## DEDICATION AND ACKNOWLEDGMENTS

This book is dedicated to Clifford W. Hesseltine, Hwa L. Wang, and Keith H. Steinkraus (microbiologists); The Farm (Summertown, Tennessee) and KOPTI (Indonesia); Darwin Karyadi and Mary Astuti.

Part of the enjoyment of writing a book lies in meeting people from around the world who share a common interest, and in learning from them what is often the knowledge or skills acquired during a lifetime of devoted research or practice. We wish to give deepest thanks...

Of the many libraries and librarians who have been of great help to our research over the years, several stand out:

University of California at Berkeley: John Creaser, Lois Farrell, Norma Kobzina, Ingrid Radkey.

Northern Regional Library Facility (NRLF), Richmond, California: Martha Lucero, Jutta Wiemhoff, Scott Miller, Virginia Moon, Kay Loughman.

Stanford University: Molly Molloy, who has been of special help on Slavic-language documents.

National Agricultural Library: Susan Chapman, Kay Derr, Carol Ditzler, John Forbes, Winnifred Gelenter, Henry Gilbert, Kim Hicks, Ellen Knollman, Patricia Krug, Sarah Lee, Veronica Lefebvre, Julie Mangin, Ellen Mann, Josephine McDowell, Wayne Olson, Mike Thompson, Tanner Wray.

Library of Congress: Ronald Jackson, Ronald Roache.

Lane Medical Library at Stanford University.

Contra Costa County Central Library and Lafayette Library: Carole Barksdale, Kristen Wick, Barbara Furgason, Sherry Cartmill, Linda Barbero.

Harvard University's Five Botanical Libraries (especially Arnold Arboretum Library): Jill Gelmers Thomas.

French translation: Martine Liguori of Lafayette, California, for ongoing, generous, and outstanding help since the early 1980s.

Japanese translation and maps: Akiko Aoyagi Shurtleff.

We would also like to thank our co-workers and friends at Soyinfo Center who, since 1984, have played a major role in collecting the documents, building the library, and producing the SoyaScan database from which this book is printed:

Irene Yen, Tony Jenkins, Sarah Chang, Laurie Wilmore, Alice Whealey, Simon Beaven, Elinor McCoy, Patricia McKelvey, Claire Wickens, Ron Perry, Walter Lin, Dana Scott, Jeremy Longinotti, John Edelen, Alex Lerman, Lydia Lam, Gretchen Muller, Joyce Mao, Luna Oxenberg, Joelle Bouchard, Justine Lam, Joey Shurtleff, Justin Hildebrandt, Michelle Chun, Olga Kochan, Loren Clive, Marina Li, Rowyn McDonald, Casey Brodsky, Hannah Woodman, Elizabeth Hawkins, Molly Howland, Jacqueline Tao, Lynn Hsu.

Special thanks to Tom and Linda Wolfe of Berwyn Park, Maryland.

■ For outstanding help on this tempeh book we thank: Keith H. Steinkraus, Clifford W. Hesseltine, Seth Tibbott, Amin Sweeney, Valerie Robertson, Allan & Susan Brown, Cynthia Bates, Don Wilson, Laurie Sythe Paskin, Suzy Jenkins Viavant, Alexander Lyon, Betty Stechmeyer, Gordon McBride, Steve Demos, Sjon Welters, Michael Cohen, Luke Lukoskie, Benjamin Hills, Gale Randall, Andy Schecter, Lonnie Stromnes, Steve Fiering, Ike van Gessel, Sandor E. Katz, Mrs. & Mrs. Mustam, Manfred Warmuth, Robert Walker, Mary Astuti, Darwin Karyadi, Hermana, Flora Bwee Hwa Yap, Ko Swan Djien, Bernd Drosihn, Kiku Murata, Junko Ebata, Yasuko Torii, Makiko Kageura, Rustono, M.P. Vaidehi.

■ Finally our deepest thanks to Tony Cooper of San Ramon, California, who has kept our computers up and running since Sept. 1983. Without Tony, this series of books on the Web would not have been possible.

This book, no doubt and alas, has its share of errors. These, of course, are solely the responsibility of William Shurtleff.

■ This bibliography and sourcebook was written with the hope that someone will write a detailed and well-documented history of this subject.

# INTRODUCTION

## Brief Chronology/Timeline of Tempeh Worldwide.

The word *tempe* appears to have originated in Central Java, in today's Indonesia. It is not derived from Chinese (as are the names of so many other Indonesian soyfoods) and it does not start with the prefix *tau* or *tao* (as do *tauci*, *tauco*, *taugé*, *taujiong*, *tahu*, *takua*) (Astuti 1999, p. 2-15).

"In Javanese literature, the word *kedelai* (written as *kedele* in Javanese), was first recorded in the Serat Sri Tanjung manuscript, believed to have been written in the 12<sup>th</sup> or 13<sup>th</sup> centuries" (Astuti 1999, p. 3).

**1815** – The earliest known reference to tempe is found in the *Serat Centhini* manuscript. This document was first cited for its early reference to tempe in *History of Tempeh*, by Shurtleff & Aoyagi (July 1984, p. 9; May 1985, p. 9), then in *The Book of Tempeh*, 2<sup>nd</sup> ed., by Shurtleff & Aoyagi (1985, p. 145, 169). The story in the manuscript is set in the reign of Sultan Agung (1613-1645) and the descriptions purport to be of that time, so it is possible that tempeh existed in Java in the early 1600s.

A more detailed explanation and translation was given by Astuti (1999, p. 4-15).

**1875** – The earliest known reference to tempe by a European appears in the *Javaansch-Nederduitsch Handwoordenboek*, by J.F.C. Gericke and T. Roorda.

**1895 and 1896** – Two articles by the Dutchman H.C. Prinsen Geerligs (who lives in Java) usher in the era of scientific research on tempeh by European microbiologists and food scientists. The 1896 article (which is a German translation of his 1895 Dutch-language article) is the first to spell the word "tempeh" (with an "h" on the end). It is also the first to give the name of the tempeh mold as *Rhizopus Oryzae*.

But other early Western authors, especially the Dutch, use the spelling *témpé* (Gericke and Roorda 1875; Heyne 1913) or *tèmpé* (Vorderman 1902; Stahel 1946).

**1900** – The Dutchman Dr. P.A. Boorsma, who lives in Java and does original laboratory tests, publishes the first detailed description (in Dutch) of the traditional Indonesian process for making *Tempe kedeleh* (soybean tempeh).

**1905** – Dr. Kendo Saito, a professor in the Plant Physiology Laboratory of the Botanical Institute at Tokyo Imperial University, first describes (in German) and illustrates what is today considered to be the main tempeh microorganism, *Rhizopus oligosporus*. He did not, however, mention tempeh

(*Zentralblatt fuer Bakteriologie* 14:623-27).

**1912** – Dr. Ryoji Nakazawa, the great Japanese microbiologist, is the first Japanese to study tempeh. He asks a person from Southeast Asia to bring him samples of tempeh and oncom (ontjom, made from peanut presscake); he analyzes their microorganisms. He was working at the Taiwan High Commissioner's Office Central Research Laboratory at the time.

**1926** – Dr. Nakazawa takes a research trip to Java and Sumatra, where he collects 22 samples of soy tempeh and oncom from various markets and small manufacturers. He and Takeda analyze the microorganisms used and in 1928 publish "On the filamentous used to make ontjom and tempeh in the South Pacific," in Japanese in *Nihon Nogei Kagakkai Shi* (4:252-63).

**1931** – The first English-language information about tempeh appears in *Vegetables of the Dutch East Indies*, by J.J. Ochse (p. 391). He describes the tempeh-making process in detail and says that the mold used is *Aspergillus oryzae*.

**1936** – In about this year (according to van Veen 1962) a group of missionaries from Travancore, a poor region of southern India, wanted to make and introduce soy tempeh. For 3 weeks van Veen gave them short courses in how to make tempeh. When the missionaries returned to Travancore they made tempeh and it was fine "but the Indian population did not have any interest in this unknown fermentation product and the experiment failed." This is the earliest known introduction of tempeh to India.

**1946 April** – ENTI (*Eerste Nederlandse Tempe Industrie*), the first tempeh-making company in Europe is founded by a Dutch couple whose last name was Wedding; they had learned how to make tempeh while living in Indonesia. The origins and history of this company are shrouded in the mists of time; it is not clear when they actually started (perhaps 1948) and when they started to sell the tempeh they made.

**1946 Dec.** – The first English-language article specifically about tempeh is written by Gerold Stahel, director of the Agricultural Experiment Station in Paramaribo, Surinam (a Dutch colony). He wrote: "Here in Surinam, as in the East Indies, most of the soybeans are consumed in this form." This was also the earliest known article about tempeh published in the United States (in the *Journal of the New York Botanical Garden*), and the earliest reference to tempeh in Latin America.

**1944** – Dr. Masahiro Nakano (age 37), one of Dr. Nakazawa's youngest but eventually best-known students of microbiology, goes to Japan's National Food Research Institute (NFRI) (Shokuryo Kenkyujo) in Tokyo and creates a Department of Applied Micro-biology. After World War II (starting in about 1946) Dr. Nakano and his student, Teruo Ohta, introduce tempeh to Japan. They are the first to make and serve tempeh in Japan and they wrote numerous articles about this food (Nakano 1959; Ohta, Ebine & Nakano 1964; Ohta 1965, Nakano 1967, Ohta 1971; Watanabe, Ebine & Ohta 1971, etc.).

**1950 June** – P.M.L. Tammes (in Dutch) gives the first detailed discussion of Indonesian starter culture (*ragi*) and how *ragi* is used to make tempeh.

**1950** – Van Veen and Schaefer are the first to spell the word “tempeh” in an English-language article. The final “h” was added to prevent the word from being pronounced “temp.” The new spelling quickly catches on. Steinkraus et al. (1960) are the first in the United States to spell it “tempeh.” Most Westerners feel that correct pronunciation is more important than correct spelling. However most Indonesians now spell the word “tempe,” which is the correct spelling in their language.

**1958** – Scientific research on tempeh in the United States begins when Ms. Bwee Hwa YAP of Indonesia begins to work with Dr. Keith H. Steinkraus, a top microbiologist, and his Cornell group at Geneva, New York. The first of their many pioneering papers is published in Dec. 1960.

**1959 Jan.** – Firma E.S. Lembekker is founded in Amsterdam; it is Europe's 2<sup>nd</sup> earliest tempeh maker.

**1960** – Scientific research on tempeh at the USDA Northern Regional Research Laboratory in Peoria, Illinois, begins when KO Swan Djien arrives from Indonesia to study industrial fermentation. Dr. Hesseltine, another world-class microbiologist, encourages him to start by studying the tempeh fermentation; he knows tempeh well but has never studied it. The first of their many pioneering papers was published in 1961.

**1960s** – Another center of tempeh research in Japan develops during the early 1960s at the Food and Nutrition Laboratory, in the Faculty of Science of Living, at Osaka City University. Early research there (on antioxidants in tempeh) is done by Dr. Kiku Murata, Dr. Hideo Ikehata, and co-workers. Between 1964 and 1980 Dr. Murata is the senior author of eight publications on tempeh and co-author of five others.

**1961** – The first commercial tempeh shop in North America, Joy of Java Tempe, is opened by Mary Otten, of Indonesian

ancestry, in Albany California (Shurtleff & Aoyagi, *History of Tempeh (HOT)* 1985, p. 39).

**1963** – “Investigations of tempeh, an Indonesian food,” by Hesseltine et al. is the first scientific article to investigate many different tempeh cultures (including 26 strains of *Rhizopus*) and to select one strain (NRRL 2710) as being best suited for making tempeh from soybeans. They later find it is also best for making tempeh from cereal grains, and from mixtures of both. This strain soon becomes the first choice of tempeh makers, big and small, in North America. This 1963 article also contains the first detailed discussion of tempeh starter culture in English.

**1964 May** – The use of perforated plastic bags and tubes as containers for tempeh fermentation is first proposed by Martinelli and Hesseltine in an article in the journal *Food Technology*. This new idea and new technology is quickly transferred to tempeh makers in Java, where it becomes widely used.

**1964 May** – KO Swan Djien of Indonesia presents a 17-page paper titled “Tempe, a fermented food from soybeans,” at the International Symposium on Oilseed Protein Foods, held May 11-16 in Tokyo, Japan. It contains the most complete information seen to date on tempeh, especially tempe in Indonesia. The section titled “Preparation of tempe” contains the first tempe recipes seen in English. Three common ways of cooking tempeh are given, with ingredients (but no exact amounts) and procedure; no recipe names are given. It is also the earliest known reference to the use of okara in making tempe.

In this document, Ko is the first to signal what he hopes will be the beginning of a new image for tempe Indonesia: “But there is no doubt that the time will come when Indonesians will be proud of their tempe, in the same way as the Japanese are proud of their sake, the French people of their wine, Italians of their macaroni, Indians of their curry, Russians of their caviar, the Dutch of their cheese, etc.” Unfortunately, the paper was never published.

**1969** – Handelsonderneming van Dappern is founded in the Netherlands by Robert van Dappern, with the help of his Dutch father (Herman), his Indonesian mother (Aveline), and Dutch-Indonesian wife. He paid the Dutch-Indonesian sailor (who had founded Firma ENTI) a substantial sum of money to teach him how to make tempeh. By 1970 they were making tempeh in a small warehouse in Rotterdam. By 1972 or 1973 they moved the thriving company to Kerkrade, in southern Holland near the family home in Heerlen, and started mass production. By mid-1982 the company was making 6,000 to 8,000 lb/week of tempeh, making it the largest tempeh manufacturing company in the world. In 1983 the company was renamed Tempe Production Inc. By early

1984 production had increased to 13,200 pounds a week.

**1970** – *Cooking the Indonesian Way*, by Alec Robeau, is published in New South Wales, Australia. It contains four named tempeh recipes, with the amount of each ingredient given: Sajur oblok, Sajur gudek, Sajur kangkung, and Tempe goreng. These are the world's first real tempeh recipes in English.

**1972 Feb.** – *Introduction of Soybeans for Human Nutrition, Republic of Zambia*, by Dr. Thio Goan Loo, a 51-page report, is published jointly by the Government of The Netherlands and the Republic of Zambia. A description of workshops held at 8 places in Zambia in Aug. and Sept. 1971, it introduces tempeh, tofu, soymilk, and other soyfoods to Zambia. This is the 2<sup>nd</sup> earliest reference to tempeh in Africa. The author is Senior Technologist at the Royal Tropical Institute, Dep. of Agricultural Research. Amsterdam. It includes a recipe for making "Soy Steak (Tempeh)" at home.

**1972** – The Farm, a large spiritual community of several thousand "hippies" in Summertown, Tennessee, starts making tempeh for its members. Alexander Lyon is the pioneer, soon joined by many other Farm residents. They start the first Caucasian (though non-commercial) tempeh shop in North America. They play a key role popularizing tempeh in the United States and Canada (*The Farm Vegetarian Cookbook* 1975).

**1975 Feb.** – Gale Randall starts the Indonesian Tempeh Co., the first Caucasian-run commercial tempeh shop in North America, in Unadilla, Nebraska, making Soy- and Wheat-Soy tempeh (*HOT*, p. 49).

**1975 Feb.** – *The Farm Vegetarian Cookbook*, is published by The Farm (Summertown, Tennessee, 128 p.). It contains a section titled "Tempeh" (p. 60-62). This book played an important role in introducing tempeh, soyfoods, and a vegan diet to America. It is The Farm's earliest publication that contains a tempeh recipe (Indonesian Fried Tempeh).

**1976 May** – *Mother Earth News* publishes an article about tempeh. This and a number of subsequent magazine articles listed the USDA's Northern Regional Research Lab. (Peoria, Illinois) as America's only source of tempeh starter. Over the next few years the Peoria group sent out some 25,000 tempeh starter cultures and instructions and instructions for making tempeh, free of charge, to people and organizations requesting them; by 1981 the number sent out had reached 35,000.

**1976 July** – "Tempe," by Cynthia Bates, a 4-panel (blue on white) leaflet is published at The Farm in Summertown, Tennessee. It describes how to make 5 pounds of tempe, and

the differences between good and bad tempeh (with photos showing each). It gives four recipes, including one for a "Tempe burger." This is the earliest known reference to that term. This leaflet was distributed with Cynthia's tempeh starter and "Fermentation Funnies" (cartoons designed to help introduce tempeh). Thus in 1976, the Farm became a source of commercial tempeh starter (powdered, pure culture), made by Cynthia Bates at the Tempeh Lab.

**1976 Aug.** – America's first Soy Deli, established in the Farm Food Company's storefront restaurant in San Rafael, California, features tempeh in Tempeh Burgers, Deep-fried Tempeh Cutlets, and Tempeh with Creamy Tofu Topping. The first tempeh dishes sold in an Americans-style restaurant, they are made from tempeh produced by Don Wilson in the rear of the building (*HOT*, p. 44).

**1976** – A.I. Nelson and L.K. Ferrier at the University of Illinois, Department of Food Science, develop a low-tech, build-it-yourself soybean dehuller and hull separator. It works well for making tempeh, is not patented, and was first used commercially in Feb. 1981 by Soyfoods Unlimited, Inc. in California. Also in Feb. 1981 an article about it by Steve Fiering (illustrated by Akiko Aoyagi) appeared in *Soyfoods* magazine.

**1977 Jan.** – A media blitz for tempeh begins in the United States with major articles in *Organic Gardening* (circulation 1.35 million), *Mother Earth News*, and *East West Journal* (July 1978).

**1977 early** – The Farm (Summertown, Tennessee) starts selling America's first commercial tempeh starter. It is made by Cynthia Bates. In 1977 when Farm Foods was founded, it took over marketing of the tempeh starter. They also sold America's first Tempeh Kit, made at The Farm.

**1978 June** – Robert Walker starts making Canada's first tempeh, at a commercial kitchen in his home in Port Perry, Canada. His inspiration came from an article titled "Tempeh, a new health food opportunity," by Robert Rodale published in July 1977 in *Prevention* magazine. By early 1983 there were five tempeh companies in Canada. All were quite small, making less than 200 pounds of tempeh a week.

**1979 Feb** – White Wave of Boulder, Colorado, launches Soya Rice Tempeh, America's first multi-grain tempeh and the first to contain rice.

**1979 early** – There are 13 commercial tempeh shops in operation in the United States, 1 in Canada, and 4 in Europe (all in the Netherlands) (Shurtleff & Aoyagi 1979, p. 148-49).

**1979 March 11** – KOPTI, the Cooperative of Tempe and Tofu producers of Indonesia is founded, with Achmad Rouzi Noor as director in Jakarta. By 1983 KOPTI had over 28,000 members in Java; 72% of these ran home industries (*HOT*, p. 26).

**1979 April** – In Sri Lanka, from April to June, 1979, Dr. Thio Goan Loo, a Chinese-Indonesian stationed at the Royal Tropical Institute in Amsterdam, taught many people, especially those associated with the Soyfoods Research Center at Gannoruwa, how to make and serve tempeh.

**1979 June** – Farm Foods (in Lanark, Ontario, Canada) starts making and selling tempeh. The main tempeh makers are Susan and Allan Brown. They learned how to make tempeh and tempeh starter at The Farm in Summertown, Tennessee.

**1979 July** – *The Book of Tempeh*, by Shurtleff & Aoyagi, is published by Harper & Row (New York City, 160 p.). The world's first book devoted entirely to tempeh in any language.

**1979 Sept.** – The Tempeh Works, founded by Michael Cohen in Greenfield, Massachusetts, starts making and selling tempeh. It is the first U.S. company to set up shop in a commercial building strictly for the purpose of making tempeh. By Sept. 1981 The Tempeh Works was making 6,800 pounds/week of tempeh.

**1980 March** – *Tempeh Production: A Craft and Technical Manual*, by Shurtleff and Aoyagi is published by the authors (176 p.). It describes how to start and run a commercial tempeh manufacturing company on any of six different scales. It is the first such book written in the Western world.

**1980 June** – Noble Bean, founded by Allan and Susan Brown, starts making tempeh in the heart of Toronto's Chinatown. They bought Robert Walker's equipment. In June 1985 they moved to R.R. 1, McDonalds Corners (near Elphin), Ontario, Canada. Today they are Canada's largest tempeh maker.

**1980 Aug.** – Island Spring (in Vashon, Washington) introduces the world's first commercial "Tempeh Burgers." They are made on a small scale in individual round petri dishes.

**1980 Aug.** – Pacific Tempeh is started in Emeryville, California, by Travis Burgeson.

**1980 June** – GEM Cultures, started by microbiologists Gordon McBride (PhD) and Betty Stechmeyer in Fort Bragg, California, becomes the first source of "Living Tempeh Starter" (LTS) in both Kit and Professional sizes. Gordon

is the former manager of the Living Culture Department at Ann Arbor Biological Center, Inc. (in Michigan) (*Soyfoods*, summer 1980, p. 4). In July 1981 GEM Cultures launches Powdered Tempeh Starter (PTS).

**1980 Dec.** – Turtle Island Soy Dairy, founded by Seth Tibbott, starts making soy tempeh inside the Hope Co-op in Forest Grove, Oregon. Their next two products, launched in June 1981 are Tempehroni (herb-seasoned tempeh in sausage-like rolls), and Five Grain Tempeh (with soybeans, rice, millet, sunflower seeds and sesame seeds); this is America's 1<sup>st</sup> herbed tempeh and America's 2<sup>nd</sup> multi-grain tempeh (but America's 1<sup>st</sup> multi-grain with three or more grains). In Feb. In June **1981** – Soyfoods Unlimited launched a Soy & Rice Tempeh (using brown rice).

**1980** – The earliest known tempeh companies start in Australia. The first two to start were Dharma, part of Earth Foods in Waverly, run by Swami Veetdharma, and a small shop at Bodhi Farm, New South Wales, run by John Seed.

**1981 Jan.** – Pacific Tempeh introduces the world's 2<sup>nd</sup> tempeh burger – but the first made and marketed on a large scale; they quickly become very popular and widely imitated. The company also sells the world's first vacuum-packed tempeh. In March 1982 they develop a handsome full-color poster advertising their tempeh burger.

**1981 Jan.** – Paul's Tofu & Tempeh is in operation at 155 Archway Rd., Highgate, London – the first European tempeh shop outside of the Netherlands.

**1981 Jan.** – *Soyanews* (in Sri Lanka) introduces tempeh to its many readers, with a description of how to make tempeh at home plus many recipes. Sun-dried tempeh came to be called "*soya karawala*," *karawala* being a popular type of dried fish, which tempeh apparently was found to resemble in texture and flavor. By May 1981, tempeh starter was available at SFRC (Soybean Foods Research Centre) at Gannoruwa. Soya Karawala was first introduced commercially in 1982, the first of about 7 commercial tempeh products made in Sri Lanka. Many subsequent articles about tempeh were published in *Soyanews*.

**1981** – Starting this year and for the next decade, Dr. M.P. Vaidehi (of the Department of Rural Home Science, University of Agricultural Sciences at Bangalore, India) did a great deal to introduce tempeh to Indian villages and to promote its use. She made her own tempeh, then did a study serving tempeh curry and tempeh chips to 100 villagers and 100 urban consumers. The two products were well received (Vaidehi 1981; Vaidehi 1993).

**1981 Feb. 15** – Valerie, John and Gary Robertson start to

make tempeh at Soyfoods Unlimited Inc. in their \$100,000 state-of-the-art plant in San Leandro, California. In June 1981 they launch Soy & Rice Tempeh and in Sept. 1981 Tempeh Burgers (marinated, non-fried, vacuum packed). By Oct. 1982 they are running beautiful full-page color ads for the burgers under the slogan “All the Sizzle..., None of the Steak” in *Vegetarian Times* and *East West Journal*.

**1982 May** – About 19,055 pounds of tempeh are being made each week in the United States; a year later that amount has increased by 34% to 25,590 pounds (*Soyfoods Industry and Market*, by Soyfoods Center).

**1982 July** - Cyril and Elly Cain start making tempeh in Australia at Beancoast Soyfoods, Maroochydore, Queensland.

**1983 Feb.** – Pacific Tempeh introduces Tempeh Lite, America’s first commercial okara tempeh; it contains 25% by weight of brown rice. Low in cost and high in fiber, it is marketed like fish sticks.

**1983 July** – Travis Burgeson sells Pacific Tempeh to Quong Hop & Co., a large manufacturer of tofu and soymilk that had not previously made tempeh. Pacific Tempeh was kept as the brand name for Quong Hop’s line of tempeh products. By Jan. 1984 production has risen to 7,000 pounds a week, making Quong Hop the largest tempeh manufacturer in the United States, followed by White Wave (CO), then Soyfoods Unlimited (CA), then The Tempeh Works (MA).

**1983** – Starting this year, five organizations deserve the lion’s share of the credit for commercializing tempeh in Japan: Torigoe Flour Milling Co. (started making and selling tempeh in June 1983, the first company in Japan to do so), the National Food Research Institute (NFRI), The Japan Natto Association, Marukin Foods, and Marusan-Ai (Shurtleff & Aoyagi 1985, p. 153-55).

**1984 Jan.** – In the United States, 53 companies are producing 34,675 pounds of tempeh each week at an average retail price of \$2.50 per pound; this is the equivalent of \$4.96 million per year (*HOT*, p. 59).

**1984 March** – *Tempeh Cookery*, edited by Colleen Pride, is published by The Book Publishing Co. (Summertown, Tennessee; 127 p.). America’s fourth popular book about tempeh, it is the first with full-page color photos. It becomes a perennial best-seller.

**1984 July** – *History of Tempeh: A Fermented Soyfood from Indonesia*, by Shurtleff and Aoyagi, is published by the authors (81 pages, 375 references). A slightly revised 2<sup>nd</sup> edition is published in May 1985 (91 p.). Much of the above history is documented in these books.

**1984 July** – In Japan the Tempe Research Society (*Tenpe Kenkyu-Kai*) is founded in Tokyo by various friends of tempeh (incl. Dr. Kiku Murata and Mrs. Yasuko Torii) as a membership organization (with annual dues) to provide a forum for ongoing investigation, discussion and popularization of tempeh. The proceedings of each meeting were distributed to members.

**1984 Nov.** – Tempehworks, Inc. (Greenfield Massachusetts) launches Lightlife Meatless Fakin’ Bacon (made from tempeh). The first marinated tempeh strip, and a best-seller, it was renamed Marinated Smoky Tempeh Strips in about April 1997.

**1985 March** – *The Book of Tempeh*, 2<sup>nd</sup> ed., by Shurtleff and Aoyagi published by Harper & Row (New York City, 175 p). Appendix A, “A brief history of tempeh East and West” (p. 145-56) is greatly expanded and updated (based largely on *History of Tempeh*, 1984, 1985), as is Appendix B, “Tempeh makers in the West” (listed alphabetically by state in the USA and by country overseas). Marusan-Ai, which started making tempeh in Japan in 1983, is now the world’s largest tempeh manufacturer, making 15,148 lb (6,885 kg) per week (p. 155).

**1985 Sept.** – The Tempeh Works is renamed Tempeworks, Inc., gets large loans, and introduces its first non-tempeh product – Tofu Pups: The Uncommon Dog (a meatless hot dog whose main ingredient is tofu).

**1986 Dec. 1** – White Wave of Boulder, Colorado, acquires Soyfoods Unlimited, Inc. Each of the three Robertsons ended up owning 1% of White Wave. With this acquisition, White Wave becomes the largest tempeh maker in the United States.

**1987 April 1** – Tempehworks, Inc. is renamed Lightlife Foods, Inc. The company now makes Tempeworks Tempeh, Tofu Pups (meatless hot dogs) and Cookie Heaven (ready to bake cookie batter).

**1987** – The Plenty Canada Soya Utilization Project (related to but separate from The Farm in Tennessee) starts to play an important part in introducing tempeh to Sri Lanka.

**1987 Sept.** – Centro de Soya, Soy Dairy in San Bartolo, Solola, Guatemala, starts making the first commercial tempeh (named “Tempi”) in Latin America outside of Surinam (a Dutch colony). The tempeh is made by Amado del Valle and his business partner, Philippe. Members of The Farm (Summertown, Tennessee) are instrumental in starting and maintaining this company, and in introducing this product. By the mid-1990s this company was renamed

Alimentos San Bartolo.

**1991 Oct.** – Jiangdou Nutritive Food Factory (Jongdou, Jiangsu province, China) introduces the earliest known commercial tempeh in China. Founded by Dong Min-Sheng of the Dept. of Food Science, Nanjing Agricultural University, the product is named “Tempeh.”

**1997 April** – Dakini Health Foods Pvt. Ltd. of Pune / Puna, India, starts making the first commercial tempeh in India. The very successful company, founded and run by Seemo (Mr. H. Shapiro from Israel) and Khairava (Mrs. J. Spaelstra from the Netherlands) also makes two types of tahini, peanut butter, hummus, and (in Aug. 1999) tofu (“soymilk paneer”). They came to India to be at the ashram of Sri Rajneesh (Osho) in Pune.

**1997** – Mary Astuti (PhD, Gadjah Mada University, Yogyakarta, Indonesia) presents a superb paper on the “History of the development of tempeh,” with much new information on the early history of tempeh, tempeh starter, and soybeans in Indonesia; it was published in 1999 (*The Complete Handbook of Tempe*, p. 2-15).

**1997 July** – “Current state of the North American tempeh market,” by Seth Tibbott (founder and owner of Turtle Island Foods) is published in *Reinventing the Hidden Miracle of Tempeh*, Proceedings of an International Tempe Symposium held in Bali, Indonesia (p. 28-35). It gives a good update of tempeh history and the tempeh market in the USA from 1985 to May 1997.

**2000 July 14** – Conagra, one of the world’s largest food companies (with annual sales of more than \$25 billion), acquires Lightlife Foods, Inc., of Turners Falls, Massachusetts.

**2000** – Rustono, who was born in Java, Indonesia, starts to make tempeh in Japan – but he sells it only to Indonesians. He lives in a Japanese village about an hour’s drive from Kyoto with his wife and two children. On 3 Oct. 2003 he starts to make tempeh in Otsu, Japan – and for the first time starts selling it to Japanese. He soon becomes known as the “King of tempeh.” (Sudiarno 2008; Rustono Oct. 2011).

**2009 March** – Turtle Island (Oregon) launches the first line of marinated tempeh strips in three flavors. Smoky Maple Bacon was added to this in March 2010. Turtle Island was already in mass supermarkets in the southeastern United States, but by mid-2011 the tempeh products were added as line extensions in those accounts – especially in Florida, North Carolina, South Carolina, and Georgia, in that order. The Sesame Garlic and the Smoky Maple flavors are the best sellers in the line.

**2009 April** – The Soybean Company in Kerkrade, Netherlands (founded by Robert van Dappern but now owned by Angelo Croci, an Italian) is now the largest tempeh maker in The Netherlands and in Europe. The company is making about 15,000 lb/week of soy tempeh.

**2011** – Pasteurizing tempeh by using vacuum sealing for longer refrigerated shelf life. This has been taking place since the mid-1990s, but it has been steadily improved. Refrigerated tempeh has a better texture and flavor than frozen tempeh, and requires much less energy use.

**2011** – People are increasingly becoming aware of the many important benefits of fermented foods and fermented soyfoods, and of a “whole foods, plant-based diet.”

**2011 Oct.** – Lightlife Foods, Inc. of Turner Falls, Massachusetts, is by far the biggest tempeh maker in the United States, followed by Turtle Island Foods, Inc. of Hood River, Oregon, then by Hain (“Where good brands go to die” – which now makes Westsoy Tempeh, which was originally made by Steve Demos of White Wave and is probably still made at the former White Wave plant in Boulder, Colorado), then (in the natural foods market) Surata Soyfoods (Oregon), Northern Soy / Soyboy (Rochester, New York), Rhapsody (Vermont), Wildwood Natural Foods (Pulmuone, southern California, made by Turtle Island), Bountiful Bean (Madison, Wisconsin), Central Soyfoods (Lawrence, Kansas), 21st Century Foods (Jamaica Plain, Massachusetts), Sweet Earth (Birmingham, Alabama), M Café, and Hearty Vegan (Texas).

**2011** – How big is the market for tempeh in the United States?

First, in the natural foods channel / market: Total sales of refrigerated meat alternatives for the year ending Aug. 2011 were at least \$51.6 million.

19.3% of this was refrigerated tempeh (up 14.0% over the previous year).

Second, in the mainstream / mass market (including conventional supermarket chains): Sales of refrigerated meat alternatives for the year ending Aug. 2011 were at least \$65.9 million.

4.47% of this was refrigerated tempeh (up 14.1% over the previous year).

**2011** – Interest in and research on tempeh in the United States and Europe has enhanced the image of tempeh in Indonesia.

## ABOUT THIS BOOK

This is the most comprehensive book ever published about the history of tempeh. It has been compiled, one record at a time, over a period of 35 years, in an attempt to document the history of this remarkable fermented soyfood. It is also the single most current and useful source of information on this subject.

This is one of more than 100 books compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyinfo Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features detailed information on:

- 71 different document types, both published and unpublished.
- 2,705 published documents - extensively annotated bibliography. Every known publication on the subject in every language.
- 374 original Soyinfo Center interviews and overviews never before published.
- 554 unpublished archival documents
- 537 commercial tempeh products.

Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present.

Each bibliographic record in this book contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given). For most books, we state if it is illustrated, whether or not it has an index, and the height in centimeters.

For commercial soy products (CSP), each record includes (if possible) the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.

A complete subject/geographical index is also included.

## ABBREVIATIONS USED IN THIS BOOK

A&M = Agricultural and Mechanical  
 Agric. = Agricultural or Agriculture  
 Agric. Exp. Station = Agricultural Experiment Station  
 ARS = Agricultural Research Service  
 ASA = American Soybean Association  
 Assoc. = Association, Associate  
 Asst. = Assistant  
 Aug. = August  
 Ave. = Avenue  
 Blvd. = Boulevard  
 bu = bushel(s)  
 ca. = about (circa)  
 cc = cubic centimeter(s)  
 Chap. = Chapter  
 cm = centimeter(s)  
 Co. = company  
 Corp. = Corporation  
 Dec. = December  
 Dep. or Dept. = Department  
 Depts. = Departments  
 Div. = Division  
 Dr. = Drive  
 E. = East  
 ed. = edition or editor  
 e.g. = for example  
 Exp. = Experiment  
 Feb. = February  
 fl oz = fluid ounce(s)  
 ft = foot or feet  
 gm = gram(s)  
 ha = hectare(s)  
 i.e. = in other words  
 Inc. = Incorporated  
 incl. = including  
 Illust. = Illustrated or Illustration(s)  
 Inst. = Institute  
 J. = Journal  
 J. of the American Oil Chemists' Soc. = Journal of the American Oil Chemists' Society  
 Jan. = January  
 kg = kilogram(s)  
 km = kilometer(s)  
 Lab. = Laboratory  
 Labs. = Laboratories  
 lb = pound(s)  
 Ltd. = Limited  
 mcg = microgram(s)  
 mg = milligram(s)  
 ml = milliliter(s)

mm = millimeter(s)  
 N. = North  
 No. = number or North  
 Nov. = November  
 Oct. = October  
 oz = ounce(s)  
 p. = page(s)  
 photo(s) = photograph(s)  
 P.O. Box = Post Office Box  
 Prof. = Professor  
 psi = pounds per square inch  
 R&D = Research and Development  
 Rd. = Road  
 Rev. = Revised  
 RPM = revolutions per minute  
 S. = South  
 SANA = Soyfoods Association of North America  
 Sept. = September  
 St. = Street  
 tonnes = metric tons  
 trans. = translator(s)  
 Univ. = University  
 USB = United Soybean Board  
 USDA = United States Department of Agriculture  
 Vol. = volume  
 V.P. = Vice President  
 vs. = versus  
 W. = West  
 °C = degrees Celsius (Centigrade)  
 °F = degrees Fahrenheit  
 > = greater than, more than  
 < = less than

## HOW TO MAKE THE BEST USE OF THIS DIGITAL BOOK - SEARCH IT

**Most Important Thing:** The **KEY** to using this digital book, which is in PDF format, is to **SEARCH IT** using Adobe Acrobat Reader: For those few who do not have it, Google: **Acrobat Reader** - then select the **free** download for your type of computer. Then...

Type [Ctrl+F] to “Find.” Near the top right of your screen a white box will appear.

Click the small down-pointing arrow just to the right of that box to get a menu.

Click “Open Full Acrobat Search.”

At the left side of your screen a “Search” box will open.

When asked: “What word or phrase would you like to search for?” type that word or phrase in the box. For example: Rustono or Turtle Island. No need to use quotation marks. Then click “Search.”

At “Results” click any line that interests you.

For those using a Mac without Acrobat Reader: Safari is often the default browser. Click “Edit” in the toolbar at top. In the dropdown click “Find,” then click “Find...” again. A search bar will open across top of screen with a search box at right. In this box type a word or phrase you would like to search, such as Rustono or Turtle Island. Click “Done” then scroll through the various matches in the book.

**Chronological Order:** The publications and products in this book are listed with the earliest first and the most recent last. Within each year, references are sorted alphabetically by author. If you are interested in only current information, start reading at the back, just before the indexes.

**A Reference Book:** Like an encyclopedia or any other reference book, this work is meant to be searched first - to find exactly the information you are looking for - and then to be read.

**How to Use the Index:** A subject and country index is located at the back of this book. It will help you to go directly to the specific information that interests you. Browse through it briefly to familiarize yourself with its contents and format.

Each record in the book has been assigned a sequential number, starting with 1 for the first/earliest reference. It is this number, not the page number, to which the indexes refer. A publication will typically be listed in each index in more than one place, and major documents may have 30-40 subject index entries. Thus a publication about the nutritional

value of tofu and soymilk in India would be indexed under at least four headings in the subject and country index: Nutrition, Tofu, Soymilk, and Asia, South: India.

Note the extensive use of cross references to help you: e.g. “Bean curd. See Tofu.”

**Countries and States/Provinces:** Every record contains a country keyword. Most USA and Canadian records also contain a state or province keyword, indexed at “U.S. States” or “Canadian Provinces and Territories” respectively. All countries are indexed under their region or continent. Thus for Egypt, look under Africa: Egypt, and not under Egypt. For Brazil, see the entry at Latin America, South America: Brazil. For India, see Asia, South: India. For Australia see Oceania: Australia.

**Most Important Documents:** Look in the Index under “Important Documents -.”

**Organizations:** Many of the larger, more innovative, or pioneering soy-related companies appear in the subject index – companies like ADM / Archer Daniels Midland Co., AGP, Cargill, DuPont, Kikkoman, Monsanto, Tofutti, etc. Worldwide, we index many major soybean crushers, tofu makers, soymilk and soymilk equipment manufacturers, soyfoods companies with various products, Seventh-day Adventist food companies, soy protein makers (including pioneers), soy sauce manufacturers, soy ice cream, tempeh, soynut, soy flour companies, etc.

Other key organizations include Society for Acclimatization (from 1855 in France), American Soybean Association, National Oilseed/Soybean Processors Association, Research & Development Centers (Peoria, Cornell), Meals for Millions Foundation, and International Soybean Programs (INTSOY, AVRDC, IITA, International Inst. of Agriculture, and United Nations). Pioneer soy protein companies include Borden, Drackett, Glidden, Griffith Labs., Gunther, Laucks, Protein Technologies International, and Rich Products.

**Soyfoods:** Look under the most common name: Tofu, Miso, Soymilk, Soy Ice Cream, Soy Cheese, Soy Yogurt, Soy Flour, Green Vegetable Soybeans, or Whole Dry Soybeans. But note: Soy Proteins: Isolates, Soy Proteins: Textured Products, etc.

**Industrial (Non-Food) Uses of Soybeans:** Look under “Industrial Uses ...” for more than 17 subject headings.

**Pioneers - Individuals:** Laszlo Berczeller, Henry Ford, Friedrich Haberlandt, A.A. Horvath, Englebert Kaempfer, Mildred Lager, William Morse, etc. Soy-Related Movements: Soyfoods Movement, Vegetarianism, Health and Dietary Reform Movements (esp. 1830-1930s), Health Foods Movement (1920s-1960s), Animal Welfare/ Rights. These are indexed under the person's last name or movement name.

**Nutrition:** All subjects related to soybean nutrition (protein quality, minerals, antinutritional factors, etc.) are indexed under Nutrition, in one or more of 14 subcategories.

**Soybean Production:** All subjects related to growing, marketing, and trading soybeans are indexed under Soybean Production, e.g., Soybean Production: Nitrogen Fixation, or Soybean Production: Plant Protection, or Soybean Production: Variety Development.

**Other Special Index Headings:** Browsing through the subject index will show you many more interesting subject headings, such as Industry and Market Statistics, Information (incl. computers, databases, libraries), Standards, Bibliographies (works containing more than 50 references), and History (soy-related).

**Commercial Soy Products (CSP):** See "About This Book."

**SoyaScan Notes:** This is a term we have created exclusively for use with this database. A SoyaScan Notes Interview contains all the important material in short interviews conducted and transcribed by William Shurtleff. This material has not been published in any other source. Longer interviews are designated as such, and listed as unpublished manuscripts. A transcript of each can be ordered from Soyinfo Center Library. A SoyaScan Notes Summary is a summary by William Shurtleff of existing information on one subject.

**"Note:"** When this term is used in a record's summary, it indicates that the information which follows it has been added by the producer of this database.

#### **Asterisks at End of Individual References.**

1. An asterisk (\*) at the end of a record means that Soyinfo Center does not own that document. Lack of an asterisk means that Soyinfo Center owns all or part of the document.

2. An asterisk after eng (eng\*) means that Soyinfo Center has done a partial or complete translation into English of that document.

3. An asterisk in a listing of the number of references [23\* ref] means that most of these references are **not** about soybeans or soyfoods.

**Documents Owned by Soyinfo Center.** Lack of an \* at the end of a reference indicates that the Soyinfo Center Library owns all or part of that document. We own roughly three fourths of the documents listed. Photocopies of hard-to-find documents or those without copyright protection can be ordered for a fee. Please contact us for details.

**Document Types:** The SoyaScan database contains 130+ different types of documents, both published (books, journal articles, patents, annual reports, theses, catalogs, news releases, videos, etc.) and unpublished (interviews, unpublished manuscripts, letters, summaries, etc.).

**Customized Database Searches:** This book was printed from SoyaScan, a large computerized database produced by the Soyinfo Center. Customized/personalized reports are "The Perfect Book," containing exactly the information you need on any subject you can define, and they are now just a phone call away. For example: Current statistics on tofu and soymilk production and sales in England, France, and Germany. Or soybean varietal development and genetic research in Third World countries before 1970. Or details on all tofu cheesecakes and dressings ever made. You name it, we've got it. For fast results, call us now!

**BIBLIO:** The software program used to produce this book and the SoyaScan database, and to computerize the Soyinfo Center Library is named BIBLIO. Based on Advanced Revelation, it was developed by Soyinfo Center, Tony Cooper and John Ladd.

**History of Soybeans and Soyfoods:** Many of our digital books have a corresponding chapter in our forthcoming scholarly work titled History of Soybeans and Soyfoods (4 volumes). Manuscript chapters from that book are now available, free of charge, on our website, [www.soyinfocenter.com](http://www.soyinfocenter.com).

**About the Soyinfo Center.** An overview of our publications, computerized databases, services, and history is given on our website.

**Soyinfo Center**

**P.O. Box 234,**

**Lafayette, CA 94549 USA**

**Phone: 925-283-2991 Fax: 925-283-9091**

# HISTORY OF TEMPEH AND TEMPEH PRODUCTS

1. Serat Centhini [The Centhini manuscript]. 1815. In: Codex Orientalis 1814 of the Leiden University Library. Vol. 1. See p. 295. [Mal]

• **Summary:** “Serat” means manuscript or work or tale. “Centhini” (also spelled “Centini”) refers to a character in the book. From a letter dated 16 Nov. 1984 from Dr. S.O. Robson, expert in Javanese languages at the State University of Leiden in the Netherlands: *The Serat Centhini* is a classic work of modern Javanese literature, written in verse. It tells of the adventures of “students” wandering in the Javanese countryside in search of truth, and in the course of this story, information (often very detailed) is given on many different subjects—not just religion but also various aspects of Javanese culture and life. Hence the term “encyclopedia” is applied to this work.

On one page the word “tempeh” appears. For the full page of text, see next page.

The word for “tempeh” can be seen in detail.

The Serat Centhini as we now have it was probably written around A.D. 1815 on the orders of Sunan Sugih, then Crown Prince and later Pakubuwana V of Surakarta. The main author was probably Ranga Sutrasna, although he was probably assisted by others; there are various traditions on this point. The work as a whole, however, is quite possibly based on much older sources. The story is *set* in the reign of Sultan Agung (1613-1645), and the descriptions purport to be of that time.

Codex Orientalis of the Leiden University Library bears the date 1846; it originated from Surakarta and consists of five volumes. The text was published in the *Verhandelingen van het Koninklijk Bataviaasch Genootschap voor Kunsten en Wetenschappen* (Batavia, 1912-15), and a summary of contents was published by Th. Pigeaud (VBG LXXII, 2, Bandung 1933). For further information, see his short introduction.

The passage quoted here is from Canto 31, stanzas 211-213, on page 82 of volume I-II of the printed version referred to above. It occurs in a description of the prosperous village Wanamarta, in the context of a reception and meal given for Jayengwèsti. This involves all sorts of food. The line mentioning *témpé* reads: “onions (or garlic) and uncooked *témpé*.”

Note 1. This is the earliest document seen (Sept. 2011),

worldwide, that mentions tempeh.

Note 2. This document was first cited for its early reference to tempeh in *The Book of Tempeh*, 2nd ed., by Shurtleff and Aoyagi (1985, p. 145, 169).

2. Ehrenberg, Christian Gottfried. 1821. De Mycetogenesi ad Acad. C.L.C.N.C. Praesidem epistola [Letter to the President of the Emperor Leopold II Academy of the Curiosities of Nature, on the origin of fungi]. *Nova Acta physico-medica Academiae Caesareo Leopoldinae Carolinae Naturae Curiosorum* 10(1):159-222 + plates. See p. 198-205. [Lat]

• **Summary:** Page 198 is titled “*Rhizopus nigricans* nov. gen. Syn. *Mucor stolonifer* Ehrenbg. Sylv. Mycol. Tab. XI. Fig. 1-7.” (*Mucor stolonifer* Ehrenb. was first described in: *Silvae Mycologicae Berolinensis* 1818).

Note: This is the earliest document seen (Sept. 2011) that mentions *Rhizopus* without mentioning tempeh. Address: Med. Doct., Acad. C.N.C.S.

3. Serat Centhini [The Centhini manuscript]. 1846. In: Codex Orientalis 1814 of the Leiden University Library. Vol. 1. See p. 295. Reprinted in *Verhandelingen van het Bataviaasch Genootschap voor der Kunsten en Wetenschappen* (Batavia, 1912-15), Vol. I-II. p. 82, Canto 31, stanza 212. [Ind]

• **Summary:** Mentions tempeh.

4. Crawford, John. 1852. A grammar and dictionary of the Malay language: With a preliminary dissertation. 2 vols. London: Smith, Elder, and Co. 21 cm.

• **Summary:** Vol. I, “Dissertation and Grammar,” contains two parts: A long essay about the language (p. i to ccxc), and a “Grammar of the Malay language” (84 p.). On p. clxxxiv is a list of cultivated plants. *Kachang* means “pulse” in both Malay and Javanese. Malay is always written in the Arabic alphabet, to the 28 letters of which 6 are added using diacritical marks to express sounds unknown to the Arabic language. Of the 34 letters, there are only 3 vowels, all long (p. 1). The Arabic alphabet is very ill adapted to pronunciation of the Malay language, whose native sounds “can be expressed with ease and precision by Roman letters, and with a few trifling modifications, so as to furnish one unvarying character for every sound” (p. 2).

Vol. II is titled “Malay and English, and English and Malay Dictionaries” (208 + 201 p.). Abbreviations: J. = Common to the Malay and Javanese. v. = variants / variant of. Soy-related words and terms include: “Kachang (J.). A common term for pulses or leguminous plants.” “Kachang-jâpun. The Japan or soy bean, *Soja hispida*.” “Kachang kâdâle (Telinga). Hairy-podded bean, *Phaseolus max*.” “Ragi

[illegible]

(J.). Yeast, barm. In Javanese, it more frequently means spiceries.”

The following soy-related terms do *not* appear: Bungkil, bunkil, kachap, kechap, kechipir, onchom / ontjom, tahu, tahua, takoa, takua, taosi, tausi, tapai, tapé, tauchi, tauge, tempe.

Other terms that do appear: “Agar-agar. The name of the alga or sea-weed which is a considerable article in the Chinese trade, *Plocaria candida*” (p. 2). “Bijen (J. wijen). The sesame plant, *Sesamum indicum*.” Note 1. This is the earliest English-language document seen (Jan. 2005) that contains the word “sesame.”

“Kachang-china. Chinese pulse, *Phaseolus lunatus*; v. Kachang-mas.” “Kachang-goreng. The ground-nut, *Arachis hypogaea*; v. Kachang-tanah and Kachang-miñak.” “Kachang-gunung. Mountain pulse, *Hedysarum* [*Hedysarum gangeticum*].” “Kachang-ijau. Green pulse [mung bean], *Phaseolus radiatus*.” “Kachang-jâriji. The lablab bean, *Lablab vulgaris*.” “Kachang-kakara, v. Kachang-jâriji.” “Kachang-kakara-gatal. Cowitch, *Dolichos pruriens*.” “Kachang-kayu. The pigeon pea, *Cytisus cajan*.” “Kachang-kâchil. Rayed bean *Phaseolus radiatus humilis*.” “Kachang-manila. The Manilla bean [Manila bean] *Voandzeia subterranea*.” “Kachang-mas. Golden bean, or Chinese bean *Phaseolus radiatus*; v. Kachang-china.” “Kachang-miñak. Oil bean or ground-nut, *Arachis hypogaea*; v. Kachang koreng and Kachang-tanah.” “Kachang-moñat. Monkey bean or snail-flower, *Phaseolus caracalla*.” “Kachang-pendek. Lowly bean, *Phaseolus compressus*.” “Kachang-putih. White bean, *Dolichos kachang*.” “Kachang-tanah. Ground-nut or oil bean, *Arachis hypogaea*.” “Lânga (J. oil). The sesame plant, *Sesamum indicum*.” “Wijen (J.). The sesame or oil plant, *Sesamum orientale*. In Javanese it has the epithet of, alas, ‘wild,’ or ‘of the forest.’”

John Crawford lived 1783-1868.

Note 2. This is the earliest English-language document seen (Aug. 2007) that contains the term “pigeon pea.”

Note 3. This is the earliest English-language document seen (May 2008) that contains the term “ragi,” which is the Malay / Indonesian word for a “starter culture,” such as “ragi tempe,” which is tempeh starter made with predominantly *Rhizopus* mold grown on soybeans.

Note 4. “Cowitch, *Dolichos pruriens*,” probably refers to the velvet bean, *Mucuna pruriens* (L.) DC. If it does, this is the earliest document seen (April 2007) and the earliest English-language document seen (April 2007) that mentions this plant. Address: Author of “The History of the Indian Archipelago” [London, England].

5. Tieghem, Ph. van. 1875. Nouvelles recherches sur les Mucorinées [New investigations on the Mucorinees]. *Annales des Sciences Naturelles, Series VI*. 1:5-175. [Fre]\*

• **Summary:** The author describes a small *Rhizopus* species. See Plates I-V, Figures 1-177. Letter from Dr. C.W.

Hesseltine. 1988. Oct. 28. “Van Tieghem described at least two species of *Rhizopus* and described several genera of the Mucorales. Modern classification began with his studies.” Neither soy nor tempeh are mentioned.

6. Gericke, J.F.C.; Roorda, T. 1875. Javaansch-Nederduitsch Handwoordenboek [Javanese-Low German concise dictionary]. Amsterdam, Netherlands: Johannes Mueller. 1051 p. See p. 378, bottom right. Foreword by A.C. Vreede. Also in 2nd edition, 1901. p. 695. [Dut; Jav; Mal]

• **Summary:** This is the second earliest document seen (Sept. 2011) that mentions tempeh, which is defined as “Fermented soybeans or presscake (bunkil) baked or fried in flat pressed cakes. It is well-liked as a side dish with rice.”

This is the earliest Dutch-language document seen (Sept. 2011) that mentions tempeh, which it calls “tépépé.”

In the 1901 edition, under the heading tépépé is a textual reference to “Tjentini I, 295,” which refers to Volume I of LOr 1814, a 5 volume manuscript of the Centini stored in the Leiden Oriental Department of the Leiden University Library. Address: Indonesia and Netherlands.

7. Saccardo, Pier Andrea. ed. 1888. Sylloge fungorum omnium hucusque cognitorum. Vol. VII. Gasteromycetæ, phycomycetæ, myxomycetæ, ustilagineæ et uredinæ [Compendium of information on all fungi known to date... Vol. 7. Gastromycetes, phycomycetes, myxomycetes, ustilagineæ and uredinae]. 882 + lix p. See p. 181-83, 190-91, 212-14. 23 cm. Reprinted in 1966 by Johnson Reprint Corp., New York and London. [Lat]

• **Summary:** The genus *Rhizopus* is discussed in the section titled Phycomycetæ by Dr. A.N. Berlese and Dr. J.B. de Toni (Scholæ Botanicæ Patavinæ). It is classified under Family 1. Mucoraceæ de Bary, Subfamily 2. Mucoreæ. The genus *Rhizopus* was named by Ehrenberg in De Mycetogenesi in Nova Acta X, p. 198. The following species are described: 1. *Rhizopus circinans* Van Tiegh. 2. *Rhizopus echinatus* Van Tiegh. 3. *Rhizopus nigricans* Ehrenberg. 4. *Rhizopus microsporus* Van Tiegh. 5. *Rhizopus minimus* Van Tiegh. 6. *Rhizopus Cohnii* Berl. et De Ton. 7. *Rhizopus elegans* (Eidam) Berl. et De Ton. 8. *Rhizopus reflexus* Bain. 9. *Rhizopus? fructicola* (Corda) Berl. et De Ton.

Amsterdam, Netherlands: J.H. de Bussy. vii + 303 p. See p. 283-87. Supplement to the 1884 publication of the same title. 25 cm. [2 ref. Dut]

• **Summary:** The section titled “Kadelé” (Soybeans) discusses the cultivation of soybeans (also called *katjang djepoen* [Japan beans], Soya, *Glycine hispida*, or *kadelé boontjes*) on Java and the experimental culture in Europe. Interest is shown in the cultivation of soybeans as a food for

diabetics.

Soya is cultivated in Java both for its seed and for its green leaves which are used as animal feed. The small soy beans are roasted by the indigenous people or, in the form of cakes / patties (*tetempé* [tempeh]), eaten like bean-cheese (*boonen-kaas* [tofu]). (“*De kadele boontjes worden door de inlanders geroosterd of, in den vorm van koeken (tetempé), als boonen-kaas gegeten*”).

The author considers that Indonesian soy sauce (*kétjap*) is inferior to Japanese soy sauce. Nutritionally, soya is rich in proteins (*proteïnestoffen*) ( $\pm 38\%$ ) and fat ( $\pm 21\%$ ), and low in starch and sugar.

In Germany and Austria, many years have been spent in developing and cultivating varieties of soybeans adapted to the European climate. Dr. Haberlandt, professor at the University of Vienna, distinguished himself for this work, even to the extent that a variety was named after him. In the experimental gardens at the National Agricultural in Wageningen [Netherlands], a field of soya is cultivated, but the results are not yet satisfactory. Yields are low, especially during the dry and warm summers, when the plant flowers abundantly, but the seeds don't have time to develop properly. The author hopes that through continued experiments, a suitable variety will be developed.

The soya bean has received attention from the medical profession because of its composition. Dr. Le Cerf of Paris was one of the first to try using soya with diabetic patients. He introduced soya bread instead of an almond bread and was successful with it. Dr. Stokvis, a professor in Amsterdam, recommended soy bread (see *Nederlandsch Tijdschrift voor Geneeskunde* No. 10), and the chemical analyses published by Mr. L.C.W. Cox in the same journal (issue No. 19) supported the recommendation. Patients were content with the bread, although they did not find it very appetizing. The author states that if rye or wheat flour could be used together with soy flour, they would yield a very digestible and nutritious food. For this reason also he recommended experiments aimed at acclimatizing soya to Europe.

Dr. Sollewijn Gelpke has published a work titled “The Yield and Cultivation of Dryland Crops,” in which he writes that the cultivation of soya is quite easy and in Java takes place on sawahs (wet rice fields) and clay, in contrast to peanuts (*katjang-tanah*), which is grown on tegals and sand. [Note: A tegal is a dry (not irrigated) field, near the rice fields, but used for vegetables and other secondary crops.] Soya beans are sun-dried, soaked in water for 24 hours, then sown on land that has first been flooded with water. Otherwise they are sown by poking holes in the ground and dropping in the seeds. Gelpke says that soya is so appealing to the indigenous people that, if the soil is hard, he just opens the surface with a crowbar and sows his seeds. This way of cultivation is seen especially on the heavy clay soils of Java.

In the Netherlands it is not well known that soya is

cultivated in Java, because it could be imported for less money than is currently the case. The author has samples of the beans and has noticed that the seeds from European experiments are smaller in size than those grown in Java.

Various laboratory analyses are given. It is noted that soya flour coming from Hungary is used for the production of soy bread, baked by Mr. Koehler of Amsterdam. Mr. Cox studied this bread. The author believes that the sugar content of this bread is high enough to make it unsuitable for diabetic patients, and notes the presence of starch and dextrin. Morawski and Harz have confirmed that ripe soya beans don't contain starch, whereas unripe beans do.

Note 1. Kempster (1923) says: “see van Gorkom's *Oost-Indische Cultures*, neu herausgeg. von Prinsen-Geerligs, Verlag de Bussy, Amsterdam, 1913, Vol. III, p. 283/86.”

Note 2. This is the earliest Dutch-language document seen (Aug. 2003) that uses the word *proteïnestoffen* (or *proteïnestoff*) to refer to proteins in connection with soybeans. Address: Dr., Former Head Inspector of Crops, Dutch East Indies (Oud-Hoofd-Inspecteur der Cultures in Nederlandsch Oost-Indië).

9. Vorderman, Adolf G. 1893. *Analecta op bromatologisch gebied*. I. [Writings on foods: Mold-fermented foods. I.]. *Geneeskundig Tijdschrift voor Nederlandsch-Indie* 33(3):343-99. Sept. See p. 350-360. [Dut]

• **Summary:** The Dutch microbiologist discusses bean sprouts (p. 350-54; *taôge*), light-colored, brown and black soybeans (p. 354-56; *kadelé poetih, merah, item [Bat. maleisch]*, *Licht gekleurde, bruine en zwarte soja-boontjes*), tofu (p. 356-57; *tao-hoe*), firm or pressed tofu (p. 357-59 (*tao-koa*)), *râgi* (p. 359-60; a traditional inoculum, though he does not mention tempeh), *tapej* (p. 360; [tapeh], Tsao in Chinese), *arak* (p. 369-78). Plates at the end show microorganisms for *râgi*, *tapej*, sugarcane brew, and rice wine.

Note: This is the earliest document seen (April 2001) that contains the term *tao-koa*. Address: Inspect. burg. geneesk. diest voor Java en Madoera (Civil Medical Service in Java and Madura).

10. Prinsen Geerligs, H.C. 1895. *Eenige Chineesche voedingsmiddelen uit Sojaboonen bereid* [Some Chinese foods made from soybeans]. *Pharmaceutisch Weekblad voor Nederland* 32(33):1-2. Dec. 14. Summarized in *Teysmannia* (1897) 7:413-15. [5 ref. Dut; eng]

• **Summary:** Contents: Introduction. Tofu or bean cheese (*Tao-hoe of boonenkaas*). Chinese soja or Fao-ijoe (boonenolie; soybean oil). Japanese soya (soy sauce; In Japanese: Shojioe; in Chinese: Sex-sze-ijve). Tauchou or bean paste (*Fao toio of boonenbrei*).

In the section on tofu, soymilk is mentioned twice.

Note 1. This is the earliest Dutch-language document seen (Oct. 2003) that uses the term *melkachtige, vettige vloeistof*

(“milky, fatty liquid”) or *gefiltreerde melkachtige vleistof* (“filtered milky liquid”) to refer to soymilk.

Note 2. This is the earliest document seen (March 2009) that mentions Indonesian-style miso, which it calls “Fao toio.” This would later be spelled tao-tjo, taotjo, tauco, or taucho.

At the end of the section on tofu, the author continues: Another widely used bean preparation is soy sauce (de Soja), of which two kinds exist: the Japanese and the Chinese Soja. The first-mentioned has already been repeatedly described, for example by König (1889, p. 241), further by J.J. Hoffman in his “Contributions to the Knowledge of the Language, Geography, and Ethnology of the Netherlands Indies” (*Bijdragen tot de Taal-, Land- en Volkenkunde van Nederl. Indië*; Vol. V, p. 192), and recently by G. Schlegel in *T'oeng pao* [T'oung Pao 1894] (Part 5, No. 2) and O. Kellner in *Chemiker Zeitung* (1895, p. 120). While I could not find anything in the literature about the preparation of Chinese soy sauce (*Soja*), I have copied the following from the manufacturers themselves.

Chinese Soja or Fao-ijoe (bean oil). For this, only black varieties of the *Soja hipida* [*sic, hispida*] *humida* □ *atrospenna* or *Soja hipida platycarpa* □ *melanosperma* have been used. Their seeds are cooked and the water poured off, after which the beans are left in the sun for half a day to dry. Now they are cooled on big trays of woven bamboo out of the sun, then covered with leaves of a *Hibiscus* variety. On the beans there will always appear a type of mold, the *Aspergillus Oryzae* to be precise, which, at least on Java, appears every time again on moist soybeans exposed to the open air, but strangely enough does not appear on other foods. The beans are allowed to stand until the mold sporulates, which can be seen by the green color of the mold threads (hyphae), then they are dried again for some days and then put in a strong salt solution that has been cooled. This mixture is put in the sun for 8 days and afterwards it is boiled. The salt solution is then poured off from the beans and saved. The beans are boiled again and the water is added to the first salt solution. This process is repeated as many times as it takes to extract the residue completely.

“The decoction is strained through a fine sieve, boiled again, and the sugar from the areng palm, star anise (not the leaves), and some other herbs (which are available from Chinese druggists as “soya herbs”) are added. Finally, this dark brown, pleasantly aromatic liquid is boiled down until salt crystals start to appear on the surface, indicating that the liquid is completely saturated with salt. After cooling, the soy sauce (*soja*) is ready to use. It yields a spice which is used together with all different kinds of foods as a pleasant condiment, and in the Chinese, Javanese, and even the European kitchen on Java it is an irreplaceable ingredient.

“Soy sauce is sold in several quality grades, of which the best is a thick sauce with a special aroma. The lesser kinds are thinner and are made by diluting the thick soy sauce with

salt water, while in the very low-grade kinds, instead of the pleasantly sweet-tasting palm sugar, the bitter, sour-smelling unassimilated molasses from sugar factories is used.

Note 3. This is the earliest document seen (May 2010) that describes the preparation of a sweet Indonesian-style soy sauce quite similar to *ketjap manis* (which seems to have been first created about 1960), yet the writer does not mention its name.

“The Chinese soy sauce appears as a black colored, thick, clear liquid in which sometimes a viscous sediment can be found. When diluted with water it turns turbid or cloudy, but after adding salt this cloudiness disappears. Here is an analysis of one of the most common varieties: Specific gravity 1.254, saccharose and glucose 15.60%, nitrogen containing substances (*stikstofhoudende stof*) soluble in alcohol 4.87%, nitrogen containing substances not soluble in alcohol 2.62%, nitrogen-free substances soluble in alcohol 0.25%, nitrogen-free substances (*stikstofvrije stof*) not soluble in alcohol 0.75%, salt 17.11%, other ash components 1.65%, water 57.12%. Total 100%.

“The substances insoluble in nitrogen consist (except for peptone) mainly of legumin, which is soluble in strong salt solutions (compare Beilstein, *Handbuch Organische Chemie*, III, p. 1275) and will precipitate when diluted. This protein product (*eiwitstof*) has, by repeated precipitation with alcohol and renewed dilution in water and salt, been cleaned and could be recognized as a legumin. The elementary analyses gave these figures: Carbon 51.6, hydrogen 7.1, nitrogen 15.9.

“Furthermore, the dilution in water was precipitated by ammonium sulfate, magnesium sulfate and sodium sulfate and not by a large quantity of sodium chloride.

“The nitrogen containing substances soluble in alcohol were leucine, tyrosine and aspartic acid, all breakdown products of legumin, plus a little ammonia. Nitrogen-free extraction substances are almost not present and consist of a little pectin and the black coloring agent from the skin of the soybeans, which gives the black color to the soya.

“Just like Kellner (*Chemiker Zeitung* 1895, p. 121) remarks, the composition of the soya is very similar to the one of meat extract, by which the big importance of this condiment in countries, where mainly vegetable type food is consumed, can be readily explained. Very peculiar moreover is the way in which during the preparation of the soya the heavily digestible protein substances, which are locked into the thick skinned cells of the soya, have been converted into an easily digestible, very delicious food.

“One lets the boiled beans mold by means of the *Aspergillus oryzae*, which above all has the quality of changing amyloextrine and starchy substances into sugars followed by carbonic acid and water breakdown. We can say that a microscopic investigation of a molded soybean shows that the mold threads (hyphae) penetrate the cell walls of the complete soybean and partly dissolve them so the contents will be more readily available. When the mold has used up

all that food, as shown by its fructification, the beans are put into a strong solution of salt water so that the legumin will dissolve, producing a thick fluid liquid. At the same time, the broken down substances of the legumin will dissolve pepton [peptone], leucine, tyrosine and ammonia, next to the aromatic substance that will start to form in this stage. The continued manipulations, addition of sugar, herbs, etc., are of course of minor importance, but principally the clever way in which the mold is being used to dissolve the cell walls is highly interesting. This, like so many Chinese preparations, is completely empiric and no Chinese would have the slightest notion of what all this molding is about.”

This article describes the first attempt to identify the tempeh mold. In the section on Indonesian miso (taucho), the author notes: “In a similar way, in Java, other molds are used to make leguminous seeds into more digestible foods. Thus the presscake, which remains after making peanut oil and would be indigestible without further preparation, is subjected to the action of molds. In central and eastern Java *Chlamydomucor Oryzae* [now known as *Amylomyces rouxii*] is used, whereas in western Java an orange mold of the family Oospora (Neurospora) is used. In the former case, the food is called ‘bongkreng,’ and in the latter ‘ontjom.’ If soybeans are molded with *Chlamydomucor* the spice is called ‘tempets’ [sic, tempeh]. In the preparation, the seeds are boiled, spread, mixed with a little molded cake from a former batch, and left alone for a while until the mass is bound into a solid white cake.

“All the aforementioned molds have the ability to break starch and pectin substances down into sugars, by which means the cell walls are opened and the seeds made more easy to digest.

“In the case of the starch-containing peanut presscakes, the breakdown of starch into sugars, followed by the use of the resulting sugars, proceeds so rapidly that the cakes become warm and within 1 day about 5% of their weight will disappear.

Kagok Tegal 28.9.95.

Note 4. This is the earliest document seen (Feb. 2004) written only in Dutch that mentions tofu, which it calls “Tao-hoe” or “boonenkaas.” Earlier documents written in Latin and Dutch also mentioned tofu.

Note 5. This is the earliest document seen written only in Dutch that mentions Indonesian miso, which it calls *Fao toio* or *boonenbrei*, and *tao tsioe*.

Note 6. This is the earliest document seen stating that Hibiscus leaves are used in Indonesia to make soyfoods—in this case soy sauce.

Note 7. This is the earliest document seen (Sept. 2011) that mentions “bongkreng”—but the explanation is incorrect.

Note 8. This is the earliest document seen (Sept. 2011) that mentions “ontjom.” Address: Java, Indonesia.

11. Prinsen Geerligs, H.C. 1896. Einige chinesische

Sojabohnenpraeparate [Some Chinese soybean preparations]. *Chemiker-Zeitung* 20(9):67-69. Jan. 29. (Exp. Station Record 8:72). [3 ref. Ger]

• **Summary:** This is a German translation of the author’s 1895 Dutch article, but with two mistakes concerning tempeh corrected. He changed the name of the mold from *Chlamydomucor Oryzae* to *Rhizopus Oryzae* and he changed the name of the product from “tempets” to “tempeh.” He added in conclusion that “it was finely sliced and enjoyed, mold and all.” But he continued, apparently mistakenly, to refer to tempeh as a Chinese soyfood.

He also improved his description of Chinese-style soybean paste, which he now calls *Tao-tjung* (*Bohnenbrei*) [*doujiang*], and says has much similarity with the miso of the Japanese (p. 68 R.7).

Note 1. These two articles by Prinsen Geerligs ushered in the era of scientific research on tempeh by European microbiologists and food scientists.

Note 2. This is the earliest document seen (Sept. 2011) that contains the word “tempeh”—spelled with an “h” on the end.

Note 3. It is also the earliest German-language document seen (Sept. 2011) that mentions tempeh, which it calls “tempeh.”

Note 4. This is the earliest German-language document seen (Oct. 2003) that uses the term *milchweisse Flüssigkeit* (“milk-white liquid”) to refer to soymilk. Address: Java, Indonesia.

• **Summary:** Includes a discussion of *Rhizopus oryzae* Went und Prinsen Geerligs, *Mucor Rouxii*, *Chlamydomucor Oryzae*, and *Mucor javanicus* nov. spec. (new species). Illustrations show three cakes of Javanese ragi by Kagok-Tegal (about 3/4 size). Address: Technical Hochschule, Hannover, Germany.

13. Sack, J. 1900. Samenstelling van Indische voedingsmiddelen: Tweede serie (LI-C) [Composition of Indonesian foods: Second series (51-100)]. *Bulletin van het Koloniaal Museum te Haarlem* No. 23. p. 85. Nov. Fold-out table bound at the end of No. 23. [3 ref. Dut]

• **Summary:** This is the second such table published in this Bulletin. The first table by J. Sack was published in Bulletin No. 22 (March 1900). Dr. M. Greshoff supervised the work. The composition of fifty Indonesian foods is given, with two lines of notes in one wide column after each. Each food is numbered: 51-100. Soy-related foods are: 56. Black soybeans (*Katjang kadelé itam*; *zwarte soja*). 76. Tempeh (*Tempé*). 81. Japanese shoyu (*Japansche soja*).

Also discusses: 57. *Katjang poetih* (Poetih [putih] means

“white.” A note says this is a type of soybean but we think it is a species of *Vigna*. 58. Katjang ketjipir (*Psophocarpus tetragonolobus*). 67. Sesame seeds. 82. Agar-agar. Address: Assistent bij het Laboratorium, van het Koloniaal Museum te Haarlem [Netherlands].

14. Sack, J. 1900. Samenstelling van één honderd Indische voedingsmiddelen [Composition of one hundred Indonesian foods]. *Bulletin van het Koloniaal Museum te Haarlem* No. 23. p. 68-73. Nov. [Dut]

• **Summary:** This is a detailed summary of information published in two fold-out tables by J. Sack, published in Bulletin No. 22 (March 1900) and No. 23 (Nov. 1900). Here, however, the 100 foods are listed in a different sequence—alphabetically by Indonesian name.

Soy-related foods are: 33 and 34. Soybeans (*Katjang kadelé*; *Glycine*). 35. Black soybeans (*Katjang kadelé hitam*). 84. Japanese shoyu (*Soja*; *Japansche*). 90. Tempeh (*Tempé*).

Also discusses: 1. Agar-agar (*Eucheuma*). 36. Winged beans (*Katjang ketjipir*; *Psophocarpus tetragonolobus*). 43. Peanuts (*Katjang tanah*; *Arachis*). 81. Sesame seeds (*Sesamzaad*; *Sesamum*). Address: Assistent bij het Laboratorium, in het Laboratorium van het Koloniaal Museum te Haarlem [Netherlands].

15. Boorsma, P.A. 1900. Scheikundig onderzoek van in Ned.-Indie inheemsche voedingsmiddelen. De sojaboon [Chemical analysis of some indigenous foodstuffs in the Netherlands Indies. The soybean]. *Geneeskundig Tijdschrift voor Nederlandsch-Indie* 40:247-59. [18 ref. Dut]

• **Summary:** Contents: Literature review. Introduction (Boorsma is living in Java). Chemical composition of indigenous soybeans: Table giving figures (based on Boorsma’s original research) for large black, large yellow, small yellow, unripe or immature black soybeans, soy protein (*eiwit in de soja*) or legumine, the oil (*De vette olie*), analysis of the ash, starch, the black soybean (*zwarte kedeleh*), use of soybeans in Java and Japan. Japanese soya preparations (*soja preparaten*): Shoyu (soja) made with koji, tofu, yuba, miso and natto. Indigenous (Chinese) preparations: Tempeh (*tempe kedeleh*), Indonesian soy sauce (*Ketjap-Bataviasche soja*), tofu and pressed tofu (*Tao-hoe en Tao-koan*), Indonesian miso and soy nuggets (*Tao-tjo en Tao-dji*).

Note 1. This is the earliest Dutch-language document seen (May 2010) that mentions soy nuggets, which it calls *Tao-dji*.

Note 2. This is the 2nd earliest document seen (March 2009) that mentions Indonesian-style miso, which it calls “Tao-tjo.” This is the earliest Dutch-language document seen (Feb. 2009) that uses the word “Tao-tjo” to refer to Indonesian-style miso.

This excellent article contains a 4½-page description (the best seen to date) of the traditional process for making soybean tempeh (*Tempe kedeleh*). The soybeans are

parboiled, soaked in water for 2-3 days, drained, steamed in a steamer (*koekes*), spread in a layer several centimeters thick on woven bamboo trays in shelves, and covered completely with banana leaves. They are then inoculated with the *bijang*, which is the “mold containing residues of a previous preparation.” This is mixed in here and there, then the trays are covered lightly with banana leaves so as to let in some air. “Rampant growth of the mold soon begins. In the evening the mass is molded a little and after two 24-hour periods one will obtain a coherent cake, which is cut into pieces and taken as is to the market.”

The cotyledons are stuck together by a dense mycelium, which has grown into a somewhat white covering. According to Prinsen Geerlings [sic, Prinsen Geerligs] (cited above), the name of the mold is *Chlamydomucor Oryzae*.

During the two days of rampant mold growth, a radical conversion takes place in the components of the seeds; a lot of water, carbonic acid, and heat start to develop... A thermometer inserted into the fermenting mass shows a temperature 10-12°C above that of the environment.

As the preparation is finished, the banana leaves are taken away; the temperature drops slowly to normal, the rampant mold growth stops, and the mass dries out slightly. In this condition, the tempeh can be kept for several days with spoiling.

When the rampant mold growth is allowed to continue for a third day, simply by leaving the banana leaves in place, the conversion will soon become much stronger as noted by the formation of ammonia. Also poisonous products start to form; a monkey, given a little bit [of overripe tempeh] among his other foods that day was vomiting violently one hour later. Thus we should admit that the stories about poisonings caused by various sorts of tempeh [such as bongkreng, made from coconut presscake] probably have some foundation. But there is little fear of this from soybean tempeh.

After microscopic examination, Boorsma concluded that Prinsen Geerligs and others were wrong in stating that (1) the mold hyphae penetrate and dissolve the hard soybean cell walls, and (2) cellulose is decreased during tempeh (*tempe*) fermentation. He studied the chemical and compositional changes at four stages during a 3-day tempeh fermentation; a table shows his findings. He observed that fats and soluble carbohydrates decreased substantially, while nitrogen decreased only slightly. He also discussed the hydrolysis of soybean lipids, and why tempeh is easier to digest than whole soybeans.

Note 3. This is the earliest Dutch-language document seen (Sept. 2011) that uses the term *tempe kedele* or the word *tempe* to refer to tempeh.

Note 4. This is the earliest document seen (Sept. 2011) that describes how to make tempeh on a commercial scale.

On page 258 Boorsma briefly discusses Ketjap (which he called *Bataviasche soja*, or Jakarta soy sauce) and Tao-hoe and Tao-koan (tofu and firm tofu), based on information

from Prinsen-Geerligs (for both) and Vorderman (for firm tofu). For each he gives a nutritional composition. On page 259 Boorsma briefly discusses *Tao tjo* and *Tao-dji* (Indonesian-style miso and soy nuggets). Note 5. This is the earliest Dutch-language document seen (Dec. 1999) that uses the term *Tao tjo* to refer to Indonesian-style miso or tauco / tauchō.

Note 6. This is the earliest document seen (April 2001) that contains the term *Tao-koan*.

Note 7. This is the earliest Dutch-language document seen (Feb. 2004) that contains the term *natto*.

Note 8. This is the earliest Dutch-language document seen (Oct. 2008) that mentions yuba, which it calls *Yuba* and describes as *een nog vetrijker product dat verkregen wordt bij uitdampen van de roomloog, die zich bij de zooeven genoemde boonenmelk aan de oppervlatte verzamelt.*

Note 9. Boorsma was a Dutch naturalist who lived in Indonesia in the early 1900s. Address: Netherlands.

16. Wehmer, Carl. 1901. Der javanische Ragi und seine Pilze. II. [Javanese ragi and its fungi. II.]. *Zentralblatt fuer Bakteriologie. Series 2*. 7(9/10):313-26. May 6. [8 ref. Ger]  
 • **Summary:** One table (p. 524) gives details on *Mucor rouxii*, *Mucor javanicus* / *M. dubius*, *Rhizopus oryzae*, and *Chlamydomucor oryzae*. A second table (p. 325) gives additional details on *Mucor rouxii*, *Mucor javanicus*, and *Rhizopus oryzae*. *Rhizopus oryzae* was first isolated from Javanese rice flour cake (*javanischen ragi*), and described. Neither the word “tempeh” nor “tempe” is mentioned. Address: Technical Hochschule, Hannover, Germany.

17. Went, F.A.F.C. 1901. *Monilia sitophila* (Mont.) Sacc., ein technischer Pilz Javas [*Monilia sitophila*, an industrial fungus from Java]. *Zentralblatt fuer Bakteriologie. Series 2*. 7(15):544-50. July 12; 7(16):591-99. Aug. 10. [1 ref. Ger]  
 • **Summary:** The author reported that the mold *Monilia sitophila* plays an important role, because of its enzymes, in the production of ontjom, a good-tasting cake made by fermentation of peanuts. Tempeh is not mentioned.

18. D.A.R. 1901. Katjang-Kedelihpraeparaten [Soyfoods]. *Orgaan van de Vereeniging van oud Leerlingen der Rijks Landbouwschool (see Landbouwkundig Tijdschrift)* 13(161):242-45. Dec. [Dut]

• **Summary:** The author wrote an article in the April issue of this magazine about soybean cultivation. Now he will discuss how soybeans are used to make foods. As mentioned in the previous article, soya beans as such are not good to eat, even boiled or roasted; they need to be processed so as to digest the indigestible protein; then this protein can be absorbed by the digestive enzymes of the stomach and intestines.

As Japan is the soya country, we will start with the product that is most popular there, soy sauce, which has also earned its place in Europe. It is made from equal parts

of roasted soybeans and wheat, 1-3 parts water, and much salt. The koji is fermented for a long time. Prof. Dr. M. Fesco [sic, Fesca], who provided much of this information, said it takes about 20 weeks to 5 years. The longest and slowest fermentation gives the best quality product. In Japan, every housewife makes her own soya sauce and there is competition for the best homemade soy sauce. Late-ripening protein-rich soybeans, called shoyu-mame, are used. In Java, the residue from soy sauce is used a lot, along with peanut presscake, for fertilizing sugar-cane fields.

In the Netherlands Indies, ketjap [Indonesian-style soy sauce] is made solely by the Chinese. Also called Tao-yoe, it is prepared by covering cooked soybeans with hibiscus (*waroe*) leaves. The age and variety of the leaves is very important. The mold that grows produces substances [enzymes] that digest legumin [soy protein]. More of the process is described.

Note 1. This is the earliest document seen (Feb. 2009) that contains the term Tao-yoe. H.T. Huang (e-mail of 25 Feb. 2009) states: “Tao-Yoe sounds like Cantonese for *Douyou* (pinyin) or *tou yu* (W.-G.) which in Mandarin mean soy sauce, and which first appeared in about 1750 in the *Xingyuan Lu* (*Hsing Yüan Lu*). See Huang 2000, p. 371-73.

Star anise (*Hades manies*) is also added to Indonesian soy sauce. Some Chinese have gained a reputation for their knowledge of the different additives (*boemboengs*). 6l. kg of soybeans (1 gantang or 10 katties) can yield 3 bottles of number 1 ketjap (which retails for 50 Dutch cents per bottle), plus 3 bottles of 2nd extraction ketjap (each 40 cents), plus 3 bottles of ketjap no. 3 (which is little better than salt water with a light brown tint; each 20 cents).

The Japanese also use soybeans to make tofu (*tofoe*). Precipitated with magnesium chloride, it is a greyish-white dough, or sometimes yellow product. Although containing 90% water, it is a concentrated food. A table (based on analyses by E. Kirch [sic, Kinch] of Tokyo) shows the composition of tofu and kori-tofu; the latter is made by freezing tofu then thawing it. Tofu is a good product for vegetarians, but beware than it can act as a laxative because of the magnesium chloride.

Note 2. This is the earliest Dutch-language document seen (Sept. 2011) with the term “Katjang-Kedelihpraeparaten” in the title; it means “Soyfoods.”

Note 3. This is the earliest Dutch-language document seen (Feb. 2004) that mentions dried-frozen tofu, which it calls “kori-tofu.”

19. Wilkinson, Richard James. 1901-1902. A Malay-English dictionary. Singapore: Kelly & Walsh Ltd. 700 p. 31 cm.

• **Summary:** This book was published in two parts in 1901 and 1902 but continuously paginated. Under *tempe* we read (p. 190): “Jav. A kind of dish; beans prepared in a certain way.” Under *tauge*: “[Chinese tau-ge]. A vegetable; bean sprouts.” The soybean is mentioned under *kachang* (p.

492) and is written “*K. jepun*—the soy bean, *soya hispida*. Other entries at *kachang* are: *K. botor-psophocarpus tetragonolobus*. *K. china*—the pea-nut, *arachis hypogaea*. *K. goreng*—the pea nut, *arachis hypogaea*. *K. kedelai*—a bean (*dolichos lablab* ?). *K. kelisah*—(Kedah) *psophocarpus tetragonolobus*. Also *k. kotor*. *K. menila-voandzeia subterranea*.

Also discusses: *bijan* (sesamum-seed, *sesamum indicum*, p. 139). *tapai* (rice fermented with *ragi* [tapeh], p. 151). *ragi* (yeast or leaven, p. 316). *kedelai*—*Kachang kedelai*: a plant, *phaseolus mungo*; Height about 180. Also *kedele* and *kedeli* (p. 508).

Note 1. This book is hard to use since the order of words follows the Malay alphabet. The digital edition on Google Books is easier to use.

Note 2. This is the earliest English-language document seen (Sept. 2011) that mentions tempeh, which it calls *tempe*.

Note 3. The author lived 1867-1941. Address: Straits Settlements Civil Service.

20. Bie, H.C.H. de. 1901. De landbouw der inlandsche bevolking op Java [The agriculture of the indigenous people in Java]. *Mededeelingen uit 's Lands Plantentuin (Buitenzorg)* No. 45. 143 p. See p. 97, 99, 138-43. [Dut] • **Summary:** The soybean is discussed in the chapter titled “Cultivation of crops other than paddy rice: Cultivation of secondary crops (*Palawidja*).” Soya bean is one of the secondary foods served with rice, but it is mostly used to make soy sauce and tempeh (*tempe*). One variety of soybean, which originally came from Japan, is widely grown as a second crop on the wet rice fields (*sawahs*), and it is easy to cultivate at altitudes of 1,200 to 1,500 feet above sea level. It is called *katjang kedele* in Central and East Java, but *katjang djepoen* in Sunda or West Java (*de Soendalanden*). A description of the plant and the method of cultivation in Java is then given. It is planted much more on wet rice fields than on dry (non-irrigated) fields (*tegallans*) near the rice fields used for vegetables and secondary crops. Usually the soybean seeds are planted right after the paddy stumps have been cut away, but sometimes they are planted just before or during the paddy harvest, and pressed into the earth under the feet of the paddy cutters. They are rarely weeded, excepted when the crop is suffocated by tall weeds. At harvest, the plants are pulled completely out of the ground and bound into bunches. At night they are stored under a specially-constructed roofed shelter in the field, and during the day they are sun-dried on bamboo structures or on the ground. This takes at most 3-4 days, if the plants are really ripe and the weather is good, after which the bunches are put on bamboo mats in heaps and threshed. To protect the seeds from damage, one preferably uses pieces of banana tree branches which still have fibrous veins. The fibrous plant stems and branches are removed together with the soybean pods and burned on the sawah fields. Poor people

first sort out the pieces good enough for fuel and take these home. Immature green leaves are fed to animals. Sometimes soybeans are planted on the dikes of the paddy fields at the same time as or a few days later than the paddy rice. The fresh seeds from this harvest are then planted in the sawah fields after the paddy is harvested. Soybeans planted in this way are called *katjang apitan*.

There are two varieties of soya: one has an ivory yellow seed coat and the other is black. The latter is used almost exclusively to make soy sauce; the former to make pastry and condiments for rice or as a vegetable (*sayur*). Soya is cooked with salt in the green pod and eaten as a snack.

The indigenous people don't concern themselves with the production of ketjap (soy sauce). The work is too involved and takes too long before the product is ready to be sold. Most people are too inexperienced and there is not enough of a market for the product.

The only food that most people make out of soybeans is tempeh (*tempe*), which plays the same role in Central and East Java as does *ontjom* in Sunda or West Java, and is prepared similarly. The tempeh-making process is described. It takes place indoors, out of the light. It is sometimes cut into smaller pieces. It is usually eaten pan-fried after being soaked in a solution of tamarind and salt. It is also cooked with vegetables.

Most soybean seeds are sold to the Chinese, who export them or process them to make soy sauce and other products. To make soy sauce, the seeds are roasted to aid in removing the hulls. Some people pound the seeds instead. They are cleaned, boiled in water, drained, spread on flat bamboo trays (*tampah* or *njiroe*) and dried daily for a week in the wind. They are washed again then soaked for 30-40 days in salt water which has been boiled then cooled. This mash is mixed thoroughly and strained through a cloth. To the black liquid is added a boiled and cooled mixture of cane sugar and water, then the mixture is boiled until its volume is reduced by 20%. If the solid residue removed by filtering still tastes salty, it is put into water, kneaded and strained again. A sugar solution is added and all is boiled down as before to make second-grade ketjap.

To make *taoetjo* (*tauco*, *taucho* or Indonesian-style miso), the soybeans are soaked in fresh water, the hulls are removed, the seeds boiled and spread on bamboo trays to cool. Rice or glutinous rice flour is roasted until golden brown, then mixed with the seeds and set aside for 2-3 days to ferment between hibiscus (*waroe*) leaves on flat trays. When the mass has molded, it is sun dried for a few days until very hard. Note: This is the soybean koji used making *taucho*.

Remove the leaves and put this mass of soybean koji into salt water. On the third or fourth day, add some yeast (*gist*) and some cane sugar syrup. Continue the soaking and fermentation in salt water for 2-3 weeks. Place it [in crocks] daily outside in the dew, taking care that no rain gets on it.

To stimulate the fermentation, take steamed rice or glutinous rice that is only half cooked. Add *ragi* starter and allow it to ferment for 2-3 days until a sweet, alcoholic flavor develops. This kind of fermented rice is called *peujeum* in West Java, or *tapé* in Central or East Java. Now add this fermented rice to the soybeans in salt water to enhance both the fermentation and the product.

After 3-4 weeks the soybeans should be very soft like porridge; then the *taucho* is ready to be used. It is eaten raw with cooked or raw vegetables, or mixed with meat or rice dishes; other condiments are also made from it.

Another product that the Chinese make out of soybeans is *tofu* (*tahoe* or *tauwhoe*). Soaked soybeans are ground and the puree is mixed with fresh water. Then a milky liquid (*melkachtige vloeistof*) is filtered off and coagulated. The Chinese use a coagulant called *tjiogo* (gypsum or calcium sulfate), which is specially imported from China and is not always available, even to the Chinese apothecary. It is first burned, then cooled before being added to the milky liquid. The white mass which is precipitated is called *tofu*. A similar product can be made from mung beans. Address: Batavia (Jakarta), Java.

21. Bie, H.C.H. de. 1901. De cultuur van cassave in de Preanger-Regentschappen en het gebruik, dat van dit gewas door de bevolking wordt gemaakt en hare verwerking tot tapioca-meel [The culture of cassava in the Praenger Regency, its use by the population, and its processing into tapioca flour]. *Teysmannia* (Batavia [Jakarta]) 11:273-98. See p. 273, 288-89. [Dut]

• **Summary:** The soybean (*kadele*, *sojaboon*) is mentioned only in passing (p. 273). *Ontjom* is described as a tempeh substitute in Java (p. 288-89). Address: Controleur voor de landrenteonderzoek te Bandung.

22. Went, F.A.F.C. 1901. Ueber den Einfluss der Nahrung auf die Enzymbildung durch *Monilia sitophila* (Mont.) Sacc. [On the influence of food on enzyme production by *Monilia sitophila* (Mont.) Sacc.]. *Jahrbuecher fuer Wissenschaftliche Botanik* 36:644-52. [36 ref. Ger]

• **Summary:** *Monilia sitophila* is a mold used in Java to make *onchom*. However, neither *onchom* nor tempeh are mentioned in this article. This mold can produce at least ten different enzymes. Contents: 1. Historical. 2. Maltoglucose. 3. Trehalase. 4. Raffinase. 5. Invertase. 6. Cytase. 7. Diastase. 8. Lipase. 9. Tyrosinase. 10. Labenzym. 11. Trypsin. 12. Summary of results. Address: Utrecht [Netherlands].

23. Went, F.A.F.C. 1902. Ueber den Einfluss der Nahrung auf die Enzymbildung durch *Monilia sitophila* (Mont.) Sacc. [On the influence of food on enzyme production by *Monilia sitophila* (Mont.) Sacc.]. *Zentralblatt fuer Bakteriologie. Series 2*. 8(10):313-16. March 8. Extract from Pringsheim's *Jahrbuch* 36:611 (1901). [1 ref. Ger]

• **Summary:** Neither *onchom* nor tempeh are mentioned.

24. Neuville, Henri. 1902. Les ferments industriels d'Extrême-Orient (Biologie, emploi et produits) [Industrial fermentations of East Asia (biology, utilization, and products)]. Paris: Masson et Cie. 192 p. 19 cm. Encyclopédie Scientifique des aide-memoire publiée sous la direction de M. Léauté. [60+ ref. Fre]

• **Summary:** Chapter 4, titled "Food products obtained by fermentation of amylaceous [starch-like] substances," discusses the following fermented soyfoods and related products: *Shoyu* and *miso*, *koji*, *brem*, and *ontjom*. Contains a good bibliography. Neuville lived 1872-. Address: Préparateur au Muséum d'Histoire Naturelle.

25. Vorderman, Adolf G. 1902. *Analecta op bromatologisch gebied. IV.* [Writings on mold-fermented foods. IV.]. *Geneeskundig Tijdschrift voor Nederlandsch-Indie* 42:395-431. See p. 411-31. [10 ref. Dut]

• **Summary:** Describes the "ontjom" and "tèmpé" [he spells the word tempeh with these two accents throughout] processes, including *ontjom beureum* [a Sundanese food made from *boengkil katjang* (bean waste or *okara*) and *Monilia sitophila* mold], *onggok*, and *tempe-kedele*. He describes two ways of making tempeh that he saw. The first is the well-known one in which soybeans are fermented between banana leaves. In the second way the soybeans are wrapped in a banana leaf to form a package about 20 cm (8 inches) long and 7 cm (2.8 inches) wide, then wrapped in a *djati* (*jati*) leaf. These packages are stacked in a bamboo basket covered with sacks for 24 hours, then taken out and spread on the floor to cool for another 24 hours.

He also describes: *Tempe bongkrekatjang*; same as *ontjom beureum* [*okara onchom*] except that a *Rhizopus* mold is used. *Ontjom bodas*; same as *tempe bongkrekatjang* except that another *Rhizopus* mold, not similar to *Oryzae*, is used. *Tempe bongkrekatjapa* (from South Banjoemas); Quite similar to *ontjom beureum*, it is made from pressed coconut and inoculated in the old leaves from tempeh *kedele*. It is eaten mostly by poorer people because of its lower price. *Tempe morrie* made with *Soempiaoe* type soybeans (from Banjoemas) and coconut residue pressed 3 times. The soybeans are treated like soy tempeh up to the *laroe* process. Then they are mixed with coconut presscake, which has been washed, steamed, and inoculated with ground *bibit* leaves on which there is *Rhizopus oryzae*. Finally it is packed in the skin of the banana stem to make long slender rods, and fermented. *Tempe enthoe*, from South Bagelen, is made from coconut (no soy) wrapped in a banana stem. *Tempe tjengereng* is made with coconut presscake (called *gatok* in Banjoemas) and *ragi*, no soy; "This tempeh has, like the tempeh bongkrekatjapa, led to several cases of fatal food poisoning. *Dagé* [Dageh, Dage] is made with bacteria rather than molds on a substrate of oilseed cakes,

primarily pressed coconut, sesame seeds, or peanuts.” The last page contains detailed illustrations (drawings) of *Rhizopus* species from *Ontjom bodas* and *Rhizopus oryzae* from *tempe kedele*, each magnified 60 times.

Note 1. This is the earliest Dutch-language document seen (Oct. 2001) that mentions okara, which it calls *boengkil katjang*.

Note 2. This is the earliest document seen (Sept. 2011) that mentions and correctly describes tempeh bongkrek, which, for the sake of clarity, he describes as *tempeh bongkrek kelapa*.

26. Vorderman, Adolf G. 1902. De oranje ontjom-schimmel (Monilia sitophila Mont.) en hare verschijning als eerste vegetatie op de aschvelden van den kloet [The orange ontjom mold (Monilia sitophila Mont.) and its appearance as first vegetation on the ash fields of the “Kloet” (a recently erupted volcano)]. *Teysmannia* (Batavia [Jakarta]) 12:274-79. [Dut]  
• **Summary:** Soybeans are not mentioned. In 1896 Dr. Vorderman was an inspector of the civil medical service. He spent time at Buitenzorg. Address: Soekaboemi (Sukabumi), Indonesia.

• **Summary:** The newly named species of mold (Pilz) is *Rhizopus chinensis*. It is used in China in the city of Shao-hing, province of Che-kiang to make an alcoholic beverage named “Shao-hing-Chew.” Soy is not mentioned. Two illustrations show the mold. Address: Plant Physiology Lab., Botanical Inst., Tokyo Imperial University.

28. Burg, Cornelis Leendert van der. 1904. De voeding in Nederlandsch-Indië [The foods of the Netherlands Indies]. Amsterdam, Netherlands: J.H. de Bussy. viii + 526 p. See p. 210-20, 222-23, 255-56. Index. 24 cm. [49 ref. Dut]  
• **Summary:** Burg describes the preparation of tempe as follows: “Yellow soy-beans are boiled, soaked in cold water for 48-72 hours, squeezed out between cloths, and then steamed in a conical basket, made of flattened bamboo or of cane (Malay: kukusan) till they are done. Afterwards they are spread out on wire frames, which are entirely covered with banana leaves, and mouldy remains of a previous preparation are added, then all is covered again with banana leaves. The whole mass is stirred a few times, and after 2 days a cake has been formed, from which pieces are cut, which are fried in coconut oil and eaten afterwards. During the preparation, the cotyledons have been bound together by a tight mycelium, much water and carbonic acid being secreted in the meantime and the temperature of the mass rising 10 to 12°C above that of the surroundings. The cellular walls are not dissolved by the hyphae, but the soluble carbohydrates

and the fat diminish, the nitrogen content remains about the same, but in tempé only 70% is to be found of the protein, as originally present in the beans.”

He also describes, on Prinsen Geerligs’ authority, the preparation of *tao-tjo* (Indonesian-style miso). Peanuts are discussed on p. 220; *tempé boengkil*, *tempé bongkrek*, *ontjom beurream*, *ontjom bodas* on p. 222.

29. Saito, Kendo. 1905. Microbiological studies on the brewing of Japanese Soja-Sauce. *Botanical Magazine* (Tokyo) 19(216):75-77. Jan. 20. Bound after p. 119 of Japanese text. [1 ref. Eng]

• **Summary:** The author has been able to isolate the following microorganisms from koji and moromi: 1. Moulds: *Aspergillus Oryzae*, *Rhizopus sp.*, *Tieghmella sp.* Others incl. *Penicillium glaucum*, *Cladosporium herbarum*, etc. 2. Bacteria: *Sarcina Hamaguchiae* and *Bacterium Soja* (both new species). 3. Yeasts: *Saccharomyces Soja* (new species) grows copiously in moromi [the mash]. Film yeasts incl. *Saccharomyces farinosus* Lindner [Pichia farinosa (Lindner)], *Mycoderma sp.*, etc.

Note 1. This is the earliest document seen (Jan. 2009) describing Japanese investigation on the yeasts in shoyu mash (*moromi*).

Note 2. This is the earliest document seen (Jan. 2009) which mentions that *Saccharomyces* yeasts are involved in the shoyu fermentation. Address: Botanical Inst., Imperial Univ., Tokyo, Japan.

• **Summary:** Mentions the mold *Rhizopus*. Address: Moto Jozo Shikensho Gishu.

31. Saito, Kendo. 1905. Rhizopus oligosporus, ein neuer technischer Pilz Chinas [*Rhizopus oligosporus*, a new industrial fungus from China]. *Zentralblatt fuer Bakteriologie. Series 2.* 14(18/20):623-27. [10 ref. Ger]

• **Summary:** In this document the author announces the discovery of *Rhizopus oligosporus*. Through a friend, Prof. J. Takano, at the technical high school in Tokyo, he obtained a rice meal cake which Chinese in the city of Kobe use for the preparation [inoculation] of an alcoholic beverage made from rice. They say that the original material for these cakes comes from Shantung province, China. The author then gives a detailed description of *Rhizopus oligosporus* including its morphology, physiology, affinities (similar molds), and a diagnosis. A full-page illustration (next page) shows 7 parts and sexual phases of the mold in detail. Address: Prof., Dr., Plant Physiology Lab., Botanical Inst., Imperial University, Tokyo, Japan.

32. Stuerler, F.A. von. 1906. *Nederlandsch Oost-Indische cultuurgewassen: Hunne kenmerken, teelt en bereiding* [Crops of the Dutch East Indies: Their characteristics, cultivation and preparation]. Tiel: A. van Loon. ii + 373 p. See p. 341-43. Illust. Index. 25 cm. [5 ref. Dut]

• **Summary:** The subsection on the hibiscus plant (*De Waroe-boom*, *Hibiscus tiliaceus*, p. 334) states that the leaves are used in making foods from soybeans [tempeh].

In the chapter on crops that yield oils and fats (*Vette oliegewassen*, p. 335-44), the section titled “Soja” (p. 341-43) has the following contents: General botanical characteristics: Introduction, the plant, stem, leaves, flowers, fruit, seeds. Cultivation. Chemical composition of the seeds, preparation, and uses.

The main product made with soybeans is soy sauce (*kètjap*). The Chinese in Java cook the soybeans and inoculate them between hibiscus leaves (*Hibiscus tiliaceus*) to make tempeh (*tèmpé*). They also make *tao-tjo*, a sort of bean paste (Indonesian-style miso). And with the black soybeans they make a sort of bean cheese, *tao-djie* (soy nuggets). Also discusses peanuts (*aardnooten*, p. 335-37), sesame seeds (*sesam*, p. 337-39), the castor oil plant (*ricinus*, p. 339-41), other crops that yield oils and fats (p. 343-44).

Note: This is the earliest document seen (Sept. 2011) stating that molds grown on Hibiscus leaves are used in Indonesia to inoculate tempeh. Address: Leiden.

33. Clercq, Frederik S.A. de. 1909. *Nieuw plantkundig Woordenboek voor Nederlandsch Indië* [New botanical dictionary for the Netherlands Indies]. Amsterdam, Netherlands: J.H. de Bussy. xx + 395 p. See p. 248, no. 1664. [1 ref. Dut]

• **Summary:** In the following, we will spell out, then translate, abbreviations in square brackets: “1664 *Glycine Soja* Sieb. et Zucc. \* Nat. fam. der Leguminosae. Dekeman, Jav. Kr. D. [Krama-Doesoen of Hoog-Dorps-Javaansch = Mount Dusun high-level village Javanese]; Dele, Jav. [Javaansch = Javanese]; Gadele, Jav. [Javanese]; Kadele, Boeg. [Madoereesch = Madurese, spoken in Madura {Dutch: Madoera}, an Indonesian island off the northeastern coast of Java]; Katjang djepoen, Soend. [Soendaasch = Sunda, the language of the Sundanese people of Western Java]; Katjang kedelai, Mal. [Maleisch = Malay, the language of Malaysia and Brunei, lingua franca of the Malay Archipelago]; Katjang kedele, Mal. Batav. [Bataviasch-dialect van Maleisch = the Batavian dialect of Malay; Batavia was the colonial Dutch name (1600s to 1942) for today’s Jakarta]; Kedangsoel, Jav. Kr. D. [high-level village Javanese]; Kedelai, Mal. [Malay]; Kedele, Balin. [Balineesch = Balinese, the language of the Indonesian island of Bali], Jav. [Javanese], Mal. Batav. [the Batavian dialect of Malay]; Keudeule, Soend. [Sunda]; Lawoei, Biman. [Bimaneesch = Bima, language of the Bimanes people, spoken on the Indonesian island of Sumbawa and its city of Bima]; Leboewi bawak, Sas. [Sasaksch = Sasak, spoken by the Sasak people on the Indonesian island of Lombok]; Retak medjong, Lamp. [Lampongsch = Lampung, spoken by the Lampung people in the Indonesian province of Lampung, on the southeastern tip of Sumatra].

“*Variëteiten (Varieties) in Soend. [Sunda]: Katjang djepoen beureum; Katjang djepoen bodas; Katjang djepoen hedjo; Katjang djepoen hideung. – Kruid (herb, plant), de sojaboon.*

“Uses: Known for the high protein content of its beans, consumed mostly by indigenous people as green vegetable soybeans (unripe). For the preparation of Batavian ketjap or Soy (*Bataviasche ketjap of soja*), black-seeded soybeans are used. In addition, the beans are boiled, beaten into flat cakes, and inoculated with a particular type of mold to obtain tempeh (*tempe*), which is very much liked in Java.” Address: in Leven, Oud-Resident van Ternate en van Riouw.

34. Saito, Kendo. 1909. *Tôyô-san yûyô hakkôkin* [Useful fermentation microorganisms from East Asia]. Tokyo: Hakubunkan. 200 p. See p. 14-17, 108-09, 122-25, 144-47, 162-64. [Jap]

• **Summary:** This book contains a little information about *Rhizopus oligosporus*, onchom, and miso or *Tao-Tjiung*

[probably *doujiang*]. Address: Botanical Inst., Tokyo Univ., Japan.

35. Saito, Kendo. 1910. Notizen ueber einige koreanische Gaerungsorganismen [Notes on some Korean fermentation organisms]. *Zentralblatt fuer Bakteriologie. Series 2*. 26(13/15):369-74. Feb. 23. [4 ref. Ger]

• **Summary:** Mentions the molds *Aspergillus oryzae* and *Rhizopus Tamari*. Address: Botanical Institute, Tokyo.

36. Quintus Bosz, J.E. 1911. De samenstelling van Indische voedingsmiddelen [The composition of Indonesian foods]. *Bulletin van het Kolonial Museum te Haarlem* No. 46. 261 p. March. Also published in Amsterdam by J.H. de Bussy as a book. [8 ref. Dut]

• **Summary:** The nutritional composition and the source of information is given in a table for the following: Soybean seeds (p. 74-77). Soybean oil (*sojaboonen-olie*) (p. 76-77). Soybean flour or meal (p. 154-55). Soybean biscuit (*Beschuit*, 170-71). Japanese soy sauce and soybean tempeh (*Japansche soja*, *Tempé kedeleh* p. 242-43). Indonesian soy sauce (*Ketjap*, *Bataviasche soja* p. 244-45). Firm tofu (*Tao-koan*, 79.8% water. p. 244-45). Address: Dr., naar onderzoekingen in het Laboratorium van het Koloniaal Museum verricht onder leiding van Dr. M. Greshoff.

37. Nishiwaki, Yasukichi. 1911. Kaki-iro kabi, kôji kabi oyobi kumonosu kabi o motte, shôyu jôzô hikaku kenkyû [Shoyu manufacturing experiment using orange-colored mold, koji mold, and *Rhizopus* mold]. *Kogyo Kagaku Zasshi (J. of the Society of Chemical Industry, Japan)* 14(166):1161-65. Dec. [Jap; eng]

• **Summary:** The orange colored mold is actually called “persimmon colored” and refers to *Oidium lupli* or *Monilia sitophila* (used to make onchom or ontjom). The koji mold is *Aspergillus oryzae*. *Rhizopus japonicus* is called “spider-web mold.” It is clear that shoyu can be made with molds other than just the koji mold. Good shoyu koji was made easily with the orange mold, which is little attacked by other molds. The *Rhizopus* mold gave unfavorable results. Address: Nôgaku-shi, Japan.

38. Lafar, Franz. 1911. Technical mycology: The utilization of microorganisms in the arts and manufactures. Vol. II. Eumycetic fermentation. Translated from the German by Charles T.C. Salter. London: Charles Griffin & Co. ix + 558 p. Illust. Index. 23 cm. [3240\* ref. Eng]

• **Summary:** An extensive bibliography (3,240 references) for both this volume and volume I appears at the back of this volume (p. 417-518). The opening chapter begins: “Already in the first volume (sect. 22) the algae and the fungi were arranged in a single group. that of the Thallophytes, in contradistinction to all other plants, the latter being classed in the group Cormophytes.” The latter group has “an

articulation of the body of the individual organism into leaf and stem.”

Chapter 43, titled “Morphology and systematology of the Mucors (p. 48+) contains sections on “Subdivision of the Mucor family” (p. 49-51), “The genus Mucor” (p. 51-53; The genus was established by Micheli as far back as 1729. It contains *Mucor Rouxii* and *Mucor mucedo*), and “Rizopeæ” (p. 53-56). An illustration (p. 55) shows *Rhizopus nigricans* (After Brefeld). *Rhizopus nigricans* is the best and longest known member of this family. In 1818 it was described by Ehrenberg under the name *Mucor stolonifer*, which is still used by several workers.” “The name *Rhizopus oryzae* has been given by Went and Prinsen Geerligs (I.) to a fungus discovered by them in Ragi (sect. 241), the sporangia and spore of which organism are considerably smaller than those of *R. nigricans*.

Chapter 44, is titled “Fermentation by Mucors” (p. 57-62). Chapter 45, titled “The use of Mucoreæ in the spirit industry” (p. 63-71) has three sections: Sect. 240. “Mucor rouxii and other species of Amylomycetes” (p. 63-67) states: “For the preparation of rice spirit there is produced in China, Cochin China, and neighboring countries, an article known as Chinese Yeast, and put on the market in the form of flat mealy balls, about the size of a half-crown. Its preparation, composition, and application were first described in 1892 by E. Calmette (I.), whose reports were extended and supplemented by C. Eijkman (II.) in 1894.” The method of preparation is given. More important than its bacteria are “the yeast cells, which must be regarded as the exciting agents of the alcoholic fermentation; and certain Mucors, which affect the saccharification of the starch. Of the last-named organisms, which concern us here, Calmette isolated a species which, in honour of his teacher and colleague, E. Roux, he named *Amylomyces Rouxii*.” Two illustrations show this organism, which produces a “diastatic enzyme” (p. 65). The so-called amylo process and the work of Colette and Boidin with  $\square$ -*Amylomyces* and  $\square$ -*Amylomyces* in this process are discussed (p. 65-66).

Sect. 241 titled “Ragi and tapej” [tapé or tapeh] (p. 67-69) states that “Tapej... is prepared from rice by the aid of a secondary auxiliary material, which the Malay natives of Java term Ragi or Raggi, and the Chinese settlers call Peh-Khah.” A.G. Vorderman (1893) describes the preparation of Ragi. According to Eijkman (1894) Tapej, which is also called Tsao, is prepared with the aid of Ragi, by boiling husked Mochigome rice (*Oryza glutinosa* [*Oryza sativa glutinosa*], known as “Ketan” in Java) in water until soft. The flora of Ragi and Tapej comprises three groups of microorganisms; bacteria, budding fungi, and fungi belonging to the family *Mucoraceæ*.

Sect. 242, titled “The so-called Amylomyces process,” (p. 69-71), or Amylo process for short, states that “this is the name given to the process for the industrial utilisation of the diastatic activity of *Mucor Rouxii* and several allied

fungi. A company, the '*Société d'Amylo*, was founded by A. Collette and A. Bodin (I, 1897), who also, in 1897, took out in the name of this company a German patent for a 'process for producing alcohol from starchy materials, by means of aseptic saccharification and fermentation with *Mucedineæ*,...'

Fernbach (II, 1899) has given a lucid description of the practical performance of this process in the patentees' works, the maize distillery at Seclin near Lille, France. This description is summarized. "An English patent for the mechanico-technological modification of the process was also taken out by Collette and Boidin (III.) in 1898." See also two other 1897 English patents by Collette and Boidin No. 19858 and No. 1155. "The reader interested in this matter will find more precise data in the review published by M. Delbrück (III, 1899). The chief advantage of the *Amylomyces* process is the abolition of the expensive additions of malt requisite in the older method of saccharification, the amount formerly needed being up to 15 per cent. in the case of maize, and 2 to 3 per cent. in the case of potatoes. With regard to the yield furnished by the *Amylomyces* process, it is stated that in the Seclin works, 37.8 litres of absolute alcohol are obtained per 100 kilos. of maize containing 57.5 p, a yield corresponding to 66.2 litres per 100 kilos of starch. Owing to the large amount of mycelial hyphae, the residue filters easily." "Finally it should be said that, since 1898, the aforesaid patentees have replaced *Mucor* (*Amylomyces*) *Rouxii* by another species, namely, so-called *Beta-Amylomyces*, or *Mucor Beta*. This organism is capable of dealing with more highly concentrated mash than the other, and enables a charge of 25,000 kilos. of maize to be mashed to 1000 hl (22,000 gallons) of goods. per cent. of starch

Page 213 states that *Pichia farinosa* (Synonym: *Saccharomyces farinosus* Lindner, a film yeast) has been found by K. Saito (II, 1905, *Botanical Magazine*, Tokyo) in Japanese Soja sauce.

Chapter 51 discusses the genus *Aspergillus* (p. 228-31) with many fine illustrations, including conidiophores, conidia, ascospores, different stages of *A. oryzae* and *A. glaucus*. Page 228-29 state: "*Aspergillus Wentii*, Wehmer, was observed by Went in the preparation of Tao Yu (see vol. 1, p. 248) according to the method practised in Java, and was described by Wehmer (XIX.) in 1896. It appears spontaneously on the boiled Soja beans that have been covered with *Hibiscus* leaves, and affects a loosening and disintegration of the firm tissue of the bean. The species forms a pale coffee-coloured, dense mold vegetation (Fig. 167)."

In Chapter 57 titled "Chemical activity of the *Aspergillaceæ*," by Prof. Dr. C. Wehmer, page 270 states: "Two species, *Asp. oryzae* and *Asp. Wentii* are reported as able to grow through the substance of soft-boiled rice and Soja beans..." The "enzyme mixture from *Asp. oryzae* (the

so-called 'Takadiastase')" is also mentioned.

Chapter 62 titled "The *Monillæ* and *Oidia*," by Dr. H. Wichmann mentions *Monilia javanica* (occurring in association with others in Ragi, p. 333)., "*Monilia sitophila* (Mont.), Saccardo, is said by Went (IV.; reference missing) to be used by the natives in West Java in the preparation of a sweetmeat known as 'ontjom' composed of the seeds of the ground-nut or earth-nut (*Arachis hypogæa*). The ground-nuts, which are thoroughly permeated by the fungus, are made up in the form of small, orange-colored cakes, the surface of which is covered with the conidia, whilst the interior is both chemically altered and loosened in structure by the mycelium." Sect. 315 (p. 336-39) is titled "Oidium lactis and allied species." Also discusses *Oidium lupuli*, Matthews and Lott (p. 338). Address: Prof. of Fermentation-Physiology and Bacteriology, Imperial Technical High School, Vienna.

• **Summary:** Gives a systematic description, with an illustration, of each of the following species: *Rhizopus nigricans*, *R. oryzae*, *R. arrhizus*, *R. chinensis*, and *R. japonicus*. Address: Sapporo, Japan; and Technical Hochschule, Hannover, Germany.

45. Takahashi, Teizô; Yukawa, Matao. 1915. On the budding

fungi of "shôyu-moromi" and "shôyu-koji." *J. of the College of Agriculture, Tokyo Imperial University* 5(3):227-61. March. [10 ref. Eng]

• **Summary:** "Up to now several studies on the budding fungi of 'shôyu-moromi' and 'shôyu-koji' have been published, but with regard to the botanical classification all these studies have very little merit, as we cannot derive any systematic classification from them."

The author gathered 52 samples of moromi, aged for 2 to 24 months, from 11 shoyu factories in various parts of Japan. The factories were: 1. Shichirouemon Mogi's shoyu brewery at Noda, Shimousa province. 2. Saheiji Mogi's shoyu brewery at Noda, Shimousa prov. 3. Hamaguchi's shoyu brewery at Choshi, Shimousa prov. 4. G. Tanaka's shoyu brewery at Choshi, Shimousa prov. 5. J. Iwasaki's shoyu brewery at Choshi, Shimousa prov. 6. K. Nakamura's shoyu brewery at Goyu, Owari prov. 7. Asai shoyu brewery at Tatsuno, Harima prov. 8. Maruo shoyu brewery company at Tatsuno, Harima prov. 9. Kikuichi shoyu brewery company at Tatsuno, Harima prov. 10. Tatsuno shoyu brewery company at Tatsuno, Harima prov. 11. Kagawa shoyu brewery experimental station at Shôtoshima, Sanuki prov.

The following budding fungi were isolated from the samples: 1. *Zygosaccharomyces major* [a yeast] nov. spec. 2. *Zygosaccharomyces soja*, nov. spec. 3. *Zygosaccharomyces japonicus*, Saito. 4. *Zygosaccharomyces salsus*, nov. spec. 5. An asporogenic species of *Zygosaccharomyces* (?). 6. Two species of *Mycoderma*. 7. *Pichia alcoholophila*, Kloecker var. 8. Several species of *Torula*. 9. A species of *Monilia* [Note 1. The mold *Monilia sitophila* is used to make onchom in Indonesia].

"General conclusions: The occurrence of *Zygosaccharomyces* in 'shôyu'-mash furnishes us with a very interesting field for future researches in microbiology. The application of pure cultures of *Zygo. major* and *Zygo. soja* must naturally result in the future improvement of our 'shôyu.' The two species of *Zygosaccharomyces* i.e. *japonicus* and *salsus*, and the species of *Torula* and *Monilia* must be regarded as harmful or damaging fungi for 'shôyu', but their common property of decolorizing 'shôyu' may sometimes be utilized for the preparation of the colorless or 'shiro-shôyu', by taking the precaution of lessening the deteriorating effect of the fungus. The *Mycoderma* species in 'shôyu-koji' will be more appreciated in future on account of its energetic generation of a pleasant aroma."

Note 2. This is the earliest document seen (June 1999) that mentions the shoyu yeasts *Zygosaccharomyces major* *Zygosaccharomyces salsus*.

Note 3. This is the earliest English-language document seen (June 2006) that uses the term "shiro-shôyu" to refer to clear shoyu, which has the lightest color of the five basic types of Japanese shoyu. Address: Tokyo, Japan.

46. Usami, K. 1915. Mykologische notizen ueber Awamori-Koji-Pilze (*Aspergillus*) und *Rhizopus Delemar* [Mycological notes on awamori koji molds. *Aspergillus* and *Rhizopus Delemar*]. *Zentralblatt fuer Bakteriologie, Series 2* 43(10/11):250. April 10. [1 ref. Ger]

• **Summary:** Abstracted from *Mykologisches Centralblatt*. 1914. 4:193-96. Address: Japan.

48. Prinsen Geerligs, H.C. 1917. Ueber die Anwendung von Enzymwirkungen in der Ostasiatischen Hausindustrie [On the application of enzymes in East Asian cottage industries]. *Zeitschrift fuer Angewandte Chemie, Wirtschaftlicher Teil* 30(3):256-57. May 8. [Ger]

• **Summary:** Paper read before the *Niederlaendische Chemische Vereinigung* (Dutch Chemical Union), General session in The Hague, December 28, 1916.

This paper is on the domestic application of enzyme actions in Eastern countries, and describes, among other things, the making of fermented and non-fermented soybean food products. “To make soymilk (*Milchersatz*), only white soybeans are used, softened in water for 3 hours until they have swollen to 3 times their original size. Then, while water is added continuously, they are milled between two hard stones and fall through a hole in the bottom stone into a pail. A very small amount of the thin soybean slurry is set aside; through the proliferation of lactic acid bacteria it quickly becomes so sour that after several hours that lactic acid content has risen to 1.5%. The above mass is cooked in a large pan. The now pasteurized liquid is filtered through a large sieve to remove the hulls and hard pieces. The filtered milk-white liquid has, in appearance and chemical composition, the greatest similarity with animal milk. A sample contains 6.9% solids, 3.13% protein, and 1.89% fat. It gives an alkaline reaction and contains a solution of legumin bound to potassium phosphate, while the fat is emulsified in the thick protein solution. Unfortunately this soymilk (*Bohnenmilch*) tastes very much like raw French-beans (*Schneidebohnen*), so that people who are accustomed to cow’s milk do not enjoy it much. But infants should be very content with it.

“If cheese is to be made from this milk, a small amount of the slurry soured with lactic acid is added to it. Thereby, the legumin (protein) is dissolved from the potassium phosphate and coagulated, then settles out with the fat with

which it is emulsified. When the milk, through several hours mixing with the coagulation liquid, has become fully firm, it is packed in cloths and pressed between boards, in order to remove any excess water. Then the cakes are cut into square pieces; if they are to be eaten raw, it must be done quickly, lest they continuing souring and spoil. In order to impart a pleasant color to the cakes, they may be placed for several moments in a Curcuma [turmeric] decoction. Mostly the cakes of cheese (*Kaesekekuchen*) are dried in the sun or fried (*gebraten*). They then keep better and acquire a pleasant flavor.”

“Of much greater significance is the preparation of the most popular and prevalent soybean preparation, soy sauce (*der Soja*), which in East Asia is an indispensable seasoning for a variety of dishes, and is produced and used in unbelievably large quantities. There are various types, some of which contain wheat flour. But here we will consider only the type that is made [in the Dutch East Indies] with soybeans plus some added ingredients to improve the flavor. For the preparation of soy sauce, brown or black soybeans are cooked for several hours. After pouring off the cooking water, the beans are placed in flat trays (*Hürden* [*tampah*]) of woven bamboo and dried for half a day in the sun, then cooled in the shade. When they are cooled, the beans are covered with leaves of *Hibiscus tiliaceus*, a species of mallow, and they are soon covered with a layer of *Aspergillus* mold, which is usually found on the tiny hairs or cilia on the underside of the hibiscus leaves and so is transferred to the beans. The mold filaments or hyphae penetrate between the tough and thick cell walls, dissolve these through hydrolysis, and thus make the cell contents accessible to the influence of the molds. The mold is allowed to work until it forms spores (*Fruchtstaende*). The beans then appear to be covered with a brownish green felt. The beans are then dried in the sun and placed in a strong, cold salt solution. The mixture is placed in the sun for several days and then cooked. The brine solution, which contains the soybean extract, is poured off and the beans are cooked several more times until they have lost their salty taste. The various cooking extracts are mixed, filtered through a fine sieve, then mixed with palm sugar, aniseed [*Pimpinella anisum*], and an herb extract, which one can buy at a druggist’s shop, and finally cooked until salt crystals appear. The soy sauce (*Soja*), which is now ready to use, is a dark brown, thick, very salty liquid, in which a viscous sediment forms. By diluting with water, it becomes turbid. But the solution again becomes clear with the addition of salt. This thorough investigation has shown that the mold hyphae branch out into the cell walls, hydrolyze and dissolve the pectin substances, and likewise break down the protein content of the cells to leucine, tyrosine, asparagine, and other decomposition products of legumes.

“But this action and result is of secondary importance. The main point is the dissolution of the cell walls, whereby

the protein becomes free and can be dissolved in the concentrated salt solution. The composition of soy sauce, except for the salt content, is very similar to that of meat extract, so that it can completely replace meat in the largely vegetarian diets of the people of the East.

"In a similar way, various other foods are obtained, whereby a mold dissolves the cell wall and so fulfills the function otherwise accomplished by cooking. We mention here only the bean paste (*Bohnenbrei*) [*tao-tjo*], for the preparation of which, dehulled white soybeans are cooked and then mixed with rice flour and glutinous rice flour (*Kleereismehl*). The mixture is placed in a small basket that is lined with the same hibiscus leaves mentioned above, and the *Aspergillus* molds growing on the leaves are allowed to develop. This saccharifies the rice starch flour and dissolves the bean cell walls. Thereby, the mixture becomes sticky and glutinous, and tastes sweet. It is dried and placed in a pot with saltwater. There it remains until each bean is permeated with salt and a sample tastes salty. Palm sugar is added to taste and it is ready for use without further cooking. Microscopic analysis showed that the cell walls were completely dissolved and the contents lay free, so that the mold growth had greatly improved the digestibility of the beans.

"In Java, soybeans are also cooked and made into flat cakes on a flat bamboo lattice. A small piece of an old cake is added and the mass is covered with banana leaves. One soon observes a rise in temperature and the development of moisture. The mass is penetrated by hyphae of *Rhizopus Oryzae*, which again dissolves the cell walls and frees their contents. The cake [tempeh, though the term is not mentioned] with its covering of mold, is consumed without further processing, raw or fried (*gebraten*).

Also discusses the preparation of onchom from peanut press-cake. Address: PhD, Netherlands.

49. Prinsen Geerligs, H.C. 1917. Domestic application of enzyme actions in Eastern countries (Abstract). *J. of the Society of Chemical Industry (London)* 36(12):662-63. June 30. [1 ref]

• **Summary:** A summary of a paper read before the *Niederlaendische Chemische Vereinigung* (Dec. 28, 1916) and published in the *Zeitschrift für Angewandte Chemie, Wirtschaftlicher Teil* 30(3):256-57 (1917, May 8).

"A milk-like product produced by grinding soya beans with water contains 6.9% of total solids, 3.13% of proteins, and 1.89% of fat; this product, unless boiled, rapidly undergoes lactic acid fermentation, and a cheese may be obtained by the addition of a quantity of the fermented liquid to a larger volume of the normal liquid. To prepare an extract [soy sauce] resembling meat extract, the cooked beans are subjected to the action of fungi which are found on the leaves of a species of mallow (*Hibiscus tiliaceus*), the mass is then extracted with salt solution, spices are added

to the extract, and this is then concentrated to a thick syrup. A similar product is prepared from a mixture of soya beans and rice by the action of fungi. Another food [tempeh] is obtained by submitting soya bean cakes to the action of fungi found on banana leaves, etc. The fungi found in rice meal and rice straw are utilised for converting rice meal into alcohol; rice meal may be saccharified by treatment with the fungi occurring on banana leaves and the liquid obtained is subsequently converted into rice wine. One of the most important results of enzyme action is the production of sugar in the palm; the stem of the latter is free from sugar but contains large quantities of starch; the conversion of the starch into sucrose proceeds in the tree, but laboratory experiments with the separated enzyme resulted in the formation of dextrose alone."

Note: This early English-language document describes tempeh, although the term is not actually mentioned.

52. Yamazaki, Momoji. 1919. Shina-san hakkô kinrui no kenkyû. IV. Shujôshu yaku no kumonosu kabi-zoku ni tsuite [Studies on Chinese fermenting microbes. IV. Some species of *Rhizopus* from Chinese yeast]. *Nogaku Kaiho (J. of the Scientific Agricultural Society, Japan)* No. 202. p. 575-601. June 5. [Jap]

Address: Nôgaku-shi, Japan.

53. Jansen, B.C.P. 1923. On the need of anti-beri-beri-vitamin of the animal organism and on the amount of this vitamin in different foodstuffs. *Mededeelingen van den Burgerlijken Geneeskundigen Dienst in Nederlandsch-Indie* p. 1-122. See p. 65-73. [60\* ref. Eng]

• **Summary:** Eykman, who discovered the nutritional cause of beri-beri, quickly pointed out the great importance of determining the protective power of various substances against beri-beri. It has been known for 25 years that living mainly on polished rice contributes to beri-beri, “whilst unpolished rice entirely protects against this disease.” Most Javanese farmers still pound their own rice; when they do, only a part of the pericarp is removed by pounding. This sort of rice contains sufficient vitamin to protect the population from beri-beri. Industrial workers, who have neither time nor opportunity to pound their own rice, buy polished rice (with the whole pericarp removed) from rice mills. Though nearly devoid of vitamin, it is a product which “much more lasting with regard to storage and transport, and which at the same time by its nicely white aspect fetches a much better price on the market.” Therefore the authors are investigating foods that can be eaten with polished rice to help prevent beri-beri.

Section 8, titled “Katjang kedele (Soy-beans)” (p. 65-73) begins: “This is a very important kind of beans for the native dietary.” Soy-beans were fed to pigeons with white rice in varying proportions. The higher the proportion of soybeans, the better the health of the pigeons. When a large proportion of the diet was washed and polished white rice, the birds developed polyneuritis and often died or became paralyzed.

On page 68 the author notes that in Java, “soy-beans are not only eaten as such, but also very much in the shape of different native concoctions. It has been asserted (by C.L. van den Burg, 1904) that in this way the hard-to-digest legumins would be made easier to digest. However as far as I know, this assertion has not been founded on any experiment. A priori I think it as probable that by making tempe of the beans the taste is changed to such an extent, that they may be used continually, without being objected to. I hope some time to find an opportunity of experimentally deciding this question. Till at present I only examined, whether in these concoctions the vitamin-content either has increased or lessened... I now experimented with tempe kedele and with tao-tjo” [Indonesian-style miso].

Tempe, purchased on the market in Batavia, was fed in place of the soybeans. The results showed “a rather considerable loss of vitamins may be seen to have taken place during the preparation of tempe kedele from the soybeans.” Tao-tjo (Indonesian-style miso) was then used in place of soybeans, and it too was found to be a poor source of vitamins.

Note 1. This is the earliest English-language document seen (Sept. 2011) that mentions tempeh, which it calls “tempé” or “tempe” or “tempe kedele.” These terms are not italicized in the text.

Note 2. This is the earliest English-language document seen (March. 2009) uses the word “tao-tjo” to refer to Indonesian-style miso. Address: Dr., Head of the Chemical Dep., Medical Lab. at Weltevreden.

54. Kempfski, Karl E. 1923. Die Sojabohne: Geschichte, Kultur und Verwendung unter besonderer Beruecksichtigung der Verhaeltnisse in Niederlaendisch-Indien [The soybean: History, culture and use, with special attention to the situation in the Netherlands-Indies]. Berlin: Paul Parey. 88 p. Illust. Index. 22 cm. [101 ref. Ger]

• **Summary:** Contents: Introduction. Some remarks on the soybean’s early history. Overproduction of soybeans in Manchuria after the Russo-Japanese War—English oil mills make their first trials. Soybean production in Manchuria. Soybean production in Korea. Soybean production in Japan. Soybean production in America—Soybean meal and soybean milk are introduced. Soybean production has also expanded in Africa, British India, and the Philippines. The introduction of soybean cultivation to Europe. The many uses of the soybean in Europe. Uses of soy oil. Old and new methods of obtaining soy oil. Soybean production and use of soybeans in the Netherlands-Indies. Appendix: Descriptions of how the most important soybean products are manufactured: In Java (tao-hoe [tofu]), tempeh, ketjap [soy sauce], tao-tjong [or tao-jiung, a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], in China and Japan (soy sauce, miso, tofu, frozen tofu, natto, soymilk) (p. 62-68). Supplements: I: Soybeans in Manchuria. II; Hansamuehle [Hansa Muehle] in Hamburg, Germany. III: *The Soybean* by Piper and Morse.

Note the extensive, early bibliography. Unfortunately, it contains many errors.

This book is largely a review of the literature, but with some original information, especially on Indonesia and Germany. In 1923 Java imported 150,000 to 200,000 tons of soybeans and had a population of 35 million. The area of soybeans planted in Java (including Madura) increased from 157,600 ha in 1918 to 164,700 ha in 1922 (p. 32). In 1921, 67.3% of Java’s soybean acreage was in Central Java, 20.7% was in East Java, and only 5.7% was in West Java. (p. 35). Large quantities of soybeans are imported to the Netherlands-Indies from Manchuria: 35,105 metric tons (tonnes) in 1920, rising to 95,742 tonnes in 1922. From these and local soybeans are made tempeh [spelled like this!], tofu (*tahoe*; *Bohnenkäse*), soy sauce (*Ketjap*, *Sojasauce*), etc. In Java, mostly black soybeans are grown. To make tofu yellow, it is cooked in an extract of the *Curcuma* root / rhizome. Sometimes it is also sun-dried or fried/roasted (*gebraten*). Tempeh is inoculated with a piece of tempeh from a previous fermentation, and often fried in coconut oil. Detailed descriptions are given of the production of soy sauce (*ketjap*; which is made from black soybeans) and Indonesian miso (*taucho*; *tao-tjong*). The author (p. 64) states that ketjap

and tao-tjiung are both inoculated using *Hibiscus tiliaceus* (hibiscus) leaves, called *waroe* in Java. Today Germany, like America, produces fresh and dried soymilk, fresh and dried soya cream, meat analogs, and soy sauce (p. 25).

This book contains 17 interesting, old photos.

Descriptions of those reproduced from other periodicals are omitted. (1) A soybean field on the farm Kikai Nojo near Sempo-Station, Korea, owned and run by Mr. Moegling (p. 12). (2) A combine used for harvesting regular beans in California in 1918 (p. 19). (3) Many hydraulic presses in a modern American oil factory (p. 29). (4) The equipment used in steaming the soybeans before they are crushed in an American “steam mill” type oil mill (p. 31). (5) The interior of a British oilmill (p. 33). (6) The electrical generators in a modern oilmill (p. 34). (7) Soybeans being harvested manually at Madioen [Madiun, in East Java], Java (p. 48). (8) Harvested soybeans being dried on racks in a field in Java, and carried away by one worker (p. 48). (9) Workers dividing up the harvest in Java (p. 50). (10) Threshing soybeans with bamboo flails in the courtyard of a small farmer in Java (p. 51). (11) Selling soybeans in a small market in Central Java (p. 51).

Tables show: (1) Imports of soybeans to Germany from 1910 (43,500 tonnes) to 1912 (more than 125,200 tonnes) (p. 24). (2) Soybean acreage in Java (including Madoera) from 1918 (157,600 ha) to 1922 (164,700 ha) (p. 32). (3) A breakdown of soybean area in Java in 1921 (of 226,186 bouws) into West Java (12,980 bouws), Central Java (152,154 bouws), and East Java (61,082 bouws) (p. 35). Note: 1 bouw = 1.754 acres (Johnstone 1975). (4) Imports of Manchurian soybeans to Java (including Madoera) and other parts of the Dutch East Indies (mainly Sumatra) from 1920 to 1922 (p. 36). (5) Yields (average or range) of soybeans in various countries: Germany, Italy, British Indies, Manchuria (incl. China and Korea), Japan, America (up to 2,700 kg/ha), Java (p. 52). (6) Comparison of the nutritional composition of soybeans, peas, and regular beans (Phaseolus varieties) (p. 53). (7) Comparison of the nutritional composition of soya cheese (*Sojakäse*, tofu), beef, and lean pork (p. 53). (8) The prices of white and of black soybeans in Java during January and December 1922 and the same two months of 1923 (in Gulden) (p. 56). (9) Comparison of yields, price, costs, and profit for peanuts (*Katjang tanah*) and soybeans in Java (p. 57-58). (10) Nutritional composition of canned frozen tofu (based on E. Senft) (p. 68). (11) Exports of soybeans from five Manchurian ports (Dairen, Antung, Newchwang, Suifenhö [Suifenhö], and Sansing) in 1919, 1920, and 1921 (p. 70). (12) Exports and value of soybeans from all of China to four countries (Netherlands, Russia, Japan, Dutch East Indies) in 1919, 1920, and 1921 (p. 72). (13) Exports of soybean oil from five Manchurian ports (Dairen, Antung, Newchwang, Suifenhö [Suifenhö], and Harbin) in 1919, 1920, and 1921 (p. 72). (14) Exports and value of soybean oil from all of China to five countries (England, Netherlands,

Belgium, Japan, USA) in 1919, 1920, and 1921 (p. 72). (15) Exports of soybean meal from four Manchurian ports (Dairen, Antung, Newchwang, Suifenhö [Suifenhö]) in 1919, 1920, and 1921 (p. 73). (16) Exports and value of soybean meal from all of China to three countries (Japan, Russia, USA) in 1919, 1920, and 1921 (p. 73). (17) Names of the five major railway lines in Manchuria (South Manchuria Railway, Chinese Eastern Railway, Peking Mukden Line, Kirin-Changchun Line, Saupingkai-Taonan Line) (p. 74). (18) Amounts (in tons) of soybeans, soybean cake, and soy oil (*Sojaöl*) shipped over the South Manchuria Railway, and the Chinese Eastern Railway in one year (p. 74). (19) Railway transport and production amounts of the mills (in tons) in Dairen and Newchwang of soybeans, soybean cake, and soy oil (*Sojaöl*) during the year 1921 (p. 74). Address: Agricultural Expert in Poerbasari te Pengalengan, Java.

55. Nishiwaki, Yasukichi. 1924. Soja-Bereitung mit *Oidium lupuli*, *Aspergillus oryzae*, und *Rhizopus japonicus* [Preparation of soy sauce with cultures of *Oidium lupuli*, *Aspergillus oryzae*, and *Rhizopus japonicus*]. *Zentralblatt fuer Bakteriologie. Series 2*. 63(1/8):28-30. Nov. 27. [2 ref. Ger]

• **Summary:** The author reports experiments concerning the production of soy sauce using three different types of mold: *Oidium* [one of the early names for *Neurospora* before the sexual stage was described in 1927], *Aspergillus* (the mold generally used in soy sauce production in Japan), and *Rhizopus* (the mold widely used to make tempeh). Surprisingly, the soy sauce fermented with *Oidium* was considered to be the best quality. It can also be used to make good quality miso. The quality of soy sauce made with *Rhizopus* molds was considered to be poor, and the yield of soy sauce was low. Onchom is not mentioned. Address: Professor, Technischen Hochschule zu Osaka, Japan.

56. Nishiwaki, Yasukichi. 1924. Biologische Untersuchungen ueber den Koji-Pilz des Okazaki-Hatchomiso-Koji und der Kaboch-Bana des Tome-Koji [Biological investigations on the koji mold of Okazaki Hatcho miso koji and the “orange flowers” of “tome koji”]. *Zentralblatt fuer Bakteriologie. Series 2*. 63(1/8):25-28. Nov. 27. [2 ref. Ger]

• **Summary:** “On Tome-Koji, a type of koji produced during the warmer times of the year, one can often observe that the surface is covered with a red- to reddish-yellow mycelium of mold. Because of its yellowish-red [orange] coloring, which is reminiscent of the Japanese cucurbit [pumpkin] named Kabocha, this koji is usually called *Kabochabana* (“Kabocha flower”). Japanese koji manufacturers ascribe no significance to the appearance of this mold and consider it harmless since the quality of the Tome or Miso made from this koji is not found objectionable. In the production of koji for Okazaki Hatcho Miso, a large quantities of this yellowish-red mold appear and, in fact, the manufacturers consider this type of

koji as the best, since the Okazaki Hatcho miso made from it is regarded as the best.

"In 1911, through the friendliness of manufacturers Aoki, Hayakawa, Hattori, and Ito, I obtained samples of *Kabochabana*, which I investigated. I became convinced that the mold in question was a type of fungi imperfecti, the *Oidium lupuli* Matthews & Lott = *Monilia sitophila* Mont. (Saccardo)." Note: The genera *Oidium* and *Monilia* were later renamed *Neurospora*.

The author concludes that this mold is especially found on Hatcho miso koji. He notes that in 1901 Went reported that in Java, this mold plays an important role, because of its enzymes, in the production of ontjom, a good-tasting cake made by fermentation of peanuts. Address: Prof., Technischen Hochschule, Osaka, Japan.

57. Jansen, B.C.P.; Donath, W.F. 1924. Metabolic experiments on rats and digestibility of the proteins of some foodstuffs. *Mededeelingen van den Burgerlijken Geneeskundigen Dienst in Nederlandsch-Indie* p. 25-45. [6 ref. Eng]

• **Summary:** Concludes from rat feeding experiments that "the digestibility of the proteins of *tempe kedele* [soy tempeh] is equal to that of *katjang kedele* (soy-beans)." Address: 1. Dr.; 2. Dr. Both: Medical Lab., Weltevreden.

58. Jansen, B.C.P.; Donath, W.F. 1924. The A-vitamin-content of different Indian foodstuffs, and the value of the proteins of these latter, as a supplement to the proteins of rice. *Mededeelingen van den Burgerlijken Geneeskundigen Dienst in Nederlandsch-Indie* p. 46-98. See p. 78-80. Summarized in Experiment Station Record 52:64-65. [7 soy ref. Eng]

• **Summary:** In section 7, titled "Meat," a graph (p. 64) shows the growth curves of young rats fed on a diet containing 90 parts rice (not unpolished) and 10 parts dried *tempe kedele* [soybean tempe].

Section 17, titled "Soy-beans" (p. 79-80) states that in Malay, the soy-bean is called *katjang kedele*. However it is usually eaten as *tempe kedele* [soybean tempe] (see below), "which is a very important ingredient in the native dietary. We made experiments as well with *katjang kedele* itself as with *tempe kedele*. Of the soy-beans there exist differently coloured varieties; we experimented with the yellow variety, of which also the *tempe kedele* is made." Soybeans were found to contain a small amount of vitamin A.

Section 18 titled "*tempe kedele*" (p. 80-81) begins: "Usually the soy-beans are not eaten as such, but from the boiled beans a product is prepared by fermentation: the *tempe kedele*." Various experiments showed that "the proteins of *tempe kedele* appear indeed to be as efficient a compliment to the rice-proteins as those of soy-beans. Also with regard to the A-vitamin-content we could not ascertain any difference between soy-beans and *tempe kedele*." Rice

"with *tempe* has to be regarded also as the most important ingredient of the basis-food of a large part of the native population..."

The vitamin A content of the following foods is also discussed: Peanut-presscake (*Arachis hypogaea*, L.) (p. 61-62). *Ontjom* or *tempe bungkil* (p. 62-63; made of peanut-presscake); in the Sunda-lands (and in Batavia as well) it is called *ontjom*. "Of this *ontjom* there exist two varieties: a white one and a yellowish red one. Whereas often (not always) a yellow or yellowish-red colour happens to coincide with a high content of vitamin A, we thought it interesting to examine the red *ontjom* as to its A-vitamin content." Conclusion: *Ontjom* "is not very rich in A-vitamin; yet the content seems to be higher than that of the presscake." Address: 1. Head of the Chemical Dep., Medical Lab., Batavia (Jakarta), Indonesia; 2. Chemist at the Lab.

59. Ochse, J.J. 1925. Tropische groenten. Geteelde en in 't wild groeiende gewassen, die door de Indische bevolking worden gegeten [Tropical vegetables: Cultivated and wild plants eaten by the Indonesian people]. Weltevreden: Uitgave en Druk Volkslectuur. 215 p. July. See p. 92-95. Illust. Also listed as series #686. [Dut]

• **Summary:** This is the original Dutch-language edition, which was revised in 1931 as *Indische Groenten* and translated into English in 1931 as *Vegetables of the Dutch East Indies*. Ochse lived 1891-1970. After describing the plant, the author notes that there are two varieties of soybeans: one is yellowish brown and the other is black. The first is used to make tempeh and tofu; the second to make këtjap. Very popular soy products in the Indonesian market are tofu and firm tofu (*tahoe* and *takoäh*). Also discusses *tao tjo* (Indonesian-style miso; has a consistency like paste or porridge), *tao dji* (soy nuggets), *témpé*, and *ontjom*. The process for making each of these soyfoods is described.

Illustrations show: (1) A young soybean plant with leaves and pods (half size).

(2) A bamboo scaffolding or curing frame, in tripod form with 3 horizontal supports, used for drying bunches of soybeans.

Note: This is the earliest document seen (April 2001) that contains the word *takoäh*. Address: Buitenzorg [Bogor], Java.

60. Shear, C.L.; Dodge, B.O. 1927. Life histories and heterothalms of the red bread-mold fungi of the *Monilia sitophila* group. *J. of Agricultural Research* 34(11):1019-1042. June 1. [53\* ref]

• **Summary:** This article contains the original description of the genus *Monilia*—the "conidial masses varying from pale salmon to orange color." Plate 2, B, shows the conidial stage of *Monilia sitophila*. "The red bread mold has long been known as a bakery pest and has caused much loss to bakers as well as to housewives." Address: 1. Senior Pathologist in

Charge, Mycology and Disease Survey; 2. Pathologist, Fruit Diseases, Bureau of Plant Industry, USDA.

61. Heyne, K. 1927. De nuttige planten van Nederlandsch Indië [The useful plants of the Netherlands Indies. 3 vols.]. The Hague, Netherlands: W. van Hoeve. 1662 + CCXLI p. See vol. 2, p. 789-90, 814-20. Index. 28 cm. See also 3rd ed. 1950. [14 ref. Dut]

• **Summary:** Contents: Ontjom. Dagé. The soybean (Sojaboon, Kedele). Cultivation. Seeds. Utilization: Témpe [tempeh], tao hoe [tofu], tao koan [pressed tofu; doufu-gan], tao tjo [Indonesian-style miso], soja (kètjap).

Note: One other edition of this work (same author and title) was published in 1927: 2nd improved and expanded edition, 3 vols, published in the Dutch East Indies (Buitenzorg) by Departement van Landbouw, Nijverheid en Handel. Printed by Ruygrok & Co. (Batavia) (1662 + ccxli p.). OCLC Accession No.: 756-9335 and 588-3707. Owned by 30 + 24 = 54 libraries worldwide. Address: Hoofd van het Museum voor Economische Botanica te Buitenzorg (Bogor).

62. Nakazawa, Ryoji. 1928. Nanyô-san ontjom, tempeh o tsukuru shijôkin ni tsuite [On the filamentous fungi used to make ontjom and tempeh in the South Pacific (Java and Sumatra)]. *Nihon Nogeï Kagakkai Shi (J. of the Agricultural Chemical Society of Japan)* 4(4):252-63. April. See also *Zentralblatt fuer Bakteriologie. II.* 80:114 (1930) and *Biological Abstracts* 4:25213 (1930). [13 ref. Jap]

• **Summary:** Discusses *Mucor*, *Aspergillus*, *Rhizopus*, and *Penicillium* molds.

Onchom is made from peanuts and tempeh from soybeans. The authors note that Prinsen Geerligs (1896) had reported that these foods were fermented using *Rhizopus oryzae*, whereas Went (1901) had said they were fermented using *Monilia sitophila*.

In 1912 Nakazawa had asked a person from Southeast Asia to bring him samples of tempeh and ontjom (made from peanut presscake). He analyzed their microorganisms and repeatedly found *Penicillium*, a grayish-brown mold, to be the predominant genus.

In 1924 Yoshito Takeda, Nakazawa's co-worker, obtained more samples of these foods from Southeast Asia, and again found *Penicillium* to be predominant. *Monilia* (which in 1901 Went had said was the predominant microorganism) was not found; Takeda assumed it had died during transport.

In April and May of 1926 (Taisho 15) Nakazawa took a research trip to Java and Sumatra and carefully collected (in sterile containers) 59 samples of soy tempeh and onchom from various markets and small manufacturers. Tempeh was collected from Medan, Semarang, and Soerabaya, while ontjom was collected from only Buitenzorg and Medan. Nakazawa and Takeda analyzed the microorganisms in these fermented foods and in this document reported

that they found the onchom microorganisms to be almost exclusively *Penicillium* and the tempeh microorganisms to be mostly *Penicillium*, but with substantial amounts of *Mucor*, *Rhizopus* (all light grayish-brown) and *Aspergillus* (dark green) as well. No *Monilia* was found and no species names were reported. Dr. Grounewege at the Buitenzorg Agricultural Research Laboratory confirmed that these were the predominant species.

Note 1. This is the 2nd earliest document seen (Sept. 2011) worldwide which uses the spelling "tempeh" to refer to this fermented Indonesian soybean food. This word, written in roman letters, appears throughout the publication and by the 1960s had become the standard spelling in English and most other European languages.

Note 2. This is the earliest Japanese-language document seen (Sept. 2011) (one of two documents) that mentions tempeh.

Note 3. Today most tempeh is made with *Rhizopus* species and most ontjom with *Monilia* species.

Note 4. Dr. Nakazawa never made tempeh, probably for lack of a suitable inoculum. Address: Taiwan Sotokufu Chuo Kenkyujo, Kogyo-bu Hokoku.

63. Nakazawa, Ryoji; Takeda, Yoshito. 1928. Nanyô-san ontjom, tempeh o tsukuru shijôkin ni tsuite [On the filamentous fungi used to make onchom and tempeh in the South Pacific (Java and Sumatra)]. *Taiwan Sotokufu Chuo Kenkyujo, Kogyobu Hokoku (Report of the Industrial Section, Central Research Institute, Taiwan Governor-General's Office)* 4(4):252-63. April. See also *Zentralblatt fuer Bakteriologie. II.* 80:114 (1930) and *Biological Abstracts* 4:25213 (1930). [13 ref. Jap]

Address: Taiwan Sôtokufu Chûô Kenkyûjo, Kôgyô-bu.

64. Nakazawa, R.; Takeda, Y. 1928. Ueber die Schimmelpilze welche sich bei der Herstellung des Leckerbissens "Ontjom" und "Tempeh" (Java und Sumatra) mitwirken [Molds that assist the production and fermentation of the delicacies "ontjom" and "tempeh" in Java and Sumatra]. *Bulletin of the Agricultural Chemical Society of Japan* 4(4/6):86. April/June. [2 ref. Ger]

• **Summary:** "Ontjom" and "Tempeh" are the names of foodstuffs which the indigenous people of the aforementioned islands make. According to a communication from Prinsen Geerligs, *Rhizopus Oryzae* is used for making Ontjom from peanuts and for making Tempeh from soybeans. Went observes, however, that both these foods are made from *Monilia sitophila*. Address: [Japan].

65. Dorsett, P.H.; Morse, W.J. 1928. Agricultural explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon (Log-unpublished). Washington, DC: USDA Bureau of Plant Industry. Foreign Plant Introduction and Forage Crop

Investigations. 8,818 p. Unpublished typescript log. Illust. Partially indexed. 28 cm.

• **Summary:** Also called the “Log of the Dorsett Morse Expedition to East Asia” and (by the National Archives) “Dorsett-Morse Expedition to the Far East, 1929-31,” this is one of the most important documents ever produced on soybeans and soyfoods. Covering the period from late 1928 until 1932, it consists of 17 volumes of typewritten unpublished manuscript plus handwritten notebooks.

The two explorers, who were gone on the expedition for a little more than two years, initially planned to be gone for about three years. They took 3,369 photos of which 95% appear in the report; the original prints are pasted on the pages, each with a number and a caption. The first negative number is #43196 (p. 238) and the last is #46514. The last numbered page of the report is #8818, but most of the index pages are not numbered and some special reports at the end of the main report each start with page 1.

The first quarter of the pages (to about page 2,500) are indexed, using 4 separate indexes. The only original and 2 microfilm copies were at the American Soybean Assoc. (St. Louis, Missouri), however as of Aug. 2011 they are on permanent loan to Rare and Special Collections at the National Agricultural Library (Beltsville, Maryland)—which also has 7 photograph albums that accompany the 7 log books. A list of the missing pages has been compiled. One photocopy of a microfilm copy is at the Soyinfo Center (Lafayette, California). One microfilm copy is at the National Archives in Washington, DC, in Records of the Bureau of Plant Industry, Soils, and Agricultural Engineering, Record Group 54. See: “National Archives Microfilm Publication No. M840. Expedition Reports of the Office of Foreign Seed and Plant Introduction of the Department of Agriculture, 1900–1938.” Rolls 16-20, volumes 56-73. These microfilm rolls may also be available for viewing or duplication at one of the various regional branches of the National Archives (e.g. San Bruno, California).

A brief itinerary of the trip is as follows: 1929 Feb. 18—The party of 5 people leaves Washington, DC, for Los Angeles by train. It consists of Morse, his wife Edna, their daughter Margaret (age 7), Dorsett, and his daughter-in-law Ruth (Bobbie; the widow of Dorsett’s son, she served as Dorsett’s secretary and general helper).

March 1—They sail from San Francisco to Yokohama on the S.S. *President Grant* of the Dollar Steamship Lines. March 29—Arrive in Yokohama, proceed directly to Tokyo, establish headquarters with rooms at the Imperial Hotel, and hire an interpreter, Mr. Suyetake, who works with them for the next 2 years. May 21—The Morses go to Hokkaido, the Dorsetts to Kyoto, by sleeper train. Morse returns to Tokyo.

Aug. 17—The entire party arrives in Hokkaido and establishes headquarters in Sapporo to study soybeans. Oct. 8—Leave Hokkaido for the Northeast Provinces, then arrive in Tokyo on Oct. 15. Oct. 22—Arrive in Keijo (Seoul),

Korea, then take many side trips. Note: 1929 Oct. 29—Great Depression begins in USA with stock market crash. Dec. 8—Return to Japan via Kyushu, then to Tokyo to study soyfoods. They buy and photograph many!

1930 April 1—Travel by steamer to Dairen, Manchuria, where they set up headquarters. Dorsett very sick from April 11 to June 11; taken to a Japanese hospital in Dairen, he almost dies of double pneumonia. Morse does the work of both men and does not inform USDA of Dorsett’s critical condition. June 24—Morse takes a quick trip to northern Korea, via Mukden and Antung (Tan-Tung), to look for *Zoysia* grass.

July 1—Returns to Manchuria via Mukden. July 21. Dorsetts leave for Peking by train; Morses and Mr. Suyetake stay in Dairen. Aug. 21—Morse party travels to northern Korea, staying in Heijo (Pyongyang / P’yongyang); takes a 4-day side trip to Seoul. Sept. 28—Morse returns to Dairen, Manchuria.

Oct. 19—Morse party leaves Dairen, arriving in Peking the next day. Nov. 9—Morse party returns to Dairen. Nov. 30—Morse arrives in Harbin, north Manchuria, then passing through Mukden, returns to Dairen. Dec. 18—Morses leave Dairen for Japan, passing through Kobe on Dec. 21 and arrive in Tokyo on Dec. 23.

1931 Jan. 12—Travel to Kyoto, Himeiji, and Tatsuno Shoyu. Jan. 16—Visit Okazaki and Hatcho miso. Jan. 17—Return to Tokyo. Feb. 17—Morse party leaves Tokyo by boat for the USA, arriving in San Francisco on March 4. March 15—Dorsett party leaves Peking for Tientsin, Shanghai, and Hankow. March 27. Dorsetts sail from Shanghai to San Francisco.

Note 1. The title of this report is puzzling since the expedition never went to Taiwan, Singapore, Java, Sumatra, or Ceylon. It was proposed several times that they visit these places, but the plans did not work out.

Note 2. This is the earliest log (unpublished) seen (Oct. 2001) that mentions soy. Address: Agricultural Explorers, USDA, Washington, DC.

66. Dorsett, P.H.; Morse, W.J. 1930. A close relative of tempeh in China (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: USDA Bureau of Plant Industry, Foreign Plant Introduction and Forage Crop Investigations. 8,818 p. See p. 6264, 6273. Unpublished log.

• **Summary:** Page 6264. On 24 Oct. 1930, the authors photographed a tempeh-like product on Hsi Tan Pailou Street in northwestern Peiping [today’s Beijing], China.

Page 6273. A good photo with the following description: “Soybean Cake. Peiping, China. A life-sized picture. Chinese name ‘*Tou chiah ping*’ [soybean fried cake]. Small cakes made from boiled soybeans. The beans are pressed into small

round cakes which are allowed to develop a mold-taking about 7 days. These cakes are broken into small pieces and fried in sesame oil.” There are no known references to this Chinese food product in any language.

Note: In 1983 William Shurtleff, while traveling in China, asked at least ten Chinese connected with soyfoods if they had ever heard of or seen *tou chiah ping* and showed them the characters with which the name was written. None had ever heard of or seen it. Address: Agricultural Explorers, USDA, Washington, DC.

67. Nakazawa, R; Takeda, Y. 1930. Ueber die Schimmelpilze welche bei der Herstellung des Leckerbissens “Ontjom” und “Tempeh” (Java und Sumatra) mitwirken [Molds that assist the production and fermentation of the delicacies “ontjom” and “tempeh”] (Abstract). *Biological Abstracts* 4(10):2379 (Abst. #25213). Oct. [1 ref. Ger]

• **Summary:** Tempeh and ontjom are the names of foods produced by the natives of Java and Sumatra. Tempeh is made from soybean and ontjom from groundnuts (peanuts). Geerligs reported that *Rhizopus oryzae* is the mold used to produce both these foods, but Went reported it was *Monilia sitophila*. However Nakazawa and Takeda identified *Penicillium brevicaulis* as the main mold involved, together with small quantities of *Rhizopus*, *Aspergillus*, and *Mucor*.

68. Yamazaki, Momiji. 1931. Shina-san hakkô kinrui no hakkô kagaku-teki seishitsu no kogai [Studies on fermentation of the fermentable fungi of China]. *Jozogaku Zasshi (J. of Brewing, Osaka)* 9:12-25, 84-103, 174-93, 258-70. [Jap]

• **Summary:** Mentions the mold genera *Rhizopus*, *Mucor*, *Aspergillus*, and *Monilia*. Address: Nôgaku Hakase, Japan.

69. Ochse, J.J. 1931. Vegetables of the Dutch East Indies. Buitenzorg (Bogor), Java: Archipel Drukkerij. xxxvi + 1005

p. See p. 366, 389-93, 398, 407-08, 732, 943-71. An entirely revised and greatly enlarged second edition of his *Tropische Groenten* (1925). Translated by Mr. C.A. Backer. Illust. 25 cm. Index. [10 ref. Eng]

• **Summary:** This translation (by Mr. C.A. Backer, the reputed ex-Botanist for the flora of Java) of Ochse’s classic “may be taken as an entirely revised and much enlarged second edition of ‘*Tropische Groenten*’ (Tropical Vegetables), which booklet was published in July 1925.” The author, a Dutchman who confined his research to Java and Madoera, described the tempeh-making process in detail, saying that the mold used was *Aspergillus oryzae* and that it was obtained from a former batch of tempeh.

Page 366 discusses ontjom (têmpê boongkil in Javanese), tetêmpê, and dagê, all made from peanuts. Page 372 notes that the pigeon pea (*Cajanus cajan*) can be used to make têmpê bosok.

Pages 389-93 discuss the soya bean, which has various names in local languages. Malay: Katjang djepoon or Kedele. Javanese: Dekeman or Dekenan, Dele, Demekan, Gadele, Kedele, Kedoongsool, or Dangsool. Sundanese: Kadele, Katjang booloo, Katjang djepoon, Katjang kadele. Madura: Kadhele, Kadhellee, or Kedeleh. A description of the plant is given.

Illustrations show: (1) A young soybean plant with leaves and pods (half size). (2) A bamboo scaffolding or curing frame, in tripod form with 3 horizontal supports, used for drying bunches of soybeans.

Soybeans come in two main forms: Light yellowish-brown seeds, and black seeds. The latter are used to make *ketjap* (Indonesian soy sauce). “Of the ripe seeds *pêlas* (Jav.) is made, by mixing them with grated young coconut [coconut], salt, and other ingredients. The mixture is wrapped in a banana leaf and steamed.

“The seeds can also be roasted and afterwards pounded. The *boobook* [*bubuk*, roasted soy flour], *boobook* or *boobookan* (Jav.) is eaten in the shape of powder, usually with the addition of lombok and other ingredients.

“The seeds are mixed with a porridge of rice-meal and water and afterwards fried in coco-nut oil. This dish is called *rempeyek* (Jav.). It consists of brown slices in which the black *kedele*-seeds are scattered. *Rempeyek* is eaten either as a delicacy or with the rice table. “Têmpê [tempeh, p. 391] is a much used product. In East- and Central-Java it takes the same place as the ontjom in West-Java. It is prepared in much the same way as *ontjom*, and the reaction is brought about by the same fungus, *Rhizopus Oryzae*, Went et Prinsen Geerligs, which is transmitted by *râgi*. The seeds are cooked and, after they have cooled, put in a basket. By stirring, rubbing and even by treading, coupled with repeated washing with fresh water, one tries to remove the testa from the seeds. When this has been done, the seeds are put on hurdles (*sasak*) covered with banana- or waroo-leaves. Now the so-called *beeang*, i.e. rests of the fungus used for a former

batch, is sprinkled over them and the mass is turned over on other sasaks. The *témpé*-cakes treated in this way are kept indoors and after two or three days the fungus has spread sufficiently for giving a light grey colour to the cakes, which then are soft and dry and ready for use. They are sold on the markets either cut into small pieces or divided at pleasure, according to the amount of money the buyer wishes to spend. *Témpé* is used, fried, in the *sayor* or prepared with all sorts of ingredients.

“Other products for the native market are *tahoo* [tofu] and *takoāh* [pressed tofu; Chinese: doufugan]. Both are eaten either boiled or cut into small slices, fried and added to *gado-gado* or, lombok rawit being added, as a side dish.

“For the preparation of *tahoo* or *takoāh* the seeds are soaked, ground fine, boiled and pressed through a cloth. The juice which is pressed out is mixed with salt, vinegar, coconut milk or with unburned gypsum (so-called *batoo tao*), imported from China. By this treatment a white gelatinous mass is formed, which, after cooling, can be cut into pieces.”

“Wet *tahoo* does not keep well for a long time. For this reason it is soon made into *takoāh*. For this purpose the *tahoo* is cut into pieces, folded in pieces of cloth, pressed in order to remove part of the water and next boiled in a decoction of koonir [turmeric]. The product obtained in this way has an intense yellow color and is a much relished delicacy, especially with lombok rawit [fiery dwarf chilies].”

*Taotjo* [Indonesian-style miso] is a porridge made of soybeans and rice meal. The soybeans are soaked, dehulled (the testa removed), cooked, and left to cool. Then they are mixed with the meal of rice (regular or glutinous), which has been previously roasted. “The porridge obtained in this way is poured on winnows (*tampah* [winnowing trays]) covered with waroo-leaves, sprinkled with *ragi* or *beeang*, probably of *Aspergillus Wentii*, Wehmer, and covered with leaves. The filled tampahs are piled on each other and left alone till the cakes are very mouldy. Then they are dried in the sun, soaked in brine and mixed with sirup of *arèn* [sugar palm] and with *tapè* [*tapai*; a sweet fermented cake] of rice or glutinous rice. Next the porridge is placed out of doors. After the seeds have become soft by this treatment, which takes three or four weeks, the *taotjo* is ready for use.

“*Taotjo* must be boiled, otherwise the smell is too strong. It is eaten with cooked or raw vegetables. It is used for dressing some dishes of meat or fish, whilst it is also a material of which diverse side dishes are made.”

Note 1. This is the earliest English-language document seen (March 2009) that uses the word “*taotjo*” to refer to Indonesian-style miso.

“According to De Bie (1901), *tao djee* [*tao dji*; *doushi*, *douchi*] is *taotjo* alternating with layers of cooked whole *kadelè*-seeds. This stuff is put into a pot or basin with some salt and boiled *arèn*-sugar. The mass is left to itself during a few days till the *taotjo* has become pervaded by the salt and the sugar and has assumed a uniformly brown colour. Note 2.

*Tao djee* [*doushi*] is soy nuggets, which are not the same as *Taotjo* [Indonesian-style miso]. De Bie (1901) seems to have made a mistake.

“Of the black *kadelè*-seeds *soya* [soy sauce] is made, exclusively by the Chinese and the natives. First the seeds are cooked in a strong solution of salt. After diverse manipulations the cooked seeds are mixed with *arèn*-sugar and so-called *soya*-condiments and the mixture is concentrated till the salt begins to crystallize. By diluting this product with more or less water one obtains the diverse qualities of *kètjap* or *soya* found in commerce.”

The “Pemimpin Pengoesaha tanah” of 15 Jan. 1915 lists various ingredients that can be used with black soybeans in making *ketjap*. “Young seedlings, obtained, like *taogè* [*taugè*, soy / bean sprouts], by fermenting, are called *ketjambah kedele*; they are cooked and eaten as *petjel* (Jav.) with the rice (*ganteng*, Jav.)”

“Finally young leaves of *Kadele* can be eaten, raw or steamed, as *lalah*.

Page 398 describes *dagè* and *témpé bengook* made from these seeds of the velvet bean (*Mucuna pruriens*). Roasted tempeh are also discussed.

Pages 407-08 states that the seeds of the *Katjang oji* (rice bean) can be used for the preparation of tempeh.

Pages 414-15 state that, when they have no soybeans, the Chinese use mung beans (*Katjang eedjo*) to make tofu and takoah, but they are most widely used to make mung bean sprouts (*taogè*). Page 634 mentions *témpé bosok* (overripe tempeh) made with the foul-smelling bruised leaves of the plant *Paederia foetida*. Page 732 also mentions overripe tempeh.

Note 2. This is the earliest English-language document seen (Dec. 1998) which contains detailed information about tempeh, or which refers to tempeh as “*témpé*.”

Note 3. This is the earliest English-language document seen (Feb. 2004) that uses the word “*tahoo*” or the word “*takoāh*” to refer to tofu. Address: Buitenzorg (Bogor), Java, Indonesia.

70. Ochse, J.J. 1931. Indische Groenten [Vegetables of the Dutch East Indies]. Buitenzorg (Bogor), Java: Department Landbouw. 1005 p. See p. 388-92. Index. Illust. 27 cm. [10 ref. Dut]

• **Summary:** For details, see the English-language translation, also published in 1931.

Under soybean utilization, the following food products are discussed in detail on pages 390-92: Tempeh (*témpé*), tofu (*tahoe*) and firm tofu (*takoā*), Indonesian-style miso (*taotjo*), soy nuggets (*tao dji*), and Indonesian-style soy sauce (*kètjap*). “*Témpé* is a much used product. In East- and Central-Java it takes the same place as the *ontjom* in West-Java. It is prepared in much the same way as *ontjom*, the reaction is brought about by the same fungus, *Rhizopus Oryzae*, Went et Prinsen Geerligs, which is transmitted by

*ragi.*”

On pages 943-970 is an alphabetical “List of Vernacular Names of Objects, Properties or Actions.” For example: Kedelee oongaran (p. 390, Jav.) is a soybean plantation on a sawah, immediately following the paddy [rice] harvest. Kedelee apeetan (p. 390, Jav.) is the second harvest of the year or the second plantation in the same year of Kedelee (soybeans; *Glycine Soja*). Address: Buitenzorg (Bogor), Java.

Over de beteekenis van de sojaboon als handelsproduct [On the commercial significance of the soybean as a commodity]. *Landbouw (Buitenzorg, Java)* 7(9):571-96. March. English-language summary, p. 743-74. Also in: Dutch East Indies Dept. of Agriculture..., ed. 1932. Kedelee. Buitenzorg, Java: Departement van Landbouw, Nijverheid en Handel. Afdeeling Landbouw. p. 5-30, 177-78. [1 ref. Dut; eng]

• **Summary:** “Annually Java requires considerable quantities of the soybean, about one half of which is imported... On Java the soybean is used principally for the preparation of soy sauce (*soja of ketjap*), tahoe, tempe, and taotjo (various dietary preparations). Our investigations have proven that the Java-grown soybean can be used for making ketjap, tahoe and tempe just as effectively as the imported soybean. In western Java the manufacturers of soy prefer the imported article, those in central and eastern Java prefer the home-grown bean. This preference, which must be attributed chiefly to habit and conservatism, is also partially to be ascribed to the fact that in western Java but little of this article is grown, whilst in central and eastern Java the production is much more considerable, which causes the former region to be more dependent upon the imported article than the latter districts. For the preparation of tahoe a certain preference is indeed shown for the imported bean, in view of the greater keeping properties of the article prepared therefrom; nevertheless, the soybean grown on Java is also widely used for that purpose. The same holds good for the preparation of tempe, where the imported article is preferred chiefly on account of its larger size. Generally speaking, the imported kinds of soybean are preferred for the preparation of tahoe and tempe because they satisfy to a greater extent the demands of the manufacturers, and also because they are readily obtainable. Taotjo, however, is practically exclusively prepared from the imported bean.

“The general conclusion is that the imported soybean can be replaced, if not entirely, at a rate to a very great extent by the soybean grown on Java, thus indicating that the furtherance of its cultivation in this country can only be of advantage...

“The principal import harbours are Semarang [Central Java], Sourabaia [Surabaya], Tandjong Priok, Tjilatjap, and Cheribon.” Address: 1. fd. Hoofd van Afdeeling Handel te Buitenzorg; 2. Vakkundig Ambtenaar bij de Afdeeling

Handel, Java.

March. English-language summary, p. 759-61. Also in: Dutch East Indies Dept. of Agriculture..., ed. 1932. Kedelee. Buitenzorg, Java: Departement van Landbouw, Nijverheid en Handel. Afdeeling Landbouw. p. 139-74, 193-95. [48 ref. Dut; eng]

• **Summary:** Discusses the composition of the soybean. “In contrast with Manchuria, where it is a common article of diet, the soybean is rarely used as such in these parts; but by means of various operations, among which is the action of certain fungi, several products are prepared from it.

“These products, such as *tempe kedelee*, *taotjo*, *tahoe*, *taokoan* and *ketjap* are important items in the native diet. Except for the last mentioned, the preparation of these products is such that the albumins are preserved practically intact, so that, especially in tempe, as we were able to point out, the biological albumin value is very high...

“*Soymeal*, which is prepared by removing the husks and then pounding what is left, has the drawback that it tastes somewhat bitter and, in consequence of the high percentage of fat, soon becomes rancid... Berczeller, however, seems to have succeeded in obtaining an improved soy meal...

“Finally, in discussing the importance for the native diet of these beans and the products prepared from them, the author arrives at the conclusion that it is especially the albumins that are important, the people being practically vegetarian and these foods being, in addition, rich in carbohydrates.

“Thus the author expresses his approval of the fact that of late years the *Department of Agriculture, Industry and Commerce* has advocated the growing of the soybean and the consumption of the products prepared therefrom.”

Note 1. This is the earliest English-language document seen (the summary) (Sept. 2005) that contains the word “soymeal,” which apparently refers to whole (full-fat) soybean flour.

Note 2. This is the earliest document seen (April 2001) that contains the word *taokoan*. Address: Hoofd van het Analyselaboratorium te Buitenzorg, Java.

• **Summary:** "In the province of Banjumas [Banyumas, or Dutch Banjoemas] (Central Java, Netherlands Indies), which has a population of  $\pm 5,000,000$  souls, there have since time immemorial occurred repeatedly wholesale poisonings, caused by the consumption of different products, made, sometimes by means of fungi, from coconuts. As a rule these products are harmless. but if they are poisonous the consuming of very little of the matter (5-20 g by estimate) is already sufficient to make the poisoning fatal... The most dangerous foodstuffs are, as we found: *Bongkre*, a product prepared by means of fungi (*Rhizopus* species) from coconut-presscakes made by the population themselves, and *Semaji*, prepared from grated coconut, after the oil has been pressed out."

The authors isolated certain bacteria which produce the deadly poison; their colonies are generally yellowish, and the isolate consists of yellow needle-shaped crystals. Address: Central Medical Lab., Batavia, Netherlands Indies.

86. Burkill, I.H. 1935. A dictionary of the economic products of the Malay Peninsula. 2 vols. Published for the Malay Government by Crown Agents, London. 2,400 p. See p. 1080-86.

• **Summary:** These two densely-written volumes might be described as updates to the works of Sir George Watt. In the Malay peninsula, the soy bean is generally known as *Kachang bulu rimau* or *Kachang jepun* [the Japan bean]. In Java it is called *Kachang kedele*, *Dele*, *Gadele*, *Dekeman*, or *Dekenan*; in Sundanese, *Kachang bulu*, *Kachang jepun*, or *Kedele*; in Sumatra, *Kachang rimau* or *Kachang ramang*; and in Siam, *Tua luang* or *Tua praluang* [accents are included by Burkill].

"The word 'soy' came from a Japanese name for this plant, through the Dutch, who made it [the word 'soy'] known to Europeans. The first account was a result of the residence of their embassy surgeon, Kaempfer, in Japan, in 1691 and 1692; the second of the long service of their merchant, his contemporary, Rumpf, in Amboina."

The soy bean "is frequently cultivated in Siam, and seems to be a familiar plant in Kelantan [a state of Malaysia bounded on the north by Thailand]. Repeated experiments have been made with it elsewhere in Malaya; the Chinese, indeed, continually make them, usually without success, their failure being conspicuous when any available seed is used, instead of seed of races known to stand more or less tropical conditions. In 1918 advantage was taken of experiments in the Philippine Islands, to try, in Singapore, races which succeeded there and grew well. Races from the warmer parts of the United States were on trial in Selangor [Malaysia] in 1922. In 1924 a Chinese race was successfully grown by settlers in villages in the southern parts of Pahang [a state of

Malaysia, bounded on the north by Kelantan and Trengganu].

"The soy bean has long been cultivated in Java, and in recent times this cultivation has become almost universal except at the western end of the island, where the climate is most uniformly humid. Probably it came to Java from India, for the name by which it is most known is Tamil and the seed is flattened as are North Indian races, while the Manchurian races have round seeds."

Note: Roxburgh (1832), in discussing the earliest known date for cultivation of soybeans in India states: "Reared in the Honourable Company's Botanic garden [across the Hooghly / Hugli River from Calcutta] from seeds received from the Moluccas [in today's Indonesia] in 1798.

"In Java a soy crop immediately follows rice, and this was the rotation apparently which Spring found the Chinese to use in Pahang."

The seed of the soy bean is rich source of nutrients. It "replaces meat very largely among the Chinese; and as rations for Japanese troops has played a large part." Because the ripe seed contains little or no starch, it is widely used in diabetic diets. "A kind of artificial milk can be made from the seed, and is in common use in Japan and China... This milk has only three-quarters of the full food-value of cow's milk." Soy-bean coffee, made from roasted soy beans, "is sold regularly in Japan, and into the coffee can be put soy-bean milk. The Chinese germinate the beans and eat the seedlings.

Legumin, or vegetable casein is best made commercially from defatted soy beans. The casein is precipitated from the milky fluid [soymilk] by calcium sulphate. "The liquor is strained through muslin, and the precipitate treated with soda lye, which dissolves the casein; filtering gets rid of the impurities and acetic acid precipitates the casein from the filtrate in a more or less pure state. This casein is fit for use in all the industrial processes for which casein from cow's milk is used."

Soy beans can also be fermented to make témpé or "flavourings used in small quantities to make uninteresting dishes appetizing... Témpé is a food product made in Java from soy beans. It occupies a very important place in the diets of those who live in central and east Java." Detailed descriptions are given of two methods of preparation. (1) Initially, the seeds are parboiled then left soaking in water for 2-3 days. The "mush" [sic, cooked beans] is spread upon frames in flat cakes and inoculated with the fungus *Aspergillus oryzae* by the addition of some of the previous preparation. The cakes are wrapped in banana leaves; (2) This method requires greater care and time. "Meanwhile, a preparation of the fungus has been made in a somewhat elaborate manner, as follows: a portion of an older preparation is wrapped in a rather young teak leaf freely punctured with holes; this preparation is allowed to dry for two days, during which the fungus spreads to the teak leaf. Next, the soy-kernel mush [sic, the cooked soybeans] being ready, the teak leaf is emptied of its contents and sprinkled

over the mush in order to convey the fungus. The mush is now put up in packets in banana leaves, heaped together, and covered up for twenty-four hours, after which it is exposed again to the air and cooled; the packets are then ready for sale.” Note: This is the second English-language work to contain information about tempeh.

“The Chinese, throughout their own country and those domiciled in Malaysia, make a yet greater variety of preparations. Chief among these is teou-fu [tofu, usually precipitated with imported calcium sulphate]. “The ‘teo-fu’ does not keep well in a moist state, but can be treated for preservation. First, the cakes are colored yellow by a solution of turmeric or Gardenia flowers, then they are wrapped in cotton cloth and submitted to pressure. Thus made drier, they keep better. The use of this preparation is spreading.”

The Chinese also make tao-cho and soy kechap (each fermented with an *Aspergillus* mould). K. Heyne describes how kechap is made in Java using black soy beans, hibiscus leaves, and *Aspergillus oryzae* mold. Finally the sauce is boiled with Arenga sugar, star anise, and other flavourings until the solution is so thick that the salt begins to crystallize.

Large amounts of soy-bean oil (“kachang oil” [perhaps soy sauce]) are imported to Malaya. “In the East [East Asia] it is used chiefly as food, but has other uses such as lubricating, varnish-making, making printer’s inks, waterproof goods (Chinese umbrellas and lamps) and also for illumination. A process was patented 20 years ago for making artificial rubber, starting with soy oil. Note: Burkill was a British authority on the flora of southern and southeastern Asia.

“Criminal use: The hairs on the pods seem to be capable of causing a certain amount of irritation within the digestive tract. Gimlette (Malay Poisons, ed. of 1929 p. 169) records a case of administration of them with food in a criminal attempt to poison. He calls them a substitute for bamboo hairs in such circumstances.

“Joss-sticks: Ash of the stem, mixed with resin of *Canarium*, is said to make joss-sticks in Indo-China (Crevost and Lemarié, Cat. Prod. Indochine, 1917 p. 106).”

87. van Veen, A.G. 1935. Het B-1 gehalte van voedingsmiddelen [The vitamin B-1 content of foods]. *Geneeskundig Tijdschrift voor Nederlandsch Indie* 75(25):2050-64. [25 ref. Dut; eng]

• **Summary:** The vitamin B-1 (anti beri-beri) content in International Units of soybeans (*sojaboonen* or *katjang kedelee*; high), soy tempeh (*tempe kedelee* “prepared by means of fungi from soy-beans;” moderate), and tofu (*tahoe*; low) is given. Address: Geneeskundig Laboratorium, Batavia (Jakarta, Indonesia).

88. van Veen, A.G.; Mertens, W.K. 1935. De invloed van het bongkrekzuur op de koolhydraatstofwisseling [The influence of bongkrek acid on carbohydrate metabolism].

*Geneeskundig Tijdschrift voor Nederlandsch Indie* 75(13):1059-71; 75(14):1116-27. [24 ref. Dut]

• **Summary:** About the causes of bongkrek poisoning in Java. Address: Uit het Centraal Geneeskundig Laboratorium te Batavia-C.

89. van Veen, A.G.; Mertens, W.K. 1936. Der Einfluss der Bongkreksaeure auf den Kohlehydratstoffwechsel [The influence of bongkrek acid on carbohydrate metabolism]. *Archives Neerlandaises de Physiologie de l'Homme et des Animaux* 21(1):73-103. March. [34 ref. Ger]

• **Summary:** In Central Java, bongkrek poisoning is greatly feared. The authors recently demonstrated that a bacterium they discovered (*Bacterium cocovenenans*) produces the toxic principles in two normally-edible foods—Bongkrek and Semaji—prepared from coconut press-cake or grated fresh coconut. The two toxic principles are toxoflavin and bongkrek acid (*Bongkreksaeure*).

• **Summary:** A superb early work, containing extensive original information, looking at developments with soybeans and soyfoods country by country, worldwide. Contents. Preface (p. 1). A. Culture of soy (*soja*; p. 4): 1. Botanical description, selection, classification of the varieties. 2. Culture properly said. 3. Enemies and illnesses.

4. Culture in the various countries: 4a. The Americas (p. 38): Antigua, Argentina, Bermuda, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, USA (gives details on all varieties grown, and describes production, history, varieties, and cultural practices in North Carolina, Illinois, Indiana, Iowa, Maryland, Massachusetts, Mississippi, Missouri, New York, Ohio, West Virginia, Wisconsin, Conclusion), Guadeloupe, Guatemala, British Guiana, Dutch Guiana, British Honduras [Belize], Jamaica, Barbados, Martinique, Mexico, Montserrat, Peru, Puerto Rico, El Salvador, Trinidad and Tobago, Uruguay.

4b. Europe (p. 101): Germany, the Danubian countries, Austria, Spain, France, Great Britain, Hungary, Italy,

Netherlands, Poland, Romania, Switzerland, Czechoslovakia, Turkey, USSR.

4c. Asia (p. 128): Ceylon, China and Manchuria, Cyprus, Federated States of Malaysia, British India (incl. Punjab, Bihar and Orissa, Burma, Berar, Madras Presidency, Bombay Presidency, Bengal (incl. Nepal, Bhutan, Sikkim, and the district of Darjeeling), Assam, North-West Frontier Province, United Provinces), Netherlands Indies, Indochina (incl. Tonkin, Annam, Laos, Cambodia, and Cochinchine), Japan, Palestine, Siam.

4d. Africa (p. 146): French West Africa, Algeria, Belgian Congo, Cyrenaica, Egypt, Eritrea, Madagascar, Morocco, Mauritius (Ile Maurice), Reunion (Réunion), Rhodesia, Anglo-Egyptian Sudan, Tripolitania, Tunisia, Union of South Africa.

4e. Oceania (p. 153): Australia, Fiji Islands, Hawaii, New Caledonia, New Zealand, Philippines.

B. Utilization of soya (p. 158): 1. The soybean in human nutrition and in industry: Whole soybeans, chart of the uses of whole soybeans, use of soya in the green state (green vegetable soybeans), soy sauce (*dau-tuong* of the Annamites, or *toyo*, named shoyu by the Japanese, or *chau-yau* or *chiang yoo* by the Chinese), condiments and sauces based on soya in the Netherlands Indies (*tempe*, *ontjom*, *tempemori* and *tempe kedele* [various types of tempeh and onchom, p. 168-70]), *tao tjo* [Indonesian-style miso], *tao dji* [soy nuggets], *ketjap*, *ketiap benteng* [Indonesian-style soy sauce], soymilk (*le lait de soja*), yuba (*crème de lait de soja*), tofu (*le fromage de soja*) and fermented tofu (*des fromages fermentés*, made by Li Yu-ying near Paris), soymilk casein (*caséine du lait de soja*, for industrial use, including vegetable albumin, or galalithe [galalith]” [isolated soy protein], and artificial wool), soy lecithin (*lécithine de soja*), soy flour (*la farine de soja*, incl. soy bread, soy pastries, and soy cocoa).

Note 1. This is the earliest document seen (Sept. 2010) that uses the term *benteng ketiap benteng* to refer to an Indonesian-style soy sauce.

2. Soy oil (p. 194): Food uses, industrial uses (including soaps, products resembling petroleum, paints, varnishes, linoleum, and artificial rubber), extraction, directory of U.S. manufacturers of materials and equipment for soybean processing, directory of U.S. and Canadian manufacturers of food products based on soya (*produits alimentaires à base de soja*, p. 205-06), directory of U.S. manufacturers of industrial soy products (p. 206-07).

3. Soybean in the feeding of domestic animals (p. 207): Forage, hay, silage, pasture, soybean seeds, the minerals in soybeans, soya as a feed for dairy cows, cattle, buffaloes, sheep, hogs, horses and mules, poultry.

4. Use of soya as fertilizer (p. 257). C. The trade of soya and of its by-products (p. 363): Production of soybeans in the principal countries, economic importance of soybean culture in the USA, soybean trade/commerce including tables of the major importers and exporters, and amounts traded annually

in 1931-1934, price of soybeans, cost of production.

List by region and country of people and organizations that responded to a questionnaire sent by IIA (p. 273-76). Bibliography of main publications consulted, listed by region and country of publication.

Reunion (*Ile de la Réunion*): “The soybean (Le Soja) is only cultivated as an experimental crop, on a few square meters at the agronomic station” (p. 148).

Fiji (*Iles Fidji*): Soybean cultivation is not yet practiced in this colony; however soybean seeds are currently being imported in order to conduct a trial.

New Caledonia: In 1928 soybean cultivation was introduced to New Caledonia.

Note 2. This is the earliest document seen (Dec. 2007) concerning soybeans in Bhutan, Costa Rica, Dominican Republic, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Morocco, New Caledonia, Palestine, Peru, or Réunion, or the cultivation of soybeans in Bhutan, Costa Rica, Dominican Republic, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Mexico, the Middle East. Morocco, New Caledonia, Palestine, Peru, or Réunion. It is also the earliest document seen (Dec. 2007) concerning soybeans in connection with (but not yet in) Cyprus; it is stated that soybeans are not grown on the island of Cyprus. Soybean culture is not practiced in the Italian colonies of Eritrea (Erythrée, now part of Ethiopia) or Cyrenaica (Cyrénaïque, now part of Libya).

Note 3. This document contains the earliest date seen (June 2007) for soybeans in Bhutan, New Caledonia, or Réunion, or the cultivation of soybeans in New Caledonia (1928), or Bhutan or Réunion (1936) (One of two documents).

Note 4. This is the earliest French-language document seen (Sept. 2011) that mentions tempeh, which it calls “tempe” (p. 168). It notes that, in general, the indigenous people of the Netherlands Indies use soybeans mainly to make *tempe*, a product which, throughout central and eastern Java, takes the place reserved for *ontjom* in western Java. Tempeh is found in two forms: either in large flat cakes which are cut at the time of sale into small square morsels, or wrapped in folded banana leaves. A detailed description of the preparation of each of these two types of tempeh is given as well as another type of tempe, called *tempemori*, which is made with soybeans and coconut presscake.

Soybean culture is not known to be practiced in the following countries or colonies: Antigua, Barbados, British Honduras (renamed Belize in about 1975), Trinidad and Tobago. Address: Rome, Italy.

92. Shih, You-Kuang. 1937. Study on the molds concerned in the fermentation of wheat gluten in China. *Lingnan Science Journal* 16(1):27-38. Jan. 13. [21 ref. Eng; chi]

• **Summary:** The author begins by discussing the research of others on *fu-yu*, which he calls “preserved soy bean curd.”

He notes that P.W. Liu, in his unpublished work, “isolated a species of *Mucor* from Mei-Tou-Cha [meitauza; Chinese characters are given], or naturally fermented dregs of soy bean curd [i.e., naturally fermented okara], which is a common foodstuff in Wuchang and Hankow.” It is prepared by frying in vegetable oil or animal fat.

“No mention of the so-called Minchin [W.-G. *mien chin*, pinyin *mianjin*] fermentation has been made as yet in literature. Minchin is, chemically speaking, the gluten of wheat.” Rich in protein, it has a delicious taste. In some districts it is commonly eaten as a substitute for meat by Buddhists who do not eat meat. It is also occasionally used as a palatable dish at banquets. “Although we do not know definitely when it came to be used as an article of diet, it probably was at least hundreds or even thousands of years ago. Recently it has become a canning industry in large cities, San-Loh Wusih Minchin of Kiangsu province being a well-known example.”

The author then gives a detailed description of how raw wheat gluten is made in China. To the high-protein wheat flour, about 0.5% to 1% by weight of table salt is added before any water is added in a large earthen jar. The dough is allowed to stand for 1-2 hours under water before the starch is removed in a strainer. A high grade of minchin is one that is almost free of starch content, pale in color, and very sticky and flexible.

Raw wheat gluten is typically made into one of four end products: (1) Fresh minchin: The raw minchin is kneaded into desirable shapes then boiled and seasoned for eating. When prepared for sale at a market in hot weather, it is usually preserved in water to prevent rapid spoilage by bacteria; (2) Roasted minchin is prepared by roasting raw minchin in a flat pan over a fire. A small mass of raw minchin will bubble up into a large globose shape with a very loose and porous texture. It is usually used to prepare soups, or cooked with other foods, and can be purchased even in small grocery stores in some localities; (3) Fried minchin is prepared by frying raw minchin with vegetable oil and seasoning. Recently the preparation of this kind of minchin has become a canning industry, as noted above. It has an excellent taste and is especially appropriate for travelers; (4) Fermented minchin (fermented wheat gluten) is made by putting fresh minchin into a suitable container, usually an earthen jar, and covering it tightly. After 2-3 weeks at room temperature, it will be overgrown with molds and bacteria. Then an excess amount of table salt (sodium chloride), more than 10% by weight of the molded minchin is added. After thoroughly mixing the salt into the minchin, it is allowed to stand for 2 more weeks to age. It is then commonly cut into thin strips and used as a condiment with other foods. Usually the fermentation is carried on during the winter because in hot weather it spoils rapidly due to bacteria.

Minchin is most commonly eaten by the people in

northern China, however fermented minchin is rarely heard of except in Wuchang, Hankow and Hanyang of Hupeh Province so far as the author knows. According to the “Investigation of diet nutrition of Chinese in Manchuria” by Lu (1934), the average amount of Minchin consumed a day by one person of different classes, and its nutritive value are as follows (Table 1): Physicians 14.4 gm of minchin, 3.2 gm of protein; Members of the bank 13.8 gm, 3.1 gm of protein; Officials 11.2 gm, 2.5 gm of protein; School teachers 3.7 gm, 0.8 gm of protein; Middle class families 1.8 gm, 0.4 gm of protein.

Minchin appears to contain a mixture of molds including *Paecilomyces varioti*, *Aspergillus flavipes*, *Cladosporium elegans*, *Fusarium orthoceras*, *Syncephalastrum racemosum*, *Trichothecium roseum*, and *Penicillium* species.

Note 1. This is the earliest English-language document seen (Feb. 2007) that uses the term “fu-yu” to refer to fermented tofu.

Note 2. This is the earliest document seen (Sept. 2011) concerning okara tempeh (which it calls Mei-Tou-Cha), and the earliest English-language document seen (Sept. 2011) that uses the term “Mei-Tou-Cha” to refer to okara tempe. Address: Lab. of Applied Mycology, College of Agriculture, Hokkaido Imperial Univ., Sapporo, Japan.

93. Shih, You Kuang. 1937. Untersuchungen ueber eine neue *Mucor*-Art auf “Meitauza” aus China [Investigations on a new type of *Mucor* mold on meitauza from China]. *Transactions of the Sapporo Natural History Society* 15(1):13-23. July. [51 ref. Ger]

• **Summary:** Contents: Introduction. 1. On the material to be investigated and its preparation. 2. Morphological. 3. Physiological: Properties of the culture, influence of temperature, influence of hydrogen ion concentration [pH], influence of the carbon source, influence of the nitrogen source, investigation of the fermentation of sugars, formation of alcohol and acids, saccharification of starches. 4. Diagnosis (conclusion).

Meitauza is okara, fermented with a *Mucor* mold. The product is traditionally made in many places in China such as Wuchang, Hankow, and Hanyang, preferably in winter, as follows: Form okara into round cakes 4½ to 5 inches in diameter, 1 inch thick at the center and 3/8 to ½ inch thick at the edges. Place the cakes in a vessel of the same size and allow to ferment in a room with moderate aeration until, after 10-15 days they are covered with a white mycelium of *Mucor meitauza* Shih. It is said that the best meitauza cannot be prepared in hot weather; it is usually prepared in winter. At higher temperatures bacteria can grow faster than the desired mold, and thus spoil the fermentation. Dry the cakes in the sun for several hours, then sell. Meitauza is served either fried (*gebraten*) in vegetable oil or cooked with vegetables then seasoned; it is widely considered to be tasty and nutritious.

"I received the research material [cakes] by post from Wuchang. It was still covered with a thick mycelium, which was downy and grayish white. Its form and size were about the same as described above. Through the usual culture methods, I isolated a type of *Mucor*. I then investigated its morphological and physiological characteristics."

Shih (working in the laboratory of Professor Dr. Jun Hanzawa in Hokkaido, Japan—with assistants Y. Tamura and S. Yoshimura) described the *Mucor* mold he isolated as a new species. He tried growing it on tofu (*Soja-Bohnenkäse*) but found that it grew best on moist rice and okara. The optimal temperature is 27-32°C, and pH 5-6.

A full page of illustrations shows at least 9 views of *Mucor meitauza*, including the sporangiospores, columella, branching of the spore-carrying parts, and chlamydospores.

Note 1. Hesseltine (1965, p. 190) noted that from the fresh product, Shih isolated a *Mucor* which he carefully studied and described as a new species, *M. meitauza*. However a comparison of his species illustration and his observations indicate it is a synonym of *Actinomucor elegans*, already noted as one of the principal fungi involved in the preparation of fermented tofu.

Note 2. This is the earliest document seen (Sept. 2011) that contains the word "meitauza" (spelled like this, without hyphens).

Note 3. Meitauza is apparently a type of (or close relative of) okara tempeh. Address: Laboratory for Applied Mycology, Agricultural Institute, Hokkaido Imperial Univ., Sapporo, Japan.

94. van Veen, A.G.; Baars, J.K. 1938. Ueber das Toxoflavin, ein Isomeres von I-methyl-xanthin [On toxoflavin, an isomer of I-methyl-xanthin]. *Recueil des Travaux Chimiques des Pays-Bas* 57(3):248-64. March 15. [15 ref. Ger]

• **Summary:** Discusses Bongkre- and Semaji- poisoning, and the yellow poison named Toxoflavin, produced by *Bacterium cocovenenans*. Address: Batavia, Chem. Abt. des "Geneeskundig Laboratorium" (Chemical Div. of the Medical Lab.).

95. Kurano, K.; Itai, J.; Nonomura, S. 1939. Rizopusu kin ôyô shôyu jôzô shiken (Die Anwendung des Rhizopus anstatt des Aspergillus fuer das Syoyu brauen) [Application of *Rhizopus* instead of *Aspergillus* for brewing shoyu]. *Jozo Shikensho Hokoku (Report of the Brewing Experiment Station)* No. 128. p. 289-95. [Jap]

96. Soetisna, Mas. 1939. Kedelé mas Toegoemoeljo [The yellow soybean of Toegoemoeljo]. *Kolonisatie Bulletin* 6:9-11. [Ind]

• **Summary:** In the author's name, the term "Mas" may be a Javanese title, of lower rank than Raden. "Toegoemoeljo" (presently spelled Tugumulyo) is a place name but it can also be translated as "Column/Pillar of Glory," in Javanese

culture refers to the manifestation of the highest level of happiness. The document tells about yellow soybeans from this place. Address: Adjunct-landbouwconsultent di Loeboek Linggau.

97. Beadle, George W.; Tatum, E.L. 1941. Genetic control of biochemical reactions in *Neurospora*. *Proceedings of the National Academy of Sciences, USA* 27(11):499-506. Nov. [11 ref]

• **Summary:** This epochal paper, which reported the first mutants (*Neurospora*) with biochemically defined nutritional requirements (their inability to carry out specific biochemical processes), started the revolution in molecular biology. Address: Biological Dep., Stanford Univ., California.

98. van Veen, A.G. 1941. [The protein supply in infertile districts of Java]. *Natuurwetenschappelijk Tijdschrift voor Nederlandsch Indië* 101:321-23. [Dut]\*

99. Beadle, George W. 1945. Genetics and metabolism in *Neurospora*. *Physiological Reviews* 25(4):643-63. [67 ref]

• **Summary:** "Near the close of the last century the well-known Dutch botanist, F.A.F.C. Went, was stationed in Java. He was interested in fungi used for technical purposes and his attention was called to *Monilia sitophila*, now known as *Neurospora sitophila*, which was used by the Javanese in making a kind of delicacy known as 'ontjom'."

"Prof. F.A.F.C. Went undertook to study the 'ontjom fungus' from a physiological standpoint. He encountered serious difficulty, however. At the high humidities of the tropics the fungus has the discouraging habit of growing rapidly through the cotton stoppers of the containers in which it is cultured. The investigations were deferred until his return to Holland."

"In a discussion of the results of experiments in which raffinose was added to media containing other sugars, Went came close to discovering that some accessory factor (biotin) was necessary for the growth of *Neurospora*."

"The year 1927 marks the birth of the genus *Neurospora* (literally 'nerved spores') and the beginning of its use in genetic studies. In this year Shear and Dodge published their account of the life histories of members of the genus, including the sexual stages. They proposed the generic name and described the heterothallic species, *sitophila* and *crassa*, and the homothallic species, *tetrasperma*. Dodge immediately recognized the advantages of *Neurospora* for genetic studies and undertook a series of investigations which have been continued without interruption since."

Note: The author won the Nobel Prize in Physiology/Medicine in 1958 for his work with *Neurospora*. Address: School of Biological Sciences, Stanford Univ., Stanford, California.

100. Swingle, Walter T. 1945. Our agricultural debt to Asia.

In: Arthur E. Christy, ed. 1945. *The Asian Legacy and American Life*. New York: The John Day Co. x + 276 p. See p. 84-114. Index. 21 cm. Also published by The Asia Press, 1942. [2 ref]

• **Summary:** “The beginning and foundation of the Library of Congress Orientalia Collection was the great Chinese encyclopedia, the *Ssu k'u ch'uan shu*, a gift of the Empress Dowager of China.

“About 1914, Dr. Swingle, then head of the Office of Crop physiology and Breeding, Bureau of Plant Industry, U.S. Dept. of Agriculture, was able to secure the services of a Cornell graduate, Dr. Hing Kwai Fung, to make abstracts and/or translations of information in the *Ssu k'u ch'uan shu* regarding economic plants. Dr. Swingle interested Dr. Herbert Putnam, Librarian of Congress in increasing the holdings of Chinese books, especially gazeteers [sic, gazetteers] which contain local information. When Dr. Fung returned to China, he was given a modest sum for purchasing books. Dr. Fung was able to persuade the Commercial Press (the largest publishing firm in China, located in Shanghai) to act as receiving agent for books for the Library of Congress, and to ship them to Washington [DC]. Soon after, Dr. Swingle was sent to the Orient—in March 1918—by the Dept. of Agriculture.” There he made arrangements for collecting books in Tokyo and Shanghai.

“As American merchants and missionaries gradually penetrated into China, they sent home more and more plants and trees. The Arnold Arboretum, organized and directed by the great tree expert, C.S. Sargent, financed extensive trips to the Orient to obtain botanical specimens and seeds of ornamental trees and shrubs as well as photographs of them as they grew in their native habitat. These trees and shrubs revolutionized the garden and park plantings of the northern parts of the United States. The illustrated popular books of E.H. Wilson, who made many trips to the Orient for the Arnold Arboretum, helped to arouse interest in the very rich arboreal flora of China...

“The Plant Introduction Service of the U.S. Department of Agriculture was organized by David Fairchild in 1897; he did very extensive exploring for foreign economic and ornamental plants from 1898 on, and directed the Plant Introduction Service from 1909 to 1928. I was fortunate enough to be one of the first ‘agricultural explorers.’” Of these men Frank N. Meyer and P.H. Dorsett were outstanding, not only for the number and value of the plants they secured, but also for the detailed and accurate descriptions of every plant they sent to Washington.

“P.H. Dorsett some years later, during the twenties, traveled widely in North China taking many fine photographs of Chinese crop plants and writing descriptions of the culture, harvesting and curing of each. On these trips he collected many varieties of soy beans largely through the utilization of a new and potent method of securing the willing cooperation of all educated Chinese people. A

complete translation, prepared by Michael J. Hagerty under my direction in 1917 of the chapter on soy beans contained in a standard Chinese work on economic plants (the *Chih Wu Ming T'u K'ao* by Wu Ch'i-chun) had been furnished the plant explorers looking for soy bean varieties. This translation, covering eighty-two pages, discussed several hundred varieties, telling where they were largely grown. In all cases the name of the variety and the name of the locality where it was grown were not only spelled out in English but also written carefully in Chinese characters. An index made it easy to turn to any variety under discussion and see what was said about its culture.

“This was a turning point in field explorations in China. Such indexed translations in the hands of foreign plant explorers insured the attention of all educated Chinese, who gladly directed the explorer to the nearest source of the various named varieties. I had learned this at first hand in 1915 when studying varieties of Citrus in southern China. Surprise and skepticism about the foreigners knowledge of Chinese books gave way to astonishment and warm approbation.”

“The soy bean is a striking example of the introduction of a new crop... Soy beans were sent from China to France as early as 1740 and from 1779 were grown in the famous Botanic Garden of Paris. Benjamin Franklin, who had been a member of the French Academy of Sciences since 1772, sent seeds back to the United States and urged that they be given a trial. But in spite of his plea, the soy bean remained merely a curiosity in this country for more than a century.

“In the late eighties [sic, 1890] Prof. C.C. Georgeson brought soy bean seeds from Japan, where he had been teaching at the Agricultural College at Komaba, and planted them in a field on the campus of the Kansas State Agricultural College. I could see the stunted soy bean plants from the windows of the botanical laboratory where I was a teen-age research assistant. This variety, adapted to the perpetual spring climate of Komaba near Tokyo, did not do well on the bare Kansas hills, often swept by hot dry winds. And nothing happened. Soy beans did not arouse interest among Kansas farmers until many years after this failure.

“In the third decade of the twentieth century Dorsett sent to Washington more than 800 named soy bean varieties from China, Manchuria and Japan. These together with shipments secured by Dr. David Fairchild from his numerous correspondents in the Old World, especially in Asia, amounted by 1928 to a total of more than 2800 packages of soy beans, almost all named varieties but many of them duplicated, some of them many times. Meantime tests made by W.J. Morse, in charge of soy bean culture for the Bureau of Plant Industry, showed that many varieties had a narrow range of adaptability. Accordingly, from 1929 to 1931, Morse joined Dorsett in the Orient and these two experts, with trained Chinese helpers, brought to this country the largest single collection of soy bean varieties ever assembled. As

soon as Morse returned from studying soy beans in Asia and attacked the problem of finding which Asiatic varieties adapted to the different regions and selecting and breeding to make them fit various American soils and climates, a remarkable change occurred in soy bean culture. Yields went up and plantings increased year by year...

"One of the best-known industrial uses for soy bean proteins is for making water-resistant glue. No less than 30,000 tons of soy bean glue were made in 1942 by a single firm and its licenses annually, most of it being used in the rapidly growing plywood industry. Soy bean proteins have been enthusiastically used by Henry Ford in his automobiles, being mixed with the more expensive phenolic resins, thereby reducing costs and also yielding a more plastic, freer-flowing mixture which takes dyes better...

"As long ago as 1917-1918 Dr. Yamei Kin set up under my general supervision for the U.S. Department of Agriculture a soy bean mill in New York City in the hope of supplying tofu to increase the bulk and food value of meat dishes served to soldiers in training at near-by camps. Dr. Kin succeeded in making excellent tofu. She even served to a group of army officers a meal composed entirely of soy bean dishes! However, it proved impossible to test tofu on a large scale at that time, since we could not get priority for transportation of soy beans from North Carolina, then the nearest region where they were grown on any considerable scale.

"A splendid example of a double fermentation is the soy bean cheese called *nam yüe* by the Cantonese and *sufu* in North China. It is preferred even to the best Roquefort as a salad dressing constituent by those who have had the opportunity to try it. It is made by Chinese masters of the cheesemaker's art who believe that its fermentation is an insoluble mystery.

"Shih Chi-yien, then working in the American University of Soochow, published in 1918 the first English account of the most important fermented bean foods. He traced the making of *tofu* from soy beans back to the Han dynasty (A.D. 22). Ten years later Wai Ngan-shou [Nganshou], one of the first scientifically-trained Chinese microbiologists and fermentation experts, was able to isolate and identify as a new species of *Mucor* the mold that makes possible the *nam yüe* fermentation. It is a curious fungus, *Mucor sufu*, distantly related to the miraculous *Penicillium notatum* whose marvelous curative action has only recently been discovered. A third fermentation expert, Shih You-kuang, studied another soy bean fermentation product, *meitauza*, made by another species of *Mucor*, and published an illustrated account of it in German in 1937. In his review of the literature of *Mucor* fermentations, Shih You-kuang cites no fewer than thirty articles by eighteen authors all based on Chinese fermentations...

"Miss Elizabeth Groff, under my direction in 1918, made a thorough study of the fermentation of soy sauce in

the famous factories of Canton, China, and published the first detailed account of the process in the *Philippine Journal of Science* for 1919."

"It has been my privilege to assist in building up a great Chinese library in the Library of Congress, under the enlightened policy of Dr. Herbert Putnam, beginning in 1912. The Orientalia Division, headed by Dr. Arthur Hummel, is now the largest Chinese library outside of Asia and is probably larger than all the European libraries of Chinese books combined. It now contains, Dr. Hummel estimates, about 230,000 Chinese volumes (*Chüan*) and some 20,000 more will soon be added in the form of bibliofilm copies of very rare works from the Chinese National Library, sent to Washington for safekeeping."

Note 1. This is the earliest secondary document seen that mentions the early introduction of soybeans to America by Benjamin Franklin.

Note 2. This is the earliest English-language document seen (Feb. 2007) that uses the word *nam yüe* to refer to Chinese-style fermented tofu. It is 2nd earliest English-language document seen (Feb. 2007) uses the word "sufu" to refer to Chinese-style fermented tofu, and the first such document written by a Westerner. Photos show Dr. Walter Tennyson Swingle, and his wife Maude K. Address: Collaborator, Bureau of Plant Industry, USDA; Consultant on Tropical Botany, Univ. of Miami, Florida.

**101. Product Name:** [Tempeh].

**Foreign Name:** Tenpe.

**Manufacturer's Name:** ENTI (Eerste Nederlandse Tempe Industrie).

**Manufacturer's Address:** Zevenhuizen, Netherlands.

**Date of Introduction:** 1946. April.

**New Product-Documentation:** Form filled out by from Firma Lembekker. 1982. Says ENTI was started in April 1946, then sold to Mrs. Duson in Zevenhuizen; Letter from Sjon Welters. 1982. Sept. 27. "The company was founded around 1954." Mrs. Duson, who is now the producer, took over about 10 years ago from the foundress.

Letter from Sjon Welters. 1983. March 2. The official name of this company is Firma Enti. It was founded by a woman named Wedding. Her man was an Indonesian. Mrs. Duson, the woman who owns it now, could not remember if Mrs. Wedding was Dutch or Indonesian.

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 28. This was Europe's first commercial tempeh company, founded in April 1946 by a Dutch couple whose last name was Wedding. They had learned to make tempeh while living in Indonesia. In the early 1970s the company sold to Mrs. Duson in Zevenhuizen. It was then making 2,000 lb of tempeh a day. Interview with Sjon Welters. 1984. Oct. 25. ENTI went out of business in January 1984 and the original Indonesian culture, now over 135 years old, was deliberately destroyed.

Note: This is the earliest document seen (Sept. 2011) that gives tempeh production statistics for a particular manufacturing company.

102. Roelofsen, P.A. 1946. Tempeh-bereiding in Krijgsgevangenschap [Tempeh-making in prisoner-of-war camps]. *Vakblad voor Biologen* 26(10):114-16. Oct. [Dut]  
**• Summary:** Throughout this article, and in the title, the Dutch and Malay word previously spelled tempé or tempe is spelled “tempeh.” Note: This is the earliest Dutch-language publication seen that uses the word tempeh. Several years later, that spelling would become the standard English-language spelling. Address: Director, Deli Proefstation, Medan (Sumatra, Indonesia).

103. Stahel, Gerold. 1946. Foods from fermented soybeans as prepared in the Netherlands Indies. I. Taohoo, a cheese-like substance, and some other products. *J. of the New York Botanical Garden* 47(563):261-67. Nov.  
**• Summary:** Contents: Introduction. Sprouts and milk from soybeans. Cheese-like products. How taohoo is made. Condiments made with *Aspergillus*.

In East Asia—as in Surinam—people have developed “means for overcoming the rather bitter taste of soybeans and their failure to cook soft. They have learned to ferment the soybeans with quick-growing fungi, thus making several palatable and wholesome foods.

“Most important of these foods are *taohoo* and *tempe*; also *taokoan*, a cheese made from *taohoo*; *taotjo*, a fermented paste-like condiment, and *ketjap*, which is soy sauce. Soybean milk is also made, but without a fungus, and sprouted soybeans are widely used by orientals.”

“In the Netherlands East Indies [later Indonesia] sprouted soybeans are called *tokolán* or *taogé*. They are one of the ingredients of every ‘rijst-tafel’ (rice table, or combination of dishes) and therefore are never lacking in the ‘passar’ (market). Even in our Paramaribo market *tokolán* is displayed every day.”

In China, soy milk is used in the same manner as cow’s milk. It is also consumed in the United States, though on a very limited scale. In the Netherlands East Indies, soy milk “is only slightly known as food, but it is produced in large quantities for the manufacturing of soy cheese, called *taohoo* or *tahoo*.”

The curd [tofu] “is either eaten fresh or baked in oil or lard. In China it is sometimes processed further into a kind of real cheese by impregnating the curd with turmeric and reducing the water content by heavier pressing. This cheese, called *taokoan* [Chinese: *doufugan*], has a yellow color and can be shipped abroad.”

“After *tempe* [made with *Rhizopus Oryzae*], *taohoo* is the most common form of soybean product eaten in the Netherlands East Indies. In China, it is the most important soy product. *Taohoo* is manufactured here in Surinam only

on a very limited scale, by a single Chinese store-keeper close to the Paramaribo market-halls along the Surinam river. Twice daily, between 2 and 4 o’clock in the morning and again in the afternoon, he manufactures 11½ kilograms of *taohoo*, to be sold after 6 o’clock the next morning.” A detailed eyewitness description of the tofu-making process is then given.

Describes briefly how to make *taotjo* (a kind of paste) and *ketjap* (soy sauce) with *Aspergillus oryzae*, another fungus. *Taotjo* is not made in Surinam, but *ketjap* is. “To make *taotjo*, boiled soybeans are mixed with roasted meal of wheat or glutinous rice. The mass is wrapped in hibiscus leaves, which commonly harbor the *Aspergillus* fungus.” After 2-3 days the moldy mass is immersed in brine, where it is kept for several weeks. “Palm sugar is added at intervals. *Taotjo* must be made in the dry season, because every day it has to be brought outside into the sun and air for hours.” This dish is eaten in East Asia with the ‘rijst-tafel.’”

To make *ketjap*, soybean are boiled, cooled, then wrapped in hibiscus leaves—but without mixing in roasted meal. After fermenting for 2-3 days, the mass is immersed in brine, as with *taotjo*. Each day, for one to several months, it is exposed to the sun. A little palm sugar is added at intervals. Then the fluid is filtered off and the solid residue is cooked several times with fresh water to extract all the soluble material. “The fluid is then concentrated by slow boiling. Spices and other piquant materials are added, according to the *specialité de la maison*. These may include galangal, ginger, cloves, Jew’s ear fungus, and dried and ground fish and chicken meat.”

Photos show: (1) Chinese kitchen [shop] equipped with implements for *tahoo* manufacture, with hand-turned millstones, soybean mash flowing into cheesecloth bag hanging in wooden barrel, press, earthenware pot filled with brine for the “coagulation of the curd.” (2) Four pieces of fresh *taohoo*, four-fifths natural size. (2) Four pieces of freshly baked *taohoo*, four-fifths natural size.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “*taohoo*” or “*taokoan*” to refer to tofu. Address: Agric. Exp. Station, Paramaribo, Surinam.

104. van Veen, A.G. 1946. De voeding in de Japansche internerings-kampen in Nederlandsch Indie [The food in Japanese prisoner of war camps in the Netherlands Indies]. *Voeding* 7(5):173-86. Dec. 15. [Dut; eng; fre]

**• Summary:** Among the foods consumed in these camps were soybeans (*sojaboonen*), *tempeh* (*tempe*, see p. 175, 183-84), and *ontjom*, starting in November 1944. “The food was very insufficient, calorically as well as regards further composition and taste. So numerous cases of nutritional oedema and other deficiency phenomena occurred. The construction of kitchens, bakeries and such was done by the inhabitants of the camps themselves with the most primitive

materials. Food yeast, baker's yeast, maize malt, vitamin B extracts and other useful products were also made by the inhabitants themselves mostly out of waste products. For the patients very simple diets were composed." Address: Geneeskundig Laboratorium, Hoogschool, Batavia (Jakarta, Indonesia).

105. Stahel, Gerold. 1946. Foods from fermented soybeans as prepared in the Netherlands Indies. II. Tempe, a tropical staple. *J. of the New York Botanical Garden* 47(564):285-96. Dec. [6 ref]

• **Summary:** Contents: Summary. Introduction. Experimenting with tempe. Native method of manufacture (used by a Javanese peasant woman named Sinem, living near Lelydorp. "Every day she makes about 80 tempes for sale"). Packaging the tempes (in large leaves). Rapid deterioration (after the tempe is 2½ days old). Quantities measured (losses during preparation and fermentation). Large tempes for festive occasions (containing 1 kg of soybeans in a layer 1 to 1½ cm thick fermented between leaves in a bamboo tray about 1 foot in diameter). Directions for making tempe.

During World War II, "soybeans were sent to New Guinea [probably Western New Guinea, called Netherlands New Guinea in 1946] by the United States Government to feed the Europeans and Indonesians living there. For two years the people had had none of this to them important food. What the shippers did not realize, however, was that plain soybeans would be unpalatable to people of Indonesian eating habits. A specific fungus was needed to ferment the soybeans into *tempe*, a food that would be relished. Since the Papuans, the aboriginals of New Guinea, do not use soybeans in any form, all cultures of the fungus were lost when connections were broken with other Indonesian islands.

"The author then was asked to send the tempe fungus from Surinam, where it was known to be in use by Javanese people living there. The pure cultures and quickly dried tempe cakes arrived in New Guinea by plane in a little more than a week. The people then were able to use the ample stores of American soybeans by making their familiar and well liked tempe cakes."

The author isolated the tempe fungus and used it to make tempe in a laboratory. He describes several local Surinam methods of making and packaging tempe. In Surinam the inoculated soybeans are wrapped in large monocotyledonous leaves, e.g., of the family Musaceae (such as the genera *Musa* and *Heliconia*), and also of the family Marantaceae, such as *Ischnosiphon*. 30 to 40 grams of inoculated beans are folded into each leaf. Then the packet is tied with rice straw or with raffia.

Photos show: (1) A young lady in the Paramaribo market, Surinam, holding a round bamboo tray loaded with leaf-wrapped packets of tempe. (2) Two close-up

shots (four-fifths natural size) of cakes of tempe as sold in the Paramaribo market; on the upper cake is a luxuriant growth of *Rhizopus Oryzae*, whereas on the lower cake the growth of the fungus is more scanty due to insufficient oxygen supply. (3) Longitudinal and cross-sectional views of "tempes" from the Paramaribo market; the lower ones are still wrapped in banana leaves. (4) Ten cakes of tempe made in a laboratory. All were wrapped with an *Ischnosiphon* leaf before incubation. Two cakes are shown still wrapped with the leaf, tied around the middle with a string. (5) "A large tempe, one foot in diameter, cultured between *Ischnosiphon* leaves on a flat bamboo basket called a 'tampa.'" (6) A lady "Making a tempe package with *Ischnosiphon* leaves."

Note 1. This is the earliest article seen about tempe [tempeh] published in the United States.

Note: This is the earliest English-language document seen (Sept. 2011) with the word "tempe" in the title. This new Address: Director, Agric. Exp. Station, Paramaribo, Surinam.

106. *Soybean Digest*. 1947. Soy foods in New Guinea. Nov. p. 14-15.

• **Summary:** This is a summary of two articles by Gerold Stahel (of Paramaribo, Surinam) on tempe [tempeh] and

taohoo [tofu] published in late 1946 in the *Journal of the New York Botanical Garden*. Three photos show tempe and two show taohoo.

Note: This is the earliest document seen (Sept. 2011) with the term “Soy foods” in the title.

107. Bruyn, G.F. de; Dulst, J. van; van Veen, A.G. 1947. Biochemie in een Interneringskamp [Biochemistry in an internment camp]. *Voeding* 8(2/3):81-96. [Dut]\*

108. Eek, Th. van. 1948. Re: *Rhizopus nigricans* culture and tempeh. Letter to Northern Regional Research Lab., Peoria, Illinois, May 18. 1 p. Typed, without signature.

• **Summary:** “We have sent you a culture of *Rhizopus nigricans*, generally used in the Netherlands East Indies to ferment soya beans for making ‘Tempe’ or ‘Tempeh.’ We isolated the culture from decayed pettels [sic, petals] of *Hebiscus*” [sic, *Hibiscus*].

In short the production is as follows: 1. Soak the soya beans in water for 12-24 hours to loosen the husks from the beans. 2. By stirring and agitating, the husks are easily taken off from the beans and because they are lighter they can be skimmed off. 3. In java the beans are laid in layers about half an inch thick between banana leaves after thorough mixing with about 1/20–1/10th of its volume with inoculum, taken from the previous batch. 4. After 24-36 hours the fungus has completely grown through the bean layer tightening them together; the layer can now be cut in pieces of 1½–2 inches. 5. These pieces are salted and fried in oil or fat.

“The beans in the fermenting layer may not be damaged, because in that case other microorganismen [sic, microorganisms] will spoil the fermentation of *Rhizopus*. Address: N.V. Centrale Suiker Matschappij, Research-Afdeling, van Noordkade 20, Amsterdam, Netherlands.

• **Summary:** Includes a detailed discussion and photo of “ragi” (starter culture) and how ragi is used to make tème (tempeh). Address: Dr., Hoofd van de Afdeling Makassar van het Algemeen Proefstation voor de Landbouw.

112. van Veen, A.G. 1950. Bongkre acid, a new antibiotic. *Documenta Neerlandica et Indonesica de Morbis Tropicis* 2(2):185-88. June. [6 ref. Eng]

• **Summary:** “Bongkre acid, which causes severe, usually fatal food poisoning in man because of its glycogen-mobilizing and hypoglycaemic action, possesses a strong antibiotic action on various fungi and yeasts, in which it probably influences glycogen metabolism.” Address: Biochemical Lab., Delft Inst. of Technology, Delft, Netherlands.

113. van Veen, A.G.; Schaefer, G. 1950. The influence of the tempeh fungus on the soya bean. *Documenta Neerlandica et Indonesica de Morbis Tropicis* 2(3):270-81. Sept. [18 ref. Eng]

• **Summary:** Contents: Introduction. Methods: Preparation of tempeh, methods of analysis. Results: Analysis of the composition of soya beans before and after treatment with the fungus (dry weight, ash, soluble carbohydrates, hemicellulose, crude fibre {cellulose}, fat {ether extract}, nitrogen compounds {quantitative, and qualitative}), extractability of tempeh with water and enzyme solutions. Conclusions.

The article begins: “Soya beans and their derivatives constitute not only one of the most valuable, but also one of the most interesting foodstuffs. The high protein and fat content is well known.” During fermentation the soluble carbohydrates mainly disappear and the protein is broken down into water soluble products. This explains the tolerance for tempeh of most patients with intestinal disorders. “The unpopularity of the soya bean is probably due for the greater part to the fact that it does not soften well during cooking

and is difficult to digest.”

“In the following pages we draw attention to an interesting and easily digested soybean product which is little known outside Indonesia, i.e., *tempeh kedele* (kedele = soya bean).”

“Soya beans are a very popular food on the island of Java, and are nearly exclusively consumed as *tempeh kedele*, a product prepared by means of a fungus (*Rhizopus oryzae*)... It is possible in this way to change products which are normally difficult to cook and digest into easily digested, comparatively easily prepared and cheap foodstuffs. Moreover, these have the advantage that little firewood is needed for cooking.

“In World War II the soya beans (which were well-nigh indigestible for the undernourished prisoners of war) were made into tempeh in many P.O.W. camps in Java and on other islands; even patients with dysentery and nutritional oedema were able to assimilate it (van Veen, 1946).”

Note: This is the earliest document seen (Sept. 2011), in English or any other language, with the word “tempeh” in the title. This new spelling quickly caught on, and since the early 1960s the word has consistently been spelled this way in English and most other European languages—except in a few Dutch and English-language publications written by Indonesians—the final “h” being added to prevent the word from being pronounced “temp.” Address: Lab. of Biochemistry, Inst. of Technology, Delft, The Netherlands.

Tokyo: Nihon Gakujitsu Shinkokai/Hirokawa Publishing Co. 11 volumes. In European languages and Romanized Japanese. [500 soy ref. Eng; Jap] • **Summary:** Contains extensive, excellent bibliographies on the following soy-related subjects (listed here alphabetically): Amazake (p. 139, only 2 references). Kôzi (Koji) (p. 398-410). Mirin (p. 464-65). Miso (p. 465-68). Natto (p. 8-9). Natto bacteria (p. 9-10). Penicillium (p. 210-63; see p. 240 for tempeh and ontjom). Rhizopus (p. 81-97). Soybean and soybean cake (p. 271-77). Syôyu [Shoyu] (p. 436-49). Tôhu (p. 498, only 3 references, all for nonfermented tofu). Each bibliography lists the documents in approximately chronological sequence. An unnumbered page near the beginning titled (in Japanese characters only) *Shuyô Inyo Bunken* [Main Periodicals Cited] lists 51 such periodicals, of which 12 are in Japanese. Of these twelve, all have the title written in Chinese characters, with an English translation, and a Chinese plus a romanized abbreviation of the Japanese title. Two examples: No. 2. *Nippon Nogeï Kagaku Kaishi*. J. Agr. Chem. Soc. Japan [J. of the Agricultural Chemical Society of Japan]. *Nô-ka*. No. 4. *Nihon Jozo Kyokai Zasshi*. J. Fermentation Association Soc. Japan. *Zyô-Kyô*. Note that much of the romanization throughout these 11 volumes is based on a system that is no

longer used. Nakazawa was born in 1878. Address: Japan.

115. Heyne, K. 1950. *De nuttige planten van Indonesië*. 2 v. [The useful plants of Indonesia. 2 vols.]. The Hague, Netherlands: W. van Hoeve. 1660 + ccxli p. Tables. 25 cm. [Dut]\*

• **Summary:** Contents: Ontjom. Dagé. The soybean (Sojaboon, Kedele). Cultivation. Seeds. Use: Tépépé, tao hoe, tao koan, tao tjo, soja (ketjap).

Note: This book by K. Heyne was formerly published under the title *De Nuttige Planten van Nederlandsch Indië*. This is not a new edition; only the title has been changed. Address: Hoofd van het Museum voor Economische Botanische Buitenzorg (Bogor).

116. Mahyudin, R. 1950. *Chasiat kedele dan tomat: Sebagai makanan rakjat* [The use of soybeans and tomatoes as foods]. Jakarta: Pustaka Rajkat. 42 p. [Ind] Address: Indonesia.

117. Nicholls, Lucius. 1951. *Tropical nutrition and dietetics*. 3rd ed. London: Baillière, Tindall and Cox. ix + 476 p. Feb. Illust. 24 cm. [40+\* ref]

• **Summary:** Table XI (p. 22), “Chemical and biological evaluation of proteins for growing rats,” contains 6 columns: Foodstuff, digestibility, Biological Value, Net Utilisation [NPU], Protein efficiency ratio, chemical score, and limiting amino-acid. “There is agreement in all methods of the high value of milk, eggs, and other foods of animal origin, and among those of vegetable origin, the proteins of soya bean flour hold a high place.” Values for soya bean curd [tofu] are also included. The next section is on supplementing proteins.

The long section titled “Pulses (legumes)” (p. 219-35) has this contents: Introduction. Dhals (Dals; peas which have been shelled, split and polished). Peanut. Bambara earth pea (*Voandzeia subterranea*). Soya bean: Importance in Asia, used in many forms: Nearly-ripe seeds [edamamé or green vegetable soybeans], dry seeds, soya bean emulsion (‘Milk’—contains a detailed description of how soya milk [Vitasoy] is made in Hong Kong, including exact amounts of all ingredients for 800 oz and the nutritional composition (%)), soya bean curd (may be smoked or dried), fermented curds [fermented tofu], fermented beans (tépépé), soya bean sauce, sprouted soya beans, soya bean flours, mixtures of soya beans and cereals, milk substitutes (for infant feeding in China). The genus *Phaseolus* may be divided into two types: Those of Asian origin and those of New World origin (Americas). Cow pea (*Vigna sinensis*, *V. unguiculata*, *V. sesquipedalis*). Egyptian kidney bean (*Dolichos lablab*). Horse gram. Chick pea. Cluster bean (*Cyamopsis psoraloides*). Four-angled bean or Goa bean (*Psophocarpus tetragonolobus*). Locust bean (*Ceratonia siliqua*). African locust bean (*Parkia biglobosa*, *P. filicoidea*). Sword bean (*Canavalia gladiata*). Jack bean (*Canavalia ensiformis*).

Velvet bean (*Mucuna* spp.). Honey locust (*Prosopis juliflora*). Garden pea (*Pisum sativum*). Broad bean (*Vicia faba*—not a tropical plant). Yam bean (*Pachyrrhizus erosus*). West Indian locust (*Hymenaea courbaril*). Madras thorn (*Pithecellobium dulce*).

Phaseolus—Asian: *Phaseolus aureus*: green gram [mung bean]. *Phaseolus mungo*: black gram. *Phaseolus calcaratus*: rice bean. *Phaseolus actinifolius*: moth bean. *Phaseolus angularis*: adzuki bean. New World: *Phaseolus lunatus*: lima bean. *Phaseolus vulgaris*: kidney bean. *Phaseolus multiflorus*: scarlet runner. The subsection titled “Substitutes for milk” (p. 231-35) discusses soya milk. Goitrogenicity of [raw] soya beans (p. 376). Saponins in foodstuffs (incl. soya bean; p. 385). Table 62 (p. 404-05) gives the botanical name and composition of pulses, incl. soya bean, soya bean curd, soya bean milk, carob bean, Goa bean, tepary bean. Table 66 (p. 410-11) does the same for fresh legumes, incl. broad bean, French beans, pea, pea nuts, and sprouted soya. Table 67 does the same for nuts, oil seeds, and miscellaneous seeds, incl. almonds, coconut, coconut “water,” coconut “milk,” linseed, pumpkin seed, sesame (gingelly), sunflower seed, and sunflower seed (kernel).

Note 1. This is the earliest English-language document seen (Feb. 2007) that uses the term “fermented curds” to refer to fermented tofu.

Note 2. The title C.M.G. (Companion of St. Michael and St. George) is an honor conferred upon those for distinguished service in the British colonies or commonwealth.

Also discusses: Marmite (autolysed yeast, p. 158, 302). Fluorine in teeth and fluorosis (p. 170, 38). The many species of millet and sorghum (p. 216-18). Coconut, coconut milk, palm oil, red palm oil benniseed of Nigeria, gingelly oil, sesame, sim-sim, til (p. 254-60). Yeast (dried; *Torula utilis*, Brewers’ yeast, Bakers’ yeast, Marmite) (p. 302-03).

Lucius Nicholls was born in 1884. Address: C.M.G., M.D., B.C., B.A. (Cantab.). Late Director of Bacteriological and Pasteur Institutes, and Director of Div. of Nutrition, Ceylon; Lecturer in Nutrition, Ceylon Univ.; Late Lecturer on Tropical Medicine, Ceylon Medical College; Nutrition Adviser to Commissioner General, South East Asia. Presently at Cookham Dean [just west of London, England].

118. *Soybean Digest*. 1951. Tempeh was a boon to World War II prisoners. Feb. p. 34.

• **Summary:** A summary of van Veen and Schaefer 1950.

Note: This is the earliest document seen (Sept. 2011), published in the USA, that contains the word “tempeh” in the title.

119. Sie-Boen-Lian, S. 1951. Serous central chorioretinitis in Djakarta. *Documenta Neerlandica et Indonesica de Morbis Tropici* 3(3):235-44. See p. 244. [17 ref. Eng]

• **Summary:** “*Ontjom* is a moulding product of the soya bean

and it has repeatedly caused severe intoxication in Java [sic], sometimes with fatal issue. Another moulding product of the soya bean which is consumed in great quantities by the Javanese is *tempeh*, which is not known to be poisonous.”

Note 1. Only *ontjom* made from coconut (not from soya beans) is toxic / poisonous.

Note 2. Chorioretinitis is an inflammation of the choroid (thin pigmented vascular coat of the eye) and retina of the eye. It is also known as choroid retinitis, and as uveitis. Source: Wikipedia. Address: [Dr. [ophthalmologist], 187 Djalan Gadjah Mada, Djakarta].

120. Smith, Dean A.; Woodruff, M.F.A. 1951. Deficiency diseases in Japanese prison camps. *Medical Research Council (London), Special Report Series* No. 274. p. 192. (HMSO Privy Council, G.B.).

• **Summary:** This comprehensive report discusses the effects of an inadequate, unbalanced, and unaccustomed diet, maintained over a period of years, on thousands of men, women and children, prisoners in the hands of the Japanese in Hong Kong and Singapore.

One section is titled “Preparation of Tempe.” British and Dutch prisoners of war in Changi, a Japanese prisoner of war camp in Singapore, survived on tempeh. “Soya beans first appeared in Changi in May, 1943, as a purchase by the Camp Messing Fund; from December of that year onwards, they were occasionally issued to the camp by the Japanese in place of a certain amount of rice... The beans were first simply boiled, but in this form they were rather unpalatable and exceedingly indigestible, and many men passed unaltered beans in their stools. Some Dutch prisoners of war suggested that this difficulty could be overcome by converting the beans into a substance known in the Netherlands East Indies as *tempe*, a product which... occupies a very important place in the diets of those who live in central and east Java.” A description of the tempeh-making process is given. “The original culture of fungus was obtained from the withered petals of the *Hibiscus* plant... At Changi, *tempe* was made part of the general issue when available and was used to treat protein and vitamin deficiencies, and was given to diabetics for whom the ordinary rice diet was unsuitable.”

Note: According to *The Defining Years of the Dutch East Indies, 1942-1949*, by Jan A. Krancher (McFarland & Co. 1995), upon their invasion of Java in 1942, the Japanese began a process of Japanization of the archipelago. Over the next 3 years, more than 100,000 Dutch citizens were shipped to Japanese internment camps, and more than 4 million *romoeshas*, forced Indonesian laborers, were enlisted in the Japanese war effort. The Japanese occupation stimulated the development of Indonesian independence movements. Headed by Sukarno, nationalist forces declared their independence on August 17, 1945. For Dutch citizens, Dutch-Indonesians or “Indos,” and pro-Dutch Indonesians,

Sukarno's declaration marked the beginning of a new wave of terror.

121. Grant, M.W. 1952. Deficiency diseases in Japanese prison camps. *Nature (London)* 169(4290):91-92. Jan. 19. [1 ref]

• **Summary:** "... many attempts were made to make soya beans palatable and digestible, the only satisfactory method proving to be one common in Indonesia, involving inoculation with a fungus [to make tempeh]. Otherwise, these beans were liable to give rise to much digestive disturbance when used in any quantity, even if first reduced to a fine meal."

122. Delvaux, Edgar. 1953. Les protéines de coton et de soya dans l'alimentation humaine au Congo Belge et au Ruanda Urundi: Relation d'une enquête aux E.U. [The proteins of cottonseed and soya in human foods in the Belgian Congo and in Ruanda Urundi: Report of an investigation in the USA]. Louvain: U.S. Foreign Operations Administration. Operations Mission to Belgium and Luxembourg. 26 p. No. TA 32-101. Aug/Sept. 53. [68\* ref. Fre]

• **Summary:** Contents: 1. Current state of food and nutrition of the indigenous people of the Belgian Congo and of Ruanda Urundi—Results of an investigation by FAO, OMS, and UNICEF. 2. Vegetable protein and animal protein in human nutrition. 3. Vegetable material rich in protein and available in the Belgian Congo—Cotton and soya. 4. Acceptability of a food. Conclusions.

Substituting vegetable protein for animal protein could help alleviate the shortage of animal protein that exists for certain categories of infants and adults, and that can lead to kwashiorkor. Cassava, the main food of these countries, is rich in carbohydrates but low in protein. The use of soy flour or cottonseed flour could add valuable protein to the diet. The soy flour could be used, as it has been elsewhere, to make soymilk for infants, tempeh, tofu, breads (add 35), or Multi-Purpose Food (Meals for Millions). Address: U.S. Foreign Operations Administration. Operations Mission to Belgium and Luxembourg.

123. Autret, Marcel; Behar, Moisé. 1954. Síndrome policarencial infantil (kwashiorkor) and its prevention in Central America. *FAO Nutritional Studies* No. 13. 81 p. Oct. Also published as "Le Syndrome de Polycarence de l'Enfance en Amérique Centrale (Kwashiorkor)" in *Bulletin de l'Organisation Mondiale de la Santé* No. 11, p. 891-966. [108 ref. Eng]

• **Summary:** This was one of the surveys made by United Nations agencies in the late 1940s and early 1950s which showed the prevalence of protein-calorie malnutrition. Pages 61-63 discuss the soybean as a rich source of protein that may be prepared in a variety of ways. A brief review is given of work with soy in Uganda, Mexico City, India, El Salvador,

and Guatemala.

"Acceptability tests with soybean milk were carried out successfully in 1951 in schools and community dining rooms in Mexico City, under the supervision of the Institute of Nutrition (according to a 1951 personal communication from J. Calvo de la Torre and J. Diaz Barriga). The milk was prepared from non-bitter varieties of soybeans developed by the Agricultural Research Department of the Ministry of Agriculture, with the assistance of the Rockefeller Foundation, and cultivated in Mexico under the direction of the Maize Commission, which plans to grow soybeans in rotation with maize" (p. 62)

"The Government of Indonesia, with the financial aid of UNICEF and the technical assistance of FAO, plans to construct a plant for the preparation of an infant food made from dried soybean milk. Other countries, such as Thailand and the Philippines, are now considering similar projects" (p. 62).

The fortification of tortillas with soybeans or soy flour looks very promising. "In an attempt to modernize tortilla making, the Industrial Research Department of the Bank of Mexico has set up a pilot plant to make powdered dried *nixtamal* from suitably treated maize. When this powder is reconstituted with water, it gives the *masa* or dough which can then be rolled out into cakes and baked at home. In addition to several economic and hygienic advantages, the new technique makes it possible to incorporate either whole or partly fat-free soy flour in the *nixtamal* powder. Experiments carried out on this product have been seen by one of the authors; the *tortilla* with 10% soy flour added was still excellent.

"In towns, where *tortillas* are the staple food, there will be no difficulty in introducing soybean once the preparation of *nixtamal* is concentrated in a few large industrial plants instead of scattered among thousands of mills. However, if the Government were to make soybean-maize mixture obligatory now, control would be difficult. In the rural areas the preparation of *tortillas* is a family operation, and it will be necessary to teach the women to add soybeans to the maize grains in the preparation of the *tortillas* by giving practical demonstrations. This will be a long-term and exacting task, but it must be undertaken because mature soybeans cannot be used in the same way as other beans, as they require prolonged cooking.

"The use of the classic fresh soybean curds [tofu] calls for long education of the public, as does that of certain special preparations such as *tempeh* (fungus-fermented soybean cheese), the preparation and nutritive value of which have been studied by Van Veen" (p. 63).

"This Study is being published in French in the Bulletin of the World Health Organization for November/December 1954, and in Spanish in the Bulletin of the Pan-American Sanitary Bureau."

In: *Malnutrition in African Mothers, Infants and Young Children: Report of the Second Inter-African Conference on Nutrition*. London: Her Majesty's Stationery Office. 398 p. See p. 278-79. Held 19-27 Nov. 1952 at Fajara, Gambia, under the auspices of the Commission for Technical Cooperation in Africa South of the Sahara (CCTA). [2 ref]

• **Summary:** The soya bean "can be grown in Southern Rhodesia where, however, no serious attempt has yet been made to process the soya bean so as to make it a popular human food.

Experiments in processing have been made in Southern Rhodesia in collaboration with an immigrant from Indonesia who is well acquainted with a product of processed soya bean, *tempé*, which was used in Changi [Singapore] Prisoner of War camp" [during World War II]. A method for preparing tempe is described, based on many trials plus helpful information supplied by Professor van Veen of the Food and Agriculture Organization (FAO).

Footnote 1 (p. 278), referring to the title of this article, states: "A note by Dr. Baker Jones on the preparation of soya bean curd which was available to members of the Conference has now been revised in the light of information received from Mr. W. R. Carr, Food Technologist, Southern Rhodesia."

Footnote 2. "A letter dated June 1953 from Dr. Baker Jones says, 'The pilot plant for *tempé* production, constructed by our local Farmers' Co-op, is expected to come into operation in a week or two.'"

Note: The term "soybean curd" usually refers to tofu, so "fermented soybean curd" is a poor term for tempeh. Address: Dr., Secretary, Nutrition Council, Causeway, Salisbury, Southern Rhodesia.

125. Baker Jones, E. 1954. Foods from Southern Rhodesia. In: *Malnutrition in African Mothers, Infants and Young Children: Report of the Second Inter-African Conference on Nutrition*. London: Her Majesty's Stationery Office. 398 p. See p. 269-71. Held 19-27 Nov. 1952 at Fajara, Gambia, under the auspices of the Commission for Technical Cooperation in Africa South of the Sahara (CCTA). [2 ref]

• **Summary:** "White maize [corn] is the staple food of Southern Rhodesia; it is supplemented by bulrush millet (*Pennisetum typhoideum*), finger millet (*Elusine coracana*), sorghum and upland rice." A sauce made from cooked, pounded groundnuts is widely served over cooked vegetables. Animal products include meat (average consumption of beef is less than 21 gm = 3/4 oz per day), termites and caterpillars (the latter two fried in their own fat).

"Native beer is brewed from maize and finger millet. Small, almost negligible, amounts of cow's and goats milk are consumed. Infants are fed from an early age with cereal pap and as a rule they are weaned late... The bulk of the legume crops is sold for cash. Oil and margarine are produced from most of the groundnuts grown and the residue is used for cattle cake."

"Attempts to improve the diet of the African in Southern Rhodesia are being made by the introduction of two new dishes, one a maize tortilla traditional in Mexico, and *tempé* as produced in Indonesia. Difficulties have arisen in the preparation of *tempé* as the air temperature and humidity in Southern Rhodesia are not favourable for the fermentation processes, and plant and equipment will have to be designed for this purpose.

"The method used for preparation of *tempé* is given on page 278. It is of interest that farmers of Southern Rhodesia have been attracted by *tempé* as a feed for cattle and it is as such that it may first appear on the market. It is thought that the artificial heat and humidity of the tobacco curing sheds of Southern Rhodesia might be adapted to the manufacture of *tempé* and it seems that the production of soya bean, the advantages of which have been so advocated by Southern Rhodesian agriculturalists, may be stimulated by a demand for *tempé*, in the first instance for feeding cattle." Address: Dr., Secretary, Nutrition Council, Causeway, Salisbury, Southern Rhodesia.

Held 19-27 Nov. 1952 at Fajara, Gambia. Illust. Index. 25 cm.

• **Summary:** Contains 5 papers about food uses of soya in Africa, each cited separately. Address: Gambia and London.

128. Trowell, H.C.; Davies, J.N.P.; Dean, R.F.A. 1954. *Kwashiorkor*. London: Edward Arnold. xii + 308 p. Illust. 22 cm. [625\* ref]

• **Summary:** This is the classic book on kwashiorkor, which is severe malnutrition, especially in infants and children, that is caused by a diet high in carbohydrate and low in protein. Contents: 1. Reports of kwashiorkor in children and a discussion of terminology (p. 1-11). 2. The history of kwashiorkor (p. 12-46). 3. Kwashiorkor in children. 4. Protein malnutrition in adults. 5. Implications of kwashiorkor in children and of protein malnutrition in adults.

In the chapter on “Kwashiorkor in Children,” in the section titled “The Treatment of Kwashiorkor,” there is lengthy discussion of the treatment with plant protein diets, including those containing soybeans. At Kampala, Uganda, rats and then children with kwashiorkor were fed a diet of sweet bananas and a paste of cooked whole soybeans, sucrose, and vitamins. “A day’s food for a child weighing 6 to 8 kg. might consist of 300 to 400 gr. of the mashed banana, 300 gr. of the soya preparation, 25 gr. sugar (sucrose) and 2.0 gr. of the vitamin mixture. This diet provided a little more than 500 gr. protein, and about 1000 calories. It also provided nearly 25 gr. fat, but apprehensions of the danger of giving so much fat, based on some unfortunate experiences with full-cream milk that had shown only too clearly the fat intolerance of severe kwashiorkor, proved to be largely unjustified: the soya fat, possibly because its fatty acid composition was very different from that of milk fat, seemed to be easily absorbed and did not cause any gastro-intestinal upsets, even in moderately severe cases.” The banana-soya diet was low in cost and results were satisfactory. Address: 1. O.B.E., M.D. (London), F.R.C.P., Physician, Mulago Hospital, Uganda Medical Dep., and Dep. of Medicine, Makerere College Medical School, Kampala, Uganda; 2. M.D., Prof. of Pathology, Makerere College Medical School, Kampala; 3. Ph.D. (Cambridge), M.R.C.P., Medical Research Council, Group for Research in Infantile Malnutrition, Kampala, Uganda.

129. Autret, M.; van Veen, A.G. 1955. Possible sources of protein for child feeding in underdeveloped countries. *American J. of Clinical Nutrition* 3(3):234-43. May/June. [7 ref]

• **Summary:** Soybeans can help fill protein needs but must be processed in well-controlled processing plants. FAO has long been associated with the “saridele” “soy milk” project in Indonesia. After the “saridele” project had been extensively discussed in the National Nutrition Council of Indonesia, the Indonesian government asked UNICEF and FAO to assist in establishing a “saridele” plant for the manufacture of this product for “mother and child welfare centers and hospitals.” Why did the Government choose centralized manufacture rather than local manufacture in villages and households? “The reply is that whereas in many villages ‘soy milk’ is not unknown, ‘saridele’ from soybean and groundnut certainly is. Introducing a new, hardly known food or food mixture in a country like Indonesia is a difficult and slow process; demonstration through feeding schemes is one of the best ways. Processing on a village scale or locally for hospitals, etc. would certainly lead to numerous difficulties, such as unhygienic manufacture and distribution, lack of suitable containers, and adulteration of the product with water, etc.

“The total capital investment of the Government and UNICEF (who will supply the plant) is about 6 or 7 million Rupiahs (about &700,000); the plant will produce at least

300 tons of the dry product a year” (p. 235-36). Note: This is the earliest document seen (Sept. 2000) that mentions “saridele.”

“Another well-known soybean product from Indonesia, *tempeh*, prepared by treating the cooked soybeans with a certain fungus, has drawn the attention of workers in Southern Rhodesia where soybeans are cultivated, but the local population is not much interested in consuming them. Tempeh has a high nutritive value and is highly digestible, but the manufacture is somewhat difficult to control when the product is manufactured under simple conditions. This and other considerations were the basis in Indonesia of the conclusion that soy milk would be preferred to tempeh in the manufacture of a soy product for infants, and children.

“FAO has been giving technical advice on the manufacture of tempeh in Southern Rhodesia, and it seems that the results of the large-scale experiments are very promising. It is to be hoped that these will be published, not only in connection with acceptability, but also concerning the technical problems, data on production costs, and so on.” Address: 1. Pharm. D.; 2. PhD.

130. Kardinah, N. 1955. Tempe benguk dan tempe koro [Velvet bean tempeh and jack bean tempeh]. *Pewarta Balai Teknologi Makanan* 1(2):4-5. [Ind]\*

• **Summary:** Note: This is the earliest document seen (Sept. 2011) that discusses non-soy tempeh (jack-bean tempeh, *tempe koro*).

131. Jelliffe, D.B. 1955. Infant nutrition in the subtropics and tropics. *World Health Organization Monograph Series (Geneva)* No. 29. 237 p. [313 ref]

• **Summary:** Contents: Introduction. 1. Evolution of infant feeding in the Western world. 2. Present infant-feeding practices in the subtropics and tropics. 3. Present status of nutritional disease among infants in the subtropics and tropics. 4. Methods of improving infant feeding in the subtropics and tropics. 5. Prevention of kwashiorkor. Acknowledgements. Annexes: 1. Summary of suggested methods of infant feeding in the subtropics and tropics. 2. Questionnaire for use in investigating methods of infant feeding. Illustrations. References. Index.

Soya-bean products are mentioned on pages 47 (tempeh and “tahu” [tofu]) and 49 (soya curd [tofu] and tempeh).

In the chapter titled “Prevention of kwashiorkor,” pages 160-62 review and discuss the use of the soya bean to prevent protein deficiency in infant nutrition: (1) Soya-bean emulsion is “also known as soya ‘milk.’” Work in the USA, Philippines, Hong Kong, Thailand, and Indonesia is discussed. (2) Soya-bean curd, “also known as soya ‘cheese’” [tofu], is rich in calcium but is lacking in the vitamin-B complex. “Nevertheless, it can be an extremely valuable food, and, according to Platt (personal communication) is far superior to other soya products in

infant feeding.” (3) Fungus-digested soya beans or tempeh from Indonesia contains vitamin B-12 and is not expensive. It is very digestible and can be ground up and added to steamed rice for feeding older infants. (4) “Miscellaneous. Various other prepared soya products are of great nutritional value, but are probably unsuitable for infants.” These include miso and soy sauce. “A simple method of preparation which requires further investigation is that of grinding the roasted beans into a flour, which can be added to gruels or soups. The roasted bean is certainly palatable but its digestibility for children is unknown, as is the effect of roasting on the trypsin inhibitor and on the amino-acid composition.” Address: WHO Visiting Prof. of Paediatrics, All-India Inst. of Hygiene and Public Health, Calcutta. Formerly, Senior Lecturer in Pediatrics, University College of the West Indies, Jamaica. Nutrition Consultant, World Health Organization.

132. Platt, B.S. 1956. The soya bean in human nutrition. *Chemistry and Industry (London)* No. 32. p. 834-37. Aug. 18. [25 ref]

• **Summary:** The author worked in China during the period in 1933-37, and there had “some experience of preparations made from the soya bean in infant feeding; also rarely a day passed in that period when I did not eat something of one or more of the Chinese soya bean food products—sauce, oil, bean curd or sprouts.”

The author gives figures to refute the common misconception that “millions of Chinese have lived for centuries on a diet of rice and soya beans. For example (according to Buck 1938) in northeast China (Manchuria) where soya beans were used most, “very little rice was eaten, 25% of the calories in the diet came from wheat, and 5% from the soya bean... Only 2% of the calories in the Chinese farm diet were derived from vegetable oils which included oils from groundnuts, rape seed, sesame, and soya bean; the first three together occupy rather more than the acreage under soya bean crops. Learmonth (1956, p. 360) has stated that the soya bean has only been grown as an oil-bearing crop since the 19th century. There is, however, a Chinese work dated A.D. 1637 called ‘The exploitation of the works of nature,’ the second volume of which is devoted to oils and fats. From this work it may be deduced (according to information supplied by Dr. G.D. Lu) that the soya bean was grown for its oil as early as the third century A.D. According to Buck’s data on most frequent yields, broad beans and field peas yield on average 18 bushels per acre compared with 14 bu/acre for soya beans. Peanuts or groundnuts give 64 bu/acre but it is not clear whether they are shelled or not.

“Anyone who, at a Buddhist feast, has eaten the delectable dishes made from the soya bean cannot but agree that, gastronomically, the merits of a wide range of soya bean products are outstanding. The ‘vegetable’ varieties of soya bean are, in fact, often simply immature ones. They are green and look like young lima beans but they have a richer and

a distinctive and more delicious flavour... Soya bean curd (tou fu) is used in a variety of dishes. It is prepared from the mature beans, not usually in the home, but by the village ‘specialist.’ ... With appropriate culinary treatment, it can be made to imitate a variety of meat dishes; traditionally it is given to young Chinese children.”

The author also discusses soy sauce, tempeh, soy oil, and soya “milk”.

“I recently had a visit from a professor of pediatrics at a hospital in Djakarta [Jakarta], Indonesia, who reported that about 50 infants put on a soya milk preparation, *all*, after two months, had some gastro-intestinal disturbances; none of them was thriving. In my view, it is still too early to replace human milk for infants and certainly not by a vegetable substitute for animal milk...”

“In my own experience soya bean curd is a suitable product for feeding young children and I suggest that its superiority over soya milk may be the separation in the ‘whey’ of substances that have been shown to be toxic for animals.

The contents of this paper were first presented as a contribution to the discussion on “Soya in the Field of Nutrition” by E.M. Learmonth, published in *Chemistry and Industry* on 12 May 1956. The author mentions an ad for “Sun Spot” soya milk.

The article begins with a poem written by “a medical nutritionist and his wife”: “Little Soybean who are you / From far off China where you grew?” / I am wheels to steer your cars, / I make cups that hold cigars. / I make doggies nice and fat / And glue the feathers on your hat. / I am very good to eat, / I am cheese and milk and meat. / I am soap to wash your dishes, / I am oil to fry your fishes, / I am paint to trim your houses, / I am buttons on your blouses. / You can eat me from the pod, / I put pep back in the sod. / If by chance you’re diabetic / The things I do are just prophetic. / I’m most everything you’ve seen / And still I’m just a little bean.”

Note: This poem, written by Dr. and Mrs. J.W. Hayward, was first published in the *Proceedings of the American Soybean Assoc.* 1940. Aug. p. 6. Address: C.M.G., Ph.D., M.B., Ch.B., Human Nutrition Research Unit, Medical Research Council Laboratories, Holly Hill, London, N.W. 3.

• **Summary:** An excellent review of the genus, based on her dissertation. The lengthy bibliography runs from p. 722-738.

134. **Product Name:** Dried Tempeh.

**Manufacturer’s Name:** Industrial Caterer’s Ltd.

**Manufacturer’s Address:** Salisbury, Rhodesia.

**Date of Introduction:** 1956.

**Wt/Vol., Packaging, Price:** 2 shillings per pound.

**How Stored:** Shelf stable.

**New Product–Documentation:** Van Veen. 1962.

“Proceedings of Conference on Soybean Products for Protein in Human Foods.” p. 212. “After the war, as Dr. Gyorgy knows, one of my former coworkers came to South Rhodesia, and saw a lot of soybeans exported, and not eaten by the population. He went to a local food technology institute, where the staff became interested. For some time the interested scientists made ‘tempeh’ for the hospitals, but the population having no experience with fungus products at all (as the people in Southeast Asia have) just did not want to embark on tempeh manufacture and at the moment tempeh has disappeared from Rhodesia.”

Orr and Adair. 1967. Tropical Products Institute Report G-31. “The production of protein foods and concentrates from oilseeds.” p. 67. “Tempeh was produced in Africa on an industrial scale for a limited period about ten years ago. The firm concerned was Industrial Caterers Ltd., of Salisbury, Rhodesia, which produced dried tempeh for sale at 2 shillings per lb. However our information [based on a personal communication from Dr. S. Graham, Office of the Provincial Medical Officer of Health, (Northern) Rhodesia] is that the product... was not readily accepted by the African, nor was the European interested in it. It would have required a very extensive propaganda campaign to establish it and money for this was not forthcoming.”

Note: This is the earliest known commercial soy product made in Southern Rhodesia (later renamed Zimbabwe).

136. Soetan, Sanif. 1956. Kedelai [Soybeans]. Jakarta: Dinas Penerbitan Pustaka. 23 p. [Ind]

• **Summary:** Contains descriptions of the preparation of tempeh, tautjo (Indonesian-style miso), ketjap (soy sauce), and tahu (takoa; tofu).

Note: This is the earliest English-language document seen (Feb. 2009) that uses the word “tautjo” to refer to Indonesian-style miso. Address: Indonesia.

137. Nugteren, D.H.; Berends, W. 1957. Investigations on bongkreic acid, the toxine from *Pseudomonas cocovenenans*. *Recueil des Travaux Chimiques des Pays-Bas* 76(1):13-27. Jan. [25 ref. Eng]

• **Summary:** Reliable methods for the preparation, isolation and determination of bongkreic acid, the antibiotic from *Pseudomonas cocovenenans*, are described. Note: This is the earliest document seen (Sept. 2003) that correctly gives *Pseudomonas cocovenenans* as the name of the bacterium that produces the bongkreic toxin. Address: Biochemical Lab., Technological Univ. of Delft, Netherlands.

138. Benjamin, Chester R.; Hesseltine, C.W. 1957. The genus *Actinomucor*. *Mycologia* 49(2):240-49. March/April. [13 ref]

• **Summary:** “*Actinomucor*, one of several monotypic genera of the family Mucoraceae, was originally described by Schostakowitsch in 1898 from ‘Taubenmist’ from Siberia. Schostakowitsch stated that the genus was closely related to *Mucor*; but differed in having branched stolons which gave rise to rhizoids and sporangiophores. He also stated that the genus was distinct from *Rhizopus* and *Absidia*, two other stoloniferous genera, because of the limited growth of its stolons and the different formation of its columellae and sporangiophores.

Fermented tofu is not mentioned, but the species used to make it, *Actinomucor elegans*, is described and its taxonomic history is given. It has had twelve different scientific names between 1871 and 1946, including *Mucor corymbosus* (1871), *Rhizopus elegans* (1884), *Mucor harzii* (1888), *Actinomucor repens* (1898), *Glomerula repens* (1903), *Mucor glomerula* (1908),... and *Actinomucor corymbosus* (1939, 1946).

Note 1. Letter from Dr. Clifford W. Hesseltine. 1990. “Our own observations are in accord with the findings of Schostakowitsch... *Actinomucor* is the mold used in making Chinese Cheese, and its nature is not well known, even to mycologists.”

Note 2. This is the earliest document seen (April 2003) that mentions *Actinomucor elegans*. Address: NRRL, Peoria, Illinois.

139. Boedijn, K.B. 1958. Notes on the Mucorales of Indonesia. *Sydowia (Annales Mycologici)* 12(1/6):321-62. March 25. Series II. [101\* ref]

• **Summary:** Gives details with illustrations on many *Rhizopus* species of molds including *Rhizopus oligosporus* Saito (which in Bogor can always be isolated from tempeh, and can also be isolated from “Bungkil” (cattle cakes) and fermenting tobacco), *Rhizopus stolonifer*, *Rhizopus chlamydosporus*, etc. Address: s’Gravenhage, Netherlands.

140. Subrahmanyam, V.; Bhagavan, R.K.; Swaminathan, M. 1958. The place of processed foods in the treatment and prevention of protein malnutrition in children. *Indian J. of Pediatrics* 25(123):216-27. May. [57 ref]

• **Summary:** Contents: Introduction. Treatment of kwashiorkor: Vitamin therapy, the use of dried stomach preparations (e.g., hog’s stomach), the use of protein hydrolysate, human serum, plasma and blood, treatment with skim milk powder and proprietary casein foods, treatment with plant protein diets, soybean-banana mixture (Dean 1952), Bengal gram and banana diet mixture, low-fat groundnut flour–Bengal gram–skim milk diet mixture, possible sources of processed protein rich foods for the

prevention of protein malnutrition, better utilization of soya and groundnut products, soya and groundnut milks (7 studies are summarized briefly), low-fat oilseed flours, balanced malt food containing soya flour and groundnut flour, Multipurpose food based on low-fat soya flour and groundnut flour, predigested foods, fish flour. Conclusion.

“Introduction: It is now well recognized that protein malnutrition is widely prevalent among children in many tropical and subtropical countries (Trowell et al. 1954) (p. 216).

“The foods that have been most extensively used in the treatment of kwashiorkor, are skimmed milk powder and calcium caseinate” (p. 217).

“Treatment with plant protein diets: Of late it is being increasingly recognised that skim milk powder, though the cheapest protein food available so far for the treatment of protein malnutrition, cannot provide the basis for a large scale solution of the problem in underdeveloped countries, where skim milk powder is not available in sufficient quantities and has to be imported” (p. 218).

“Better utilization of soya and groundnut products:... Both these foods are by themselves highly concentrated and difficult to be cooked properly. Consequently children may experience difficulty in digesting cooked [whole] soyabean or roasted groundnut (Aykroyd and Krishnan 1937). Recent investigations carried out in India and other countries have shown that both soyabean and groundnut could be suitably processed into milk which is highly nutritious and can be readily digested by young children (Dean 1953; Indian Council of Medical Research 1955). Low-fat flours obtained from soyabean and groundnut are also highly nutritious and can be incorporated in various ways in the diet of children (Autret and Van Veen 1955).

“Predigested foods” [fermented]: Mentions soy sauce, and tempeh in Southern Rhodesia.

“Conclusion: It is evident from the foregoing account that besides cereals and pulses which form important sources of protein in the diet of the low income groups in tropical countries, oilseeds and oilseed meals represent an abundant and a most important source of proteins which have not been fully utilised so far for supplementing human diet.” Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

141. Hardjohutomo, Harsono. 1958. *Oxalis corniculata* bagi pembikinan bongkreng [*Oxalis corniculata* in the preparation of bongkreng]. In: 1958. Kongres Ilmu Pengetahuan Nasional I. (Report at the First National Science Congress, Malang, Indonesia). Vol. C. See p. 117-35. [12 ref. Ind]

• **Summary:** The author, a co-worker of A.G. van Veen, conducted an interested practical experiment aimed at preventing bongkreng poisoning. When the coconut-containing material before inoculation with the fungus is slightly acidified (e.g., about pH 5.5), the *Pseudomonas*

scarcely grows, but the fungus does. He proposed that the material be mixed with the acid-containing leaves of an *Oxalis* species that grows everywhere as a weed in Banjumas. He was able to show in laboratory experiments that in this way, after inoculation with both *P. cocovenenans* and *Rhizopus*, the material does not become toxic. However, *Oxalis* leaves are an unusual ingredient for the population; moreover they seem to give the material an unusual dark color that may explain why the population has, as far as known, not made use of this simple safety measure. Address: Indonesia.

142. Dean, R.F.A. 1958. Use of processed plant proteins as human food. In: A.M. Altschul, ed. 1958. Processed Plant Protein Foodstuffs. New York: Academic Press. xv + 955 p. See p. 205-47. Chap. 9. [99\* ref]

• **Summary:** Contents: General considerations: Early sources of protein for human food, competition for food between man and his domestic animals, vegetarianism and vitamin B-12, protein requirements (of children, of adults). Plant proteins now in use: Foods that can be prepared in the home (cereals, legumes {incl. groundnuts, soybean}, sunflower seed, sesame), plant foods used after factory processing (cereals, legumes, sunflower seed meal, cottonseed meal). Other forms of plant food: Plankton, algae, food yeast, leaf proteins (p. 237-38). Future extensions of the use of plant proteins: The theoretical basis of selection, assessment of the value of foods intended for human consumption, practical measures for the future.

In 1957 some 160,000 tons of soybeans were used to make tofu in Japan. “Magnesium or calcium salts are the precipitants of the curd from the soybean milk; the product is eaten by nearly every family in Japan with its breakfast miso-soup.”

During World War II, the attempt was made to introduce soya as a food crop to Uganda. But “no instruction was given in the necessary details of preparation, with the result that the crop was very reasonably declared inedible by the Africans. They retain a violent prejudice against it and are suspicious that it has been added to any food, such as yellow corn meal, that they find distasteful.

“One of the most interesting methods for making soya edible has evolved in Indonesia and was described in full by Van Veen and Schaeffer (1950). It takes advantage of the ability of the mold *Rhizopus oryzae* to grow on the bean and alter its constituents... The product made from soya is called *tempeh kedelee* (kedelee = soybean).” Details of the production process are given. A description of natto and its composition is also given (p. 218).

The section on algae gives detailed information on chlorella, a type photosynthetic single-cell protein. As early as 1954, Morimura and Tamiya in Japan were experimenting with the use of powdered *Chlorella ellipsoidea* in foods. Note: This is the earliest document seen (Aug. 1997—one

of two documents) that mentions the use of algae or other photosynthetic single-cell protein as food.

The section on leaf proteins (p. 237-39) begins: "Protein synthesis is one of the chief activities of the leaf, and proteins are comparable to animal proteins in their amino acid composition (Lugg 1949). The young leaf is especially rich in protein..." Pirie (1953) has suggested a process for recovering the leaf protein from the fibrous residue left after mechanical separation; the protein is usually very difficult to free. Pirie (1953) has also described the likely structure of an efficient plant. "There are also obvious possibilities in such abundant and little-used material as the leaves of sugarcane, cassava, and bananas" (p. 238-39).

The section titled "Sesame" (p. 219-20) states that the Zande people of southwestern Sudan steep the seeds in water for a few minutes, then pound them lightly to loosen the outer coat. They then dry the seeds and the outer coat is sieved or winnowed away. The seeds are then roasted and ground to a paste, which is sometimes used to make a sauce (Culwick 1950). "The use of sesame as a sweetmeat or condiment is fairly widespread in the Near East. A sweetmeat called *tahinya* or *tahina* is made in the Gezira [Sudan] by cooking the roasted seeds in sugar; sometimes the seeds are crushed before the cooking, and sometimes not" (Culwick 1951). Describes how to make the condiment. Address: Medical Research Council, Mulago Hospital, Kampala, Uganda.

143. Stokes, J.L. 1958. Microbial proteins. In: A.M. Altschul, ed. 1958. Processed Plant Protein Foodstuffs. New York: Academic Press. xv + 955 p. See p. 789-804. Chap. 29. [56 ref]

• **Summary:** Contents: Introduction. Yeasts: Composition, amino acid composition, feed yeasts, food yeasts. Molds: Composition, amino acid composition, molds as animal food, molds as human food. Bacteria: Composition, amino acid composition, bacteria as food. Summary and conclusions.

Concerning molds as human food (p. 797): "Only a few attempts have been made to supplement human food with mold protein. Most of these experiments took place in Germany during World War II and are described by Robinson (1952). Preparations of *Fusarium* and *Rhizopus* as well as several yeasts were fed to human beings. The general health of the people to whom the molds were fed was better than that of those acting as controls; the *Fusarium* strain, which was grown on whey, was the most satisfactory of the organisms tested. The strains of both *Fusarium* and *Rhizopus* were high in cystine, methionine, and glutathione and were therefore especially suitable for feeding and superior in this respect to the general run of yeast strains."

"Another possibility for use of molds as human food is to grow them on soybeans or oilseed press cakes. A product called *tempeh*, formed in this manner, is described in Chapter 9, page 218." Address: USDA, Albany, California.

144. **Product Name:** [Tempeh].

**Foreign Name:** Tenpe.

**Manufacturer's Name:** Firma E.S. Lembekker.

**New Product-Documentation:** Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Address is now given as 61 Corn V Alkemadestraat, 1065 Amsterdam, Netherlands. Phone: 020-151-480.

Letter from Sjon Welters. 1982. April 16. "We have some big Indonesian tempeh-makers who are producing first class tempeh, sold refrigerated. Fa. Lembekker (c.v. Alkemadestr. 61, Amsterdam), one I know personally, makes the best tempeh I ever ate. It's made with a fast fermentation and it keeps for 10-14 days just by keeping it cool." Form filled out by Fa. Lembekker. 1982. Aug. They started to make tempeh in 1959. They now make an average of 3,000 lb/week of tempeh. The owner believes that ENTI was the first tempeh shop in the Netherlands, started in April 1946; but it has already disappeared—It was sold to Mrs. Duson of Zevenhuizen, Netherlands. The owner believes that Van Dappern is the largest tempeh manufacturer in Europe.

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 28. This was Europe's second earliest commercial tempeh company, founded in January 1959.

145. *FAO Nutrition Meetings Report Series*. 1959. Report of the FAO/UNICEF Regional School Feeding Seminar for Asia and the Far East. No. 22. 53 p. Held 10-19 Nov. 1958 at Tokyo, Japan. [5 soy ref]

• **Summary:** UNICEF stands for the United Nations International Children's Emergency Fund. Appendix 3 (p. 48-51) titled "Data on some nutritious food products that have been developed in Asia and the Far East," discusses Saridele, groundnut extract curd [tofu made from peanut milk], Indian Multipurpose Food (MPF, developed by CFTRI), miso, natto, and tempeh.

"Saridele" is the name that has been given to a spray-dried soybean extract combined with an extract of sesame, or peanut, with or without the addition of malt. Vitamins and calcium are added to saridele in order to make its nutritive value similar to that of cow's milk or to enhance its nutritive value. Flavorings such as vanilla or chocolate are also used, which make the product highly acceptable.

"A plant having a capacity of about 800 kg./day has been erected in Indonesia with the financial assistance of UNICEF and the technical assistance of FAO. Saridele is manufactured from a mixture of soybeans and decorticated sesame in the proportion of 4:1. Malt extract from maize may be used to replace 50% of the cane sugar used. Soybean and sesame are soaked for about six hours and then disintegrated finely, together with 7 volumes of hot water.

The slurry is stirred vigorously and then filtered. The filtered liquid is heated under pressure for 10 minutes at 120°C., then flashcooled and formulated with Vitamin A, in oil solution, and malt, if desired. The formulated liquid is homogenized, concentrated in a vacuum evaporator to about 22% solids, then spray-dried. The powder finally is sifted and blended with finely ground cane sugar, and calcium carbonate, riboflavin, ascorbic acid and Vitamin B<sub>12</sub> added; the mixture may be flavored with vanilla or chocolate." A table compares the nutritional composition of whole dried cow's milk and Saridele (based on a leaflet from Saridele Ltd., Indonesia). Address: FAO, Rome.

146. Nakano, Masahiro. 1959. FAO Ajia chiiki shokuhin kakô kaigi ni shusseki shite [Attending the FAO Asian food processing conference]. *Nosan Kakko Gijutsu Kenkyu Kaishi (J. for the Utilization of Agricultural Products)* 6(6):292-302. Dec. [Jap]

• **Summary:** Discusses Korean meju and soy sauce, Indonesian tempeh (tenpe), ontyom (onchom) and pongrek [sic, bongkrek], and Vietnamese nuoc-mam. Address: National Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

147. Soedarmo, Poorwo. 1959. Vegetable protein as cow's milk substitute. In: Proceedings of the 15th General Assembly, Japan Medical Congress. See vol. 1, p. 492. \*

• **Summary:** Orr and Adair (1967) state that the author presented an undated paper by this title at the "Symposium on Problems of Nutrition in Asian Countries." Includes a discussion of Saridele, a spray-dried soy milk made in Indonesia. "The equipments are highly technical, the receiving country is technically not well-developed, and this arouses problems in the selection and the ordering, the transportation, the installation and the exploitation of the equipment."

Tempeh is an Indonesian preparation. It may be eaten on its own, after roasting or frying, or used in soups. It is also used in a dry form. It is said that about 60 million of the 90 million inhabitants of Indonesia include tempeh in their daily menu.

148. Van Damme, P.A.; Johannes, A.G.; Cox, H.C.; Berends, W. 1960. On toxoflavin, the yellow poison of *Pseudomonas cocovenenans*. *Recueil des Travaux Chimiques des Pays-Bas* 79(3):255-67. March. [15 ref. Eng]

• **Summary:** *Pseudomonas cocovenenans* growing on tempeh bongkrek can produce two deadly toxins: yellow-colored toxoflavin and colorless bongkrek acid. The latter, by far the more potent toxin of the two, is responsible for most of the lethal food poisonings. Address: Biochemical Lab., Univ. of Delft, Julianalaan 67, Delft, Netherlands.

149. Yap, Bwee-Hwa. 1960. Nutritional and chemical studies

on tempeh, an Indonesian soybean product. MS thesis, Cornell University, Ithaca, New York. 50 p. June. No index. 28 cm. [37 ref]

• **Summary:** Contents: Introduction. Review of literature. Experimental: Preparation of tempeh, yield dimensions, determination of pH and temperature changes during the period of fermentation, determination of percentage of moisture, determination of total protein, preparation of a soluble fraction, determination of soluble solids, soluble nitrogen, reducing substances, and percentage transmittancy, comparison of preservation methods. Results. Discussion. Summary. Bibliography. Appendix.

She thanks Dr. Van Veen for his long-standing interest and advice. She did her research at both the Dep. of Food Science and Technology, New York State Agricultural Experiment Station, Geneva, NY, and in the Graduate School of Nutrition, Cornell Univ., Ithaca, New York. At the experiment station a standardized method for the preparation of tempeh was developed and chemical analyses were made to determine changes that took place during tempeh fermentation. At the school of nutrition, the nutritive value of tempeh was studied on rats.

She mentions Saridele. Taucho is a seasoning used in Indonesia. Mung bean sprouts are more popular than soy bean sprouts in Indonesia. Tempeh is thought to have originated on the island of Java, whence it was gradually introduced to the other islands of Indonesia. In Indonesia, tempeh is normally consumed in amounts of 100 to 200 gm per person per meal. De Bruyn did pioneering work on tempeh and its derivatives (such as onchom from peanuts).

Osborne and Mendel (1917) discovered that preheating raw soybean meal increases its nutritive value. Franek (1958) in India reported loss of basic amino acids with increases in autoclaving temperature. So one must find the optimum middle point, as Liener and Fevold did in 1949.

Everson et al. (1943) showed that germination of soybeans improves the nutritive value, equivalent to the addition of cystine or to autoclaving. Note: This does not mean that it is OK to eat soy sprouts raw!

Yap acidified the presoak water with lactic acid. She dehulled the soybeans with an electric vegetable peeler, grew the starter spores on bran, and did tempeh yield determinations at 5 points in a 22-hour fermentation. She also measured pH and many other variables.

Fresh tempeh should smell like fresh bread dough. As soon as ammonia can be detected, the tempeh is beginning to deteriorate—quickly.

She found the PER of tempeh to be 2.5, midway between that of cooked soybeans (2.3) and casein (2.7). But for rats, the nutritive value of tempeh is almost equal to that of casein. The rats ate 1.5 times as much tempeh as cooked soybeans, and they grew better on tempeh than those on plain cooked soybeans, and almost as fast as those on casein.

During soaking, soybeans increased 2.17 fold in weight.

Tempeh yield is 1.95 relative to that of soybeans. She cooked them for 90 minutes in acidified water. Yap gathered all the data used in the Steinkraus (1960) report. She has graphs on changes during fermentation: temperature, soluble solids, soluble nitrogen. Address: Ithaca, New York.

150. Aljat, -. 1960. Food & utilization of food resources (Indonesia). In: Proceedings of the Fourth Pan Indian Ocean Science Congress. Section G. Human Ecology. See p. 65-68. Held 14-24 Nov. 1960 at Karachi, Pakistan.

• **Summary:** Gives detailed instructions for making the following soybean products: tempeh (tempe, soya-cake, moulded), tofu (tahu, soya curd, coagulated with gypsum / sakow powder), miso (taotjo), and sweet Indonesian soy sauce (Ketjap [perhaps ketjap manis], made with black soybeans). Also describes how to make onchom (ontjom) from peanuts, plus krupuk, and lempers. Table 1 compares the nutritional composition of powdered Saridele and cow's milk. Table 2 compares the amino acid composition of various mixtures containing soy.

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the term "soya curd" or the word "tahu" to refer to tofu.

Note 2. This is the earliest English-language document seen (Oct. 2010) that uses the term "sweet Indonesia soy sauce" to refer to what is probably *kecap manis*. Address: Nutritional Inst. Labs., Jakarta, Indonesia.

151. Prawiranegara, Dradjat; Rawi, Ihsan el. 1960. Food & utilization of natural food resources (Indonesia). In: Proceedings of the Fourth Pan Indian Ocean Science Congress. Section G. Human Ecology. See p. 55-63. Held 14-24 Nov. 1960 at Karachi, Pakistan.

• **Summary:** This is a relatively early publication by an Indonesian author on soyfoods, especially tempeh. The first author's name is incorrectly listed on the document as simply Dradjat. "Protein rich food. Soya beans: In order to increase the protein consumption of the people more soya bean should be made available, and soya products should be popularized and manufactured on large scale." After praising the nutritional properties of soybeans, the authors continue: "In order to render soya protein utilizable, both destruction of the cell walls and heat treatment are necessary. Crushing the beans such as in the manufacture of soya milk and 'tahu' or the action of fungi which partly digest and break the cell wall such as the case with 'tempeh' are means of improving the nutritional value of soya. All these foods are heat treated both during the manufacture and on preparation for the table, and the enzyme inhibitors are destroyed. Tempeh, tahu [tofu], tautjo [Indonesian-style miso], ontjom, soya milk, etc. [are excellent foods. A meal] which gives the maximum biological value contains soya proteins and rice protein in the ratio of about 2.3. Therefore an adult who receives little or no animal food should get 15 or 20 gm soya protein with his

rice. A medium size family should get 75 to 100 gm of soya protein. Unfortunately, soya preparations such as tempeh and tahu are comparatively expensive. For example 100 gm of soya protein in the form of tempeh costs about 5 rupiahs. This is why it is necessary to find a simple way of using unprocessed soya beans. The preparations of 'fried soya' is one such way. Fried soya is simply prepared as follows. Soya is soaked overnight in water with a little salt added, ground to a paste. The stuff is pleasant smelling, and tastes good. It can be used in many different ways, both in adults and in children's food. It costs little, compared to tempeh or tahu, and its nutritional value is high, specially when mixed with rice or corn. It is certain that the introduction of fried soya to the Indonesian family's daily diet will appreciably improve the nutritional status of the people. Three times as much soya protein can be consumed for the price paid for tempeh or tahu. Recent work on tempeh (which is soya bean product subjected to the action of certain fungus) have shown that the product is of a higher nutritional quality than heat-treated soya bean. Apparently the fungus growth on the soya favourably alters the biological value of its protein. More work is needed on the subject in order to find out the reason for such improvement. It was suggested that tempeh should be investigated as infant food. (P. Gyorgy's recent report to W.H.O. Protein Advisory Group).

Note: This is the earliest English-language document seen (March. 2009) uses the word "tautjo" to refer to Indonesian-style miso.

"'Saridele' is an imitation milk of vegetable origin. It is made from soya sesame combination. It is available as spray-dried powder. The composition is similar to cow milk powder. Animal trials have shown that the protein of the product is somewhat inferior to cow milk, but the biological value improves considerably when mixed with rice. Trials with infants showed that Saridele is well tolerated by older infants and it is a valuable addition to the diet after the age of 6 months. In case of emergency, when no cow milk is available, saridele may be used as food for infants over 4 months of age (will be published by Children Dep. Medical School, Univ. Indonesia)." A table lists gives the nutritional composition of soybeans, tempeh, tofu, fish flour, fresh cassava leaf, and dry cassava leaf. Address: 1. M.D., M.P.H., Director, National Nutrition Inst., Dep. of Health, Jakarta; 2. FAO Food Chemist.

152. Steinkraus, K.H.; Yap, B.H.; Van Buren, J.P.; Provvidenti, M.I.; Hand, D.B. 1960. Studies on tempeh: An Indonesian fermented soybean food. *Food Research* 25(6):777-88. Dec. [6 ref]

• **Summary:** Also cited as New York State Agric. Exp. Station Journal Paper No. 1176. Contents: Introduction. Materials and methods: Essential steps in tempeh production—Indonesian method (as described by Miss Yap). Analyses: Determination of soluble solids. Results

and discussion: Microorganisms involved in tempeh fermentation, factors influencing mold growth, flavor of tempeh, changes occurring during tempeh fermentation (with graph), results of cytological studies, preservation of tempeh, yields of tempeh at various stages of processing. Summary.

Photos show: (1) Tempeh ingredients and prepared tempeh including: (a) dry soybeans; (b) soaked, peeled, and cooked soybeans; (c) "raw tempeh bean cake sliced;" (d) "deep fat fried sliced tempeh. (3) Hydrated soybeans, x 500 (magnification 500). (4) Hydrated steamed soybeans, x 500. (5) "Several sections of tempeh digested soybeans, x 500" (a) 24 hours; (b) 72 hours. (6) Hydrated soybeans. (7) Soybeans steamed 90 minutes. (8) Tempeh, 200 x. (9) Soybeans cooked 1½ hours (120°C).

Note: This is the earliest document seen, written by researchers in the USA, that contains the word "tempeh" in the title. Address: Cornell Univ.

153. USDA ARS Northern Utilization Research and Development Division, Peoria, Illinois. 1960. Definitions of foreign foods of current interest (Brochure). Peoria, Illinois. 4 p. 28 cm.

• **Summary:** The first section, titled "Japanese foods from soybeans" (p. 1-2) includes: Aburage, frozen tofu, Hamanatto, kinako, koji, kori tofu, miso, monosodium glutamate (a seasoning compound first isolated from soy sauce), nama-age, natto, satsumage, soybean milk or tonyu, soy sauce or shoyu, tofu, yaki-dofu, yuba.

The second section, titled "Indonesian fermented foods" (p. 3-4) includes: Arak, ketjap (soy sauce made with black soybeans), ontjom, ragi, sajur asin, tapé ketan (fermented glutinous rice), tapé katella (fermented arrowroot), tempeh (or témpé or témpé kedelé), tuwak. Address: Peoria, Illinois.

156. Diser, Gleason M. comp. 1961. Glossary of soybean terms. *Soybean Blue Book*. p. 61-64.

• **Summary:** This is the first glossary with this title in the *Soybean Blue Book*. However in the first *Blue Book* (1947, p. 17-19) there was a somewhat similar section titled "Terminology: Definitions and product descriptions for the soybean industry."

The following terms are defined in this glossary: Soybean(s), soybean processor, soybean processing (solvent extraction, mechanical pressing, hydraulic pressing), soybean oil, crude soybean oil, edible crude soybean oil,

refined soybean oil, edible refined soybean oil, hydrogenated soybean oil, degummed soybean oil, winterized oil, technical grade refined soybean oil, soybean fatty acids, soybean soapstock, acidulated soybean soapstock, soybean lecithin, break material, sludge.

Soybean products: Ground soybeans, soybean hay meal, soybean flakes, 44% protein soybean oil meal, dehulled soybean flakes, 50% protein solvent extracted soybean oil meal, soybean proteins, soy flour, soy grits, soybean oil meal, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, protein, isolated protein, toasting. Oriental soy foods: Soy sauce (shoyu), soy milk, miso, frozen tofu, aburaage, kinako, namaage, ganmodoki, tempeh, natto, yuba, moyashi (soybean sprouts). Address: Archer-Daniels-Midland Co., Minneapolis, Minnesota.

157. Scrimshaw, N.S.; Bressani, R. 1961. Vegetable protein mixtures for human consumption. *Federation Proceedings (FASEB)* 20:80-88. Part III (March), Supplement 7. Proceedings of the Fifth International Congress on Nutrition. Held 1-7 Sept. 1960 at Washington, DC. [44 ref]

• **Summary:** Contents: Introduction. Basic principles involved. Present scope of efforts to develop vegetable protein mixtures. Vegetable ingredients for protein-rich foods (especially legume seeds and oil seeds). Soy-based protein-rich foods (incl. whole soybeans, soy flour, soybean milk, tempeh). Mixtures using chick pea, cow peas, beans, peanut flour or sesame. INCAP Vegetable Mixtures 8 and 9 (based on corn; neither contains soy). Summary. Address: Inst. of Nutrition of Central America and Panama (INCAP), Guatemala City, Guatemala.

158. Shurpalekar, S.R.; Chandrasekhara, M.R.; Swaminathan, M.; Subrahmanyam, V. 1961. Chemical composition and nutritive value of soyabean and soyabean products. *Food Science (Mysore, India)* 10(3):52-64. March. Published in 1961 as a 32-page book by the Soybean Council of America in Hamburg, Germany. [178 ref]

• **Summary:** Contents: Introduction. Chemical composition and nutritive value. Soyabean oil. Carbohydrate in soyabean. Minerals in soyabean. Vitamins in soyabean. Factors affecting nutritive value: Trypsin and growth inhibitors, heat processing, other factors. Digestibility and biological value: Animal experiments, supplementation with sulphur amino acids, human feeding experiments. Supplementary value to other food proteins. Processed foods from soyabean: Soyabean milk, dried milk substitutes from soyabean, malt foods containing soyabean, soyabean flour, multipurpose food (fortified soyaflour), dehydrated soup mixture, balanced food, soyabean protein isolate. Fermented soyabean products: Soy sauce, tofu or soyabean curd, miso, natto, tempeh. Conclusion.

Note 1. This is the earliest document seen (Jan. 2001) from India that mentions tempeh.

Note 2. This is the earliest English-language document seen (Aug. 2003) that contains the term “soyabean protein” (or “soyabean proteins”).

Note 3. This is the earliest English-language document seen (Aug. 2003) that contains the term “soyabean protein isolate” (or “soyabean protein isolates”). Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

159. Smith, Allan K.; Wolf, Walter J. 1961. Food uses and properties of soybean protein. I. Food uses. *Food Technology* 15(5):4-6, 8, 10. May. [34 ref]

• **Summary:** Contents: Summary. Introduction. Commercial soybean protein fractions. Soybean foods: Soybean varieties (garden varieties vs. field varieties, main differences between them, U.S. soybean breeding program). Trends in protein requirements (worldwide protein shortage). Soybeans and fractions used in food: Whole soybeans, defatted soybean meal, isolated proteins, protein concentrate (called “protein concentrate 70” in the summary), Gelsoy.

Whole soybeans may be baked or boiled, or used to make sprouts, fresh or dried tofu, vegetable milk (or “soybean milk”), yuba, and many fermented food products, including “miso or soy paste, natto, hamanatto, shoyu (soy sauce), tempeh, and some less important foods.”

“Protein concentrate: Extraction of dehulled and defatted meal with dilute acid (pH 4.5) removes soluble sugars, nonprotein nitrogen, and other low-molecular weight components and a small amount of protein. The flavors are also mostly removed in the extract or in drying. The dried concentrate contains about 70% protein unless soybeans containing above-average protein are used.

“This product, having a manufacturing cost between that of soy flour and isolated protein, has been introduced recently into the food industry. This protein concentrate is a combination of the acid-precipitated protein plus the residue normally obtained in isolating the acid-precipitated protein... A protein concentrate can also be made by extraction of SOM [soybean oil meal] with about 70% ethanol at 50°C or higher. This type of product is finding its place in the food industry.”

Note: This is the earliest English-language document seen (Dec. 2005) that uses the term “protein concentrate 70” or the term “protein concentrate” to refer to a product containing 70% protein on a dry-weight basis. Address: NRRL, Peoria, Illinois.

160. *Soybean Digest*. 1961. UNICEF grant steps up research on soy products. May. p. 29. [1 ref]

• **Summary:** “Research work on soybean food products is now being accelerated under a grant-in-aid from UNICEF [United Nations International Children’s Emergency Fund] by the department of food science and technology at Cornell University...

“The work is being concentrated along two principal

lines. The department is conducting pilot-plant experiments on the production of soybean milk with the hope of improving its yield and nutritive value. And the second line of work is the production of tempeh, also on a pilot-plant scale, in order to develop a suitable semi-commercial process.”

161. Wagenknecht, A.C.; Mattick, L.R.; Lewin, L.M.; Hand, D.B.; Steinkraus, K.H. 1961. Changes in soybean lipids during tempeh fermentation. *J. of Food Science* 26(4):373-76. July/Aug. [11 ref]

• **Summary:** The *Rhizopus oryzae* mold “possesses strong lipase activity and caused the hydrolysis of over one-third of the neutral fat of the soybean during the three-day fermentation... The neutral fat was composed of palmitic, stearic, oleic, linoleic, and linolenic acids, with linoleic acid predominating... Except for the depletion of some 40% of the linolenic acid in the later stages of the fermentation, there apparently was no preferential utilization of any fatty acid.”

“Although fatty acids were liberated by the hydrolysis of soybean lipid, there was no subsequent utilization of these fatty acids. It can be concluded, therefore, that *R. oryzae* either does not possess the enzyme systems necessary for metabolizing these fatty acids or that *R. oryzae* is impermeable to these acids under the conditions of tempeh fermentation.”

Note: Sorenson and Hesseltine (1966, p. 687) state, based on this research, that “it is likely that lipid materials, and particularly fatty acids, are the primary sources of energy for the tempeh fermentation. The fact that the mold grows well on various vegetable oils further suggests that this conclusion is true.” Address: New York State Agric. Exp. Station, Cornell Univ., Geneva, New York.

162. Latuasan, H.E.; Berends, W. 1961. On the origin of the toxicity of toxoflavin. *Biochimica et Biophysica Acta* 52(3):502-08. Sept. 30. [21 ref]

• **Summary:** “Toxoflavin, a poison from *Pseudomonas cocovenenans* was isolated by van Veen and Mertens in 1934. This microorganism, which also produces bongkreikic acid, has been found responsible for several fatal food poisonings occurring amongst the natives in the densely populated parts of Mid-Java... It seems probable that the poisonous effect of toxoflavin is always due to the hydrogen peroxide formed.” Address: Biochemical and Biophysical Lab., Technological Univ. of Delft, Netherlands.

163. *Soybean Digest*. 1961. The Peoria conference on soybean products for protein in human foods. Oct. p. 6-8.

• **Summary:** A photo (p. 8) shows F.R. Senti, R. Sabin, J.W. Hayward, and A.K. Smith tasting samples of miso, tempeh, and tofu which were served at the reception and made at the Northern Utilization Laboratory.

164. Dwidjoseputro, Dakimah. 1961. Studies on *Monilia sitophila* from Indonesia. *Bulletin of the Torrey Botanical Club* 88(6):404-11. Nov. [10 ref. Eng]

• **Summary:** A fungus found on ontjom-presscake of peanuts and okara onchom (*ontjom tahu*) fermented products in West Java, Indonesia is reported. Biological data suggest it to be *Neurospora sitophila*; it was traditionally called *Monilia sitophila*. Address: Dep. of Biology, Vanderbilt Univ., Nashville, Tennessee.

165. Ko Swan Djien; Hesseltine, C.W. 1961. Indonesian fermented foods: Made from soybeans. *Soybean Digest*. Nov. p. 14-15. [6 ref]

• **Summary:** Focuses on tempe (tempeh), ketjap, and studies at the Northern Laboratory. Photos show: (1) Dry soybeans in a Petri dish. (2) Soybeans in a Petri dish after soaking, dehulling, cooking and inoculating, ready to be placed in incubator. (3) Mature tempe [round cake, with wedge-shaped slice removed], prepared with *Rhizopus* sp. NRRL, removed from the Petri dish. Note growth of mycelium throughout the cake. Address: NRRL, Peoria, Illinois.

166. *Soybean Digest*. 1961. A.K. Smith of Peoria Lab on trip to Asia. Nov. p. 7.

• **Summary:** Dr. A.K. Smith, head of meal products investigations, oilseed crops laboratory, Northern Regional Research Laboratory (Peoria, Illinois), left Oct. 15 on a 2½ month trip to India, Japan, and Indonesia. "Dr. Smith will survey research laboratories in the countries to determine those that are qualified to do food research and development on soybeans, soybean products, and related agricultural products under the P.L. 480 program." In Japan, he will visit trade associations to encourage the use of U.S. soybeans in Japanese foods.

Research is needed in six areas: Use of soy flour to supplement bread and cereal products. Manufacture of soybean protein. Use of tempeh. Production and nutritional value of soy milk. Production of low-salt miso for feeding babies. Comparison of U.S. soybean varieties in commercial production of tofu. A portrait photo shows Smith.

167. Ter Horst, K. 1961. The selection of pulses in Suriname.

III. Soybean, cowpea, blackeye pea, mungbean and miscellaneous pulses. *Euphytica* 10(3):277-82. Nov. [10 ref. Eng; dut]

• **Summary:** Summarizes in English four papers originally published in Dutch, dealing mainly with crops suitable for alternating with rice. In the section titled "Selection of pulses for heavy clay soils" are the following subsections: (1) The soybean (p. 278-79). From the USA 59 varieties were imported, from Indonesia 16 and from the Philippines 4. All the American varieties had to be discarded, probably because they were not adapted to the day-length of Suriname. The three varieties chosen for multiplication and release were Laris (selection from Otan from Buitenzorg, Indonesia; used to make tempé), Vada (from Indonesia), and Bilomi I (from Philippines).

(2) *Vigna sinensis* Savi ex Hasskarl, cowpea and blackeye pea.

(3) *Phaseolus radiatus* L., mungbean. "The mungbean was included in the selection programs. This crop is indigenous and offers an extra possibility for cultivation after rice because the growing cycle is very short, 60-70 days. The local varieties *urdi* and *katjang idjoe* were compared" with other varieties. "The world market for mung beans depends largely on the failure of the crop in Oklahoma. There is only trade when the American farmer cannot meet the domestic demand for sprouted beans. Prices and volumes are very erratic. It will be very difficult to base a program for the extension of the mungbean culture on this situation." Sesame is also mentioned (p. 280).

Note 1. This is the earliest English-language document seen (Nov. 2008) with the word "mungbean" (or "mungbeans") in the title.

Note 2. This is the earliest English-language document seen (Oct. 2006) that uses the term "blackeye pea" to refer to the cow pea. Address: Agronomist, Inst. for Soil Fertility, Groningen, The Netherlands.

168. **Product Name:** Joy of Java Tempe.

**Manufacturer's Name:** Otten's Indonesian Foods.

**Manufacturer's Address:** Albany, California.

**Date of Introduction:** 1961.

**New Product-Documentation:** Shurtleff. 1982. Soyfoods. Winter. p. 21; Soyfoods Center Computerized Mailing List. 1982. July 23. The company is now located at 322 Key Blvd., Richmond, California 94805. Phone: 415-232-9511. It is run by Irene and Mary Otten.

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 39. In 1961 Mary Otten started making tempeh in her basement on Stannage Ave. in Albany. She sold it to her friends and served it at parties that she catered. In 1967 she started Java Restaurant and served many tempeh recipes. In 1974 she and her daughter, Irene, started Otten's Indonesian Foods, America's earliest known tempeh company. By 1981 they were making a full line of tempeh second generation

products.

169. Desrosier, Norman W. 1961. Attack on starvation. Westport, Connecticut: AVI Publishing Co. 312 p. [211\* ref]  
**• Summary:** Soybeans are discussed in the section titled “Ingredients for Protein Enriched Plant Foods” (p. 254-57). Under “Soybean Food Mixtures,” tempeh, Saridele, soy milks, and infant feeding are mentioned. Address: Prof. of Food Technology, Purdue Univ., Lafayette, Indiana.

170. György, Paul. 1961. The nutritive value of tempeh. *National Academy of Sciences, National Research Council, Publication No. 843*. p. 281-89. [3 ref]  
**• Summary:** “The first tempeh preparations and control soybeans used in this study were obtained from Indonesia \* (Footnote: \*Through the courtesy of Dr. Poorwo Soedarmo, Institute of Nutrition, University of Djakarta, Indonesia) (1954, 1955) and Southern Rhodesia \*\* (Footnote: \*\*Through the courtesy of the Executive Officer, Nutrition Council, Federal Ministry of Health, Salisbury, S. Rhodesia) (1955). In the following years attempts, largely futile, were made to produce tempeh in our own laboratory. In 1959 a cooperative arrangement has made it possible to produce tempeh and control soybeans on a larger scale in the Department of Food Science and Technology, New York State Agricultural Station, Cornell University, Geneva, N.Y. under the supervision of Drs. D.B. Hand and K.H. Steinkraus. Under this arrangement, animal studies are carried out independently in our laboratory and in the laboratory of the School of Nutrition (Dr. R.H. Barnes), Cornell University, Ithaca, N.Y.”

Various rat feeding experiments are described. Hemolysis tests were carried out by Dr. Kiku Murata (Osaka, Japan) in György’s laboratory. It was found that “tempeh is stabilized by virtue of an ‘antioxidant’ produced during the course of the fermentation process. Unfermented soy flour had a high peroxide content and was rancid.

Note: Dr. Paul György was born in Nagyvarad, Hungary, on 7 April 1893. He received his M.D. degree in Budapest in 1915 and later studied at Heidelberg, Germany, where he became a professor of pediatrics. He has made many contributions to the field of nutrition with his studies of vitamin B-6, pellagra, biotin and vitamin H. Since 1944 he has been associated with the Philadelphia General Hospital as a pediatrician and as Professor of Pediatrics at the University of Pennsylvania, a post from which he “retired” in 1960. Address: Chairman, Dep. of Pediatrics, Philadelphia General Hospital, Philadelphia 4, Pennsylvania.

 Address: Bandung, Indonesia.

172. *National Academy of Sciences, National Research Council, Publication*. 1961. Progress in meeting protein needs of infants and preschool children: Proceedings of an international conference held in Washington, D.C., August 21-24, 1960 under the auspices of The Committee on Protein Malnutrition, Food and Nutrition Board, and The Nutrition Study Section, National Institutes of Health. No. 843. 570 p. Reviewed by Soybean Digest, Nov. 1961, p. 23.

**• Summary:** The National Academy of Sciences was established in 1863, the National Research Council in 1916, and the Food and Nutrition Board in 1940.

In Aug. 1960, 33 researchers from 18 foreign countries joined with 42 researchers from the USA in a 4-day conference to review the results of a worldwide research program for the development of protein products suitable for infants and children from indigenous resources such as soybeans, cottonseed, peanuts, and similar products in countries where protein deficiency is most prevalent. This research program has been conducted by the Committee on Protein Malnutrition with funds provided by the Rockefeller Foundation in cooperation with UNICEF, FAO, and WHO. The researchers also met to survey the areas of greatest need for further research, and to evaluate the status of knowledge in protein nutrition.

The 45 research reports in this volume constitute a comprehensive summary of the status of protein nutrition around the world and the technological problems involved in the development of economical protein foods. The papers are divided into the following groups: Central and South America (7 papers). Africa and the Middle East (10). India and the Far East (10). Relevant research in the United States (6). Experimental protein malnutrition in animals (4). Basic principles of protein and amino acid evaluation and potential protein resources (10). Protein problems around the world (3). Summary of the conference. Nomenclature guide to plant products cited.

Autret (p. 537) stated “the No. 1 problem for F.A.O. and for national agricultural departments is the production of protein foods of good quality.” Address: Washington, DC.

• **Summary:** Discusses soymilk and tempeh. As a result of studies at Geneva, the yield of soybean solids for soymilk production has increased from 65 to 90 percent." Photos show: (1) Two men pouring soymilk from a large metal vat into a cooker, in the Cornell "pilot plant process for producing soymilk. (2) Small packets of tempeh wrapped in banana leaves on a round woven bamboo tray in Indonesia. Address: Dep. of Food Science and Technology, Geneva, New York.

177. **Product Name:** Tempe.

**Manufacturer's Name:** Runnels Foods.

**Manufacturer's Address:** Los Angeles, California.

**Date of Introduction:** 1962.

**New Product–Documentation:** Shurtleff & Aoyagi. 1985. History of Tempeh. p. 39. America's 2nd earliest tempeh shop.

178. Hesseltine, C.W. 1962. Research at Northern Regional Research Laboratory on fermented foods. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 74-82. [9 ref]

• **Summary:** "Three types of fermented foods have been investigated at the Northern Regional Research Laboratory, namely, soya sauce, miso, and tempeh. The first was studied shortly after World War II and the others have been studied

within the last 2 or 3 years. The three fermentations have in common a mold fermentation of soybeans, with the soybeans being altered by the enzymes produced microbiologically."

"A third fermentation of soybeans which we have studied most recently is the Indonesian fermented soybean food called tempeh or tempe. We were fortunate in having Mr. Ko Swan Djien from the Laboratory of Microbiology, Institute of Technology, Bandung, spend part of last year with us in the study of this fermentation. Since he was acquainted with this food and we had cultures available, we began with a study of the pure culture fermentation paralleling the actual process carried out in Indonesia. The flowsheet of the process on a laboratory scale shown in Figure 4 is as follows:" Each step is described. The mold culture used is *Rhizopus* sp. NRRL 2710.

Note: This is the earliest document seen (Oct. 2011) that mentions the *Rhizopus* strain "NRRL 2710." Address: Head, ARS Culture Collection Investigations, Fermentation Lab., Northern Utilization R&D Div., Peoria, Illinois.

179. Hilbert, G.E. 1962. Foreign research program of U.S. Department of Agriculture on soybean protein products under Public Law 480. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 93-98.

• **Summary:** "For many years, the Department was financing with dollars a farm research program abroad."

"A considerable expansion of our foreign research program was effected a few years ago under Public Law 480. This program of research is financed with foreign currency accruing to the United States from the sale of surplus agricultural commodities, and, in a sense, trades surpluses for research results. Research in the field of economics, forestry, farm, marketing and utilization is carried out under this program. Projects are selected for financing which are of direct interest to the United States and also of interest to the foreign country.

"At the present time, 195 grants or research agreements have been executed in 20 countries in Europe, Asia, and Latin America. Funds are available to initiate programs in an additional 6 countries. Proposals from most of these countries are being processed at the present time. The annual cost of the grants already executed amounts to about the equivalent of \$2-2½ million in foreign currency annually. Substantial funds are available for the expansion of this program.

"The Public Law 480 foreign research program is being administered by the Foreign Research and Technical Programs Division, Agricultural Research Service, U.S. Department of Agriculture, in Washington. A regional office has been established in Rome, Italy, to negotiate the costs of grants and administratively supervise the program in Europe and the Near East. A regional office has been established in

New Delhi, India, also, to carry out the same functions in the Far East.

“The technical phases of the program—that is, the approval of projects on which grants are executed and the review of progress reports—are handled by the various research divisions in the Department. For example, all projects on the utilization of soybeans fall under our Northern Utilization Research and Development Division. All those dealing with the nutritional aspects of soybeans as a food are under the jurisdiction of the Institute of Home Economics.

“Ideas for new research projects may come from within the Department, from research organizations abroad, from our Research and Marketing Advisory Committees, from national commodity organizations, or from the processing industry. We are indebted to The Soybean Council of America for the interest it has taken in developing our research program on soybeans abroad. The Council has stimulated many foreign research groups to submit projects on improving uses for soybeans. It has brought to our attention, also, important problems on soybeans that need attention.

“In developing a program on soybeans we have been faced with the problem that most countries in which we have funds have had practically no knowledge or experience on the uses of soybeans, and have conducted very little research on their utilization. The opportunity has been very limited for financing research on the utilization of soybeans in laboratories with background experience on its products.

“Fortunately, the activities of UNICEF and FAO, on increasing the protein level of the diet in the developing areas of the world, and the powerful market development program of The Soybean Council of America, have stimulated great interest in many countries on the usage of soy products in the diet. These efforts have facilitated the development of our research program on soy products.

“As the primary emphasis of this conference is on soybean products for protein in human foods, the research work we are financing on soybean oil and fatty acids will not be discussed here. My talk will cover only those projects dealing with soybean proteinaceous foods, and with minor components in soy flour or soybean products which may affect their food value. A dozen or more projects of this kind, in half a dozen countries, are underway or will be shortly.

“At the National Institute of Nutrition in Rome, Italy, we have executed a grant with Professor Visco to finance research on the use of soybean protein products as supplements to wheat flour production of pasta, such as spaghetti and macaroni. The southern part of Italy depends to a large extent upon cereal grains as the main staple of the diet. Raising the protein level and quality of the diet in Italy could be done readily by increasing the protein content of pasta with soy protein products. Professor Visco has set as his objective an increase of 10 percent in the soy

protein content of pasta. He believes this amount of soy protein in pasta would provide all the essential amino acids necessary for good nutrition. The Institute has produced pasta containing 10 percent by weight of soy protein. Pasta containing the type of commercial soy protein used was unaltered in cooking quality, but had a slight gray cast and slight change in flavor. The effect of lowering the content of soy protein on color and flavor of pasta is now being investigated. The effect of other sources of commercial soy protein on color and flavor will be studied, also. Professor Visco is interested in following up these studies by conducting nutritional investigations on groups of school children, using pasta fortified with soy protein.

“In Japan, we are negotiating a grant with the Food Research Institute, in Tokyo, for research on dried tofu. Fresh tofu is the most important soybean food in Japan. On a dry basis, its protein content ranges from 50 to 60 percent, and fat content from 21 to 50 percent. It has a bland flavor. It is eaten as such usually with soy sauce. Slabs are deep-fat fried [tofu], also, forming an envelope which is stuffed with hot rice. Fresh tofu is made in thousands of small plants, many of them family-run operations. Fresh tofu has a relatively short storage life comparable to that of fresh milk. Dried tofu, which is a spongelike product, has come into production in recent years. It has a shelf life of 6 months or longer. However, the product is inferior to the fresh product in overall eating quality.

“Under the grant to be carried out at the Food Research Institute there will be studied the varietal effect of soybeans, and variation of processing conditions on the physical characteristics and flavor of dried tofu. Fresh and dried tofu have promise in supplementing the diet in the protein deficient areas of the world.

Miso is another important soybean food used in Japan. It is produced by the fermentation of soybeans with *Aspergillus oryzae*. The most popular use of miso in Japan is in soup. Miso soup plays an important part in the standard Japanese breakfast. Because of uneven uptake of water, not all varieties of soybeans can be used, or only with difficulty, in the traditional Japanese process for making miso. Most Japanese and Chinese varieties of soybeans are better than most American varieties. In preliminary experiments conducted at the Northern Utilization Research and Development Division, in cooperation with two Japanese miso experts, it was found that dehulled soybeans or soybean grits absorbed water uniformly and yielded excellent miso. Now we are interested in following up these studies on a pilot-plant scale using different varieties of soybeans, and carrying out the fermentation under various Japanese environmental conditions. A grant on this project is being negotiated with the Central Miso Institute.

“As it is produced at the present time, miso has a relatively high salt content. Salt is used in the process to control the microbiological population. Dr. Gyorgy informs

me that miso with a greatly reduced salt content might make it more suitable for feeding infants and young children. The development of procedures for producing miso containing very little salt might broaden its usefulness.” Continued. Address: Director, Foreign Research and Technical Programs Div., USDA, Agricultural Research Service, Washington 25, DC.

180. Hilbert, G.E. 1962. Foreign research program of U.S. Department of Agriculture on soybean protein products under Public Law 480 (Continued—Document part II). In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 93-98.

• **Summary:** Continued: A related project on miso is under consideration in Israel. This is based upon producing a miso-type product from controlled amounts of oil ranging from none to that originally present in the bean. Japanese miso contains all the oil present in the bean.

“We are negotiating one other project with the Food Research Institute in Tokyo. This project deals with the development of procedures for producing a yogurt-type product from soy milk, and obtaining information on the changes that occur in the soybean components in the transformation. It is planned to have cooperative investigations on the nutritional value of the fermented soy milk conducted at the Institute of Nutrition Research under Dr. Arimoto. Although soy milk has been used for many years in the Orient as an infant food, the expansion of its use has been very slow, particularly in the underdeveloped areas of the world. At times, difficulties have been encountered in its large-scale production due either to lack of technical knowledge or to inadequate control methods. Soy milk may cause diarrhea or flatulence in some infants.

“It is possible that fermented soy milk may have advantages over soy milk. One potential advantage of fermented soy milk is that the acid may destroy undesirable microorganisms that too often occur under unsanitary conditions in underdeveloped areas of the world. The widespread use of yogurt in the original primitive areas of Northeastern Europe and Northern Asia may well have resulted from the comparatively greater safeness and stability of this product over milk. At the present time, 45 percent of all milk consumed in the USSR is in the form of yogurt, attesting its popularity and the fact that a taste for it can be acquired. Nutritional studies conducted in Europe have shown that yogurt is a highly nutritious product, and that digestibility is increased during the fermentation. Likewise, the fermentation of soy milk may lead to an improvement in its food value. At any rate, our hopes are high on this project.

“Fermented proteinaceous foods are produced and used in Indonesia. Three types are tempeh, onjom, and ragi. Tempeh was just discussed by Dr. Steinkraus. Onjom is made

by fermentation of peanut press cake with molds, probably the genus *Neurospora*. It is a popular food in West Java. Ragi is produced by a yeast-mold fermentation of rice flour and sugar. Little is known about the micro organisms effecting this fermentation. Ragi is not served as food. It is used in recipes for the preparation of other foods.

“More information on the microorganisms used in the fermentations to produce onjom and ragi, and on the composition of these products, is needed. Similar types of products might be produced using other raw materials abundant in other underdeveloped countries. Knowledge on the quality of protein produced would be helpful in determining the usefulness of such products in upgrading the protein level of the diet.

“A grant is being negotiated with the Bandung Institute of Technology, Indonesia, on the isolation of pure cultures of microorganisms present in tempeh, onjom, ragi, and other Indonesian fermented foods produced by different manufacturers in different parts of Java, as well as other islands of Indonesia. Variations of species used by different manufacturers and in different regions for the same type of food fermentation will be investigated under this grant also.

“Studies will be made of the chemical changes and physical transformations brought about by the pure cultures. This will involve an investigation of the products produced in the fermentations including the proteins elaborated in all except the tempeh fermentation which already is receiving a great deal of attention. Pure cultures of the isolated microorganisms will be studied further and characterized at the Northern Utilization Research and Development Division.

“A number of grants on soybean protein have been executed or are being negotiated with research institutes in Israel.

“One of these deals with the effect of processing conditions on the yield and quality of isolated protein. This grant is being negotiated with Professor Zimmerman, of the Israel Institute of Technology. A great deal of work has been done in the United States and Japan on the commercialization of soy products. Large quantities are being produced, and some are being used for food purposes. However, there is need for more information on processing and drying of soy proteins, and the effect of processing conditions on flavor and nutritive value. This is the kind of research to be carried out in Dr. Zimmerman’s laboratory. Also, he will study the flavor and acceptability of isolated soy protein when used in various Israeli-type foods. The effect of processing on the nutritive value of isolated soy protein will be determined by animal feeding tests.

“Although much information has been obtained by Dr. Allan K. Smith and others in the United States on the physical and chemical properties of soy protein, little is known about the complexes of protein in the bean or in the meal. There has been neglected the problem of protein

complexes in the native state or formed in soybean oil meal processing operations. Whether protein-phytate complexes exist in the bean or result from interaction during processing operations is unknown. No information is available as to whether nucleoproteins, lipoproteins, and mucoproteins exist in soybeans. we have no knowledge, either, as to the interaction with protein of pigments, metal ions, and carbohydrates during processing of the beans.

“However, these changes affect the color, flavor, and (in view of the sensitivity of lysine) the nutritive value of the protein. This problem on the chemical, physical, and biochemical properties of protein complexes in soybeans will be studied under a grant which is being negotiated with Dr. Katchalski at the Weizmann Institute of Science. Dr. Katchalski’s team has a worldwide reputation for the fine work they have done on the structure and modification of proteins. It is an ideal group to investigate this difficult and very important problem, the solution of which may lead to the enhancement of the food value of soy flour and soy protein.

“A grant is being negotiated with Dr. Guggenheim, at Hebrew University, on the development and biological evaluation of protein-rich foods from vegetable sources. Various mixtures of cereals with combinations of soya, sesame, sunflower, and chick peas will be studied. The nutritive value of different combinations of proteins will be assessed on growing rats. In vitro methods of measuring the essential amino acids will be made, also, and compared with levels of amino acids present in the blood of the portal veins of rats following a protein meal. Nutritional evaluation of the protein mixtures on humans will be carried out at a later stage.

“There has been a real need for the development of a rapid chemical method for measuring the biological value of proteins. Such a test would be very helpful in measuring change in nutritive value of proteins, including soy protein or flour, during processing and on storage. we are financing two studies on the development of such a method. One line of work is being carried out at the Israel Institute of Technology under Dr. Zimmerman, and the other at the University of Cambridge, England, under Dr. K.J. Carpenter.

“We are financing three basic investigations on certain minor components of soybeans which may affect the nutritive value of soy products. One of these is a comprehensive study of the simple sugar and oligosaccharides in soybeans. This work is being done at the University of Caen, France. Another investigation deals with a detailed study of the polysaccharides of soybeans, and is being carried out at the University of Edinburgh, Scotland, under Professor Hirst. The third deals with the isolation and characterization of saponins in soybeans and various processed soy products. This study also will include the exploration of methods for inactivating saponins in the processing of soybeans. This work is being done by

Professor Bondi, Hebrew University, Israel.

“In this discussion I have summarized, briefly, the various lines of activity we are sponsoring abroad under Public Law 480 on soy protein and proteinaceous soy foods, and related investigations affecting the food value of soy products. It is hoped these investigations in countries where no work on soybeans has been done previously will stimulate additional research on soybeans, and lead to an increased recognition of the importance of soy products in the diet. It is believed these investigations will provide information that should be helpful in guiding efforts to upgrade the diet in protein deficient areas of the world.” Address: Director, Foreign Research and Technical Programs Div., USDA, Agricultural Research Service, Washington 25, DC.

181. Muljokusumo, E. Sudigdo. 1962. *Témpé dan ontjom, benguk, dagé. Tjetakan ke-1* [Tempeh and onchom, benguk, and dagé. First printing]. Bandung, Indonesia: Penerbit Tarate. 44 p. Illust. 21 cm. Kita membuat sendiri, 2 [Series: We make these foods ourselves No. 2]. [Ind]

• **Summary:** Tempeh is a fermented food made from soybeans. Ontjom is a fermented food made from peanut presscake. Tempeh benguk is a fermented food made from the seeds of the velvet bean (*Mucuna pruriens*). Dagé is a fermented food made with bacteria rather than molds on a substrate of oilseed cakes, primarily pressed coconut, sesame seeds, or peanuts. Describes how to make each of these foods on a commercial scale. Contains many excellent illustrations (line drawings). On page 10 is an interesting aerial cut-away view of a tempeh shop, with many people actively making tempeh. Address: Science specialist [Indonesia].

184. van Veen, A.G. 1962. Panel discussion on problems involved in increasing world-wide use of soybean products as foods: Possible contribution of FAO. In: USDA Northern Regional Research Laboratory, ed. 1962. Proceedings of Conference on Soybean Products for Protein in Human Foods. Peoria, IL: USDA NRRL. iii + 242 p. See p. 210-13. • **Summary:** About “25 years ago, a group of missionaries from Travancore, a poor region in South India, wanted to make ‘tempeh’ from soybeans (which you had yesterday and enjoyed). For 3 weeks we gave them short courses in how to make tempeh. When the missionaries went back to Travancore they made tempeh and it was fine, but the Indian population did not have any interest in this unknown fermentation product and the experiment failed.” Note: This document contains the earliest date seen for tempeh in India—about 1937.

“After the war, as Dr. Gyorgy knows, one of my former coworkers came to South Rhodesia, and saw a lot of soybeans exported, and not eaten by the population. He went to a local food technology institute, where the staff became interested. For some time the interested scientists made ‘tempeh’ for the hospitals, but the population having no experience with fungus products at all (as the people in Southeast Asia have) just did not want to embark on tempeh manufacture and at the moment tempeh has disappeared from Rhodesia.” Address: Chief, Food Science & Technology, Food and Agriculture Organization of the United Nations, Viale delle Terme di Caracalla, Rome, Italy.

185. Senti, F.R. 1963. Soybeans—Their future as a food and feed crop. *Soybean Digest*. Jan. p. 16-20.

• **Summary:** “A thorough survey of the present and potential markets for both the oil and meal fractions of the soybean.” Discusses food uses of soybean oil, fats and oils used in margarine (1946-61; graph), sources of high-protein concentrates or livestock and poultry feeds (1937-61; graph), polyunsaturated fatty acids in the U.S. diet, feed and food uses of soybean meal, growth in oilseed meal consumption, tofu, miso, tempeh, UNICEF’s clinical trial with soy beverage for infants in Taiwan, Public Law 480 and soya. To date 12 projects sponsored by the NRRL and funded by P.L. 480 on various food aspects of soybean utilization have been activated in Italy, Spain, Scotland, Finland, Israel, and Poland.

Figure 1, “Fats and oils used in shortening (1946-61)” is a graph showing that in 1945, soybean oil was the main oil used, followed by cottonseed oil, with animal fats a distant third. In 1961 soybean oil is still the leader (47.6% of total fats used), followed by animal fats (33.3%), then cottonseed oil (16.7%).

Figure 2 is a graph showing that per capita consumption of liquid edible oils increased from about 6.2 lb in 1945 to 11.2 lb in 1961.

Figure 3, “Fats and oils used in margarine (1946-1961)”

is a graph showing the total increasing from about 450 million lb in 1946 to about 1,350 million lb in 1961. In 1946 soybean oil and cottonseed oil each accounted for about 50% of the total oil. In 1961 soy oil accounted for about 78% of the total, followed by cottonseed oil and corn oil. Address: Director, NRRL, Peoria, Illinois.

186. *Soybean Digest*. 1963. Brazilians study soy [at the Northern Utilization Laboratory in Peoria, Illinois]. Jan. p. 24.

• **Summary:** The three Brazilian scientists, Dr. Alcides Martinelli, Filho (Junior), Dr. Rudolpho de Camargo, and Dr. Helcio Falanghe, are from the University of Sao Paulo, Piracicaba, Brazil. At the Northern Utilization Laboratory in Peoria, Illinois, Martinelli is investigating the use of plastic fermentation packages in making tempeh. Camargo is studying the activity of enzymes in tempeh fermentation, and a factor that can interfere with the fermentation. Both are working under the supervision of Dr. C.W. Hesseltine. Falanghe is doing chemical research under Dr. J.J. Rackis to isolate this inhibitory factor. The work is supported in part by UNICEF.

187. Smith, A.K.; Rackis, J.J.; Hesseltine, C.W.; Robbins, D.J.; Booth, A.N. 1963. Processing losses and nutritive value of tempeh, a fermented soybean food. *Cereal Science Today* 8(4):129. April.

• **Summary:** “Rats fed tempeh showed a small reduction in growth and protein efficiency compared to rats fed autoclaved and dehulled full-fat soybean meal... There was no evidence of pancreatic hypertrophy, indicating that heat treatment in normal tempeh preparation was sufficient to destroy the factors in raw soybeans responsible for poor growth and pancreatic hypertrophy. Methionine supplementation of tempeh significantly increased rate of rat growth and protein efficiency values.” Address: NRRL, Peoria, Illinois.

188. Senti, Frederic R. 1963. Current status of soybean utilization research under P.L. 480. *Soybean Digest*. May. p. 28, 30-34.

• **Summary:** This is the third in a series of USDA research reports under the P.L. 480 program. Discusses progress on active projects: Soybean oil in Seville, Spain; Chemical changes in sterols during refining of soy oil by Prof. H. Niewiadomski in Gdansk, Poland; Flavor stability of soy oil in by Prof. Y. Toyama at Toyo Univ. in Japan; Improving the frying quality of soybean oil by Prof. G. Varela at Univ. of Granada, Spain; Meal constituents.

Oriental foods: Production of shoyu (soy sauce) using U.S. vs. Japanese soybeans, use of dehulled soybean grits for making miso, miso-type food in Israel, use of U.S. soybeans in making tofu, or soybean curd, by the Japan Tofu Association, Tokyo.

Industrial applications: Polymerization studied in Milan, Italy. Soybean constituents. Oriental foods #2: Dried tofu in Japan, *Saccharomyces rouxii* yeast in shoyu and miso, development of fermented products from soybean milk in Japan, fermented soybean cheese in Taiwan, fermented soyfoods (tempeh, ontjom, ragi) in Indonesia.

Domestic research for increasing imports: Work with soy oil, UNICEF trainees from Brazil studying tempeh, projects saponins, protein complexes, and isolated protein quality in Israel.

A small portrait photo shows F.R. Senti. Address: Director, Northern Utilization Research and Development Div. (also known as the Northern Regional Research Lab.), Agricultural Research Service, USDA, Peoria, Illinois.

189. Smith, Allan K. 1963. Foreign uses of soybean protein foods. *Cereal Science Today* 8(6):196, 198, 200, 210. July. [28 ref]

• **Summary:** Contents: Introduction (world food shortages). Technological assistance (by NRRL). Oriental traditional foods: Tofu, shoyu or soy sauce, miso or soy paste, monosodium glutamate, natto and kinako, soy beverage, tempeh (tempe). Recent food developments. Address: NRRL, Peoria, Illinois.

190. Hesseltine, C.W.; Camargo, R. de; Rackis, J.J. 1963. A mould inhibitor in soybeans. *Nature (London)* 200(4912):1226-27. Dec. 21. [4 ref]

• **Summary:** This factor inhibits the mould growth of *Rhizopus* species, which are used in the "fermentation of soybeans to make the Indonesian food tempeh." The inhibitory factor(s) was found to be heat-stable and water-soluble. One gets the best tempeh when it is dissolved out and rinsed / washed out before the tempeh fermentation. Address: National Utilization Research and Development Div., USDA, Peoria, Illinois; NRRL, Peoria, IL.

Address: Bandung, Indonesia.

192. Chaves, Nelson. 1963. Proteínas vegetais e trópicos [Vegetarian and tropical proteins]. Recife, Brazil: Imprensa Universitária. 151 + 5 p. Illust. Series: Coleção nordestina, 2. [75+\* ref. Por]

• **Summary:** Soyfoods and their nutritional value are discussed on pages 65-67, incl. soymilk (*leite de soja*), tempeh, miso, tofu, shoyu, and natto.

Note: This is the earliest Portuguese-language document seen (Sept. 2011) that mentions tempeh, which it calls

"tempeh." Address: Universidade do Recife, Instituto de Fisiologia e Nutricao.

193. Hesseltine, C.W.; Smith, Mabel; Bradle, Barbara; Ko Swan Djien. 1963. Investigations of tempeh, an Indonesian food. *Developments in Industrial Microbiology* 4:275-87. [8 ref]

• **Summary:** "Tempeh is made in Indonesia with mixed cultures that appear to be largely *Rhizopus oligosporus*, of which NRRL 2710 is a typical representative. We prepared tempeh by pure culture fermentation with 39 strains of *Rhizopus* representing 6 species. A satisfactory laboratory-scale fermentation is described based on a 20 to 24-hour fermentation of dehulled beans with *R. oligosporus*. Full-fat grits may be used in place of dehulled whole beans... The tempeh-producing strains were characterized with regard to carbon and nitrogen source required for growth. All strains grew on soybean oil, xylose, glucose, galactose, trehalose, and cellobiose. None grew on i-erythritol, lactose, raffinose, or inulin. The best nitrogen sources appeared to be asparagine and ammonium sulfate."

Contents: Introduction. Isolation of the tempeh mold (21 species and strains were isolated). Small-scale tempeh fermentation (with flow sheet, based on 100 gm of soybeans). Preserving tempeh. Miscellaneous studies. Amylase activity.

Figures show: (1) Flow sheet for tempeh. (2) Pectinase activity of *R. arrhizus* NRRL 1526 and a non-tempeh-forming fungus, *Gilbertella persicaria* NRRL 2700. (3) Pectinase activity of *R. arrhizus* NRRL 1526 at different dilutions of the culture filtrate. (4) Pectinase of representative tempeh molds. Some have low activity and some high.

Tables: (1) Time and temperature required for making good tempeh with 17 different NRRL mold strains and at 4 different temperatures. (2) Utilization of various carbon sources by certain strains of *Rhizopus*. (3) Amylase produced by tempeh producing strains of *Rhizopus* (26 strains during 3 different times—42, 66, and 138 hours). (4) Liquefaction of gelatin by selected strains of tempeh producing *Rhizopus*.

Note: This is the earliest document seen (Oct. 2011) that describes how to make tempeh in a laboratory or on a laboratory scale. Address: NRRL, Peoria, Illinois.

194. Tjan Giok Lian. 1963. Some factors effecting the growth competition of *Rhizopus Sp.* and *Pseudomonas cocovenenans* in tempe bongkrek, and toxicity of *Pseudomonas cocovenenans* toxin on fishes. Thesis (Skripsi), Bagian Biologi Institut Teknologi Bandung, Bandung, Indonesia. 138 p. PBIB. \*  
Address: Bandung, Indonesia.

195. Ohta, Teruo; Ebine, H.; Nakano, M. 1964. Tenpe (tempeh) ni kansuru kenkyū. I. Indonesia-san tenpe funmatsu no hinshitsu to seijō ni tsuite [Study on tempeh. I. On the

property of tempeh powder made in Indonesia]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 18. p. 67-69. March. [4 ref. Jap; eng]

• **Summary:** Soybeans were fermented with *Rhizopus oryzae* for 60 hours at 30°C, then vacuum dried and ground to a powder. The solubility of protein and the rate of amino-nitrogen to total-nitrogen were 20% and 2% respectively, indicating that protein hydrolysis slightly exceeded that of koji-beans, but was far less than that of natto.

Peroxide value of fat and oil in tempeh stored for 3 months at room temperature was only 1.3 M.E./kg, whereas that of cooked and dried soybean powder and that of natto powder stored under the same conditions were 71 M.E./kg and 38 M.E./kg respectively. This fact shows that tempeh has antioxidative property comparable to that of miso. Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan.

196. Hackler, L.R.; Steinkraus, K.H.; Van Buren, J.P.; Hand, D.B. 1964. Studies on the utilization of tempeh protein by weanling rats. *J. of Nutrition* 82(4):452-56. April. [7 ref]

• **Summary:** Fermentation of soybeans by the tempeh mold “did not improve protein efficiency nor growth in these studies [on weanling rats] above the protein efficiency ratio for the unfermented soybeans... In all our studies the animals receiving diets containing tempeh have consumed less food than similar animals fed diets containing unfermented full-fat soybean meal. Our experiments do not show an improvement in the nutritional value and digestibility of soybeans fermented by a specific mold of the *Rhizopus* species, but they do show that properly prepared tempeh contains high quality protein.”

Table 1 shows that the apparent digestion coefficient of tempeh by weanling rats changed slightly with the length of fermentation: 86.9% after 0 hours, 88.0% after 12 hours, 86.2% after 24 hours, 85.3% after 36 hours, and 85.4% after 72 hours.

Table 2 shows that the apparent digestion coefficient of tempeh by weanling rats changed slightly with the time that tempeh was deep fried: 86.8% after 0 minutes, 87.4% after 1 minute, 84.4% after 3 minutes, 82.8% after 5 minutes, and 79.0% after 7 minutes. Address: Cornell Univ.

197. Roelofsens, P.A.; Talens, Anneke. 1964. Changes in some B vitamins during molding of soybeans by *Rhizopus oryzae* in the production of tempeh kedelee. *J. of Food Science* 29(2):224-26. March/April. [11 ref]

• **Summary:** During tempeh fermentation, riboflavin and niacin increased considerably, whereas thiamin decreased. Of the thiamin present in the cooked soybean cotyledons, about one-third was used up by the tempeh mold—*Rhizopus oryzae*.

During tempeh fermentation, the hyphae of the mold penetrate between the cells in the outermost layer of the cotyledons, and “secrete enzymes that penetrate further. As

a result of the enzymatic action on the cell walls, the cells in tempeh separate easily when the cotyledons are either masticated, squeezed, or shaken with water. The digestibility of the cotyledons is greatly increased over that of merely cooked ones.”

Note: This is the earliest English-language document seen (Sept. 2006) with the word “kedelee” (Indonesian for “soybean”) in the title. Address: Lab. of General and Technical Biology, Technological Univ., Delft, Netherlands.

198. Ko Swan Djien. 1964. Tempe, a fermented food made from soybeans. Paper presented at the International Symposium on Oilseed Protein Foods, May 11-16, Tokyo, Japan. 17 p. [30 ref]

• **Summary:** This very interesting paper contains the most complete information seen to date on tempe, and, especially concerning tempe in Indonesia. It discusses tempeh’s history, traditional production methods, inoculum, packaging, chemistry and microbiology, contamination, shelf life, basic recipes, and price, plus a review of other research (including the best English-language bibliography of Dutch research to date) and a description of a tempeh pilot plant being developed in Bandung (complete with a mechanical roller-miller dehuller, water flotation hull removal, heated incubator and trays, and improved inocula).

Concerning okara tempeh, page 5 states: “For the purpose of lowering the price, often the dehulled soybeans are mixed with the residue of soybeans material from the process of manufacturing of tofu. This material is in fact the coarse components of crushed soybeans. Usually it is used as feed for pigs and is relatively low in price. Mixed in tempe, it will lower the price of tempe.”

Note 1. This is the earliest English-language document seen (Jan. 2005) that refers to the use of okara in making tempeh.

In this document, Ko is the first to signal what he hopes will be the beginning of a new image for tempeh in Indonesia: “But there is no doubt that the time will come when Indonesians will be proud of their tempe, in the same way as the Japanese are proud of their sake, the French people of their wine, Italians of their macaroni, Indians of their curry, Russians of their caviar, the Dutch of their cheese, etc.”

“Totally this food is produced in large quantities. Though dependable statistics are not yet available, it is not excessive to say that every day 10 percent of Indonesia’s population of more than 100 million people consume at least 10 grams of tempeh per person. Although this huge amount illustrates the importance of tempe in the Indonesian diet, it is recognized as such by only a few experts.” Note 2. This is 2.2 million lb/day or 1,000 metric tons per day.

Note 3. This is the earliest document seen (Sept. 2011) that gives industry or market statistics for tempeh, or for tempeh in Indonesia. Address: Lab. for Microbiology,

Bandung Inst. of Technology, Indonesia.

199. Martinelli, Alcides Filho; Hesseltine, C.W. 1964. Tempeh fermentation: Package and tray fermentation. *Food Technology* 18(5):167-71. May. [11 ref]

• **Summary:** Describes rapid production in large quantities by pure-culture tempeh fermentations in shallow wooden and metal trays with perforated bottoms and covers. (Also in perforated plastic tubes and bags).

Note: This new idea and “new technology” is soon transferred to tempeh makers in Indonesia, where it becomes widely used. Address: NRRL, Peoria, Illinois.

200. Platt, B.S. 1964. Biological ennoblement: Improvement of the nutritive value of foods and dietary regimens by biological agencies. *Food Technology* 18(5):68-73, 75-76. May. [34 ref]

• **Summary:** The most common vitamin deficiency worldwide is probably riboflavin (B-2). The amount of riboflavin is increased in the preparation of various fermented foods. Riboflavin is synthesized by a wide variety of microorganisms, notably by a yeastlike organism, *Eremothecium ashbyii*, which has been grown with a high yield on wheat bran and on the refuse (*tou cha* [okara]) from the manufacture of soy bean curd (tofu).

“Riboflavin is also increased in the fermentation of a variety of seeds, notably the seed of the African locust bean (*Parkia filicoidea*).” Boil the seeds for 24 hours to soften the seed coats, then remove the coats. Boil the kernels again for about 2 hours, then set them aside, cover with leaves, and allow to ferment for 2-3 days. Pound the fermented mass into a paste, form it into small balls, then dry these in the sun. The resulting product, “which is found widely throughout West Africa, is known as *dawadawa* or *uri*, keeps well if properly dried, and may contain 0.2 to 0.8 mg riboflavin and 37% of protein” (Platt, 1962). Address: Prof. of Human Nutrition, London School of Hygiene & Tropical Medicine, London, W.C. 1, England.

201. Smith, A.K.; Rackis, J.J.; Hesseltine, C.W.; Smith, Mable; Robbins, D.J.; Booth, A.N. 1964. Tempeh: Nutritive value in relation to processing. *Cereal Chemistry* 41(3):173-81. May. [17 ref]

• **Summary:** “Rats fed tempeh showed a small reduction in growth and protein efficiency compared with autoclaved and dehulled full-fat soybean meal. This reduction in nutritive value may not be serious when one considers the improved edibility of soybeans for human consumption by fermentation. Loss of solids and protein in dehulling, soaking, washing, and cooking soybeans before fermentation did not reduce the nutritive value of either cotyledons, or full-fat grits (chips), used to make tempeh... Methionine supplementation of tempeh significantly increased rate of rat growth and protein efficiency values.” Address: NRRL,

Peoria, Illinois; Western Regional Research Lab., California.

202. Steinkraus, Keith H. 1964. Research on tempeh technology in the United States. Paper presented at the International Symposium on Oilseed Protein Foods. 9 p. Held 10-16 May 1964 at Tokyo. [15 ref]

• **Summary:** An excellent review of the subject. “The general objectives of tempeh research in the United States have been (1) to develop controlled processing methods which will consistently yield a uniform, reproducible tempeh which can be used for biochemical or nutritional studies, (2) to develop small factory methods of producing tempeh for use in the world-wide feeding programs, (3) to determine the changes that occur in soybeans fermented to tempeh, (4) to characterize the molds capable of converting soybeans to tempeh and to learn their requirements for growth and enzymic activity, and (5) to determine the nutritive value of tempeh.”

Table 1 gives an equipment list for a small tempeh factory. Table 2 is a flow sheet for production of tempeh and of tempeh inoculum. Address: Cornell Univ., New York State Agric. Exp. Station, Dep. of Food Science and Technology, Geneva, New York.

203. Wai, Nganshou. 1964. Soybean cheese. *Bulletin of the Institute of Chemistry (Taiwan)*. *Academia Sinica* No. 9. p. 75-94. July. [5 ref. Eng]

• **Summary:** One of the best publications on fermented tofu, this work was supported by a grant (FG-Ta-100) from the USDA Agricultural Research Service. Contents: 1. Introduction. 2. Experimental. Microbiological investigations (using sufu made at 3 factories in Taipei, Taiwan. All three used the same strain of *Rhizopus chinensis*). Many photos (magnification to 70 x to 700 x) show *Rhizopus chinensis* var. *chungyuen*, *Mucor hiemalis* and *Mucor silvaticus*. Procedures and results. Analyses. 3. Discussion. *Mucor* is the preferred mold. Summary of newly developed method. History of tofu. The ancient process for making fermented tofu. Table showing five varieties of sufu and their nutritional composition.

“Soybean cheese (sufu) has been produced in China for many centuries.” “Which kind of fungus is adaptable for the preparation of sufu is one of the keystone problems in studying this vegetable cheese.” The mycelial mat, grown on the cubes of firm tofu, should ideally be white (or slightly yellowish white), and “the mycelial mat should be dense and tenacious so that a film will be formed on the surface of the ‘pehtze’ to serve as an envelope to protect the finished sufu from distortion in its shape. (‘Pehtze’ means the bean curd freshly grown with the fungus but not yet processed and aged to become sufu)” (p. 75).

In Taipei, Taiwan, sufu is made in three factories; all three used the same strain of fungi, which we will designate as *Rhizopus chinensis* var. *chungyuen*. Sufu is also made at

home. "It is well recognized by Chinese housewives that when soybean curd is covered with rice straw it will at last become pehtze of sufu. This may be explained by the fact that a kind of fungus naturally inhabiting on the rice straw may have the chance to grow on bean curd under favorable conditions." Two strains of fungi were isolated from the rice straw: *Mucor heimalis* and *Mucor silvaticus*. Many photomicrographs of all three molds are shown. Kaoliang wine is preferred is the typical solution of 12% NaCl and 10% ethanol (generally added as rice wine or distilled liquor) (p. 76-83).

The five varieties shown in the table are: Rose sufu (to which some rose essence is added), Fermented rice sufu (tsao sufu, to which some pressed residue from rice wine {also called "fermented rice mash"}, cloves and orange peels are added), Red sufu (to which red koji and soy mash are added; red koji is boiled rice grown with *Monascus anka* [angkak]), and Kwantung Sufu [sic, Kwangtung Sufu from Kwangtung province in southeast China] (to which salt, red koji, red pepper and anise are added), and Yunnan sufu.

Note: This is the earliest English-language document seen (Feb. 2007) that uses the terms "rose sufu" "tsao sufu" "fermented rice sufu" "red sufu" "Kwantung sufu" "Kwangtung sufu" or "Yunnan sufu" to refer to different types of fermented tofu. It is also the 2nd earliest English-language document seen (Feb. 2007) that contains the term "fermented tofu." And it is the earliest English-language document seen (Feb. 2007) that uses the word "pehtze" to refer to "bean curd freshly grown with the fungus but not yet processed and aged to become sufu." Address: Inst. of Chemistry, Academia Sinica, Taiwan.

204. György, Paul; Murata, K.; Ikehata, H. 1964. Antioxidants isolated from fermented soybeans (tempeh). *Nature (London)* 203(4947):870-72. Aug. 22. [10 ref]

• **Summary:** The isoflavone 6,7,4'-trihydroxyisoflavone was found in tempeh and the authors believe this highly active substance is probably a normal constituent of soybeans. [Note: This isoflavone was later shown to be a product of the fermentation process]. This may be an example of isoflavone modification that may occur during the fermentation or processing of soybeans. "Daidzein and genistein are the aglucones of the known glucosides, daidzin and genistin. Enzymatic hydrolysis of the glucosides through the action of *Rhizopus oryzae* has been proved... The antioxidants liberated in tempeh act probably through their protection and preservation of the biologically eminently effective vitamin E in soybeans and not by direct biological action. When larger amounts of 6,7,4'-trihydroxyisoflavone become available, its antioxidant effect in vitamin E-deficient animals should be investigated." Address: 1. Univ. of Pennsylvania; 2-3. Osaka City Univ., Osaka, Japan.

205. Hardjo, Suhadi. 1964. Pengolahan dan pengawetan

kedelai untuk bahan makanan manusia [Soybean processing and preservation for human consumption]. Paper presented at Seminar Kedelai (Soybean Seminar, Rapat Kerdja Kedelai). 14 p. Held 28-30 Sept. 1964 at Bogor, Indonesia. [Ind]\*

• **Summary:** Describes several methods of processing and preserving soybeans in Indonesia, including the production of tempeh, tofu (tahu), soy sauce (kecap), tauco (soybean paste), koji, and soybean flour.

Note: This is the earliest document seen (March. 2009) uses the word "tauco" (spelled in that way) to refer to Indonesian-style miso.

206. Ko Swan Djien; Sastramihardja, I. 1964. Some experiments on fermentation of soybean. Presented at Seminar Kedelai (Soybean Seminar, Rapat Kerdja Kedelai). Held 28-30 Sept. 1964 at Bogor, Indonesia. [Eng]\*

207. Mustakas, G.C.; Griffin, E.L., Jr.; Allen, L.E.; Smith, O.B. 1964. Production and nutritional evaluation of extrusion-cooked full-fat soybean flour. *J. of the American Oil Chemists' Society* 41(9):607-14. Sept. [14 ref]

• **Summary:** The abstract begins: "A processing method for preparing full-fat soybean flours for human consumption by a new extrusion cooking method was developed." The paper continues: "The extrusion equipment described in this paper was used in 1961 to convert soybeans directly to full-fat meals for feed mixing. Swine feeding tests carried out on these meals at Purdue University [Indiana] were reported [Jimenez et al. 1961, in *Feedstuffs* 33(44):42] to give comparable weight gains and feed conversion efficiencies of regular defatted soybean meal with added fat.

"On the basis of the Purdue experiment, it was conceived that it might be possible to apply the cooker-extruder process to dehulled soybeans to produce an edible-grade full-fat soybean product which could be ground to a highly nutritious flour for human foods."

"A collaborative project was therefore sponsored by UNICEF, and undertaken by the Northern Utilization Res. & Dev. Div., ARS, USDA [NRRL], and the Wenger Mixer Manufacturing [Sabetha, Kansas] to develop and evaluate a simplified extrusion cooking process for the production of full-fat soybean flour for edible uses." Contains an analysis of 12 soybean flours processed under different conditions. "The United Nations Children's Fund (UNICEF) has been improving local diets in the developing countries, especially of children and of pregnant and nursing mothers. Since [cow's] milk is a logical food for this group, UNICEF has assisted in building and equipping over 200 milk-processing plants in the developing countries to provide safe milk or milk powder."

"Asians have traditionally used soybean foods, generally in a moist form. Some of these are: soy milk (a water extract of the ground whole bean); tofu (a precipitated curd similar to cottage cheese); and tempeh (a fermented product of the

decorticated bean). Because of their relatively short shelf life they are usually made locally each day as a cottage or small village industry.”

The product flavor was evaluated. “The prevention of off-flavors and odors which result from fat deterioration is of major importance.” Only one lot was stabilized with an antioxidant. Accelerated stability tests were conducted on two lots at 100°F and 113°F for 1-39 weeks. The higher-temperature lot began to show evidence of rancidity by its elevated peroxide value of 6.4 at the end of 15 weeks, and this rancidity was strong at the end of 26 weeks when the peroxide value reached 54. The fresh products had a desired nutty flavor, and the strong beany-bitter flavor had been removed.

“Proposed Clinical Testing. A 1,000-lb lot of the milled soy flour has been forwarded to the P.N. Sarihusada Co., Jogjakarta, Indonesia, where it will be formulated and packaged for acceptability testing in the areas now supplied by the plant with the dried water-extracted soya milk formulation. Clinical and acceptability testing is being done by the College of Medicine of the National Taiwan University, Taipei, Taiwan. It is part of a large-scale clinical test with infants up to 12 months of age to compare the extruded soy flour formulated as a milk, with various other soybean products.” Two illustrations show the extrusion equipment, which was operated by LaVon Wenger.

Note 1. This is the earliest document seen (Dec. 1997) that discusses extrusion cooking in connection with soybeans for food uses. This appears to be the first production of full-fat soy flour (FFSF) by an extrusion cooker.

Note 2. This is the earliest document seen (Sept. 2000) that describes the equipment used to make soy flour. Address: 1-2. NRRL, Peoria, Illinois; 3. Food Conservation Div., UNICEF, United Nations, New York; 4. Wenger Mixer Manufacturing, Kansas City, Missouri.

208. Prawiranegara, Dradjat D. 1964. Pentingnya kedelai dalam menu Indonesia [The importance of soybeans in the Indonesian menu]. In: Seminar Kedelai, Bogor. (Rapat Kedelai Kerdja, Bogor). See p. 5. Held 28-30 Sept. 1964. [Ind]\*

209. Soedarmo, P. 1964. Kedudukan katjang kedelai sebagai makanan di Indonesia [Soybeans as a food for Indonesians]. In: Seminar Kedelai, Bogor. (Soybean Seminar, Rapat Kedelai Kerdja, Bogor). See p. 5. Held 28-30 Sept. 1964. [Ind]\*

210. Hesseltine, C.W. 1964. Fungi and fermented foods (Abstract). *Abstracts of the 10th International Botanical Congress*. p. 55-56.

• **Summary:** “In the Western World, the least understood field of industrial mycology is the nonalcoholic food fermentations.” For the last 5 years, the author’s laboratory

has been investigating miso and tempeh. The 5 objectives of the research are outlined. Address: NRRL, Peoria, Illinois.

211. Ikehata, Hideo; et al. 1964. Hakkô daizu tempeh ni kansuru kenkyû. II. Koyoketsu bussuitsu no seishitsu [Research on tempeh. II. The nature of hemolytic substances]. *Eiyo (Nutrition and Nutrology)* 17(1):35. [Jap]\*

212. Aykroyd, Wallace R.; Doughty, Joyce. 1964. Legumes in human nutrition. *FAO Nutritional Studies* No. 19. xi + 138 p. Reissued by FAO in 1982. [119 ref]

• **Summary:** Contents: Preface. Introduction. History of legumes. Production and consumption. Composition and nutritive value. Methods of processing and cooking. Effects of processing on nutritive value. Toxic substances. Legume proteins. Observations on the value of legumes in human feeding. The place of legumes in human diets. Appendixes. References.

Appendix 1, titled “Legumes eaten by man” (p. 101-14), lists the various legumes by their Latin names. The entry for *Psophocarpus tetragonolobus* gives its vernacular names as “Goa bean, asparagus pea, winged pea, winged bean, sesquidillas.”

Note: This is the earliest English-language document seen (Aug. 2007) that uses the word “sesquidillas” to refer to the winged bean. Address: 1. Dep. of Human Nutrition, London School of Hygiene and Tropical Medicine; Former Director, Nutrition Div., FAO, Rome, Italy.

213. Murata, Kiku; Ikehata, H.; György, P. 1964. Detection and isolation of the antioxidants from fermented soya beans, tempeh. In: Proceedings of the Sixth International Congress of Nutrition. Edinburgh and London: E. & S. Livingstone Ltd. xv + 683 p. See p. 601. Held 9-15 Aug. 1963 at Edinburgh, Scotland.

• **Summary:** The authors detected an antioxidant in the alcohol extract of tempeh which is similar to that of vitamin E; it prevents haemolysis of red blood cells to dialuric acid. They attempted to isolate the active antioxidants from tempeh and succeeded in obtaining two isoflavons and one unknown “Factor 2” in crystalline forms. Two of the crystals were identified as daidzein and genistein. Compared with vitamin E, they have only 1% and 5% respectively of the activity to prevent the haemolysis of red blood cells. However “Factor 2” has twice the activity of vitamin E.

Also summarized in *Nutrition Abstracts and Reviews* (1964, p. 1792). Address: 1-2. Osaka City Univ., Osaka, Japan; 3. Philadelphia General Hospital, Philadelphia, Pennsylvania.

• **Summary:** The pilot plant produced 54.5 kg/day of fresh tempeh or 27 kg/day of dry tempeh, using 1 man 8 hours a day and the equipment described. Step-dehulling, precooking, inoculation with *Rhizopus oligosporus*, fermentation and dehydration are described with research results. Chemical composition of tempeh is given. Modifications for use at village level are given. Address: Dep. of Food Science and Technology, New York State Agric. Exp. Station, Cornell Univ., Geneva, New York 14456.

216. Wolf, Walter J. 1965. Chemistry of soybean proteins. Paper presented at National Dairy Products Corp., Glenview, Illinois. 17 p. Feb. 4. Typed, without signature (carbon copy).  
• **Summary:** This lecture is a "broad review of current knowledge with emphasis on chemical properties which may be important in food properties of soy proteins." It included 20 slides, each described briefly in a "List of slides" at the end of the paper.

Correspondence in connection with this lecture shows: (1) That Dr. Wolf and Dr. H.L. Wang of the NRRL were each invited by Dr. Hugh Mottern (Manager, Long Range Planning) to present papers on Feb. 4; expenses will be paid by NDPC—which appears to be related to Kraft Foods. The title of Dr. Wang's talk will be "Fermented Soybean Foods" and she will discuss primarily [fermented] soybean cheese, tempeh, and miso. Initially Mottern asked Dr. Wolf to give a seminar on full-fat soy flour, but that was later broadened to soy proteins. NDPC is currently having a series of seminars on soybeans and soybean products (8, 11, and 18 Jan. 1965; 1 Feb. 1965). Address: Northern Regional Research Lab., Peoria, Illinois.

217. *Chemurgic Digest*. 1965. Special fermentations to produce new food products. March. p. 2.

• **Summary:** Discusses the work of the Northern Regional Research Laboratory with tempeh and miso. Dr. C.W. Hesseltine is in charge of the Laboratory's culture collection, one of the largest, most complete, and most industrially important in the world. It contains more than 8,000 microorganisms, all kept under refrigeration.

218. Diser, Gleason M. comp. 1965. Glossary of soybean terms. *Soybean Blue Book* 25(6):18-21. March.

• **Summary:** This is the last issue of the *Blue Book* that contains "A glossary of soybean terms" (p. 18-21), a

valuable section that has remained largely unchanged since 1961. Address: Minneapolis, Minnesota.

219. Abbott, J.C. 1965. Protein rich foods from oilseeds: Economic aspects. *P.A.G. News Bulletin (Protein Advisory Group, WHO / FAO / UNICEF)* No. 5. p. 19-38. April. [15 ref]

• **Summary:** Table 1 lists annual consumption (in metric tons) of oilseed protein foods in some main consuming areas. Column 1: Miso, tofu, tempeh and other fermented or cooked soybean products: Mainland China 3,736,000. Japan 2,536,000. Indonesia 200,000. South Korea 160,000. Taiwan 153,000. Hong Kong 15,000. Malaya 15,000. Singapore 15,000.

Column 2: Soy milks: Singapore and Malaya 1,300 metric tons, Hong Kong 1,000.

Note: This is the earliest document seen (Sept. 2002) that contains industry or market statistics for soymilk by geographical region. Address: Chief, Marketing Branch, FAO Headquarters, Rome, Italy.

220. Hesseltine, C.W. 1965. A millennium of fungi, food, and fermentation. *Mycologia* 57(2):149-97. March/April. [38 ref]

• **Summary:** A landmark, widely cited work on indigenous fermented foods. Interestingly, it makes no mention of amazake, or kanjang (Korean soy sauce). Contents: Tempeh. Ragi. Sufu (describes process, mentions pehtzes and the mold *Actinomucor elegans* NRRL 3104). Thamnidium (meat tenderizer and flavor enhancer from the mold *Thamnidium elegans*). Miso. Shoyu (incl. tamari. "In China, shoyu is more of the tamari type, that is, more soybeans are used and less wheat,..."). Tea fungus. Ang-Kak (p. 179-81). Advantages of fermenting foods. The future of food fermentations.

The glossary gives brief descriptions of aga-koji, akakoji, amylo process, anchu, angkak, angkhak, ang-quac, anka, anak, arack, arak, arrack, atsumandie, awamori, bagoong, bakhar, beni-koji, benikoji, braga, brem, busa, chao, ch'au yau (Chinese name for shoyu), chee-fan (a type of Chinese cheese or sufu), chiang (Chinese equivalent of miso), chicha, Chinese cheese (sufu), Chinese red rice (ang-kak), chiu-chu (Chinese yeast), chiu-niang (Chinese term for koji), chou [*ch'ü*] (Chinese equivalent of koji), dahi, dawadawa (made from African locust bean—*Parkia filicoidea*; soy is not mentioned), dhokla, dosai, fermentation of citron, fermented fish, fermentation of maize, fermented minchin (wheat gluten), fermented soybeans ("a Chinese food prepared from small black soybeans." See A.K. Smith 1961 [soy nuggets]), fish paste, fish sauce, fish soy, fu-yu, fu-yue, fuyu (see sufu [fermented tofu] for all 3), ginger beer plant, grib, hamanatto, hon-fan [fermented tofu], hongo, hung-chu, idli, injera, jamin-bang, java yeast, jotkal, kaffir beer, kanji, katsubushi, katyk, kefir, ketjap, kimchi, kishk,

kisselo mleko, koji, kombucha (tea fungus fermentation), kome-miso, kuban, kumiss, kumys, kushik, kushuk, kvass, kwass, kyoku-shi, lao-chao, leben, lebeny, levain of khasia, levain of sikkin, lontjom (ontjom), magou, mahewu, maize fermentation of the maoris, mazun, medusen tee, meen, meitauza, meju (fermented soybeans of Korea), mén, mien (Chinese yeast), mirin, mish, miso, moromi, mugi miso, murcha, nappi, nata, natto, ngapi, nuoc-mam, nukamiso, ontjom, patis, paw tsay, peh-khak, pehtze, peujeum, peyem, poi, prahoc, pulque, raggi, ragi, ranu, red pepper sauce, red rice, red sufu, sajur asin, saraimandie, sekihan, shiro koji, shottsuru, shoyou, sho-yu, shoyu, soja japonais (shoyu), sonti (a rice beer wine of India), South African fermented corn, soy, soybean cheese [fermented tofu], soy sauce, sufu, su fu [both fermented tofu], sweet flour paste, taette, tahuli, tahuri [both “Philippine fermented soybean curd”], takuwan, tamari, tane koji, tao-cho [taotjo], taokoan [pressed or firm tofu, not fermented], tao dji (see taotjo {sic}), tao-si ([soy nuggets]; see Handbook of Philippine Agriculture. 1939. p. 132-43), tao-tjung, tao-yu, taotjo, tapej, tape ketan, tape ketella, tarhana, tea beer, tea cider, tea fungus, teekwass, teeschwamm, tempe, tempeh, tempeh bongkreik, tempeh kedelee, thamnidium, thumba, tibi, tien mien chang [chiang], tojo, tokua, torani, tosofu, toyo, trassi, tsue fan, tuwak, uri, u-tiat, wunder pilz, yen-tsai.

Note 1. This is the earliest document seen (Feb. 2007) that mentions *Actinomyces elegans* in connection with sufu [fermented tofu]. In 1966 Hesseltine describes it as the best mold for use in making this fermented food.

Note 2. This is the earliest document seen (July 2000) that mentions “mugi miso”—a type of miso made with barley koji. By the mid- to late-1960s, macrobiotic companies in the USA were importing barley miso from Japan and labeling it “Mugi Miso.”

Note: This is the earliest English-language document seen (Feb. 2007) that uses the terms “fuyu” or “fu-yue” to refer to fermented tofu.

Photos show: (0) Clifford W. Hesseltine (portrait). (1-3) *Rhizopus oligosporus* mold, used to make tempeh (3 views). (4) Skewered cubes of sufu in an incubator, with one skewer of uninoculated tofu cubes and three rows of tofu inoculated with *Actinomyces elegans* showing luxuriant growth of mold. (5) Cubes of Chinese cheese [fermented tofu] removed from brine. (6) Dilution plate of tane koji showing different types of *Aspergillus oryzae*. Address: NRRL, Peoria, Illinois.

221. Miller, Harry W. 1965. Meeting the world’s nutritional needs with soy milk. *Soybean Digest*. May. p. 19-21.

• **Summary:** In East Asia, milk is in short supply and expensive. A replacement made from soybeans has proved acceptable both tastewise and nutritionally. Moreover, animals are not an efficient means of producing protein. In East Asia, soybeans for food use have traditionally been soaked and then milled. Thus a “wet milling operation” is

used instead of dry milling, as to make flour. “For adult use, they have built up a number of soy protein dishes, called ‘meat without bones’. However they have not taken into consideration the nutritional needs of infants and growing children, and malnutrition is seen everywhere in these developing countries.”

“In Japan, 30 pounds per capita of soybean are consumed as food but to provide soy milk for infants and children another 15 pounds per capita need to be added.” For soy milk processing two systems are in use: the small community soy milk plant (the fresh milk may be dispensed from the conventional milk can without bottling, thus lowering the cost) and the large commercial bottling plant. “In Hong Kong, soy milk is made, bottled, and distributed everywhere in the colony for 3½ cents for a 7-ounce bottle. It has the largest sale of any bottled beverage in the colony... In Hong Kong are two factories of the most modern type, with upwards of 40 large delivery beverage trucks, under the genius and leadership of K.S. Lo, general manager. These plants daily manufacture some 25,000 cases each containing 24 bottles of soy milk [i.e. 600,000 bottles/day]. These are delivered to hospitals and schools, and this milk is on sale at all beverage places...” In Singapore, in Bangkok, Thailand, and in Manila, Philippines, soy milk is also made and well accepted. In Formosa, where 2-3 years ago there was only one soy milk plant in Taipei, today more than a dozen rural pilot plants have sprung up all over the country.

Photos show: (1) A bottling machine at a soy milk plant in Hong Kong. (2) Boy scouts in Hong Kong drinking bottled soy milk. Address: M.D., Director Emeritus, International Nutrition Research Foundation, Arlington, California.

222. *Soybean Digest*. 1965. Expect “entirely new foods” from Asian fermentations. May. p. 26-27.

• **Summary:** One of these new foods may be a tempeh-like product made from wheat, Dr. C.W. Hesseltine, retiring president of the Mycological Society of America, told that group at its annual meeting. USDA’s Northern Utilization Research Laboratory is making a broad effort to find new outlets for American farm products. “Scientists at Peoria [Illinois] began studying the use of U.S. soybeans in foods such as Indonesian tempeh and Japanese miso more than 5 years ago. They have supported contract research on fermented foods in foreign laboratories for the past 2 years... The retiring president discussed research and processing of six fermented foods. Among them were tempeh and miso.” A photo shows Dr. Hesseltine.

223. Rawi, Ihsan el; Oey, Kam Nio. 1965. Soya-rice baby food. *Paediatrica Indonesiana* 5(1-2):606-08. Jan/June. Supplement. [7 ref. Eng]

• **Summary:** Saridele is a commercial weaning food made in a factory in Jogja (Central Java). It is powdered soya milk

fortified with vitamins and minerals. Animal trials (young albino rats) show that saridele has a high P.E.R. value, especially after adding rice flour. A table compares the PER of whole milk, skim milk, Saridele, fried tempeh, and fried whole soybeans.

The latter, which are the least expensive, are prepared as follows: Soak whole soybeans overnight in water (or for 1 hour in hot water). Remove the hulls by rubbing and pour off the hulls. Drain and rise the soybeans, then drain until dry. Deep fry the soaked whole soybeans in hot cooking oil until golden brown in color. Then grind or pound the fried beans.

"The combination of tempeh and red rice is a daily food for adults and older children." There is no reason why it cannot be made into a porridge and served to younger children after weaning. Address: Nutrition Inst., Ministry of Health, Jakarta, Indonesia.

224. De, Sasanka S. 1965. The present state of protein-rich food development in Asia and the Far East. *J. of Nutrition and Dietetics (India)* 2(3):166-76. July. [23 ref]

• **Summary:** Gives an excellent account of soymilk production in Asia during the mid-1960s and a brief history of the FAO/WHO/UNICEF/Protein-rich food program. "The First International Conference sponsored by FAO, WHO and Josiah Macy Jr. Foundation (New York) held in Jamaica in 1953, discussed the biological, technical and pathological aspects of protein malnutrition. The next Conference on 'Human protein requirements and their fulfillments in practice' held in Princeton in 1955 under the same sponsorship, gave detailed consideration to the testing of new protein rich foods before their use in child feeding was recommended.

"The Protein Advisory Group (PAG) was established by the Director-General of WHO in 1955 to 'act on behalf of WHO in rendering advice to FAO and UNICEF on the safety and suitability for human consumption of proposed new protein-rich foods.' The PAG... became a tripartite FAO/WHO/UNICEF Protein Advisory Group in 1961."

Soybean milk: "In 1939, K.S. Lo established a firm known as 'Hong Kong Soyabean Products' to produce sterilized bottled soya milk. The two plants of the firm in Hong Kong produce 12,000 cases (24 x 7-oz. bottles per case) a day."

Also discusses miso, natto, tempeh, full-fat soya flour, soya presscake and meal, groundnut protein isolate. Address: Regional Office for Asia and Far East, FAO, Bangkok, Thailand.

225. Findlay, W.P.K. 1965. Fermented foods. *British Vegetarian*. July/Aug. p. 282-83. [1 ref]

• **Summary:** In 1964 at the Botanical Congress in Edinburgh, Scotland, an American mycologist, Dr. C.W. Hesseltine, gave a fascinating account of the studies he has made of foods fermented with molds. A full account of his work has

just been published in *Mycologia*. 1965. 57(2): March/April. This is a summary of that article, focusing on tempeh, sufu or Chinese cheese, miso, and shoyu or soy sauce. Address: D.Sc.

226. Steinkraus, K.H.; Lee, C.Y.; Buck, P.A. 1965. Soybean fermentation by the onchom mold *Neurospora*. *Food Technology* 19(8):119-20. Aug. [5 ref]

• **Summary:** The onchom mold was compared with the tempeh mold. The former had a lower maximum growth temperature and grew more slowly but produced the same general changes in a soybean substrate as the latter.

Surprisingly, a tempeh-like product made with soybeans but inoculated with the onchom mold *Neurospora* was never traditionally made in Indonesia. The soybeans were used only to make tempeh, and the onchom was always made from peanut presscake or okara. The authors developed and describe an acceptable soy onchom, which resembled tempeh except that the flavor was more nutlike. Address: 1. Dep. of Food Science and Technology, Cornell Univ.

227. Wang, Hwa L.; Hesseltine, C.W. 1965. Studies on the extracellular proteolytic enzymes of *Rhizopus oligosporus*. *Canadian J. of Microbiology* 11(4):727-32. Aug. [9 ref]

• **Summary:** "Two proteolytic enzyme systems were observed in the culture filtrates of *Rhizopus oligosporus*. One has an optimum pH at 3.0; the other, at 5.5. Both enzyme systems have maximum activities at 50-55°C and are fairly stable at pH 3.0-6.0. Maximum production of the enzymes occurred after 72 to 96 hours of incubation and then it decreased rapidly."

Note: An extracellular enzyme (or exoenzyme), is an enzyme that is secreted by a cell and that works outside of that cell. It is usually used for breaking up large molecules that would not be able to enter the cell otherwise. This term is also often used to refer to the hydrolytic digestive enzymes secreted by fungi [such as *Rhizopus oligosporus*]. The majority of enzymes are intracellular, not extracellular (Source: Wikipedia, May 2010). Address: NRRL, Peoria, Illinois.

228. *Harian Karya (Indonesia)*. 1965. Tempe naik tahta [Tempeh steps to a higher throne]. Sept. 21. [Ind]

• **Summary:** This article reports with amazement that Ko Swan Djien, head of the Department of Microbiology at the Bandung Institute of Technology, studied tempeh at the university.

229. Ohta, Teruo. 1965. Tenpe [Tempeh]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 60(9):778-83. Sept. [Jap]

Address: Norinsho Shokugo Kenkyujo, Tokyo.

230. Sorenson, William G.; Hesseltine, Clifford W. 1965.

Carbon and nitrogen utilization by *Rhizopus oligosporus* (Abstract). *Phytopathology* 55(10):1077. Oct.

• **Summary:** The main soluble carbohydrates in soybeans (stachyose, raffinose, and sucrose) were not utilized as sole sources of carbon by the tempeh mold *Rhizopus oligosporus* NRRL 2710. However such common sugars as glucose, fructose, galactose, and maltose did support excellent growth of the mold, as did xylose. Address: Northern Utilization Research and Development Div., USDA, Peoria, Illinois.

231. Murata, Kiku. 1965. Annual report of research conducted under grants authorized by PL-480. Project title: Nutritional value of tempeh. Osaka, Japan. 15 p. Grant Number: FG-Ja-110; A11-HN-1.

• **Summary:** Dates of research period covered by report: 14 Oct. 1964 to 31 Oct. 1965. Includes 3 tables and 4 graphs. Introduction: "It is significant to study the nutritional value of tempeh in detail from various points of view, not only to study the biologically active substances but also to find changes in content of nutrients of tempeh during the fermentation of soybeans."

Summary: Hemolysis-preventing and antioxidant activities were detected in tempeh but not in boiled unfermented soybeans. Among the biologically active substances isolated from tempeh, it was found that the isoflavone 6,7,4'-trihydroxyisoflavone, which was originally isolated from tempeh but never isolated previously from natural foods, was most active in preventing in vitro dialuric acid-induced hemolysis of red blood cells. The content of riboflavin and nicotinic acid increase significantly during tempeh fermentation.

Note: This is the earliest document seen that contains the term "biologically active substances." By the early 1990s these substances were renamed "phytochemicals." Address: Food and Nutrition Lab., Faculty of Science of Living, Osaka City Univ., Nishi-ku, Osaka, Japan.

232. Stillings, B.R.; Hackler, L.R. 1965. Amino acid studies on the effect of fermentation time and heat-processing of tempeh. *J. of Food Science* 30(6):1043-48. Nov/Dec. [17 ref]

• **Summary:** After the typical 24-hour fermentation, the amino acid methionine, increased slightly, whereas cystine, tryptophan, lysine, histidine, arginine and aspartic (amino acids) all decreased slightly. Free amino acids increased during fermentation. "Deep-fat frying of tempeh caused some amino acids to decrease after 5 minutes [longer than tempeh is typically fried] ... lysine and cystine were most susceptible to heat destruction." Steaming tempeh for typical lengths of time had no effect on the amino acid content. Address: Dep. of Food Science and Technology, New York State Agric. Exp. Station, Cornell Univ., Geneva, New York 14456.

• **Summary:** The section titled "Soybean" discusses the following: Vernacular names in various languages. Overview of world production. Botany. Varieties. Breeding and selection. Climatic and soil requirements. Culture. Harvesting. Uses (incl. soy sauce, tempeh, and tofu). Future possibilities. Diseases. Ochse was born in 1891.

Note: This book was originally published in English in 1961 by Macmillan Co. in New York. Address: 1. Consultant, Tropical and Subtropical Agriculture, Research

Consultant in Economic Botany, Univ. of Miami, Coral Gables; 2. Assoc. Prof. of Fruit Crops, Univ. of Florida, Gainesville; 3. Prof. of Applied Tropical Botany and Genetics, Univ. of Miami, Coral Gables; 4. Asst. Plant Pathologist, Univ. of Florida, Everglades Experiment Station, Belle Glade. All: Florida.

240. Hesseltine, Clifford W.; Martinelli, A., Jr. Assignors to the USA as represented by the Secretary of Agriculture. 1966. Methods for producing tempeh. *U.S. Patent* 3,228,773. Jan. 11. 3 p. Application filed 13 Dec. 1962.

• **Summary:** The authors have developed a method for producing commercial quantities of tempeh in perforated plastic bags.

Note: As of March 1978, Dr. Martinelli's address is: Instituto Zimotecnico, Universidade de Sao Paulo, Piracicaba, Brazil. Address: NRRL, Peoria, Illinois.

241. Hesseltine, Clifford W.; Smith, Mabel L. Assignors to the USA as represented by the Secretary of Agriculture. 1966. Cereal-containing varieties of tempeh and process therefor. *U.S. Patent* 3,243,301. March 29. \*

• **Summary:** Methods have been developed for producing tempeh from cereal grains (such as wheat, rice, barley, oats, or rye) or from mixtures of grain and soybeans. Formerly, tempeh had been produced exclusively from soybeans. It was found that *Rhizopus oligosporus* NRRL 2710 works very well for making these foods. Address: NRRL, Peoria, Illinois.

242. *New York Times*. 1966. Fermenting lifts grain food value: Biologists told the process could curb malnutrition. April 13. p. 53.

• **Summary:** Dr. Hwa L. Wang of the USDA's Northern Research and Development Division (Peoria, Illinois) said, "Protein deficiency is the most urgent problem in the world today." Born in China but educated in the USA, she is now a U.S. citizen. She said that fermentation was "the standard method of preparing an Indonesian food called tempeh. The Indonesians make this by using certain molds to ferment soybean." Drs. Wang and C.W. Hesseltine head the USDA's project that uses the mold *Rhizopus oligosporus* "to ferment combinations of wheat, barley, oats or rice with soybean flour."

243. Schmeck, Harold M., Jr. 1966. Environment and biology. *New York Times*. April 17. Section IV. p. 11, col. 4.

• **Summary:** Drs. Hwa L. Wang and C.W. Hesseltine of the USDA are fermenting grain mixtures with the mold *Rhizopus oligosporus*. "The result of the fermentation is a cake of food material with good protein and good vitamin content, tasting somewhat like nuts or mushrooms and somewhat comparable to Indonesian fermented food called tempeh which is made by a similar process from soybeans."

244. *Agricultural Research*. 1966. From traditional Indonesian tempeh: Simple, uniform process produces new high-protein foods. 15(1):8-9. Aug.

• **Summary:** Describes the research on new types of tempeh conducted by microbiologist C.W. Hesseltine, biochemist H.L. Wang, and microbiological technician M.L. Smith at the USDA's Northern Regional Research Lab at Peoria, Illinois. They are making tempeh from wheat, oats, rice, barley, rye, wheat-soybean mixtures, and rice-soybean mixtures. Photos show H.L. Wang making soybeans into tempeh.

245. Wang, Hwa L.; Hesseltine, C.W. 1966. Wheat tempeh. *Cereal Chemistry* 43(5):563-70. Sept. [17 ref]

• **Summary:** The wheat tempeh was made from cracked Conley hard red spring wheat. "Among the cultures tested, *Rhizopus oligosporus* NRRL 2710 gave the most satisfactory wheat tempeh... The yield of wheat tempeh by the procedures described was approximately 84.5% (on a dry solid basis) after 20 hours of fermentation [at 31°C]... Soluble nitrogen and reducing substances increased steadily whereas total nitrogen remained fairly constant. Proteolytic enzyme having optimal pH 5.5 was responsible for the breakdown of protein. Of the vitamins analyzed, niacin and riboflavin of wheat tempeh greatly exceeded that of wheat; thiamine appeared to be less. Thus, this new fermented wheat product may provide vitamins, as well as calories and proteins, at low cost." Address: NRRL, Peoria, Illinois.

246. Sorenson, W.G.; Hesseltine, C.W. 1966. Carbon and nitrogen utilization by *Rhizopus oligosporus*. *Mycologia* 58(5):681-89. Sept/Oct. [13 ref]

• **Summary:** "The utilization of various carbon and nitrogen compounds by *Rhizopus oligosporus* Saito NRRL 2710 was investigated. The principal components of the soluble carbohydrates of soybeans, i.e., stachyose, raffinose, and sucrose, were not utilized as sole sources of carbon. Common sugars such as glucose, fructose, galactose, and maltose supported excellent growth as did xylose. Various vegetable oils could be substituted for sugars as sources of carbon with excellent growth.

"Ammonium salts and such amino acids as proline, glycine, aspartic acid, and leucine were excellent sources of nitrogen. Other amino acids were less suitable, and tryptophan supported no growth at all. Sodium nitrate was not utilized as the sole source of nitrogen. Experiments with citrate-buffered media demonstrated that *R. oligosporus* grows well at a pH as low as 2.6-3.0." Address: NRRL, Peoria, Illinois.

247. Swaminathan, M. 1966. The use of soyabean and its products in feeding infants and in the prevention of protein malnutrition in weaned infants and pre-school children in developing countries. *Indian J. of Nutrition and Dietetics*

3(4):138-50. Oct. [63 ref]

• **Summary:** Contents: Introduction. Chemical composition: Carbohydrates, fat, minerals, vitamins, proteins. Factors affecting the nutritive value of soya proteins: Trypsin and growth inhibitors, heat processing, other factors. Nutritive value of soya proteins (with or without methionine supplementation): Experiments with animals, experiments with human beings, supplementary value to other food proteins. Processed foods from soyabean for feeding infants and preschool children: Milk substitutes and infant foods, processed protein foods based on soya (soya flour, Multipurpose Food or MPF, soup powder). Foods based on soyabean and other oilseed meals: Precooked roller dried foods, extrusion-cooked full-fat soybean flour. Other soya products (soy protein isolate, tofu, natto, miso, tempeh, soy sauce). Conclusion. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

248. Hesseltine, C.W.; Shotwell, Odette L.; Ellis, J.J.; Stubblefield, R.D. 1966. Aflatoxin formation by *Aspergillus flavus*. *Bacteriological Reviews* 30(4):795-805. Dec. [39 ref]

• **Summary:** Introduction. Fungi producing aflatoxins and other toxins of *A. flavus*. Natural occurrence of aflatoxin. Factors affecting aflatoxin formation in nature. Production of aflatoxin in culture. Aflatoxin studies at the Northern Regional Research Laboratory.

The occurrence of mycotoxins has been known for several decades. In 1913 Alsberg and Black of the USDA studied the biochemistry of toxins of certain molds isolated from corn meal. *Penicillium puberulum* was found to produce penicillic acid which was toxic. Interest in aflatoxins arose after the death of a large number of young turkeys in Great Britain in 1960. At least 4 aflatoxins are known to exist, produced by certain strains of *Aspergillus flavus* Link, *A. parasiticus* Speare, and *Penicillium puberulum* Bainier.

"*Aspergillus oryzae* and its near relatives are widely used in the preparation of koji for such food fermentations as shoyu (soy sauce), miso, black beans [soy nuggets / fermented black soybeans], and sake" (p. 802). *A. oryzae* is a close relative of *A. flavus*; they are distinguished on the basis of minor morphological characteristics. Aflatoxin has been found on only two commercial commodities: Peanuts and cottonseed cake. Although *A. flavus* can be made to grow on soybeans, none of the strains produced much aflatoxin regardless of the conditions. Aflatoxins have not been found in commercial soyfoods produced by *Aspergillus oryzae*.

The authors obtained very low toxin production (0.03 micrograms/milliliter) on pearled soybeans (Hawkeye variety) using a strain of *Aspergillus flavus*. Address: NRRL, Peoria, Illinois.

249. Burkill, I.H. 1966. Dictionary of the economic products of the Malay Peninsula, 2nd ed. 2 vols. Kuala Lumpur, Malaysia: Ministry of Agriculture and Co-operatives. xiv +

2444 p. See vol. 1 (A-H), p. 1098-1103. Index. 24 cm. [11 ref]

• **Summary:** Information on the soy bean (*Glycine max*) is found under Glycine. Contents: Origin. Man has selected the more tropical races and is still selecting. Search for a race suitable for Malaya. Java, long ago, found one suitable for the drier parts of the island. Secondary uses as fodder, a cover crop, and green manure. High food-value of the seed. The seed, ripe or nearly ripe, as food. Its special use in diabetes. Artificial milk. Vegetable casein [for industrial uses]. substitute for coffee. Seedlings [sprouts] eaten. Sauces, &c., from the bean. Tépépé made in Malaysia with the aid of a fungus. Teou-fu [tofu] prepared by the Chinese. Tao-cho prepared [in Java] with the aid of fungus. Sho-yu or soy kechap. Miso, a Japanese preparation. The making of soy kechap in Java. Organisms in fermentation. Oil [soy-bean oil, or kachang oil]. Criminal use (hairs on the pods cause irritation within the digestive tract). Fibre (in the stem). Joss sticks (Ash of the stem is said to be used in joss-sticks in Indo-China). The soybean is frequently cultivated in Burma and Siam.

A photo (frontispiece) facing the title page shows Isaac Henry Burkill (1870-1965). This second edition is only slightly different from the original 1935 edition of which 2,000 copies were sold. This edition was published on behalf of the governments of Malaysia and Singapore by the Ministry of Agriculture and Cooperatives, Kuala Lumpur, Malaysia. Address: Director of Gardens, Straits Settlements (Singapore; 1912-1925).

250. Milner, Max. 1966. General outlook for seed protein concentrates. *Advances in Chemistry Series* No. 57. p. 52-64. Chap. 5. World Protein Resources. [8 ref]

• **Summary:** "Seed proteins, particularly those of the cereals and legumes, are mainstays of human protein nutrition, providing several times more of this nutrient than animal proteins..."

"World Protein Resources: The cereals contribute in round numbers 75 million metric tons of protein, of which wheat provides 25 million, rice 12 million and corn 20 million tons. The legumes, consisting of various beans, peas and lentils, in aggregate, provide, surprisingly, only about 8 million tons. Additional but minor plant sources of protein are tubers, including potatoes, and nuts. The world animal protein supply, including principally meat, milk, eggs, and fish, has been estimated to be about 20 million metric tons. And finally, the potential contribution of the oilseeds, which include principally soybeans, cottonseed, and peanuts, can be considered to be about equal to that of all the animal protein now available, 20 million tons per annum."

A long section titled "Soybeans" (p. 57-59) discusses soybeans and soyfoods, including tofu, miso, natto, tempeh, soybean milk, full-fat soybean flour, soy protein concentrates and isolates, and spun soy protein products. Address:

UNICEF, United Nations, New York, NY; Present address: Office of Technical Cooperation and Research, Agency for International Development, Washington, DC.

251. Murata, Kiku; Ikehata, H. 1966. Hemolysis preventing antioxidant activity of synthesized 6.7.4'-trihydroxyisoflavone and that isolated from tempeh. In: 1966. Proceedings of the Seventh International Congress of Nutrition, Hamburg. Braunschweig, West Germany: Verlag Friedr. Vieweg & Sohn GmbH. See vol. 5, p. 656-59. [3 ref]  
**• Summary:** Contents: Introduction. Synthesis of 6.7.4'-trihydroxyisoflavone and its derivatives and their biological activities. Antihemolytic activities of tempeh with different fermentation times. Production of  $\alpha$ -glucosidase activity in *Rhizopus oligosporus*. Summary. Address: Osaka City Univ., Osaka, Japan.

252. Schenk, E.G.; Naundorf, G. 1966. Lexikon der tropischen, subtropischen und mediterranen Nahrungs- und Genussmittel [Dictionary of tropical, subtropical, and Mediterranean foods and food adjuncts (stimulants / enjoyables)]. Herford, Germany: Nicolaische Verlagsbuchhandlung Herford. xiv + 199 p. Index. 21 cm. Series: Manualia Nicolai 1. [200\* ref. Ger]  
**• Summary:** Pages 70-71 give a list of Japanese foods (after Mayerhofer and Pirquet 1926) in no apparent order, with the Japanese name followed by a translation of that name into German. Included in the long list are: Akamiso, miso, shiromiso, tofukasu [okara], daizu, fu [dried wheat gluten], kingyo-fu, kiri-fu, kiri-mochi [frozen and dried rice cake], ame [malt extract], mirin, aburage [tofu fried in vegetable oil], natto–Bohnenkäse, Tofu–Sojatopfen, Tonyu–Sojamilch, azuki [small red beans], kwansen-fu, kinako–Sojabohnenmehl, geröstet, amasake–unvergorener Sake, umeboshi, koritofu [frozen and dried tofu], midzuame [soft ame = rice syrup], shoyu–Sojasauce, yuba–eine Bohnenspeise. Plus many types of sea vegetables.

On pages 140-42 the following terms are defined in German: Soja [soya], Sojabohne [soybeans], Sojabohnenkäse [soy cheese or tofu], Sojabohnenmehl [soybean meal], Sojabohnenöl [soybean oil], Sojakäse [fermented soy cheese], Sojamilch [soymilk], Soja-Nahrungsmittel [soyfoods]: Koji, Miso, Tofu, Nato [sic, natto], kondensierte Soja-Milch [condensed soymilk], Japanische Verarbeitungen [Japanese processed foods: Japanische Soja-Sauce Shoyu (Shoyu), Miso, Tofu], Soja-Nahrungsmittel, javanische [Javanese soyfoods: Tao-Hoe, Tempeh, Ketjap, Tao-Tjong [a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], Sojatunken, Soja-Verarbeitungen: Sojamilch, Bohnenkäse, Teoufou (China), Tofu (Japan), Dan Phu (Vietnam), Natto (Japan), Tao-tehe (China).–Bohnenbrei Miso (Japan), Tao-tjiung (*doujiang*, China).–Sojasauce: Shogu [sic, Shoyu] (Japan), Tsiang-Yeou, Tao-yu (China), Ketjap (Java), Tuong (Vietnam).–Gärmittel: Kiut see (Japan).

Then a table shows the nutritional composition of 8 of these foods.

Note 1. This book contains more than its fair share of errors and could be better organized.

Note 2. This is the earliest German-language document seen that uses *Sojabohnenkäse*, the German word meaning “soybean cheese,” to refer to tofu. Address: 1. Prof. Dr. med. habil., Dr. phil. nat, Laurensberg ueber Aachen, Germany.

253. van Veen, A.G. 1966. Toxic properties of some unusual foods. In: Toxicants Occurring Naturally in Foods, 1st ed. 1966. Washington, DC: National Academy of Sciences. 301 p. See p. 174-82. National Academy of Sciences, Natural Research Council, Publication No. 1354. [21 ref]  
**• Summary:** Contents: Introduction. Quail. Djenkol (a bean). Kava-kava (or Kawa-kawa). *Leucaena glauca*. Bongkrek (or tempeh bongkrek). Ackee. Address: Graduate School of Nutrition, Cornell Univ., Ithaca, New York 14850.

254. Shallenberger, R.S.; Hand, D.B.; Steinkraus, K.H. 1967. Changes in sucrose, raffinose, and stachyose during tempeh fermentation. *USDA Agricultural Research Service. ARS-74-41*. p. 68-71. March. Proceedings of the 8th Research Conference on Dry Beans. Held 11-13 Aug. 1966 in Belaire, MI.

**• Summary:** During tempeh fermentation (for 80 hours; typically tempeh is fermented for 24 hours), sucrose decreased, raffinose increased slightly, and stachyose decreased dramatically. Soaking and cooking raw soybeans reduced the sugar content by about 50%. On a percent dry basis, sucrose decreased the most (to 1.84 from 4.53), raffinose to 0.35 from 0.73, and stachyose to 1.40 from 2.73. Address: New York State Agric. Exp. Station, Geneva, New York.

255. De, Sasanka S.; Russell, J.S.; André, L.M. 1967. Soybean acceptability and consumer adoptability in relation to food habits in different parts of the world. *USDA Agricultural Research Service. ARS-71-35*. p. 20-27. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [1 ref]

**• Summary:** Contents: Traditional soy products in the Far East: Soysauce, soy milk, bean curd, tempeh, natto and miso, roasted soy flour, kochu chang [Korean soybean miso], sprouted beans. Introduction [of soybeans] in other countries: Brazil, USSR, Africa, Latin America, Turkey. New types of products: Defatted soy flour, full-fat soy flour and beverages made from it developed by the Soybean Council of America. Justification: Cost of a pound of protein from different foods. Beef \$4.60. Pork \$4.30. Poultry \$1.50. Nonfat dry milk solids \$0.41. Dry beans \$0.35. Soybeans \$0.14. Attempted introductions: India. Factors involved in adoptability.

“Kochu chang is produced in every household in Korea from mashed boiled [soy] beans which are hung in bags for

2 to 3 months. The product is broken up, dried, and ground. It is then mixed with ground red pepper [plus salt and water] and kept for some time before use.”

This paper was presented by Leon Marie André.

Note 1. This is the earliest English-language document seen (Jan. 2007) that contains the term “roasted soy flour.” We read (p. 22): “This product is produced in small amounts and consumed with rice cake [mochi]. There is hardly any information on the nutritive value of the product.”

Note 2. This is the earliest English-language document seen (March 2009) that uses the word “kochu chang” (or “kochu-chang”) to refer to Korean-style red pepper and soybean paste (miso). Address: 1-2. Food and Agriculture Organization of the United Nations, Rome, Italy; 3. FAO Liaison Officer and adviser to UNICEF.

256. Fischer, R.W. 1967. The use of soy in food products. *Soybean Digest*. May. p. 29, 31-32, 35-36, 38.

• **Summary:** An excellent overview, with considerable history. Contents: Introduction. Grisly hand of hunger. Soybean oil. Oriental soy foods. Soy flour and grits (with a good history of Berczeller, A.E. Staley, Shellabarger, Allied Mills, J.R. Short Milling Co. and Wytase). Isolates and concentrates. The war years (during and immediately after World War II, soy flour and grits come to be widely disliked). New products and know-how.

“Oriental soy foods:... In the Orient soybeans have, for centuries, played an important part in human diets as soy milk for infants, shoyu, or soy sauce as we call it, miso, tofu, tempeh, kinako, natto, yuba, etc.”

“Isolates and concentrates: In the mid-1930’s processes for further refining the protein factors of soy began to appear. The first 70% soy protein concentrate was turned out by Mead Johnson Co. using the Bonato process of sulfur dioxide and sulfurous acid extraction, but was discontinued for lack of adequate markets for the product. In 1936 the Glidden Co. began working on the production of an isolated protein [90-100% protein] from extracted soy flakes for industrial uses. Glidden, as a major manufacturer of resin, wanted the isolate as a stabilizer for the resin used in sizing paper to provide wet strength. By 1939 Glidden was producing an enzyme hydrolyzed isolated protein to be used with egg albumen for its whipping capacity in producing food toppings... Over the years soy protein isolates have found their greatest application in the industrial field, particularly as paper coatings for high gloss products.”

A photo shows cans of Worthington Choplets, Soyameat (3 varieties), and Numete—all made from spun soy protein fibers. Address: Soypro International Inc.

257. Hesseltine, Clifford W. 1967. Fermented products: Miso, sufu, and tempeh. *USDA Agricultural Research Service*. ARS-71-35. p. 170-80. May. Proceedings of International Conference on Soybean Protein Foods. Held

17-19 Oct. 1966 at Peoria, Illinois. [12 ref]

• **Summary:** Discusses: Miso. Sufu, or Chinese cheese [fermented tofu]. Tempeh. Absence of aflatoxin in fermented food products. Table 1 shows mold fermented food products tested for aflatoxin and found negative. These include shoyu, miso, Chinese black beans (Soy nuggets from Taiwan), Hamanatto, moromi, soy tempeh, wheat tempeh, rice tempeh, wheat-soybean tempeh.

Concerning sufu: “The pehtzes [molded tofu cubes] are next brined in various solutions depending on the flavor desired. A typical brine would consist of 12% NaCl and 10% ethanol (sometimes added as rice wine). In other instances, only a salt brine may be used. The molded cakes are allowed to age for about 2 months. The finished cheese along with the brine is bottled, sterilized, and marketed as sufu.”

Of all the various *Mucor* species tested for use in making, the *Actinomucor elegans* used commercially is the best proteinase and almost the best lipase producer. “This same fungus is used in China to produce a food made by fermentation of wheat gluten” Address: Northern Utilization R&D Div., ARS, USDA, Peoria, Illinois.

258. *Soybean Digest*. 1967. Cereals, soybeans combined in USDA food process. May. p. 40, 42.

• **Summary:** This article begins: “New cereal foods can be made in modern processes adapted by Department of Agricultural scientists from primitive ways of making an Indonesian food, tempeh, from soybeans.

“The new foods, made from cereals or cereal-soy mixtures, can be deep fried as chips, baked or used as ingredients for foods such as soups... The cereal-soy temphehs hold promise as sources of high-quality protein, but have not yet been tested for nutritional value.

“The fried chips have mild flavors of meat, popcorn, mushrooms or nuts,...”

A photo shows Jeffrey Lee, age 3, eating a strip of fried tempeh. Jeffrey is the son of Mr. and Mrs. Stephen Lee, Peoria, Illinois.

Note: This article is based on: Hesseltine, C.W.; Smith, Mabel; Wang, Hwa L. 1967. “New fermented cereal products.” *Developments in Industrial Microbiology* 8:179-86.

259. Orr, Elizabeth; Adair, David. 1967. The production of protein foods and concentrates from oilseeds. *Tropical Products Institute Report* No. G31. 104 p. June. Also titled T.P.I. Report (London). [44 ref]

• **Summary:** Contents: Foreword. Acknowledgements. Introduction. 1. The use of oilseeds as a source of protein. 2. Oilseed resources. 3. The manufacture of protein flours by standard oil milling processes. 4. Some cost aspects of the manufacture of protein flour by standard oil milling processes. 5. Examples of the use of edible flours made by standard oil milling processes. 6. Full fat soya flours. 7.

Oriental methods of processing soya. 8. Other processes for making protein products. 9. The distribution of protein products. 10. Current experience of making protein flours and foods from oilseeds. 11. The initiation of protein food programmes with particular reference to the role of the administrator. Appendices. 1. Protein nutrition. 2. Oilseed statistics. 3. Toxic hazards. 4. P.A.G. Guides [PAG]. 5. Aflatoxin. 6. Questionnaire. 7. Some examples of the cost of packaging oilseed-based protein foods. 8. Prices of edible oilseed products and protein flours and foods made from oilseeds. Bibliography. Chapters 6 and 7 are especially relevant to soyfoods.

“Full fat soya flour (FFSF) is manufactured in the USA by Archer Daniels Midland Co. and Central Soya, and in the UK by 3 firms: British Arkady Co. Ltd., Soya Foods Ltd., and British Soya Products Ltd. There are no official statistics for production in either country. A trade source of information has estimated UK usage of soya flour at 30,000 tons per annum, but this figure includes defatted soya flour made from meal imported from the USA. Full fat soya flours can be divided into 2 main categories: (a) flours used primarily for bleaching purposes in bread, and (b) general purpose flours. When the flour is to be used mainly for bleaching it is made from uncooked beans, since the natural enzymes in the bean must remain active until the bleaching process has been completed. It is estimated that about half the full fat soya flour made in the UK is used in bread manufacture.”

A table lists all known commercial full-fat soy flours, their composition and prices. Describes the Promo Process and Wenger Process for making FFSF, with cost data. Gives case histories for Pronutro in South Africa and Nutresco in [Southern] Rhodesia.

Chapter 7. Kinako. Fermentation products: Soya sauce (shoyu), miso, natto, tempeh. Developing the use of fermented products. Aqueous extracts: Soya milk and tofu, kori-tofu. Soya milk as a substitute for cow's milk. The package soy milk shop (including Tetra Pak and Prepac packaging; the Prepac system, developed by the S.E.A.B. Co., Villejuif, France, has a capacity of 1,500 packs/hour). Case histories for soya milk: Rural cooperatives in Taiwan, Saridele in Indonesia, and Vitasoy in Hong Kong. Soya milk made from soya flour: The 4 known manufacturers are Promo Ltd. of the U.K. (“The product made by Promo is marketed under the brand name of ‘Velactin by the Wander company.’”), and Loma Linda Foods (Soyalac and Granogen), Mead Johnson (Sobee or Soybee), and Borden's Soy Processing Co., all of the USA. Promo and Loma Linda use the traditional Oriental method rather than using soy flour.

Note: This is the earliest document seen (Sept. 2002) concerning Tetra Pak and soy. Address: TPI, 56/62 Gray's Inn Road, London WC1.

260. Hesseltine, C.W.; Wang, Hwa L. 1967. Traditional fermented foods. *Biotechnology and Bioengineering* 9(3):275-88. July. [8 ref]

• **Summary:** Contents: Summary. Introduction. Fish fermentations. Soybean and peanut fermentations: Koji, shoyu, miso, hamanatto, natto, ontjom, sufu, tempeh. Discussion: Advantages of preparing foods by fermentation. Address: NRRL, Peoria, Illinois.

261. Dimler, R.J. 1967. Soybeans and corn join forces in food! *Soybean Digest*. Sept. p. 50-53.

• **Summary:** Discusses composition of soybean and corn foods, essential amino acids, village process for making full-fat soy flour, CSM (Corn-Soy-Milk mixture; developed by the American Corn Millers Federation and originally known as Blended Food product, Formula No. 2). The ingredients are 68% gelatinized corn meal, 25% defatted soy flour (toasted), 5% nonfat dry milk solids, and 2% vitamins and minerals, cereal-soya tempeh.

“Last fall [1966], the director general of the National Children's Bureau, Health Ministry of Brazil, visited the Northern Laboratory to discuss the Village Process. On his return to Brazil, he arranged purchase of six sets of equipment by UNICEF. Mr. Gus Mustakas, one of the chemical engineers responsible for developing the process, was invited to Brazil to demonstrate the process and to provide technical assistance. Mr. Mustakas has just returned home, and reports that he gave instructions on the process to groups of doctors, nutritionists, and social workers of the National Children's Bureau. These groups are now introducing the process to villages in Brazil for the purpose of providing installations to improve nutrition among young children suffering from dietary protein deficiency.” Address: Director, NRRL, Peoria, Illinois 61604.

262. Murata, Kiku; Ikehata, Hideo; Miyamoto, Teiji. 1967. Studies on the nutritional value of tempeh. *J. of Food Science* 32(5):580-86. Sept/Oct. [27 ref]

• **Summary:** The nutritional composition of tempeh and unfermented soybeans were compared. There were no large differences in protein and ash content between tempeh and unfermented soybeans. Fiber was slightly increased during fermentation. The fat content of tempeh was slightly lower than that of soybeans, but the acid value was noticeably higher. Free amino acids were increased during fermentation. The amount of different free amino acids in the palatable tempeh was from 1 to 85 times as much as that of unfermented soybeans. Riboflavin increased 8 to 47 times, vitamin B-6 (pyridoxine) increased 4 to 14 times, and nicotinic acid (niacin) increased 2 to 5 times in tempehs made and sun-dried in Indonesia. Pantothenic acid also increased during fermentation, although thiamine was little altered.

Tables: (1) Chemical composition of tempeh and

unfermented soybeans. (2) Amino acid composition of tempeh and unfermented soybeans. (3) Changes in free amino acids of tempeh during fermentation. (4) Chemical characteristics of oils from tempeh and unfermented soybeans. (5) Vitamin content of Indonesian tempeh and unfermented soybeans (in dry matter).

Figures: (1) IR spectra of oil fractions from soybeans and tempeh. (2) Changes in thiamine and riboflavin content of tempeh during fermentation. (3) Changes in pantothenic acid and vitamin B content of tempeh during fermentation. (4) Changes in nicotinic acid content of tempeh during fermentation. Address: Food and Nutrition Lab., Faculty of Science of Living, Osaka City Univ., Osaka, Japan.

263. *Nutrition Reviews*. 1967. Soy fibers—A new approach to vegetable protein acceptability. 25(10):305-07. Oct. [6 ref]

• **Summary:** The subtitle summary states: “Fibers have been formed from soybean protein and incorporated into meat analogs. The process, its nutritional and economic aspects, and the mechanism of fiber formation are described.”

Traditional foods made from soybeans include tofu, natto, miso, and tempeh. U.S. food manufacturers have developed a new process for making “fibers from isolated soy protein, and for incorporating these fibers into meat-like analogs which may find consumer acceptance as a meat substitute in this country. These products should be cheaper than meat and can be made as or more nutritious than meat by addition of the missing vitamins and minerals.” The final products, meat analogs, typically contain (on a dry basis) 40% soy fiber, 10% protein binder (usually egg albumin), 0-50% fat and/or 0-50% flavors, colors, and supplemental nutrients.

264. *Soybean Digest*. 1967. USDA develops wheat-soy tempeh. Nov. p. 4.

• **Summary:** This tempeh was developed by Dr. H.L. Wang, biochemist, and Dr. C.W. Hesseltine, microbiologist, and others at USDA's Northern Utilization Research Lab.

265. Leitao, M.F.F.; Menezes, T.J.B.; Tango, J.S. 1967-1968. Producao de “Tempeh,” produto fermentado de soja [Production of tempeh—a fermented soy product]. *Coletanea do Instituto de Tecnologia de Alimentos (Campinas)* 2:333-39. [10 ref. Por]\*  
Address: Brazil.

266. Pigeaud, Theodore G.Th. 1967-1970. Literature of Java. Catalog raisonné of Javanese manuscripts in the library of the University of Leiden and other public collections in the Netherlands. 4 vols. The Hague: Martinus Nijhoff. See vol. II, p. 32. 25 cm. [5000+\* ref. Eng]

• **Summary:** Vol. II is titled “Descriptive lists of Javanese manuscripts.” These lists “are to take the place of the Old Dutch Catalogues of the Library of the University of

Leiden,...

In the section titled “Delft Collection” (p. 25-50) is a description of the *Serat Centhini* manuscript (which mentions tempeh) in volume II, p. 32. “Lor 1814 (I-V)—B-30.802. 21 x 35 cm... Centini, encyclopedical romantic poem in macapat verse, dated 1775 A.J., i.e. 1846 A.D., by Ranga Sutrasna, who lived in the reign of Paku Buwana V (1920-1823). Five leather bound volumes with quadratic kraton script, written in Surakarta, originally belonging to the Delft Collection. Cat. Vreede p. 323-27 has a Dutch epitome and references to literature, The Centini has been edited in Batavia (KBG, romanized) in 1912/15. See Pigeaud, ‘De Tjabolan en de Tjentini’ (Verh. KBG vol. 72, 1933), which has an extensive Dutch summary and lists of initial lines of cantos.”

Pigeaud was born in 1899. Address: PhD, Leiden.

267. Ikehata, Hideo. 1967. Daizu no furabonoido [Soybean flavonoids]. *Shokuhin Kogyo (Food Industry)* 10(16):42-47. [16 ref. Jap]

• **Summary:** Discusses genistein, daidzein, daidzin, isoflavones, and estrogens. Address: Osaka Shiritsu Daigaku, Japan.

268. Kasuya, Ritsu; Ikehata, H.; Miyamoto, T.; Murata, K. 1967. Nattô to tempeh no B-rui bitamin [B-vitamin content of natto and tempeh]. *Kaseigaku Zasshi (J. of Home Economics of Japan)* 18:362-64. [10 ref. Jap]  
Address: Osaka, Japan.

269. Direktorat Gizi. 1967. Daftar komposisi bahan Makanan [Indonesian food composition tables]. Jakarta: Bhratara. Direktorat Gizi Departemen Kesehatan R.I. 59 p. [Ind]

• **Summary:** Chapter 2 contains data on the nutritional composition of beans and seeds including okara (*ampas tahu*), soybeans—fresh (*basah*) and dry (*kering*), and bongkre (tempe bungkil kelapa).

Note: This is the earliest Indonesian-language document seen (Oct. 2001) that mentions okara, which it calls *ampas tahu*. Address: Indonesia.

270. Hesseltine, C.W.; Smith, Mabel; Wang, Hwa L. 1967. New fermented cereal products. *Developments in Industrial Microbiology* 8:179-86. Chapter 20. [10 ref]

• **Summary:** “New fermented tempeh-type products were prepared from wheat, oats, rye, barley, rice, and combinations of rice or wheat with soybeans by selected strains of *Rhizopus oligosporus* from the Indonesian tempeh fermentation. All fermentations were carried out at 31°C for 24 hours or less. The products possess a very pleasant odor, a desirable color, and a very acceptable mild taste. Fermentations may be carried out in either shallow perforated trays or perforated plastic packages. The fermentation products may be preserved for at least a month

by freezing. Data are given on the changes of temperature and weight losses due to fermentation, as well as on methods of modifying flavor.”

The use of sorghum or peanuts with soybeans gave poor results.

Tables: (1) Time of boiling required by different grains in preparation for fermentation. (2) Evaluation of cooked and uncooked fermented food products. (3) Evaluation of uncooked and cooked products made from combinations of cereals and legumes. (4) Change in temperature during large scale fermentation of equal amounts of soybean grits and cracked wheat.

Figures: (1) Cakes of tempeh. Wheat, soybeans, rice, wheat-soybeans, rice-soybean. (2) Fresh tempeh sliced. Soybeans, wheat, rice, wheat-soybeans, and rice-soybean. Address: NRRL, Peoria, Illinois.

271. Indonesia. Departemen Pertanian [Indonesian Department of Agriculture]. 1967. *Mustika rasa; membuat resep 2 masakan Indonesia dari Sabang sampai Merauke*. [Gems of taste: Indonesian cookery]. Djakarta, Indonesia: Indonesia. Departemen Pertanian [IDA]. xi + 1,123 p. Illust. (part color). 22 cm. [Ind]\*  
Address: Indonesia.

272. Lien Soen In. 1967. *Pembuatan Vitempo sebagai makanan anak dan penilaian daya tahannya* [Preparation of Vitempo as a children's food and shelf-life tests]. Thesis (Skripsi), Akademi Kimia Analis, Bogor, Indonesia. 24 p. [Ind]\*

• **Summary:** Vitempo is a children's food made of 78% soy tempeh (made from defatted soybean meal), 20% sugar powder, 2% rice flour, and 4 ml/100 gm of coconut oil. Address: Bogor, Indonesia.

273. Mateles, Richard I.; Wogan, Gerald N. eds. 1967. *Biochemistry of some foodborne microbial toxins*. Cambridge, Massachusetts: MIT Press. ix + 171 p. Papers presented at the Symposium on Microbial Toxins held at the meeting of the American Chemical Society, New York, on 12 Sept. 1966. [100+\* ref]

• **Summary:** Contents: Part I: Bacterial and algal toxins. Part II: Fungal toxins. One chapter in each part is about soy. They are cited separately. Address: MIT, Cambridge, Massachusetts.

274. Nakano, Masahiro. ed. 1967. *Hakkô shokuhin* [Fermented foods]. Tokyo: Korin Shoin. 244 p. See esp. p. 81-101. [Jap]

• **Summary:** Includes sections on soymilk yogurt (cultured with *Lactobacillus bulgaricus*) and *nyu fu* [fermented tofu].

Chapter 6, *Nyu fu* notes that this is an ancient food that came from China and Taiwan, but has never become a part of Japanese cuisine. In the United States (in English) it is

known as “Soybean cheese” and “Vegetable cheese,” while in China it is known as “Nyufu” as well as Chaw taufu, Sufu, Funyu, etc.

6.1.2—Places of production and varieties: Nyufu is made mainly in the middle to southern four coastal provinces of China. These include (pinyin / Wade-Giles): Jejiang / Chekiang (Jap: Sekkô), Jiangsu / Kiangsu (Jap: Kôso), Fujian / Fukien (Jap: Fukken), Guangdong / Kwangtung (Jap: Kanton). A lot of Nyufu is also made in Taiwan, which is located off the coast of Fujian province.

Since nyufu has been produced for a long time over a vast area, there are many varieties. A study conducted in the 1920s found the varieties shown in chart 6.1 in the Shanghai market (Shanghai is in Jiangsu province near the mouth of the Yangtze River).

(1) Pickled without mold on the tofu. (i) Jianning-dofu: Drain then dry the tofu, add salt, and pickle in jiang or the residue / dregs left after making soy sauce

(ii) Doufuru: Drain then dry the tofu. Sprinkle it with salt then pickle it in koji.

(2) Culture mold on small cubes of tofu until a fragrant white mycelium surrounds each cube, then pickle.

(iii) Jiangrufu: Pickle in jiang or the residue / dregs left after making soy sauce.

(iv). Honjiang rufu [red jiang fermented tofu]: Pickle in a mixture of red rice / angkak (a red koji made by growing *Monascus* mold on rice) and the residue / dregs left after making soy sauce.

(v) Zaorufu: Pickle in sake lees.

(vi) Hongrufu: Pickle in red sake lees.

(vii) Jiujia rufu: Pickle in white sake / daku-shu, like unrefined sake (*doburoku*).

(viii) Xiangrufu (fragrant rufu): Pickle in jiang with olive leaves, fragrant mushrooms, etc.

Dr. Masahiro Nakano was born in 1907. Address: National Food Research Inst., Tokyo.

275. van Veen, A.G. 1967. The bongkreik toxins. In: R.I. Mateles and G.N. Wogan, eds. 1967. *Biochemistry of Some Foodborne Microbial Toxins*. Cambridge, MA: MIT Press. ix + 171 p. See p. 43-50. [13 ref]

• **Summary:** Bongkreik poisonings have occurred for as long as could be remembered in Central Java (Indonesia), mainly in the province of Banjumas [also spelled Banyumas, or Banjoemas in Dutch] and its surrounding areas. “Although mass poisonings involving sometimes as many as 200 people had been known to occur since at least the end of the last century, the cause was unknown; it was certain only that it was not a contagious disease... Moreover, the population held the belief that the poisonings were due to evil spirits or to the Goddess of the Indian Ocean in an angry mood! The poisonings occurred a few times a year, and there were never many survivors... During the economic depression in Indonesia, between 1931 and 1937, the poisonings were very

numerous. Mertens and van Veen from the Eijkman Institute in Djakarta began investigation of them...

"It was found that as a rule the poisonous products were poorly fermented and that they always contained coconut press cake (the fermented product is then called 'bongkre' or 'tempeh bongkre') or grated coconut ('semaji'). A few grams of the poisonous material, even after having been cooked in a soup or fried in oil, seemed to be enough to kill a man...

"It appeared that the villagers who were used to manufacturing bongkre or semaji for themselves or for sale nearly always produced good, harmless products... However, in periods of economic distress when the villagers who customarily sell their coconuts, copra, or coconut press cake to the processors cannot do so, they start to manufacture bongkre or semaji themselves for home consumption. Many of them, not knowing the technique, may not be able to get a good fermentation, so that the *Rhizopus* does not grow fast enough (e.g., within 18 to 48 hours) and other microorganisms get an opportunity to grow. In most cases, these will be mainly spoilage bacteria or other fungi but every now and then there may be an accidental infection with the toxic *Pseudomonas cocovenenans*, and this microorganism may be able to multiply fast for two reasons. Usually the fungus grows much faster than any bacteria or yeast present in the basic material, but if it does not do so the *Pseudomonas* has a chance. The latter, moreover, excretes two antibiotic substances which inhibit any fungus growth that takes place. Later van Veen (1950) was able to show that at least one of the substances causing the fatal poisoning in man is also a strong antibiotic for the *Rhizopus*.

The authors were able to extract from suitable culture media two poisonous substances. One was the yellow poison called toxoflavin because its chemical and physical properties were very similar to those of riboflavin, which at that time had only recently been discovered. The other, bongkre acid, had all the characteristics of a highly unsaturated fatty acid. "In general, bongkre acid is a much more severe poison for animals and humans than is toxoflavin. It mobilizes the glycogen from the liver, thus leading to fatal hypoglycemia."

"After the war, when antibiotics had become known, van Veen found that bongkre acid in salt form was a very active antibiotic for the bongkre fungus, *Rhizopus*, as well as for *Penicillium glaucum*, yeast, and a number of bacteria (van Veen, 1950)." Address: Graduate School of Nutrition, Cornell Univ., Ithaca, New York.

276. Associated Press (AP). 1968. Poison food kills 60. *Chicago Tribune*. Feb. 20. p. 13.

• **Summary:** "Jakarta, Indonesia, Feb. 19—About 60 persons have died of food poisoning in Bandung, West Java, the official news agency, Antara, reported today. Antara said they died after eating poisonous soybean cakes."

Note 1. These people almost certainly died from eating coconut-presscake tempeh (*tempe bongkre*), which contains no soybeans, but is made and eaten in much the same way as regular soybean tempeh.

Note 2. This article, titled "Illness kills 60," also appeared in the *Hartford Courant* (Feb. 20, p. 31C).

277. Diokno-Palo, Natividad; Palo, Macario A. 1968. Two Philippine species of *Phycomycetes* in tempeh production from soybean. *Philippine J. of Science* 97(1):1-16. March. [13 ref]

• **Summary:** "Half or more of Indonesia's soybean harvest of 17 million bushels in 1959 was utilized for making this food product [tempeh] and many thousands of people particularly in big cities make a living on it. Tempeh is not known in food markets in the Philippines. There is no published report which mentions or describes its manufacture in any region of this country."

In a preliminary test conducted under room temperature conditions (27-32°C) *Rhizopus stolonifer* (NRRL 1477), a foreign mold strain, was observed to produce a better tempeh cake than any other foreign *Rhizopus* strains. Illustrations and photos show: A fascicle of sporangiophores of *Rhizopus stolonifer* bearing full-developed sporangia, from the base of which grow downward rootlike filaments (rhizoids) that attach it to the substrate. Within the sporangia are spores. *Cunninghamella elegans* A-12679 with unbranched conidiophores arising slightly from hyphal branches. Conidia and pointed sterigmata. Address: National Inst. of Science and Technology (NIST), Manila, Philippines.

278. van Veen, A.G.; Graham, D.C.W.; Steinkraus, K.H. 1968. Fermented peanut press cake. *Cereal Science Today* 13(3):96, 98-99. March. [18 ref]

• **Summary:** Discusses onjom and the aflatoxins it may contain. Aflatoxins can cause liver tumors. "We were able to show that under the influence of *Neurospora sitophila* the aflatoxin B-1 content decreases by about 50%. In one experiment we found that *Rhizopus oligosporus* reduced the aflatoxin content of peanut press cake by about 70%." Address: Cornell Univ. 1-2. Ithaca; 3. Geneva, New York.

279. Ikehata, Hideo; Wakaizumi, M.; Murata, K. 1968. Antioxidant and antihemolytic activity of a new isoflavone, "Factor 2" isolated from tempeh. *Agricultural and Biological Chemistry* 32(6):740-46. June. [14 ref]

• **Summary:** "A new isoflavone assigned the trivial name 'Factor 2' which was first isolated from tempeh, a fermented soybean product, and identified as 6,7,4'-trihydroxyisoflavone was technically synthesized and tested for antioxidant activity by several methods. Factor 2 was proved to be a potent antioxidant in aqueous solution at pH 7.4. However it was not effective in preventing autoxidation of soybean oil and soybean powder. Factor 2

given orally to rats fed a vitamin-E deficient diet was also negative in hemolysis preventing activity. Biological activity of tempeh and the isolated Factor 2 to prevent hemolysis of red blood cells of rats fed a vitamin-E deficient diet was discussed.” Address: Food and Nutrition Lab., Faculty of Science of Living, Osaka City Univ., Nishi-ku, Osaka, Japan.

280. Murata, Kiku; Miyamoto, T.; Taguchi, F. 1968. Biosynthesis of B vitamins with *Rhizopus oligosporus*. *J. of Vitaminology (Kyoto, Japan)* 14(3):191-97. Sept. 10. [4 ref]  
 • **Summary:** “The thiamine, riboflavin, and biotin content of the fungus increased during tempeh fermentation in proportion to weight or nitrogen content. Concentration of riboflavin and biotin in the medium also increased. The thiamine content of the medium decreased indicating that it was taken up from the medium by the fungus rather than synthesized.” Address: Nutrition Lab., Faculty of Science of Living, Osaka City Univ., Nishi-ku, Osaka 550, Japan.

281. Stanton, W.R.; Brook, E.J.; Wallbridge, A. 1968. Fermentation methods for protein enrichment of cassava. Presented at the Third International Fermentation Symposium. Held in Sept. at New Brunswick. \*  
 Address: 1. PhD, Head, Microbiology Section, Tropical Products Inst., London, England. Later: Prof. of Botany, Univ. of Malaya, Kuala Lumpur, Malaysia.

282. Wang, Hwa L.; Ruttle, Doris I.; Hesseltine, C.W. 1968. Protein quality of wheat and soybeans after *Rhizopus oligosporus* fermentation. *J. of Nutrition* 96(1):109-14. Sept. [17 ref]  
 • **Summary:** The growth of rats fed fermented wheat improved significantly over those fed unfermented wheat. The Protein Efficiency Ratio (PER) of wheat and wheat/soybean mixtures was significantly increased by fermentation with *Rhizopus oligosporus* NRRL 2710, although that of soybeans alone was unchanged. These improvements were partly attributed to the increase in availability of lysine in wheat by fermentation. A mixture of equal parts wheat and proteins gave a good pattern of amino acids. The fermentation process raised the PER of the mixture so that it was comparable to casein. Address: NRRL, Peoria, Illinois.

283. Camargo, R. de. 1968. Tecnologia de alimentos ricos em proteina vegetal [Technology of foods rich in vegetable protein (Abstract)]. *Simposio Brasileiro de Alimentacao e Nutricao, Anais (Recife)* 2:151-52. Recife: Universidade Federal de Pernambuco. [Por]\*  
 Address: Brazil.

285. Yu, Jean Ya-Chen. 1968. The preservation of ocean fish with fermented soybean (tempeh). MSc thesis, University of Kentucky. vii + 71 leaves. Illust. 29 cm. \*

• **Summary:** Includes bibliographic references (leaves 66-71). Jean Ya-Chen Yu was born in 1942.

286. Borgstrom, Georg. 1968. Principles of food science: Food microbiology and biochemistry (Vol. 2). New York, NY: Macmillan. xiv + 473 p. Index. 26 cm. [9 ref]

• **Summary:** In Chapter 4, “Fermentation,” is a section titled “soybeans” (p. 110-12) which discusses: Tofu or teou-fu, miso, sufu, natto, tempeh, taotjo and ketjap (shoyu / soy sauce).

“Frozen tofu (kori tofu, or koya dofu) is tofu that has been frozen for several weeks and dried. Aburage is fresh tofu dried in deep fat. Namage is fresh tofu that has been surface-fried.”

In Chapter 10, “Trends in food utilization,” is a section titled “Soybean” (p. 297-301) which discusses: Soybean products and fermented products (“These foods are all rather unknown among Western peoples, although they are eaten by millions of people and constitute some of the most common foods on earth.” Yet some “typical oriental soy foods,” such as tofu and tempeh, are finding acceptance in the West. One soy product that is widely used in most parts of the world is soy sauce. Soy flour and soy grits were first made commercially in the USA in the early 1930s. Milk made from the soybean is important in China {see Vol. I, Chap. 15}. Fermented products include taotjo, soy sauce or ketjap). Soybean protein, including soybean oil and defatted soybean oil meal (In 1961, 9.5 million tons of soybean oil meal was used in the USA, mainly for animal foods, with special grades used for food and industrial products, such as isolated soybean protein. Purified proteins extracted from dehulled and defatted meal, when toasted, are used in “Civil Defense emergency rations” and by the “international organization Meals for Millions.” Some 90% of the processed soybean oil in the USA now goes into food uses. Soybean oil is now the most important ingredient in oleomargarine {see Fig. 10.1}. About one-third of the soybeans moved off the farm are exported; Japan is our biggest customer {taking about 57%} followed by Western Europe {27%}, Canada {8%} and Israel {5%}). Soybean uses (Despite its nutritive value, “the soybean is not looked upon with favor in many areas” for two main reasons: it does not soften well during cooking and it is difficult to digest. Many other legumes share these problems, but they are generally require less cooking. When soy flour is used, alone or with cereal flours, the drawbacks almost vanish. “Soybean milk is not comparable to animal milk or human milk except in protein content.” And it usually has an unpleasant, bitter taste, but this can be removed at least cost by bulk processing. When

soybean curd is made in the typical way, “many nutritious components are lost,” yet it is easy to digest. Soy sauce can be used only as a condiment because of its high salt content. Germinated soybeans make an excellent vegetable, which is rich in vitamin C).

Table 10-1 (p. 300) shows utilization of soybean oil (in millions of pounds) (1947-49 to 1967). The columns are: Shortening (the largest use and steadily increasing), margarine, cooking, salad and other edible oils (No. 2), total for food uses, total nonfood uses.

Toasted soy protein (Made by General Mills, starting in Belmont, Iowa, and named Hi-Pro and Protein Plus. “The Belmont plant has been running at capacity to supply for American Civil Defense stockpiling of toasted soy protein”). MPF (Multi-Purpose Food) made by a joint venture between General Mills and the Meals for Millions foundation. Gelsoy (the “first vegetable protein found to have gelling properties”). Promine (an edible soy protein). Fibroten (soy protein spun into filaments). Soybean oil (The initial purpose of the U.S. soybean crushing industry was to obtain oil. The residual meal was considered virtually useless).

Chapter 13, titled “The world food issue,” is about world hunger, which is “an ever-present specter for 2.3 billion people of the present world population of 3.4 billion.” These people are concentrated largely in warm parts of the globe. Also discusses “protein malnutrition” (the main problem) and the need for more animal protein. North America has an animal protein “intake nine times that of the Far East.” A section on “Plant milks” (p. 428-29), which are made from pulses and cereals, includes a subsection titled “Soybeans” which begins: “Soybeans form the basis of the most widely used and successful plant milks in China, Hong Kong, Indonesia, and the Philippines. Such milk has recently become available in Europe and the United States, primarily for clinical purposes”—for children allergic to the proteins in cows’ milk.

Notes: Many references, divided into English and non-English, books and papers, are given at the end of each chapter. Address: Michigan State Univ.

287. Uphof, J.C. Th. 1968. Dictionary of economic plants. 2nd ed., revised and enlarged. West Germany: Verlag von J. Cramer. See *Glycine max*, p. 246.

• **Summary:** Lists briefly the many food, industrial, and feed uses of the soybean. For example: “Seeds are source of an oil, made into glycerine; used in enamels, varnishes, paints, waterproof goods, linoleum, hard soaps, liquid shampoo, paste soap for hospital use, oil cloth, used in metal moulding, foundry cores; used with rubber for manuf. mats, hose etc., rubber substitutes, lubricant, in printing inks. When refined used for cooking, salads, margarine, shortening.” Address: Tampa, Florida. Emeritus Prof. of Botany. Formerly faculty member of the Michigan State Univ. and State Univ. of Arizona. Economic botanist to the Board of Economic

Warfare, Washington, DC.

288. Wang, Hwa L.; Ruttle, Doris I.; Hesseltine, C.W. 1969. Milk-clotting activity of proteinases produced by *Rhizopus*. *Canadian J. of Microbiology* 15(1):99-104. Jan. [9 ref]

• **Summary:** *Rhizopus oligosporus* NRRL 3271 produces an enzyme having high milk-clotting activity... The NRRL 3271 enzyme merits further study as a potential replacement for rennin or as an adjunct to be incorporated into rennin for the manufacture of cheese.

“The coagulation of milk by the enzyme rennin is a key step in making cheese. Since rennin is only obtainable from the stomachs of milk-fed calves, its limited availability has prompted many investigators to search for rennin-like enzymes from various sources. Among these sources are bacteria (1), fungi (5, 7, 8), and higher plants (2). None of those enzyme preparations, however, have been a satisfactory substitute for animal rennin.” Address: NRRL, Peoria, Illinois.

289. Hesseltine, C.W.; Wang, H.L. 1969. Oriental fermented foods made from soybeans. *USDA Agricultural Research Service*. ARS-74-50. p. 45-52. Feb. Proceedings of the Ninth Dry Bean Research Conference.

• **Summary:** Contents: Introduction. Koji. Shoyu or soy sauce. Miso. Hamanatto. Sufu. Tempeh. Natto. Idli. Conclusion. Flow sheets show the basic process used in making most of these foods. A photo taken in Aug. 1948 shows a miso plant in Tokyo, Japan, with large wooden vats in the foreground. A part of this plant was destroyed during World War II. Address: Northern Utilization Research and Development Div., USDA, Peoria, Illinois.

290. *Agricultural Research*. 1969. Tempeh: Protein-rich food may increase disease resistance. 17(10):5. April.

• **Summary:** “Tempeh, a good-tasting, oriental soy food,

also has a medicinal property—it inhibits the growth of some bacteria.”

“Scientists at the Northern laboratory recently discovered that *R. oligosporus* produces antibacterial compounds that may stimulate growth and increase disease resistance.”

“Antibacterial compounds extracted from tempeh and from *R. oligosporus* growing on skim milk or soybean meal were tested against 25 species of bacteria. Eleven species were affected by the compounds, and nine species completely stopped growing. Four species of bacteria inhibited by the antibacterial compounds are typical inhabitants of the human intestinal tract.” A photo shows Dr. Clifford Hesseltine selecting *R. oligosporus* culture from the USDA Agricultural Research Service (ARS) culture collection.

291. Banzon, Julian; Steinkraus, Keith H. 1969. How to use soybeans from your garden. College of Agriculture, University of the Philippines. 5 p. Mimeographed circular. Distributed through Los Banos Extension Dept.

• **Summary:** Introduction (the importance of protein, of which soybeans are a good source). How to grow soybeans in the Philippines, by Richard Bradfield of IRRI. How to make soybean milk and other nutritious soybean foods: Steamed green soybeans, mature dry soybeans, soybean milk, tokua—soybean curd, taosi (soybeans fermented with *Aspergillus oryzae* mold), tempeh.

Note: This is the earliest English-language document seen (Oct. 2008) that uses the word *taosi* to refer to soy nuggets. Address: 1. Prof. of Chemistry; 2. Visiting Prof., Microbiology and Food Science. Both: Univ. of the Philippines, College of Agriculture, Laguna, Philippines.

292. Chen, Linda H.; Packett, L.V.; Yun, I.; Yu, J. 1969. The potential of tempeh to serve as an antioxidant in lipids and in tissue (Abstract). *Federation Proceedings (FASEB)* 28(2):306 (Abst. #271). March/April.

• **Summary:** “Tempeh (fermented soybean) obtained from Indonesia was mixed into tocopherol stripped corn oil at 1, 25, and 50% levels. Alpha tocopherol was added to stripped corn oil at 0.03% and 0.01% levels and all samples incubated six weeks at 37°C.”

The antioxidant potential of tempeh was found to be greater than that of alpha tocopherol at 0.03% for up to 4 weeks. Address: Univ. of Kentucky, Lexington, KY 40506.

293. Stanton, W.R.; Wallbridge, A. 1969. Fermented food processes. *Process Biochemistry* 4(4):45-51. April. [34 ref]

• **Summary:** “Fermentation of starch tubers such as cassava with fungal organisms such as *Rhizopus* can result in a food product with significant increases in protein content.” The cassava dough is inoculated then extruded (like noodles) into fermentation trays.

Table 1 shows many different “vegetable cheeses and related fermented foods.” The first such food mentioned is minchin, made from wheat [gluten] in China. The microorganisms used are *Paecilomyces*, *Aspergillus*, *Cladosporium*, *Fusarium*, *Syncephalastrum*, *Penicillium*, and *Trichothecium* species. This is an anaerobic fermentation of wheat gluten for 2-3 weeks at room temperature during the winter, with 10% salt added. The product is cut into strips and used as a condiment. Eaten as a meat substitute, it is rich in protein, nutritious, and healthy.

Fermented soy products include sufu, tempeh, meitauza, Hamanatto, shoyu, miso, and natto. Address: 1. PhD, Head, Microbiology Section, Tropical Products Inst., London, England; 2. Parke Davis Co.

294. Russo, J.R. 1969. Can new protein sources avert world shortage? Part II. *Food Engineering* 41(6):80-83. June.

• **Summary:** Part I of this article discussed protein in new forms such as fish protein concentrate, meat protein concentrate, and protein from petroleum. This part discusses protein from oilseeds, the least expensive and most promising source. Products containing soy include beverages such as Vitasoy in Hong Kong, ProNutro in South Africa, and Saci in Brazil. In Brazil, Cerealina has been introduced by Corn Products Company. Also discussed are synthetic amino acids, new foods from meat wastes, and food processing “wastes.” Photos show a Saci bottle and an Incaparina bag. Address: Asst. ed., Food Engineering.

295. Wang, Hwa L.; Ruttle, Doris I.; Hesseltine, C.W. 1969. Antibacterial compound from a soybean product fermented by *Rhizopus oligosporus*. *Proceedings of the Society for Experimental Biology and Medicine* 131(2):579-83. June. [11 ref]

• **Summary:** “In the course of investigating the proteolytic enzyme systems of *Rhizopus oligosporus* Saito, a mold used for tempeh fermentation, we found that the mold produces a compound that inhibits the growth of bacteria associated with cheese making... the cheese failed to become acid because of failure of the lactic acid bacteria to grow.”

Many fungi produce antibiotics. However it is rare for Phycomycetes (such as members of the genera *Rhizopus* or *Mucor*) to produce antibiotics. Thus it was unexpected when this investigation showed that *R. oligosporus* produced antibacterial compound(s) that inhibited the growth of *Streptococcus cremoris*. “The production of antibacterial agents by these species certainly would help to explain the nutritional value of fermented foods as claimed by natives, and the beneficial effects of tempeh on patients with dysentery as observed by Van Veen and Schaefer (1950)...

“The compound may not be an important antibacterial drug, but it is well established that antibiotics, in addition to minimizing infections, elicit growth-stimulating effects in animals. All these results, however, emphasize that

antibiotics have a particularly striking growth-stimulating effect in diets that are deficient in any one of several vitamins or proteins, or some growth factors still unknown...

"Oriental people constantly are exposed to overwhelming sources of infection and their diets are frequently inadequate, yet they possess a wonderful resistance to disease. Our finding that an antibacterial agent is produced by *R. oligosporus* possibly offers a clearer understanding of the true value of tempeh in the diet of Indonesians, and perhaps of fermented foods in the diets of Orientals." Address: NRRL, Peoria, Illinois.

296. Orr, Martha Louise. 1969. Pantothenic acid, vitamin B-6, and vitamin B-12 in foods. *USDA Home Economics Research Report* No. 36. 53 p. Aug. [440\* ref]

• **Summary:** Lists the content of these three vitamins for whole dry soybeans, tempeh, soy flour (full-fat, high-fat, low-fat, and defatted), and a sweetened powdered soymilk product.

The percentage of vitamin B-6 in the form of pyridoxol, pyridoxal, and pyridoxamine is as follows: for soybeans (44, 44, 12) or (18, 77, 5), soyflour (63, 25, 12).

Address: National Food Research Inst., Tokyo.

302. **Product Name:** [Tempeh].

**Foreign Name:** Tempé.

**Manufacturer's Name:** Handelsonderneming van Dappern. Renamed Tempé Produkten B.V. in April 1983.

**Manufacturer's Address:** 66 Kloosterbostraat, 6464 Kerkrade, The Netherlands. Phone: 045-455-803.

**Date of Introduction:** 1969.

**New Product-Documentation:** Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Robert van Dappern. Largest tempeh plant in the Netherlands. Interview with Ike Van Gessel. 1982. June. The company started in Rotterdam in 1969. They learned how to make tempeh from a Dutch-Indonesian sailor, who had started to make tempeh in the Netherlands in 1949. He made it for family and friends but did not sell it commercially.

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 29. This was Europe's third earliest commercial tempeh company, founded in 1969. In Jan. 1972 the thriving

company moved to Kerkrade from Rotterdam. In June 1980 the company bought a \$1,000,000 modern factory in Kerkrade and expanded production greatly. By mid-1982 it was the largest tempeh company in the world, making 6,000 to 8,000 lb of tempeh a week. In April 1983 the name was changed to Tempé Produkten B.V.

Letter and Label sent by Ike Van Gessel. 1992. Dec. 20. The man who taught Robert van Dappern to make tempeh was not a sailor but a private person named Mr. Remmert, who passed away in 1970. The company now makes 5,000 kg/week of tempeh. It is located at: Tunnelweg 107, 6468 EJ Kerkrade, Netherlands. Phone: 045-455803.

The Label is 8.5 by 5.5 inches. Orange and black on clear plastic. 450 gm. UPC indicia.

303. Streeter, Carroll P. 1969. A partnership to improve food production in India. A special report from the Rockefeller Foundation. See p. 80-85. 27 cm.

• **Summary:** Discusses the all-India soybean research program that was launched in 1967, with technical guidance from the University of Illinois under a U.S. AID contract and financial support from the Indian Council of Agricultural Research.

304. **Product Name:** Tempe.

**Manufacturer's Name:** Toko Baru.

**Manufacturer's Address:** 969A Glendora Ave., West Covina (Los Angeles area), CA 91790. Phone: 213-962-0317.

**Date of Introduction:** 1969.

**New Product–Documentation:** Shurtleff and Aoyagi visited this small Indonesian delicatessen which makes its own tempeh in Jan. 1977. They met Randy Kohler included the company in a list of tempeh shops in North America in the 1977 edition of "What is Tempeh?" Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 148. Owner: Rudy Kohler. An Indonesian delicatessen. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Rudy Kohler. By July 1982 the address has changed to 16006 Amar Rd., City of Industry, California 91746. Phone: 213-333-6220. The owner is the same.

Dimbleby, eds. 1969. *The Domestication and Exploitation of Plants and Animals*. Chicago: Aldine Pub. Co. xxvi + 581 p. See p. 463-690. Proceedings of a meeting... held at the Institute of Archaeology, London University. Illust. 26 cm. [10 ref]

• **Summary:** In this paper, "lower plants" refers to microorganisms and algae. These cultivated microorganisms include marine and lacustrine algae (nori, kombu), fungi (*Aspergillus*, *Rhizopus* species), yeasts (*Saccharomyces* species) and bacteria (*Lactobacillus*, etc.). In Indonesia, tempeh (cakes made by fermenting soybeans) and fermented groundnuts "provide about one-third of the total crude protein requirement the population..." (p. 464). A complex fermentation is used to make miso, a fermented soybean paste, in Japan; a number of different microorganisms take part at different stages. Some 75% of the households in Japan use miso daily as the main soup seasoning—according to a recent survey.

"The Japanese products represent a northward and eastward migration of the 'sho' process (a general term

in Japan for the high salt fermentations). Today these fermentations are carried out under highly industrialized conditions, the organisms being given the benefit of highly specialized environments, and the domestication in consequence has proceeded here further than it has elsewhere in the region" (p. 467). Address: Tropical Products Inst., London.

311. Ucko, P.J.; Dimbleby, G.W. eds. 1969. The domestication and exploitation of plants and animals: Proceedings of a meeting of the Research Seminar in Archaeology and Related Subjects held [18-19 May 1968] at the Institute of Archaeology, London University. Chicago, Illinois: Aldine Publishing Co.; London: Gerald Duckworth & Co. Ltd. xxvi + 581 p. Illust. General index. Index of sites and localities. Index of authors. 26 cm. [500+\* ref]

• **Summary:** One goal of this seminar is to gain an "insight into modern man's relationship to his habitat. In the last decade or two a change in methods of investigating these events has taken place, due to the mutual realization by archaeologists and natural scientists that each held part of the key and neither alone had the whole. Inevitably, perhaps, the floodgate which was opened has resulted in a new spate of knowledge..." "This meeting was called so that workers in the archaeological, anthropological, and biological fields could bridge the gap between their respective disciplines..." (p. ix).

"Mankind took an immensely long time to learn how to gain food by any other means than hunting, fishing and gathering. Our record of manufactured tools goes back over one million years but evidence of domesticated animals and plants only starts at a date somewhere near the end of the European Ice Age, i.e. after ca. 10,000 BC" (p. xvii).

While archaeology is presently best suited to study domestication, a movement is taking place in archaeological thought which recognizes the essential unity of the ecological approach; man is increasing being viewed as part of an ecosystem in which he has played a significant, if not dominant, role for some millennia. Increasingly man is seen as "another animal in the world of nature" (p. xxiii).

One cannot solve a problem unless one asks the right questions. And to ask the right questions one must look at the problem from a particular viewpoint. "That viewpoint, so far as the origin of domesticated plants is concerned, is, I am convinced, the ecological one... we must look at wild and cultivated plants associated with man as an ecological complex and view this in relation to the ecology of man himself." Scientists must search for exact "archaeobotanical data."

Vavilov considered the soyabean a primary crop (Hawkes, p. 25). In Indonesia, "fermented cakes of soya beans and groundnut [tempeh and onchom] provide about one-third of the total crude protein requirement of the population..." (Stanton, p. 464). In Japan, advanced

fermentation processes are used to make miso and shoyu. Today these fermentations take place under highly controlled, industrial conditions in highly specialized environments (Stanton, p. 467).

This book shows clearly that many crops were domesticated before the soybean. In China, foxtail millet (*Setaria italica* var. *germanica*), broom corn millet (*Panicum miliaceum*), rice (*Oryza sativa*), and wheats (*Triticum* spp.) have been identified in neolithic contexts (Watson, p. 398-99). In Tehuacan, Mexico, radiocarbon datings for common beans (*Phaseolus vulgaris*) have been reported from 5,300 B.P. [before the present] (Smartt, p. 452-53). Chili peppers (*Capsicum annuum*) share with *Phaseolus* beans and the Cucurbits (squashes) the distinction of being among the first plants cultivated in the New World (Americas). Chili peppers have been found in early sites in both Middle and South America. In Mexico, they have been dated back to about 7,000 BC. "This antedates the development of agriculture and implies that wild plants were being exploited." The first plants cultivated in Peru appear to be gourds and squashes, but by 2,000 BC peppers were grown in the Ancon area on the central coast (Pickersgill, p. 443, 446-47). Address: 1. Dep. of Anthropology, University College, London; 2. Dep. of Human Environment, Inst. of Archaeology, London.

312. Zycha, H.; Siepmann, R.; Linneman, G. 1969. Mucorales. Eine Beschreibung aller Gattungen und Arten dieser Pilzgruppe [The Mucorales. A description of all genera and species of this group of molds]. West Germany: Verlag von J. Cramer. viii + 355 p. See p. 74-84. Illust. Index. 25 cm. [809\* ref. Ger]

• **Summary:** Within the Mucorales, and within the family Mucoraceae, are a number of genera that are important to fermented soyfoods: I. *Mucor*. VI. *Actinomucor*. IX. *Rhizopus*.

The genus *Rhizopus* was named by Ehrenberg in 1820 (Nova Acta Acad. Leop. 10, 1, 198). The following species of *Rhizopus* mold are discussed in detail, with a short bibliography of previous names for some, and some are illustrated with exquisite line drawings: 1. *Rhizopus homothallicus*. 2. *Rhizopus sexualis*. 3. *Rhizopus microsporus*. 4. *Rhizopus circinans*. 5. *Rhizopus echinatus*. 6. *Rhizopus oligosporus* (named by Went & Prinsen Geerligs 1895; In 1907 Saito named it *R. tamari* and found it in Japanese Soja-Koji). 7. *Rhizopus arrhizus* (4 illust. from Zycha 1935). 8. *Rhizopus cohnii*. 9. *Rhizopus oryzae*. 10. *Rhizopus nigricans* (6 illust. from Zycha 1935). Address: 1-2. Biologische Bundesanstalt fuer Land- und Forstwirtschaft, Inst. fuer Forstpflanzenkrankheiten, Kassler Str. 22, D-351 Hann. Muenden, West Germany.

313. Noznick, Peter P.; Luksas, Anthony. J. Assignors to Beatrice Food Company, Chicago, Illinois (A corporation of Delaware). 1970. Process for making tempa [sic, tempeh].

U.S. Patent 3,489,570. Jan. 13. 2 p. Application filed 2 May 1968.

• **Summary:** A process for making powdered tempeh by submerged fermentation. “Tempa, also known as tempeh, is a popular food of Indonesia. It is prepared from cooked and dehulled soybeans fermented with the ‘tempa mold.’” The prior art for making tempa is described.

In this patent: “Tempa is prepared by comminuting wet whole soybeans to form a slurry which approaches a solution. The slurry is sterilized and maintained sterile throughout the balance of the process. The slurry is placed in a fermenter, inoculated with tempa mold and strongly agitated and aerated. The fermented slurry is pasteurized and dried.”

• **Summary:** The soybean (*de sojaboon*) and soyfoods (p. 6-7) include: Soybean meal (*sojameel*), soy oil (*de olie*), soy sprouts (*gekiemde sojaboonen*), tofu (*tahu*), soy sauce (*sojasaus*), miso, and tempeh. Address: Doctor, Centraal Instituut voor Voedingsonderzoek TNO, Zeist.

315. Centre de Documentation Internationale des Industries Utilisatrices de Produits Agricoles (CDIUPA). 1970--. IALINE (Industries Agro-Alimentaires en Ligne) base de données [IALINE (Food and Agricultural Industries On-Line) database]. 1, avenue des Olympiades-91300 Massy, France. [271542 ref. Fre]

• **Summary:** This is the world's best database for French-language publications related to food and nutrition. It first became available for use in Jan. 1970, and that is also the date of the earliest record in the database. It is produced by the Center for International Documentation on Industrial Utilization of Agricultural Products (CDIUPA), founded in 1965 by the French Ministry of Agriculture. CDIUPA is administered by APRIA (*Association pour la Promotion Industrie Agricole*), which is a member of the International Commission of Agricultural and Food Industries.

The current contents of the database is published in a monthly journal titled “Industries Agro-Alimentaires: Bibliographie Internationale,” which began under that title in Jan. 1983. It was preceded by *Bibliographie Internationale des Industries Agro-Alimentaires. Bulletin Bibliographique* (published from Jan. 1967 to Dec. 1982). In the monthly journal, the citations are grouped under 6 broad headings: 1. General (with 8 subcategories). 2. Agro-food industries (industries agroalimentaires; with 17 subcategories; Many documents on soyfoods are cited in subcategory N titled “*Protéines d'origine animale, végétale, microbiologique, algues et levures aliments*”). 3. Fermentation industries (with 6 subcategories). 4. Food microbiology. 5. Food toxicology.

6. Utilization and adding value to agricultural and food-industry by-products. Biotechnology. The journal contains 3 indexes: Subject index. Index of sources (periodicals [with journal names written out in full], acts of congress, books, theses). Author index.

Information related to soyfoods is likely to be found under the following headings in the subject index: *Aspergillus oryzae*; *Farine de soja* (incl. soy flour, and roasted soy flour or kinako); *Huile de soja* (soy oil); *Koji*; *Lait de soja* (soymilk); *Miso*; *Nato* (incl. natto); *Produit à base de soja* (incl. dawa-dawa, kinema, soy cheese [western style], soy nuggets/Hamanatto, soynuts, soy ice cream, soy yogurt, thua-nao, yuba), *Protéine de soja* (soy protein products); *Protéine de soja, Produit extrudé* (extruded soy products); *Protéines d'origine animale, végétale*; *Sauce de soja* (soy sauce); *Soja* (incl. green vegetable soybeans); *Soja, germe* (soy sprouts); *Sufu* (fermented tofu); *Tempeh*; *Tofu*. Address: Massy, France. Phone: (1) 69.20.97.38.

316. Dwidjoseputro, Dakimah. 1970. Microbiological studies of Indonesian ragi. PhD thesis in Biology, Vanderbilt University, Nashville, Tennessee. vi + 125 p. Jan. Illust. No index. 29 cm. Published in Indonesia in 1976. [64\* ref]

• **Summary:** Contents: Acknowledgments. List of tables. List of plates. 1. Introduction. 2. Review of literature. 3. Materials and methods. 4. Experimental results. 5. Discussion. 6. Summary. Literature cited. Address: Nashville, Tennessee.

317. Ebine, H.; Matsuura, M. 1970. Rizoopusu-zoku no shōyu jōzō e no riyō. II. Rizoopusu-zoku kōbo to tokusei [Application of *Rhizopus* for shoyu manufacturing. II. Properties of *Rhizopus* enzymes]. *Shokuryo Kenkyujo Kenkyu Hokoku (Report of the Food Research Institute)* No. 25. p. 140-45. Feb. Reprinted from *Chomi Kagaku* 16(4):15-19 (1969). [4 ref. Jap; eng]  
Address: Food Research Inst., Shiohama 1-4-12, Koto-ku, Tokyo, Japan (Norinsho Shokuryo Kenkyujo).

318. Iljas, Nasruddin; Peng, Andrew C.; Gould, Wilbur A. 1970. Tempeh: Find ways to preserve Indonesian soy food. *Ohio Report on Research and Development* 55(1):22. Jan/Feb.

• **Summary:** Tempeh, a fermented food, is consumed as a main dish rather than a flavoring or seasoning agent. Tempeh was preserved by freezing, canning, or dehydrating. Freezing, the best way, was as follows: Slice tempeh into pieces about ½ inch thick and 3½ inches long. Fill a 303 x 407 can with the pieces and process in boiling water for 5 minutes. Seal the tempeh in 303 cans and immediately store in a freezer at -20°F.

When ready to serve, thaw the frozen tempeh by exposing it to room temperature for several hours. Soak tempeh pieces in a 5% salt solution (table salt in tap water), then deep-fry in peanut oil for 4 minutes at 350°F.

The yield of tempeh from raw soybeans was found to be 84.96% on a dry basis.

Photos show: (1) On a shallow tray (right to left): soybeans, slices of fresh tempeh, slices of deep-fried tempeh. (2) Deep-frying tempeh in a basket deep-fryer. Address: 1. Graduate student; 2. Assistant Prof.; 3. Prof. All: Dep. of Horticulture, The Ohio State Univ., Columbus, and the OARDC.

319. *Ohio Report on Research and Development*. 1970. Special Report: Soybean Research. 55(1):1-24. Jan/Feb.

• **Summary:** Contains various articles by different authors, each of which is cited separately. Address: Wooster, Ohio.

320. Gray, William D. 1970. The use of fungi as food and in food processing. *CRC Critical Reviews in Food Technology* 1(2):225-329. May. (Chemical Rubber Co. Press, Cleveland, Ohio). [348\* ref]

• **Summary:** The section titled "Oriental fungus-processed foods (p. 263)" discusses: Broad differences between fermentation processes in the Occident and Orient, miso, shoyu, Hamanatto, tempeh, ang-khak, ontjom, sufu, meitauza, ketjap, katsuobushi, and other fungus-fermented foods: Chee-fan (a type of sufu), fermented minchin (wheat gluten), fermented soybean prepared from black soybeans in China (soy nuggets), tao-cho, tao-si, and taotjo (the last 3 foods made from soybeans). Address: Dep. of Botany, Southern Illinois Univ., Carbondale, Illinois.

321. van Veen, Andre G.; Steinkraus, Keith H. 1970. Nutritive value and wholesomeness of fermented foods. *J. of Agricultural and Food Chemistry* 18(4):576-78. July/Aug. [18 ref]

• **Summary:** Contents. Introduction. Materials and methods: Tempeh, ontjom, bongkrek, idli, fish sauces, fermented rice, yoghurt-wheat foods. Nutritive value. Digestibility. Vitamins. Acceptability. Wholesomeness of fermented foods. Address: New York State Agric. Exp. Station, Cornell Univ., Geneva, New York.

• **Summary:** "Extracellular proteases of *Rhizopus oligosporus* have been purified and separated into five active fractions (A-E) by ammonium sulfate fractionation, gel filtration, or diethylaminoethyl cellulose chromatography. All fractions showed single bands on acrylamide gel electrophoresis." Address: NRRL, Peoria, Illinois.

323. Dwidjoseputro, Dakimah; Wolf, Frederick T. 1970. Microbiological studies of Indonesian fermented foodstuffs. *Mycopathologia et Mycologia Applicata (The Netherlands)* 41(3-4):211-22. Dec. 4. [18 ref]

• **Summary:** Ragi is Indonesian starter culture. From ragi-tempe (tempeh starter) and tempe were isolated *Rhizopus oryzae*, *R. arrhizus*, *R. oligosporus*, *R. stolonifer*, *Mucor Rouxii*, *M. javanicus* and *Trichosporon pullulans*.

From ragi-ketjap, used to prepare Indonesian soysauce, were isolated *Rhizopus oligosporus*, *R. arrhizus*, *R. oryzae*, *Aspergillus oryzae*, and *A. flavus*, the latter species probably being an accidental contaminant. The microflora of *tapé* (*tapéh*) is also described. Two new species are described: *Candida lactosa* and *Hansenula malanga*, from ragi-tapé from Surakarta and Malang, respectively. Address: Vanderbilt Univ., Nashville, Tennessee. Dwidjoseputra now resides in Malang, Indonesia.

324. Murata, Kiku; Miyamoto, Teijiro; Kokufu, Etsuko; Sanke, Yukiko. 1970. Studies on the nutritional value of tempeh. III. Changes in biotin and folic acid contents during tempeh fermentation. *J. of Vitaminology (Kyoto, Japan)* 16(4):281-84. Dec. 10. [10 ref]

• **Summary:** Changes in biotin and total folic acid activities during fermentation with *Rhizopus oligosporus* were investigated. It was found that the contents of biotin and total folate compounds in tempeh were 2.3 and 4-5 times higher than those in unfermented soybeans, respectively. Address: Food and Nutrition Lab., Faculty of Science of Living, Osaka City Univ., Sumiyoshi-ku, Osaka, Japan (Post No. 558).

325. Lijmbach, G.W.M.; Cox, H.C.; Berends, W. 1970. Elucidation of the chemical structure of bongkrekic acid. I. Isolation, purification and properties of bongkrekic acid. *Tetrahedron* 26(24):5993-99. Dec. Based on Lijmbach's 1969 PhD thesis, Delft. [26 ref]

• **Summary:** The preparation, isolation and purification of the toxic antibiotic bongkrekic acid (BA), produced by *Pseudomonas cocovenenans* on partially defatted coconut are described. It has been shown that BA is a branched unsaturated tricarboxylic acid with a gross formula of  $C_{28}H_{38}O_7$ . The presence of three methyl groups, one methoxyl group, one ring system and six double bonds—two isolated and two pairs of conjugated double bonds, both conjugated with a carboxyl group—is proved. Address: Lab. of Biochemistry and Biophysics, Technical Univ. Delft, Julianalaan 67, Delft, Netherlands.

326. Wang, H.L.; Hesseltine, C.W. 1970. Oriental fermented foods. Paper presented at Part I, Seminar on Protein Food Promotion. 5 p. Typed manuscript. Held Nov. 22 to Dec. 1, 1970 at Inst. of Food Research and Product Development, Kasetsart Univ., Bangkok, Thailand. [13 ref]

• **Summary:** Contents: Introduction. Miso. Hamanatto. Sufu. Natto. Tempeh. Nutritional value of fermented foods. Absence of aflatoxin in fermented food products.

A note on page 1 of this manuscript states: "To be

published in Part I of Seminar on Protein Food Promotion, November 22-December 1, 1970, Institute of Food Research and Product Development, Bangkok, Thailand.” This was an invited paper. Address: NRRL, Peoria, Illinois.

327. Hermana, -; Soetedja, -. 1970. Advances in the preparation of tempeh. I. New method of preparing tempeh. *Gizi Indonesia, J. of the Indonesian Nutrition Association* 2(3):167-68. [3 ref. Eng]

• **Summary:** The traditional method for making tempeh is described. In the new method, soybeans were dehulled by a burr mill. 1 kg of dehulled soybeans was cooked in water heated to the boiling point, then soaked in this water for 22 hours. The beans were washed to remove their seed coats, then reboiled in fresh water for 40 minutes, drained, and left to cool. The soybeans were inoculated with a tempeh mould preparation (1 gram inoculated 1 kg of soybeans) and wrapped in cheese-cloth for 24 hours. Then they were bagged in perforated polyethylene bags having pinholes in a grid pattern 4 cm apart, then fermented for 14 to 16 hours.

Tempe made by this new method had a milder aroma and better texture than traditional tempeh, and had a keeping quality of 3 days. Even after 3 days, the color of the tempeh remained white; changes in texture and aroma were slight. Address: Nutrition Research, Unit Jl. Semboja, Bogor Indonesia.

[30 ref. Jap; eng]

• **Summary:** “After investigation of the nutritional value of tempeh, including antioxidative and antihemolytic activities of tempeh, for several years, the following results were obtained: 1. Lipid of the tempeh powder is stable, while that of the unfermented soybean powder is labile to oxidation during storage. 2. It was found that isoflavones, especially Factor 2 (6-7-4'-trihydroxyisoflavone), which was liberated with  $\alpha$ -glucosidase during fermentation with *Rhizopus*, was one of the antioxidants in tempeh. 3. The isolated or chemically synthesized crystalline Factor 2 was active in preventing hemolysis of the red blood cells of the vitamin E deficient rats *in vitro* but not in *in vivo* tests. 4. Protein Efficiency Ratio (PER) of tempeh and of unfermented soybeans (fresh or stored) were not significantly different. However, hemolysis percentages of blood of rats fed stored tempeh were less than 20%, while those of rats fed stored unfermented soybeans were 100% throughout the experimental period after 2 weeks. The serum tocopherol of the tempeh group was higher than that of the unfermented soybean group. 5. Most of the B vitamins except thiamine in tempeh were increased to 4-8 times as much as those of unfermented soybeans during fermentation. 6. It was observed that supplementation of methionine (1.09%), lysine (0.34%), and threonine (0.24% in protein level) improved PER as well as that of tempeh 7: whole egg 3 in protein level.” Address: Osaka.

333. Hardjohutomo, Harsono. 1970. Pengganti tempe bongkreng [Substitutes for tempe bongkreng]. Jakarta: Penerbit Pradnja Paramita. 31 p. 18 cm. [Ind] Address: Dosen Fakultas Perikanan, Institut Pertanian Bogor, Indonesia.

334. Robeau, Alec. 1970. Cooking the Indonesian way. New South Wales, Australia: A.H. & A.W. Reed. 160 p. Index. 21 cm.

• **Summary:** The Introduction has good, long definitions of many Indonesian ingredients including: Ketjap, ketjap manis, soya beans, tahu (tofu, and how to make it at home), taotjo (“These are salted soya beans and are readily available in all Chinese stores and shops.” [Note: Taotjo is Indonesian-style miso]), tempe [tempeh].

Soy-related recipes include: Sajur oblok (Smoked fish and vegetable dish, with ¼ lb diced tempe, p. 34-35). Sajur gudek (Spiced vegetables and jackfruit dish, with ¼ lb diced tempe, p. 37). Sajur kangkung (Spiced watercress, with ¼ lb diced tempe, p. 38). Tahu Surabaya (Fried soya bean cakes with vegetables, with ½ lb diced tofu, p. 46). Kuah sate II (Spiced peanut sauce (with ketjap), p. 52). Babi ketjap (Pork in soyabean sauce, with 3 tablespoons soy sauce, p. 74-75). Sambal taotjo (Spiced chilli paste with taotjo, p. 119). Tempe goreng (Fried tempe, p. 128. Serve as a snack or side dish).

335. *Food Processing (Chicago)*. 1971. Specialty 'fermented foods'... highly nutritious, digestible [Tempeh]. 32(1):F7-F9. Winter. Foods of Tomorrow section.

• **Summary:** Discusses tempeh, and the research of C.W. Hesseltine and H.L. Wang of the Northern Regional Research Laboratory, Peoria, Illinois. Five color photos show tempeh at different stages.

336. Murata, Kiku; Ikehata, H.; Edani, Y.; Koyanagi, K. 1971. Studies on the nutritional value of tempeh. II. Rat feeding test with tempeh, unfermented soybeans, and tempeh supplemented with amino acids. *Agricultural and Biological Chemistry* 35(2):233-41. Feb. [13 ref]

• **Summary:** In a rat feeding experiment, it was observed that the PER value of tempeh (fresh or stored) was not significantly different from that of the unfermented soybeans (fresh or stored). However the peroxide value of the oil of stored tempeh was only 10% of that of stored soybean powder [soy flour].

"Substitution of whole egg for tempeh to supply 30% of protein in the diet improved the quality of the protein as measured by the protein efficiency ratio. An equal improvement was accomplished by supplementation of tempeh with lysine, methionine, and threonine in such amounts as the level of these amino acids equal to that in the tempeh-egg diet." Address: Food and Nutrition Lab., Faculty of Science of Living, Osaka City Univ., Sumiyoshi-ku, Osaka, Japan.

337. Schroder, D.J.; Jackson, H. 1971. Preparation of soybean cheese using lactic starter organisms. III. Effects of mold ripening and increasing concentrations of skim milk solids. *J. of Food Science* 36(1):22-24. Jan/Feb. [11 ref]

• **Summary:** Fermented soybean cheeses were prepared from blends of skim milk powder and soybean milk in 4 different proportions. The amount of skim milk had little effect on the flavor of the finished cheese due to the dominant beany flavor from the soybeans. The original cheese was made with *Streptococcus thermophilus* as a starter, plus rennet added after 1 hour to assist in the coagulation of the milk. The cheeses were waxed and stored at 20°C. The surface of the cheeses were inoculated with one of two molds: *Rhizopus oligosporus*, or *Penicillium camemberti*.

A third trial consisted of making tempeh, then grinding the tempeh to make a milk, which was made into cheese by the normal method. Mold ripening resulted in desirable changes in texture, but these were offset by the development of bitter flavors. Address: Dep. of Food Science, Univ. of Alberta, Edmonton, Canada; Schroeder present address: Univ. of Minnesota, St. Paul.

338. Calloway, D.H.; Hickey, C.A.; Murphy, E.L. 1971. Reduction of intestinal gas-forming properties of legumes by traditional and experimental food processing methods. *J. of Food Science* 36(2):251-55. March/April. [18 ref]

• **Summary:** Tofu and tempeh have little flatus activity, i.e. they cause little gastrointestinal gas.

The two basic types of bean sprouts, soybean and mung bean, gave almost identical reactions. Both cause slightly more breath hydrogen, total flatus and bacterial gases in the flatus than the baseline treatment but somewhat less than the 100-gram doses of beans.

MPF [Multi-purpose food] is a high-protein food (containing 50% protein) with toasted soy grits as the only protein source. The size of the test dose (136 gm) contained the same amount of protein as 20 gm of soybeans. This amount of MPF contains only one-third the carbohydrate content found in soybeans (21 vs. 67 gm) a very little fat (1.4 gm). The gas forming property of the soybean was found to be "retained in proportion to the amount of carbohydrate present and was otherwise unchanged by the processes applied." Address: Dep. of Nutritional Sciences, Univ. of California, Berkeley.

339. Sanke, Yukiko; Miyamoto, Teijiro; Murata, Kiku. 1971. Studies on the nutritional value of tempeh. IV. Biosynthesis of folate compounds with *Rhizopus oligosporus*. *J. of Vitaminology (Kyoto, Japan)* 17(2):96-100. June 10. [5 ref]

• **Summary:** A previous study (Murata et al. 1970) showed that active folate compounds were produced in tempeh during fermentation with *Rhizopus oligosporus*. This study was conducted to clarify whether folate activity in tempeh was formed *de novo* or released from a bound form during fermentation. The former (de novo formation) was found to be the case.

Folate compounds are related to folic acid. *Webster's Dictionary* defines folic acid (derived from the Latin folium = leaf, and first used in 1941) as "a crystalline pteroylglutamic acid (C<sub>19</sub>H<sub>19</sub>N<sub>7</sub>O<sub>6</sub>) that is a vitamin of the B complex and is used especially in the treatment of nutritional anemias." Address: Food and Nutrition Lab., Faculty of Science of Living, Osaka City Univ., Sumiyoshi-ku, Osaka, Japan (Post No. 558).

340. Spicer, A. 1971. Synthetic proteins for human and animal consumption. *Veterinary Record* 89(18):482-87. Oct. 30.

• **Summary:** Microbial protein can be textured into meat-like strands. “As regards the Eastern world, microfungi are extensively used in the processing of soya beans to make them suitable human food products. Miso and tempeh are but two examples. The average Indonesian eats 154 gm per day of tempeh, thus consuming several grams of *Rhizopus* in his daily diet.” Address: The Lord Rank Research Centre, High Wycombe, Bucks, England.

341. Packett, Leonard V.; Chen, Linda H.; Liu, Jean Y. 1971. Antioxidant potential of tempeh as compared with tocopherol. *J. of Food Science* 36(5):798-99. Sept/Oct. [6 ref]

• **Summary:** “Different levels of tempeh were mixed into corn oil, and incubated at 37°C for a maximum of 6 weeks. Peroxide values were determined biweekly. Results showed that tempeh can prevent lipid oxidation. Corn oil containing 50% tempeh showed higher antioxidant potential than those containing 25% tempeh, 0.01%  $\alpha$ -tocopherol, or 0.03%  $\alpha$ -tocopherol. This study substantiates the antioxidant potential of tempeh and suggests its use with other foodstuffs to help preserve the lipids contained therein.” Address: Dep. of Nutrition & Food Science, Univ. of Kentucky, Lexington, KY 40506.

342. Sastroamidjojo, M.S.A. 1971. An answer to world food crisis? *ANU Reporter (Australian National University)* 2(19). Nov. 26.

• **Summary:** “Mr. Setiadji Sastroamidjojo, a Colombo Plan student doing a PhD in physics, believes that commercial food producers are neglecting their responsibility by not taking up the large-scale production of tempeh, a soya-bean based food used by Indonesian people for the past 2,000 years.

“Mr. Sastroamidjojo believes that tempeh, if produced on a large enough scale and distributed throughout the underdeveloped areas of the world, could save countless thousands of people from hunger and possible starvation.

“Until recent years there have been problems of heat transference associated with the commercial production of the food, but Mr. Sastroamidjojo believes he answered these problems in his own research on the subject, the findings of which were published in Japan last year.” He believes “that a wheat-based tempeh will be more acceptable to the people of western nations. He sees Australia as an excellent country in which to establish the commercial manufacture of tempeh.” It has a surplus of wheat, is close to the obvious markets, and could develop sophisticated, automated process that would allow low-cost, large scale production. “Once the industry was established, Australia would not only be able to export dried tempeh but would be able to export the ‘know-how’ of its manufacture so that Asian and African countries may benefit.” A total of 20 intestinal bacteria are said to be inhibited by tempeh. “Indonesians recognize it as a medicine

for dysentery.”

343. Hermana, -; Roedjito, Sri Wismaniah. 1971. Pembuatan laru tempe dan pengamatan kekuatannya selama penjinjmanan [Preparation of tempe mold inoculum and observation on its activity during storage]. *Penelitian Gizi dan Makanan (Research on Food and Nutrition)* 1:52-60. [5 ref. Ind]

• **Summary:** Methods of preparing 3 kinds of tempeh starter are described. The best is that made by growing tempeh mold inoculum on rice. Its activity did not decrease when it was stored in a closed container at 25 degrees C for 6 months.

Address: 1. Balai Penelitian Gizi (Nutrition Research), Unit Jl. Semboja, Bogor; 2. Bag. Gizi dan Makanan, Dep. I.K.K., Faperta, I.P.B., Bogor.

344. Hesseltine, C.W. 1971. Problems of supply of inocula for fermentations, especially solid state fermentations. In: G.C. Ainsworth and J. Webster, eds. 1971. First International Mycological Congress, Abstracts. Unwin Brothers Ltd., The Gresham Press, Old Woking, Surrey England. 113 p. See p. 44-45. Congress held Sept. 1971 at Exeter, England.

• **Summary:** “The fungus used in a fermentation is the key to the success or failure of the process. It is the catalyst that makes the fermentation work.

“A fungus culture must have certain general attributes if the process it generates is to be operable. Regardless of the nature of the product and the simplicity or complexity of the engineering process, the strain: (1) must be genetically stable; (2) must produce many vegetative cells, spores, or other reproductive units; (3) must grow vigorously and rapidly after inoculation into seed tanks or other containers used to prepare large amounts of inoculum before the fermentation production; (4) should be a pure culture, not only free of other microscopically visible micro-organisms, but also free of phages; (5) should produce the required product within a short period of time, preferably in 3 days or less; (6) should produce the desired product to the exclusion of other substances; (7) should be able to protect itself against contamination, if possible; (8) should be readily maintained for reasonably long periods of time; (9) should be amenable to change by mutagenic agents; and (10) must give a predictable amount of desired product in a given fermentation time.”

Much of this presentation describes “the use of inoculum and the course of solid substrate fermentations which, in several systems, give product yields much higher than can be obtained by either still or conventional stirred tank fermentations of the same size.” Address: NRRL, Peoria, Illinois.

345. Murata, Kiku. 1971. [Studies on the nutritional value of tempeh]. *Osaka Shiritsu Daigaku, Kassei Gakubu Kiyo (Report of Osaka City University)* 18:19-33. [30 ref. Jap]\*

• **Summary:** Daidzein and genistein found in fermented

soybeans are reported to possess antioxidant activity.  
Address: Osaka City Univ., Japan.

346. Slamet, Dewi Sabita; Tarwotjo, Ignatius. 1971. Kadar zat gizi dalam ontjom [The nutrient content of ontjom]. *Penelitian Gizi dan Makanan (Research on Food and Nutrition)* 1:49-52. [7 ref. Ind]

• **Summary:** Contents: Introduction. Literature review. Section I: Characterization and identification of the organism. Literature review, materials and methods, experimental, discussion. Section II: Studies on the conditions for bongkreik acid production. Introduction, experimental, discussion. Section III: Studies on the physiological function of bongkreik acid. Introduction, materials and methods, experimental, discussion. Summary. Literature cited. Address: Wisconsin.

348. De, Sasanka S. 1971. Technology of production of edible flours and protein products from soybean. *FAO Agricultural Services Bulletin* No. 11. 151 p. AGS: ASB/11. [37 ref]

• **Summary:** Contents: Preface. Introduction. Oil milling operations. Quality control of edible flour and grits. Process procedure for production of soya flour and grits. Production of full-fat soya flour: Wenger process, Buehler process, simple process for villagers. Protein isolate: Advantages, process, yield and quality, Alfa-Laval process, estimated cost and calculations on economic return. Production of other soya products: Soy milk, Saridele, Stork method of soy milk production, pilot plant production of tempeh, protein fibers and meat analogs, extrusion-expansion products (meat analogs), bean curd (tofu). List of equipment suppliers. Annexes: PAG Microbiological requirements. 27 tables. 23 figures.

Note: This is the earliest document seen (Aug. 2002) concerning Alfa-Laval's work with soy products (soy protein isolate). Address: Senior Food and Agricultural Industries Officer, Food and Agricultural Industries Service, FAO.

349. Hesseltine, C.W.; Wang, H.L. 1971. Fermented soybean foods. In: Y.M. Freitas and F. Fernandes, eds. 1971. *Global Impacts of Applied Microbiology, GIAM III*. India: Univ. of Bombay. See p. 403-20. Conference held in 1969 in Bombay, India. [11 ref]

• **Summary:** Contents: Introduction: Nine advantages of fermenting soybeans. Sufu. Hamanatto. Natto. Tempeh.

Magou (from South Africa).

"In South Africa, an interesting fermented native food (*magou*) is now made on a modern industrial scale from fermented corn and soybeans. *Magou* is prepared by the fermentation of coarsely ground white corn meal (maize). Pure cultures of *Lactobacillus* used in this fermentation were isolated from native *magou*. The culture, which is not pure, is started in coarse whole wheat flour." Then it is used to ferment corn meal for 22-24 hours. "The mash from the fermentation tanks is mixed with defatted soybean meal, sugar, whey, or buttermilk powder and yeast. The soybean meals used contain at least 52 per cent protein. After thorough mixing of all the ingredients, the mix is spray dried. Currently this product sells for about 10 cents a pound in 50 pound bags... *Magou* is used principally for feeding miners and other workers employed in heavy industry. It is well adapted to being taken into the mines and reconstituted at the point of consumption." Address: NRRL, Peoria, Illinois.

350. Ohta, Teruo. 1971. Tenpe [Tempeh]. In: T. Watanabe, H. Ebine, and T. Ohta, eds. 1971. *Daizu Shokuhin [Soyfoods]*. Tokyo: Korin Shoin. 271 p. See p. 208-17. [4 ref. Jap]  
Address: National Food Research Inst., Tokyo, Japan.

Fernandes, eds. 1971. *Global Impacts of Applied Microbiology, GIAM III*. India: Univ. of Bombay. See p. 444-50. Conference held in 1969 at Univ of Bombay, India. [13 ref]

• **Summary:** Discusses tempeh, ontjom, Ecuadorian rice, fish paste, idli, flour kishk, bongkreik, and the wholesomeness of fermented foods. Address: Cornell Univ., New York.

352. Watanabe, Tokuji; Ebine, Hideo; Ohta, Teruo. eds. 1971. *Daizu shokuhin [Soyfoods]*. Tokyo: Korin Shoin. 271 p. Illust. Index. 22 cm. [134 ref. Jap; eng+]

• **Summary:** This is the best book published to date on soyfoods in Japan. Contents: 1. Classifications and varieties of soybeans (p. 1). 2. Physical characteristics of soybeans (p. 5). 3. Chemical characteristics of soybeans (p. 9). 4. Standards and methods of examining soybeans (p. 47). 5. Special characteristics and problems of using soybeans for food (p. 53). 6. Current status of the soybean industry in Japan (p. 63). 7. Soymilk and various types of tofu: Aburage (deep-fried tofu pouches), ganmodoki (deep-fried tofu burgers), kôri-dofu (dried frozen tofu), soymilk, and yuba (p. 75). 8. Fermented soyfoods: Natto, shoyu, miso, fermented tofu (*rufu*) (p. 123). 9. Other soyfoods (incl. kinako, soy sprouts or moyashi, tempeh or tenpe, p. 203). 10. Quality and usage of defatted soybeans (*dasshi daizu*) (p. 219). 11. New food uses of soybeans and especially defatted soybeans (incl. 70% soy protein powder, soy protein curds, soy protein

isolate, surimi gel, spun soy protein fibers) (p. 229). 12. Advice regarding supplying protein from organizations such as the United Nations and FAO (p. 257).

A 47-page translation of portions of this book (parts of Chapter 6 and all of Chapters 7) by Akiko Aoyagi and Chapters 8.1 and 8.2 by Alfred Birnbaum are available at Soyfoods Center.

Tokuji Watanabe was born in 1917. Hideo Ebine was born in 1921. Teruo Ota was born in 1926. Address: National Food Research Inst., Tokyo.

353. Chen, Linda H.; Packett, L.V.; Yun, Insun. 1972. Tissue antioxidant effect on ocean Hake fish and fermented soybean (tempeh) as protein sources in rats. *J. of Nutrition* 102(2):181-85. Feb. [13 ref]

• **Summary:** "Soybean, tempeh, fish or fish-soybean and fish-tempeh mixtures were used as the sole protein source in diets with or without vitamin E added. Rats were fed 4 weeks, killed and the antioxidant status of the liver, spleen and kidney was determined by using thiobarbituric acid (TBA) assay. Dietary vitamin E reduced TBA values in the liver, kidney and spleen by factors of 11.1, 1.1 and 4.6 respectively. Tempeh did not alter tissue antioxidant status even though earlier studies proved it to contain a potent natural antioxidant. Fish-tempeh or fish-soybean combinations acted synergistically in reducing liver TBA values ( $P < 0.01$ ) below fish, tempeh or soybean alone." Address: Dep. of Nutrition and Food Science, Univ. of Kentucky, Lexington, KY 40506.

354. Thio, Goan Loo. 1972. Introduction of soybeans for human nutrition, Republic of Zambia. Amsterdam, Netherlands: Royal Tropical Institute, Dept. of Agricultural Research. iii + 48 p. Feb. 28 cm.

• **Summary:** Description of workshops held at 8 places in Zambia in August and Sept. 1971, teaching preparation and use of traditional, low-tech soyfoods (soymilk, tofu, tempeh, okara). Contents: Summary. Introduction. Programme. Equipment and raw materials. Finance. Language. Workshops: Lusaka morning workshop, Lusaka afternoon workshop, Kabwe workshop, Ndola workshop, Solwezi workshop, Katete workshop, Mansa workshop, Kasama workshop, Monze workshop. Conclusions. Recommendations. Acknowledgments.

List of Annexes: I. Itinerary. II. Technical programme of soybean workshops. III. Soybeans, soybean products, and their applications (a brochure prepared for Zambia in June 1971; discusses soymilk, tofu, tempeh, fried soybeans [soynuts], boiled young whole soybeans [green vegetable soybeans], fried tofu, dried sliced tofu, soymilk residue flour [ground okara], soy croquettes (soyrolls, made from okara flour and soymilk), soy biscuits [made with okara flour], vegetable soysoup [with soymilk], tofu omelette, tofu salad with peanut sauce, soy-maize bread [with soymilk and tofu],

average chemical composition of soybeans). IV. Examples of modified Zambian recipes with the addition of soybean products (using mostly tofu, soymilk, and okara flour). V. Preparation methods for soybean products adapted to village conditions: Soymilk, tofu. VI. Proposed training system.

Note: This is the earliest English-language document seen (Oct. 2001) that uses the term "soymilk residue" (or "soy milk residue") to refer to okara. Address: Senior Technologist, Royal Tropical Institute, Dept. of Agricultural Research..

355. Wang, Hwa L.; Ellis, J.J.; Hesseltine, C.W. 1972. Antibacterial activity produced by molds commonly used in Oriental food fermentations. *Mycologia* 64(1):218-21. Jan/Feb. [6 ref]

• **Summary:** Antibiotics (such as penicillin) have long been made from fungal cultures.

Tempeh made with *Rhizopus oligosporus* (strain NRRL 2710) was found to have natural antibacterial activity. That means that the tempeh mold is capable of synthesizing an antibiotic. It is well established that antibiotics minimize infections. Conclusion: "The finding of antibacterial compounds produced by molds commonly used in Oriental food fermentations, therefore, offers a better understanding of the true value of fermented foods." Address: NRRL, Peoria, Illinois.

356. Van Buren, J.P.; Hackler, L.R.; Steinkraus, K.H. 1972. Solubilization of soybean tempeh constituents during fermentation. *Cereal Chemistry* 49(2):208-11. March/April. [12 ref]

• **Summary:** Tempeh is typically fermented for about 24 hours. However if it is fermented for 72 hours (3 times as long as usual) about two-thirds of the nitrogen-free extract (NFE) and half the crude protein and fat have become soluble in water. Changes in the composition of tempeh during fermentation at 0, 12, 24, 36, and 72 hours are given for crude protein (decreases slightly), ammonia (increases 8-fold after 24 hours), available lysine (decreases slightly), free fat (decreases), bound fat (decreases), fatty acids as a percentage of total fat (increases 8.7-fold after 24 hours), crude fiber (increases), nitrogen-free extract (increases slightly), pH (increases), and moisture (increases).

The disappearance of crude protein shows that the mold rapidly utilizes amino acids and low-molecular-weight peptides for its own growth. Address: Dep. of Food Science and Technology, New York State Agric. Exp. Station, Geneva, New York 14456.

357. Gandjar, I.; Hermana, -. 1972. Some Indonesian fermented foods from waste products. In: W.R. Stanton, ed. 1972. Waste Recovery by Microorganisms: Selected Papers for the UNESCO / ICRO Work Study Held at the University of Malaya, 1-18 May 1972. Kuala Lumpur: Published by the

Ministry of Education, Malaysia, for the Malaysian National Commission of UNESCO. 221 p. See p. 49-54. Held at Kuala Lumpur, Malaysia [9 ref]

• **Summary:** Contents: Introduction. The products: Ontjom, dage [pronounced dageh or dagé], tempe bongrek, tempe mata kedele, tempe gembus (okara inoculated with the tempe mold, *Rhizopus* species) and ontjom tahu (okara inoculated with *Neurospora sitophila*). Nutritive value. Toxicity studies (have been carried out for ontjom from peanut press cake, for ontjom tahu, and for tempe bongrek). Discussion.

Table 1, titled "Various kinds of Indonesian fermented foods from waste products" contains 3 columns: Name of food, raw material, and microorganism(s). For example: Ontjom is made from peanut press cake inoculated with *Neurospora sitophila* or *Monilia sitophila*. Address: Indonesia.

358. György, Paul. 1972. Food product containing tempeh. U.S. Patent 3,681,085. Aug. 1. 3 p. Application filed 27 April 1970. [4 ref]

• **Summary:** "An edible food product is prepared by forming a uniform admixture of fish pieces or fatty meat pieces and tempeh and sterilizing the resulting admixture." In this invention, the tempeh is typically lyophilized (freeze-dried) then sieved to produce a fine, fluffy powder, and mixed with the macerated fish or cut meat.

Table 1 shows the PER of fish/soybean combinations. Carnation milk has a corrected PER of 3.00, whereas tempeh/fish (3:1 weight ratio) has a corrected PER of 2.48, and soybean/fish (3:1 weight ratio) has a corrected PER of 2.20.

Antioxidants in the tempeh keep the fish or meat fat from becoming rancid. Table 2 shows the oil content and peroxide value of two soy/fish products after 8 months of storage at room temperature in an atmosphere of air. Fermented tempeh/mackerel (3:1 weight ratio) had an oil content of 31.2% and a peroxide value of 0.6. Unfermented soybean/mackerel (3:1 weight ratio) had an oil content of 32.9% and a peroxide value of 16.6. A high peroxide value indicates rancidity. After the 8 months of storage, the tempeh/mackerel sample had a pleasant ester-like smell, whereas the unfermented soybean/mackerel sample smelled very strongly of rancid fish oil. Address: 201 Curwen Road, Rosemont, Pennsylvania.

359. Murata, Kiku; Fujita, K. 1972. Hakkô daizu tenpei no kôsansei kôyô ketsuin-shi no kensatsu [Studies on antioxidative and antihemolytic factor in tempeh]. *Seikagaku (Biochemistry)* 44(8):496. Aug. Presented at the 45th Annual Meeting of the Japanese Biochemical Society. [1 ref. Jap] Address: Osaka Shiritsu Daigaku, Kasei Shokumotsu, Japan.

360. Menezes, Tobias J.B. de. 1972. Alimentos e molhos obtidos por fermentacao da soja e de cereais [Foods and

sauses obtained by fermentation of soybeans and cereal grains]. *Boletim do Instituto de Tecnologia de Alimentos (Campinas, Sao Paulo, Brazil)* No. 31. p. 49-63. Sept. [24 ref. Por]

• **Summary:** Contents: Introduction. Shoyu (*molho de soja*). Miso. Natto. Tempeh. Sufu. For each food, there is an introduction and a description of the process for making that food, sometimes with a flowchart.

Note: This is the earliest Portuguese-language document seen (April 2001) that mentions fermented tofu, which it calls "sufu." Address: Brazil.

361. Wang, Hwa L.; Vespa, Janet B.; Hesseltine, C.W. 1972. Release of bound trypsin inhibitors in soybeans by *Rhizopus oligosporus*. *J. of Nutrition* 102(11):1495-1500. Nov. [13 ref]

• **Summary:** During tempeh fermentation an active soybean trypsin inhibitor (SBTI) was liberated from a heat-resistant, inactive, bound (insoluble) form by protease enzymes produced by the *Rhizopus oligosporus* mold. Thus extracts prepared from tempeh showed higher trypsin-inhibiting activity than extracts prepared from boiled soybeans. Once released, however, the inhibitor was readily inactivated by heat. *Rhizopus oligosporus* protease was also found to inactivate crystalline SBTI. Address: NRRL, Peoria, Illinois.

Forwarded to DANIDA 13 Dec. 1972. Unpublished manuscript. [11 ref. Dan]\* Address: Dep. of Biochemistry & Nutrition, Technical Univ. of Denmark, Lyngby, Denmark.

363. Leung, W-T.W.; Butrum, R.R.; Chang, F.H. 1972. Food composition table for use in East Asia. Atlanta, Georgia: Center for Disease Control, U.S. Dept. of Health, Education, and Welfare. xiii + 334 p. Dec. No index. 30 cm.

• **Summary:** Part I. Proximate composition, mineral and vitamin contents of East Asian foods, by Woot-Tsuen Wu Leung, Ph.D. (Nutrition Program, Center for Disease Control, Dep. of Health, Education and Welfare), and Ritva Rauanheimo Butrum, M.S., and Flora Huang Chang, B.S. (Federation of American Societies for Experimental Biology).

Part II. Amino acid, fatty acid, certain B-vitamin and trace mineral content of some Asian foods, by M. Narayana Rao, Ph.D., and W. Polacchi (Food Policy and Nutrition Division, Food and Agriculture Organization of the United Nations).

In Part I, Food Group 3 titled "Grain legumes and legume products" (p. 16-22) gives the composition of the following (100 grams edible portion and as purchased): Adzuki beans (*Phaseolus angularis*; incl. "Azuki-an," and boiled sweetened). Asparagus bean: See Cowpea, yardlong.

Asparagus pea: See Goabean. Bambara groundnut or jugo bean (*Voandzeia subterranea*). Bengal gram: See Chickpea. Blackeyed pea: See Cowpea, catjang. Blackgram: See Mung bean. Broad bean or horse bean (*Vicia faba*; incl. “Fuki-mame” and “Otafuku mame”). Burma bean: See Lima bean. Butter bean: See Lima bean. Catjang pea: See Pigeonpea. Chickpea or Bengal gram (*Cicer arietinum*). Cowpea, all varieties (*Vigna* species). Cowpea, yardlong: See Cowpea, all varieties. Dhal: See Lentil. Dolichos, Australia pea (*Dolichos lignosus*). French bean: See Kidney bean. Goabean [goa bean], asparagus pea, or winged bean (*Psophocarpus tetragonolobus*). Golden gram: See Mung bean. Green gram: See Mung bean. Haricot bean: See Kidney bean. Hindu cowpea: See Cowpeas, all varieties. Horse grain or horse gram or Madras gram (*Dolichos uniflorus*; *D. biflorus*). Horsebean: See Broadbean. Note 1. This is the earliest English-language document seen (Jan. 2005) that uses the word “horsebean” or the word “broadbean” to refer to *Vicia faba*.

Horsegram: See Horse grain. Hyacinth bean or Indian butterbean (*Lablab niger*; *Dolichos lablab*). Indian bean: See Mung bean. Indian butterbean: See Hyacinth bean. Jackbean, common (*Canavalia ensiformis*). Jugo bean: See Bambara groundnut. Kidney bean, French bean, navy bean, pinto bean, snap bean, or string bean (*Phaseolus vulgaris*; incl. “Usura-mame”). Lentil or dhal (*Lens culinaris*; *Lens esculenta*; *Ervum lens*). Lima bean, butter bean, or Burma bean (*Phaseolus lunatus*; *Phaseolus limensis*).

Note 2. This is the earliest English-language document seen (May 2003) that uses the scientific name *Lens culinaris* to refer to lentils.

Note 3. This is the earliest English-language document seen (Jan. 2009) that uses the name “Burma bean” to refer to the lima bean.

Madras gram: See Horse grain. Mung bean, Indian bean, red bean, green gram, golden gram, or blackgram / black gram (*Phaseolus aureus*; *Vigna radiata*; incl. vermicelli, dried starch, starch jelly, instant powdered green or red products with sugar and flour added). Mung bean, black gram or urd (*Phaseolus mungo*; *Vigna mungo*). Navy bean: See Kidney bean. Peanut or groundnut (*Arachis hypogaea*; incl. raw, roasted, with or without shell, salted, parched, seasoned, fried, peanut flour, peanut butter, peanut milk, peanut cake—defatted, peanut cake—defatted and fermented [onchom]). Peas, garden or field (*Pisum* species; incl. parched—salted, “Uguisu-mame”). Pigeonpea, or catjang pea (*Cajanus cajan*; *Cajanus indicus*). Pinto bean: See Kidney. Red bean: See Mung bean. Rice bean (*Phaseolus calcaratus*; *Vigna calcarata*). Soybean and soy products (*Glycine max*; *G. hispida*; *G. soja*; p. 19-21), incl: Whole mature seeds—dried (yellow, black), whole immature seeds dried, whole seeds—salted (black, green, green soaked, fried, fermented {natto}, pickled, roasted), flour of roasted soybeans, defatted soybeans—whole seeds. Soybean products: Curd—unpressed,

curd—tofu—raw (plain, kinugoshi, fukuroiri), curd—tofu—fried (moist type, dried type—regular size, dried type—small size, canned, abura age), curd—roasted [grilled], curd—tofu—fermented (home-prepared, jarred), curd—tofu (dried—spongy square, preserved, dried—rope-like, commercial {fermented with chili pepper}—jarred), curd cheese, curd sheet (milk clot sheet {yuba}) (moist type, dried type, pickled in soysauce), curd—pressed—raw (plain, fermented, spiced, strips—semi-dry), miso (Japan) (plain, sweet {5.3% salt added}, salty—light {10.4% salt added}, salty—dark {11.7% salt added}, mame-miso {9.7% salt added}, powdered {18.5% salt added}), paste [jiang] (plain, fermented, red pepper added, sweet, malt), soybean milk (unenriched—unsweetened, “Kaset” {Thailand; canned—concentrated, fluid}, Saridele {a mixture of soybeans, sesame seeds or peanuts, with vitamins and calcium added—Indonesia}), soybean sauce (dark—thick, light—thin, unspecified), tempeh (fermented soybean product, Indonesia), “Budo-mame” (cooked—Japan), Soybean residue [okara] (liquid, powder). Urd: See Mungo bean. Velvetbean (*Mucuna utilis*; *Stizolobium utilis*; incl. dried or mold-treated {tempeh}). Winged bean: See Goabean, Indes.

Food Group 4 titled “Nuts and seeds (p. 23-29) includes: Almonds, hemp seeds—whole, perilla—common (*Perilla frutescens*), safflower seeds, sesame seeds, sunflower seeds (*Helianthus annuus*), watermelon seeds.

Food Group 5, titled “Vegetables and vegetable products” (p. 30-75) includes: Amaranth, mungbean sprouts, seaweeds (many types), soybeans—immature seeds [green vegetable soybeans], soybean sprouts (raw, cooked).

Note 4. This is the earliest English-language document seen (March 2004) that mentions silken tofu, which it calls (in a table): “Curd, tofu, raw: ‘Kinugoshi,’ Japanese preparation.”

Note 5. This is the earliest English-language document seen (Dec. 2005) that contains the term “flour of roasted soybeans.”

Note 6. This is the earliest English-language document seen (Oct. 2006) that uses the term “Blackeyed pea” to refer to the cow pea. Address: Dep. Health Education and Welfare.

• **Summary:** Okara tempeh contains 84.9% moisture, 8.4% carbohydrate, 4.0% protein, 2.1% fat, and 0.7% ash, plus 226 mg of calcium per 100 gm. Address: 1. Balai Penelitian Gizi Unit Diponegoro, Departemen Kesehatan R.I., Jakarta; 2. Balai Penelitian Gizi Unit Semboja, Departemen Kesehatan R.I., Bogor, Indonesia.

369. Hermana, -; Sibarani, Sujana; Herlinda, Judith. 1972. Percobaan perbaikan campuran "Tempe Fish Rice" [Experiment on the improvement of Tempeh Fish Rice mixture as a protein source]. *Penelitian Gizi dan Makanan (Research on Food and Nutrition)* 2:57-61. [4 ref. Ind]

• **Summary:** The previous composition of Tempeh Fish Rice was modified for the consumption as a food supplement by pre-school children. Composition the of the TFR was 30% tempeh powder, 30% rice flour, 10% fish meal, 25% sucrose, and 5% peanut oil. Improvement of quality was achieved. Even though the nutritional components were about the same, the NPU (Net Protein Utilization) was higher. The flavor, color, and aroma of the mixture were stable during the 10-week storage period. Address: 1. Balai Penelitian Gizi Unit Semboja, Departemen Kesehatan R.I., Bogor, Indonesia; 2. Bagian Gizi dan Makanan Departemen Ilmu Kesejahteraan Keluarga Fakultas Pertanian, Institut Pertanian Bogor; 3. Balai Penelitian Gizi Unit Diponegoro, Departemen Kesehatan R.I., Jakarta.

food products. In: A.K. Smith and S.J. Circle, eds. 1972. *Soybeans: Chemistry and Technology*. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 389-419. Chap. 11. [54 ref]

• **Summary:** Contents: Introduction. Koji. Miso: Preparation of koji, treatment of soybeans (mixing, fermentation). Shoyu: Incl. chemical shoyu. Natto. Hamanatto. Tempeh. Sufu [fermented tofu]. New soybean products made by fermentation: Cheese-type products, fermented soybean milk, an ontjom-type product. 10. Future of fermented soybean foods.

Tables: (1) Demand for whole soybeans in Japan (1964-1967) to make miso, shoyu, and natto. In 1967, only 4.5% of the soybeans used to make miso were used in the form of defatted soybeans, whereas the same year 91.1% of the soybeans used to make shoyu were defatted. The total demand in 1967 (in 1,000 metric tons) was miso 177, shoyu 169, and natto 47. (2) Chemical composition of soybean foods: Miso (salty light, salty light, soybean miso), natto, soybeans. (3) Annual production of miso (1956-1967). Production of 530,078 tons in 1956 decreased to a low of 453,956 tons in 1962, then rose to 520,510 tons in 1967. (4) Composition of miso in relation to time of fermentation and ratio of soybeans:rice:salt for three types of miso: White miso, light-yellow salty miso, and yellow-red salty miso. (5) Average composition of shoyu made from whole soybeans and defatted soybean meal.

Illustrations (flowsheets): (1) Process for making red miso. (2) Process for manufacture of shoyu. (3) Process for making hamanatto. (4) Tempeh fermentation on a laboratory scale. (5) Preparation of sufu. (6) Preparation of soybean cheese. Address: NRRL, Peoria, Illinois.

• **Summary:** One part of fresh tempeh was mixed with 2 parts of chili sauce and 2 parts of tomato sauce, then cooked for 10-15 minutes. The flavor acceptability of the product was good. Address: Ohio State Univ., Columbus, Ohio, & Indonesia.

372. Jensen, J. Stoumann. 1972. Baelgplanter. Frugtens anvendelse og potentiel i menneskelig ernæring. En analyserende og diskuterende oversigt [Leguminous plants. Use of their seeds and its potential for human nutrition. An overview, with analysis and discussion]. Unpublished manuscript. Lyngby, Denmark. 110 p. Forwarded to DANIDA Sept. 1974. Unpublished manuscript. [23 ref. Dan]

• **Summary:** Under East Asian soyfoods, mentions soy sauce, miso, natto, sufu, and tempeh. Address: Dep. of Biochemistry & Nutrition, Technical Univ. of Denmark, Lyngby, Denmark.

373. Liener, I.E. 1972. Nutritional value of food protein products. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 203-77. Chap. 7. [417 ref]  
**• Summary:** Contents: 1. Introduction. 2. Protein and amino acid requirements of man: Protein requirements, amino acid requirements. 3. Evaluation of protein quality: Amino acid composition, biological techniques involving animals, protein efficiency ratio (PER), N-balance studies, plasma amino acids, experiments with human subjects, amino acid availability, in vitro techniques (physical tests, available lysine, tests for biologically active components [urease, trypsin inhibitor], enzymatic and microbiological techniques). 4. Nutritional significance of other soybean constituents: Available energy, vitamins (fat-soluble vitamins, water-soluble vitamins), minerals (calcium, phosphorus, zinc, other minerals), unknown growth factor(s). 5. Factors affecting the nutritive properties of soybean protein: heat treatment, supplementation with amino acids, storage, germination, effect of antibiotics, dietary source of carbohydrate. 6. Soybean products used for human consumption: Soybeans as a vegetable, soybean flour (incl. Multi-Purpose Food (MPF)), soybean milk, soybean curd, other fractions, protein concentrates, protein isolates (use in infant foods, use in textured foods), fermented products (tempeh, natto, miso). 7. Use of soybean products as protein supplement: As supplement to wheat protein (bread, other baked goods), as supplement to corn, as supplement to rice, use in vegetable protein mixtures, peanut and other oilseed proteins, blends containing corn, other cereals and legumes. Address: Univ. of Minnesota.

374. Nakano, Sasuke. 1972. Ryôri no kigen [The origin of foods]. Tokyo: Nihon Hoso Shuppan Kyokai. 225 p. [Jap]  
**• Summary:** The important chapter titled “The natto triangle and miso,” by Sasuke Nakao (p. 118-27) discusses natto, its relatives and ancestors in East Asia, and the “natto triangle” theory (with a map). Nakao hypothesized that natto originated in the monsoon area of Southeast Asia, where there are East Asian evergreen forests. He considered Yunnan province in China to be the original center of natto. His theory is based on the observation that there are many varieties of non-salted fermented soyfoods and soy condiments inside the “natto triangle.” Yunnan province in southwest China, Thailand, Myanmar (Burma), Bhutan, Nepal, Indonesia, and Japan all fall within this triangle.

Note: The term “natto triangle” can be misleading, especially for non-Japanese. Natto is the only non-salted fermented soyfood or soy condiment indigenous to Japan. Natto is made by fermenting whole, cooked soybeans with bacteria (*Bacillus natto*, or *Bacillus subtilis*) in a warm place (ideally 104°F or 40°C) for about 24 hours. According to various Japanese legends, natto originated almost 1,000 years

ago in northeast Japan when cooked soybeans were placed in a rice-straw sack strapped over the back of a horse. The natto bacteria are found abundantly on rice straw, and the warmth of the horse’s body aided the fermentation. Under these conditions, the fermentation would take place naturally, without intentional inoculation. The “natto triangle” refers to the geographical area within a large triangle in East-, South-, and Southeast Asia—the only place in the world where non-salted fermented soyfoods and soy condiments are indigenous. A number of these—such as tempeh in Indonesia and unsalted soy nuggets in China—are fermented primarily with molds (e.g., *Rhizopus*, *Aspergillus*) rather than bacteria. The triangle has its three corners in northeastern Japan (on the northeast, for natto), northeastern India and Nepal (on the west, for kinema and thua-nao), and Java (Indonesia, on the south, for tempeh).

375. Nurrachman, -. 1972. Beberapa proses bahan makanan fermentasi secara tradisional di Indonesia [Several traditional Indonesian food fermentation processes]. Thesis (Skrripsi), Akademi Gizi, Jakarta. 50 p. [Ind]\*

**• Summary:** A bibliographic study on fermented foods, among which are tempeh and onchom (oncom). Address: Jakarta, Indonesia.

376. Smith, A.K.; Circle, S.J. 1972. Historical background (on soybeans and soybean foods). In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 1-26. Chap. 1. [53 ref]

**• Summary:** Contents: 1. Introduction. 2. U.S. history: Introduction of soybeans, processing for oil, soybean oil. 3. Soybean meal and protein: Animal feed industry, poultry industry, industrial uses. 4. Soybean production. 5. Oriental history: Ancient history, Oriental fermented foods (shoyu, miso, tempeh, ontjom, natto, hamanatto, tao tjo [Indonesian-style miso], kochu chang, ketjap), Oriental nonfermented foods (soybean milk, tofu), wedge press. 6. Soybeans and world food problems: Green Revolution, protein supplements (high protein food formulations, AID funded), amino acids, CSM, cottage industries.

Concerning industrial uses (p. 8-9): Soybeans rose in popularity as an agricultural crop in the USA at a time when other crops such as corn, wheat, cotton, and tobacco were being produced in surplus quantities. Soybeans took over much of the acreage vacated by these crops. “At that early period it was the hope of many leaders of agriculture, government, and industry that much of the oil and protein of the soybean could be diverted from the food and feed industries into industrial products such as paints, varnishes, soap stock, plastics, adhesives, plywood glue, paper coating and lamination, paper sizing, textile fibers, and other uses... In 1936 the US organized the Regional Soybean Industrial Products Laboratory for this purpose. These new industrial

uses were expected to help relieve the problem of farm surpluses... In 1935 the Glidden Company built the first plant for the isolation of industrial grade soybean protein (transferred to Central Soya in 1958). The largest use of industrial grade protein is in the paper-making industry, for coating and sizing of paper board.

“After World War I, soybean meal, because of its low cost, replaced casein as an adhesive for Douglas fir plywood glue, where it still retains a substantial part of the market for the interior grade product.”

“While soybean proteins have several important industrial applications, especially in the paper industry for coating and sizing paper, which are expected to continue for years to come, the original dream of an ever-expanding industrial market [for soy proteins] has faded. In the polymer market it appears that for most applications the proteins cannot be made competitive with the increasing number of low cost, high quality synthetic resins... It is generally recognized that the increasing demand for proteins for feed and food will greatly surpass the anticipated industrial uses.”

A graph (p. 1) shows: Soybean production in the United States for seed, 1940-1970. Address: 1. Oilseeds Protein Consultant, New Orleans, Louisiana; 2. Director, Protein Research, W.L. Clayton Research Center, Anderson Clayton Foods, Richardson, Texas.

377. Smith, Allan K.; Circle, Sidney J. eds. 1972. Soybeans: Chemistry and technology. Vol. 1. Proteins. Westport, Connecticut: AVI Publishing Co. xi + 470 p. Illust. Index. 24 cm. [500+ ref]

• **Summary:** One of the best and most comprehensive reviews on the subject, with extensive information on modern soy protein products. Each of the 12 chapters is written by an expert on the subject. Volume 2 was never published. Address: 1. PhD, Oilseeds protein consultant, New Orleans, Louisiana; 2. PhD, Director, Protein Research, W.L. Clayton Research Center, Anderson Clayton Foods, Richardson, Texas.

378. Smith, A.K.; Circle, S.J. 1972. Appendixes: Glossary of soybean terms: Terms used in conjunction with the processing of soybeans and the utilization of soy products. Official standards of The United States for soybeans. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 438-56. Appendix. [4 ref]

• **Summary:** Glossary: Soybean(s), soybean processor, soybean processing (solvent extraction, mechanical processing, pre-press solvent processing), soybean oil, crude soybean oil, edible crude soybean oil, refined soybean oil, edible refined soybean oil, hydrogenated soybean oil, degummed soybean oil, winterized oil, technical grade refined soybean oil, soybean fatty acids, soybean soapstock, acidulated soybean soapstock, soybean lecithin, break

material, sludge.

Soybean products: Ground soybeans, ground soybean hay, soybean hulls, solvent extracted soybean feed, soybean meal, dehulled solvent extracted soybean meal, soybean mill feed, soybean mill run, heat processed soybeans, nitrogen free extract (N.F.E.).

Standard specifications: Soybean chips, soybean cake, 41% protein soybean meal, soybean flakes, 44% protein soybean meal, dehulled soybean flakes, 50% protein solvent extracted soybean meal.

Soybean proteins: Soy flour, soy grits, soybean meal, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, protein, isolated protein, toasting, textured protein products (TPP), meat analogs. Definitions: Soy grits and/or soy flour, isolated soy protein, soy protein concentrate.

Vegetable fats: Margarine, vegetable shortening.

Oriental foods: Soy sauce (shoyu), soy milk, miso, tofu, dried tofu, aburaage, kinako, namaage, ganmodoki, tempeh, natto, yuba, moyashi (soybean sprouts), vanaspati, ghee.

Official standards of the U.S. for soybeans. Soy flour standards. Analytical data range of commercial soy protein. Some U.S. companies marketing soy protein food ingredients. Nitrogen solubility index (NSI). Protein dispersibility index (PDI). Urease activity. Water absorption of soy flour. Address: 1. Oilseeds Protein Consultant, New Orleans, Louisiana; 2. Director, Protein Research, Anderson Clayton Foods, Richardson, Texas.

• **Summary:** Contents: Preface (by Prof. Sarwono Prawirohardjo, Chairman, ASEAN Permanent Committee on Science and Technology). Introduction: The soybean (*Glycine max*), soybean meal and oil, food uses, industrial uses, scope of the bibliography ("excludes references to non-alimentary utilisation of soybeans" and to "references to alimentary utilisation where the harvested plant has not undergone processing by either fermentation or oil extraction"), terminology of soybean processing (soybean meal, soy flours and grits, solvent extraction, miscella, desolventizer-toaster, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, soy protein concentrates, soy milk, Saridele, yuba, soybean curd [tofu], aburage, koritofu [kori-dofu, dried frozen tofu], soy protein isolate, protein fibre products {spun, spinnerettes}, extrusion-expansion products, fermentation products {ontjom, *Neurospora sitophila*, soysauce, shoyu, *Aspergillus oryzae*, koji, moromi, tamari, koikuchi, natto, miso, tempeh, *Rhizopus oligosporus*, soybean cheese, sufu, *Mucor sufu*}, *Zygosaccharomyces*).

General (p. 1). Fermentation products (p. 2-16). Soybean oil, meal, and protein (p. 17-42). Nutrition (p. 43-56). Note: 500 copies were printed. Address: Indonesia.

388. *PAG Bulletin (Protein Advisory Group, WHO / FAO / UNICEF)*. 1973. PAG statement (No. 22) on upgrading human nutrition through the improvement of food legumes. 3(2):1-24. Summer. [106 ref]

• **Summary:** Identified research deficiencies in the most prevalent food legume crops and proposes desirable procedures for increasing yield and improving nutritional and food use qualities. "The PAG recommends urgent research attention to six major species of food legumes: dry peas, pigeon peas, cow peas, chick peas, broad beans, and peas; and the two leguminous oilseeds, peanuts and soybeans."

389. György, Paul. 1973. Stabilized edible oil and fat compositions containing oil of tempeh. *U.S. Patent* 3,762,933. Oct. 2. 4 p. Application filed 21 June 1971. [8 ref]

• **Summary:** Tempeh oil is extracted from tempeh using a solvent (50% aqueous ethanol solution) and used as an antioxidant for edible fats and oils. The peroxide value (POV) is a measure of the oxidative rancidity of an oil. The larger the POV value, the more rancid is the oil. When 100%

soybean oil was stored for 35 days at 37°C (98.6°F) the POV was 118. However if a mixture of 90% soybean oil and 10% tempeh oil was stored under the same conditions, the POV dropped to 55. And when a mixture of 50% soybean oil and 50% tempeh oil was stored under the same conditions, the POV dropped to 8. The same type of stabilizing effect was found with corn oil, cottonseed oil, safflower oil, and lard. Address: 201 Curwen Rd., Rosemont, Pennsylvania 19010.

390. Ilany (Feigenbaum), J. 1973. Soybean food for today and tomorrow. *Gordian (Hamburg)* 73(10):390-91. Oct.; 73(11):428-30. Nov.; 73(12):464-65. Dec. [21 ref. Eng; ger]  
**• Summary:** "This is a short review of what is chiefly known at present of this wonderful bean, which only a few years ago, constituted a strange and exotic food." Contents: Introduction. Composition and nutritional value. Green soybeans. Sprouted soybeans. Soybean flours. Isolated proteins. Soy-food products of the Far East: Kinako, soymilk, yuba, "tofu or curd-soycheese," aburage, natto, Hamanatto, tempeh, miso, shoyu or soy sauce. Soybean oil. Lecithin.

Concerning tofu: Tofu made in the regular way "is called 'Fresh Tofu.' It does not keep long, even under refrigeration, unless it is further processed. For this purpose it may be canned, frozen, fried, smoked, or fermented."

Note: This is the earliest English-language document seen (Aug. 2011) that contains the term "soycheese"; it uses this term to refer to regular tofu.

391. Iljas, N.; Gould, W.A.; Peng, A.C. 1973. New soybean food made from tempeh. *Ohio Report on Research and Development* 58(6):125-26. Nov/Dec.

**• Summary:** Eight tempeh-based foods were developed using tomato products as the second ingredient. The most acceptable of these was a sort of tempeh sloppy joe. The recipe is given. Address: Dep. of Agricultural Research and Development Center, Ohio State Univ.

392. Yamamoto, Yukiko. 1973. Hakkô daizu, tenpei no eiyôka ni tsuite [The nutritional value of fermented soybeans and tempeh]. *Hyogo Joshi Tandai* No. 6/7. p. 128. [Jap]\*

393. Cowan, J.C. 1973. Processing and products [soybeans]. In: B.E. Caldwell, ed. 1973. *Soybeans: Improvement, Production, and Uses*. Madison, Wisconsin: American Society of Agronomy. xviii + 681 p. See p. 619-64. Chap. 20. [52 ref]

**• Summary:** Contents. 1. Introduction. 2. Processing for oil and meal: Preparation of flakes, solvents, extraction, desolventizer-toaster, degumming. 3. Conversion to edible oil products: Refining, bleaching, deodorization, hydrogenation. 4. Edible fat products: Salad and cooking oils, status of flavor stability, shortenings and margarine oils, lecithin. 5. Essential fatty acids and atherosclerosis.

6. Industrial uses of oil. 7. Meal for livestock and poultry: Nutritional aspects, factors affecting use of meals. 8. Edible protein products: Soy flour, concentrates and isolates, textured protein products (textured soy flour or textured soy protein fibers made into "meat analogues" resembling chicken, bacon, etc.). 9. Fermented and specialty foods: Tofu, soybean milk (an intermediate step in the manufacture of tofu), miso, shoyu (tamari, light-colored shoyu), sufu, tempeh, hamanatto, and natto.

Soybeans flow through a crushing plant as follows: First, they are cracked to release or loosen the hull and to break the cotyledon into about 4 parts. Shakers and aspirators separate the hull from the cracked cotyledons and rollers flake them. "Purified petroleum hydrocarbons known as hexane extract the oil from the flakes and the solvent is recovered. Moistened flakes are heated to inactivate the antinutritional factors and are converted to feeds for livestock and poultry. A small proportion of the flakes goes to a wide variety of soybean protein products including flour, isolates, and concentrates."

Tables show: (1) Utilization of soybean in U.S. in million pounds, every 5 years from Oct. 1933 to 1970 (Kromer 1970). (2) Use of soybean meal in the USA for feeding livestock and poultry (million tons). In 1969, the estimated amounts used were as follows: Cattle 3.43. Hogs 1.69. Other livestock 1.73. Total livestock: 6.85. Broilers 3.07. Hens and pullets 1.28. Other poultry 1.10. Total poultry 5.45. Total livestock + poultry 12.30. Note that cattle are the single biggest users. (3) Bleaching soybean oil (process, % clay and type, change in Lovibond color rating). (4) Effect of bleaching, citric acid, and light exposure on soybean salad oil. (5) Specifications for soybean oil. (6) Effect of linolenate content on flavor of soybean oil at elevated temperatures. (7) Composition of certain edible oil products from soybean oil and related products (salad oil, hydrogenated-winterized soybean salad oil, hydrogenated soybean oil liquid shortening, plastic shortening types I and II). (8) Changes in iron and copper content of soybean oil in commercial refining. (9) Properties of all-purpose and high-stability shortenings from all-hydrogenated vegetable oils and blends of animal fat and/or vegetable oil (iodine value, melting point, % linoleic acid, solid fat index {% solid at temperatures indicated}). (10) Typical analyses for mellorine and cookie and confectioner's fat. (11) Analytical data for typical margarine oils low and high in polyunsaturates (iodine value, melting point, % linoleic acid, solid fat index {% solid at temperatures indicated}). (12) NSPA-tentative lecithin specifications (NSPA, 1969-1970). (13) Composition of soybean lecithins. (14). Approximate composition of soybeans and meal products (whole bean, cotyledon, hull, hypocotyl, meal {cake-extruded, flakes-solvent extracted, dehulled flakes-extracted, mill feed-separated hulls, mill run-separated hulls}). (15) Amino acid analysis of soybean meal (44% protein and 49% protein {dehulled}) and corn.

(16) Amino acid analysis of blends of soy flour with cereals and milk (Inglett 1968; Corn soy milk {CSM}, Millet soy milk, Wheat soy milk, etc.). (17) Partial formulas for young swine and boiler rations in percent total rations. (18) Partial formulas for dairy feeds (14% protein). A supplement to forage or roughage. (19) Soybean grits and flour—screensize. (20) Composition of soy flour. (21) Composition of 4 types of soy protein concentrates. (22) Uses for high-protein soy products (protein 70 [concentrates] and protein 90 [isolates]). Note: This is the earliest English-language document seen (Dec. 2004) that uses the term “protein 90” to refer to a soy protein isolate. (23) Amino acid analysis of fractions derived from dehulled extracted flakes (Rackis et. 1961, 1970). (24) Effect of cooking in salt solutions on texture of structured granules. (25) Composition and use (1,000 metric tons in 1964 and 1967) of soybeans for traditional foods in Japan (Use of whole soybeans in 1967 in 1,000 metric tons: Miso 169. Shoyu 15. Natto 47. Tofu 329. Total 642. Use of defatted flakes or grits in 1967 in 1,000 metric tons: Miso 8. Shoyu 154. Natto 0. Tofu 77. Total 284).

Figures show: (1) Flowchart: Processing of soybeans to oil and meal using hexane extraction. (2) Illustration: A modern soybean processing facility (aerial view, Central Soya, Inc.). (3) Schematic diagram / flowchart: Manufacture of edible soybean oil products (salad oil, salad and cooking oil, shortenings, margarines, liquid shortening). (4) Illustration: A continuous deodorizer for soybean oil. (5) Graph: Effect of prolonged storage at 100°F on flavor score of hydrogenated-winterized soybean oil or soybean salad oil (nitrogen packed, air packed). Preparation of tempe mold inoculum and observation of its activity during storage. *Gizi Indonesia, J. of the Indonesian Nutrition Association* 5(1-2):2-7. Presented initially at the 4th International Fermentation Symposium. Held 19-25 March 1972 at Kyoto, Japan. 9 p. [5 ref]

• **Summary:** “Tempeh mold inoculum can be made by growing mold on rice or steamed cassava flour. The mold culture is then dried in the sun when the spores have fully matured. It is then ground to a powder. The spores may also be taken off from the dried culture by rubbing them off with wheat flour. Rice flour or tapioca flour may be used as substitutes for wheat flour. The flours are also used to dilute the concentration of the spores in the inoculum.

“Another type of tempeh mold inoculum can be made by grinding dried tempeh into powder.

“Inoculum made by growing tempeh mold on rice is the best of the three, is easily prepared and is inexpensive. The shelf life is at least 6 months when stored in a closed container at room temperature (25°C).” Address: 1. Research Associate, Nutrition Research Inst., Bogor; 2. Dep. of Botany, Bogor Agricultural Univ., Bogor; 3. Director, Nutrition Research Inst., Bogor, Indonesia.

395. Hermana, -. 1973. Tempe: An Indonesian fermented soybean food. In: W.R. Stanton, ed. 1972. Waste Recovery by Microorganisms: Selected Papers for the UNESCO/ ICRO Work Study held at the University of Malaya. Kuala Lumpur: Ministry of Education, Malaysia... 221 p. See p. 55-62. Held 1-18 May 1972 at Kuala Lumpur, Malaysia. Illust, Maps. 27 cm. [34 ref]

• **Summary:** An excellent early summary. Contents: Introduction. Methods of preparation: Dehulling, packaging. The mold (*Rhizopus* species): Characteristics desirable for a strain of mold used to manufacture tempe, requirements for mold growth. The inoculum: Methods used to prepare it. Nutritive value: Changes in protein (soluble nitrogen, changes in amino acids and free amino acids), changes in lipids (strong lipolytic activity, changes in fatty acid composition, changes in linolenic acid, acid number and pH), changes in carbohydrates, changes in B vitamins, changes in solids (and soluble solids), changes in nutritive value of protein (changes in PER). Uses of tempe (keeping quality, extending shelf life by sun drying or deep frying).

A table (p. 60) shows the nutritive value of tempe per 100 gm.

Note: This is the earliest document seen (Sept. 2011) that describes commercial production of tempeh. Address: Bandung, Indonesia.

396. Hudayah, Haryati. 1973. Mempelajari kemungkinan penggantian proses pengupasan kulit biji kedele dengan perlakuan bahan kimia pada pembuatan tempe [The possibility of chemical treatment as an alternative to soybean dehulling in tempeh processing]. Thesis (Skripsi), Fakultas Teknologi Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 23 p. [Ind]\* Address: Yogyakarta, Indonesia.

397. Hunter, Beatrice Trum. 1973. Fermented foods and

beverages. New Canaan, Connecticut: Keats Publishing Co. 116 p. Index. 18 cm. [38 ref]

• **Summary:** In the chapter titled “Soybeans” (p. 31-49), the author discusses tofu (and how to make it at home with or without fermentation), meitauza (fermented okara), hakko tofu (a newly developed high protein food; fermented soybean curd), sufu (Vietnamese call it Chao), shoyu, miso, ketjap (thick Indonesian soy sauce [probably ketjap manis]), tempeh, Hamanatto, natto, Tao-cho from Malaysia, and Tao-si from the Philippines.

Note: The author has collected her information (both correct and incorrect) for a number of sources, which she does not cite directly, although she does have a bibliography.

398. Iljas, Nasruddin; Peng, A.C.; Gould, W.A. 1973. Tempeh: An Indonesian fermented soybean food. Wooster, OH: Ohio Agricultural Research and Development Center, Dept. of Horticulture. 36 p. Horticulture Series No. 394. [134 ref]

• **Summary:** An excellent review of the literature with a large bibliography. Contents: Introduction. Production and consumption of soybeans (worldwide). Nutritive value. Deficiencies inherent in soybeans: Amino acid, beany flavor, antinutritional factors. Tempeh: The tempeh mold, methods of preparation, Changes in chemical composition (proteins and amino acids, lipids, carbohydrates, vitamins, minerals), nutritive value, preservation, acceptance and potential use.

Footnote (p. 1): “Part of the review was from a Ph.D. dissertation by the senior author at The Ohio State University. Present address: Fakultas Pertanian, Universitas Negeri Seriwidjaja, Djl. Bukit Besar, Palembang, Indonesia.” Address: Ohio State Univ.

399. van Veen, A.G. 1973. Toxic properties of certain unusual foods. In: National Academy of Sciences, National Research Council, Food and Nutrition Board, Food Protection Committee. 1973. Toxicants Occurring Naturally in Foods, 2nd ed. Washington, DC: National Academy of Sciences. vii + 624 p. See p. 464-76. Chap. 21. [47 ref]

• **Summary:** Includes discussions of *Leucaena glauca*, and bongkreik (incl. bongkreik acid and mimosine). The literature is reviewed through 1970. Address: Graduate School of Nutrition, Cornell Univ., Ithaca, New York 14850.

400. Saono, Susono; Gandjar, Indrawati; Basuki, Triadi; Karsono, Herry. 1974. Microflora of ragi and some other traditional fermented foods of Indonesia. *Annales Bogorienses* 5(4):187-204. Feb. [14 ref]

• **Summary:** “Studies have been conducted on the microflora of samples of ‘ragi’, ‘tapé ketéla’ [tapeh ketela, from cassava] or ‘peuyeum’, ‘tapé ketan hitam’ [from black glutinous rice], ‘oncom hitam’ [onchom from peanut presscake or cassava presscake], and ‘oncom mérah’ [onchom merah] or ‘oncom beureum’ [from peanut presscake

or okara; both terms mean “red onchom”] from various places in West Java. Genera found in ragi include *Candida*, *Mucor* and *Rhizopus* species.

Appendix I, titled “Fermented products of Indonesia” lists 26 different traditional fermented products. Those made from soybeans and related products include: Kécap—Soy sauce made from black soybeans. Oncom mérah—Okara onchom. Tépép kedelé—Tempeh made from soybeans. Tépép bengook—Tempeh made from the ripe seeds of *Mucuna pruriens* var. *utilis*. Tépép lamtoro—Tempeh made from the seeds of *Leuceuna leucocephala*. Tépép gembus—Okara tempeh. Tépép bongkrék—Tempeh made from the solid refuse of coconut meat. Many of these foods are prepared with the help of a starter called “ragi,” a small, slightly flattened dry ball consisting of rice powder, spices, and microorganisms. Ragi tépép, for example, is the type of ragi used to make tempeh.

Appendix II, titled “Methods of preparation of ‘ragi,’ ‘tapé ketela,’ ‘tapé ketan,’ ‘oncom hitam,’ and ‘oncom merah’ in West Java” contains 1-2 paragraphs on each. On pages 200-204 are detailed illustrations showing the morphology of 14 species and varieties of yeast.

Note 1. The Treub Laboratory was named after Dr. Treub, who was associated with the founding of the Buitenzorg Botanical Gardens in the 1880s. He was there in the mid-1890s.

Note 2. This is the earliest document seen (March 2010) that contains the word “oncom” (spelled in that way). Address: 1,3-4. Treub Lab., National Biological Inst., Bogor; 2. Nutrition Research Inst., Dep. of Health, Bogor.

401. Steinkraus, Keith H. 1974. Research on traditional Oriental and Indian fermented foods. *Current Science and Technology, Special Report* No. 16. p. 10-13. April. (Cornell University). [13 ref]

• **Summary:** Discusses tempeh, ontjom, idli, Ecuadorian “yellow” rice, Indonesian tape (tapeh, tapé), fermented soy milks, and fish paste, including their nutritive value, digestibility (apparent digestion coefficient), vitamins, and acceptability, plus thoughts on the wholesomeness of fermented foods. Address: Prof. of Microbiology, Dep. of Food Science & Technology, New York State Agric. Exp. Station, Geneva, New York.

402. Kay, Theodore. 1974. Soybeans in the Nigerian diet. *Samaru Agricultural Newsletter* 16(1):18-22. May. [Eng]

• **Summary:** Contents: Introduction. Nutritional value of the soya bean. Daily amino acid requirements for men, women, and children. Suggested methods of incorporating soya bean into the Nigerian diet: Soya bean paste (soaked, uncooked soya beans, with the hulls on, ground to a white paste) and whole beans (not dehulled). Utilization of the paste: Directly for kosei (akara ball) and panke (puff-puff), for preparation of soya bean milk, which can be used to make protein-

enriched pap, fu-fu, bean curd (to-fu), awara or wara. Use of the residue from preparation of soy bean milk [okara]: In Alele (moin-moin), or biscuits. Utilization of whole soya beans: baked, sweet baked powder, stew. Discussion: Why do we need soya bean in Nigeria? Five reasons are given. Acknowledgments to many co-workers.

The soya bean has been cultivated in the Far East since about 2800 B.C. It has [been] the main source of protein for all of East Asia, particularly for the vegetarian Buddhist. It has been used as bean curd (To-fu) and soya sauce in most parts of the Far East from Indonesia up to the Northern end of Japan, as soya bean milk in China, as soya paste (mi-so) in Japan, and as a fermented product (Tempe) in Indonesia.

The crop is well established in Benue Plateau State south of Makurdi, in the North-Western State around Abuja and in the southern part of North-Central State. However, it has been very difficult to cook the beans in a traditional West African way so it has never become popular in this country. Most of the soya bean produced in Nigeria has been exported as a cash crop, except a little for animal consumption. Address: Inst. for Agricultural Research, Samaru, Ahmadu Bello Univ., PMB 1044, Zaria, Nigeria.

403. Wang, H.L.; Vespa, J.B.; Hesseltine, C.W. 1974. Acid protease production by fungi used in soybean food fermentation. *Applied Microbiology* 27(5):906-11. May. [17 ref]

• **Summary:** The authors investigated growth conditions for maximum protease production by *Rhizopus oligosporus*, *Mucor dispersus*, and *Actinomucor elegans*. In East Asia, the first of these three molds is used to make tempeh, and the latter two are used to make sufu. Enzyme yields for all 3 were higher in solid substrate fermentations than in submerged culture. Of the 3 substrates tested—wheat bran, wheat, and soybeans—wheat bran was the best for enzyme production. The optimal conditions for maximum enzyme production were as follows: *Rhizopus oligosporus*, 50% moisture at 25°C for 3-4 days; *Mucor dispersus*, 50 to 63% moisture at 25°C for 3-4 days; *Actinomucor elegans*, 50 to 63% moisture at 20°C for 3 days. Address: NRRL, Peoria, Illinois.

404. Beuchat, Larry R.; Worthington, R.E. 1974. Changes in the lipid content of fermented peanuts. *J. of Agricultural and Food Chemistry* 22(3):509-12. May/June. [28 ref]

• **Summary:** “Full-fat peanuts were fermented with *Neurospora sitophila*, *Aspergillus oryzae*, *A. Niger*, *Rhizopus oligosporus*, and *R. delemar*. Total lipids, total fatty acids, and free fatty acids (FFA) were measured at incubation times ranging up to 116 hr” [hours]. Address: Dep. of Food Science, Univ. of Georgia, Experiment, GA 30212.

405. Ellis, John J.; Wang, H.L.; Hesseltine, C.W. 1974. *Rhizopus* and *Chlamydomucor* strains surveyed for milk-

clotting, amylolytic, and antibiotic activities. *Mycologia* 66(4):593-99. July/Aug. [11 ref]

• **Summary:** “Nine strains of *Chlamydomucor oryzae* and 347 strains of *Rhizopus*, representing 10 species, were grown in rice flour and wheat flour media. When grown on wheat flour medium, nearly all strains exhibited amylolytic activity and more than 300 strains showed milk-clotting activity. Almost all strains of *R. arrhizus* exhibited antibiotic activity against NRRL B-765 *Bacillus subtilis*. The 23 strains of *R. stolonifer* showed none of these activities. Renninlike proteinases from microorganisms have attracted interest in the past few years as possible substitutes for rennin in making cheese.” Address: NRRL, Peoria, Illinois.

406. Gandjar, Indrawati; Steinkraus, K.H. 1974. Biochemical, nutritional, and organoleptic changes occurring during production of indigenous fermented foods. In: UNESCO/ICRN/ITB Training Course on Indigenous Fermented Foods. 25 p. Held 12-31 Aug. 1974 at Bandung, Indonesia. \*

• **Summary:** Discusses kecap ([pronounced kechap], soy sauce), tauco ([taucho] Indonesian-style miso), tempeh, idli, tapeh ketan, and terasi.

Note: This is the earliest English-language document seen (March. 2009) uses the word “tauco” (spelled in that way) to refer to Indonesian-style miso.

407. György, Paul; Murata, K.; Sugimoto, Y. 1974. Studies on antioxidant activity of tempeh oil. *J. of the American Oil Chemists' Society* 51(8):377-79. Aug. [4 ref]

• **Summary:** A powerful water-soluble antioxidant has been isolated from tempeh and recognized as 6, 7, 4'-trihydroxyisoflavone. Crude oil extracted from dried tempeh (with 2 parts hexane and 1 part alcohol and recovered by evaporation of the solvents) contains this antioxidant, and when small amounts of this oil are added to typical vegetable oils or lard it protects them from autoxidation, i.e. prevents the typical rise in their peroxide value, even after exposure to air and at temperatures of up to 60°C for many weeks. “This mixture appears to be, at present, the best natural way of preserving various kinds of oil in fresh condition for long periods of time. Soy oil, which under ordinary commercial conditions (in bottles without complete elimination of air), develops undesirable flavor within a few months, retains, for an almost indefinite period of time when mixed with a small amount of tempeh oil, its normal physical, chemical, and gustatory qualities.”

The tempeh isoflavone, however, did not show any protective antioxidant effect when it was added to soybean powder or soybean oil. Address: 1. Dep. of Pediatric Research, Philadelphia General Hospital, Philadelphia, Pennsylvania 19104; 2-3. Faculty of Science of Living, Osaka City Univ., Osaka, Japan.

408. Robinson, Robert J.; Kao, Chuan. 1974. Fermented foods from chickpea, horse bean, and soybean (Abstract). *Cereal Science Today* 19(9):397. Abst. #94. Sept.

• **Summary:** The authors made soybean tempeh, chickpea tempeh, and horse bean tempeh from dehulled 0.2 to 0.4 cm diameter grits. The soybean tempeh had the best flavor, texture, and color.

They also made soybean miso, chickpea miso, and horse bean miso from the grits. Compared with soybean miso, chickpea miso's color was darker, while horse bean miso's is lighter.

Note: This is the earliest document seen (Sept. 2002) concerning miso made without soybeans; chickpeas and horse beans were used instead. Address: Kansas State Univ., Manhattan, Kansas.

409. Rusmin, Simon; Ko Swan Djien. 1974. Rice-grown *Rhizopus oligosporus* inoculum for tempeh fermentation. *Applied Microbiology* 28(3):347-50. Sept. [15 ref]

• **Summary:** A method of growing tempeh starter culture on cooked rice is described and evaluated. The spores of *Rhizopus oligosporus* survived best at low temperature (4°C) and intermediate humidity (50% relative humidity). "The activity of the rice-grown inoculum to ferment soybeans into tempeh did not decrease appreciably when stored desiccated for one year at 4°C or room temperature. Bacterial contaminants as high as 100 million counts per gram of cooked soybeans did not seem to affect the fermentation."

In Indonesia, tempeh starter is sometimes grown on the crushed leaves of *Musa* [banana] species, *Koثرina* species, *Hibiscus similis*, or *Tectona grandis*, which are placed inside the package of inoculated soybeans. The leaves, which become covered with mycelium during fermentation, are sun-dried and stored for inoculum.

Present addresses: Rusmin: School of Biological Sciences, University of Kentucky, Lexington, KY 40506. Ko: Food Science Dep., Agricultural University, Wageningen, The Netherlands. Address: Laboratorium Mikrobiologi, Institut Teknologi Bandung, Bandung, Indonesia.

410. *Soybean Digest*. 1974. Soybean research from ancient to ultramodern. Nov. p. 24-25.

• **Summary:** About the research work of Dr. H.L. (Hwa Li) Wang and her husband Dr. Li Chuan Wang, both of the USDA's Northern Regional Research Lab., Peoria, Illinois. Mrs. Wang, a biochemist, is studying tempeh. Her husband researches soy protein yields. Describes how to make tempeh and tempeh starter.

Photos show: (1) Dr. H.L. Wang holding a packet of freeze-dried tempeh starter. On the table is a sausage-shaped roll of tempeh "for easy slicing and deep-fat frying." (2) Dr. L.C. Huang. (3) The two PhDs together holding a basket of mold cultures in test tubes.

411. György, Paul. 1974. Oil of tempeh. *U.S. Patent* 3,855,256. Dec. 17. 4 p. Application filed 27 June 1973. [2 ref]

• **Summary:** Tempeh oil is extracted from tempeh using a solvent and used as an antioxidant for edible fats and oils. See also the inventor's U.S. Patent 3,762,933 of 2 Aug. 1973. Address: 201 Curwen Rd., Rosemont, Pennsylvania 19010.

412. *Today's Living*. 1974. How can you use soybeans? Let us count the ways. Dec. p. 20-23, 46, 48.

• **Summary:** A good introduction to tempeh and to food uses of soybean with 4 photos and recipes for Soy stuffed peppers (with ¼ cup soy grits) and Baked soybeans (with 2 cups dry soybeans).

It begins: "In the orient soybeans are used in 400 different ways, according to Charles B. Heiser in *Seed to Civilization*." "Soy protein is of very high quality, its amino acid content almost equalling that of eggs and meat."

Tempeh is a staple food throughout Indonesia with its 100 million people; it is made in hundreds of thousands of homes and in many small tempeh shops. "More than half of Indonesia's annual soybean crop is used for making tempeh." Gives a brief description of how Indonesians make tempeh.

413. Worthington, R.E.; Beuchat, L.R. 1974. Alpha-galactosidase activity of fungi on intestinal gas-forming peanut oligosaccharides. *J. of Agricultural and Food Chemistry* 22(6):1063-66. Nov/Dec. [26 ref]

• **Summary:** *Neurospora sitophila* and *Rhizopus oligosporus*, were examined for their ability to utilize sucrose, raffinose, and stachyose in peanuts. *N. sitophila*, showed definite □-galactosidase activity with a decrease in raffinose and stachyose content of ferments. *R. oligosporus* and 3 other strains did not utilize these sugars or utilized them only slowly. Address: Dep. of Food Science, Univ. of Georgia Agric. Exp. Station, Experiment, GA 30212.

414. Central Bureau of Statistics (CBS), Indonesia. 1974. [Industrial census]. Indonesia. [Ind]\*

• **Summary:** Contains early statistics on commercial production of tempeh, tofu, Indonesian soy sauce (*kecap*), and Indonesian miso (*tauco*) in Indonesia. Producers are divided into 2 groups by size: Home industry (1-4 workers) and small scale industry (5 or more workers). The amount of soybeans processed in tonnes/year is as follows for home industry/small-scale industry: tempeh (1.8/12.3), tofu (3.8/15.2), soy sauce (0.8/3.7), and miso (4.7/6.3).

Note: This is the 2nd earliest document seen (Sept. 2011) that gives industry or market statistics for tempeh, or for tempeh in Indonesia.

415. Hermana, -. 1974. Saving the protein waste from processing of legumes in Indonesia. Bogor, Indonesia: Ministry of Agriculture, Nutrition Research Institute.

ASEAN 7FA/Wrks. GL1/Wop-13.

• **Summary:** See Hermana. 1976. "Saving the protein waste from processing of legumes in Indonesia." Address: Bogor, Indonesia.

416. P'ng, H.A.; Ho, Coy Choke. 1974. Analysis of protein, ribonucleic acid and carbohydrate contents for nutritional studies in the food fungus, *Neurospora intermedia* (Abstract). In: Proceedings of the First Malaysian Biochemical Society Conference. See p. 11. \*  
Address: Dep. of Genetics and Cellular Biology, Univ. of Malaya, Kuala Lumpur, Malaysia.

417. Brackman, Agnes de Keijzer. 1974. Art of Indonesian cooking: The ABC's. Singapore: Asia Pacific Press. 127 p. 23 cm. First published in 1970.

• **Summary:** This recipe book, with a long introduction to each chapter, contains numerous soy-related recipes: Soya fish (Ikan ketjap, p. 24; Ketjap is "sweet soya sauce" [probably ketjap manis]). Soya fish, large (Ikan ketjap besar, p. 25). Soya chicken (Ajam ketjap, p. 38). Braised soya duck (Bebek smor ketjap, p. 48). Spicy soya sauce (Sambal ketjap, p. 74). Fermented soya beans (Sambal goreng tempe, p. 77; a must for the rijsttafel [rice table]). Peppered bean cakes [with tofu] (Sambal goreng tahoe, p. 82). Indonesian salad [with tofu] (Gado-gado, p. 85). Spiced soya (Sambal ketjap, p. 106).

The back matter notes that the best source of Indonesian ingredients is the Dutch company Conimex, in Baarn, Netherlands. There is a page of ideas for ingredient substitutes in the West (for sweet soya sauce substitute "equal amounts of Chinese or Japanese soya sauce and molasses"), and a 3-page Indonesian-English kitchen glossary. Address: Brookfield Center, Connecticut.

418. Hunter, Beatrice Trum. 1974. Favorite natural foods: Adapted from a series of programs on WGBH, Boston. New York, NY: Simon and Schuster. 219 p. Index. 21 cm. [154 ref]

• **Summary:** Contents: Foreword. 1. Vegetables, vegetables. 2. Perking up the salad bowl. 3. Sprouts (incl. legume seeds {alfalfa, chick pea, lentil, mung bean, peanut, pinto bean, soybean}, grain seeds, vegetable seeds, herb seeds, weed seeds, oil seeds {flax, safflower, sesame, sunflower}). 4. Whole grains. 5. The Cornell mix [for bread; Dr. Clive McCay]. 6. Sourdough. 7. Sauerkraut. 8. Yogurt. 9. Soybeans. 10. Satisfying that sweet tooth: Dried fruit desserts, confections, snacks. 11. Of special concern: Baby foods, brown-bagging, party fare, making good foods even better. Appendix.

Contents of chapter 9, Soybeans: Introduction. Soybean sprouts. Fresh green soybeans as a vegetable: Freezing, canning, drying. Recipes for whole dry soybeans (2). Making soybean pulp (put cooked, drained soybeans through a meat

grinder; recipe for green peppers stuffed with soybean pulp). Roasting dry soybeans (soak, drain, and dry roast). Making soybean milk (recipes for spiced soybean milk, brown rice pudding with soybean milk). Making soybean curd (also called "soybean cheese" or "tofu." From soybean milk, from fermented soybean milk, from soybean flour, from soybeans). Using soybean flours (three types: high-fat or full-fat, low-fat or medium-fat, minimum-fat or fat-free). 100% soybean flour cookies (grain-free). Other soybean products you can buy: Soybean grits and soybean flakes (with 1 recipe). Soybean lecithin (with 2 recipes). Tamari, miso. The soybean and you: Meat alternatives, tempeh, textured vegetable protein products (inferior), fabricated soy foods in school lunch programs ("a nutritional crime"). Avoid mock foods.

About the author: She is the author of numerous books and winner of the French Company's Tastemakers Award. She and her husband, John, live in New Hampshire. Nationally known for her lectures and demonstrations on natural foods, she is a member of the Price-Pottenger Nutrition Foundation and twice a speaker for the Martha Jones Lectures in Nutrition at the Ashbury Theological Seminary in Kentucky. She holds a B.A. from Brooklyn College and a Master's degree from Columbia University. She has done graduate work at State Teachers College in Buffalo, New York, and at Harvard University. A small photo of Beatrice Trum Hunter appears on the front dust jacket of the hardcover edition. Address: New Hampshire.

419. Kao, Chuan. 1974. Fermented foods from chickpea, horsebean, and soybean. PhD thesis, Kansas State University. 143 p. Page 2250 in volume 35/05-B of Dissertation Abstracts International. \*

Address: Kansas State Univ; PrAlBeBr.

420. Ko Swan Djien. 1974. Self-protection of fermented foods against aflatoxin. In: 1974. Proceedings Fourth International Congress Food Science and Technology. Madrid, Spain: International Union of Food Science & Technology. 6 vols. See vol. 3, p. 244-53. [7 ref]

• **Summary:** When making tempeh or onchom, the ability of *Aspergillus flavus* to produce aflatoxin B-1 was considerably suppressed when grown together with *Neurospora* species on a peanut substrate, or when it was grown together with *Rhizopus oligosporus* on soybeans. Large amounts of the aflatoxin mold (10 to 100 times normal levels) were used during inoculation, yet little or no aflatoxin was detected during the first 3 days of incubation at 30°C. Therefore accumulation of aflatoxin during traditional fermentation of tempeh or onchom is unlikely when a natural contamination with *A. flavus* occurs. Address: Lab. of Food Microbiology & Hygiene, Dep. of Food Science, Agricultural Univ., Wageningen, The Netherlands.

421. Moosdean, Fardian. 1974. Diteksi dan evaluasi jamur penghasil antibiotika yang tumbuh pada makanan tradisi Indonesia yang difermentasikan [Detection and evaluation of antibiotic producing fungi on traditional Indonesia fermented foods]. Thesis (Skripsi), Bagian Biologi, Institut Teknologi Bandung, Bandung, Indonesia (PBITB. Biology Dep., Inst. of Technology at Bandung). 50 p. [Ind]\*

• **Summary:** Discusses tapai (tapeh; fermented cassava), onchom, and tempeh. Address: Bandung, Indonesia.

422. Rachie, K.O.; Roberts, L.M. 1974. Grain legumes of the lowland tropics. *Advances in Agronomy* 26:1-132. See p. 83-85. [493 ref]

• **Summary:** The main plants discussed are peanuts, pigeon peas, cowpeas, and mung beans. However under "Humid Tropics" (p. 83-85) is a rather long discussion of soybeans, which "has been extensively grown for a long time as a basic food crop of the low elevations in southeastern Asia (Indonesia, Philippines, Malaysia). More recently, investigations in India, the West Indies, and both East and West Africa have demonstrated that soybeans can be very successfully grown in the lowland tropics under favorable conditions. At present there is no other species that can so consistently produce on a hectare per day basis both high yields of good quality protein and oil. The main deterrent to increasing production of this species in many tropical regions is lack of markets and understanding of its cultivation and utilization." Discusses: Adaptation and problems. Utilization ("green beans (vegetable)," split, sprouted, soy milk, soy sauce, tofu, tempeh). Recent investigations.

"Perhaps the most successful campaign to introduce soybeans and find solutions to production and utilization problems has been in India with assistance from a USAID-sponsored contract with the University of Illinois. In Africa, French-sponsored research organizations have centered their activities mainly in Madagascar with testing and management experiments in the Cameroons [Cameroon] and Centrafrique [central Africa]." In English-speaking Africa, breeding programs are in place in Tanzania and Nigeria. Address: 1. International Inst. of Tropical Agriculture, Ibadan, Nigeria; 1-2. The Rockefeller Foundation, New York, New York.

423. Soewarbo, Sri Lawihana. 1974. Kemungkinan pemakaian usar dari kedelai kuning dalam pembuatan [The possibility of using usar from yellow soybeans in tempeh processing]. Thesis (Skripsi), Fakultas Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 29 p. [Ind]\* Address: Yogyakarta, Indonesia.

424. Wahyunto, Winarto Bangun. 1974. Kemungkinan pemakaian jamur murni pada pembuatan tempe [The possibility of using pure-culture molds in tempeh processing]. Thesis (Skripsi), Fakultas Pertanian Universitas

Gadjah Mada, Yogyakarta, Indonesia. 21 p. [Ind]\* Address: Yogyakarta, Indonesia.

425. Farm, The. 1975. The Farm vegetarian cookbook. Summertown, Tennessee: The Book Publishing Co. 128 p. Illust. Index. 18 cm. Revised edition by L. Hagler. 1978. 223 p.

• **Summary:** Expanding on the pioneering "Yay Soybeans!" (1974), this creative and creatively illustrated vegan cookbook contains many extremely innovative and original recipes including: Soybean Stroganoff. Soyburgers. Spaghetti Sauce with TVP. Soysage. Soy fritters. Indonesian fried tempeh. Soymilk. Tofu. Tofu spreads. Soy "yogurt." Soy "cheese." Soy "butter" (made with soy flour). "Cream cheese" (made with soymilk). Soy "mayonnaise." Soy "whipped cream." Soy "coffee." "Soy 'nuts.'" Soy pulp granola. Ice Bean [soy ice cream] (Recipes include: Pineapple "sherbert" and "Vanilla ice bean," each made with soy milk instead of dairy milk). Mellowmeal (breakfast cereal containing soy flour). Soy "yogurt" Danish pastry. Soy bread. Soy pulp cookies. Soy "cheese cake." Blintzes (filled with tofu).

Gluten recipes (p. 54-59) include: Basic gluten (feeds 8 generously). Gluten roast. Gluten burritos. Chili gluten.

Oven-fried gluten. Janice's barbeque [barbecue] gluten ribs.

The rear cover states: "We are a large, long-haired spiritual community in Tennessee. We came together through open meetings in San Francisco with Stephen. We have 750 people, including 250 kids, living on 1,750 acres. This cookbook is to help as many people be vegetarians as possible without turning any of them off and making them think its strange or weird and to let people know that it tastes good, is nice, graceful, and it can be a turn-on, that it'd be really neat to eat, and make you look forward to meal-times and make you really happy to eat such good food." The Introduction, by Stephen, begins: "The thing about our cookbook is we don't want to be faddish or cultish or scare people off. We just honestly want them to know how to make it on vegies, even somebody who doesn't particularly have a moral reason for being a vegetarian, but just wants to eat a little cheaper, or somebody who learns to be a vegetarian to loose weight, 'cause you maintain a really healthy natural weight on vegetables... The main thing is that we're absolute vegetarians. We don't do meat or milk or eggs or cheese or fish or fowl."

"You can increase the world's food supply by being a vegetarian. So its good for everybody else, its good for the individual for health, and its good for the soul and the spirit not to be involved in killing. And I understand that vegetables are alive, but like I've said before, I've been to pig stickings, and I've been to rice boilings, and rice boilings have better vibrations than pig stickings."

Photos show: Facing title page: People planting white potatoes at the edge of a large field in front of the woods. The lady in front is Sylvia Tepper, Robert Tepper's wife. Pages: (1) Little Susannah Frohman eating a rolled up soybean tortilla. (3) Stephen Gaskin. (18) Ruth Thomas, making lunch in the kitchen of the only house on the property when Farm folks first came here. It housed The Farm's clinic, school, bank offices, and receptionist for a number of years until other facilities were built for these purposes. Ruth could make a mean soybean burger (which is pictured). (23) Laurie Sythe making potato soup on the other side of the same kitchen Ruth was pictured in. (35) Poblano chili plants. (60-61) Tempeh sliced to be round to fit on buns, resting on a plate (L) and a tray (R). (64). Uncle Bill (age 82, center, surrounded, from left by: Marilyn Keating, Jeffrey Keating, Ruth Thomas, Patrick Thomas, Uncle Bill, Joel Kachinsky, Roberta Kachinsky, Bruce Moore, Roslyn Moore {holding baby Sam}. All at their home on Schoolhouse Ridge. The house, named "Kissingtree," was originally built for Stephen and family, but he declared it "too fancy" for him, and he passed it on to this group {women were mostly schoolteachers in our school}). (67) Janice Hunter making stir fry at the Tower Road House kitchen. (68) John Hurgeton drinking a glass of soymilk on a construction site somewhere. (71) Sue Ellen, who worked in The Farm's soy dairy, holding a glass of soymilk and relaxing. (89) Sour

soymilk Danish pastry. (106) Jars of canned goods stored at the Farm's canning facility. Thanks to Cynthia Holzapfel for providing photo captions.

Illustrations appear on almost every page: On the front cover is a color illustration of a basket full of vegetables on a quilt. Many of the pages have illustrated borders or unique illustrations (line drawings) (flowers, plants, leaves, a pot of steaming food, psychedelic designs, native American motifs, etc.) where there would otherwise be empty space. Pages: (10) A Farm member eating, with one hand, a tortilla wrap filled with cooked whole soybeans. (20) A young woman in a kitchen facing the stove. (28-29) Illustrations of two Farm members making pizza. (65) Uncle Bill in a kitchen stirring a pot. (81) A pitcher labeled "Soy Milk." (83) An old-fashion, hand-turned ice cream machine for making Ice Bean. (88) Sour soymilk Danish pastry. (95) A happy man and a woman eating bagels. The man's finger, pointing up, serves as a bagel holder. Yum! (100) Overhead view of a round table with ten people eating. (105) A vase full of kitchen utensils. (113) A lady holding a cake—a very favorite recipe on The Farm. (120) A lady rolling out dough on a table.

Note 1. This book played an important role in introducing soyfoods (especially tempeh and soy ice cream), as well as a vegan diet, to America.

Note 2. This is The Farm's earliest publication that contains a tempeh recipe.

Note 3. This is the earliest document seen (Oct. 2008) that contains the word "vegies" (one of two documents).

Note 4. This is also the earliest document seen (Oct. 2008) that uses the word "barbeque" or "barbequed" rather than the standard "barbecue." Address: Summertown, Tennessee.

426. **Product Name:** Tempeh [Soy, or Wheat-Soy].

**Manufacturer's Name:** Indonesian Tempeh Co.

**Manufacturer's Address:** R.R. 1, Unadilla, NE 68454. Phone: 402-780-5934.

**Date of Introduction:** 1975. February.

**New Product–Documentation:** Order from Gale Randall, Indonesian Tempeh Company, RR#1, Unadilla, Nebraska 68454. 1976. Oct. He orders The Book of Tofu, Vol. 2 (later renamed Tofu & Soymilk Production) and a catalog of tofu-making equipment.

Shurtleff & Aoyagi. 1977, Jan. What is Tempeh? p. 5.

Rodale, Robert. 1977. "Tempeh, a new health food opportunity." *Prevention* (Emmaus, Pennsylvania). July. p. 25-32. "Gale Randall of Unadilla, Nebraska, is the first commercial tempeh-maker in the United States.... Randall works in the Lincoln, Nebraska, post office at night and operates his tempeh-making operation during the day."

Letter from Gale Randall of Unadilla, Nebraska. 1978. Jan. 27. Describes how to make Wheat-Soy Tempeh at home. The wheat should be cracked as coarsely as possible in a hand mill.

Letter from Gale Randall. 1978. Aug. 28. "The Indonesian Tempeh Company has moved to somewhat larger quarters. We now make soy milk and tofu as well as a variety of tempeh products. The new address is Route 1, Box 146, Palmyra, Nebraska 68418.

Letter from Gale Randall. 1979. Undated. Gives a detailed, typewritten description of his process for making tempeh and the construction of his incubator. Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 148. Owner: Mr. Gale Randall.

Visit to Gale Randall's tempeh shop in Palmyra, Nebraska. 1980. Summer. He now dehulls his soybeans wet, using a grist mill with coarse steel burrs that he got from a Sears catalog. He makes 50 to 100 eight-ounce packets of tempeh a day; he could make 300 to 1,000 if he had more equipment and time or labor. He has 2 incubators and each holds 50 packages. He built his own incubator from 4 by 8 sheets of pressed wood. It is 5-6 feet high. Between the pressed wood he sandwiched 3/4 inch Styrofoam. The shelves are 1/8 inch thick pegboard, with each supported by several boards to keep them from sagging. Heat is from 2 light bulbs, about 100 watts each, connected to a regular home thermostat. He now makes pinto bean tempeh and uses it unfried in soups. His tempeh now retails for \$0.91 to \$0.99 per 8 oz. cake.

Talk with Gale Randall. 1981. March 30. He started

making tempeh commercially in the winter of 1975. A former high school teacher, he retired in 1971 and moved his family to the farm in Unadilla where he had grown up. Looking for alternative ways of securing his basic life needs (food, shelter, and clothing), he got interested in algae and single cell proteins (CSP). In about 1974 he happened to read about tempeh the proceedings of an international conference on SCP held in Kyoto in about 1971. He read of it again in the December 1974 issue of *Today's Living* (p. 20), a popular health food magazine published in New York. He contacted Dr. Wang at the USDA/NRRC in Peoria, Illinois, for starter and instructions. "She did everything possible to help me get started. She was wonderful." He made tempeh for his family for roughly 6-12 months, then built a tempeh shop in the basement of his home and began selling the product commercially. At night he worked in the post office in Lincoln, Nebraska.

Shurtleff & Aoyagi. 1985. *History of Tempeh*. p. 49. This was America's first commercial Caucasian-run tempeh company, started by Mr. Gale Randall.

427. Wang, Hwa L.; Swain, E.W.; Hesseltine, C.W. 1975. Mass production of *Rhizopus oligosporus* spores and their application in tempeh fermentation. *J. of Food Science* 40(1):168-70. Jan/Feb. [8 ref]

• **Summary:** The authors recommend making *Rhizopus oligosporus* spores on a substrate of either rice, rice:wheat bran (4:1), or wheat:wheat bran (4:1) at a substrate to water ratio of 10:6 for 4-5 days at 32°C. The fermented mass is then immediately freeze dried, ground into a fine powder, and stored in closed plastic bags, ideally at 4°C.

Soybeans are not recommended for use as a substrate for spore production since, after extended fermentation with *Rhizopus oligosporus*, an unpleasant odor often resulted.

For inoculation, the authors suggest using 1 million viable spores per 100 gm of cooked soybeans or wheat. A rice-based substrate with 40% moisture will contain about 100 million viable spores per gram of starter. Tempeh was also made successfully from okara whose water content had been reduced to less than 80% by drying at 100°C. It is then fermented at 32°C for 20 hours. Address: NRRL, Peoria, Illinois.

428. Mustam, Muhammad. 1975. How to make tempeh at home and prepare Indonesian-style recipes using it (Interview). Conducted by William Shurtleff in Tokyo, Japan, March. 1 p. transcript.

• **Summary:** Note: William Shurtleff and Akiko Aoyagi, living in Tokyo, were first introduced to tempeh in March 1975, when friends at The Farm, a large spiritual community in Tennessee, sent them *The Farm Vegetarian Cookbook*, which had just been published. They read the section on tempeh with great interest. That same week, on an introduction from the Indonesian Embassy, they visited

Mr. Muhammad Mustam, a former tempeh maker living in Tokyo. He and his wife showed Shurtleff and Aoyagi how to make tempeh on a home scale; they were surprised at how quick and easy the process was. Two days later the Mustams invited Shurtleff and Aoyagi back to their home and used the freshly-made tempeh to prepare a feast of their favorite tempeh recipes. Their guests later wrote in the preface to their *Book of Tempeh*: Such appealing textures and savory flavors we had rarely tasted before. We were so impressed that we included the Mustams' tempeh making method and five recipes in our *Book of Tofu* that was just going to press."

In Indonesia, typical tempeh makers use 10 liters of soybeans at a time, and they prepare the tempeh in their own home. They soak the beans for 24 hours, then tread them underfoot in tightly woven bamboo baskets that are about 50 cm deep and 3 feet in diameter; the water drains out slowly due to the tight weave.

At home, rub soaked soybeans with one hand to remove the hulls, then float them off with running water. It is okay if the beans are split lengthwise into halves (two cotyledons), but try not to break the beans into small pieces. Then simmer the dehulled beans for 45 minutes over low heat and allow them to stand in the cooking water overnight; this causes a mild acid to form. Rinse and drain 5-6 times to give a milder, finer flavor. Add fresh water and cook over low heat for 15 minutes (the beans are still quite firm), then pour into a strainer and allow to cool to room temperature. Wash hands. Crumble 1½ teaspoons ragi (Indonesian tempeh starter cake, which looks like a tan cake of pressed sawdust) over the beans and mix it in. Spread the inoculated soybeans on a piece of aluminum foil (7 by 9 inches). Fold over all 4 sides to form a cake 4 by 3 by ½ inch thick. Seal the packet. Allow to stand at room temperature for 48 hours. The Mustams prepared the following recipes: Tempeh Goreng, Tempeh Kemul, Tempeh Bacham, Tempeh Kering. Address: Former Indonesian tempeh maker, living in Tokyo, Japan.

429. Steinkraus, Keith H. 1975. Exotic fermented foods for Americans. *New York's Food and Life Sciences Quarterly* 8(1):8-11. Jan/March.

• **Summary:** "Nearly all of us are familiar with soy sauce, the *shoyu* of Japan and China, since this is an exotic food that has become a part of our diet. Few Americans, however, know the flavor and aroma of genuine, fermented soy sauce or are aware of how the product is manufactured. Actually, much of the soy sauce available today is produced by hydrolyzing (digesting) soybeans with hydrochloric acid. This acid splits the proteins and lipids and other soybean components, yielding, when neutralized, a salty, tasty liquid that imparts a meatlike flavor to bland foods."

Describes how fermented shoyu is made. Then gives a brief introduction to miso, nuoc-mam and other fish sauces, fish pastes, tempeh kedele, onjom (made from peanut presscake), bongkreng (made from coconut presscake), tapé,

and idli.

Photos show: (1) A round tray of koji to be used for making soy sauce. (2) A man holding a tray on which are several large pieces of tempeh wrapped in banana leaves. (3) A deep tray filled with fresh, white tempeh, made at the New York State Agricultural Experiment Station. Address: Dep. of Food Science and Technology, New York State Agric. Exp. Station, Geneva, New York.

435. Wang, Hwa L.; Swain, E.W.; Wallen, L.L.; Hesseltine, C.W. 1975. Free fatty acids identified as antitryptic factor in soybeans fermented by *Rhizopus oligosporus*. *J. of Nutrition*

105(10):1351-55. Oct. [16 ref]

• **Summary:** The trypsin inhibitory activity in tempeh comes from free fatty acids. "Oleic, linoleic, and linolenic acids are primarily responsible for the increased trypsin-inhibiting activity of cooked soybeans after fermentation. The free fatty acids are liberated from oil in the soybeans by fungal lipase, and they differ from other reported soybean trypsin inhibitors that are protein in nature." Address: NRRL, Peoria, Illinois.

436. Bates, Cynthia; Bates, Albert. 1975. Re: Making tempeh spores commercially. How to make okara tempe. Design of a community-scale tempe incubator. Letter to William Shurtleff, undated. 2 p. Handwritten.

• **Summary:** "Dear Bill, You must not have received our last letter. I wrote that I felt that we didn't have it together yet to offer tempe spores for sale in Japan right now. We will eventually though, I hope, but we have bitten off a big chunk already. Thank you for your generous offer though. Dr. Hesseltine's recipe is ½ teaspoon per pound (2½ cups) of semi-cooked beans. He sent me a packet of spores once with the directions. He also sent us our original culture and several reprints on tempeh.

"Your recipe for Homemade Tempeh looks fine. Am I correct that the '1 cup dry soybeans, washed and soaked' is 1 cup of dry beans? On second look, I'm sure that's what you meant, seems obvious. I've never cooked tempeh beans in a cooker before—always soaked them overnight. I find using freshly split beans makes it easier to get the hulls off. That's hard to do using whole beans. One way is to get them split by a miller for large quantity. Or do it yourself in a Corona mill. Another way is to soak the beans overnight then run them through a Corona mill on coarse setting so the beans are halved. The hulls come right off and can be poured off. It's important to get the hulls off because the mold can't penetrate the hull so there's a chance that an un-dehulled bean could spoil inside.

"To make okara tempe the okara must be somewhat cooked or the mold won't grow. For example, okara from the milk method on pg. 68 in the *Farm Vegetarian Cookbook* doesn't tempe because it's not cooked enough. Must be cooked in excess water (which it would be in [soy] milk making) about 15-20 minutes at above 195 [°F]. This is a guess because I'm not experienced with more than 3 kinds of okara, but I feel it's pretty close. The okara must be coarse enough to allow free passage of air into the mass."

Note 1. A small illustration shows this with grits and rice. Note 2. The creative use of the word "tempe" as a verb.

"The recipe goes: 2½ cups well pressed okara. 2/3 tablespoon vinegar. 1 tablespoon dried spores (or ½ teaspoon Dr. Hesseltine's spores. His are more concentrated).

"The okara should be so dry you can squeeze a handful hard and not have any milk appear between your fingers except for a drop down between your fingers where they hook onto your hand. Squeezing a handful should leave

your hand dry, not moist. Spread in a layer ½-inch deep in aluminum (not rust) window screen and cover with wax paper, plastic with holes punched in every ¼ to ½ inch.

"We have two incubators, one working and one being set up. The one [working] now is a plywood box with screen trays. Its heated by a turned down dryer heater, and also has a blower for air circulation. Trays are put in so that they are alternately in front or rear of the box so air circulation will be even. [A small illustration shows a side view of the box / incubator, with blower and stagger-stacked trays]. This box works well, but its not a sealed environment, so other microorganisms can get in. Plywood isn't very groovy for a large incubator—too wet and hard to clean. Our new box is a 3 door refrigerator. Shelves are food grade plastic PVC pipe and trays are food grade plastic sheets with 1/8 inch holes drilled every ½ inch.

Three small illustrations show: (1) Incubator tray. (2) Side view of shelves, showing where trays slide in. (3) Top view of inside of incubator showing trays, dehumidifier, furnace pipe, and fan inside.

"Its still in the experimental stages—dehumidifier is being put on. When the mold grows it gives of water—if it gets too wet in the incubator box, the mold won't grow.

"We like tempe a lot in sandwiches with just about anything—fried eggplant, onions, sauerkraut, tartar sauce.

"I talked with Stephen's wife Margaret, the Farm nutritionist, and she doesn't want you to put in the method of making [soy] milk from dry beans as the Farm's method because we don't like it and are changing our process. She would dig it if you would put in the one in the *Farm Vegetarian Cookbook*, page 68. I hope this doesn't inconvenience you too much. I'm really sorry. I should have figured that out in the first place.

"Oh, also we've made tempi on the farm by hanging a plastic 'sausage' in the rafters of our tent above the pipe on the woodstove. Works good, but may take 3 or 4 days depending on how often your stove is run.

Two small illustrations show: (1) Plastic bag made into a tube like a sausage, holes pinched in every 1 to 1½ inches. (2) Tempeh hanging from ridge pole above wood stove in tent.

"We are going to do a tempeh brochure soon. Spores are being tested in a lab for contaminants—will send them as soon as possible.

Wow, all those tofu recipes you sent are really gonna help us out, especially like the tofu mayonnaise. We don't use much oil because the price has gone high, but we really dig sandwich spreads and sauces. We really dig the reverence you feel for your work. We feel feeding folks is a holy duty. As Stephen says, 'The purpose of eating is to maintain that psychedelic experience we call life.'

"Love you, Albert & Cynthia."

Note. The Farm made the first okara tempeh in the Western world. Address: 156 Drakes Lane, Summertown,

Tennessee 38483.

437. Tovar Galvez, Luis Raul. 1975. Productos derivados del frijol soya tecnologías tradicionales en el Lejano Oriente [Traditional technology soy products in the Far East]. In: American Soybean Assoc., ed. 1975. *Memorias: Primera Conferencia Latinoamericana Sobre la Proteína de Soya*. Mexico City. 232 p. See p. 185-93. [14 ref. Spa]

• **Summary:** Descriptions of and flow sheets for the production of the following basic soyfoods are given: Miso, shoyu (*salsa de soya*), natto, tempeh, sufu (fermented tofu), and soy yogurt. A table shows the nutritional composition of each of these foods as well as yuba and kori-tôfu (dried-frozen tofu).

Note 1. This is the earliest Spanish-language document seen (Sept. 2011) that mentions tempeh, which it calls “tempeh.”

Note 2. This is the earliest Spanish-language document seen (Feb. 2004) that uses the term “kori-tôfu” to refer to dried-frozen tofu. Address: Facultad de Química, UNAM, Mexico.

438. Autumn Press, Inc. 1975. *Imagine...* (Ad for The Book of Tofu by Shurtleff and Aoyagi). *Macrobiotic (The) (Chico, California)* No. 111. p. 61. Dec. [1 ref]

• **Summary:** “Imagine... How strange it would seem if in the world’s greatest wheat-producing country most of the people had never tasted bread. Yet no less unusual is the present situation in America, the world’s greatest producer of soybeans, where the majority of people have not yet tasted, seen or even heard of tofu.”

*The Book of Tofu* is 8½ x 11. 336 pages and has over 300 illustrations, \$6.95.

“A family of foods developed over thousands of years in China and Japan, tofu is East Asia’s way of using soy protein to complement a diet low on the food chain. Now available commercially across America in over 10 different forms, tofu can also be made at home—for pennies! Quick-and-easy to use in almost every conceivable type of Western-style preparation ranging from dips to desserts, these time-tested natural foods open new vistas of creative, healthful menu-planning—while offering a revolutionary approach to meeting the world’s critical food requirements.

“*The Book of Tofu* contains: Over 500 recipes culled from East and West. Easy-to-follow instructions for making 7 varieties of tofu (plus soymilk, yuba and tempeh) at home and on a community scale. An illustrated description of the art of making tofu in a traditional Japanese shop. The most detailed glossary of Japanese foods ever compiled in English. And much, much more.”

Note: This is the earliest advertisement seen that mentions tofu. Address: P.O. Box 469, Soquel, California 95073.

439. Shurtleff, William; Aoyagi, Akiko. 1975. *The book of tofu: Food for mankind*. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• **Summary:** This pioneering work started the “tofu revolution” in America. Contents: Preface.

Acknowledgements. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food: Introduction, rich in high quality protein (NPU, biological value, protein score, amino acid content), high protein complementarity (tofu contains an abundance of lysine, an essential amino acid that is deficient in many cereal grains; increase usable protein by combining tofu with wheat, rice, corn, etc.), easy to digest, an ideal diet food, low in saturated fats and free of cholesterol, rich in vitamins and minerals, a health-giving natural food, backbone of the meatless / vegetarian diet, free of chemical toxins, low in cost, easily made at home, quick & easy to use, versatile.

3. Getting started: Introduction, buying and storing tofu, basic ingredients (whole-wheat flour, miso {rice-, barley, and soybean miso, special Japanese miso, Chinese chuang}, oil, brown rice, salt, shoyu {natural shoyu, shoyu, Chinese soy sauce, synthetic or chemical soy sauce}, sugar, vinegar, monosodium glutamate {MSG}), Japanese kitchen tools (each illustrated), preparatory techniques (salt rubbing, rinsing and pressing leeks and onions, soaking burdock root, reconstituting dried sea vegetables {dried hijiki, wakame, agar}, wheat gluten and kaniyô [kanpyo], parboiling, cutting tofu and vegetables, using sesame seeds, toasting nori, preparing a steamer), basic recipes (soup stocks and broths {dashi}, basic shoyu dipping sauces {tsuke-jiru}, miso toppings {sweet simmered miso / *nerimiso*, miso sauté / *abura miso*, special miso toppings and dipping sauces, finger lickin’ miso, and regular miso}, miso salad dressings, nut and seed butter toppings, spreads and dressings, basic sauces, rice, noodles and other basic preparations).

Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History of soybeans and “soybean foods,” cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*, incl. a recipe for “Sweet emerald bean paste {*Jinda*}), kinako (roasted full-fat soy flour, incl. Japanese health food treats such as *kinako amé*, *gokabo*, *kokusen*, *kankanbo*, and *abekawa mochi*), soybean sprouts (*daizu no moyashi*), natto (“sticky fermented whole soybeans,” with “gossamer threads”), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable

protein {TVP}, soy oil products). 5. Gô (a thick white puree of well-soaked uncooked soybeans). 6. Okara or Uohana. 7. Curds and whey. 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding, homemade tofu, tofu quick and easy {incl. Chilled tofu–Hiya-yakko}, tofu dressings, spreads, dips and hors d'oeuvre {incl. Tofu mayonnaise dressing, Tofu tartare sauce, Tofu cream cheese, Tofu sour cream, Tofu cottage cheese, Tofu guacamole}, tofu in salads {Western style and Japanese style salads incl. Shira-ae}, tofu with sandwiches and toast, tofu in soups {Western style and Japanese style soups, incl. miso soup}, tofu in sauces, tofu in breakfast egg dishes, tofu baked, tofu sautéed, stir-fried or topped with sauces {incl. Mabo-dofu [Ma Po doufu]}, deep-fried tofu, tofu with grains, tofu broiled {incl. Tofu dengaku}, tofu simmered in one-pot cookery and seasoned broths, tofu steamed, tofu desserts).

9. Deep-fried tofu: Thick agé or nama agé or atsu agé, ganmo or ganmodoki (incl. *hiryoze* / *hirosu*), agé or aburagé (incl. “Smoked tofu,” p. 197). 10. Soymilk. 11. Kinugoshi (“*Kinu* means ‘silk’; *kosu* means ‘to strain’; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk.” It is made from concentrated soymilk). 12. Grilled tofu (incl. *sukiyaki*). 13. Frozen and dried-frozen tofu. 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha’s chicken, Buddha’s ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}; see p. 258 for illustrations of many meat alternatives, incl. Buddha’s fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig’s head, and molded ham). One type of Korean soybean miso is called *kotsu jang* [sic, *kochu jang*]. When tofu is served with miso [Korean-style, *Tenjang*] as the dominant seasoning, and with rice, “it becomes the popular *Tenjang Chige Pekpem*” (p. 262). 16. Special tofu.

Note: This is the earliest (and only) English-language document seen (March 2009) that uses the word “*Tenjang*” to refer to Korean-style soybean jang (miso).

Part III–Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way.

Appendices: A. Tofu restaurants in Japan; many are vegetarian: In Tokyo: Sasa-no-yuki / Sasanoyuki, Goemon, Hisago, Sanko-in, Shinoda-zushi, Dengaku (south of Tokyo in Kamakura). In Kyoto: Nakamura-ro, Okutan, Takocho, Izusen, Junsei, Nishiki, Hakuun-an, Rengetsu, Sagano, Sorin-an. Tea ceremony cuisine (*Kaiseki ryori*), Zen temple cookery or Buddhist vegetarian cookery (*Shojin ryori*), Tea ceremony cookery from China (*Fucha ryori*), Wild gathered cookery (*Sansai ryori*). A directory of these and others, with addresses and phone numbers, is given (p. 312).

B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe, and 3-7 in Latin America {Mexico City, Rio de Janeiro and Sao Paulo, Brazil}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for “Mock tuna salad with deep fried tofu.”

Note 1. This is the earliest English-language document seen (March 2007) that uses the term “Tofu ice cream” to refer to soy ice cream or that contains a recipe for “Tofu ice cream.”

Note 2. This is the earliest English-language document seen (March 2000) that uses the term “Tofu Cheesecake” and the first to give a recipe for a tofu cheesecake.

Note 3. This is the earliest English-language document seen (May 2000) that uses the term “Tofu Sour Cream” (p. 109) or that contains a recipe for “Tofu Sour Cream.”

Note 4. This is the earliest English-language document seen (Dec. 2003) that uses the term “tofu milkshake” or that gives a recipe for a shake made with tofu.

Note 5. This is the earliest English-language document seen (Feb. 2004) that uses the word “stringy” to refer to natto.

Note 6. This is the earliest English-language document seen (Feb. 2004) that uses the term “dried-frozen tofu.”

Note 7. This is the earliest English-language document seen (March 2004) that describes preparatory techniques for tofu (p. 96-98).

Note 8. This is also the earliest English-language document seen (March 2004) that contains the term “smoked tofu.”

Note 9. This is also the earliest English-language document seen (March 2004) that uses the term “kinugoshi tofu” to refer to silken tofu.

Note 10. As of March 2007, the various English-

language editions of this book have sold more than 616,000 copies.

Note 11. This is the earliest English-language document seen (June 2011) that uses the term “tofu lees” to refer to okara (see p. 22, 77).

Note 12. This is the earliest English-language document seen (Aug. 2011) that contains the term “Modern Western soybean foods” (see p. 69), a term that Shurtleff would soon (by 1983) replace by the more accurate “Modern soy protein products.” Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

440. Shurtleff, William; Aoyagi, Akiko. 1975. Tempeh (fermented soybean cakes) (Document part). In: W. Shurtleff and A. Aoyagi. 1975. *The Book of Tofu*. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. See p. 68-69.

• **Summary:** “These cakes of cooked soybeans, bound together by a fragrant, white mycelium of *Rhizopus* mold, have a delectable flavor: fried or deep-fried, they taste remarkably like fried chicken or veal cutlets. Rich in protein (18.3% fresh or 48.7% dried), tempeh is also highly digestible, and *Rhizopus* serves as an effective deactivator of trypsin inhibitor (p. 70). Like other fermented soy products (miso, shoyu, natto) and sea vegetables, tempeh is one of only a few non-meat sources of vitamin B12.

“For centuries prepared daily on a cottage scale throughout Indonesia (where it is a basic food for millions of people and makes use of more than 50 percent of the country’s soybean crop), tempeh is also an important staple in New Guinea and Surinam, and is eaten on a small scale in Malaysia and Holland. Its adaptability to household industries and its low cost should make it, like tofu, a food of worldwide commercial interest during the coming decades.

“Tempeh can be prepared without difficulty in any Western kitchen using either whole soybeans, okara (p. 81), or cooked grains (wheat, rice, barley, or rye) fermented alone or mixed with soybeans. In Indonesia, ½ cup portions of partially cooked, inoculated soybeans are wrapped in banana leaves, tied, and fermented. For larger scale preparation, use (stainless steel) trays with 1/8-inch holes every 2 inches throughout the top and bottom, or similarly-perforated, sausage-shaped plastic bags 1½ inches in diameter. Be sure that all containers are well washed since even small amounts of oil or salt hinder mold growth.

“The starter is available from the U.S. Department of Agriculture, Northern Regional Research Lab., 1815 N. University Ave., Peoria, Illinois 61604. The Farm (p. 316) is now making up a brochure on tempeh preparation which will soon be available with the starter.

“To prepare new starter, carefully scrape darkened (sporulated) mycelium from the surface of freshly fermented cakes or from the wrapper or tray in which tempeh was fermented. Mix with 1 teaspoon (sterile) water and use in place of commercial starter.

“Homemade Tempeh: Makes 6 cakes.

“1 cup soybeans, washed and soaked for 18 hours in a mixture of 1 quart water and 1 teaspoon vinegar or lactic acid.

“½ teaspoon tempeh starter (*Rhizopus oligosporus* mold spores).

“Squeeze beans firmly and repeatedly with one hand in soaking water to remove all seed coats, then carefully pour off water and coats. Refill soaking container with water and repeat until all coats are removed. Combine drained beans and 4 cups water in a pot, bring to a boil, and simmer for 60 minutes. Drain beans, rinse 4 to 5 times under water, then drain well. Allow to cool to body temperature, then mix in starter. Divide inoculated beans into 6 equal portions, placing each at the center of a 7 by 9 inch piece of aluminum foil.

“Fold over sides, then ends of foil, sealing tightly, to form a 4- by 3- by ½-inch thick ‘package.’ Place packages in a warm clean place or incubator and allow to stand for 24 hours at 88° (or as long as 30 hours at 78°), or until beans are bound together into a cake by a fragrant white mycelium. For best flavor, serve these fresh tempeh cakes as soon as possible, cooked in any of the following ways:

“Deep-fried or Fried: Deep-fry cakes (or pan-fry on both sides) until crisp and golden brown. Serve topped with shoyu, ketchup, Worcestershire, or any of the following Basic Sauces (pp. 48 to 49): Onion, Mushroom, Sweet & Sour, Ketchup-Worcestershire, or Tomato & Cheese. Also delicious in sandwiches and soups.

“Tempeh Goreng (Savory Cutlets): Score both surfaces of 3 fresh tempeh cakes to a depth of 1/8 inch. Combine 3 tablespoons water, ½ teaspoon salt, ½ clove of crushed garlic, and ¼ teaspoon coriander. Add tempeh, marinate for 5 minutes, and drain well. Deep-fry in (coconut) oil (p. 130). Serve as an accompaniment for rice dishes, topped with red-pepper sauce (*sambal*) if desired.

“Tempeh Kemul (Crisp Chips): Cut 3 tempeh cakes horizontally into paper-thin slices; sun-dry for 5 minutes if desired. Combine 6 tablespoons (rice) flour, 1 clove of crushed garlic, ½ teaspoon salt, and ¼ teaspoon coriander. Mix in enough (coconut) milk to form a fairly thin batter, then add tempeh slices and allow to stand briefly. Deep-fry until crisp, and serve like potato chips. For variety use a well-salted tempura batter.

“Tempeh Bacham [Bachem] (Rich Fillets): Combine in a skillet ¼ grated onion, ½ teaspoon salt, 3 to 4 tablespoons brown sugar, and 1½ cups water. Add 3 tempeh cakes (cut crosswise into fourths), bring to a boil, and simmer until all liquid has evaporated. Deep-fry cakes and serve as for Tempeh Goreng.

“Tempeh Kering (Fiery Sauté): Cut 3 tempeh cakes into paper-thin ½-inch squares; sun-dry for 1 to 2 hours if desired. Deep-fry and drain well. Sauté ½ clove of crushed garlic and ½ minced onion in 3 tablespoons oil for 5 minutes. Add 2 tablespoons each brown sugar and water, 1 to 2

minced red peppers, ½ teaspoon salt, and spices (*salam*, *laos*, *asam*) to taste: sauté for 2 minutes more. Add tempeh slices and sauté for 4 more minutes. Scoop out tempeh with a slotted spoon or spatula, drain briefly over wok or skillet, and serve as a topping for cooked rice.

“In Soups: Add diced fresh tempeh to soups and simmer for 30 minutes. Season with salt, miso, or shoyu.

“Baked or Roasted: Bake at 350° for about 20 minutes, or until nicely browned and fragrant. If desired, use as the basis for a pizza-type preparation, or serve topped with any of the sauces mentioned above.”

Illustrations show: (1) Small round and square cakes of tempeh. (2) How to fold inoculated, cooked soybeans a small packet when making Indonesian-style homemade tempeh.

Note 1. This is the earliest published document seen (Oct. 2011) that describes how to make tempeh at home. The process was learned from an Indonesian couple, Mr. and Mrs. Mustam, in Tokyo, Japan, in March 1975.

Note 2. On 1 Sept. 1975 Shurtleff (in Tokyo) sent a copy of this entire section on “Tempeh” (typeset galley proofs) to Cynthia Bates at The Farm (Summertown, Tennessee) and requested her comments.

Address: Lafayette, California.

441. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind (Illustrations—line drawings). Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• **Summary:** Continued: Illustrations (line drawings, both numbered and unnumbered) show: A hearth in a traditional Japanese farmhouse with tofu dengaku roasting around a bed of coals in a sunken open-hearth fireplace. An old Japanese plum tree blossoming in winter. Three pieces of skewered tofu dengaku with a sansho leaf atop each in a special serving box. A sprig of sansho with berries. Stylized top of a soybean plant in a circle. Fig. (4) Tofu products available in the West (tofu, dofu, kinugoshi, thick agé triangles, cubes, and cake, agé and age puffs, hollow agé cubes, soymilk, tofu pudding, doufu-ru {white and red}, ganmo {patties, small

balls, and treasure balls}, grilled tofu, dried-frozen tofu, instant powdered tofu, okara, dried yuba, soymilk curds, pressed tofu, savory tofu). A wooden cutting board and Japanese broad-bladed vegetable knife (*nagiri-bôcho*) with vegetables and tofu on a woven bamboo tray. (8) A wooden keg of red miso and a plastic bag of barley miso. (9) Shoyu in a metal can, wooden keg, glass bottle, and table-top dispenser. Traditional Japanese kitchen tools: *Miso-koshi* (woven bamboo strainer used in making miso soup). cutting board, Japanese vegetable knife, wooden spatula, bamboo rice paddle (*shamoji*) and spoon, woven bamboo colander or tray (*zaru*), *suribachi*, Japanese grater (*oroshi-gané*), *sudare* (bamboo mat), pressing sack for tofu or soymilk, serrated tofu-slicing knife, *tawashi* scrub-brush (made of natural palm fiber), wok with draining rack and wooden lid, stir-frying ladle and spatula, long cooking-chopsticks, mesh skimmer, deep-frying thermometer, Chinese bamboo steamer (*seiro*), charcoal brazier (*konro*, *shichirin*), broiling screen. Covered pot steamer. Small lidded pottery pot. More kitchen tools (p. 50-51). (10) A soybean measuring box (*ishshô-bako*). (11) The soybean plant. Two views of a soybean seed with seed coat, hilum, and hypocotyl labeled. A bag full of soybean. Roasted soybeans in a woven bamboo tray (*zaru*). Edamamé in the pods. Three shapes of kinako treats. Soybean sprouts. Natto on a bamboo mat (*sudare*). Natto wrapped in rice straw as it ferments. A hand holding chopsticks that lift natto up from a bowl of natto—connected by gossamer threads. Tempeh (round and square pieces). Wrapping a small packet of inoculated soybeans to make tempeh. (15) Two Japanese women in traditional clothing using hand-turned grinding stones (quern) to grind soaked soybeans when making tofu. (16) Push-pull grinding stones. (17) Motor-driven grinding stones. (18) Water-powered millstones. (19) Wind-powered millstones. (20) Unohana. (21) A tofu maker sitting on a traditional lever press that presses soymilk from the okara in a pressing sack on a rack. A heavy iron skillet. (22) Folding okara omelet pouches. Okara doughnuts. (23) A bamboo colander. (24) A tofu maker weighting a colander with a brick so that whey will collect in it. (25) Ladling whey from curds; it foams! (27) A horse drinking whey from a wooden vat. Soymilk curds in a bamboo mat. (28) Ladling curds for Awayuki. (29) Fresh tofu in a plastic tub. (30) A tofu maker placing a weight on pressing lids as tofu is pressed in settling boxes (forming boxes). Transferring tofu-filled settling box to sing. Cutting a block of tofu into cakes under water. Eggplant halves in a yin-yang dance. Preparatory techniques used with tofu (slanting press, sliced tofu, squeezing, scrambling, reshaping, crumbling). (32) Utensils for making tofu at home. (33) Three designs for a homemade settling container. (34) Preparing homemade tofu (a-l). (35) Removing tofu from a farmhouse-style settling container (forming box). (36) Chilled tofu. Iceberg chilled tofu. A hot, moist, white towlette (*o-shibori*) is used to wipe the face and hands before (or occasionally after) a meal. Tofu salads

in three Japanese pottery dishes. Japanese soups in three types of containers. (37) Chrysanthemum tofu. (38) Tofu poached egg. Tofu-stuffed green peppers. A wok. (39) Filling a wok with oil. (40) testing oil temperature in a wok. (41) Deep-frying tofu tempura—and (42) Serving it in a shallow bamboo basket. (43) Making *Kaki-agé*. (44) Dengaku Hoshi (from *Tofu Hyaku Chin*). (45) Skewered Tofu dengaku. Preparing Tofu dengaku in old Japan (from Hokusai's sketchbooks). (46) A variety of skewers. (47) Chinese firepots. (48) A Simmering Tofu wooden serving container heated by coals from within. (49) Miso oden. (50) Tofu wrapped in rice straw. (51) Nanzenji wrapped tofu. (52) Gisei-dofu. (53) Serving freshly deep-fried agé. (54) The deep-frying area of a traditional tofu shop. (55) Deep-frying tools. (56) Wooden bamboo tray with raised sides. Chinese cleaver. (57) Nori-wrapped sushi with agé (making and serving; six drawings). Eating noodles from old Japan (from Hokusai's sketchbook). (58) Preparing homemade noodles. (59) The Oden man on a winter's eve. A potter bowl of Oden. Kombu rolls. (60) Making konnyaku twists. (61) Nishime in a multi-layered lacquerware box. (61) Pressing tofu for thick agé in a tofu shop. (62) Deep-frying tofu for thick agé. (63) A tofu maker with deep-fried thick agé triangles on screen trays. (64) Stuffing thick agé. (65) Thick agé stuffed with onions. (66) Pressing tofu for ganmo. (67) Adding seeds and vegetables. (68) Deep-frying ganmo. (69) A farmhouse open-hearth fireplace with nabe kettle. (70) Preparing homemade ganmo. Ganmo balls in a draining tray. Ganmo cheeseburger. (71) Cutting tofu to make agé slices (*kiji*). (72) Deep frying agé. (73) Opening agé into pouches. Agé treasure pouches. (74) Agé pouches sealed with foodpicks. Inari shrine with Shinto torii. (75) Kampyo-tied pouches [kanpyo]. (76) Making rolled agé hors d'oeuvre. (77) Tofu maker ladling gô (fresh soy puree) into a cauldron. (78) Stirring down the gô. Pressing soymilk from okara with a hand-turned screw press. (79) Serving fresh soymilk in a tofu shop. Six Japanese commercial soymilk products. Little girl at The Farm (Summertown, Tennessee) seated on a small chair drinking a cup of soymilk. Chinese breakfast soymilk soup with deep-fried crullers (*Siento-chiang with yu-chiao tsao pi*). (80) Takigawa-dofu. (81) Tofu maker pouring the soymilk for kinugoshi tofu. (82) Adding solidifier. (83) Trimming kinugoshi from sides of box. (84) Modern lactone kinugoshi (with GDL). (85) Modern kinugoshi factory. (86) Sasa-no-Yuki's Gisei-dofu container. (87) Kinugoshi with ankake sauce. The entrance way to a traditional Japanese restaurant featuring tofu. Traditional metal skewer for making grilled tofu. (88) Traditional tofu maker grilling tofu over a charcoal brazier (*hibachi*). Grilling tofu in a traditional open hearth. (89) An early method of elaborate grilling. Pieces of tofu on different types of skewers. Farmhouse sukiyaki with grilled tofu. (90) Tying frozen tofu with rice straw. (91) Drying farmhouse frozen tofu. (92) Pressing frozen tofu at home. (93) Deep-fried frozen tofu with cheese. (94) Making deep-

fried frozen tofu sandwiches (*Hakata-agé*). (95) Frozen tofu wrapped in kombu. (96) Steaming table in a yuba shop. Ten different types / shapes of yuba. (97) Lifting yuba away from soymilk. (98) Yuba sashimi. (99) Yuba envelopes. (100) Deep-fried yuba dengaku. (101) Folding yuba into bundles. Trimming half-dried yuba from a skewer. (102-113) Tofu and yuba in Taiwan, China, and Korea (see separate record). Sesame tofu in pottery bowl. (114) Traditional farmhouse tofu, tied into a package with rice straw rope. (115) Shirakawa-go farmhouses with water-powered rise-husker in foreground. (116) Making seawater tofu at Suwanose. Mortar and pestle for pounding mochi. Making community tofu: Western metal hand mill, hand-turned stone mill apparatus, faces of upper and lower stones, colander and cloth, two shapes of cooking pots, Japanese farmhouse earthen cooking stove, cooking pot set on cut-off oil drum, ladle, two wooden paddles, pressing rack, pressing okara, lever press, pressing sack, wooden settling [forming] container with cloths. (117) Making nigari with salt in bamboo colander, a traditional "salt boat" for refining salt of nigari. (119) Country farmhouse tofu (5 illust.). (121) Morning shopping at a tofu shop. (122) Diagram of a tofu-shop floor plan. (123) Modern pressure with hydraulic press. (124) Modern centrifuge with 3 soymilk barrels. Thirty-one unnumbered illustrations showing every step in making and selling tofu in a traditional Japanese shop (p. 299-306). (125) Cutting tofu for Dengaku (from *Tofu Hyaku Chin*). (126) Ladies busy making dengaku (from *Tofu Hyaku Chin*). (127) Hearth at Nakamura-ro. (128) The garden at Okutan. Six types of Japanese sea vegetables: Hijiki, aonori, wakame, agar, nori, kombu. (129) Japanese vegetables (27 illustrations). Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

**• Summary:** Note: *Trichoderma* is a mold, now also called the “compost fungus” and used in composting (especially in the Philippines) to accelerate the breakdown of the substrate into soil.

446. **Product Name:** Tempeh (Soya Beans Cake).

**Manufacturer's Name:** Bali Foods.

**Manufacturer's Address:** 4219 Alderson Ave., Unit B, Baldwin Park (Los Angeles area), CA 91706. Phone: 213-338-7178.

**Date of Introduction:** 1975.

**Ingredients:** Soya beans, water, yeast.

**Wt/Vol., Packaging, Price:** 11 oz.

**How Stored:** Frozen.

**New Product–Documentation:** Shurtleff and Aoyagi visited this fairly modern tempeh factory in Jan. 1977. They met Mr. Henoch Khoe and included the company in a list of tempeh shops in North America in the 1977 edition of “What is Tempeh?”

Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 148. Owner: Mr. Henoch Khoe. Rose Dosti. 1980. Los Angeles Times. July 31. Part VII. p. 1. Part VIII. p. 16, 18. Janto M. Khoe is the Filipino owner of Bali Foods (4219-B Alderson Ave., Baldwin Park, California). It took him 4 years to develop a method which produces the firm tempeh that Indonesians prize. A photo shows Khoe and his wife. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Mr. Henoch Khoe. Tempo. 1981. June 13. p. 50. Shows label. Shurtleff & Aoyagi. 1985. *History of Tempeh*. p. 39. America's 2nd earliest tempeh shop.

450. Circle, S.J.; Smith, A.K. 1975. Soybeans: processing and products. In: N.W. Pirie, ed. 1975. *Food Protein Sources*. Cambridge, London, New York, Melbourne: Cambridge University Press. xx + 260 p. See p. 47-64. [88 ref]

**• Summary:** Contents: Introduction. Agronomy: Varieties, cultivation, yields. Soybean composition. Protein nutritional value. Traditional processing into nonfermented foods: Soybeans as a table vegetable (green soybeans), soy milk, tofu (soybean curd), yuba, kinako, salted soybeans, soybean sprouts. Traditional processing into fermented foods: Miso and shoyu, tempeh. Others include: natto, hamanatto, sufu (soy cheese), tao-tjo, kochu chang, ketjap, ontjom, and yogurt-like products.

Contemporary processing without defatting: ‘Debittering’ by aqueous treatment, whole bean processing, full-fat flour, soy milk and curd. Contemporary defatting processes: Defatting by aqueous processing, defatting with organic solvents, composite flour, soy flours, protein concentrates, protein isolates and textured soy products (recipes for using soy protein products in foods are available from several publications). Address: Anderson Clayton Foods, W.L. Clayton Research Center, 3333 Central Expressway, Richardson, Texas 75080.

• **Summary:** This excellent book for children discusses beans in legend and history, how to grow them, and their future as a low-cost protein supplement. Includes experiments, bean recipes, and games.

Contents: Beans. The story of beans. The history of beans. Beans in legend and lore. The life story of the bean. Kinds of beans. Beans in the garden and the marketplace. Beans for the future. Fun with beans. Beans for good eating.

Page 2: “Kuan Yu, a great war god in Chinese folktales, was a bean curd [tofu] seller in his youth.”

Pages 12-13, a brief (and partially accurate) history of the soybean, begin: “Soybeans are native to eastern Asia. The oldest written records of them date back to 2838 B.C. [sic], when Emperor Shen Nung of China wrote a description of the plant.” Also mentions: The five sacred grains, soybean “milk,” tofu, yuba, [soy] sauces, soybean paste, soybean sprouts, soybean oil, Engelbert Kaempfer, first introduced “to the United States around 1800 when a ship brought some to Philadelphia [Pennsylvania], Commodore Perry (1854), USDA tested about 10,000 different kinds. Now soybeans are the number one U.S. cash crop, accounting for more than 75% of the world’s soybean supply. Soybeans are used as foods for humans (in the form of oil, flour, soy sauce, “milk substitutes, and meat substitutes and ‘extenders’”) and feeds for animals. They are also used in the manufacture of more than 250 industrial products, including paints, soaps, lubricants, adhesives, and fertilizer.

Page 16: “In China, beans were a good luck symbol. A person who wore a string of soybeans hidden around his neck was believed to possess magic powers to do amazing feats. Three dark soybeans soaked in sesame oil for three days were used to foretell the future.”

The chapter “The life story of the bean” (p. 18-29) gives (with illustrations) a simple and accurate description of the bean seed and how it grows, discussing the hilum or seed scar, the micropyle or tiny hole at one end of the hilum, the seed coat, the two cotyledons in which food for the young growing plant are stored, the embryo nestled (a plant in miniature) between the cotyledons, with its two tiny leaves (the plumule), a little root (the radicle), and a stemlike part connecting them (the hypocotyl). When the seed is planted, and it germinates or sprouts, the “embryo root pokes its tip out through the micropyle and grows out into the soil. Tiny root hairs form along the growing root. They take in moisture and dissolved minerals from the soil.” The hypocotyl grows until it “suddenly pushes up out of the soil—the first part of the seedling to emerge. It is bent over, for the cotyledons are still buried in the soil.” The hypocotyl continues to grow. In a day or so the seed coat splits, then the top of the plant pops up out of the soil. “The empty seed coat is left behind, buried beneath the surface.” Now the young bean seedling is growing straight up. The two seed leaves at the top unfold and grow quickly. Below them on the stem are the two cotyledons. As sun shines on the growing plant, its leaves, cotyledons, and stem begin to turn green—a turning point in the life of the plant.

For a while, the growing plant takes the food it needs from the reserves stored in the two cotyledons. But as these reserves are used up, they shrivel and finally fall off. Now the young plant must create its own food using chlorophyll and photosynthesis.

Chlorophyll traps energy from the sun. When examined under a magnifying glass, one can see that the surface of a plant leaf contains many tiny openings called stomates, which are usually open during the day and closed at night. “When the stomates are open, gases from the air pass freely in and out.” Air is about 80% nitrogen, 20% oxygen, plus smaller amounts of carbon dioxide, water vapors, and others gases. In the leaves, “carbon dioxide and water are combined, using the sunlight energy trapped by chlorophyll, into sugar, starches, and other complicated chemicals. Scientists call this process photosynthesis (photo means light, and synthesis means a putting together).” The by-product, oxygen, passes out into the air through the stomates; it is the gas that humans and other mammals need to breathe.

Describes the underground activities related to plant growth, nodules, bacteria that live symbiotically in the roots and fix ammonia and nitrogen. Also describes the bean flower, its parts, self-pollination, the key role of bees, and how the seeds are formed from the flower.

The chapter “The soybean—Number one” (p. 36-39) describes the current status of the soybean in the USA. The chapter “Beans for the future” discusses modern developments such as CSM, soyfoods such as sufu, tempeh, miso, spun soy protein fibers, soybean meat analogs, textured vegetable protein (TVP).

When a bean seed sprouts, how does it know which way is “up”? “Could you ever get a seedling with its roots pointing up in the air and its shoot poking down into the soil?” Supposing you cut off all sunlight? No, plants have a built-in gravity sense which scientists call “geotropism.” A plant hormone called an auxin causes the plant to bend upward—and toward the light (heliotropism). In 1888, the symbiotic partnership between legumes and nitrogen fixing bacteria was first discovered by Hellriegel and Wilfarth. There are short-day plants, long-day plants, and day-neutral plants; flowering will not begin until the length of days and nights is just right (p. 54-59). Bean recipes (p. 70-75). Address: 1. Prof. of Biology, Staten Island Community College, New York City; 2. Translator of Russian scientific materials.

456. Sudargo, Lestari D. 1975. Penelitian waktu pembusukan pada tempe kedelai dan tempe gembus [Research on putrefaction time of soy tempeh and okara tempeh]. Thesis (Skripsi), Akademi Gizi, Jakarta. 33 p. [Ind]\*  
Address: Jakarta, Indonesia.

457. Sudarmadji, Slamet. 1975. Certain chemical and nutritional aspects of soybean tempe. PhD thesis, Dep. of Food Science, Michigan State University. ix + 151 leaves. Page 4371 in volume 36/09-B of Dissertation Abstracts International. Illust. 29 cm.

• **Summary:** Discusses: Changes in fatty acid content and profile of tempeh during fermentation. Total free fatty acids produced by tempeh during 100 hours of fermentation (The most rapid production occurs during the first 28 hours). Total bacterial count in tempeh during fermentation (This increases most rapidly during the first 18 hours). The temperature of tempeh at ambient temperatures of 25°C and 32°C. (At 32°C the temperature in the tempeh rises rapidly from the 15th hour until the 27th hour, reaching a peak of about 43.5°C). Rats fed fried soy tempeh gained weight more slowly than rats fed cooked and fried unfermented whole soybeans.

Note: Slamet Sudarmadji was born in 1941. Address: Michigan State Univ.

458. Thio, Goan Loo. 1975. Small-scale and home processing of soya beans with applications and recipes. *Royal Tropical Institute (Amsterdam), Dept. of Agric. Research. Communication No. 64.* vii + 51 p. Illust. Third ed., revised and enlarged. 1978. No. 64a. 59 p. 24 cm. [26 ref]

• **Summary:** Contents: 1. Introduction: History, botany, cultivation, pests and diseases, harvesting, yield and storage. 2. Chemical composition. 3. Nutritive value: Supplementation, trypsin inhibitor, hemagglutinins. 4. Small-scale and home processing methods: Soya milk, yogurt of soya milk, tofu (Soya bean curd), soya-bean sprouts, soya steak (Tempeh). 5. Applications of soya beans and soya-bean

products: Fried soya beans, cooked, young whole soy beans [green vegetable soybeans], flavoured soya milk, fried tofu, fried soya steak, dried sliced tofu (tofu crisp/crisps), soya flour (including soya-milk-residue flour [ground okara]). 6. Recipes based on soya bean products: soups with soya bean products, flavoured soya milk, soya yogurt with fruits, tofu bread/cake, tofu dishes, modified Zambian recipes, recipes with soya flour, soya shashlick (tofu kebab), and soya [tofu] spring roll. 7. Discussion. References. Note: Tofu = Tofu.

Note: This is the earliest English-language document seen (Feb. 2000) that uses the term “soya-bean sprouts” to refer to these sprouts. Address: Dep. of Agricultural Research, Royal Tropical Inst., Amsterdam.

459. Wolf, W.J.; Cowan, J.C. 1975. Soybeans as a food source. Revised ed. Cleveland, Ohio: CRC Press. 101 p. Illust. Index. 26 cm. CRC Monotopic Series. [416 ref]

• **Summary:** Contents: Introduction. Seed structure and composition. Soybean production: Early history, areas of production, production, importance of varieties. Disposal of the crop: Grading standards, disposition. Processing soybeans into oil and meal: Storage, preparation of beans, extraction, desolventizing, degummed oil and lecithin separation. Conversion to edible oil products: Alkali refining, bleaching, hydrogenation, deodorization. Soybean oil products: Salad and cooking oils, shortening and margarine oils, flavor stability of soybean oil, soybean lecithin—products and use. Food uses of soybean proteins: Physical and chemical properties (solubility as function of pH, molecular size, reactions of the 7S and 11S globulins, solubility of isolates, denaturation, amino acid composition), forms of soy proteins (whole soybeans, processed soybean protein products), selling prices and production estimates, functional properties (emulsification, fat absorption, water absorption, texture, dough formation, adhesion, cohesion, and elasticity, film formation, color control, aeration), nutritional properties (antinutritional properties, protein quality of soybean products), foods containing soy proteins (Oriental foods [tofu, kori-tofu, miso, natto, shoyu, tempeh], domestic foods [baked goods, meat products, simulated meats, breakfast cereals, infant foods, beverages, dietary foods, snack foods, miscellaneous uses]), problem areas. Conclusions.

Addendum. Introduction: Origin of soybeans, soybean situation—future, recent sources of information, soybean organizations. Production: Short-term situation, storage and exports, soybean varieties, yield barrier, varieties and antinutritional factors, aflatoxin in soybeans. Edible oil products: Deodorization, an antioxidant for soybean oil, flavor stability of soybean oil, oil from field-damaged beans, flavor components in soybean oil. Conversion to edible protein products: Production and producers, new processes (full-fat products, defatted flakes and related products, concentrates, isolates, textured protein products). Properties of soy proteins: Functional properties (solubility, water

absorption and swelling, viscosity, emulsification, film formation, texture), nutritional and physiological properties (trypsin inhibitors, soybean proteins in blended foods, nutritional value of textured soybean proteins, soybean proteins in infant formulas, effect of alkali treatment on soy protein), flavor studies on soy proteins (organoleptic evaluation of commercial protein products, origin of flavor compounds). Food uses of soybean proteins: Baked goods, meat products and analogs, instant breakfast items, snack foods, legal and regulatory aspects. References.

An excellent source of information on soy flour and modern soy protein products, this book contains a surprisingly small amount of information (about 1 page total) about traditional soyfoods such as tofu, miso, natto, shoyu, tempeh, etc. even though a number of the latter foods are much more widely used worldwide. Soy beverage (soymilk) is not even mentioned. The extensive bibliography would be greatly improved by the inclusion of the titles of the articles.

Table 26, titled "Selling prices and production estimates (in 1970) for soybean proteins" (p. 42) states: Defatted flour and grits sell for 7-8 cents/lb ex factory and estimated annual production in 1970 was 232-237 million lb. Soy concentrates (18-26 cents/pound, 20-35 million lb). Soy isolates (35-45 cents/pound, 25-50 million lb). Address: 1. Research Leader, Meal Products, Oilseed Crops Lab., USDA NRRL, Peoria, Illinois; 2. Adjunct Prof. of Chemistry, Bradley Univ., Peoria, Illinois 61606 (Formerly Chief, Oilseed Crops Lab., NRRL, Peoria).

460. Lyon, Alexander. 1975? Tempeh instructions. Summertown, Tennessee: The Farm. 3 p. Undated. Unpublished manuscript.

• **Summary:** Begins with a basic introduction to tempeh, "a traditional Indonesian food made from soybeans."

"Making good tempeh is like making good yogurt. You are working with a living creature in both cases. You must pay attention and take good care of your cultures; it's like gardening, except the plants are microscopic in size. The cultures need the right conditions to grow well, and must be kept free of bacteria and other molds... they are the microscopic weeds.

"We will send you some spores to start your culture. They are a dry, grey powder that looks like cement. Once your culture is alive and growing you can propagate it by saving a good healthy piece from each batch to use as starter for the next day. If you want to stop making tempeh for awhile, but don't want to lose your culture, just freeze the starter. Thaw it and use it when you're ready to go again. If you do lose your culture or if it becomes too contaminated to use, write us for more spores.

"You can make tempeh from soybeans alone, bean and grain combinations, and from soy pulp (the residue left over from making soymilk). We also print a free soybean recipe booklet, which has other soybean recipes, including our

soymilk recipe.

Then describes how to make tempeh on a home scale from soybeans, from cracked grains (wheat and rice work best), from grain-bean combinations (try using about 1 part grain to 1 part beans) and from soy pulp [okara]. You must squeeze the soy pulp "as dry as possible to be sure it is loose and fluffy in the package so the mold can breathe. Add 1 teaspoon vinegar to each quart of soy pulp when inoculating to prevent bacterial spoilage (you can do this with other kinds of tempeh to if you have a spoilage problem). Making tempeh from soy pulp is an excellent way to turn it into something that tastes good. The soy pulp has a fair amount of good quality protein and should not be wasted.

"The best way to cook tempeh is to slice it fairly thin, dip each piece in salty water, and lightly fry in a hot pan barely coated with oil. It has a rich meaty flavor. Different people have said it tastes like bacon, pork chops, fish, chicken, and liver!... It is a good vegetarian way to add meaty tastes to your diet... We made delicious vegetarian pizza at our Wisconsin Farm by layering tomato sauce, chopped onions, good tasting nutritional yeast gravy, and topping with sliced tempeh. It tasted like pepperoni. Let us know if you come up with any winners."

Note 1. The date this document appeared was estimated by Alexander Lyon (many years later) as late 1975 or early 1976.

Note 2. This is the 2nd earliest document seen (Oct. 2011) that describes how to make tempeh at home.

Note 3. This is the earliest document seen (Sept. 2011) that lists The Farm as a source of tempeh starter.

Note 4. The Farm made the first okara tempeh in the Western world. Address: Summertown, Tennessee.

461. Autumn Press, Inc. 1976. Imagine... (Ad for The Book of Tofu by Shurtleff and Aoyagi). *Mother Earth News* No. 37. Jan. p. 153. [1 ref]

• **Summary:** This exact same ad first appeared in Dec. 1975 in *Macrobiotic (The)* (Chico, California), No. 111. p. 61. Address: P.O. Box 469, Soquel, California 95073.

462. *Cereal Foods World*. 1976. Simulating meat: A new process has been developed for preparing simulated meat, fish and dairy products. 21(1):31-32. Jan. [1 ref]

• **Summary:** This is a summary of an article in *Soybean Digest* (Dec. 1975) about James Liggett of Foundation Foods Inc. and his work with tempeh. The article is technically in *Cereal Industry Newsletter* 6(1):1-2. Jan. 1976—inside *Cereal Foods World*.

463. Ho, Coy Choke; Koh, Chong Lek. 1976. Microbiology of soybean-based fermented food in South-East Asia. Paper presented at the Third INTSOY Regional Soybean Conference. 7 p. Held 23-27 Feb. 1976 at Chiang Mai, Thailand. Unpublished manuscript. [17 ref]

• **Summary:** The relatively well-studied soy-based fermented foods in South-east Asia are tempe, sufu (soy cheese), ontjom tahu [okara tempeh], tau chiow ([tauco, tauchō], soybean paste), soy sauce, and thua-nao (natto). These are shown in Table 1, with the microorganisms responsible for fermentation, substrates, uses, and principal references given for each. “It can be noted that only a very limited range of genera of fungi are involved in these fermentations, namely *Rhizopus*, *Aspergillus*, *Neurospora*, *Actinomucor* and *Saccharomyces*. Furthermore, within a genus only a very limited number of species are actually utilized, for example *Aspergillus sojae* in soy sauce fermentation, and *Neurospora intermedia* in ontjom tahu fermentation.

“Regarding ontjom tahu fermentation, the fungus used was formerly erroneously listed as *Neurospora sitophila* (Dwidjoseputro, 1961).”

The authors then use analyses of conidia color and crossing experiments based on meiotic sterility to show that the cultures on okara tempeh (ontjom tahu) belong to a single species, *Neurospora intermedia*.

Note: This is the earliest English-language document seen (March 2009) that uses the word “tau chiow” to refer to Indonesian-style miso. Address: Dep. of Genetics and Cellular Biology, Univ. of Malaya, Kuala Lumpur, Malaysia.

464. Kozaki, Michio. 1976. Fermented foods and related microorganisms in Southeast Asia. *Proceedings of the Japanese Association of Mycotoxicology* No. 2. p. 1-9. March 20. [16 ref]

• **Summary:** Table 1, “Main fermented foods using molds, yeasts or bacteria in Southeast Asia,” contains four columns: Name of fermented food, raw materials, main related microorganisms, and remarks (incl. names in other countries). Fermented foods listed include amazake (tapé / tapeh in Indonesia, with *Rhizopus* instead of *Aspergillus oryzae*), tempeh, sufu, ontjom, natto (soy bean fermented with *Bacillus subtilis* var. *natto*; Teranatto is same as original miso, Taosi in Philippines).

Table 2, “Main fermented foods using molds plus bacteria, molds plus yeasts, yeasts plus bacteria and molds, or yeasts plus bacteria in Southeast Asia,” contains the same four columns. Fermented foods listed include soy sauce (*Aspergillus oryzae*, *Saccharomyces rouxii*, *Pediococcus halophyllus*; called Jan [kanjang] in Korea and Thua nao [sic] in Thailand), Miso (same 3 microorganisms as in soy sauce). Address: Tokyo Univ. of Agriculture, Dep. of Agricultural Chemistry, 1-1, Suragaoka, Setagaya-ku, Tokyo.

465. Bortz, Brenda. 1976. The joys of soy. II. Tofu and tempeh. *Organic Gardening and Farming* 23(3):128-31. March. See also Part I: 23:28-30, 32, 34, 36, 38. Feb.

• **Summary:** “Two Far Eastern soybean favorites—tofu and tempeh—turn up exciting new menu and nutrition ideas in the OGF Research and Development Group’s latest tests...

“At this time, Dr. Schwartz is inviting a limited number of adventurous OGF readers to help him evaluate the ease and dependability of his method and tempeh’s potential as a new food for Americans. Readers who would like to join R & D’s modest ‘Soybean Task Force’ should write to Nancy Bailey, R & D Readers’ Service, Rodale Press Inc., Emmaus, Pennsylvania, 18049. Those selected will receive soybeans, culture, and complete instructions for making the simple incubator and tempeh itself.”

Contains a recipe for Tofu Loaf with Onion and Cheese from *The Book of Tofu* by Shurtleff and Aoyagi.

Note: This is the earliest document seen (March 2003) that mentions tempeh, published by or in connection with Rodale Press.

466. Boucher, Suzanne. 1976. Tempe makers in Yogyakarta. *Indonesia Circle* 9:10-11. March.

• **Summary:** Discusses tempeh in the context of family life in Yogyakarta, Java, Indonesia. During the author’s stay in Yogyakarta last summer she was introduced to a family of tempe makers. She describes the process of making tempeh. In some cases, after the soybeans are dried but before they are inoculated, they are mixed with coconut gratings (*ampas kelapa*) to make *tempe tidak murni*. During this mixing, there must be no trace of coconut oil on the tempeh maker’s hands. During menstruation, women are not allowed to make tempeh.

467. Longacre, Doris Janzen. 1976. More-with-less cookbook. Scottsdale, Pennsylvania: Herald Press. 328 p. April. Illust. Index. 22 cm. Introduction by Mary Emma Showalter Eby. Spiral bound. [30\* footnotes]

• **Summary:** Commissioned by the Mennonite Central Committee. On the cover: “Suggestions by Mennonites on how to eat better and consume less of the world’s limited resources.” However, this is not a vegetarian cookbook. Contents: Introduction. Part I: More with less. 1. Less with more: World shortages, North America: Five times as much, overspending money, overeating calories, overeating protein, overeating sugar, overcomplicating our lives. 2. Change—An act of faith: Does it really help anyone if I cut back?, it seemed inadequate, we liked it better the second time. 3. Building a simpler diet: The protein question, what is complete protein?, amino acid teamwork, no-meat, low-meat, and which meat, increasing protein content in foods.

II. Sharing the recipes. Soy-related recipes (all use whole soybeans unless otherwise stated): Nameless soybeans (p. 47). Soybean granola (with roasted soybeans, p. 91). Section of soybean recipes (p. 96-98, 109-15): Savory baked soybeans. Soybean loaf. Soybean hamburger casserole (with ground beef). Soybean casserole. Fresh soybean-cheese casserole (with “fresh green soybeans”). Soybean pie. Refried soybeans. Soybean soufflé. Sweet and sour soybeans. Marinated soybeans. Soybean sandwich spread. Basic

soybean spread or dip. Soybean curd sauté (with bean curd [tofu]). Gather up the fragments. Soy, cheese and meat loaf (with “vegetable-protein meat extender, p. 166). Basic burger mix (p. 166). Quick soybean soup (p. 211). Soybean salad (p. 259). Roasted soybeans (3 recipes, p. 305).

Soy is also mentioned elsewhere: Soybeans contain complete protein (p. 28). Protein complementarity: In Indonesia fermented soybean cakes go with a rice meal. Chinese and Japanese use bean curd [tofu] and bean sprouts with rice (p. 29) Use soybeans or soy flour to increase protein content of foods (p. 31). Table showing protein and calorie content of some common foods (low fat soy flour, dry soybeans, immature cooked soybeans, mature cooked soybeans, p. 34). Table showing comparative costs of protein sources (dry soybeans {the least expensive of all!}, textured vegetable protein meat extender, soybean breakfast sausage, soy flour, p. 37). Soybeans and soy flour (p. 45). Cook large amounts of soybeans and freeze them to save time (p. 48). Soybeans contain fewer calories per gram of protein than common white beans (p. 49). When making granola, add soy flour, soy grits, roasted soybeans, or soaked soybeans (p. 88). Address: Akron, Pennsylvania.

468. Saono, S.; Brotonegoro, S.; Abdulkadir, S.; Basuki, T.; Jutono, -; Badjra, I.G.P. 1976. Microbiological studies of tempe, kecap, and taoco. I. Quantitative estimation and isolation of microorganisms from some products from West Java. In: ASEAN Project on Soybean and Protein Rich Foods, Progress Report on Research Activities, Jan-May, 1976. Appendix 7. \*

• **Summary:** Note: This is the earliest English-language document seen (March 2009) that uses the word “taoco” to refer to Indonesian-style miso.

469. Shurtleff, William; Aoyagi, Akiko. 1976. Excerpts from *The Book of Tofu*: Cooking with whole dry soybeans. Roasted soybeans, fresh green soybeans, soybean sprouts, and fermented soybean cakes (tempeh). *Mother Earth News* No. 39. May. p. 40-43. [1 ref]

• **Summary:** The first in a series of excerpts from this book. Describes how to make each of these foods at home, and gives several recipes for each (including 7 tempeh recipes). A sidebar discusses trypsin inhibitor, and soybean soaking time at various room temperatures.

Mother’s introduction to the book reads: “The various food-processing industries (bless ‘em) seem to be trying hard to alleviate this overcrowded planet’s shortage of animal-derived protein. How? By ‘beefing up’ our store-bought rations with ‘inexpensive’ meat substitutes procured from—primarily—the good old soy bean. And as they do so, these self-proclaimed wizards of matters comestible are weaving a web of mystery around the useful bean. But now, for us ‘little guys,’ there’s a book that (1) not only brings the versatile vegetable out of the arcane commercial fog and into

our kitchens, but (2) shows and tells us how we all can save grocery money *and* eat more nutritious meals (WHILE we loosen the hold that the doctored-food moguls have on all our lives and diets!). We’re proud, then, to present excerpts from... *The Book of Tofu*.”

The section on tempeh (and how to make it at home) states: “The starter is available from the U.S. Department of Agriculture, Northern Regional Research Lab., 1815 N. University Ave., Peoria, Illinois 61604. *The Farm* (Rt. 1, Box 156, Summertown, Tennessee 38483) is now making up a brochure on tempeh preparation which will soon be available with the starter.”

Note: This information about tempeh starter appears on page 68 of *The Book of Tofu*. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

470. Bates, Cynthia. 1976. Tempe (Leaflet). Summertown, Tennessee: The Farm. 4 panels. Undated. Front and back. Each panel is 22 x 14 cm.

• **Summary:** Printed with blue ink on white paper. Describes how to make 5 pounds of tempe. Describes the differences between good and bad tempe. Gives four recipes: Indonesian fried tempe. Tempe burger. German tempe sandwich. Albert’s tempe topping. Photos show (1) Close-up of tempe cake. (2) Cross section of tempe cake. Two parts of this cross-section are circled and described: “Not done yet. Mold around beans too sparse.” “Well done. Heavy mold around each bean.”

Note: This is the earliest document seen (April 2011) that contains the term “tempeh burger” or a tempeh burger recipe. This leaflet was distributed with tempeh starter and “Fermentation Funnies” (cartoons designed to help introduce tempeh). The leaflet was revised as “Tempeh” in 1977, for distribution with Farm Foods’ commercial tempeh. Address: Summertown, Tennessee.

471. Podems, Marc. 1976. Comments on Organic Gardening and Farming tempeh questionnaire results. Emmaus, Pennsylvania: Interoffice memo. July 21. 6 p. Unpublished manuscript.

• **Summary:** “We received an overwhelming positive reaction to making and eating Tempeh from our specially selected sample of OGF readers. In mid-March questionnaires were sent to 60 OGF readers who were the most enthusiastic about testing tempeh as revealed in their letters to us. 90% have sent back completed questionnaires so far... A majority of the reader/researchers are married with children at home and have been subscribing to OGF for more than 1 year. 87% have eaten soybeans in dried form within the last month... Most enjoyed making tempeh, although more than 50% had difficulties. They said it was new, challenging, and simple. But the majority had trouble either finding the proper materials or maintaining the correct

temperature.”

The readers were asked to prepare and evaluate two recipes: Fried Tempeh, and Tomato and Tempeh Casserole. “Both recipes received favorable marks from almost everyone. Many liked tempeh’s crunchy texture and good nutty flavor. But others complained about having to deep fry it.” A detailed tabulation of the questionnaire results is given. Address: Emmaus, Pennsylvania.

472. Bates, Cynthia; Lyon, Alexander; Sorenson, S.; Keller, B.; Jenkins, Suzy. 1976. Beatnik tempeh making. Summertown, Tennessee: The Farm. 20 p. Undated. 28 cm. Mimeograph. [8 ref]

• **Summary:** Contents: Abstract. Introduction. Methods of preparing inoculum: Pure culture propagated on rice (California, Kentucky), dry inoculum (Tennessee), inoculum grown on sweet potatoes (Tennessee), serial transfer (Tennessee).

Methods for making tempeh: Making tempeh at home (5 lb.; soaking the beans, splitting the beans, second boiling, cooling the beans, inoculation, incubation), making tempeh for a large family group (about 4 kg [8.8 lb] per day), community scale production (25 kg [55 lb], Tennessee), commercial production in California (10 kg. [22 lb] per day). soy pulp [okara] tempeh. Quality control. A table compares “good tempeh” with “bad tempeh” in terms of texture, color, odor, uniformity, and taste. Tempeh is a great favorite on the Farm and easily digested.

Recipes for tempeh: Indonesian fried tempeh. Tempeh burger. German tempeh sandwich. Albert’s tempeh topping. The great potential of tempeh. Expanding our tempeh operation (on the Tennessee Farm). Some facts about tempeh and food. References. Acknowledgement.

“Introduction: The Farm is a non-denominational religious community of 1,100 men, women and children living in southern Tennessee. We also have a dozen smaller communities living in other parts of the U.S., also in Canada, Europe and Guatemala. We are complete vegetarians: we eat no meat, eggs or dairy products because we found out that, on the average in the U.S., it takes eight pounds of feed protein to produce one pound of meat protein. We believe that by being vegetarians we can utilize our planet’s resources more efficiently, and this make more food available for our hungry world.

“Over the last five and one-half years that we’ve been together, we’ve developed a tasty, nutritious diet of beans and grains that centers around soybeans as a protein source. We have a soy dairy that produces 120 gallons of soy milk fresh each day to supply our community. The Soy Dairy also makes soy yogurt, soy cheese and Ice Bean (soy milk ice cream) from the soy milk. We love the good tasting, versatile, high protein soybean and one of our favorite ways of eating it is the fermented product, tempeh. At present our communities are making tempeh in Tennessee, California

[San Rafael], Colorado, Kentucky, New York, and Louisiana [Houma].”

“We plan to increase tempeh production on the Tennessee Farm to 135 kg. daily for the community, and to introduce it to neighboring towns.” “Our Colorado Farm makes solar dehydrated tempeh chips for soup mix, and this operation could be expanded or duplicated.”

“Acknowledgement: We would like to thank Don Wilson for the information on the California Farm method of making tempeh and inoculum.” Thanks also to Diane Darling, “the Farm Tempeh Crew, and friends who’ve helped: Debra Heavens, Valerie Epstein, Paul Meltzer, Maureen Hale, Deborah Stevenson, Laurie Sythe, David Handel, JoAnn Else, Paula Denton, and Corey Ford.

Later summarized as “Utilization of Tempeh in North America” in K.H. Steinkraus, ed. 1983. *Handbook of Indigenous Fermented Foods*. New York: Marcel Dekker. p. 48-50. Address: The Farm, Summertown, Tennessee.

473. Farm Food Company. 1976. August. New soyfoods restaurant or deli. 820 B. St., San Rafael, CA 94901.

• **Summary:** Shurtleff & Aoyagi. 1976. Sept. Tofu & Miso America Tour Itinerary. Contact: Kathleen Sandler.

Questionnaire filled out by Robert & Constance Dolgin. 1980. Jan. The Farm Food Co. in San Rafael opened its deli in about Aug. 1976, and the same month started making tempeh, tofu and soymilk. Shurtleff & Aoyagi visited in Sept. 1976. A list is given of dishes containing soyfoods served at the deli during its first year in business: Fried tofu sandwiches, tofu salads [like eggless egg salads], tofu salad dressings, and tofu cheesecake; tempeh burger, deep-fried tempeh cutlet, tempeh with creamy tofu topping, and Indonesian delight (tempeh strips with peanut butter and miso sauce over rice); soymilk ice cream, soymilk shakes, soy yogurt, soymilk mayonnaise, and soy whipped creme; soybean stroganoff and burritos; TVP chili; and Vege-Links (canned Loma Linda meatless hot dogs). Also for sale at the food store were packaged tofu, soymilk, tempeh, soy mayo, and Ice Bean [soy ice cream], all made in the same building.

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3.

Laurie Sythe Praskin. 1985. “The Farm soy history: An overview.” States (p. 3) that it was named “Farm Foods Cafe.”

Note 1. This is America’s first “soy deli,” offering a host of highly creative and delicious recipes, served at a counter or tables.

Note 2. At this deli was developed and made the world’s first “Tofu Salad,” which would soon (made by various companies, including Farm Foods in San Francisco) become one of America’s first popular tofu products, widely called “Eggless Egg Salad” (1977), “Tofu No-Egg Salad” (1978), and “Missing Egg Salad” (1978). Address: San Rafael, California. Phone: 415-454-3797.

474. Jurus, Alan M.; Sundberg, Walter J. 1976. Penetration of *Rhizopus oligosporus* into soybeans in tempeh. *Applied and Environmental Microbiology* 32(2):284-87. Aug. [17 ref]  
 • **Summary:** "Histological observations were made on the penetration of the hyphae of *Rhizopus oligosporus* into soybean cotyledons in tempeh. Hyphal penetrations averaged one per 1,400 square micrometers on the curved (outer) cotyledon surface and one per 1,010 square micrometers on the flat (inner) surface. Hyphae infiltrated to a [maximum] depth of 742 micrometers, or about 25% of the average width of a soybean cotyledon. This previously unreported degree of penetration offers partial explanation for the rapid physical and chemical changes in soybeans during tempeh fermentation." Address: Dep. of Botany, Southern Illinois Univ., Carbondale, Illinois 62901.

475. New-age Foods Study Center. 1976. Publications & materials, 1976 [mail order catalog]. 790 Los Palos Manor, Lafayette, CA 94549. 1 p. Aug.  
 • **Summary:** This single page leaflet, 8½ by 14 inches, printed on one side with black ink on white paper, is the Center's first catalog. In the upper right corner is the Japanese-style logo of waves and a moon in a circle. They sell four books written or published by William Shurtleff and Akiko Aoyagi (the softcover edition of *The Book of Tofu*, published by Autumn Press {336 pages} retails for \$6.95), pamphlets, a tempeh brochure, *Diet for a Small Planet* by Lappe, a tofu box and tofu making kit. They offer free of charge catalogs of tofu making equipment and koji starter. Coming soon are *The Book of Kudzu* and *The Book of Sea Vegetables*. Address: Lafayette, California. Phone: 415-283-3161.

476. Ohlund, Tim. 1976. Re: Work with miso and koji in Sweden. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 2 p. Handwritten.  
 • **Summary:** "Dear friend. I have been very impressed with your articles on tofu and tempeh in such magazines as *East West Journal* and *Mother Earth News*. I have been working in this area on a very small scale since about 5 years ago, when I got into macrobiotics in Japan under Nahum Stiskin. Since then I have been living in Sweden studying Japanese and Chinese at Uppsala University as well as managing a truck garden (biodynamic) during the summers."

He has been growing Japanese vegetables in Sweden—with good results. "I've also been working with a new variety of soybean suited for this northern climate. This year I have a very good crop of them. The last two winters I've been making up batches of miso just to see how it would go and gain some experience at it. It is not yet as I would like it, but that will take some time. What I really need at this time is some good literature on the subject. My friend and I have combed the library at the university here and found

much important information on tofu, tempeh, and lactic acid fermentation in *Applied Microbiology* and *Journal of Food Science*, etc." He requests more information and contact people. He may make another trip to Japan in the next year or shortly thereafter to do research. Address: Box 559A, 19063 Örsundsbro, Sweden.

477. Nelson, A.I.; Singh, B.P.N.; Singh, S. Assignors to University of Illinois Foundation. 1976. Apparatus for the preparation of a soybean beverage base [low tech soybean dehuller]. *U.S. Patent* 3,981,234. Sept. 21. [8 ref]\*  
 • **Summary:** For a favorable evaluation of this dehuller, see Shyeh, Rooda, and Nelson, 1980. It works well for dehulling soybeans when making tempeh or soymilk. Address: Univ. of Illinois, Urbana, Illinois.

478. Wilson, Don. 1976. Method of making tempeh and tempeh starter at the Farm Food Company in San Rafael, California (Interview). Conducted by William Shurtleff of New-Age Foods Study Center, Sept. 29. 2 p. transcript.  
 • **Summary:** Contains detailed descriptions (based on Shurtleff observing Wilson at work in San Rafael) of how to make: (1) 22 lb of soy tempeh on a community scale; (2) 20 petri dishes full of tempeh starter from freeze dried spores; (3) Tempeh starter from sporulated rice tempeh starter.

On September 29-30, 1976, Akiko Aoyagi and William Shurtleff visited Farm Food Company (also called the California Farm), which is a branch of The Farm (Summertown, Tennessee) as the first stop on our 4-month Tofu & Miso America Tour (29 Sept. 1976 to 3 Feb. 1977). Don Wilson, the tempeh maker, kindly let us observe and record his method and equipment for making tempeh and tempeh starter. He started with 10 pounds of dry soybeans and ended up with 22 pounds of excellent tempeh, which was sold at the Farm Food Co. retail store in San Rafael.

The description of Don's process appeared first in 1976 as a typewritten leaflet, then was later published in our book *Tempeh Production* (1980). Address: Farm Food Company, 820 "B" Street, San Rafael, California 94901. Phone: 415-454-3797.

479. Beuchat, L.R. 1976. Fungal fermentation of peanut press cake. *Economic Botany* 30(3):227-34. Sept. [40 ref]  
 • **Summary:** Discusses the preparation of ontjom and gives a detailed analysis of its composition. Address: Dep. of Food Science, Univ. of Georgia, Georgia Agric. Exp. Station, Experiment, Georgia 30212.

480. **Product Name:** Tempeh.

**Manufacturer's Name:** Farm Food Co.

**Manufacturer's Address:** 820 B St., San Rafael, CA 94901.

**Date of Introduction:** 1976. September.

**New Product—Documentation:** Shurtleff & Aoyagi. 1976.

What is Tempeh? p. 5. Attn: Lewis Headrick. This is a natural food store and soy dairy that makes and sells fresh, fried, and frozen tempeh. Shurtleff, W. 1976. Sept. Don Wilson's method of making tempeh at Farm Food Co. in San Rafael. 2 p. Unpublished manuscript. Shurtleff and Aoyagi visited this small tempeh shop in Sept. 1976.

481. Revelle, Roger. 1976. The resources available for agriculture: The physical resources of earth, air, fire (energy) and water are large but essentially fixed. The biological and social resources, however, are far from being pressed to the limit. *Scientific American* 235(3):164-68, 170, 172-74, 177-78. Sept.

• **Summary:** Pages 170 and 172 discuss the importance of microorganisms and fermentation. "The fermentation process not only adds distinctive flavors, which are prized in their own right, but also often augments the content of riboflavin and other vitamins. Sauerkraut and yogurt are familiar fermentation products in American diets; tempeh, ragi, sufu, shoyu, ang-kak, tea fungus and mizo [sic, miso] are among those eaten in Asian countries." Address: Director, Center for Population Studies, Harvard Univ., Massachusetts.

482. Shurtleff, William; Aoyagi, Akiko. 1976. Tofu & Miso America Tour: 29 Sept. 1976 to 3 Feb. 1977 [Itinerary with two maps]. Lafayette, California: New-Age Foods Study Center. Unpublished manuscript.

• **Summary:** On 13 Sept. 1976 the authors bought a large, white 1975 Dodge Tradesman 300 van (used, with 40,000 miles on it). On one side Akiko painted in large, bold letters "Tofu and Miso America Tour 1976-77." Their *Book of Tofu* had been published in December 1975 and *Book of Miso* on 23 Sept. 1976. On Sept. 29 they packed the van full to the ceiling with their books on tofu and miso, plus Larry Needleman's tofu kits—and departed.

This trip had four main purposes: (1) To introduce tofu and miso to America; (2) To introduce people to the many benefits of a meatless/vegetarian diet; (3) To encourage people to start soyfoods companies, especially tofu shops; and (4) To promote the authors' newly-published *Book of Tofu* and *Book of Miso*.

This itinerary includes the name and address of 64 people and organizations visited. Many of these were pioneers in the soyfoods and natural foods movements: Sept. 29—David and Kathleen Sandler, Robert Dolgin, Don Wilson, Farm Food Co. (San Rafael, California; we observed and recorded in detail how Don Wilson made tempeh and tempeh starter / inoculum at Farm Food Co.). Oct. 1—Petaluma, California. Oct. 2—Josephine County Food Center, Grants Pass, Oregon. Oct. 3. Heliotrope Natural Foods (Salem, OR). Oct. 4—West Bank Cafe (Corvallis, OR). Oct. 5. Visit Linda Shurtleff (McMinnville, OR). Visit *Rain Magazine* (Portland, Oregon). They do an interview which is published in their Nov. 1976 issue. Oct. 6. Blake Rankin and

Janus Natural Foods (Seattle, Washington). Oct. 7. Janus. Oct. 8—Luke Lukoskie and Sylvia Nogaki of Island Spring (Vashon, Washington). Oct. 10—Jack Grady, a macrobiotic (Spokane, WA). Oct. 13—Univ. of Minnesota. Oct. 14—Georgie Yiannias of Wedge Food Co-op and Ananda Marga (Minneapolis, Minnesota). Our largest class with 300 people. Oct. 15—Barbara ("Bobbie") Reinhardt Shurtleff dies of colon cancer at Alta Bates Hospital, Berkeley, CA. Oct. 15. Famine Food Co-op (Winona, Minnesota). Oct. 16—Bonnie Maroney of The Wisconsin Farm (Ettrick, WI). Oct. 19—Visit George Strayer and Larry Krueger of the American Soybean Assoc. (Hudson, Iowa). Visit David and Ann Tucker (Iowa City, Iowa). Oct. 20. Outpost Natural Foods (Milwaukee, WI). Visit Bountiful Bean Co-op. Oct. 21. Visit Dr. Danji Fukushima and Kikkoman Foods (Walworth, Wisconsin). Oct. 22—Visit Drs. Hesseltine, Wang, Wolf, Mustakas, Cowan at Northern Regional Research Center (Peoria, Illinois). Oct. 23—Morning class on commercial production for Les Karplus and 5 people at Vegetarian Incorporated (Urbana, Illinois). Oct. 23-24. Side trip to visit ADM and Staley (Decatur, IL). Oct. 24—Les and Debbie Karplus of Vegetarian Inc. (Urbana, IL). Oct. 25—Visit Dr. L.S. Wei of the Univ. of Illinois Dept. of Food Science (Urbana, Illinois). Evening program for Karplus in Urbana. Oct. 26. Purdue University (Indiana). Oct. 27—Chris Steele (Lansing, Michigan). Oct. 28—Mike Potter and Louis Howie of Eden Foods (4601 Platt Rd., Ann Arbor, Michigan). Oct. 29—Calico Market (Erie, Pennsylvania). Oct. 30—Visit Greg Weaver and Jay Thompson of Rochester Zen Center (Rochester, New York; Later Northern Soy). Visit Genesee Co-op. Oct. 31—Alternative Health Education Center (Rochester).

Nov. 1—Visit Arnold Karmody at Empty Cloud (Canandaigua, New York). Meet Dr. Keith Steinkraus (Geneva, New York). Nov. 2—Visit with Dr. Steinkraus at New York Agric. Exp. Station (Geneva, NY). Lunch together with his wife, Maxine. Nov. 3—Tom MacDonald at Hannibal, New York. Nov. 4—Ira and Kathy Leviton of Corncreek Bakery (South Deerfield, Massachusetts). Visit Laughing Grasshopper tofu shop just before it begins operation. Nov. 5—Fritz Hewitt of Common Ground Restaurant (Brattleboro, Vermont). Visit Tom Timmins of Llama, Toucan & Crow (Brattleboro). Nov. 6. Shep Erhard (Franklin, Maine). Nov. 7—Ann S. Johnson at Univ. of Maine (Orono, ME). Nov. 8—Visit Marine Colloids (Rockland, Maine). Nov. 10—Drive to Boston, stay with Nahum & Beverly Stiskin (Brookline). Nov. 13—Tofu & Miso program in Boston. Visit Erewhon Natural Foods (33 Farnsworth St., Boston, Massachusetts), Martha Trundy, Jeffrey & Gretchen Broadbent. Nov. 14—Visit to shops in Boston's Chinatown. Michio and Aveline Kushi give a big party in our honor at their home at 62 Buckminster Rd., Brookline, then take us out to dinner at the Seventh Inn. Nov. 15—Tofu-making class at a home in Boston. Nov. 17—Visit offices of *East West Journal*. Sherman Goldman conducts long interview, later published in Jan. 1977 issue.

Misomaking class at home of Ken Burns. Nov. 18—Visit Joel Wollner in Cape Cod. Nov. 19—Radio show then program for Joel. Nov. 20—Peter Smith at Quaker group in Pennsylvania. Nov. 22—Visit Woods Hole, Massachusetts to study sea vegetables. Evening program at New Bedford, MA. Nov. 23—Stay with Seung Sahn, Sa Nim at Providence, Rhode Island Zen Center. Meditate and show students how to make tofu. Evening at Insight Meditation Center, Barre, MA, a Vipassana center in a former Catholic seminary, co-founded in 1976 by Jack Kornfield, Joseph Goldstein and 3 others. We have dinner, meditate with the sangha, and hear Jack talk about Vipassana. Nov. 24 Sit morning zazen with master and students at Providence zendo. Nov. 25—Thanksgiving. Akiko and I stay alone in a house near Hartford, Connecticut and taste a good tofu pumpkin pie. I read about seaweeds. We take a long walk in the countryside. Nov. 26—Program for Erewhon Natural Foods in Hartford (stay with Maria Orefice, owner of Garden of Eating restaurant in Hartford). Article in *The Hartford Courant* (Dec. 1). Nov. 27—Long River Food Coop in Connecticut. Nov. 28—Stay with Susan and Kirk Gershuny of Snowflower (Tivoli, New York). They plan to make soy ice cream soon. Nov. 29—Drive in Deep snow to the New York Farm in Franklin, New York. Stay in a big house they built. Nov. 30—Carl Bethage of the East West Center in Gardiner, New York. Also did a radio program.

1976 Dec. 1—Visit Frances Moore Lappé at her upstairs office in Hudson-on-Hastings, New York. Then visit her large home on the hillside. Dec. 1-5—We missed a program for Annemarie Colbin in New York City (partly because we feared our van would be burglarized on the street) so we stayed Dec. 1-5 at the luxurious home of Leo S. Nikora (Niki; Bobbie's friend). I work on writing *The Book of Kudzu*. Dec. 6-7. Program for 40 people (Hosts: Nancy N. Bailey and Robert Rodale) at Rodale Press (Emmaus, Pennsylvania); I am surprised they serve white sugar on their dining tables. Dec. 8—Tim Snyder of Ecology Co-op in Philadelphia. Dec. 9—Stay at home of Sylvia Anderson in Pleasantville, New Jersey and do a program upstairs in a modern university. Study magnificent photos of Native Americans by Edward S. Curtis. Dec. 10—Visit Jay and Freya Dinshah of the North American Vegetarian Society (Malaga, New Jersey); their poor vegan child has bowed legs. Dec. 12—Cindy Blouse in Dallastown, Pennsylvania. Dec. 13—Visit Laurelbrook Foods, a natural foods distributor in Forest Hill, Maryland. We meet Rod and Margie Coates. Dec. 14—Big program hosted by Ella May Stoneburner and Seventh-day Adventists near Washington, DC. Dec. 15—Michael Rosoff (who ran the East West Center in Washington, DC) planned to host a class in a DC church. After we witness a robbery, we are afraid to leave our van on the street. So we do a scaled-down program in the home of Murray and Pam Snyder, which was the East West Center in Baltimore, Maryland. Visit Laurelbrook Foods Warehouse #2 in Durham / Chapel Hill. Dec. 16—Roanoke Food Co-op in Copper Hill,

Virginia. Dec. 17-18—John Shuttleworth and Jim Morgans of *Mother Earth News* (Hendersonville, North Carolina). They do a long interview and take photos. Program at night. Note: An audio tape of Bill's talk at this program is filed with Soyfoods Center documents for 1976. Dec. 19—Chandler Barrett in Atlanta, Georgia.

Note 1. This is the earliest document seen (April 2001) concerning the work of Ira Leviton or Tom Timmins with soy. One evening, before Shurtleff was scheduled to speak at Leviton's Corncreek Bakery, Leviton drove Shurtleff to see the Laughing Grasshopper Tofu Shop which was under construction on the second story of an old wooden building in the nearby town of Millers Falls, Massachusetts. Much of the equipment was made out of wood—including wooden curding vats and a wooden cider press. The company opened in Jan. 1977.

Note 2. This is the earliest document seen (April 2006) concerning Llama, Toucan & Crow in Brattleboro, Vermont.

Note 3. This is the earliest document seen (May 2006) concerning the forerunners of United Natural Foods, Inc. (INFI)—in the form of Llama, Toucan & Crow. Address: 790 Los Palos Manor, Lafayette, California 94549. Phone: 283-3161.

483. Shurtleff, William. 1976. New-Age Foods Study Center: Basic purposes and activities (Leaflet). Lafayette, California. 1 p. Single sided. Sept. 28 cm.

• **Summary:** "1. To work toward creative, low-cost solutions to the present world food/protein crisis by doing basic research and writing books... Our special interests include soybean products (tofu, miso, tempeh, shoyu, etc.), sea vegetables, whole-grain bread, and kuzu.

"2. To aid in the spread of the ideas found in our writings by regularly responding to invitations from any part of the world to do lecture/demonstrations and cooking classes."

3. To encourage the adoption of meatless and vegetarian diets which help make the best use of the planet's precious food resources, are low in cost, conducive to the development of a healthy body and clear mind, kind to animals, and ecologically sound.

"4. To encourage people in the West to begin commercial or community production of tofu, miso, and tempeh..."

"5. To provide centers where people can come to learn more about our work and to begin their own study of basic important foods. In Japan, we assist people in studying with tofu- and miso masters..."

"6. To work actively to promote the key concept of food self-sufficiency and simpler, low-cost lifestyles that are harmonious with the needs of the planetary ecosystem. Likewise to encourage deeper understanding of selfless service, and of daily life and work as a spiritual practice.

"7. To provide a catalog of publications and materials

related to our work. We invite you to contact us and we hope we may be of service to you.” Address: New-Age Foods Study Center, 790 Los Palos Dr., Lafayette, California 94549. Phone: (415) 283-3161.

484. Shurtleff, William; Aoyagi, Akiko. 1976. Tofu & Miso America Tour: 29 Sept. 1976 to 3 Feb. 1977. Continued from Jan. 1977. [Itinerary with two maps]. Lafayette, California: New-Age Foods Study Center. Unpublished manuscript.

• **Summary:** Continued: 1976 Dec. 21. Arrive at The Farm in Summertown, Tennessee. Meet Margaret Nofziger and Stephen Gaskin. Stay until 2 Jan. 1977. We stayed most of the time at “Hoot Owl Hollow,” a large community owner-built home with many families; our host was Edward Sierra. During the next few weeks we stayed in a parked mobile home (owned by the Sandlers) in a lovely valley about 1 hour drive away. I worked on *The Book of Kudzu* final draft. Heavy confrontation with Farm folks—as I am about to start a program—about how they didn’t like my way. Write a 4-page pamphlet titled “What is Tempeh?” jointly with Cynthia Bates. 1976 Dec. 31—This is our first year with significant income (\$27,390, mostly from Autumn Press royalties) but no profit. During 1976 thirty articles and book reviews about our work with tofu and miso were published in magazines and newspapers in the USA and Japan.

1977 Jan. 2—Our Tofu & Miso America Tour continues. Jan. 3—Stay in a suburban home with Lynn Delacruz in Meridan, Mississippi. Jan. 4—Program for Atlantis Distributors in New Orleans. That night we stay in a trailer home with John and Katherine Gabriel in Houma, Louisiana. They are from The Farm and make commercial tempeh in their trailer. Jan. 6—Jim Baker (Dallas, Texas). After the program I meet Dr. Ralph Sand who is studying tofu and soy cheeses at Anderson Clayton. We also visit with my cousin, Bob Shurtleff, near Dallas. Jan. 7—Jane Binante in Denton, Texas. Jan. 9—Jim Hemminger of Gregg St. Tofu Co. (started by Thom Leonard) in Fayetteville, Arkansas. His partner is Mary Weingartner. We sleep on the floor of a small house in Fayetteville and the next morning see Jim make tofu in a bathtub. Jan. 10—East Wind in Tecumseh, Missouri. Jan. 12—Stay with Robert Nissenbaum (a fine, humble fellow) in St. Louis, Missouri. I finish typewritten manuscript of “What is Tempeh?” Jan. 13—Program at a restaurant, The Sunshine Inn (St. Louis). Sponsored by The Ethical Society. Stephen Uprichard, Dale Deraps, and Robert Nissenbaum are there.

Jan. 15—Meet David and Danette Briscoe (Kansas City, Missouri; they soon start publishing *Soycraft*, a small periodical on soyfoods), dinner with Thom Leonard at his home in Lawrence, Kansas (we have miso soup with miso that Thom made, then do a big program sponsored by the Mercantile Community Co-op in downtown Lawrence at either the Lawrence Library or Community Center—in a big downstairs room. I tape the lecture. Unbeknownst to me, Ken Bader, CEO-to-be of the American Soybean Assoc., is in

attendance). Jan. 16—Visit Bob Amelay of the Omaha Food Co-ops in Omaha, Nebraska. Jan. 17—Drive across Nebraska to Denver. Jan. 18-19—Dave Bolduc and Christie Shurtleff in Boulder, Colorado. The first night we do a big tofu program in the historic Boulder Theater. That afternoon we have an audience with the Karmapa—a high Tibetan spiritual leader, who has diabetes; we give him an inscribed hardcover copy of *The Book of Tofu*. Akiko recalls cooking tofu burgers for him. That evening in a large, packed hall, we witness his Holiness conduct the Black Crown Ceremony. Jan. 20. Jimmy Carter is inaugurated as president. Jan. 24—Program for The Colorado Farm in Hotchkiss, Colorado—way out in the boondocks. Jan. 25—Stay with Andrea Chin in Taos, New Mexico. Visit Lama Foundation high above Taos in the snow (Steve Durkee, teacher). They have many small meditation cubicles around the hillside and have just finished a nice adobe meditation hall. Near Durango, Colorado, we visit Ed Tripp, who looks lonely, sad and desolate, farming a little patch of organically grown wheat and living alone in a bare shack on coffee and cigarettes. Jan. 26. We stay somewhere in New Mexico. Jan. 27—Program at the First Unitarian Church in Albuquerque (79 p.m.) hosted by Michele E. Martin of Jemez Bodhi Mandala Zen Center, Jemez Springs, New Mexico. Sit meditation in their cold Rinzaï zendo then soak in the hot springs outside in the snow. Their teacher, Sasaki roshi, is not there. Jan. 28—Susan Berry in Silver City is supposed to host a program. We cannot find her house. At one point along in here we do a program in or near Utah in a remote church up on a little bluff. Dinner before at Frosty Hot Dog place. Jan. 29—Long drive across Arizona to San Diego. Jan. 30—Big program in San Diego for 350 people at the Ocean Beach Community School hosted by David and Barbara Salat, publishers of *Well Being* magazine. Afterwards we stayed overnight on their houseboat in San Diego Bay. Magical. Akiko had a bad cough and was very tired.

In Los Angeles we spend a day (in late January or early February 1977) with Lewis Headrick and Jimmy Silver visiting three small tempeh shops: Bali Foods (in Baldwin Park, run by Mr. Henoeh Khoe), Country Store Health Foods (in Sun Valley; Joan Harriman), and Toko Baru (in West Covina; Randy Kohler). One evening we had dinner with Mr. Yamauchi and perhaps Al Jacobson. I gave a presentation on tofu. Afterwards, in the parking lot, Mr. Yamauchi gave me an envelope containing several hundred dollars in bills—his way of saying thank you for the work we were doing on behalf of tofu. Feb. 1. Drive to northern California, then have dinner at the home of Herman and Cornelia Aihara (Oroville, CA). Feb. 2. Last program of the tour for Harold Lockhard of the Sacramento Natural Foods Co-op (Sacramento, California; Program is in a modern college building).

On 3 Feb. 1977 arrive home in Lafayette, California.

On this 4-month tour the Shurtleffs, trying to do for

soyfoods what Johnny Appleseed did for apples, presented 70 public programs attended by about 3,646 people, did many media interviews and appearances, and travelled 15,000 miles. They had a gross income of \$18,020 from honoraria and sales of their books (Book of Tofu, Book of Miso), tofu kits, pamphlets, and nigari. Total trip expenses were about \$5,361 plus about \$7,200 for books from the publisher, leaving a net income of about \$5,459. It was a huge, challenging, and exhausting Odyssey that bore abundant fruit in the founding of a new tofu shop almost everywhere they spoke.

1977 Feb. 9—Meeting in Lafayette (790 Los Palos Dr.) with Robert Dolgin and David Sandler (from the Farm and Farm Foods in San Rafael) and Larry Needleman leads to the establishment of Bean Machines, Inc. (BMI). The Farm places a firm order for a Japan tofu system.

1977 Feb. 12—Bill and Akiko leave America and fly to Japan. Air fare paid by Hydrometals. Address: 790 Los Palos Manor, Lafayette, California 94549. Phone: 283-3161.

485. USDA Northern Regional Research Center. 1976. Papers on fermented foods from the Northern Regional Research Center. Peoria, Illinois. 4 p. Sept. 8. [55 ref]  
• **Summary:** Of the 55 citations listed, the majority are related to soybeans. Address: Peoria, Illinois 61604.

486. Cherry, J.P.; Beuchat, L.R. 1976. Comparative studies of protein and amino acid changes in peanuts infected with *Neurospora sitophila* and *Rhizopus oligosporus*. *Cereal Chemistry* 53(5):750-61. Sept/Oct. [21 ref]  
• **Summary:** “The Indonesians prepare a product called ‘ontjom’ from peanut press cake by fermenting the cake with a reddish-orange mold, *Neurospora sitophila*. Less often, *Rhizopus oligosporus* is used to produce white ontjom. The latter organism is also used to manufacture tempeh from soybeans.” Address: Dep. of Food Science, Univ. of Georgia Experiment Station, Experiment, GA 30212.

487. Gunawan, Cecelia. 1976. Percobaan membuat inokulum untuk tempe dan oncom [Experiments on the preparation of inocula for tempeh and onchom]. Paper presented at Lembaga Kimia Nasional—LIPI. 24 p. Held 11 Oct. 1976 at Bandung, Indonesia. [Ind]\*

488. Liener, Irvin E. 1976. Nutritional aspects of soy protein products. In: Archer Daniels Midland Co., comp. 1976. Edible Soy Protein Seminar. Decatur, Illinois. 220 p. See p. 13-85. Held in 1976 at Moscow, USSR and Warsaw, Poland. [265 ref]  
• **Summary:** Contents: Nutritional value of the protein of individual soy products: General considerations, soybeans as a vegetable, soyflour, soybean milk, soybean curd, protein concentrates, protein isolates, fermented products. Blended soy products: Blend with wheat protein, blend with corn

protein, blend with rice, vegetable-protein formulations, soy protein as meat extender. Textured meat analogs. Nutritional value of non-protein constituents: Available energy, crude fiber, vitamins (fat-soluble vitamins, water-soluble vitamins), minerals (calcium, phosphorus, zinc, other metals). Antinutritional factors: Heat-labile factors (trypsin inhibitor, hemagglutinins, other heat-labile factors), heat-stable factors (saponins, estrogens, flatulence factors, lysinoalanine). References. Tables.

Concerning lysinoalanine (p. 58-59): “Sternberg et al. (1975) have recently shown lysinoalanine to be widely distributed in cooked foods, commercial food preparations, and food ingredients, many of which had never been subjected to alkaline treatment. Many of these foods had levels of lysinoalanine which were considerably higher than those found in commercial samples of soy protein isolate. The wide distribution of lysinoalanine among commonly cooked foods would tend to indicate that” this is neither a novel protein nor a serious problem, as some humans have long been exposed to proteins containing lysinoalanine with apparent impunity. “Its presence in soy protein can hardly be considered a serious problem for man.” Address: Dep. of Biochemistry, Univ. of Minnesota, St. Paul, MN 55108.

489. Nelson, Alvin I.; Ferrier, Les K. 1976. Soybean processing using low level technology. Urbana, IL: University of Illinois. 34 p. Soybean Food Processing Terminal Report. Contract AID/TA/C-1294. 1 April 1976 to 31 Oct. 1976.

• **Summary:** The soybeans investigated were whole dry soybeans, soymilk, and tempeh. Address: Dep. of Food Science, Univ. of Illinois, Urbana, Illinois.

490. Bhumiratana, Amara. 1976. Small-scale processing of soybeans for food in Thailand. *INTSOY Series* No. 10. p. 143-46. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).  
• **Summary:** Contents: Introduction. Fermented soybeans. Soymilk. Yuba. Yoghert [Soy yogurt, inoculated with *Lactobacillus bulgaricus* and *L. acidophilus* and incubated at 37°C for 16-20 hours]. Chinese soya bean dessert (Taow Huey). Tofu (white or yellow). Sufu. Soybean snack (protein crisp; deep-fried sufu). Tempeh. Thai dessert. Kanom ping kaset. Baby food. Kaset noodle. Kaset protein. Note: There is a flowchart and photo of each product.

“The Institute of Food Research and Product Development, Kasetsart University, initiated several soybean utilization pilot projects five or six years ago. Using soybeans alone or combined with other ingredients, we have developed a range of products, such as baby foods, kaset protein, and snacks. Tests indicate that these foods are highly acceptable, being both palatable and nutritious. Some of these products are soon to be manufactured commercially by small-scale industries. This paper is a description of the

soy food processing methods developed by the Institute.”  
Address: Inst. of Food Research and Product Development,  
Kasetsart Univ., Bangkok, Thailand.

491. Somaatmadja, Sadikin; Guhardja, Edi. 1976. Current status of soybean research and utilization in Indonesia. *INTSOY Series* No. 10. p. 232-35. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign). [1 ref]

• **Summary:** Contents: Introduction. Production: Hectarage and yield. Production techniques: Systems of cultivation, inoculation, harvesting and processing for storage, storage. Factors affecting soybean production in Indonesia: Seed viability and seed supply, pests, diseases, cultural practices, varieties. Consumption and utilization. Marketing. Extension: Training, method used to increase soybean production (expansion of hectarage, intensification, varieties).

“At present soybeans occupy fifth place among the other food crops, after rice, cassava, maize, and sweet potatoes. Research on soybeans is conducted at the Central Research Institute for Agriculture (CRIA) at Bogor and its substations, including Sukamandi and Ujung Pandang; at several universities, such as the Institut Pertanian Bogor, Universitas Gadjah Mada, Yogyakarta, and Brawijaya Malang; and at other research institutes, including Badan Tenaga Atom Nasional, Jakarta, and Lembaga Biologi Nasional, Bogor.

“From 1970 to 1973 the annual harvested hectarage of soybeans averaged 703,878 hectares with a production of 517,199 metric tons and an average yield of 7.34 quintals [1 quintal = 100 kg] per hectare. Approximately 80 to 85 percent of the total soybean hectarage in Indonesia is in Java-Madura...

“Per capita consumption of soybeans in Indonesia reflects the distribution of the crop. In Java the per capita consumption each year is about 5.04 kg; in Sumatra, Kalimantan, Sulawesi, and Maluku/Irian Jaya between 0.10 and 1.04 kg; and in Bali about 3.43 kg.

“Soybeans are not consumed directly, but are processed into a large number of products. Tempeh (fermented soybeans), tahu (soybean curd), tauge (soybean sprouts), kecap (soy sauce), tauco (fermented mixture [Indonesian miso]), and oncom (made from residues of soymilk and tahu) are consumed as side dishes with rice. Roasted beans, tahu chips, and boiled seeds are eaten as snacks, and boiled young pods are prepared as a green vegetable. Soymilk is consumed as a beverage.” Address: 1. Sukamandi Research Station, Central Research Inst. for Agriculture, Sukamandi; 2. Bogor Agricultural Univ., Bogor. Both: Indonesia.

492. Winarno, F.G.; Karyadi, Darwin. 1976. Nutrition and processing of soybeans. *INTSOY Series* No. 10. p. 137-42. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).

[21 ref]

• **Summary:** Contents: Introduction. Nutritional status. Soybeans as source of good-quality protein: Chemical composition, nutritive value, other components. Storage of soybeans. Processing and its effects on nutritive value: Effects of heating on nutritive value, effects of heating on flavor, soybean varieties and processing methods. High protein food mixtures: Saridele, Tempeh-fish-rice, soya-rice baby food, soybean residue-fish-rice (with okara), other food mixtures. Conclusion. Discussion.

“In 1952 the Institute of Nutrition started a study of soybean milk. As a result of the study, a factory was set up in Jogjakarta in 1957 with the assistance of FAO and UNICEF. The product, which was called Saridele, was made from soybeans, peanuts, and sesame seeds, and was fortified with minerals and vitamins. The nutrient composition of Saridele compared with that of cow’s milk is shown in Table 6. The production of Saridele was discontinued after 1966 because of the irregular supply of soybeans and marketing problems.” Address: 1. Agricultural Engineering and Product Technology, Bogor Agricultural Univ., Fate Meta, Jl. Gu Gede; 2. Nutrition Research and Development Centre. Both: Bogor, Indonesia.

The microbial content and its amylolytic, proteolytic, and lipolytic activities. Progress Report Subproject III.b. ASEAN Project for Soybean and Low-Cost High Protein Foods. Jan-Dec. 1976. Unpublished manuscript. \*

494. **Product Name:** Tempeh Starter & Instructions (Vacuum Dried–Powdered).

**Manufacturer’s Name:** Farm Foods.

**Manufacturer’s Address:** 156 Drakes Lane, Summertown, TN 38483.

**Date of Introduction:** 1976.

**New Product–Documentation:** Label. 1977, dated. 4.5 by 6.5 inches. Brown on white. Makes 6 lb. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Farm Foods Products Catalog. 1978. p. 3-4.

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods*. p. 189. “Tempeh starter is cultured on white rice in our laboratory. The spores are dehydrated and dormant when purchased... The tempeh starter is combined with sterile wheat starch to allow for easy mixing and a more even distribution of starter throughout the beans.”

Talk with Robert Tepper of Farm Foods. 1984. May 4. In 1975 Cynthia Bates set up a little laboratory and began to make powdered, pure-culture tempeh starter for use on the Farm. By 1976 it was being sent out or sold commercially to interested people.

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 43, 56. "In 1984 Farm Foods had about 60% of the U.S. tempeh starter market, Turtle Island 35-40%, and GEM Cultures 0-5%."

Note: This is the earliest known commercial tempeh starter made in the United States.

495. Jensen, J. Stoumann; Djurtoft, R. 1976. Preparation of tempeh, a fermented food, from whole grain legumes and cereals: A summary of experiments and results obtained 1970-74 in Denmark, Ghana and Nigeria. Lyngby, Denmark: Dept. of Biochemistry and Nutrition, Technical University of Denmark. 50 p. Including 15 color photos, each with a caption. [30 ref]

• **Summary:** Discusses tempeh made from broad beans (*Vicia faba*), cowpeas (*Vigna sinensis*), barley and/or wheat, broad beans plus barley or wheat (the best taste was obtained from 2 parts by boiled weight wheat plus 1 part broad beans). Taste tests by Danish judges of broad bean tempeh, wheat + broad bean tempeh, and soybean tempeh, each fried, gave soybean tempeh the highest ratings. Taste tests by 19 African judges from 10 countries showed that fried broad bean tempeh was acceptable to 16 of 19. Danish judges found cowpea tempeh just as acceptable as soybean tempeh.

Jensen made a 3-week trip to Ghana and Nigeria to discuss the tempeh concept with local people and to obtain more information about local legume preparation and consumption. Africans will find it hard to accept uncooked tempeh, since the mold reminds them of a food in the process of deterioration. Moreover, West Africans did not like the taste of cowpea tempeh. Two other problems are obtaining, propagating, and storing the tempeh starter/inoculum, and storage and distribution of the fresh tempeh. Address: Lyngby, Denmark.

• **Summary:** Discusses soy flour tempeh. Address: National Inst. of Chemistry, Bandung, Indonesia.

501. Batra, L.R.; Millner, P.D. 1976. Asian fermented foods and beverages. *Developments in Industrial Microbiology* 17:117-28. [53\* ref]

• **Summary:** "Kenima. This soybean product is known from Nepal, Sikkim, and Darjeeling districts of India. Externally, it resembles Indonesian *tempeh* and is consumed in the same manner: salted, deep-fried, and used as an adjunct to staples such as rice. Soybeans, soaked and dehulled, as described above, are cooked in water for 2-3 hours, presumably inoculated by chance inoculum, and wrapped in leaves of banana or other large leaves. In 24-48 hours at 22-30°C, and sometimes longer, the beans become mucilaginous. No yeasts or filamentous fungi were recovered consistently from the three samples analyzed from Darjeeling, but two rod-shaped, acid-producing bacteria, present at levels of 1-10 million per gram of wet weight, were recovered. Uncooked *kenima* was unappealing to the western taste but when deep-fried and salted, it had a pleasant, nut-like flavor." A photo shows *kinema* spread on a mat as sold at market places in northeast India.

Note 1. This is the earliest document seen (Aug. 2010) that uses the word "kenima" to refer to "kinema." It is actually much more closely related to natto than to tempeh in consistency, appearance, and type of fermentation organisms used.

Note 2. In 1986 Batra stated that in this 1976 publication the incubation temperature of "kenima" was erroneously reported as 22-30°C; it should have been 35-45°C. Address: ARS, USDA, Beltsville, Maryland 20705.

502. Beuchat, Larry R.; Basha, S.M.M. 1976. Protease production by the oncom fungus, *Neurospora sitophila*. *European J. of Applied Microbiology* 2(3):195-203. [12 ref]

• **Summary:** "Maximal activity of protease of extracted from 4-day-old cultures occurred at pH 6.5 when an unfractionated peanut (groundnut) protein substrate was used. The greatest protease activity and mycelium production occurred during the first day of the 4-day test period." Address: Dep. of Food Science, Univ. of Georgia Agric. Exp. Station, Experiment,

GA 30212.

503. Directions for tempeh fermentation. 1976. Peoria, Illinois: USDA NRRC. 1 p. Sent to those ordering tempeh starter. Unpublished manuscript.

• **Summary:** Steps 1-7 describe how to make tempeh in a typical home. A footnote at the end of step 7 states: "(1) The odor of the fermented product should be pleasant without the odor of ammonia. If this odor is present, then the fermentation has gone too long. (2) Any other unpleasant odor indicates the development of undesirable bacteria."

Step 8 (a basic recipe) states: "This mass of mycelium and beans is then sliced into thin slices about ½ cm. or less in thickness, dipped into salt water, and fried in a vegetable oil. The slices will become a golden brown color and are delicious when hot. One may want to salt to suit one's taste and some like to add soya sauce or ketchup to the hot, crisp slices."

Suggested containers: The tempeh should be fermented in shallow metal trays or perforated plastic bags at 31°C (88°F) for 20-24 hours.

Note: Although no authors' names appear on this sheet, it was written by Dr. H.L. Wang and co-workers. Address: NRRL, Peoria, Illinois.

504. Essen, Berty van. 1976. Vegetarisch kookboek [Vegetarian cookbook]. Bussum, Netherlands: C.A.J. van Dishoeck. 126 p. Illust. 22 cm. Recipe index. [Dut]  
• **Summary:** Soy-related recipes include: Fried tofu (Gebakken tahoe, p. 38). Soybean dish with vegetables (Sojabonenschotel met groenten, p. 104-05). Fried tempeh (Gebakken tempé, p. 106). Address: Hilversum, Netherlands.

505. Gandjar, I.; Slamet, D.S. 1976. The nutrient content of fermented *Mucuna pruriens* seeds [tempe benguk, or velvet bean tempeh]. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. 225 p. See p. 201-06. [9 ref]

• **Summary:** The mature seeds of *Mucuna pruriens* are mostly consumed by people living in Central Java in a fermented form known as 'tempe benguk'. Physically the bean cake, the tempe benguk, resembles tempe from soybeans. It is consumed fried or mixed with vegetables in soups as a side dish with rice. Address: Nutrition Research Inst., Bogor, Indonesia.

506. Hakim, Rusli. 1976. Grain legumes in Indonesia. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. 225 p. See p. 1-7. [3 ref]

• **Summary:** Grain legumes have long been grown in Indonesia; traditional uses include bean curd [tofu], tempe [tempeh], oncom [onchom], soysauce, soypaste, and roasted nuts.

Tables show: (1) A ten year average of production, acreage, and yield of soybeans in Indonesia, 1961-1971—by province. The provinces with the highest average production are: East Java (Jawa Timur) 249,651. Central Java (Jawa Tengah) 75,775. West Nusa Tenggara (Nusa Tenggara Barat) 26,659. West Java (Jawa Barat) 18,319. Yogyakarta 11,952.

(3) Per capita consumption of soybeans in Indonesia 1970 (kg per capita per year). West Nusa Tenggara (Nusa Tenggara Barat) 14.14. East Java (Jawa Timur) 5.04. Central Java (Jawa Tengah) 5.04. West Java (Jawa Barat) 5.04. Yogyakarta 5.04. Jakarta 5.04. Bali 3.43. Address: Central Research Inst. for Agriculture, Bogor, Indonesia.

507. Hermana, -. 1976. Saving the protein waste from processing of legumes in Indonesia. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. 225 p. See p. 195-200. [11 ref]

• **Summary:** Contents: Introduction. The protein waste: Peanut soybean, mungbean. Utilization of the waste.

Tables show: (1) Food legumes available in Indonesia. The three columns are: Latin name, English name, and Indonesian name. Shows 22 food legumes available in Indonesia, from Ochse (1931) and Aykroyd (1969).

(2) Food legumes usually processed. Discusses hunkwe, made by extracting the starch from the mung bean or kacang ijo (*Vigna radiata*, now *Phaseolus aureus*) with water.

(3) Indonesian fermented foods made from waste products. Include dage (made from oncom), oncom (made from peanut presscake or okara), tempe bongkreng (made from coconut presscake), tempe gembus (okara tempeh), tempe mata kedede (made from the hypocotyl of the soybean).

(4) Nutritive composition of kecap (per cent): Both peanut kecap and soybean kecap. Address: Nutrition Research Inst., Bogor, Indonesia.

• **Summary:** Contents. Foreword. Acknowledgment. Introduction. 1. Nutritive value. 2. Utilization. 3. Cost and return analysis of soybean production. 4. Marketing. 5. Cultural management: Selection of varieties, adaptation (soil and climate requirements), land preparation, inoculation, planting, water management, fertilization, crop protection. 6. Post-harvest handling: Threshing, drying, storage. 7. Soybeans in multiple cropping. 8. Seed production. 9. References. Appendices: A. Standardization of soybean. B. Multifarious uses and preparation of soybean and by-products. C. Climate in the Philippines. D. Available inoculants and their distributors. E. Symptoms and first aids for pesticide poisoning. F. Addresses of manufacturers and distributors of pesticides. G. Glossary. Appendix tables. Tables. Figures.

A summary of soybean area, production, and yield in the Philippines, 1959-1975 follows: The number of hectares used for planting soybeans went from 1,690 ha. in 1959 up to 2,200 ha. in 1962, and then decreased annually until it was only 1,240 ha. in 1973. However, a record high of 2,780 ha. was reached in 1974, followed by 2,018 ha. in 1975. Production of soybeans was low in 1959-60, only 571.8 and 981.3 tons, respectively. By 1962, however, production had increased to 2,066.9 tons, but decreased steadily over the years until 1974. In 1974, a maximum of 2,214.0 tons was produced. The corresponding annual yields (tons/ha.) reflect the sharp rise of soybean production in 1961-62 and the ensuing decline of the industry throughout the rest of the

1960s and early 1970s, until 1974, when production soared to new heights. Address: PCARR (Philippine Council for Agriculture and Resources Research), Los Baños, Laguna, Philippines.

AID AG/TAB-225-12-76. 197 p. AID contract report. Undated. No index. 27 cm. Spiral bound. [65 ref]

• **Summary:** Contents: Introduction. Home and village traditional soybean foods by country. 1. Soybean food uses and production in Asia. Soaking dry soybeans. In China: Tou Chiang (soybean milk; preparation, ways of serving), tou fu (soybean curd; yen-lu is the Chinese name for nigari), tou fu nao (soft curd), tou fu kan (dry / firm bean curd), chien chang (pressed tofu sheets), yu tou fu (fried tofu), tung tou fu (frozen tofu), tou fu pi (protein-lipid film; yuba), huang tou ya (yellow bean sprout or soybean sprout), mao tou (hairy bean, green soybean, or immature soybean), dry soybeans (roasting and frying, stewing and boiling), roasted soybean flour. Fermented soybean foods. Production and consumption of soybeans (China and Taiwan).

Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products (aburage or age, nama-age and ganmo), kori tofu (dried-frozen tofu), yaki tofu (grill tofu), yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu

no moyashi (soybean sprouts), edamame (green vegetable soybeans), whole soybeans, kinako. Fermented soybean foods: Production and consumption.

Korea: Tubu (soybean curd), soybean sprouts, whole soybeans (green soybeans, parched or roasted soybeans, boiled soybeans), soybean flour, soysauce, bean paste [Korean soybean miso], natto (no Korean name is given), production and consumption of soybeans.

Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap or soysauce, tauco or bean paste [miso]), food mixtures (Saridele, Tempe-fish-rice or TFR, Soy-rice baby food, soybean residue [okara]-fish-rice), production and consumption of soybeans.

Thailand. Philippines: Soybean sprouts, soybean coffee, soybean cake (made from equal amounts of soybean flour and wheat flour), soybean milk, tou fu and processed tou fu products, production and consumption. Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. West Asia [Middle East; Iran and Turkey]. References—Soybean food uses in Asia.

2. Soybean food uses and production in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References—Soybean food uses in Africa.

3. Soybean food uses and production in Europe [both Eastern and Western]. 4. Soybean food uses and production in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela (fried arepas with textured soy). Mexico: New village process, commercial developments of soy-based food products, Gilford Harrison, Ruth Orellana, Seguras Social. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References—Soybean food uses in Latin America.

5. Soybean food uses and production in North America. United States: Oriental populations, vegetarian communes, The Farm in Tennessee. Canada. References—Soybean food uses in North America. 6. Soybean food uses in Oceania. Australia. New Zealand. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprout, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soysauce, fermented soybean paste, fermented whole soybeans [Toushih, hamanatto], natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Recent simple soybean processes, other than traditional. Simple village process for processing whole

soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. Foods from whole soybeans developed at the University of Illinois (drum dried flakes, canned and homecooked soybeans, soy beverages and beverage products, spreads, snacks).

Ways of cooking and serving soybeans in the American diet. 9. Industrial processes. Industrial production and selling prices of edible soybean protein products. 10. Barriers to acceptability and utilization of soybeans in food and research recommendations: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer. Research recommendations [concerning each of the above barriers].

Concerning Morocco: Cereal-soy blends have been used extensively in Morocco; in fiscal year 1974 some 14.7 million lb were shipped to Morocco. Mmbaga (1975) reported that soy flour is being used in making porridge, with 1 part soy flour to 3 parts maize / corn flour.

Tables show: (1) Soybean production and imports in Taiwan, 1962-1975 (tonnes = metric tons, p. 33). Production rose from a 53,000 tonnes in 1962 to a peak of 75,200 tonnes in 1967, then fell to 61,900 tonnes in 1975. Imports skyrocketed from 62,400 tonnes in 1962 to a record 827,300 tonnes in 1975. (2) Consumption of soybean foods in Taiwan, 1964-1974 (kg/capita/year, p. 34). Total soybean foods not including tofu rose from 1.08 kg in 1964 to a peak of 2.61 kg in 1972 then fell to 1.99 kg in 1974. Consumption of tofu (80% water) rose from 18.75 kg in 1964 to a peak of 33.89 kg in 1972, then fell to 32.04 kg in 1974. (3) Supply and disposition of soybeans in Japan, 1971-1974 (p. 49). Total supply is beginning stocks, plus domestic production, and imports. Total disposition is crushing, plus traditional foods and feed. In 1974 imports accounted for 87.5% of the supply, and crushing accounted for 71.0% of the disposition. (4) Whole soybeans used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 50). Tofu and others rose from 508,000 in 1970 to 539,000 in 1974. Miso rose from 177,000 in 1970 to 192,000 in 1974. Shoyu rose from 13,000 in 1970 to 14,000 in 1974. (5) Defatted soybean meal used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 51). Shoyu rose from 163,000 in 1970 to 176,000 in 1974. Tofu and others was constant at 130,000 from 1971 to 1973. Miso decreased from 4,000 in 1970 to 2,000 in 1974. (6) Production of traditional soybean foods in Japan, 1970-74 (tonnes / metric tons, p. 52). Tofu and others rose from 1,867,800 in 1970 to 2,264,900 in 1973. Shoyu rose from 1,334,1000 in 1970 to 1,455,800 in 1974. Miso rose from 552,200 in 1970 to 587,200 in 1974. (7) Production and food use of beans [various types] and consumption of some soybean products in Korea, 1964-1967 (p. 56-57). In 1967 consumption (in tonnes / metric tons) was: Bean curd 290,000. Bean sprouts 270,000. Bean

sauce 69,700. Bean paste 27,700. Total: 11.6 kg per capita per year. (8) Soybean production in Indonesia, 1960-1974 (p. 65). It rose from 442,862 tons in 1960 to 550,000 tons in 1974. (9) Consumption of soybeans in various parts of Indonesia in 1970 (p. 66). (10) Production of soybean foods in the province of Central Java, 1968-1972 (tons, p. 67). Kecap rose from 914,695 in 1968 to 1,524,000 in 1972. Tahu decreased from 18,570 in 1978 to 17,000 in 1972. Tempe rose from 506 in 1968 to 39,000 in 1972. (11) Area planted to soybeans and total soybean production in Thailand, 1964-1974 (p. 70). Area rose from 213,000 rais (6.25 rais = 1 ha) in 1964 to 1,016,000 rais in 1974. Production (in metric tons) rose from 31,300 in 1964 to 252,400 in 1974. (12) Utilization of soybeans by soybean-consuming countries, 1964-66 (based on FAO 1971 Food Balance Sheets, 1964-66 average, p. 150). The countries leading in per capita consumption (kg/person/year) are: China (PRC) 6.7. Japan 5.1. Korea(s) 5.0. Singapore 4.3. Indonesia 2.8. Malaysia 2.6. Taiwan (ROC) 1.1. (13) Amounts of cereal-soy blends distributed under Title II, Public Law 480 in fiscal year 1974 (p. 152-155). (14) U.S. exports of full-fat soy flour, 1974-75 (p. 156).

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “tubu” to refer to Korean-style tofu. Address: Northern Regional Research Center, Agricultural Research Service, Department of Agriculture, Peoria, Illinois 61604.

517. Winarno, F.G.; Hardjo, S.; Rumawas, F. 1976. The present status of soybean in Indonesia. Bogor, Indonesia: FATEMETA, Bogor Agriculture University. xxiii + 128 p. 29 cm. [7 ref]

• **Summary:** The best and most comprehensive survey up to this time on the subject, it was done as part of the 1974 Industrial Census of the Central Bureau of Statistics. Full of valuable statistics and tables. Contents. Preface. Summary. List of tables. List of figures. I. Introduction. II. Objectives and survey methods: A. Objectives. B. Survey methods. III. Cultivation, product handling and protection: A. Botany of the soybean. B. Varieties. C. Growth requirements. D. Agronomy of soybean. E. Crop Management. F. Harvesting and product handling.

IV. Production: A. Harvested acreage, production and average soybean yield in Indonesia. B. Center production areas. C. Harvested acreage of soybean versus other food crops. D. Factors affecting soybean production. V. Farm management and soybean marketing in Indonesia: A. Farm management. B. Marketing of soybean.

VI. Soybean utilization (p. 52): A. Soybean products: Introduction, yuba, sere (from Bali: cooked whole soybeans, mixed with onions, hot pepper, turmeric, salt, and coconut presscake; molded into patties, sun dried, then deep fried), soybean milk, tofu (coagulated with *biang* or *sioko* {calcium sulphate}), soybean sprouts (*tauge*), soybean powder

(soybeans that have been cooked, dried, dehulled, and pounded), soybean mixtures, kecap (Indonesian soy sauce), oncom (fermented soybean product, red or black), tauco (Indonesian-style miso), tempe. B. Soybean utilization: Utilization by farmer (in each of 6 provinces and total), utilization by processor (tempe, tofu, kecap, miscellaneous), census conducted by Central Bureau of Statistics, conversion factor for soybean products. C. Consumption of soybean and its processed products (by province). D. Other components. Appendixes.

Tables in body of text: (1) Brief description of recommended soybean varieties. (2-3). Insecticides used against *Agromyza* and *Phaedonia inclusa*. (4) Soybean harvest seasons in Indonesia (major harvest months, by province). (5-8) Harvested acreage, production, and average soybean yield during 1950-73, 1960-74, and in Java-Madura (1967-71, 1972, 1973, and 1974). (9) Soybean acreage in Java-Madura. (10) Major production areas in Java-Madura, and average 5-year yield, 1965-69. (11) Harvested acreage of soybeans vs. other crops in Java-Madura, 1971-72. (12) Production cost and value per hectare of soybeans. (13) Major trading and harvest months. (14-15) Percentage of farmer's share and marketing cost of the trade price in various provinces. (16) Percentage of farmer's share of the trade price. (17) Soybean utilization by farmers, 1975-76. (18-21) Production/consumption of tempeh, tofu, kecap, tauco, taugé, yuba, and sere.

(22-29) Raw material utilized by small-scale processors and by soybean home industries in Java and Jakarta. (30-31) Value of raw material and end products of small-scale industries over 3- and 12-month periods. (32) Conversion factor of soybean products to raw material. (33-36) Average daily consumption per capita of soybean and its process products at villages in Lampung, Yogyakarta, East and West Java, and in 4 other provinces. Address: FATEMETA, Bogor Agricultural Univ., Indonesia.

518. Associated Press (AP). 1977. Food poisoning takes 69 lives. *Daily Colonist* (Victoria, BC, Canada). Jan. 9. p. 28, col. 5.

• **Summary:** “Sixty-nine persons died and 265 others in East Java were in hospital for food poisoning after eating tempe, a local dish made from soy beans, the daily newspaper *Kompas* reports.”

Note: The tempeh that killed these people was probably tempe bongkreng, made from shredded coconut presscake rather than from soybeans. There are no known reports of soybean tempeh being toxic, but many reports of coconut presscake being toxic.

519. Shurtleff, William. 1977. Re: Our stay with you at The Farm. Tempeh pamphlet. Letter to Cynthia and Albert Bates, The Farm, Summertown, Tennessee, Jan. 19. 2 p. Typed, without signature (carbon copy).

• **Summary:** “We really enjoyed our stay with you and were greatly inspired by what we learned about tempeh. Somehow we got a much clearer vision of its potential in America in communities, homes, and on a commercial level. We especially dug working together with you on the first joint Farm / New Age Foods Study Center publication [“What is Tempeh?”]. The evening of our program in Louisiana, we stayed with John and Katherine Gabriel in Houma and got some good ideas from them to.

“Finally, during five days of being snowed in in Fayetteville [Arkansas] and St. Louis [Missouri], I had a chance to read carefully through all of the literature we have on the subject. The result of all this was a decision to amplify the pamphlet we did with you at the farm. We preserved everything we did together, but added a lot more interesting details to it—such as a history of tempeh, how to make tempeh with grains and soy pulp, names and addresses of people and institutions in America and Indonesia interested in tempeh, etc. We hope you like it. Now, we would very much like to get this information out to people around the world and would like to work with you in doing this. How?” Address: New-age Foods Study Center, Traveling in Boulder, Colorado.

520. **Product Name:** Tempeh.

**Manufacturer's Name:** Country Store Health Foods.

**Manufacturer's Address:** 8720 Sunland Blvd., Sun Valley, CA 91352. Phone: 213-768-6373.

**Date of Introduction:** 1977. January.

**New Product–Documentation:** Shurtleff and Aoyagi visited this small tempeh shop in Jan. 1977. They met Joan Harriman and included the company in a list of tempeh shops in North America in the 1977 edition of “What is Tempeh?”

Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 148. Owner: Joan Harriman or Buddy Tjandrawibawa; a natural foods store.

Letter from Joan Harriman, R.D. 1979. Nov. 1. She orders 68 copies of *The Book of Tempeh*. She plans to do a booth on tempeh. Address is the same as shown above.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Joan Harriman.

521. Goldman, Sherman. 1977. Charles Atlas versus the Bodhisattva: An interview with Bill Shurtleff and Akiko Aoyagi. *East West Journal*. Jan. p. 32-35.

• **Summary:** An in-depth discussion of the work of Shurtleff and Aoyagi with tofu, miso, and tempeh in the USA, Japan, and Indonesia. Photos show: Shurtleff speaking into a microphone. Akiko Aoyagi smiling. Shurtleff and Aoyagi standing next to their white 1975 Dodge Van on the side of which is written: “New-Age Foods Study Center–Tofu & Miso America Tour, 1976-77.”

522. Magboul, Bahi El Din I.; Lein, H.T. 1977. Tempeh,

a fermented soybean food. *Sudan J. of Food Science and Technology* 9:24-26. Jan. [3 ref]

• **Summary:** The authors produced tempeh using different concentrations of *Rhizopus oligosporus*. The best quality was obtained by incubating the inoculated soybeans for 48 hours at 30°C. Address: Dep. of Food Science, Agricultural Univ. of Wageningen, Netherlands. Magboul moved to the Food Research Centre, Shambat, Sudan.

523. Ruttle, Jack. 1977. Tempeh keeps ‘em coming for more soybeans. *Organic Gardening and Farming* 24:103, 106, 108-11. Jan.

• **Summary:** Last year OGF R&D food technologist Mark Schwartz began to work with Dr. Hwa Wang of the Northern Regional Research Laboratory at Peoria, Illinois, to develop a simple, inexpensive way to make tempeh at home. Once a good method was developed, Mark, Nancy Bailey and Marc Podems packed cracked soybeans, Dr. Wang's tempeh starter from the NRRL, and detailed instructions, then sent them to 60 readers, who were asked to make tempeh following the instructions and give their comments. The responses were very favorable. Most described tempeh as delectable. Some said it tasted like seafood, others like fried chicken.

The article then describes how to make tempeh at home and gives a nice illustration of the incubator. Contains a recipe for fried tempeh, from *The Book of Tempeh* by Shurtleff and Aoyagi. Cracked soybeans can be ordered from The Farm in Summertown, Tennessee. Tempeh starter can be ordered from Dr. Wang at the NRRL.

524. Shurtleff, William; Aoyagi, Akiko. 1977. What is tempeh? Lafayette, California: New-Age Foods Study Center. 14 p. Unpublished manuscript. Jan. Published as a 4-page tan leaflet later in 1977 with the addition of 4 Los Angeles tempeh shops. Revised, published edition, Oct. 1980. Also reprinted by many tempeh shops under their logo. Unpublished manuscript.

• **Summary:** Contents: Introduction. A rich source of nutrients. Tempeh in Indonesia. A brief history of tempeh. Making tempeh at home: Homemade soy tempeh (using 2½ cups soybeans), homemade okara- or coconut press-cake tempeh, homemade grain- or grain & soy tempeh. Storing & preserving tempeh. Favorite tempeh recipes: Deep-fried tempeh. Pan-fried tempeh. Tempeh chips. Tempeh, lettuce & tomato sandwich. Tempeh burger, and 11 others. Soybeans and the world food crisis. Making tempeh starter at home. Making tempeh in a community or commercial shop. People & institutions connected with tempeh: Research scholars and institutes in North America, tempeh shops in America (7), individuals interested in tempeh in America (4), research scholars and institutes in Indonesia and Japan (5). Address: 790 Los Palos Dr., Lafayette, California 94549.

525. Shurtleff, William. 1977. Soy foods: Protein source of

the future—now. Paper presented on 1976-77 Tofu & Miso America Tour. 16 p. transcript. Unpublished manuscript. [5 ref]

• **Summary:** This is the transcript of a speech given on 15 Jan. 1977 in Kansas, but a similar speech was given by Shurtleff at 70 public programs throughout the USA. Contents: World hunger and its causes: Population growth, affluence and the feedlot system, land misuses and international food exploitation. Vegetarian diets as a solution to degenerative diseases and food problems. Soybeans in America. Soybeans and soyfoods in East Asia: Tofu, miso, tempeh, shoyu. The future of soybeans on the planet. Address: New-age Foods Study Center, 790 Los Palos Dr., Lafayette, California 94549. Phone: 415-283-3161.

526. Arbianto, Purwo. 1977. Arah-arrah baru dalam proses pembuatan tempe [New directions on the tempeh making process]. Presented at Lokakarya Bahan Pangan Berprotein Tinggi (Conference on High Protein Food). Held 22-24 Feb. 1977 at Bandung. [Ind]\*

527. Lembaga Kimia Nasional—LIPI (National Chemistry Institution). 1977. Dasar-dasar proses pembuatan tempe [Elements of tempeh processing]. Presented at Lokakarya Manajemen Perusahaan Tempe (Seminar on Management of Tempeh Manufacturing). Held 31 Jan. to 5 Feb. 1977 at Lembaga Kimia Nasional LIPI, Bandung, Indonesia. [Ind]\*

• **Summary:** Discusses soy flour tempeh.

530. Shurtleff, William. 1977. Re: Bali Foods becoming a commercial supplier of tempeh starter culture. Letter to Mr. Henoeh Khoe at Bali Foods, Baldwin Park (Los Angeles area), California 91706, March 6. 1 p. Typed, with signature on letterhead (photocopy).

• **Summary:** “I am writing concerning a business proposal... It concerns the possibility of Bali Foods becoming a supplier and producer of *Rhizopus oligosporus*, the starter

or inoculum that could be used by people around North America who wish to make their own tempeh. At present there is a great demand for this starter and not one single commercial supplier.”

According to a letter from Dr. H.L. Wang of the USDA Northern Regional Research Laboratory in Peoria, Illinois, they are now receiving an average of 30 requests for tempeh starter daily, and have been during the past 3 months. Address: New-Age Foods Study Center, c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

531. Shurtleff, William. 1977. What is tempeh? *Macrobiotic (The) (Chico, California)* No. 118. p. 13-14. March.

• **Summary:** Contents: Introduction. A rich source of nutrients. Tempeh in Indonesia. A brief history of tempeh.

Note: This article is continued in the next issue, p. 16-18. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

532. Sudarmadji, Slamet; Markakis, Pericles. 1977. The phytate and phytase of soybean tempeh. *J. of the Science of Food and Agriculture (London)* 28(4):381-83. April. [13 ref]

• **Summary:** In the process of making tempeh, the “phytic acid content of soybeans was reduced by about one-third as a result of this fermentation, while an equivalent amount of phosphate was released in the tempeh. The reduction of phytic acid was due to phytase elaborated by the mould of the fermentation. The pH optimum of this enzyme was 5.6.” Address: Dep. of Food Science and Human Nutrition, Michigan State Univ., East Lansing, Michigan 48824.

533. Gullion, Laurie. 1977. Tofu: High protein food. *Recorder (Greenfield, Massachusetts)*. May 28. p. 13.

• **Summary:** The Laughing Grasshopper Tofu Shop in Millers Falls, Massachusetts, is tucked away beside the Millers Falls Library. “The four-month-old shop in Millers Falls was created by four persons who strongly believe in self-employment and are committed to healthful foods.

“Richard Ira Levitan [sic, Leviton] and Kathy Whelan began the Corncreek Bakery on South Deerfield in 1974, a thriving business which abstains from using any dairy or animal products in its baked goods. Tom Timmons [sic, Timmins] is a past manager of the Yellow Sun Natural Foods Cooperative in Amherst, and Michael Cohen was instrumental in beginning the Equinox Restaurant in Amherst.

“‘We want to put cows out of business,’ said Leviton. Tofu can be used like dairy products in preparing meals at a much cheaper price, and Leviton said the food staple differs from dairy and beef products in that it is low in calories, free of cholesterol and, thus, helps avoid arteriosclerosis and obesity. Cohen, a vegetarian, believes tofu is an excellent meat substitute...”

“The Laughing Grasshopper Tofu Shop produces 600 pounds of tofu in a nine-hour day... They distribute their product to Boston, New York City, Baltimore (Maryland), Vermont and New Hampshire. The tofu is sold locally at Foster’s Supermarket.”

A photo shows Michael Cohen and Jon Lee flipping a tofu settling box. Leviton’s name is misspelled as Levitan throughout the article.

Note 1. This is the earliest article seen (Sept. 2011) about the Laughing Grasshopper Tofu Shop.

Note 2. This is the earliest document seen (Sept. 2011) that mentions Michael Cohen in connection with soyfoods; he was an early partner in Laughing Grasshopper (later New England Soy Dairy) and founder of The Tempeh Works.

534. **Product Name:** The Complete Kit for Making Tempeh (With Soybeans & Starter & Instructions).

**Manufacturer’s Name:** Farm Foods.

**Manufacturer’s Address:** 156 Drakes Lane, Summertown, TN 38483.

**Date of Introduction:** 1977. May.

**Ingredients:** Split, dehulled soybeans, tempeh starter, complete instructions and recipes for cooking at home.

**Wt/Vol., Packaging, Price:** 1 or 3 lb.

**How Stored:** Shelf stable.

**New Product–Documentation:** Catalog. 1977. “The delicious nutrient-rich soybean food from Indonesia. Makes six pounds.” Below that are the words “Farm Foods” with a circular logo between the two words. The logo shows rows of crops (soybeans) in a field converging in the distance at the foot of three mountains. Label. Kit weighs 3 lb.

Farm Foods. 1978. *Products Catalog*. 8 p. See p. 4. “Tempeh kits are available in 1 and 3 lb. display packages, offering starter, instructions, recipes, and conveniently split, dehulled soybeans. Tempeh starter is available separately with instructions and recipe flyer. Split, dehulled soybeans are also available from Farm Foods in bulk quantities.” Photos show: (1) The kit, in a brown bag with a large label on the front. (2) The front of the package of “Tempeh Starter & Instructions.” (3) A person holding a thin cake of tempeh in both hands. A table shows the nutritional value of 100 gm of tempeh.

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods*. p. 189. A photo shows the label. In Nov. 1979 enough Farm Foods tempeh starter to make 7 lb of tempeh costs \$1.35, or \$0.225 per pound.

Steinkraus, Keith H.; et al. 1983. *Handbook of Indigenous Fermented Foods*. New York, NY: Marcel Dekker. ix + 671 p. Microbiology Series, Vol. 9. See p. 616 for a photo of this tempeh kit.

535. Shurtleff, William. 1977. Homemade tempeh. *Macrobiotic (The) (Chico, California)* No. 119. p. 16-18. May.

• **Summary:** Describes (without illustrations) how to make 1.5-2.5 lb of tempeh at home. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

536. Shurtleff, William; Aoyagi, Akiko. 1977. Favorite tempeh recipes. *Organic Gardening* 24:112, 114. June.

• **Summary:** Contains recipes for: Deep-fried tempeh. Pan-fried tempeh. Tempeh, lettuce and tomato sandwich. Batter-fried tempeh. Tempeh on pizza. Tempeh in tortillas, tacos, or pita. Tempeh in soups and stews. Broiled or barbecued [barbecued] tempeh. Address: c/o New-Age Foods Study Center, 790 Los Palos Dr., Lafayette, California 94549. Phone: 415-283-3161.

537. Wang, Hwa L.; Swain, E.W.; Hesseltine, C.W. 1977. Calling all tempeh lovers. *Organic Gardening and Farming* 24:108-11. June.

• **Summary:** "Over 3,000 people have asked us for tempeh starter... since our offer first appeared in the Jan. 1977 issue of *Organic Gardening and Farming*. We sent everyone a packet with just enough to make several batches, but we were just too busy getting the starter in the mail to answer all the questions about making tempeh."

Discusses: How to keep the first batch of tempe going at home—i.e. use the microorganisms from that first tempeh to make more sequential batches. How to make your own tempeh starter on a rice substrate in a mason jar. Making tempeh from other grains such as wheat, oats, rye, barley, or rice, alone or in combination with soybeans (defatted soy grits are not suitable for making tempeh). The NRRC can no longer send out small packets of tempeh starter. Please order it from OGF in Emmaus, Pennsylvania. Address: NRRC, Peoria, Illinois 61604.

538. Wang, Hwa L. 1977. Re: Tempeh starter and questions concerning tempeh. Letter to William Shurtleff at New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan, July 6. 2 p. Typed, with signature on letterhead.

• **Summary:** Dr. Wang encloses a package of tempeh starter which Shurtleff requested in his letter of June 18. She then answers four questions that Shurtleff asked related to tempeh. Address: USDA ARS North Central Region Northern Regional Research Lab., 1815 North University St., Peoria, Illinois 61604.

539. Nofziger, Margaret. 1977. Re: Instructions for making tempeh. Albert and Cynthia Bates. Letter to William Shurtleff, July 11. 2 p. Typed, with signature on letterhead.

• **Summary:** The letterhead contains the words "Farm Foods" (in light blue) with a thin outline around each word. Between the two words is a circular logo, which shows rows of crops (soybeans) in a field converging in the distance at the foot of three mountains. Below the logo is the phone number. Address: Farm Foods, 156 Drakes Lane, Summertown, Tennessee 38483. Phone: (615) 964-3575.

540. Mulyadi, Tri Suharni; Sutarto, E.E. Sutariningsih; Sidemen, I.G.P. Badjra. 1977. Protein terlarut pada tempe kedelai yang dicampur dengan bahan berkarbohidrat [Soluble protein in soy tempeh mixed with carbohydrate-containing food]. In: Collected manuscripts (Kumpulan Naskah) from Seminar Biologi V. Held 7-9 July 1977 at Malang, Indonesia. [Ind]\*

541. Rodale, Robert. 1977. Tempeh, a new health food opportunity. *Prevention (Emmaus, Pennsylvania)*. July. p. 25-32.

• **Summary:** This outstanding article begins: "Gale Randall of Unadilla, Nebraska, is the first commercial tempeh-maker in the United States... Tempeh is on its way up, Before long, it will be eaten widely and lovingly across this land of ours. Someday there could even be a sign along Highway No. 2 in Southeastern Nebraska pointing to the gravel road that leads to where Gale Randall lives. It might say something like this: 'Here, in 1975, the tempeh revolution got its start.'"

Soybean sprouts and bean curd (tofu) are great foods, but they are side dishes that never occupy center stage. "Tempeh, in contrast, has the potential to be a real main course dish that could lead soybeans to the forefront of the health food advance. It has a firmness, body and flavor that could eventually lead to its acceptance as 'another thing to eat when the family's tired of chicken, beef and fish.'"

The section titled "The Nebraska Tempeh Pioneer, notes that Gale Randall works in the Lincoln, Nebraska, post office at night and operates his tempeh-making operation during the day. He discovered tempeh 3 years ago while searching for an inexpensive protein product he could make at home. Randall recalls that Dr. H.L. Wang, of the NRRL in Peoria, Illinois, "did everything possible to help me get started. She was wonderful. I've never had anyone help me like that." She provided Randall with tempeh starter culture and lots of free advice. Photos show Randall with his tempeh incubator and slicing finished tempeh.

The last section, titled "The Coming Soy Boom," talks about that work of C.R. Sirtori and co-workers in Milan, Italy, whose research has showed that soybeans have a powerful ability to reduce cholesterol levels in human beings. Rodale then adds: "The next phase in tempeh development, I feel, will be for more people like Gale Randall to set up small tempeh shops, from which they can supply health food and natural food stores." A sidebar at the end states that the USDA Northern Regional Research

Center has provided Rodale Press “with large amounts of free [tempeh] starter, which we are making available in individual packets to save the scientists a lot of clerical work. In addition, we also have illustrated plans for building an incubator as well as additional printed material on tempeh, including recipes. To receive this material, send your request, along with 50 cents to cover handling, to Prevention Tempeh Starter, 33 E. Minor St., Emmaus, Pennsylvania 18049.

A photo-like illustration (line drawing) shows Robert Rodale.

543. Leviton, Richard. 1977. Re: History of and current developments at Laughing Grasshopper Tofu Shop. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 23—in reply to inquiry. 7 p. Typed, with signature.

• **Summary:** An excellent letter, full of useful details! The company now produces 700 to 800 lb/day of tofu, 6 days a week. Seven people are employed: four partners, two full-time employees, and one part timer. Summer sales have averaged \$8,000/month. They are moving their shop of some 1,000 square feet to a new location of 7,000 square feet for only double the rent. They are importing equipment from Japan. “This winter we intend to commence soymilk production; next spring: tempeh, soy mayonnaise, soy ice cream, and agé. We have potentially a very exciting and massive business on our hands.”

Leviton then answers in detail the following questions asked by Shurtleff: How did you obtain equipment and ingredients? How did you learn to set up a shop? What type of equipment did you buy and how much did it cost? What about health inspectors and codes? How did you determine your prices and what are they? How did you choose the best variety of soybean to use? How and from whom do you buy your soybeans? Your nigari? Address: LGTS, 3 Main St., Millers Falls, Massachusetts 01349.

544. Rasmussen, Carol. 1977. Vegetarians straight off the farm: Soy is source of successful diet. *Chicago Tribune*. Sept. 8. p. E3, or p. W\_A3, or p. N\_83.

• **Summary:** This article is about The Farm, from Summertown, Tennessee, and their creative but strict vegetarian diet—that uses no meat, eggs, or dairy products.” Margaret Nofziger explains that Farm members are not food faddists; they eat cocoa, sugar, and white flour.

Most of their nutrients comes from soybeans. They grow 250 acres of soybeans a year and turn a significant portion of these into an incredible array of foods such as soy flour and soy milk. The soy milk is made into soy yogurt, mayonnaise, a cheese, tofu, soy ice cream, and tempeh (which is a

fermented soy product from Indonesia). The pulp that remains after making soy milk is used to make a meatless sausage; it also add to cakes, cookies, and other baked goods. Also on The Farm, soybeans are roasted to make nuts, and ground to make coffee. They have published recipe booklet titled “Yay soybeans.”

The Farm has a great deal of experience in cooking whole soybeans. The best way is to use a pressure cooker for 1 hour at 15 pounds pressure. Or you can cook them for at least 10 hours at atmospheric pressure.

A typical breakfast at The Farm might consist of toast, fried tofu, tea and sugar. Or perhaps fried potatoes and cheese [made from nutritional yeast] and hot soy milk and tea.

A cartoon has this caption: “Soybeans are the base for cheese, ice cream, sausage, and burgers.” Address: Food Guide editor.

545. East West Foundation. 1977. Food policy recommendations for the United States: Statement of Michio Kushi, September 21, 1977. 359 Boylston St., Boston, MA 02116. 32 p. 28 cm.

• **Summary:** On September 21, 1977, Michio Kushi and several associates, including Dr. Robert Mendelsohn, M.D., met in Washington with members of the White House staff. The meeting, which lasted approximately two hours, began with a 45 minute presentation of a series of recommendations by Michio Kushi, a description of the activities and goals of the East West Foundation (founded 1972), and a history of Erewhon (fiscal 1978 sales estimated at \$10 million). An outline of the East West Journal’s position on various political, social, and economic applications of the national food policy was also included in the meeting’s agenda.

Recommendations for seasoning foods and to aid digestion of grains, was traditional foods such as pickled vegetables and naturally fermented soy bean products (such as soy sauce, miso, tempeh, etc.). Note: Dr. Mendelsohn died in about May 1988. Address: Boston, Massachusetts. Phone: 617-536-3360.

546. Sastroamidjojo, M.S.A. 1977. Re: Design of a wet-process bean dehuller for making tempeh. Letter to William Shurtleff at New-Age Foods Study Center, Oct. 11—in reply to inquiry. 2 p. Typed, with signature.

• **Summary:** Discusses the principles of the design. Address: Dr., Solar Energy Research Centre, Faculty of Science, Gadjah Mada Univ., Sekip III, Yogyakarta, Indonesia.

547. Farm, The. 1977. How we make and eat tempeh down on the farm. *Mother Earth News* No. 47. p. 105-08. Sept/Oct.

• **Summary:** Most of the article describes how to make tempeh at home, with photos. Then there are sections on “Additional tempeh-checking tips” and “Questions and answers” about making tempeh at home, followed by

recipes: Tempeh burger. Deep-fried tempeh. Tempeh pizza. Cubed fried tempeh. Tempeh and noodles. Cajun tempeh jambalaya. One full page of color photos shows tempeh recipes.

Note: This is the English-language document seen (Jan. 2007) that contains the term “Tempeh burger” (or “Tempeh burgers”). Address: Summertown, Tennessee.

548. Kokke, R. 1977. Improvement of carob pods as feed by solid-substrate fermentation. *J. of Applied Bacteriology* 43(2):303-07. Oct. [23 ref]

• **Summary:** Chopped and autoclaved carob pods, were inoculated with *Rhizopus oligosporus* or *Monascus ruber* and incubated at 30°C for 3 days. The growing mycelium penetrated the particles to form a cake-like structure containing about 7% protein. Tempeh is mentioned briefly 3 times. Address: Lab. of Micorbiology, Delft Univ. of Technology, Julianalaan 67a, Delft, Netherlands.

553. Djurtoft, R.; Jensen, J. Stoumann. 1977. Tempe-like foods produced from broad beans (*Vicia faba*), cowpeas (*Vigna sinensis*), barley (*Hordeum vulgare*), wheat (*Triticum aestivum*), or mixtures thereof. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 59-64. Original manuscript is 23 p. [2 ref]

• **Summary:** The goal of this research is to make a tempe-like product using beans grown in Africa. Broad beans (*Vicia faba*) are well known in Africa, where they are used for preparing many dishes. Cowpeas (*Vigna sinensis*) are a familiar food in the countries south of the Sahara Desert. “To improve the nutritional value of the product, tempe made from mixtures of grain legumes and cereal grains was also studied.”

Contents: Tempe products from broad beans. Tempe products from cowpeas. Tempe products from cereal grains or from mixtures of legumes and cereal grains.

Tables: (25) Composition of dehulled broad beans. (26) Amino acids in dehulled cowpeas, broad beans, and soybeans. (27) Cowpeas and cowpea tempe products: Essential amino acid analyses and feeding tests. (28) Comparison of new tempe products with soybean tempe, essential amino acid analyses, and feeding tests.

Figures: (26) Flow sheet: Laboratory process for making

broad bean tempe. (27) Flow sheet: Laboratory process for making cowpea tempe. Address: Dep. of Biochemistry and Nutrition, Technical Univ. of Denmark, Building 224, DK-2800 Lyngby, Denmark.

554. Gandjar, I. 1977. Fermentation of winged bean seeds: Tempe kecipir. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 47-48. [12 ref]

• **Summary:** Discusses the fermentation process, the changes during fermentation (in pH, total solids, total acidity, amino nitrogen, and soluble carbohydrates), and the composition of raw winged bean seeds and winged bean tempeh. Twenty three recipes were prepared and found acceptable by a taste panel. In Indonesia, the winged bean is popularly known as *kecipir*. Other local names are *kaceper*, *jaat*, and *botor*. Address: Nutrition Research and Development Centre, Dep. of Health, Indonesia.

555. Gandjar, I.; Slamet, D.S.; Ekasari, I.; Kartosuwondo, D.; Rasyidi, L. 1977. Tempe from the solid waste of a *hunkwe* (mung bean starch) factory. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 56-57.

• **Summary:** Contents: Introduction. The fermentation process. Biochemical changes occurring in substrate during fermentation. Address: Dep. of Biology, Faculty of Mathematics and Natural Sciences, Univ. of Indonesia, Jakarta.

556. Gandjar, I. 1977. Tempe benguk [Velvet-bean (*Mucuna pruriens*) tempeh]. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 50-54.

• **Summary:** In Central and West Java, the velvet bean is already utilized by the Indonesian people. Grown in less fertile soil or in drier climates than soybeans and other tropical legumes, it sells for about half the price of soybeans. Therefore velvet-bean tempe (*tempe benguk*) is much less expensive than soybean tempe (*tempe kedele*)—and more available to the poor. This tempe is consumed as a side dish.

Tables: (18) Comparison of nutrients of tempe gembus with those of oncom (from peanuts) and other tempes (tempe koro benguk and tempe lamtoro). (19) The protein content of *Mucuna pruriens* seeds in Indonesia. (20) Changes in amino nitrogen and total acid content during the fermentation of tempe benguk with *Rhizopus oryzae* R128 and with *Rhizopus oligosporus* R116. (21) Changes in total amino

acids and total essential amino acids of tempe benguk during the fermentation process. (22) The amino acid content of the seeds of *Mucuna pruriens*, tempe benguk, soybean, and soybean tempe. Address: Dep. of Biology, Faculty of Mathematics and Natural Sciences, Univ. of Indonesia, Jakarta.

557. Gandjar, I. 1977. Tempe gembus [okara tempeh]. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 48-50.

• **Summary:** During World War II, when food was scarce, the people of Java used okara, the refuse of tahoo / tahu [tofu] factories, to make an acceptable, low-cost tempe. Today this kind of tempeh can be found in every market in Central and East Java, sold at a price that low-income people can afford. It is consumed (like most regular tempe) as a side dish for rice. The traditional fermentation, which is described, takes 2 days. The laboratory process is described in more detail. Address: Dep. of Biology, Faculty of Mathematics and Natural Sciences, Univ. of Indonesia, Jakarta.

Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 68. [14 ref]

• **Summary:** 0.5% NaCl inhibits production of bongkrek acid. Contains a lengthy bibliography on tempeh bongkrek. Address: Dep. of Food Science, Agricultural Univ., Wageningen, The Netherlands.

561. McComb, John. 1977. A study of the use of sweet lupins in tempeh, an Oriental food fermentation. Bachelor of Agricultural Science thesis, University of Western Australia. xi + 127 p. Nov. Illust. with 9 color photos. No index. 30 cm. [130 ref]

• **Summary:** Excellent review of the literature. Contents: List of tables, figures, plates. I. Introduction. II. A literature review: 1. A context for food research. 2. Microbiology of tempeh production. 3. Nutritional characteristics of tempeh. 4. New fermented food products. 5. Food uses of lupins. III. Experiments: 1. Culture preparation and preservation. 2. Preparation of lupins for fermentation and collective observations. 3. Tempeh fermentation: Inoculum potential for lupin tempeh production. 4. Energy content of lupin tempeh. 5. Human feeding test with lupin tempeh. 6. Consumer taste response survey. IV. Conclusions. References. Appendixes: 1. Yeast malt extract agar. 2. Blood and urine analysis. Daily diet. 3. Solids and energy losses during tempeh fermentation procedures. Address: Univ. of Western Australia.

562. Murata, Kiku. 1977. Antioxidants and vitamins in tempeh. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 38-40.

• **Summary:** "Murata attributed the improved nutritive value of tempeh to stabilization of the oil by antioxidants produced during the fermentation and synthesis of B vitamins. Stored tempeh does not develop rancidity" because the mold produces an isoflavone (factor 2) which acts as an antioxidant. "The antioxidant is not effective in preventing autoxidation of soybean oil and soybean flours" (p. 40).

Note: Autoxidation is any oxidation that occurs in open air or in presence of oxygen and/or ultraviolet (UV) radiation

and forms peroxides and hydroperoxides. Address: Dep. of Food and Nutrition, Teikoku Women's Univ., 173-6 Thoda-cho, Moriguchi City 570, Japan.

New York: Marcel Dekker, Inc. ix + 671 p. See p. 38-40. Original manuscript is 10 p. [9 ref]  
Address: Dep. of Microbiology, Kasetsart Univ., Bangkok, Thailand.

564. Steinkraus, Keith H. 1977. Enhancement of food quality by fermentation. *New York State Agricultural Experiment Station, Nutrition Council Report* No. 26. p. 21-25. Nov. [13 ref]

• **Summary:** Contents: Introduction. Meat-like flavor from vegetable proteins. Meat-like textures on vegetable substrates. Quick-cooking foods. A method for increasing the protein content of high starch substrates. Utilization of food and agricultural wastes to produce human food. References. Address: Cornell Univ.

565. Tanuwidjaja, Lindayati. 1977. Utilization of defatted soybean flour in tempeh fermentation. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. *Handbook of Indigenous Fermented Foods*. New York: Marcel Dekker, Inc. ix + 671 p. See p. 64-66.

• **Summary:** The highest quality tempe is made from whole dehulled soybeans. Lower qualities of tempe are made by adding varying amounts of waste products, such as the waste from tapioca flour processing (*onggok*), young papaya, okara (left over after making tofu or soymilk), and grated coconut after the milk is pressed out. The main reason for adding these waste products is to lower the cost of the tempe. "Even though tempe is considered to be a low-cost, protein-rich food, high-quality tempe is expensive for very low income groups." Moreover, the addition of these low-protein waste products lowers the protein content and nutritional value of the tempe. Therefore the tempeh was made from low-cost, high protein defatted soy flour. The final tempe was a solid cake covered with a white mold mycelium, having typical tempe flavor and texture. Address: National Inst. of Chemistry, Bandung, Indonesia.

566. **Product Name:** Tempeh.

**Manufacturer's Name:** Tempeh.

**Manufacturer's Address:** 310 Oxford St., Rochester, NY 14607.

**Date of Introduction:** 1977. November.

**New Product–Documentation:** Letter from Earl Lepper to William Shurtleff at New-Age Foods Study Center. 1977. Nov. 21. "Our shop simply called Tempeh is now located in our apartment. We have considered a cooperative shop with The Tofu Shop but overhead expenses prohibit. We are supplying regularly 2 co-ops, 1 health food store, and one branch of a health food chain."

Letter from Earl Lepper. 1978. Jan. 21. "Tempeh is growing slowly but surely. The incubator has a capacity for more than 80 lb of tempeh daily. As of this past week full production is now under way. The hold up has been to make ends meet while supporting a family of five. Now limiting carpentry and painting to tempeh seems more of a possibility. The market seems best for fresh daily at large co-ops and frozen at smaller health food stores and restaurants."

Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 149. Contact Earl Lepper.

Note: This is the earliest document seen (Sept. 2011) that gives tempeh production statistics for a particular manufacturing company in the United States.

567. Yeoh, Q.L.; Mercian, Z. 1977. Malaysian tempeh. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. *Handbook of Indigenous Fermented Foods*. New York: Marcel Dekker, Inc. ix + 671 p. See p. 41-42. Original manuscript is 14 p. [7 ref]

• **Summary:** Tempe is made as a cottage industry in Malaysia (see Fig. 23, a tempe maker working at home with a child nearby); it is sold in markets wrapped in banana or other leaves. The initial investment is very small—a few cooking utensils, mats, and trays. The main raw material is soybeans; a little wheat flour is sometimes added. The starter / inoculum is from a previous batch of tempe along with spores present on the leaf wrappers, and is thus free of charge. 1 kg of raw soybeans (which costs US\$0.60) can be made into an estimated 42 packets (48 gm each) of tempe which are retailed at 3 packets for US\$0.10. Thus a gross profit of US\$0.80 can be made from each kg of soybeans processed. This does not include the cost of fuel or of any banana leaves that must be purchased. Address: Agricultural Products Research Div., MARDI, Serdang, Selangor, Malaysia.

568. Perkins, David D. 1977. Re: *Neurospora*, the *Neurospora* Newsletter, and ontjom. Letter to William Shurtleff at New-Age Foods Study Center, Dec. 19. 1 p.

• **Summary:** Dr. Perkins would be glad to review the Appendix on onchom in the forthcoming *Book of Tempeh*. He has checked the 24 *Neurospora Newsletter* issues since it began in 1962. Nothing on ontjom is listed in the indexes. However he has found some early references to ontjom: Beadle (1945), and Moreau-Froment (1956, which includes 2 references to Nishiwaki on "tome-koji" or "kabocha-bana").

*Oidium lupuli* is one of the early names used for *Neurospora* before the sexual stage was described in 1927. Other early names for the mold are *Monilia sitophila* and *Monilia aurea*. Address: Prof. of Biology, Stanford Univ., Stanford, California 94305.

569. Dwidjoseputro, Dakimah. 1977. Re: The process for making tempeh in Malang. Letter to William Shurtleff at New-Age Foods Study Center, Dec. 26—in reply to inquiry. 2 p. Typed, with signature on letterhead.

• **Summary:** Describes the process. Address: Badan Penelitian dan Pengembangan IKIP Malang, Jalan Semarang No. 5, Malang, Indonesia. Phone: 5296.

570. Barrett, Clare. 1977. Tempeh (101 ways to have fun with a soybean). *Vegetarian Times* No. 22. Nov/Dec. p. 55. [1 ref]

• **Summary:** An article in praise of soybeans, tempeh, and *The Book of Tofu*. Discusses the work of Dr. H.L. Wang of the NRRC and Robert Rodale of *Organic Gardening and Farming*. Tempeh starter and complete instructions for its preparation are available for \$0.50 from Rodale Press, Emmaus, Pennsylvania.

Note: This is the earliest article on soy seen (Aug. 2002) in *Vegetarian Times* magazine. Address: Chicago, Illinois.

571. Liem, Irene T.H.; Steinkraus, K.H.; Cronk, T.C. 1977. Production of vitamin B-12 in tempeh, a fermented soybean food. *Applied and Environmental Microbiology* 34(6):773-76. Dec. [14 ref]

• **Summary:** It is believed that the vitamin B-12 in tempeh is synthesized by a *Klebsiella* bacterium, which is a contaminating microorganism rather than one of the microorganisms responsible for the fermentation of the legume substrate. Therefore one may not be able to consider tempeh a reliable, consistent source of this vitamin.

Several varieties of soybeans generally contained less than 1 ng [nanogram] of vitamin B-12 per 100 gm... Pure tempeh molds obtained from different sources did not produce vitamin B-12. It was found that the major source of vitamin B-12 in commercial tempeh purchased in Toronto, Canada [made commercially by Tjing Giok Tan {Mr. Tjeng Giok Tan} of Toronto] was a bacterium that accompanies the mold during fermentation. Reinoculation of pure bacterium onto dehulled, hydrated and sterilized soybeans resulted in the production of 148 ng of vitamin B-12 per gm... Nutritionally significant amounts of vitamin B-12 were also found in the Indonesian fermented food, ontjom.”

“Indonesian tempeh, a protein-rich vegetarian food, is one of the world’s first meat analogs.” Mycelia of *Rhizopus* molds “overgrow hydrated, dehulled, and partially cooked soybeans, knitting them into a firm cake, which can be sliced and deep-fat fried or cut into cubes and used in place of meat in soups.”

“Ontjom samples from Indonesia were obtained through the courtesy of A.G. van Veen, Cornell University. Sample 1 was traditional ontjom made from peanut presscake and sample 2 was ontjom [okara tempeh] made from soybean residue.”

Table 2 shows the vitamin B-12 content of commercial tempehs made in Toronto (6.3 mcg [micrograms] per 100 gm), Indonesia (sun dried, 1974, 2.9 mcg; oven-dried, 1975, 0.4 mcg), and California (freeze-dried 1.5 mcg per 100 gm).

Note: *Klebsiella pneumoniae* is the microorganism which causes bacterial pneumonia in humans. Address: Cornell Univ., Geneva, New York 14456.

572. *Mother Earth News*. 1977. Frank Ford, and Robert Rodale. No. 48. Nov/Dec. p. 60.

• **Summary:** Frank Ford has “farmed organically in Deaf Smith County for 25 years [i.e., since 1953]. Besides that, in 1960 he started a company (Arrowhead Mills, Inc.) that became one of the first major distributors of whole grains in this country. In the years since then, he’s served on advisory committees to four different U.S. Secretaries of Agriculture. His *The Simpler Life Cookbook* has sold a quarter of a million copies, as has *The Deaf Smith Country Cookbook*, a book co-authored by his wife, Margie.”

Robert Rodale runs Rodale Press, which was started by his father. “The Research and Development Division has a successful tempeh project underway, with over 14,000 packets of starter—and instructions for preparing the fermented soybean food—already distributed to readers of *Organic Gardening and Farming*.” Photos show Robert Rodale and Frank Ford.

573. Robinson, R.J.; Kao, C. 1977. Tempeh and miso from chickpea, horse bean, and soybean. *Cereal Chemistry* 54(6):1192-97. Nov/Dec. [6 ref]

• **Summary:** The authors made soybean tempeh, chickpea tempeh, and horse bean tempeh from 0.2 to 0.4 cm diameter grits. The soybean tempeh had the best flavor, texture, and color.

They also made soybean miso, chickpea miso, and horse bean miso. Compared with soybean miso, chickpea miso’s color was darker, while horse bean miso’s is lighter. Address: Dep. of Grain Science & Industry, Kansas State Univ., Manhattan, KS 66506.

574. Saono, S.; Brotonegoro, S.; Abdulkadir, S.; Basuki, T.; Jutono, -; Badjra, I.G.P. 1977. Microbiological studies of tempe, kecap, and taoco. II. Qualitative amylolytic and proteolytic activities of the isolates from various products from west Java. Progress Report Subproject III.b. ASEAN Project for Soybean and Low-Cost High Protein Foods. Jan-Dec. 1977. 8 p. [5 ref]

• **Summary:** An analysis is given of the types of bacteria, yeasts, and molds found in tempe, kecap, and taoco.

Scientific names of these microorganisms are not given. For example, in tempeh, molds consistently gave the highest number of viable cultures on any of the test media employed, followed by yeasts and bacteria in that order. Address: 1-4. Treub Lab., the National Biological Inst., Bogor; 5-6. Faculty of Agriculture, Gadjah Mada Univ., Yogyakarta.

**Manufacturer's Address:** 2011 E. Michigan Ave., Lansing, MI 48912.

**Date of Introduction:** 1977.

**New Product–Documentation:** Shurtleff & Aoyagi. 1976.

What is Tempeh? p. 5. Run by Greg Demers. Two letters from Greg Demers. 1978. Jan. 17. Discusses his process for making tempeh and asks related questions. He is a very careful researcher in both food and academic research. Home address: 1522 Mount Vernon Rd., East Lansing.

Letter from Diane Demers (formerly Greg Demers).

1980. Aug. 1. Contains a number of bibliographic references to tempeh. Address is now 420 Evergreen St., East Lansing, Michigan 48823.

584. Bates, Cynthia; Shurtleff, William. 1977. Tempeh. Summertown, Tennessee: The Farm. 7 p. Undated. Unpublished manuscript.

• **Summary:** Contents: Introduction. Making tempeh at home (from whole soybeans or dehulled, cracked soybeans). Good tempeh, immature tempeh, and inedible tempeh. Favorite tempeh recipes: Deep-fried tempeh. Pan-fried tempeh.

Tempeh chips. Tempeh burger. Tempeh pizza. Tempeh in sauces. Tempeh in salads. Tempeh in soups or casseroles. Feeding the larger self. Nutritional value of soybeans.

This document was written by the authors when Shurtleff and Aoyagi were visiting The Farm in early 1977. Address: Summertown, Tennessee.

585. Farm Foods. 1977. Fermentation funnies (Leaflet).

Summertown, Tennessee. 2 p.

• **Summary:** Another very creative publication from Farm Foods and The Farm. Each is a leaflet (8½ by 11 inches) printed on both sides with blue ink on white. Each gives, in cartoon-strip format, an introduction to fermentation, fermented foods, tempeh, etc. (1) “For thousands of years friendly microorganisms—have helped people produce a variety of fermented foods. (2) Literally hundreds of foods have enriched our diet... (3) ... which were made available through the action of molds, yeasts and bacteria.” An illustration shows sauerkraut, yogurt, bread, soy sauce, vinegar, cheese, each running forward on two legs, each

holding up a hand with the index finger pointing up.

(4) “These helpful miniature plants, by secreting enzymes, that act on the parent food [substrate] create new foods.” An illustration shows a small critter, driving a tractor over a cake of tempeh, spraying enzymes on the food (as some farmers might spray agrichemicals). (5) “They are good nutritionally and often have better taste, texture, digestibility and keeping properties.

(6) “Now, from Indonesia, another new fermented food. It’s tempeh! (pronounced TEM-py or TEM-pay). (7) Yes,

it’s tempeh, a mild white cake of solid soybeans—Those high-protein, low-cost beans that farmers feed to their cows! (8) First, soybeans are cooked lightly, drained and cooled, sprinkled with tempeh starter, wrapped in wax paper or plastic, and left in a warm place for about a day.

(9) “When it forms, the new tempeh is ready to be quick-cooked or frozen for future meals. It can be fried, boiled, baked, stewed or frozen for different flavors. Now you can prepare tempeh at home and have it as an instant main dish any time you want! (10) Order soybeans, starter, and our instruction booklet separately or ask for our complete kit. Free instructions for making tempeh at home.” An illustration shows a packet of tempeh starter. The final frame shows the Farm Foods logo. The leaflet is designed to be folded crosswise into thirds and mailed. On the back is an order form (with prices) and a photo of four kids eating and

enjoying tempeh.

Note: An earlier version of this same cartoon strip, with the same title, but undated (probably 1976 or early 1977) is not quite as creative. The text is somewhat similar but there is less promotion of products (only starter kits which are \$1 each). Farm Foods is not mentioned; the return address is: Témpe, Box 156, Summertown, Tennessee 38483. It is also printed with blue ink on white paper and designed to be folded into thirds.

On the back is: (1) A table giving a detailed composition of soybeans. (2) A bar chart showing “Per acre yields of usable protein from different food sources” showing that soybeans (at 356 pounds) are highest, whereas beef (at 20 pounds) is lowest. This chart is adapted from *The Book of Tofu* (1975, p. 15). Address: 156 Drakes Lane, Summertown, Tennessee 38483. Phone: (615) 964-3574.

586. Farm Foods. 1977. Tempeh (Leaflet). Summertown, Tennessee. 2 p. Revised 1978.

• **Summary:** Contents: Introduction. Making tempeh at home: equipment and process (with a description of good, immature, and inedible tempeh). Preserving tempeh. Questions and answers. Four brief recipes: Tempeh burger. Deep-fried tempeh. Tempeh pizza. Cubed fried tempeh. Using whole soybeans.

The border around the front page is single stalks of bamboo. Around the back page is a woven bamboo colander. Contains 9 photos and a line drawing of a five-dollar incubator for tempeh. Address: 156 Drakes Lane,

Summertown, Tennessee 38483.

587. Gandjar, I. 1977. Fermentasi biji *Mucuna pruriens* DC dan pengaruhnya terhadap kualitas protein [Fermentation of *Mucuna pruriens* DC seeds and its effects on protein quality]. Thesis, Institute Teknologi Bandung, Indonesia. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker. ix + 671 p. See p. 50-54. [Ind]\*

• **Summary:** The resulting fermented food is velvet bean tempeh (*tempeh benguk*). Address: Bandung, Indonesia.

588. Hinson, K.; Hartwig, E.E. 1977. Soybean production in the tropics. *FAO Plant Production and Protection Paper* No. 4. v + 92 p. Illust. 27 cm. (Rome, Italy). Revised 1982. [82 ref. Eng; Chi; Fre; Spa]

• **Summary:** Contents: Introduction. Botany. Climatic requirements. Soils and soil fertility. Water and water management. Varieties and variety development. Culture. Nitrogen nutrition and inoculation. Diseases and nematodes. Insects. Harvesting and seed storage. Nutritive quality and use. Rotations and intercropping. Bibliography. Address: Research Agronomists, USDA.

589. Shurtleff, William. 1977. Indonesian words associated with tempeh / tempe and tempeh (or oncom / onchom) recipe names. Lafayette, California. 1 p. Unpublished typescript.

• **Summary:** This list was compiled from various books while writing *The Book of Tempeh*. The names are in alphabetic order and the number after each is the number or page number in some forgotten book—perhaps Mustika Rasa. (1) Achar tahu tempe–64. (2) Tempe asam manis–10. (3). Tempe bacem–8. (4) Tempe bacem kering–40. (5) Besengek tempe–35. (6) Bistik tempe–3. (7) Botok tempe–18, 21. (8) Brongkos tempe–55. (9) Tempe bumbu Bali–44.

(10) Tempe bumbu rujak–16. (11) Ento ento–53. (12) Gado-gado–39. (13) Gadon tempe–30. (13a) Gejos oncom–6. (14) Tempe goreng–1. (15) Tempe goreng biasa–58. (16) Tempe goreng dengan bumbu–13. (16a) Gudeg tempe–. (17) Gulai tempe–41. (18) Kare tempe–29. (19) Tempe kemul–2.

(20) Kering tempe–52. (21) Keripik tempe–4, 24. (22) Kokotan tempe–28. (23) Kroket tempe–3. (23a) Tempe lado–57. (24) Lengko-lengko–49. (25) Masak petis–45. (26) Masak taoco–48. (27) Mendoan tempe–31, 57. (28) Mendol–61. (29) Menjeng tempe–20.

(30) Menjes tempe -. (31) Nyomok tempe–50. (32) Oblok-oblok–54. (33) Oblok-oblok oncom–67. (34) Oncom goreng–14. (35) Opor tempe–43. (36) Orem orem–51. (37) Oseng oseng tempe–19. (38) Tempe panggang -. (39) Tempe pechel or pechil–.

(40) Penchok-pepechak–59. (41) Pepes oncom–66. (42) Pepes tempe -. (43) Perkedel tempe–17. (44) Pindang tempe busuk–36. (46) Tempe podomoro–68. (47) Rendang tempe–23. (48) Rempeyek tempe–24? (49) Sambal tempe -.

(50) Sambal goreng tempe–63. (51) Sambal goreng kanchung–75. (52) Sambal goreng kering–12. (53) Sambal goreng krechak–22. (54) Sambal jenggot–76. (55) Sambal tempe busuk–39. (56) Sambal tepung–73. (57) Sambal tumpang. (58) Sate tempe–32. (59) Sate manis tempe–.

(60) Sayur asam tempe–62. (60a) Sayur kangkung tempe–. (61) Sayur bening tempe–37. (62) Sayur lodeh tempe–74. (63) Semur tempe–65. (63a) Soto tempe -. (64) Tauge goreng–69. (64a) Tepung -. (65) Terik tempe–5. (66) Terik tahu dan tempe–42. (66a) Tumis oncom–2. (67) Tumis tempe–38. (68) Tumis kangkung tempe–34. (69) Tempe unkep–See bacem.

Singkatan = abbreviations (Indonesian): bdj = bidji / biji (seed). bb = buah (fruit). btg = batang (stem, stalk). btl = botol (bottle). btr = butir (piece). gl = gelas (glass). ikt = ikat (bunch, bundle). lbr = lembar (sheet). pt = potong. rsd = ruas jari / ruas jari (finger tip size). sdm = sendok makan (tablespoon). sdt = sendok teh (teaspoon). tjkr = tjankir / cangkir (tea cup). tk [or btg] = tangkai (stalk, stem). kg = kilogram. g = gram. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

590. Souser, M.L.; Miller, L. 1977. Characterization of the lipase produced by *Rhizopus oligosporus*, the tempeh fungus (Abstract). *Abstracts of the Annual Meeting of the American Society for Microbiology* 77:258.

• **Summary:** “The extracellular lipase produced by *Rhizopus oligosporus* during tempeh fermentation and in liquid culture was partially purified and characterized.” Lipase activity in tempeh peaked after 24 hours; its optimum pH is 7.0 and optimum temperature for activity is 40°C. Address: Dep. of Microbiology, Cook College, Rutgers Univ.

591. *SoyaScan Notes*. 1977. Chronology of the early years of Legume, run by Gary Barat and Dyanne Chandri Speer Barat, through Dec. 1983. 27 Oct. 1988. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Gary Barat is born on 28 Nov. 1942 in Manhattan, New York.

1967-72. Gary is one of the founders of an early hippie commune named Huggs, located on 2,000 acres outside Burlington, Vermont. They rented it for \$1 a year. He lives there (in an Indian tepee for a year) and works on their co-operative organic farm. He also learned carpentry and cabinet making. They sold their crops at a fruit and vegetable stand. In 1968 he becomes a vegetarian for moral reasons.

1972-77. The farmer who owned the Vermont land died and his heirs wanted the community off the land. Gary returned to New York. There he worked on and off as a carpenter. In 1971 he founded a company named “Longest Pillow in the World” which markets pillow furniture at outlets like Bloomingdale’s and Macys. He may have invented the term “pillow furniture.” He creates and registers the trademark “X-Rated” and a logo. He eventually licenses

the rights to Sony.

1977. Gary has open-heart surgery necessitated by an unusual blood infection. While recuperating at his sister's home in Umatilla, Florida, he visits Lecanto Tofu Shop (90 minutes drive away) and first sees tofu being made. Decides he wants to do something with tofu as a right livelihood.

1978-79. Gary recuperates.

1979 June. Gary establishes Nature's Inn Corporation as a research company. He has no money—it was all gone from the operation and not being able to work for almost 2 years. But now he has a chance to start over with a Right Livelihood occupation. It was a spiritual quest. He uses this company to raise money to study the soyfoods market and create a business plan. Some money came from an investment banker, some from a man who owned an advertising agency. They were not relatives and they didn't stay with the company in the long term.

1979 July. Gary attends the Second Soycrafters Conference in Amherst, Massachusetts. First real involvement with soyfoods. Meets Steve Demos of White Wave, Tom Timmins of New England Soy Dairy, and others. After the conference he starts to compile a business plan for his new company.

1979 August. Gary meets Chandri Dyanne Speer at the Muktananda ashram in South Fallsburg, New York. Born on 3 March 1950, she graduated from Syracuse Univ., worked on a PhD at Boston College, studied in Paris at the Political Science Institute for a year, and then spent a year studying Eastern philosophy and meditation in India. Gary hires her to help him do research on the tofu market. On 23 Aug. 1979 Oak Barat of McNaturals orders books on tofu, miso, and tempeh from New-Age Foods Study Center. Gary and Chandri travel together around the USA researching tofu. After visiting Steve Demos at White Wave in Boulder (who personally prepared them a delicious dinner, featuring 15 tofu dishes, at his home) they decide at the Boulderado Hotel that they will make finished tofu products—not plain tofu. In California, they also visit Larry Needleman (their guide in California), Ray Nagai (who convinces them not to make tofu and not to own a factory), Bob Gerner of Gilman Street Gourmet in Berkeley (they loved and were inspired by the tofu burgers he sold at his Deli), and William Shurtleff (Dec. 18-21). At this point, their basic concept is to create a fast-food restaurant serving a variety of tofu dishes, with a traditional tofu shop in the restaurant, clearly visible behind a large glass window. Then on to Japan to study tofu there—with most of the expenses paid by Sony. They eventually collect 500 pages of research on the industry.

1980 May. Return to New York City and start baking Whipped Tofu Mousse Pie (their very first product), Tofu Muffins, and Tofu Spinach Quiche in their apartment. They sell them throughout the summer from a booth at street fairs in New York City both as a source of income and for market research to see which products were well accepted. Lasagna

in large trays (unpackaged) was also sold at this time.

1980 June. Dissolve Natures Inn Corp. and start doing business as Legume. A Tempeh Chili product is being planned. Tempeh Cutlets soon follow, but neither of these are ever packaged or labeled. The muffins, quiches, and no-creme pies were the first products to be packaged and labeled; each is kosher. They made the first two products, mostly by hand themselves, in a large bakery they rented for the summer in the Crown Heights section of Brooklyn. The baker, impressed by their business plan, invested \$19,500 in the company and let them use his bakery after his daily baking was done. Limited freezer space in this bakery was a major problem.

1981 Jan. 23. Incorporate Legume in New York, then that month move to Bloomfield Bakery, a larger facility in Verona, New Jersey (which has freezer space), ending up right next to Celentano. Meet Ira Shapiro, a food broker who represents major low-calorie frozen food lines. His son, Robert Shapiro, invests \$10,000 in the company and becomes sales manager. At about this time, when they were trying to raise money, their basic concept changed from being a restaurant to being a nationwide marketer of prepared tofu dishes. The restaurant business was seen as too risky and neither Gary nor Chandri had any experience in it. Investors were scared of putting money into a restaurant.

1981 March. Legume publishes a leaflet with the slogan "Who says rich, creamy foods have to be high in cholesterol & calories." Their Tofu Country Pies, Tofu-Bran Muffins, Tofu No-Cream Pies, and Cakes now start to be shipped nationwide, frozen, through a network of health food distributors.

1981 May. Celentano starts co-packing Legume's Italian-style entrees, beginning with Tofu Lasagna, followed by Tofu Ravioli. The Tofu Lasagna, a frozen entree, has a crack-and-peel label on an all-white box. It bears the new Legume logo on the front but no food illustration yet. It debuted at a food show in Soho. Gary and Chandri are still making their baked goods by hand in the bakery. Since May 1980 Gary and Chandri have realized that they prefer to let another company make their products, so that they can focus on marketing. They are one of the first soyfoods companies to come to this key realization.

1981 June. Gary and Chandri are married in New Jersey.

1981 Sept. Legume runs its first magazine ad (in *Whole Foods*, p. 56), stating that Legume now markets 3 Legume-brand snacks (Tofu muffins, "No-creme" pies, and tofu cakes), and 3 entrees (Tofu lasagna, Tofu ravioli, and Tofu country pies). The company's slogan is "Delicious protein meals and snacks."

1982 Feb. (winter). The earliest document seen on Legume appears in *Soyfoods* magazine (p. 56). Their products: Tofu Bran Muffins (Raisin or Blueberry), Tofu No-Creme Pie (Strawberry, Coconut, Banana), Tofu Cake (Carrot or Banana), Tofu Country Pie (Spinach or Broccoli),

Tofu Ravioli, Tofu Lasagna.

1982 July. Richard Leviton visits Legume and publishes article in Soyfoods magazine ("Touring for Soyfoods," p. 32, 41). Products now include tofu pizza, lasagna, ravioli, vegetable pies, muffins, cakes, and cheesecakes. Company is now starting to phase out its line of baked products.

1982 Oct. Legume raises \$200,000, half through a public sale of 1,000,000 shares of common stock at a price of \$0.10 per share, and half a loan, to promote its tofu frozen entrees. This is the first of the new wave of tofu companies to become publicly owned. Now, with the help of food broker and board member Ira Shapiro, they take aim at supermarkets.

1983 Jan. 24. Article on Legume in the *Wall Street Journal* titled "Company finds a niche selling frozen foods made with tofu." Includes a good history of the company, whose sales now "are only \$40,000 a month, \$20,000 less than the break-even point."

1983 July. Gary Barat takes the lead in forming the Soyfoods Association of America, a new organization to represent larger companies and to break away from SANA.

1983 Aug. Legumes raises \$600,000 more, 2/3 through sale of common stock to 34 people in a private transaction, and 1/3 from a loan.

1983 Dec. Six new Italian-style tofu entrees, sold frozen, introduced in stylish boxes. Line of "Legume Light & Natural Tofu Entrees" includes Stuffed Shells Provencale, Tofu Tetrazzini, Sesame-Ginger Stir-Fry, Tofu Bourguignon, and Cannelloni Florentine. Each contains less than 300 calories.

1984 Feb. The company borrowed \$200,000 from two parties, one of whom, Vincent Galano, is a principal stockholder of the company.

592. Wood, B.J.B. 1977. Oriental food uses of *Aspergillus*. In: J.E. Smith and J.E. Pateman, eds. 1977. Genetics and Physiology of *Aspergillus*. New York: Academic Press. x + 552 p. See p. 481-98. [33 ref]

• **Summary:** Contents: Introduction. Koji. Tamari. Miso. Tempeh. Sake. Some minor fermentations. Fermented foods and mycotoxins. Acknowledgments. References. Address: Dep. of Applied Microbiology, Univ. of Strathclyde, Glasgow [Scotland], U.K.

593. Yustuti, Edi Budi. 1977. Perlakuan penambahan asam laktat pada pembuatan tempe sebagai pengganti perlakuan perendaman biji kedelai [Addition of lactic acid in tempeh processing as an alternative treatment to soybean soaking]. Thesis (Skripsi), Fakultas Teknologi Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 26 p. [Ind]\* Address: Yogyakarta, Indonesia.

594. Ang, H.G.; Kwik, W.L.; Tan, S.F.; Theng, C.Y. 1978. Development of traditional and new soy products using

defatted meal. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 53-58.

• **Summary:** Contents: Abstracts. Introduction: Non-fermented products (soymilk, soybean curd, yuba), fermented products (soy sauce, soy cheese, tempeh), others (soybean sprouts, whole bean), soymilk and soymilk powder from defatted soymeal. Results and discussions: Preparation of soymilk powder. Conclusion. Address: Dep. of Scientific Services, Singapore.

595. Shurtleff, William. 1978. Household preparation of winged bean tempeh, tofu, milk, and sprouts. In: 1978. The Winged Bean. Los Banos, Laguna, Philippines: Philippine Council for Agriculture and Resources Research (PCARR). xvii + 448 p. See p. 335-39. Jan.

• **Summary:** This book consists of papers presented at the 1st International Symposium on Developing the Potentials of the Winged Bean. Held Jan. 1978, at Manila, Philippines. Contents: Introduction. Homemade winged bean tempeh: Recipe, directions, polyethylene (plastic) bags, baking pans or pie tins, good tempeh, immature tempeh, inedible tempeh, troubleshooting (tempeh is too wet, mold is sparse and does not bind beans tightly, tempeh contains black spots or patches, tempeh smells strongly of ammonia, mold grew abundantly in some places but sparsely in others). Homemade winged bean tofu: Recipe, directions, troubleshooting (low yield, small curds or crumbly tofu texture, coagulant was insufficient). Homemade winged bean milk: Recipe, directions, honey-vanilla, rich and creamy, carob-honey, malt, mocha, or coffee. Homemade red winged bean miso. Homemade winged bean sprouts.

Note: This is the earliest document seen (Jan. 2011) that describes how to make tofu from winged beans (Kantha 1983). Address: New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

596. Stein, Ellin. 1978. Making money making tofu. *Whole Foods (Berkeley, California)*. Jan. p. 32-38.

• **Summary:** This multi-part article describes commercial operations at Farm Foods (San Rafael, California—"Down on the Farm"), Redwood Natural Foods (Santa Rosa, California), The Tofu Shop (Rochester, New York—"Hope in Rochester"), Surata Soyfoods (Eugene, Oregon—"Tofu Recipe Doubles in Oregon"), and The Soy Plant (Ann Arbor, Michigan—"Midwest Soy Plant Expects to Grow").

Note: This is the earliest document seen (Sept. 2011) that mentions "Surata Soyfoods," the first company with the word "Soyfoods" in the company name.

Part of the main article ("A Busy Grasshopper Waits for Profits") and a full-page sidebar titled "Making Tofu on Main Street" tells the story of Laughing Grasshopper Tofu Shop in Millers Falls, Massachusetts. "With *The Book of Tofu* as their

guide, Ira and Kathleen Leviton founded the first occidental tofu shop in the northeastern USA in this sleepy papermill town in Aug. 1976. At the time the Levitons owned and operated Corn Creek Bakery in Greenfield, eight miles away, and they ran the two businesses until August 1977, when they closed Corn Creek due to a continuing labor dispute. Having formed a partnership with two men, Tom Timmins in August 1976 and Michael Cohen in February 1977, the Levitons found their 100 bread accounts quite eager to stock tofu. They are now producing over 800 pounds of tofu per day to service their 100 accounts... Grasshopper makes tofu with Prize variety soybean shipped from Iowa in trailer loads and stored in the plant...

"Fully believing that the tofu market can be doubled within the first quarter of 1978, Grasshopper is moving this month to a 3200-sq.-ft. plant in Greenfield that already offers a well-drained concrete floor... Tofu production will be upgraded with the installation of \$5,000 worth of Japanese tofu machinery... Cohen estimates daily tofu capacity will increase to 1,600 pounds. 'As soon as we can,' says Cohen, 'we'll have not only tofu, but deep-fried age, soymilk-flavored and unflavored, tempeh, and soy 'ice cream.' We feel the market is at our fingertips. We've never taken the step into a serious sales campaign, but I think we will. So far, we make the soft tofu, we give the soft sell."

Note 1. This is the first issue of *Whole Foods* magazine. This is also the earliest article on soy seen (Aug. 2002) in *Whole Foods* magazine.

597. Yu, Swee Yean; Ch'ng, Guan Choo. 1978. Soy bean foods in Malaysia. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 48-52. [16 ref]

• **Summary:** Contents: Introduction. Fermented soya bean products: Soya sauce (manufacture of 'thin' (dilute) soya sauce, manufacture of 'thick' (viscous) soya sauce, microbiology of Malaysian soya sauce, stability of the product), tempeh, tau cheo (thick paste-like sauce), tao si (soy nuggets). Non-fermented soya bean products: Soya bean sprouts, tofu (semi-firm curd), tofu fah (soft curd), tow kwa (firm curd), tin chok (dried, flat sheets [yuba]), fu chok (dried, rope-like [bamboo yuba]), tofu pok (deep-fried curd [tofu cubes]), chak tie (vegetarian [yuba] sausage), soya bean milk (tau cheong), meat analogues (soya flour is shaped into desired forms by hand). Nutritional data. Conclusion. Address: Universiti Pertanian Malaysia, Serdang.

598. New England Soy Dairy Inc. 1978. Re: Announcing opening of New England Soy Dairy, Inc. Letter to customers and friends of the business, Feb. 17. 2 p. Typed, with signature on orange letterhead. [1 ref]

• **Summary:** "Dear friends. We are pleased to announce the opening of the New England Soy Dairy, Inc... As soon as we can hook up our deep fryer and practice making agé and agé

pouches, we'll add them to our list of products... We have ordered a packaging machine that is scheduled to arrive in a few weeks." The company will then start making packaged tofu (now it is all sold in bulk), and may begin producing hard tofu (doufu), tofu pudding, and bottled soymilk. "The possibilities for freshly made soybean products seem almost endless. We are experimenting with a soy ice creme, and with miso. We'd really like to start producing tempeh this autumn... Our tofu price will remain at \$0.44/lb to retailers." The company plans to pick up its first two distributors: Homestead Trading Co. and nearby Llama.

Shurtleff and Aoyagi, and their *Book of Tofu* and *Book of Tempeh* are mentioned in the letter. At the end: "Soy to the world, (Thanks to Akiko Aoyagi for the drawings)." A handwritten note at the end reads: "Bill & Akiko, We sent this around to our customers. We're still reading the B.ofT. [Book of Tofu]. Tom Timmins. P.S. Come visit us next time you're East." Address: 305 Wells St., Greenfield, Massachusetts 01301. Phone: (413) 772-0746.

599. *Organic Gardening and Farming*. 1978. Tempeh culture. 25:95. Feb.

• **Summary:** "We know of no better, easier way to fix dried soybeans than tempeh... More information, complete instructions, culture and even beans, if you need them, are available from both: Farm Foods, 156 Drakes Lane, Summertown, Tennessee 38483, and Microcultures, Drawer A, Bayville, New Jersey 08721."

An internal memo from Rodale Press, publisher of *Organic Gardening and Farming*, reveals that they ran this notice because "The demand for tempeh culture over the past months has exceeded our supply."

600. Westbrae Natural Foods. 1978. Price list [Catalog]: February 1978. Emeryville, California: Westbrae. 20 p. 26 cm.

• **Summary:** On the cover are a black plum blossom logo and a large, bold double "W" in calligraphy near the bottom against a gray background.

Interesting products: Natural fruit butters and unsweetened fruit spreads. Four types of granola and two trail mixes. Panda snacks: Tamari almonds, Tamari cashews, Tamari nut roaster's mix, Tamari sunflower seeds, White water trail mix (tamari roasted). Westbrae roasted nuts (25 lb boxes): Tamari almond, Tamari cashew pieces, Tamari valencia peanuts, Tamari nut roaster's mix, Tamari sunflower seeds, Tamari pepitas (pumpkin seeds), Tamari filberts. Tamari nut butters (12, incl. almond, 6 peanut, and sesame tahini). Whole wheat soy pasta.

Asian foods & sea vegetables: Miso (red miso, brown rice miso, barley miso, Hatcho miso, soybean miso, light yellow miso, natto miso). Miso made in the United States: Light yellow, mellow white, red, mixed case. Sea vegetables: Agar, dulse (whole or flakes / powder), sea palm, nori,

aramé, hijiki, kombu, wakame. Shoyu and shoyu products: Josen shoyu, Sendai shoyu, White Tiger Tofu Sauce. Nigari. Kudzu. Umeboshi. Toasted sesame oil. Helpful tools: Wok (11 inch), vegetable brush, glass shoyu dispenser, Tofu kit, Tempeh kit, rice koji (Cold Mountain). Beans: Azuki (10 lb or 25 lb bag), soybeans (60 lb or 25 lb), soy grits raw. Publications: Includes four books and 3 pamphlets by Shurtleff and Aoyagi.

Note: The products in this catalog do not require refrigeration; they contain no refined sugar / white sugar, no meat, and no dairy products—just like the catalogs of almost all other natural food distributors during the 1970s and 1980s. Address: 4240 Hollis St., Emeryville, California 94608. Phone: (415) 658-7518 (order) or 7521 (office).

601. *Town Crier (Greenfield, Massachusetts)*. 1978. Tofu manufacturing plant opens. 12(3):1-2. March 22.

• **Summary:** “The New England Soy Dairy, 305 Wells Street, in Greenfield, has opened the doors on its new manufacturing plant... The firm has recently completed a long-projected expansion into more spacious and efficient facilities where it utilizes special tofu-making equipment imported from Japan enabling the company to produce nearly 10,000 pounds of tofu every week. The Soy Dairy ships this out all across New England, New York City, and Pennsylvania.” The tofu, which retails for about \$0.75/lb is “made from organically grown soybeans, water, and nigari, a coagulant extracted from seawater...”

“The company uses the term ‘dairy’ to indicate its intention to provide a full range of alternative dairy-like products all derived from soybeans, including ice cream, yogurt, cream cheese, mayonnaise, whipped cream, tartar sauce, plain and flavored soymilk. In addition, other less familiar items will be introduced, such as miso soy bean paste, deep-fried tofu, and a fermented product, called tempeh. The Dairy operates at a medium level of technology, fusing traditional hand craftsmanship with modern labor saving equipment.”

“The company is open Monday through Saturday, 8 a.m. to 6 p.m. and visitors are welcome.” A photo shows Kathy Whelan Leviton cutting a large sheet of tofu into cakes.

602. **Product Name:** Tempeh.

**Manufacturer's Name:** Soy Plant (The).

**Manufacturer's Address:** 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-8638.

**Date of Introduction:** 1978. March.

**Ingredients:** Organic soybeans, vinegar, *Rhizopus oligosporus* culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**Nutrition:** Per 100 gm: Calories 157, protein 19.5 gm, fat 7.5 gm, carbohydrates 9.9 gm, calcium 142 mg, iron 5 mg.

**New Product–Documentation:** Letter from Steve Fiering. 1978. Oct. 2. A 5-page detailed description, including

equipment and process, of how The Soy Plant makes tempeh.

Letter from Steve Fiering. 1979. Undated. A 3-page handwritten description of photos showing how The Soy Plant makes tempeh. Letter from Steve Fiering. 1979. Oct. 22. A 2-page typewritten description of how The Soy Plant makes tempeh.

Shurtleff & Aoyagi. 1979. *The Book of Tempeh*. p. 148. Made by Steve Fiering. Steve Fiering. 1979. *Whole Foods*. Jan. p. 38, 40. “A Midwestern Interest in Tofu.” This is included in a list of products presently produced by the company.

Letter/Order for *The Book of Tempeh* from Kurt Getman of Frog Farm Tempeh (Soy Plant). 1979. Aug. His address is 5177 Grand River, Fowlerville, Michigan 48836. Two rectangular Labels in Soy Plant scrapbook. 1980. 6 by 4½ inches. Purple on white. Square Labels in Soy Plant scrapbook. About mid-1980. 4½ inches square. Black on white. The soy plant logo is near the bottom of a rayed V inside a circle. Written across the top of the circle: “Keep frozen. Thaw only portion used.” No address is given.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Kurt Getman. Listed at 771 Airport Blvd. #1. Label. 1981, undated. Yellow, purple and green on white. The company name is given as “The Soyplant Co-op Inc.—A people's business.”

Talk with Steve Fiering. 1988. June 10. This was the company's fourth commercial product. In January 1978 we moved into the shop at 211 E. Ann St. and within a couple of months we built a small incubator and started making tempeh.

603. Delaney, Connie. 1978. Readers' letters: Home-style tempeh incubator sans electricity. *Organic Gardening and Farming* 25:24. April.

• **Summary:** This method works even in a cold house in the dead of winter. Fill some jars with water heated to the temperature required for incubation. Put lids on the jars and place in a cardboard or Styrofoam box along with the tempeh (or yogurt). Insulate well on all sides with pillows, blankets, etc. This will hold a constant temperature for 8-10 hours in cold weather; at that time add more hot water. Address: Salmon, Idaho.

604. Saono, Susono; Basuki, Triadi. 1978. The amylolytic, lipolytic and proteolytic activities of yeasts and mycelial molds from ragi and some Indonesian traditional fermented foods. *Annales Bogorienses* 6(4):207-19. April. [9 ref]

• **Summary:** The only tempeh mentioned is okara tempeh (*oncom hitam*). Address: Treub Lab., National Biological Inst., Bogor, Indonesia.

605. Steinkraus, Keith H. 1978. Tempeh—An Asian example of appropriate/intermediate food technology. *Food Technology* 32(4):79-80. April. [7 ref]

• **Summary:** Discusses tempeh processes, process improvements, and transfer of these technology improvements to Indonesia. Address: Cornell Univ., Geneva, New York.

606. Walker, Robert. 1978. How to make tempeh—the nutritious meat substitute. *Alive (Canada)* No. 18. p. 13.

• **Summary:** The author started producing Canada's first commercial tempeh in June 1978. Here he describes what tempeh is, how to make it at home, and how to cook it. Photos show: (1) Robert Walker with the container he invented for making doughnut-shaped tempeh. The inside core and the holes on the outside tube allow the air to circulate evenly throughout the fermenting soybeans. (2) A close-up of two shapes of tempeh. A note at the bottom of the page states: "Robert Walker who lives in Port Perry, Ontario, is starting a tempeh making business." Address: Ontario, Canada.

607. Johns, Yohanni. 1978. Re: Thoughts on The Book of Tempeh manuscript. Letter to William Shurtleff at New-Age Foods Study Center, May 15. 1 p. Typed, with signature on letterhead.

• **Summary:** "Your book should have been published many years ago. It will be a hit even in Indonesia... I am from Central Sumatra, thus, there are many recipes that I have never seen before. Moreover, in Central Sumatra, where much more meat is eaten than in Java, people tend to look down on tempeh. In fact, I seldom ate tempeh until I made my first visit to Java at the age of twenty.

"Your recipes are fascinating... There is however, one important point: the making of tempeh making residual press-cake from sun-dried coconut is now banned in Indonesia. It may be lethal!"

Note: Yohanni is a well-known cookbook author. See *Dishes from Indonesia* (1977). Address: Lecturer, Dep. of Indonesian Languages and Literatures, Faculty of Asian Studies, The Australian National Univ., Box 4, P.O., Canberra, A.C.T.,.

Address: Team Bioteknologi, Departemen Kimia, Institut Teknologi, Bandung, Indonesia.

609. ASEAN Sub-Committee on Protein. ed. 1978. Report on the First ASEAN Workshop on Solid Substrate Fermentation. Bandung, Indonesia. Held 8-13 May 1978 at Bandung, Indonesia. [100+ ref]\*

• **Summary:** This is the 5th ASEAN Protein Workshop. Address: Malaysia.

610. Ho, Coy Choke. 1978. Isolation, identification, and

characterization of *Neurospora intermedia* from oncom: a fermented food in Indonesia. Paper presented at ASEAN Workshop on Solid Substrate Fermentation. 9 p. Held 8-13 May 1978 at Bandung, Indonesia. \*  
Address: Dep. of Genetics and Cellular Biology, Univ. of Malaya, Kuala Lumpur.

611. Ho, Coy Choke. 1978. Microbiology of oncom, an Indonesian fermented food. Paper presented at ASEAN Workshop on Solid Substrate Fermentation. 4 p. Held 8-13 May 1978 at Bandung, Indonesia. \*  
Address: Dep. of Genetics and Cellular Biology, Univ. of Malaya, Kuala Lumpur.

612. Whitaker, John R. 1978. Biochemical changes occurring during the fermentation of high-protein foods. *Food Technology* 32(5):175-80. May. [42 ref]

• **Summary:** Foods are fermented to improve the flavor, color, aroma, and texture, and to remove toxic constituents. Occidental fermentations generally use bacteria and non-filamentous fungi, whereas Oriental fermentation procedures generally use filamentous fungi. The following foods are discussed: Cheeses (particularly Roquefort and Cheddar), sufu, yoghurt, meat, fish, soy sauce, miso, tempeh, and angkak. Flow sheets show the production of sufu and soy sauce.

Contents: Reasons for fermenting foods. Occidental vs. oriental fermentations. Major fermented high-protein foods. References. Address: Dep. of Food Science and Technology, Univ. of California, Davis, California.

613. MacKinnon, Jerry; Fiering, Steve. 1978. Re: Update on plans for Soycrafters Convention at The Soy Plant in Ann Arbor, Michigan. Letter to William Shurtleff at New-Age Foods Study Center, Lafayette, California, June 9. 3 p. Typed, with signature.

• **Summary:** Includes a copy of Shurtleff's proposed schedule for the program. "Just a word about our shop here in Ann Arbor. We began over a year ago in the local bakery trying to eke out a hundred pounds of tofu a week. Today, we've opened a store front with our shop in back. By the time we see you in July we'll be well over the 2,000 lb. weekly mark with full scale Tempeh production." Address: The Soy Plant, 211 East Ann St., Ann Arbor, Michigan 48104. Phone: (313) 663-0500.

614. MacKinnon, Jerry; Fiering, Steve. 1978. An invitation. *Soycraft (Lawrence, Kansas)* 1(3):1. June.

• **Summary:** "The workers of the Soy Plant Soy Dairy would like to invite you to a national conference which is to be held in Ann Arbor, Michigan" on July 28-30, 1978. "We expect to have technical workshops on tofu, tempeh, soymilk and miso production as a base to begin from."

Note: The Soycrafters Association of North America (SANA) was founded at this meeting. Address: The Soy

Plant, 211 East Ann St., Ann Arbor, Michigan 48104. Phone: (313) 663-0500.

615. Olszewski, Nancy. comp. and ed. 1978. *Tofu madness: 50 wild and crazy ways to use tofu and tempeh*. Vashon, Washington: Island Spring. 64 p. June. Illust. by Kathy Provazek. No index. 21 cm.

• **Summary:** Contents: Introduction. Preface. Beverages. Quick snacks and sandwiches. Soups. Breakfasts. Dips, spreads, and salad dressings. Main dishes. Fancy international meals for special occasions. Desserts. Special tempeh recipes. Explanation of terms. Afterword. Contains 52 recipes. Address: Vashon, Washington.

616. Shurtleff, Bill. 1978. News from New-Age Foods Study Center. *Soycraft (Lawrence, Kansas)* 1(3):3-5. June.

• **Summary:** This open letter begins: "Dear Soycrafters of North America: There has recently been growing interest in North America in starting a Soycrafters Union or Cooperative, perhaps along the lines of Japanese National Tofu, Miso, Shoyu, Natto, etc. Unions [Associations]. Such a development would seem to represent a great leap forward, of benefit to many in the expansion of consciousness and production of quality soyfoods in the Western world."

The author then summarizes five major functions of Japanese national trade associations related to soy products, and suggests how each of these be adapted to present American conditions and consciousness which are very different from those in Japan: Purchasing soybeans, maintaining a list of member shops, doing "soyfood publicity," publishing a newsletter, and establishing and running a nationwide center, information clearing house, and school for teaching production of low-technology "soyfoods" to people from both developed and developing countries.

"How might this basic model be adapted to the United States? First, since soyfoods are still quite new in the USA, we might want to form one united front cooperative or union for all soycrafters or producers of soyfoods, rather than trying to form individual unions for tofu & soymilk, miso, tempeh, shoyu, etc. Given such a joint union, it would seem that all of the functions performed by the Japanese unions would be of great potential value to producers in North America. The key point, however, is that for the Union to work it must be financially viable and sound. Thus it must be created and supported by individual members who understand clearly that its functions are in their best interest, both in the short and long run."

"Second, we must remember that the number of shops presently producing soyfoods here is still very small. We have the names of 95 tofu shops and/or soy dairies in the United States plus 6 more in Canada, 9 tempeh shops, 8 miso shops, and one shoyu factory (Kikkoman). Of these, about 41 of the tofu shops and soy dairies, 5 of the tempeh shops, and 2 of the miso shops are 'new-age' types, newly

started by Caucasian Americans. This latter group would probably form the initial nucleus of the Soycrafters Union, however after the benefits of membership could be clearly demonstrated, the more conservative Japanese producers might be eventually interested in joining."

"At the proposed First North American Soycrafters Convention to be held in Ann Arbor [Michigan] July 28-30 the above suggestions might be discussed one by one..."

At the end of the article is a form which new or existing tofu or soymilk manufacturers in the U.S. are invited to fill out and return to Shurtleff so that he can list them in the next edition of *The Book of Tofu*. It asks for the name, address, and phone number of the company, the person(s) in charge, the date tofu or soymilk production started, the approximate cost of getting started, the average quantity of soybeans used per week, the soyfoods produced (in order of importance), the main pieces of equipment purchased, and equipment the company plans to purchase in the near future.

Note the early use of the terms "soyfoods" and "soyfood" in this article. The term "soyfoods" was coined by Surata Soyfoods of Eugene, Oregon, in Dec. 1976.

Note 2. This is the earliest document seen (Oct. 2008) that contains the term "low technology" (or "low tech"). Shurtleff coined this term to refer to soyfoods that could be made, and had long been made, using simple, traditional technologies, appropriate to Third World countries or relatively poor areas. Address: Director, New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

617. **Product Name:** Tempeh.

**Manufacturer's Name:** Tempeh Enterprises, Ltd.

**Manufacturer's Address:** R.R. 3, Group 3, Box 7, Port Perry, ONT, L0B 1N0 Canada. Phone: 416-985-3158.

**Date of Introduction:** 1978. June.

**New Product-Documentation:** Soya Bean Tempeh. This 1-page leaflet (undated, but probably printed in 1978-79) contains 10 tempeh recipes developed by Tempeh Enterprise Ltd.: Tempeh rarebit. Fried tempeh cakes. Tempeh-rice casserole. Tempeh soup. Tempeh casserole. Broiled tempeh cakes. Tempeh steamed delight. Tempeh carob (or chocolate) cookies. Tempeh candy bars. Tempeh and wheat-germ brownies.

Letter (5 pages) from Robert Walker, founder and owner. 1979. March 9. He presently makes 1 batch of tempeh a week; 28 lb of soybeans yield about 50 lb of tempeh. "I am 59 years old, have a full-time job, and started Tempeh Enterprises Limited about 1 year ago with thoughts of devoting all my time in the future, if I retire at an early age, to making and marketing tempeh... I made a large poster for each store ('Tempeh Available Here'). I am enclosing a recipe flyer, that is on the counter in each store..." Describes his process and equipment.

Letter from Robert Walker. 1979. Undated, but about

April. Gives a detailed handwritten 9-page description, with illustrations, of how his company makes tempeh. Letter from Robert Walker. 1979. May 9. Includes photos of his process for making tempeh. Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 149. Owner: Robert Walker.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Robert Walker.

Letter from Robert Walker. 1984. May 3. "I started to sell tempeh in June 1978. I have enclosed a letter and some bills of sale as proof of the date. I do not know of any other tempeh production before mine. Robert Rodale wrote an article in *Prevention* magazine about tempeh in July 1977. After reading and studying that article I decided to start a tempeh shop. The maximum amount of tempeh I made and sold was 50 lb/week. I will be 65 years old in September and I am planning on retiring for my job at Port Perry High School at the end of that month. As to why I stopped making tempeh, I guess I was trying to burn the candle from both ends, working 8 hours a day, 5 days a week at the high school, making 50 pounds of tempeh and the starter and driving about 60 miles (one way) through heavy traffic to Toronto each Saturday to deliver the tempeh to 5 or 6 health food stores, as well as doing household duties, community work, gardening, snow shovelling (we live in the country), etc." On 29 Oct. 1979 Robert was taken to the hospital and diagnosed as suffering from anxiety syndrome. He was not able to return to work at school for one year. Now he is back to normal, but he had to discontinue making tempeh commercially.

Shurtleff & Aoyagi. 1985. *History of Tempeh*. p. 60. This was the earliest known commercial tempeh made in Canada.

618. Bellicchi, Kathy. 1978. New England Soy Dairy. *East West Journal*. July. p. 42-44.

• **Summary:** A good history of and introduction to the company. "New England Soy Dairy began a year and a half ago with four partners, Tom Timmins, Kathy and Ira Leviton, and Michael Cohen. Before they got together, Tom was working for a natural foods distributor [Llama, Toucan & Crow], Kathy and Ira were running a natural foods bakery, and Michael was living in Virginia in a satellite community of The Farm (an experience which provided him with a sound working knowledge of soybeans)... They went into business as the Laughing Grasshopper Tofu Shop..." Later the company moved to a much larger facility on the outskirts of Greenfield, Massachusetts. Today they make 1,600 lb of tofu per 8 hour day.

The company presently produces only tofu. However they are in the "process of perfecting a variety of other soy products, including soy milk, soy mayonnaise, dips for crackers and spreads for sandwiches, tempeh (split, hulled soybeans that are fermented), age (deep-fried tofu), and, eventually, ice cream."

Photos show: A barrel of soy milk being curded with nigari. Arthur Braverman standing by the tofu-making equipment at the center of the plant. Tofu being pressed in forming boxes. Ira Leviton carrying a tray of tofu ready for packaging.

619. Farm, The. 1978. Make your own soyburger. *East West Journal*. July. p. 58-63.

• **Summary:** Most of the article describes how to make tempeh at home, with photos. Then there are sections on "Additional tempeh-checking tips" and "Questions and answers" about making tempeh at home, followed by recipes: Tempeh burger. Deep-fried tempeh. Tempeh pizza. Cubed fried tempeh. Tempeh and noodles. Address: Tennessee.

620. Sudarmadji, S.; Markakis, P. 1978. Lipid and other changes occurring during the fermentation and frying of tempeh. *Food Chemistry* 3(3):165-70. July. Originally presented in 1977 at the Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. *Handbook of Indigenous Fermented Foods*. New York: Marcel Dekker, Inc. [10 ref]

• **Summary:** As tempeh is fermented for 30 hours, there is a rapid increase in free fatty acid (FFA) content, number of bacteria, and temperature, along with a copious growth of the mould. "Upon frying in coconut oil, tempeh undergoes a sharp reduction in FA content with a concomitant increase in the FFA content of the frying oil. While frying alters the percentage composition of the glycerides of tempeh because of coconut oil absorption, the glyceride composition of the frying oil barely changes." Address: Dep. of Food Science & Human Nutrition, Michigan State Univ., East Lansing, MI 48824.

621. Shurtleff, William. 1978. Re: Tempeh project. Soyfoods Association of North America. Letter to Cynthia Bates, The Farm, Summertown, Tennessee, Aug. 15. 1 p. Typed, with signature on letterhead (photocopy).

• **Summary:** "Our new technical manual, entitled *Tempeh Production*, is scheduled to go to the typesetters in about 3 to 4 weeks. We want very much to include your method for making tempeh starter. If however your method is secret or you do not want to share it with the people, please let me know so that I don't have to wait.

"We had hoped very much to see you at the First North American Soy crafters Convention in Ann Arbor. It was a great meeting with over 70 people from around the USA gathered together to discuss common problems, etc. We set up a nationwide body called the *Soy crafters Association of North America*. There was a great deal of interest in tempeh and many people are now starting tempeh shops, often together with tofu shops. We showed 230 color slides of tempeh production in Indonesia." Address: New-Age Foods

Study Center: U.S.A.–P.O. Box 234, Lafayette, CA 94549.  
Phone: 415-283-2991.

622. Shurtleff, William. 1978. Re: Proposal to add new categories and information about soyfoods to *Soybean Digest Blue Book*. Letter to Mr. Lynn Munyer, editor, *Soybean Digest Blue Book*, P.O. Box 158, Hudson, Iowa 50643, Aug. 21. 2 p. Typed, with signature on letterhead.

• **Summary:** Contents: Introduction to publications and work of New-age Foods Study Center. Statistics on consumption of traditional soyfoods in East Asia. Tofu. Soymilk. Miso. Shoyu. Tempeh. Natto. Conclusion.

“Worldwide and increasingly in the United States the traditional soyfoods discussed in our books account for an extremely large proportion of world soybean consumption for human diets.

“Therefore we feel it is in the interest of the ASA [American Soybean Association] and American Soybean farmers to do more to introduce these traditional soyfoods to people around the world via your publications.” Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

623. **Product Name:** Tempeh Chips.

**Manufacturer’s Name:** Bali Foods.

**Manufacturer’s Address:** 4219 Alderson Ave., Unit B, Baldwin Park, CA 91706. Phone: (213) 338-7178 or 337-1682.

**Date of Introduction:** 1978. August.

**Ingredients:** Yuca (cassava) flour, tempeh, soy oil, salt, seasoning.

**Wt/Vol., Packaging, Price:** 2 oz in poly bag.

**How Stored:** Shelf stable.

**New Product–Documentation:** Letter from Henoeh Khoe. 1978. Aug. 29. “Tempeh Chips are selling nationwide and our sales are increasing by leaps and bounds because a lot of money, time and efforts have been spent in promoting our Tempeh and Tempeh Chips in the U.S. market. Tempeh, therefore, has become a very sacred word to us. We strongly suggest that you immediately seek legal advice before you make any foolish decision to publish and sell your forthcoming ‘Book of Tempeh.’”

Note 1. He is trying to use tempeh as a registered trademark.

Note 2. This is the earliest commercial soy product seen (Sept. 2011) in which tempeh is used as an ingredient.

Label. 1979, undated. Printed on plastic bag, 8.5 by 11 inches. Red and green on yellow. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

624. Kao, C.; Robinson, R.J. 1978. Nutritional aspects of fermented foods from chickpea, horsebean, and soybean. *Cereal Chemistry* 55(4):512-17. July/Aug. [9 ref]

• **Summary:** Tempeh and miso were made from chickpeas

(*Cicer arietinum*), horsebeans (*Vicia faba*), and soybeans. Rats on freeze-dried tempeh diets ate more, gained more weight, and had higher PERs than did rats eating autoclaved (unfermented) grits. The PER of chickpea tempeh was slightly higher than that of soybean tempeh. The PER of horsebean tempeh was significantly lower than that of either of the other two tempehs. Misos contained about 25% salt on a dry weight basis—too much to be acceptable rat diets. Address: Dep. of Grain Science & Industry, Kansas State Univ., Manhattan, Kansas 66506.

625. **Product Name:** Tempeh.

**Manufacturer’s Name:** Swan Gardens.

**Manufacturer’s Address:** Route 1, Box 216, St. Ignatius, MT 59865.

**Date of Introduction:** 1978. August.

**New Product–Documentation:** Letter from Brenda Wood. 1978-79? Undated. “We have a tofu shop producing 260-390 lb a week and we also make and sell between 40 and 50 lb of tempeh weekly, made out of the okara (160-200 lb monthly).” Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 148. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Contact: Brenda Wood.

Talk with former Swan Gardens employee. 2001. Dec. 31. This tempeh was incubated in an old chicken egg incubator; it looked like a big upright wooden cabinet, about 5 feet tall, 3 feet wide, and 18 inches deep. It was probably introduced in about May 1978. Most of the tempeh was made with okara, but there was at least experimentation with whole soybean tempeh.

626. White Wave. 1978. White Wave through The Cow of China, offers food from the kingdom of plants. We make it all here in Boulder! 100% dairyless! (Poster). 1738 Pearl St., Boulder, CO 80302. 1 p. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

• **Summary:** “Organic nigari tofu, Soymilk, Soysage, Missing egg salad, Tofu mayo, Baked savory tofu cutlets, Sweet bean tofu pie, Tofu cinnamon rolls, soy-sesame bars, Energy chews, Almond butter, Cashew butter, Peanut butter, Tahini, Figgies, Date coconut bars, Tofu ‘meatball’ sandwiches, ‘Macro’ pizza, Tofu turnovers, ‘Sloppy joe’ sandwiches, Tempeh.” Address: Boulder, Colorado.

627. Gandjar, I. 1978. Solid fermented foods of Java with special reference to tempe products. Presented at Meeting of the Danish Society of Food Technology and Hygiene, and the Danish Nutrition Society. Held Sept. 1978 at Copenhagen, Denmark. \*

Address: Dep. of Biology, Faculty of Mathematics and Natural Sciences, Univ. of Indonesia, Jakarta.

628. Shurtleff, William. 1978. New food from old ways. *Agenda (US-AID, Washington, DC)* 1(8):18-20. Sept.

• **Summary:** This periodical is published by the U.S. Agency for International Development. Discusses: Soybeans and world hunger, the inefficient ways that soybeans are used in industrialized countries by feeding them to animals, and alternative ways of using them in foods such as tofu, soymilk, tempeh, and miso. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

629. Shurtleff, William. 1978. Re: The Farm Vegetarian Cookbook. Letter to Margaret Gaskin, Laurie Praskin, Cynthia Bates, and Louise Hagler, The Farm, Summertown, Tennessee, Aug. 15. 1 p. Typed, with signature on letterhead (photocopy).

• **Summary:** “This morning I bought a copy of your new edition of *The Farm Vegetarian Cookbook* at Shambala in Berkeley and spent all day reading it. Akiko too. We both think it is a really outstanding job, one that will benefit people around the country and the world, and one that we look forward to learning a lot of new things from. The book has all the touches, so artistically and sensitively presented. We laughed over the illustration on page 95 of milking the cow-sized soybean or soybean sized cow, at the parfait on p. 102-03 that expands the more you open the book, etc. We look forward to trying out many of your soy recipes. With a book like that out, we feel we can retire from our work of trying to turn the world on to soy. You’ve done it, or at least provided a good start.

“We have a number of new books on soyfoods coming out soon, and you can be sure that we will make very favorable mention of your book in all of them. We will even try to get it into the Ballantine Books edition of the pocketbook mass-market *Book of Tofu* (175,000 copies first printing, out this January) but it may be too late. There will be numerous references in our *Book of Tempeh*, *Tempeh Production*, and *Tofu & Soymilk Production*. In the latter would you mind if we used a few of your recipes (e.g., Ice Bean) with credits, of course?” Address: New-Age Foods Study Center: U.S.A.—P.O. Box 234, Lafayette, CA 94549. Phone: 415-283-2991.

630. Daniels, Stevie. 1978. I was a sucker for protein. *East West Journal*. Oct. p. 60-62.

• **Summary:** Her introduction to soyfoods came the hard way—by trying a “can of textured soy protein”—the food that could end world hunger. She tried preparing it in many different ways. “Nothing worked. It was terrible. I threw it on the compost pile and watched squirrels, rats, and chipmunks detour around it for weeks... It was easy to see why even starving people gave thumbs down to this orangish, gloppy, spoiled-tasting concoction.” She learned that the oil companies extract the oil from soybeans with hexane solvent then use the defatted leftovers to feed livestock and make textured soy protein.

Later she became a vegetarian, tried cooking whole

soybeans, and then “fresh soybeans” in the pods—which a local organic farmer brought to her co-op. Finally one day she found a brochure stating: “The four main foods made from soybeans are tofu (soybean curd), tempeh (fermented soyburger), shoyu (soy sauce), and miso (fermented bean paste).

“I was amazed. The Eastern people, one-fourth of the world’s population, had known how to use soybeans for centuries. I learned they also sprouted the beans...” She tried these foods and liked them. Bill Shurtleff stopped by the EWJ’s office after attending the first national soyfood conference in Ann Arbor, Michigan. She describes their discussion, including the founding of the Soycrafters Association of North America. At the end is a list of resources and a bibliography of EWJ articles on soyfoods: Larry Needleman (Soycrafters Assoc. of North America, P.O. Box 76, Bodega, CA 94922. Phone: (707) 876-3341). Bill Shurtleff, The Farm (Summertown, Tennessee), Asunaro Eastern Studies Institute (Attn: Dina Drago, 4600 Cavedale Rd., Glen Ellen, California 95442. Phone: (707) 996-5365. Miso and shoyu production taught by Naboru [sic, Noboru] Muramoto).

631. **Product Name:** Tempeh.

**Manufacturer’s Name:** It’s Natural.

**Manufacturer’s Address:** 502 Main St., Evanston, IL 60202. Phone: 312-491-1144.

**Date of Introduction:** 1978. October.

**New Product–Documentation:** Letter and menu from Brian Schaefer, owner. 1978. Oct. 13. “We are making tempeh at our restaurant now and selling it also in our natural foods store. The reaction among customers is, of course, mixed. I have been experimenting with different methods of tempeh production to try to find a method that will be consistent and efficient on a large scale operation (large enough to sell to other stores in our area). The menu of the restaurant at 514 Main Street contains the following recipes: Indonesian Curry (with tempeh and tofu), and Tempting Tempeh (tempeh with a special sauce, greens, and sprouts). On the front panel of this international [vegetarian] menu: “Welcome: Our purpose is to support nutritional habits that will promote the health and happiness of all earth’s children. We endeavour to serve the most natural and organic food available; and we prepare it freshly for you in our kitchen. Relax and Enjoy.”

On the back panel, titled “About our menu,” is a brief definition of five words: Tofu, miso, tamari, tempeh, natural, and organic.

Letter from Brian Schaefer. 1979. A 4-page, handwritten description of how his company makes tempeh, plus a bulk recipe for Indonesian Tempeh with tempeh and tofu.

Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 148. Owner: Brian Schaefer. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Brian

Schaefer. This restaurant made tempeh in its kitchen, then served the tempeh in the restaurant in dishes such as Tempeh Filet (with mushrooms in lemon-butter sauce, rice and vegetable; \$4.95 in 1980), and Tempeh lettuce and tomato on pita bread with tahini sauce (\$2.75).

632. Jacobs, Leonard. 1978. Menage: My family has been making soymilk and tofu practically every day, but we cannot figure out what to do with the leftover soybean pulp (okara). M. Weintraub, Gabriola, California. *East West Journal*. Oct. p. 12.

• **Summary:** Answer: One of the best uses for okara is in making tempeh. You can also steam okara with vegetables and compost the rest. Address: Publisher, East West Journal.

633. Shurtleff, William. 1978. Protein source for the future. *PHP (Japan)*. Oct. p. 8-18, 79-82. Illust. 18 cm.

• **Summary:** Contents: Introduction. Ten reasons why soybeans will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost source of protein in almost every country of the world. 3. High nutritional value. 4. Time tested for over 2,000 years. 5. Remarkably versatile. 6. Appropriate technology ("Traditional soyfoods can be produced in cottage industries"). 7. New dairylike products. 8. Soybeans are hardy and adaptive. 9. Free nitrogen fertilizer from nodules on soybean plants. 10. Great productivity potential.

Discusses new patterns of soy protein utilization, with specific reference and descriptions of tofu, soymilk, tempeh ("Indonesia's most popular soyfood"), miso, shoyu, whole dry soybeans, roasted soybeans, fresh green soybeans, soy flour, kinako, soy sprouts, and textured soy protein (TVP), yuba, and natto. Concludes with a discussion of new developments in the Western world. Address: New-Age Foods Study Center, P.O. Box 234 (951½ Mountain View Dr.), Lafayette, California 94549. Phone: 415-283-2991.

634. Fleiss, Paul M.; Douglass, J.M.; Wolfe, L. 1978. Vitamin B-12 deficiency in strict vegetarians. *New England J. of Medicine* 299(23):1319. Dec. 7. [2 ref]

• **Summary:** This letter was written in response to a letter by Higginbottom et al. in the Aug. 17 issue of JAMA. "A nutritionally adequate, strict vegetarian diet is, in fact, possible. Natural vitamin B-12 is synthesized by microorganisms, and, accordingly, vegans may obtain vitamin B-12 from soy sauce (3 micrograms per 5 ml), miso, and tempeh, as well as certain seeds and nuts, or by colonic synthesis when adequate unheated seeds are eaten (U.D. Register, personal communication)... Our experience with hundreds of healthy, breast-fed infants indicates that omnivores, lacto-ovo-vegetarians, lacto-vegetarians, and strict vegans (some practicing lifetime avoidance of animal products) can nourish their infants adequately for the first few months of life without supplementation." Address: 1.

USC School of Medicine; 2-3. Kaiser-Permanente Center, Los Angeles, California 90027.

635. *East West Journal*. 1978. Soy boom. Dec. p. 18.

• **Summary:** "Over seventy people involved in the production of soy foods met in Ann Arbor, Michigan, this summer and established the Soycrafters Association of North America (SANA). The nonprofit organization will facilitate communication among the 140 businesses producing tofu, miso, soymilk, or tempeh. SANA reports soy foods have been received enthusiastically across the United States and Canada. Seventy new tofu shops and soy dairies have been established in thirty-one states in the last two years. For further information write SANA, Box 76, Bodega, California 94922."

636. Arbiyanto, Purwo. 1978. Proses fermentasi tempe ditinjau dari sudut fermentasi substrat padat [The tempeh fermentation process observed from the solid substrate fermentation viewpoint]. Presented at Seminar Mikrobiologi II (Second Seminar on Microbiology). Held at Yogyakarta. [Ind]\*

637. Bhavanishankar, T.N.; Shatha, N.V.; Rajashekaran, V.P.; Sreenivasmurthy, V. 1978. Studies on tempeh made from groundnut and soybean mixture. In: Proceedings of the First Indian Convention of Food Scientists and Technologists. No. 9.2. See p. 95. \*

• **Summary:** The authors reported a considerably better release of free amino acids like methionine and lysine, and higher non-protein nitrogen and free amino nitrogen in the fermented groundnut-soybean mixture than in the fermented soybean. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

638. Farm Foods. 1978. Products catalog. 156 Drakes Lane, Summertown, TN 39483. 6 p. 21 cm.

• **Summary:** Products sold include Whole Cleaned Soybeans, Full-Fat Soy Flour, Good For Ya Texturized Vegetable Protein, Nigari, Tempeh Kit, Tempeh Starter, Good Tasting Nutritional Yeast, The Farm Vegetarian Cookbook, and Yay Soybeans! T-Shirts. Free literature includes: Yay Soybeans!, Vitamin-B-12 for Complete Vegetarians, Feeding Your Baby Vegetarian, Feeding Your Young Vegetarian Child, and Vegetarian Prenatal Nutrition and High Protein Recipes.

This innovative catalog is printed with brown ink on white paper. At the top of the cover are the words "Farm Foods"; to the left of them is a circular logo, which shows rows of crops (soybeans) in a field converging in the distance at the foot of three mountains. Below that is the address, phone number, and catalog title. On the bottom half of the cover is a photo of many young soybean plants growing in a field. Address: Summertown, Tennessee.

639. Kuswanto, Kapti Rahayu; Kasmidjo, R.B.; Bawono, Djoko. 1978. Pengaruh penggilingan kedele rebus sebelum inoculasi pada [Effect of grinding boiled soybeans before inoculation in tempeh processing]. Presented at Seminar Mikrobiologi II (2nd Seminar on Microbiology). Held at Yogyakarta. [Ind]\*

640. Murthy, V. Sreenivasa. 1978. Development of tempeh and onjom-type of food products for use in India. USDA, Final Technical Report. Public Law 480 Project UR-A7-(40)-207. \*

• **Summary:** The Protein Efficiency Ratio (PER) was improved when groundnut/soybean mixtures were fermented with *Rhizopus oligosporus* NRRL 2549.

641. **Product Name:** Tofu, and Tempeh.

**Manufacturer's Name:** Pillar of Dawn (Amud Ha Shachar).

**Manufacturer's Address:** Moshav Me'or Modi'im, Doar Na Hamercaz, Israel.

**Date of Introduction:** 1978.

**New Product–Documentation:** Shurtleff & Aoyagi. 1979. July. New Tofu Shops & Soy Dairies in the West. Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Avraham Sand.

Talk with Avraham Sand. 1981. This was Israel's first tofu shop; it started in 1978. The tofu was curded using bitter melon (nigari) from a salt factory on the Dead Sea. The company also made soymilk, tempeh, and miso, but only the tofu and miso were sold commercially, off the moshav, in Jerusalem. Avraham was an American, born Roger Sand, the son of Ralph Sand, who did work on soy cheeses with Anderson Clayton in Texas. Ralph tried to develop a casein-free soy cheese that would melt, but he never was able to.

Shurtleff & Aoyagi. 1982. Soyfoods Industry: Directory & Databook. Owner is now Ben Zion Soloman.

Talk with Avraham Sand. 1990. Sept. 9. Gives a detailed history of this company.

Talk with Nathan Segal. 1994. Sept. 12. He lives in Natanya, Israel. Shlomo Carlebach started this moshav, and it soon became a leading purveyor of natural foods in Israel. It was within that context that a tofu shop started there. He thinks the tofu shop is still in operation. Note: A moshav (the word was first used in 1931) is a cooperative settlement of small individual farms in Israel. By comparison, a kibbutz (the word was also first used in 1931) is a collective farm or settlement in Israel.

642. Roestamsjah, -; et al. 1978. Improvement of traditional tempe manufacturing techniques. Bandung: Indonesian Institute of Science. \*

Address: Bandung.

643. Agustine, Nany. 1978. Pengaruh waktu perebusan kedele pada pembuatan tempe [Effect of soybean boiling time on tempeh processing]. Thesis (Skripsi), Fakultas Teknologi Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 26 p. [Ind]\*

Address: Yogyakarta, Indonesia.

644. Aramaki, Nancy. 1978. Acceptance evaluation of tempeh made from soybeans, bulgar, millet and aduki beans. BS thesis in dietetics and food administration, California Polytechnic State University, San Luis Obispo, California. 24 p. 28 cm. [13 ref]

• **Summary:** The four types of tempeh were sliced and fried in oil before being served to members of a taste panel. The four categories of sensory evaluation were taste, smell, appearance, and texture. "The computer, which analyzed the results, showed acceptance of the four samples in all categories, except for the category of appearance of aduki bean tempeh." Millet tempeh was rated best in all 4 categories. Soybean tempeh was rated worst in taste. Aduki bean tempeh was rated worst in smell and appearance. Bulgar tempeh was rated worst in texture. Address: California Polytechnic State Univ., San Luis Obispo.

645. Association for Science Cooperation in Asia. 1978. Food technology for developing countries, 6th. Wellington, New Zealand: ASCA. 107 p. Held in Feb. 1978 at Palmerston North, New Zealand. \*

646. Ballentine, Rudolph. 1978. Diet and nutrition: A wholistic approach. Honesdale, Pennsylvania: The Himalayan International Inst. 634 p. Illust. Index. 24 cm. Seventh printing (revised): 1982. [799\* ref]

• **Summary:** Ballentine is an M.D. The book, advocating a vegetarian diet and based in part on the principles of Indian Ayurvedic medicine, is carefully researched and well written. He has a nice 1-page statement on tofu. Concerning de-gassing beans: "The gas that comes from eating beans is caused primarily by two unusual starches, stachyose and raffinose (Rackis 1970). They are rather short chains of sugar molecules, but they are joined by a special linkage that cannot be broken by any of the enzymes usually found in the intestine. For this reason they cannot be absorbed, but remain behind in the digestive tract where they are metabolized by certain bacteria that are more common in those who eat meat. Especially in one who is not accustomed to a vegetarian diet, these bacteria break down the short starches into carbon dioxide and hydrogen, the two main components of gastrointestinal gas (Rackis 1975). These starchy villains (stachyose and raffinose), responsible for so many unsavory misdeeds, can fortunately be removed from the beans. Soaking overnight helps a little since enzymes in the bean break down the starches into sugars. But this probably eliminates less than a tenth of the problematic

starches. Boiling for 20 minutes will remove a third of them, and 85% can be removed if soybeans, for example, are boiled 5 minutes, soaked for a half hour in tap water, rubbed until the hulls float free, then cooked for an hour (Wolf 1975, Latin Am.).

Most of the gas-producing starches can be eliminated by sprouting. This also increases the protein content, decreases the starch content, and shortens the cooking time of legumes.

“Phytic acid (p. 71) is phosphorous compound found in most plant foods but in especially large amounts in whole grains, beans, and peas. It has the property of combining with minerals, especially calcium, iron and zinc, to form insoluble compounds which are carried out in the stool.” It can lead to rickets or softening of the bones in adults. Chapter 6, titled “Protein,” contains interesting sections on legumes (“The soybean holds a position of honor in traditional Chinese culture... the higher the income in India the greater the quantity of legumes consumed”), history of attitudes toward protein (origin of the ideas of complete proteins, incomplete proteins, and complementary amino acids), and beans and grains (p. 135-40).

Note 1. By 1987 this book was in its 14th printing and had sold over 100,000 copies. Note 2. This is the earliest document seen (July 1999) with the word “wholistic” in the title. Address: Honesdale, Pennsylvania.

647. Behrman, Daniel. 1978. Protein for the poor from fermented foods. *ASM News (American Society for Microbiology, Ann Arbor, Michigan)* 44(3):104-06. \*

• **Summary:** Includes a discussion of tempeh.

648. Beuchat, Larry R. 1978. Food and beverage mycology. Westport, Connecticut. AVI Publishing Co. x + 527 p. See p. 224-42. Illust. Index. 23 cm. [300+\* ref]

• **Summary:** Chapter 9, “Traditional fermented food products (p. 224-53), by Larry R. Beuchat, is cited separately.

In Chapter 13, “Metabolites of Fungi Used in Food Processing” (p. 368-96), by R.J. Bothast and K.L. Smiley, the section on enzymes (p. 378) begins: “Fungal enzymes have been used for hundreds of years, especially in the Orient. However, modern industrial enzyme technology probably started with Takamine (1894) [Note: In Sept. 1894 he was issued two U.S. Patents for “Process of making diastatic enzyme,” Nos. 525,820 and 525,823] and his work with *Aspergillus oryzae*. Today many industrial enzymes are of fungal origin.” These include □-amylase (from *Aspergillus oryzae* and *A. niger*), glucoamylase, pectic enzymes or pectinases, naringinase, invertase (sucrase), □-galactosidase, lactase (□-D-galactosidase), protease (from *Aspergillus oryzae*), rennet (called rennin, if pure; from *Mucor pusillus*, *Mucor miehei*, or *Endothia parasitica*; used in many types of cheeses), and glucose oxidase, cellulase, lipase, catalase.

There are also chapters on: 14. “Myctoxins,” by

N.D. Davis and U.L. Diener. 15. “Methods for detecting mycotoxins in foods and beverages,” by L.B. Bullerman. 16. “Methods for detecting fungi in foods and beverages,” by B. Jarvis. Address: Assoc. Prof., Dep. of Food Science, Agric. Exp. Station, Univ. of Georgia, Experiment, GA.

649. Beuchat, Larry R. 1978. Traditional fermented food products. In: L.R. Beuchat, ed. 1978. Food and Beverage Mycology. Westport, Connecticut. AVI Publishing Co. xi + 527 p. See p. 224-53. Chap. 9. [69\* ref]

• **Summary:** Contents: Introduction, Koji. Soybeans: Shoyu, miso, natto (incl. itohiki-natto, yukiwari-natto, and hama-natto / hamanatto), sufu, meitauza, témpé. Peanuts: Oncom. Rice: Lao-chao, ang-kak, idli. Maize: Ogi, kaanga-kopuwai, injera. Cassava: Tapé, gari. Taro (*Colocasia esculenta*): Poi. Cacao beans: Cocoa, chocolate, and chocolate liquor are products derived from cacao fruits (*Theobroma cacao*).

Tables show: (1) Some fermented foods of fungal origin. For each food is given: Product name, geography, substrate, microorganisms, nature of product, and product use. Soy-related products include: Chee fan, Chinese yeast, Hamanatto, ketjap, meitauza, meju, miso, shoyu, sufu, tao-si, taotjo, and témpé.

“Yukiwari-natto is made by mixing itohiki natto with rice koji and salt, and aging at 25 to 30°C for about two weeks.” Note 1. Yukiwari natto is natto resembling miso, featuring the stickiness (*nebari*) of natto and the sweetness of koji. It is made by a two-step fermentation. Another process: (1) Make the natto and the koji, separately. (2) Mince natto finely and mix it with koji, shoyu, and dashi made from kombu. Ferment at 30-33°C for 30-40 days.

Note 2. This is the earliest English-language document seen (Aug. 2006) that mentions the term yukiwari-natto (or yuki-wari natto). Address: Dep. of Food Science, Agric. Exp. Station, Univ. of Georgia, Experiment, GA.

650. Farm (The). 1978. Farm report: The year of the soybean—1978 (Brochure). Summertown, Tennessee. 24 panels. 43 cm. Blue ink on white paper.

• **Summary:** Contents: The community (history from San Francisco, California’s, Haight-Ashbury days; arrived in Tennessee in May 1971 with about 270 people). How we live. Right vocation. Farm Foods (“our food distributing soybean-oriented cottage industry.” Products {all vegetarian} include: whole and split soybeans, soy flour, texturized vegetable protein, nigari for curding tofu, tofu and home tofu presses, and tempeh. The Farm Construction Co. Government. Financial statement. The Book Publishing Co. (in the last 5 years they have sold over 1 million books; half of these they have printed themselves). Media (telephone system, CB radio, video production crew, audio tapes, The Farm Band). Education. The Gate. How we really make it (“We try to be spiritual in everything we do”). Other Plenty centers in Guatemala, South Bronx, Bangladesh). Quotation

from Stephen (“I really know we are all One”). Plenty. The Planet. The Noble Bean. The midwives. Farm health. This brochure contains 27 wonderful blue-and-white photos. Address: 156 Drakes Lane, Summertown, Tennessee 38483. Phone: (615) 964-3584.

651. Farm Foods. 1978. Tempeh (Leaflet). Summertown, Tennessee. 2 p. 36 cm. Brown ink on white paper. Original edition 1977.

• **Summary:** Page 1 describes how to make tempeh at home, with 6 photos. The top half of page 2 gives “Recipes for soybean tempeh.” Indonesian fried tempeh. Albert’s tempeh topping. Barbequed tempeh. Sweet and sour tempeh. Pan fried tempeh. Tempeh cacciatore. Creamed tempeh. A photo shows a bowl of fried tempeh.

The bottom of page 2 describes: Preserving tempeh. How to start another batch of tempeh from a previous batch. Other methods for splitting and hulling whole soybeans. Why we use soybeans. Other delicious soyfoods described in “Yay! Soybeans.” Bean and grain tempehs. Address: 156 Drakes Lane, Summertown, Tennessee 38483. Phone: (615) 964-3584.

652. Ford, Barbara. 1978. Future food: Alternate protein for the year 2000. New York, NY: William Morrow and Company, Inc. 300 p. Index. 22 cm. [40+ ref]

• **Summary:** The author concludes that soybeans are most likely to be the protein source of the future. Chapter 2, “The Cinderella Bean” (p. 32-53) and Chapter 3, “Soybeans, Oriental Style” (p. 54-71) both discuss the benefits of soybeans. Pages 37-38 note that soybeans were once called “haybeans” and their hay was called “haybean hay.” Note: This is the earliest English-language document seen that which uses the term “haybean” or “haybeans.”

The work of the USDA Northern Regional Research Lab. with soyfoods is described at length. Chapter 6, “It Ain’t (Just) Hay,” is about alfalfa leaf protein and leaf protein concentrate. Research on leaf protein “really started during World War II, when British scientist N.W. Pirie suggested the use of leaves to augment dwindling meat supplies... Pirie’s proposal never got underway during the war because of the costs involved, but after the war he was given a laboratory where he carried out most of the pioneering work on leaf protein.”

Chapter 9, “SCP: Promises, Promises,” is about single-cell proteins such as the bacteria *Cellulomonas* and *Pseudomonas* (the champion, which can double its weight in 9 minutes). A probable culprit in SCPs is “nucleic acids, which have been shown to cause elevated uric acids in humans if used over an extended period of time. Raised uric acid levels lead to gout, kidney stones, and gallstones. Some bacteria contain from 15 to 16 percent nucleic acids, a fairly high level. Yeasts and fungi contain from 6 to 11 percent, still a high level. Algae have less.” It is recommended that

humans not consume more than 2 grams (0.7 ounces) of nucleic acid per day. Address: USA.

653. Frazier, W.C.; Westhoff, D.C. 1978. Food microbiology. 3d ed. New York, NY: McGraw-Hill Book Co. xvi + 540 p. Index. 24 cm. [400+\* ref]

• **Summary:** Contents: 1. Food and microorganisms. 2. Principles of food preservation. 3. Contamination, preservation, and spoilage of different kinds of foods. 4. Foods and enzymes produced by microorganisms. 5. Foods in relation to disease. 6. Food sanitation, control, and inspection.

In the section on “Oriental fermented foods” (p. 387-91), the following soy-related foods are mentioned: Koji (*chou* in Chinese), soy sauce, tamari sauce, miso, tempeh, natto, soybean cheese or *tou-fu-ru*. Address: 1. Univ. of Wisconsin 2. Univ. of Maryland.

654. Gandjar, I. 1978. Fermentation of the winged bean seeds. In: 1978. The Winged Bean. Los Banos, Laguna, Philippines: Philippine Council for Agriculture and Resources Research (PCARR). xvii + 448 p. See p. 330-34. [12 ref]

• **Summary:** Initially presented at Workshop/Seminar on the Development of the Potential of the Winged Bean, Los Baños, Philippines, Jan. 1978. Address: Nutrition Research & Development Center, Dep. of Health, Indonesia.

655. Gandjar, I.; Jutono, Y. 1978. Microbiology, food and the Indonesian economy. In: W.R. Stanton and E.J. DaSilva, eds. 1978. GIAM V; Global Impacts of Applied Microbiology: State of the Art: GIAM and its Relevance to Developing Countries. Kuala Lumpur: UNEP/UNESCO/ICRO Panel of Microbiology Secretariat. Universiti Malaya Press. 323 p. See p. 169-72. Conference held 21-26 Nov. 1977 in Bangkok, Thailand. [5 ref]

• **Summary:** Indonesia consists of 5 big islands and thousands of smaller ones; 65% of the 130 million people live on the islands of Java and Madura. Since 60% of the people in Indonesia earn their living from agriculture, this sector was chosen as the leading sector in the First Five Year Development Plan of Indonesia (1969/70–1973/74). Protein calorie malnutrition is the most serious nutrition problem. “The main protein source is derived from dried fish or fresh water fish and legumes (soybeans, peanuts, and several other kinds of beans). Meat, eggs, and milk are relatively expensive and are consumed more by the better-off people. It is of great concern for us that a large part of the people and many children are not able to consume the amount of protein required.

“Traditional fermented foods always play an important role in the daily diet, especially of the low-income people. They are consumed as side-dishes with rice or as snacks and often serve as sources of vitamins and protein. The mature

dry leguminous seeds are often processed into a fermented form known as *tempe*. It is worth noting here that where in other countries the agricultural wastes are merely used for fodder, in Indonesia they are transformed through the aid of microorganisms into a palatable product, such as *oncom kacang* (fermented peanut presscake), *oncom tahoo* (fermented soybean milk refuse [okara onchom]) and *tempe bongkreng* (fermented coconut presscake).” Address: 1. Departemen Kesehatan, Bogor, Indonesia; 2. Gadjah Mada Univ., Yogyakarta, Indonesia.

656. Hagler, Louise. ed. 1978. *The Farm vegetarian cookbook*. Revised ed. Summertown, Tennessee: The Book Publishing Co. 223 p. Illust. Index. 22 cm.

• **Summary:** An expanded and extensively revised version of its pioneering and very creative and influential predecessor. There are excellent expanded sections on gluten (p. 76-81), tempeh and tempeh starter (p. 82-93), miso (p. 93), soymilk (p. 95-101), Ice Bean (soy ice cream, including recipes for 5 flavors), Frogurt (soymilk frozen yogurt, p. 107), soy yogurt (p. 108-13 including a non-fermented cheese made by draining soy yogurt curds in a cotton bag; from this “yogurt cheese” are made soy-based cottage cheese, sour cream, cream cheese, and cheesecake), tofu (p. 114-41), yuba (142-43), soy coffee, soy nuts, granola, and Soysage (p. 144-47), soy flour (p. 148-53), sprouts (incl. alfalfa, mung beans, and soybeans, p. 154-57). Address: Summertown, Tennessee.

657. Hellendorn, Emile W. 1978. Fermentation as the principal cause of the physiological activity of indigestible food residue. In: Gene A. Spiller, ed. 1978. *Topics in Dietary Fiber Research*. New York: Plenum Press. x + 223 p. See p. 127-68. Chap. 6. [76 ref]

• **Summary:** The “terms ‘roughage,’ ‘fiber,’ and particularly ‘cellulose’ are not applicable to the indigestible parts of human vegetable food and should no longer be used in this context.” The author prefers the terms “indigestible residue (IR)” which contains “crude fiber (CF).”

Defatted “soyflour” has a lower IR value than peas and beans. During tempeh fermentation, part of the indigestible matter disappears. A table (p. 132) shows that tempeh contains 49.8% dry matter of which (on a dry weight basis), 6.0% is crude fiber and 6.8% is indigestible residue. Defatted soyflour contains 88.1% dry matter of which 7.5% is crude fiber and 11.9% is indigestible residue. Foods with a high content of indigestible residue include: (1) Legumes—Canned Dun peas 19.6%. Pressure cooked kidney beans 15.0%. Cereal products—Wheat bran 56.0%. Rye bread 21.0%. Vegetables: Dehydrated cassava leaves 34.6%. Dehydrated curled kale 30.2%.

Foods with the greatest difference between the CF and IR values generally cause the most flatulence. Thus, beans and dun peas are more flatulent than soybeans, tempeh, or peanuts. Address: Central Inst. of Nutrition and Food

Research, Zeist, The Netherlands.

658. Hobson, Phyllis. 1978. *The soybean book*. Growing and using nature’s miracle protein. Charlotte, Vermont: Garden Way Publishing. iv + 172 p. Illust. by Andrea Gray. Index. 23 cm.

• **Summary:** Contents: Why soybeans? How to grow, harvest, and store soybeans: Selecting seed (edible varieties and time to maturity for fresh soybeans and dried beans), sources of seed, how much seed, planting the seed, inoculation, germination, the developing plant, the harvest, storing beans. Saving seed. How to process soybeans: Fresh soybeans (in the pods), dried soybeans, soy grits, soy pulp (cooked, mashed dehulled soybeans), soy flour, soy milk (from whole soybeans or from soy flour; the remaining “pulp” may be added to meat loaves or casseroles), soy curd (tofu), soy sprouts. Recipes—Soybean “meats.” Roasted soybeans. Fermented soybean cakes (tempeh). Soy beverages. Soy breads. Soy cereals. Soy desserts. Soybeans with eggs. Soy salads. Soy spreads. Soy snacks. Candy and cookies. Soy soups. Soy meat dishes. Soybeans with meat. Soybean vegetable dishes. Supper dishes. Growing soybeans for animal feeds. Homemade dog and cat food. Using soybeans for soil improvement.

Note: The chapter on how to grow soybeans (p. 6-20) is especially useful. Address: USA.

659. Huriati, Isna. 1978. A study of the storage stability of dehydrated tempeh. MSc thesis, University of New South Wales, Sidney, Australia. 74 p. \* Address: Sidney, Australia.

660. Muljokusumo, E. Sudigdo. 1978. Hasil proses fermentasi, kedelai dijadikan lebih bergizi [As a result of the fermentation process, the soybean is made more nutritious]. Bandung: Tarate. 79 p. [Ind]\*

661. Null, Gary; Null, Steve. 1978. *The new vegetarian: Building your health through natural eating*. New York, NY: William Morrow and Company, Inc. 350 p. Index. 22 cm. [63 ref]

• **Summary:** In the chapter titled “Incomplete Protein Foods,” soybeans are discussed on pages 183-86. A brief introduction is given to soy protein concentrates, isolates, spun protein fibers, and textured vegetable proteins. Full-fat soy flour, soy granules, soy flakes, and defatted soy flour and grits are available in natural-food stores.

“In striking contrast to these highly refined products of the West are the traditional East Asian products, tamari soy sauce, miso (fermented paste), and tofu... Tofu (soy curd or soy cheese) is a truly remarkable food. It is very inexpensive when purchased at Oriental markets or natural food shops and even more so if made at home.” A description of how to make tofu and a summary of its nutritional benefits are

given.

The soybean is “delicious when served a fresh green summer vegetable, simmered or steamed in the pod.” Or as roasted soybeans [soynuts, dry-roasted or oil-roasted], cooked whole dry soybeans, tempeh, or soy sprouts. The same chapter also discusses miso and tamari in detail (p. 197-99), wheat gluten (p. 178-79), and azuki beans (p. 180). Address: Director, Nutrition Inst. of America, New York. Host of the daily radio program “Natural Living.”

662. Shihani, S. 1978. Microbiology of the soy sauce and tempeh fermentations. MSc thesis, Dep. of Applied Microbiology, University of Strathclyde, Glasgow, Scotland. \*

Address: Univ. of Strathclyde, Glasgow, Scotland.

663. Smith, Allan K.; Circle, S.J. eds. 1978. Soybeans: Chemistry and technology. Vol. 1. Proteins. Revised. Westport, Connecticut: AVI Publishing Co. xiii + 470 p. Illust. Index. 24 cm. [500+ ref]

• **Summary:** This revised edition contains relatively few, unimportant changes from the original, classic 1972 edition. The following changes have been made: Addition of a 7-line preface to the “revised second printing” dated 4 Oct. 1977, updating of a graph of U.S. soybean production (p. 1). Updating (to 1976) of a table on U.S. and world production of important oilseeds (soybeans, cottonseeds, peanuts, sunflower, rape, sesame) (p. 2). Minor textual changes on pages 18-19. Addition of a table showing distribution of the 3 leading soybean varieties in 14 major states and the percentage of acreage harvested for each variety in 1976 (e.g., in Illinois, Williams accounted for 25.1% of harvested acreage, Amsoy 17.3%, and Wayne 12.8%). And updating of a table on U.S. soybean production by state showing acreage harvested, yield per acre, and production for 1974, 1975, and 1976 (p. 32).

The foreword, chapter titles, and index have not been changed at all. Note: Vol. 2 was never published. Address: 1. Oilseeds protein consultant, Hot Springs, Arkansas; 2. Oilseed protein consultant, Protein Technology, Richardson, Texas.

664. Steinkraus, K.H. 1978. Contributions of Asian fermented foods to international food science and technology. In: W.R. Stanton and E.J. DaSilva, eds. 1978. GIAM V; Global Impacts of Applied Microbiology: State of the Art: GIAM and its Relevance to Developing Countries. Kuala Lumpur: UNEP/UNESCO/ICRO Panel of Microbiology Secretariat. Universiti Malaya Press. 323 p. See p. 173-79. Conference held 21-26 Nov. 1977 in Bangkok, Thailand. [23 ref]

• **Summary:** Contents: Meat analogs: Ontjom, soy sauce, seafood sauces, tempe, tape (tapeh). Microbial protein.

Mass doubling times: Bacteria and yeasts 10-120

minutes, molds and algae 2-6 weeks, grass and some plants 1-2 weeks, chickens (broilers) 2-4 weeks, young pigs 4-6 weeks, young cattle 4-8 weeks, humans 2-6 months.

Yields of protein in kg/ha/year: Elephant grass 2,000 to 8,775 (world's record), alfalfa 3,000, soybeans (four successive crops) 3,200, Miracle Rice (IR-8) 1,600, groundnut 500, mungo bean (2 crops) 500, coconut 190, cow's milk 90, yeast (continuous fermenter charged with 500 kg yeast cells built on 1 hectare of land) 250,000 (dry basis, of *Candida lipolytica*).

Note: UNEP is the United Nations Environment Program. MIRCENs are Microbiological Resources Centres. GIAM 1 was held in 1963 in Stockholm, Sweden; Proceedings edited by M.P. Starr were published in 1964. GIAM 2 was held in 1966 in Addis Ababa, Ethiopia; Proceedings edited by E.L. Garden, Jr. were published in 1969. GIAM 3 was held in 1969 in Bombay, India; Proceedings edited by Y.M. Freitas and F. Fernandes published in 1971. GIAM 4 was held in 1973 in Sao Paulo, Brazil; Proceedings edited by J.S. Furtado were published after 1978. Address: Cornell Univ., Geneva, New York, USA.

665. Sussman, Vic S. 1978. The vegetarian alternative: A guide to a healthful and humane diet. Emmaus, Pennsylvania: Rodale Press. xvii + 286 p. Index. 22 cm. [39 ref]

• **Summary:** Explains the fundamentals of a vegetarian diet. Covers nutrition, protein requirements, health, world food crisis, recipes, and kitchen techniques. Paul Obis, editor of *Vegetarian Times*, has called this “the most complete, concise, and nondogmatic book we have come across.” Keith Akers says that this is one of his four favorite books on vegetarianism.

This book contains extensive information on soyfoods (p. 248-50) including soymilk, tofu, tempeh, miso, and soy flour. The author's greatest praise is for tofu. Of *The Book of Tofu*, by Shurtleff and Aoyagi, he says (p. 274): “The most important book on food ever published for vegetarians—if not all the world. Clear prose and beautiful illustrations... Five hundred recipes for preparing this versatile and nutritious food. Buy this book...” Address: Travilah, Maryland.

666. Wardhani, Rose Wahyuni. 1978. Variasi pembuatan tempe di sekitar kota Bogor [Variations of tempeh processing in Bogor and its vicinity]. Thesis (Skripsi), Akademi Gizi (Academy of Nutrition), Jakarta. 39 p. [Ind]\* Address: Jakarta, Indonesia.

667. Yanwar, Afrida Nazir; Saparsih, Sri Budhi. comps. 1978. Selected abstracts of traditional fermented food. Jakarta, Indonesia: National Scientific Documentation Center, Indonesian Institute of Sciences (PDIN-LIPI). iv + 470 p. Author index. 29 cm. [506 soy ref]

• **Summary:** These are abstracts of documents published from 1910 to 1976 on traditional fermented food, particularly of food prepared and consumed in Southeast Asia and the Far East. Each chapter is divided into 6 sections: Method of preparation, microorganisms, fermentation studies, nutritive values, other influence in the foodstuff, storage. Within each section, the references are listed alphabetically by author. The source of most of the references is *Chemical Abstracts*, to which an exact citation is usually given.

Contents: Preface. Introduction. 1. Fermented rice (incl. tape ketan [tapeh], sake, awamori). 2. Fermented soy beans: Soysauce (p. 173-294; 350 references), tempe (p. 294-307; 43 refs), natto (p. 307-312; 13 refs), miso (p. 312-343; 100 refs). 3. Fermented coconut press cake (bongkreng; p. 345-47). 4. Sauerkraut. 5. Fermented fish. 6. Vinegar. 7. Fermented cassava (tape / tapeh). Author index (p. 459-70).

Financial assistance was received from the National Institute of Chemistry, the Indonesian Institute of Sciences, the Indonesian Protein Project in the framework of ASEAN–Australian Economic Co-operation. Address: Indonesia.

668. Zurbel, Runa; Zurbel, Victor. 1978. The vegetarian family: With recipes for a healthier life. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 185 p. Edited by Lester Alexander. Illust. Index. 23 cm. [44 ref]

• **Summary:** The section on soybeans (p. 62-67) discusses soybeans and soyfoods, then gives recipes for: Basic soybeans. Mediterranean soybean casserole Soybean casserole. Soybean salad. Soy milk. Sesame soy milk. Roasted soybeans (baked). Other soy-related recipes include: Soyburgers (p. 80). Ginger tamari sauce (p. 118). Miso yogurt dip (p. 127).

The section titled “Basic Macrobiotic Cooking” discusses shoyu tamari, and miso, and gives recipes for: Miso soup. Miso spread. Nerimiso (Sweet simmered miso).

Chapter 7 (p. 88-101) is titled “Tofu: The food of the future—Discovered over two thousand years ago.” A full-page photo opposite the title page shows a wooden forming box, with cakes of tofu and soybeans nearby. *The Book of Tofu*, by Shurtleff and Aoyagi, is praised and credited as the source of much of the information on tofu in this book. Recipes include: Quick tofu. Homemade traditional tofu. Tofu sandwich. Tofu salad. Tofu and peas. Tofu and snow peas. Tofu and Chinese vegetables. Tofu and [mung] bean sprouts. Tofu and sesame. Kinugoshi and how to make custard style kinugoshi. The chapter ends with 2 pages on tempeh, but no recipes.

669. Shurtleff, Willam. 1978? La soja, esperanza mundial: Nuevos alimentos con modalidades muy antiguas [The soybean, hope for the world: New foods with ancient roots]. *Chacra y Campo Moderno* (Buenos Aires, Argentina). [8 ref. Spa]

• **Summary:** Discusses soy protein and world hunger,

tofu, tempeh, and miso. Growth of the soybean industry worldwide. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

670. Fiering, Steve. 1979. A Midwestern interest in tofu [The Soy Plant in Ann Arbor, Michigan]. *Whole Foods* (Berkeley, California) 2(1):38, 40. Jan.

• **Summary:** This is basically a history of The Soy Plant and some of its creative financing schemes. The Soy Plant began operation in August 1977. New products include soymilk, tempeh, spiced tofu, two spreads (one with eggless soy mayo and turmeric; one with tofu, sweet miso and tahini), ice bean [soy ice cream], tofu pies, okara peanut butter balls, and soy sausage. Address: The Soy Plant, Ann Arbor, Michigan.

671. Fillip, Janice. 1979. The fermentation transformation. *Whole Foods* (Berkeley, California) 2(1):31-33. Jan. [2 ref]

• **Summary:** Contents: Introduction. Shoyu, tamari and soysauce. Tempeh. Address: California.

672. Gandjar, Indrawati. 1979. Food: Microbiological aspects. Paper presented at UNESCO Regional Training Course Development. 16 p. Held 8-24 Jan. 1979 at Bandung Institute of Technology, Bandung, Indonesia. \* Address: Nutrition Research & Development Center, Dep. of Health, Indonesia.

673. Monroe, Linda. 1979. The many faces of tofu. *Alch Mist of Ann Arbor* (Michigan). Jan.

• **Summary:** The Soy Plant, located at 211 East Ann St., is a tofu shop—but they also make soysage, missing egg salad, tempeh, spiced tofu (various spices are added when curdling the soy milk), soy milk (regular or flavored with honey and vanilla), missing egg salad, tofu-tahini spread, tofu tarts (a tasty dessert). Coming soon: Soy Scream (soy milk ice cream), and Boston brown bread (steamed). Tofu is made four days a week. “Soy products can be and indeed are the staple of many vegetarian diets.”

“The Soy Plant sells one pound cubes of tofu for 70 cents (if you bring your own container), 72 cents with their plastic bag, or 85 cents in their container [plastic tub]. They encourage people to bring their own containers so as to cut down the use of plastic.” “The collective has been very creative with the versatile little soy bean. Their ideas seem to be endless. They have developed many tasty foods by experimenting with different combinations of ingredients.”

“The Soy Plant is a cheerful, pleasant place to visit. You’ll usually find samples of their different spreads and beverages. Any questions about soy products are gladly answered either by collective members or by just looking in any of the various books available there on tofu, miso and other soy products. You can be sure the collective will always be coming up with new items to surprise and satisfy your taste buds.

"The Soy Plant is open Mondays–Fridays, 10-6, and Saturday, 9-5."

In the middle of the article is The Soy Plant Logo, two soybean plants growing (to left and right) out of Planet Earth. Around the bottom is written "The Soy Plant."

Talk with Steve Fiering, a founder of The Soy Plant in Ann Arbor. 2000. Dec. 3. The title of this periodical derives from the word "Alchemist." The logo was Steve's idea, developed by Marge Bruchac, Susanna Middaugh, and Dan Ecclestone.

674. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tofu. Extensively revised and updated. Condensed. New York, NY: Ballantine Books. 434 p. Illust. by Akiko Aoyagi Shurtleff. Index. Jan. 18 cm. [60 ref]

• **Summary:** Contents: Preface. Acknowledgements. 1. Protein East and West. 2. Tofu as a food. 3. Getting started: Favorite tofu recipes. 4. Soybeans. 5. Fresh soy puree. 6. Okara (Soy pulp). 7. Curds and whey. 8. Tofu & firm tofu. 9. Deep-fried tofu: Tofu cutlets, burgers, treasure balls, and pouches. 10. Soymilk. 11. Silken tofu. 12. Grilled tofu. 13. Frozen & dried-frozen tofu. 14. Fermented tofu. 15. Yuba. Appendices: A. Tofu restaurants in Japan. B. Tofu shops and soy dairies in the West. C. Varieties of tofu in East Asia. D. Table of equivalents. Bibliography. Glossary. Contains 250 recipes and 100 illustrations. Price: \$2.95.

This new edition features: (1) New recipes: Over fifty new American-style tofu recipes including Creamy Tofu Dressings, Tofu Teriyaki, Tofu Burgers, Tofu Eggless Egg Salad, and the like. The key to the book is an updated list of favorite tofu recipes plus suggestions for incorporating them into a weekly menu (p. 56). (2) New sections: An extensive new introduction to Soy Protein Foods (p. 66), dairylike products made from tofu (p. 150), dairylike products made from soymilk (p. 302) including soymilk yogurt (fermented), ice cream, kefir, mayonnaise, whipped cream, popsicles, buttermilk, and soy shakes. (3) New chapters: Wine Fermented Tofu and Varieties of Tofu in East Asia. (4) New basic methodologies: The key recipes for homemade tofu and homemade soymilk have been simplified and improved. (5) Updates: A complete listing of the 120 tofu shops and soy dairies now operating in the West; over 60 Caucasian-run shops have opened in the past two years. (6) New Americanized tofu names: Including tofu burgers, tofu cutlets, silken tofu, wine fermented tofu, and fresh soy puree. (7) No sugar.

Note 1. This is the earliest English-language document seen (March 2004) that uses the term "silken tofu."

Note 2. This is the 2nd earliest English-language document seen (Oct. 2010) that contains the term "Wine-fermented tofu."

In Jan. 1988 a new printing (but not a new edition) of this book (the 13th), slightly revised, appeared. It had a new cover and many new small illustrations. The subtitle was

"Protein Source of the Future–Now!" The heading: "The World's Bestselling Book on Tofu." Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

675. Shurtleff, William. 1979. Protein source for the future. *Cosmos (NSW, Australia)* 6(6):1, 4-5. Jan.

• **Summary:** Gives ten reasons why soybeans soy will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost protein. 3. High nutritional value. 4. Time tested. 5. Remarkably versatile. 6. Appropriate technology. 7. New dairylike products. 8. Hardy and adaptive. 9. Free nitrogen fertilizer. 10. Energy and resource efficient. "All of these ten factors work together synergistically, reinforcing one another, to give added weight to the prediction that soybeans will be a key protein source for the future on plant earth."

Note: This information was published in July 1979 in *The Book of Tempeh* (p. 21-24). Address: Lafayette, California.

676. Wang, H.L.; Mustakas, G.C.; Wolf, W.J.; Wang, L.C.; Hesseltine, C.W.; Bagley, E.B. 1979. Soybeans as human food: Unprocessed and simply processed. *USDA Utilization Research Report* No. 5. iv + 54 p. Jan. Slightly revised, July 1979. Jan. No index. 28 cm. Compiled for USAID. [50+ ref]

• **Summary:** Contents: Introduction. 1. Soybean food uses in Asia. China: Soaking dry soybeans, tou chiang (soybean milk), tou fu (soybean curd), processed tou fu products, tou fu pi (protein-lipid films), huang tou ya (soybean sprouts), whole soybeans, fermented soybean foods, production and consumption. Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products, yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), whole soybeans, fermented soybean food, production and consumption. Korea: Tubu (soybean curd), processed tubu product, soybean sprouts, whole soybeans, soybean flour, fermented soybean food, production and consumption. Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap {soy sauce}, tauco {soybean paste}), food mixtures, production and consumption. Thailand: Tofu (*tauhu*), soy sauce, green soybeans in the pods (*tourae*). Philippines: Soybean sprouts, soybean coffee, soybean cake, soybean milk, tou fu and processed tou fu products, production and consumption. Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. Middle East. References–Soybean food uses in Asia.

2. Soybean food uses in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-

soy mixtures (soy-ogi). Tanzania. Uganda. Production. References—Soybean food uses in Africa.

3. Soybean food uses in Europe and U.S.S.R.

4. Soybean food uses in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela. Mexico: New village process, commercial developments. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References—Soybean food uses in Latin America.

5. Soybean food uses in North America. United States. Canada. References—Soybean food uses in North America.

6. Soybean food uses in Australia. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprouts, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soy sauce, fermented soybean paste, fermented whole soybeans, natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. 9. Industrial production and selling prices of edible soybean protein products.

10. Barriers to accepting and using soybeans in food: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer. Address: NRRC, Peoria, Illinois.

677. Weaver, Greg. 1979. Re: The Tofu Shop retail outlet in Rochester, and its favorite recipes. Letter to William Shurtleff at New-Age Foods Study Center, undated. 6 p. Handwritten.

• **Summary:** Describes the reasons for setting up “the retail shop.” Numerous favorite tofu and tempeh recipes are attached. Some were used by Shurtleff & Aoyagi in their book *Tempeh Production*. Address: The Tofu Shop, 686 Monroe Ave. / 277 N. Goodman St., Rochester, New York 14607. Phone: 716-442-1213.

678. *Whole Foods (Berkeley, California)*. 1979. The beaning of Motown. 2(1):41. Jan.

• **Summary:** In January 1978, Carol Ann and Timothy Huang, founders of the Yellow Bean Trading Co. in Detroit, Michigan, started to distribute tofu, soymilk, and tempeh made at The Soy Plant in Ann Arbor, Michigan. Yellow Bean takes the products to health and natural food stores, restaurants, fruit markets, and Oriental grocery stores in Detroit. In the beginning they distributed 100 lb/week of tofu; that figure has now risen to 400 lb/week. They also carry nutritional yeast, sprouts, textured vegetable protein, soybeans, soy flour, and *The Farm Vegetarian Cookbook*,

which contains excellent soyfoods recipes.

Timothy and Carol Ann made soyfoods a major part of their diet while living on The Farm in Tennessee. They were married on a branch of The Farm in Wisconsin, where their son was born. Carol and Tim now also give demonstrations on how to cook with tofu and other soyfoods.

“As the wholesale business grows, the Huang family is now setting up a store and restaurant, Yellow Bean Vegetarian Foods. At first, the restaurant is planned as a carry-out, including a deli case.” Later they hope to expand to a larger location, open a sit-down restaurant, and begin making their own tofu and soymilk.

The Huangs feel “really glad to be part of this ‘revolution,’ and offer what we’ve learned.”

679. *Whole Foods (Berkeley, California)*. 1979. The food of the future. 2(1):22-24. Jan.

• **Summary:** The article begins: “Why devote an entire issue of *Whole Foods* to the subject of soyfoods? Soyfoods are a rapidly growing part of the natural foods industry...”

“The bringing of the ‘Soyfoods Revolution’ to the natural foods industry is the work of individuals, toying and playing with new recipes in their own kitchens and shops. No person deserves more credit for this revolution than William Shurtleff who, along with Akiko Aoyagi, wrote *The Book of Tofu*, and told us all how to do it. (An updated pocket-size version of *The Book of Tofu* is just off the presses of Ballantine Press.) Shurtleff travels the globe, sharing his expertise on soyfoods, covering topics as specific as chip-dip recipes and as broad as the role of soybean production in future patterns of world protein hunger.

“Other individuals, most of them with small soyfoods shops of their own, met recently to form the Soycrafters Association of North America (SANA), which is likely to serve as the backbone of the Soyfoods Revolution in the natural foods industry. [Note: This historic first meeting was held on 28-30 July 1978 at The Soy Plant in Ann Arbor, Michigan.] SANA selected Larry Needleman as its first president. Needleman, whose Bean Machines, Inc. imports the prime line of Takai tofu and soymilk equipment from Japan, has been a major source of information about soyfoods equipment for our industry.

“Needleman wrote about the spirit of the new organization at its first gathering in Ann Arbor.

“Imagine a group of seventy people representing enthusiastic dedication (almost to the point of craziness) to the production and distribution of tofu and other soyfoods, gathered in an informal setting in a university town in the Midwest, with meetings scheduled from nine in the morning till eleven at night—and you’ve got a good idea of what went on... ‘Sharing began immediately. Groups of people gathered here and there and began asking each other about their shop or organization. Those passing by would hear a familiar word such as ‘yield’ of ‘pressure-cooker’ and just stopped to join

the conversation. It was apparent that here was a gathering destined to be stimulating and mutually beneficial...

“The first evening, Bill Shurtleff set up a slide show about tofu and miso production in Japan. The presentation ran the gamut from small, traditional shops built over their own well, to large, fully-automated factories turning out tens of thousand of pounds per day. Bill answered questions and added a personal touch to the showing because he had shot the photos himself over a period of years, and was familiar with the language, traditions and production of the Japanese...

“On Saturday morning, The Soy Plant showed us their method of producing tofu and soymilk. Those with less experience absorbed information and asked questions, and those with more experience volunteered information, clarified points and offered suggestions. Then Wataru Takai, the overseas manager for Takai Tofu and Soymilk Equipment Co., Japan’s largest manufacturer of this equipment, explained principles behind each step of production, and the uses of the equipment...

“At a later session, it was remarked that many soyfoods producers are operating on an inefficient and labor-intensive basis. Some felt this was a good way to begin, first becoming intimate with the steps of production and developing a market ‘track record,’ and then using that base to upgrade production by purchasing more sophisticated equipment. Others felt that the time and energy involved in putting together a makeshift shop which was outgrown in about six months would be better spent in the capital to start at higher technological level...

“In one of the most popular and exciting discussions of the conference, the consensus of the group was that tofu and soymilk were the foods that Americans have been waiting for. A list of related products that have been marketed with incredible success included tofu burgers, no-egg salad, honey soymilk ice cream, tofu chip-dips and dressings, flavored soymilk, tofu ‘mayonnaise,’ and pressed, marinated tofu. There was unanimous agreement that it was these new soyfoods that would capture the interest and palate of middle America, people who had turned up their noses at that tasteless white cake of tofu floating in water...

“Later we discussed the problems of proper storage and display of our products. In US food markets, tofu has usually been sold with Oriental foods in the vegetable section. Getting it moved to a cooler, more appropriate cheese display case, where it will stay fresh longer and compete favorably with dairy products, has met with resistance...

“In the evening, another slide show by Bill Shurtleff showed us how tempeh, a key protein source for millions of people in Indonesia, is quickly and simply produced as a cottage industry in their homes. Having sampled this unusual food at lunch, we were eager to learn about it because it was delectable. Somewhere between a deep-fried fish cake and Kentucky fried chicken in flavor and texture, it lent itself to

use in a seemingly endless variety of ways...

“Toward the end of the conference, discussion turned to marketing and finance. It was found that some firms lacked capital for growth, while others had enough capital but needed greater management skills to keep up with the growing demand for soyfoods. That demand is not uniform nationwide. Different regions show various levels of consumer awareness, interest in, and acceptance of soyfoods. Printed hand-out sheets and cooking classes were suggested as promotional efforts were an important part of the creation of a desirable image for soyfoods.

“Before leaving Ann Arbor, the participants formed the Soycrafters Association of North America as a trade association to promote soyfoods and exchange information among the members. With the founding of SANA, the Soyfoods Revolution took its longest recent stride. Soycrafters were no longer isolated persons, groups and shops, but had become a nationwide network devoted to the same purposes, sharing their experiences for mutual benefit and the ultimate benefit of the American consumer.”

Note: The word “soyfoods” is used throughout this article.

680. [Shurtleff, William; Aoyagi, Akiko]. 1979. Soyfoods buyer’s guide [Tofu, tempeh and miso shops in the USA and Canada]. *Whole Foods (Berkeley, California)* 2(1):42-44. Jan.

• **Summary:** A listing of all companies in the USA and Canada, by food type, by state.

Note: This is also the earliest English-language publication (one of two in this issue) seen with the term “Soyfoods” in the title. Shurtleff and Aoyagi compiled this list and gave *Whole Foods* permission to use it free of charge. Address: P.O. Box 234, Lafayette, California 94549.

681. Steinkraus, Keith H. 1979. Re: Vitamin B-12 content of tempeh. Detecting “true” vs. “pseudo” B-12 activity. Letter to William Shurtleff at New-Age Foods Study Center, Feb. 14—in reply to letter of Feb. 10. 1 p.

• **Summary:** “Thank you for your letter of Feb. 10 and also the copy of your paperback book—The Book of Tofu...”

“Regarding your article on vitamin B-12, the best I can do is to inject a word of caution. It is probably a good idea if you can distribute the ‘facts’ but the question is what are the ‘facts.’

“Even the Liem et al. paper [1977] can be interpreted wrongly. What we report in that paper are vitamin B-12 ‘activities’. In our original publication, we reported a level of about 5 nanograms vitamin B-12 activity in dried Indonesian tempe. Our assay then was based upon experiments using a photosynthetic protozoa—*Ochromonas malhamensis*. This organism supposedly detects only ‘true’ vitamin B-12 and thus is a ‘supposedly’ accurate measurement of the vitamin B-12 activity that product would have in man. Even this is

not necessarily so if the consumer does not have enough 'intrinsic factor' in the diet which directly influences absorption of vitamin B-12 consumed. But let's assume that the figure is correct for true vitamin B-12 in tempeh.

"In Liem's studies, she used another assay for vitamin B-12 activity—*Lactobacillus leichmanii*. It is somewhat easier to use than *Ochramonas* but it is probably not as fastidious in detecting only 'true vitamin B-12 activity'. It also responds to pseudo-vitamin B-12 activity of which there are several forms. So, a portion of the vitamin B-12 activity reported in Liem's paper may be inactive in the human consumer. We are repeating that work with *Ochramonas* in an effort to determine the 'true B-12 activity'.

"You should worry not only about our figures on B-12 activity but also the figures published by others. How many of the others have used *Ochramonas* and how many have used *L. leichmanii* and therefore include some pseudo-B-12 (inactive in the human) in their figures.

"Next we do not know of any yeasts or molds where it has been proven that they produce vitamin B-12. Vitamin B-12 is produced only by prokaryotes (the bacteria and possibly some *Actinomycetes*).

"Thus, this area of vitamin B-12 activity in tempeh and other products is quite complex and it would be very easy to distribute false information. If you are dealing with scientists, most will be familiar with the basic assumptions and the possible fallacies that may be involved. In other words, the amount of the vitamin found is dependent upon the method used and the type of activity detected (whether 'true' or 'pseudo') and the relative proportions depend upon the actual amounts of both types present and the method and organism of assay. If these same figures are thrown at the lay public, they may get entirely wrong ideas about the amounts of B-12 they are ingesting.

"This is another reason why I caution producers also not to make too many claims regarding the vitamin B-12 activity in their products. As soon as a claim is made that the product contains a certain amount of B-12, the FDA can challenge them to prove that their claims are accurate and that the vitamin B-12 is 'true' B-12 and not 'pseudo'. Based upon our studies with *Ochramonas* we know that our basic results are all correct. Tempeh does contain vitamin B-12 activity in the 'true' form when *Klebsiella* is present but the levels may vary anywhere from 3 to 15 nanograms per gram tempeh. We do not know for certain what the exact levels of 'true' B-12 activity are in tempeh (not to our satisfaction at any rate)." Address: Prof. of Microbiology, Dep. of Food Science & Technology, New York State Agric. Exp. Station, Geneva, NY 14456. Phone: 315-787-2255.

**682. Product Name:** Okara Tempeh.

**Manufacturer's Name:** Kirpalu Yoga Retreat.

**Manufacturer's Address:** Box 120, Summit Station, PA 17979. Phone: 717-754-3051.

**Date of Introduction:** 1979. February.

**New Product–Documentation:** Letter from Chris Yorston, Kitchen Dep., Kirpalu Yoga Retreat. 1979. Feb. 20.

Describes how they make okara tempeh on a community scale. They sometimes supplement it with bulghur for taste. They make their own starter by growing a package of The Farm's starter on white rice. The tempeh is made in standard 15 by 24 inch baking trays covered with perforated plastic wrap, then incubated in the kitchen loft. They prefer to bake rather than fry so their favorite recipe is Baked Tempeh with Bar-b-que Sauce.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Chris Yorston.

**683. Product Name:** Tempeh.

**Manufacturer's Name:** Surata Soyfoods.

**Manufacturer's Address:** 518 Olive St., Eugene, OR 97401. Phone: 503-485-6990.

**Date of Introduction:** 1979. February.

**Ingredients:** Organically grown soybeans, vinegar, *Rhizopus oligosporus* (mold inoculant).

**Wt/Vol., Packaging, Price:** 10 oz in perforated plastic bag, in outer plastic bag.

**How Stored:** Frozen.

**New Product–Documentation:** Label. 1979, undated.

4.25 by 5.5 inches. Blue on white. "Saute in skillet until brown on both sides. Add 1/3 cup water, cover, and cook 15 minutes." Shurtleff & Aoyagi. 1979 (July). The Book of Tempeh. p. 149. Made by Benjamin Hills. He learned how to make tempeh from his former wife, who learned it from The Farm in Tennessee. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owners: Ed Miller & Lisa Rein. Label. 1982, undated. Red on beige from 302 Blair. Talk with Newt Loken. 1989. Sept. 19. They now make bulk tempeh. Average production of all tempeh is 500 lb/week, but on weeks with large bulk orders it may reach 1,500 lb/week.

Form filled out by Shevah Lambert. 1990. July 2.

An Oregon Cooperative

1982

**Surata Soyfoods**

"The firmest, best quality tempeh we have yet tasted in the U.S."

*Tempeh Production by Shurtleff & Aoyagi  
(The Soyfoods Center), Authors Book of Tempeh*

# TEMPEH

**A Cultured Soyfood**

Tempeh can be steamed, baked, broiled, fried, or barbequed. See recipes on other side.

Dark spots are normal to the tempeh culture and do not indicate spoilage.

For more recipes and information, send S.A.S.E. to **Surata Soyfoods Inc.**, 302 Blair, Eugene, OR 97402

Ingredients: *Sprouted* organically grown soybeans, water, apple cider vinegar, tempeh culture (*Rhizopus Oligosporus*)

Keep frozen NET WT. 10 OZ.

**MAKES 4 BURGERS!**

## TEMPEH STROGANOFF

10 oz. Surata Tempeh  
 ½ medium onion, chopped well  
 1 lb. fresh mushrooms, chopped well  
 3 T butter (or oil)  
 3 T soy sauce  
 ¼ c water  
 1 ¼ t salt  
 1 t dry mustard powder  
 dash pepper  
 ¼ c. burgundy wine  
 2 T pastry flour  
 4 c uncooked egg noodles  
 ¼ c sour cream

Saute onions and mushrooms in butter for a few minutes until onions are translucent. Cut tempeh into small (½") cubes, and saute with mushrooms and onions for 5 minutes. Add soy sauce and water.

Simmer 1 minute, then add salt, pepper, mustard powder, and wine.

Simmer another minute, and add flour to slightly thicken juices. Set aside.

For more information and delicious recipes see *The Book of Tempeh* by Shurtleff & Aoyagi (Harper & Row).

Nutritional Information:  
Per 2½ oz. Serving

Calories	113
Protein	14 g.
Carbohydrates	7 g.
Fat	5 g.

Cook noodles and drain; add pat of butter, dash of salt and pepper.

Mix noodles, tempeh mixture, and sour cream in a large bowl. Serve immediately. Serves 3-4.

## TEMPEH SALAD

Serves 4

10 oz. Tempeh, steamed for 20 minutes, allowed to cool, and cut into small cubes

4-5 T mayonnaise

1 stalk celery, chopped fine

3 T minced dill pickles

4 T minced onion

2 T fresh minced parsley

(or 1 t dried)

1 carrot, grated

1 t prepared mustard

1 t soy sauce

dash of garlic powder/dash of

cayenne pepper

(½ t prepared horseradish, optional)

½ t basil

½ t dill

Combine all ingredients and mix well. Great on sandwiches!!

## TEMPEH BURGERS

Tastes great on buns with all the fixings, or in lasagna, Mexican food, "sloppy joes," or on pizza!

10 oz. Surata Tempeh

1 T butter (or oil)

1 T soy sauce

1 clove garlic (optional), minced or crushed

If tempeh is frozen, thaw for about 15 minutes until it can be cut into 4 pieces for burgers, or into cubes or strips for casseroles, pizza, etc. Steam tempeh in vegetable steamer for 15-20 minutes. Melt butter in skillet (add garlic here if you choose). Add tempeh and soy sauce; cook until tempeh is brown on both sides. For cheese-burgers, melt slices of cheese on burgers just before removing from heat.

© Surata Soyfoods

Surata now makes 1,063 lb/month of this product called Soy Tempeh. Production started in Feb. 1979.

684. **Product Name:** Tempeh.

**Manufacturer's Name:** White Wave.

**Manufacturer's Address:** 3869 Walnut St., Boulder, CO 80301. Phone: 303-443-3470.

**Date of Introduction:** 1979. February.

**Ingredients:** Certified organically raised soybeans, *Rhizopus oligosporus* mold spores.

**Wt/Vol., Packaging, Price:** 10 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Letter from Steve Demos. 1979. Sept. 2. Tempeh is a minor product. Only 160 by 8 oz. bags are produced. Chip McIntosh was the first tempeh maker, followed by Chris O'Riley; Label. Undated. 4 inches square. Black on tan. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Product Price List. 1979, winter. 10 oz. "Delicious deep fried or steamed with ginger and soy sauce." Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Address listed as 1990 N 57th St., Boulder, Colorado 80301. Chip McIntosh is the tempeh maker.

685. **Product Name:** Soya Rice Tempeh.

**Manufacturer's Name:** White Wave.

**Manufacturer's Address:** 3869 Walnut St., Boulder, CO 80301.

**Date of Introduction:** 1979. February.

**Ingredients:** Certified organically raised soybeans, brown rice, apple cider vinegar, *Rhizopus oligosporus* mold spores.

**Wt/Vol., Packaging, Price:** 10 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label. 1979, undated.

4 inches square. Brown on tan. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 54. This is America's first commercial multigrain or soy-and-grain tempeh, and the first to contain rice as an ingredient.

686. Davis, Melissa. 1979. The soy of cooking: Out of the field, into the kitchen. *Washington Post*. March 15. p. E1, E14, E20.

• **Summary:** Starts by discussing Henry Ford's interest in and work with soybeans. He wanted to find a way to "grow automobiles out of the soil. In 1940 he discovered that soybeans were his bumper crop."

Last week a milestone in soybean history was made on Capitol Hill [Washington, DC]. "About 500 people including senators, representatives, ambassadors, diplomats and freeloaders turned up at the International Soybean Fair.

While Chai Zemin (of the People's Republic of China) and Bob Bergland (U.S. Secretary of Agriculture) stood shaking hands, people pushed and shoved to get to the bar and to hors d'oeuvres made from every soybean product imaginable—soy flour, bean curd, textured vegetable protein (TVP), soy milk, soy sauce, etc. Also mentions tempeh and miso.

The event was largely sponsored by the Food Protein Council and its member companies. "There were a few interesting hors d'oeuvres including soy nuts and garlic smothered bean curd." Contains recipes.

687. Schecter, Andy. 1979. Re: Tempeh at Northern Soy. Letter to William Shurtleff at New-Age Foods Study Center, March 31. 1 p. Typed, with signature. [1 ref]

• **Summary:** In 13 steps describes the process for making tempeh at Northern Soy in perforated Ziploc bags.

A handwritten notes at the end states: "Here is our tempeh process. We're doing some experimentation with starter production, which is not exactly trouble-free at this point. Tried your 'sporulated inoculated soybean method' but must have left it in incubator too long 'cause it started to smell like ammonia. Will try again. Pics [pictures = photos] to follow as soon as we can get them processed. Best wishes, Andy." Address: The Tofu Shop, 277 N. Goodman St., Rochester, New York 14607. Phone: 716-442-1213.

688. *Ann Arbor Observer (Michigan)*. 1979. One of the few U.S. tofu manufacturers is right here in Ann Arbor: At the Soy Plant on Ann Street a collectively-run business combines political and nutritional interests to produce over 2000 pounds of soybean curd weekly. March. p. 29. [1 ref]

• **Summary:** This February morning Steve Fierling [sic, Fiering] arrives at The Soy Plant at 5 a.m. to start the day's work in the back room of the former pizza carryout at 211 East Ann St. in Ann Arbor. He turns on the lights and the boiler, then starts cooking soy milk for the first batch of tofu.

Fiering is part of a nine-member collective; this week he's the cooker. The first batch of tofu should be ready by 7 a.m. Making tofu is a demanding discipline. Fiering, Sue Kalen, Chris Coon, and Al Dynak were the original founders of The Soy Plant one and a half years ago. Steve originally came from Camden, New Jersey, to the University of Michigan, where he majored in geology and, as he puts it, "minored in extracurricular political activism." Politics led to a job as coordinator of the People's Food Co-op, and that led to helping to start The Soy Plant. The Soy Plant is one of the few places in America where people can buy fresh tofu daily. A low-cost vegetable source of protein, retails for \$0.70/lb in the consumer's tub or \$0.85 in a plastic tub.

Henry Ford was deeply interested in soybeans. He believed that "mechanized soybean production would help free the farmer from the drudgery of dealing with animals by eliminating the need for most meat... In fact his large demonstration soybean farm was near Macon, south of Saline, in Lenawee County." Tofu can become an economical vegetarian alternative to ground beef.

The company began as the Tofu Collective, a Sundays only operation at Wildflower Community Bakery around the corner on North Fourth Avenue. A few months later, in the summer of 1977, the name was changed to The Soy Plant, and the collective moved into the basement of Eden Foods, where it attempted to produce tofu to sell wholesale. Fiering recalls that the early days were *really* hard. They used to work 14-16 hours a day. But the hard work paid off. By last spring The Soy Plant had the track record and credibility to be able to raise \$10,000 in loans to purchase more efficient equipment and move into larger quarters at its present location on Ann Street near Fourth.

For each \$100 loan, supporters were compensated with an unusual but sensible kind of interest: a pound of tofu each week, which yields a 35% annual return. Backers included both typical co-op supporters and quite a few native Asians eager to find a local source of fresh tofu.

Members of the collective now earn \$3.25 an hour—a big increase over the \$50 a week that they were paid in the beginning. But that cheap labor was the capital that got the business started. Current members of the collective are Fiering, Sue Kalen, Dan Ecclestone, Anne Elder, Kurt Getman, George Hanley, Mike Mazzie, Jerry McKenna [sic, MacKinnon], and Ann Wilson.

The Soy Plant makes its tofu in 50-pound batches. Of the more than 2,000 lb of tofu it makes each week, about 350 lb are sold at The Soy Plant retail store, where soy milk, soy byproducts, and prepared soy foods like sandwich spreads, missing egg salad, soyage, and pies are also sold. Another 1,700 lb/week of tofu goes to local restaurants, retail stores (incl. Meijer's Thrifty Acres, Asian-, and natural food stores), and to Midwest Natural Foods, which distributes the tofu to as far away as Pennsylvania and West Virginia.

Soy Plant workers have strong political motivations.

They believe that soy products can help to solve world food problems. Fiering, a decentralist, talks about his personal beliefs. An excellent introduction to tofu is the 15-cent pamphlet titled "What is tofu?" available at The Soy Plant. It contains ten popular recipes plus basic information. "For the truly committed, there's the encyclopaedic *Book of Tofu: Food for Mankind* by William Shurtleff and Akiko Aoyagi." Shurtleff "has been the tofu guru for America in the 1970s, and this book has inspired and instructed most of the country's approximately fifty tofu shops operated by non-Asians."

A sidebar titled "Take-out tofu treats" mentions the following made and sold at The Soy Plant: Tofu-tahini spread. Tempeh—which resembles Brie cheese in texture and flavor. Tofu tarts in several flavors: pecan cream, pumpkin cream, yam, mocha, and lemon.

Photos by Peter Yates show: (1) Anne Elder adding soy puree to boiling water in the cooking kettle to make a foamy brew that is eventually curdled to become tofu. (2) Steve Fiering filling one-pound tofu retail packages (in a bathtub) with water from a hose before shipping. Address: Ann Arbor, Michigan.

689. Hesseltine, C.W. 1979. Some important fermented foods of Mid-Asia, the Middle East, and Africa. *J. of the American Oil Chemists' Society* 56(3):367-74. March. [34 ref]

• **Summary:** Contents: Abstract ("These fermentations, unlike those of the Orient, use bacteria and yeasts instead of filamentous fungi"). Introduction. Eight reasons for using a fermentation process in the production of acid foods. Idli. Kishk. Ogi (The Yoruba {western Nigeria} for a fermented sour maize product found throughout Black Africa). Mahewu (Magou). Kaffir beer (Bantu beer, sorghum beer, mqombothi).

"When we think of food fermentations, aside from those we encounter daily such as cheese and bread, we think of those strange and exotic products like soy sauce, soybean paste [miso], and tempeh made in China, Japan, and the East Indies."

A photo shows Hesseltine. See also p. 380-81 of this March issue. Address: NRRC, Peoria, Illinois.

690. Hesseltine, C.W. 1979. Other fermented foods. *J. of the American Oil Chemists' Society* 56(3):380-81. March.

• **Summary:** Discusses four more examples of traditional fermentations that have been industrialized: Kaffir beer (Bantu beer), the new Kikkoman plant in the USA, mahewu (sour maize from South Africa), and tempeh. Address: NRRC, Peoria, Illinois.

• **Summary:** The section titled “Fermented Cereals and Grains” gives basic information about the following fermented soybean foods: Tempeh, soy sauce, miso, and sufu or Chinese cheese. Address: Dep. of Food Science and Nutrition, Univ. of the Philippines, Diliman, Quezon City, Philippines.

692. **Product Name:** Tempeh.

**Manufacturer’s Name:** Northern Soy.

**Manufacturer’s Address:** 277 N. Goodman St. Rochester, NY 14607. Phone: 716-442-1213.

**Date of Introduction:** 1979. March.

**New Product–Documentation:** Letter from Andy Schecter on stationery with no letterhead. 1979. March 31. “Tempeh at Northern Soy.” A 1-page description of how the company makes tempeh in perforated Ziploc bags.

Letter from Andy Schecter on The Tofu Shop letterhead. 1979. May 26. Seven small photos show the company’s tempeh-making process and equipment: (1) Cooking soybeans with steam. (2) Cooling cooked beans on a table. (3) Mixing in starter in plastic buckets. (4) Bagging and flattening inoculated soybeans. Tofu is being made in the background. (5) Placing screen trays loaded with bagged tempeh into the incubator. (6) Tempeh (and starter in Petri dishes) in the incubator. (7). Front of incubator. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Address listed as 30 Somerton St., Rochester, New York 14607.

693. Winarno, F.G. 1979. Fermented vegetable protein and related foods of Southeast Asia with special reference to Indonesia. *J. of the American Oil Chemists’ Society* 56(3):363-66. March. [22 ref]

• **Summary:** Contents: Abstract. Introduction. Fermented foods and food needs. Tempeh and oncom. Bongkrek (and its toxic-producing bacteria) and tauco. Wholesomeness of fermented foods. Development of food supplement using fermented food as a basic ingredient.

Table I shows the population, population growth rate, and average national income per capita in ten Southeast

Asian countries. Indonesia has by far the largest population (136.9 million), followed by Vietnam (47.3). Khmer republic (Cambodia) has the highest population growth rate (2.8%), followed by the Philippines (2.7%); Singapore has the lowest (1.3%). Singapore has by far the highest average national income per capita (US\$2,510), followed by Malaysia (\$720), then Maungthai (Thailand–\$350); Khmer Republic and Laos have the two lowest per capita incomes (\$70). Table II shows the nutritional composition of tempeh, oncom, bongkrek, and tauco per 100 gm. Table III shows 7 fermented vegetable protein foods in Southeast Asia: Tempeh, bongkrek, oncom, tauco, kecap (shoyu), ang-kak, and sofu (sufu); for each is given the microorganism used, substrate, nature of product (solid, liquid), and area where article is sold commercially. Table IV shows the composition and nutritional value of TFR (Tempeh-Fish-Rice), as developed at the National Research Institute, Bogor, Indonesia. A photo shows F.G. Winarno. Address: Bogor Agricultural Univ., Fatemeta, IPB, Jalan Gunung Gede, Bogor, Indonesia.

694. Yueh, Mao H.; Daravingas, G.V.; Rigelhof, F.J.; Mueller, H.W. Assignors to General Mills Inc. (Minneapolis, Minnesota). 1979. Process for producing a fried snack food containing tempeh. *U.S. Patent* 4,151,307. April 24. 3 p. Application filed 2 Dec. 1974. [5 ref]

• **Summary:** A dough is made from cereal, potato flour, and starch, plus tempeh (5-60% dry weight). For example, cooled tempeh is ground and blended with other ingredients in the following amounts: ground tempeh 44%, ground potato flakes 44%, pregelatinized waxy maize starch (Polar Gel I) 8.5%, and table salt 3.5%. The mixture is extruded and the resulting thin strips of dough are cut into chip sizes (approximately 1 by 1¼ inches) and allowed to air dry overnight to a moisture content of about 9%. These chips are then deep fat fried in coconut oil at 375°F for 6½ seconds drained. The resulting fried chips had a good texture and flavor, and were expanded about 3 times. They had a protein content of 11.5% and a fat content of 25.4% as compared to 5.3% protein and 39.8% fat in a typical commercial potato chip product.

5% gluten (Pro 80) can also be used as an ingredient in place of 5% of the ground potato flakes. Address: 1&4. Minneapolis; 2. Edina; 3. Minnetonka. All: Minnesota.

695. Shurtleff, William. 1979. Re: Request for clarification and additional information on making tempeh at Northern Soy. Letter to Andy Schecter at Northern Soy in Rochester, New York, April 29. 1 p. Typed, without signature (carbon copy). [1 ref]

• **Summary:** Shurtleff thanks Andy for his letter of March 31, asks him to check Shurtleff’s rewritten description for the book *Tempeh Production*, then asks 7 questions with space after each for a response. Andy’s handwritten responses are included.

Shurtleff's typewritten P.S. adds: "*Tofu & Soymilk Production* went to the printers last week. We hope to have it ready by the SANA conference. 320 pages." Andy's handwritten note at the end: "Keep up the good work, Bill! We're real interested in *The Book of Tempeh* [not yet published]—especially a pocket size edition will help us to get sales going." Address: New-age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

696. Duienga, Suzanne; Duienga, William. 1979. The Soy Plant. *Beansprout Flyer and Pocket Reader: Grand Rapids Food Co-op Newsletter* 2(3): April.

• **Summary:** "A current personal interest in soybeans combined with a concern about the high price of tofu at the coop led us to visit the Soy Plant in Ann Arbor. What we found was not a 'plant' or a factory at all, but a downhome group of people with a genuine interest in their work.

"Steve Fiering, the man who first envisioned the Soy Plant, stopped his work to show us around the shop and talk with us about his experiences and his soybean philosophy.

"When asked why Soy Plant tofu costs so much, Steve gave us some pretty impressive reasons. First of all the soybeans that the Plant uses are organic. Secondly, Steve values the people with whom he works and so wages (\$4.00 per hour) reflect this. Lastly and most importantly, the Soy Plant is the first of its kind in this area. As with all first, 'We make mistakes and they cost money.'" Steve made much of the machinery in the shop himself.

"The Soy Plant already has a large line of delicious soy products (all personally sampled and 'wholestomachally' approved of), including soysage, tempeh, soymilk, brown bread, sweet white miso, spiced tofu, spreads, tofu pies, and okara peanut butter balls. Free samples of the delectable spreads are available on the counter.

"During the visit our basic curiosity evolved into true inspiration. The Plant is a living, breathing, organically growing example of how a cooperative group of people can come together and make something happen. The place truly is a center of learning, staffed by people eager to share their newly found knowledge about the creating of this very old food.

"Do you often wonder what to make with this nutritious but strange stuff called tofu? Here are some delightful recipes:" The recipes, from *The Book of Tofu* by Shurtleff and Aoyagi, are for Tofu-nut butter spread or topping, and Banana-tofu milkshake. Address: Michigan.

697. Jack, Alex. 1979. The taste of America: Our changing diet. *East West Journal* 10(4):46-61. April. [24 ref]

• **Summary:** This is a macrobiotic view of the changing American diet. Contents: Modern dietary trends. The rise of the standard diet. Food origins: Meat-centered, traditional, vegetarian. Food changes: 1910-1976 (percentage change). The effects of meat and dairy. Effects of sugar and spice. The

limits of modern nutrition. The rise of vegetarianism: Adolf Hitler [in Germany], Mohandas Gandhi [in India]. You are what your grandparents ate. Popular health foods: Honey, yogurt, herb teas. The traditional diet of humans. Seven levels of eating. The future diet of humanity.

"Underlying nearly all modern dietary trends is a shift from meals centered around animal products toward ones derived from plant sources. According to a 1978 Roper Poll, 7 million Americans over age 18 do not eat any meat and 37 million more are cautious about how much meat they consume. Another 44% regard a reduction of meat consumption as healthy." In all, nearly 50% of Americans are concerned about meat and the standard American diet. Then lists 12 signs of a major shift in our attitudes toward meat and dairy products; No. 10 incl. "the rising popularity of soy products such as miso, tofu, and tempeh as alternative protein sources to meat." Address: [Boston, Massachusetts].

698. Rhodes, Elizabeth. 1979. A tofu-tempeh tycoon on Vashon Island? *Seattle Times Magazine*. May 6. [1 ref]

• **Summary:** William Luke Lukoskie was born 24 November 1946 in Duluth, Minnesota. His Catholic family moved to Edmonds, Washington, in 1956 and he attended parochial schools. After earning a BA in philosophy (math minor) from Carroll College in Helena, Montana, he returned to Seattle. He enrolled in graduate business school at the University of Washington in 1968, then switched to working on a doctorate in educational psychology, then dropped out. In 1976 he founded Island Spring tofu factory. Today Island Spring produces tofu, tempeh, soymilk, Soyfreeze soy ice cream, and Delicious Steamed Tofu. Future products may include soy mayonnaise, soy yogurt, frozen tofu lasagna, and cheesecake. A photo shows Lukoskie smiling and holding a block of his tofu with a six-petaled flower pressed into the surface. Address: Seattle.

699. Cohen, Michael. 1979. Re: Hope to start tempeh production by mid-July in Greenfield, Massachusetts. Letter to William Shurtleff at New-Age Foods Study Center, May 15. 2 p. Handwritten, with signature on letterhead.

• **Summary:** "Dear Bill, I've been meaning to write you for over a month, now, but the time keeps slipping by. Hopefully we'll be into tempeh production by mid-July. 'We' is actually me right now with moral and administrative support from Shelley. We've got a 1200 square foot building, cinder block walls and slab floor; floor drains and other plumbing going in this week. The incubation room is 12 feet long, 6 feet deep and 8 feet high. Its heated by an electric baseboard system with an industrial thermostat with an 85°-110°F range.... The incubator should be able to handle 2,500 lbs/week (We hope to be doing 1,000 lbs/week as soon as possible). We are starting with a 40 gallon steam kettle.

"We've decided not to market the tempeh as a frozen food but as a refrigerated item. Most retailers agree that

cooler foods move about 3 times as fast as their frozen counterparts. We will do frozen tempeh for any large account (distributor, restaurant, etc.) that might want it. We'd like to deep-fry the tempeh—it would give us a good shelf life and have the advantage of making the tempeh a ready to eat food. Unfortunately at this time we would not afford the investment of a deep-fry operation... So it looks like we're going to steam the tempeh prior to packaging and then store at just above freezing in our walk-in... See you in July, Michael." Address: The Tempeh Works, P.O. Box 870, Greenfield, Massachusetts 01301.

700. Flinders, Carol. 1979. Soybean key to world food plight? Notes from Laurel's Kitchen. *Rocky Mountain News* (Denver, Colorado). May 16. p. 24A.

• **Summary:** Twelve years ago (i.e., in late 1968) Carol spent a memorable week at the Tassajara Zen Mountain Center near Big Sur, California. "Among the many good people I met, one I've always remembered was Bill Shurtleff, who helped run the kitchen out of which was issued the well known Tassajara bread.

"Spare of words, lean and thoughtful, he had a kind of banked fire in his eyes that told you he was a man in search of a vocation. Last week Bill and his wife, Akiko, came to our home to visit and exchange ideas. It's clear that he has found the vocation he's been looking for, and that, in a sense, all of us stand to gain from the passion with which he's answered it.

"The cause Bill has taken up is that of the more than one billion people of the world for whom hunger is *the* central fact of life. To be as continually mindful of their plight as he is would probably be unbearable if he didn't believe he holds a significant key to relieving it. The key? 'Glycine max'—soybeans to you and me.

"Western exploitation of the soybean has been absurdly slight until recent years. Mostly we've fattened our livestock with it. That soy is 'king of beans' we've long recognized." But they have entered the American food supply well disguised in such forms as textured vegetable protein. "The soybean foods Bill is promoting are of a much more sophisticated nature. Their names fall oddly on the Western ear:" tofu, shoyu, tempeh, miso.

Bill and Akiko met in Japan. She "was a fashion designer in Tokyo before they were married. The image of big city haute couture doesn't attach easily to the simply dressed and unpretentious Akiko, and everything makes a little more sense when you find out the fashions she designed were actually for handicapped children.

"Akiko's skill as a graphic artist and fine cook are the perfect complement to Bill's, as writer and investigator. Her warmth and gentleness are the perfect balance to his single-minded intensity. (Akiko doesn't just invite you for dinner. She seizes your arm as you're walking along together, wraps it close in her own and holds on tight, convincing you life

will be pure misery for them until you come to their house).

"Tofu was the soyfood that first captured Bill's interest." Discusses its virtues. "But what really wins him over, I think, is the sheer romance of tofu. What you know of tofu, and what I've told you about Bill, might make that seem unlikely. But read his book and see for yourself—beneath that samurai exterior beats the heart of a Shelley or a Keats. Listen:

"Like water that flows through the worlds, serving as it moves along, tofu joyfully surrenders itself to the endless play of transformation. Pierced with a skewer, it sizzles and broils above a bed of live coals... deep-fried in crackling oil, it emerges crisp and handsome in robes of golden brown, frozen all night in snow under vast mountain skies, it emerges glistening with frost and utterly changed. All as if it knew there was no death to die, no fixed or separate self to cling to, no other home than here."

Contains a favorite Flinders' recipe for tofu patties.

701. Tempeh Crew. 1979. Tempeh news. *Amazing Tales of Real Life* (The Farm, Summertown, Tennessee). May 24. p. 1.

• **Summary:** "We've found that the best way to feed the Farm lots of high quality tempeh is to give inoculated, ready-to-incubate beans to the households, and have the people incubate their own tempeh. We're putting the beans in plastic bags and they can be incubated right in the bag if you poke holes with a fork every inch or so on all sides as soon as you can."

"The best way to increase our production right now would be to have more dedicated people helping make tempeh. It's fine revolutionary work, a good skill to learn and it's a light-duty job (suitable for pregnant ladies). With a little more help the Farm will eat more tempeh."

702. Schecter, Andy. 1979. Re: Equipment and process for making tempeh at The Tofu Shop. Letter to William Shurtleff at New-Age Foods Study Center, May 26. 1 p. Handwritten, with signature on letterhead. [1 ref]

• **Summary:** Seven small photos (contact prints) show the company's tempeh-making process and equipment: (1) Cooking soybeans with steam. (2) Cooling cooked beans on a table. (3) Mixing in starter in plastic buckets. (4) Bagging and flattening inoculated soybeans. Tofu is being made in the background. (5) Placing screen trays loaded with bagged tempeh into the incubator. (6) Tempeh (and starter in petri dishes) in the incubator. (7). Front of incubator.

He concludes: "Looking forward to seeing you & Akiko at the SANA conference and in Rochester afterwards! Take care, Andy. P.S. Please send \$10 to defray film, processing & the photographer. Thanks." Address: The Tofu Shop, 277 N. Goodman St., Rochester, New York 14607. Phone: 716-442-1213.

703. Gandjar, Indrawati; Slamet, Dewi Sabita; Kartosuwondo, Diah. 1979. Tempe from non-soybean

leguminous seeds. Presented at Seminar Teknologi Pangan IV (Fourth Seminar on Food Technology). Held 16-17 May in Bogor, Indonesia. \*

Address: Nutrition Research & Development Center, Dep. of Health, Indonesia.

704. Moore, Karen. 1979. Tofu, a Far East import, offers potential as meat, fish, cheese substitute. *Food Product Development* 13(5):24. May.

• **Summary:** Discusses both tofu and tempeh. "New England Soy Dairy has already increased production [of tofu] from 500 pounds per week in 1977 to 9 tons [18,000 lb] per week in 1979, and the company expects revenues to exceed \$750,000 this year. Matsuda Hinode Tofu Co. of L.A. produces approximately 10 tons [20,000 lb] of tofu daily."

"Interest in tempeh is beginning to build. Within the last year USDA's Northern Regional Research Center filled 36,000 requests for inoculum." Address: Assoc. editor.

705. Tanuwidjaja, Lindajati; Ambijah, Koesbianti. 1979. Pembuatan inokulum tempe dengan kultur campuran [Preparation of tempeh inoculum using mixed cultures]. In: Proceeding Seminar Teknologi Pangan IV. See p. 191-99. Held 16-17 May 1979 in Bogor, Indonesia. [Ind]\* Address: Bandung, Indonesia.

706. *Whole Foods* (Berkeley, California). 1979. B-12 bonanza. May. p. 20.

• **Summary:** Tempeh, a fermented soyfood from Indonesia, is one of the few vegetarian sources of vitamin B-12. The bacterium *Klebsiella* has been identified as the producer of B-12 in tempeh. "Samples of tempeh commercially available in this country were found to contain 1.5 to 6.3 micrograms per 3½ ounce (100 gm) serving. When researchers added *Klebsiella* to the starter used to make tempeh, B-12 content was boosted as high as 14.8 micrograms per 100 gram serving."

707. Zilliken, Fritz W. Z-L Limited Partnership (Janesville, Wisconsin). 1979. Antioxidants, antioxidant compositions and methods of preparing and using same. *U.S. Patent* 4,157,984. June 12. 8 p. Application filed 8 June 1977. [8 ref]

• **Summary:** An alcohol-soluble mixture of antioxidants and antioxidant compositions has been extracted from a natural source, tempeh, a fermented soybean product. The oil of tempeh demonstrates improved antioxidant properties over those of unextracted tempeh. The mixture is purified and used as a food, or a stabilizer for oils and fats. "An ergostadienol which possesses antioxidative properties and which in combination with mixtures of isoflavones provides compositions having exceptional antioxidative properties has been produced. This new sterol, either alone or in combination with mixtures of isoflavones or other

compounds, would appear to be useful in the prevention and/or treatment of various diseases including atherosclerosis...

Two novel isoflavones have also been produced and recovered from tempeh. A mixture of these isoflavones possesses antioxidative properties which are enhanced by the presence of the ergostadienol and known isoflavones."

The principal antioxidants currently used by the food industry are BHA (butylated hydroxyanisole), BHT (butylated hydroxytoluene), and TBHQ (tertiary butylhydroquinone). Address: Remangen, West Germany.

708. Hesseltine, Clifford W.; Wang, Hwa L. 1979. Fermented foods. *Chemistry and Industry (London)* No. 12. p. 393-99. June 16. [4 ref]

• **Summary:** Contents: Fermentation: Advantages of fermented foods. Need for more research. Need for a worldwide fermented foods catalogue. Investigating the process. Characteristics and microorganisms. Fermentation: 12 aspects that merit attention. Improvement: Example of tempeh spores and plastic bags. New foods (such as wheat and cereal tempehs). Future of traditional fermented foods (it looks bright). Mahewu. Kaffir/Bantu beer.

"Finally we would like to suggest several fermented foods that might be possible candidates for future development outside the Orient. These are miso, natto, hamanatto, and sufu." Address: NRRC, Peoria, Illinois.

709. **Product Name:** Tempeh.

**Manufacturer's Name:** Farm Foods.

**Manufacturer's Address:** R.R. #3, Lanark, ONT, K0G 1K0, Canada. Phone: 613-278-2215.

**Date of Introduction:** 1979. June.

**Ingredients:** Soybeans, water, culture.

**Wt/Vol., Packaging, Price:** 12 oz perforated plastic bag (not vacuum packed).

**How Stored:** Frozen.

**New Product-Documentation:** Talk with Allan and Susan Brown. 1998. May 11, followed by a detailed letter from Allan. In the late summer of 1974, having met and become engaged on the Wisconsin Farm, Allan and Susan hitch-hiked to The Farm in Summertown, Tennessee, where they were married later that year. Susan writes: "When we arrived at the Gate, it was Cynthia and Albert Bates who graciously took us in and shared their humble tent-house on Hickory Hill. (They even moved next door for a weekend to make room for my parents when they came from Boston to attend the wedding.) While we were staying there, Cynthia sometimes took me to the soy dairy, where she and Alexander Lyon were experimenting with ways to make tempeh. They had heard about it from Dr. Hesseltine in Illinois. I learned to make tempeh starter on rice from Cynthia. Little did I know then that I would eventually make my livelihood making tempeh!

"Our next experience with tempeh was in January

1976 while we were visiting my parents in Belmont, near Boston, Massachusetts. On my mother's shelf was a tempeh kit—a small package containing dry split soybeans, starter, and instructions. She had ordered it via a Farm catalogue. The culture was spores mixed with starch, to make such small amounts easier to measure. I made tempeh on the water-heater, in various containers. The most effective was a covered casserole (very Earth-friendly compared to the disposable plastic bags we now use!) The results were delicious, although there were a few patches of dark gray and some dried out places where the culture hadn't grown."

In 1978 Allan learned how to make tempeh from Mary Hubbard (who was from The Farm in Tennessee) in the kitchen on The Farm in Canada. Mary and her husband Nick had their home base in Tennessee. From the Farm-affiliated Denver Center (in Colorado), where they had been making tempeh, they had come to Lanark, Ontario, to help out at The Farm, while most of the community members were away at Thunder Bay planting trees as a fund-raiser for Plenty and while Allan and Susan were bonding with a newborn baby given to them by a young lady who did not want to keep her baby. For about 3 weeks Mary and Nick made "every kind of soy product under the sun, including tempeh." A good friend of Allan's named Paul Smith ran Baldwin Natural Foods—the hottest macrobiotic store in Toronto. Paul had seen the tempeh made by Robert Walker at Baldwin Natural Foods; he was making about 50 lb/week of tempeh shaped like a doughnut. Allan thought there was a market for a second tempeh product, so in the summer of 1979 he started making tempeh under the Farm Foods label. Allan photocopied a label with a bamboo border, and sold the tempeh at Baldwin Natural Foods. Allan made the tempeh in the community kitchen and incubated it on the rafters above the wood stove in the kitchen. There wasn't a lot of agreement on The Farm to make tempeh commercially. There was a constant struggle for the available energy from Plenty and from Farm Foods. After about 6 months, during which they made only 2-3 very small batches of tempeh and sold them to just one store (Baldwin Natural Foods) in Toronto, Allan and Susan were ready to leave The Farm. Their tempeh operation wasn't really a business yet; it was more just testing the waters. Robert Walker had suffered a stroke and his tempeh-making equipment was up for sale. So as the Browns moved to Toronto, taking their fledgling tempeh operation with them, they bought Robert's equipment. In June 1980, in the heart of Toronto's Chinatown, they started Noble Bean (which see) as a tempeh manufacturing company.

Photo copy of Label (5¼ by 3½ inches) sent by Allan Brown. 1998. Jan. 21. This label was used for a short period of time in 1979. It has a bamboo border, with the word "Tempeh" written in large letters across the top half of the label. "Contents: Soybeans, water, *Rhizopus oligosporus* culture, vinegar." Below that are the words "Farm Foods" with a thin outline around each word. Between the two

words is a circular logo, which shows rows of crops (soybeans) in a field converging in the distance at the foot of three mountains. Below that is the typewritten address: "R.R. #3, Lanark, ONT K0G 1K0." Note: The typeface used for the word "Tempeh," the bamboo border, and the Farm Foods logo all appeared earlier (about 1978) on tempeh products made at The Farm in Summertown, Tennessee.

710. Gomez, M.I.; Kothary, M. 1979. Tempeh from red kidney beans. *League for International Food Education Newsletter*. June. p. 1-2.

• **Summary:** Describes how to make the product, which was found to be highly palatable. Address: Dep. of Food Science & Technology, Univ. of Nairobi, Kabetia, Kenya.

711. **Product Name:** Island Spring Soy Bean Tempeh.

**Manufacturer's Name:** Island Spring, Inc.

**Manufacturer's Address:** P.O. Box 747, Vashon, WA 98070. Phone: 206-622-6448.

**Date of Introduction:** 1979. June.

**Ingredients:** Organic soy beans, water, apple cider vinegar, *Rhizopus oligosporus*.

**Wt/Vol., Packaging, Price:** 8 oz (227 gm).

**How Stored:** Frozen or refrigerated.

**New Product—Documentation:** Form filled out by Luke Lukoskie. 1979. Oct. 3. He buys his soybeans from Living Farms; Pacific Coast Soybeans in Walla Walla, Washington, went out of business last year when the Chinese undersold them in the Japanese market. Discusses how to buy used food processing equipment. Shurtleff & Aoyagi. 1979. *The Book of Tempeh*. p. 149. Made by Russ Pals and Ben O'Loughlin, this was the world's first tempeh to be packaged in a tofu tub.

Label. 1980, undated. 4 by 5 inches. Red and black on white. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Luke Lukoskie. Form filled out by Yvonne Kuperberg. 1988. Oct. 1. Launched June 1979. Discontinued

after the fire, Feb. 1986.

712. Shurtleff, William. 1979. Sources of vegetarian vitamin B-12. *Vegetarian Times* No. 31. May/June. p. 36-37, 39-40. Reprinted, revised and updated, in *Vegetarian Times*, Feb. 1983, p. 61-63. [11 ref]

• **Summary:** This review of the literature shows that the major vegetarian sources of vitamin B-12 are fermented soyfoods (tempeh, natto, miso), single-cell-proteins (spirulina, chlorella, scenedesmus, unfortified yeasts), sea vegetables (kombu, wakame, and others). The richest known animal source is beef liver. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

713. Shurtleff, William; Aoyagi, Akiko. 1979. *The book of tempeh: A super soyfood from Indonesia*. New York, NY: Harper & Row. 160 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [24 ref]

• **Summary:** Contents: Acknowledgments. What is tempeh? Preface. 1. Soybeans—Protein source of the future: Introduction, the causes of hunger and starvation—two analyses (*The Twenty-Ninth Day*, by Lester Brown—population, affluence; *Food First: Beyond the Myth of Scarcity*, by Lappé and Collins—population, narrow focus on increasing food productivity, international food exploitation, land monopolization and misuse, cash crop system of export agriculture). Ten reasons soy will be the protein source of the

future: 1. Optimum land utilization. 2. Lowest cost protein. 3. High nutritional value. 4. Time tested. 5. Remarkably versatile. 6. Appropriate technology. 7. New dairylike products. 8. Hardy and adaptive. 9. Free nitrogen fertilizer. 10. Energy and resource efficient. “All of these ten factors work together synergistically, reinforcing one another, to give added weight to the prediction that soybeans will be a key protein source for the future on plant earth.” Present patterns of soy protein utilization. New developments. An idea whose time has come.

2. Tempeh as a food. 3. Getting started (incl. basic preparatory techniques and 18 recipes, incl. a recipe for sweet Indonesian soy sauce {*kechap manis*}). Favorite tempeh recipes (13 Western favorites, 6 non-fried favorites, and 12 Indonesian favorites; also Suggestions for serving tempeh throughout the day). 4. Western-style and Oriental tempeh recipes (68 recipes). 5. Indonesian tempeh recipes (70 recipes). 6. Making tempeh at home or in a community. 7. Making tempeh starter. 8. The Indonesian tempeh shop. Appendix A: A brief history of tempeh East and West. Appendix B: Tempeh shops in the West. Weights, Measures, and Equivalents. Glossary. Bibliography. About the authors. About the New-Age Foods Study Center.

The first book in the world devoted entirely to tempeh. It contains the first sizeable collection of American-style and Indonesian tempeh recipes (130 in all), the first illustrated descriptions of making tempeh, tempeh starter, and onchom on various scales in Indonesian tempeh shops, the first history of tempeh, detailed discussion of tempeh in Indonesian culture and of the many varieties of Indonesian tempeh, and the first recommendations for commercial names for the more than 30 types of tempeh that could easily be made in the West. It also contains chapters and reviews of the literature on tempeh nutrition and the microbiology and biochemistry of tempeh fermentation, plus the largest bibliography on tempeh to date (including many new Indonesian references), an annotated listing of 61 people and organizations around the world connected with tempeh, and the first list of tempeh companies in the West.

Page 26 states: “Modern soy-protein products, such as textured soy proteins, are increasingly available at supermarkets, often in forms that simulate the fibrous, chewy texture of meat.

Note 1. This is the earliest known book in any language devoted entirely to tempeh. Note 2. This is the earliest English-language document seen (Aug. 2011) that contains the term “modern soy protein products;” Shurtleff would soon start to use it to refer to defatted soy flour or grits, soy protein concentrates, soy protein isolates, and textured soy protein products.

Illustrations (line drawings; unnumbered, not including “spots”). Indonesian dancer in sarong and crown. Balinese lion mask dancer. Two Indonesian women dancing. Cuts of fresh tempeh on a woven bamboo tray. Woman in a

traditional Indonesian kitchen cooking tempeh. Terraced rice patties in Java. Woman selling tempeh in Bali market. Masked Indonesian figure. Soybeans in the pod. A hand holding dry soybeans over a sack of such soybeans. Three women selling beans and grains in a Javanese market. Two men selling tempeh in a Javanese market. Balinese mask. Indonesian mortar and pestle. Traditional oil skimmer for deep frying. A wok. Tamarind paste and pods. Soy sprouts. Pieces of tempeh on a bamboo tray Gado-gado. Laos root & chilies. Palm sugar. Chilies. Indonesian woman carrying fruits in a bowl on her head. Salam leaf. Botok tempeh. Peté beans. Winged and masked Balinese figure. Indonesian spices. Soybean (enlarged). Cartoon of a fuzzy little critter driving his tiny tractor over a cake of tempeh, inoculating it with a secret enzyme (The Farm, Summertown, Tennessee). Placing tempeh into a homemade Styrofoam incubator. Cross section of good tempeh and bad. Winged beans. Close-up of outside of a homemade tempeh incubator. Dry soybeans in pods on plant. Woman in the USA making tempeh. A deep woven bamboo basket for treading soaked soybeans. Ten steps in the process for making traditional soy tempeh in a small shop (GIZI, Bogor). Twenty steps in the process for making and delivering traditional soy tempeh in a large shop (Oeben, Bandung). Two views of a modern dehuller and dehuller-separator. Five steps showing making tempeh in plastic bags. Three steps showing making tempeh in banana-leaf wrappers. Fourteen steps in the process for making and delivering Malang tempeh.

714. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tempeh: A super soyfood from Indonesia. Professional hardcover edition. New York, NY: Harper & Row. 248 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [190 ref]

• **Summary:** A special cloth-bound professional edition of *The Book of Tempeh* prepared for libraries, commercial tempeh producers, microbiologists, students of Indonesian foods, and those who love fine books. In addition to the full contents of the paperback edition, it contains the following lengthy appendixes: B: Tempeh in Indonesia (an overview of the tempeh industry and market, including the number of shops by province, per capita consumption, etc.). C: The Varieties of Tempeh. D: Soybean Production and Traditional Soyfoods in Indonesia. E: The Microbiology & Chemistry of Tempeh Fermentation. H. Onchom or Ontjom. A Glossary of Indonesian Foods (the most extensive one available in English). Bibliography on Tempeh containing over 190 entries: Works on the world food crisis, works on tempeh cookery or Indonesian cuisine, scientific journal articles on tempeh, early Dutch- and German-language works on tempeh, Indonesian-language works about tempeh, key

English-language works on microbiology, film and color slides on tempeh. Illustration of an Indonesian dancer. Expanded Index. A great deal of original research is contained in the extra 88 pages and 54 illustrations.

Appendix C, "The varieties of tempeh, states: "The many varieties of tempeh may be grouped into five basic types, according to the primary ingredient used: legumes, grains & soy, grains, presscake residues, and nonlegume seeds. Legume tempehs: Soy tempeh (*tempe kedelai* or

*kedelai*, made from the seeds of *Glycine max*). Velvet-bean tempeh (*tempe benguk* or *tempe koro benguk*, made from the seeds of *Mucuna pruriens*, which are called *kara benguk* in Indonesian). Winged-bean tempeh (*tempe kecipir*, made from the seeds of *Psophocarpus tetragonolobus*). Leucaena tempeh (*tempe lamtoro* or *tempe mlandingan*, made from the seeds of *Leucena leucocephala*). Mung bean tempeh (*tempe kacang hijau*, made from the seeds of *Vigna radiata*, which are called *kacang hijau* in Indonesian). Broad-bean or fava-bean tempeh (*tempe kacang babi*, made from the seeds of *Vicia faba*, also called horse beans). Sesban-bean tempeh (*tempe turi*, made from the seeds of *Sesbania grandiflora*). Pigeon-pea tempeh (*tempe kacang iris*, made from the seeds of *Cajanus cajan*). Green-bean tempeh (*tempe kacang merah*, made from the seeds of *Phaseolus vulgaris*, which are called *kacang buncis* in Indonesian). Lima-bean tempeh (*tempe kara* or *tempe kara kratok*, made

from the seeds of *Phaseolus lunatus*). Lablab-bean tempeh (*tempe kara-kara* or *tempe koro wedus*, made from the seeds of *Lablab purpureus*, which is called hyacinth bean in the USA). Jack-bean tempeh (*tempe kara bedong* or *tempe kara pedang*, made from the seeds of some strains of *Canavalia ensiformis*). Lupin tempeh (developed in Australia, made from the seeds of the narrow-leafed sweet lupin (*Lupinus angustifolius*) or the Andean lupin (*Lupinus mutabilis*)). Cowpea or black-eyed pea tempeh (developed in West Africa and Thailand, made from the seeds of *Vigna unguiculata*). Note: Chickpeas (garbanzo beans), baby limas, and great northern beans have also been used to make tempeh.

Grain & soy tempehs: Wheat & soy tempeh, barley & soy tempeh, rice & soy tempeh, bulgur & soy tempeh. Grain tempehs: Barley, rice, wheat, oats, and rye have been used with good results.

Presscake tempehs: Okara tempeh (called *tempe gembus* in Central and East Java where it is most popular, and called *oncom hitam* in West Java where it is not widely used). Peanut presscake tempeh (called black onchom (*oncom hitam*) in the Bogor region of West Java where it is most widely consumed, or white onchom (*oncom putih*) in the Tasikmalaya region, or “tempeh from peanut presscake” (*tempe bungkil kacang*) in East Java). Coconut presscake tempeh (*tempe bongkreng*, *tempe bungkil kelapa*, or *tempe kapuk*) comes in several varieties and can be poisonous if the pathogenic aerobic bacterium *Pseudomonas cocovenenans* grows on it and produces either yellow-colored toxoflavin or the more toxic colorless bongkreng acid. Peanut- & coconut-presscake tempeh (*tempe menjes*). Mung-bean-presscake tempeh (*oncom hitam* or *oncom ampas kacang hijau*). Soy- & peanut-presscake tempeh. Defatted soy-meal tempeh.

Seed tempehs (nonleguminous): Rubberseed tempeh (*tempe kaloko*) is made from the seeds of the rubber tree (*Hevea brasiliensis*). Okra tempeh. Sesame & soy tempeh. Tempeh extenders and adulterants: Okara, cassava, mung-bean presscake, soybean hulls, sweet potato, coconut- or peanut presscake, papaya. The stages of tempeh fermentation (underripe to overripe): Premature tempeh (*tempe koro*), mature tempeh, slightly overripe tempeh (*tempe semangit* or *tempe lanas*), overripe tempeh (*tempe busuk* or *tempe bosok*), rotten tempeh. Tempeh wrappers.

Appendix D: “Soybean production and traditional soyfoods in Indonesia” discusses: Soybean production in Indonesia, traditional Indonesian soyfoods: Kecap (*kecap* / *ketjap*, incl. *kecap manis*), tauchō (*tauco* or *taoco*), okara onchom, sereh (*sere*), taokoan or takoa, tofu (*tahu*). Other nonfermented soyfoods: Soy sprouts (*taugé kedele*), yuba (*bungah tahu*), soymilk, roasted soybeans (*dele sangan*, *kedele sangrai*), roasted soy grits or full-fat flour (*bubuk kedele*), fresh green soybeans (*kedelai rebus*).

Note: This is the earliest English-language document seen (March. 2009) uses the word “tauchō” (spelled in that

way) to refer to Indonesian-style miso.

Appendix E: “The microbiology and chemistry of tempeh fermentation” discusses: What are fungi?, general characteristics of *Rhizopus* molds, *Rhizopus* species used to make tempeh, pure cultures versus mixed cultures, preparing soybeans for fermentation, requirements for mold growth, general changes during tempeh fermentation, changes in nutrients and digestibility, the finished tempeh, the advantages and disadvantages of tempeh fermentation, suggestions for further research.

Appendix H: “Onchom or ontjom” discusses: Introduction. The varieties of onchom (*onchom merah* or *onchom beureum*): Peanut-presscake onchom, okara onchom, soy onchom, coconut-presscake onchom. Making peanut-presscake onchom in a commercial shop. Making okara onchom in a commercial shop. The microbiology of onchom. Laboratory studies of onchom. Aflatoxins. Works on onchom and Neurospora. People connected with onchom and Neurospora. Continued. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

715. Fiering, Steve. 1979. Re: Thanks for hospitality. Next Soycrafters conference. Tempeh equipment. Letter to William Shurtleff at New-Age Foods Study Center, July 11. 1 p. Typed, with signature on letterhead.

• **Summary:** Across the top of the letterhead is written “Organic Soy Products.” “Thank you again for your hospitality. The evening with you and Akiko was one of the highlights of the trip for both Sue and myself. I came back to The Soy Plant with many new insights into the soy foods business and our shop in particular and my approach has changed quite a bit. I feel interested in being more businesslike and professional in my work...”

“All plans are still go for the conference, I’m really quite excited... Please confirm my order for 30 *Book of Tempeh* and order 25 Ballantine *Book of Tofu*.”

Gives the address and phone number of Kerry Sandford of Ann Arbor, Michigan, who is interested in making bean busters—a pedal-powered Corona mill for dehulling soybeans.

Gives details on the company’s tempeh incubator and perforated plate. Address: The Soy Plant, 211 East Ann St., Ann Arbor, Michigan 48104. Phone: (313) 663-0500.

716. *Recorder (Greenfield, Massachusetts)*. 1979. Soybean revolution conquering American tastes. July 28. \*

717. **Product Name:** Tempeh.

**Manufacturer’s Name:** Farm Tempeh Shop.

**Manufacturer’s Address:** 156 Drakes Lane, Summertown, TN 38483. Phone: 615-964-3574.

**Date of Introduction:** 1979. July.

**New Product–Documentation:** Shurtleff & Aoyagi. *The Book of Tempeh*. 1979 (July). p. 148-49. Contact Cynthia Bates, Louis Headrick, or Alexander Lyon; distributes frozen

tempeh; sells tempeh starter and dehulled cracked soybeans. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Cynthia Bates.

718. Leviton, Richard. 1979. The soy delicatessen. *Soycraft* (Greenfield, Massachusetts) 1(1):12-18. Summer.

• **Summary:** Describes The Tofu Shop (Rochester, New York), The Soy Plant (Ann Arbor, Michigan), The Cow of China (Boulder, Colorado), and The Tofu Shop (Telluride, Colorado).

Photos taken at The Tofu Shop in Rochester show: Greg Weaver at the counter serving a woman (cover photo). The inside of the restaurant, including two women seated at a wooden table and the large menu on the wall in the back. A woman employee cutting vegetables in the kitchen. Another woman working in the kitchen. A close-up of the wooden menu on the back wall (with prices; \* = organically grown), which offers: Deli: Tofu\*, tempeh\*, soy mayo, soysage, soy milk\*. Salads: Deviled tofu, tempeh, tossed. Dips (with tofu): Onion, dill. Hot sandwiches: Tofu burger, tofelafl, sloppy joe tempeh, tempeh Reuben, temptation! Cold sandwiches: Deviled tofu, tempeh salad. Casseroles: Tofu-spinach pie, tofu Italiano. Soups: Miso, soup of the day. Sampler plate. Special of the week: Ginger garlic sauce over tofu, rice and sauteed vegetables. Desserts: Lemon cream pie, tofu carob-mint pie, chocolate-mint pie, gingerbread, peanut butter cookies. Drinks: Soymilk, herb tea\*, vegetable juice\*, apple cider, Bambu (a roasted grain coffee), banana shake (with frozen bananas and soymilk), carobanana. The deli case at White Wave. The outside of The Cow of China.

Note 1. This is the earliest document seen (Feb. 2007) that mentions the use of frozen bananas to add thickness to a smoothie—a breakthrough idea.

“Matthew Schmit—proprietor of The Tofu Shop, in Telluride, Colorado, Juice Bar, Dining, Catering, Wholesale Kitchens, ‘producers and suppliers of specialty foods for the western slope—operates a soy-based restaurant that seats about thirty people and has waiters and waitresses. The Restaurant, which opened in October 1977, and had gross sales last year of twenty thousand dollars, is open six days a week from 11:00 A.M. to 9:30 P.M. Matthew astonished me with the figure of one thousand dollars as the initial capital investment for this business, which now produces 250 pounds of tofu for weekly wholesale distribution in addition to the flourishing restaurant.

“The menu, which features a stunning photograph of Rocky Mountains rising out of a misty valley, and which they use as a promotional brochure, delineates the fare: Entrees (Stir-fried tofu, Rice & vegetables; Soy burgers, Tofu burgers, Okara burgers, Grilled tofu & vegetables in pita bread, Guacamole & tofu, Spicy tofu & rice filling with guacamole for burritos); Smoothies (Carob-honey soymilk with banana, Carrot sunny shake); Beverages (Miso broth, soymilk, [soy] whey); and Salads (Tofu & guacamole salad,

okara salad, tofu & vegetable salad).” Matthew explains the okara salad and whey.

“Matthew and his associates regard the tofu and soyfoods as an entrance into an expanded food processing line for their local market, a move that will lessen their dependence on only one or two products. Believing that every community should have its own fresh tofu, Matthew adds that ‘everyone develops their own business according to the nature of their community.’” During the holiday season, Matthew’s community created an exotic recipe for “tofu turkey.” “Chunks of tofu are seasoned and basted, often carved in the shape of turkeys, and baked for an entire day”—after which “they taste exactly like turkey.”

Note 2. This is the English-language document seen (Jan. 2007) that contains the term “Okara burgers” (or “Okara burger”). Address: Sunrise Farm, 100 Heath Rd., Colrain, Massachusetts 01340.

719. Leviton, Richard. 1979. Opening speech. Paper presented at Second Annual Soycrafters’ Conference. 6 p. Held 26-29 July 1979 at Hampshire College, Amherst, Massachusetts. Typed manuscript. Address: 100 Heath Rd., Colrain, Massachusetts 01340.

720. Shurtleff, William. 1979. Soyfoods in America 1979: Progress, problems, challenges. Keynote paper presented at Second Annual Soycrafters Conference, Hampshire College, Amherst, Massachusetts. July 26. 14 p. Unpublished manuscript.

• **Summary:** The full text of this presentation has been transcribed. The major events of the past 12 months are reviewed. The key challenge is to build a strong Soycrafters Association. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

721. Shurtleff, William. 1979. Report on trip to second annual meeting of Soycrafters Association of North America (Amherst College, Massachusetts, July 26-29), and subsequent visit to Rochester, New York. P.O. Box 234, Lafayette, CA 94549. 2 p. Aug. Unpublished manuscript.

• **Summary:** July 15–9:45. Akiko and I fly to New York City from Lafayette. The previous day our *Book of Tempeh* had arrived from Harper & Row, and we took it with us to the conference. Stay in a hotel near a park, with fear of being mugged or robbed in this unfriendly city.

We attend and I speak at Buckminster Fuller’s World Games (about world hunger and world resources) in New York City. Have a nice talk there with Robert Rodale.

Akiko and I meet Uri Geller at his home / apartment—at his invitation, because he knows and admires our *Book of Tofu*; he is a very nice, healthy man with world-famous psychic abilities. He bends my house key before my eyes by psychic force, without touching it; I carry that useless house key on my key chain for years and show it to many people.

Uri also replicates a drawing I made of a stick figure standing with both hands held high under a rayed sun; he was sitting across the room and could not see what I had drawn.

I do about 3 live radio broadcasts for Gary Null (WBAI Natural Living) and visit his home for taping segments; he is a bachelor. Also do an evening program on soyfoods for Annemarie Colbin at her home. And we have dinner at The Cauldron (that makes tofu—and probably tofu cheesecake—we visit the kitchen) and Souen (which makes tofu cheesecake), both macrobiotic restaurants.

While in New York City, Akiko and I visit our editors at Harper & Row headquarters—many stories up in Manhattan.

July 22—Overnight at Ira and Kathy Leviton's home at Sunrise Farm, 100 Heath Road., Colrain, Massachusetts.

July 24? Visit Michael and Shelley Cohen's Tempeh Works, which is preparing to open in a gas station in Greenfield, Massachusetts (production officially began on Oct. 1). I take 3 pages of handwritten notes and many photos for our forthcoming book *Tempeh Production* (see p. 95-98). I first describe each piece of equipment in the shop and illustrate some, then describe the process (20 lb of dry beans makes 52 lb of tempeh), and finally draw a detailed floor plan of the shop. This was the first batch of tempeh Michael had ever made in this shop. He sold 200 lb of tempeh to the Soycrafters Conference later that week.

July 25. Our book *Tofu & Soy milk Production*, published by our New-Age Foods Study Center, arrives from the printer (Braun Brumfield) in Ann Arbor, Michigan. It is the first book we have self-published properly, and the first to contain an ISBN (our second, 0-933332-01-7) and an LCCN.

July 26-29 (Thurs. to Sun.) Second Annual Soycrafters Association of North America (SANA) conference at Hampshire College in Amherst, Massachusetts, organized and run by Ira / Richard Leviton. 230 people attend. It is Akiko's first SANA conference. A magnificent event. Also first issue of *Soyfoods* magazine out, published by Leviton. One evening there is a square dance. I recall Jon Lee of New England Soy Dairy being a superb square dancer. I meet angry Paul Duchesne. Steve Earle from San Jirushi gives a wooden speech on the history of his company and the tamari they make.

July 30-31. After the conference, with Richard Leviton driving and Jeremiah Ridenour on board, we visit The Tofu Shop, a soy deli at 686 Monroe Ave., Rochester, New York, founded by Andy Schecter, Greg Weaver, and Norman Holland. Very interesting. Ira takes lots of photos for an article in *Soyfoods* magazine. One nice one shows Akiko and Jeremiah Ridenour seated in the Deli at a table which is loaded with soyfoods dishes ready to eat.

Will in Rochester, Shurtleff presented a lecture and slide show to 150 people at the Eisenhart Auditorium in the Rochester Museum and Science Center; it was sponsored by The Tofu Shop.

Aug. 2—We arrive back in Lafayette. Address: New-age

Foods Study Center, Lafayette, California.

722. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tempeh: A super soyfood from Indonesia. Professional hardcover edition (Continued). New York, NY: Harper & Row. 248 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [190 ref]

• **Summary:** Continued: Numbered figures (line drawings unless otherwise stated. The capital letter before the decimal refers to the appendix number). B.1 Table: Tempeh shops in Indonesia by province: Home-industry scale. B.2 Table: Relative frequency of tempeh consumption in Indonesia (by province). B.3 Carrying tempeh to market in Java using a shoulder pole and trays stacked on two baskets. B.4 Cost of one day's supply of protein in Indonesia.

C.1 Table: Edible grain legumes. C.2 Map: Distribution of legumes in southeast Asia. C.3 Winged bean, showing leaves, pods, flowers and beans. C.4 *Leucaena* leaves and pods (*peté china*). C.5 Reduction in bongkre toxicity from bongkre acid during fermentation (Ko 1977). Okra. Packets of tempeh, ready to sell, wrapped in leaves and tied. A large soybean, with hilum showing.

D.1 Table: Soybean production in Indonesia (1950-1976). D.2 Table: Major Indonesian food crops, D.3 Table: Indonesian soybean production and yields (by province). D.4 Map: Major soybean producing districts in Java (1976; most are in East Java, led by Jember and Pasuruan). Table: Daily per capita consumption of tempeh (by province, led by Central Java, then West Nusa Tenggara, Yogyakarta, and East Java). Table: Percent of dietary protein supplied by major food categories (led by cereal grains, then fish, nonlegume vegetables, and soy products). Table: Percentage of dietary protein supplied by soy products (by province, led by Central Java, then East Java, Yogyakarta, and West Java). D.5 Table: Statistics on production and consumption of basic Indonesian soyfoods (led by tempeh, then tofu, kechap, taicho). D.6 Star anise. Grinding soybeans for tofu using traditional push-pull stone mills. Pouring soy curds into cloth-lined forming box.

Javanese shadow puppet (*wayang kulit*).

Table: Classification of *Rhizopus oligosporus*. E.1 Two stages in the germination of a spore (after 1½ and 10 hours). E.2 Two successive views of hyphal tip growth at half-hour intervals (previous page).

E.3 *Rhizopus oligosporus* (Frazier 1957, showing sporangium, columella, apophysis, sporangiophores, stolon, sporangiospores, node, rhizoid). E.4 *Rhizopus stolonifer*. A. Columella and attached spores. B. Collapsed (invaginated) columella (Webster 1970).

E.5 Life cycle of *Rhizopus* (Raven and Everet 1976). E.6 Graph: Changes in tempeh oil and moisture content during fermentation (Sudarmadji 1977). E.7 Graph: Three phases of tempeh fermentation (rapid, transition, and deterioration; Sudarmadji 1977). E.8 Graph: Changes occurring during tempeh fermentation (temperature, soluble solids, pH, soluble nitrogen, and reducing solids; Steinkraus et al. 1960). E.9 Graph: Yields of tempeh and of solids and different stages of the fermentation process (100 gm of whole dry soybeans yield 173 gm of tempeh on average; Steinkraus 1960; Murata 1967). E.10 Table: Loss of solids and protein during tempeh fermentation. E.11 Table: Percentage changes in composition of key essential amino acids during tempeh fermentation. E.12 Table: PER (protein efficiency ratio, a measure of protein quality for humans) changes during tempeh fermentation. E.13 Graph: Changes in concentration of three carbohydrates during tempeh fermentation (sucrose, stachyose, and raffinose, all decrease; Shallenberger et al. 1976). E.14 Table: Amount of B-complex vitamins in 100 gm of tempeh vs. 100 gm unfermented soybeans (all increase in tempeh except thiamine {vitamin B-1}). Changes in peroxide value and TBA value tempeh and soy flour during storage at 37°C (98.6°F; both rise rapidly in soybeans, but

stay near zero and stable for tempeh; Watanabe et al. 1971).

H.1 Table: Foods known in Indonesia as “onchom” (made from peanuts or soybeans). H.2 Selling onchom in a Javanese market. H.3 Graph: Changes in soy onchom during fermentation (temperature, soluble solids, pH, soluble nitrogen, and reducing solids; Steinkraus et al. 1965). H.4 Flowchart for preparation of peanut presscake onchom. Unnumbered illustrations show 12 steps in the process of making onchom in a commercial shop in Indonesia. Neurospora: Budding conidia, conidiophore. H.5 Graph: Reduction in onchom aflatoxin during fermentation with *Neurospora* (Ko 1974). A thermometer, showing both Fahrenheit and Centigrade.

Glossary of Indonesian foods, spices, etc. Agar. Amaranth, Indonesian. Apem. Arak. Aren sugar. Aromatic ginger. Asam. Bananas (pisang). Basil. Bawang merah. Bawang putih. Bayam. Bean sprouts. Belimbing. Blachan. Brem. Bumbu. Candlenuts (kemiri). Carambola (belimbing). Cassava. Chabé. Chayoté. Chilies (red, green, fiery dwarf). Two-page spread showing illustrations of Indonesian natural foods. Choko. Cirus leaves. Cloves. Coconut. Coconut, grated. Coconut milk and cream. Coconut oil. Coconut water. Coriander. Cumin. Dageh. Daun asam. Daun jeruk purut. Daun salam. Daun seré. Daun-so. Durian. Fermented fish. Fermented fish sauce. Fruits. Galangal, greater. Galangal, lesser. Gingerroot. Indonesian amaranth. Jackfruit. Jaggery. Jinten or jintan. Kangkung leaves. Kecap (kecap) or ketjap. Kemangi leaves. Kemiri. Kenchur root. Ketjap. Ketumbar. Kluwak. Koji. Kolang-kaling. Krupuk. Kunyit. Labu siam. Laos root. Lemongrass. Lime leaves. Lombok. Melinjo leaves. Mochi, Indonesian (*uli*). Mung-bean sprouts. Nutmeg. Okara. Onchom or ontjom. Palm sugar. Pandanus leaf. Pasta. Pepper. Peté beans. Petis. Peuyeum. Prawn paste. Putjung nuts. Ragi. Rempeyek. Rice. Salam leaf. Sambals. Santan, Sayur asin. Seré or serai. Shallots. Shrimp crisps. Shrimp paste. Soursop. Soy sauce, Indonesian. Star fruit. Swamp cabbage. Tahu. Tamarind. Taocho, taoco, taoco, or taotjo. Taogé or taugé. Tape. Tapioca. Taucho or tauco. Terasi. Tofu. Trasi. Tuak or tuwak. Turmeric. Winged bean. Note on monosodium glutamate. A woman holding a tray of leaf-wrapped tempeh in Surinam. Photo of Shurtleff and Aoyagi on inside rear dust jacket. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

723. *Soycraft* (Greenfield, Massachusetts). 1979. Greenfield, Massachusetts: Tempeh Works. 1(1):9. Summer.

• **Summary:** Michael Cohen is now opening what promises to be one of the largest volume tempeh shops in the U.S., with a capacity of 3,000 lb/week in the 1,200 square foot workshop. He intends to have the New England Soy Dairy handle the bulk of his distribution.

Note: This is the earliest document seen (Sept. 2011) concerning The Tempeh Works.

724. Suharni, Th. Tri. 1979. Pemilihan bakteri yang berpengaruh dalam pembentukan growth factor pada fermentasi tempe [Selections of bacteria that affect growth factor formation during tempeh fermentation]. Presented at Kongres Nasional Biokimia IV. Held 10-12 July 1979 at Bandung, Indonesia. [Ind]\*

725. Zamora, Regalado G.; Veum, Trygve L. 1979. The nutritive value of dehulled soybeans fermented with *Aspergillus oryzae* or *Rhizopus oligosporus* as evaluated by rats. *J. of Nutrition* 109(7):1333-39. July. [23 ref]  
 • **Summary:** The diets containing heated dehulled soybeans fermented with either *Aspergillus oryzae* or *Rhizopus oligosporus* had a greater apparent biological value and apparent net protein utilization when fed to rats compared to diets containing heated unfermented dehulled soybeans. In two experiments, a 30% and a 12% improvement in average daily weight gain by the rats was observed due to fermentation of the soybeans. Address: 110 Animal Science Research Center, Univ. of Missouri, Columbia, Missouri 65211.

726. [Adams, Ruth]. 1979. How you can use soybeans. *Better Nutrition*. July. p. 22-23, 38, 40.

• **Summary:** A good introduction to tempeh and to food uses of soybean with 4 photos and recipes for Soy stuffed peppers (with ¼ cup soy grits) and Baked soybeans (with 2 cups dry soybeans).

It begins: "In the orient soybeans are used in 400 different ways, according to Charles B. Heiser in *Seed to Civilization*." "Soy protein is of very high quality, its amino acid content almost equalling that of eggs and meat."

Tempeh is a staple food throughout Indonesia with its 100 million people; it is made in hundreds of thousands of homes and in many small tempeh shops. "More than half of Indonesia's annual soybean crop is used for making tempeh." Gives a brief description of how Indonesians make tempeh.

727. O'Connell, Jean. 1979. Protein through the soybean: Soycrafters' new food. *Morning Union (The) (Springfield, Massachusetts)*. Aug. 1. p. 22, 27.

• **Summary:** The Soycrafters Association of North America held its first national conference at Hampshire College this past weekend. Some 230 people attended the conference. Most were under 40, and most were looking quite fit, certainly not fat. William Shurtleff gave the conference keynote address. A large illustration by Akiko Aoyagi shows Richard Leviton stirring nigari into hot soymilk to make tofu. Address: Union Food Editor.

728. Redrupp, Jackie. 1979. 'We must return to getting protein from the earth.' *Democrat and Chronicle (Rochester, New York)*. Aug. 4. p. 12C. [2 ref]

• **Summary:** About the work of William Shurtleff and Akiko

Aoyagi with tempeh. A photo shows Akiko standing by a skillet with a freshly-made tempeh burger. The Shurtleffs are on the East Coast to attend the second annual Soycrafters of North America Conference at Hampshire College, Amherst, Massachusetts; it was attended by about 230 people. Greg Weaver, a partner in The Tofu Shop, 686 Monroe Avenue, the soy delicatessen of the Northern Soy Tofu Company of Rochester, attended the conference and invited Shurtleff to Rochester to sample the deli's selection of soyfoods and to share ideas about the production and marketing of tempeh. Contains 3 favorite recipes from *The Book of Tempeh*. Address: D&C Food Writer.

729. Gump, Debbie. 1979. Tempeh, Tempeh. Don't turn up your nose—It doesn't taste half-bad and the protein story on tempeh is really good news. *Times-Union (Rochester, New York)*. Aug. 7. p. 1C, 2C, 4C.

• **Summary:** Based on a lecture presented last week by William Shurtleff to 150 people at the Eisenhart Auditorium in the Rochester Museum and Science Center. Sponsored by The Tofu Shop, 686 Monroe Ave., which sells Sloppy Joe Tempehs, Tempeh Reubens, and Temptations. The article contains recipes for Homemade soy tempeh, Seasoned crisp tempeh, and Tempeh Reuben sandwich. Address: Food editor.

730. *Recorder (Greenfield, Massachusetts)*. 1979. Our growth industry [soyfoods]. Aug. 8. p. A6.

• **Summary:** This editorial states that the New England Soy Dairy has moved into the former Bete Fog Nozzle building on Wells Street and plans to add 1,200 square feet for refrigeration. New equipment will help maintain production of 25,000 pounds of tofu weekly.

Michael Cohen is opening The Tempeh Works on French King Highway; he hopes it will be one of the largest volume tempeh businesses in the United States. And Lama Trading Co. [formerly Llama, Toucan & Crow], which moved to Greenfield from Brattleboro, Vermont, is growing as a major soyfood-natural foods distributor throughout the Northeast.

"To help coordinate and build the industry, Richard Leviton and David Kilroy have formed the Soycrafters Association of North America and are publishing a slick quarterly magazine called *Soycraft*. Both use the Wells Street address. More than 200 industry representatives gathered in Amherst recently for a national conference organized primarily under Mr. Leviton's direction."

731. *Valley News & Valley Green Sheet (Van Nuys, California)*. 1979. From the makers of tofu and miso, a new tempeh-tation—The Joy of Soy: Treat your body like a temple with tempeh. Aug. 16. \*

732. New-age Foods Study Center. 1979. Catalog of

publications & materials by William Shurtleff & Akiko Aoyagi [mail order]. P.O. Box 234, Lafayette, CA 94549. 2 p. Aug. 24.

• **Summary:** This single page leaflet, 8½ by 14 inches, is printed on both sides with brown and teal blue ink on white Classic Laid paper. The Japanese-style logo is waves and a moon in a circle. The following items are available: The Book of Tofu (Ballantine \$2.95). Tofu & Soymilk Production (\$17.95). The Book of Tofu: Food for Mankind (Autumn Press \$7.95). The Book of Tempeh (paperback and professional hardcover editions). Tempeh Production (\$13.95). The Book of Miso (Autumn Press). Miso Production. Pamphlets (5). Tofu kit. Color slide sets. Soykraft magazine (and information about Soycrafters Assoc.). Catalogs of tofu & soymilk equipment (Bean Machines). Natural nigari. Tempeh starter (contact Farm Foods). Koji & koji starter. Pressing sacks & straining bags. The Book of Kudzu. A large sidebar is titled “New-Age Foods Study Center.” Address: Lafayette, California. Phone: 415-283-3161.

733. New-age Foods Study Center. 1979. Soyfoods tour of the Pacific Northwest (Itinerary, Aug. 27–Sept. 6). P.O. Box 234, Lafayette, CA 94549. 1 p. Aug. Unpublished manuscript.

• **Summary:** On this tour Shurtleff and Aoyagi conducted a number of public programs on soyfoods (tofu, tempeh, miso, etc.), showing color slides and sampling foods. They also did research for their forthcoming book *Tempeh Production* and held numerous media interviews. In California they visited Bean Machines, Ramagiri (home of Laurel’s Kitchen), Farallones Inst. (Donna Calvaud). In Oregon, Surata Soyfoods (Benjamin Hills), Blair Island (Toby Alves), Sunbow Farm (Mia Posner), and *Rain* magazine. In Washington, Island Spring (Luke Lukoskie). Address: Lafayette, California.

734. *Vegetarian Times*. 1979. Tempeh: An important soyfood for the future. No. 32. July/Aug. p. 60-61. [1 ref]

• **Summary:** Adapted from *The Book of Tempeh* by Shurtleff & Aoyagi.

735. Demos, Steve. 1979. Re: Making tempeh at White Wave, Inc. Letter to William Shurtleff at New-Age Foods Study Center, Sept. 2. 3 p. Handwritten.

• **Summary:** “Dear William and Akiko, I’m sorry for not having written sooner. I’ve meant to, however I’ve been extremely busy here at White Wave. Most of my time is taken up in tofu production, as we’ve been producing quite a lot lately.

“At the present moment, tempeh is a very minor product at White Wave. I make only two batches a week at 80 10 oz packages per batch. The growth of tempeh consumption in this area is very slow, as few people know about it. However

we are trying to turn more people on to it, and have plans to expand our production, perhaps this winter.

“I am very interested in your new Book of Tempeh. I haven’t read much of it, as yet, but plan to go through it thoroughly I’ll also be interested in obtaining a copy of your book on Tempeh Production.

“The following is a description of our current mode of tempeh production. Please keep in mind it is a very small operation, and that the same equipment is also used in tofu production.” The rest of the letter is that description. Address: Boulder, Colorado.

736. Krieger, Verena. 1979. Re: Thoughts on returning to Switzerland. Letter to William Shurtleff at Soyfoods Center, Sept. 17. 1 p. Typed, with signature.

• **Summary:** “Dear Bill, It has finally become possible for me to return to my native Switzerland (just as you told me two years ago at the first national ‘soyfoods conference’ [Held July 28-30, 1978, in Ann Arbor, Michigan]). I am determined to continue my work as a natural foods cook, teacher and possibly writer... What would be new here is the contribution from the Far East, especially soyfoods and seaweeds. It may take a long time for these products to spread in Europe, and especially in Switzerland, since many popular-traditional and cultural values are so much connected with cattle raising. Also, soybeans grow poorly here... Anyway, these were considerations I did not have to face, while I was using pounds and pounds of tofu, tempeh, miso, etc. in our restaurant in Chicago, and I feel I have a lot to learn and rethink at this point.”

Note: In 1978-79 Verena worked at the vegetarian, natural-foods restaurant “It’s Natural,” owned by Brian Schaefer, at 502 & 514 Main St., Evanston, Illinois 60202 (a suburb of Chicago). Address: Frauenfeld, Switzerland. Phone: 041-22 50 34.

737. Yamamoto, Toyo. 1979. The soybean: Potential to feed the world. *Oregon Herald*. Sept. 17. p. 5, 8. [3 ref]

• **Summary:** An interview with William Shurtleff about soyfoods. “On Saturday night of the Labor Day weekend about 70 people cozily seated themselves at the First Methodist Church in downtown Salem [Oregon] to hear a lecture/slide show by author William Shurtleff. He discussed soybean foods, such as tempeh, tofu and miso—most of which are now available at natural foods stores in the mid-valley.” The program was sponsored by Heliotrope Natural Foods in Salem. Address: Salem, Oregon.

738. *Journal American (Kirkland, Washington)*. 1979. Some say protein foods of the future are tofu and tempeh. Sept. 26. \*

• **Summary:** About Island Spring (Vashon, Washington).

739. Esko, Wendy. 1979. Introducing macrobiotic cooking.

Tokyo: Japan Publications. 144 p. Foreword by Aveline Kushi. Preface by Edward Esko (both written June 1978). Illust. by Bonnie Harris. Index. 26 cm. Reprinted in 2006 by Square One Publishers (Long Island, NY, 240 p.).

• **Summary:** The author was introduced to macrobiotics in upstate New York in about 1971. This is her first book on macrobiotics. It was originally published under the title of *An Introduction to Macrobiotic Cooking* by the East West Foundation, 17 Station Street, Brookline, Massachusetts 02146. Though copyrighted in 1978, the first edition appeared in Sept. 1979. The fourth printing was May 1981.

The chapter titled “Beans including tofu and natto” gives descriptions of and recipes for making: Japanese black beans (black soybeans, p. 54; “These beans are therapeutic for the sexual organs and will relieve an overly yang condition caused by too much animal food or fish.”) Soybeans (p. 54. “These beans are the most yin of the bean family... It is recommended that soybeans be eaten only occasionally as a separate side dish. Because they are very yin, they should be cooked with yang vegetables such as lotus root or burdock, for balance. The best way to eat soybeans is in the form of *tofu*, *okara*, *natto*, *tempeh*, and, of course, miso and tamari.”) Tofu, and Homemade tofu (curded with nigari, p. 54-55). Okara (p. 55-56). Tofu and corn. Tofu, onions and water cress. Dried tofu (dried-frozen, p. 57). Yuba (dried soy milk; how to make at home). Vegetables and dried soy milk (p. 57). Ganmodoki (Tofu and jinenjo patties, p. 57-58). Natto (description and how to make at home, p. 58-59).

Other soy-related recipes include: Tofu soup (p. 68). Miso soup (p. 69-70, basic, or quick). Watercress miso soup (p. 71). Daikon and sweet rice dumpling soup (with miso). Chinese cabbage and tofu miso soup (p. 71). Aveline Kushi’s miso stuffed lotus root (p. 86). Tofu dressing (p. 91). Miso-tahini spread (p. 92). Miso-sesame spread (p. 92). Miso-lemon sauce (p. 93). Tofu dip (p. 93). Miso with scallions (p. 95). Tamari (description, p. 95). Tekka (made with Hatcho miso, p. 96). Miso pickles (p. 100-01). Tamari pickles (p. 101). Tofu plaster (p. 130). Ume-Sho-Kuzu drink (with umeboshi, tamari and kuzu, p. 131). Ume-sho-bancha (with tamari, p. 131). Use of tamari, miso, and tekka (p. 132).

Also includes instructions for making amasake at home (p. 116; it is a natural sweetener made from fermented sweet rice), and a recipe for Amasake bread (p. 107), instructions for making seitan at home (p. 46-47, using 3½ lb of hard spring or hard winter whole wheat flour; spring wheat flour produces a much softer texture of seitan than the winter variety), and recipes for seitan stew, seitan-barley soup, sauteed vegetables and seitan, stuffed cabbage with seitan, and seitan croquettes (p. 47-49), plus recipes for leftover seitan (p. 125). Address: East West Foundation, near Boston/Cambridge, Massachusetts.

740. **Product Name:** Tempeh.

**Manufacturer’s Name:** Tempeh Works (The).

**Manufacturer’s Address:** P.O. Box 870, Greenfield, MA 01301. Phone: 413-772-0991.

**Date of Introduction:** 1979. September.

**Ingredients:** Organically grown soybeans, water, Rhizopus culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**Nutrition:** Per 4 oz.: Calories 182, protein 24 gm, carbohydrate 9 gm, fat 6 gm, sodium 11 mg, iron 3 gm. Percentage of RDA: Vitamin B-12 160%, Protein 40%, Iron 20%, calcium 10%.

**New Product–Documentation:** Visit to plant by Shurtleff and Aoyagi. 1979. July. They took many photos of the plant and production process, which appeared as illustrations (line

drawings) and a description of process in their book *Tempeh Production*, published in March 1980.

Note: This is the earliest known commercial soy product or tempeh product made by the Tempeh Works.

Soycraft. 1979. Summer. p. 9-10. "Greenfield, Massachusetts: Tempeh Works." Describes "what proposes to be one of the largest volume tempeh shops in the United States." Details of the process are given, but no photos. The company, founded by Michael Cohen, plans to open in mid-July.

Leviton. 1980. Soycraft. Winter. p. 36-41. "The Tempeh Works: The soyfood with culture." Contains many photos and a detailed description of the process.

Ad in *New Age*. 1980. July. p. 69. "Tempeh. The super soyfood! Made from organically grown soybeans... Tempeh, an exciting new taste in vegetarian eating, is found in your natural foods market and coop. Wholesale inquiries welcome!"

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Michael Cohen. Poster. Back to back. 5.5 by 8.5 inches. One color. A photo shows the staff. "Tempeh Works tempeh. Makes delicious entrees in minutes."

Ad (1/3 page) in *East West Journal*. 1981. Aug. p. 63. "Tempeh: The soyfoods with culture." The ad consists largely of the tempeh label. "Ingredients: Organically grown soybeans, water, Rhizopus culture."

Label. 1982, undated. 5 by 6 inches. Brown on tan. Ad in *New Age*. 1982. April. p. 21. "Tempeh. The Soyfood with Culture."

Talk with Michael Cohen. 1982. June 30. His weekly tempeh production peaked at 6,800 lb in Sept. 1981; it stayed at this level for 3 weeks. Then in early 1982 five competitors appeared in his market area; his production dropped by 35%. Now sales are rebounding, having reached 4,000 to 4,500 lb/week during June 1982. In the winter of 1981-82 he expanded his incubation space by adding 650 square feet with trailers.

Talk with Michael Cohen. 1984. Jan. Their tempeh production averages 5,500 lb/week, maximum 7,000 lb/week. Their best-seller is soy tempeh, followed by 3-grain, then by non-fried tempeh burgers. 95% of their tempeh is sold refrigerated and 5% frozen. A proprietary steaming method gives a 30-40 day shelf life refrigerated.

Shurtleff & Aoyagi. 1985. *The Book of Tempeh*. 2nd ed. p. 152. "America's first bona fide commercial tempeh company, having its own building and specializing in tempeh, was The Tempeh Works, started in 1979."

741. **Product Name:** Tempeh.

**Manufacturer's Name:** Tofu Factory (The).

**Manufacturer's Address:** Route 1, Box 216, St. Ignatius, MT 59865. Phone: 406-745-4538.

**Date of Introduction:** 1979. September.

**New Product-Documentation:** Letter/Order from Gerald

Minsk of The Tofu Factory (formerly Swan Gardens; Box 216 Rt. 1, St. Ignatius, Montana 59865). 1979. Sept. 28. He orders the books *Tofu & Soymilk Production*, *The Book of Tempeh*, *The Book of Tempeh*, Vol. II.

Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Brenda Wood; Soyfoods Center Computerized Mailing List. 1983. June 20. Brenda's name is now Brenda Adley. She and Gerald Minsk also make tofu.

742. Kreck, Carol. 1979. Tofu is 'remarkable.' *Denver Post*. Oct. 17.

• **Summary:** A profile of Steve Demos and White Wave. "Two years ago last week, White Wave started in a small retail space making about 300 pounds of tofu a week. Now the company has a factory at 3867 Walnut St., produces between 5,000 and 7,000 pounds of tofu a week, and operates a vegetarian delicatessen, the Cow of China, at 1738 Pearl St. in Boulder. The Cow of China also provides a place for White Wave to test the market for their other products (Polar Bean, Tempeh, etc.) Their tofu is sold at health food stores and King Soopers at \$0.85 for a 14-ounce package." A photo shows George Hamel pressing the long wooden arm of the soymilk press. Address: Colorado.

743. Shurtleff, William; Aoyagi, Akiko. 1979. How to make tempeh at home. *Vegetarian Times* No. 33. Sept/Oct. p. 26-29.

• **Summary:** A basic description (easy-to-follow directions) in recipe format with 13 illustrations (by Akiko Aoyagi), plus a description of three types of finished tempeh (Good, unfinished, and inedible) and troubleshooting tips. Address: Lafayette, California.

744. *League for International Food Education (LIFE) Newsletter*. 1979. Some recent references on fermented foods. Nov. 1. 10 p. [60 ref]

• **Summary:** Contents: Books (11 books, incl. 7 on fermented soyfoods by Shurtleff & Aoyagi). Articles: Tempeh (12), peanuts (3), miso (4), miscellaneous products (30). Address: 1126 Sixteenth St., N.W., Room 404, Washington, DC 20036.

745. *Recorder (Greenfield, Massachusetts)*. 1979. Soybean cake [tempeh] makers move to new location. Nov. 2. \*

• **Summary:** About the Tempeh Works and Michael Cohen.

746. Beardsley, Nancy. 1979. Tempeh beefs up meatless diet. *Seattle Post-Intelligencer*. Nov. 28. p. D1. [1 ref]

• **Summary:** A nice introduction to tempeh with recipes for Tempeh Lasagne, Seasoned Crisp Tempeh, and Steam-Fry Tempeh. William Shurtleff, Akiko Aoyagi, and Luke Lukoskie visited this newspaper to promote tempeh. Photos show (1) Shurtleff and Aoyagi with tempeh recipes, their *Book of Tempeh*, and a package of Island Spring Tempeh;

(2) The inside of the Island Spring soyfoods plant. Address: Staff home economist, Washington.

747. Hannigan, Kevin J. 1979. Tempeh...a super soy. *Food Engineering* 51(11):11. Nov.

• **Summary:** Tempeh has endless possibilities as an engineered food.

748. Leviton, Richard; Kilroy, David. 1979. Media bibliography. Greenfield, Massachusetts: Soycrafters Association of North America. 16 p. Nov. Unpublished manuscript. 28 cm. [243 ref]

• **Summary:** Each page of this soyfoods (mostly tofu) bibliography is on letterhead that reads: *Soycraft: The Journal of the Soycrafters Association of North America*. Most of the articles cited were published in 1979, between May and November. However 9 articles were published from June 1976 to Feb. 1979. It is divided into 5 sections: (1) Profiles of individual soycraft companies (3 p., 38 ref). (2) Soybean and soyfoods industry (2 p., 32 ref). (3) Sanitation and soyfoods production (2 p., 18 ref). (4) Local and regional general accounts of soyfoods (8 p., 140 ref) (5) National and mass circulation coverage (1 p., 15 ref).

Note 1. How did Richard Leviton collect all these references? In an interview (2005 March 2) he recalls that New England Soy Dairy (of which he was a co-owner and where he worked) subscribed to a clipping service on the subject of soyfoods (tofu, tempeh, food uses of soybeans, soybean oil, soy based infant formula, etc.) starting in about May 1979.

Note 2. It is quite remarkable to see the level of nationwide media coverage that tofu received as early as 1979. Leviton's tireless and effective activities (organized national conference in July 1979 in Amherst, Massachusetts, wrote and published *Soycraft* magazine, and perhaps did a news release) may well have been the main reason for this positive media coverage. As of March 2005, of the 225 food-related references in this bibliography, Soyfoods Center had not seen 161, or 71.6%. Address: 305 Wells St., Greenfield, Massachusetts 01301. Phone: 413-774-5480.

749. Rodale, Robert. 1979. The amazing three-way bean. *Organic Gardening*. Nov. p. 28-35.

• **Summary:** Some people see soybeans as just another bean. Soycrafters see in soybeans the potential for a natural, healthful and even profitable new way of life. And one doctor even sees in soybeans a possible way of controlling cancer.

After discussing tofu and tempeh, and why one might want to become a soy crafter, Rodale continues: "What may really cause soy craft to boom, though, is new information that the eating of soy foods may give people a potent weapon in the control of cancer. Walter Troll, Ph.D., a researcher at New York University Medical Center, is about to publish details of experiments which show that experimental animals

fed soybeans were able to resist the effects of chemical carcinogens (cancer-causing substances). It is already known that women living in countries where soybeans and other seeds are important sources of protein have less breast cancer. Now there is laboratory evidence showing why. Substances called protease inhibitors [or trypsin inhibitors] are the key."

"If you are interested in tofu or tempeh-making as a business, you may want to check out *Soycraft* magazine. The address is 158 Main Street #3, Greenfield, Massachusetts 01301. A one-year subscription—four issues—is \$15." Photos show: Robert Rodale. Tofu being made at the New England Soy Dairy.

750. McBride, Gordon E. 1979. Re: How to make tempeh starter culture. Letter to William Shurtleff at New-Age Foods Study Center, Dec. 21. 1 p. Handwritten.

• **Summary:** Includes 6 photos with a description of each. McBride, who likes tempeh, grows the living tempeh starter culture on rice in 250 ml Erlenmeyer flasks, and keeps it on PDA slants. As sold, the starter is 3 inches in diameter and 1 inch thick. Address: PhD, Manager, Living Lab., Ann Arbor Biological Center, Inc., 6780 Jackson Rd., Ann Arbor, Michigan 48103. Phone: 313-761-8600.

751. Girija Bai, R.; Ramachandra Rao, T.N.; Prabha, T.N.; Sreedharan, V.P.; Sreedhara, N. 1979. Studies on tempeh. II. Nutritive value of tempeh and its supplementary value to rice diets. *Indian Food Packer* 33(6):26-33. Nov/Dec. [23 ref. Eng]

• **Summary:** Tempeh prepared from a mixture of equal parts (on a dry weight basis) groundnuts and soybeans, was compared with soybean tempeh with regard to: (1) effect of supplementation with the limiting amino acids methionine, lysine, and tryptophan; (2) supplementary value with rice diets to rats; (3) Intestinal gas forming properties. Address: Central Food Technological Research Inst. (CFTRI), Mysore-570013, India.

752. Obis, Clare Barrett. 1979. Vegetarian nutrition for pregnant and breast-feeding women. *Vegetarian Times* No. 34. Nov/Dec. p. 42, 44-46.

• **Summary:** Describes how to meet the special nutritional needs of pregnancy with a well-balanced vegetarian diet using vegetarian and vegan sources of nutrients. Contents: Introduction. Protein. Iron. Vitamin D. Vitamin A. Vitamin C. Vitamin B-6 (riboflavin). Vitamin B-12. Calcium. Supplements. Final words. Resources.

753. Shurtleff, William; Aoyagi, Akiko. 1979. American style tempeh: Our favorite recipes. *Vegetarian Times* No. 34. Nov/Dec. p. 34-35.

• **Summary:** Contains 9 recipes excerpted from *The Book of Tempeh*. Address: Lafayette, California.

754. Soy Plant (The). 1979. Tofu gratuity (Leaflet). Ann Arbor, Michigan. 1 p. Undated. 11 x 9 cm.

• **Summary:** This tiny, hand-lettered “take one” reads: “Gift certificates may be purchased at a 10% discount through January 31st 1981. Visit our retail store, 211 E. Ann, Ann Arbor, Michigan. 663-0500.” An illustration shows a wheel with spokes; on each spoke is written: Tempeh, soysage, tofu, soymilk, miso. Across the diameter: “Soy foods for body & planet.” In large letters across the bottom: “The Soy Plant.” Address: 211 East Ann St., Ann Arbor, Michigan. Phone: (313) 663-0500.

755. Steinkraus, Keith H. 1979. Transfer of tempe technology. *League for International Food Education (LIFE) Newsletter*. Dec. p. 1-2. [1 ref]

• **Summary:** In 1959 the traditional method of removing soybean hulls when making tempeh involved loosening them by hand or under foot and floating them off in water, and the tempeh was fermented in wilted leaves. In 1965 Steinkraus and co-workers published a pilot plant process for making tempeh in which the hulls were removed by passing the dehydrated beans through a burr mill and fermenting the tempeh in trays. In 1974 Dr. Steinkraus visited a tempeh factory in Indonesia in which these modernizations had been implemented and the perforated plastic bags for incubating tempeh, pioneered in 1964 by Martinelli and Hesseltine, were also being used. Address: Cornell Univ., Geneva, New York 14456.

756. White Wave Soy and Natural Foods. 1979. Product price list: Winter. 3869 Walnut St., Boulder, CO 80301. 6 panels. Catalog. Dec.

• **Summary:** Soyfoods: Nigari tofu (bulk, packaged, doufu [extra firm Chinese style]). Salad dressings (mellow miso salad dressing, hearty miso salad dressing). Tempeh. Soysage. Tofu Mayo. Savory baked tofu. Polar bean (banana-carob soy ice cream).

The company also sells sesame products (raw tahini, roasted tahini, sesame butter, sesame salt), peanut butters (salted or unsalted; crunchy natural, creamy natural, Valencia {crunchy or creamy}), more nut and seed butters (roasted almond butter, raw cashew butter, roasted cashew butter, roasted sunflower butter), and tamaried nuts and seeds (tamaried almonds, tamaried cashews, tamaried Spanish peanuts, tamaried sunflower seeds, and tamaried nut mix [a blend of peanuts, sunflower seeds, cashews, and almonds]). Note: This is the earliest English-language document seen (July 2005) that uses the word “tamaried” to refer to nuts and seeds that have been seasoned with tamari soy sauce and then baked.

“White Wave was founded in 1977 upon the principle of supplying the Rocky Mountain region with high quality protein foods. As these foods are an extension of our own

lifestyles, we offer only products we personally feel are wholesome and nutritious. It is our pleasure to guarantee the quality of all our products. All foods carrying a White Wave label are made solely by us. We thank you for supporting our business. The Folks at White Wave.” Address: White Wave, 3869 Walnut St., Boulder, Colorado. Phone: 303-443-3470.

757. **Product Name:** Tempeh.

**Manufacturer’s Name:** Bean Mountain Soy Dairy.

**Manufacturer’s Address:** 121 W. Howard St., Boone, NC 28607. Phone: 704-264-0890.

**Date of Introduction:** 1979.

**New Product–Documentation:** Mashburn. 1980. The Sentinel. Feb. 15. p. 7. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Jerry McKinnon.

Talk with Jon Kessler of Virginia Soyworks, then with an employee of the company. 1991. Sept. 14. The company, now named Bean Mountain Natural Foods, has just moved to 1096 New Stock Rd., Weaverville, North Carolina (phone: 704-658-2326), and has just gotten a major account with Tree of Life. John Swann is president. The company is privately owned and presently makes only tofu and tempeh.

766. **Product Name:** Tempeh.

**Manufacturer's Name:** Yellow Bean Vegetarian Foods.

**Manufacturer's Address:** 15309 Mack Ave., Detroit, MI 48224.

**Date of Introduction:** 1979.

**New Product–Documentation:** Letter from Carol Ann Huang. 1979. Undated [May]. "We've begun making tempeh now. It's been going real good. We've had our store open for 1½ months now and things are growing stronger all the time... We converted our double door refrigerator into a [tempeh] incubator." They make tempeh in 15 lb batches. "We're getting close to serving food out of our store now. Getting the kitchen up to code and insurance and all that."

Letter/Order for 1 case (34 books) of *The Book of Tempeh* from Yellow Bean Trading Co. 1979. Sept. 21. They are located at the address shown above.

767. Abjah, Koesbianti. 1979. Studi perbandingan aktivitas proteolitik dan amilolitik kapang *Rhizopus* dan isolasi khamir dari tempe [Comparative study on the proteolytic and amylolytic activity of *Rhizopus* enzymes, and the isolation of yeasts from tempeh]. Thesis (Skripsi), Bagian Biologi Institut Teknologi Bandung, Bandung, Indonesia. 88 p. PBITB. [Ind]\*

Address: Bandung, Indonesia.

768. Aoki, Hiroshi; Ito, Kiyoe. 1979. Chôri to daizu [Cooking and soybeans]. Gakken Shoin K.K., Tokyo. 173 p. Illust. Index. 22 cm. [151 ref. Jap]

• **Summary:** Contents. I. Cooking and soybeans. II. Soybean molecules and soybean protein. III. Cooking and traditional soy protein foods. 1. Cooked whole soybeans (nimame), green vegetable soybeans (yude-mame, edamame), soy sprouts. 2. Roasted soy flour (kinako). 3. Tofu. 4. Deep-fried tofu pouches and tofu burgers (aburaage and ganmodoki). 5. Dried frozen tofu (kori-dofu). 6. Yuba. 7. Natto. 8. Tempeh. 9. Soymilk. 10. Miso (Miso soup, miso-ni, ae-mono). 11. Shoyu. IV. Cooking and new soy protein products. Address: 1. Prof., Otsuma Joshi Daigaku; 2. Prof., Tokyo Gaku Gei Dai.

769. Arbianto, Purwo. 1979. Bongkreng food poisoning in Java. In: P. Matangkasombu, ed. 1979. Proceedings of the Fifth International Conference on Global Impacts of Applied Microbiology. Bangkok: GIAM V Secretariat. xxxviii + 535 p. See p. 371-74. Held 21-26 Nov. 1977 in Bangkok, Thailand. [5 ref]

• **Summary:** Bongkreng food poisoning outbreaks were first reported in 1895 and 1901 and are still happening periodically today. A table shows the number of casualties due to bongkreng food poisoning each year from 1951 to 1975. During these 25 years, 7,216 people were poisoned and 850 died. Thus 11.8% of those poisoned died, and on average 34 people a year died. In 1975, the worst year, 1,036 people were poisoned and 125 people died. Officially the production of tempe bongkreng is outlawed. Address: Team Bioteknologi, Departemen Kimia, Institut Teknologi, Bandung, Indonesia.

770. Gomez, M.I.; Kothary, M. 1979. Studies on production of red-kidney-bean tempeh. *J. of Plant Foods* 3(3):191-98. [18 ref]

• **Summary:** "Red kidney beans of the Canadian Wonder variety can be used as a substrate for production of a fermented tempeh-like product using *Rhizopus oligosporus*." Incubation at ambient tempeh takes 48 hours. Using tempeh instead of whole beans reduces cooking time and fuel use. Address: Dep. of Food Science & Technology, Univ. of Nairobi, P.O. Box 20953, Nairobi, Kenya.

771. Ko Swan Djien; Hesseltine, C.W. 1979. Tempe and related foods. *Economic Microbiology* 4:115-40. A.H. Rose, ed. Microbial Biomass. [65 ref]

• **Summary:** Contents: Introduction: Appearance and preparation, production, literature. Inoculum: Tempe mold, traditional inoculum, pure-culture inoculum. Production methods: Basic procedure, raw material, preparation of the soybeans, packaging, incubation and mould growth. Keeping

qualities and preserving methods. Changes in chemical composition. Nutritive value. Other tempe-type processes: Tropical Products Institute process, oncom (ontjom), natto, thua-nao, Tate and Lyle process.

“Meanwhile, in Indonesia, the attitude towards tempe has gradually changed over the last 15 years. Although most people like tempe, it was formerly considered as an inferior food, mainly because it is less expensive than other protein foods like meat, fish and eggs; another reason was that products of low quality were sometimes sold at the market. But, during the last decade through studies by universities as well as by government agencies, more attention has been paid to this product” (p. 119). Address: 1. Dep. of Food Science, Agricultural Univ., Wageningen, Netherlands; 2. NRRRC, Peoria, Illinois.

772. Ko Swan Djien; Kelholt, A.J.; Kampelmacher, E.H. 1979. Inhibition of toxin production in tempe bongkreik. In: P. Matangkasombu, ed. 1979. Proceedings of the Fifth International Conference on Global Impacts of Applied Microbiology. Bangkok: GIAM V Secretariat. xxxviii + 535 p. See p. 375-88. Held 21-26 Nov. 1977 in Bangkok, Thailand. [14 ref. Eng]

• **Summary:** Salt (NaCl) was added to tempe bongkreik to effectively inhibit toxin production. Tempe bongkreik is made of partly defatted coconut residue which remains after coconut meat is pressed to obtain oil, or when shredded coconut meat is extracted with water to obtain coconut milk. Outbreaks of food poisoning by tempe bongkreik still occur periodically. During the latest large outbreak, shortly after the new year in 1977, more than 400 persons were involved and more than 70 victims died. Address: Dep. of Food Science, Agricultural Univ., Wageningen, Netherlands.

773. Nakano, Masahiro. 1979. Tezukuri no kenkô shokuhin: Hakkô riyô no subete [Handmade healthy fermented foods]. Tokyo: Nosan Gyoson Bunka Kyokai. 227 p. Illust. 18 cm. [Jap; eng+]

• **Summary:** Describes how to prepare homemade soymilk cheese (p. 139-42), soymilk yogurt (p. 155), tempeh, and miso (16-39, 84-91). Address: Tokyo, Japan.

774. National Academy of Sciences, National Research Council, Board of Science and Technology for International Development, Commission on International Relations, Advisory Committee on Technology Innovation. 1979. Microbial processes: Promising technologies for developing countries. Washington, DC. xii + 198 p. Illust. No index. 23 cm.

• **Summary:** Soy-related chapters include: 1. Raw materials for microbial processes. In 1977 an estimated 13,842,000 metric tons of soybeans were grown in developing countries. Soybeans were number 15 on a list of 22 major food crops grown in developing countries, and accounted for 1.59%

of the total production. The largest crops produced were paddy/rice (21.36% of total), cassava (11.87%), wheat (10.90%), maize/corn (8.41%), and banana/plantain (6.33%).

2. Food and animal feed. Discusses production of meatlike flavors using miso and shoyu, the koji method of producing enzymes, and Indonesian tempeh.

3. Soil microbes in plant health and nutrition.

“Mycorrhizal fungi: Most plants, both wild and cultivated, have roots infected with fungi that increase nutrient and water uptake and may also protect the root from certain diseases. These infected roots are called mycorrhizae. Although the mycorrhizal fungi probably increase uptake of all the essential elements, they are usually most important in improving phosphorus nutrition. Phosphate is generally present in the soil in low concentrations and it is also highly immobile. Strands of fungal hyphae grow out from mycorrhizae and greatly increase the volume of soil from which phosphorus is obtained. So mycorrhizal plants, in general, can grow and thrive in soils much lower in phosphate and other essential nutrients than a comparable nonmycorrhizal plant. Many plants are so dependent on mycorrhizal fungi for nutrient uptake that they may starve if these fungi are absent. There are a number of types of mycorrhizae. The two that occur on the most economically important crops, the endomycorrhizae and the ectomycorrhizae, are discussed.”

4. Nitrogen fixation. “Air is four-fifths nitrogen, yet it is the absence of this particular element that most commonly limits food production. Neither man, animals, nor higher plants can use elemental nitrogen; it must first be ‘fixed,’ that is, combined with other elements such as hydrogen, carbon, or oxygen before it can be assimilated.

“Certain bacteria and algae have the ability to utilize (fix) gaseous nitrogen from the air. Some microorganisms work symbiotically in nodules on the roots of plants, with the plant providing food and energy for the bacteria, which, in turn, fix nitrogen from the air for their host...”

“Bacteria that fix nitrogen in nodules on the roots of leguminous plants are called rhizobia...”

“Leguminous plants have been known for centuries to enrich soils, but the reason was not understood until 1886 when two German scientists, Hellriegel and Wilfarth, found that the bacteria in the nodules on the leguminous root brought about nitrogen fixation. Nitrogen-fixing microorganisms fix an estimated 175 million metric tons of nitrogen annually, or about 70% of our total supply. The remainder is produced in chemical fertilizer factories.” The nitrogen fixed by the soybean-rhizobium association is about 60-80 kg/ha/year. 5. Microbial insect control agents. Green cloverworm on soybeans can be controlled by *Bacillus thuringiensis*. 10. Pure cultures for microbial processes. Discusses world culture collections. Address: Washington, DC; Peoria, Illinois.

775. Nuryanti, Endang. 1979. Pengaruh penggunaan ragi tempe dari beberapa daerah di pulau Jawa pada pembuatan tempe kedele [Effect on soy tempeh processing of using tempeh starter (ragi tempe) from several regions in Java]. Thesis (Skripsi), Fakultas Teknologi Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 37 p. [Ind]\* Address: Yogyakarta, Indonesia.

776. Peppler, Henry J.; Perlman, D. eds. 1979. Microbial technology. 2nd ed. Vol. 1. Microbial processes. Vol. 2. Fermentation technology. New York, NY: Academic Press. Vol. 1, 544 p. Vol. 2, 536 p. Subject index.  
 • **Summary:** Contents of Vol. 1: 1. Beer brewing. 2. Cheese. 3. Distilled beverages. 4. Mold modified foods, by Hwa L. Wang and C.W. Hesseltine (p. 95-129, cited separately; incl. soy sauce, miso, hamanatto, sufu, tempeh). 5. Wine. 6. Vinegar. 7. Ketogenic fermentation processes. 8. Mushroom fermentation. 9. Inocula for blue-veined cheese and blue cheese flavor. 10. Microorganisms for waste treatment. 11. Elementary principles of microbial reaction engineering. 12. Microbial culture selection. 13. Methods for laboratory fermentations. 14. Instrumentation of fermentation systems. 15. Computer applications in fermentation technology. 16. General procedures for isolation of fermentation products. 17. Use of immobilized cell systems to prepare fine chemicals. 18. Economics of fermentation processes. 19. Fermentation processes and products: Problems in patenting. Address: 1. Universal Foods Corp., Milwaukee, Wisconsin; 2. School of Pharmacy, Univ. of Wisconsin, Madison.

777. Riker, Tom; Roberts, Richard. 1979. Directory of natural and health foods: A sourcebook for dietary revolution. New York, NY: Putnam (A Paragon Book). 320 p. Index. 37 cm.

• **Summary:** The first part of this book (p. 7-49) consists of essays on natural foods and nutrition (some reprinted). Part two is a commercial catalog/directory of natural foods available in 1979; it lists and describes (with many photos and labels) products from most of the major U.S. natural foods manufacturers. An Index (p. 293-308) lists participating companies alphabetically.

Soy-related products include: Hain Super-E Soy Oil and Crude [unrefined] Soy Oil (Los Angeles, California, p. 55). Health Valley Soy Moo (Montebello, California, p. 56). Edward & Sons Miso-Cup (Union, New Jersey, p. 57). Family Orchards Fruit & Nut mixes, incl. Back Packer+\*, Hi-Fiber Mix+, Hi-Iron Mix+, Hi-Protein Mix+\*, Hiker's Helper, Mixed Nuts\*, Mountain Munchies\*, Tamari Mixed Nuts\* (+ = contains Soy Nuts; \* = contains Tamari Peanuts) (Berkeley, California, p. 60-61). Niblack Tamari Pumpkin Seeds (Pepitas), Tamari Roasted Sunflower Seeds, Liquid Lecithin, Granular Lecithin (Rochester, New York, p. 72-73). Arrowhead Mills Unrefined Soybean Oil (Hereford, Texas, p. 75). Good Morning New England Granola incl. Cashew-

Raisin Bran-ola (with okara soy fiber), Happy Trails Mix (with roasted soynuts) (Amherst, Massachusetts, p. 79). Elam's Soy Flour (Broadview, Illinois, p. 81).

A long section on Erewhon and its products (p. 84-108) is probably the reproduction of an Erewhon catalog. Erewhon is now located at 3 East Street, Cambridge, MA 02141. Following several pages about the company and its philosophy and standards, each of its major products is discussed in detail, often with nutritional analyses. A label for Soy Flour (organically-grown stone-ground, 24 oz.) is shown; the main recommended use is for making soy milk! A major part of the presentation is titled "Japanese food guide." Products described include: Umeboshi (2 pages): Plums pickled in brine (umeboshi). Umeboshi paste. Plum concentrate (*bainiku ekisu*). Miso (2 pages): Hatcho, waka-Hatcho, soybean, barley, brown rice, rice, and natto miso varieties. Tekka (made with Hatcho miso). Sweets made from mizu ame [rice syrup]. Nigari. Gomashio. Koji starters for various types of miso or shoyu. Goma-muso (60% barley miso and 40% whole sesame seed butter). *Gomamiso furikake* (with barley miso, whole roasted sesame seeds, and shredded nori seaweed). Kombu candy. Kokkoh. Dried tofu (*Kohya-dofu*). Brown rice sake. Mirin. Gluten cakes (*Kuruma-fu*). Seitan (Gluten cooked in shoyu). Rice crackers seasoned with tamari soy sauce. Kuzu (3 pages). Tamari and shoyu (4 pages; Johsen Shoyu is made in Sendai and tamari is made by San-jirushi Co.). Seaweeds (4 pages): Kanten, arame, hijiki, kombu, ne-kombu, nori, seasoned nori, kanten, kanten flakes, wakame, and mekabu.

Good Food brand Soy-Millet Bread (Austin, Texas, p. 120). Arrowhead Mills Bulgur-Soy Grits (p. 121). Erewhon Morning Cereal, and Infant Cereal (each containing soy beans). Chico-San Black Soybeans (imported), and Azuki Beans (Dainagon imported small red), and Lima Soy Sauce (Chico, California, p. 126-27). Arrowhead Mills 7 Grain Cereal, and Deaf Smith Crunch (granola-type cold cereal) (each contains soybeans, p. 130).

The section on pages 188-197 is titled "Soy." It lists Farm Foods Tempeh Kit, Tempeh Starter, Natural Nigari for Curding Tofu, Soyflour, Whole Cleaned Soybeans, Good for Ya Textured Vegetable Protein (Summertown, Tennessee, p. 189). New England Soy Dairy Tofu (with many tofu recipes, Greenfield, Massachusetts, p. 192-96).

The Redwood Sprouter Co. sprouter containing Soy Sprouts (1976, Austin, Texas, p. 202-04). Worthington Foods (a photo shows their line of 38 products). Millstone Burger-Like (with soy flour and TVP), Wheat Fries (with wheat gluten), Tender Cuts (with wheat protein and soy flour) (Penryn, California, p. 222-23). Sunrise Health Products Lecithin Granules (p. 274-75).

778. Smith, Elizabeth Bernice. 1979. Vegetarian meal-planing guide: A lacto-ovo-vegetarian diet. Winnipeg, Manitoba, Canada: Hyperion Press Ltd. 104 p. Illust. (some

color). 21 x 22 cm. [57+ ref]

• **Summary:** At head of title: "Dr. Elizabeth Smith's New World of Eating." Table 5e (p. 25) lists calories for meat alternates group. Soybean sprouts, miso, soybean curd (tofu), soybean milk, and TVP are moderate calorie, while soybeans and soy grits are high calorie.

Page 47 notes: "Generally speaking, legumes are moderately deficient in methionine. Soybeans are an exception, as are their by-products, tempeh (fermented), tofu (the curd formed for soya), and soybean milk. All these are roughly equivalent in quality to cow's milk.

Page 49 notes that when breast feeding is not possible, soyamilk may be formulated as a very satisfactory substitute; vitamin B-12 must supplement it in pill form. "An infant who cannot tolerate cow's milk because of allergy and cannot be breast fed may accept a soybean formula until 3 to 4 months of age. At weaning, according to Fomon, the child should continue to receive by cup either soybean formula or soybean milk fortified with vitamin B-12.

Pages 54-56 describe in detail how to sprout soybeans at home, and how to prepare homemade soymilk and tofu (soybean curd). It is advised that fermented soybean products such as miso and tempeh not be produced at home "as the control of the fermentation process by specific micro-organisms is too difficult to achieve without specialized training and equipment."

Soy-related recipes include: American soybean loaf (with soaked, ground soybeans, p. 76). Soybeans printanier (with cooked soybeans). Soya sesame loaf. Soya cheese balls (with cooked, seasoned soybeans). Soybean casserole (p. 77). Sprouted soybean Creole. Sprouted soybeans au gratin. Bean sprout chop suey (with tofu, p. 77). Skillet soya sprouts and beans (p. 78). Soybean stroganov (p. 78). Address: Winnipeg, Manitoba, Canada.

779. Sundjojo, -. 1979. Mempelajari peranan penggodokan pada pembuatan tempe kedelai [Study of the effects of boiling on soy tempeh processing]. Thesis (Skripsi), Fakultas Teknologi Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia (College of Agricultural Technology, Gadjah Mada University). 49 p. [Ind]\*  
Address: Yogyakarta, Indonesia.

780. Voldeng, Harvey D. 1979. Soybeans in Canada—Past, present and future. Based on an article [sic, manuscript] by Dr. H. Voldeng. In: 1979. *Fats and Oils in Canada: Annual Review*. Ottawa, Ontario, Canada: Grain Marketing Office, Dept. of Industry, Trade and Commerce, Agriculture Canada. [vi] + 95 p. See p. 1-10. Chapt. 1. [7 ref]

• **Summary:** Contents: Introduction. Introduction of soybeans to Canada. Importance of the soybean [worldwide]. Utilization. Food uses of soybeans: Oriental foods—Soy milk, tofu, sufu, miso, soy sauce, tempeh, Hamanatto, natto. Western ingredients—Full fat flour, defatted flour, soy protein

concentrates (70% protein), soy protein isolate (more than 90% protein), textured soybean protein. Soybeans in Ontario. Development of short season varieties. Soybeans in Quebec and the Maritimes. Soybeans in the Prairies (southern Manitoba and Alberta).

A table shows soybean acreage in Ontario's leading counties in 1978. Kent 205,000. Essex 192,000. Lambton 170,000. Elgin 63,000. Middlesex 40,000. Other 7,000. Total (Ontario) 705,000 acres.

Soybeans grown in Ontario can be crushed at three plants: (1) Victory Soya Mills (owned by Procter and Gamble) in Toronto. (2) Canadian Vegetable Oil Processing Limited (owned by Canada Packers) in Hamilton. (3) The recently completed Maple Leaf Monarch plant (affiliated with Unilever Corporation) in Windsor. Total crushing capacity in Ontario is about 35 million bushels per year.

The CSP Foods Plant in Altona, Manitoba, has in some years crushed limited amounts of soybeans imported from the U.S.

"Development of short season varieties: The justification for the effort to develop a large acreage outside of southwestern Ontario as been the magnitude of imports of soybeans, meal and oil. This has been and continues to be sizeable. The situation (in metric tons = tonnes) is outlined below for the 1977/78 crop year: (1) Whole soybeans: Production 527,361. Imports 262,835. exports 64,173. Domestic crushing 728,400.

(2) Soybean oil: Imports 28,100. Exports 1,400. Domestic production 125,600.

(3) Soybean meal: Imports 376,300. Exports 45,600. Domestic production 575,400. Source: *Fats and Oils in Canada, Annual Review*, 1978.

Letter (e-mail) from Dr. H. Voldeng of Agriculture and Agri-Foods Canada. 2010. Feb. 16. The original "article" was not an article but a manuscript that was sent to the publishers of this volume; they reduced the length slightly. It was never published separately, no longer exists, and cannot be cited separately. Address: Agriculture Canada, Ottawa, Ontario.

781. Wang, Hwa L.; Hesseltine, C.W. 1979. Mold-modified foods. In: H.J. Peppler and D. Perlman, eds. 1979. *Microbial Technology*. 2nd ed. Vol. 2. Fermentation Technology. New York: Academic Press. 544 p. See Vol. 1, p. 95-129. [90 ref]

• **Summary:** Volume 1. Microbial processes. Volume 2. Fermentation technology. Contents: 1. Introduction. 2. Soy sauce. 3. Miso. 4. Hamanatto. 5. Sufu [fermented tofu]. 6. Tempeh. 7. Ang-kak (red rice, used as a color agent). 8. Absence of mycotoxins in fermented foods. 9. Conclusions.

For each food is given: General description, method of preparation, composition [chemical / nutritional]. In addition for tempeh is given: Tempeh-like products, biochemistry and physiology of *Rhizopus oligosporus*, changes occurring during fermentation, nutritional value.

“Soy sauce “is known as *chiang-yu* on China, *shoyu* in Japan, *kecap* in Indonesia, *kanjang* in Korea, *toyo* in the Philippines, and *see-iew* in Thailand. In the Western World the product is often referred to as soy sauce.” Japan is the leader worldwide in sauce production; it has the largest fermentation plant and uses the most advanced technology.

Hamanatto: Products similar to Japan’s hamanatto are known as *tou-shih* in China, *tao-si* in the Philippines, and *tao-tjo* [sic] in the East Indies [Indonesia]. A typical process for making hamanatto in Japan, based on information supplied by Dr. T. Kaneko of Nagoya Univ., Japan, is as follows: Wash soybeans, then soak, steam until soft, drain, and cool. Mix with parched wheat flour in the ratio of 2 parts soybeans to 1 part flour. Inoculate the soybeans with a short- or medium-stalked strain of *Aspergillus oryzae*. Incubate for 1-2 days until the beans are covered with a fragrant mycelium and have become soybean koji. Pack the soybeans in a container [wooden keg] with (for example) 2.5 kg soybean koji, 650 gm salt, 3.6 liters water and some freshly sliced gingerroot. Cover the container tightly and age under pressure for 6-12 months. Remove beans from liquid and dry them in the sun to give hamanatto. The composition of the brine may differ among manufacturers.; thus the finished hamanatto differs somewhat in taste and appearance. “Japanese hamanatto is rather soft, having a high moisture content. Chinese *tou-shih* has a much lower moisture content... and therefore is not so soft. *Tao-tjo* tends to have a sweet taste because sugar is often added to the brine.”

Shoyu in Japan: Although there are more than 4,000 shoyu makers in Japan, the largest 4-5 companies produce about 50% of the total. Address: NRRC, Peoria, Illinois.

782. *Manna Bulletin*. 1979-- . Serial/periodical. Meeuwenlaan 70, 1012 JK Amsterdam, Netherlands. Editor: Sjon Welters. Illust. 21 cm. [Dut]

• **Summary:** This is a magazine about natural foods, macrobiotics, and alternative lifestyles. Soyfoods Center owns Vol. 3, No. 2 (June 1979), and Vol. 4, No. 3 (autumn 1982). In the former issue, the advisors are Adelbert Nelissen and Willem de Ridder. The editors are Hans den Hoed, Wieke Nelissen, etc. The latter issue contains one article titled “Macrobiotic Economics and the Practice of Manna” (a photo shows Adelbert Nelissen, Manna director), and another titled “Fermented products, an essential supplement to a vegetarian (*plantaardig*) diet.” Page 12 shows an ad for Witte Wonder Products (2 Riemerstraat 186, 2513 EZ Den Haag), producers of tofu and seitan.

Talk with Sjon Welters. 1994. April 4. He was once the editor of this publication. He thinks it stopped being published in about 1984-1985. Address: Amsterdam, Netherlands.

783. Greenwood, Rebecca. 1980. Try fried tempeh in diet. *Daily Camera* (Boulder, Colorado). Jan. 2.

• **Summary:** Includes a recipe from The Book of Tempeh.

784. Pickarski, Ron. 1980. Re: Favorite tempeh recipes. Letter to William Shurtleff at Soyfoods Center, Feb. 11. 2 p. Handwritten.

• **Summary:** The author sends a copyrighted recipe for Tempeh Loaf and offers to send a recipe for Tempeh Wellington as soon as it is copyrighted. He offers to let Shurtleff use them in his forthcoming book *Tempeh Production*. The author’s *Gourmet Vegetarian Cookbook*, which will use classical French and ethnic foods in a gourmet manner, will go to press later this year. Address: Br. Ron, OFM, CWC, Saint Paschal Franciscan Friary, 3400 Saint Paschal Dr., Oak Brook, Illinois 60521. Phone: 312-654-4210.

785. Mashburn, Rick. 1980. From beans to ‘cheese.’ *Sentinel (The)* (Winston-Salem, North Carolina). Feb. 15. p. 7. [1 ref]

• **Summary:** About Jerry MacKinnon and Bean Mountain Soy Dairy of Boone, North Carolina. The shop makes 1,000 lb/week of tofu plus some tempeh and soymilk. MacKinnon left a tofu business he started in Ann Arbor with four other people 2 years ago when it grew too big. “MacKinnon seems reluctant to start sermonizing on the virtues of tofu. He’d much rather hand out a copy of a chapter from *The Book of Tofu*, by William Shurtleff. Crowell, however, is a more zealous missionary.” Concerning the future of tofu, he notes: “As soon as General Foods realize Americans are gonna eat tofu, we’ll be out of business.” Four photos show Jerry MacKinnon, with beard and hat, cooking 50 lb of ground soybeans in steam-jacketed cooker. A portrait shows Marc Crowell. A label for the company’s tofu product.

786. McBride, Gordon E. 1980. Re: Samples of tempeh starter culture. Letter to William Shurtleff at New-Age Foods Study Center, Feb. 18. 1 p.

• **Summary:** “Under separate cover I am enclosing 10 cultures of *Rhizopus oligosporus* for your evaluation.” The culture is alive and grown in Petri dishes, which can be easily shipped. The spores have a high percentage of viability compared to lyophilized [freeze-dried] spores. “The disadvantage is that the shelf life will be shorter than lyophilized spores, but the people at the local Soy Plant inform me that they get good results from our cultures after storing them for a month in the refrigerator.” The price (not including shipping): \$4.25 each; \$3.80 for 5 or more cultures; \$3.50 for 10 or more. “This seems to be a considerable saving over The Farm’s price, since they charge around \$22.00 for enough starter to inoculate 100 lbs of dry soybeans. Based on the Soy Plant’s data, ten of our cultures (\$35.00) should inoculate 240 lbs. of dry soybeans. Moreover our product should have much better spore viability.”

Note: Gordon was manager of the “Living Department,”

which sold things like live frogs for use as teaching materials in biology classes. His PhD degree was in fresh water algae and he wrote his thesis on the evolution of land plants. Address: PhD, Manager, Living Department, Ann Arbor Biological Center, Inc. (subsidiary of Harcourt Brace Jovanovich, Inc.), 6780 Jackson Rd., Ann Arbor, Michigan 48103. Phone: 313-761-8600.

787. New-age Foods Study Center. 1980. Catalog of publications & materials by William Shurtleff & Akiko Aoyagi [mail order]. P.O. Box 234, Lafayette, CA 94549. 20 panels. Feb. 20.

• **Summary:** This catalog, folded like a road map, is printed with brown and dark orange ink on white paper. The Japanese-style logo is waves and a moon in a circle. In addition to the many books and pamphlets in the previous catalog, the following have been added: Soyfoods: Protein source of the future... now (1 panel). Many quotations from book reviews. Books about world hunger (1 panel). New-Age Foods Study Center (1 panel). About the authors (1 panel, autobiographical). Photos show William Shurtleff & Akiko Aoyagi. Address: Lafayette, California. Phone: 415-283-3161.

788. Cone, Joe. 1980. Tip of the tongue [Tempeh and Surata Soyfoods]. *Oregon Daily Emerald*. Feb. 22. [1 ref]

• **Summary:** Combines an introduction to tempeh with a description of how it is made by Benjamin Hills of Surata Soyfoods, a cooperatively owned food business with 6 full-time members in downtown Eugene, Oregon. Surata now makes 300 10-ounce bags weekly; each wholesales for \$0.80. "Surata tempeh is available in the freezer case of most food and community markets in Eugene, including the University Food-Op. The Homefried Truckstop and Zoo-Zoo's Cafe regularly feature tempeh and tofu dishes."

789. Leviton, Richard. 1980. The soyfood with culture: The Tempeh Works. *Soycraft (Colrain, Massachusetts)* 1(2):36-41. Winter.

• **Summary:** An in-depth article about how tempeh is made at The Tempeh Works, in Greenfield, Massachusetts. The company is owned by Michael Cohen (age 29) and his wife, Shelley. The article begins: "I love making tofu because its a mystical process, but tempeh is more of a challenge, its a more complex process, though routine." He adds: "Our goal now is to produce a mild-tasting, pure white tempeh, not sharp in taste, a tempeh pleasing to a majority of people."

Large photos (by Frank Ward) show: (1) Michael Cohen proudly displaying a tray of fresh tempeh. (2) Barry Baldwin air-drying cooked and split soybeans. (3) A worker pouring a bucket of split, soaked, and dehulled soybeans into a cooker. (4) The same worker drying the cooked soybeans in a centrifugal extractor (centrifuge). (5) A worker tending soybeans as they are emptied from the cooker onto a screen

drying table, with its overhead fan—the old way of drying the soybeans before the centrifuge was developed. (6) Heat sealing a perforated plastic bag of inoculated soybeans using a small heat sealer. (7) Michael Cohen and a woman worker holding a metal tray on which flattened bags of tempeh will be incubated. The trays will then be placed in a rolling rack. (8) Many finished 8 oz bags of tempeh, each bearing "The Tempeh Works" label. A pack of Tempeh Recipes is in the upper right corner.

Note: This is the earliest document seen (Sept. 2011) that refers to tempeh as "The soyfood with culture"—a phrase that soon became widely used in connection with tempeh. Address: Colrain, Massachusetts.

790. Leviton, Richard; Shurtleff, William. 1980. Estimates of production and sales of tofu and other soyfoods in the USA and Canada (News release). Soycrafters Assoc. of North America, 305 Wells St., Greenfield, Massachusetts 01301. 1 p. Feb.

• **Summary:** Early statistics compiled on the U.S. soyfoods industry: 188 tofu companies, employing 680 people, used 13,500,000 lb of soybeans to produce 33,750,000 pounds of tofu that retailed for \$33,750,000.

Other soyfood manufacturers (including 27 tempeh companies and 5 miso companies), employing 225 people, used 4,500,000 lb of soybeans to produce 11,250,000 pounds

of other soyfoods that retailed for \$11,250,000. The figures were compiled largely by Shurtleff, who gave Soycrafters Assoc. permission to use them. On 8 Feb. 1980 Leviton also sent a letter to Linda Madl, Soybean Bluebook, American Soybean Assoc. with a request to publish these statistics; she never did. Address: 1. Sunrise Farm, Heath Rd., Colrain, Massachusetts 01340; 2. New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

791. **Product Name:** Tempeh.

**Manufacturer's Name:** Monterey Bay Soyfoods.

**Manufacturer's Address:** 335 Pennsylvania Ave., Santa Cruz, CA 95062. Phone: 408-423-2256.

**Date of Introduction:** 1980. February.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Jeremiah Ridenour. 1988. Aug. 31. This was the first commercial soy product made by Jeremiah or by Monterey Bay Soyfoods.

792. *Soycraft (Colrain, Massachusetts)*. 1980. Soyfoods deli update. 1(2):10. Winter.

• **Summary:** Discusses Yellow Bean Trading Co. (Detroit, Michigan), The Tofu Shop (Rochester, New York), and The Cow of China (Boulder, Colorado), and The Soy Plant Deli (Ann Arbor, Michigan).

“The Yellow Bean Trading Company of Detroit, Michigan, began business in September 1978, with a truck, garage, and cooler, as Timothy and Carol Huang delivered tofu, tempeh, soysage, and soymilk, made by the Ann Arbor Soy Plant, around the metropolitan area. But in March 1979, they opened a retail delicatessen because they ‘wanted to teach people about soyfoods by letting them taste them, which is better than reading about them in books.’ The deli retails groceries, juices, herbs, teas, dry grains, bulk tofu, bottled soymilk, nori rolls, tofu carob creme pies, and tofu salad. The Yellow Bean has seating for fourteen and they are planning to introduce hot food items, such as tofu spinach pies, tofu lasagna, rice with tempeh, and bean and vegetable dishes.” Though currently losing money, the deli grosses about \$600 each six-day week.

Greg Weaver of The Tofu Shop in Rochester reports that August 1979 was their biggest month all year; they grossed \$2,000/week. Autumn sales averaged about \$1,700/week. During the World Series in October they invented the Not Dog—a hot dog based on baked tofu.

Steve Fiering of the Soy Plant deli in Ann Arbor reports steady sales of about \$1,000 a week. Steve Demos at the Cow of China deli in Boulder reports that retail sales peaked in August at \$450/day. Now they range from \$1,700 to \$2,000/week.

793. *Vegetarian Times*. 1980. Brother Ron Pickarski: Bringing vegetarianism into the gourmet limelight. No. 35. Jan/Feb. p. 28-32, 34-35.

• **Summary:** This cover story on Brother Ron Pickarski, a Franciscan brother and a world-class vegan chef, contains a nice portrait of him. Another photo shows an associate chef carving a portion of Tempeh Wellington—an entree served in his Escoffier Dinner Menu. Soy-related recipes include: Tofu dip (p. 34). Dairyless, eggless quiche (with tofu, p. 34). Mushroom stroganoff (with tofu cream, p. 34). Curried tofu and bananas (p. 35).

794. Island Spring Inc. 1980. Can you make a living making tempeh? (Ad). In: William Shurtleff and Akiko Akiko.

1980. *Tempeh Production: The Book of Tempeh, Volume II*. Lafayette, California: New-Age Foods Study Center. 176 p. See p. 171.

• **Summary:** This quarter-page black-and-white ad is for the Soyrafter's Apprenticeship Program, a professional 21-day intensive “hands-on” course in the commercial production and marketing of tempeh, tofu, soymilk, and related soyfoods. Address: P.O. Box 747, Vashon Island, Washington 98070. Phone: (206) 622-6448.

795. Keough, Carol. 1980. Tempeh—Really good, really cheap food: In place of meat, it fills the bill for protein but cuts the bill for groceries. *Organic Gardening* 27:122-28. March.

• **Summary:** Introduces tempeh, describes how to make it, and gives recipes. Contains many photos.

796. O'Neill, Kevin. 1980. Tempe: A traditional food for tomorrow. *Indonesia Circle (Univ. of London)* No. 21. March. p. 54-59. [13 ref]

• **Summary:** An interesting introduction to tempeh. “Nothing certain is known of its introduction into Indonesia but one might guess that it was during the time of regular trade between South China and Indonesia starting about A.D. 1000. One Sundanese name for soya-bean is *kacang jepun* (Japanese bean) which might be significant.”

“Pure culture fermentation of *Rhizopus* [to make tempe] was developed in the United States early in the 1960s.

“Editor's note: It has recently come to our attention that Dr. J. Hedger and Mr. T. Basuki of the Department of Botany and Microbiology, University College of Wales, Aberystwyth, have been experimenting with *tempe* production and, indeed, plan to start a *tempe* factory in Britain. Mr. Basuki has produced a four-page roneo leaflet, *Tempe—an Indonesian fermented soybean food*, which provides a clear and concise guide for the home *tempe*-maker, and Professor Hedger wrote a script for the BBC2 program “Tomorrow's world”, on *tempe* which was broadcast in the summer of 1979...

“Finally, readers will be interested to know that ready-made *tempe* can sometimes be bought at Lee's Emporium, Dyne Road, off Kilburn High Road, in north-west London. I.C. Glover.” Address: American Indonesian Chamber of

Commerce.

797. Shurtleff, William; Aoyagi, Akiko. 1980. Tasty homemade tempeh. *East West Journal*. March. p. 62-67.

• **Summary:** Gives an introduction to tempeh, a detailed description of how to make tempeh at home (with 8 illustrations), and four favorite tempeh recipes. Address: Lafayette, California.

798. Shurtleff, William; Aoyagi, Akiko. 1980. Tempeh production: The book of tempeh, volume II. A craft and technical manual. Lafayette, California: New-Age Foods Study Center (Renamed Soyfoods Center in Sept. 1980). 176 p. Illust. by Akiko Aoyagi Shurtleff. Index. March. 28 cm. [46 ref]

• **Summary:** Contents: Preface. 1. How to start a tempeh shop. 2. Setting up shop: Community or kitchen shop, fire cooker shop, steam cooker plant, modern factory, tropical village shop, tropical caldron plant. 3. Ingredients. 4. Principles of tempeh production. 5. Making tempeh in North America. 6. Making tempeh in Indonesia. 7. Making specialty tempehs: Introduction, specialty soy tempehs, other legume tempehs, grain (or seed) & soy tempehs, grain tempehs, okara tempeh, soy (or grain) & okara tempehs. 8. Quantity tempeh recipes & the soy deli. 9. Making tempeh starter. Appendices: A. Resources: People and institutions connected with tempeh production. B. Tempeh shops in the West. C. Measures, weights & equivalents. Bibliography. New-Age Foods study center. D. Index.

Note 1. This is the earliest known English-language book devoted entirely to tempeh production.

Note 2. On page 10 we read: "For more information about the natural low-tech soyfoods industry and its publication *Soyfoods*, contact the Soycrafters Association of North America,..." This is the earliest English-language document seen (Aug. 2011) that contains the term "low-tech" in connection with soy, or the term "low-tech soyfoods." Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

799. *Santa Cruz Sentinel (California)*. 1980. Workshop-lecture on tofu and tempeh Monday. April 30. p. 32. [3 ref]

• **Summary:** This news release explains that William Shurtleff and Akiko Aoyagi, authors of 3 best-selling books, will present a program and workshop on Monday, May 5, from 7:30 to 9:30 p.m. at Santa Cruz High School Auditorium. Donation is \$1. "Sponsoring the lecture Monday is Monterey Bay Soy Foods whose proprietors, Jeremiah Ridenour and Kevin Van Slooten, plan to provide the community with fresh bulk tofu and other soy products." Photos show Shurtleff and Aoyagi. Note 1. This is the first program on Shurtleff & Aoyagi's Soyfoods America Tour 1980.

Note 2. This is the earliest document seen that mentions

Jeremiah Ridenour in connection with soyfoods.

800. Java Murni Restaurant. 1980. April. New soyfoods restaurant or deli. 4509 Adams St., Carlsbad, CA 92008.

• **Summary:** Questionnaire filled out by owner of restaurant or deli. 1982. Lists the company's most popular soy-based menu items in descending order of popularity. The highest weekly total sales over the past 6-2 months, the month that this occurred, and why. The average weekly sales during this period. Average hourly wages paid to workers. The business startup cost (amount of money it cost to get the business started). Current profitability status. Plans for the future. Advice the owner would give to someone starting a similar business.

Poster sent by Doug Fiske. 1981. Dec. "Prepare now for Java Murni's vegetarian X-mas dinner. Dec. 26 and Dec. 27. 5-7 or 7:15-10 pm. Contains the menu and an illustration of a shadow puppet. Soy-related dishes include: Appetizers: Gulung Rebung (bamboo shoots wrapped in crispy tofu). Tofu Kembang (tofu flowers). Salad: Gado-gado (with peanut dressing). Entree: Tempeh Treat (tempeh braised in Indonesian soy and safflower oil). Tofu-Saus-Richa (tofu in sweet-and-sour spicy sauce). Chah Tempeh (mixed-tempeh-vegetables). Keringan Tempeh (sweet-piquant tempeh). Satay Tempeh (bbq tempeh). Soyex Malakka (soy cubes in malakka sauce).

Vegetarian menu. 1982. Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Address: Carlsbad, California. Phone: 714-434-4131.

801. Shyeh, Ben Jo; Rodda, E.D.; Nelson, A.I. 1980. Evaluation of new soybean dehuller. *Transactions of the ASAE (American Society of Agricultural Engineers)* 23(2):523-28. March/April. [4 ref]

• **Summary:** An evaluation of a new soybean dehuller (see Nelson, Singh, and Singh, 1976 U.S. Patent 3,981,234) using a roller and stationary concave plate gave dehulling efficiencies up to 88%. Best results were obtained with a preheating treatment at 93°C (200°F) for 15 minutes. The dehulling operation was followed by a rubber roller treatment to loosen adhering hulls. Sizing of the beans into two size ranges was found desirable. Address: Food Science Dep., Univ. of Illinois, Urbana, IL.

802. **Product Name:** Yuba Rolls, and Stuffed Agé Pouches. **Manufacturer's Name:** Soy Plant (The).

**Manufacturer's Address:** 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.

**Date of Introduction:** 1980. April.

**New Product-Documentation:** Talk with Steve Fiering. 1988. June 10. These were developed by Jura McDowell, who was a good cook. The yuba rolls were about 5 inches long and a little less than 1 inch in diameter. He made the yuba (but it was never sold as such) then use it as an outer

# TEMPEH PRODUCTION

THE BOOK OF TEMPEH : VOLUME II

WILLIAM SHURTLEFF & AKIKO AOYAGI

wrapping around a filling with ground tempeh and soyisage. The Agé Pouches were made by deep-frying tofu to make pouches, then opening and stuffing them with a delicious mixture of ground tempeh, and perhaps soyisage, nuts, and sweet white miso. They were sold fresh in the deli, and they sold very well. Note: This is the 2nd earliest commercial soy product seen (Sept. 2011) in which tempeh is used as an ingredient.

803. Jerram, Elsie. 1980. Tempeh makes local debut. *Monterey Peninsula Herald (California)*. May 14. p. 25.  
 • **Summary:** Based on a lecture by Shurtleff and Aoyagi. Address: Editor, Food Page.

804. *Iowa City Press-Citizen*. 1980. Tofu, tempeh workshop set. May 20. p. 7A.  
 • **Summary:** “Want to learn how to cook with tofu and tempeh? William Shurtleff and Akiko Aoyagi, authors of books on preparing the soybean products, will present a program and workshop from 7:30 to 9:30 p.m. Thursday [May 22] at the Unitarian Church Auditorium, 10 S. Gilbert St.” in Iowa City... The program is sponsored by the New Pioneer Cooperative Society. Photos show Shurtleff and Aoyagi. Address: Iowa.

805. *State Journal (Lansing, Michigan)*. 1980. Annual soy day to promote bean long on protein. May 27. Living Today / Lifestyle section.  
 • **Summary:** Len Stuttmann is in charge of the Mid-Michigan “Soy to the World Day” which will be celebrated at a program on June 2 at 7:30 p.m. at the United Ministries in Higher Education, 1118 S. Harrison, East Lansing. His company, INARI Ltd. makes soynut snacks by the ton. “Authors William Shurtleff and Akiko Aoyagi Shurtleff will be the featured speakers, showing slides and explaining how to make soyfoods at home. They will prepare and serve a number of their favorite recipes in addition to discussing soy foods from a nutritional point of view... The program is sponsored locally by, among others, area food cooperatives, Michigan State University’s Food Science and Microbiology Club, Tri-County Office on Aging, several area bookstores, INARI, and Unitarian Universalist Church. Admission is free. The Ingham County Task Force on Hunger and Nutrition will sponsor a vegetarian potluck at United Ministries beginning at 6:15 p.m. Those attending are to bring a vegetarian dish and recipe.

“On Tuesday, June 3, Shurtleff will present a program for the Tri-County Office on Aging senior citizen cooks on alternative ways of working protein into meals via soybeans.”

Note: This is the earliest published document seen (Sept. 1998) that contains the phrase “Soy to the World,” which was coined by Len Stuttmann for this event and used later that year for marketing his company’s gift packs of soynuts.

806. Greenwood, Rebecca. 1980. Variety is possible with tofu, tempeh dishes. *Daily Camera (Boulder, Colorado)*. May 28.

• **Summary:** Based on a lecture by William Shurtleff to 200 people sponsored by White Wave.

807. Owen, Sri. 1980. Tempe: A Javanese health food comes West. *PPC (Petits Propos Culinaires, London)* No. 5. p. 13-18. May. [Eng]

• **Summary:** Describes how the author (a woman) grew up in Padang Panjang (West Sumatra), then central Java (during World War II), her interest in tempeh there and in London. “Tempe is becoming in Britain one of those things of which people have vaguely heard but which remain teasingly mysterious. Even in Holland, where it is quite easy to buy, and in North America, where making tempe at home is a popular hobby for health-food lovers, it cannot yet be called a household word... A few people are now making tempe in Britain, and anyone who is seriously interested should write Dr. John Hedger, Department of Botany and Microbiology, The University College of Wales, Aberystwyth. Ready-made tempe can sometimes be bought at Lee’s Emporium, Dyne Road, off Kilburn High Road in North West London.” Tempeh recipes follow, starting with Tempe Goreng Bacem. Address: 96 High St., Wimbledon Village, London, SW19 5EG England. Publisher is Prospect Books, 45 Lamont Rd., London SW10 0HU.

808. Robertson, Valerie. 1980. Early history of Soyfoods Unlimited, Inc.—a large, pioneering tempeh making company in San Leandro, California.

• **Summary:** In Sept. 2011 Bill Shurtleff asked Valerie Robertson, with help from John and Gary Robertson, to reach back 30 years and (with the help of dated documents from those days) to try to reconstruct the origins of Soyfoods Unlimited—a pioneer tempeh maker in California. As Valerie recalls: “I think I first met you and Akiko at Eco House in Walnut Creek, run by Mark Maloney (later Mark Westwind); we kept our bees there and I met you one day when all three of us happened to be there. Then I saw an ad in the *Contra Costa Times* from Soyfoods Center asking for volunteers. I called and started doing work for you both, first doing office work—filing, folding pamphlets and then testing recipes and eating—tempeh!!! You were both very interested in tempeh because your *Book of Tempeh* had recently been published.

“Gary recalls that we were all at your house and you asked Gary (who was a contractor) and John (who was the Biomedical Director at John Muir Medical Center)—‘What do you want to do? Are you happy with what you are doing now or would you maybe like to do something else?’ You kind of put a bug in their ear. We talked about

doing something with tempeh and we started making and eating tempeh.

"We made our own tempeh at our home in Walnut Creek (see photo) using an incubator from John Muir Hospital. It was not hard to make and turned out like magic. Starting in 1981 we sold the tempeh we made at home under the label Vasilia's Homemade Soy Tempeh. My ancestors are Greek and 'Vasilia' is the Greek word for Valerie. Akiko designed the 'Vasilia's' label and we had it printed up. I taught tempeh and tofu cooking classes at a health food store in nearby Concord called The Harvest House. Actually, Akiko came to one of my cooking classes with me as my 'helper.' So I had an outlet via Harvest House and classes to sell tempeh.

"We started to get really interested in starting a tempeh company in the San Francisco Bay Area. Above all it was the tempeh itself that convinced us to do it. 1. We *loved* tempeh. 2. We made excellent tempeh at home. 3. We wholeheartedly believed it was a excellent protein food for vegetarians and all others. We believed in tempeh. It tasted so good, and the texture was amazing. It sold itself (proven during countless demos in stores). We had the desire and ambition to give it a try with a lot of sweat equity (eventually drilling out the concrete for drains, building incubation rooms, setting up a lab etc.).

"But back to the story: You and Akiko were about to leave on a speaking tour, which you called "1980 Soyfoods America Tour," to promote your books and tempeh, and to attend the University of Illinois soyfoods course and the 3rd annual Soyfoods Association of North American conference at the University of Illinois in Champaign-Urbana, Illinois. You both wanted to serve your favorite tempeh recipe during intermission to everyone at each talk. So Akiko asked me to help her make Tempeh Cacciatore (chunks of tempeh in a seasoned tomato sauce) and to "can" these in quart Mason jars. We had a ball together in your tiny kitchen and ended up canning 110 quart jars.

"On May 5, 1980, you and Akiko left Lafayette, California, on your tour, with your big white Dodge van loaded with books, canned tempeh, etc. You were planning to be gone for 3 months. At about this time we decided that we definitely wanted to start a company making tempeh. I think you (Bill) came up with the name, 'Soyfoods Unlimited.' It ended up being a corporation, incorporated in Nov. 1980 as Soyfoods Unlimited, Inc. The 'Inc.' part was costly; we had to paint a lawyer's house in Lafayette in exchange for the Inc.! It also (as you know) protected us as individuals.

"I decided to fly to Illinois to attend the SANA conference to learn as much as I could about making tempeh and the new soyfoods movement; John and Gary were busy with their work and could not go. On July 9-13, 1980, the Third Annual SANA Conference was held at the University of Illinois. It was a big success in every way. About 270-285 people from all over the world attended. I met Dr. Clifford Hesseltine and talked with him about tempeh and our ideas.

He was very helpful and encouraging.

"On Aug. 3, 1980, you and Akiko returned to Lafayette from Illinois and your tour. You had given 27 programs and traveled 9,000 miles. At each program you served your favorite tofu and your favorite tempeh recipe, than asked for a show of hands as to which one people liked best—without exception tempeh was the favorite by a 2 to 1 ratio. We were ready to go.

"In about Sept. 1980 we signed the lease on a large building suitable for food processing in San Leandro, California. The first 3 months were rent-free. We knew we would need plenty of money to start the kind of company we envisioned. Gary invested \$100,000 cash and John put in more than \$35,000 by taking a second mortgage on our home on San Miguel Drive in Walnut Creek. The money started to flow out and our sweat equity began to flow in—John with his engineering mind and logic; Gary with his construction skills, and our knowledge of recipe development. We tested many recipes at home first. Murphy's Law was in full force, as every step in the process took much longer than expected.

"On Oct. 3, Akiko finished designing for us a new Soyfoods Unlimited letterhead, with promotional materials and even aprons for demos. The logo was like a soybean leaf with three leaves, one for each of the three of us (see photo).

"On Oct. 16, 1980, we finished a new 8-panel brochure titled "What is Tempeh?"—a joint venture of the Robertsons and Shurtleffs. We both had the rights to use it as we wished.

"Finally, on Feb. 15, 1981, the three of us begin making tempeh in our state-of-the-art \$100,000 plant in San Leandro, California. The efficient, 1,850-square-foot operation, had a capacity of 10,000 pounds a week.

A photo shows Valerie seated near some tempeh on a table at her home in Walnut Creek, California. Valerie and John were married. John was Gary's older brother. All three lived in the same large home in Walnut Creek.

"Later that year, on July 8-12, 1981, the 4th Annual Soycrafters Conference was held at Colorado State University, Fort Collins, Colorado. I drove out with you and Akiko and Kazuko Aoyagi and Maria-Elena Nava of

### THE MIRACLE OF FERMENTATION

The key to tempeh's wonderful flavor, meaty texture, and excellent nutritional value lies in the process of fermentation with the *Rhizopus* mold culture. Just as the miracle of fermentation brings us cheeses, yogurt, wines, beer, miso, natural soy sauce, and a host of other foods, it also brings us tempeh. The molds used to make tempeh are closely related to mushrooms, also prized for their wonderful aroma and flavor. And molds are used to make various cheeses, miso, and soy sauce. But why is a beneficial mold deliberately used in food? What does it do?

First the mycelium binds the loose soybeans into a firm, textured food, which can be sliced and used with great versatility, easily replacing meats, which are high in cholesterol, fats, and cost. The mycelium also gives us the flavor and aroma of sauteed mushrooms. But perhaps even more important, the mold creates enzymes which serve to break down or predigest the protein, fats, and carbohydrates in the tempeh, making them easier for the body to assimilate. The gas-causing oligosaccharides found in regular whole beans are virtually eliminated and the levels of various important vitamins (especially B-12, B-6, B-3, and folic acid) are increased by a factor of four or more. The mold also produces a mild natural antibiotic, which is thought to increase our resistance to some intestinal diseases. Finally the fermentation saves us fuel energy by reducing the cooking time from 4 to 6 hours required for whole soybeans to only 45 to 60 minutes while making the tempeh followed by about 3 minutes of deep- or shallow-frying, or 10 to 15 minutes of simmering in soups or steaming.

### BUYING AND STORING TEMPEH

Tempeh is now sold in the West at a growing number of natural and health food stores. Look for it in the frozen or refrigerated foods section, or in the ready-to-eat forms at delicatessens. When buying fresh tempeh, see that the beans are bound together into a firm, compact cake by a dense, uniform white mycelium. It should have a pleasant, clean, mushroomy aroma. Some gray or black spots are normal sporulation and do not indicate spoilage. There is no reason to trim off the dark areas. Refrigerated, tempeh will keep for an average of ten days; frozen, it will keep for months. We recommend that tempeh be kept frozen, until you are ready to use it. Then remove it from the freezer and allow to thaw in the package for 45 minutes at room temperature. The tempeh can then be used in your favorite recipes.

for  
Health**

## WHAT IS TEMPEH?

Tempeh (pronounced TEM-pay) is a delicious fermented (cultured) food consisting of tender cooked soybeans (or occasionally other legumes, cereal grains, seeds, or a mixture of these) bound together by a dense cottony mycelium of fragrant white *Rhizopus* mold into compact ¾-inch-thick cakes or patties. Tempeh is usually sliced and fried, baked, or steamed. When fried, the surface is crisp and golden brown, and the flavor is most often compared to that of southern fried chicken, veal cutlets, or fish sticks. Tempeh is a natural meatless backbone of the diet in Indonesia, where it is made daily in 41,000 shops. It is now increasingly available at reasonable prices throughout North America.

With body you can sink your teeth into and a savory flavor, tempeh is unique in its ability to serve as a satisfying main course in place of meat, poultry, seafoods, or cheese, and to become a key source of protein in vegetarian diets. Convenient in that it requires only a few minutes of cooking, tempeh is also as versatile as it is nutritious; it can be used in literally hundreds of delectable Western-style or Indonesian recipes. You can serve it in place of meat in Tempeh Burgers, Tempeh Lettuce and Tomato sandwiches, Cutlets, Sloppy Joe Tempeh, Crisp Tempeh, Tempeh Cacciatore, Mock Chicken or Tuna Salads, or applesauce-topped Tempeh Chops. It adds a slightly nutty flavor to pizza, casseroles, spaghetti, tacos, or stir-fried rice. Pureed, it works like a soft cheese to make creamy dressings, spreads, and guacamole. Probably the most popular way to serve tempeh (and also the simplest), is as Coriander & Garlic Crisp Tempeh or Seasoned Crisp Tempeh.

Mexico, stopping overnight at your cabin at Lake Tahoe and sleeping out one night in a “snake farm” in the desert.

“Our company did well, launched many delicious tempeh products, and introduced many innovations.

Note: They were the first company to do dry dehulling and hull removal from their soybeans prior to cooking; for this they used a simple and ingenious mill and vacuum cleaner system designed by the Department of Food Science at the University of Illinois but modified and enlarged by the Robertsons. They started selling frozen soy tempeh, but after 2-3 months were selling 90% of their tempeh refrigerated, after steaming. In Sept. 1981 they introduced America’s first nonfried tempeh burger, which they vacuum packed. In Jan. 1982 they started air-freighting 1,800 pounds a month of their tempeh burgers to the East Coast. In June 1983 Lonnie “Lon” Stromnes of Namaste Marketing began to work as their full-time marketing director.

“White Wave was a major tempeh maker at that time. In 1986 we met Steve Demos (founder and CEO of White Wave) at Spenger’s restaurant in Berkeley and asked him if he would be interested in buying our company. White Wave acquired Soyfoods Unlimited, Inc. on Dec. 1, 1986 and each of the three of us Robertsons ended up owning 1% of White Wave.

“By acquiring Soyfoods Unlimited, White Wave became the largest manufacturer of tempeh in the United States. And

he got our greatly superior process for making tempeh, the ability to make his own tempeh starter, our excellent recipes, our list of our distributors, a much greater presence for White Wave products on the West Coast, and much more. He also took on our debt! He thanked us for offering our business and our secrets to him instead of folding up. He is Greek, just like me.

“On May 7, 2002, Dean Foods acquired the remaining 64% of White Wave that it did not already own. At that point we sold our shares of White Wave stock to Dean Foods. Our stocks split and each share became 9,860 shares. We were each bought out at \$145.00 a share. Not bad!

“The home I am living in today on the big island of Hawaii was paid for by the sale of the White Wave stock. I only wish I made a deal for endless tempeh!! I love tempeh!”

“I still eat tempeh all the time and still love it. I buy White Wave tempeh out here in Hawaii. I think Turtle Island also has a great white tempeh. I’m so glad it is available here in Hawaii at all the health food stores.”

809. Shurtleff, William; Aoyagi, Akiko. 1980. Soyfoods America Tour: May 5 to June 10; July 25 to Aug. 3, 1980 (Log and trip report—unpublished, including Itinerary with map). Lafayette, California: New-Age Foods Study Center. Unpublished log.

• **Summary:** This trip had five purposes: (1) To introduce tempeh to America; (2) To promote the authors’ newly published *Book of Tempeh*. Harper & Row, the publisher, paid most of the trip expenses; (3) For William Shurtleff to attend the University of Illinois Short Course in Soybean Processing; (4) To visit and study soyfoods companies in America; (5) To introduce people to the many advantages of a meatless / vegetarian diet.

A photo shows: Shortly before the trip, Akiko (left) and Valerie Robertson (right) (working in the Shurtleff’s small home kitchen) “canned” many quart Mason jars of Tempeh Cacciatore to serve at the intermission of each lecture / presentation.

Includes the name and address of 37 people and organizations visited. Many of these were pioneers in the soyfoods and natural foods movement: April 25—Optimum Foods (Napa, California). April 27—David Burns (Sebastopol, CA). May 5—Jeremiah Ridenour of Monterey Bay Soyfoods (Santa Cruz, CA). May 6—Thelma Dalman, Foodservice Director for the Santa Cruz City Schools, *Monterey Peninsula Herald*, Ted & Marie Fehring (Carmel), Paula Welch Terui of Jack and the Beanstalk (Carmel Valley, CA). May 8—Al Jacobson of Garden of Eatin', Mr. Kaye Dunham of Tumaro's, Hugh Roberts of Meals for Millions. May 9—Eddie Okita of Okita Enterprises, and Noritoshi Kanai of Mutual Trading Co. (Los Angeles, CA). May 10—Kay Glass (La Cañada, CA). May 11—Frazier Farms natural foods supermarket (Escondido, CA), Bill Walton vegetarian and basketball star (San Diego, CA; we stay with Craig Wright and Andrew Solony of TriLife; they hope to market Bill Walton's tofu under the TriLife brand). May 12—Clare Quinn of The Farm (Tucson, Arizona; her check bounced so we never got paid). May 13—Kathryn Bennett of Southwest Soyfoods (Santa Fe, New Mexico), Tracy McCallum, Taos. May 14—Leslie Wertz (Alamosa, Colorado). May 16—Stay with Christie and John Baker (Boulder, Colorado). May 17—Steve Demos of White Wave Soyfoods and Good Belly Deli. May 18—Sanford and Rebecca Greenwood of East West Center (Boulder, Colorado). May 19—Judson Harper and the low cost extrusion cooker program at Colorado State Univ., Carol Hargadine of Nupro Foods & Soywaze Tofu (Fort Collins, CO). May 21—Gale Randall of the Indonesian Tempeh Co. (Palmyra, Nebraska). May 22—David Tucker of New Pioneer Co-op Society (Iowa City). May 23—George Strayer of Edible Soy Products (Makers of Pro-Nuts, May 23) and Agricultural Exports (Hudson, and Cedar Falls, Iowa). May 24—Cedar Falls (Iowa) and Minneapolis media. May 25—Pat Aylward and Jamie Stunkard of Joy of Soy Tofu (Minneapolis, Minnesota). May 27—Richard Cihoski (Duluth, MN). May 28—Chris Burant of Bountiful Bean Plant and Jehan Ziegler of Higher Ground Cultured Foods (Madison, Wisconsin). May 29—Danji Fukushima of Kikkoman Foods (Walworth, Wisconsin), Diane Loomans of The Magic Bean Co-op (Milwaukee, Wisconsin). May 30—Susan Dart (Lake Forest, Wisconsin), Research staff of Kraft Foods (Glenview, Illinois), Brian Schaefer of It's Natural (Evanston, Illinois). May 31—Paul Obis of *Vegetarian Times* magazine (with Brother Ron Pickarski) (Oak Park, Illinois). June 2—Lou Richard of Fearn Soya Foods, Leonard and Irene Stutman of INARI, Ltd. June 3—John Gingrich of The Soy Plant. June 4—Tim and Carol Ann Huang of Yellow Bean Trading Co. (Detroit, Michigan). June 5—Glen Blix and Charles D. Howes of Loma Linda Foods (Mt. Vernon, Ohio; furthest point east on tour). June 6—Warren Hartman of Worthington Foods (Worthington, Ohio). June 7—Mick Vissman and Bill Lutz of Hip Pocket Tofu Deli and Rain Star (Columbus, Ohio), Ed Willwerth of Soya Food Products (Cincinnati, Ohio).

June 8—Jay McKinney of Simply Soyfoods (Bloomington, Indiana). June 9—Lynn Adolphson and Bob Thompson of Archer Daniels Midland Co., and Grant Smith of A.E. Staley Mfg. Co. (Decatur, Illinois). June 10–11—Les Karplus of Corn Country Foods and Strawberry Fields. June 11—William Thompson and John Santa of INTSOY (Champaign, Illinois).

During the INTSOY Short Course: July 6—We did a program hosted by Patricia Mutch at Andrews University (Berrien Springs, Michigan). July 9–13—Third Annual Soycrafters Association of North America conference was held at the University of Illinois, produced by Richard Leviton. There were 270–285 attendees, and it made good money.

People at the University of Illinois we met during the course: Dr. William Thompson, Frances Van Duyne, Harold Kauffman, John Erdman, L.S. Wei, A.I. Nelson, M.P. Steinberg, Munir Cheryan, Ted Hymowitz, Woody Yeh.

Return trip after course: July 28—Bob Davis of Light Foods (St. Louis, Missouri). July 30—James Lowrie of Iowa State University (Ames, Iowa). Aug. 2—Lake Tahoe. Aug. 4—Home in Lafayette, CA.

At most of the public classes/lectures on this trip, Shurtleff and Aoyagi served their favorite tempeh and tofu dishes. They wanted to find out how Americans liked tempeh, so they asked for a show of hands as to which the attendees liked best. The tempeh dish was usually Tempeh Cacciatore, and the results were, on average, that the tempeh was preferred by a ratio of 2 to 1 over the tofu.

On this trip, Shurtleff and Aoyagi did 27 public programs, had 28 media interviews and appearances, traveled 9,000 miles, earned \$13,000 gross income and \$8,500 net income. Address: P.O. Box 234, Lafayette, California 94549.

810. Battin, Sandy. 1980. Tofu is cheap, tasty, high in protein, too. *Herald (Duluth, Minnesota)*. June 4. p. 1D, 5D. Living & Food section. [2 ref]

• **Summary:** An introduction to tofu and soybeans, with several recipes, including Creamy tofu dressing with curry. William Shurtleff and Akiko Aoyagi recently conducted a program on tofu in Duluth, hosted and sponsored by Richard Cihosky, a Duluth city planner. A large photo shows Shurtleff and Aoyagi with dishes of Tempeh sloppy Joes and a Creamy tofu dip for vegetables. They are holding their books on tofu and tempeh.

811. Chiavetta, Lee. 1980. Protein-rich soybean may be wise solution to world food crisis. *Iowa City Press-Citizen*. June 9. p. 8. [3 ref]

• **Summary:** William Shurtleff (who calls himself “the Johnny Appleseed of tofu”) and his wife, Japanese painter and cook, Akiko Aoyagi, discussed soyfoods and global food problems before a soyfood workshop sponsored by the New Pioneer Food Cooperative. Shurtleff said the audience

response is generally quite good, even in this beef-and-pork country. Address: Staff Writer, Iowa.

812. Tufford, Carolyn. 1980. Versatile vegetable assumes many uses and may be the answer to world hunger. *Herald-Tribune (Bloomington, Indiana)*. June 11.

• **Summary:** A summary of a speech which William Shurtleff and Akiko Aoyagi presented about soybeans and soyfoods, especially tempeh and tofu, to about 100 persons of all ages at the Whittenburger Auditorium in Bloomington. Simply Soyfoods, a Bloomington-based company, provided recipes for tofu burgers and tofu onion dip. Address: Asst. Lifestyle Editor.

813. *Consumer Reports*. 1980. Vegetarianism: Can you get by without meat? 45(6):357-61. June.

• **Summary:** Large sidebars include “Soybeans—the ‘meat’ that grows on vines,” two sample menus for one day—one vegan and one with milk and eggs, and “The vitamin B-12 brouhaha” (tempeh is listed as a source). See also “Meatless meats” in this same issue.

“According to a recent survey, some seven million people in the U.S. now consider themselves vegetarians—nearly three times the number estimated a generation ago.” Health is the reason most often cited by U.S. vegetarians. They believe that foregoing meat is better for them. The word “vegetarian” was coined in 1842 by English vegetarians to describe people, such as themselves, who ate no meat, fish, or fowl. Address: Mt. Vernon, New York.

814. *Consumer Reports*. 1980. Soybeans—the “meat” that grows on vines. 45(6):360. June.

• **Summary:** This sidebar to the article “Vegetarianism: Can you get by without meat?” gives a brief description of the soybean and its food uses. “Roasted soybeans [soynuts] can be a delicious snack food.” A small amount of soy flour added to bread or pasta dough appreciably increases those foods’ protein content. Sprouted soybeans can be eaten cooked or as a salad vegetable and are a good source of vitamin C.

“Soybeans can be made into a milk that, when fortified, can supply nutrients usually obtained from cow’s milk. That’s important for total vegetarians or those allergic to milk protein. Soy milk can be made into a cheese: soybean curd, or tofu, familiar to many as the little white cubes floating in the soup at a Chinese restaurant.” Also mentions soy sauce, miso, tempeh, and meat extenders or meat analogs.

815. **Product Name:** Living Tempeh Starter [Kit Size 15 x 60 mm Petri dish, or Professional Size 15 x 100 mm Petri dish], Koji Starter for Miso (40 gm) [Light Rice, Red Rice, Barley, or Soybean Koji], Shoyu Koji Starter (60 gm), Natural Nigari (Tofu Coagulant).

**Manufacturer’s Name:** GEM Cultures.

**Manufacturer’s Address:** 30301 Sherwood Rd., Fort Bragg, CA 95437. Phone: 707-964-2922.

**Date of Introduction:** 1980. June.

**New Product–Documentation:** Article and ad in *Soyfoods*. 1980. Summer. p. 4-5. “New Source of Tempeh Starter.” “Gordon McBride, PhD, former manager of the Living Culture Department at Ann Arbor Biological Center [Inc. in Michigan], and his wife, Betty Stechmeyer, B.S., announced the formation of GEM Cultures, which will provide high-quality tempeh starter cultures at reasonable prices.”

Letter and catalog from GEM Cultures to Tempeh producers. 1980. July. Offers a free sample of professional size Living Tempeh Starter (a pure culture of *Rhizopus oligosporus*).

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 55. This starter, sold live, was grown on agar in petri dishes.

Letter from Betty L. Stechmeyer of GEM Cultures. 1991. Oct. 18. These four basic products were introduced in June 1980. For a while, they tried to import commercial shoyu and miso cultures from Nihon Jozo Kogyo but it never worked, so they ended up ordering via Mitoku.

816. Hesseltine, C.W.; Wang, H.L. 1980. The importance of traditional fermented foods. *BioScience* 30(6):402-04. June. [12 ref]

• **Summary:** Table 1 gives, for each food, the name, area or country, microorganism used, substrate, nature and uses. The following soy-related foods are included: Soy sauce (chiang-yu, shoyu, toyo, kanjang, kecap, see-ieu), miso (chiang, doenjang, soybean paste, tauco), Hamanatto (toushih, tao-si, tao-tjo [sic, tao-tjo = tauco is Indonesian-style miso]), sufu (fu-ru, fu-ju, tou-fu-ju, bean cake, Chinese cheese), tempeh, bongkreik, ontjom (oncom), natto. Address: NRRRC, Peoria, Illinois.

817. **Product Name:** Tempeh.

**Manufacturer’s Name:** Noble Bean.

**Manufacturer’s Address:** (1) 38 Grange Ave., Chinatown, Toronto, ONT, Canada; (2) From Jan. 1984–293 Augusta Ave. (in Kensington Market, near Oxford St.), Toronto, ON M5T 2M2.

**Date of Introduction:** 1980. June.

**Ingredients:** Soybeans, water, culture.

**Wt/Vol., Packaging, Price:** 12 oz perforated plastic bag (not vacuum packed). In spring 1982 an 8.5 oz size was introduced.

**How Stored:** Frozen.

**New Product–Documentation:** Label. 1985, undated. 5.25 inches square. Green on yellow. “An excellent source of protein. Culturing fine tempeh since 1979.” 227 gm. Recipes for Tempeh Shish Kebab, Indonesian Fried Tempeh, Nutritional Yeast and Tempeh Casserole; Letter from Allan Brown. 1985. Aug. 7. “I have been making tempeh since

1979. [He started making it commercially on The Farm in Lanark, Ontario.] We bought Robert Walker's equipment in 1980. We just moved back to the country, near Plenty Canada. We're at R.R. #1, McDonalds Corners, ONT, K0G 1M0, Canada."

Talk with John Gabriel, former tempeh maker and member of The Farm, now living in Nevada City, California. 1992. April 28. Allan Brown is now making 200 lb/day of tempeh, which makes him the biggest tempeh maker in Canada.

Talk with Allan and Susan Brown. 1998. May 11, followed by letters from Allan and Susan. Their company is still named Noble Bean, not Noble Beans. They first began making tempeh commercially in mid-1979 at The Farm in Lanark, Ontario. After about 6 months, by the time Alan and Susan were ready to leave The Farm, Robert Walker had suffered a stroke and his tempeh-making equipment was up for sale. So as the Browns moved to Toronto, they bought Robert's equipment. They located a small shop at 38 Grange Ave., in the heart of Toronto's Chinatown, and founded Noble Bean. There they began making tempeh in about June of 1980. They produced 200/300 lb/week. Their first distributor was Ital Foods, a Rastafarian community that made vegetarian sandwiches and distributed them, along with Noble Bean's tempeh, to natural food stores. Susan writes: "When we began to make tempeh in Toronto, I made the starter. I sterilized bottles of rice in a pressure cooker, and inoculated them with spores from the Tempeh Lab in Summertown, Tennessee (made by Cynthia Bates). We incubated them in our tempeh incubator. In 1983 I started using a larger autoclave to prepare the rice medium. When our second son, Marty Brown, was born (on April 13, 1988), we began buying bulk inoculant from the Tempeh Lab, as we still do."

Allan writes: "In the fall of 1983 we moved back to The Farm near Lanark, Ontario, to have a home birth. We brought a happening scene with us—six freezers and a strong market in Toronto 225 miles away. We were feeling out what things were like and discovered much dissention and competitive vibes among the men (Plenty vs. Farm Foods, etc.). After one week we knew we weren't going to stay. It was coming apart at the seams. But while we were there amongst good friends, Noble Bean was a community business for a short while. Our first son, Casey Brown, was born at the community on Nov. 6, 1983. We left in Jan. 1984, when Casey was 2 months old, and moved back to Toronto, where we rented a house at 293 Augusta Ave. (two doors from Oxford St., postal code M5T 2M2) in Kensington Market. This was the ethnic food center of Toronto. At our house on Augusta, we had our tempeh shop on the first floor, and we lived upstairs. We were then distributing to 40 stores weekly. We also distributed tofu burgers from La Soyarie of Ottawa, Ontario. In late 1984, EcoFarms began distributing our tempeh to farther-flung stores in Ontario."

In June 1985, after about 5 years in Toronto, they bought ten acres of land near McDonalds Corners (not far from The Farm in Lanark, Ontario), and moved Noble Bean onto that land.

Note 1. This is the earliest soyfoods company seen (Sept. 2011) that has the term "Noble Bean" in the company name.

Note 2. This is the earliest known commercial soy- or tempeh product made by Noble Bean in Canada.

818. Shurtleff, William; Aoyagi, Akiko. 1980. Kicking the meat habit with soyfoods. *Vegetarian Times* No. 38. June. p. 30-31.

• **Summary:** Contains recipes for: Tofu steak. Tofu burgers. Teriyaki tofu. Tofu cutlets. Tofu Italian meatballs. Tempeh burger. Sloppy Joe tempeh. Tofu jerky (marinated in teriyaki sauce, then baked). Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

819. Shurtleff, William. 1980. Look out Big Mac—tempeh: Making it at home. *CSC Reports (Elkins Park, Pennsylvania)* 2(2):4, 10. Spring/Summer. Cover story. [1 ref]

• **Summary:** A detailed description of how to make tempeh at home with six illustrations (line drawings) and three recipes. Large photos of William Shurtleff and Akiko Aoyagi are on the cover of this issue. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

820. Soycrafters Assoc. of North America. 1980. Estimated soyfoods industry statistics (News release). Sunrise Farm, Heath Rd., Colrain, MA 01340. 1 p. June.

• **Summary:** Raw soybean usage, number of companies, employees, food production, wholesale value, and retail value are given for tofu, other soyfoods (mainly tempeh and miso), and total. Based in part on statistics gathered by Soyfoods Center. Address: Colrain, Massachusetts.

• **Summary:** Contents: Meat analogs. The role of plants. Microbe production. Fermented foods: Tempeh, miso, soy sauce. Address: New York State Agric. Exp. Station, Geneva, NY 14456.

822. Thompson, William N. 1980. History of work with soy and views on the potential of soyfoods around the world (Interview). Conducted by William Shurtleff of Soyfoods Center, July 3. 3 p. transcript.

• **Summary:** 1. What is your background and how did you become interested in soy and INTSOY? Ans: He grew up on a farm in Illinois when soy was still a very small crop. In college, he was an ag economist, specializing in farm management, with work on the economics of various types of cropping systems. In 1965 he helped to develop an

agricultural university in Sierra Leone, This experience was very valuable in orienting him toward the problems of the developing world. Since then, most of his work has been on these problems. He has had short-term assignments in India, Nepal, and Thailand, where he developed research and education organizations. He is the first director of Intsoy. He had no special interest in soy before joining Intsoy except that soy and maize are major crops in Illinois. He is mainly an administrator, not a technical man. His major role has been to develop an institutional structure to make knowledge on soy available worldwide.

2. What do you feel are the two or three main advancements that INTSOY has made worldwide? 1. Facilitate worldwide network to improve communications among people interested in soy. Regional conferences, newsletter, publication series, training courses at the Univ. of Illinois. 2. Focus on the key problems of soy in tropical countries. Intsoy has more impact in India than in any other country. The India program started in 1965 (funded by US AID) with the cooperation of Indian food scientists and agronomists, specially at Pantnagar and Bareilly. The two university development projects in India were in Madhya Pradesh and Uttar Pradesh. Then the Coordinated Research Project on Soybeans was developed—both utilization and production. The results were exciting. Intsoy grew out of that program as the potential became clear. Now India has 1 million acres in soybeans. Develop soybean varieties that will grow in areas where it was formerly not thought possible. Develop new Maturity Groups 0 and 00 to the north and 9 and 10 to the south as soybeans are grown ever closer to the equator. Work on soybean diseases (mosaic virus), pest control. Intsoy has done more work in soybean production than in utilization. It is hard to get financing for utilization.

New soybean countries working with Intsoy: Ecuador now has 30,000 acres of soybeans, Egypt 50,000 acres, Ivory Coast, Pakistan (good yields), Colombia, Guatemala (work with Plenty from Tennessee), Indonesia, Thailand, Zambia, Kenya, Ghana, and Nigeria. 3. The method for boiling and processing whole soybeans using sodium bicarbonate has been a breakthrough. Soy + cereals make low-cost infant foods.

3. Do you feel that in 20 to 30 years most countries in the world will be growing and processing soybeans. Yes, he thinks that, in the next 15-30 years, most developing countries will have soybeans growing somewhere in their country. This will take adaptive research domestically. Some areas and climate in most countries are suited to soybeans, which can now be grown under a wide range of conditions. The soybean is a high producer of both energy (calories) and protein per hectare.

4. What are your views on low-technology soyfoods in Third World Countries? Which particular foods do you feel will become widely used in South Asia, South America, and Africa. Intsoy's primary orientation is low-tech—using

less capital and more labor. The Sri Lanka program is medium- to low-tech. Intsoy is proud of that program and its training activities. There is great potential to expand soybean utilization in this way.

5. How do you feel about the use of soy in livestock feeds in poor countries? Is there a danger that the upper classes will use most of the soy protein to make their meat leaving little for direct food use? This is not much of a problem since prices for soy will always be low for use as livestock feed. We should use soy to help as many people as possible. The more affluent, with economic and political power, will consume more animal proteins and soy. Soy will easily find its way into feed. We need strategies to get soy to the poor—those who need it most. It can also be used in feeds for animals of the poor. Intsoy's bias is to help soy find its way into the diets of low-income people. We must be very careful with the crop that is displaced, so that a net gain results. In India, the soybean fit in as a monsoon crop where no other crop was grown. Beware of the Brazil problem. Intsoy did some variety testing in the Amazon in Brazil. They now have varieties that yield very well in northern Brazil. Brazil has lifted some technologies from the U.S., such as highly mechanized farms, but this will not work in northeastern Brazil. There has been aggressive government support and subsidies for soy in Brazil. Dr. Thompson has lots of respect for Brazil and the government's support for agricultural development. Now they need to work on nutrition and food uses. The main problem for Intsoy is to figure out how soy can meet the needs of a particular country or region; not to get soy growing everywhere.

6. Are you aware of a deemphasizing of the role of protein in the diet in Third World countries? How might this affect soy? If we grow enough grains, will the protein take care of itself? Soy fits in nicely with the Green Revolution, although this revolution has led to a decrease in legume production in India. This leads to more funding for IRRRI and less for soy. But there is still a problem of protein in some countries that have done a lot to meet calorie needs. It is an oversimplification to say that a diet with adequate calories will contain enough protein. Indians now realize this. They now want more dairy milk—the white revolution.

7. Recent findings at MIT and INCAP have shown that for humans soy protein is approximately equal in quality to that of milk and meats. How long do you think it will be before this finding has an impact in America and the Third World? Dairy milk is no longer considered to contain higher quality protein than soymilk. Dr. Thompson thinks this research data is solid. Perhaps more important, we can produce 4 times as much protein from a unit area of land in the form of soymilk than of dairy milk. So the key problems are acceptability and cost.

In the U.S., as with margarine replacing butter, there is a gradual move toward vegetable proteins. That move is faster in the Third World where people have less choice with

their food dollars. Dr. Thompson thinks that when people are introduced to soyfoods in the Third World, they will generally like them, and buy or make them. They are not as resistant to change as we might think—as shown clearly in the Sri Lanka program. Moreover, ingredients like ground whole soybeans or soy flour can be added to baked goods or tortillas where people are not aware that they are eating a more nutritional food.

8. How might the Soycrafters Association and our New-Age Foods Study Center cooperate with INTSOY? Specific projects? He thinks our two organizations are more oriented toward the USA, whereas Intsoy is oriented toward the Third World. Yet he sees good opportunities for cooperation—as in Intsoy learning more about traditional Asian soyfoods such as tofu, tempeh, miso, etc. He hopes our two organizations can have more of an impact on the Third World. Les Ferrier has done lots of overseas utilization work. Maybe we could be on a technical advisory committee (TAC).

9. Would you favor legislation requiring 5-10% fortification of items such as baked goods and chapaties in poor countries growing soybeans if this did not decrease the acceptability of the foods. How might it affect cost? Is there any such legislation?

10. Any other comments? Intsoy's annual budget is less than \$2 million, including \$850,000 from AID for Urbana and Puerto Rico. IRRI's budget is about \$15 million. Part of the reason for the difference is due to the reevaluation of the importance of protein in human diets. Address: Director, INTSOY, Univ. of Illinois at Urbana-Champaign, Urbana, Illinois.

823. United Press International (UPI). 1980. Soy foods heralded as key to survival. *Toronto Star (Ontario, Canada)*. July 28. p. C4.

• **Summary:** "Urbana, Illinois (UPI)—If the 1980s are the years of tofu, the '90s belong to tempeh and miso." These foods are believed to hold the key to world hunger problems.

The article is a summary of the Soyfoods Association of North America's annual meeting, at the University of Illinois. Speakers included William Shurtleff, Dr. Clifford Hesseltine, Richard Leviton.

824. Dosti, Rose. 1980. Tempeh: An old food moves out of ethnic kitchens. Tofu's Indonesian cousin is making L.A. debut. Soy food takes many forms. *Los Angeles Times*. July 31. Part VII. p. 1. Part VIII. p. 16, 18 (p. J18, K18).

• **Summary:** This two-part article is a good introduction to tempeh (pronounced tempay), "which follows on the heels of the rising popularity enjoyed by its non-fermented cousin, tofu (soy bean curd),..." Discusses the work of William Shurtleff and Akiko Aoyagi in introducing tempeh and other soyfoods to America. Janto M. Khoe is the Filipino owner of Bali Foods (4219-B Alderson Ave., Baldwin Park, California). It took him 4 years to develop a method

which produces the firm tempeh that Indonesians prize. Contains six recipes: Tempeh with batter. Tempeh egg rolls. Scrambled tempeh. Tempeh croquettes. Crisp tempeh snack. Tempeh vegetable soup. Photos show: Fresh, thick cakes of tempeh, sliced and cubed. A table full of tofu dishes. Mr. Khoe and his wife, Erna Lauw.

Part II, titled "Soy food takes many forms," discusses the nutritional value of tempeh, how to store, cut, and cook fresh tempeh, how to reconstitute dry tempeh, and where to buy tempeh in the greater Los Angeles area. Address: Times staff writer.

825. American Dietetic Association. 1980. Position paper on the vegetarian approach to eating. *J. of the American Dietetic Association* 77(1):61-70. July. [54 ref]

• **Summary:** This position paper is surprisingly supportive of a lacto-ovo vegetarian diet, although the ADA continues to feel that combining proteins is important. It states that "a growing body of scientific evidence supports a positive relationship between the consumption of a plant-based diet and the prevention of certain diseases," including coronary heart disease, osteoporosis, and gastrointestinal and reproductive cancers.

Contents: Introduction. Definition of terms: Vegetarian, vegetarianism, traditional vegetarians, total vegetarians or vegans, lacto-vegetarians, semi-vegetarians or partial vegetarians, new vegetarians (since 1960, incl. yogic vegetarians, Hare Krishnas or Krishnas, Sufis, Sikhs, Macrobiotics), fruitarians, raw food eaters, individualistic vegetarians, alternative life style diet. Other terms which relate to vegetarianism: Natural foods, organic foods, unrefined foods, unprocessed foods, health foods, meat analogs (look and taste like meat), nutritional or food yeast, milk substitute (alternate) (usually based on soy. "Calcium, zinc, vitamins A, B-12, D, and K, and thiamin are all substantially lower (or missing) in these home-made products than in breast milk or other proprietary formulas"), fermented foods (incl. soy sauce, miso, tempeh—may contain some vitamin B-12), seaweeds and algae.

Vegetarianism past and present: Historical perspectives (omnivorous diets), vegetarianism in the U.S. today (it is more popular than at any time in the nation's history). Nutrition issues: Proteins, energy, carbohydrates and fats, vitamins and minerals (vitamins B-12 and D, calcium and riboflavin, iron and phytic acid, zinc and phytates). Groups with special physiologic risks: Pregnant and lactating women, infants and children (lacto-ovo- and lacto-vegetarian diets, vegan diets—the use of properly fortified soy milk is strongly recommended, vitamins and minerals), adults with special health problems (lactose intolerance, diabetes mellitus). Implications of vegetarian diets for health promotion and prevention and treatment of disease: Coronary heart disease, cancer, obesity, dental caries, osteoporosis. Menu planning guidelines for vegetarians. Meat analogs.

Summary. The President's page: Esther A. Winterfeldt, PhD, RD, on "Position papers."

"Macrobiotics—persons who consume vegan or vegetarian diets which involve extensive non-animal food avoidances, use of unprocessed, unrefined, 'natural', and 'organic' foods; and also, in some forms, fluid restriction. Tamari, miso, and various seaweeds are used extensively and are believed to be endowed with special properties.

"Vegetarianism—past and present: The American Dietetic Association recognizes that most of mankind for much of human history has subsisted on near-vegetarian diets. The vast majority of the population of the world today continues to eat vegetarian or semi-vegetarian diets for economic, philosophical, religious, cultural, or other reasons. The matter of motivation is crucial, because it affects the diet adopted, adherence to it, and other characteristics of life style."

"Nutrition issues: The American Dietetic Association affirms that a well planned diet, consisting of a variety of largely unrefined plant foods supplemented with some milk and eggs (lacto-ovo vegetarian diet) meets all known nutrient needs. Furthermore, a total plant dietary can be made adequate by careful planning, giving proper attention to specific nutrients which may be in a less available form or in lower concentration or absent in plant foods."

Note: This is the earliest English-language document seen (June 2002) that uses the term "plant-based diet" to refer to one that contains no animal products.

826. Everybody's Vegetarian Restaurant. 1980. July. New soyfoods restaurant or deli. 120 21st Ave. North, Nashville, Tennessee.

• **Summary:** Menu sent by Richard Leviton, obtained while visiting the restaurant. 1982. April.

Leviton, Richard. 1982. "Everybody's Restaurant. The Farm brings soyfoods to Nashville." *Soyfoods*. Summer. p. 38-39.

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started July 1980 by members of The Farm, in Summertown, Tennessee. Address: Nashville, Tennessee. Phone: 329-2000.

827. Island Spring Inc. 1980. Can you make a living making tofu? (Ad). *Soyfoods* 1(3):8. Summer.

• **Summary:** This quarter-page black-and-white ad is for the Soyrafter's Apprenticeship Program, a professional 21-day intensive "hands-on" course in the commercial production and marketing of tempeh, tofu, soymilk, and related soyfoods. Address: P.O. Box 747, Vashon Island, Washington 98070. Phone: (206) 622-6448.

828. Leviton, Richard. 1980. Effective soyfoods marketing: "We want to do for tofu what flavors did for yogurt." *Soyfoods* 1(3):46-51. Summer.

• **Summary:** Discusses the tofu marketing strategies of: (1) Steve Demos at White Wave (Boulder, Colorado); he makes 7,500 lb/week of tofu and tofu products; (2) John Paino of Nasoya Foods (Leominster, Massachusetts). Nasoya makes four tofu spreads and a tofu mayonnaise; (3) Luke Lukoskie of Island Spring, Inc. (Vashon, Washington). Each week the company produces 10,000 lb of tofu, five flavors of Soyfreeze (soymilk ice cream), soyloaf, tempeh, soymilk, and spicy Korean tofu; (4) Madeline Fox, director of Marketing at the New England Soy Dairy (Greenfield, Massachusetts).

Photos show: (1) Tom Timmins (rear view) addressing a soyfoods press conference audience in Boston. (2) A waiter in a black bow tie setting up the tofu buffet at the Seventh Inn.

Note: This is an earliest document seen comparing the marketing of tofu to yogurt (the dairy product) in the title. Address: Colrain, Massachusetts.

829. New-Age Foods. 1980. Calling all soycrafters... Start your own soyfoods business. Tofu, soymilk, tempeh, miso. Here are the books that show you how! (Ad). *Soyfoods* 1(3):45. Summer.

• **Summary:** This 2/3 page ad is for three books by Shurtleff and Aoyagi: *Tofu & Soymilk Production*. *Tempeh Production*. *Miso Production*.

"Since publication in 1976 of *The Book of Tofu* by William Shurtleff & Akiko Aoyagi (there are now a quarter million copies in print), more than 120 new tofu shops and soy dairies have been started in North America. Based on the authors' *Book of Tempeh* and *Book of Miso*, many new tempeh and miso shops have also come into being. The founders of these shops have joined to form the Soycrafters Association of North America. Indeed a growing number of people are joining the Soyfoods Revolution and finding that the soycrafting arts offer just the type of creative, satisfying, and financially rewarding work and way of life they have long been seeking—plus an opportunity to make a vital contribution to the future.

"Three beautiful technical manuals: Based on over seven years of research with master craftsmen and modern producers in the U.S. and around the world, Shurtleff and Aoyagi have prepared three beautiful craft and technical manuals, containing all the information you'll need to start and run your own soyfoods business on any of various scales and budgets from low-cost community shops up to large modern plants. These books, used to start virtually all the shops mentioned above, each come in a handsome large (8½ by 11-inch) format, filled with informative illustrations."

A brief description is given of each, along with the price, and a photo of the cover. "Free with each book: A list of all tofu, tempeh, or miso shops in the West, and applications for the Soycrafters Apprenticeship program, Soycrafters Assoc. of North America, and *Soyfoods Magazine*." Address: New-

Age Foods, P.O. Box 234, Lafayette, California.

830. Shurtleff, William. 1980. Soyfoods in America 1980: Progress, problems, challenges. Opening remarks to the 1980 Soycrafters Conference at the University of Illinois. Opening paper presented at Third Annual Soycrafters Conference, Urbana, Illinois. July 9. 14 p. Unpublished manuscript.

• **Summary:** The full text of this presentation has been transcribed. Ten trends and the major events of the past 12 months are reviewed. The key challenge is still to build a strong Soycrafters Association. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

831. *Soyfoods*. 1980. Centrifuge proves efficient in tempeh production. 1(3):40. Summer.

• **Summary:** The Tempeh Works (Greenfield, Massachusetts) has purchased a laundry extractor to spin dry their cooked soybeans for tempeh production. This centrifuge works much better than the simple drying table with overhead fans described in *Soycraft* 1(2):39–Winter 1980). The extractor was purchased used for less than \$1,000. It dewateres the beans in 2 minutes.

Island Spring (Vashon, Washington) also uses a centrifuge for making tempeh; theirs cost \$225 from a junk dealer who buys equipment lots from Army surplus. A photo shows a long-haired production worker at The Tempeh Works with their centrifuge.

832. *Soyfoods*. 1980. Soyfoods to the American taste: An interview with Drs. Clifford Hesseltine and Hwa L. Wang. 1(3):58-62. Summer. [1 ref]

• **Summary:** Dr. Hesseltine has just returned from a six-week to East Asia. In Taiwan he studied soy sauce fermentation and gave advice on setting up a national collection of microorganisms used in soybean fermentations. In Indonesia he attended an international symposium on various aspects of fermentation as a method a processing foods, with an emphasis on soybeans in Southeast Asia. “These people look to us in the West as far as science is concerned. Suddenly we see scientific institutions in the U.. and now in Europe being interested in high protein foods made from soybeans. The East Asians follow and say, ‘Well, if its very interesting for the West, then we should be interested in it.’” There is increasing interest in traditional, lightly-processed soyfoods.

Way back in 1963 the NRRL did research on making tempeh perforated plastic bags. Today, “on the island of Java, 90 percent of tempeh is now produced using plastic bags, including the tempeh I saw being sold on the street...”

Dr. Wang, who was born and raised in China, recently returned there to visit family. She noted: “To me, it is a very sad story... “Even tofu is rationed now. You can’t buy tofu every day, probably once a week.” “Soy sauce is not hard to get. Miso never had as much importance as in Japan... Tofu and soymilk are the two foods that were very common

before. We stayed at a hotel and we only had soymilk once a week, in the morning for breakfast. And tofu, I don’t even remember having eaten any.”

“Dr. Hesseltine: Natto is one of the most rapidly growing fermented soyfoods in Japan, which surprised me, over something like miso. Natto has become more popular because it’s supposed to be the great aid for digestion. In the new form, natto is much more acceptable as a food because the old, traditional type is sticky (it’s a real mess) and this isn’t. This is coated, so what you get is like small peanuts coated with powder; they don’t stick to your hands.”

Dr. Hesseltine: “What I saw in Taiwan really fascinated me—pressed tofu sheets [*pai-yeh*]. “We would like to see the soycrafters making some recommendations [for us] as to practical areas of research for soybeans.”

Portrait photos show (1) Dr. Clifford Hesseltine. (2) Dr. H.L. Wang. Two photos of each, seated. Address: NRRC, Peoria, Illinois.

833. *Soyfoods*. 1980. New source of tempeh starter. 1(3):4. Summer. [1 ref]

• **Summary:** “Gordon McBride, PhD, former manager of the Living Culture Department at Ann Arbor Biological Center, and his wife, Betty Stechmeyer, B.S., announced the formation of GEM Cultures which will provide high-quality tempeh starter cultures at reasonable prices.”

A ¼-page ad for their Living Tempeh Starter (LTS) is on p. 5.

834. Wagner, Martha. 1980. Tempeh: Food for the future. *New Age Journal (Boston, Massachusetts)*. July. p. 68-71.

• **Summary:** An introduction to tempeh with 5 recipes. Address: Eugene, Oregon.

835. Wang, H.L. 1980. Enhancement of nutritive factors in fermented foods. Paper presented at the International Fermentation Symposium, London, Canada. July 21-23. 9 p. Address: NRRC, Peoria, Illinois.

836. Palmer, Jane. 1980. Yogurt’s success inspires tofu backers. Soybean product adapts to main dishes, desserts. *World-Herald (Omaha, Nebraska)*. Aug. 6. p. 17.

• **Summary:** William Shurtleff and Akiko Aoyagi were in Omaha, Nebraska, last week to present a program on tofu and tempeh, two soybean products. Contains three tofu recipes: Tofu burgers. Creamy tofu dressing. Tofu cheesecake. Photos show Shurtleff and Aoyagi. Note: This is an second earliest document seen comparing the marketing of tofu to yogurt (the dairy product) in the title.

837. *Journal Star (Peoria, Illinois)*. 1980. Tempeh, tofu, miso may replace hot dog. Aug. 11.

• **Summary:** At a recent national conference held at the University of Illinois, William Shurtleff discussed the

potential and possible future of these three foods. His remarks were supported by those of Dr. Clifford Hesseltine, a microbiologist at the USDA's research laboratory in Peoria, Illinois. Hesseltine added that the use of tempeh is growing "at a phenomenal rate."

838. Huey, Pamela J. 1980. Conference sees future for tofu, tempeh, miso. *Hartford Courant (Connecticut)*. Aug. 13. p. 1A.

• **Summary:** "If the 1980s are the years of tofu, the '90s belong to tempeh and miso. All three are soybean products long used as staple foods in several Asian countries." William Shurtleff spoke about these foods at a recent national conference at the University of Illinois.

Eight years ago tofu was largely unknown in the United States. During the past four years, the number of tofu makers in the U.S. has gone from 60 to 240, according to Shurtleff.

"Tempeh is a fermented soy food held together by the fibers of the tempeh culture. It has a meaty texture and flavor." Dr. Clifford Hesseltine spoke about tempeh, whose use is growing "at a phenomenal rate."

"Shurtleff is convinced the system of feeding animals for slaughter is the major reason for hunger in the world. Soy foods are a logical replacement for the feedlot system, he said." Address: United Press International (UPI).

839. Zilliken, Fritz W. Z-L Limited Partnership (Janesville, Wisconsin). 1980. Antioxidants, antioxidant compositions and methods of preparing and using same. *U.S. Patent* 4,218,489. Aug. 19. 8 p. Application filed 17 Jan. 1979. [10 ref]

• **Summary:** "This is a division of application Serial No. 804,594, now U.S. Patent No. 4,157,984, filed June 8, 1977." It describes the process for recovery of a steroid-type antioxidant, ergostadienol, from the lipids of tempeh. This antioxidant has exceptional antioxidative properties when used in combination with isoflavones. Address: Remangen, West Germany.

840. **Product Name:** Higher Ground Tempeh.

**Manufacturer's Name:** Higher Ground Cultured Foods.

**Manufacturer's Address:** Box 3128, Madison, WI 53704. Phone: 608-257-7010.

**Date of Introduction:** 1980. August.

**New Product–Documentation:** Label. 1980, dated. 4.5 by 7 inches. Black on yellow. Leaflet. 1980, undated. 8.5 by 11 inches. Black on yellow. "Have you tasted tempeh? The front introduces tempeh and the company. The back gives recipes and eating suggestions: Tempeh burger. Tempeh croutons. Tempeh and mushroom sauce. Tempeh stir fry. Dragon food. Barbequed [Barbecued] tempeh. Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Jehan Ziegler. Address listed as 812 Jennifer St., Madison, Wisconsin 53703. • **Summary:** This is an abbreviated form of an article by the same author titled "Tempeh: An old food moves out of ethnic kitchens," that appeared in the *Los Angeles Times* on July 31 (Part VII. p. 1. Part VIII. p. 16, 18). Gives 4 tempeh recipes. Address: Los Angeles Times.

845. Sass, Lorna J. 1980. A couple on a tofu mission in the West. *New York Times*. Sept. 24. p. C3. Reprinted in the San Francisco Chronicle. Nov. 12. p. 22.

• **Summary:** About William Shurtleff and Akiko Aoyagi, authors of *The Book of Tofu*. A large photo shows each person. "The two people most responsible for catapulting tofu from the wok into the frying pan are William Shurtleff and Akiko Aoyagi." In the early 1970s they began to work on introducing this inexpensive foodstuff, high in protein and free of cholesterol, to the United States. Concerned that there is a world food crisis, they are committed to the philosophy expressed in the book *Diet for a Small Planet*, that if people in Western cultures relied on beans and grains rather than meat, the problem would start to improve. Shurtleff says that they wanted to find a way to make soy foods appealing to Big Mac [hamburger] fans. "We decided to try to do for tofu and other soy foods what Johnny Appleseed did for apples."

A graduate of Stanford University in physics and industrial engineering, Shurtleff first became interested in natural foods and a healthy diet starting in 1968, while living at the Tassajara Zen Mountain Center near Carmel Valley, California. In 1971 he went to live in Japan where, as a student with little money, he found he could eat for as little as 30 cents a day by relying on tofu as his major source of protein. There he met Miss Akiko Aoyagi, a Tokyo-born fashion designer who was also fine cook. Using the seven different types of Japanese tofu, she prepared her favorite tofu recipes for him. A turning point came when they shared a meal at Japan's oldest haute cuisine tofu restaurant [Sasano-yuki, in Tokyo].

At the time they had no publishing experience and only about \$100 between them. Yet within several weeks they had found a publisher and were hired on a part-time basis by an American company to do interpreting, that paid enough to free them to research the subject thoroughly for the next four years.

In December 1975 their first book, *The Book of Tofu*, as published by Autumn Press, a small publisher originally headquartered in Japan and now in Massachusetts, interested in both tofu and vegetarianism. The book was received so enthusiastically—over 100,000 copies are now in print, that Ballantine Books decided last year to publish a revised mass market pocket-book edition.

In 1975 they founded the New-Age Foods Study Center, with offices in Tokyo and Lafayette. Their center

has published three volumes: *Tofu and Soymilk Production* (\$17.95), *Tempeh Production* (\$15.95), and *Miso Production* (\$17.95). These books are directed at people interested in manufacturing "soy foods." In 1978 they helped to found the Soy Crafters Association of North America. Last July the association held its third annual conference.

Lorna Sass is also the "general editor of the forthcoming reprint series of significant historical cook books." Address: Culinary historian, New York.

846. Hesseltine, C.W.; Wang, Hwa L. 1980. Fermented foods. *Food Trade Review* 50(9):473-79. Sept.; 50(10):543-45. Oct. [4 ref]

• **Summary:** Discusses shoyu, tempeh, wheat soya tempeh, sufu, natto, koji, miso, ragi, and soy yogurt. Address: USDA NRRC, Peoria, Illinois.

847. **Product Name:** Soybean Tempeh.

**Manufacturer's Name:** Kingdom Foods.

**Manufacturer's Address:** 3704 Jennifer St., P.O. Box 28431, Washington, DC 20005. Phone: 202-244-3895.

**Date of Introduction:** 1980. September.

**New Product—Documentation:** Order form filled out by Eileen Judge, Kingdom Foods, P.O. Box 28431, Washington, DC 20005. 1981. Nov. 20. She orders 100 "What is tempeh?" pamphlets. Letter of 11 Jan. 1981. "For all correspondence please use my home address: 3704 Jennifer St. NW, Washington, DC."

Washington Post. 1983. March 2. p. E1, E3. Soybeans with Pizazz.

Talk with Eileen Judge. 1990. Sept. 25. She started selling tempeh in the fall of 1980 to a local co-op. She initially made it in her home.

848. Redwood Valley Soyfoods Unlimited. 1980. [Real Food Tofu Shop and Café] (News release). 8473 East Rd., Redwood Valley, CA 95470. 1 p. Sept.

• **Summary:** "Redwood Valley Soyfoods Unlimited is proud to announce their opening of the Real Food Tofu Shop and Cafe. It is a 14-seat restaurant serving lunch and dinner with deli products featuring our Brightsong Tofu." The tofu shop is behind the cafe. The wholesale food processing kitchen

manufactures Tofu Cheesecake, Soy Juice, Tofu Treat, Tofu Dips and Dressings, Marinated Salad, Soyannaise, Soy Loaf, frozen dinners and various sandwiches. "The cafe is the only one of its type west of Colorado."

Note 1. A pink leaflet titled Brightsong. The Real Food Tofu Café, gives details: Air conditioned. Smoke free. 8473 East Road, Redwood Valley. Sandwiches \$2.00: Tofunafish, Baked-spice tofu, Missing egg salad, Happy Chicken Salad, Hummous, Tofummus, Stuffed mochi. Not dogs. Burgers \$2.50: Tempeh, Tofu, Soysage. Desserts: Creamies, Cheesecake, Cookies, Ice Bean, Banana Split, Frozen Joy. Salads: Missing Egg... Drinks: Soy shake, soymilk, Spirulina smoothies.

Note 2. This is the earliest document seen (Sept. 2011) that mentions "Redwood Valley Soyfoods Unlimited."

Note 3. On 31 Oct. 1979 Brightsong Tofu ordered *The Book of Tempeh* (professional edition) and *Tempeh Production* (Vol. II, manuscript). Address: Redwood Valley, California.

849. Shurtleff, William; Aoyagi, Akiko. 1980. The soyfoods explosion—Here come soyfoods: Tofu & tempeh. *CSC Reports (Elkins Park, Pennsylvania)* 2(3):8. Fall/Winter. [1 ref]

• **Summary:** This full-page article describes how to make tofu at home, and gives recipes for Tofu cheesecake (with strawberry topping), and Tofu fruit whip. Also tells how to make a tempeh incubator, with illustration. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

850. **Product Name:** Tofu, and Tempeh.

**Manufacturer's Name:** Taos Tofu & Tempeh.

**Manufacturer's Address:** Box 137, Arroyo Seco, NM 87514. Phone: 505-776-2971.

**Date of Introduction:** 1980. September.

**How Stored:** Refrigerated.

**New Product—Documentation:** Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Tracy McCallum.

851. Wagner, Martha. 1980. Okara: The little-known superfood & soy cookbooks. *New Age Journal (Boston, Massachusetts)*. Sept. p. 69, 71.

• **Summary:** Part I is about Okara, which is defined as "the pulp left behind when soymilk is strained to make tofu. As a by-product, it is a free food for tofu makers and people who make soymilk at home or on a commercial scale... Fluffy, cream-colored okara is easily as versatile as tofu. Some American tofu shops are now using okara to make 'soysage,' a spicy, meatlike food. It can be used in yeasted and quick breads; just substitute packed okara for a third of the flour called for... Dry-roast okara in the oven and you have the

makings for granola or a crumb crust."

Part II is a brief review of some soy cookbooks, of which there has been a proliferation in the past few years. "It all began in 1975 with *The Book of Tofu* (Autumn Press, \$8.95). With this tome of 300-plus pages, including over 500 recipes, William Shurtleff and Akiko Aoyagi introduced tofu to America. A fascinating book, attractively illustrated;... the condensed, revised 1979 paperback edition (Ballantine \$2.95) has a more manageable amount of material (including 250 recipes) and is still packed with information..." Other books reviewed: *The Tofu Cookbook*, by Kathy Bauer and Juel Andersen (Rodale Press). *The Farm Vegetarian Cookbook*. *Tofu Goes West*, by Gary Landgrebe (Fresh Press, \$4.95). *The Great American Tofu Cookbook*, by Patricia Gaddis McGruter (Autumn Press, \$6.95).

"Shurtleff and Aoyagi have recently followed up their tofu classic with *The Book of Tempeh* (Harper & Row, \$6.95)... a thoroughly researched and fascinating book." Contains two illustrations reprinted, with permission, from *The Book of Tofu*.

852. *San Francisco Bay Guardian*. 1980. 4th Annual New Earth Exposition: "Living lightly on the earth" (Ad). Oct. 16-23. p. 13 (Ad).

• **Summary:** "Transportation. Shelter. Energy. Health. Food. Growth. Wilderness. Gardening. Environment. Exhibits, marketplace, lectures, films, demonstrations, entertainment."

"Highlights:... Delicious natural foods to eat: Soy ice cream, sushi, tofu, tempeh, mochi, fresh juices, organic burritos." Lectures:... Soyfoods (Bill Shurtleff).

"October 17-19, 25-26. 2 weekends. Fort Mason Center, San Francisco."

853. Stocker, Carol. 1980. Living. *Boston Globe*. Oct. 22.

• **Summary:** Nancy Kerr (a nutritionist with the states WIC program) is trying to help people who can't afford meat every night to find alternatives that are healthy and grown in Massachusetts in season. The state currently imports 80-90% of its food. For 2 years, Kerr was co-manager of the Yellow Sun Natural Foods Coop in Amherst, Mass. Now she is part of Nut Ed, a nutrition education group, which supports local food companies such as the New England Soy Dairy and the Tempeh Works, two businesses in Greenfield that produce soybean products—including tofu and tempeh. Address: Massachusetts.

854. Mayer, Jean; Goldberg, Jeanne. 1980. Nutrition. *Washington Post*. Oct. 23. p. E20.

• **Summary:** "Q: I have followed a vegan-type vegetarian diet and have eaten no animal products for several years. After reading in your recent column that such a diet can eventually produce vitamin B-12 deficiency, my mother became extremely upset. Could you please reassure her that since I am using a variety of fermented soy foods, like miso

and tempeh, as well as several sea vegetables, I am getting all the B-12 I need?"

"A: Unfortunately, we cannot provide that reassurance." Fermented foods, may indeed provide some vitamin B12 from microorganisms, but the amount is variable depending on the particular product and the process by which it is made. Likewise with sea plants. Reliable sources include traditional vitamin supplements, and a special type of yeast grown on vitamin-B-12.

855. Hesseltine, C.W. 1980. Re: Sufu, tempeh, vitamin B-12. Letter to William Shurtleff at Soyfoods Center, Oct. 24. 2 p. Typed, with signature on letterhead.

• **Summary:** Thanks for the two beautiful slides. "We didn't have any slides of the actual production of sufu."

Tempeh should be cooked before it is eaten since the *Rhizopus* mold "is still alive and there are members of the Mucorales which can grow in the body of diabetics and those using anticancer drugs that reduce resistance. They apparently get in by growing in breaks in the skin and lining of the digestive tract." So, like other soyfoods, tempeh should not be eaten as a raw food. Address: Chief, Fermentation Lab., USDA/NRRL, Peoria, Illinois.

856. Business Trend Analysts, Inc. 1980. The health and natural food market: An analysis of current performance & future prospects. Dix Hills, New York. viii + 234 p. Oct. No index. 28 cm. Spiral bound. Project director: Amadee Bender. [9 ref]

• **Summary:** Section 12 (p. 85-113) of this study is titled "Soyfoods & Other Soy Products." It consists largely of statistics compiled by the Soyfoods Center and Soycrafters Association of North America. On pages 95-110 is published, without permission, complete lists of all U.S. tofu shops, tempeh shops, and miso and koji manufacturers from books copyrighted by Shurtleff and Aoyagi. Acknowledgement of the source of all this information is given only at the bottom of tables, on the last page of the plagiarized list of manufacturers, and in Appendix 6, page 234. No permission was obtained from the Soyfoods Center to use any of this material.

On page 113 is a table on U.S. lecithin production from 1976 to 1979, based partly on U.S. Census figures. Production averaged about 60 million lb/year, worth \$19 to \$23 million. The estimated percentage consumed for health purposes rose from a estimated 2.5% worth \$500,000 in 1976 to an estimated 5.5% worth \$1.3 million in 1979.

Page 232 lists the largest health food wholesalers in the USA: Balanced Foods Inc. (Ridgefield, New Jersey), Landstrom Distributing (San Francisco, California), Erewhon, Inc. (Cambridge, Massachusetts), Health Foods Inc. (Des Plaines, Illinois), Kahan & Lessin Co. (Compton, California), Nature's Best (Torrance, California), and Tree of Life Inc. (St. Augustine, Florida). Address: Dix Hills, New

York.

862. ASEAN Sub-Committee on Protein. ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. Held 27-29 Nov. 1980 at Kuala Lumpur, Malaysia. 29 cm. [100+ ref]

• **Summary:** This the 10th workshop organized by the ASEAN Sub-Committee on Protein and the second workshop in the series on solid substrate fermentation. The first was held in May 1978 at Bandung, Indonesia. The protein project, which has a newsletter and is directed toward the development of small industries, has been active since 1974. Members of the Main Organising Committee include Prof. Ho Coy Choke (Chairman), Dr. Ahmad Zaharudin Idrus, and Ms. Yeoh Quee Lan. At the back is a directory of participants (p. 411-15). Address: Malaysia.

863. Esko, Edward; Esko, Wendy. 1980. Macrobiotic cooking for everyone. Tokyo: Japan Publications, Inc. 272 p. Nov. Foreword by William Tara, Director, Community Health Foundation, London, England. 26 cm. [50 ref]

• **Summary:** The authors studied in Japan (mostly Kyoto), from Sept. 1978 to May 1979, at which time they returned to Boston. In the summer of 1979 “more than 100 delegates from various regional centers throughout the United States and Canada met in Boston for the first North American Congress of Macrobiotics.” Part I of this book discusses the theory of macrobiotics and Part II gives recipes. Unfortunately, the book has no index, and the bibliography gives no years of publication. There are chapters on: Seitan, fu, and noodles (incl. soba), and Sea vegetables.

Soy-related recipes include: Brown rice and soybeans (p. 90). Miso soft rice (p. 96). Somen with deep-fried tofu (p. 118). Kenchin soup (with deep-fried tofu cubes and tamari, p. 130). Okara soup (p. 132). Miso soups (p. 137-143; 12 recipes are given plus a long letter from Jan Belleme, about how she and her husband, John, who arrived in Japan in late October 1979, are now living with the Onozaki family and

studying miso-making there—p. 138-39). Sauteed cucumbers and miso (p. 154). Boiled cabbage, sweet corn, and tofu (p. 155). Udon-vegetable bane (with deep-fried tofu, p. 159). Steamed kale and tofu (p. 161). How to make sprouts (incl. soybean sprouts, p. 177).

Chapter 5 is titled “Bean dishes, including tofu and natto.” It states (p. 178-79, without citing the source) that “In China and Japan there is a proverb, ‘A man who eats too many beans becomes a fool.’... Lima beans and soybeans are both very yin, and require thorough chewing. They should be eaten only on occasion and in small quantities... Kombu can be placed on the bottom of the pot when cooking chickpeas, soybeans, lima beans or kidney, pinto and navy beans. I have found that kombu definitely improves their flavor, and because of its high mineral content, creates a very balanced dish.” To pressure cook soybeans so that they do not clog the steam escape valve, first boil them for 30 minutes. Skim the foam off the top as it rises, and when no more foam rises to the surface you may place them in a pressure cooker and continue cooking until done. Recipes include: Japanese black beans (black soybeans). Soybeans with kombu and burdock. Soybeans with lotus root and salmon. Following a long discussion of tofu, Homemade tofu. Tofu with scallions. Tofu with bonito flake broth. Baked tofu with miso/lemon sauce. Broiled tofu. Tofu loaf. Steamed tofu rolls. Deep-fried tofu cakes. Aburage (Age or deep-fried tofu). Stuffed age pouches. Okara. Okara croquettes. Sautéed natto. Natto rice or noodles. Natto tempura. Dried natto.

Hijiki with soybeans (p. 193). Hijiki and deep-fried tofu (p. 194). Tempuraed tofu-nori rolls (p. 198). Koi-koku (Carp miso soup, p. 220). Daikon and tamari. Scallion miso. Green peppers and miso (p. 224). Miso condiments (p. 226). Tamari. Moromi (p. 227). Rutabaga-tamari pickles (p. 233). Quick miso pickles (p. 234). Tofu tamari dressing (p. 236). Tofu-sesame dressing. Shiro-miso-tofu dressing. Miso dressing (p. 237). Tamari-lemon dressing. Tamari-rice vinegar dressing. Miso-tahini dressing (p. 238). Miso-rice vinegar dressing. Miso walnut dressing. Miso-tahini spread. Sesame miso spread. Miso-nut spread (p. 239). Lentil-miso spread. Lima bean miso spread (p. 240). Tofu dip (p. 243). Amazake (p. 247-48). Clear broth soup with tofu & scallions (p. 253). The glossary lists many soy products plus azuki beans, sea vegetables (many types), gluten, koji, kuzu, mochi, natto, nigari, okara, seitan, tekka, tempeh, umeboshi, unohana (okara), and yuba.

Macrobiotic periodicals include: *East West Journal* (Brookline, Massachusetts). *Kushi Institute Study Guide and Kushi Inst. Newsletter* (Brookline, MA). *The Order of the Universe* (East West Foundation, Brookline, MA). *The Macrobiotic Review* (East West Foundation, Baltimore, Maryland). *Spiral* (Community Health Foundation, London). *Le Compas* (Paris). Note: The date each periodical began publication is not given.

The lengthy section on seitan (p. 110-13) gives a

detailed recipe for making seitan at home using the short method and 3½ lb hard spring wheat flour or hard red winter wheat flour. The broth is made with kombu and tamari. Seitan recipes include: Seitan stew. Seitan fried rice. Stuffed mushrooms (with sauce). Stuffed squash or Hokkaido pumpkin. Address: Boston, Massachusetts.

864. Gery, Michael E.C. 1980. Tempeh: A tempting soyfood with culture. *New Roots (Amherst, Massachusetts)* No. 12. Nov. p. 50-53.

• **Summary:** A long sidebar tells about Michael Cohen and The Tempeh Works of Greenfield, Massachusetts. "The Tempeh Works in Greenfield, Mass. produced 300 pounds of tempeh per week when Cohen opened the business in the fall of 1979. A year later it makes more than 3,000 pounds per week." The Tempeh Works buys its soybeans from the New England Soy Dairy. Photos show Cohen holding a tray of fresh tempeh, a man at Tempeh Works making tempeh, and the Tempeh Works label. Address: Ashfield, Massachusetts.

865. Hartadi, Sri. 1980. Inoculum preparation for tempe and soysauce fermentation. In: ASEAN Sub-Committee on Protein, ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. 415 p. See p. 256-62. Held 27-29 Nov. 1980 at Kuala Lumpur, Malaysia. [9 ref]

• **Summary:** Usar is the Indonesian name of the inoculum used to make tempeh. It consists of strains of *Rhizopus* molds, plus yeast and bacteria. It is prepared by placing inoculated soybeans on leaves of *Hibiscus* species, *Tectona grandis*, *Musa paradisiaca*, or *Bambusa* species. There are two ways of making tempeh inoculum: The traditional usar method in which the mold is grown on soybeans on leaves, and the powdered form inoculum, in which it is grown on rice.

Most of the soysauce made in Indonesia does not use special inoculum. However two new methods have been developed; growing a powdered inoculum on rice and rice bran, or a fresh inoculum on soybeans. Address: Dep. of Microbiology, Faculty of Agriculture, Gadjah Mada Univ., Yogyakarta, Indonesia.

866. Karim, Mohamad Ismail Adbul. 1980. The role of microorganisms in food fermentation with special reference to Malaysian fermented foods. In: ASEAN Sub-Committee on Protein, ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. See p. 31-64. [27 ref. Eng]

• **Summary:** Traditional Malaysian fermented soyfoods include kicap (soy sauce), tempeh, and tauco (Malaysian miso). Fermentation is considered by most small-scale processors as more of an art than a science. The secrets of the processes have been passed down in the family from one generation to another. Much of the flavor of fermented soy products comes from fatty acids (glutamic acid, propionic

acid, butyric acid, etc.), ammonia, and amines.

In Malaysia, the manufacture of soy sauce is normally done by small establishments using traditional methods. Boiled soybeans are cooled then mixed with 40-50% by weight of wheat flour. The mixture is spread onto large shallow bamboo trays (90 cm diameter and 5 cm deep) to a depth of 5 cm. The trays, which are used repeatedly, harbor many useful microorganisms. The trays are then stacked in tiers 15-30 cm apart on wooden racks for 7-10 days. The mixture is broken up and turned every 2 days to allow aeration. At the end of the fermentation, the white mycelium-impregnated mass, with its spores turning yellow and greenish yellow, is filled into earthenware jars (190 liters capacity) and covered with brine solution of 15-20% concentration. The jars are exposed to the sun and covered with lids at night or whenever it rains. The brine mixture is allowed to ferment for 2 to 24 months depending on the quality of the sauce needed. At the end of the fermentation period, the resulting dark liquid (soy sauce) is removed by siphoning or straining through a cheese cloth or suitable strainer. The sauce is then bottled. Sometimes sugar or benzoic acid (a preservative) is added to the sauce before bottling. A sauce could also be cooked and thickened with caramel (up to 80%) and bottled as thick sauce for sale. The production of thin sauce requires a short fermentation (1½-6 months) whereas thick sauce requires a longer fermentation (6-24 months). The extraction process could be repeated 4 to 6 times by topping the remaining mash with brine solution (10-14%) after each extraction.

Soybean paste or tauco is made in essentially the same way as soy sauce except that broken soybeans are used and the liquid is not removed. The final product is reddish brown. Most Malaysian tauco is not sun-dried, but is packed into wide-mouth jars in its moist paste form. Address: Jakatan Sains dan Teknologi Makanan, Universiti Pertanian Malaysia, Serdang, Selangor, Malaysia.

867. Sastraatmadja, D.D.; Saono, S.; Brotonegoro, S. 1980. Oncom and oncom-like products prepared by using pure cultures of molds. In: ASEAN Sub-Committee on Protein, ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. See p. 263-72. [12 ref]

• **Summary:** Oncom is one of the traditional Indonesian fermented foods that is widely produced and consumed in West Java. The substrate consists of various proportions of peanut presscake, the solid residue of tapioca flour (*onggok*), and the solid residue of tahu (soybean curd [which is *okara*]) fermented by *Neurospora sitophila* (*N. intermedia*). Because these residues are cheap and still contain a significant amount of protein, oncom is thus a good, inexpensive food.

Altogether 122 mold strains were studied, comprising 13 strains of *Neurospora* spp., 15 strains of *Mucor* spp., 9 strains of *Rhizopus* spp., and 85 other strains which are most

likely *Mucor* or *Rhizopus* species. *Mucor* species gave the best oncom after 24 hours, but *Rhizopus* species gave the best oncom after 48 hours. Address: National Biological Inst., Bogor, Indonesia.

868. Sutedja, L.; Roestamsjah, -; Gunawan, C. 1980. The effect of moisture content on oncom fermentation utilizing mixed substrates. In: ASEAN Sub-Committee on Protein, ed. 1980. Report on the Second ASEAN Workshop on Solid Substrate Fermentation. Kuala Lumpur, Malaysia. 415 p. See p. 301-25. [12 ref]

• **Summary:** Good quality oncom was prepared using a mixture of 2 parts peanut presscake (53-61% moisture), 2 parts "soybean curd waste" [okara] (75-82% moisture), and 1 part bulgur wheat (64-66% moisture). Each was steamed for at least 30 minutes before inoculation.

Note: This is the earliest English-language document seen (Oct. 2001) that uses the word "residue" or the term "soybean curd waste" to refer to okara. Address: National Inst. for Chemistry, Indonesian Inst. of Sciences, Indonesia.

869. Ferretti, Fred. 1980. Gastronomes' Christmas visions: Oysters, crabmeat, a live goat [and tofu]. *New York Times*. Dec. 3. p. C1, C8. [2 ref]

• **Summary:** Various food authorities were asked: "After truffles, foie gras and caviar, what would you like for Christmas?" Alice Waters of Chez Panisse wanted "a live goat so I could get warm goats milk every morning into which I would melt Swiss chocolate. What a breakfast!" James Beard wanted choice Dungeness crab meat from the West Coast. "Finally a wish for enough food for the '15 to 20 million people starving throughout the world' was expressed by William Shurtleff, who with his wife Akiko Aoyagi wrote 'The Book of Tofu' and 'The Book of Miso.' And, he added, the realization by Americans that their diet is exceedingly harmful would be a fine Christmas gift." Other than that Shurtleff said he could think of nothing else but tofu (bean curd) or tempeh (cakes made of soy) as things he wanted for Christmas 'Anything else, he said, 'would be insignificant.' Contains a cartoon of Shurtleff, Julia Child, and others.

870. Martin, Dale. 1980. New age eatery owners hope to attract diners from all over the state to tofu cafe in Redwood Valley. *Daily Journal (Ukiah, California)*. Dec. 4. p. 2-3. [1 ref]

• **Summary:** The article begins: "Redwood Valley may be an unlikely place to open a tofu shop and cafe, but store owners Dik and Sharon Rose are hoping this new age eatery will catch on and attract diners from all over the area. Tofu is becoming quite a business these days, as more and more people are starting to discover the cheap, nutritious, and versatile soybean product... tofu is finding its way into the American mainstream. It isn't just a health food any more."

"Tofu, made from curdled soybean milk, is also called

bean curd. A complete protein, the custardy textured product has been hailed as being highly digestible and an excellent diet food. With meat prices going up and up, many meat eaters as well as vegetarians are increasing their tofu intake.

"Dik and Sharon Rose bought into the tofu dream in June [1980], when they took over Brightsong Tofu in Redwood Valley from its former owner, David Patton. The shop is now in its third year of production. Through increased advertising and hard work, the Roses tripled the output of the shop in five months. The shop is now producing 1300 pounds of tofu a week... The Roses currently employ two workers who make the tofu by hand with wellwater, fresh soybeans and 'a lot of care and love,' according to Dik."

Until a few months ago, Brightsong was the only tofu shop between South San Francisco and Eugene, Oregon. But now there is a new shop in Marin and one opening soon in Arcata.

"Dik and Sharon became interested in tofu after hearing a lecture in 1976 by the 'gurus' of the soybean product, William Shurtleff and Akiko Aoyagi, who wrote 'The Book of Tofu.' After visiting a shop in Oregon, the Roses came to Mendocino County where they discovered 'Brightsong' for sale in the spring."

The Real Food Tofu Cafe seats 14. "The cafe's menu offers such dishes as spiced baked tofu sandwiches, tofu burgers, brown rice tofu burritos, 'soyannaise' spread and tofu cheesecake." Tempeh is also served.

Photos show: (1) Sharon Rose (with long curly hair) standing at the front counter, with a large menu on the wall behind her. Menu items include cheese cake, ice bean cone, soy juice, spirulina, vege herb tofu. (2) A grinder, out of which ground soybeans are dropping into a 5-gallon plastic bucket labeled Brightsong Tofu. (3) A large, round curdling basin: "After the nigari is added, the tofu solidifies and separates into curds and whey." (4) Dik Rose, with beard and pony tail, cutting tofu into cakes. (5) Cakes of tofu cooling in water in a stainless steel sink.

Note 1. This is the earliest dated document seen that mentions Brightsong Tofu. Note 2. This is the earliest document seen that mentions Dik or Sharon Rose in connection with this company.

871. Soyfoods Center. 1980. Catalog: Publications & materials by William Shurtleff & Akiko Aoyagi [mail order]. P.O. Box 234, Lafayette, CA 94549. 20 panels. Dec. 8.

• **Summary:** On 17 Sept. 1980, the name of New-Age Foods Study Center was changed to Soyfoods Center. This catalog, folded like a road map, is printed with brown and light green ink on white paper. 12,500 copies were printed. Address: Lafayette, California. Phone: 415-283-3161.

872. Ferretti, Fred. 1980. The gastronomes' Christmas wish list. *Chicago Tribune*. Dec. 11. p. W\_B2, or S\_B2, or N\_B2.

[2 ref]

• **Summary:** This article (under a slightly different title) first appeared in the New York Times (3 Dec. 1980, p. C1).

873. Anderson, Eugene N. 1980. Re: Soybeans, tofu, and tempeh. Letter to William Shurtleff at Soyfoods Center, Dec. 12—in reply to inquiry. 2 p. Typed, with signature on letterhead. [4 ref]

• **Summary:** A sinophile, he is collaborating with Dr. Paul Buell (an historian at Western Washington University, Bellingham, WA) on various books on Chinese agriculture, including an economic botany. “We are currently working on the soybean article for this and drawing heavily on your books. He is an inveterate tofu maker who lives by your books.”

The spices in real curry are fascinating and much different from those in the “nauseating and disgusting ‘curry powder’ of commerce.”

He is aware of some spectacularly fine Chinese books on vegetarian soyfoods cookery, written by Buddhist religious groups. “Most of the Chinese cookbooks in English are obscene and should be banned as pornography.”

It is now known that the old Shen Nung Herbal is from ca. 100 A.D.

“Tempe I assume to be an application to soybeans of earlier technology used on coconut. Incidentally the soybean was introduced to the Malay world by people from the Fujian-Guangdong border between Xinmen (Amoy) and Swatow (Shandou), as shown by the distinctive dialect words borrowed into Malay (*bahasa Indonesia, bahasa Malaysia*)—*taohu, taugé, taucho, tausi*, etc. These are also in Indonesian and Filipino—though *tausi* could be from Cantonese. These are direct borrowings of precisely the dialect forms of the border area, the southern dialects of the Southern Min or Hokkien language. *Tauhu*, for instance, is their pronunciation of tofu (dofu in standard Chinese). One word I can’t explain is *kecap* (formerly spelled *ketjap* and so pronounced), the Malay word for soy sauce. It seems to have referred earlier to quite a different, local brew. It has nothing whatever to do with ketchup.

“The latest soy news is yet another proof that peasant techniques have their reasons. It now appears that soybeans have a huge amount of phytate, amounting to up to several percent of the bean. Phytate (the distinctive ion of phytic acid) takes up calcium, zinc magnesium, niacin and other chemically active items in food and makes chemical compounds that humans can’t digest effectively. Thus the calcium, niacin, etc., of food is lost. This leads to calcium deficiency, zinc deficiency (as with whole-grain wheat bread eaters in the Near East), or worst of all, pellagra (corn is classically associated with pellagra because it’s high in phytate and low in niacin). But of course if you add calcium or magnesium or the like to your food, it takes up the phytate and you’re OK. Heat also destroys some of it. Micro-

organisms such as yeasts and *Aspergillus* can also destroy it, having appropriate enzymes. Thus processing soybeans with gypsum, nigari or fungal fermentation wipes out this danger.” Address: Dep. of Anthropology, Univ. of California, Riverside, CA 92521.

874. Bau, H.M.; Debry, G. 1980. L’art de l’utilisation du soja: Habitudes et traditions [The art of soya utilization: Customs and traditions]. *Cahiers de Nutrition et de Dietetique* 15(4):277-84. Oct/Dec. [40 ref. Fre; eng]

• **Summary:** “For many centuries, soybeans have meant meat, milk, cheese, bread, and oil to the people of Asia. Because of their great food value, they not only have long had a definite place in the oriental diet but now belong in the diet of America and of the entire world. In Europe, the use of soybean products in the quotidian diet is still limited, however it is sure that they will be an important factor in the balanced diet of the future.”

Note 1. Soyfoods Center has a 16-page English-language translation of this article.

Note 2. *Webster’s Dictionary* defines quotidian (derived from the French *quot* = as many as + *dies* = day) as “occurring every day.” Address: University of Nancy, France.

• **Summary:** Tom Timmins started his career in natural foods as a manager of the Yellow Sun Food Co-op in Amherst, in 1973. He was introduced to tofu through his work at the Equinox, Amherst’s first natural foods restaurant. In 1974 the Equinox started serving tofu, which was purchased through a local Chinese restaurant, which was in turn supplied from Boston’s Chinatown. “In 1976, while working for a local natural foods distributor [Llama, Toucan & Crow], Tom was turned on to *The Book of Tofu*. It excited him to such a degree that by the next year he began to work on the Laughing Grasshopper Tofu Shop, together with Richard (Ira) Leviton... The New England Soy Dairy now employs 40 people and sells over 100,000 lb/month of tofu (25,000 lb/week by Jan. 1980).

Michael Cohen, a vegetarian since 1971, stopped eating foods containing *any* animal products in 1975. He too was involved with the Equinox restaurant when it first opened and was introduced to tofu there and at The Farm in Tennessee. In 1978, after 6 months at The Farm, he returned to what had become the New England Soy Dairy. But he decided to leave for personal reasons to start his own tempeh business.

• **Summary:** Contents: Abstract. Acknowledgments. List of tables and figures. Introduction. Materials and methods: Materials, preparing PDA slants, spore mass production, enumeration of mold spore viability, preparation of soybeans, preparation of okara, tempeh fermentation, preparation of samples for sensory testing, soybean characteristics. Results and discussion: Starter culture, tempeh fermentation—general observation, taste test results, whole soybean tempeh, conclusions. Appendix I. Appendix II. References.

The author returned to Indonesia in about early 1981 and in July 1982 was teaching at Padjadjaran University in Bandung. Address: Univ. of Minnesota, St. Paul.

879. Tofu Shop (The). 1980. December. New soyfoods restaurant or deli. 768 18th St., Arcata, CA 95521.

• **Summary:** Matthew Schmit. 1981 Feb. 13. "Fresh tofu comes to Northern Cal." "The Tofu Shop of Arcata, California, officially opened its doors on December 12, 1980..."

Questionnaire filled out by owner of restaurant or deli. 1982. Restaurant opened for business in Dec. 1980. Lists the company's most popular soy-based menu items in descending order of popularity: 1. Tofuburger (authentic). 2. Tofu-vegetable sushi rolls. 3. Tofu spinach turnovers. 4. Tofu pumpkin pie. 5. Tofu cream pie. 6. Tofu vegetable patties. 7. Tofu tahini salad. 8. Tofu potato salad. 9. Carob soy pudding. 10. Happy-dragon soydrink. The highest weekly total sales over the past 6-2 months: \$1,200 in Oct. 1981 because of deli expansion and return of students to Humboldt State. The average weekly deli sales during this period: \$850. Note: The company also sells \$850/week wholesale. Average hourly wages paid to workers: \$3.50. The business startup cost (amount of money it cost to get the business started): \$11,000. Current profitability status: Profitable. Plans for the future: Deli display cooler, steam table for hot food, tempeh production. Advice the owner would give to someone

starting a similar business: Choose the perfect community. Prepare a detailed business prospectus. Obtain sufficient capital (plus some extra). Prepare for at least one year of double-time work. Love soyfoods. Be professional. Other: "Our goal has been to develop a model for the 'all-American neighborhood tofu shop,' which produces its own fresh tofu and other soy products; where the neighbor down the street can grab a quick bite on the run, or pick up staple groceries (tofu, soymilk, soy margarine, bread, etc.) for home cooking. A large portion of our business is from people who walk to our shop. A balance of wholesale / retail and deli foods / groceries makes small scale tofu production feasible."

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started in Dec. 1980 by Matthew & Suzanne Schmit, who formerly ran Far Pavilions in Telluride, Colorado.

Packet from Matthew Schmit. 2002. Sept. 24. He encloses three original, undated menus, all vegetarian: (1) Earliest, printed in about 1982, is dark blue ink on tan paper. 8½ by 11 inches. Printed back to back, folded into three panels. The menu is on the inside 3 panels. On the 1st panel: Welcome! The Tofu Shop Deli and Grocery. A nice (3 by 2¼ inch) illustration of "The Tofu Shop Specialty Grocery and Deli" appears in the center. "We make our own tofu fresh daily..." (2) Similar. Printed in about 1987. Blue ink on light beige paper. Prices have risen a little. (3) Larger. Printed in about 1992, green ink on beige recycled paper, 8½ by 14 inches, folded into 4 panels on each side. More menu items in these categories: Green salads. Deli salads. Tofu salads. Burgers. Sandwiches. House specialties. Soups & sides. Beverages. Tofu cold-cuts. Address: Arcata, California.

880. **Product Name:** Soy Tempeh.

**Manufacturer's Name:** Turtle Island Soy Dairy.

**Manufacturer's Address:** c/o Hope Co-op, 2017 21st Ave., Forest Grove, OR 97116.

**Date of Introduction:** 1980. December.

**Ingredients:** Organically grown soybeans, water, apple cider vinegar, *Rhizopus oligosporus* (tempeh starter), rice [on which the starter was grown].

**Wt/Vol., Packaging, Price:** 8 oz plastic bag. Retails for \$0.99.

**How Stored:** Frozen.

**New Product—Documentation:** Letter/Order for the book *Tempeh Production* (\$10.95 + postage) from Seth Tibbott. 1979. Oct. 2. He is at Rt. 1, Box 311, Gaston, Oregon 97119.

Yvonne Rothert. 1981. The Oregonian. June 24. "Use of soybean well known, but here comes tempeh." Tibbott first made tempeh at home in Tennessee 1977, and commercially in December 1980; Letter from Seth Tibbott. 1981. Aug. 21. Label for Soy Tempeh enclosed.

Talk with Seth Tibbott of Turtle Island. 1984. Jan. 17. Their tempeh is pre-steamed to pasteurize it. Half is sold refrigerated (nearby), half frozen (shipped far away). Their

best-selling product is soy tempeh, followed by five-grain tempeh.

Voice of the Turtle (Husum, Washington). 1989. Feb. "Turtle Tempeh still high in B-12! According to two separate tests of our products completed in the fall of 1988, Turtle Island Tempeh has one of the highest Vitamin B-12 contents reported in the country... In 1985, Turtle Island Tempeh was found to contain 2.5 mcg. of B-12. Wanting further verification we sent two more samples to the lab and were told in December 1988 that our tempeh contained 5.4 mcg. of B-12 per 4 oz." Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Seth Tibbott. Address is now P.O. Box 218, Husum, WA 98623. Phone: 509-493-2004.

Talk with Seth Tibbott. 1990. March 2. He has sent samples of tempeh from one batch to 3 professional laboratories for nutritional analyses. The results have varied widely. For example, vitamin B-12 has ranged from almost zero to 4-5 mcg/100 gm. Sylvia Ruth Grey, a macrobiotic microbiologist and B-12 researcher, thinks this is because cobalt in U.S. soils is being depleted. B-12 is dependent on cobalt in soybeans.

Talk with Seth Tibbott. 1990. Aug. 15. Seth has new equipment, a new plant in Husum or Hood River, and new labels. Last year his production doubled. He now makes on average 2,000 lb/week of tempeh, but sometimes as much as 3,000 lb/week.

Note: This is the earliest known commercial soy product made by Turtle Island.

881. **Product Name:** Tempeh.

**Manufacturer's Name:** Bodhi Farm Tempeh Co.

**Manufacturer's Address:** 2480 Channon, NSW, Australia.

**Date of Introduction:** 1980.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: John Seed. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 32. This was one of the first two tempeh shops in Australia.

882. **Product Name:** Tempeh.

**Manufacturer's Name:** Bountiful Bean Plant.

**Manufacturer's Address:** 903 Williamson St., Madison, WI 53703.

**Date of Introduction:** 1980.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** James Lubbe. 1988. March. Abbreviated History of the Bountiful Bean. This product started as a deli item in about 1980 but it is not clear when it was first made by the Bountiful Bean.

Leaflet and Label sent by Paul Olson, new owner of Bountiful Bean Soyfoods. 1993. Nov. 19. The company still makes tempeh. Label. 4 by 4.5 inches. Orange, green, and white on yellow. Net weight: 8 oz. "A cultured soyfood. No preservatives. If purchased fresh, keep refrigerated. If purchased frozen, use within 12 days of thawing and keep

refrigerated until use." Ingredients: Organic soybeans, *Rhizopus oligosporus* culture.

Jakarta: Departemen Perindustrian, Republik Indonesia. 7 p. Indonesian Industrial Standard SII.0271-80. [Ind]\* Address: Jakarta, Indonesia.

884. **Product Name:** Tempeh.

**Manufacturer's Name:** Dharma.

**Manufacturer's Address:** c/o Earth Foods, 308 Bronti Rd., Waverley, NSW, 2024, Australia. Phone: 994-505.

**Date of Introduction:** 1980.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Swami Veetdharma. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 32. This was one of the first two tempeh shops in Australia.

885. Fang, S.F. 1980. [The origin and development of alcoholic beverage fermentation with chu]. *History of Science and Technology (China)* 4:140. [Chi]\*

• **Summary:** The first written reference to chu was found in the Shu-Ching, written during the Chou dynasty (1121-220 B.C.), which states that *chu* (grain koji) is essential for making *chuiu* (alcoholic beverages). Of the early types of chu, the most widely used one was yellow (*huang-chu*), indicating perhaps that *Aspergillus oryzae* may have been cultured at that time. The yellow color was said to be so lovely that the Emperor's yellow robes were known as *chuyi*. Initially chu was made in granular form (*san-chu*), but by the Han dynasty (205 B.C.–220 A.D.) it was being made as a cake (*ping-chu*). It was later found that the growth of *Rhizopus* and yeast species were more abundant than *Aspergillus* in *ping-chu*. Thus the so-called amylo process actually originated in China in the third century.

The earliest written description of the method for preparing chu appeared in the Ch'i-min Yao-shu (early 6th century A.D.). It described three types of yellow chu: *huang-yi*, *huang-tcheng*, and *nu-chu*. Yellow chu was widely used for alcohol fermentation and for fermented soyfoods. Fang then discusses 11 other types of chu, including *hong-chu* (red rice with *Monascus*). Address: Inst. of Microbiology, Academia Sinica, Beijing, China.

the acceptability of tempeh]. *Bulletin of Teikoku Gakuen* No. 6. p. 33-39. [8 ref. Jap; eng]

• **Summary:** A survey on the acceptability of tempeh was carried out by 50 members of a taste panel at the authors' school in Osaka, Japan. "The results of the survey indicated that the appearance of tempeh was lower than that for flavor, taste, stickiness, and texture. More than 76% of the panel members favored tempeh over natto (the result may be different if a survey is carried in Kanto district). Among methods of cooking tempeh, deep fat frying was most favored. Salt was evaluated as the best seasoning for tempeh rather than coriander or curry. The panel also compared the meat burger, the meat with soyprotein burger, and the tempeh burger. The meat only was given the highest rating, the meat with soybean protein second, the tempeh burger was the lowest. However, it was found that the tempeh burger could be acceptable." Address: Teikoku Women's Univ., 173, 6-chome, Todacho, Moriguchi-shi, Osaka, Japan.

888. **Product Name:** Tempeh.

**Manufacturer's Name:** Garden of Eatin' (Marketer-Distributor).

**Manufacturer's Address:** 5300 Santa Monica Blvd., Los Angeles, CA 90029.

897. **Product Name:** [Vanda Tempeh Chips].

**Foreign Name:** Vanda Tempé Chips.

**Manufacturer's Name:** Van Dappern B.V. Renamed Tempé Produkten B.V. in April 1983.

**Manufacturer's Address:** Kerkrade, Netherlands.

**Date of Introduction:** 1980.

**New Product–Documentation:** Label. 1984, undated. 3.5 by 7 inches. Orange, black, and white on clear plastic. “Een gezonde soja snack” [A healthy soya snack]. 100 gm.

Letter from Ike Van Gessel. 1992. Dec. 20. This product was introduced in 1980 and discontinued in 1984. The name of the product as it appeared on the label was “Vanda Tempé Chips.”

898. Bloodroot Collective; Beaven, Betsey; Giordano, Noel; Miriam, Selma; Shea, Pat. eds. 1980. The political palate: A feminist vegetarian cookbook. Sanguinaria Publishing, 85 Ferris St., Bridgeport, CT 06605. xxiii + 325 p. Illust. Index. 23 cm. [39 ref]

• **Summary:** This feminist collective and restaurant is named Bloodroot for an eastern woodland wildflower, *Sanguinaria canadensis*. They “found something symbolic in its slow spreading rhizomatous root system and the way each piece of root throws up its own grey-green leaf furled protectively around the eight-petaled white flower. Any part of the root, stem, or leaf ‘bleeds’ a red juice.” The cookbook is largely vegetarian (though 8 recipes which use fish are included), seasonal, and ethnic/regional. The introduction praises the books on tofu, tempeh, and miso written by Shurtleff and Aoyagi as “truly political books.” Their favorite vegetarian cookbook is Julie Jordan’s *Wings of Life* (Crossing Press). The book is interspersed with feminist quotations and has a separate lengthy feminist bibliography.

Soy-related recipes include: Harvest vegetable platter with miso gravy (p. 17-19). Winter miso soup (with soybeans, p. 80-81). Kasha platter (with miso gravy, p. 91-92). Indonesian tempeh dinner (p. 96-97). Urab: Indonesian steamed vegetable salad (with tofu, p. 98). Sea vegetable salad (with tofu dressing and wakame, p. 134-35). Grilled Ma-Po tofu and rice (p. 169-70). Hot and sour soup with

wild daylily buds (and tofu, p. 188-89). Snow pea salad with tofu sauce (p. 196). Omelet grandmere (with miso gravy, p. 280-82). Address: Bridgeport, Connecticut.

899. Brotonegoro, Soetarjo; Sudjana, M.; Saono, S. 1980. Preservation of economically important cultures by freeze drying. Paper presented at the Second ASEAN Workshop on Solid Substrate Fermentation. Held 27-29 Nov. 1980 at Kuala Lumpur, Malaysia. \*

• **Summary:** The author isolated, identified, and preserved the microorganisms in some traditional Indonesian foods such as tempe, tauco (Indonesian miso), and kecap (soya sauce). Address: Malang Research Inst. for Food Crops (MARIF).

900. Chen, Steve; Wang, E. 1980. Huang-dou shu-pin [Soy foods]. Taipei, Taiwan: American Soybean Assoc. 248 p. Illust. 19 cm. [Chi]

China Food Health, Nutrition Research Foundation.” Contains many photos and graphs. Address: American Soybean Assoc.

901. Corbin, Frederick T. ed. 1980. World Soybean Research Conference II: Abstracts. Boulder, Colorado: Westview Press. 124 p. Conference held 26-29 March 1979 at North Carolina State Univ. Author index. 24 cm.

• **Summary:** The World Soybean Research Conference II was held on 26-29 March 1979 at North Carolina State University. This volume contains summaries of the more than 200 papers, both invited and contributed, presented at that meeting. The full proceedings contains 74 of the invited papers in full.

Contents: Keynote addresses. Mineral nutrition. Engineering. Nitrogen fixation. Entomology. Utilization. Breeding. Physiology. Production. Protein and oil. Plant pathology. Modeling soybean systems. Regional. Agribusiness. Marketing, transport and storage. Weed control. Research techniques. Addendum. Address: Prof. of Crop Science; North Carolina State Univ., Raleigh.

902. Fukushima, Danji; Hashimoto, Hikotaka. 1980. Oriental soybean foods. In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Proceedings. Boulder, Colorado: Westview Press. xv + 897 p. See p. 729-743. [7 ref]

• **Summary:** Contents: Fermented soybean foods. Non-fermented soybean food. Conclusion. References.

The following statistics show the amount (tons) of whole soybeans/ defatted soybean grits/ total of whole and grits consumed for various soybean foods and feeds in Japan in 1976.

Fermented soyfoods: Shoyu (soy sauce) 10,000/

165,000/ 175,000, miso 190,500/ 5,000/ 195,500. Natto 69,000/ 0/ 69,000.

Non-fermented soyfoods: tofu and aburage (fried tofu pouches) 411,500, 55,000/ 466,500. Kori-tofu (dried-frozen tofu) 29,000/ 0/ 29,000. Others 16,000/ 75,000/ 91,000.

Animal feeds: 30,000/ 1,950,000/ 1,980,000. Thus total use for foods and feeds is whole soybeans 756,000. Defatted soybean grits 2,250,000, total of both 3,006,000. By type of use, animal feeds account for 65.9% of total Japanese usage of whole soybeans and defatted grits, non-fermented soyfoods account for 19.5%, and fermented soyfoods account for 14.6%. The top three food users are tofu (466,500 tons, 45.5% of all food uses), miso (195,500), and shoyu (175,000). There are 35,000 tofu plants in Japan.

Fermented soybean foods described are shoyu (soy sauce; 5 types), miso (3 basic types, 6 varieties), sufu (Chinese soybean cheese), tempeh (fermented soybean cake), natto (fermented whole soybeans; itohiki-natto and hama-natto), and fermented soymilk (recently a new fermented soybean product appeared on the market in Japan. It is a soy milk drink fermented by lactic acid bacteria).

Non-fermented soybean foods described are tofu (soy milk curd), aburage (fried tofu pouches), kori-tofu (dried-frozen tofu), yuba (coagulant film of soy milk), kinako (roasted soybean powder), moyashi (soybean sprouts), and soybeans. Production, chemical composition, and use of each of these foods is discussed. Address: Kikkoman Foods Inc., P.O. Box 69, Walworth, Wisconsin 53184.

903. Gay, Martin; Gay, Kathlyn. 1980. Eating what grows naturally. South Bend, Indiana: And Books. 137 p. Illust. by Brian "Woodie" Byrn. 21 cm. [75 ref]

• **Summary:** A book about natural foods, with some vegetarian recipes. Martin was born in 1950. Pages 79-80 give ten menus based on Shelton's food-combining principles, including (5) Stir-fried vegetables and tofu cubes, and (9) Tofu-vegetable casserole with green salad. Page 106 gives definitions of miso, tamari, tempeh, and tofu. Soy-related recipes include: Soy burgers (with ground, cooked soybeans, p. 108), and tofu casserole (p. 109).

904. Hanssen, Maurice. 1980. Country kitchen recipes with soya beans. Wellingborough, Northamptonshire, England: Thorsons Publishers Ltd. 32 p. Illust. 14 cm. \* Address: Northamptonshire, England.

906. Liener, Irvin E. 1980. Miscellaneous toxic factors. In:

I.E. Liener, ed. 1980. Toxic Constituents of Plant Foodstuffs. 2nd ed. New York: Academic Press. xiv + 502 p. See p. 430-67. Chap. 13. [322\* ref]

• **Summary:** Soya is discussed under: Estrogenic factors (p. 430). Antivitamin A (Raw soybeans are known to contain the enzyme lipoxidase, which oxidizes and destroys carotene; p. 442). Antivitamin D (which leads to rachitogenic activity and can cause rickets; p. 442-43). Antivitamin E (p. 444). Antivitamin B-12 (p. 447). Other enzyme inhibitors (inhibitor of pancreatic lipase; p. 452). Flatus-producing factors (p. 455-56).

The estrogenic principles of plants have been, in most cases, chemically identified as isoflavones, which occur naturally in the form of glucosides. Isoflavones have been isolated from the soybean.

"One of the major factors limiting the human consumption of legumes is their ability to produce gas in the gastrointestinal tract, also referred to as flatulence." The intestinal gas is "composed largely of carbon dioxide, hydrogen, and, to a lesser extent, methane. Studies have clearly implicated the oligosaccharides raffinose and stachyose as causative factors of flatus. These oligosaccharides are related by having one or two  $\alpha$ -D-galactopyranosyl groups attached to sucrose via  $\alpha$ -1,6-galactosidic linkages. Owing to the absence of enzymes in the human intestinal mucosa that are capable of hydrolyzing this linkage, the intact oligosaccharides accumulate in the lower intestine, where they undergo fermentation by anaerobic bacteria. The gases so produced are responsible for the characteristic features of flatulence, namely, nausea, cramps, diarrhea, abdominal rumbling, and the social discomfort associated with the ejection of rectal gas. Such traditional soybean foods as tofu (soybean curd) and tempeh have little flatus activity." Address: Dep. of Biochemistry, College of Biological Sciences, Univ. of Minnesota, St. Paul, MN 55108.

907. Lin, Ching-Fwu. 1980. Preparation of shrimp-flavored tempeh using a thermo-tolerable *Rhizopus* sp. T-3 isolated from Indonesia. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 167-79. Held 10-14 Dec. 1979 in Taipei, Taiwan. 8 tables. 3 figs. [20 ref]

• **Summary:** This T-3 strain of *Rhizopus* mold, which was isolated from indigenous tempeh collected on Bali island, grew vigorously even at 45°C or more, and the stolon and sporangiophore were found to be larger than for any *Rhizopus* species listed in the "Taxonomical Studies on the Genus *Rhizopus*" by Inui et al. This mold produced abundant hydrolytic enzymes, such as acid protease, glucoamylase, lipase, cell separating enzymes and milk clotting enzyme in soybean substrate. The tempeh prepared by this mold after 18 hours fermentation at 30°C-40°C had the flavor of shrimp.

The tempeh thus made was easily macerated into a single cell from slight blending in a blender.

“An improved procedure for preparation of tempeh using raw soybean as substrate is presented in this paper.” Address: Inst. for Microbial Resources, Taiwan Branch, 100 Chien-Hsing St. East, Taichung, Taiwan.

908. McConnaughey, Evelyn. 1980. More sea vegetable recipes from the Oregon coast. Plus seaweeds from the Orient. 1653 Fairmount Blvd., Eugene, OR 97403. 41 p. Illust. by Catherine Vignaux. No index. 22 cm. [8 ref]

• **Summary:** On page 7 is nutritional information about tofu, tempeh, miso, and tamari (shoyu). Soy-related recipes: Miso (p. 13). Tempeh (p. 26, 27, 37). Tofu (p. 15, 27). Tamari shoyu (p. 27). Line drawings of sea vegetables appear on most pages. Address: Oregon.

909. Miller, Lani; Rodgers, Diane. 1980. We love your body. Seattle, Washington: Morse Press, Inc. vii + 256 p. Illust. by Joanie Oliver. 25 cm.

• **Summary:** A natural foods, vegetarian cookbook. The glossary describes soybeans (incl. soy flour, milk, and tempeh, p. 246), tamari sauce, and tofu (p. 247).

910. Nagai, S.; Nishio, N. 1980. Biochemical engineering problems on solid state culture. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 218-26. Held 10-14 Dec. 1979 in Taipei, Taiwan. 1 table. 10 figs. [11 ref]

• **Summary:** The production of wheat tempeh cultured with *Rhizopus oligosporus* is studied. Contents: Introduction. Static cultivation without aeration. Static cultivation with forced aeration. Dynamic cultivation without aeration (in a small drum fermenter). Dynamic cultivation with forced aeration. Engineering problems.

During tempeh production, the substrate temperature increased remarkably due to the metabolic heat generation; a major problem is removal of this heat. Also a large amount of moisture was produced due to a respiration reaction; this increases the substrate moisture content and may cause quality problems. Address: Dep. of Fermentation Technology, Faculty of Engineering, Hiroshima Univ., Hiroshima, Japan.

911. Null, Gary. 1980. The new vegetarian cookbook. New York, NY: Macmillan Publishing Co., Inc.; London: Collier Macmillan Publishers. x + 310 p. Recipe index. 24 cm.

• **Summary:** One chapter (p. 52-60) titled “Soybeans and Soybean Products” discusses: “Whole, raw soybeans” [green vegetable soybeans], dried soybeans, soybean milk soy flour, soy grits, soy flakes, tempeh, tamari, miso, and tofu. The long section on tofu begins: “As a high-quality source of complete protein, tofu (soybean curd, usually

called bean curd) is hard to beat, not to mention inexpensive, low in calories and versatile.” It ends: “As you become more familiar with tofu, you’ll come up with many of your own innovations. But no matter how you choose to serve this natural, high-protein food, serve it often and savor its benefits!”

Page 78, under “Bean Sprouts,” states that “Soybeans make the most delicious sprouts, but are a little more difficult to grow” than mung bean sprouts. Page 88 notes that tamari and miso are good alternatives to salt.

Soy-related recipes include: Miso tofu soup (p. 132-33). The section titled “Tofu Dishes” (p. 199-208) includes: Butternut tofu. Tofu cauliflower casserole. Herby tofu croquettes. Mushroom and tofu sautéed in miso. Tofu Orleans. Red and green peppers with tofu. Soba tofu dinner. Tofu eggplant Parmesan. Yogurt tofu casserole [with cow’s milk yogurt]. Tomato tofu and kidney beans. Bulghur, lentil and tofu casserole. Tofu à la king. Sesame tofu (Tofu plus sesame seeds). Hot breakfast for two (tofu with oatmeal, raisins, and walnuts).

Soy-enriched wheat berry bread (p. 242). Page 304 contains a list of food suppliers, including Chico San, East West Journal Mail Order, and Walnut Acres (Penns Creek, Pennsylvania). Address: New York City, NY.

912. Perl, Lila. 1980. Eating the vegetarian way: Good food from the earth. New York, NY: William Morrow and Company. 93 p. Illust. Index. 25 cm. [9 ref]

• **Summary:** This children’s book discusses the reasons for vegetarianism, the different types of vegetarian diets, and why modern meat-raising techniques are causing many Americans to change their diets. Also offers alternative protein-rich recipes.

Pages 42 mentions soybeans, and page 48 mentions tofu, tempeh, and soy sauce. Address: Beechhurst, New York.

913. Sugiarto K., Ignatius. 1980. Penelitian pendahuluan tentang kerja lapuk dalam tempe [Preliminary research on the fermenting action of tempeh molds]. Thesis (Skripsi), Departemen Kimia, Matematika dan Ilmu Pengetahuan Alam Institut Teknologi Bandung, Bandung, Indonesia. 38 p. PBITB. [Ind]\*

Address: Bandung, Indonesia.

914. Thio, Goan Loo. 1980. Processing and application of soya beans for human nutrition at home and village levels (Abstract). In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Abstracts. Boulder, Colorado: Westview Press. 124 p. See p. 35-36.

• **Summary:** “It is of utmost importance that the less developed and the developing countries avail themselves of simple methods for processing soya beans into easily digestible soya products, which can be manufactured at home and village levels. These products should have a

high nutritive value and preferably a neutral, bland taste, so that they can be incorporated into local dishes of the countries concerned, without the risk of being refused by the population. Because of the neutral bland taste, these soya products will take on the taste and flavor of the national dish into which they are incorporated. In this way they will in most cases be directly accepted by the consumers. Soya products like soya milk and soya bean curd (also called *toufu* [tofu]), which have proved to be high quality protein sources and which have existed for thousands of years, can easily be flavored or spiced so that they will become as delicious as meat and fish dishes.

“Soya milk can be prepared easily at home and village levels just like soya bean curd and soya steak (also called tempeh). The most important factor is the absence of the beany taste in these products, and also the absence of trypsin inhibitors and of hemagglutinins. Especially for babies and toddlers these two antinutritive factors should be inactivated. As they both belong to the proteins, simple heat treatment during a few minutes at temperatures above 90 C is sufficient. With soya products prepared at home and village levels, a great variety of delicious dishes and high quality weaning food can be prepared.” Address: Royal Tropical Inst., Amsterdam, The Netherlands.

915. Walker, Robert. 1980. Re: How to make tempeh on a commercial scale at Tempeh Enterprises. Letter to William Shurtleff at Soyfoods Center—in reply to inquiry. 3 p. Undated. Handwritten

• **Summary:** A handwritten, detailed description of exactly how two people make tempeh on a commercial scale at Tempeh Enterprises.

Note: This description soon appeared in the book *Tempeh Production*, by Shurtleff and Aoyagi (March 1980, p. 91-94), with 10 illustrations. Address: Founder and owner, Tempeh Enterprises, R.R. 3 Box 7, Port Perry, Ontario L0B 1N0, Canada.

916. INTSOY. 1980? Soybean Foods Research Centre (SFRC), Gannoruwa (Brochure). 3 p. Undated. Publisher not given.

• **Summary:** Contents: Introduction. Home level. Village level. Commercial level: Full fat soya flour, coconut milk substitute, soya cereal extrusion cooked blends, soya milk (beverage), soya oil and meal, soya and cassava extrusion cooked blends, soya-maize extrusion cooked blends, Oriental soya foods (tofu and tempeh), soya sauce. Future plans.

917. Davis, Richie. 1981. Soy food prices to increase: Soybeans in shorter supply. *Recorder (Greenfield, Massachusetts)*. Jan. 2.

• **Summary:** The New England Soy Dairy of Greenfield now manufactures nearly 30,000 lb/week of tofu. They buy 15,000 lb/week of soybeans from Minnesota and Illinois.

The Tempeh Works buys 10,000 lb/month of soybeans to make 4,200 lb/week of tempeh.

Richard Leviton, “who said shipping costs account for 25 percent of the price of soybeans, said he, his wife and a third partner plan to start growing soybeans in the Hadley-Hatfield area this spring... The first year, he said, he plans on growing between 25 and 50 acres of organic soybeans on rented land. Eventual plans call for between 1,000 and 1,500 acres of soybeans.” A photo shows Louis H. Battalen checking tempeh at the Tempeh Works. Address: Staff reporter.

918. Root, Waverley. 1981. A cordial bow to the byproducts of the soybean. *Los Angeles Times*. Jan. 15. p. J42.

• **Summary:** This article is indebted to: Simonds, Nina. 1979. “Chinese cuisine: Bean curd.” *Gourmet*. Sept. p. 28-29, 84-91.

The soybean, which offers extraordinary versatility as a human food, can be transformed into soybean milk, “the soybean milk skin [yuba] derived from the milk, the bean sticks [bamboo yuba] made from the milk skin, the also edible sediment given off by the milk [okara], untreated bean curd [regular tofu and perhaps silken tofu], pressed bean curd which produces bean curd noodles [pressed tofu noodles], more tightly compressed bean curd cakes, and frozen-and-thawed bean curd [dried frozen tofu].”

In the process of making “pressed bean curd, another soybean food is created—bean curd skin [*pai yeh*, pressed tofu sheets], which should not be confused with soybean milk skin [yuba]. Dried bean curd skin,” which needs no refrigeration and is often stuffed, for example with chopped meat, is sold by weight by Chinese specialty shops throughout the world; five or six sheets weigh one ounce.

“There is a whole family of foods made from fermented bean curd” [fermented tofu]. Bean curd can be fermented in various ways. Bean curd loaves, for example, can be stored for the winter in a cool dark place; micro-organisms from the air cause fermentation. “The loaves acquire a fungoid coating, which has to be scraped off, and as far as I know is not used for food,...” Fermented bean curd, which has been called “soybean cheese,” is easier to digest than unfermented bean curd. Bean curd can also be marinated in rice wine, flavored with spices, and then allowed to ferment. A most unusual type of fermented tofu is stinky bean curd (*sh'ou tou fu*), a favorite Chinese snack. In Taipei, there are many street vendors who ply the streets with their portable deep fryers. This fermented tofu is usually deep-fried and usually eaten with one's choice of soy sauce, vinegar, mashed garlic, and chili paste.

Other fermented foods include miso, natto, hamanatto (which is of Korean origin), tempeh (of Indonesian origin), and shoyu (Soybean sauce, soy sauce).

“It is said that the best grades of soy sauce can take as much as six to seven years of aging to reach perfection, and

that the making of a superb soy sauce requires ‘as much art in its preparation as good French wines.’”

Flavorings are added to some Chinese soy sauce “various herbs, especially citronella; spices (ginger); aromatic vegetables (onions); and not only fermented fish, but even fermented chicken meat. To produce three liters (3.1 quarts) of sauce requires on kilogram (2.2 pounds) of beans.

“Fukien has the reputation of producing the best soy bean sauce in China and consequently stews many foods in it, giving them a color which has caused the culinary techniques of this region to be called ‘red cooking.’”

Soybean sauce is “often an important ingredient in many more complicated sauces—for instance Hoisin sauce in China and Worcestershire sauce in England.”

919. **Product Name:** Tempeh.

**Manufacturer’s Name:** Calindo Co.

**Manufacturer’s Address:** 617 Nebraska St., Vallejo, CA 94590. Phone: 707-644-8866.

**Date of Introduction:** 1981. January.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Mrs. L.J. Duson.

Letter from Sjon Welters. 1983. March 2. The official name of this company is Firma Enti. It was founded by a woman named Wedding. Her man [husband] was an Indonesian. Mrs. Duson, the woman who owns it now, could not remember if Mrs. Wedding was Dutch or Indonesian.

922. **Product Name:** [Tempeh].

**Foreign Name:** Tenpe.

**Manufacturer’s Name:** Firma Ergepe.

**Manufacturer’s Address:** 4 Singelsteeg, 3511 Utrecht, The Netherlands. Phone: 030-318-315.

**Date of Introduction:** 1981. January.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1981. Jan. 22.

923. **Product Name:** Tempeh.

**Manufacturer’s Name:** Homeland Foundation.

**Manufacturer’s Address:** Upper Thora, Bellingen, NSW 2492, Australia. Phone: 066-558-514.

**Date of Introduction:** 1981. January.

**New Product–Documentation:** Interview with Jonathan Gordon of White Wave, Inc. 1995. Nov. 16. Jonathan traveled to Australia in March or April 1981 and lived at the Homeland Foundation in Upper Thora, Bellingen, New South Wales, where he made tofu with other members of the community. Homeland was also making tempeh at the time Jonathan arrived but he was not a tempeh maker and he does not remember the tempeh maker’s name. He left Australia in about Dec. 1981 to return to England. Jonathan thinks their food plant did not have a name separate from the name of the Homeland Foundation. They did not package their tempeh. They just used to take it around in their own van to people’s houses and little food shops. But he may be able to find out. His close friend at Homeland, Karen James (an American), is now in California and she may remember; she worked more extensively in the food area than Jonathan did.

Talk with Karen James White, now living in Santa Fe, New Mexico. 1997. March 12. Karen recalls that she arrived at Homeland Foundation in either late December 1981 or early 1982. It was located about 40 miles inland from Coffs Harbour, in a lush, fertile green valley—perhaps 40-50 miles from the nearest neighbors. At that time the community was making and selling tempeh, and the shop (which also made tofu—in the same room as the tempeh—and sprouts) almost certainly had a name. She worked in the tempeh shop during her 3½ month stay at Homeland, where they typically made 30-40 pounds of tempeh per batch using an incubator as big as a refrigerator.

924. **Product Name:** Istemewa Tempeh.

**Manufacturer’s Name:** Istemewa Corp. (Tamarinda).

**Manufacturer’s Address:** 9918 Commerce Ave., Tujunga, CA 91042. Phone: 213-338-7178.

• **Summary:** Excellent tempeh was made from fava beans alone or blended with equal parts soybeans. Fava bean tempeh was more crisp than soybean tempeh. The crispness decreased with increasing soybean content. The beany flavor of the soybean has prevented it from playing a more important role in the Indian diet. Address: Dep. of Microbiology, College of Basic Sciences and Humanities, G.B. Pant Univ. of Agriculture and Technology, Pantnagar, India.

941. Fiering, Steve. 1981. Low technology soybean dehuller. *Soyfoods* 1(4):52. Winter. [1 ref]

• **Summary:** An essential article for anyone wishing to dehull soybeans using low-cost equipment, with one useful illustration. The basic machine, a simple stone dehuller, was developed and patented by Nelson and Ferrier at the University of Illinois. U.S. Patent 3,981,234. The separator, based on a vacuum cleaner blower, neatly and cleanly separates the hulls into a cloth bag.

“During last summer’s *Soyfoods Showcase* I was excited by the work of the University of Illinois in expanding the use of soybeans as human food. Their work with technology-deficient countries has led them to develop a ‘low tech’ soybean hull separator. This machine holds promise for

NOTE: A stone mill to dry dehull soybeans and this make-it-yourself hull separator is by far the best way of dehulling soybeans for making tempeh. Bill Shurtleff.

## SOYTECH

### Low Technology Soybean Dehuller

by Steve Fiering

During last summer's *Soyfoods Showcase* I was excited by the work of the University of Illinois in expanding the use of soybeans as human food. Their work with technology-deficient countries has led them to develop a "low tech" soybean hull separator. This machine holds promise for immediate use by the growing ranks of tempeh makers.

The machine is designed to separate the hulls from dry-cracked beans, a mixture of hulls and soybean fragments. For the University of Illinois prototype, the cracked beans are made from whole beans by a mill of their invention called a *drum dehuller*. The hulls are separated from the cotyledons by dropping the cracked beans through an upward flow of air. The light hulls are carried upward and the heavier cotyledons fall through the updraft and are collected at the bottom.

For a detailed description of the machine's construction, I will quote from the inventors, Nelson and Ferrier. Writes Alvin Nelson:

"The dehuller was developed by the writer and two associates while I was on assignment in India. It is patented and the U.S. Patent Number is 3,981,234 which was issued on September 21, 1976. As with our soybean beverage base, the patent belongs to the University of Illinois Foundation and its use requires suitable arrangements.

"The body of the separator consists of a vertical four-inch diameter plexiglass tube, three feet long. A rectangular feed tunnel, with interior measurements of 3½" wide x 1" wide x 10" long is mounted six inches from the top of the tube making a 50 degree angle with the tube. A loading hopper, with a sliding feed door, is attached to the top of the feed tunnel. The top of the separating tube is connected with a four inch diameter, four-foot long flexible hose, to a squirrel cage blower (Torrington, Model FE610 Airtor) powered by a 3,450 rpm, ¼ hp., Westinghouse electric motor. This blower is designed to deliver air at 200 cfm. A collection box is connected to the outlet of the blower to catch the separated hulls. The bottom of the plexiglass tube is open and air flows rapidly up through the tube

when the blower is operating so that hulls are carried upward and cotyledons fall out of the lower end. During early tests it was noted that the cotyledons carried along some hulls as they dropped through the tube. To avoid this, a deflector was placed in the feed tunnel to direct the cracked beans to the inside surface of the wall of the tube. This encourages cotyledons to fall in a spiral path around the wall of the tube and thus tends to provide the hulls with a clear path to move up through the center of the tube. In addition, the cotyledons travel a longer path around the inside surface of the tube which allows opportunity for more efficient hull separation."

The separator is an admirably efficient machine. It processes five pounds of dry cracked beans per minute and in two passes will virtually

remove 100 percent of the hulls with .06 percent of the cotyledon carried up with the hulls. Such efficiency is not demanded in tempeh making because 100 percent of the hulls do not have to be removed. Possibly a tempeh maker could make do with one pass. The speed of bean feed is controlled by the previously mentioned slide below the hopper while the amount of draft is controlled by a similar slide just prior to the blower in the flexible hose. These controls give the separator some ability to adjust to variables in the cracked beans fed to it. This adjustability of the separator will be needed as soycrafters try to combine this machine with their current bean-cracking system.

Further information is available from Dr. A.I. Nelson, 110 South Wing Horticulture Field Lab, University of Illinois, Urbana, Illinois, 61801.

immediate use by the growing ranks of tempeh makers.”

Note 1. This is the earliest document seen (Sept. 2011) with the term “low technology” (or “low tech”) in the title.

Note 2. This is the earliest document seen (Sept. 2011) that contains the term “low tech” (“low-tech”).

Note 3. The description of this dehuller and hull separator (with different illustrations) first appeared in: Nelson, A.I.; Ferrier, L.K. 1976. Soybean processing using low level technology. Urbana, Illinois: University of Illinois. 34 p.

Note 4: In a 2-page letter to Bill Shurtleff dated 16 July 1984, A.I. Nelson says: “The hull separator is not patented and can be used by any interested parties.”

Address: The Soy Plant, Ann Arbor, Michigan.

942. Fiering, Steve. 1981. Demystifying refrigeration. *Soyfoods* 1(4):48-51. Winter. [2 ref]

• **Summary:** An excellent introduction to an essential subject for soyfoods makers who sell refrigerated or frozen products. “A cooler takes heat from within an insulated box and releases the heat into the environment outside the box. This is accomplished by taking advantage of the fact that when a liquid changes to a gas (evaporates), it absorbs a great deal of heat, and when a gas changes to a liquid (condenses), it releases heat.

“All coolers work on this very simple principle. A substance, generally freon [Freon], is brought inside the

cooler box as a liquid and once in the box, allowed to evaporate; thus absorbing heat from within the box. The freon is taken out of the box as a gas and then condenses back into a liquid releasing heat. The liquid is sent back into the cooler, allowed to evaporate, then once more taken out and condensed. This cycle—called the refrigeration cycle—continues until the box is cool enough. It’s a simple idea, though the mechanics of accomplishing it may be complex.”

The three basic units of every refrigeration unit are the compressor, evaporator, and condenser. Two illustrations show the relationship between these basic components. Address: The Soy Plant, Ann Arbor, Michigan.

943. Grant, Therese Carroll. 1981. Tempeh: Molds make it happen. *Learning*. Feb. p. 45, 48.

• **Summary:** Contains a science lesson for children on how to make and eat tempeh; doing so offers an excellent classroom opportunity for the study of molds. They also learn about and develop positive attitudes toward beneficial molds. “Children learn not only about the life cycles of molds and conditions for optimum growth, but also inoculation and incubation techniques and how to use a microscope. It can also be used to teach an awareness of plant proteins and their anticipated role in helping to solve world hunger problems.” Address: Acme, Washington.

**TEMPEH BURGER**

**Recipes**

**SWEET AND SOUR TEMPEH**  
Serves 3 or 4

Oil for frying  
8 oz. tempeh, cut into slices each  
1/2 by 1/2 by 1/4 inch thick  
1 1/2 T. oil for sauteing  
1/2 c. sliced onions  
1 clove of garlic, minced  
1/2 c. sliced mushrooms  
1/2 c. sliced green pepper  
1/2 c. thin sliced carrots  
Sauce (premixed)  
2 T. honey  
2 T. vinegar  
1 1/2 T. shoyu (natural soy sauce)  
1 T. cornstarch  
1/2 c. water or stock

Heat oil to 375° F. in wok or skillet.  
Fry tempeh for 5 minutes. Drain well.  
Heat wok and coat with the 1 1/2 T. oil.  
Add onions and garlic and saute for 2 minutes. Add the next three ingredients and saute for 1 minute more. Stir in sauce until thickened. Mix in tempeh and remove from heat. Serve over rice or noodles, hot or chilled.

**TEMPEH IN TOMATO & HERB SAUCE**  
Serves 4 or 5

Oil for frying  
10 oz. tempeh, cut into slices each  
1 by 2 by 1/4 inch thick  
2 T. margarine  
1 onion, minced  
2 cloves of garlic, minced  
2 c. tomato sauce  
2 T. honey  
1 T. shoyu (natural soy sauce)  
1/2 t. basil  
1/2 t. oregano  
Dash of thyme  
Dash of marjoram  
Dash of cayenne

Heat oil to 375° F. in wok or skillet.  
Fry tempeh for 5 minutes. Drain well.  
Melt margarine in pan. Saute onion and garlic for 5 min. Mix in tempeh and remaining ingredients. Bring to a boil, then simmer uncovered for 30 minutes. Serve as spaghetti sauce, sloppy joe, lasagna filler, or pizza topping.

Tempeh can be fried, steamed, baked, broiled, or barbecued.

946. *Soyfoods*. 1981. Soyfoods showcase 1980 [Third Annual Soycrafters Association conference at the University of Illinois is a big success]. 1(4):6. Winter.

• **Summary:** The conference, titled *Soyfoods Showcase* under the direction of Richard Leviton, was convened at the University of Illinois at Urbana on 9-13 July 1980. Over 270 people attended, including representatives for 10 other nations, in addition to 15 Third World students already on campus for the INTSOY summer training program. Representatives of a number of large American food companies also attended, including Kraft, Beatrice Foods, General Foods, and General Nutrition.

“In addition to its rigorous intellectual format, *Soyfoods Showcase* featured 12 vegetarian-soyfoods meals prepared by Small Planet Catering of Chicago and Catering Plus of Champaign. Buffet meals included tofu lasagna, tofu spread in pita bread, tofu enchiladas, tofu ‘egg salad’ sandwiches, tempeh ‘sloppy joes,’ barbecued tofu in Chinese stir fry, miso paté, Indonesian gado-gado with tempeh, spinach tofu quiche, and tofu cheesecake.” A photo shows Akiko Aoyagi teaching a cooking class.

947. Turtle Island Soy Dairy. 1981. And now... Tempeh

information and recipes (Leaflet). Forest Grove, Oregon. 2 p. Front and back. 35 cm.

• **Summary:** This leaflet is printed with dark brown ink on orange-tan paper. The front contains information about tempeh, with the company logo and two illustrations. The back contains five recipes: Basic recipe. Jeff & doc’s tempeh spaghetti. Linda Klatt’s tempeh cutlets. Baked Indonesian tempeh. Tempeh Reuben Sandwich (the most popular sandwich at the Hope Co-op in Forest Grove). “For more recipes look for our “Recipe of the Month” cards in your neighborhood store.

Talk with Seth Tibbott, founder and owner of Turtle Island. 2000. Oct. 10. This leaflet first appeared in about Feb. 1981.

Note: This is the earliest document seen (Sept. 2011) concerning Turtle Island and tempeh (or soy). Address: 2017 21st Ave., Forest Grove, Oregon 97116.

948. **Product Name:** VFP Tempeh.

**Manufacturer's Name:** Victor Food Products, Ltd.

**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.

**Date of Introduction:** 1981. February.

**New Product–Documentation:** Ad in Chimo. 1981. Feb. p. 15.

949. O’Connell, Jean. 1981. First cousins in Greenfield [Massachusetts]: Tempeh follows tofu to market. *Morning Union (The) (Springfield, Massachusetts)*. March 18. p. 25-26.

• **Summary:** A few nights ago the New England Soy Dairy organized a dinner meeting in Greenfield for the members of the Northeast Chapter of the Institute of Food Technologists. The meal included cottage cheese made without milk and lasagna made without meat. “Fairly tasty, but hardly exciting.” But the dinner menu wasn’t the point. Rather the “event served to point out that soy is coming of age here in the Connecticut Valley.” More people are including tofu in their cooking, and tofu is now available in the lunch program of the Springfield public schools. “Soy is a good, cheap source of protein and it’s receiving more attention as people scramble to beat, or at least meet inflation.”

A little tofu shop named Laughing Grasshopper opened in 1976 in Greenfield. It was the forerunner of the New England Soy Dairy which is now the third or fourth largest tofu maker in the USA. Eighteen months ago Michael Cohen, one of the four partners, left the Soy Dairy to establish his own soy business, the Tempeh Works, which is also located in Greenfield. Cohen’s shop now produces

an average of 4,000 lb/week of tempeh. Photos show: (1) Michael Cohen putting soybeans into a centrifugal extractor for removal of the water before adding tempeh culture. (2) Skat McPherson examining finished cakes of tempeh on a rack at the Tempeh Works.

"Another chapter in the soy story in the Connecticut Valley is expected to begin in the fall of this year with the opening of the South River Miso Company in Conway [Massachusetts]. Christian Elwell and his family are moving the company here from Ohio.

"Miso, even less known than tempeh, is a fermented soybean puree made with water and barley or rice. It has a long fermentation period and is used for such things as soup stock, according to Elwell who attended the Soy Dairy dinner in Greenfield.

"There are only three miso companies in the United States, one on the West Coast, one in North Carolina [American Miso Co.] and the one which is coming to Conway, it was noted by Richard Leviton at the Greenfield meeting." Leviton added that he and others in the soy industry are heartened that a few farmers in the Connecticut Valley are trying to grow soybeans, since the nearest source is now about 1,000 miles away. Contains a recipe for "Peanutty Soy," peanut butter extended with tofu, from Madeline Fox, marketing director and recipe developer at the New England Soy Dairy.

Note: This is the earliest document seen (Nov. 1999) that mentions the South River Miso Company—which began selling miso under its name in Oct. 1982. Address: Union Food and Fashion Editor.

950. Hesseltine, C.W. 1981. Work with soyfoods, Dr. Charles Thom, the NRRC culture collection, and the NRRC's main contributions related to fermented foods (Interview). Conducted by William Shurtleff of Soyfoods Center, March 20. 1 p. transcript.

• **Summary:** Contributions: (1) The development of solid-substrate fermentation, an indirect spinoff of work with foods, is now widely used in the West. Originally it was used for the production of enzymes, and later for experimental production of aflatoxins from *Aspergillus species*. (2) The introduction of pure culture yeasts in the miso fermentation process in place of the addition of lots of old miso. This is now completely accepted and widely used; (3) The use of perforated plastic bags to make tempeh. Address: Chief, Fermentation Lab., NRRC, Peoria, Illinois.

951. Hicks, Alastair. 1981. Re: History of the full-fat soy flour factory in Thailand. Letter to William Shurtleff at Soyfoods Center, March 25. 2 p. Typed, with signature on letterhead.

• **Summary:** "The full fat soy flour factory in Thailand commenced production of soyflour during commissioning trials which I ran in the week April 24-28, 1978, as food

engineer to the project. The location is Mae Chan, a small village outside Chiang Rai in the far north of Thailand, near the Golden Triangle. The plant was initiated by the ASEAN Sub-Committee on Protein, whose chairman is Professor Amara Bhumiratana, Director of the Institute of Food Research and Product Development (IFRPD), Kasetsart University, Bangkok, Thailand.

"The king of Thailand, King Bhumibol Adulyadej, provided the land and buildings, as part of the Thai contribution to the project. One aim of the Royal Preserved Foods Project is to encourage Hill tribe farmers to grow crops other than opium poppies, in this case, nutritious soybeans, as part of an overall crop substitution program...

"The factory is able to make the following products: cleaned soybeans (up to 3 ton/hour); clean, cracked, debittered soybeans (a possible tempeh raw material); enzyme inactive full fat soyflour. The latter products can be produced at 1.1 tonne/hour. Enzyme active products could also be produced. Most of the full fat soyflour is utilized in the production of Kaset Infant food, a baby food produced at the I.F.R.P.D. in Bangkok. This product in turn is supplied to the hundreds of baby health centers throughout Thailand.

"For further information on these and other details, I suggest you write to Professor Amara... Meanwhile, I would like you to record the Department of Food Technology, Hawkesbury Agricultural College of Advanced Education, Richmond, N.S.W., Australia, as a center for soyfoods processing and research in Australia.

"We have an ongoing program of agricultural research in soybean varieties suitable for the Asian market. Related to this we have developed tofu trials and soybean canning trials. Presently we are developing soymilk from full fat soyflour and tempeh as a soyfood in Australia." Address: Lecturer, Dep. of Food Technology, Hawkesbury Agricultural College, Richmond, NSW 2753, Australia. Phone: (045) 701 333.

952. Fukushima, D. 1981. Soy proteins for foods centering around soy sauce and tofu. *J. of the American Oil Chemists' Society* 58(3):346-54. March. [41 ref]

• **Summary:** Contents: Abstract. Introduction. Soy sauce varieties: Koikuchi, usukuchi, tamari, saishikomi, and shiro shoyu. Soy sauce manufacturing process (for each of the 5 types). Miso. Other fermented products: Tempeh and natto. Tofu and related products: Regular and silken tofu, dried-frozen tofu, deep-fried tofu. Fermented tofu (Sufu). Other soy products: Soy milk, fermented soy milk beverages, yuba.

This paper discusses traditional Oriental soy protein foods which are growing rapidly in popularity in the USA among non-Asian-Americans.

"Generally speaking, soy sauce is divided into two groups: fermented soy sauce and chemical soy sauce. Fermented soy sauce has a long history as a human food, whereas chemical soy sauce has a history of only several decades. In fermented soy sauce, the proteins and

carbohydrates contained in the materials are hydrolyzed very slowly under mild conditions below 30°C for over six months, whereas in chemical soy sauce they are hydrolyzed quickly by hydrochloric acid at 80°C for 8-10 hours. Chemical hydrolysis is a cheap and rapid process, but during the hydrolysis, various secondary reactions occur and produce undesirable compounds, e.g. dark humins, furfural, dimethyl sulfide, hydrogen sulfide, levulinic acid and formic acid, which are not present in fermented soy sauce. Furfural, dimethyl sulfide and hydrogen sulfide, which have strong, bad odors in themselves, are derived from pentose, methionine, and sulfur-containing amino acids respectively. Furthermore, tryptophane, one of the nutritionally important amino acids, is destroyed almost completely. As shown in Figure 1 [two chromatograms], the main organic acid of fermented soy sauce is lactic acid, whereas the main organic acid of chemical soy sauce is formic acid. Levulinic acid, present in chemical soy sauce, does not exist naturally.

“To improve the odors of chemical soy sauce, semichemical soy sauce was devised. It is made by hydrolyzing raw soybeans with a lower concentration of hydrochloric acid (7-8%) as the first step, followed by fermenting the hydrolysate with osmophilic yeasts in the presence of wheat koji.” In Japan, chemical soy sauce is not used as a soy sauce in itself, but as an extender for fermented soy sauce.

Table 1 gives the typical chemical composition (per 100 ml) of the five varieties of traditional soy sauce in Japan, including Bé [Baumé; a measure of the relative density of liquids], sodium (koikuchi is lowest at 17.6%, usukuchi is highest at 19.2%), total nitrogen (koikuchi has 1.55 gm, tamari has 2.55 gm or 65% more), formol nitrogen, reducing sugar, alcohol (koikuchi is 2.2%, by far the highest), pH (ranges from 4.6 to 4.8), and color.

A brief description of each of the five traditional varieties: (1) Koikuchi: This “dark-colored” shoyu is by far the most popular of the five types of fermented soy sauce in Japan, comprising 85% of the total. It is an all-purpose seasoning with a strong aroma, complex flavor, and deep, reddish-brown color. These characteristics are mainly derived from the use of equal amounts of wheat and soybeans in the koji; (2) Usukuchi [light-colored] shoyu is characterized by a lighter, red-brownish color and a milder flavor and aroma. It is used mainly for cooking when one wishes to preserve the original flavor and color of the food itself. As in koikuchi, equal amounts of soybeans and wheat are used in the koji, but the fermentation is done under conditions which prevent the development of a dark color. (3) Tamari shoyu has a higher amino acid content, but it lacks aroma. The koji is made primarily from soybeans with little or no wheat. (4) Saishikomi (twice-fermented) shoyu is made using equal amounts of wheat and soybeans in the koji, but using raw (unpasteurized) soy sauce instead of salt solution, which is mixed with the harvested koji.

Saishikomi is characterized by aroma and full-bodied taste. (5) Shiro (clear, or “white”) shoyu is made by using a very high ratio of wheat to soybeans in the koji, and further by fermentation under conditions which prevent dark color development. It is characterized by a very light yellow to tan color, though the amino acid content is very low because of the low soybean content in the koji. Flow sheets show the process for manufacturing koikuchi, usukuchi, and tamari shoyu. Each has three basic parts: Koji making process, brine fermentation process, and refining process.

Concerning soy sauce production and consumption: The total annual production of soy sauce in Japan in 1979 reported by the Japanese Agricultural Standard (JAS) was 1,252,431 kiloliters (kl). In 1979 in Japan, about 70% of the soy sauce products in Japan were purely fermented, 25% contained some semichemical soy sauce, and the remaining 5% contained chemical (HVP) soy sauce. The most recent estimates of annual consumption of soy sauce in the USA are as follows: Fermented soy sauce 17,850 kl; Chemical (HVP) soy sauce 25,500 kl. Within fermented soy sauce, production of koikuchi soy sauce is estimated to be 16,500 kl/year.

In Japan an “instant tofu powder” is actually a spray-dried soy milk. This product was made and introduced by *Nihon Tanpaku Kogyo* (Japan Protein Industry) about 15 years ago (ca. 1966) and was used mainly as a raw material for making regular or silken tofu in order to save time. “Recently, however [1973], the product was placed on the market as an instant powdered tofu [named *Hausu Hontôfu*] by Hausu [House] Foods Co.”

A photo shows D. Fukushima. Address: Kikkoman Foods, Inc., Walworth, Wisconsin 53184.

• **Summary:** The phytic acid content decreased rapidly during fermentation. Phytase is the enzyme that hydrolyzes phytates. Address: Dep. of Food Sciences & Human Nutrition, Michigan State Univ., E. Lansing, MI 48824.

959. **Product Name:** Tempeh.

**Manufacturer's Name:** Harvest Wholefoods.

**Manufacturer's Address:** 403 Richmond Rd., Grey Lynn, Auckland, New Zealand.

**Date of Introduction:** 1981. April.

**Ingredients:** Whole soybeans, water, culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 250 gm plastic bag.

**How Stored:** Frozen.

**New Product–Documentation:** Chalmers, Elizabeth. 2007. Jan. 16. "Business history of the Chalmers family: Making soyfoods in New Zealand" (Interview). Letter (e-mail) from Elizabeth Chalmers. 2007. Jan. 23. This tempeh was not made with organic soybeans. "In 1981 you could only get 2 things in New Zealand that were organic—wheat & rye. We didn't start using organic soybeans until we started the Organic Soy Company in 1996. We always made tempeh in perforated plastic bags, then packaged it in another labeled plastic bag. We sold it frozen. The typical weight was 250 gm. We got our spores from Betty at GEM Cultures. We learned how to make tempeh from *The Book of Tempeh*, by Shurtleff & Aoyagi." As far as Elizabeth knows, this was the first tempeh made and sold commercially in New Zealand. "There was a Dutch Indonesian guy who used to do Indonesian food from his home, and he made a bit of tempeh, but as soon as we started making it he stopped, as it was too much work on top of his meals."

960. Soyfoods Center; Soycrafters Assoc. of North America. 1981. Soyfoods Production in America and the West (News release). Lafayette, California: New-Age Foods Study Center. 1 p. April. Updated in Sept. 1981 in a neater format.

• **Summary:** A table shows production statistics for 25 types of soyfoods. Number of manufacturers in the USA, Canada, Other West, Total; Tons of raw soybeans/year used by each food. Yield of food from 1 unit weight of soybeans. Wholesale value. Retail value. Number of people employed. Address: P.O. Box 234, Lafayette, California 94549.

961. Lesem, Jeanne. 1981. Will Americans swallow soybeans? *Morning Union (The) (Springfield, Massachusetts)*. May 13. p. 29. [1 ref]

• **Summary:** According to this summary of an article by Judy Brown in the *National Food Review*, a USDA quarterly, tofu, tempeh, and miso are becoming increasingly popular.

962. Lesem, Jeanne. 1981. Will soybeans now follow margarine on road to success? *Hartford Courant (Connecticut)*. May 13. p. E12.

• **Summary:** This article is a telephone interview with Judy Brown, based on her article in the *National Food Review*, a USDA quarterly. "Tofu (toe-foo) is as much a part of Japanese culture and cookery as bread is in the United States," says Brown. Also discusses tempeh, miso, soy flour and grits, and "textured vegetable products."

• **Summary:** Methods of preparation are given for the following soyfoods: Tofu, soy sauce, miso, hamanatto, sufu, tempeh, natto. A table gives local names, descriptions, and uses for traditional East-Asian non-fermented soyfoods: “Fresh green soybeans (mao-tou, edamame),” soybean sprouts (huang-tou-ya, daizu no moyashi), soybean milk (tou-chiang), protein-lipid film (tou-fu-pi, yuba), soybean curd (tofu, tou-fu, tubu, tahoo, touhu, taufoo, dou-fu, dan-fu), and soybean flour (tou-fen, kinako). Local names, organisms used, substrate, and description of the product are given for traditional East-Asian fermented soyfoods: soy sauce, miso, hamanatto, sufu, tempeh, and natto.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “taufoo” to refer to Chinese-style tofu. Address: NRRC, Peoria, Illinois.

967. O'Neill, K. 1981. America, God willing, becomes a tempe nation. *Tempo*. June 13. p. 49-50. [1 ref]

• **Summary:** Tempeh has started to be sold in Indonesian

supermarkets. They are displayed on the stands at Pekan Raya in Jakarta. KOPTI was founded on 11 March 1979. The cooperative split off from a firm which equalized the distribution of soybeans, which are still imported and always in short supply. Indonesia requires 4,300 tons of soybeans a day. Of that total, 3,000 tons is for tempeh and 1,300 tons for tofu. KOPTI, which now has more than 12,000 members from 40 cooperatives, is headed toward mechanization.

Note: This is the earliest document seen (Sept. 2011) that mentions KOPTI. Address: New York.

968. Rothert, Yvonne. 1981. Use of soybean well-known, but here comes tempeh. *Oregonian (The) (Portland, Oregon)*. June 24.

• **Summary:** About Seth Tibbott (a photo shows him carrying a tray of finished tempeh) and Turtle Island Soy Dairy.

Tibbott started make tempeh on a home scale in Tennessee in 1977, and commercially in December 1980 in Oregon, in 50- to 60-lb batches. Compared with tofu, says Tibbott, tempeh has a more meatlike texture and flavor that “you can sink your teeth into and chew on.” “Tibbott has also begun marketing an herb-seasoned tempeh, flavored with basil and oregano, which is pressed into sausagelike rolls instead of cakes.”

Contains recipes “collected from Oregon tempeh lovers” for: Indonesian-style baked tempeh. Sauteed tempeh. Tempeh spaghetti. Tempeh cutlets. Tempeh Reuben. Tempeh teriyaki. Address: Oregonian staff.

969. **Product Name:** Tempeh Brothers Soyfurters (Marinated Tempeh Sticks Resembling Square Hot Dogs).

**Manufacturer's Name:** Appropriate Foods, Inc.

**Manufacturer's Address:** 137 New Hyde Park Rd., Franklin Square, Long Island, NY 11010.

**Date of Introduction:** 1981. June.

**Ingredients:** Organic soy tempeh, shoyu, herbs, spices.

**Wt/Vol., Packaging, Price:** 5 oz.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1982. June 15. 2 by 5 inches. Orange on light grey. Interview with Robert Werz. 1987. Sept. 9. Made by slicing a cake of tempeh lengthwise into 4 sticks and marinating in a soy sauce, seasoned with liquid smoke. Introduced 15 June 1981. Discontinued 30 Dec. 1982.

970. Bassett, Barbara. 1981. Surprise! Its soy: New ideas for soy cookery from the Soyfoods Center. *Bestways*. June. p. 70-71, 74.

• **Summary:** This is an interview with William Shurtleff plus recipes for their latest favorite (previously unpublished) tofu recipes, including Yummy no-egg carob-applesauce cake with tofu, No-egg tofu carrot cake with tofu-tahini icing, Tofu cheesecake with strawberry topping, Tofu-apple-nut whole-wheat bread, Savory tofu cutlets (fried), Tofu carob

parfait, Wonderful creamy tofu dip or dressing: our favorite latest discovery, and Eggless egg salad sandwich. Photos show: Each of the above recipes. Akiko Aoyagi seated behind a table on which are various tofu recipes.

971. **Product Name:** Soy Tempeh.

• **Summary:** Contents: Tempeh: Introduction, vitamin B-12 and tempeh, tempeh recipes (five recipes). Soymilk yogurt: Introduction, making the soymilk for soy yogurt, to make your mother culture, to make yogurt from mother culture, flavoring your yogurt, yogurt recipes. A photo shows Suzy Jenkins, smiling and holding a large container of tempeh. Address: The Farm, Summertown, Tennessee.

975. Smith, Paul. 1981. Re: Pioneering work with debittered full fat soy flour and with soybeans in Australia. Soybean production in Australia. Letter to William Shurtleff at Soyfoods Center, undated. 2 p. Handwritten. Plus comments on draft of History chapter.

• **Summary:** Comments on “History of Soya in Australia” manuscript: Vincent R. Smith was a soyfoods pioneer in Australia. In 1951-52 he began to manufacture Australia's first whole (full-fat) heat-treated (debittered) soy flour. From 1953-54 to 1974-75 V.R. Smith also canned soybeans in tomato sauce or puree. In 1956 he founded Soy Products of Australia Pty. Ltd. Between 1965 and 1974-75 Mr. Smith developed and manufactured two soyabean meat substitutes—Soya Bean Luncheon Loaf, and Savoury Roast—for Bellevue Health Supplies, as part of his product range within F.G. Roberts' Health Foods Proprietary Ltd. This latter company has since been absorbed within Soy Products of Australia Pty. Ltd. Technically and nutritionally these products were excellent, but they were discontinued due to rising labour costs, the small Australian market, and competition from larger, more highly automated companies like Sanitarium and Heinz. At the time, possibly due to the very cheap cost of meat in Australia, there was very little market interest in soyabeans either as a food, meat substitute, and/or extender.

By 1981 Soya Products of Australia Pty. Ltd. was making debittered full-fat soy flour and grits, Soy Crunch (a breakfast cereal containing soy grits), Soy Compound (containing dry soymilk, whole soy flour, malt, and lactose), and several types of Muesli containing soy grits. The company's main role is in supplying high grade, human consumption quality raw (enzyme active) and debittered (heat-treated) soy grits and soy flour to industry [food processors] for a wide variety of uses: cakes, biscuits, bread, bread premixes, pizzas, breakfast cereals and mueslis, hamburgers, smallgoods, baby foods, soy milk, soy ice cream, tofu, and calf- and piglet rations.

Interest in soyfoods is growing in Australia, and will continue to grow fostered by increasing health consciousness and the rising prices of meats of all kinds. After the end of the Vietnam war in 1975, there was a big influx of Vietnamese into Australia, swelling the number to 50,000, of which 30,000 are ethnic Chinese. There are also some 10,000 Indonesians currently residing in Sydney alone.

Letter: “Thank you for your hospitality during my visit to the USA... We are now more than fully occupied running, maintaining, and expanding our soy flour mill and our health food business. In the last two years we have made substantial improvements in our quality control, throughput, and heat-treatment process. We have also been working on improving our bulk unloading and grain cleaning system, and plans for extending and further automating our plant are well in hand... We are actively participating in research and development work on soy flour and its end uses: particularly in the areas

Cric - 2001/06  
Tempeh**CRICKLEWOOD SOYFOODS**

**1/4 lb. Burger**  
*Mmm... This Really is a Tasty Burger!*

of liquid and powdered soymilks and soy ice cream.

"We were amongst the first people in Australia to use soya beans to make products for human consumption, in particular heat-treated or debittered full fat soy flour. We were actively involved with the first commercial crops of soybeans grown in Australia in the early 1950s at Kingaroy; we even had a plot of several varieties of soyabeans growing in our own backyard for several years from about 1953-55. Though the bushes grow, the soybeans never mature properly. We also did some interesting work in canning beans in tomato sauce or purée and in manufacturing soy meat substitutes. In addition to our conventional bakery and small goods outlets, our own specialty products and breakfast cereals, we are now supplying several small manufacturers of tofu, soymilk with soybeans, soy flour (raw), and soy grits (raw) and have recently become involved in tempeh manufacture. The trend here in Australia is definitely following that in the USA and interest seems to have grown dramatically in the last year or so. Soyfoods seem to have taken off... Unless you can afford shiploads, freight to Australia is a killer, so we do our best to avoid importing soybeans.

"I am enclosing a recent newspaper article about a tofu producer. We supply him with soy flour for making his tofu and soymilk."

Concerning soyabean production in Australia: "Soyabeans are widely grown in Australia from just north of Shepparton in Victoria (120 miles north of Melbourne), through the Riverina district of southern New South Wales (NSW), through central, north, and northeastern NSW; the Darling Downs area (around Toowoomba) and Kingaroy districts of Queensland. More recently soyabeans have been grown in Western Australia, near Perth.

"A great deal of work has gone into developing suitable varieties of soyabeans for Australian conditions; much of this has been built on American research and experience. U.S., Chinese and Australian beans, while generally similar, are very different to handle and process, in our experience.

"Initially, soyabeans were grown under natural rainfall but this is now rare as bean size tends to be small and yield poor. Soyabeans are definitely not suited to dryland farming techniques. Nearly all soya beans now grown in Australia are grown under irrigation."

Update (March 1995): Paul Smith joined this family-run company in April 1980. In 1981 he was just starting to learn about its history. By 1986 he had done extensive research and writing (which see) on the company history, which showed that it had much earlier and very interesting origins. Address: Soy Products of Australia Pty. Ltd., 69 Power Road, Bayswater, VIC 3153, Australia. Phone: (03) 729-1738 or 729-3611.

**Manufacturer's Name:** Turtle Island Soy Dairy.

**Manufacturer's Address:** c/o Hope Co-op, 2017 21st Ave., Forest Grove, OR 97116.

**Date of Introduction:** 1981. June.

**Ingredients:** Organically grown soybeans, water, apple cider vinegar, marjoram, basil, oregano, thyme, summer savory, *Rhizopus oligosporus* (tempeh starter).

**Wt/Vol., Packaging, Price:** 8 oz plastic wrapped cylinder. Retail for \$1.28.

**How Stored:** Frozen.

**New Product–Documentation:** Tibbott. 1982. Soyfoods. Winter. p. 31. "The soy tempeh with herbs." Label, undated. "New! The soy tempeh with herbs." This label, 5½ by 3½ inches, is printed red on white. The Turtle Island logo appears large in the upper left corner. A turtle, upon whose shell appears the continents of North and South America, is inside of a circle formed by a vine with soybean leaves. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 56.

980. **Product Name:** Five Grain Tempeh (With Soybeans & Rice & Millet & Sunflower Seeds & Sesame Seeds).

**Manufacturer's Name:** Turtle Island Soy Dairy.

**Manufacturer's Address:** c/o Hope Co-op, 2017 21st Ave., Forest Grove, OR 97116.

**Date of Introduction:** 1981. June.

**Ingredients:** Soybeans, millet, rice, sunflower seeds, sesame seeds.

**New Product—Documentation:** Tibbott. 1982. Soyfoods. Winter. p. 31. "From a production standpoint, it is the most difficult tempeh to make." Shurtleff & Aoyagi. 1985. History of Tempeh. p. 56. This was America's first tempeh containing multiple cereal grains.

981. Vaidehi, M.P. 1981. A few soyabean products requiring better attention. *Lal-Baugh Journal (The)* 26(2). April/June. [Eng]

• **Summary:** "Soyabean should be considered not primarily as a meat substitute, but rather as a food ranking with meat, eggs, milk, and cheese, in protein content and supplementing these foods in the diet."

"The most popular south Indian fermented breakfast foods are 'idli' and 'dose'" [dosai]. Their batters are naturally fermented with wild yeasts present in the atmosphere. Soya dhal could be used as a partial replacement for black gram dhal in making either of these popular foods. A recipe is given.

Recipes are also given for making tempeh, tempeh chips, tempeh curry, soy milk, soy curd and butter milk, tofu (like paneer). Cow's milk paneer retails for over Rs. 25/- per kg. whereas tofu retails for Rs. 8-10 per kg—less than half the price. Address: Univ. of Agricultural Sciences, Bangalore, India.

982. **Product Name:** Soybean Tempeh.

**Manufacturer's Name:** White Cloud Tempeh.

**Manufacturer's Address:** 12333 Mt. Angel Gervais Rd., Mt. Angel, OR 97362. Phone: 503-845-9261.

**Date of Introduction:** 1981. June.

**New Product—Documentation:** Letter. 1982. Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Roberta Rodriguez. Company name is given as Colony Soy Dairy & White Cloud Tempeh.

983. Flinders, Carol. 1981. Like tofu and miso, tempeh is soybean import from Asia: Notes from Laurel's Kitchen. *Hartford Courant (Connecticut)*. July 8. p. E7.

• **Summary:** A good introduction to tempeh and to *The Book of Tempeh* by Shurtleff and Aoyagi. Contains a recipe for Barbecued tempeh.

984. Mounts, T.L. 1981. Soycrafters annual meeting. *Northern Regional Research Center; Notes from the Director (Peoria, Illinois)* No. 1468. p. 1-2. July 17.

• **Summary:** "The fourth annual meeting of the Soycrafters Association was held on the campus of Colorado State University at Fort Collins, July 8-12. The foods receiving the most attention were tofu and tempeh, and modifications of them. Richard Leviton, Executive Director of the organization, pointed out that the growth rate of traditional soy foods is 25 to 30% each year, and he projected gross sales of \$620 million by 1990. Currently the total sales are more than \$50 million. California now has a pilot study on tofu for the school lunch program."

"Since 1979, the taste and appearance of soy foods served at these meetings has greatly improved. The tempeh burgers, served on a bun with lettuce and tomatoes, were exceptionally good." Address: Director.

985. Kornblatt, Sasha. 1981. Re: Request for permission to use a quotation from *The Book of Tempeh, Vol. II (Tempeh Production)*. Letter to William Shurtleff and Akiko Aoyagi at New-Age Foods, July 24. 2 p. Typed, with signature on letterhead.

• **Summary:** "Since we moved into our new facility, things here at Surata have been very exciting. While we are still a co-operative, we have organized to insure a strong management to effectively respond to the fast pace of the food industry. In May, I became Marketing Manager."

At the new plant, for the first time, Surata is able to produce more than the demand. "While natural food stores

have always been responsive and pioneering accounts for us, that market is saturated and becoming increasingly competitive..." Now Surata is working to become "competitive and effective in the supermarket arena. We have been doing very well in a supermarket that sells [tofu in] bulk, surprisingly, and we are planning to approach other accounts with a co-ordinated, professional, and service-oriented view.

Sasha has been working with a graphics firm to redesign Surata's logo and labels. She encloses a copy of their new tofu label. "We are also switching to eight-ounce tempeh as we redesign the package." She requests permission to use a quote from *The Book of Tempeh, Vol. II* on their new tempeh label.

Note: The permission was granted in writing. Address: Marketing Manager, Surata Soyfoods, Inc., 302 Blair Boulevard, Eugene, Oregon 97402. Phone: (503) 485-6990.

986. Cohen, Richard L. 1981. Bay Area companies excited about tempeh. *San Francisco Business Journal*. July 27. p. 8-9.

• **Summary:** About Pacific Tempeh and Soyfoods Unlimited. Pacific Tempeh was America's first company to develop and market a tempeh burger. Soyfoods Unlimited invested \$100,000 in their plant. It has the capacity to produce 10,000 lb/week of tempeh but currently produces only about 1,500 to 1,800 lb/month. The business will break even at 3,500 lb/month.

Note: This is the earliest document seen (Sept. 2011) that mentions Soyfoods Unlimited.

987. Cohen, Michael. 1981. Sterile technique for tempeh starter. *Soyfoods* No. 5. p. 36-37. Summer.

• **Summary:** "The following method for in-plant preparation of tempeh starter was developed by Michael Cohen and

his co-workers at The Tempeh Works, of Greenfield, Massachusetts." The trick in making tempeh starter in a commercial shop is to keep everything sterile, i.e., free of unwanted microorganisms. So this is a very practical and useful article.

The instructions are in the form of a recipe with 10 numbered steps. Each step is accompanied by a photo taken by Frank Ward. Address: Tempeh Works, Greenfield, Massachusetts.

988. **Product Name:** Fresh Viili Starter, Powdered Tempeh Starter, Homemaker Light Rice Koji Spore Kit [for Amazake], Natural Terra Alba Calcium Sulfate (Tofu Coagulant).

**Manufacturer's Name:** GEM Cultures.

**Manufacturer's Address:** 30301 Sherwood Rd., Fort Bragg, CA 95437. Phone: 707-964-2922.

**Date of Introduction:** 1981. July.

**New Product-Documentation:** Letter from GEM Cultures. 1981. "Just a few words about our Powdered Tempeh Starter. Our PTS is prepared on the same all vegetable (non dairy, non animal origin) medium on which our Living Tempeh Starter is grown." It is mixed with sterilized flour to extend it.

Letter from Betty Stechmeyer of GEM Cultures. 1991. Oct. 18. These three basic products were introduced in July 1981.

989. **Product Name:** Hi Pro Tempeh.

**Manufacturer's Name:** Hi-Pro Tempeh.

**Manufacturer's Address:** 73 Jamaica St., Jamaica Plain, MA 02130. Phone: 617-524-2524.

**Date of Introduction:** 1981. July.

**New Product-Documentation:** Letter from Michael Morearty. 1981. July 22. They now make 160-240 lb/week of soybean/rice tempeh. "This fall we will be setting up a larger factory and will give an apprenticeship in tempeh production." Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Michael Morearty. Address is given as P.O. Box 69, Gardner, MA 01440.

Label. 1982, undated. 4.5 by 5.5 inches. Black on yellow. Address is now Box 69, Gardner, MA 01440.

Leaflet with recipes sent by Morearty. 1982. April 9. "High Pro Tempeh. Taste the difference." Introduced in the fall of 1981, the product is made in the traditional Indonesian way; Shurtleff & Aoyagi. 1982. *Soyfoods Industry & Market*. 1982. p. 48. By Jan. 1982 the company was at 73 Jamaica St., Jamaica Plain, MA 02130.

Talk with Michael Morearty. 1983. Feb. 26. He went to Java for 4½-5 weeks to study the real traditional tempeh method. He learned how to make tempeh up to 10 cm (3.9 inches) thick and how to make tempeh krepik (he visited the plant). He stayed with a family in Malang for 2 weeks, learned a lot and took many color slides. He plans to return

to Boston to set up a legitimate tempeh plant.

Michael Morearty. 1983. "Making traditional tempe in America: The Hi Pro Tempe story" (unpublished manuscript, 5 p.). The author began making tempeh in Miami, Florida, late in the summer of 1979. His hobby turned into a small business. He followed the "Americanized" process of making tempeh and people liked his tempeh but he felt that something was missing, that he wasn't making "real" tempeh. He moved from Miami to Boston (then Gardner), Massachusetts, and his home-based production grew from 75 lb/week to 200 lb/week. Then he used *The Book of Tempeh* to make his tempeh using the traditional Indonesian method. He soaked the beans for 18-36 hours to acidify them naturally, thus eliminating the need for vinegar. Then he lowered the incubation temperature to 84-86°F and extended the fermentation time to 39 hours. Consumers liked his new product, production rose to 400 lb/week and he raised his price 20% above that of his two competitors. Later he went to Indonesia to study traditional tempeh making there. He met his current wife there, then returned to San Diego, California.

Michael Morearty. 1983. "Rice bran tempeh ragi—Affordable tempe starter for America" (unpublished manuscript, 3 p.).

990. Kronenberg, H. 1981. Tempeh today: A technique for preserving tempeh culture. *Soyfoods* No. 5. p. 32-33. Summer. [2 ref]

• **Summary:** Tempeh makers need quick access to pure culture tempeh starter. We may someday isolate a strain of *Rhizopus oligosporus* that produces white sporangia (fruiting bodies) and this resolve the problem of good tempeh with black spots on its surface. Contains a detailed description (in recipe format in 11 steps with a flow sheet) for preservation of *Rhizopus* culture.

Note: Kronenberg is an expert on this subject; he studied tempeh fermentation at Hebrew University in Jerusalem, Israel. A photo shows Michael Cohen (founder of The Tempeh Works), smiling, holding out a tray of mature tempeh in perforated plastic bags.

991. Leviton, Richard. comp. 1981. Soyfoods in America. The Fourth Annual Soycrafters Association Conference on Producing and Marketing Soyfoods: Schedule, abstracts, expo information, the menu, registration list, and directory of instructors. Colrain, Massachusetts: Soycrafters Assoc. 150 p. Held 8-12 July 1981 at Colorado State Univ., Ft. Collins, CO. No index. 28 cm.

• **Summary:** These proceedings were given to the registrants when they arrived. Schedule: Wed., July 8. Lectures: Directions for the soyfoods industry, by Richard Leviton. Soyfoods: Protein source of the future, by William Shurtleff.

Thurs., July 9. Class period 1: Review of tofu-making equipment, by Larry Needleman. International

soyfoods cooking class, by Melodie Phipps. Small business management, by Dr. Harry Kreuckeberg. Tofu plant tour. Seminars: Sensory evaluation, part I, by Adrian Pearson. Soyfoods & human nutrition, part I, by Dr. Joseph Rackis, chairman. Home soymilk preparation, by Linda Gilbert. Tempeh production laboratory, by Dr. Clifford Hesseltine [NRRC, Peoria, Illinois], chairman. Class period 2: Soyfoods master chef cooking class, by Akiko Aoyagi. The Real Food Tofu Cafe, by Dik Rose. Soyfoods marketing strategies, by Dr. Harry Krueckeberg. Tofu plant tour. Tempeh production laboratory II, by Dr. Clifford Hesseltine, chairman. Lecture: Low cost extrusion cooking, by Dr. Judson Harper. Expo opens. Class period 3: Cooking soyfoods, macrobiotic style, by Rebecca Greenwood. Effective advertising and promotion, by Dr. Harry Krueckeberg. Seminars: Levels of tofu production, Luke Lukoskie, chairman. Introduction to nutrition and dietary analysis, by Jennifer Andersen & Suzy Pelican. Lectures: The view from tofu towers, by Thelma Dalman. The history of soybeans in the West, by Dr. Theodore Hymowitz. The year in review: Progress, problems & challenges, by William Shurtleff.

Fri., July 10. Class period 4: Tofu in Ecuador cooking class, by Ricardo Jennings. Quality control of soy products, by Dr. Joseph Maga. Labor / management relations, by Dr. Ron Wiggins. Demonstrations: Tofu making, at White Wave, Boulder, Colorado. Soymilk ice cream, by Jamie Stunkard & Al Jacobson. Extrusion cooking, by Dr. Ron Tribelhorn. Seminars: Soyfoods & human nutrition, by Dr. J. Rackis, chairman. Sensory evaluation, part 2, by Adrian Pearson. Business management, by William Scott. Class period 5: Soyfoods master chef cooking class, part 2, by Akiko Aoyagi. The small tofu shop, by Dik Rose. Tempeh making demonstration, at White Wave. Lecture: The nutritional value of extruded foods, by Dr. Richard Jansen. Expo open. Class period 6: How to open a tofu or tempeh plant, by William Shurtleff. Infant and child nutrition, by Dr. Barbara Smith. Soyfoods desserts cooking class, by Darrilyn Jackson. Seminar: Recall programs for soyfoods, by Dr. Joseph Rakosky. Lecture: Soyfoods & the natural foods industry, by Gil Johnson. Tofu cheesecake bake-off awards. Live music & refreshments.

Sat., July 11. How to open a tofu business on nothing down, by Al Jacobson. Soyfoods & the kosher market, by Chananyah Kronenberg. Government taxes and small business, by Dr. Terry Lantry. Demonstrations: Design and maintenance of the soy plant, by Steve Fiering (at White Wave). Soysage production, by Jamie Stunkard & Bob Davis (at White Wave). Seminars: Quality assurance programs, by Dr. Joseph Rakosky. Tofu and institutional feeding, by Thelma Dalman and Maxine Prairie. Class period 8: Sweden's first tofu plant, by Dr. Ted Nordquist. Quick home tempeh method, by Linda Gilbert. Frozen tofu cooking class, by Robin Clute. Expo open. Lecture: Tofu from cottonseeds, by Dr. Khee Choon Rhee. Class period

9: Tempeh microbiology and technology, by Chananyah Kronenberg. Financial management, by Dr. Oscar Varela. Tofu production cost control and analysis, by John Baldwin. Mexican village soya cooking class, by Blanca Dominguez. Seminar: Principles of tofu production, by Dr. Hwa Wang, Dr. C. Hesseltine, Dr. K.C. Rhee. Dinner. Square dance.

Sunday, July 12. Class period 10: Soyfoods in the North Woods cooking class, by Demetria Nanos Hamdorf. Workers & management / conflict resolution. What are organic soybeans, by Ardell Andersen. Open technical seminar on soyfoods, by William Shurtleff. Tempeh producers roundtable: Dr. Clifford Hesseltine, chairman. Lectures: The woman's role in promoting soya in Mexico, by Blanca Dominguez. Morinaga aseptically packaged tofu, by Kunisuke Kuwahara. Closing remarks, by Richard Leviton.

A SANA business meeting was held on Sat. July 11, starting at 7:00 p.m., moderated by Luke Lukoskie of Island Spring (president) and Richard Leviton (Executive Director). Format: President's report, by Luke Lukoskie. Financial report, by Richard Leviton. Proposals, by Richard Leviton. Open discussion. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

992. Leviton, Richard. 1981. Directions for the soyfoods industry. Paper presented at the annual Soyfoods Association Conference, Ft. Collins, Colorado. 12 p. Unpublished manuscript. Address: 100 Heath Rd., Colrain, Massachusetts 01340.

993. Needleman, Larry. 1981. Tofu plant profiles: Swan Gardens, Miami. *Soyfoods* No. 5. p. 26-27. Summer. • **Summary:** Swan Gardens, located in Industrial Miami, is a family-run business which was started by and is now owned by Jocelyn and Dick McIntyre. It has 6 employees, including the McIntyre's daughter and, earlier, Jocelyn's mother. "The company began in St. Ignatius, Montana in 1978 where they produced 500 pounds of tofu weekly from a small shop situated on an organic vegetable farm, Jocelyn McIntyre had been making tofu at home for 8 years previously and finally yielded to her friends' encouragement to produce tofu commercially. In August 1979 they sold their company and farm and used the proceeds to launch Swan Gardens in Miami, which they opened in January 1980. They wanted to get into tofu in a big way and Miami seemed like a promising, wide-open market. Today they manufacture 2,100 lb of firm, vacuum packaged tofu, 5 to 6 days weekly, and distribute over 50% of it outside of Florida, often as far as Illinois and Ohio." A detailed description of the tofu production process and equipment is given. "What I find most impressive about Swan Gardens is their excellent application of American equipment to fashion a smooth production flow in a very clean and well maintained plant. They are among a few innovative companies that are trying vacuum-packing tofu as a way to extend shelf life and attract

customers. Jocelyn McIntyre describes the company as 'a stable, solid business with a good work crew.' They are preparing an okara tempeh for the market and plan to release soysage and baked tofu in the future." Photos show: (1) Dick McIntyre and his daughter, Cecilia/Ceci, standing behind a 200 gallon tank of soymilk (p. 26). Ceci and her grandmother (Joci's mom) preparing tofu for vacuum packaging (p. 27). Address: Bean Machines Inc., Bodega, California.

994. Needleman, Larry. 1981. Tofu plant profiles: Sunshine Soy, Miami. *Soyfoods* No. 5. p. 29-30. Summer.

• **Summary:** Sunshine Soy is owned and operated by Danny Paolucci in Coral Gables, a suburb of Miami. "Starting in 1970 when he became acquainted with the vegetarian diet and the food uses of soybeans, Mr. Paolucci has been 'screaming soybeans,' as he remarks. In the mid-1970s he was cook at the Mt. Baldy Zen Center in California where he experimented with soybean dishes and made community scale miso. In 1974 he wanted to open a soy plant but there was no technology or information available; existing Oriental plants were unwilling to help him. In December 1977 he linked up as manager with the meteoric Swan Foods of Miami, an early multiproducts soy company that in its one intense year of business lost some \$140,000. Mr. Paolucci emerged from the experience with considerable insight and some manufacturing equipment so that in June 1980 he was able to launch his own soy venture"—Sunshine Soy.

The company now makes 500-750 lb of tofu a day, plus tempeh, baked tofu, soymilk, miso salad dressing, and soysage. Photos show: Danny Paolucci. A hydraulic forming box press. A clamshell sealer. A Chisholm-Ryder screw extractor; unfortunately it is no longer manufactured. Address: Bean Machines Inc., Bodega, California.

995. Rakosky, Joseph, Jr. 1981. Tempeh today: Report from Indonesia. *Soyfoods* No. 5. p. 34-35. Summer.

• **Summary:** This year Rakosky traveled to Southeast Asia on behalf of the American Soybean Association (ASA), the Foreign Agricultural Service (FAS), and the USDA. He visited five countries: Philippines, Singapore, Malaysia, Thailand, and Indonesia. The purpose of his trip was to encourage people to use soy protein products in their foods and the report his impressions on the market potential.

In Indonesia he found that soymilk was being made in villages by licensed businesses for use in schools; it was flavored with ginger and contained 8% added sugar and 0.03% salt. Plans were underway to start a special soymilk project in which the beverage would be retorted, then distributed in shelf-stable cans and bottles.

Dr. F.G. Winarno, head of Nutritional Research and Development at the Agricultural Institute of Bogor in Jakarta, is involved in a program to improve the nutritional level of Indonesians living in villages. His group is concerned with the design and construction of equipment suitable for village

level food processing.

Dr. Winarno said the biggest change in tempe processing occurred in 1976 when the university showed tempe makers that they could get a better product, faster, by incubating their inoculated soybeans in plastic bags rather than in the traditional banana leaves. “Twenty years ago the people of Java ate tempe and the Chinese ate tofu,” Dr. Winarno explained. “Today they are both considered national dishes for the Indonesian people.” About 70% of the soybeans in Indonesia are used to make tempe, with 20% used to make tofu. The biggest tofu maker in Indonesia uses a little less than 10 metric tons per day.

There follows a detailed description of how tempe and tempe starter are made commercially in a traditional Indonesian shop. “The government requires tempe shops to offer small preparation areas for villagers to use to make their own tempe.”

“While the Chinese make up about 4% of the total population, they control about 80% of the wealth; obviously they are the country’s businessmen, an imbalance the government is trying to correct.”

KOPTI is an cooperative organization of independent tempe and tofu makers, mostly small companies, with a current membership of 2,035. To become a member, a company pays a one-time fee (depending on the size of the company) then a monthly fee of \$1.62. Members buy their soybeans from KOPTI, which presently handles 4,800 metric tons a month and uses its large volume to get low prices. KOPTI also helps its members upgrade their products and schools them in sanitary practices.

“Since tempe is so popular in Indonesia, one would expect to find it in local supermarkets, but it cannot be found there.” A photo shows a small tempe shop in Jakarta, with soybeans being soaked in metal barrels. Address: Morton Grove, Illinois.

996. Ridenour, Jeremiah. 1981. Honey extractor for tempeh [centrifuge/dewaterer]. *Soyfoods* No. 5. p. 50. Summer. [1 ref]

• **Summary:** For beginning or small-scale tempeh makers who wish to get into business on a shoestring. After converting a dead refrigerator into an incubator, you can get a low-cost, manual centrifugal honey extractor for cooling and drying the cooked soybeans or splits. Describes how to convert the equipment to tempeh use, and how to use it. The total cost of the extractor and conversion was about \$125. A list of two honey equipment suppliers is given. A photo shows the cylindrical extractor and its internal basket. Address: Santa Cruz, California.

997. Shurtleff, William; Aoyagi, Akiko. 1981. Tempeh production in community. *Communities—Journal of Cooperative Living (Oroville, California)* No. 49. p. 3-10. July. Cover story.

• **Summary:** “Portions of this article were excerpted from *Tempeh Production, The Book of Tempeh: Volume II* by William Shurtleff and Akiko Aoyagi.” Contents: What is tempeh? The community shop: Equipment. Two tempeh shops (process given for each): (1) Yellow Bean Trading Co. (Detroit, Michigan)—Dry dehull, skim preparation, bag fermentation, makes 34 pounds of tempeh. (2) It’s Natural (Evanston, Illinois)— Soak dehull, skim preparation, bag fermentation, makes 17 pounds of tempeh. Contains 15 illustrations (line drawings). Favorite tempeh recipes (five).

On the front cover of the magazine is a multi-color illustration of a tempeh burger. Address: Lafayette, California.

998. Shurtleff, William. 1981. Soy crafters conference speech: The year in review, 1980-81. Paper presented at Fourth Annual Soyfoods Association of North America (SANA) Conference, Colorado State University, Fort Collins, Colorado. July 8. 14 p. Unpublished manuscript.

• **Summary:** In outline form: Discusses the major events of the past year, month by month, overall developments, and the main problem: To build a strong trade association. The conference was held on 8-12 July 1981. Address: Co-founder and director, Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

999. Shurtleff, William. 1981. William Morse: The father of soybeans in America (Continued—Part IV). *Soyfoods* No. 5. p. 56-60. Summer.

• **Summary:** Continued: “Moreover, in the U.S. only about 11,350 tons of soybeans (a mere 0.02 percent of the total U.S. crop) are used directly as food in a lightly processed form that allows the virtues of the vegetable-type bean (better flavor and texture, higher protein, larger seeds) to shine through. About half of the U.S. vegetable-type soybeans are exported to soyfoods producers in Japan and Europe and half are used for American soyfoods. The major uses, in order of importance, are for tofu, soynuts, soymilk, whole canned (mature) soybeans, and tempeh.

“Bill Morse was a strong supporter of the American Soybean Association. He was at the founding meeting in 1920 and was elected president three times (1924, 1925, and 1932). Pioneer soybean grower, E.F. ‘Soybean’ Johnson later said that ‘for many years the ASA existed mainly through Morse’s untiring efforts.’ He was the mainspring that kept the clock ticking year after year through good times and bad. In 1944 George Strayer said: ‘Morse might be called the ‘daddy’ of the American Soybean Association as well as of the soybean in America, since our organization has probably leaned on him more than any other man through the years. He has always been a guiding light and missed few if any meetings (except 1929-31 when he was in Asia). It is doubtful if anyone can equal his record.’

“Morse was a highly competent researcher and a prolific

writer. Between 1910 and 1950 he wrote some 87 articles and bulletins on soybeans and soyfoods, including The Soybean—in addition to making hundreds of speeches. Many of his articles appeared in publications of the American Soybean Association. He was editor of the Association's first publication in 1928 entitled *Proceedings of the American Soybean Association*, which contained 192 pages of papers given at the annual ASA conferences between 1925 and 1927. He contributed several papers to this volume, including 'The Distribution of Soybeans in the U.S.' (1927). He was also a frequent contributor to the *Soybean Digest*, which the ASA started in November 1940.

"The first article on soyfoods run by *Soybean Digest* was an article by Morse about vegetable-type fresh green soybeans entitled 'Shanghied... A Super Food' (July 1941). His second article was also on vegetable-type soybeans, 'Soy in Food: Future of Vegetable Varieties' (September 1945). In 1951 he wrote 'What's in a Name,' describing the significance of the poetic names given to varieties of soybeans in East Asia.

"In November 1949, when Morse retired after 42 years of service, he was known throughout the world, but especially in the U.S. and East Asia, for his work on soybeans and soyfoods. In 1907, when he started work, the soybean was such a small crop that no records of its production were kept. One measure of the success of his work is the amazing expansion of the crop from about two million bushels in 1919 to 9.4 million in 1929, 91 million in 1939, and 200 million in 1949.

"On retirement, Morse turned his work over to Martin G. Weiss, a professor of plant breeding and genetics from Iowa State University. From his home in Takoma Park, Maryland, where he had lived since 1917, Morse moved to Eastchester, New York, next door to his daughter, Margaret, who had accompanied him on the trip to East Asia. During the last ten years of his life he worked from time to time on his book on soyfoods (which, unfortunately, he never finished), did a lot of reading and gardening (he planted his own vegetable-type soybeans and enjoyed them each spring as fresh green soybeans, or later in the season, as mature cooked soybeans), and kept in active touch with the world of soybeans and soyfoods through many visitors and an extensive correspondence. He continued to enjoy soyfoods in his home meals.

"On the morning of July 30, 1959, at age 75, William J. Morse died of a cerebral hemorrhage at his home in Eastchester, New York.

"The work of Bill Morse runs like a bright thread through the whole tapestry of soybean and soyfood development in the Western world. We can pay no greater tribute to the man than to carry on his work and help fulfill his dream.

"For their help in providing information related to this article, the author would like to thank Mrs. Walter Thalman

(Morse's daughter), George Strayer, Martin G. Weiss, Theodore Hymowitz, Jackson Cartter, R.W. Howell, and Verna Donovan." Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

1000. **Product Name:** Tempeh.

**Manufacturer's Name:** Soy Shop.

**Manufacturer's Address:** 1081 Memorial Dr. S.E., Atlanta, GA 30317.

**Date of Introduction:** 1981. July.

**New Product–Documentation:** Letter/Order for the book *Tempeh Production* (\$10.95) from The Soy Shop (P.O. Box 734, Decatur, Georgia 30031). 1979. Dec. 17.

Soyfoods Center Computerized Mailing List. 1982. July 23. Owners: Sarah & Steve Yurman. The address is 1081 Memorial Drive, S.E., Atlanta, GA 30316. Phone: 404-577-8896; Label. 1983, undated. 4 by 4.5 inches. Red and blue on white. 8 oz. Address: 1863 Memorial Dr. S.E., Atlanta, GA 30317.

1001. *Soyanews (Sri Lanka)*. 1981. Make your own tempeh starter. 3(12):3, 7. July.

• **Summary:** "There was a very encouraging response to the offer made by the Soyabean Foods Research Centre to send samples of tempeh starter, on request." Describes how to use existing tempeh starter to make more. Two illustrations show before and after. Two more illustrations show Indonesian people with finished tempeh starter (From *The Book of Tempeh*, by Shurtleff and Aoyagi).

1002. **Product Name:** Tempeh.

**Manufacturer's Name:** Sunshine Soy Co. Inc.

**Manufacturer's Address:** 4015 Laguna St., Suite "H," Coral Gables, FL 33146. Phone: 305-447-1277.

**Date of Introduction:** 1981. July.

**New Product–Documentation:** Needleman. 1981. Soyfoods. Summer. p. 29-30. "Tofu plant profiles: Swan Gardens and Sunshine Soy (Miami)."

Made by Danny Paolucci. Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Danny Paolucci.

1003. Wagner, Martha. 1981. Soy down under. *Soyfoods* No. 5. p. 11-12. Summer.

• **Summary:** First discusses the work of Marcea Weber and Debbie Schmetzer in Australia. Marcea Weber owns The Soybean Factory located just outside of Sydney, Australia. Debbie, formerly a tofu maker at Surata Soyfoods in Eugene, Oregon, is now living in New Zealand, where she plans to start a soyfoods business. "Marcea, originally from New York, began her tofu business three years ago, about a year after arriving in Australia from England where she operated a small natural foods bakery. Koreans and Chinese were already producing large volumes of tofu in Australia but her

business was the first to produce a nigari tofu. After three years, tofu is still quite foreign to Australians, Marcea says...

"The Soybean Factory sells to natural food stores, restaurants, and juice bars. It produces only 600 half-pound blocks a week. Using simple Takai machinery with a 45-gallon Australian pressure cooker, only 30 pounds are produced in each batch so the selling cost is high, about double U.S. prices, and much higher than Korean and Chinese tofu sold in Australia." "The factory employs three production workers and a manager. Marcea does the promotion. She also spends much of her time teaching cooking and nutrition classes at the East-West (Macrobiotic) Center, which she and her husband, Daniel, an acupuncturist, established when they arrived in Australia."

In New Zealand, "no one outside the Chinese community had even heard of tofu until an Auckland health food store, Harvest Whole Foods, began producing it in a backroom kitchen last October [1980]. The enthusiasm for tofu was shown by several restaurants doing an alternative lifestyle festival, which featured tofu burgers, has produced healthy sales for the shop. The three owners, Greg and Ricky Chalmers and Ricky's wife, Elizabeth, are producing about 170 to 299 kilos (374 to 440 pounds) of tofu a week. They expect sales to grow and are planning to expand production facilities."

Debbie Schmetzer arrived in New Zealand in Jan. 1981 with her husband, Peter (who was born in New Zealand) and their young son. She describes the process and ingredients used to make tofu at Harvest Health Foods, then notes that "Even in the Chinese community, only two Chinese restaurants are making tofu. Harvest's main customers are Indonesians, vegetarians, people switching from dairy to soy on the advice of naturopathic doctors, and spiritual seekers such as Hare Krishna and Divine Light people." On the Run is a fast food deli that makes excellent tofu dishes in Auckland, including tofu burgers, curried tofu salad in pita bread, and tofu tacos with locally made tortillas.

Letter from Martha Wagner. 1981. July 24. "Before this article went to press I learned that Debbie and her husband had become disillusioned with attitudes in New Zealand toward food and organic agriculture, red tape, and toward setting up business—especially concerning a mold to make tempeh. So they took off for greener pastures in Australia. They are now mulling over the scene in the Melbourne area and may well do a bagel business combined with a soy deli. She would be a good person for a soyfoods information center there. Address: 35 Flower Street, Essendon 3040 Victoria, Australia.

"For the addresses of the Koreans and Chinese making lots of tofu in Australia, contact Marcea Weber, 29 Belmore St., Rozelle 2039, NSW.

"Did you meet the Australian couple Fred and Radhika Koch at the SANA conference? They are planning to set up a good size tofu operation as a support for a 26-person

community in the country." Address: USA.

1004. Sass, Lorna J. 1981. Soy foods: Versatile, cheap and on the rise. *New York Times*. Aug. 12. p. C1, C6. Widely syndicated.

• **Summary:** The article begins: "Soy foods have come west and, apparently, are here to stay. No longer restricted exclusively to the world of woks and cleavers, soybeans in America are now patted into soyburgers, and tofu (soybean curd) is puréed into soy mayonnaise, baked into 'cheesecake' and fried as 'cutlets,' while soy milk emerges from the blender as a frothy carob shake or from the freezer as cantaloupe 'ice cream.'

"Because soy foods are an inexpensive source of protein, low in fat and completely cholesterol-free, they have been attracting more and more attention among the growing number of weight-conscious, health-conscious and dollar-conscious Americans. Until recently, soy sauce was the only soy product familiar to most Americans.

Contains a long discussion of David Mintz (owner of Mintz's Buffet, a kosher delicatessen at 1040 Third Avenue at 62nd Street). He makes a tofu ice cream, and a tofu-spinach quiche. "A large Japanese company wants to buy exclusive rights to distribute Mintz's tofutti 'ice cream' in Japan. 'The more dishes I make with tofu, the better my business is,' said Mr. Mintz." He is frequently called upon to cater "tofu weddings."

Also discusses Light Foods in St. Louis (Missouri), and the Rochester Soy Deli (in New York). "Two of the people most responsible for introducing soy foods to Americans are William Shurtleff and his wife, Akiko Aoyagi, who in 1975 wrote 'The Book of Tofu,' a comprehensive cookbook and introduction to the untapped potential of soy foods as an alternate source of protein."

There follow seven recipes featuring tofu and tempeh: Mintz's tofu herb dip. Breaded tofu cutlets (with frozen tofu. Might also be called "Fillet of tofu," plus a note on how to freeze tofu at home). Tofu tartare sauce. Tempeh salad. Carob-tofu-mint pie. Whole wheat pastry crust (with soy milk and soy oil). Lotus Cafe not-dogs (meatless hot dogs).

Next comes a section titled "Learning more about soy: A listing of useful books." For example: "There is no more thorough book on the history and myriad Oriental forms of tofu than the profusely illustrated *"Book of Tofu,"* by William Shurtleff and Akiko Aoyagi (Autumn Press / Random House; 334 pages; \$8.95). First published in 1975, it is credited by most tofu cookbooks as the one that 'spread the light.' The hundreds of recipes, mostly Oriental in style, will fascinate adventurous cooks. Beginners may prefer the condensed, somewhat more Americanized version (Ballantine, 433 pages, \$2.95)."

The long article ends with a helpful sidebar titled "How to buy and store tofu." "A four-ounce piece of tofu (bean curd) sells for about 30 cents..." One main difference

“between the tofu sold in health food stores and the Oriental-style tofu sold by many greengrocers is the type of coagulant used. Tofu from health food stores is almost always made with nigari (primarily magnesium chloride and trace mineral elements derived from evaporated seawater), while Oriental tofu makers generally use calcium sulphate.”

A photo shows Katherine Iselin with some of the special sandwiches at the Tofu Shop, a fast-food soy deli in Rochester, New York. She is wearing a Soyboy Tofu T-shirt. On the wall behind her is the restaurant menu.

Note: A similar article titled “More budget-conscious Americans are hitting the soy—its not just sauce” in the *Chicago Tribune* (29 Oct. 1981, p. W\_A21).

1005. Tibbott, Seth. 1981. Re: Making tempeh at Turtle Island Soy Dairy. Letter to William Shurtleff at Soyfoods Center, Aug. 21. 1 p. Handwritten.

• **Summary:** Seth is surprised and glad to hear that his Five Grain and Tempehroni are now available in the San Francisco Bay Area, California. He doesn’t know how they get there, as his current distributor goes only to Red Bluff.

He encloses two labels, some PR material, recipe of the month cards, an article from the *Oregonian* (which put his company “in touch with a thriving, tempeh-starved community of Indonesians who are buying by the case for home use!), and a cooking class poster.

“We are tempeh specialists making no other products. We’re currently selling about 250 pounds a week and project to double this volume in the next month when we plan to take on more accounts and move from our current location. We’ve derived a lot of help from your books and are grateful for the good publicity generated from your center. Every time we turn around it seems like you’re writing articles for another national magazine. It always helps our sales.

“Keep in touch and let us know if we can be of any assistance. Sincerely, Seth Tibbott.

“P.S. By the way, Alexander Lyon is out here working with us now and sends along his greetings.”

Note: Though Seth’s tempeh shop is in Forest Grove, this letter is written from: Rt. 2, Box 73, Gaston, Oregon 97119. Address: Founder, Turtle Island Soy Dairy, 2017 21st Ave., Forest Grove, Oregon 97031.

1006. Krieger, Verena. 1981. Gestern Steak, Morgen Tofu: Oder was man mit einer Bohne so alles machen kann [Yesterday steak, tomorrow tofu: Or all the things that can be made with one bean]. *Tages Anzeiger Magazin* No. 34. p. 6-12. Aug. 22. Also translated in English, French, and Italian. [4 ref. Ger; Eng; Ita; Fre]

• **Summary:** A lengthy, pioneering account of the virtues of tofu, and its development in the USA and Switzerland by the Sunday supplement to Switzerland’s biggest daily newspaper. Contains numerous color photos of soyfoods from around the world. Also defines and discusses soymilk,

miso, tamari, shoyu, and soy sauce, tempeh, and soy sprouts. Discusses the work of Edgar W. Schweizer (underway by 1977) in attempting to grow soybean varieties suited to Switzerland.

The Geneva restaurant “La Moisson” has had tofu on the menu for 5 years. In Bern, in the beginning of July, the restaurant “Sesam” was acquired by the first Swiss organic food store (*Bioladen*), the “Lotusbluemli” (Little Lotus Blossom). Since Sesam opened, the people of Bern have been able to get to know a rich treasure of dishes from tofu made at Sesam, as well as many applications of miso and shoyu or tamari. The vegetarian restaurant “Bristol” in Lucerne is launching tofu as its summer hit this year, in the form of Tofu Schnitzels and Burgers... In organic food shops, Reform Houses and Oriental specialty shops, miso and soy sauce are available. The following places in Switzerland sell fresh tofu, which they make on the spot: (1) Centre macrobiotique de Lausanne, ruelle de Bourg 7, 1003 Lausanne. (2) S. Gänterli, Vonmattsrr. 50, 6003 Lucern. (3) Le Grain d’Or, rue Voltair 27, 1201 Geneva. (4) De Lade, Oberaltstadt 8, 6300 Zug. (5) S. Lotusbluemli, Gerechtigkeitsgasse 17, 3011 Bern. (6) Madal Bal, Kreuzplatz 10, 8032 Zurich. On the last page of the article is an ad for Soyana in Zurich.

Note: The Italian-language edition of this article is titled “Ieri bistecca, domani il tofu.” It is the earliest Italian-language document seen (Sept. 2011) that mentions tempeh, which it calls “tempeh.” Address: Lucerne, Switzerland.

1007. McNees, Pat. 1981. Natural & organic: Taking the health food approach. *Washington Post*. Aug. 27. p. E1, E15, E20.

• **Summary:** The author’s position on health food is slightly to the left of Julia Child and “considerably right of tofu lemon pie.” She still eats more for pleasure than virtue [health]. She quickly adds: “You don’t have to be a health nut or food faddist to take advantage of what health food stores have to offer.” Their prices aren’t always more expensive than those of supermarkets—and they tend to be much less expensive on some items, such as bran or stick cinnamon, and grains, nuts, herbs, and dried foods sold in bulk—which two photos show.

Includes the name and address of 15 such stores in Washington, DC, and 20 in Maryland (incl. Beautiful Day Trading Co. and Smile Herb Shop). Contains 8 recipes incl. one for Seasoned Crisp Fried Tempeh, from *The Book of Tempeh*, and one for Creamy Tofu Dip, from *The Book of Tofu* (both by Shurtleff and Aoyagi).

1008. McNees, Pat. 1981. Questions? Read on [A list of books about healthy foods]. *Washington Post*. Aug. 27. p. E1, E26. [30 ref]

• **Summary:** The books listed here are a good introduction to the subject of healthy and natural foods. Includes books

on whole foods, whole grains, macrobiotics, vegetarianism, and soybean products. "Serious vegetarians and lovers of Oriental cuisine will want to take a look at, if not own, three thoroughly fascinating and informative books about how to prepare and make the best use of three important soybean products: 'The Book of Miso' (Autumn Press), 'The Book of Tempeh' (Harper & Row), and 'The Book of Tofu' (Autumn Press), all by William Shurtleff and Akiko Aoyagi. Aoyagi creates the recipes, which work better than those we've tried in some other recipe books mainly because she doesn't try to make the principal ingredients taste too much like something they're not (although even she fails to make tofu palatable as a dessert, in the recipes we tried). What makes these books seductive for cookbook buffs is the research, which is Shurtleff's bailiwick; he tells you more than you could ever want to know about a subject, but he sure keeps you reading..."

1009. Kushi, Aveline. 1981. My favorite tempeh recipes: Cooking with a versatile Indonesian staple. *East West Journal*. Aug. p. 62-65.

• **Summary:** "Tempeh became popular in this country about two years ago. Bill Shurtleff was largely responsible, and I will always be grateful to him for this. Tempeh is not available in Japan, so I did not eat it while I was growing up.

"Tempeh is a very nice *whole* food. It gives great energy, especially to vegetarians, and it is very appealing to someone who is craving animal foods."

"I'm in my fifties and I stopped menstruating several years ago. The first time I ate tempeh—it was pan-fried with just a brush of oil, and cooked with onions and tamari—my menstruation returned for a time! So I think that tempeh perhaps helps to increase sexual vitality for women and strengthen men's and women's sexual organs." Contains 11 tempeh recipes: Tempeh with arame (a sea vegetable). Kinpura (with burdock and tempeh). Cabbage-roll tempeh. Tempeh with vegetables. Fried rice or noodles and tempeh. Paella without fish. Tempeh in soup. Tempeh macaroni salad. Barley stew with tempeh. Shish-ke-bab. Tempeh with kombu, daikon, and shiitake. A large photo shows Aveline Kushi smiling and cutting carrots. A large ad (p. 65) shows *The Book of Tempeh* by Shurtleff & Aoyagi.

1010. Lenetsky, Mark. 1981. Short course on soyfoods: What they are, how they are used. *Health Foods Business*. Aug. p. 46, 49-50, 52, 53. [2 ref]

• **Summary:** Contents: Introduction. Tofu or "soy cheese." The many uses of tofu. Makings of miso. Tamari—by any name. Tempting tempeh. 'High tech' approach (TVP). Its a joy to cook with soy: Selected recipes from suppliers. Address: Nutritional consultant, Applegate Natural Foods, Tigard, Oregon.

1011. New-Age Foods. 1981. Move over Big Mac! Here

comes tempeh: A super soyfood from Indonesia. William Shurtleff and Akiko Aoyagi (Ad). *East West Journal*. Aug. p. 65.

**MOVE OVER BIG MAC! HERE COMES**

# TEMPEH

**A SUPER SOYFOOD FROM INDONESIA**  
WILLIAM SHURTLEFF & AKIKO AOYAGI

The authors of the bestselling *Book of Tofu* (over 250,000 copies in print) and *Book of Miso*, now present **THE BOOK OF TEMPEH**, the full story of this delectable natural soyfood that tastes like southern fried chicken, contains twice the protein of hamburger, and is the world's best source of vegetarian vitamin B-12. Instructions for making tempeh at home, in communities, or in a commercial shop. 130 tempting American and Indonesian recipes. 160 pp., 210 illustrations, \$6.95 paper. Or clothbound Professional Edition with appendixes, 248 pp. \$16.95.

**Harper & Row**  
10 E. 53rd St. New York 10022

"Stunningly impressive in its thoroughness and vastly wholistic in its vision. A milestone. . . . An unparalleled success." —*Soyfoods Magazine*  
"Unique in focus and truly excellent treatment. Highly recommended." —*Library Journal*

Also available: **TEMPEH PRODUCTION: The Book of Tempeh Vol. II. How to start your own tempeh shop.** 176 pp. 285 illust. \$15.95. Send prepaid orders to: New-Age Foods, P.O. Box 234-A, Lafayette, CA 94549

• **Summary:** This 1/3-page black-and-white ad for *The Book of Tempeh* by Shurtleff and Aoyagi, includes a photo of the book's cover. "The authors of the bestselling *Book of Tofu* (over 250,000 copies in print) and *Book of Miso*, now present *The Book of Tempeh*." Address: P.O. Box 234-A, Lafayette, California 94549.

1012. *Soyanews (Sri Lanka)*. 1981. Soya to help raise nutritional levels. 3(12-1):1. Aug.

• **Summary:** "Five District Development Officers selected by the Nutrition Committee of the Matara District attended a week-long course last month to study the processing of soyafoods at the Soyabean Foods Research Centre at Gannoruwa."

A photo shows "Miss Ellen Jayawardena demonstrating how to make tempeh to the five district development officers..."

1013. *Soyanews (Sri Lanka)*. 1981. Tempeh at Esala Fair. 3(12-1):1. Aug.

• **Summary:** "Soya karawala (sun-dried tempeh) will be sold at the Agricultural Department's stall during the Esala Fair to be held on the Bogambara grounds, Kandy, beginning from the first week of August."

"The Esala Fair which is held each year to coincide with the duration of the Kandy Perahira begins on August 6 and goes for 13 days."

1014. Well Bean Deli (The). 1981. August. New soyfoods

restaurant or deli. 349 Soquel Ave., Santa Cruz, CA 95062.

• **Summary:** Letter from Kevin Van Slooten. 1980. Dec. 15. Written on letterhead that reads: Monterey Bay Soyfoods, 594 Redwood Dr., Santa Cruz, California 95060. Phone: 408-476-5833. Producers of tofu, tempeh and other fine soy foods. "I'm planning a soy deli for the Santa Cruz area. I'm 3/4 done defining and strategizing the plan... It will be structured partly as a non-profit educational organization so I can continue doing classes on soyfoods cooking etc. We did a booth of tempeh burgers and tofu salad at a food festival last weekend. It was a big hit and I've attracted interest by the local heart association."

Leaflet. 1981. "Announcing the Grand Opening" at 349 Soquel Ave., behind the Breadline Eatery. Article in *Santa Cruz Mobile News*. 1981. Oct. 2. p. 19. "A restaurant with accent on health." A photo shows part of the menu on the wall.

Candace Atkins. 1981. Green Sheet (Santa Cruz, California). Nov. 4. p. 3. "Tofu—the 'natural' kind of fast food."

Questionnaire filled out by owner of restaurant or deli. 1982. Lists the company's most popular soy-based menu items in descending order of popularity. The highest weekly total sales over the past 6-2 months, the month that this occurred, and why. The average weekly sales during this period. Average hourly wages paid to workers. The business startup cost (amount of money it cost to get the business started). Current profitability status. Plans for the future. Advice the owner would give to someone starting a similar

business.

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started on 25 August 1981 by Kevin Van Slooten. Startup cost: \$43,000. Avg. weekly sales in 1982: \$2,200. Address: Santa Cruz, California. Phone: (408) 425-4544.

1015. Cohen, Michael. 1981. Re: Thanks for the slides. Letter to William Shurtleff at Soyfoods Center, Sept. 1. 1 p. Handwritten, with signature on letterhead.

• **Summary:** Bill—Thanks for the [color] slides. Here's your paper. All in all I think its a good attempt.

"We've been doing a lot of contamination research this summer (we've had a lot!) working with 3 labs—Will let you know more on our findings later on—Best wishes, Michael.

"I'm trying to improve my reputation as a correspondent!!" Address: The Tempeh Works, P.O. Box 870, Greenfield, Massachusetts 01301. Phone: 413-772-0991.

1016. Leviton, Richard; Shurtleff, William. 1981. U.S. per capita consumption of soyfoods grows to nearly 9 pounds per year (News release). Soyfoods Assoc., Sunrise Farm, Heath Rd., Colrain, MA 01340; and Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 4 p. Sept. 4. Published in *Soyfoods*, winter 1982, p. 6. [2 ref]

• **Summary:** Compiled largely by Shurtleff, circulated by Leviton. "In 1981 Americans spent \$4.57 per capita on soyfoods [not including soy oil] while consuming 4.9% of

the U.S. soybean crop—possibly an all-time high.” Address: 1. Colrain, Massachusetts; Lafayette, California.

1017. The Soycrafters Association of North American (SANA) board of directors meets at the home of John and Valerie Robertson, 2101 San Miguel Drive, Walnut Creek (near San Francisco), California (photograph). 1981. Sept. 13.

• **Summary:** The board decides (unanimously) to change the name of the association to Soyfoods Association of North America to broaden its scope and base of support.

That evening a dinner party for the board is held at the home of William and Akiko Aoyagi Shurtleff. The vegetarian meal (featuring tempeh and other soyfoods) is prepared by Akiko. A photo shows (previous page) (left to right): Steve Demos (White Wave; gray sweater), Mark Brawerman (Living Lightly), Pat Aylward (Joy of Soy), Bob Davis (Light Foods), Luke Lukoskie (Island Spring), Larry Needleman (Bean Machines), Richard “Ira” Leviton (Soyfoods Association, Soyfoods magazine), Valerie Robertson (Soyfoods Unlimited), Akiko Aoyagi (Soyfoods Center). The photo was taken by William Shurtleff (of Soyfoods Center) on the evening of 13 Sept. 1981 at Soyfoods Center, the home of William and Akiko Shurtleff, 951½ Mountain View Drive, Lafayette, California.

1018. **Product Name:** Soy-Millet Tempeh (Sausage Shaped).

**Manufacturer’s Name:** 21st Century Foods.

**Manufacturer’s Address:** 30A Germania St., Jamaica Plain, MA 02130.

**Date of Introduction:** 1981. September.

**Ingredients:** Organic soybeans (90%), organic millet (10%), purified water, fresh *Rhizopus* culture.

**Wt/Vol., Packaging, Price:** 8 oz or 16 oz flat, or 8 oz roll.

**How Stored:** Refrigerated, 21 day shelf life.

**Nutrition:** Per 4 oz.: Calories 197, protein 23 gm, carbohydrate 15 gm, fat 5 gm, fiber 3.45%.

**New Product–Documentation:** Spot in Soyfoods. 1982. Summer. p. 57. The company, which began production in September 1981, now makes 400 lb/week of Soy-Millet Tempeh. Label, various sizes. 2 colors each. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Label. 1987. 6 by 8 inch plastic bag. Red, yellow, black, and white. “Healthy food for the whole world. Low calories. Low sodium. No cholesterol. No preservatives. What is Tempeh? (Lengthy description on back). Dark areas may occur on our tempeh, which indicate ripeness, and are normal on foods naturally cultured.”

1019. **Product Name:** Soy Tempeh.

**Manufacturer’s Name:** 21st Century Foods.

**Manufacturer’s Address:** 30A Germania St., Jamaica Plain, MA 02130.

**Date of Introduction:** 1981. September.

**Ingredients:** Organic soybeans, purified water, fresh *Rhizopus* culture.

**Wt/Vol., Packaging, Price:** 8 oz or 16 oz flat, or 8 oz roll.

**How Stored:** Refrigerated, 21 day shelf life.

**Nutrition:** Per 4 oz.: Calories 197, protein 23 gm, carbohydrate 15 gm, fat 5 gm, fiber 3.45%.

**New Product–Documentation:** Spot in Soyfoods. 1982. Summer. p. 57. The company, which began production in September 1981, now makes 400 lb/week. Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Lucio Armellini. Address: 90 Risely Rd., Brookline, Massachusetts 02146. Phone: 617-739-9164.

Letter from Norbert Belanger. 1984. Jan. 16. He sends frozen samples of the company’s products. Net sales of all soyfoods products for the month of Oct. 1983 was 4,074 lb compared with 975 lb for Jan. 1983. The company is still at 30A Germania St. Phone: (617) 522-7595.

Label, various sizes. 2 colors each. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Leaflet sent by 21st Century Foods. 1983. “Tempeh with a Real Difference.” Individual photos show members of the Homestyle Tempeh family: Soy-Millet Tempeh, Soy Tempeh, Tempeh Burgers. SoyLami, and Tempeh Fiesta. The company now uses 200 lb/day of soybeans to make all of its products.

Label. 1987. 6 by 8 inch plastic bag. Red, yellow, black, and white. “Whole food for a healthy world. Low calories. Low sodium. No cholesterol. No preservatives. What is Tempeh? (Lengthy description on back). Dark areas may occur on our tempeh, which indicate ripeness, and are normal on foods naturally cultured.”

1020. Hymowitz, T.; Newell, C.A. 1981. Taxonomy of the genus *Glycine*, domestication and uses of soybeans. *Economic Botany* 35(3):272-88. Sept. [100 ref]

• **Summary:** Contents: Taxonomic history of *Glycine*. Domestication [and dissemination of the soybean]. Uses [of the soybean] (The four most important foods developed from the soybean in East Asia are miso, shoyu (soy sauce), tempeh, and tofu). “These traditional foods have little physical or flavor identity with the original bean. Hence it is not too surprising that Marco Polo, who raveled from Venice to Cathay and throughout the Orient between 1271 and 1295, makes no mention of the soybean (Rugoff, 1961).”

The earliest accurate description by a European seen for the use of soybeans as food was by Friar Domingo Navarrete. He wrote about them in 1665.

East Asian nonfermented soy foods: Tofu, soy milk, yuba, kinako, sprouts, green soybeans.

East Asian fermented soy foods: Miso, soy sauce, tempeh. Soy uses in the West: Oil, protein (from defatted soybean meal). A brief history of each of these foods is given.

Tables: (1) The species of *Glycine* according to Linnaeus, 1753, and their subsequent classification. (2) The genus *Glycine* L. according to Bentham (1864, 1865). (3) The genus *Glycine* L. according to Hermann (1962). (4) The genus *Glycine* Willd. as revised by Verdcourt (1966, 1970). (5) The genus *Glycine* Willd. as accurately delimited.

Figures: (1) *Shu*, the archaic character for soybeans (five stages in the character's development; Hu {1963} believes that the *shu* pictograph can be traced back to approximately the 11th century B.C.). Address: Dep. of Agronomy, Univ. of Illinois, Urbana.

1021. Inkson, Ms.; Mann, E.J. comp. 1981. Thesaurus: Food Science and Technology Abstracts. 2nd ed. Shinfield, Reading, England: IFIS (International Food Information Service). 238 p. No index. 30 cm. First edition, 1977. [Eng]  
 • **Summary:** The Introduction states: "The original IFIS word list, issued in 1970, did not attempt to give more than the barest outline of the relations between the terms encountered. In 1977, therefore, an FSTA Thesaurus was published, in which the basic structuring of the material found in FSTA was set out. The Thesaurus was designed to give maximum compatibility with the EEC Multilingual (English / French / German / Italian) Food Thesaurus, published in 1979 (and itself based largely on the FSTA system for the English version), and to take into account the needs of on-line users."

The terms are divided into headings (main terms or descriptors), which are printed in capital letters, and lead-in terms (non-descriptors) printed in lower case. Additional information is included in square brackets. The following abbreviations show the types of relationship between terms: BT = broader terms. NT = narrower terms. RT = related terms. UF = used for. lead-in term followed by "see" heading (e.g. bean curd see TOFU).

Soy-related terms: Beverages: UF soy milk. Lecithins: BT Emulsifiers, Phospholipids. UF phosphatidylcholine. Legumes: NT Soybeans. Miso: BT Soy Products. natto: see Soy Products. Sauces: NT Soy Sauces. soy flour: see Soy Products. soy milk: see Beverages; Soy Products.

Soy Products: BT Soybeans, Vegetable Products, Fermented Products. NT Miso, Soy Proteins, Soy Sauces, Soybean Oils. UF natto, nyufu, soy flour, soy milk, sufu, tempeh, tofu, tsukudani, vital.

Soy Proteins: BT Protein Products, Soy Products, Proteins Vegetable. RT Textured Vegetable Proteins. UF okara protein, Promine [Central Soya Co.], Supro 620, yuba.

Soy Sauces: BT Fermented Products, Sauces, Soy Products. UF moromi, shoyu.

Soybean Oils: BT Oils Vegetable, Soy Products. Soybeans (*Glycine max*): BT Legumes, Oilseeds. NT Soy Products.

Note 1. This is the earliest document seen (Sept. 2003) that is a thesaurus containing terms related to soybeans and soy products.

Note 2. This is the earliest English-language document seen (Feb. 2007) that uses the word "nyufu" to refer to fermented tofu. Address: IFIS (International Food Information Service), Lane End House, Shinfield, Reading RG2 9BB, England.

1022. Mintz's Buffet. 1981. Mintz's tofu buffet menu.

1040 Third Ave. (between 61st & 62nd Streets, near Bloomingdale's), New York, NY 10021. 1 p. Undated.

• **Summary:** This handwritten, undated menu (which includes prices) was probably printed in about Sept. 1981. It could have originated as early as August 1980—by which time Mintz's was serving quiches and tofu muffins. By Feb. 1981 they were serving egg rolls. Soy-related menu items include: Vegetable salads: Steamed broccoli with tofu-mustard sauce (\$3.99/lb). Tofu-vegetable quiches: Broccoli, spinach, zucchini [sic, zucchini], mixed vegetable, cauliflower (\$4.95). Vegetable tofu pies: Spinach, broccoli, cauliflower, zucchini (\$2.75). Tofu-bran muffins: Strawberry-rhubarb, apple-walnut, blueberry-bran, carrot-apple, pecan, lemon-granola, pineapple-coconut, cherry-granola. Tofu-eggrolls: Spinach, Chinese vegetable, tabouli, tofu blintzes. Hot tofu items: Soy burgers, with tempeh & soy milk. Soy pizza, with nutritional yeast (\$1.50). Eggplant Parmesan, with soy milk topping (\$6.99/lb). At the bottom right is a floral design above the words: "An affair to remember."

Note: No ice cream of any kind is on the menu. Address: New York City. Phone: 212-751-9367.

1023. Mintz's Buffet. 1981. Tofu Time menu. 1040 Third Ave. (between 61st & 62nd Streets), New York, NY 10021. 1 p. Undated. 28 cm.

• **Summary:** This printed, undated menu (which includes prices) was probably printed in about Sept. 1981. Tofu is included in every item on the menu.

Tofu bran muffins (\$0.95 each): Strawberry rhubarb, blueberry, carrot apple, pineapple, dutch apple, banana. Tofu vegetable salads (\$3.99): Cauliflower, eggplant, steamed broccoli with mustard sauce, spinach, broccoli, zucchini [sic, zucchini]. Tofu vegetable pies (\$2.75): Cauliflower, zucchini, spinach, broccoli. Tofu Ice Cream (Country vanilla, old fashioned chocolate, strawberries n'cream, peaches n'cream, apples n'cream, Dutch nut chocolate, apricot rum).

"All tofu dishes are completely natural and free of preservatives." Glatt Kosher. Louise Londin / Design. Address: New York City. Phone: 212-751-9367.

1024. *Soyanews (Sri Lanka)*. 1981. Snack foods sales up at fair. 4(1):1, 8. Sept.

• **Summary:** The Soya Sales Centre conducted by the Department of Agriculture during the Kandy Esala Fair last month had, once again, a successful run with a turnover reaching record levels. This was the fourth year in succession that the Centre was open at the fair.

“The Sales Centre opened for the first time in 1978 with only a soya milk bar run by the Milk Board which produced the milk from its Palkelele factory. A cup of chilled soya milk was sold at -/25 cents. It was an instant success with 30,000 cups of milk sold during the first ten days.

“In 1979 more soya foods were put out for sale at the Esala Fair Soya Sales Centre which was taken charge of by the Department of Agriculture for the first time.”

“On sale at the 1979 exhibition were soya nuts [oil roasted soyabeans], murukku [a deep-fried snack, popular in southern India and Sri Lanka], and cutlets which were all turned out at the home level kitchen of the Soyabean Foods Research Centre in Gannoruwa.

In 1980 “Soya ice cream which was on sale for the first time was the most popular item and along with the rising demand each night of the fair for fried [soya] nuts, cutlets and [soya] milk it was clear that soyafoods had come to stay.”

This year soya ice cream was popular again; the new soyafood on sale was tempeh. “Both tempeh and tofu had satisfactory sales considering that they were not items that could be consumed on the spot.”

**1025. Product Name:** Tempeh Burgers (Non-fried: Vacuum Packed).

**Manufacturer’s Name:** Soyfoods Unlimited, Inc.

**Manufacturer’s Address:** 14670 Doolittle Dr., San Leandro, CA 94577.

**Date of Introduction:** 1981. September.

**Ingredients:** Soy tempeh (made with soybeans organically grown in accordance with section 26569.11 of the California Health and Safety Code), natural soy sauce, herbs, spices.

**Wt/Vol., Packaging, Price:** 6 oz (170 gm). Vacuum packed in poly pouch.

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per 3 oz.: Calories 190, protein 9 gm, carbohydrates 6 gm, fat 3 gm, sodium 466 mg.

**New Product–Documentation:** Label. Undated. Blue and red on white, with rainbow border. “No oil. Tasty. To serve: Brown in oiled pan or steam for 5 minutes.” Ads in *Vegetarian Times* and *East West Journal*. 1982. Oct. “All the Sizzle... None of the Steak.” Also in *New Age*. 1982. Dec. Inside rear cover; Spot in *Soyfoods*. 1984. Summer. p. 43. “America’s first tempeh burgers were developed by Pacific Tempeh and Soyfoods Unlimited.” Shurtleff & Aoyagi. 1985. *History of Tempeh*. p. 53. America’s first non-fried tempeh burger, sold vacuum packaged.

**1026. Product Name:** Tempeh, and Tofu.

**Manufacturer’s Name:** Teac Bán Macrobiotic Center–Fad Saol Foods.

**Manufacturer’s Address:** 6 Parnell Road, Harold’s Cross Bridge, Dublin 6, Ireland. Phone: 01-543943.

**Date of Introduction:** 1981. September.

**Ingredients:** Tempeh: Organic soybeans, rice, *Rhizopus oligosporus* culture.

**New Product–Documentation:** Letter concerning an interview with owners and founders Ann Currie and Patrick Duggan conducted by Anthony Marrese. 1993. March. This organization was founded in 1985 or 1986. “They say they were the first in Ireland to make tempeh in any quantity and to sell it commercially. The name “Fad Saol Foods” is used for their products; It means “Long Life,” or, for them, macrobiotics. Their first contact with tempeh was through the Community Health Foundation in England. They were given the first tempeh hand grinder that was used by the Foundation, and they say it was the first organization in England to make tempeh. Since tofu and tempeh were generally not available for their needs in macrobiotics and dietary counseling, they started making these foods. They supplied most of Dublin with tempeh at that time, and their fresh tofu was sold at health food shops. There are Chinese shops that produced their own tofu at that time and still do. Ann and Patrick use nigari to make their tofu. They also run tofu-making classes and tofu cookery courses. They presently sell most of their tofu and tempeh through only one retail shop. They have little desire to supply more because of their current focus on courses and teaching. At present they make about 35 lb/week of tempeh (sold frozen) and 70 lb/week of tofu. Patrick produces both these soyfoods on his own. In the future they are open to increasing production if people from their courses come in to help. Once a week they serve a meal prepared by their cooking class and explain the significance of the foods, their preparation, etc. Approximately 15 people can be served and they are generally sold out.

In a letter of 12 May 1994 Anthony Marrese also sends a business card for the Macrobiotic Centre, a tempeh label, an issue of *Teac Ban News* (Vol. 7, No. 3, Autumn/Winter 1992; the Centre offers shiatsu treatment and classes, macrobiotic consultations, and courses in alternative medicine [10 sessions] and wholefood cookery [8 sessions, including tofu and tempeh]), and 2 pages of tofu recipes (from *The Magic of Tofu* and *The Book of Tofu*).

Tempeh Label. 4 by 6.75 inches. Blue on beige. Printed on both sides—with 6 recipes or recipe suggestions on the back. “Gluten free. No cholesterol. High protein. No preservatives.”

Form filled out by Patrick Duggan and Ann Currie. 2001. May 29. Their food company is named Fad Saol Foods. They started making tempeh in Sept. 1981. They also send their tempeh label, a one-panel tempeh leaflet, and a 6-panel brochure describing “Teac Ban: The home of healthy living, macrobiotic cooking, feng shui, and shiatsu.”

**1027. Santa Cruz Mobile News.** 1981. A restaurant with accent on health. Oct. 2. p. 19.

• **Summary:** About the Well Bean Deli, 349 Soquel Ave.,

# All the Sizzle... None of the Steak.

Mmmm...go ahead, bite into this thick and juicy "All American" Tempeh Burger from Soyfoods Unlimited. It's a real taste sensation that is wholesome and full of hearty flavor.

There's no need to worry about fat and cholesterol while you're enjoying this burger. Made from cultured organic soybeans, natural soy sauce and a unique blend of seasonings this new burger alternative is a complete protein containing *no animal products*, *no oil*, and *no cholesterol*. And there are only 120 calories per burger. The Tempeh Burger from Soyfoods Unlimited is pre-cooked so it's ready to eat. Add it to casseroles, pizzas, tacos or one of your favorite recipes.

Enjoy the best of both worlds: meaty flavor, high protein, plenty of B vitamins and lots of sizzle...but none of the steak.

Available in popular square and round shapes.

Look for other delicious and versatile products from Soyfoods Unlimited:  
Soy Tempeh • Soy and Five Grain Tempeh • Soy and Rice Tempeh  
• Available in the refrigerator or freezer case wherever you buy natural foods.

## The Tempeh Burger from Soyfoods Unlimited

Soyfoods Unlimited, Inc., 14670 Doolittle Dr., San Leandro CA 94577

Santa Cruz, California. It was started less than 2 months ago by Kevin Van Slooten. A photo shows part of the menu on the wall. Many of the dishes feature tofu or tempeh—Tofu burger, tempeh burger, missing egg salad or sandwich, tempeh mock chicken salad, tofunia salad or sandwich, tempeh salad, soy milk, tofu cheesecakes, etc. Address: Santa Cruz, California.

1028. Shurtleff, William; Aoyagi, Akiko. 1981. History of major U.S. soya research centers. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 24 p. Oct. 12. Unpublished typescript.

• **Summary:** A comprehensive history of the subject. Contents: Introduction. University of Illinois and INTSOY: Home Economics Department's work (in the 1930's, 1940-1961, and 1974-1981), Food Science Department (1955-1981), International Soybean Program (INTSOY) founded July 1973, large number of talented faculty made the Univ. of Illinois one of the world's top soy research centers. Iowa State University. Cornell University: First work with soy 1883, first soyfoods work in 1927 (soymilk thesis by Y.T. Chiu), one of leading centers of U.S. soyfoods research during World War II (see chapter on Clive and Jeanette McCay), rebirth of interest in soyfoods in late 1950's, 1960 paper on tempeh, soymilk work 1963-1980, other soyfoods studied, arrival of Dr. Van Veen in 1962 (had studied tempeh since 1932, had lived in Indonesia, and had a lifelong interest in tempeh), renewed program of soybean development and production initiated in New York state in 1964. USDA Northern Regional Research Center (NRRRC): Originated with 1929 USDA soybean lab in Ohio, 1936 soybean lab in Urbana, IL, transferred to Peoria, IL, 1942, expanded research on food uses of soybeans and soy oil, fermentation division headed by Langlykke, work on soy sauce, life of Dr. A.K. Smith, at NRRRC from 1942-1964, arrival of Drs. Watanabe and Shibasaki, Smith one of first American researchers to realize the potential of tofu, work with miso, 1960 arrival of respected Indonesian microbiologist Ko Swan Djien, work on tempeh, NRRRC hosted 2 of first major conferences on soy protein foods in 1961 and 1966, sponsorship of overseas contract work, expansion of research in 1960's, soy flour extrusion, Rackis' work with oligosaccharides (flatulence-causing factor in soybeans), life of Dr. C.W. Hesseltine, 1962 arrival of Dr. H.L. Wang at fermentation lab, Mustakas' studies on soymilk, NRRRC's interest in soyfoods steadily growing, legitimizes soyfoods to people in U.S. and around the world. INTSOY: Founding, 5 basic objectives, main accomplishments with soybeans, main accomplishments with soyfoods. Address: Lafayette, California. Phone: 415-283-2991.

1029. *Chicago Tribune*. 1981. 'Tofu' and other soy books: Reader's guide to good eating. Oct. 29. p. W\_A21, or N\_B19.

• **Summary:** This is a briefly annotated list of useful books about soy products: (1) *Soybeans for Health and Longevity*, by Philip S. Chen. (2) *The Soybean Book: Growing and Using Nature's Miracle Protein*, by Phyllis Dobson. (3) *The Farm Vegetarian Cookbook*, edited by Louise Hagler. See recipes for making ice bean, soy yogurt, and soysage. (4) *The Book of Tofu*, William Shurtleff and Akiko Aoyagi. Profusely illustrated, with hundreds of recipes. "There is no more thorough book on the history and myriad Oriental forms of tofu... First published in 1975, it is credited by most tofu cookbooks as the one that 'spread the light.'" (5) *The Tofu Cookbook*, by Cathy Bauer and Juel Anderson. Incorporates tofu artfully into familiar international dishes. Many recipes assume access to the by-products of making tofu at home: okara (soy pulp) and whey. (6) *The Great American Tofu Cookbook*, by Patricia McGruter. (7) *Tofu Goes West*, by Gary Landgrebe. For those who enjoy the chewy texture of "frozen tofu." (3) *The Book of Miso*, by Shurtleff & Aoyagi. The best-known book about miso. (8) *The Book of Tempeh*, by Shurtleff & Aoyagi. A thorough study of this traditional Indonesian food.

1030. Sass, Lorna J. 1981. More budget-conscious Americans are hitting the soy—it's not just sauce. *Chicago Tribune*. Oct. 29. p. N\_B19.

• **Summary:** This article first appeared as: Sass, Lorna J. 1981. "Soy foods: Versatile, cheap and on the rise." *New York Times*. Aug. 12. p. C1, C6.

1031. Storup, Bernard; Ruel, Françoise. 1981. Re: Studying tofu in America and starting work with tofu in France. Letter to William Shurtleff at Soyfoods Center, Oct. 31. 6 p. Typed, with signature. [2 ref. Eng]

• **Summary:** Bernard and Françoise enjoyed the 8 months they spent studying soyfoods in the USA, and have now been back in France for nearly 10 weeks. "During the time we were in the U.S., we had a rather good survey of the small and medium scale tofu industry, and I think we learned a lot from all the people we met, and very often what not to do.

"I have been really surprised by the quality of the welcome we had all along our way, as well as the spirit prevailing among most of the people involved with soyfoods (we did not visit the big factories). This too has been a good lesson. Another small surprise has been the general lack of technical experience of most of the people working with tofu... They could learn a great deal from the dairy industry—chiefly the small and medium scale cheese-making industry—by using the techniques and the equipment (very often not expensive) employed when curding, putting in pressing boxes by gravity, pressing, etc."

Concerning Li Yu-ying, "we went with Jean de Preneuf to the location of 'La Société Française pour l'exploitation du soja et de ses dérivés,' located at 48 Rue Denis Papin, Les Vallées, Colombes (west of Paris). The buildings had been

pulled down about 20 years ago, but were used for other manufacture since at least the beginning of the thirties. We met an old man who has always lived in the neighborhood and remembers that ‘some Chinese people were making cakes there before the first world war.’ So, it is certain that this address was the one of Li’s plant in 1912. We have been to the town hall of Colombes, but nobody was able to help us. We have to come back there at the end of November...

“Since our return to France, we had have, with Jean de Preneuf, a lot of contacts with different people to introduce, at least, the idea of soyfoods. We met people of the medical corps, all having an important role in scientific research (Dr. Sautier, INSERM, Hôpital Bichat, Paris; Dr. Mirouse, Dean of the Faculty of Medicine in Montpellier—the most important in France) working on plant proteins for years (as Dr. Cheftel, Université de Montpellier, who has been to Japan several times and has worked on soymilk with experimental equipment made by Alfa-Laval) and people from INRA (Institut National de la Recherche Scientifique). All these people knew or at least had heard about tofu, and are ready to help us in their own field (analysis or sometimes technical assistance).

“We also met people from large industry (researchers for Nestlé, and an executive of Prolait) to ask if they had worked on soy products other than T.V.P. and soymilk formulas for infants. They all knew tofu and other soyfoods very well but said that ‘the market in Europe is not ready yet for this.’ Finally, we met organic soybean producers (and non-organic too); we wanted to know more about the future policy of the Economic European Community on soybeans...

“Actually, 9000 hectares of soya (22,500 acres) are cultivated in France, mostly in the south of France. Soya represents in value the second largest (after oil) national import for the French budget.

“In France, we can find tofu only in very few places, most of the time at a prohibitive price, between \$4 and \$7 a kilo. Vietnamese shops in all big cities have tofu, but their tofu is rather special with a sandy texture and a strong (sour) taste. We found only one (bad) tempeh producer in Paris. For these reasons, we have thought more and more that it would be a good thing to open a tofu shop and to work at the same time on the informational level. We are now working on a small recipe book (adapted to the French habits) as well as on a technical flyer, a pamphlet and other things...

“We are thinking of starting a Soyfood Center in France but we will tell you about this in the future as soon as we have found a new place to settle (it should be near Paris). We have already made an application.

“Jean de Preneuf contacted different (good) publishers, and one said *The Book of Tofu* has been found to be very interesting by a committee of readers. We are now waiting for a definitive answer from this publisher (Editions Denoel, one of the best in France, by quality and volume).”

Accompanying the letter are photocopies of books by Li

Yu-ying and Grandvoinnet (1912) and Rouest (1921) which Shurtleff had been unable to find in America. Key portions were highlighted in yellow and translated into English.

Note: This is the earliest document seen (Feb. 2003) concerning Société Soy or its founders, Bernard and Françoise. The company’s first soy product was launched in June 1982. Address: 48 Rue Bouffard, 33000 Bordeaux, France.

1032. *East West Journal*. 1981. A soyfoods trailblazer looks back... & ahead [Interview with Dr. C.W. Hesseltine]. Oct. p. 30, 32-33.

• **Summary:** This interview was conducted by William Shurtleff of Soyfoods Center. Dr. Hesseltine’s lab has sent out 30,000 to 40,000 packets of tempeh starter to approximately 20,000 different people over the past 5 years. “Shurtleff: Has there been an interest comparable to that for any other [NRRC] food project that you know of? Hesseltine: No, nothing on that scale. Even back in the penicillin days, there was no such response.” A photo shows Dr. Hesseltine talking with people at the 1981 Soycrafters Association Convention.

Note: Dr. Hesseltine says that okara can be used as a feedstock for making ethanol (ethyl alcohol) and methanol. Address: Chief, Fermentation Lab., USDA/NRRC, Peoria, Illinois.

1033. Greenwood, Rebecca. 1981. Irresistible soy cuisine: Discover soy yogurt and prepare old favorites. *East West Journal*. Oct. p. 64, 66-69.

• **Summary:** The author prefers fermented soyfoods, finding them more digestible, and richer in enzymes and vitamins. She describes how to prepare homemade soy viilia (a yogurt-like product whose starter culture is available from GEM Cultures in Fort Bragg, California), homemade miso, homemade natto and natto condiment, tofu and natto sandwich spread, an autumn meal with natto, amasake, and a pecan pie sweetened with thick amasake. She predicts a bright future for tempeh. Address: Colorado.

1034. Leviton, Richard. 1981. Things go better with soyburgers: The new all-American food. *East West Journal*. Oct. p. 24-30. Cover story. Photos by Frank Ward.

• **Summary:** Contents: Of tempeh burgers and tofu dips: An industry poised for growth. The soyfoods industry: Building on a solid foundation. Market penetration: Mainstreaming convenience soyfoods. Soyfoods market snapshot: Crystal ball gazing. Soy sense. Address: Editor and publisher of *Soyfoods*, the quarterly journal of the soyfoods trade, and executive director of the Soycrafters Assoc. of North America, 100 Heath Road, Colrain, Massachusetts 01340.

1035. Soy Plant (The). 1981. An all-soy deli: Tofu, miso, soymilk, tamari, tempeh (Ad). *Ann Arbor Calendar*

(Michigan). Oct. p. 21.

• **Summary:** At the top of this small ad (2½ by 1.75 inches) is the collective's logo. At the bottom: "Present this ad for a 10% discount on listed items through 10/31/81. Limit one per customer." Address: 211 East Ann St., Ann Arbor, Michigan 48104. Phone: 663-0500.

1036. Weber, Marcia. 1981. Re: New developments with tofu and tempeh in Australia. Letter to William Shurtleff at Soyfoods Center, Nov. 8. 1 p. Typed, with signature on letterhead.

• **Summary:** "Here in Sydney there are only two other major producers of Bean Curd. They are both Chinese and are very enterprising.

"Our factory has shut down, and now one of the Chinese producers [Sin Ma Trading Co., 9 Meeks Road, Marrakville, NSW] is allowing us to use their premises to make our tofu... We are hoping to start another factory with more capital behind us. Unfortunately, we were grossly undercapitalized, and this was our downfall. The demand here in the healthfood line has stabilized at about 600 [pieces of tofu] weekly. Many people buy the Chinese bean curd, because they don't know the difference. When they experience our brand, they realize that there is a vast difference.

"However, it is impossible to compete with the price; our Tofu is twice the price. Because our volume is so low, we have very little choice. I myself teach cooking, and try to promote it as much as I can... Don't forget that this whole country is only 13 million people. It's very small compared to the U.S."

Gives addresses for Castle Trading Pty. Ltd. in Ranwick NSW, Homeland Community in Bellingen NSW, Sin Ma Trading Co. in Marrakville NSW, and Elly & Cyril Cain in Eumundi. The latter are just starting tempeh making on a very small scale. Address: East West Foundation of Australia, Suite 507, 363 George Street, Sydney 29 5481, Australia.

1037. Sweeney, Amin. 1981. How to search for early reference to tempeh in early the Javanese literature (Interview). *SoyaScan Notes*. Nov. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** William Shurtleff is trying to find an early reference to tempeh in today's Indonesia.

The classical Malay literature, which is Indonesia's oldest, is written in Perso-Arabic script. It is palace literature and not much of it has been translated; a little has been translated into Dutch.

To find an early Malay or Javanese reference to tempeh, it is probably best to look in the early Javanese literature.

The oldest of all Malay manuscripts date from about 1600; 12 of them are at Oxford and Cambridge, but there is probably no reference to in them. The oldest dated manuscripts start in the early 1800s.

Prof. Sweeney thinks he has seen a reference to tempeh

in the classical literature of the 18th and 19th centuries. He's think about the question. He requests that Shurtleff call back next week.

Another easier source is old Dutch dictionaries; look in the South and Southeast Asia Library. In 1928 Malay was declared the language of the future Indonesia. Then it was called Bahasa Indonesia. Malay and Indonesian are basically the same language, like British English and American English. Before 1928 no distinction was made between the two dialects. The Malay language was the lingua franca of the whole archipelago. Address: Prof., Indonesian Languages, 4116 Dwinelle Hall, Univ. of California, Berkeley, CA 94720. Phone: 642-4180.

1038. Affandi, Irwin; Mahmud, Mien K.; Hermana, -. 1981. Memanfaatkan khasiat tempe [Making better use of the special virtues of tempeh]. In: S. Josodiwondo, R. Utji, and U. C. Warsa, eds. 1981. Kumpulan Makalah Kongres Nasional Mikrobiologi III. Perhimpunan Mikrobiologi Indonesia. See p. 445-48. Held 25-28 Nov. 1981 in Jakarta. [4 ref. Ind]

• **Summary:** Describes results of a study on the use of tempe in the preservation of fish and in treating gastrointestinal disorders in children under 5 years. It was shown that tempeh was a good preservative but so far no inhibitory effects on microorganisms causing diarrhea were noted.

In other studies, tempeh has been reported to contain antibacterial and antiinfection substances, and may cure dysentery, gastrointestinal diseases, and digestive disorders. Address: Pusat Penelitian dan Pengembangan Gizi, Badan Penelitian dan Pengembangan Kesehatan Departemen Kesehatan R.I., Bogor, Indonesia.

1039. **Product Name:** Tempeh.

**Manufacturer's Name:** Beancoast Soyfoods.

**Manufacturer's Address:** Eumundi P.O. c/o C. Cain, Eumundi, QLD, 4562, Australia. Phone: 071-470-189.

**Date of Introduction:** 1981. November.

**New Product-Documentation:** Letter (order form) filled out by Mrs. Elly Cain (324 Grant Ave., Syracuse, New York 13207). 1979. Sept. 26. She orders 1 copy of *The Book of Tempeh* (professional hardback edition).

Letter from Marcea Weber. 1981. Nov. 8. Elly & Cyril Cain (Nambour P.O., Eumundi, 4560 QLD) are just starting tempeh making on a very small scale. Soyfoods Center Computerized Mailing List. 1982. July 23. Owners: Elly & Cyril Cain.

Letter from Ken Alexander of Daylesford, Australia. 1982. Oct. 21. "Cyril and Ellie Cain have gradually built up a tempeh business, supplying Brisbane [in Queensland]. Cyril makes beautiful tempeh. As he is selling the business to a private family concern, the situation is too tight for me to be included, otherwise Cyril would gladly share his experience with me. Cyril needs a successful sale, so as to return to the

United States with his family.”

Letter from Michael Joyce (which see). 1983. March 5. Gives a brief history of Cyril and Elly Cain’s pioneering work with tempeh in Australia.

Letter from Michael Joyce. 1984. Oct. 25. “I believe Cyril and Elly Cain made the first commercial tempeh in Australia, commencing in July 1982, as Beancoast Soyfoods, Maroochydore, QLD. Julie and I started working with them in October 1982 and we bought the company in May 1983. In October 1983 we changed the name to Mighty Bean Soyfoods and moved from Maroochydore to Cooloolabin via Yandia, Sunshine Coast, Queensland 4558. We make 100-300 kg/week.”

Vicki Jackson. 1983, Nov. The Squirrels Cook Book Brisbane. On p. 94 starts chapter titled “Tempeh” written by Julie and Michael Joyce. They note: “Little did we know in early 1982, when we first ate tempeh made by Cyril & Ellie Cain of Eumundi, Sunshine Coast, that we were soon to become tempeh makers.”

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 32. This company was founded by Cyril and Elly Cain in July 1982.

1040. Leviton, Richard. 1981. Plenty to eat at “Soyfoods in America” conference [at Colorado State University]. *Vegetarian Times* No. 51. Nov. p. 86-88.

• **Summary:** More than 240 people, from 18 nations, attended the 4-day conference. The “Soyfoods Expo 1981” featured a 30-booth trade show, including much production equipment. A strong feature of the conference was the opportunity it offered everyone to sample soyfood dishes in daily meals and cooking classes. The vegetarian food service program was developed and supervised by Pat Calhoun and Pattie Morris, soyfood chefs associated with White Wave, which helped plan the conference.

“Another world’s first was the Tofu Cheesecake Bakeoff, never before dreamed of anywhere, anytime (according to our far-flung sources) in the tofu-eating world. Ten daring contestants baked their tofu creme pies and cheesecakes (free from dairy, eggs, sugar, white flour) during the conference while the panel of hungry judges went delirious in sampling, then evaluating, what was agreed were the finest tofu cheesecakes ever submitted to a panel of soyfoods judges.”

A series of ten cooking classes were taught by Akiko Aoyagi, Rebecca Greenwood, Richard Jennings, Darrilyn Jackson, Robin Clute, Blanca Dominguez, Demetria Nanos Hamdorf, Melodie Phipps, and Thelma Dalman. Linda Gilbert and Ray Wolf of Rodale Press demonstrated their shortened and simplified home tempeh method.

Photos show Robin Clute, Akiko Aoyagi, and Rebecca Greenwood. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1041. Norton, Reggi; Wagner, Martha. 1981. The soy of

cooking: A tofu and tempeh recipe book. Revised ed. White Crane, P.O. Box 3081, Eugene, OR 97403. 58 p. Nov. Illust. 22 cm.

• **Summary:** Contents: Introduction. 1. Tofu and tempeh basics. Recipes—2. Salads, dressings, and dips. 3. Light meals and snacks, including appetizers and soups. 4. Main courses. 5. Desserts and muffins. Address: Eugene, Oregon.

1042. *Soyanews (Sri Lanka)*. 1981. Recipes: Tempeh with soya refuse. 4(3):3. Nov.

• **Summary:** How to make okara tempeh. Good tempeh can also be made with varying percentages of okara and whole or split soyabeans.

1043. **Product Name:** Santa Cruz Tempeh. Soy-Rice.

**Manufacturer’s Name:** Western Soy Complements.

**Manufacturer’s Address:** 335 Pennsylvania Ave., Santa Cruz, CA 95062. Phone: 408-423-2256.

**Date of Introduction:** 1981. November.

**Wt/Vol., Packaging, Price:** ½ lb. and 1 lb.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Jeremiah Ridenour. Talk with Jeremiah Ridenour. 1988. Aug. 31.

1044. Kim, Gai W. 1981. Re: Introducing tofu to Sri Lanka. Letter to William Shurtleff at Soyfoods Center, Dec. 18—in reply to inquiry of Nov. 18. 1 p. Typed, with signature.

• **Summary:** “I sincerely hope that you and your wife will come to Sri Lanka in the near future to teach me how to make aburaage [deep-fried tofu pouches], which I simply fail to make although I tried all the instructions written in your *The Book of Tofu*.

“As for my project, at present, Tofu, which I named Boncheese here because ‘bean’ in Sinhalese is Bonchi and the method of making tofu is just like making cheese. Soy Bread are daily sold at the Cornel’s, the only Super Market in Colombo. I managed to make Miso out of Tempeh within a week’s time and you have to taste it to appreciate its beauty. The biggest breakthrough is to supply about 50 pounds of *soyamesh* [soybeans ground in water; soybase or soy puree] every morning to the Colombo General Hospitals and the Welikada Prison to be used in lieu of coconut milk for the daily curry cooked in their kitchen. The plant I helped to set up is using about 1.5 to 2 tons of de-hulled [soya] beans a month at the moment.

“I am enclosing a report from the Super Intendent [superintendent] of the Welikade Prison in Colombo for your perusal. If you are really interested in my project in can send you some correspondence and newspaper cutouts [clippings] upon request.

“I just finished writing a letter to BMI regarding an order of BMI 100 for the expansion of the project.”

A handwritten note says that Kim is contacting the Navy and Air Force canteens for her soy project.

Attached are two letters which are cited separately:

(1) From H.G. Dharmadasa, Superintendent of Welikada / Welikade Prison (Oct. 1981). (2) From Dr. W.S. Weerasooria, Secretary, Ministry of Plan Implementation (16. Oct. 1981). Address: c/o UNDP in Sri Lanka, P.O. Box 1505, Colombo, Sri Lanka.

1045. *Food Chemical News*. 1981. Tempeh is ethnic food, not "vegetable protein product," Miles says. 23(40):20. Dec. 21.

• **Summary:** As such, tempeh may be used as an ingredient in other foods. Corbin I. Miles, Chief of the Generally Recognized as Safe (GRAS) Branch in the Food and Drug Administration's (FDA) Bureau of Foods wrote his opinion to Herbert Friedlander, of Arthur A. Checchi, Inc., in a letter dated 14 Dec. 1981.

1046. Lyon, Alexander. 1981. Early history of tempeh, soy ice cream, and other soyfoods at The Farm in Tennessee (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 26. 1 p. transcript. Includes follow-up interview of 18 Feb. 1985.

• **Summary:** The first cake of tempeh (just one cake) was made from whole soybeans, then the rest were all made with okara. They did not make whole soy tempeh since they had no way to dehull the soybeans. They only started making tempeh from whole soybeans after the splits were available for use in tempeh kits. Now most of the tempeh is made from whole soybeans rather than okara. Cynthia Bates was one of the first to work with tempeh and to stay with it. They used a food dehydrator as an incubator.

Members of The Farm Soy Dairy crew (Alexander, Marlene Pantos, Joanne Elfe, Myra Traugot) first started making soymilk ice cream during the summer of 1972 or 1973, using homemade soymilk, a hand-crank machine provided by Melvin Stirriff, and fresh blackberries gathered at a patch behind the soy dairy. Needless to say, the product was a hit, since no dairy products were consumed in the community and soymilk was still rationed among community members. The crew made this non-dairy ice cream 6-12 times during the first summer. A year or two later The Farm invested \$100 in four tiny table-top Glacier ice cream machines that made 1-2 quarts at a time. Production grew, but it was all consumed within the community.

In 1974 The Farm's publications "Hey Beatnik" and "Yay Soybeans!" both mentioned soymilk ice cream.

After production of Ice Bean was moved from San Francisco, California, to Tennessee, Steve Meyers and Michael Moorman became the two key soy ice cream people. Address: Summertown, Tennessee.

1047. **Product Name:** Tempeh.

**Manufacturer's Name:** Aqua Agra.

**Manufacturer's Address:** 100 Highline Dr., Longwood, FL 32750. Phone: 305-339-8157.

**Date of Introduction:** 1981. December.

**How Stored:** Refrigerated.

**New Product-Documentation:** Talk with Don Wilson.

1993. Nov. 24. In late 1981 Aqua Agra began to make soy tempeh. They sold less than 100 lb/week, and only to a few health food stores in Orlando who had asked for it. the last soy product they introduced, and the market for it was not very big. When he had to close the business, he had just started developing it and he had not yet introduced it into any of the chain stores.

1048. Brown, Judy. 1981. Soyfoods: Catching on in the U.S. diet. *National Food Review*. Winter. p. 10-11. [6 ref]

• **Summary:** Begins with a brief history of soyfoods and soy modern soy protein ingredient in the United States. Contains a long section on tofu and a shorter section on tempeh and miso.

"Soybeans are finding a new place in the U.S. food system."

"Another indication of the growing popularity of soy protein as food can be found in industry figures which show that in 1971 food use of soybeans was estimated to be around 10 million bushels annually or less than 1 percent of the crop. Today, almost 50 million bushels or nearly 2 percent of the total soybean production goes to human consumption each year (excluding oil)." Address: USDA Economics, Statistics, and Cooperatives Service. Phone: (202) 447-6364.

1049. Chen, Steve; Wang, Elizabeth. 1981. Huangdou you yu huangdou shipin shoutse [Handbook of soy oil and soy foods]. Taipei, Taiwan: American Soybean Assoc. 200 p. 19 cm. [Chi; eng]

• **Summary:** On the rear cover is written (in English): "American Soybean Association. China Nutrition Society. China Institute of Food Science Technology. China Food Health, Nutrition Research Foundation." Contains many tables and graphs. Address: Taipei, Taiwan.

1050. Fardiaz, Dedi; Markakis, Pericles. 1981. Oligosaccharides and Protein Efficiency Ratio of oncom (fermented peanut press cake). *J. of Food Science* 46(12):1970-71. Nov/Dec. [15 ref]

• **Summary:** "Peanut press cake was fermented with *Neurospora sitophila*, *Rhizopus oligosporus*, a *Neurospora* strain isolated from Indonesian oncom, and mixed *Neurospora-Rhizopus* cultures... Mixed cultures resulted in the quick elimination of all sugars," including oligosaccharides, a benefit in reducing flatulence. Peanut press cake has a PER of 1.51 (measured on rats). Oncom has a PER of 1.41, a reduction of 6.7%. Replacing 10% of the peanut protein with sesame protein raised the PER of the fermented mixture to 2.11, compared with 2.50 for casein. Address: 1. Dep. of Food Science & Human Nutrition, Michigan State Univ., East Lansing, MI 48824; 2. Bogor

Agricultural Univ. Formerly at MSU.

1051. Ismail Bin Abdul Karim, Mohamed. 1981. Preliminary studies on nutritional qualities of Malaysian tempeh. *Pertanika* 4(2):129-32. Dec. [15 ref. Eng; mal]

• **Summary:** Commercial tempe, purchased from small processors and markets at various places in Indonesia, was found to contain 65.08% moisture, 40.22% protein, 21.73% fat, 4.18% ask, and 9.39% crude fiber.

In Malaysia, tempe is incubated and sold wrapped in three types of leaves: (1) Banana (*Musa sapientum*). (2) Rambai (*Baccaurea motleyeyanam*). (3) Ketapang (*Terminalia catappa*). Plastic (polyethylene) bags are also used in place of leaves. Address: Dep. of Food Science and Technology, Faculty of Agriculture, Universiti Pertanian Malaysia, Serdang, Selangor, Malaysia.

1052. Java Murni. 1981. Reserve now for Java Murni's Vegetarian X-mas dinner. 4509 Adams St., Carlsbad, California.

• **Summary:** The dinner will we held on Dec. 26 and 27 from 5-7 or 7:15 to 10 p.m. The menu is given: Soup: Soto (mild) or Laksa (spicy). Appetizers: Gulung rebung (bamboo shoots wrapped in crispy tofu). Tofu kembang (tofu flowers). Salad: Gado-gado (with peanut dressing). Urap (with coconut dressing).

Entree: Tempeh treat (tempeh braised in Indonesian soy and safflower oil). Tofu-saus-richa (tofu in sweet-and-sour spicy sauce). Sambal goreng boontjis (green beans in savoury sauce). Sayur lodeh (vegetables in coconut milk). Chah tempeh (mixed tempeh & vegetables). Keringan tempeh (sweet-piquant tempeh). Satay tempeh (barbecue tempeh). Beehun goreng (rice noodles). Soyex malakka (soy cubes in malakka sauce). Nasi kuning (yellow rice).

Dessert: Onde-onde (mung beans wrapped in glutinous rice and sesame). Pisang goreng (coated fried banana).

Dinner includes all the above: Per person \$12.95.

A map shows the way to the restaurant. Illustrations: A bamboo border. A large Javanese shadow puppet on the left border, looking right. Address: Carlsbad, California. Phone: 434-4131.

1053. Ko Swan Djien; Kelholt, A.J. 1981. The inhibitive effect of *Rhizopus oligosporus* on toxin production by *Pseudomonas cocovenenans* in tempe bongkrek. *Annales Bogorienses* 7(3):97-106. Dec. [15 ref. Eng; ind]

• **Summary:** "*Rhizopus oligosporus* which is the principle mold species for the fermentation of soybeans or other raw materials into tempe, has several properties which inhibit harmful effects of other micro-organisms [microorganisms]. This paper reports on its inhibitive effect on toxin production by *Pseudomonas cocovenenans* in laboratory made 'tempe bongkrek.'" Address: 1. Dep. of Food Science, Agricultural Univ., Wageningen, Netherlands.

1054. Shurtleff, William; Aoyagi, Akiko. 1981. La soya y sus derivados: Tofu, miso, tempeh [The soybean and its products: Tofu, miso, tempeh]. *Quadernos de Natura (Editorial Posada, Mexico)* No. 20. 87 p. Dec. [3 ref. Spa]

• **Summary:** Contents: Introduction: The miracle of soya, by Ma. Teresa Piazza. 1. Soya: Source of protein. Ten reasons that soy will be the protein source of the future. 2. Tofu: Introduction A family of distinctive foods. A storehouse of high-quality protein. Cost of protein from different sources. Low in saturated fats: free of cholesterol; an ideal diet food. Natural backbone of the meatless diet. Buying and storing tofu. Making tofu at home and in communities. Soybeans, tofu, and the world food crisis. Table of different tofu varieties. Tofu shops in Japan. Our favorite tofu recipes.

3. Miso: Introduction. Delightfully varied; highly versatile. A nutritional treasure trove. The varieties of miso (including a table). The preparation of miso. Traditional natural miso and quick modern miso. A brief history of miso. Buying, storing, and using miso. Miso in Japan. Traditional Japanese miso shops and modern factories. Making miso at home. Our favorite miso recipes (contains 16 recipes).

4. Tempeh: Introduction. Rich in protein and vitamin B-12. Tempeh comes west (a brief history). How tempeh is made. The miracle of fermentation. Buying and storing tempeh. Tempeh for Latin America. Our favorite tempeh recipes (contains 8 recipes).

Note: This book is largely a Spanish-language translation of three English-language brochures written by the authors in the late 1970s: What is tofu? What is miso? What is tempeh? Chapter 1 is summarized from the first chapter of *The Book of Tempeh*. Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

1055. **Product Name:** Tempeh (Soy & Okara), Tofu, Soysage, Egg-less Salad, Flavored Soymilk (Carob & Honey, or Maple).

**Manufacturer's Name:** Soy Beings.

**Manufacturer's Address:** 13-C Railroad Square, Waterville, ME 04901. Phone: 207-872-8790.

**Date of Introduction:** 1981. December.

**New Product-Documentation:** Soyfoods Center Computerized Mailing List. 1981. Dec. 8. Owner: Richard Tory. Shurtleff & Aoyagi. 1982. Soyfoods Industry: Directory & Databook. p. 1. Form filled out by Richard Tory. ca. 1982. This is a 5-person collective. "We have a small, light catering business and wholesale sandwich business selling locally to natural food stores, etc. Potato salad, tofu dips, tempeh sandwiches, whole wheat tofu pizza, and natural pastries." The tofu contains nigari and organically grown soybeans. Soysage is made with nutritional yeast, safflower oil, honey and spices in an okara base. Egg-less salad made with tofu and eggless mayonnaise.

1056. Soyfoods Center; Soycrafters Assn. of North America. 1981. Per capita use of soyfoods grows to nearly 9 lbs. in U.S. *Vegetarian Times* No. 52. Dec. p. 6.

• **Summary:** Based on a Sept. 1981 news release copyrighted by the Soyfoods Center and the Soycrafters Assoc. of North America, this summary of a market study gives for each major soyfood product the number of manufacturers in the USA, Canada, and worldwide. The tons/year of raw soybeans used. And (in the USA only) the tons of food produced, wholesale value, retail value, and number of employees.

In the USA, the number of manufacturers, tons of product produced, and retail value in million dollars are as follows for low technology, traditional: Tofu and tofu products (154, 22,700, \$50.4), tempeh (32, 494, \$1.78), soymilk and soymilk products (14, 148,000, \$118.0), soy sauce, shoyu & tamari (15, 54,837, \$203.0), soynuts and soynut butter (12, 2,750, \$4.6), miso (10, 2,000, \$4.8), soy sprouts (5, 360, \$0.25), etc. Subtotals for low-tech (284 manufacturers, 231,305 tons produced, \$392.25 retail value).

For high-technology, modern: Soy flour & grits, defatted (12, 400,000, \$190.4), textured, extruded soy flour (TSP/ TVP) (2, 200,000, \$179.2), soy protein concentrates (3, 45,000, \$56.7), soy protein isolates (3, 45,000, \$126.0), meat analogs (secondary products) (6, 20,000, \$55,000). Subtotals for high-tech (26 manufacturers, 710,000 tons produced, \$615.6 retail value). Total low and high tech: 310 manufacturers, 941,305 tons produced, and \$1,007.85 million dollars.

Also published in *New Age* (Jan. 1982, p. 17) under the title "Tofu Takes Over."

1057. **Product Name:** Soylami (Ready-to-Eat Sausage-Shaped Meatless Salami Made from Tempeh; Vacuum Packed).

**Manufacturer's Name:** 21st Century Foods.

**Manufacturer's Address:** Jamaica Plain, Massachusetts.

**Date of Introduction:** 1981.

**Ingredients:** Organic soybeans, whole wheat, sesame seeds, corn oil, tamari, herbs, spices, tempeh starter, vinegar.

**Wt/Vol., Packaging, Price:** 6 oz cylinder, vacuum packed.

**How Stored:** Refrigerated.

**New Product–Documentation:** Labels (two), undated. "Pre-cooked. Ready to Eat Snack or Hors D'Oeuvre." Spot in *Soyfoods*. 1983. Summer. p. 52. "One Soylami on Rye, Please." Ready to eat. Label. 1987. 3.5 by 6 inches. Red and white on yellow-orange. "Made from Homestyle Tempeh. Ready to Eat Snack or Hors D'Oeuvre. Serving Suggestion: Cut into thin slices. Serve warm or cold. Combine with mustard or sauerkraut if desired." Talk with Rudy Canale. 1988. Sept. 13. One of their earliest products, launched in 1981, this is still a popular item.

1062. **Product Name:** Java Murni Tempeh Schnitzstick (Seasoned and Breaded Fried Tempeh).

**Manufacturer's Name:** Indocon. Div. of Indofoods, Inc.

**Manufacturer's Address:** Carlsbad, California.

**Date of Introduction:** 1981.

**Ingredients:** Organic soybeans, organic unhulled sesame seeds, onions, soy sauce, garlic, vinegar, *Rhizopus oligosporus*, water, wheat flour, corn flake crumbs, soy oil.

**Wt/Vol., Packaging, Price:** 6 oz.

**How Stored:** Refrigerated.

**Nutrition:** Calories 72, protein 9 gm, carbohydrates 4.6 gm, fat 3.2 gm.

**New Product–Documentation:** Label. 1981, undated. Black on white.

1063. **Product Name:** Java Murni Tempeh Burger.

**Manufacturer's Name:** Indocon. Div. of Indofoods, Inc.

**Manufacturer's Address:** Carlsbad, California.

**Date of Introduction:** 1981.

**Ingredients:** Organic soybeans, organic unhulled sesame

seed, garlic, vinegar, onions, salt, *Rhizopus oligosporus*, safflower oil margarine, water.

**Wt/Vol., Packaging, Price:** 10 oz.

**How Stored:** Refrigerated.

**Nutrition:** The tempeh part: Calories 102, protein 12.3 gm, carbohydrates 6.4 gm, fat 4.5 gm, calcium 92 mg, iron 3.2 mg.

**New Product–Documentation:** Label. 1981, undated. Black on white.

1064. **Product Name:** Java Murni Tempeh.

**Manufacturer's Name:** Java Murni.

**Manufacturer's Address:** 4509 Adams Ave., Carlsbad, CA 92008. Phone: 714-434-4131.

**Date of Introduction:** 1981.

**Ingredients:** Dehulled and cracked organic soybeans, water, vinegar, *Rhizopus oligosporus*.

**Wt/Vol., Packaging, Price:** 10 oz.

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per 100 gm: Calories 179, protein 17 gm, carbohydrates 12 gm, fat 7 gm, calcium 103 mg, iron 3.7 mg.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1981. Jan. 22. By July 1982 the owners are Max S.T. Tan and Bob I.K. Sih. Label. 1981, undated. Black on white. "Made with loving care and knowledge for Java Murni Ricetable Ingredients. Try tempeh at Java Murni Restaurant, 4509 Adams Street, Carlsbad." Recipes.

1065. Java Murni. 1981. Vegetarian Menu. 4509 Adams St., Carlsbad, California.

• **Summary:** Includes many interesting tempeh and tofu dishes. Dec. 1981 ranking of best-sellers: 1. Tempeh treat (Tempeh braised in Indonesian soy and safflower oil). 2. Keringan tempeh. 3. Satay tempeh. 4. Tempeh kechap. 5. Tempeh malakka. 6. Sambal goreng tempeh. Address: Carlsbad, California. Phone: 434-4131.

1066. Kronenberg, H.J. 1981. Synthesis of an antibiotic by *Rhizopus oligosporus*. 14 p. Unpublished manuscript. [9 ref]

• **Summary:** "Fermentation products of *Rhizopus oligosporus* were tested for antibiotic activity against *Bacillus subtilis*, *Bacillus subtilis* var. *niger*, and *Sarcina lutea*. A tempeh extract was found to inhibit the growth of all three assay organisms. The antimicrobial compound is moderately heat stable, and there is some evidence suggesting that it may contribute to the nutritional value of soybean tempeh." Note: *Bacillus subtilis* is the bacterium used in the natto fermentation.

1067. **Product Name:** New World Norimaki (Vegetarian Sushi) [With Tempeh, or with Seitan].

**Manufacturer's Name:** New World Enterprises. Renamed New World Natural Foods in 1985.

**Manufacturer's Address:** 157 Sutherland Rd., Brookline, MA 02146. Phone: 617-232-5973.

**Date of Introduction:** 1981.

**New Product–Documentation:** Talk with Emily Merghart. 1989. Aug. 18. These two products were introduced today.

1068. **Product Name:** Tempeh Burger (with Miso).

**Manufacturer's Name:** North Coast Tempeh Co.

**Manufacturer's Address:** c/o Cleveland Tofu Co, 8021 Euclid Ave., Cleveland, OH 44121.

**Date of Introduction:** 1981.

**Ingredients:** Tempeh (organic soybeans, water, *Rhizopus* culture), tamari, barley miso, spring water, corn oil, rice vinegar, spices.

**Wt/Vol., Packaging, Price:** 8 oz (3 burgers).

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1982. 4.25 inch diameter. Red, green, blue, and yellow on white. Logo of Jack and the Beanstalk. "No cholesterol. All natural. Pan Fry, Bake, Steam, or Grill." Jeff Narten. 1987. "History of North Coast Tempeh and its Products." 4 p. Dec. 7. "Our tempeh burger is our number one product after tempeh. It is unique to my knowledge in that it is a fairly complicated marinade and depends less on tamari than many I've tasted."

1069. **Product Name:** Soyboy Tempeh.

**Manufacturer's Name:** Northern Soy.

**Manufacturer's Address:** 30 Somerton St., Rochester, NY 14607.

**Date of Introduction:** 1981.

**Ingredients:** Water, organic soybeans, cider vinegar, tempeh starter (*Rice*, *Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Frozen.

**New Product–Documentation:** Label. 1981, dated. 5.5 by 6.5 inches. Orange, green, and black on beige. Recipes on back for Pan Fried Tempeh, Steamed Tempeh, Tempeh Lettuce & Tomato Sandwich, Garden Tempeh Spread, Sloppy Joe Tempeh. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Soyfoods Center Computerized Mailing List. 1982. July 23. Owners: Andy Schecter & Norman Holland. Address is now 30 Somerton St., Rochester, New York. Phone: 716-442-1213.

1070. **Product Name:** Tempeh Salad.

**Manufacturer's Name:** Soy Plant (The).

**Manufacturer's Address:** 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: 313-663-8638.

**Date of Introduction:** 1981.

**Ingredients:** Tempeh (organic soybeans, *Rhizopus* culture, vinegar), simmered in shoyu & water, Soy-naise (soymilk, oil, vinegar, spices), carrots, celery, green onions, parsley, basil.

**Wt/Vol., Packaging, Price:** 12 oz. plastic tub.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label in Soy Plant scrapbook. 1980. 2.75 by 2.5 inches. Black on white.

1077. Altman, Nathaniel. 1981. Nathaniel Altman's total vegetarian cooking. New Canaan, Connecticut: Keats Publishing, Inc. 229 p. Index. 18 cm. Series: A Pivot Original Health Book. [180 ref]

• **Summary:** The author was born in 1948. The first page of the book begins: "It's not just spinach. The vegetarian way of eating is incredibly varied, employing such exotic, appealing foods as calcium-rich hijiki, tempeh from Indonesia, and tofu."

The glossary (p. 139-44) describes: Lecithin, milk (soy), miso, soybeans, soy grits, sprouts (incl. soy), tamari, tempeh, tofu, and textured vegetable protein (TVP).

Chapter 11, titled "A vegetarian diet can save you money" (p. 146-51) mentions soybeans and soyfoods (incl. soy milk powder, dry tofu [probably dried-frozen tofu], soy sprouts, soy flour, soy sauce, tofu) repeatedly as low-cost sources of protein.

The book has several very interesting appendixes: C. The vegetarian bookshelf (p. 208-10). D. Vegetarian contacts—Some vegetarian societies and publications (p. 211-12). Bibliography by chapter (p. 213-20).

1078. Buchari, Syafril. 1981. Mempelajari pengaruh jenis bahan penambahan antioksidan terhadap mutu tepung tempe selama penyimpanan [Study of the effects of different types of antioxidants on the quality of tempeh flour during storage]. Thesis (Skripsi), Fakultas Mekanisasi dan Teknologi Hasil Pertanian Institut Pertanian, Bogor, Indonesia (College of Agricultural Mechanization and Technology, Bogor Institute of Agriculture). 118 p. [Ind]\*  
Address: Bogor, Indonesia.

1079. Dianti, Merry. 1981. Pembuatan dan pengujian bahan makanan campuran sorgum kedele dan sorgum tempe [Preparation and testing of foods made from a soybeans-and-sorghum mixture, and a sorghum-and-tempeh mixture]. Thesis (Skripsi), Akademi Gizi, Jakarta, Indonesia. [Ind]\*  
 • **Summary:** Discusses Vitempo, a tempeh formula. Address: Akademi Gizi, Jakarta, Indonesia.
1080. Djurtoft, R. 1981. Studies related to tempe production. I. Tempe production from soybeans and cowpeas. Unpublished typed manuscript. 9 p. Plus 9 pages of 32 color photos, each with a caption. Unpublished manuscript. 30 cm. [1 ref]  
 • **Summary:** Contents: Oeben Sjarim factory culture. Usar leaves from “Nga Beans”. Usar leaves from “Tempe Giling Murni”. Old usar cultures from Jogjakarta. Tempe served as snacks. Address: Dep. of Biochemistry & Nutrition, Technical Univ. of Denmark, DK-2800 Lyngby, Denmark.
1081. Djurtoft, Robert. 1981. Studies related to tempe production. II. Two types of microorganisms on usar leaves (*Rhizopus* molds, *Bacilli*). Unpublished typed manuscript. 37 p. Including 13 color photos. Unpublished manuscript. 30 cm.  
 • **Summary:** Contents: Introduction. Determination of the number of viable organisms. Isolation and identification of molds and bacteria. Identification of molds from usar leaves: Two *Rhizopus* species from Nga usar, one *Rhizopus* species from GM4 usar. Identification of bacteria on usar leaves: Classification in genera, differential classification. Address: Dep. of Biochemistry & Nutrition, Technical Univ. of Denmark, DK-2800 Lyngby, Denmark.
1082. Djurtoft, Robert; Nielsen, Jens Peter. 1981. Studies related to tempe production. III. Nutritional value of [soy and cowpea] tempeh in relation to B-vitamins, including B-12. Unpublished typed manuscript. 10 p. Including 5 pages of color graphs. Unpublished manuscript. 30 cm.  
 • **Summary:** Contents: Introduction. Experimental. Conclusions. Address: Dep. of Biochemistry & Nutrition, Technical Univ. of Denmark, DK-2800 Lyngby, Denmark.
1083. Ford, Richard. 1981. Soy foodery cookbook: Tofu, tempeh, miso, sea vegetable recipes and resources. Santa Barbara, California: Published by the author. ii + 78 p. Illust. No index. 22 cm. Spiral bound. [20+ ref]  
 • **Summary:** Contents: Introduction: Creative balance. Soyfoods: Foods for the future. Soyfoods resources. Tofu: A soy product catching on. Tempeh: The super soy. Soysage. Sea vegetables: The tide is rising. Miso: A food doing it with culture. Soyfood travelers guide. Contains many recipes using tofu, tempeh, sea vegetables, and miso. At the end of each chapter is a bibliography. Address: Santa Barbara, California.

1084. Gandjar, I. 1981. Soybean fermentation in Indonesia. *Advances in Biotechnology* 2:531-34. [9 ref]  
 • **Summary:** Discusses various kinds of tempeh, taoco (Indonesian miso), kecap (Indonesian soy sauce), tempe gembus (okara tempeh; sold in every market and village in Central and Eastern Java), oncom tahu (okara onchom), and traditional fermentation processes. Address: Dep. of Biology, Faculty of Mathematics and Natural Sciences, Univ. of Indonesia, Jakarta, Indonesia.
1085. Hesseltine, Clifford W. 1981. Thom Award Address: A microbe's view of fermentation. *Developments in Industrial Microbiology* 22:xv-xvi, 1-18. [21 ref]  
 • **Summary:** Pages xv to xvi give a brief biography and photo of Dr. Clifford W. Hesseltine, winner of the tenth Charles Thom Award on 14 Aug. 1980, presented by the Society for Industrial Microbiology. Dr. Hesseltine knew Dr. Charles Thom and was strongly influenced by him, even though the two men never worked together.  
 “Dr. Hesseltine's studies on the taxonomy of the Mucorales have resulted in a classification now in worldwide use... The research of Dr. Hesseltine on mycotoxins is world famous. He has directed the aflatoxin project of the Fermentation Laboratory, NRRC...”  
 “Dr. Hesseltine's studies on fermented foods are equally well known. Included in this research has been the use of soybeans and cereals in Oriental fermented foods including tempeh, miso, Chinese cheese, and shoyu.”  
 Just 100 years ago the first pure cultures of fungi were made by Brefeld, a German, who published his results in 1881. The development of submerged culture of penicillin production began in 1941 at the NRRL. The USA lost its leading role in industrial fermentation early in the 1960s due to weakness in research in many fields. Address: NRRC, Peoria, Illinois.
1086. Jaffrey, Madhur. 1981. Madhur Jaffrey's World-of-the-East vegetarian cookery. New York, NY: Alfred A. Knopf, Inc. 461 p. Illust. by Susan Gaber. Index. 20 x 20 cm. A second edition was published in 1983 in London by J. Cape.  
 • **Summary:** The Indian woman author of this creative book presents 21 recipes for bean curd (tofu), 7 for tempeh, and some for yuba and miso. Green soy beans with sauce (p. 7). Cabbage with miso (p. 15). Eggplant slices with white miso (p. 22-23). Fresh soy beans, steamed (p. 57). Spinach with fermented bean curd (p. 59). Stuffed yellow squash (with yuba, p. 62-64). Pecel (Vegetable salad with spicy peanut sauce, plus tofu and tempeh; p. 73-74). Tempura (with tofu; p. 75-77). Soy bean sprouts (how to grow; p. 100). Soy-bean and mung-bean sprouts seasoned with sesame oil (p. 105). Tempeh, Fried tempeh, Fried, preseasoned tempeh, Sambal goreng tempeh kering (Sweet and sour tempeh), Tempeh cooked in coconut milk (p. 108-110). Thai fried rice (with

red fermented tofu; p. 150-51).

One chapter (p. 160-89) is titled "Soy milk, bean curd, and wheat gluten." Making your own soy milk. Making your own bean curd. Udofu (*Yudofu*, simmering bean curd with seasonings). Bean curd with watercress. Korean-style bean curd in a hot water bath. *Hiya-yakko* (Chilled bean curd). Bean curd with Chinese parsley. Bean curd with broccoli. Cabbage cooked with bean curd. Bean curd with a deliciously spicy sauce. Carrots and beans with bean curd dressing. Bean curd, mushrooms, and peanuts in hoisin sauce. Sautéed bean curd. Tofu dengaku (Toasted bean curd with a miso topping). Fried bean curd cubes, soy-bean sprouts sautéed with fried bean curd. Fried bean curd with a sweet-and-sour sauce. Fried bean curd cakes with a mustard surprise. Inari-zushi ("Bags" of fried bean curd stuffed with sushi rice). Pressed bean curd with cabbage. Salad of pressed bean curd, mung-bean sprouts, and agar-agar. How to make fried and baked wheat gluten balls (plus 5 gluten recipes). Buddha's delight (with yuba and fried bean curd).

Chawanmushi (Steamed savory custards, with tofu; p. 192-94). Omelette with bean curd (p. 198-99). Soy sauce eggs (p. 209). Paneer (milk cheese; p. 237-40). Hot or cold noodles with a soy-sauce dressing (p. 248). Noodles with a hot-and-sour bean sauce (p. 250). Vegetarian mee krob (Crisp noodles with pressed bean curd and eggs, from Thailand, p. 255-56). Noodles with quail eggs, mushrooms, spinach, and yuba (Japan; p. 256-57). Hoppers (yeast pancakes from Sri Lanka). Roti (Flat whole-wheat bread). Delicious stock made with soy-bean sprouts. Clear soup with enok mushrooms, bean curd skins [yuba], and spinach (p. 297). Clear soup with soft bean curd and celery cabbage (p. 298). Miso soup with bean curd (p. 307). Miso soup with carrots and mushrooms (p. 308). Fried, munchable soy beans [soynuts] (p. 321-22). Potato and tempeh patties (p. 339). Dipping sauces (with soy sauce; p. 357-59). Kombu relish (with soy sauce, p. 374). Shoyu daikon (White radish pickled in soy sauce). Ginger quick-pickled soy sauce (p. 375). Aomidaikon (Quick pickled small white radishes, with slightly sweet yellow miso; p. 377-78). Chinese-style jellied bean-curd sweetmeat with a peanut topping (p. 399-400).

General information (p. 418-36; lots on soyfoods, see: bean curd [regular, fried, fermented, pressed, pressed seasoned], kochu chang [jang], miso, soy-, tempeh, yuba). Sources (of ingredients; p. 437-40). Address: New York City, NY.

1087. Ko Swan Djien. 1981. Fermented foods of Indonesia except those based on soybeans. *Advances in Biotechnology* 2:525-30. [37 ref]

• **Summary:** Foods discussed include oncom [ontjom, onchom] (chiefly made of peanut presscake fermented with *Neurospora* species of molds), tempe bongkreng (made from coconut presscake obtained from coconut-oil factories where oil is pressed from copra, or from partly defatted

coconut residue which is left when shredded coconut meat is extracted with water to obtain coconut milk for preparing dishes for family consumption; also discusses bongkreng poisoning and its history in Indonesia), tapé, and dagé. Address: Dep. of Food Science, Agricultural Univ., Wageningen, The Netherlands.

1088. McCallum, Cass. 1981. The real food guide. Vol. 2: Pulses, grains and seeds. Glasgow, Scotland: The Molendinar Press. 196 p. Index. 20 cm.

• **Summary:** The section on "Anti-nutritional factors in pulses" discusses those found in many legumes (such as haemagglutinins, trypsin inhibitors, phytic acid, flatulence factors) and those of importance in specific legumes; for soybeans, only heat-resistant trypsin inhibitors are mentioned. The section on "Basic bean cookery" gives general guidelines and tips (never add salt until beans are cooked tender). A table (p. 54) shows that soybeans require the longest cooking time of any bean listed.

The section titled "A-Z pulses" gives details (incl. the scientific name) concerning many legumes listed alphabetically. Includes adzuki, kura mame [sic, kuro mame = black soybeans] (p. 65), and winged beans. By far the longest section is on soy beans (p. 71-82). Contents: Introduction. Nutritional values. Dried soy bean products: Soy grits, soy coffee, soy flour (full fat, medium fat, fat free), soy nuts, soy milk, soy yolk (a concentrated form of soy flour), textured vegetable protein, soy splits, tofu powder. Fermented soy bean products: Black beans—fermented, chao, chee-fan, chiang (Chinese miso), Hamanatto, ketjap, koji, meitauza, miso, mame miso, Hatcho miso, kome miso, mugi miso, natto, okara. Soy sauces: Introduction, Chinese soy sauce, ketjap, synthetic sauce, tamari. Sofu [sic, sufu], tahuri, tamari, tao-cho, taokoan or tao koan, taotjo or tao dji, tempeh, tofu. Tofu from whole beans (homemade recipe). Tofu from powdered [soy] milk.

The part titled "Recipes" (p. 129-92) is divided into three sections. Soy-related recipes in each are listed here: (1) Soups and starters: Iced tofu (p. 134). miso soup (p. 138). Adzuki bean soup (p. 141). (2) Main dishes: Deep-fried tofu (p. 167). Szechuan bean curd (p. 168). (3) Bread, side dishes, sauces and desserts: Miso lemon sauce (p. 186). Miso ginger sauce (p. 187). Peanut butter (homemade recipe, p. 191).

The rear cover states: "These books fight a war against junk food—and win." The author is a woman.

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word "tao koan" (or "tao-koan") to refer to tofu. Address: United Kingdom.

1089. Sayekti, S.; Tien, -. 1981. Usaha-usaha untuk memperpanjang daya simpan tempe kedele [Methods for extending the durability (shelf-life) of soy tempeh]. Thesis (Skripsi), Fakultas Teknologi Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 31 p. [Ind]\*

Address: Yogyakarta, Indonesia.

1090. Schmidgall-Tellings, A. Ed; Stevens, Alan M. 1981. Contemporary Indonesian-English dictionary: a supplement to the standard Indonesian dictionaries with particular concentration on new words, expressions, and meanings. Chicago, Illinois: Ohio University Press. xv + 388 p. 24 cm. [Ind; Eng]

• **Summary:** Soy-related words (many are missing):

“Bungkil—peanut residue after the oil has been pressed out.

“Kacang hijau—mung beans. Kacang tojin—roasted peanuts with garlic. Note 1. Soybean is not mentioned here.

“Kècap manis—Indonesian sweet soy sauce.” Note 2. Plain Indonesian soy sauce is not mentioned here.

Note 3. Kedelai, kedelé—Not listed.

“Tahu—bean curd. Tahu pong—bean curd cut into small pieces and baked until it pops up. Tahu tempe—a side dish of tahu and tempe.”

Note 4: Tauco—Not listed.

“Témpé—a protein-rich cake of fermented soybeans. témpé bangsa—a small and insignificant nation. témpé pemuda—a good-for-nothing kid. témpé gembos—fermented beancake made from peanut residue.”

The Preface begins: “The form of Malay used in the Indonesian archipelago was already different from peninsular Malay when, on October 28, 1928, a nationwide youth congress held in Jakarta named Bahasa Indonesia, the Indonesian language, as the national language. Since August 17, 1945, when Indonesia declared its independence, the language has changed rapidly, especially in the area of vocabulary.” Address: 1. Freelance translator and author of many books and articles on the Indonesian language; 2. Prof. of Linguistics, Queens College and the Graduate Center, City Univ. of New York.

1091. Soetrisno, Uken S.S. 1981. The effect of heating time of soybean on vitamin B-6 and folacin retention, trypsin activity, and microstructure change. MSc thesis, Oregon State University, Corvallis, Oregon. 54 p. \*

Address: Corvallis, Oregon.

1092. Stobart, Tom; Owen, Millie. 1981. The cook's encyclopedia: Ingredients and processes. New York, NY: Harper & Row, Publishers, Inc. xii + 547 p. Illust. 25 cm. [20 ref]

• **Summary:** Soy related entries include: Bean curd (incl. tofu). Bean-curd cheese [fermented tofu]. Bean paste and bean sauce (incl. Red bean paste) is sweet and made from adzuki beans. Yellow bean paste is made from soybeans and is salty and pungent. “Fermented salted black beans” is made from a black variety of soybeans; these salted black beans can be used to make “black bean sauce” which can be used as a flavoring in fish, lobster, chicken, and pork dishes.

Soybean (incl. soya bean, soja bean, flour {“pork soya links” used in Britain during World War II}, sprouts, soy oil, soy sauce, soymilk, vegetable yogurt [soy yogurt], vegetable cheese [soy cheese], tempeh, bean curd skin [yuba], miso, tamari, soy sauce, soy protein isolate, soy granules or grits, textured plant protein [textured soy protein]). The name in four European languages is given.

Soy sauce or shoyu (It “is said to be one of the ingredients of Worcestershire sauce.” Incl. the “very heavy Indonesian *ketjap* {*ketjap manis* or *ketjap benteng*}, which is a type of soy sauce,...”). The name in four European languages is given.

Textured plant protein (a high-protein foodstuff manufactured from plants (soybeans, peanuts, wheat, cottonseed, etc.). “Originally it was aimed at the vegetarian market.” Also called “textured vegetable protein” in the USA. Incl. textured soy flour, textured soy protein gel and fibers).

Worcestershire sauce: Begins with a history (starting in 1837) based on the fanciful story so widely known. “Thus was born what is probably the world's best-known and most ubiquitous bottled sauce, one which has become a standard ingredient.” Note: How about soy sauce? “The exact formula is secret. Although it is much imitated, nobody seems to be able to get quite the taste of the original.”

Also contains entries for adzuki, ketchup (“Javanese *katjap* [ketjap], for example, is a very sweet soy sauce”), peanut (groundnut or monkey nut), pulses, seaweed, sesame seed, tahini.

Note: Millie Owen prepared the American edition of this book. Address: 1. Hassocks, Sussex, England; 2. Northfield, Vermont.

1093. Vaidehi, M.P.; Vijayakumari, J. 1981. Soya delights: Recipes for the use of soybean. Hebbal, Bangalore 560-024, India: University of Agricultural Sciences. xii + 106 p. Illust. No index. 22 cm. All India Coordinated Research Project on Soybean. [17 ref]

• **Summary:** Contents: 1. Introduction: Importance of soybean in Indian diet, processing method of soybeans, University of Illinois methods of processing for home and village level use, industrial processing of soybeans, soybean cultivation details, glossary. 2. Boiling method for soy dishes. 3. Roasting method for soy dishes. 4. Steaming method for soy dishes. 5. Frying method for soy dishes. 6. Baking method for soy preparations. 7. Sweet dishes from soybeans. 8. Soy milk and its preparation. 9. Soy fermented foods (tempeh). Tables and figures (12). Address: 1. PhD; 2. Mrs., instructor. Both: Univ. of Agricultural Sciences, Bangalore, India.

1094. Wedhastri, Sri. 1981. Daya proteolitik beberapa strain *Rhizopus Sp.* dalam usar pada substrat campuran kedelai dan kacang tolo [Proteolytic activity of the enzymes from various

strains of *Rhizopus* molds on a mixed soybean and *tolo* bean substrate]. Thesis (Skripsi), Fakultas Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 42 p. [Ind]\*  
Address: Yogyakarta, Indonesia.

1095. Wolf, Ray; Hoffman, Jim; Keough, Carol. ed. 1981. Home soyfood equipment: Build-it-yourself. For production and use of high-protein, low-calorie tofu, tempeh, and soymilk. Emmaus, Pennsylvania: Rodale Press. 84 p. Illust. No index. 22 x 29 cm.

• **Summary:** For production and use of high-protein, low-calorie tofu, tempeh, and soymilk. Contents: Section I. Introduction. 1. What soyfoods are. 2. Using soyfoods (recipes). Section II. Introduction. 3. Tofu box. 4. Pot-mount press. 5. Table-mount press. 6. Tempeh incubator. Section III. Blueprints. Address: Rodale Press, 33 East Minor St., Emmaus, Pennsylvania 18049.

1096. Wood, B.J.B. 1981. Introduction of new fermented foods into Western culture. *Advances in Biotechnology* 2:467-72. Also in Proceedings of the VIth International Fermentation Symposium; London, Ontario. Academic Press, New York, pp. 467-472. [6 ref]

• **Summary:** Discusses soy sauce, shoyu, miso, tempeh, sake, and soy milk. Address: Dep. of Applied Microbiology, Univ. of Strathclyde, George Street, Glasgow G1 1XW, Scotland.

1097. Yepson, Roger B. ed. 1981. Home food systems. Emmaus, Pennsylvania: Rodale Press, Inc. 475 p. Illust. Index. 29 cm. [15 ref]

• **Summary:** Extensive, positive information on soyfoods is contained in the chapters on Grains (and bread, see p. 35), Beans (p. 94-95, 99-115; tofu, tempeh), Sprouting (p. 120, 125, 127), Canning (p. 203), and The Home Dairy (p. 298; soymilk, soy yogurt). Reviews and photos of many soyfoods books are given, with a sample recipe from most.

Pages 298 notes: "Soymilk is low in riboflavin (vitamin B-2), totally lacking in vitamin B-12, and has drastically less calcium than dairy milk. On the other hand, soymilk is lower in carbohydrates, has 12% fewer calories, 25% less fat, no cholesterol, and contains 15 times more iron than cow's milk." Address: Emmaus, Pennsylvania.

1098. **Product Name:** Hickory Smoked Tempeh Snack.

**Manufacturer's Name:** Hi-Pro Tempeh.

**Manufacturer's Address:** Gardena, Massachusetts.

**Date of Introduction:** 1981?

**New Product-Documentation:** Shurtleff & Aoyagi. 1985. History of Tempeh. p. 56.

1099. Hamlin, Suzanne. 1982. Tempeh: "New" food for the 80s. *Daily News (New York)*. Jan. 6. Good Living section. p. 1, 3, 7. Wednesday.

• **Summary:** The article begins: "A super soy food from

Indonesia is what tempeh has been dubbed, although Westerners tend to look at it askance, bewildered by its homely looks and uncompromisingly firm shape. In truth, it is not a pretty thing... It might be said to resemble a piece of moldy stucco wall or a remnant of an old sponge. Or it might be likened to a flattened piece of overripe brie cheese." Includes photos of Farm Foods Tempeh Kit, plus many recipes including: Tempeh dip and dressing. Seasoned crisp tempeh. Tempeh fries. Crispy tempeh bits. Broiled tempeh. Winter tempeh salad. Sesame and tempeh salad. Tempeh lasagne. Stir-fried tempeh and cabbage. Tempeh slices in hot sauce.

• **Summary:** This syndicated article first appeared in the *Daily News* (New York). Jan. 6. Good Living section. p. 1, 3, 7. Wed.

1101. Krieger, Verena. 1982. Re: Dr. Johannes Kuhl and fermented foods in Switzerland. Letter to William Shurtleff at Soyfoods Center, Jan. 19. 1 p. Typed, with signature. [1 ref]

• **Summary:** Dr. Kuhl, who wrote in the 1950s and is no longer living, advocated a natural-foods diet containing large amounts of fermented foods (one-third to one-half of all foods consumed). He believed that such a diet is the best protection against cancer and radioactivity. "His publisher, who keeps re-editing his books thinks that miso and tempeh would fit perfectly into his theory (K. himself had probably never heard of fermented soybeans).

"I have always been fascinated by fermented foods and feel that they will have to become an important part of the diet, especially with people moving away from meat eating. I hope that I shall be able to write a cookbook some day as a tool on how to integrate them into a practicable diet." Address: Bruchmattstr. 24, CH-6003 Lucerne, Switzerland. Phone: 041-22 50 34.

1102. Hamlin, Suzanne. 1982. Tempeh may be ugly, but its beauty is in palate of eater. *Chicago Tribune*. Jan. 21. p. W\_A9B.

• **Summary:** This syndicated article first appeared in the *Daily News* (New York). Jan. 6. Good Living section. p. 1, 3, 7. Wed.

1103. Sass, Lorna J. 1982. Budget-conscious Americans are hitting the soy—its not just sauce. *Chicago Tribune*. Jan. 21. p. S\_A151.

• **Summary:** This article first appeared as: Sass, Lorna J. 1981. "Soy foods: Versatile, cheap and on the rise." *New York Times*. Aug. 12. p. C1, C6. It first appeared in the *Chicago Tribune* on 29 Oct. 1981 (p. N\_B19).

1104. Jaccard, Anne-Marie; Krieger, Verena. 1982. Une graine pour l'an 2000 [A grain for the year 2000]. *Illustre (Lausanne, Switzerland)* No. 4. p. 59-63. Jan. 27. [Fre]

• **Summary:** This grain is the soybean, which is imported in huge quantities from the USA to Europe. The article discusses the soybean plant, tofu, miso, tamari and shoyu, tempeh, homemade soy sprouts, and yuba.

A photo shows Paul Simon, a specialist in macrobiotic food at Lausanne. He makes tofu in the traditional way using nigari, and serves it with tamari and ginger. "Fresh tofu, prepared on the spot, is difficult to find in Switzerland. In the French-speaking cantons of Switzerland, there are only two places: (1) The macrobiotic Center of Lausanne, 7 ruelle de Bourg, and (2) Le Grain d'Or, 7 rue Voltaire, Geneva." Recently a factory opened at Zurich, and another will open soon at Nyon. In the two macrobiotic restaurants of French-speaking Switzerland (Romandie), tofu is found regularly à la carte: at "The Bio" in Lausanne, and "La Moisson" in Geneva.

1105. *Beanfield Newsletter (The)* (SANA, Colrain, Massachusetts). 1982. Tempeh sales. 2(4):1. Jan.

• **Summary:** "The *Beanfield* recently contacted 15 tempeh companies around the U.S. to determine industry production figures and general prospects for tempeh sales. While overall poundage remains light except in Massachusetts and California most producers foresee a bright future and expanding sales." Lists weekly tempeh production figures (in pounds) for each manufacturer.

The largest are: Soyfoods Unlimited (San Leandro, California; 5,900, including 3,200 lb of soy tempeh, 400 lb of five grain tempeh, and 400 lb of soy/rice, and 1,000 lb of packaged tempeh burgers every week. In addition they ship some 6,000 lb of tempeh burgers once a month to New England Soy Dairy in Massachusetts for East Coast distribution. Promotion to the local Indonesian market netted a 33% sales increase in one month).

The Tempeh Works (Greenfield, Massachusetts; 4,500), and Pacific Tempeh (Emeryville, California; 2,500). White Wave (Boulder, Colorado; 700). Cricklewood Soyfoods (Mertztown, Pennsylvania; 500). Northern Soy (Rochester, New York; 500).

1106. **Product Name:** Tempeh Burger.

**Manufacturer's Name:** Cauldron Express.

**Manufacturer's Address:** 123 Bolinas Rd., Fairfax, CA 94930. Phone: 415-453-2360.

**Date of Introduction:** 1982. January.

**Ingredients:** Pacific Tempeh Deep-Fried Tempeh Burger on a round whole-wheat hamburger bun with lettuce, relish, and tomato.

**Wt/Vol., Packaging, Price:** 9 oz.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Paul Duchesne. 1989. Aug. 26. This was one of two products that he made in addition to products he distributed. It sold well.

1107. **Product Name:** [Tempeh].

**Foreign Name:** Tempe.

**Manufacturer's Name:** Haagse Tempe Fabriek.

**Manufacturer's Address:** Treubstraat 9, 2288 EG Rijswijk ZH, Netherlands. Phone: 070-951974.

**Date of Introduction:** 1982. January.

**New Product–Documentation:** Letter from U.A. Soffner. 1984. They started on 12 Jan. 1982. By 1984 they used 200 lb/day of dry soybeans.

1108. **Product Name:** [Tempeh Chips].

**Manufacturer's Name:** Haagse Tempe Fabriek.

**Manufacturer's Address:** Treubstraat 9, 2288 EG Rijswijk ZH, Netherlands. Phone: 070-951974.

**Date of Introduction:** 1982. January.

**New Product–Documentation:** Letter from U.A. Soffner. 1984. They started on 12 Jan. 1982.

1109. **Product Name:** [Sambal Goreng Tempeh].

**Manufacturer's Name:** Haagse Tempe Fabriek.

**Manufacturer's Address:** Treubstraat 9, 2288 EG Rijswijk ZH, Netherlands. Phone: 070-951974.

**Date of Introduction:** 1982. January.

**New Product–Documentation:** Letter from U.A. Soffner. 1984. They started on 12 Jan. 1982.

1110. **Product Name:** [Jakso Tempeh].

**Foreign Name:** Jakso Tempe.

**Manufacturer's Name:** Jakso. Center for Agriculture & Craftsmanship. (Also/after called Yakso Farms).

**Manufacturer's Address:** Voorne 13, 6624 KL Heerewarden, Netherlands. Phone: 088-772-189.

**Date of Introduction:** 1982. January.

**Wt/Vol., Packaging, Price:** 300 gm retails for 2.5 guilder (11/83).

**New Product–Documentation:** Form filled out by Tomas Nelissen of Jakso. 1981. The company opened on 1 July 1981. Soyfoods Center Computerized Mailing List. 1981. Dec. 8. "Jaksco Ct. Craftsmanship, Voorne 13, 6624 KL, Heerewarden, Netherlands. Tomas Nelissen. Phone 088-772-189." Note: By July 1982 Tomas had been joined by Peter Dekker.

Letter from Sjon Welters. 1982. April 16. Jakso is the first and still the only shop making tempeh from organic soybeans. They are at Voorne 13, Heerewarden. Attn: Peter Dekker. Form filled out by Jakso. 1982. June. The company started to make tempeh commercially in Jan. 1982. They presently make 315 kg/week of tempeh.

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 31. This was the earliest New Age tempeh shop in the

Netherlands. Probably started on 1 July 1981, but may have been as late as Jan. 1982. Tomas Nelissen: tempeh maker.

Richard Leviton. 1983. Trip to Europe with American Soybean Assoc. Oct/Nov. Unpublished manuscript. p. 24; Sjon Welters. 1989. Soya Newsletter. May/June. p. 14. "Soyfoods in Europe. During the early 1980s, tempeh was rediscovered. "Yakso Farms in the Netherlands was one of the first non-Oriental companies to produce tempeh, made from organic soybeans, and to process it into spreads, pat , sauces, and marinated products." Talk with Sjon Welters. 1989. July 15. This company was founded by Sjon's brother in law (his wife's brother) Tomas Nelissen. Tomas is now a shiatsu instructor.

Letter from Sjon Welters. 1989. July 24. "Yakso started to produce tempeh in 1982 as far as I can remember."

1111. **Product Name:** Okara tempeh.

**Manufacturer's Name:** Pour Tous Auroville.

**Manufacturer's Address:** Food Processing Unit, Aspiration 605104 Kottakupam, India.

**Date of Introduction:** 1982. January.

**New Product–Documentation:** Letter from Alain Bernard. 1982. Jan. 20. "We make okara tempeh each time we make tofu."

Interview conducted by Anthony Marrese. 1990. Aug. "The best I can tell, this company made tempeh for about a year or two, then stopped about 2 years ago when they ran out of culture. They are planning to order more culture and start again in 1991."

1112. Sastraatmadja, Dudi Djuhdia; Saono, Susono. 1982. Oncom inoculum. Presented at The UNESCO Regional Symposium on Microbiology. Held 26-29 Jan. 1982 at Bandung, Indonesia. \*

1113. Soyfoods Center. 1982. Tempeh shops in the West. Lafayette, California. 2 p. Jan. Unpublished manuscript.  
• **Summary:** Lists the name, address, and phone number of 41 tempeh shops in the USA, 3 in Australia, 3 in Canada, 1 in England, 5 in the Netherlands, and 1 in West Germany. Address: Lafayette, California. Phone: 415-283-2991.

1114. Wollner, Joel. 1982. History of Erewhon, macrobiotics, and soyfoods in America (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 2. 2 p. transcript.

• **Summary:** Evan Root was the first attendant at the Erewhon retail store, below street level at 303-B Newbury Street. He lacquered the walls with Michio. Evan is a great storyteller, very intelligent. The initial store was just one room, about 10 by 20 feet. Very few people came in to buy food, so it was more like a stock room than a store. Some evenings there were lectures there. Redwing Books now occupies that space. Most of the food (a tin of miso, a keg of tamari) was just being sent by the Kushis' friends from Japan

as gifts; it didn't go through customs.

The Kushis got nigari and made tofu at home. It was not for sale, but for dinner guests and cooking classes. Joel made some tofu using lemon juice when nigari was not available.

As tofu started to become more popular, Erewhon started to buy it from a tofu maker in Boston's Chinatown. First they just bought and sold that tofu, but before long (in about 1973-74) they convinced him to start making nigari tofu for them. They guaranteed to buy what he made, and they sold him the nigari at cost. This might have been the first nigari tofu made in USA. A lot of nigari tofu is still made in Boston's Chinatown. Joel thinks the tofu maker was located on Tyler, Street, perhaps Yah Kee. Nigari came in 66 pound sacks from Japan. Erewhon also sold small quantities of nigari in the retail store. Chinatown was Erewhon's main source of tofu until Laughing Grasshopper appeared.

What was the macrobiotic movement's contribution to the history of soyfoods in the United States? Macrobiotic teachers and students talked and wrote about them, ate them, and sold them. They felt soyfoods were an important part of a good diet. They educated people and developed a market for soyfoods Few Americans had eaten miso and tofu at home before 1966—the year Erewhon started. Macrobiotics were the first Caucasian Americans to really use soyfoods regularly. Before that, soyfoods (except perhaps soy sauce) were just interesting oddities. Once could say that the macrobiotic movement introduced soyfoods to America.

As for tofu, Joel thinks that Michio Kushi's students misinterpreted his remarks about tofu being yin. Macrobiotics now eat tofu regularly, 3-4 times a week. There are endless ways to prepare it. It's been years since Joel has heard that tofu is "too yin."

What did *The Book of Tofu* (published in Dec. 1975) do for tofu? It expanded its relevance for the Western diet. Before that book, most of the tofu in the United States was consumed by people of East Asian ancestry.

Charles Kendall played a key role in making and introducing natto, mochi, and amazake to Caucasian Americans. He made these foods in his home and sold them locally. Initially, it was not a formal / legal business. But today his business, Kendall Foods, sells \$500 a week of these three foods. He has been making natto for 4-5 years. He was America's first Caucasian natto maker. Natto was served in macrobiotic restaurants in Boston.

The latest soyfood to hit Boston has been tempeh. It's been a phenomenal success. Macrobiotics are going crazy over it. Thom Leonard has been giving lots of tempeh classes for the past 1½ years. For more than a year, lots of sandwich makers in Boston have been making and selling tempeh sandwiches. Tempeh is made into cutlets, burgers, tempeh mock-tuna salad. Why is it so popular? Because it is rich and meaty in texture and flavor—the opposite of rice. Most macrobiotics crave rich, meaty foods.

Ron Kotzsch is very close to the Kushis. A very

unpretentious person with a wonderful sense of humor, he is now teaching in North Carolina. He is friends with Helen and Scott Nearing. He toured China and Japan with John Denver, the singer and songwriter—who did a benefit for Michio's new college.

How does Joes see the future of Erewhon? He thinks the company will focus on manufacturing only. Now is the critical time. He'd give Erewhon a 30-70% chance of survival. Address: Boston, Massachusetts.

1115. Nabben, Alexander. 1982. Re: Work with soyfoods in Germany and France. Letters to William Shurtleff at Soyfoods Center, Feb. 20 and July 17. 1 p. Typed, with signature. [Eng]

• **Summary:** "I have given our vegan restaurant [Wildwuchs] in Munich to friends, who are continuing to make tofu there. We [Irene and I] went with our friends from the Eire-Farm to the mountains of southwest France to start a new European Farm. In the beginning we are living in tents, planting a big soybean field and more. But we're still connected with Germany, so we're going to have a tour through the country, doing soy-cooking lessons in Berlin, Hamburg, Bremen, Frankfurt (at the International Bookfair), Stuttgart and in Munich. Beside all that we're working on a small book about soyfoods and life alternatives... Soon we'll have some people with us who worked in the tempeh plant on the Tennessee Farm." Address: Europa Farm, Ferme la Garrigue, Besse-Festes St. André, 11300 France; or Berlin, West Germany.

1116. Brody, Jane E. 1982. Winged bean hailed as a potent weapon against malnutrition. *New York Times*. Feb. 23. p. C1, C4. [1 ref]

• **Summary:** "The winged bean, a plant virtually unknown six years ago, has definitely taken off." Prof. Theodore Hymowitz says, "it's like an ice cream cone—you eat the whole thing." "The winged bean seed rivals the soybean in the quantity and quality of its protein."

Like the soybean, the winged bean can be pressed to obtain an edible oil. It can also be sprouted, or made into tofu, tempeh ("an Indonesian fermented bean cake") or a nutritious milk-like drink. Address: New York.

1117. Tallent, W.H. 1982. Shoyu update. *Northern Regional Research Center, Notes from the Director* No. 1493. p. 2-3. Feb. 26.

• **Summary:** "On February 22-23, Drs. H. Hashimoto (manager, quality control) and D. Fukushima (executive vice president and general manager) of Kikkoman Foods, Inc., visited the Center [NRRC]. Their Walworth, Wisconsin, plant, which began producing fermented shoyu in 1973 with a capacity of 2.6 million gallons per year, now has expanded to produce about 5.2 million gallons. Their fermentation is based upon wheat and soybeans. Currently they have about 45% of the soy sauce business in the United States and sales

are increasing rapidly.

"Total U.S. sales of soy sauce in 1956 was about 1 million dollars (consumption 15 ml per capita per year); this has now increased to 100 million dollars (148 ml per capita per year). Many years ago we supported yeast genetic work on this fermentation based upon Dr. L.J. Wickerham's (NRRC, retired) demonstration that the shoyu yeast had mating types and that improved strains could be developed in a genetic improvement program.

"Kikkoman now has a whole line of dehydrated products based on shoyu that are used to make instant teriyaki sauce for chicken, beef, and seafood. A relatively new product is a steak sauce that contains applesauce, shoyu, spices, and salt. H.L. Wang and C.W. Hesseltine (FL [Fermentation Lab]) supplied the Kikkoman visitors with information on tempeh and pointed out the similarities of the preparation of this food with their method of producing koji for the shoyu fermentation. Drs. Hashimoto and Fukushima also talked with W.J. Wolf and other Meal Products Research (OC [Oilseed Crops]) members concerning isoflavone analysis, phosphatidyl-choline autoxidation, and nutritional properties of soybean proteins." Address: Center Director.

1118. **Product Name:** Tempeh Salad (A Tuna-Fish-Style Crunchy & Creamy Salad or Sandwich Spread).

**Manufacturer's Name:** Cricklewood Soyfoods.

**Manufacturer's Address:** R.D. #1, Box 161, Mertztown, PA 19539.

**Date of Introduction:** 1982. February.

**New Product–Documentation:** Leviton. 1982. Soyfoods. Summer. p. 33. Packed in 8 oz. tubs with a 2 week shelf life. Ad in CRC Reports. 1982.

1119. **Product Name:** Tempeh (Fresh, Unfrozen), and Breaded Tempeh Cutlets.

**Manufacturer's Name:** Finger Lakin' Good.

**Manufacturer's Address:** 103 N. Aurora St., Ithaca, New York. Phone: 607-272-9177.

**Date of Introduction:** 1982. February.

**How Stored:** Refrigerated.

**New Product–Documentation:** Call from J.J. Schultz, who is doing a market study on tempeh for a class on food marketing at Cornell in New York. 1991. Nov. 17. About ten years ago a man named Bob Bohdan made tempeh at his restaurant in Ithaca, and sold it both in the restaurant and to natural food stores in the area.

Call from J.J. Schultz. 1992. Jan. 28. Bohdan's tempeh company was named Finger Lakin' Good, after the Finger Lakes region of New York. It was in business from 1982 to 1986, making 75 to 100 lb/week of regular soy tempeh and breaded tempeh cutlets. Most of his products were sold fresh at the very large and old Greenstar Food Co-op in Ithaca. He made these foods in the back of his shop and had a retail store in front, where he sold them along with

health foods and ice cream. He discontinued the business in 1986—he needed more time off—and went to work for a food distributor in New York. He works out of his home (Phone: 607-272-9177). Schultz wrote a report for his class and gave a free copy to Armand Ascher, who is a vegetarian interested in making tempeh. The report concluded that Ascher could make money making tempeh in Ithaca, but not a lot. The key would be to make second-generation tempeh products. Schultz interviewed many consumers on their attitudes toward tempeh.

Talk with Bob Bohdan and his wife Joan Tregaskin. 1992. Jan. 31. Bob first tasted tempeh in 1975 at The Tofu Shop (a soy deli or restaurant affiliated with Northern Soy) in Rochester, New York. He had been a vegetarian since 1974 and he liked it very much. Then their friend Hananya Kronenberg at Cornell got him even more interested. Bob has a BSc degree in nutrition from Cornell but was never introduced to tempeh as part of his studies. After graduation, he became director of the county's Community Food and Nutrition Program. But when President Reagan took office, his program was eliminated, so he started his own small business, Finger Lakin' Good, which had a small café in the front and a food manufacturing plant in the back. They started out making only honey-sweetened ice cream, but then they wanted to have some sandwiches in the café, so in January or February of 1982 they started making fresh tempeh. Some of the tempeh was served in the restaurant (the favorite was the Tempeh Reuben Sandwich, followed by Sweet & Sour Tempeh) and some was sold wholesale to other food retail stores, especially the Greenstar Cooperative Market in Ithaca. About half the company's income came from the retail store, and half from the wholesale food manufacturing operation in the back. The business was financially successful. The only employee in the shop was a Cambodian refugee named Hac Lay, who was an wonderful man. They felt the two keys making a top quality product were wet dehulling and selling the tempeh fresh (not frozen). Fresh tempeh has a better flavor and aroma, a better appearance (because of the fluffy white mycelium), and a better texture (because the beans are more tightly bound together by the mycelium). Using a wet dehulling process gives more whole soybean cotyledons (halves) and less small, broken pieces, which gives more interstitial spaces for the mycelium to grow, and thus a tighter bind and more mushroomy flavor. Of their three commercial products, fresh tempeh accounted for 70% of sales, black bean and soy tempeh 25%, and tempeh cutlets 5%. Not much ice cream was wholesaled, and then only for the first few years.

They ran the business for 5 years, then someone wanted to buy the building and Bob wanted his weekends free, so in the fall of 1986 he sold the location and equipment. He did not sell the tempeh business, but he could not find anyone to take it over. Hac Lay tried for a few months, then he stopped. He gave free consultation and advice to at least 3 other very

interested parties. He feels that, to this day, anyone who uses his basic model, would have a successful business. He is still eager to help that person get started. It is there for the taking. Then he began to work for Casa Imports, which sells imported foods from Utica, New York.

**1120. Product Name:** Tempting Tempeh Burger, Barbecued Tempeh Burger, and Mock Chicken Salad.

**Manufacturer's Name:** Fresh Foods.

**Manufacturer's Address:** Boulder, Colorado.

**Date of Introduction:** 1982. February.

**New Product—Documentation:** Talk with Gloria Gilbert. 1989. Sept. 11. She got the idea of a tempeh burger sandwich from Marty Roth and Barbara Svenning in late 1981. It was a gift from them at the time Gloria bought their sandwich business. Gloria introduced the Tempting Tempeh Burger in late Feb. or early March 1982. She bought the basic seasoned tempeh burger from Steve Demos, then sold it between buns with all the trimmings, in a plastic wrap, to the same outlets as her amasake, to markets in the Boulder, Denver, Ft. Collins, and maybe northern New Mexico. In April 1982 she launched a Mock Tempeh Salad made with plain soy tempeh from White Wave. Then in about June 1982 she introduced Barbecued Tempeh Burgers, a variation on the original burger but with barbecue sauce. At the peak, she was making about 300 of the two tempeh burgers each week. Years later she made a Quinoa Salad without soy.

1121. Kronenberg, H.J. 1982. A quality control and spore production facility for tempeh makers. *Soyfoods*. Winter. p. 32-34, 38-40. [13 ref]

• **Summary:** An expert on the subject, with considerable experience making tempeh starter culture, discusses: Organoleptic evaluation (taste testing) vs. product parameters for determining quality (a pH of 6.5 and soluble solids content of about 21% are considered optimum). A quality control report for tempeh makers. The adequate space for a quality control laboratory (ideally not less than 80 square feet). Storage, waste disposal, physical comfort of the lab technician, a protected environment for aseptic microbiological transfers, a positive pressure hood vs. a filtered laminar air flow system (which provides more flexibility and freedom of movement). Standards of identity of tempeh.

The tests: Standard plate count, pH, viable spore count, coliform count, net weight, organoleptic evaluations, surface microbial count, microscopic examination.

Equipment and materials: Autoclave, pH sensitive paper, kitchen scale, thermometers, nutrient media, . magnetic stirring rods, pressure cookers, colony counter, incubator, inoculating needles, culture tubes and petri dishes, Fernbach flasks, glass pipettes, graduated cylinders, chemicals, other miscellaneous items.

Environmental control: Temperature, special epoxy

paints, cleaning compounds, high efficiency particulate air (HEPA) filter, positive pressure hood, laminar system, prefilters, ultraviolet lights. Contains numerous illustrations.

A table gives suppliers of lab equipment. Address: Cornell Univ., Ithaca, New York.

1122. Leviton, Richard; Shurtleff, William. 1982. The coming tempeh boom. *Soyfoods*. Winter. p. 26-34, 38-40. Cover story. [13 ref]

• **Summary:** Company profiles of Soyfoods Unlimited (San Leandro, California) and Pacific Tempeh (Emeryville, California). "On February 15, 1981, Valerie, John, and Gary Robertson began tempeh production in their state of the American art \$100,000 plant in San Leandro, California." The 1,000 square foot plant has a capacity of 10,000 lb/week of tempeh. "While the three Robertsons are each principals, Valerie is the chief dynamo, tempeh-maker, and sales-stormer, staging three in-store product demonstrations (called 'Tempeh Tastings') every week while managing their line of three tempehs and tempeh burgers." "Soyfoods Unlimited produces 1,000 pounds of tempeh weekly and 1,000 pounds of marinated, steamed tempeh burgers. The tempeh intended for distributors is frozen immediately, then thawed and predated 16 days ahead of the day of delivery. Fresh tempeh is steamed then refrigerated until delivery. The Robertsons refrain from vacuum packing their tempeh in order to preserve the firm, white cake; the vacuum compression tends to darken and crush the fragile white mycelium. Although their tempeh was presented initially as a frozen food, the lack of product shelf visibility prompted the Robertsons to supply a refrigerated tempeh as well. The tempeh burgers, which are vacuum packed in six ounce plastic bags (with two burgers) are marinated in a steam kettle, then steamed... Their Brown Rice Soy Tempeh is fast becoming popular while the burgers are available in both round and square shapes (called 'Tempeh Cutlets / Burgers')."

"The energetic Valerie continually drives around the Bay Area to conduct new Tempeh Tastings in the high volume stores among the region's natural foods outlets. At a typical demonstration she offers samples of Tempeh with Herb Tomato Sauce, Sweet and Sour Tempeh, Mock Chicken Tempeh Salad, and Tempeh Burgers. To complement the demonstrations, the Robertsons have launched a cautious advertising campaign targeted for both the Bay area and selected national natural foods publications."

The plant has a powerful sanitation system, which is described in detail.

Pacific tempeh was launched in Aug. 1980 on a \$40,000 investment that secured a 1,000 square foot facility in Emeryville, California. "The plant has a per week capacity of 5,500 pounds while current weekly tempeh production is 2,400 pounds."

Photos show: (Cover) Valerie Robertson standing behind a table of tempeh dishes and promotional materials.

(1) Valerie Robertson pulling a tray of finished tempeh in perforated plastic bags from a rolling rack. (2) Inside of the Soyfoods Unlimited plant. (2) Travis Burgeson holding a tray of finished tempeh. (4) A person vacuum packing tempeh burgers. (5) Travis Burgeson standing by a rolling rack. Address: 1. 100 Heath Rd., Colrain, Massachusetts 01340; 2. Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 413-624-5591.

1123. Leviton, Richard. 1982. Soy delis: Fast, natural, and growing. *Soyfoods*. Winter. p. 35-37.

• **Summary:** Discusses the Well Bean Deli in Santa Cruz; Real Food Tofu Cafe in Redwood Valley; and The Tofu Shop in Arcata. All in California. Two photos show each location.

Concerning The Tofu Shop (768 18th St., Arcata, CA 95521): It "combines retail take-out with small scale tofu production and bakery products in a wood-lined airy storefront. Owner Matthew Schmit (who earlier managed a soy deli in Telluride, Colorado) has filled his 1,000 square feet with a small commercial cauldron-style tofu shop, small bakery, and 200 square foot retail front, all of which he launched on \$11,000 investment on December 15, 1980. The cozy retail space features racks of soy cookbooks and crackers, teas, packaged miso, tofu and tempeh kits, noodles,

seaweed, and a handsome reach-in cooler where the tofu herb burgers, tofu spinach pies, vegetable tofu sushi rolls, tofu tahini salad, tofu herb dip, tofu cream pies, and bottled soymilk are displayed. Monthly sales average \$3,500 with some outside distribution of tofu, soymilk, and burgers. The deli attracts walk-in customers from the nearby Humboldt branch of the University of California while tofu burgers and tofu spinach turnovers are probably the most popular products at the deli." Photos show: (1) Matthew Schmit standing at the wood-lined counter. (2) Matthew and Susan [Suzanne] Schmit with their shop's specialties. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1124. **Product Name:** Living Lightly brand). 1982. Product catalog. P.O. Box 40429, San Francisco, CA 94110. 12 p. [1 ref]

• **Summary:** Includes photocopies of all product labels, showing all ingredients. A pioneering and extremely creative product line. Address: San Francisco, California.

1125. **Product Name:** Living Lightly Tempeh Enchiladas. **Manufacturer's Name:** Pacific Trading Co. (Marketer-Distributor).

**Manufacturer's Address:** San Francisco, California.

**Date of Introduction:** 1982. February.

**Ingredients:** Filling: Soy & brown rice tempeh, rennetless raw milk mild Cheddar cheese, onions, sea salt, spices, soy oil. Sauce: Water, rice flour, soy oil, chili powder, apple cider vinegar, sea salt, spices. Flour tortilla: Whole wheat flour, water, soy oil, sea salt.

**Wt/Vol., Packaging, Price:** 18 oz. Plastic wrapped on ovenable tray.

**How Stored:** Frozen.

**New Product-Documentation:** Label.

1126. **Product Name:** Living Lightly Tempehroni Pizza.

**Manufacturer's Name:** Pacific Trading Co.

**Manufacturer's Address:** P.O. Box 40429, San Francisco, CA 94110.

**Date of Introduction:** 1982. February.

**Ingredients:** Crust: Whole wheat flour, water, yeast, sesame seeds, salt. Sauce: Tomatoes, onions, carrots, parsley, soy oil, garlic, green pepper, spices. Rennetless mozzarella cheese, Tempehroni (Soybeans, brown rice, water, tempeh culture), shoyu soy sauce, herbs, spices.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Frozen.

**New Product-Documentation:** Label. "No Preservatives."

1127. **Product Name:** Living Lightly Sweet & Sour Tempeh (Meatless Chinese Entree).

**Manufacturer's Name:** Pacific Trading Co.

**Manufacturer's Address:** San Francisco, California.

**Date of Introduction:** 1982. February.

**Ingredients:** Soy & Rice tempeh, water, green pepper, mushrooms, carrots, onions, honey, soy oil, shoyu soy sauce, potato starch, apple cider vinegar, garlic.

**Wt/Vol., Packaging, Price:** 12 oz.

**How Stored:** Frozen.

**New Product-Documentation:** Label. "Ready to Eat.

For delicious tempeh recipes see *The Book of Tempeh* by Shurtleff & Aoyagi."

1128. **Product Name:** Living Lightly Tempeh Patties (Meatless Burgers: Vacuum Packed).

**Manufacturer's Name:** Pacific Trading Co.

**Manufacturer's Address:** P.O. Box 40429, San Francisco, CA 94110.

**Date of Introduction:** 1982. February.

**Ingredients:** Soy tempeh (made from organic soybeans), natural soy sauce, herbs, spices.

**Wt/Vol., Packaging, Price:** 6 oz vacuum packed.

**How Stored:** Frozen or refrigerated.

**Nutrition:** Per 3 oz.: calories 120, protein 12 gm, sodium 443 mg, carbohydrates 8 gm, fat 4 gm.

**New Product-Documentation:** Label. Undated. 3.5 inch diameter. Red and blue on white. "Meatless, Ready to eat.

Not fried! No cholesterol. Shelf life at 40°F is up to 28 days."

1129. **Product Name:** Living Lightly Chili Con Tempeh (Meatless Chili).

**Manufacturer's Name:** Pacific Trading Co.

**Manufacturer's Address:** San Francisco, California.

**Date of Introduction:** 1982. February.

**Ingredients:** Pinto beans, soy & rice tempeh, tomato sauce, onions, water, jalapeno peppers, serrano peppers, soy oil, chili powder, spices, sea salt, shoyu soy sauce, garlic powder.

**Wt/Vol., Packaging, Price:** 12 oz.

**How Stored:** Frozen.

**New Product-Documentation:** Label. "Ready to Eat.

For delicious tempeh recipes see *The Book of Tempeh* by Shurtleff & Aoyagi."

1130. Shurtleff, William; McBride, G.; Robertson, G.V.J.; Burgeson, T. 1982. Dealing with tempeh contamination. *Soyfoods*. Winter. p. 29-32. [1 ref]

• **Summary:** The cause is probably a "Bacillus problem," a buildup in your shop of bacteria of the genus *Bacillus*, more specifically *Bacillus subtilis*, the bacterium used to make natto. Steps to take when a Bacillus problem occurs (listed in approximate order of importance and effectiveness): 1. Have a sample of your tempeh tested at a reputable food laboratory. 2. Test your starter and increase dosage. 3. Try to find out how your problem started. 4. Lower incubation temperature. 5. Sanitize your shop. 6. Cool beans before inoculation. 7. Increase your vinegar usage. 8. Cook soybeans longer. 9. Experiment with various mixes of the

\*\*\* Tempeh Makers: Post this in your plant for emergencies.\*\*\*

# DEALING WITH TEMPEH CONTAMINATION

By William Shurtleff, Gordon McBride, Gary, Val, and John Robertson, Travis Burgeson

**Symptoms:** Tempeh that usually turns out beautifully suddenly looks bad. Each cake is unusually wet, the mycelium is often very weak, the incubation time is longer than usual, and the finished tempeh and incubation room have a strong sweet-sour smell of ammonia or *natto*.

**Cause.** You probably have a "Bacillus Problem," a buildup in your shop of bacteria of the genus *Bacillus*, probably *Bacillus subtilis* (pronounced *buh-SIL-us SUT-il-us*). These bacteria, widely used in Japan to produce the fermented soyfood *natto*, wreak havoc in tempeh. They may have entered your plant on a recent shipment of soybeans. Or they may have multiplied because of generally unsanitary manufacturing conditions, poor production techniques, or a spell of hot weather. Most *Bacillus* problems occur in summer, or in warm humid weather. Note: Tempeh can also be contaminated by microorganisms other than *Bacillus*. A list of these less common forms is given at the end of this article.

**About Bacillus:** *Bacillus Subtilis* is a very common bacterial contaminant, widely found in soil or dust (as on soybean seed coats), air, or water. Microscopic, rod-shaped, aerobic (requiring air to grow), and thermophilic (liking warmth), these bacteria are extremely difficult to get rid of, in part because they produce spores within their own bodies (intracellular endospores), which are extremely resistant to heat. While the bacteria themselves are generally killed by 1 to 4 minutes of boiling, and less than 1 percent of their spores will survive 20 to 30 minutes of boiling in water at atmospheric pressure,<sup>1</sup> some of their spores can survive boiling at at-

mospheric pressure for 1 hour or more; some even survive pressure cooking (autoclaving) at 15 pounds pressure for 20 minutes (but not 30 minutes). During soaking of your soybeans, the spores will tend to sporulate into vegetative cells (which are easily killed by boiling); however don't soak for longer than 8 hours at room temperature, or the new bacteria will begin to produce more spores.<sup>1</sup>

The only chemical acceptable in a food plant that will kill these spores is bleach (5% sodium hypochlorite; *Clorox*, *Purex*). *Bacillus subtilis* grows best at about 40°C (104°F) in a moist environment. And while they will not cause food poisoning, they will spoil your tempeh. They grow especially well on soybeans. The following steps, then, are designed to create conditions in your plant which are favorable to the growth of *Rhizopus* and unfavorable to *Bacillus*.

## HOW TO PREVENT A BACILLUS PROBLEM

**1. Develop a Rigorous Plant Sanitation Program:** Start by reading several good books on food sanitation and studying or re-studying the chapters on soy plant sanitation in *Tempeh Production* and *Tofu & Soy Milk Production* (by Shurtleff & Aoyagi). Then call the local branch of one of America's major sanitation supply companies (Oxford Chemical Co., Bonewitz Chemical Co., Klenzade, Diversey-Wyandotte) for a free plant visit and consultation. They will help you to design a sanitation program suited to your budget, food product, and philosophy, which almost certainly will save you money in the long run. They will analyze problems, answer questions, help train your cleanup crew, and even give free

emergency visits. Then put your sanitation program into writing and see that it is understood by all and followed.

**2. Watch out for Bacillus-Contaminated Soybeans:** Virtually all batches of soybeans contain some level of *Bacillus* contamination on or inside the seed coat, but some batches have much higher contamination levels than others. Beans containing higher than 10 percent moisture tend to have higher *Bacillus* loads. Environmental conditions during harvesting and storage can also affect the load. Be sure to store your beans in a dry, cool, dust-free location to help keep down the load. If you have had no *Bacillus* contamination problems in the past, keep buying from your same soybean supplier. If you are forced to change suppliers, test the new beans (before using them regularly in your shop) by making a small sample batch of tempeh at home, or by crushing a few of the new beans, moistening them, putting them on a nutrient agar culture plate, incubating them for 24 hours, then testing for the level of contamination compared with beans you have been using. Be sure to keep soybeans which are heavily contaminated with *Bacillus* out of your shop at all costs. Large shops may want to test a sample of beans from every shipment they receive.

1. Swain, E.W., Wang, H.L. and Hesseltine, C.W. In press. "Heat resistant aerobic bacterial spores in soybeans," *Applied and Environmental Microbiology*.

## STEPS TO TAKE WHEN A BACILLUS PROBLEM OCCURS

The following are listed in approximate order of importance and effectiveness.

**1. Have a Sample of Your Tempeh Tested at a Reputable Food Laboratory:** Just as each person or family should have a doctor they know to turn to in emergencies, so each tempeh plant should have established a good working relationship with a nearby, professionally-run food laboratory. To locate such a lab, look in the Yellow Pages of your phone directory under "Laboratory-Testing" or contact your nearest city, county, or state health inspector (listed in the phone book). Ask the lab for a list of bacterial contaminants present in the tempeh, with special emphasis on *Bacillus* species; tell them also of the other possible contaminants listed at the end of this article. After the analysis, ask them about solutions to your problem. Many lab workers are friendly and willing to spend time helping you. They may show you how to do your own tests in the future.

**2. Test Your Starter and Increase Dosage:** A viable propagule count (probably best done by the same food lab) will tell you if your starter has the required number of propagules per unit, and if it contains any contaminating organisms. If your starter is okay, increase the dosage you are using by 60%; if that solves the problem, next time increase it by only 30%, until you find the lowest dosage required to give good tempeh, allowing the *Rhizopus* a strong advantage over the *Bacillus* "invaders."

**3. Look for Other Clues and Keep Careful Production Records:** While having your tempeh tested and increasing your starter, look for other clues to the cause of your problem. Did your problem start with beans from a new shipment? If so, examine the beans for *Bacillus* contamination, as described above. Did you just have a spell of hot and/or humid weather, which always aggravates contamination problems? If so, proceed with the steps below.

One key aid to tracking problems is to keep records in a ledger of each batch of tempeh made. Record the date, outside temperature and relative humidity, starting time, amount of

beans, amount of vinegar, cook time, centrifuge and rinse times, amount of starter used, date of starter, number of bags filled, times in and out of incubator, total time in incubator, incubator and exhaust fan settings, and (most important) your comments and observations.

**4. Lower Incubation Temperature:** Set your incubation room thermostat to 28-29°C (82-84°F) and set the ceiling exhaust fan to go on at 29.5-30°C (85-86°F). Be sure the exhaust fan is powerful enough to prevent temperature buildup in the incubation room. To check this, put a maximum-minimum thermometer in the room at the level of the tempeh and check the maximum temperature.

**5. Intensify Your Sanitation Program:** Make a mixture of 7:3 bleach to water. Spray this on all food contact surfaces and any areas that tend to stay wet, such as under centrifuges. Leave for 4 hours, then rinse off to prevent corrosion of stainless steel. This will kill *Bacillus* vegetative cells and spores. To kill *Bacillus* vegetative cells, use a quat (quaternary ammonium), sponging it on the walls, ceiling, and floor of your incubation room, and on working surfaces. Note that quat also kills *Rhizopus*, so rinse it off well. *Do Not mix bleach and quat:* the mixture produces a toxic gas.

Call in your sanitation supply company salesman and ask for his free help and advice. Go over your entire sanitation program. (1) Do you wash and sanitize your shop thoroughly after each production run, especially hard-to-reach areas such as inside the centrifuge? (2) Do you have several dipping stations in the plant (basins filled with 1 ounce iodine mixed with 5 gallons water) for regularly dipping your hands? (3) Do all workers maintain high standards of personal hygiene: clean clothes, aprons, footwear, hair-and-beard nets, etc.? (4) If you have a boiler, do you use a steam gun with a disinfectant inlet? This is a potent weapon against contaminants. You may also try using a "power jet fogger" (cost: \$75 new from Oxford Chemicals; also called "atomizer-mister") which can fill your shop or incubation room with a fine mist of sanitizer.

**6. Cool Beans Before Inoculation:** Spray them in the centrifuge with sanitary tap water. Measure the tem-

perature of the beans in the mixing bowl or vat with a thermometer, letting it drop to 36-37°C (98°F) before inoculation. Any hotter temperature aids *Bacillus* growth.

**7. Increase Usage of Vinegar or Lactic Acid:** Try using 20% more vinegar than you have been. Molds grow better at low pH than bacteria. Too much vinegar, however, will inhibit mold growth. Even better, try using lactic acid, which gives a low pH with little mold inhibition.

**8. Cook Soybeans Longer:** Boil beans for 60 to 75 minutes. This will help kill *Bacillus* vegetative cells. Longer cooking may require slightly longer cooling.

**9. Call the Fermented Foods Contamination Hotline:** GEM Cultures in Fort Bragg, California, has established a hotline (phone: 707-964-2922) to help you with contamination problems and to keep track of general problems occurring throughout North America.

**10. Experiment with Various Mixes of the Above:** Pay special attention to and keep records on how the weather and seasons affect your tempeh, and what processing changes are required to give good tempeh under various conditions. Watch for patterns in the comments on your production records. Please write The Soyfoods Center (P.O. Box 234, Lafayette, CA 94549) to report any new techniques you find to be effective in dealing with any type of tempeh contamination problem; we will then share that information with others in future editions of our book *Tempeh Production*.

**Other Tempeh Contaminants:** In addition to *Bacillus subtilis*, there are a number of other tempeh contaminants, which you and your food lab should watch out for:

**A. *Rhodotorula* Yeast:** These red-orange, red, pink or yellow yeasts may cause tempeh discoloration (colored spots or areas) after 2 to 3 days.

**B. *Pseudomonas*:** These food-putrifying bacteria, which grow well at refrigeration temperatures, give tempeh an undesirable sharp odor; they may have a mustard-yellow color, or be colorless.

**C. Slime Molds:** These can make tempeh bright yellow.

None of these organisms cause food poisoning, but they can easily spoil your product.

Soyfoods #6 Winter 1992

above.

Photos show: (1) A person spraying sanitizers onto a rolling rack after production. (2) John, Valerie, and Gary Robertson smile through their hairnets. (3) Valerie Robertson preparing tempeh for freezing or steaming before delivery to increase its shelf life. Address: 1. Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1131. Shurtleff, William. 1982. Otten's Indonesian Foods. *Soyfoods*. Winter. p. 28.

• **Summary:** This company is run by Mary and Irene (mother and daughter) Otten, of Indonesian descent. "Mary Otten started the earliest known U.S. tempeh shop in 1961 in Albany, California, where she produced it in a basement and sold it to friends and catered parties." Mary and Irene moved to Oakland, then to 322 Key Blvd. in Richmond, California, where in 1976 they started Otten's in a small plant behind their home. In addition to tempeh they make a line of ready-to-eat tempeh dishes: Sambal Bali Tempeh, Tumis Tempeh, Oblok-Oblok Tempeh, Sayur Lodeh Tempeh, Sweet & Sour Tempeh, Sambal Goreng Tempeh, Terik Tempeh, and Sambal Goreng Udang dan Tempeh. A photo shows Mary and Irene Otten. Address: Lafayette, California.

1132. *Soyfoods*. 1982. Soyfoods marketer. Winter. p. 57.

• **Summary:** "Mark Brawerman's Pacific Trading Co. distributes a diverse line of frozen and refrigerated soyfoods around the greater San Francisco area. Besides his stock of yogurt, cheeses, juices, eggless honey dairy ice cream, and middle eastern specialty foods, Brawerman distributes soyfoods from three West coast producers including Island Spring (Smoked Soyloaf, Steamed Tofu), Redwood Valley (Almond Creamie, Berry Creamie, Soysage, Tofumous, Missing Egg), and Soyfoods Unlimited (Tempeh, Tempeh Burger). Brawerman also handles two brand name lines of his own, Jolly Licks Non-Dairy Frozen Desserts and Living Lightly. The Jolly Licks line of soymilk ice creams was introduced in July 1980 and includes these flavors: Toasted Almond, Strawberry, Coffee, Carob, Orange, Carob Mint, Vanilla, Chocolate, (in pints and 5 oz cups). The Living Lightly line includes soft and firm tofu (water-packed and vacuum packed), tofu cutlets, SoyMoo beverage (plain, vanilla-cinnamon, in pints and quarts), two flavors of Tofu No-Cheese Cake (Hawaiian, Strawberry, at 12 oz), and six frozen tofu entrees, (Tofu Tamale, 7 and 12 oz; Tofu Enchilada, 12 oz; Tofu Lasagna, 18 oz; Tofu Ravioli, 14 oz; Tofu Italian Salad, 8 oz; and Tofu No Egg Salad, 8 oz)."

1133. *Soyfoods*. 1982. Welcome to the all tempeh restaurant. Winter. p. 29.

• **Summary:** About Java Murni Indonesian Ricetable (4509 Adams St., Carlsbad, California 92008). Lists all the tempeh dishes on the menu. Java Murni also produces a tempeh burger.

1134. Tibbott, Seth. 1982. Turtle Island Tempeh, Oregon. *Soyfoods*. Winter. p. 31.

• **Summary:** "Turtle Island Soy Dairy is a small tempeh shop in Forest Grove, Oregon. Three of us make tempeh four nights a week in an old creamery building and we make three tempeh products: plain old soy tempeh, Five Grain, and Tempehroni (the soy tempeh with herbs)... We make our Five Grain style from soybeans, millet, rice, sunflower and sesame seeds... Since pizza was always one of our favorite ways to eat tempeh, we designed Tempehroni to be sliced into attractive two-inch rounds similar to its more well-known cousin, pepperoni. After much experimentation we settled on marjoram, basil, oregano, thyme, and summer savory [as Tempehroni seasonings]. Tempehroni's relatively high price (\$1.28 for 8 oz) reflects the high labor costs involved, chiefly funneling all those beans down a thin chute into a specially made bag."

A photo shows 3 Turtle Island tempeh products. In illustration shows the Turtle Island Soy Dairy logo. Address: Owner, Turtle Island Soy Dairy, Forest Grove, Oregon.

1135. Funcación Tao-Fu. 1982. Proyecto piloto para la produccion e introduccion de los productos derivados de la soya en Quito, Ecuador [Pilot project for the production and introduction of soyfoods to Quito, Ecuador]. Quito, Ecuador. iii + 21 p. March 1. Unpublished manuscript. [Spa]

• **Summary:** Proposal submitted by Richard Jennings and Ismael Janisch. In Feb. 1980 la Fundacion Tao-Fu began its work to introduce soy protein foods to Ecuador. To date, they have developed tofu (seasoned and natural), tempeh, soy yogurt, and soymilk. Address: Casilla 252-A, Quito, Ecuador.

• **Summary:** This syndicated article first appeared in the *Daily News* (New York). Jan. 6. Good Living section. p. 1, 3, 7. Wed.

1137. **Product Name:** Earth Angel Tempeh.

**Manufacturer's Name:** Earth Angel Soyfoods.

**Manufacturer's Address:** 53 Stanley Ave., Mt. Waverley (E. Oakleigh), VIC 3149, Australia. Phone: 03-544-8020.

**Date of Introduction:** 1982. March.

**Ingredients:** Organic soybeans, cider vinegar, tempeh starter (Rice, *Rhizopus oligosporus* culture).

**Wt/Vol., Packaging, Price:** 250 gm.

**New Product–Documentation:** Letter from Debbie Schmetzer. 1982. March 3. Earth Angel is just getting underway and their first product is tempeh. They soon hope to produce tofu and tofu puddings for the health food stores. Label. 1983, undated. 4 by 8 inches. Black on tan. 250 gm. Illustration of a winged elf, with soybean leaves on both sides.

1138. Herath, H.M.E. 1982. [Soybeans in] Sri Lanka. *INTSOY Series* No. 22. p. 172-75. J.B. Sinclair and J.A. Jackobs, eds. Soybean Seed Quality and Stand Establishment (College of Agric., Univ. of Illinois at Urbana-Champaign).  
 • **Summary:** Contents: Introduction. Liquid soymilk. Dried soymilk. Full fat soy flour. Soy-fortified bakery and other products. Low cost weaning food. Tofu. Tempeh. Soy dhal. Home level training and demonstrations.

“At the present time, the government has included soybeans with a few other field crops into a floor price system. During the last 12 months, the demand for soybeans has increased tremendously, with their use by some agencies in fortification programs... There is an immediate demand for 30,000 ha of soybeans. This target will be achieved by 1982.

“The bulk of the area under soybeans is presently confined to the rainfed highland... The primary objective of the Sri Lanka program is to develop a balanced soybean industry including production, marketing, processing and utilization...

“Accomplishments of the Soybean Food Research Centre (SFRC) include: Liquid soymilk. Dried soymilk: Nearly 5,000 lbs of dried soymilk (DSM) was manufactured... as a coconut milk extender/substitute. DSM has been found acceptable as a coconut milk extender by General Hospital in Kandy and Teaching Hospital in Peradeniya. The Rajarata Food Grain Processing Co., Ltd., a joint venture of the GSL and the private sector, is putting up a 4-ton FFSF/DSM plant in Maha Illuppallama, under the technical guidance of the staff at the SFRC.

“Full fat soy flour:... Nearly 70,000 lbs of FFSF has been produced at the pilot plant and sold through various sales outlets for fortifying wheat/rice flour at 5-10 percent levels... Soy-fortified noodles are being successfully marketed by Forbes and Walker...

“Tofu: Regular production of about 20 lbs of tofu per day has been done with a view to testing its acceptance for use in various curry preparations... Tempeh: Processing parameters for the production of tempeh at the cottage scale have been standardized... Soy dhal.

“By May, 1981, 1,077 trainees had followed the one-to two-week regular course, and 483 had completed the ‘Sandwich Course.’ More than one hundred demonstrations have involved about 6,000 participants, both from governmental and voluntary organizations.” Address: Coordinator, Sri Lanka Soyabean Production Project, Deputy Director of Horticulture, Ministry of Agricultural R&D, Sri Lanka.

1139. Langley-Danysz, Pernette. 1982. Une technique séculaire de fermentation du soja [An ancient technique for fermentation of soya]. *Biofutur*. March. p. 33-35. [5 ref. Fre]  
 • **Summary:** About tempeh.

1140. Shurtleff, William; Aoyagi, Akiko. 1982. Terrific tempeh. *Ziriuz (Australia)*. March. p. 7-8.

• **Summary:** Contents: An introduction to tempeh. Rich in protein and vitamin B-12. Tempeh comes West. How tempeh is made. The miracle of fermentation. Buying and storing tempeh. Favorite tempeh recipes (four recipes). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1141. Shurtleff, William; Aoyagi, Akiko. 1982. History of the soyfoods movement in North America. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 50 p. March. Unpublished typescript.

• **Summary:** A comprehensive history of the subject. Contents: New image of soyfoods and causes of interest: Good health, nutrition and fatness, weight loss diets, low-cost protein, meatless and vegetarian diets, world hunger, appropriate technology and right livelihood, voluntary simplicity, ecology and conservation, interest in East Asian cultures, spiritual practices, and cuisines.

Allied movements: Macrobiotics, natural foods, Rodale Press, vegetarianism.

Characteristics of the soyfoods movement: Major foods and types of products, comparison of soy protein industry (high tech) and soyfoods industry (low tech), appropriate technology, relevance to the Third World, conclusion.

The Farm in Tennessee. *The Book of Tofu* and Soyfoods Center. Early soyfoods manufacturers. Soyfoods delis and restaurants. Second-generation soyfoods manufacturers and distributors (e.g. Swan Foods in Florida). Tofu kits and equipment. Soyfoods terminology. Founding of the Soycrafters/Soyfoods Association of North America: Richard Leviton. Growth of the Soyfoods Association: First conference, Soyfoods magazine, subsequent conferences, SANA problems, The New Soyfoods Association—Gary Barat and Michael Austin of New York City.

Soyfoods books and booklets. Media coverage. Growth of the soyfoods industry, including the Soycrafters Apprenticeship Program. Soyfoods Marketer/Distributors: Yellow Bean Trading Co., Garden of Eatin', Jolly Licks. Soyfoods in foodservice institutions. Influence and activities

abroad. The future.

Note: This is the earliest document seen (Oct. 2008) that uses the term “Second-generation” in connection with soyfoods to refer to a soyfood product which uses a basic soyfood as its major ingredient. Thus, Tofu Cheesecake, Tempeh Lasagne, and Instant Miso Soup are all commercial “second-generation soyfood products.” If made at home for home use, they would be “second-generation soyfoods.” For some products, the line between basic and second-generation soyfood products is blurred, since some second-generation products that have as long history have come to be thought of as basic. For example: Deep-fried tofu burgers (*ganmodoki*), teriyaki sauce, etc. Address: Lafayette, California. Phone: 415-283-2991.

1142. S.M. [S. Milius]. 1982. Faster tempeh. *Organic Gardening*. March. p. 102-07.

• **Summary:** “A new method for preparing this cheap, nutritious soyfood takes 45 minutes instead of four hours.” The new method, developed by researchers at the Rodale Food Center kitchens, starts with roasted soybeans. These don’t have to be soaked overnight and hulled, the most time-consuming steps.

1143. Soy Plant Co-op Inc. (The). 1982. Price list effective 3/22/82 [22 March 1982]. Ann Arbor, Michigan. 1 p. 28 cm.

• **Summary:** This typewritten sheet contains three columns: Supplier, product, and price. The Soy Plant is supplier of (packaged or in bulk): Tofu (1 lb tub), plain soy milk and flavored soy milk (quarts), tempeh (8 oz), soysage (8 oz), miso garlic dressing (16 oz), Soyanaise (soy mayo, 16 oz), carob tofu pies, missing egg salad, tofu spinach quiche, gomaseao [gomashio]. Other suppliers are Micro Farms (alfalfa- or mung bean sprouts), Westbrae Foods (miso—3 types), The Grocery (The Tofu Cookbooklet), and Learning Tree (tofu kit, \$13.50 each).

New products available soon: Tempeh salad. Tofu tahini spread. Address: 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: (313) 663-8638.

1144. *Whole Foods (Berkeley, California)*. 1982. New England Soy Dairy [distributing tempeh products]. March. p. 51.

• **Summary:** New England Soy Dairy has entered into an exclusive distribution agreement to distribute Soyfoods Unlimited Tempeh Burgers and Cutlets and the Pacific Tempeh Burger.

1145. Welters, Sjon. 1982. Re: Recent developments with soyfoods in Europe, and ties with macrobiotics. Letter to William Shurtleff at Soyfoods Center, April 16. 6 p. Typed, with signature on letterhead (photocopy).

• **Summary:** This letter, whose letterhead reads “Manna Natuurlijke Levensmiddelen,” contains names and addresses

of many new soyfoods companies, many of them started by people interested in macrobiotics. Names and addresses of the following companies are given: Tofu Denmark (in Valby, run by Per Fruergaard, a macrobiotic), Bernard Storup, Ab & Paulien Schaft (Dutch, setting up a small shop in Baillestavy, France, to make miso, shoyu, natto, and koji), Traditions du Grain (Jean Luc Alonso is setting up a macrobiotic tempeh shop in Ivry France; they will start this summer), Paul Jones (Tofu shop in London), Saskia de Jong (may make miso in Ireland), de Brandnetel (tofu shop in Antwerp, Belgium), Jonathan (makes tofu, ganmo, seitan, mochi in Ekeren, Belgium. Run by J. v. Ponselee), Seven Arrows (Leuven, Belgium; making tofu), Lima Foods (now sell miso made at their plant and farm in France), Witte Wonder (Den Haag, Netherlands), De Morgenstond (Bakkeveen, Netherlands), Jakso (Heerewaarden, Netherlands. Run by Peter Dekker. The first and only shop making tempeh from organic soybeans), Firma Lembekker (Amsterdam), Unimave (Lisbon, Portugal), Jose Parracho (Setubal, Portugal), Swame [sic, Swami] Anand Svadesha (Furth im Wald, West Germany), Bittersuess (Cologne, West Germany. Attn: Thomas Kasas/Karas). Three distributors of soyfoods and natural foods in Germany are YinYang (Berlin), Rapunzel (Heimradshofe), and Mutter Erde (Werbelen). In Finland: Luonnonruokakauppa AUMA (Helsinki). In Switzerland: Verena Krieger of Sojalade (Engelberg, tofu shop), Hans Rudolph Opplinger (Cham, tofu shop), Marty Halsley (Nyon, tofu & tempeh), Restaurant Sesam (Bern). P. Ton van Oers is a Dutch priest who works in Kananga, Zaire. The natives have grown soya for 10 years and he is thinking of making tofu and soymilk from them.

“In Great Britain the East West Centre is very active in promoting soyfoods. As a part of the Kushi Institute program they have home-scale processing, in which tofu, tempeh, and miso-making are taught by Jon Sandler [Sandifer?]. He is the tempehmaker of the EWC too at Community Health Foundation, 188 Old St., London EC1. In the Netherlands, a great deal of soyfoods promotion is done by the East West Center and Manna. As you probably know, Manna was the first to introduce miso, tamari, shoyu, tempeh, tofu and koji to the larger public and we are still the main promoters of soyfoods as part of a more natural, vegetarian, and economic diet. Manna has been followed by a lot of other distributors of natural and health foods. We have two competitors in the tofu business: Witte Wonder and De Morgenstond.

“At the moment I’m the only teacher giving lectures on homescale miso-, tofu-, tempeh-, shoyu-, tamari-, natto-, and koji-making in the Netherlands. Mainly at the East West Centre and sometimes at different places in the country. People are starting to get interested.”

Note: This is the earliest document seen (Jan. 2003) concerning the work of Swami Anand Svadesha of West Germany, and of Thomas Karas of Bittersuess (Cologne, West Germany). Address: Stichting Natuurvoeding

Amsterdam, Meeuwenlaan 70, 1021 JK Amsterdam-N, Netherlands. Phone: 020-323977.

1146. Dreyer, Lawrence. 1982. Re: International fair and symposium on soya products in Salzburg. Letter to William Shurtleff at Soyfoods Center, April 27. 2 p. Typed, with signature. [Eng]

• **Summary:** "The Way of Nature (*Weg der Natur*), a foundation, was established in Austria with the express purpose of disseminating information about macrobiotics, food, and their relationship to our health. Each of the founding members have had at least 2 months training at a temple in Japan." The foundation plans to hold an international fair named Bio Life 2000 in Salzburg from 17-20 Nov. 1982. "The foundation has, for the past two years been linked to a Natural Food Shop and has been, for this period, producing tofu and miso. This shop will be represented at the Fair and will be exhibiting and selling macrobiotic foods, snacks, and drinks. To run concurrently with the Fair, the Foundation is also planning a symposium on Soya products, Miso, Tofu, Tempeh, etc.

"The program will include lectures and discussions on planting and growing soya beans, making soya products, the suitability and advantages of soya products in the diet of Mankind with particular emphasis on the peoples of the West, and the substitution of soya products for animal products as a source of protein. There will also be demonstrations on cooking natural foods and the production of tofu and miso.

"The symposium will be conducted in both English and German and possibly also in French. The media, press, radio and TV have all expressed a keen interest in this fair, so a wide coverage is assured. We would be delighted if you, as the initiator of the use of tofu in the West, would be prepared to participate in this fair."

Note: A handwritten letter from Lawrence Dreyer (1983 Feb. 15) states that this fair was never held. His company is still producing tofu with equipment purchased in Japan a couple of years ago. Address: Director.

 • **Summary:** Following a description of tempeh and its benefits (including its content of vitamin B-12), the author explains how to make tempeh at home, with 8 photos. She then gives 3 tempeh recipes: Fried tempeh. Tempeh stew with mushrooms. Tempeh fritters with coconut. Pages 28-29 describe the characteristics of good homemade tempeh, and give troubleshooting advice if your tempeh did not turn out properly. Much of this material is excerpted from *The Book of Tempeh*, by Shurtleff & Aoyagi, a favorable review of which appears on p. 29. Photos show: A hand holding a cake of freshly-made tempeh. Five steps in the process of making tempeh at home. Fried tempeh slices on a plate.

1163. Mandoe, Bonnie. 1982. Soy power! Part I. *Bestways*. May. p. 98, 99, 101.

• **Summary:** "However familiar—or unfamiliar—we may be with soy foods, the eighties are certain to increase our appreciation of these versatile and varied products. The same marketing skills that turned yogurt from the curious 'health-food oddity' it was in the sixties, to the popular supermarket item it is today, are being applied to soy foods, particularly tofu, tempeh, and soya ice cream."

Contains a short section on tofu that mentions Larry Needleman and *Soyfoods* magazine, and a shorter section on tempeh. Gives 3 tofu recipes and 4 tempeh recipes. Photos show: (1) Bonnie Mandoe. (2) A cake of tofu.

published in June as Soyfoods Industry: Directory and Databook. 52 p. [24 ref]

• **Summary:** A detailed study of the rapidly emerging soyfoods industry and market. Contains original statistics compiled by the Soyfoods Center through interviews with companies. Contents of 2nd edition: 1. Terminology: The many types of soyfoods, traditional and modern. 2. Soyfoods industry directory: Names and addresses of over 850 soyfoods manufacturers in the Western world, plus major soymilk, miso, shoyu, and yuba manufacturers in East Asia. 3. Analysis of the soyfoods industry in the U.S. 4. Trends in U.S. and world soybean production. 5. Analysis of the tofu industry in the West. 6. Analysis of the tempeh industry in the West. 7. Analysis of the worldwide soymilk industry. 8. Analysis of the soy sauce/shoyu and miso industries worldwide. 9. Other: Analysis of the soynuts industry in the U.S., North America's larger soyfoods delis, cafes & restaurants, soybean crushing industry; overview. 10. Soyfoods terminology and standards. 11. Names of soyfoods around the world: 40 products. 12. Key institutions working with soyfoods in the West.

Note: This is the first market study published by Shurtleff. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1166. Soyplant Co-op Inc. (The). 1982. Price list: Effective 5/21/82 (Leaflet). Ann Arbor, Michigan. 1 p. 28 cm.

• **Summary:** This is a photocopy sheet, black on white. At the top center is the company logo, two soybean plants growing out of a round Planet Earth. Office hours: 9:00–4:00 M-F. These are wholesale prices, with suggested retail prices listed in parentheses. "A minimum order of \$25.00 is required for all deliveries."

Tofu—1# tub. \$0.85 per lb (\$1.10).

Tofu—Bulk. \$0.70 per lb plus 5¢/lb outside Ann Arbor.

Plain soy milk. \$0.80 per quart (\$1.04).

Flavored soy milk. \$0.88 per quart (\$1.14).

Plain soy milk—Bulk. \$2.10 per gallon (5-gallon minimum).

Flavored soy milk—Bulk. \$2.50 per gallon (5-gallon minimum).

Tempeh. \$0.90 per half lb (\$1.25).

Tempeh—Bulk. \$12.00 per 8 lb sheet. Address: 771 Airport Blvd. Suite 1, Ann Arbor, Michigan 48104. Phone: (313) 663-8638.

1167. **Product Name:** 3 Grain & Soy Tempeh (With Brown Rice & Millet & Barley).

**Manufacturer's Name:** Tempeh Works (The).

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01301.

**Date of Introduction:** 1982. May.

**Ingredients:** Organically grown soybeans, millet, brown rice, barley, water, Rhizopus culture.

**Wt/Vol., Packaging, Price:** 7 oz or 8 oz package.

**How Stored:** Refrigerated.

**Nutrition:** Per 4 oz.: Calories 190, protein 12 gm, carbohydrate 25 gm, fat 4 gm, sodium 15 mg, iron 1.5 mg.

**New Product–Documentation:** Spot in Soyfoods. 1982. Summer. p. 54. “Grains and Beans in One Tempeh.” Ad in New Age. 1982. July and Dec. p. 26; Shurtleff & Aoyagi. 1985. History of Tempeh. p. 52.

1168. **Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer’s Name:** Traditions du Grain.

**Manufacturer’s Address:** 16 Avenue Jean-Jaurès, 94400 Ivry, France. Phone: 46.71.89.88.

**Date of Introduction:** 1982. May.

**New Product–Documentation:** Note: Ivry is a suburb of Paris, located about 7 km (4 miles) southeast of the city’s center. Letter from Sjon Welters. 1982. April 16. Traditions du Grain is a macrobiotic centre which is setting up a tempeh shop. They will start in summer. Contact Jean Luc Alonso, 16 Rue Jean Jaureo, Ivry 92200, France. Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Jean Luc Alonso. No phone.

Letter from Anita Dupuy and Jean Luc Alonso of Traditions du Grain. 1983. May. “We introduced tempeh 1 year ago on a commercial scale. I think there is no other tempeh production in Paris (or France) on a commercial scale.”

Richard Leviton. 1983. Oct. 16. Trip to Europe with American Soybean Assoc. Jean Luc Alonso, a tempeh maker 20 miles from Paris at Traditions du Grain, runs France’s first tempeh shop. Ad in Le Compas. 1986. No. 26. p. 34.

Talk with (call from) someone from France. 1989. Dec. 11. Jean Alonso and Rachel Revesz are starting a new tempeh shop in Bergerac, France, to make soya tempeh. The company has no name yet.

Letter from Rachel Revesz. 1989. Dec. 11. “The former tempeh-workshop in Paris was called Tradition [sic, Traditions] du Grain. It existed for 2½ years. Jean-Luc Alonso was selling only in Paris and its suburbs. The production and sales were small. Nobody knew about tempeh and the work needed for making it known exceeded his financial capabilities. Ten years later, after more experience in macrobiotics and business, we plan to start our new project. It will be a plant of 600 square meters located in the countryside 9 km from Bergerac in Dordogne, near Bordeaux, with a maximum production (during the first year) of 12,000 pieces of tempeh (300 gm each) per month. We also plan to produce 10,000 tempeh burgers and 10,000 croquettes monthly, as well as a bit of fried tempeh, all prepared with spring water. They will be vacuum packed. Before starting, we did a market study, which gives us hope. During the first year we will be 3 persons working in the enterprise, which will be called Enzo Future Foods, located

in Queyssac, 24140 Villamblard, France.”

Letter from Roland A. di Centa. 1993. Aug. 9. Roland was one of the first people to introduce soyfoods to Italy. He was very interested in macrobiotics and was a close friend of Michio Kushi. “My interest in food was to heal people with food and I had a lot of success using a holistic approach to help people with major diseases. For all these cures I used a lot of miso, tempeh, and tofu. Good miso was available. However tempeh and tofu had to be locally produced. I cured people from 1980 until about 1985... Tempeh: There was only tempeh available for Paris, made by a lady there named Anita Dupuy, who delivered to Le Bol en Bois (a macrobiotic restaurant in Paris) and to some consulates and embassies (such as the Philippines). As I was busy elsewhere I sent Giovanna Mazzieri (of Milan, Italy) to Paris to study the process [in Feb. 1983]. Anita taught Giovanna how to make tempeh. Giovanna was a very busy lady and a fan of macrobiotics after I healed her husband of a very difficult disease. She was very smart and she produced in tempeh in Milan in about 1980 [sic 1983]. It was perfect and of very good quality. It was sold in a few health food stores.” Anita Dupuy is at Rue du 18 Juin, 25-94400 Vitry [Ivry?], France. Vitry [Ivry?] is a suburb of Paris.

Letter from Giovanna F. Mazzieri. 1993. Oct. 6. She went to Paris for one week in February 1983 and Anita Dupuy taught her how to make and cook with tempeh. At the time, Anita was definitely selling her tempeh to many shops in Paris, including Le Bol en Bois, other natural food or macrobiotic shops, and also to the Indonesian Embassy in Paris. She returned to Milan, Italy and made tempeh non-commercially starting in mid-1983.

1171. Krieger, Verena. 1982. Re: Recent developments with tofu in Switzerland. Letter to William Shurtleff at Soyfoods Center, June 14. 3 p. Typed, with signature. [1 ref]

• **Summary:** A person who is knowledgeable on macrobiotics and soyfoods in Europe is Mario Binetto from the Macrobiotic Center in Bern. He can be reached at Restaurant Sesam, Monbijourstr. 19, CH-3011 Bern. Marty Halsey is doing work at his tofu shop. Tevan Thieu is trying to start a tofu business in the Basel-area. In the late 1970s Verena worked at a natural foods vegetarian restaurant near Chicago,

Illinois, where tempeh and tofu were made frequently. In June 1979 she and her husband David returned to her native Switzerland and began work that played a key role in getting soyfoods into the Swiss consciousness and Swiss kitchens.

"The milestone was set, when I managed to publish my article 'Gestern Steak, morgen Tofu.'...into a Sunday magazine, which is respectable and progressive at the same time and widely read in Switzerland.

"Thanks to the foresight of my friend Lukas Kelterborn, who knew that this publication would stir a wave of interest, we [she and 4 other people interested in tofu] hastily set up a tofu shop to meet the coming demand for tofu. This was the birth of the 'Sojalade.'

"Two months later Swiss national TV did a 30-minute show during prime time on soybeans, using basic information from 'Das Tofu-Buch' (the book was actually shown and recommended through the channel), at the end of which I was given a few minutes to present a meal of five tofu dishes, tailored to the Swiss palate. Since then tofu has been a favorite child of the medias. A couple of weeks ago, our tofu group was even mentioned in the 'Blick' (the 'National Enquirer' of Switzerland)... With all this noise, things have remained small and still beautiful. Our shop is approaching the 1,000 lb/week production level, and we are distributing our tofu mainly in Zurich (population about half a million). Demand has gone up steadily, especially in Zurich. Considering that Switzerland is a classic dairy country, where the cow is held more holy than in India, where milk is the next best thing to our life-blood, and where there is no Asian population to speak of, this is a compliment to both tofu and the Swiss. Of course, the bulk of tofu is still being sold in health and natural foods markets...

"The present soyfoods market wants only organically grown soybeans, and to promote soybean growing just on that basis is ten times harder than conventionally grown beans...

"For the fall, Swiss national radio plans a series of two programs on soybeans, especially directed to farmers." Address: Bruchmattstr. 24, CH-6003 Lucerne, Switzerland. Phone: 041-22 50 34.

1172. Van Gessel, Ike. 1982. History of Van Dappern Tempeh Co. in the Netherlands (Interview). Conducted by William Shurtleff of Soyfoods Center, June 19. 2 p. transcript.

• **Summary:** The company started in Rotterdam in 1969. They learned how to make tempeh from a Dutch-Indonesian sailor, who had started to make tempeh in the Netherlands in 1949. He made it for family and friends, but did not sell it commercially. Address: 2272 Santa Anita Rd., Norco (near Los Angeles), California 91760. Phone: 714-734-2034.

1173. Cohen, Michael. 1982. New developments at The Tempeh Works (Interview). *SoyaScan Notes*. June 30.

Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** His weekly tempeh production peaked at 6,800 lb in Sept. 1981; it stayed at this level for 3 weeks. Then in early 1982 five competitors appeared in his market area; his production dropped by 35%. He was also slow to introduce variety tempehs and second generation tempeh products. In May 1982 he introduced 3 grain and soy tempeh, and in July tempeh burgers—with more new products planned for this summer. Now sales are rebounding, having reached 4,000 to 4,500 lb/week during June 1982. In the winter of 1981-82 he expanded his incubation space by adding 650 square feet with trailers. Address: Greenfield, Massachusetts.

1174. **Product Name:** Tempeh Brothers Tempehburger. Renamed Tempeh Brothers Tempeh Burgers by early 1983.

**Manufacturer's Name:** Appropriate Foods, Inc.

**Manufacturer's Address:** 137 New Hyde Park Rd., Franklin Square, Long Island, NY 11010.

**Date of Introduction:** 1982. June.

**Ingredients:** Organic soy tempeh, shoyu, herbs & spices.

**Wt/Vol., Packaging, Price:** 7 oz.

**How Stored:** Refrigerated or frozen.

**New Product—Documentation:** Label. 1982. June 15. 3 inch diameter. Yellow, red, blue and white. Spot showing label in Soyfoods. Winter. 1983. p. 50. "The Tempeh Burger Takeover. Nationwide at least 7 brands of prepared tempeh burgers are produced." The label reads "tempeh burgers." Also in Soyfoods. 1984. Summer. p. 43. Interview with Robert Werz. 1987. Sept. 9.

1175. Five Seasons Restaurant (The). 1982. Menu. Jamaica Plain, Massachusetts. 1 p.

• **Summary:** This menu, dated June 1982, printed with dark brown ink on beige paper, is divided into the following categories: Appetizers: incl. Tofu cream cheese & crackers, Tempura nori roll, Marinated tofu. Staples. Salads: incl. Chef's salad with slices of seitan and marinated tofu, Tofu cream cheese platter. Desserts. Luncheon specials. Sandwiches: incl. Fried tempeh sandwich, Tofu cream cheese sandwich. Noodles: incl. With tofu & vegetables, topped with fried tofu or tempeh. Pan-fried rice or noodles. Side orders: incl. fried tofu, fried tempeh. Beverages. To go: Tofu cream cheese. Address: Jamaica Plain (near Boston), Massachusetts.

1176. Lappé, Frances Moore. 1982. Diet for a small planet. Tenth anniversary edition. Completely revised and updated. New York, NY: Ballantine Books. xiv + 498 p. Illust. by Marika Hahn. Index. 21 cm. [250\* ref]

• **Summary:** Listings of soyfoods in index: Soy flour & grits p. 16, Tofu p. 14, Soybeans p. 7, Soy foods (tofu, tempeh) p. 229. Tempeh p. 3. The section titled "Recommended paperback cookbooks" (p. 454-55) includes *The Book of Tofu*, *The Book of Miso*, and *The Book of Tempeh*, by

William Shurtleff and Akiko Aoyagi, and an invitation to send a long, self-addressed stamped envelope to their Soyfoods Center in Lafayette, California. Address: Inst. for Food & Development Policy, San Francisco, California.

1177. Leviton, Richard. 1982. Tofu, tempeh, miso and other soyfoods. New Canaan, Connecticut: Keats Publishing Inc. 26 p. June. No index. 22 cm. [46 ref]

• **Summary:** Contents: The neighborhood soy deli. What are soyfoods? Soybeans from China. Soyfoods have marched west. The nutritional side of soyfoods. Soyfoods in your kitchen (3 recipes from other cookbooks). The future. Bibliography. A list of soyfoods cookbooks. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1178. Lotus Cafe (The). 1982. Menu. Rochester, New York. June.

• **Summary:** This original menu, dated June 1982 and typed on beige paper, is divided into: Soups. Salads (incl. Hummus, Devilled tofu, Tempeh salad). Sandwiches (all with the Lotus Cafe's original tofu mayonnaise): Tofuburger, Tempehburger, Not dog, Tempeh Reuben, Pita sandwiches in Syrian pocket bread (incl. Tofulafel, Temptation). Entrees: Incl. Tofu spinach pie, Tofu ravioli, Tofu and sauce with brown rice and marinated tofu. Side dishes. Beverages: Incl. Shakes with fresh soymilk (Banilla, Carobanana, Banana colada), freshly made juices, sparklings, glass of soymilk or carob soymilk. Desserts: Incl. Almond cream cheese tart, Maple walnut pudding, carob brownie, ice cream (Ice Bean). Address: 686 Monroe Ave., Rochester, New York 14607.

1179. Shurtleff, William; Aoyagi, Akiko. 1982. Report on soy delis, cafes and restaurants. Lafayette, California: Soyfoods Center. 116 p. Illust. June. 28 cm. [21 ref]

• **Summary:** Contains 150 recipes. Based on extensive original surveys conducted by Soyfoods Center, including questionnaires sent to each of the soy delis. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1180. **Product Name:** Tempeh (Soya Karawala) [Dried, or Fresh].

**Manufacturer's Name:** Soya Foods Research Centre. Sri Lanka Dept. of Agriculture.

**Manufacturer's Address:** P.O. Box 53, Peradeniya, Sri Lanka.

**Date of Introduction:** 1982. June.

**Ingredients:** Split soya beans, tempeh culture, rice flour (aids culture growth and binding).

**Wt/Vol., Packaging, Price:** Fresh: 300 gm bag retails for Rs. 4/50. Dried: 100 gm bag with label and recipe retails for Rs 4/-.

**Nutrition:** Fresh: 19.5% protein. Dried: 50.6% protein.

**New Product-Documentation:** Label. 1988. 5 by 3.5

inches. Purple on white paper. "Tempeh (Soya Karawala [Karawala means 'dried fish']) (High Protein)." In English and Sinhala. Form filled out by Jane Gleason. On 23 March 1988 she met with Mr. H.G. Jayatissa, Project Manager, at Plenty Soya Food Centre. Plenty has marketed SFRC (Soya Foods Research Center) products since Oct. 1987. In addition, they are available at the SFRC retail outlet in Gannoruwa, as they have been since each product was introduced. Plenty is currently assisting an entrepreneur, Mr. Ratnayeke of Welligama, near Gampola, in starting production of dried tempeh at his rice mill. On 25 April 1988 Gleason met with Mrs. K.G.S. Ariyaratne, Agriculture Instructor. At the SFRC shop dried tempeh is sold in a 100 gm unlabeled bag for Rs. 3/- and fresh tempeh in a 250 gm bag for the same price.

1181. **Product Name:** Multi-Grain Tempeh (Sprouted Soybeans & Rice & Millet).

**Manufacturer's Name:** Surata Soyfoods.

**Manufacturer's Address:** 302 Blair Blvd., Eugene, OR 97402.

**Date of Introduction:** 1982. June.

**Ingredients:** Sprouted organically grown soybeans, rice, millet, water, apple cider vinegar, tempeh culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 10 oz in poly bag.

**How Stored:** Refrigerated or frozen.

**New Product-Documentation:** Label, undated. Originally a 1 x 3 inch, white-on-brown add-on for basic tempeh label. Then a 7 x 8-inch preprinted poly bag, red on yellow. "An Oregon Cooperative. A Pre-Cooked Cultured Soyfood. A Complete Protein." Recipes on back: Tempeh Stroganoff, Tempeh Burgers, and Tempeh Spaghetti Balls.

Talk with Surata Soyfoods. 1982. June 6. They are using soybeans that have been sprouted overnight to make their tempeh. Sprouting increases the levels of B and C vitamins, increases the tempeh yield by 11%, and makes it easier to do wet dehulling.

Form filled out by Shevah Lambert. 1990. July 2. Surata now makes 875 lb/month of this product. Production started in Feb. 1982.

1182. Ko Swan Djien. 1982. Re: History of his work with tempeh, and why so few Indonesians studied tempeh before World War II and during the two decades thereafter. Letter to William Shurtleff at Soyfoods Center, July 1. 2 p. Typed, with signature on letterhead. [2 ref]

• **Summary:** Ko studied at the University of Wisconsin at Madison from August 1959, then did research at the Northern Regional Research Center (NRRC, Peoria, Illinois), from February to Aug. 1960. Thereafter he returned to the Bandung Institute of Technology, where his Laboratory for Microbiology began doing cooperative research on tempeh with the Cornell University (New York) and NRRC groups.

Ko's first article, co-authored with Dr. Hesseltine in 1961, was titled "Indonesian Fermented Foods." With this article, Ko became the second Indonesian to publish scientific research about tempeh.

It is curious to note that, despite the fact that tempeh has long been a very important and widely used Indonesian food, all of the scientific studies on tempeh from 1895 to 1960 (and virtually all of the references in any language) were done by Europeans living in Indonesia. There are several reasons for this. First, while Indonesia was a Dutch colony, very few Indonesians were able to attend a university or do scientific research of any type. There were very few Indonesian food scientists or microbiologists and these were not encouraged to study indigenous foods. Second, During Dutch colonial rule, public opinion was strongly influenced by the Dutch emphasis on Western values and lifestyles, and the devaluation of indigenous values and lifestyles. Consequently a food such as tempeh, which was unknown in the West, and which was a low-priced food of the common people, acquired the image of an inferior, lower-class, or even poor-people's food, even though it was consumed by Indonesians of all classes. No Indonesian scientists felt it was worthy of their attention or research. Unfortunately, this attitude persisted even after independence.

"The enclosed photocopy of Indonesian newspaper articles (from Sept. 1965) illustrates the feeling of amazement at that time, when a reporter discovered that I studied tempeh at the university. Headings like 'Tempeh Naik Tahta' (Tempeh steps to a higher throne) in large letters decorated their reports." Address: Dep. of Food Science, Agricultural Univ., Wageningen, Netherlands. Phone: (08370) 84162/82888.

1183. Bhatnagar, P.S. 1982. Re: Request for proforma invoice for publications and materials. Letter to William Shurtleff at Soyfoods Center, July 8. 1 p. Typed, with signature on letterhead.

• **Summary:** He would like to order popular books on miso, tofu, and tempeh. Address: Project Coordinator, All-India Coordinated Research Project on Soybean, G.B. Pant Univ. of Agriculture and Technology, Pantnagar (Uttar Pradesh), India. Phone: 291-292 Rudrapur.

1184. Dominguez de Diez Gutiérrez, Blanca. 1982. Re: Names of soyfoods around the world: Spanish. Form filled out and returned to William Shurtleff at Soyfoods Center, July 9. 1 p. Handwritten. [Eng]

• **Summary:** Gives the names of all the various soyfoods in Spanish. Note: A typed list of these names is published in *Soyfoods Industry and Market: Directory and Databook*, 1985. 5th ed. p. 164.

"Fresh green soybeans—Frijol de soya tierno o ejote de soya. Whole dry soybeans—La soya, Frijol de soya. Black soybeans—Frijol de soya negro. Fresh soy puree—Pure de

frijol de soya. Soy sprouts—Germinados de soya. Soynuts—Soya-nuez (nuez means walnuts or pecans), Soya-huate (means peanuts from cacahuete). Oil roasted soynuts—Soya nuez tostada (meaning nut). Dry roasted soynuts—Soya-huate tostado (meaning peanuts). Soynut butter—Mantequilla de soya. Roasted soy flour—Harina de soya tostada (kinako). Soy coffee—Soyafee. Soy chocolate—Soyalate. Soymilk—Leche de soya. Soymilk ice cream—Helado de leche de soya. Soymilk curds—Cuajada de soya, Jocoque de leche de soya. Tofu—Tofu, Queso de soya, Cuajada de soya. Soft tofu—Tofu blando. (Regular) Tofu—Tofu comun. Firm Tofu—Tofu firme. Extra firm tofu—Tofu extra firme. (Deep fried) Tofu cutlets—chuletas de tofu. (Deep fried) Tofu burgers—Hamburguesas o tortitas de tofu. (Deep fried) Tofu pouches—Saquitos de tofu. Silken tofu—Tofu sedoso. Pressed silken tofu—Tofu sedoso prensado. Grilled tofu—Tofu a la parrilla. Dried frozen tofu—Tofu seco congelado. Okara or soy pulp—Okara, pasta de soya, pulpa de soya. Yuba—Yuba. Soy nuggets—Palanquetas de soya. Miso or soybean jian—Miso (el). Soy sauce—Salsa de soya. Shoyu—Shoyu (el). Tamari—Tamari. HVP soy sauce—Have not found it. Tempeh—Tempeh (el). Fermented tofu—tofu fermentado. Fermented / cultured soymilk—Leche de soya fermentada. Natto, thua-nao, kinema—Natto (el). Soy oil—aceite de soya. Soy lecithin—Lecitina de soya. Soy flour—Harina de soya. Whole (full fat) soy flour—Harina de soya entera. Defatted soy flour—Harina de soya degreasada. Soy grits and flakes—Soya martajada y hojuelas de soya. Cereal-soy blends (CSM, WSB, etc.)—Soyavena (with oatmeal). Soy protein concentrate—Concentrado de proteína de soya. Soy protein isolate—Aislado de soya. Textured soy protein product—Productos de soya texturizada. Textured soy flour, TSF, or TSP—Harina de soya texturizada. Textured soy concentrates—Concentrados de soya texturizada. Textured soy isolate—Aislados de soya texturizada. Spun soy protein fibers—Fibra de proteína hilada de soya. Soy casmar, Soya Cocoa, Coco soya—Beverages made with chocolate or cocoa. Patisoya—Like spaghetti or noodles of different kinds made with soy flour—commercial products. Vegesoya—Commercial products for soups. Soya mex and Chocosoya—for beverages. Soya pac—Textured soya like meat, also a commercial product." Address: Apdo. Postal 226, Jalapa, Veracruz, Mexico.

1185. Shurtleff, William; Aoyagi, Akiko. 1982. History of other fermented soyfoods. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 7 p. July 18. Unpublished typescript.

• **Summary:** A comprehensive history of the subject. Contents: Introduction. Soy wine, 321 A.D. Cantonese wine starter (*kiu-tsee*), 1878. Soy fermentation pellicle (*tou-huang*), 1911. Meitauza (*Mucor*-fermented okara tempeh), 1937. Okara onchom, 1901. Soy onchom, 1965. Soy idli, dosa (or dosai), and dhokla, 1976. Soy-ogi, 1966. Sere or serelele (Bali) discussed in chapter on whole dry soybeans. Address: Lafayette, California. Phone: 415-283-2991.

1186. **Product Name:** Millet Tempeh.  
**Manufacturer's Name:** 21st Century Foods.  
**Manufacturer's Address:** Brookline, Massachusetts.  
**Date of Introduction:** 1982. July.  
**New Product–Documentation:** Spot in Soyfoods. Summer. p. 57. Company began in September 1981. Lucio Armellini reports total tempeh production of 400 pounds a week.

1187. **Product Name:** [Tempeh].  
**Foreign Name:** Tempeh.  
**Manufacturer's Name:** Alexander's Tofu Shop.  
**Manufacturer's Address:** Leonrodstr. 19, 8000 Munich 19, West Germany. Phone: 089-160-474.  
**Date of Introduction:** 1982. July.  
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Alexander Nabben. Note: This was the earliest known tempeh ever made in Germany.

1188. **Product Name:** Tempeh.  
**Manufacturer's Name:** Ashland Soy Works.  
**Manufacturer's Address:** 280 Helman St., Ashland, OR 97520. Phone: 503-482-1865.  
**Date of Introduction:** 1982. July.  
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: James Muhs.

1189. **Product Name:** Tempeh.  
**Manufacturer's Name:** Bud, Inc.  
**Manufacturer's Address:** 1100 Wicomico St., Baltimore, MD 21230. Phone: 301-837-4034.  
**Date of Introduction:** 1982. July.  
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Aaron C. Liu. Company name is given as Bud, Inc. Soyfoods.

1190. **Product Name:** Tempeh.  
**Manufacturer's Name:** Community Health Tempeh.  
**Manufacturer's Address:** c/o Community Health Centre / Foundation, 188 Old Street, London EC1V 9BP, England. Phone: 01-251-4076.  
**Date of Introduction:** 1982. July.  
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. The tempeh makers are Jon Sandifer and Andrew Leech.

Talk with Thomas Andersen of Thomas Tempeh. 1990. May 24. In about 1985, he learned how to make tempeh at this Centre, which is a macrobiotic education and natural healing/therapy center. There were two tempeh makers at the time. One was Roger Green.

1191. **Product Name:** Tempeh.

**Manufacturer's Name:** Creative Soyfoods Inc.  
**Manufacturer's Address:** 526 N. Clark St., River Falls, WI 54022. Phone: 715-425-0467.  
**Date of Introduction:** 1982. July.  
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: David Nackerud. Poster and recipe leaflets. 1982, undated. Label. 1983, undated. 4.5 by 6 inches. Brown and orange on tan.

1192. **Product Name:** Tempeh.  
**Manufacturer's Name:** Current River Soy Products.  
**Manufacturer's Address:** 707 Lafayette St., Doniphan, MO 63935. Phone: 314-996-4982.  
**Date of Introduction:** 1982. July.  
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Sheldon Zola.

1193. Fiering, Steve. 1982. Vacuum-packing: Is it the new wave for soyfoods? *Soyfoods*. Summer. p. 42-48.  
**• Summary:** "Two packaging technologies—pasteurization and vacuum packing—can extend tofu shelf life to one month or more. As competition for the large warehouse accounts heats up, it seems certain that most of the sales will be captured by tofu with the 30 day shelf life." Discusses: 1. What is vacuum packaging? "Possibly the most important marketing consideration is that most of the other familiar protein foods, such as cheese and lunchmeats, are also vacuum packaged... Most of the common spoilage organisms are aerobic... Tests done for Nasoya Inc. indicate that the total plate count of tofu is reduced by at least 80% after vacuum packaging..." Is botulism a reasonable concern? Maybe. But not if an oxygen permeable film is used. Most films have a polyethylene inside and nylon outside, which permits some oxygen permeability. 2. What is botulism? 3. Botulism and vacuum packaging. 4. Vacuum packaging equipment "Available machinery varies according to evacuating, sealing, and product handling systems." Chamber system, nozzle type machine, double chamber style machine, conveyor chamber, horizontal form-fill-seal machine (which start at \$50,000). 5. The companies. Cryovac, Hantover Inc., Koch Supplies Inc., T.W. Kutter, Inc., Packaging Aids Corp., Smith Equipment Co., Tipper Tie. Photos show Kutter's Tiromat in action at Nasoya Foods in Massachusetts. Address: The Soy Plant, Ann Arbor, Michigan.

1194. **Product Name:** [Tempeh].  
**Manufacturer's Name:** Jose Parracho Tofu.  
**Manufacturer's Address:** Quinta da Portugesa, Fieguesia da Annuciada, Setubal, Portugal.  
**Date of Introduction:** 1982. July.  
**New Product–Documentation:** Letter from Sjon Welters. 1982. April 16. "In Portugal some macrobiotic centres are

busy in promoting soyfoods as part of the macrobiotic diet... A friend who studied at Manna for a while, José Parracho is planning to make tempeh and tofu in Portugal. The business will be Quinta da Portuguesa in Setubal.”

Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Jose Parracho.

1195. **Product Name:** Tempo Tempeh Salad, and Soybean-Brown Rice Tempeh.

**Manufacturer's Name:** Kingdom Foods.

**Manufacturer's Address:** 513 Morse St. N.E., Washington, DC 20002. Phone: 202-543-7107.

**Date of Introduction:** 1982. July.

**New Product–Documentation:** Talk with Eileen Judge. 1990. Sept. 25. She started selling these two tempeh products in July 1982 in Washington, DC.

1196. Kronenberg, H.J. 1982. Biotechnology and fermented soyfoods. Tests of solid state rotary drum fermentation with soybeans for tempeh production... *Soyfoods*. Summer. p. 24-27. [12 ref]

• **Summary:** “... revealed that soybeans could ferment in beds up to 4 inches thick while the process might have wide applications in industry.”

Contents: Introduction. Fermentation process and variables. Evolution of solid-state fermentations. Applications to fermented soyfoods.

Fermentation processes are typically described as either liquid, semi-solid, or solid systems. Penicillin is made in a liquid system whereas tempeh is made in a solid system.

Illustrations show: (1) Rotary drum fermentation of mold bran. (2) Continuous tray method for mold enzyme production. (3) Rotary fermentor used to make koji (adapted from Ebine 1972). A photo shows a small rotary fermentor for tempeh.

Note: A fermentor is the vessel where fermentation happens. A fermenter is the microorganism that makes the fermentation happen. Address: Cornell Univ., Ithaca, New York.

1197. Leviton, Richard. 1982. Touring for soyfoods. *Soyfoods*. Summer. p. 32-37, 41.

• **Summary:** At The Farm in Tennessee, the soy dairy, managed by Chuck Haren, “operates 3 days a week, turning out 7,500 lb/week of calcium sulfate tofu for immediate consumption by the Farm’s 1,300 soyfood lovers.”

Legume: “Gary and Chandri Barat and Robert Shapiro have a booming company on their hands after 1 year of business with an impressive line of prepared frozen tofu entrees and desserts. Jan. 1981 rented facility in Verona, New Jersey. May 1981 Celantano started co-packing. Photos show: Chandri Barat, Gary Barat, and Robert Shapiro of Legume (see also photo on p. 3).

The following people and their companies are also

discussed, with photos: Tim Nusser of Rising Sun Soy Farms (Columbus, Ohio). Jim Saunders of Real Foods (tofu shop in a supermarket in Allentown, Pennsylvania). Renate and Karl Krummenoehl of Cricklewood Soyfoods. Jamie and Nancy Stunkard of Nature’s Grace. Joel Dee of Edward & Sons in Saluda, North Carolina (marketers of Miso-Cup). Henry Salazar of Sam Sung Tofu Co. Eileen Foote and Eileen Judge of Kingdom Foods. Bob Hunt of Blue Ridge Soyfoods. Soya Food Products in Cincinnati (Ben & Nina Yamaguchi). Rising Sun Soy Farms. Bill Lutz of Hip Pocket Tofu Deli (Columbus, Ohio). Robert Marrochessi and Bill Spear of The Bridge (Middletown, Connecticut). Suzy Jenkins and Laurie Praskin of Plenty (Summertown, Tennessee). Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1198. Leviton, Richard. 1982. Multimarket targeting: Where is the soyfoods market? *Soyfoods*. Summer. p. 61-68.

• **Summary:** Discusses Pacific Tempeh, White Wave, Quong Hop Tofu Cutlets Marinara, Burgers, Cannoli. Photos show: Jim Miller and his wife Emily of Quong Hop, with the New Leaf products. Steve Demos at Pat Calhoun in the White Wave booth at the Natural Foods Expo, 1982, Anaheim, California. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1199. Leviton, Richard. 1982. Everybody’s Restaurant. The Farm brings soyfoods to Nashville. *Soyfoods*. Summer. p. 38-39.

• **Summary:** Everybody’s Vegetarian Restaurant, founded and owned by Judd and Diane Hoffman, opened in July 1980 in the university district of Nashville, Tennessee, and now seats 45. Many of the items on the meatless and dairyless [vegan] menu feature soyfoods—especially tofu, soymilk, and tempeh. The facility has 2,700 square feet, with 1,500 for retail and 1,200 for kitchen. The 12 restaurant workers, who are all members of The Farm (Summertown, Tennessee), live together communally in a large house outside Nashville.

Photos show: (1) Judd and Diane Hoffman. (2) A view of the front of the restaurant from outside. (3) Inside the kitchen. Address: Colrain, Massachusetts.

1200. **Product Name:** [Manna Tempeh].

**Foreign Name:** Manna Tempeh.

**Manufacturer's Name:** Manna Natuurvoeding B.V. (Marketer). Made in The Netherlands by Yakso.

**Manufacturer's Address:** Meeuwenlaan 70, 1021 JK, Amsterdam, The Netherlands. Phone: 020-323-977.

**Date of Introduction:** 1982. July.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owners: Sjon Welters & Robert Hendriks. Soya Bluebook. 1985. p. 100. Letter from Sjon Welters. 1989. Aug. 9. From 1983 through 1985 (?) the tempeh sold by Manna was made by Yakso in

the Netherlands. Sjon thinks that Manna never made its own tempeh.

1201. **Product Name:** Tempeh.

**Manufacturer's Name:** Midwest Soy Products, Inc.

**Manufacturer's Address:** 608 S. Belmont Ave., Champaign, IL 61820. Phone: 217-398-57560180.

**Date of Introduction:** 1982. July.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Anthony & Patricia Kao.

1202. **Product Name:** Tempeh.

**Manufacturer's Name:** Open Sesame Restaurant.

**Manufacturer's Address:** 48 Boylston St., Brookline, MA 02146. Phone: 617-277-9241.

**Date of Introduction:** 1982. July.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23.

1203. **Product Name:** Tempeh.

**Manufacturer's Name:** Panda Food Products.

**Manufacturer's Address:** 98-05 Atlantic Ave., Woodhaven, NY 11421. Phone: 212-441-6494.

**Date of Introduction:** 1982. July.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Hal Siegel. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 59.

• **Summary:** Presented to a special meeting of Japanese attendees. Contents: Introduction. Americans' basic view of soybeans and soyfoods. Nutrition and attitudes toward animal and vegetable proteins. Tofu innovations. Tempeh. Kikkoman. Conclusion. Accompanied a slide show. Address: Co-founder and director, Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1205. Shurtleff, William. 1982. The year in review. Paper presented at Fifth Annual Soyfoods Association of North America (SANA) Conference, University of Washington, Seattle. July 8. 2 p. Unpublished manuscript–outline.

• **Summary:** Presented on Thursday, July 8, 9:30 to 10:15. Includes popular media coverage of soyfoods from 1975 to the present. Address: Co-founder and director, Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1206. **Product Name:** New England Tempeh Burgers (By 1984 renamed Lightlife Meatless Tempeh Burgers).

**Manufacturer's Name:** Tempeh Works (The).

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302.

**Date of Introduction:** 1982. July.

**Ingredients:** Organic soy tempeh, soy sauce, spices.

**Wt/Vol., Packaging, Price:** 7 oz 2 x 3.5 oz burgers per package.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1983, undated. 3.5 inches square. Brown, yellow and white. Spot in Soyfoods. 1983. Winter. p. 50. "The Tempeh Burger Takeover. Nationwide at least 7 brands of prepared tempeh burgers are produced." Also 1984. Summer. p. 43. Product list. 1984. "Now you can have a tempeh burger made right here in New England." Shurtleff & Aoyagi. 1985. History of Tempeh. p. 52.

1207. **Product Name:** Tempeh.

**Manufacturer's Name:** Thompson Tempeh.

**Manufacturer's Address:** 371 Snyder Hill Rd., Ithaca, NY 14850. Phone: 607-273-2362.

**Date of Introduction:** 1982. July.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owners: Bruce & Katie Thompson.

1208. **Product Name:** Liquid Tempeh Starter.

**Manufacturer's Name:** Turtle Island Soy Dairy.

**Manufacturer's Address:** 2017 21st Ave., Forest Grove, OR 97116.

**Date of Introduction:** 1982. July.

**New Product–Documentation:** Shurtleff & Aoyagi. 1985. History of Tempeh. p. 56.

1209. **Product Name:** Tempeh.

**Manufacturer's Name:** Two Winds Tempeh.

**Manufacturer's Address:** 344 Combs Ave., Fayetteville, AR 72701.

**Date of Introduction:** 1982. July.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Jas Hawkins. But no phone number is listed.

1210. Whiting, M.G. 1982. Food uses of *Leucaena* seeds.

1. Tempeh lamtoro, preparation and toxicity. *Leucaena Research Reports* 3:100-01. July. (Taipei, Taiwan: Council for Agricultural Planning and Development). [4 ref]

• **Summary:** During a trip to Central Java in the fall of 1981, the author observed and photographed the process for making tempeh lamtoro in a village code-named P-M, using leucaena seeds. "It was found that *tempeh lamtoro* was available two or three times a week in local markets in and around Wonogiri and sold at a much lower price than *tempeh kedele*, made from soy-beans which are not grown in any quantity in the area. More flavorful than soybean tempe,

many persons stated a preference for the *tempeh lamotro*. Both are served in similar ways...

"It seemed important to the tempeh makers in P-M to eliminate the mucilage envelope which surrounds the seed cotyledons and separates them from the testa. Some of the mucilage is absorbed and later washed away with the heavy ash. Trampling in running water helped to separate but did not tear or break, the testa and seed. Most of the mucilage was washed away during the trampling. Most of the seed's mimosine is in the mucilage...

"Two to nine percent mimosine was found in intact seeds. However, only traces of mimosine could be found in a dozen samples of *tempeh lamotro*. It is apparent that the mimosine is destroyed or metabolized during the washing, soaking, boiling, steaming, and finally, during the fermentation." Address: Research Affiliate, Lyon Arboretum, Univ. of Hawaii, Honolulu, HI 96822.

1211. **Product Name:** Tempeh.

**Manufacturer's Name:** Bali Hai Tempeh Co.

**Manufacturer's Address:** P.O. Box 1342, Kaneohe, Oahu, HI 96744.

**Date of Introduction:** 1982. August.

**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Bonnie Fish. Company name is Bonnie Fish Tempeh Co. Address is P.O. Box 1073, Hanalei/Kauai, HI 96714. Phone: 808-826-6305.

Letter from Bonnie & Larry Fish. 1983. Soyfoods Unlimited's low prices threaten their business.

Oda. 1983. Hawaii Herald. Oct. 7. p. 6. "Hawaii's Tempeh Pioneers."

Letter from Kiku Murata of Japan, who was at the University of Hawaii, Honolulu, from Feb. to April 1984. During her stay there she made a speech on tempeh to a seminar, and also visited the tempeh farm—Bali Hai Tempeh, Inc. (P.O. Box 342, Kaneohe, Hawaii 96744).

Talk with Roger Krehl of Paradise Fruit—Maui. 1990. July 4. He is thinking of starting a tempeh company and has talked with Bonnie Fish recently. She lives on Makawao, Maui.

1212. Brown, Judy A. 1982. Soyfoods are catching on. The soyfoods industry has shown astonishing growth. Who created the boom and why? *Whole Life Times* No. 20. p. 34-36. July/Aug.

• **Summary:** Contents: Introduction. Idealism guides many soycrafters. Soybean goldmine. Tofu. Tempeh. Miso. Soymilk. Soy inhibitions. Wave of the future. Photos show: William Shurtleff and Akiko Aoyagi. Richard Leviton. Michael Cohen.

1213. *Diet & Exercise*. 1982. Spectacular soy food... tempeh. Summer. p. 62-63, 74, 76.

• **Summary:** "What is it? A cheap, tasty protein that's good for your figure—and your budget." An introduction to tempeh with nine recipes.

A large photo shows Valerie Robertson of Soyfoods Unlimited, makers of fine tempeh.

1214. **Product Name:** Tempeh, Tofu Tart (Tofu Pudding) [Chofu with Carob, Vanillafu with Vanilla, Lemonfu with Lemon, and Bananafu with Banana], Cottage Tofu.

**Manufacturer's Name:** Star Soyfoods.

**Manufacturer's Address:** Route 2, Box 337, Sandpoint, ID 83864. Phone: 208-265-4720.

**Date of Introduction:** 1982. August.

**Ingredients:** Tofu Tart: Crust: Vegan graham crackers, soy margarine. Soy Whip: Soy oil, soy milk, honey, vanilla. Fillings: Tofu, honey, vanilla for Vanillafu; plus lemon juice, soy oil and lemon rind for Lemonfu; carob powder and soy milk for Chofu; bananas, soy oil and lemon juice for Bananafu.

**Wt/Vol., Packaging, Price:** Tempeh: 8 oz. perforated poly bag sealed in a printed outer bag. Tart and Cottage Tofu: 2-4 oz small clear plastic cup with snap-on lid.

**How Stored:** Refrigerated.

**New Product–Documentation:** Order from Penny Billiter of Rt. 2, Box 337, Sandpoint, Idaho. 1981. Oct. 23. She orders 100 "What is Tempeh" pamphlets. On Dec. 8 she writes: "I have found your books very helpful and full of information. Thanks."

Form filled out by Penny A. Billiter. ca. 1981. Label with a smiling orange star is enclosed. "I am making tempeh, mock happy chicken, and baked tofu for the three health food outlets here in Sandpoint. I am only using 3-4 lb dry beans/week." Second form states the company started officially

on 3 August 1982. Makes Tempeh and Tofu Tarts. Label. 1982, undated. 3.5 by 4 inches. Blue and orange on white. Label. 1983. 2 by 2 inches. Self adhesive. Blue on white with orange smiling star. Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Penny Billiter.

Talk with Penny Billiter Miller. 1993. Feb. 23. She still lives in Sandpoint and is still interested in soyfoods. She called the tarts “puddings” and she made several flavors: carob, vanilla, and banana. Sometimes she omitted the graham-cracker crust and just sold the product as a pudding. The Cottage Tofu, introduced at about the same time as the tempeh and tarts, was on the market for only a short time; she did it through the local food co-op. She still has records.

1215. Weiner, Steve. 1982. Cashing in on ‘natural foods.’ *Eugene Register-Guard (Oregon)*. Sept. 19. p. 1E, 2E.

• **Summary:** A large color photo shows Surata Soyfoods tofu and tempeh, plus Nancy’s Honey Yogurt. Sue Kesey, co-owner of the Springfield Creamery (founded 22 years ago), is president of the fledgling Lane County Natural Foods Association, a 20-member group that wants everyone to eat natural foods. Gil Johnson is a spokesman for the Association. Callix Miller is Surata’s marketing manager.

1216. Ohta, Teruo. 1982. Tenpe wa kôtanpaku shokuhin [Tempeh is a high-protein food]. *Zenkoku Shokuhin Shinbun (National Food News)* No. 433. Sept. 21. [Jap]

• **Summary:** The oil in tempeh becomes rancid more slowly than most oils. Tempeh starter culture is sold at supermarkets in Indonesia. The author is planning to use electrical engineering (*denshi kôgaku*) to help make tempeh starter culture. Address: Nosuisho Shokuryo Sogo Kenkyujo, Oyo Biseibutsu Bucho: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukubagun, Ibaraki-ken 305, Japan.

1217. Fitzpatrick, Jean Grasso. 1982. Separate and equal. *New York Times*. Sept. 26. p. SM96, 121.

• **Summary:** What happens in households where vegetarians and meat eaters regularly have meals together? Living with a vegetarian has its pluses and minuses. If you are a gourmet, remember that they tend to be upwardly mobile—trying to eat like the people they aspire to be. Vegetarians tend to be downwardly mobile. Who makes the meals, and how? Can they respect one another? One way is to make one base, say from vegetables, then add chicken to one half and tofu to the other.

Two recipes are given: Tempeh / lamb kebabs. Chinese broccoli with chicken or tofu. “Each of these recipes serves two—one vegetarian and one meat eater. To cook for a group, multiply the meat or the soy food (depending on who’s in the majority) and add accordingly to the remaining ingredients.”

1218. Welters, Sjon. 1982. Re: Tempeh in the Netherlands:

ENTI, Van Dappern, Jakso, and estimated total production. Letter to William Shurtleff at Soyfoods Center, Sept. 27. 2 p. Typed, with signature on letterhead. [Eng]

• **Summary:** History and production information. Address: Manna Natuurlijke Levensmiddelen, Meeuwenlaan 70, 1021 JK Amsterdam-N, Netherlands.

1219. **Product Name:** Tempeh Brothers Super Tempeh (With Soybeans & Brown Rice & Millet & Barley & Sunflower Seeds & Sea Vegetables & Herbs).

**Manufacturer’s Name:** Appropriate Foods, Inc.

**Manufacturer’s Address:** 137 New Hyde Park Rd., Franklin Square, Long Island, NY 11010.

**Date of Introduction:** 1982. September.

**Ingredients:** Organic soybeans, brown rice, millet, barley, sunflower seeds, water, sea vegetables, herbs, spices, Rhizopus culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1982. Sept. 1. 4.5 by 5.5 inches. Red and blue on white. “To serve: Simply slice & fry, steam in broth, broil, bake, or barbecue.” Interview with Robert Werz. 1987. Sept. 9. This product was introduced on 1 Sept. 1982.

1220. **Product Name:** Tempeh Brothers Soy-Rice-Sesame Tempeh.

**Manufacturer’s Name:** Appropriate Foods, Inc.

**Manufacturer’s Address:** 137 New Hyde Park Rd., Franklin Square, Long Island, NY 11010.

**Date of Introduction:** 1982. September.

**Ingredients:** Organic soybeans, brown rice, sesame seeds, water, Rhizopus culture.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1982, undated. 4.5 by 5.5 inches. Black on yellow. “To serve: Simply slice & fry, steam in broth, broil, bake, or barbecue.” Label. 1982. Sept. 1. 5 by 6 inches. Red and blue on white. Sea Cliff, New York. Interview with Robert Werz. 1987. Sept. 9.

1221. Kronenberg, Hananya. 1982. How to make and maintain tempeh stock and starter cultures on a commercial scale. Soy Systems, 714 N. Aurora, Ithaca, NY 14850. 158 p. Sept. Illust. No index. 28 cm. [12 ref]

• **Summary:** Contains most of the information necessary to set up a laboratory and make tempeh starter for a commercial tempeh plant or a commercial tempeh starter business. Detailed and practical.

Contents: Part I (p. 1-19, typewritten). Consultation and non-disclosure agreement (9 Aug. 1982). Schedule for lab. Rice starter production method (for 30 bottles, 210 batches). Viable spore count (VSC) starter test: Cultural potency. Standard plate count with actidione SPC/ACT

starter test: Cultural purity–Bacterial contamination. Silica gelplate inoculation method. Starter mini test #1 using plates. Starter mini test #2 using PDA. Starter mini test #3 using SMA/ACT. Phosphate buffer preparation. SMA/Actidione preparation. Tween 80 preparation. Procedure for making antifungal inhibitory media.

Part II (p. 20-42, neatly handwritten). Culture maintenance. Starter culture quality control. Sanitation monitoring. Starter culture production. Media preparation. Bacillus contamination. Net weight. Addresses.

Part III (p. 43-107). Photocopies of related publications, as from laboratory manuals, quality control books, PhD theses, popular magazines, etc.

Part IV (p. 108-158, handwritten). Programs, notes, checklists, schedules, etc., including: Supplies from stock culture preparation of Rhizopus (quantity, supplier, cost). Pure crystals silica gel–Baker Co. Schedule of tests and checks. Quality Control Program for Soyfoods Unlimited (Starter Culture Program: Establish stock culture system, tempeh starter production, quality control checks on starter. Product quality control: Bacteriological monitoring, physical, sensory. Plant sanitation. Quality control record keeping). Schedule. Standard plate count and coliform count for products. Viable spore count calculation method. Air quality testing. Plant equipment surface contamination. SPC–SMA. Psychrophilic test. Shelf life. Bacillus test. Aseptic techniques. Address: Ithaca, New York.

1222. Leviton, Richard. 1982. In a small bright building: Cottage soy industries on Vancouver Island. Colrain, Massachusetts. 15 p. Sept. Unpublished typescript.  
**• Summary:** Discusses Sooke Soyfoods (Wayne Jolley), Thistledown Soyfoods, Shin Mei Do Miso, and Metta Tofu. Note: This article was commissioned by *East West Journal* but never paid for or published. For a good summary, see: *Soyfoods*. 1983. Winter. p. 36-37. “Cottage soy industries thrive on Vancouver Island.”

Concerning Shin Mei Do on Denman Island: Lulu Yoshihara recalls: In 1976 we picked up *The Book of Miso* at Uwajimaya department store in Seattle [Washington]. It didn’t look like it would be all that hard [to make miso] or take that much time or technology. Plus miso wasn’t perishable and didn’t need to be marketed right away. Ray [Lipovsky] was already here doing tofu and that gave us the idea we could do a little home soy business on the island and make a living. So I went to Japan in 1977 to find a miso teacher. We’ve been together since 1971. Address: Colrain, Massachusetts 01340.

1223. Shurtleff, William; Aoyagi, Akiko. comps. 1982. Soyfoods labels, posters & other graphics. Lafayette, California: Soyfoods Center. 185 p. Sept. Illust. No index. 28 cm. 2nd ed. 1984. 6 vols. 685 p. total.

**• Summary:** Contents: 1. Tofu. 2. Other tofu types. 3. Secondary tofu products. 4. Tempeh. 5. Secondary tempeh

products. 6. Soymilk. 7. Soymilk products. 8. Soy sauce, shoyu & tamari. 9. Miso. 10. Soynuts. 11. Other soyfoods. 12. Letterheads & business cards. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1224. Spencer, Colin. 1982. Food... and don’t rely on sympathetic waiters. *Guardian (England)*. Oct. 1. p. 10.

**• Summary:** Today’s column is about vegetarianism. “The Vegetarian Society has recently come up with a new symbol, a green V for restaurants, pubs, eating houses and snack bars to display.”

*Vegetarian Restaurants in England*, compiled by Leslie Nelson (published by Penguin) is a useful guide.

“The Seven Sheaves in the East West Centre [macrobiotic] (188 Old Street, London, EC1) is another remarkable restaurant, where I ate my first bowl of tempeh—a fermented tofu [sic] high in protein. It tasted of field mushroom, white truffle and—dare I say it?—grouse.”

Note: Tempeh, which is a cake of fermented soybeans, is completely different from tofu, which is not fermented. And fermented tofu is much different from regular nonfermented tofu.

1225. Appropriate Foods, Inc. 1982. Eat Appropriately! [Catalog and price list]. P.O. Box 57, Sea Cliff, NY 11579.

**• Summary:** The following lines are carried and distributed: Tempeh Brothers, No Cow (Soymilk), Nasoya, The Bridge (Amazake, Seitan, Tofu Salad), Grainaissance (mochi), Island Sprouts (alfalfa), Sunshine Soyfoods (soysage), Sister Shorter (tofu spinach pie).

Note: This is the earliest document seen (Sept. 2011) that mentions Tempeh Brothers or Appropriate Foods. Address: Sea Cliff, New York.

1226. **Product Name:** Tempeh.

**Manufacturer’s Name:** Delicious Tempeh.

**Manufacturer’s Address:** 250 W.S. College St., P.O. Box 6, Yellow Springs, OH 45387-0006. Phone: 513-767-9309.

**Date of Introduction:** 1982. October.

**New Product–Documentation:** Form filled out by Corinne and Daniel L. Pelzl. They opened on 28 June 1982 but first sold to stores Oct. 4. “We are up to about 25 lb/week [of soybeans] in 3 batches a week, and growing.”

1227. **Product Name:** Tempeh.

**Manufacturer’s Name:** Home Town Tempeh. Div. of Springfield Community Foods.

**Manufacturer’s Address:** 300 N. Waverly, Springfield, MO 65802. Phone: 417-866-1337.

**Date of Introduction:** 1982. October.

**New Product–Documentation:** Letter from Jim Hawkins. 1982. Oct. 12. Nice letterhead. “Home Town Tempeh is one of several businesses operating under one roof as Springfield Community Foods. We make soybean tempeh and will make

other kinds as the market develops, such as tempeh salad.”

1228. Kanasugi, Goro. 1982. Yokubatta negai [A greedy wish]. *Daizu Geppo (Soybean Monthly News)*. Oct. p. 8-9. [Jap]

• **Summary:** The author, vice-president of the Japanese Natto Association, would like to see tempeh become popular throughout Japan. Address: Zenkoku Natto Kyodo Kumiai Rengokai, Fuku Kaicho.

1229. Leviton, Richard. 1982. The Perriers of soy foods: With large initial capital investments and national marketing plans, these companies are positioned for rapid growth. *In Business*. Sept/Oct. p. 53-56.

• **Summary:** Discusses three soyfoods companies: Legume, Soyfoods Unlimited, and American Miso Co. “While most companies in the industry operate on local or regional levels at best, these three progressive firms uphold nationwide market goals, have tied up large amounts of capital, and nurture vigorous plans to capture the American mainstream market. Legume, located in Caldwell, New Jersey, and run by Gary and Chandri Barat, and Robert Shapiro, “distributes an impressive line of tastefully packaged, prepared convenience soyfoods in 40 states. Legume practically invented the product category, which includes tofu pizza, lasagna, ravioli, egg-plant Parmesan, tofu-vegetable pot pies, muffins, cakes, and tofu cheese-cakes. Currently the company, with weekly sales of \$8,000, contracts out all its food production, thereby allowing its lean staff of three to concentrate on sales and marketing. The Barats expect 1982 sales to top \$1 million with three employees, and \$3 million by 1983 with only five workers.” A good history of Legume begins: “Gary and Chandri Barat first caught wind of the swelling enthusiasm for soy products in July, 1979 at the Second Soycrafters Conference in Amherst, Massachusetts. They gathered over 500 pages of industry documentation and while uncertain of a specific product line, they were convinced that soyfoods, particularly prepared convenience offerings, were to be *the growth* area of the general food industry. Yet in their search for venture capital, holding only their prospectus as bait, they experienced difficulty... ‘Let’s taste the product,’ potential investors demanded.

“The Barats lacked a track record in the food industry,... But today, investment money firmly in hand, Gary reflects: ‘When raising money, make it a learning experience.’ Ask a lot of questions. Find out why people say no, listen carefully, study their answers, then make adjustments to address their concerns. Then ask again. Never take the rejections personally. Developing a business plan is an ongoing venture; it never stops and never ends. In the summer of 1980 the Barats took their fledgling concept to the streets of New York City, where they served their new line of prepared tofu products to a series of street fairs. “They served over 10,00 meals of tempeh chili, tofu chocolate mousse, and tofu

cutlets, and studied faces carefully for reactions. Buoyed by the positive response,” they added tofu muffins, then vegetarian quiche to their line. The “R&D Taste Testing” at the street fairs eventually secured them \$50,000 in capital and \$100,00 in loans. They still managed to hang on to 51% ownership in their new company. They did careful market research using the influential SAMI (Standard Area Marketing Index) data, read reports, and interviewed industry leaders. They began to promote frozen tofu entrees but the profit margins were too slim. Their latest 1982 plan “calls for introducing six or eight boxed, frozen tofu entrees for national distribution.”

Valerie, John and Gary Robertson launched Soyfoods Unlimited in San Leandro, California in Feb. 1981. They focus on making and marketing selling. A big break came when New England Soy Dairy in Massachusetts bid to distribute 2,700 lb/month of their tempeh burgers. Once a week Valerie delivers the cases of frozen tempeh to the San Francisco airport.

John and Jan Belleme started the American Miso Co. in Aug. 1981 in Rutherfordton, North Carolina, after a \$300,000 investment in plant and equipment. They hope to produce 500,000 lb/year of miso. They did an 8-month apprenticeship in Japan with a master misomaker.

Photos (by Richard Leviton) show: (1) Valerie Robertson of Soyfoods Unlimited with a tray of freshly-made tempeh. (2) John, Valerie, and Gary Robertson; the two men are wearing masks. (3) John Belleme of American Miso Co. empties hot, steaming soybeans. Address: Colrain, Massachusetts.

1230. Soyfoods Unlimited. 1982. All the sizzle... None of the steak (Ad). *Vegetarian Times*. Oct.

• **Summary:** A full-page ad for tempeh burgers. “Mmmm... go ahead, bite into this thick and juicy ‘All American’ Tempeh Burger from Soyfoods Unlimited. It’s a real taste sensation that is wholesome and full of hearty flavor.”

1231. Furth-Kuby, Wolfgang. 1982. Re: New developments with tofu and soyfoods in Europe. Letter to William Shurtleff at Soyfoods Center, Nov. 4. 2 p. Typed, with signature on letterhead. [Eng]

• **Summary:** “The term ‘Tofurei’ was invented by Gabriele Furth-Kuby. We thought it would be nice to have a similar name as ‘Backerei’ for bakery, ‘Metzgerei’ for butchery, etc. Consequently a miso shop would be called ‘Misorei’ or a soy foods shop ‘Sojarei’ or a Tempeh shop ‘Tempehrei.’

To date, the German edition of *The Book of Tofu* has sold 2,203 copies and *The Book of Miso* 3,040 copies. There are two new books about soyfoods out in German. One is *Kochen mit Tofu* (originally published by Autumn Press), the other *Soja Total* the new Farm cookbook. Sojaquelle has a full-page ad in each of them. Advertising our Tofu-kit we will get the addresses of people interested in soyfoods and

then they will also buy our soybooks.

Wolfgang will see Herrn Wolf in Vienna [Austria]  
“within the next two weeks and then will get copies of the two soybooks [that Shurtleff requested]. As soon as I have them I will send them to you.”

In December the German TV will broadcast a six-minute film about Tofu. Gabriele's brother has done the film and we expect a breakthrough with it.”

Note: Sojaquelle became inactive in 1986.

Letter from Bernd Drosihn of Viana. 1995. April 19.  
Wolfgang Furth-Kuby's new address is: Nelkenstrasse 11, 83125 Eggstätt, Germany. Phone: 08056 240. Fax: 836.  
“Wolfgang is now working as a consultant mostly for natural food stores and seems to be a little bit disappointed by the soyfoods business. He wants to get in contact with you again.” Address: President Sojaquelle and Ahorn Verlag, Weidgarten 2, D-8091 Soyen, West Germany. Phone: 08071-4220.

1232. Nelissen, Tomas. 1982. Re: Jakso and soyfoods in the Netherlands. Letter to William Shurtleff at Soyfoods Center, Nov. 9. 2 p. Typed, with signature on letterhead.

• **Summary:** “Maybe you still remember me from the time we were in Japan; once we met at Kichijoji station, next to Mitaka station. You tasted my genmai [brown rice] miso at a coffee-bar (next door).

“At this moment I am living in Holland with my wife Yvonne and two children. We set up a farm called Jakso. The whole idea is about becoming self-sufficient from the 30 hectares of land (including 6 hectares of fruit trees), a sourdough bakery, a soyfoods workshop, a futon workshop and educational activities.

“For the three workshops we “cut” the big barn into two halves and made a third floor. We built a very nice wood-burning bakery which produces all kinds of bread, cookies and savories. The soyfoods workshop makes tempeh and tofu, as well as seitan. Year-round we produce an average of about 1,500 pieces of tempeh a week at 210 grams each, about 50 kg of tofu a day and a little less than 100 kg of seitan.

“We distribute our products all over Holland... in a 100 km circle around the farm. Our future products will be miso, shoyu, amasake and mushrooms. These are the products we studied in Japan for about 4 years...

“There are 12 people working on the farm (plus 7 children)... The meals are on a macrobiotic base.” Address: Director, Jakso, St. Natuurlijke Land- en Tuinbouw, Voorne 13, 6624 KL Heerewarden, Netherlands. Phone: 08877-2189.

1233. Cadwallader, Sharon. 1982. Vegetarian soy tempeh. *San Francisco Chronicle*. Nov. 10. p. 43. Sunday.

• **Summary:** Includes an introduction to tempeh, a favorable review of *The Book of Tempeh*, by Shurtleff and Aoyagi, and two recipes: Deep-fried tempeh, vegetable and curry patties.

Tempeh enchilada pie.

1234. Joyce, Michael. 1982. Re: Tempeh in Australia. Letter to William Shurtleff at Soyfoods Center, Nov. 17. 4 p. Handwritten.

• **Summary:** “Greetings from Australia. My wife, Julie Anne, and family had the pleasure of meeting your friends Cyril and Elly Cain earlier this year. They have shared so many wise, fruitful and wonderful experiences with us and they have set up Australia's first tempeh shop.

“In their sharing with us the knowledge of tempeh and the wide and varied range of the soya bean, we have begun to appreciate the work you and Akiko have done over the past decade.

“Could you please send details of the INTSOY program in India to Dr. Ernest Koomapalli, c/o Pastor V.A. Thampy, Changanacherry 2, Kerala, South India. These people are feeding 450 children and 50 adults and I know the knowledge of soya bean will be a blessing to them.

“We are helping Cyril and Elly with the tempeh shop and hope to continue making fine tempeh from what they have set up when they return to the U.S. in 1983. Cyril will leave all his books.” Address: P.O. Box 45, Woonbye 4559, QLD, Australia.

1235. Cohen, Michele. 1982. Local bean makes good: A look at Wildwood Natural Foods. *T&T Natural News (San Rafael, California)*. Oct/Nov.

• **Summary:** When the author visited Wildwood, “Marin's local tofu-making factory in Fairfax, she was given a guided tour by Paul Orbuch, one of the company's four owners. The place was “a flurry of impressively organized activity in an area of less than 1,000 square feet. Paul explained that each morning at 5 A.M. 8 workers arrive and begin the day's preparation of sandwiches, which have become standard favorites of many. The selection includes a brown rice and tofu sandwich, Tofunofish, Avotofu, Tofu-Steak and a Supreme-Bean Tempeh Burger. The Deli line offers hummus, potato salad, tofu-dill salad, tobouli [sic, tabouli, tabbouleh] and tofu-vegetable salad.”

“Bill Bramblett, another partner who popped into the office added that the clear structure, right personnel and smooth system are what keep those soybeans cooking.”

The author then describes how “20 pounds of organic Midwestern soybeans are alchemically transformed into 40 pounds of tender tofu... The capacity of Wildwood's facilities allows them to manufacture a maximum of 330-340 pounds of tofu per day.”

Photos show: Eleven Wildwood employees, around a table with their products. Tom Meyer stirring tofu curds in a large stainless steel barrel. Soybeans soaking and a press.

Note: *T&T Natural News* is published by a two-chain food store in San Rafael, California. The T&T stands for Throckmorton and Thunderstrand.

1236. Djurtoft, Robert. 1982. Technical report [Production of cowpea tempeh in Osegere, Nigeria]. Unpublished typed manuscript. 10 p. Nov. Unpublished manuscript.

• **Summary:** Describes the method of producing cowpea tempeh, tempeh recipes, and tempeh inoculum. Prof. Omolulu and Dele Omotola, Dep. of Nutrition, were actively involved. Address: Dep. of Biochemistry and Nutrition, Technical Univ. of Denmark, Building 224, DK-2800 Lyngby, Denmark.

1237. Kushi, Michio. 1982. Cancer and heart disease: The macrobiotic approach to degenerative disorders. Tokyo: Japan Publications, Inc. 224 p. Nov. Illust. Index. 26 cm. [50\* ref]

• **Summary:** Contents: Foreword, by Michio Kushi. Foreword by Edward Esko. 1. The macrobiotic approach, by Michio Kushi. 2. Cancer and diet. 3. Diet and heart disease. 4. Macrobiotics, preventive medicine, and society. 5. Case histories. Appendixes: Food policy recommendations for the United States, by Michio Kushi. East West Foundation—Diet and health related activities, 1972-1982. Bibliography.

Many of the subchapters in this book are written by physicians. For example, William P. Castelli, M.D., contributed a 5-page original article titled “Lessons of the Framingham Heart Study.” There are also articles by Robert S. Mendelsohn, M.D., Keith Block, M.D., and Christiane Northrup, M.D. Miso, tempeh, natto, tofu, and soy sauce are all discussed as foods that can be used to help in the prevention and cure of these two major diseases. Address: Brookline, Massachusetts.

1238. Leviton, Richard. 1982. Soyfoods come of age. *Vegetarian Times*. Nov. p. 28-29, 31. [1 ref]

• **Summary:** “Soybean based foods made with simple technology are gradually replacing meat in America diets. Originally developed in the Far East, foods like miso, tofu, and tempeh are becoming Westernized as manufacturers add convenient packaging, modern marketing and pizzazz to their soyfoods. Discusses: New tofu marketing techniques, the impact of *The Book of Tofu* by Shurtleff & Aoyagi and other tofu cookbooks, secondary soy products (prepared, convenient soyfoods), Legume, Quong Hop, Garden of Eatin’, Edward & Sons, the soy deli, interest in tofu by large American food companies (Del Monte and Kraft).

Includes “A Guide to Soyfoods” the briefly defines miso, soy sauce, texturized soy protein, tofu, and tempeh. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1239. *Manna Bulletin* (Amsterdam, Netherlands). 1982. Fermentatieprodukten essentiële aanvulling op plantaardige dieet [Fermented products, an essential supplement to a vegetarian diet]. 4(3):9-11. Autumn. [Dut]

• **Summary:** Mentions tamari soy sauce (*Tamari-sojasaas*, fermented for 2 years), miso (*Miso-sojapasta*, fermented for 2 years), tempeh, and natto.

1240. Noble Bean Deli. 1982. November. New soyfoods restaurant or deli. 18320 Euclid Ave., Cleveland, OH 44112.

• **Summary:** Jeff Narten. 1987. History of North Coast Tempeh and its Products. 4 p. Dec. 7. This deli was founded on 12 Nov. 1982. In 1987 it moved to 2246 Lee Rd., Cleveland Heights.

Note: This is the second earliest soy-related company seen (June 1998) that has the term “Noble Bean” in the company name. Address: Cleveland, Ohio.

1241. Shurtleff, William; Aoyagi, Akiko. 1982. History of Soya Production and Research Association (SPRA) (Document part). In: William Shurtleff and A. Aoyagi. 1982. History of Soya in the Indian Subcontinent. 36 p. See p. 24-26, 30-31. Unpublished manuscript. [1 ref]

• **Summary:** “SPRA was founded by Robert W. Nave, an American who was born and raised in India and worked there as a missionary since the late 1950s. His interest in improving the well-being and economic status of low-income people in India led him in the mid-1960s to establish the Nave Technical Institute (NTI), a Methodist missionary foundation and school at Shahjahanpur, Uttar Pradesh. In 1968 Nave and co-worker Peter Chowfin visited Dick Matsuura, director of the soy program at Pantnagar. Matsuura encouraged them to consider a church-sponsored program for producing soyfoods—since no private businesses were willing to take the risk and the work was clearly of real importance. In 1970 Nave founded a nonprofit, charitable organization called NTI Soya Products. Joe Wenger and his Wenger Manufacturing Company, old friends of Nave’s parents, donated a Wenger X-25 extrusion cooker to the new organization to help in setting up a pilot project in India making textured soy protein foods. Soon additional funding was obtained from the USAID, G.B. Pant University, Bread for the World of West Germany, the Methodist Church, and Nave Technical Institute. Nave started building a factory at Bareilly, an industrial center 50 miles northwest of Shahjahanpur, in March 1971. Key people helping to start the new company were Prof. A.I. Nelson, Surjan Singh, Dick Matsuura, and Eldon Rice.

“In early 1972, in order to raise additional funds and to cement ties with Pant University, Nave sold 20% of the stock in NTI Soya Products to the university; NTI owned the rest. At that point the company was renamed Soya Production and Research Association (SPRA) and converted to a profit making organization, but with all the profits to be used for socially beneficial activities. In July 1972 SPRA produced its first large run, 40 tons of corn-soy blend to be used in an AID feeding program in Madras. Defatted soybean meal was especially made for SPRA by the Prag Ice and Oil Mills in

Aligarh.

"In the fall of 1972 SPRA started to make its first commercial product, an extruded/textured soy flour (TVP). Recipes were developed and the product was market at a low price in inexpensive packaging for the poor. But they wouldn't take it even when it was given to them. So SPRA took a new approach, marketing the product for the rich to reach the poor. The company chose a catchy name (Nutri Nugget), developed a fancy box written entirely in English for snob appeal, and introduced the product only in the finest stores, with demonstrations at colleges and for upper income women's groups. After much hard work, the product caught on. Its success was assured when Sikhs started using it at their wedding dinners to satisfy both vegetarian and nonvegetarian guests. Soon all TVP came to be referred to by the public as Nutri Nugget (or Soy Nugget or Nugget). During the first year SPRA sold about 10 tonnes of Nutri Nugget. In 1973 they added their next product, Protesnac, a soy-rice spiced snack, a fortified analog of the puffed rice which was popular, especially in Bengal, on festive occasions. By 1974 the company had introduced Protein Plus (a corn-soy weaning food), Nutri Ahar (a whole soy flour-wheat weaning food), Paustic Ahar (a sweetened ready-to-eat corn-soy blend), and an extrusion cooked whole (full-fat) soy flour (Singh 1978). By 1974 840 tonnes a year of these products were being produced, with about half being sold through the retail trade.

"In 1974 SPRA, in cooperation with G.B. Pant University, introduced a soybean extension program in the plains of Rohilkhand Division of Uttar Pradesh, an area on the plains near Bareilly where soybeans had not been grown economically before. SPRA hoped to develop a closer, more reliable source of soybeans. Using a grant from the Central Agency of West Germany, SPRA worked with hundreds of farmers, providing certified seeds, fungicide, *Rhizobium* inoculum, and careful supervision, plus a guarantee to buy all soybeans produced at a predetermined price. R.N. Trikha of Pant University was head of the program, which conducted hundreds of demonstrations and established demonstration plots (40% of which had yields over 2,000 kg/ha or 29.6 bu/acre), published a *Soybean Technical Newsletter* and other extension literature, had an advisory service, and conducted many training sessions, soybean field days, and crop yield competitions. As a result of all this important work, local yields and production increased markedly (Trikha and Nave 1979). This extension program was still active as of 1982...

"SPRA expanded considerably during the late 1970s and early 1980s. In about 1977 a larger extrusion cooker, a Wenger X-155, replaced the original X-25. But as the products, especially the basic Nutri Nugget (plain TVP), grew in popularity, competitors sprang up on all sides, in most cases imitating almost exactly SPRA's product and marketing techniques. By 1981 SPRA had 50% of the Indian TVP market, but there was competition from four

other companies. Still SPRA was able to sell all it could produce and was planning to double production. In May 1981 Nave established a new nonprofit corporation named Compatible Technology, Inc., which was registered and located in Minnesota. Though legally unrelated to SPRA, its funding was raised by Nave and its purpose was to transfer ideas and technology to India. Projects in 1981 included development of: low-cost packaging techniques for whole soy flour, 5-to-10 horsepower low-cost extrusion cookers, small soy oil extraction plants, a soy-based cookie for feeding programs (a soy-fortified flour would be sold to local bakers and institutions, which would bake the cookies for fresh local consumption), tempeh, and a soyfoods training center. In 1981 SPRA made and sold roughly 2,000 tonnes of Nutri Nuggets (TVP) plus 120 tonnes of Protein Plus for net sales of \$2.5 million. SPRA has done pioneering work with soyfoods and soybeans in India, being the first company to interlink soyfoods research, product development, processing, and marketing with soybean crop extension."

1242. *Soyanews (Sri Lanka)*. 1982. The day tofu came to Jaffna. 5(3):4-5. Nov.

• **Summary:** "Over 250 representatives from the Jaffna Multi-Purpose Co-operative Societies Women's Guilds attended the lecture / demonstrations in soyafood preparations conducted last September by Miss Ellen Jayawardene, Chief Instructress of the Soyafoods Research Centre's Home Level Training Program. The lecture / demonstrations were spread over five days. It was the first time such an intensive training program was held in Jaffna."

Three large photos show lively scenes women making soyafoods. A fourth photo shows a sales transaction following a demonstration at the Veerasingham Hall, Jaffna. Soya flour and dried tempeh were greatly in demand. Tempeh, either fresh or dried, can serve as a substitute for the ever popular *karawadu* [karawala] (dried fish).

1243. Leviton, Richard. 1982. Re: Summary of soyfoods research trips in the Midwest and Canada (Oct. 14-28) and West Coast (Nov. 21-30). Letter to William Shurtleff at Soyfoods Center, Dec. 6. 2 p. Typed, with signature on letterhead.

• **Summary:** The letter begins: "As you requested, the notes on my 'historic' tour, hysterically unprofitable, but at least fun." Traveling 4,700 miles, Leviton gave programs about tofu, tempeh, and other soyfoods sponsored by various companies, and was on TV and newspaper interviews. Companies visited in the Midwest and Canada: Rising Sun (Columbus, Ohio), Prairie Soyl, Community Foods Tofu/Tempeh Shop, Light Foods, Michiana Soyfoods, Zakhi Soyfoods, Bountiful Bean, Higher Ground Tempeh, Steve Fiering (disappointing business meeting), Soyateria, Victor Foods (Toronto, Ontario, Canada), La Soyarie (Ottawa), Unisoya (Quebec).

West Coast and British Columbia: Wildwood Natural Foods, Brightsong Light Foods, Dayspring Soyacraft, Sooke Soyfoods, Metta Tofu, Sin-Mei-Do, Thistledown, Lifestream, Surata.

Leviton is thinking about relocating in California or working with Soyfoods Center on writing books. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1244. Kronenberg, Hananya. 1982. Re: Research on meitauza fermentation. Letter to William Shurtleff at Soyfoods Center, Dec. 7. 1 p. Typed, with signature on letterhead. [1 ref]

• **Summary:** He is still working on his Master's degree at Cornell University, on the subject of meitauza fermentation. He is making progress and hopes to present some of his findings at the IFT convention this June.

The letterhead is black ink on beige paper. In the upper left is a logo of one circle inside another. In the inner circle are three soybean leaves with three pods above them on a black background. Between the inner and outer circles are six sporeheads, each on a stalk. Address: Soy Systems, 714 N. Aurora, Ithaca, New York 14850.

1245. Kim, Kil Hwan. 1982. Kohng, dubu wa kohng nah mul eh kwah hak [The science of soybeans, tofu and soy sprouts]. Seoul, South Korea: Korean Science Foundation. 211 p. Dec. Illust. Index. 21 cm. [200+ ref. Kor]

• **Summary:** Contents: I. Soybeans. Introduction. World soybean production: Areas of production, quantities produced, amount produced in Korea, amount imported to Korea, chemical composition of all soybeans. How to use soybeans: Foods and processed soybean foods (sauces, tempeh, natto), industrial uses. Nutritional composition of soybeans: Common components, protein and amino acids (protein, essential amino acids, necessary protein intake, necessary amino intake, chemical score, biological value of soybean protein, the need to heat soy protein, the use of soy protein as a protein supplement), soybean oil (components of soybean oil, oil assimilation / absorption), other nutritional components (carbohydrates, vitamins, minerals), references.

II. Tofu. Introduction. Kinds of tofu and production: Soybean curd (production in factories, production at home, instant tofu, kinugoshi tofu, grilled tofu, frozen tofu, how to freeze and dry tofu). Movement of nutritional values during tofu processing: Movement of common nutrients, movement of amino acids. Nutritional components of tofu: Tofu protein, tofu protein as a protein supplement, digestion of tofu, calories in tofu, fat and cholesterol, minerals and vitamins, toxins, *hwe bun* in tofu. Tofu and group meals: School meals in Japan, in America, in Korea. Tofu factories and associations involved with tofu: Member list of food associations in Korea, regular member and extra member list of tofu packaging associations in Japan, directory of tofu

shops and factories in North America, in Europe, in other countries, list of companies selling tofu coagulants, list of tofu restaurants in Japan. References.

III. Soy sprouts. Introduction. Production of soy sprouts: Soybean varieties, selecting and washing the soybeans, soaking, watering the sprouts, machines for cultivating soy sprouts, maintenance. Nutritional composition of soy sprouts: Common nutrients, increase of vitamin C during growth, changes in vitamin C during heating, changes in riboflavin during heating. Glossary.

Soybeans arrived in Korea in about 200 B.C. (p. 11). Contains many useful tables. Address: Korea.

1246. *Soyanews (Sri Lanka)*. 1982. Dried tempeh on sale. 5(4):1. Dec.

• **Summary:** "A new soya product—Dried Tempeh is being marketed in the Kandy District. The tempeh is produced by Unisoy, Hindagala, Peradeniya, as a cottage industry. Currently 15 kilos of dry soyabeans are being processed daily to make the tempeh."

Photos show: (1) The front of a package of Soya Karawala. In a large circle: "Protein 51%." (2) "One of the tempeh workers (a lady) proudly displays their first packaged product."

1247. **Product Name:** Soya Karawala.

**Manufacturer's Name:** Unisoy.

**Manufacturer's Address:** Hindagala, Peradeniya, Sri Lanka.

**Date of Introduction:** 1982. December.

**How Stored:** Shelf stable, 6-12 month shelf life.

**New Product—Documentation:** *Soyanews* (Sri Lanka). 1982. Dec. p. 1. "Dried tempeh on sale." "A new soya product—Dried Tempeh is being marketed in the Kandy District. The tempeh is produced by Unisoy, Hindagala, Peradeniya, as a cottage industry."

Note: This is the earliest known commercial tempeh made in Sri Lanka.

1248. **Product Name:** Tempeh.

**Manufacturer's Name:** Amity Soy Products.

**Manufacturer's Address:** Box 995, Amityville, NY 11701.

**Date of Introduction:** 1982.

**New Product—Documentation:** Label. 1982, undated. 4.5 by 5.5 inches. Black on green.

1250. Bo, Thi-an. 1982. Hishio to shôyu no engen to sono seisan gijutsu ni tsuite. I. [On the origins of chiang and shoyu, and their production technology. I.]. *Nippon Jozo Kyokai Zasshi (J. of the Society of Brewing, Japan)* 77(6):365-71. [9 ref. Jap; eng]

• **Summary:** This is one of the most interesting and carefully researched articles seen up to this time on this subject. The author (Ho Keian in Japanese), is a Chinese graduate of Iwate University in Japan. He sent this article to the university alumni association on the university's 80th anniversary. Shoyu has become a world-class seasoning. Even in Moscow they have built plants to produce soy sauce and chiang (miso).

The earliest chiang was made with meat, fish, and shellfish; later, as agriculture advanced, beans and grains were used. The two main types of chiang are (I) those made using flesh as a main ingredient and (II) those made solely from plants. The flesh chiangs can be further subdivided: IA. Those made from animal and bird flesh. IA1. Made without bones (mentioned in the Shih Ching [Classic of Food], the Chou Li [Rituals of the Chou Dynasty, 3rd century B.C.], the Li Chi [Book of Rites, 2nd to 3rd century B.C.], and the I Li); IA2., Made with a large amount of liquid (mentioned in the Chou Li and Li Chi); IA3. Made with flesh and bones (mentioned in the Chou Li, I Li, and Ch'i-min Yao-shu [Essential techniques for the peasantry of Ch'i, written by Chia Ssu-hsieh in A.D. 535]); IB. Made with fish or shellfish, including IB1. Fish chiang (mentioned in the Chou Li, Ch'i-min Yao-shu), and IB2. Fish intestine chiang (mentioned in the Ch'i-min Yao-shu). The non-flesh or vegetable chiangs (II) can be divided into: IIA. Those made with beans including IIA1. Chiang (mentioned in the Chou Li (3rd century B.C.), Lun Yu [Analects of Confucius, after 479 B.C.], Shih Chi [The Historical Record by Ssu-ma Ch'ien, ca. 90 B.C.], and Chi Chiu P'ien [48 to 33 B.C.]); IIA2. Bean (Soybean) chiang (tou-chiang, mentioned in the Ch'i-min Yao-shu). IIA3. Small (Red/Azuki) bean chiang (mentioned in the Nung Sang I Shih Chi Yao [+1314]). IIB. Chiang made from other vegetable materials including: IIB1. Wheat chiang (mentioned in the Shih Ching); IIB2. Wheat flour chiang (mentioned in the Pen-ts'ao Kang-mu [Compendium of Materia Medica, by Li Shih-chen, A.D. 1578-97] and the Chü Chia Pi Yung Shih Lei Ch'uan Chi [+1301]); IIB3. Coconut chiang (Mentioned in the Ch'i-min Yao-shu); IIB4. Barley chiang (mentioned in the Pen-ts'ao Kang-mu); and IIB5. Mustard chiang (mentioned in the Li Chi and Chih Ching).

It is interesting to note that the earliest meat and fish chiang was made with koji, typically millet koji. Koji is also used today to make some of the fish sauce called Shottsuru in Akita prefecture in Japan. Shottsuru has a 3,000 year history.

The use of the terms "hai" (meat chiang) and "chiang" in the Chou Li imply that some chiang was made from ingredients other than meat. An illustration from the Han

dynasty shows a hole in the bottom of a chiang pot for drawing off soy sauce. The *Ssu Min Yüeh Ling* by Ts'ui Shih from the Later Han (25-220 A.D.) uses the term "ch'ang chiang" to refer to refined/filtered soy sauce. The *Ch'i-min Yao-shu* also uses two terms for refined chiang that seem to be referring to types of soy sauce. Thus it seems relatively sure that chiang has a history of about 3,000 years from the Chou dynasty (1122-256 B.C.) and soy sauce has a history of over 2,000 years since the Ch'in (221-206 B.C.) or Han (206 B.C.-A.D. 220). In the literature of the T'ang dynasty it is not rare to use soy sauce for medicinal purposes.

Soy sauce came from chiang, which was made from soybeans and wheat flour or wheat; it is still widely produced today. But from shih (soy nuggets) came tamari and kuan-tou soy sauce (kuan-tou is a region in Fukien/Fujian in southeast China). Only soybeans were used to make these types of soy sauce. The first tou-shih (soy nuggets) was made from soybeans only, with *Aspergillus oryzae* mold. If salt was added, the product was called hsien tou-shih; if none was added, it was called tan tou-shih. Later they started to use *Mucor* (as in Szechuan tou-shih) or *Rhizopus* species. Today most tou-shih is made with *Aspergillus*. This is the ancestor of tamari shoyu and kuan-tou soy sauce. Address: Iwate Daigaku Nôgaku-bu, Sogaku 80 shunen no gosokuji ni kaete; Present address, China.

1251. **Product Name:** Tempeh Balance Burger/Cutlet (With Soybeans & Brown Rice & Sesame Seeds).

**Manufacturer's Name:** Cricklewood Soyfoods.

**Manufacturer's Address:** Route 1, Mertztown, PA 19539.

**Date of Introduction:** 1982.

**Ingredients:** Incl. soybeans, brown rice, spices, oil.

**New Product-Documentation:** Ad in CRC Reports.

1982, and 1987. Fall. p. 15. 7 oz. Frozen. Talk with Karl Krummenoehl. 1988. Jan. 4. He considers this the best tempeh burger on the market, and their product with greatest potential. It is sauteed in cold pressed oil.

1256. **Product Name:** [Tempeh].

**Manufacturer's Name:** Luiz Simas and Bobbi Joels Tempeh.

**Manufacturer's Address:** Estrada do Tambá, 175, apt. 401, 22.450 Rio de Janeiro (RJ), Brazil.

**Date of Introduction:** 1982.

**New Product–Documentation:** Letter from Luiz Simas and Bobbi Joels. 1986. Jan. 7. "When we returned to Brazil from the USA in Nov. 1981, we decided to hold a series of classes on natural foods processing, including a class on making tempeh at home. (Tempeh was completely unknown around here at that time.) We also began to make tempeh for our own consumption, but ended up setting up a small shop in our apartment. Because of the limited space, our tempeh production never went beyond 50 pounds per month, in spite of the large demand. So after a year or so, as we had originally planned, we handed the business over to a couple of friends who, unfortunately, for many reasons, were not able to continue tempeh production."

1264. **Product Name:** One World Foods Tempeh: Cultured Soya Beans.

**Manufacturer's Name:** One World Natural Foods.

**Manufacturer's Address:** 188 Old St., London EC1V 9BP, England. Phone: 01-490 0749.

**Date of Introduction:** 1982.

**Ingredients:** Soya beans, vinegar, Rhizopus oligosporus, rice flour.

**Wt/Vol., Packaging, Price:** 8 oz poly bag.

**How Stored:** Frozen.

**New Product–Documentation:** Label for 1984 product sent by Anthony Marrese. 1992. March 28. "One World Foods Tempeh." 4 inches square. Glossy paper. Dark blue and

white on light blue.

Simon Bailey. 1988. Natural Choice. Aug. 15. "Soya-Based Products." A photo shows the Label. "Now Organic." CSP form filled out by Simon Bailey. 1988. Sept. 28. The contact here is Josef Simpson. This company was formerly Community Health Foundation.

Interview with Joe Simpson, the owner, conducted by Anthony Marrese. 1992. March 28. The company was founded in 1984 and that year started commercial production of tempeh. The location has not changed. The East West Center in London is a large building of 5 floors with several rooms per floor. One World Foods has 2 rooms, each approximately 30 ft. by 30 ft. One room is for tempeh production and the other is for the office and secondary processing. In 1982 at the same address Joe started producing tempeh for the Clearspring Restaurant, at the East West Center, London. As the amount of tempeh used by the increased, one World Foods was founded in 1984. Joe was one of the first to introduce organic tempeh in London and to promote its use. In 1987 the shop expanded from one room to two at the same address. Success has been based on a quality product with good customer service, quality packaging and labeling, plus personal dedication by Joe. The company's first product was named Canadian Organic Soya Tempeh, launched in 1984 and still on the market in 8 oz poly bags. In 1985 the company launched Tempeh Sandwiches, plainly wrapped with no individual labels. One World Foods presently makes 600 x 8 oz packages of tempeh per week. The sandwiches were discontinued in 1989 due to Joe's lack of interest in doing more secondary production and distribution. Joe (the full owner) and one helper are the only two employees. Sales growth has been slow and steady, about the same as the 2-3 other tempeh producers in London. One World Foods also produces some other non-soya products such as sesame-peanut bars, and seitan. Anthony closes by noting that Joe is a very dedicated person, willing to share all he has and knows if it will help others.

New label for "Organic Tempeh Soya: Traditionally Cultured Soy Beans" sent by Anthony Marrese. 1992. March 28. 4 inches square. Brown, green, and red on yellow. Illustration of a wok filled with vegetables and tempeh. "Frozen. Simple to prepare. Low in saturated fats. High protein. Salt free.

Leaflet (8½ by 11 inches). 1992. "Nourishing delicious tempeh: The organic soyafood." Green, red, blue, and brown on beige. Illustration shows a wok filled with vegetables.

Leaflet. 1992. Tempeh: The cultured soyfood. Dark blue and light blue on white.

1276. Coyle, L. Patrick, Jr. 1982. The world encyclopedia of food. New York, NY: Facts on File, Inc. xv + 790 p. Illust. Index. 28 cm.

• **Summary:** Contains basic information (sometimes interesting, often superficial, with quite a few errors) about some 4,000 foods and beverages, including worldwide staples (potatoes, soybeans, apples), local specialties, delicacies, major brand-name products (Coca-Cola) and oddities (penguin eggs, grasshoppers). With 200 line drawings, 150 black-and-white photos, and 50 color plates.

See entries for soybean (incl. black soybeans, fermented tofu, miso, soybean flour, soybean milk, soybean oil, soy sauce, tempeh; tofu, “white soybeans”), and Worcestershire sauce (which “is said to contain more than 100 ingredients, including soy sauce, vinegar, molasses, chili, anchovies, garlic, shallots, tamarinds, limes and many spices”).

Also has entries for: Almond, chufa, peanut, peanut butter, peanut oil, seaweed (incl. algae, dulse, laver, rock weed / sea wrack, agar-agar, carrageen, kelp), sesame (with illustration of leaves, flower, and pods). Address: Freelance writer, Oceanside, California.

1277. CTI. 1982. What is Compatible Technology, Inc. (CTI)? (Brochure). Minneapolis, Minnesota: CTI. 10 p. 21 x 23 cm.

• **Summary:** Contents: Introduction. Why CTI? Program areas: Formulation of foods, process and processing equipment development, refrigerated transport of perishable foods, education and training programs, surveys and data collection, back-up support for development workers. Personnel. Organization (established in May 1981 as a charitable organization). Project procedure. Future plans. Progress to date. Projects being undertaken. Financial needs.

“The president of CTI, Robert W. Nave, was born and raised in India and worked there as a missionary for 27 years. His interest in improving the well-being and economic status of low income people led him to establish the Nave

Technical Institute, Skills for Progress (SKIP), an all-India association of private technical schools, and Soya Production and Research Association (SPRA), which produces high-energy, high-protein foods from soybeans grown in India.”

CTI is making soy fortified products (such as breads and cookies) with existing village level technology, and developing a small extrusion cooker and a village batch texturizer.

Future plans include: Develop packaging techniques for cooked full-fat soy flour in inexpensive packaging materials. Provide consultation or supervision for establishing a prototype oil extraction plant for soybeans. CTI has already formulated a soybean cookie for feeding programs. SPRA, “which has pioneered production of soy based snack foods in India, is now introducing the cookie and processing techniques locally and in feeding programs. It is now working on a 5-10 horsepower extrusion cooker and tempe [tempeh] processing suitable for India.” Address: Compatible Technology, Inc., 7600 Harold Ave., Minneapolis, Minnesota 55427.

1278. Hagler, Louise. 1982. *Soja Total. Das vegetarische Kochbuch der Tennessee-Farm* [Total soya. The vegetarian cookbook of the Tennessee-Farm]. Hamburg, West Germany: Papyrus Verlag. 200 p. Translation by Elizabeth Leihs of *The Farm Vegetarian Cookbook* (1978, English). Illust. 21 cm. [Ger]

• **Summary:** This interesting vegan cookbook book is loaded with creative recipes, illustrations (line drawings), and black-and-white photos. Contents: Beans. Soyameat (TVP). Italian dishes. Chili rellenos, nixatamal and masa. Nutritional yeast. Knishes. Soups. Uncle Bill’s recipes. Gluten. Tempeh. Miso. Soymilk. Ice Bean (Soymilk ice cream, p. 4, 96-98). Soy yogurt. Tofu. Pureed tofu. Yuba. Soy coffee. Soy nuts. Soya pulp (okara). Soy flour. Vegetables. Bread. Cereal grain recipes. Breakfast breads and pancakes. Desserts. Nutritional advice.

Note: This is the earliest German-language document seen (March 2007) that mentions soy ice cream, which it calls *Soja-Eiskrem*, *Eis-Bohnen*, or *Schokoladen-Bohnen-Eiskrem*. Address: Summertown, Tennessee.

1279. Hedger, J.N. 1982. Production of tempe, an Indonesian fermented food. In: S.B. Primrose and A.C. Wardlaw, eds. 1982. *Sourcebook of Experiments for the Teaching of Microbiology*. New York and London: Academic Press. xvii + 766 p. See p. 597-602. 25 cm. [4 ref]

• **Summary:** In part 8 of this book, titled “Micro-organism Meets Plant,” this chapter describes how to make tempeh (using 500 gm soybeans) and tempeh starter as an educational project for college undergraduates. Address: Dep. of Botany and Microbiology, University College of Wales, Aberystwyth, Dyfed, Wales.

1280. Henderson, Bruce R. 1982. *Oakland organic: A vegan primer*. Albany, New York: Caboose Press. 200 p. Illust. 23 cm. [24 ref]

• **Summary:** This is a book about veganism which contains a few vegan recipes near the back. It focuses on the San Francisco Bay Area and urban areas, and contains extensive information about soybeans and soyfoods, much of it inspired by *Yay Soybeans*, from The Farm in Summertown, Tennessee. As follows: Miso, and Soya-Mineral Bouillon (Dr. Bronner’s) (p. 19). Soy as an alternative protein source (p. 37-43). Soymilk (p. 53-56; Jethro Kloss). More soy (p. 57-61; soy pulp [okara] pudding, soysage, Garden of Eatin’ Soy Jerky (illustration of package), Brightsong Missing Egg Tofu Salad (illustration), soy yogurt (fermented), soy tofu—hard, baked, or fried). Sprouting (p. 67-70; incl. soybeans). Fermented foods (p. 71-74; incl. tempeh, raw tofu). Snacks & quick foods (p. 88-96; incl. Ice Bean—soy ice cream, Ice-C-Bean). Miso and soy sauce (p. 120-21). Soy-related recipes: Baked apples with miso (p. 185-86). Tofu cheesecake (p. 188-89). Soysage (p. 193). Soy ice bean (p. 195). Note: Bruce Henderson was born in 1946. Address: Oakland, California.

1281. Herarti, Rina. 1982. *Tinjauan pemanfaatan jamur sebagai sumber zat gizi* [Survey on using fungi as a source of nutrients]. Thesis (Skripsi), Akademi Gizi, Jakarta. [Ind]\* Address: Jakarta, Indonesia.

1282. Ismariasi, K. 1982. Aspek gizi tempe dan perubahan nitrogen terlarut pada tepung tempe [Nutritional aspects of tempeh and nitrogen solubility changes in tempeh flour]. Thesis (Skripsi), Fakultas Teknologi Pertanian Universitas Gadjah Mada, Yogyakarta, Indonesia. 39 p. [Ind]\* Address: Yogyakarta, Indonesia.

1283. Ko Swan Djien. 1982. Indigenous fermented foods. *Economic Microbiology* 7:15-38. A.H. Rose, ed. Fermented Foods. [67 ref]

• **Summary:** Contents: 1. Introduction. 2. Foods fermented by moulds: Roles of the moulds. 3. Foods fermented by bacteria: Fermented vegetable products, fermented fish products, fermented seeds (natto, thua-nao, dagé), fermented starch-rich raw materials (fermented maize products, fermented rice products, fermented cassava), fermented plant juice.

4. Foods fermented by a mixture of moulds and yeasts: Ragi, micro-organisms, fermented starch-rich raw materials.

5. Foods firstly fermented by moulds [as in making koji], followed by a fermentation with a mixture of bacteria and yeasts (the salt-tolerant yeasts are species of *Saccharomyces* and *Torulopsis*; the bacteria are species of *Pediococcus* and *Streptococcus*): Tane koji, soy sauce, other fermented soybean products (tauco {porridge or dry consistency}, miso, hamanatto {which is soft and has a high

moisture content}, tou-shih {which has a much lower water content than hamanatto and is therefore not so soft}. These “fermented soybean products are also used as flavouring agents in cooking as well as table condiments or as a side dish”).

6. Specific aspects of fermented foods: Mould species, lactic-acid bacteria, yeasts, salt. 7. Acknowledgement. References.

Concerning soy sauce (p. 30-31): “Japanese *shoyu* is made from equal amounts of soybeans and wheat.” The “raw materials are inoculated with tane koji which contains spores of selected strains of *Aspergillus oryzae* and *A. soyae*. In less sophisticated soysauce factories throughout South East Asia, mould species grow spontaneously on the soybeans by natural contamination from the air and from the bamboo trays on which soybeans of former batches were incubated (Bhumiratana et al., 1980). The moulds involved are species of *Aspergillus*, *Rhizopus*, or *Mucor*. Some Indonesian *kecap* manufacturers inoculated the cooked soybeans with tempe [tempeh] inoculum which contains spores of *Rhizopus oligosporus*.”

Tables: (1) Conferences discussing aspects of indigenous fermented foods (1977-1981, chronological). (a) Symposium / Workshop on Indigenous Fermented Foods, Nov. 21-26, 1977, Bangkok, Thailand. (b) World Conference on Vegetable Food Proteins, Oct. 29–Nov. 3, 1978, Amsterdam, The Netherlands, (c) Symposium on Fermented Foods, Nov. 22, 1978, London, England. (d) International Symposium on Oriental Fermented Foods, Dec. 10-14, 1979, Taipei, Taiwan. (e) United Nations University Workshop on Research and Development Needs in the Field of Fermented Foods, Dec. 14-15, 1979, Bogor, Indonesia. (f) VIth International Fermentation Symposium, July 20-25, 1980, London, Ontario, Canada. (g) Eighth Conference of Association for Science Cooperation in Asia (ASCA), Feb. 9-15, 1981, Medan, Indonesia.

(2) Origins of various fish sauces. (3) Origins of various fish pastes. (4) Names given in various countries to an inoculum used to manufacture food products. (5) Names given in various countries to fermented glutinous rice (*Oryza sativa glutinosa*). (6) Names given in various countries to rice wine. (7) Names given to soy sauce in different countries (*Chiang-yu* in China, *Kan jang* in Korea, *Kecap* in Indonesia, *Shoyu* in Japan). (8) Soybean foods produced by a two-stage fermentation (*Hamanatto* and *miso* in Japan, Soy sauce in the Orient, *Taoco* in Indonesia, *Tao-si* in the Philippines, and *Tou-shih* in China). Address: Dep. of Food Science, Agricultural Univ., Wageningen, Netherlands.

1286. Lie Goan Hong. 1982. Nutritional aspects of fermented foods in Indonesia: An overview. In: S. Saono, F.G. Winarno, and D. Karjadi, eds. 1982. Traditional Food Fermentation as Industrial Resources in ASCA Countries. xvii + 259 p. See p. 115-30. Proceedings of a technical seminar, held 9-11 Feb. 1981 at Medan, Indonesia. [23 ref]

• **Summary:** Discusses the preparation of tempe, oncom, tauco, kecap, tempe bongkretek (and bongkretek poisoning), tempe gembus (okara tempeh), oncom ampas tahu (okara onchom), soysauce (kecap), and fermented fish products. Tempeh is a good source of vitamin B-12 and of certain antibacterial agents. Certain minor legumes should also be used in preparing these traditional foods.

Table I shows the most important traditional fermented foods in Indonesia, with the name and type of product, organism used, substrate, nature of product (solid, liquid), and area of production and consumption. Address: Nutrition Unit Diponegoro, National Inst. for Health Research and Development, Ministry of Health, Jakarta, Indonesia.

1287. Murthy, V. Sreenivasa; Natarajan, C.P. 1982. Fermented foods and their industrial prospects in India. In: S. Saono, F.G. Winarno, and D. Karjadi, eds. 1982. Traditional Food Fermentation as Industrial Resources in ASCA Countries. xvii + 259 p. See p. 19-30. Proceedings of a technical seminar, held 9-11 Feb. 1981 at Medan, Indonesia. [8 ref]

• **Summary:** Discusses soy idli, soy tempeh, and groundnut + soybean tempeh. “Although Tempe is not yet known in India, some investigations were carried out at the Central Food Technological Research Institute, Mysore, with a view to using indigenous raw materials.” The results of this study, carried out under a PL-480 financed project, are summarized in Tables I to V. Address: Central Food Technological

Research Inst. (CFTRI), Mysore, India.

1288. Nahas, Ely; Machado, José Octávio. 1982. Estudos sobre a utilização de *Rhizopus oligosporus* em farelo de soja para produção de tempeh [Studies on the use of *Rhizopus oligosporus* grown on soy flour for the production of tempeh]. *Cientifica (Sao Paulo)* 10(2):217-23. [20 ref. Por; eng]

• **Summary:** Soybean meal can be used as a substrate to produce a fermented tempeh-like product, but it is necessary to add at least 30% of a carbohydrate source (such as manioc flour or corn flour), 3.5% of citric acid to decrease the pH to 4.5, and 150% by weight of distilled water. Address: Departamento de Microbiologia, Faculdade de Ciências Agrárias e Veterinárias, UNESP-14870-Jaboticabal, São Paulo, Brazil.

1289. Nahas, Ely; Machado, José Octávio. 1982. Características biológicas e bioquímicas do farelo de soja após fermentação por *Rhizopus oligosporus* [Biological and biochemical characteristics of soybean meal after *Rhizopus oligosporus* fermentation]. *Cientifica (Sao Paulo)* 10(2):225-32. [27 ref. Por; eng]

• **Summary:** Tempeh made from defatted soybean meal (soybean meal tempeh, or SMT) compared with regular tempeh made from whole soybeans, has a similar protein content, but contains less oil and more crude fiber, ash (minerals), and carbohydrates. The content of dispersible protein in SMT was increased 3.3 to 3.5 times, suggesting an improvement in digestibility. The protein efficiency ratio of the SMT was similar to that of soybean meal and of standard casein, but superior to that of regular tempeh. Sensory analysis showed that SMT was as well accepted as regular tempeh. Address: Departamento de Microbiologia, Faculdade de Ciências Agrárias e Veterinárias, UNESP-14870-Jaboticabal, São Paulo, Brazil.

• **Summary:** "Four years ago, Dr. Sattilaro, President of the Methodist Hospital in Philadelphia, was dying of cancer. Today, after changing his lifestyle [primarily by adopting a macrobiotic diet], prescribed by Michio Kushi, he is totally free of this disease. Before this book was published, his remarkable story appeared in *Life Magazine* and the *Saturday Evening Post*, and he has told his story on television." Address: M.D., Philadelphia.

1297. Seguin, Clare. 1982. Cooking with tempeh. Higher Ground Press, P.O. Box 3128, Madison, WI 53704. xii + 63 p. Illust. No index. 22 cm. [3 ref]

• **Summary:** Contents: Foreword. About Tempeh. Cooking techniques. Recipes: Breakfast. Soups, salads, and sandwiches. Hors d'oeuvres. Main dishes. Macrobiotic recipes. Address: Madison, Wisconsin.

1298. Shurtleff, William; Aoyagi, Akiko. 1982. Report on soyfoods in delis, cafés, and restaurants. Lafayette, California: Soyfoods Center. 127 p. 28 cm. [21 ref]

• **Summary:** Contents: 1. Introduction and overview: A. Names and addresses: Soyfoods delis, cafes, restaurants; Secondary soyfoods manufacturer-distributors; Soyfoods marketer-distributors. B. Chronology of soy delis starting in business (Farm Food Company in San Rafael, California, was first in Aug. 1976). C. North America's largest soy delis, cafes, and restaurants, with startup cost and average and maximum weekly sales.

2. Names of recipes served at each soy deli and ranking of the best-selling of these recipes: Data for 18 soy delis, cafes, and restaurants. 3. Names of recipes produced by secondary soyfoods manufacturer-distributors: Data for 4 soyfoods manufacturer-distributors. 4. Names of recipes produced by soyfoods marketer-distributors: Data for 4 soyfoods marketer-distributors. 5. Individual bulk recipes for tofu and tempeh dishes: 21 bulk tofu recipes and 21 tempeh recipes. 6. Alphabetical listing of recipes given above: 250 recipe names listed alphabetically. 7. Articles published

about soyfoods delis, cafes, and restaurants: 19 articles.

8. Menus, posters, and promotional materials: 15 menus, posters, and flyers. 9. Conclusion and summary. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1299. Sihombing, G. Nainggolan. 1982. Malpractice of colouring soy tempe with non-edible metanil yellow. In: S. Saono, F.G. Winarno, and D. Karjadi, eds. 1982. Traditional Food Fermentation as Industrial Resources in ASCA Countries. xvii + 259 p. See p. 227-29. Proceedings of a technical seminar, held 9-11 Feb. 1981 at Medan, Indonesia. [3 ref]

• **Summary:** "The Indonesians in general like to have their foods coloured. For that purpose they usually utilize natural colouring agents. At present synthetic colouring agents, due to their convenience in use and wide availability in the markets, have also found wide application. Not all of these synthetic colouring agents are suitable for colouring foods and drinks, a fact that the public in general is not aware of.

"A number of soy Tempe sold in some Jakarta markets are coloured yellow with a certain colouring agent. The reasons for this practice are not clearly known, but is probably to improve the appearance and the shelf life (as claimed by some Tempe producers) of the product. It is suspected that the colouring agent used for this purpose is one of the non-edible synthetic ones which were reported to be used for colouring snacks and drinks. To verify if this is in fact the case, the present investigation was carried out." Address: Nutrition Unit Diponegoro, National Inst. for Health Research and Development, Ministry of Health, Jakarta, Indonesia.

1300. Slamet, Dewi Sabita; Ubaidillah, -; Ganjar, Indrawati. 1982. Winged bean tauco. In: S. Saono, F.G. Winarno, and D. Karjadi, eds. 1982. Peoria, Illinois.

1308. Winarno, F.G. 1982. The nutritional potential of fermented foods in Indonesia. In: S. Saono, F.G. Winarno, and D. Karjadi, eds. 1982. *Traditional Food Fermentation as Industrial Resources in ASCA Countries*. xvii + 259 p. See p. 31-40. Proceedings of a technical seminar, held 9-11 Feb. 1981 at Medan, Indonesia. [5 ref]

• **Summary:** Discusses tempe, tempe fish rice (TFR), oncom (onchom), tempe bongkreng (from coconut presscake), tempeh gembus (from okara), and tauco. Indonesian tempeh may contain 30 nanograms of vitamin B-12 per gm of tempe. If average daily consumption were 60 gm per person, tempeh would provide 60% of the daily requirement of B-12. In 1978, estimated annual tempe production in Indonesia was about 75,600 tons.

“Tauco is a very popular fermented food in Indonesia particularly for people who live in West Java. So far Tauco is utilized mainly as a seasoning and is used in vegetable soups, fish and meat, to enhance their flavour...”

“A study on the development of a ‘New Tauco Product’ is now being conducted at the Food Technology Development Centre, Bogor, to make Tauco a mass consumption product, by experimenting with different soup recipes to meet the Indonesian taste, both in the urban and rural population.” Address: Food Technology Development Centre, FATEMETA-IPB, Bogor, Indonesia.

1309. Mouish, Jo Collins. 1983. Cook uses tofu to create ‘luscious’ cheesecake: Cook’s corner. *Press (Ypsilanti, Michigan)*. Jan. 5. p. 1C.

• **Summary:** Karen Malofy, age 29, works as a cook at The Soy Plant in Ann Arbor, is married and has two daughters. The “hidden ingredient” in her recipes is tofu. Recipes are given for: Tofu cheese cake. Tofu quiche. Tempeh mock chicken salad. Missing egg salad. Tempeh with nutritional yeast gravy. Photos show: (1) Ms. Malofy. (2) A block of tofu and tofu cheesecake. Address: Living editor.

1310. Shurtleff, William. 1983. Graph of tofu and tempeh manufacturers in the West. Lafayette, California: Soyfoods Center. 1 p. Jan. Unpublished manuscript.

• **Summary:** This graph shows how the number of tofu manufacturers in the West grew from 56 in Oct. 1975 to 310 in Jan. 1983. The number of tofu manufacturers in the USA grew from 48 in Oct. 1975 to 182 in Jan. 1983.

The number of tempeh manufacturers in the West grew from 8 in Oct. 1975 to 78 in Jan. 1983. The number of tempeh manufacturers in the USA grew from 1 in Oct. 1975 to 56 in Jan. 1983. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

1311. Walnut Acres. 1983. Organic farming—natural foods [Mail order catalog and price list]. Penns Creek,

Pennsylvania 17862. 40 p. Jan/Feb. Illust. Index. 28 cm. [37 ref]

• **Summary:** A large color photo on the cover shows a red barn in the snow, with the caption “Buy direct from the farm—500 acres of chemical free soil.” In 1946 Paul and Betty Keene first fell in love with Walnut Acres. They had just completed four years of study in organic homestead-and-farm schools. Note: It is unclear when they started to do business. They also sell products made by other companies, such as Shiloh Farms, Fearn, and Westbrae. Soy related products: Miso Plus all natural dip mixes. 4-grain cereal (incl. soybeans). Hearty cereal (incl. soya). 12-grain cereal (incl. soy). Soy grits, organic. Rice pancake mix (with soya flour). Triticale pancake mix (with soya flour). 12-grain pancake mix (with soya flour). Unbleached white pancake mix with soya flour. Wheatless pancake mix with soya flour. Whole wheat and soy pancake mix with soya flour. Cornell flour, with organic soy flour. Soy flour, organic. Instant soy milk powder. Sterling special carob blend (soya carob). 12 grain flour (incl. soya flour). Soya-carob bread mix (with soya flour). Corn muffin mix (with soya flour). Apricot nut quick bread mix (with soya flour). Granola maple quick bread mix (with soya flour). Four Fearn cake mixes (with soy powder). Pro-Nuts (soy-nuts). Soybeans, yellow (25 lb, 5 lb, 3 lb, 1 lb). Tempeh starter. Whole wheat and soy spaghetti. Pea and soybean soup. Miso-Cup red vegetarian soup. Green soybeans (whole dry, canned). Tamari soy sauce (with or without wheat). Comtessa coffee substitute (with soy beans). Celestial Seasonings Breakaway Coffee Substitutes (most have roasted malted barley and barley grains, and roasted chicory root as the main ingredients). Lecithin granules (soya phosphatides). Soy bean lecithin (raw, crude, natural pint). Books. Soya-carob bread. Portrait photos show Paul Keene and Betty Keene.

Also discusses: Gluten flour. Amaranth seeds. Psyllium seed. Sesame seed (raw hulled; raw unhulled; toasted hulled). Adzuki beans. Peanut butter, sesame tahini, and other nut butters. Pita bread. Address: Penns Creek, Pennsylvania. Phone: (717) 837-0601.

1312. Leonard, Thom. 1983. Pioneering work with miso in America (Interview). *SoyaScan Notes*. Feb. 12. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** In the fall of 1974, Thom Leonard made his first batch of barley koji and barley miso using a recipe in Herman Aihara’s new book titled *Soybean Diet*. The 80-pound batch of miso was aged in a soy sauce keg from Hong Kong. He then made 80-pound batches of chunky wheat miso in the fall of 1975 (he later pickled tofu in it) and of barley miso in early 1976. After moving to Fayetteville, Arkansas, he and Jim Hemminger made larger scale miso equipment and on 15 April 1977 packed their first 35-gallon cedar vat with brown-rice miso. Soon over 1,000 lb were aging in the vats. This miso was sold to and distributed by

the Ozark Cooperative Warehouse.

Thom and Richard Kluding founded the first Caucasian-run miso company in North America, Ohio Miso Co. in Monroeville, Ohio. They began production on 13 March 1979. By Jan. 1980 Ohio Miso was making several varieties of miso: brown rice, barley (one or two year), mellow brown rice, mellow red, and black soybean; output was 2,400 lb/week.

Then in the spring of 1980 Leonard and Kluding split up, largely because of interpersonal problems. In the summer of 1980 Leonard taught miso classes at the macrobiotic Spiral Inn and Moniteau Farm in Missouri. Then in late 1980 he taught 2 classes on making miso, natto, tofu, and tempeh at the Kushi Institute in Boston, Massachusetts, with 30-40 people per class. In 1981 and 1982 he taught 8 similar classes out of his home in Boston, plus four 3-day residential workshops on the same subjects. All were sold out every time. In 1983 he plans to travel Ireland to start a miso plant in County Kilkenny. Friends of his own several old buildings. The Irish government will help pay startup costs, covering 45% of the required startup capital plus 25% of the rent for the first 5 years. He hopes to be start in July 1983 and be producing miso by late 1983. He hopes to make 100,000 to 200,000 pounds of mostly barley miso, both mellow barley and 12-24 month barley miso. Thom's constitution is so yang that he can't eat much miso—which is also very yang. But this week he enjoyed miso soup twice, which is more than he has had for the past year.

Note: Thom and his wife went to Ireland but they never started a miso plant or commercial miso production there. Address: Brookline, Massachusetts.

1313. Zacharowicz, Paul. 1983. Re: Soybeans and soyfoods in Austria. Letter to William Shurtleff at Soyfoods Center, Feb. 23. 2 p. Handwritten. [Eng]

• **Summary:** He will try to find out about the Salzburg Faire. He discovered a relatively old Austrian book in which the Soybean, for Western standards, is rather extensively discussed. It appears that before World War II, the soybean was making inroads here. Currently he is aware of only two farmers in Austria who produce soybeans—and in only extremely limited quantities (for their pigs, of course). “There appears to be some sort of restriction on soybean production between the U.S. and Austrian governments.”

Lothar Vogel is developing a specialty tempeh from dried peas. He has created contacts with farmers who have tons of peas and no idea of what to do with them. “The spectrum of soyfoods is still a future endeavor. With positive, constructive collaboration it will become a bona fide reality in the near future. Currently we are working on an information awakening of the general public regarding whole foods in general. Further, there are an increasing number of Austrian Macrobiotics who are producing tofu regularly and delivering it to whole foods stores as well as Chinese

restaurants.” Address: Hasnerstr. 159/18, 1160 Vienna, Austria.

1314. Ellis, J.J.; Hesseltine, C.W. 1983. Maintaining stock cultures of *Rhizopus oligosporus* for tempehmaking. *Soyfoods*. Winter. p. 29-31. [2 ref]

• **Summary:** “Tempeh experts Hesseltine and Ellis describe a reliable technique for making stock tempeh cultures they’ve been using for 30 years.”

Contents: Introduction. Media for growing *Rhizopus oligosporus*. Inoculating and incubating new cultures. Contamination to watch out for (The major contaminants are mites, bacteria, yeasts, and other molds; there are simple methods to control them). Suggested remedies for contamination. Formulations (Potato dextrose agar, yeast extract–malt extract–peptone–glucose agar {YM}, etc.).

A photo shows a package of Tempeh Brothers tempeh plus two half cakes, and slices of tempeh. Address: NRRC, Peoria, Illinois.

1315. **Product Name:** Tempeh.

**Manufacturer's Name:** Michael Joyce Tempeh.

**Manufacturer's Address:** P.O. Box 45, Woonbye 4559, QLD, Australia.

**Date of Introduction:** 1983. February.

**New Product–Documentation:** Shurtleff & Aoyagi. 1983. *Soyfoods Industry & Market*. Michael and Julie Anne Joyce.

1316. **Product Name:** Tempeh Lite (Okara & Brown Rice Tempeh).

**Manufacturer's Name:** Pacific Tempeh.

**Manufacturer's Address:** 1508 62nd St., Emeryville, CA 94608.

**Date of Introduction:** 1983. February.

**Ingredients:** Soy puree [Okara], brown rice, water, tempeh culture.

**How Stored:** Refrigerated.

**Nutrition:** Per 4 oz.: Calories 84.

**New Product–Documentation:** Label. 1983. “New. 71% less fat. Only 84 calories per 4 oz. serving.” Spot in *New Age*. 1983. June. p. 63. “Pacific Tempeh sells an unusual Tempeh Lite, which has half the calories of standard whole-soy tempeh and 71% less fat.” Talk with Travis Burgeson of Pacific Tempeh. 1983. April. This product was introduced in Feb. 1983. It contains 25% by weight of brown rice and is more expensive to make than soy tempeh. He received a super response to the product at the Natural Foods Expo at Anaheim, where he served it sliced and deep-fried, dipped in shoyu seasoned with garlic, coriander and lemon juice.

Shurtleff & Aoyagi. 1985. *History of Tempeh*. p. 52. America's first commercial product of this type. Okara tempeh was the product concept that got Travis Burgeson interested in tempeh.

1317. Shurtleff, William; Aoyagi, Akiko. 1983. The soyfoods industry and market: Directory and databook 1983. 3rd ed. Lafayette, California: Soyfoods Center. 112 p. Feb. No 28 cm. [191 ref]

• **Summary:** As of May 1982, America's four largest tempeh makers (in lb/week) are Pacific Tempeh (5,000, California, started 1980), Tempeh Works (4,250, Massachusetts, started 1979), Soyfoods Unlimited (3,000, California, started 1981), White Wave (1,900, Colorado, started 1979). About 17,455 lb/week of tempeh are sold by 15 companies in the USA.

Reviewed by Walter J. Wolf in *Cereal Foods World* (Oct. 1983). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1318. **Product Name:** Santa Fe 4-Grain Tempeh (Made with Okara).

**Manufacturer's Name:** Southwest Soy Foods.

**Manufacturer's Address:** 2889 Trades West Rd., Santa Fe, NM 87501. Phone: 505-471-8979.

**Date of Introduction:** 1983. February.

**Ingredients:** Okara soybean pulp, bulgur [wheat], rolled oats, sunflower seeds, vinegar, tempeh culture.

**Wt/Vol., Packaging, Price:** 8 oz package.

**How Stored:** Frozen or refrigerated.

**New Product–Documentation:** Soyfoods Monthly. 1983. Feb.; Shurtleff & Aoyagi. 1985. History of Tempeh. p. 56-57. Talk with Richard Jennings of Southwest Soyfoods. 1990. Aug. 2. This tempeh was made by taking hot okara right off the press, mixing it immediately with the bulgur, which caused partial hydration and cooking of the bulgur, and reduced the moisture content of the okara to a level that allowed it to ferment well while being made into tempeh. After Richard bought Southwest Soyfoods from Kathryn O. Bennett, he moved it from 121 E. Santa Fe Ave., Santa Fe, New Mexico 87501 to its present location shown above. He has not moved the company since then.

Label brought by Richard Jennings. 1990. Sept. 20. 3 by 4.5 inches. Red on yellow. "All natural ingredients"

1319. *Soyfoods*. 1983. Soyfoods mini-boom underway in Europe. Winter. p. 8-9.

• **Summary:** "This year we became aware that the kind of developments that took place in the U.S. in 1977-78 are now taking place in Europe with the sudden increase in the number of soyfoods companies," reports Bill Shurtleff of The Soyfoods Center. 'Historically speaking, this will probably be the most important event for the soyfoods industry in 1982. Europe is coming on strong and it's a tradition of soyfoods that goes back 130 years that is now being revived.'

"Most of the impetus for soyfoods in Europe apparently stems from the vigor of the macrobiotic community. Per Fruergaard started Tofu Denmark in Valby and has encountered legal problems regarding the use of nigari. In Paris, France, Bernard Storup purchased a Takai tofu

system; Ab and Paulien Schaft are setting up a small plant in Baillestavy to make miso, shoyu, natto, and koji; in Ivry, Jean Luc Alonso's macrobiotic center, Traditions du Grain, prepares for tempeh production.

"In the British Isles, Paul Jones' Tofu Shop in London, England, has been active since 1981 while Community Health Foundation, also in London, promotes homescale tofu, tempeh, and misomaking. In Dublin, Ireland, Jane O'Brien gives tofu cooking classes, has published a tofu cookbook and is considering commercial production.

"The macrobiotic movement is strong in Belgium where de Brandnetel, a large Antwerp-based distributor of natural foods, operates a tofu shop in the rear of their retail store. Jonathan Company in Ekeren makes 3000 pounds of tofu weekly, along with seitan, mochi, soups, canned foods, and soymilk. Seven Arrows in Leuven is another small tofu shop in operation.

"In the Netherlands Manna was the first company to introduce soyfoods to the public and is now an important promoter. Manna's John Welters (who provided much of this information) lectures on homescale soy processing and reports interest and sales are rising as are the number of magazine articles on soyfoods. Manna itself markets tofu spreads and distributes a joint equipment price list with Takai Company of Japan. Witte Wonder in The Hague makes tofu, as does De Morgenstond in Bakkeveen, while Peter Dekker's Jakso produces tempeh. In Portugal, Unimave promotes soy as part of the macrobiotic diet and makes small amounts of tofu and soymilk; Jose Parracho in Setubal is starting a self-sufficient center involving tofu and tempeh production.

"In Soyen, West Germany, Wolfgang Furth-Kuby, who published *Das Tofu Buch* (by William Shurtleff) in German, is interested in tofu production at his Sojaquelle. Tofu producers are Swame [sic, Swami] Anand Svadesha in Furthim-Wald, Thomas Kasas [sic, Karas] who installed a tofu system last summer at his Bittersuess [later Soyastern] in Cologne, and Alexander Nabben in Munich.

"In Sweden Tim Ohlund and Ted Nordquist have been operating Aros Sojaprodukter since early 1981 in Örsundsbro using a Takai pressure cooker system and vacuum packaging. In Rimini, Italy, Gilberto Bianchini makes tofu at Community Foods. And Switzerland is the home of four soy companies including Restaurant Sesam in Bern, an active macrobiotic center with homescale tofu and seitan production; Marty Halsey makes tofu in Nyon; Hans Opplinger produces tofu in Chan; and Verena Krieger operates Sojalade in Luzern (Lucerne).

"Sojalade, whose tofu output at mid-summer 1982 was 1000 pounds weekly, is a company launched mainly on the results of an article Ms. Krieger published ('Yesterday Steak, Tomorrow Tofu') in a Swiss Sunday magazine. Krieger then established her shop to meet the expected tofu demand stirred up by her article. Swiss national television ran a 30 minute feature on soybeans this year in which Krieger made

a brief demonstration of 5 tofu dishes. ‘Since then tofu has been a favorite child of the media,’ she says, adding that tofu appeared in the pages of *Blick*, a mass market newspaper.”

Photos show: (1) European representatives at the international Soyfoods Come West conference in Seattle, Washington: Gilberto Bianchini, Marina Casazza (Italy); Joanna White (Switzerland); Kym Olsen (England); Wolfgang Furth-Kuby (W. Germany); Tim Ohlund (Sweden); Roger Kayes (England). (2) Ted Nordquist and Tim Ohlund of Aros Sojaprodukter, Sweden’s first tofu company.

1320. *Soyfoods*. 1983. Cottage soy industries thrive on Vancouver Island. Winter. p. 36-37.

• **Summary:** Wayne Jolley’s Sooke Soyfoods, which opened in early 1981, produces 1,800 lb/week of nigari tofu. Thistledown Soyfoods, run by Jan Norris, opened in October 1981. Each week the company produces 350 lb of tofu, 150 lb of tempeh (vacuum packed), and 75 lb of soy pate from okara. At Shin Mei Do Miso, Lulu and Yoshi Yoshihara have been making miso since 1979. They now produce 10,000 lb of 3 styles of miso each year. Metta Tofu is owned by “Ray Lipovsky, who might be North America’s original cottage tofumaker as he’s been coagulating soymilk with sea water since 1975... Besides producing 600 pounds of nigari tofu every week, Lipovsky is hot on the trail of Frozen Buddha, his multi-flavored line of frozen soymilk ice cream, already producing 360 gallons weekly.”

Also on the island in Victoria, though too large for the cottage scale, is Dayspring Soycraft Corporation, operated by Michael Hsieh. Hsieh, a trained dentist, and his brother, Steven, and their families, emigrated to British Columbia from Taiwan and decided to launch a pressure cooker tofu plant in 1982.

1321. *Soyfoods*. 1983. The soy deli experience at Well Bean. Winter. p. 38-40.

• **Summary:** The Well Bean is a soy deli at 349 Soquel Ave., Santa Cruz, California, run by Kevin Van Slooten. It features “Natural Fast Foods.” Photos show: Twelve different ads and leaflets promoting the Well Bean. Kevin, behind the counter, smiling, with the deli’s menu on the wall behind him.

1322. **Product Name:** Tempehroni (Herb-seasoned Tempeh in Sausage-Like Rolls) [Hot!, or Mild].

**Manufacturer’s Name:** Turtle Island Soy Dairy.

**Manufacturer’s Address:** P.O. Box 218, Husum, Washington 98623.

**Date of Introduction:** 1983. February.

**Ingredients:** Hot! Organically grown soybeans, water, apple cider vinegar, marjoram, basil, oregano, thyme, savory, cayenne, garlic, onion, black pepper, *Rhizopus oligosporus* (tempeh starter).

**Wt/Vol., Packaging, Price:** 8 oz plastic wrapped cylinder.

**How Stored:** Frozen.

**New Product–Documentation:** Labels sent by Seth Tibbott of Turtle Island. 2000. Sept. 12. Tempehroni, introduced in June 1981, now has a spicy cousin. And the label for regular/mild Tempehroni has been changed. Each label (red on white) has a thermometer on the right side; it measures the “Tempehture.” For the hot, the red mercury rises to the top, labeled “Hot.” A cartoon figure standing to the right of the thermometer, with a body like a soybean pod and wearing a sombrero, makes a gesture with one hand to indicate “just right.” For the mild, the red mercury rises only halfway up—to the mild mark. A different cartoon figure, with a body of similar shape and wearing a chef’s hat (toque) is tossing a pizza into the air over his head. The Turtle Island logo appears large in the upper left corner of each label.

Talk with Seth Tibbott, founder and owner of Turtle Island. 2000. Oct. 10. These two products were introduced in about Feb. 1983, shortly after the company moved to Husum.

1323. Fritschner, Sarah. 1983. Soybeans with pizzazz. Tempeh: The fermented cousin of tofu. *Washington Post*. March 2. p. E1, E3. Wednesday.

• **Summary:** Eileen Judge, age 27, makes tempeh at Kingdom Foods in a warehouse on Morse St. (Washington, DC 20002), and distributes it to about 20 health food stores and co-ops in the area. Dr. Clifford Hesseltine of the USDA in Peoria is enthusiastic about tempeh, which he has studied for 20 years. He says that whenever they make a batch of tempeh, “it gets eaten up right away.” Eileen believes the soybean explosion is coming. Recipes are given for Barbecued strips, Tempeh Pate, and Tempeh stir-fry. Two photos show Eileen with her tempeh.

1324. Tepper, Robert. 1983. Farm Foods and Ice Bean (Interview). *SoyaScan Notes*. March 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Farm Foods presently has 37 distributors nationwide for Ice Bean. More than 10 of those are in California. The “soy powder” in the product is spray dried soymilk. Ice Bean is made at an ice cream plant in Memphis. People from Farm Foods make it there 2 days a week with the help of a plant technician. In 1982 sales of Ice Bean were almost \$500,000. There are now 1,200 people living on The Farm, and almost half are children. Farm Foods started as a name under which The Farm sold its surplus produce to local food stores in Tennessee. Farm Foods is now mostly Ice Bean plus some tempeh starter sales. Ice Bean’s future is to expand into supermarkets. Address: Summertown, Tennessee.

1325. Joyce, Michael; Joyce, Julie. 1983. Re: Growing soybeans in Australia. Tempeh and tofu down under. Letter to William Shurtleff at Soyfoods Center, March 5. 4 p. Handwritten.

• **Summary:** “In Queensland, Australia, soybean still are

grown mainly inland, away from the coast. But in coastal regions the wet season occurs when the bean is mature (March-April).

"The beans are sown the first week in December. Inland the yield averages 1.25 tonnes (metric tons) per acre while on coastal regions, if weather permits, yields can be up to 2.25 tonnes per acre. The Department of Primary Industries is presently encouraging sugar cane farmers to intercrop soybeans as a nitrogen fixer, while contracting at \$217.00 per tonne this year to the United Grasiere Association.

"Most of the production is high oil content, small beans. I believe we have a similar climate to Florida and I would be interested in high protein soybeans grown in that region for tempeh and soyfoods production. Names of varieties would be a big help. The varieties grown for oil here are Wills, Leslie, and G522 and their heritage can be traced to the Florida region.

"Most soybeans are now grown by a method called "No tillage direct drill," which is by no means organic. It requires aerial spraying with Round-Up, a systemic herbicide, then direct drilling sowing (same as planting sugar cane) one week later.

"We are fortunate to have an organic farmer, supplier, of three generations, farming 200 acres for the culinary trade. He grades and cleans and supplies to us only his biggest beans which we find suitable for tempeh and tofu.

"Cyril and Elly Cain have indeed pioneered tempeh in Australia. They have now set up a small, low-tech shop in Maroochydore, Queensland, and are proud parents of a 7 week old beautiful girl named Jessimin. They are soon to return to the U.S. and Julie and I will be taking over the tempeh shop and moving production to our farm at Cooloolabin, which is west of Yandina and Eumundi at 1,000 feet. We feel it will be more suitable for tempeh in the mountains where we will be more subject to a tropical climate than on the coastal regions only 10 miles away.

"We hope to develop these small beginnings into a "pilot plant" which may spread knowledge of soyfoods to both residents and non-residents of Australia. As our vision unfolds we shall keep you informed of all aspects of progress and the greater good prevailing in this important work. Cyril and Elly will always be remembered as the producers of Australia's first and finest commercial soy tempeh. Their tempeh is known throughout the East Coast to be unsurpassed for flavour and shelf life. Always sold fresh, not frozen. Delicious. We wait in hope and peace. Giving glory to God." Address: Queensland, Australia.

1326. Vogel, Lothar. 1983. Re: Anton Wolf and the history of soybean breeding in Austria. Letter to William Shurtleff at Soyfoods Center, March 13. 2 p. [Eng]

• **Summary:** Lothar spent 5 hours talking about soybeans with Anton Wolf at the latter's home. He learned more during that time than he had been able to learn in the previous 5

years. Wolf said that Franz Anton Brillmayer was Austria's outstanding soy expert. Wolf thinks of himself as the third generation from Brillmayer; they have done much the same work with similar results. Wolf has a collection of virtually all the old Austrian literature on soybeans. The work that Wolf and his colleagues are doing is quite amazing. He has started the SoyaRing and has 100 farmers as members, all growing soybeans under his guidance.

One big problem is that tofu is so expensive here that it is an elitist food, and soybeans cost \$2.00/kg. A man in Salzburg is producing tempeh and a couple outside of Vienna is making tofu. Address: Vienna, Austria.

1327. Vogel, Lothar. 1983. Re: More on Anton Wolf and the history of soy in Austria. Letter to William Shurtleff at Soyfoods Center, March 15. 2 p. Handwritten. [Eng]

• **Summary:** Lothar had a fine meeting with Anton Wolf, who is sending Shurtleff the title pages of some books that are probably available in the USA. Herr Wolf also gave Lothar a copy of a cookbook titled *Wiener Soja-Küche*, by F. Brillmayer and Henriette Cornides.

But Lohar was most interested in two German-language articles from *Trend* magazine about the American soybean monopoly's fear of soybeans grown in Austria.

Lothar plans to travel to Verona, Italy, Germany, India (for a month of tapas), then Indonesia (to learn more about tempeh). Address: Vienna, Austria.

1328. Djurtoft, R.; Nielsen, J.P.; Omololu, A.; Omotola, B.D. 1983. Cowpea tempeh and its nutritional value. Paper presented at the 2nd African Nutrition Congress. 13 p. Held 27 Feb. to 3 March 1983, Ibadan, Nigeria. [8 ref. Eng]

• **Summary:** "The work with cowpea tempeh in Nigeria was started as an M.Sc. project carried out by B. Omotola in 1981. The work involved production of cowpea tempeh, determination of the important parameters for the production, such as presoaking time, boiling time, quality of the inoculum, etc. Besides, search for potential mycotoxins was carried out. No mycotoxins (determined as aflatoxin B-1) were found. Eighteen months ago the tempeh production was moved to Osegere village, 20 km from the University of Ibadan, and during the past months the production has been studied, and acceptability tests have been carried out.

"Cowpea tempeh was accepted. 51 out of 52 persons would like to taste it again, and 36 ranked cowpea tempeh as excellent food, 13 as fairly good, and 3 as not too good." Address: 1-2. Dep. of Biochemistry & Nutrition, Technical Univ. of Denmark, DK-2800 Lyngby, Denmark; 3-4. Dep. of Human Nutrition, Univ. of Ibadan, Nigeria.

1329. Hankin, Lester; Hanna, J. Gordon. 1983. Quality of tofu and other soy products. *Connecticut Agricultural Experiment Station, Bulletin* No. 810. 4 p. March. [8 ref]

• **Summary:** This cooperative study by the Connecticut

Agric. Exp. Station and the Connecticut Department of Consumer Protection analyzed the microbial and nutrient content of 17 soy products: 5 tofu products made by New England Soy Dairy (Greenfield, Massachusetts), Firm Organic Tofu, and Tofu Slices (Marinated and Broiled) made by Nasoya Foods (Leominster, MA), Soy-Moo soymilk sold by Health Valley Natural Foods (Montebello, California), Tempeh Burgers made by Soyfoods Unlimited (San Leandro, CA), Tempeh Burger made by Pacific Tempeh (Emeryville, CA), Tofu Lasagna with Sauce marketed by Legume, Inc. (Bloomfield, New Jersey), Tempeh made by Tempeh Works (Cambridge, MA), Genmai Miso distributed by Erewhon, Inc. (Cambridge, MA), Kome Miso distributed by Tree of Life (St. Augustine, Florida), and 3 tofu products made by The Bridge (Middletown, Connecticut). Ingredients of each product are given.

The study showed high levels of bacterial contamination in many of the products, much higher than for dairy products. Only 41% met the coliform bacteria standard of less than 10 per gram of product, 29% met yeast standard of less than 10/gm, 41% met the 10 mold standard of less than 10/gm, and only 12% met the standard for total aerobic bacterial count (less than 25,000/gm). In addition, soyfoods generally contained more fat than claimed.

This report had widespread repercussions for the soyfoods industry, which (in the short term) were negative. The authors had previously published studies on the microbiological quality of numerous dairy products. Address: P.O. Box 1106, New Haven, CT 06504. Phone: 203-789-7272.

1330. Krieger, Verena. 1983. Re: History of work with tofu in Japan, Illinois, and Switzerland. Letter to William Shurtleff at Soyfoods Center, March. 2 p. Typed, without signature. [1 ref. Eng]

• **Summary:** "The year of 1973 I spent in Japan, where I got to know tofu and learned how to make it. The following years I spent in the U.S., working at several natural foods restaurants using soyfoods as important parts of the menu. The last of these jobs was at It's Natural (Brian Schaefer), where we made our own tempeh. We were also the first (and an important) customer of Mu-Tofu of Chicago.

"In 1979 I returned to Switzerland, where I first started to sell a Tofu-Set [tofu kit, for making tofu at home], using it in private cooking classes. (The publication 'So mache ich Tofu,' is the instruction booklet, accompanying the set, written by me and printed by the Ahorn-Verlag.)

"In 1980, just before going to the Soyfoods Conference in Illinois, I approached Morga, asking them if they were interested in producing tofu. They had all the right equipment and I even went there to make tofu for them once, but we could not come to terms, since they wanted to sell a sterilized tofu with long shelf life at room temperature. But such tofu was already on the market from Belgium, made by

Lima. I wanted the fresh product.

"I then started to make tofu in my home kitchen for a local vegetarian restaurant. In the spring of 1981, I heard about Hans-Ruedi Oppliger, who was then also making tofu in his home kitchen for a natural foods store. I contacted him and we decided to join efforts in creating a market. But it was only after 'Yesterday Steak, Tomorrow Tofu' was published that we could start full scale production. We set up the Sojalade with 3 other people and founded a co-op. This co-op has now 9 members and both Hans-Ruedi and I are still part of it. (Hans-Ruedi does not have a shop of his own.) The Sojalade was set up in August 1981, but Restaurant Sesam in Bern and Restaurant La Moisson (both macrobiotic) had been making tofu for their own use for several months, or even years before us. Soyana started their tofu production in February 1982.

"The Sojalade is now also working on a project to help organic farmers get started with soybean cultivation... By the spring of 1983 interest in tofu production has become quite considerable. Therefore, the Sojalade has instituted a small apprenticeship program, where we train people in tofumaking for at least ten days. Since we can only take one person at a time, we already have a waiting list till June."

Update: 1990 April 9. Verena is now writing cookbooks, and has 5 in print. One on beans just been published. Her tofu cuisine is still in print. A condensed version has been taken over and distributed by Migros. She is no longer involved with Genossenschaft Tofurei, which is quite a distance from her home. She was on the board of directors but she keeps in touch and she still has some money involved. Address: Bruchmattstr. 24, CH-6003 Lucerne, Switzerland. Phone: 041-22 50 34.

1331. Milly's International Vegetarian Cuisine. 1983. March. New soyfoods restaurant or deli. 1613 Fourth St., San Rafael, CA 94901.

• **Summary:** Menu and article in Natural Foods Merchandiser. 1987. Oct. p. 66. Founded by Brian and Dennis Malone. Their mother is Milly. Entrees include Tempeh Rancheros, Tofu Piccata, Tempeh Dore, Tempeh Oscar, Milly's Vegetable Stirfrys. Address: San Rafael, California.

1332. *Soyanews (Sri Lanka)*. 1983. Book review: Handy guide to the soyafoods world. 5(7):6. March.

• **Summary:** A full page, positive review (by. S. Pathiravitana) of *Soyfoods Industry: Directory and Databook* (1982), by Shurtleff and Aoyagi. A graph of world soybean production (total and by region) is shown.

"The databook section is only one-half of this book. The other is a directory, which helps to bring people in the soyafood business together. Soyafoods is now a worldwide phenomenon to judge from the scattered places in the globe where people are quietly and patiently making tofu and

tempeh.

"From Mexico to the Philippines and from New Zealand to Canada there is a growing global soya network which the Shurtleffs have now drawn closer. The glossary of soyafoods terms, names and addresses, of business houses and soy crafters make this databook a useful addition to libraries."

1333. *Soyanews (Sri Lanka)*. 1983. Prisons expand use of soya. 5(7):7-8. March.

• **Summary:** "After the new machine [disintegrator / grinder] was installed in Welikada Prison last September, there has been a further saving of nearly Rs. 65,000 during a period of three months from September 1982 to December 1982."

"In addition, the work camps and open prisons have also cultivated soya this maha."

"The Department of Prisons which has shown that large savings are possible by using soya in institutional feeding has now branched into the production of other soyafoods like soya fortified bread and yogurt.

"Exhibition: Independence day celebrations held in Kandy this year featured an Agricultural and Technical Exhibition..." At the soyafoods stall, ice cream sold for Rs. 2/-, soyamilk for Rs. 1/- and 100 grams of fried tempeh was 1/-.

"In the eight days that the exhibition ran many more thousands came to know and understand the immense potential of the bean that is at present the cheapest pulse in the market" where it retails for Rs. 4.00 to 4.50 per 500 gm.

A photo shows a field of soybeans at the open prison camp, Anuradhapura.

1334. Soyfoods Center. 1983. Professional publications and services (Leaflet). Lafayette, California. 2 p. March 26.

• **Summary:** This leaflet, printed with brown and black ink on glossy white paper, advertises the following: Soyfoods consulting services. Computerized soyfoods mailing list. *Using Tofu, Tempeh & Other Soyfoods in Restaurants, Delis & Cafeterias* (spiral-bound book, with excerpt of book review). *Soyfoods Labels, Posters & Other Graphics* (spiral-bound book, with excerpt of book review). Special bulk discounts on books and materials. Soyfoods document center and library (which owns 3,500 documents). Soyfoods color slide shows. Tempeh pamphlet reprint rights. Order form. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-3161.

1335. **Product Name:** Okara Tempeh.

**Manufacturer's Name:** Swan Gardens.

**Manufacturer's Address:** Miami, Florida.

**Date of Introduction:** 1983. March.

**New Product-Documentation:** Soyfoods Monthly. 1983. Feb.; Soyfoods. 1983. Summer. p. 43; Shurtleff & Aoyagi. 1985. History of Tempeh. p. 56-57.

1336. Heimlich, Jane. 1983. Tofu & tempeh: Meatless alternatives. *Cincinnati Enquirer*. April 6. [4 ref]

• **Summary:** Contains 5 tofu and 4 tempeh recipes. Address: Ohio.

1337. O'Brien, Jane. 1983. The magic of tofu and other soybean products. Wellingborough, England: Thorsons Publishers Ltd. 128 p. April. Illust. by Niall Morris and Clive Birch. Index. 20 cm. [6 ref]

• **Summary:** Written in large letters at the top of the cover: "The Best of Vegetarian Cooking." Contents. Foreword.

Introduction (incl. tempeh, soy flour, miso, tamari). 1. Making your own tofu. 2. A word about the recipes. 3. Recipes. 4. Soymilk. 5. Other soybean products (Okara, gô, yuba, soynuts). 6. Soybeans as beans. 7. Food value of soyfoods. 8. History of the soybean. Further reading.

Jane was a soyfoods pioneer in Ireland. In the Introduction (p. 18-21) Jane explains that "I was frequently ill as a child, and on several occasions I was very near to death's door." Yet as she got older, she grew to enjoy gourmet food and gourmet cooking. The man who became her husband gave her the first book she read on natural foods. "As soon as I became aware that food contributed to the maintenance or destruction of health, I began a lifetime of experimentation. I changed from refined foods to whole foods, gave up eating red meat, studied macrobiotics, so much so that over ten years ago I went to Boston [Massachusetts] with two children under the age of four, and pregnant with a third, to study the subject, and I continued from there to develop my own system." Her husband, an actor, is now quite happy with her cooking, after "an austerity programme involving giving up meat, cutting down on and nearly eliminating dairy food, getting rid of sugar."

"I have been working on creating meals that are increasingly more healthful for over seventeen years now [since 1966], and I find it a fascinating study. It is wonderful to witness the vast improvement in my own health..." Her son Quinn is now 15 years old. Her religion is Baha'i. "In furthering my interest in natural foods, I have given cooking classes in Dublin [Ireland] for over ten years [since 1973], not steadily, but from time to time when there were people interested. In the early days of my cooking classes, I also imported the necessary foods: whole grains, beans, miso and natural soy sauce from suppliers in England as they were not available in shops here in Dublin. There was no other way of getting these foods for my family. During the cooking classes I sold much of the stock... That led to the beginning of Ireland's first natural food store which I started with my husband's patient assistance, but which we left to someone else for many reasons."

"Several years ago I began to use tofu and soyfoods and to include them in the cooking classes. Because I was so interested in learning more about them, I attended the soyfoods conference held in Illinois in 1980 and the one in

Colorado in 1981... I think that I became so excited about tofu, soymilk and soyfoods really because I had long been a lover of puddings, custard, and creamy toppings, often made with dairy foods. However, because I needed to cut down on my use of dairy foods, I had nearly eliminated all of those things from my diet. When I discovered that it was possible, not only to make tofu and soymilk successfully in my own kitchen, but to use it for very accurate substitutions of my childhood favorites which were far more healthful than the things I had eaten as a child, I was thrilled."

Note: On 9 November 1979 Mrs. Jane M. O'Brien (7 Woodside Drive, Rathfarnham, Dublin 14, Ireland), ordered books on tofu, tofu & soymilk production, miso, and tempeh from Shurtleff & Aoyagi at Soyfoods Center in California.

Talk with Jane O'Brien. 1980. July 13. She developed the many recipes in this book using soybeans that she imported from England to Ireland, starting in about 1980.

Letter from Jane O'Brien. 1983. May 28. This book was published in April 1983. "It is presently on sale in England but not yet here in Ireland." Address: 7 Woodside Dr., Rathfarnham, Dublin 14, Ireland.

1338. Rathbun, Bonnie L.; Shuler, M.L. 1983. Heat and mass transfer effects in static solid substrate fermentations: Design of fermentation chambers. *Biotechnology and Bioengineering* 25:929-38. April. [23 ref]

• **Summary:** "An experimental device was constructed to allow nearly simultaneous measurements to be made on temperature and gas composition at different depths in solid-substrate fermentation bed... With a tempeh fermentation (*Rhizopus oligosporus* growing on soybeans) the temperature gradient could be as steep as 3°C/cm during active mold growth and concentration of carbon dioxide could reach 21 vol. % in the bottom layer." Address: School of Engineering, Cornell Univ., Ithaca, New York.

1339. Rosenbaum, Ron. 1983. The alternative Big Mac. *Esquire* 99(4):126. April.

• **Summary:** "I'm sorry, I draw the line at tempeh. I had no qualms about tasting soy burgers, tofu burgers, lentil-walnut burgers, and sunflower-seed burgers, but I simply refuse to taste a tempeh burger.

"Tempeh, if you must know, is soybeans fermented with a mold. Soyheads say that tempeh has all sorts of high-quality-protein benefits you can't get even from the highly acclaimed soybean-curd tofu. It's the hot new item on the health food scene. I don't care. All I can think of when I hear 'tempeh' is those pallid squares of tofu floating in basins of dirty water in health food stores and developing mold. Yucch. I'm all for the health benefits of natural foods, but I have some aesthetic standards.

"The idea here was to search for a health food alternative to the hamburger, something that tasted good on the sensual level and satisfied on the soulful level...

"Do the substitutes offer that kind of satisfaction? Well, forget about tofu burgers. We're looking for hamburger alternatives, not hamburger helper. Tofu burgers are so bland, so ascetic, so utterly tasteless that they may be natural as hell but they taste like polyester."

1340. *Soyanews (Sri Lanka)*. 1983. Recipes: Tempeh as a flavouring agent. 5(8):3, 8. April.

• **Summary:** When fresh tempeh is immersed in a brine solution (16-18%) in an uncovered glass jar and exposed to sunlight for about 3 weeks, it turns into a kind of sauce with the flavour of Jaadi (salted fish). This preparation was first suggested by Mrs. Gai Kim. It could be called "Tempeh sauce." A recipe is given.

1341. *Soyfoods Monthly (Colrain, Massachusetts)*. 1983. Soyfoods Association rejuvenated at first meeting of new board, new goals. 3(4):1. April.

• **Summary:** "Thirty two industry members attended a 2 hour planning session of the new Soyfoods Association in Anaheim, February 7 and appointed board of directors and officers. Michael Austin was selected the new Executive Director following Richard Leviton's resignation. Board members include: Gary Barat, Legume (President), Yvonne Lo, Vitasoy USA (Vice President), Tom Timmins, New England Soy Dairy (Vice President), Dan Burke, Pacific Soybean (Treasurer), Richard Leviton, *Soyfoods Magazine* (Secretary), Travis Burgeson, Pacific Tempeh; Michael Fountain, SanJi [San-J] Int'l.; Jim Miller, Quong Hop; Jack Mizono, Azumaya; Morris Shriftman, Tree of Life; Robert Tepper, Farm Foods; Shoan Yamauchi, Hinode Tofu Co. An initial pledge of \$12,000 from 14 companies was received at this organizational meeting."

1342. Sunset international vegetarian cook book. 1983. Menlo Park, California: Lane Publishing Co. 96 p. April. Illust. 28 cm. Retitled Vegetarian Favorites in 1987.

• **Summary:** This book is by the editors of Sunset books and Sunset magazine; the supervising editor is Maureen Williams Zimmerman. A table titled "Choosing nutritiously" (p. 5) shows that soybeans are a good source of thiamin (B-1), niacin, vitamin B-6, folic acid, calcium, and iron. Another table titled "Protein partnerships" (p. 7) states that soybeans and soyfoods (soybean curd/tofu, soy flour, soy milk, and tempeh), like dairy products and eggs, have no limiting amino acid. Soy-related recipes include: Miso grilled mushrooms (p. 14; Japan). Golden tofu cauliflower soup (p. 34; Thailand). Greens & tofu in peanut sauce (p. 48; Thailand). Stir-fried tofu & vegetables (p. 50; Vietnam). Whole wheat & soy pasta (p. 52). Mandarin pancakes with spicy tofu filling (p. 70; China). Address: Menlo Park. Phone: 415-321-3600.

1343. Dreyer, Lawrence. 1983. Re: Work with soya in

Austria. Letter to William Shurtleff at Soyfoods Center, May 1. 3 p. Handwritten, with signature. [Eng]

• **Summary:** “Herr Anton Wolf was here yesterday and told me that only 100 hectares of soybeans were planted in Austria in 1982. The yield was about 2,500 kg/ha.”

Dreyer’s main work is as the architect of the additions they are making to their facilities in Wiener Neustadt. At present they have a small shop and restaurant. There will be a new area for producing tofu on a small scale, gluten, mochi, bread. “At present we produce a limited quantity of tofu with equipment bought in Japan... A group of people loosely related to us uses a small centrifuge to make soymilk. This group has also recently started making tempeh... I have given copies of your chapter on “History of Soya in Austria” to Anton Wolf.” Address: Weg der Natur, Austria.

1344. Mallory, Margaret. 1983. Introducing tempeh. *Oakland Tribune*. May 4. p. D1-D3. Wednesday.

• **Summary:** This article, based on a new cookbook, *Tempeh Primer*, by Juel Andersen and Robin Clute (Creative Arts Communications, Berkeley), gives a basic introduction to tempeh, with four recipes. Andersen believes that tempeh is now where tofu was about 10 years ago. Photos show: (1) Andersen and Klute. (2) Three prepared tempeh dishes. Address: Tribune Food Editor.

1345. Stark, Bruno. 1983. Re: WSL and Haus Minerva in Switzerland. Letter to William Shurtleff at Soyfoods Center, May 4. 1 p. Typed, with signature.

• **Summary:** WSL, run by Bruno in Wolfhaden, Switzerland, is a society or club (*Verein*). Since 1982, among other things, every other month, they have given a course in making tofu and tofu dishes. Those attending have been very enthusiastic about it. This year they want to put on a tempeh course. Tempeh is not yet sold in Switzerland. “We hope with our work to make soyfoods better known.”

Bruno also sent Soyfoods Center several brochures: One 4-page brochure is titled “*Programm 1983*.” One course is titled Cooking Course (Soya cookery: Tofu & tempeh). An introductory tofu course is given 4 times during the year, as in an advanced tofu course. An introductory tempeh course is given twice.

Another brochure (black on pink), titled “Tofu Cooking Course,” gives details about tofu and the course. Address: CH-9427 Wolfhaden, Switzerland. Phone: 071-91 26 75.

1346. Cohen, Michael. 1983. New developments at The Tempeh Works (Interview). *SoyaScan Notes*. May 6. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Michael’s company now makes just over 5,000 lb/week of tempeh and has 13 employees. His main products, in descending order of sales, are soy tempeh, 3-grain tempeh, and tempeh burgers. Today he plans to sign the papers that will enable him to move into a 4,000 square foot building on

2 acres of land in Greenfield in September. His post office box and phone number will not change.

In 1982 his company almost went out of business. He made big capital investments to expand into trailers, adding lots of new tempeh incubation space, then suddenly 4 competitors appeared in the New York-Boston area. For 9 months in 1982 he suffered big monthly losses. But he learned new ways of managing resources and people, recovered, and again achieved a positive monthly cash flow. He now has 2 production managers, which allows him to focus on marketing and sales. He has opened many new supermarket accounts, and is conducting many in-store demonstrations serving Sloppy Joes (multi-use for pasta filling, etc.) and Tempeh Mock Chicken Salad. He is trying to get the salad into salad bars but it is more expensive than potato salad or macaroni salad. Address: Greenfield, Massachusetts.

1347. Dreyer, Lawrence. 1983. Re: Tempeh in Austria. Letter to William Shurtleff at Soyfoods Center, May 19. 1 p. Handwritten. [Eng]

• **Summary:** A “Dipl. Ing.” is someone who has graduated from a technical university. The people making tempeh in Austria that I know of are Anton Krizmanics and Norbert Brunthaler. They have apparently founded a company called SoyVita and their address is Herrengasse 30, A-5020 Salzburg, Austria. Tel. (06222) 430985. They both speak reasonably good English. “If there is anything else with which I can help, please write.” Address: Austria.

1348. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo*). 1983. Niowanai nattô [Natto that doesn’t smell: Tempeh]. May 20. Evening ed. p. 14. [Jap]

1349. *Zenkoku Shokuhin Shinbun* (*National Food News*). 1983. Nattô Kenkyû-kai no kappatsu na katsudô (nattô-kin tenpe) o Zennôren tsûjô sôkai [The Natto Study Group’s vigorous activity (with “tempeh natto”) at the Japan Natto Association’s general meeting]. No. 452. May 21. [Jap] Address: Japan.

1350. Ikawa, Kazuhisa. 1983. Higashi Ajia fukugo bunka-ken. Tôfu bunka to nattô no toraianguru [East Asia’s culture complex. Tofu culture and the natto triangle]. *Asahi Shinbun* (*Asahi Daily News, Tokyo*). May 28. p. 11. [Jap]

1351. Fardiaz, Dedi. 1983. Aspek pengolahan kedelai [Aspects of soybean processing]. Presented at Konsultasi Teknis Pengembangan Industri Pengolahan Jagung, Kedelai dan Ubi kayu (Technical Consultation on Industrial Development of Corn, Soybean, and Cassava Processing). Held 30-31 May 1983 at Kampus Darmaga, Bogor, Indonesia. [Ind]\*

1352. Fieldman, Anita. 1983. Application: Health connection. *Whole Foods (Berkeley, California)*. May. p. 19-21.

• **Summary:** The Los Angeles County Task Force on Nutrition and Behavior is located at 713 Hall of Administration, 500 W. Temple St., Los Angeles, California 90012. "The Task Force is persisting in its efforts to convert county facilities to natural foods." A photo shows Frances Lux, director, and president of California Design Collection in Marina del Rey, California. She has studied nutrition for over ten years and has designed and developed the menus for many natural foods restaurants. Lux states that a long term goal of the Task Force "is to replace hamburgers with tempeh, and Sugar Smacks with granola."

1353. Hesseltine, C.W. 1983. Food fermentation research and development. In: K.T. Achaya, ed. 1983. Proceedings of AHARA 82, First AFST (I) International Conference on Food Science and Technology. See p. 65-67. Held 23-26 May 1982 at Bangalore, India.

• **Summary:** Discusses the amounts of miso, shoyu, and natto produced in Japan. In Korea in 1978 an estimated 51,237 metric tons of soybean paste, 97,830 kiloliters of soy sauce, and 33,525 metric tons of gochujang (hot pepper paste) were produced. Also discusses the amounts of tofu, tempeh, and miso made in the USA. Address: USDA, Peoria, Illinois.

1354. Leviton, Richard. 1983. Soyfoods market overview. *Whole Foods (Berkeley, California)*. May. p. 24-25.

• **Summary:** Discusses twelve soyfoods trends of interest to retailers. Address: 100 Heath Rd., Colrain, Massachusetts 01340.

1355. **Product Name:** [Tofu, and Tempeh].

**Foreign Name:** Soja-Quark (Tofu), Soja-Brie (Tempeh).

**Manufacturer's Name:** SoyVita Austria.

**Manufacturer's Address:** Herrengasse 30, A-5020 Salzburg, Austria. Phone: (0662) 43 09 85.

**Date of Introduction:** 1983. May.

**New Product–Documentation:** Letter (typed, with signature on letterhead) from Norbert Brunthaler 1983. May 11. "In our last letter we informed you of our intention to start a soyfood company. We have set up a company named SoyVita Austria (Herrengasse 30, A-5020 Salzburg, Austria. Phone: 0662 43 09 85). We produce tofu, tempeh, and have also put up small amounts of miso. In the future we'll try to produce soysauce. For all of our products we use Austrian soybeans, ecologically grown.

Letter from Lawrence Dreyer. 1983. May 19 (which see). Note: Brunthaler's partner was apparently Anton Krizmanics. By 1984 Brunthaler was part of another company named Soyvita Produktions GmbH in Lichtenwörth, Austria. Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Norbert Brunthaler.

Talk with Guenter Ebner of Sojarei Ebner-Prosl. 1990. May 28. He says SoyVita is the second largest tofu maker in Austria, after Sojarei Ebner-Prosl.

1356. Steinkraus, Keith H.; Cullen, R.E.; Pederson, C.S.; Nellis, L.F.; Gavitt, B.K. eds. 1983. Handbook of indigenous fermented foods. New York, NY: Marcel Dekker. ix + 671 p. May. Illust. Index. 26 cm. Microbiology Series, Vol. 9. [200+ ref]

• **Summary:** Contents: Foreword by E.J. Da Silva. Preface. 1. Indonesian tempeh and related fermentations: Protein-rich vegetarian meat substitutes. 2. Indigenous fermented foods involving an acid fermentation: Preserving and enhancing organoleptic and nutritional qualities of fresh foods.

3. Indigenous fermented foods in which ethanol is a major product: Types and nutritional significance of primitive wines and beers and related alcoholic foods.

4. Indigenous fermented amino acid / peptide sauces and pastes with meatlike flavors (p. 433-571): Introduction.

(A) Soy sauces: Japanese shoyu: Koikuchi, usukuchi, and tamari; Chinese chiang-yu, by Tamotsu Yokotsuka (p. 437-51). Taiwanese soy sauce, by Liu (p. 451-56). Malaysian soy sauce: Kicap, by Ong, Mercian, Poesponegoro and Tanuwidja (p. 456-61). Indonesian soy sauce: Kecap, by Saono, Poesponegoro and Tanuwidja (p. 461-65). Korean soy sauce, by Chang (incl. homemade kanjang and meju, p. 465-66). Taiwanese black bean sauce: Inyu, by Jan et al. (p. 466-67). Philippine taosi, by Steinkraus (p. 467).

(B) Fermented soybean pastes: Japanese miso, by Ebine, Shurtleff and Aoyagi (p. 468-79). Indonesian tauco, by Saono et al. and Winarno (p. 479-82). Korean Doenjang and kochujang, by Chang, Shurtleff and Aoyagi (p. 482-87).

(C) Fermented fish-shrimp sauces and pastes (p. 487-526).

(D) Fish-soy sauce and fish-soy paste, by Ismail (p. 526-30).

(E) Miscellaneous Oriental fermentations. Japanese natto (itohiki natto), by Hayashi and Ota (p. 530-45). Japanese Hama-natto (hamanatto) and related products (incl. yukiwari natto, p. 545-47). Chinese red rice: Anka (Ang-kah), by Lin, Su and Wang, Sooksan and Gongsakdi, and Pichyangkura (p. 547-53). Chinese sufu, by Su and L.-P. Lin (incl. nyufu, p. 553-61). Note: Chapter 4 contains about 195 references.

5. Mushrooms: Producing single cell (microbial) protein on ligno-cellulosic or other food and agricultural wastes.

6. General papers related to indigenous fermented foods: Contributions of the western world to knowledge of indigenous fermented foods of the orient, the importance of microbial genetics in indigenous food fermentations, new uses for traditional food fermentations, mycotoxin problems in indigenous fermented foods and new methods for mycotoxin analysis.

Less widely known fermented foods include: Idli, dosa/

dosai, dhokla (with soy, 131-35), enjera (162), tef/teff (164), wot (165), hopper (173), kishra (175), lambic (179), ogi (with soy, 189-98), mahewu (203), gari (208), dahi (249-57), srikhand and lassi (256-57), laban rayeb, laban zeer, yogurt (257-59; cultured soy yogurt is mentioned on p. 616), liban, mast, mass, taw (260), tairu (with soy, 260-65), kishk or kushuk (267), Metchnikoff (266), trahanas or tarhanas (271-76), rabdi, jalebi (275), koumiss (276), kefir (277-80).

Alcoholic beverages and foods: Honey wine, mead, metheglin (305), tej (306), sugar cane wines, basi, bubod, binubudan (307), palm wine or toddy (315-28), pulque (328-37), kaffir (344), tesguino (352), bouza (357), pito (358), busaa (365) sake (373-79), yakju and takju (379), tape = tapeh (381-400), ragi (381), tapuy (400), lao-chao (402), madhu (406), brem (408), tropical vinegar (410-14), nata (414-20), tea fungus (421), nuoc-mam (516-21).

Reviewed in *Scientific American* (Nov. 1983, p. 37), and in *Bio/Technology* (1984, p. 364). Address: Inst. of Food Science, Cornell Univ., Geneva, New York.

1357. Kanasugi, Goro. 1983. Tempe no hôkoku to setsumeï [Tempeh: Report and explanation]. *Zenkoku Shokuhin Shinbun (National Food News)* No. 453. June 1. p. 2. [Jap]

• **Summary:** Tempeh recipes developed and tested by Mr. Kanasugi include karinto, otsumami, subuta-style yakimeshi, curry rice, tempeh sauteed with vegetables or with pickles, gyôza, harumaki (spring rolls), croquettes, cutlets, agé balls fukumeni style, steamed bread, saka manju, egg bread, Kinzanji miso, Tekka miso, sanbaizu aenuta, jashiki-agé, mameita, Inari-zushi, norimaki, oden, fukumeni, shio mamemochi, ohagi, hijiki nikomi, salad, stew, etc.

In Japan it is very difficult to omit all of the meat from a traditional meat recipe, so Mr. Kanasugi leaves in 10-20% for flavor, and substitutes tempeh for the rest. His dream is to establish a chain of specialty tempeh restaurants in Japanese cities. He would like to ask a professional cooking teacher to develop some popular tempeh recipes suited to the needs and tastes of the people.

1358. Krasner, Jeffrey. 1983. Tempeh producers fight image problem. Area company believes in future of soybeans. *Columbia Missourian*. June 1. p. 17A.

• **Summary:** Imagine Foods Inc. in Jamestown, Missouri, was incorporated in Oct. 1982 and is now expanding its small tempeh shop in the homesteading community of Moniteau Farm, says David Carlson, the company president. This will increase production capacity to 5,000 lb/week from 1,000. Costs before expansion began totaled \$25,000. Robert Nissenbaum is the company's vice president. Address: Missouri.

1359. Wagner, Martha. 1983. A growing galaxy of cookbooks helps Americans come to terms with tofu. *Chicago Tribune*. June 16. p. G10. [7 ref]

• **Summary:** "As tofu moves out of the hinterlands of America, as it begins to appear in university cafeterias, chic restaurants and gourmet food magazines, tofu cookbooks are multiplying." At least 20 titles are now available in this category. Those mentioned are: (1) *Tofu Goes West*, by Gary Landgrebe (vegetarian, reflects the common theme). (2) *The Book of Tofu*, by William Shurtleff and Akiko Aoyagi ("put tofu on the American map back in 1975, with more than 500 vegetarian recipes... and beautiful illustrations"). (3) *The Tofu Cookbook*, by Kathy Bauer and Juel Andersen. (4) *Cook with Tofu*, by Christina Clark. (5) *Tofu at Center Stage*, by Gary Landgrebe. (6) *The Great American Tofu Cookbook*, by Patricia Gaddis McGruter. (7) *The Book of Tempeh*, by Shurtleff and Aoyagi.

Concludes with three tofu recipes: Sunny tofu salad. Tofu tartar sauce. Baked marinated tofu.

1360. *Nikkei Sangyo Shinbun (Japan Economics and Industry News)*. 1983. Daizu hakkô no shizen shokuhin. Torigoe Seifun. Tokushu kin tsukai. Kusami naku [A natural fermented soyfood: Tempeh is made by Torigoe Seifun using a special microorganism to get rid of beany flavor]. June 30. p. 15. [Jap]

• **Summary:** Fukuoka prefecture—Torigoe Seifun announced that from the middle of July they will start to make tempeh (tenpe) on a commercial scale and sell it nationwide to institutions. In September it will be sold to retailers—natural food stores, restaurants, department food stores, and supermarkets. The company plans to make and sell 15 tonnes a month. A description is given of how the tempeh is made. In about 1975 Torigoe Seifun started to R&D on tempeh together with the department of Agriculture at Kyushu University. Mr. Heiki, president of Torigoe, thinks tempeh will become a regular part of the food life of Japan.

Note: This story was also run on the same day in other major Japanese newspapers: *Mainichi Shinbun* (p. 8). *Yomiuri Shinbun* (p. 10). *Nishi Nihon Shinbun* (p. 8). A photo of sliced tempeh ovals, cubes, and sticks appeared in the last two articles.

1361. **Product Name:** Tofu Delight Tempeh Salad [Curry, or Herb].

**Manufacturer's Name:** Appropriate Foods, Inc.

**Manufacturer's Address:** 137 New Hyde Park Rd., Franklin Square, Long Island, NY 11010.

**Date of Introduction:** 1983. June.

**Ingredients:** Organic tempeh, brown rice, miso, tamari, herbs, spices.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated.

**New Product—Documentation:** Catalog. 1983. June. In June 1984 changed to New York Soy Deli brand. Label. 1984. June. 1.5 by 3 inches. Black on orange. Distributed from June 1984 to June 1986.

1362. Djurtoft, Robert. 1983. Main report on cowpea tempeh project in Nigerian villages. Unpublished typed manuscript. 13 p. June. Project J.nr. 104.Dan.8/83. Unpublished manuscript. [29 ref]

• **Summary:** Contents: “Tempeh-Products” as food in Nigerian villages. General background. Aim of project. Tempeh. Production of *Rhizopus* culture for making tempeh: Sporulated *Rhizopus* growth on rice, Hibiscus usar method, the original *Rhizopus* culture. Microbiological work. Lipid studies. Vitamin analyses. Main points in collaborative work. Address: Dep. of Biochemistry and Nutrition, Technical Univ. of Denmark, Building 224, DK-2800 Lyngby, Denmark.

1363. Gullo, Karen. 1983. Soyfoods consumption hits all-time high. *Vegetarian Times*. June. p. 12. [1 ref]

• **Summary:** This is a review and summary of *Soyfoods Industry Directory and Databook 1983* by Shurtleff and Aoyagi. 1982 USA production and retail sales figures are given for the following foods: Tofu (27,500 tons, \$50 million in 1981), tempeh (450 tons, \$2 million), and miso (750 tons). Four factors contributing to the growth of soyfoods are summarized. “Low-calorie convenience soyfoods products and frozen, meatless ‘heat and serve’ entrees will play and important role in soyfood’s entrance into the mainstream American diet... Dairy-like soymilk and soymilk shakes, yogurt and ice cream, tofu cottage cheese and tofu burgers will soon be low-cost, low-calorie alternatives to mainstream supermarket fare.”

1364. Herrmann, Karl. 1983. Ueber Sojabohnen und Sojaprodukte [On soybeans and soybean products]. *Ernaehrungs-Umschau* 30(6):175-79. June. [17 ref. Ger]

• **Summary:** Contents: Introduction, nutritional composition, amino acids in soy sauce. Unfermented soy products: Soymilk, tofu (*sojaquark*), aburage, kori-tofu, yuba, kinako. Fermented soy products: Soy sauce, miso (*sojapaste*), tempeh, sufu, natto. Address: Institut fuer Lebensmittelchemie, Hannover Univ., Wunstorfer Str. 14, D-3000 Hannover 91 [West Germany].

1365. Island Spring Inc. 1983. Make a living making tofu! (Ad). *Soyfoods* Summer. p. 72.

• **Summary:** This quarter-page black-and-white ad is for the Soyrafter’s Apprenticeship Program, a professional 21-day intensive “hands-on” course in the commercial production and marketing of tempeh, tofu, soymilk, and related soyfoods. “Start your own soyfoods enterprise!... Join the soyfoods movement!...” Address: P.O. Box 747, Vashon Island, Washington 98070. Phone: (206) 622-6448.

1366. Kronenberg, H.J. 1983. Engineering tempeh incubators. *Soyfoods*. Summer. p. 56-62.

• **Summary:** Contents: Introduction. Overview of tempeh incubators. Incubation requirements. Psychrometric principles. A sample calculation. An integrated incubation system. An illustration shows an integrated incubation room and air conditioning unit. Contains many charts, formulas, and calculations. Address: Director, Soy Systems, Cornell Univ.

1367. Mazzieri, Giovanna Fosso. 1983. Tempeh [Tempeh]. Milan, Italy: Published by the author. 7 p. June. 21 cm. [2 ref. Ita]

• **Summary:** This saddle-stitched booklet, which contains the earliest detailed information about tempeh and tempeh recipes available in Italian, was written and published in a limited edition by the author in June 1983. Page 3 notes that in Milan, tempeh can be ordered from the author, whose phone number is given. She can prepare it on request and can also teach others how to make it. (Note: She made it in her home kitchen, and did not have a commercial shop.) Page 4 gives a nutritional comparison of tempeh and whole soybeans. Pages 5-7 contain 14 Italian-style tempeh recipes.

Letter from Giovanna Mazzieri. 1993. Dec. 20. Two articles encouraged her to write this booklet: (1) Hélène Magarinos. 1982. *Le Tempeh: “Usine” à protéines et vitamines. En provenance d’Indonésie* [Tempeh: A protein and vitamin factory from Indonesia]. *Compas (Le)* (France). No. 21. p. 23-29. Spring. (2) P. Langley-Danysz. 1982. *Une technique séculaire de fermentation du soja* [An ancient technique for fermentation of soya]. *Biofutur*. March. p. 33-35. Address: Via Santa Tecla 3, 20122 Milan, Italy. Phone: 806272.

1368. **Product Name:** Tempeh.

**Manufacturer’s Name:** Nasoya Foods (Distributor). Made in Greenfield, Mass., by The Tempeh Works.

**Manufacturer’s Address:** Mechanic St. Ext. (P.O. Box 841), Leominster, MA 01453.

**Date of Introduction:** 1983. June.

**New Product–Documentation:** Poster. 1983; Soyfoods. 1983. Summer. p. 52; Ad in Soyfoods. 1984. Summer. p. 3. Soya Bluebook. 1987. p. 94.

1369. **Product Name:** Tempeh Burgers.

**Manufacturer’s Name:** Nasoya Foods (Distributor). Made in Greenfield, Mass., by The Tempeh Works.

**Manufacturer’s Address:** Mechanic St. Ext. (P.O. Box 841), Leominster, MA 01453.

**Date of Introduction:** 1983. June.

**Ingredients:** Organic soy tempeh, natural soy sauce, herbs, spices.

**Wt/Vol., Packaging, Price:** 7 oz.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1983, undated. 4 inches square. Yellow, black, blue, green. “100% natural.”

1370. *Soyfoods*. 1983. The Miami soyfoods scene [Heartsong Tofu, Sunshine Soy, Swan Foods, Swan Gardens, Unicorn Village, Oak Feed Store]. Summer. p. 38-39, 43.

• **Summary:** In Miami, three major tofu companies make about 25,000 pounds a week of vacuum packed tofu, prepared tofu products, and tempeh.

Brightsong Tofu: Bob and Toni Heartsong began making tofu in “1976 in a south Miami cottage style tofu shop which lasted until 1978. Making 900 pounds of hand-made tofu every week, the Heartsongs pioneered the Miami market, fully one year before the legendary and short-lived Swan Foods was opened in 1977. In January 1978 the Heartsongs moved to Redwood Valley, California, to help launch Brightsong Tofu. Meanwhile in 1977 they had written and Banyan Books had published, *The Heartsong Tofu Cookbook*, one of the first designed-for-tofu cooking guides. Bob Heartsong then worked in Hawaii for Mrs. Cheng’s Soybean Products where he made 600 pounds of tofu daily.”

Finally, the Heartsongs, peripatetic tofumakers, returned to Miami and in January 1982 opened Heartsong Tofu, a “1,200 square foot plant where today they produce 4,500 pounds of vacuum packed tofu each week (with an 18-day shelf life).” The company employs 6 full-time and 2 part-time workers. A list of their tofu products and equipment is given. The Grand Union supermarket chain sells \$2,200/week of their tofu products.

“Sunshine Soy, owned and managed by Danny Paolucci, occupies 2,500 square feet, in suburban Coral Gables, of what once was a Borden’s walk-in cooler... Paolucci opened Sunshine in June 1980, a company which today produces 4,000 pounds of tofu and various secondary products every week.

“Previously Paolucci served as production manager for Swan Foods until its closing in December 1978. [Note: Swan Foods opened in 1977.] Paolucci often measures his Sunshine Soy’s sensible survival against Swan Foods exciting but disastrous history. Swan Foods was, unfortunately, a textbook example of uncontrolled growth marked by nonmanagement: no competition, distribution by the formidable Tree of Life, a wildly innovative product line, a quadrupling of sales in the first 18 months, \$2,200 in weekly sales—ending in a disheartening crash. Their product line included baked, marinated, regular, and caraway tofus, soymilk (1,000 quarts weekly), tofu cashew pie, tofu dips and salads, soy yogurts, and soymilk shakes.

“Sunshine Soy, which employs four workers, has a privately labelled vacuum packed tofu (Golden Harvest brand) in most of Florida’s 100 General Nutrition Centers; Tree of Life, out of St. Augustine, handles the distribution.”

Swan Gardens: “Commanding the top tofu market position in Miami, Jocelyn and Richard McIntyre’s Swan Gardens, which moved to south Florida in 1979 from

Montana, produces 15,000 pounds each week of vacuum packed tofu. Their 10,000 square foot plant uses only 3 production workers, each working 10 hour days, 5 days weekly—a model of streamlining. In March 1982 Swan introduced their boxed tofu (see New Products, this issue) featuring their firm (16.6% protein) tofu which sells for \$1.19 a pound in produce at Winn Dixie. A major Florida distributor moves an estimated 5,000 pounds of their dealer brand every week as far north as Washington, DC. Recently Swan introduced an okara tempeh with a two week refrigerated shelf life, and this product joins their Spicy Soysage and Baked Tofu, also vacuum packed. Swan Gardens tofu is pre-dated 4 weeks for the supermarkets but McIntyre claims it remains microbially sound for 6 weeks. The company is comfortably profitable.”

Photos show: (1-2) Bob Heartsong, with tofu pressing in stainless steel forming boxes, and a close-up of his line of products. (3-4) Danny Paolucci and a close-up of his line of products. (5) A close-up of Swan Gardens’ products.

“On the retail natural foods level, four major stores share the bulk of Miami soyfoods sales. The Unicorn Village in North Miami Beach is stocked with 25 soy products... The Unicorn itself prepares a Tofu Cottage Salad, Eggless Egg Tofu Salad, Baked Tofu, and Tofu Onion Dip in their restaurant for retail sale in their adjoining store.” Also discusses: The Oak Feed Store, a macrobiotic retailer in Coconut Grove (carries 44 soy products). Sundance Natural Foods in downtown Miami (many tofu-based deli items prepared in their kitchen). Nature’s Touch in Miami.

1371. *Soyfoods*. 1983. Wildwood’s sandwich power [Tofu sandwiches from Wildwood Natural Foods in Fairfax, California]. Summer. p. 42.

• **Summary:** “Wildwood Natural Foods has carved out a successful market niche in the competitive Bay Area soyfoods scene with their daily delivery of fresh tofu sandwiches and tempeh salads. The three year old company has built its reputation and sales volume on same-day freshness as all products reach the stores by 12 noon on the same day as manufacture. Wildwood’s concept, backed by their in-house tofu shop, is eminently worth imitating in other similarly strong retail marketplaces.

“The Wildwood shop begins bustling with sandwich-making activity at 5 a.m. six mornings a week as about a dozen (out of a 35 member staff) workers prepare the daily quota of 800 sandwiches completing them by 10 when the truckers take them down to San Francisco, about 60 minutes drive away. With their 340 square foot steam kettle tofu shop, Wildwood, located in Fairfax, California, produces 2200 pounds of nigari tofu every week of which one half is used for sandwiches, the other half for distribution as bulk tofu under the “UFO” brand name (“us feeding ourselves”). In the busy summer months, sandwich production can easily soar to 6000 a week; surprisingly the returns on day-old

sandwiches is only 5%.

“Under the guidance of Paul Duchesne and Bill Bramblett, the company was launched in August 1980 [Note: Actually that was when Wildwood began manufacturing tofu, on 8 Aug. 1980; they had incorporated in April or May 1980]. Duchesne had been supplying Marin County with his brown rice and tofu sandwiches since 1975 [Note: Actually since late 1977] when Bramblett suggested they expand his concept, make tofu, and distribute a wider line of tofu sandwiches.

“Today in mid-1983 (with partners Bramblett, Frank Rosenmayr, and Paul Orbuch) Wildwood distributes an impressive line of sandwiches (which retail for \$2.25 each) including Avo-Tofu, Brown Rice & Tofu, Mustard Brown Rice & Tofu, Curry Brown Rice and Tofu, Sushi, Tofu Steak, Supreme Bean Tempeh Burger, Hijiki Rice Pie, and Seventh Heaven Bread. They also make prepared salads, packaged in 12 ounce containers which retail for \$2.25, including Curry Tofu, Tofu Vegetable, Temptation, Potato, Hummus, Tabooli, and Good Puddin’, in addition to bottled plain and honey-vanilla soymilk. The salads are dated for 7 days and the sandwiches for 1 although they stay fresh for 2 days.

“To service their Bay Area accounts, Wildwood employs four drivers who ply four different routes, which often take them further north to Santa Rosa or south to Santa Cruz. The limit to fresh sandwich distribution, Paul Orbuch explains, is simply how far they can be transported after production and before 12 noon, the cut-off period as the lunch hour business is crucial to retail sandwich sales.

“Wildwood’s distribution system also handles local natural foods products such as Grain Dance seitan, Evolutionary Bean’s Not Cheesecakes, and Solar Tacos (with soy protein). Wildwood’s line, states Orbuch, is now moving into supermarkets, their Brown rice and Tofu sandwich accounts for 30% of total sandwich sales, and their products are handled by at least two area college lunch concession stands. Wildwood has been noted for their novel pedal-powered Tofumobile which they use in the summertime to bicycle sandwiches around to stores in trendy Marin County.”

1372. *Soyfoods*. 1983. The soyfoods industry on display [at Natural Foods Merchandiser Expo in Anaheim, California and Whole Life Times Expo in San Francisco]. Summer. p. 7.

• **Summary:** Sixteen soyfoods companies exhibited at Anaheim to 7,600 paying visitors. “Six soyfoods companies shared an official Soyfoods Association booth, where they retailed their own products and provided liberal tasting samples as well. Participants included Legume Inc. (tofu pizza, tofu lasagna), Farm Foods (Ice Bean, in cones), Quong Hop (tofu burgers, tofu canolli, soymilk), Sonoma Specialty Foods (tofu salads, tofu cheesecakes), Laughing Moon (vegetable tofu turnovers), and San-Jirushi International

(samples of San-J Real Tamari). The Association booth, one of 10 food catering booths at the Expo, was ‘packed solid through the whole show,’ reports Farm Foods’ Robert Tepper.”

“William Shurtleff gave a one hour speech and slide presentation on soyfoods to an enthusiastic audience.”

Other interesting companies include: Pacific Tempeh, Light Foods, Essential Foods, Garden of Eatin’, Living Lightly, Kibun, Westbrae Natural Foods, Edward & Sons, Cedarlane Foods, Morinaga, Worthington Foods.

Interesting products: Light Links tofu “hotdogs,” Ravioli, Tofumale Tamale, Tempehroni Pizza, Chili Con Tempeh, Tempeh Enchilada.

Photos (without captions) show: (1) Danielle Lin of Laughing Moon. (2) Steve Snyder of Hinode. (3) The Morinaga booth, with Mr. Seishiro Ikegami.

1373. **Product Name:** [Torigoe Gold Tempeh (Semi-Prepared Fingers, or Patties)].

**Foreign Name:** Goorudo Tenpe / Gold Tempe.

**Manufacturer’s Name:** Torigoe Seifun (Torigoe Flour Milling Co.).

**Manufacturer’s Address:** 6-5-2 Hakozaki-Futo, Higashi-ku, Fukuoka, Kyushu 812, Japan. Phone: 092-651-3269.

**Date of Introduction:** 1983. June.

**Ingredients:** -

**New Product–Documentation:** Talk with and Label from Kazuhiro Takamine, from the R&D Dept. of Torigoe Flour Milling Co. Ltd. 1984. Feb. 5. This was Japan’s first commercial tempeh product, launched by Torigoe in June 1983. The ‘tempeh fingers’ were dipped into a batter, dusted with bread crumbs, packed in a shallow tray, together with 2 packets of tartar sauce, and sold frozen. The consumer would then deep fry them to serve crisp and crunchy with the sauce. The patties were made by pressing the ground trimmings from the patties into patties, then proceeding as for the fingers.

Five-page color brochure (in Japanese) titled “Torigoe Tempe.” Brought by Kazuhiro Takamine. 1984. Feb. 4. New product. Beloved in the 21st century, born from soybeans, 100% fermented natural food. Shows tempeh fingers, patties, and cubes—with recipes.

1376. Kanasugi, Goro. 1983. Re: Thanks for meeting with the Natto Association in Japan to discuss tempeh. Letter to William Shurtleff at Soyfoods Center, July 5. 1 p. Handwritten, with signature. [Jap]

• **Summary:** On 2 July 1983 an interesting meeting was held at the Natto Association headquarters in Tokyo, Japan. Five leaders of the Association, Dr. Teruo Ohta and Kiyoaki Katoh from the National Food Research Institute (NFRI), William Shurtleff from Soyfoods Center, and Mrs. Yasuko Torii (author of books on natural foods and farming) met for 6 hours to discuss developments with tempeh in the USA and strategies and tactics for introducing tempeh to Japan. This is a thank-you note for attending that meeting and the dinner afterwards. Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan. Phone: 048-644-1323.

1377. *Zenkoku Shokuhin Shinbun (National Food News)*. 1983. Tenpe nattô kenkyû keika to suishin kikaku [Progress in research on "tempeh natto" and plans to make it succeed]. No. 456. July 11. p. 6. [Jap]

• **Summary:** Dr. Ohta studied tempeh for 30 years under Dr. Masahiro Nakano. The Japanese Natto Association is trying to obtain a patent on the tempeh making process, and hopes to publish a tempeh cooking pamphlet. Address: Japan.

1378. *Zenkoku Shokuhin Shinbun (National Food News)*. 1983. Shisatsu Haken-in kikoku hôkoku Zennôren Tenpe kenkyû-kai [The Japan Natto Association's Tempeh research group presents its homecoming report after being sent to study tempeh]. No. 456. July 11. p. 6. [Jap]

• **Summary:** On 18 June 1983 the group had a regular meeting and listened to the report of the tempeh study group that has just returned from Indonesia. Mr. Ose, the chair, told the members that it is unfortunate that the mass media are doing stories on tempeh before it is firmly established in and adapted to Japanese culture. He asked members of the group to please refrain from publicizing tempeh before it is ready.

1379. *Toyo Shinpo (Soyfoods News)*. 1983. Beikoku de no daizu shokuhin no genjô. Beikoku wa ima tenpe buumu. Nihon demo chikaku ryûkô. Amerika de katsuyaku-chû no Shurtleff fusai ni kiku [The current status of soyfoods in America, where there is now a tempeh boom. Will it soon become popular in Japan? Let's ask the Shurtleffs, who are at the center of the activity in America]. July 21. p. 30-31. [Jap]

• **Summary:** Photos show Shurtleff and Aoyagi. Many other photos (from Soyfoods Center color slide sets) show tempeh and other soyfoods in America.

1380. Iggers, Jeremy. 1983. Soy Plant struggles to keep its '60s ideals in '80s business world. *Detroit Free Press*. July 31. p. 6G.

• **Summary:** About The Soy Plant in Ann Arbor, Michigan. Includes discussions with Steve Fiering, Rick Whealey, Jane Southwell, Geof Beck (production co-ordinator), Carolyn Roi (marketing co-ordinator), and Steve Fiering (one of the founders). Hours and wages have been cut—wages from \$5/hour to \$3.50/hour last fall because the business was losing money. Difficulties include inefficient equipment, too little capital, and lack of professional management. Federal corporate taxes went unpaid for three years before anyone noticed; it then took years to pay both the taxes and the penalty.

The company got about \$20,000 in loans from members of the community. They paid interest in the form of one pound of tofu a week, but the \$18,000 they eventually paid in free tofu was a huge drain on the struggling enterprise. Last may the workers decided the tofu interest payments had to stop. Letters were sent to all lenders explaining the financial difficulties and offering three choices: They could forgive the debt, take payment of the principal in tofu, or put their names on a list for eventual repayment. It was a hard choice for the company to make.

Now things are looking up. Several new products are selling well: Tempeh-filled tacos, Soysage, tempeh burgers, and spiced tofu.

1381. Fukushima, Danji. 1983. Fermented soy foods in the United States. *INTSOY Series* No. 25. p. 117-19. B.J. Irwin, J.B. Sinclair, and Wang Jin-ling, eds. Soybean Research in China and the United States (College of Agric., Univ. of Illinois at Urbana-Champaign).

• **Summary:** Although chemically hydrolyzed soy sauce is widely consumed, fermented soy sauce has an annual growth rate of 15%. La Choy and Chun King, the two largest producers of chemical soy sauce, are assumed to have a combined annual production of 20,000 kiloliters. Most of the fermented soy sauce is produced by Kikkoman Foods, Inc. and annual production has reached 19,000 kiloliters.

Soy sauce manufacturing consists of three main processes: koji making, brine fermentation, and refining. Major improvements in the soy sauce process are (1) high

temperature short time cooking of the soybean flakes to increase the yield, (2) use of an artificial mutant of *Aspergillus sojae* which produces twice as much proteolytic enzyme, (3) use of automatic koji making equipment, and (4) use of *Pediococcus halophilus* and *Saccharomyces rouxii*, and proper temperature control during brine fermentation. Address: Kikkoman Foods, Inc., Walworth, Wisconsin.

1382. **Product Name:** Tempeh.

**Manufacturer's Name:** Kingdom Foods. Later renamed The Tempeh Shop. Merged with Virginia Soyworks in April 1987.

**Manufacturer's Address:** 1717-A Allied Lane, Charlottesville, VA 22901. After spring 1988: Route 1, Box 193, Faber, VA 22938. Phone: 804-361-1543.

**Date of Introduction:** 1983. July.

**New Product–Documentation:** Talk with Mark Kruger. 1990. Sept. 10. Virginia Soyworks, located on his property, is now for sale. He and others are thinking of buying the company. When Robert Graham owned the company, Robert made tempeh for a while, then discontinued it.

Talk with Shag Kiefer. 1990. Sept. 11. (Phone: 804-293-9244). In about 1983 Eileen Judge moved her tempeh company, Kingdom Foods, from Washington, DC, to Charlottesville, Virginia. She thus became the first tempeh company in Virginia. Shag found her a location in Charlottesville. Many people had asked Shag to make tempeh at Virginia Soyworks, but Eileen requested that he not do so so that she could sell her tempeh in Charlottesville. She continued to run her company for several years. She and Shag shared her cooler and some distribution. She then sold the business to Anne Lawrence (Anne presently has no phone; Eileen's phone is 804-758-3189). Anne had a degree in engineering and lives out in the woods where she is clearing the land and building her own house. At one point Anne changed the company name to "The Tempeh Shop." She also added one or more new products, including a new type of tempeh salad. Ann ran the shop for several years, then when Robert Graham bought Virginia Soyworks (a tofu company) in April 1987, he also bought the tempeh company. At that point Ann stepped out but served as a consultant for a while. Graham hired a new tempeh maker. Then in the spring of 1988 both companies were moved to the same location in Faber, Virginia, about 20 miles southwest of Charlottesville. After that, Shag helped with the production of tempeh and tempeh salad, but it stopped about 6 months after the move, at about the time Shag left. It was hard to keep training people and to make so many products.

Talk with Eileen Judge, founder of Kingdom Foods. 1990. Sept. 25. She moved her tempeh company to Charlottesville, Virginia, from Washington, DC, in July 1983. She sold the business to Anne Lawrence in April 1986.

1383. **Product Name:** Tempeh Burgers.

**Manufacturer's Name:** Soy Plant Co-op Inc. (The).

**Manufacturer's Address:** 711 Airport Blvd., Ann Arbor, MI 48104. Phone: (313) 663-8638.

**Date of Introduction:** 1983. July.

**New Product–Documentation:** Iggers, Jeremy. 1983.

*Detroit Free Press*. July 31. p. 6G. "Soy Plant struggles to keep its '60s ideals in '80s business world." Several new products are selling well, including tempeh burgers.

Soyplant pickup distributor price list effective April 16, 1984. Lists Tempeh Burgers, sold 3 per package or in bulk (50 singles).

1384. Kronenberg, Hananya. 1983. Re: Research and publications on meitauza fermentation. Letter to William Shurtleff at Soyfoods Center, Aug. 1. 2 p. Typed, with signature on letterhead. [1 ref]

• **Summary:** Unfortunately he does not have anything to send from his IFT presentation on meitauza. However, he plans to publish a scientific article in the *Journal of Food Science* sometime this year. He has not yet finished his thesis, but hopes to have ready (if all goes well) by the end of September.

He wrote an article on a tempeh incubator in *Soyfoods* magazine (issue No. 9). He and his wife enjoyed the article on yuba. He still is thinking of writing a book related to soyfoods. Address: Soy Systems, 714 N. Aurora, Ithaca, New York 14850.

1385. Robertson, Valerie. 1983. Soyfoods Unlimited is now making its own tempeh starter (Interview). *SoyaScan Notes*. Aug. 2. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Soyfoods Unlimited used to spend \$250/week on tempeh starter from GEM Cultures. Hananya J. Kronenberg helped them to set up their own lab at a cost of about \$5,000 including his consulting fee of \$1,700. Now it takes two people 6-8 hours each, once a month, to make a month's supply of tempeh starter. They have had no problems with the starter and it was not difficult to set up the lab. Kronenberg set up Panda Foods in New York with a lab before he set up that of Soyfoods Unlimited.

Travis Burgeson of Pacific Tempeh has long made his own tempeh starter inside a glass box. Valerie thinks that GEM Cultures' tempeh starter is better than that made by The Tempeh Lab / Farm Foods in Tennessee. Address: Soyfoods Unlimited, San Leandro, California.

1386. Woodcock, Chris. 1983. Tempeh Works moving to downtown location. *Recorder (Greenfield, Massachusetts)*. Aug. 4. p. 1.

• **Summary:** Tempeh Works is moving into a former truck terminal at 74 Fairview St. The owner, Michael Cohen, says he hopes the firm will be in operation at the new site by mid-September 1983. The new building contains 4,000 square feet of space, more than three times the 1,200 square feet in

the existing plant on French King Highway. "Renovations on the Fairview Street building began this week... The cost of renovations to the one-story building will be \$27,000 with the total cost of the relocation about \$40,000, Cohen said. The firm plans to lease the building for a year and then purchase..."

"During the first three years of operation, which Cohen described as 'incredible struggles' the firm lost money. But in the past year, Cohen said the company has begun to show a profit. In the first year, when there were just three employees at Tempeh Works, sales totaled \$65,000, Cohen said. In the operating year that ended June 30, sales had increased to \$265,000. Cohen projects \$350,000 in sales in the current year. The company at present has seven full- and six part-time employees." Address: Staff reporter.

1387. *Zenkoku Shokuhin Shinbun (National Food News)*. 1983. Zennôren Ose kaichô kôki kôsô [Japan Natto Association's chief for the second half of the year, Mr. Ose, and his plan]. No. 458. Aug. 11. p. 1. [Jap]

• **Summary:** Mr. Ose would like to get a patent on the tempeh process which the association has developed.

1388. Torii, Yasuko. 1983. Re: New developments with tempeh and tofu in Japan. Letter to William Shurtleff at Soyfoods Center, Aug. 14. 2 p. Typed, without signature (carbon copy). [Eng]

• **Summary:** Tempeh: "(1) There was a seminar on soyfoods on Aug. 5. The topics were: 'Tofu and Japanese foods in the U.S.,' by Prof. Okubo. 'Does tempeh fit into the Japanese diet,' by Prof. Katsuyoshi Tsujimura of Tokyo. A party was held after the seminar to celebrate the 15th anniversary of the Soyfoods Development Association. Many businessmen showed interest in tempeh.

"(2) Mr. Kato of the Ministry of Agriculture [*Nôrinsho*] arranged for a meeting for Nihon Kogyo KK and Kyodo Press on Aug. 9. I prepared soy and okara tempeh, and Mr. Kato brought Torigoe's tempeh. According to Mr. Kato, articles on tempeh will be distributed to many local papers thru Kyodo Press. Nihon Kogyo seems to be interested in producing [tempeh] starter. A few researchers are going to visit the U.S. in September to attend a convention and they hope to visit some tempeh and tempeh starter factories in California. Is it possible to make such arrangements for them?

"(3) Mr. Sakata of Shibata Shoten [a publishing company] visited Natto Kumiai [Japan Natto Association] and attended the soyfoods seminar. A final decision concerning publication will be made in a few days.

"(4) Natto Kumiai has distributed tempeh cultures to some members to study production. A meeting is scheduled in September and I was asked to attend and talk about tempeh."

Also discusses: Publication of The Book of Kudzu

in Japanese. The Book of Tofu on NHK-TV. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

1389. Kanasugi, Goro. 1983. Re: Work with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, Aug. 23. 2 p. Typed, without signature. [Jap]

• **Summary:** Ose Noboru, head of the Natto Assoc. is very ill so work to introduce tempeh to Japan is not advancing well. In 1981 Teruo Ohta brought tempeh back from Indonesia and introduced it to the Natto Assoc. in May when he lectured about it at Hanamaki hot springs (*onsen*) in Iwate prefecture. In Sept. 1981 he presented another lecture on tempeh to the Association at Yamanashi prefecture. In May 1983 at the Ueno restaurant (*Seiyoken*) in Tokyo the Natto Assoc. decided to pursue tempeh research and popularization, including recipe testing. Ohta and Kanasugi will be advisors on the project. Mr. Ebara is in charge of tempeh cultures. In June 1983 the Natto Association sent a team of 3 men to Indonesia to study tempeh. Mr. Kanasugi, Mr. Hisao Nagayama (a natto historian), and Mr. Kikuo Chiba spent 5 days in Jakarta, Bogor, and Yogyakarta, looking at tempeh production and visiting KOPTI. The trip was successful and on their return (on June 18) they presented a report. In July the Natto Assoc. founded a research laboratory in Omiya city (Saitama prefecture) and at the end of July it started to produce tempeh spores for members of the Association only, and (perhaps) to introduce tempeh as "tempeh natto" in Japanese confections and as a meat extender. The year 1983 has been proclaimed as the "first year of tempeh in Japan" (*Tenpe Gannen*). Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan. Phone: 048-644-1323.

1390. **Product Name:** [Tempeh].

**Manufacturer's Name:** Consuma B.V.

**Manufacturer's Address:** P.O. Box 175, Christiaan Huygensstraat 10, 2665 KX Bleiswijk, Netherlands.

**Date of Introduction:** 1983. August.

**New Product-Documentation:** Letter from Henk P.M. Rigter. 1983. Started 15 Aug. 1983. Interview in Soya Foods (ASA, Europe). 1984. Nov. p. 6. "Consuma started on 15 Aug. 1983 with the production of tempeh..."

1391. **Product Name:** [Marusan Sukoyaka (Healthy) Tempeh].

**Foreign Name:** Marusan Sukoyaka Tenpe.

**Manufacturer's Name:** Marusan-Ai Co., Ltd.

**Manufacturer's Address:** Aza-Arashita, 1 Jungi-cho, Okazaki city, Aichi prefecture 444-21, Japan. Phone: 0564-45-3112.

**Date of Introduction:** 1983. August.

**Ingredients:** Soybeans, culture.

**Wt/Vol., Packaging, Price:** 250 gm vacuum pack.

**How Stored:** Frozen.

**New Product–Documentation:** Letter from Naoki Kawai. 1984. Gives a brief history of Marusan’s work with tempeh. Their first commercial tempeh product was launched in Aug. 1983, a few months after Torigoe’s tempeh product. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 68-70. Soya Bluebook. 1987. p. 95.

Color leaflet. 1989, received. 5 by 7 inches. Full color. 4 panels. Front panel shows sliced tempeh, fried tempeh cutlets, and kabobs, and nori-wrapped tempeh fingers. Inside gives nutritional information. Back panel gives 6 Japanese style tempeh recipes with a color photo of each finished dish. Label received from Ebata sensei. 1989. Aug. 4.25 by 3.12 inches. Green on white. Self adhesive. “Fermented soyfood. Please store at -18°C.” Illustration of 4 soybean leaves. Note: This tempeh is quite thick, 1 to 1 1/8 inches thick.

Form filled out by Naoki Kawai. 2001. June. Marusan-Ai stopped making tempeh in 1990. Mr. Kawai still works for Marusan-Ai; the address has not changed.

1392. Oshikiri, Susumu. 1983. Okara o shuzai to suru shokuhin no seihô [Process for manufacturing a food in which okara is the main ingredient (Okara tempeh)]. *Japanese Patent Application* 155,358. Application filed 24 Aug. 1983. [Jap]\*

1393. Shurtleff, William. 1983. Log of soyfoods research trip to Hong Kong, China, Singapore, and Japan: May 29 to July 10, 1983 (Unpublished report). Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 117 p. Aug. Unpublished manuscript.

• **Summary:** Contents: Hong Kong: K.S. Lo and Vitasoy. May 29 (Sunday)–Plane from Hong Kong to Guangzhou City (Canton) in Guangdong (Kwantung) province. China: Guangzhou (May 29-30), Zhengzhou, Beijing, Harbin, Beijing #2 (Scurlock, Chen Xi-Hau, Joe Rakosky, Terrence Foley, local markets, vegetarian deli). Singapore: STS and Anders Lindner, Alan Yeo, American Soybean Association (Don Bushman, Sabine Lee, Lars Wiederman).

Japan: Seiyu department store, Kibun, ASA Tokyo (Ms. Kojima), Kanji Tsuchiya, Japan Soymilk Assoc., Sano Rinji, Kikori, Prasad and natural foods, Goro Kanasugi and tempeh, Tsuchiya soymilk #1, Kikkoman at Noda (Yokotsuka #1, Mizunuma, Plant #6 modern, Yokotsuka #2, Goyo Gura, Noda Museum, Noda Library, Mr. Ichiyama), Morinaga, Kikkoman Tokyo, Japan Packaged Tofu Assoc., Natto statistics, Asahimatsu, Natto-tempeh meeting, Mr. Katoh, Nakano Masahiro, Mr. Iitsuka of Kikkoman, Daizu Shokuhin Kaihatsu, Tsuchiya #2, Nagayama, soynuts, oil association, kinako, Ishige, Mr. Mori and soy sprouts, Katoh, Arai-san, Kodansha, Nagayama and kinako, Dr. Nakano #2, Arai shoyu, Tsuchiya #3, Tenmi. Address: Lafayette, California.

1394. Shurtleff, William; Aoyagi, Akiko. 1983. The book of

tofu. 2nd ed. Berkeley, California: Ten Speed Press. 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. Aug. 28 cm. [321 ref]

• **Summary:** Three parts of this new edition have been extensively revised and updated: (1) “Tofu Makers in the West” (p. 313-16) has been updated and now includes 310 tofu producers in the Western world (with the name, address, phone number, and contact person for each company), arranged by state or foreign country. This is the only tofu book containing such a directory.

(2) The “Bibliography” (p. 319-324) has been a greatly expanded and updated. It now contains 321 publications on tofu, including all known scientific and nutritional journal articles, the 33 books about tofu written in North America since publication of the first edition of *The Book of Tofu* in 1975, and other key articles and books about tofu from East Asia and Europe, the earliest from Europe dating back to 1613!

(3) An updated listing of “People and Institutions Connected with Tofu” in the U.S. and around the world, including researchers, major tofu manufacturers in Japan, trade associations, publications, equipment dealers, and tofu apprenticeship programs.

The “Glossary” (p. 325-27) has been condensed to make space for the expanded bibliography and back matter. There is a new page about the Soyfoods Center (p. 333). The page “About the Authors” (autobiographical) has been expanded, and the photograph has been updated. “Sending Tofu to the Four Directions” (p. 335) and the inside rear cover have both been updated. Still contains 500 vegetarian recipes—both western and eastern style.

Note: A news release of 17 Aug. 1983 states: “The Book of Tofu, which introduced the Western world to tofu and inspired the founding of more than 200 tofu shops and soy dairies in North America, has sold 340,000 copies to date, making it the world’s best-seller on this popular new ‘protein source of the future.’” Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1395. Leviton, Richard. 1983. Report on soyfoods research trip across America, September 1983. Colrain, Massachusetts. 8 p. Unpublished typescript.

• **Summary:** Visited or discusses: Grainnaissance (makes amazake and mochi), Brightsong (Dik / Richard Rose), Sonoma Specialty Foods (California), Northern Soy (Rochester, New York), Southwest Soyfoods (Richard Jennings), White Wave (Steve Demos, Boulder, Colorado), Quong Hop & Co. (South San Francisco, California), Modern Fare (Loveland, Ohio), Soyfoods Unlimited (Valerie, Gary and John Robertson, San Leandro, California), Soyfoods Center (Lafayette, California), Soyfoods of America (Doug Fiske and Ken Lee, Los Angeles), Real Foods (Polk St., San Francisco), Tumaros (Los Angeles), Unicorn (Terry Dalton, Florida), Japantown and Rainbow

Grocery (San Francisco), Berkeley Natural Grocer and Berkeley Co-op (Bob Gerner, California), Hinode Tofu Co., Edensoy, Farm Foods, New England Soy Dairy, and Nasoya (Leominster, Massachusetts). Legume (Gary & Chandri Barat, New York City), Lotos / Lotus Cafe (Greg Weaver, Rochester, New York), NRRC (Hesseltine and Wang),

Out of business: Michiana Soyfoods, St. Ignatius shop, Sunshine Soy, Heartsong, probably Joy of Soy and a Korean shop in Salt Lake City, Utah.

Concerning soy milk: 10. In Oak Park, Illinois, a natural foods retailer says Edensoy outsells San-J by two to one. (Note: San-J imports "To-Neu Natural Soy Beverage" made in Japan by Kibun). Teenagers buy the carob Edensoy along with popcorn in the store, and use it as a soft drink. But most retailers say the Eden package [stand-up foil retort pouch] as a disaster; it is impossible to open without scissors, then if you squeeze, it spills out. San-J [in a Tetra Brik carton] is convenient but the taste is poor and the front graphics are confusing—too many words and images. According to Shurtleff, both are inferior products compared to Japan's best.

22. Concerning Edensoy at the NNFA show in Denver, Colorado: Mike Potter says "it went over great." He sold two container loads right away. People liked the package and the taste. About 4,000 people sampled it and were "generally amazed." The results were as good as they could want; it generated interest and excitement. Now they are setting up the distribution system. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1396. Leviton, Richard. 1983. Soyfoods in the heartland: A colorful program on tofu and tempeh, by Richard Leviton (Poster). Colrain, Massachusetts. 1 p. Undated (Sept/Dec). 11 x 17 inches.

• **Summary:** This poster, printed with black ink on off-white paper, was used to advertise a series of programs that Richard Leviton gave in the Midwest in the fall of 1983. The text states: "Editor / publisher *Soyfoods* magazine, Executive Director Soyfoods Association of North America, & widely published author on soyfoods.

"At the program you will... Learn how to make tofu and tempeh at home.

"Learn how to set up your own kitchen soy deli—from tofu cheesecake to tempeh burgers.

"Enjoy a color slide show: over 200 stimulating images.

"Meet soyfoods, today's No. 1 versatile, low cost protein.

"Discover nutrition and convenience in soyfoods—fast foods to gourmet.

"Sample delicious tofu or tempeh recipes."

Near the bottom are blank spaces to fill in the date, time, admission fee, place, and sponsored by.

Color photos show: Portrait of Richard Leviton with impish grin. A tempeh burger with all the trimmings.

Address: 100 Heath Rd., Colrain, Massachusetts 01340.

1397. McDougall, John A.; McDougall, Mary A. 1983. The McDougall plan. New Century Publishers Inc., 220 Old New Brunswick Rd., Piscataway, NJ 08854. 340 p. Foreword by Nathan Pritikin (8/83). General index and recipe index. 24 cm. [804\* ref]

• **Summary:** This carefully researched and documented book and cookbook argues convincingly in favor of a vegan diet that uses no animal products, that is low in fats, calories, and sodium, and rich in complex carbohydrates. Pages 89-90 give the percentage of calories from fats in various foods under 3 categories: low-fat vegetable foods (incl. oatmeal 16% of calories from fat, apple 9%, broccoli 9%), high-fat vegetable foods (incl. avocados 88% of calories from fat, almonds 82%, peanut butter 77%, sunflower seeds 76%, tofu 53%, soybeans 40%, wheat germ 27%, tempeh 25%), and animal foods (bacon 94%, t-bone steak 82%, frankfurters 80%, cheddar cheese 73%, egg 65%, tuna in oil 64%, milk [whole 3.5% fat] 49%, ice cream 49%, milk low-fat 31%, chicken [light-skinned] 18%, tuna in water 6%, buttermilk 3%, skim milk 2%).

Note: The author, however, argues repeatedly against the use of tofu and tempeh based on the "percentage of calories from fat" concept. His figures are correct but we and many nutritionists feel the basic concept, originally popularized by Nathan Pritikin, overlooks two key points: (1) the percentage of water in the food, and (2) the average serving size.

Page 198, in a section on rich [high fat] plant foods, states that tofu, tempeh, soybeans, textured vegetable protein (TVP), and miso contain excessive fat and most are high in calories. "The rich plant foods may account for a small portion of your daily food (less than 10 percent of your calories per day) but only after you have attained the level of health you are striving for. In general, these foods are more harmful than health-supporting. Never eat these foods if you have problems with your health that remain unsolved. If you begin using this group of foods and find that you are also gaining weight or getting back some of your old ailments, then stop eating these foods immediately."

Appendix I, p. 322-28 contains a table listing the percentage of calories from protein, fat, and carbohydrates in many foods. It also gives the calorie concentration (in calories per gram) for each food; foods with a low concentration aid in weight-loss programs. Tofu has only 0.72 calories per gram, and soy sprouts only 0.46; both are low. No soyfoods are used in the many recipes in this book.

Note: According to a colleague, John McDougall suffered a stroke at age 19, which led to much of his current interest in diet and health. He is not a Seventh-day Adventist. Address: 1. M.D. Both: Near Kailua Bay, Oahu, Hawaii.

1398. **Product Name:** [Soya Tempeh].

**Foreign Name:** Soja Tempeh.

**Manufacturer's Name:** Paul Stuart Zacharowicz. Renamed Vollwert und Wertvoll by June 1984. Later renamed Naturliche Lebensmittel. Named "Von Anfang an Natur, Paul Stuart's" by Dec. 1992.

**Manufacturer's Address:** Staudgasse 70, A-1180 Vienna, Austria. Phone: 0222/48 50 03.

**Date of Introduction:** 1983. September.

**Ingredients:** Sojabohnen aus oesterr. Umstellungsbetrieb: biologischer Landbau, Edelpilz, Wasser.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Letter from Paul Stuart Zacharowicz. 1983. Sept. 28. "After much hardship, tempeh is now available in limited quantities at health food stores in Vienna. I currently produce about 50 kg/week and enjoy it immensely. It is sold fresh, wrapped in wax paper and keeps fresh up to 5 days. Our work is done completely unofficially. The costs of government food inspections is exorbitant."

Letter from Paul Stuart Zacharowicz. 1984. June 22. "Currently I produce about 75 kg of tempeh per week; 30 kg is sold refrigerated in plastic bags and 75 kg is cut into 60-gm pieces (each 7 by 8 cm), dipped in seasoned batter, and fried ready to eat. Our predominant market is natural food stores with a few restaurants. Vienna University has also had our tempeh on the menu. Our company is called Vollwert und Wertvoll, Paul Stuart Zacharowicz & Co. OHG, Neustift 27, 1070 Vienna."

Letters from Norbert Brunthaler of Sojvita. 1988. Jan. 4 and Feb. 2. Label. 1987. 5.5 x 4 inches. Black, gold, and green on white card stock. "Natur. A cultured fresh soybean product to fry, bake, steam, smoke, or grill. Keep refrigerated; can also be frozen. Contains 100% vegetable protein and is the richest vegetable source of vitamin B-12. Free of cholesterol, low in calories, easy to digest, tastes excellent. Tempeh is suited for all types of preparations, both the traditional and the new light cuisine. Dark spots on the surface of the tempeh are a natural sign of ripening. They can be rinsed off under cold water."

Letter from Paul Stuart Zacharowicz. The company started unofficially in Sept. 1983, officially in Sept. 1984. It was originally named Paul Stuart Zacharowicz, Tempeh, Hasnerstr. 159/18, 1160 Vienna, Austria.

Letter from Paul Stuart Zacharowicz. 1992. Dec. 22. "The name of my company is now 'Von Anfang an Natur, Paul Stuart's.' We produce tempeh and tempeh products as well as vegetarian burgers, spreads, and nut butters. I would like to upgrade my tempeh selection with products that are meat and meat product like." The company address is still Staudgasse 70, A-1180 Vienna.

1399. Steinkraus, Keith H. 1983. Lactic fermentation in the production of foods from vegetables, cereals and legumes. *Antonie van Leeuwenhoek* 49(3):337-48. Sept. [52\* ref. Eng]

• **Summary:** Includes a discussion of tempeh. Address: Inst. of Food Science, Cornell Univ., Geneva/Ithaca, New York

14456.

1400. Nakano, Masahiro. 1983. Re: Introducing tempeh to Japan. Letter to William Shurtleff at Soyfoods Center, Oct. 1—in reply to inquiry. 2 p. Handwritten. [Jap]

• **Summary:** One of Japan's greatest living microbiologists, Dr. Nakano and co-workers introduced tempeh to Japan. They were the first to make it on a small (noncommercial) scale and serve it to others. But they were never interested in popularizing it—then or now. He was a scholar and research microbiologist for a nonprofit organization. He is now retired. "When I was in the Japanese Army in Java, although I was fortunate in having a chance to see and hear things in my field of interest, I did not do actual research. I have a subconscious desire to avoid developing the things I learned there."

The Taiwan Governor-General's Research Institute (*Taiwan Sotokufu Kenkyujo*) was founded in 1909. Dr. Ryoji Nakazawa, the great microbiologist, worked at that lab from 1907 until 1940, when he returned to Japan; he died in 1975 at age 96. For more on tempeh, see Dr. Nakazawa's *Taikan Kinen Ronbun-shu*, his collected papers compiled and published when he retired. Dr. Nakano started to work at this Taiwan lab in 1934. Address: Dr., Kugayama 1-2-7, Suginami-ku, Tokyo 168, Japan. Phone: 03-334-6911.

1401. Oda, Lorraine. 1983. Bonnie & Larry Fish: Hawaii's tempeh pioneers. *Hawaii Herald*. Oct. 7. p. 6. Friday.

• **Summary:** Bonnie and Larry started the Bali Hai tempeh factory in Kanehoe, Oahu, where they moved from Kauai in July 1982. Bonnie, a native of California, learned about tempeh production in 1976 at a seminar by Noboru Muramoto. "Although the Fishes are moving back to Kauai, they plan to keep their factory in Kaneohe going. In fact, they are in the process of incorporating and are looking for investors." Three photos show Bonnie and Larry Fish, their tempeh shop, and their two children. Address: Honolulu.

1402. Chong Liek Kah. 1983. Solid substrate fermentation in Malaysia. In: Proceedings of the Third ASEAN Workshop on Solid Substrate Fermentation. See p. 93-99. Held 3-9 Oct. 1983 at Cebu City, Philippines. [Eng]\*

• **Summary:** Includes a discussion of tempeh.

1403. **Product Name:** Farm Soy Dairy Tempeh.

**Manufacturer's Name:** Farm Soy Dairy.

**Manufacturer's Address:** 156 Drakes Lane (P.O. Box 96), Summertown, TN 38483. Phone: 615-964-2529.

**Date of Introduction:** 1983. October.

**Wt/Vol., Packaging, Price:** 8 oz bags (each 7 by 9 inches).

**New Product–Documentation:** Talk with Michael Lee, owner. 1988. Oct. 12. They make about 400 lb/month of tempeh.

1404. Hesseltine, C.W. 1983. The future of fermented foods. *Nutrition Reviews* 41(10):293-301. Oct. [20 ref]

• **Summary:** Contents: Advantages of food fermentation, factors having an adverse effect on the use of fermented foods, nutritional and economic data on some fermented foods, future changes in fermented foods, factors that may lead to growth in the use of fermented foods (scientific interest in fermented foods, prevention of food poisoning, fermentation and increased shelf life, improvement of the physical properties of the product, interest in natural products of plant origin, modification of the substrate, interest in more healthy food, necessity of increased consumption of plant materials as population increases, cultural and religious grounds, and migration of people since World War II). Summary. Contains considerable information on fermented soyfoods. Address: NRRRC, Peoria, Illinois.

1405. Jutono, -, Wedhastri, Sri. 1983. The potency of usar as inoculum for tempe fermentation from various substrates and admixtures. In: Proceedings of the Third ASEAN Workshop on Solid Substrate Fermentation. See p. 157-72. Held 3-9 Oct. 1983 at Cebu City, Philippines. \*  
Address: Faculty of Agriculture, Gadjah Mada Univ., Yogyakarta, Indonesia.

1406. Jutono, -. 1983. Solid substrate fermentation in Indonesia. In: Proceedings of the Third ASEAN Workshop on Solid Substrate Fermentation. See p. 81-92. Held 3-9 Oct. 1983 at Cebu City, Philippines.

1407. Leviton, Richard. 1983. The market boom for soyfoods in the United States. Paper presented before the Euvepro General Assembly, Parma, Italy. Oct. 11. 13 p. Unpublished typescript on Soyfoods magazine letterhead..  
• **Summary:** An excellent overview of the subject, presented with color slides. Contents: Introduction. The U.S. soyfoods industry and market. Eight reasons for the soyfoods boom in America. New U.S. soyfoods products. Ten trends in the soyfoods market. The European soyfoods boom (what it is and 4 steps to expand it). Conclusions. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1408. Leviton, Richard. 1983. The soy deli case. *Whole Foods (Berkeley, California)*. Oct. p. 27-28.  
• **Summary:** "The Hinode Tofu Company of Los Angeles recently propelled the industry years by running a series of full page, full color ads for their branded tofu in regional editions of *Good Housekeeping*, *Weight Watchers*, *Runner's World*, *Bon Appetit*, and the *Los Angeles Times* (circulation: one million). Their ad included a 15¢ discount coupon (eight million were printed in total). Edward & Sons has been advertising its Miso-Cup instant soups and Miso+Plus Chive

and Jalapeno dry miso dips in national trade and consumer publications. And Farm Foods, with their expanding line of Ice Bean soy ice creams (hard packed and soft-serve) recently launched a cooperative advertising and discount program in cooperation with retailers..."

The Real Food Store on Polk Street in San Francisco has introduced what is probably the first distinctly labeled soy case. It consists of a self-standing reach-in cooler filled with about 34 different soyfood products, from bulk and packaged tofu to soymilk and tempeh burgers.

"At press time, Bread & Circus, a leading natural foods retailer in Boston, was planning a week-long soy promotion in cooperation with a half dozen Bay State producers... Elsewhere, Tree of Life, Florida's \$35 million distributor and manufacturer, designated August as Soyfoods Month and ran promotions in their 60-page monthly newsletter sent to their 2,000 accounts. Soyfoods were presented as that month's 'Super Specials' with 'deep pocket discount' for retailers, reports Morris Shriftman, vice president." Address: Colrain, Massachusetts.

1409. Leviton, Richard. 1983. Soyfoods in your kitchen: The variety is infinite! *Your Good Health: Review & Digest* 1(6):16-18. Oct.

• **Summary:** An introduction to tofu and tofu products, tofu main dishes, tofu desserts, tempeh, miso, soysage, "green soybean pods in plastic bags," soynuts, natto, hamanatto, and yuba.

Gives recipe names and ideas for each soyfood type, but no actual recipes. Concludes with the thought: "If you remember this diversity of applications of tofu and tempeh... never again will you comment, 'Tofu is nice but it's just a bland white block.'" Address: Colrain, Massachusetts 01340.

1410. **Product Name:** Mountain Mist Tempeh.

**Manufacturer's Name:** Mighty Bean Soyfoods.

**Manufacturer's Address:** M.S. 1117, Cooloolabin, via Yandia, QLD 4561, Australia. Phone: 071-46-7342.

**Date of Introduction:** 1983. October.

**New Product-Documentation:** Letter from Michael Joyce. 1984. Oct. 25. "I believe Cyril and Elly Cain made the first commercial tempeh in Australia, commencing in July 1982, as Beancoast Soyfoods, Maroochydore, QLD. Julie and I started working with them in October 1982 and we bought the company in May 1983. In October 1983 we changed the name to Mighty Bean Soyfoods and moved from Maroochydore to Cooloolabin via Yandia, Sunshine Coast, Queensland 4558. We make 100-300 kg/week."

Label. 1984, undated. 3.5 by 4 inches. Orange on yellow. "Product of Sunshine Coast, Australia."

1411. Okada, Noriyuki; Hadioetomo, Ratna Siri; Nikkuni, S.; Katoh, K.; Ohta, T. 1983. Vitamin B-12 content of fermented

foods in the tropics. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku (Report of the National Food Research Institute)* No. 43. p. 126-29. Oct. [7 ref. Eng]

• **Summary:** Vegetarian foods containing significant amounts of vitamin B-12 per 100 gm according to a biological assay method using *Lactobacillus leichmanii* were: tempeh (Indonesia) 4.6 mcg (micrograms), natto fermented soybeans (actually thua-nao, Thailand) 1.5 mcg, and fermented tofu (Singapore, also called Sufu) 1.1 mcg. Flesh-based foods with a high B-12 content included Ka-pi shrimp paste (Thailand) 5.3 mcg, kung-jom fermented shrimp (Thailand) 2.5 mcg, fish sauce, 3 month fermentation (Thailand) 2.4, and fish sauce (Thailand) 1.3 mcg, and fish sauce (Japan) 1.0 mcg.

Of these foods transported from tropical countries, tempeh was especially interesting because it is made of soybeans and had the highest B-12 content of any food measured. However not all tempeh samples contained such large amounts. "For example, a fresh sample of tempeh which was transported from Indonesia as rapidly as possible contained a very low amount, 0.7 mcg/100 gm, and tempehs prepared in the laboratory by using the tempeh-making fungus, *Rhizopus oligosporus*, contained only 0.02 to 0.06 mcg/100 gm. However the low vitamin B-12 content in tempeh which was transported from Indonesia increased to a value of 8 mcg/100 gm when the sample was incubated at 30°C, unlike in the tempeh prepared in the laboratory. It is probable that microorganisms accompanied with tempeh-making fungus were associated with the production of vitamin B-12 in Indonesian tempeh. Further studies will be required to identify the microorganisms capable of producing vitamin B-12, and useful for the fermentation food industry." Address: 1,3-5. National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukubagun, Ibaraki-ken 305, Japan; 2. Bagian Mikrobiologi, Departemen Botani, Fakultas Pertanian, Institut Pertanian Bogor, Jl. Raya Pajajaran, Bogor, Indonesia.

1412. Soy Systems. 1983. Soy Systems: An integrated consulting service designed for soyfoods producers (Brochure). Ithaca, New York. 4 p.

• **Summary:** This consulting firm was "created exclusively for the emerging soyfoods industry. Hananyah Kronenberg, Director, holds an M.S. degree in Food Science from Cornell University and has published numerous articles in 'Soyfoods' magazine on tempeh and related topics." The company's services include: Starter culture production systems. Quality control laboratories. Quality assurance programs. Sanitation and Good Manufacturing Practices. Plant design and startup. Okara utilization. Tempeh production. Hananyah developed the system whereby Soyfoods Unlimited was able to make and maintain its own tempeh starter cultures. Other clients include Surata Soyfoods and 21st Century Foods. Address: P.O. Box 488, Ithaca, New York 14851. Phone: (607) 272-

2708 Ext. 10.

1413. *Soyanews (Sri Lanka)*. 1983. Recipes: Sri Lankan dishes with tempeh. 6(2):3. Oct.

• **Summary:** "At present fresh tempeh is available only at the Soya Foods Research Centre, Gannoruwa. Those who wish to make their own tempeh should write to the Manager... and ask for the culture and instructions to use it.

Four recipes are given: Tempeh ambul thital. Tempeh polos curry. Tempeh tempered. Super sweet and sour tempeh.

1414. *Soyanews (Sri Lanka)*. 1983. Tempeh comes to hotels [restaurants]. 6(2):7. Oct.

• **Summary:** "Two popular restaurants in Kandy, Bake House and Green Cafe, invited the Soya Foods Research Centre in Gannoruwa to give demonstrations in preparing tempeh last month. The Chief instructress of the Home level soya program, Miss Ellen Jayawardene, showed a number of ways in which both dried and fresh tempeh could be prepared for the table.

Two photos show Ellen demonstrating tempeh. Note: Hotels are not mentioned in this article.

1417. Erewhon Mail Order. 1983. Erewhon. Natural foods mail order catalog. Brookline, Massachusetts. 16 p. Nov. 1. Catalog and price list.

• **Summary:** This is a new mail order catalog, whose prices are effective from 1 Nov. 1983. On the front cover is a woodblock print of two wooden barrels, a wooden tub, two sacks of corn, a sheaf of wheat, several ears of corn, and a scythe. Erewhon is located at 26 Washington St. in Brookline Village—also the home of Erewhon Mail Order. There are retail stores at 342 Newbury St. in Boston and 1731 Massachusetts Ave. in Cambridge. Products grown organically, without chemicals, are marked with the code "OG."

Contents: Whole grains & cereals (incl. Erewhon granolas). Flours. Pastas. Beans (incl. azuki beans, black soybeans from Japan, yellow soybeans from Minnesota). Seeds, nuts & dried fruit (incl. alfalfa seeds, sesame seeds,

and tamari roasted nuts and seeds). Sea vegetables. Misos and tamari soy sauces. Japanese macrobiotic specialty products. Condiments, vinegars & sauces. Sea salts. Erewhon vegetable oils. Baking & home products (incl. koji rice for making amasake and miso, nigari for making tofu, tempeh starter). Sweeteners (Yinni rice syrup, barley malt, maple syrup, clover honey, wildflower honey {unfiltered}). Erewhon nut butters (Almond, cashew, peanut, sesame, sunflower). Fruit spreads. Snack foods. Sweets. Perishables (incl. bread, mochi, produce, amazake, tempeh). Beverages. Supplements. Natural cosmetics & body care. Cookware & appliances. Books & publications. Ordering & shipping information. Zone & shipping charts. Address: 236 Washington Street, Brookline, Massachusetts 02146. Phone: 1-800-222-802 or (617) 738-45168.

1418. Shurtleff, William; Aoyagi, Akiko. 1983. George Ohsawa and the macrobiotic movement: History of work with soyfoods. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 46 p. Nov. 10. 28 cm. Unpublished typescript. [92\* ref]

• **Summary:** A comprehensive history of the subject. Contents: Introduction: Acknowledgement of Ron Kotzsch. The roots of macrobiotics: *Yellow Emperor's Classic of Internal Medicine*, Shinto classics, Ekiken Kaibara (1630-1714), Nanboku Mizuno (late 1700's-early 1800's), Sagen Ishizuka (1850-1910), Manabu Nishibata. The life of George Ohsawa (1893-1966): To Paris 1929-36, return to Japan and World War II, Internationalism 1946-53, ran school Centre Ignoramus, "world journey" 1953 to India, Africa, then Paris, started Muso Shokuhin (macrobiotic food company) in Osaka, Japan, in 1959, work in Europe 1956-66, earliest reference seen to soy (miso) in 1956, first visit to New York City Dec. 1959, post-visit institutions, second visit 1960, first American macrobiotic summer camp on Long Island, exodus to Chico, California, Aug. 1961 to escape feared nuclear war, establishment of Chico-San, move of Michio and Aveline Kushi to Boston in 1963, *Zen Cookery* 1963, *Zen Macrobiotics* second edition 1965, growth of the movement, Beth Ann Simon's death blamed on macrobiotics in 1965, response of U.S. Food and Drug Administration is to close N.Y. Ohsawa Foundation, Ohsawa's general macrobiotic teaching, view of Western civilization as one in crisis, with fundamental biological change required to improve it, death in 1966 in Tokyo at age 72 of cardiac failure, seen as sage by his followers, seen as inconsistent crackpot by his critics, work carried on by wife Lima and by his students. Development of macrobiotics in Boston: Kushi's lectures and classes from 1965, early food sales from house, Erewhon's start in 1966 and subsequent growth, establishment of organic suppliers in the U.S., first imports from Japan 1968, 1970 natural foods boom, National Food Distributors Association, *East West Journal*, Autumn Press founded in Japan by macrobiotic student from Boston, Boston institutes,

centers, and foundations from 1972 on, increasing popularity of soyfoods (tofu, tempeh, and miso) in Boston, Erewhon from 1973 to bankruptcy in 1981 and sale to Ronald Rossetti in 1982. Development of macrobiotics in New York City: Void after departure of Aihara group and Kushis, establishment of Infinity Foods in mid-1960's, Michel Abehsera's restaurants, cookbooks, and tour. Development of macrobiotics in California: Influence of Chico-San on natural foods movement to 1970, Lundberg rice 1968-69, Yamazaki miso and shoyu 1970, 1972 fire in Chico-San warehouse, educational activities and institutions, growth of Chico-San, Noboru Muramoto. Nutritional views of macrobiotic diets: General critical attitude from 1965 to 1977, not countered by macrobiotic leaders, scientific studies pro and con, specific critique of the diet, turnaround in attitude since 1977 (*Dietary Goals* published by U.S. Senate's McGovern Committee), Dr. Mendelsohn, Nathan Pritikin, cancer cures and Anthony Sattilaro (1980). Macrobiotics in Europe and Latin America: First European company Lima N.V., other distributors, centers, publications, tours, active in South America since 1954. A major contribution: Type of overall influence on soyfoods, number of followers in 1981. Address: Lafayette, California. Phone: 415-283-2991.

1419. Soyfoods Center. 1983. Catalog: Publications & materials by William Shurtleff & Akiko Aoyagi [mail order]. P.O. Box 234, Lafayette, CA 94549. 20 panels. Nov. 18.

• **Summary:** This catalog, folded like a road map, is printed with reddish brown and light blue ink on white paper. Address: Lafayette, California. Phone: 415-283-3161.

1420. Bates, Cynthia. 1983. Re: Thanks for new editions of *The Book of Tofu* and *The Book of Miso*. Letter to William Shurtleff at Soyfoods Center, Nov. 25. 2 p. Handwritten, with signature on letterhead.

• **Summary:** Cynthia would like to make some miso this winter in some big wooden barrels, but they are moving the tempeh shop, so they'll have to wait and see. Address: 156 Drakes Lane, Summertown, Tennessee 38483. Phone: (615) 964-3584.

1421. *SoyaScan Notes*. 1983. Recent changes on The Farm in Tennessee: The Changeover (Overview). Nov. 29. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** This overview was compiled after talks with several long-time members of The Farm in Tennessee. Many people have left The Farm. The population has dropped to about 700 from a peak of about 1,300 several years ago. Some feel that "the boat is sinking." The farm is now in a period of transition called "the Changeover." The reasons for this change in basic economic structure are quite complicated, but a major reason is the large population of people who did not have a paying job. Formerly everything on The Farm was collectively owned (there was no private

property), and all income went into a common pool to pay the community's expenses. At the end of the changeover, each community member will be required to pay their own way, including monthly dues voted by the members for debt reduction plus ongoing community services: roads, water, fuel, taxes, bookkeeping, etc. However, the land and all other non-business community assets will continue to be held in common.

There are two types of work on The Farm: (1) "Service jobs" such as working on the Farm as a teacher, in the Soy Dairy, as a mechanic, etc. at a job which provides valuable services to Farm members but does not generate any income. (2) Money-making jobs, mostly off The Farm, and especially in construction—a construction crew of 40-50 skilled men brought in the majority of The Farm's income. The basic problem is that although everyone works every day, not enough people are making money. Summertown, in Lewis County, is in one of the poorer, rural parts of Tennessee, and there are not many paying jobs available in Summertown or the surrounding area.

The Farm worked very hard to create its own companies (such as Farm Foods and The Book Publishing Co.) that would employ members and earn money to support the community, but it took time for these companies to become profitable and, since they were collectively owned, they could not attract investors. When the changeover started, people working in community-owned businesses were given those businesses. For example, those working in the soy dairy when the changeover started, now owned it. They could sell the soyfoods they made both to community members and off The Farm; they shared the profits from their enterprise, and each used that income to buy whatever they needed.

Many Farm members agree that a basic part of the problem was The Farm's great generosity. They generously allowed almost everybody who came to the gate to join the Farm. Stephen went on tours in buses to talk about vital issues of the day; The Band went with him and neither ever charged people to hear them. The community generously helped those in need around the world, in part through Plenty a relief organization created on The Farm in 1974, and with much volunteer labor.

Over the years The Farm had to borrow money to pay its bills—just like most American families and businesses. The amount borrowed was not unreasonable given the size of the community, however these loans and the interest on them eventually became so large that they were the main catalyst for the changeover. A large percentage of the early dues went toward debt reduction, enabling The Farm to pay off its total debt of \$1.2 million in a little more than three years.

Many of those who left were the ones making money; some of them got tired of supporting the others.

The big change from a collective to a cooperative took place in mid-October 1983. Many people who had given

all their money and personal possessions to The Farm and imagined living their entire lives there felt considerable bitterness and anguish; they often left with nothing but good memories and had begun to hunt for a job. People are now employed at and paid by The Book Publishing Co., Farm Foods, Solar Electronics, and Satellite Dishes. Things that used to be given away for free on The Farm (such as soyfoods made at the Soy Dairy) are now bought and sold. People can start their own business on The Farm. It's the "real world" now. The Farm still has big debts and could even dissolve. Big medical bills hurt The Farm. Plenty is totally independent of The Farm financially, and has grown much bigger. The Farm Soy Dairy has trained several hundred people from Third World countries over the years.

Plenty Canada is in Lanark, Ontario. They have a little basement tofu and tempeh shop, and want to make it a soyfoods training center.

1422. Jackson, Vicki. 1983. *Squirrels vegetarian cook book*. William Brooks Queensland, 921 Kingsford Smith Drive, Eagle Farm, Brisbane 4007, Queensland, Australia. 143 p. Illust. by Vicki Jackson. Index. Nov. 29 cm. 2nd ed. 1984. • **Summary:** This hand-lettered cookbook was written for Squirrels Vegetarian Restaurant, Corner Melbourne & Edmonstone Streets, South Brisbane. The owners, Bronwyn Moses and Diana Mitchell, plan to open Squirrels on the Park, a second restaurant at 685 South Dowling St., Moore Park, Sydney, by Sept. 1984.

Soy-related recipes include: Chinese tofu soup (p. 12). Broccoli-pasta salad (with Soyaroni pasta, p. 30). Soyaroni marinaria [marinara?] (p. 52). Saucy soy stew (with cooked soybeans, p. 67). Tofu & peppercorn strudel (p. 79). About tofu (p. 86). Tofu satays with peanut sauce (p. 87). Battered tofu in sweet & sour sauce (p. 88). Tofu & peanut sauce (p. 89). Tofu & veggie curry (p. 90). Tofu & mushroom on spinach pasta (p. 91). Tofu & spinach loaf (p. 92). Tofu Chinese style (p. 93).

About tempeh, by Julie & Michael Joyce (p. 94; "Little did we know in early 1982, when we first ate tempeh made by Cyril & Ellie Cain of Eumundi, Sunshine Coast, that we were soon to become tempeh makers." They supply Squirrels with the tempeh they make). Tempeh chips (p. 96). Tempeh & tomato bake (p. 97). Tempeh sweet & sour (p. 98). Tempeh Indonesian style (p. 99). Tempeh Chinese style (p. 100). Tofu dessert (p. 125). Pages 141-42 describe tamari, tempeh, tofu, and miso. Address: Brisbane, Queensland, Australia.

1423. Kanasugi, Goro. 1983. *Tempe o Nihon de tsukuru* [Making tempeh in Japan]. *Shin Eiyo (New Nutrition)* No. 168. Nov. [Jap]

• **Summary:** The Natto Association had a meeting where members brought 100 tempeh dishes. A cooking teacher was there and she made 5-6 tempeh from tempeh made by

Mr. Kanasugi; they were very popular. The members made their tempeh as follows: First the Association obtained tempeh starter from Indonesia and propagated it in a room at Mr. Kanasugi's plant. They distributed the starter to the members, who then made tempeh and used the tempeh to make dishes. Mr. Kanasugi owns a restaurant name Mame-no-ko ("child of the soybean"), where he serves tempeh in place of meat. For example, diced tempeh is served with vegetables, or made into tempura or karinto. He also makes *okoshi*, a crunchy millet (*awa*) based confection containing 20% tempeh. Ground tempeh is mixed into a ground beef cutlet. The guests like tempeh served in these ways. The Natto Assoc. is thinking of publishing a book on tempeh. A photo shows Kanasugi and various tempeh dishes. Address: Zenkoku Natto Kyodo Kumiai Rengo-kai, Fuku Kaicho.

1424. Leviton, Richard. 1983. Brief history of Sojalade (*Die Genossenschaftstofurei*) and Verena Krieger's work with soyfoods in Switzerland (Document part). In: R. Leviton. 1983. Report of Trip to Europe with American Soybean Assoc. 82 p. See p. 17-19. Unpublished manuscript.

• **Summary:** Based on talks with Verena Krieger. Sojalade in Ottenbach was renamed Genossenschaftstofurei in 1982. It is an 8-member cooperative that makes 400-500 kg/week of tofu and services the Zurich-Lucerne market. The company started in Aug. 1981 in a small laundry room in Zurich then moved downstairs to a butcher shop with a tile floor on the ground floor of a 300 year old home. Elsewhere in the building is a co-op cafe. They use a BMI Mini Mite disintegrator, double steam jacketed kettles, an Erme Verpackungen vacuum packer (2 chamber, 1 lid), and a ratchet press.

Zurich is the best and biggest market in Switzerland. The country's population is only 6 million. They even sell some tofu by mail-order. Their tofu is sold in some dairy stores (Molkerei/Laiterie), specialty produce stores, 10-12 Japanese or Chinese restaurants, 4 vegetarian restaurants, and health food outlets. The Reform Houses are a chain of 500 outlets in Switzerland stemming, at least in spirit, from the days of Dr. Bircher-Benner and his natural nutrition reform ideas. Tofu is strong in Switzerland because of this established health foods tradition and the country's general affluence. Sojalade works with local farmers to grow organic ("biological") soybeans, without herbicides. In 1982 some 2 tons of soybeans were produced biologically and another 4 tons by conventional means. Maple Arrow and Giesso (from Germany) are the best suited varieties. Fiskeby gave low yields.

Soyana sells its tofu throughout Switzerland, while Marty Halsey services Geneva. Hans Opplinger in Cham is not a company. An English guy, Jean Spearing, is starting a shop named Tofurei Pfannenstiel in Maennedorf. In Bern, the macrobiotic group, Infinity, will start making tempeh and seitan mainly for use in their restaurant. [Note: This later

became Berner Tofurei.] In Thusis, someone makes 5 kg/week of tofu. Susan Gerber is converting a dairy into a tofu shop. [Note: It never was finished.] A friend of Verena's, Gauthier Loeffler, sells 200 tofu burgers one day a week in the Zurich open market.

Letters from Verena Krieger. 1990. July 5 and Aug. 10. In 1989 this company's name was changed from Genossenschaftstofurei to Tofurei Genossenschaft Engel, because the former name was not acceptable to Swiss trade regulations. The present manager is Peter Martmer. Mr. Hans Opplinger never owned a company making soyfoods in Switzerland, but he is still a member of Tofurei Genossenschaft Engel in Ottenbach. The company has never sold soymilk (despite a listing in Soya Bluebook, 1984, p. 63). Address: Colrain, Massachusetts.

1425. Mahmud, Mien K. 1983. Tempe: makanan tradisional yang menakjubkan [Tempeh: The astonishing traditional food]. Paper presented at Kursus Penyegar Ilmu Gizi dan Kongress Persagi VI (Refresher Course on Nutrition and 6th Persagi Congress). 8 p. Held 17-19 Nov. 1983 at Jakarta, Indonesia. [Ind]\*

1426. **Product Name:** [SunSeed Tempeh].

**Foreign Name:** San Shiido Tenpe.

**Manufacturer's Name:** Marukin Shokuhin Kogyo (Marukin Foods).

**Manufacturer's Address:** 380 Yoyasu-machi, Kumamoto-shi 860, Kyushu, Japan.

**Date of Introduction:** 1983. November.

**New Product-Documentation:** Label. 1983, undated. 5.5 by 11 inches. Red, white, blue, and orange. Nihon Keizai Shinbun. 1983. Dec. 1. Nebaranai natto.

Leaflet sent by Moto-o Kira. 1984. June. Marukin no tenpe. San Sheedo. Leaflet sent by Moto-o Kira. 1984. June. Kyushu Daizu Shokuhin Kogyo Kumiai (Kyushu Soyfoods Industry Association).

1427. *Sunset (Menlo Park, California)*. 1983. Indonesian tofu? It is versatile, cheese-like *tempeh*. 171:256, 258. Nov.

• **Summary:** Following an introduction to and description of tempeh are recipes for Tempeh with peanut sauce, Tempeh wafers, and Tempeh and mushroom pâté, submitted by Travis Burgeson of Berkeley, California [owner of Pacific Tempeh]. Photos show: (1) Tempeh being cubed next to a tempeh package—from Pacific Tempeh. (2) Sauteed vegetables with tempeh served with seasoned bell pepper on lemon.

1428. *Nihon Shokuryo Shinbun (Japan Food News)*. 1983. Nebaranai nattô. Marukin Shokuhin Sangyo SunSeed. Shôhin-ka ni seikô [The natto that isn't sticky—SunSeed Tempeh from Marukin Foods. They succeeded in commercializing it]. Dec. 1. [Jap]

• **Summary:** A photo shows a packet of Marukin SunSeed Tempeh.

1429. Breuls, René F. 1983. Re: Tempeh production by a natto manufacturer in Japan. Letter to Cynthia Bates at Farm Foods, Summertown, Tennessee, Dec. 19. 1 p. Typed, with signature on letterhead.

• **Summary:** “The natto producer which we have been supporting and provided with samples so far has produced the best Tempeh in Japan. They have interested the Natto Association to backup their efforts. Dr. Ohta, the advisor to the Natto Association, is receiving small [tempeh] samples from the U.S.A. which he gives to our people to continue their experiments. We do not know from where in the U.S.A. he receives them.

“Our natto producer is now getting a number of natto producers together to start a joint venture tempeh factory. Because of contamination hazards the producers cannot use their own natto factories although the equipment is not so much different.

“In Southern Japan some marketing trials are made to see consumer reactions to this new soy product. It is expected that next year the Tempeh will be launched in Japan with all the necessary advertising and promotion.

“We will supply the spore powder when it will be required in commercial quantities. Please find enclosed our cheque for US\$70. Please send us 100 gram spore powder so our people can familiarize themselves with it.” Address: Asiatic Company Ltd., C.P.O. Box 1942, Tokyo 100-91, Japan. Phone: (03) 273-0773.

1430. *Ann Arbor Observer (Michigan)*. 1983. [A pair of retrenchments]. Dec. [1 ref]

• **Summary:** On Ann Street, just west of Fourth, The Soy Plant is discontinuing its retail operation. “The Herb and Spice and Produce co-ops, which have shared the one-time pizzeria at 211 East Ann with the Soy Plant, have taken over the sale of tofu, tempeh, and soy milk, and will continue to redeem the loans the Soy Plant is paying off in bean curd. But the Soy Plant’s specialty deli items (which include soy cheesecake and tofu quiche) will now be sold through Arbor Farms instead.” Address: Ann Arbor, Michigan.

1431. Tsuchiya, Kunio. 1983. Tenpe Gannen no hassoku o tataete. Daizu shokuhin no kakumeiteki yakuwari [In praise of the first year of tempeh in Japan. The revolutionary role of soyfoods]. *Daizu Geppo (Soybean Monthly News)*. Dec. p. 24-30. [Jap]

1432. Winarno, F.G. 1983. Peranan dan prospek bioteknologi dalam penanganan pasca panen tanaman pangan [The role and prospects of biotechnology in handling post-harvest food crops]. Paper presented at Upacara Penerimaan Jabatan Guru Besar Bidang Ilmu Teknologi Pangan Institut Pertanian

Bogor (Food Technology graduation ceremony, Institute of Agriculture, Bogor). 32 p. Held 20 Dec. 1983 at IPB in Bogor. [Ind]\*

1433. **Product Name:** Homestyle Tempeh Fiesta (Tempeh & Millet & Veggie Spread or Salad).

**Manufacturer’s Name:** 21st Century Foods Inc.

**Manufacturer’s Address:** 30 Germania St., Jamaica Plain, MA 01230.

**Date of Introduction:** 1983.

**Ingredients:** Organic soy tempeh, marinated in tamari, herbs, and spices; cooked organic millet, finely cut carrot, celery, bell pepper, onion, parsley; corn oil, vinegar.

**Wt/Vol., Packaging, Price:** 12 oz plastic tray with lid.

**How Stored:** Refrigerated.

**New Product–Documentation:** Leaflet. 1983. “Tempeh with a Difference.” Spot in Soyfoods. 1984. Summer. p. 44. “A Meal in Itself.” Talk with Rudy Canale. 1988. Sept. 13. This is still being made but is now called simply Tempeh Fiesta. It was never renamed “Tempeh Spread.”

1434. **Product Name:** Aged Tempeh.

**Manufacturer’s Name:** 21st Century Foods.

**Manufacturer’s Address:** 30A Germania St., Jamaica Plain, MA 02130.

**Date of Introduction:** 1983.

**New Product–Documentation:** Manufacturer’s catalog. 1984. “This is a unique innovation which takes advantage of longer fermentation to produce a dark grey, marbled effect on the surface. plus a superior flavor and aroma. Preferred by tempeh connoisseurs worldwide.” Talk with Rudy Canale. 1988. Sept. 13. This product was launched in about 1983.

Form filled out by Rudy Canale. 2001. June. He is still making tempeh at the same address.

1435. **Product Name:** [Tempeh].

**Manufacturer’s Name:** Berner Tofurei.

**Manufacturer’s Address:** Monbijoustr. 19, CH-3000 Bern, Switzerland. Phone: 33-71-3090.

**Date of Introduction:** 1983.

**New Product–Documentation:** Letter (fax) from Verena Krieger. 1990. May 31. Berner Tofurei used to be named Restaurant Sesam. The company is now located at Obere Bahnhofstrasse, CH-3714 Frutigen, Switzerland. Phone: 33-71-3090. The owners are R. and O. Wickart. They make 400 kg/week of tofu and 100 kg/week of tempeh.

1436. **Product Name:** Soy Tempeh Burger.

**Manufacturer’s Name:** Creative Soyfoods Inc.

**Manufacturer’s Address:** 526 N. Clark St., River Falls, WI 54022.

**Date of Introduction:** 1983.

**Ingredients:** Tempeh, pure vegetable oil, garlic, sea salt, spices.

**Wt/Vol., Packaging, Price:** 5 oz.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Label. 1983, undated. 2.5 by 4.25 inches. Black on white. “Deep fried to a delicious golden brown. Ready to eat.”

1437. **Product Name:** Tempeh Burger.

**Manufacturer’s Name:** Cricklewood Soyfoods.

**Manufacturer’s Address:** Route 1, Mertztown, PA 19539.

**Date of Introduction:** 1983.

**New Product–Documentation:** Ad in CRC Reports. 1987. Fall. p. 15. Talk with Karl Krummenoehl. 1988. Jan. 4. This is soy tempeh with spices marinated in soy sauce. Launched in about 1983.

1438. **Product Name:** Earth Angel Okara-Rice Tempeh.

**Manufacturer’s Name:** Earth Angel Soyfoods.

**Manufacturer’s Address:** 53 Stanley Ave., Mt. Waverley (E. Oakleigh), VIC 3149, Australia. Phone: 544-8020.

**Date of Introduction:** 1983.

**Ingredients:** Okara (soybean pulp), brown rice, cider vinegar, tempeh starter (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 250 gm.

**New Product–Documentation:** Label. 1983, undated. 3.5 by 7 inches. Black on tan. 250 gm. Illustration of two elves under soybean leaves.

1439. **Product Name:** Black Bean & Soy Tempeh.

**Manufacturer’s Name:** Finger Lakin’ Good.

**Manufacturer’s Address:** 103 N. Aurora St., Ithaca, New York. Phone: 607-272-9177.

**Date of Introduction:** 1983.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Bob Bohdan and Joan Tregaskin. 1992. Jan. 31. They introduced Black Bean & Soy Tempeh in 1983. It was made from about equal parts of black beans (*Phaseolus*; frijoles, not black soybeans) and soybeans. The black beans were not dehulled, so they kept their black appearance. The tempeh was speckled in appearance.

1440. **Product Name:** Five-Grain Tempeh, Soy Rice Tempeh, and Tempeh Burgers.

**Manufacturer’s Name:** Imagine Foods, Inc.

**Manufacturer’s Address:** Moniteau Farm, Jamestown, MO 65046.

**Date of Introduction:** 1983.

**New Product–Documentation:** Talk with Robert Nissenbaum. 1988. Jan. 5. David Carlson and Ken Sloan were the early tempeh makers.

1441. **Product Name:** [Fried and Marinated Tempeh Burger (Round), Tempeh Cubes (¼ inch), Tempeh Spreads/Pâtés].

**Foreign Name:** Temmo, Fruutjes, Tarzan Tempeh Pâté.

**Manufacturer’s Name:** Jakso. Center for Agriculture & Craftsmanship. (Also/late called Yakso Farms).

**Manufacturer’s Address:** Voorn 13, 6624 KL Heerewarden, Netherlands. Phone: 088-772-189.

**Date of Introduction:** 1983.

**New Product–Documentation:** Letter from Sjon Welters. 1989. July 24. “Yakso started to produce tempeh in 1982, as far as I can remember. The fried and marinated tempeh products were developed by themselves and introduced in early 1983, if I recall well. I developed their tempeh spreads in the summer of 1983 and they were introduced that fall. The sauces mentioned in the Soya Newsletter contained no tempeh.” Letter from Sjon Welters. 1989. Aug. 9. Describes the three products.

1447. **Product Name:** Soy Yoghurt, Soy Nuts, Soy Mix, Tempeh, and Soy Sprouts.

**Manufacturer’s Name:** New Age Food Enterpriser.

**Manufacturer’s Address:** 10 Batakettara Road, Suwarapola, Piliyandala, Sri Lanka. Phone: 505228.

**Date of Introduction:** 1983.

**New Product–Documentation:** Form filled out by R.S. Udakumbura. 1989. April 17. The company began producing

soyfoods in 1983.

**1448. Product Name:** New World Tempeh Burger.  
**Manufacturer's Name:** New World Enterprises. Renamed New World Natural Foods in 1985.  
**Manufacturer's Address:** 226 Cypress St., Brookline, MA 02146. Phone: 617-232-5973.  
**Date of Introduction:** 1983.  
**New Product–Documentation:** Talk with Emily Merghart. 1989. Aug. 18. This product was introduced 6 years ago. The tempeh burger itself was made for her by 21st Century Foods. This product has been discontinued.

**1449. Product Name:** Tempeh Burger, Hi-Pro Burger (Marinated Tempeh Burger), Tempeh-Tofu Burger.  
**Manufacturer's Name:** Soy Power (Marketer/Distributor). Made in South San Francisco by Quong Hop & Co.  
**Manufacturer's Address:** 2811-A Ocean Park Blvd., Santa Monica, CA 90405.  
**Date of Introduction:** 1983.  
**Ingredients:** Hi-Pro Tempeh Burger: Soy tempeh from organically grown soy beans, shoyu, oleic safflower oil, lemon juice, natural hickory smoke, herbs and spices.  
**Wt/Vol., Packaging, Price:** 7 oz.  
**How Stored:** Refrigerated.  
**New Product–Documentation:** Label. 1983. 3 inch diameter. Self adhesive. Dark brown and white on lighter brown. "100% Natural. High in Protein. No Cholesterol. Hi-Pro Tempeh Burgers may be eaten fresh from the pack or steam 6 minutes in a covered pan with 5 tablespoons water sprinkled around burger. Serve in pocket bread, garnished with your favorite burger type trimmings (tomato, alfalfa sprouts, onion, etc.)." Talk with Kevin Cross. 1988. Sept. 22. Introduced in about 1983.

**1450. Product Name:** Tempeh-Taco.  
**Manufacturer's Name:** Soyplant Co-op Inc. (The).  
**Manufacturer's Address:** 211 East Ann St., Ann Arbor, MI 48104. Phone: (313) 663-8638.  
**Date of Introduction:** 1983.  
**Ingredients:** Tempeh, tomatoes, tomato sauce, soy sauce, peanut oil, sesame oil, garlic, molasses, spices.  
**Wt/Vol., Packaging, Price:** 12 oz.  
**New Product–Documentation:** Label in Soy Plant scrapbook from about 1983. 3 by 2 inches. Red on white. 12 oz.

**1451. Product Name:** Tempehroni.  
**Manufacturer's Name:** Soyplant Co-op Inc. (The).  
**Manufacturer's Address:** 211 East Ann St., Ann Arbor, MI 48104.  
**Date of Introduction:** 1983.  
**Ingredients:** Tempeh, tomatoes, tomato sauce, soy sauce, peanut oil, olive oil, garlic, molasses, spices.

**Wt/Vol., Packaging, Price:** 12 oz.  
**New Product–Documentation:** Label in Soy Plant scrapbook from about 1983. 3 by 2 inches. Green on white. 12 oz.

**1452. Product Name:** Okara Tempeh.  
**Manufacturer's Name:** Summercorn Foods Inc.  
**Manufacturer's Address:** 401 Watson, Fayetteville, AR 72701. Phone: 501-521-9338164.  
**Date of Introduction:** 1983.  
**Ingredients:** Okara (ground, water-extracted organic soybeans), *Rhizopus oligosporus*, filtered water, cider vinegar.  
**Wt/Vol., Packaging, Price:** 18 oz.  
**How Stored:** Refrigerated or frozen.  
**New Product–Documentation:** Label. 1987. 3.25 x 2.75 inches. Brown on tan. "Dark areas are normal and do not detract from quality or flavor." Talk with David Druding. 1988. May 18. Ken Audley, a mycologist, started this product in about 1983.

**1453. Product Name:** [Tempeh Natto (actually this is tempeh)].  
**Foreign Name:** Tenpe Nattô.  
**Manufacturer's Name:** Takashin Shokuhin (Takashin Foods).  
**Manufacturer's Address:** Tachibana 1-29-2, Sumida-ku, Tokyo 131, Japan. Phone: 613-5311.  
**Date of Introduction:** 1983.  
**How Stored:** Refrigerated.  
**New Product–Documentation:** Letter, Label and leaflet sent by Mr. Mitsuaki Yamanaka of Takashin. 1984. May. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 75.

**1456. Product Name:** Tempeh Starter.  
**Manufacturer's Name:** Turtle Island Soy Dairy.  
**Manufacturer's Address:** Box 218, Husum, WA 98623.  
**Date of Introduction:** 1983.  
**New Product–Documentation:** Leaflet sent by Turtle Island. 1983. "At Turtle Island we have been making our own tempeh starter for about 2 years. Our process was developed by Alexander Lyon, who has a PhD in

biochemistry and has been studying and making tempeh starter for 10 years. This process yields more starter than our previous rice method... It is now available as a frozen liquid spore preparation, in 100 gram portions sealed in plastic bags. Each bag will start 50 lbs. of cooked soybeans.” Five packs cost \$20.00. Customer pays shipping (15% added to order).

1457. Well Bean Deli (The). 1983. Menu. Santa Cruz, California. 1 p.

• **Summary:** The Well Bean Deli was located at 349 Soquel Ave., Santa Cruz, California 95062 when Richard Leviton visited there before April 1982. Address: 349 Soquel Ave., Santa Cruz, California 95062. Phone: (408) 425-4544.

1458. **Product Name:** Tempeh Burger.

**Manufacturer's Name:** White Wave.

**Manufacturer's Address:** 1990 North 57th Court, Boulder, CO 80301.

**Date of Introduction:** 1983.

**Ingredients:** Soy tempeh (made with cultured soybeans organically grown in accordance with the California Health and Safety Code, section 26569.11), soy sauce, garlic, onion, spices.

**New Product–Documentation:** Spot in Soyfoods. 1984. Summer. p. 43. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 54. By 1984 this was the company's best-selling tempeh product, followed by frozen soy tempeh, soy & rice tempeh, then 5-grain tempeh. In May 1988 the round Soyfoods Unlimited Meatless Burger was merged into this product, but using the Soyfoods Unlimited Label with the juicy glazed burger and the two onion rings floating above it. The full title of the new label now reads: White Wave Tempeh Burger. Marinated Soy Tempeh. All the Sizzle... None of the Steak. Ready to eat in 1 minute. Pareve.

1459. **Product Name:** 5 Grain Tempeh (With Soybeans & Millet & Wheat & Oats & Barley).

**Manufacturer's Name:** White Wave.

**Manufacturer's Address:** 1990 North 57th Court, Boulder, CO 80301.

**Date of Introduction:** 1983.

**New Product–Documentation:** Label. 1983, undated; Shurtleff & Aoyagi. 1985. History of Tempeh. p. 54. Talk with Steve Demos. 1989. Nov. 1. White Wave got the idea for this product from Soyfoods Unlimited, which introduced it in 1982. White Wave's product was probably launched in late 1982 or in 1983.

1460. Yoshida, Shuji. 1983. Kabi ga tsukuru tabemono. Indonesia no hakkô shokuhin [Indonesian mold fermented foods]. *Kikan Minzokugaku (Ethnology Quarterly)* 25:98-107. [Jap]

• **Summary:** Contains many photos of tempeh being made

commercially and served in Indonesia. Address: Kokuritsu Minzokugaku Hakubutsukan (National Ethnology Museum).

1461. Aubert, Emmanuelle. 1983. Les 9 grains d'or dans la cuisine [The nine golden grains in the cuisine. 2nd ed.]. Paris: Le Courrier du Livre. 286 p. Illust. by C. Galinet. Index. 22 cm. [Fre]

• **Summary:** The subtitle on the cover reads: 400 simple and savory recipes. Menus and advice on good health. Contents: Introduction. 1. The cereals (see p. 28-31 for instructions for making seitan at home from 500 gm wheat flour, plus 8 seitan recipes). 2. Breads. 3. Legumes: Cooking legumes, lentils, haricots, dry peas, chick-peas, azuki beans, soya. 4. Vegetables. 5. Soups. 6. Animal products. 7. Condiments, aromatics, and sauces (incl. tamari and miso). 8. Desserts. 9. Beverages. 10. 80 menu ideas. 11. Pregnancy and the feeding of young infants. 12. Some natural remedies. Where to buy supplies.

Soy-related recipes include: Making tofu at home (p. 87-91; illustrations and method taken without credit or permission from *The Book of Tofu* by Shurtleff & Aoyagi). Yuba. Grilled tofu (p. 91). Tofu with nuts (*noix*) and miso. Skewered tofu. Tofu salad (p. 92). Tofu with vegetables. Onions with tofu. Okara croquettes. Soymilk with fruits (p. 93). Making tempeh at home (p. 94-95). Tempeh goreng. Tempeh bachem (p. 95). Keripik tempeh (tempeh chips; p. 96). Tempeh croutons (p. 96). Pate of vegetables with tofu (p. 126). Jardinière au tofu (p. 128). Peas with tofu (p. 128). Soy sprouts made from mung beans (p. 129-30).

Pages 191-94 give basic information on the following fermented soya condiments: tamari, miso (Hacho [sic, Hatcho] miso, barley miso, rice miso). Pages 278-79 list manufacturers and handlers of various foods used in this book, and pages 280-81 give their addresses: Yellow soybeans: Celnat, Les Sept Marches, Le Seuil, Lima. Miso: Celnat, Lima, Les Sept Marches, Le Seuil, le Bol en Bois, Tenryu. Only Lima and Les Sept Marches manufacture miso in France. Tamari: Celnat, Le Seuil, Les Sept Marches, Lima, le Bol en Bois, Tenryu. Nigari: Le Bol en Bois, Tenryu. Tofu: Le Bol en Bois, Tenryu, Soy. Tempeh: Traditions du Grain, Le Bol en Bois. Tempeh culture: Semailles. Koji: Les Sept Marches, Tenryu, Le Bol en Bois. Amasaké: Traditions du Grain. Soymilk: Celnat, Lima.

A photo on the rear cover shows Aubert, a woman.

Note: This is the earliest French-language document seen that mentions amazake, which it calls “Amasaké.” Address: France.

1462. Bastaman, Sjarif. 1983. Mempelajari pengaruh penambahan onggok, ampas tahu, dan parutan pepaya (*Carica papaya L.*) dalam pengolahan tempe [Study of the effect of adding onggok, okara, and shredded papaya in tempeh processing]. • **Summary:** One section of this study (including pages 108-111) concerns the soyfoods market. It consists largely of statistics compiled by the Soyfoods Center and Soyfoods Association of North America. No permission was obtained from Soyfoods Center to use this information. Address: Commack, New York.

1464. Clute, Robin; Andersen, Juel. 1983. Juel Andersen's tempeh primer: A beginner's book of tempeh cookery. Berkeley, California: Creative Arts Book Co. 56 p. Illust. Index. 23 cm.

• **Summary:** Contents: Frontispiece. Introduction. Recipes—Salads and sandwiches. Soup and stir-fry. Stove top meals. Oven dishes. Book design and hand lettering by Sigrid Andersen. Address: California.

1465. Djurtoft, R.; Nielsen, J.P. 1983. Increase of some B vitamins, including B-12, during fermentation of tempeh, produced from cowpeas or soy beans. *J. of Plant Foods* 5(3):135-41. [15 ref]

• **Summary:** Tempeh samples produced from cowpeas and soy beans were analyzed for vitamin B-2 (riboflavin), B-6 (pyridoxine), B-12 (cyanocobalamin), niacin, and pantothenic acid. Vitamin contents increased significantly during fermentation both in cowpea tempeh and soybean tempeh. Special attention is given to the B-12 content during fermentation, because of its importance for people eating food primarily of vegetable origin. Address: Dep. of Biochemistry and Nutrition, Technical Univ. of Denmark, Building 224, DK-2800 Lyngby, Denmark.

1466. Flaws, Bob; Wolfe, Honora Lee. 1983. Prince Wen Hui's cook: Chinese dietary therapy. Brookline, Massachusetts: Paradigm Publications. v + 201 p. Index. 23 cm. [16 + 25 footnotes]

• **Summary:** The story of Prince Wen and his cook appears in Chuang-Tzu's *Inner Chapters* (trans. G.F. Feng & J. English, New York: Vintage Books, 1974, p. 55). Diet is the third of the Eight Limbs of Classical Chinese Medicine. The other 7 limbs are meditation, exercise, astrology, geomancy, massage, herbology, and acupuncture.

If a man is diagnosed as having a liver imbalance, such as "liver fire blazing upwards," he should consume food and herbs that will sedate, calm, and cool the liver and lower the Yang; foods that raise the Yang, produce internal fire, or aggravate the liver should be avoided.

Page 35 notes that foods that are energetically cool and cold include soy products (such as tofu, tempeh, soymilk). Foods that produce fluid and are damp in nature include

soybean and tofu.

In the section titled "Categorization of Foods," a number of individual foods are analyzed in detail, based on characteristics described below: Aduki bean, agar (p. 143), alfalfa, almond, and amasake (fermented glutinous rice) (p. 144), black soybean (p. 148), gluten (seitan, p. 158), kudzu root powder (p. 161), seaweed (p. 179), soybean (p. 181), soybean oil (p. 181), and tofu (p. 185).

Taking tofu, then black soybeans, as examples of the format used. Tofu: Nature: Cool. Flavor: Sweet. Meridian: Lungs, large intestine, stomach. Direction: Descending. Quality: Yin and yang. Elemental quality: Earth. Treatment principles: Tonifies Qi [ch'i] and Blood, clears Heat, sedates Yang, tones Yin, harmonizes the Middle Burner, produces Fluid, lubricates Dryness, counteracts toxins. Commonly used in the treatment of conjunctivitis, chronic amoebic dysentery, diabetes, sulfur poisoning, and alcoholism. Contraindications: spermatorrhea.

Black soybean: Nature: Neutral. Flavor: Sweet. Meridian: spleen and Kidneys. Direction: Ascending. Quality: Yang. Elemental quality: Earth. Treatment principles: Tonifies Qi [ch'i] and Blood, activates the Blood, benefits Water, expels Wind, counteracts toxins. Commonly used in the treatment of edema, Wind Bi (rheumatism), jaundice, beriberi, and spasms.

The remedial recipes are divided into Chinese (p. 96-116) and American (p. 117-35) types. Soy-related recipes include: Lord Buddha's delight casserole (with tofu, p. 88-89). Clams with black bean garlic sauce (with salted black beans [soy nuggets], p. 91). Five jewel casserole (with tofu or tempeh, p. 92). Quick braised soybean sprouts (p. 104).

Amasake cheesecake with cherry topping (p. 119). Shepherd's pie with seitan (Gluten meat, p. 122). Ginger seitan beef (p. 122). Seitan veal marsala (p. 129). Aduki bean brownies (p. 133). Dairyless pumpkin pie (with soymilk or cashew milk, p. 135). Many recipes use soy sauce or tamari in their braising liquid. The cookbook also uses meat, poultry, fish, and sugar quite extensively.

• **Summary:** This is the best of the Goldbeck's many good books on food. Contains many recipes for tofu (regular and frozen, p. 166-73) and tempeh (p. 173-75), and some for soynuts, whole soybeans, and soy flour. Although its subtitles says it is a meatless cookbook, pages 15-16 discuss the value of adding small amount of meats, fish, and poultry to other dishes, and page 478 contains details on storing six different types of meats, plus poultry and fish. Address: Woodstock, New York.

1469. Hermana, -. 1983. Pengaruh konsumsi bahan makanan campuran dengan kedelai atau tempe terhadap anak balita penderita kurang kalori-protein [Effect of the consumption of food mixtures containing soybeans or tempeh on children under the age of five suffering from protein malnutrition]. PhD thesis, Fakultas Pasca Sarjana, Institut Pertanian Bogor, Bogor, Indonesia. xii + 105 p. Illust. No index. 28 cm. [84 ref. Ind]

• **Summary:** Children suffering from protein-energy malnutrition were fed a food supplement formula consisting of 70% rice flour and 30% tempeh flour. There was a beneficial effect on the general status and for protection against gastroenteral infection. Address: Bogor, Indonesia.

1470. Herrmann, Karl. 1983. Exotische Lebensmittel. Inhaltsstoffe und Verwendung [Exotic foods. Ingredients and uses]. Berlin, Heidelberg, & New York: Springer-Verlag. x + 175 p. Illust. 21 cm. See p. 111-19. Sojabohnenprodukte. [18 ref. Ger]

• **Summary:** The chapter on legumes contains brief introductions to soybeans, green vegetable soybeans (*unreife Sojabohnen*), soy sprouts (*Sojabohnensprossen*, *Sojabohnenkeimlinge*), soymilk (*Sojamilch*), tofu (*Tofu*, *Sojaquark*), soy sauce (*Sojasosse*, *Shoyu*), miso (*Miso*, *Sojapaste*), tempeh (*Tempeh*), fermented tofu (*Sufu*, *chinesischer Sojabohnen-Käse*), and natto (*Natto*, *fermentierte ganze Sojabohnen*). Tables shows the nutritional composition of tofu, deep-fried tofu pouches (*Aburage*), dried-frozen tofu (*Kori-Tofu*), yuba (*Yuba*), roasted soy flour (*Kinako*), and miso, plus defatted soybean meal (*entfettetes Sojabohnenmehl*; 51% protein), and soybean concentrate (*Sojabohnen Konzentrat*; 64.9% protein). Address: West Germany.

1471. Hesseltine, C.W. 1983. Microbiology of Oriental fermented foods. *Annual Review of Microbiology* 37:575-601. [50 ref]

• **Summary:** Contents: Introduction. Historical account. Importance of mixed cultures. Microorganisms used.

"The Japanese Food Agency, Ministry of Agriculture, Forestry, and Fisheries (1979), gave the following figures for 1979: miso, 567,776 tons; shoyu, 1,252,431 kiloliters; and natto, 158,000 tons. In Korea, 35% of the 442,803 metric tons of soybeans produced is fermented. Indonesia uses

about 75,600 tons of soybeans in making tempeh.

"There is considerable ancient writing in Chinese publications about foods made by fermentation, but the first scientific reports are only about 100 years old. From 1878 until the beginning of World War I, there was an explosion of papers and reports dealing with fermented foods and drinks... In general, studies between 1881 and 1914 were devoted to the description of the product and the local name and to the isolation and description of the microorganisms associated with the fermentation. A number of organisms new to science were described and illustrated. Additional information was given on the action of the fungus on the substrate, suggested uses of the fungus in processes that could be exploited in European technology, and a description of the substrate preparation, food use, and native methods of food preparation.

"This period of research ended abruptly with the advent of World War I, as the exchange of students and cooperation between Japan and Germany ceased. Food fermentation studies resumed in the 1950s and today considerable interest exists. This renewed interest stems from the concern with nutrition, the great enthusiasm for vegetarian and natural foods, the search for less expensive, high-protein foods, the influence of foreign students studying in the West, the need to expand export markets, the need to add products to convenience foods to add zest and flavor, and the interest in the activities of microorganisms used in fermented foods." Address: NRRC, Peoria, Illinois.

1472. Jaffrey, Madhur. 1983. Eastern vegetarian cookery. London: Jonathan Cape. xii + 531 p. Illust. by Susan Gaber. Index. 24 cm.

• **Summary:** This is an expanded version of *Madhur Jaffrey's World-of-the-East vegetarian cookery* (1981, New York). The author of this creative book, a woman, was born in British India on 13 Aug. 1933. She first became known as an actress in India, but later found fame as a food writer. She has lived in America for more than 20 years. She presents 21 recipes for bean curd (tofu), 7 for tempeh, and some for yuba and miso. Soy-related recipes include: Aubergine slices with white miso (Japan, p. 4-5). Green beans with soy sauce (Japan, p. 20), Cabbage with miso (Japan, p. 29). Lotus root with soy-sauce dressing (Korea / Japan / Hong Kong, p. 46-47). Yellow pumpkin cooked with soy sauce (Japan, p. 74-75). Fresh soy beans, steamed (China, p. 76, with "fresh green soy beans in their pods"). Yien Koo's Spinach with fermented bean curd (China, p. 78-79). Pecel (Vegetable salad with spicy peanut sauce, plus tofu and tempeh; Indonesia, p. 87). Tempura (with tofu; Japan, p. 89-92). Soy bean sprouts (how to grow, p. 119). Soy-bean and mung-bean sprouts seasoned with sesame oil (Korea, p. 123-24). Tempeh, Fried tempeh, Fried, pre-seasoned tempeh, Sambal goreng tempeh kering (Sweet and sour tempeh), Tempeh cooked in coconut milk (Indonesia, p. 127-30). Thai fried

rice (with red fermented tofu, p. 176).

Chapter 4 (p. 187-221), titled “Soy milk, bean curd, and wheat gluten,” contains the following: Introduction to each ingredient. Soy milk (making your own at home). Making your own bean curd. Udofu (Yudofu, simmering bean curd with seasonings, Japan). Bean curd with watercress (Singapore Chinese). Bean curd with fresh coriander (Taiwan). Korean-style bean curd in a hot water bath. *Hiya-yakko* (Chilled bean curd, Japan). Bean curd with broccoli (Hong Kong). Cabbage cooked with bean curd (Japan). Bean curd with a deliciously spicy sauce (China). Carrots and beans with a bean-curd dressing (Japan). Bean curd, mushrooms, and peanuts in hoisin sauce (Chinese style). Sautéed bean curd (Korea). Tofu dengaku (Toasted bean curd with a miso topping, Japan). Fried bean-curd cubes (Most of East Asia). Soy-bean sprouts sautéed with fried bean curd (China). Fried bean curd with a sweet-and-sour sauce (China). Fried bean curd cakes with a mustard surprise (Japan). Inari-zushi (“Bags” of fried bean curd stuffed with sushi rice, Japan). Pressed bean curd with cabbage (China). Salad of pressed bean curd, mung-bean sprouts, and agar-agar (China). How to make fried and baked wheat-gluten balls. Stew of baked wheat gluten, potato, turnip, carrot, and cabbage rolls (Japan, p. 215). Fried wheat gluten with broccoli, carrot, and mushrooms (China). Fried wheat gluten and potato stew (Indian style). Shredded wheat gluten and Cabbage with fennel seeds (Indian style). Buddha’s delight (A mixed Chinese stew, Hong Kong; with yuba, fried tofu, and fried wheat gluten balls).

Chawanmushi (Steamed savory custards, with tofu; Japan, p. 223-26). Omelette with bean curd (Japan, p. 230-31). Soy-sauce eggs (Thailand / China, p. 245). Paneer (Fresh cheese from cow’s milk; India, p. 277-78). Hot or cold noodles with a soy-sauce dressing (China, p. 288). Noodles with a hot-and-sour bean sauce (China, p. 290). Vegetarian mee krob (Crisp noodles with pressed bean curd and eggs; Thailand, p. 296-97). Noodles with quail eggs, mushrooms, spinach, and yuba (Japan; p. 298-99). Hoppers (yeast pancakes; Sri Lanka, p. 315). Roti (Flat whole-wheat bread; India, p. 320). Delicious stock made with soy-bean sprouts (p. 340). Clear soup with mushrooms, bean curd skins [yuba], and spinach (Japan, p. 346). Clear soup with soft bean curd and Chinese leaves (p. 346). Miso soup with bean curd (Japan, p. 357). Miso soup with carrots and mushrooms (Japan, p. 358). Fried, munchable soy beans [soynuts] (China, p. 373). Potato and tempeh patties (Indonesia, p. 394). Dipping sauces (with soy sauce, p. 414-17, incl. *kochu chang*—Korean soy sauce). Kombu relish (with soy sauce; Japan, p. 435). Shoyu daikon (White radish pickled in soy sauce; Japan, p. 436). Ginger quick-pickled soy sauce (China, p. 436). Aomidaikon (Quick pickled small white radishes, with slightly sweet yellow miso; Japan, p. 438-39). Chinese-style jellied bean-curd sweetmeat with a peanut topping (Singapore, p. 462-63).

General information [like a glossary] (p. 481-506): See: Bean curd (regular, fried, fermented {*fu-ju*, *nam-ye*, *tao-hoo-ye*, red bean curd}, pressed {*doufu kan*}, pressed seasoned {*pai doufu kan*}, dried bean-curd skin or yuba). Beans (azuki, soy). Bean sauce (made from fermented soy beans). Chilli paste with soy bean (and garlic). Hoisin sauce. Miso. Nam yee (see Bean curd, fermented). Nigari. Soy beans, fresh. Soy-bean sprouts. Soy milk. Soy sauce (incl. Japanese, Chinese dark and light, Japanese *usukuchi*, Indonesian *ketjap manis*). Tao Hoo Yee (see Bean curd, fermented). Tempeh. Yuba. Sources (of ingredients; p. 507-10).

Note 1. This is the earliest English-language document seen (Oct. 2010) that uses the term “Nam yee” to refer to a kind of fermented tofu. Address: New York City, NY.

1473. Kushi, Michio; Jack, Alex. 1983. The cancer prevention diet: Michio Kushi’s nutritional blueprint for the relief and prevention of disease. New York, NY: St. Martin’s Press. xi + 460 p. Index. 22 cm. [32 ref]

• **Summary:** In this book, cancer preventing effects are attributed to miso (p. 50-51, 220-21, 304-06), and to soybeans (p. 51, 154-55, 293, 306). Natto, soymilk, tamari, tempeh, and tofu are also discussed.

Pages 50-51 note: “A ten-year study completed in 1981 by the National Cancer Center of Japan reported that people who ate miso soup daily were 33 percent less likely to contract stomach cancer than those who never ate miso soup. The study also found that miso was effective in preventing against heart and liver diseases...”

“Soybeans, a major source of protein in the macrobiotic diet, have been singled out as especially effective in reducing tumors. The active ingredient in soybeans is called a protease inhibitor. Laboratory tests show that soybeans and certain other beans and seeds containing this factor added to the diet prevent the development of breast, stomach, and skin tumors. Whole soybeans and soy products, including miso, tamari soy sauce, tofu, tempeh, and natto are staples of the macrobiotic diet... At St. Luke’s Hospital in Nagasaki, a group of macrobiotic doctors and patients who had survived the atomic bombing on August 9, 1945 subsequently protected themselves against potentially lethal doses of radiation on a diet of brown rice, miso soup, sea vegetables, and sea salt.”

Pages 220-21 contain a long excerpt from the account of Dr. Tatsuichiro Akizuki, director of internal medicine at St. Francis’s Hospital in Nagasaki. He survived the world’s first atomic bomb attack on 9 Aug. 1945. He believed that the main reason that neither he nor any of his co-workers at the hospital suffered or died from radiation was because of their diet, based on miso, brown rice, and sea vegetables.

Pages 293, and 304-06 summarize a number of publications which seem to show that consumption of soybeans, miso, or soymilk may prevent cancer. Pages 391-99 contain soyfoods recipes. Address: Boston,

Massachusetts.

1474. Puetz, Jean; Gollhardt, Heinz. 1983. *Hobbythek Buch 8* [Hobby book 8]. Cologne, Germany: Verlagsgesellschaft Schulfernsehen. 168 p. See p. 130-39. [3 ref. Ger]

• **Summary:** This book describes how to make tofu, tempeh, and soy sprouts, and how to build a tempeh incubator (bio-box) at home. Flora Yap (4/92) notes that the author has demonstrated tempeh making before 1988. Address: Germany.

1475. Rasyid, Abdul. 1983. Protein quality of soybean, red bean and corn tempeh. MSc thesis, Washington State University. viii + 46 leaves. 29 cm. \*

• **Summary:** Includes bibliographic references (leaves 43-46). Abdul Rasyid was born in 1950.

1476. Rohé, Fred. 1983. *The complete book of natural foods*. Boulder, Colorado: Shambhala. xvi + 491 p. Illust. Index. 26 cm. [120 ref]

• **Summary:** This book is about “The New American Diet,” which is an “omnivarian” diet including some fish and meat. Chapter 14, titled “New and future natural foods,” contains a section titled “Soy foods” (p. 162-65) including tofu, tempeh, miso, soy sauce, soy milk, and other soy products (yuba and sufu). The work of William Shurtleff and Aoyagi, and their Soyfoods Center, is mentioned 2-3 times. Toward the back of the book are many soyfoods recipes.

The Prologue tells Rohe’s life story and pioneering work with natural foods. In 1964, at the ripe old age of 27, he didn’t feel good, didn’t look good, and didn’t like it—the result of years of smoking, drinking, eating bad food and “burning the candle at both ends.” “It was time to do something about it. Adelle Davis became my guru and Thom Hamilton—the health foods store owner who sold me [her book] *Let’s Eat Right to Keep Fit* became my mentor.” Within a few months he was feeling much better. “So in 1965 I bought a small health food store in the Sunset district of San Francisco.” It was named Sunset Health Foods.” He discarded most of the dietetic foods on the shelves and replaced them with “old-fashioned groceries—basic stuff, traditional, simple, whole food... What was evolving was a modern version of an old-fashioned grocery store.” He would provide information instead of hype, bulk retail foods sold out of barrels, crocks, jars, and drawers instead of packaged products, food instead of food supplements. He renamed the store “New Age Natural Foods.”

“My career ended in 1973, after eight years. New Age Natural Foods had served as a model for what were called in those days ‘hippie food stores.’ It is credited as being the prototype natural foods store, as distinct from a health food store.” Since 1973 Fred continued to work in the natural foods industry. In 1979, in his capacity as a consultant, he met the people of Sunburst Farms, who are

his collaborators on this book. “Sunburst is the realization of a vision experienced in 1951 by its founder Norm Paulsen, while he was living as a student monk studying yoga at the Self-Realization Fellowship in Los Angeles. He moved to the Santa Barbara area, and while operating a construction business in 1968 established Sunburst Farms as a group of people living communally under spiritual principles on 160 acres of land in the mountains above Santa Barbara. The community-owned business, Sunburst Natural Foods, grew foods organically and flourished. In 1970 they opened a natural foods retail store in Santa Barbara. The community grew to include a second ranch and a total membership of over 200 people. “The business came to include manufacturing and wholesaling as well as retailing. There are now five Sunburst Farmer’s Markets, two of them—in Goleta and Ventura—large, complete, natural foods supermarkets. Sunburst also owns and operates a natural foods restaurant, ‘The Farmer and the Fisherman,’ 35 miles north of Santa Barbara along the coastal highway.” Then Norm envisioned a new direction and everything changed. They traded their 6,000 acre coastal ranch for land in northeastern Nevada totaling over 500,000 acres. “It could hardly have been a more radical change. But the soil is rich in minerals and there is abundant water from artesian wells. They are responding strongly to the challenge of, as they say, ‘making the desert bloom as a rose.’”

“Appendix eight: Recommended reading list” (p. 470-78) includes a section titled “Soyfoods.”

This book was Re-published in 1986 as *Nature’s Kitchen* by Garden Way in Brattleboro, Vermont.

Interview with Fred Rohe. 1988. Nov. 3. Fred bought Sunset Health Foods in 1965 and transformed it into New Age Natural Foods at 1326 Ninth Ave. in San Francisco. Address: 4014 Lincoln Way, San Francisco, California 94122. Phone: 415-564-7024.

Address: Bandung, Indonesia.

1482. Soy Power Co. 1983. Everything you wanted to know about tofu—But were afraid to ask (Leaflet). Santa Monica, California. 4 panels. 11 x 14 cm.

• **Summary:** Contains basic information about tofu, 6 recipes, and a list of Soy Power products: Silken tofu, Chinese tofu, Pressed tofu, Savory baked tofu, Whatta salad, Fiesta salad, Hi-Pro tempeh burger, and Non-dairy soymilk (Plain, Carob & honey). Printed with purple ink on gray paper. Address: 2811-A Ocean Park Blvd., Santa Monica, California 90405.

1483. *SoyaScan Questions*. 1983. Questions about the history of tempeh. Further research needed. Compiled by William Shurtleff of Soyinfo Center.

• **Summary:** 1. Learn more about the early history of tempeh in Indonesia before 1875. There must be some earlier references by missionaries, travelers, traders, etc.

2. Learn more about tempeh (tou chiah ping) in China.

3. Were there no references to tempeh by Indonesians prior to Soetan in 1956? Not even dictionaries?

4. How does the vitamin B-12 content of fresh tempeh

compare with that of cooked (boiled, fried) tempeh?

5. Which was the first commercial European tempeh Co? Firma E.S. Lembekker in Jan. 1959? Ask them about Firma ENTI?

6. Where was ENTI founded? When did they start to sell tempeh commercially? Where did the April 1946 founding date come from? Europe? van Dappern?

7. Did Robert van Dappern learn to make tempeh from the man who started Firma ENTI? If not, from whom? When did he move his plant to Kerkrade (about 1972-73)? When did he buy the \$1 million plant (about 1980-81)? In mid-1982 was production 7,000 lb/wk or 10,000 lb/day as Ike said? How much tempeh does he make now each day? Each week?

8. What have Hedger and Basuki done with tempeh at Wales and what are they planning to do (O'Neill 1980)? Did they ever start a tempeh plant?

9. How many pages does Nakazawa have on *Rhizopus*? Does he mention tempeh at Penicillium?

10. Who wrote the early article on tempeh at Kyushu University, Japan, that interested Torigoe?

11. Get full citations for and copies of the following documents: Wigman, pre 1900.

12. Did Ohta or Karauchi write an early article on tempeh in about Showa 7 or 8 (1932-33)? Ohta mentioned this.

13. Try to get the article (about 1947-48) from Nosan Seizo, written by Ohta Teruo or Nakano Masahiro.

14. When did the Natto Gyokai News (or any natto newspaper) publish its first article on tempeh. I'd like to get copies of all early and recent important articles it has published.

15. Dr. S.O. Robson, Netherlands. Reward of \$1 per year for citations on tempeh prior to 1875. Maximum \$100.

16. K.K. Fuji was interested in Japan since 1980, says Dr. Wang at NRRC. Who are they? Who is Nihon Kogyo?

17. Get samples of Michael Cohen's new tempeh bags and labels.

18. Get answers to all the questions I wrote to Watanabe and Takamine in Kyushu.

19. Who made the early tempeh starter in Japan?

20. KOPTI: Please send me the names and locations by city of Indonesia's five largest tempeh companies. How many kg of tempeh does each make per week?

21. Get a full bibliographical citation for Kawai.

[Ind]\* Address: Yogyakarta, Indonesia.

1489. Swaminathan, Mahadeva. 1983. Oilseed and nut proteins. In: Miloslav Rechcigl, ed. 1983. *CRC Handbook of Nutritional Supplements*. Vol. I. Human Use. Boca Raton, FL: CRC Press. 564 p. See p. 3-27. [147\* ref]

• **Summary:** Contents: Introduction. Production: Soybeans, cottonseed, sesame seed, copra, sunflower seed. The chemical composition and nutritive value of the proteins of certain oilseeds and nuts: Chemical composition, essential amino acid composition and nutritive value of proteins, amino acid supplementation of the proteins of oilseeds and nuts. Deleterious constituents present in oilseeds and legumes. Effect of processing on the nutritive value. Processed foods based on oilseeds and their meals: Preparation of edible meals, protein isolates from oilseeds and nuts. Infant foods and milk substitutes from oilseeds and nuts: Infant foods and milk substitutes from soybeans (soy milk, dried soybean milk, large-scale production), nutritive value of soybean milk and soybean milk proteins (animal experiments, treatment of protein malnutrition in children), feeding experiments with infants and children, milk substitutes and infant foods from peanut, nutritive value of peanut milk and its proteins, feeding trials with infants and children, coconut milk and products based on coconut milk. Milk substitutes based on other nuts and oilseeds: Almond milk, cashewnut milk. Protein foods based on oilseed meals and isolates: Supplements based on soybean meal, on peanut meal, on cottonseed flour, on sesame flour, on coconut meal, on sunflower seed meal. Other processed products based on oilseeds and nuts and their meals: Products based on peanut and peanut flour, enriched tapioca flour and macaroni products, products based on soybean and soybean meal (baked products, macaroni products, tofu, natto, tempeh), foods based on protein isolates from peanut and soybean, products based on peanut protein isolate, products based on soy protein isolate (infant foods, textured food products). Conclusion.

Table 13 (p. 18) lists "Supplementary foods for weaned infants and preschool children." The following contain soya (usually defatted soy flour): Protein Food I and II (India). Fortifex (Brazil). Cerealina (Brazil; with full-fat soy flour). Multipurpose Food, CSM, WSB (USA). Pronutro (South Africa).

Note: On pages 156-57 is a brief description of quark, a non-fermented edible milk protein product widely used in Germany. It is a fresh, uncured cheese, usually sold in bulk form. Versatile and easy to use, it is made by coagulating the milk exactly like cottage cheese, "but instead of cutting, cooking, and washing the curd particles, the whole coagulum is passed through a specially designed centrifuge" to separate the whey from the solidified protein curd, which is then cooled and packaged in bulk. When made under sanitary conditions, the quark has a good shelf life under refrigeration. Some 30-40 different food products based on quark (such as spreads, dips, and desserts) are now sold in western and eastern Europe. A survey concluded that quark has considerable potential in the USA if (like yogurt, the most newly accepted dairy food in the USA) it is well advertised and promoted. Address: Retired, Applied

Nutrition and Dietetics Discipline, and Emeritus Scientist, CFTRI, Mysore, India.

• **Summary:** At the end of 1983 Torigoe Seifun started test marketing tempeh at a major department store in Kyushu. Taste testing done among college girls in Japan shows that they prefer tempeh (76.4%) to natto. Torigoe Seifun says that after marketing tempeh to industrial users (institutions and food processors) at 1,500 yen/kg, they have received many enquiries. They haven’t decided the price for home use yet. Their goals: (1) Tempeh production of 15,000 kg/month; (2) Sales of 100 million yen from July–Dec. 1983; (3) In three years their sales goal is 2,000 million yen.

1495. **Product Name:** Homestyle Tempeh Burgers (Sesame Wheat Tempeh Burger).

**Manufacturer's Name:** 21st Century Foods Inc.

**Manufacturer's Address:** 30 Germania St., Jamaica Plain, MA 01230.

**Date of Introduction:** 1984. January.

**Ingredients:** Organic soy tempeh, San-J tamari, herbs, spices.

**Wt/Vol., Packaging, Price:** 7 oz 2 round burger patties, vacuum packed.

**How Stored:** Refrigerated, 30 day shelf life.

**New Product–Documentation:** Leaflet from Norbert C. Belanger, General Manager. 1984. Jan. 16. The company now makes and sells six tempeh products, including Tempeh Burger. Label. Undated. 3 inch diameter. Reddish brown on yellow. Leaflet. 1983. "Tempeh with a Difference."

1496. Nasoya Foods. 1984. Make the Nasoya Foods section a part of your store (Ad). *Natural Foods Merchandiser*. Jan. p. 11 (unnumbered) of 12-page color advertising insert. Soyfoods Pavilion '84. Marketing soyfoods in America.

• **Summary:** A 7.75 by 10.5 inch black-and-white ad. An illustration show the following Nasoya products: Firm Style Tofu, Soft Style Tofu, Marinated and Broiled Tofu, Tofu Burgers, Tempeh, Tempeh Burgers, Fresh Noodles, Wonton Skins, Egg Roll Wrappers, Tofu Vegi Dip (Creamy Dill, Soyannaise, Onion, Creamy Garlic) and Corn Cakes (Blueberry, Cranberry, With Bran). "Nasoya Foods. A commitment to quality."

This ad also appeared in *Soyfoods* magazine (summer, p. 9). Address: P.O. Box 841, Leominster, Massachusetts 01453. Phone: 617-537-0713.

1497. Shurtleff, William. 1984. Soyfoods year in review 1983. Lafayette, California: Soyfoods Center. 2 p. Unpublished typescript.

• **Summary:** A month by month chronology of important events in the soyfoods industry from January to December 1983, followed by a summary of important trends. Address: Co-founder and director, Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1498. Soyfoods Assoc. of America. 1984. Soyfoods Pavilion '84. Marketing soyfoods in America (Ad). *Natural Foods Merchandiser*. Jan. 12-page color advertising insert.

• **Summary:** Contains large color ads by Legume Inc. (6 frozen tofu entrees), Erewhon, Inc. (shoyu tamari), Vitasoy (USA), Inc. (natural and coconut soy drink, sweetened with maple syrup), San-J International, Inc. (tamari, teriyaki sauce, tamari crackers, teriyaki crackers), Tofu-Time, Inc. (Tofutti "nondairy tofu frozen dessert"), Eden Foods, Inc. (Edensoy soy beverage in plain and carob flavors, retort pouch), and Westbrae Natural Foods (natural ramen in 100% whole-wheat, buckwheat, brown rice, mushroom, seaweed, miso, 5-spice, and curry flavors).

Contains black-and-white ads by Westbrae Natural

Foods (shoyu, tamari, and soy sauce), Chico-San, Inc. (imported miso and soysauce), Fantastic Foods, Inc. (tofu burger mix), Penguino's, Inc. (dairy-free frozen dessert), Nasoya Foods (Firm Style Tofu, Soft Style Tofu, Marinated & Broiled Tofu, Tofu Burgers, Tempeh, Tempeh Burgers, Tofu Vegi-Dip [Creamy Dill, Soyannaise, Bleu Cheese, Onion, Creamy Garlic], Corn Cakes [Plain with Bran, Blueberry, Cranberry]; Non-soy products in the "Oriental Cuisine" line include Fresh Noodles, Wonton Skins, Egg Roll Wrappers), Hinode Tofu Co. and Azumaya, Inc. ("The #1 and #2 tofu producers in America").

The only article, whose author is not given, is titled "Soyfoods Pavilion debuts at Natural Foods Expo '84." On the front cover of the insert is a list of members of the Soyfoods Association of America (formed in Feb. 1983) that participated in Natural Foods Expo '84. In addition to the advertisers mentioned above, they include: Farm Foods, Laughing Moon Food Co., Paradise Distributors, Inc., Soyfoods Magazine, Tempeh Works, Inc., and White Wave, Inc. Address: 526 East 20th St., New York, NY 10009.

1499. **Product Name:** Leandro's Meatless Lasagna (Tempeh Blended with Four Cheeses in Whole Wheat Pasta).

**Manufacturer's Name:** Soyfoods Unlimited, Inc.

**Manufacturer's Address:** 14670 Doolittle Dr., San Leandro, CA 94577.

**Date of Introduction:** 1984. January.

**Ingredients:** Sauce: Crushed tomatoes, tempeh, whole wheat lasagna noodles, onion, water, vegetable oil, white wine, honey, garlic soy sauce, black pepper, basil, oregano. Filling: Ricotta cheese, mozzarella cheese, Romano cheese, Parmesan cheese, egg white, parsley flakes, nutmeg.

**Wt/Vol., Packaging, Price:** 10 oz vacuum pack.

**How Stored:** Frozen.

**New Product–Documentation:** Label. 1984, undated.

2.5 by 4.5 inches. Red, green, and white. "Old fashioned goodness. Single serving." Poster. Two color, with ingredients. Reprinted in *Soyfoods Marketing*. Lafayette, CA: Soyfoods Center. Spot in *Soyfoods*. 1984. Summer. p. 43-44. Spot in *Whole Foods*. 1984. May. p. 63. Press release. 1984. 2 p. with photo. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 54.

Letter (e-mail) from Valerie Robertson. 2011. Sept. 21. We had Alioto's restaurant in San Francisco make our tempeh lasagna. We took them tempeh that had been ground (in a meat mixer) and seasoned. They put it all together (with whole wheat lasagna noodles) and froze it. It was good.

1500. **Product Name:** Tempeh Burgers [Plain, or Bar-B-Q].

**Manufacturer's Name:** Turtle Island Soy Dairy.

**Manufacturer's Address:** 2017 21st Ave., Forest Grove, OR 97116. Phone: 509-493-2004.

**Date of Introduction:** 1984. January.

**Ingredients:** Organic soybeans, well water, soy sauce,

1983 — 1984

**SERVING SUGGESTIONS**

1. Preheat oven to 375°F.
2. Remove product from package and place in a baking dish which conforms to product size.
3. Bake 55-60 minutes or until lightly browned.
4. Let cool 5 minutes before consumption.

**MICROWAVE OVEN**

1. Remove product from container. Place in a non-metallic dish which conforms to product size.
2. Heat for 9 minutes.
3. Let cool 5 minutes before consumption.

Dist. by Soyfoods Unlimited, Inc.,  
 San Leandro, CA.

PERISHABLE  
 KEEP FROZEN UNTIL  
 READY TO USE. IF  
 PRODUCT THAWS,  
 PREPARE PROMPTLY.

**Ingredients (Sauce):**  
 Crushed Tomatoes,  
 Tempeh, Whole Wheat  
 Lasagna Noodles, Onion,  
 Water, Vegetable Oil,  
 White Wine, Honey,  
 Garlic, Soy Sauce, Black  
 Pepper, Basil, Oregano.

**Ingredients (Filling):**  
 Ricotta Cheese, Mozzarella  
 Cheese, Romano Cheese,  
 Parmesan Cheese, Egg  
 White, Parsley Flakes,  
 Nutmeg.

Old Fashioned Goodness

# Leandro's Meatless Lasagna

herbs, spices, apple cider vinegar, rhizopus oligosporus.

**Wt/Vol., Packaging, Price:** 6 oz package. Retail for \$1.79 (Plain), \$1.89 (Bar-B-Q).

**How Stored:** Frozen or refrigerated.

**New Product–Documentation:** Interview with Seth Tibbott of Turtle Island. 1984. Jan. 17. The burgers are sold vacuum packed.

Soya International. 1990. April/June. p. 24. Contact: Seth Tibbott. Address is now P.O. Box 218, Husum, Washington 98623.

Leaflet. 1992. “Discover Turtle Island.” Turtle Island makes 3 types of burgers, with have the registered trademark “Big T Burgers.” They are marinated, not fried, and vacuum packed in resealable bags, two patties per pack. “Eat one/ save one” and still have a handy “Ziploc” bag when all is done Sold frozen or refrigerated—delicious, ready to eat. Tempeh Burgers are made from the company’s own soy tempeh, simmered to perfection in their own herb soy sauce blend. Great as a quick meal. BarBQ Burgers are cooked through and through with Turtle Island’s own special barbecue sauce to make them jut right for your grill or microwave.

1501. Burgeson, Travis; Takamine, Kazuhiro. 1984. Making tempeh and tempeh burgers at Pacific Tempeh and Torigoe (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 5. 2 p. transcript.

1504. **Product Name:** Breaded Tempeh Cutlets.

**Manufacturer’s Name:** Finger Lakin’ Good.

**Manufacturer’s Address:** 103 N. Aurora St., Ithaca, New York. Phone: 607-272-9177.

**Date of Introduction:** 1984. February.

**How Stored:** Refrigerated.

**New Product–Documentation:** Call from J.J. Schultz.

1992. Jan. 28. Bohdan’s tempeh company was named Finger Lakin’ Good, after the Finger Lakes region of New York. It was in business from 1982 to 1986, making 75 to 100 lb/ week of regular soy tempeh and breaded tempeh cutlets. Most of his products were sold fresh at the very large and old Greenstar Food Co-op in Ithaca.

Talk with Bob Bohdan and Joan Tregaskin. 1992. Jan. 31. They introduced these cutlets as a commercial product in early 1984. To make them: Cut fresh tempeh into fingers (sort of like fish sticks), dip them in either beaten egg or arrowroot powder, then bread with bread crumbs and pan fry. These were sold both in the restaurant and outside, mostly at Greenstar Cooperative Market in Ithaca.

1505. Kendig, Joan. 1984. Tempeh: No cholesterol—no fat, can be made to taste like many gourmet foods. *Nutrition Health Review*. Winter. p. 20-21.

• **Summary:** An introduction to tempeh with two recipes: Tempeh with mushroom sauce. Stuffed peppers with tempeh. A photo shows Kendig. Address: Vegetus Nutrition Society, P.O. Box 1378, New York City, New York 10156.

1506. *Soyanews (Sri Lanka)*. 1984. The Indonesian art of making soyafoods. 6(6):4-5, 9. Feb. [1 ref]

• **Summary:** “Recently the UNDP invited the Soyabean Foods Research Centre in Gannoruwa to send a team of food technicians to study the Indonesian experience. They have now returned to Sri Lanka after a two-month study tour which helped to acquaint them with the home and cottage level processing of soyafoods.”

Fermented foods are highly developed and very important in Indonesia. “The only fermented preparation Sri Lankans are perhaps acquainted with is with the making of hoppers, thosai [dosai], and iddli [idli in south India].”

Those who took part in the two-month study course were: Miss Ellen Jayawardene, Miss H.M. Lalitha Padmini, Mrs. J.M.K. Jayaratna, Mrs. K.G.S. Ariyaratna and Mrs. Soma Weerasuriya.

Five large photos show fermented foods being made in Indonesia on a cottage level. The foods are tempeh, tofu, yuba, soya sauce, and a shop that makes both tofu and tempeh. At least one person appears in each photo.

1507. Henningsen, Peter. 1984. Re: Growing soybeans in Nova Scotia. Improving tempeh incubator. Letter to William Shurtleff at Soyfoods Center, March 15. 2 p. Typed, with signature on letterhead.

• **Summary:** Peter is working for Wolfgang Furth-Kuby, translating *The Book of Tempeh*, by Shurtleff and Aoyagi, into German. He and his wife now live at exactly 45 degrees north latitude. All of Germany and most of France is far north of their home. “Soybeans are grown commercially in

the Annapolis Valley of Nova Scotia, one of the best areas in Canada for growing apples...” Statistics show that production of pedigreed soybean seed production in Nova Scotia was 17,367 kg in 1979 and 7,167 in 1980.

Peter and his wife live in a very good microclimate in zone 5b. “Our problem here is that the soil keeps very cold long into the spring, and soybeans need fairly warm ground to germinate—otherwise they will hesitate and be overtaken by rot. So I plan to plant my soybeans by the middle of June, which leaves me with 105 or maybe even 120 days before the first frost.” The climate of Nova Scotia during the summer gets very hot during the day—very similar to the climate of Brazil in summer.

“By the way, I think you could improve upon [the design of] your small incubators [for making tempeh at home] by putting the heat source at the bottom and using a low-temperature heat source like a mini-greenhouse heating cable (light bulbs give off so much radiant heat that heats only the surface it strikes).” Address: RR#1 Walton, Nova Scotia, Canada B0N 2R0.

1508. Kawarai, Kumiko; Kikuchi, Kyoji; Aoki, Sadao. 1984. Tenpe hakkô katei ni okeru seibun no henka [Change in nutrients during tempeh fermentation]. *Tochigi-ken Miso Shoyu Gijutsu Kaishi (Tochigi Prefecture Miso and Shoyu Technical Journal)* No. 34. p. 28-32. March 15. [Jap]  
Address: Tochigi-ken Shokuhin Kogyo Shidosho.

1509. Sharma, Renu; Sarbhoy, A.K. 1984. Tempeh—A fermented food from soybean. *Current Science (Bangalore, India)* 53(6):325-26. March 20. [7 ref]

• **Summary:** Summarizes the results of an MSc thesis by Renu Sharma. Good quality tempeh was developed using popular Indian soybean cultivars and *Rhizopus oligosporus*. Address: Div. of Mycology and Plant Pathology, Indian Agricultural Research Inst., New Delhi 110012, India.

1510. Storup, Bernard. 1984. Re: New developments at Société Soy. Letter to William Shurtleff at Soyfoods Center, March 22. 3 p. Typed, with signature on letterhead (photocopy). [Eng]

• **Summary:** “A brief history of Société Soy: Oct. 1981—Sept. 1982. Search for a place to settle near Paris, choose and install equipment. The company’s first commercial production began in June 1982.

“Oct. 1982—May 1983. Production of tofu (firm for the natural food market and soft for the Japanese community—30,000 Japanese living in Paris); distribution by our own means in Paris only.

“From May 1983. Nationwide distribution of firm tofu—vacuum packed, 24 day shelf-life—and tofuburgers (called ‘Croque Tofou’) by Paris based distributors (actually, from Rungis, which is the biggest market of its kind in the world, and a key point for fresh products for western Europe).

“We carry 5 types of burgers (see labels), with 26 day shelf-life (we could put 2 months, according to a strict microbiological survey we ran, but prefer to shorten it in order to have a more regular rotation).

“This week have begun a nationwide advertising promotion for ‘tonic burgers’ (in Paris subway, on the national radio); it is run by a fast food chain that wants to promote a more dietetic way of eating. We make the burgers.

“We should double our production within the next 6 months; We don’t really have time to develop new products, at least for this year.

“We are presently making 2,500 kg/week of tofu, including 1,400 kg/week of burgers; one year ago we were making 1,000 kg/week.

“Some news from Europe: Several types of soymilk have recently been put on the market: Lima Soya Drink, Sojal, and Soyo.

“I think the biggest tofu manufacturer in Europe is Vanka-Kawat in Rijswijk, Holland. They sell about 30,000 pieces of tofu (250 gm and 450 gm) per week, mostly for the Asian (Indonesian) community. They also make sprouts and tempeh. They have an automatic plant with only European equipment; there is no way to visit it.

“The French dairy lobby (France is the world’s leader in cheese consumption) has recently clearly defined its new priorities: fight by all means against all kinds of substitutes for dairy products—above all soymilk.” Address: Société Soy, Plateau de l’Ardennais, 91590 Cerny, France. Phone: (6) 457 52 01.

1511. Caty, Thérèse. 1984. Dossier: Le soja [Dossier on soyfoods in France]. *France Dietetique*. Feb/March. p. 24-31. [Fre]

• **Summary:** This extremely interesting article gives an introduction to the various soyfoods, then list all known soyfoods products sold in France, complete with the brand, product name, ingredients, nutritional composition, weight or volume, and packaging. The last half of the paper is a French translation of a paper titled “The American boom in traditional soy products,” presented by Richard Leviton on 11 Oct. 1983 at a conference in Parma, Italy.

The following products, manufacturers/marketers (and brands) are listed: 1. Whole soybeans and flour: Lima (Organic soybeans, organic whole soy flour). 2. Textured soya: Charusse, Soyavit. 3. Convenience prepared foods for vegetarians: Pural (Frika Vita, Sojafleisch, Pasta Chuta, Sojavite, Soja Mignon, Sojanelles, Sojanelles épicées), Hera (Croq Meal, Herameal, Végémeal, Potage), Fritini (Aux herbes). 4. Liquid soymilk: Celnat (Soyo), Lima, Pural (Sojlactis), Sapov (Sojal), Provamel (Soya Drink, Soya dessert choco [a pudding, made by Alpro in Belgium]), Naturvit (Soyalet, Soyalet sans sucre). 5. Tofu: Le Bol en Bois (Koya-dofu), Soy (Tofu, Croque Tofu [6 types]). 6. Tempeh: Traditions du Grain. 7. Miso: Celnat (Brown rice

miso imported from Japan, Barley miso), Lima (Hatcho miso, barley miso). 8. Soy sauce: Celnat (Shoyou), Lima (Tamari, Tamari Shoyu). Address: France.

1512. Handy, R.; Mardanus, D. 1984. Menjadi bangsa tempe yang baik [Becoming a good tempeh nation]. *Majalah Promosi*. March. p. 17-19. [Ind]\*

• **Summary:** Java has 78% of Indonesia's total soybean production and 77% of the total harvested acreage.

Evaluasi proses panas pada lima jenis olahan tahu dan tempe dalam kaleng [Evaluation of heating on five different processes for canning tofu and tempeh]. Paper presented at Scientific Meeting (Pertemuan Ilmiah) Lembaga Kimia Nasional-LIPI. 24 p. Held March 1984 at Bandung. [Ind]\*

Address: Bandung, Indonesia.

1514. Kantha, S. Sri; Erdman, John W., Jr. 1984. The winged bean as an oil and protein source: A review. *J. of the American Oil Chemists' Society* 61(3):515-26. March. [160\* ref]

• **Summary:** The past 10 years of published literature concerning nutritional studies on and uses of the winged bean are reviewed, including its origin and cultivation, its overall proximate composition, its nutritional value and antinutritional factors, the functional properties of its proteins, and its use in protein based foods (supplemented breads, weaning food products, fermented products, winged bean milk and tofu). Address: Dep. of Food Science, Univ. of Illinois, Urbana.

1515. Leviton, Richard. 1984. Tempeh in America: Selling sizzle, not steak. *Whole Foods*. March. p. 28-29.

• **Summary:** "Tempeh—the soyfood with culture, as one manufacturer puts it—has never enjoyed the unremitting publicity, the near celebrity status that has propelled its sister soyfood, tofu, into market prominence since 1976."

According to new statistics compiled by researcher William Shurtleff, director of The Soyfoods Center, there are 53 commercial tempeh makers in the United States and tempeh was the fastest growing soyfood in the USA in 1983.

"Approximately 20 companies represent 90 percent of the total output of tempeh and the top four producers enjoy a 63 percent market share." In 1983, some 1.998 million pounds of tempeh were made in the USA, almost double the amount made in 1981. "Moreover, it appears, the entire (visible) tempeh industry is controlled and staffed by non-Indonesians."

While "tempeh has a strong presence in natural food stores (on the coasts) it is minimally represented in supermarkets." "At least eight brands of pre-cooked brands of tempeh burgers" are available. Address: Editor, Soyfoods

Magazine, P.O. Box 511, Encinitas, California 92024.

1516. Pride, Colleen. ed. 1984. Tempeh cookery. Summertown, Tennessee: The Book Publishing Co. 127 p. Illust. by Jeanne Purviance and Greg Lowry. Color plates and photography by Michael Bonickson. Index. March. 26 cm. [10 ref]

• **Summary:** A very important tempeh cookbook (see next page). Contents. 90 recipes—1. Dips and appetizers. 2. Salads. 3. Main dishes. 4. Side dishes. 5. Making tempeh at home.

This vegan cookbook contains no recipes calling for eggs or dairy products. Address: Summertown, Tennessee.

1517. Somaatmadja, Sadikin. 1984. Development of soybean culture in Indonesia. *Tropical Agriculture Research Series* No. 17. p. 23-36. March. International Symposium on Soybean in the Tropics and Subtropics. [3 ref]

• **Summary:** Contents: Abstract. Area and production: Share in national food production, national soybean production, producing centers, soybean area. Supply and demand situation: Export and import, future demand and production, utilization. Methods of cultivation: Cropping system, cultivation, pests, diseases and other problems. Research and CRIFC: Research program and activities. Support for soybean production. Further prospects and main constraints. Discussion (questions and answers).

Utilization (p. 28): "1. Side-dish with rice: Tempe (fermented soybean cake), tahu (soybean cake), tauco (soybean paste), tauge (soybean sprout), kecap (soy sauce) and goreng kedelai (fried soybeans). Of these, tempe and tahu are very important in the diet of the people.

"2. Snacks: Roasted soybeans, kerupuk tahu (tahu chips), boiled young soybean pods" [edamame].

Tables: (1) Annual average soybean production during and before PELITA (Five-year development plan, 1964-1981). (2) Soybean production in the last six years, 1977-1982 (East Java, Yogyakarta, Lampung, Central Java, Nusa Tenggara Barat {NTB}, West Java). (3) Soybean production in six [major soybean producing] provinces, 1988-1981. (4) Soybean production in four additional centers, 1977-1981 (D.I. Aceh, N. Sulawesi, Bali, S. Sulawesi). (5) Soybean harvested area, yield and production in sawah (rice fields) and tegalan (dry land), 1979-1981. (6) Export and import of soybean, 1969-1982 (Indonesia was a small exporter until 1977 when exports stopped; imports over 100,000 tonnes began in 1976, and by 1982 had risen to 476,000 tonnes). (7) The estimated demand for soybean and production target, 1983-1988 (Source: Directorate General of Food Crops). (8) The important insects of soybean. (9) Improved soybean varieties. (10) Packages of technology in the intensification and areal [area] expansion programs.

Graphs: (1) Demand, production, and import of soybeans, 1978-1982. (2) Target of soybean area, 1983-1988 (tegalan field area is expected to rise rapidly; sawah field

area will stabilize starting in 1985). A map of Indonesia (p. 31) shows seven research institutes under the Central Research Institute for Food Crops (CRIFC). They are located in Bogor, Sukamandi, and Lembang (W. Java), Sukarami (W. Sumatra), Banjarmasin (S. Kalimantan), Maros (S. Sulawesi), and Malang (E. Java). Address: Central Research Inst. of Food Crops, JL Merdeka 99, Bogor, Indonesia.

**1518. Product Name:** Tempeh Chips.

**Manufacturer's Name:** Soycraft.

**Manufacturer's Address:** P.O. Box 420, Woollahra (near Sydney), NSW 2025, Australia. Phone: (02) 32 0716.

**Date of Introduction:** 1984. March.

**Ingredients:** Incl. tempeh.

**New Product–Documentation:** Letter from Ralph and Volli Henderson, founders of Soycraft. 1984. Jan. 17. "Our tempeh cabinets will be ready the first week of next month, however due to limited freeze facilities [freezer space] of the health food retailers, and our need to transport the product inter-state, we will produce the tempeh chips. Local tempeh is made, some in Queensland, some by an Indonesian restaurant, very, very small, servings, and expensive, so much so that local shops are giving up because of consumer reaction to price."

1519. Suzuki, Steven. 1984. Pacific Rim potential for edible soybeans. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 224-41.

• **Summary:** Soybeans were first exported from Canada about 12 years ago when a Japanese house approached the Ontario Soybean Grower's Marketing Board for a trial shipment to Japan. The trial worked out very well and in a short time Ontario's soybean exports became a multi-million dollar business. Ontario soybeans are very clean, the quality is comparable to Japanese and Chinese soybeans, and the supply is consistent. However the price is high in relation to Chinese and U.S. soybeans. As a result, Ontario soybeans are sold in high-priced markets, as for making premium quality miso or soyamilk. The supply of Chinese soybeans is irregular. Address: Manager, Grain Trading Section, Okura & Co. America Ltd., New York, NY.

**1520. Product Name:** Tempté (Spicy Tempeh Spreads) [Hearty Chili, Hot Curry, or Garlicky Onion-Herb].

**Manufacturer's Name:** Tempeh Works (The).

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302.

**Date of Introduction:** 1984. March.

**Ingredients:** Hearty Chili: Tempeh, spices, sea salt.

**Wt/Vol., Packaging, Price:** 7 oz deli container.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label, undated. 3 inches diameter. Yellow and brown on white. Spot in Soyfoods.

1984. Summer. p. 44. "Tempting Tempeh." Leaflet. Back to back. 8½ by 11 inches. 2 color. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Tempte. The all natural spicy [tempeh] spreads." In 7.5 oz deli containers, 12 to a case. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 52.

1521. Wang, Hwa L. 1984. Tofu and tempeh as potential protein sources in the Western diet. *J. of the American Oil Chemists' Society* 61(3):528-34. March. [22 ref]

• **Summary:** Contents: Abstract (uses the word "soybean foods" several times). Introduction. Traditional soybean foods. Trends in market growth for tofu and tempeh (based on statistics gathered by Shurtleff & Aoyagi of The Soyfoods Center in California, 1983). Tofu. Tempeh.

Traditional soybean foods can be classified as either nonfermented or fermented. Tables show: (1) Oriental nonfermented soybean foods (gives food name, local names, description, uses): Fresh green soybeans (local names: mao-tou, edamame). Soybean sprouts (huang-tou-ya, daizu no moyashi). Soybean milk (tou-chiang). Protein-lipid film (tou-fu-pi, yuba). Soybean curd (tofu, tou-fu, tubu, tahoo, touhu, tau-foo, dou-fu, dau-fu). Soybean flour (tou-fen, kinako) (Wang 1983).

(2) Oriental fermented soybean foods (gives food name, local names, microorganisms used, substrate, nature of product): Soy sauce (local names: chiang-yu, shoyu, toyo, kanjang, ketjap, see-ju). Miso (chiang, doenjang, soybean paste). Hamanatto (tou-shih, tao-si, tao-tjo [sic]). Sufu (fu-ru, fu-ju, tou-fu-ju, bean cake, Chinese cheese). Tempeh (tempe kedelee). Natto.

(3) Tofu industry in the United States (No. of manufacturers and annual production in 1975, 1979, 1981, 1982, and 1983).

(4) Soybean solids and proteins in soybean soak water as affected by soaking conditions (temperature vs. time; Lowry protein / Lowry's protein). (5) Ratio of protein to oil content of tofu and soy milk as affected by protein content of soybeans (for different soybean varieties; the highest ratios come from the varieties Wase-Kogane, Vinton, Toyosuzu, and Coles).

Figures: (1) Flow diagram for the preparation of tofu. (2) Graph: In vitro digestibility of soybean milk as affected by the duration of boiling. Best digestibility is 12-14 minutes. (3) Four graphs: Relationship of concentration and type of coagulant to the yield of tofu. Coagulants are calcium sulfate, calcium chloride, magnesium sulfate, and magnesium chloride. The 4 graphs are: Gross weight of tofu. Moisture content. Total solids recovery. Nitrogen recovery. Calcium sulfate gives the highest values on all four graphs. (4) Four graphs: Relationship of concentration and type of coagulant to the texture characteristics of tofu. Same coagulants. The four graphs are: Hardness. Brittleness. Cohesiveness. Elasticity. (5) Flow diagram for tempeh

fermentation. Address: NRRC, ARS, USDA, Peoria, Illinois 61604.

1522. White Wave Inc. 1984. Order form and list of products. 1990 North 57th Court, Boulder, CO 80301. 1 p. March.

• **Summary:** Soyfoods include: Bulk tofu (hard or soft). Packaged tofu (hard or soft). Savory baked tofu. Soysage (1 lb. or ½ lb.). Tempeh burgers (bulk or packaged). Tempeh (soy, soy rice, or five grain). Polar bean (soy ice cream, 1 pint; carob mint, strawberry, chocolate, vanilla, and mocha).

The company also makes various nut and seed butters. Address: Boulder, Colorado. Phone: (303) 443-3470 or 3485.

1523. Randall, Gale. 1984. Update on his work with tempeh (Interview). *SoyaScan Notes*. April 21. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** He first made tempeh commercially in Unadilla, Nebraska. Later he moved to Palmyra. There he worked as a postal employee.

He is still making tempeh, but mostly experimentally in his basement. He sells a little, but not much. he is not satisfied with ways to blanch the tempeh. He is looking for better ways to stabilize and flavor it. And he is studying microbiology. Overall, he is trying to increase the shelf life of his tempeh. Address: Indonesian Tempeh Co., Route 1 Box 146, Palmyra, NE 68418. Phone: 402-780-5634.

1524. Tan, Tjeng Giok. 1984. Early work with tempeh in Canada (Interview). *SoyaScan Notes*. April 22. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Mr. Tan never made tempeh commercially and he does not have a company—though he was involved with tempeh. An acquaintance of his was studying at a university in the United States and he wanted a sample to test for vitamins. Mr. Tan used to make tempeh, but only for himself and friends, starting in about 1968. He does not know of any early Canadian tempeh companies. Address: 324 Apache Trail, Toronto, Ontario, Canada. Phone: 416-491-2328.

1525. Steinkraus, Keith H. 1984. History of his work with tempeh (Interview). Conducted by William Shurtleff of Soyfoods Center, April 27. 2 p. transcript.

• **Summary:** First Flora Yap came to do tempeh research at his lab. Then he began working on tempeh with Dr. György in Philadelphia, Pennsylvania. Dr. György had traveled to Indonesia many times and knew tempeh well; he was well aware of the severe malnutrition among Indonesian children, and he felt that tempeh offered a way of improving their diet. But he didn't have the facilities to make tempeh in larger quantities, so Dr. Steinkraus made the tempeh and sent it to Dr. György, who used it in his nutritional studies.

György found that tempeh was much more resistant to the development of rancidity than soybeans. That led to the

work with Murata on antioxidants. Many nutritionists believe that rancid food, which contains high levels of peroxides, is quite harmful to consumers.

Then in 1959 Dr. Steinkraus went to Indonesia, mainly to visit the Saridele soymilk plant there which was supported by UNICEF. They were having trouble with the nutritional value of their soymilk. While in Indonesia, Dr. Steinkraus visited some tempeh plants for the first time. Address: New York State Agric. Exp. Station, Geneva, NY 14456.

1526. Steinkraus, Keith H. 1984. Re: Early work with Flora Yap and Tempeh at Geneva, New York. Letters to William Shurtleff at Soyfoods Center, April 30 and May 14. 1 p. each. Typed, with signature on letterhead.

• **Summary:** Yap Bwee Hwa of Indonesia obtained her degree in nutrition. At that time Dr. Steinkraus was also a faculty member in the Graduate Field of Nutrition. She did her course work under the direction of Prof. Louise Daniel. She did her research in Dr. Steinkraus' laboratory but the rat feeding experiments were done under the direction of Louise Daniel and Dr. Richard Barnes, formerly Director of the Graduate School of Nutrition.

"Dr. van Veen and I were in contact for a number of years before he left FAO in Rome to come to Cornell University. It is obvious that Flora Yap also had been in contact with Dr. van Veen, perhaps during his trips to Indonesia..."

"Perhaps a letter to Ms. Yap at Am Muehlenwaldchen 1A, D-6670 St. Ingbert, West Germany, will give you further information on why Flora came to my laboratory clutching her small bottle of sun-dried tempeh which she used for inoculum. I still have that original bottle of dried ground tempeh... On it was written 'Enzyme Preparation Obtained in Indonesia by Miss Yap.'" Address: Prof. of Microbiology, Dep. of Food Science & Technology, New York State Agric. Exp. Station, P.O. Box 462, Geneva, NY 14456-0462. Phone: 315-787-2276.

1527. Bates, Cynthia. 1984. Re: History of The Farm's work with tempeh. Letter to William Shurtleff at Soyfoods Center, undated. 3 p. Typed, with signature on letterhead.

• **Summary:** Alexander [Lyon] and Dianne Darling began experimenting with tempeh in about 1972. Dr. Hesseltine had sent some literature and starter culture on the hunch we would be interested. I did not work at the [Soy] Dairy at this time, but I have been told about this time space by others who did work there then. Alexander was the Dairy straw boss and overview person; he set up the [soy] milk operation and ran it. Dianne mostly worked with the cultures and got into miso for the most part, I was told, but didn't get into tempeh so much because she thought large scale production was not practical. Occasionally she and Alexander would make a small batch of tempeh, enough for the people who worked there to get a taste. Deborah Flowers started working at the

Dairy and liked tempeh, and wanted to turn the Farm onto it. She made a couple of large batches, incubated in the boiler room at the Canning and Freezing plant, that were served for breakfast two different times at our community kitchen; that was the first time I tasted it. Deborah was trying to figure out ways to produce enough spores, a limiting factor along with the lack of an incubator...

"In 1974 I was researching algae for alternative protein sources in human foods and wanted to start an algae farm. I joined the [Soy] Dairy because soy systems looked like a good intermediate step that would accomplish the same ends (i.e. feed more people with less waste). One day we (the Dairy [soy] milk crew, Mary Hubbard, Marsha Ellis, JoAnne Else, and I) made some soy pulp [okara] sausages. Soon after I adopted the project and built an incubator out of an old refrigerator. JoAnne showed me the way the Dairy was currently making spores—inoculating petri dishes of chopped sweet potatoes (sterilized) with cultures in test tubes. Alexander taught me basis lab procedure: transferring cultures with a needle, making agar slants, doing serial dilutions.

"November 1974 is the first recorded batch of tempeh in the Tempeh Shop, but I was not keeping very good records at the time. I made 20-30 pound batches out of soy pulp [okara] for the rest of the year. Alexander [Lyon] scored us the Flour Mill's old bean dryer for an incubator which we used into 1975. At that time Alexander was still the overall manager of the [Soy] Dairy and, although he didn't actually work at the tempeh shop, he would come in and do a project sometimes, be encouraging, give advice. He was the Dairy expeditor and teacher. Deborah Heavens and Valerie Epstein both worked at the Tempeh Shop at different times in its first year."

"So far I haven't been able to come up with a documented date on the first printed instructions [for making tempeh]. They were most likely written in 1975 after *The Farm Vegetarian Cookbook* came out, but they may have been published in late 1975 or early 1976."

For a history of The Farm's pioneering work with tempeh to about 1984 see: *History of Tempeh, a Fermented Soyfood from Indonesia*, by William Shurtleff and Akiko Aoyagi (1985). Available on Google Books in full view. Address: The Tempeh Lab., P.O. Box 208, Summertown, Tennessee 38483. Phone: 615/964-2286.

1528. Cusumano, Camille. 1984. Tofu, tempeh, & other soy delights: Enjoying traditional Oriental soyfoods in American-style cuisine. Emmaus, Pennsylvania: Rodale Press. x + 261 p. Illust. Index. April. 23 x 20 cm.

• **Summary:** Each chapter on a specific food describes (with illustrations and nutritional information) how to prepare that food at home, followed by many recipes. Contents: 1. The coming age of soyfoods cuisine. 2. Tofu 3. Tempeh. 4. Soymilk. 5. Japanese soyfoods. 6. Whole dry soybeans. 7. Fresh green soybeans. 8. Soy sprouts. 9. Soy flour and soy

grits. 10. Soy sauces. 11. The soyfoods pantry.

Scattered throughout the books are 1-page descriptions of various American soyfoods companies, each accompanied by a black-and-white photo. Photos show: Greg Weaver and two other workers at The Lotus Cafe, Rochester, New York (p. 83). Sharon Rose of Brightsong Light Foods, Petaluma, California (p. 142). Steve and Sara Yurman of The Soy Shop, Atlanta, Georgia (p. 169). A craftsman cutting tofu at Tomsun Foods, Greenfield, Massachusetts (p. 195). Toby Alves of Blair Island Natural Foods Restaurant, Eugene, Oregon. A worker making brown rice and tofu sandwiches at Wildwood Natural Foods, Fairfax, California (p. 235). The company is owned by Bill Bramblett, Paul Orbuch, and Frank Rosenmayer.

Note: As of Sept. 1989 some 25,688 copies of this book had been sold by Rodale Press. It was sold out and will not be reprinted. Address: Rodale Press, Emmaus, Pennsylvania.

1529. Jacobs, Susan. 1984. The Cultured Club. Fantastic fermented foods. *Vegetarian Times*. April. p. 44-45, 47-48.

• **Summary:** Includes a brief introduction to tempeh, fermented tofu, miso, natto, and soy sauce.

1530. Jayaratna, J.M.K. (Mrs.). 1984. Tempeh—the health food. *Soyanews (Sri Lanka)* 6(8):6-7. April. [Eng]

• **Summary:** Mrs. Jayaratna, a 49 year old soya cookery demonstrator, is working at the Soyabean Foods Research Centre at Gannoruwa; her favorite soyfood is soya karawala (dried tempeh). A large photo shows her making tempeh in Indonesia.

1531. Ohta, Teruo. 1984. Seijinbyô o fusegu to Amerika de hyôban no Jawa nattô, tenpe [Tempeh, Java natto, prevents geriatric diseases and is popular in America]. *Watashi no Kenko (My Health)*. April. p. 66-69. [Jap]

Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan: Bucho, Norin Suisansho.

1532. **Product Name:** [Tempeh Burgers].

**Manufacturer's Name:** Paul Stuart Zacharowicz. Renamed Vollwert und Wertvoll by June 1984. Later renamed Natuerliche Lebensmittel. Named "Von Anfang an Natur, Paul Stuart's" by Dec. 1992.

**Manufacturer's Address:** Staudgasse 70, A-1180 Vienna, Austria. Phone: 0222/48 50 03.

**Date of Introduction:** 1984. April.

**New Product–Documentation:** Letter (handwritten) from Paul Stuart. 1984. April 9. "I am in the process of expanding my already existing tempeh workshop. We're planning more with soyfoods as well as a soy deli. Currently we supply kilo and half kilo tempeh cakes as well as tempeh burgers. The burgers are our best advertisement. Unfortunately they are labor intensive and costly and not very lucrative." He then

describes his production process in detail.

1533. Shurtleff, William; Aoyagi, Akiko. 1984. Soyfoods industry and market: Directory and databook 1984. 4th ed. Lafayette, California: Soyfoods Center. 203 p. April. 28 cm. [325 ref]

• **Summary:** Traditional soyfoods, which include tofu, tempeh, soymilk, miso, soy sprouts, soynuts and soy sauce accounted for \$465 million in annual domestic retail sales. High-tech, modern soy protein foods, which include soy flour and grits, soy protein isolates and concentrates, extrusion textured soy flour and meat analogs, totaled \$501 million. When the two sectors are tallied together, Americans spent \$966 million in 1984 for soyfoods... not including soy oil or exported products. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1534. Soyplant (The). 1984. Pickup distributor price list effective April 16, 1984 and subject to change. Ann Arbor, Michigan. 1 p. 28 cm.

• **Summary:** This typewritten sheet lists products made by the Soyplant and their prices: Tofu tubs in milk crates. Tofu tubs in cardboard cases. Spiced tofu tubs. Tempetaco tubs. Temperoni tubs. Tofu bulk. Spiced tofu bulk. Soymilk (plain or flavored). Tempeh (8 oz or 8 lb sheet). Soysage (8 oz, 1 lb). Tempeh burgers (3 per package). Tempeh burgers (bulk, 50 singles). Address: 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: (313)-663-8638.

1535. Soyplant (The). 1984. Produce co-op price list—Delivered. Effective April 30, 1984 and subject to change. Ann Arbor, Michigan. 1 p. 28 cm.

• **Summary:** This typewritten sheet lists products made by the Soyplant and their prices: Tofu bulk. Spiced tofu bulk. Soymilk (plain or flavored). Dofu Gan savory baked [tofu]. Soysage (8 oz). Tempeh (8 oz). Tempeh burgers (3 per package). TempeTaco. Temperoni. Address: 711 Airport Blvd., Suite #1, Ann Arbor, Michigan 48104. Phone: (313)-663-8638.

1536. Tepper, Robert. 1984. Development of commercial tempeh starter and the Tempeh Lab at The Farm in Tennessee (Interview). *SoyaScan Notes*. May 4. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Robert and Cynthia Bates sat down yesterday and tried to work out this history.

Note 1. In about 1974 Alexander Lyon of The Farm sent out 3 pages of “Tempeh instructions.” This is the earliest document seen that lists The Farm as a source of tempeh starter.

In 1975 Cynthia Bates set up a little laboratory and began to make powdered, pure-culture tempeh starter for use on the Farm. By 1976 it was being sent out or sold commercially to interested people.

Note 2. By late September 1976 Don Wilson of The San Rafael Farm was making his own tempeh starter, and using to make tempeh which that Farm Soy Deli sold commercially.

In June 1977 H.L. Wang and co-workers of the USDA's Northern Regional Research Center (NRRC) wrote articles for *Organic Gardening and Farming* magazine and listed NRRC as a source of starter. The NRRC was soon overwhelmed with requests for free starter; when she got to where she couldn't handle all the requests, she passed the people's requests to The Farm. By 1978 Cynthia thinks Dr. Wang sent most of the orders she received to The Farm, where Cynthia handled them. In Sept. 1977 another major article on tempeh in *Mother Earth News* said that both split dehulled soybeans and tempeh starter were available from The Farm; orders poured in. Also in 1977 Farm Foods started selling tempeh starter and promoting tempeh to the natural foods industry.

By 1978 Robert was serving tempeh and selling tempeh starter at trade shows.

The question of how Cynthia Bates learned to make tempeh starter that was pure, potent, and reliable remains an unanswered question; she probably learned from Alexander Lyon, from published articles on the subject, and from trial and error. Address: Summertown, Tennessee.

1537. Morris, Linda Lowe. 1984. Popularity of soyfoods keeps cookbook authors busy. *Journal-Gazette (Ft. Wayne, Indiana)*. May 9. [3 ref]

• **Summary:** About Shurtleff & Aoyagi (authors of *The Book of Tofu*, *The Book of Miso*), Jana Crutchfield (*Tofu—Not Just for the Health of It*), and Juel Anderson (*Tempeh Primer*). Address: Baltimore Sun.

1538. Murata, Kiku. 1984. Re: History of her work with tempeh. Letter to William Shurtleff at Soyfoods Center, May 16—in reply to inquiry. 2 p. Typed, with signature. [Eng]

• **Summary:** Her profession is biochemical nutritionist.

One of the first companies to make tempeh in Japan was Marusan-Ai Co., best known as a miso manufacturer (1 Aza Arashita, Niki-cho, Okazaki City, Aichi prefecture, 444-21, Japan. Phone: 0564-45-3111). They started research on tempeh production about 10 years ago. In Feb. 1984, after introduction of tempeh to dieticians, they started to distribute tempeh for the school lunch program. For that purpose they made a pamphlet (which Murata sensei will send to Shurtleff with copies of requested papers). They also started to sell tempeh to caterers. They presently make about 30 metric tons per month of tempeh.

She initially went to Dr. Gyorgy's laboratory to work on the mechanisms of cirrhosis production in animals fed a high sugar diet. Then she gradually got involved with tempeh.

Note: For details see the book *History of Tempeh: A Fermented Soyfood from Indonesia* by Shurtleff and Aoyagi

(1985). Address: Teikoku Women's Univ., 173-6 Thodacho, Moriguchi City, Osaka, Japan. Phone: 06-902-0791.

1539. Yap, Bwee Hwa Flora. 1984. Re: Early history of her work with tempeh. Letter to William Shurtleff at Soyfoods Center, May 17. 2 p. Typed, with signature.

• **Summary:** The first Indonesian to do scientific research on tempeh, and to write a post-graduate thesis on the subject was Ms. Yap Bwee Hwa—a Chinese Indonesian, whose name comes from the Hokkien dialect of Fujian (Fukien) province. After graduating from the Fakultas Ilmu Pasti dan Alam (Faculty of Natural Sciences and Mathematics) in Bandung with a major in biochemistry (degree equivalent of MSc), she went to work in Jakarta at the Nutrition Institute under Dr. Poorwo Sudarmo, a progressive physician interested in nutritious, low-cost foods for infants. She then won a Fulbright scholarship to the United States and Sudarmo encouraged her to study tempeh. After reading an article by van Veen on the value of tempeh in prisoner of war camps, she made up her mind. The Fulbright committee suggested that she study at Cornell University, so she wrote Dr. Hand, head of the Department of Food Science and Technology at Cornell's New York State Agricultural Experiment Station. While still in Indonesia, she visited tempeh plants to study the process, collected tempeh from the Jakarta market, then dried it and put it into a little brown bottle for later use as tempeh starter. She left Indonesia for the USA in August 1957. In the summer of 1958 she started to work in Dr. Keith H. Steinkraus' laboratory at Geneva, New York, where, for the first time, she prepared tempeh. This was probably the first tempeh ever made in America. A graduate student in nutrition and food science, Ms. Yap pursued her interest in tempeh as a nutritious food for infants and children, in part because of the high rate of infant mortality in Indonesia caused by undernutrition. In 1960 she wrote her MS thesis titled *Nutritional and Chemical Studies on Tempeh, an Indonesian Soybean Product*. That same year she co-authored the Cornell group's first tempeh publication "Studies on Tempeh—An Indonesian Food" (Steinkraus et al. 1960). It is also interesting to note that it was from the pulverized sample of tempeh that Yap brought with her from Indonesia that the group isolated the culture of *Rhizopus oligosporus*, which Dr. C.W. Hesseltine later identified and gave the number NRRL 2710 (ATCC 22959). This is still the most widely used tempeh culture strain in the USA. Address: Am Muehlenwaeldchen 1A, D-6670 St. Ingbert-Rohrbach, West Germany.

1540. Oda, Lorraine. 1984. Re: Soyfoods in Hawaii. Letter to William Shurtleff at Soyfoods Center, May 22. 1 p. Typed, with signature on letterhead. Address: Editorial Asst., The Hawaii Herald, 917 Kokea St., Honolulu, Hawaii 96817. Phone: 845-2255.

1541. Torii, Yasuko. 1984. New developments with tempeh in Japan (Interview). Conducted by William Shurtleff at Soyfoods Center, May 25. 4 p. transcript.

• **Summary:** This interview, conducted during a visit by Mrs. Torii to Soyfoods Center in Lafayette, California, discusses: Marukin Shokuhin Kogyo in Kumamoto city, Japan, Mr. Goro Kanasugi, the recent start of production of tempeh starter in Japan, tempeh made by Takashin / Takato, René Breuls, sales outlets for tempeh in Japan, Marusan-Ai in Okazaki, update on Torigoe, soybeans in Indonesia, symposium at Tsukuba (Japan) on tempeh and natto, Japan Tempeh Research Society (*Tenpe Kenkyukai*, Korin Shuppan KK, Iriya 1-27-4, Taito-ku, Tokyo), Okinawa fermented tofu (*tofu-yo*), Yamagata no Shojin Bushi (dried tofu that is shaved like katsuobushi). Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

1542. Kawai, Naoki. 1984. Re: History of Marusan-Ai's work with tempeh. Letter to William Shurtleff at Soyfoods Center, May 30. 2 p. Handwritten, without signature. [Jap; eng+]

Address: Manager, Development Section, Marusan-Ai Co. Ltd., 1 Arashita, Niki-cho, (P.O. Box 444-21), Okazaki-shi, Aichi-ken 444-21, Japan. Phone: 0564-45-3111.

1543. Soyfoods Center. 1984. Tempeh (color slide show). P.O. Box 234, Lafayette, CA 94549. 75 slides. Narration with each set.

• **Summary:** Slide show (#4). 1. The Soyfoods Center Presents... 2. Tempeh is a delicious high-protein fermented or cultured soyfood. Sold in 3/4-inch thick cakes and usually deep or shallow-fried until crisp and golden brown, tempeh has a flavor and texture resembling those of southern-fried chicken or fish sticks. For centuries a backbone of the Indonesian diet, tempeh is prepared fresh each morning at some 41,000 shops on Java alone. 3. Tempeh is increasingly available at reasonable prices throughout the United States, especially at natural or health food stores, or at Indonesian specialty shops. Tempeh is an excellent source of nutrients, containing 50 percent more protein than hamburger and completely free of cholesterol; it is also the world's richest known source of vegetarian vitamin B-12. Like all soyfoods, tempeh is rich in lysine, the essential amino acid in shortest supply in most cereal grains. Serving tempeh and grain at the same meal boosts the amount of usable protein by up to 40 percent. 4. Tempeh has many virtues. 5. It promises to be an important part of meatless diets and of the new emerging American cuisine.

6. A typical package of tempeh. 7. There are various types of tempeh. 8. Here is a kit for making tempeh at home; it contains everything you will need. 9. Tempeh at a market in Bali, Indonesia. 10. Different sized packages of tempeh in Indonesia; made and sold wrapped in banana leaves.

11. Tempeh sold in a market place in Java. On the left is

tofu simmered in turmeric, a natural preservative. 12. Now let's learn how to make tempeh at home. The soybeans can be dehulled either wet or dry. We prefer wet dehulling. But this is how it is done dry. For best results with dry dehulling, preheat the soybeans at 250°F in an oven for 10 minutes, or just until the hulls split. 13. Tempeh is easily made at home. Begin by combining 2½ cups soybeans with 7½ cups water in a large pot. 14. Bring just to a boil. 15. Then remove from heat, cover, and allow to stand for 8 to 16 hours.

16. Carefully pour off water from pot then vigorously rub beans between the palms of both hands for 3 to 4 minutes to remove hulls. 17. Then pour off hulls into a strainer. Repeat this process several times until all the beans are dehulled. 18. To the drained beans in the pot add 10 cups (hot) water and 1½ tablespoons vinegar. 19. Bring to a boil and cook, uncovered, for 45 minutes, then pour contents of pot into a large colander and allow beans to drain well. 20. Then allow beans to dry for 20 to 30 minutes on a double layer of absorbent toweling.

21. To make the container for incubation you can use Ziploc bags, baking pans, pie tins, etc. We prefer Ziploc bags. Take two 7-by-8-inch polyethylene bags and, using an ice pick, make holes in a grid pattern every ½ inch. 22. When the soybeans have cooled to body temperature and are well dried, transfer them to a separate clean tray for inoculation. 23. Now we are ready to inoculate them. The inoculum, tempeh starter, is available from The Farm in Tennessee or from Organic Gardening magazine. Once you buy one small packet you can make more of your own, using illustrated instructions in our book of tempeh. To inoculate, simply take 1 teaspoon of starter, sprinkle it over the beans... 24. And mix well. 25. Then spoon half of the inoculated beans into each of the two perforated bags.

26. Flatten each bag to a thickness of ½ to ¾ inch. 27. Then place bags in an incubator. This incubator is made from a Styrofoam cooler or picnic basket heated by a 20-watt electric bulb regulated by an aquarium or chick brooder thermostat. A water heater room or any other place as warm as 86°F (30°C) can serve as an incubator. 28. Incubate the tempeh at 86 to 88°F for 22 to 26 hours. When done, the beans should be bound together firmly into fragrant white cakes. 29. A large cake of finished tempeh and tempeh in burger rounds made in yogurt containers. 30. Here is an incubator made from two cardboard boxes, the space between the larger and the smaller being filled with batting for insulation. Note the perforated rack on which the tempeh is placed.

31. Good tempeh looks like this when sliced. 32. Tempeh is as versatile and delicious as it is nutritious and inexpensive. Most of the tempeh in Indonesia is served deep-fried or shallow-fried to give it a crisp texture and savory flavor. Here tempeh is being shallow fried to make crisp tempeh chips. 33. Crisp tempeh chips with creamy tofu dip. 34. Tofu burger. 35. Tofu burgers (open faced) made with

round tempeh patties.

36. Some people like to grill their burgers first with a miso sauce. 37. Label of tempeh patties. 38. TLT; Tempeh, Lettuce & Tomato Sandwich. 39. Tempeh Sloppy Joe. 40. Canning Tempeh Sloppy Joe.

41. Tempeh burritos or tacos. 42. Tempeh in pita bread. 43. Tempeh Guacamole and Crisp Tempeh Bits on tortillas. 44. Breaded Tempeh Cutlets or Croquettes. 45. Tempeh Lumpia, a Filipino dish.

46. Tempeh Gyoza or Egg Rolls. 47. Tempeh Felfels; Temptations. 48. Tempeh is delicious simmered in coconut milk with herbs and spices. The milk is easily made at home in a blender as described in *The Book of Tempeh*. 49. Simply pour the mixture of coconut pulverized with hot water into a strainer and press out the coconut milk with your fingertips. 50. Tempeh starter can also be made at home. Here is a method for growing it on soybeans and sifting off the spores. 50A. It can also be grown on pressure cooked white rice, cooked in a Mason jar.

51. Now to Indonesia. A sketch of a large Indonesian tempeh shop. 52. In a few areas, tempeh is incubated packed in bamboo halves. 53. Close-up. 54. Carrying the tempeh to market. 55. Indonesian tempeh wrapped in banana leaves and polyethylene bags.

56. Tempeh in small packets wrapped with banana leaves in the Yogyakarta market, May 1977. 57. Close-up. 58. Here is a wife cooking tempeh in a typical village kitchen. 59. Thin tempeh slices at the marketplace are dipped in a batter of spiced coconut milk and rice flour, then deep-fried to make tempeh chips. 60. Here are tempeh cutlets, seasonings, and chips.

61. Other ready-to-eat tempeh items in a West Javanese market. 62. Tempeh chips in a marketplace in Yogyakarta, Java. 63. Making grilled tempeh on skewers like shish kebab over a home barbecue. 64. Making Sate, a similar skewered delicacy with a wonderful dipping sauce, sold here by a street vendor. 65. Javanese markets are a festival of colors. Most tempeh cuisine includes a load of blazing hot chilies...

66... which are ground by hand in stone mortars for use in sauces. 67. Like most traditional societies, Indonesia has a grain-centered diet. The colors of natural grains and beans in the markets are a feast for the eyes. 68. In Indonesia the remarkable winged bean is also made into tempeh; or it can be made into tofu or deep-fried tofu. 69. A close relative of tempeh is onchom, which is usually made from peanut presscake or okara with a *Neurospora* mold. It is sold in cakes in the markets of West Java. 70... and may have a distinctive orange color from the mycelium.

71. To make onchom, steamed peanut presscake is packed into molds, 72. Inoculated with onchom from a previous fermentation, 73. Placed in an incubator where it generates its own heat from fermentation, 74. And looks like this when it is finished. Address: Lafayette, California.

1544. Soyfoods Center. 1984. Tempeh production in the USA (color slide show). P.O. Box 234, Lafayette, CA 94549. 77 slides. Narration with each set.

• **Summary:** Slide show (#5). A. The Soyfoods Center presents... B. Basic types of tempeh shops. C. Temperate climate dry dehull tempeh method. D. Temperate climate wet dehull tempeh method.

1. This sequence shows The Tempeh Works in Greenfield, Massachusetts, April 1980. The soybeans are dry dehulled without preheating or pre-grading. 2. Overview of the shop interior. 3. Ditto, with soaking vats in use. 4. Cooking soybeans in a steam-jacketed cooker. 5. Skimming off the hulls. 6. Running soybeans from cooker into sack in centrifuge. 7. Beans in sack in centrifuge. 8. Preparing to centrifuge beans. 9. Transferring centrifuges soybeans into inoculation container. 10. Inoculating the soybeans.

11. Mixing in inoculum by hand. 12. Scooping inoculated beans into pre-perforated polyethylene bags. 13. Weighing bags. 14. Another view of filling area. 15. Heat-sealing the bags. 16. Compacting beans and flattening bags. 17. Transferring bags on rolling rack into incubation room. 18. Bags on racks in incubation room. 19. Pressure steaming tempeh in bags; tempeh is distributed refrigerated, not frozen. 20. Wall mounted sanitation unit.

21. Making tempeh at Island Spring in Vashon, Washington state. The weighed soybeans are transferred into a used (inoperative) steam jacketed kettle used as a wash and rinse tank. 22. After washing and rinsing (but without soaking), the beans are dehulled in a tofu shop stone mill. 23. Then cooked and skim-dehulled in a steam jacketed kettle. 24. After being drained in the screen-bottom kettle, they are dewatered in a centrifuge. 25. Then put in a mixer with inoculum and mixed well. 26. The inoculated beans are placed 8 ounces at a time in polyethylene tofu tubs, packed by hand with a tamp.

27. Then placed on trays in a rolling rack in the tubs. 28. The mouth of each tub is covered with plastic film using a tofu packaging machine, perforated with an attachment on the machine. 29. As shown here. 30. The tubs filled with inoculated beans are placed on trays in a rolling rack and rolled into an 8-foot-cube incubation room. 31. After incubation the perforated top of each tub is covered with a label to close the perforations. 32. The finished tempeh and its package look like this.

33. Now we will visit Surata Soyfoods in Eugene, Oregon. The tempeh maker is Benjamin Hills. The soy beans are precooked in a large pot over a gas burner. 34. Then dehulled in a tofu shop stone mill. 35. After a second cooking they are drained in the pressing sack of a tofu hydraulic press, then pressed to dewater them. 36. Inoculated with starter. 37. Mixed well by hand. 38. Scooped in 8-ounce quantities into perforated Ziploc-type bags. 39. Which are placed on bread racks. 40. And incubated in a large incubation room. 40A. Examining the finished tempeh. 40B.

Freezing the tempeh for long distance distribution.

41. Tempeh Enterprises in Toronto, Ontario. The soaked beans are dehulled in a meat grinder with a special extruder blade attachment. 42. The cooker, specially designed, places the cooking pot on the stove then carries it later to the draining sink. 43. The hulls are skimmed off during cooking. 44. Ziploc-type bags are perforated using a sharpened screwdriver and a special grid set over an opened drawer.

45. The beans are weighed into perforated bags in 16-ounce quantities. 46. Tamped firm. 47. And placed overhead on racks in an incubation room. 48. Each cake is cut into fourths. 49. For freezing, the cakes are placed between perforated racks to ensure air circulation. 50. These Coleman refrigerators, used to distributed refrigerated or frozen tempeh, plug into the cigarette lighter of a car.

51. At Northern Soy in Rochester, New York, the tempeh is frozen on these racks. 52. Finished tempeh made in a metal tray, from The Tempeh Works. 53. Tray tempeh being cut. 54. Freezing this tempeh. 55. A low-technology dry dehuller developed at the University of Illinois. 56. Another view. 57. Gale Randall's home tempeh incubator in Nebraska. 58. Bag tempeh. 59. Tray tempeh.

60. Making tempeh starter at Island Spring. A positive pressure hood with the hood down. 61. Inoculating rice (already pressure cooked in a Mason jar) under the hood. 62. Overview of positive pressure hood. 63. Pulverizing the starter in a blender. 64. Drawings of *Rhizopus oligosporus* by the Japanese scientist, Kendo SAITO, who named it in 1905. 65. The *Rhizopus mycelium*. 66. The *Rhizopus* sporangia. 67. *Rhizopus* after sporulation.

68. Living tempeh starter, made by GEM Cultures on nutrient agar in a petri dish. 69. Method for doing a viable spore count on tempeh starter (or transferring a pure culture). Pipetting a spore suspension or dilution into petri dish. 70. Adding nutrient agar. 71. Shaking all together. Address: Lafayette, California.

1545. Soyfoods Center. 1984. Tempeh production in Indonesia USA (color slide show). P.O. Box 234, Lafayette, CA 94549. 72 slides. Narration with each set.

• **Summary:** Slide show (#6). 1. The following slides show the production of tempeh in Indonesia in a number of different shops using different technologies, methods, and scales of production. Here we see a very large shop, the Oeben shop in Bandung, West Java, which uses 660 pounds of dry soybeans daily. First, water is brought to a boil in large caldrons. 2. Then poured into wooden vats containing washed soybeans. 3. The soybeans are soaked overnight in the warm water. There they undergo a prefermentation, which lowers the pH and causes foaming. 4. The soak water is discarded and the beans drained in woven bamboo baskets. 5. Then they are treaded underfoot to remove the hulls, which are floated off in a tank. 6. The beans are transferred back into the caldron and simmered or steamed for 1½ to 2

hours.

7. Again they are well drained. 8. And a weight is put on top to help expel excess water. 9. After about 30 minutes they are transferred to a large cooling tray, and cooled with a fan. 10. Tapioca is sprinkled on in this shop to serve as an energy source for the starter and to help reduce the moisture content. 11. The inoculum consists of soybeans which have been inoculated and allowed to sporulate between hibiscus leaves (we will see the process shortly). The leaves are pulled apart and their surfaces rubbed over the warm soybeans; the spores come off and inoculate the beans. 12. The inoculated beans are then poured into shallow trays lined with perforated plastic. 13. Leveled and smoothed.

14. Stacked and covered on top to form a sort of incubator, the heat being generated by the fermentation process. 15. After about 8 hours of incubation in this way, the trays are unstacked and placed in incubation racks. Here they are left to incubate for 14 hours. 16. Then each tray is inverted leaving the plastic-wrapped tempeh resting on the bottom of an empty tray. 17. Here they are allowed to stand for about 17 hours more, or a total of 39 hours. 18. At about midnight, each pallet of tempeh is cut into cakes and sold.

19. The same shop also incubates about half of its tempeh in small perforated plastic bags. 20. To make the typical Indonesian tempeh inoculum, inoculated soybeans are placed about 20 to 30 on the fuzzy underside of hibiscus leaves, which are placed together like sandwich halves and stacked 4 to 6 layers deep in trays lined with perforated plastic sheeting. 21. Several trays are covered with cloth while they incubate for 3 to 4 days until the mold sporulates. 22. The leaves are then uncovered and allowed to dry. 23. Just before inoculating the next batch of soybeans, the leaf sandwich is opened, revealing the sporulated mold.

24. A modern stone mill dehuller. 25. A simple machine for dehulling and hull separation.

26. In this next small shop in West Java, the beans are dehulled by rubbing between the hands. 27. And the hulls poured off. 28. They are incubated in plastic bags, which are first stacked and perforated many at once with an ice pick. 29. Inoculated beans are poured into each bag. 30. The bags flattened. 31. Then arranged on long incubation shelves. 32. Which are put into racks. 33. Or under the rafters and incubated at room temperature for about 48 hours. 34. Midway through the fermentation, each bag is inverted and patted to compact the beans. 35. At the same shop, some of the inoculated beans are incubated inside long tubes of banana leaves joined together by wooden pins. 36. The finished tempeh is carried to market to be sold by children. 37. Or elders.

38. In this small but typical shop in Bali the soybeans are cooked in a drum-can caldron. 39. Treaded underfoot by the riverside to loosen the hulls. 40. Which are poured off first. 41. Then completely floated away by the river current. 42. After the second cooking, the beans are inoculated with

homemade hibiscus leaf starter. 43. Scooped into plastic bags. 44. And incubated under the eaves, outdoors, for about 48 hours. 45. The next morning the craftsmen puts his tempeh and his neighbor's tofu in cans on the back of his bicycle. 46. And is off to market.

47. Now lets look at a large modern Indonesian shop, Tempeh Murni, in Yogyakarta (in special region near East Java). Here is Mr. Murni and his soybean granary. 48. The soaked beans are carefully washed and any stones removed by hand. 49. Then they are cooked in large caldrons. 50. And dehulled in this homemade stone mill rather than by foot. 51. The hulls are floated off by hand on shallow bamboo trays in barrels of water. 52. A delicate process.

53. Inoculation takes place again with hibiscus leaf inoculum on large bamboo trays. 54. Small portions of beans are wrapped in banana leaves. 55. And incubated in racks. 56. In some west Javanese shops the beans are wrapped in long portions in banana leaves. 57. And in food technology laboratories new dehullers are being developed, which both remove the hulls and float them off.

58. The aristocrat of Indonesian tempehs is Malang Tempeh, made in the city of Malang, East Java. In many areas there are tempeh cooperatives and the beans are dehulled by treading them underfoot in bamboo baskets in communal ponds. Then they are recooked and cooled in bamboo trays. 59. The hibiscus leaf inoculum rubbed in. 60. Banana leaves are perforated. 61. And used to line large tables. 62. A unique method. 63. Inoculated beans are poured onto the tables. 64. And smoothed.

65. To form a layer the depth of the middle finger up to the knuckle, about 1¼ inches, which is much thicker than most tempeh. 66. The layer of beans is then covered with perforated banana leaves. 67. And the leaves weighted with bricks to compact the beans and hold in the heat. 68. After a 48-hour fermentation, the tempeh is cut at a slant into cakes. 69. Which look like this. 70. These are placed in boxes. 71. And taken to the market to be sold. Address: Lafayette, California.

**1546. Product Name:** Tempeh.

**Manufacturer's Name:** Tempeh Foods.

**Manufacturer's Address:** 30 Greyfriars Road, Ipswich, Suffolk IP1 1UP, England.

**Date of Introduction:** 1984. May.

**Ingredients:** Soya beans, *Rhizopus oligosporus* culture, rice flour.

**Wt/Vol., Packaging, Price:** 8 oz (227 gm).

**How Stored:** Frozen.

**Nutrition:** Per 100 gm (3.5 oz). Calories 157, Protein 19.5%, fat 7.5%, carbohydrates (incl. fiber) 9.9%, calcium 142 mg, phosphorus 240 mg, iron 5 mg, vitamin B-1 0.28 mg, vitamin B-2 0.65 mg, niacin 2.52 mg.

**New Product–Documentation:** Leah Leneman. 1985. *The Vegetarian*. July/Aug. p. 23. "Tomorrow's Food." "The first

company to manufacture tempeh on a large scale [in the UK] is *Tempeh Foods* (30 Greyfriars Road, Ipswich, Suffolk, IP1 1UP). They only started trading officially last June, but their tempeh is already being distributed by The Regular Tempeh Company, and by wholesalers in London, Middlesex and Lancashire.”

Label. “Best before 15 Jan. 1988.” 8.5 by 4 inches. Black on tan paper. “Gluten free. No cholesterol. High protein. No preservatives.” The company address is given as Unit 1, Cowslip Farm, Witnesham, Ipswich, Suffolk, England. On back of label are 5 recipes plus promotion for *The Book of Tempeh*. Letter from Simon Bailey. 1988. Oct. 10. This company is now owned by Fruits of the Earth (a co-operative), same address. Phone: 0473-211282. Contact Sue or April.

L. Leneman. 1988. *Soya Foods Cookery*. p. 86. Tempeh Foods in Ipswich makes tempeh and distributes it to a number of health food stores in England.

Form filled out by Graham Lanman and Jennie Greenhalgh. 1989 or 1990. They are in charge of Tempeh Foods at Unit 1, Cowslip Farm, Witnesham, Ipswich, Suffolk, England. Phone: (Ipswich) 213114. They opened in May 1984, and today make approximately 500 8-oz. packs of frozen tempeh per week.

Talk with (call from), followed by a letter, from Tom Wells, now a partner/owner with Louise Tonkin of Tempeh Foods in West Wales. 1992. June 26 and July 22. The company has changed hands. “The former owners were Graham Lanman and Jennie Greenhalgh, who started the company in Ipswich in about 1984, but they stopped making tempeh several years ago. This was the company referred to by Leah Leneman. When they gave up, Friends of the Earth in Ipswich took over, trading under the name of ‘Fruits of the Earth,’ but they never really got off the ground. The equipment and name then passed to another person (name unknown) in Ipswich; he was already connected with the food business in some way, but he too never got going. Graham and Jenny then ‘repossessed’ their equipment when they heard that Stephen Bowles, a long time friend of theirs from Ipswich, wanted to take up the reins in West Wales; and so in late 1989 or early 1990 they brought it all over to him, including a large amount of paperwork. Stephen was offered a small workshop at Felin Geri, which is a 16th century flour mill (felin = mill) that operates as a tourist attraction. He paid only a low rent in exchange for converting it. He made a fine job of the conversion, but by the spring of 1991 he was running out of steam and money and hadn’t really got going on the production side. I met Steve through a mutual friend and as Louise and I wanted to get out of London, and pursue something worthwhile, and Steve wanted to do a teacher training course, we agreed to take over. Louise and I started production in Wales in Oct. 1991.” Encouraged by success, they are planning to move into a new building.

Letter from Andy McAuley of The Soya Dairy. 1992.

Nov. 6. While working at Fruits of the Earth, Dave Carless had run a small scale tempeh kitchen for about 3 years under the name of Tempeh Foods. Davy and Andy later co-founded The Soya Dairy in Sheffield. Dave taught Andy how to make tempeh.

1547. **Product Name:** Tempeh, and Okara Tempeh.

**Manufacturer’s Name:** Traditional Foods Cooperative.

**Manufacturer’s Address:** Route 1, Gays Mills, WI 54631.

**Date of Introduction:** 1984. May.

**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Liz Coleman of Traditional Foods. 1991. Nov. 25. This company was started as a home business by Bob Mandel and Cindy Wiar. They used to make tempeh, but it was not profitable. The company is now located in a bakery at P.O. Box 92 (Corner of Grove and North Railroad Streets), Gays Mills, WI 54631. Phone: 608-735-4711.

Talk with Mary Ruth of Traditional Foods. 1991. Nov. 25. Bob Mandel and Cindy Wiar started making and selling tofu, then tempeh out of their home, which was located just outside of Gays Mills. They only sold the foods through their local co-op, The Kickapoo Exchange, in the little rural town of Gays Mills. In April 1989 Traditional Foods was formally incorporated into a cooperative (a legal form of corporation in Wisconsin) with the same name. Bob and Cindy put up a sign at the local co-op (where Cindy was manager) inviting interested people to a meeting; a group of co-op members formed and began to have meetings. Then, in Sept. 1989, the group found and bought a local commercial bakery named Wheat Heart Bakery, and moved the business out of Bob and Cindy’s home into the bakery. Before this time, tempeh and tofu had been discontinued.

Talk with Cindy Wiar. 1991. Nov. 25 and 28, then 1992. Jan. 12. She and Bob started in about April 1984 making tofu at their home located on Route 1 outside of Gays Mills. They didn’t have a phone, and they had no business name until the fall of 1986, when they started making tempeh and seitan. At that time they started calling their business “Traditional Foods” but it was not official or incorporated. They learned how to make the tempeh from books by Shurtleff and Aoyagi. They made both regular and okara tempeh, which they initially sold mostly at one co-op in Madison, Wisconsin. They phased out tempeh in the summer of 1989, after the new cooperative had been formed, because of their very low profit margins and time pressures to make the more profitable seitan and miso—which were being sold to warehouses and larger places. They intended to continue the tofu and tempeh later, but it has not yet happened.

Cindy is no longer associated with Traditional Foods; Bob works there 1 day a week making koji. After Bob passes on his knowledge of making koji, he plans to leave too. He now works the rest of the time on other people’s farms. It was their dream to form a cooperative making these foods,

but it didn't work out. The quality of the foods declined and the other members of the cooperative often just wanted a job, rather wanting to be owners of the business. There were endless problems and meetings. Cindy and Bob were put in a position of being the bosses, which they didn't want to be. By the summer of 1991 they realized they wanted to get out—but it still hurts.

Talk with Bob Mandel. 1992. Jan. 11. In the fall of 1986 he and Cindy started to make and sell tempeh and seitan from their home in Gays Mills. They also sold a little tempeh and seitan in Madison, which is a college town with a lot of health food stores. In Dec. 1988 there was meeting called to establish a co-op. In April 1989 they incorporated as a co-operative. In Aug. 1989 they purchased a commercial bakery. The original plan was to start making tempeh (to get initial cash flow) in the new building, and to develop a line of miso products. But the person who was supposed to make the tempeh was never able to—so they found themselves in a bind. Therefore in about Feb. 1990 they started to make seitan again. To get things started, Traditional Foods sold their products to the co-ops in Madison. The co-ops asked North Farm Co-op (a natural foods wholesaler and distributor) to starting distributing Traditional Foods products; North Farm became Traditional Foods' first distributor in Feb. 1990—distributing to co-ops, other retail stores, and buying clubs. Soon Blooming Prairie was also distributing Traditional Foods' products, especially west of the Mississippi to buying clubs. in Feb. 1990. Today the company makes seitan (packaged and in bulk) and 3 types of miso.

1548. Yamanaka, Mitsuaki. 1984. Re: The work of Takashin Ltd. with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, May. 3 p. [Jap]

• **Summary:** Our company, Takashin, Ltd. (*Takashin Shokuhin*) is a member of the Japanese National Natto Association (*Zenkoku Natto Kyôdô Kumiai Rengokai*). In early 1983, with director Ose's announcement of *Tempe Gannen* (The First Year of Tempeh) we started basic research on tempeh production and on second generation tempeh products—with other members in full force. From the beginning of 1984, under the leadership of our president Makito Takato, we are making progress on marketing and commercialization. We are also consulting with Oita-sensei, the top tempeh researcher in Japan, from the Ministry of Agriculture and Forestry Research Center (*Nosui-sho Shokuhin Sôgo Kenkyû-sho*).

We are now preparing to build a tempeh plant, with tempeh-making equipment, in order to make consistently good quality tempeh at low price for the market.

To answer your questions: 1. In April 1983 our president attended the Association meeting. Since then we have been doing research on tempeh. As a new fermented food in Japan, tempeh appealed to our president's progressive nature.

We believe it has many advantages over natto.

2. July 1983. Right after Mr. Kanasuki / Kanasugi of the association returned from Indonesia, we invited him to our company and asked him to teach us how to make tempeh. In Sept. 1983 we started to sell hamburger with tempeh.

3. We are making and selling both tempeh (40 kg/day) and second-generation tempeh foods (20 kg/day)—such as hamburger, croquettes, cutlets, etc.

4. Monthly production is 1,500 kg.

7. We are selling or tempeh and tempeh products through natural foods restaurants and natural foods stores. We tried to test market our products in regular food stores but it didn't sell well because of lack of promotion and publicity. Address: Tachibana 1-29-2, Sumida-ku, Tokyo 131, Japan.. Phone: 048-644-1323.

1549. Schipper, M.A.A. 1984. A revision of the genus *Rhizopus*. I. The *Rhizopus stolonifer* group and *Rhizopus oryzae*. *Studies in Mycology* No. 25. p. 1-19. June 1. [42 ref]  
• **Summary:** "The genus *Rhizopus* Ehrenb. is revised, mainly using the strains maintained in the CBS culture collection. In the *Rh. stolonifer* group only 2 species are maintained, both with several varieties. The variable species *Rh. oryzae* is described. Numerous older taxa are treated as synonyms. Keys to the accepted taxa are provided.

"The genus *Rhizopus* Ehrenberg (1820) was based on *Rhizopus nigricans*, an incorrect name change for *Mucor stolonifer*, which was earlier described by Ehrenberg (1818)."

"The early history of the genus was first reviewed by Zimmermann (1871)... Well known treatments of the genus are those of Lendner (1908), Hanzawa (1915), Zycha (1935), Zycha et al. (1969), Naumov (1935/1939) and Inui et al. (1965)." Address: Centraalbureau voor Schimmelcultures, Baarn, Netherlands.

1550. Schipper, M.A.A.; Stalpers, J.A. 1984. A revision of the genus *Rhizopus*. II. The *Rhizopus microsporus* group. *Studies in Mycology* No. 25. p. 20-34. June 1. [11 ref]

• **Summary:** "The complex around *Rhizopus microsporus* has been revised. Two species are recognized, viz. *Rh. homothallicus* and *Rh. microsporus*, the latter with 3 additional varieties: var. *chinensis*, var. *oligosporus* and var. *rhizopodiformis*."

"In addition to this apparent continuum in patterns of ornamentation, another type is found in *Rh. microsporus* var. *oligosporus*. This type is derived from the above but not well developed; we consider it to be rudimental or degenerate. The spores are often more or less collapsed with recognizable ridges which are rarely entire, largely consisting of rows of warts." Address: Centraalbureau voor Schimmelcultures, Baarn, Netherlands.

1551. Hansen, Barbara. 1984. Tofu. *Los Angeles Times*. June 7. Food section (Part VIII). p. 1, 9, 12, 14. Thursday.

• **Summary:** Don Bushman, American Soybean Assoc. director in Singapore, notes that the Asian soybean market is growing rapidly. “Indonesians consume about 1 million tons of soybeans annually, 60% to 65% of them in the form of tofu, and 35% to 40% as *tempe*. The fifth-largest nation in the world in terms of population, Indonesia imports 400,000 tons of soybeans a year, about 90% of them from the United States. Some 25,000 to 30,000 tons of soybeans are used annually for food in Malaysia, and 15,000 to 20,000 tons are imported to Singapore for food use, Bushman said. In Singapore and Malaysia, most of the tofu is made with Canadian beans, he added, explaining that Canada is able to deliver the beans at a lower cost. Thailand produces all of its food beans domestically and does not import additional supplies, Bushman said. However, the United States sends soy meal for animal feed to this and other Asian countries.”

1552. Kira, Motoo. 1984. Re: History of Marukin Shokuhin's work with tempeh. Letter to William Shurtleff at Soyfoods Center, June 8. 5 p. Handwritten, with signature. [Jap; eng+]

• **Summary:** Marukin Foods. The first natto company to start large-scale production of tempeh in Japan was Marukin Shokuhin (Marukin Foods Industry Co. Ltd.). Located in Kumamoto, Kyushu (Japan's southernmost main island), they were (in 1984) one of Japan's Big Five natto manufacturers, and they also made several other foods such as roasted soy flour (kinako), tofu, and konnyaku. In about 1964 Mr. Hayashi of the Japanese-American Soybean Institute suggested that Marukin start to study tempeh. At that time Marukin was looking for a new product, so Mr. Haruo Kato (the brother of Marukin's president and chief of natto production, research, and development) began with great interest to collect material and investigate this little-known fermented soyfood. Kato obtained tempeh culture from an unknown source in 1964 and was soon making small batches of tempeh. However the company eventually came to believe (incorrectly) that tempeh culture could interfere with the natto fermentation, and taste tests of tempeh led Kato to feel that it might be difficult to introduce tempeh into Westernized diets in Japan. So interest in tempeh waned. In July 1982 Marukin and eleven other small- to medium-sized soyfoods manufacturers from throughout Kyushu joined to establish the Kyushu Soyfoods Industry Association (*Kyushu Daizu Shokuhin Kogyo Kumiai*). Marusan's president, Itsuo Kira, became head of the cooperative Association. To help them compete with larger companies, and supported by Japanese government aid, they built a large and modern factory (6,600 square meters), with a daily capacity of 15 tonnes of natto and 6 tonnes of kinako and soy soup base (*gojiru no moto*). In April 1983, this new natto factory, the largest in Japan, started production, employing 85 workers. Marukin decided to use its former natto factory to make tempeh, since there was a growing interest in soyfoods and healthful foods, and since they already had extensive

experience in making fermented soyfoods. In November 1983 Marukin Foods launched SunSeed brand tempeh. An article on the product in the 1 December 1983 issue of the *Japan Food News (Nihon Shokuryo Shimbun)* was headlined “nonsticky natto” and by May 1984 they were selling 1,500 packs of 200 gm each (300 kg) daily, about 4,620 lb (2,100 kg) a week or 9,150 kg a month. They were also developing secondary tempeh products, including snack foods, paste-type foods, and fried foods. The person in charge of tempeh production and sales was Moto-o Kira, eldest son of the president, Itsuo Kira, and next to top man in the company. Marukin sold its tempeh in department stores and in supermarkets at their own in-store booths. To promote tempeh, the company employed two professional nutritionists to do demonstrations and lectures at cooking classes. Marukin soon hopes to sell tempeh to school lunch programs. Address: Manager, tempeh production, 380 Yoyasu-machi Kumamoto-shi 860, Japan. Phone: 096-325-3232.

1553. *Recorder (Greenfield, Massachusetts)*. 1984. Soy curd [sic] firm expands with state loan aid. June 9. p. 3.

• **Summary:** Tempeh Works Inc. [which makes tempeh, NOT soy curd] is beginning an expansion using a five-loan \$215,000 financing package. The bulk of the funds (\$165,000) included a Small Business Administration guaranteed loan through the Shawmut Bank of Franklin County. The money will be used (1) To purchase the 74 Fairview St. building in which Tempeh Works has operated since September; (2) To purchase new state of the art food processing equipment; (3) To construct a 2,000 square foot addition that will increase the firm's space from 4,200 to 6,200 square feet. The addition will provide space for incubation and cold storage; (4) To provide working capital to launch a line of new products and save money through bulk buying.

Tempeh works now has 7 full-time and 4 part-time workers. “In the first year, when there were just three employees at Tempeh Works, sales totaled \$65,000. In the operating year that ended June 30, 1983, sales had jumped to \$265,000. Sales in the current year, which ends June 30, will total about \$330,000, Cohen said.” Address: Staff reporter.

1554. Karyadi, Darwin. 1984. Re: New developments with tempeh in Indonesia. Letter to William Shurtleff at Soyfoods Center, June 16. 1 p. Typed, with signature on letterhead.

• **Summary:** “Dear Mr. Shurtleff, Since the issue of your famous book of tempeh, I keenly observed the tremendous fast trend of increased consumption of tempeh all over the world.

“In the last few years our institute has researched other medical aspects of tempeh which might be useful for public health intervention program. Therefore it is time now to gather updated information on the current knowledge

on several aspects of tempeh such as food technology, gastronomy, medicine, food microbiology, etc.

“To realize this, our Institute is planning to organize an international symposium on advanced knowledge of tempeh sometime in late 1985, either in Bogor or Bali.

“While preparing the first circular I would appreciate your comments and suggestions about the symposium. If there are sponsorships from the United States I would appreciate this for the success of the meeting.

“With best regards, sincerely yours...” Address: M.D., Ph.D., Director and Professor, Nutrition Research Development Center (Ministry of Health, National Institute for Health and Development), Komplek Gizi, Jalan Dr. Semeru, Bogor, Indonesia. Phone: (0251) 21763.

1555. Lewis, Bea. 1984. Tempeh: Tofu’s first cousin. *Newsday (Long Island, New York)*. June 16. [2 ref]

• **Summary:** Robert Werz, owner of Appropriate Foods, prepared tempeh recipes that she liked and published: Sweet & Sour Tempeh, and Tempeh Salad.

1556. Kato, Eihachiro. 1984. Re: Work with natto at the NRRC and in Japan. Work with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, June 18. 2 p. Handwritten on lined paper; 3 p. transcript. [Jap; eng+]

• **Summary:** In Oct. 1983 the author started doing research on natto under Drs. Hesseltine and Wang at the Northern Regional Research Lab. in Peoria, Illinois. In Japan, the soybeans used to make natto are grown mostly in Japan or China. U.S. soybeans are believed to be unsuited for making natto since they remain hard after cooking, and they produce natto that has less sweetness and stickiness (*nebari*) than desired. He is now trying to find U.S. soybeans suited to making natto. He has found that the environment and conditions under which the soybeans are grown has more influence on the natto than the varieties themselves. He thinks that natto has many potential uses in a dried powdered form that could be mixed with other foods. He plans to return to Japan in late Aug. 1984. He has an extensive collection of publications on natto, which he is willing to share.

In Japan, he teaches at Meiji University in the agricultural chemistry dept., fermented foods research lab. He worked under Dr. Masahiro Nakano for a long time when he was there. His father (Haruo Kato) and brother (Itsuo Kira) produced natto after World War II in Kumamoto prefecture, Kyushu. They also tested tempeh for about 15 years. Their company is called Marukin Shokuhin Kogyô K.K. In July 1983 they established the Kyushu Soyfoods Association (*Kyûshu Daizu Shokuhin Kogyô Kumiai*) with Japanese government aid, and in Uto-chi, Kumamoto prefecture, they built a new plant. Marukin shokuhin is mainly handling the sales. Mr. Kato has no direct connection with Marukin. Address: NRRC, Peoria, Illinois.

1557. *Toyo Shinpo (Soyfoods News)*. 1984. Tenpe honkaku shihan [Marusan-Ai plans to really market tempeh from June 1]. June 21. [Jap]

• **Summary:** Contains 2 graphs. Address: Kyushu Daigaku Meiyo Kyoju, Nôgaku Hakase (Dep. of Food Science and Technol., Kyushu Univ.).

1562. **Product Name:** Vegetarian Paté (Made with Tempeh).

**Manufacturer’s Name:** 21st Century Foods Inc.

**Manufacturer’s Address:** 30A Germania St., Jamaica Plain, MA 02130. Phone: 617-522-7595.

**Date of Introduction:** 1984. June.

**Ingredients:** Organic soy tempeh, sesame tahini, carrots, parsley, onions, lemon juice, olive oil, garlic, tamari, sea salt.

**Wt/Vol., Packaging, Price:** 6 oz glass jar.

**How Stored:** Shelf stable; refrigerate after opening.

**New Product–Documentation:** Label. 1987, undated. 4 by 2 inches. Red and black on white. “Ready to eat. Gourmet. Organic.” Posner. 1987. 21st Century Whole Foods Cook Book. Inside rear cover. Talk with Rudy Canale. 1988. Sept. 13. The invoice for printing the labels for this product is dated June 1984.

1563. Appropriate Foods, Inc. 1984. Eat Appropriately! Summer catalog ‘84. 137 New Hyde Park Rd, Franklin, NY

11010.

• **Summary:** The following lines are carried and distributed: Appropriate Foods (tempeh, soymilk), New York Soy Deli, Grainaissance (amazake and mochi), Garden of Eatin', McZand Products, N.Y. Miso, Nasoya, Nutri-Gest, The Soy Source, Sister Shorter, Swan Gardens, Sprout Delights, Willow Run Margarine, Great Eastern Sun (all of their products). Address: Franklin Park, New York.

1564. Ariyaratna, K.G.S. (Mrs.). 1984. Tempeh—the health food. *Soyanews (Sri Lanka)* 6(10):4-5, 7. June.

• **Summary:** Describes how to make and serve tempeh on a small commercial scale in Sri Lanka. Four large photos show the process. Tempeh is presently sold at the Soyabean Foods Research Centre sales centre, Gannoruwa, at Rs. 20/ a kilo. Address: Food Technician, Soyabean Foods Research Centre, Gannoruwa, Sri Lanka.

1565. Beuchat, Larry R. 1984. Fermented soybean foods. *Food Technology* 38(6):64-70. June. [31 ref]

• **Summary:** Discusses soy sauce, miso, and tempeh, and gives details of their fermentation processes. Address: Prof., Dep. of Food Science, Univ. of Georgia, Agric. Exp. Station, Experiment, GA 30212, USA.

1566. Bo, Thi-an. 1984. Tōshi no engen to sono seisan gijutsu ni tsuite [On the origins of soy nuggets [douchi] and their production technology. I and II.]. *Nippon Jozo Kyokai Zasshi (J. of the Brewing Society of Japan)* 79(4):221-23; 79(6):395-402. [7 ref. Jap]

• **Summary:** A definitive history of the subject. Includes a discussion of *shuidouchi*, which might be called salted Chinese natto; it is fermented with *Bacillus subtilis* and made in Shandong province in China—directly west of South Korea. Address: Iwate Daigaku Nōgaku-bu, Sogaku 80 shunen no gosukui ni kaete; Present address, China.

1567. Farm Foods. 1984. Soyfoods a hit at American Booksellers Assoc. Convention (News release). P.O. Box 37, Summertown, TN 38483. 1 p. June.

• **Summary:** Farm foods and its sister company, The Book Publishing Company, served samples of Tofu Cheesecake, Tofu Onion Dip, and Deep-Fried Tempeh to nearly 20,000 convention attendees in Washington, DC. This helped to promote their books *Tofu Cookery* and *Tempeh Cookery*. Address: Summertown, Tennessee.

1568. Kanasugi, Goro. 1984. Re: Work with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, June. 4 p. Handwritten, with signature. [Jap]

• **Summary:** Mr. Kanasugi, vice president of the Japan Natto Assoc., started a soyfoods restaurant named Mame-no-ko ("child of the soybean") in Omiya city, Saitama prefecture. By mid-1983 he was serving tempeh there as an alternative

to meat in various side dishes: tempura, harumaki (spring rolls), karinto (sweet fried dough cake), curried sauce, sauteed vegetables, croquettes, and various others. He also sells ready-to-eat tempeh dishes at his take-out deli. Many of his recipes contain 10-20% chicken or meat.

Mr. Kawashima of Tsukuba told him that his tempeh has a very good flavor. Lots of big Japanese companies are now looking at tempeh manufacturing. Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan. Phone: 048-644-1323.

1569. Leneman, Leah. 1984. The foods that are soya good. *Vegetarian (The)*. May/June. p. 12.

• **Summary:** "Soya foods are playing an increasingly important role in the American health food movement, a positive trend which hopefully will be echoed in the U.K. By soya foods I do not mean TVP (which has never really caught on in a big way in the States), but tofu (soya bean curd) and tempeh. These are low-cost, low-technology products simple enough to make in your kitchen." In America the movement away from dairy products is for reasons of health rather than ethics. In Britain, ethics come first. Cholesterol is the real bugbear to Americans. In New York the author tasted a soft-serve tofu ice cream with a "creamy texture I would not have believed possible in a dairyless product."

1570. **Product Name:** [Tempeh Burgers (Marinated and Baked. No Oil)].

**Manufacturer's Name:** Noble Bean.

**Manufacturer's Address:** Toronto, ONT, Canada.

**Date of Introduction:** 1984. June.

**New Product—Documentation:** Letter from Allan Brown. 1985. Aug. 7. Ready to eat. 4 oz for \$1.65. Letter (fax) from Allan Brown. 1998. Jan. 21. Tempeh burgers were first sold in June 1984.

1571. Shurtleff, William; Aoyagi, Akiko. 1984. Using tofu tempeh, & other soyfoods in restaurants, delis & cafeterias. Lafayette, California: Soyfoods Center. 181 p. June. 28 cm. Revision of Report on Soy Delis, Cafes, and Restaurants. [21 ref]

• **Summary:** Contents: 1. Introduction and overview. 2. Directory of soyfoods delis, cafes and restaurants. Secondary soyfoods manufacturer-distributors. Soyfoods marketer-distributors. 3. Chronology of opening (Farm Food Company in San Rafael, California, was first in Aug. 1976). 4. Names of recipes served at each soy deli and ranking of the best-selling of these recipes. 5. Names of recipes produced by second generation soyfoods manufacturer-distributors. 6. Names of recipes produced by soyfoods marketer-distributors. 7. Individual bulk recipes for tofu and tempeh dishes. 8. Alphabetical listing of recipes given above. 9. Articles published about soyfoods restaurants, delis, and cafeterias. 10. Menus, posters, and promotional materials. 11.

Conclusion and summary. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

**1572. Product Name:** [Tempeh].

**Foreign Name:** Tempeh.

**Manufacturer's Name:** Sojvita Produktions GmbH.

**Manufacturer's Address:** Hauptplatz 1, 2493 Lichtenwoerth, Austria. Phone: 02622/75494.

**Date of Introduction:** 1984. June.

**Ingredients:** Sojabohnen, Edelpilzkultur.

**Wt/Vol., Packaging, Price:** 450 gm.

**How Stored:** Refrigerated.

**Nutrition:** 157 calories/100 gm.

**New Product–Documentation:** Letter from Norbert Brunthaler. 1988. Jan. 4. Gives date of introduction as starting date of company, June 1984. Label. 1987. 3.5 by 3 inches. Dark green, light green, orange, and black on white. "Tempeh is versatile food that is rich in protein and vitamin B-12, which is good for frying (plain or in a breaded batter), baking, or dicing. Keep refrigerated. Do not use raw."

**1573. Product Name:** Tempeh.

**Manufacturer's Name:** Soyabean Foods Research Centre.

**Manufacturer's Address:** Gannoruwa, Sri Lanka.

**Date of Introduction:** 1984. June.

**Ingredients:** Soybeans, water, starter culture.

**New Product–Documentation:** Ariyaratna, K.G.S. (Mrs.). 1984. *Soyanews* (Sri Lanka). "Tempeh—the health food." Tempeh is presently sold at the Soyabean Food Research Centre sales centre, Gannoruwa, at Rs. 20/ a kilo.

Note: Tempeh made by this same Centre had been sold commercially in Sri Lanka as early as Sept. 1981, but only in a booth at agricultural fairs—never on a permanent basis.

1574. Watanabe, Tokuji; Kishi, Asako. 1984. The book of soybeans: Nature's miracle protein. New York, NY: Japan Publications. 191 p. June. Illust. General index. Recipe index. 26 cm. [21 ref]

• **Summary:** Contents: Introduction. Part 1. General information: 1. Characteristic traits: Agronomic and other biological characteristics, physical properties, chemical properties, soybean protein, properties of soybeans as food material. 2. Current ways of using and processing soybeans: Throughout the world, traditional ways of using and processing, new soybean food products. 3. Tofu and other nonfermented soybean food products: Tofu, deep-fried tofu, dried-frozen tofu, soy milk, yuba, roasted soy flour (kinako), soybean sprouts. 4. Miso and other fermented soybean products: Miso, natto, Hama-natto (tera-nattô), soy sauce, sufu, tempeh. 5. Other ways of eating soybeans—Simple traditional Japanese foods: Parched soybeans, boiled soybeans (*budo-mame*; *hitasahi mame*), beaten and mashed [or ground] soybeans (*go*, or (from edamamé) *zunda* or *jinda*), molded soybean mash (*jinta-dôfu*), molded mashed

soybeans and rice flour (*shitogi*), soybean soybean-mash paste. 6. New soybean protein products.

Note 1. This is the earliest document seen (Nov. 2008) that mentions *zunda*. The text (p. 84) reads: "When fresh green soybeans (edamame) are used in cooking, they are boiled for from ten to twenty minutes; ground; and flavored with salt, sugar, and soy sauce. The resulting dish is called *zunda* or *jinda*."

Note 2. *Zunda* is a healthy and tasty snack or treat made from mashed edamamé. It is sweet, rich in protein, high in fiber and emerald green. It is said to have originated hundreds of years ago in Japan in Miyagi prefecture. In and around Sendai (capital of Miyagi prefecture) one can find many shops and booths that sell *zunda* cakes, *zunda* mochi treats, and *zunda* shakes, all made from edamamé (green vegetable soybeans). One well-known company in Japan that markets delicious *zunda* products is *Zunda Saryo*.

Part 2. Cooking with soybean food products: Tofu, yaki-dofu, kori-dofu, nama-age, abura-age, gammodoki, yuba, natto, miso, soy milk, soybeans, bean sprouts. Afterword. Bibliography.

In the chapter on tofu, pages 43-44 discuss *okara* or *unohana* (the residue remaining after soy milk production); a photo shows it in a glass bowl. "Though it formerly appeared on many Japanese tables seasoned and cooked with vegetables, today it is most often fed to animals. As the number of animals raised in urban and suburban areas decreases, however, tofu manufacturers are finding it harder to dispose of residue."

Page 99 notes of tofu: "At a certain temple in Kyoto is a plaque bearing the following inscription, which, while comparing this food to religious faith, clearly shows the esteem in which the Japanese people hold tofu. 'Religious faith should be like tofu: it is good under any circumstances. It is good boiled, grilled, or fried. Raw, chilled, served with soy sauce and other seasonings, it is good with steamed rice. Simmered in hot water and flavored, it is good with sake. Because it is soft, old people and sick people welcome it, but children and young people like it too. Men like it, women like it; poor and rich both like it. Though common, it has elegance enough to find a place in the upper class.

"It cuts clean and well for use in clear broths. It is good in the meatless diets of religious training. It can be crushed for use in miso soup. It is used all the time and in all seasons. It is inexpensive yet numbered among the delicious treats. It is welcomed everywhere, in mountains as well as in big cities. It is well received at dinners for dignitaries and guests yet is convenient enough for college students who do their own cooking. Women especially should be like tofu. The mature and cultivated person should be tender, yet firm, like tofu. Though apparently tasteless, it is delicious. Though apparently ordinary, it is extraordinary."

Other ways of eating soybeans (p. 83-84): (1) Parched—"Parched gently in unglazed ceramic dishes made for the

purpose,” then tossed by people at Sestubun in February around their houses as they chant “Demon out! Good luck in!” “Then they pick up the beans and eat them. “Parched soybeans are included in some varieties of *mochi* (glutinous rice cake) and in *okoshi* a confection made of puffed rice bound together with sugar syrup. In the past they were eaten with salt, miso, or soy sauce.” Note: In the USA, parched soybeans are called “dry roasted soynuts.”

Tables show: (1) World production of soybeans (1977-1982). (2) Price trends in dollars per ton for wheat, soybeans, and corn (1970-1981). (3) Soybean yields in the USA and Japan (1974-1981). (4) Chemical composition of soyfoods: Tofu, abura-agé, kôri-dôfu, yuba, kinako, soybean sprouts, nattô, miso (dark yellow), soy sauce (common), soybean (Japanese). (5) Statistics on production of modern soybean products in Japan (1975-1981). (6) Annual production and prices of modern soy protein products in the USA (May 1983).

Japan once produced a million tonnes (metric tons) of soybeans annually. This figure decreased dramatically during World War II. After the war, as soybean imports from the United States steadily increased, Japan’s domestic crop gradually fell to the level of no more than 100,000 tonnes. In 1977 it was 111,000 tonnes, yet by 1982 it had jumped to 226,000 tonnes as rice acreage was reduced.

All photos are black and white. Figures show: (2) Line drawing of soybean plant with flowers and leaves. (2) Cross section of soybean seed-coat and cotyledon. (3) Graph of protein solubility (NSI) of defatted soybean meal at different pH values. (4) Graph of protein solubility (NSI) of defatted soybean meal at different concentrations of calcium chloride. (5) Graph of relationship between time and temperature of soaking soybeans in water (colder water temperature requires longer soak time). (6) Flow sheet for making regular tofu. (7) Photo of regular (*momen*) “cotton tofu.” (8) Line drawing of grinder (horizontal type) used with soaked soybeans when making tofu. (9) Photo of continuous filter for soy-milk preparation. (10) Photo of small-scale soy-milk processing plant. (11) Line drawing of molding box [forming boxes with lids] for making regular tofu. (12) Photo of yaki-dofu [grilled tofu]. (13) Photo of okara in a glass cup. (14) Line drawing of molding box [forming box] for silken tofu. (15) Photo of silken tofu. (16) Flow sheet for packaged tofu production [GDL]. (17) Photo of packaged tofu in package. (18) Flow diagram of large-scale process for making tofu and abura-age with 26 pieces of equipment labeled. (20) Flow diagram of continuous process for making packaged tofu [GDL]. (21) Photo of 2 pieces of abura-agé. (22) Photo of deep fryer for making abura-agé. (23) Photo of nama-agé [deep fried tofu cutlet]. (24) Photo of two types of ganmodoki. (25) Line drawing for tofu kneader for ganmodoki production. (26) Photo of kôri-dofu [dried frozen tofu]. (27) Flow sheet for making dried-frozen tofu. (28) Flow diagram of process for making large-scale dried-frozen tofu. (29) Photo of

aseptic carton and glass of soy milk. (30) Flow sheet for making aseptically packaged soy milk. (31) Photo of 5 different forms of dried yuba. (32) Photo of kinako in two clear glass bowls. (33) Photo of soybean sprouts in a woven bamboo basket. (34) Flow sheet for making miso. (35) Three different types and colors of miso on 3 bamboo rice paddles (*shamoji*). (36) Line drawing of cut-away view of traditional pressure cooker (*koshiki*) for rice cooking. (37) Diagram of continuous rice cooker with 7 parts labeled. (38) Line drawing of *Aspergillus oryzae* with conidia (spores), sterigmata, and mycelium labeled. (39) Photo of pieces of koji. (40) Diagram of modern fermentation room for making koji. (41) Cut-away view of miso fermenting in a wooden vat with stone weights above vinyl film on top. (42) Line drawing of a mashing machine for miso. (43) Photo of natto in rice straw wrapper and polystyrene tray. (44) Cross sectional view of pressure cooker for soybeans. (45) Line drawing of rotating mixer to combine cooked soybeans with pure-cultured *Bacillus natto*. (46) Photo of soy sauce table dispenser. (47) Flow sheet for making Japanese soy sauce (shoyu). (48) Transparent view of crusher (roller) for roasted wheat in making soy sauce. (49) Photo of modern stainless steel fermentation tanks / vats (indoors). (50) Photo of a jar and a cup of sufu [fermented tofu]. (51) Diagram showing relationships between modern soy protein foods.

Note: Surprisingly, edamamé, one of the most popular soyfoods in Japan, is mentioned only once, in passing (p. 84) in this book.

Photos on the rear cover show Tokuji Watanabe (born in 1917, graduated from the Faculty of Agriculture of Tokyo University, 1941, with Doctor of Agriculture) and Asaki Kishi. A brief biography of each is given. Address: 1. D. Agr., Kyoritsu Women’s Univ., Tokyo.

1575. Praskin, Laurie. 1984. Work with soyfoods on The Farm in Tennessee. Luci Morren working with soyfoods in Mexico. *SoyaScan Notes*. July 1. Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** The Farm Soy Dairy had a centrifuge for making soymilk and dewatering soypulp in 1975. Laurie started working in the soy dairy in late 1974 or early 1975. Alexander was still there. There was a centrifuge there before that. All the tempeh at that time was okara tempeh. She does not recall if they used the centrifuge to dewater whole soybeans for tempeh.

Suzie and Chris Jenkins. Utah. 801-532-4289. Suzie made tempeh before she went to Guatemala.

Luci Morren is a woman working in Mexico with refugees from Guatemala. She went to the World Soy Conference. To make tortillas, add soybeans with corn to boiling lime water (cauldron cuts cooking time a lot), soak over night, then rinse, grind, form and cook tortillas.

Also using soybeans with local black beans, 1:5. Soak over night to do away with some SBTI [soybean trypsin

inhibitor]. Also cook with rice. People don't use enough wood to cook things longer. Suzi utilizes everything when she does her demos. The whey is drunk with sugar and limes; refreshing. The pulp [okara] used in *masa*, and fried. Luci is a Belgian woman, who got turned onto soy in Mexico. She went to Nicaragua right after the revolution and started a big soy program. Nicaragua has classified soy as one of its protein sources. For 3 years, she worked closely with women; she also has a program with 5 farmers growing soybeans.

Laurie will try to get me Luci's address. Its sickening to see the poor kids. Mexicans do not want to help too much. Foreigners aren't allowed into camps. Including Luci. She works out of San Cristobal in her office, training Mexican promoters, but not all are as dedicated as she. Another student of hers is making tofu in her house to sell to tourists. Laurie taught her to make tofu cheesecakes.

Plenty is funding Luci to do this soy project in Guatemala. Do they buy beans in Tapachala? Are any Chinese in Guatemala making soyfoods?

1576. Stuart, Paul. 1984. Re: Searching deeper for information on Franz Anton Brillmayer in Austria. Letter to William Shurtleff at Soyfoods Center, July 12. 4 p. Handwritten. [Eng]

• **Summary:** "Thanks for writing again." Paul has not since been able to contact Anton Wolf and thus has not been able to learn much more about Mr. Brillmayer.

"The address of my current provisional business is: Neustiftgasse 24 / MAG., 1070 Vienna." He presently has no telephone since he intends to move to an environmentally healthier area. "If all goes well we will be able to produce with much more professionalism in the fall. It has been a very difficult road thus far with no letting up in sight.

"I intend to visit my family and existing tempeh & soy products companies in the U.S. at this time. Perhaps you could recommend some good contacts, preferably in the northeastern U.S.

"Austria is overflowing with grains and legumes. Unfortunately soybeans (Austrian) are short of impossible to obtain... Presently I pay over 20 [Austrian] shillings for Austrian soybeans. Peas cost a mere 5.

"Mrs. (Emile) Brillmayer lives under the address Nied. Oes. [Nieder Oesterreich] 2051 Platt Nr. 14. She does not have a telephone. Her brother died in 1964. She also reported in her postcard that there are no soybeans grown in her area. And that I should take a look in the Marchfeld area. Marchfeld is sort of the Sacramento Valley of Austria. As of yet I have not been able to make any connections in this regard.

"The town, better said village Platt where Brillmayer lived lies roughly 50 km. northwest of Vienna. Near Hollabrunn. It is a quaint very old dorf [village] that has remained pretty much untouched. When I was there I felt as

though I was 50 years earlier in time.

"Thanks much for the informative brief history of soybeans in Austria. The article gives me much to go on. With luck I will be able to find some info about at least some of the scientists you listed."

"After a visit to the Austrian National Library I can happily say that I now have all of F.A. Brillmayer's works photocopied. *Wunderpflanze "Soja"* (1947), *Die Kultur der Soja in Oesterreich* (1947), and *Die Bedeutung der Soja fuer die Ernaehrung Oesterreichs* (1947), plus a couple of other interesting works. All of these works are very interesting. If you would like I could photocopy and forward these for you providing you pay the cost of photocopying and sending which would roughly be about 600 Sch [Austrian schillings]—as I unfortunately don't have access to a photocopier other than the public ones which costs between 1-2 Sch a side. (600 Sch = about between 30-35 U.S. dollars). Perhaps with luck I can get the works photocopied less expensively. Let me know if you're at all interested first. Looking forward to hearing from you."

Note: Paul used to write his surname as Zacharowicz. Address: Neustiftgasse 24, 1070 Vienna, Austria.

1577. *Nikkei Sangyo Shinbun (Japan Economics and Industry News)*. 1984. Indonesia daizu shizen shokuhin. Nihon de tenpe kokusai kaigi [An Indonesian natural soyfood. International tempeh symposium in Japan]. July 13. [Jap]  
Address: Tokyo, Japan.

1578. *Bee (Fresno, California)*. 1984. Tempeh making its way into American kitchens. July 18.

• **Summary:** Contains four recipes for the "soyfood with culture."

1579. Lindsley, Kathy. 1984. Meatless, but not tasteless: You won't miss the meat in these recipes. *Times Union (Rochester, New York)*. July 31.

• **Summary:** Vegetarian cookery, featuring tofu and tempeh, has gone gourmet at The Lotus Cafe (686 Monroe Ave.) in Rochester, New York. A large photo shows Greg Weaver with a blackboard menu.

1580. Hermana, -. 1984. "Tempe" superior to any other vegetarian food. *Indonesia*. July. p. 58-59.

• **Summary:** Mr. Hermana, age 45, whose photo is shown, recently earned his doctorate from the Bogor Institute of Agriculture (IPB) with a thesis on tempe. As part of his research from Dec. 1980 to Sept. 1982, Hermana fed tempeh to 420 children between the ages of 13 and 36 months in the villages of Bendungan in Bogor and Dlingo in Yogyakarta. About 30% of Indonesian children suffer an alarming protein-calorie deficiency. Feeding them a mixture of grain and tempe led to dramatic weight gains. Address: Bogor,

Indonesia.

1581. Shurtleff, William; Aoyagi, Akiko. 1984. History of tempeh: A fermented soyfood from Indonesia. Lafayette, California: Soyfoods Center. 81 p. July 17. No index. 28 cm. 2nd ed. 1985. 91 p. [375 ref]

• **Summary:** Contents: 1. Introduction. 2. Etymology. 3. World Overview. 4-8. History of Tempeh in Indonesia—discusses (for the first time) the world's earliest known reference to tempeh in the *Serat Centini* manuscript, which was probably written in about A.D. 1815. 9-11. History of Tempeh in Europe and Australia. 12-15. History of Tempeh in the United States and Canada. 16-18. History of Tempeh in Japan. 19-23. History of Tempeh in Asia (China, Taiwan, Southeast Asia, India, Sri Lanka). 24. History of Tempeh in Latin America. 25. History of Tempeh in Africa. 27. International Interest. 28. U.S. and Third World Problems.

The world's largest tempeh manufacturers are as follows:

Company name, Country, Year Started, Avg. Weekly Production

1. Marusan-Ai, Japan, 1983, makes 15,148 lb/week = 6,885 kg/week

2. Tempe Production Inc., Netherlands, 1969, makes 13,200 lb/week = 6,000 kg/week

3. Quong Hop/Pacific Tempeh, USA/CA, 1980, makes 7,000 lb/week = 3,182 kg/week

4. White Wave, USA/CO, 1979, makes 5,850 lb/week = 2,659 kg/week

5. Soyfoods Unlimited, USA/CA, 1981, makes 5,800 lb/week = 2,636 kg/week

6. Torigoe Flour Milling, Japan, 1983, makes 5,770 lb/week = 2,623 kg/week

7. The Tempeh Works, USA/MA, 1979, makes 5,500 lb/week = 2,500 kg/week

8. Marukin Foods, Japan, 1983, makes 4,620 lb/week = 2,100 kg/week. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1582. Kira, Motoo. 1984. Re: More history of Marukin Shokuhin's work with tempeh. Letter to William Shurtleff at Soyfoods Center, Aug. 4. 4 p. [Jap; eng+]

• **Summary:** Answers to Shurtleff's questions: (1) From the end of last year until the beginning of this year, Marukin was making 1,800 kg/week of tempeh. However presently (July 1984) they make only 15 kg/month in order to use it for developing second generation food. They have stopped making tempeh for the general market.

(2) Marukin's president is named Itsuo Kira.

(3) In July 1982 the twelve manufacturers of natto, kinako, and *gojiru no moto* in Kyushu all got together and founded the *Kyushu Daizu Shokuhin Kogyo Kumiai* (Kyushu Soyfoods Association). In April 1983 we built a large plant in Uto / Udo city on the outskirts of Kumamoto city. The

capacity of the plant for making natto is 250,000 shoku per year (1 shoku = 100 kg; so 25 million kg/year). And kinako and *Gojiru no moto* is 6 tons. Marukin makes 80% of the total production of this plant, and the plant is run by Marukin's people with Marukin's technical assistance.

(4) As I wrote you in my last letter, Mr. Haruo Kato took charge of researching and developing now fermented soyfoods. He was also very interested in tempeh and was doing tempeh research and development when he died on 3 Dec. 1983. He did not leave clear records of the history of his work with tempeh. However his records show that in about 1950 he experimented with making tempeh. In 1963 in Kumamoto he attended a lecture given by Mr. Dr. Iwao at the National Nutritional Research Center and Dr. Kato became deeply interested in the subject of that lecture, "A growth quickening factor in tempeh." He again started his research on tempeh, and in Feb. 1964 Hayashi-kaicho (a leader) and tried to get a copy of Dr. Iwao's paper as well as tempeh starter culture. "I am sending you the article that was sent by Hayashi-kaicho to Mr. Kato." Address: Manager, tempeh production, 380 Yoyasu-machi Kumamoto-shi 860, Japan. Phone: 096-325-3232.

1583. Yap, Bwee Hwa Flora. 1984. Re: Ahorn Verlag and current work with tempeh. Letter to William Shurtleff at Soyfoods Center, Aug. 4. 1 p. Typed, with signature.

• **Summary:** Ahorn Verlag as recently moved to Pitenhart. Mrs. Kuby said that it would be difficult for a foreigner to translate *The Book of Tempeh* into German, but Flora can work with others as expert advisors on the translation.

Flora is sending to everyone she knows (in Indonesia and Germany) Shurtleff's offer of a cash prize to whoever finds the earliest reference to tempeh in Indonesia.

"To my knowledge the soybean is only used for cattle feeding in Germany, and I was much surprised to find an article about soy products for human consumption in a periodical published by AOK (Health Insurance in Germany). It is distributed to each member and I think covered a great part of the population of Germany—all working people have to be insured."

Flora is considering writing an article about tempeh for a German lady's journal (women's magazine), or doing cooking demonstrations on television—as a way of introducing tempeh to people in Germany. Address: Am Muehlenwaeldchen 1A, D-6670 St. Ingbert-Rohrbach, West Germany.

1584. Kanasugi, Goro. 1984. Re: More on work with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, Aug 7—in reply to questions. 2 p. Handwritten. Plus 4 p. translation. [Jap]

• **Summary:** To answer your questions: (1) Mame-no-ko restaurant and deli opened on 10 Feb. 1977. (2) Tempeh started to be served at Mame-no-ko in late May 1983. "I

got tempeh starter from Teruo Ota sensei and soon tried to make tempeh. It turned out well and the first dish served was tempeh sauteed with vegetables.

(3) My natto and tempeh plant is located about 150 meters (500 feet) away from Mame-no-ko. We make tempeh there about once a month. (4) At Mame-no-ko we use tempeh once or twice a week in various dishes; we use 15-20 kg/month.

(5) At our plant we make 100 to 200 kg/month of tempeh, entirely for use in second generation soyfood products. (6) I would estimate that, on average, about 500 people per day eat the tempeh we make, both at the restaurant and deli and from retail stores.

(7) I depend on Ota sensei for tempeh starter so I don't know who makes tempeh starter in Japan. Soon the research center for making cultures in Tokyo will start making tempeh starter. (8) I think that Takashin started to make tempeh in about Aug. 1983, and that they now make about 50-100 kg/month.

(10) I am enclosing a copy of a *Shin Eiyō* magazine article about tempeh.

Here is my recipe for tempeh jam. I have just received very big news. The Japanese government has announced that it will help development and popularization of tempeh in Japan. They told the Japanese Natto Association that they will lend ¥8.7 million as part of a program to promote practical use of new technologies. Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan. Phone: 048-644-1323.

1585. *Toyo Shinpo (Soyfoods News)*. 1984. Daizu tanpaku [Soy protein foods]. Aug. 11. [Jap; eng+]

• **Summary:** This is a translation of an article about nutrition in some U.S. magazine that mentions tempeh.

1586. Viavant, Suzy Jenkins. 1984. Re: Work with soyfoods Sri Lanka and Guatemala. Making tempe at The Farm in Tennessee. Letter to William Shurtleff at Soyfoods Center, Aug. 13—in reply to inquiry. 1 p. Typed, with signature.

• **Summary:** Suzy has been “extremely busy getting ready for a soy development tour in Sri Lanka due to happen on the 27th of August through the end of September. I am being sub-contracted by CIDA thru Plenty as a Soy Development Consultant. We will be investigating opportunities for an in-depth soy development project in Sri Lanka. Accompanying me will be the director of Plenty Canada, his wife and a member of the Sarvodaya movement.”

“I started making tempe [tempeh, at The Farm in Summertown, Tennessee] in Sept. of 1976 at which time I took over production so Cynthia [Bates] could go full time into making spores [for tempeh]. At this time I was the first one to try using the centrifuge to dewater the soybeans after cooking, although I think it was originally Cynthia's idea. I made tempe until July 1977 when I went to Guatemala.”

In Guatemala the “escalation of the political violence

made it impossible for our extension workers to hold classes without being looked upon as subversives by the government. Because the dairy [soy dairy at Solola] was just a business it never really threatened the government so it was able to run for a few years. Now the dairy is closed for economic as well as political reasons. We hope to return if it [the political situation] cools down. Our latest report from Guatemala is that people in Itzapa are still growing soybeans and their wives are still making tofu and soymilk. I don't know if the people in Solola are still growing them because we never quite isolated the best variety for their altitude.” Address: Utah.

1587. Six-Chan, Pauline. 1984. Work with soyfoods in Belgium (Interview). *SoyaScan Notes*. Aug. 18. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Pauline (age 41) earned a MSc degree in food science from Michigan State Univ. (East Lansing) in 1979. In 1982 she started Premier Foods to focus on foods that were international, fresh, and healthy. Since Oct. 1983 the company has been very active in presenting tofu and tofu products to the Belgian public and to buyers at supermarkets, cafeterias, etc. Once a month she gives free tofu cooking demonstrations to the general public. She is the most active person in Belgium with soyfoods, and she would like to start a Soyfoods Center there. She prompted the American Soybean Assoc. to hold the forthcoming soyfoods seminar, but they are charging a lot for it, so she fears that few people will come. She dislikes ASA; they are only interested in animal feeds. She also dislikes macros; they are not interested in soyfoods for the general public, and they insist that she sell “organic (biological) tofu.” She makes mung bean sprouts. She buys all of her tofu from Heuschen in the Netherlands, and has an exclusive distribution contract for Belgium with him. She is most interested in developing second generation tofu products. She already has a tofu tart/cheesecake/pie, and she wants to demo U.S. second generation tofu products at the ASA seminar. Her literature about tofu and tempeh is in Flemish.

Heuschen Products started making tofu on a small scale many years ago. They automated and got big about a year ago. Now they cannot sell nearly as much as they can make. Address: Manager & owner, Premier Foods p.v.b.a., Dietstraat 197, 3000 Leuven, Belgium. Phone: 016.23.31.48.

1588. Fiske, Doug. 1984. Soyfoods in the supers [supermarkets]. *Soyfoods*. Summer. p. 18-23.

• **Summary:** Gives an in-depth look at the marketing strategies of Legume Inc., Tomsun Foods, Eden Foods, Vitasoy, Tempehworks, Nasoya, Eden Foods, Soyfoods of America (Furama and Naturespring brands), White Wave, Hinode Tofu Co., Tofu Time (Tofutti), and Nasoya.

Eden Foods of Clinton, Michigan, has been involved

with natural foods for 15 years, but only within the past year have they been able to establish a beachhead in supermarkets with their miso, soy milk, and soy sauce products. They are presently selling through 5 chains representing about 50 individual stores. Supermarket sales now account for about 10% of their \$7.5 million yearly sales.

1589. House, S.L. 1984. Spotlight: Institutional foodservice. Alive Polarity, Murrieta, California. *Soyfoods*. Summer. p. 6.  
**• Summary:** “Northeast of San Diego and southeast of Los Angeles lies a peaceful place where people can go for a day, a week, a month to experience spiritual renewal and better health practices. Among other diverse activities, Alive Polarity’s Murrieta Hot Springs offers mudbaths, marriage counseling and superb vegetarian cooking.”

“The lacto-vegetarian diet offered at Alive Polarity emphasizes purifying, health-building and gourmet dishes. Soyfoods make up a large part of the menu.

“More than 50 percent of our meals contain soy products,” says Breese English, kitchen manager. Tofu is by far the soyfood used most often because it’s so receptive; it adds little flavor of its own yet takes on the flavor of ingredients used with it. ‘I’d say we consume at least 70 pounds a day.’”

“Alive Polarity’s restaurant serves breakfast, lunch and dinner buffet style, totaling about 1000 meals daily.”

“While tofu is a primary ingredient in many of the recipes, other soy products are used extensively as well. Bragg’s Liquid Aminos and tempeh are two products that have found a place in Alive Polarity’s kitchen.

“Bragg’s is a liquid mineral soy bouillon often used instead of soy sauce or tamari. Its slightly less salty flavor had made it a popular item for the cooks as Mary Ann Beauchamp attests. ‘I use it in almost everything, sauces, salad dressings, soups.’ About 25 gallons of Bragg’s Liquid Aminos are consumed weekly.

“Tempeh is the third most popular soy product used. Tempeh is a complete protein food with a texture that lends itself to hearty foods and entrees. Used in place of hamburger for summer barbecues, tempeh burgers are very popular. The kitchen staff estimates they use about 400 tempeh patties a week.

“Two soyfoods recently introduced at Alive Polarity include soy milk and Tofutti. Given that almost 20 gallons of soy milk are consumed weekly, it appears it’s already gained acceptance among the clientele.”

“Mary Ann Beauchamp, whose mother is Japanese explains, ‘My mother is amazed with the things we do with tofu. The Japanese use tofu in traditional ways for specific purposes. I don’t feel that they experiment or work with it as we do.’ For example, Beauchamp explains a favorite recipe, Tofu Tidbits. ‘You take cubes of tofu and bread them in a mixture of flour, nutritional yeast, herbs and spices. Then layer the cubes in a pan with a small amount of oil. Bake for

an hour at 500°. Serve with tartar sauce and lemon wedges, it’s fantastic. People just love it.’”

A photo shows the staff: Jane Buck, Breese English, Mary Ann Beauchamp, and Diane Luzzi. Contains a “favorite recipe” for Tofu french toast.

1590. Kronenberg, Hananya J.; Hang, Yong D. 1984. Biochemical changes in okara during meitauza fermentation. *Nutrition Reports International* 30(2):439-43. Aug. [12 ref]

**• Summary:** “Okara (soybean milk residue) was fermented with *Actinomucor elegans* to produce meitauza, a traditional food from China.” In China, meitauza is found primarily in the Wuchang, Hankow [part of Wuhan since 1950], and Hanyang regions, where it is traditionally prepared for consumption by frying in vegetable oil or by cooking in a soup with vegetables and spices. Since Shih’s original study in 1937 [*Lingnan Science Journal* 16(1):27-38. Jan. 13] there has been no further research on meitauza.

In the USA, where production of tofu and soy milk are growing, an estimated 14,000 tons of okara are produced as a by-product each year. Despite desirable nutritional properties, it is largely treated as a waste or animal feed due to poor organoleptic characteristics.

Okara was formed into cakes and fermented on trays until the cakes became covered with a white mycelium. Biochemical changes in okara during 80 hours of fermentation at 15°C were characterized by a rise in pH from 5.48 to 7.50, an 8-fold increase in nonprotein nitrogen, marked liberation of ammonia, and production of an acid protease. Address: Dep. of Food Science and Technology, Cornell Univ., Geneva, New York 14456.

1591. Leviton, Richard. 1984. Plant profile: Quong Hop. *Soyfoods*. Summer. p. 26-28.

**• Summary:** An excellent history of Quong Hop & Co. plus an accurate account of their present activities. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1592. Leviton, Richard. 1984. Soyfoods market: The top 15 prepared convenience soyfoods. *Soyfoods*. Summer. p. 42-43.

**• Summary:** “Since 1980 most of the innovation—and excitement—in the American soyfoods industry has centered around what are now called prepared convenience soyfoods.” The top 15 are: (1) Legume Light & Natural Tofu Entrees. (2) Edward & Sons’ Miso-Plus Jalapeno and Chive miso dips. (3) Farm Foods’ Ice Bean and Ice Bean Sandwich. (4) Tofu Time’s Tofutti. (5) Light Foods’ Light Links (tofu hot dogs). (6) Brightsong Light Foods’ Tofu Desserts and Dips. (7) Tomsun Foods’ Spice and Herb Tofu. (8) Eden Foods’ Edensoy. (9) Nasoya’s Vegi Dips. (10) Sonoma Specialty Foods’ Nutcracker Sweets. (11) Pacific Tempeh and Soyfoods Unlimited’s Tempeh Burgers. (12) Soyfoods

Unlimited's Leandro's Meatless Lasagna. (13) Fantastic Foods' Tofu Burger Mix. (14) Quong Hop's Soy Fresh. (15) Garden of Eatin's Nuclear Freeze (soymilk ice cream pops). A photo shows each product.

1593. Neumann, P.E.; Walker, C.E.; Wang, H.L. 1984. Fermentation of corn gluten meal with *Aspergillus oryzae* and *Rhizopus oligosporus*. *J. of Food Science* 49(4):1200-1201. July/Aug. [12 ref]

• **Summary:** "Corn gluten meal (CGM) is the 60% protein co-product obtained during the wet-milling of corn. The protein is very low in lysine and tryptophan and consequently is of poor nutritional quality. Fermentation with proteolytic fungi has been shown to alter the composition and, in some cases, improve the nutritional quality of protein in various substrates."

The introduction discusses three other studies in which the fermentation of soybeans with *Aspergillus oryzae* or *Rhizopus oligosporus* led to improvements in the protein quality of the substrate. Address: NRRC, Peoria, Illinois.

1594. Shurtleff, William. 1984. Japan's first and largest tempeh companies. *Soyfoods*. Summer p. 30-32.

• **Summary:** Discusses: Ryoji Nakazawa (a microbiologist; the first Japanese to study tempeh and publish information about it, in 1928). Department of Applied Microbiology, established in 1944 within the National Food Research Institute. The Food and Nutrition Laboratory at Osaka University (late 1950s and early 1960s).

Torigoe Flour Milling Co. (Torigoe Seifun, Kyushu University's Dep. of Food Science and Technology, Kazuhiro Takamine). Takamine goes to study tempeh at the University of Minnesota's Dep. of Food Science and Nutrition under Dr. William Breene and with PhD candidate Abdul Ribai. Returning to Japan, Takamine develops an improved type of tempeh. In June 1983 Torigoe starts making tempeh at their Fukuoka flour mill in a pilot plant that cost \$50,000 and had a capacity of 33,000 lb/month of tempeh. They make the key decision not to sell plain tempeh but rather two semi-prepared products, both called Gold Tempeh. By early 1984 Torigoe was making 24,200 lb/month of tempeh—making it the world's sixth-largest tempeh maker.

Marusan-Ai, one of Japan's most dynamic and forward looking food companies, started in early 1984.

Two large natto companies began making tempeh in early 1984: Marukin Shokuhin Kogyo in Kyushu, and Takushin in Tokyo—both prompted by the Japan Natto Association's promotional work for tempeh.

Note: This article is an excerpt from "The Tempeh Revolution in Japan," by William Shurtleff, who is now writing a History of Tempeh (worldwide). Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

1595. *Soyanews (Sri Lanka)*. 1984. Letters: Tempeh. 6(12):8.

Aug.

• **Summary:** A reader (President, Howpe Consumers Society, Galle) writes to ask about tempeh. Answer: "The dried form of tempeh is available at present from the Sales Centre of the Soyabean Foods Research Centre in Gannoruwa. There is also a sales point at the Soya Centre, 15 Gospel Lane, Jaffna, as well as at the NADSA Sales Centre in Getambe, Peradeniya. It is possible for consumer societies such as yours to act as retail points for some of the soya products made in Gannoruwa; please inquire from the SFRC, Gannoruwa."

1596. Soyfoods Unlimited, Inc. 1984. Discover the little known pleasures of Indonesian cuisine—enjoy Tempeh! Fact sheet and selling guide (Leaflet). 14670 Doolittle Dr., San Leandro, CA 94577. 1 p. Single sided. 8½ by 11 inches. Aug.

• **Summary:** At the top of the letterhead is the Soyfoods Unlimited 3-leaf logo. Below that is the title, in bold white letters on a black background. Contents: What is soy tempeh (12 points). Nutritional information and % RDA per 4 oz. serving of soy tempeh. Soy & Five Grain Tempeh [launched 1982]. Nutritional information and % RDA per 4 oz. serving of Soy & Five Grain Tempeh. Address: San Leandro, California. Phone: 415-352-1320.

1597. Tempehworks! 1984. Surprise. It's our 5th birthday (Ad). *Soyfoods*. Summer. p. 39.

• **Summary:** A full-page ad. "... and to celebrate, we've designed an all new package combining the best of art and science. *Elegant design*—aimed at your target market. *New vertical shape*—takes up less precious shelf space, while offering greater consumer visibility. Easy to handle, easy to store, easy to use.

"The same quality products you've known us for—now *vacuum packed* for freshness and extended shelf life.

"Look for our new logo: Tempehworks! The market leader for 5 years." Address: Greenfield, Massachusetts.

1598. Nordquist, Ted. 1984. Re: New developments with tofu at Aros in Sweden. Letter to William Shurtleff at Soyfoods Center, Sept. 6. 1 p. Typed, with signature on letterhead.

• **Summary:** "The company continues to expand, sales have doubled each year since we started in 1980. We now have steam injected cooking and pasteurization with a 30 day shelflife on all six products: Tofu (12% protein, made with nigari), tofu (8% protein, made with calcium sulfate), tofuburgers, tofulindstrom (red beets), Indian curry and marinated tofu. We will soon introduce tempeh, deep fried and marinated. We also plan to introduce a sandwich spread much like liverwurst in consistency before the end of this year.

"We produce about 108 kg of tofu per hour now and between 1.5 and 2 tons of products per week. I will be

attending the first European Soyfoods Workshop, Sept. 27-28 in Amsterdam...

"Would you please write a short resume about your work so I can submit it to the right people for the Alternative Nobel Prize" [Right Livelihood award].

Across the top of this handsome letterhead are three logos: (1) Left: aros sojaprodukter örsundsbro shows a little blue Viking with a horned helmet and big red heart. (2) Center: Aros. (3) Right: A Soyfoods Center, Sweden, with the California Soyfoods Center logo in all blue.

Enclosed with the letter: (1) Eight-panel brochure of "What is tofu?" and tofu recipes. (2) Aros mail order catalog (1 sheet, 8½ x 12 inches, blue on beige, 3 panels each side), with 8 books, a tofu kit, nigari, tempeh starter, and koji for making miso or amazake. Address: President, Aros Sojaprodukter, Bergsvägen 1, S-190 63 Orsundsbro, Sweden. Phone: 0171-604 56.

1599. Yap, Bwee Hwa Flora. 1984. Re: Current work with tempeh. Letter to William Shurtleff at Soyfoods Center, Sept. 10. 1 p. Typed, with signature.

• **Summary:** Flora is busy translating the chapter on biochemistry and microbiology from *The Book of Tempeh* into German for the German edition of this book. Mrs. Kuby approved her trail translation. Since she is a trained microbiologist, the biochemistry portions are difficult. She plans to check the microbiological terminology with Mr. Ko Swan Djien, who she knows from Indonesia. He is now living in Wageningen, Holland. Address: Am Muehlenwaeldchen 1A, D-6670 St. Ingbert-Rohrbach, West Germany.

1600. Ohta, Teruo. 1984. Nihon yori Amerika de kanshin ga takai tenpe [From Japan to America interest in tempeh is high]. *Toyo Shinpo (Soyfoods News)*. Sept. 21. [Jap] Address: National Food Research Inst., Tsukuba, Japan.

1601. Ohta, Teruo. 1984. Atarashii daizu hakkô shokuhin: Tenpe, onchom no shiyô [New fermented soyfoods: Use of Tempeh and onchom]. *Toyo Shinpo (Soyfoods News)*. Sept. 21. [Jap; eng+]

• **Summary:** A basic introduction.

1602. Troy, John. 1984. American Natural Foods, Elf Works, and work with miso (Interview). *SoyaScan Notes*. Sept. 26. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** American Natural Foods (ANF) was formed in Jan. 1984 as its own company with its own investors; in March 1984 it acquired Elf Works, Ltd. Miso Mustard, BeeNut Butter, and Smoky Mountain Sizzlin' were all introduced formally for delivery in Sept. 1984. ANF had a private stock offering in May 1984 in North Carolina; the proceeds (\$150,000) from 25 shareholders will be used mainly to develop new products. Some of the shareholders

(such as John Fogg, marketing and design) are working with the company. Barry Evans, owner of American Miso Co. in North Carolina, is the company's miso supplier. The packer is also a shareholder. Hot Stuff is John's only commercial miso product with a sales record to date. The Works will be out in about 2 weeks. He expects big revenues from it because people use much more per serving—dink dink vs. glug glug. Smoky Mountain Sizzlin' is getting rave reviews. It's super with tempeh. They are sampling it on grilled skewered tempeh and pineapple.

John's first commercial miso product, Hot Stuff, was first put on the market in early 1981 [about April]. John is trying to use miso to create natural foods for Americans. To date John has sold exclusively to U.S. Naturals, his distributor, run by Jeffrey Hilbert and Jimmy Silver. But he has had bad service and many problems from them, so he is considering a new distribution system. He may get regional warehouses and sell from there to distributors like K&L [Kahan & Lessin], cutting out any master distributors. Address: Suite 21, The Courtyard, Chapel Hill, North Carolina 27514.

1603. Berry, Linden. 1984. The soy of cooking. *Women's Sports* 6:40-41. Sept.

• **Summary:** A brief introduction, without recipes, to tofu, tempeh, miso, and shoyu. "You don't have to be a vegetarian to eat and enjoy soy foods... Look for cookbooks with recipes for using these soy foods at your local bookstore. There are lots of delicious and healthful alternatives to meat that await you."

1604. **Product Name:** [Fresh Tempeh].

**Foreign Name:** Frisches Tempeh.

**Manufacturer's Name:** Byodo Naturkost.

**Manufacturer's Address:** Thalkirchenstr. 57, D-8000 Munich, West Germany. Phone: (089) 16 85 70.

**Date of Introduction:** 1984. September.

**Ingredients:** Organically grown soybeans, water, vinegar, beneficial mold culture (Edelpilzkultur) *Rhizopus oligosporus*.

**Wt/Vol., Packaging, Price:** 200 gm plastic bag.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm.: Protein 19.5 gm, fat 7.5 gm, carbohydrates 9.9 gm, calories 157, vitamin B-12 5 mcg.

**New Product—Documentation:** *Die Geschaeftsidee*. 1989. Dec. p. 32. The third tofu maker in Munich, Byodo, was founded in 1985. The present owners, Bernd Steyers [sic, actually Steyer] and Michael Biedenbach. They also make tempeh.

Letter from Anthony Marrese. 1990. March 22. Based on a March 21 interview with Bernd Steyer, tempeh production manager and builder of their first tempeh incubator in 1984. The company started in 1984, when they started to make their own tempeh. Present production is said

to be 50 kg/week of tempeh plus 500 burgers/week.

Bernd Drosihn. 1989. *Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft* [Tempeh: A traditional food with a future]. p. 38. Says the company makes fresh tempeh from whole soybeans, tempeh burgers, and tempeh chips. A source of tempeh starter.

Letters (faxes) from Harry Whitford. 1990. May 11 and June 9. "Byodo Naturkost was founded in the summer of 1984 by Lukas Kelterborn (whose idea it was), Hermann Konrad, and myself. I contributed the name—Byodo is the Japanese Buddhist term meaning "eternity," or with extended vowels (Byôdô) "equality" as implied in the perfection of indifference. The full original name was "Byodo Naturkost, Lukas Kelterborn, Hermann Konrad & Harry Whitford." It's legal status was a "GbR" ("Gesellschaft bürgerlichen Rechts"—a "Personen Gesellschaft"), that is, a company made up of individuals who carry full personal responsibility for the debts and assets of the company. In Germany, such a company must include the names of all owners in the company name. Hermann and I were both cooking at Keyno Vegetarian Restaurant, where I was in charge of soyfoods production and quality. We made our own tofu and tempeh at the restaurant.

"Byodo started as a tempeh company. The first product was Frisches Tempeh (Fresh Tempeh, in English). Production started in about Sept. 1984. Originally we were located at Thalkirchnerstr. 50, D-8000 Munich, in a former bakery together with the Italian Aikido-teacher and Tofu maker Georgio Sapia. We started making a Tempeh Burger (Tempehburger) later that fall after we realized we couldn't keep the company going only on tempeh. A Tofu Burger (Tofuburger) followed shortly afterwards that fall and Lukas' last service to the company was to establish the tie to Soyastern, which was unable to fry burgers due to complaints by the neighbors. We started buying tofu from Soyastern in Cologne to make burgers for them—at a distance of 400 miles!"

Label sent by Anthony Marrese. 1990. April 15. 4 by 6 inches. Purple on white, printed on a 5.25 by 8.75 inch outer plastic bag. "Occasional gray to black spots are a sign of full ripeness. The fresh soy specialty product. Rich in protein. Free of cholesterol. Low in calories.

Letter from Bernd Steyer to Anthony Marrese. 1990. March 23. Bottom of letterhead lists the company owners as Bernd Steyer, Gert Borst (crossed out in pen), and Michael Biedenbach. They will start a new tempeh plant in August. Phone: 0 88 06/5 09.

1605. **Product Name:** [Tempeh Burger—Deep-fried].

**Foreign Name:** Tempeh-Burger—Frittiert.

**Manufacturer's Name:** Byodo Naturkost.

**Manufacturer's Address:** Thalkirchenstr. 57, D-8000 Munich, West Germany. Phone: (089) 16 85 70.

**Date of Introduction:** 1984. September.

**Ingredients:** Soybeans, water, vegetables (Carrots, zucchini, soy sprouts) in varying proportions by weight, whole oats, whole wheat, brown rice, sesame seeds, sunflower seeds, spices, soy sauce (shoyu), sea salt, vinegar, beneficial mold culture (*Edelpilzkultur*) *Rhizopus oligosporus*. Ingredients predominantly organically grown.

**Wt/Vol., Packaging, Price:** 130 gm plastic bag.

**How Stored:** Refrigerated.

**New Product—Documentation:** Letter from Anthony Marrese. 1990. March 22. Based on a March 21 interview with Bernd Steyer, tempeh production manager and builder of their first tempeh incubator in 1984, when they started to make their own tempeh. Present production is said to be 50 kg/week of tempeh plus 500 burgers/week.

Bernd Drosihn. 1989. *Tempeh: Ein traditionelles Nahrungsmittel mit Zukunft* [Tempeh: A traditional food with a future]. p. 38. Says the company makes fresh tempeh from whole soybeans, tempeh burgers, and tempeh chips. A source of tempeh starter.

Letter (fax) from Harry Whitford. 1990. May 11. "We started making Tempeh Burgers (Tempehburgers) later that fall (1984) after we realized we couldn't keep the company going only on tempeh."

Label sent by Anthony Marrese. 1990. April 15. 5 by 2.25 inches. Green on yellow, printed on front and back of plastic bag. "A nutritional soya specialty (Eine vollwertige Soja-Spezialität). Store at 4-8°C."

1606. Chen, Steve. 1984. Soyfoods in the Far East and USA: Products, markets, trends. In: American Soybean Assoc., ed. 1984. First European Soyfoods Workshop, Proceedings. Brussels, Belgium: ASA. 36 p. See p. C1-C38. Held Sept. 27-28 at Amsterdam, Netherlands. [11 ref]

• **Summary:** Contents: Summary. 1. Introduction: Ten reasons why soybeans will be a key protein source for the future. 1. Soyfood products. A. Non-fermented soyfoods: Fresh green soybeans, soybean sprouts, soynuts, soymilk, soy flour, yuba or soy protein film, tofu. B. Fermented soyfoods: Soy sauce, miso, tempeh, natto, fermented tofu, soy nuggets (tou-shih, hamanatto). 3. Soyfoods markets and trends in the Far East: Taiwan, China, Japan, South Korea, Indonesia, Malaysia, Singapore, Thailand, Philippines. 4. Soyfoods markets and trends in the U.S. 5. References. Plus 15 tables and 8 figures.

"It is our [American Soybean Association's] strong intention that marketing and consumption of soy protein should not in any way deter the expansion of the production and sale of as much animal protein as the world can be expected to produce in the years ahead. Soy protein foods are being intentionally brought to the market to complement and not necessarily to replace animal protein products."

"Taiwan imported 1.41 million tonnes (metric tons) of soybeans in 1983 and used about 250,000 tonnes as soyfoods for direct human consumption, which made Taiwan one of

the highest in per capita consumption of soyfoods (13.2 kg or 29 lb) in the world. In the past 10 years (1974-1983), the consumption of traditional soyfoods showed an average increase of 3% per year as compared to 12% and 8.1% for poultry and soy oil, respectively. The market for packaged soymilk, soy pudding and tofu has also been expanding rapidly in recent years in Taiwan.” Table 7 shows the production of soymilk in Taiwan, which grew from 103,600 tonnes in 1974 to 210,000 tonnes in 1983, for an average growth rate of 8.2% a year.

China produces about 9 million tones of soybeans a year, and about half of these are consumed as soyfoods, giving a per capita consumption of 4.5 kg of soyfoods. “An improvement in the general economy and soyfood technology and equipment will bring a sharp increase in soybean demand and more soyfoods consumption.”

In South Korea soymilk consumption has increased more than seven-fold in the last 4 years. Currently about 10,000 tonnes of soybeans are used to make 70,000 tonnes of soymilk. “It is projected that soymilk production in Korea will double in 1984 as compared to the previous year.”

Indonesia continues to be Southeast Asia’s largest consumer of soybeans as food. In 1982/83 soybean consumption was 6.7 kg per capita. Indonesia consumes about 1 million tonnes of soybeans annually, 60-65% of them in the form of tofu and 35 to 40% as tempeh.

Malaysia consumes only about 30,000 tonnes of soybeans per year as food. In Singapore, more than 75% of the population of 2.5 million are Chinese. Therefore tofu, soysauce, and soymilk are the predominant traditional soyfoods consumed.

Thailand consumes about 40,000 tonnes of soybeans a year as food, mainly in the form of tofu. The Philippines uses only 5,000 tonnes of soybeans annually for food, mainly as tofu.

To summarize (Table 6), annual per capita consumption of soybeans in various East Asian countries, in descending order of the amount consumed, is as follows: Taiwan 13.2 kg (population 19 million); Japan 8.3 kg (population 120 million); South Korea 7.5 kg (population 40 million); Indonesia 6.7 kg (population 150 million); Singapore 6.25 kg (population 2.4 million); China 4.5 kg (population 1,000 million); Malaysia 2.1 kg (population 14 million); Thailand 0.8 kg (population 50 million); Philippines 0.3 kg (population 15 million). Address: Director, American Soybean Assoc., Room 603, Kwang-Wu Building, No. 386, Tun Hua South Road, Taipei, Taiwan.

1607. Cusumano, Camille. 1984. Discovering tempeh. *Vegetarian Times*. Sept. p. 38-41.

• **Summary:** “In the colorful marketplaces of Bali, tempeh cakes wrapped in banana leaves are a common sight. Indonesians have long savored fragrant cakes of tempeh, with its rich, meatlike flavor and unique, chewy but tender

texture. Westerners are just beginning to discover this delicious fermented food that originated in Indonesia centuries ago.”

Contains a good introduction to tempeh, including information about buying and storing tempeh, and preparing tempeh recipes—plus 6 recipes starting with Pumpkin-tempeh bread.

1608. Kooij, J.A. van; de Boer, E. 1984. Microbiological aspects of soyfoods. In: American Soybean Assoc., ed. 1984. First European Soyfoods Workshop, Proceedings. Brussels, Belgium: ASA. 131 p. See p. 11-115. Held Sept. 27-28 at Amsterdam, Netherlands. [20 ref]

• **Summary:** “To learn more about the microbiological quality and safety of tempeh and tofu a survey was carried out by the working party ‘Fungi in Foods’ in the summer and autumn of 1983. The products were sampled in stores, restaurants and production places throughout the Netherlands and analyzed by using standard microbiological procedures...

In 110 samples of tempeh: “About 10% of the samples contained *Staphylococcus aureus* and *Bacillus cereus* in numbers which may cause food intoxication. However, the *S. aureus* strains isolated in this survey proved to be non-enterotoxigenic. *Yersinia enterocolitica* (non-pathogenic serotypes) was found in 6 samples. *Salmonella* was not isolated from any of the samples tested...

“In 154 samples of tofu: 2.1% had more than 100 counts/gm of *Staphylococcus aureus*; 11.2% had more than 100 counts/gm of *Bacillus cereus*. And 36.3% had more than 100 counts/gm of *Escherichia coli*. “About 95% of the samples appeared to have an aerobic count over 1,000,000 colony forming units (cfu) per gram. This means that there is a very great proliferation of bacteria after the production, for immediately after the production the aerobic plate count is usually below 10,000 cfu/g. This indicates that the tofu had been stored improperly or for too long. The average pH of tofu immediately after production was about 6.5, but at the time of sampling it averaged 5.2. But 5% of the samples had a pH of less than 4.5, and 16% has a pH of 4.5 to 4.9. These low pH values indicate sour/acidic products caused by large numbers of lactic acid bacteria. “In 0.7% of the tofu samples *Bacillus cereus* and *Staphylococcus aureus* were present in numbers that may cause food intoxication. The presence of *B. cereus* was probably caused by an outgrowth of the spores which survived the heat treatment. This indicates that the tofu must have been stored at too high a temperature during a long period (12–48 hours).

“The presence of *S. aureus* can be explained by a bad hygienic practice during production, after the heat treatment step. *Salmonella* was not found in any of the tofu samples.” Address: Food Inspection Services, Netherlands.

1609. Mandoe, Bonnie. 1984. Tempeh: An Indonesian superfood. *Bestways*. Sept. p. 50-51, 60.

• **Summary:** About four years ago Bonnie came across an unfamiliar item—a “tempeh kit” in her natural foods store. Although she had no idea what tempeh was, the label assured her that this delicious fermented soyfood was easy to make. She bought the kit, which contained hulled, cracked soybeans and a small packet of tempeh starter. She followed the instructions and “got an extraordinary surprise.”

This is a good basic introduction to tempeh, with Bonnie’s list of nine benefits of tempeh. Contains 5 recipes. Photos show: (1) Bonnie Mandoe. (2) A plate of four thin squares of fried tempeh surrounded by vegetables.

1610. Martin, Michael. 1984. World supply and demand for soybeans with special reference to soyfoods. In: American Soybean Assoc., ed. 1984. First European Soyfoods Workshop, Proceedings. Brussels, Belgium: ASA. 131 p. See p. B1-B32. Held Sept. 27-28 at Amsterdam, Netherlands.

• **Summary:** The author estimates that European soymilk consumption is about 9-10 million liters / year, which is very small compared to European cow’s milk consumption of 22,000 million liters/year. European tofu consumption is estimated at 5-6 million kg/year, which is about one-fourth of U.S. tofu consumption. Other estimates for Europe consumption are: Miso 250,000 to 300,000 kg/year; Soy protein products (probably mostly isolates and concentrates) 40,000,000 kg/year; soy oil 1,700,000 tonnes/year. Europe has a fairly small ethnic population, about 1,000,000 people compared to 3,500,000 in the USA. Europe presently has some 20-25 tempeh companies producing an estimated 400,000 to 500,000 kg/year compared to 900,000 kg/year in the USA. Europe, and especially the Netherlands, are moving ahead quickly with tempeh.

The European food market is more fragmented, diverse, and conservative than its American counterpart. “The European consumer expects freshness and quality as a matter of course, and does not expect to pay a premium for these.”

“It is well known that the European healthy foods market is booming. It is part of a much wider social trend which involves ecology and politics, real environmental concerns, alternative medicine and coping with unemployment, an aging population, and a minimum growth economy. It places emphasis on quality of life, individualism and cooperation. It does not exclude any age group.

“Soyfoods will increasingly find a place in our daily diets, but not without significant changes in the existing soyfoods industry, with above all greater attention to product quality and product marketing.”

Appendix 1 (p. B-12) lists 9 U.S. “suppliers of food-grade soybeans in small quantities suitable for” tofu manufacturers.

Pages B15 to B32 contain numerous other tables, 8 of them reprinted without permission from *Soyfoods Industry and Market: Directory and Databook*, by Shurtleff & Aoyagi. Address: American Soybean Assoc., Centre

International Rogier, Bte 521, 1000 Brussels, Belgium.

1611. Mwangi, -. 1984. The Jamaica nutrition project. *Yard Roots Reports (Oakland, California)*. Sept. p. 4-5.

• **Summary:** The author is working to raise \$100,000 to develop a soy dairy in Jamaica to make tofu, soy-burgers, tempeh, soy milk, ice cream, mayonnaise and other products from soy beans. The Afrobean Foundation in Kingston is also interested in this idea. Two groups in Jamaica will find soy products useful in their diet. First, the more than 100,000 Rastafarians, most of whom are attempting to pursue a vegetarian diet. Second, Jamaicans of Chinese descent who have traditionally used soy products. “Most of the imported soybeans today are mainly used for making oil and for poultry and pig feed.” Readers are asked to send donations to Caribbean Media and Community Resources, Inc. in Oakland, California. Address: Caribbean Media and Community Resources, Inc., 314 17th Street #188, Oakland, California 94612. Phone: (415) 536-3031.

1612. Ohta, Teruo. 1984. Kongetsu no kotoba: Muen daizu shokuhin tempe kaiatsu ni omou [Words for this month: Development of tempeh, an unsalted fermented soyfood]. *Daizu Geppo (Soybean Monthly News)*. Sept. p. 2-3. [Jap]

• **Summary:** “In Feb. 1982, as a part of the International Scientific Technology Cooperative Research Project of the Science and Technology Administration (Kagaku Gijyutsu-cho), the Agricultural University (Bogor, Indonesia) and the National Food Research Inst. (Japan) decided to do cooperative research on the development of technology for making practical use of microorganisms. As part of the negotiations and field research, I got the opportunity to study the actual situation of tempeh production and consumption in various areas of Indonesia.” A photo shows Ohta sensei. Address: Norin Suisan-sho Shokuhin Sogo Kenkyu-jo, Oyo Biseibutsu Bucho [Tsukuba, Ibaraki-ken, Japan].

1613. Samson, Robert A. 1984. Tempeh: Production in moderate climates. In: American Soybean Assoc., ed. 1984. First European Soyfoods Workshop, Proceedings. Brussels, Belgium: ASA. 131 p. See p. G1-G11. Held Sept. 27-28 at Amsterdam, Netherlands. [8 ref]

• **Summary:** Contents: Introduction. Traditional tempeh fermentation. Tempeh production in temperate climates: Preparation of soybeans, starter culture, temperature, humidity and aeration, preservation and storage life. Table 1 lists 8 molds found in a recent microbiological survey of tempeh sold in the Netherlands. Table 2 lists 16 yeasts found in tempeh sold in the Netherlands.

“Be aware that refrigeration may not necessarily stop fermentation, since the mould may produce heat, which may not be dissipated. This sometimes happens when tempeh is stacked too closely in the refrigerator... If tempeh is stored in a freezer, the cake usually loses its typical texture and

appearance, and when thawed it may crumble because the mould threads no longer bind the soybeans.” Address: Centraalbureau voor Schimmelcultures, POB 273, 3740 AG Baarn, Netherlands.

1614. *Soyanews (Sri Lanka)*. 1984. Wider sales network for soya. 7(1):1. Sept.

• **Summary:** “A regular supply of soya products will be ensured to residents of Colombo and the suburbs beginning from this month. This service will be provided by Forbes Distributors (Pvt) Ltd., a subsidiary of Forbes and Walker, which has been retailing soya products at its shop Lankasoy in Darley Road, Colombo, for some time now.

“The chairman of Forbes Distributors is Mr. R.S. Wijesekara who has been keenly interested in the popularisation of soya foods. Mr. Wijesekara took the initiative to introduce Sri Lankans to soya meat [soyameat] which is now a popular item of food in many homes. He is chairman of the Raja Rata Food Grains Processing Co., makers of Raja Soya, now widely used as a substitute for coconut milk.

“Forbes Distributors have two vans at their disposal and these will serve many retail points in the city and suburbs. Among the items that are available for distribution are Soyabev, a substitute for coffee and the first of the soya products that Mr. Wijesekara introduced to the public, Raja Soya and soya noodles which has been found to be better than ordinary noodles.”

Also: Soya sauce, soya flakes, soya devilled nuts, soya oil, soya meat, and “a new product—Mealmaker, which is a spiced and flavoured soya meat.” This company will soon be distributing dried tempeh.

“Forbes Distributors have their office at 29 Braybrooke Place and their stores at 40 First Cross Street, Borupana, Ratmalana.”

Photos show: (1) A F&W Lankasoy van. (2) Front panel of a package of Mealmaker.

1616. Vaidehi, M.P. 1984. Re: Request for tempeh culture and studies on tempeh in Bangalore. Letter to William Shurtleff at Soyfoods Center, Oct. 5. 1 p. Typed, with signature on letterhead.

• **Summary:** She requests a packet of tempeh starter culture for some consumer acceptability studies. “I was one of your students at M.F.M.” [Meals for Millions, in Santa Monica, California] and hope you will help me in encouraging tempeh use in Indian villages.

“In one of my studies I found that when tempeh curry and chips were served to 100 villagers and 100 urban consumers in India, the results were very promising. The consumers liked tempeh, tofu, and nutri nuggets (TVP); they

liked soya curds the least.” Address: Assoc. Prof. & Head, Dep. of Rural Home Science, The Univ. of Agricultural Sciences, Hebbal, Bangalore-560 024, India.

1617. Joyce, Michael. 1984. Re: Work with tempeh in Australia. Letter to William Shurtleff at Soyfoods Center, Oct. 7. 4 p. Handwritten.

• **Summary:** “My wife and I have been fungi farming for over 18 months now and without being boastful are the growers of Australia’s finest tempeh (soy only at present). We are very interested in keeping touch with what is happening world wide with soyfoods as this helps to expand our vision and encourages us... Although Indonesia is our neighbour most Australians are still very English diet conscious and Australia is a ‘big beefer.

“Through our association with soyfoods we realised the basic drawback in marketing is people’s ignorance and general lack of knowledge. We are finding more and more that marketing soyfoods becomes an education program.”

He then asks four questions about making tempeh. Address: Mighty Bean Soyfoods, M.S. Cooloolabin via Yandia 4561, Sunshine Coast, QLD 4558, Australia. Phone: 071-46-7342.

1618. Torii, Yasuko. 1984. Re: New developments with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, Oct. 16. 2 p. transcript. Handwritten on lined paper. [Jap; eng+]

• **Summary:** Mrs. Torii thinks that tempeh will spread and become popular in Japan. It is now rapidly growing in popularity.

Mr. Kanasugi’s restaurant Mame-no-ko opened in March 1976. He makes the tempeh in a walled-off room in his natto factory.

Takashin tempeh is served as tempeh cutlets at Alicia’s in Shimokitazawa, where it is a popular entree.

The first tempeh discussion group (*Danwa-kai*) in Japan was at Kyushu University, Fukuoka, on 30 July 1984. The Japanese-language program is enclosed. The next will be in Tokyo on 9 Nov. 1984. The one after that will be in Osaka. At the first discussion group (as the program shows) the activities were speeches, discussion of winged bean tempeh, tempeh cookery, tempeh in Indonesia, and future activities. Membership is ¥3,000. Watanabe Tadao is in charge.

Preparations are now underway for the international tempeh and natto symposium (Non-Salted Soybean Foods).

Natural House sells tempeh in four places: Aoyama, Shimokitazawa, Kichijoji & Akasaka. The tempeh is made by Kanehara Shoten. Natural House also sells nigari tofu.

Mr. Kanasugi’s method makes good, firm, tasty tempeh, with no dewatering. Prof. Watanabe and Mrs. Torii have both visited him and both praised the method. His tempeh miso is very delicious. She gives the recipe. Like Namé Miso it is good on sliced cucumber or with ginger. Address:

Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan.  
Phone: 0467-76-0811.

1619. Flinders, Carol. 1984. Laurel's Kitchen. *Washington Post*. Oct. 17. p. E6. [1 ref]

• **Summary:** "Bill Shurtleff and his wife, Akiko Aoyagi, have probably done more than any other individuals in this country to popularize soyfoods and encourage their commercial production." Contains two tempeh recipes.

1620. Flinders, Carol. 1984. Soy food business grows in U.S., Japan *Hartford Courant (Connecticut)*. Oct. 17. p. E11. [3 ref]

• **Summary:** "I first met Bill Shurtleff 16 years ago at the Tassajara Zen Center in Big Sur, California. Clear-eyed, slender and very thoughtful, he struck me as one of the most self-disciplined and idealistic people I'd ever met."

"And he hasn't changed a bit.

"Bill and his wife Akiko Aoyagi wrote 'The Book of Tofu' in 1979 [sic, 1975], and followed it up with 'The Book of Tempeh,' 'The Book of Miso,' and a spate of books for people in the soy foods business, the most recent being a yearly update called 'The Soyfoods Industry and Market: Directory and Databook.'

"Shurtleff and Aoyagi have probably done more than anyone in this country to popularize soyfoods and encourage their commercial production.

"I called them recently and they had nothing but good news. The soy foods industry has greatly benefited from the concern with too much cholesterol, and business is booming, not only in the country, but also in the part of the world where the soybean has long been king.

"Last January, the couple traveled to East Asia, where they discovered that demand for soy milk is growing faster in every country there than for any other food product. In Japan, production has doubled annually for the past five years. All the major milk companies in Japan have begun to market soy milk. They are convinced it doesn't interfere with dairy sales, that in fact it expands their overall market 'reach' and enhances their corporate image by giving the impression of being up to date and health-conscious.

"The term vegetable protein apparently has extremely positive connotations for the modern Japanese. Beef and dairy product consumption has risen enormously since World War II, but so has incidence of cardiovascular disease and cancer. The term plant protein is associated with the traditional, grain-based diet that prevailed when such ailments were rarer.

"The real driving force of the soymilk takeoff, says Bill, has to do with the technological breakthroughs made at Cornell University [Geneva, New York] and the University of Illinois that have made it possible to produce soy milk that does not taste 'beany.' Popularity of this soy milk is not confined to Japan or Indonesia, Bill's itinerary last winter

included visits to four provinces in the People's Republic of China, where he gave intensive workshops in soy milk manufacturing. In the United States, seven companies have introduced it this past year, each with major promotional campaigns."

Includes a recipe for tempeh rice salad. Address: Petaluma, California.

1621. *Yomiuri Shinbun (Yomiuri Daily News, Tokyo)*. 1984. Nattô, sekai ni shinshutsu [Natto-tempeh is marching into the world]. Oct. 24. [Jap]

• **Summary:** This article is entirely about tempeh, yet it is called natto!

1622. *Yomiuri Shinbun (Yomiuri Daily News, Tokyo)*. 1984. Nattô sekai ni [Natto is marching into the world]. Oct. 24. [Jap]

• **Summary:** This article is about tempeh in general and about the world conference on Asian non-salted fermented foods in July 1985 in Tsukuba, Ibaragi prefecture, Japan.

Prof. Watanabe Tadao (Kyushu University) is the head of the conference. They are planning to invite specialists from Thailand, Indonesia, Nepal, China, Korea, USA, Holland, and Denmark.

The wife of Mr. Kawashima (of Tsukuba University) has been developing tempeh recipes suited to Japanese tastes. This subject was on HNK TV on the 6:30 p.m. "News Center 630," on Oct. 17, 1984. Mrs. Kawashima got interested in tempeh when she was living in Indonesia with her husband (a food researcher); she lived there for a long time.

Photos show: (1) A traditional Indonesian tempeh maker in his shop. (2) Mrs. Kawashima holding a plate of prepared tempeh.

1623. Welters, Sjon. 1984. Early history of tempeh in the Netherlands. *SoyaScan Notes*. Oct. 25. Conducted by William Shurtleff of Soyfoods Center.

• **Summary:** Cees van Rest, a friend of Sjon's and the owner and president of Wittewonder, visited Mrs. Duson, owner of ENTI, and asked her the list of questions Shurtleff had written her twice but she did not answer.

Note: Firma ENTI was founded in about 1946-1948.

A Dutch couple whose last name was Wedding lived in Indonesia and made tempeh there. They took a 100 year old culture to Holland in a wooden box, along with their tempeh recipe. In Holland they started to make tempeh on a home scale for friends and relatives. They kept the culture going and used it to inoculate Indonesian soybeans with the help of blankets and lamps. It gradually grew into a commercial operation.

The business did well and by the early 1970s they were making 2,000 lb/day of tempeh. Mrs. Duson bought the company in about 1974, Apparently (?) the couple was growing old.

ENTI went out of business in January 1984 and the original Indonesian culture was deliberately destroyed. They sold all the equipment to a used equipment dealer, rather than to a person to continue the business.

Firma Lembeker is now the oldest existing tempeh company in Holland—approximately 25 years old.

Prospects for the future of tempeh in Holland look bad. Mrs. Duseon felt extremely sad; she didn't think the health food industry would take over sales of the tempeh for lack of tradition and craftsmanship. She is older. Sjon says the Indonesians in Holland are no longer prospering. After World War II they were prospering with tofu and tempeh. But that stopped in the 1970s, in part because of cultural assimilation. Their population in Holland is diminishing, as some went back to independent Indonesia. Ketjap is still very popular in Holland.

Sjon knows another company that has just started to make tempeh, and is now making 1,500 lb/week. He thinks it is the best quality he has seen. It is sponsored by a multinational—but Sjon cannot say who it is. Address: Netherlands.

1624. **Product Name:** [Aros Tempeh].

**Foreign Name:** Aros Tempeh.

**Manufacturer's Name:** Aros Sojaprodukt KB.

**Manufacturer's Address:** Bergsvägen 1, Orsundsbro S19063, Sweden. Phone: 017-160-456.

**Date of Introduction:** 1984. October.

**Wt/Vol., Packaging, Price:** 200 gm.

**New Product—Documentation:** Talk with Ted Nordquist. 1985. Jan. 7. Tim Ohlund started making tempeh commercially at Aros in Oct. 1984. He makes 100 x 200 gm packages once every two weeks. But note that there is a listing in the Soyfoods Center Computerized Mailing List. 1982. July 23. Owners: Ted Nordquist & Tim Ohlund.

Letter (fax) from Ted Nordquist. 1990. June 28. Aros does not presently make tempeh. They sell tempeh starter, instructions, and recipes. Talk with Tim Ohlund. 1991. May 31. He made the tempeh at Aros as Ted described, but it was Aros's product, not Tim's. It was named Aros Tempeh on the label.

1625. **Product Name:** Tempeh.

**Manufacturer's Name:** Frank Barker Tempeh Co.

**Manufacturer's Address:** c/o Post Office Cowarumup 6284, Western Australia.

**Date of Introduction:** 1984. October.

**New Product—Documentation:** Letter (4 p., handwritten) from Frank Barker, 1985. Feb. 25. Has been making tempeh commercially for 4 months.

Talk with (call from) Frank Barker of Tally-Ho Farm. 1994. June 15. A disastrous fire has just burned down his tempeh plant and his offices. He is thinking of re-locating in Perth.

Form filled out by (fax from) Frank Barker. 2001. July 2. Tallyho Farm is making tempeh. Located at 3 Cullen St., Bayswater, Western Australia 6053. Phone: 08 9371-9840. Persons in charge: Frank Barker and C.T. Cheong.

1626. *J. of the American Oil Chemists' Society*. 1984. New soy crushing facility [in Indonesia]. 61(10):1521, 1523. Oct. • **Summary:** "Indonesia's first soybean crushing facility is expected to be operational in late 1985 or early 1986, reducing that nation's dependence on imported soybean meal for its poultry industry and increasing the volume of soybean imports.

"The plant capacity is estimated at 300,000 tonnes annually, which should produce about 240,000 tonnes of meal. That is about the volume of soybean meal imported from the U.S. during 1984. Domestically produced soybeans are used almost exclusively for human foods such as tempeh and tofu.

"Oil palm and coconut are the major sources of vegetable oil in Indonesia, with palm, palm kernel and coconut oils accounting for 99% of Indonesia's 1.8 million tonne production."

1627. **Product Name:** Grain Tempeh (With Okara, Brown Rice & Sunflower Seeds).

**Manufacturer's Name:** Soy City Foods.

**Manufacturer's Address:** 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada. Phone: 416-762-1257.

**Date of Introduction:** 1984. October.

**Ingredients:** Soy mash [okara], brown rice, sunflower seeds, vinegar, *Rhizopus oligosporus*.

**Wt/Vol., Packaging, Price:** 250 gm plastic bag.

**How Stored:** Refrigerated.

**Nutrition:** Per 100 gm: Protein 7.9gm, fat 9.76 gm, carbohydrate 12.0 gm, calories 167.4 gm.

**New Product—Documentation:** Label. Received 1988, Aug. 7 inches square. Printed on plastic bag. Orange, white, green, yellow and blue. Illustration of a sunflower and a field at the base of high mountains. Text and recipes in English and French. "150 g of tempeh provides a good source of protein. Keep refrigerated. Always cook thoroughly." On back panel: "Health is the most precious thing you have. Sustain it by eating good food." Recipe for Soy City Bake. "Tempeh naturally changes color from white through grey to black. These colouration changes improve the tempeh's quality and flavour." Letter from Jon Cloud: Introduced in the fall of 1984. Later he said spring 1984.

1628. *Trinidad and Tobago Review*. 1984. The "noble bean" in the Caribbean. Oct. p. 27.

• **Summary:** "On the main road about 1 mile south of the heart of Roseau between Dominica's western slopes and the shoreline is the Plenty Canada Soya Shop (a photo of which is shown). After only a week opening in Newtown,

this unusual take-away outlet sells out of accras and [soy] ice-cream nearly every day.” Each morning the staff prepares batches of soyamilk, which is “used to make ice-cream and Tofu (soyabean cheese) and some is reserved to be sold as milk while the presscake [okara] is combined with tofu, wholewheat flour and seasonings to prepare the delicious and popular fried accras. The shop opens at one o’clock and serves a steady stream of customers until eight, unless stocks run out.”

Plenty Canada’s representatives arrived on Dominica in response to requests from local people. “With the co-operation of the government they have demonstrated simple home-scale soyafoods preparation in local areas and conducted soyabean seed trials. The initial interest in soyafoods was enough to encourage them to set up shop in central Roseau, grinding the beans at first by hand in a cocoa mill. As the business grew they needed more production space and more contact with local people on a ‘grass roots’ level as the shop was intended primarily as a training situation. Since the move to Newtown a Dominican couple are planning to re-open the original premises as a second soya shop, Creole-style.

“Plenty’s soya project is staffed by three volunteers from Canada and the USA, who receive only subsistence, and five wage-earning Dominicans who are learning to manage the shop. They have requests for soya shops in other parts of the island...

“Plenty brought in an initial supply of soyabeans from North America and are now supplying seed to two groups of local farmers who are keen to grow for the shop... The shop is beginning production of Tempeh, a cultured soya food from Indonesia.”

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the term “soyabean cheese” to refer to tofu.

Note 2. This is the earliest English-language document seen (Aug. 2002) that uses the term “Noble Bean” in the title to refer to the soybean.

Eng] • **Summary:** Contains a summary and historical overview of the *Serat Centhini*, a transliteration and a translation of Canto XXXI of the Javanese script by Ms. Florida in the poetic metre, a list of 5 references consulted, and 3 manuscript sources. The 2 abbreviations used are: LOr = Leiden Oriental Collection, Leiden University Library. SP

= Sasono Poestoko, Karaton Surakarta, Surakarta, Central Java, Indonesia.

Note: Nancy is preparing a 4-volume work titled *Javanese Language Manuscripts of Surakarta, Central Java: A Preliminary Catalog*, to be published in 4 volumes by Cornell Univ. Southeast Asia program. Address: Dalem Joyoksuman, Gajahan RT 9/ RK I, Solo, Jateng 57115, Indonesia.

1631. Soyfoods Center. 1984. Early reference to tempeh discovered in Javanese literature of 1815 (News release). P.O. Box 234, Lafayette, CA 94549. 2 p. Nov. 28. [3 ref]

• **Summary:** Prior to 1984, the earliest document seen worldwide that mentioned tempeh (a fermented soyfood that originated in Indonesia) was an 1895 article by a Dutch scientist and microbiologist, H.C. Prinsen Geerligs. It was generally thought that tempeh had originated in Java long before this time but there was no proof.

In July of 1984 William Shurtleff, with help from Amin Sweeney, Prof. of Malay and Indonesian Literature and Languages at the Univ. of California at Berkeley, pushed the date of the earliest document seen that mentions back to 1875, with the discovery of a reference to tempeh (actually *tempe*) in a Javanese-Dutch dictionary, the *Javaansch-Nederduitsch Handwoordenboek* by the Dutch scholars J.F.C. Gericke and T. Roorda.

Now Shurtleff, with the help of Prof. Sweeney, Eric Oey (one of his students), and Nancy Florida (an American living in Solo, Indonesia, cataloging ancient Javanese texts) has found an earlier reference to tempeh in the *Serat Centini* [also spelled *Serat Centhini*] which was written in about A.D. 1815 on the orders of Sunan Sugih, then Crown Prince and later Pakubuwana V of Surakarta, in today’s eastern Central Java. The main author was probably Rangga Sutrasna. This classic work of Modern Javanese literature contains a line mentioning “onions and uncooked *tempe*.”

Although the *Serat Centini* was written in about 1815, it is quite possibly based on much older sources. Address: Lafayette, California.

1632. *New Chronicle. The Conscience of the Nation (Dominica, West Indies)*. 1984. Soy foods available. Nov. 30.

• **Summary:** Today Nathalie Andrew is opening “Soy Kweyol,” a take away health oriented catering service in the heart of Roseau, Dominica. All of her foods are made from soybeans, and are homemade. A photo shows Nathalie serving a beverage from her shop window. “Soy beans, it has been discovered, can now be grown locally. Farmers in areas like La Plaine have successfully produced their first crop of beans and have already begun preparations for planting a second crop. The seeds which take three months to grow can be obtained from the ‘Plenty’ Office in Victoria Street, New Town.” Address: Dominica.

• **Summary:** "At long last, here are the last of the changes—none of them too radical."

Note: For our complete history of The Farm's pioneering work with tempeh please see: *History of Tempeh, a Fermented Soyfood from Indonesia*, by Shurtleff and Aoyagi (1985, p. 42-46). Address: The Tempeh Lab., P.O. Box 208, Summertown, Tennessee 38483. Phone: 615/964-2286.

1634. **Product Name:** 3-Bean 3-Grain Tempeh (With Pinto Beans & Wheat & Corn).

**Manufacturer's Name:** Cricklewood Soyfoods.

**Manufacturer's Address:** Route 1, Mertztown, PA 19539.

**Date of Introduction:** 1984. November.

**New Product–Documentation:** Ad in CRC Reports. 1984. Oct.; 1987. Fall. p. 15.

1635. **Product Name:** Tempeh.

**Manufacturer's Name:** Nutrisoy Pty. Ltd.

**Manufacturer's Address:** 255 Forest Road, Arncliffe 2205, NSW, Australia.

**Date of Introduction:** 1984. November.

**Ingredients:** Organic soybeans, water, cider vinegar, and culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 250 gm in plastic bag.

**How Stored:** Refrigerated.

**New Product–Documentation:** Label with date sent by Tony Wondal of Nutrisoy. 2005. April 26. He started making and selling this product in Nov. 1984. Red, green and white on yellow. Front panel: "Nutritious. Cholesterol free. Frozen fresh natural. Fitness food. Fry, bake, grill or steam for a quick and easy meal. Fitness food. Bermutu Tinggi."

1636. *Soya Foods (ASA, Europe)*. 1984. The Soyafoods Interview: Henk P.M. Rigter, Consuma B.V., Netherlands. Nov. p. 6.

• **Summary:** Consuma B.V. is a 100% subsidiary of Chemex B.V., a company trading soy proteins. Consuma started on 15 Aug. 1983 with the production of tempeh. The company presently employs 4 people and Righter is the director. The tempeh is made in the standard way except the *Rhizopus* inoculum has been specially developed for Consuma. The product is marketed to health food stores, and to the wholesale trade for Indonesia "toko" restaurants. Later they hope to sell to normal food retail outlets. The company is trying to develop a throw-away package that will give the tempeh a longer shelf life. Address: Christiaan Huygensstraat 10, 2665 KX Bleiswijk, Netherlands.

1637. **Product Name:** Lightlife Meatless Fakin' Bacon (Made from Tempeh). Renamed Marinated Smoky Tempeh Strips by about April 1997.

**Manufacturer's Name:** Tempehworks, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302.

**Date of Introduction:** 1984. November.

**Wt/Vol., Packaging, Price:** 6 oz 170 gm in plastic bag.

**Nutrition:** Per 2 oz.: Calories 79.4, Protein 8.4 gm, carbohydrates 5.6 gm, fat 2.6 gm, sodium 233 mg.

**New Product–Documentation:** Food Report (Lehmann).

1984. Nov. Label. 1985, undated. 4 by 9.5 inches. Brown and orange on yellow. "100% Natural. Cholesterol free. Delicious and nutritious." Package changed so that Fakin' Bacon is one of three types of Meatless Deli Slices. Red and brown on white. "Ready to eat. Ready to heat. Delicious and Nutritious." Layton. 1988. Greenfield Recorder. May 20. p. 25. Fakin' Bacon retails for \$1.75 a pound, roughly the same as pork bacon.

1638. **Product Name:** Lightlife Meatless Deli Slices (Made from Tempeh) [New York Style 'Strami, or Kansas City B.B.Q.].

**Manufacturer's Name:** Tempehworks, Inc.

**Manufacturer's Address:** P.O. Box 870, Greenfield, MA 01302.

**Date of Introduction:** 1984. November.

**Wt/Vol., Packaging, Price:** Vacuum packed in 6 oz poly bag. Retail for under \$2.00.

**How Stored:** Refrigerated, 40 day shelf life. Or frozen.

**Nutrition:** Per 2 oz.: Calories 79.4, protein 8.4 gm, carbohydrates 5.6 gm, fat 2.6 gm, sodium 152 mg.

**New Product–Documentation:** Label. 1985, undated. 4 by 9.5 inches. Red and brown on white. "Ready to eat. Ready to heat. Delicious and Nutritious."

## Lightlife line introduced by Tempehworks to rave reviews

ATLANTA, July 22 - Tempehworks, Inc. introduced it's new product line at the NNFA show here. The new members of the Tempehworks troupe are Fakin' Bacon breakfast strips, New York 'Strami and Kansas City B.B.Q deli slices. Perfectly typecast to appear in breakfast, lunch and dinner performances, the entire Lightlife line boasts authentic texture and flavor while offering low calories, high protein, and absolutely no cholesterol. The new stars were only in town for a four day engagement, but left a trail of loyal fans from coast to coast.

Scientists praise nutritional value and of meatless

• **Summary:** The main isoflavones responsible for the antioxidative activity in tempeh were deduced to be daidzein and genistein. Address: 1&3. Research Inst. for Food Science, Kyoto Univ., Uji, Kyoto 611, Japan; 2. Doshisha Women's College, Imadegawa, Kamigyo-ku, Kyoto 602, Japan.

1643. **Product Name:** Tempeh.

**Manufacturer's Name:** Sooke Soy Foods Ltd.

**Manufacturer's Address:** 2625 Otter Point Rd., R.R. 2, Sooke, Vancouver Island, BC, V0S 1N0, Canada. Phone: 642-3263.

**Date of Introduction:** 1984. December.

**Ingredients:** Organic soybeans, water, and culture (*Rhizopus oligosporus*).

**Wt/Vol., Packaging, Price:** 8 oz (227 gm).

**How Stored:** Refrigerated or frozen.

**Nutrition:** Per 100 gm: Calories 163, protein 19 gm, carbohydrates 13 gm, fat 5 gm.

**New Product–Documentation:** Label. 1988, received. 6 inches square plastic bag. Blue, white, green, and yellow on clear film. "An excellent source of protein. Soy. Organic. No preservatives. On Back: Quick and Easy Recipes for Saucy Tempeh, and Sweet and Sour Tempeh. If you like our tofu—you'll love our tempeh! \* Tempeh, like tofu, is so versatile it adapts itself to any cooking method and all types of cuisine. \* Tempeh is terrific in stir fries, soups, stews, and sandwich spreads. \* Tempeh is delicious deep-fried like fish sticks,

broiled as cutlets, or barbecued. \* Invent your own dishes; great in Mexican and Italian foods! Grey or black areas on tempeh are due to normal sporulation, and do not indicate spoilage." Letter from Wayne Fatt. 1988. Sept. 29. The product was introduced in Dec. 1984.

1644. *SoyaScan Notes*. 1984. Chronology of events during 1984 concerning *Soyfoods* magazine, Doug Fiske, Richard Leviton, and William Shurtleff (Overview). Compiled by William Shurtleff of Soyfoods Center.

• **Summary:** Jan. 30—Fiske, owner of *Soyfoods* magazine in Encinitas, California, writes William Shurtleff of Soyfoods Center. This letter is written on a new *Soyfoods* letterhead with a new matching envelope.

Feb. 15—Fiske mails a letter to "Dear Reader," the many people receiving *Soyfoods* magazine free of charge. "In the face of the economic realities of magazine publishing, *Soyfoods* is converting its circulation from mostly free to mostly paid... On January 1, 1984 a one-year subscription to soyfoods went from \$15 to \$20." But, by responding now, you can save \$5.00 on your subscription. A coupon is enclosed.

April 13—Leviton writes Fiske to explain that he does not want to continue working with *Soyfoods* magazine. He finds his soy sauce book project stimulating.

March—Fisk writes subscribers apologizing for the delay in publishing. Issue No. 10 is scheduled to be published June 29, 1984.

April 17—Gary Barat, president of the Soyfoods Association, writes a letter on his Legume letterhead to all Soyfoods Association members, urging them to take advantage (as he plans to) "of the Ad / Cover Proposal / Editorial proposal which Doug Fiske of *Soyfoods Magazine* outlines in his enclosed letter... Six of our members have already committed to the cover;..."

April 19—Fiske sends a letter to soyfoods producers asking for help with the magazine, and a sheet of mechanical specs and advertising rates.

May 7—Fiske sends Shurtleff a check to cover the cost of making 422 ads, changes, and deletes to the magazine's mailing list. Also his edited version of an article on tempeh in Japan.

June 11—Shurtleff writes Leviton in Glastonbury / Avalon, England, asking if he would be willing (as a consultant) to visit a tofu plant near London.

Aug. 17—Fiske writes Shurtleff 2 letters concerning details of publishing *Soyfoods* magazine, and responding to Shurtleff's comments on the last issue (full-color cover published summer 1984).

Sept. 5—Leviton writes Shurtleff from Somerset, England; responds to questions written him by Mark Fruin concerning the seriousness of his commitment to writing the soy sauce book with Shurtleff and Fruin. He will honor his agreement but is disappointed that a publisher for the book

has not yet been found.

Oct.–Fiske writes a letter to readers (300-350 domestic producers), encouraging them to advertise and enclosing rates. Sends a personal, handwritten letter to Shurtleff with the form letter.

Oct. 21–Shurtleff writes Fiske concerning the annual Soyfoods Year in Review he has written jointly with Leviton for the past 3 years.

Nov. 4–Fiske writes Shurtleff. A small publishing company nearby has shown interest in *Soyfoods* magazine. They want numbers. Doug is cautiously optimistic.

Nov. 28–Leviton writes Shurtleff from Massachusetts. He is back in the USA for a few months and will be in California to visit in December and January. He has finished his book (not related to soy), 1250 pages. He is pleased with it, and will send the manuscript to a literary agent in New York City next week. He will pick up his boxes of personal belongings in the Shurtleffs' garage when he visits.

Are colon bacteria a major source of cobalamin analogues in human tissues? 24-hour human stool contains only about 5 µg of cobalamin but about 100 µg of apparent analogue (and 200 µg of folate). *Transactions of the Association of American Physicians* 97:161-71. \*  
Address: New York.

1648. **Product Name:** Tempeh.

**Manufacturer's Name:** Light Wave Wholefood.

**Manufacturer's Address:** 21 Gilbert St., Newton, Adelaide, SA 5074, Australia.

**Date of Introduction:** 1984.

**New Product–Documentation:** Letter from Dominic Anfiteatro of Light Wave Whole Foods, Adelaide. 1983? (undated). He has been a vegan for 8 years. He learned about tempeh during a 7½-week grape and water fast from *The Book of Tempeh*, by Shurtleff and Aoyagi. Then he traveled to Indonesia to learn more about making tempeh. He was there just after Mt. Galunggung in West Java erupted for the first time (about 1982?). He smuggled some indigenous mixed-culture tempeh starter (*biang ragi*) into Australia and

“made hundreds of batches of tempeh for myself and for Adelaide.” He ran a vegetarian restaurant and juice bar from which he introduced tempeh to many people. He orders a copy of the book *Tempeh Production*. He also made tapeh using organic brown rice, or cassava.

Label. 1984, undated. 4.5 by 5 inches. Red and black on white. “A Cultured Soyabean Food.” 250 gm. Letter from Dominic Anfiteatro. 1985. May 2.

1649. **Product Name:** Tofu, Tempeh, and Soya Milk.

**Manufacturer's Name:** Molly Turner Tofu & Tempeh.

**Manufacturer's Address:** Malahide, County Dublin, Ireland. Phone: 01-8453853.

**Date of Introduction:** 1984.

**New Product–Documentation:** Letter concerning an interview with Molly Turner and her mother and helper (Laura Turner) conducted by Anthony Marrese. 1993. March. Molly is the owner of this small company. She started selling commercially in 1984. She started because of her interest in diet and in supplying other interested people. She is macrobiotic. Although they have sold in various ways (through private sales, health shops, etc.) now they sell only through the local whole-food co-op once every 2 weeks. Presently tempeh sales are 3-5 kg every 2 weeks and tofu sales are 5-10 kg every two weeks. They also sell a small quantity of soya milk (3 liters every 2 weeks). They make their own tempeh starter. They also supply fresh herbs and plants, and books about macrobiotics and gardening at the co-op. They have no present plans for changes except to meet the growth in demand at the food co-op.

1650. **Product Name:** [Tempeh Rice Crackers].

**Foreign Name:** Tenpe Senbei.

**Manufacturer's Name:** Morita Beika Honpo.

**Manufacturer's Address:** Morita Masao, Dote-cho 3-256, Omiya-shi, Saitama-ken, Japan.

**Date of Introduction:** 1984.

**New Product–Documentation:** Label. 1984, undated. 1.5 by 3 inches on a 6 by 10 inch cellophane bag. Dark green on light green. “Teyaki senbei” [Hand-baked rice crackers].

1651. **Product Name:** Mu Tempeh.

**Manufacturer's Name:** MU Tofu Shop.

**Manufacturer's Address:** 1735 W. Greenleaf, Chicago, IL 60626. Phone: 312-743-1339.

**Date of Introduction:** 1984.

**Wt/Vol., Packaging, Price:** 8 oz.

**How Stored:** Refrigerated or frozen.

**New Product–Documentation:** Talk with Rebecca Uchida. 1990. May 14. They have been making tempeh since 1984.

Label for MU Tempeh sent by MU Tofu Shop. 1998. July 2. They still make tempeh. 4 inches square. Brown on orange. “Keep refrigerated or frozen. 8 oz. 1735 Greenleaf, Chicago, Illinois 60626.”

Talk with Terry, who runs the business side of MU Tofu. 2001. June 19. Yoshi still makes tempeh. He makes all the soyfoods; the production is a one-man show. The company is doing well.

1652. Mulyati, Yetti; Tanuwidjaja, Lindajati; Roestamsjah, -. 1984. Pembuatan tempe dengan beberapa macam kacang [Preparation of tempeh using different types of beans]. Bandung: Lembaga Kikia Nasional LIPI. 12 p. Research report. [Ind]\*  
Address: Bandung, Indonesia.

1653. **Product Name:** [Soy & Rice Tempeh Patty].  
**Foreign Name:** Soja-Reis Laibchen.  
**Manufacturer's Name:** Natuerliche Lebensmittel. Paul Stuart Zacharowicz.  
**Manufacturer's Address:** Staudgasse 70, A-1180 Vienna, Austria. Phone: 0222/48 50 03.  
**Date of Introduction:** 1984.  
**Ingredients:** Tempeh (cultured fresh soy product), natural rice (organically grown; biologischer Landbau), vegetables, sea salt, spices/seasonings, sesame.  
**How Stored:** Refrigerated.  
**New Product–Documentation:** Label. 1987. 5.5 x 4 inches. Black, gold, and orange on white card stock. "Natur. Ready to serve, cold as a light meal or snack or warm as a main course. Contains no chemical colorings or preservatives."

1654. **Product Name:** [Tempeh Spread with Garlic].  
**Foreign Name:** Tartiner au Tempeh (Ail).  
**Manufacturer's Name:** Noble Bean.  
**Manufacturer's Address:** Toronto, ONT, Canada.  
**Date of Introduction:** 1984.  
**Ingredients:** Organic soy tempeh, tamari, spring water, garlic, chives, soy oil.

**Wt/Vol., Packaging, Price:** 227 gm.  
**How Stored:** Refrigerated.  
**New Product–Documentation:** Label. 1985, undated. 3.5 inches in diameter. Orange and green on white. "Fresh-Delicious-Nutritious. Great for sandwiches or on crackers. All natural. Ready to eat." Letter from Allan Brown. 1985. Aug. 7. 8 oz for \$1.95. Letter (fax) from Allan Brown. 1998. Jan. 21. This Garlic Tempeh Spread was first sold in 1984, and continued being sold until 1986.

1655. **Product Name:** Tempeh, Soysage, and Soymilk.  
**Manufacturer's Name:** Oryana Soy Shop.  
**Manufacturer's Address:** 16591 Cherry Bend Rd., Traverse City, MI 49684. Phone: 616-941-0254.  
**Date of Introduction:** 1984.  
**New Product–Documentation:** Talk with Tom Slater (nicknamed Tom Tofu). 1988. Sept. 7. The company started making these three products in about 1984, as part of the Oryana Food Co-op, Inc. Today Oryana Soy Shop makes 35-50 lb/week of tempeh, and that is increasing. They make 2-3 gallons/week of soymilk, mostly by special request.

1656. **Product Name:** Soymilk, Tofu, Soy Ice Cream, Fried Accras, or Tempeh.  
**Manufacturer's Name:** Plenty Canada Soya Shop. Renamed Soy Development Center by 1987.  
**Manufacturer's Address:** Roseau, Dominica.  
**Date of Introduction:** 1984.  
**How Stored:** Frozen.

**New Product–Documentation:** Trinidad and Tobago Review. 1984. Oct. p. 27. "The 'noble bean' in the Caribbean. Accras (fritters), a traditional local food, are now made by mixing tofu and okara with wholewheat flour and seasonings, then frying.  
Plenty Bulletin. 1987. Fall. p. 4. Note: This is the earliest known commercial soy product made in Dominica.
