Lactobacillus plantarum* and *L. fermentum* and the yeasts *Saccharomyces cerevisiae*, *Pichia anomala* and *Kluyveromyces lactis* could grow during tempeh fermentation and the yeasts even during cold storage. LAB and yeasts did not negatively affect growth of *R. oligosporus* at an inoculation level of 10,000 cfu/g [colony forming units per gram], respectively, but did so at higher inoculation levels.

On pages 9-10 is a very interesting but brief discussion of *Mei Dou Za* (okara tempeh, called Meitauza in several early English-language documents). It is still made by “spontaneous fermentation” in about 3 days in several places in China. On page 10 are 6 photos taken by the writer in 2006 showing how the product is made, and then sliced and dried in Qian Jiang, Hubei Province, China Address: Dep. of Microbiology, Swedish University of Agricultural Sciences, Box 7025, SE-75007 Uppsala, Sweden.

3396. Golbitz, Peter; Jordan, Joe. 2006. Soyfoods: Market and products. In: Mian A. Riaz, ed. 2006. Soy Applications in Food. Boca Raton, Florida, London, New York: CRC Press (Taylor & Francis Group). [x] + 288 p. See p. 1-21.

• **Summary:** Contents: History of soyfoods: Growth and development in the Western world, soybean industry blossoms in the United States, soybeans grow around the world. Soybean production and utilization for food: Soyfoods in Asia, soyfoods in Europe, soyfoods in Africa, soyfoods in the United States: Development of the U.S. soyfoods industry, Americanization of soyfoods. Soybean nutritional components: Soy protein, soy oil, carbohydrates and fiber, vitamins and minerals, isoflavones. Soyfoods and protein ingredients: Whole dry soybeans, tofu, soymilk, tempeh, soymilk yogurt, miso, soy sauce, okara, natto, soy nuts, meat alternatives, cheese alternatives, nondairy frozen desserts, green vegetable soybeans (edamame), soy sprouts, full-fat soy flour, defatted soy flour, textured soy flour, soy protein concentrate, soy protein isolate. Conclusions.

Tables: (1) World soybean production by major producers. (2) Annual per capita consumption (2001) of soybeans for direct food. (3) U.S. soyfoods market (1996 to 2005).

This chapter suffers from a lack of references, and contains several basic errors concerning the early history of the soybean. Contrary to what Mr. Golbitz says: (1) The Chinese have not considered the soybean a basic source of nutrition for almost 5000 years (see Hymowitz 1970, “On the domestication of the soybean”). For “a little more than 3000 years” would be much more accurate. (2) The first reference to soybeans in Chinese literature does not date back to 2853 B.C. (see Hymowitz 1970, and Hymowitz and Shurtleff 2005, “Debunking soybean myths and legends in the historical and popular literature”). It dates back to about 1100 B.C. (3) Natto was not developed at least 3000 years ago in Japan (the earliest known document that mentions natto dates from 1450 CE—or about 560 years ago). Address: Soyatech, Inc., Bar Harbour, Maine.

• **Summary:** A vegan cookbook. Gary has eaten a vegan diet for more than 30 years. He owns a juice bar named Gary Null’s Uptown Whole Foods in New York City. He advocates eating soybeans and soy products; because of their “extensive and well researched health benefits” and because it comes in such a wide variety of forms, from “tofu and tempeh, to nondairy products like milks, cottage cheese, cheese, yogurt and ice creams. No other legume can be used in so many delicious ways” (p. 10, 24-25). One of his 15 “power foods” is soy (p. 13). He likes juicing and raw foods; in the chapter on beverages he sometimes adds 1-2 tablespoons soy protein powder, or a cup or so of soymilk or rice milk, or soy yogurt. For dips, he likes silken tofu. The chapter on “Entrees” (p. 240-88) includes 13 recipes that call for tofu, and 8 that call for tempeh. Edamame, whole soybeans, tamari, and soy cheese are included. His daughter, Shelly Null, is a gourmet chef. The book has no index. Address: Author of more than 70 books, New York City.

Singapore. New York and London: W.W. Norton & Co. 384 p. + 16 unnumbered pages of plates. Illust. (some color). Maps. Index. 26 x 21 cm. [41 ref]

• **Summary:** Lavishly praised. “James Beard Foundation Book Award Winner: Asian Cooking.”

In Chapter 3, “At the market, ingredients” (which has many fine color photos) is a long, interesting entry for “Indonesian sweet soy sauce (*kecap manis*, p. 72). “Sweet soy sauce is hugely popular in the cooking of Indonesia and, to a lesser extent, Malaysia and Singapore. (The word *kecap*, by the way, is derived from the Cantonese *koe-chiap*, or ‘sauce,’ from which we get the word *ketchup*. It was probably handed over by traders from southern China who long ago traveled extensively to the Indonesian islands.)” Its main use is as a table condiment or dipping sauce, although cooks also use it in marinades and to flavor stews. When Indonesian sweet soy sauce is mixed with sliced red chiles and lime juice, it becomes the widely used *sos kecap rawit*. In the U.S., the two most widely available brands, both imported from Indonesia, are Cap Bango (which the author prefers) and ABC.

There are also entries for “Soy sauce (*kecap*, p. 87. Of the two types, the first is called simply soy sauce, whereas the second “is double-black soy sauce, which has been aged longer and mixed with a small quantity of molasses.” It has a more robust flavor than regular soy sauce). Sweet soybean paste (*tauco* or *taucheo*, p. 88-89, a Hokkien word. A “thick, golden brown, misolike condiment made of fermented soybeans, rice flour, sugar, and salt). Tempeh (p. 90-91, “one of Indonesia’s great gifts to the culinary world”). Tofu (*tahu*, p. 91-92).

Chapter 13 (p. 318-35), titled: “Tempeh, tofu, eggs,” has a long and very interesting introduction about the author’s visit to Rahmat, a traditional tempeh maker and his shop in Yogyakarta, Java; he wanted to learn how tempeh is made. Recipes: Garlic-marinated tempeh (*Tempe goreng, Indonesia*). Tempeh sambal with lemon basil (*Sambal tempe, Bali, Indonesia*). Carmelized tempeh with chiles (*Tempe kering, Central Java, Indonesia*). Tofu and summer vegetables in coconut milk (*Sayur lodeh, Malaysia*). Twice cooked tofu with coriander (*Tahu goreng bacem, Central Java, Indonesia*).

Tempeh, tofu, soy sauce, and sweet soy sauce are also discussed in many places throughout the book. Address: Executive editor of *Saveur*, New York City.

3401. Planck, Nina. 2006. Real food: What to eat and why. New York and London: Bloomsbury Publishing. [viii] + 343 p. Index. 22 cm. [30+ ref]

• **Summary:** This book is carefully researched and very well, thoughtfully and fairly written; the author has written for *Time* magazine and comes with very good credentials for this book. Born in 1971 in Buffalo, New York. “She was a speechwriter to the U.S. ambassador to Britain when she

opened the first farmers’ market in London on June 6, 1999. Six months later she quit her job to open ten more markets, write *The Farmers’ Market Cookbook*, and host a British television series on local food. In 2003 Nina created the Mount Pleasant Local Food Market in Washington, D.C. In New York City she ran Greenmarket, the largest network of farmers’ markets in the United States. Nina’s new company, Real Food, runs markets for farmers and purveyors of regional and traditional foods” (“About the author,” p. 344).

The author advocates the following: (1) Eat real, traditional foods rather than more modern “industrial foods.” These real foods include plenty of meat, fish, poultry, eggs, and dairy products made from whole raw (unpasteurized) milk from cows grazed outdoors on grass (rather than corn and soybeans, which cows were not designed to eat by nature) without synthetic hormones—plus real, organically grown fruits, vegetables, whole grains and legumes (including traditional soy foods), real salt, and dark chocolate

(2) Eat real fats—including butter, beef fat, coconut oil, lard, and extra-virgin olive oil, including saturated fats and cholesterol. Avoid industrial fats—such as margarine, polyunsaturated vegetable oils (including soybean, corn, and sunflower oil), and shortening. (3) Go beyond and disregard the cholesterol myth; the evidence supporting it is weak. (4) Stop eating a vegetarian diet, and especially a vegan diet (which no traditional society has ever practiced).

To start with the section on soy foods: In the Chapter 8, titled “Other real foods,” the section on soy foods is titled “Traditional and industrial soy are different” (p. 225-34). Traditional soy foods are those that have a long history in the diet, and are still made in pretty much the way they used to be. Her information on the early history of the soybean and soy foods (p. 225-26) contains many errors, as well as some interesting observations. Some of the earliest soyfoods were fermented (starting with soy nuggets and jiang in China). She lists five health benefits of fermentation. Fermentation (along with cooking) helps to reduce the phytic acid in soybeans. Soy foods do not contain reliable vitamin B-12. The author states several times that soy protein is not complete protein. Most nutritionists for the past 50 years have correctly avoided this “is” vs. “is not” labeling and instead have listed all foods along a continuum from high quality to low quality. By the latest measures of protein quality, soy protein (by itself, without supplementation by cereal grains) has about the same quality as beef, but lower than that of eggs or milk. While noting that about 85% of all soybeans are genetically engineered, she fails to mention that most traditional soyfoods in the USA are made from organic, non-GE soybeans. She discusses the important part that soy plays in the Okinawan diet, where the people have the highest longevity in the world. Yet soy “should be viewed as part of a diverse diet, not as a nutritional silver bullet.” We heartily agree. She lists the many traditional soyfoods (p. 231-32), made basically the traditional way, including: Bean sauce

(jiang), miso, natto, soy milk (non-industrial), soy sauce, sufu (fermented tofu, incl. Filipino tahuri), tofuyu (fermented tofu from Okinawa), tamari (liquid left after miso is made), tempeh, tofu, and edamame. She recommends that we avoid modern soy protein products made from defatted soybean meal (typically extracted with hexane solvent), including soy protein isolate, “industrial soy milk,” soy based infant formula, and soy sauce which uses defatted soybean meal instead of whole soybeans. But what would she do with all the oil left over after using whole soybeans?

Concerning a diet rich in fish, meat, and poultry. She partly ignores the ethical issues involved in killing billions of those animals each year and the environmental issues involved in raising them. These are both huge issues. Several complex issues that she addresses head-on and in a fair, interesting way: (1) Is milk good for humans (p. 39-86).

One of the basic hopes / agendas behind this book is that people will start to leave cities, buy a piece of land (as the author's own family did when she was age 2), grow their own food and raise their own animals for milk, meat, and eggs. There is a steadily growing number of books advocating this traditional way of life.

The Glossary (p. 306-15) contains many good definitions that most people will be able to understand. The bibliography (p. 316-21) is substantial, and there are also endnotes (p. 290-303) but the book would be better if more of its controversial or historical statements cited authoritative sources. Address: USA.

3402. Sugano, Michihiro. 2006. Nutritional implications of soy. In: Michihiro Sugano, ed. 2006. *Soy in Health and Disease Prevention*. Boca Raton, Florida: Taylor & Francis. [xii] + 313 p. See p. 1-16. [10 ref]

• **Summary:** Contents: Introduction. Structure of soybean. Components of soybean: Proteins, oil, carbohydrates, minerals, vitamins. Composition of soy products. Nutritional aspects of soy products: Protein, peptide, oil, oligosaccharide, vitamins, other components. From “A Meat in the Field” to “A Treasure Box of Functionality.”

Tables: (1) Major soybean components and their health effects. Two columns: Components and functions. (2) Nutrient contents of dried soybean (incl. minerals and vitamins). (3) Nutrient contents of soybean products (gm per 100 gm): Kinako (parched soybean flour, full-fat). Tofu (bean curd). Abura-age (fried bean curd). Kori-tofu (frozen bean curd). Natto (fermented soybean). Okara (Tofu refuse). Tonyu (soymilk). Yuba (Soymilk skin). Tempe. Miso (bean paste). Shoyu (soy sauce). Soy protein isolate. (4) Mineral contents of soybean products (sodium, potassium, calcium, magnesium, phosphorus, iron, zinc, copper, manganese; same products as in Table 3). (5) Vitamin contents of soybean products (retinol, carotene, D, E, K, B-1, B-2, niacin, B-6, B-12, folic, pantothenic, C; same products as in Table 3). (6) Amino acid and protein composition

of Japanese soybean products. (7) Proposed patterns for essential amino acid requirements and composition of soybean proteins (soy protein concentrates and isolates). (8) Fatty acid composition of soybean oils (% of total fatty acids) (Products: Refined soybean oil, genetically modified oils, low linolenic, high oleic, low palmitic, low saturated fatty acid, high palmitic, high stearic).

Figures: (1) Pie chart of intake of soybean and its products in Japan (gm per day of tofu {38.2 gm}, fried tofu {7.9 gm}, natto {6.9 gm}, whole soybeans {2.0 gm}, other {2.3 gm}; Total 57.3 gm per day). (2) Bar chart: Amino acid score of dietary proteins in humans (casein 1.0, egg white 1.0, soy protein concentrate 9.9, soy protein isolate 9.5, beef 9.5). (3) Graph and bar chart: Soybean protein lowers liver delta-6 desaturase activity and liver phospholipid delta-6 desaturation index in rats—relative to casein. Address: Director, Fuji Foundation for Protein Research, Japan; Professor Emeritus Kyushu University and President, Prefectural Univ. of Kumamoto, Japan.

• **Summary:** Contents: Introduction. Natto: Antibacterial activity of natto and natto bacillus, fibrinolytic enzyme substances contained in natto, depressor effects, carcinostatic effects, and dissipation of the effects of alcoholic drinks, preventive effects for osteoporosis. Tempeh: Strong antibacterial activity and effectiveness against intestinal disorders, antioxidant, antiallergic, and beauty care effects, starters for tempeh and high nutritional value. Shoyu (soy sauce): Antibacterial, antioxidation, and depressor effect, antitumor effects. Miso (soybean paste): Effectiveness of soybean paste for cancer prevention, depressor effects, antioxidation and antiradioactivity effects. Tofuyo.

Tables: (1) Dipicolic acid in natto and *Bacillus subtilis* natto. (2) Fibrinolytic activity in human plasma after the intake of natto. (3) Expired gas and intestinal gas after intake of tempeh. (4) Isoflavone content in tempeh. (5) Antioxidation activity of the aromatic components of shoyu (soy sauce). (6) Functional effects of melanoidine contained in shoyu (soy sauce) and miso (soybean paste).

Figures: (1) Graph of the effects on *O-157* as a result of the addition of natto bacillus. (2) Graph of the effects on *H. pylori* (Sydney strain) resulting from the addition of natto extracts. (3) Photo of fibrinolytic activity of natto. A piece of natto commonly sold on the market was placed in a petri dish with artificial thrombus. (4) The molecular structure of nattokinase. (5) Photo of fibrinolytic activity of nattokinase. (6) 3 graphs of changes in the fibrinolytic parameters in the blood after oral administration of nattokinase to human volunteers. (7) Graph of the effects of natto extracts

on blood pressure. (8) Graph of the inhibitor activity of platelet aggregation. (9) 2 graphs of the concentration of vitamin K<sub>2</sub> in human blood after the intake of natto. (10) Bar chart of change in the concentration of menaquinone-7 in plasma after ingestion of natto. (11) Graph of the effects of the tempeh bacteria on aflatoxin-producing bacteria. (12) Diagrams of the aromatic components of shoyu (soy sauce). (13) Bar chart of the effects of the concentration of nitrous acid on the antitumor activity of shoyu (soy sauce). (14) Chart of the carcinogenesis inhibitor effects of HEMF against proventriculus tumors induced by benzo[a]pyrene. (15) Bar chart of standardized mortality from stomach cancer relative to the level of frequency of eating miso soup. (16) Graph of changes in blood pressure by oral administration of miso (soybean paste) extracts. (17) Graph of reaction between coloring degree of miso and its antioxidative activity. Address: Dep. of Physiological Chemistry, Kurashiki Univ. of Science and the Arts, Kurashiki, Japan.

3404. Wang, Yi-Chieh; Yu, R.C.; Chou, C.C. 2006. Antioxidative activities of soymilk fermented with lactic acid bacteria and bifidobacteria. *Food Microbiology* 23:128-35. [34 ref]

• **Summary:** Probiotics can serve as antioxidants. "Previous research has demonstrated that the antioxidative activity fermented soyfoods such as miso, natto, and tempeh, was remarkably stronger" than that of unfermented steamed soybeans,

To develop a probiotic dietary adjunct / supplement, soymilk was fermented with two different lactic acid bacteria: (1) *Lactobacillus acidophilus* CCRC 14079, or (2) *Streptococcus thermophilus* CCRC 14085. And with two bifidobacteria: (3) *Bifidobacterium infantis* CCRC 14633, or *Bifidobacterium longum* B6—individually and in conjunction (all together). Several antioxidative activities were investigated: The inhibition of ascorbate autoxidation. The scavenging effect of superoxide anion radicals and hydrogen peroxide, and the reducing activity exerted by different varieties of fermented soymilk. In addition, the effects of freeze-drying and spray drying were also investigated.

"In general, antioxidative activity in soymilk fermented with lactic acid bacteria and bifidobacteria simultaneously is significantly higher ( $P < 0.05$ ) than that fermented with either individually. Moreover, antioxidative activity as the fermentation period is extended.

Freeze drying causes much less reduction in antioxidative activity than does spray drying. Address: Graduate Inst. of Food Science & Technology, National Taiwan Univ. 59, lane 144, Kelung Road, Section 4, Taipei, Taiwan.

3405. Chalmers, Elizabeth. 2007. Business history of the Chalmers family: Making soyfoods in New Zealand (Interview). *SoyaScan Notes*. Jan. 16. Conducted by William

Shurtleff of Soyinfo Center.

• **Summary:** At Easter 1980 Rick & Elizabeth Chalmers, together with Rick's brother Greg (his formal name is "Stephen"), opened Harvest Wholefoods, 403 Richmond Road, Grey Lynn, Auckland. They borrowed the money from Elizabeth's mother, and were all equal owners. It was New Zealand's first wholefoods / natural foods store as well as the country's first macrobiotic foods retail store. They were idealists and purists, refusing to sell any vitamins, or minerals, or dairy products.

They started the store partly as a result of becoming interested in macrobiotics, and partly because Elizabeth and Rick had a 3 year old son (Daniel) who could not tolerate dairy products. As the Chalmers could not get the food they wanted anywhere, they thought that they would open a shop to also provide it to others. Moreover, Greg, who had been overseas in London (where he had worked in a restaurant) and the USA, was a pioneer in bringing macrobiotics to New Zealand. "He brought home miso and some seaweeds—foods we had never seen before."

After about six months, in Oct. 1980, in order to attract customers to the shop, they started to make nigari tofu (for their own store only) in a small room at the back of the store, designated just for that purpose. They made the simple equipment themselves, and they learned the process from *The Book of Tofu*, by Shurtleff and Aoyagi.

After another six months they were inundated with other store owners, and cafe & restaurant owners from all over New Zealand wanting to buy their tofu. "It was just amazing." The tofu was completely unpackaged and they sold it under water in bulk buckets only. So in about April 1981 they started to sell their tofu outside of Harvest Whole Foods. "Sometimes they would pick it up, and sometimes we would deliver it."

Sanitarium Health Food Co. was making many kinds of breakfast cereals and canned nut meats, but no soyfoods. Several Chinese restaurants were making tofu (they called it "bean curd"), but only for use in their own restaurants; they did not sell it elsewhere. One of these was named Sun Sun, located in Khyber Pass, Auckland.

Their daughter, Jesse, was born on 1st October 1981, and by this time it was becoming difficult to manage both the shop and making tofu. So they sold the shop and with the capital gained they brought in special tofu making equipment from Japan, moved to new premises at 1 Wallingford St., Auckland, and started Harvest Soyfoods. Harvest Whole Foods is still at its same original location today; it is going strong and doing well financially.

Harvest Soyfoods' first product was nigari tofu; to this they soon added Tofu Spreads (Feb. 1981) then Tempeh (April 1981). The business grew very rapidly, and during this period Greg also had a child, so they all had very young children and were trying to manage their lives as well as an extremely rapidly increasing business.

Greg's partner decided that she wanted to leave Auckland, and as they could not picture another partner in his place and were feeling very overloaded anyway they decided in 1983 to sell the business to Paul and Trevor Johnston, who renamed it Bean Supreme. The Johnstons paid half the money at the time of sale and the remainder a year later; Elizabeth and Rick Chalmers worked for the Johnstons during that year. This business is also still in existence, although it was bought out by Sanitarium Health Food Co. in about Aug. 1986. Note: Trevor is no longer with the company; Paul sold the company to Sanitarium Health Foods.

From 1983 to 1986 Rick and Elizabeth had a commercial cleaning business, which suited the family structure very well, but was very unsatisfying workwise and environmentally.

In about 1980 or 1981 Austin Holden had started a largely macrobiotic import and wholesale business, Kiaora Naturals, at 374 West Coast Road, Glen Eden, in west Auckland. Holden soon started a very small shop in the corner of his warehouse and called it East West Wholefoods. For the first few years, his only customer was Harvest Wholefoods. "We kept him going."

Then in 1986 Rick and Elizabeth started East West Organics, taking over the building (and business) formerly occupied by Austin Holden and Kiaora Naturals. They knocked out all the walls, resulting in a much larger shop that specialised in organic food, with a big emphasis on fruit and vegetables.

They had no intention of making soyfoods. However there was suddenly an influx of Asian immigrants to New Zealand and Asian Tofu (usually made with calcium sulfate in aluminum pots) became widely available. By this time organics was really growing in New Zealand. Elizabeth and Rick wanted to stock organic tofu in their store, but they couldn't find a source. They talked with Trevor and Paul Johnston about making it for them, but the brothers felt there was no future in it, so they declined to do it.

So in 1996 Elizabeth and Rick started The Organic Soy Company, again in a small food factory out the back of East West Organics. They started making nigari tofu again—for their own store only. For the first time, they started to use organic soybeans, and as many other organic ingredients as they needed and could get. "We were right back where we started. And then exactly the same thing happened again. Once the word got out that organic nigari tofu was available again, people started coming from everywhere to buy it. It was not our intention to get back into the soyfoods business; we'd already sold our company. But we wanted the quality, so we had to make it ourselves." East West Organics is still operating today, although out of new premises (outgrew old one), and has just moved up the road slightly.

Their son Daniel joined them in January 1998, and in October of 1998, they sold East West Organics and moved

the Organic Soy Company to their current premises at Unit A, 2 Corban Avenue, Henderson, Auckland.

Elizabeth and Rick separated the same year, but continued on in the family business together. In 2001 their daughter Jesse returned from Europe and also joined us in the business. Later that same year Rick left the business to go to University and currently, Elizabeth, Daniel and Jesse are in joint ownership, with Rick still having a 10% share. They started using the brand names (the first being Tonzu) in 2002.

The business is growing slowly, currently producing tofu, tempeh, soy yoghurt, tofu burgers and teriyaki sauce, all 100% organic. Elizabeth has moved to part time as the younger generation are taking on the responsibility for the business. They currently have 3 full time employees as well as themselves, so are still reasonably small.

"We see a great future for the business and will probably outgrow our current premises within the next few years. We love making traditional soy products, and eventually hope to make miso and tamari, which will be export products as well as for the domestic market."

First sold commercially by the organic soy company: Tofu (1996), Teriyaki Tofu (1999), Tempeh (1999), Tofu Burgers (2001), Teriyaki sauce (2003).

All current labels and packaging are new, and have changed very much from the original. They once made two tofu spreads, one teriyaki and the other curry flavour. However it was hard to get a good enough shelf life out of them to make them viable, so reluctantly they discontinued them. They have also changed their burgers significantly. When they first produced a burger in 2001, they had 3 varieties: Garlic and Cheese, Sundried Tomato, and Feta, and Vegan. They have discontinued them all and now just make one that is actually Vegan, although they do not call it that. The burgers did not sell well; they are not certain why that was, maybe they were too expensive with all the organic ingredients and very labour intensive. So they have simplified and streamlined our current burger making the whole process more viable.

As the population of the whole of New Zealand is around 4 million and only 15% of them are vegetarian, they are playing to quite a small market, this can sometimes be quite a challenge. In the long term it will be sensible to develop products that they can export. Address: Founder and owner, The Organic Soy Company, Ltd., Unit A, 2 Corban Ave., Henderson, Waitakere, Auckland 0612, New Zealand. Phone: +64 9 835 3617.

3406. Tibbott, Seth. comp. 2007. Tofurky brand products overview: Natural foods segment. Hood River, Oregon: Turtle Island Foods, Inc. [36] p. 28 cm. [1 ref]

• **Summary:** A full-color booklet bound with a handsome, black ProClick plastic spine. On the front cover: "1980-2006: 26th anniversary Turtle Island Foods, Inc." "Sales data from: SPINscan Natural and SPINscan Conventional. 52

weeks ending December 30, 2006. All statistics are for the total U.S. market.

Contents (unnumbered pages): (1) "Turtle Island Foods honored by Inc. magazine: 2,240th fastest growing small business in the USA (of 6 million total). 159.7% growth rate over last 4 years. 57th fastest growing food and beverage company in the USA. 19th fastest growing food processor.

(2) About Tofurky products: 100% vegan. Based on organic soy products. Use non hexane extracted proteins. VejNews. Winner veggie awards—Best meat substitute.

(3) Natural foods market without Whole Foods (which no longer shares sales info with the industry). Growth of top ten brands ranked by dollar volume. Frozen and refrigerated meat alternatives. 52 weeks ended Feb. 24, 2007. Category: \$35.5 million. Growth: 4.7%. Turtle Island is the fastest-growing brand: 16.1%, followed by Quorn, Nates, Amys Kitchen, Morningstar Farms, Gardenburger, and Yves. Lightlife, Boca Foods, and White Wave all have negative growth.

(4) Natural foods market. Frozen and refrigerated meat alternatives. Top ten of 478 items by dollar volume. 52 weeks ending Dec. 30, 2006. #1. Quorn Chicken Style Nuggets. 10.6 oz. \$1,507,537. 5.6%. #2. Turtle Island Tofurky Italian Sausage (organic) 14 oz. \$1,262,616. 25.7%. #3. Quorn Chicken Style Patties. #4. Lightlife Gimme Lean Sausage. #5. Quorn Veg. Naked Chicken Cutlet. #6. Turtle Island Tofurky Deli Slices, Hickory Smoked. 5.5 oz. \$1,131,760. 19.2%. #7. Lightlife Smart Dogs. #8. Boca Original Patties Chicken Natural (4-pack). #9. Amys Burger California Veggie. #10. Quorn Meat Free Chicken Tenders.

(5) Natural foods market. Refrigerated meat alternatives, Top 10 of 260 items by dollar volume. 52 weeks ending Dec. 30, 2006. Turtle Island currently as the #1, #3, #9 and #10 best selling items among the 260. They are: Tofurky Italian Sausage. Tofurky Deli Slices Hickory Smoked. Tofurky Deli Slices Oven Roasted. Tofurky Kielbasa (sausages).

(6) Tofurky deli slices: Six features, incl. "Organic tofu based." The six types of deli slices are: Oven roasted, Hickory smoked, Peppered, Italian deli, Cranberry & Stuffing, "Philly-style" steak.

(7) Tofurky deli slices. Bar charts of refrigerated meatless deli sales, 2001-2006. For each year are given: Competitor #1. Competitor #2. Turtle Island. Overall category. "While the competition sales have been flat, Turtle Island has grown the subcategory 72 and has become the #1 brand.

(8) Deli slice standings. (9) Tofurky gourmet sausages. (10) Frozen and refrigerated meat alternatives. (11) Tofurky Jurky: 5 features.

(12) Top 10 jerky items (meat and meatless)—SPINscan natural channel. 52 weeks ending Feb. 24, 2007. The category is \$8.3 million. There are three vegetarian jerky among the top 10. Tofurky Jurky Original is the #2 seller and Tofurky Jurky Peppered is #7. The other vegetarian brand

(#6 seller) is Primal Strips Seitan Teriyaki.

(13) Tofurky "foot long" veggie dogs: 5 features, incl. organic tofu based. (14) "Open mouth, insert foot."

(15-17) Turtle Island tempeh: Five features.

(18-22) Happy Tofurky Day: Five features.

(23-35) Glossy color sell sheets, printed on both sides, with the following titles: (23-24) Happy Tofurky Day! (25-26) Brave New Tempeh. (27-28) Tofurky Jurky. (29-30) Frankly speaking Tofurky Franks & Links are the best! (31-32) There's 3 big new dogs in the house. (33-34) Go beyond the bun: Introducing Tofurky 'foot long' veggie dogs. (35-36) Tofurky deli slices: New look. Other Turtle Island glossy color sell sheets. Address: Founder and President, Turtle Island Foods, P.O. Box 176, Hood River, Oregon 97031.

3407. Brown, Allan; Brown, Susan. 2007. Re: Photographs of making tempeh at McDonalds Corners, Ontario, Canada. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 29-30. 14 p.

• **Summary:** Each of these color digital photos is accompanied by a caption or explanation. In chronological they are: 2005 summer—Allan and son Casey Brown cranking a wooden grain cleaner / winnower by hand. They soon motorized it.

2005 June—A color poster (see next page) celebrating Noble Bean's 25th anniversary of making tempeh commercially at R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Susan and Allan founded the company that June, having previously lived with Farm folks (and made tempeh) in Wisconsin, Tennessee, and Lanark, Ontario, Canada. To celebrate the occasion, Allan writes (March 2007): "We did have a toast and a large feeling of accomplishment. We advertised and ran stories in 3 mags [magazines] that get out all over Ontario... Then we ate some chocolate and had a distinct lightness of being experience."

2005 summer—Rosemary Kotze, a neighbor, with the wooden grain cleaner.

2006 Jan/Feb.—Noble Bean headquarters in the snow.

2006 spring—Susan and Allan Brown, pioneer tempeh makers in Canada, standing together, his arm around her shoulder, in their tempeh shop. Caption: "The boss and her assistant."

## 25th Anniversary

**Thank you tempeh  
lovers everywhere**

- The Canadian Original
- Certified Organic/OCPP
- Naturally Pure Water
- Fresh Frozen/Not Pasteurized
- Tasty Traditional Tempeh
- Genuine Slow Food

**Noble Bean Tempeh Shop**

[www.noblebean.ca](http://www.noblebean.ca)

2006 spring—Susan Brown carrying a tray of burger size tempeh to incubator; each plastic bag makes nine 3 x 3-inch burgers (see previous page).

2006 spring—Jake Dixon cranking cooked soybeans out of the kettle with a cool custom colander (under sheet of stainless steel that is used as a ramp between kettle and centrifuge).

2007 Jan.—Jake Dixon cleaning the centrifuge.

2007 March 18—Noble Bean's tempeh products displayed on a table at Manger Santé Montreal. Note recent Kosher certification symbol OVH (Ottawa). Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3408. Sullivan, Cheryl L.; Nash, Marilyn. 2007. Soy on the menu: Recipes for foodservice. Champaign-Urbana, Illinois: Illinois Center for Soy Foods. 52 p. Illust. No index. 26 cm. Series: Soy in the American Kitchen.

• **Summary:** This book has a creative format: (1) An outer color cover folds over the white spiral binding. (2) The pages are spiral bound across the top. (3) The bottom unfolds like a gusset so the book stands up by itself on a table with the pages angles slightly back on a table. (4) A CD-ROM comes with the book. Remarkably, the whole package sells for only \$3.00!

Contents: Bringing soy foods to the American table: Soy in foodservice, why choose soy?, soy foods, vegetarian and vegan recipes [in this book], recipe information, nutrient information, acknowledgements. Recipes: Appetizers. Breakfast. Breads. Salads. Soups. Side dishes. Main dishes. Desserts.

The recipes in this book use: Soy flour, soymilk, tofu, textured vegetable protein / TVP [texture soy flour], edamame, black soybeans, soy analogs [meat and dairy analogs].

Sidebars include: Biodiesel (p. 10). Research shows kids like soy in school lunches (p. 11). Uncommon soy foods:

Tempeh, miso, okara, natto. Are you soy savvy?: Why is soy flour added to baked goods? (p. 14) U.S. soybean production, yield, exports, and domestic usage (1979 vs. 2004) (p. 16). Industrial uses of soybeans: Soy candles, ink, biodiesel, soy cleaners, waterproofing sealants, soy silk (fabric). Are you soy savvy? Edamame (p. 19). INTSOY (p. 22). NSRL (p. 24). What is the soybean checkoff? (p. 27). WISHH initiative for soy in human health (p. 29, 30). Illinois Soybean Association (p. 34). What is okara? Why should you shake up a carton of soymilk? (p. 39). Make your own tofu (p. 47). Address: 1. M.A., R.D., Research Dietitian; 2. Ph.D., Project coordinator. Both: 170 National Soybean Research Center, 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: (217) 244-1706 or [www.soyfoodsillinois.uiuc.edu](http://www.soyfoodsillinois.uiuc.edu).

3409. **Product Name:** Tempeh.

**Manufacturer's Name:** Henrietta Vlугter

**Manufacturer's Address:** Greyton, 150 km East of Capetown, South Africa.

**Date of Introduction:** 2007. July.

**Ingredients:** Soybeans, water, starter culture.

**Wt/Vol., Packaging, Price:** 600 gm in perforated Self-sealing bag.

**How Stored:** Frozen.

**New Product—Documentation:** Talk with (phone call from) Henriette Vlугter [Dutch] in South Africa. She started selling her soy tempeh commercially about 3 weeks ago. She still has no label. She uses starter from Belgium. She teaches a yoga class in her village and she is involved in this project with her yoga teacher, to help him make a living.

3410. Pirello, Christina. 2007. Cooking the whole foods way: Your complete, everyday guide to healthy, delicious eating with 500 vegan recipes, menus, techniques, meal planning, buying tips, wit & wisdom. Revised and updated edition. New York, NY: Home Books. xiii + 354 p. Aug. Illust. (by Christina Pirello). Index. 24 cm. [38 ref]

• **Summary:** On the cover: "Includes 80 new recipes. Revised and updated—Now 100% vegan." This is basically a macrobiotic cookbook with 500 vegan recipes. One long chapter is titled "Tasty tofu, tempeh and seitan" (p. 115-40). Other soy-related recipes include: Basic miso soup (p. 35). Miso millet stew (p. 64). Minute miso soup (p. 82). Black soybean relish (p. 101; as black soybeans are simmered, they create their own gravy). Baked beans with miso & apple butter (p. 109). Tofu cheese (with miso, p. 118-19). Lemon miso sauce (p. 276). Also contains recipes for amasake, azuki beans, mochi, and sea vegetables.

The recipe for "Tofu cheese" (p. 118-19) is very creative and delicious.

About the author: A brief biography is on the rear cover; a color portrait photo is on the front cover. Address: Emmy Award-winning host of national public television's *Christina Cooks*.

3411. Berne, Amanda. 2007. Meaty alternatives: The accidental vegetarian. Chefs find winning ways to cook seitan, tempeh and tofu. *San Francisco Chronicle*. Sept. 19. p. F1, F4-F5. Food section.

• **Summary:** Many Bay Area restaurants cater to vegetarians and vegans. "It's all about fake meat." While tofu has become well known, chefs are now experimenting with tempeh and seitan. Contains many tempeh and seitan recipes. Address: Chronicle staff writer.

3412. **Product Name:** Artie's Tempeh Burgers, and Artie's Fresh Organic Soy Tempeh.

**Manufacturer's Name:** Artomoro Inc.

**Manufacturer's Address:** 125 N.W. 23rd Ave. #17, Gainesville, FL 32601. Phone: 352-226-5561.

**Date of Introduction:** 2007. September.

**Ingredients:** Organic soybeans, water, *Rhizopus oligosporus*.

**Wt/Vol., Packaging, Price:** Frozen: Burgers: 4 x 3 oz burgers per pack; Not vacuum packed. Tempeh: 1 lb retail.

**New Product–Documentation:** Talk with Sam Guy. 2008. Dec. 29. His son is Art and the tempeh business was Art's idea. The tempeh burgers were introduced in Sept. 2007 and the retail tempeh in Oct. 2007, one month later. His son delivers his tempeh locally on a bicycle—which has attracted media attention. The business provides detailed nutritional and microbiological info on its product; this as made it possible to attract large customers; the company has about 80 customers, big and small. Their tempeh is frozen but not pasteurized. See [www.artiestempeh.blogspot.com](http://www.artiestempeh.blogspot.com). On this website is a list of "Some of the fine grocery stores that are selling Artie's Tempeh." Many nice recipes are given (each with a color photo) on the website.

3413. Dorff, Erik. 2007. The soybean, agriculture's jack-of-all-trades, is gaining ground across Canada (Web article). <http://www.statcan.gc.ca/pub/96-325-x/2007000/article/10369-eng.pdf>. 14 p. Oct. 26. Printed 28 Jan. 2010. [7 ref]

• **Summary:** An outstanding overview and description of the current status of soybeans in Canada.

Contents: Introduction. Development of the soybean sector in Canada. Growth in soybean area across the country. The soybean—an international super-crop. Soybean dollars make sense to farmers. One crop, many uses. Food for human consumption. Animal feed. Industrial products. Soybean not a "has-bean" crop in Canada. The gift of the bean (a brief early history of the soybean in the USA and Canada).

Figures: (1) Gains in soybean area reflect crop development efforts (1951-2006; 000 hectares). (2) One crop many uses. Diagram showing uses as: Food for human consumption, animal feed, industrial products. (3) Bred in

Canada: soybeans of prominence. AC Proteus, Toki (for tofu), Nattawa (for natto), Maple Arrow (expanded soybean range out of southern Ontario), Maple Presto (the fastest maturing soybean). (4) Traditional soy foods: a brief guide (with a description of each). Edamame, miso, natto, soy sauce, soy milk, tempeh, tofu.

Tables: (1) Census of agriculture tracks growth in soybean area. Gives the area planted in Canada, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, and Alberta in the census years of 1976, 1981, 1986, 1991, 1996, 2001, and 2006. Soybeans were planted in each of these provinces in the three most recent census years. (2) Top 10 soybean producing nations (Average 2000 to 2005): After the USA, Brazil, and Argentina, China is 4th, India 5th, Paraguay 6th, Canada 7th, Bolivia 8th, Indonesia 9th. and Italy 10th. (3) Average soybean composition. Columns: Characteristic, oil, feed and meal beans, soy milk / tofu soybeans. For the latter: 100 seeds should weigh more than 20 gm. Colour very light with clear hilum, oil content 17-19%, protein content 44-47%, soluble sugar content 11-13%, insoluble sugar content 21-25%, minerals 5%. (4) Nutritional comparisons: Tofu and soy milk with ground beef and cow's milk.

Maps: (1) Soybeans in Canada (3 maps on one page). Map A shows that quite a bit of Quebec's soybean acreage lies south of the Saint Lawrence River, in the region named "Southern Quebec" (which includes the Eastern Townships at its southernmost area—its south-western end).

"Until the mid-1970s, soybeans were restricted by climate primarily to southern Ontario. Intensive breeding programs have since opened up more widespread growing possibilities across Canada for this incredibly versatile crop: The 1.2 million hectares of soybeans reported on the Census of Agriculture in 2006 marked a near eightfold increase in area since 1976, the year the ground-breaking varieties that perform well in Canada's shorter growing season were introduced" (p. 1).

"For years, soybeans were being grown in Canada but it wasn't until the Second World War that Statistics Canada began to collect data showing the significance of the soybean crop, with 4,400 hectares being reported in 1941. In fact, one year later the area had jumped nearly fourfold, to 17,000 hectares. In 1943 a program aimed at actively breeding soybeans suitable for southern Ontario was initiated.

"During the Second World War, North American manufacturers used oil from soybeans not only as a food but also to produce a wide number of industrial products including glycerine for the manufacture of nitroglycerine used for explosives and ammunition.

"By 1951, 62,967 hectares had been planted with soybeans (Figure 1), but they were still mostly confined to southern Ontario, the region with the longest and warmest growing season in Canada" (p. 2).

"It wasn't until varieties with earlier maturity and

improved tolerance of cooler climates were successfully developed—the ‘Maple’ series of soybean cultivars—that significant soybean production was pushed beyond southern Ontario. The 1976 release of the Maple Arrow variety in particular is credited with expanding the range of soybean production into eastern Ontario (Table 1).’’

The “growth between 2001 and 2006 was particularly notable in the Prairie provinces, with Manitoba’s soybean area increasing sevenfold to over 141,869 hectares and its more western neighbours, Saskatchewan and Alberta, beginning to actively pursue soybean production. These gains in area were the payoff from research aimed at finding and breeding soybean varieties suited to the Prairies as well as from crop promotion and market development” (p. 5).

“In the 2006 calendar year, farm cash receipts from soybeans amounted to \$680 million in Canada, making it the fifth most valuable field crop, trailing canola (\$2.5 billion), wheat (\$1.8 billion excluding durum), potatoes (\$899 million) and corn (\$753 million). In Ontario, where it was also the most planted crop, it was the top crop in terms of farm cash receipts, at \$547 million, eclipsing the receipts from corn (\$449 million) and wheat (\$275 million)” (p. 6).

“International trade contributed to the value of soybean receipts. Preliminary figures place soybean exports at over 40% (1.5 million tonnes) of the soybeans grown in Canada in the 2006 crop year (3.5 million tonnes).

“Of the four top buyers in 2006, Japan led the list, importing \$138 million in Canadian soybeans, followed by Malaysia (\$52 million), the Netherlands (\$49 million) and Iran (\$43 million). At the same time, Canada imported about 302,000 tonnes of soybeans valued at approximately \$81 million, 99% of which came from the United States” (p. 7). Address: Statistics Canada.

3414. *SoyaScan Notes*. 2007. Chronology of major soy-related events and trends during 2007 (Overview). Dec. 31. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Jan. 1—Soyfoods Center changes its name to Soyinfo Center.

Feb.—The Soy Connection for the Food Industry (Vol. 1, No. 1) starts to be published by United Soybean Board as a free e-newsletter. The subject of the first issue is Qualisoy soy oil.

March 6–8 International Soy Utilization conference in Bangkok, Thailand. It is organized by: The Institute of Nutrition, Mahidol University (INMU), ASA International Marketing (ASA IM), and the Soy Food Forum Southeast Asia (SFF).

April 4—Organizations listed in the *Soya & Oilseed Bluebook* are invited and enabled to update their own listings online. The update listing will appear as soon as the Bluebook editors review it and in the print edition in the fall. The Bluebook will continue to be printed as a bound book. Preferred customers will receive a free copy. Qualified

people or organizations in the industry who request a copy pay shipping and handling. Those outside the industry must pay for shipping and handling plus a \$95 fee.

June 11—The Hain Celestial Group completes its acquisition of the tofu and meat-alternatives business of WhiteWave Foods Co., a subsidiary of Dean Foods. The product line includes grilled and baked tofu, seitan, tempeh, etc. These products are expected to complement Hain Celestial’s existing meat alternatives under the Yves brand in Canada and the United States. The White Wave tofu business generated sales of approximately \$8 million in the last financial year.

July 11—Solae announces that it has completed its purchase of Cargill’s Prolisse line of isolated soy proteins (ISP; soy protein isolates), including the patented membrane technology for processing ISP.

Aug. 16—CPM (Waterloo, Iowa) acquires Crown Iron Works (Minneapolis, Minnesota). CPM is owned by Golbert Global, a private equity group. The acquisition doubles the size of CPM.

Aug. 7—SunOpta (incl. SunRich), headquartered in Canada, announces that it has acquired a soymilk plant in Heuvelton, New York, from ProSoya Corporation (Ottawa, Ontario). Allan Routh is president of the SunOpta Grains and Foods Group.

Sept. 11—Hain Celestial Group announces it will delay filing its annual report with the U.S. Securities and Exchange Commission (SEC) pending a review of its practices in granting stock options. Thus, the annual report was received by shareholders in April 2008, rather than the typical Nov. 2007.

3415. Turtle Island Foods. 2007. Cirque du Tofurky (Painted steel lunch box) (Memorabilia). P.O. Box 176, Hood River, Oregon 97031. Dec. 7 by 8¼ by 4 inches deep.

• **Summary:** This colorful sheet metal lunch box, with a sturdy plastic handle, is 7 by 8¼ inches by 3.75 inches in deep. On the lid is the embossed (raised), a happy-looking, colorful “Wild” Tofurky” symbol happily dancing in a circus ring. On the four sides are color photos of Tofurky product labels, each with wheels like cars on a train, being pulled by a locomotive. On the bottom is a circus tent. On it, in big letters, are the words “Meatless. Gourmet. Delicious.” A “Wild Tofurky” symbol is walking overhead on a tightrope, while three others dance on the ground.

How will Turtle Island use this? Seth Tibbott (president) writes on 24 Jan. 2008. (1) Give to buyers. (2) Give to customers who send in 5 UPC codes, etc. (3) My main idea though is to sell to the public through perhaps a “Tofurky Foundation” that would send all of the proceeds to worthy causes and non profits around the world. We bought 5,000 lunchboxes and I have 3,000 in my barn now in Trout Lake. Plan is to take orders here and have my son Luke and his other teenage friends do order fulfillment and possibly run

that side of things including having input on where the money goes. Important to introduce kids to non profits which along with English Majors are the two best things about America. Address: Hood River, Oregon.

3416. Tamang, Jyoti Prakash. 2007. Fermented foods for human life. In: Ashok K. Chauhan, A. Varma, Harsha Kharkwal, eds. 2007. *Microbes for Human Life*. New Delhi, India: I.K. International Publishing House. And: Tunbridge Wells, Kent, England: Anshan. xvi + 678 p. See p. 73-87. 25 cm. [77 ref. Eng]

• **Summary:** Contents: Abstract. Key-words. Introduction. 1. Enrichment of diet. 2. Bio-preservation. 3. Bio-enrichment of nutritional value. 4. Degradation of undesirable compounds. 5. Improvement of lactose metabolism (for people suffering from lactose intolerance or malabsorption). 6. Probiotic function. 7. Production of enzymes (which break down / hydrolyze complex molecules, making them easier to digest). 8. Antimicrobial properties (help preserve foods and destroy pathogens). 9. Anticarcinogenic properties. 10. Reduction in serum cholesterol (from consumption of fermented milks). 11. Therapeutic values (koumiss, kvass). Conclusion.

This article is primarily about the benefits of fermentation and fermented foods, as well as about functional foods and probiotics.

The following fermented soyfoods are mentioned: kinema, natto, tempe [tempeh].

Note: Another list of the primary benefits of fermented soyfoods from a PowerPoint presentation by Jyoti Tamang in 2010 is as follows: 1. Improvement of flavour and aroma. 2. Bio-enrichment of nutritional value (vitamins). 3. Improved digestibility. 4. Degradation of anti-nutritive factors. 5. Improvement in bio-availability of minerals. 6. Production of enzymes. 7. Low-fat and low-cholesterol food. 8. Anti-allergy. 9. Antioxidant activities (anticarcinogenic properties). 10. Therapeutic values: prevention of osteoporosis, heart disease. 11. Low-cost high plant protein food. Address: Food Microbiology Lab., Sikkim Government College, Gangtok, Sikkim 737 102, India.

3417. Berley, Peter; Singer, Zoe. 2007. *The flexitarian table: Inspired, flexible meals for vegetarians, meat lovers, and everyone in between*. Boston, Massachusetts: Houghton Mifflin. viii + 342 p. Illust. (color photos by Quentin Bacon). 25 cm.

• **Summary:** A “flexitarian” (noun) is: “1. A person who is mainly a vegetarian but who occasionally eats fish or meat. 2. Someone who is not a vegetarian but enjoys meatless meals.”

Provides menus and recipes for the “flexitarian,” or “flexible vegetarian” family, offering ideas for how to prepare vegetarian and meat versions of entrees simultaneously without extra effort and menus based on seasonally available foods (Publishers blurb).

Contents: Introduction: What’s a flexitarian? How to use this book. About the ingredients. Poultry. Meat. Fish and Seafood Vegetables. Tofu, tempeh, and seitan. Dairy. Eggs. Beans. Seeds and nuts. Spices. Cooking with the Seasons: Chapter 1: Spring menus. Chapter 2: Summer menus. Chapter 3: Fall menus. Chapter 4: Winter menus.

Ingredients include miso, tempeh, tofu, sea vegetables, and seitan.

Note: This is the earliest book seen (June 2010) with the word “Flexitarian” in the title. Address: Author and former chef of the all-vegan Angelica Kitchen in New York City.

3418. Blereau, Jude. 2007. *Wholefood: heal—nourish—delight*. Philadelphia, Pennsylvania: Running Press. 332 p. Illust. Index. 23 x 19 cm. [8 ref]

• **Summary:** This cookbook is not vegetarian. Vegan recipes are so labeled. One chapter, titled “Soy” (p. 92-110) is divided into two parts: Tofu and tempeh The index contains 18 entries for tofu, 14 for tempeh, 3 each for miso and tamari, 2 each for miso soup, soy beans, 2 and soy milk, and 1 each for soy flour, teriyaki marinade, and textured vegetable protein.

“Jude Blereau is a natural foods chef, food coach, and cooking teacher who has been involved with the organic and wholefoods industry for more than 15 years. She first became involved in the natural food industry while living in the U.S. in the late 1980s. In 1997, Jude co-founded The Earth Market, a much loved wholefood store and cafe; in Perth, Western Australia. Her focus is on helping people learn about good food-what it truly is, where to get it, how to use it-and to give them the tools and information to make healthy eating a part of their everyday lives. Blereau lives in Australia.” From publisher’s description. Address: Natural Foods Chef, Australia.

3419. Clark, Emily. 2007. *Tempting tempeh*. Doncaster East, Victoria, Australia: Aduki Independent Press. 48 p. Illust. (photos by Rhonda Bonnici). \*

• **Summary:** A tempeh cookbook, with 20 vegan / vegetarian tempeh recipes, color photos, and a glossary.

3420. Freedman, Rory; Barnouin, Kim. 2007. *Skinny bitch in the kitch: kick-ass recipes for hungry girls who want to stop cooking crap (and start looking hot!)*. Philadelphia, Pennsylvania: Running Press. 192 p. Illust. Index. 20 cm.

• **Summary:** This vegan cookbook contains over 100 recipes. Both authors are women and both previously wrote the best-selling manifesto *Skinny Bitch*, a foul-mouthed book that “exposed the horrors of the food industry while inspiring people to eat well and enjoy food.”

The index contains 26 entries for tofu, and 1 each for seitan, tempeh, and textured soy protein.

3421. Ismiatun, -. 2007. *Kudapan berbahan tempe*. Cet. 2

3422. Moskowitz, Isa Chandra; Romero, Terry Hope. 2007. *Veganomicon: the ultimate vegan cookbook*. New York, NY: Marlowe & Co. Distributed by Publishers Group West. xvii + 298 p. + [16] unnumbered pages of plates. Illust. (some color). 26 cm

• **Summary:** A hefty collection of 250 recipes, with a good glossary. Both authors are young women. One section is titled “Tofu, tempeh, and seitan” (p. 125-33) with these recipes: Chile cornmeal crusted tofu. Basic broiled tofu. Tangerine baked tofu. Curried tofu. Baked BBQ tofu. Marinated Italian tofu. Marinated Asian tofu. Hot sauce glazed tempeh. Smoky grilled tempeh. Simple seitan [homemade]. Seitan cutlets. Chickpea cutlets.

Tempeh is mentioned on 21 pages, tofu on 21, seitan on 20, miso on 7, and edamame on 1 page.

Five icons are used with the appropriate recipes in this book: (1) Soy-free. (2) Gluten free. (3) Low fat / reduced fat. (4) Under 45 minutes. (5) Supermarket friendly. Address: Brooklyn & Queens, New York.

3423. Oliveira, Karla. 2007. *Tassajara cookbook: lunches, picnics & appetizers*. Layton, Utah: Gibbs Smith. 224 p. Illust. (color). Index. 26 cm. [1 ref]

• **Summary:** From the Tassajara Zen Mountain Center, a beautiful Buddhist monastery north of the Carmel Valley, in California’s Ventana Wilderness of Los Padres National Forest in the Santa Lucia Mountains. Full-page color photos accompany many recipes. On page 15 is a color photo of the beautiful Tassajara kitchen building with natural stone walls 18 inches thick and entire trees for rafters.

Soy related recipes: Artichoke Walnut Spread (with ½ cup firm silken tofu, or ricotta cheese, p. 25). Creamy tempeh [spread] with garlic and dill (p. 62). Tempeh spread with capers and onions (p. 66). Western-style shira-ae (with 6 ounces soft tofu, mashed, p. 65). Creamy tofu dip (p. 66). Pâté tempeh (p. 76).

One chapter is titled “Tofu, tempeh & egg salad sandwich fillings” (p. 85-95): Herb-crusted tofu. Happy tuna salad (with tempeh). Eggless egg salad (with tofu). No egg salad (with tofu). Tofu salad sandwich spread. Mexican tempeh salad. Tofu mayonnaise. Tempeh salad (p. 94).

Tofu “bits” in Kosho’s secret tenzo sauce (p. 95). Miso sauce (p. 109).

Another chapter is “Marinades for tofu, tempeh & vegetables” (p. 117-26; speaks of a “block” of tofu): Orange balsamic marinated tofu. The Tassajara marinated tofu. Tofu teriyaki. Tofu marinated with parsley and olive oil. Honey-mustard tofu. Hoisin marinade (with soy sauce).

Edamame salad (p. 132). Cabbage salad with miso “floating cloud” dressing (p. 140). Japanese marinated salad with diced tofu (p. 141).

In the Index is a long entry for “Vegan cookies” and another for “Vegan spreads.” Address: M.S., R.D., Nutritionist and professional chef, San Francisco Bay Area.

3424. Reinfeld, Mark; Rinaldi, Bo. 2007. *Vegan fusion world cuisine: extraordinary recipes & timeless wisdom from the celebrated Blossoming Lotus restaurants*. New York, NY: Beaufort Books. 243 p. Foreword by Dr. Jane Goodall. Illust. (color photos). Index. 26 cm.

• **Summary:** A beautiful, inspirational book. Chapter 8 is titled “Tempeh, tofu & seitan” (p. 114-33). The index contains 28 entries for tofu, 13 for tempeh, 4 for seitan, 3 for soy milk, and 2 for miso.

Includes a resource guide, a good glossary with entries for miso, nama shoyu, seitan, shoyu, soy milk, tamari, tempeh, textured vegetable protein, and tofu.

Note: Unfortunately the quotation near the beginning, supposedly by Albert Einstein, is a mish-mash by various wise writers including Albert Schweitzer. Address: 1. Founding chef, Blossoming Lotus Restaurant (Kaua’i, Hawaii), and author; 2. Author and teacher. Both: Kaua’i, Hawaii.

3425. Yeager, Selene. 2007. *The doctor’s book of food remedies: the latest findings on the power of food to treat and prevent health problems—from aging and diabetes to ulcers and yeast infections*. Fully revised and updated. [Emmaus, Pennsylvania]: Rodale Inc. Distributed to the trade by Macmillan. xii + 707 p. Index. 24 cm. 1st ed. 1998.

• **Summary:** The chapter titled “Soy foods: Help for weight loss” (p. 579-83) explains that in the late 1990s the media strongly soy, made it into a sort of miracle food or cure, and rode the wave up, then after about 2005 when scientists found that soy was not a miracle food, the media decided that “The party’s over,” and they rode the wave down. In 2005 soy foods faced big setbacks, when a U.S. government panel said there wasn’t clear evidence that soy could guard against heart disease, ease menopause, or protect bones from osteoporosis. “In response the National Institutes of Health (NIH) said it would stop paying for new soy studies.” That fall, the soyfoods industry withdrew a petition that asked the FDA to permit food labels that claim that soy protein helps prevent cancer.

This chapter explains: “But flash forward to 2006, where one dour headline—‘Soyonara—tells the sad tale. Has this promised [by the media] superfood become a has-bean?’ Maybe not.”

It proceeds to give a fair assessment of what current science says can and cannot be expected of soyfoods. Cannot (by itself): Significantly reduce cholesterol. Protect against breast or prostate cancer. Build bones or reduce osteoporosis. Cool hot flashes or reduce menopause symptoms. This is followed by a long list of its many well-known health benefits. “That’s good news because soy seems to be here to

stay.” It has gone mainstream, and sales of soy foods in the United States rose dramatically from \$300 million in 1992 to \$3.9 billion by 2004—a 13-fold increase in 13 years.

The section titled “The joy of soy” gives brief definitions of some of the most popular soyfoods: Edamame, soy nuts, meat substitutes [sic, alternatives], soy flour (made from roasted, ground soybeans), soy milk, tempeh, and texturized soy protein.

A sidebar titled “Doctor’s top tip” recommends eating soy (such as edamame, tofu, soy nuts, and some soy burgers) in place of foods high in animal fats. The head of the American Heart Association’s nutrition committee reminds us: “Heart disease is a major problem—using soy protein instead of animal protein is still a win.”

Dr. Mark Messina, a prominent soy researcher, says there are many reasons to add soy to your diet from just a basic nutritional point of view: (1) Soyfoods such as tofu or tempeh are high quality, low-cost, versatile sources of protein. (2) A half cup of tofu, curdled with calcium sulfate, can provide more than 25% of the Daily Value (DV), plus a significant amount of iron. (3) Soyfoods contain little of the artery clogging saturated fats found in meat and many dairy products.

Contains recipes for: Soy fruit smoothie (with vanilla-flavored soy beverage, p. 583). Mocha Tofu Pudding (with 2 packages {10½ ounces each} silken tofu and 2/3 cup packed light brown sugar).

The index contains 34 entries for soy, 13 for tofu, 4 for tempeh, 3 entries for miso, 2 entries each for edamame and for soy milk, 1 entry each for soy nuts soy yogurt, and textured soy protein.

Note: This book is not vegetarian.

3426. Tibbott, Seth. 2008. Update on Tofurky and Turtle Island (Interview). *SoyaScan Notes*. Jan. 17. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** In about 1998 Turtle Island changed from being mainly a tempeh company to being mainly a meat alternatives company; that year sales of Tofurky-brand products passed sales of tempeh and tempeh products. Today, tempeh products (including two burgers, which are meat alternatives) account for only 7.2% of sales. In 2002 tempeh and products accounted for 18% of company sales.

Seth and his step-son, Jamie (who has a PhD and is very bright) are working on an innovative new process for making tempeh. Seth believes that the flavor and texture of the finished product maybe slightly improved. Seth still considers homemade tempeh, with its magical snowy white mycelium on top, to be the very best. Vacuum-packing gives it a slight bitterness, which degrades the quality about 30%. Freezing is much better, as it lowers the quality less than 10%.

Tempeh is making a comeback nationwide. Sales were up 11% in 2007 compared with the 52 weeks before Dec.

2007. Seth can think of five possible reasons for this. Tempeh is: (1) a whole-grain food; (2) A fermented food, with the many benefits of fermentation; (3) A vegan meat alternative at a time when veganism is growing in the USA; (4) A low sodium food—all meats are high in sodium; (5) Gluten free.

In Dec. 2007 Tofurky got a great deal of free publicity. Citigroup, which lost about \$10 billion in the 4th quarter of 2007, ran a very nice, positive 2-page color ad featuring “tofurkey” tofu” as the center of a family’s Thanksgiving meal. It appeared at the very front of magazines such as *People*, *Time*, *Newsweek*, *Gourmet*, *The New Yorker*, etc. Note that Citigroup carefully misspelled and lowercased “tofurkey.”

In 2007 Turtle Island sold 275,634 Tofurky Roasts, up 37% from the 201,000 sold in 2006. This was the largest percentage increase since 1999 and is a key indicator of vegetarianism in America. In addition, Turtle Island was No. 2,240 in the INC, 5,000 fastest growing small, independently held companies in the USA and the 19th fastest growing independent food company. Seth’s company has grown 159% over the last four years.

Seth is always surprised and disappointed at the disconnect between environmental groups and vegetarianism. Such groups almost always serve plenty of meat at their various gatherings—as if to say that they are just regular American folks out to save the environment.

Steve Demos recently launched Goodbelly, an organic fruit juice containing a patented probiotic culture; he has apparently started a new company. Address: President and Founder, Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

3427. **Product Name:** Tempeh [Spicy Veggie, Organic Five Grain, Organic Soy].

**Manufacturer’s Name:** Turtle Island Foods, Inc.

**Manufacturer’s Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 2008. January.

**Ingredients:** Spicy Veggie: Organic soybeans, water, dehydrated red peppers, dehydrated organic onions, habanero peppers, organic apple cider vinegar, starter culture (*Rhizopus oligosporus*). Soybeans certified organic by Oregon Tilth.

**Wt/Vol., Packaging, Price:** 8 oz. paperboard box.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Labels (boxes) sent by Seth Tibbott. 2008. Jan. 22. This is a very attractive and well-designed box / label. 5.5 by 4.25 by 1 inch deep. Full color. Front panel of Spicy Veggie shows tempeh slices and veggies wrapped in a burrito on a yellowish-beige plate. Text: “Made with organic soybeans. Family owned and independent since 1980. Gourmet, meatless, and delicious! Gluten free. Vegan. Keep refrigerated or frozen. Rear panel: Nutrition facts.

Ingredients. Recipe for Tempeh fajitas. Cookbook offer (*The Tempeh Cookbook*, by Dorothy Bates).” Note: This tempeh is packed in recycled paperboard cartons.

3428. Wulandari, Fitri. 2008. Indonesian tempeh makers struggle as soybean prices rise (News release). Feb. 4.

• **Summary:** “Jakarta (Reuters)—Indonesia’s traditional soybean cake, known as tempeh, is a source of livelihood for millions of people, many of whom are now struggling to cope with spiraling soybean prices.”

The soybean is a staple in Indonesia. Small tempeh makers are finding it difficult to pass on the higher cost of ingredients to their customers. So their own earnings are dropping.

The price of imported soybeans is now double what it was a year ago. In an effort to control these rising food prices, the Indonesian government announced on Friday that it would partially subsidize the price of soybeans for six months, paying about 13% of the imported price.

Nevertheless, the soaring prices of staple foods have sparked protests among producers, sellers and consumers who are also trying to cope with a rising prices of many basic foods, including cooking oil.

New statistics from Indonesia’s Industry Ministry show that there are 92,400 household workshops or small factories that make soyfoods; 60% of these (55,440) make tempeh.

Indonesia uses 2 million tonnes (metric tons) of soybeans a year; 70% of these are imported from the United States, the world’s leading soybean exporter.

Until the late 1990s, Indonesia depended almost entirely on domestically-grown soybeans to fill its needs. Then the International Monetary Fund instituted reforms in which the state procurement agency lost its monopoly; imported soybeans began to flood the market.

In 1992 production of soybeans in Indonesia reached its peak of 1.87 million tonnes; by 2007 it had decreased by 67.5% to 608,230 tonnes as a result of cheaper soybean imports, the higher quality of imported soybeans, lack of incentives for farmers, and poor, small-scale farming practices.

The government has tried to soften the impact of surging prices by discontinuing its 10% import duty on soybeans. However some believe that this change will only benefit importers, who will not necessarily pass the 10% they now save on to the food producers.

Some Indonesian’s are learning to live without their favorite protein source—tempeh; others say they have no alternative because tempeh is much less expensive than chicken.

Today \$1 = 9.285 rupiah.

3429. Shurtleff, William; Aoyagi, Akiko. 2008. *Le livre du tofu: La source de protéines de l’avenir—dès maintenant!* [The book of tofu: Protein source of the future—now!

Translated from the English by Nathalie Tremblay].

Varennes, Quebec, Canada: Éditions AdA Inc. 430 p. Illust. by Akiko Aoyagi. Index. Feb. 28 cm. [53 ref. Fre]

• **Summary:** Contents: Preface. Acknowledgements. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food. 3. Getting started. Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History, cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*), kinako (roasted full-fat soy flour), soybean sprouts (*daizu no moyashi*), natto (sticky fermented whole soybeans, with “gossamer threads”), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein (TVP), soy oil products). 5. Gô (a thick white puree of well-soaked uncooked soybeans). 6. Okara or Unohana. 7. Curds and whey. 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding).

9. Deep-fried tofu: Thick agé or nama agé, ganmo or ganmodoki (incl. *hiryoze / hiroso*), agé or aburagé (incl. “Smoked tofu,” p. 197). 10. Soymilk. 11. Kinugoshi (“*Kinu* means ‘silk’; *kosu* means ‘to strain’; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk”). 12. Grilled tofu. 13. Frozen and dried-frozen tofu. 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha’s chicken, Buddha’s ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}; see p. 258 for illustrations of many meat alternatives, incl. Buddha’s fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig’s head, and molded ham). 16. Special tofu.

Part III—Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way. Appendices: A. Tofu restaurants in Japan (many are vegetarian). B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe {Germany, Austria, Belgium, Denmark, Finland, France, Ireland, Italy, Netherlands, Portugal, Spain, Switzerland, UK, Wales}, and 3 in Latin America {Brazil, Colombia, El Salvador, Guatemala, Mexico}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-

ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for "Mock tuna salad with deep fried tofu." Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549 USA. Phone: 925-283-2991.

3430. Welters, Sjon. 2008. Re: Soyfoods in western Europe. Letter to William Shurtleff at Soyinfo Center, March 24. 2 p. Handwritten.

• **Summary:** Sjon just returned from a trip to Europe (to visit parents and inlaws) where he collected some soyfoods labels. He "noticed a proliferation of soyfoods, especially of tofu products."

Rinatura is a brand he had not seen before. Also: Rinatura.de, and Rila. They sell tofu sterilized in a glass jar for 2.29 euros for 130 gm drained weight.

Some prices: Yakso Tempeh 1.95 euros for 350 gm. Viana Tempeh 3.49 euros for 200 gm. Viana tofu (nigari) 1.99 euros for 300 gm. Demeter tofu (nigari, calcium sulfate) 2.29 euros for 300 gm in Germany or 2.45 euros for 300 gm in the Netherlands. Provamel tofu (nigari, calcium sulfate) 1.99 euros for 400 gm in Germany or 2.20 euros for 400 gm in the Netherlands. These are both packaged 2 x 200 gm in one box. Taifun tofu (nigari) 1.49 euros for 225 gm in Germany. Taifun tofu (calcium sulfate) 1.99 euros for 400 gm in Germany. Taifun silken tofu (*seiden tofu*, nigari only) 2.59 euros for 400 gm in Germany.

Svadesha.de in Munich is another new name, yet apparently the oldest tofemaker in Germany.

Alpro and Provamel are all over with their soymilk.

3431. Johnson, Katherine Quimby. 2008. Fresh and full of beans: Vermont Soy. From the good earth. *Green Edible Mountains* No. 2. Winter. p. 18-21.

• **Summary:** About Vermont Soy, which makes four flavors of soy milk and a firm tofu in Hardwick, Vermont. Their products debuted in the summer of 2007 at the Hardwick and Waitsfield farmers markets. The company grew from the desire of co-owner Todd Pinkham to turn the tempeh he made at home into a commercial venture. Todd's partner

is Andrew Meyer. With support and technical assistance from the Innovative Agricultural Initiative developed by the University of Vermont (UVM), about 6 farmers around the state (in Alburgh, Highgate, Bridport, Orwell, Glover, and Hardwick) have begun growing food-grade soybeans organically. Extra-firm tofu, Vermont Soy's newest product, is curded with nigari. The soy plant in Hardwick is located next to Meyer's other venture, Vermont Natural Coatings; tofu is made there every Thursday. Tofu recipes are given for: Chinese noodle soup. Pumpkin pie.

Color photos show: (1) James Lewinsky, Sophia Smith, Andrew Meyer, and Todd Pinkham holding a Vermont Soy sign. For more: [www.vermontsoy.com](http://www.vermontsoy.com). (2) Bright yellow soaked soybeans in a large metal bowl. (3) A thermometer held above hot soymilk. (4) Yoshikawa Maruzen nigari, for curding tofu.

3432. Liu, KeShun. 2008. Food use of whole soybeans. In: Lawrence A. Johnson et al. eds. 2008. Soybeans: Chemistry, Production, Processing, and Utilization. Urbana, Illinois: AOCS Press. viii + 842 p. See p. 441-481. Chap. 14. [85 ref]

• **Summary:** Contents: Introduction. Non-fermented soyfoods: Soymilk (traditional soymilk, modern soymilk {techniques to reduce beany flavors, formulation and fortification, homogenization, thermal processing, and packaging}), tofu (preparation methods, factors involved in tofu-making {soybean varieties, storage and pretreatment, solids concentration, heating, type of coagulants, coagulant concentration, coagulation temperature, coagulation time, process automation, packaging}), varieties of tofu {silken tofu, regular and firm tofus, varieties of tofu products}), green vegetable soybeans, soybean sprouts, yuba, okara, roasted or cooked soybeans. Fermented soyfoods: Terms (Koji {fermentation, koji starter, inoculum}), fermented soy paste (preparation method {preparing rice koji, treating soybeans, mixing and mashing, fermenting, pasteurizing and packaging}), processing principles), soy sauce (preparation method {treating raw materials, koji making, brine fermentation, pressing, refining}), processing principles, chemical soy sauce), Japanese natto (preparation method, processing principles), Indonesia tempeh (processing method, processing principles), fermented soymilk, fermented tofu (preparation method, processing principles), soy nuggets (Chinese douchi, Japanese hamanatto). Conclusion.

Figures show: (1) Flowchart of a traditional Chinese method for making soymilk and tofu. (2) Photo of savory tofu dices. (3) Photo of soy sprouts. (4) Photo of yuba (soymilk film). (5) Photo of Chinese jiang and Japanese white and red miso. (6) Flow chart of a common method for making Japanese rice miso. (7) Photo of Japanese natto. (8) Flow chart of a traditional Indonesian method for making tempeh. (9) Photo of Chinese douchi (soy nuggets or fermented whole soybeans). Address: Research Chemist,

U.S. Dep. of Agriculture, Agricultural Research Service, Grain Chemistry and Utilization Lab., Aberdeen, Idaho 83210.

3433. Hogervorst, E.; Sadjimin, T.; Yesufu, A.; Kreager, P.; Rahardjo, T.B. 2008. High tofu intake is associated with worse memory in elderly Indonesian men and women. *Dementia and Geriatric Cognitive Disorders* 26(1):50-57. June. [28 ref]

• **Summary:** High consumption of tofu was associated with worse memory, while high consumption of tempeh was independently associated with better memory. Tempeh contains high levels of phytoestrogens, but (due to fermentation) also contains high folate levels which may exert protective effects. But some of the tofu was made using formaldehyde as a preservative. Address: 1. Dep. of Human Sciences, Brockington Building, Loughborough Univ., Loughborough LE11 3TU, UK; 2. Univ. of Respati Health Inst., Yogyakarta, Indonesia; 3. Oxford Institute of Ageing, Oxford, Somerville College Woodstock Road, Univ. of Oxford, Oxford, UK; 4. Center for Health Research, Univ. of Indonesia, Jakarta, Indonesia.

3434. Messina, Mark J. 2008. Update on research on the health benefits and risks of soy (Interview). *SoyaScan Notes*. July 26. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Analysis of the strengths and weaknesses of the Harvard study showing an association between isoflavone intake and sperm counts, by Cavarro et al., and of the Indonesian study showing an association between tofu consumption (but not tempeh consumption) and mental function. In the latter study formaldehyde used as a preservative in tofu may have caused the problem.

Different basic types of scientific studies involving humans: Epidemiologic studies, case control, cross sectional, prospective (Framingham), intervention, in vitro, in vivo, food frequency questionnaires. Pilot studies vs. full studies.

Second incarnation of the Harvard study. Biological basis for the Harvard study. Effect more pronounced on overweight people. Four biggest weaknesses in the Harvard study: (1) Only looked at 15 different soyfoods but not at other foods consumed, nor at exercise. (2) Four quartiles based on soy intake did not show a dose response. (3) In the 2nd group soy intake was too low to be significant. (4) Ejaculate volume increased.

Another very important study by J.H. Mitchell in 2001 was titled "Effect of a phytoestrogen food supplement on reproductive health in normal males" (Clinical Science (London)). Involved 12 men

Vittorio Unfer has done important research and a case study on use of soy isoflavones to increase sperm count and fertility. A five-year study on endometrial hyperplasia is of long-term concern.

Feminizing effect is a big unknown. What kind of study

could be designed. Two cups of Silk contains 50 mg of phytoestrogens.

Mark is organizing a soy symposium in Japan in November. At least 12 of the papers are good enough to be the subject of news coverage.

The scientific health evidence in favor of a vegetarian diet over a prudent diet that contains meat is no longer impressive. The evidence in favor of fruits and vegetables has grown weaker.

The evidence that soy is good for health is stronger now than 5-10 years ago, but in a more modest way. But the industry has gotten so small: ADM, Solait, and Silk (\$400 million retail sales). Revival Soy has reformulated many of its products. Address: PhD, 439 Calhoun St., Port Townsend, Washington 98368. Phone: 360-379-9544.

3435. Brown, Allan; Brown, Susan. 2008. Re: Photographs of improved technology for making tempeh at McDonalds Corners, Ontario, Canada. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 21-22. 2 p.

• **Summary:** Each of these two color digital photos is accompanied by a caption or explanation. They are: (1) Improved bag puncher. In the western world, many companies incubate their tempeh in perforated plastic bags. This bag puncher, designed and built by John Drozdowski, Allan's equipment engineer, was first used in Sept. 2007. Allan says: "The holes we punch in our bags are much bigger than the industry standard." He thinks every tempeh maker in North America "gets their bags or rolls in tube stock punched with really small perforations from the same supplier." That size of hole did not give us the growth and quality of tempeh we are used to."

(2) Improved soybean dehuller. Allan writes: Here is a picture of a dehuller we designed from that article you sent to us from *Soyfoods magazine* [Fiering, Steve. 1981. "Low technology soybean dehuller." *Soyfoods*. Winter. p. 52]. Wow! This knocks 2/3 of our time off of our old system of dehulling. Plus very little clean up and virtually no dust in

the air. Note dust collector sucks the hulls out of the falling split beans from the grinder and into the lower bag. Upper bag is for air release. We now can do this inside our shop instead on the cold, cold porch. Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3436. Mintz, Sidney W. 2008. Fermented beans and western taste. In: Christine M. Du Bois, C.-B. Tan, and S.W. Mintz, eds. 2008. Urbana, Illinois: University of Illinois Press. viii + 337 p. See p. 56-73. [37 ref]

• **Summary:** Contents: Introduction. The distribution of fermented legumes in local food systems. The absence of fermented legumes from western food history. The future of fermented legumes in the West. Address: Johns Hopkins Univ., USA, emeritus professor of anthropology..

3437. Sidharta, Myra. 2008. Soyfoods in Indonesia. In: Christine M. Du Bois, C.-B. Tan, and S.W. Mintz, eds. 2008. Urbana, Illinois: University of Illinois Press. viii + 337 p. See p. 195-207. [17 ref]

• **Summary:** Contents: Introduction. The promotion of soybeans. The story of tofu in Indonesia. Indonesia's *Oncom*. *Tempe*—what is it, and how is it made? The story of *Tempe*. Other soyfoods. Soy products as a source of proteins. Conclusion. Notes. Address: University of Indonesia, lecturer of Faculty of Letters..

3438. Associated Press 2008. As prices for U.S. soybeans rise, so does hunger in Indonesia: The country relies on imports to produce staples such as tempeh and tofu. But with costs soaring, producers and vendors are cutting back or going out of business. *Los Angeles Times*. Nov. 2.

• **Summary:** Many of Indonesia's poor have long relied on tempeh and tofu and tasty, nutritious, low-cost sources of protein and basic food. But now the cost of the two foods has doubled, driven by the soaring price of soybeans imported from the United States.

The same problem is found in countries worldwide. During the past 10 years, Indonesia—a nation of 220 million people—went from growing more than half its soybeans, to importing 70% of its needs from the USA. This is the negative side of globalization. Address: Los Angeles Times.

3439. Sudiarno, Tarko. 2008. Rustono: King of tempeh in Kyoto. *Jakarta Post (The) (Indonesia)*. Dec. 1. [www.thejakartapost.com/news/2008/12/01/rustono-king-tempeh-kyoto.html](http://www.thejakartapost.com/news/2008/12/01/rustono-king-tempeh-kyoto.html).

• **Summary:** A color photo shows Rustono looking very happy and standing next to a tempeh making machine that he ordered from Bantul, Yogyakarta. Rustono, age 40 was born in Purwodadi, Central Java, Indonesia. He now lives in a Japanese village about an hour's drive from, Kyoto, Japan, with his wife and their two children. He likes living there, and finds the people friendly, just like villagers in Java.

Previously a bellboy for a star-rated hotel in Yogyakarta, he now has about 350 tempeh customers in Japan. One winter, in the snow, he and his wife built their own tempeh factory, 4 by 8 meters. Some 60% of his customers are Japanese. Address: Staff writer, Japan.

3440. **Product Name:** [Natural Way Tempeh].

**Foreign Name:** Natural Way Tempeh (Marinovany, Party, Uzeny).

**Manufacturer's Name:** Vyrobce: Oldrich Plsek.

**Manufacturer's Address:** Sazovice 185, 763 01 Myslocovice, CR [Czech Republic]. Phone: 577 663 6665.

**Date of Introduction:** 2008.

**Ingredients:** Incl. soybeans.

**Wt/Vol., Packaging, Price:** 200 gm. Prices: 39.80, 35.90 and 42.90.

**How Stored:** Refrigerated.

**New Product—Documentation:** Label sent by Sjon Welters. 2008. Dec. 26. Three flavors (see above). The company's website is [www.naturalway.cz](http://www.naturalway.cz).

3441. Atlas, Nava. 2008. *Vegan express*. New York, NY: Broadway Books. viii + 247 p. + 8 unnumbered pages of plates. Foreword by Neil Barnard, M.D. Illust. (some color). Index. 23 x 20 cm.

• **Summary:** On the cover: "Featuring 160 recipes for quick, delicious and healthy meals." Chapter 2 is titled: "The protein trio: tofu, tempeh, seitan." This book contains: About 37 recipes using tofu (she says, for example, "Cut each block of tofu into six slabs"). 10 recipes using seitan. 9 recipes using vegan cheese. 9 recipes using tempeh. 5 recipes using Tofurky sausage. 4 recipes using miso. 3 recipes using edamame. Address: Hudson Valley, New York.

3442. Bennett, Beverly Lynn; Sammartano, Ray. 2008. *The complete idiot's guide to vegan cooking*. New York, NY: Alpha Books. Published by the Penguin Group. xix + 328 p.

Illust. Index. 23 x 19 cm.

• **Summary:** Being vegan is “not a diet—is a lifestyle.” The index contains 48 entries for tofu, 37 for tamari, 30 for soymilk, 8 for tempeh, 6 for TVP, 4 each for miso, soy yogurt, tofu cream cheese, and seitan, 2 for silken tofu and Soyrizo, and 1 each for edamame, soynut butter, and Soyatoo (natural nondairy whipped topping).

“There are so many reasons to go vegan—health and nutrition, weight loss, green and sustainable living, and prevention of cruelty to animals. With over 200 mouth-watering recipes and tips for converting meat- and dairy-based dishes into vegan ones, *The Complete Idiot’s Guide to Vegan Cooking* will help readers enjoy a healthy vegan diet without sacrificing taste” (publisher’s description). Address: 1. Vegan chef, author, and host of [veganchef.com](http://veganchef.com) since 1999; 2. Long-time vegan cook and “foodie”.

3443. Farnworth, Edward R. 2008. *Handbook of fermented functional foods*. 2nd ed. Boca Raton, Florida: CRC Press. xviii + 581 p. See p. 333, 341-45. \*

• **Summary:** Partial contents: Chapter 6. “Natto: A soybean foods made by fermenting cooked soybeans with *Bacillus subtilis*.” Chapter 11. “Miso: Production, properties, benefits to health.”

Chapter 12. “Korean fermented foods: Kimchi and doenjang,” by Jeonghee Surh, Young-Kyung Lee Kim, and Hoonjeong Kwon, has a long section on doenjang, including: Cancer: Epidemiology, anticarcinogenic and antimutagenic activities *in vitro* and animal models. Cardiovascular disease: Inhibition of angiotensin converting enzymes, antithrombotic peptides, isoflavones.

Chapter 17. “Tempeh: A mold-modified indigenous fermented food.”

3444. Fiore, Toni. 2008. *Totally vegetarian: easy, fast, comforting food for every kind of vegetarian*. Philadelphia, Pennsylvania: Da Capo / Life Long. xi + 273 p. + 16 pages of unnumbered plates. Illust. (some color). Index. 24 cm.

• **Summary:** A mostly vegan cookbook; each recipe that calls for milk as an ingredient gives soy milk as an alternative. Rarely, if ever, have we seen such a dazzling and delicious variety of vegetarian soy recipes and information in one book. One purpose of this book is to demystify the world of vegetarian cookery and vegetarianism—especially for non-vegetarians.

The Introduction tells the story of the author’s gradual transition from typical meat eater (living in Europe to animal rights activist in Maine, to vegetarian). She advises: Buy locally, eat seasonally, buy organic, use your intuition (and imagination).

The chapter “Stocking the pantry” contains basic information (p. 39-42, 45-46) about sea vegetables, seitan, and soy products, including edamame, miso, tempeh,

textured vegetable protein (TVP), tofu, and soy sauce (Light Chinese soy sauce, shoyu, and tamari), and Worcestershire sauce (vegetarian; without anchovies)

Soy related: Golden tofu bites (with one 14-ounce package firm tofu, frozen, then thawed... p. 50). Red pepper tofu dip (p. 67). Vegetarian Caesar salad (with “silken soft tofu, p. 76). Edamame and apple salad (p. 81; kids love edamame). Boiled edamame pods. Curried lima bean and rice salad with tempeh (p. 92). Tofu lime dressing (with silken tofu, p. 102). Spinach and tofu soup (p. 108). Miso soup. Hot and sour soup (with firm tofu, p. 109). Roasted pumpkin bisque (with soy milk, p. 114). Corn bread (with soy milk, p. 130).

One chapter is titled “Tofu” (p. 145-53): Seared tofu. Tofu sour cream. Baked tofu meatballs. Tofu with parsley sauce. Tofu kebabs with tamari-ginger sauce. Tofu pot pie.

The next chapter is “Tempeh and seitan” (p. 155-69): Best braised tempeh (with sweet and spicy marinade, p. 197). Tamari tempeh. Barbequed tempeh. Jamaican jerk tempeh. Malaysian curried tempeh. Greek stuffed cabbage (with lemon cream sauce and tempeh). Tempeh and cabbage. Moroccan stew. Tempeh cacciatore. Tempeh fajitas. Tempeh marsala. Homemade seitan (from bulk vital wheat gluten). Penne with onions and vegetarian bacon (p. 175). Spaghetti tofunese (p. 176). Tofu ravioli with butter and sage (p. 181-82). Bechamel (with soy milk, p. 184). Tofu lasagna (p. 185-86). Vegetable lasagna (with tofu filling, p. 187). No-egg salad sandwiches (with tofu). Mock fish salad sandwiches (with tempeh). Mock Maryland crab cakes (with tofu, p. 196). Tempeh club sandwiches (p. 197). Cornhusker’s reubens (with tempeh, p. 198). New York hot dogs and onions (with vegetarian hot dogs, p. 199). Soysage-pepper sandwiches (with Italian-style vegetarian sausage links, p. 200). Eggplant meatballs (with tofu, p. 214). Stuffed sugar pumpkins (with tempeh, p. 215). Fluffy mashed potatoes (with soy milk, p. 219). Spinach tortillas with potatoes (and seitan, p. 228). Pfannkuchen (with soy milk, p. 239). Rye bread French toast (with soy milk, p. 240). Loaded bagel (with tofu cream cheese, p. 243). Tofu cannoli (p. 250). Tofu coconut cream pie (p. 251). Basmati rice pudding (with soy milk, p. 252). Banana chocolate chip cake (with soy milk, p. 256).

About the author: “A vegetarian for over 20 years, Fiore is a self-taught chef who first embraced Mediterranean culinary techniques and philosophy while growing up in Italy.” But she spent the first six years of her life in Germany. Address: Portland, Maine. Host of the national public television show *Delicious TV’s Totally Vegetarian*.

3445. Nishi, Dennis. 2009. Perseverance answers vegans’ prayers. *Wall Street Journal*. Jan. 6. [1 ref]

• **Summary:** About Seth Tibbott, Turtle Island (his company), and Tofurky, in question and answer format. he key to his success: Stick with it. His company’s sales have

doubled between 2003 and 2007 as a growing number of nonvegetarian consumers include meat alternatives in their diet. Seth has been a vegetarian since 1974. He was inspired to change by *Diet for a Small Planet*, by Frances Moore Lappe. Before 1980 Seth had made tempeh for friends on the side while teaching for outdoor schools in Oregon. When Ronald Reagan became president money for such outdoor education programs disappeared, so in 1980 he tried to sell tempeh full time—and to live as inexpensively as possible. In 1984 he built a tree house, which he live in until 1992. He rented the tree for \$25 a week, and had a wood stove, a phone, and hot and cold running water. In 1982 he recapitalized the business by borrowing money from his brother and mother. In 1987 his brother (presently Turtle Island's vice president) entered this business in about 1987, when he bought a large share of it. The company broke even for the first 15 year; after the debut of Tofurky, it became profitable. The company used to make most of its money during Thanksgiving and Christmas, but today those holiday sales are only about 18% of the total.

3446. Turtle Island Foods, Inc. 2009. Announcing the arrival of tempeh 2.0: Marinated tempeh (Leaflet). P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. 1 p. Front and back. 28 cm.

• **Summary:** A glossy color sell sheet. At the front top are the fronts of three marinated tempeh packages (Lemon Pepper, Coconut Curry, Sesame Garlic) against a background that fades from black at the top to deep blue. In the lower one-third is a photo from outer space of vast curve of Planet Earth with the white rayed sun starting to rise over it. The text: "Delicious. Marinated. Gluten free. Tempeh strips." The company logo: "Turtle Island Foods, Inc. Since 1980. Family owned and independent." [www.tofurky.com](http://www.tofurky.com).

On the back is a photo of an astronaut walking on the surface of the moon, holding a package of marinated tempeh strips. The bold text reads: "One small change for tempeh: One giant savings for human's time." Below that: "For centuries the miracle fermented food known as tempeh has been sold as a plain cake of soybeans and grains. To fully enjoy, most cooks take time to slice the tempeh and soak for hours in a variety of marinades. When thus prepared, tempeh takes on a zesty wholesome flavor that's hard to bet. Yet many people do not have the time..." Below that are the front panels, nutrition facts, and ingredients of the 3 new types of marinated tempeh. Address: Hood River, Oregon.

3447. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. I. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.

• **Summary:** A cry for help on the ham radio: On February 4, 1976, a devastating earthquake hit Guatemala at 3:01 a.m. local time, while most people were asleep, taking at least 23,000 lives. Approximately 76,000 were injured, and many

thousands left homeless. Some areas went without electricity and communication for days, but a desperate cry for help on the ham radio managed to reach "The Farm," a self-sufficient spiritual community in Summertown, Tennessee, founded by Stephen Gaskin. In response, Plenty, The Farm's community outreach program, chose three carpenters to help with the reconstruction efforts. Dennis Martin, Pedro Grey and Melvyn Stiriss were soon flying to Guatemala armed with only their skills, a backpack full of tools and a desire to help rebuild.

**Reconstruction Project:** Dennis Martin, a natural at networking, was quick to forge strong connections with members of the Canadian Embassy, Clive Carruthers, acting as the Canadian Chargé d'Affaires, and Rick Bronson, administrator of funds for the Canadian International Development Agencies (CIDA). Martin soon discovered that CIDA had a shipment of prefab housing materials and funds on the way for the reconstruction of Guatemalan towns that had been destroyed in the earthquake. Martin pledged to CIDA that if they were to grant him funds and these materials, Plenty would aid in the reconstruction of the town of San Andres Itzapa, in the municipality of Chimaltenango, and build thirteen schools. CIDA agreed, and thus began Plenty's Guatemalan Project.

**The Clinic Program:** With a few months, many carpenters from The Farm had volunteered for the reconstruction effort, and the Project was quickly underway. However, as they began clearing debris and rubble, a new crisis emerged. They were horrified to find infants, many orphaned, in dire need of medical attention. The Project urgently requested volunteers with medical knowledge to come and provide assistance. Mary Louise Perkins and her medical and public health crew from The Farm answered that call and soon set up a medical clinic in the Plenty camp, which at that time was no more than one kitchen structure, a few platformed tents surrounded by a coffee plantation and corn field. The clinic was later joined by Thomas Wartinger acting as site physician.

**The Orphanage:** The number of infants and children orphaned by the earthquake had reached a critical point. The Farm sent out request to its members for single female volunteers to help establish an orphanage. In June 10, 1977, I volunteered along with five other women to go to Guatemala and help set up the orphanage. We became known as the Angel Crew. Our responsibilities involved one-on-one parenting of a single infant, collectively caring for 37 children, and preparing three meals a day for around 90 people consisting of orphans, patients at the clinic, and volunteers involved in the Project. Along with the orphans, many locals joined our team, including several teenagers who had been living on the streets of Guatemala, who we helped recover from drug addictions. My baby was Maria Cruz who was severely malnourished. After several months of nursing her back to health using primarily diluted soy

formula she regained her health and was later adopted by Alan and Jane Graf, one of the Plenty couples.

At that time the infant mortality rate was around 50%. Some of the infants came to us extremely malnourished and underweight—at an age of eight months some weighed a mere eight pounds (the weight of most infants at birth!). We fed these babies diluted soy formula through an eyedropper, but in some cases it was simply too late. The only thing that made the heart-breaking experience of losing a child bearable was that we were able to save others. Some returned home if they had one, and others were adopted. However, many of the children we treated went home only to return to us again in a short time, again malnourished. Most of the children in Guatemala were given only tortillas to eat, and it became increasingly clear to me that many Guatemalan mothers needed to be educated about how to provide for their children's basic nutritional needs.

**Soy Agriculture & Demonstration Program:** Aware of the undernourishment of the people of Itzapa and the high nutritional benefits of soybeans and soy products, we forged a plan to introduce soybeans as a new crop to the local farmers. Our goal was to supplement the diet of the local villagers with high-quality protein while also providing a source of income to the farmers. Soybeans seemed like a viable solution since the farmers had only small plots of land and soybeans can yield high amounts of protein per acre.

In October of 1978, Darryl Jordan, a member of the Plenty team who specialized in agriculture, initiated the soy program. He contacted INTSOY at the University of Illinois and asked if he could conduct one of their international soybean variety trials; he was sent 20 soybean varieties, written procedures to follow, and forms showing results to fill out and return to INTSOY. Itzapa sits at an elevation of 5,860 feet, which at that time, was the highest growing elevation ever tested. Darryl was joined later by Craig Bialick, another team member, who planted and tested the different varieties of which Cobb, Bosier & Davis proved to yield well. As the interest in the new crop increased among the passing farmers, they wanted to know about the new bean and how could they grow it. Since I had a background in producing tempeh for The Farm, Darryl approached me with the idea of teaching the locals about soy products and how to prepare them.

I began by writing a proposal which I submitted to UNICEF Guatemala requesting \$6,000.00 to fund in-home soy cooking classes in the area of Itzapa. They gave me the funds I requested along with a two-gallon stainless steel pot and The Soy Demo Project was born. The first classes were held with the wives of the farmers that were involved in growing the soybeans which had proven to grow well at the 5,860 ft. elevation. I taught them using the same utensils that they used themselves, such as a rock grinding stone and cooking on a wood fire; this way every woman who took the class would be able to use the same methods in her own

home.

The class size averaged 6-8 neighborhood women along with about 15 children. I would teach the class in Spanish (which I learned informally after arriving in Guatemala), and Maria Sal, a local Indian mother of five who joined our team, would translate in Cakchiquel (a Mayan dialect). The children loved eating the soyfoods and news traveled fast; at the end of each class I would find myself surrounded by 20-30 children, all waiting eagerly for a sample. Interest among the women grew quickly as well. Word spread throughout the area and the requests for classes became overwhelming. I was soon teaching soy demo classes not only in Itzapa, but in many of the neighboring villages as well. By June 1979 approximately 200 women were taught.

**The Soy Promoters Program:** In one of Itzapa's neighboring villages, San Jose Poaquil, a Guatemalan agency named World Neighbors had set-up a cooperative that held classes in agriculture. While performing a class there, I met a Latino Guatemalan named Amado del Valle, who was the director of the program. (Note: In this context, "Latino," refers to one whose ancestry is largely Spanish rather than indigenous Mayan; for centuries there has been both conflict and intermarriage between these two groups). With his background in agriculture he was very interested in what the soybean had to offer for Guatemala's protein crisis. I realized I needed help spreading the word, so he offered 8 women from his cooperative to become teachers.

In August 1979, we wrote a proposal requesting funding from CIDA to provide the equipment, supplies and training for the cooperative promoters, who would in turn train others in the preparation of soyfoods. I donated my salary as a volunteer and UNICEF donated several thousand dollars towards the project, the total amount of which would then be matched by CIDA. Previously CIDA was able to contribute matching funds through Plenty USA. However at this time, to continue their funding, Plenty needed to obtain a Canadian NGO nonprofit status; we did this through our sister Farm in Canada and we received \$11,000.00 for the program. There was good acceptance in Poaquil, especially in the low parts of the municipality. Each promoter had about five groups, some of them walked 15 miles and approximately four hours to get to their groups. We trained them at their cooperative and later went with them to their villages to observe one class. We left them with soybeans, supplies, and funding to continue teaching on their own, visiting them occasionally checking in on their books, and charts, which they kept on all classes. Continued. Address: Salt Lake City, Utah.

3448. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. II. Continued. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.

• **Summary:** Continued: In September 1979 the immediate food and housing crisis in the area had been solved, so we began to focus on long-term developments in agriculture

and nutrition. As we moved from that area of Guatemala we began to realize the town had grown accustomed to our medical assistance and were growing dependent upon our charity. It became apparent that we needed to develop a means to allow the indigenous community to help themselves. We moved our camp from Itzapa to Solola, where we had built a Mayan municipality building and several schools. Darryl and his wife Leslie returned to the Farm with their adopted baby named Irma, one of the recovered babies that had been abandoned. Since our project focus changed, as we moved to Solola most of the medical crew returned to the USA after adopting (and taking with them) most of the rest of the 7-10 children in our orphanage; most of these children grew up in the USA and never returned to Guatemala to stay.

**The Soy Dairy Project:** Although the soyfoods were very popular and classes were available, many women in Guatemala did not consistently have time to make their own soy products at home. To address this need, Plenty wrote another proposal to CIDA for \$31,000.00 to build a soy dairy that would operate as a cottage industry. Building the dairy would enable us to produce soyfoods on a large scale, create job opportunities, and make soy products available for purchase to the people of Guatemala. Soy ice cream seemed to be a good product choice to focus on. Its production required less education and ice cream was very popular throughout Guatemala.

We decided to build the dairy in the community of San Bartolo, Solola, where we had moved our camp. We had established a good rapport with the community's reconstruction committee. We had already built a school and installed a water system for them which featured a water spigot in every home. The water system had improved the quality of life immensely in San Bartolo, as before they had to carry water for several miles to their homes. My knowledge of large scale soymilk production was limited so Plenty approached Laurie Praskin, the soyfoods expert who for years was in charge of producing soy milk and tofu on a large scale for The Farm community in Tennessee. Laurie accepted and I returned to the United States to help her purchase the equipment needed. We traveled across the country educating people about our cause. We were able to get some of the equipment donated and purchased the rest with the funding we had received—including two 50 gallon stainless steel pots that Laurie acquired from the Boy Scouts of America.

In the summer of 1979 we shipped the equipment to Guatemala along with seven tons of soybeans, and I returned to Guatemala with Laurie as my partner. Laurie's husband, Alan Praskin, was also an agriculture specialist who joined with Craig Bialick to continue doing more soybean variety trials at different altitudes. They did one trial with 16 different varieties in San Martin Jilotepecque, where they partnered with Amado del Valle, the director of the World

Neighbors Cooperative where we trained the eight soy promoters. They also did a trial in the Solola area which at 7,200 ft. was the highest elevation ever tested at that time using INTSOY varieties.

On February 19, 1980 the facility was finished, and the Soy Dairy was inaugurated. Our long-term plan was to turn over full operation of the dairy to the people of San Bartolo so our first task was to choose and train a local to oversee the project. We chose Agustin Xoquic. He had been head of the reconstruction committee in San Bartolo at the time we had installed the water system, and we had developed a very strong bond with him and his family. We lived in the Mayan community, training Agustin and his wife Elena to oversee the dairy. The Soy Demo Promoter's project continued while also operating the soy factory project.

As of August 31, 1980, there had been 117 promoter classes and 1,013 men and women were taught how to make soymilk and tofu in their homes through the Soy Promoter program. Small women's groups had collectively grown their own plot of soybeans. This program was similarly implemented in San Martin Jilotepecque, Chimaltenango, with another World Neighbors Cooperative. Eight women were approved as soy promoters and taught 307 men and women. Over 100 people in San Martin planted soybeans that year. Between all the cooperatives, they harvested approximately 8,000 pounds of soybeans for their own needs and the remaining amount was sold to the *Fabrica de Soya* (Soy Dairy) in Solola.

In Solola, Laurie and I held cooking classes in the town, teaching Latino women, how to prepare fancier dishes such as lasagna, blended tofu dishes, fried and scrambled tofu. These ladies had electric blenders, ovens, and tofu, which was now available in the local market produced by the *Fabrica de Soya* in Solola. We also continued our classes with the Indigenous people in the surrounding villages of Solola.

We also began working with Berhorst Hospital in Chimaltenango, where we had often taken some of our patients. They were very enthusiastic about soy technology and asked us if we could get them enough soybeans to supply soymilk and tofu for their patient's daily consumption. They also asked us if we could get them an ice cream machine for making soy ice cream for sales to their patients. The current practice is for the patients to go to the local store and get junk food without much nutritional value. They wanted a high quality protein product such as soy ice cream, to be available for their patients. We began holding demonstrations at the hospital with 35 volunteer promoters from the surrounding villages of Chimaltenango.

After eight months of training the employees at the soy factory, the political climate in Guatemala became violent. People we worked with on our water projects were put on "hit lists," and since we did not want to jeopardize anyone's safety we were forced to prematurely leave the soy factory

project in the hands of people in San Bartolo.

On September 22, 1980 we returned to the U.S. Since Darryl Jordan returned earlier he had published an article about the soy project in a development newsletter titled *League for Food Education (L.I.F.E.)*. We received responses from fifty different countries requesting advice on how to set up similar projects. We then published the *Plenty Agricultural Program: Guatemala* booklet (1980, 46 p.) and the *Plenty Integrated Soy Program, Guatemala* (1982, 48 p.) booklet to help educate the many people from whom we had received inquiries, along with those from other interested organizations.

After we left Guatemala, Amado Del Valle worked with Food for the Hungry in efforts to set up two more soy dairies in Zacapa, but the political violence from Guatemala's civil war made it too dangerous to complete. It had also become too dangerous for the Soy Factory in Solola to operate, so it closed as well.

On May 27, 1981, Amado left Guatemala and arrived at The Farm in Tennessee, to study large scale production of soyfoods; he later went on to the Canada Farm. In September of 1985, he returned to Guatemala with funding from Plenty Canada at which time he helped Agustin reopen the soy factory and become the Director for three years. It was reborn as Alimentos San Bartolo, community owned and managed, although Agustin and Elena were still in charge of production, and remain so to this day.

On March 7, 1991 the soy project land was officially turned over to the committee of San Bartolo. Chuck Haren and other members of Plenty periodically traveled to Guatemala to help with funding and equipment upgrades.

In June of 1995 with help from Plenty USA and funding from Food for the Hungry, I returned to Guatemala to do a marketing upgrade which I completed in three months. I wrote a Spanish-language booklet with local recipes titled *Recetas de Soya (Soyfoods Recipes)*, had 1,000 copies printed, and used it at soyfoods classes, some of which were held at local restaurants.

In August of 2006, each household in San Bartolo was bought out for an amount of money equal to their share of the project. The project was restructured from a community owned business to an association named *Asociacion de Desarrollo Integral Belen (ADIBE)*, but it is still directed by the committee of San Bartolo, which is elected every 4 years by the community. Address: Salt Lake City, Utah.

3449. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. III. Continued. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.

• **Summary:** Continued: In July of 2008 the members of ADIBE traveled to Guatemala City to compete and present all of their products at a National Rural Development contest; they were recognized as one of ten winners and were awarded 46,000 quetzals.

The project has become a model project worldwide. The soy dairy has operated as a self-sufficient business for twenty-nine years. It employs seven members of the Mayan community full-time and perhaps most importantly, continues to supplement the protein intake of the Mayan children.

As of August 21, 2008: The current items produced and sold weekly are: 40 gallons of soymilk, 110 pounds of tofu, 15 gallons of soy ice cream, 20 pounds of tempeh, and 20 pounds of soy flour.

In October of 2007, Amado del Valle developed several new products which the soy factory now produces; shampoo, face cream and hand soap (all made from tofu whey, which was previously discarded).

As it is becoming increasingly more popular to be "green," we, the people of this planet, should harness this global consciousness and set up more projects of this kind, which has proven to make the most of our world's resources and provide quality nutrition and education to people who would otherwise not have them. With more funding, education and organization of the planet's resources, there would be plenty of protein to go around, and malnutrition could be a thing of the past—this is my dream. My experience has taught me that small donations, desire, grass roots commitment and organization can change and save lives.

Note: This article is written from the memory of my experience setting up the Soy Demonstration Programs in Guatemala. However I would like to acknowledge that the success of the soy program involved many Plenty volunteers and Farm members, who have contributed or supported the project directly or indirectly over many years. I apologize if I missed mentioning anybody.

Even though I am no longer a member of Plenty, I have still consistently returned to Guatemala to check-up on the project and bring them supplies.

3450. Katz, Ellex Sandor. 2009. Re: Making tempeh, koji, and miso. Letter (e-mail) to friends, Feb. 6. 1 p.

• **Summary:** "I've been busy creating a new teaching kitchen at a friend's farm a few miles from my home. With a dedicated incubator (rather than one improvised in the oven I share with twenty people), I've made more tempeh in the past couple of months than in the 15 years before. I've been experimenting with different beans and grains, and we've been eating lots of tempeh. Yummmmm! I've also scaled up my koji-making and miso-making. And I'm trying my hand dry-curing venison in the style of prosciutto. All very exciting.

"I'm pleased to announce that I will be hosting my first

workshops in the new space this upcoming spring. Four-day hands-on fermentation production. Details below. I will continue spreading fermentation fervor elsewhere, but in a much more limited way (only occasionally).” Address: Foundation for Fermentation Fervor, 247 Sanctuary Lane, Liberty, Tennessee 37095.

3451. Yoshihara, Akino. 2009. The temptations of tempeh. *Daily Yomiuri Online (Japan)*. Feb. 19. [www.yomiuri.co.jp/dy/features/culture/20090219TDY16002.htm](http://www.yomiuri.co.jp/dy/features/culture/20090219TDY16002.htm).

• **Summary:** Tempeh was introduced to Japan about 30 years ago, but it has not become widely popular since there are now few tempeh manufacturers in Japan. Yet tempeh is made in Shiroishicho in Saga prefecture, Tokyo, Nagano prefecture and Okayama prefecture (located in southwestern Japan, just north of Shikoku Island). In Okayama prefecture about 20 firms make tempeh and 2nd generation tempeh products such as ramen noodles with tempeh or miso with tempeh. Moreover, many tempeh-related events have been organized, including cooking classes.

In 1987 the Japanese Society of Tempe was organized. Today it is headed by Masaharu Horii, professor in the Graduate School of Human Life Sciences, Notre Dame Seishin University, Okayama. The society promotes tempeh “to both the food industry and individual consumers through an annual conference featuring expert lectures and a cooking workshop.”

“The society is trying to popularize consumption of tempeh as part of people’s daily diet. We plan to publish a book containing useful information for consumers, such as the health benefits and a buyer’s guide.”

In Indonesia, long popular among the working classes, tempeh has recently become popular among the upper classes because of its many health benefits.

Note: Masaharu Horii, born in March 1939 and a researcher in the field of eating habits and food science, can be contacted at: Notre Dame Seishin University, Graduate School of Human Life Sciences, 2-16-9 Ifukucho, Okayama-shi, Okayama 700-8516 Japan. Fax: +81-86-252-5042. Address: Staff writer, Japan.

• **Summary:** Rustono, a man born in Indonesia, lives with his Japanese wife, Tsuruko Kazumoto and two daughters in a house adjacent to their tempeh shop in Otsu, Japan. Otsu, the capital of Shiga prefecture, is located at the southwest end of Lake Biwa in Central Japan, just east of Kyoto.

The two met in 1995, when Tsuruko took a trip to Indonesia, at a hotel in Yogyakarta where Rustono worked. “After maintaining a long-distance relationship, Rustono came to Japan in October 1997, and the couple married and started living in Uji, Kyoto Prefecture.” Rustono, who was

interested in food and Japanese culture, first worked at a confectionery shop in Uji, where he carefully observed the Japanese quality control and inspection techniques. He later worked at a food factory, where he chopped vegetables for two years. It was at about this time that Rustono got the idea of making tempeh in Japan.

Using a recipe his mother got from a neighbor, Rustono and his wife made 40 packages of tempeh a day. After about four months, however, they ran into difficulties. The quality of the tempeh bean to decrease [probably due to a decrease in the quality of the starter culture].

So Rustono returned to Indonesia for several months; there he visited about 60 tempeh makers, and vastly increased his knowledge of how to make tempeh.

Returning to Japan with renewed commitment, he also decided to change his sales strategy by focus on Indonesians throughout Japan, starting with his Indonesian friends. Before long, “his tempeh’s reputation [and sales] began to grow among foreigners and Japanese by word of mouth.”

In 2000 the couple moved their family and business from Uji to Otsu, where they lived in a house belonging to Tsuruko’s father. They chose Otsu, in part, because of its clear water. By themselves, they built a tempeh shop during a snowy winter, “carrying sand from the bottom of the river to mix with concrete.” They dug a well to reach the clear water. Good water is important in making good tempeh. They also created a new brand: Rusto’s Tempeh.

They now make large batches of tempeh about 2-3 times a month, then freeze it. They ship their tempeh to about 300 locations from one end of Japan to the other.

The business is growing. Recently the couple purchased property just a few minutes walk from their home on which to build a new house and larger tempeh shop. Address: Staff writer, Japan.

3453. Welters, Sjon. 2009. Re: Tempeh makers in The Netherlands. New variety of tempeh mold that sporulates with white spores. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 23—in reply to specific questions. 1 p.

• **Summary:** Shurtleff e-mailed Sjon to ask about companies that presently make tempeh in The Netherlands. “Good timing. I had just asked Bernard Faber, a Dutch friend of mine whom you might remember from the early Manna years, to check on the tempeh situation in The Netherlands a few weeks ago. He actually managed to talk to the owner of The Soybean Company ([http://tempehproducts.com/pagina/home\\_tempeh\\_soy\\_products\\_uk\\_holland/index.html](http://tempehproducts.com/pagina/home_tempeh_soy_products_uk_holland/index.html)) and got him to talk back! (Something pretty unusual for Indonesians). You might know this company or recognize them from years back because you talk about them in your writings. Could this be the original Van Dapperen?

“Anyway, he makes 20,000 x 400 gm pieces of tempeh per week, shelf life 2 weeks, does not distribute it (everything is picked up from the plant) and he says shipped

to Russia (frozen product) also. Does it all with 3 or 4 part-timers, where he used to do it with 15 full timers, because he invested 100,000 Euro in new equipment of which more than 30,000 Euro was in a packaging machine. Makes it in perforated bags wrapped in shrink wrap (no vacuum packing), but used to do it in perforated Rubbermaid-type containers.

“Long shelf life is attributable to the fact that he uses the common white spores, unlike the black spores common in the USA. This starter takes much longer to incubate and is steadier and less quick to spoil. U.S. starter kicks in quick (after 12 hours) and ripens fast, but spoils fast, too. Hence the vacuum packing. No need with the white starter that the Dutch Indonesians use. I have not been able to figure out yet which particular strain they use, but I know that it is available for home use from <http://www.tempeh.info/starter/tempeh-starter.php>. I bought it and tried it here and it is slower.” I’m not sure how public this information is/should be. You know how close-mouthed the Indonesians can be.

“There are more tempeh makers in The Netherlands, but I need to do more prodding there to get to the bottom of it. I don’t know if Seth will be able to get into any Dutch tempeh maker’s facility. Hope he does. He can contact Bernard Faber; maybe together they can pull it off. Bernard is also a writer for *Biofood Magazine* and a long-time friend who’s been in the natural food movement since the mid-1970s and still is.” Address: Founder and owner, Rhapsody, 28 Main St., Montpelier, Vermont 05062. Phone: 802-229-6112.

3454. Soy Bean Company. 2009. SBC–Tempeh, soy, soyproducts (Website printout). [tempehproducts.com/pagina/home\\_tempeh\\_soy\\_products\\_uk\\_holland/index.html](http://tempehproducts.com/pagina/home_tempeh_soy_products_uk_holland/index.html). Printed March 31. [Eng]

• **Summary:** Contents: Home, soybeans, tempeh, recipes, contact. On the homepage of the SBC is a brief definition of tempeh. Color photos show: (1) Outside front of the company. (2) Two views of the inside of the company.

Soybeans: Introduction (click link for Q+A Are there special concerns related to soy foods? Provided by the George Mateljan Foundation), a health-promoting meat replacer, stay lean with soy, soy lowers blood pressure and cholesterol in men, beneficial effects on cholesterol levels and platelets.

Tempeh: Same as home page. Recipes: For Tijuana tempeh, Tempeh teriyaki, Tangy tempeh with portobello mushrooms.

E-mail in Dutch: [croci@htnet.nl](mailto:croci@htnet.nl). E-mail in English: [soybeancompany@htnet.nl](mailto:soybeancompany@htnet.nl).

Note: This is a minimalist website, with no company history and very little interesting information. Yet *History of Tempeh*, by Shurtleff & Aoyagi (1985, p. 29) states that this was Europe’s third earliest commercial tempeh company, founded in 1969. In Jan. 1972 the thriving company moved to Kerkrade from Rotterdam. In June 1980 the company

bought a \$1,000,000 modern factory in Kerkrade and expanded production greatly. By mid-1982 it was the largest tempeh company in the world, making 6,000 to 8,000 lb of tempeh a week. Address: Tunnelstraat 107, 6468 EJ Kerkrade (Limburg), Netherlands. Phone: 045 567 0583 or 0584.

3455. Shurtleff, William; Aoyagi, Akiko. 2009. The vegetarian meat: Made from fermented soya, tempeh is one of the most popular meat alternatives in the market. *Times Food Processing Journal (Mumbai, India)*. Feb/March. p. 29-33.

• **Summary:** Excerpted from *The Book of Tempeh*, with emphasis on the history of tempeh.

Note: “Times” refers to *The Times of India*, which is India’s largest selling English-language newspaper. TFPJ is part of the *Economic Times*, the financial newspaper by the same group. It is published both in print and online. Address: Founders, Soyinfo Center, P.O. Box 234, Lafayette, California 94549.

3456. **Product Name:** Marinated Tempeh [Lemon Pepper, Coconut Curry, Sesame Garlic].

**Manufacturer’s Name:** Turtle Island Foods, Inc.

**Manufacturer’s Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 2009. March.

**Ingredients:** Lemon Pepper: Organic soybeans, water, shoyu soy sauce (water, non-GMO soybeans, wheat, salt, culture), garlic, organic evaporated cane juice, lemon juice concentrate, organic apple cider vinegar, salt, black pepper, culture (*Rhizopus oligosporus*). Contains: Soybeans, wheat. Certified organic by Oregon Tilth.

**Wt/Vol., Packaging, Price:** 7 oz. paperboard box.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Labels (boxes; see next page) sent by Lisa Conway of Turtle Island. 2009. Jan. 9. This is a very attractive and well-designed box / label. 5.5 by 4.25 by 1 inch deep. Full color. Front panel of Lemon Pepper shows tempeh slices and veggies in a sub sandwich. Text: “Family owned and independent since 1980. Gluten free. Strips. Made with organic soybeans. Keep refrigerated or frozen.” Rear panel: Nutrition facts. Ingredients. Preparation instructions. Marinated tempeh strips cooking contest. “Proud supporter of The Humane Society (with HS logo). Box is 100% recycled paperboard. Low VOC inks.”

Letter (e-mail) from Seth Tibbott. 2009 March 23. “... presented the new [Marinated] Tempeh Strips to rave reviews at Expo West [Anaheim, California] earlier this month [March 5-8] and came away with two awards for best new product at the show. One award came with \$30,000.00 of sales data... We shipped the first shipment of Tempeh Strips on March 13, 2009 so already in Whole Foods stores in the

northeast. Should hit full swing this summer.”

3457. Centraalbureau voor Schimmelcultures. 2009. CBS Fungal Biodiversity Centre (Website printout–part). [www.cbs.knaw.nl](http://www.cbs.knaw.nl). Printed April 6.

• **Summary:** This culture collection organization is similar to the National Center for Agricultural Research Utilization (NCAUR) in Peoria, Illinois. Contents: Home (incl. current news, biodiversity). About CBS. Research. Collections. Databases (18). Publications. Service. Links.

When we searched the 1st database, the “Filamentous fungi database,” it was very slow to load and to search. It “contains data on more than 38,000 strains in the CBS collection,” we got interesting results searching for: (1) Tempeh—14 hits = records found. In each record, tempeh appears in the field “Substrate.” The “Taxon name” (scientific name) of *Rhizopus oligosporus* has been changed to *Rhizopus microsporus* var. *oligosporus* (Saito) Schipper & Stalpers. In some records the name of the collector and date collected are given. Country and locality (where collected): Indonesia.

Other organisms used to make tempeh are: *Rhizopus oryzae* Went & Prinsen Geerligs. *Rhizopus stolonifer* var. *stolonifer*. *Cladosporium oxysporum* Berkeley & M.A. Curtis. *Rhizopus azygosporus* G.F. Yuan & S.C. Jong. One culture typically costs “150 Euro (65.0 Euro for Academies, Universities, Education).”

(2) *Rhizopus oligosporus*: 5 hits.

(3) Miso: 3 hits. One substrate was soy sauce and another was koji starter culture. The fungi were: *Aspergillus oryzae* var. *oryzae*. *Aspergillus sojae* Sakaguchi & K. Yamada ex Murakami.

(4) Soy sauce: 13 hits. In addition to the two molds used to make miso, there was also: *Aspergillus oryzae* var. *effusus* (Tiraboschi) Y. Ohara.

(5) Chinese cheese: No hits.

(6) Fermented tofu: No hits.

(7) Sufu: 9 hits. The molds used are: *Mucor racemosus* f. *racemosus*. *Mucor indicus* Lendner. *Mucor hiemalis* Wehmer. *Actinomucor elegans* (Eidam) C.R. Benjamin & Hesselstine. *Mucor circinelloides* f. *circinelloides*. *Rhizopus microsporus* var. *microsporus* Tieghem.

(8) Douchi or doushi or doushih or dowsee or dowsi or toushih or tou-shih or fermented black beans or preserved black beans: No hits.

(9) *Aspergillus*: 1,213 hits.

(10) Soybeans: 1 hit. Substrate: Soybeans. Taxon name: *Aspergillus wentii* Wehmer. Country and locality: Indonesia, Java.

(11) Soybean: 18 hits. Substrate is usually “soil from soybean field.” Molds are *Penicillium* and *Aspergillus* species.

(12) Koji: 36 hits. Molds: *Aspergillus oryzae* var. *oryzae*. *Aspergillus oryzae* var. *brunneus* Murakami. *Aspergillus*

*tamarii* Kita. *Rhizopus microsporus* var. *tuberosus* R.Y. Zheng & G.Q. Chen (koji from China). Address: Utrecht, Netherlands. Phone: +31 (0)30 212-2600.

3458. Lam, Alex. 2009. Update on The Soy Shop, Atlanta, Georgia (Interview). *SoyaScan Notes*. April 14.

• **Summary:** His father, Kich Lam bought The Soy Shop (which started in July 1979) from Steve and Sarah Yurman in April 1985; he bought it mostly for the equipment. But before he bought the company, he had been making tofu in the basement of his home in Decatur, near Atlanta.

The Yurmans left the keys to the shop with their employees; one reason the Yurmans sold their company was because of employee theft. The employees came in in the middle of the night and made tofu, then delivered it the next morning. But the quality was not very good. After the Lams bought the company, Alex’s mom scared the employees away and the Lams began to make better quality tofu. But in the mid-1980s, there were not many Asians in the southeastern USA—so it was pretty tough times. And there was competition from Calco and Jimmy Wang, both of whom were better capitalized and were ahead of the Lams. But the Lams worked harder and harder, then eventually took the whole market from them. Alex’s father passed away in the year 2000. Up that time, his father had been the tofu maker and Alex had handled the business side of things—billing, logistics, etc. In Jan. 2008 the company moved from Decatur to Atlanta. The company has had great growth for the past 10 years. Today, Alex thinks, The Soy Shop is the biggest tofu manufacturer in the southeastern USA (Florida, Georgia, North Carolina, South Carolina, Tennessee, and Alabama).

Today the company makes only two products: firm and soft tofu. Ten years ago he used to make tempeh, soysage, and soymilk. But tofu, the company’s bread and butter, grew so fast that he had to discontinue the other soyfood products.

Now growth has begun to slow, because of the economic downturn and new competition. This has been his company’s slowest year in the last ten years. In Oct. 2006 House Foods opened a brand new tofu factory in Somerset, New Jersey. They are now flooding the market with low-cost tofu. Alex is slowly seeing the products come into his market. Address: 5289 McCall Dr., Atlanta, GA 30367. Phone: 770-458-7808.

3459. Tibbott, Seth. 2009. Recent trip to The Netherlands to study tempeh. Tempeh in the USA (Interview). *SoyaScan Notes*. April 24. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** In April Seth traveled to The Netherlands to study tempeh. By good fortune he met Angelo Croci (an Italian), who owns The Soybean Company in Kerkrade. Angelo speaks Italian and Dutch but very little English. Second in command there is Keyes Van Puten. Seth’s driver translated from Dutch to English. Angelo took Seth through

his tempeh plant. Seth thinks he did this because he would like to visit Seth's plant in Oregon. Seth also showed Angelo his new Tempeh 2.0, regular and marinated. Seth thinks that Angelo is making about 15,000 lb/week of tempeh—about the same as Seth is—but of only soy tempeh, no other styles or second generation products. One 400 gm cake sells for 2 euros and has an 18-day refrigerated shelf life.

Lots of tempeh is sold at Indonesian and Surinamese restaurants throughout Amsterdam, which Seth found to be one of world's truly great cities. A week before Seth was there, Sinta Santoso, founder and co-owner of Primasoy (Victoria, Australia), had visited Angelo's company.

The plant is of medium size and has no large machines. Angelo soaks his soybeans for 2 days [perhaps to acidify the soak water] rather than the typical one and incubates his tempeh for 3 days—relatively long. The most interesting thing is the tempeh culture, which does not produce black spores. Seth believes that this is a variety of *Rhizopus oryzae* rather than *Rhizopus oligosporus*. Seth brought some of this tempeh home and it still had not sporulated white.

But even though the tempeh does stay white, it requires a two-day incubation process and the resulting tempeh is not as flavorful as Seth's current product. So Turtle Island still buys its tempeh starter from the Tempeh Lab on The Farm (Summertown, Tennessee).

As far as Seth knows, no patents have been issued to this starter or the process for making from it. Seth thinks that a company selling tempeh starter on the Web as "Shining White Tempeh Starter" (<http://tempehonline.com/products.htm>) may be selling this same starter.

Note: According to Ike Van Gessel, this tempeh company used to be owned by Robert Van Dappern. Its name was Tempé Produkten B.V. Robert sold it to Mr. J. Singh, a Sikh, who bought the Belgian tofu business in 1986 and the Netherlands tempeh business in 1990. The address is unchanged.

Seth saw products from three tempeh makers in Europe: (1) The Soybean Company in Kerkrade, Netherlands. (2) FZ Organic Food (Yakso brand) in Wolvega, Netherlands. (3) De Hobbit in Maldegem, Belgium. He sent all 3 labels to Shurtleff at Soyinfo Center.

While in the Netherlands Seth met Bernard Faber, on introduction from Sjon Welters; they had a beer together. Bernard has a macrobiotic background, used to be involved in food, and is now a journalist.

In the United States sales of tempeh have recently been increasing—unexpectedly. Seth buys market statistics from SPINS (Natural) and others, for tempeh, Tofurky, and related products; he thinks that Lightlife is now the largest tempeh manufacturer in the USA. Seth thinks that tempeh has saved Lightlife and Conagra; their products made with soy protein isolates and other modern soy proteins are not doing very well. Seth demoed his tempeh 2.0 at several Natural Products trade shows, and it was even blogged about on the web

before Seth officially launched it. Shortly afterward Lightlife introduced very similar products. In fact, Lightlife may be the biggest tempeh maker in the world.

Frankly, Seth is glad that Lightlife is taking part of this new market because he doubts that he could meet the demand alone. Even the supermarkets are looking at his marinated tempeh strips. Either a Turtle Island or a Lightlife line of these products may well show up in Safeway before long. Seth already has his in Raley's and other similar chains. Its not easy for him to expand tempeh production because of the incubator. Seth is also starting to use more tempeh starter culture than is available. He continues to grow out the spores on rice, but does keep it going generation after generation. He is looking for an industrial culture lab to make the basic starter culture for him. Address: President and Founder, Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

3460. Chang, Chen-Tien; Hsu, Cheng-Kuang; et al. 2009. Effect of fermentation time on the antioxidant activities of tempeh prepared from fermented soybean using *Rhizopus oligosporus*. *International J. of Food Science and Technology* 44(4):799-806. April. [32 ref]

• **Summary:** The researchers concluded that tempeh fermented with *R. oligosporus* for 10 days showed the highest antioxidant activities compared with the other extracts. Address: 1, 3-6. Dep. of Food and Nutrition, Providence Univ., No. 200 Chungchi Rd., Shalu, Taichung 433, Taiwan; 2. Department of Health and Nutrition Biotechnology, Asia University, No. 500, Lioufeng Road, Wufeng Shiang, Taichung 433, Taiwan.

3461. **Product Name:** [Yakso Tempeh].

**Foreign Name:** Yakso Tempeh.

**Manufacturer's Name:** FZ Organic Food.

**Manufacturer's Address:** Oppers 58 8471, ZM Wolvega, Holland.

**Date of Introduction:** 2009. April.

**Ingredients:** Soybeans\*, water, rhizopus culture. \* = Organically grown

**Wt/Vol., Packaging, Price:** 300 gm. Retails for 2.29 euros in a natural food store (April 2009).

**How Stored:** Refrigerated.

**New Product—Documentation:** Label sent by Seth Tibbott of Turtle Island after trip to Netherlands to study tempeh 2009. April 22. Red, black, brown and white against a bamboo-brown colored background with horizontal stripes. Vers produkt = New product.

3462. **Product Name:** Cool Beans: Handmade Tempeh [Soy Tempeh, Soy & Yellow Split Pea Tempeh, Soy & Black Bean Tempeh, Soy & Pinto Bean Tempeh, Soy & Garbanzo Bean Tempeh].

**Manufacturer's Name:** Viable Cultures.

**Manufacturer's Address:** P.O. Box 6051, Asheville, NC 28816. Phone: (828) 768-7931.

**Date of Introduction:** 2009. May.

**Ingredients:** Soybeans, culture.

**Wt/Vol., Packaging, Price:** 8 oz or 16 oz in plastic bag. Retail for \$5.49 (8 oz single bagged) or \$8.50 to \$9.49 (16 oz double bagged)—including NC sales tax (7.75%).

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Brian Moe, founder of Viable Cultures. 2009. July 7—I returned his call about Professional Edition of *The Book of Tempeh*. He makes two types of tempeh: soybean tempeh and specialty tempeh (soy and split pea, with nutty flavor).

Letter (e-mail) from Brian Moe. 2009. Dec. 9. He makes three fermented foods in Asheville: tempeh (5 kinds), raw krauts, and kombucha. The most recent, exciting, development for the business is that the tempeh is now being made with locally-grown soybeans (the beans are grown in Old Fort, North Carolina, about 30 miles east of Asheville). He sells his tempeh locally, at farmers' markets, to food stores, and to restaurants. His five basic types of tempeh (which all use the same self-adhesive label except for different ingredients) are: (1) Basic soy tempeh was first sold commercially in May 2009 in the two basic sizes in which he sells all his tempehs. (2) Soy & split pea tempeh (launched July 2009; made with yellow split peas). (3) Soy & black bean tempeh (launched July 2009). (4) Soy & pinto bean tempeh (launched July 2009). (5) Soy & garbanzo bean tempeh (launched Aug. 2009). His four "specialty" tempehs are one dollar per package more expensive than his soy tempeh.

Brian first learned to make tempeh in a workshop within a food conference, that was put on by the Sequatchie Valley Institute, near Chattanooga, Tennessee in 2001. Brian knows Sandor Katz of Liberty, Tennessee, and actually attended one of his fermentation workshops, years ago. "He is a great fellow and has done much to popularize the merits and how-to's of fermented foods." For more information: [www.viablecultures.com](http://www.viablecultures.com).

3463. Haygunde, Chandan. 2009. Police HQ new home for Israeli businessman. *Indian Express.com*. June 20. <http://www.indianexpress.com/news/police-hq-new-home-for-israeli-businessman/478873/>. [11 ref]

• **Summary:** "Pune: The Pune police commissionerate has been the residential address of Israeli businessman Hillel Shapira for the past two weeks. Not that he is new to Pune and couldn't find any another place to stay—he has been residing in the city for many years and runs his own business here.

"Things began to go wrong on June 3 when Shapira, partner and managing director of Dakini Health Foods Private Ltd., Mundhwa, was detained at the commissionerate. The fortnight-long detention followed an

order from Deputy Commissioner of Police (special branch) Ravindra Sengaonkar. What's making it difficult for Shapira is that he has been held for activities allegedly detrimental to national security.

"The order said: 'The above named foreigner (Shapira) should not move out of the FRO (foreigners' registration office) premises from 03/06/2009 till his departure to Israel, as there is every likelihood that he may go underground and/or indulge in undesirable activities detrimental to the national security.'" Address: TNN.

3464. Reinfeld, Mark; Murray, Jennifer. 2009. The 30-minute vegan: Over 175 quick, delicious, and healthy recipes for everyday cooking. New York, NY: Perseus Books Group (print). xx + 348 p. Foreword by Deborah Madison. Illust. Index. 21 cm. [25 ref]

• **Summary:** Published as both a printed, bound book and as an e-book. The index contains 31 entries for tofu, 19 for tempeh, 15 for soy milk, 5 for miso, 4 for seitan, 3 for edamame, and 1 for meat substitutes.

Includes recipes for: Tempeh bacon (p. 57). Tofu scramble (p. 62). Seitan curry bowl (p. 119). BBQ tempeh sandwich (p. 123). Sea vegetable salad with edamame and wasabi (p. 142). Tofu garden vegetable salad (p. 148). Tuna-free tempeh salad (p. 149). Tofu satay (p. 193). Tofu saag (p. 209). Asian shiitake tofu (p. 223). Macadamia nut-crusted tofu (p. 224). Chipotle chile-rubbed southwest tempeh (p. 226). Tempeh vegetable enchiladas (p. 237).

3465. Febrina, Anissa S. 2009. The making of a staple food. *Jakarta Post (The) (Indonesia)*. July 27. [www.thejakartapost.com/news/2009/07/27/the-making-a-staple-food.htm](http://www.thejakartapost.com/news/2009/07/27/the-making-a-staple-food.htm)

• **Summary:** Production of tempeh has long been the domain of cottage or home industries. At one kampung (village; or neighborhood, or district in a city) in Tegal Parang, South Jakarta, you can see how tempeh is made at home. About 90% of the 300-plus inhabitants of Tegal Parang ("city of soy") make tempeh and/or tofu for a living. For more than 30 years, Muhammad Bintoro, age 56, has been living in this kampung and making tempeh. His tempeh shop is in his kitchen plus living room inside his home of 20 square meters that he has called home for the past 15 years.

Each day Muhammad buys 40 kg of soybeans, which his son washes and soaks overnight. The next morning Muhammad pours the softened soybeans into a machine that he built himself. He used to tread the soaked beans underfoot to remove the hulls, but now he simply runs them through this machine. The process for making tempeh is then described. Tempeh that is started on Thursday will be ready to sell on Sunday.

A color photo shows soaked soybeans being poured (with their soak water) into a square wooden box atop a soybean dehuller. Address: Staff writer, Japan.

3466. Deshpande, Swati. 2009. HC [High Court] seeks reasons for denial of visa to Israeli. *Times of India (Mumbai)*. Sept. 11. [http://articles.timesofindia.indiatimes.com/2009-09-11/mumbai/28081154\\_1\\_visa-extension-israeli-businessman-ram-jethmalani](http://articles.timesofindia.indiatimes.com/2009-09-11/mumbai/28081154_1_visa-extension-israeli-businessman-ram-jethmalani). [11 ref]

• **Summary:** “Mumbai: An Israeli businessman, denied a visa extension three years after he sought one, got a reprieve of sorts on Thursday when the Bombay high court directed the authorities not to put him in custody and sought reasons for the denial from the ministry of home affairs.

“A bench, headed by Justice Bilal Nazki, after hearing Israeli national Hillel Shapira’s counsel Ram Jethmalani, said he should not be confined to Pune or Mumbai. Jethmalani expressed outrage over the government’s actions in denying the 50-year-old ‘legitimate resident’ a visa extension without giving him any reason or hearing him.

“He said even a foreigner was entitled to protection under the right to life and equality under the Constitution but here was a case where the authorities were taking away the ‘livelihood’ of a man they ‘had invited and allowed to set up business in 1996.’” Address: TNN.

3467. Misra, Anshika. 2009. Jethmalani dons new robe, becomes Shapira’s saviour. *DNA (Daily News & Analysis)*. Sept. 11. [http://www.dnaindia.com/mumbai/report\\_jethmalani-dons-new-robe-becomes-shapira-s-saviour\\_1289226](http://www.dnaindia.com/mumbai/report_jethmalani-dons-new-robe-becomes-shapira-s-saviour_1289226). [11 ref]

• **Summary:** “Senior lawyer Ram Jethmalani has officially stopped accepting new cases. But on his 86th birthday on Thursday, the feisty lawyer took up the case of a 50-year-old Israeli national who had been legally running a health food business in Pune for the past 13 years and has been served a deportation notice by the government.

“Hillel Shapira’s business visa expired in June 2006 before which he had sought a visa extension in May 2006. The government did not act on the application for over two years and in April 2009, the Pune Foreigners’ Registration Office (FRO) asked Shapira to leave India, stating that the government had rejected his visa extension application.

“Shapira moved the Bombay high court challenging his deportation. Despite representations to the government, he was put under detention in Pune in June. On September 8, he was arrested and taken to the Mumbai airport for deportation. Only on the HC’s intervention, the deportation was put on hold. Hearing the government’s ‘disgraceful behaviour’, Jethmalani decided to take up Shapira’s case for free.

“‘Everything that has happened in this case is without the authority of law,’ Jethmalani argued. He pointed out that during Shapira’s detention in Pune, he was kept in inhuman conditions without access even to a toilet. ‘He [Shapira]

had to pay for every act of sh\*\*. They imposed a tax on his bowels. Bribery and corruption are the rule now,’ he stated.

“Condemning the government’s ‘arbitrary act’ of deporting a foreigner without giving him a hearing or a reasoned order, Jethmalani said such behaviour sends out a wrong signal, as we are inviting foreigners to invest in India.

“Additional Solicitor General DJ Khambatta said the home ministry had considered Shapira’s case and decided not to extend his visa. He added that for three years, Shapira is in India without a valid visa. ‘I can assure the court that we [Centre] will refund any charges made by him [Shapira] if proved,’ Khambatta said, referring to Jethmalani’s allegation of ‘bowel tax’. The matter will be heard on September 24.” Address: TNN.

3468. Thomas, Shibu. 2009. Foreigner can’t claim right to a visa: HC [High Court]. *Times of India (Mumbai)*. Nov. 22. [http://articles.timesofindia.indiatimes.com/2009-11-22/india/28078357\\_1\\_business-visa-hillel-shapira-extension](http://articles.timesofindia.indiatimes.com/2009-11-22/india/28078357_1_business-visa-hillel-shapira-extension). [11 ref]

• **Summary:** “Mumbai: In a landmark judgment, Bombay HC has ruled that a foreign national has no fundamental right to a visa to stay in India.

“Dismissing an application filed by Israeli businessman Hillel Shapira seeking extension of his business visa, a division bench of Justices B H Marlapalle and R Y Ganoo on Saturday upheld the order of the Union government to deport him.

“‘No foreigner, whose request for a visa or its renewal has been rejected, has a right to be heard,’ said the judges, adding, ‘Once Shapira’s application for extension of business visa has been rejected, the inevitable result is that he has to leave this country and he does not have any vested right for extension of his visa.’” Address: TNN.

3469. Chico. 2009. Re: Testing different tempeh starters. Letter (e-mail) to William Shurtleff at Soyinfo Center, Dec. 3. 2 p.

• **Summary:** In September 2009 I got hold of some samples of different commercial tempeh starters.

One sample was given by the Belgian company that holds the website [tempeh.info](http://tempeh.info). It consists of a *Rhizopus oryzae* (rather than *oligosporus*) culture. This starter is being sold as not developing black spots during “regular” incubation time (i.e. up to 48h). Another sample was obtained from GEM Cultures in the USA.

A fellow member of the yahoo discussion group on tempeh provided me with a sample of the famous Indonesian Raprima starter that is produced by The Indonesian Institute of Sciences (LIPI—Lembaga Ilmu Pengetahuan Indonesia). Actually, he provided 2 samples: one was pure Raprima out of the bag and the other, he had cut with rice flour. Of course Raprima is already originally cut with some extender, so this person only further extended it, as he claimed that Raprima

was already too strong.

Finally, the fourth sample was sold by the friendly person that runs the blog Kedai Perantau (Overseas Store) <http://kedaiperantau.blogspot.com/>. He did not provide any details on the origin of starter, but he assured it was not Raprima.

The conditions of the trial do not, by any means, comply to any rigorous scientific experiment. The information I'm providing is to be taken at best with a pinch of salt. On top of that, the different starter providers all specify different procedures to making tempeh (temperature and incubation time differ greatly), and most important of all, specify different quantities of starter. I did my best to adjust accordingly, and since all the batches were incubated for the same time, results might not be fair and not a standard "apples with apples" comparison.

The previously cracked and dehulled and rehydrated organic soybeans were cooked for approximately 1 hour. They were split into 5 different pots and inoculated with the different starters. They were incubated on a custom-built, dedicated cabinet incubator using a thermostat.

After approximately 24h at 32°C, the tempeh that created the most mycelium was definitely the one from GEM Cultures. But, it was the only one that created a lot of black spots. As we all probably know, black spots are the result of the mould having reached maturity and having reproduced sexually. There is a downside to this. I personally don't find eating the result of fungal sexual activity "yucky," but some people that do not know what this is, think that this tempeh is gone off and that the black spots are the presence of mould. Of course they are right, to some extent, but those people think that those moulds are external to tempeh and that they are pathogenic, and ignore the fact that tempeh in itself is a mould! Anyway, some commercial sellers avoid producing tempeh with black spots and this is the reason why Tempeh.info sell their special starter with a slower metabolism never creating black spots. And it didn't, in our experiment. This starter also created a rich, dense mycelium. The tempeh incubated with Raprima also didn't create black spots. The starter provided by Kedai Perantau only created very little black spots. The starter from Kedai Perantau and from Raprima created a not so dense, compact mycelium but this was, I suspect, due to the not enough starter being used. I noticed very little difference between the batches using custom-extended Raprima starter and out-of-the-bag Raprima. The further extended one produced slightly more mycelium than the other.

Having said this, let's move to the organoleptic results.

There was a "panel" of 4 people that tasted tempeh slices marinated with garlic and tamari, toasted on a skillet with olive oil. Because we wanted to be able to identify the different tempeh batches we cooked them all one after another, so this ended up being another variable that might have affected the results. But anyway. We all seemed to

agree that the best tempeh was the one inoculated with the Raprima starter. This tempeh had a more dense flavour, much richer and with different, subtle, tones. Compared to it, the tempeh made with the GEM Cultures starter seemed more bitter, and with a poorer flavour. It was nonetheless quite good, but definitely not as good as the Raprima. The tempeh made with the Belgium tempeh.info starter tasted a bit of "chicken" but that might have been due to the fact that some slices were slightly overtoasted, mimicking a roasted chicken skin. (For the record, I haven't eaten any meat of fish for over 12 years, but others had the same impression too.) Apart from the chicken flavour, this tempeh was pretty bland, which on the good side means it was less bitter than the one from GEM Cultures. On the end of the spectrum we all seemed to agree that the tempeh made with starter provided by Kedai Perantau was the less interesting one.

It would be great to find out the exact details of each starter: strains of *Rhizopus* spp, extender dilution, if pure or mixed cultures, etc. Unfortunately this information is very hard to obtain.

Best Wishes, Chico. Address: Lisbon, Portugal.

3470. Astuti, Susi. 2009. *Hidangan special tahu tempe* [Special tofu and tempeh dishes]. Depok, Indonesia: Kriya Pustaka. iii + 72 p. [Ind]\*

• **Summary:** Contains many tofu and tempeh recipes.

3471. Blatner, Dawn Jackson. 2009. *The flexitarian diet—The mostly vegetarian way to lose weight, be healthier, prevent disease, and add years to your life*. New York, NY: McGraw-Hill. xvii + 285 p. 24 cm. [116\* ref]

• **Summary:** The author says she tries not to use the word "tofu"—even though she likes and recommends it. Instead she uses a longer term she coined—"veggie white meat." Tofu contains the taste "umami" also found in meat.

Soy is mentioned throughout this book, including (see index): Edamame, tofu, tempeh, vegetarian meats, vegetarian white meat. For definitions and a "tofu tutorial" see p. 24-29.

The author, Dawn Jackson Blatner, RD, LDN, is a registered and licensed dietitian and a national spokesperson for the American Dietetic Association. She is the online nutritionist for Lifetime Television's MyLifetime.com; writes a food and nutrition blog for USA Today; teaches cooking classes; and appears regularly in print and television outlets such as CNN and RED magazine. Address: RD, LDN.

3473. Bryant, Terry. 2009. *Vegan soul kitchen: fresh, healthy, and creative African-American cuisine*. Cambridge, Massachusetts: Da Capo Press. xxvii + 223 p. + 8 unnumbered pages of plates. Illust. (some color). Index. 24

cm. [25 ref]

• **Summary:** A unique and pioneering book with 150 recipes! Terry is an African-American man with many distinctions and awards. Accompanying each recipe is the name of a musical soundtrack the author likes and would like to share. Each also has headnotes.

Soy-related: Cajun Creole-spiced tempeh pieces with creamy grits (p. 10-11). Open-faced BBQ tempeh sandwich with carrot cayenne coleslaw (p. 12-13, incl. a brief introduction to tempeh). Pan-fried coconut tempeh cubes with creamy celeriac sauce (p. 50). Spice mafé tempeh (p. 95-96). Tempeh, shiitake mushroom and cornmeal dumpling stew (p. 97-98).

One chapter (p. 139-53) is titled: "Protein routine: beans, tofu, tempeh, seitan." Red beans and brown rice with red wine-simmered seitan. Rosemary toasted tofu cubes. Blackened tofu slabs with succotash salsa (with a brief introduction to tofu. "Think of tofu as a blank canvas on which you can creatively arrange colors to make a beautiful work of art"). Tempeh-stuffed bell peppers. Good green tempeh packet. Whole-grain mustard and cornmeal crusted seitan. Smothered seitan medallions in mixed mushroom gravy.

On the front cover is a photo of the author cooking. For one page about the author, see p. 217 or [www.bryant-terry.com](http://www.bryant-terry.com). Address: Eco-chef, food justice activist, and author, Oakland, California.

3474. Esselstyn, Rip. 2009. *The Engine 2 diet: the Texas firefighter's 28-day save-your-life plan that lowers cholesterol and burns away the pounds*. New York, NY: Wellness Central. xiii + 273 p. Foreword by T. Colin Campbell, PhD. Illust. Index. 24 cm.

• **Summary:** A very interesting, readable, and innovative book that advocates a sound, healthy diet that can last a lifetime. "Rip managed to convert a firehouse full of committed firefighters to a plant-based diet. Rip (born in 1963) is the eldest son of Caldwell B. Esselstyn, Jr., M.D., who has become famous for his ground-breaking book *How to Prevent and Reverse Heart Disease*. This book is both similar and different. It is similar in that the basic whole foods, plant-based diets advocated by father and son are 98% the same (and please focus on practicing that 98% and not squabbling about the 2%). It is different in that Rip is from a younger generation, is not a physician but an athlete and firefighter, and is trying to help people who want help in lowering their high cholesterol levels and their weight. He is not primarily trying to help people who have had at least one heart attack, are a death's door, and are (generally) willing to do almost anything to save their lives.

In Chapter 2, "My story," we read that while in school, Rip was an outstanding athlete. He set many high school swimming records (he still holds a national record in the 200 meter medley relay); he was a top player in his high school

tennis team and co-captain of the water polo team.

At the University of Texas at Austin, he was a three-time All American swimmer and an Olympic trials qualifier in the 100- and 200-meter backstroke and freestyle events. In 1986 he graduated from the University of Texas and within six months he was competing as a professional triathlete—which required a 1-mile swim, a 24.9 mile bike ride, and a 6.2 mile run. In the Hawaii Ironman Triathlon he competed against six-time Ironman Champion Dave Scott, who was powered by a plant-based diet—Rip lost. So in 1987, because of the influence of his father and of Dave Scott, Rip changed to a healthy, whole foods, plant-based diet. In 1997 he decided to become a fire fighter in Austin, Texas. He continued to compete and won many events and set many records. For example, in May 2008 he set the National Record at the U.S. Masters Swimming Championship in the 200 yard backstroke (1:56:55). Rip is married to Jill Kolasinski, and they have a son, Kole.

Rip's commitment to a healthy plant-based diet has resulted in many people asking him to help them with their diets. So in 2007, he devised the six-week Engine 2 Pilot Study in which 62 people agreed to eat a plant-strong diet; he put them through a gauntlet of tests before and after study to quantify the results—which were spectacular. Then in May 2008 he initiated a similar 4-week (28 day) study in which 15 people participated, 13 Engine 2 firefighters and two civilians. Again careful before and after records were kept. The average participant saw his total cholesterol drop 62 points (from 197 to 135), his average LDL (bad) cholesterol fall 50 points (from 125 to 74), and his weight drop 14 pounds (from 203 to 189). And all this in only 4 weeks! This book is based on the latter plan.

Rip makes much more use of soyfoods in his plant-based diet than does his father. The index contains 16 entries for tofu, 4 for tempeh, 4 for seitan, 2 for milk substitutes ("soy, rice, almond, and oat milk, for example"), 1 each tofu sour cream (p. 239), soy milk, soy yogurt (Silk or WholeSoy).

Soy related recipes include: Migas especiales (with 1 lb firm tofu, p. 154). Breakfast tacos (with "½ tube vegetarian breakfast sausage {we like Gimme Lean})," or use scrambled tofu (p. 155). E2 omelet (with "12 ounces Silken Lite Firm Tofu," p. 156). Lemon cornmeal pancakes (with "2 cups soy milk" and "½ cup soy yogurt, p. 157). Tofu steaks and mushrooms with mashed potatoes and green peas (with "1 pound extra-firm tofu," p. 180).

Linguine and creamy alfredo sauce (with "1 package Silken Lite firm tofu" and "2 cups unsweetened soy milk," p. 195). Lynn's meatloaf (with "10 ounces firm tofu," p. 204). Vegetable stir-fry with brown rice (with "1 pound seitan" and "two tablespoons low-sodium tamari," p. 208). Tempeh-mushroom stir-fry and soba noodles (with "1 package tempeh," and "3 tablespoons low-sodium tamari," p. 209). Red vegetable curry and brown rice (with "1 pound extra-

firm tofu,” p. 210).

Pad Thai (with “1 pound broiled tofu cubes {see p. 210},” p. 211). The great wooden bowl salad (with “1 pound extra-firm tofu,” p. 214-15). Tofu vegetable spread (with “½ pound extra-firm tofu,” p. 238). E2 sour cream (with “1 package Silken Lite firm tofu,” p. 239). Asian marinade (with “3 tablespoons soy sauce, p. 241). Island marinade (with “4 tablespoons soy sauce,” p. 241). Add tofu and allow to marinate refrigerated for 30 minutes to 4 hours (p. 241). Rip’s favorite snacks include “4. Soy yogurt: I’m particularly fond of the Westsoy... cherry” (p. 243). E2 Basics chocolate pudding (with “1 package Silken Lite tofu,” p. 245). Fruit bowl with soy drizzle (with “4-6 ounce container of soy yogurt,” p. 249). Fruit mousse (with “1 package extra-firm Silken Lite tofu,” p. 255). Maple sour cream dream (with “1 vanilla soy yogurt,” p. 256).

Many recipes call for “Bragg Liquid Aminos” which are simply HVP (hydrolyzed vegetable protein) made by a quick and unnatural / artificial process; soybeans, wheat, and/or corn are immersed in hydrochloric acid until, after 1-3 days, the acid has broken down the protein into its constituent amino acids. Fermentation (as of soy sauce) can do the same thing naturally in 4-6 months. HVP is a source of flavor without salt, but that flavor is generally considered to not nearly as good as the flavor of soy sauce.

Rip has an exercise component to his “Engine 2” 28 day plan.

And Rip gives people a choice as they start the 28 day plan; one can be a Fire Cadet or a Firefighter (p. 22). The “Fire Cadet option is for those who prefer a more gradual approach.” In week 1 Cadets must stop eating dairy products and processed / refined foods (such as refined sugar, white flour, etc.). In week 2 Cadets must stop eating meat, poultry, fish and eggs. In week 3 Cadets must do without added or extracted oils—even vegetable oils such as olive oil. In week 4 Cadets and Firefighters eat the total E2 diet, a healthy, whole-foods, plant-based diet. A Firefighter (the plan Rip recommends) requires that a give up all of these unhealthy foods from the start of the program. “Americans consume a staggering 50 percent of their calories from refined and processed foods.”

Cholesterol-lowering drugs (such as statins: Rip, who is not a physician, does not use them).

Salt and sodium: Rip advocates a low-sodium diet.

Support groups after the 4-week program: Optional.

People who wish to can create or find one themselves (p. 92).

Meditation and relaxation to reduce stress: Not part of the program.

Sugar and sweets. Avoid refined sugars, high fructose corn syrups, and things such as sodas, candy to which they are added. Instead choose natural sugars such as those in whole naturally-sweet fruits (p. 114-15, 134). In desserts, Rip often calls for up to 3-4 tablespoons maple syrup or agave nectar, yet a recipe for Brownies (p. 247) calls for “½

cup light brown sugar, packed” and “½ cup raw sugar.” And a recipe for “Oatmeal raisin cookies” (p. 253) calls for even more refined sugar. Rip admits he has a sweet tooth. Some of his desserts violate the basic principles of the Engine 2 diet; they contain large amounts of refined sugars—unlike the recipes (developed by his mother) in his father’s book. Moreover, his mother strongly suggests that desserts be saved for special occasions.

This is a sound, healthy diet and anyone who stays on it for 28 days will see dramatic improvements in their overall health and weight.

The Engine 2 diet is a good, practical diet for the rest of your life. But go easy on the desserts and try to avoid the ones with refined sugar. Address: Austin, Texas.

3475. Hunt, Nirala. 2009. *Tempeh: Food for the future*. Fremantle, Western Australia: Vivid Publishing. 47 p. Illust. Index. 21 cm. \*

3476. Moskowitz, Isa Chandra. 2009. *Vegan brunch: homestyle recipes worth waking up for—from asparagus omelets to pumpkin pancakes*. Cambridge, Massachusetts: Da Capo Life Long. xiv + 240 p. Illust. (color photos). Index. 23 x 18 cm.

• **Summary:** What a great writer! Another fine book; her middle name, Chandra, is Indian, and her last name, Moskowitz is Russian Jewish. “Dedicated to vegan hash slingers everywhere. Scrambled tofu saves lives!”

The index contains 30 entries for tofu, 8 for tempeh, 5 for seitan, and 1 each for miso and soy. Address: Brooklyn, New York.

3477. Ronnen, Tal. 2009. *The conscious cook: delicious meatless recipes that will change the way you eat*. New York, NY: William Morrow, an imprint of HarperCollins Publishers. 239 p. Illust. (Color). Index. 26 x 20 cm.

• **Summary:** A full-color vegan cookbook. The index contains 21 entries for tofu (including tofu ricotta, p. 82-83), 15 for Gardein, 11 for tempeh, 5 for soy milk, 3 for seitan, 2 each for miso and for soy cheese, and 1 each for soy creamer and soy yogurt. Includes interviews with: Yves Potvin, maker of Gardein (p. 157-59). Seth Tibbott, founder and president of Turtle Island Foods (p. 192-93). Address: Vegan chef, lives in Los Angeles and Vancouver, BC.

3478. Silverstone, Alicia. 2009. *The kind diet: a simple guide to feeling great, losing weight, and saving the planet*. Emmaus, Pennsylvania: Rodale Press. Distributed to the trade by Macmillan. xi + 308 p. Foreword by Neal Barnard. Illust. (color photos by Victoria Pearson). Index. 24 cm. [17 + 71 endnotes\*]

• **Summary:** On the cover: “New York Times Bestseller.” A powerful, very popular book about a plant-based (vegan) lifestyle and diet, which calls for only “real food,” with some

nice macrobiotic flavor—A whole grain dish should be at the center of every meal, use of seasonal foods organically grown, azuki beans, daikon, kuzu, kabocha, miso, mochi, nori, sea vegetables, seitan, shoyu, no white or cane sugar (a “crazy making” food), tamari, umeboshi, etc.

By a well known actress who first became widely known for the film *Clueless*, a 1995 American comedy film loosely based on Jane Austen’s 1815 novel, *Emma*.

She dedicates the book to Sampson, a stray dog she picked up on the streets of Los Angeles, to all animals who suffer needlessly, and to all “who do their best to tread lightly on the earth.”

The index contains 16 entries for tofu, 14 for miso, 11 for seitan, 4 for soybeans (whole dry), 3 for soy milk, 2 each for edamame and tempeh, 1 each for butter substitute (soy-based margarine, p. 142-43), cheesecake—tofu, cheese—vegan (p. 143), shoyu (p. 142), sour cream—soy (p. 143), soy candles (p. 134), and tamari (p. 142).

Some good quotations from a fine writer: “And what about your health?... What if I told you that, by eating a plant-based diet, you will strengthen your immune system, beautify your skin, increase your energy, and reduce your risk (significantly) of cancer, heart disease, diabetes, arthritis, osteoporosis, allergies, asthma, and almost every other disease? What if I said that I feel myself getting younger, more powerful, and more beautiful as I age simply because of *what I eat*?... If you want to lose weight, you’ve come to the right place (p. 1).

“Eating a plant-based diet is the most ecologically friendly thing you can do... Every time you purchase organic plant-based food, you are protecting the quality of the soil and participating in a more equitable distribution of resources. Conversely, every time you buy a mass-produced steak—packaged in Styrofoam and plastic—you are feeding a huge, unsustainable, toxic death machine. This may sound harsh, but it’s the truth! There’s a whole world of consequences behind every decision we make” (p. 131).

A large color photo on the cover shows lovely Alicia Silverstone, seated, with a bowl of food in one hand. The book contains many fine color photos on glossy paper. Address: Actress, activist, and committed conservationist, Los Angeles, California.

3479. Walters, Terry. 2009. *Clean food: a seasonal guide to eating close to the source, with more than 200 recipes for a healthy and sustainable you*. New York, NY: Sterling. 290 p. Illust. (Color). Index. 24 cm.

• **Summary:** This vegan cookbook, with a strong macrobiotic flavor and 223 recipes (arranged by season), shows you how to eat seasonal, unprocessed, and locally-grown foods that are good for people and the environment.

On pages 17-18 is a section titled “Soy” in which the author describes her belief that “there is so much information about whether soy is healthy or not.” We have rarely seen

a short section on soy containing so many clearly false or misleading statements as this one—too many to list. Clearly she gets her information about the nutritional value of soy from the Web rather than from scientific journals. Nevertheless she recommends and uses miso, tempeh, tamari / shoyu, and tofu.

The glossary of foods likewise contains many errors. For example: Aduki beans: Misspelled. Fermented black beans: She fails to mention that these are soybeans. Gomasio: Misspelled. Tempeh: “Made from pressed and fermented soybeans.” Tofu: “Made from soybean curd.”

The index contains 23 recipes for tofu, 9 each for miso, and tempeh, 3 for shoyu, and 4 for tamari. Address: Connecticut.

3480. Brown, Allan; Brown, Susan. 2010. Re: Update on Noble Bean at McDonalds Corners, Ontario, Canada. Several new photos. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 25. 1 p.

• **Summary:** “Thirty years and counting and selling all [the tempeh] that we make. A couple of hot vegan restaurants in Toronto (Urban Herbivore / Fressen [at two different locations in Toronto]) and in Montreal (Aux Vivres and The Green Panther; Google this one and you’ll see a tempeh person with carrot stick arms) make the most delicious food with our product that folks go buy it retail after eating at their restaurant. Life is good, we are healthy...”

Each of these color digital photos is accompanied by a caption or explanation. They are: (1) Allan and Susan Brown, founders of Noble Bean. Photo taken on mother’s day, 10 May 2009 at the home of Allan and Susan’s son in Ottawa, Ontario.

(2) A blue Noble Bean promo sign created for the Toronto Vegetarian Association city directory to veggie food 2010. Can also see it at: <http://veg.ca/pdf/torontovegdirectory-10.pdf>.

(3) Three photos show how Noble Bean uses solar energy to heat the water for cooking soybeans to make

tempeh. Allan writes: These photos were taken on 2 June 2010. Cost of the evacuated tube solar hot water system: \$19,000. Federal (Canadian) and Provincial (Ontario) governments each pitched in 25% and we (Noble Bean) paid the remaining 50% of the cost. It was part of a grant for small businesses. Water in the solar panels is heated to 85-90 degrees Celsius by solar radiation in sunny weather. Very little propane is needed to bring this water up to boiling (100 degrees C) for cooking soybeans. The 3 boxes you see on the close-up inside are heat dissipaters to expel extra heat during long stretches of sunshine. Insulated storage tanks manufactured in Budapest have heat exchangers inside that transfer the heat from the glycol in the panels to the cold water. Essentially a pump runs that glycol from the panels through the storage tanks and heats the water. We save about one-third of our propane costs with this system. The “payback period” (time required for the return on an investment to “repay” the sum of the original investment) is about 10 years. Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3481. Culture Codec. 2010. Pune health-food company Dakini Foods forced to leave (Web article). <http://www.culturecodec.com/post/440492747/dakini-foods-pune-closed>. March 11. Posted.

• **Summary:** “It is a sad day here in Pune, as I have received word from our favorite health-food producers in town that they have been forced to leave for bogus visa reasons.

“Dakini Foods produced the best natural food products we could find in town—including all natural and fresh peanut butter, tofu, tempeh, and rice cakes. Ah, what a sad, sad day.

“What is more, it seems that corruption and abuse of power were the rule in the government’s under-handed dealings with Hillel Shapira, the proprietor of Dakini Foods, even to the extent of imprisoning him and making him pay bribes to use the bathroom.

“We clearly live in uncertain times when the emerging leaders of the ‘free’ world act indiscriminately with impunity.

“We wish Hillel and the others the best, and hope they find prosperity in their next ventures. Good bye, Dakini!”

Note: Three links are given to newspaper articles; two of these are to the *Times of India*. Address: Pune, India.

3482. Haron, H.; Shahar, S.; O’Brien, K.O.; Ismail, A.; Kamaruddin, N.; Rahman, S.A. 2010. Absorption of calcium from milk and tempeh consumed by postmenopausal Malay women using the dual stable isotope technique. *International J. of Food Sciences and Nutrition* 61(2):125-37. March. \*

• **Summary:** Absorption of calcium from tempeh did not differ significantly from milk. However, due to differences in the calcium content of tempeh, four servings of this product would be needed to get the same amount of absorbed calcium as that obtained from a 4-ounce glass of milk. Tempeh may provide a readily available source of calcium for this population of women at risk for low bone mass. Address: Dep. of Nutrition & Dietetics, Faculty of Allied Health Sciences, Universiti Kebangsaan Malaysia, 50300

Kuala Lumpur, Malaysia.

**3483. Product Name:** Marinated Tempeh [Smoky Maple Bacon].

**Manufacturer's Name:** Turtle Island Foods, Inc.

**Manufacturer's Address:** P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. Phone: 1-888-TOFURKY (863-8759).

**Date of Introduction:** 2010. March.

**Ingredients:** Organic soybeans, water, shoyu soy sauce (water, non-GMO soybeans, wheat, salt, culture), molasses, maple syrup, natural smoke flavor, autolyzed yeast extract, salt, potato maltodextrin, gum arabic, organic apple cider vinegar, starter culture (*Rhizopus oligosporus*). Contains: Soy, wheat. Certified organic by Oregon Tilth.

**Wt/Vol., Packaging, Price:** 7 oz. paperboard box.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label (box; see p. 870) sent by Seth Tibbott of Turtle Island. 2010. Dec. 15.

**3484. Product Name:** Cool Beans: Handmade Tempeh [Soy & Blackeyed Pea Tempeh].

**Manufacturer's Name:** Viable Cultures.

**Manufacturer's Address:** P.O. Box 6051, Asheville, NC 28816. Phone: (828) 768-7931.

**Date of Introduction:** 2010. March.

**Ingredients:** Soybeans, culture.

**Wt/Vol., Packaging, Price:** 8 oz or 16 oz in plastic bag. Retail for \$5.49 (8 oz single bagged) or \$8.50 to \$9.49 (16 oz double bagged)—including NC sales tax (7.75%).

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter (e-mail) from Brian Moe. 2010. June 17. This tempeh was first made and sold in March 2010.

**3485. SoyaScan Notes.** 2010. The Jakarta Post: The best source of current English-language information on soybeans and soyfoods in Indonesia (Overview). May 16. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Indonesia is the largest producer and user of soybeans in Southeast Asia. *The Jakarta Post* has digital archives of its daily issues going back to 1999. A search for soybeans or soybean gets hundreds of hits, as do searches for tempe, tempeh, tahu, tofu, kecap, soy sauce, kecap manis, etc.

The Jakarta Post, an English-language daily, is Indonesia's largest English-circulation, with an average circulation of about 50,000 copies. Launched on 25 April 1983, its head office is in Jakarta. The Jakarta Post is a small but influential newspaper oriented towards local English-speaking expatriates and the diplomatic community. In many ways, it acts as an unofficial mouthpiece of the Indonesian government into the international community. Go to: [www.jakartapost.com](http://www.jakartapost.com).

**3486. Product Name:** Tempeh, and Italian Tempeh Sausage.

**Manufacturer's Name:** Hearty Vegan (The).

**Manufacturer's Address:** Bastrop, Texas.

**Date of Introduction:** 2010. September.

**New Product–Documentation:** Talk with Beth Taylor, co-founder—with her daughter, Becky. This company is run by Beth and Becky. Visit to website [www.heartyvegan.com](http://www.heartyvegan.com). In the mid-1980s, Beth became a vegetarian and a vegan. Hearty Vegan traces its origins back to 1995 when Beth was hired as a personal chef to a woman who was very busy and who wanted healthy vegan food for her husband. "She was worried about her husband's high cholesterol, blood pressure, and weight." The Hearty Vegan started making and selling tempeh a year ago. They are now planning to move to Austin, Texas.

E-mail from Beth Taylor. 2011. Sept. 30. "I have been making and selling tempeh since 2003. Now we make and sell tempeh and italian tempeh sausage at Wheatsville Coop in Austin, Texas."

**3487. Chappell, Mary Margaret.** ed. 2010. *Vegetarian Times everything vegan*. Hoboken, New Jersey: John Wiley & Sons 352 p. Foreword by Neal Bernard, M.D. Illust. (full-page color photos). Index. 24 cm.

• **Summary:** Recipes from *Vegetarian Times* magazine. Chapter 7 (p. 131-64) is titled "Tofu, tempeh, and seitan." The index to the book contains 36 entries for tofu (divided into different types such as extra firm, firm, flavored and processed, silken; plus lots of basic information), 17 for seitan, 15 for tempeh, 7 for miso, 5 for soy crumbles and textured soy protein, 4 for meat alternatives, 4 for edamame, 2 for smoothies, and 1 for soymilk—although many recipes call for soymilk.

This book frequently includes alcoholic beverages with recipes and in photos.

**3488. Finlayson, Judith.** 2010. *The vegetarian slow cooker: over 200 delicious recipes*. Toronto, Ontario, Canada: Robert Rose Inc. 304 p. Illust. (color). Index. 27 cm.

• **Summary:** A "slow cooker" is an electric (100 watt) kitchen appliance. One chapter (p. 187-239) is titled "Beans, lentils, tempeh and tofu." The index contains 11 entries for tofu, 5 for miso, and 4 for tempeh. Recipes are prominently marked as "Vegan friendly" when appropriate. Address: Food writer, journalist and author.

**3489. Hackett, Jolinda; Bull, Lorena Novak.** 2010. *The everything vegan cookbook: 300 recipes for any occasion!* Avon, Massachusetts: Adams Media. x + 294 p. Index. 24 x 21 cm.

• **Summary:** The book begins: "Dear Reader: When I

decided to give up eggs and dairy, I asked every vegan I knew for their advice. One sentiment always stood out: ‘Learn to cook.’”

Chapter 11, titled “Tofu” (p. 219-42) contains 26 tofu recipes of great variety and creativity. Chapter 12, “Seitan, TVP, and tempeh” (p. 243-65) contains 23 recipes, including homemade seitan.

Other soy related recipes: Vegan mayonnaise (with “1 12-ounce block silken tofu,” p. 23). Vegan “pigs” in a blanket (with vegan hot dogs, p. 24). Vegan tzatziki (with soy yogurt, p. 30). Chili masala tofu scramble (p. 38). Quick tofu breakfast burrito (p. 42). Strawberry protein smoothie (with silken tofu, p. 43). Granola breakfast parfait (with soy yogurt, p. 46). Baked “sausage” and mushroom frittata (with vegetarian sausage or “beef” crumbles, p. 53). Creamy miso sesame dressing (p. 61). Tempeh dill “chicken” salad (p. 64). Edamame salad (p. 73). Winter seitan stew (p. 88). Saucy Chinese vegetables with seitan or tempeh (p. 105). Barley pilaf with edamame and roasted red peppers (p. 185). Cheesy macaroni and “hamburger” casserole (with veggie burgers, p. 210). TVP taco “meat” (taco filling, p. 250). Homemade baked seitan (p. 251).

Many other recipes call for soy milk or soy cream. Jolinda Hackett has been a vegetarian for nearly 20 years and a “plant-based vegan” for nearly ten. Address: 1. Santa Barbara, California; 2. RD [Registered Dietitian], Riverside, California.

3490. O’Donnel, Kim. 2010. The meat lover’s meatless cookbook: vegetarian recipes carnivores will devour. Cambridge, Massachusetts: DaCapo Life Long. xii + 237 p. + [8] unnumbered pages of plates. Illust. (some color). Index. 24 cm. \*

• **Summary:** Mentions tempeh.

3491. Quinlivan, Rachel. 2010. Cooking light: Way to cook vegetarian. Birmingham, Alabama: Oxmoor House. 424 p. Illust. (color). 24 cm.

• **Summary:** An excellent, gorgeous vegetarian cookbook, printed entirely on semi-gloss paper with many color photos.

One very creative chapter (p. 206-43) is titled “Tofu & tempeh.” The contents (not including recipes): Tofu (description). Tofu varieties: Silken tofu, water-packed tofu, flavored tofu. Tempeh. Tempeh varieties (with a good color photo of each): Wild rice, soy, flax, garden vegetable, multigrain, original. How to press tofu. How to bread and pan-fry tofu. How to fry in a healthier way. How to saute tofu. How to marinate tofu. How to broil tofu. How to prepare lemongrass. How to peel and grate gingerroot.

The index contains 18 entries for tofu, 9 for tempeh, 2 for edamame, 2 for soy and 1 each for soy sauce (low-sodium tamari), black bean garlic sauce (such as Lee Kum Kee) and seitan. Address: R.D., editor.

3492. Reinfeld, Mark; Murray, Jennifer. 2010. The 30 minute vegan’s taste of the East: 150 Asian-inspired recipes—from soba noodles to summer rolls. Cambridge, Massachusetts: Da Capo Press. xix + 266 p. Plus 16 unnumbered pages of color plates. Illust. (color photos). Index. 24 x 18 cm. [28 ref]

• **Summary:** The index contains 22 entries for tofu, 8 each for tempeh and for seitan, 3 for miso, 2 for edamame, and 1 each for tamari and for soy sauce (Noodles with sweet soybean sauce, pad siew).

Includes a good glossary with entries for miso, nama shoyu, seitan, shoyu, soy milk, soy sauce, tamari, tempeh, tofu Address: 1. Founding chef, Blossoming Lotus Restaurant, and author; 2. Author and teacher. Both: Kaua’i, Hawaii.

3493. Tamang, Jyoti Prakash. 2010. Himalayan fermented foods: Microbiology, nutrition, and ethnic values. Boca Raton, Florida: CRC Press. xix + 295 p. See p. 65-78. 230-31, 233. Illust. 25 cm. [584 ref]

• **Summary:** This is a very interesting, original, well researched and well written book. It is also the best source of detailed, well documented information on kinema and its close relatives seen to date.

The word Sanskrit word Himalayas means literally “abode of the snows.” This region is the home of over 65 million people. Those in the eastern Himalayas are of Mongolian ethnicity and ancestry.

Chapter 3, titled “Fermented legumes,” includes a section titled “3.1 Important fermented soybean foods” which states (p. 65): “Some of the common ethnic nonsalted sticky fermented soybean foods of the eastern Himalayas are *kinema* (Nepal, Darjeeling hills, Sikkim, and South Bhutan), *hawaijar* (Manipur), *tungrymbai* (Meghalaya; food of the Khasi and Garo peoples), *bekang* (Mizoram; food of the Mizo people), *aakhone* (also called *axone*, Nagaland; food of the Sema Naga), and *peruyyan* (Arunachal Pradesh). Manipur, Meghalaya, Mizoram, Nagaland, and Arunachal Pradesh are small states in northeastern India.

All of these foods are similar to *kinema*.

For all these six foods is given: The name of the food, a close-up photo of the food, indigenous knowledge of preparation, a flow chart showing the indigenous method of making the food, culinary practices (how the food is prepared / cooked and eaten), economy (its role in the local economy), microorganisms (dominant and secondary).

Section 3.3 is “Microbiology” (of fermented legumes): Kinema (microorganisms, source of inoculation in kinema production optimization of fermentation period, in situ fermentation of kinema, selection of starter culture, monoculture fermentation of kinema, development of pulverized starter for kinema production, phylogenetic similarity of *Bacillus* strains from Asian fermented soybeans), other fermented soybean foods of north east India.

Section 3.4 is “Nutritive value” (table 3.1 compares the nutritional composition of raw soybean and kinema). And section 3.5 is “Conclusion.”

The long and very interesting section (9.1.1) on the “Antiquity of kinema” (p. 230-34) states that it is a food of the Kirat ethnic group (to which the Limboo belong) of eastern Nepal. The origin of the word “kinema” can be traced back to the word *kinaba* of the Limboo language (*ki* = fermented; *namba* = flavor). It is not clear whether *kinema* appeared first, then was disseminated and diversified, or vice versa. The Limboo believe that their discovery and domestication of the soybean (which they named *chembi*) in mentioned in one of their oral myths, as explained.

Kinema is made by fermenting whole soybeans, without inoculation, with strains of *Bacillus subtilis* bacteria. It is alkaline in nature / pH, has a sticky, stringy texture and a strong flavor.

Natto is believed to have been introduced to Japan from China during the Nara period around 710-714 AD (Ito et al. 1996; Kiuchi 2001). Kinema might have originated in east Nepal around 600 B.C. to 100 A.D. during the Kirat dynasty.

Products closely resembling kinema are popular foods in many non-Brahmin communities in the eastern Himalayas. “The Lepcha [the aboriginal inhabitants of today’s Sikkim] call it *satyangser*; the Tibetans and Bhutia [of Bhutan and Sikkim] call it *bari*; the Khasi [of Meghalaya] call it *tungrymbai*; the Meitei [of Manipur] call it *hawaijar*; the Mizo [of Mizoram] call it *bekang*; the Sema Naga [of Nagaland] call it *aakhone*; and the Apatani [of Arunachal Pradesh] call it *peruyyan*.”

Soybean products closely resembling kinema outside of the Himalaya region are *natto* of Japan, *chungkokjang* of Korea, and *thua-nao* of Thailand [From Google Books Preview].

Dr. Sasuke Nakao (1972) coined the term “natto triangle,” but Tamang proposes that the hypothetical triangle be renamed “Kinema–Natto–Thua-nao triangle” (or KNT triangle). An illustration / map (Fig. 9.1) shows this triangle with Japan, Nepal-India-Bhutan, and Thailand at its three angles; it also includes chungkokjang (Korea), pepok (Myanmar), sieng (Thailand), and *douche* [*douchi*] from south China. These mildly alkaline, sticky fermented foods are popular among the peoples of Mongolian origin. This may be due to their typical flavor called *umami* (Kawamura and Kara 1987). This flavor is developed during the hydrolysis of soy protein (by protease enzymes) into amino acids during fermentation. Have people of Mongolian origin evolved or developed particular senses which inclines them to enjoy the umami flavor? In the eastern Himalayas green vegetable soybeans are also boiled and eaten.

Section 10.3, “Commercialization through ethnic food tourism,” suggests that just as tourists visit the vineyards of France, tempeh shops in Indonesia, and artisans or factories that make shoyu or sake in Japan, there are potential tourist

sites for experiencing how traditional foods are made in the Himalayan villages. For kinema, try visiting Aho village in Sikkim.

About the author (p. xix): A good biography and portrait photo are given. In the “Acknowledgments” (p. xvii) he writes: “I am thankful to my wife Dr. Namrata Thapa for constant support and technical assistance in the preparation of this book. Over the past 16 years the team of brilliant Ph.D. students that I have recruited from the Food Microbiology Laboratory, Sikkim Government College, Gangtok, has been the real driving force in researching and identifying the scientific mechanisms of ethnic Himalayan fermented foods.” He then lists their names. Address: Food Microbiology Lab., Sikkim Government College, Gangtok, Sikkim 737 102, India.

• **Summary:** Chapter 1. “Dietary culture and antiquity of fermented foods and beverages,” by J.P. Tamang and D. Samuel (p. 1-40). Chapter 2. “Diversity of fermented foods,” by J.P. Tamang (p. 41-84).

Chapter 6. “Fermented legumes: soybean and non-soybean products,” by Toshirou Nagai and J.P. Tamang (p. 191-224).

Chapter 15. “Health aspects of fermented foods,” by M. Farhad, K. Kailasapathy, and J.P. Tamang (p. 391-414).

3495. Ron, Wells. 2011. A brief history of Footprint Foods, dba Green Cuisine (Interview). *SoyaScan Notes*. Jan. 3. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** “We are Footprint Foods. We purchased the manufacturing part of Green Cuisine brand from Andy Cunningham in May 2008. We are in our third year now as owners of Footprint Foods. Andy still owns Green Cuisine.” In June 2008 Rony reintroduced two brands of tofu and 5 brands of tempeh (fresh and frozen).

His product line is: 95% and above organic ingredients. Certification by PACD. Tofu (medium and extra firm), Tempeh, frozen (soybean, herb 7 grain) and fresh Tempeh (Indonesian, Original burger, BBQ burger, Marinated, Smoked, Simply Soybean), Mochi (brown rice, raisin cinnamon, sesame), Wheat Cutlets (plain, Ginger and Garlic), and Amasake (Plain, Hazelnut, Almond, Banana Mango).

Ran has five distributors in Canada, but none in the USA. The big chains in Canada are squeezing him and he doubts he will be in business in one year. Ron’s e-mail: ron.footprintfoods@shaw.ca. Address: 712 Discovery St., Victoria, BC, V8T 1H2, Canada. Phone: 250 381 8638.

3496. Schmidt, Henry. 2011. Re: History of Henry’s Tempeh

in Canada. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 12. 2 p.

• **Summary:** Henry Schmidt was born in 1948 in Winnipeg, Manitoba, Canada. His parents were farmers. He attended high school in Gretna, Manitoba, and graduated from the University of Manitoba, with a B.A. in sociology and psychology. In 1975 he left Manitoba and moved to Ontario, to pursue graduate studies in sociology at the University of Waterloo.

“1998—Daughter (Katrina) introduces me to tempeh via the statement of “I have an idea” and “The Book of Tempeh.” Research led me to conclude: (1) That tempeh is a good food—good for the eater and good for the planet. (2) Consumption of tempeh is / will be a growing market. (3) There are a limited number of tempeh producers in Canada and there is opportunity for another one.

“Helped daughter, Katrina, establish a tempeh production facility on Saltspring Island (British Columbia), called Saltspring Tempeh. Note: Henry didn’t live on Saltspring Island; his daughter did. After helping her to start her business, he returned home to Ontario. Tempeh production ceased on Saltspring in 2004.

2000—The company I was working with/for (senior housing development and management) was sold and I needed to find new employment. Having been in different business ventures with partners I had a desire to start a business all on my own. The tempeh business seemed to fit the bill. So about 8 years ago I moved to Ontario, from British Columbia, Canada, in order to gain access to a larger market, and to bypass the expensive process of transporting tempeh from an island (Saltspring) onto the mainland.

2000 Oct.—I sold my first tempeh to a retail outlet on Scott St. in Kitchener, Ontario, Canada. Started with one variety of tempeh (SoyKasha) and one year later introduced the second, SoyOnly. Using a unique production process we are able to produce tempeh that is mild in flavour, attractive in appearance and fresh to the consumer (i.e., not frozen). For several years I “flogged”—promoted (cold calling) and delivered—the product to health food stores.

2003—Started working with a health food distributor in Toronto area.

2004—Introduced a tempeh burger, discontinued after one year; decided to stick to our knitting and do what we do best—make excellent tempeh—and leave the value-added products for others to do.

2005—Had a website developed (traded tempeh for its development) website [www.tempeh.ca](http://www.tempeh.ca)

March—Introduced 3 more varieties of tempeh: SoyBasil, SoyCurry and SoyRedPepper (see next page).

Starting working with a second health food distributor, expanded coverage to include areas east to the coast and west to the prairies.

2010—Growth has been steady and organic; primary promotion is word-of-mouth from satisfied consumers and

via demos at health food stores and trade shows

Currently our tempeh is sold primarily in health food stores though some main stream grocery stores (Toronto area) also carry our product.

Henry’s favorite is SoyKasha Tempeh (the buckwheat gives it a nutty flavor) but the SoyOnly is the best-seller. Address: Henry’s Tempeh Inc., 237 Arnold St., Kitchener, ON N2H 6E8. Phone: 519-748-8677.

3497. Tibbott, Seth. 2011. Update on tempeh, Tofurky and Turtle Island (Interview). *SoyaScan Notes*. Jan. 19. Conducted by William Shurtleff of Soyinfo Center.

• **Summary:** Tempeh sales constituted about 10.7% of Turtle Island’s total sales last year; the remaining 89.3% was Tofurky products. “The various types of Tofurky have steadily become our dominant products by far. Yet sales of all our tempeh products increased 39.8% during calendar year 2010. The increase was in two areas: In March 2009 we launched tempeh strips [Marinated Tempeh] in 3 flavors (Lemon Pepper, Coconut Curry, and Sesame Garlic), and packaged each in a nice box. In June 2010 we added a fourth flavor—Smoky Maple Bacon.” The 39.8% sales increase figure refers to sales of these tempeh strips (4 SKUs, in a 12-pack to the natural food market and a 6-pack to the mass market) and sales of cake tempeh and tempeh strips to the mass market. Last year, Seth sold 27,000 cases of tempeh strips and 29,000 cases of tempeh cakes (of various types) in the natural foods market. Seth has been selling tempeh in cakes for about 30 years, but in strips for less than 2 years. So the strips (which weigh 7 oz per individual package) have caught on very rapidly and are almost at the level of the cakes (which weigh 8 oz per individual). In short, natural foods customers like flavored, heat-and-serve, 2nd generation tempeh products. But here’s the kicker; sales of the strips are growing fastest in the mass market (supermarkets), where Seth sells about 10 times as many cases of strips as he does cakes. And its just getting started. In places like North Carolina and South Carolina they just can’t get enough of these 6-pack cases of marinated strips.

Turtle Island was already in mass supermarkets in the southeastern United States, but by mid-2011 the tempeh products were added as line extensions in those accounts — especially in Florida, North Carolina, South Carolina, and Georgia, in that order. The Sesame Garlic and the Smoky Maple flavors are the best sellers in the line.

There are a growing number of voices in America talking about the health and flavor benefits of fermented foods.

Seth’s tempeh sales (all cakes) (all types) were \$472,000 in calendar year 2002, rising to \$1.3 million in 2009. So sales of tempeh cakes are way up compared with 10 years ago.

The biggest tempeh maker in the USA by far is Lightlife Foods (in Massachusetts); they make about 10 times as much tempeh (Fakin’ Bacon and cake tempeh) as Turtle Island. No.

2 is Turtle Island, followed by Hain (“Where good brands go to die”), which now makes Westsoy Tempeh, which was originally made by Steve Demos of White Wave.

In the SPINS data there is no category for tempeh alone; rather the category is “Tempeh and Seitan.” That category was \$6.1 million in 2006, increasing to \$6.5 million in 2009—but those numbers are inaccurate because Whole Foods recently stopped selling its data to SPINS.

How long will Seth continue to be in charge of his business? Good question. His stepson, Jaime Athos, who is extremely bright, has a PhD in neurobiology from the University of Washington (Seattle), is a vegetarian, and has good business sense, is “chomping at the bit” to take over the business from Seth. Seth wants to continue working there, but perhaps in an emeritus position and as chairman of the board. Seth’s 60th birthday is coming up on April 20, 2011, so he has to start thinking about succession and what else he wants to do. He is considering starting a foundation.

Yet his basic financial situation is “rags to better rags; it’s not rags to riches.” Seth does not have a big attraction to money. “It’s never been about money for me. In 1980 when I was first starting Turtle Island on my 2,500 bucks, I had never taken a class in business, but there were these free classes from the SBA [Small Business Administration] on how to start and run a business. So I figured, well, its free and I don’t have any money, so I’d better go there and learn about business. So I go the first class and this guy stands up there and his first question to this room-full of entrepreneurs is: ‘How many of you people are out there to save the world?’ And my hand shot up. I looked around and no one else’s hand was up. And I go, ‘Oh god. Its a rhetorical question. I just flunked my first business exam.’ And then he goes, ‘How many of you are out there to make money?’ Every hand shot up. The place went wild. I was embarrassed—but... I see myself as the cosmic goof—the least likely person to succeed in business. Anyone with a good work ethic, little luck, a good product—so long has she doesn’t take herself too seriously—can succeed in business.

“When I was younger, I was always this humorous guy. But when I started a business making tempeh I suddenly transformed into this serious guy. The conventional wisdom was—you don’t want to make this funny; just play it straight. You don’t wanna to upset the middle class with a joke. And I lost tons of money. It was only when I came out with this wacky Tofurky product, that people thought was a joke, did I start making money. Humor started creeping into the way Turtle Island presented itself at that time. The subject lent itself naturally to humor. “I could feel I was letting my true self come through in the business.”

There has been a shakeup at Lightlife Foods. Top management has been asked to leave Turner Falls and move to Conagra Headquarters in Omaha, Nebraska. At least one top manager has quit.

In June 2010 Turtle Island launched a new product

which has, so far, been extremely successful—Tofurky Pizza (vegan), in 3 SKUs. The cheese they use is the remarkable new tapioca-based Daiya Vegan Cheese, made by Daiya Foods, a relatively small start-up company in Vancouver, Canada ([www.daiyafoods.com](http://www.daiyafoods.com)) that was founded in mid-2007 by Andre Kroeher and Greg Blake. They have taken the cheese-alternative category by storm. You can find shredded pieces of Daiya at any Whole Foods Market in the non-dairy cheese section.

Seth asks:

“Have you heard the joke about the fire in the vegetarian cheese factory? Everything melted except the cheese!” This non-dairy cheese really melts and stretches, is gooey and tastes great. Amy’s owns the natural foods pizza category but Seth’s 3 vegan pizzas are moving up fast on the charts. They started to be sold commercially in June 2010.

Sales of the three Tofurky products (Roast & Gravy, Feast, and Roast) reached 353,250 units in calendar year 2010. Sales have increased every year since Turtle Island started making the product in about 1995. The number sold has increased every year as follows (numbers prior to 2002 were rounded off to the nearest thousand): 1995–500. 1996–1,500. 1997–18,000. 1998–45,000. 2000–84,000. 2002–118,000. 2004–152,070. 2006–201,108 (one millionth Tofurky roast sold!). 2008–308,436. 2009–339,996 (two millionth Tofurky roast sold!). 2010–353,250. Total: 2,360,734.

Tofurky Feast (3.5 lbs): First sold in November 1995. Gone through several incarnations of size and product offerings. Current pack holds: two pound Tofurky Stuffed Roast, 14 oz Savory Tofurky Gravy, 11 oz Amy’s Vegan Chocolate Cake, one set of Tofurky Jurky Wishstixs, Happy Tofurky Day card, coupons for Tofurky products. Sold Frozen, mainly in Natural Foods stores like Whole Foods, Berkley Bowl, etc.

The Tofurky Roast has always had tofu in it; the first two years it was all tofu, no wheat gluten. In 1997 wheat gluten was added to give more turkey-like texture and to aid in freeze/thaw process. Tempeh Drumettes were part of the original Tofurky Feast but were replaced with Cranberry Apple Potato Dumplings in 2003, which were in turn replaced with Amy’s Vegan Chocolate Cake in 2010.

Tofurky Roast (26 oz): First sold in October 2002. Only the Tofurky Stuffed Roast. Sold Frozen, mainly in Natural Foods market.

Tofurky Roast and Gravy (2.5 lbs): First sold in October 2005. Includes one 26 oz Tofurky Stuffed Roast and 14 oz of Savory Tofurky Gravy. Sold Refrigerated in Mass Market accounts like Trader Joes, Publix, Safeway, etc. Address: President and Founder, Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031. Phone: (503) 386-7766.

3498. Shurtleff, William. 2011. Results of searches for the word “tempeh” in books or magazines on Google Books

published worldwide in any language from 1975 to 2011 (Overview). *SoyaScan Notes*. March 22.

• **Summary:** This is a search in the “Google Books” database for the word “tempeh” anywhere in books or magazines published worldwide in any language after Jan. 1, 1975.

(1) The word “tempeh” anywhere in the document plus the word “vegetarian” or “vegetarians” in the title of the document: 3,301 hits (results).

(2) The word “tempeh” anywhere in the document plus the word “vegan” or “vegans” in the title of the document: 2,053 hits (results).

(3) The word “tempeh” in the title of the document: 971 hits.

(4) The word “tempeh” anywhere in the document and the word “soy” in the title of the document: 846 hits (results).

(5) The word “tempeh” anywhere in the document and the word “soybean” or “soybeans” in the title of the document: 39 hits (results). (6) The word “tempeh” anywhere in the document and the word “soyfood” or “soyfoods” in the title of the document: 17 hits (results).

(7) The words “tempeh” and “tofu” in the document: 22,000 hits.

(8) The words “tempeh” and “miso” in the document: 9,760 hits.

(9) The words “tempeh” and “seitan” in the document: 3,590 hits.

(10) The word “tempeh” in the document every five years: 1970-1974 = 567 hits. 1975-1979 = 999 hits. 1980-1984 = 1,760 hits. 1985-1989 = 2,670 hits. 1990-1994 = 2,740 hits. 1995-1999 = 5,390 hits. 2000-2004 = 8,520 hits. 2005-2009 = 10,700 hits. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549.

3499. Tibbott, Seth. 2011. Re: Capitalization of Turtle Island Foods Letter (e-mail) to William Shurtleff at Soyinfo Center, April 22. 1 p.

• **Summary:** “Initial capitalization was \$2,500 of my own money.

“My brother Robert Tibbott invested \$19,000 in May 1990 when we incorporated into Turtle Island Foods, Inc. He also loaned me \$100,000 in 1992 to finance the move from Husum to Hood River; the loan was paid back in 1999. We had several other small loans from the bank and Robert but these were short term loans (for soybeans, etc.) and were paid back.

“My mother gave me \$5,000 in 1991 because she saw how hard I was working. I told her I would give her stock amounting to 13% of the company which later helped to pay her medical bills as she aged and needed more care.” Address: Turtle Island Foods, Inc., P.O. Box 176, 601 Industrial Ave., Hood River, Oregon 97031. Phone: 541-386-6925 OF.

3500. *SoyaScan Notes*. 2011. Updated USDA database on the

isoflavone levels in foods, commercial ingredients, soybeans and soyfoods (Overview). June 24. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• **Summary:** The link is now [http://www.ars.usda.gov/SP2UserFiles/Place/12354500/Data/isoflav/Isoflav\\_R2.pdf](http://www.ars.usda.gov/SP2UserFiles/Place/12354500/Data/isoflav/Isoflav_R2.pdf). “Legumes and legume products” starts on p. 16. Start by going to page 24, which is where the soy section begins. Then you can do a PDF search for fermented soyfoods such as: Tempeh, miso, soy sauce, natto, or Sufu (fermented tofu)—and you will see that they are NOT lower in total (or specific isoflavones) than nonfermented soyfoods such as: Tofu, soymilk soybeans (immature), soybeans (mature), etc.

3501. Jones, Paul. 2011. Re: Early history of Paul’s work with tofu. Letter (e-mail) to William Shurtleff at Soyinfo Center, June 6. 1 p.

• **Summary:** Q1. On what date did you make your first commercial tofu?

Ans: It must have been 1977/78—I was already in production when we came to ‘Soyfoods Comes West’ in 1979. Peter Bradford might remember for it was he who gave us the Chinese stone grinder to make the ‘Go.’

Q2. Was the address at that time you started commercial production: 155 Archway Rd., Highgate, London, N6 4NA, England? Ans: Yes.

Q3. Do you remember the date when you left that address and moved to St. Albans, Hertfordshire, England? Ans: 1980/81? We moved to the old brewery, Wheathampstead House, Wheathampstead, Herts.

Note: Current website: [www.soyfoods.co.uk](http://www.soyfoods.co.uk). Paul Jones now works with Peter ‘Tempeh’ Efemey. On the website is a nice video (6:50 minutes) of Paul making tofu on BBC Two “Chinese Food Made Easy” for Ching-He Huang, who uses that fresh tofu to make a Chinese dish. In his baking, Paul is pleased to use flours milled by Miller Nigel Moon, who helps fly the flag for sustainability and the local food economy by restoring Whissendine Windmill to its original power source. The final pair of sails were fitted on 7th September, 2006 with major funding from English Heritage. The grain is locally grown and organic. Address: Founder, Soyfoods Ltd., 66 Snow Hill, Melton Mowbray, Leics., LE13 1PD. Phone: 01664 560572.

3502. Shurtleff, William. 2011. Comparison of the macrobiotic diet and Dr. Caldwell Esselstyn’s whole foods, plant-based diet (Editorial). *SoyaScan Notes*. July 2.

• **Summary:** Meat: The macrobiotic diet allows consumption of fish, shellfish, and other seafoods, whereas the Esselstyn diet (which is designed to prevent and reverse coronary artery disease / heart disease) allows no animal products. Dairy: Both diets prohibit consumption of dairy products.

Refined carbohydrates, such as white sugar, white rice, white flour, white: Both diets prohibit it except that the Esselstyn diet uses white sugar in a small percentage

of desserts. For example, in the book *Prevent and Reverse Heart Disease* (2007), the recipe for Birthday Cake (p. 276) calls for “1 cup (or less) sugar. Chocolate Red Devil Cake (p. 278) calls for “1 cup sugar.” Luscious Lemon Cake (p. 280) calls for “3/4 cup (or less) brown sugar plus granulated sugar sprinkled over the cake.

**Salt:** The salt content of the macrobiotic diet (like the traditional Japanese diet) is high, provided by such condiments as miso, soy sauce (tamari), and gomashio, whereas the Esselstyn diet aims to use as little salt as possible—since many of patients have cardiovascular disease and hypertension. “If you *still* miss salt, try adding a little Bragg Liquid Aminos” (a salt alternative) or small amounts of “South River Sweet White Miso or low-sodium tamari. Try to limit sodium consumption to 2,000 mg a day.” A table shows the amount of sodium in salt and four condiments (p. 122).

**Soyfoods:** The macrobiotic diet uses soyfoods abundantly; in addition to miso and tamari, it likes tempeh, natto, and small amounts of tofu. The Esselstyn diet advises: “Eat soy products cautiously. Many are highly processed and high in fat” (p. 121).

**Fruits:** The macrobiotic diet uses fruits sparingly, since most are classified as very “yin.” However apples (the most yang fruit) are used quite freely. The Esselstyn encourages the use of all fresh, whole fruits except avocados (which are high in fat).

**Grain vs. vegetables.** The macrobiotic diet is based on the basic idea of a primary food (such as brown rice or other whole grains) and secondary foods (such as vegetables). The Esselstyn diet encourages the use of all fresh, whole vegetables. One might say that the center of the Esselstyn diet is fresh fruits and vegetables.

The macrobiotic diet strongly discourages consumption of foods which are members of the nightshade family—potatoes, tomatoes, and eggplants. The Esselstyn diet encourages the consumption of whole (unpeeled) potatoes and tomatoes.

The macrobiotic diet resembles a Japanese diet, whereas the Esselstyn diet resembles an American diet.

**Use of local, seasonal foods:** The macrobiotic diet emphasizes this somewhat more than the Esselstyn diet.

**Use of added oil:** The Esselstyn diet strongly discourages this, whereas the macrobiotic diet focuses more on the quality of the oil, but while still advising moderation in quantity, includes recipes for deep-fried foods (such as tempura).

The name of the macrobiotic diet is a short, whereas the name of the “whole-foods, plant based diet” is descriptive but too long, and in need of a shorter name. Address: Founder and owner, Soyfoods Center, Lafayette, California. Phone: 925-283-2991.

3503. Kageura, Makiko. 2011. Re: Color photos of Mr.

Rustono, of tempeh made by Rustono and Japanese-style recipes made from it by Makiko. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 25. 1 p. Typed, with signature. [Eng]

• **Summary:** The tempeh was made by Rustono, who was born in Indonesia and who has a tempeh shop in Otsu, Shiga prefecture near his home. He is now building (by himself) a much larger tempeh shop—actually a factory. He has 4,000 to 5,000 customers now for his tempeh. The dishes were created by Makiko. Photos show: (1) A package of fresh tempeh, made by Rustono, in a perforated plastic bag. (2) Slices of this tempeh on a cutting board in the kitchen of Makiko’s apartment building, ‘Takasegawa House, in Kyoto,

Japan. (3) Tempeh sushi, with a bead of mayonnaise on top! (4) Rustono at his tempeh factory in Otsu holding a large piece of fresh tempeh he made. (5) Rustono with a friend. (6) Rustono laughing. (7) Rustono in his tempeh factory. (8) Rustono with a co-worker. (9) Slices of tempeh freshly fried by Makiko. (10) A tempeh curry dish made by Makiko. (11) Keripik tempeh [tempeh chips] dish made by Makiko. (12) Japanese-style tempeh recipe made by Makiko. (13-14) Rustono at his new tempeh factory in Otsu. Address: 608

Honyakushi, Nara City 630, Japan.

3504. Kageura, Makiko. 2011. Re: Color photos of Mr. Rustono at his tempeh factory in Japan. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 25. 1 p. Typed, with signature. [Eng]

• **Summary:** Four photos (see next 3 pages). The tempeh was made by Rustono, who was born in Indonesia and who has a tempeh shop in Otsu, Shiga prefecture near his home. Address: 608 Honyakushi, Nara City 630, Japan.

3505. Astuti, Mary. 2011. Re: Yayasan Tempe Indonesia (Indonesian Tempe Foundation). Researching a book on black soybeans. Letter (e-mail) to William Shurtleff at Soyinfo Center, May 31. [Eng]

• **Summary:** “Yayasan Tempe Indonesia (Indonesian Tempe Foundation) was established at Jakarta on April 11, 1995 and the book of ‘Bunga Rampai Tempe’ [Anthology of Indonesian tempeh]. was published in 1996 in Indonesian.

Indonesian Tempe Foundation was supported by Indonesia’s Ministry of Food. I am sorry to tell you that the Indonesian Tempe Foundation is no longer active because (1) there is no support from the government and (2) Dr. Sapuan, the head of this foundation, has retired.

“Through the support of the American Soybean Association (ASA) there is Forum Tempe Indonesia (Indonesian Tempe Forum). I have been involved in Yayasan Tempe Indonesia and Tempe Forum Indonesia.

“I am in the process of researching and writing a book about black soybeans, including the black soybean products such as sweet soysauce, tempe, tofu and crackers. I hope it will be finished by the end of this year.” Address: Indonesia.

3506. Kageura, Makiko. 2011. Re: Teaching high school students how to make tempeh in Japan. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 27. 1 p. [Eng]

• **Summary:** Makiko, who lived in Canada for a year and studied the tempeh market there, has now returned to Japan and taken an interest in tempeh in Japan. She was invited by a friend to visit Ehime Prefecture Ozu Agricultural Senior High School (*Ehime Kenritsu Ohzu Nogyo Kotôgakkô*), a public agricultural high school on the island of Shikoku, where she met Mr. Yamada, the biology teacher. She imagined that he had a personal interest in tempeh but she did not know when or where he had developed that interest. She has just returned home from the one-day trip.

To her surprise, Mr. Yamada told her that teaching students how to make tempeh in the classroom is part of the biology curriculum—and has been for at least 10 years. The process is described as a lesson plan in the textbook and each student is required to make his or her own tempeh!

Mr. Yamada got soybeans from the local public market in Ohzu and he sometimes uses soybeans grown at the school. He ordered tempeh starter culture via the Internet.

They made the tempeh at room temperature at the laboratory. In winter, he told me to use the experimental incubator installed in the school to keep the normal temperature. Even in September they can make it at room temperature; its often good over a bit 30°C (and at least 25°C). They also made okara tempeh.

The students then cooked and ate their fresh tempeh, in the form of tempeh cookies, tempeh yokan, and tempeh donuts.

What a great way to learn about microbiology, molds, fermentation, fermented foods, and tempeh.

This shows that anyone can make tempeh at home. The only requirements are several cups of soybeans, some tempeh starter culture, and a warm place or incubator.

Makiko adds: “One interesting thing is that everyone can make tempeh at home and tempeh sushi seems to be good for everyone. My mum loves my tempeh sandwiches too!” Address: 27-1 Kamikarakawa, Iyo-city, Ehime 799-3134, Japan.

3507. Jamieson, Alexandra. 2011. Vegan cooking for dummies. Hoboken, New Jersey: Wiley Publishing, Inc. xx + 364 p. Illust. (some color). Index. 24 cm.

• **Summary:** A fun, well written, and very informative book. Contains more than 160 healthy vegan recipes. The index contains 22 entries for tofu, 14 for tempeh, 11 for soy foods, 5 for seitan, 3 for edamame, 2 each for milk replacements (soy milk), miso, soy sauce, soy yogurt, and 1 for TVP (textured vegetable protein).

Also mentions macrobiotics, mochi, raw foods diet, sea vegetables, sesame oil, sesame seeds, etc. Address: Professionally trained vegan chef and board certified holistic health counselor (CHHC), and member American Association of Drugless Practitioners (AADP), New York City.

3508. Spots.

• **Summary:** (a) Fresh thick tempeh at a market in Indonesia wrapped in banana leaves (b) Freshly sliced thick tempeh. (Source: Wiki at Tempeh).

3509. *SoyaScan Notes*. 2011. Soyfoods scientific research wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1. How to get vitamin B-12 into tempeh, ideally by inoculation with an organism. 2. What degree of grinding of whole soybeans gives the maximum extraction of soluble protein? Of soluble fat? Of both combined. How does this relate to the type of filtration system? 3. How does flatulence in vegetarians compare with that of non-vegetarians, on average. 4. Research on the ability of tofu to lower blood cholesterol in humans (parallel to that done by Sirtori and Carroll on isolated soy proteins).

3510. *SoyaScan Notes*. 2011. Early tempeh manufacturers in Europe, listed chronologically by country (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** Netherlands: ENTI 1946 April, Firma E.S. Lembekker 1959 Jan., Handelsonderneming van Dappern 1969, Firma Ergepe 1981 Jan., Jakso/Yakso 1982 Jan., Haagse Tempe Fabriek 1982, Consuma B.V. 1983, Heuschen B.V. 1986.

France: Traditions du Grain 1982 March, Athanor 1985 Oct., Les Sept Marches 1985 April.

UK: Paul's Tofu & Tempeh 1981 Jan., One World Natural Foods 1982.

Switzerland: Soy Joy 1982 April.

Belgium: De Hobbit 1982 May, Lima Foods 1986.

Austria: Natuerliche Lebensmittel, Paul Stuart Zacharowicz 1983 Sept., Sojvita Produktions 1984 June.

West Germany: Pro Natura 1985.

3511. *SoyaScan Notes*. 2011. Chronology of Soyfoods Center: The work of William Shurtleff and Akiko Aoyagi. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1. Introducing soyfoods to the West: Popular books (1972 Oct.–1979 July).

*The Book of Tofu:*

1972 Oct. 22–First visit to San-gen-ya tofu shop in Tokyo. Mr. Toshio Arai begins to teach William Shurtleff the traditional art of making tofu.

1972 Dec. 22–Meet Nahum Stiskin of Autumn Press. Start to write tofu booklet.

1973 Jan. 13–Sign contract for *Book of Tofu* with Autumn Press.

1973 March 2–Visit Sasa-no-yuki tofu restaurant in Tokyo.

1975 Dec. 12–*The Book of Tofu*\* published by Autumn Press.

\* = Book illustrated by Akiko Aoyagi.

1978 Dec. 22–*The Book of Tofu*\* published by Ballantine Books in a mass-market pocketbook edition that retails for \$2.95.

*The Book of Miso*

1974 Feb/March–Study miso and shoyu in Japan on trip with Bob Gerner, head of Westbrae Natural Foods.

1974 May 7–Start to write *The Book of Miso*, table of contents.

1975 April–Autumn Press accepts idea of publishing *The Book of Miso*. Contract signed Aug. 18.

1976 Sept. 23–*The Book of Miso*\* published by Autumn Press.

1976 Sept. 29–1977 Feb. 3–Tofu & Miso America Tour. We do 70 public programs, many TV and radio interviews, drive our van 15,000 miles in 17 weeks.

*The Book of Tempeh*

1977 May–To Indonesia for one month of tempeh research.

1978 Feb. 27–Sign contract with Harper & Row.

1979 July 14–*The Book of Tempeh*\* published by Harper & Row.

2. Working to build a soyfoods industry in the Western world (1977 April–present)

1977 April 5–Establish Takai Tofu and Soymilk Equipment Co.

1977 Aug. 16–First Takai catalog of tofu and soymilk equipment published.

1977 Aug. 16–*Miso Production*\* published by Soyfoods Center–the first book we self-published.

1978 July 28–30–The Soycrafters' Association of North America is founded in Ann Arbor, Michigan.

William Shurtleff helps to organize the inaugural meeting, is a founding member, and a member of the first board of directors.

1978–Soyfoods Center starts to develop a mailing list (typed so as to fit on pressure sensitive labels) of all people who have purchased books or contacted us.

1979 July 15–*Tofu and Soymilk Production*\* published by Soyfoods Center.

1979 July–The first issue of *Soycraft* magazine is published by Richard Leviton, director of Soycrafters' Association in Massachusetts. Each mailing is based on the use of Soyfood Center's mailing list–free of charge.

1980 March 10–*Tempeh Production*\* published by Soyfoods Center.

1980 Sept.–Dec.–Our mailing list of about 5,000 names and addresses, divided into 70 coded categories, is computerized by Parallel Procedures in San Francisco. This was done primarily to help Richard Leviton of *Soycraft* magazine.

1981 Dec.–There are now 10,900 names on our computerized Soyfoods mailing list, rising to 13,800 names by May 1982.

3. Documenting the history of soybeans and soyfoods (1980 Oct.–present)

1980 Sept. 10–Start to build what we hope will become a large library at Soyfoods Center with regular trips to the University of California at Berkeley library system.

1980 Oct. 22–Start writing *History of Soybeans and Soyfoods*.

1984 June 1–History book manuscript is now completely in our word processor: 2,500+ pages, 70+ chapters.

1984 June 21–Soyfood Center's annual summer intern program begins. Irene Yen, a Stanford student starting her senior year, is our first summer intern.

1984 July 17–*History of Tempeh* published–our first history book.

4. Studying the burgeoning soyfoods industry and market (1982 Sept.–1985 Feb.)

1982 May 16—*Soyfoods Directory and Databook* (1st edition) published. Renamed *Soyfoods Industry and Market: Directory and Databook* on 26 Feb. 1983. 3rd edition.

1982 Sept. 10—*Soyfoods Labels, Posters, and Other Graphics* published.

1984 Feb. 25—*Soymilk Industry and Market* published.

1985 Feb. 22—*Tofutti and Other Soy Ice Creams* published.

1990 May 8—*Tofu Industry and Market in Europe* published.

1990 July 17—*Soymilk Industry and Market in Europe* published.

1994 Jan.—*Soyfoods Industry and Market: Bibliography and Sourcebook* published.

5. Foreign language editions of our books are published (1980 -)

1980 July—*Das Miso Buch\** (hardcover and paperback) published by Ahorn Verlag (Wolfgang and Gabriella Furth-Kuby) in Germany.

1981 Aug.—*Das Tofu Buch\** (hardcover) published by Ahorn Verlag in Germany.

1988 Nov.—*Das Tempeh Buch\** (hardcover) published by Ahorn Verlag in Germany—6 years after the project started.

1988 Nov.—New German pocketbook editions of *Das Tofu Buch* and *Das Miso Buch* (paperback) published by Goldmann Verlag.

6. Developing a computerized information center (1980 Dec.—present).

1980 Dec. 12—Mailing lists of Soyfoods Center and Soyfoods magazine merged and computerized by Parallel Procedures in San Francisco. 5,500 names in 50 categories.

1983 Sept. 28—Install first computer at Soyfoods Center, IBM-PC with 20 MB hard disk and word processing software to use for writing our book on *History of Soybeans and Soyfoods*.

1985 May 9—Install Revelation database manager software for developing a computerized bibliographic database on soya.

1985 July 31—Finish keying all 6,677 file cards (3x5 inch) into our computerized database. Our library is now computerized.

1985 Aug. 30—Our computerized database, containing 9,500 bibliographic records, is now available for use by the public.

1986 Sept. 1-16—The first of many trips to do library research at the USDA National Agricultural Library, Library of Congress, and National Library of Medicine—America's three national libraries, all located in and about Washington, DC.

1987 July 6—Start entering Commercial Soy Products into our database.

1987 Oct. 11—*Bibliography of Soymilk, from 1578 to 1987: With 1,584 References* published—our first bibliography.

1987 Oct. 19—Coin the name SoyaScan, start using it to refer to our computerized database, and apply for a registered trademark, which we are issued on 19 July 1988.

1993 Feb.—Install a Novell 5-user network to link our various computers.

1995 Feb. 11—We enter the 50,000th record into our SoyaScan database.

1997 Nov. 24—We enter the 55,000th record into our SoyaScan database.

7. Current status of computerized information—2000 January 1

SoyaScan database now contains 59,440 records from 1100 B.C. to the present, including 48,318 published documents, 12,683 commercial soy products, 4,628 original interviews and overviews, and 41,584 unpublished archival documents.

More than 75% of all SoyaScan records have a summary/abstract averaging 143 words in length.

More than 26,000 records (44% of the total) are for documents published before 1970.

Thirty five major books in the series Bibliographies and Sourcebooks on Soya, produced from the SoyaScan database, are now available, published by Soyfoods Center.

Soyfoods Center Library owns about 54,000 documents, almost all of which have a record in the SoyaScan database.

SoyaScan Directory now contains the name, address, and phone number of 17,300 people and organizations worldwide actively involved with soyfoods and soybeans. Each entry is coded to show the type of activity, e.g. 2A = Tofu manufacturers.

8. Collecting and Publishing Information on Vegetarianism and Other Non-Soy Food Products that can Replace Animal Products.

1984 Oct. 31—Create our first vegetarian keyword (subject heading) *VegeAnim* = Vegetarian Diets and Animal Rights.

1988 Feb. 21—*Amazake and Amazake Frozen Desserts: Industry and Market in North America* published. Updated bibliographic supplement published in March 1995.

1992 Oct.—Start actively collecting information specifically on vegetarianism and veganism, and entering it into our new *VegeScan* database.

1992 March 4—*Bibliography of Vegetarianism: 1,755 References from A.D. 1170 to 1992, Extensively Annotated* published (360 p. large format, preliminary edition).

1992 June 12—*Sourcebook on Wheat Gluten Foods and Seitan* published. Expanded edition published in Jan. 1994.

2000 Jan. 1—*VegeScan* database now contains 5,500 bibliographic records on vegetarianism and veganism from 238 B.C. to the present.

Best selling books from Soyfoods Center (English-language editions only, as of Jan. 2000).

The Book of Tofu—557,000 copies sold.

The Book of Miso—115,900 copies sold.

The Book of Tempeh—47,950 copies sold.

Tofu & Soymilk Production—5,020 copies sold.

Other—9,200 copies sold.

Total—775,070 copies sold. Address: Lafayette, California. Phone: 925-283-2991.

3512. *SoyaScan Notes*. 2011. When soy-related terms first appear in the *Reader's Guide to Periodical Literature* (Overview). Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** The Reader's Guide to Periodical Literature began publication in 1894. Soybeans first appear as a subject heading in the April 1949–March 1952 issue. Information on soybeans and soyfoods is found under the following subject headings: Central Soya Company. Coffee substitutes. Cookery—soybeans. Cookery—vegetables. Diesel fuels (from 1979-1980). Food substitutes. Lecithin. Soybeans (divided into: Cost, cultivation, diseases and pests, drying, export-import trade, harvesting, hybrids, marketing, prices, seed, seeding (planting), yield; with See also: cookery—vegetables). Multipurpose Food (from 1949). Plant proteins. Root tubercles. Soybean industry. Soybean products (with See also: okara, tempeh, tofu). Tempeh (from 1976-1977). Tofu (from 1977-1978). Tofutti/Tofutti Brands Inc. (from 1984-1985). Vegetarianism.

3513. *SoyaScan Questions*. 2011. Questions about the history of tempeh in Japan. Further research needed. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1. When was *Taiwan Sotokufu Chuo Kenkyujo* founded? 2. When did NAKAZAWA Ryoji start to work at the Taiwan lab? What did he finally leave for Japan? 3. In what year did NAKANO Masahiro start to work at the Taiwan lab? 4. In Nakazawa's *Hakko Bunken-shu* (11 volumes, 1950-65), is there any reference to tempeh under *Penicillium*? There is NOT any reference under *Rhizopus*. 5. Was any research on using defatted soybean meal (dashi daizu) to make tempeh done in Japan after World War II (Nakano does not remember any).

6. Did Ohta or Karauchi write a very early article on tempeh in about Showa 7 or 8? (1932-33)? Ohta mentioned this. 7. Get a citation for Ohta's article on tempeh in *Nihon Jozo Kyokai Zasshi* from about 1980-81. 8. Try to get the early article (1947-48) from Nosan Seizo, written by Ohta or Nakano. 9. What were the causes that the Natto Association started to take a serious interest in tempeh in about 1981-82? When did this interest start?

11. What is the substrate used for growing tempeh spores at NFRI? Rice? Bread? Potatoes? Potato starch? 12. Is there a tie between Kalki's research on lactic acid and production of B-12 in tempeh? 13. When did the Natto Gyokai News publish its first article on tempeh? I'd like to get any other important articles it has published, as about the June 1983 trip to Indonesia. 14. Who is Mr. Kikuchi, at natto

meeting, in charge of making tempeh spores?

15. How many pages does Nakazawa have on *Rhizopus*? Does she mention tempeh at *Penicillium*? 16. Who wrote the early article on tempeh at Kyushu University that interested Torigoe? 17. Did Ohta or Karauchi write an early article on tempeh in about Showa 7 or 8 (1932-33)? Ohta mentioned this. 18. Try to get the article (about 1947-48) from Nosan Seizo, written by Ohta Teruo or Nakano Masahiro. 19. When did the Natto Gyokai News (or any natto newspaper) publish its first article on tempeh. I'd like to get copies of all early and recent important articles it has published. 20. Who made the early tempeh starter in Japan? 22. When did Takashin start to make tempeh? How many kilograms do they now make per week?

An asterisk (\*) at the end of the record means that SOYFOODS CENTER does not own that document.

A plus after eng (eng+) means that SOYFOODS CENTER has done a partial or complete translation into English of that document.

An asterisk in a listing of number of references [23\* ref] means that most of these references are not about soybeans or soyfoods.

Soy Cheese—Etymology of This Term and Its Cognates / Relatives in Various Languages. 439, 441, 3429

Soy Cheese—Fermented, Western Style, That Melts. May Contain Casein (Cow's Milk Protein). 337, 425, 594, 773, 2922, 2973, 3410

Soy Cheese—Non-Fermented, Western Style, That Melts. Typically Made with Tofu or Isolated Soy Proteins. Usually Contains Casein (A Protein from Cow's Milk). 2062, 2362, 2659, 2688, 2832, 3105

Soy Cheese Industry and Market Statistics, Trends, and Analyses—By Geographical Region. 2227, 2582, 2845

Soy Cheese Industry and Market Statistics, Trends, and Analyses—Individual Companies. 2659

Soy Cheese or Cheese Alternatives—General, Western Style, That Melts. Often Contains Casein (Cow's Milk Protein). 315, 482, 484, 1896, 1963, 2107, 2154, 2227, 2263, 2304, 2331, 2353, 2400, 2471, 2495, 2511, 2537, 2582, 2583, 2656, 2657, 2682, 2683, 2699, 2725, 2732, 2733, 2740, 2741, 2745, 2747, 2781, 2788, 2817, 2826, 2829, 2845, 2846, 2847, 2850, 2851, 2859, 2869, 2886, 2895, 2910, 2920, 2931, 2934, 2940, 2941, 2961, 2962, 2963, 2964, 3002, 3004, 3036, 3063, 3073, 3074, 3079, 3081, 3094, 3096, 3107, 3112, 3113, 3119, 3120, 3143, 3176, 3213, 3247, 3253, 3265, 3270, 3272, 3273, 3278, 3279, 3280, 3281, 3336, 3342

Soy Cheesecake or Cream Pie, Usually Made with Tofu. 425, 439, 441, 473, 591, 656, 698, 718, 792, 826, 836, 848, 849, 870, 879, 946, 970, 1004, 1027, 1030, 1040, 1103, 1123, 1132, 1149, 1229, 1266, 1274, 1280, 1309, 1371, 1372, 1430, 1466, 1567, 1587, 1816, 1965, 2073, 2143, 2145, 2148, 2266, 2541, 2583, 2598, 2640, 2673, 2702, 2734, 2817, 2940, 2997, 3068, 3069, 3107, 3112, 3256, 3270, 3279, 3290, 3295, 3429

Soy Coffee—Made from Roasted Soy Flour or Ground Roasted Soybeans. 86, 91, 249, 425, 516, 544, 656, 676, 960, 1088, 1184, 1278, 1810, 1859, 2029, 2235, 2241, 2290, 2339, 2490, 2657, 2681, 2754, 2765, 2941, 3062, 3512

Soy Cream Cheese, Usually Made of Tofu or Soy Yogurt. 425, 601, 656, 674, 1394, 2145, 2148, 2260, 2313, 2521, 2598, 2640, 2673, 2817, 2934, 3065, 3162, 3176, 3263, 3279, 3280, 3312, 3357, 3365

Soy Flour—Whole or Full-fat. 8, 72, 156, 193, 196, 201, 207, 216, 224, 247, 250, 255, 259, 261, 296, 299, 348, 378, 387, 418, 439, 441, 450, 459, 516, 638, 661, 714, 722, 874, 951, 960, 975, 1088, 1138, 1184, 1241, 1277, 1489, 1511, 1668, 1690, 1776, 1803, 1815, 1816, 1859, 1896, 1970, 2057, 2100, 2339, 2393, 2469, 2652, 2680, 2734, 2767, 2768, 2798, 2873, 2879, 2892, 2924, 2941, 2972, 3396, 3425, 3429

Soy Flour Equipment. 207

Soy Flour Industry and Market Statistics, Trends, and Analyses—By Geographical Region. 259, 306, 951, 1056, 1725, 2469, 2471, 2681, 2766, 2945

Soy Flour Industry and Market Statistics, Trends, and Analyses—Individual Companies or Products. 2766

Soy Flour or Defatted Soybean Meal in Cereal-Soy Blends, with Emphasis on Dry Products Used in Third World Countries (such as CSM, WSB, etc.). 155, 157, 169, 223, 261, 294, 373, 376, 377, 488, 516, 663, 676, 916, 1489, 1690, 1725, 1860, 2129, 2766, 2941

Soy Flour, Grits, Meal, Powder, or Flakes—For Food Use (Usually Defatted or Low-Fat). See also Soy Flour—Whole or Full-fat. 36, 65, 91, 114, 116, 117, 122, 123, 140, 142, 157, 158, 159, 166, 170, 175, 188, 193, 205, 207, 219, 223, 242, 247, 255, 256, 259, 279, 296, 297, 298, 303, 306, 315, 330, 332, 336, 338, 373, 377, 378, 387, 390, 393, 407, 418, 425, 439, 441, 458, 459, 467, 488, 500, 513, 516, 517, 529, 544, 565, 588, 597, 600, 633, 650, 652, 656, 657, 658, 663, 665, 674, 675, 676, 678, 686, 726, 777, 809, 814, 822, 874, 901, 902, 904, 909, 911, 916, 956, 960, 962, 966, 1021, 1028, 1056, 1077, 1088, 1092, 1093, 1165, 1176, 1184, 1242, 1275, 1276, 1278, 1282, 1288, 1311, 1317, 1337, 1342, 1394, 1468, 1488, 1528, 1533, 1606, 1670, 1672, 1686, 1687, 1689, 1701, 1710, 1725, 1727, 1785, 1786, 1800, 1848, 1853, 1860, 1867, 1868, 1896, 1905, 1931, 1951, 1953, 1954, 1963, 1970, 1991, 2029, 2038, 2057, 2100, 2129, 2153, 2154, 2170, 2197, 2200, 2204, 2226, 2241, 2250, 2259, 2260, 2269, 2304, 2308, 2353, 2360, 2378, 2431, 2469, 2471, 2484, 2511, 2537, 2541, 2559, 2567, 2595, 2631, 2645, 2680, 2681, 2684, 2699, 2706, 2711, 2721, 2725, 2734, 2741, 2752, 2761, 2765, 2766, 2767,

2768, 2772, 2781, 2791, 2818, 2822, 2823, 2829, 2830, 2842, 2850, 2851, 2856, 2858, 2859, 2867, 2869, 2873, 2878, 2879, 2886, 2889, 2895, 2899, 2901, 2907, 2909, 2910, 2911, 2912, 2924, 2931, 2939, 2940, 2941, 2943, 2945, 2949, 2950, 2959, 2961, 2963, 2964, 2972, 2977, 2982, 2989, 2996, 3002, 3003, 3009, 3010, 3019, 3036, 3061, 3062, 3063, 3066, 3073, 3074, 3079, 3082, 3094, 3096, 3110, 3112, 3113, 3115, 3122, 3133, 3137, 3139, 3141, 3151, 3160, 3162, 3176, 3177, 3181, 3191, 3209, 3210, 3211, 3213, 3217, 3218, 3233, 3248, 3249, 3253, 3254, 3260, 3263, 3265, 3267, 3270, 3280, 3287, 3291, 3305, 3306, 3309, 3312, 3314, 3333, 3336, 3342, 3348, 3355, 3360, 3361, 3365, 3368, 3370, 3408, 3429, 3449

Soy Flour, Grits, and Flakes—Enzyme Active (Whole / Full-Fat, Unheated). 256, 259, 951, 975, 2393, 3010, 3115

Soy Flour, Textured (Including TVP, Textured Vegetable Protein). 348, 378, 425, 459, 467, 473, 633, 638, 656, 675, 777, 778, 857, 901, 960, 1010, 1056, 1077, 1238, 1241, 1278, 1511, 1569, 1764, 1789, 1790, 1803, 1848, 1852, 1916, 1963, 1965, 2057, 2114, 2153, 2192, 2204, 2210, 2235, 2259, 2269, 2284, 2331, 2356, 2378, 2428, 2465, 2469, 2508, 2511, 2570, 2619, 2628, 2645, 2652, 2681, 2690, 2695, 2725, 2728, 2734, 2745, 2763, 2869, 2894, 2911, 2913, 2920, 2942, 2964, 3011, 3034, 3076, 3096, 3107, 3191, 3236, 3278, 3289, 3304, 3314, 3342, 3348, 3420, 3425, 3489

Soy Ice Cream (General—Usually Non-Dairy). 287, 315, 393, 425, 439, 441, 473, 482, 543, 544, 596, 598, 601, 618, 656, 670, 673, 674, 679, 698, 749, 756, 826, 828, 848, 852, 870, 975, 991, 1004, 1024, 1030, 1046, 1103, 1124, 1132, 1149, 1197, 1198, 1222, 1278, 1280, 1320, 1324, 1363, 1372, 1393, 1394, 1397, 1408, 1498, 1522, 1533, 1569, 1588, 1591, 1592, 1611, 1628, 1632, 1656, 1672, 1694, 1716, 1725, 1759, 1766, 1776, 1790, 1815, 1817, 1818, 1819, 1821, 1867, 1911, 1932, 1963, 2070, 2072, 2086, 2107, 2127, 2133, 2144, 2147, 2149, 2150, 2154, 2159, 2167, 2172, 2210, 2217, 2227, 2241, 2260, 2284, 2325, 2331, 2360, 2373, 2413, 2431, 2471, 2495, 2559, 2564, 2565, 2567, 2569, 2583, 2598, 2605, 2640, 2656, 2664, 2673, 2682, 2683, 2684, 2706, 2721, 2741, 2761, 2765, 2766, 2777, 2787, 2792, 2793, 2796, 2845, 2846, 2847, 2850, 2851, 2859, 2868, 2871, 2875, 2881, 2910, 2941, 2963, 2992, 2997, 3000, 3004, 3036, 3062, 3063, 3073, 3079, 3080, 3084, 3113, 3119, 3162, 3213, 3248, 3253, 3256, 3263, 3265, 3279, 3280, 3305, 3312, 3330, 3356, 3357, 3362, 3365, 3429, 3447, 3448, 3449, 3511, 3512

Tofu in Second Generation Products, Documents About. 439, 441, 626, 718, 957, 993, 994, 1123, 1124, 1131, 1132, 1197, 1212, 1225, 1229, 1274, 1370, 1371, 1372, 1395, 1408, 1496, 1498, 1563, 1588, 1591, 1592, 1695, 1819, 1928, 1932, 2124, 2127, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2246, 2269, 2271, 2297, 2359, 2363, 2777, 2946, 3180, 3292, 3429

Tofu, Criticism of, Making Fun of, or Image Problems. 679, 1339, 2853, 2856, 2863, 2940, 3269

Tofu, Fermented (Also Called *Doufu-ru*, *Toufu-ru*, *Furu*, *Fuyu*, *Tahuri*, *Tahuli*, *Tajure*, *Tao-hu-yi*, or *Sufu*). *See also* *Tofu-yo*. 65, 68, 69, 91, 92, 93, 100, 114, 117, 138, 203, 220, 225, 257, 260, 274, 286, 289, 293, 300, 315, 320, 326, 349, 352, 355, 360, 370, 372, 377, 387, 390, 393, 397, 403, 437, 439, 441, 450, 455, 463, 465, 481, 490, 508, 513, 516, 576, 612, 648, 649, 652, 653, 663, 674, 676, 691, 693, 708, 776, 780, 781, 816, 846, 855, 860, 874, 902, 918, 939, 952, 960, 966, 1021, 1085, 1086, 1088, 1092, 1184, 1224, 1276, 1291, 1292, 1307, 1312, 1356, 1364, 1394, 1404, 1411, 1470, 1472, 1476, 1492, 1529, 1540, 1574, 1606, 1670, 1694, 1701, 1725, 1788, 1845, 1849, 1876, 1916, 1945, 1949, 1966, 1970, 1977, 1986, 2029, 2033, 2034, 2041, 2043, 2044, 2129, 2193, 2194, 2200, 2206, 2241, 2260, 2313, 2324, 2351, 2393, 2425, 2430, 2484, 2490, 2502, 2525, 2534, 2623, 2625, 2626, 2631, 2680, 2681, 2695, 2729, 2743, 2754, 2766, 2791, 2867, 2922, 2960, 2973, 2978, 2988, 3059, 3064, 3138, 3162, 3187, 3189, 3199, 3241, 3248, 3263, 3269, 3288, 3303, 3310, 3325, 3333, 3365, 3401, 3410, 3429, 3432, 3436, 3457, 3493, 3508

Tofu, Fermented—Etymology of This Term and Its Cognates / Relatives in Various Languages. 92, 100, 117, 203, 220, 360, 674, 1021

Tofu, Fermented—Tofu-yo from Okinawa, Japan (Made with Red Rice {*Beni-Koji*} Containing *Monascus purpureus*). 1541, 1779

Tofu, Five-Spice Pressed (*Wu-hsiang Tofukan* / *Wuxiang*

*Doufugan*). 439, 441, 2284, 2429, 3009, 3429

Tofu, Flavored / Seasoned / Marinated and Baked, Broiled, Grilled, Braised, or Roasted. Including Tofu Jerky and Savory Baked Tofu. 626, 756, 818, 863, 870, 994, 1370, 1482, 1522, 1535, 2038, 2145, 2429, 2673, 2832, 2910, 3085, 3119, 3126

Tofu, Flavored, Seasoned, or Marinated, but not Baked, Broiled, Grilled, Braised, or Roasted. Including most Five-Spice Pressed Tofu (*wu-hsiang toufukan* / *wuxiang doufugan*). 439, 441, 2143, 2284, 2362, 2634, 2694, 2733, 2934, 2975, 3009, 3429

Tofu, Fried (Especially Pouches, Puffs, Cutlets, or Burgers; Agé or Aburagé, Atsu-agé or Nama-agé, Ganmodoki or Ganmo). 153, 156, 252, 286, 354, 378, 390, 439, 441, 458, 473, 516, 543, 544, 576, 591, 598, 601, 618, 674, 679, 718, 739, 768, 800, 812, 818, 836, 863, 902, 952, 970, 1003, 1004, 1027, 1030, 1086, 1088, 1103, 1132, 1145, 1198, 1339, 1363, 1394, 1424, 1449, 1470, 1472, 1496, 1510, 1574, 1598, 1758, 1761, 1865, 1888, 1970, 2058, 2149, 2169, 2240, 2247, 2260, 2273, 2284, 2297, 2363, 2380, 2390, 2422, 2461, 2462, 2481, 2488, 2493, 2534, 2546, 2583, 2588, 2630, 2634, 2640, 2655, 2673, 2680, 2685, 2699, 2785, 2867, 2997, 3064, 3065, 3138, 3161, 3162, 3189, 3199, 3241, 3263, 3269, 3270, 3283, 3296, 3365, 3402, 3429

Tofu, Fried, Used as an Ingredient in Commercial Soyfood Products. 802

Tofu, Frozen or Dried-Frozen—Etymology of This Term and Its Cognates / Relatives in Various Languages. 18, 437, 439, 441, 3429

Tofu, Frozen, Dried-frozen, or Dried Whole (Not Powdered). 18, 54, 153, 156, 159, 188, 252, 259, 286, 348, 378, 390, 437, 439, 441, 458, 459, 516, 576, 674, 700, 739, 768, 777, 902, 952, 991, 1004, 1029, 1030, 1077, 1103, 1245, 1364, 1394, 1468, 1470, 1511, 1574, 1849, 1970, 2152, 2154, 2260, 2325, 2363, 2393, 2427, 2537, 2598, 2621, 2655, 2680, 2699, 2822, 2835, 2867, 2885, 2910, 2943, 3065, 3076, 3162, 3187, 3241, 3248, 3257, 3263, 3296, 3365, 3402, 3429

Tofu, Grilled, Braised, Broiled, or Roasted (*Yaki-dôfu* in Japanese). A Japanese-Style Commercial Product. 153, 363, 439, 441, 516, 674, 718, 863, 1184, 1245, 1461, 1496, 1498, 1574, 2541, 2588, 2625, 2626, 2640, 2656, 2822, 2912, 3009, 3112, 3161, 3187, 3255, 3269, 3296, 3329, 3355, 3429

Tofu, Homemade—How to Make at Home or on a Laboratory or Community Scale, by Hand. 439, 441, 475, 482, 484, 600, 674, 739, 863, 1088, 1095, 1141, 1231, 1330, 1758, 2724,

2785, 2903, 3279

Tofu, Non-Soy Relatives (Such as Winged Bean Tofu or Peanut Tofu). 20, 145, 595, 1116, 1514, 2839

Tofu, Silken (Kinugoshi)—Etymology of This Term and Its Cognates / Relatives in Various Languages. 363, 367, 439, 441, 3429

Tofu, Silken (Kinugoshi). 363, 367, 439, 441, 516, 576, 668, 674, 676, 952, 1245, 1482, 1694, 1789, 2107, 2440, 2484, 2486, 2569, 2583, 2619, 2655, 2680, 2734, 2800, 2822, 2867, 2912, 2913, 2942, 3009, 3065, 3074, 3081, 3093, 3094, 3112, 3118, 3158, 3269, 3281, 3296, 3305, 3342, 3429

Tofu, Smoked—Etymology of This Term and Its Cognates / Relatives in Various Languages. 439, 441, 3241, 3429

Tofu, Smoked. 390, 1865, 1965, 2066, 2169, 2284, 2325, 2339, 2378, 2427, 2428, 2461, 2483, 2488, 2588, 2598, 2634, 2678, 2695, 2699, 2892, 2910, 2970, 3065, 3099, 3156, 3241, 3332

Tofu, Spray-dried or Powdered. 1285, 2866

Tofu, Used as an Ingredient in Second Generation Commercial Products Such as Dressings, Entrees, Ice Creams, etc. 1055, 1214, 1375, 1449, 1761, 1808, 1822, 1839, 1865, 1888, 2054, 2169, 2174, 2231, 2310, 2362, 2380, 2636, 2861, 2877, 3012, 3099, 3322, 3328, 3329, 3332

Tofu, baked or broiled at flavored / seasoned/marinated. *See* Tofu, Flavored/Seasoned/Marinated and Baked, Broiled, Grilled, Braised, or Roasted

2894, 2901, 2910, 2913, 2933, 2942, 2946, 3008, 3051, 3084, 3087, 3095, 3101, 3102, 3133, 3157, 3181, 3191, 3227, 3257, 3260, 3289, 3290, 3313, 3319, 3320, 3327, 3330, 3392, 3407, 3447, 3448, 3449, 3450, 3462

United States–States–Texas. 376, 377, 482, 484, 572, 663, 777, 1271, 2146, 2394, 2511, 2819, 2881, 2968, 3254, 3260, 3287, 3290, 3474, 3486

United States–States–Utah. 484, 1395, 1575, 1586, 2146, 2430, 2452, 2468, 2580, 2860

United States–States–Vermont. 482, 533, 730, 1092, 2005, 2174, 2592, 2819, 2932, 3071, 3245, 3331, 3364, 3431, 3453

United States–States–Virginia. 482, 618, 1291, 1382, 1783, 2041, 2512, 2592, 2697, 2926, 2964, 3241, 3260, 3414

United States–States–Washington state. 482, 484, 615, 698, 711, 733, 738, 746, 794, 827, 828, 831, 841, 873, 880, 1222, 1319, 1322, 1365, 1456, 1475, 1500, 1544, 1700, 1880, 1922, 2026, 2189, 2229, 2344, 2374, 2474, 2478, 2479, 2554, 2637, 2703, 2822, 2843, 2877, 2883, 2898, 2902, 2911, 2931, 2945, 2946, 2947, 3012, 3061, 3099, 3125, 3265, 3294, 3295, 3307, 3322, 3332, 3379, 3392, 3434, 3445

United States–States–West Virginia. 91, 2994

United States–States–Wisconsin. 91, 347, 460, 678, 707, 776, 809, 839, 840, 882, 902, 1117, 1182, 1191, 1297, 1381, 1436, 1547, 1749, 1848, 2234, 2508, 2698, 2738, 2835, 2880, 2972, 3095, 3140, 3240, 3260, 3272, 3290, 3407

United States–States–Wyoming. 3272

United States Department of Agriculture (USDA)–Agricultural Research Service (ARS, Established 1953). Including Agricultural Research Administration (1942-1953). 153, 178, 179, 180, 188, 203, 207, 216, 254, 255, 257, 289, 290, 501, 516, 538, 1788, 2046, 2100, 2515, 2622, 2743

United States Department of Agriculture (USDA)–Bureau of Agricultural and Industrial Chemistry (1943-1953). Including Bureau of Agricultural Chemistry and Engineering (1938-1943), Bureau of Chemistry and Soils (1927-1938), and Bureau of Chemistry (1901-1927). Transferred to the Agricultural Research Service (ARS) in 1953. 90

United States Department of Agriculture (USDA)–Bureau of Plant Industry, Soils, and Agricultural Engineering (1943-1953). Including Bureau of Plant Industry (1901-1943), Office of Plant Industry (1900-1901), and Division of Agrostology (1895-1901). Transferred to Agricultural Research Service in 1953. 60, 65, 66, 100, 999, 2681

United States Department of Agriculture (USDA)–Food and Nutrition Service (FNS). 3315

United States Department of Agriculture (USDA)–Section of Foreign Seed and Plant Introduction (Established 1898 within the USDA with David Fairchild in Charge). Transferred to Bureau of Plant Industry (1 July 1901). Later Referred to as the Office of Foreign Seed and Plant Introduction and then the Office of Foreign Plant Introduction. 65, 66, 100

United States Department of Agriculture (USDA; Including Federal Grain Inspection Service [FGIS], and War Food Administration [WFA]). See also: Agricultural Marketing Service, Agricultural Research Service (ARS), Bureau of Plant Industry, Economic Research Service, Food and Nutrition Service, Foreign Agricultural Service, and Section of Foreign Seed and Plant Introduction. 143, 163, 166, 186, 189, 217, 240, 243, 258, 264, 296, 299, 306, 410, 455, 485, 503, 572, 588, 640, 652, 676, 686, 832, 837, 950, 953, 961, 962, 995, 1028, 1032, 1048, 1536, 1931, 1970, 2044, 2188, 2240, 2761, 2798, 2878, 2931, 3115, 3500, 3511
