Martha demonstrates how to cook the soybeans, following the instructions on the package, by boiling them in heavily salted water for about 5 minutes. Have a bowl of iced water nearby in the sink. "Soybeans like this are packed full of vitamins, nutrients, and unsaturated fats–the kinds of fats that break down cholesterol in your body. As such, I suggest that you try 'em as a snack." Lift the edamamé out with a strainer, then lower the strainer into the iced water. Leave until cool, but not too long, lest they become soggy. Drain in the strainer, then while they are still a little bit damp, sprinkle them generously with natural sea salt–the kind with irregular crystals. Then they are ready to eat. "You just squeeze on the pod, and the little soybean pops out. Mmmm. Really good." "Keep a supply of this edamamé in your freezer, and the next time guests stop by or your children come home from school, you'll be prepared with a really healthy and delicious snack."

Talk with Tak Kimura. 2000. July 11. To prepare precooked, frozen edamamé: After the green pods are picked from the soybean plants, they are rushed to the packaging plant, blasted with steam (to clean the surface of the pods), immediately blanched in boiling water for 4-5 minutes (to help them keep their bright green color and good flavor and texture), then quickly frozen and packaged. A large percentage of the edamamé consumed in Japan today are sold frozen like this, so that they can be enjoyed year-round. This new frozen trend started in about 1990; before that Japanese enjoyed edamamé as a seasonal food, fresh during the summer only. Nowadays quite a few companies even freeze the fresh edamamé during the summer, because they find that dealing with fresh foods is a nuisance.

Note: Martha Stewart has been able to turn her own lifestyle into a major industry. A successful model during the late 1950s and early 1960s, she was even more successful as a Wall Street stockbroker, and again very successful in a catering business she started. In 1982 she wrote a best-selling book titled *Entertaining.* Her ideas about gracious living have had a major influence. Address: Westport, Connecticut.

10782. Wollner, Joel. 2000. Mr. Kitani of Yamaki Co. in Japan has a huge new shoyu and miso factory that uses 100% organically grown ingredients (Interview). *SoyaScan Notes.* July 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In June 2000, on a trip to Japan and China, Joel (together with translator and guide Yoshi Nanabayashi) visited Mr. Tomio Kitani, owner of Yamaki Jôzô K.K. in Saitama prefecture, Japan. He is about age 60 and very healthy and vital. Several years ago he moved from the nearby town into the mountains, where he built a huge new factory where he makes miso, shoyu, tofu (fresh and instant), and pickles. The company's address is (written Japanese-style): Saitama prefecture, Kodama-gun, Kamiizumi Mura, Oaza Shimo, Akuhara 955. Phone: 0274-52-7000. Fax: 0274-52-7001. Plant manager: Morikawa Kazuhiko. The nearest railroad stop is Kodama station.

The company has about 80 huge shoyu vats filled with moromi. Most of his miso is short-term–1 to 3 months. His koji rooms are fully automated. Yamaki Co. is extremely important in the world of organic miso and shoyu in Japan. Joel thinks they make more of these products than Sendai Miso Shoyu, and may be the biggest such manufacturer in Japan. He also bottles and sells water from a spring he owns. His company is flourishing, and growing very rapidly. Some 90-95% of his market is in Japan; the rest is miso and shoyu exported to the USA. He is the 4th of 5th generation owner, and he hopes his son will take over from him within the next ten years or so. The main ingredient he uses is soybeans, but all of his ingredients are organically grown in Japan by MOA (Mokichi Okada International Association), a quasi-religious, quasi-cooperative organic farmers organization and movement. MOA is one of the pioneering and most important organic organizations in Japan.

Joel first visited Yamaki in 1985 when he, Bob Kennedy, and Herman Aihara were setting up Ohsawa America (after Kennedy had sold Chico-San to Heinz). Joel later brought in Martin Roth–who is now married, lives in Berkeley, and is head of a marketing company with Kristin Brun (who lives in El Cerrito). Ohsawa America, which traded with Ohsawa Japan, no longer exists. Address: 76 Florida Ave., Berkeley, California 94707. Phone: 510-524-4420.

10783. *SoyaScan Notes.* 2000. Chronology of Erewhon Miso Co., Oak Feed Miso, Inc. and American Miso Company (Overview). July 6. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** These three companies are actually the same

© Copyright Soyinfo Center 2014

company whose name changed. This chronology is based largely on dated documents. Undocumented dates are usually followed by question mark. Notice the many unusual twists and turns in the story.

1977 Aug. 2–A bee flies into the cabin of a big truck near Rutherfordton, North Carolina. As the driver tries to swat it, his truck swerves across the road, smashing into a car driven by Bob Deakin, killing Bob's daughter (age 12½) and severely injuring Bob and his young son.

1978 Dec.–Sandy Pukel, Michio Kushi, and John Belleme get together in Boston to discuss the miso factory. They agree on quite a few points. All three are deeply interested in macrobiotics.

1979 Jan. 26–The bank (Tryon Federal Savings and Loan) forecloses on Bob and Karen Deakin's mortgage. Still injured from the car accident, he is unable to make his land payments. The land goes on the market.

1979 Feb. 28–Oak Feed Miso, Inc. is incorporated in Florida. The initial directors and officers are Sandy Pukel and John Belleme. 1979 Feb?–A contract is drafted by David Young (though never signed) showing what percentage of the proposed Erewhon Miso Co. will be owned by the Erewhon group (comprised of Sendai Miso-Shoyu Co., Michio and Aveline Kushi, and maybe Mitoku / Mr. Kazama) and by the Oak Feed Group (comprised of Sandy Pukel and John Belleme). The Erewhon group was to have the majority ownership, and Japanese companies and individuals were expected to play a major role in the new company.

1979 March–Joseph Carpenter looks for land in Rutherford County, North Carolina. Talks with several insurance agents.

1979 spring–Members of the Oak Feed and Erewhon groups meet in North Carolina in the first attempt to locate a site for the miso plant. In attendance are Michio and Aveline Kushi, Sandy Pukel, John Belleme, Frank Head, and Junsei Yamazaki and his wife (both from California).

1979 April–Barry Evans makes his first investment in the miso company, $50,000.

1979 June?–Sandy Pukel travels to North Carolina and makes the down-payment on a piece of land in Rutherfordton. The roughly 92 acres cost about $110,000 to $120,000.

1979 Aug. 7–Oak Feed Miso, Inc. finalizes the purchase on the 92 acres of land by assuming the second mortgage and paying an additional $11,500 each to Lawrence L. Bridges and E. Milton Singletary. Sandy Pukel (president) and John Belleme (secretary) sign the land deed and deed of trust.

1979 Aug. 16–Subscribers Consent Agreement executed.

1979 Aug. (late)–Joseph and Patricia Carpenter arrive in Rutherfordton from Florida to live and work on the miso company land.

1979 Oct.–John and Jan Belleme leave for Japan to begin an apprenticeship with a miso master. They stop by the land in North Carolina to visit briefly with the Carpenters, then also visit Thom Leonard at Ohio Miso Co. Arriving in Japan in late October, they visit Mr. Kazama in Tokyo then travel north with him to Yaita, where they study miso-making with the Onozaki family–which makes only dark rice miso. A good, long letter from Jan describing their experiences is published in 1980 in the book *Macrobiotic Cooking for Everyone,* by Edward and Wendy Esko.

1979 Nov. 18–Barry Evans is in a very serious bicycle accident.

1980 April–A detailed letter by John, about his miso apprenticeship with the Onozaki family in Yaita, Japan, is published in *GOMF News,* a small macrobiotic magazine from Oroville, California.

1980 June–John and Jan Belleme return to the USA from Japan. That summer John located the remaining miso equipment in New Jersey and ordered wooden vats from the Arrow Tank Co. in Buffalo, New York.

1980 fall–John and Jan go on the Erewhon payroll.

1980 Sept. 29–Work has just begun at Rutherfordton in leveling the site for miso factory, which is going to be a metal Butler building. By late 1980 John and Jan begin to make their first experimental batches of one-year rice miso, at their home, in the sauna.

1981 early–The project stalls for lack of funds. John starts writing articles about his trip to Japan. One goal is to convince Barry not to abandon the project.

1981 Jan.–"The Master of Hoops," John's first article, is published in *East West Journal.*

1981 March 9–John Belleme is deeded 7.5 acres of land by American Miso Co. in the northwest corner of the AMC property; later he starts to build a house there.

1981 April–"The Miso Master's Apprentice," John's second article, is published in *East West Journal.*

1981 July–"The Miso Master With a Big Heart: Making Miso in a Japanese Village," John's third article, published in *Soyfoods* magazine. Contains many good photos of miso making in Japan.

1981 July–The beautiful and joyous opening ceremony for the Erewhon Miso Co. is held at Rutherfordton, North Carolina. Those present include Michio and Aveline Kushi, John and Jan Belleme, Sandy Pukel, Barry Evans. It is a moving experience for all. But behind the scenes, Erewhon's financial is rapidly deteriorating–due largely to too rapid expansion.

1981 Aug.–John and Jan Belleme begin full-time large-scale production of one-year Onozaki-style red (rice) miso at their plant in Rutherfordton.

1981 Sept. 27–The annual meeting of the Oak Feed Miso Co. is held at Rutherfordton, North Carolina. Barry Evans is appointed acting chairman. Shares in company are owned as follows: Barry Evans 1,400, Sandy Pukel 1,400, John Belleme 900, Yozo Masuda 100, Edmund Benson 100, and James Kenney 50. All stock is converted to one kind, Class A, which is voting stock. Thus, for the first time, Barry

© Copyright Soyinfo Center 2014

gets the right to vote and becomes a member of the board of directors.

1981 Aug.–John and Jan Belleme begin fulltime, large-scale production of miso and koji at their new plant in Rutherfordton, North Carolina. Fourteen months have passed since they returned from Japan. Twelve more months must pass before this miso is ready to sell.

1981 Nov. 10–Erewhon files for bankruptcy protection under Chapter 11 of the Federal Bankruptcy Act because of debts totaling $4.3 million. At this time, Aveline Kushi is the sole owner of Erewhon. Thus, the miso company can no longer count on Erewhon to distribute its products. Apparent disaster!

1981 Dec.–Barry Evans establishes Great Eastern Sun (GES) in Asheville, North Carolina, in part to package and market the miso made by AMC. Mitoku, almost destroyed by Erewhon's collapse, and eager to rebuild, agrees to export Japanese natural foods to GES.

1982 Jan. 4–Barry Evans sends out a letter announcing the opening of The American Miso Company in North Carolina. The company now has a new name (it was officially changed on 5 May 1982). Barry also announces that Linden's Elf Works (Rougemont, North Carolina), run by John Troy, has been appointed as AMC's sole marketing and distribution agent. Note: This arrangement was very short-lived; Elf Works never distributed any of AMC's miso. Great Eastern Sun did all the distribution.

1982 Jan.–Mr. Takamichi Onozaki comes to America from Japan to see how well his students had learned his lessons. He stays and helps make koji and miso for 2-3 weeks, until he is fully satisfied that all is well.

1982 Jan. 31–Barry Evans and Sandy Pukel agree to a swap of stock, such that Barry gets all of Sandy's stock in the miso company and Sandy gets all of Barry's stock in Oak Feed Store and Restaurant. After this, Sandy is no longer involved with the miso company. Barry and John Belleme now own all the company's shares, and Barry owns a large majority.

1982 April–Great Eastern Sun make's its first sale, of products imported from Mitoku in Japan to a natural foods store in the USA.

1982 April–Mr. Onozaki's his adopted son, Haruo, and eldest daughter, Kaoru (Haruo's wife), arrive in Rutherfordton and spend 3 months sharing the Belleme's home, helping Jan who is pregnant, and helping to make miso. The Bellemes' son, Justin, is born on May 24.

1982 July–The first detailed article about American Miso Co. and its method of making miso (with many fine photos) is published in *Soyfoods* magazine: "American Miso makes a Big Move Down South," by Richard Leviton, who visited the company in April. The company "has struck a careful balance between the traditional approach (as in making koji, which requires skill and personal attention) and labor-saving mechanization (as with bean washing, soaking, cooking, mixing, and moving)."

1982 Sept.–The first miso made by AMC is sold by Great Eastern Sun. It is one-year, Onozaki-style red miso, sold in bulk only in 4 lb, 15 lb, and 40 lb tubs.

1983 Oct. 1–John and Jan Belleme sell all their ownership in the American Miso Co. (900 shares) to Barry Evans for $30,000. However, John continues to work making miso for AMC. Throughout the past year he has been experimenting with making mellow white and mellow barley misos. Great Eastern Sun is now selling about 50,000 lb/year of white miso from other sources.

1984 fall–AMC miso first starts to be sold in one-pound plastic coffee bags (each with a pressure release valve), refrigerated. A full-page ad showing the bag appears in the Jan. 1985 issue of *East West Journal.* Previously, all their miso had been sold in bulk.

1985 Feb.–Don DeBona leaves his job as general manager at Great Eastern Sun and begins to work at American Miso Co., learning the process from John Belleme.

1985 April?–AMC introduces three varieties of relatively sweet, light-colored, short-term misos: Mellow White Miso, Mellow Barley Miso, and Amakuchi Mugi Miso–a shock to traditional macrobiotic followers. These light misos were sold in the plastic bags. As of July 2000, half the company's sales come of such short-term types of light miso.

1985 Dec.–Don DeBona takes over management of the company. John Belleme leaves. It was a difficult transition.

1985 Dec. 31–AMC has its first profitable year, earning $22,000 in calendar year 1985.

1986 early–AMC miso starts to be sold in one-pound plastic cups/tubs, refrigerated. The plastic bags are phased out.

1987 fall–AMC miso starts to be sold in 8-oz plastic cups.

1988 Feb.?–New koji room designed and built by Don DeBona. Constructed at floor level with a large door and high ceiling, it enables the koji crib and racks of koji trays to be wheeled in and out. Before, all the koji had to be carried in and out by hand.

1992 Jan.–Barry Evans is required to take a "federal vacation" in Santa Barbara, California, for 2½ years. He hands the management of American Miso Co. and Great Eastern Sun over to Don DeBona.

1992–American Miso Co. builds a second factory as large as the first.

1993–American Miso Co, now has 41 huge wooden (mostly cedar) miso vats, each of which holds over 4 tons of miso. Starting with only eight vats, they added six in 1986, seven in 1989, five in 1991, and fifteen more in 1993. Also in 1993 AMC begins to export its miso to Europe, where it is distributed by Lima throughout the continent.

1995 April–Greg Gonzales starts work at American Miso Co. learning the process from Don DeBona.

© Copyright Soyinfo Center 2014

1995–AMC uses up the last of tax loss carryforwards; total past financial losses go to zero.

1997 March–Greg Gonzales takes over management of the company after Don DeBona leaves.

10784. Santacruz, Cecilia; Santacruz, Nestor. 2000. Re: More searching for the roots of soya in Colombia. New developments at Delisoya. Letter to William Shurtleff at Soyfoods Center, July 19. 2 p. Typed, with signature. [1 ref]
• ***Summary:*** Cecilia traveled to Corpoica but was unable to obtain the 1930 Boletin by Durán Castro: Molina Garcés. All records of the Granja Experimental de Palmira were sent to ICA, and the ICA can't find them.

"Our small business demands a lot of time and we are not integrated; we make and sell the tofu in different places. We started a new activity (see the yellow paper) in Delisoya–making lunches. Gloria, my new partner, a young girl and I. Nestor keeps making tofu and soymilk."

Accompanying the letter is Deli Soya's daily lunch menu (black on yellow background) which includes: Brown rice mixed with tofu. Whole-grain lasagna with Italian tomato sauce, tofu and spinach.

In a handwritten note at the end, Cecilia says that she is studying Japanese, and has been invited to stay at the home of Japanese friends. Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

10785. Belleme, Jan. 2000. Work with American Miso Co. (Interview). *SoyaScan Notes*. July 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** After she and John had been living at the Onozaki's home in Japan for about a month, a letter came from Mr. Kazama (of Mitoku) saying that Mr. Onozaki did not want to teach them any more about making koji–so they would have to leave any day now. This was disastrous news for them. Then, without an explanation, Mr. Onozaki changed his mind, and they ended up staying for 7 months.

After John and Jan returned from their apprenticeship with Mr. Onozaki in Japan, Jan worked side by side with John making koji and miso. In 1981, when she was pregnant, she had to increasingly take it easy. She worked up until the 7th month of her pregnancy; their son, Justin, was born on 24 May 1982. Address: P.O. Box 457, Saluda, North Carolina 28773.

10786. Asia Foods Group. 2000. Company profile. Hong Kong. 30 p. 30 cm.
• ***Summary:*** This brochure, written in English and Japanese, contains many color photos. Contents: Introduction. Company profile. Company history (chronology: Dec. 1976 to July 2000). Organization structure. Directors and management. Quality assurance and environment protection. Edamame power. Office & factory profile. Organic farming: History and background, farming fields control and management, compost production facility and management, quality control and factory management, GMO (genetically modified organism), pesticide residue control and management.

For ongoing basic information, see the 1998 edition. The page titled "Edamame power" states: "Edamame has been Asia Foods' main product since its establishment and today the Company is both the leader in Edamame processing and one of the largest exporters to Japan and the USA market." Nine benefits of eating edamame are discussed.

In March 1994, Asia Foods began organic farming in China (Taian, Shandong province).

In the long section titled "Products," the page on "Beans" (*mamérui*) shows (with a color photo and text, in English and Japanese, for each product) that Asia Foods sells three types of edamame: (1) Edamame and Edamame without pod (*muki edamame*). (2) Chamame and Chamame without pod (*muki chamame*). (3) Kuromame [black soybean] and Kuromame without pod (*muki kuromame*). Address: Suite 1508 Dominion Centre, No. 43-59 Queens Road East, Hong Kong. Phone: (852) 2865-3216.

10787. Fallon, Sally W.; Enig, Mary G. 2000. Tragedy and hype: The Third International Soy Symposium. Parts I & II. *Nexus* (*New Zealand*). July. p. 66-71; Aug/Sept. p. 56-58. [72 ref]
• ***Summary:*** Note: This article, which is extremely critical of soy and the soy industry, is identical to that by the same authors that appeared in *Nexus* (New Zealand) in April/May 2000 except that: (1) The word "Hype" was accidentally written "Hope" in Part I of this article; (2) The references are included with the article. Address: 1. M.A.; 2. PhD. Phone: 619-574-7763.

10788. House Foods America Corporation. 2000. Hinoichi and House Foods products: Tofu, age, konnyaku, natto (Leaflet). Garden Grove, California. 1 p. Front and back. 28 cm.
• ***Summary:*** Glossy color and dated. Appears to show a photo of the front of the package of all the different types of Hinoichi-brand and House-brand soy products made at this time.

(1) Tofu. Hinoichi brand: Soft tofu 14 oz, regular tofu 14 oz, firm tofu 14 oz, and extra-firm tofu 14 oz. Soft tofu 19 oz, regular tofu 19 oz, firm tofu 19 oz, and extra-firm tofu 19 oz. House brand: Tokusen kinugoshi tofu (Soft tofu) 10 oz, Sukui tofu (Extra soft tofu) 12 oz, Spoon tofu (Extra soft tofu) 12 oz.

(2) Organic tofu: House brand: Organic tofu soft 14 oz, organic tofu regular 14 oz, organic tofu firm 14 oz, and organic tofu extra-firm 14 oz.

(3) Flavored tofu. House brand: Chef tofu original 19 oz, Chef tofu herb & garlic 19 oz, Chef tofu chili & vegie 19 oz.

© Copyright Soyinfo Center 2014

(4) Tofu dessert. House brand: Shao mi tofu dessert (mango) 10 oz, Shao mi tofu dessert (lychee) 10 oz, Shao mi tofu dessert (tangerine) 10 oz.

(5) Age. Hinoichi brand: Agé (tofu pouches) 6 pieces = 1.5 oz total, Oagesan (tofu pouches) 2 pieces, Oagesan (tofu pouches) 4 pieces, Oagesan (tofu pouches) 100 pieces (institutional), Atsu-agé (tofu cutlets) 5 oz, jumbo atsu-agé (tofu cutlets) 9 oz, ganmodoki large (tofu fritters) 3 pieces = 5.4 oz total, ganmodoki small (tofu fritters) 8 pieces = 4.3 oz total.

(6) Konnyaku. Hinoichi brand: White ita konnyaku (yam cake) 10.5 oz, black ita konnyaku (yam cake) 10.5 oz, white shirataki bag (yam noodle) 8 oz, black shirataki bag (yam noodle) 8 oz, konnyaku (yam cake) 11 oz, shirataki (yam noodle) 9 oz.

(7) Natto. Hinoichi brand: Mamekozo natto (fermented soybeans) 5.4 oz, natto (fermented soybeans) 4 oz. Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

10789. Shurtleff, William; Aoyagi, Akiko. comps. 2000. Miso and soybean chiang–Bibliography and sourcebook, first century B.C. to 2000: Detailed information on 2,619 published documents (extensively annotated bibliography), 343 commercial miso products, 304 original interviews (many full text) and overviews, 372 unpublished archival documents. Lafayette, California: Soyfoods Center. 1026 p. Subject/geographical index. Author/company index. Extensively annotated. Printed July 10. 28 cm. [3198 ref]
• ***Summary:*** Miso, or "fermented soybean paste," is one of East Asia's most important soyfoods. Miso is an all-purpose high-protein seasoning, which has no counterpart among Western food or seasonings. Made from soybeans, rice or barley, and salt, its smooth or chunky texture resembles that of soft peanut butter. It comes in a wide range of warm, earthy colors ranging from light yellows to rusty reds, rich chocolate browns, or loamy blacks. Each miso has its own distinctive flavor and aroma, which for the darker, more traditional varieties is savory, and sometimes almost meaty, while for the lighter-colored types is subtly sweet and delicately refreshing. Miso's range of flavors and colors, textures and aromas, is at least as varied as that of the world's fine wines or cheeses.

Today miso is made by a small number of companies in the United States, Canada, Europe, and (as miso or miso products) is widely available at supermarkets, natural- and health food stores, and Asian stores.

This book contains the first detailed history of each of America's pioneer miso manufacturers.

This is the most comprehensive book ever published about miso and/or soybean chiang. It has been compiled one record at a time, over a period of 25 years, in an attempt to document the history of this subject. Its scope includes all known information about these two seasonings, worldwide, from the first century B.C. to the present. It is also the single most current and useful source of information on this subject available today, since 86% of all references (and most of the current ones) contain a summary/abstract averaging 229 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 63 different document types, both published and unpublished, every known publication on the subject in every language–including 2,368 in English, 618 in Japanese, 120 in German, 105 in French, etc. Extensive translations of many of the Japanese and European works. 304 original Soyfood Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present, worldwide.

The bibliographic references in this book include 2,169 published documents and 372 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

This book also includes details on 343 commercial miso products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject/geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

10790. Cooper, Kim. 2000. Growing identity preserved (IP) soybeans in Canada (Interview). *SoyaScan Notes.* Aug. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Canada has been "IPing" (growing identity preserved soybeans) for about 15 years (i.e., since about 1985). The pioneers in growing IP soybeans were Paul King (age 50-55) and his father (who founded King Grain, and who is now in his 90s) and W.G. Thompson & Sons Limited (Blenheim, Ontario). Kim worked for King Grain for about 9 years. During his travels, Paul saw the need for consistent soybeans. He realized there was no way that Canada could

© Copyright Soyinfo Center 2014

compete with the USA for bulk shipments, so he proposed that Canada start to develop niche markets. He got very interested in soyfoods, because he believed there was a real opportunity for Canada to supply tofu makers with soybeans of consistently high quality year after year. Today Canada has the largest and most sophisticated IP system for soybeans of any country in the world.

When genetically engineered soybeans started to be sold, the Ontario Soybean Growers (OSG) got chastised by the American Soybean Association for growing non-GMO soybeans and for not helping the advancement of GMO soybeans. When the ASA suggested that Canada stop this, they responded that they were simply trying to fill a need in the market.

When customers started asking for non-GMO soybeans, they simply became another of Canada's IP products; the infrastructure was in place. OSG is basically selling a process, which they show to their customers–from seed to grower to elevator. The customers are quite satisfied that they will get the soybeans they want, whether it is 0.1% non-GMO or 1% non-GMO or whatever. For customers in Japan and the UK, non-GMO is very important; for those in Hong Kong, only about 50% want non-GMO. Ontario's IP production and exports have been increasing. This growth is hard to measure because the acreage is grown by individual companies. Kim has been doing some informal surveys, which show that 30-35% of the larger farmers are growing IP soybeans, which are also a value-added crop. Throughout Ontario province, Kim would estimate that IP acreage accounts for about 20-25% of total soybean acreage, compared with less than 5% of America's total soybean acreage. So Canada is way ahead of the USA in growing IP soybeans. Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

10791. Korth, Laura. 2000. Looking for those 'green things'–Edamame beans: Hard to recall the name but finally going to market. *Times–Call* (*Longmont, Colorado*)**.** Aug. 23.
• ***Summary:*** In Colorado, where edamame have been grown for about 4 years, they are just starting to arrive in markets this year. The author, who has become a fan, tells how to cook and eat them. Laura Culbertson, of Panchamama Farms in Longmont, went with her husband Ewell, to Japan to learn more about growing edamame. When eating their meals in farmers' homes, they were pleasantly surprised to see a bowl of cooked edamame set on the table at every meal–even breakfast.

10792. Skiff, James. 2000. Seminars on identity preserved (IP) soybeans and non-GE soybeans organized by the American Soybean Association in Tokyo, Japan (Interview). *SoyaScan Notes.* Aug. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** A Japanese law requiring selective labeling of genetically engineered (GE) soybean ingredients was passed in Oct. 1999 but does not take effect until 1 April 2001. Jim Echle, head of the ASA office in Tokyo, is extremely receptive to the needs of his Japanese customers, such as tofu makers.

The first conference on this subject was held in April 1999 in Tokyo; it was Jim Echle's idea. In about Jan. 1999 Echle visited Jim Skiff's non-GE soybean facility in Mattoon, Illinois. He told Skiff that he was thinking about having a seminar on Identity Preserved and non-GE soybeans in Tokyo and asked Skiff if he would be willing to participate; Skiff said he would like to. He did not yet have a date or place, but he had the idea before he visited with Skiff, because he had been approached in Japan by trade associations and manufacturers who were interested in obtaining non-GE soybeans. Skiff then suggested that Echle talk with Dr. Dennis Thompson of the Illinois Crop Improvement Association, who Jim relied on to test for and verify non-GE soybeans. Skiff took Echle to meet Thompson. Echle subsequently scheduled Thompson to be the keynote speaker at the seminar in Tokyo. It was held in April 1999 in the afternoon in a university auditorium near the ASA offices. Several Japanese also spoke. An interpreter was present. The ASA went out of its way to make the subject of the seminar Identity Preserved (IP) soybeans and seed certification rather than non-GE soybeans, since ASA has pushed so hard to try to make GE soybeans acceptable. In fact, Echle told Skiff not to mention non-GE soybeans and not to have any signs that mentioned them. About 150-200 people attended the seminar, which lasted approximately 4 hours.

After the seminar, the attendees went to a larger meeting room down one story in the same building where there was a two-hour informal expo and social hour with snacks. About 7-8 American companies, such as Jim's, had tables or booths. Most were selling specific IP soybean varieties. Only Skiff was focused on non-GE soybeans. Peter Shortridge from Northland Organic had a both next to Skiff's. Sandra, the USDA Officer in Tokyo, gave a little introductory talk, followed by the president of the Japanese Tofu Association. Because of his position with the ASA, Echle had to downplay non-GE soybeans but he also knew genetic engineering was a big issue in Japan. Skiff feels that he has developed a good relationship with Jim Echle.

The second such seminar was held in early June of this year (2000) in Tokyo. Dan Burke of Pacific Grain and Soy was the keynote speaker. Jim was unable to attend because he had to be at a show in Europe; he is not aware of a third seminar. Jim thinks that the Tokyo office of ASA has been the most responsive of all ASA offices worldwide to the needs of its customers for non-GE soybeans. In Europe, ASA has lost many customers. The last ASA director in ASA's Brussels office lasted less than a year.

ASA has done a great disservice to soybean growers

© Copyright Soyinfo Center 2014

by presenting a one-sided and slanted view, and by not keeping them informed of anti-GE sentiments and legislation worldwide. With better information, more American farmers would have started growing IP or non-GE soybeans–and probably profited thereby. The Ontario Soybean Growers in Canada have done a much better job of following a two-track policy. ASA still argues that there are only a few nuts like Greenpeace who oppose GE soybeans for no good reason, and that all rational people believe genetic engineering is a boon to soybean farmers and the inevitable wave of the future. But how about the Japanese and their law requiring labeling of GE ingredients? ASA should have followed a two-track, customer oriented policy. You want non-GE soybeans? Buy 'em from us. You don't care if the soybeans are genetically engineered? Buy 'em from us. Address: US Soy, 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

10793. Asimov, Eric. 2000. $25 and under: Going beyond sushi, on an unlikely street. *New York Times.* Aug. 30. p. F9.
• ***Summary:*** This is a review of the Japanese restaurant Miyagi (220 West 13th St., Greenwich Village–a largely residential area on the west side of downtown {southern} Manhattan in New York City). One of the writer's favorite dishes was "greens tossed with delicate soy milk skins [yuba] in a mustard-and-miso dressing ($4.25). The dish is so bright and winning that only on closer examination can you tell that the greens are broccoli rape."

10794. *ASA Today* (*St. Louis, Missouri*). 2000. Food grade soybeans in Japan: The market for high quality, non-biotech soybeans. 6(9):4-page insert after p. 4. July/Aug.
• ***Summary:*** Across the top of each page this insert: "Demand for identity preserved soybeans grows in Japan." In a colored box on the lower right corner: "A special guide to profit opportunities, from the American Soybean Association, August, 2000." A color photo in the lower left corner shows a huge soybean with the words "non GMO" branded on it in brown, against a blue sky with white clouds. The caption (in both English and Japanese): "The Tokyo Grain Exchange launched the world's first Non-GMO soybean contract on May 18, 2000." Across the bottom of page one: "This publication is sponsored by Bayer Corporation."

The article begins: "Japan, the single largest customer for U.S. soybeans, and the world's largest importer of food grade soybeans, has passed a biotech food labeling law that will affect foods containing soy protein. Beginning April 1, 2001, foods containing biotech ingredients will be required to display a label informing consumers that the product includes genetically modified materials.

"Rather than marketing a consumer product with a GMO ingredient label, Japanese importers are already sourcing from the United States Identity Preserved (IP), non-biotech soybeans for use in tofu, and other soy foods, in anticipation of the new labeling law."

A sidebar on p. 2 titled "Market size" states: "ASA estimates that demand for identity preserved non-biotech soybeans for the tofu market in 2000 will equal about 500,000-700,000 metric tons (18-26 million bushels)–around 15-20 percent of total U.S. exports to Japan. This does not include about 300,000 metric tons (MT) of organic and premium grade soybeans, which have been grown for the Japanese market under high-value IP systems by U.S. farmers for many years."

A color photo on page 3 shows seven people standing together at "ASA's 3rd Annual Food Soybean Conference" which was held in Tokyo on June 13. One of the seven is Dan Burke of Pacific Soybean and Grain (San Francisco, California).

Note: Throughout this article the term "food grade soybeans" is used.

10795. KTV Kansai Fuji Television. 2000. "Excavation"–Aru aru daijiten #174 "Edamame" [Digging into our big, big dictionary #174–"Edamame"] (Color videotape). Tokyo, Japan: Fuji Television. 50 minutes. Aired Aug. 6. [Jap]
• ***Summary:*** This color video discusses the history of edamame in Japan, the nutritional value of edamame, and how to best prepare edamame (in the pods) at home.

The strongest "team" is beer and edamame–natural products of Japan's summer. But what is edamame? Edamame are soybeans that are harvested three months before mature, dry soybeans, while they are still young and green. Eating premature soybeans is part of Japan's original food culture, according to Nagayama Hisao, food culture historian and commentator. Countries that currently enjoy edamame are China, Taiwan, Thailand, Vietnam, and a few other Asian countries. But the habit of eating edamame originated in Japan.

Edamame became part of Japanese food culture during the Edo period (1600-1868). According to documents from that time, edamame vendors, carrying edamame in pack on their back, entered various towns during the summer season. People were attracted as they called out "Edamame," according to one written record. Since the edamame were precooked, they were a ready-to-eat food–a snack that you could eat while walking–even though was considered bad manners at the time. In short, edamame was Japan's "original fast food." And during the Edo period that began to be eaten as a snack with beer.

There are several theories as to why Japanese started, long ago, to eat premature soybeans. One theory, based on documents in the National Diet Library, says that during the Nara Period (A.D. 710-784), when there were repeated famines, Japanese began to eat edamame as an emergency famine food. Note: Unfortunately, no reference is given for these ancient documents, nor are we told what the food was called at the time. A second theory, also based on

© Copyright Soyinfo Center 2014

documents in the National Diet Library, says that during the Heian period (794-1185), edamame was consumed by the aristocracy as a high-valued food that was only available for a short time during the summer months.

Now is the prime season to enjoy edamame's "hidden health power" to counterattack summer fatigue, overdrinking, and overworking. Both fresh and frozen edamame are available. There are now more than 30 different brands of frozen edamame according to the Japanese Frozen Food Association.

The program closes with tips for preparing the most delicious edamame at home.

Talk with Tak Kimura of Concord, California–who gave a copy of this video to Soyfoods Center. 2001. Aug. 3. This is the best video he has seen on edamame. Address: Tokyo Japan.

10796. DiMartino, Christina. 2000. Mori-Nu seeks to educate consumers about the benefits of tofu. *Produce News* (*Fort Lee, New Jersey*). Sept. 11.
• ***Summary:*** The article begins: "One sure way to take advantage of what interests consumers today is for a company to focus on the health benefits of its products." Morinaga Nutritional Foods is doing just that.

A photo shows 4 types of Mori-Nu organic tofu "packaged in aseptic boxes," which assures consumers that the tofu will be fresh.

10797. *SoyaScan Notes.* 2000. Monsanto has no plans to develop biotech soybeans with consumer benefits (Overview). Sept. 12. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Monsanto and other biotech advocates have been saying, in response to growing consumer opposition to genetically engineered (GE) foods, that their next step will be to develop GE foods with consumer benefits–such as soybeans with more protein or isoflavones (such as genistein) or vitamin E, etc. Actually, however, Monsanto is reducing (by firing) most or all of their researchers developing such GE foods, for two reasons: (1) The market for soyfoods is too small to justify the investment in food development and plant breeding; (2) The risk is too great that consumers won't want GE foods even if they have such benefits.

Instead Monsanto is focusing its efforts on breeding soybeans with benefits for animal feeds, since the market is much bigger and there is much less risk of complaints from customers.

With this strategy, however, Monsanto faces a basic contradiction and fundamental problem. Without products having consumer benefits, consumer opposition to genetic engineering is likely to grow. Japan has already passed a law requiring all GE foods to be so labeled; the USA and Europe are likely to follow Japan's lead since polls show that most consumers believe that have a right to know what is in their foods. But labeling laws will require that GE and non-GE foods must be harvested, cleaned, transported, and stored separately. As the debate expands, and as new unforeseen consequences multiply (which seems likely), citizens may put pressure on legislators to sharply limit all genetic engineering. This may well become one of the big issues and debates of the early 21st century.

Talk with Jim Skiff of US Soy. 2000. Sept. 13. The trend in Europe is away from genetically engineered animal feeds. Some countries, such as Austria, won't allow any GE seeds to cross their borders. In both the USA and Europe the market for organically grown feeds is expanding. Given these trends, Monsanto may run into opposition to its GE feeds.

10801. Efron, Sonni. 2000. Japanese company tries making tofu trendy. *Daily Journal* (*Orem, Utah*). Oct. 11.
• ***Summary:*** Kyo Tofu Fujino, a famous Kyoto tofu shop, is trying to survive by reinventing itself as an upscale, designer chain selling European-style tofu confections. Seiji Fujino, the company's second-generation president, says he wants to teach kids, who are growing up on McDonald's and Mr. Donut, how to eat tofu. The company already has outlets in fancy department stores in Kyoto, Osaka, and Tokyo, plus its own specialty stores and a tofu restaurant. It opened the latter, Tofu Kaho, in April at Fujino, a quiet neighborhood of northern Kyoto. Its offerings: Tofu doughnuts, chocolate peach soy-cream layer cake, tofu cream fig shortcake, or a pastry filled with whipped soy cream and purple sweet potato. In addition to many types of cakes and puddings made with tofu, the sweet shop also offers four flavors of tofu ice cream–ginger, white sesame, vanilla, and black bean coffee. And it bakes cookies using the left-over okara. Then there are traditional dishes: Oboro-dofu (served cold), tofu flavored with yuzu (a citrus-like lime), sesame tofu, black bean tofu, and deep-fried tofu with lotus root.

Recently, some 500-600 neighborhood tofu shops across Japan have gone bankrupt each year, although there are still some 16,500 shops in Japan–according to the Japan Tofu Association. In 1967 the average Japanese household consumed 72 pounds of tofu; by 1999 that figure had fallen to 59 pounds–an 18% decline in 32 years. During the same period, consumption of rice and fish also fell, which meat consumption rose sharply.

Fujino tofu, like many other brands, carries a label stating that it contains no genetically modified soybeans. Address: Los Angeles Times.

10802. Rose, Bruce. 2000. How Bruce got involved with natural foods, soyfoods, Rosewood Products, Inc. and Tofu International Ltd. (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1967, while enrolled at Wayne State University in Detroit, Michigan, Bruce got involved with macrobiotics. His main education came from "street school." He would drive to Ann Arbor for the fun of it, and there he discovered Eden Foods, a little upstairs co-op that was the first he found that sold brown rice. He would buy foods, and take them back to the little center which was in Detroit. Michio Kushi visited their center several times and gave lectures.

One of his childhood friends was Tim Redmond, whom he later met during his college years and then at Eden Foods. Redmond's dad invested money in Eden Foods on the condition that they cease to be a co-op. Michael Potter later contributed money "from spurious sources in tune with the times." Potter's attitude has long been "It's Mike against the world."

Many of the food co-ops were started by potheads; most were in university towns and part of the counterculture–a mix of politics and natural foods.

From time to time, usually when some problem or opportunity arose, Eden Foods would run out of money and call on Bruce. He loaned them money (once $12,000) and they paid it back each time. In 1978 Bruce started to work for Eden Foods at their warehouse on Platt Road in Ann Arbor. They were already a fairly big food distribution company with large semi trucks [semitrailers]. Soon Bruce learned about the Soy Plant, which was a co-operative on Ann Street in Ann Arbor. He started to visit their deli. In 1979, Bruce and his family moved to a town about 20 miles north of Ann Arbor–before the fire.

Then in Nov. 1979 the Eden warehouse at 4601 Platt Road was destroyed by a large fire. Bruce was a manager at the time. He is quite sure that the fire was *not* caused by arson. If it was arson, it certainly was not done by the owners. They definitely didn't burn down the company to collect on the insurance. The main reason is that Eden was greatly underinsured; they lost a lot more than they got back or than could ever have gotten back. In the best case, insurance pays you 80% of what you're insured for. To this day, nobody knows for sure what caused the fire. The fire almost put Eden out of business; they lost a lot of money. They were able to stay in business because of the help of their friends. Before the fire, the insurance companies were always trying to get Eden to buy more insurance coverage–but they never did.

The fire was devastating for Bruce as well. He had been working on some automatic packaging equipment for Eden; it all melted. So after the fire, he decided to leave the company. They owed him $15-30,000 at the time. He sat down with Potter and his good friend Redmond and made them an offer. You can forget the debt if you will give me just 15% of the stock in Eden Foods. Potter said "Yes" and Redmond said "No."

Cliff Adler, who had joined the company before the fire, had a profound effect on its recovery. After the fire, he converted a $100,000 loan into stock so that in 1980

© Copyright Soyinfo Center 2014

he owned 34% of the company. "Cliff was great. He was an upper management mover and shaker and eased the company's debt burden. He moved the company forward."

At one point Bruce considered starting a company to make tofu, but he didn't want to compete with the Soy Plant. Then he happened to meet Ben Wenzel who was delivering (by contract) the Soy Plant's tofu out of the Ann Arbor area and outside of Michigan. "He was delivering cider and tofu in his old hippie van." So Bruce decided to go into the raw milk cheese business. He got into it by accident by misunderstanding the difference between markup and profit margin. "Had I known the difference, I never would have gone into the business." So in Aug. 1980 he started a distribution company named Rosewood Products, Inc. After about a year, he started to distribute the Soy Plant's products along with his cheese. Then the Soy Plant got into trouble financially. Bruce tried to help them. He said: "I had a long history with the Soy Plant and this looked easy. Making tofu sounds exciting. East meets West type products was the reason I went in. I never dreamed I'd be packing tofu for 20 years. You never know what life has to offer you."

Bruce ran the Soy Plant for 3 months before they went bankrupt. Then he bid on the company when they were in bankruptcy, and won the bid. He tried to keep all the employees but they came from a co-op background. "I was a pretty traditional business guy. I wasn't smoking dope any more, had short hair, hard working. A lot of the co-opers wouldn't work for me. I found the best workers were good old meat-eaters. The idealists would do great for three months, and then peter out."

For years after he took over the company, people who had loaned the Soy Plant $100 or so, came to Bruce and said they wanted their money back. He tried to explain that the Soy Plant had declared bankruptcy and their debts were not his. But that didn't satisfy most of them. Bruce estimates that The Soy Plant paid back about half of the roughly $10,000 they borrowed from members of the community.

In the end, Bruce merged the Soy Plant, a pioneer soy company, into his Rosewood Products, then later renamed it Tofu International Inc.

Update: Letter (fax) from Bruce Rose. 2001. May 22. Bruce says Rosewood Products no longer makes tempeh. They bought from White Wave from 1990-1998, but now buy their tempeh from Lightlife. They sell mostly bulk tempeh burgers. The Soy Plant started making tempeh in 1977. Rosewood started in 1987, stopped about 1995. Address: Founder and President, Rosewood Products, Inc., 738 Airport Blvd., Suite 6, Ann Arbor, Michigan 48108. Phone: 734-665-2222.

10803. Kimura, Takuji "Tak." 2000. Mechanical harvesting of edamamé (green vegetable soybeans) (Interview). *SoyaScan Notes.* Oct. 17. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Taiwan, Tak saw a huge machine specially designed to harvest edamamé and separate the green pods from the stems and leaves. Thus, it might be called an "edamamé combine." It is about 13 feet long, 13 feet high, and 10 feet wide, and looks like a cotton-picker, a large pea-picker. Two large and adjacent horizontal brushes sweep the pods off the plants and up into the machine, then (inside the machine) separates the pods from the leaves and any accidental stems. It puts the pods gently in a huge container in the machine, and discharges the leaves and chaff back onto the field, where it serves as organic matter. When this container is full, the edamamé are dumped into a similar container in a truck alongside the harvester; this dumping inevitably causes some bruising of the edamamé.

The Taiwan Edamamé Association, located in central Taiwan, owns about 32 of these harvesters. The harvesting of edamamé in China and elsewhere in East Asia is done by hand. Of the edamamé grown in Taiwan, about 80% are sold to Japan, 10% to the USA, and 10% to Europe. The soil in Taiwan used to be quite polluted, but they have greatly improved it as by bringing in peat moss.

The pods are rushed to the packing plant, where most are dropped into lightly salted boiling water in a continuous process. After the water returns to a boil, they are boiled for about 6 minutes before being frozen. For customers (mostly in the USA) who want shelled green beans, the tender green beans are removed from the pods by hand–using human labor; they have a machine to do this but it doesn't work very well.

The growing of edamamé is now spreading rapidly to Vietnam and Thailand, which are located in Southeast Asia, south of the southernmost part of China; there they can get four harvests a year. In Taiwan and southern China they can get only two harvests a year.

SunRich in Minnesota has a harvesting machine and a separate machine that carefully removes the tender beans from the pods. These may be similar to the machines that harvest and shell green peas. But Tak thinks that green peas are much easier to squeeze out of their pods than green soybeans.

Photocopies of color photos show a huge edamamé harvester at work in Taiwan: (1) Distant front view of harvester at work in a field of green soybeans. (2) Close-up view harvester, showing driver in clear-walled cabin at front left. A sign shows that this machine was made by FMC corporation; it may be an FMC green-bean harvester. (3) Rear view of harvester. (4) Close-up view of a row of soybean plants that have been harvested. Many stems are still standing upright and many leaves are lying on the ground. (5-6) Dumping a container of pods from the harvester into a truck waiting beside it. (7) Close-up view of the raised harvesting mechanism at the front of the harvester; the two adjacent cylindrical brushes are each about 14 inches in diameter and as wide as the harvester (10 feet). Beneath them

is a sort of comb. Address: 3616 Delancey Lane, Concord, California 94519-2357. Phone: (925) 687-2422.

10804. Cleland, Nora T. 2000. Couple takes unique approach to farming. *Farm Talk* (*Parsons, Kansas*). Oct. 18.
• ***Summary:*** Innovation is the watchword for Lee and Cindy Quaintance who farm near Edgerton, Kansas, close to Olathe.

Their main crop is organic soybeans, especially those varieties made into tofu. This year they are trying another variety named "Nato" [for making natto], which is smaller than most soybeans. Whereas the count of typical soybeans is about 3,500 per pound, "the little Nato beans run about 6,500 beans per pound."

They have found a company in Garden City, Missouri, which will buy the Nato beans and export them directly to Japan. They expect to be paid about $15 a bushel, but that isn't quite as lucrative as it sounds because Nato yields only about 35 bushels per acre.

When growing soybeans organically, they have found that it is easier when they are planted in rows 36 inches apart rather than 30 inches. The beans rapidly grow and shade a 10-inch space on both sides of the row–which eliminates the need for herbicides. Still he cultivates the area between the rows once each season to eliminate weeds.

Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 35-36.
• ***Summary:*** Tanbaguro is a soybean variety having a black seed-coat in which the seed size can reach 80 gm per 100 seeds under suitable cultivating condition. The seed size has doubled in the last 50 years from 40 gm to 80 gm by selection and improvement of cultivation practices. Tanbaguro is highly valued because of its large seed size, softness and the good taste of the boiled beans. Consequently the price is about ten times that of ordinary varieties in Japan. Moreover Tanbaguro has received high evaluation as a vegetable soybean of unique quality in recent years.

However, Tanbaguro also has many demerits in cultural traits, such as susceptibility to certain diseases, low lodging resistance, and low yield.

Tanbaguro (or Tanbakuro) has a long history; it originated in Hyogo and Kyoto prefectures in central Japan. The earliest known literature about it dates back to 1797 in Sasayama city. The name "Tanbaguro" first appeared in 1934. Address: Hyogo Prefectural Hokubu Agricultural Inst. [Japan].

• ***Summary:*** Japan is the world's largest soybean importer. Of the 4.9 million tonnes (metric tons) imported, about one million tons (actually 960,000 tonnes or 19.6%, called "food soybeans") are used for making tofu, miso, natto, soysauce, etc. The rest are crushed to make soybean oil and meal.

A table (p. 118) shows the quantity of soybeans obtained from various sources to make each of the major Japanese soyfoods in 1998, 1999, and 2000. In the year 2000, some 512,000 tonnes were used to make tofu, 168,000 tonnes for miso, 125,000 tonnes for natto, 40,000 tonnes to make soy protein and products, 30,000 tonnes to make soysauce (from whole soybeans), 6,000 tons to make soymilk, and 79,000 tons to make other products. Grand total 960,000 tonnes.
Address: Marubeni Corp., Japan.

html.

• ***Summary:*** "Soybeans have been produced in Brazil since 1882. By 1960, soybean production reached 0.2 million metric tons, all of it processed domestically. The oil was used in domestic foods and the meal was used to support a growing poultry industry. At this point, Brazil was not a competitor in world soybean markets.

"That began to change in the early 1970s when the following chain of events propelled Brazil into the world soybean market. In 1971, the U.S. devalued the dollar causing the export price of U.S. corn, wheat, and soybeans to fall sharply relative to the rest of the world. During that time, the USSR generated large supplies of foreign currency by increasing its petroleum production. Using this foreign currency, the USSR financed large quantities of imported U.S. wheat and then later, large quantities of U.S. corn and soybeans.

"Simultaneously, adverse worldwide weather conditions reduced world grain production. Later, in 1972-73, an exceptionally harsh El Nino greatly reduced the supply of Peruvian fishmeal at that time, a major source of protein in animal feed rations. As a result, foreign demand for U.S. soybeans increased dramatically, causing soybean supplies to dwindle. Soybean prices skyrocketed to an all time record of $12.00 per bushel. This drew loud complaints from U.S. consumers who feared that the U.S. would run out of soybeans.

"Responding to political pressures in June 1973, President Nixon imposed an embargo on soybean and soybean meal exports. The soy embargoes and the Peruvian fish meal shortage combined, created a worldwide impression that the U.S. and Peru were unreliable suppliers of animal feed protein. Major soy importers–Japan and Europe–began seeking alternative sources of animal feed protein. Attempting to encourage the growth of soybeans in Brazil, Japanese investors bought land in Brazil for soybean production. Since then, soybean production has increased from 5 million metric tons in 1973 to about 32.5 million metric tons in 2000. Today, Brazil is the world's second largest soybean exporting country." Address: Professors of economics, Iowa State Univ.

10819. Mogi, Katsumi. 2000. Makasete, makasazu [Entrust, but keep an eye on it]. Japan: 133 p. Oct. No index. 21 cm. [Jap]

• ***Summary:*** Katsumi was the former vice-president and president of Kikkoman Corp. Address: Former president, Kikkoman Corporation, Japan.

10820. Muramatsu, Kanako; Katsumata, Rie; Watanabe, Sugio; Tanaka, Tadayoshi; Kiuchi, Kan. 2000. Improvement of itohiki-natto manufacturing process employing commercial natto starters. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 333-34. [1 ref]

• ***Summary:*** In order to improve the quality of natto in Japan, changes in the incubation temperature program and of the amount of oxygen consumed within the natto packages were measured as a function of time. Four programs of temperature regulation were devised. In the one considered best (No. 4): The temperature was initially set at 40ºC, then raised to 47ºC between the 12th and 17th hour–at which point the temperature in the package rose as high as 52ºC. After the 20th hour, the temperature was cooled to 4ºC.

Three commercial natto starters (A, B and C) made by three different companies were used. Five large-seeded soybean varieties used to make tofu and four small-seeded varieties used to make natto were studied; all were harvested in 1999.

Natto made by temperature regulation program No. 4 was twice as viscous that made by program No. 1. The natto made by Starter C was especially viscous. Natto made from Suzuyutaka soybeans had the best flavor. Although it is generally said that small-seeded soybean varieties make better natto than large-seeded ones, the latter were found to be as good as the former for making natto in this study. Address: Faculty of Home Economics, Kyoritsu Women's Univ., Hitotsubashi, Chiyoda-ku, Tokyo 101-8433, Tokyo.

10821. Muramatsu, Kanako; Katsumata, Rie; Watanabe, Sugio; Tanaka, Tadayoshi; Kiuchi, Kan. 2000. Natto manufacturing methods employing natto bacilli with high elastase activity and its mutants. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 335-36. [1 ref]

• ***Summary:*** This process begins by forcing bacteria to mutate by irradiating them with ultraviolet (UV) radiation. Elastase is an enzyme which, when obtained from a pig's pancreas, is sold as a medicine. The goal of the mutation was to create and isolate one strain of elastase-producing natto bacilli, plus a second strain that did not require leucine, an essential amino acid (also called α-amino acid).

But natto made from the mutants was not viscous. So a new program of temperature regulation was devised. When the temperature was initially set at 42ºC, then raised to 47ºC after 8 hours, held there for three hours, then reduced to 42ºC after 24 hours [which does not add up!], the natto made from the mutant strains was viscous.

Note: How far are you willing to go to make your natto taste a little better? Address: Faculty of Home Economics, Kyoritsu Women's Univ., Hitotsubashi, Chiyoda-ku, Tokyo 101-8433, Tokyo.

induced by soyprotein sumizyme hydrolysate with bound phospholipids or chitosan. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 207-208. [8 ref]
• ***Summary:*** Soy protein, a vegetable protein, is well known to reduce serum cholesterol, in comparison with casein, an animal protein. This study on rats found that the cholesterol lowering activity of soyprotein peptic hydrolysate with bound phospholipids (SPHP) was stronger than that of soyprotein peptic hydrolysate (SPH) or soy protein alone. Chitosan, a dietary fiber, also lowers both serum cholesterol and body weight gain in rats. Address: 1-3. Dep. of Food Science, Faculty of Agriculture, Gifu Univ., Gifu 501-1193, Japan; 4-7. Tsukuba Research Laboratories, Kyowa Hakko Kogyo Co., Ltd., Ibaraki 305-0841, Japan.

Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 142-143. [7 ref]
Address: Toyama Prefectural Food Research Inst.

10824. Nguyen, van Chuyen; Konagai, C.; Oshite, H. 2000. Antioxidative activity and desmutagenicity of soybeans after heating. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 189-190. [6 ref]
• ***Summary:*** The antioxidative activity and radical scavenging activity of soybeans were increased by heating to 150-190ºC. Aqueous and methanol extracts of heated soybeans showed strong desmutagenic [antimutagenic] activity (43-92%) against heterocyclic amines. These extracts included the isoflavones daidzin, genistin, daidzein, and genistein. Address: Dep. of Food and Nutrition, Japan Women's Univ., Tokyo, Japan.

10825. *Nikkei Shinbun* (*Tokyo*). 2000. Bei ni reitô tôfu kôjô: Genchi meekaa baishu mo suishin. Tendore [Frozen tofu factory in America: Also push to buy local tofu makers. Tendre]. [Jap]
• ***Summary:*** The American Soy & Tofu Co. has been incorporated in Massachusetts by Michio Kushi. They hope to raise $15 million and are now raising venture capital. They plan to purchase 18 local tofu makers. The four prospective partners are: American farmers $2.6 million. East West Foundation (Kushi) $2.0 million. Tendre, a maker of frozen tofu from Wakayama prefecture, Japan $1.0 million. Michio Kushi $1.0 million. The company is planning to build a factory in Macon, Georgia, and to make tofu, margarine, and cheese.

Talk with Christine Akbar, who works with Michio Kushi at his home. 2000. Nov. 20. Macon, Georgia is the center for Japanese cherry trees in America; some 200,000 to 300,000 cherry trees now grow there. Mr. Kato who is head of the International Cherry Park Commission in Japan wants to disseminate Japanese cherry trees all over the world. His dream is to buy several hundred acres of land in Macon, Georgia, and to plant cherry trees in the form of a huge American flag: Red blossoms for the red stripes, white blossoms for the white stripes, and a 40-acre reflecting pond for the field of blue, with sprinklers coming out for the 50 stars. Each tree will have a donor/sponsor, whose name will appear on a plaque on or by the tree. Mr. Kato is from Wakayama, and he established a connection with the Tendre company which makes frozen tofu there. On the part of this land not used for cherry trees, Mr. Kato and Michio Kushi would like to build a factory to make soy products for the company he has started–American Soy and Tofu Co. Mr. Kato discovered Tendre; they could make frozen tofu in the factory. Aveline discovered the Okinawan fermented tofu named *Tofuyo,* which she loves; she would like to learn how to make it at the factory. Fred Sternau, who lives and works in New York state, (phone: 914-763-3662) is an old friend of Michio's, and has a background in the investment banking business with Dean-Witter, is working now to raise the money from venture capitalists in America for the new corporation, and to develop a business plan. Christine thinks that someone else is working to raise money in Japan. Christine thinks that some money has been committed but she does not think that any of it has been "transferred." "We should know more in one month. It's just getting started."

Note: Hiroaki Iwamoto is president of Tendre, Tanabe City, Wakayama prefecture. He holds a patent on his frozen tofu.

• ***Summary:*** In 1996 Japan was hit by a series of intestinal hemorrhagic E. coli O157 cases nationwide. The Japanese are working to adopt HACCP (Hazard Analysis and Critical Control Points) to the soy sauce, miso, and tofu industries. Each food has its unique CCP. Address: Japan Food Industry Centre.

10829. Ono, Tomotada. 2000. The mechanisms of curd formation from soybean milk to make a stable lipid food. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 51-52. [6 ref]
• ***Summary:*** The lipids / fats in tofu are stable and no subject to oxidation. During the curd formation, first protein particles (80 nm = nanometers in size) combine with an oil globule (300 nm) because of the addition of magnesium or calcium ions [in the coagulant]. Then the bound globules aggregate with one another to hold water. The curd is formed as soluble proteins are combined with a decrease in the pH. The oil is packed in triple layers of protein, that is oleosin (oil body protein), protein particles, and soluble proteins.

Figures show: (1) Scanning electron micrograph of the floating fraction of soymilk. (2) Formation of tofu-curd from soymilk (speculation). Address: Dep. of Agro-Bioscience, Faculty of Agriculture, Iwate Univ. Ueda 3-18-8, Morioka, Japan.

Co., Ltd. [xxiv] + 728 + 8 p. See p. 195-198.
• ***Summary:*** Okinawan women now enjoy the longest life expectancy (85.08 years) in Japan, and thus in the world. Moreover, Okinawans have the highest soy product consumption in Japan. Two graphs show that the greater a person's urinary excretion of isoflavonoids, the lower their risk of ischemic heart disease (p. 196) and of breast cancer (p. 197).

Conclusion: The WHO Cardiac study indicates that "increased soybean consumption would reduce not only cardio-vascular disease (CVD) mortality, but also prostate cancer, breast cancer, and all other cancer mortalities." Address: WHO-Cardiac Study Group, WHO Collaborating Center for Research on Primary Prevention of Cardiovascular Disease, Graduate School of Human and Environmental Studies, Kyoto Univ.

• ***Summary:*** The chemicals used in manufacturing plastics and detergents have been found to be estrogenic. Two of these, nonylphenol and bisphenol A are endocrine disrupters and can enhance growth in estrogen receptor-positive MCF-7 human breast cancer cells. Isoflavones (such as genistein, daidzein, and glycitein) inhibited the endocrine disrupter-reduced cell proliferation of MCF-7 human breast cancer cells. In general, isoflavones decrease the effect of endocrine disrupters. Address: 1-2. Fujicco Co.; 3-4. Graduate School of Human and Environmental Studies, Univ. of Kyoto.

10844. Yoshida, Shuji. 2000. The origins of fermented soybeans and their distribution. In: Kyoko Saio, ed. 2000. Proceedings–Third International Soybean Processing and Utilization Conference. Tokyo, Japan: Korin Publishing Co., Ltd. [xxiv] + 728 + 8 p. See p. 697-700. [8 ref]
• ***Summary:*** The origins of two types of fermented soybeans will be discussed: (1) *Jiang* is used in preserving meat. (2) *Dou-chi* is used in brewing.

Jiang existed in the lower Huang-He [Yellow River] area before the Yin dynasty, ca. 1500 BC. Doujiang, jiang made of soybean, seems to have been invented much later, during the Han dynasty, around 300 B.C.

However *dou-chi* was already known in the middle and lower reaches of the Chang Jiang River [Yangtze River, which enters the ocean {East China Sea} near Shanghai, in southern China] before the Han dynasty. *Dou-chi* [fermented black soybeans] spread northward to the northeastern part of China, westward to Nepal, southward to Indonesia, and eastward to Japan.

1. Dou-chi and dou-jiang. Dou-chi is the oldest type of fermented soybean made by fermenting soybeans with species of *Aspergillus* mold. "'Dou-chi with ginger' was found in the ancient Ma Wang Dui Tomb no. 1 which was probably built in BC 186. Thus, dou-chi appeared in the Han Dynasty and was supposedly invented before the Qin dynasty (Bo 1984)."

The idea of culturing a "koji" mold on cooked soybeans was probably derived from the brewing process. Thus, instead of fermenting a cereal grain (such as rice for saké) they attempted to ferment soybeans. But as often happens, the final product was different from what had been expected. The result was a soybean covered with a mycelium of yellowish mold (*dou-huang,* where dou = soybean + huang = yellow). "Dou-chi is a sophisticated form of dou-huang; douchi is soaked in a little water and fermented for more than one month."

"Jiang, on the other hand, is probably derived from meat preservation. In the early days, meat was preserved simply by adding salt. Later, koji mold was employed for preservation and koji was produced. Jiang existed in the northern part of China during the Yin dynasty, about 1500 BC. Soybean jiang (*dou-jiang*), however was a relatively new product. It never existed before about the 3rd century B.C., during the early Han dynasty (Ishige & Raddle 1990)."

Dou-chi and dou-jiang each are connected with brewing. "I am not concerned here with the history of brewing in China but I will briefly introduce the hypothesis on koji mold development. There are two types of koji, the grain type and the cake type." The grain type was first introduced in the Chang Jiang [Yangtze] River area of southern China; from there it migrated to northern China. The cake type of koji, however, was invented in northern China (Yoshida 1993a).

Following this hypothesis, dou-chi was derived from the grain-type of koji, not from the cake type. "Therefore I assume that dou-chi originated in the Chang Jiang [Yangtze] River area of southern China, where the grain type was invented and is still popular. In practice, dou-chi is preferred in southern China." The dou-chi method of culturing mold on cooked soybeans was practiced before dou-jiang was invented. When the molded soybean method was introduced to northeastern China via northern China, it became common

© Copyright Soyinfo Center 2014

to produce dou-chi using the local soybeans produced in that area I assume that northeast China is the second center of dou-chi production; from there it spread to Korea and Japan. In Japan, dou-chi is known as "miso" [sic]. Address: National Museum of Ethnology, Osaka (Kokuritsu Minzokugaku Hakubutsukan), Japan.

10847. Chiang, Cecilia Sun Yun. 2000. Maodou (green vegetable soybeans) in Chinese food culture (Interview). *SoyaScan Notes.* Nov. 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** *Maodou* (characters: hair + beans) are widely used in two types of Chinese cooking: (1) As a seasonal vegetable in the cooking of Jiangsu province (Wade-Giles: Kiangsu; southeastern China), whose major culinary cities are Shanghai (now an independent municipality), Nanjing (Nanking), Wuxi (Wu-hsi), and Changzhou; (2) Chinese Buddhist vegetarian cookery (*su-tsai*). *Maodou* is rarely used in northern Chinese cooking, where the people eat a lot of flours. In Shanghai they eat a lot of beans, including *maodou.* Yet *maodou* is almost never found in the cookery of neighboring Guangdong province or in the famous cookery of its capital, Canton.

Cecilia was born in Wu-hsi near Shanghai, one of 13 children in a family of great wealth. Her father was a high government official. When she was age 4, she moved with her family to Peking, where she was raised in luxury (their famous house had been an old palace) and educated from grammar school to university graduate. Her mother cooked only on special occasions. Among the 14 servants and maids, her family had two chefs; one cooked northern Chinese food and the other cooked Shanghai food. Cecilia learned nothing from these two cooks, since she was not allowed to go into the kitchen! In 1943, when the Japanese marched on Beijing (Peking), her family fled south to Chongqing (Chungking / Ch'ung-ch'ing; capital of "Free China" from 1937-1945); there she was married. It was not until 1945, V-J Day, that she first saw the remains of her parents' house at Wuxi. It had been destroyed by Japanese bombings. She and her husband (plus a cook and a few servants) lived near Shanghai for four years, then in April 1949 they fled to Japan when the Communists arrived, eager to confiscate the property of the wealthy. They lived in Japan for 8 years, until 1957, during the hard, lean years after World War II. Then they came to America. Cecilia learned to cook after she came to America.

In the Shanghai area during the summer months *maodou* are as widely found as edamamé in Japan. They are used in many different dishes. For example, shelled, they are cooked with shrimp, or with shrimp, pickled vegetables, and *pai-yeh* (sliced, pressed tofu sheets). A very large number of Buddhist vegetarian dishes contain *maodou*–such as "Vegetable Delight" which Cecilia used to serve at The Mandarin restaurant. When served in the pods, the pods are first boiled in unsalted water, then sesame oil and soy sauce are sprinkled on the pods, and the *maodou* are served in the pods.

Because they are available fresh for only about two months each year, *maodou* are very expensive. Thus, they are certainly not a poor-man's food. Some people (such as her mother) would dry *maodou* during the summer for use as a vegetable during the snowy winter when vegetables are scarce. The dried *maodou* are washed, soaked, then cooked–often with meat.

Cecilia is aware that edamamé are now starting to become quite popular in the USA. She thinks "the Japanese did something very good. Many Japanese restaurants give you a little edamamé to start with."

Cecilia knows nothing about the history of *maodou,* but she is quite sure these characters have been used in Chinese cooking for at least several hundred years.

Today, lots of edamamé are grown in Taiwan but Cecilia thinks this is not a result of the Japanese occupation of Formosa. Rather, the Japanese used Formosa mainly to grow sugar cane and pineapples. Address: Former owner, The Mandarin restaurant, Ghirardelli Square, San Francisco, California.

10848. *Rafu Shimpo* (*Los Angeles, California*). 2000. House Foods introduces new Chef Tofu. Nov. 6. [Eng]
• ***Summary:*** This new product helps consumers save time but costs a little more. Chef Tofu is firm textured and comes in three flavors–Original, Herb & Garlic, and Chili & Vege. Already sliced into four pieces, it is easy to prepare.

"House Foods America Corporation is based in Japan, where it was founded in 1913 under the name of House Foods Corporation." The largest spice processor in Japan, it is also one of the largest food conglomerates.

"In 1981, the Los Angeles office was established to

© Copyright Soyinfo Center 2014

introduce through importing, Yoshoku–Japanese style western food–to the United States, Canada, and Mexico. In 1983, the Curry House Restaurant chain was opened in Little Tokyo [Los Angeles]. There are now four Curry House Restaurants in Los Angeles County (Beverly Hills, Gardena, Little Tokyo, Torrance), and two in Orange County (Cypress and Irvine.)

"The U.S. Company also started manufacturing tofu in the early 1980s. Shortly after this, House Foods merged with the Hinoichi Tofu Company. Hinoichi is an over 50-year-old firm with long-established ties in the Los Angeles market. Today, House Foods America Corporation not only sells various Japanese style flavored mixes but such traditional Japanese food products, Some of their better-known brands are Hinoichi Tofu, House Foods Organic Tofu and Shao Mi Mi Tofu dessert.

"In 1997, all three divisions were combined to become House Foods America Corporation."

10849. Ito-Peterson, Yoko. 2000. House Foods betting on spiced-up tofu. *Orange County Business Journal* (*Newport Beach, California*) 23(46):1-2. Nov. 13.
• ***Summary:*** The House Foods tofu plant in Garden Grove, California, opened in 1997, replacing an old plant in downtown Los Angeles that began making tofu in 1981. A unit of Japan's House Foods Corp., the Garden Grove plant is believed to be the largest in the USA, making more than 100,000 packages of tofu a day, and is 128,700 square feet–compared to the 120,000 square foot East Coast Nasoya plant owned by rival Vitasoy USA. The California plant employs about 140 workers, mostly Hispanic.

In May House Foods added two new production lines, bringing their total to five, and their capacity to 220,000 packages per day. Yet Toshifumi Nomura, the company's marketing manager, says Americans have "tofu-phobia."

The U.S. tofu market was estimated at $238 million last year by Peter Golbitz of Soyatech Inc. Southern California is the largest U.S. center of soyfoods production according to William Shurtleff of Soyfoods Center (Lafayette, California). A photo shows Kazumi Kuniyasu, the business administration manager of House Foods America.

10850. Ito-Peterson, Yoko. 2000. Protein play: House Foods betting on spiced-up tofu. *Orange County Business Journal* 23(46):1, 73. Nov. 13-19.
• ***Summary:*** House Foods America Corp. is a unit of House Foods Corp. of Japan. Kazumi Kuniyasu, the company's business administration manager, says that his modern tofu plant, located in an industrial corner of Garden Grove, California, is the biggest one in America; it is 128,700 square feet, whereas the next largest plant (owned by Nasoya in Massachusetts) is only 120,000 square feet. His 140 workers, mostly Hispanic, produce more than 100,000 packs of tofu a day from about 15 tons of soybeans. Last year House Foods America sold $17 million worth of tofu and other soy products, up 15% over 1999. In May the company added two new tofu production lines, bringing their total to five and more than doubling the plant's capacity–to 220,000 packages per day.

In 1997, when the Garden Grove plant opened, it replaced an older factory in downtown Los Angeles that had been set up in 1981. The 1997 move enable the company to double production.

Last year the U.S. tofu market was estimated at $238 million by Peter Golbitz of Bar Harbor, Maine–up 15% over 1998. The largest single company is Vitasoy USA, which claims to make about half of all tofu sold in U.S. supermarkets at their two large plants in California (Azumaya) and Massachusetts (Nasoya). The Osaka-based parent company, House Foods, doesn't make tofu in Japan. To protect small tofu shops, a Japanese law prevents big corporations for entering the tofu manufacturing industry. House is Japan's largest spice manufacturer, selling curry powder and snack foods. In Southern California, the company also operates five Curry House restaurants.

A large color photo shows Kazumi Kuniyasu, wearing a sanitary hair net, standing next to two soybean washing machines in his plant. Five small black-and-white photos show: Three shots of the conveyorized packaging line, curding vats and tofu forming boxes, various packaged tofu products.

10851. Associated Press (AP). 2000. Iowa soybean market about to take off. *Sioux City Journal* (*Iowa*). Nov. 21. p. A5.
• ***Summary:*** Des Moines–Iowa Governor Tom Vilsack predicted Monday that sales of organic soybeans to Japan could increase 50% during the next year because of Iowa's labeling efforts and trips to Japan to cement relationships.

10852. Lumpkin, Tom. 2000. Update on work with edamamé (green vegetable soybeans) in the state of Washington (Interview). *SoyaScan Notes.* Nov. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** One of the earliest Chinese-language references Tom has seen to soybeans (though he is not sure they are green vegetable soybeans) is in a poem about boiling immature soybeans with the branches of the plant. The poem is told from the viewpoint of the pods, which lament "Why are my brothers, the branches, boiling us?"

Tom has a videotape made in Japan that contains several early Japanese references to edamamé.

The proceedings of the edamamé conference, to be held on 10-12 Aug. 2001 at Washington State University, will be published before the conference. Tom asks Shurtleff to write a worldwide chronology of green vegetable soybeans and edamamé, which Shurtleff agrees to write; Tom will present it at the conference and publish it.

For the past five years, Tom's program has been

© Copyright Soyinfo Center 2014

developing ten non-shattering varieties of edamamé; they are at the F-6 stage. The key to breeding edamamé for America is making them machine harvestable. One Japanese and one Thai graduate student are helping him on the project. The varieties do not yet have names, only numbers. The main variables are non-shattering, structure of the plant, seed size, and flavor. Tom's program is also running "microsatellite fingerprinting" and "AFLP fingerprinting" on 150 edamamé varieties. Note: AFLP, which stands for "amplified fragment length polymorphism," is the registered trademark of a Dutch company. Most of the varieties are Chinese, with some Japanese and including their own ten. These new techniques, which give genetic fingerprints of each variety, enable them to: (1) Give precise descriptions of varietal differences; (2) See how much diversity exists among popular varieties; (3) Protect the lines and varieties they are developing; and (4) See who has been stealing varieties from whom. They have already constructed a pedigree, which will appear in an article, probably in *Crop Science* and in the conference proceedings. To get a broad range of offspring, a breeder wants to ideally select parents that are quite different.

Americans find the image of green soybean pods very attractive. Tom is well aware that edamamé are not simply any soybeans harvested at the green stage. He likes to say: "What sweet corn is to field corn, edamamé is to soybeans." They must also be processed in the same way to keep the sugars from changing into starches.

Tom has heard the word *azunda* used to refer to a soup containing edamamé; it is also used in some sweets, and his group has made a nice guacamole containing edamamé.

Tom believes that China will become the world's major grower of edamamé in the near future. Tom is working with Small Planet Foods (formerly Cascadian Farms) in the state of Washington–doing varietal development. Small Planet sells edamamé both in the pods and shelled. Tom also expects that precooked, flavored edamamé (in wasabi, teriyaki, etc. flavors) will become a big item in the near future.

Tom has been department chair at WSU for five years. His administrative duties (with 40 faculty and 70 staff people) make it harder for him to find time to do his own research and write. Just before he accepted this position, he had been accepted to go to the Needham Research Institute (which includes the East Asian History of Science Library) at Cambridge University in England. He would like to do that when he steps down from his current position, and maybe do a book on edamamé at that time. Address: Head, East Asian Crop Development Program, Dep. of Crops and Soil Sciences, Washington State Univ., Pullman, WA 99164-6420. Phone: 509-335-2726.

10853. *Canadian Soybean Bulletin* (*OSG, Chatham, Ontario, Canada*). 2000. Canadian soybean exports. 14(2):3. Nov.
• ***Summary:*** A large table shows statistics in tonnes (metric tons) of soybeans exported to various countries, and regions, each year from 1996/97 to 1999/2000. The countries are: In Asia–China, Hong Kong, Indonesia, Japan, Malaysia, Philippines, Singapore, South Korea, and Thailand. In Western Europe–Austria, Belgium, Denmark, France, Germany, Italy, Netherlands, Norway, Portugal, and Spain. By continent–Africa, Central America, Eastern Europe, Middle East, Oceania, South America, and United States.

In 1999/2000 the countries to which the largest amount of Canadian soybean exports went were (in tonnes): Japan 179,708, United States 121,860, Malaysia 99,919, Indonesia 64,426, Denmark 47,444, Germany 43,410, and Netherlands 36,392.

10854. *Canadian Soybean Bulletin* (*OSG, Chatham, Ontario, Canada*). 2000. Incoming Japan soybean mission. 14(2):1. Nov.
• ***Summary:*** Japan imports 5 million tonnes (metric tons) or 184 million bushels soybeans each year. Of that, about 1 million tonnes (20%, or 37 million bushels) are used to make soyfoods such as tofu, miso, natto, soy sauce, etc. Of the 1 million tons, 500,000 tonnes (50%) are for tofu, 160,000 tonnes (16%) are for miso, and 130,000 tonnes for natto.

Exports of Canadian soybeans have been increasing rapidly, from 36,000 tonnes in 1995, to 75,000 tonnes in 1998, to 175,000 tonnes in 2000.

In Sept. 2000, the Canadian Soybean Export Association and the Ontario Soybean Growers hosted ten Japanese from the soyfoods industry and showed them the Canadian soybean industry. These Japanese were most appreciative "of our efforts to segregate GMO and non-GMO varieties of soybeans using our Identity-Preserved, or IP program."

10855. **Product Name:** UniCell soybeans.
Manufacturer's Name: Japan Cellfoods, Co., Ltd.
Manufacturer's Address: 5-45-1001, Mukogawa-cho, Takarazuka City, Hyogo Pref., Japan.
Date of Introduction: 2000 November.
Ingredients: Whole soybeans.
How Stored: Shelf stable.
New Product–Documentation: Portfolio (with 5 inserts) sent by Japan Cellfoods, received 21 July 2001. The inserts are: (1) Background information: Japan Cellfoods, Co., Ltd. Address, phone and fax. "Japan Cellfoods Co., Ltd., was formed in 1991 by Mr. Toru Akazawa, who is the company's president. After establishing the company, Mr. Akazawa spent most of the 1990s refining his proprietary soy processing technology. He applied for an international patent for the technology in August of 1999, and in February 2001 the patent was made public. Last year, Japan Cellfoods established UniCell Co., Ltd., a joint-venture with KSK Co., Ltd., of Osaka. UniCell began commercial distribution of the soy product in November of last year. At present, the product is mainly used as an ingredient in bread produced by

© Copyright Soyinfo Center 2014

such companies as Dai-Ichi Seipan, Saint-Germain Co., Ltd., Ryoyu Seipan, and Hankyu Department Store, as well as KSK Co. UniCell soybeans are currently being produced at two plants, one in Okayama and one in Hokkaido. In Japan, the company is now developing new uses for its product in nutritional beverages, curry, hamburgers, and other foods.

"UniCell soybeans: Using its proprietary technology, Japan Cellfoods produces UniCell soybeans, which are soybeans that have been broken down into individual soybean cells. The process involves an enzymatic treatment to produce a pectinase that dissolves the substance binding the cells together. Since the entire soybean is used in this process, all of the nutrients are retained. Moreover, because most of the individual cell membranes are not ruptured in this process, UniCell soybeans have almost none of the 'beany' taste of regular soybeans that is produced when an enzyme [lipoxygenase] in the soybeans oxidizes the bean's unsaturated fat. Keeping the individual cell membranes intact prevents this oxidation process and thereby minimizes the distinctive taste. As a result, UniCell soybeans can be added to a variety of food products–including bread, sauces, soups, hamburgers, and beverages-without compromising their taste."

(2) Media Advisory: Contact: Mr. Michael Solomon at Michael Solomon Associates Tel: (212) 764-4760 E-mail: solomon@msapr.com

Japan Cellfoods To Announce Breakthrough in Soy Processing–New Product Offers Soy's Nutritional Benefits Plus Palatability.

Time: Wednesday, July 11th–11:45 a.m. to 1:15 p.m.

Place: Hilton Hotel, Gibson Suite, 1335 Avenue of the Americas at 53rd Street. Gives a half-page summary of the new food and the innovative processing technology.

(3) Japan CellFoods press conference. A program featuring 11 speakers, sample tasting, Q&A session, and presentation and sampling of dishes that utilize UniCell soybeans by Ms. Misao Shirai, Chef/Food Expert.

(4) Participant profiles: Brief resumés of 5 Japanese and 3 Americans who participated in the news conference. (5) News release: Japan Cellfoods Announces Breakthrough in Soy Processing–New Product Offers Soy's Nutritional Benefits Plus Palatability. A 1-page summary of the news conference. "Journalists and representatives of the food processing industry attending today's press conference had an opportunity to confirm the palatability and versatility of UniCell soy powder by sampling it in a variety of foods and beverages. The samples included nutritionally enhanced bread developed in cooperation with the American Institute of Baking. Also featured were representatives of Henningsen Foods of Rye Brook, New York, which produced the spray-dried UniCell soy used in preparing food samples, and researchers from Iowa State University and Indiana Crop Improvement Association, who are working on food applications for the new soy product and allergy testing, respectively. Dr. Yukio Yamori, Emeritus Professor of Kyoto University, who has used the Japan Cellfoods soy product in his World Health Organization-supported research, spoke on the health benefits of a soy-rich diet.

"In addition to supplying the consumer and institutional markets (including school lunch programs) in the U.S., Japan Cellfoods intends to cooperate with U.S. firms to produce UniCell soy in this country for export to Japan and elsewhere."

(6) Translation of remarks by Mr. Toru Akazawa, President, Japan Cellfoods Co., Ltd., July 11, 2001. Two pages, typewritten, single spaced.

Note: This is a new product. It does not fit easily into either of our categories: Product Category, or Soyfood Type. We will watch with interest the future of this product.

• ***Summary:*** This is the most important book on soyfoods in China ever written, and it is especially good on their origins and early history in China. It is also one of the best books seen on food in Chinese culture and history.

The section titled "Soybean processing and fermentation" (p. 292-378) comprises 14.3% of the book's text, and has the following contents: Introduction. Soybean sprouts. Soybean curd and related products: The origin of bean curd, transmission of *tou fu* to Japan, products associated with *tou fu* (soymilk {*tou fu chiang*}, tofu curds

© Copyright Soyinfo Center 2014

{*tou fu hua* or *tou fu nao*}, pressed tofu sheets {*ch'ien chang* or *pai yeh*}, yuba {*tou fu i* or *tou fu p'i*}, deep-fried tofu {*yu tou fu* or *tou fu p'ao*}, pressed tofu {*tou fu kan*}, five-spice pressed tofu {*wu hsiang tou fu kan*}, plain dried tofu [pressed tofu] {*pai tou fu gan*}, smoked tofu {*hsün tou fu*}, dried tofu soaked in brine and fermented {*ch'ou tou fu kan*}, frozen tofu {*tung tou fu*}), making fermented tofu {*fu ju*}, comparison of *tou fu* and cheese, addendum. Fermented soybeans, soy paste, and soy sauce: *Ferments* for food processing, fermented soybeans–*shih,* fermented soy paste–*chiang,* fermented soy sauce–*chiang yu,* soy fermentations in China and Japan.

There are also long sections on the history koji (*qu*) and of red rice koji (*hong qu*) in China (p. 192-203).

Note: This is the earliest English-language document seen (April 2013) that uses the term "hsün tou fu" [pinyin: *xun doufu*] to refer to smoked tofu. Soy is also discussed in other parts of the book. Address: Alexandria, Virginia.

10858. Huang, H.T. (Hsing-Tsung). 2000. Soybean curd and related products: Transmission of *tou fu* to Japan (Document part). In: H.T. Huang. 2000. Science and Civilisation in China. Vol. 6, Biology and Biological Technology. Part V: Fermentations and Food Science. Joseph Needham series. Cambridge, England: Cambridge University Press. xxviii + 741 p. See p. 317-19. [10 ref]

• ***Summary:*** There is general agreement that tofu originated in China, but considerable uncertainty as to when and how it arrived in Japan. In recent years, the subject has attracted much interest among food historians in China; they hoped that an answer to these questions might help answer questions about the origin of tofu in China.

Two theories about the transmission of tofu to Japan have been proposed. The first follows the popular Japanese tradition which says that tofu was brought from China by a delegation of Buddhist monks headed by the master Kanshin (Jian Zhen; W.-G. Chien Chên) in A.D. 754. The second holds that tofu came to Japan with the Zen master Ingen (Yin Yuan; W.-G. Yin Yüan) in A.D. 1654. Both theories are probably unfounded.

When Ingen arrived in Japan, tofu was already a common food, and he was surprised to see varieties that were different from those he knew from China. After he established the well-known Mampuku-ji temple south of Kyoto, he taught the monks and local tofu masters how to make Chinese-style pressed tofu. According to *The Book of Tofu,* by Shurtleff and Aoyagi, "although this very firm variety became quite popular in Japan in the next century, it is now made by only one tofu shop in Japan and is featured in Zen Temple Cuisine only in restaurants near Mampuku-ji" (p. 115). Address: Alexandria, Virginia.

10863. Bakken, Henry H. 2000. Encyclopedia Americana: Futures trading. Danbury, Connecticut: Grolier Inc. 30 volumes. See Vol. 12, p. 208. [3 ref]

• ***Summary:*** Contents: Introduction. Function. Development of trading. Ever since humans discovered the benefits of trading, market procedures have gradually evolved. This development can be divided into at least five stages: Gift giving, barter, cash market, contracts "to arrive" or "to deliver," and futures trading. A futures trade in soybeans, for example, is an agreement between two parties to transfer legal rights to the beans for delivery and acceptance in the future. It is contracts that are bought and sold; the soybeans are never brought to the trading floor. A futures market serves different purposes from those of a cash market. One function is to shift risks through hedging.

The limitations of cash markets became apparent in the 1800s at major trading centers such as Tokyo, Liverpool, and Chicago (Illinois). In Chicago, for example, port facilities for storage were limited, so in 1851 grain dealers there began making agreements that were soon known as "to arrive" and "to deliver" contracts. Grain would be delivered in the future for cash, on dates when ships would be available for transport on the Great Lakes.

This system was better than earlier trading methods, so grain dealers experimented further with time contracts. In 1867 the earliest known instance of futures trading in the USA took place at the Chicago Board of Trade. However futures trading began in Japan in 1730 (rice) and in England in 1826 (nutmegs). Address: Univ. of Wisconsin.

10864. Corum, Ann Kondo. 2000. Ethnic foods of Hawai'i. Revised ed. Honolulu, Hawai'i: The Bess Press. vi + 234 p. See p. 53-54, 74, 88. Illust. Recipe index by category. Recipe index by ethnic group. 23 cm. 1st ed. 1984. [73 ref]
• ***Summary:*** The semi-Japanese recipe for Microwave azuki mochi (p. 74) concludes: "Roll in katakuriko (potato starch) or kinako (soybean flour)."

The Okinawan recipe for "Nantu: Steamed Okinawan mochi" (p. 88) calls for "kinako (soybean flour) as an ingredient.

The ethnic groups whose recipes are represented in this collection are (listed alphabetically): Chinese, Filipino, Hawaiian, Japanese, Korean, Okinawan, Portuguese, Puerto Rican, Samoan, Thai, and Vietnamese.

The section titled "Soybean and bean products" (p. 53-54) discusses miso, tofu, and shoyu, sukiyaki, aburage, okara, miso soup, teriyaki, and kuromame (black soybeans).

About the author: On the rear cover, with a portrait photo, we read: "Ann Condo Corum was born in Honolulu and graduated from Punahou School. She has a degree in English from California State University at Long Beach and a Master of Science degree from the University of Southern California." Address: Author.

• ***Summary:*** An excellent biography of Philipp Franz von Siebold (1796-1866), a German physician and naturalist who was one of the first Europeans to live in Japan. In 1823 Siebold wrote a letter to the Governor of Batavia requesting professional help at Deshima. In 1825 two men were finally dispatched: (1) Dr. Heinrich Bürger (1804-1858), a scholar, who worked as a pharmacist in Batavia, and who was to assist with scientific research, chemistry and mineralogy; and (2) Carel Hubert von Villeneuve, an auditor and artist.

On 15 Feb. 1826, Siebold departed from Deshima, accompanying the court journey to Edo (today's Tokyo) of *Opperhoofd* Johan Willem de Sturler; Siebold was joined by Dr. Bürger in the role of secretary, although Bürger's true purpose was to assist Siebold in his scientific research. These were the only three Dutchmen allowed to make the long journey. Siebold and Bürger were well prepared for the trip; they had gathered all sorts of equipment to take with them, including barometers, thermometers, hygrometers, sextants, chronometers, microscopes, crockery, furniture, silver, fine glassware, and even a piano. Some of these items were intended as gifts. En route, the inquisitive Siebold observed and wrote about practically everything. They arrived in Edo on 10 April 1826, about 2 months after leaving Nagasaki, a trip of about 1,400 km. On 1 May 1826 the three Dutchmen had an audience with the shogun. The delegation finally left Edo on 18 May 1826 and arrived at Deshima on July 7. Note: It was almost certainly on this trip that Siebold and Bürger observed soybeans and recorded their observations in the trip's log.

A 3-page chronology of Siebold (p. 100-02) includes: 1796 Feb. 17. Philipp Franz von Siebold born in Würzburg [in today's Germany]. 1815–Starts study of medicine at the University of Würzburg; subjects include chemistry, botany, and physics. 1820–Completes his studies in medicine, surgery, and anatomy, obtains his doctorate, and establishes himself as a physician in Heidingsfeld. 1822 June 21–Appointed Surgeon-Major in the Dutch East-Indies Army. 1823 Feb. 13–Arrives in Batavia. On April 18 he is appointed to the post of physician at the trading post on Deshima, near Nagasaki, Japan. He also receives instructions to conduct research into Japanese natural history, laws, and politics.

1823 Aug. 12. Arrives on Deshima and starts teaching almost immediately. That same year he "married" Kusumoto Sonogi, also known as Otaki (1807-1865); she is 11-12 years younger than he. 1824. Starts a botanical garden on Deshima at the request of the government in Batavia. Opens his school in Narutaki, just outside Nagasaki. 1825. Dr. Heinrich Bürger arrives from Batavia to help Siebold with his geological

© Copyright Soyinfo Center 2014

research, accompanied by C.H. Villeneuve, the illustrator.

1826 Feb. 15 to July 7. He accompanies *Opperhoofd* De Sturler on the court journey to Edo. Bürger, Keiga and several of his Japanese students join the delegation. 1827. The government in Batavia requests his return there, with the possibility that he may have to return to Holland. Also in 1827 Von Siebold's daughter, Oine (1827-1903) is born.

1828 Sept. 18. A severe storm causes the ship, with 89 crates containing Siebold's collection, to run aground on the coast at Nagasaki. The discovery of forbidden objects leads to the detainment of Siebold, Takahashi, and many others. Siebold is placed under house arrest.

1829 Oct. 22. After being subjected to lengthy cross-examination, Siebold is banished from Japan. On Dec. 30 he leaves Japan.

1830 Jan. 18. Arrives in Batavia, then travels to Holland where he arrives on July 7. In Antwerp he meets Dr. Hoffmann, who is later to become the first professor at Leiden University.

Note: 1830. Siebold's first publication on Japanese plants appears (largely in Latin, but with many Japanese characters) in *Verhandelingen van het Bataviaasch Genootschap van Kunsten en Wetenschappen* 12:1-74. See p. 54-57, plus first table at end. He mentions two species of soybeans: *Sooja Japonica,* the cultivated soybean, and *Sooja nomame,* the wild soybean; he says he has seen a living plant specimen of the latter. Soybeans are used to make shoyu, miso, and tofu. A note at the end of table I states that he drafted it at Deshima in November 1827.

1831 April 20. King Willem I agrees to buy Siebold's ethnographic collection and to pay an advance of 12,000 guilders. 1832. Hires a house at 19 Rapenburg in Leiden, Netherlands, where he organises his collection and opens it to the public. He maintains contact with Bürger, who still lives on Deshima. Travels to Germany in the autumn. 1833. Returns to The Netherlands in the summer. Presents the first copy of his opus *Nippon* to the Society of Dutch Letters on 26 Nov.

1835. Travels in Germany and Austria. Meets Zuccarini and others. 1836 Aug. 22. Buys the house at 19 Rapenburg. 1839. From now on he spends winters in Germany, where he meets his future wife, Helene von Gagern.

1840. Buys a piece of land at Leiderdorp, where he builds the villa, 'Nippon' and starts a nursery. 1842. Establishes the plant and seed company, Siebold & Co. with Blume and Rodbard. 1845 July 10. He marries the Lady Helene von Gagern (1820-1877) in Berlin; she is 24 years younger than he. Soon four children are born. 1859. Returns to Japan. Arrives in Nagasaki on Aug. 4. 1861 Oct. He is banished from Edo, and Japan itself. 1866 Oct. 18. Von Siebold dies in Munich, Germany; he is buried in the Alten Südlichen graveyard on the Thalkirchner Strasse.

10870. Krasno, Rena. 2000. Floating lanterns and golden shrines: celebrating Japanese festivals. Berkeley, California: Pacific View Press. 49 p. Illust. (color, by Toru Sugita). Map. Index. 29 cm.

• ***Summary:*** Describes a year of special celebrations in Japan, with historical and cultural information, including recipes, crafts, and legends.

One of the celebrations is "Setsubun: Bean-throwing festival" (p. 9). The Chinese calendar was adopted by Japan in about 500 A.D. The date of Setsubun (Feb. 3 or 4) is determine by that old lunar calendar, which has 4 seasons and 24 divisions. "Setsubun" means the end of a season, as it passes on to the next one. The most celebrated of the four setsubuns is the one at the end of winter, which marks the end of one year and the beginning of a new year. This is the time for bean-throwing (*mamemaki*).

In the house people shout *Oni wa soto!* (Devils out!). Handfuls of roasted soybeans (*mame*) fly out the front door.

Then the people go outside the house and shout *Fuku wa uchi!* ("Good luck into the house"). This time more soybeans are thrown through the door into the house.

Mamemaki is such fun. Kids are running around with excitement. Some are making scary faces as they pretend to be evil goblins. Other are wearing devil (*oni*) masks that came with the package of soybeans. They scream out loud as other kids chase them and pelt them with roasted soybeans.

The next day will be Risshun, the first day of spring. Do you want to be lucky? Eat one bean for each year of your life, plus one more for the coming year.

What smells so bad? The family has grilled sardines and hung their heads outside the front door to keep devils away– by using the stinking smell.

Tomorrow, on risshun, will offer a chance to see famous athletes, movie stars and local heroes who visit Buddhist temples and Shinto shrines, where they will fling handfuls of roasted soybeans to the crowd waiting below and shouting "Good luck! Good luck."

Hundreds of eager hands are stretched out as they try to catch at least one bean–a lucky charm. "I got two! I got two!" a little girl shouts with excitement.

Note: A Japanese devil has a body shaped like a person. It has red skin, two horns, curly hair, a big mouth with two fangs among its upper teeth, angry-looking eyes and long black eyebrows.

10871. Kulp, Karel; Ponte, Joseph G., Jr. eds. 2000. Handbook of cereal science and technology. 2nd ed., revised and expanded. New York, NY: Marcel Dekker. ix + 790 p. Illust. Index. 29 cm. Series: Food Science and Technology, No. 99.

• ***Summary:*** Chapter 26, "Fermentation and microbiological processes in cereal foods," by Pierre Gélinas and Carole McKinnon (of Food Research and Development Centre, Agriculture and Agri-Food Canada, St. Hyacinthe, Quebec, Canada) (39 refs) (p. 741-54) contains a long table (p. 742-

© Copyright Soyinfo Center 2014

46) titled "List of foods prepared from fermented cereals." The four columns are: (1) Food name (synonym or related food). (2) Food type (characteristics). (3) Area (country or continent). (4) Main microorganisms.

Under "Soybeans" the following foods are listed: Chee-fan. Chinese yeast. Hama-natto. Kenima. Ketjap. Meitauza. Meju. Miso (chiang, doenjang, kochujang, tauco). Natto. Soy sauce (kanjang, kecap, kicap, shoyu, taosi [sic]). Sufu (tahuri, taokoan tao-hu-yi). Tairu (taire–fermented soybean milk, like yogurt, from Malaysia). Taotjo. Tempe (tempeh).

"Chee-fan" is described as "Curd-like" [fermented tofu] from China. Main microorganisms: *Mucor* spp., *Aspergillus glaucus.*

Note 1. Taokoan (listed under Sufu, above) is not a fermented food. It is the Filipino equivalent of Chinese *doufu-gan* or "pressed tofu." Filipino fermented tofu is *tahuri* (also spelled *tahuli*).

Table 2, "List of representative microorganisms associated with fermented cereal foods" (p. 74-48) contains two columns: (1) Type of microorganism (and within type, genus and species, listed alphabetically by genus). (2) Food produced.

Under "Bacteria" are: *Bacillus natto*–Hama-natto [sic], natto. *Lactobacillus delbrueckii*–Miso, soy sauce. *Pediococcus* spp.–Hamanatto. *Pediococcus halophilus*–Soy sauce. *Streptococcus* spp.–Hama-natto.

Under "Bacteria" are: *Actinomucor elegans*–Meitauza, sufu. *Aspergillus glaucus*–Chee-fan. *Aspergillus oryzae*–Hama-natto, ketjap, meju, miso, saké, soy sauce. *Monascus purpureus*–Anka (ang-kak, beni-koji, red rice), hong-ru (lao-hong). *Mucor* spp.–Chee-fan, ruhi, sufu. *Mucor hiemalis*–Sufu. *Rhizopus oligosporus*–Tempe.

Under "Yeasts" are: *Candida* spp.–Soy sauce. *Zygosaccharomyces rouxii*–Miso, soy sauce.

The section on "Major commercial fermentation processes" includes (p. 752-53) soy sauce (from wheat and soybeans) and miso (from rice and soybeans).

Note 2. Koji, the basis of soy sauce, miso, and saké fermentations, is not mentioned in either of the first two tables. However it is mentioned by name on p. 753. Address: 1. American Inst. of Baking; 2. Prof. Emeritus, Kansas State Univ. Both: Manhattan, Kansas.

10872. Kurlovich, B.S.; Rep'ev, S.I.; Petrova, M.V.; Buravtseva, T.V.; Kartuzova, L.T.; Voluzneva, T.A. 2000. The significance of Vavilov's scientific expeditions and ideas for development and use of legume genetic resources. *Plant Genetic Resources Newsletter* No. 124. p. 23-32. [78 ref. Eng; fre; spa]

• ***Summary:*** This article is a summary of Vavilov's principal expeditions and their significance for scientific research and practice. "Nikolai I. Vavilov (1887-1943) is recognized as the foremost plant geographer, botanist, and geneticist of contemporary times." He "was the first to recognize the necessity for intensive plant collecting and preservation." He was very interested in the sites of ancient agricultural civilizations and of mountainous regions. In 1929 he organized an expedition to China, Japan, and Korea. After these expeditions, wild and cultivated soybean species were added to his collection. However the principal legumes he collected were mung beans, chickpeas, lentils, peas, and lupins.

His main contributions to the theory of plant introduction were: Centers of origin and diversity, law of homologous series, differential systematic- geographical methods, and geographical and ecological differentiation. The latter concept has enabled scientists from VIR (N.I. Vavilov Inst. of Plant Industry–St. Petersburg, Russia) to develop interspecific classifications for almost all leguminous crops, including soya bean (Korsakov 1971; Teplyakova 1997). Korsakov has also clarified the centers of origin of various soya bean species.

Presently the VIR germplasm collection has 43,000 accessions belonging to 15 genera and 160 species of the Fabaceae including soya beans.

A photo shows: (1) N.I. Vavilov and his wife, E.I. Barulina, in 1926, before the expedition to the Mediterranean. Address: N.I. Vavilov Inst. of Plant Industry (VIR), B. Morskaya str. 44, St. Petersburg 190000, Russia.

10873. Michio and Aveline Kushi macrobiotics collection (Archival collection and finding aid). 2000. Washington, DC: Smithsonian Institution, Archives Center. 48 boxes.

• ***Summary:*** This is collection AC 619 consisting of 48 boxes (28 cubic feet). The finding aid to the collection is 12 pages. Kathy Keen did the processing. Most of the materials document the 1970s and 1980s. There are five series in the collection: (1) Publications of the East West Foundation and Kushi Institute (the largest series): In boxes 1-7 are issues of *East West Journal* (EWJ) from April/May 1977 through Dec. 1989. In box 9 are volumes 1(1971) and 2(1972) of EWJ. In boxes 10-12 are volumes 2(1972) through 6(1976) of EWJ. In boxes 13-26 are various volumes and issues of macrobiotic periodicals including *Order of the Universe* (from Vol. 1, 1967), Michio Kushi Seminar Reports (from Nov. 1974), *Macrobiotic Monthly* (from July 1965), *Yin Yang* (from Sept. 1962), *Macrobiotic News* (from May 1960), *One Peaceful World* (from No. 27), *The Macrobiotic* (from Vol. 9) *Macrobiotics Today* (from 1984), *Musubi* newsletter (1971), *Macromuse* (from 1982). In box 29 are Erewhon product catalogs (13 catalogs from 8 Dec. 1972 to summer 1977; other catalogs include 19 Feb. 1973, 6 April 1973, 29 May 1973, 20 Aug. 1973, Nov. 1973, June 1974, spring 1975, summer 1975, Feb. 1976, and spring 1977).

(2) Audio tapes (box 40). (3) Video cassettes of lectures by Michio Kushi on macrobiotic subjects from 1981 to 1991 (boxes 34-40). (4) Books on macrobiotic subjects (99 in English and 8 in foreign languages) (boxes 30-33). (5)

© Copyright Soyinfo Center 2014

Photographs (box 41).

Contents of the 12-page finding aid: History of macrobiotics and Michio and Aveline Kushi. Provenance (the collection was donated in Aug. 1997, with additional materials in May 1999). Scope and content. Related materials. Container list.

There is also a 2-page cataloging record for the collection. Address: Washington, DC. Phone: 202-357-3270.

10874. Miso Kenkozukuri Iinkai. 2000. What's miso. Tokyo: Miso Health Building Committee. 6 panels. 1 folded sheet. Illust. (color). 21 x 10 cm. [Eng]*
Address: Japan.

10875. Shimbo, Hiroko. 2000. The Japanese kitchen: 250 recipes in a traditional spirit. Boston, Massachusetts: Harvard Common Press. xiii + 512 p. Foreword by Ming Tsai. Illust. (by Rodica Prato). Index. 23 cm.
• ***Summary:*** An excellent book with exquisite illustrations. The index contains 46 entries for miso, 20 for tofu, 12 for shoyu, 10 for teriyaki, 7 for edamame, 6 for natto (fermented soybeans), 6 for soybeans, 5 for koji ("a fermentation starter"), 3 for koyadofu (freeze-dried tofu), 2 for soy milk, soy sauce dressing, soybean lover's soybean rice, soybean miso, soybean pulp, 1 each for kinu dofu, moyashi (incl. soybean sprouts; "Until recently, moyashi used for cooking in Japan were predominantly soybean sprouts," p. 42), nama-age, nama-miso, nama-shoyu, okara (soybean pulp), saikyo miso, and tamari.

In the section on *Daizu* "(Dried soybeans)" (p. 96-97) both roasted soybean flour and *kinako* are mentioned. Dried green soybeans, are toasted then ground to a flour (*kinako*) which "is mixed with sugar and used to coat moist or sticky Japanese sweets." During the summertime, edamame (fresh green soybeans) are boiled and served in the pods.

The section on "Koyadofu" recounts the story of its origin: "The dried form of tofu, koyadofu, was invented by accident around the twelfth century, when, it is said, a priest at Mt. Koya Temple left freshly made tofu as an offering on the altar one snowy night. The next morning the tofu was frozen, so he threw it away in the back garden." After several sunny days of melting and evaporation, the tofu was found completely dried. It was found that this dried form can be kept for a long time.

The section on *Tofu seihin*–"Cooked tofu products" (p. 139-41) includes *Abura-age*–"Fried thin tofu." "One type of *abura-age,* called *sushi-age,* is sold specially for the preparation of *inarizushi,* a small barrel-shaped brown sushi, *Sushi-age* comes slit to make a pocket into which sushi rice can be stuffed."

Note: This is the earliest English-language document seen (April 2013) that uses the term *Sushi-age* to refer deep-fried tofu pouches used to make inari-zushi.

Atsuage–"Fried tofu." *Ganmodoki*–"Fried tofu dumplings." *Yakidofu*–"Lightly broiled tofu." *Yuba*–"Soy milk sheet."

The latter section states nicely: "Because freshly collected yuba is soft and fragile, many sheets may be piled together and rolled into a 1-inch-thick stick. The stick is chilled, cut into bite-sized pieces, and eaten with a little shoyu (soy sauce) and grated wasabi. Fresh yuba has a wonderful creamy texture and a sweet, nutty taste."

"Because fresh yuba is perishable, most yuba found in stores is in the form of a dried sheet." It must be reconstituted in water, but after it has regained its flexibility it makes an excellent wrapper for other foods in fried or simmered dishes.

Shimbo-Beitchman is a knowledgeable and talented Japanese cooking teacher who ran a cooking school in Tokyo for eight years and in London for two; she now teaches in New York City. Address: Teacher of Japanese cooking, Hiroko's Kitchen, London, England. Phone: Fax: 44-171-289-0855.

V: Primary sources by period.

In the chapter titled "Agriculture, food and the environment," section 35.2.2 on "Pre-Qin foodstuffs and cooking" (the Qin dynasty, 221-206 B.C., came just before the Han) states that the staple dishes, cooked mainly by boiling or steaming, were typically "accompanied by a savory paste (*jiang, miso* in Japanese) made from hydrolyzed (fermented) meat, fish, crustaceans, or, most important of all, soybeans" (Footnote 8). "The soybean is indigenous to northeast China. Its cultivation began in the Zhou period. It was a major source of protein, especially for peasants and laborers. Starting in the Yangzi valley, it was brined and hydrolyzed into the characteristic Chinese flavoring, soy sauce (*jiangyou*) (9). By the Han, a new process had been discovered; if the production was interrupted half way and the beans dried, they became blackened and delicious. Along with savory pastes (*jiang*) and pickles (*zu*), these fermented soybeans (*chi*) were immensely popular (10)."

Footnote 8: See *Zhongguo shiqian yinshishi* (A history of Chinese prehistoric food and drink), Wang Renxiang, ed. in chief, Qingdao, 1997.

Footnote 9 (p. 638): "The origin of 'soya' in European and other languages is from either *xiyao* [fermented black soybean sauce] or *shôyu* (the Cantonese and Japanese for *jiangyou* [soy sauce] respectively). The early generic word was *shu* (*Glycine max*), later *dou,* and later still *dadou* to distinguish it from post-Han imported pulses."

Footnote 10: "*Chi* used to be pronounced *shi.* Other names for *chi* were *douchi, daku,* and *nadou* (*nattô* in Japanese)."

Section 35.2.3 on "New foodstuffs and cooking" covers the period from the beginning of the Han dynasty in 202 B.C. Noodles (*bing*) were introduced. Soybeans (in the forms of jiang and fermented black soybeans {*chi*}) remained an important source of protein. Alfalfa (*musu* or *mushu*), peas (*hudou,* modern *wandou*), and sesame (*huma,* modern *zhima* or *mazi*) are said to have been introduced by Zhang Qian, the emissary from the Former / Western Han dynasty. By the Tang "bitter fermented blackened soy beans" (*huchi*) had been introduced; *hu* means "barbarian." Tofu (*doufu*) is first mentioned in the early Song dynasty. It was imported into Japan and first appeared there in a document dated 1183. "It was used as a substitute for meat and fish in Buddhist vegetarian cooking." New World crops which made their way into China from the 16th century include peanuts (*fandou,* modern *huasheng*), chili, corn, sweet potatoes, and tomato (p. 643).

Note: The author was educated in England. Address: Head of Delegation and Ambassador to China for the European Commission.

10878. Yûmeiten no ryôrinin go oshieru miso o tanoshimu ryôri hachijippin [Chefs from famous restaurants teach 80 recipes for enjoying miso]. 2000. Tokyo: Seibido Shuppan. 129 p. 29 cm. Series: Seibido Mook. [Jap]*
Address: Japan.

10879. G.T.B. Group of Japan, Inc. 2001. Questionnaire [concerning edamame]. Denver, Colorado. 6 p. Jan. 31. Unpublished typescript.
• ***Summary:*** This research was conducted over a 2 month period from 1 Dec. 1999 to 31 Jan. 2000. The questionnaire was administered by an in-store demonstrator. The GTB is the edamame vender for Whole Foods, Wild Oats, and King Sooper. The questionnaire consists of 11 questions, with about 4-5 choices after each question. The number of respondents to each question varies from 59 to 132.

1. How long have you known about Edamame? More than 1 year: 49%. First time: 22%.

2. How often do you purchase Edamame? 1-2 times per month: 44%. Once every 2 weeks: 22%.

3. How often do you eat soy products? (Tofu, Dried soybeans, Soymilk etc.). 1-2 times per week: 51%. 2-3 times per week: 22%. 1-2 times per month: 18%. 2-3 times per month: 9%.

4. Reasons for purchasing our Edamame. Good Taste: 37%. Great health benefit: 33%.

5. Price. Reasonable: 59%. Expensive: 38%.

6. How do you like the flavor of our Edamame? Just Right: 88%. Do not need any salt at all: 7%. Not Enough Salt: 4%. Too Salty: 1%.

7. How do you eat Edamame? By Itself: 81%. Put them into salad: 13%. Put them into stir fry: 5%.

8. How do you feel about the person doing the demonstration? Very friendly: 59%. Provides great information: 23%. Answers customers' questions clearly: 17%.

9. How did you find out about Edamame? By shopping grocery: 53%. At restaurant: 26%.

10. What are other food products you would prefer to eat as snack or quick-preparation meal? Sushi: 37%. Miso soup: 29%. Noodle soup: 28%.

11. If you have any other comments or suggestions, please feel free to give us anything! Address: Denver, Colorado.

Address: Japan.

10882. *Mainichi Daily News* (*Japan*). 2001. Poor seaweed crop [nori in Kyushu, Japan]: Editorial. Feb. 5.
• ***Summary:*** About 40% of all the nori (seaweed) produced in Japan comes from the Ariake Sea off the western coast of Kyushu. This is the biggest stretch of tidewater in Japan and is also the nation's biggest center of nori production. This winter the nori crop was devastated by an unseasonal outbreak of red tide. The nori has been unable to get enough nutrients because of the massive proliferation of plankton, which turned the sea red, and caused the nori off the coast of four Kyushu prefectures to turn yellow–instead of the normal black.

Local nori growers blame this on a land reclamation project in Ishaya Bay off Nagasaki prefecture. In April 1997 some 3,500 hectares of the bay were closed off to create 1,500 hectares of farmland. Nori growers believe this destroyed the natural purifying capability of the sea and coastlands. Another likely culprit behind the abnormal plankton levels is the release of untreated water from a large reservoir created by the project during low tide.

10883. Kashihara, Keiko; Nio, Noriki; Kobota, Kouji. 2001. [Purification and characterization of a protease in commercial natto]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 48(2):134-37. [13 ref. Jap; eng]

10884. *SoyaScan Notes.* 2001. Early sources of funding for the American Soybean Association (ASA) (Overview). March 11. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1920-1925. From Sept. 1920, when the forerunner of the ASA (named the National Soybean Growers' Association) was founded on the Fouts Brothers' farm in Indiana, until Sept. 1925 when the Association was reorganized and renamed, the ASA has no source of income. Its only activities were to organize an annual summer field meeting and a winter business meeting. At the fifth annual business meeting in Chicago, Illinois: "The matter of a membership fee was discussed by W.A. Ostrander and C.L. Meharry. It was moved that a committee be appointed by Mr. Morse to consider the feasibility of a regular membership with a fee attached and report at the next field meeting."

1925 Dec.–The first constitution and by-laws are drafted and approved at the sixth annual business meeting in Chicago. The provision for dues states that membership is $1.00 a year. This remains ASA's main source of income for more that 15 years–during the Great Depression.

1930–In volume II of the *Proceedings of the American Soybean Association* (published in 1930 for the years 1928 and 1929) the first advertisements appear. The 10 pages of ads (from soybean crushers, and sellers of soybean seed, inoculant, farm equipment, bags, etc.) help pay the cost of publishing and mailing the 110-page proceedings.

1940 Nov.–George Strayer begins publishing *Soybean Digest,* an excellent monthly magazine, in his hometown of Hudson, Iowa. "The coupon on the rear cover and your check for $1.50 will entitle you to a membership in the American Soybean Association and to a year's subscription to 'The Soybean Digest' if mailed immediately." So dues are up by 50% but with them comes a major new benefit of membership. Advertisements in *Soybean Digest* help to pay for the costs of editing, publishing, printing, and mailing the magazine.

1941 Jan.–The "Seed Directory" section in *Soybean Digest* enables ASA members, for $1.00, to list up to three soybean varieties that they sell.

1956 April–The ASA signs an agreement with USDA's Foreign Agricultural Service for a market development project for soybeans in Japan. Up to $75,000 in Japanese yen may be used for the project. For ASA, this is a huge amount of money.

1956 May–The Soybean Council of America, Inc. is organized by the American Soybean Association and the National Soybean Processors Association. Its basic purpose is to expand the market for soybeans in the USA and abroad. "The program will be financed by voluntary contributions of 10¢ per 100 bushels ($1.50 per carlot) at the point of sale. Collections start Sept. 1 on all 1956-crop soybeans sold on or after July 15."

1966 Sept. 9–The landmark date in the history of ASA funding! North Carolina soybean producers vote to pay a half cent per bushel checkoff on all soybeans sold, starting with the 1966 crop. This is the first statewide checkoff ever put into effect on soybeans. About 75% of the 11,000 soybean producers voting favored the checkoff.

1968 Sept.–"Phase 1, ASA's plan of contribution by growers and agribusiness to launch a program of worldwide market development, begins.

1969 Nov. Phase II, ASA's voluntary ½ cent per bushel checkoff on soybeans at the first point of sale, begins in several states. Funds collected from this program will go for market development in Japan, Germany, and Iran.

10885. Smith, Patricia. 2001. The Natural Products Expo at Anaheim and the natural foods industry (Interview). *SoyaScan Notes.* March 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Expo at Anaheim this year was the biggest ever, attracting more than 30,000 people. She walked past

© Copyright Soyinfo Center 2014

every booth and almost every one was offering some kind of soy product. The interest in soyfoods just keeps growing.

At the show there was talk about illegal genetically-engineered StarLink corn in Kellogg's Morningstar Farms products such as Corn Dogs, Mini Dogs, and maybe other products. Some company are pulling these products from their shelves.

Before the first Natural Foods Merchandiser (NFM) trade show was held in 1981, at Anaheim, California, the pioneering natural foods companies such as Erewhon, Eden, Westbrae, Sunburst, and Chico-San all (reluctantly) attended the annual NNFA show in Las Vegas, Nevada. There would always be a big party one evening in someone's hotel suite–with lots of fun. But from 1981 on, these and other natural foods companies found their real home at the NFM trade shows.

Patricia saw Yuko Okada at this year's show. His Macrobiotic Company of American now sells only Muso Shokuhin products. Norio Kushi is running the company. Yuko kicked out Bruce Macdonald over alleged financial improprieties. A lawsuit that Bruce filed has apparently been settled.

Michael Potter bought the Herb-T Company from Cecile Levin in southern California. Mr. Muramoto started the company many years ago.

Patricia has now worked for Trader Joe's for 16 years. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

10886. Morinaga Nutritional Foods, Inc. 2001. Organic beauty. Aahh! The wonder of nature. 100% pure. Unadulterated (Ad). *Natural Foods Merchandiser.* March. p. 57.

• ***Summary:*** This full-page color ad is divided into equal-size quarters, each with a title (see above). In each square is the front of a package of a different type of Mori-Nu Silken Tofu "Made with organic soybeans." The four types are soft, extra firm, extra firm lite, and firm.

Note: This is NOT "Mori-Nu organic tofu." But rather "Mori-Nu 'Made with Organic soybeans' tofu." What's the difference? Each type of Mori-Nu tofu contains isolated soy protein, which is not presently available as an organic ingredient. Address: 2050 West 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638 (NOW TOFU).

10887. Andoh, Elizabeth. 2001. Sampling seasonal delicacies, at reasonable prices, in Osaka. *New York Times.* April 1. p. TR6, TR18 (Sunday).

• ***Summary:*** Contains reviews of restaurants in Osaka. Yoshino Sushi offers "plump vegetable rolls stuffed with broth- and soy-simmered koya-dofu (dried tofu).

Shiru Yoshi offers "one tofu kaiseki; each menu is $100 a person. Throughout Japan tofu is not synonymous with vegetarian cuisine. At Shiru Yoshi, it means two of the many courses that feature silky bean curd [kinugoshi; silken tofu]: in the winter a hot pot of tofu and mushrooms with a soy-based dip... and agedashi, a deep-fried block of tofu..." A "succulent chunk of miso-marinated fish was also served" to those who ordered the kobachi kaiseki dinner (literally "feast of small dishes"). Address: Tokyo, Japan.

10888. Kaneki, M.; Hodges, S.J.; Hosoi, T.; Fujiwara, S.; et al. 2001. Japanese fermented soybean food as the major determinant of the large geographic difference in circulating levels of vitamin K2: possible implications for hip-fracture risk. *Nutrition* 17(4):315-21. April. [Eng]

• ***Summary:*** "Increasing evidence indicates a significant role for vitamin K in bone metabolism and osteoporosis. In this study, we found a large geographic difference in serum vitamin K2 (menaquinone-7; MK-7) levels in postmenopausal women.

"Serum MK-7 concentrations were 5.26 +/- 6.13 ng/mL (mean +/- SD) in Japanese women in Tokyo, 1.22 +/- 1.85 in Japanese women in Hiroshima, and 0.37 +/- 0.20 in British women. We investigated the effect of Japanese fermented soybean food, natto, on serum vitamin K levels. Natto contains a large amount of MK-7 and is eaten frequently in eastern (Tokyo) but seldom in western (Hiroshima) Japan. Serum concentrations of MK-7 were significantly higher in frequent natto eaters, and natto intake resulted in a marked, sustained increase in serum MK-7 concentration.

"We analyzed the relation between the regional difference in natto intake and fracture incidence. A statistically significant inverse correlation was found between incidence of hip fractures in women and natto consumption in each prefecture throughout Japan. These findings indicate that the large geographic difference in MK-7 levels may be ascribed, at least in part, to natto intake and suggest the possibility that higher MK-7 level resulting from natto consumption may contribute to the relatively lower fracture risk in Japanese women."

Note 1. There are two K vitamins: K1 and K2. K1 has been much more widely studied than K2. The most concentrated sources of K1 are fruits and vegetables (in micrograms per 100 gm): Kale 817. Spinach 387. Broccoli 156. Green peas 36. Natto 34.7.

Note 2. This is the earliest document seen (Jan. 2012) that focuses on the nutritional significance of the high concentration of vitamin K in natto. Address: Dep. of Geriatric Medicine, Univ. of Tokyo Graduate School of Medicine, Tokyo, Japan.

• ***Summary:*** One of the most popular items at Seibu is edamame gelato, which sells for 280 yen each (US$1.00 = 124 yen, so 280 yen = $2.25). Each serving (ice cream cone) weighs 100 grams. Only 20 cones a day are sold at Seibu since everything is hand-made. These edamame ice cream cones are sold out almost every day. A color photo shows the blackboard menu, including the edamame gelato, and a girl serving a cone to a customer.

10893. FutureHarvest. 2001. Research gives birth to Nigerian soybean industry: Tofu becomes a hunger fighter and cash earner for women farmers and entrepreneurs (Web printout). *www.scienceinafrica.co.za/may/tofu.htm.* May. Printed 27 Aug. 2009.
• ***Summary:*** The article begins: "Ask any farmer in central Nigeria which local food crop is good for her children, puts cash in her pocket, and enriches the soil, and she'll probably say 'soybean.' Then ask her how she prepares it, and she'll likely say 'as tofu.'

In just over two decades, Nigeria–the continent's most populous country (est. 148 million in 2007)–has become Africa's largest producer of soybeans and soy products. In the year 2000 Nigeria harvested about 500,000 tons of soybeans, a 20-fold increase in just over 20 years. That crop, which was valued at US$85 million, "was used to produce a variety of traditional dishes, as well as processed foods such as soymilk and specially formulated foods to help malnourished infants and children."

"A near-perfect crop: 'Soybeans are a near-perfect crop for a country like Nigeria,' says Lukas Brader, director general of the International Institute of Tropical Agriculture, IITA, one of the 16 Future Harvest centers. 'Nutritionally, they carry twice the protein of meat or poultry and contain all eight essential amino acids needed for childhood development. Soybeans are also good for the environment,' Brader says. 'Because they evolved in Asia, they are far less vulnerable to local insects than African bean crops and require fewer insecticide sprays. They also fix atmospheric nitrogen, which reduces the need for farmers to purchase fertilizer.'

"Best of all, they are affordable. In Nigerian markets, soybeans cost about one-fifth as much as other forms of protein, including dairy and fish, and are easier to store and transport. "'Those are big advantages for a crop,' Brader says. 'But to get to that stage, our researchers had to produce an entirely new plant type that could cope with high disease pressure, compete with parasitic weeds, and grow in African soils.'

"'Basically, our plant breeders had to redesign the crop,' he says. IITA soybeans, he notes, are two to three times more productive under Nigerian conditions than U.S. and Asian varieties.

"Funding for the research, some US$20 million, was provided by the members of the Consultative Group on International Agricultural Research (CGIAR), building on seed money provided by Canada's International Development Research Centre (IDRC)."

"My Second Husband: 'Soybean has been a godsend for Nigeria,' says Professor Dele Fakorede, an agricultural expert based at Nigeria's Obafemi Awolowo University. 'Our farmers are earning good money, our small industries are prospering, and our children and young mothers are benefiting from a locally-made, protein-rich food.'

"Nigerian women would seem to agree. In Benue State, a major soybean producing area in the central part of the country, women farmers often describe the crop as their 'second husband' because it helps to pay school fees and medical bills.

"'Soybeans are making it possible for a lot of women to earn their own way and achieve a greater degree of independence than ever before,' says Fakorede.

"While the new plant types have made it possible to expand soybean farming across large parts of the country, most observers agree that what sparked production was the development of soy-based food products, including a West African version of tofu. It was a Japanese researcher, Osamu Nakayama, who got the idea to use tofu as a substitute for *wara,* a traditional but expensive kind of local cheese, says

© Copyright Soyinfo Center 2014

Brader. 'And, of course, there were skeptics.'

"'A lot of people had doubts that we would succeed or that tofu would ever be accepted by Nigerian consumers,' Nakayama says, 'but eventually we succeeded in making a good *wara* substitute using soymilk and local plant extracts.' Nakayama worked at IITA as part of a scientific exchange program sponsored by the Japan International Cooperation Agency (JICA).

"The idea, Nakayama says, came from watching what local village women did to prepare food for their families. 'We learned a lot through simple observation and by asking questions about traditional methods, he says.' Nakayama's 'wara-tofu' is similar in appearance to farmers' cheese or firm yogurt and has a taste and texture that's only slightly different than Asian-style tofu. Local cooks say that it is easily incorporated into traditional recipes and costs about a third as much as wara made from cow's milk.

"Today, the demand for tofu and other processed soy foods is growing at an annual rate of 20 percent, fueling a major cottage industry in rural Nigeria. A follow-up report by researchers at Nigeria's University of Ibadan points out that children who grow up in soybean-producing communities are generally healthier and suffer less malnutrition than the average Nigerian child. Improved nutrition, researchers believe, also helps to limit the spread of HIV/AIDS.

"In the places where soybeans are grown, roughly 40 percent of the income earned by women is thought to be derived from soybean production or processing. Thus far, nearly 100,000 Nigerians, three-fifths of them women, have been trained in soybean production and in the preparation of soy products by local NGOs, hospitals, and church groups working in cooperation with IITA and various government agencies.

"Currently, about 140 soy-based food products have been developed for use in Nigeria."

A color photo shows a Nigerian woman, in traditional dress, holding a plate filled with pieces of fried "wara-tofu."

10894. Iino, Ryoichi. 2001. The history of shoyu (Soy sauce) 3. *Food Culture* (*Kikkoman Inst. for International Food Culture, Noda, Japan*) No. 3. p. 20-23. May. http://kiifc.kikkoman.co.jp. [8 ref. Eng]
• ***Summary:*** Contents: *Sho* in the Kamakura period. The development of *nimono.* The appearance of *tare-miso.* Cooking with *tare-miso. Tou-miso* in the *Tamonin-nikki.* The appearance of the term *shoyu.* Soy sauce and tamari.

This article begins: "Sho in the Kamakura Period: In the previous issue of *Food Culture,* I noted that both liquid *sho* [pronounced *jiang* in Chinese] and unrefined *sho* [which probably had a consistency like applesauce] were manufactured during the Heian period (794-1185); that the term *sho* was generally used to refer to unrefined *sho;* and that the use of liquid *sho* gradually declined. In this continuation of my article, I would like to discuss the situation in the subsequent period; that is, during the medieval age, up until the appearance of soy sauce."

"*Tare-miso* is a liquid seasoning made by adding water to miso, boiling it down, and then straining the mixture by suspending it in a cloth bag. A method for making *tare-miso* can be found in the *Ryori Monogatari,* compiled in 1643... The same book contains a different recipe for *nama-dare,* which is a form of *tare-miso* prepared without cooking." Yet *tare-miso* is mentioned as early as 1432. Address: Food historian, and teacher of food history, Hattori Nutrition College, Japan.

10895. JICA (Japanese International Cooperation Agency). 2001. Tofu production in Nigeria. *Japan Close-Up.* May. *
• ***Summary:*** Describes how Osamu Nakayama (a Japanese) in Nigeria learned how to use the process for making *wara* (unripened Nigerian dairy cheese) to make alternative cheese from tofu.

10896. Maeda, Hiroshi; Mizutani, Osamu; Yamagata, Y.; Ichishima, E.; Nakajima, T. 2001. Alkaline-resistance model of subtilisin ALP I, a novel alkaline subtilisin. *J. of Biochemistry* (*Tokyo*) 129(5):675-82. May. [39 ref]
• ***Summary:*** The alkaline-resistance mechanism of the various alkaline-stable enzymes is not yet known. To clarify the mechanism of alkaline-resistance of alkaline subtilisin, structural changes of two typical subtilisins, subtilisin ALP I (ALP I) and subtilisin Sendai (Sendai), were studied by means of physicochemical methods. Conclusion: Alkaline resistance is closely related to the surface structure of the enzyme molecule. Address: Lab. of Molecular Enzymology, Div. of Life Science, Graduate School of Agricultural Science, Tohoku Univ., Tsutsumidori Amamiyamachi, Aoba-ku, Sendai 981-8555, Japan.

10897. Shurtleff, William; Aoyagi, Akiko. 2001. The book of tofu. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. May. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]
• ***Summary:*** The spine has a new look, with dark brown letters on a beige background. At the base of the spine is the Ten Speed Press logo in orange.

This edition contains an updated "Appendix B– Directory of Tofu Makers" (p. 313-316, updated to 22 Feb. 2001). The copyright page and inside rear cover have also been updated; the SoyaScan database now contains 62,000 records. The preface has been expanded. Numerous other small changes have been made throughout the book. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

10898. Torassa, Ulysses. 2001. Living long and prospering: Doctor thinks Japan's Okinawans have discovered the secret. *San Francisco Chronicle.* June 3. p. B3-B4. Living / Health

© Copyright Soyinfo Center 2014

& Fitness section.
• ***Summary:*** A new book titled *The Okinawa Program,* by Dr. Bradley Wilcox (a Harvard physician), Craig Wilcox, and Makoto Suzuki, analyzes why the people of Okinawa, Japan's southernmost prefecture, live such long, vigorous, and happy lives. Unlike America, with its fast pace, consumerism, love of junk food, and emphasis on individualism, Okinawans do the opposite. They live longer than anyone else on earth (81.2 years vs. 76.8 for Americans). There are six times as many centenarians per 100,000 people in Okinawa than in the USA. Rates of heart disease and breast and prostate cancer in Okinawa are less than a quarter of what they are in the USA. Wilcox says they are the happiest people he has ever seen, yet Okinawa is Japan's poorest region–the gross domestic product is just 60% what it is elsewhere in Japan.

What are the secrets? For starters, according to Wilcox, "it's a diet rich in soy, fish and vegetables, and low in fat, red meat and dairy foods." Soy is rich in flavonoids. Address: Staff writer.

10899. Kanai, Atsuko. 2001. Working with Fuji Seiyu to introduce new Japanese-style frozen tofu products to the USA (Interview). *SoyaScan Notes.* June 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Fuji Seiyu is a Japanese oil milling company that got interested in soy protein products in the 1970s. They have strong research on soy protein and on developing soy protein products, but they do not have strong marketing or distribution in the USA; that is Mutual Trading Company's forte. So Mutual began working with Fuji Seiyu to bring their ready-to-eat frozen tofu products to the USA, introducing them first to Japanese restaurants in Dec. 2000. Her concept was to sell "authentically Japanese" tofu products that were not easily replicated by American manufacturers. Fuji Seiyu has dozens of such products; Mutual is test marketing only a few. This is one of Mutual's priority food lines in 2001. Eventually Atsuko would like to get one or more of those items into large natural foods retailers.

Atsuko sends two leaflets which describe eleven products in this "Miyako Tofu Course Series." For each is given: A photo of the finished product, the item number, pack size, product name and description in English and in Japanese (*hiragana*), and price per case, pack, and serving. The following products are sold: (1) Fukkura Ogon Tofu: Golden fried tofu puff. (2) Veggie-Fish Tsutsumi: Tofu stuffed squares patty. (3) Gomoku Inari: Vegetable medley squares patty. (4) Yuba to Yasai no Cabbage Tsutsumi: Yuba and tofu stuffed cabbage. (5) Ajitsuke Inari: Inari sushi pocket. (6) Yawaraka Ganmo: Tofu vegetable patty. (7) Yuba Shumai: Yuba and tofu shumai. (8) Vegetable Kinchaku: Tofu vegetable pouch. (9) Koimo Kinchaku: Tofu taro pouch. (10) Shrimp Yubamaki: Tofu shrimp roll. (11) Vegetable Yubamaki: Tofu vegetable roll. Address: Mutual Trading Co., Inc., 431 Crocker St., Los Angeles, California 90013. Phone: (213) 626-9458.

10900. Revkin, Andrew C. 2001. U.S. losing status as a world leader in climate science: Relying on foreign help. Long-term research is lagging even as consensus builds about global warming. *New York Times.* June 11. p. A1, A11 (Natl).
• ***Summary:*** The U.S., in little more than a decade, has fallen significantly behind other countries in its ability to predict and simulate long-term shifts in climate. Problems include: Fragmentation of research efforts among many government agencies; lack of super computers; lack of funding. Global warming "could become the biggest environmental problem of the next 100 years." Britain and Japan have poured millions of dollars into computer centers focusing on long-range climate research. Japan is poised to leapfrog past everyone; over the past 3 years it has spent more than $400 million building its "Earth Simulator" in Yokohama, which will have a linked array of the world's best supercomputers. In the USA, budgets for science are curtailed everywhere.

10901. Fetters, Luke. 2001. Sovereign foundations and educational antecedents to the Hong Kong Conference, Church of the United Brethren in Christ. Paper presented at the second annual meeting of the United Bretheren Historical Society. 31 p. Held 29 June 2001 in Huntington, Indiana. [34 ref]
• ***Summary:*** "In this paper I will present a historical overview of the United Brethren outreach to the Chinese prior to 1950, focusing on the work of three key figures who shaped a United Brethren missiological strategy for reaching the Chinese: Moy Ling, Chiu Yan Tze, and Wan Kwai Chin. All three were Chinese. All three were educators. All three were related by marriage. All three were highly entrepreneurial. And most impressive, all three displayed remarkable resilience in the face of numerous setbacks."

Chiu Yan Tze is an important figure in the history of soymilk in China and the USA. Therefore we will focus on his life, and that of his wife, Wan Kwai Ching. Here is a brief chronology: 1890 April 14–Y.T. Chiu born in Canton, China, the eldest of 9 children, into a devout Christian family with a strong Baptist heritage. His grandfather on his mother's side was the first Baptist preacher in Canton. His uncle (Mrs. Moy Ling's father) was at one time pastor of the Canton Baptist Church. His father came to Portland, Oregon, in 1855, and while studying in one of the mission schools in Portland, became a Christian; before his death he became one of the elders of the Baptist Church in Hong Kong. His mother was a teacher in the Canton Baptist School before she was married. Therefore Y.T. Chiu was a 3rd generation Christian. 1893–Chiu's father moves his family to Hong Kong, and the son studies in private schools

© Copyright Soyinfo Center 2014

there from 1895 to 1903. 1895 ca.–Wan born in Hong Kong. 1905–At age 15, Chiu baptized in Baptist Church in Hong Kong. 1908–Chiu leaves Hong Kong to study science and education at the University of California at Berkeley. While in school, he was an active Christian leader. He served as teacher and assistant principal of evening school in Berkeley. 1913–Chiu receives his B.S. degree in Chemistry from U.C. Berkeley. 1914–He moves to New York City to attend Columbia University. 1915–Chiu receives his MS degree in chemistry from Columbia. 1915–Chiu returns to Canton to serve as prof. of chemistry and chair of Religious World Committee at Lingnan University (then known as Canton Christian College, Baptist). 1916–Chiu and Wan are married. Her mother died when she was 12 years old. She was the eldest of 3 living children. She graduated from teacher's college at age 16. Upon graduation, she founded Ming To school for poor children in Hong Kong and served as principal for 2 years. She resigned to marry Chiu; the marriage was arranged by their families. 1927–Chiu receives his PhD degree in chemistry at Cornell University (Ithaca, New York). 1937 Aug. 31–Japanese start bombing Canton. 1938 Oct. 12–35,000 Japanese troops occupy Canton; Chiu is in Hong Kong. 1941 Dec. 8–Japanese bombing of Hong Kong begins, followed soon by occupation. Wan evacuates to Hong Kong, where she works in education, evangelism, and refugee relief. 1942-46–Chius flee Hong Kong with family, staff and students. They travel in the Chinese interior, providing education and relief work. 1946–Chius return to Canton to find demolished homes and school buildings. Their person effects are gone. They repaired, rebuilt, and started over. 1947 summer–Chiu returns to USA to teach at Huntington College, Indiana, as a guest professor. Wan supervises work in China. 1949–Communist revolution in China. In Oct. Chiu moves to Hong Kong because of his extensive ties to America. 1949 Oct. 14–Communists take control of Canton. Wan remains in Hong Kong to supervise work. 1957 March 30–Wan is permitted to leave China for Hong Kong. 1959–Chiu serves as director of Hong Kong conference until 1967, at which time the Chius retired to California. 1981–Wan dies. 1987–Chiu dies.

Includes a timeline of Dr. Chiu's life. Note: Both K.S. Lo and Y.T. Chiu lived in the village of Linshan during the war. His name: Chiu Yan-Tsz (Cantonese; he wrote it like this on all his papers) or Chao En-tz'u (Mandarin); Zhao Enzi (pinyin). She says Yan = Grace and Tsz = Given. He was a Rev and PhD; in 1927 he wrote his PhD thesis on soymilk at Cornell Univ. Address: Asst. Prof. of Educational Ministries, Huntington College, 2303 College Ave., Huntington, Indiana 46750.

10902. Hiroyuki, Fujita; Tomohide, Y.; Kazunori, O. 2001. Efficacy and safety of Touchi extract, an alpha-glucosidase inhibitor derived from fermented soybeans, in non-insulin-dependent diabetic mellitus. *J. of Nutritional Biochemistry* 12(6):351-56. June. *

• ***Summary:*** Eighteen type-2 diabetic patients ingested touchi extracts (0.3 gm) three times daily before every meal (0.9 gm/day) for a 6-month period. Blood glucose levels and HbA(1c) levels were monitored at 0 (pre-ingestion), 1, 3, and 6 months post-ingestion. Blood glucose levels dropped from 9.25 to 7.6 mmol/liter. HbA(1c) levels dropped from 10.5% to 9.0%.

Indexes for serum lipids and total cholesterol level revealed moderate decreases with a slight increase in the high-density lipoprotein (HDL) level after touchi extract (TE) ingestion. However, triglyceride (TG) levels significantly decreased at 3 ($p < 0.05$) and 6 mo ($p < 0.01$) post-ingestion of touchi extract. In this study, other biochemical parameters were not affected in any of the patients, and no one complained of any side-effects or abdominal distension. TE, exhibiting alpha-glucosidase inhibitory activity, demonstrated an anti-hyperglycemic effect and may prove useful for improving glycemic control in patients suffering from non-insulin-dependent diabetic mellitus. Address: Research and Development Dep., Nippon Supplement Inc., Kita-ku, 531-0076, Osaka, Japan.

10903. Kikkoman Corporation. 2001. Annual report 2000. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 39 p. 28 cm. [Eng]

• ***Summary:*** The information in this English-language annual report is current as of April 2001. Contents: Financial highlights. Introduction. Message from the president (Yuzaburo Mogi): Fiscal year in review, operating results, strengthening the competitive business, summary of business policy (business principles {based on consumer satisfaction}, medium-term business strategy, business organization, basic policy on distribution of profits, tasks for the coming years, in closing). Global operations: United States, Europe, Asia, Japan. Topics: Commemorative events held to mark milestones at Singapore and Taiwan plants, Kikkoman takes part in Dutch water resource preservation project. Research and development. Financial review: Operating results. Consolidated balance sheets, etc. Corporate history (chronology from April 1925 to Aug. 2000). Global network (directory of Kikkoman names, addresses, and phone numbers worldwide). Board of directors and officers. Corporate data. Overall, sales and profits remained approximately unchanged from 1999.

Overseas, Kikkoman is benefitting from the growing popularity of soy sauce. Statistics demonstrate this. Over the last 26 years, overseas of Kikkoman soy sauce have grown by an average of more than 10% a year. Last year, overseas sales of soy sauce topped 120 million liters for the first time. Overseas sales (excluding exports from Japan) accounted for about 30% of consolidated net sales and 50% of Kikkoman's consolidated operating income–excluding the Coca-Cola Business. Sales volume in the USA, the company's largest

© Copyright Soyinfo Center 2014

overseas market, rose to 95 million liters, grew steadily, and accounted for 80% of Kikkoman's total overseas sales of soy sauce. Last year, Kikkoman's share of the U.S. home-use market hit an all-time high of 55%. In Europe, production capacity at the plant in the Netherlands is presently being raised to 7 million liters, from 6 million liters, to meet rising demand. In China, Kikkoman is constructing a soy sauce plant; shipments are slated to start in the spring of 2002. The China plant will be the company's third in Asia outside Japan, joining plants in Singapore and Taiwan.

Effective from fiscal 2000, the results of the Tone Coca-Cola Bottling Co., Ltd. and two other companies accounted for by the equity method have been included in the consolidated results, following the introduction of new accounting standards based on the Securities and Exchange Law of Japan. However tables on p. 22 make it easy to compare Kikkoman's 2000 financial performance with that of the year before. Excluding Tone: Sales were down 1.4% but net income (profit) was up 39.6%.

Photos (p. 3 and 7) show Yuzaburo Mogi. Address: Noda, Japan.

10904. Ragone, Diane; Lorence, David H.; Flynn, Timothy. 2001. History of plant introductions to Pohnpei, Micronesia and the role of the Pohnpei Agriculture Station. *Economic Botany* 55(2):290-324. April/June. [30 ref. Eng; pol]
• ***Summary:*** Pohnpei (formerly Ponape) is located in the eastern Caroline Islands, approximately 4,800 km southwest of Honolulu. A high volcanic island with a land area of only 344 square km, it is the third largest in Micronesia (after Guam and Babeldoab) and the largest in the Caroline group. It is presently a member state and capital of the sovereign nation of the Federated States of Micronesia (FSM). The population is about 35,000, one-third of whom live in the island's main town, Kolonia.

History: Pohnpei was formerly colonized by Spain, Germany, and Japan. After World War II, the island was administered by the United Nations as a UN trusteeship (Trust Territories of the Pacific Islands). During the Japanese period (1914-1945), the Japanese Tropical Research Industries Institute was established. It became very active largely through the efforts of one man, the distinguished agronomist Moritaro Hoshino, who came to the island in 1927 and set about making Ponape the center of Japanese agricultural research in Micronesia. In the 1930s the Pohnpei station was one of the world's foremost centers for the study of tropical agriculture.

Appendix I of this article, titled "Plants documented as introduced to the Island of Pohnpei, including all plants tested or cultivated at the Pohnpei agricultural station" (p. 304+) states (p. 313) that the soybean was introduced during the Japanese period for use as a vegetable.

Note: This is the second earliest document seen (July 2002) concerning the cultivation of soybeans in Micronesia. This document contains the earliest date seen for soybeans in Micronesia, or the cultivation of soybeans in Micronesia (1945 or before). The source of these soybeans was probably Japan. Address: National Tropical Botanical Garden, 3530 Papalina Road, Kalaheo, Hawaii 96741.

10905. *SoyaScan Notes.* 2001. On the English-language etymology of "green vegetable soybeans," "edamamé," "vegetable-type soybeans," and "food-grade soybeans": A chronology of terminology (Overview). July 6. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** No other soyfood has had so much difficulty in finding a single, standardized name. To this day, soybeans picked when still fresh and green in the pods, boiled or steamed, and served like a vegetable, are called by a bewildering variety of names: *edamamé* (pronounced ay-duh-MAH-may, the Japanese name), fresh green soybeans, vegetable soybeans, green soybeans, edible green soybeans, green vegetable soybeans, immature green soybeans, green immature soybeans, immature soybeans, garden soybeans, garden-type soybeans, garden soys, branch-beans, etc. The short names are all ambiguous and the precise names are all too long. Fortunately, since the late 1990s, the media have increasingly used one name: edamamé.

The first attempt to describe green vegetable soybeans appeared on 12 April 1855 when T.V.P. [T.V. Peticolas] of Mount Carmel, Ohio, writing in the *Country Gentleman* said: "They are inconvenient to use green, being so difficult to hull." For the next few decades other writers followed this pattern of describing rather than naming the tender green beans.

In Dec. 1890 C.C. Georgeson, writing in the *Kansas Agric. Exp. Station Bulletin* first used the term "Edamamé" in an English-language publication to describe his seeds imported from Japan; but he was using the word as the name of a soybean variety, rather than as the name of a food type.

It wasn't until Jan. 1915 that a real name for these tender fresh beans first appeared–in the *USDA Bureau of Plant Industry, Inventory* No. 33. Referring to Plant Introduction No. 34702, from Shantung Province, China, Dr. William R. Faries of Coachella, California, wrote that he had received the seeds in December 1912. They "grow well here. They are fine for green shelled beans."

On 19 May 1917 Anna R. Van Meter, writing in the *Ohio Farmer,* called them "Green Soybeans." The only problem was that dry soybeans with green seed-coats are called by the same name.

In July 1918 William J. Morse, wrote in the *USDA Farmers' Bulletin* No. 973 about this "green-vegetable bean."

The name we prefer was coined by William Morse while studying soybeans in Japan. In July 1929 he first called them "Vegetable soybeans," then in Jan. 1931 he started using the term "Green vegetable soybean," and finally in March 1932

© Copyright Soyinfo Center 2014

"green vegetable soybeans" (our preference). Morse made a major effort to introduce both the new varieties and the new way of eating them to America.

During the 1930s, six new terms were introduced: "green shelled soybeans" (USDA Bureau of Home Economics, 1933), "fresh green soybeans" (Carey Miller of Hawaii, 1933), "green immature soybeans" (Carey Miller and Ruth Robbins, 1934), "shell soy beans" (Dr. John Harvey Kellogg, letter of 9 Dec. 1935 to William Morse), "immature green soybeans" (Dr. A.A. Horvath 1938), and "immature garden soy beans" (Helen Parsons, Abby Marlatt, and George M. Briggs, 1939).

The name "Green vegetable soybeans" first appeared in the title of a publication in 1935; it was an article by Morse in the *Proceedings of the American Soybean Association* (p. 44-45). In the same article he began to search for terms to describe the new *type* of large-seeded Japanese soybeans from which the best edamamé are grown: Being unaware of the word edamamé, he coined the terms "vegetable types" and "green vegetable types." In 1938 he began to call them "edible soybeans."

But the name that stuck was first appeared in March 1939 in a famous bulletin titled "Eighteen varieties of edible soybeans," by J.W. Lloyd and W.L. Burlison of the Illinois Agricultural Experiment Station. They called them "vegetable-type soybeans" and distinguished then from typical "field-type soybeans."

Other terms used to refer to regular soybeans include "grain type" (Deodhar et al., 1973), "oil beans" (Liu et al., 1995), and "commodity soybeans" (Poysa, 1999).

During the 1930s and 1940s William Morse did more than any other person to try to introduce green vegetable soybeans and "edible- or vegetable-type" soybeans to America as a new food and to popularize their use. He wrote and lectured widely about them, and therefore he thought a great deal about what name would best describe them. He was in a unique position to see the big picture in terms of soybean terminology, and by the 1940s he had clearly settled on the terms "green vegetable soybeans" and "edible types" as those he preferred.

After 1940 only a few new names appeared: "Garden soys" (Edward Dies, 1942), "garden-type soybeans" (Allan K. Smith, 1959), and "branch-beans" (a literal English translation of the Japanese name *edamamé*) (*Organic Gardening and Farming*, July 1977).

Then in the late 1990s a new name burst upon the scene: "edamamé," the Japanese word for green vegetable soybeans cooked and served in the pods. This name was first used in an English-language document, as far as we can tell, in 1991, by the Jameson-Williams Co. of Fairmont, Michigan. The company issued a 2-page leaflet titled "What is edamamé?" By the late 1990s and early 21st century, food writers and manufacturers were using the word "edamamé" for all kinds of green vegetable soybeans, including shelled ones that would never be called "edamamé" in Japan.

Today, most people using the term "edamamé" don't realize that they are using it to mean "green vegetable soybeans" and that the word "edamamé" has long been used to refer to a subcategory of green vegetable soybeans–namely those that are cooked and served in the pods. Moreover, many do not understand the important connection between "vegetable-type soybeans" and "green vegetable soybeans." This is unfortunate.

After studying these terminology questions for more than 25 years, Soyfoods Center would like to see the following terms adopted: (1) Green vegetable soybeans: Vegetable-type soybeans picked green and cooked until tender. They may be served either in the pods (as edamamé) or shelled. This term has a 50-year history of use in the professional literature. (2) Edamamé: Green vegetable soybeans sold, cooked, and served in the pods. For shelled green vegetable soybeans we favor the term "shelled edamamé." In Japan, the latter are just starting to become available in the produce section of grocery stores, sold refrigerated (not frozen), typically in rigid containers with clear plastic tops and called either *mukimi edamamé* or *edamamé no mukimi* or *mukimamé. Mukimi* means "shelled" and *mukimamé* means "shelled beans." (3) Vegetable-type soybeans: Certain varieties of large-seeded soybeans (most with Japanese pedigrees and clear hilums) recognized for their good flavor and texture when used as food–either as green vegetable soybeans or tofu, soymilk, etc. This term has a 50-year history of use in the professional literature. In Japan, such seeds are called *edamamé no tane* ("edamamé seeds"). They are widely available in Japan in the spring in typical paper seed packets at grocery stores next to the produce department or the cut-flower department.

An alternative, simpler approach (now used by the American media) would be to call both (1) and (2) above "edamamé" then to call the shelled ones "shelled edamamé."

Unfortunately each of these three approaches and terms has its disadvantages. (1) Green vegetable soybeans is a very descriptive term, but it is quite long and unfamiliar to most Americans. Since "shelled green vegetable soybeans" is much too long, "shelled edamamé" (a term now starting to be used in Japan) or "green shelled soybeans" might be better. (2) Edamamé is nice and short, and widely used in the American press since the late 1990s. But it is difficult for English speakers pronounce correctly if there is no accent on the last letter, yet no English words have accents, and the keyboard character (é) only exists in special foreign-language character sets, which are a nuisance to use frequently. (3) The term "vegetable-type soybeans" is easy to confuse with "green vegetable soybeans." Moreover, the term sounds strange when used to describe large-seeded (often clear hilum) soybean varieties preferred for making tofu or soymilk. In addition, most American's have never heard of "vegetable-type soybeans." The term "food-grade

© Copyright Soyinfo Center 2014

soybeans," widely used in Canada since the 1980s, has its own problems. First, it is often used to refer to all soybean varieties utilized to make foods, including small-seed varieties used to make natto and soy sprouts. Second, all soybeans can be considered "food grade."

• ***Summary:*** "Dadacha-mame" varieties of vegetable soybean have a high market value due to their excellent flavor. It was found that the aromatic compound 2-acetyl-1-pyrroline (AP) is largely responsible for this good flavor. The concentration of this compound in soybeans changes as the seeds mature, reaching its maximum concentration during the edible period for edamame, then decreasing.

Note: This is the earliest English-language document seen (Sept. 2006) with the word "mame" in the title. Address: 1. National Food Research Inst., Kannondai 2-1-12, Tsukuba, Ibaraki 305-8642, Japan. E-mail: fufufu@nfri.affrc.go.jp.

10916. Shurtleff, William; Aoyagi, Akiko. comps. 2001. Green vegetable soybeans, edamamé, and vegetable-type soybeans–Bibliography and sourcebook, 1275 A.D. to 2001: Detailed information on 1,032 published documents (extensively annotated bibliography), 77 commercial green vegetable soybean products, 133 original interviews (many full text) and overviews, 72 unpublished archival documents. Lafayette, California: Soyfoods Center. 514 p. Subject/geographical index. Author/company index. Printed Aug. 4. 28 cm. [1245 ref]
• ***Summary:*** This is the most comprehensive book ever published about green vegetable soybeans and vegetable-type soybeans. It has been compiled, one record at a time over a period of 26 years, in an attempt to document the history of these two closely related subjects. Its scope includes all known information about green vegetable soybeans and vegetable-type soybeans, worldwide, from earliest times to the present.

This book is also the single most current and useful source of information on green vegetable soybeans and vegetable-type soybeans, since 95% of all records contain a summary/abstract averaging 248 words in length.

This is one of more than 45 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 49 different document types, both published and unpublished; every known publication on the subject in every language–including 1,102 in English, 61 in Japanese, 44 in French, 25 in German, etc.; 69 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of green vegetable soybeans and vegetable-type soybeans from their earliest beginnings to the present.

The bibliographic records in this book include 1,032 published documents and 72 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 77 commercial green vegetable soybean products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries,

© Copyright Soyinfo Center 2014

states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

10917. Shurtleff, William; Aoyagi, Akiko. 2001. The book of tempeh: A cultured soyfood. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 176 p. Aug. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [374 ref]
• ***Summary:*** This revision has completely new front and rear covers, designed and illustrated by Akiko. It contains a completely new "Appendix B–Directory of Tempeh Makers" (p. 157-58, updated to 16 June 2001). The page "About the Authors" (autobiographical) has been updated, and the original photographs have been replaced with more recent ones–reflecting the fact that Bill and Akiko separated in Nov. 1993 and their marriage ended in May 1995.

The last page, "Soyfoods Center," has been updated.

On page 176 is "The Best of Vegetarian Cooking from Ten Speed Press" (descriptions of eight cookbooks, with price and ISBN).

The inside rear cover has been updated, and now includes current information about: (1) *Tempeh Production,* a book published by Soyfoods Center about how to start and run a company making tempeh on any of four scales and budgets in North America, and on either of two scales in tropical developing countries. (2) *Tempeh and Tempeh Products: Bibliography and Sourcebook,* published by Soyfoods Center. (3) SoyaScan, the unique computerized database produced by Soyfoods Center. This database now contains more than 62,000 records from 1100 B.C. to the present, and more than 76% of all records have a summary / abstract averaging 146 words in length. A description of the four different types of records (published documents, commercial soy products, original interviews and overviews, and unpublished archival documents), and the number of each type, is given.

The title page, copyright page, and table of contents have been redesigned and updated to give the book a much more contemporary look. Other small changes have been made throughout the book. Still contains 130 vegetarian recipes–both western and Indonesian.

Ten Speed Press gave this book a new ISBN: 1-58008-335-8. Yet despite the many changes described above, the authors preferred not to have this called a "new edition" or "revised edition." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

10918. Shurtleff, William; Lumpkin, Thomas A. 2001. Chronology of green vegetable soybeans and vegetable-type soybeans. In: T. Lumpkin, ed. 2001. Second International Vegetable Soybean Conference. Pullman, Washington: Washington State University. 202 p. See p. 97-103. [12 ref]
• ***Summary:*** Contents: Introduction. Chronology. Address: 1. Director, Soyfoods Center, Lafayette, California; 2. Chairman, Dep. of Crop and Soil Sciences, Washington State Univ., P.O. Box 646420, Pullman, WA 99164-6420. lumpkin@wsu.edu.

10919. Shurtleff, William. 2001. On the English-language etymology of "green vegetable soybeans," "edamamé," "vegetable-type soybeans," and "food-grade soybeans". In: T. Lumpkin, ed. 2001. Second International Vegetable Soybean Conference. Pullman, Washington: Washington State University. 202 p. See p. 179-181.
• ***Summary:*** "After studying these terminology questions for more than 25 years, Soyfoods Center would like to see the following terms adopted: (1) Green vegetable soybeans: Vegetable-type soybeans picked green and cooked until tender. They may be served either in the pods (as edamamé) or shelled. This term has a 50-year history of use in the professional literature. (2) Edamamé: Green vegetable soybeans sold, cooked, and served in the pods. For shelled green vegetable soybeans we favor the term 'shelled edamamé.' In Japan, the latter are just starting to become available in the produce section of grocery stores, sold refrigerated (not frozen), typically in rigid containers with clear plastic tops and called either *mukimi edamamé* or *edamamé no mukimi* or *mukimame. Mukimi* means 'shelled' and *mukimame* means 'shelled beans.' (3) Vegetable-type soybeans: Certain varieties of large-seeded soybeans (most with Japanese pedigrees and clear hilums) recognized for their good flavor and texture when used as food–either as green vegetable soybeans or tofu, soymilk, etc. This term has a 50-year history of use in the professional literature. In Japan, such seeds are called *edamamé no tane* ('edamame seeds'). They are widely available in Japan in the spring in typical paper seed packets at grocery stores next to the produce department or the cut-flower department.

"An alternative, simpler approach (now used by the American media) would be to call both (1) and (2) above 'edamame' then to call the shelled ones 'shelled edamame.'

"Unfortunately each of these three approaches and terms has its disadvantages. (1) Green vegetable soybeans is a very descriptive term, but it is quite long and unfamiliar to most Americans. Since 'shelled green vegetable soybeans' is much too long, 'shelled edamame' (a term now starting to be used in Japan) or 'green shelled soybeans' might be better. (2) Edamame is nice and short, and widely used in the American press since the late 1990s. But it is difficult for English speakers to pronounce correctly if there is no accent on the last letter, yet no English words have accents, and the keyboard character (é) only exists in special foreign-language character sets, which are a nuisance to use frequently. (3) The term 'vegetable-type soybeans' is easy to confuse with 'green vegetable soybeans.' Moreover, the term sounds strange when used to describe large-seeded (often clear hilum) soybean varieties preferred for making tofu or soymilk. In addition, most Americans have never

© Copyright Soyinfo Center 2014

heard of 'vegetable-type soybeans.' The term 'food-grade soybeans,' widely used in Canada since the 1980s, has its own problems. First, it is often used to refer to all soybean varieties used to make foods, including small-seeded varieties used to make natto and soy sprouts. Second, all soybeans can be considered 'food grade.'" Address: Soyfoods Center, Lafayette, California, USA.

10921. Srisombon, S.; Shanmugasundaram, S.; Sophanodora, D. 2001. The history of vegetable soybean development, current status and future development in Thailand. In: T. Lumpkin, ed. 2001. Second International Vegetable Soybean Conference. Pullman, Washington: Washington State University. 202 p. See p. 183-186. [7 ref]
• ***Summary:*** Contents: Introduction. Vegetable soybean development: Production and market promotion, research, yield constraints. Future prospects. Conclusion.

"From the time the soybean was introduced from China to the northern part of Thailand the vegetable soybean was consumed for more than a hundred years in Thailand." Soybeans with medium size seeds (15-20 gm per 100 seeds), used for food and oil extraction, have also been used traditionally as green vegetable soybeans (called *tua rae* in Thai). "Green pods attached to the stems are commonly boiled and sold countrywide in the local markets."

In the late 1980s, the development of vegetable soybeans for export began with the establishment in Thailand vegetable factory as a joint venture between Thais and Japanese. In 1990 the first small exports of vegetable soybeans from Thailand to Japan began. In 1999 the export volume increased dramatically to about 9,000 tonnes, making Thailand the 3rd largest exporter of vegetable soybeans to Japan–after China and Taiwan. Address: 1. Senior Research Scientist, Field Crops Research Inst., Dep. of Agriculture, Paholyothin Road, Chatuchak, Bangkok 10900, Thailand, Email: kssssb@yahoo.com 2. sundar@netra.avrdc.org.tw 3. fcri@doa.go.th.

10922. Brooks, Patricia. 2001. A Japanese cuisine with style & spark. *New York Times.* Oct. 28. p. CT16.
• ***Summary:*** A restaurant review of Yooki Yama ("snow-capped mountain"), 1018 Main St., Branford, Connecticut. The "silk tofu casserole, a Korean dish whose contents were steamy hot and included "custard-soft bean curd cakes" which "floated in a batch of red-hot pepper sauce that made our eyes smart. The tofu was like a sponge, absorbing all the fire of the peppery broth. Wow!" Yooki Yama's owner is Japanese Korean, which explains the spicy hot dishes on the menu.

One of the "recommended dishes" is "Age-dashi tofu" [age-dashi-dofu]–"deep-fried soy bean cakes [tofu] served with a perky ginger scallion dip."

Note: Branford is a seaside town with many lively restaurants just east of New Haven, Connecticut, midway between New York City and Providence, Rhode Island.

10923. Bennett, Ken; Stoneman, Don. 2001. Japanese soybean investment helps Ontario farmers access good Identity Preserved markets. *Better Farming* (*Ontario, Canada*) 3(9):20-29. Nov.
• ***Summary:*** Ontario farmers are moving from growing commodity soybeans for crushing to growing identity preserved (IP) soybeans for specialty uses, as for the Japanese market. This year's drought and small soybean crop may actually speed the transition. Growth of Ontario soybean sales overseas continues to grow.

Eric Bosveld "is president of the new Agromart Processing Company Incorporated, located at Belton in western Ontario, between St. Marys and London." Agromart is a new food-grade soybean processing plant; it is also

© Copyright Soyinfo Center 2014

"the missing piece of equipment that has kept the Agromart Group from accessing good Identity Preserved (IP) markets for farmers.

"The plant also represents a significant investment by three Japanese companies who are paying half of the total cost, which is in excess of $1 million." The three, Marubeni Corp., Nisshin Oil Mills, and Nisshin Logistics, have made a substantial commitment to the Ontario soybean industry. This gives Ontario soybean growers and Agromart Processing to their markets. With this investment, the Japanese companies are no longer just a buyer; they are now a partner and investor, directly involved with the new processing company.

The other half of the costs has been paid by 12 Agromarts. This should make Ontario soybean farmers more profitable.

"That business model has already been proven by the success of Agromart Terminals Incorporated, which also operates at Belton and is 50 per cent owned by 14 of the Agromart joint ventures."

Peter Hannam, president of First Line Seeds Limited in Guelph, Ontario, "is considered by many to by many to be the guru of the Ontario soybean industry. He found the cold-tolerant soybean variety named Now. The story begins in 1962, when Hannam saw some soybeans "growing outside the crop science building at the University of Guelph, where he was about to receive an agricultural degree." At the time soybeans were considered to be a warm season crop, better suited to the climate of a few of Ontario's southwest counties. When a professor told Hannam that soybeans would not grow in cold climates, he took it as a challenge. In 1963 he began experimenting with a small plot of soybeans on the outskirts of Guelph. It took him 8 years of planting 5 or 10 acres of soybeans before he found a way that was profitable. "He worked closely with the University of Guelph to find a cold-tolerant bean, searching as far away as Sweden."

"In the early 1980s, he was involved with the Canadian Seed Growers Association and met a dozen other seed growers across Ontario who shared his vision. In 1982, they joined forces and First Line Seeds was born" in Guelph. Hannam wants to get out of "the commodity cycle" by developing proprietary soybean varieties and finding proprietary IP markets. He believes this will benefit farmers.

"In 1993 it was not legal to breed the Roundup Ready (R) gene into soybeans in Canada. "Nobody else in Ontario was interested in doing that." First Line was the first company to incorporate the Roundup Ready gene. "That innovation gave them a huge lead in the Roundup Ready market, enabling them to offer the first [genetically engineered soybean] varieties in Canada in 1997. It also made them an attractive partner for a large crop technology company, and in 1998 Monsanto bought a majority stake in First Line." The active minority shareholders make First Line "the most unusual seed company in the world." Hannam sees "a very strong future for the bio economy, growing specialized crops for specialized purposes." There will be many new uses. There is "a long way to go in utilizing the protein of soybeans to its fullest extent," says Hannam.

John Cowan is manager of the Hyland Seed Division of W.G. Thompson and Sons Ltd. He notes that "Hyland was the original IP crop producer in Ontario, producing corn for the Kellogg plant in London," Ontario, Canada, as early as 1977–the same year Hyland began its soybean breeding program.

In the crop year ending September 2000, Ontario soybean growers sold 2.34 million tonnes of soybeans. "Exports were more than 400,000 tonnes. While the definition of IP remains vague," Kim Cooper, marketing manager of the Ontario Soybean Board, says that, "strictly speaking, IP soybeans represent about 40 per cent" of the exports. Peter Hannam, president of First Line Seeds, thinks that about 75% of this year's crop will be "sold by variety."

10924. Morinaga Nutritional Foods, Inc. 2001. Get rich. Quick (With Mori-Nu Creamy Soups made with organic soy) (Ad). *Natural Foods Merchandiser.* Nov. p. 13.
• ***Summary:*** This full-page color ad shows a four flavors of Mori-Nu soups (butternut squash, corn, tomato, garden pea) in two sizes (1 quart and 11 oz). "Just heat and serve for 4 to 6 grams of soy protein per serving."

This ad also appeared in the Jan. 2002 (p. 21) issue. Address: 2050 West 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638 (NOW TOFU).

10925. Ashiuchi, M.; Kamei, T.; Baek, D.H.; Shin, S.Y.; Sung, M.H.; Soda, K.; Yagi, T.; Misono, H. 2001. Isolation of *Bacillus subtilis* (chungkookjang), a poly-gamma-glutamate producer with high genetic competence. *Applied Microbiology and Biotechnology* 57(5-6):764-69. Dec. [Eng]*
• ***Summary:*** Chungkookjang (also spelled chung-kook-jang) is a traditional Korean seasoning, fermented with *Bacillus subtilus* [the natto bacterium]. A bacterium with high poly-gamma-glutamate (PGA) productivity was isolated from this fermented food. Address: Dep. of Bioresources Science, Kochi Univ., Nankoku, Japan.

10926. *Canadian Soybean Bulletin* (*CSEA, Chatham, Ontario, Canada*). 2001. New food grade soybean cultivars developed at Harrow. Fall. p. 2.
• ***Summary:*** New varieties developed at the GPCRC (Greenhouse and Processing Crops Research Centre) include AC Hime, AC Vin-Pro, AC X790P. Canada's exports of food grade soybeans to Japan have increased dramatically from 36,000 tonnes in 1995 to 75,000 tonnes in 1998, to 175,000 tonnes in 2000. Address: Canadian Soybean Export Assoc., P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

10927. Ohara, M.; Lu, H.; Shiraki, K.; Ishimura, Y.; Uesaka, T.; Katoh, O.; Watanabe, H. 2001. Radioprotective effects of miso (fermented soy bean paste) against radiation in B6C3F1 mice: increased small intestinal crypt survival, crypt lengths and prolongation of average time to death. *Hiroshima J. of Medical Sciences* 50(4):83-86. Dec. *

• ***Summary:*** Miso at three different stages of fermentation (short, medium, and long-term) was mixed in a modified-fat diet (MF diet) into biscuits at 10% and was fed to the rats 1 week before irradiation. Survival of rats fed the long-term fermented miso was significantly longer compared with rats fed the short-term fermented miso and MF cases after a specified dose (8 gray) of gamma ray radiation at the rate of 2 gray per minute. Rats in all three miso groups lived significantly longer. At doses of 10-12 gray and a dose rate that was twice as high (4 gray per minute), the treatment with the long-term fermented miso significantly increased crypt survival. Also the protective influence against irradiation in terms of crypt lengths in the long-term fermented miso group was significantly greater than in the short-term or medium-term fermented miso and MF diet groups. Thus, prolonged fermentation appears to be very important for protection against radiation effects.

Note: Michio Kushi, a macrobiotic teacher in Boston, Massachusetts, has often said that long-fermented miso has more healing power than short-term miso.

10928. Halpern, Jack. 2001. The Kodansha kanji learner's dictionary. Tokyo, New York: Kodansha International. *

10929. Kiuchi, Kan. 2001. Miso and natto. *Food Culture* (*Kikkoman Inst. for International Food Culture, Noda, Japan*) No. 3. p. 7-10. http://kiifc.kikkoman.co.jp. [6 ref. Eng]

• ***Summary:*** This article makes several statements that, to us, seem very surprising: (1) "Both *miso* (soybean paste) and *natto* (fermented soybeans) are said to have originated in China, but once introduced into Japan they inspired the development of a variety of unique local soybean based products" (p. 7).

Note 1. We believe that *itohiki-natto,* whose main fermentation organism is *Bacillus subtilis* and which is unsalted, originated in Japan, and that *douchi* (fermented black soybeans), whose main fermentation organism is a mold and which is salted, originated in China, long before *itohiki-natto* is thought to have originated in Japan.

(2) "Whole soybeans are used to make *natto,* and because only a single variety of *natto* mold is used in the fermentation process, the beans retain the original shape" (p. 7).

Note 2. Natto (i.e., *itohiki-natto*) is not made with a mold; it is made with a bacterium.

(3) *Natto* is thought to have originated in China's Yunnan province, although legend has it that *itohiki-natto* (hereinafter simply called "natto") was invented by accident in Japan's Tohoku region in the eleventh century when boiled beans that were going bad were eaten and found to be rather tasty.

"The two main varieties of *natto* are *itohiki-natto* and *shiokara-natto,* which is also known as *tera-natto* and includes *daitokuji-natto* from Kyoto and *hama-natto* from Hamamatsu. A bean koji is made using koji mold" (p. 9).

Note 3. We believe that the statement *"Natto* is thought to have originated in China's Yunnan province,..." is very confusing, and that confusion is based on the fact that in Japanese, two completely different and unrelated fermented soyfoods are both referred to as "natto." We would say instead: Natto (i.e., *itohiki-natto*) originated in Japan and *douchi* (called *shiokara-natto in Japan*) originated in China. Address: Ph.D., Prof., Dep. of Food Science and Nutrition, Kyoritsu Women's Univ., Japan.

10930. **Product Name:** San-J Tamari Sesame Dressing, Tamari Peanut Dressing.
Manufacturer's Name: San-J International, Inc.
Manufacturer's Address: 2880 Sprouse Dr., Richmond, VA 23231. Phone: 804-226-8333.
Date of Introduction: 2001.
Ingredients: Tamari Sesame: Water, tamari soy sauce (water, soybeans, salt, alcohol), rice vinegar, organic sugar, onion juice (onion juice, salt, natural flavors), sesame oil, ground sesame, arrowroot, whole sesame, white pepper. This product is made in a plant inspected by the Gluten-Free Certification Organization (www.gfco.org).
Wt/Vol., Packaging, Price: 8 fl. oz. (237 ml) glass bottle.
How Stored: Refrigerate after opening.
New Product–Documentation: Digital color image of front and back labels for both dressings sent by Misako Binford of San-J. 2012. May 11. In an attached e-mail she says that these products were first sold in 2001 in a "milk jug type" bottle (which looked like it was designed for sauces) rather than the present "banjo-type" bottle. However the copyright on the back of each label is 2009–indicating that the label design was updated.

10931. Ishige, Naomichi. 2001. The history and culture of Japanese food. London, New York, Bahrain: Kegan Paul. x + 273 p. Illust. Maps. No index. 24 cm. [59 ref. Eng]

• ***Summary:*** This book is crippled by the lack of an index. Moreover, the sources of most of the interesting material in the text are not cited. Otherwise it is very well researched and well written.

Contents: Introduction–The historical framework. Part I: The dietary history of Japan. 1. The prehistoric era: The Paleolithic age, the advent of earthenware, Jômon society and dietary culture. 2. Establishment of a rice-growing society: A crop held in special regard, the dissemination

© Copyright Soyinfo Center 2014

and development of rice, rice cooking, sake brewing, fermented fish and flavourings. 3. The formative period of Japanese dietary culture: Historical setting, the taboo on meat eating, the lack of a dairy industry, annual observances and rites of passage, place settings and table settings, cooking and banquet styles, the roles of the monasteries, the popularization of noodles.

4. The age of change: Historical setting, the diffusion of tea, the impact of the 'Southern Barbarians' (*nanban;* first came the Portuguese and Spaniards, Catholics from Iberia, then the Dutch and English, Protestants from northwest Europe called *kômôjin* {"redheads"} to distinguish them from the Iberians, Saint Francis Xavier, introduction of meat eating {beef} by Catholics by 1557 in the town of Oita in northwest Kyushu, expansion of meat eating by non-Christians in Nagasaki and Hirado island {northeast Kyushu}, in 1612 Christianity and meat eating are prohibited by the Tokugawa shogunate but the Chinese colony in Nagasaki is exempted, Dutch traders are the only Europeans allowed to remain in Japan after the country is closed but they are isolated on a tiny island in Nagasaki harbor and barred from contact with ordinary citizens, dishes with nanban influence include fried tofu patties {called *ganmodoki* in the east of Japan, or *hirôsu* or *hiryôzu* in the west}, tempura, nanban confectionary {such as *kasutera*} is especially popular, introduction of new crops by Europeans {incl. sweet potato, two types of pumpkin squash, cayenne pepper, kidney beans, peanuts}), formation of a new style (banquet-style meals {*honzen ryôri*}, *kaiseki*), change in the frequency of meals (from two to three).

Note 1. This is the earliest (and only) English-language document seen (April 2013) that contains the word *hirôso;* it refers to Kyoto-style deep-fried tofu balls.

5. The maturing of traditional Japanese cuisine: Historical setting town and country, the spread of soy sauce, the emergence of the restaurant, snack shops, books on cooking and restaurants, the Ainu, the Ryukyu Islanders. 6. Changes in the modern age: Historical setting, the resumption of meat eating, milk and dairy products, entry of foreign foods, zenith and nadir, new meal patterns, integration of foreign foods–a model.

Part II: The dietary culture of the Japanese. 7. At the table: Gohan–framework of the meal, the rise of the table, the tabletop as landscape, chopsticks and table manners, etiquette–as you like it. 8. In the kitchen: The secularization of fire and water, from wood fire to electric rice cooker, the knife–a sword in the kitchen, restaurants–the public kitchen. 9. On the menu: Soup and umami flavouring. Sashimi–Cuisine that isn't cooked, Sushi–from preserved food to fast food, sukiyaki and nabemono, tofu and nattô–meat for vegetarians, vegetarian temple food, tempura and oil, noodles and regional tastes, pickled and preserved seafood, mochi, confectionery and tea, the dynamics of sake and tea.

Teriyaki developed during the Edo / Tokugawa period (1600-1867) (p. 116; However no citation for the source of this information is given).

During the Edo period, most commoners living in Japan's cities ate plain and repetitive meals. In Edo (later Tokyo) most had a breakfast of rice, miso soup, and pickles; for lunch and dinner they ate approximately the same thing "with the addition of one dish of simmered vegetables or tofu, or simmered or grilled fish" (p. 113). Address: National Museum of Ethnology, Osaka, Japan.

10932. Ishige, Naomichi. 2001. The spread of soy sauce [and miso]. In: N. Ishige. 2001. The History and Culture of Japanese Food. London, New York, Bahrain: Kegan Paul. x + 273 p. See p. 113-17. [59 ref. Eng]

• ***Summary:*** Soy sauce and miso are both made by mixing soybeans and miso with a fermenting agent named koji (see Section 2.4, p. 32-35). Prototypes of these fermented soyfoods were probably developed in China during the Han dynasty (c. 200 BCE to CE 200). The earliest record of their use in Japan appears in the Taihô Code of 701. The fermented soyfoods mentioned in those laws are: (1) Miso. (2) *Kuki,* which was similar to today's Daitokuji Natto and Hamanatto, in which the beans retain their shape and solidity in the final product. (3) *Hishio,* "a semi-liquid paste or gruel fermented from a mixture of soybean, grains, and sake."

At least 90% of the miso consumed in Japanese households today is used in miso soup, which most people consume once a day. Miso soup is known to have existed as early as the 10th century, when it was mentioned in the *Engi Shiki.* However "during medieval times it was not part of the meals of the common people. This may have been because miso was considered a luxury and hence not made in quantities sufficient for daily cooking. Instead small amounts were typically consumed by eating a side dish of miso or of vegetables pickled with miso." Small amounts were also used as a flavoring. Regional varieties began to develop. In order to improve the appearance of food or to impart a lighter flavor, "miso and water (or a cooked mixture of miso and water) would be placed in a cloth bag and the liquid that trickled out would be collected. This refined miso solution was used in preparing elegant meals for the upper class, and later was replaced by soy sauce."

As noted above, the prototype of soy sauce was *hishio,* a semi-liquid flavoring, which was probably used in Japan as early as the 8th century (Fukuo 1979). Yet it "was probably too expensive to come into general use, for it is harder to make than miso and has a more refined flavour."

Soy sauce (shoyu) is mentioned in several 16th century documents. By the 2nd half of this century shoyu factories had been established in the Osaka-Kyoto (Kansai) area, "and some trading ships were used exclusively to distribute the product to other regions. It was as a factory-made product that soy sauce became popular, initially coming into use at daily meals among the townspeople whose lives

© Copyright Soyinfo Center 2014

depended upon the commodity economy." As Edo (today's Tokyo) grew into a major city, its residents consumed large quantities of soy sauce made in the Osaka-Kyoto (Kansai) area.

Then in the late 1600s, "soy sauce aimed at the Edo market began to be made locally, in the districts that are now called Chôshi and Noda in Chiba Prefecture." In contrast to the lighter-colored and saltier Kansai product (*usukuchi*), the plants around Edo / Tokyo used a larger proportion of wheat to make a rich, fragrant soy sauce called *koikuchi.* This suited the townspeople of Edo well and by the late 1700s, it had taken over the metropolitan market.

In the cities, by the 1700s, "soy sauce had become the principal seasoning for food and miso had come to be used almost exclusively for soup. But in remote rural districts, miso remained in use as a seasoning for daily meals until the early 20th century, while soy sauce, purchased in small quantities from local factories, was eaten [consumed] only at festival meals or when serving special guests. Many farm families made their own miso until the 1950s, whereas those families that made only soy sauce were always a rarity.

"Nothing is wasted in making miso, because all of the ingredients are turned into the paste which is eaten. Making soy sauce not only involves more work but also leaves a substantial amount of inedible lees after the liquid is strained [and the lees pressed]. The lower rate of yield from the raw materials made soy sauce a luxury item which the peasantry could not easily produce at home, and so miso remained the everyday seasoning among the rural population. What soy sauce was used was factory made. Besides the local sake brewery, every area had a small soy sauce brewery until the early 20th century, when major firms with large factories and national distribution networks created an oligopoly market for soy sauce and it came into regular use even in poor rural households. Thus the main flavouring of Japanese cooking shifted from miso to soy sauce over a period of more than two centuries, as urban taste gradually diffused through the countryside."

"Direct use of salt is much less common in Japan than in the West, for much salt is ingested indirectly from soy sauce and miso. A 1980 survey by the Ministry of Health and Welfare determined that soy sauce and miso supplied 27% and 16% respectively of the average daily salt intake, while salt sprinkled on food in the kitchen or at the table accounted for only 13%. In addition to saltiness, of course, soy sauce and miso add other flavour and fragrance to food. Their tastiness results notably from their high content of glutamic acid (discussed in Chapter 2) and their complex flavour structures contain tart and sweet elements as well as alcohol."

"Soy sauce, being a liquid, is easier to use than miso." Its greater convenience and wider range of use are key factors in its growth in popularity, which was "also connected with a change in the style of easting raw fish" (*namasu* or *sashimi*). "Sashimi now means fish that has been sliced and arranged on a plate and served with a smaller plate of soy sauce,... With this style, skill at cutting and arranging the slices in a pleasing becomes a point of pride with the chef. Besides *sashimi,* such popular and internationally known dishes as sushi (*nigiri-zushi*), tempura and teriyaki, which all developed during the Edo period [1600-1867], are also meant to be eaten with soy sauce."

The "cooks of the Edo period were not very eager to develop new tastes. Their culinary ideal was... rather to present the natural taste of the food itself in as pure a way as possible." Soy sauce helped them fulfill this ideal. "Cooking which concentrates on avoiding creativity and complexity in taste, and which seeks to select the finest ingredients and to slice and serve them with the most beautiful technique, is what developed among the chefs of the high-class restaurants during the Edo period." Address: National Museum of Ethnology, Osaka, Japan.

• ***Summary:*** "Japan had the highest rate of literacy in the world during the Edo period [1600-1867]. Many common people could read and write, and a print culture flourished as great numbers of books were printed by woodblock. Cookbooks were among them, and for the first time it became common for cooking techniques to spread by means other than word of mouth and actual example. Thus knowledge about refined cooking could spread beyond a particular region or class, and travel quickly to the countryside and the population at large. More than 120 different block-printed cookbooks from the Edo period, and more than twice that number of hand-copied cookbooks are extant [Hirata 1985: 537].

"A hand-copied work from the end of the thirteenth century, the *Chûji ruiki* (Kitchenry Cyclopedia), is the oldest known Japanese document recording practical cooking techniques. The ten or so chief surviving examples of cookbooks written between then and the seventeenth century detail the foods, serving etiquette and table manners of ceremonial banquets for the nobility and samurai. Their authors were either members or associates of the schools of cooks who served the court and the Muromachi shoguns, and the works are evidently intended for those who were qualified to attend such banquets and those who cooked for them. In short, the cookbooks of the medieval age had extremely limited circulation.

"The first modern cookbook was titled *Ryôri monogatari* (Accounts of Cooking), and went through many editions. The oldest surviving specimen was printed in 1643, but it is very likely that it was originally published about 1600. Its unknown author wrote from an independent standpoint

© Copyright Soyinfo Center 2014

that was not allied with any particular cooking school. Eschewing the authoritarian, formalistic descriptions of trivial and antiquated procedures that had characterized previous cookbooks, the *Ryôri monogatari* presents practical knowledge in a thoroughly pragmatic spirit. It contains 20 sections which fall into two main parts, the first containing the names of many different dishes listed by ingredient, and the second providing general descriptions of the techniques for preparing stewed foods, grilled foods etc. along with recipes for typical dishes. Under that arrangement there are many dishes that are mentioned by name without instructions for their preparation, indicating that the book was not written with amateurs in mind, but rather for those with a fair degree of cooking knowledge, mainly professional cooks [Harada 1989: 17-29].

"From the seventeenth century, books of practical explanations of cooking were published one after another. They are organized in various ways, by ingredient with lists of recipes; or by cooking technique with lists of ingredients; or by menu with instructions for preparing each item. What most of them have in common is that they are not mere collections of recipes, but attempts to explain cooking techniques in a systematic fashion.

"In addition to cookbooks, various scholarly works concerning foodstuffs were published. These were written mainly by specialists in the field of traditional Oriental natural science (*honzôgaku*), in which Chinese medicine and pharmacology played strong roles. They were concerned with the effects of different foods on the body and with the choice of foods for maintaining health and healing illness. The outstanding work of this genre is the *Honchô shokkan*, written by Hitomi Hitsudai and published posthumously in 1697. It is a 12-volume, illustrated encyclopaedia of a tremendous number of animal and plant substances, with explanations of processing methods, cooking techniques, pharmacological characteristics, and folklore.

"The number of printed cookbooks increased from the 1760s, the same time that restaurants began to proliferate in the cities. Previous cookbooks had strong colouration as insider's manuals, written by cooks and aimed at readers who were cooks. From the latter part of the eighteenth century many works appeared which were aimed at a general audience, and a significant number were written not by specialists but by intellectuals with literary skill. This new genre went beyond the bounds of practical manuals. Conceived primarily as interesting reading matter, the books tended to be in literary prose style with quotations from other books or descriptions of strange foods, and were lavishly illustrated [Harada 1989: 104-31]. These `fun-to-read cookbooks' may well have circulated among the common folk via the lending libraries which developed during the period.

"An influential example is *Tôfu hyakuchin* (A Hundred Tofu Curiosities), originally published in Osaka in 1782. It presents a hundred ways to prepare tofu along with illustrations, sketches of popular restaurants specializing in tofu cooking, relevant excerpts from Chinese and Japanese literary works, and citations concerning the history of tofu. The population was quite familiar with tofu, and this book allowed everyone to satisfy any intellectual interest they may have had in the food. The pseudonymous author is suspected to be a sinologist who was active in Osaka at the time. The book won enormous popularity and within the year a second volume presenting another hundred ways of preparing tofu was published and both volumes were available in Kyoto and Edo bookshops as well. This success promptly motivated a bookseller in Kyoto to issue a series of `hundred recipes` books on such foods as eggs and porgy (in landlocked Kyoto, freshwater carp was long rated the tastiest fish, but saltwater porgy [sea bream] displaced it during the Edo period). This cookbooks came to be designed by publishers as potential bestsellers.

"Restaurant guides constituted another category of food-related publications. With the proliferation of restaurants in the three main cities, the need arose for information to help in selecting a place to eat... Many of them were broadsheets..." and they appeared "in Japan a century before the first *Guide Michelin* was published in France." Address: National Museum of Ethnology, Osaka, Japan.

10943. Nakamura, Yumiko; Kaihara, A.; Yoshii, K.; Tsumura, Y.; Ishimitsu, S.; Tonogai, Y. 2001. Content and composition of isoflavonoids in mature or immature beans and bean sprouts consumed in Japan. *J. of Health Science* (*Japan*) 47(4):394-406. [26 ref]
• ***Summary:*** Isoflavones comprise a class of organic compounds, often naturally occurring, related to the isoflavonoids. [1] Many act as phytoestrogens in mammals. Some are termed antioxidants because of their ability to trap singlet oxygen. [2] Some isoflavones, in particular soy isoflavones, when studied in populations eating soy protein, have indicated that there is a lower incidence of breast cancer and other common cancers because of its role in influencing sex hormone metabolism and biological activity through intracellular enzymes, protein synthesis, growth factor actions, malignant cell proliferations, differentiation and angiogenesis. [2] Isoflavones are produced almost exclusively by the members of the Fabaceae (i.e., *Leguminosae,* or bean) family. (Source: Wikipedia, at isoflavones, Jan. 2013).

Thirty four samples of mature legumes, 7 samples of immature legumes and 5 of legume sprouts, obtained in Japan, were analysed by HPLC (high-performance liquid chromatography) for contents of total isoflavonoids and 9 individual isoflavonoids.

Mature legumes tested included yellow soybeans, black soybeans, green soybeans, kidney beans, scarlet runner beans, lima beans, butter beans, saltapia beans, peas, adzuki beans, black mappe [*Vigna mungo*], green gram, chick peas, broad beans and peanuts.

Immature legumes included soybeans (edamamé), black soybeans, broad beans, green peas, green pea pods and kidney bean pods. Sprouts were from soybeans, green peas, black mappe and green gram.

Individual isoflavonoids [isoflavones] tested were daidzein, glycitein, genistein, formononetin, biochanin A, coumestrol, daidzin, glycitin and genistin.

Content and composition of isoflavonoids varied greatly between soybean sprouts, immature soybeans and mature beans of the same type but from a different source. Isoflavonoid content was highest in mature soybeans, but the relative proportions of isoflavonoids present varied at each stage of growth. In samples other than soybeans, highest isoflavonoid content was found in mature chick peas, but this value was much lower than that in mature soybeans. It was concluded that the contribution of legumes other than soybeans to daily intake of isoflavonoids in a typical Japanese diet is negligible.

Table 5 gives the "Compositions of isoflavonoids" and the total. For whole dry mature soybeans of various colors and from various countries (11 samples), the total content ranges from 1.3 to 13.0.

For immature soybeans (2 samples), the total ranges from10.3 to 12.0.

For soybean sprouts (2 samples) the total ranges from 16.2 to 34.3, compared with 27.6 for black mappe sprout (1 sample) and 27.7 for green gram sprout. Address: Div. of Food Chemistry, National Inst. of Health Sciences, 1 -1-43 Hoenzaka, Chuo-ku, Osaka 540-0006, Japan.

• ***Summary:*** A remarkable book! Written by a team of internationally renowned experts, it is based on the landmark, scientifically documented 25-year Okinawa Centenarian Study. Okinawans have the world's longest

© Copyright Soyinfo Center 2014

disability-free life expectancy. Their occurrence of heart disease is only one fifth that of Americans. Their rate of breast, ovarian, and prostate cancer is less than one quarter of American levels. And the number of centenarians per 100,000 is six times that of the USA. This is a book with plenty of solid, practical scientific advice.

If you have ever questioned the healthfulness of traditional soyfoods, read Chapter 4, "Eating the Okinawa way" (p. 114-45). A table (p. 116) lists "The top fifteen Okinawan healing foods." No. 1 is "Okinawan tofu." Its main active components are saponins and flavonoids (mostly isoflavones). No. 2 is Miso, which has the same active ingredients.

Step 3 in eating the Okinawan way is to "Eat three calcium foods daily." Calcium-fortified tofu is given as the single best source (p. 122)–containing 46% more usable calcium than the same volume of calcium-fortified orange juice! Calcium fortified soy milk is the 3rd best source. "Dairy products are also excellent sources of calcium, but they are best consumed in moderation–there is little support from interventional studies that they actually help reduce risk for osteoporosis [8]. In fact, osteoporosis rates are lower in societies where people eat few, if any, dairy products. This may be because they are high-protein foods, and *too much protein tends to leach calcium out of bones.* For every gram of protein that you eat, you lose 1 to 2 mg of calcium in your urine [9]. For postmenopausal women your protein to calcium ratio (how much protein you eat versus how much calcium) is actually a stronger predictor of your risk for bone fracture than your calcium. intake alone [10]. If you maintain a high-protein diet for an extended period with marginal calcium intake, you could be increasing your risk for osteoporotic fracture.

"The type of saturated fat in dairy products is also the worst offender for making cholesterol in the body."

Step 4 in eating the Okinawan way is to "Eat three flavonoid foods daily. Flavonoids–ubiquitous plant compounds found in large quantities in soy products and some other legumes (beans), and to a lesser extent in tea, onions, and apples–are powerful antioxidants. They provide a weak form of estrogen where the body needs it and block the body's own estrogen in locations where estrogen may induce cancer... two plants–soybeans and flaxseed–have pharmacological levels of these compounds, levels that exceed those in other plants by as much as 1,000 times [14]." "Soy has just been allowed the unprecedented honor of an official U.S. Food and Drug Administration (FDA) health claim [20]... Our prediction is that as the evidence mounts for soy consumption reducing the risks for breast cancer, prostate cancer, and possibly other cancers such as colon cancer, other USDA-approved health claims will follow."

"Tips for increasing your flavonoid intake: Learn about soy products." On pages 126-28 are substantial, accurate descriptions of the following soy products: Tofu, silken tofu, tempeh, miso, soy milk, soy flour, textured soy protein (TSP) or texturized vegetable protein (TVP), edamame, soy nuts.

The praise for soyfoods continues in the next chapter, "Okinawa's healing herbs and foods." There are two pages about Okinawa firm tofu (p. 158-59). Address: 1. 10948. Kuzmic, Vlatka. 2002. Re: Brief history of Annapurna, and work with tofu and seitan in Croatia. Letter (fax) to William Shurtleff at Soyfoods Center, Jan. 11. Followed by letter (e-mail) of 11 July 2006. 1 p. Typed, on letterhead. Followed by a brief interview later the same day. • ***Summary:*** 1997 March–Vlatka and Miroslav "Miro" Kuzmic (later her husband) started cooking and delivering vegetarian meals to some friends and acquaintances. In order to improve the quality of the meals, they became interested in macrobiotics and tofu.

1998 Feb.–They tried to make tofu, for the first time, from soy flour as described in the book *Super Soy,* by Ruth Winter. They were not successful. So they started reading *The Great Macrobiotic Cookbook,* by Aveline Kushi (in Croatian) and studying a recipe for tofu in that book. At about the same time they asked Suzana Ciceli, a macrobiotic friend, to help them improve their tofu-making process. She gave them her recipe, but after trying it a few times, they made big changes. Suzana suggested that they grind the soybeans, cook the slurry, then press the hot soymilk from the okara. But they decided to do it in the traditional Chinese way, grinding the soybeans, pressing the cold soymilk from the okara, then cooking only the soymilk. The results–firm, Chinese-style tofu–were excellent. At first the tofu was flat and round. They discussed their achievements with their friend Gordana Sibila. She supported them and convinced them to sell tofu and seitan to their friends.

At that time Maca, and his vegetarian restaurant *Vegeterra,* became interested in tofu. But of course they wanted nice square tofu. At first they had a tofu forming box made from a plastic box that could contain about 500 gm of tofu. But this wasn't a very good idea, so their fathers came

© Copyright Soyinfo Center 2014

to help them. Their next forming box was made of stainless steel; it had three compartments that each held about 0.8 kg of tofu, and it had removable sides so that when the tofu was ready they would just remove the sides and have nice squares. They made a mechanical screw press (rather than using a weight) to press the tofu.

They could produce about 5 kg/day of tofu in their small kitchen located at Poljanicki Prilaz 12, 10000 Zagreb, Croatia.

1998 May–They started selling their tofu and seitan to their friends, then to their friends' friends, and soon to many other people they didn't even know. At the same time they began using the business name "Annapurna" with the tag line *"zdrava hrana.* Annapurna is the name of the second highest peak in the Himalayas–but unlike the others, which are covered with snow, it is covered with greenery and flowers. Annapurna is also an Indian goddess of food and wealth (*anna* means "food" and *purna* means "wealth"); *"zdrava hrana* means "healthy food." Their first three products, each introduced in May 1998, were Fresh Tofu, Marinated Tofu, and Fresh Seitan. Marinated Seitan was introduced a month later, and Smoked Tofu in Sept. 1998. The ingredients in their first commercial tofu were soybeans (non-organic, grown in Croatia near the city of Kutina) and refined nigari (in small flakes; they bought it in Croatia at a shop named Biovega).

At the start, they bought a new vacuum packaging machine from Multivac, the best European manufacturer. It packs two bags at a time; you just have to close the lid. After the bag is sealed, the lid opens automatically. Eventually they stopped cooking meals and devoted themselves totally to making tofu and seitan–but still in their small home kitchen. They developed some Croatian-language flyers which they used to help sell their tofu.

1999 April–They start making smoked tofu.

1999 Dec.–They decided to start their tofu and seitan making business officially.

2000 Jan.–They introduced Tofu Mayonnaise.

2000 May–They rented a workplace at Petrinjska 2, bought the necessary equipment, and moved out of their home kitchen. Now their business became serious and really started to grow.

2001 Jan.–They moved their business into a larger space at Zumberacka 42.

2001 Feb.–They began to sell their tofu in health food stores.

2001 Feb. 12–Vlatka and Miroslav are married. She writes: "I think Miroslav deserves most of the credit for our business. Most of the ideas were his. It was his idea that we should start making tofu in the first place, and he has always been very enthusiastic about making tofu."

2001 March–They start using natural (unrefined) nigari to coagulate their tofu; they buy it from Austria.

2001 Sept.–They introduce Tofu with Vegetables, Tofu Spread with Garlic, and Tofu Spread with Sweet Dry Red Peppers.

2001 Oct.–They start using organically grown, non-GE (not genetically engineered) soybeans, which are now grown near Pozega, a small town in eastern Croatia, by Zeljko Mavrovic, a very famous Croatian ex-boxer and world champion.

2001 Dec.–They move their business into a larger rented space at Nehajska 42, 10000 Zagreb, Croatia. On Dec. 18 they sold the first tofu made at that location.

2002 Jan.–Today they make about 700 kg/month of tofu, including Fresh Tofu, Marinated Tofu, Smoked Tofu, Tofu with Vegetables, Tofu Mayonnaise, and Tofu Spread (With Garlic and Parsley, or With Red Peppers). They use organically-grown, GMO free soybeans.

But the demand for tofu in Croatia is much larger than they expected. Their equipment is too slow to keep up with the demand, which is increasing every day. Their biggest problems are grinding the beans and draining the okara. Address: Nehajska 42, 10000 Zagreb, Croatia. Phone: +385 1-3639-092.

10949. Carter, Jeffrey. 2002. More research dollars needed to breed export soybeans: There's less focus on producing new lines of foodgrade soybeans than on herbicide resistant beans. *Ontario Farmer* (*Canada*) 34(47):16. Jan. 15.
• ***Summary:*** This was the message of soybean exporter Michael Loh to farmers at the Southwest Agricultural Conference at Ridgetown. Loh emphasized that the Ontario soybean industry must respond to the needs of its customers. "My vision for southwestern Ontario and Canada is for us to have the image as being the place to go for the best foodgrade soybeans."

Roundup Ready varieties tend to produce a smaller sized bean, yet many Japanese customers want larger-seeded varieties–according to Morris Sagriff, a Lambton County farmer. A photo shows Michael Loh.

10950. Nihon Kokugo Daijiten [Shogakukan Unabridged Dictionary of the Japanese Language. 2nd ed. 14 vols.]. 2002. Tokyo: Shogakukan, Inc. Illust. 26 cm. [Jap]*
• ***Summary:*** The English title (above) is that given by JapanKnowledge, which says of it: This work "has been edited over a period of four decades, with the cooperation of over 3,000 authorities in fields such as history, Buddhism, Chinese writing, folklore, economics, law, zoology and botany." In Japanese, it is abbreviated as Nikkoku. The 1st edition was published in 1972.

Like the *Oxford English Dictionary,* this work is based on historical principles, and each entry word contains a citation for the earliest know document containing that word. Address: Japan.

10951. Huang, H.T. (Hsing-Tsung). 2002. Takamine Jokichi

© Copyright Soyinfo Center 2014

and the transmission of ancient Chinese enzyme technology to the West. In: Alan K.L. Chan, Gregory K. Clancey and Hui-Chieh Loy, eds. 2002. Historical Perspectives on East Asian Science, Technology and Medicine. Singapore: World Scientific Publishing Co. See p. 525-32.

• ***Summary:*** "When we talk of technology transfer in the last hundred years, we tend to think of the traffic as flowing entirely from West to East. Actually, even in the 20th century significant bits of Chinese or East Asian technology were also being transmitted to America and Europe. Of these the most influential and yet least appreciated is the use of microbial enzymes in food processing and related industries."

Most of the enzymes used today are derived from 3 genera of moulds, namely *Aspergillus, Rhizopus* and *Mucor.* In the early 1950s Dr. Huang gained a working knowledge of the enzyme industry in the U.S. when he worked as a research chemist at the Enzyme Research Department of Rohm and Haas Co. (Philadelphia, Pennsylvania).

Table 1 (p. 526) shows microbial enzymes used in food processing in 2002, and Table 2 (p. 527) shows those used in food processing in 1951. Takamine Laboratories (Clifton, New Jersey) made and marketed Takadiastase, a digestive aid. Wallerstein & Co. (New York) produced the enzyme papain for chillproofing of beer. Rohm & Haas pioneered the application of pancreatic enzymes for the bating of hides. All 3 companies were founded at about the turn of the 19th to 20th centuries.

Jokichi Takamine's innovation was based on koji (Chinese: *qu* [pronounced ch'ü]; the Japanese word is written with the ancient Chinese character), which has been used in Japan for centuries to make saké (and other alcoholic drinks), soy sauce, and miso (both soy condiments). "Modern microbiological studies show that the principal organisms in *qu* are grain molds of the genera *Aspergillus, Rhizopus,* and *Mucor.*

"The origin of *qu* is obscure. It was a known entity in the early Zhou (1000 B.C.), but it could have been in existence much earlier, perhaps even before the legendary Xia dynasty (2000 B.C.). According to the *Jiu Gao* (Wine Edict), c. 300 A.D., by Jiang Tong, *qu* was first obtained when steamed rice was inadvertently left in the open and became mouldy [endnote 3 gives the exact Chinese characters]. This view is supported by two pieces of evidence. First, rice was already cultivated extensively and pottery steamers were known around 6000 B.C. in the Hemudu culture near Hangzhou [W.-G. Hang-chou, or Hang-chow, capital of Zhejiang province in eastern China]. Second, this is precisely the way a rudimentary *qu* was prepared and used in making wine in the 1950s by the aborigines in Taiwan. Thus the earliest *qu* probably had rice as the growth substrate. Rice is still the principal substrate in South China today. But during the Zhou [1045-256 B.C.], as barley and wheat (which were considered inferior grains) grew in importance as cultivated crops in North China, they were adopted as the preferred substrates for making *qu.* Endnote 4. For further details on the origin of *qu,* see H.T. Huang's book titled *Fermentations and Food Science* in the *Science and Civilization in China* series.

"The art of using *qu* or koji to make fermented drinks, i.e. *sake,* was brought to Japan from South China, probably towards the end of the Han dynasty (Shinoda Osamu 1967, p. 551-74). Their employment in the making of fermented soy condiments, such as *Jiang,* arrived later during the Tang (618-907 A.D.), accompanied by the famous agricultural treatise *Qimin Yaoshu* (Important Arts of the People's Welfare) of 544 A.D. But the Japanese soon developed their own versions of soy condiments such as miso which is quite unlike the fermented *jiang* (soy paste) of China." Modern microbiology has shown that the principal mould in koji is *Aspergillus oryzae.*

"The technology of *qu* was also transmitted, presumably by Chinese immigrants in more recent centuries, to Indonesia. It is called *raggi* [*ragi*] by the natives or *peh-khak* ('white qu') by the Chinese settlers. In the 1890s Dutch scientists determined that the fungi in *raggi* were species of *Mucor* and *Rhizopus.* They tried to exploit the amylolytic activity of these fungi for converting grains to alcohol commercially in Seclan [Seclin], France, and Antwerp, Belgium, but their attempts were unsuccessful."

These early ventures might have remained forgotten were it not for the work Jokichi Takamine in the USA. There follows a summary of Takamine's life to 1890. In his travels in the U.S. Takamine learned how the brewers and distillers there "used malt to hydrolyze grains into sugar so they could be fermented into alcohol. He realized that Japanese *koji* was much more active than malt for the hydrolysis of grains. He studied the production of 'diastase' (amylolytic [starch splitting] enzymes) by the *koji* mold *Aspergillus oryzae* when he returned to Japan. The results convinced him that replacing malt with *koji* enzymes would be a great improvement in the manufacture of whiskey." In 1890, with the help of his wife's parents, Takamine made the fateful decision to move his family to the USA and to start the Takamine Ferment Company in Peoria, Illinois, to produce diastase for a local distillery company. The initial results were very promising.

"However, Takamine's apparent success presented an unwelcome threat to the malt producers in Peoria. They incited local xenophobia [fear and hatred of strangers or foreigners or of anything that is strange or foreign]. One night in 1894 the distillery in which his experiments were being conducted was burned down." Note 1. There is no evidence that he ever sold any of his purified enzymes in Peoria. [Three years later] "He moved his family to Chicago, where he continued to promote his diastase preparation. Fortunately, by this time, he had obtained a patent (U.S. 525,820) on the use of his diastase as a cure for dyspepsia."

© Copyright Soyinfo Center 2014

Parke, Davis & Co. (Michigan) agreed to make and market the product under the brand name Takadiastase. In 1897 he moved his family and research laboratory to New York City. Address: Goodwin House, 4800 Fillmore Ave., Alexandria, Virginia 22311.

10952. Kikkoman International Inc. 2002. Se habla soy sauce! (Ad). *Food Product Design* 11(10):77. Jan.
• ***Summary:*** A large color photo shows a tortilla wrapped around a mixture of meat and vegetables on a plate. On the tortilla is branded: "Kikkoman naturally brewed soy sauce." The text reads: "There's big news in flavor enhancement, amigo. From fajitas to fish sticks, manufacturers are discovering a surprising natural flavor enhancement solution: Kikkoman Soy Sauce. That's because Kikkoman's naturally occurring amino acids actually intensify the flavors of other ingredients. Naturally brewed and aged for full flavor, Kikkoman is available in every form for every function, from liquid to dry, reduced sodium to preservative free and even clear–the widest selection of any company in the world. So when you think soy sauce, don't just think Asian. Because no matter what cuisine you're working on, Kikkoman speaks your language. Naturally." Address: San Francisco, California. Phone: 415-956-7750.

10953. Grimes, William. 2002. Diner's journal. *New York Times.* March 15. p. E43.
• ***Summary:*** This is a review of the Japanese restaurant Kai (822 Madison Ave., at 69th St.). The name refers to kaiseki, the elegant tea ceremony cuisine. "The two main courses include tilefish wrapped in yuba, or soy-milk skin, and accented with mitsuba, a chervil-like herb. The sauce is a seafood broth..."

10954. MicroSoy Corporation. 2002. MicroSoy Flakes. Exceeding expectations (Leaflet). Jefferson, Iowa. 8 panels. Each panel 28 x 21 cm.
• ***Summary:*** See next 2 pages. Leaflet sent by Patricia Smith from Natural Products Expo West at Anaheim. 2002. March. Contents: The key benefits of MicroSoy Flakes. Microsoy Flakes product types. Microsoy Flakes unique fat reduction capabilities. Controlling lipoxygenase and "beany" flavor in soy foods and beverages. Verification of Microsoy Flakes quality and safety. Microsoy Flakes: What you should know about processing. The top ten features of Microsoy Flakes. About our company.

"MicroSoy Corporation, formerly known as MYCAL Corporation of America, was formed in 1984. MYCAL Corporation of America was a wholly owned subsidiary of the MYCAL Group based in Osaka, Japan. The company was acquired in March 2002 by a group of U.S. investors led by Itaru (Terry) Tanaka former General Manager of MYCAL Corporation of America.

"MicroSoy Corporation produces MicroSoy Flakes within the heart of the largest and finest soybean-producing region of the world, Jefferson, Iowa. The company has been producing its proprietary MicroSoy Flakes in Jefferson since 1991, providing the unique soy ingredient for nutritious, wholesome and great-tasting food products to millions of people, primarily in Japan. With the growing popularity of soymilk, soy beverages, tofu, soy yogurt, soy cheeses, soy frozen desserts (ice creams) and other soy foods in the western hemisphere, MicroSoy is focusing on servicing and growing with the expanding global demand." Address: 300 East MicroSoy Drive, Jefferson, Iowa 50129. Phone: 515-386-2100.

10955. Asimov, Eric. 2002. $25 and under: Japanese noodles make you forget sushi. *New York Times.* April 10. p. F10.
• ***Summary:*** This is a review of the Japanese restaurant Onyi (330 Avenue of the Americas, near West Forth St., Greenwich Village–in downtown {southern} Manhattan in New York City). Menchanko means foods mixed together in one huge bowl. "The oyster Menchanko ($12.50), a miso broth with ramen noodles, is thick with fat, tender oysters, chunks of tofu, vegetables and billowy sheets of soy-milk skin [yuba] that look like handkerchiefs but are soft as bean curd."

"The already spicy miso Menchanko ($9.75) is... crammed with shrimp. chicken and balls of salmon along with tofu, soy-milk skin and vegetables."

After 5 p.m. you can supplement noodle dishes with "simple edamame ($3.75), boiled green soybeans that are the Japanese equivalent of salted peanuts, to complex yuba chakin ($6.75), crisp tofu [sic, yuba] purses stuffed with vegetables and crab meat."

Note: The word "Oni" means devil in Japanese.

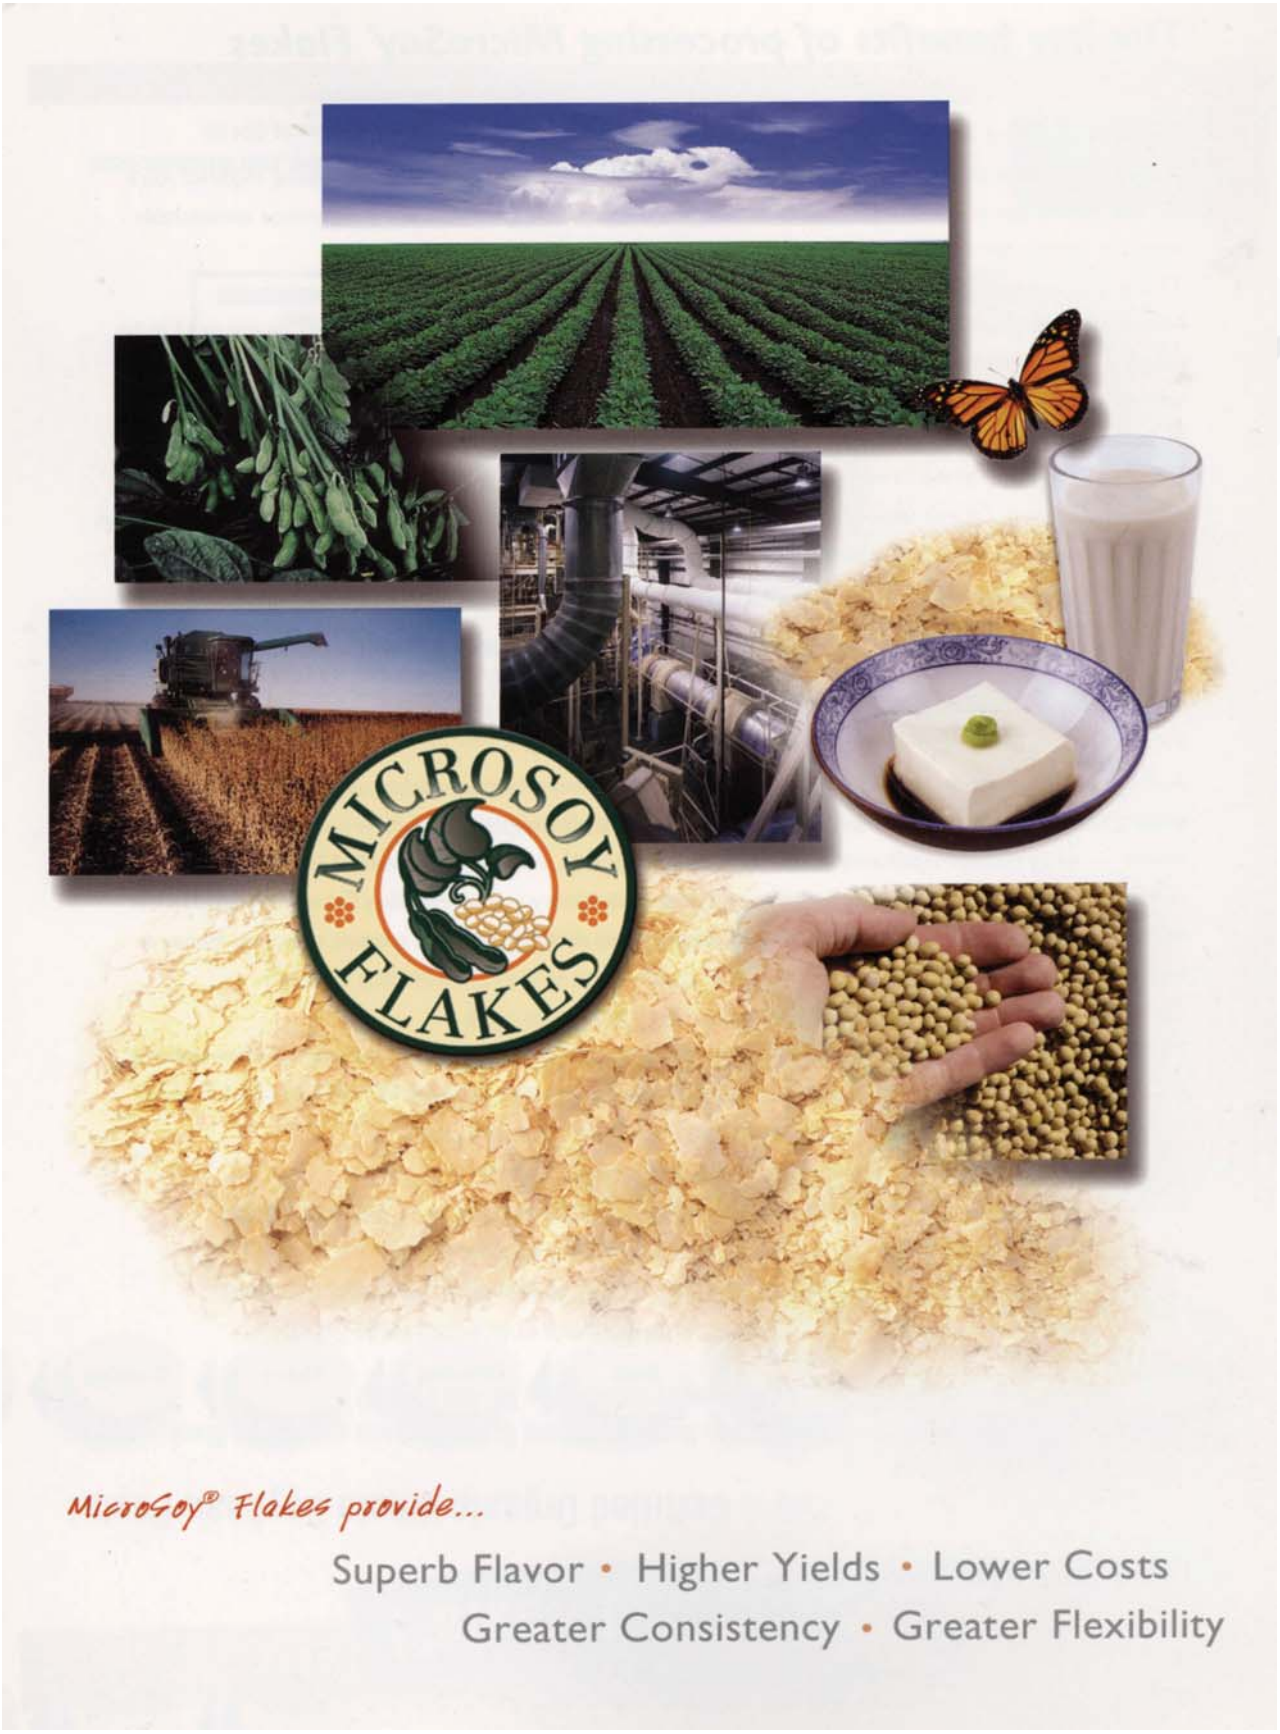
10956. Vaidya, Achutananda. 2002. Re: Answers to questions on soyfoods in Nepal. Letter to William Shurtleff at Soyfoods Center, April 12. 3 p.
• ***Summary:*** On 19 Jan. 1993 William Shurtleff, founder of Soyfoods Center, wrote Mr. Vaidya a series of questions based Mr. Vaidya's last letter. Mr. Vaidya and his uncle seem to be the first people to make tofu in Nepal, so details of their work are very interesting from an historical point of view.

"First, questions about the work of your uncle, Raghubir Baidya. (1) Did he ever sell any of his tofu? Even a few cakes? He Must have sold a few cakes if he tried for several months?" Answer: "First he made Tofu for his own consumption only." He did not sell that tofu. At that time none of the Nepali people understood what tofu was, so he had no idea of selling it.

(2) "At what address did he make his tofu at his residence in Kathmandu?" Ans: The address of his residence in Kathmandu was Tripureswar, Kathmandu, Nepal. Now his family address has changed.

(3) "Did your uncle ever mention that tofu was made

© Copyright Soyinfo Center 2014



© Copyright Soyinfo Center 2014

commercially (= for sale) in Tibet? Have you ever heard that it is?" Ans: "No I never heard my uncle mentioning that Tofu was made commercially in Tibet. He had no idea about it." I heard he had only one Tibetan friend.

(4) "You said he started making tofu for 'domestic consumption.' Does that mean he made it, free of charge (of course) for members of his immediate family? How did they cook and serve it (what kind of recipes?). Did he also give it to members of his extended family such as brothers, nephews? Did you ever taste it? What did you think of it? How was it prepared when you tasted it?" Ans: Yes, at first when he started making Tofu he made it free of charge for members of his family. At first Tofu is fried in oil. And then it is used with vegetables as a delicious food," like pickles etc. "Yes he gave it to his extended family members. Yes, I've tasted it. I think Tofu is an excellent food for helping to solve world food crisis because it is a high quality nutrition food and the cost is very low. I tested it; I thought it was like a vegetable." I studied your book, *The Book of Tofu.*

(4a). "How often did you watch your uncle making tofu?" Ans: "Sometimes I watched him making tofu."

(5) "Did he do a special demonstration just for you to teach you the process or did you just watch him while he was making tofu as usual?" Ans: "He never did a special demonstration to teach me but I learned by watching him as usual."

"My uncle was not interested in Tofu because the Nepalese people were not interested because it was a new product for them." The Nepalese concept of the soybean is that it is very cheap and used only by low-class people. "But I was very interested because it was of high quality nutrition and the cost was very low.

"At first no one knew that Tofu was soybean cakes. My uncle's family also didn't know it. They just called it using the Nepali words *Bhatamass Ko Paneer."* But when my friend Mr. Akifumi Nakamura came to Nepal from Kobe, Japan, in 1972, he suggested to me that I call this product Tofu. "Mr. Nakamura was the one who saw my interest in Tofu and taught me to make tofu. He came to Nepal in 1972" to work with Japan Overseas Cooperation Volunteers (JOCV) for two years. He worked at the Central Food Research Laboratory in Kathmandu. During this time he taught me to make Tofu during his after office hours. Then I learned how to make tofu. I started making tofu commercially in Dec. 1974, first at my own residence to keep my expenses low. I started by selling it to small shops and many other places. Then I developed recipes and sold it to even more people. And slowly the people of my country came to understand it as well. At times Mr. Nakamura would help me and we imported some machines from Japan. Then I started commercially.

"Now I want to ask about your company, Nepal Soya Industries. I think you were a pioneer in Nepal not only with tofu, but also with other soyfoods! (7) In what month and year did you start to SELL each of the following soyfoods commercially in Nepal. And approximately what percentage of your total sales does each account for now? Ans: (7a) Shree Akita Miso = Akadashi Miso. Started Oct. 1986. I made miso and sold it in Japanese hotels and restaurants. Even now no Nepalese people know about miso. It accounted for 15% of total sales. Now it is named Akita Miso.

(7b) Soya sauce. Started in March 1982. When I started to make soy sauce nobody knew what it was. Nowadays some people in the cities know about it. And also some local restaurants used soya sauce. It accounted for about 25% of total sales.

(7c) Dry Tofu. I tried making it but never sold it commercially because there was no interest.

(7d) Soya Milk. At first the Nepalese people had not heard of soya milk, but after a few years one International company started it. They named it Indreni Soyamilk. But after some years they stopped selling it. (7e) Soya Curd. I started making it in 1985. It is a part of Yogurt we used. It is sold commercially. But now lots of dairy companies make it commercially, so I stopped producing it. During the period 1985-1990 it accounted for about 10% of sales.

(7f) Vita Tofu. It started making it Dec. 1974. I stopped making it during 1983-185 because at that time I went to Japan and could not manage my factory. My children could not do the work for me. From 1986 to 2000 we again made Vita Tofu, but last year our country had a crisis–the Royal Family accident. Nowadays Maoists are attacking most parts of our country. And now the Nepalese Government has issued an Emergency. Because of this, tourists have stopped visiting Nepal. My business fully depends on tourists. So last year I had to stop making tofu. It once accounted for 40%. "I am interested in working with soyfoods in any country. If

© Copyright Soyinfo Center 2014

you will arrange it I am always ready for it."

(8) "Please circle each product for which you were the first person in Nepal to make that product commercially." Ans: He is not sure, so he circles only Tofu in 1974.

(9) "Are you making all these products commercially now? Are you making any others? Is making soyfoods your main source of income now?" Ans: Nowadays I produce it on a very small scale and this is my main source of income. But now I am retired from my job also [on 15 March 2001 at the Central Food Research Laboratory in Kathmandu and as a food inspector].

(13) "You said that in Japan you learned to make moyashi. Were these soybean sprouts or sprouts from other kinds of seeds?" Ans: They were not soybean sprouts but rather sprouts from some kind of black seeds [probably black mappe].

Mr. Vaidya attaches his business card and a 2-page curriculum vitae with a portrait photo attached. He was born on 28 Dec. 1947. Address: Founder and owner, Nepal Soya Industries, 9/374 Bhedashing, Jamaguthi, Kathmandu, Nepal.

10957. Greendale, Gail A.; FitzGerald, Gordon; Huang, M.H.; Sternfeld, B.; Gold, E.; Seeman, T.; Sherman, S.; Sowers, M. 2002. Dietary soy isoflavones and bone mineral density: results from the study of women's health across the nation. *American J. of Epidemiology* 155(8):746-54. April 15. [39 ref]

• ***Summary:*** "Japanese and Chinese women are about half as likely as Caucasian women to experience a hip fracture." Understanding the reasons for this striking difference could lead to new strategies for treating or preventing this condition.

"Isoflavones are naturally occurring selective estrogen receptor modulators, with potential bone protective effects. To study the relation between soy isoflavone intake and bone mineral density (BMD), the authors analyzed baseline data from the Study of Women's Health Across the Nation, a US community-based cohort study of women aged 42-52 years. Their 1996-1997 analysis included African-American (n = 497), Caucasian (n = 1,003), Chinese (n = 200), and Japanese (n = 227) participants." Address: 1. Div. of Geriatrics, School of Medicine, Univ. of California, Los Angeles, CA.

10958. Smith, Patricia J. 2002. Macrobiotic Company of America (MCOA, Asheville, North Carolina) is no longer in business. Bruce Macdonald is importing all of Mitoku's products to the USA (Interview). *SoyaScan Notes.* April 19. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Patricia has heard from reliable sources that after MCOA ceased its operations, Norio Kushi left the company. Bruce Macdonald and his daughter, Crystal, both live in Asheville and run Bruce's company.

Patricia recently visited South River Miso Company where she visited with Christian Elwell, Robin Cole, Megan Calogeras, and Charles Kendall–who is still making natto, amazake, and mochi. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

10959. Grimes, William. 2002. Restaurants: A Japanese-French hybrid, in little bites. *New York Times.* April 24. p. F8.

• ***Summary:*** This is a review of the Japanese restaurant Kai (822 Madison Ave., at 69th St.). "Kai is short for kaiseki, the traditional meal of refined little bites [*deai*] that grew up around the tea ceremony." At Kai, the food is modernized kaiseki, and the commitment to presentation and style is total. It is a feast for the eyes–and a bold experiment.

The executive chef, Hitoshi Kagawa, has grafted French ideas onto kaiseki cuisine with an elegant hand. "In a Japanese response to cooking en papillote [using edible oiled paper], he has wrapped tilefish in a soy-milk skin [yuba] that, miraculously, quivers but does not break."

10960. Steinkraus, Keith H. 2002. Fermentations in world food processing. *Comprehensive Reviews in World Food Science and Food Safety* 1(1):23-32. April. [96 ref]

• ***Summary:*** The section titled "Alkaline fermentations" (p. 28) states that highly alkaline fermentations are generally safe. These include *dawadawa* in Nigeria, *soumbara* in the Ivory Coast, and *iru* in West Africa–each made by fermentation of the soaked and cooked seeds of the African locust bean tree (*Parkia biglobosa*). This is a bacterial fermentation; the bacteria belong to the genus *Bacillus,* typically *Bacillus subtilis.* No inoculum is used.

Soybeans can be substituted for the locust beans.

Protein-rich alkaline fermentations also include several based traditionally on soybeans; natto from Japan, thua-nao from northern Thailand, and kinema from Nepal and environs. In each food, the essential microorganism is *Bacillus subtilis* and related bacilli. The enzymes produced are highly proteolytic; the proteins in the substrate are hydrolyzed to peptides and amino acids. Ammonia is released and the pH rapidly rises to 8.0 or higher. The combination of high pH and free ammonia plus the rapid growth of the essential microorganisms at relatively high temperatures (above 40ºC) make it difficult for spoilage microorganisms to grow. Therefore the products are quite stable and well-preserved. They are safe to eat even when made in an unhygienic environment.

The section titled "High salt savory flavored amino / peptide sauces and pastes" (p. 28) discusses sauces and pastes including Chinese soy sauce, Japanese shoyu and miso, Indonesian kecap, Korean kanjang, Taiwanese inyu, and Filipino taosi.

"The ancient discovery of how to transform bland vegetable protein into meat-flavored amino acid / peptide sauces and pastes was an outstanding human accomplishment." Address: Prof. Emeritus, Microbiology

and Food Science, Cornell Univ., Ithaca, New York 14853.

10961. **Product Name:** [Summertime Edamamé Snack (Chips)].
Foreign Name: Natsu no Edamamé Sunakku.
Manufacturer's Name: Kameda Seika K.K.
Manufacturer's Address: Danchi 3-1-1, Kameda-Kogyo, Kameda-cho, Nakaurahara-gun, Niigata-ken, Japan 950-0198. Phone: 025-382-8880.
Date of Introduction: 2002 May.
Ingredients: Wheat flour, edamamé (soybeans), vegetable oil, green peas powder, salt, chicken extract powder, etc.
Wt/Vol., Packaging, Price: 55 gm foil pouch.
How Stored: Shelf stable.
New Product–Documentation: Product with Label brought from Japan by Tak Kimura. 2002. June 14. 7 by 9 inch foil pouch. Green, red, white, blue and tan on white. On the front panel are two color photos. On the top half is a shallow bamboo basket filled with bright green edamamé (in the pods). On the bottom half are the many light-green rectangular chips sold in the bag. Soyfoods Center taste test. 2002. July 15. Excellent texture and flavor. A creative product.

10962. Willems, Nadine. 2002. Tofu: The taste of a hundred things. *Winds* (*JAL Group–Japan Airlines*) 22(12):19-25. May. [1 ref]
• ***Summary:*** "As versatile as eggs or potatoes, but far better for you, tofu–or bean curd–left the specialist health stores in the West long ago and is now a familiar sight on the menus of fashionable restaurants." Starts with a description of making tofu at 5:00 a.m. one morning at Futaba tofu shop in Tokyo's downtown Ningyocho area. A one-page sidebar discusses the *Tofu Hyakuchin* (One Hundred Tofu Delicacies), published in Osaka in 1782 during "The Golden Age of Tofu."

Superb color photos show: (1) A Yokohama tofu maker at work early one morning. (2) Soymilk being poured into a wooden forming box to make silken tofu. (3) Dried yellow soybeans with a wooden measuring box (*masu*). (4) Freshly made silken tofu being cut away from the sides of a forming box. (5) Large block of tofu, held with one hand, being sliced into cakes under cold water. (6) Deep-fried tofu (Ganmodoki and aburage) draining on a bamboo mat (*sudare*). (7) Many tofu dishes served at Ume no Hana chain restaurant. (8) Tofu dengaku. (9) A cake of tofu being held out in one hand.

10963. Corcoran, David. 2002. Restaurants: The sushi belt. A Japanese restaurant is reborn as it installs automated service. *New York Times.* June 9. p. NJ20.
• ***Summary:*** This is another review of East Japanese Restaurant (1405 Teaneck Rd., Teaneck, New Jersey). East has installed a kaiten-zushi revolving conveyor belt that carries pieces of sushi around the sushi bar. On it the "chefs continually place little plates of fresh sushi, to which the diners help themselves. The color of the plate indicates the price; at the end of the meal the waiter adds it all up."

The idea was invented in Osaka in the late 1950s; it has transformed this sushi bar from a calm, relaxed, mediocre place to one that "throbs with hyperkinetic urban intensity" and an "impulse-buying spirit."

"That bean-and-scallion roll on the white dish, driving up on the left? Go for it! It's only a dollar. It turns out to be a natto roll: sticky soybeans that leave a viscous trail when you pick them up; they are bland, chewy and faintly bittersweet.

"In truth, I'd place natto roll in the 'interesting' category. I'm glad I tried it, but I didn't feel I needed to finish it." As the carousel turns.

10964. *Bluebook Update* (*Bar Harbor, Maine*). 2002. Soymilk plant opens in Guatemala: MicroSoy Flakes fuel new project. 9(2):1, 7. April/June.
• ***Summary:*** Leyenda, S.A., a new plant making soymilk and soyfoods in Villa Nueva, Guatemala, now makes Soy! Soyaleche, according the president Alejandro Barrios. The plant opened in Nov. 2001. With the capacity to produce 40,000 liters/day, Leyenda uses processing equipment from Perfecta Curitiba of Brazil and non-GMO MicroSoy Flakes from MicroSoy Corporation of Jefferson, Iowa. A photo shows Barrios holding two large glass beakers of his soymilk; That made from MicroSoy Flakes is whiter than that made from whole soybeans.

10965. Miyazaki, Koji; Hanamizu, Tomoko; Iizuka, R.; Chiba, K. 2002. Genistein and daidzein stimulate hyaluronic acid production in transformed human keratinocyte culture and hairless mouse skin. *Skin Pharmacology and Applied Skin Physiology* 15(3):175-83. May/June. *
Address: Yakult Central Inst. for Microbiological Research, Kunitachi, Tokyo, Japan.

10966. Ohara, M.; Lu, H.; Shiraki, K.; Ishimura, Y.; Uesaka, T.; Katoh, O.; Watanabe, H. 2002. Inhibition by long-term fermented miso of induction of gastric tumors by N-methyl-N'-nitro-N-nitrosoguanidine in CD (SD) rats. *Oncology Reports* 9(3):613-16.May/June. *
• ***Summary:*** Can consumption of miso affect gastric tumors. N-methyl- N'-nitro- N-nitrosoguanidine is abbreviated MNNG. A total of 120 rats, 6 weeks of age, were divided into 6 groups and given MNNG (100 ppm) in the drinking water for 16 weeks. Starting 1 week before the carcinogen treatment the rats were fed a normal control modified-fat (MF) solid diet, or the same diet containing 10% long-term fermented, medium- or short-term fermented miso, or 1% NaCl until the end of the MNNG exposure period. They were then maintained on the MF control diet and normal tap water until the autopsy time point at 52 weeks. The long-term fermented miso significantly reduced the size of the gastric

© Copyright Soyinfo Center 2014

tumors as compared with the other groups. The present results thus indicate that dietary supplementation with long-term fermented miso could act as a chemopreventive agent for gastric carcinogenesis.

10967. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo*). 2002. [Edamame: From growers direct to consumers]. July 22. p. 14. [Jap]
• ***Summary:*** Three color photos show farmers harvesting edamame, first in August, then September, and finally October. A fourth shows the emerald green edamame ready to eat on a bamboo basket. These edamame can be ordered through the newspaper at http://shop.yomiuri.co.jp. 1 kg fresh sells for about $32.50.

10968. Friedrich, Kristin. 2002. Soy you like tofu? Little Tokyo festival celebrates the miracle bean. *L.A. Downtown News* (*Los Angeles*). Aug. 5. p. 16.
• ***Summary:*** The festival, part of Nisei Week festivities, will be held on San Pedro between Second and Third Streets in Little Tokyo. General admission is $2, and food prices range for $1-$4 per serving. See www.tofufest.org or www.niseiweek.org.

10969. Severson, Kim. 2002. Global food fight? Why, soytainly! Battle brews over sauce labeling. *San Francisco Chronicle*. Aug. 25. p. 1, A21.
• ***Summary:*** The debate concerns classification of soy sauces made by different methods under the rules of the Codex Alimentarius Commission, the powerful regulator of international food trade, which was created in 1962 by two organizations of the United Nations. The Commission sets standards for foods that are imported and exported. Starting September 23, the Codex committee in charge of soy sauce will meet in San Antonio, Texas.

The debate began several years ago when Japanese officials proposed that only "naturally brewed" [fermented] products be allowed to use the term "soy sauce" in international trade. Products made using the quicker hydrolyzed vegetable protein nonbrewed method would have to use another name. The International Hydrolyzed Vegetable Protein Council dislikes the proposal; they believe the standard is discriminatory. *Food Chemical News,* a trade publication, has strong views on the subject. The stakes are high since Americans consume almost 3 cups of soy sauce a year.

Leaders of Slow Food, an international organization with 60,000 members dedicated to preservation of natural food products and methods, say the debate is about consumer rights. They believe only brewed soy sauce should have the right to use that name.

However, 30 years ago nonbrewed soy sauce was America's favorite, led by the La Choy and Chun King brands. Then in 1973 Kikkoman entered the picture with a brewed soy sauce. Today La Choy and Chun King are owned by ConAgra Foods, and are much less popular than Kikkoman.

A sidebar titled "Tasters find brewed is best" explains how the Chronicle's food staff compared the taste of Chun King (nonbrewed) and Kikkoman (brewed). Kikkoman won. Address: Staff writer.

10970. Aoki, Hisa; Otaka, Y.; Igarashi, K.; Takenaka, A. 2002. Soy protein reduces paraquat-induced oxidative stress in rats. *J. of Nutrition* 132(8):2258-62. Aug. [32 ref] Address: Dep. of Bioresource Engineering, Faculty of Agriculture, Yamagata Univ., Yamagata, Japan.

10971. Kikkoman Corporation. 2002. Annual report 2002. Year ended March 31, 2002. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 30 p. 28 cm. [Eng]
• ***Summary:*** Kikkoman has changed its fiscal year end from Dec. 21 to March 31. April 2001. It is disappointing that so little information about the company's performance and activities is given compared with previous years. Sales and profits were about the same as for the year ended 31 Dec. 2000. As in previous years, growth in overseas sales and profits was much larger than their Japanese counterparts. Address: Noda, Japan.

10972. Golbitz, Peter. 2002. Japanese soyfoods: Looking back to the future. *Bluebook Update* (*Bar Harbor, Maine*) 9(3):4-5. July/Sept.
• ***Summary:*** A photo shows Peter Golbitz.

10973. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*). 2002. ISU keeps consumer in mind when developing food-grade soybeans. 13(8):17. Summer.
• ***Summary:*** Dr. Walter Fehr, distinguished professor of agriculture at Iowa State University (ISU) and head of the university's breeding program, has as his motto: "The consumer is always right." The university's involvement in breeding soybean varieties for food uses has been driven by the Asian market. In 1978 ISU developed a variety named Vinton; after 20 years it remains the standard of quality in the Japanese tofu industry.

In 1979 Fehr took his first trip to Japan to understand that market. Since that time he has worked closely with Asian food manufacturers and buyers. ISU has also developed large-seeded soybeans tailor-made for miso, vegetable soybeans (edamame), lipoxygenase-free soybeans with no "beany flavor," soybeans with reduced saturated fat content to eliminate the need for partial hydrogenation, varieties that are low in phytate to reduce the amount of phosphorus in animal waste.

10974. Morinaga Nutritional Foods, Inc. 2002. Powered by soy (Ad). *Vegetarian Times.* Oct. p. 31.

© Copyright Soyinfo Center 2014

• ***Summary:*** A full-page color ad. In the top half of the ad, a large photo shows two young women walking briskly for exercise. Below that is the ad title. The ad is for Mori-Nu Creamy Soy Soup, which is available in three flavors (tomato, butternut squash, and corn) and two sizes (1 quart and 11 oz). The text concludes: "Rev up your day with a kick of soy." Address: 2150 W. 190th St., Suite 110, Torrance, CA 90504.

10975. *SoyaScan Notes.* 2002. Growth habit of the soybean: Viny vs. erect, the wild annual soybean, and its wild perennial ancestors (Overview). Nov. 18. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The ancestors of the cultivated soybean (all wild perennial *Glycine* species) were all very viny, twining, and procumbent in growth habit (having stems that trail along the ground), with very small black seeds. The wild soybean (*Glycine soja*), which is an annual, is also viny, twining and procumbent with small black seeds that shatter terribly; it is intermediate between the wild perennial soybeans and the domesticated soybean (*Glycine max*). Because of this ancestry, most of the world's early domesticated soybeans were of viny growth habit and had black seeds. Thus, it would not be surprising to find a viny soybean in a farmer's garden in Ming dynasty, China. If it were a wild soybean (*Glycine soja*), it would probably reseed itself each year; the farmer would simply tend it. If it were a domesticated soybean (*Glycine max*), it would probably have larger seeds than its wild relative and might be erect, since farmers over many generations selected for large seed size and erectness; however, the growth habit might still be viny.

A small percentage of the early soybean varieties grown in the United States were viny–like cowpeas. The vines were either cut and used as forage for livestock, or left uncut and used as pasture (including hogging off). These viny soybeans, when interplanted with corn, would often climb up the corn plant to the top. Soybean varieties adapted to Southern U.S. daylengths but grown in the north, would continue to grow–in a viny way–until they were killed by the cold.

In 1910 Piper & Morse (in "The soy bean: History, varieties, and field studies." *USDA Bureau of Plant Industry, Bulletin* No. 197) classified all 285 soybean varieties introduced to the USA to date. The major grouping (p. 37-39) was by habit of growth: (1) Plants bushy, the branches without tendency to twine, the terminals rarely elongated: 202 introductions or 71% of the total. (2) Plants more or less twining, especially the long slender terminals: 83 introductions or 29% of the total. Of this latter twining group there were two subgroups: (2a) Plants erect or suberect, slender, the internodes long; pods medium to small: 76 or 26.7% of the total. (2b) Plants procumbent, rather coarse; pods small; very late: 7 varieties or 2.4% of the total. Of these 7 varieties, none had a name. Four were from India, and one each from Soochow (southeast China), Taihoku (Formosa), and Tokyo (Japan; a wild soybean from the Botanical Garden).

Thus by 1910 Asian farmers had been quite successful in selecting for erect habit of growth (and large seed size).

In 1923 Piper and Morse (in their classic book *The Soybean,* p. 162-70) described the main characteristics of the 43 varieties "that have been found agriculturally the most valuable under American conditions up to 1922." A tabulation of the growth habit of the plants shows the following: Erect and stout (and usually bushy): 34

Erect and slender: 7 (Laredo, Minsoy, Otootan, Peking, Virginia, Wilson, and Wilson-Five).

Semi-erect with twining terminals: 1 (Chiquita). Rather inclined to lodge (fall over) in rich soil: 1 (Barchet).

In summary: 80% were bushy and stout (like most modern varieties), and 95% were erect. None were described as "viny," "vining," "twining," or "procumbent."

The advent of the use of the combine (combined harvester-thresher) to harvest soybean seeds in about 1924 created a new incentive for breeders to develop plants with upright, stout, and bushy growth habit.

However in the USA most soybeans continued to be used as forage, until 1941 when the number of acres planted for seed first surpassed the number of acres planted for forage. Address: Prof. of Plant Genetics, Dep. of Crop Sciences, Univ. of Illinois, Urbana, Illinois.

10976. Kadokura, Tania. 2002. Sumo stew: Japan's famed wrestlers have been bulking up on chanko-nabe, a hearty, protein-rich one-pot meal, for more than a century. *Saveur* (*New York, NY*) No. 62. p. 68-75. Nov.
• ***Summary:*** Ingredients include tofu and miso. Contains recipes and color photos of sumo wrestlers and chanko-nabe. Address: Tokyo-based cooking teacher.

10977. Kadokura, Tania. 2002. In the *Saveur* kitchen: The beef behind sukiyaki. *Saveur* (*New York, NY*) No. 62. p. 89. Nov.
• ***Summary:*** Sukiyaki is thin slices of meat or seafood with tofu and vegetables, simmered in a sweetened soy sauce base; it is Japan's best-known nabe. Contains a recipe and color photo. Address: Tokyo-based cooking teacher.

10978. *SoyaScan Notes.* 2002. Chronology of major soy-related events and trends during 2002 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 1–The Kerry Group (of Wisconsin and Iowa) creates Nutriant as its new nutritional division; into Nutriant it merges Solnuts and Iowa Soy Specialties, LLC.

March–Proceedings of the Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease held at San Diego, California, published as a supplement to the *Journal of Nutrition,* 132(3):545S-619S.

© Copyright Soyinfo Center 2014

General chairpersons and Supplement editors: Stephen Barnes and Mark Messina.

March–A new tofu plant owned by Sunrise Soya Foods of Vancouver, starts operation in Toronto, Canada. This is the company's first plant in eastern Canada.

March 15–Minnesota becomes the first U.S. state to pass legislation requiring diesel fuels sold in their state to contain a 2% blend of biodiesel (B2). By 1 July 2002 nearly every gallon of diesel fuel sold in Minnesota must contain a 2% blend of biodiesel.

May 8–Dean Foods announces that it has signed a definitive agreement to acquire the 64% equity interest in White Wave, Inc. it does not currently own. The price of this 64% was approximately $189 million, bringing Dean's total investment to approximately $204 million. White Wave had total sales of approximately $125 million during the 12 months ending 31 March 2002.

May (late)–Central Soya Co. acquires CanAmera, Canada's largest producer of edible oil products. Central Soya had owned 50% of CanAmera since it was established in 1992.

July 22–Bunge Ltd., North America's leading soybean processor, announces an agreement to acquire a majority stake in Cereol S.A., the Paris-based parent of Central Soya Co., headquartered in Fort Wayne, Indiana.

Aug. 13. Pharmacia spins-off Monsanto; as a result, Pharmacia no longer owns any equity interest in Monsanto. During fiscal 2002 Monsanto suffered huge financial losses. Net income showed a *loss* of $1,693 million–down dramatically from +$295 million in 2001.

Oct. 1–Bunge acquires Cereol S.A. (based in Paris), which includes Central Soya (a U.S. soybean processing pioneer and leading manufacturer of soy protein concentrates and soy lecithins) and CanAmera Foods (in Canada).

Oct. 4–Mr. Shoan Yamauchi, the most important tofu pioneer in the United States and Hawaii, dies in Torrance, California. He began making tofu in Hawaii in 1939 at a company that was started in 1923. In 1947 he and his wife came to Los Angeles, where in late 1947 they purchased the Hinode Tofu Co. at 6th St. and Towne Ave. This company, which is now named House Foods America Corporation (still in Los Angeles), is the oldest existing Japanese-American tofu manufacturer in the United States.

Oct. 21–The National Organic Standards take effect.

Sept. (late)–U.S. Food & Agribusiness Exhibition in Havana, Cuba. Some 290 U.S. companies take the rare opportunity to present their products to over 16,000 visitors.

Nov. 14–Biodegradable hydraulic fluid made from soy oil is first used in the elevator inside the Statue of Liberty. Its advantages over the petroleum-based oils previously used are its environmental friendliness and improved safety–says the National Park Service and USDA.

Dec.–Hain-Celestial buys Imagine Foods (maker of Soy Dream and Rice Dream) for $52 million. Imagine has annual sales of about $70 million.

10979. Belleme, John. 2002. Mitoku–Japan's natural foods pioneer. *Macrobiotics Today* (*Oroville, California*) 42(6):22-25. Nov/Dec.
• ***Summary:*** A good history of Akiyoshi Kazama and the company he founded, Mitoku. With photos. Address: Saluda, North Carolina.

10980. *Canadian Soybean Bulletin* (*OSG, Chatham, Ontario, Canada*). 2002. Canadian soybean exports. Winter. p. 2.
• ***Summary:*** A large table shows statistics in tonnes (metric tons) of soybeans exported to various countries, and regions, each year from 1998/99 to 2001/2002. The countries are: In Asia–China, Hong Kong, Indonesia, Japan, Malaysia, Philippines, Singapore, South Korea, Taiwan, and Thailand. In Western Europe–Austria, Belgium, Denmark, France, Germany, Italy, Netherlands, Norway, Portugal, and Spain. By continent–Africa, Central America, Eastern Europe, Middle East, Oceania, South America, and United States.

In 2001/2002 the countries to which the largest amount of Canadian soybean exports went were (in tonnes): Japan 126,619, Malaysia 101,698, United States 60,244 Germany 29,377, Indonesia 26,836, Hong Kong 22,800.

Total soybean exports have declined dramatically during the past two years, from a peak of 946,360 in 1999/2000, to 746,241 in 2000/2001, down to 471,492 in 2001/2002.

10981. Sebastian, Anthony; Frassetto, L.A.; Sellmeyer, D.E.; Merriam, R.L.; Morris, R.C., Jr. 2002. Estimation of the net acid load of the diet of ancestral preagricultural *Homo sapiens* and their hominid ancestors. *American J. of Clinical Nutrition* 76(6):1308-16. Dec. [61 ref]
• ***Summary:*** Paleolithic diets produced a slightly alkaline condition in the human body; even though animal foods caused an acidic condition, this was more than buffered by plants in the diet. However when cereal grains displaced some fruits and vegetables, the balance tended to shift to a net acid condition. Sebastian believes this is a "profound transition" and has inevitable maladaptations–which may be the cause of many of our modern diseases.

Note: The basic problems with this theory are that: (1) Most human diets throughout the past 10,000 years have been based on cereal grains; (2) The healthiest populations in the world today (Okinawa, Japan, China) eat a grain-based diet. Address: Dep. of Medicine and General Clinical Research Center, Univ. of California, San Francisco.

10982. Yamori, Yukio; Moriguchi, Emilio H.; Teramoto, Takanori; et al. 2002. Soybean isoflavones reduce postmenopausal bone resorption in female Japanese immigrants in Brazil: A ten week study. *J. of the American College of Nutrition* 21(6):560-63. Dec. [20 ref]
• ***Summary:*** Brazilian researchers gave 20 Japanese

© Copyright Soyinfo Center 2014

postmenopausal female immigrants either a placebo or 37 mg of isoflavones isolated from the hypocotyl portion of the soybean. The hypocotyl portion of the soybean is high in the isoflavones glycitein and daidzein and is low in genistein. After 10 weeks, the urinary excretion of bone resorption markers in the isoflavone group was significantly decreased, whereas there was no change in the placebo group. Thus, this study suggests isoflavones inhibit bone breakdown. Address: 1. WHO Collaborating Center for Research on Primary Prevention of Cardiovascular Diseases.

10983. Shimizu, A. 2002. [The structural change in the food system of "natto" (fermented soybeans) and correspondence of natto manufacturers]. *J. of Food System Research* (*Tokyo*) 8:13-24. [142 ref]*
Address: Biotechnology Inst. of Natto, Suzuyo Kogyo Co. Ltd. Both: Tokyo, Japan.

10984. Emi, Kazuko. 2002. Japanese cooking: The traditions, techniques, ingredients and recipes. London and New York: Hermes House. 256 p. Illust. (color). Index. 31 cm.
• ***Summary:*** A beautiful book, with many old color woodblock prints and creative color photos. With recipes by Yasuko Fukuoka. Contents: Introduction. The development of Japanese cuisine. Foreign influences. The impact of isolation. Sushi: a national favourite. The tea ceremony. Traditions and festivals. Seasonal and regional foods. Cooking and eating. Equipment and utensils. Utensils for cooking with rice. Cooking at the table. Crockery and cutlery. Drinking vessels. The Japanese kitchen: Rice and rice products,... dried beans (incl. soya beans, boiled soya beans, dried yellow beans, dried green beans, black soya bean, soya bean products, kinako, natto), fresh beans (incl. eda-mame), tofu and tofu products (incl. fresh tofu, okara, silken tofu, koya-dofu, yuba, fried tofu, abura-age, atsu-age, ganmodoki, home-made ganmodoki), gluten products, mushrooms, seaweeds, fish, shellfish, fish roes, fish products, fish pastes, meat and chicken, sauces for flavouring and dipping, ready made sauces,... Japanese cooking (recipes). Glossary. Acknowledgements. Shopping information.

The index mentions: Abura-age (tofu), atsu-age (tofu), azuki beans (incl. *an* {sweet bean paste}), eda-mame, gammodoki, kinako (yellow soya bean flour), koya-dofu, miso, miso soup, shoyu (soy sauce), soya beans, silken tofu, sukiyaki (with tofu), tofu, yuba, vegetarian tempura.

Concerning kinako [roasted whole soy flour]: A photo (p. 65) shows kinako made from soybeans with three different color seedcoats: black, yellow, and green. The kinako made from the black soybeans is the darkest of the three–a medium brown–but not at all black. The kinako made from the yellow soybeans is the lightest of the three–yellowish brown. The kinako made from the green-coated soybeans is intermediate between the other two in darkness–light brown–but with no trace of green in its color. When kinako is mixed with an equal volume of sugar and a pinch of salt, it is rolled in lightly-boiled, soft mochi cakes which make tasty confection. Kinako, which is also used to make *wagashi* (Japanese cakes / confections), is sold at most Japanese grocery stores or supermarkets. Address: Japan.

10989. Lee, Cherl-Ho; Lee, Sang Sun. 2002. Cereal fermentation by fungi. In: George G. Khachatourians and Dilip K. Arora, eds. 2002. Applied Mycology and Biotechnology. Vol. 2. Agriculture and Food Production. Amsterdam, New York: Elsevier. 428 p. See p. 151-70. [50 ref]
• ***Summary:*** Contents: Summary. Introduction. Fermentation starters: History of solid state fermentation starters in northeast Asia, cereal alcoholic fermentation starters, soybean fermentation starters. Fungal fermented foods: Cereal alcoholic products (rice wine, rice beer, alcoholic rice paste, alcoholic rice seasoning), fermented soybean products (Korean kanjang and doenjang, Japanese shoyu and miso, tempe, Chinese sufu), other fermented products (Chinese red rice {Anka}, enzyme foods). Hygienic aspects of fungal fermented foods: Mycotoxins in fermentation raw materials, mycotoxin formed during fermentation. Conclusion.

Page 162: "... soybean sauce, *kanjang*, and soybean paste, *doenjang*, have been used in Korea for more than 2000

© Copyright Soyinfo Center 2014

years and formed the characteristic flavor of Korean cuisine. The term "Shi" [fermented black soybeans], the Chinese letter indicating *meju,* first appears in *Jijiupian* written in the Han period (206 B.C. to 208 A.D.) of China. *Bowuzhi* of Jin (265-420 A.D.) of China describes that *Shi* [fermented black soybeans] originated in a foreign country, and the letter is a dialect. *Xintangshu* of the Tang period (618-807 A.D.) in China names Shi as a special product of Balhai or Bohai (688-826 A.D.), a nation founded by the refugees from defeated Kokuryo (37 B.C. to 668 A.D.).

"It is generally recognized that Koreans were the first to experiment with soybean fermentation, sparking the beginning of the soy sauce culture of the Orient (Lee 2001). Their traditional fermentation technology was so advanced that they taught their techniques to neighboring countries."

Page 162-63: "*Meju* [soybean koji], the fermentation starter for Korean soysauce, *kanjang,* is made from soybean... The ripening of *kanjang* mash in the brine is ended in 1-2 months."

10990. Ling, Kong Foong. 2002. Food of Asia: authentic recipes from China, India, Indonesia, Japan, Singapore, Malaysia, Thailand and Vietnam. Singapore: Periplus. 192 p. Illust. (color photos). Index. 31 cm.
• ***Summary:*** This oversized paperback book, loaded with glossy color photos, is an expanded version of the original 1998 edition. The introduction and essays are by Kong Foong Ling. The index, which is poor, makes the book hard to use if you are looking for particular foods found throughout Asia such as soybeans, soy sauce, miso, salted / fermented black beans, yuba [bean curd skin], etc.

Contents: The flavors of Asia. Ingredients. The Asian kitchen. Burma. China. India. Indonesia. Japan. Korea. Malaysia & Singapore. The Philippines. Sri Lanka. Thailand. Vietnam. Appendix.

The "Ingredients" section (p. 10-17) includes: Bean curd (incl. cotton or momen tofu, silken bean curd, deep-fried bean curd or aburage, grilled bean curd or yakidofu, fermented bean curd or nam yee). Bean curd skin [yuba]. Black beans, salted (and fermented). Hoisin sauce ("A sweet sauce made of soy beans, with spicy and garlicky overtones"). Miso (incl. red miso and white miso). Salted soy beans (incl. "yellow bean sauce"). Soy sauce (incl. light soy sauce, black soy sauce, red soy sauce, Kikkoman, tamari, thick sweet soy sauce (kecap manis–Indonesian)). Tempeh. Also: Red beans (dried azuki). Seaweed (incl. dried kelp, golden kelp, mozuku, salted dried kelp, laver or nori, wakame). Sesame (black and white seeds, tahina {tahini}). Sesame oil. Sesame rice crackers.

Korea (p. 109+). Page 110: There are also many fermented pastes and sauces for dipping, called *chang.* Every restaurant and home has its own formula for making chang. Based on a fermented mash of soy beans, the three most common varieties are *kan chang* (dark and liquid), *daen chang* (thick and pungent), and *gochu chang* (fiery and hot).

Soybean is mentioned on pages 8, 11, 68, 89.

Beancurd or bean curd is mentioned on pages 8, 10, 11, 26, 32, 33, 35, 36, 40-42, 68, 70-71, 74, 89, 90, 92, 93, 94, 96, 100, 102, 104, 107, 111, 112, 113, 119, 120, 127, 133, 158, 172, 175, 185, 189, 190, 191, 192.

Bean curd skin [yuba] is mentioned on pages 11, 35, 36.

Bean paste and bean paste sauces, p. 8, 32.

Fragrant soy sauce is mentioned on page 128.

Also: Red bean paste, p. 46 (canned, azuki).

10991. Machida, Shinobu. 2002. Nattô taizen: aisubeki dentô shokuhin no nazo o toku [The big and complete book of natto: Solve the mystery of the beloved traditional food–natto]. Tokyo: Kadokawa shoten. Illust. [Jap]*

10995. Sasaki, Sanmi. 2002. Chado: the way of tea. A Japanese tea master's almanac. Translated from the Japanese *Saijiki* by Shaun McCabe and Iwasaki Satoko. Boston, Massachusetts: Tuttle Publishing, an imprint of Periplus Editions (HK). xli + 742 p. Foreword by Sen Sôshitsu XV. Illust. Index. 24 cm. [Eng; jap]
• ***Summary:*** This book, published originally in 1960 in Japanese, is widely regarded as a classic. And this is a superb translation.

Text in English with captions and quotations in Japanese. One page 78, footnote 14, referring to *kitsune-zushi* states: "Also called *inari-zushi. Kitsune-zushi* is sushi in *abura-age* (deep-fried tôfu) pouches. *Abura-age* is considered to be the favorite food of the fox (*kitsune*)**.**

Tofu is mentioned on 10 pages: In the glossary: Dengaku is tofu coated with sweetened miso and grilled on skewers (p. xxii).

Tofu (soybean curd): The two main types are *momen-dôfu* (cotton-like) and *kinugoshi-dôfu* (silk-like) (p. xxxvii).

In the month of February: Footnote explaining *kitsune-zushi* (p. 78). Koori-dôfu (dried-frozen) is an ingredient in one course (p. 92).

For the month of April: Tofu dengaku (p. 171, 207– served as part of *Kaiseki,* meals for tea / tea ceremony meals). A section titled "Tofu dengaku" (p. 212) explains that this dish is "one of the symbols of spring." Gives details on how to prepare it using skewers of green bamboo and a coating of *ki no me miso.* Kenzan, Oribe and other tea masters have designed containers made exclusively for dengaku. However a lacquer or plain wood container is fine. "Nakamura-rô at Gion, Kyoto, is famous for its dengaku."

For the month of May: kinugoshi-dôfu is an ingredient in a course (p. 262).

For the month of August: Shin-tofu ("New tofu") is made from the first soybeans of the year. A poem by Kikaku states: "Just as we were admiring the fine points of the pottery, *shin-dôfu* was served" (p. 427).

Daizu (soybeans) are a major ingredient for making miso, soy sauce, yuba, tofu, natto, and *mame-ko* (roasted soy flour). "A behind-the-scenes contributor for *kaiseki* (p. 431).

For the month of September: The section on "Ochiayu" explains that *ayu* holds the first place among all the fish for summer. Ochi-ayu, those caught in the autumn, taste good when cooked with tofu, but may not be a good choice for kaiseki (p. 469).

For the month of October: Yu-miso (p. 494), also called *yuzu-miso,* is the subject of a section (p. 524). Yuzu is a green Japanese citrus fruit. The top is cut off, the inside is hollowed out, it is packed with a mixture of miso and sugar then grilled. Only the miso is eaten–filled with the fragrance of yuzu. "It is suitable for vegetarian *mukô.* A second way of making yu-miso is described which can be used for dengaku in April. A poem that mentions yu-miso is included.

For the month of November, broiled tofu and kuro-mame (black soybeans) are mentioned (p. 552).

Kuro-mame [black soybeans] are mentioned on 2 pages (p. 42, 552), miso on 33 pages, soy [sauce] on 35 pages, soybean or roasted soybean flour on 6 pages (Uguisu-mochi, p. 87; warabi-mochi, p. 134; hagi no mochi, p. 460), soybeans on 8 pages. Yuba (p. 621). Natto (p. 71, 621-22). Eda-mame (green soybean, p. 701).

Vegetarian: "During the week of the spring equinox a vegetarian meal in vermillion utensils is expected" (p. 139). *Shôjin* means vegetarian (p. 655). Address: Tea master, Japan.

10996. Smith, Lawrence. 2002. Japanese prints during the allied occupation, 1945-1952: Onchi Kôshirô, Ernst Hacker and the First Thursday Society. Chicago, Illinois: Art Media Resources. 128 p. See p. 20. Illust. (some color). 29 cm. [120* ref]
• ***Summary:*** A book (p. 20) of prints published in 1942 in Japan was titled *Mamenoko Butai.* The word "mamenoko" usually means *kinako* or "roasted soy flour." However it is translated (probably correctly) on page 20 as "The Baby Peas' Detachment."

Note: Chapter 1 (p. 8-12) is "Japan June 1857-1952: A fast track history." Very interesting and creative. Address: Former Keeper of Japanese Antiquities in The British Museum.

10997. Sugimoto, Keiko; Takamizawa, Etsuko. 2002. Ikiiki bijin no nattô reshipi: ketsueki sarasara ohada tsurusuru hone genki [Natto recipes for the beautiful woman: your blood flows smoothly, skin is glowing, and bones are healthy]. Tokyo: Sobokusha. [Jap]*
Address: Japan.

10998. Sugimoto, Takashi; Iwatate, Marcia. 2002. Shunju: new Japanese cuisine. Sensational recipes from Tokyo's most famous restaurant. Singapore: Periplus Editions. 271 p. Foreword by Charlie Trotter. Illust. (chiefly color, by Masano Kawana). Index. 26 x 23 cm.
• ***Summary:*** Contents: Foreword. The Shunju way: The Shunju philosophy (history, architecture, bar, lighting, *zashiki* {dining room floor}, *chashitsu* {tea room}, hospitality {*motenashi*}). The seasonal kitchen. Spring. Summer. Autumn. Winter. Appendixes: Step by step preparation techniques (incl. Fresh soymilk, Green bean soymilk yuba {*Ryokuto nama yuba*}). Chefs (profile of head chef at each restaurant). Glossary of ingredients. Mail-order sources of ingredients. Acknowledgments.

"The history of Shunju began in 1986 in Mishuku, Tokyo." Today, Shunju has five different outlets in Tokyo– Mishuki, Hiroo, Torizaka, Bunkamura Dori, and Tameiki Sanno (p. 14).

"The most important element in Shunju's cuisine is to be able to truly appreciate the four seasons and the abundant

© Copyright Soyinfo Center 2014

blessings which mother nature has bestowed upon us...–Marcia Iwatate" (p. 24).

At the recipe for Green and lavender tofu squares (*Masu-dofu*) we read (p. 53): Tofu is undoubtedly one of the most representative dishes of Shunju. Our tofu is made daily–soymilk is curdled with *nigari* (bittern)–in different ware unique to each of our five restaurants; in this case in *masu* (traditional square, wooden measuring boxes)." To make green soymilk, see p. 255.

The glossary of ingredients (p. 258+) includes azuki (*koshi an, ogura an*), edamame, miso (many types), okara, sake (incl. koji {molded steamed rice}), shoyu (incl. koikuchi shoyu, usukuchi shoyu, shiro shoyu, tamari shoyu), tofu, ume, umeboshi, wasabi, yuba (famous as a Kyoto delicacy).

Tamari is mentioned on 98 pages of this book, miso on 67 pages, soy sauce on 54 pages, shoyu on 51 pages (incl. "koikuchi shoyu" on 34 pages, "usukuchi shoyu" on 13 pages and "shiro shoyu" and "tamari shoyu" on 2 pages each), tofu on 18 pages, soymilk on 14 pages, yuba on 7 pages, koji on 5 pages, nigari and edamame on 4 pages each, black soybeans on 2 pages (p. 53 and 84).

Natto and kinako are not mentioned. Address: Creators and founders, Shunju restaurants, Japan.

11001. Tamang, J.P.; Thapa, S.; Dewan, S.; Jojima, Y.; Fudou, R.; Yamanaka, S. 2002. Phylogenetic analysis of *Bacillus* strains isolated from fermented soybean foods of Asia: kinema, chungkokjang, and natto. *J. of Hill Research* (*Sikkim*) 15(2):56-62. [22 ref]
• ***Summary:*** A total of 38 strains of dominant endospore forming and rod shaped bacteria were isolated from kinema, chungkokjang, and natto (three closely related fermented soyfoods), and studied phenotypically. All endospore forming rods were identified as *Bacillus subtilis.* The average load of endospore forming bacteria of the samples was about 100 million colony forming units (CFU) per gm.

Fig. 1 (p. 60) is a "Phylogenetic tree [also called a horizontal cladogram] showing the relationships of *Bacillus subtilis* strains to other strains of the genus *Bacillus* and related genera based on partial sequence of 16S rRNA gene."

This suggests that *B. subtilis* strains responsible for the fermentation of sticky Asian soyfoods might have originated from the same stock. Address: 1-3. Food Microbiology Lab., Dep. of Botany, Sikkim Government College, Gangtok, Sikkim 737 102, India.

11002. Watanabe, Sugio. 2002. Nattô: genryô daizu no erabikata kara hanbai senryaku made [Natto: From choosing the whole soybeans (as a raw material) to sales strategy]. Tokyo: Nô-san-gyoson Bunka Kyôkai. 120 p. Illust. 21 cm. [Jap]
Address: Japan.

11003. **Product Name:** [Organic Shoyu].
Foreign Name: Salsa de Soja (Shoyu) Organico.
Manufacturer's Name: M.O.A. Internacional.
Manufacturer's Address: Argentina.
Date of Introduction: 2002?
Ingredients: Soybeans, wheat, salt, water.
Wt/Vol., Packaging, Price: 900 cc bottle.
How Stored: Shelf stable.
New Product–Documentation: Visit with Carlos Planes at Soyinfo Center in Lafayette, California. 2012. Feb. 23. He brought this label in a scrapbook. Red, black and yellow on green. 2.75 by 4.5 inches. Carlos says MOA is a well-known company in Argentina, owned by Japanese, located on a little farm near Buenos Aires. He does not know when MOA started to make and sell Japanese-style soy sauce (shoyu) but he obtained this label from the product in Argentina in about 2002. MOA also made (and probably still makes) Japanese-style tofu.

11004. Mescher, Kelly. 2003. Japanese expand minds and menus to new soyfoods: The Japanese are known for observing tradition. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 14(4):6. Jan.
• ***Summary:*** Discusses the "Japan Food Soybean Mission, in which the Iowa Soybean Promotion Board (ISPB) staff, board members, and Iowa food grade soybean exporters traveled to meet with soybean processors in Japan and to talk with them about market opportunities."

"The soyfoods seminar provided cooking demonstrations for professional chefs, manufacturers, and food media in Japan." An American chef, Michael Foley, prepared various dishes (whose names are given) using soy ingredients. "They ate everything. There was not a morsel left, and they wanted the recipes," said Linda Funk, executive director of the Soyfoods Council. The Japanese are already fans of soy in its traditional forms, says Foley, "but these recipes were outside the box for them. To finish soups with soymilk, soy yogurt, and soy sauce is new to them... They were surprised at how good it tasted."

One of the highlights was the first Soyfoods Foodservice

Seminar. A color photo shows Linda Funk and Jim Stillman (ISPB director) in a downtown market in Tokyo.

11005. Russnogle, John. 2003. Old market, new possibilities: Non-GMO is now part of life in Japan. *Soybean Digest.* Jan. p. 24.
• ***Summary:*** Japan was for many years the world's No. 1 buyer of American soybeans until 1999, when it was surpassed by China and Mexico. In 1993 Japan bought 980,000 tonnes (metric tons) of U.S. food-grade soybeans, or 75.6% of that country's total soybean imports. But by 2002 that figure dropped by one-third to an estimated 659,000 tons–just 57.9% of Japan's imports. During that time, Canada's soybean exports to Japan increased 2.6 fold, from 57,600 tonnes to 150,000 tonnes (from 4.4% in 1993 to 13.2% of Japan's total imports in 2002). And Japan has almost tripled its own production of food-grade soybeans from 68,000 tonnes to 200,000 tonnes. Japan's increased production is partly the result of a government program that gives growers big financial incentives to convert rice acres to soybeans. Japan grows more rice than it can consume, but produces only 5% of its total soybean needs. Japanese like Brazilian soybeans, which tend to be higher in protein and oil than their U.S. counterparts.

11006. Iino, Ryoichi. 2003. The history of shoyu (Soy sauce) 4. *Food Culture* (*Kikkoman Inst. for International Food Culture, Noda, Japan*) No. 5. p. 8-10. Feb. 20. http://kiifc.kikkoman.co.jp. [5 ref]
• ***Summary:*** Contents: Edo period–The production and diffusion of shoyu (soy sauce). The manufacture of soy sauce. From barley to wheat. Heating and *niban shoyu* (second soy sauce). Kijoyu (raw soy sauce) and the addition of dilutors. The center of production moves to Kanto (Tokyo area). Exports to Holland. Another name for soy sauce (*oshidashi*). Soy sauce with cooked dishes and soups. Grilled foods and soy sauce. Sashimi (raw fish) and soy sauce.

Another name: "We know that soy sauce became a standard seasoning relatively early in Japan by the fact that it is also began to be called *oshidashi.* The word *oshidashi* is written using the Chinese characters meaning foundation or base. The term was used during the Muromachi Era (1338-1573) to indicate soup stock or broth, which was the basic ingredient for flavoring foods. *Oshidashi* was used in the same way to later refer to soy sauce. There are several written examples of the use of the term *oshidashi* to indicate soy sauce including *Onna Chouhou-ki* (1692), the three-volume *Ukiyo Burou* (1811), *Tokaidouchuu Hizakurige* (1814) and *Kouto Gosui* (1850)." Address: Food historian, and teacher of food history, Hattori Nutrition College, Japan.

11007. American Soybean Assoc. 2003. Bean beat: ASA reports U.S. soybean quality survey results. *Soybean Digest.* Feb. p. 56.
• ***Summary:*** The results of ASA's 17th U.S. Soybean Crop Quality Survey were presented in Dec. 2002 during a 2-week international mission to Korea, Japan, China, and Taiwan. The survey contained information about the protein (35.4%), oil (19.4%), and amino acids content of this year's U.S. soybean crop.

This was the first year that the survey gathered information about amino acids, according to author Tom Brumm of the Agricultural and Biosystems Engineering Dep. at Iowa State University. Livestock producers use amino acid content to determine the value of soybean meal. The report is based on a survey of 1,400 randomly selected ASA farmer-members across the USA; each submitted samples of their crop. For details see www.asasoya.org under "Current News & Events."

11008. *Ontario Soybean Growers Newsletter.* 2003. OSG promotes Canadian soybeans on mission to Asia. Feb. p. 2.
• ***Summary:*** "The Canadian soybean industry travelled to Asia in November 2002 to conduct eight seminars in eight Asian cities. The seminars were held in Japan (Tokyo, Nagoya, Osaka, Fukuoka), Malaysia (Penang, Kuala Lumpur), Singapore and Hong Kong.

"Liam McCreery and Kim Cooper from the Ontario Soybean Growers participated in this trip, along with 12 other members of the Canadian Soybean Export Association, representing exporters, researchers and government.

"The objectives of this trip to Asia were:

"To meet with soyfood associations and various buyers and give them presentations on the Canadian soybean industry and the IP [identity preserved] soybean standard that was developed by the Canadian Soybean Export Association last year.

"To demonstrate how both the Canadian and Ontario governments are working in partnership with the Canadian soybean industry to develop, market and ensure the highest quality of food-grade soybeans to meet export customers' needs.

"To gather information on customers' markets, needs and suppliers (market intelligence) in order to better provide a quality and competitive product.

"To provide information to export customers on the 2002 soybean crop in terms of yield, quality and grade. To emphasize Canada's commitment to further develop research and marketing programs in response to buyer's needs.

"This trip was very successful in attaining its objectives. All mission members and our overseas buyers felt these seminar presentations were very informative and needed if we are to further expand our market base around the world."

A large photo shows OSG past chair, Lam McCreery. Address: Chatham, ONT, Canada N7M 5L8.

11009. Takenaka, Asako; Annaka, H.; Kimura, Y.; Aoki, H.; Igarahi, K. 2003. Reduction of paraquat-induced

© Copyright Soyinfo Center 2014

oxidative stress in rats by dietary soy peptide. *Bioscience, Biotechnology, and Biochemistry* 67(2):278-83. Feb. [19 ref]
• ***Summary:*** A soy peptide was found to have antioxidative activity. The effect of a dietary soy protein isolate (SPI), soy peptide (PEP) and the amino acids in soy protein on oxidative stress was investigated in rats. Address: 1-3, 4. Dep. of Bioresource Engineering, Faculty of Agriculture, Yamagata Univ., Tsuruoka, Yamagata 997-8555, Japan.

11010. Zhou, J.R.; Yu, L.; Zhong, Y.; Blackburn, G.L. 2003. Soy phytochemicals and tea bioactive components synergistically inhibit androgen-sensitive human prostate tumors in mice. *J. of Nutrition* 133(2):516-21. Feb. [38 ref]
• ***Summary:*** Japanese prostate cancer rates are only about one-eighth of those in the USA. In this animal study, soy phytochemical concentrate (SPC) was given to mice implanted with cancer cells that were sensitive to the tumor-promoting effects of testosterone. SPC, which is rich in isoflavones, reduced tumorigenicity (% of animals with tumors) by about 50% compared to animals fed the control diet. Furthermore, black tea also inhibited tumorigenicity by about 40%. SPC combined with black tea reduced tumorigenicity by nearly 80%. Thus soy inhibits prostate tumor growth in mice. Address: Nutrition / Metabolism Lab., Dep. of Surgery, Beth Israel Deaconess Medical Center, Harvard Medical School, Boston, Massachusetts.

11011. Hill, Amelia. 2003. The day the earth died. *Observer* (*London*). March 2. p. 213.
• ***Summary:*** On 7 Aug. 1942 Japanese planes dropped anthrax on a town in China. Yalin Zhou recalls that it was beautiful as it floated down, like willow pollen or flowers, flowing with the wind.

But at midnight on that same day, "in the village of Tangjia in Zhejiang, CaiQiu Tang woke up screaming. Her pillow was wet with blood... The skin on my face had rotted and turned black, and my flesh was all pulpy like fermented tofu. All the teeth on one side of my face had fallen out..."

This is the story of Japan's secret Unit 731 of the Japanese Kwantung Army in Manchuria, organized in 1936, that conducted experiments on people living in China and Manchuria in order to try to perfect germ warfare (biological warfare). It is one of the largest and yet least known of the crimes against mankind.

11012. Bittman, Mark. 2003. The minimalist: Move over vinaigrette. *New York Times.* March 26. p. F3.
• ***Summary:*** As always, it is worth buying good soy sauce. "The standard brands (Kikkoman, Yamasa, San-J and so on) are fine, as is any soy sauce that lists as its ingredients only soy [beans], wheat, salt, and 'culture,' the yeast that makes the mixture ferment.

"Homemade ponzu will keep for several days with no loss in quality."

11013. *ASA Today* (*St. Louis, Missouri*). 2003. FAS is 50. 9(5):1. March.
• ***Summary:*** The Foreign Agricultural Service (FAS), an agency of the USDA, was established on 10 March 1953. FAS, which is celebrating its 50th anniversary this month, works to improve access to foreign markets for U.S. products and "operates programs designed to build new markets and improve the competitive position of U.S. agriculture in the global marketplace.

"The very first FAS Foreign Service National (FSN) cooperator was from the American Soybean Association's Japan office." Over the years, ASA has worked closely with FAS to develop and grow international markets for U.S. soybeans and soy products. FAS has a network of agricultural counselors, attachés, and trade officers stationed abroad as well as analysts, marketing specialists, negotiators, and related specialists in Washington, DC.

"FAS bears the primary responsibility for USDA's overseas activities–market development, international trade agreements and negotiations, and the collection and analysis of statistics and market information. It also administers USDA's export credit guarantee and food aid programs."

11014. *Bluebook Update* (*Bar Harbor, Maine*). 2003. Soybeans used as food will grow by 72% this decade: Soyatech releases new study. 10(1):2. Jan/March.
• ***Summary:*** "Whole Soybeans as Food Ingredient," a new study published [in January] by Soyatech, Inc., focuses on the market for soybeans for food.

Over the past 30 years, soybean production globally has grown over 400%. The production in 2002 was about 184 million metric tons, with the combined products of Argentina and Brazil looking like they might overtake the United States, the largest producer. The lower cost of production factors like land and labor in South America and the high value of the dollar are contributing factors.

Annually, 85% of soybeans are crushed into meal and 9% are processed into human food, 95% of which is consumed in Asia. China, Japan, Korea, Indonesia, and Taiwan are the main consumers.

A small percentage of the beans crushed into meal are processed into soy protein ingredients for food. Examples include soy protein concentrates, soy flour, and isolated soy proteins. 3.2% of the crushed beans are used in this manner; however, use of crushed soybeans is food is expanding at 6 times the rate of the use of whole soybeans.

The use of soybeans for food will expand by 72% between the years of 2000 and 2010, requiring that additional soy protein plants be constructed. Distribution channels will also require expansion.

Although only 0.2% of the U.S. soybean crop is processed into human food domestically, 8.8% are when global exports are included. 6.3 million acres of soy beans

© Copyright Soyinfo Center 2014

therefore ultimately are used for food.

A pie chart titled "Soybean usage: 1996-2001" shows: Soybean crush 84.4%. Direct food use 8.6%. Feed/seed/residual 5.7%. Change in stocks. 1.4%.

11015. Nagata, Chisato; Shimizu, H.; Takami, R.; et al. 2003. Soy product intake is inversely associated with serum homocysteine level in premenopausal Japanese women. *J. of Nutrition* 133(3):797-800. March. [32 ref]
• ***Summary:*** Soy is shown to reduce levels of homocysteine in the blood. Address: Dep. of Public Health, Gifu Univ. School of Medicine, Gifu, Japan.

11016. Shiraki, K.; Une, K.; Yano, R.; Otani, S.; Mimeoka, A.; Watanabe, H. 2003. Inhibition by long-term fermented miso of induction of pulmonary adenocarcinoma by diisopropanolnitrosamine in Wistar rats. *Hiroshima J. of Medical Sciences* 52(1):9-13. March. *
• ***Summary:*** Can miso help reduce lung tumors? Diisopropanolnitrosamine is abbreviated BHP. A total of 63 Slc:Wistar rats, 6 weeks of age, were divided into 4 groups and given BHP (2000 ppm) in their drinking water for 10 weeks. After the carcinogen treatment the rats were fed a normal control modified-fat (MF) solid diet, or the same diet containing 10% long-term or short-term fermented miso for 12 weeks. The long-term fermented miso significantly reduced the number of lung tumors, adenocarcinomas and PCNA strongly positive tumors as compared with the short-term fermented miso.

These results indicate that dietary supplementation with long-term fermented miso could exert chemopreventive effects on lung carcinogenesis. Address: Dep. of Cellular Biology, Research Institute for Radiation Biology and Medicine, Hiroshima Univ., Kasumi 1-2-3, Minami-ku, Hiroshima, 734-8553, Japan.

11017. Shiraki, K.; Une, K.; Yano, R.; Otani, S.; Mimeoka, A.; Watanabe, H. 2003. Inhibition by long-term fermented miso of induction of pulmonary adenocarcinoma by diisopropanolnitrosamine in Wistar rats. *Hiroshima J. of Medical Sciences* 52(1):9-13. March. *
• ***Summary:*** Diisopropanolnitrosamine is abbreviated BHP. Address: Dep. of Cellular Biology, Research Institute for Radiation Biology and Medicine, Hiroshima Univ., Kasumi 1-2-3, Minami-ku, Hiroshima, 734-8553, Japan.

11018. Suzuki, Y.; Kondo, K.; Ichise, H.; Tsukamoto, Y.; Urano, T.; Umemura, K. 2003. Dietary supplementation with fermented soybeans suppresses intimal thickening. *Nutrition* (*Burbank, California*) 19(3):261-64. March. *
• ***Summary:*** Although soyfoods have been consumed in East Asia for more than 1,000 years, it is only during the past 20 years that they have made inroads into Western diets. We investigated the effect of dietary supplementation with natto extracts produced from fermented soybeans on intimal thickening of arteries after vessel endothelial denudation. Natto extracts include nattokinase, a potent fibrinolytic enzyme having four times greater fibrinolytic activity than plasmin. Address: Dep. of Pharmacology, Hamamatsu Univ. School of Medicine, Shizuoka, Japan.

11019. **Product Name:** [Nattoesse: Essence of Natto Food].
Foreign Name: Nattoesse.
Manufacturer's Name: Ventrep Sante, Inc. (Importer/Marketer). Made in Japan by Gudo Shusei Co., Ltd. (Tokyo).
Manufacturer's Address: 3-3-26-201 Jingu-mae, Shibuya-ku, Tokyo 150-0001, Japan. Phone: +81 3 3401 8360.
Date of Introduction: 2003 March.
Ingredients: Natto.
How Stored: Shelf stable.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2003. March. "Nattoesse: Essence of Natto Food. Soy beans naturally fermented by Bacillus (NattoVR 501) living in rice straws." Contents: A functional food from traditional Japanese diet. Research reports. A brief story [history] of natto food and nattokinase.

11020. Kasahara, Takaoki; Kato, Tadafumi. 2003. A new redox-cofactor vitamin for mammals. *Nature* (*London*) 422(6934):832. April 24. [10 ref]
• ***Summary:*** A Japanese research team confirmed that PQQ (pyrroloquinoline quinone), a substance discovered in 1979, can be classified as a vitamin. More specifically, it is a new B vitamin, joining niacin / nicotinic acid (vitamin B3) and riboflavin (vitamin B2)–first new vitamin in 55 years. The most concentrated known source of PQQ is natto, a type of soybeans fermented by *Bacillus natto* bacteria. The new vitamin plays an important role in the fertility of mice and may have a similar function in humans.

Note 1. This is the earliest document seen (Jan. 2012) that mentions PQQ in connection with natto.

Note 2. A Google search of natto + pqq (July 2009) gets 2,480 hits. Natto is an excellent source of PQQ, a critical nutrient for skin health. PQQ is essential to the mammalian diet, meaning it can only be obtained from food sources. Address: Lab. for Molecular Dynamics of Mental Disorders, Brain Science Inst., RIKEN, Wako-shi, Saitama 351-0198, Japan.

11021. Colbin, Annemarie. 2003. Interview with Irma Paule: February 9, 2002. *Macrobiotics Today* (*Oroville, California*). March/April. p. 10-13.
• ***Summary:*** A biography of Irma Paule, a pioneer in organizing macrobiotics in New York City, starting in about 1959-60, when Alcan Yamaguchi saved her life–free of charge. At the time, she was a young actress and a coffee addict, drinking 30 cups a day. Because she speaks French,

© Copyright Soyinfo Center 2014

she served as George Ohsawa's translator when he spoke in America. Yamaguchi and Herman Aihara had founded the Ohsawa Foundation in New York City. When they left for Chico, California, it fell into Irma's hands willy-nilly. She called it by various names, including the Ohsawa Foundation and the Macrobiotic Foundation. She gave lectures and advised people, but never charged for her services. She rented a small professional apartment at 217 Second Ave. where they had some Ohsawa books and sold organic brown rice, etc.

There was a swank Japanese restaurant named Musubi on West 56th Street, between 5th and 6th avenues. The Sato brothers invested money in that restaurant and Alcan Yamaguchi ran it like a macrobiotic restaurant. There she first saw a machine for making rice cakes. Describes the death of Beth Ann Simon from Irma's recollections. Beth drank "three-fourths of a bottle of tamari soy sauce" shortly before she died. A photo shows Irma Paule. Address: PhD, Founder, Natural Gourmet Cookery School and Inst. for Food and Health, New York City.

11022. Morinaga Nutritional Foods, Inc. 2003. Mori-Nu. The tofu created for royalty. Now available for your table (Ad). *Vegetarian Times.* April.
• ***Summary:*** This attractive color ad (8½ by 11 inches) shows a large black-and-white photo of a former emperor of Japan and his wife. In front of it is a large color package of Mori-Nu Extra Firm Silken Lite Tofu–with a new label design. Across the bottom are small photos of the six types of Mori-Nu tofu–each with a new label design. The tofu that is "Made with Organic Soybeans" also has new ingredients–it no longer contains isolated soy protein. All should be available in stores by late April.

This ad also appeared in *Natural Foods Merchandiser* (March 2003, p. 15). Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

11023. Aoyagi, Akiko. 2003. McDonalds in Japan plans to launch a fried tofu burger (Interview). *SoyaScan Notes.* May 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Akiko recently saw a program on Japanese TV stating that McDonalds Holdings Co. (Japan) Ltd., the American burger giant, is experiencing lagging sales and decreasing profits for the first time in 29 years in Japan. In response they have decided to start selling a fried tofu burger as a healthy alternative in their Japanese restaurants, and to make other healthy additions to its Japanese menu. The new tofu burger will come with a ginger-flavored soy sauce and sell for $1.91. McDonalds' problems include youth savvy competition from the Freshness Burger chain and fears about Bovine Spongiform Encephalopathy (BSE).

Note: An article in *Bluebook Update* (May 2003, p. 1) stated that On April 23, McDonalds Holdings Co. (Japan) Ltd., a mainstream foodservice company, is adding "tofu hamburgers" to its menu. Address: Walnut Creek, California.

11024. *Ontario Soybean Growers Newsletter.* 2003. Canadian Soybean Export Association holds annual meeting. May. p. 6.
• ***Summary:*** "The Canadian Soybean Export Association (CSEA) held their 8th annual business meeting recently in Guelph. The following members were elected to lead the association in 2003-2004:

Chair: Brad Richmond, Maple Leaf Foods International
Vice-Chair: Marty Huzevka, Hensall District Co-operative
Past-Chair: Martin Vanderloo, Huron Commodities Inc.
Executive Member: Jim Gowland, OSG
Secretary / Treasurer: Kim Cooper, OSG

"CSEA is a voluntary association of members of the Canadian soybean industry, working to promote exports of Canadian soybeans and soya products into world markets. This year's activities included hosting a group of soybean industry members from Japan, Taiwan and Western Europe, participating in a technical mission to Japan, Taiwan, South Korea and Singapore, and the development of two resources to promote the Canadian soybean industry." Address: Chatham, ONT, Canada N7M 5L8.

11025. Yamamoto, Seiichiro; Sobue, T.; Kobayashi, M.; Sasaki, S.; Tsugane, S. 2003. Soy, isoflavones, and breast cancer risk in Japan. *J. of the National Cancer Institute* 95(12):906-13. June 18. [44 ref]
• ***Summary:*** Breast cancer risk was reduced by one half in Japanese women who ate three or more bowls of miso soup on an almost daily basis. The report monitored 21,852 women from 1990 to 2000. Post-menopausal women showed the greatest reduction of risk.

"In Japan, soy is consumed in various forms, including dried or green soybeans, tofu (soybean curd), natto (fermented soybeans), miso (fermented soybean paste), okara (tofu lees), soybean sprouts, soymilk, yuba (soy milk skin), kinako (soy flour), and soy sauce." Address: Cancer Information and Epidemiology Div., National Cancer Center Research Institute, Tokyo, Japan.

11026. Belleme, Jan. 2003. New developments with Mitoku and with miso (Interview). *SoyaScan Notes.* June 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** At the end of March 2003, Mr. Kazama closed Mitoku's office in the USA which John and his wife, Jan, ran as a home business. So John is looking for other sources of income.

Rudy Shur plans to publish John's new book on miso in October or November of this year; the title will probably be *The Miso Book.* The book is a wholistic look at miso with emphasis on health benefits.

© Copyright Soyinfo Center 2014

Vern Verona, a long-time macrobiotic, wrote a book titled *Cancer Preventing Food,* published in 1994 by Prentice-Hall. Vern is now writing a book about miso. John is involved in a miso-marketing venture. He and Sandy Pukel are organizing a 7-day "wholistic health" cruise to the western Caribbean.

Update: 2009. Jan 27. In the spring of 2005 Sandy Pukel and his partner, John Belleme, launched Holistic Holiday at Sea, a fun filled cruise vacation with gourmet vegan fare and extraordinary educational opportunities. The Taste of Health and Holistic Holiday cruise (as it has come to be known) has become a full-time and very successful business, with revenue of more than $1 million a year. They do only one cruise a year–in the summer. Last year more than 1,000 people went on the cruise. This coming summer will be the 6th cruise. It is organized entirely by John and Jan Belleme and Sandy Pukel. On a typical day, John and Jan work 12 hours a day. The cruise rates per person range from $1,195 to $3,000.

Chris Dawson, who now owns Clearspring in London, has built it into a thriving $10-12 million dollar a year import and distribution business. He imports from Japan and China and also distributes many natural foods made in Europe. John wrote a book for him titled *The Real Taste of Japan,* published by Cross Media. Address: P.O. Box 457, Saluda, North Carolina 28773.

11027. Kuba, Megumi; Tanaka, K.; Tawata, S.; Takeda, Y.; Yasuda, M. 2003. Angiotensin I-converting enzyme inhibitory peptides isolated from tofuyo fermented soybean food. *Bioscience, Biotechnology, and Biochemistry* 67(6):1278-83. June. [27 ref. Eng]
• ***Summary:*** Angiotensin I-converting enzyme (ACE) inhibitory activity was observed in a tofuyo (fermented soybean food) extract. Address: 1-3, 5. Dep. of Bioscience and Biotechnology, Faculty of Agriculture, Univ. of the Ryukyus, 1 Senbaru, Nishihara-cho, Okinawa 902-0213, Japan.

11028. Suganama, Kiyoshi; Sumi, Hiroyuki. 2003. 11029. Tanaka, Tadayoshi; Yamauchi, Tomoko; Katsumata, Rie; Kiuchi, Kan. 2003. [Comparison of volatile components in commercial itohiki-natto by solid-phase microextraction and gas chromatography]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 50(6):278-85. [23 ref. Jap; eng]
• ***Summary:*** "The volatile component in commercial itohiki-natto was extracted with divinylbenzene / carboxen / polydimethylsiloxane solid-phase microextraction fiber at 50ºC for 60 minutes, and injected by gas chromatograph (GC) or gas chromatograph mass spectrometer (column: DB-WAX (0.25mm ID, 30m long, 0.25µm film thickness)). Each peak was identified by comparing the mass spectrum and the retention indices with the mass spectrum databases and the retention indices of authentic compounds, respectively. Twelve alcohols, 20 ketones, 12 fatty acids, 12 nitrogen compounds, 10 hydrocarbons, 8 esters, 3 phenols, 2 frans, 1 aldehyde, 1 pyrane, 1 oxazole, and ammonia = a total of 83 compounds were identified" (from journal@rchive). Address: 1. Dep. of the Science of Living; 2. Faculty of Home Economics. All: Kyoritsu Women's Univ., 2-2-1, Hitotsubashi, Chiyoda-ku, Tokyo 101-8433, Japan.

11030. Wood, Marcia. 2003. USDA plant collectors' exotic expedition captured in historical photo albums. *Agricultural Research.* June. p. 18-19.
• ***Summary:*** Seven albums, containing more than 1,000 photographs from the Dorsett-Morse Expedition to East Asia, are now owned by Special Collections, National Agricultural Library at Beltsville, Maryland. The collection is officially named the "Palemon Howard Dorsett Collection." Researchers visiting the library can, by appointment, view the albums. Each print is pasted on heavy green paper, typical of that used for photograph albums of the early 1900s; below each is a handwritten caption in black ink which generally includes the date, location where the photo was taken, and the name of the plant or object shown–notes Susan H. Fugate, head of the library's special collections. For example: "Soja ussuriensis, Wild soy bean. View [of] the wild soy bean plants growing along road side on [the] outskirts of Heijo [today's Pyongyang / P'yongyang, the capital of North Korea]... These plants appear different from wild soy bean found in Manchuria and Japan. The leaves are larger and somewhat different [in] shape."

A selection of nearly 50 prints can be viewed on the Web at www.nal.usda.gov /speccoll/findaids /dorsett.

The major focus of this expedition was soybeans. "Today soybeans are the second largest U.S. farm crop, worth more than $14 billion in 2002." Food uses that Dorsett and Morse envisioned are part of that market. "What's more, studies are revealing the new benefits of soy compounds such as isoflavones."

"Some of the credit for this current success can be attributed to the Dorsett-Morse expedition. The team brought back about 4,500 soybean specimens as well as another 4,500 specimens of interest. Some of the soybean plants had prized traits, such as resistance to harmful microbes that could otherwise devastate the crop.

"Dorsett, born in Illinois in 1862 and educated at the University of Missouri, joined USDA in 1891. After more than a decade, he left the department to start his own

© Copyright Soyinfo Center 2014

business, then rejoined as a plant explorer in Washington, D.C., in 1909.

"The Dorsett-Morse Oriental Exploration Expedition was an unqualified success and further enhanced Dorsett's reputation as a premier plant explorer. In 1936, he won the Frank N. Meyer Medal from the Council of the American Genetic Association for his outstanding work. The award was named in honor of another USDA plant explorer, who died under what some claim were mysterious circumstances while on a collecting expedition in China.

"But that's another story."

A photo shows P.H. Dorsett (second from right) and his Chinese interpreter Peter Liu on the trail. No date is given. Address: USDA ARS.

11031. Elegant, Simon. 2003. Long lives well lived. *Time.* July 16.
• ***Summary:*** "Okinawa's national dish is a stir-fry called chample." "The exact recipe varies from house to house but the basic ingredients are always there: tofu, soya beans and goya [a local variety of bitter gourd]. Those three are all very high in flavonoids as well as other compounds like isoflavones, saponins and vitamins B and C that provide protection against free radicals." Address: Okinawa.

11032. Toscano, Dawn. 2003. Work with tofu in Japan and Spain (Interview). *SoyaScan Notes.* July 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dawn has been living in Spain since 1988–for the last 15 years. Now she wants to start making tofu in Valencia, Spain, where it is available only at high prices, vacuum packed in plastic, at trendy herb stores or via Chinese distributors.

She knew Nahum & Bev Stiskin, whose fledgling publishing company, Autumn Press, published *The Book of Tofu* in late 1975. In March 1974, when she went to Japan (because she could not find a job in USA), she lived in Minami-ku, Yokohama, and worked at the YMCA. Then, during her yearly gynecological visit, she met a gynecologist at the Yamate Hospital who was a Lt. Commander in the U.S. Navy. He lived on the navy base in Yokohama. Later in 1974 she moved to Hayama and got into paper-making then into weaving. Beverly Stiskin was selling one of her looms, but Bev needed to see a gynecologist, so Dawn took Bev to the Yamate Hospital and Dawn's boyfriend helped her, free of charge. Dawn ended up not buying the loom. But she did talk to Nahum and showed him a newspaper article she had about tofu. He was interested. She may have given Shurtleff's phone number to Nahum or she may suggested to Shurtleff that he call Nahum.

In the 1970s she called Shurtleff at least 3 times in Japan and once in ca. 1980-81 from a phone box in Lafayette, California; her future ex-husband lived in Walnut Creek. In Japan she sent Shurtleff a draft of an article she wrote about tofu and wanted to submit to *Mother Earth News.* Shurtleff suggested some corrections, but it was never published. She used to make tofu all the time at home in Japan, and she has continued since she arrived in Spain. She bought a first edition of *The Book of Tofu,* then wrote a letter to *Mother Earth News* and urged them to review the book. They wrote back saying "no, the timing is not right," because they had never heard of tofu. She still has both letters *Mother Earth News* wrote to her. The second says "Thanks so much for bringing this book to our attention." She was a *Mother Earth News* lifetime subscriber ("Lifer," for $250) #447 or #449. Address: Calle Uruguay 59, pta 13, 46007 Valencia, Spain. Phone: +34 96 380 2129.

• ***Summary:*** "We established a simple method for identifying *Bacillus subtilis* natto strain KA-145 by PCR [polymerase chain reaction]. *B. subtilis* natto is indispensable as a starter strain for fermenting the traditional Japanese food natto. *B. subtilis* natto strain KA-145 is a recent isolate with high nattokinase activity compared to the normal strain. Discrimination of the bacterial strains is important in controlling contamination of the strains" (from journal@ rchive).

Note: An insertion sequence (also known as an IS, an insertion sequence element, or an IS element) is a short DNA sequence that acts as a simple transposable element. Insertion sequences have two major characteristics: they are small relative to other transposable elements (generally around 700 to 2500 bp in length) and only code for proteins implicated in the transposition activity (they are thus different from other transposons, which also carry accessory genes such as antibiotic resistance genes). (Source: Wikipedia, Feb. 2012). Address: 1-3. National Agricultural Research Center for Kyushu Okinawa Region, Suya 2421, Nishigoushi, Kikuchi, Kumamoto-ken 861-1192, Japan.

• ***Summary:*** Every one of the top ten U.S. soybean customers was once a recipient of some type of U.S. foreign assistance. "Today these nations are powerful U.S. trade partners. A table shows export value in millions of U.S. dollars."

Whole soybeans: European Union $1,167 million. China $1,012. Mexico $755. Japan $724. Taiwan $385. Indonesia $245. Korea $226. Canada $130. Thailand $115. Israel $95.

Soybean meal: Canada $200 million. Indonesia $167. Philippines $138. Dominican Republic $71. Turkey $62. Saudi Arabia $59. Japan $59. Mexico $50. Egypt $49. Thailand $44. Source: U.S. Department of Commerce.

11039. *NSRL Bulletin* (*National Soybean Research Laboratory, Urbana, Illinois*). 2003. New soybean varieties developed for use as garden vegetable. 10(3):5. Oct.
• ***Summary:*** "Soybean breeder Richard Bernard at the Univ. of Illinois has developed 13 varieties of soybeans called Gardensoy, specifically bred to be eaten as a vegetable on the dinner plate alongside peas, carrots, and corn, but with the added nutritional punch of protein found in soybeans.

"Cary Howrey has been farming for about 15 years and was a guinea pig for Bernard's Gardensoy soybeans when he was first developing the varieties. Howrey grew many of the varieties on her farm in Illinois and sells them at a Saturday morning farmer's market at Lincoln Square in Urbana at her stand under the name 'Garden of Eatin'.'

"'When I first started selling edible soybeans, they were a hard sell to American women.' Howrey says. 'They thought soybeans were just for animals. Then when soybeans were in the news saying that soy products were good for women's health, they started trying my fresh soybeans more. My Asian customers have always loved them.'

"Farmers in Japan have been growing soybeans to be eaten as a table vegetable for centuries, but their varieties don't thrive in the climate and diseases in the United States. 'I started the hybrid process using Japanese soybean varieties and crossed them with our own high-yielding varieties,' Bernard says."

In 2000 Bernard released his first six Gardensoy varieties. In 2002 he released 7 additional varieties and is still working on more than 100 varieties.

"He will provide 30 to 50 seed packets free of charge to anyone who wants to try them. Larger quantities can be ordered through Rupp Seeds in Ohio at (800) 700-1199."

• ***Summary:*** One of these leaders is Tsuru Yamauchi, mother of Shoan Yamauchi, whose story is told on pages 216-19. Born on 25 Dec. 1890, in Shuri, Okinawa, Japan, her full name at birth was Tsuru Kamigawa. She died in 1900 in Hawaii. She was cofounder of the Aala Tofu Co., Honolulu, Hawaii (1940-1958). A "picture bride from Okinawa, she helped her husband, Shokin, establish Aala Tofu Co. in Honolulu, Hawaii, in 1940. This tofu manufacturing company, which traces its roots back to 1923, eventually made its way to Los Angeles, California, where it became Hinode Tofu Co. It eventually merged with a Japanese Spice manufacturer, House Foods, to create Hinoichi Tofu." Address: Independent writer and editor.

11053. Hoshikawa, Hiroko; Hoshikawa, Haruo; Koizumi, Takeo. 2003. Shôta to nattô [Shôta and natto]. Tokyo: Popurasha. Unpaginated. Illust. (color). 21 x 27 cm. [Jap]*
• ***Summary:*** For a juvenile audience. Shôta is a Japanese boy. His grandfather teaches him that natto is a magical food. Starting from growing soybeans to making natto, the whole process of making fermented soyfoods is introduced.

11054. Hosoi, Tomohiro; Kiuchi, Kan. 2003. Natto–A food made by fermenting cooked soybeans with *Bacillus subtilis* (*natto*). In: Edward R. Farnworth. 2003. Handbook of Fermented Functional Foods. Boca Raton, Florida: CRC Press. 390 p. See p. 227-50. [111 ref]
• ***Summary:*** Contents: Fermented soybean foods in Asia. Ingredients of natto: *Bacillus subtilis* (*natto*) spores, soybeans (color, size, protein content, sugar content, washing and storage methods). Natto processing: Washing and soaking of soybeans, steaming of soybeans, inoculation with *Bacillus subtilis* (*natto*) spores, packaging, fermentation, packing for shipment, changes in packages. Assessment of quality: Chemical composition, sensory tests (8 criteria), changes in consumers' preferences (growing preference for larger soybeans and natto with markedly weaker odors and strings). Health benefits: *Bacillus subtilis* (*natto*) cells (effects on intestinal microflora and feed efficiency, effects on the immune system, anti-allergy effect of subtilisin, fibrinolytic activity of subtilisin, role of vitamin K-2 (menaquinoe-7) in the prevention of osteoporosis), phytoestrogens–effects on cancer and osteoporosis. Conclusions.

Natto and related foods are all made by fermentation with the bacterium *Bacillus subtilis* (*natto*). These include sweet dou chi (*xian doushi*) in China (where it is used as a seasoning for Beijing duck [Peking duck]), kinema in Nepal and Myanmar, *tua nao* in Thailand, and *chungkuk-jang* in Korea.

In the year 2000 a total of 10.1 million metric tons of soybeans in Japan were converted directly into foods; more than 80% of these soybeans were imported. Between 1991 and 2000 there was a 13% increase in soybean consumption for natto products.

Natto makers prefer to use certain soybean varieties such as Suzuhime and Suzumaru which are grown in Hokkaido, Kosuzu in Iwate, Miyagi, and Akita Prefectures, and Natto-Shoryo in Ibaraki Prefecture.

Natto makers generally desire the following qualities in soybeans: 1. Extra small or small size (for consumers from Tokyo northward). 2. Easily washable. 3. Yellow surfaces and hila. 4. A suitable degree of stickiness when made into natto. 5. Relatively sweet taste. 5. Minimal changes in constituents and appearance during storage.

In Japan, soybeans are classified by diameter into four groups: (1) Extra small is less than 5.5 mm diameter. (2) Small is 5.5 mm to 7.3 mm. (3) Medium is 7.3 mm to 7.9 mm. (4) Large is greater than 7.9 mm in diameter.

Japan's leading natto trade association is called the "Federation of Japan Natto Manufacturers Cooperative Society."

A soybean allergen has been identified as *Gly m* d 28K. This allergen is found in high concentrations in various nonfermented soybean products such as soy protein isolate, tofu, dried frozen tofu, and yuba. However fermented soybean products such as natto, soy sauce and miso do not contain this allergen. "*Bacillus subtilis* (*natto*) produces a serine protease [proteolytic enzyme] of subtilisin NAT during its growth. Subtilisin NAT appears to degrade *Gly m* d 28K."

"Circulating platelets and blood-derived proteins (fibrin) are essential for the formation of blood clots, which prevent bleeding long enough for healing to occur. However, excess coagulation prevents normal physiologic blood flow, which causes thrombotic disorders Thrombolytic therapy is the most direct means of restoring blood flow. *Bacillus* spp. produce serine proteases called subtilisins, which are known

© Copyright Soyinfo Center 2014

to have fibrinolytic activity" [8 references cited]. Address: 1. PhD, Tokyo Metropolitan Food Research Centre; 2. PhD, Dep. of Food Science and Nutrition, Kyoritsu Women's Univ. Both: Tokyo, Japan.

• ***Summary:*** Contents: Introduction. Miso: The history of miso, manufacturing miso, home production of miso, effects of miso on health (gastrointestinal diseases, cancer prevention, elimination of radioactive materials, effect on cholesterol levels and aging, harmful effects of tobacco). Conclusions. Acknowledgments.

Total commercial production of miso in Japan is presently about 600,00 tonnes (metric tons) per year, produced by over 1,500 miso factories and plants (p. 278).

History: At some time between 200 B.C. and 300 A.D. the soybean was probably introduced to Japan, most likely from northern China, through Korea. The earliest known book about miso is "thought to be the *Taiho-ritsyryo* compiled in A.D. 702, but by that time a type of miso was already known in Japan." The technique for preparing miso was introduced from either Korea or China. One theory is that miso developed from Chinese jan [sic, jiang]. In about 550 to 600 A.D., Japanese came to know about jiang, however at this time jiang was being made in Buddhist temples in China. It is believed that in 753, a Chinese Buddhist named Ganjin (688-763) came to Japan to promote Buddhism and at the same time brought jiang to Japan.

Elimination of radioactive materials: Miso exports to European countries increased after the April 1986 accident at the Chernobyl nuclear power plant in Northern Ukraine, because it was believed that miso consumption could ameliorate the harmful effects of exposure to atomic radiation. Researchers studying the activities of microorganisms have shown that miso consumption helps to eliminate radioactive substances from the body. Address: 1. PhD, First Dep. of Pathology, Okayama Univ. Medical School; 2. Dep. of Pathological Research, Graduate School of Medicine and Dentistry, Okayama Univ. Both: Okayama, Japan.

Kyushu, Japan. Sea vegetables imported to America today (Interview). *SoyaScan Notes.* Jan. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** About 40% of all the nori produced in Japan comes from the Ariake Sea off the western coast of Kyushu, where it has been cultivated on nets for more than 25 years. This bay was ringed by wetlands, which were gradually filled in by developers. In early 2001 the entire nori crop in that bay failed because of an unseasonal outbreak of red tide–which had several causes, including a land reclamation project which destroyed wetlands that are no longer able to purify the sea water. The Japanese believe that nori will never be grown in that bay again–a huge disaster for thousands of nori farmers! This had led to more of the sea vegetables imported to the USA coming from China and Korea. Barry thinks that 80-90% of all the sea vegetables now consumed in Japan comes from China.

It is generally believed in Japan that, of the various sea vegetables, the kombu crop is the cleanest and most free of heavy metals such as lead, mercury, and arsenic. That is because most of the kombu harvested in Japan comes from the area around Hokkaido, Japan's northernmost large island, where the cold, clear current flows down from the north. Japan has made a big effort, over the past 10-20 years, to clean up its environment and coastal waters.

China, on the other hand, has little pollution contral. Its main goal is to be the low-cost producer of any product that consumers desire–worldwide. It produces a growing percentage of the world's sea vegetables–but heavy metal content is an issue.

Eden Foods, which is the leading seller of sea vegetables in the USA, buys all of its sea vegetables from Japan and pays more for them than if it bought them from China or Korea. In recent years, Great Eastern Sun (GES) has built its seaweed business on having less expensive products, imported from China. The only sea vegetable GES imports from Japan (Mitoku) is arame, which is not available from China. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

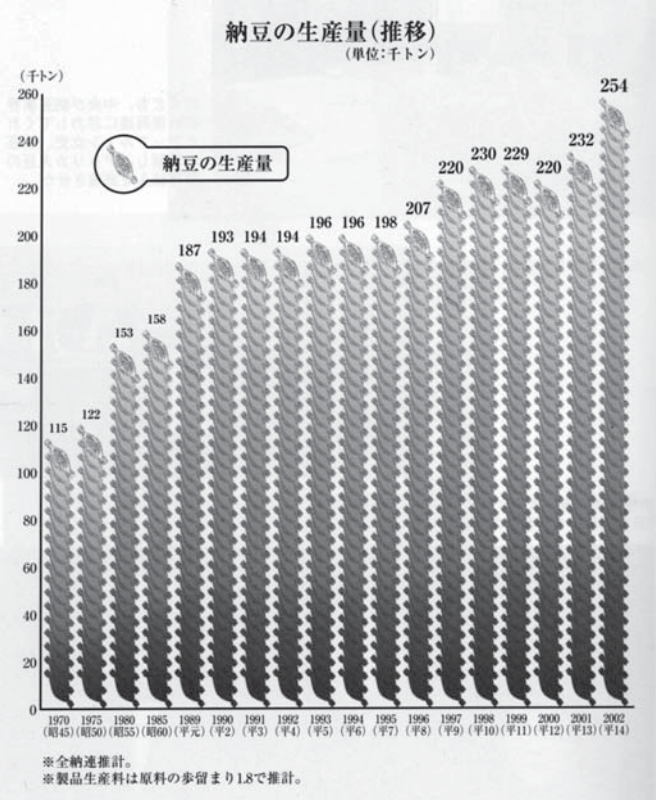
11068. Alexander, Melissa. 2004. Focus on Brazil: Soybean sector surges ahead on investments by multinationals, domestic companies. *World Grain* 22(1):22, 24, 26-27.
• ***Summary:*** Worldwide, Brazil ranks first in exports of coffee, orange juice and soybean meal, second in exports of soybeans and tobacco, and third in exports of beef and poultry. Brazil's main export markets are the U.S., Argentina, Japan, and the Netherlands.

A valuable sidebar titled "Key facts," gives basic information about: Capital city, demography, geography, government, official agricultural agencies, economy, G.D.P. per capita, currency, exports, imports, major crops / agricultural products, wheat, soybeans, maize, transportation, internet. A half-page section discusses oilseeds (mainly soybeans) in Brazil. Underlying Brazil's spectacular rise as a world soybean producer is "a whole new system of oilseed inputs, outputs, and infrastructure led by multinationals, such as Cargill, Inc. and Bunge Limited, and large domestic companies." On the one had, these companies have made seed, fertilizer, herbicides, and credit available to farmers, while on the other hand they are offered purchasing, crushing, transport and export facilities to complete the cycle. Many new soy-related projects are under construction or being planned.

A graph (1994-95 to 2003-04) shows Brazil's soybean production and soybean exports, and U.S. soybean exports.

11069. Zenkoku Natto Kyodo Kumiai Rengokai (Japanese National Natto Assoc.). ed. 2004. Nattô kindai gojû nenshi [Natto's recent history: 50 years]. Tokyo: Zenkoku Natto Kyodo Kumiai Rengokai. 439 + 31 p. Plus 8 unnumbered pages of plates at front. Illust. No index. 20 cm. [1 ref. Jap]



• ***Summary:*** Name of organization with diacritics is: Zenkoku Nattô Kyôdô Kumiai Rengokai. Contents: Graph of natto production (in 1,000 metric tons {tonnes}) in Japan from 1970 to 2002. Production increased from 115,000 in 1970 to 187,000 in 1989 to 230,000 in 1998 to 254,000 in

© Copyright Soyinfo Center 2014

2002. 31 unnumbered pages of glossy photos, mostly of people connected with the Natto Association. 1. History of natto (before World War II). 2. History of natto (after World War II). 3. From soybeans to natto: History of natto containers. 4. History and usage of mustard for natto: History of sauce (*taré*). 5. Comments from the researchers: Suggestions / proposals.

6. Big and complete book about the nutritional value of natto–How wonderful natto is! [*Nattô Taizen,* by Shinobu Machida, published in 1997]. 7. Longevity with native / local natto foods and cookery: The Japanese chain of islands, natto cuisine is traveling. 8. Study of spices / condiments (*yakumi*). 9. Natto cooking a la carte. 10. Activities, directions, and work details of the Japanese National Natto Association. 11. Timeline / chronology of Japanese National Natto Assoc. 12. Meetings / gatherings for judging samples of natto. 13. How this book was published: Regarding the use of questionnaires. Address: Tokyo, Japan.

11070. Hinners, John. 2004. Sizing up the competition. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 15(5):16-17. Feb.

• ***Summary:*** Brazil is poised to become the world's largest exporter of beef in 2004. In 1999 Brazil exported 464,000 tons of beef; in 2004 the country is projected to export 1.4 million tons–an "explosive increase." It is likely that pork production and exports will follow the same pattern. In 2003 pork exports from Brazil rose 99% (almost double).

A pie chart titled "U.S. soybean use by livestock" shows: Poultry 50%, swine 25%, beef 13%, dairy 6%, petfood 3%, and other 3%.

Mexico and Japan are the two largest consumers of U.S. red meats. Tables show that in 2001, the U.S. exported to Japan 513,174 tons of beef and beef variety meats worth $1,245.8 million. Also in 2001 the U.S. exported to Mexico 311,404 tons of beef and beef variety meats worth $546.2 million.

More than 33 million bushels of U.S. soybeans are used to produce U.S. red meat exports. For more: www.usmef.org. Address: Director: Industry Relations, U.S. Meat Export Federation.

11071. Shida, Yasuyo. 2004. Soymilk desserts: Quick & easy. Tokyo: Joie, Inc. 92 p. Feb. Illust. (color). No index. 26 cm.

• ***Summary:*** A handsome book loaded with glossy color photos. Contents: About the author. Baked desserts. Steamed / fried desserts. Fruit desserts. Chilled desserts. Drinks & shakes. Nutrition and health benefits of soybean products. Kitchen utensils for making sweets. Glossary: Meringue, mousse, okara, parchment, puree, sesame seeds, sieve, skimmed milk, souffle, syrup, tofu, *tonyu* (the Japanese word for soymilk), whisk, *yuzu* (a sour and fragrant citrus fruit from Japan).

The author has studied confectionary art at both L'Ecole Lenotre in Paris, France, and at Richmond Bakery School in Luzern (Lucerne), Switzerland. A portrait photo shows the author.

11072. Shurtleff, William. 2004. Why do we in the USA use the Japanese word "tofu" rather than the Chinese word "doufu" to refer to this soyfood product? (Editorial). *SoyaScan Notes.* March 4.

• ***Summary:*** Several important trends would favor the use of the Chinese term "doufu": (1) During the period 1920 to 1960, Chinese cooking was much better known in the USA than Japanese cooking. There were many more Chinese restaurants, Chinese cookbooks, and Chinese recipes in American cookbooks (See *Cooking with a Foreign Accent,* 1952; *Helen Brown's West Coast Cook Book,* 1952, etc.). (2) In 1975, there were also more Chinese-American tofu manufacturers. See list in *The Book of Tofu,* by Shurtleff and Aoyagi–although no list is complete because many were small and sold their products mostly to the local Chinese community. (3) Americans generally prefer Chinese-style firm tofu to Japanese-style soft tofu.

But: (1) The influence of confusing Chinese terminology and spelling due to dialects and lack of standard system of romanization. For example, Cantonese is the main dialect of Chinese spoken in the United States, whereas Mandarin is the standard in China.

(2) Influence of Japanese macrobiotic movement: 1. In the 1950s, George Ohsawa, a Japanese teacher, started the macrobiotic movement in the United States. He and his teachers (Michio and Aveline Kushi; Herman and Cornellia Aihara) developed a great popular interest in Japanese foods. 2. Tofu used as an ingredient in many macrobiotic cookbooks. 3. The macrobiotic movement played a major role in starting the natural foods industry in America, especially with the pioneer company Erewhon–started by Aveline and Michio Kushi, Japanese teachers of macrobiotics. The first Erewhon retail store opened in Boston, Massachusetts, in April 1966. Soon Erewhon became the most important distributor of natural foods in the USA. Tofu was sold at most natural food stores, where it was almost always called "tofu."

(3) Influence of William Shurtleff: He became interested in both macrobiotics and Japanese culture in the mid-1960s. 1967 spring–He took a course in Japanese Art, taught by Michael Sullivan, at Stanford University; that summer he lived in Kyoto, Japan, studying art and architecture and practicing Zen meditation. 1968 May–the Esalen at Stanford program (of which he was director), hosted Michio Kushi, a Japanese teacher of macrobiotics, in a 1-week workshop. At about this time Shurtleff and the members of the commune in which he lived near Stanford University decided to stop eating meat and become vegetarians. 1968 June 10–Shurtleff entered Tassajara Zen Mountain Center south of Carmel,

© Copyright Soyinfo Center 2014

California, where he practiced meditation as a student of Japanese Zen master Shunryu Suzuki, roshi for 2½ years. The delicious vegetarian diet included tofu, miso, and whole soybeans. 1969 Dec.–A photocopied book titled *The Tassajara Food Trip,* which he wrote, was distributed to friends at Christmas. It contained many Japanese and macrobiotic recipes served at Tassajara–including 4 recipes calling for "tofu"–the word that was used by everybody at Tassajara to refer to this food. 1971 Jan. 16–Shurtleff arrives in Japan to study Japanese language and culture, and Zen meditation. He becomes increasingly interested in Japanese foods and especially tofu. 1971 Dec. 26–He meets Akiko Aoyagi in Tokyo. She is an excellent cook and artist, and begins to serve him many Japanese-style vegetarian recipes–often including tofu. 1972 Dec.–He begins to write a booklet about tofu, for friends. But after meeting Nahum and Beverly Stiskin, founders of Autumn Press, the booklet is transformed into a book project. In Dec. 1975 *The Book of Tofu,* by Shurtleff and Aoyagi, was published in Japan by Autumn Press. It was the first popular book about tofu in the Western world, and it quickly became a best-seller–selling more than 500,000 copies by the year 2002. The Preface to the 2001 editions gives details about how the book was written.

(4) Influence of Library of Congress. In the USA the Library of Congress has long been the organization that decides which terms will be used to describe important subjects. The results are published in the well-known Library of Congress Subject Headings (LCSH), which is updated each year as new terms are added or outdated terms change. On 6 June 1977 the term "Bean Curd" was approved by the Library of Congress Subject Headings committee. On the same day they approved "Bean Curd, Dried" and "Cookery (Bean Curd)." So starting at this time, "bean curd" became the official, authoritative name for tofu. According to Tom Yee of the Library of Congress, these headings were probably established as a result of cataloging *The Book of Tofu,* by Shurtleff & Aoyagi. Any books about tofu published in the USA would thereafter be given the subject heading "bean curd" by the Library of Congress and libraries across America in their cataloging and card catalogs. New editions of *The Book of Tofu* published after June 1977 were given the subject heading "bean curd." In May 1985 Shurtleff wrote the Library of Congress, Cataloging in Publication Div., recommending that its subject heading be changed from "bean curd" to "tofu." He gave three carefully researched reasons for recommending the change. The Library of Congress made the change from "bean curd" to "tofu" in their subject headings. Address: Lafayette, California.

11073. Drosihn, Bernd. 2004. Update on soyfoods in Europe. Part II (Interview). *SoyaScan Notes.* March 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Soymilk: A major new soymilk maker in Europe is named Wild (www.wild.de), an old German food company that specializes in fruits and ingredients; their retail soymilk is named Soy and Joy. Their most famous brand is Caprisun, a non-soy drink in a foil pouch, well known in the USA. They and So Good, the Australian soymilk now made with Solae, are both strong competitors of Alpro.

Several weeks ago Hain-Celestial of New York purchased two German soymilk makers, both owned by Bruno Fischer, Jr.: Natumi and Gut Honneroth. He sold both companies at a low price–probably because he had to. Bruno had gotten his soymilk into Aldi, the mother company of Trader Joe's and the No. 1 discounter in Germany–and maybe in all of Europe, and he developed a large soymilk business with Aldi–perhaps so large he could no longer handle it himself. Bruno also made a lot of private label soymilk. With Hain, Bruno found a large German dairy to make soymilk for Aldi under a new Aldi brand. The new European CEO of Hain-Celestial is Philippe Woitrin, who was CEO of Lima Foods when Hain acquired it.

Triballat makes the best soy yogurts (Sojasun brand) in the world–in Bernd's opinion. They have a new brand, Sojadé, which are delicious creamy yogurt drinks–maybe organic. The Japanese Yakult concept of drinking live beneficial probiotic bacteria each morning has now caught on in a big way in Europe. Yakult is one of the best entries into the European food market in years. Bernd just saw White Wave's Silk Alive [the name was soon changed; it was sold commercially only under the name "Silk Live"], a similar product, at the Anaheim Natural Products Expo. But he liked the Wildwood smoothie even better, and the WholeSoy fermented soymilk best of all American products.

In France a small company named Sojami (pronounced so-zha-MEE), which started about 10 years ago, makes very creative, unique, and interesting soy cheeses and cultured soy yogurts. The founder has a university research background and is a very nice guy.

Tofu: Tofu consumption in Europe has expanded steadily over the past 5-7 years, but it is still a very small product. The largest maker of the tofu and tofu products sold in Germany is Life Food GmbH / Taifun Produkte, run by Wolfgang Heck and Guenter Klein. Heuschen-Schrouff B.V. (Landgraaf, Netherlands) and Viana are tied for second place. About 10 years ago, Heuschen-Schrouff started selling their tofu under the organic So Fine brand (www.sofine.nl). An Indian-run company in Kerkrade, Netherlands, run by the brothers Singh (both Sikhs), makes tofu mostly for the Asian (Indonesian) market. In 2001 Viana started selling its tofu to the mainstream market under the Veggie Life brand; this English-language brand name communicates well to people speaking many different languages throughout the EU (European Union)–though distribution is still limited to Germany and Austria. Soto Tofu, formerly run by Rolf Barthof has been sold to a very large dairy company, Algäuland. Viana's main products are tofu and tofu

© Copyright Soyinfo Center 2014

products–such as meat and cheese alternatives. Viana is #1 in Germany in meat alternatives. Germans buy soyfoods for three main reasons: They are good for one's health, they taste good, and good for the environment. Bernd is a vegan, but about 90% of Viana's products are sold to non-vegetarians.

Early tofu companies still active in Europe include Sojafarm (founded and still run by Lothar Stassen), Albert's Tofuhaus (Albert Hess; exports lots of his products to France). A basic problem with the smaller, early tofumakers in Germany is that they didn't have the creativity or power to put a brand on the market. So both these companies produce a lot of tofu under private labels. Lothar bought the Svadesha brand (Svadesha was the first German tofu company) and produces tofu under the Svadesha brand. About 2-3 years ago he also purchased the Nagel's Tofu brand from Christian Nagel, who now markets the tofu under his former brand. So Lothar makes tofu under 3 brands. Berief Feinkost (in Beckum, northern Germany), started 10-15 years ago, tries to cover the mainstream tofu market, but not very successfully. Kassel Tofu Kato (started by Gyoergy / Yuri Debrecini, who was at Soyastern). Thomas Karas is no longer involved with soyfoods; he tried to enter the computer business but Bernd does not know what he is doing now. In Spain, the market leader is Natursoy near Barcelona. Nearby is Salvador Sala of Vegetalia. In Spain, there is a lot of interest in and rapid growth of soyfoods and organic foods. In Italy the Ki Group (Schenker) owns a tofu company–fairly old but not very creative.

In the United States, Pulmuone now has three U.S. factories; their first one in Southgate, southern California, a new one at Fullerton, California, and a 3rd one in New York. The Fullerton factory is the most modern Bernd has ever seen. There they make Gourmet Tofu, introduced in about Jan. 2004, which is presliced and marinated, in 4 flavors / styles: Baked, Sliced, and Marinated.

Meat alternatives: Nestle now owns Osem which owns Tivall, the Israeli maker of meat alternatives. Since all of Tivall's products are held together by eggs or egg whites, none of them are vegan–and none are organic. Quorn, which also contains lots of egg protein, is owned by AstraZeneca [Marlow Foods]–which wants to sell the company because growth and profits have been lower than expected. DE-VAU-GE in Germany is a very big company, they make large amounts of meat alternatives (incl. burgers), and they do a lot of business with Aldi in breakfast cereals–not in soyfoods. Bernd thinks they are good, and very economical manufacturers, but they are not very creative and they have no USP (unique sales point); moreover, many of their products contain egg protein, but their quality is lower than that of Tivall. Bernd believes his meat alternatives are as good as Tivall's, but more expensive, in part because of organic ingredients. Tivall makes its raw materials in Israel, then exports these to Europe for cutting and flavoring.

Klaus Gaiser owns Topas which sells Viti brand meat alternatives based on wheat gluten, with no soy; he owns the brand and markets the products, but he has meat companies manufacture them. However, when his typically 3-year contract with the manufacturer expires, he has to find a new manufacturer, but the previous one keeps making his products under their own brand. In the USA: At Turtle Island Foods (Hood River, Oregon), Bernd met Hans Wrobel, a German who does product development. Note: Hans and Rhonda Wrobel of The Higher Taste developed Tofurky in Portland, Oregon. Bernd makes Pizzarella, a tofu-based cheese alternative. Address: Founder and president, Viana Naturkost GmbH, 54578 Wiesbaum / Vulkaneifel, Germany. Phone: +49 06593-99670.

11074. Morinaga Nutritional Foods, Inc. 2004. Mori-Nu–Refreshing new package design: Tantalizing new recipes (Leaflet). Torrance, California. 1 p. Front and back. 28 cm.
• ***Summary:*** This color leaflet (sent by Patricia Smith from Natural Products Expo West, March 2004) contains a color photo of each of the six different types and textures of Mori-Nu Silken Tofu: Soft, Firm (Made with organic soybeans), Firm, Lite Firm, Extra Firm, Lite Extra Firm. The writing and graphics are now in "landscape" mode, with the package horizontally rather than vertically. "The same great Mori-Nu Silken Tofu now in a new package."

On the rear is detailed information about each product, including ingredients. The coagulant in each is "gluconolactone" plus either calcium sulfate or calcium chloride. Address: 2050 West 190th St., Suite 110, Torrance, California 90504.

11075. Okazaki, Tetsuki. 2004. The role of the merchant coalition in pre-modern Japanese development: An historical institutional analysis. CIRJE-F-284. www.e.u-tokyo.ac.jp/cirje/research/dp/2004/2004cf284.pdf. 20 + [8] p. March. [59 ref]
• ***Summary:*** Shinbo and Hasegawa (1988, p. 262-63) pointed out that in 1780 a *kabu nakama* [merchant coalition] of merchants trading soy sauce from other regions was established in Kyoto; it formed a distribution system for soy sauce from the other regions and brought about soy sauce production in Tatsuno. This is an example of how a merchant coalition can contribute to forming a distribution network (p. 12).

Commodities whose prices are known during the period 1800 to 1840 in Edo (Tokyo) and Osaka are unpolished rice, polished rice, barley, soybeans, raw cotton, wax, muscovado, miso, soy sauce, and saké (p. 12-13). Note: Muscovado (also "muscavado") is unrefined or raw sugar obtained from the juice of the sugarcane by evaporation and draining off the molasses. Address: Faculty of Economics, Univ. of Tokyo.

11076. **Product Name:** Soy Natto–Natto Boy Snack Nuts [Plain, or Sea Salt & White Soy Sauce].

© Copyright Soyinfo Center 2014

Manufacturer's Name: Soy Natto Food Co. (Importer-Distributor). Made in Japan.
Manufacturer's Address: 1015 East Howard Ct., Visalia, CA 93292. Phone: 559-679-9699.
Date of Introduction: 2004 March.
Ingredients: Sea Salt: Soybeans, Subtilis natto, White soy sauce, sea salt.
Wt/Vol., Packaging, Price: 1.06 oz (30 gm) plastic pouch.
How Stored: Shelf stable.
New Product–Documentation: Sell sheet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2004. March. "New generation soy food: Soy natto." "Healthy and happy snack from kids to seniors. Easy to crunch, enjoyable for snacking." Also press release dated March 5, 2004. "Soy Natto Food Company is proud to unveil its new products, 'Soy Natto Snack Nuts'... into North America and Europe Markets at Natural Products Expo West at Anaheim, California on March 5, 2004. Soy Natto is a dried food product derived from fermented soy beans. Fermented soy beans, known as 'Natto,' have received positive attention for the natural enzyme, Nattokinase, and ability to help maintain a healthy circulatory system in addition to diversified beneficial functions." Natto has a long history in Japan, going back many centuries. Contact: www.soynatto.com or info@soynatto.com.

Product with Label sent by Mike Masuyama, PhD, of Visalia. 2006. June. 4 by 6 inches plastic pouch. Two flavors. On the front panel is a color cartoon of Natto Boy, a soybean, with a smiling mouth, eyes, 2 hands, and 2 feet, On the sea salt flavor he is wearing a flat-brimmed yellow hat with a red flower in it. Nutrition facts and barcode are also on the front panel; there is no printing on the back of the package. The natto inside have been dried until crunchy, quite like soynuts. Soyfoods Center taste test. The salted ones have a good flavor and texture. The unsalted are quite bland.

Note: K. Mike Masuyama, PhD (Executive Vice President) and Christopher K. Maruyama (Marketing Manager) both sell "Spirit of the Sea" High Mineral Sea Salt. A leaflet (8½ by 11 inches, 3 panels each side) gives details.

11077. **Product Name:** Soy Natto–Salad Toppers (Fermented Soy & Veggie Salad Topping). Renamed Natto Boy: Natto & Veggie Toppers by June 2006.
Manufacturer's Name: Soy Natto Food Co. (Importer-Distributor). Made in Japan.
Manufacturer's Address: 1015 East Howard Ct., Visalia, CA 93292. Phone: 559-679-9699.
Date of Introduction: 2004 March.
Ingredients: Fermented soy (soybeans, Subtilis natto), sesame, carrots, cabbage, rice, wakame sea vegetable.
Wt/Vol., Packaging, Price: 1.06 oz (30 gm) plastic pouch with self-seal top (like Ziploc).
How Stored: Shelf stable.
New Product–Documentation: Sell sheet (8½ by 11 inch,

color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 2004. March. "New generation soy food: Soy natto." "Healthier salad topping than bacon bits or analogues. Applicable before serving over pizza, pasta, baked potato, anything for additional seasoning and health benefit" Also press release dated March 5, 2004. "Soy Natto Food Company is proud to unveil its new products, 'Soy Natto Salad Toppers'... into North America and Europe Markets at Natural Products Expo West at Anaheim, California on March 5, 2004..." Contact: www.soynatto.com or info@soynatto.com.

Product with Label sent by Mike Masuyama, PhD, of Visalia. 2006. June. 4½ by 7½ inches plastic pouch. On the front panel is a color cartoon of Natto Boy, a soybean, with a smiling mouth, eyes, 2 hands, and 2 feet. The tagline now reads: "Natto Boy Natto & Veggie Toppers." Nutrition facts and barcode are also on the front panel; there is no printing on the back of the package. The natto pieces inside have been dried until crunchy, quite like pieces of soynuts. Soyfoods Center taste test: Fair flavor (quite bland) and texture. The only salt comes from the wakame.

• ***Summary:*** In Japan, heart disease is practically unknown. In 1980 a young doctor named Hiroyuki Sumi set out to discover why. New research indicated that a major culprit in causing heart disease and strokes might be blood clots that lodge in the arteries and cut off the oxygen supply to the heart and brain. After carefully testing 173 common Japanese foods, he found that the most powerful clot-buster was natto, a fermented food.

After additional research, he found that that natto contained a potent enzyme named nattokinase (pronounced nah-to-KAI-nase), which had the ability to prevent blood clots from already forming, but also to dissolve blood clots that had already formed.

Since 1980 at least 17 studies on natto and its enzymes have been published in Japan and the USA.

Blood clots, which are composed of sticky protein strands called fibrin that accumulate in blood vessels, have two functions: First, they enable the blood to quickly form clots to prevent loss of blood in the case of a cut or major wound. But their second function causes major problems. If these clots occur within the vessels of the heart, the heart muscle is starved of needed oxygen and quickly begins to die; the result is either angina or a heart attack. When clots occur in blood vessels supplying the brain, nerve cells die, resulting in a stroke and/or senility.

• ***Summary:*** Okinawans live long and healthy lives. Take Seiryu Toguchi, age 103. He wakes at 6 a.m. For breakfast, he enjoys whole-grain rice [brown rice] and miso soup with vegetables. Then he works for 2 hours weeding his fields. For lunch, he has "goya stir-fry with egg and tofu," then naps for an hour or so and spends several hours in the field.

11089. Iowa Soybean Promotion Board. 2004. SoyInk: Soy ink touches people across the globe. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 15(8):12e-12f of 12-page insert after p. 12. Summer.
• ***Summary:*** Soy ink is made from soybeans grown in the USA. Soy ink made its world debut in 1987 when *The Gazette* in Cedar Rapids, Iowa, was the first newspaper to use soy ink. Today, more than 90% of America's 1,500 daily newspapers use it in their printing. In addition, 50,000 commercial U.S. printers use now soy ink for magazines, government and commercial documents, and packaging. Recently a soy-based toner (dry ink) for photocopy machines has been developed. Outside the United States, use of soy ink is increasing worldwide. For example, in Japan, 47% of all newspaper ink is soy ink. In addition, soy ink accounts for 77% of all heat-set ink and 28% of all sheet-fed ink. At the end of April 2004, there were 4,000 SoySeal registrations in Japan.

One sidebar is titled "Ten-year anniversary of the Vegetable Ink Printing Act: U.S. Representative Jim Leach (R-IA) was one of the Members of Congress who championed passage of the Vegetable Ink Printing Act. Signed into law on October 6, 1994, this Act prohibits any Federal agency from performing or procuring lithographic printing if the ink contains less than a specified percentage of vegetable oil (40 percent for news ink; 20 percent for sheet-fed ink and forms ink and 10 percent for heat-set ink)."

Another sidebar is titled "Soy ink users." There are 85 U.S. ink manufacturers offering soy ink. "Nearly 20,000 subscribe to the Soy Ink Newsletter published by the Soy Ink Information Center and there are nearly 3,300 SoySeal trademark users in the U.S."

Contains many color photos.

11090. Kikkoman Corporation. 2004. Annual report 2004. Year ended March 31, 2004. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 33 p. 28 cm. [Eng]
• ***Summary:*** This year's annual report is unfortunately a minimal and rather uninteresting version with almost no information about activities in the USA and Japan, and little financial information in dollars–only yen.

Consolidated net sales fell 2.4% to ¥334.656 trillion, operating income fell 4.8% to ¥69 trillion, but net income rose 11.7% to ¥9.287 trillion. Cash dividends per share were up 25%, to ¥10 from ¥8.

Message from the CEO (Yuzaburo Mogi, with color photo): "Summary of business policy. Business principles: The activities of the Kikkoman Group are shaped by three core principles: To pursue the fundamental principle 'consumer oriented.' To provide high-quality products and services and to promote the international exchange of food culture. To become a company whose existence is meaningful to the global society.

"The future performance and prosperity of a company are the direct result of customer satisfaction. Indeed, optimizing satisfaction is the key to future growth and earnings. Accordingly, the Kikkoman Group continues to develop products imbued with value that mirror the ever-changing needs of consumers and that provide opportunities for new culinary experiences."

"In order to earn recognition as a socially responsible company whose existence is meaningful to society, Kikkoman is committed to deepening its involvement in social activities while working to assure that its operations co-exist in harmony with the environment."

"Business strategy: Overseas we are making progress ramping up production capacity at our plants in Wisconsin, U.S.A., the Netherlands and in Singapore. Shipments are also increasing steadily from our plant in China. With these developments, we are creating a foundation to enable us to meet new demand for, and stimulate greater consumption of, soy sauce in markets around the world."

The section titled "Soy sauce division" (p. 7) states: "In Japan the home-use sector, *Tokusen Marudaizu Shoyu* (premium soy sauce), *Gen-en Shoyu* (light soy sauce), *Tokusen Yuki Shoyu* (organic soy sauce) and other products generated strong sales. However, sales in the home-use sector were down year on year due to lower sales of 1-liter bottles of mainstay *Koikuchi Shoyu* (regular soy sauce)."

"From June 2003, Kikkoman progressively switched to using non-genetically modified soybeans for its soy sauce in response to customer calls for safe and reliable products that are free of any concerns surrounding genetically modified ingredients.

"Overseas, in the U.S. and Asia outside Japan, sales were sluggish in the first half of the year due to the Iraq war and fallout from SARS, but results improved in the second half on the back of a recovering economic picture. Sales continued to grow steadily in European soy sauce markets."

Small color photos across the bottom of pages 6-7 show bottles of various Kikkoman soy sauce products.

Note: SARS stands for "severe acute respiratory syndrome," a viral disease in humans. There was a near pandemic between Nov. 2002 (it began in south China) and July 2003, with 8,096 infected cases and 774 deaths. Address: Noda, Japan.

11091. Robbins, John. 2004. Soy: What's the whole story? (Letter to the editor). *EarthSave* Summer. p. 4. www.earthsave.org/pdf/summer2004.pdf [1 ref]
• ***Summary:*** This excellent rebuttal is to an article titled

© Copyright Soyinfo Center 2014

"The Whole Soy Story: The Dark Side of America's Favorite Health Food," by Kaayla Daniel, published in *Mothering* magazine (May/June 2004). It is by far the best rebuttal seen.

"It is difficult in a short letter to respond to seven pages of biased material, particularly when each page is crowded with half-truths, statements taken out of context, and conclusions drawn inappropriately from data." Contains a good discussion of the case of Okinawa. "The elder population of Okinawa (a prefecture of Japan) have the best health and greatest longevity on the planet. This is important because the highest soy consumption in the world is in Okinawa." In the *Okinawa Centenarian Study,* which includes an extremely thorough analysis of food consumption in the prefecture, the principle investigators and authors of the study (Makoto Suzuki, M.D., Bradley J. Willcox, M.D., and D. Craig Willcox, Ph.D.) state: "Okinawan elders eat an average of two servings of flavonoid-rich soy products per day."

"This is about 10 times more than the amount of soy Kaayla Daniels claims 'Asians really eat.' When she says 'there is no historical precedent for eating the large amounts of soy food now being consumed,' she is incorrect. Soy makes up twelve percent of the diet of Okinawan elders." The authors of the study "conclude that high soy consumption is one of the main reasons that Okinawans are at extremely low risk for hormone-dependent cancers, including cancers of the breast, prostate, ovaries, and colon. Compared with North Americans, they have a staggering 80 percent less breast cancer and prostate cancer, and less than half the ovarian cancer and colon cancer." Address: Founder and Board Chair Emeritus, EarthSave International.

11092. Bryant, Anne. 2004. New developments with HVP soy sauce (Interview). *SoyaScan Notes.* Sept. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** New regulations require that the terms "HVP" and "hydrolyzed vegetable protein(s)" be made more specific; for example: "hydrolyzed soy protein" or "hydrolyzed wheat protein." This is related in part to a new allergy bill.

Concerning the international Codex Alimentarius, ConAgra wants its La Choy brand HVP soy sauce to be able to be sold as "soy sauce" worldwide. The U.S. government is attending international meetings in support of ConAgra's position. The Japanese position is that only fermented soy sauce should be able to bear the label "soy sauce." Address: Center for Science in the Public Interest, Washington, DC.

11093. Skrzycki, Cindy. 2004. Feud ferments between soy sauce makers: The regulators. *Washington Post.* Sept. 21. p. E1, F4-F5.
• ***Summary:*** The dispute, which began several years ago, involves setting an international standard, under the auspices of the United Nations' food standards program (Codex Alimentarius Commission), that would govern the manufacture and labeling of soy sauce. In 1998, the Japanese asked the Commission to define soy sauce as being fermented ("naturally brewed") and aged.

But the proposal was not well received by the International Hydrolyzed Protein Council; some of its members make HVP soy sauce. The U.S. delegation wants both fermented and HVP soy sauce to be able to bear the label soy sauce. The issue has not yet been finalized.

11099. **Product Name:** Soy Natto: Tropical Flavor Baked Energy Bar.
Manufacturer's Name: Soy Natto Food Co. (Importer-Distributor). Made in Japan.
Manufacturer's Address: 1015 East Howard Ct., Visalia, CA 93292. Phone: 559-679-9699.
Date of Introduction: 2004 October.
Ingredients: Brown rice syrup, Energy Smart (fruit juice, natural grain dextrin), rolled oats, baby rolled oats, natto, rice flour, raisin paste, dried apples, barley malt, brown crisp rice, dried apricots, dried pineapple, natural flavors, banana puree, sea salt.
Wt/Vol., Packaging, Price: 2 oz (56 gm) in foil pouch. Retails for $2.79.
How Stored: Shelf stable.
New Product–Documentation: Product with Label sent by Mike Masuyama, PhD, of Visalia. 2006. June. 6 by 2 inches foil pouch. On the front panel is a color cartoon of Natto Boy, a soybean, with a smiling mouth, eyes, glasses, 2 hands, and 2 feet. A pink Hawaiian lei hangs around his "neck" (held up by the back of his glasses). Also: Two sell-sheets: (1) "Natto up-date." 2005. Jan. (2) "New generation soy food–Natto Boy products." "The world's first Natto energy bar." "Natto has a distinct fermented smell and sticky texture. The characteristic smell is similar to that seen with bacterial surface aging cheeses such as Limburger from Belgium, Liederkranz, Brick, or Monterey from the US, St. Paulin or Brie from France, Muenster from Germany and Bel Paese from Italy." In 1980 Dr. H. Sumi at the University of Chicago discovered that the sticky portion of natto "contains functional properties such as antigens and Nattokinase."

Soyfoods Center taste test: Delicious flavor, excellent texture and appearance.

11100. Bruni, Frank. 2004. Restaurants: A paean to tofu in a Japanese pub. *New York Times.* Nov. 24. p. F8.
• ***Summary:*** This is a review of En Japanese Brasserie, a restaurant in Greenwich Village, New York City, which features artisanal tofu–as well as "its dynamic cousin yuba, which is the skimmed skin of heated soy milk, omelet-esque in texture. Yuba arguably has more character than plain tofu..." It also serves house-made miso pastes. Address: Japan.

11101. Bittman, Mark. 2004. Japan's liquid gold [shoyu]. *Travel & Leisure.* Nov. *
• ***Summary:*** The writer travels to Kyoto, Japan, where he visit's Denkichi Matsuno's shoyu factory. He describes how traditional shoyu is made (including koji and moromi) and discusses possible origins and early history of shoyu and its place in Japanese culture. Regular shoyu (*koikuchi*) is fermented for 18 months and double-fermented (*saishikomi*) is fermented for 2 years. Matsuno's family has been making shoyu since 1805; he is the 6th generation to run the business. He makes 26,000 gallons of shoyu a year whereas the big Kikkoman factory in Noda turns out more than 90,000 gallons a day! Today about 1,600 companies make at least 12 different varieties of shoyu in Japan and Kikkoman is the largest.

Bittman then visits Tsukiji, the bustling central fish market in Tokyo, and has sushi (with shoyu) for breakfast. Every piece of fish is glazed with a light sauce of shoyu and mirin just before being served. "This mixture, on which the best chefs pride themselves, is added to daily, often making the base years and years old. My dining companion whispered, 'If there's ever a fire, the shoyu base is the first thing the chef will grab.'"

For dinner, after a hot public bath, he enjoys freshly made soba (buckwheat noodles) served with *soba tsuyu,* a dipping sauce made of shoyu, mirin, and dashi. His friend orders mixed tempura, served with shoyu (of course) followed by *soba yu* the water in which the soba noodles were cooked. They mixed it with leftover *soba tsuyu,* spiked it with chili and shoyu, then drank it like tea–a great tradition. Conclusion: "Shoyu makes everything taste good."

A photo shows a Japanese man pouring fresh koji from a wooden scoop into a wooden koji tray.

11102. Lanki, Colleen; Tsuneda, Keiko; Sadakari, Lei. 2004. Moral: A play by Kisaragi Koharu. *Asian Theatre Journal* (*ATJ*) 21(2):119-76. Autumn. See p. 174.
• ***Summary:*** This is a long translation and review of the play *Moral.* Introduction by Colleen Lanki; script translated by Tsuneda Keiko and Colleen Lanki; original director's notes translated by Colleen Lanki and Lei Sadakari. Kisagari Koharu is a Tokyo woman playwright.

In the "Notes" section at the end of the translation, note 14 (p. 174) states: *"Inari-zushi* is a small ball of rice covered by *aburage,* a thin fried tofu skin soaked in a sweet vinegar sauce."

Note: This is the earliest document seen (April 2013) that contains the term "thin fried tofu skin."

11103. Iowa Soybean Promotion Board. 2004. Simply soy: Recipes celebrating nature's perfect bean. Urbandale, Iowa: Iowa Soybean Promotion Board. 151 p. Illust. Index. 23 cm.

• ***Summary:*** A gorgeous book, filled with elegant, mouth-watering full-page color photos of prepared recipes. Contents: Introduction, by Linda Funk, Executive Director, The Soyfoods Council. 1. The magical bean: Soy to the world, soy and health, the soyfoods pantry (glossary incl. soybean oil, soymilk, tofu, tempeh, edamame, soynuts, soy flour, textured soy protein, canned soybeans, miso, soy protein powder {soy protein isolates}, dried soy flakes {MicroSoy}, soy yogurt and smoothies, soy pasta {ADM}). Soyfood nutrient chart. 2. Start it up with soy: Appetizers and nibbles. 3. On the sidelines: Sides and salads. 4. Spoon fed: Comforting soups and stews. 5. Vegetarian anyone? 6. Teamwork: Pork, beef, chicken, seafood and soy. 7. The bread box: Breads and muffins. 8. Desserts: Soy and spice and everything nice. 9. Cooking with kids. Resources (Directory of members of The Soyfoods Council and their soy products; Directory of state and national soybean boards).

A smoothie (p. 133) is made at home by combining 1 cup soymilk (plain or vanilla), ½ medium banana (may be frozen, if desired), and optional nondairy ingredients, such as chocolate syrup, peanut butter, fruit juice concentrate, or frozen fruits (alone or in combinations–pineapple, orange, cranberry, raspberry, etc.). "Many of the soy smoothies and soy yogurts on the market today are probiotic, meaning they contain active, live cultures that are beneficial to intestinal health." Address: 4554 N.W. 114th Street, Urbandale, Iowa 50322-5410. Phone: 866-431-9814.

11104. Takahashi, Hideki; Ohara, Masahiro. 2004. Biodiversity and biogeography of the Kuril Islands and Sakhalin. 3 vols. Sapporo, Japan: Hokkaido University Museum. Illust. Maps. 30 cm. *
• ***Summary:*** Also cataloged as Bulletin of the Hokkaido University Museum.

11105. Wang, L.J.; Li, L.T.; Fang, J.F.; Saito, M.; Tatsumi, E. 2004. Antioxidative and angiotensin I-converting enzyme inhibitory activity of sufu (fermented tofu) extracts from various regions of China. *JARQ* (*Japan Agricultural Research Quarterly*) 10:324-27. [Eng]*

11106. Bashô, Matsuo; Barnhill, David Landis. 2004. Bashô's haiku; Selected poems by Matsuo Bashô. Translated by, annotated and with an introduction by David Landis Barnhill. Albany, New York: State University of New York Press. xiii + 331 p. Index. 22 cm.
• ***Summary:*** No. 476 (p. 110). The poem (in Romanization) reads as follows:

"Niawashi ya.

"Mame no komeshi ni.

"Sakuragari."

Barnhill's translation: "So fitting–/ Bean-flour rice balls / while blossom hunting.

Comments on this poem on page 232: It was written in the spring of 1690. "The simplicity of rice balls sprinkled with flour fits with flower viewing more than the common picnics with fancy food and large quantities of sake. 'Blossom hunting' was another name for blossom viewing."

Note: "Mame no ko" is the early Japanese word for *kinako,* which is roasted whole soy flour, that is–a flour or powder made by grinding whole roasted soybeans. Address: 1. Japan..

11107. Belleme, John; Belleme, Jan; Spevack, Ysanne. 2004. The real taste of Japan: Using the finest ingredients. London: Cross Media Ltd. 155 p. Illust. 19 cm. *
• ***Summary:*** Written and published for Clearspring, a natural foods importer and distributor in London. Address: 1-2. Saluda, North Carolina.

11108. Blussé, Leonard; Viallé, Cynthia; Remmelink, Willem; Daalen, Isabel van. eds. 2004. The Deshima diaries marginalia, 1740-1800. Tokyo: Japan-Netherlands Institute. xl + 898 p. Illust. Maps (some color). Index of ship's names. Index of geographical names. Index of non-Japanese names. Index of Japanese names. Subject index. 27 cm. Series: Scientific Publications of the Japan-Netherlands Institute No. 2. [99 ref]
• ***Summary:*** "The basis for the present text are the Deshima [Japan] *dagregisters..."* of the Nederlandsche Oost-Indische Compagnie. Comptoir, Nagasaki.

Contents: Fold-out color Japanese map of Nagasaki in the 1700s, with numbers and accompany legend inserted for key places by the editors. Three other fold-out color illustrations. Map of the route to and from the Shogun's court in Edo (today's Tokyo), with a circle giving the name of each overnight place. The route to Edo goes across Kyushu then along the southern coast of Japan's main island (Honshu). The route back is largely by boat through the Inland Sea to Shimonoseki, than back across Kyushu. List of illustrations. Contents. Foreword. Editorial note. Introduction. Diary kept for one year (starting in about mid-November or early December) by each *Opperhoofd* (Chief of the Dutch factory on Deshima with the rank of Senior merchant). Appendixes (4; secret diaries and private notes). Sources (with NFJ numbers at the Dutch National Archives, The Hague). Glossary.

The legend to the color fold-old map of Nagasaki Bay and city includes: (6) Dutch ship at harbor. (7) Deshima. (9) Government house. (10) Chinese island (about the same size as Deshima, but just to the south of Deshima). (11) Chinese garden. (12) Junk from Nanjing. (13) Boats of the Shogunal guard. (14) Shogunal guard at Tomachi. (15) Tow boats. (16) Dutch ship arrives. (17) Shogunal guard from Nishidomari. (18) Junk from Fuzhou arrives.

In the index there are many entries under: Chinese–Island. And under Seaweed.

© Copyright Soyinfo Center 2014

Note: Soy sauce is not mentioned in the Index under "Chinese–Island." Very little has been written in English about the activities of the Chinese traders who lived on this artificial island in Nagasaki harbor–very near the island of Deshima, where the Dutch traders were confined. The Chinese traders at Nagasaki were confined to a walled compound, and their activities, though less strictly controlled than the Dutch, were closely monitored and scrutinized by the Governor of Nagasaki. Many questions arise: What is this island called? What kind of Chinese organization(s) occupied the island? Was it a single private company like the Dutch East India Co., or was it a collection of independent Chinese merchants, or something else? When did the Chinese island compound start to be used as a trading post? When did it cease to be used? Did the Chinese export or import any soy products? If yes, which ones, how much of each per year, from when to when. Where were these products sold? Inside China or outside? Address: Netherlands.

11109. Ebine, Hideo. 2004. Industrialization of Japanese miso fermentation. In: Keith H. Steinkraus, ed. 2004. Industrialization of Indigenous Fermented Foods. 2nd ed. Revised and Expanded. New York, NY & Basel, Switzerland: Marcel Dekker. xix + 796 p. See p. 99-147. Chap. 2. [87 ref]

• ***Summary:*** Contents: Introduction. History and earliest known references to miso. Indigenous process: Raw materials used in ancient times. Industrial / Commercial production today. Contrast between indigenous and modern processing. Critical steps in manufacture / fermentation. Major problems in industrialization. Optimal environmental conditions for microorganisms. Essential microorganisms for fermentation. Possible spoilage microorganisms. Chemical / Biochemical changes in miso during fermentation. Changes in physiological functions during fermentation. Forecast of the role of miso in the future.

Foods similar to miso are made in other parts of East- and Southeast Asia. They are referred to as "jiang" in China, "doenjang" in Korea, "taucho" in Indonesia, and "tao-si" in the Philippines.

Note: In the Philippines, the word "tao-si" (also spelled "tausi" or "taosi") refers to fermented black soybeans, not to a kind of miso. Address: Professional Engineer, Shishitsuka, Tsuchiura, Ibaraki-ken, Japan.

11110. Fukuda, Yoshiko. 2004. Genki ga deru nebaneba pawa reshipi [Sticky power recipes to bring forth your energy and health]. Tokyo: Ie no Hikari Kyokai. 95 p. 21 cm. [Jap]*

11111. Fukushima, Danji. 2004. Industrialization of fermented soy sauce production centering around Japanese shoyu. In: Keith H. Steinkraus, ed. 2004. Industrialization of Indigenous Fermented Foods. 2nd ed. Revised and Expanded. New York, NY & Basel, Switzerland: Marcel Dekker. xix + 796 p. See p. 1-98. Chap. 1. [179 ref]

• ***Summary:*** Contents: Introduction. History: Historical development of soy sauce in China (Chiang, shih), introduction of soy sauce in Japan, origin of fermented soy sauce in the United States. Present soy sauce situation: Japan (types of soy sauce, manufacturing, flavor components and quality evaluation), China, Southeast Asia, United States. Change of soy sauce manufacturing methods from indigenous to modern processing: Treatment of soybeans and wheat as materials, koji fermentation, brine fermentation, pressing, pasteurization, refining and bottling. Microbiology and biochemistry: Role of koji as an enzyme source (unique source of enzymes, peptidases in koji, role of proteinases in koji during protein digestion, role of glutaminase in koji in formation of glutamic acid during protein digestion) effect of heat treatment of soybean proteins on their digestibility and nutritive value (enzyme digestibility and yield of soy sauce, enzyme digestibility and nutritive value of protein), microorganisms during brine fermentation in soy sauce (change of microflora during brine fermentation, properties of *Tetragenococcus halophilus,* properties of *Zygosaccharomyces rouxii,* properties of *Candida species*), safety of soy sauce and physiological functional properties (Studies of mycotoxins and safety of soy sauce, studies of mutagens and safety of soy sauce, long-term animal tests and anticarcinogenicity of soy sauce, other physiologically functional properties of soy sauce). Application of new technology for soy sauce manufacture: Manufacture of soy sauce through fermentation by bioreactor with immobilized whole cells, enzymatically hydrolyzed vegetable protein, breeding of koji mold through protoplast fusion. Forecast.

Contains 68 figures and 23 tables.

The section titled "Origin of fermented soy sauce in the United States" states (p. 10) that in 1907 a plant manufacturing fermented soy sauce was opened in the United States by Shinzaburo Mogi–a relative of the Mogi family of Kikkoman fame. Note: The author does not say where this plant was, nor does he cite any evidence to support his claim. As of Jan. 2005, Soyfoods Center has been unable to find any firm evidence that such a plant was opened.

"After that, another soy sauce company named Oriental Show-You Company was promoted in 1917 in Columbia City, Indiana." Shinzaburo Mogi was one of the stockholders in this company. Shinzo Ohki, a Japanese man living in the USA, began to make regular (koikuchi) shoyu in the traditional Japanese way, and at one time was making 30,000 gallons/year. In 1961 the Oriental Show-You Co. was sold to Beatrice Foods, Inc. and subsequently became part of La Choy Food Products which was also owned by Beatrice.

Figure 12 (p. 28) shows imports of soy sauce to the USA from 1947 to 1981. This graph was taken, without citing the source, from: Shurtleff & Aoyagi. 1985. *Soyfoods Industry*

© Copyright Soyinfo Center 2014

and Market, 5th ed. p. 103.

Concerning the soy sauce market in the United States (p. 28-31): In 1973 Kikkoman opened its first plant to make fermented soy sauce at Walworth, Wisconsin. In 1998 Kikkoman opened a 2nd such plant in California. In 2001 these two Kikkoman plants made 85,000 kiloliters and 20,000 kiloliters (kL) of soy sauce respectively, for a total of 105,000 kL. To take advantage of the rapidly growing American market for soy sauce, several other foreign manufactures also opened plants making fermented soy sauce. In about 1980, Wan Ja Shan (Taiwan) opened a plant making regular Japanese-style soy sauce (koikuchi). In 1991 San-J (San Jirushi, Japan) opened a plant making tamari soy sauce. In 1994 Yamasa (Japan) opened a plant making shoyu in Salem, Oregon. In 2001 the total annual production of these 3 plants was estimated at about 20,000 kL. In addition, HVP soy sauce (unfermented) is made and sold in the USA under brands such as La Choy, Chun King, and Aloha–with total production in 2001 estimated at 15,000 kL. Thus in 2001 total soy sauce production in the USA was estimated at 140,000 kL with the following market shares: Kikkoman 75%, 3 other makers of fermented soy sauce 14.2%, and HVP 10.7%. Figure 14 shows total U.S. consumption of soy sauce from 1950 to 2001, including total domestic production, total Kikkoman U.S. production. and total imports. Address: Noda Inst. for Scientific Research, Noda-shi, Japan.

11112. Kiuchi, Kan; Watanabe, Sugio. 2004. Industrialization of Japanese natto. In: Keith H. Steinkraus, ed. 2004. Industrialization of Indigenous Fermented Foods. 2nd ed. Revised and Expanded. New York, NY & Basel, Switzerland: Marcel Dekker. xix + 796 p. See p. 193-246. Chap. 4. [142 ref]

• ***Summary:*** Contents: Introduction–Description and history of natto: Raw materials, natto in East Asia (History of natto, natto in China {*douche*} [*doushi / douchi*], natto in Japan {itohiki-natto, cracked natto, yukiwari-natto, barley natto, salted natto, dried natto, soboro-natto, how natto is used in foods}, tua'nao [thua-nao, tua nao] {incl. pe-pok in Myanmar and tau'si in Laos}, kinema, chongkuk-jung, dawadawa [the starters for these products are *Bacillus subtilis*], making of natto in the home).

Production and consumption. The fermentation process. Materials used for traditional and modern natto production. Modern manufacturing methods: Storage of raw soybeans and purification process, processes of washing and soaking, steaming and inoculation processes, natto-filling process, fermentation process, refrigeration and aging process, second packaging and shipping processes.

Change from traditional process to modern manufacturing process: Cultivation and storage of raw soybeans (traditional, modern), selection. washing and soaking, steaming and inoculation, filling, fermentation, first refrigeration, packaging, second refrigeration. Critical steps in the manufacture and fermentation of natto. Important problems in the industrialization of natto: Soaking, steaming, filling, fermentation Optimum conditions for fermentation: Initial stage of fermentation (lag phase), middle stage of fermentation (log to stationary phases), latter stage of fermentation (death phase). Microbiology and biotechnology: Determinative or systematic characteristics of natto bacilli, difference between natto bacilli and other *B. subtilis* as natto starters, enzymes and other materials produced by natto bacilli. Other aspects of the microbiology of natto: Phages of natto bacilli, plasmids of natto bacilli. Chemical and biochemical changes during fermentation: Soybean characteristics on steaming, relationship between the components of natto and those of soybeans, changes in soybean constituents during fermentation (carbohydrates, fatty acids, organic acids and other volatile components), size of soybeans, steaming condition. Starter cultures: Marketed starters, development of new starters. Contains 26 figures.

In 1999 in Japan, about 130,000 metric tons per year of soybeans are used to make about 260,000 tons of natto or 5.20 billion 50-gm packages worth 160.5 billion yen. Approximately 500 companies make natto in Japan, but the 10 largest companies account for 85% of total production.

Concerning hikiwari natto (cracked natto) (p. 195): Parch soybeans than crack them into 3-4 pieces for use as a raw material, instead of whole soybeans, for making natto (*itohiki nattô*). Cracking reduces the soaking time to 3-4 hours.

Concerning yukiwari natto (p. 195): It is one of the trade names of "Barrel natto" and a special product of Yamagata prefecture, located in northeastern Japan. To make it at home or on a small commercial scale, mix 18 kg cracked natto, 9 kg of rice koji, and an appropriate amount of salt in a large wooden barrel. Allow it to ferment until ripe.

Note 2. This is the earliest English-language document seen (Jan. 2012) that uses the term "tua-nao" to refer to thua-nao. Address: 1. Kyoritsu Women's Univ.; 2. Biotechnology Inst. of Natto, Suzuyo Kogyo Co. Ltd. Both: Tokyo, Japan.

11113. Kozaki, Michio. 2004. Tempe production in Japan. In: Keith H. Steinkraus, ed. 2004. Industrialization of Indigenous Fermented Foods. 2nd ed. Revised and Expanded. New York, NY & Basel, Switzerland: Marcel Dekker. xix + 796 p. See p. 637-45. Chap. 12. [12 ref]

• ***Summary:*** Contents: Circumstances and background of tempe. Starters for tempe production. Tempe *Rhizopus* is derived from hibiscus. Production of tempe. Nutrition and secondary processing of tempe. Future of tempe in Japan.

Before 1998, the origin of the Rhizopus mold used to make tempe in Indonesia was unknown. Research on the subject by K. Tsubaki, S. Tokumasu, and H. Konno, based on investigation of the percentage of mold genera isolated from

© Copyright Soyinfo Center 2014

fresh *usar* and wild hibiscus leaves in Indonesia and Japan, showed that *Rhizopus* was by far the predominant genus. Their results, shown in tables 1 and 2, were published in 1998 in the *Journal of the Japanese Tempeh Society* (vol. 3, no. 1).

Commercial tempeh production in Japan began in the 1980s. However it has gradually decreased until today it has stopped. However total annual production of about 30 tons is now continued in agricultural communities in Okayama and Saga. Address: Tokyo Univ. of Agriculture, Tokyo, Japan.

11127. **Product Name:** Soy Natto: Natto Boy Powder.
Manufacturer's Name: Soy Natto Food Co. (Importer-Distributor). Made in Japan.
Manufacturer's Address: 1015 East Howard Ct., Visalia, CA 93292. Phone: 559-679-9699.
Date of Introduction: 2005 January.
Ingredients: Soybeans, *Subtilis natto* [sic, *Bacillus subtilis natto*].
Wt/Vol., Packaging, Price: 8.8 oz (250 gm) in cylindrical plastic bottle.
How Stored: Shelf stable.
New Product–Documentation: Product with Label sent by Mike Masuyama, PhD, of Visalia. 2006. June. 3.75 inches high by 3.75 inches in diameter. On the front panel is a color cartoon of Natto Boy, a soybean, with a smiling mouth, eyes, 2 hands, and 2 feet. He is wearing a baseball cap; in his left hand he holds a baseball bat. Also: Two sell-sheets: (1) "Natto up-date." 2005. Jan. (2) "New generation soy food–Natto Boy products." This product is "All powder: All high-quality natto properties retained. Use for mixing into shakes or for sprinkling over foods. 1 tablespoon (10 gm) per serving." Contains a one-month supply.

11131. Sweets, Laura E.; Wrather, J. Allen; Wright, Simeon. 2005. Soybean rust. http:muextension.missouri.edu/explore/agguides/crops/g04442.htm. 2 p.
• ***Summary:*** "Asian soybean rust is a serious foliage disease that has the potential to cause significant soybean losses. Although Asian soybean rust was identified on soybean plants in Hawaii in 1994, the disease was not reported in the continental United States until the fall of 2004. The USDA released an official notice of the confirmation of soybean rust on soybean leaf samples collected in Louisiana on Nov. 10, 2004. Over the next few weeks the fungus was detected on plants from a number of additional states, including Missouri."

"History: Soybean rust was first reported in the Eastern Hemisphere [Asia] in the early 1900s. It is now accepted that there are two different fungal species, *Phakopsora pachyrhizi* and *Phakopsora meibomiae,* that cause soybean rust. *Phakopsora meibomiae,* referred to as the New World type, is a much weaker pathogen and is the pathogen that has been found in limited areas in the Western Hemisphere (primarily the Caribbean).

"*Phakopsora pachyrhizi,* referred to as the Asian or Australasian soybean rust, is the more aggressive pathogen. It was first reported in Japan in 1902 and was initially limited to tropical and subtropical areas of Asia and Australia. Unfortunately, it is *Phakopsora pachyrhizi* that has been spreading through the soybean-producing regions of the world. *Phakopsora pachyrhizi* was reported from Hawaii in 1994, Zimbabwe in 1998 and Paraguay in 2001. In Africa this aggressive soybean rust has spread to Uganda, Zambia, Rwanda, Nigeria, West Africa, Mozambique, South Africa and Cameroon. In South America, *Phakopsora pachyrhizi* has been found in most of the soybean-producing regions of Brazil as well as Argentina, Bolivia and Colombia." Address: 1. Dep. of Plant Microbiology and Commercial Agriculture Program; 2. Dep. of Plant Microbiology and Pathology, Delta Research Center; 3. Plant Diagnostic Clinic. All: Univ. of Missouri.

11132. Camps, Lisa. 2005. Re: History of work with soyfoods in Goa, India. Letter (e-mail) to William Shurtleff at Soyfoods Center, May 15. 2 p.
• ***Summary:*** 1984–Lisa came to Goa to nurse a friend back to health; he was a vegetarian. While in India she discovered so many alternative styles of life, so many people from all over the world with a similar consciousness related to healthy body, mind, and spirituality. All "seemed to care about the planet, nature, peace, yoga, natural healing, vegetarianism, etc. India is a whole country of vegetarians, but in Goa, a former Portuguese colony, the inhabitants are mostly Christians who eat meat." That year, Lisa became a vegetarian.

She returned to America, only to yearn to come back to India. So she spent 7-8 years coming and going, whenever finances permitted. When in the USA, she worked with food, in restaurants, hotels, night clubs, made good money, then left again. She took many courses in the health and nutrition at community colleges. She had seen many unhealthy vegetarians and wanted to learn how to be a healthy,

© Copyright Soyinfo Center 2014

vigorous vegetarian. Having helped to deliver 4 children by natural child birth in Goa, she was interested vegetarian diets for children and natural healing.

1982–While in Goa, Lisa met an Australian woman, Diane [Froggatt], who was making her own tofu, because it was not available, and all were tired of Dal (lentils). "I asked her to teach me, and she did... I happily made it for myself to fill the protein gap. Along with Tofu also comes Soy Milk and Okara! A bonus! Made soysausage, soya burgers, etc., but only at home at that time."

1986-87–Lisa attended a Michio Kushi Institute in Switzerland; she learned macrobiotics and shiatsu, which she practiced for about a year, then decided that macrobiotics was "excellent for healing purposes, but not for daily life, simply because any diet so extreme and tasteless is doomed to opposite extremes." She observed that most people who regularly ate a macrobiotic diet "craved massive amounts of Chocolate, or some other form of 'naughtiness.'"

1989-90. Lisa decided to settle in Goa. It had really become her home and it was too expensive to fly back and forth. But how to make money in India? Her many Indian women friends adored lingerie. So she did all the necessary paperwork and started a business named Ooh-La-La-Lingerie Pvt. Ltd., importing undergarments from Europe and traveling all over India to sell them to major department stores. The business went well for 2-3 years until the suppliers and buyers connected–leaving her out.

At the same time, Lisa was selling soya burgers, hummus brown bread, and 4 flavors of soy milk in the Flea market [in Anjuna], where she had a food stall; she made these in her home kitchen. "Then a few people started asking me if I could make them some Tofu! So, I thought why not, since I'm doing it for myself anyway." "All our production started in a small room (in my house), which I converted into a special tofu room, with ventilation above a false ceiling, a sink, stainless steel tables, and extreme hygiene. It was about 3 meters on a side with white tiles. We used (and still use) Aqua Guard water filter systems for all production and packing. So I started by making 2-3 kg at a time, squeezing the milk through a cloth by hand, actually burning my hands on a regular basis, until I decided to build a press. Made some wooden tofu boxes, and did the grinding on a grinding stone. Ouch, too much time and labor! We were selling only to shops and Five-Star hotels.

"As time passed and orders got bigger, my friend and now partner, Richard Chabin, helped me get some machinery, Then, I wanted to learn about Tempeh, and how to make it. There was an American fellow named Joseph Papa who had a book and an interest, so I traded him my shiatsu massages for the method on how to make Tempeh. My interest in Tempeh was the vitamin B's only found in Tempeh. Important if you don't eat beef liver.

"So now I knew many soy foods, and was happily cooking for many friends daily. I enjoy cooking, and they enjoyed eating.

"Then I tried to market the tofu to the local market and restaurants, but as they were not familiar with it, they were afraid, even after I gave them many recipes" and even showed them how to prepare it Indian style–like paneer. "That's when I decided to open a small sandwich shop."

1999–The sandwich shop, named Bean Me Up, Soya Station, Salad Bar, was a "raging success from the beginning." It became too big for the original premises, and there were long lines at peak season. Note: The restaurant name derives from a famous catchphrase from the movie *Star Trek,* "Beam Me Up, Scotty!"

2004 Oct. 31–Lisa took on large premises with 14 rooms to rent and a small health food shop and restaurant. The commercial foods (tofu, tempeh, soymilk, etc.) are made in a separate building (a small factory) on the compound. It opened on Halloween with a costume party. The "real point is the restaurant" (which kept the same name); it is a unit of Ooh-La-La Ling. When people discover that they can get fresh safe salads, Tofu, Tempeh, Seitan, soya ice cream, Tofunaise, etc. after traveling in India, they are so Appreciative. That is a reward in itself! I truly believe that to introduce people to a more healthy diet, and to given up meat, the alternative must taste good, or why would they consider changing? Hence, our theme is 'The Tasty Alternative.' Lisa, now an established businesswoman, has a new source of income from her 14-room hotel!

Two months later, on 24 Dec. 2004 (Christmas eve), a mob of 150 people, escorted by two policemen (for the mob's protection!) went to the Anjuna-Chopra beach belt and rudely demanded that certain restaurants and shops close down. Why? Because their owners were of foreign origin. No matter that Lisa, of American origin with an Indian passport, had lived in Goa for 23 years and had all the legal papers required to run her business. The agitation was probably initiated by indigenous restaurant / shop owners who resented the foreigners' success and had the blessings of local politicians–a familiar theme worldwide. Fortunately, Lisa had some friends with the National Press, *Times of India,* so she and her fellow foreigners showed no fear, followed the procedures, and made a big noise; the actions of the mob were clearly illegal. Her restaurant was never shut down and the problem appears to have gone away.

Lisa is a member of the Vegetarian Society of India, and occasionally they call on her to give seminars for the members.

Note: Diane Frogatt died a few years ago from cancer.

Photos sent by Ratan Sharma in 2010 and taken by him in Jan. 2005 show the entrance to and the inside of this remarkable soy restaurant and salad bar. They serve only soy-based recipes. They also have a branch in Hyderabad. Note: Lisa does not own a SoyaCow. Address: Owner, Bean Me Up, 1629 Deulvaddo, Anjuna / Vagator, Goa, India 403-509. Phone: 0091-(0)832-227349.

• ***Summary:*** Glossy color and dated. Appears to show a photo of the front of the package of all the different types of House-brand soy products made at this time.

(1) Tofu: 12 types / SKUs. (2) Organic tofu: 4 types. (3) Seasoned tofu (tofu steak): 2 types. (4) Soy snack (Tofulicious [soy ice cream]): 3 types. (5) Soy milk: 6 types. (6) Age [Fried tofu]: 11 types. (7) Natto: 3 types. (8) Konnyaku (8 types, 2 of which contain tofu). Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

11134. *Ontario Soybean Growers Soybean Report.* 2005. CAFTA campaign stresses importance of international markets. June. p. 1.
• ***Summary:*** "OSG Director and Bruce County farmer Jim Gowland is among the six Canadians to be featured with his family in the 'My Future is Global' campaign from the Canadian Agri-Food Trade Alliance (CAFTA).

"The 'My Future is Global' campaign is designed to highlight the importance of international markets to Canada's agriculture and agrifood sector. Canada is the world's third largest exporter of agriculture and food products. More than 90% of Canada's farmers, representing 80% of farm cash receipts, rely on international markets. And more than a million Canadian jobs depend on trade.

"Yet the sector continues to be forced to compete in a market that is severely distorted by subsidies and access barriers."

"'We are really happy to be telling the positive story of trade to Canada's decision makers,' says CAFTA President Liam McCreery. 'We want Canada's decision makers and negotiators to understand how important trade is to the Canadian agriculture and food sector, and how innovative and competitive our industry is. But we also want them to understand that this very vibrant industry is relying on them to negotiate aggressively at the World Trade Organization to remove market distortions. Our future is global, and it's in their hands.'"

A photo shows Jim Gowland and his family. "Jim's specialty soybeans are found in tofu in Japan. They are also considered special health foods in Europe." Address: Guelph, ONT, Canada.

• ***Summary:*** A moisture-rich substance from okara–the fiber left over from making soymilk or tofu–is now being used to tone and soften the skin of Japanese women. Bernet International teamed up with Osaka Prefectural University to design the technology used to extract the substance named "soyfun." Used as an ingredient in cosmetics and soaps in Japan, it has been registered with the U.S. Food and Drug Administration. Source: Soyatech.com, 29 March 2005.

11137. *SoyaScan Notes.* 2005. Etymology and definition of the word "seitan" (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Etymology: From Japanese *sei-* fresh or raw + *tan* (in tanpaku(shitsu) protein); usually written in the Japanese katakana syllabary to deemphasize the meaning of the Chinese characters, however < Middle Chinese.

The word was coined in 1961 by the founder of macrobiotics, Nyoichi (or Nyoti) Sakurazawa, known in the West as George(s) Ohsawa (1893-1966).

Definition: "A condiment or meat alternative made by simmering fresh wheat gluten in soy sauce, sesame oil, ginger, and kombu."

The word seitan was clearly coined by George Ohsawa in 1961–see authoritative account (interview) of the word's origin by the man (Mr. Kiyoshi Mokutani) who developed and first commercialized seitan in Japan and was with Ohsawa when he coined the term, writing it in the Japanese katakana. This is a key point; he wanted it to be a Japanese word, not a Chinese loan word.

Seitan was first made commercially in Japan in 1962, and was first imported to the Western world (USA) in about 1969 by two macrobiotic trading companies. For most of the first 10 years of its history it was used as a condiment, mainly by those eating a macrobiotic diet; it was much too salty for typical Americans, and was not widely available.

The basic taste and texture of seitan underwent a gradual transformation over its first 10 years in the USA. It started as a very salty, black, rather hard or tough (like jerky) condiment, then evolved into a much less salty, more tender, brownish product that might be called a meat alternative. I have never heard anyone–except OED–refer to it as a "textured vegetable protein." The latter term is generally used to refer to products that have been texturized by a machine named an extrusion cooker or extruder. I strongly prefer the term "meat alternative," but only for seitan's later incarnation. The term "meat substitute" has largely

© Copyright Soyinfo Center 2014

been replaced in the USA over the past 10 years "meat alternative"–which has a more neutral connotation.

11138. Kingsbaker, C. Louis. 2005. Fires and explosions at soybean processing plants (Interview). *SoyaScan Notes.* Aug. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There has long been an important relationship between the Safety Committee of the National Soybean Processors Association (NSPA, now named NOPA) and the National Fire Protection Association (NFPA); the latter organization has developed NFPA-36, which is the standard for Class 1B flammable liquids. The first NFPA-36 standard was written in 1957 and adopted by NFPA in 1959. It has been incorporated into the OSHA law / standards. When Lou joined the NFPA-36 committee in 1970, there were only two engineers (Lou and John Howeman) and no members of oilseed processing companies. Everyone else on the committee represented insurances; they were out to protect their own interests. "NFPA-36 pretty well eliminates soybean dust as a cause of explosions, because soybean dust is not an explosive due to its high oil content." Lou plans to give a speech in Buenos Aires, Argentina, in Nov. this year; his subject will be fires and explosions, and what changes have been made in NFPA-36 to prevent them from happening. The number of explosions has decreased as better safety practices have been implemented and enforced.

Lou has a list (not computerized) of more than 50 [59 to be exact] fires and explosions from 1948 on at oilseed processing plants worldwide; these are mostly soybean plants. He would be willing to share it with Soyfoods Center if we credit him as the source. He has been involved in 12 or 13 of these accidents, either while the fire was still burning or coming in afterwards to see what caused it.

In 1948 Lou started to work for Blaw-Knox and has been involved in starting up plants since 1949. In most of these cases, he was working for Blaw-Knox (which was later acquired by Dravo). Some of the explosions were in Blaw-Knox plants, some were not–but Blaw-Knox saw this as an opportunity for new business.

Lou was involved with the Louisville sewer explosion. In Friday, 13 Feb. 1981 Ralston Purina dumped about 25,000 gallons of hexane into the Louisville, Kentucky, sewage system, and blew up (and destroyed) about 20 miles of sewage pipes in the system. Miraculously, nobody was killed, and only one person was injured. Manhole covers were blown into the air, and flames shot out of the manholes. Ralston Purina was trying to get rid of the hexane and they thought they could get away with it. This was Lou's first job as a consultant; he was hired by the Louisville municipal sewer system.

Lou presented a paper about the Louisville sewer explosion in Denver, Colorado, for the international oil millers superintendents association. "This was the first time anyone had talked about what happened in this explosion." Ralston Purina sent a lawyer. Lou said that as long as the lawyer was in the room, he wouldn't give his paper. The group asked the lawyer to please leave, which he did. George Willhite of AOCS attended the meeting mainly to hear Lou's paper.

Lou turned the paper into an article, then submitted it to George Willhite for publication. The higher-ups at AOCS wouldn't allow the article to be published; somebody from Cargill stopped it. AOCS may publish it in 2005 to mark the 25th anniversary of the disaster.

Dick Farmer is now checking to see if Cargill (which bought 7-8 of the Ralston Purina soybean crushing plants) will allow Lou to give the talk at an AOCS meeting next spring. Lou and Dick Farmer are good friends and have worked together since the 1960s.

Cargill bought most or all of the Ralston Purina plants after the explosion. The explosion was probably the main reason that Ralston Purina got out of the soybean processing business! They were very embarrassed by this incident. The deposition of Hal Dean and William Stiritz was taken in their board room. Lou has most of the newspaper articles and many photos about the explosion in his files. It was the biggest event in the history of the solvent extraction industry in the USA. One reason for the Louisville explosion was very bad management at Ralston's plant; there was an ongoing argument between the man running the plant and headquarters in St. Louis, Missouri. Lou walked and inspected the sewers, and took many photos. More than 100,000 people were without sewage for a very long time. Sewage could not flow through the old pipes until they were replaced. One hole in the street was 20 by 30 feet. Ralston took out a $100 million insurance policy with Lloyd's of London 1-2 days after the explosion; they were afraid of pestilence if there were rain. People could get ill and die. In the end, Lou thinks it cost the company about $80 to $90 million out of pocket. There was a federal trial in Louisville. Lou, who was on the side of the prosecution, was in the witness stand for 4 straight days. After the prosecution presented its case, Ralston caved in and settled–with the sewer district, the city of Louisville, the state, and all the merchants who had to shut down their businesses because they couldn't get sewage service.

He also has photos of Quincy Soybean Co. when they had an explosion in Sept. 1966. And of Oelmuehle Hamburg in Germany where there was a tremendous explosion in about 1983; he was hired by them as a consultant. Central Soya had an explosion in 1994 in Indianapolis, Indiana; they were not allowed to rebuild the plant. They were cited by OSHA and fined something like $600,000 to $700,000. The story made all the Indianapolis newspapers. If somebody gets killed or goes to the hospital, OSHA comes right in and it becomes an open book. At Union Oil Mill, a cottonseed processor in Jackson, Mississippi, two men were killed.

In Germany, there have been a lot of explosions related

© Copyright Soyinfo Center 2014

to solvent extraction. Oelmuehle Hamburg had 3 solvent plants; 2½ of them were blown apart. At one plant in Germany, Lou was there when it was on fire. Another was Fuji Oil Co. in Japan in about 1990, where about 8 people were killed. Then the Japanese government stepped in, shut down the company and wouldn't let them re-open the plant. Lou, who was a consultant by then, was hired by the Japanese Oilseed Processors Association to fly to Japan, meet with the company, and see if they could develop a program to get government approval.

Blaw-Knox replaced the German plants owned by ADM and by Glidden (Indianapolis). Blaw-Knox copied some of the German designs, but then they developed a completely new extractor (Rotocel), and desolventizer. Lou "cut his teeth" working with the Rotocel at Blaw-Knox. Address: Atlanta, Georgia. Phone: 770-396-1413.

11139. Beech, Hannah. 2005. The wasted asset: Japan's gender crisis. *Time* (*Asia*). Aug. 22.
• ***Summary:*** Cover story: "Japanese society... venerates the winner dog, the housewife who waits at home with a vat of miso soup for her husband and kids." It still doesn't have much respect for women who are single, childless, happy, affluent, and independent.

11140. Squires, Sally. 2005. The argument over soy: The FDA is weighing its health benefits, even as some experts caution that too much could pose a risk for children. Lean plate. *Los Angeles Times.* Aug. 22. p. F3.
• ***Summary:*** Are Americans getting too much of a good thing–soy? Some FDA administrators are asking this question as they consider a "petition to give soy products a new boost: a qualified health claim for possible prevention of breast, colon and prostate cancer. This type of claim, unlike full-fledged health claims, is based on emerging research that points to, but does not prove, health benefits.

In recent years, qualified claims have been given to nuts, olive oil, and omega-3 fatty acids. Soy protein received its first full-fledged FDA health claim in [Oct.] 1999. Since then, consumption of soy protein has more than doubled in the USA, so it is now 2.2 gm per person per day from all sources. This is about one-fourth the amount consumed daily in Japan.

Soy is a rich source of high-quality protein, with many other good nutrients. "But its the isoflavones in soy that may be of greatest benefit and concern." They have some of the same properties as the female hormone estrogen.

Mark Messina, PhD, an expert on soy nutrition, says that most of the safety issues pertain to infants and children. "With adults, its hard to find any cause for concern," he adds. In July 2005, the Israeli Ministry of Health announced plans to recommend that young children limit soy products to one a day and advised that infants avoid them altogether. The French government recently advised that soy products not be given to children younger than age 3.

"But a recent review at the National Institute of Environmental Health Sciences in Research Triangle Park, North Carolina, reached a different conclusion. Though the researchers found that soy-fed infants are exposed to enough compounds that are pharmacologically active, they concluded that 'there is no indication of such action in the 50 years the formulas have been used.'"

A little goes a long way. Dr. Mark Messina advises adults to aim for 15 to 25 grams of soy per day–about the amount found in one-half to one cup of tofu or several cups of soy milk. "If you've got high blood cholesterol, 'shoot for 25 grams per day,' he said, noting 'the limitation is not based on any safety concerns, but the dietetic principle of eating a varied diet.'"

A large color photo shows an overhead view of edamamé (green vegetable soybeans in the pods) in a round blue bowl. Address: Special to The Times.

11141. Thurman, Judith. 2005. Night kitchens: Where making bean curd is an ancient art. *New Yorker.* Sept. 5. p. 66, 68-70, 73-74.
• ***Summary:*** One of the most insightful articles about tofu ever seen. An American goes in search of the heart of tofu in Japan, and the place of tofu in the Japanese diet and psyche; in the process, she finds the heart and soul of Japan. At Daisen-in, a Zen temple in Kyoto, she discovers "workshops where tofu is handmade by artisans faithful to the old tradition." Tofu was imported to Japan from China and Korea, along with Buddhism; it has been a mainstay of the monastic diet in Japan for about 1,000 years. But it "has never lost the soulful, exalted aura of its provenance."

At Okutan, the oldest tofu restaurant in Japan (established about 400 years ago within the walls of Nanzenji temple) she enjoys tofu at its best. She meets Mr. Ishii, whose tofu kitchens and private museum of beans are housed beneath the restaurant; he gives her a detailed history and gastronomy of the soybean. The shop where Okutan's tofu is made uses only traditional equipment–much of it made of cedar. Nigari is made here, dripped from sea salt. Shima-dofu is made with pure seawater–not with nigari–gathered off the tiny island of Hateruma.

She spends the night at a lovely old traditional Japanese Inn (*ryokan*) named Yoyokaku, near the beach in Karatsu, Saga Prefecture, on the west coast of Kyushu, about 4 hours by train south of Kyoto. Biking to a tiny nearby restaurant named Kyomachi, she finds that "its cuisine consists almost entirely of artisanal tofu made nightly, on the premises, by Yoshimasa Kawashima... whose family has been making tofu in Karatsu for nine generations." Age 58, he has created a unique new product named *zaru-dofu,* curded with nigari and eaten as curds. He also serves the okara as a dish in its own right.

Finally she visits Kashiwajima, an rocky island off

• ***Summary:*** A very attractive, complex character, Chinese-language edition of *The Book of Miso.* A slightly revised edition (different color cover) was published in mid-2012. Address: 1. Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

11149. *New York Times.* 2005. Dried vaccines. Dec. 6. p. F6.
• ***Summary:*** Aktiv-Dry, a Colorado company that turns liquids into superfine powders, is developing a measles vaccine that can be stored dry and inhaled. It is very difficult to keep vaccines cold in Third World villages without refrigeration. Yet each year, "23 million children in Africa and Asia get measles, and 1 million die of it." The chosen vehicle for the vaccine is *Bacillus subtilis,* which is found in dirt all over the world. Safety is not an issue, since many Japanese eat it daily for breakfast. "The bacteria are used to ferment soybeans for a dish called natto." Illustrations show the inhalator and how it works.

11150. *SoyaScan Notes.* 2005. Chronology of major soy-related events and trends during 2005 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan.–Monsanto acquires Seminis for $1.4 billion. This gives Monsanto a commanding position in the fast-growing and very profitable vegetable seed market–a segment in which Monsanto previously had no presence. Jan.–*EarthSave News* stops being printed on paper and migrates to the Internet.

Feb. *The Whole Soy Story: The Dark Side of America's Favorite Health Food,* by Kaayla T. Daniel published by New Trends Publishing Inc. (Washington, DC). This is the first entirely anti-soy book.

March 14–Steve Demos, founder of White Wave, Inc., is terminated without cause (forced out) by Dean Foods.

July 7–Galaxy Nutritional Foods announces it will sell its manufacturing assets to Schreiber Foods, Inc. of Green Bay, Wisconsin, a major manufacturer of cheese products. Galaxy has recently suffered large financial losses.

July–Israeli Ministry of Health announces plans to recommend that young children limit soy products to one a day and advised that infants avoid them altogether. The French government recently advised that soy products not be given to children younger than age 3.

Oct. 17–Gardenburger Inc., the company credited with taking veggie burgers into the mainstream, files for Chapter 11 bankruptcy. The company will stay in business but become privately held; the name of the new owner is not yet known. The value of all Gardenburger shares is now zero.

Nov.–Yamasa Corporation purchases San Jirushi Corp. (Kuwana, Japan). San-J plans to build a new tamari plant next to their original plant (which has reached full capacity) in Richmond, Virginia.

During 2004-05 world production of palm oil reached 33.88 million metric tons to pass soybean oil (32.31) for the first time in history and to become the world's leading vegetable oil. Projections show this lead continuing to grow during the next two years (Source: *2007 Soya & Oilseed Bluebook,* p. 348).

11151. Lyddon, Chris. 2005. Global grain trade review. *World Grain* 23(12):34-38, 40-41. Dec.
• ***Summary:*** For soybeans in 2004-05, the top exporters (in 1,000 tonnes [metric tons]) are: 1. USA 29,801. 2. Brazil 20,538. 3. Argentina 9,600. 4. Paraguay 2,600. And Canada 1,025. Total world exports: 65,034.

Top importers: 1. China 25,700. 2. E.U.-25 16,000. 3. Japan 4,300. 4. Mexico 3,500. 5. Taiwan 2,300.

Statistics are also given for soybean meal.

The five leading U.S. seaports for imports and exports of all grains are (in million tonnes): 1. South Louisiana 44.169. 2. Houston, Texas 5.273. 3. Portland, Oregon 3.548. 4. Duluth, Minnesota 2.573. 5. Corpus Christi, Texas 1.687. Address: World Grain's European Editor, chris.lyddon@ntlworld.com.

11152. Nakajima, Nobuyoshi; Nozaki, N.; Ishihara, K.; Ishikawa, A.; Tsuji, H. 2005. Analysis of isoflavone content in tempeh, a fermented soybean, and preparation of a new isoflavone-enriched tempeh. *J. of Bioscience and Bioengineering* (*Japan*) 100(6):685-87. Dec. *
• ***Summary:*** By adding soybean germ (hypocotyl) that contained a large amount of isoflavone, the writers prepared a new isoflavone-enriched tempeh in the form of a granular fermented soybean-based food, which can serve as a nutritious supplement, e.g. for the elderly.

Gives levels of daidzein, genistein, and glycitein in tempeh–made from yellow soybeans, black soybeans, and defatted yellow soybean germ, plus isoflavone-enriched tempeh. Address: 1. Graduate School of Health and Welfare Science, Okayama Prefectural Univ., Kuboki, Soja, Japan.

11153. **Product Name:** [Organic Shiro-shoyu (clear soy sauce)].
Foreign Name: Shiro shôyu.
Manufacturer's Name: Hichifuku Brewing Co., Ltd.
Manufacturer's Address: 2-7 Yamagami, Hekinan, Aichi 447-0869 Japan. Phone: +81 566-92-5213.
Date of Introduction: 2005.
Ingredients: Wheat, soybeans, salt, culture.
How Stored: Shelf stable.
New Product–Documentation: The website www.pref.aichi.jp lists this company at Certification No. 225. "Japan's only specialized manufacturer of *shiro-shoyu* soy sauce, in Hekinan City, the home of this special ingredient. Executive director: Atsunori Inuzuka. Company outline: Hichifuku [Shichifuku] Brewing is the only company in Japan whose *shiro-shoyu* soy sauce plant is organic–JAS certified. Wheat accounts for 90% of the raw material used to produce this soy sauce. The amber-colored product keeps intact the colors of the other ingredients as they cook. Hichifuku Brewing also manufactures *shiro-dashi* (a combination of shiro-shoyu soy sauce and dashi broth of carefully selected dried bonito, kombu, and shiitake mushrooms)."

11154. Andoh, Elizabeth. 2005. Washoku: Recipes from the Japanese home kitchen. Berkeley, California: Ten Speed Press. vii + 320 p. Illust. (many color). Index. 25 x 25 cm.
• ***Summary:*** A beautiful book. Contains a section titled "Tofu and eggs" (p. 268-93), plus many recipes that use miso, shoyu, edamame, kinako ("toasted soy flour"), and amazake. Address: Japan.

11155. Fujii, Mari. 2005. The enlightened kitchen: fresh vegetable dishes from the temples of Japan. Translated by Richard Jeffrey. Tokyo, New York, London: Kodansha International. 107 p. Illust. (photos by Tae Hamamura). Index. 26 cm.
• ***Summary:*** This is a lovely Japanese vegan (and vegetarian) cookbook filled with the spirit of kindness and of Zen–and with color photos on almost every page. It discusses and describes the ancient tradition of *shojin ryori,* the plant-based diet which originated in Japan's Buddhist temples. The author, who is the wife of a Buddhist monk, has taught temple cuisine for over 20 years. Her husband, Sotetsu, lived as a monk for ten years in various Buddhist temples; he also trained as the tenzo (head cook).

In this book she presents 60 beautiful, delicious, health-giving, and heart-warming recipes, many adapted to Western kitchens but all true to their roots. A majority of the recipes contain soyfoods in one form or another.

The helpful glossary includes descriptions of edamame beans, hijiki, karashi mustard, konbu, Koyadofu ("freeze-dried tofu"), miso, natto, nori seaweed, pickled plum paste, saké, sesame paste, sesame seeds, shiso (perilla), soy sauce, soybeans, sukikonbu, tofu, umeboshi pickled plum, usu-age tofu, wakame seaweed, wasabi, yuba, yuzu.

The index contains 20 entries for miso, 15 for tofu (p. 15, 24, 29, 32, 39, 41, 42, 48, 51, 53, 56, 62, 71, 100, 104), 6 for soymilk (p. 17, 45, 47, 94, 99, 104) 4 for edamame (p. 16, 35, 68, 99), 3 for deep-fried tofu (p. 32, 42, 71, 104), 3 for natto (p. 44, 50, 100), 2 for teriyaki (p. 48, 62), 2 for Koyadofu (p. 48, 100), 2 for usa-age (thin slices of deep-fried tofu; p. 32, 104). 2 for yuba (p. 47, 104). A small color photo on the inside rear dust jacket shows Mari Fujii. Address: Cooking teacher, Kamakura, Japan.

11156. Heldstab, Celeste Rayne. 2005. The kitchen grimoire. 2 vols. Published by the author. 724 p. See Vol. 2. p. 450. *
• ***Summary:*** The recipe for "Kinako mochi" calls for kinako as an ingredient.

11157. Hu, Shiu-ying. 2005. Food plants of China. Hong Kong: Chinese University Press. xvi + 844 p. Illust. Index. 26 cm. [350+ ref]
• ***Summary:*** This is a truly remarkable book–the most original and comprehensive book seen to date on the food plants, plant foods, and the economic botany of China. It is the author's supremely valuable life's work.

Contents: Foreword by Richard Evans Schultes (Director, Botanical Museum of Harvard University, Emeritus). Foreword by George W. Staples, III (Bernice P. Bishop Museum, Honolulu, Hawaii). Introduction: Why the book and to whom is it addressed. Illustrations (numbered but on unnumbered pages).

Part I: Cultural aspects of Chinese foods. 1. The sources and nature of information. 2. The production and preparation of Chinese plant food. 3. Selected Chinese food plants with instruction for preparation. 4. Spices and flavoring materials. 5. Health food (*bupin*) and herbal tea (*liangcha*).

Part II: Botanical aspects of Chinese food plants. 6. Nonvascular plants. 7. Vascular plants (incl. spermatophytes {seed-bearing plants} and angiospermae {flowering plants}, incl. monocotyledons and dicotyledons). Bibliography. Latin name index. Chinese name index. English name index.

On the inside front cover and facing right-hand page is a large map of China, with each province shown, and the localities of Shiu-Ying Hu's botanical activities in China clearly show in symbols: white triangle = before and white circle = after 1950. A black triangle or circle = staying 8 or more years. In each triangle or circle is a number, keyed to a list of the names of 65 localities. She did more research in southern China than in northern.

There is no country in the world today "where the value of useful plants is more thoroughly appreciated than in contemporary China" (p. vii, Foreword 1).

Dr. Hu is an expert taxonomist and economic botanist. She "draws on the fields of plant taxonomy, morphology, economic botany, pharmacognosy, and phytochemistry to

© Copyright Soyinfo Center 2014

name a few, yet the text is far from a dry recitation of facts and statistics. What brings the work to life are the numerous anecdotes and personal experiences she shares. Indeed, this latter element gives the book the aspect of a personal memoir." "The major divisions... are taxonomic and within each division the plants are arranged alphabetically by scientific name. Also provided are the names in Chinese characters, the transliteration in English of both the Putonghua and Cantonese pronunciations for the Chinese names, common names in English, and a brief commentary" (p. ix-x, Foreword 2).

"The food plants of an area provide the material basis for the survival of its population" and furnish inspiration for its cultural development. "In China, 1,156 species and 274 varieties and/or cultivars of food plants have been recorded and are used" by the people. The preparation of this work began in 1957 and a compilation was distributed at the Ninth Pacific Science Congress. Born in 1908, the author entered a boarding school in Xuzhou, Mary Stevens Girls' High School, run by Presbyterian missionaries. In like manner she went to Ginling College, a small liberal college of arts and sciences in Nanjing. After college she entered Lingnan University (formerly Canton Christian College) in Guangzhou, from which she graduated with the master of science degree in June 1937–a month before the Marco Polo Bridge Incident on July 7, 1937, when the Sino-Japanese War broke out in Beijing. She fled to Chengdu, Sichuan, where in Jan. 1938 she accepted a teaching position in the Department of Biology, West China Union University–also a missionary college. In the late 1930s and early 1940s, Hu had botanized in western Sichuan at a time when only a few men (notably Armand David, Joseph Rock, and E. Wilson) had explored that region. During summer vacations, she took students to botanize around Muping. At West China Union University, Hu continued her field studies, taught courses in botany, and was elected president of the International Women's Club. The vice president of the club, who was a Radcliffe graduate, applied to Radcliffe for a fellowship for Hu.

She left China on 2 Aug. 1946 for graduate work at Radcliffe College; it was like a metamorphosis–the United States was a completely new world. In 1946 she was offered a graduate fellowship for a doctorate (PhD) program at Radcliffe College under Prof. E.D. Merrill, then Director of the Arnold Arboretum (Harvard Univ.) from 1935-1946. Her doctoral dissertation on the genus *Ilex* (Aquifoliaceae) was carried out at the Arnold Arboretum under the direction of E.D. Merrill. After completing the requirements and finishing the dissertation for a doctorate degree at Harvard, in April 1949, she became the herbarium assistant at the Arnold Arboretum. From 1953 to 1957 she worked on the Flora of China Project at Arnold Arboretum. Among other things, she became famous for her Chinese dinners with staff and students alike. She officially retired from the Arnold Arboretum on 30 June 1976.

Dr. Hu returned to China in July 1975, after 29 years abroad. Since the normalization of diplomatic relations between the USA and China in 1978, she has made many trips to China, and travelled studied extensively (p. xi-xii, 12-14). As of Aug. 2011 Dr. Hu resides in Hong Kong and is closely associated with the Chinese University of Hong Kong.

A photo (Fig. 1) shows the author in 1941 as a young lady in Tibetan attire; she spent summers in the area formerly called "Eastern Tibet."

Fig. 34, an illustration composed of seven superb line drawings (each with a scale) showing the soybean plant, a flowering branch, the front view of a flower, a lateral (side) view of the same, a fruit (pod with 2 seeds) with one side of the pericarp (outer pod) removed–showing the seeds, a soybean seed showing the acentric hilum, the micropyle and the hypocotyl ridge, soybean sprouts from a market showing the smooth fleshy cotyledons, the hypocotyl and the very small plumule.

Fig. 35. Four black and white photos showing: (1) Two round trays of koji, made of cooked soybeans, roasted wheat flour, and fungal spores, in shelves, to be used for making soy sauce. (2) Large earthen jars with convenient hat-like covers, containing the koji, salt and water, placed in the yard of the *jiang-yuan* (2 Cc = Chinese characters given) ("jiang garden"), exposed to the sun during the day and dew at night, covered only when it rains and stirred occasionally. (3) A man stirring hot soymilk in a large shallow cauldron before adding pulverized calcium sulfate for precipitation of the soybean protein, used to make tofu. (4) A wooden frame [curding box], lined with cloth for filtering the coagulated protein and solidifying the mass (under small pressure) to make bean curd.

Soybeans (*Huang-dou,* 2 Cc). Before World War II, the United States was a net importer of soybeans; now she is a net exporter. "Although soybean products have entered American supermarkets, several Chinese uses of soybean can introduce more variety and tastier food into many homes (Figure 35). Included... are: green immature soybean, soybean curd, soybean sheets [pressed tofu sheets], firm bean curd squares [pressed tofu], soybean skin [yuba], and soybean sprouts." With the exception of soybean sheets, all these items are available in Chinese American grocery stores. "The Food Plants Research Institute, Amherst, Massachusetts, is in the process of introducing soybean sheets (3 Cc) to American markets (p. 118-19).

Hordeum vulgare L. var. *vulgare*–Barley *Da-mai* (W.-G. *Ta-mai*) (2 Cc, 'big grain'). "... also ground with sorghum and soybean for a coarse, healthy, fiber bread flour."

Glycine max (L.) Merrill–Soybean. *Da-dou* (W.-G.: *Ta-tou*). (2 Cc) ('giant bean'). *Huang-dou* (W.-G.: *Huang-tou*). (2 Cc) ('yellow bean'). "Seed mixed with *gao-liang* (kaoliang) and barley, ground together for flour, used to be

• ***Summary:*** The section titled "Inari Sushi" states (p. 20): "Inari; usually pictured as a old man with a pair of sacks and accompanied by a pair of foxes, is the god of rice in Japan. Because pockets of abura-age, or fried tofu, stuffed with *sushi-meshi* look like the rice bags carried by Inari, they're called *inari sushi.* They are also known as *age sushi* (*age* means "fried," referring to tofu pouches), *o-inari sushi* or *o-inaribukuro* (inari stuffed in a sack) or *kitsune sushi* (fox sushi)."

Popular with Japanese children, inari sushi makes a fine snack or light lunch, but it isn't common in sushi-ya [sushi shops]. They are most widely found in prepackaged lunch-box type sushi.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *age sushi* or the term *kitsune sushi* or the term *o-inari sushi* to refer to inari sushi, made with deep-fried tofu pouches.

Almost all of the sushi terms in this book are presented and used in their original Japanese; they are not translated into English. Thus, this book contains a wealth of real sushi terminology and vocabulary. The writing style mixes both humor and serious admiration. Address: Restaurant critic for *St. Louis* magazine, Missouri.

11163. Moriyama, Naomi; Doyle, William. 2005. Japanese women don't get old or fat: Secrets of my mother's Tokyo kitchen. New York, NY: Delacorte Press. 274 p. Illust. Index. 22 cm. [50+ ref]
• ***Summary:*** From the publisher's description: "Japanese-born Moriyama reveals the key to the enduring health and beauty of Japanese women. The Japanese eat one of the most delicious, nutritious, and naturally satisfying cuisines in the world without denial, without guilt, and, yes, without getting fat or looking old. If you think you've eaten Japanese food, you haven't tasted anything yet. Japanese home-style cooking isn't just about sushi and raw fish but good, old-fashioned everyday-Japanese-mom's cooking that's stood the test of time–and waistlines–for decades. Reflected in this are the age-old traditional values of family and the abiding Japanese love of simplicity, nature, and good health. It's the food that millions of Japanese women eat every day to stay healthy, slim, and youthful. Even better, it's fast and easy. If you're tired of counting calories, counting carbs, and counting on diets that don't work and don't satisfy, it's time to discover this."

Traditional Japanese soyfoods are mentioned throughout this book, always in a very positive way and in recipes. Japanese generally eat soyfoods in their more natural and less processed forms such as tofu, miso, natto, and edamame–and rarely in the forms of soy supplements, soy shakes, soy burgers, soy energy bars, etc. that are so popular in the West.

Chapter 5, "The seven pillars of Japanese home cooking," states (p. 122) that they are: "fish, vegetables, rice, soy, noodles, tea and fruit." Soy, "The fourth pillar," is discussed very nicely on pages 181+.

Here is the number of pages on which various foods are mentioned: Tofu 56 (incl. silken tofu {kinugoshi}, cotton tofu {momen, regular}, atsu-age {deep-fried tofu cutlets}, usu-age {deep-fried tofu pouches}, yakidofu or broiled tofu). Miso 50 (incl. p. 91-92. 99-100). Soy sauce 50. Edamame 12. Shoyu 3 (p. 75, 114, 121). Natto 2 (p. 184, 188). Okara

© Copyright Soyinfo Center 2014

1 (p. 184). Yuba 1 (p. 184). Also many reference to sea vegetables (hijiki, kombu, nori). A photo on the inside rear dust jacket shows the authors; she was born in Tokyo, and he is an American who has written or cowritten five books.

Note: The paperback edition of this book (only) mentions "The Japanese Skincare Revolution: How to Have the Most Beautiful Skin" in connection with tofu. Address: Wife and husband live in New York City.

11164. Mullin, W.J. 2005. Miso as a functional food. In: John Shi, C.-T. Ho, and F. Shahidi. 2005. Asian Functional Foods. Boca Raton, Florida: CRC Press. xxi + 647 p. See p. 537-53. Chap. 19. [34 ref]
• ***Summary:*** Contents: Introduction. Raw materials: Soybeans (preferred qualities), rice, barley, salt, water, [yeast and] bacterial cultures (halophilic yeasts: *Zygosaccharomyces rouxii, Candida versalitis;* lactic-acid producing bacteria: *Tetragenococcus halophilus*), koji starter (*tane-koji*). Processing technology: Organoleptic properties. Nutritional properties. Standards and regulations.

Of the macronutrients in soybeans, the carbohydrate content is the most important, particularly the level of oligosaccharides.

Page 242: Traditionally, making miso was a family operation that took place after the fall harvest; the food was preserved in times of plenty, which were followed by times of uncertainty in the food supply.

Miso cooperatives: The system of miso cooperatives is very well organized. Local cooperatives throughout Japan are organized into 51 unions, and these are grouped into eight national blocs based on geographical location. The blocs have joined to form a national organization called the Japan Federation of Miso Manufacturers Cooperatives (JFMMC) [*Zenkoku Miso Kogyo Kyodo Kumiai Rengokai*], with headquarters in Tokyo. JFMMC represents about 1,400 miso manufacturers of all sizes. All miso makers are eligible to become members of the local organization, and the vast majority take advantage of the membership, which can provide many benefits. "The JFMMC operates the Central Miso Research Institute, which conducts basic research, tests new domestic and imported varieties, troubleshoots processing problems, and prepares and distributes cultures for fermentation." The JFMMC is very active in public relations and publicity; it also sponsors research into the health benefits and nutritional value of miso. It publishes an annual report which includes detailed statistics on miso production in Japan, as well as discoveries based on new miso research.

Annual miso competitions are held at the local and national level to keep miso in the spotlight; they do much to maintain and improve the quality of miso. Most take place in the fall, with the national JFMMC competition held last of all in early November in Tokyo–a climax of the miso production year. "The competitions are keenly contested with several hundred entries and are widely reported in the national and local media." "Winning a class can be of great promotional benefit to the winner." New uses for miso are also on display with leading chefs preparing dishes that are offered to members of the JFMMC, competition participants, and to the media. Address: Agriculture and Agri-Food Canada, Ottawa, Ontario, Canada.

11168. Park, Kun-Young; Jung, Keun-Ok. 2005. Fermented soybean products as functional foods: Functional properties of doenjang (fermented soybean paste). In: John Shi, C.-T. Ho, and F. Shahidi. 2005. Asian Functional Foods. Boca Raton, Florida: CRC Press. xxi + 647 p. See p. 555-96. Chap. 20. [121 ref]
• ***Summary:*** Contents: Introduction. History of Korean soybean fermented foods. Manufacturing methods and characteristics of doenjang fermentation. Functional properties of doenjang: Nutritional and functional components in soybean and doenjang, safety of doenjang, antimutagenic activity of doenjang. Anticancer effect of doenjang. Increased chemopreventive effect of doenjang: Antioxidant effects, reduced cardiovascular diseases (fibrinolytic effect {as in chungkookjang and natto which secrete strong fibrinolytic enzymes}, antihypertensive effects, reduced serum cholesterol level), other possible functions of doenjang. Conclusion.

Doenjang is "Korean fermented soy paste" and kanjang is Korean-style fermented soy sauce that is obtained by filtering off the liquid from doenjang. "Historically soybeans and processed soybean foods have been the main protein sources in the Korean diet" (p. 555). "The medicinal functions of doenjang were first described in the *Dongeuibogam* [*Dongui Bogam* (*RR*), *Tongui Pogam* (*MR*)] (1613 A.D.), which was a popular traditional Korean medical text" [no citation given].

The section titled "History of Korean soybean fermented

© Copyright Soyinfo Center 2014

foods" contains what promises to be a number of references to early and possibly very interesting documents that mention soybeans and soyfoods in Korea. Yet the authors fail to cite any of them properly, so for the time being, we must accept their account of what the documents say. The problems are: (1) None of these documents (except one, Ref. #46) is cited in the long list of references at the end of the chapter. (2) The title of all these documents is given only in Korean, even though at least two should have Chinese titles; one of those two (described as "The Chinese agricultural technology book, *Jeminyosul* {A.D. 530 to 550} written by a governor, Maeeunsa,...") is actually the famous *Qimin Yaoshu,* by Jia Sixie. (3) We are never told in what language the original document referred to is written. (4) The page number(s) on which the ancient, important information appears is not given for any of these documents. (5) For some documents no date is given, whereas for others no author is given. (6) It is not clear what names were used to refer to each of the various soyfoods in the original documents. (7) The authors never tell us whether they examined the original document, or read a contemporary version, or simply got the information from a secondary source.

For example (all dates are A.D.): 99–It has been reported [by what document?] that soybeans were cultivated–Where were they cultivated?

530-550–The *Jeminyosul* [*Quimin Yaoshu*] states (in Chinese) that shi [fermented black soybeans], soybeans fermented with bacteria, in Korea were disseminated to China and Japan.

683 Feb.–An article [no title given] by King Sinmoon, that appeared in the 3rd year of his reign (during the Silla dynasty), mentioned the words *jang* (mold-fermented soybeans) and *shi* (bacteria-fermented soybeans).

701–*Daeboyulryong* mentioned the words jang, shi, and maljang, which referred to soybean products.

739–*Jungchang Wonmooseu* also mentioned the word maljang.

Donga (no date given), which was written by Shinjungbaesuk (is that the writer's real name?) in Japan, "indicated that maljang was imported from Korye (the old name of Korea);" it was renamed "miso" (Source: Ref. #46–35th Chronicle of Korea Soy Sauce Industrial Cooperative. 1997. Seoul. p. 27-32). Korean jang is said to have developed into traditional Japanese miso using meju made of soybeans and rice instead of maljang, which was made from soybeans only.

918-1392–During the Korye [Goryeo] dynasty, [in Korea] the name "maljang" changed to "maejyo" and then to "meju" [meaning soybean koji in the shape of balls or cones]; it was soaked in brine in a clay pot and ripened [then filtered]. The liquid was called *kanjang* (soy sauce) and the solid sediment was called *doenjang* (soy paste).

1613–*Donguebogam* [see above], written by Hurjun, described how to make medicinal doenjang using soybeans and how to fix soured doenjang.

1760–*Jungbosan Limkyunge,* written by Yojungim, "introduced 45 different processing methods for soybean foods, describing how many days fermentation for jang, selection of water, salt quality, how to handle the pottery, fixing jang with an off-taste, etc."

1790 ca–*Kyuhap Chongseo,* written by Madam Lee (lived 1759-1824) described the proper methods for making the various types of jang in great detail.

1930 ca.–Commercial production of fermented soybean products ("jang" in Korean) started in Japanese-built jang factories in Korea during the occupation (1909-1945) to supply soybean products for the Japanese in Japan.

1945–After gaining independence from Japan, Koreans took over the factories. Since the Korean war (1950-1953) military personnel and people living in large cities have mostly consumed commercial fermented soybean products, whereas families living in rural areas still prepare their own. Address: Pusan National Univ., Busan, Korea.

11169. Shi, John; Ho, Chi-Tang; Shahidi, Fereidoon. 2005. Asian functional foods. Boca Raton, Florida: CRC Press. xxi + 647 p. Illust. Index. 24 cm. Series: Nutraceutical Science and Technology.

• ***Summary:*** Contents: Preface. About the editors. Series introduction. Contributors. Table of contents. 1. Functional foods and their impact on nutrition and health: Opportunities in the Asia Pacific... Contains two chapters on fermented soyfoods (Chap. 19, Miso, and Chap. 20, Doenjang) which are cited separately.

The Preface begins (p. v): "Health and 'healing' foods have a long history in Asian cultures." Asians such as the Chinese and Indians have long known that food and medicine come from the same source; they can treat illnesses and build a healthy life. Since ancient times, Chinese have compiled a remarkable amount of information about the materia medica, the use of natural substances–plants, animals, and chemical–to treat illness.

Kudzu (*Pueraria lobata, ge geng*), one of the earliest medicinal plants used in traditional Chinese herbal medicine, is discussed on pages 83-86.

In chapter 7 titled "Traditional Functional Foods in Korea," the section on "Fermented soybean foods" (p. 165-66) states that typical daily per capita consumption of these foods are: Soy sauce 20 ml, soy paste 20 gm, and hot soy paste 10 gm. In recent years there has been a decrease in soy intake due to increased use of Western seasonings such as mayonnaise, tomato ketchup, meat sauces, etc.

In Chapter 8, titled "Evolution of Korean dietary culture and health food concepts," the section on "Food as medicine" begins (p. 210): In traditional Korean culture, food was regarded as the basic source of health. It was believed that all diseases could be cured by foods. Korean knowledge of the medicinal effects of foods came, not

© Copyright Soyinfo Center 2014

through the sciences of nutrition, medicine, chemistry, or physiology, but through long human experience. Moreover, a key practice and discipline has long been to eat only when hungry, and not to overeat. The enormous size of the health food market in Korea today reflects the country's long tradition of 'food as medicine.'"

Page 229: "Micronutrients." Asian fish sauces are good sources of vitamin B-12 (cobalamine) because they are made from animal protein. Fish sauce from Thailand contains 1.91 mcg (micrograms) per 100 ml. This amount protects the Thai population from megaloblastic anemia caused by vitamin B-12 deficiency. The estimated average requirement for vitamin B-12 is only 2 mcg per day. However fermented soybean sauce contains very little (0.14 mcg per 100 ml); the small amount present is attributed to microbial synthesis.

Page 230: "The high salt problem." Japanese men rank highest in daily per capita sodium intake at 5.4 gm; the United States, Thailand, and New Zealand each average about 3.9 gm.–72% as much, or 28% less. Some cultures consume as little as 0.69 gm / day.

Pages 248-49: "Future potential for fish sauce." It is unclear whether fish sauce was first developed in Asia or Europe. But while it has vanished in Europe, it has become a thriving industry in Southeast Asia–perhaps because the extensive use of bland-tasting rice requires a salty and tasty protein-rich seasoning. Several species of anchovy are the preferred raw material for fish sauce. Some say that soy sauce was first developed in Japan. Address: 1. Research Scientist, Federal Dep. of Agriculture and Agri-Food Canada, Ottawa, Ontario, Canada; 2. Rutgers Univ., Rutgers, New Jersey; 3. Memorial Univ. of Newfoundland, St. John's, Newfoundland, Canada.

11170. Smith, Andrew F. 2006. Soy [sauce] and ketchup / catsup (Interview). *SoyaScan Notes.* Jan. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** William Shurtleff called Smith, who had written a book on the history of ketchup (*Pure Ketchup*), to ask why there were recipes in early American cookbooks titled "Tomato Soy" (Randolph 1838, p. 163) and "Soy" (Beecher 1850, p. 72) which did not call for soy [sauce] as an ingredient and did not even mention "soy" in the body of the recipe.

Smith: The price of the soy sauce imported to America from Asia in the late 1700s and 1800s would have been very high. Importers may have adulterated this soy sauce to obtain more and reduce the price. Andrew thinks that the "soy" called for in early American cookbooks would probably not have been real soy sauce; that is, it may not have been made with soybeans–you don't know for sure. Soy is a generic concept; it's like the term "ketchup," which is also a generic term. "Ketchup" and "soy" were used interchangeably. There were probably only a handful of people in 19th century America who knew was "soy" really was, and most of those did not realize that soy sauce was made from soybeans. And soy was certainly not a major part of the American diet or cookery. Mary Randolph could use the word "soy" in place of ketchup and not even give it a second thought. Ketchup is a sauce that is made from a single food product (such as mushrooms) with added spices. Soy was the same. It wasn't necessarily made from soybeans.

Once a term is adopted, like ketchup in England, it becomes an "in" word, and people then use the word to mean other things. These words are not yet clearly defined. In the United States, Noah Webster's *American Dictionary of the English Language* did not appear until 1828. It states: "Catchup or Catsup: A liquor extracted from mushrooms, used as a sauce." "Catsup: *see* Catchup, Ketchup." "Ketchup: A sauce. *See* Catchup." "Soy: A kind of sauce used in Japan."

Mary Randolph ran a boarding house. If someone came in with a "Tomato soy" recipe, she would probably have said "Okay, fine."

If a cook goes somewhere and samples or buys a little real soy [sauce], and finds it to be tasty, her / his goal is to go home and try to develop a kitchen recipe for it–just as with ketchup. Ketchup was originally a fermented sauce from Indonesia which included soybeans. When it arrived in England, people tried to duplicate it. Recipes are interesting in that they first show us that people were using the word "soy" to refer to sauce that contained no real soy sauce. People did not feel the need for clear definitions in the area of recipes, and especially with the terms "ketchup" and "soy." It really isn't until sauces become commercialized that clear definitions become necessary.

Concerning terms like "India soy" and "Indian soy," Shurtleff notes: Japan was closed to foreign trade until about 1868. The one exception was the Dutch trading post on the tiny island of Deshima in Nagasaki Bay in southern Japan. From there, Dutch trading ships would transport Japanese shoyu to their own network of trading posts in Southeast Asia, and to the southern tip of India, where they would sell it to the British East India Company. But, of course, they would not tell the British where it was made. So the British began calling it "India Soy" or "Indian Soy," even though (as far as we know) no soy sauce was made in India. Smith adds: The Dutch probably also traded Indonesian ketchup (kécap; Indonesian-style soy sauce, made in Indonesia) with the British, but there is less evidence of this.

In 1684, the British established a settlement on Sumatra named Bencoulin [Benkulen, Bengkulu] (alternatively spelled Bencoelen, Benkulen, Benkoelen). "It served as a center of the British pepper and spice trade during the late 17th and early 18th centuries. At the time of its founding, Bencoulin was the only British settlement in Southeast Asia." In 1825 the settlement was handed over to Dutch control in exchange for the Dutch colony of Malacca on the Malay Peninsula [in today's West Malaysia on the Strait of Malacca].

© Copyright Soyinfo Center 2014

"Only one ketchup recipe known to have originated in Southeast Asia has survived. It was published by Richard Bradley in the 1732 edition of his *Country Gentleman and Farmer's Monthly Director.* The recipe was titled "Ketchup in Paste" (see Part 2, p. 150) and its main ingredient was kidney beans–which almost certainly referred to soybeans. Rich in spices, it contained no salt or sugar, so it could not have lasted for any length of time. "It appears to have had no influence on subsequent cookery writers." In short, the British first discovered ketchup–and began using the word–on the southwest coast of Sumatra, in today's Indonesia, in Bengkulu, on the Indian Ocean. That ketchup was probably Indonesian-style soy sauce. They tried to duplicate it when they returned to England, but since they didn't have soybeans, and didn't even know it contained soybeans, they developed a host of alternative recipes–based on mushrooms, walnuts, anchovies, etc.

Isn't it strange, that soy sauce was never adopted or became popular in the Netherlands, as it did in England. This raises one real question. Also: Why are there so few early records concerning soy sauce in today's Indonesia? Another question is whether the terms "India soy" and "Indian soy" refer to today's India or to the Dutch East Indies. Address: 135 Eastern Parkway, #11a, Brooklyn, New York 11238.

11171. Shurtleff, William. 2006. Thoughts and questions concerning Dutch traders, the Dutch East India Co. (VOC), soy sauce in the Dutch East Indies and the Netherlands, and the words "catchup," "catsup," "ketchup" and "ketjap" (Editorial). *SoyaScan Notes.* Jan. 15.

• ***Summary:*** During the 1600s and 1700s, traders and merchants of the Dutch East India Co. in Asia greatly preferred Japanese shoyu [soy sauce] to Indonesian kecap / ketchap [soy sauce]. In the 1640s, the Dutch replaced the Portuguese as the only nation allowed by Japan's ruling shoguns to trade with Japan. Dutch traders purchased Japanese shoyu from their trading post at Deshima, then filled orders for it from their many trading posts in the Dutch Indies (today's Indonesia and parts of India), where it was used to season foods. Dutch traders also sold it in India to British East India Co. traders, who shipped it back to England and on to the United States; in both these places it became quite popular–much more popular than it ever became in the Netherlands. The British had no access to Japan; the only way they could obtain Japanese soy sauce was to buy it from the Dutch East India Co. In short, the Dutch were the first foreigners to buy, sell, and use Japanese soy sauce.

It seems very surprising that, during this period, there is almost no evidence that these Dutch traders were importing any kind of soy sauce to the Netherlands.

Soy sauce was in England by 1679, when it was reported by John Locke in his journal. This is also the earliest date seen for soy sauce in Europe. It was not reported in the Netherlands until 1727; that year the German physician and traveler Engelbert Kaempfer wrote: "This *Soeju* [shoyu, or soy sauce] is exported by the Dutch, and brought even into *Holland."*

From 1641 to 1858 there was a Dutch East India Co. trading post on Deshima, an artificial an island in Nagasaki harbor, Kyushu. The earliest date seen for a shipment of shoyu from Deshima by Dutch traders is 1651.

About 20 years earlier, in 1619, the Dutch built Batavia [today's Jakarta] and established a settlement on Java [part of today's Indonesia].

When the British started buying "Ketchup" from the Dutch: (1) What type of Ketchup was it? Sweet or salty. Perhaps we could find the answer by doing a careful analysis of its early imitations–mushroom, walnut, and oyster ketchup. Were they basically sweet and thick like the more modern kecap manis, or were they thinner and salty–like ketjap asin or like Japanese or Chinese soy sauce? (2) Where in the Dutch East Indies was it made? (3) At which trading post did the Dutch East India Co. sell it to the British East India Co. (4) When did the earliest known sale take place and where is it recorded? (5) In what type of containers was it packaged and shipped?

If only one VOC ship a year was allowed to export Japanese goods (including soy sauce) from Deshima, the VOC would plant that shipment very carefully to maximize profits. Why would they want to sell the soy sauce at wholesale prices to the British East India Co.

The best way to understand what early ketchup was, is to study it together with soy sauce–not by itself, alone.

Did the VOC or the Dutch ever import soy sauce from the Dutch East Indies to the Netherlands? If so, starting when? What did they call it? Did they import different types?

When did soy sauce first appear in Holland / The Netherlands?

What were the characteristics of earliest homemade ketchup recipes in English–make a table of ingredients with date down left column. Did they tend to be sweet or salty? When salty, how was the salty flavor obtained? The savory flavor? Were any early ones fermented? Or just aged? Address: Founder and owner, Soyfoods Center, Lafayette, California. Phone: 925-283-2991.

11172. Global Industry Analysts, Inc. (GIA). 2006. Soy foods–Global strategic business report. 5645 Silver Creek Valley Rd., San Jose, California. 302 p. Jan. *

• ***Summary:*** Publisher description: This report analyzes the worldwide markets for Soy Foods in millions of US$. The specific product segments analyzed are Soy Ingredients, and Soy Oil. The report provides separate comprehensive analytics for the US, Canada, Japan, Europe, Asia-Pacific (excluding Japan), Latin America, and Rest of World. Annual forecasts are provided for each region for the period of 2000 through 2010. The report profiles 151 companies

including many key and niche players worldwide such as Archer Daniels Midland Company, Dean Foods Company, White Wave, Eden Foods, Inc., Galaxy Nutritional Foods, Inc., Gardenburger, General Mills, Glenn Foods, Greet Spot (Thailand), Griffith Laboratories (UK), H.J. Heinz Co. Hain Celestial Group, Hartz International (Australia), Hazlewood Grocery (UK), Heartland Fields (USA), Hermans Foods (Australia), High Mark Foods (New Zealand), Imagine Foods, Inc., Kerry Group PLC (Ireland), Kerry Ingredients (Australia), Kikkoman (Japan, Australia, USA, Singapore), Kimlan Foods Co. (Taiwan), Kuhne Nederland BV (Netherlands), SoyaWorld, Inc., Turtle Island Foods, Inc., and Vitasoy USA, Inc.

Price: Electronic or hard copy 3,496 euros. Please note: Reports are sold as single-site single-user licenses. The delivery time for hard copies is between 3-5 business days, as each hard copy is custom printed for the organization ordering it. Electronic versions require 24-48 hours as each copy is customized to the client with digital controls and custom watermarks. Address: San Jose, California. Phone: 408-528-9966.

11173. *SoyaScan Notes.* 2006. Chronology of the Dutch East India Company (VOC), 1602-1799 (Overview). Feb. 6. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Throughout the 16th century (1500s), Portugal became fabulously wealthy from its monopoly of the spice trade in the East Indies. Like many commercial advantages of the time, this was achieved by control of sea routes, especially domination of the route to the East Indies via the Cape of Good Hope (at the southern tip of Africa).

A well-organized Protestant church movement developed in the Netherlands, and the dissatisfaction with Catholic Spain coincided with the Protestant revolt against the Roman Catholic Church.

1566–Anti-Catholic riots spread across the Spanish Netherlands. Philip II of Spain sends his troops whose harsh actions result in open revolt.

1568–The 80-year war of independence by the Dutch against Spain begins (ended 1648).

1579–Signing of the Union / Treaty of Utrecht with Spain marks the foundation of the United Provinces. These are the 7 northern Protestant provinces of Holland, Zeeland, Utrecht, Gelderland, Groningen, Friesland, and Overijssel. The 7 provinces that joined the union would eventually become the Netherlands; the 10 southern Catholic provinces that did not would become Belgium.

1581–The Union of Utrecht (United Provinces) declare independence from Spain.

1596–Dutch merchants begin trading with Jayakarta (today's Jakarta).

1600–The Dutch ship *Liefde* is stranded in Usuki Bay, Japan; the first Dutch contact with Japan.

1600–The Honourable East India Company is established in London, Europe's first such international trading company. The Tokugawa shogunate begins in Japan.

1602 March 20–The Dutch East India Company (*Verenigde Oostindische Compagnie, VOC*–literally "United East Indies Company") is established by Dutch merchants, when the Estates-General of the Netherlands granted it a monopoly to conduct trade, business and colonial activities in Asia. It was the world's first company to issue stocks and the first multinational corporation. The VOC eventually became the world's largest company, in existence for over 200 years. It built over 1,600 ships called East Indiamen.

The VOC consisted of 6 Chambers (*Kamers*) in Amsterdam (with 8 delegates), Middelburg (for Zeeland; 4 delegates), plus Enkhuizen, Delft, Hoorn, and Rotterdam (1 delegate each). Delegates of these chambers convened as the *Heeren XVII* (the Lords Seventeen). Because of its majority 8 delegates, the Amsterdam bloc basically decided policy. The start-up capital was 6.4 million Gulden, raised by the 8 chambers, of which 27% came from Amsterdam. This capital was raised by selling VOC stock to 1,143 subscribers.

1603 Dec. 18–The first VOC fleet of 12 ships sails under the command of Steven vander Hagen.

1605–VOC first lands in Asia. Armed Dutch merchantmen capture the Portuguese fort at Ambon (Amboyna / Amboina, a town and island in the Moluccas, in today's eastern Indonesia) and take control of the island which was the most important of the Moluccas (Spice Islands) at this time. The Portuguese had established a factory here in 1521; it was the source of their clove monopoly. This fort is developed in the VOC's first secure fort. Ambon was the headquarters of the VOC from 1610 to 1619 until the founding of Batavia (now Jakarta) by the Dutch.

1609–VOC factory (comptoir, trading post) established on site of Jacatra / Jakatra (today's Jakarta) by Dutch merchant Jan Pieterszoon Coen. Located at the far western end of the island of Java, it becomes the headquarters of the Dutch East India Company, which gradually extends control over neighboring sultanates and principalities.

1609–First VOC factory (trading post) in Japan established on the island of Hirado (Por. Firando), off Japan's southernmost island of Kyushu (northwest of Nagasaki).

1609–Twelve Years' Truce, signed in Antwerp, calls a halt to hostilities between Spain and the Seventeen Provinces.

1610–Small walled town of Paliacatta (also spelled Paliacatte; today's Pulicat) established on the east coast of southern India. It soon becomes the chief Dutch settlement and headquarters of the VOC factories on the Coromandel Coast. At its center is Fort Geldria, with its permanent garrison of Dutch soldiers, its cannon and armory to protect the various Company trading posts along the Coromandel Coast.

1612–Fort established on Ceylon (today's Sri Lanka).

© Copyright Soyinfo Center 2014

1613–As early as this year, VOC leaders recognize the importance of direct trade with China. However attempts to establish a settlement on the Chinese coast in the early 1600s are not successful.

1615–Powerful Dutch merchant Isaac Le Maire tries to break the VOC monopoly on trade routes to the Indies by sailing westward through dangerous and uncharted waters around Cape Horn, the southernmost tip of South America and into the Pacific Ocean, avoiding the VOC-controlled Straits of Magellan. The ship arrived in Jakarta in Oct. 1616, to the amazement of Governor-General Jan Coen.

1616–Danish East India Company founded.

1619–The Dutch attack and destroy Jayakarta (Jakarta, Jacatra). East of the ruins they build a new coastal town, which Coen names Batavia (essentially he renamed Jayakarta). Batavia becomes the headquarters of the VOC and of Dutch colonial power in Asia for almost 350 years.

1621–Banda Islands (in today's south central Moluccas, Indonesia) conquered by the VOC, which establishes its monopoly over nutmeg and mace there.

1621–Dutch West India Company founded. In 1624 this Dutch West India company establishes a settlement in New Amsterdam (now Manhattan, New York).

1622–VOC attack on the Portuguese in Macao / Macau fails.

1624–Chinese armies drive the VOC from the Pescadores Islands. A fortified settlement on Formosa (Taiwan) becomes VOC's base for trade with China until 1662.

1633–St. Helena island in the South Atlantic Ocean becomes a supply station.

1635–The Portuguese blockade Malacca (until 1640).

1638–Goa (capital of Portuguese India) blockaded by Dutch fleets (until 1644).

1638–Beginning of VOC's conquest of the coast of Ceylon near Kandy.

1639–The Portuguese are expelled from Japan by the shogun.

1641–The Dutch put a blockade on Melaca / Malacca (the city in today's Malaysia that controls the crucial Straits of Malacca) then seize the city from the Portuguese after 6 months. They keep this hold on Melaka for the next 150 years.

1641–The VOC trading post on Hirado (closed in 1640 by the shogun) is moved to the tiny artificial island of Deshima in Nagasaki Bay, where the men are kept as virtual prisoners (with more severe restrictions than before Shimabara Revolt and the seclusion {*sakoku*} of Japan in 1641) and allowed only one trading ship a year. The Dutch are the only Europeans allowed to trade with Japan for the next 200 years–until 1853.

1648–Treaty of Muenster ends the 80-years' war; Spain recognizes the sovereignty of the Dutch Republic, which is now the foremost commercial and maritime power in Europe, and Amsterdam is the financial center of the continent.

1651–Repeat of the war with Portugal in the Indies–in Ceylon and on the Malabar Coast of southwest India.

1652–Jan van Riebeeck establishes a supply station at Table Bay, the first European settlement near the Cape of Good Hope (on the southern tip of today's South Africa). This post later became a full-fledged Dutch colony, the Cape Colony.

1652-54–First English-Dutch sea war.

1658–Dutch replace Portuguese in Sinhalese kingdom (Ceylon) as the occupying power.

1661–Beginning of the definitive campaign (completed in 1663) to drive the Portuguese out of the Malabar Coast and to control their production of pepper.

During the 1600s (17th century), British and Dutch traders became bitter rivals in international commerce.

1662–VOC is driven out of Formosa / Taiwan by Ming Chinese troops under the command of Cheng Ch'eng-Kung, known to Europeans as Koxinga. In 1684 Manchu troops occupy Formosa.

1664–French East India Company founded.

1665-67–Second English-Dutch sea war.

1667–Dutch seize town of Macassar (Ujung Pandung) and develop trade monopoly in Makassar Strait (in today's Indonesia between East Borneo and West Sulawesi).

1667–VOC takes trading post at Achem (Aceh), the native kingdom of Sumatra.

1669–The VOC is now the richest private company the world has ever seen, with over 150 merchant ships, 40 warships, 50,000 employees, a private army of 10,000 soldiers, and a dividend payment of 40%. By now, the company is in almost constant conflict with the English. Moreover, the VOC has now grown to become a state within a state.

1682–Dutch seize Bantam in West Java. VOC outposts were also established in Persia (today's Iran), Bengal (now Bangladesh), Siam (now Thailand), and mainland China (Canton).

Dutch policy encourages monoculture of the fine spices they controlled: Amboyna for cloves, Timor for sandalwood, the Banda Islands for mace and nutmeg, and Ceylon for cinnamon.

During the 17th century, the VOC was the most important European company in the Asia trade, and Amsterdam became Europe's most important market. It took a Dutch ship 3 to 6 months to travel from Holland to Batavia. The trip was risky, in part because of the inherent dangers of bad weather and uncertain navigation, but also because no reliable method of determining longitude was discovered until the 1770s (by John Harrison in England) and measures to prevent scurvy (carrying fresh fruit, vegetables, and sauerkraut) were not put in place until the period 1772-1795.

The 17th century has been called the Dutch Golden Age,

© Copyright Soyinfo Center 2014

in which Dutch trade, science, and art were among the most acclaimed in the world. This Golden Age was caused by wealth, tolerance, and a new national consciousness.

1731–The Swedish East India Company founded.

1780-1784–Fourth war between the United Provinces and England; England wins, capturing many VOC ships and imposing peace terms that enabled it to trade without hindrance from the VOC and to take over key VOC settlements in Asia. After this war, the VOC is in deep financial trouble.

1795 Jan 19–The seven provinces which have comprised the Republic of the Seven United Netherlands proclaim the *Bataafse Republiek* (Batavian Republic), rendering the Netherlands a unitary state–one country. From 1795 to 1806, the Batavian Republic designated the Netherlands as a republic modelled after the French Republic.

1799 Dec. 31–The bankrupt Dutch East India Company is nationalized, dissolved and liquidated; its huge debt of 219 million Dutch guilders and all of its property are taken over by the Dutch government.

From 1806 to 1810, the *Koninkrijk Holland* (Kingdom of Holland) is set up by Napoleon Bonaparte as a puppet kingdom governed by his brother Louis Bonaparte in order to control the Netherlands more effectively. The name of the leading province, Holland, was used for the whole country. French domination lasted until 1815 when the "United Kingdom of the Netherlands" was formed by the Congress of Vienna at the end of the Napoleonic Wars.

11174. Nihon Keizai Shinbun. 2006. Honda Trading to launch diet supplement business on natto-based product (News release). Japan. 1 p. March 1.
• ***Summary:*** Honda Trading Corp. "said Tuesday it was launching a dietary supplement business based on nattokinase, an enzyme synthesized by the bacteria used to make natto, a fermented soybean food.

"Studies have shown that nattokinase has the effect of dissolving blood clots that might otherwise lead to heart attack or stroke.

"Honda Trading has been working with the discoverer of nattokinase, Hiroyuki Sumi, a professor at the Kurashiki University of Science and the Arts, to develop a way to refine nattokinase" so that it has high purity.

The company plans to sell the refined nattokinase in powdered form as a supplement to makers of food and medicine starting this spring.

Two pills a day would provide the same amount of nattokinase as eating a typical 50-gram package of natto. Address: Japan.

11175. Manley, Charles H. 2006. History of hydrolyzed vegetable proteins (HVP) (Interview). *SoyaScan Notes.* March 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Discusses: Justus Liebig (developed basic chemistry), Julius Maggi (commercialized the product in Switzerland with many products), Nestle (acquired Maggi in the 1930s), Unilever, World War II (Maggi built HVP plant at New Milford, Connecticut in USA), wheat, corn and soybeans, Aji-no-moto and Suzuki, monosodium glutamate, Japanese fermentation process, Huron, process flavors (started in late 1960s with Dr. May, a Brit who worked for Unilever). Intake of fermented soybeans, natto, is associated with reduced bone loss in postmenopausal women: Japanese Population-Based Osteoporosis (JPOS) Study. *J. of Nutrition* 136(5):1323-28. [35 ref]

• ***Summary:*** Japanese fermented soybeans (natto), which contain a large amount of menaquinone-7, may help prevent the development of postmenopausal osteoporosis. Bioavailable isoflavones may also contribute to the effect. "The incidence of hip fracture in Japan is lower than in European countries and the United States. The reasons for this difference are unknown," but they are thought to be due to differences in dietary and lifestyle factors. Address: JPOS Study Group, Dep. of Public Health, Kinki Univ. School of Medicine, 377-2 Oono-Higashi, Osaka-Sayama, Osaka, Japan.

11180. Masuyama, Mike K. 2006. Re: Shiro (white) soy sauce. Letter (e-mail) to William Shurtleff at Soyfoods Center, July 3–in reply to inquiry. 1 p.

• ***Summary:*** Hello Bill: I would like to share the info that Mr. Ninagawa has sent me. 1. Ninagawa does not know the exact first name of Mr. Endo, guessing probably "Yoshinao".

2. There is an association of white soy sauce manufacturers, Tokai Shiro Shoyu Association" (1-16-7 Sakae, Naka-ku, Nagoya, 400-0008, Japan, Phone 011-81-52-221-9501, No e-mail address listed). This organization is not a trade organization but one with volunteer memberships. It holds 2-3 friendly meetings a year for traditional greeting or some news exchanges. It does not represent the whole white soy sauce industry and does not do any publication of statistics or government-public relation activities.

3. According to Ninagawa, there are 9 manufacturers of white soy sauce in Aichi-Mie prefecture area: Yamashin, Nitto Jyozo, Ohtaya (under the brand name of Morita), Shichifuku, Hatoya, Sato, Yamadai, Nakari, Isekura.

There are four manufacturers outside Aichi-Mie prefecture area. Kinoene (under Kikkoman, Chiba), Shoda (Gunma), Chiba (Chiba), Honmurasaki (Hiroshima).

4. The Shoyu Information Center www.soysauce.or.jp is the only one organization to provide info to public. According to Ninagawa, there are no statistics on white soy sauce there.

I pay respect to your comment on our business. I will answer you technical questions as follows:

1. Since white soy sauce darkens through photo-chemical reaction, we use amber or green bottles to minimize darkening. Yamashin appears not to be concerned with the natural reaction in clear bottles. There is no safety issue there but appearance and taste concerns.

2. A very small amount of alcohol may be produced in white soy sauce fermentation process. The alcohol listed as an ingredient is alcohol originating from another fermentation that is added for preservation and flavor stabilization.

"I hope you will make contacts with the Tokai Shiro Shoyu Association or Shoyu Information Center for further

© Copyright Soyinfo Center 2014

inquiries. Happy 4th of July. Mike Masuyama." Address: Visalia, California.

11181. Gilbert, Marc Jason. 2006. Paper trails–Deshima Island: A stepping stone between civilizations. *World History Connected* 3(3):1-27. July. Retrieved 10 Nov. 2008. <http://www.historycooperative.org/journals/whc/3.3/gilbert.html>.
• ***Summary:*** "Deshima, known as Dejima in Japanese, was a small artificial island in Nagasaki Bay (approximately 150 feet by 500 feet)... From 1641 to 1845, Deshima served as the sole conduit of trade between Europe and Japan..." (p. 1).

Will Adams, pilot of the *Liefde* was the first European to win the confidence of Tokugawa Ieyasu. "Adams relations with the Tokugawa were immortalized, if also highly fictionalized, by the late James Cavell in his popular novel, *Shogun* (1975).

One of the best contemporary accounts of the Dutch factory and of Japan was by Isaac Titsing [Titsingh] (1740?-1812) who went to Japan as the Durch Envoy in 1778 and served as director of the factory at Deshima for three periods between 1779 and 1784. Recently his correspondence has been published in English in two volumes. His work also provides insight into the Chinese factory at Deshima.

Illustrations show: (1) The Dutch factory on the Island of Deshima (overhead view). (2) Will Adams. (3-4) Will Adams' memorials at Hirado, Japan, and Gillingham, England (his birthplace). (5) Two views of the bay of Nagasaki and the island of Deshima in 1832 (top) and 1850 (bottom). Aerial view of the procession of the Dutch factors from Deshima to the Tokugawa court in Edo. (6) The Chinese factory on an island near Deshima. Address: North Georgia College and State Univ.

11182. Patterson, Daniel. 2006. The way we eat: I can't believe its tofu. *New York Times Magazine.* Aug. 6. Sunday.
• ***Summary:*** The writer never thought he could love a soy product. He could probably muster admiration, certainly respect, but never infatuation. So he was quite surprised when dining at Kappo Sakamoto in Kyoto, Japan, that he swooned over a dish of yuba. It was served in a handmade box, simmering in water over a piece of glowing charcoal. He lifted the opaque sheets from the bubbling water, dipped them into a sauce (made from soy sauce, dashi, mirin, and fresh wasabi) and wow! A mildly sweet flavor and tender texture he had never experienced before. Here was tofu's "sexy and elegant cousin." He returned to the USA in search of yuba.

By good fortune, Ryuta Sakamoto, the son of Kappo Sakamoto's chef, was a partner in a San Francisco restaurant name "Medicine," that served (among other things) yuba! He explained that "yuba is one of the purest expressions of Kyoto cuisine. It is exquisitely simple, so its magic lies in the quality of the ingredients and the skill with which they are handled." Just as a film forms atop milk when it is heated, so yuba forms atop soymilk. Each batch of soymilk will yield about 7-8 layers of yuba. The first 4-5 are the best quality; the last 2-3 sheets are generally dried. "Yuba is best just after it is made" and will keep for only about 5 days.

Can you make yuba at home? Yes, but not with commercial soymilk. The protein content is too low.

Then Sakamoto directed the writer to Minh Tsai, the owner of Hodo Soy Beanery, a Bay Area company that makes soyfoods using only organic ingredients that are not genetically engineered. Tsai sells his yuba and other soy products at farmer's markets around the Bay Area and will also ship yuba in the U.S. The writer bought some and rushed back to his restaurant to try it. Modest success. But when he deep fried the yuba it was pure bliss.

11183. Kendall, Charles. 2006. Making natto in America (Interview). *SoyaScan Notes.* Aug. 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Charles first made and sold natto in the fall of 1978. He didn't make that much in the early years. He no longer has the original labels but he thinks they were rectangular. The next label was circular.

His main business now is making and selling natto–mostly via UPS. Most of his customers are Japanese-Americans, who love his natto and are very loyal. He just stopped making amazake (he almost never drank it himself) and is selling his last cases–largely because he has so much demand for natto. Also amazake and its bottles take a lot of room and a lot of equipment.

Discusses how to make the best quality natto. He has always tried to make the best quality of each food. Of course he starts with organically grown ingredients–soybeans in the case of natto. He does not use any variety of "small seeded soybeans," but rather uses the cut of small soybeans that result from screening. His natto soybeans are 5.5 to 6.0 mm in size. Some soybean varieties have average seed weights that are smaller than others, yet they still produce many individual soybeans that are too large for natto and must be screened out and used for other purposes. As soon as his natto has finished its basic fermentation, he refrigerates it to 35ºF and ships it out. Natto is best 3-4 days after the end of its incubation, when it should be refrigerated. It gets stickier and better. It should never be eaten right away, but it will keep refrigerated for 20-30 days.

He and his wife Yoko (Aveline Kushi's sister) live in eastern Massachusetts, out in the country. His business is very small; he has the capacity to make 650 containers of natto/day, each weighing 5 ounces. People in the New England area eat much more soybeans during the winter than during the summer–when it is hot, humid, and muggy. He makes natto and mochi, mostly during the cold half of the year, which is when the demand is greatest. He plans to take about 1½ months in the summer to do other things–and to not make foods then. He enjoys making foods, but not all the

© Copyright Soyinfo Center 2014

time. He and his wife are nearing retirement; she is near 70. His two main hobbies are playing golf and gardening.

He and his wife traveled to Mito, Japan, last year and visited a natto maker who still wraps and ferments his natto in straw. He has a machine that does the wrapping and binding. They have to steam the straw first to kill all the undesirable bacteria; the natto bacteria survive the steaming. Humidification is also important. They learned the history of natto there, but nothing new about making natto. Address: Owner, Kendall Food Co., 448 Huntington Rd., Worthington, Massachusetts 01098-9550. Phone: 413-238-5928.

11184. Kunishi, Alvin. 2006. Early history of Sacramento Tofu Co. (Interview). *SoyaScan Notes.* Aug. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Alvin's mother, Michiko Kunishi, who is still alive and whose husband (Hiroshi "Tom" Kunishi) founded the Sacramento Tofu Co., has always told Alvin that the company was started in 1947 in Sacramento. She helped her husband with the company as much as she was able to while raising a family. Four men founded the company: (1) Hiroshi, Alvin's father. (2) Takeo Hiroshige, a friend of Hiroshi's who is still alive. (3) George Shimada, Alvin's uncle (his mother's brother), and (4) Mr. Tsumura, who taught Hiroshi Kunishi how to make tofu. Alvin thinks that Mr. Tsumura may have owned a tofu company before World War II began. Alvin thinks there were 2-3 tofu manufacturers in Sacramento before the war. All four men worked at the company from day to day for about the first 1-2 years. Takeo Hiroshige told Alvin several times that the company was founded in 1947. Other than this, Alvin has no written or documentary proof of the date the company was founded.

Sacramento State College collects materials on the history of Japanese Americans in Sacramento.

Note: Japanese American Directories show that at least 19 different tofu manufacturers existed in Sacramento from about 1895 to 1941. Address: Owner, Sacramento Tofu Mfg. Co., 8300 Belvedere Ave., Sacramento, California 95826.

11185. Kamimura, Yasuko. 2006. Nattô no reshipi 93: nebaneba pawaa de karada bijin [Ninety-three natto recipes: The sticky power way to a beautiful body]. Tokyo: Nitto Shoin Honsha. 127 p. Illust. (color). 21 cm. [Jap]*

11186. Kikkoman Corporation. 2006. Annual report 2006. Year ended March 31, 2006. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 37 p. 28 cm. [Eng]
• ***Summary:*** Consolidated net sales rose 4.4% to $3.076 billion, operating income climbed 4.0% to $158 million, and net income rose 6.7% to $86.5 million. Note: Some dollar values actually fell due to changing foreign exchange rates.

"In terms of capital and business alliances, we are collaborating with Higeta Shoyu Co., Ltd. on jointly purchasing raw ingredients and effectively sharing each other's manufacturing facilities, while fostering closer cooperation in the foodservice- and industrial-use markets... We are also reinforcing our alliance with the Kibun Foods Group." In April 2006 Kikkoman "transferred" [sold?] its *shochu* [a clear alcoholic beverage] business. A nice photo shows Yuzaburo Mogi (Chairman of the Board and CEO) and Takashi Ushiku (President and COO). Address: Noda, Japan.

11187. Lee, Joseph. 2006. The sky burns red. Los Angeles, California: Published by the author. 331 p. www.theskyburnsred.com.
• ***Summary:*** This is a work of fiction. Page 128: "The deal smelled as bad as 'Nattoh,' Japanese fermented soybean paste [sic, fermented soybeans] that his friends had made him eat as a dare. He finally ate it, but had to guzzle two bottles of Asahi Super Dry to clear his mouth of the aftertaste."

Page 330: Japanese words and their translation: "Nattoh: Fermented soy beans."

On the rear cover is a portrait photo of the author and a brief biography.

Note: This is the earliest English-language document seen (Dec. 2011) that uses the word "nattoh" to refer to natto. Address: International business consultant, Los Angeles, California.

11188. McNatt, Linda. 2006. Japanese demand for natto beans gives Virginia farm all the business it can handle. *Non-GMO Report* (*The*) (*Fairfield, Iowa*) 6(8):3-4. Aug.
• ***Summary:*** From the *Virginian-Pilot.* Natto is fermented whole soybeans that "smell slightly rotten and taste like strong cheese." Natto soybeans are grown by Bill Taliafero and his brothers at Montague Farms, Inc. in Essex County, Virginia. The company shipped more than 10,000 tons of the natto beans last year. "Researchers at Virginia Tech have developed a new variety of the natto bean that grows particularly well in the mid-Atlantic region from Maryland to North Carolina. They call it the Vanatto." Natto soybeans are smaller than typical soybeans and are bright golden in color. Farmers get $2.25 a bushel more for the food-grade natto beans than for regular soybeans used for oil and animal feed.

11189. Hymowitz, Ted. 2006. Why did the West (Europe and the Middle East) know so little about China in the 12th and 13th centuries? (Interview). *SoyaScan Notes.* Sept. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Because the Arabs blocked most European travel over the Silk Road / Route from about the 7th century until the 12th or 13th century. The Arab conquest blocked the overland route, in part to control the trade. There were actually two phases in the history of the Silk Road. The first phase ended in about the 6th or 7th century, before the origin of Islam.

© Copyright Soyinfo Center 2014

Note: Both of these "Silk Roads" was actually a series of interconnected routes that ran from about Xian (Chang'an) in eastern China, along the northern part of China, branching into today's Central Asia, south of the Caspian Sea, through today's Turkmenistan, Iran (formerly Persia), and Iraq, to Damascus (today's Syria) and Antioch (in today's Turkey). The first famous and documented Chinese traveler, Zhang Qian (W.-G. Chang Ch'ien) led two expeditions to the Western Regions in the 2nd century BC, during the Former / Western Han dynasty.

As early as the 1st century AD, there were already some oceanic routes that were part of the "Silk Road." They hugged the coast from central China, around India, into the Persian Gulf and the Red Sea, then on to Italy!

This Arab blockade was one of the reasons for the search for a water route to China. The blockade began to fail as sea routes were developed. For example, in May 1498, Vasco da Gama was the first European to discover a sea route to India.

Another reason it took so long for information about the soybean to reach Europe from China was that the soybean is unlike rice, wheat, and maize / corn, where the product of the crop is associated very closely with what is growing in the field; everyone knows what rice, wheat and corn look like because they are so widely consumed as food. The main products of the soybean, especially those in commerce (such as soy sauce), bear no resemblance to the seed or plant from which they are made. It took a long time before Europeans realized that soy sauce (for example), which was known in Europe by the late 1600s, was made from the soybean–which did not arrive in Europe until the late 1730s. Even in Asia, the various names of the soybean were very different from the names of its major products. For example in China: Soybean is *dadou* or *huangdou,* soy sauce is *jiangyou,* tofu is *doufu,* and soymilk is *dounai* or *doujiang.* In Japan: Soybean is *daizu,* soy sauce is shoyu, tofu is tofu, soymilk is *tonyu,* miso is miso, natto is natto, and green vegetable soybeans are edamamé. In Indonesia, tempé is tempeh. Even in the Western World today, many of these traditional foods and condiments do not have "soy" as part of their name. Moreover, the foods look totally different from the seed / bean from which they are made.

The first European to understand the connection between the soybean and its products was Engelbert Kaempfer; he made this clear in his book *Amoenitatum exoticarum...* vol. 5. Yet most Westerners did not understand this connection until more than a century later, and quite a few even today don't realize that tofu (for example) is made from soybeans.

Ted is convinced that Marco Polo and the various early Western missionaries who traveled to China probably tasted soyfoods over and over again–but they didn't realize they were made from soybeans. A good example is milk. The early Western travelers in China often mentioned that Chinese drank milk; in some cases they were probably drinking soymilk. Address: Prof. of Plant Genetics (retired), Dep. of Crop Sciences, Univ. of Illinois, Urbana, Illinois.

11190. Inatsu, Y.; Nakamura, N.; Yuriko, Y.; Fushimi, T.; Watanasiritum, L.; Kawamoto, S. 2006. Characterization of *Bacillus subtilis* strains in Thua nao, a traditional fermented soybean food in northern Thailand. *Letters in Applied Microbiology* 43(3):237-42. Sept.

• ***Summary:*** The purpose of this research was to determine the diversity of *Bacillus subtilis* strains in Thua nao that produce high concentrations of products useful in food manufacturing and in health-promoting compounds.

"Production of amylase, protease, subtilisin NAT (nattokinase), and gamma-polyglutamic acid (PGA) by the Bacillus subtilis strains in Thua nao was measured... Molecular diversity of isolated strains was analysed via randomly amplified polymorphic DNA-PCR fingerprinting. The strains were divided into 19 types, including a type with the same pattern as a Japanese natto-producing strain."

Conclusion: Thua nao could be a good source of the desired enzymes. Address: National Food Research Institute, Tsukuba, Japan. inatu@affrc.go.jp.

11191. Fruin, W. Mark. 2006. Thoughts on the early history of soy sauce and kecap / ketjap (Interview). *SoyaScan Notes.* Oct. 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Mark knows a woman professor Tashiro in Japan who is doing research on the early history of soy sauce (e-mail shiro@flet.kweio.ac.jp). She and others she knows are interested in the "leaky sieve" theory which basically says "Yes, we had this very controlled system during the Tokugawa / Edo period, but lots of things were going on that were not official–such as exporting outside of Deshima. You could call them pirates or extra-legal exports. Many of these exports went to places like Korea, or the Korean islands between the Korean mainland and Japan, all of which were near Japan. Mark suggests I write her and mention his name.

Remember that there is a difference between Kansai shoyu (lighter in color and saltier, *usukuchi*) and Kanto shoyu (darker in color, *koikuchi*). Whatever they shipped out of Deshima and Nagasaki was more likely to be Kansai shoyu than Kanto shoyu.

Also remember that soy sauce was widely made locally by small makers. One of the bigger castle towns (*jôka-machi;* "castle + under") or commercial towns (*shukuba-machi*) of Kyushu or southern Japan probably provided the early shoyu exported by the Dutch East India Co. (VOC). These were the two types of cities in Tokugawa Japan; there had to be one castle per fiefdom (*han*). Address: Palo Alto, California.

car ascent. The 48-room *shukubo* is famous for its tofu and lavish temple altar." Meditation is offered twice daily.

11193. *SoyaScan Notes.* 2006. Another dimension of the macrobiotic and natural foods movements: Preserving traditional ways of making foods (Overview). Oct. 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** George Ohsawa, and the founders of Nippon C.I. and Muso Shokuhin–both Japanese-run companies based in Japan–were the first to seek out these Japanese makers of traditional foods. Soon Mr. Akiyoshi Kazama, founder of Mitoku Trading Co., joined them in the search.

In the mid-1960s, Paul Hawken of Erewhon went to Japan to find and place orders from companies and craftspeople who made foods in the traditional, natural way. Many of these companies were facing financial difficulties as modernization was sweeping Japan, and this new business and new market gave them a new lease on life.

Phase 2 began when companies in the USA and Europe started making Japanese foods (such as miso) and European foods (such as whole wheat bread) in the traditional, natural way.

11194. Hymowitz, Ted. 2006. Re: Note on "India Soy" and "Indian Soy" as early names for soy sauce. Letter (e-mail) to William Shurtleff at Soyfoods Center, Oct. 31. 2 p.
• ***Summary:*** "Looking through gobs of historical documents it is obvious that certain cities in Asia were centers of trade within and between Asian countries and with the west.

"For example, when the Spanish started trade with the Philippines in 1560 they recorded what was brought back to Mexico. I was amazed at the stuff that came from China, Japan, etc.

"I was puzzled by the diversity of items in the Spanish trade. However, when I visited the Pescadores Islands a little snooping about solved my Manila problem. During the day the fishing boats were out fishing. However, at night they were also gone. Aha, the boats were loaded with electronics for trade with Mainland China. The fishing boats would meet with boats from mainland China somewhere mid-point between the Islands and China and exchange goods. Probably exchanges were made by family contacts.

"Manila was a trading city as was Calcutta and places in Indonesia. Thus India soy was the name given to soy that arrived from Calcutta. Obviously it was not made in Calcutta but rather was brought there via local trading ships. Thus soy sauce was shipped to Calcutta and from there transported to England. Now the Dutch had their own contacts in India, Japan and Indonesia. Thus soy sauce reached the Netherlands via the Dutch ships who transported the sauce via the Dutch East India ships. The Dutch were the main importers of ketchup since it was made in the Malaysia Area where they had extensive contacts.

"Was soy sauce made in China? In 1711 Lockyer says so. But I suspect most of the stuff in international trade came from Japan via the Dutch.

"The first English factory in India was in Surat. Could very well be that Surat was or had been the transshipping point of soy sauce to England."

Note: This e-mail was a reply to one that Shurtleff had written Hymowitz the day before:

Not much soy sauce was made in China in the 1600s and 1700s, and several travelers in Asia from that period say that Chinese "soy" was not nearly as good as Japanese soy. The reasons were simple:

(1) The Chinese saw making soy sauce as wasteful; what were they going to do with all that residue, except feed it to pigs. So they spent little effort in trying to improve the process and the product.

(2) Chinese soy sauce, to this day, is usually made with soybeans only, and little or no grain; it is basically the same as Japanese tamari–a product with a tiny niche market in Japan and worldwide. The standard Japanese formula calls for equal parts soybeans and roasted wheat. The wheat is hydrolyzed by the koji enzymes into alcohol and many fragrant and volatile compounds, such as esters, giving Japanese shoyu a real "bouquet."

So I ask again, where do you think the Chinese got the soy sauce that they shipped to India? China? The Dutch East Indies (they had a small base there)? Address: Prof. of Plant Genetics (retired), Dep. of Crop Sciences, Univ. of Illinois, Urbana, Illinois.

11195. Budra, Beth. 2006. Magic miso: A guide to Japanese soybean pastes and how to use them. *San Francisco Chronicle.* Nov. 1. p. F1, F6.
• ***Summary:*** "In my quest to make the most of miso, I turned to Ayaki [sic, Ayako] Iino, who teaches Japanese cooking classes in the East Bay" (www.ayakoiino.com). The title of p. F6 is "Discovering the secrets of miso." Gives the names of some miso varieties and their uses. Contains recipes for: Orange almond miso vinaigrette. Miso-broiled black cod. Sesame-miso dipping sauce (with Japanese sesame paste, tahini, or natural peanut butter, and sweet white miso).

11196. Itoi, Lydia. 2006. A Zen palette. *Time* (*Europe and Asia*). Nov. 20 and 27.
• ***Summary:*** Umu is London's most ambitious kaiseki restaurant. Executive chef Ichiro Kubota goes to great lengths to bring the refined taste of Kyoto to the land of fish and chips. "Dishes like sesame tofu are nods to Kyoto's Buddhist vegetarian cuisine. At the end comes the spiritual heart of the meal: rice, pickles and the best miso soup around."

11197. Endô, Orie. 2006. A cultural history of Japanese women's language. *Michigan Monograph Series in Japanese Studies.* No. 57. vii + 129 p. Nov. See p. 38. [415+* ref]

© Copyright Soyinfo Center 2014

• ***Summary:*** In the section titled "Women's language in the Kamakura [1185-1333] and Muromachi [1336-1573] periods" we learn (p. 37) that *mushi* is the women's word (*nyôbô-kotoba*) for miso; it appears in *Senjimono* (The Decoction).

The word "mame no ko" (meaning *kinako* or "roasted soy flour") appears on page 38–in the very interesting context of women's words created during the Edo period. We read: "Some expressions came into use among the men of the samurai class as well, a fact lamented in *Kagomimi* [a book published during the Edo period, 1600-1867]. 'It is unpleasant to hear samurai, tradesmen, and artisans use words that are women's. Examples such as... *okawa* for *kawamesha,* 'glutinous steamed rice for red beans,' *akanomeshi* for *sekihan,* 'festive red rice, *kinako* for *mame no ko,* 'soybean flour,' are all too frequently used.' There are also examples of men using words such as *murasaki, himojii,* and *okabe* in a collection of popular common stories called *Seisuishô* (1623).

Note: This series is published by the Center for Japanese Studies, University of Michigan, Ann Arbor, Michigan. Address: Dep. of Cultural Linguistics, Koshigaya campus, Bunkyô University, Japan.

Box 9515, 2300 RA Leiden, The Netherlands. Phone: +31 71 527 2599.

11201. Cwiertka, Katarzyna Joanna. 2006. Modern Japanese cuisine: Food, power and national identity. London: Reaktion Books. 240 p. Illust. Index. 22 cm. [525* ref. Eng]

• ***Summary:*** The author is a recognized expert on the subject of Japanese cuisine and its modern history. This book is the result of more than a decade of research. Since 1950, the popularity of Japanese food in the West has greatly increased, contributing to the continuing diversification of Western eating patterns. This book examines the origins of Japanese cuisine as we know it today, exploring the transformations and developments food culture in Japan has undergone since the late 19th century. "Among the key factors in the shift in Japanese eating habits were the dietary effects of imperialism, reforms in military catering and home cooking, wartime food management and the rise of urban gastronomy. Japan's patchwork of diverse regional cuisines became homogenized over time and was replaced by a set of foods and practices with which the majority of Japanese today ardently identify. This book demonstrates that Japanese cuisine as it is currently understood and valued, in spite of certain inevitable historical influences, is primarily a modern invention concocted in the midst of the turbulent events of the late 19th and the 20th centuries."

Miso, miso soup, tofu, tofu lees [okara] and "simmered thin-sliced deep-fried tofu" are mentioned on pages 104-05–suggestions for dishes to be served in 1915 and July 1920. Address: Researcher, Centre for Japanese and Korean Studies, Leiden Univ.

11202. **Product Name:** Miso-Cup: Japanese Restaurant Style Natural Instant Soup (Soft-Pack Miso Soup).

© Copyright Soyinfo Center 2014

Manufacturer's Name: Edward & Sons Trading Co., Inc. (Importer). Made in Japan.
Manufacturer's Address: P.O. Box 1326, Carpinteria, CA 93014.
Date of Introduction: 2006 December.
Ingredients: Soft-Pack: Organic miso (Organic soybeans, cultured organic rice, sea salt, yeast), water, kombu seaweed extract, salt, shiitake mushroom extract, onion powder, yeast extract, alcohol. Tofu and vegetable packet. Freeze dried tofu (water, soybeans, calcium sulfate, rice starch), wakame seaweed, freeze-dried green onions.
Wt/Vol., Packaging, Price: Three 8-oz. servings.
How Stored: Shelf stable.
New Product–Documentation: Product with Label sent by Joel Dee of Edward and sons. 2006. Dec. 8. Gusseted plastic stand-up pack 6 by 7.75 inches. Green, yellow and white on red and black. A color photo on the front shows a bowl of miso soup. A small illustration to right of bowl shows a Japanese lady serving miso soup. Text on front panel: "Made with organic miso. 3 individual servings. Convenience without compromise. 60 calories per serving. No MSG. Vegan logo. Gluten-free logo. Delicious miso soup–To go. Just add hot water. Back panel text. The story of miso cup. Directions. Source: The Book of Miso by Shurtleff & Aoyagi, Ten Speed Press. Ingredients. • ***Summary:*** Contents: History of soyfoods: Growth and development in the Western world, soybean industry blossoms in the United States, soybeans grow around the world. Soybean production and utilization for food: Soyfoods in Asia, soyfoods in Europe, soyfoods in Africa, soyfoods in the United States: Development of the U.S. soyfoods industry, Americanization of soyfoods. Soybean nutritional components: Soy protein, soy oil, carbohydrates and fiber, vitamins and minerals, isoflavones. Soyfoods and protein ingredients: Whole dry soybeans, tofu, soymilk, tempeh, soymilk yogurt, miso, soy sauce, okara, natto, soynuts, meat alternatives, cheese alternatives, nondairy frozen desserts, green vegetable soybeans (edamame), soy sprouts, full-fat soy flour, defatted soy flour, textured soy flour, soy protein concentrate, soy protein isolate. Conclusions.

Tables: (1) World soybean production by major producers. (2) Annual per capita consumption (2001) of soybeans for direct food. (3) U.S. soyfoods market (1996 to 2005).

This chapter suffers from a lack of references, and contains several basic errors concerning the early history of the soybean. Contrary to what Mr. Golbitz says: (1) The Chinese have not considered the soybean a basic source of nutrition for almost 5000 years (see Hymowitz 1970, "On the domestication of the soybean"). For "a little more than 3000 years" would be much more accurate. (2) The first reference to soybeans in Chinese literature does not date back to 2853 B.C. (see Hymowitz 1970, and Hymowitz and Shurtleff 2005, "Debunking soybean myths and legends in the historical and popular literature"). It dates back to about 1100 B.C. (3) Natto was not developed at least 3000 years ago in Japan (the earliest known document that mentions natto dates from 1450 CE–or about 560 years ago). Address: Soyatech, Inc., Bar Harbor, Maine.

11209. Ikeda, Ikuo. 2006. Soy sterols. In: Michihiro Sugano, ed. 2006. Soy in Health and Disease Prevention. Boca Raton, Florida: Taylor & Francis. [xii] + 313 p. See p. 199-205. [9 ref]
• ***Summary:*** Contents: Introduction. Physiological functions of soy sterols. Mechanisms of the cholesterol-lowering activity of plant sterols. Mechanisms of inhibition of cholesterol absorption by plant sterols. Hypocholesterolemic effect of soybean-germ oil. Conclusions.

Tables: (1) Examples of composition of plant sterols in soybeans and soybean-germ oils.

Figures: (1) Chemical structures of major plant sterols in soybean oil and soybean-germ oil. (2) Bar chart of effect of dietary sitosterol and cholesterol on the micellar solubility of sterols in rats. (3) Bar chart of effect of sitosterol on incorporation of ^{14}C-cholesterol into rat intestinal mucosa. (4) Graph of effect of sitosterol on lymphatic recovery of ^{14}C-cholesterol in rats cannulated in the thoracic duct. Address: Graduate School of Agriculture, Tohoku Univ., Sendai, Japan.

11219. Planck, Nina. 2006. Real food: What to eat and why. New York and London: Bloomsbury Publishing. [viii] + 343 p. Index. 22 cm. [30+ ref]

• ***Summary:*** This book is carefully researched and very well, thoughtfully and fairly written; the author has written for *Time* magazine and comes with very good credentials for this book. Born in 1971 in Buffalo, New York. "She was a speechwriter to the U.S. ambassador to Britain when she opened the first farmers' market in London on June 6, 1999. Six months later she quit her job to open ten more markets, write *The Farmers' Market Cookbook,* and host a British television series on local food. In 2003 Nina created the Mount Pleasant Local Food Market in Washington, D.C. In New York City she ran Greenmarket, the largest network of farmers' markets in the United States. Nina's new company, Real Food, runs markets for farmers and purveyors of regional and traditional foods" ("About the author," p. 344).

The author advocates the following: (1) Eat real, traditional foods rather than more modern "industrial foods." These real foods include plenty of meat, fish, poultry, eggs, and dairy products made from whole raw (unpasteurized) milk from cows grazed outdoors on grass (rather than corn and soybeans, which cows were not designed to eat by nature) without synthetic hormones–plus real, organically grown fruits, vegetables, whole grains and legumes (including traditional soy foods), real salt, and dark chocolate.

(2) Eat real fats–including butter, beef fat, coconut oil, lard, and extra-virgin olive oil, including saturated fats and cholesterol. Avoid industrial fats–such as margarine, polyunsaturated vegetable oils (including soybean, corn, and sunflower oil), and shortening. (3) Go beyond and disregard the cholesterol myth; the evidence supporting it is weak. (4) Stop eating a vegetarian diet, and especially a vegan diet (which no traditional society has ever practiced).

To start with the section on soy foods: In the Chapter 8, titled "Other real foods," the section on soy foods is titled "Traditional and industrial soy are different" (p. 225-34). Traditional soy foods are those that have a long history in the diet, and are still made in pretty much the way they used to be. Her information on the early history of the soybean and soy foods (p. 225-26) contains many errors, as well as some interesting observations. Some of the earliest soyfoods were fermented (starting with fermented black soybeans and jiang in China). She lists five health benefits of fermentation. Fermentation (along with cooking) helps to reduce the phytic acid in soybeans. Soy foods do not contain reliable vitamin B-12. The author states several times that soy protein is not complete protein. Most nutritionists for the past 50 years have correctly avoided this "is" vs. "is not" labeling and instead have listed all foods along a continuum from high quality to low quality. By the latest measures of protein quality, soy protein (by itself, without supplementation by cereal grains) has about the same quality as beef, but lower than that of eggs or milk. While noting that about 85% of all soybeans are genetically engineered, she fails to mention that most traditional soyfoods in the USA are made from organic, non-GE soybeans. She discusses the important part that soy plays in the Okinawan diet, where the people have the highest longevity in the world. Yet soy "should be viewed as part of a diverse diet, not as a nutritional silver bullet." We heartily agree. She lists the many traditional soyfoods (p. 231-32), made in basically the traditional way, including: Bean sauce (jiang), miso, natto, soy milk (non-industrial), soy sauce. sufu (fermented tofu, incl. Filipino tahuri), tofuyo

© Copyright Soyinfo Center 2014

(fermented tofu from Okinawa), tamari (liquid left after miso is made), tempeh, tofu, and edamame. She recommends that we avoid modern soy protein products made from defatted soybean meal (typically extracted with hexane solvent), including soy protein isolate, "industrial soy milk," soy based infant formula, and soy sauce which uses defatted soybean meal instead of whole soybeans. But what would she do with all the oil left over after using whole soybeans?

Concerning a diet rich in fish, meat, and poultry. She partly ignores the ethical issues involved in killing billions of those animals each year and the environmental issues involved in raising them. These are both huge issues. Several complex issues that she addresses head-on and in a fair, interesting way: (1) Is milk good for humans (p. 39-86).

One of the basic hopes / agendas behind this book is that people will start to leave cities, buy a piece of land (as the author's own family did when she was age 2), grow their own food and raise their own animals for milk, meat, and eggs. There is a steadily growing number of books advocating this traditional way of life.

The Glossary (p. 306-15) contains many good definitions that most people will be able to understand. The bibliography (p. 316-21) is substantial, and there are also endnotes (p. 290-303) but the book would be better if more of its controversial or historical statements cited authoritative sources. Address: USA.

11227. Yamamoto, Eric K.; Ebesugawa, Liann. 2006. Report on redress: The Japanese American internment. In: Pablo De Greiff, ed. 2006. The Handbook of Reparations. Oxford, England; New York, NY: Oxford University Press. xxxiii + 1020 p. See p. 257-83. Chap. 7. Index. 26 cm. [123 ref]

• ***Summary:*** This book is a project of the International Center for Transitional Justice. Chapter 7 is balanced and insightful.

Contents: Introduction. 1. Origin of the Japanese American internment and reparations: Before Pearl Harbor, after Pearl Harbor, the internment: Military, congressional and executive actions, legal challenges. 2. History of 1988 Civil Liberties Act: Judicial action, executive action, congressional action (under presidents Gerald Ford, Ronald Reagan, and George H.W. Bush). 3. Implementation of the 1988 Civil Liberties Act: Office of Redress Administration, eligibility requirements and payments, form of delivery, Civil Liberties Public Education Fund, relationship to civil suits, economic impact ($20,000 per surviving internee). 4. Conclusion.

Was there any factual basis for American fears before the internment? "Heightening military anxieties between December 17 and December 23, Japanese submarines sank two tankers and damaged one freighter along the West Coast. General DeWitt feared (inaccurately) that Japanese Americans were aiding the submarines by signaling them from shore" (p. 260)

Note: There was another submarine incident in southern California. On 23 Feb. 1942 the lone Japanese submarine I-25, under captain Nishino Kozo, surfaced near an oil field pier just north of Goleta, a suburb of Santa Barbara, California. The submarine shelled the pier, damaging it, and also shelled the area around the Ellwood Oil field, but no damage was done there. On 1 March 1942, the headlines of the Santa Barbara newspaper and the *San Francisco Chronicle* announced the attack. News of the shelling triggered an invasion scare along the West Coast. "Frightened residents put their homes up for sale and made plans to flee." This was the first shelling of the U.S. mainland during World War II. California citizens along the West Coast were on edge.

After midnight, on Feb. 25, 1942, there seemed to be a Japanese air raid over Los Angeles. The city was put on red alert, with air raid alarms, blackouts, and radio silence. Anti-aircraft guns were manned and searchlights turned on. "Anti-aircraft guns from the IV Interceptor Command opened fire at 3:16 a.m., fired steadily until 3:36, stopped, then resumed at 4:05 for another 10 minutes. During their 30-minute fusillade, the command's guns hurled 1,440 rounds of 3-inch and 37mm ammunition into the night sky above Los Angeles. Not counting unofficial shots, 48 shells were fired per minute. And almost 10 tons of expended ammunition fell somewhere on the city during the supposed raid."

"While it is easy to look back and laugh at the excitability of Los Angeles' defenders, their reaction to the possibility of an enemy air attack reflects the anxiety that gripped much of the West Coast in the months after Pearl Harbor" (Young 2003).

Sources: (1) *History of California, 4th ed.,* by Andrew Rolle (1991, p. 445). (2) *In Defense of Internment,* by Michelle Malkin (2004). (3) "Phantom Japanese Raid on Los Angeles During World War II," by Donald J. Young. *World War II* magazine (Sept. 2003). For a broader discussion of Japanese attacks on the the USA and Canada see "Japanese operations" under American Theater (1939-1945) on Wikipedia.

"Several high-ranking government officials, including Attorney General Francis Biddle, opposed the exclusion of Japanese Americans. On February 19 [1942], President Roosevelt nevertheless signed Executive Order 9066

© Copyright Soyinfo Center 2014

granting the military the power to exclude persons from specific areas. On its face, the order made no mention of persons of Japanese ancestry. Race was implied." The full text of the Order is given (p. 262).

"The Civil Liberties Act became law on August 10, 1988, when Ronald Reagan signed Public Law 100-383. Before signing the bill President Reagan remarked that 'we gather here today to right a grave wrong... More than forty years ago... 120,000 persons of Japanese ancestry living in the United States were forcibly removed from their homes and placed in makeshift internment camps. This action was taken without trial, without jury. It was based solely on race.'

"The President captured the essence of the bill by stating: 'No payment can make up for those lost years. So what is most important in this bill has less to do with property than with honor. For here we admit a wrong; here we affirm our commitment as a nation to equal justice under the law... the ideal of liberty and justice for all–that is still the American way" (p. 270).

"The apology mandated by the Civil Liberties Act. of 1988 was ultimately made through a letter from President George [H.W.] Bush to each person eligible for reparations, The reparations check accompanied the letter, both of which were sent by registered mail" (p. 274).

Conclusion: "The Japanese American redress process was arduous. Many Japanese Americans contributed, and their communities overwhelmingly considered reparations a great victory... A measure of dignity was restored. Former internees could finally talk about internment. Feelings, long repressed, surfaced..." Address: 1. Prof. of Law, William S. Richardson School of Law at the Univ. of Hawaii.

11228. Yamamoto, Seiichiro; Johnson, Stuart K. 2006. Soy and breast cancer prevention. In: Michihiro Sugano, ed. 2006. Soy in Health and Disease Prevention. Boca Raton, Florida: Taylor & Francis. [xii] + 313 p. See p. 43-72. [132 ref]

• ***Summary:*** Contents: Introduction. Soy and isoflavone: Estrogenic activity of isoflavone. *In vitro* studies: Physiological environment, cell growth inhibition by genistein, summary. Animal studies: Overall results, early exposure, *in vivo* studies in humans. Epidemiological studies: Level of evidence in epidemiological studies, population-level studies of soybean intake and breast cancer, randomized controlled trials. Summary. Acknowledgments.

Tables: (1) Comparison of isoflavone intake, concentration in blood, and urine excretion of isoflavone in various populations. (2) Experimental studies of isoflavone in rodents. (3) Evidence level and epidemiological study design. (4) Summary of epidemiological studies investigating dietary soybean products and breast cancer.

Etoposide was injected at a dose of 1.0 mg/kg intraperitonealy for 3 consecutive days to 11-d-old rats. (4) Light micrographs of hematoxylin-eosin-stained dorsal skin sections from neonatal rats treated with saline, etoposide, or etoposide + soymetide. Address: Kyoto Univ., Kyoto, Japan.

11233. Ishige, Naomichi. 2007. Re: Early history of the word "teriyaki." Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 5. 1 p. [Eng]
• ***Summary:*** "The following is my answer to your question of teriyaki.

"As far as I know, the first appearance of the word 'teriyaki' was in 1813, when *Shijûhachi Kuse* [48 habits], written by Shikitei Sanba, was published. The word appeared in the second volume of the novel as 'shrimp teriyaki'. The original text was a block book, so the page number was unknown. However, according to the reprinted edition, the details are as follows: *Ukiyodoko: Shijûhachi Kuse* in *Shincho Nippon Kotenshusei 52*, Honda Yasuo (corrections and notes), Tokyo: Shincho-sha, 1982, p. 237.

It is assumed that teriyaki's recipe already existed in the Edo period before the word of teriyaki appeared in a book. For instance, the way to cook *unagi no kabayaki* ("charcoal broiled eel"), which went around from the middle of the Edo period onward, is the same as teriyaki; its sauce is the mixture of soy sauce and mirin or sake. Eel is covered by the sauce and baked. In the 19th century, the use of mirin in the sauce became more popular than the use of sake, because it gave good gloss (*teri*) to the eel when it was cooked. As a result, I suppose, 'teriyaki' became a generic term for the style of cooking that fish was grilled with soy sauce and mirin.

A Happy New Year! Best wishes, Naomichi Ishige.

Note: In his book *The History and Culture of Japanese Food* (Kegan Paul, 2001, p. 116), Ishige says that teriyaki developed during the Edo / Tokugawa period (1600-1867), however no citation for the source of this information is given. Address: National Museum of Ethnology, Osaka, Japan.

11234. *SoyaScan Notes.* 2007. Award and plaque presented to William Shurtleff and Akiko Aoyagi Shurtleff by JETRO Los Angeles (Overview). Feb. 13. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** The imitation stone plague, which is about 5½ by 8 inches, mounted on a cherry wood background (7½ by 10 inches) reads: "Presented to William Shurtleff, Akiko Aoyagi, in honor of your pioneering achievements in the promotion of Japanese foods. JETRO Los Angeles, Chief Executive Director, Keizo Tsuchiya. February 13th, 2007."

The plaque, a $1,000 award, and a nice letter from Atsuko Kanai (on Mutual Trading Co. letterhead) were presented to Akiko who flew to L.A. for the ceremony (William was unable to attend) at a luncheon at the home

© Copyright Soyinfo Center 2014

of the Japanese consulate in L.A. The main event was the "Press Event for Sake Festival in L.A." As part of that was a 10-minute "ceremony of Appreciation." Awards were presented to Mr. John Gauntner (sake expert) and Akiko. Mr. Gauntner then gave a 1-hour lecture on sake.

The person who initiated the award to Shurtleff and Aoyagi was Mr. Noritoshi Kanai, president of Mutual Trading Co. Two pages of information about the work of Shurtleff and Aoyagi, written by Atsuko Kanai from materials supplied by Soyinfo Center, were distributed representatives of the media who were present.

11235. Vialle, Cynthia. 2007. Re: In 1637 the Dutch exported ten barrels of *moersackij* (shoyu) from Japan. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 19. 1 p.
• ***Summary:*** "About soy. Do you know that soy was also called murasaki? Sakijmoer or moersakij in the Dutch records. I have a reference of 1637 that ten barrels of moersakij were shipped from Japan to Siam or Batavia. Two Japanese historians told me that moersakij is murasaki, soy. It's nothing to do with the history of the word, but I thought it might be of some interest to you."

On March 28 Cynthia sent the following citation: "10 vaten moersackij" = 10 barrels of murasaki [soy sauce]. "Hirado, 27 Nov. 1637. Shipped in the *Aeckersloot* sailing from Hirado to Siam and Batavia.

Source of document: "Nationaal Archief, The Hague, Archive of the Dutch Factory in Japan, record number 837." Address: Leiden Univ., Netherlands.

11237. Ness, Carol. 2007. Top tamari balances sweet and salty: Taster's choice. *San Francisco Chronicle.* March 28. p. F2. Food section.
• ***Summary:*** Seven brands of tamari sold in San Francisco were tasted and rated in descending order of preference as follows: 1. Eden (organic, imported green label) (69 points; $5.69 for 10 oz at Rainbow). 2. Mitoku imported (60 points, $7.99 for 10 oz at Rainbow). 3. Eden (55 points, organic, plum-colored label, not imported. $4.19 for 10 oz at Whole Foods). 4. Kikkoman (53 points, made in Japan, $3.89 for 10 oz). 5. San-J (45 points, black label, $2.59 for 10 oz at Rainbow). (6) Ohsawa (35 points). (7). San-J gold label 14 points.

Tamari is a Japanese-style soy sauce "made mainly from soy beans with little or no wheat, which gives it a richer taste than regular soy sauce." Tasters commented mainly about the color, saltines, sweetness, and (above all) the balance of saltiness and sweetness. "The panel looked for a smooth, rich flavor balanced by the right amount of salt. Common problems were harsh or sweet notes, or too much salt." Address: Staff writer.

11238. **Product Name:** Better Bites: Sweet Soy Treats.
Manufacturer's Name: Microsoy Corp.
Manufacturer's Address: 300 East Microsoy Dr., Jefferson, IA 50129. Phone: (515) 386-2100.
Date of Introduction: 2007 March.
Ingredients: Non-GMO soybean flakes, Florentine mix (glucose syrup {wheat starch}, sugar, vegetable oil, dextrose, whole milk powder, soy lecithin).
How Stored: Shelf stable.
New Product–Documentation: Glossy color leaflet (single sided, 21.4 cm) sent by Patricia Smith from Natural Products Expo West. 2007. March.

11239. Yoshiba Restaurant. 2007. Best food of champions. *Time.* April 24.
• ***Summary:*** For centuries, for sumo wrestlers, the main course "has been *chankonabe,* a protein-rich stew containing beef, chicken, pork, seafood, tofu, vegetables and just about anything else the stable master can find." Traditionally sumo wrestlers abstained from meat such as beef or pork that came from four-legged animals. Address: Tokyo, Japan.

11240. Wexler, Geoffrey. 2007. Re: Documenting the early history of Ota Tofu Co. (Portland, Oregon). Letter to Roy Yotsuuye, 16003 N.E. 25th Ave., Ridgefield, Washington 98642, June 1. 1 p. Typed, on letterhead. [8 ref]

© Copyright Soyinfo Center 2014

• ***Summary:*** "To answer your first question, the two addresses (226 [sic] Davis Street and 96 N. 5th St.) were not the same location. The [first] major street renaming took place around 1892, when the 'alphabet' streets (A, B, C, etc.) were given the names of Portland pioneers (Ankeny, Burnside, Couch, Davis, etc.). The next major change was between 1931 and 1933, when all the house numbers in the city were changed and many street names were altered too. At that time North Fifth Street became Northwest Fifth Avenue, and Davis Street became Northwest Davis Street.

"As to the founding of the Ota Tofu Company, the city directories do not help with this. I spot checked the directories from 1908 through 1934 and found no listing at all for Ota (or Ohta) Tofu. However, I did find the following:

1910: Charles Ota listed as a "cook" with residence at 352 Oak Street.

S. Ota listed as "baths" with business and residence at 86½ 5th Street North.

1913: E. Ota listed as "cook."

1915: S. Ota listed as "baths," same addresses as 1912.

1921-1922: H. Ohta listed as "baker."

1924: H. Ota listed as "restaurant" with address at 86½ 5th Street North.

1933: Saizo Ohta listed as "wholesale baker" at 86½ 5th Street North.

1934: Same as 1933.

"Of course, the directories are not always accurate, especially for the Japanese and Chinese communities in the area that is now called Old Town / Chinatown in downtown Portland (where the above addresses were located).

"There may be more detailed information here at OHS, perhaps in census records or books on the Japanese community. It may be worth a trip here to our research library to conduct further research." Address: Senior Archivist, The Oregon Historical Society, 1200 SW Park Ave., Portland, Oregon 97205. Phone: 503.222.1741.

11241. Okazaki, Noriko Ota. 2007. Re: Ota family history. Letter (e-mail) to Eileen Ota, Ota Tofu, Portland, Oregon, June 3. 1 p.

• ***Summary:*** "Hi Eileen: Hope everything is going well for you and the Tofu shop.

"I've been trying to answer your e-mail regarding the history of the Ota Tofu Shop and this is what I think I know:

"Saizo and Shina's last name was OHTA and whoever reported Matsuno's birth certificate made a mistake on her last name and was recorded as OTA. The Japanese character is the same.

"I don't know how many brothers and sisters Saizo had. At least one brother was here in the United States. I have no idea when he arrived in United States. I know for sure one brother was here because he married Mits' grandmother at one time. (she was married to Okazaki and had a son, Shizuo, in Japan before she was remarried to Saizo's brother).

"Saizo may have had a brother (I guess could be a sister also) in Japan since my mother talked about her cousin (no idea how many). Had tuberculosis and died.

"Like I had told you earlier, I don't know or have not met one single person with a name of Ota in Japan when I was growing up.

"The oldest relative who might know anything would be Matsuno's cousin, Matasuda since she grew up with them but he is at least 10 years younger and the time I saw him last year, he was not in any condition to remember anything.

"I think Grandma Shina was a picture bride and she moved into Ota family in Japan prior to coming U.S. No idea how long or what year. I don't think she had any occupation, just to a training to be a bride.

"Ohta family (I think) lived in Shiraishi, Okayama but no idea of their occupation. I don't think they were any way connected to the Tofu business. (this is my guess)

"There may be sources in Japan to help or the temple Ohta family belong to may help but I have no idea where to start. It is also possible everything was destroyed during the war when Okayama was bombed; no idea how extensive damages were.

"This is all I can think of now. If I get any more information, I will let you know.

"Take care and say hello to everybody, Noriko." Address: Japan.

11242. Walsh, Bryan. 2007. Lamenting the decline of the home-cooked meal in Japan. *Time.* June 6.

• ***Summary:*** About Etsuko Shiobu teaching at her home in Tokyo: "As commuter trains rumble outside the window of Shinobu's crowded kitchen, we prepare tuna sushi cake, tofu, a carrot and radish soup and a vinaigrette salad."

11243. *SoyaScan Notes.* 2007. Early Dutch exports of soy sauce from Japan, and early documents that mention soy sauce in Europe (Overview). June 10. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1647–Documents show that the Dutch East India Co. (VOC) began exporting soy sauce from Japan, from their tiny artificial harbor in Nagasaki harbor, and exported some almost every year from 1751 on. Most of this soy sauce was sent and used at to their trading posts in Southeast Asia.

Concerning early documents that mention soy sauce in Europe:

1679–John Locke (England) mentions "saio" in his journal.

1688–William Dampier (England) mentions "Soy" in his journal.

1690–E.B. (England). The canting crew. "Catchup, a high East-India Sauce."

1696–Ovington, Suratt (England). "Bambou and

Mangoe Achar [pickle], Souy the choicest of all Sawces, are always ready to whet the Appetite."

1705–Samuel Dale (England). "3. Soia *Offic.* [probably Officinarum] Phaseolus Japonicus ex quo Japonesium Soia, qui intinctus species est, conficitur *Herm.* Species Phaseoli parvi albi, è Japonia allata, è qua conficiunt condimentum *Ketchup* dictum, duum generum, liquidum nimirum & solidum.

1736–The first Dutch soy sauce, exported from Japan via Batavia in the Dutch East Indies, arrives in Holland.

1750–Soy sauce first arrives in the Unites States (actually the British colonies of North America) in New York City. It is imported from Europe and advertised as being on sale in a retail store.

11244. Shurtleff, William. 2007. Thoughts and questions concerning Chinese traders in Nagasaki, Japan. Could they have exported soy sauce? Could they have sold that soy sauce to British East India Co. merchants? *SoyaScan Notes.* July 15. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** In about 1600 the Chinese obtained an official trade permit and settled in Nagasaki. At the peak of Chinese activity there, about a century later, as many as 190 Chinese ships a year were visiting Nagasaki, and one-sixth of the town's population hailed from the East Asian mainland. Address: Founder and owner, Soyfoods Center, Lafayette, California. Phone: 925-283-2991.

11245. Yu, Jonathan; Yu, Beth. 2007. Re: History of Cherry Food Industry / APY Food Processing in Quezon City, Philippines. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 24. 1 p.
• ***Summary:*** Cherry Food Industry operated as a soy processing company in 1976. In January 1985 the company was registered as APY Food Processing. APY signifies the initials of Mrs. Adelaida Pua Yu, the owner, who had the first factory running at # 74 Speaker Perez St., Barangay Lourdes, Quezon City with 10 employees. From its initial operations until January 1995, Mrs. Yu successfully maintained the factory. In 1993, Jonathan Yu and wife Beth participated in the family business operations. Since the other siblings of Jonathan were engaged in other concerns, the management and operations of the company was transferred to the youngest Jonathan Pua Yu in 1995.

The company now makes the following soy products: Nippon Tofu. Toho. Tokwa. Taohue. Soymilk. Address: Quezon City, Philippines. Phone: (632) 365-0835.

11246. Kikkoman Corporation. 2007. Annual report 2007. Year ended March 31, 2007. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 37 p. 28 cm. [Eng]
• ***Summary:*** Consolidated net sales rose 9.1% year on year to $3.327 billion, operating income climbed 16.6% to $183 million, and net income rose 16.6% to $91.1 million. All three were record figures for Kikkoman. Note: Some dollar values actually fell due to changing foreign exchange rates.

Page 1, titled "A golden heritage: Kikkoman's 50th anniversary in America," begins: "In 2007 we celebrate the 50th anniversary of our full-scale entry into the U.S. market. Over the ensuing 50 years, we have aimed to make soy sauce a more integral part of the American food culture... Sales volume of soy sauce overseas during fiscal 2007 grew to some 157,000 kiloliters." A map shows North American production and sales bases. A bar chart shows "Overseas sales volume," which has grown from about 10,000 kl in 1974 to 35,000 kl in 1986 to 92,000 kl in 1996 to 158 kl in 2006; it has increased dramatically and exponentially. Kikkoman's two soy sauce factories in the USA, at Walworth, Wisconsin, and Folsom, California (northeast of Sacramento, California, near Folsom Lake) "now ship over 110,000 kiloliters of soy sauce throughout North America."

A photo (p. 2) shows Yuzaburo Mogi (Chairman of the Board and CEO) and Takashi Ushiku (President and COO). Address: Noda, Japan.

11247. Monden, Eiji. 2007. What is natto? Natto to save the earth! Presented Sept. 16 at 2007 Midwest Specialty Grains Conference & Trade Show. 29 p. Held Sept. 16-18 in Fargo, North Dakota.
• ***Summary:*** A PowerPoint presentation with 29 slides containing color photos and graphics. (2) Table of contents. (3) About Federation of Japan Natto Manufacturers' Cooperative Society. Phone: 03-3832-0709. President: Takashi Sasanuma. Established: April 1954. Members: 251 natto manufacturers. Objective: To work cooperatively among members to conduct natto promotion activities and improve natto makers' economic status. Qualifications: Must be a natto manufacturer that owns an office in Japan. History: 1939–Prefectural natto cooperatives were organized, 1941–Established Japan Natto Industry Cooperative Association. 1953 [after World War II]–Re-organized to Federation of Japan Natto Manufacturers' Cooperative Society.

(4-5) Activities: National natto contest. Natto symposium. Natto queen ceremony. (6) What is natto? With photos of soybeans, container of natto, natto mixed with rice being lifted out of a bowl with chopsticks. (7) Natto making: The 3-day process. (8-10) Health benefits of natto. Medical uses: Reduces likelihood of blood clotting. Contains large amounts of vitamin K. Contains large amounts of enzyme called nattokinase which may also reduce blood clotting. (11-12) Types of Natto. Sticky natto and Dried Natto. Whole soybean natto, hikiwari natto (from cracked soybeans) and goto natto (hikiwari natto and malted rice [rice koji]) are all types of sticky natto, while Tera Natto (Temple Natto) is the only dried natto. It is black and salty, and was introduced to Japan by priests who studied in China. Photos show Itohiki Natto (Sticky natto), Goto Natto, Tera Natto, and Cracked Bean Natto. (13) How to eat Natto. Photos show

© Copyright Soyinfo Center 2014

a package of natto, the package open to show its contents, with the natto, a packet of sauce, and a packet of mustard, and the natto served in a bowl on top of rice. (14) History of Natto. *Bacillus natto* are naturally found on straw; in the Taisho period (1912-1926), researchers found a way to cultivate the bacillus without straw. This made the natto easier to produce and more reliable. (15-16) Natto Market. Graph shows Natto Consumption per household per year and volume of natto market. 130,000 MT [metric tons] of soybean are used annually to produce 4.7 billion packages (50 g natto/package) of natto. (17) Reasons for purchasing Natto. (18) How did you learn the health benefits? Graph shows how people learned about the benefits of natto. (19-21) Natto Variety. Graph shows soybean use for Natto by country of origin, 2007 Food soybean use by usage. In 2007, 956,000 MT of soybeans were used for food; 135,000 of which went to produce Natto. Graph shows price trends for a bushel of soybeans. (23) World Average Life Span Rankings. Table shows that Japan ranks first, with an age of 82 years. The United States is 26th at age 78. (24) Future Market: Further research on new natto health benefits, new menu development of natto, further natto market expansion domestically and globally. (25) Expectations of the U.S. IP [identity preserved] soy industry: To strengthen more direct communication for new variety development with natto manufacturers at an early stage, to continue growing food soybeans, continuing demands and market potential for U.S. Non-GMO soybeans exist in Japan, the possibility of launching a natto market similar to the soysauce market in the United States. Address: Federation of Japan Natto Manufacturers' Cooperative Society (Zenkoku Natto Kyodo Kumiai Rengokai), 4th Floor, Natto Kaikan 2-7-10 Moto-Asakusa, Taito-ku, Tokyo 111-0441 JAPAN.

11248. Kikkoman Corp. 2007. Kikkoman–A golden heritage: Kikkoman's 50th anniversary in America. *Arigato, America* (Ad). *New York Times.* Sept. 19. p. A13.

• ***Summary:*** A full-page color ad. The top half is a message from Mr. Yuzaburo Mogi, Chairman and CEO, Kikkoman Corporation. It begins: "Thank you, America, for 50 great years.

"Thank you for making Kikkoman one of America's best-loved food brands. We are honored and humbled by the generous welcome you have extended to us since we started marketing our soy sauce in America 50 years ago.

"A lot has changed since then, but one thing remains the same. Our core product, naturally brewed soy sauce, is still made just as it was more than 300 years ago–slowly fermented and aged for full flavor like a fine wine." Below the message is Mr. Mogi's signature. In the bottom half of the ad is a large color photo of Mr. Mogi, a bottle of Kikkoman soy sauce, and the logo of Kikkoman's 50th anniversary in America (1957-2007). In smaller red letters we read: "A member of the family that founded the company more than three centuries ago, Mr. Yuzaburo Mogi has helped make Kikkoman one of the world's leading food brands."

At the bottom of the ad is an announcement of Kikkoman's 50th anniversary sweepstakes, which ends Sept. 30, and includes a trip to Japan. To enter and for official rules go to www.kikkoman50.com.

11249. Nisshin OilliO Group Co., Ltd. 2007. Nisshin Oirio Gurûpu 100 nen-shi [Nisshin OilliO Group Co. Ltd. 100-year history]. Tokyo, Japan. 351 p. Illust. No index. 31 cm. [100+ ref. Jap]

• ***Summary:*** Mr. Y. Komura, who sent this citation and scans of many pages, notes: "In 2004, Nisshin Seiyu Co. merged with 2 oil milling companies and started its new stage by changing its name as Nisshin OilliO.

"The president of Nisshin then told me he thought the staffs of new the company had to recognize that the new company must based on "Oil"

"The new name is formed by combining "Oil" and "Oil." Thus, OilliO is a palindrome, which reads the same backward or forward. Address: Japan.

11250. Taguma, Kenji G. 2007. History of the *Nichibei Shinbunsha-sha* (Japanese-American Times Co.), Kyutaro Abe, Tsuda Yonako (his wife) and Tsuda Umeko (Yonako's sister) (Interview). *SoyaScan Notes.* Oct. 19. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** The *Nichibei Shinbun* began publication in 1899 as the merger of two earlier Japanese newspapers in the USA. It was published from 1899 to 1942–when it was closed by the Internment of World War II.

It was founded and published by Kyutaro Abiko (1865-1936), perhaps the most prominent *Issei* pioneer in America. In 1909 he married Tsuda Yonako (1880-1944), and they worked together closely in publishing the newspaper. Address: Vice President and English Edition Editor, Nichi Bei Times, 2211 Bush St., San Francisco, California 94115.

11251. Dorff, Erik. 2007. The soybean, agriculture's jack-of-all-trades, is gaining ground across Canada (Web article). http://www.statcan.gc.ca/ pub/ 96-325-x/ 2007000/ article/10369-eng.pdf. 14 p. Oct. 26. Printed 28 Jan. 2010. [7 ref]

• ***Summary:*** An outstanding overview and description of the current status of soybeans in Canada.

Contents: Introduction. Development of the soybean sector in Canada. Growth in soybean area across the country. The soybean–an international super-crop. Soybean dollars make sense to farmers. One crop, many uses. Food for human consumption. Animal feed. Industrial products. Soybean not a "has-bean" crop in Canada. The gift of the bean (a brief early history of the soybean in the USA and Canada).

© Copyright Soyinfo Center 2014

Figures: (1) Gains in soybean area reflect crop development efforts (1951-2006; 000 hectares). (2) One crop many uses. Diagram showing uses as: Food for human consumption, animal feed, industrial products. (3) Bred in Canada: soybeans of prominence. AC Proteus, Toki (for tofu), Nattawa (for natto), Maple Arrow (expanded soybean range out of southern Ontario), Maple Presto (the fastest maturing soybean). (4) Traditional soy foods: a brief guide (with a description of each). Edamame, miso, natto, soy sauce, soy milk, tempeh, tofu.

Tables: (1) Census of agriculture tracks growth in soybean area. Gives the area planted in Canada, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, and Alberta in the census years of 1976, 1981, 1986, 1991, 1996, 2001, and 2006. Soybeans were planted in each of these provinces in the three most recent census years. (2) Top 10 soybean producing nations (Average 2000 to 2005): After the USA, Brazil, and Argentina, China is 4th, India 5th, Paraguay 6th, Canada 7th, Bolivia 8th, Indonesia 9th. and Italy 10th. (3) Average soybean composition. Columns: Characteristic, oil, feed and meal beans, soy milk / tofu soybeans. For the latter: 100 seeds should weigh more than 20 gm. Colour very light with clear hilum, oil content 17-19%, protein content 44-47%, soluble sugar content 11-13%, insoluble sugar content 21-25%, minerals 5%. (4) Nutritional comparisons: Tofu and soy milk with ground beef and cow's milk.

Maps: (1) Soybeans in Canada (3 maps on one page). Map A shows that quite a bit of Quebec's soybean acreage lies south of the Saint Lawrence River, in the region named "Southern Quebec" (which includes the Eastern Townships at its southernmost area–its south-western end).

"Until the mid-1970s, soybeans were restricted by climate primarily to southern Ontario. Intensive breeding programs have since opened up more widespread growing possibilities across Canada for this incredibly versatile crop: The 1.2 million hectares of soybeans reported on the Census of Agriculture in 2006 marked a near eightfold increase in area since 1976, the year the ground-breaking varieties that perform well in Canada's shorter growing season were introduced" (p. 1).

"For years, soybeans were being grown in Canada but it wasn't until the Second World War that Statistics Canada began to collect data showing the significance of the soybean crop, with 4,400 hectares being reported in 1941. In fact, one year later the area had jumped nearly fourfold, to 17,000 hectares. In 1943 a program aimed at actively breeding soybeans suitable for southern Ontario was initiated.

"During the Second World War, North American manufacturers used oil from soybeans not only as a food but also to produce a wide number of industrial products including glycerine for the manufacture of nitroglycerine used for explosives and ammunition.

"By 1951, 62,967 hectares had been planted with soybeans (Figure 1), but they were still mostly confined to southern Ontario, the region with the longest and warmest growing season in Canada" (p. 2).

"It wasn't until varieties with earlier maturity and improved tolerance of cooler climates were successfully developed–the 'Maple' series of soybean cultivars–that significant soybean production was pushed beyond southern Ontario. The 1976 release of the Maple Arrow variety in particular is credited with expanding the range of soybean production into eastern Ontario (Table 1)."

The "growth between 2001 and 2006 was particularly notable in the Prairie provinces, with Manitoba's soybean area increasing sevenfold to over 141,869 hectares and its more western neighbours, Saskatchewan and Alberta, beginning to actively pursue soybean production. These gains in area were the payoff from research aimed at finding and breeding soybean varieties suited to the Prairies as well as from crop promotion and market development" (p. 5).

"In the 2006 calendar year, farm cash receipts from soybeans amounted to $680 million in Canada, making it the fifth most valuable field crop, trailing canola ($2.5 billion), wheat ($1.8 billion excluding durum), potatoes ($899 million) and corn ($753 million). In Ontario, where it was also the most planted crop, it was the top crop in terms of farm cash receipts, at $547 million, eclipsing the receipts from corn ($449 million) and wheat ($275 million)" (p. 6).

"International trade contributed to the value of soybean receipts. Preliminary figures place soybean exports at over 40% (1.5 million tonnes) of the soybeans grown in Canada in the 2006 crop year (3.5 million tonnes).

"Of the four top buyers in 2006, Japan led the list, importing $138 million in Canadian soybeans, followed by Malaysia ($52 million), the Netherlands ($49 million) and Iran ($43 million). At the same time, Canada imported about 302,000 tonnes of soybeans valued at approximately $81 million, 99% of which came from the United States" (p. 7). Address: Statistics Canada.

11252. Willcox, Bradley J.; Willcox, D. Craig; Todoriki, H.; et al. 2007. Caloric restriction, the traditional Okinawan diet and healthy aging: the diet of the world's longest-lived people and its potential impact on morbidity and lifespan. *Annals of the New York Academy of Sciences* 1114:434-55. Oct. [70 ref]

• ***Summary:*** Table 1 (p. 443) shows the Okinawa's whole-population dietary intake for the year 1949. Notable is the high intake of vegetables, particularly sweet potatos and soy, as a principal protein.

Okinawans also had higher consumption of flavonoids–as in soy foods and Okinawan sweet potatoes.

Summary: Caloric restriction in humans, as in other animals, promotes healthy aging. Caloric restriction (CR) is the most robust and reproducible means of reducing age-related diseases and extending life span in short-lived

© Copyright Soyinfo Center 2014

animals such as rats, dogs, etc. This study shows the same is true of humans. Address: 1-2. Pacific Health Research Inst., 846 South Hotel Street, Suite 301, Honolulu, Hawaii 96813.

11253. *SoyaScan Notes.* 2007. Seattle's 2nd oldest Japanese newspaper: *Hokubei Jiji* (*The North American Times,* 1902-1942), and *Hokubei Hochi* (*The North American Post,* 1946-present [2007]) (Overview). Dec. 22. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** *Hokubei Jiji* (*The North American Times*) was founded in 1902. From no later than 1906 until it was forced to close in 1942, the newspaper's office was located at 215 5th Avenue South, in the future International District of Seattle. This paper was forced to close when Seattle's Japanese American community was forced away into internment camps during World War II. The last issue was published on 12 March 1942.

After a four-year suspension, on 5 June 1946, a Japanese newspaper was again published in Seattle. *Hokubei Hochi* (*The North American Post*) started as a weekly at 217 5th Avenue South. As of Dec. 2007 the *Hokubei Hochi* is published at 662½ S. Jackson St. in Seattle. Phone: 206-623-0100.

11255. Meerak, Jomkhwan; Iida, H.; Watanabe, Y.; Miyashita, M.; Sato, H.; Nakagawa, Y.; Tahara, Y. 2007. Phylogeny of gamma-polyglutamic acid producing *Bacillus* strains isolated from fermented soybean foods manufactured in Asian countries. *J. of General and Applied Microbiology* (*Tokyo*) 53(6):315-23. Dec. [23 ref]
• ***Summary:*** Natto and closely related fermented soyfoods are made and consumed in many Asian countries. In this study, 34 *Bacillus* strains capable of producing gamma-polyglutamic acid (PGA) were isolated from natto and its relatives in mountainous areas of South Asia and Southeast Asia and from soils in Japan. This phylogenetic analysis shows the similarity among strains of *Bacillus subtilis* isolated from various sticky fermented soyfoods of Asia. This suggests that *B. subtilis* strains responsible for the fermentation of sticky Asian soyfoods might have originated from the same stock.

The foods examined include: Kinema from Darjeeling (West Bengal, India) and Dhankuta (Nepal). Thua-nao from Maehongsorn and Chiangmai, Thailand. Tan-douchi from Ruili, Yunnan province (near the border with Myanmar). Chungkuk jang from Taegu, Korea. Also, soil was examined from Hokkaido, Iwate, Nagano, and Yamagata, Japan. Address: 1-3, 7. Dep. of Applied Biological Chemistry, Faculty of Agriculture, Shizuoka Univ., Shizuoka 422-8529, Japan.

11256. **Product Name:** San-J Tamari Ginger Dressing.
Manufacturer's Name: San-J International, Inc.
Manufacturer's Address: 2880 Sprouse Dr., Richmond, VA 23231. Phone: 804-226-8333.
Date of Introduction: 2007.
Ingredients: Tamari Sesame: Water, tamari soy sauce (water, soybeans, salt, alcohol), rice vinegar, organic sugar, onion juice (onion juice, salt, natural flavors), sesame oil, ground sesame, arrowroot, whole sesame, white pepper. This product is made in a plant inspected by the Gluten-Free Certification Organization (www.gfco.org).
Wt/Vol., Packaging, Price: 8 fl. oz. (237 ml) glass bottle.
How Stored: Refrigerate after opening.
New Product–Documentation: Front and back label sent by Misako Binford of San-J. 2012. May 11. In an attached e-mail she says that this product was first sold in 2007. However the copyright on the back of each label is 2009– indicating that the label design was updated.

11257. Gill, Robin D. 2007. Cherry blossom epiphany: The poetry and philosophy of a flowering tree. Key Biscayne, Florida: Paraverse Press. 719 p. See p. 47. Index. 25 cm.
• ***Summary:*** The poem (p. 47 in Romanization) reads as follows:

"Niawashi ya.
"Mamenoko meshi ni.
"Sakura-gari."

Gill's translation: "Bean-flour rice / The perfect food for / Cherry hunting."

Gill's commentary: "The 'bean-flour' is *kinako,* roasted soybean flour with a slightly malty taste. Balls of rice (common picnic fare) may be dusted with it and some salty

© Copyright Soyinfo Center 2014

or sweet condiment. While rice is, by definition, fine food, this is a rustic way to eat it–compared to the fancy box lunches of the wealthy–suitable to the country Bashô was visiting and the sandy gold color of the flour would look good with pinkish petals."

11258. Kurihara, Harumi. 2007. Harumi's Japanese home cooking. 1st American ed. New York, NY: Home Books. A division of the Penguin Group (USA) Inc. 160 p. Illust. (color). No index. 26 cm.
• ***Summary:*** A translation of *Kurihara Harumi no japaniizu hoomu kukkingu.* One chapter is titled "Soup, eggs & tofu." The book (which is crippled by the lack of an index) contains 7 recipes for miso, 5 for tofu, 2 for teriyaki sauce, and 1 for edamame. Soy sauce is used as an ingredient in many recipes such as Chicken with soy and balsamic dressing. The short glossary mentions Kochujan (Korean miso).

Harumi Kurihara, a housewife, is Japan's most popular cooking expert. Her first book in English, *Harumi's Japanese Cooking* won the Gourmand World Cookbook award in 2004. Address: Japan.

11259. **Product Name:** Liquid nigari (Bittern).
Manufacturer's Name: Natural Import Co. (Importer). From Japan.
Manufacturer's Address: 9 Reed Street, Biltmore Village, NC 28803. Phone: 828-277-8870 or 1-800-324-1878.
Date of Introduction: 2008 February.
Ingredients: Seawater.
Wt/Vol., Packaging, Price: 5 oz plastic bottle or ½-gallon container.
How Stored: Shelf stable.
New Product–Documentation: Talk with Bruce Macdonald. 2008. July 1. His company began selling this product in Feb. 2008. They import it from Ishigaki Island, located 430 km southeast of Okinawa, Japan. The entire island, surrounded by pristine coral reefs, is a natural sanctuary and protected from development. It is registered for a "Ramsar Convention on Wetlands"–signed in Ramsar, Iran in 1971 for the conservation and wise use of wetlands. The company started making natural seasalt in 1996 with 5 staff members. They now have a staff of 20 people, all professional salt-masters. They pipe up the sea water in bamboo pipes from 20 meters depth in the midst of the coral reefs. Then they boil it slowly for 3 days until the density is 28%, which Ishigaki Seasalt starts to appear. During the drying process, which is patented, the temperature never exceeds 90ºC (below boiling). No refined salt or chemicals are added. From this the liquid nigari (called bittern) is made–but Bruce is not sure how. They are a environmental activist company. Long ago Bruce visited Robert Salazar, who made Muramoto seasalt; he put natural salt in a sack and let the nigari drip off.

A diagram from the company shows that the following steps are used in making sea salt and nigari: Sea water > filter > concentration > separation > natural sea salt goes off. Check density of liquid > Filter 100 mesh > weighing > packing in bottles. Note: This process could be reverse osmosis or ultrafiltration.

11260. Shurtleff, William; Aoyagi, Akiko. 2008. Le livre du tofu: La source de protéines de l'avenir–dès maintenant! [The book of tofu: Protein source of the future–now! Translated from the English by Nathalie Tremblay]. Varennes, Quebec, Canada: Éditions AdA Inc. 430 p. Illust. by Akiko Aoyagi. Index. Feb. 28 cm. [53 ref. Fre]
• ***Summary:*** Contents: Preface. Acknowledgements. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food. 3. Getting started. Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History, cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame*), kinako (roasted full-fat soy flour), soybean sprouts (*daizu no moyashi*), natto (sticky fermented whole soybeans, with "gossamer threads"), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein (TVP), soy oil products). 5. Gô (*purée de fèves de soya fraîches;* a thick white puree of well-soaked uncooked soybeans). 6. Okara or Unohana. 7. Curds and whey (*Caillé et petit-lait*). 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding).

9. Deep-fried tofu (*Tofu frit*)*:* Thick agé or nama agé (*Agé épais {côtelettes de tofu frit}*), ganmo or ganmodoki (*burgers de tofu frit;* incl. *hiryozu / hirosu*), agé or aburagé (*pochettes de tofu frit;* incl. "Smoked tofu," p. 197). 10. Soymilk (*Lait de soya*). 11. Silken tofu (Kinugoshi ou tofu soyeux) ("*Kinu* means 'silk'; *kosu* means 'to strain'; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk"). 12. Grilled tofu (*Tofu grillé*). 13. Frozen and dried-frozen tofu (*Tofu surgelé et tofu surgelé séche*). 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha's chicken, Buddha's ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}*;* see p. 258 for illustrations of many meat alternatives, incl. Buddha's fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig's head, and molded ham). 16. Special tofu (*Tofu particuliers*).

Part III–Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way. Appendices: A. Tofu restaurants in Japan (many are vegetarian). B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe {Germany, Austria, Belgium, Denmark, Finland, France, Ireland, Italy, Netherlands, Portugal, Spain, Switzerland, UK, Wales}, and 3 in Latin America {Brazil, Colombia, El Salvador, Guatemala, Mexico}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for "Mock tuna salad with deep fried tofu."

Note. This is the earliest French-language document seen (Sept. 2013) that mentions soy cream cheese (p. 125), which it calls *Fromage à la crème au tofu.* Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549 USA. Phone: 925-283-2991.

11261. Moskin, Julia. 2008. Yes, MSG: Monosodium glutamate never shook off its image problems, but these days its the secret behind spicy tuna rolls and Thai noodles. *New York Times.* March 5. p. D1, D5. Food section.

• ***Summary:*** The "Chinese restaurant syndrome" started in 1968 when a Chinese-American physician wrote a rather light-hearted letter to the *New England Journal of Medicine.* "He had experienced numbness, palpitations and weakness after eating in Chinese restaurants in the United States, and wondered whether the monosodium glutamate used by cooks here (and then rarely used by cooks in China) might be to blame.

"The consequences for the restaurant business, the food industry and American consumers were immediate and enormous. MSG, a common flavor enhancer and preservative used since the 1950s, was tagged as a toxin, removed from commercial baby food and generally driven underground by a new movement toward natural, whole foods."

In September 2008 the University of Tokyo will host the "centenary celebrations honoring Prof. Kikunae Ikeda's 1908 discovery of glutamate flavor"–umami. Ajinomoto, a Japanese company, transformed that flavor into a crystalline powder and patented it in 1909.

Contains two recipes that use MSG as an ingredient and a photo of many commercial products that contain MSG.

11262. Ishige, Naomichi. 2008. Re: Early history of tataki natto, itohiki natto, and natto-jiro in Edo city, Japan. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 16. 2 p. [Eng]

• ***Summary:*** "Tataki natto is minced itohiki natto, chopped with a cooking knife.

"In about the 1830s, eating granulated [regular] itohiki natto started to become popular in central Edo city (today's Tokyo). When people had granulated itohiki natto, they stirred it and put it on hot rice with soy sauce. Before that period, itohiki natto was commonly eaten as natto-jiru, which was a kind of miso soup with tataki natto, greens, and tofu. Because of this eating style, peddlers started to sell tataki natto with greens and tofu so that people could make their own natto jiru more easily and inexpensively.

Note: This is the earliest English-language document seen (Jan. 2012) that mentions or describes "Tataki natto."

"Natto-jiru was the soup for the winter season. Starting in about the 1830s in Edo city, granulated [regular] itohiki natto began to be sold instead of tataki natto. Once people got familiar with eating granulated itohiki natto with soy sauce, peddlers started to sell itohiki natto even in the summer.

"In the well-known book *Morisada Mankô,* the author, KITAGAWA Morisada, compared the way of life in Edo, Kyoto, and Osaka in the late Edo period. He wrote that natto sellers disappeared from Kyoto and Osaka in the late Edo period. Thus, people who wanted to eat natto in the region needed to make it by themselves. Even now, although natto is popular in Kanto region, which developed around Edo city, people in Kansai region, to which Kyoto and Osaka belong, do not eat natto so much.

"I do not know any record by which the origin of tataki natto can be traced. However, it is thought that tataki natto was made from olden times as one of the basic ways of eating natto.

"Today, natto-jiru is not popular for Japanese, so tataki natto is usually not sold. If you want to have natto-jiru, you need to mince natto by yourself." Address: National Museum of Ethnology, Osaka, Japan.

11263. *SoyaScan Notes.* 2008. Dates of earliest documents seen that mention non-fermented soyfoods used as human food (Overview). March 17. Compiled by William Shurtleff

• ***Summary:*** On the cover is a color photo showing the following products: (1) Kikkoman Bread Crumbs (Panko). (2) Kikkoman Organic Soy Sauce and Tamari Soy Sauce. (3) Kikkoman Teriyaki (Original, or Spicy Miso; Takumi Collection). (4) Kikkoman Pearl Soymilk (Aseptic quarts; Organic Original, Organic Creamy Vanilla, Organic Green Tea, Organic Unsweetened, Organic Chocolate, and Nonorganic Tropical Delight–with 7 Juices). (5) Kikkoman Pearl Soymilk (Tetra Prisma Aseptic grab-n-go 8.25 oz packs; Organic Chocolate, Organic Green Tea, Organic Creamy Vanilla). (6) Kikkoman Black Bean Sauce, Hoisin Sauce, Thai Style Chili Sauce. Plum Sauce.

On the inside two pages are details about each of these products. On the rear panel is detailed information about the six flavors and two packages of Kikkoman Pearl Soymilk. Address: P.O. Box 420784, San Francisco, California 94142-0784. Phone: (415) 956-7750.

11265. Lee, Jennifer 8. 2008. The fortune cookie chronicles: Adventures in the world of Chinese food. New York, NY: Twelve (Hachette Book Group USA). x + 307 p. 24 cm. [75+ endnotes]

• ***Summary:*** Contents: Prologue. 1. American-born Chinese. 2. The menu wars. 3. A cookie wrapped in mystery inside an enigma. 4. The biggest culinary joke played by one culture on another. 5. The long march of General Tso. 6. The bean sprout people are in the same boat we are. 7. Why chow mein is the chosen food of the chosen people, or, The kosher duck scandal of 1989. 8. The Golden Venture: restaurant workers to go. 9. Take-out takeaways. 10. The oldest surviving fortune cookies in the world? 11. The mystery of the missing Chinese deliveryman. 12. The soy sauce trade dispute. 13. Waizhou, U.S.A. 14. The greatest Chinese restaurant in the world. 15. American stir-fry. 16. Tsujiura Senbei. 17. Open-source Chinese restaurants. 18. So what did Confucius really say?

The basic history: Fortune cookies were invented in Japan by the 1870s (they were called *Tsujira senbei*), then brought to California by Japanese immigrants. Before World War II they were called *senbei* and the fortunes were usually written in Japanese. Makoto Fujiwara served these senbei in 1894 in San Francisco at the Japanese Tea Garden (of which he was superintendent); it was built as part of the World's Fair, the Midwinter International Exposition. In San Francisco, there was a 9-fot fortune cookie manufacturing machine in the basement of Benkyodo, a Japanese sweets and food store still in operation.

Starting in early 1942, and during World War II, when basically all 110,000 West Coast Japanese were sent to internment camps, Chinese living in America took over the business of manufacturing fortune cookies (in Los Angeles and San Francisco)–in part because Chinese restaurants needed them. "By the 1940s English-language fortune cookies were already commonplace in Chinese restaurants in San Francisco and southern California. Historically, Chinese have never baked and are not known in the West for their desserts–which use little sugar and fat, but plenty of red [azuki] beans, lotus, peanuts, sesame seeds, soybeans and almonds. The Chinese built automated factories and when the Japanese were freed from the camps after the war, they were unable to get back into the industry. Today, the major fortune cookie manufacturing companies in the USA are owned and run by Chinese Americans.

Chapter 12 is about a company named Kari-Out, located in the quasi-industrial town of Totowa, New Jersey. Kari-Out–which was founded in the late 1960s by Howard Epstein, a Bronx-born businessman with a "passion for what he called 'small-unit packaging'"–makes the millions of tiny transparent packets of brown-black liquid that are distributed every year for free in Asian take-out meals and products (like ramen noodles). It is called "soy sauce" but its main ingredients are water, hydrolyzed vegetable protein, caramel coloring, and corn syrup. So, where's the soy? Asian manufacturers of traditional fermented soy sauce, in which soybeans are one of the main ingredients, have begun a global campaign to prevent products like that made by Kari-Out from being classified as "soy sauce." Through the government of Japan, they have submitted a proposal to the Codex Alimentarius Commission, the "forum for international food-definition battles." The Asian makers of soy sauce wanted to have soy sauce classified into four types: long-term brewed, short-term brewed, nonbrewed, and mixed. But the debate has heated up because La Choy, founded in America, also makes this same kind of HVP soy sauce. Suddenly the International Hydrolyzed Protein Council and the USDA were defending La Choy's HVP soy sauce. In the end, the Americans wrestled the definition of "soy sauce" away from the Asian makers. In 2005 the Japanese government quietly withdrew its proposal.

Note 1. From the publisher's description of this book: "If you think McDonald's is the most ubiquitous restaurant experience in America, consider that there are more Chinese restaurants in America than McDonalds, Burger Kings, and Wendy's combined. *New York Times* reporter and Chinese-

© Copyright Soyinfo Center 2014

American (or American-born Chinese). In her search, Jennifer 8. Lee traces the history of Chinese-American experience through the lens of the food. In a compelling blend of sociology and history, Jenny Lee exposes the indentured servitude Chinese restaurants expect from illegal immigrant chefs, investigates the relationship between Jews and Chinese food, and weaves a personal narrative about her own relationship with Chinese food. The Fortune Cookie Chronicles speaks to the immigrant experience as a whole, and the way it has shaped our country."

Note 2. The author was born in 1976. "Jennifer 8. Lee, the daughter of Chinese immigrants and a fluent speaker of Mandarin Chinese herself, grew up eating her mother's authentic Chinese food in her family's New York City kitchen before graduating from Harvard in 1999 with a degree in Applied Mathematics and economics and studying at Beijing University. At the age of 24, she was hired by the *New York Times,* where she is a metro reporter and has written a variety of stories on culture, poverty, and technology." A color photo on the rear dusk jacket shows Jennifer 8. Lee. Address: Harlem, Manhattan, New York City, New York.

• ***Summary:*** Contents: Introduction. Non-fermented soyfoods: Soymilk (traditional soymilk, modern soymilk {techniques to reduce beany flavors, formulation and fortification, homogenization, thermal processing, and packaging}), tofu (preparation methods, factors involved in tofu-making {soybean varieties, storage and pretreatment, solids concentration, heating, type of coagulants, coagulant concentration, coagulation temperature, coagulation time, process automation, packaging}, varieties of tofu {silken tofu, regular and firm tofus, varieties of tofu products}), green vegetable soybeans, soybean sprouts, yuba, okara, roasted or cooked (boiled whole) soybeans.

Fermented soyfoods: Terms (Koji {fermentation, koji starter, inoculum}), fermented soy paste (preparation method {preparing rice koji, treating soybeans, mixing and mashing, fermenting, pasteurizing and packaging}, processing principles), soy sauce (preparation method {treating raw materials, koji making, brine fermentation, pressing, refining}, processing principles, chemical soy sauce), Japanese natto (preparation method, processing principles), Indonesia tempeh (processing method, processing principles), fermented soymilk, fermented tofu (preparation method, processing principles), fermented black soybeans (Chinese douchi, Japanese hamanatto). Conclusion.

Figures show: (1) Flowchart of a traditional Chinese method for making soymilk and tofu. (2) Photo of savory tofu dices. (3) Photo of soy sprouts. (4) Photo of yuba (soymilk film). (5) Photo of Chinese jiang and Japanese white and red miso. (6) Flow chart of a common method for making Japanese rice miso. (7) Photo of Japanese natto. (8) Flow chart of a traditional Indonesian method for making tempeh. (9) Photo of Chinese douchi (fermented black soybeans or fermented whole soybeans). Address: Research Chemist, U.S. Dep. of Agriculture, Agricultural Research Service, Grain Chemistry and Utilization Lab., Aberdeen, Idaho 83210.

11268. Ota, Eileen. 2008. Update on history of Ota Family Tofu in Portland, Oregon (Interview). *SoyaScan Notes.* June 30. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** Koichi "Ko" Ota is still the head tofu maker at Ota Family Tofu. He and Eileen were married in 1976, which is how Eileen got involved with and became an owner of this business, but later divorced. Ko's sister, who goes to Japan fairly often and keeps in touch with her father's part of the family (Isoshima), is interested in the history of Ota Tofu Co. She said that they never kept in contact with half of the family; that was the Ota family. She thought that maybe there was some kind of a stigma attached to them; maybe they had tuberculosis. She recalled to Eileen that after her mother (Matsuno) and father (Sokichi) came to the United States in the early 1950s, she remembers her parents in Japan renting an automobile and driving around to say farewell to everybody. The children got out everywhere except at the

© Copyright Soyinfo Center 2014

Ota residence; the children at that stop were made to stay in the car. She thought it may have been because they had tuberculosis.

Elsewhere Eileen has heard the story about someone connected with Ota Tofu dying or getting sick, one of the brothers went back to Japan.

Matsuno Ota was sent back to Japan for her education; she ended up getting a college education there. She married Sokichi Isoshima, who changed his name to Ota, in order to carry on the family name.

Who were the Ota brothers and when did they start to work at or own the tofu shop? In the *Hokubei Nenkan–North American Yearbook* (1913, p. 43) the names of the Ota brothers, Saizô and Heiji, are written in Japanese characters. No address is given, but the entry says they came from Okayama. A census record shows that Saizô came to the USA in 1905 from Okayama. It is clear from an ad dated 1 Jan. 1915 in *Oshû Nippô* (*The Oregon News*) (Portland, Oregon) that the Ota brothers owned the tofu shop at this time. But Eileen does not know when or why they left. It is also not clear who Saizo's parents were.

At some point Saizô and his wife, Shina, began to own and operate Ota Tofu Co.

Eileen's maiden name was Nishimoto. She was born in Portland after World War II, in 1949. She avoided the internment but her parents and elder brother did not. She finished college at the University of Oregon, majoring in Japanese language. However today she cannot read Japanese.

When Bill Shurtleff first contacted Eileen many years ago, he sent her three genealogy charts to fill out. At that point Eileen went to Ko's sister; they were unable to fill out all three charts, which stopped (going backwards) with Saizo's parents and with the two brothers who either started or owned the Ota Tofu Co.

The two places most interested in the history of Ota Tofu Co. are The Oregon Historical Society and the Oregon Nikkei Legacy Center. The legacy center may have interviewed Ko's mother, Matsuno Ota.

11269. Ito, Eiichi. 2008. Re: Looking for the Ota family Portland, Oregon, directories at the Library of Congress. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 11. 1 p.

• ***Summary:*** Shurtleff asked Mr. Ito if he would look for the names Ota, Oha, and Nagoro in the *Japanese American Yearbook* (*Nichibei Nenkan*) and *Japanese American Directory* (*Nichibei Jushoroku*) in the section on Portland, Oregon, residential listings, for the years 1919, 1926, 1932, 1936, and 1941.

Mr. Ito writes that there are residential listings in Portland, Oregon, in all five editions (1919-1941) requested. However he did not find entries for Ota or Nagoro in any of these.

In addition, The Library of Congress' collection of the *Japanese American Yearbook* (*Nichibei Nenkan*) includes 1909-1910, and 1912-1916.

11270. Ota, Eileen. 2008. Re: More history of Ota Family Tofu in Portland, Oregon. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 11. 1 p.

• ***Summary:*** "In answer to the question of the marriage of Saizo and Shina, Noriko Ota Okazaki, seemed quite certain that Saizo and Shina were married in Japan, as she recalled that Shina went to live with the Ohta family in Japan for a period of time. Perhaps Shina was not a "picture bride" as I would define it, but went through the traditional Japanese match-making process. Shina Ota and Saizo Ota are listed on a passenger list sailing from Yokohama, Japan on June 11, 1913. Her name is no longer Masuda, but Ota. From this, I would guess that Saizo may have returned to Japan to marry, and then returned to the US with his bride."

I do not know if the ONLC [Oregon Nikkei Legacy Center, in Portland] has Polk's [Portland directory], but they also sent me a page of the 1928 Census of the Japanese Population in Oregon. Please let me know if you are interested in receiving any of the pages the ONLC sent to me.

Amy Peterson works at the ONLC and is a subscriber to Ancestry.com. Amy, who provided the documents from Ancestry.com, said that Saizo and Shina may or may not have been married at the time of the 1913 ship's listing. According to her, in some cases women changed their names prior to boarding ships to come to the US. Amy also said that it was a common practice for marriages to take place in Seattle. So we are not yet sure where or when the marriage of Saizo and Shina took place.

11271. Yoshihara, Susan-Marie ["Lulu"]; Yoshihara, Yasuo ["Yoshi"]. 2008. Re: History of Shin-Mei-Do Miso Company. Letter to William Shurtleff at Soyinfo Center, Aug. 12. 3 p. Typed, with signature.

• ***Summary:*** "Dear Bill, In 1977 I met you and Akiko in Tokyo. Our miso making journey began a year before when I found "The Book of Miso" in Uwajima-ya department store in Seattle [Washington]. Your book, "The Book of Tofu," was already my favourite cookbook and I was looking forward to new culinary adventures. It may sound trite but what I found in the "The Book of Miso" literally changed my life.

"Inside the book was not only a wealth of miso lore and recipes, complete and detailed instructions for making miso at home and on a commercial scale were there in the back of the book, too. With this information I knew that our family could set up our own miso business.

"In 1976 we had just moved to rural Denman Island but still had no idea of how we would make our living. My husband, Yoshi, was from a Japanese farm family and he remembered how his family had made miso at home every

© Copyright Soyinfo Center 2014

fall. But he was only a child then and knew only some of the details involved. Nevertheless, we were interested and in the fall of 1977, accompanied by our 4 year old son, I went to Japan.

"Thanks to an amazing bit of luck I received an introduction to Yaeko Nakata, sister of the president of Maruman Miso Company in Nagano prefecture. Ms. Nakata was in charge of the hand-made division of the company. She and miso maker Chisato Kobayashi allowed me to observe and participate in the koji making process. Because I was able to experience the making of koji, so crucial to the making of good miso, I felt that Yoshi and I would be able to succeed in miso making.

Note: Susan-Marie arrived in Japan in Oct. 1977 and was there until the end of February 1978–about 5 months. Thus, she was the first Caucasian and the first Westerner to travel to Japan with the specific goal of making miso commercially in the North America or Europe. She got very little support from anyone in the beginning. The trip was funded in part by money she had earned from planting trees for two weeks on Vancouver Island. "Most folks in Japan and Canada probably thought I was out of my mind to try to make miso in Canada." Yet without her struggle and her hands-on experience, the miso business in Canada could never have existed. On this trip she was accompanied by the now famous Japanese photographer, Mr. Ryuji Miyamoto.

"With very little capital but with youth and enthusiasm on our side we started work. It was 1979 and we had a 5 year old and a new baby boy. We made our first few batches in a woodshed. Our beans and grains were steamed in ½ whiskey barrels over a wood fire in a maple syrup cooker that we found in an antiques store. The upper part of our 10 acre property had been clear-cut some years before we bought it, so Yoshi used the logging slash to stoke the fires.

"That summer we built a new building. About once a month Yoshi drove our little red Datsun pickup truck to Vancouver where he bought sea salt and organically grown rice and soybeans. He also bought large oak barrels from Sweeney Cooperage in Vancouver. Two of the barrels could just squeeze into the back of the pickup and the bags of salt and grains and soybeans fit inside the barrels.

"We had no machines–no grinder, no mixer. Using a ½ barrel and a special pair of clean new gum boots, Yoshi and I took turns smashing cooked soybeans while the other poured in the salted koji and turned the miso-to-be with an extra large rice paddle that Yoshi carved from Douglas fir. Often one of us was carrying the baby on our back. Our elder son played in the shop while we worked. Over about 3 years we made 22 tons of miso that way.

"Did I tell you that Yoshi's first carpentry project ever was to build the koji incubation room in the woodshed? Our neighbours made the koji boxes from red alder wood and those boxes are still in good condition, nearly 30 years later.

"It is amazing what you can do when you are young, healthy, idealistic and ignorant! Even so, we realized soon enough that we'd have to have mechanical help to make a living. In 1982 we built an addition to the building and added 8 large wooden tanks from Arrow Tank Company of Buffalo, New York. By that time Sweeney Cooperage had already been torn down for Expo 86 in Vancouver. We also imported a miso mixing machine from Japan and bought a used grinder. A neighbour helped us set up a low pressure steam boiler by adapting a wood-fired house furnace. Used stainless steel steam kettles completed the production equipment.

"Every summer Yoshi bucked, split and stacked firewood for the boiler. He made an extra long wooden spoon to harvest the finished miso from the large tanks. He packed the miso by hand no matter how hot or cold the weather was. Only the koji incubation room was heated, yet even in mid-winter Yoshi stood there at the packaging table for hours in the freezing cold. Yoshi is very strong and fit for a man his age.

© Copyright Soyinfo Center 2014

"In September of 2006 Yoshi broke his collarbone in a bicycle accident. It never healed properly. In the meantime the cost of doing business had gone up incredibly. Ferry fares to the islands more than doubled. In 2008 we decided to retire and shut down our business after producing 220 tons of miso in nearly 30 years of business.

"If you would like to know more about how we made miso please don't hesitate to contact us. We are enclosing newspaper articles, 9 photographs and captions that explain them. Please keep these copies as we have backup copies of them.

"Sincerely,..." "

• ***Summary:*** Consolidated net sales rose 5.4% to $4.139 billion, operating income climbed 10.2% to $238.5 million, and net income rose 6.6% to $114.4 million. "Sales growth was hampered, however, by lackluster performance from Kibun Food Chemifa's soy milk drinks." Note: Dollar values may have changed at different percentage rates due to changing foreign exchange rates.

Page 1 is titled "Kikkoman Group global launch of new corporate brand logo and slogan. Written in orange, it is: "kikkoman: season your life." Above and to the right of the word "kikkoman" is the old hexagonal Kikkoman logo with the Japanese character meaning "man = 10,000" inside. "Kikkoman introduced its previous corporate logo in the Japanese market in 1987. In the two decades since then, Kikkoman has steadily globalized its operations and generates half of its operating profit in markets outside Japan." The new corporate brand logo represents the Group's "determination to harness both tradition and innovation in its business activities."

A photo (p. 7) shows Yuzaburo Mogi (Chairman of the Board and CEO) and Mitsuo Someya (President and COO).

Pages 8-9 show color photos of Japanese soy sauce products including *Tokusen Marudaizu Shoyu* (Premium shoyu made from whole soybeans–rather than the usual defatted soybean meal) and *Tokusen Yuki Shoyu* (Premium organic shoyu, certified by Japanese Agricultural Standards, JAS). Address: Noda, Japan.

11274. Kaplan, Lawrence. 2008. Legumes in the history of human nutrition. In: Christine M. Du Bois, C.-B. Tan, and S.W. Mintz, eds. 2008. Urbana, Illinois: University of Illinois Press. viii + 337 p. See p. 27-44. [40 ref]
• ***Summary:*** Contents: Introduction. Legumes in early prehistoric nutrition. Food grain legumes native to the Americas: Radiocarbon dating, beans in American archaeology, history and protein structure. The Near Eastern pulses: The classical texts, the broad bean (*Vicia faba*), lentil, pea, chickpea. The Asiatic and African pulses: Cowpea (*Vigna unguiculata* subspecies *unguiculata*), yard-long or asparagus bean (*Vigna unguiculata* subspecies *sesquipedalis*), mung bean or green gram (*Vigna radiata*), black gram (*Vigna mungo*), adzuki bean black gram (*Vigna angularis*). Note.

Throughout the world and throughout history legumes accompany cereal grains as primary components of human diets. "So pervasive is the combination of the combination of these complimentary food resources that they are often assumed to have been combined since the very beginnings of agriculture." In developing countries, "the proportion of protein derived from pulses appears to be in steady decline."

"Soy consumption is highest in industrialized, technologically developed Japan and the Republic of Korea [South Korea] (supply per capita per year of 7.53 kg and 8.10 kg, respectively) because of its central role in the traditional diet of these countries." Address: Emeritus Prof. of Biology, Univ. of Massachusetts, and former editor of the journal *Economic Botany*.

11275. *Organic and Non-GMO Report* (*The*) (*Fairfield, Iowa*). 2008. Monsanto sale of rBGH called a major milestone. 8(8):4-5. Sept.
• ***Summary:*** Monsanto announced that it has agreed to sell Posilac, its bovine growth hormone, to Eli Lilly and Co. for $300 million. The drug has failed to be approved in Canada, the European Union, Japan, Australia, and New Zealand. Milk "from cows injected with rBGH contains high levels of insulin growth factor-1 (IGF-1), a hormone that is linked to prostate and colon cancer."

11276. Osborn, Donald Z. 2008. Soybeans and soybean products in West Africa: Adoption by farmers and adaptation to foodways. In: Christine M. Du Bois, C.-B. Tan, and S.W. Mintz, eds. 2008. Urbana, Illinois: University of Illinois Press. viii + 337 p. See p. 276-297. [48 ref]
• ***Summary:*** Contents: Introduction. History. Growing soybeans in Africa. Soybeans as food. Soybeans for *Daddawa.* Bean curd. Soybeans and bean curd in Niger. Other local uses. Conclusion. Notes.

A table (p. 277) shows the earliest documentation of soyfoods in West African countries. For each country is given the year first noted and the source. The countries (listed alphabetically) are: Benin, Burkina Faso (former Upper Volta), Cameroon, Côte d'Ivoire, Gambia, Ghana, Guinea, Guinea-Bissau, Liberia, Mali, Niger, Nigeria, Senegal, Sierra Leone, and Togo. Note: Most of these dates and sources are identical to those published earlier in: Shurtleff, W.; Aoyagi, A. 1997. *Soy in Africa: Bibliography and Sourcebook, 1857-1997.* Lafayette, California. Soyfoods Center.

The section on "daddawa" is very interesting and well annotated. "One relatively early and by now fairly common adaptation of soybeans to local foodways in West Africa has been its use as a substitute for seeds of the *nèrè,* or African locust bean tree (*Parkia biglobosa*)." The resulting condiment is known as daddawa (or dawa-dawa) in Hausa, *sumbala* in the Mande languages, and *iru* in Yoruba. The physical form of daddawa may appear as a small ball, a patty, or a cluster of ripened beans, "but it is always black in color and has a very pungent odor." The product is traded widely from the areas of production. For example, some of the daddawa sold in markets in Niger was made in Nigeria. Making daddawa is traditionally a woman's work; it is relatively labor intensive and consumes significant amounts firewood [which in many areas is increasingly scarce].

The section titled "Bean curd" notes that a milestone in the effort to introduce tofu to West Africa took place when Osamu Nakayama, a soyfoods expert, was brought to Nigeria by the Japanese International Cooperation Agency (JICA) in 1989-91 to work with IITA in Ibadan. Working with local people, he saw the potential for making *wagashi* (also called *wara* in Yoruba [or *warangashi* in northern Benin]) the West African name of a soft unripened dairy cheese, from soybeans, curded with the traditional coagulant–the sap of the giant milkweed or Sodom apple tree (*Calotropis procera*). It took Nakayama six months of research to figure out how best to use the traditional African coagulant with soymilk. The resulting product is said to resemble the West African dairy cheese more than Asian tofu, yet it readily found its place as a substitute for the former. "It compared well with the cheese in flavor and texture, but had the important advantage of being much less expensive to produce."

In the decade that followed, the making of African-style tofu spread largely on its own through the north of Nigeria and across the border into Niger, becoming an important new source of income for many women. As it spread, new soymilk coagulants "were identified by local producers, notably water in which tamarind fruit had been left to soak and water from rinsing pounded pearl millet, left overnight" to sour.

The section titled "Soybeans and bean curd in Niger" begins: "Soybeans have been subject to a limited amount of agronomic research in Niger and are not produced in any significant amount." Note: This implies that soybeans have been cultivated in Niger, although in small amounts. Endnote 14 states that there have been some ongoing soybean trials in the southern part of the Dosso region.

According to American Peace Corps volunteers, tofu started to be made in about the year 2000 in the southern parts of the Zinder and Maradi regions. Since that time, tofu has been made and marketed in Niger using soybeans brought in from Nigeria, in many villages, towns, and markets, mainly in the Hausa-speaking north-central part of Niger. In 2001 it was possible to find tofu in the weekly markets of local villages in these areas, fried and sold with hot red pepper spice. "By 2002 it was more ready available in the cities of Zinder and Maradi and was produced in Birnin'Konni in the Tahoua region. By 2003 it was available in Gaya, and by midyear it was also available in Dosso town in the Dosso region."

Like the soybean used, tofu making clearly spread along the Hausa networks that cross the border. It seems significant that the Hausa names for tofu differ between Zinder and Maradi [in south central Niger] on the one hand, where a loanword from Yoruba–*awara*–is used, and Birnin'Konni [in southwestern Niger] on the other hand, where the term used is *kwai-da-kwai,* suggesting a comparison with the texture of eggs. This suggests that different networks within the larger Hausaphone area were involved the transmitting the process for making tofu.

In Niger, making tofu is a small home-scale activity. The women who make it usually do so to coincide with weekly rural markets or, if in larger towns, several times a week or even daily to fill the demand. Three curding agents are used. Four photos show tofu being made by an African woman

11278. McMullen, Michelle. 2008. Needed: Consistent non-GM soybean supply from Canada. *Ontario Soybean Growers' Update.* Oct. p. 1.
• ***Summary:*** "The Canadian Soybean Council's (CSC) 2008 incoming mission of Japanese buyers emphasized the importance of Canada's continued commitment to producing quality non-GM soybeans. Tsuento Sasaki, Trade Commissioner from the Canadian Embassy in Tokyo, joined the mission. Japan is Canada's largest market for food-grade soybeans.

"The group unanimously said that Japan's consumers will continue to demand non-GM food products. This presents a tremendous opportunity for Canada to increase its share of the Japanese market, as other non-GM soybean producing countries are unable to meet the demand.

"'The Japanese market is confident in Canada's ability to produce a quality, segregated non-GM soybean product,' says Jim Gowland, CSC Chair. 'Japanese soyfood manufacturers are now looking to Canada to be a consistent supplier of non-GM soybeans.'

"Japan continues to be Canada's largest importer of IP (identity preserved) non-GM soybeans. Nearly 100% of Canada's exports are non-GM for the food market. In 2007, Japan's total soybean imports totaled 4.16 million tonnes (metric tons), and Canada accounted for 7% of that amount. Of that 2007 total, approximately 1 million tonnes were for food uses.

"'Companies from across Japan are concerned about their ability to source non-GM soybeans in the future and are offering attractive premiums to producers for the extra work associated with growing IP soybeans,' says Gowland. 'Skilled, innovative Canadian soybean producers are needed to help meet the demand of markets such as Japan.'"

A photo shows a team of about five Japanese soy food manufacturers examining Ontario soybeans growing on a farm in September. "Ontario soybeans are the basis for Japan's highest quality tofu and miso products." Address: Canadian Soybean Council Manager.

11279. *Organic and Non-GMO Report* (*The*) (*Fairfield, Iowa*). 2008. Japanese company to triple non-GMO soy production in Canada: Market news. 8(9):9. Oct.
• ***Summary:*** In a few years, Kanematsu Corporation (Japan) plans to triple planting of non-GMO (not genetically engineered) soybeans for food use on 50,000 acres on Prince Edward Island, Canada.

Next year, PEI's soybean production is expected to be 15,000 metric tons grown on 15,000 acres–all for shipment to Japan. PEI farmers are shifting to growing organic soybeans from potatoes, which require high pesticide use and are less profitable due to falling demand.

Japanese makers of tofu, soy sauce, and other food processors use about 1 million tons a year of non-GE soybeans from overseas in addition to domestic organic soybeans. Kanematsu provides about 10% of those non-GE imports.

• ***Summary:*** In the section titled "Bayarea Restaurant Guide" is coverage of an event held by Japan Traditional Foods (makers of Tezukuri Natto) at De Loach Vineyard, Santa Rosa, California, on 15 Nov. 2008. Three photos. One shows Minami Satoh standing. Address: California.

11284. Lyddon, Chris. 2008. Global grain trade review: Volatility the dominant factor in the 'wildest 12 month history of the grain market.' *World Grain* 26(11):26-33. Nov.
• ***Summary:*** A table titled "Global grain trade activity (in 1,000 tonnes)" gives the following statistics for soybeans: 2007-08 Top exporters: 1. United States 31,434. 2. Brazil 25,500. 3. Argentina 13,500. 4. Paraguay 5,080. 5. Canada 1,825. World total 78,968 (+15% over last year).

Top soybean importers: China 36,500. E.U.-27 15,400. 3. Japan 4,050. 4. Mexico 3,750. 5. Argentina 2,950.

Also gives the top 5 importers and exporters of soybean meal for 2007-08. Exporters include: 4. India 4,850. 5. Paraguay 1,112. World total 56,2062 (+6%). Top importers: 1. E.U.-27 23,900. 2. Indonesia 2,400. 3. Vietnam 2,400. 4. Thailand 1,950. 5. Korea 1,835.

Various factors have been cited as the cause of this volatility: (1) Energy policy–using maize, rapeseed, and soybeans to make biofuels. (2) Commodity speculators–who can make prices rise faster than they would otherwise. (3) Hedge fund position limits. (4) Government intervention by embargoes and export taxes. (5) The low value of the U.S. dollar. (6) The long term trend (spanning about 15 years) of declining wheat acres. (7) Fundamentally tight stocks. (8) Disruption of supply by things like floods. Address: European editor; chris.lyddon@ntlworld.com.

11285. Sosland, Morton I. 2008. Consequences from growing wheat in foreign countries. *World Grain* 26(11):6. Nov.
• ***Summary:*** In 1973, when Richard Nixon was president of the U.S., soaring grain and soybean prices "prompted him to impose an embargo on U.S. soybean shipments. This controversial move led Japan, as a major importer of U.S. soybeans, to foster production of this crop in Argentina and Brazil."

This was an early example of "contract production," which is now looming as one of the more controversial issues facing the global grain industry. Saudi Arabia, for example, trying to secure its food supply, is seeking to purchase cropland in lots no smaller than 250,000 acres in countries like Sudan, Ethiopia, Kazakhstan, and Libya. Some have decried this as "Neo-colonialism," since the land will be used to grow crops for export, regardless of the food supply in the area where the crops are grown. Address: Editor-in-chief.

11286. Sudiarno, Tarko. 2008. Rustono: King of tempeh in Kyoto. *Jakarta Post* (*The*) (*Indonesia*). Dec. 1. www.thejakartapost.com /news/2008/12/01 /rustono-king- tempeh-kyoto.html.
• ***Summary:*** A color photo shows Rustono looking very happy and standing next to a tempeh making machine that he ordered from Bantul, Yogyakarta. Rustono, age 40 was born in Purwodadi, Central Java, Indonesia. He now lives in a Japanese village about an hour's drive from, Kyoto, Japan, with his wife and their two children. He likes living there, and finds the people friendly, just like villagers in Java.

Previously a bellboy for a star-rated hotel in Yogyakarta, he now has about 350 tempeh customers in Japan. One winter, in the snow, he and his wife built their own tempeh factory, 4 by 8 meters. Some 60% of his customers are Japanese. Address: Staff writer, Japan.

11287. Welters, Sjon. 2008. Re: History of work with amazake. Letter (e-mail) to William Shurtleff at Soyinfo Center, Dec. 17–in reply to specific questions. 4 p. 28 cm.
• ***Summary:*** "When I started to study macrobiotics in 1973 in The Netherlands I became aware of a product called amazake. It was not for sale at the time in The Netherlands. I learned how to make it, using koji, from cooking classes at the [macrobiotic] East West Center in Amsterdam. We always used Cold Mountain Koji, made and sold by Miyako Oriental Foods (owned by Mutual Trading Co.) in Los Angeles. We made a few gallons of amazake a week initially. I did not do much with it, aside from teaching how to make it during cooking classes I gave all over the Netherlands from 1977-1983. When I went to the USA in 1980 I saw the Mitoku pouch pack amazake from Japan."

Q: When and where and why did you start making and selling amazake? Ans: "In Alkmaar [a city in The Netherlands in the province of Noord Holland] we had a natural food store and restaurant between 1977 and 1983, and made amazake from koji imported from Japan. We made desserts with it and experimented with making our own sake and miso with the koji. It was just a fascinating sweetener and food that I loved from the first day I tasted it.

"In late 1982 I started to experiment with making my own domestic kind of amazake. But I did not use koji because it was expensive, foreign, and hard to get. So I used sprouted wheat and barley at first, but did not like the aftertaste the hulls of the grains gave. I then started to work with pure enzymes that I got from a European enzyme company; bacterial and fungal amylase and other enzymes, that worked well. I continued to make it off and on, with koji or enzymes, for home use but did not sell the koji-made

© Copyright Soyinfo Center 2014

amazake commercially until many years later.

"I took this knowledge and the enzymes to the USA when we emigrated to Fayetteville, Arkansas, in October of 1983, where I continued to experiment using enzymes from American companies. I told Joel Wollner, an old friend of mine and the reason we ended up in Arkansas, about my work with amazake and enzymes. During the winter of 1983-84 we came up with a plan to start a company that would produce (among other things) seitan, of which we would use its by-product, the starch, as the raw ingredient for an amazake-like product. Bob Kennedy, owner of the Chico-San rice cake company, who's company was also making rice syrup using enzymes at the time, was approached as a possible financier. He came to Fayetteville to talk and I eventually ended up at his rice syrup plant looking at ways to improve the process and see if we could work together. Nothing came of this however, as Chico-San got sold to Heinz shortly thereafter and I moved to Massachusetts and became a partner in Nasoya [a company that made tofu].

"(Note on the side: Joel took Bob to a facility of the University of Arkansas where they were shown UA's work on a "pounded sweet glutinous rice food," they, according to Joel, being totally oblivious to the fact that such a product already existed in Japan.)

"However, during our time in Arkansas, the founders of Rice Dream (Robert Nissenbaum and Ken Becker) were running experiments while they were living at an intentional community [Moniteau Farm] north of us in Jamestown, Missouri, trying to figure out how to make amazake ice cream. They were stuck with koji as being an ineffective and expensive way of turning this big kettle full of cooked brown rice into a sweet base for their rice ice cream. Joel and I visited them there and saw what they were doing. Afterward Joel continued his contact with Chico-San and spoke to Peter Milbury (who after Chico-San's sale, started to to work for Lundberg Farms) there about my experiments with enzymes. The word was out and no sooner Robert and Ken started to experiment with enzymes, too. They eventually developed what we now know as Rice Dream, the non dairy ice cream, and Rice Dream the drink, both amazake-inspired products widely available in the US.

"In about 1993, while working in Aveline Kushi's sushi restaurant in Stockbridge, Massachusetts, I learned that Mutual Trading Company had a branch in New York, and that they sold Cold Mountain koji–although I think it was still made in California.

"In 1997 we started our restaurant in the back of State Street Market at 20 State Street, Montpelier, Vermont. It was named 'The Wrap' until April 2002, when the name was changed to 'Rhapsody,' the present name. We started making and selling amazake at the same time we opened the restaurant. Although this amazake was unflavored it was naturally fortified with kombu–just like Eden soymilk. It was sold in 12 fl. oz. plastic bottles in the natural food store cooler, without a label on the bottle; the label or sign was on the shelf just below the bottles.

On 3 May 2002 we expanded into our own restaurant at 28 Main Street in Montpelier, and changed our name to "Rhapsody" from "The Wrap." In early 2003 we introduced three flavors of amazake in larger (16 fl. oz.) plastic bottles and discontinued the original amazake fortified with kombu. These had nice color labels and were sold in our cooler.

"Currently one of our people at Rhapsody makes about 80 pints per week in our restaurant kitchen, but the demand is much higher. We are just not set up yet to produce more. We cook the amazake and bottle it hot and freeze it to give it its shelf life of one year (at least). Refrigerated it lasts about 3 weeks. Hopefully somewhere in 2009 we will be able to produce at least enough for the New England market.

"Our restaurant, Rhapsody, is self-serve. Therefore, our amazake is not on our menu (we have no menu) and we do not serve it (hot or cold) in cups to people as they are dining. Rather, we sell it as a drink from our beverage cooler (three flavors: I will send you the labels) for $3.50 per pint, and to stores in Central Vermont. Recently Associated Buyers of Barrington, New Hampshire, has started to distribute the products, too. It is a special, yet exclusive product that deserves wider acceptance, which will come over time as people will start to embrace a more natural diet. I'd be happy to assist the regional development of amazake production.

"The Bridge of Connecticut sells their original amazake in Whole Foods in the Boston area. Charlie Kendall stopped making it as far as I know quite a while ago."

Note: Sjon has never learned how to make koji starter, so he has always had to buy ready-made koji for his amazake. Address: Founder and owner, Rhapsody, 28 Main St., Montpelier, Vermont 05062. Phone: 802-229-6112.

11294. Pettid, Michael J. 2008. Korean cuisine: An illustrated history. Korean-style soy sauce, miso, and red pepper sauce (Document part). London: Reaktion Books. 223 p. [118 + 110 endnotes]
• ***Summary:*** This is the best book seen to date on this subject. There are many records of the early Korean kingdoms using soy products; for example a record of 683 CE states Korean-style jang (*toenjang*) and soy sauce (*kanjang*) were among the presents exchanged in a royal wedding (p. 40, endnote 15. See: Kim Pusik, *Samguk sagi* {"History of the Three Kingdoms"} translated into modern Korean, Yi Pyongdo {Seoul, 1996}, Vol. 1, p. 201).

The section on "Condiments and seasonings" (p. 42) begins: An old Korean proverb states, "Food is only as good as the *jang"* (sauces based on soybeans).

Korean cookery has a wide range of flavors which include the stronger flavors of soybean paste stew (*toenjang tchigae*) and *kimch'i.* Moreover, even among the soy sauces (*kanjang*) and Korean-style misos (*toenchang*) there is a tremendous range of varieties and regional specialties, with many distinctive flavors.

A work titled *Chungbo sallim kyonje* (Farm management, supplemented and enlarged), written in the early 1800s points out the importance of *jang.*

"Jang is the source of all flavors. If the taste of a house's *jang* is not good, even if there are good vegetables or flavorful meats, one cannot prepare good food. The household head must always keep in mind the fermentation of *jang,* and through this will be able to have well-aged and good *jang."*

Likewise, Yi Pinghogak (1759-1824) in her *Kyuhap ch'ongso* ("Encyclopedia for Women's Daily Life") discusses the best days to make *jang* and also the importance of having the *changdoktae,* the terrace upon which earthenware jars of soy sauce and other *jang* are kept, face in an auspicious direction, as determined by the yearly calendar.

The three main types of *jang* are *toenjang, kanjang* and *koch'ujang.* The suffix *-jang* refers to a fermented sauce based on soybeans; *toenjang* means 'thick' soybean sauce and *kanjang* means 'salty' liquid soybean sauce.

The basic ingredient used to make both these sauces is soybean koji (*meju*) which was traditionally made in the late autumn and allowed to ferment until past the lunar New Year, about 3 months in all. The blocks of *meju* were then soaked in large earthenware pots of brine to make *jang* and *toenjang.*

In Korea, there are three basic types of soy sauce (*kanjang*)*:* (1) a strong-flavored sauce with a dark color (*chin kanjang*), (2) a medium-flavored sauce with a light-brown color (*chung kanjang*), and (3) a weak-flavored sauce with a light, clear color (*mulgun kanjang*). Type (1) requires at least five years of fermentation, and because of its sweet flavor and dark color it is used for boiling, fermenting, or as a seasoning in medicinal rice (*yak pap*). Type (2) was traditionally used as a seasoning for vegetables or stews, whereas type (3) which was fermented for 1-2 years used mainly as a seasoning for soups.

Given the importance of soy sauce in Korea, it us no surprise that recipe books of the Choson

Joseon period (1392-1910) offer dozens of variations

© Copyright Soyinfo Center 2014

on the basic recipe. For example, *Sallim kyongje* ("Farm management") alone offers some 25 variations.

In each household, soy sauce was prepared with great care, and each step in the process was carefully followed according to the family tradition. If a daughter-in-law failed to match the preferred taste of the soy sauce in her husband's household, it was seen as a bad omen for the family. Many families even made small ritual offerings to the household gods when making soy sauce in order to ensure success. Other customs such as hanging gold-colored thread, red chili peppers, or traditional socks–all believed to repel malevolent spirits–around the earthenware pots of soy sauce were done to keep away malicious spirits.

During the period 1910-1945, when Korea was a colony of Japan, Japanese-style shoyu was introduced to Korea and mass-produced in factories. However the flavor of this new soy sauce did not match the tastes of the Korean people, so despite the rationing of crops for the military, Koreans continued to make their traditional soy sauce, thereby preserving this important element of Korean food culture.

A detailed discussion of Korean-style miso (*toenjang*) is given next, followed by a shorter discussion of *koch'ujang* which is made by mixing *meju* powder, glutinous rice or regular boiled rice, and red chilli pepper powder–and then fermenting the entire mixture. Address: Asst. Prof. of Korean, Dep. of German, Russian, and East Asian Languages, Binghampton Univ., England.

"The firm's 2007 turnover increased 10% to 260 million euro. The company has a workforce of 950."

In Nov. 2005 ABN AMRO Capital France acquired Nutrition & Santé from Novartis for 220 million euro.

11299. Conlon, Michael. 2009. The history of U.S. soybean exports to Japan. *GAIN Report* (*Global Agriculture Information Network*) No. JA9502. 14 p. Jan. 20. [42 ref]
• ***Summary:*** An excellent, very readable historical summary. Contents: Introduction: The amazing soybean. The Auckland. Perry and the black ships. William Morse: USDA's plant explorer in Japan and the father of soybeans in America. U.S. Market development efforts in Japan. Recent activities in market development. End notes.

"The 1973 U.S. soybean embargo, unfortunately, caused some anxiety in the strong relationship between the United States and Japan. Soybeans were in short supply in the middle of 1973, and as an inflation-fighting measure, on June 27, the U.S. Secretary of Commerce imposed an export embargo on soybeans, cottonseed, and various meal and oil products from these commodities. Less than a week later, on July 2, the embargo was lifted. The embargo actually did not affect the volume of soybean exports to Japan as the country imported a record volume from the United States in 1973. However, since Japan relied on the United States for this food staple (in 1973 the United States accounted for over 88 percent of Japan soybean imports) the embargo sent shock waves through the Japanese government and food sector.

"USDA took quick action to relieve Japan's feeling of vulnerability. In early 1974, Secretary of Agriculture Earl Butz took a trip to Asia and Japan to assure the Japanese that "we made a mistake" and that the United States would never embargo food products again and that we were a reliable supplier. Secretary Butz and the Japanese Minister of Agriculture Abe met in Washington, DC on August 12, 1975. The Butz-Abe Understanding grew out of this meeting, where the United States agreed to supply Japan with certain minimum levels of grains and soybeans that were discussed in the August 12th meeting. The annual amounts were 3 million tons of wheat, 3 million tons of soybeans and 8 million tons for feeding. In all three years of the Understanding (1976-78) the minimum levels were exceeded.

"Every year since 1985, ASA Japan has hosted a

© Copyright Soyinfo Center 2014

Soybean Quality Conference to discuss customer concerns, provide the latest information on the quality of the new U.S. crop, and get the Japanese industry's insights and estimates of future needs. Around 200 participants, from crushers and traders to food manufacturers and the media, attend each year. The Conference in Japan has proved so successful that ASA now holds them in South Korea, China and Taiwan."

Figures show: (1) Bar chart of U.S. soybean exports to Japan (1,000 metric tons). They grew from 3.4 in 1946, to 572 in 1955, to 1,021 in 1960, to 2,001 in 1968, to 3,126 in 1972 to a peak of 4,646 in 1983, falling to 3,325 in 2007.

11300. Clearspring, Ltd. 2009. Clearspring (Website printout–part). www.clearspring.co.uk Printed Jan. 28.
• ***Summary:*** Contents: Home page. About us. Awards. Glossary. FAQ. News. Books. Links. Stocklists. Trade. Contact. Food quality. Producers. Health. Recipes. Where to buy.

"Introducing the chairman: Christopher Dawson was born 19 September 1953, at New Plymouth Hospital, New Zealand and grew up in Opunake, a rural town in New Zealand. He is the third son of William Geoffrey and Joan Dawson.

"Education: He did his primary, secondary and tertiary education in New Zealand. He first started independently studying vegetarianism and organic agriculture at the age of 18. In 1974 he came to London to further his studies of organic agriculture, both at the Henry Doubleday Horticulture and Nutrition Research Centre in Braintree and the Bio Dynamic Agriculture section at the Rudolf Steiner Emerson College, Sussex.

"Beginning Organic Food Distribution: In 1977, he opened and managed the East West Natural Foods Store at the Community Health Foundation, Old Street, London. He developed this shop into a distribution centre for traditional natural / macrobiotic foods, sourced from both local organic farms and from abroad, especially from Japan.

"From August 1978 through to January 1980 he traveled extensively throughout Europe, America, Australia and Asia, investigating the traditional dietary practices and food-processing techniques. He studied at the East West Foundation in Boston, Massachusetts, U.S.A. about Far Eastern philosophical principles and traditions and studied the distribution network of the natural foods movement in both America & Europe, as well as Australia and New Zealand.

"Eighteen Years in Japan: Christopher made his first trip to Japan in July 1979, visiting natural food enterprises throughout Japan with Mr. A. Kazama, president of Mitoku Co. Ltd. He returned to Japan in January 1980 and began extensive studies into the daily life and cultural and dietary practices of the Japanese people.

"At the end of 1980 he commenced full-time employment at Mitoku Co. Ltd., the major exporter of traditional, natural Japanese foods. During the eighteen years he spent with the company Christopher studied Japanese Foods & production, worked with the producers to develop products to suit the needs of customers abroad and help the producers become compliant with EU organic certification. He also travelled extensively to introduce the foods to markets worldwide, with the intention to see if Japanese foods could really become international foods.

"Building Clearspring in the UK, Europe and the Middle East: In September 1993, Christopher bought the Clearspring Ltd. company, which was then a London based wholesaler with one shop, the very shop that Christopher started in 1977! By 1998, he felt he had sufficient knowledge of traditional, top quality Japanese food and decided it was the right time to come back to UK and to focus on marketing organic and authentic Japanese foods under the Clearspring brand.

"Recognition from the Japanese government: On 25 May 2007, Christopher received the Award for Overseas Promotion of Japanese Food 2007 from the Ministry of Agriculture, Forestry and Fisheries of Japan, for his distinguished contribution to the promotion of Japanese organic food worldwide."

Down the right side of this page are the following photos: (1) Christopher seated at a desk, writing in a notebook, looking very happy, at an early age (about 6), already a promoter of the written word. (2) Christopher at the East West Natural Foods Store in 1977. (3) Christopher with his mother at home in New Zealand. (4) Christopher at Mitoku in Japan (with Mr. Kazama and staff) in the late 1980s. (5) Photo taken 11 Oct. 1990 with Lima Ohsawa, then 91, the wife of macrobiotic teacher George Ohsawa, and Aveline Kushi, then 67, the wife of macrobiotic teacher Michio Kushi. (6) Christopher with his young family (Japanese wife and 3 children) in Japan in the early 1990s. (7) Christopher, with his wife and two sons in Spain in 2006. 11301. Yoshihara, Akino. 2009. The temptations of tempeh. *Daily Yomiuri Online* (*Japan*)**.** Feb. 19. www.yomiuri.co.jp / dy/features/culture /20090219TDY16002.htm.
• ***Summary:*** Tempeh was introduced to Japan about 30 years ago, but it has not become widely popular since there are now few tempeh manufacturers in Japan. Yet tempeh is made in Shiroishicho in Saga prefecture, Tokyo, Nagano prefecture and Okayama prefecture (located in southwestern Japan, just north of Shikoku Island). In Okayama prefecture about 20 firms make tempeh and 2nd generation tempeh products such as ramen noodles with tempeh or miso with tempeh. Moreover, many tempeh-related events have been organized, including cooking classes.

In 1987 the Japanese Society of Tempe was organized. Today it is headed by Masaharu Horii, professor in the Graduate School of Human Life Sciences, Notre Dame Seishin University, Okayama. The society promotes tempeh "to both the food industry and individual consumers through an annual conference featuring expert lectures and a cooking workshop."

"The society is trying to popularize consumption of tempeh as part of people's daily diet. We plan to publish a book containing useful information for consumers, such as the health benefits and a buyer's guide."

In Indonesia, long popular among the working classes, tempeh has recently become popular among the upper classes because of its many health benefits.

Note: Masaharu Horii, born in March 1939 and a researcher in the field of eating habits and food science, can be contacted at: Notre Dame Seishin University, Graduate School of Human Life Sciences, 2-16-9 Ifukucho, Okayama-shi, Okayama 700-8516 Japan. Fax: +81-86-252-5042. Address: Staff writer, Japan.

• ***Summary:*** Rustono, a man born in Indonesia, lives with his Japanese wife, Tsuruko Kazumoto and two daughters in a house adjacent to their tempeh shop in Otsu, Japan. Otsu, the capital of Shiga prefecture, is located at the southwest end of Lake Biwa in Central Japan, just east of Kyoto.

The two met in 1995, when Tsuruko took a trip to Indonesia, at a hotel in Yogyakarta where Rustono worked. "After maintaining a long-distance relationship, Rustono came to Japan in October 1997, and the couple married and started living in Uji, Kyoto Prefecture." Rustono, who was interested in food and Japanese culture, first worked at a confectionery shop in Uji, where he carefully observed the Japanese quality control and inspection techniques. He later worked at a food factory, where he chopped vegetables for two years. It was at about this time that Rustono got the idea of making tempeh in Japan.

Using a recipe his mother got from a neighbor, Rustono and his wife made 40 packages of tempeh a day. After about four months, however, they ran into difficulties. The quality of the tempeh bean to decrease [probably due to a decrease in the quality of the starter culture].

So Rustono returned to Indonesia for several months; there he visited about 60 tempeh makers, and vastly increased his knowledge of how to make tempeh.

Returning to Japan with renewed commitment, he also decided to change his sales strategy by focus on Indonesians throughout Japan, starting with his Indonesian friends. Before long, "his tempeh's reputation [and sales] began to grow among foreigners and Japanese by word of mouth."

In 2000 the couple moved their family and business from Uji to Otsu, where they lived in a house belonging to Tsuruko's father. They chose Otsu, in part, because of its clear water. By themselves, they built a tempeh shop during a snowy winter, "carrying sand from the bottom of the river to mix with concrete." They dug a well to reach the clear water. Good water is important in making good tempeh. They also created a new brand: Rusto's Tempeh.

They now make large batches of tempeh about 2-3 times a month, then freeze it. They ship their tempeh to about 300 locations from one end of Japan to the other.

The business is growing. Recently the couple purchased property just a few minutes walk from their home on which to build a new house and larger tempeh shop. Address: Staff writer, Japan.

11303. Yang, Gong; Shu, Xiao-Ou; Li, Honglan; et al. 2009. Prospective cohort study of soy food intake and colorectal cancer risk in women. *American J. of Clinical Nutrition* 89(2):577-83. Feb. [64 ref]
• ***Summary:*** New research suggests that women, especially over-50s who consume a lot of soy can significantly cut their risk of developing bowel cancer. Researchers studied the diet and health of 68,412 women aged 40-70 in Shanghai, China. After adjustment for age, birth calendar year and total energy intake, consumption of soy foods was significantly associated with a decreased risk of colorectal cancer and the risk of colorectal cancer decreased with increasing soy food intake, primarily among postmenopausal women. According to the authors, the risk decreased more than 30% among women who were in the top third of soy food intake compared with women in the bottom third.

The authors believe that the findings may help explain why fewer people in countries such as China and Japan,

© Copyright Soyinfo Center 2014

where soy is a staple part of the diet, develop bowel cancer compared with western countries, where soy consumption is low. They suggest that the study should be repeated in non-Asian women with different genetic backgrounds and lifestyles from those in this study before public health advice based on the new research can be given. Address: 1-2. Dep. of Medicine, Vanderbilt Epidemiology Center and Vanderbilt-Ingram Cancer Center, Vanderbilt Univ. School of Medicine, Nashville, Tennessee 37203.

11304. Smith, Patricia J. 2009. Re: The Natural Products Expo at Anaheim (Color postcard). Letter to William Shurtleff at Soyinfo Center, March 7. 1 p. Handwritten.
• ***Summary:*** A Mickey Mouse postcard, with Goofy, Mickey and Minnie Mouse, Donald and Daisy Duck, etc. On the front: "Hello! from California."

Patricia writes: "Well, the Japanese have made an impression at the expo–along with soyfoods and probiotics. There are 1,600 booths and 50,000 people. the aisles are jammed. The atmospheric is electric." Address: Mill Valley, California. Phone: (617) 354-2001.

11305. House Foods America Corporation (HFAC). 2009. House Foods America Corporation (Website printout–part). www.house-foods.com Printed April 15.
• ***Summary:*** Contents: Welcome to House Foods America (dynamic banner): We are engaged in three operations: Curry & More, Tofu & More, Curry Restaurant. If you click tofu: Dynamic page & video of products–Taste & Comfort. Contents: About us. All about tofu. Products. Recipes. Production process. FAQ. What's new.

At "About us" is a brief corporate chronology / history: 1981–House Foods, Japan opens a sales office in Los Angeles. 1983–Acquires a fifty percent stake in the Hinode Tofu manufacturing company, one of the most respected brands in the country and enters into the Tofu business. 1983–The first Curry House restaurant opens in Little Tokyo (Los Angeles), introducing local Californians to Japanese cuisine with a contemporary atmosphere. 1997–A new state-of-the-art Tofu manufacturing facility opens in Garden Grove, California. All HFAC operations are consolidated at the facility. 2000–To expand business on the East Coast, HFAC opens New York office. 2006–HFAC opens its second plant, a new state-of-the-art tofu manufacturing facility in Franklin Township, Somerset, New Jersey. 2007-2008–With two major plants servicing the country, House Foods America Corporation becomes nationwide. Address: Garden City, California.

11306. Benanti, John. 2009. Re: Growing and using soybeans in Petaluma, California. Letter (e-mail) to William Shurtleff at Soyinfo Center, April 20. 1 p.
• ***Summary:*** "One final tidbit. A colleague found a clipping in our "Agriculture" file which I did not see. An ad from the newspaper of May 12, 1917 for the "Hay, Grain and Feed Market" lists, among other things, Soyo Bean Meal selling for $2.75. The paper is the Petaluma Argus. We think, rather than an ad for a specific market (store) the list is a list of market prices for a wide variety of agricultural foodstuffs including chickens, ducks, turkeys and butter. The list does not indicate the quantity of meal available for the $2.75 price.

"I will mail you a copy of the May 12, 1917 list, and one from December 31, 1912 and one from July 5, 1917. Thanks to erroneously pulling out the 'Architecture' file instead of the 'Agriculture' file to make you a copy of May 12 I found two other lists which mention soy beans misfiled in Architecture. I will send you copies of all three. I did go through the rest of the agriculture and architecture files and found no other lists. Our filing system, done by volunteers, is not the perfect system a researcher might like it to be.

"I will also send you a copy of a page from the 1919 Sanborn fire insurance map for Petaluma which shows the Soy Bean Co. mill at a time it was located on Weller St., a few blocks from Wilson. I have gone over the 1923 Sanborn map and do not find the mill anywhere on it. I can not explain why it is not there when the directory says it was on Wilson Street in 1923.

"We do not have the old newspapers on microfilm here at the museum. I will go to the local library tomorrow and search their microfilms to get the page numbers, if I can, for the three lists I am sending you.

"Petaluma was a huge poultry center in the 1920s; both eggs and chicks were shipped down the river [the Petaluma River into San Pablo Bay, adjoining San Francisco Bay] in great numbers. I think the ads were meant to tell local farmers and ranchers what prices they could expect for their goods. They 1912 list gives Poehlmann & Co. prices for meat, Drees prices for poultry and eggs, and McNear prices for grains. Poehlmann was the largest meat wholesaler, Drees the biggest poultry dealer and McNear the biggest grain dealer. McNear was known locally as the king of Petaluma, a powerful and influential businessman." Address: Researcher, Research Library, Petaluma Museum, Petaluma, California.

11308. *Soyfoods Canada Newsletter.* 2009. Canadian soybeans–a sustainable crop. Spring. p. 4.
• ***Summary:*** "Canada accounts for almost 2% of the world's soybean production. In 2007, approximately 2,700,000 tonnes [metric tons] were produced in Canada, on 2,870,657 acres (1,161,755 hectares). Soybeans are grown in three provinces: 215,006 acres in Manitoba, 434,715 acres in Quebec, and 2,224,936 acres in Ontario.

"Canadian soybean producers are known for innovative and sustainable production practices... Canada's soybean industry is known for its superior ability to segregate and trace soybean crops from seed through to end user, referred to as Identity Preservation (IP).

"Over 40%, or about 1.7 million tonnes of Canadian-grown soybeans are exported to markets such as Japan, Malaysia, Singapore, Hong Kong and Taiwan. They are used to make Asian food staples such as tofu, miso, natto, and soymilk. Japan only produces about 12% of its own country's food grade soybean requirements, and their consumers demand non-genetically modified product. Japanese buyers value Canadian soybeans because of our industry's IP ability.

"Growing soybeans leaves a relatively small carbon footprint. As a legume, the soybean plant's ability to 'fix' its own nitrogen virtually eliminates the need for petroleum-based nitrogen fertilizer. The wide canopy of leaves formed by soybean plants helps to minimize the need for herbicide sprays."

11309. Soyafarm USA Inc. 2009. Soyafarm (Website printout–part). www.soyafarmusa.com Printed June 28.
• ***Summary:*** Contents: Home page. Retail (Soyafarm Bistro Burger {meatless}, Edamame Shumai, Gourmet Tofu Delights). • ***Summary:*** Production of tempeh has long been the domain of cottage or home industries. At one kampung (village; or neighborhood, or district in a city) in Tegal Parang, South Jakarta, you can see how tempeh is made at home. About 90% of the 300-plus inhabitants of Tegal Parang ("city of soy") make tempeh and/or tofu for a living. For more than 30 years, Muhammad Bintoro, age 56, has been living in this kampung and making tempeh. His tempeh shop is in his kitchen plus living room inside his home of 20 square meters that he has called home for the past 15 years.

Each day Muhammad buys 40 kg of soybeans, which his son washes and soaks overnight. The next morning Muhammad pours the softened soybeans into a machine that he built himself. He used to tread the soaked beans underfoot to remove the hulls, but now he simply runs them through this machine. The process for making tempeh is then described. Tempeh that is started on Thursday will be ready to sell on Sunday.

A color photo shows soaked soybeans being poured (with their soak water) into a square wooden box atop a soybean dehuller. Address: Staff writer, Japan.

11311. **Product Name:** Chamame (Edamame Frozen in the Pods).
Foreign Name: Wel-Pac Chamame.
Manufacturer's Name: Marukai. Imported by JFC International. Product of Taiwan.
Manufacturer's Address: Cupertino, California.
Date of Introduction: 2009 July.
Ingredients: Soybeans (in the pods).
Wt/Vol., Packaging, Price: 14.1 oz (400 gm) plastic bag. Retails for $1.68 at Marukai (2009/07, Cupertino, California).
How Stored: Frozen
New Product–Documentation: Product with Label purchased at Marukai in Cupertino, California by Tak Kimura and wife. 2009. July 14. Pre-printed plastic bag is 9½ by 6½ inches. Filling front of bag is color photo of bright green edamame in the pods on a *zaru* (circular woven bamboo tray), atop a *sudare* (bamboo mat). Text is mostly in Japanese, but in the upper left corner is written in roman letters: "Wel-Pac. Chamame. Specially selected soybeans in

© Copyright Soyinfo Center 2014

pod." On back of bag are nutrition facts in both English and Japanese. The text is in two columns, each 3 inches wide, one in English and the other in Japanese. The top of each explains what chamame are and the bottom gives cooking directions. "Chamame Soybeans in Pod uses a special kind of Japanese soybean called Chamame." It "has been produced only in some areas of Japan for centuries but lately has gained popularity among food connoisseurs, as it has an exquisite sweetness and a distinctive aroma." Directions: Bring 6 quarts of water to boil in a large saucepan. Add contents of package and ½ teaspoon of salt (optional). "Return to a boil. Boil 5 to 6 minutes. Drain. Rinse with cold water to cool. Drain well. Serve as an appetizer or snack. Open pod; eat the beans inside and discard pod. If desired, add cooled, shelled beans to tossed green, bean, or pasta salads."

11312. Shurtleff, William. 2009. Re: Research on soy sauce in the archives of the Dutch East India in the Hague, Netherlands. Letter (e-mail) to Dana Jacobi, food writer, New York City, Aug. 1. 1 p.
• ***Summary:*** "Did I tell you that I hired an expert in Dutch archival research for two years to send me documents showing how the Dutch brought 'soy' [sauce] from the Dutch East Indies to Amsterdam–when they were sent and sold everywhere by Dutch and British merchants with ships.

"Soy sauce was being sold in retail shops in New York City by 1750–the first form of soy to arrive in the British North America, even before the soybean itself. Of course nobody but Samuel Bowen realized that 'soy' was made from soybeans. Bowen was the first to actually make commercial soy sauce in the British North America.

"He had worked at the archives of the Dutch East India Co. for years and could read the handwritten Old Dutch that appears in the letters, logs, manifests, etc. He sent me both photocopies of the originals and his translations into English of the relevant parts.

"He made a breakthrough when we realized that by 1637 the Japanese were using the ancient word for soy sauce–Murasaki–which means 'deep purple.'

"The only Japanese food item that the Dutch loved more than soy was–guess what–sake! The more things change, the more they stay the same. The Dutch also ordered lots of miso, umeboshi, and pickled vegetables for their personal tables at Dutch trading posts in the East Indies

"That story, now ready to be published, is filled with interesting and unexpected twists and turns. I hope to have a it published as part of the History of Soy Sauce on our website within the next 12 months." Address: Founder and Director, Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11313. Kikkoman Corporation. 2009. Annual report 2009. Year ended March 31, 2009. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 41 p. 28 cm. [Eng]
• ***Summary:*** Largely as a result of the global financial crisis, starting in the fall of 2008: Consolidated net sales decreased 0.3% to $4.210 billion, operating income fell 14.6% to $207.8 million, and net income declined by 76.0% to $28.0 million. Note: Dollar values may have changed at different percentage rates due to changing foreign exchange rates.

Page 1 is titled "Kikkoman Corporation shifts to a holding company structure." The shift will be effective 1 Oct. 2009. "The transition will entail the creation of several new spin-offs to operate the Group's existing businesses. A chart shows the holding company structure after 1 Oct. 2009. Under Kikkoman Corporation (the holding company) are eight divisions: 1. Kikkoman Business Services Company (new). 2. Overseas business. 3. Other domestic businesses. 4. Fodchemifa Co., Ltd. 5. Manns Wine Co., Ltd. 6. Nippon Del Monte Corporation. 7. Kikkoman Beverage Company (new). 8. Kikkoman Food Products Company (new).

"We have revised our business principles based on the following three principles. (1) To pursue the fundamental principle 'consumer oriented.' (2) To promote the international exchange of food culture. (3) To become a company whose existence is meaningful to the global society."

A photo (p. 7) shows Yuzaburo Mogi (Chairman of the Board and CEO) and Mitsuo Someya (President and COO).

Pages 8-9 show color photos of Japanese and overseas soy sauce products including *Tokusen Marudaizu Shoyu* (Premium shoyu made from whole soybeans–rather than the usual defatted soybean meal) and *Tokusen Yuki Shoyu* (Premium organic shoyu, certified by Japanese Agricultural Standards, JAS). Overseas: Less Sodium Soy Sauce (North America). Teriyaki Sauce (3 types) (North America). Sweetened Soy Sauce (Europe) (*Sauce Soja Sucrée*). Herbal Soy Sauce (Asia; made in Singapore with a fragrant blend of sweetness and herbs). Address: Noda, Japan.

11315. Fernstrom, J.D. ed. 2009. 100th anniversary symposium of umami discovery: The roles of glutamate in taste, gastrointestinal function, metabolism, and physiology. *American J. of Clinical Nutrition* 90(3S):705S-881S. Supplement. Sept. *
• ***Summary:*** Umami is a taste sensation that is savory or meaty and is produced by several amino acids (such as glutamic acid) and nucleotides. Umami is increasingly

© Copyright Soyinfo Center 2014

considered a fifth basic taste ("savoriness"), alongside sweet, sour, salty, and bitter. Umami is found in natural foods such as *konbu / kombu* (a sea vegetable; *Saccharina japonica / Laminaria japonica*) and *shiitake* mushrooms.

Contents: Program participants (directory). Symposium keynote address. Historical perspectives (4 papers). Receptors, transduction, perception: session I (6). Receptors, transduction, perception: session I (6). Gastrointestinal tract (6). Absorptive and postabsorptive handling (6).

11316. Pharmavite / Soyjoy. 2009. During the Dust Bowl, soybeans did more than just revive the earth. They helped revive America (Ad). *Martha Stewart Living* (*magazine*). Sept. p. 44.

• ***Summary:*** A full-page color ad. On the vertical left two-thirds of this ad are a color illustration of a soybean plant with deep roots, color photos of a compass, a small red stock transfer certificate, and a green soybean pod with two green soybeans, and black and white photos of a farm and the inside of a farmhouse during the Dust Bowl days. On the right one-third is a column of text with a color photo of a Soyjoy bar at the bottom. The text begins:

"The 1930s, The Great Depression turned the land of opportunity into a land of despair." Unwise farming practices, overgrazing and drought created the Dust Bowl.

"Enter the soybean. Packed with soil-replenishing nitrogen, it gave back to the land what crops like corn and wheat stripped away. Planted in large quantities and utilized in crop rotation practices first developed in China, soybeans helped suppress erosion and hold the ground together.

"With the stabilization of the land helping to stabilize the economy, America was slowly pulled out of the Great Depression. Thanks in part to the amazing soybean–for over 5,000 years an integral part of cultures and diets.

"Today, it is the same historic soybean that we take, mix with fruit, and bake to make Soyjoy.

"Packed with soy. Baked in history." soyjoy.com.

This ad also appeared in *Redbook* magazine, Sept. 2009 (p. 8). Address: Mission Hills, California.

11317. Lyddon, Chris. 2009. Global grain trade review: Despite soaring demand, record grain production puts surplus at highest point ever. *World Grain* 27(11):28-32, 34-36. Nov.

• ***Summary:*** A table titled "Global grain trade activity: Marketing years as indicated (in 1,000 tonnes)" gives the following statistics for soybeans: 2008-09 Top exporters: 1. United States 34,836. 2. Brazil 29,350. 3. Argentina 5,965. 4. Paraguay 2,300. 5. Canada 1,975. World total 76,324 (-4% from last year).

Top soybean importers: China 39,800. E.U.-27 12,800. 3. Japan 3,450. 4. Mexico 3,100. 5. Taiwan 1,830.

Top soybean meal exporters: 1. Argentina 25,000. Brazil 12,772. 3. United States 7,983. 4. India 3,150. 5. Paraguay 1,167. World total 52,988 (-5%). Top soybean meal importers: 1. E.U.-27 22,150. 2. Indonesia 2,450. 3. Vietnam 2,300. 4. Thailand 2,100. 5. South Korea 1,850.

A two-page color spread shows (for major importing countries or regions, for *all* grains) "Grain imports and exports by major seaports" (in tonnes, calendar year 2008) (plus the increase or decrease compared with last year). A world map shows where each port is located. The tables of exporting ports have a blue background whereas the tables of importing ports gave a green background.

The main exporting ports in the USA are (in descending order of volume, 1,000 tonnes): 1. South Louisiana 22,828,781. 2. Tacoma, Washington 6,785,247. 3. Corpus Christi, Texas 5,423,867. 4. Houston, Texas 5,194,172. 5. Portland, Oregon 4,410,476. 6. Brunswick, Georgia 819,790. 7. Duluth, Minnesota 612,149. No importing ports are shown for the USA.

The main exporting ports for Brazil are: 1. Santos 10,101,975. 2. Parana 4,172,447. The main importing port for Brazil is: Santos 1,339,593.

The main exporting ports for Argentina are: 1. San Martin / San Lorenzo 34,636,170. 2. Rosario 14,847,183. 3. Bahia Blanca 7,350,005. 4. Quequen 3,202,964. 5. Ramallo 1,172,462. 6. Lima (Argentina; just northwest of Buenos Aires) 814,746.

The main importing ports for Europe (E.U.-27, which does NOT include Norway, Switzerland, Russia; Candidate countries are Croatia, Macedonia, Turkey) are: 1. Rouen, France 6,349,742. 2. Hamburg, Germany 3,690,955. 3. Rotterdam, Netherlands 2,457,000. 4. Rostok, Germany 2,361,000. 5. Amsterdam, Netherlands 1,393,000. 6. Ghent, Belgium 671,929. 7. Antwerp, Belgium 506,185.

Note: The main importing port for Russia is Novorossiysk 6,317,000, located on the Black Sea in southern Russia in Krasnodar Krai. To get there a ship must pass through the Mediterranean Sea, the Bosporus, then the entire Black Sea. Address: European editor; chris.lyddon@ntlworld.com.

11318. Brunk, Conrad G.; Coward, Harold. eds. 2009. Acceptable genes?: religious traditions and genetically modified foods. Albany, New York: State University of New York. vi + 272 p. Index. 23 cm. [200* ref]

• ***Summary:*** Contents: Introduction, by Conrad G. Brunk and Harold Coward. 1. Genetics and genetically modified organisms, by Samuel Abraham. 2. Ethical perspectives on food biotechnology, by Paul B. Thompson. 3. Does vegetarianism preclude eating GM foods?, by Lyne Létourneau. 4. "When You Plow the Field Your Torah Is with You": Genetic modification and GM food in the Jewish Tradition(s), by Laurie Zoloth. 5. Some Christian reflections on GM food, by Donald Bruce. 6. © Copyright Soyinfo Center 2014

food, by Vasudha Narayanan. 8. The karma of genetically modified food: A Buddhist perspective, by David R. Loy. 9. "So That You May Have It with No Harm": Changing attitudes toward food in late imperial China, by Hsiung Ping-chen. 10. Born from bears and corn: Why indigenous knowledge systems and beliefs matter in the debate on GM foods, by Shiri Pasternak, Lorenzo Mazgul, and Nancy J. Turner. 11. Regulatory and innovation implications of religious and ethical sensitivities concerning GM food, by Conrad G. Brunk, Nola M. Ries, and Leslie C. Rodgers. Contributors.

An excellent book written from many different points of view. Unfortunately the book fails to identify the difference between "genetically modified" (all plants and animals have been genetically modified since ancient times using selection or traditional selective breeding techniques) and "genetically engineered" (transgenic technology, involving the unnatural insertion of a gene from one species into the genome / genes of another species).

A lively debate about genetically modified has followed the introduction of these foods since their introduction into the food supply in the last two decades of the 20th century. The debate has been especially intense in Europe, Japan, and parts of Africa.

"This debate has been uncharacteristically subdued in North America, where these products were first grown for commercial use and sent to markets for consumption... One reason for this may have been that government regulators in Canada and the United States approved these products for the market with no public announcement that they were doing so and certainly without any prior public consultation, in contrast to the practice in most European countries. Indeed most people in North America have been, until recently completely unaware that much of the food they are purchasing is from genetically modified corn, canola, soybeans, and other crops, and that genetically or cloned food animals have been developed and applications for their market approval submitted to their regulators.

"One concern, however, is not low–that of the desire for labeling these products in order to give consumers a choice whether or not to purchase them" (p. 1).

Ethical vegetarians have broader concerns than health vegetarians. "Ethical vegetarians worry that the genetic modification of food will lead to a loss of genetic diversity; that it will widen the gap between developing and industrialized countries; that it will reinforce the concentration of power in the hands of industry; and it will create unknown risks for human health." Not to mention herbicide-resistant weeds. Address: 1. Prof. of Philosophy and former Director of the Centre for Studies in Religion and Society at the Univ. of Victoria; Prof. Emeritus of History and Founding Director of the Centre for Studies in Religion and Society at the Univ. of Victoria. • ***Summary:*** A gorgeous, artistically designed book, printed on glossy paper, with spectacular color photos on every page.

Contents: The food of Asia: China, India, Japan, Thailand. Snacks. Starters and salads. Soups. Seafood. Poultry. Meat. Tofu, legumes & vegetables. Noodles & rice. Accompaniments & side dishes. Desserts. Breads, rice & basics. Glossary.

"China has one of the great cuisines of the world." Japan: "... combines delicate, subtle tastes ands textures, always prepared with a light hand and sublimely presented to appeal to the eye as well as the tastebuds."

Soy-related: Inari sushi (p. 22-23). Tofu rolls (from China, with firm tofu and tofu skins [yuba], p. 76-77). Chilled tofu with ginger and spring onion (from Japan, with "600 gm block silken firm tofu," p. 78-79). Tofu dengaku (from Japan, with "700 gm firm {cotton} tofu" and "100 gm red or white miso paste," p. 94-95). Tofu and spinach soup (from China, with "120 gm soft tofu, drained," p. 100-01). Stuffed tofu soup with prawns (from Thailand, p. 102-03). Ramen noodles with soy broth (from Japan, p. 104-05). Agedashi tofu (from Japan, p. 110-11). Fragrant tofu and tomato soup (from Thailand, p. 124-25). Ten-treasure soup (from China, with 450 gm firm tofu, p, 126-27). Salmon and tofu balls (from Japan, p. 150-51). Steamed mussels with black bean sauce (from China, with "1 tablespoon salted, fermented black beans, rinsed and mashed," p. 178-79). Clams in yellow bean sauce (from China, with "2 tablespoons yellow bean sauce," p, 178-79). Soy chicken (from China, with dark soy sauce and light soy sauce, p. 214-15). Shanghai soy duck (with light and dark soy sauce, p. 236-37). Shabu shabu (from Japan, with "150 gm firm {cotton} tofu," p. 258-59).

Tofu, legumes & vegetables: Ma Po tofu (from China, "A quintessential Sichuan dish... Soft tofu is traditionally used," p. 298-99). Braised tofu with Chinese mushrooms (from China, p. 304-05). Fermented tofu with Asian greens (from China, with "3 tablespoons fermented white tofu," p.

© Copyright Soyinfo Center 2014

304-05). Mushrooms with tofu (from Thailand, p. 308-09). Miso tofu sticks with cucumber and wakame salad (from Japan, with "500 gm silken firm tofu, well drained" and "3 tablespoons white miso paste," p. 310-11). Stuffed tofu (from China, p. 314-15). Stir-fried tofu in yellow bean sauce (from China, p. 314-15). Buddha's delight (from China, with "50 gm tofu puffs {deep-fried cubes of tofu}," p. 322-23). Soft tofu with chilli and spring onion (from China, p. 328-29). Braised tofu (from China, p. 328-29). Mock duck (from China, with homemade wheat gluten, p. 338-39). Beans with sesame miso dressing (from Japan, p. 392-93). Shiitake simmered in soy [sauce] (from Japan, p. 408-09). Three ways with sauces (from Japan, Ponzu, Sesame seed sauce, and Tempura dipping sauce, with soy sauce, p. 484-85). Three sauces (from China, Soy and vinegar dipping sauce, Soy, vinegar and chilli dipping sauce, Soy, chilli and sesame dipping sauce, with soy sauce, p. 487-88).

Glossary of Asian food and cooking (p. 492+): Aburage, dal (dhal), edamame, fermented tofu ("It is sometimes called preserved tofu or tofu cheese and is used as a condiment or flavouring"), hoisin sauce, inari abura-age (used to make inarizushi), Japanese mustard, Japanese soy sauce (shoyu), ketchap manis ([kecap manis] "A thick, sweet soy sauce used as a flavouring"), kuzu, mirin, miso, nori, paneer, ponzu, red bean paste ("Made from crushed adzuki beans and sugar..."), salted, fermented black beans (soya beans), sesame paste, sesame seeds, Shaoxing rice wine, soya beans, tofu, wakame, yellow bean sauce.

11323. Nguyen, Andrea Quynhgiao. 2009. Asian dumplings: Mastering gyôza, spring rolls, samosas, and more. Berkeley, California: Ten Speed Press. 234 p. Illust. (color photos by Penny De Los Santos). Index. 28 x 19 cm. [38 ref]
• ***Summary:*** Another very attractive book and well-written book by Andrea Nguyen. In the Introduction, the section titled "Ingredients" (p. 8+) discusses soy sauce (p. 16) and tofu (p. 16-17).

Soy related recipes include: Steamed vegetable dumplings [vegetarian] (Zhengjiao, Chinese, with 3 oz. brown pressed tofu filling, and light (regular) soy sauce, p. 35-36). Kimchi dumplings (Kimchi mandu, Korean, with 10 oz firm tofu, p. 44-45). Korean meat and vegetable dumplings (Gun mandu, with 6 oz firm tofu, p. 46-47). Steamed filled buns (Zheng bao, Chinese, with Vegetable and tofu bun filling {p. 101}, p. 95-96). Baked filled buns (Ju bao, or Guk bao in Cantonese, Chinese, with Vegetable and tofu bun filling {p. 101}, p. 97-99). Vegetable and tofu bun filling (Cai bao, Chinese, p. 101).

Chapter 9, "Sauces, Seasonings,..." contains several soy dipping sauces: Tangy soy dipping sauce (great with Chinese jiaozi or Japanese gyôza, p. 215). Korean dipping sauce (for Korean Mandu, p. 215). Sweet soy sauce (good with Cantonese steamed rice rolls {p. 156-60}, p. 217). Address: Food writer, Santa Cruz, California.

11324. Yagihashi, Takashi; Salat, Harris. 2009. Takashi's noodles. Berkeley, California: Ten Speed Press. An imprint of Crown Publishing Group, a division of Random House. vii + 168 p. Illust. (photos by Tyllie Barbosa). Index. 25 cm.
• ***Summary:*** A very original, beautifully designed book. "A collection of 75 recipes from James Beard Award-winning chef Takashi Yagihashi for both traditional and inventive hot and cold Japanese noodle dishes" (from the publisher).

Contents: Acknowledgments. Introduction. 1. Ramen. 2. Soba. 3. Udon. 4, Somen. 5. Asian noodles. 6. Pasta. 7. Appetizers. Ingredients glossary.

The cover photo shows a photo of "Natto soba." The headnotes to the recipe for "Natto soba" (p. 46-47) state: "My hometown of Mito is known throughout Japan as 'Natto City' in recognition of our devotion to these fermented soybeans. Natto has a wonderful nutty flavor and aroma, and I've loved it since I was a kid. Serving it with soba is a terrific introduction to this nutritious and ancient naturally preserved ingredient. When you open a packet of natto, the beans will be sticky and thready, but don't let that put you off. This dish makes a beautiful presentation when it's served. Just make sure you mix together all the ingredients very well before you eat to combine the flavors." On the facing page is a full-page color photo of the dish with cold soba broth being poured over the top.

The brief Glossary (p. 161-63) includes: Abura-age, goma paste, hoisin sauce, kombu, mirin, miso (red, white, or brown), natto, nori, soy sauce, sunchang kochujang, tobanjan, tofu, umeboshi, wakame, wasabi, yamaimo, and yuzu.

The word "soy" appears on 51 pages in this book, "soy sauce" on 43 pages, "Japanese soy sauce" on 39 pages, "miso" on 15 pages, "tofu" on 14 pages, "abura-age" on 7 pages, "natto" on 6 pages, "soybeans" on 2 pages, and "soybean" on 1 page. "Japanese soy sauce" is called for in dashi, in all other noodle broths, and in most recipes. Meat, poultry, fish, shellfish, and eggs are used throughout the

© Copyright Soyinfo Center 2014

book.

Several portrait photos show youthful, handsome Takashi. Harris Salat writes about food and culture. Address: USA.

Fanshii Fuudo Shoo ni itte kita zoi no maki [Gourmet old-guy explorer: The biggest winter gourmet event. This article is: "I went to the fancy food show"]. Jan. 29. No. 1106. p. 15. [Jap]

• ***Summary:*** Over 80,000 items were exhibited. There were familiar goods too. Showed the possibilities of Japanese foods. Photos show: (1) The Kikkoman booth. (2) Marukome miso. (3) A tea both. (4) Minami Satoh standing, in traditional Japanese clothes, discussing and demonstrating his natto. (6) A Caucasian blonde girl. "A lot of Americans who attended said they liked the taste of natto." (7) Members of a miso company and a plastic container of their miso. Address: California.

11326. Shurtleff, William. 2010. Thoughts about George Ohsawa. *SoyaScan Notes.* Feb. 5. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** There are six things I greatly admire about George Ohsawa: (1) He had a tremendous sense of gratitude for life itself and for all things. (2) He emphasized the oneness of all things (nonduality) and showed that the pairs of opposites are more deeply one. (3) He had a marvelous love of life and sense of humor. People remember him as a deeply happy and charismatic man. (4) He had a very original and creative mind–especially for a Japanese man of his time. (5) He introduced many fine Japanese foods into Western diets that Caucasians now actually eat on a regular basis–miso, tofu, shoyu / tamari, umeboshi, kuzu, sea vegetables, seitan, natto, and many more–and in doing so played a major role in starting the natural foods movement in America. (6) He played a leading role in introducing brown rice into American food culture, starting in the 1960s. Address: Founder and owner, Soyinfo Center, Lafayette, California. Phone: 925-283-2991.

11327. Nagata, Chisato. 2010. Factors to consider in the association between soy isoflavone intake and breast cancer risk. *J. of Epidemiology* (*Japan*) 20(2):83-89. Epub. 2010 Feb. 20. [80 ref]

Address: Dep. of Epidemiology & Preventive Medicine, Gifu University Graduate School of Medicine, Yanagido, Gifu, Japan.

11328. Vollmann, Johann. 2010. Re: Exhibition at the Ethnology Museum in Vienna, Austria, includes various small paper bags labeled (in Japanese) "kuro mame." Letter (e-mail) to William Shurtleff at Soyinfo Center, March 2. 1 p. [Eng]

• ***Summary:*** "At present, there is an exhibition taking place at the Ethnology Museum in Vienna, Austria, on the occasion of the 140th anniversary (2009) of the setting up of diplomatic relations between Japan and Austria in 1869. This was an issue of the opening of Japan to the Western world after the end of the Edo period. And a couple of years later, Japan participated in the Vienna expo of 1873 and again thereafter the Haberlandt experiments had started."

"In that present exhibition, a wooden box containing bags with Japanese food, 'beans,' tobacco, rice, medicals is presented. Mr. Takashi Sato, a Japanese PhD student of mine in Vienna has identified a bag entitled 'kuro mame' which means black beans. There is a possibility that these 'beans' are soybeans, perhaps the ones Haberlandt had seen during the expo in 1873 and of which he received his first seed samples (before ordering other early maturity samples). I contacted the curator of the exhibit. She believes that the signs on the bags read like black beans, but she does not know whether this means soybeans or not. (And we do not yet know what is inside!).

"I have copied a few color photographs for you onto my web site, where you could see the box and bags from the exhibition.

"I would be happy to hear your opinion on the 'black beans' bag. Could this be a soybean?

"Kind regards. Johann."

Shurtleff replied: "Dear Johann.

What treasures! It never occurred to me that such objects might be saved. I lived in Japan for 6 and a half years and still speak quite good Japanese, especially on subjects related to soy.

"In Japanese 'kuro mame' does indeed mean literally 'black beans.' However this term is used in Japanese *only* to refer to black soybeans, and should be translated 'black soybeans.' Mr. Sato will surely be aware of the widespread use of this term at the time of the Japanese New Year when *kuro mame* are one of the standard / required dishes.

"In his article 'Der Anbau der rauhhaaringen Sojabohne' (1877, table p. 261) Haberlandt states (referring to soybeans): 'Black from China (one original, one progeny), black from Mongolia (original), and black from Japan (original).' The paper bag confirms his black soybeans from Japan.

"In photo #5517 the right bag is labeled 'kuro mame.' The left bag is labeled 'maru kuro mame' ('round / whole black soybeans') and the middle bag bears the name of Siebold, referring to Philipp Franz von Siebold (1796-1866), the famous German physician and naturalist who wrote extensively about Japan and brought back a botanical garden and museum full of Japanese material, especially seeds and plants.

"Siebold's main trip to Japan lasted from Aug. 1823 to mid-1830–8 years. This was 50 years before the Wiener

© Copyright Soyinfo Center 2014

Ausstellung. Siebold was the first Westerner to sell soybean seeds in a seed catalog (his own), published in 1856 in Leyden (Netherlands) and Bonn. It would not be at all surprising or unusual if Haberlandt obtained that bag of soybeans from Siebold's organization.

"In photo No. 5524, a bag on the right is labeled 'kuro hira mame' which means literally 'black flat soybeans.'

"I think the probability that those carefully-labled bags contain black soybeans is greater than 95%. What else could be in them? The only other possibility (very unlikely) is black azuki beans." Address: PhD, Inst. of Agronomy & Plant Breeding, BOKU–Univ. of Natural Resources and Applied Life Sciences Vienna, Gregor Mendel Str. 33, A-1180 Vienna, Austria.

11329. Vollmann, Johann. 2010. Re: Heinrich von Siebold and soybeans in Austria and Europe. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 2. 1 p. [Eng]
• ***Summary:*** "Let me tell you more precisely my understanding of the whole story which plays out *after* the end of the Edo period, i.e., after 1868.

It is not possible that Haberlandt had received soybeans from Philipp F. von Siebold, as Philipp von Siebold died in 1866. Our university was founded in 1872, before that time Haberlandt was a teacher in Hungary. Haberlandt came to Vienna in 1872 as the first agronomy professor, he learned about soybean only in 1873 during the Vienna World Exposition (*Wiener Weltausstellung*).

According to what I learned from the present exhibition, the name 'Siebold' on the seed bags refers to Heinrich von Siebold (1852-1908) who was the second son of Philipp F. von Siebold. Heinrich von Siebold came to Japan in 1869, shortly after the Meiji restoration. He served as an interpreter and diplomat at the Austrian-Hungarian embassy in Tokyo for 30 years. In January 1873 he accompanied the Japanese delegation as an interpreter on their journey to the Vienna World Exposition. Like his father, Heinrich von Siebold was a collector of Japanese items of all kind. After the end of the Vienna expo he bought some of the items on display during the expo.

"Later (in 1889), Heinrich von Siebold donated over 5,000 items out of his collection to the Vienna Natural History Museum (now in the Vienna Ethnology Museum). This explains why the name 'Siebold' is on those bags; it has nothing to do with Phillip Franz von Siebold in my understanding."

"It seems that Heinrich von Siebold advised the Japanese delegation on what to present during the Vienna World Expo of 1873. He undoubtedly was one of the few people to be competent enough do so, as he knew both Japanese and European 'worlds.' So, he could have been the one who decided to bring soybeans to Europe where Haberlandt picked them up."

Dr. Vollmann attaches a detailed German-language biography of Heinrich Frh. von Siebold, diplomat and collector. Born: Boppard, Prusses (Germany) 21 July 1852; Died: Schloss Freudestein bei Bozen, Tiron (Bolzano / Bozen in Italian) on 11 Aug. 1908. It was published in an Austrian Biographical Lexicon and contains a good bibliography.

Address: PhD, Inst. of Agronomy & Plant Breeding, BOKU–Univ. of Natural Resources and Applied Life Sciences Vienna, Gregor Mendel Str. 33, A-1180 Vienna, Austria.

11330. Carr, Stephen. 2010. Patience a virtue in miso making: Englishman Tony Flenley sticks with tradition, keeps 105-year-old Osaka business alive. *Japan Times.* April 3. [Eng]
• ***Summary:*** Flenley is the managing director of Osaka Miso Jozo in central Osaka. He has run the company for 20 years–since April 1990. Flenley first came to Japan in 1977 after graduating from the University of Swansea, South Wales. He worked as an English teacher and married a local Japanese girl whose father had been running a well-established miso business since several years after World War II.

Consumption of miso has been decreasing in Japan and the quality has been going down as large manufacturers (and consumers) focus on low-price products. "Flenley believes that 'the insistence on cheap prices by supermarkets' is killing Japanese food culture. 'It's not just miso. If food producers are continually forced to keep prices down, they can survive only by making inferior products. The Japanese are getting used to the taste of cheap food.'

"Another example, he says, is natto fermented soybeans, which are only half fermented when you buy them in a supermarket. If you eat it a couple of weeks after the sell-by date, it will be properly fermented!"

"Domestic consumption is down, with 1,300 miso manufacturing plants nationwide compared with 1,600 a decade ago. Production is 520,000 tons, as against 560,000 tons at the beginning of the decade. But miso exports today stand at 6,200 tons, more than double the 3,000 at the turn of the century."

Photos show: (1) Flenley, with arms folded, standing in front of 50-year-old wooden barrels where red miso is aged for two years. (2) Flenley works with an employee at the 105-year-old miso company. Address: Tokyo.

11331. *SoyaScan Notes.* 2010. The life and work of Minami Satoh, natto maker in Sebastopol, California (Overview). April 11. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1957 April 2–Minami Satoh was born in Japan to father Fumio Satoh and mother Hisae Okazaki. Fumio

© Copyright Soyinfo Center 2014

Satoh, was founder and President of Satoh Steel Pipe Co. Ltd, a wholesaler of steel pipes and tubes.

1981 March–Minami graduated from Keio University, Law department in Tokyo, Japan, with a Bachelor of Arts degree. Minami had an interest in becoming an international business person. So in late March, 1981, while awaiting admission to American Graduate School of International Management, (Thunderbird), in Glendale, Arizona, he arrived in the USA and began to attended the Economic Institute in Boulder, Colorado; he took English classes, which helped to prepare him to study business.

1981 Sept.–Minami officially began studies at Thunderbird.

1983 Jan.–He graduated from Thunderbird. Minami lived in the U.S. for one and a half years earning his degree, Master's International Management.

1983-1988–Minami worked for DuPont in Japan, as a marketing representative, marketing Corian (artificial marble).

1989-2006–He worked for his father's company Satoh Steel Pipe Co., Ltd. wholesaling steel pipes and tubes. While successful, this work was not of much interest to him, thus he pursued diversifying the company.

2003–during this research phase, he met a Japanese American who was planning to import natto snacks to the U.S. at a trade show in Tokyo, Japan. Minami had interest in a business that had multi-cultural dynamics. However this particular project did not succeed financially.

2005–Minami then had the opportunity to purchase majority shares of a small natto-making company named Yaguchi Natto Manufacturing Company, now Yaguchi Foods Co., Ltd. in Japan. Shortly after this time, the owner died; and his relatives sold the company to Minami.

The company address is 1-30-29 Numakage, Nimai-ku, Saitama City, Saitama prefecture, Japan. Yaguchi Foods makes only natto, however they sell other soybean related foods such as tofu. The company has 35 people on the payroll including part-time employees.

Minami believed fresh and hand-made natto would have the opportunity to sell in the U.S. with its milder aroma and taste compared to frozen imported natto–and that it could become popular like other soyfoods such as tofu, edamame, miso, soy sauce, soymilk and tempeh.

2005–Minami came to the United States to meet Malcolm Clark (The great grandson of Dr. William Smith Clark {graduated Amherst College, 1848}, who was the first chairman of the agricultural college in Hokkaido, Japan, and is still quite famous.)

Malcolm Clark, founder of Gourmet Mushrooms, Inc. has since retired. While studying in Japan, he was chosen to be one of two principal students of Dr. T. Yoshii, the innovator of the use of sawdust as a substrate for growing mushrooms. With this knowledge, Malcolm returned to North America and collaborated with a group of Japanese-Canadians to start the cultivation of shiitake mushrooms. During this period, he met David Law and in 1976 the idea of Gourmet Mushrooms, Inc. was hatched.

In 1977, he and David (now CEO) founded Gourmet Mushrooms Inc. and began building their dream of commercial cultivation of exotic mushrooms in Sebastopol, Sonoma County, California.

Malcolm Clark now lives in Occidental, California.

Minami hoped that Malcolm Clark would give him some good advice about how to market natto in the USA. When he met Mr. Clark, the latter was thinking of retiring.

Minami chose to buy some shares of Gourmet Mushrooms, to share resources and create synergies between his Natto company and Gourmet Mushrooms.

2006 Feb. 24–Minami founded Japan Traditional Foods, as a corporation in Sebastopol, California for the production and sale of foods, namely natto.

2008 June–Minami moves to the United States from Tokyo, Japan to manage Japan Traditional Foods. The company presently has two employees, Minami Satoh and Dallas Akimoto. In the beginning Shun Takahashi, joined him from his natto company in Japan. Shun made the natto and Minami was in charge of running the company and marketing the natto until 2009, November.

2008 Nov.–Japan Traditional Foods starts selling its first natto product, Tezukuri Natto (Tezukuri means "hand made" in Japanese), through a Japanese distributor in Los Angeles. The first important retail outlet was Nijiya Japanese Grocery Market.

2008 Nov. 15–Natto Preview Party held at Deloache Vineyard in Santa Rosa.

2009 June 27-28–Tezukuri Natto Demonstration at Mitsuwa Market Place in San Jose, California.

2009 Aug. 8-9–Tezukuri Natto Demonstration at Mitsuwa Market Place in Costa Mesa, California.

2009 May 12–Seth Roberts, in his Wellsphere blog, writes a good history of Minami Satoh's work to date.

2010 Jan. 18–Japan Traditional Foods introduces organic Megumi Natto at Fancy Food Show in San Francisco, California.

2010 April 20–Launch celebration event for organic Megumi Natto at Ozumo Restaurant in San Francisco, California.

Note: Mr. Satoh lives in Santa Rosa, California, with his wife and daughter and travels regularly to Japan. As owner of Yaguchi Foods, he continues to oversee production and sales of natto in Japan.

11332. Nishito, Yukari; Osana, Yasunori; Hachiya, Tsuyoshi; Popendorf, K.; et al. 2010. Whole genome assembly of a natto production strain *Bacillus subtilis* natto from very short read data. *BMC Genomics* 11:243+. April 16. [40 ref]
• ***Summary:*** This is an open access article: Abstract: *Bacillus subtilis* natto is closely related to the laboratory standard

© Copyright Soyinfo Center 2014

strain *B. subtilis* Marburg 168, and functions as a starter for the production of the traditional Japanese food "natto" made from soybeans. Although re-sequencing whole genomes of several laboratory domesticated *B. subtilis* 168 derivatives has already been attempted using short read sequencing data, the assembly of the whole genome sequence of a closely related strain, *B. subtilis* natto, from very short read data is more challenging, particularly with our aim to assemble one fully connected scaffold from short reads around 35 bp in length.

"Results: We applied a comparative genome assembly method, which combines *de novo* [new] assembly and reference guided assembly, to one of the *B. subtilis* natto strains. We successfully assembled 28 scaffolds and managed to avoid substantial fragmentation. Completion of the assembly through long PCR experiments resulted in one connected scaffold for *B. subtilis* natto."

Conclusions: The determination of the whole genome sequence of *Bacillus subtilis* natto provided detailed analyses of a set of genes related to natto production, demonstrating the number and locations of insertion sequences that *B. subtilis* natto harbors but *B. subtilis* 168 lacks. Multiple genome-level comparisons among five closely related *Bacillus species* were also carried out. The determined genome sequence of *B. subtilis* natto and gene annotations are available from the Natto genome browser http://natto-genome.org/. Address: 1. Dep. of Biosciences and Informatics, Keio Univ., Hiyoshi, Kohoku-ku, Yokohama, Japan.

• ***Summary:*** The subtitle of this article reads (in Japanese): (*Heisei 21 nendo Nippon Shokuhin Kagaku Kogakukai Sho*). This means that in 2009 this article won an award from the Japanese Society for Food Science and Technology.

Tofuyo is a type of low-salt fermented tofu. This study describes the chemical characteristics of tofuyo and the role of molds of the genus *Monascus* in its production.

The tofuyo fermentation process is unique in that its soybean proteins undergo limited hydrolysis by proteinases [enzymes that break down protein] in the presence of ethyl alcohol which originates from *awamori.*

Note: *Awamori* is Okinawan distilled liquor; it is made from Thai-style long-grained Indica rice and black koji mold, indigenous to Okinawa; after distillation it is often aged like whiskey.

The main constituents of tofuyo are basic subunits of glycinin and polypeptides. During maturation, the soy proteins in tofuyo are digested into peptides and amino acids. The amount of free glutamic acid and aspartic acid are strongly correlated to the good taste (*umami*-taste) of tofuyo. Address: Dep. of Bioscience and Biotechnology, Faculty of Agriculture, Univ. of the Ryukyus, 1 Senbaru, Nishihara-cho, Okinawa 903-0213, Japan.

11335. Demetriou, Danielle. 2010. Grain of wisdom: Madonna's former personal chef (Web article). *http://www.thenational.ae/lifestyle/house-home/grain-of-wisdom-madonnas-former-personal-chef.* June 16.
• ***Summary:*** Mayumi Nishimura of Tokyo (age 53), a world-famous practitioner of macrobiotic cookery, was Madonna's personal chef for 7 years, cooking for the singer and her family, as well as providing most meals during four of Madonna's world tours. Madonna (who is not a vegetarian) also avoids dairy products, enjoys tofu, miso and soymilk, is adept at using chopsticks, and speaks pretty good Japanese.

While in high school, Mayumi began to see clearly the connection between her diet and her health and spiritual wellbeing. She changed her diet and became a vegetarian and began to eat brown rice. At age 21 Mayumi was introduced to the writings of George Ohsawa. So she packed her bags and went to study at the Kushi Institute in Boston, Massachusetts. It worked very well for her and she ended up running a branch of the Kushi Institute in Beckett, Massachusetts.

Then 9 years ago she was asked if she wanted to try out as Madonna's personal chef. She got the job and became part of Madonna's extended family. Madonna later wrote her in the book *Mayumi's Kitchen:* "Not only are you the best chef in the world, you are part of our family... In the seven years you lived with us and cooked for us, your amazing food helped me to be a happier, healthier person, balanced in body and mind. I feel better than I did 20 years ago. I am very grateful to you for this."

Note: As of April 2011, Madonna lives in New York City, in the fashionable Upper East Side at 152 East 81st St. She lives in a gated community, said to be worth $32 million.

11336. *SoyaScan Notes.* 2010. The first and second natural food movements in the United States: Differences and similarities (Overview). Aug. 19. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** The first natural foods movement, which started in 1953, had its headquarters in Atlanta, Texas. They published an excellent monthly magazine titled *Natural Food and Farming* from April 1954 until Aug. 1995 (Vol.

© Copyright Soyinfo Center 2014

41, No. 2). Each issue was 8½ by 11 inches, and in 1957 a typical issue was 22 pages long.

The movement was based on an organization named "Natural Food Associates" (NFA) (founded in 1953), which had a large membership from the mid-1950s on, and had many nationwide chapters–such as the "Connecticut Natural Food Associates." Their basic missions were to raise awareness that our food system, soil, water, and bodies were being poisoned by a host of new agricultural chemicals (such as DDT), fluoridation, etc., and to provide an alternative for those who were concerned about their health and/or the environment: "natural foods grown on fertile soil eaten fresh and poison free" (April 1958, p. 6).

They encouraged people nationwide to start a vegetable and grow their own food using compost and without using chemical fertilizers or toxic pesticides. They were independent of but closely allied with and active in promoting the fledgling organic gardening and farming movement and the biodynamic farming movement (especially Ehrenfried Pfeiffer). As they watched with alarm as the fertility of the soil was being destroyed by large-scale chemical farming methods, they were especially active in linking the health of the body to the health of the soil.

They worked very hard, for example, to ban DDT and fluoridation and many of their leading members (PhDs and university professors) testified against it.

The founder, president and sparkplug of NFA was Joe D. Nichols, M.D., from 1954 until his death on 27 May 1992. Most of the officers and leaders of this movement were adults, and a large percentage were physicians (M.D.s), dentists, or in academia. They had annual nationwide conventions, and before long, regional and state chapters and conventions. They were very active and well funded–nationwide.

Note: In 1962 *Silent Spring* was published. In 1972 DDT was banned in the USA.

The second natural foods movement in the U.S. began as a macrobiotic foods movement. It was started by Erewhon Natural Foods in April 1966 in a small natural foods retail store at 303-B Newbury Street (below street level) in Boston, Massachusetts. Aveline and Michio Kushi (teachers of macrobiotics) were the founders, but Aveline was the sole owner. Evan Root was the first retail store manager. The origin of the natural foods industry and movement in America can be traced to this date. Erewhon was the first store of its kind in America and it soon served as a model for many other similar natural food stores across the United States. So the 2nd natural foods movement actually began as a macrobiotic foods movement.

The 2nd natural foods movement was largely vegetarian in addition to eschewing refined foods–and specially white sugar. The 1st natural foods movement advocated the eating of meat, poultry, and fish as good sources of protein.

Soyfoods were a major part of the 2nd natural foods movement, but a very minor part of the 1st. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549.

11337. Kikkoman Corporation. 2010. Annual report 2010. Year ended March 31, 2010. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 41 p. 28 cm. [Eng]

• ***Summary:*** Consolidated net sales decreased 30.8% to $3.071 billion, operating income rose 3.9%% to $226.7 million, and net income increased 213.2% to $92.49 million. Note: Dollar values may have changed at different percentage rates due to changing foreign exchange rates.

Page 2 is titled "Kikkoman exhibits at Japan industry pavilion, Expo 2010, Shanghai, China." A *ryôtei* is a Japanese restaurant that serves *kaiseki-ryori,* an ultimate form of Japanese cuisine. Kikkoman's booth was named Ryôtei Murasaki.

A photo (p. 3) shows Yuzaburo Mogi (Chairman of the Board and CEO) and Mitsuo Someya (President and COO). Address: Noda, Japan.

11338. Boswell, April. 2010. Re: Work at the Erewhon retail store on Newbury Street in Boston. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 13 and 24. 1 p.

• ***Summary:*** "On a whim yesterday I googled Erewhon, the natural foods store on Ellery St. in Boston for whom I worked a few months in early 1971. As I scanned through what came across, memories began slipping back. So I thought I'd send on to you what I remember although you probably have plenty of information, and my memories are not very clear. Nevertheless...

"As a 20 year-old (my name was April Deborah Van Outrive in those days) I moved from California to Cambridge, Massachusetts in January 1971, and into a third-floor walk-up apartment with my boyfriend at the time Rory Ingalls (he might have been working at Tao Books), and two other roommates, a South American fellow, Manuel Manga (who was obsessed with geodesic domes) and Fern Weiner. They were all eating and living macrobiotically and I was learning from them. Fern did all the cooking for the house. She taught me how to make an authentic Japanese futon and some basics of macrobiotic cooking.

"After only a month or so for reasons I don't recall, we moved again into a lovely old macrobiotic house on Ellery St., around the corner from the Orson Wells theater and down the street from Harvard Square. There were eighteen to twenty people living in this house which was run by Bruce and Melinda Gardner. Melinda was pregnant and subsequently had her baby, David, that spring or summer. The house was three stories and had been built in the early eighteen hundreds. I remember Melinda making tofu from scratch in the big kitchen there with a number of us women. My memories of Bruce and Melinda are that they were both calm, gentle people. Melinda called their baby 'Davie-cha.'

"I went to work for Erewhon on Newbury St. and rode

© Copyright Soyinfo Center 2014

the bus from Cambridge, past MIT and over the bridge into Boston. Russell Desmarais (spelling?) was managing the store as I recall. We had large open barrels of grains, seeds and nuts as well as nut butter grinders, and I recall estimating amounts when helping customers with their grains. One time the famous singer Odetta came in and I waited on her. I didn't know who she was at the time. I also recall a young man who worked at Erewhon, he played the flute and would sit outside the back door on a ledge or a stairway during his breaks; I was charmed by his haunting tunes.

"Some of us Erewhon employees took a bus one weekend up to Vermont, to donate our time to work on a farm there. We worked in the fields digging stones out of the soil. The stones were as numerous as potatoes in the ground but less satisfying to unearth. I recall wondering if they just continued to rise to the surface over time. Another memory of that weekend is that along the way there, we stopped and swam in the bend of a clear cold river. The idyllic nature of that swim and that time remains with me today.

"On another occasion there was a big party at what may have been the Kushi's house that we all attended. I recall it as being a gracious home. It might have been Aveline or Michio Kushi's birthday celebration.

"We attended lectures given by Michio Kushi in Boston, I think this was downtown at a church, close to the Boston Commons.

"Bruce and Melinda were offered the opportunity to run a big house and farm in the countryside outside of Boston, where we had also visited as a group. I think they did leave the Ellery St. house to do that.

"In June or July of 1971, I decided to catch a ride back home and put up a sign to that effect on the bulletin board at Erewhon. A girl name Dulcie answered my ad; she was heading to California in her little VW and could use a traveling companion. She arrived bright and early one fine summer day, I packed my things in her car and off we went. Life made its usual twists and turns and I did not return to Boston.

"I was the girl on the cover one month of the little publication put out by Erewhon, might have been the East-West Journal. I think I was holding a big basket of fresh produce.

"So that's my little story! Thanks for allowing me to reminisce." Address: Clayton, California.

11339. Cappuccino, Bonnie; Cappuccino, Fred. 2010. Child Haven International, a herd of SoyaCows, and soymilk on the Indian Subcontinent. Part II (Interview). *SoyaScan Notes.* Oct. 25. Conducted by William Shurtleff of Soyinfo Center. • ***Summary:*** Continued: Child Haven has a number of volunteers, Westerners who go for 6-12 months to help at one of the homes in Asia. Before going, they are given a 1-2 day orientation in Ontario. Fred notes: "One of things we tell them is that anything they can do to encourage the use of the SoyaCow machines would be beneficial–such as praising and encouraging the staff who are making the soymilk. Most of the Westerners really do like the SoyaCow program and most of them enjoy that hot cup of soymilk early in the morning." Bonnie adds: "I really enjoy and appreciate that hot morning soymilk. For me, it has a better flavor than cold soymilk. I guess its just what you get used to." Because of the dark-skinned children Bonnie adopted, Fred was kicked out of one Methodist church and invited to another, where he served for four years. "During the time we were there the congregation changed from almost totally white to almost totally black." Then they moved out to the country where Fred served as minister to three churches; 9:00, 10:00, and 11:00–Fred made the circuit every Sunday. "It was fun. After that we were able to make the transfer to a Unitarian congregation." Fred has always been a Unitarian at heart.

Frank Daller was living in Toronto, in what he called "the rat race," when he heard about Child Haven and about Bonnie and Fred. He learned that Bonnie had adopted a lot of kids and that Fred was an anxious spectator. Frank was in the music business, but he was not a musician. He might have been a promoter or a manager. On the wall of his office in Toronto he had a "Juno Award." These are presented annually to Canadian musical artists and bands to acknowledge their artistic and technical achievements. Frank wanted to get out of that "rat race" life, so he and his wife moved from Toronto to be near where Fred and Bonnie lived in Maxville. Frank had skills as a carpenter, so he earned his living doing carpentry and he also worked at ProSoya. Frank and his wife had one child born to them; they then adopted a kid from Mexico.

In early 1993 CHI ordered six more SoyaCows. One of these went to their largest home, in Kaliyampoondi (near Madras, in Tamil Nadu state of southwestern India). The others went elsewhere in India–perhaps to early SoyaCow entrepreneurs.

Importing anything into India at this time was a huge hassle and extremely difficult. Getting those six SoyaCows through customs was fraught with problems–mostly bureaucratic. They didn't assume Child Haven was a charity; they took it to be a money making venture. How would they monitor how much money was made from these six machines, and are the taxes properly paid, etc.

In 1993 CIDA sent a man [Dan Thakur, PhD] to India to evaluate the SoyaCow project. This was the first program he had evaluated a program for CIDA. CIDA does not give funding for children's homes, so CIDA had no interest and no involvement in the main program of Child Haven–the children's homes. His evaluation of the SoyaCow program was totally negative. For example, CHI had hired a woman named Sandiya Rani to be in charge of the SoyaCow program. She was never a caregiver. They hired a woman because CIDA wanted to help women gain employment. She didn't work out very well. She did not

© Copyright Soyinfo Center 2014

know how to fix equipment that was not working properly and she was prohibited (as an unmarried woman, probably by her family) from traveling unless accompanied by a male relative or chaperone–as to other SoyaCow sites. This lack over supervision was an example of a criticism. The main criticism was that Child Haven was not able, at that time, to get the SoyaCow out into the Indian community with people who wanted to use it to make a living. The 53-page report was submitted on 24 Sept. 1993, after CHI owned at least six SoyaCows. After this evaluation, Child Haven received no more funding from CIDA (except for on-site funding for a school building in Nepal). Child Haven had to raise all future funds for the soya program–almost entirely from donors in Canada.

At about the same time as the negative CIDA report was issued Child Haven hired Dr. Ratan Sharma (his PhD is in soy and dairy paneer) full time to be in charge of the SoyaCow program (replacing the woman) and to monitor the roughly six SoyaCows. He was paid a fixed annual salary, to promote soyfoods and SoyaCows, teach new potential entrepreneurs how to use the SoyaCow and start a business with it, and to maintain existing SoyaCows if they develop problems. Child Haven found Ratan through Raj Gupta and they think Ratan is an outstanding person who is doing a very good job.

Shortly after hiring Dr. Sharma, Child Haven opened the SoyaCow Centre. Here Child Haven also pays the rent on his home and office. At Centre there is no SoyaCow and no space for training people. Ratan has to go to an existing site to train people.

Dr. Sharma is still employed full time by Child Haven, which is not able to pay him as much as he could earn elsewhere with his PhD degree. But he also is paid for part-time consulting with the American Soybean Association, with ProSoya, with Malnutrition Matters, and with some Indian government programs.

At least once or twice, Frank Daller traveled to India with Bonnie. On a trip in early 1995, Daller went to India to see if the herd of SoyaCows were being used properly. When he found that many were not, basic changes in the program were made.

"Part of our reason for developing the SoyaCow was not just for our children's homes but the idea of getting across the whole possibility of low-cost, high-protein food for a society that is basically vegetarian and is gradually losing one important traditional source of protein–dal. But it takes a long time to introduce a new food to a traditional culture, unless you start with the children. The SoyaCow is going out to new places in India and I think Ratan is largely responsible for that. He is still an employee of Child Haven, paid from money that is donated to Child Haven.

After Child Haven got paid staff at the office of its headquarters in Maxville, they became much better about keeping and organizing all important documents so they could be quickly and easily located. Two people presently work at the office in Maxville.

"For Child Haven, over the years, The SoyaCow program has meant much better health for the children and better teeth. Occasionally doctors from other countries offer to come in and do a dental clinic or health check. They usually say that our children have much better health and much better teeth than other children in that area or than children at other children's homes that don't have a SoyaCow. Also the whole idea of trying to spread the concept of this basically very good food for a society that needs a good source of protein because they are largely vegetarian. The SoyaCow provides a good-tasting soymilk. Using soybeans in the form of soymilk or tofu is much better than trying to use them as dal. Ratan has done good work in India, Bangladesh and Nepal to help small entrepreneurs start a new business based on soymilk and tofu made by the SoyaCow. Child Haven has a SoyaCow at its home in Nepal (where electricity is a problem) and at Chittagong, the 2nd largest city in Bangladesh.

"Raj Gupta has been a good supporter over the years of the basic program at Child Haven. Certainly the whole idea of this Soya Cow would never have started without him. Its a mutual admiration society between Raj and Rashmi and the two of us. We admire him and his wife so much for what they have been doing. We saw them often during the early years of the SoyaCow program and the committee that worked to get funding from CIDA. We still see them 2-4 times a year and they have helped us with the Indian High Commissioner to Canada (like an ambassador who lives in Canada) to get visas for our volunteers going to India from Canada. They come to our annual fundraising dinners in Ottawa. We have annual fundraising dinners across Canada at about 18 different places. Child Haven's annual budget from donors in Canada (plus a little from the U.S.) is about $1.5 million.

Question: How would you describe what you have done since you started Child Haven? Ans: "I don't know. I don't try to analyse it. We just do what seems to make sense and hope it works. I calculated one time that 75% of what Bonnie and I have tried to do in terms of new projects, etc. was a total flop. And then something clicks. Child Haven is one thing that clicked. I don't know that it means that we have any special talents or skills."

Fred adds: "When I was in Japan I had the Methodist missionary mindset. But instead of converting people, I accidentally got converted, and came to feel that the Japanese are all right the way they are. That's pretty much my story. I'm a Unitarian minister now. We don't convert people. I tell the congregation that I was 36% Buddhist, until I heard the Dalai Lama. Then I became 48% Buddhist. I'm 81% Unitarian. There's overlapping there" [Laughter]. Address: Founders, Child Haven International.

11340. *SoyaScan Notes.* 2010. Did the Chinese or Japanese or Koreans traditionally feed soymilk to infants or to recently-weaned children? No! (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** A personal view by William Shurtleff:

I have lived in Japan with a Japanese family for 6½ years, spoke fluent Japanese, traveled all over China, and read huge amounts of literature about soy in China and Japan.

I would say that the Japanese and Chinese do NOT feed soymilk to infants or even to weaned infants. Rather they DO feed tofu as one of the earliest weaning foods. They mash it with rice gruel, so both are very soft. Remember that traditional Asian soymilk causes infants intestinal gas which tofu generally does not, or at least much, much less.

Of course it depends partly on what age you mean by "infants." At what age does an infant cease to be an infant? Wikipedia says of "infant": "It is typically applied to children between the ages of 1 month and 12 months; however, definitions vary between birth and 3 years of age."

I have never seen or heard of soymilk used as an infant food or a weaning food, except in a few early French-language articles such as: Labbé 1911, and Beltzer 1911–and maybe a few other articles.

The statements in these two articles that soymilk is fed to infants are rare exceptions. I imagine that Beltzer learned it from Labbé and that Labbe did not know much about the subject.

Read the writings of Dr. Harry Miller (M.D., on our website, www. soyinfocenter.com) who established the first soy dairy in China in 1936, who lived in China as a missionary in China for many decades, and who introduced soymilk for infants (Soyalac) to the United States. He wrote a great deal and a biography has been written about him, yet I do not recall that he ever said that Chinese feed soymilk to infants. Address: Soyinfo Center.

11341. Gorell, Wallace. 2010. Re: Brief memoir–Interest in and involvement with macrobiotics (Continued–Part II). Letter (e-mail) to William Shurtleff at Soyinfo Center, 27 Dec. 2010 and 6 March 2011. 5 p. [1 ref]

• ***Summary:*** Continued: "Here is an extract from my 1967 journal, describing my arrival in Boston. (It was written without capital letters):

"now i am at 29 university road, brookline. i was greeted by beverly (renée's friend) who said 'welcome, you can put your things in the basement till we see if you will stay.' on the way out to the car i met rebecca [Dubowsky], the housekeeper. she asked mike and jan to come only at night [because they looked like hippies–they had even longer hair than I did then]. as i went to bed she was having beverly make her short hair shorter. i wonder about my hair. is my desire to keep it only natural or is it materialistic?

"just being here has made me very high. they are wonderful. i have so much to learn.

"today i have met the kushis. both he and she are amazing. very young-seeming, full of energy. i have spoken to jim ledbetter who is more like i imagined than the kushis. he is thoughtful. they are. their children are happy and active. already i feel love for them all. tomorrow perhaps mom and dad will arrive. "they arrived on the 11:00 shuttle from new york. they like the house and the people. at dinner last night they even liked the seaweed. they spoke with mr. kushi who gave them a brief run down of their ills by looking at them and trying a few pressure points. he ordered two bags full of macrobiotic staples which might be difficult to get in pennsylvania. martin brought the foodstuffs back from the store and i packed them in a picnic basket for their return trip. most everyone here at the house has told me how lucky i am to have such friendly, aware, and open-minded parents.

"now they have left. mother sounds as if she may take mr. kushi's advice and come here to live for a week or so to learn to cook and to have consultation and massage therapy. i have a slight headache and a beginning cold. michael has come by to find out what to do about jan who is sick. i unpack.

"Because I wouldn't cut my hair or beard, I was not included as part of the public face of the macrobiotic community. But I quickly made myself at home on University Road, doing a lot of the cooking for our 'study house,' and I co-edited 'The Order of the Universe' with Jim. I also intently studied macrobiotic theory, trying to make sense of the yin-yang system. I sat with Michio for hours working on a relative ranking of foods. [Note: This was no simple matter given the number of factors to consider. Yin food characteristics: large, wet, fragrant, sweet, sour or spicy, oily, seeds on the outside, native to a warm climate, coloration toward the violet end of the spectrum. Yang food characteristics: compact, dry, odor-free, salty or bitter, seeds on the inside, native to a cold climate, coloration toward the red end of the spectrum. Flesh is more yang than vegetables. Roots are more yang than fruits, stems more yang than leaves, etc., etc.]. 'Which is more yin,' I would ask, 'Cucumber or eggplant? Eggplant or banana? Banana or onion?'

"Another journal entry from that time:

"michio says that 'macrobiotics' will no longer be nonsense in ten years. perhaps that means that in ten years everything will be so nonsensical that no one will notice that macrobiotics still is.

"I returned to San Francisco for the summer of 1968 to share what I had learned–the theory still didn't make much sense, but the diet did. I served as Bobby Weir's macrobiotic advisor (Bobby was one of the founding members of the Grateful Dead). I taught a beginning cooking class weekly in the Haight Ashbury, and an advanced class in North Beach. Then after another year in Boston I went off to Japan, in August of 1969, to study acupuncture (which was still

© Copyright Soyinfo Center 2014

thought of as some medieval barbarism in the West, if it was known at all). Michio said he would arrange everything for me, that his parents would meet me at the airport and that I would stay with them while I was studying. Luckily Evan Root, a friend from Boston, met my plane, because I never saw or heard from Michio's parents during the subsequent year and a half I was in Japan.

"Why Michio told me those things, I have never understood. I tried to construe the whole thing as a trial he had contrived for me, guru-like, but it didn't make me think better of him. On my own, I never found an acupuncture teacher I wanted to study with, but I did study cooking with Darbin Yamaguchi [the wife of Alcan Yamaguchi] in Kyoto; I did work with the Katsuragis on their farm in southwestern Japan [Okayama] for a year, where I studied traditional methods of food preservation [the family made its own miso and *takuan* pickles]; and I did study shiatsu massage with the generous Miyamoto family in Hokkaido.

"After returning to the States, I worked for a year at my father's window business near Pittsburgh before returning to Boston. Here is another journal entry from that time:

"9/71 it seems i just can never write in here when the action's fast. weeks again have gone by and much has happened. now i'm in the hartford airport on my way to pennsylvania to gather up my things so i can return to boston to work with paul and bill and everyone at the erewhon trading company on filthy farnsworth street. who could have guessed it? it wasn't even on my list of options. i didn't even try. and already i've produced a whole new line of bags for them (us?) and i'm living at garner road. why this year i may even pay taxes.

"now [I'm being paid at erewhon] dollars five hundred sixty [$560] for each calendar month. paul tells me i'll be getting seven hundred by december (probably november), but he doesn't seem to want to be precise. stories of michio shafting various people monetarily make me uneasy in arranging money business here.

"'what effects did the trip to japan have on your thinking?' michio asks, and my mind whirls. what a question. 'about macrobiotics,' he says. well then. and we talk for over an hour.

"paul hawken seeks to form a new corporation in texas. he says the miller wants to give us (erewhon) nine million dollars.

"There are many unsavory stories I could tell about Paul. He named his son after Frank Ford of Arrowhead Mills in Texas–the miller mentioned above–in order to clinch an Erewhon-Arrowhead merger, then changed the boy's name when the merger fell through. He had an avid companion in his bed every night his wife Dora was in the hospital bearing him that son. (To get to his room at the Gardner Road house one had to pass by mine.) He routinely dissed Erewhon's idealistic workers. His secretiveness and duplicity made it difficult for his co-workers, many of whom had once thought of themselves as his friends, to do their jobs. One day when I couldn't take it any more, I went into Paul's office to challenge him on his behavior. Screaming, he told me he had no intention of treating anyone any differently, so I resigned. When I returned to my desk, several people at the desks around me whispered, 'What was *that* about?' 'I quit,' I said. Just then he stormed out of his office, loudly accused me of being incompetent and told me he was firing me. 'I already told them I quit,' I replied. He flushed crimson, and screamed at me to get out.

"Precisely because their president was only twenty-three–who can be surprised that he lacked maturity?–many of Erewhon's employees thought they were working in the ranks of a new world order. They gave up better-paying jobs in order to take part in the great healing. We had an M.D. working in our shipping department. But at the management level I was perhaps the only one who didn't need to curry favor with Paul. The others had no previous corporate experience–no CV that could land them a similar position anywhere else. I could easily return to a job with my father's business or, as it happened, return to school (to study Japanese)." Continued. Address: Berkeley, California, and Flinders Island, Tasmania.

11342. Gorell, Wallace. 2010. Re: Brief memoir–Interest in and involvement with macrobiotics (Continued–Part III). Letter (e-mail) to William Shurtleff at Soyinfo Center, 27 Dec. 2010 and 6 March 2011. 5 p.

• ***Summary:*** "Michio and Aveline Kushi saw business, saw Erewhon, as a way of advancing the macrobiotic campaign (and/or their own ends). They asked us, the troops in that campaign, to help make Erewhon successful. We tried, telling ourselves we were creating a new business paradigm, although, week after week, the discord Paul created made it harder to swallow that line. Would Erewhon have been peachy without Paul? It seemed so to me at the time, but perhaps that was more youthful naiveté. Bill Tara, Jean Allison, Beverly Sky, Roger Hillyard, Judy Coates, Nancy Lesourd and I–others too, perhaps even Paul–were artists who, trying to change ourselves, trying to change the world, found our way to Boston to study a new technique. We were counter-culturists, mostly strangers to the world of business. The way things were at Erewhon, it was a very uncomfortable world to spend time in. Ill at ease there, disenchanted, some of us migrated away from the scene–although not necessarily away from macrobiotics–trying to find a personal path, to further a personal vision, to walk peacefully forward. Some have been kind of successful, some–not so much. But no doubt all, like me, have found it an interesting passage."

Note: After reading an earlier draft of this memoir, Shurtleff asked Gorell several specific questions, whose answers are given below. Please excuse any of this information that is now repetitive.

© Copyright Soyinfo Center 2014

Although the Grateful Dead and The Quicksilver Messenger Service never played at The Firehouse, Wally assumes they did play at the dance his group organized at California Hall.

Wally says he hardly knew Paul Hawken in San Francisco. When asked: "How did Paul, Jean, Bill Tara, etc. support themselves for 2-3 years in San Francisco? How did they pay for food, rent, psychedelics, etc." Wally replies: "I have no recollection. I worked at the post office for a while and then after the Firehouse / Calliope Company folded I worked as an actor with the New Shakespeare Company which has become today's Shakespeare in the Park."

"I don't believe I ever knew Erewhon to have a head other than Paul Hawken when I was in Boston. I was there for three different stays. Searching back through my journals I find that... I first arrived in Boston in mid-September of 1967. I remained there for the academic year, studying with Michio and Aveline, co-editing 'The Order of the Universe' and cooking for the University Road study house. In June of 1968 I returned to San Francisco to share what I had learned.

"In late summer of 1968, I went back to Boston to continue my studies with Michio and Aveline, to continue to work with Jim Ledbetter on editing 'The Order of the Universe' and to try to rationalize the yin-yang classification system for foodstuffs, and again I cooked for our study house on University Road.

"In August of 1969 I traveled to Japan for the first time. I expected I would have enough trouble getting along there without the problems created by having long hair at that time, so I cut it off short before I left.

"I returned to the USA in early 1971, worked for my father in Pennsylvania for about nine months, and then was offered the position of Director of Imports with Erewhon. To be perfectly frank, I can't recall ever having performed any of the duties that title would suggest, although I suppose I must have. I developed recipes for our packaged line of foods, designed the labels, illustrated (I think) and hand-lettered them. In my free time, I edited some of the recipes for a cookbook Aveline was producing, I painted the signs for Sanae restaurant."

"I first studied cooking with Aveline and helped her when I could, particularly after returning from Japan when I was living on Gardner Road. In Japan I studied with Lima Ohsawa a few times and took regular weekly classes from Darbin Yamaguchi during the latter part of 1969. I also learned a lot from teaching cooking classes which I began to do in 1968 and continued for some time as a way of repaying the obligation I felt toward my teachers.

"Names [of people studying macrobiotics in Boston during Wally's first year]: Connie Frank, Beverly Sewerski, Nahum Stiskin, Paul Hawken, Martin Russell (ran the retail store), Rebecca Dubowsky, Anne Harkless, Georgeanne Coffee, Richard Sandler, Bill Tara, Renée Gremore (that's her name now, can't recall her name then), Jean Allison, Evan Root, Jim Ledbetter, Joe Leis, Nancy Lesourd, Judy Coates, Dora Coates, Peggy __ (she became a Druid nun)...

"I'm afraid I can't tell you who came first and who came later. Just don't remember except for Jimmy and Susan Silver who I believe came in my second year."

When asked if he remembered an early tofu "cheesecake" developed in the macrobiotic community in Boston: "There was a lot of experimentation attempting to make foods that people missed–tofu 'cheesecake,' seitan 'chicken,' etc. I was never much interested in those efforts. I liked food that could be appreciated for what it was and cuisine that presented that food as simply and honestly as possible. But then I didn't have wild cravings for 'forbidden' foods the way many of my fellow macros did. Brown rice was (and continues to be) one of my favorite foods. There were times in those days when I seemed to be the only person I knew–including Michio–who was actually *following* a sensible macrobiotic diet. Everyone else seemed to lurch between bingeing and making penance. This tendency was, I felt, instigated by Ohsawa's extremism. Japanese macrobiotic adherents paid little or no attention to his edicts about drinking as little as possible, avoiding yin foods entirely, never picking up your child except for feeding, etc.; while many of his American adherents, to their detriment, strictly followed his advice."

When asked when and where he learned to write formal Japanese (*keigo*)*:* "After all three stints in Boston, and not really knowing what I was getting myself into, I decided to go back to school to study Japanese formally. (I had done a seven week crash course at Harvard before going to Japan for the first time, but had not, otherwise, done any formal coursework.) I didn't want to study in a big city so The Monterey Institute of Foreign Studies (as it was then called) was the only place to go. I spent a year there, then transferred to U.C. Berkeley where I completed my B.A. degree. I then went off to study for a year at the Inter-University Center for Japanese Language Studies in Tokyo, where they put us through a *lot* of *keigo* paces. And then I did three more years of graduate study in the rhetoric department at UCB, working on rhetorical analyses of Japanese language materials, mostly the poems of a 20th century symbolist poet by the name of Nishiwaki Junzaburo–six years of formal study in all.

"Sad to say, my reading skills are now back to the level of decoding and my writing skills are next to non-existent, but I can still carry on everyday conversation fairly well and I understand most of what it is said at my tea ceremony lessons."

Martin ran the Erewhon retail store most of the time Wally was around. He was a "key figure who, as I recall, ran the retail store pretty much by himself for some years. He had a limp from childhood malady and always seemed to feel a bit one down because of it, but was a really good man and quite capable." Address: Berkeley, California, and Flinders

Island, Tasmania.

11343. Andoh, Elizabeth. 2010. Kansha: Celebrating Japan's vegan and vegetarian traditions. Berkeley, California: Ten Speed Press. vii + 296 p. Illust. (color photos by Leigh Beisch). Index. 25 x 25 cm.
• ***Summary:*** A beautiful book, and a major contribution toward understanding Japanese cuisine, culture, and the pervasive spirit of gratitude / appreciation. In Japanese, *kansha* means appreciation or gratitude. Contents: Acknowledgments. Introduction: A historical perspective on kansha (*shojin ryori* is vegan), recent developments, putting theory into practice, practicing kansha, meal planning, some final thoughts, a note about language. Rice. Noodles. Stocks and soups. Fresh from the market. The well-stocked pantry. Mostly soy. Tuskémono [pickles]. Desserts. A guide to the kansha kitchen. A catalog of tools and techniques. A catalog of ingredients [glossary]–with entries that include the following: daikon, edamame, flours (kinako), kudzu, herbs, spices and seasonings (ao nori, sansho, shiso, togarashi, wasabi), kabocha, dried beans (adzuki [sic], daizu {dried soybeans–the most important legumes in the Japanese pantry}), dried soy foods [sic] (hoshi yuba {dried yuba}, koya-dofu / kori-dofu). Dried vegetables from the land (dried shiitake mushrooms). Dried vegetables from the sea (arame, hijiki, kanten, kombu [konbu]). Dried wheat gluten. Kasu (sake dregs). Konnyaku and shirataki. Matcha. Miso (red miso, white miso, genmai miso). Mushrooms. Natto. Nigari. Nuka. Okara. Pickles. Rice. Roots and tubers. Saké. Salt. Sesame (seeds, sesame paste, sesame oil). Soy milk. Soy sauce. Sweeteners (ama-zaké, kuro-zato, mirin, mizu amé). Tofu (firm tofu, silken tofu, grilled tofu, thin fried tofu {abura agé}, thick fried tofu {atsu agé}).

Tsukemono (pickles). Umeboshi (pickled plums). Vinegar. Yuzu. Yuba.

Note: This is the earliest English-language document seen (April 2013) that uses the term "thick fried tofu" to refer to atsu agé / deep-fried tofu cutlets.

Contains many recipes that use tofu, miso, soy sauce, edamame, natto, etc. Address: Japan.

11344. Nutrition & Nature. 2010. Nutrition & Nature: Nourrir par nature. Soy. Céréalpes. Variez, équilibrez [Nutrition & Nature: Be nourished by nature. Soy. Céréalpes. Variety, and in balance (Catalog)]. Revel, France: N&N. 20 p. 30 cm. Full color [Eng]
• ***Summary:*** A stylish product catalog (without prices) for Soy and Céréalpes [Cerealpes], loaded with color photos of product labels. Contents: Introduction, by Bernard Storup, founder and General Director of Soy. Organic solidarity: No genetically engineered soybeans. 100% of soybeans used grown in southwest France. To be engaged in the development of organic agriculture. To work give growers a written contract with just prices.

Fresh line of products. UHT line. Long life line. Marketing. Shelf layout. Address: Chemin de l'Horte, F 31250 Revel (near Toulouse), France. Phone: 05 62 18 72 85.

Address: Japan.

11350. Miyamoto, Tsuneichi. 2010. The forgotten Japanese: Encounters with rural life and folklore. Translated by Jeffrey Irish. Berkeley, California: Stone Bridge Press. 315 p. Illust. Maps. 23 cm.
• ***Summary:*** "Described by translator Jeffrey S. Irish as a man of 'rare energy and practical insight,' Miyamoto Tsuneichi [1907-1981] was a leading Japanese folklorist of the mid-twentieth century. In this lifetime he walked 100,000 miles along the backroads and throughout the hill and island villages of Japan, conducting interviews, taking photographs, and capturing a vanishing way of life.

© Copyright Soyinfo Center 2014

Miyamoto's descriptions of these meetings are presented here–in the villagers' own words, in narratives, and in vignettes. The collection is as revealing as it is poignant (from the publisher).

Page 167: "Many in Takihata had learned to make Kôya tofu at Mt. Koya, and a lot of these people were originally from Tajima." "When I got well, because my family was also making Kôya tofu, I went to Awa to buy soybeans, from which tofu is made."

"Meanwhile, people said there was no profit to be made in Kôya tofu and they left" (p. 176).

Concerning the village of Kawame, Aomori prefecture (p. 248): Millet was planted in the first year of a 3-year crop rotation, soybeans in the second year, and daikon radish in the third. "Millet was the staple food, soybeans were used to make miso, and daikon radish was pickled."

Miso is mentioned on pages 50, 65, 66, 187, 248, and 315.

Soy sauce is mentioned on pages 43, 65, and 315. Address: Ethnologist, Japan.

11351. Nagai, Toushirou; Tamang, Jyoti Prakash. 2010. Fermented legumes: Soybean and non-soybean products. In: Jyoti P. Tamang and K. Kailasapathy, eds. 2010. Fermented Foods and Beverages of the World. Boca Raton, Florida: CRC Press / Taylor & Francis. xii + 448 p. See p. 191-224. [125 ref]

• ***Summary:*** An ethnic fermented food is one used by a certain ethnic group. Contents: Introduction. Fermented soybean foods: Bacilli-fermented, sticky and nonsalty soybean foods (natto, kinema, thua nao, chungkokjang, hawaijar, tungrymbai, aakhone, bekang, peruyaan, pepok, sieng), mold-fermented soybean foods (tempe, douchi, sufu, doenjang, miso, shoyu / soy sauce, tauco).

Fermented non-soybean legume foods: Dawadawa (preparation and culinary, microbiology), ugba (preparation and culinary, microbiology), maseura (preparation and culinary, microbiology), wari (preparation and culinary, microbiology), oncom (preparation and culinary, microbiology), dhokla and khaman (preparation and culinary, microbiology). Conclusion.

Among the Bacilli-fermented, sticky and nonsalty soybean foods, natto, for example, has the following contents (p. 194-96): Introduction, history, preparation and culinary, socioeconomy, microbiology and food safety, biochemistry, nutritional composition, and functional properties. Kinema and thua-nao similarly subdivided, however some lesser-known soyfoods and some non-soy foods are described in less detail.

The Introduction (p. 192-93) discusses Dr. Tamang's revised "KNT triangle" theory, with two maps. "Within the proposed triangle-bound countries, many fermented sticky nonsalty soybean foods are consumed by the different ethnic groups of people in Cambodia, Laos, Vietnam, Darjeeling hills and Northeast states of India, eastern part of Nepal, southern part of Bhutan, Myanmar, and southern parts of China (Figure 6.2). Beyond this hypothetical 'KNT triangle' there is no report of kinema-like products that are sticky and ammonia-flavored fermented soybean foods, and the proposed 'KNT triangle' does not include salted, nonsticky and non-bacilli fermented soybean products such as *tempe, miso, sufu, soy sauce,* etc. (Tamang 2010)."

Fermented soyfoods can be classified in various ways: (1) Those fermented by bacteria (primarily *Bacillus subtilis*), such as natto, thua nao, kinema, etc. (all have a characteristic stickiness), and those fermented by molds, such as soy sauce, miso, tempeh, etc. (2) Nonsalted (those to which no salt has been added, such as natto, kinema, tempeh), and salted (such as soy sauce, miso, douchi, etc.) (p. 194). Pepok (p. 207) is an ethnic fermented soyfood from northern Myanmar (formerly Burma). To make pepok: Soak soybeans in water overnight, drain, and bring to a boil. Then wrap in leaves and allow to ferment for 2-4 days. Mash the fermented beans with salt and hot chili pepper, roll out into disks, and dry in the sun. Use as a seasoning or consume after roasting.

Sieng (p. 207) is a traditional fermented soyfood from Cambodia. To make sieng: Soak soybeans in water overnight, drain, and bring to a boil. Spread in shallow bamboo baskets and allow to ferment naturally for 2 days by bacteria adhering to the baskets or suspended in the air. Then immediately transfer the fermented soybeans to salt water and soak for 5-7 days; occasionally tree sap or enzymes are added to the salt water. Use with salt and spices as a seasoning.

Tables: (1) Nutritional composition of boiled soybeans (as a control), natto, and tempe [incl. vitamins, minerals, and fatty acids]. (2) Nutritional composition of kinema and raw soybeans.

Figures (photos unless described otherwise): (1) Map of the natto triangle (based on Nakano 1972). (2) Stylized map of the KNT (kinema–natto–thua nao) triangle. (3) Chopsticks lifting up natto from a polystyrene paper package. *Bacillus subtilis* (natto) produces a polyglutamate, a viscous material, which is called *ito,* meaning "string," in Japanese. (4) Natto in a classical package made of rice straw. (5) A bowl of kinema–freshly fermented. (6) Kinema curry in a bowl and on a plate. (7) Thua nao in a plastic bag, with the label in Thai. (8a) The front of a package of chungkokjang, labeled in Korean, with a photo on the label of the product in a thick spicy stew (*chigae*). (8b-c) Top view and side view of a mound of chungkokjang. (9a) The front of a package of Rusto's Tempeh. (9b-c) Top view and side view of a cake of tempe. The spaces between soybean cotyledons are packed tightly with white mycelia of *Rhizopus oligosporus.* Address: 1. Genebank, National Inst. of Agrobiological Sciences, Tsukuba, Japan; 2. Food Microbiology Lab., Sikkim Government College, Sikkim Univ., Gangtok, Sikkim, India.

11352. Nishimura, Mayumi. 2010. Mayumi's kitchen: Macrobiotic cooking for body and soul. Tokyo, New York: Kodansha International. 157 p. Illust. (mainly color). Index. 26 cm. [15 ref]

• ***Summary:*** This is Mayumi's first English-language book. Madonna (of worldwide musical fame) wrote her a letter that appears in this book (p. 7): "Dear Mayumi, Congratulations on your fabulous book!... Not only are you the best chef in the world, you are part of our family, and we thank you for your love and warmth.

"In the seven years you lived with us and cooked for us, your amazing food helped me to be a happier, healthier person, balanced in body and mind. I feel better than I did 20 years ago. I am very grateful to you for this."

The index of this stylish book contains 24 entries for tofu (some in the chapter titled "Protein dishes"–p. 97-104), 20 for miso, 14 for seitan, and 11 for tempeh. How nice to find a Japanese cookbook that calls for the use of brown rice (basic recipe, p. 67).

The centerpiece of Mayumi's book is her 10-day detox diet.

Also contains specific recipes for: Nabe (with "2 pieces abura-age {deep-fried tofu skins}, halved or cut open on one side to form pouches," p. 67). Soybean and millet croquettes with beet sauce (with "15 oz {425 gm} canned soybeans, drained," p. 84). Seitan pot stickers (with seitan and tofu, p. 113). Smoked tofu salad (with "7 oz {200 gm} firm tofu," p. 104). Black soybean tea (p. 113).

The Glossary (p. 140-49) includes entries for: abura-age, adzuki beans, brown rice, brown rice mochi, edamame, hijiki, kombu, koyadofu, kuzu, mirin, miso, nori, rice milk, rice syrup, seitan, sesame oil, shiso, shoyu (incl. soy sauce and tamari), soba, soy meat nuggets (TVP), soymilk, tahini, tempeh, tofu, umeboshi plum, umeboshi plum paste, wakame, wasabi, whole-wheat flour.

About the author (inside rear dust jacket): "Mayumi Nishimura was born on the small island of Shinojima in Aichi Prefecture [in Mikawa Bay Quasi-National Park]. In 1982 she moved to the U.S. and began studying macrobiotics under Michio Kushi–the leading authority in the field–at the Kushi Institute. Later she worked at the school as head cooking instructor. In 2001 Mayumi became Madonna's private macrobiotic chef, joining her on her Drowned World Tour. Between 2001 and 2008 she cooked for the superstar full-time. Currently Mayumi travels between Japan, where she writes and lectures on macrobiotics, and the U.S." She has written four books published in Japanese. A large color photo of Mayumi appears on the front dust jacket.

The book is dedicated to Mayumi's children, Lisa and Norihiko, to her parents, and to Michio Kushi and his wife, Midori.

11353. Sugawara, Etsuko. 2010. Fermented soybean pastes miso and shoyu with reference to aroma. In: Jyoti P. Tamang and K. Kailasapathy, eds. 2010. Fermented Foods and Beverages of the World. Boca Raton, Florida: CRC Press / Taylor & Francis. xii + 448 p. See p. 225-45. [29 ref]

• ***Summary:*** Contents: Introduction. Aroma compounds of miso and shoyu. Brewing of miso. Brewing of shoyu. Identification of important aromatic compounds that exist together in miso and shoyu. Changes in the concentration of HEMF during fermentation. Formation mechanism of HEMF by yeast cultivation in model media. Effects of the type of yeast and growth conditions on the formation of HEMF. HEMF formation pathway by yeast in miso and shoyu (Contribution of ribose and glycine to HEMF structure, contribution of glucose to the ethyl group of HEMF). Conclusion. Acknowledgments.

HEMF is 4-hydroxy-2(or 5)-methyl-3(2H)- furanone.

More than 300 aroma components have been determined in shoyu and miso.

Figures show: (1) Quantitatively important aroma compounds in miso and shoyu: 1-Hexanol, Maltol, 2-Furfural, HDMF, 2-phenylethanol, HEMF, 4EG(4-ethylguaiacol), Methionol. (2) Simplified manufacturing process [flow sheet] for a fermented soybean paste (red salty rice miso) (with the halotolerant yeast *Zygosaccharomyces rouxii* and/or *Candida versatilis* added). (3) Simplified manufacturing process [flow sheet] of shoyu (with the halotolerant yeasts *Zygosaccharomyces rouxii* and *Candida versatilis* added). (4) Effects of nitrogenous compounds in the media of the formation of HMF by the yeast. C1: polypeptone. C2: casamino acid. C3: glutamic acid. C4: threonine. C5: serine. C6: alanine. (5) Effects of medium preparation on the formation of HMF by *Z. rouxii* 061. (6) Effect of glucose concentration and NaCl concentration in the medium on the formation of HEMF by *Z. rouxii* 061. (7) Hypothetical formation pathway of HEMF by yeast. Note: The title of this chapter seems unusual: miso is a fermented soybean paste but shoyu (soy sauce) is a liquid. However the author states (p. 227): "The original meaning of *miso* in Japanese is 'immature shoyu.'" Address: Faculty of Education, Iwate Univ., Morioka, Japan.

11354. Sumi, Hiroyuki. 2010. Nattô wa kiku: kaimei sareta nattô, pawaa no himitsu [Natto works: It has now been made clear, natto is the secret to power]. Tokyo: Dainamikkuseraa Zushuppan. 270 p. 19 cm. [Jap]*

11355. Tamang, Jyoti Prakash. 2010. Himalayan fermented foods: Microbiology, nutrition, and ethnic values. Boca Raton, Florida: CRC Press. xix + 295 p. See p. 65-78. 230-31, 233. Illust. 25 cm. [584 ref]

• ***Summary:*** This is a very interesting, original, well researched and well written book. It is also the best source of detailed, well documented information on kinema and its close relatives seen to date.

The word Sanskrit word Himalayas means literally

© Copyright Soyinfo Center 2014

"abode of the snows." This region is the home of over 65 million people. Those in the eastern Himalayas are of Mongolian ethnicity and ancestry.

Chapter 3, titled "Fermented legumes," includes a section titled "3.1 Important fermented soybean foods" which states (p. 65): "Some of the common ethnic nonsalted sticky fermented soybean foods of the eastern Himalayas are *kinema* (Nepal, Darjeeling hills, Sikkim, and South Bhutan), *hawaijar* (Manipur), *tungrymbai* (Meghalaya; food of the Khasi and Garo peoples), *bekang* (Mizoram; food of the Mizo people), *aakhone* (also called *axone,* Nagaland; food of the Sema Naga), and *peruyyan* (Arunachal Pradesh). Manipur, Meghalaya, Mizoram, Nagaland, and Arunachal Pradesh are small states in northeastern India.

All of these foods are similar to *kinema.*

Note: As a guide to the Seven Sister states of North East India, we are including a color map of the area created for Soyinfo Center.

For all these six foods is given: The name of the food, a close-up photo of the food, indigenous knowledge of preparation, a flow chart showing the indigenous method of making the food, culinary practices (how the food is prepared / cooked and eaten), economy (its role in the local economy), microorganisms (dominant and secondary).

Section 3.3 is "Microbiology" (of fermented legumes): Kinema (microorganisms, source of inoculation in kinema production optimization of fermentation period, in situ fermentation of kinema, selection of starter culture, monoculture fermentation of kinema, development of pulverized starter for kinema production, phylogenetic similarity of *Bacillus* strains from Asian fermented soybeans), other fermented soybean foods of north east India.

Section 3.4 is "Nutritive value" (table 3.1 compares the nutritional composition of raw soybean and kinema). And section 3.5 is "Conclusion."

The long and very interesting section (9.1.1) on the "Antiquity of kinema" (p. 230-34) states that it is a food of the Kirat ethnic group (to which the Limboo belong) of eastern Nepal. The origin of the word "kinema" can be traced back to the word *kinaba* of the Limboo language (*ki* = fermented; *namba* = flavor). It is not clear whether *kinema* appeared first, then was disseminated and diversified, or vice versa. The Limboo believe that their discovery and domestication of the soybean (which they named *chembi*) is mentioned in one of their oral myths known as *mundhuns.* This myth, which is described here in detail, might have been written between 2500 and 100 BC (p. 231).

Kinema is made by fermenting whole soybeans, without inoculation, with strains of *Bacillus subtilis* bacteria. It is alkaline in nature / pH, has a sticky, stringy texture and a strong flavor.

Natto [salty natto, not itohiki natto] is believed to have been introduced to Japan from China during the Nara period around 710-714 AD (Ito et al. 1996; Kiuchi 2001). Kinema might have originated in east Nepal around 600 B.C. to 100 A.D. during the Kirat dynasty.

Products closely resembling kinema are popular foods in many non-Brahmin communities in the eastern Himalayas. "The Lepcha [the aboriginal inhabitants of today's Sikkim] call it *satlyangser;* the Tibetans and Bhutia [of Bhutan and Sikkim] call it *bari;* the Khasi [of Meghalaya] call it *tungrymbai;* the Meitei [of Manipur] call it *hawaijar;* the Mizo [of Mizoram] call it *bekang;* the Sema Naga [of Nagaland] call it *aakhone;* and the Apatani [of Arunachal Pradesh] call it *peruyyan."*

Soybean products closely resembling kinema outside of the Himalaya region are *natto* of Japan, *chungkokjang* of Korea, and *thua-nao* of Thailand [From Google Books Preview].

Dr. Sasuke Nakao (1972) coined the term "natto triangle," but Dr. Tamang proposes that the hypothetical triangle be renamed "Kinema–Natto–Thua-nao triangle" (or KNT triangle).

Note: Four facts support Dr. Tamang's elegant new triangle:

(1) Indonesia and its mold-fermented tempeh should not have been part of the original natto triangle.

(2) Nakano (1972) guessed that natto might have come to Japan from Java during the Muromachi period, however extensive research on natto and tempeh after 1972 offers no support to his guess.

(3) Many new relatives of natto have been discovered since 1988, many of them by Dr. Tamang and co-workers. All of these (except the relatives of dawadawa made from soybeans found in West Africa) fall within the KNT triangle.

(4) No mold-fermented soyfoods–such as tempeh, miso, soy sauce, jiang, or fermented tofu–fall within the new KNT triangle.

An illustration / map (Fig. 9.1) shows this improved triangle with Japan (natto), Nepal-India-Bhutan (kinema), and Thailand (thua nao) at its three vertices / corners; it also includes chungkokjang (Korea), pepok (Myanmar), sieng (Thailand), and [incorrectly, mold-fermented] *douche* [*douchi*] from south China. These mildly alkaline, sticky fermented foods are popular among the peoples of Mongolian origin. This may be due to their typical flavor called *umami* (Kawamura and Kara 1987). This flavor is developed during the hydrolysis of soy protein (by protease enzymes) into amino acids during fermentation. Have people of Mongolian origin evolved or developed particular senses which incline them to enjoy the umami flavor? In the eastern Himalayas green vegetable soybeans are also boiled and eaten.

Section 10.3, "Commercialization through ethnic food tourism," suggests that just as tourists visit the vineyards of France, tempeh shops in Indonesia, and artisans or factories that make shoyu or sake in Japan, there are potential tourist

© Copyright Soyinfo Center 2014

sites for experiencing how traditional foods are made in the Himalayan villages. For kinema, try visiting Aho village in Sikkim.

About the author (p. xix): A good biography and portrait photo are given. In the "Acknowledgments" (p. xvii) he writes: "I am thankful to my wife Dr. Namrata Thapa for constant support and technical assistance in the preparation of this book. Over the past 16 years the team of brilliant Ph.D. students that I have recruited from the Food Microbiology Laboratory, Sikkim Government College, Gangtok, has been the real driving force in researching and identifying the scientific mechanisms of ethnic Himalayan fermented foods." He then lists their names. Address: Food Microbiology Lab., Sikkim Government College, Gangtok, Sikkim 737 102, India.

11356. Fu, Jia-Chen. 2011. Re: In China or Japan or Korea was soymilk traditionally fed to infants or to recently-weaned children? Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 18. 1 p. [2 ref]
• ***Summary:*** "I know of one medical study by Dr. Ruth Guy (citation below), a physician at the First Health Station of the Beiping Municipality, who found little evidence that Beiping women used soybean milk to feed their children. Dr. Guy notes that though the drink was available through street vendors, it was generally drunk by 'old people in place of tea.' Home preparation was difficult and laborious, and therefore avoided. (Ruth A. Guy, 'The Diets of Nursing Mothers and Young Children in Peiping,' *Chinese Medical Journal* 50 {April 1936}:440).

"This assessment seems in keeping with the broader Chinese medical and materia media literature of pediatrics. I've not seen soybean milk recommended in classical medical texts for infant feeding. In cases in which the mother cannot breastfeed her child, medical texts generally recommend that (1) a midwife be found, (2) animal milk (e.g., sow's milk) be used as supplement, or (3) a thin gruel made with ground cereal in water (often rice) be prepared.

"For a more extensive treatment of breastfeeding and infant feeding practices in late imperial China, please see Ping-chen Hsiung, 'To Nurse the Young: Breastfeeding and Infant Feeding in Late Imperial China,' *Journal of Family History,* 20:3 (1995): 217-238." Address: Case Western Reserve Univ., Dep. of History, Mather House, 11201 Euclid Ave., Cleveland, Ohio 44106.

11357. Kushi, Norio. 2011. Re: History of Erewhon, Los Angeles. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 20. 1 p.
• ***Summary:*** "Erewhon Los Angles was initially located at 8001 Beverly Boulevard. It was opened in the fall of 1970. John Deming and John Fountain were major investors in helping to open the LA store and during the 1980s Erewhon troubles in Boston, ownership of the LA Store was transferred to John Fountain before Tom DeSilva finally (in 1980) bought Erewhon Los Angeles. Tom DeSilva later (May 1991) moved Erewhon to its present location at 7660-B Beverly Blvd. #A, Los Angeles, CA 90036-2737. Phone: (323) 937-0777." Address: Traveling by truck in Portland, Oregon.

11358. Andoh, Elizabeth. 2011. Setsubun, sushi, sardines & beans. *Taste of Culture Newsletter* (*A*). Feb. 1.
• ***Summary:*** "Mark the date on your calendar: February 3 is Setsubun, a day to oust ogres, welcome in good fortune, gobble plump rolls of uncut sushi, and eat sardines and simmered [soy] beans to insure good health and strength.

"Written with calligraphy for 'season' and 'break,' setsubun is a marker signaling the end of one calendar segment and the start of the next. Technically there are many setsubun throughout the year, though today in Japan the word is synonymous with February 3, the start of the lunar new year (what in many Western cultures is called 'Chinese New Year'). Like many customs associated with the start of a new year, setsubun marks a time for ridding oneself of previous unpleasantness leaving lots of room for good things to come.

"Begin by expelling evil from the past. First, don a monster mask–they run the gamut from *kowai* (really scary) to *kawaii* (oh, s-o-o-o cute), and yell a bean-throwing jingle (*'Oni wa soto. Fuku wa uchi'*). According to some sources (my Japanese in-laws, included), the number of pan-roasted beans you throw should match your age.

Bean-throwing takes place at work (go ahead: pelt the boss!), at school (teachers and students toss beans at each other), at home (Dad's usually a good sport, though he probably prefers playing Santa), and in public–most *Jinja* (shrines) have *mamé maki* ceremonies. At these bean-tossing events, tiny packets of *fuku mamé* (good fortune beans) are thrown to those with out-stretched hands. In Kyoto, pretty Maiko-san toss the beans (in some locales, local politicians do the bean-throwing). Are you in Japan? Join the fun at the nearest shrine.

"Invite good fortune by eating an uncut *eiho maki* sushi roll while facing South Southwest (this year's auspicious direction). All the *konbini* (convenience stores), *suupa* (supermarkets) and *démaé* (neighborhood take-out joints that deliver) offer specials at this time of year. Sardine (*iwashi*) dishes and dried bean cookery are also part of Setsubun's culinary customs. Quenelle-like dumplings called *tsumiré* made from freshly filleted, minced sardines liberally seasoned with ginger, scallions and miso are poached in *kombu* (kelp) broth to make a wonderful, ward-off-winter soup. *Gomoku mamé ni,* a nutritious mix of veggies and slow-cooked, soy-simmered soybeans find their way into boxed lunches, folded into omelets, or on their own. I offer you both vegan and carnivore (chicken added) recipes, below." Address: Japan.

© Copyright Soyinfo Center 2014

11359. Otsuka Pharmaceutical Co., Ltd. 2011. Otsuka to begin phased launch of Soyjoy nutritional food product (News release). Japan. Feb. 2.
• ***Summary:*** "Otsuka Pharmaceutical Co., Ltd. has announced that it will begin a phased launch of its Soyjoy nutritional fruit product in France, Belgium, Italy and Spain, starting in February 2011 through its subsidiary Nutrition & Sante SAS.

"For the Otsuka Group, with its two core pharmaceutical and nutraceutical businesses (NC business), the development of the NC business in Europe is an important step in its globalization efforts.

"Soyjoy, a fruit soy bar made from soy flour, is a product that could help unlock the global potential of soybeans due to their high nutritional value. The SOYJOY line up in Europe will feature seven varieties, including strawberry and blueberry which have become hits in Japan.

"Moving forward, Otsuka Pharmaceutical will first focus efforts on the success of SOYJOY in Europe by expanding sales channels in the region, followed by the strengthening of its product line up to include original items and reviewing the potential for localized production." Address: Japan.

11360. Kushi, Norio. 2011. Re: The origin of the first Erewhon retail store at 303-B Newbury St. in Boston. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 9. 1 p.
• ***Summary:*** "Prior to the Erewhon store [in April 1966], starting in September 1964, at 101 Walden St, Cambridge, Massachusetts, we started buying items in bulk from Japan as well as grains in bulk from within the US. We would stock them in the basement and I along with others would package them into smaller containers. We would sell these every day since we had dinners and lectures most evenings. It was a busy happening place. We moved to 7 Eastman Circle in Wellesley, Massachusetts in December 1, 1965 and then to 216 Gardner Rd, Brookline, Massachusetts in March 31st 1966. During these moves we continued to buy the food products in bulk, package them and sell them at our dinners. It was while living in Wellesley, Massachusetts that Evan Root came to live with us.

"We had barely moved into 216 Gardner Rd, Brookline, when within a couple of weeks, the town of Brookline, Health Department finding out about the food operation, shut us down. This is what necessitated the opening of the Erewhon Natural Food Store at 303-B Newbury St. [in April 1966]. The name Erewhon, although it is known that it came from Samuel Butler's book, was actually picked because George Ohsawa had a special fondness for the book Erewhon. George Ohsawa created a comic series titled, 'Jack & Miti in Erewhon.'

"One year later, when my mother opened 'Sanae' Restaurant one block to the east of Erewhon, the original intention was to call the restaurant 'Nowhere.' When Evan Root went to the Boston City Hall to register the name, the people there thought the name was really odd and refused to allow the restaurant to be called Nowhere. Evan called my mother and while on the phone, my mother picked Sanae for the name." Address: Traveling by truck.

11361. Young, Jean Allison. 2011. Chronology of interests in macrobiotics and work with Erewhon (Interview). *SoyaScan Notes.* Feb. 10. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** Chronology: 1945 June 1–Jean is born in St. Paul, Minnesota. She has two brothers. Her father was killed in a traffic accident when she was 18 months old. Her mother went into the hospital for about 2 years. Her mother later came back into their lives, but her father's parents were suing for custody of the children. So her mother married her stepfather (who turned out to be a nice guy) and in 1949 the two of them moved with the 3 children to Los Angeles when Jean was age 4–to get away from the custody lawsuit.

1959 Aug. 22–The family moves to the Hawaiian Islands the day they became a state of the USA. Jean goes to high school in Hilo, on the island of Hawaii, and graduates in 1963 with honors.

1963 early summer–Jean leaves Hawaii to work for the summer at Army/Navy Supply House in San Francisco, California, as a secretary. In the fall she enters San Francisco State College while continuing her job part time during the fall. During college she also worked in several temporary jobs ranging from tax work and insurance to general office work. During 1965-66 she worked part time at Wilson's Advertising Agency in San Francisco as a secretary. She did not graduate from college (this was a time of turmoil, strikes, and protests at San Francisco State) but she does have a 4½ year education in Liberal Arts. Like many students, Jean did participate in the protests.

At the college, Jean was involved in acting, and through that she met both Paul Hawken and Bill Tara, who were doing theater in San Francisco and the psychedelic "drug scene" at that time.

1963-1967–Jean, Paul Hawken and Bill Tara grew to know one another well during the six years when they lived (often together) in San Francisco. In the early spring of 1966, shortly after rock concerts began at the Fillmore Auditorium [at the corner of Fillmore St. and Geary Blvd.] in San Francisco, they rented an old abandoned firehouse [fire station] at 3767 Sacramento Street, north of the Haight-Ashbury district in the Sunset District. Jean, Paul and Bill all lived in the firehouse the entire time they were there. Jean was Bill's girlfriend. They organized and hosted live musical performances and dancing with some of the original street bands in San Francisco–Sopwith Camel, The Charlatans, Big Brother and the Holding Co. (including Janis Joplin), etc. The firehouse held about 100 people, and the door was kept "closed," admitting people only in small groups. The resulting noise was kept carefully under control so as

© Copyright Soyinfo Center 2014

not to disturb the residential neighborhood. People paid a mandatory "donation" [one ticket shows: "Donation $2.00"] to hear the performance, and the hosts did not make change. No one sat, as there were no chairs, so everyone danced–although it was usually so crowded that no one could dance.

Concerts were held at the firehouse for at least 3 months [Feb. 12 to April 2]. "Since the last concert was the Wreckers Ball, I would assume that we had been told by the landlord that the place was to be raised and he wanted us out." "It was a wonderful and exciting time–to be there at the beginning of the rock and roll music scene in San Francisco." Jean thinks they moved from the firehouse directly to the warehouse south of Market Street, but she is not sure.

Note: This Firehouse is now part of early rock and roll legend in San Francisco. See the long blog titled Rockarchaeology101. See also: http:// www.chickenona unicycle.com/ Firehouse%20 History.htm.

"The rest of the time we were dealing and using drugs." The only LSD they could get in those days was the real Sandoz LSD. Several days in advance of each trip, they carefully prepared their minds, bodies, and the environment. They had someone who was not taking it who was in the room with them to ground them. They did it the right way because it was "a spiritual experience."

They soon moved into and rented one floor of a warehouse on an alley [65 Harriet St.] south of Market Street, between 6th and 7th streets. They pooled the money to pay the rent. "The warehouse was actually an old factory for making the pre-packaged small half-pies that you could buy at a convenience store. Initially, we had a wicked problem with rats and mice (a house cat took care of that) but had so many cockroaches that we use to have a monthly 'cockroach killing party' with Raid and beer. Great fun."

"We lived communally in a huge warehouse space, except for a single room in the back. We each set up our own bedroom area–but shared the living room area (defined by a sofa, chairs and a rug) and open kitchen (defined by a table, stove, refrig and cupboards). Bill lived there, I lived there but moved out before Bill, and Paul lived there for a time also."

"The word 'studio' fits to a certain degree. Bill Tara and I were a couple for several years although we broke up at about the time we started the macrobiotic diet–which was Renee came along. Michio and Aveline Kushi made several attempts to get us back together as a couple as they wanted to send us off as a 'teaching team.'"

Jean thinks that Paul Hawken was the first of the group to learn about macrobiotics in about 1967, perhaps from little yellow book that he was given by Roger Hillyard, who was doing light shows in San Francisco at the time. "My memory says that we were pretty much off of drugs by then. As a group we were pretty disgusted with the whole 'flower child' movement of the late 1960's–the indiscriminate use of drugs just to get as high as you could. We were also more cautious about the drugs that were available at that time, they were cut [diluted] with just about anything that came to hand. You couldn't be sure about the quality. So I would expect that we started with the exact diet as proposed by Ohsawa–brown rice for X number of weeks, gradually adding miso, shoyu, veges [vegies], etc. Alcohol was never a big deal with any of us, so I expect we just stopped. As to sugar, you know how hard that one is!! But, I expect we all tried hard. Very idealistic. I also think we were several months in to the diet–close to a year, before we left for Boston." Continued. Address: Chatham, Massachusetts.

11362. Young, Jean Allison. 2011. Chronology of interests in macrobiotics and work with Erewhon. Part II (Interview). *SoyaScan Notes.* Feb. 10. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Continued: 1967 early summer–Jean arrives in Boston, Massachusetts. In the summer and fall of 1967 she works at Harvard University, Carpenter Center for Visual Arts as an assistant to the head of purchasing and accounts receivable.

1968 fall–She joins the macrobiotic community in Boston. From the fall of 1968 until the spring of 1970 she was one of the early employees at Erewhon Trading Co., Inc. Her work with Erewhon is described later.

She lived both at Gardner Road and on University Road, and elsewhere. She never lived "off campus." "Being part of the 'elite' of the store, most of the time was spent at Gardner Rd. I moved to University Rd. to be closer to an impermanent lover of the time. At University Rd. I cooked the dinners for a while until I was asked to step down. I was trying to experiment with foods–trying to used standard macrobiotic ingredients to replicate items in the normal American diet, e.g. can you make strawberry 'shortcake' with 'whip cream' out of flours, rice and berries, etc. This didn't sit well with people who wanted only miso soup, rice and vegetables.

1970 spring–Jean leaves Erewhon and sets out on a trip around the world. Her biological father had left her $3,000 as insurance. She did not know what to do with it but she wanted to go to Japan so she bought a ticket on a airplane. She left Boston, "I believe with Jim Gronemeyer (an off-site macrobiotic lover of the time), traveling through most of Europe, then Greece, Iran, Afghanistan, Pakistan, Kashmir, India, Thailand, Vietnam (where I tried to get to visit some macrobiotics living in the demilitarized zone was turned back by the military), Hong Kong and then Japan. I taught a few cooking classes in Germany although since I was paying my own way, my time was my own. In addition, my two-months stay in India [which she found the most fascinating so far] included cooking and teaching at a hospital outside of Calcutta, with macrobiotic Joe Levine, for Indian patients that had been 'given up' by their local doctors as incurable. Cooking and prep was done on the floor on top of pottery jars filled with cow dung. The cockroaches were as big as

© Copyright Soyinfo Center 2014

bats and they would hover just out of reach of the knife, sneaking in when you weren't looking! Good fun!"

By the time she reached Japan, she had run out of money. But she intended to land in Japan because she and Beverly Stiskin were best friends (and Nahum was a close friend)–and had been for at least several years in Boston. They had met in Boston through macrobiotics.

1970 Nov. to 1972 spring–Jean arrives in Tokyo, Japan with $5 in her pocket. She knew the Stiskins were there. She called Nahum (in Kyoto) and asks him what she should do. He said, "I'm sending you a ticket." She stays in Japan at the home of Nahum and Beverly Stiskin in Uzumasa (near *Kitano-jinja*–Kitano Shrine), west of Kyoto. Reuben Stiskin was a baby at the time. She pays her way by teaching English in Kyoto to Japanese, and she studies tea ceremony (with Bev) with a Japanese teacher. Michio Kushi wanted all his macrobiotic students to study Japanese culture and language. Jean learned a little Japanese–"enough to get around." The Stiskins help support her financially, in part with a room in their home. When the Stiskins move to Tokyo, Jean moves with them. Nahum was writing a book on Shinto.

1972 spring–Jean leaves Tokyo, returns to California, stays with relatives, buys a car (1957 Ford Fairlane station wagon with a mattress in the back), and during that summer and fall (10 months) takes a slow, interesting trip across the United States by herself–seeing places such as the Grand Canyon, Yellowstone, Wounded Knee she had long wanted to see–and seeing how people lived. "It was important to me to know America."

In Boston she moved in with two semi-macrobiotics in an alley off Beacon Street in a basement (not in a macrobiotic house; Woodie and his wife and their two children). When Woodie and his family move out, Jean keeps the place.

1973-1974–Martha Fielding (later associated with Shambhala Books) moves in with Jean.

1973 fall–Jean works for 2-3 years at the Center for International Affairs at Harvard University as a staff assistant; this center was the predecessor of the Kennedy School of Government.

1974 early–Jean meets her husband to be, Andrew P. ("Andy") Young, who was not a macrobiotic and had no interest in it. He was deeply interested in Japanese food and loved sushi with raw fish. At that point Jean let go of her interest in macrobiotics.

1979 June 30–Jean Allison and Andrew P. Young are married. He goes to Tuck School of Business at Dartmouth College. In 1981 she completes her B.A. degree there–unfinished since San Francisco State days. She becomes a mother of two.

1981–They move (full time) to Chatham, Massachusetts (at the "elbow" of Cape Cod) where Andy starts his own management consulting business. After several years he goes to work for the local bank. He is now a commercial loan officer. Address: Chatham, Massachusetts.

11363. Amador-Toro, Diana. 2011. Re: Warning letter. Insanitary conditions. Letter to Mr. Shoji Ihara, Acting Vice President, Global Protein Foods, Inc., 170 Avenue L. Newark, New Jersey 07105-3831, Feb. 10. 2 p. Typed, on letterhead.

• ***Summary:*** Some of the more blatant findings include: "Floor drains throughout the facility were clogged with product such as soybeans and soybean sprouts. Water was pooling in the clogged drains near wooden water tanks in the soybean sprouting area, and in the soybean sprout production area. Pooling water with organic matter fosters the growth of pathogens which may be transferred through splashing onto food or food contact surfaces."

"You must take effective measures to exclude pests from the processing areas and protect against the contamination of food on the premises by pests, as required by 21 CFR 110.35(c). However, our investigator observed the following:

"A dead mouse on the floor near an unused fryer unit stored in the tofu fryer room.

"Live flies, too numerous to count throughout the facility, including in production areas. The flies were landing on equipment and packaging materials.

"Live roach-like insects, too numerous to count, in an unused damaged vacuum sealer stored next to the label packaging table, which is near the sprout and tofu packaging tables.

"Rodent excreta-like pellets, too numerous to count, in the walk-in refrigerator next to finished tofu product, in the receiving area where soybeans used for tofu and soymilk are washed, behind pallets of bags of soybean seeds along the walls in the warehouse area, near stored unused pallets in the receiving area, on and next to bags of citric acid in the refrigerator room, and on the floor near the hand-washing sink in the production area.

"Spider webs were throughout the facility, including in the receiving area on the overhead pipes, and a web containing a live spider was directly above the tofu production line." Address: District Director, New Jersey District. Phone: (973) 331.4900.

11364. Tara, Bill. 2011. Re: Creative work with music, dance and lights in San Francisco (1966-67) before starting work at Erewhon in Boston. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 13 and March 3. 2 p. Plus part of website printout: http://rockarchaeology101. blogspot.com/ 2009/11/ firehouse-3763- sacramento-street-san.html. Printed Feb. 13.

• ***Summary:*** "... I signed the lease on the Firehouse (at 3737 Sacramento St., San Francisco) from a guy who built a small theatre on one side of the space for a Jewish youth theatre group. Myself (and George Eby) met at the Ashland Shakespeare Festival where we were part of the company.

© Copyright Soyinfo Center 2014

The plan was to open it as an experimental theatre venue. We had started to do readings in the upstairs and lived there along with Jean Allison, a theatre major at San Francisco State [College]. Paul Hawken had returned from the South as a photographer of the civil rights movement. Paul and I decided to start producing events at the Firehouse.

"We produced seven evening events that were part 'happening,' part music and dance. The first event was February 1966 and continued till April of that year. I worked a little at the Matrix (the first Rock club in the city and did a little lighting work with Ray Anderson). George knew a few musicians so we created these crazy evenings. Paul worked out lighting. We featured Big Brother and the Holding Co., The Amazing Charlatans, the Sopwith Camel, Wildflower and The Great Society (Grace Slick's first band) as well as some folk and blues performers such as Jessie Fuller and Ale Extrom.

"Ray Anderson and Elias Romero did light shows and film, we had actors, dancers and generally a crazy time. We had some of the first light shows in the city. We had to move out since the building was sold and was to be turned into a parking lot. The last event was called the Wreckers Ball. After moving out Paul Hawkins, Jean and I formed the Calliope Company. Our group also included Wally Gorell [see handbill for concert on 26 July 1966]. We had a warehouse South of Market [on Hariett St.] and Paul and I fitted it out and lived there as well as using it as a rehearsal space and a studio for the light shows. We produced several Rock Concert / Dances in the California Hall featuring the Dead and the Airplane [Grateful Dead, Jefferson Airplane]. One of these was October 31, 1966 and called the "Dance of Death" generally credited as being produced by Bob McKendrick–he was the money man. It was scheduled on the same night that Ken Kesey was trying to do the Acid Test Graduation and the Dead had signed a contract they couldn't break. The best version of this story is in *The Electric Kool-Aid Acid Test,* by Tom Wolfe.

"Paul was introduced to macrobiotics through a book by Ohsawa given to him by Roger Hillyard who was also doing light shows. Paul and I were both interested in Eastern philosophy and environmental issues. We started to experiment with diet and had fun doing it. Paul and I sought out sources in SF for miso etc. and started to meet some people who had studied with Michio Kushi in Boston. Renee Gremore (later Tara), Paul Petrofsky (founder [with Hy Lerner] of Baldwin Hills Bakery) and Evan Root (the first Erewhon worker). We invited Herman Aihara down to give a talk to a group of outrageous hippies in the warehouse backed by a huge American flag. Years later Herman would comment how he was first to teach the 'hippies.' Paul went to the East Coast to install a light show in Washington, DC, visited Boston, met Michio and Aveline, and told me that Michio was the real deal.

"I was just finishing a show I directed but within a few months, Jean, Wally and I had moved to Boston. Roger came later. Paul, Jean, Wally, Roger and I all ended up in the Erewhon crew."

Note: Bill now lives in Scotland and have spent about 15 years in the UK since 1970. He lived for a while in Portugal. He was born and raised in Santa Cruz, California.

11365. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline Kushi, and the Boston macrobiotic scene. Part I. Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p. • ***Summary:*** "I was a minor player in the Erewhon story, but I lived in Los Angeles (L.A.) and Boston and experienced a little of its life, especially towards the end.

"In September of 1967 I arrived in Boston, age 19, at 29 University Road, the Kushis' first study house (aside from their own home). My then boyfriend was ill and wanted to try macrobiotics. We had been living in Fairfax, California, when a friend passing through during the summer left behind a copy of *Zen Macrobiotics.* When the doctors could find nothing wrong with him, but he was still sick, we went first to the Zen Macrobiotic Restaurant in L.A. on Hollywood Blvd. near Western, which was run by a very nice Japanese man and his family. I don't remember their family name. It was there for many years and was visited by John Lennon, among others. When we went to Boston I thought we were going to some kind of clinic. I had no interest in macrobiotics myself, and continued to eat my usual diet, which was pretty bad at the time.

"At 29 University Road, we had a room on the third floor next to Matt and Richard Sandler, and in another room, Wally Gorrel. Also in the house were Nahum Stiskin, Bill and Rene Tara, Rebecca Dubawsky, John Palumbo, Bob White and his wife (a black and white couple, unusual for that time), John Claude Ducet, a French Canadian who made the benches and tables for the first Sanae restaurant at 272B Newbury St., Steve Helfner, and Mrs. Ninomiya and her son, who had a separate little apartment or room and did not eat with the rest of us. She made 'happy coats' a kind of short kimono to sell to whoever would buy them. There were several others there whose names I do not remember.

"Michio would often come over during the day to check on things, and on people (a few had health issues) and sometimes would give a lecture in the evening in the living room. The Kushis' home at 216 Gardner Road was less than a mile away.

"At the beginning I didn't know I was expected to eat the same food as the rest of the household until Steve Helfner asked me one day not to heat up the canned soup, containing meat, that I was going to eat, in the pots used for the rest of the cooking. I think I had a frosted cake in the fridge, too. I don't know if everyone was being polite or just didn't take the time to explain to me how things worked there. I was kind of clueless. Anyway, I wouldn't eat most of the food served at dinner, for a good while, except the rice

© Copyright Soyinfo Center 2014

and beans, as everything looked so unfamiliar. Michio made numerous dietary recommendations for my friend, that I had to cook specially for about three months. After that period he was well again. We split up and I went to work at Sanae restaurant with Evan Root and Peggy Taylor early in 1968.

"My first impression of Michio, besides that he seemed very cordial, kind, humorous and good-natured, was that this man knows something about life. I didn't know what though. A few lectures began to enlighten me. It was obvious that he had a different level of understanding. I went to the Arlington St. church lectures also.

"At Sanae, I helped with prepping the vegetables and fruits during the day, along with Peggy, and waitressed in the evenings. Later Rosemary Traill, future sister-in-law of Richard Young, waitressed there also, as did others from time to time. Richard Young worked at a small flower shop just a few blocks away, and would drop by the restaurant during the day sometimes. He was a friend of Peggy and sisters Rosemary and Maureen Traill. He would later marry Maureen Traill after she and Bruce McDonald married and divorced. During the year I worked at Sanae, Marty Russell and then Billy Anton also worked there.

"Evan was a very good restaurant cook, a good boss, and was also very good with the customers. Responsible, solid, earthy, dependable, funny, and I respected him. The customers liked him, and a lot of fellows in the community looked up to him. He was a very good 'root' for the macrobiotic movement in Boston. I remember him taking Michio home late at night once, after lecture, on the back of his motorcycle. Michio looked hilarious in a motorcycle helmet. Eventually Richard Sandler took over Evan's job.

"I moved to the Kushis' home at 216 Gardner Road, doing the housekeeping and handling minor bookkeeping. Among those who lived there during the year or so I was there were Judy Flohr, who later married Denny Waxman, Susan Sims, who was married to Duncan Sims and moved to Canada, Jim Ledbetter, who made some very strange food in the downstairs kitchen of the 3-story home which Aveline referred to as 'dogfood,' Anne Riegal, now the wife of Ron Kotzsch, Eric Utne, Peggy Winter and, of course, Michio and Aveline and their children. Shizuko Yamamoto visited once or twice.

"After about a year I went out to Los Angeles, where Aveline was now living temporarily, to study cooking with her. I intended to stay about six weeks, but ended up staying seven years. I arrived in May 1970 at the 7511 Franklin St. home that Aveline had rented. During this summer Jimmy and Susan Silver and their toddler Rachel lived there, as well as Bruce and Maureen McDonald and their baby daughter, I, Diane Brewer and a few others.

"Aveline would prepare lunches for the Erewhon crew every morning and deliver them to the retail store on Beverly Blvd. Diane Brewer and I would have to prepare and deliver special meals to a rather tyrannical old woman in a wheelchair who seemed permanently dissatisfied with everything.

"Sometimes Aveline would ask one or more of us to accompany her to Little Tokyo, where she would take her youngest child to get treated by a Japanese doctor for a leg injury, the result of a fall on the stairs in Boston. Her other children remained in Boston with Michio. Once the police stopped us on the freeway because Aveline was driving too slowly. Years later, she said that she had failed her driving test or exam (I'm not sure which) three times. After the third try the examiner told her that if she paid him a certain amount of money ($75 I think) he would give her a passing mark. She paid." Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

11366. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part II). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• ***Summary:*** Continued: "Michio came out to visit once, during the summer I was there, perhaps for meetings about Erewhon. He gave a lecture in the living room at 7511 Franklin also. I remember a cat, perched on the mantelpiece behind the blackboard, stretching its neck around to look at Michio writing something on the board, and everyone laughed. Michio's immediate response–'Even cat wants to study, why not man?'

"Another memory from that summer–Aveline and I sitting in the back yard and she telling me 'Michio always thinks (of) my happiness.'

"Another–scrubbing the new warehouse floor, catty corner from the retail store, on my hands and knees. My first experience working for Erewhon.

"Around September I think, Aveline rented a huge mansion up the street at 7357 Franklin Ave. and we all moved in. Jimmy and Susan Silver, Bruce and Maureen McDonald, Tom DeSilva and his two little boys Joe and Patrick, and many others. The house had once been owned by film star Ruby Keeler, and her name was still there, engraved on the metal mailbox. Ozzie and Harriet lived across the street. Gloria Swanson called once to speak to Aveline and was furious with me because I didn't know where Aveline was. She'd gone out.

"Hollywood was always more or less present in this Hollywood house. The landlady had been in show business in earlier days in some way and was always willing to let the various film companies shoot films in the front yard or in the house (they paid well I believe). Several were shot during the couple of years I was there. This was always happening in L.A. and you would often see a film shoot taking place on this or that street as you drove by.

"Aveline returned to Boston late that autumn, I think, and left me in charge of the house. I wasn't a particularly good cook, by any means, but tried my best, and others

© Copyright Soyinfo Center 2014

cooked also.

"Many people stayed at that house for long or short periods of time. At one time there were nearly 60 people, staying in every nook and cranny, the attic, the basement, over the garage, in the cleaned-out tool shed, everywhere. I occupied a large closet for a while. It was all rather hippie-ish, without the drugs, though there might have been one now and then who took drugs, but certainly not openly that I ever knew about. But many had taken drugs in the past.

"Ron and Iona Teeguarden were there, during which time I think Iona wrote a lovely cookbook. John Fountain was a frequent dinner guest. John Deming was there briefly, and there was much interest in macrobiotics and always many people. Jacques and Yvette de Langre [DeLangre] lived a few blocks away, and held 'Soba Night' on Tuesdays. Yvette was a very good cook, and Jacques was a happy, upbeat and friendly personality in the community. He had a photography studio close by on Sunset Blvd., a few blocks away from his home, and once took a number of photos of the Franklin St. house and people there. Mrs. Durkin, the landlady, dropped by from time to time to check on things, a little nervous I think about so many people living there– young, hippie types. She was a kind woman, but made me ask a 16 year old girl to leave the house, worried about having an underage person living there. And also a nice black fellow because she thought he would draw too much attention from the wealthy neighbors. Michio came out from time to time and gave lectures in the very large library, and consultations and sometimes a cooking class. The lectures were very well attended. During one lecture, he levitated (I wouldn't believe this until I saw it with my own eyes). This was the only time I ever heard him ask the audience to be very quiet as he had to 'concentrate.' Usually there were babies making noises in the back of the room or children playing in the hall outside the sliding doors. Michio told the audience that he had been levitating recently to cure the arrogance of some of the teachers, presumably in Boston as L.A. didn't really have any. Later on, he said he stopped levitating because people were giving it too much attention, over his dietary teachings.

"After a couple of years I left the house in the hands of Roy and Mariko Stevens, and went to work as a secretary for Erewhon in the warehouse in Culver City.

"I think Jim Gronemeyer was vice president when I got there around late 1972 or early 1973, not sure when. I remember him coming in wearing his tennis clothes and carrying his tennis racket, quite late in the morning. Not sure if he took his responsibilities seriously. Byron Jennings took over his job at some point. I don't know if Gronemeyer left of his own accord, or was fired. Byron was very intense, very yang, but a good fellow, strong, hard-working and with a good sense of humor. He cared about the job and the company. Very brusque and took no b.s. from anybody. But I liked and respected him. He wasn't a slacker.

"Loren Spector was there also, in upper management. He had previously run one of the Kushis' study houses in Boston. He was also intense, also hard-working, and also seemed to care very much about the job and the company. He and Byron seemed to work well together and both seemed together, intelligent and focused.

"I typed letters and answered the phone, and later took orders, so I have no idea what the financial condition of the company was, or the state of operations. But all seemed well. Jeff Flasher ran the warehouse in the back. He was very popular, smart and worked well with people.

"It was kind of a hippie operation, except for Eddie ___, the accountant, another good guy, who was also very focused and worked hard.

"I remember Paul Hawken came out from Boston, for meetings I suppose, and to have a look at things, and arrived at the warehouse at 6 a.m. before anyone was there, and found the front door unlocked. Someone had forgotten to lock it. I'm not sure, but I had the feeling that relations between Erewhon Boston and Erewhon L.A. were not as cordial as they might have been. At that time anyway. But as I said, I don't really know much about what went on.

"Once, as I left the building at the end of the day, I walked into the middle of a film shoot taking place on the street. I had no idea that anyone was filming the front of the warehouse, and inadvertently disrupted the filming." Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

11367. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part III). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• ***Summary:*** Continued: "After a year I left Erewhon L.A., and one day Tom De Si1va suggested that I open a macro restaurant. So I did. I found some backers and bought a little hole in the wall restaurant at 525½ Fairfax Avenue, a few blocks from Erewhon. It was only about 25 seats. The menu was very basic, as was the decor (rice, beans, veggies, soups, salad, desserts, tempura, stirfries) but there was no lack of customers. People were hungry for natural foods. Being L.A. we were also visited by a number of celebrities and actors, including John Lennon and Governor Jerry Brown who visited a half dozen times at least, and once conducted an interview there during dinner.

"Three years later I sold the restaurant to a mother and daughter team and moved back to Boston. There I lived and worked at 62 Buckminster Road, which was now the location of the Kushis' home. I arrived there in September 1977. Laura Knudson, who later married New Hampshire teacher Blake Gould, and I shared the office work and the cooking. Olivia Oredson was also there.

"Aveline had been searching and searching for a location in which to open the Kushi Institute. Finally she found a

© Copyright Soyinfo Center 2014

third floor space (three rooms) in a warehouse at 17 Station St., less than a mile from their home. Michio and Aveline asked Olivia and me to manage it, using a $20,000 loan from Sandy Pukel. The opening ceremonies took place on September 25th (I think) 1978. As there was no cooking class room yet, Aveline cooked all the delicacies for the opening at Buckminster Road (which was quite a job) and then had them all transported down to Station St. and carried up the stairs (there was no elevator) to the third floor. It was a very happy day for Michio and Aveline.

"A year later, around August or September of 1979, Michio asked me to come to a meeting at Buckminster Road. Michio had decided to start a 'Human Relations Board' (HRB) at the Erewhon warehouse in Cambridge to help the situation there. I believe there were union rumblings [at Erewhon] at the time, though I don't remember how far along things were.

"The HRB was to be composed of Marty Roth, Lewis Legon, and me. We three and Michio were seated on the floor, in front of the couch in the living room, around a coffee table (Michio always preferred sitting Japanese style) and Michio went over the two or three pages outlining the HRB's responsibilities. So, in the course of one weekend, I went from working at the Kushi Institute in which I'd been totally absorbed, to walking into a situation I knew nothing about. I'd never worked at Erewhon in Boston, and my job at the L.A. warehouse had been secretarial.

"I don't really know why he wanted me included in this Human Relations Board. I think he was pleased with the way the Kushi Institute was going at the time. (I was the administrative director and Olivia Oredson was the educational director, but those were big titles for what was still a two-bit operation). For the first couple of weeks at Erewhon I had to go to the Kushi Institute each evening after working all day at Erewhon, to explain my job to my replacement, Steve Gagne.

"In this new job, I was unsure at first, uncertain where to begin, because I had no knowledge of the situation. But it didn't take too long to get the general picture. My memories of the time I spent in the HRB are as follows:

"There was heavy tension between Jeff Flasher, who was now president of Erewhon, and Marty Roth. I do not know the reason for it, but it was palpable on Jeff's side. I don't think Jeff supported the HRB. He wasn't at the meeting at Buckminster Road, or chose not to attend, though presumably Michio had informed him beforehand.

"Lewis, Marty and I worked well together, and might have been able to make a significant improvement in the company had we had Jeff's support. But I think he felt very threatened by the HRB, particularly by Marty.

"Instead of handling what we were supposed to handle, Jeff had Marty and I handle union negotiations, along with Evan Root, who was then vice president.

"Before the union negotiations began, Evan seemed a little unsure of his position, and didn't seem to have a niche, or much to do. At some point he said he was staying for the money. He added a solid feeling to the company, but his talents were not utilized, I think, until union negotiations began.

"The company wasn't unified. There was an 'us and them' feeling between the truckers and the production floor employees, on the one hand, and the managers and 'suits' on the second floor. At least there was this feeling on the part of the former. So it was a perfect environment for the union organizers to take hold, and as I found out, these were not the noble union organizers one thinks of as saving the day for the down- trodden employees. They were out for blood.

"I remember being astonished by the woman from the local union who was coaching and advising the employees during our evening meetings. She seemed to be *extremely* hostile to put it mildly. Excitable, ready for a fight. The employees totally distrusted us, and were very into accusing. I think much of this was fostered by the union organizers. Many of the employees were victims in a way, somewhat brain-washed by the union organizers.

"Walking past the Arlington St. Church one weekend, someone outside handed me a flyer and encouraged me to come in and listen to Caesar Chavez speak. I thought well of him at the time from the little I knew about him. However, the incredibly vile things he said during that speech shocked me. I never respected him after that. Had there been a tv crew or microphone there, I think the speech would have been completely different. He may not have realized that he wasn't speaking only to hard core union sympathizers, but also to members of the general public.

"That experience and the experience of being in on the union negotiations at Erewhon, completely changed my formerly rather benign and supportive views about unions and union organizers. Not very honorable people from the little I saw." (Continued). Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

11368. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part IV). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• ***Summary:*** Continued: "I still have my notes, from the three or four months I worked at the Erewhon warehouse in Cambridge in 1979, for a meeting with Michio. Excerpts: 'Both Lewis and Marty are paranoid about Jeff Flasher, in part justifiable, due to the emotional state and suppressed tension of Jeff, and a few incidents that happened.' (Can no longer recall what those were). 'Jeff put up a brick wall against the HRB, though he likes me personally I think, and I think he also likes Lewis, so the administration and the HRB are divided. Can't work under this. Must be unified, or at least not hostile. But Jeff feels threatened. Hands of HRB are tied. Jeff gave Marty and me union negotiations to deal with,

© Copyright Soyinfo Center 2014

along with Evan.'"

"'The HRB has had two different proposals for its purpose, one from you (meaning MK) and one from Jeff. The result is confusion, an uncomfortable situation and stagnation.'"

"'Erewhon needs yang–clear, just policies, good systems and accountability to a yang source. Erewhon's systems and structures not orderly. The warehouse is not clean. The company needs to follow American-style business logic to succeed. Some of the employees need someone firm to tell them when they're really out of line.'"

"'Besides firm authority, they also need some understanding. The employees are hungry for support (many of them) and encouragement. Problems: no one seemed to listen to them, or cared when they listened, prior to union negotiations. No one communicated the company's side when suggestions were turned down. There seems to be no one (in authority) who cares about them, everyone is busy with other things. Need a channel for their ideas and some practical utilization of their ideas, and communication about why, when not used.' (I remember thinking that upper management, in general, was not heartless, just so very focused on the future that they didn't give enough attention to the present, to the employees).

"'Jeff now tightening very much on the HRB and a few of the managers, but mostly the HRB. No one knows or understands what we are doing. We don't know our limits and freedoms.' Also, 'Not enough fellowship. Time is crowded. Most of my time is spent keeping the peace between HRB and Jeff, union correspondence and communication.'"

"'The warehouse also needs yin, improvements to the dining room, better cafeteria food, little parties, socializing, etc.' I suggested that Michio think about all of this, and then discuss it with us before he left for Europe, for a seminar tour.

"'Key points

"1. Straighten out Jeff and Marty's relationship.

"2. Straighten out Jeff and HRB's relationship.

"3. Clarify in Jeff's presence our purpose and function.

"4. Straighten out where there is overlap, and how to handle.'"

"The only way the situation would have been fixable, in my opinion, would have been if Jeff had used the talent that was already on board in the following way. Of course, hindsight is 20/20 they say.

"(1) If Marty Roth had been made operations manager, the company would. have undergone a number of much-needed improvements. Marty was very smart, capable, somewhat experience (I believe he learned a lot about business management from his father), had good sense and good suggestions, and management ability. He was capable of making tough decisions, if necessary. But he was relatively powerless in the position he was in, given Jeff's attitude and the change in the purpose of the HRB.

"(2) If Lewis Legon had been empowered to deal with all employee issues, he would have gone to bat for them, but in a way fair to the company, as he could see both sides. This would have helped morale, and taken some of the wind out of the sails of the union organizers. Lewis was capable, smart, and very good natured. He was a great asset to the company in my opinion, and Marty could have been as well.

"(3) While Evan was less willing to consider the employees side as much, he was a good company man. 'Into protecting the interests of the company. Sees certain sides no one else thinks of. Good at certain administrative duties, like security, benefits, complicated work dealing with outsiders. Very good at representing the company in matters other than financial, though (at that time) lacking in expressing interest or concern for people's needs.' He could have continued to take some of the load off Jeff's shoulders.

"(4) In addition to those three, who were already working at Erewhon, I believe the company need a different person in the position of comptroller, for a number of reasons.

"With those four players, the major problems could have been turned into manageable challenges.

"Michio and Aveline were not at Erewhon much, at least not during those few months I worked at the warehouse, except for a couple of times. I remember both of them attending a meeting we had with one of the lawyers who was advising us on some aspect of the union negotiations. The lawyer had been speaking at length when suddenly Michio began to snore softly. He had fallen asleep, sitting up perfectly straight (eyes closed) on a couch between Aveline and me. Aveline bent forward, looked over at me with a comical expression, repressing a laugh. Evan looked over at Michio and said 'let him sleep' and turned his attention back to the lawyer. Aveline dug her elbow into Michio's side. I wondered what the lawyer thought.

"The lawyers were expensive, one older male, and one younger female. Evan said Erewhon was probably paying for her training (through this experience of helping to handle Erewhon's union negotiations). But then that was true of many of Erewhon's employees and managers. Eventually the negotiations went to federal mediation. The mediator was a little surprised, I think, at the company's greenness and lack of sophistication. Anyway, I left after three or four months feeling that the situation wasn't fixable, or at least that there was no way I could help to make it better under the current circumstances." Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

11369. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part V). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• ***Summary:*** Continued: "I think Erewhon failed for a

© Copyright Soyinfo Center 2014

variety of reasons, not just one thing, but the two most important reasons were that: (l) There was too much youth in management. There were no older, riper, mature heads to steady things. (2) There was almost no one in management who had business skills and training, certainly not at the level and of the type that Erewhon needed at that stage of its growth.

"There was an absence of older, experienced and qualified people managing all of Michio and Aveline's enterprises and organizations. They were mostly always young and unqualified for the positions they held (including me and including, sometimes, Michio and Aveline's children). It was the 'Peter Principle' ["In a hierarchy every employee tends to rise to his level of incompetence." "Members are promoted so long as they work competently. Sooner or later they are promoted to a position at which they are no longer competent"]. If you did well in one thing (and sometimes a person was selected even without that slim qualification) you were given more to handle, often much more, often beyond your capabilities.

"So almost everyone was out of their depth, in all of their enterprises. Most everyone was learning on the job, finding their way, with only a very few exceptions, whether in L.A. or Boston. This was also true of Michio and Aveline, but they were not usually involved in the day-to-day management of their businesses. (And they had the additional difficulty of dealing with a different culture, ways of doing things, different language, etc.) They also had so many enterprises going at the same time, which resulted in them giving only a little attention to each, in between travelling and teaching, both abroad and at home.

"Michio and Aveline were inexperienced and unfamiliar with what they were dealing with at Erewhon, and weren't there often anyway, and wouldn't have always known what to do if they were. Michio's success at Takashimaya in NYC in earlier days didn't translate into success at Erewhon.

"The seventies and eighties were a time when things were developing fast. There was so much interest in macrobiotics or, at least, in natural foods. I don't think Michio and Aveline, or anyone else, thought it would diminish. Many problems were seen just as difficulties on the way up the mountain to further development and success. Michio and Aveline both had an enormous capacity to remain unperturbed by calamity, a least until it was too late.

"Michio's lawyer, Morris Kirsner, had a strong influence on Michio and Aveline. He was a very good and trustworthy man, and very protective of the Kushis, but I think his outlook and advice was often too protective, too strict and unyielding, and thus at odds with the more laid back and informal approach of many of the Kushi managers and employees, and even of Michio and Aveline themselves, who were almost always casual and informal. So the two sides didn't jive, they were both rather extreme, and there wasn't a lot of middle ground.

"Other reasons include:

"–The fact that so much money was lost to the law firm to handle the union negotiations. In effect, the union organizers helped to lose all of the jobs of the people they were supposedly trying to help, because the company went into Chapter 11 bankruptcy and was sold. But the union may not have gained a foothold, had management listened and cared more.

"–The fact that so much money was lost to upper level management and other employees who, in my opinion, were taking too high salaries. I doubt if most of them were able to command such salaries at wherever they worked after they left Erewhon. Though some were talented, not all were quite the hotshots some thought they were. Somebody should have put a cap on the salaries. I do not believe Michio and Aveline were involved in this. If they were, I very much doubt that they had any accurate frame of reference for what they were agreeing to. (Often the case.) Aveline didn't handle money well (she handled it quite badly) and Michio didn't handle it at all. But more than a few Erewhonians in the offices on the second floor seemed to be living rather high on the hog.

"–Too much money was lost to Tony Harnett of Bread and Circus. Though Richard Young was a good man, he may have been practically giving the goods away in his job as salesman. I do not know if this is definitely true, but I heard something of the sort during the time I worked at the warehouse. He should have been reined in, fast.

"–When the decision was taken to carry dairy foods, meat, etc. to 'remain competitive with other distributors' that change in direction changed the heart and soul of Erewhon, and its integrity and purpose, on some level at least. Michio would only have made such a decision if presented to him in a very positive light as the only way to go. I think one must look at all this from the Kushis' perspective as well. They were always engulfed in a swirl of opinions, pro and con, on many matters, and often didn't know who was right or who to believe. They were too busy and overloaded as well. They were also dealing, a lot of the time, with many young and inexperienced people, some of whom were rather full of themselves, had all the answers, knew all the solutions, or so they thought. More than a few of them should have been very grateful that they were employed by the Kushi organizations and businesses, as they wouldn't have had a chance at getting similar positions anywhere else. People also often left on the spur of the moment, and several people stole money or awarded themselves 'bonuses' without the Kushis' knowledge, until after the fact (and those are just the ones I know about–probably there are some that were never known to anyone else). Riding these rapids, and bumping along in the turbulence, Michio and Aveline Kushi tried to stay afloat. They both had their faults, most certainly, and made their share of mistakes, but so did their employees and associates. That should be remembered and taken into account.

© Copyright Soyinfo Center 2014

"–Lastly I think there was another financial drain on the company. Jeff Flasher told me he'd taken a $10,000 loan from Erewhon, during the months I was at the warehouse. I wonder if there were other 'loans' after I left. I wonder why Tom Williams, the comptroller, disappeared." Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

11370. Sharp, Carolyn Heidenry. 2011. Re: Erewhon, Michio and Aveline, and the Boston macrobiotic scene (Continued, Part VI). Letter to William Shurtleff at Soyinfo Center, Feb. 15. 11 p.

• ***Summary:*** Continued: "Given all of the above I suppose it was inevitable that Erewhon should fall.

"Many people would have had difficulty filling the shoes of president. Not an easy job. Probably no one, among the community of friends and associates that Michio and Aveline knew, and from whom they would have selected a president, had the experience or training to handle the job. And most anyone would have had some successes, and also made some mistakes. However, if Tom DeSilva or Evan Root had been president of Erewhon, I don't think either of them would have tolerated too-high salaries, too-low profit margins, or hired Tom Williams as comptroller. Or taken out $10,000 loans from the company.

"After the collapse of Erewhon, Michio once said that if ever he began a food company again, he would make it a very simple operation, selling grains, beans, sea vegetables, Condiments, miso, soy sauce, noodles, etc. of very good quality, rather than the hundreds of items (thousands I think) that Erewhon carried before it died.

"So, about 12 years later (in about 1994), I was very disappointed and puzzled when he began KFC–Kushi Food Corp. And not sorry when it folded. Michio often had a short memory.

Note: The company was originally named "Kushi Macrobiotic Corporation" (KMC). It was listed on Nasdaq as KMAC as early as 7 Nov. 1995 and as late as 23 Aug. 1996. But by Feb. 1996 it had been renamed (probably for wider appeal) to "Kushi Natural Foods Corporation." On 26 Sept. 1996 its merger with American Phoenix Group, Inc. was completed.

"When I met the CEO that Michio and Fred Sternau selected to run the company, I was stunned. I mentioned my misgivings firmly to Michio and Fred, separately, when I next saw them. They both seemed strangely casual and not too concerned about it, and didn't seem to realize the huge impact this person would have on the company.

"One final note: In all the years I worked for Michio and Aveline and in all the time I lived at their home, I never heard either of them say one word that could be construed as anti-semitic. In fact, there were so many Jewish people working for them in their various enterprises and organizations, that I remember the Kushis being criticized for having too many Jewish people running things. Michio's secretary for several years, Donna Cowan, was also Jewish. Michio's lawyer for several decades, Morris Kirsner, was Jewish. And many students and employees were Jewish or half Jewish. Michio seemed too evolved to carry around prejudice of any kind. He was, and is, a great friend of humanity. All humanity." Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

11371. Root, Evan. 2011. Re: History of Erewhon from Aug. 1967 to Nov. 1968. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 17–in reply to inquiry from William Shurtleff. 1 p.

• ***Summary:*** "This is my recollection, not perfect, I'm sure.

"In August of 1967, there was an understanding between Paul Hawken, the Kushis, and Evan Root that Paul would take over the management of Erewhon from Evan Root. However, Paul needed to return to San Francisco to wind up his affairs there, pack and return. This would take about a month or perhaps a bit more.

"Paul and Evan took this trip to SF together via 'drive-away' car, stopping at various macrobiotic friendly stops along the way. Evan gave 'lectures' and cooking classes, and Paul helped out as well as continued to soak up everything he could as preparation for his next step.

"Paul, Bill Tara, Rene, and, I think Jean, lived in a warehouse in San Francisco which they had converted to living quarters. It was quite unique. I gave a MB [macrobiotic] class there which about 30 people attended, Jean and Ty Smith among them.

"The whole trip back and forth took a month or more, so we returned to Boston in late September, 1967. During our absence, Martin Russell, I think, was the main store keeper holding the place for Paul's return.

"During the next several years, several people from that SF warehouse scene started arriving in Boston, Bill Tara and his then girlfriend (soon to be wife) Rene, Jean, Ty, in particular.

"In my opinion, and I could be wrong, Jean probably signed on to Erewhon one year later than she recalls. The reason I think this is that the first time I met her was in SF in Sept. of 1967. If she arrived in Boston, as stated in #3, in the early summer of 1967, she would have had to return to SF for me to initially meet her there. I suppose that is possible, though she would have had to leave her employment at Harvard to do so. If, however. she arrived in the early summer of 1968 and started at Erewhon in September of that year, then it all makes sense." Address: Ashland, Massachusetts.

11372. Silver, Jimmy. 2011. Re: Erewhon and San Francisco rock music. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 17. 1 p.

• ***Summary:*** Jimmy and his wife, Susan, arrived in Boston in December 1970. "The Erewhon store was first in a little

© Copyright Soyinfo Center 2014

basement space further down Newbury Street [at 303-B Newbury] from Massachusetts Ave. and on the opposite side of the street from the bigger store [at 342 Newbury St.] that succeeded it (the original space became Tao Books and then Redwing Books).

Once the new store was built, as I recall Jim Gronemeyer was one of the first managers and was succeeded by Eric Utne. I was sent over from the warehouse to keep an eye on Eric for a while, as he was sort of an unknown quantity who was probably chosen by Michio Kushi for the job, for some unknown reason. At least that is my hazy recollection.

"Roger Hillyard and Ben Van Meter's company [in San Francisco] was called the North American Ibis Alchemical Company [NAIAC] and they appear on many dance posters from that era. Roger then became president of a synthesizer company for a while.

"The North American Ibis Alchemical Company put on light shows and provided the 'atmosphere' at many, many of the rock concerts of that era. If you check out the posters for the Fillmore, Avalon and other venues, down at the bottom or somewhere in the body, you will find NAIAC on many of them. I would venture to say that they were THE light show provider of that time."

Note: NAIAC existed by 17 March 1967; they folded in 1968 and their kit was sold off, Brotherhood of Light buying 12 carousels off of Ben. One website says of them: "possibly the best lightshow name... EVER."

I remember Marty Russell. Very sweet little guy, walked with a limp and had vitiligo–the skin on his face and neck was discolored brownish and pink. He was married to the oldest of the Coates sisters, Ronnie. I think he died a few years ago, but I'm not certain. The other Coates sisters, Dora and Judy, married Paul Hawken and John Deming respectively. Dora was also married to Richard Young for a while, I believe. There may have been a fourth Coates sister, not in the macro scene–I'm not sure. Note: Sarah Coates and Nancy Coates were not in the macro scene.

"I mainly worked at the warehouse, costing out the import shipments. I sat... at a big desk that had been moved out onto the landing outside the door into the offices. As I recall the offices were on the top floor, the fourth floor, so it was a walk up four flights of stairs and there was my desk, facing the wall outside the door. Paul had the desk moved out there for me–the offices were tight for room but it always seemed kind of personal too.

"However, I was, for a while, sent to 'work' at the store and keep an eye on Eric Utne. Eric was pretty loose, so it was fun in a way, although he liked to do all these things that I thought were somehow not what the higher-ups had in mind, like going over to the Prudential Center where they had a sauna and steam room almost every day, or going down to Sanae (at that time there was only 'little' Sanae, on Newbury Street, before The Seventh Inn was built and opened across from the Commons) for lunch. Eric's idea of work was more like hanging out." Address: President, Pure Sales, Irvine, California.

11373. Kushi, Norio. 2011. Re: Kushi Macrobiotic Corporation (KMC), formed in 1994. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 26. 1 p.

• ***Summary:*** "KMC are the initials of the company that was formed in 1994. The full name was Kushi Macrobiotic Corporation, headquartered in Stamford, Connecticut.

"An associate of my father's, Fred Sternau, approached my father about starting a publicly traded 'Macrobiotic' food manufacturing company. Fred Sternau, through his connections, raised over $2 million to start this venture, which was named, Kushi Macrobiotic Corporation."

"Basically my father wanted to re-create Erewhon, under the family name 'Kushi.' My feeling is that the company was ill conceived and the corporate players had no vision other than to make money. The company basically folded within two years after spending all the venture capital.

"Once it was seen that the company was not going to make any money since the product line was ill conceived and there was no demand for these 'value added' products, the CEO resigned with a hefty severance pay of roughly $200,000 to $300,000.00–I don't recall exactly.

"Apparently there is still 'value' in having a NASDAQ listed 'shell.' Therefore the KMAC shell was split and a company, called American Phoenix, bought 1/2 of the 'shell' thereby potentially retaining value for the share holders. American Phoenix was actually based in Australia and they were involved in some products relating to yachts or sailboats.

"The other half of the KMAC shell was renamed Kushi Food Corporation with the intention that the Macrobiotic Food venture would be resurrected, or, it could be used to lure a private 'Macro' biased food company into a public 'shell.' As far as I know, nothing ever came of the Kushi Food Corporation shell.

"The CEO of Kushi Macrobiotic Corporation, Robert Morrow, came with an impressive resume, and, as it turned out was either fiction or elaboration of the positions he had held in prior companies. He had no knowledge of the natural food industry, and, the first time he stepped foot in my parents home, stated, 'Don't you dare ever offer me any of this Macrobiotic Food, I refuse to ever touch any of it!' This was prior to him even being hired. In spite of this remark, my father, who was chairman of the board, promptly hired him without checking any of his background." Address: Traveling by truck.

11374. Kushi, Norio. 2011. Re: My brothers and sisters. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 2. 1 p.

• ***Summary:*** "My sister and brothers are:

© Copyright Soyinfo Center 2014

"Lily, Lillian Midori Kushi, born July 20 1953.

"Norio, Arnold Norio Kushi, born December 15, 1954.

"Haruo or Larry, Lawrence Haruo Kushi, born December 10, 1956.

"Phiya, Phillip Yoshio Kushi, born October 29, 1959.

"Hisao, Hisao Tenshin Kushi, born June 8, 1965.

"Phiya is a nickname that I came up with when we were children and the name stuck. My father picked the western names, which were used as the first name and my mother picked the middle Japanese names, with the exception of our youngest brother Hisao. When Hisao was born, my grandparents on my father's side were living with us. My mother picked the name Hisao, which was decided to be the first name and my grandmother picked the name Tenshin to be used as the middle name.

"The four older children were born in New York City and Hisao, was born in Cambridge, Massachusetts. All of us kids were born in a hospital. "My sister spelled her name 'Lilly' for most of her life. However, in her later years, perhaps the last five years of her life, definitely after the book titled *Aveline* was printed, she began spelling her name 'Lily.' She never made a big deal about it and never corrected anyone if someone were to spell her name 'Lilly.' However, she herself would always spell her name 'Lily.'

Norio (who has long loved cars) writes (3 March 2011, in reply to a question): "I initially started driving a truck in 1981. I also drove for Greyhound and helped to start a bus company, Premier Coach of Vermont for the owner, Ron Charlebois. I went back to driving a truck back in 2002 and have been doing so since then, other than a short period when my father got sick and went into the hospital. I pretty much live in the truck full time, getting home to Asheville, North Carolina, about once a month. I left Asheville on Monday and am currently in Oxnard, California, having made a delivery here this afternoon.

A photo shows Norio, holding a guitar, with truck in background. Address: Traveling by truck.

11375. Fujita, Y.; Iki, M.; Tamaki, J.; et al. 2011. Association between vitamin K intake from fermented soybeans, natto, and bone mineral density in elderly Japanese men: the Fujiwara-kyo Osteoporosis Risk in Men (FORMEN) study. *Osteoporosis International.* March 11. [Epub ahead of print]. [38 ref. Eng]

• ***Summary:*** "A cross-sectional analysis of 1,662 community dwelling elderly Japanese men suggested that habitual natto intake was significantly associated with higher bone mineral density (BMD). When adjustment was made for undercarboxylated osteocalcin levels, this association was insignificant, showing the natto-bone association to be primarily mediated by vitamin K."

"Conclusion: Habitual intake of natto was associated with a beneficial effect on bone health in elderly men, and this association is primarily due to vitamin K content of natto, although the lack of information on dietary nutrient intake, including vitamin K1 and K2, prevented us from further examining the association." Address: Dep. of Public Health, Kinki Univ. Faculty of Medicine, 377-2 Oono-higashi, Osaka-Sayama, Osaka, 589-8511, Japan.

11376. Macdonald, Bruce. 2011. Competition and feelings between Erewhon and Chico-San. The short-grain brown rice saga (Interview). *SoyaScan Notes.* March 28. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** The split between the Kushis and the Aiharas began in 1961 when Herman and Cornellia, following Ohsawa's advice, moved to Chico, California, with the group (including Bob Kennedy) that started Chico-San, Inc. in early 1972; Michio and Aveline decided to stay on the East Coast. All four (Michio and Herman, Aveline and Cornellia) were best buddies up until 1961. After than, there was a certain coolness. Bruce remembers, for examples, that when he and others were out in California, they never invited Herman (a sensei) down to lectures or other events. That was unusual.

But Bruce knows much more about the business side of things. "Essentially Bob Kennedy was irate with us because we were selling directly to stores and he was selling through big distributors." He had chosen to go that route as the easy way to get distribution for his products. This was also in the era before there were many natural food retail stores. "We were underpricing Bob Kennedy, in part because we did not have to go through a distributor and in part because we were willing to sell larger quantities at a time–such as 50- or 100-lb bags. Koda brown rice came in 100 lb bags; Lundberg brown rice came in 50 lb bags. The bags were a generic brown multi-wall paper bag. "I think it said 'Premium Short-Grain Brown Rice' on each bag.

In Los Angeles, Bruce first saw short-grain brown rice grown by Lundberg [Note: It was probably harvested in the fall of 1970]. It was described in the Erewhon catalog as "unsprayed." It was not listed in catalogs as "organic" because Erewhon was afraid of a lawsuit from Chico-San. "Essentially everybody knew that it was the same rice that Chico-San was selling [i.e., organically grown]. How did they know? They just kind of knew. The word got out. At Erewhon, Los Angeles, we had to move a lot. The rice, in bags was piled 4-5 bags high on the floor of their little warehouse across the street from the retail store. Erewhon West hadn't yet started their warehouse in Culver City, which they moved into in the summer of 1970. So Bruce probably saw this rice in L.A. in early 1970. Bruce has always understood that the Lundbergs had done OK with their organic brown rice in the first year they grew it, but they had gotten trouble in the 2nd year. Bruce suggests that Shurtleff contact Homer or Harlan Lundberg to try to resolve this conflict of dates–and to try to see the actual contract.

In Japan, as Bruce understands it, the traditional practice

© Copyright Soyinfo Center 2014

was to sell rice at little or no markup so that everyone could afford to eat. "I always loved that idea. That's one reason why Erewhon's unsprayed rice wholesaled for $11.00 per 100 lb. bag. We did not take a full markup on that." Address: Natural Import Co., Asheville, North Carolina. Phone: 802-869-2010.

• ***Summary:*** Contents: Introduction. History of tofuyo: History of fermented tofu, history of tofuyo. Production of tofuyo (3-step process): Processes for making tofu and dehydrated tofu-cubes, processes for making rice koji, soaking and ripening. Characterization of tofuyo: Chemical changes in tofuyo during the ripening period, physical changes in tofuyo during the ripening period, the flavor compounds in tofuyo, the physiologically functional properties of tofuyo (angiotensin I-converting enzyme inhibitory peptides in tofuyo, antihypertensive and hypocholesterolemic effects of tofuyo in spontaneously hypertensive rats, effect of tofuyo on erythrocyte deformability in high-fat-fed mice and other bioactivities). Microbial biochemistry in tofuyo production: Characterization and application of aspartic proteinases from *Monascus* fungus, characterization and application of serine carboxypeptidases from genus Monascus, characterization of glucoamylases from genus *Monascus.* Conclusions. Address: Faculty of Agriculture, Univ. of the Ryukyus, Okinawa pref., Japan.

11378. Yasuda, Masaaki. 2011. Fermented tofu, tofuyo: History of fermented tofu (Document part). In: Tzi Bun Ng, ed. 2011. Soybean–Biochemistry, Chemistry and Physiology. Rijeka, Croatia: InTech. 642 p. See p. 301-02. Free, open access online publication. http:// www.intechopen.com/ source/pdfs/ 15715/InTech- Fermented_tofu_ tofuyo.pdf [Eng]
• ***Summary:*** "Fermented tofu is considered to have originated in China; however, the exact time and place of its origin remain uncertain. Hong (1985) reported that the first description concerning fermented tofu was found in *Peng Long Ye Hua* written by Li Ri-Hua in the Ming dynasty (1368-1644), where it was prepared with molded tofu. Reference to furu appeared in the famous book on Chinese medicinal and herbal materials, *Pen Ts'ao Kang Mu* (*Honzo Kou Moku,* in Japanese) published by Li Shih-Chen in 1596. In this book, furu was prepared without the molding procedure. From these old records, it appears that there were two techniques involved in furu production, treatment with and without mold. Although the name rufu appears in the section of animals of this book, it is not fermented tofu, but refers to milk-curd, which is produced from the coagulation of protein in milk under acidic conditions.

"During the Ch'ing dynasty (1644-1912), many records on fermented tofu production appeared, indicating that the molding procedure had become mainstream. The making of fermented tofu with the molding procedure is described in the book, *Shi Xian Hong Mi* written by Wang Zi-Zhen, in the middle of the Kang-Xi period (1681-1706). Interestingly, the author found that the fermented tofu was made with the 'red koji' [*beni-koji*] in this record. From this description, it is strongly suggested that the origin of tofuyo is the fermented tofu described herein. References to rufu often appear in documents of that time. Rufu seemed to be one of the finest products in the district of Jiang Nan, China, and was introduced in a kind of guidebook on local production, *Jiang Nan Tong Zhi* (1736). In this record, rufu was not milk-curd, but fermented tofu. It was revealed that the methods of making fermented tofu recorded in *Xing Yuan Lu* written by Li Shi-Ting in the middle of the Quianlong period (1757-1776) are similar to present-day methods. Fermented tofu, rufu, was also described in *Sui Yuan Shi Dan* written by Yuan Mei (1782), and the white type of rufu (containing shrimp eggs) or famous production sites, and other aspects, were introduced in this document. From a variety of literature, it can be concluded that the development and spread of fermented tofu occurred in the Ch'ing dynasty, and became popular in the diets of people in mainland China and Taiwan, and continues to be enjoyed even today. As the Chinese fermented tofu spread to other countries in East and Southeast Asia, it was given its own name in each country, as described in the Introduction. From that time to the present, the fermented tofu of each country has been traditionally made in the home or small cottage industries." Address: Faculty of Agriculture, Univ. of the Ryukyus, Okinawa pref., Japan.

11379. Yasuda, Masaaki. 2011. Fermented tofu, tofuyo: History of tofuyo (Document part). In: Tzi Bun Ng, ed. 2011. Soybean–Biochemistry, Chemistry and Physiology. Rijeka, Croatia: InTech. 642 p. See p. 302-03. Free, open access online publication. http:// www.intechopen.com/ source/pdfs/ 15715/InTech- Fermented_tofu_ tofuyo.pdf [Eng]
• ***Summary:*** "Although fermented tofu has never been widely known nor consumed in mainland Japan, it has a long and interesting history in Okinawa Prefecture, where a mellow, delicious product named tofuyo has been enjoyed for nearly 200 years. Okinawa is one of Japan's southern prefectures, and consists of hundreds of the Ryukyu Islands in a chain over 1,000 km long, extending southwest from Kyushu to Taiwan. The Ryukyu Kingdom existed in this area before the Japanese Meiji Period (1868). Since the islands are located in the center of the East China Sea and are relatively close to Japan, China and Southeast Asia,

© Copyright Soyinfo Center 2014

the Ryukyu Kingdom became a prosperous trading nation. However, four years after the beginning of the Meiji period (1872), the kingdom was officially annexed by Japan.

"The earliest known reference to fermented tofu in Japan comes from Osaka. In 1883, Ka Hitsu Jun published the famous book, *Tofu Hyaku Chin Zokuhen* (The Sequel to One Hundred Favorite Tofu Recipes). In this book, 'red tofu' and the other fermented tofu, 'tofu-ji', were introduced. According to the book, how to make the red tofu was a family secret, and few details on its production were provided. The other description was clearly of Chinese style red furu, because the materials not only included red koji from China, shiro zake (white sake, Chinese distilled liquor named 'Bai-Jiu'), *sansho* (Japanese spice, this spice seems to be used instead of chili), but also refer to it as tofu-ji and use the same method of preparation." However, this fermented food subsequently disappeared from and can no longer be found in mainland Japan. On the other hand, because relations between the Kingdom of Ryukyu and China were close at that time, it strongly suggests that furu production methods were brought to Ryukyu from China (probably from Fujiang) in cultural exchanges between the two countries at that time. However, there is very little information available on fermented tofu in Ryukyu. Red tofu, fermented tofu, furu or tofuru were not described in the Ryukyu's Old Language Dictionary *Kongo Kensyu* [*Kongo Kenshu*] (1711), or in the book on the History of Ryukyu *Ryukyu Koku Yurai Ki* (1713) edited by the Government of Ryukyu Ohfu.

"Red furu was likely introduced to Ryukyu during the late 1700s. Since the product was brined and had a strong taste and smell, it was not immediately accepted in its original form by the people. Therefore, it has been re-created using awamori. Namely, the processes of preparing molded tofu and fermenting the mold-overgrown curd in salt-brine were eliminated by cooks in the dynasty, resulting in a more palatable taste that was milder in flavor. Thereafter, they were able to decrease the amount of salt in the original recipe, and increase the shelf life without salt. Thus, an elegant, mellow and delicious fermented food, dubbed tofuyo, was newly created.

"The earliest known indirect reference was in the book *Account of a Voyage of Discovery to the West Corea and the Great Loo-Choo Island* written by Basil Hall in 1818. In this book, *Corea* refers to "Korea." Interestingly, Ryukyu was called the great Loo-Choo islands on the old map at that time. The Englishman Hall and his party visited Naha harbor in 1816, on route from China, where they were entertained by the Government of Ryukyu Kingdom and served the local cuisine. They were served "hard boiled eggs, cut into slices, the outside of the white being colored red... sackee (the liquor; awamori)... and something like cheese." The red color is thought to be the red koji-pigments produced by the genus *Monascus,* and the cheese-like food may be the fermented tofu, tofuyo, which is often made with red koji.

"The earliest known direct reference to tofuyo and red koji was in *Gozen Hon Sou* written by the physician Tokashiki Tsukan Peichin in 1832. Peichin is a term for a high-ranking officer. In this book, foods, and medicinal and herbal materials in Okinawa were described in the context of medicine and pharmacy. He describes that "Tofuyo has a delicious flavor and is good for the stomach. It makes eating a pleasure and is good for various types of sickness". From these descriptions, it was considered that tofuyo was consumed by the royal family and the upper classes as a medicinal food and as a side dish. This group established the methods of making tofuyo, but the secret of its preparation has been a stubbornly guarded family-secret. In fact, there were no references to it from 1832 until 1938.

"It was not mentioned in the accounts of visits to Ryukyu by the English captain Frederick W. Beechey (1831) and the famous American Commander Matthew C. Perry (1857), nor in any documents from the Meiji period (1868-1912). This may explain why its use did not spread and why so few references have been made to it. During the early Showa period (1926-1989), home-made tofuyo was popular only among the upper classes in the cities of Shuri (the former capital) and Naha (the new capital) in Okinawa. However, its production was not clarified at all. Ladies ate it with tea, while men took it with awamori. Typically, a small cube was placed on a small dish and eaten with chopsticks or a tooth-pick (Fig. 2). The product was never widely known by regular people because it was only rarely made at home. In 1938, Shojyun Danshaku, who was a descendant of the Ryukyu Royal Family and a well-known connoisseur, wrote an article entitled 'In Praise of Tofu' in the magazine, *Monthly Ryukyu.* He noted that tofuyo is one of the best rare and tasty foods in the world, if not the best.

"After World War II, the special family-secret of making tofuyo techniques was, for many years, inherited only at select homes; few people are aware of the food. As it is a unique low-salt soybean cheese, its industrialization has been greatly expected. However, in order to develop its production, it is necessary to clarify features of the food making that depend upon intuition and experience, and to establish the manufacturing technology in proportion to mass production. Thus, we revealed its features, and scientifically established the basic technology involved (Yasuda, 1990). The outcome was transferred to the local industry during the mid-1980s. Subsequently, tofuyo that reflects the gastronomic culture in the age of the Ryukyu dynasty has been marketed. Furthermore, the red type of tofuyo is popular, and its production been greatly developing. Nowadays, attention is being paid to this food as a health food that is cholesterol free, and is a low-salt fermented soybean cheese. Therefore, it would also be suitable for western people because it could be utilized in almost the same way as cheese." Address: Faculty of Agriculture, Univ. of the Ryukyus, Okinawa pref., Japan.

11380. Nabozny, James. 2011. Tofuyo, Okinawan fermented tofu (Interview). *SoyaScan Notes.* April 13. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** James lived on Okinawa Island for a total of 14 years as a U.S. Marine. Tofuyo is made on many of the Okinawa Islands and the Ryukyu Islands of Japan. He has tasted several different varieties of tofuyo on the island of Ishikawa, a tiny inhabited island south of Okinawa in the archipelago, which almost no outsiders visit. The people and culture there are very traditional–as from a bygone era. The tofu there is curded using seawater and is very delicious–as is the unique tofuyo. Address: Tucson, Arizona.

11381. *SoyaScan Notes.* 2011. Updated USDA database on the isoflavone levels in foods, commercial ingredients, soybeans and soyfoods (Overview). April 23. Compiled by William Shurtleff of Soyinfo Center. [1 ref]
• ***Summary:*** The link is now http://www.ars. usda.gov/ SP2UserFiles/ Place/12354500/ Data/isoflav/ Isoflav_ R2.pdf. "Legumes and legume products" starts on p. 16. Start by going to page 24, which is where the soy section begins. Then you can do a PDF search for fermented soyfoods such as: Tempeh, miso, soy sauce, natto, or Sufu (fermented tofu)–and you will see that they are NOT lower in total (or specific isoflavones) than nonfermented soyfoods such as: Tofu, soymilk, soybeans (immature), soybeans (mature), etc.

11382. Earle, Steve. 2011. Re: Takayoshi Sato has written a history of San-J, based on his recollections, mostly about the period after 1981. Letter (e-mail) to William Shurtleff at Soyinfo Center, April 28. 1 p. [1 ref]
• ***Summary:*** A couple of years ago Takayoshi Sato, the younger of the two San-Jirushi brothers, put together a history of San-J based on his recollections; he was kind enough to send me a copy and it was quite well done, despite a few mistakes. This was written for an internal (company) audience and I would not feel right about passing it on without his permission, but suggest that you contact his son, Takashi Sato, current president of San-J in Richmond. Address: Assistance, Richmond, Virginia.

11383. *SoyaScan Notes.* 2011. What ever happened to the LA Tofu Festival, held from 1996 to 2007 in Los Angeles, sponsored as a fundraiser for the Little Tokyo Service Center? (Overview). May 4. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** In 2008 the Tofu Festival was replaced by "La Vida Sake," a sake and food tasting event held at the Petersen Automotive Museum in Los Angeles, California, on May 22.

• ***Summary:*** Four photos. The tempeh was made by Rustono, who was born in Indonesia and who has a tempeh shop in Otsu, Shiga prefecture near his home.

Note: Makiko says (Feb. 2014) that Rustono started making and selling tempeh in Japan in 2000 after he moved to Shiga prefecture and got a permit from the Japanese government.
Address: 608 Honyakushi, Nara City 630, Japan.

11389. Salen, Patricia; de Lorgeril, Michel. 2011. The Okinawan diet: A modern view of an ancestral healthy lifestyle. *World Review of Nutrition and Dietetics* 102:114-23. Epub 2011 Aug. 5. In: A.P. Simopoulos, ed. 2011. Healthy Agriculture, Healthy Nutrition, Healthy People. [53 ref]
• ***Summary:*** Contents: Introduction. Social interconnections in Okinawa ("everyone must share and help each other"). The traditional Okinawan diet. Caloric restriction. High carbohydrate intake associated with low fat and low protein intake. A rather low sodium intake (as compared with Japan). High consumption of plant foods. Low to moderate consumption of sea foods. Traditional herbs and spices. Okinawa beverages (the people drink a lot of tea–green and jasmine–which is very rich in flavonoids). The main source of alcohol in Okinawa used to be *awamori,* a distilled sake made from rice, which typically contains 30-43% alcohol compared with less than 10% for sake.

In the section on "High carbohydrate intake..." are three paragraphs (p. 118) on the place of soyfoods in the Okinawan diet. Okinawans consume soy mostly in the form of tofu and miso. Their longevity has been attributed in part to their high intake of soyfoods (Willcox, Willcox & Suzuki 2001; Willcox, Willcox, Todoriki & Suzuki 2009).

Soy is a rich source of polyphenols (isoflavonoids). Okinawan tofu (the most widely eaten type being called *shimadofu*) contains less water / moisture than typical Japanese tofu and more healthy polyphenols, fat and protein. Tofu is often made at home in Okinawa and used in many different recipes.

The high intake of soy isoflavones has been associated with the very low rates of breast and prostate cancers in Okinawa (references 36-38), whereas the low rate of dementia, including Alzheimer's disease, in Okinawa may be related to the high consumption of natto, a traditional Japanese fermented food that is typically eaten on rice at breakfast. Address: Laboratoire Cour & Nutrition, TIMC-IMAG CNRS 5525, Université Joseph Fourier, Faculté de Médecine, Grenoble, France..

11390. Sharp, Carolyn Heidenry. 2011. Re: Gung Ho!: Aveline Kushi and macrobiotics. (Continued–Part II). Letter to William Shurtleff at Soyinfo Center, Aug. 15. 11 p.
• ***Summary:*** Continued. Perspective: As to the why of Aveline's unbalanced diet, again as with Michio, I think there were many reasons that contributed to her unusual way of eating. Thinking back to when she first arrived in this country, around 1951, at her destination, New York City, one can easily imagine some of what she experienced. Gone from her life were all the little shops she had frequented in Japan, filled with what she was used to cooking, and had grown up eating. The many varieties of vegetables, the extremely fresh fish on display everywhere, the noodle shops, different types of delicious pickles, various kinds of mochi and gelatins that girls and young women ate so frequently in little shops, tofu dishes, roasted sweet potatoes and chestnuts, and all the other little niceties to which she had been accustomed. In their place was an alien world with an alien cuisine-steaks

© Copyright Soyinfo Center 2014

and ham, hot dogs and donuts, pizza and hamburgers. Small vegetable selections, unlike now, that didn't include much of what she was used to cooking, and that also lacked the sea vegetables she liked so much.

"Many of the foods that she would have enjoyed and that would have contributed to a more balanced diet simply weren't available. This was long before Erewhon, Infinity, Chico-San, Eden, Ohsawa, Great Eastern Sun, Natural Import Co., and all the other high quality natural food wholesalers and retailers that developed in later years. And though New York had a Chinatown, I doubt whether it had the variety and abundance available there now, and what there was was not all of good quality. In addition, Michio and Aveline had no car for a long time, and it's unlikely that Aveline would have lugged groceries home on the subway from Chinatown more than just occasionally. Not with an infant in one arm, and then later an infant in one arm and a toddler in tow. Then two toddlers, then three. Even with a car this would have been a difficult expedition. She probably shopped as locally in her neighborhood as she possibly could. And that meant many limitations.

"She was also away from all the support she would have had at home in Japan, not only culinary, but also the support of and interaction with friends, family members, neighbors, and teachers (another kind of "food"–for the soul and heart) especially Lima Ohsawa who would have continued to be a very good influence on her. Then, too, she was away from all the charm and graciousness and quaint little ways and ancient traditions of her native land, which would have been still another form of nourishment. Away from the musical language that would have surrounded her daily. Away from the wonderful calligraphy on display in the shops and streets. So though she was now living in an interesting and powerful city, there were many things missing from her life to which she had been accustomed.

"She had to have been a rather headstrong person to live without all that and then, as well, to eat in a way that was so completely different from the way the people in her new country did, a way that was also, to a significant degree, somewhat inaccessible to her given the few stores where she could buy the relatively inferior products with which she was at least familiar. Had she come here as part of a large family, probably it would have been somewhat easier. But she came alone, and joined one man. So for the first 20 to 30 years there weren't all the hundreds of natural, organic, quality products we now take for granted. It made a macrobiotic diet quite limited. Still, she made very good meals, but it was quite different and less varied than it is now.

"Homesick: She once told me that when living in New York in the early years, she happened to eat some fruit one day, and then started weeping because she was so homesick for Japan. After that she avoided eating fruit for a long time, not wanting to feel that sadness and longing for Japan which she thought had been induced by the fruit she had eaten. It was a lesson in how food affects psychology, but it also ultimately led to a too-yang condition. However, she wanted to stay yang, so she would be strong, and not pining away for Japan. There was not a trace of self pity in her when she spoke of this. Rather, she was kind of laughing about it. She knew she had chosen to come here, and that in some ways she had had a very good life. But apparently there was an undercurrent sometimes when memories tugged at her heart. It gradually faded over the years, I think, the longing for, though not the memories of, Japan. The trips back and forth to Japan in later years probably helped.

"It wasn't until the mid-to-late sixties that the first developments in the natural food industry (as we know it today) came about, all very well detailed in Bill Shurtleff's "History of Erewhon" which covers so much more than just Erewhon. But for a long time, for years and years, Aveline was somewhat isolated from all that she knew and remembered about food, and was usually without many of the products she would have enjoyed and used in Japan. Michio, too. How much he would have enjoyed all the neighborhood sushi restaurants and noodle shops if he wanted to go out, as Japanese men so often do with each other, had he and Aveline returned to, or never left, Japan. All he had here and all he could usually afford were coffee shops, which had very different menu selections, to say the least.

"So Aveline had a somewhat imbalanced and impoverished diet right from the start in America, as did Michio, and for a very long time after that. Instead of living in a country, city and neighborhood enriched by a wide variety of wonderful vegetable, grain and fish dishes, she made do with a lot less for a long time. I think this was a very big factor in contributing to her imbalanced diet and condition.

"Another factor was that she had done so much cooking for so many years, first for the family when the children were younger, then for so many parties and special occasions for the students, as well as making lunches for employees when Erewhon first started up in Los Angeles, and also all the cooking classes–so many over the years in so many countries. On top of all that there were the dinners for a crowd every night when the students began staying with them. And so, eventually, she delegated the preparation of daily meals at home to others, to student cooks, though she continued to give many cooking classes, both in Boston and wherever she and Michio travelled. After so much intense cooking for so many years, she understandably wanted a change.

"Too yang: Having first learned from George Ohsawa, Aveline leaned towards a rather restricted version of a macrobiotic diet, like her teacher. I think most people who have used the macrobiotic eating plan for any length of time, however much they might appreciate Ohsawa's insights, life and wisdom, feel nevertheless that his dietary approach was

© Copyright Soyinfo Center 2014

too restrictive to be healthful and balanced in the long run. While his recommendations might be helpful as a cleansing diet for certain people for short periods of time, they can produce a tight mental state and even nutritional deficiencies over time. George Ohsawa was an extraordinary man and an extraordinary teacher, and it would be challenging to encapsulate all that he contributed to our understanding of the impact of food on individuals and societies. However, his approach was lacking in sufficient vegetables, variety and sweets, at least for the average American accustomed to a diet heavy in meat, dairy foods, and sugar. Yet something in Aveline responded to his overly yang style and recommendations, (perhaps that was simply all she knew) and though having children loosened and broadened her views, there was still this tendency towards an overly restrictive approach to her own diet for a long time.

"Aveline was not really a student and teacher of macrobiotic principles in the way Michio was. But she had a strong interest in sharing the traditional cooking and food customs of her native land, and she balanced Michio's theoretical teachings with the daily practicalities of feeding her family and teaching her students. She also enjoyed teaching the traditional ways of caring for infants, and sharing the happy sounds and sights of her childhood and adolescence, some of which are included in her books." Continued. Address: P.O. Box 125, Hinsdale, Massachusetts 01235.

11391. Kikkoman Corporation. 2011. Annual report 2011. Year ended March 31, 2011. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 47 p. 28 cm. [Eng]

• ***Summary:*** Net sales in yen decreased by 0.78% to ¥283,463 million. Net income in yen decreased by 9.68% to ¥7,770 million.

Under "Major group companies–Kikkoman Corporation, Japan" (p. 44) is listed: Kikkoman Soyfoods Company, 2-1-1 Irifune, Chuo-ku, Tokyo 104-8553, Japan. Phone: +81 (3) 3206-0778. This company was formerly Kibun Foods.

A photo (p. 2) shows Yuzaburo Mogi (Honorary Chief Executive Officer and Chairman of the Board of Directors) and Mitsuo Someya (President and CEO).

The Great East Japan Earthquake struck Japan on 11 March 2011. Kikkoman was affected, and "booked an extraordinary loss of ¥2,352 million due mainly to the impact of the Nippon Del Monte Fukushima plant, which will be closed in September 2011, as was previously scheduled." Address: Noda, Japan.

11392. Kushi, Michio. 2011. Kushi Institute International Aveline Award presented to William Shurtleff and Akiko Aoyagi.

• ***Summary:*** The plaque reads: "In recognition for your enduring support of macrobiotics. Your teachings and writings have brought hope and healing to people around the world. With this award Michio Kushi expresses his gratitude to you for your important contribution to macrobiotics, humanity, and the world."

Signed, Michio Kushi.

"Presented on August 4, 2011, at the International Macrobiotic Summer Conference.

Note: The award was presented in absentia since Shurtleff was unable to be present at the award ceremony. The plaque is 10½ by 13 inches, with a leather border. The body of the plaque is the printed paper covered by a sheet of glass. The blue logo of the Kushi Institute International is near the top of the sheet of paper. Address: Massachusetts.

11393. Shurtleff, William; Aoyagi, Akiko. comps. 2011. William J. Morse–History of his work with soybeans and soyfoods (1884-1959): Extensively annotated bibliography and sourcebook. Including Charles Vancouver Piper and Palemon Howard Dorsett. Lafayette, California: Soyinfo Center. 482 p. Subject/geographical index. Printed 6 Sept. 2011. 28 cm. [866 ref]

• ***Summary:*** Begins with a chronology of Morse's work. Contains 126 photos and several maps. http://www.soyinfocenter. com/books/147. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11394. *SoyaScan Notes.* 2011. What ever happened to Global Protein Foods of Valley Cottage, New York, then Newark, New Jersey? (Overview). Sept. 12. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Talk with Sam Weinreb, founder of Local Tofu, West Nyack, New York. 2011. Aug. 31. Global Protein Foods had been a competitor of his, so he kept track of what they were doing. They were in Newark, New Jersey and they were shut down about 6 months ago for some violations of water and/or health codes. They never went back into business, in part (Sam thinks) because of the earthquake and tsunami in Japan on March 11, 2001. Sam has a daughter who lived in Japan, where she learned how to make kimonos.

Letter (e-mail) from Katie Karkheck, history librarian, Valley Cottage Library, New York. 2011. Sept. 12. "Your question was forwarded to me from the reference desk since I have been keeping the records of local happenings. I first searched our local history clipping files, but found nothing about this company. I did find one OSHA citation from 2001, which can be found here:

http://www.osha.gov/ pls/oshaweb/ owadisp.show_ document? p_table= NEWS_RELEASES&p_id=238.

"It seems that Global Protein Foods' factory moved to Newark, NJ in 2002 or 2003. There seems to be a plethora of citations and an FDA warning letter from Feb. 10, 2011 citing them for lots of health code violations, including dead rodents and droppings near foods. After reading this letter, I have a feeling that this many violations would shut down any food producing company, though I have found nothing

© Copyright Soyinfo Center 2014

confirming this. Here is the link to that 2011 letter: http://www.fda.gov/ICECI/ EnforcementActions/ WarningLetters/ucm243397.htm.

"Unfortunately, I have not found a single article stating what happened, and the warning letter was the only thing I found that was recent. It seems that their closing was very quiet. They were not included in the search of over 100 newspapers and journals, nor were they in any of our business directories. I'm sorry I couldn't come up with more info than that."

Note: On 30 Sept. 2011 Katie did find a local newspaper (*Journal News*) article titled "Global Protein may be shut down," dated 25 Oct. 1998. She kindly scanned it and sent it to Soy Infocenter. See separate 1998 record.

11395. Kageura, Makiko. 2011. Re: Teaching high school students how to make tempeh in Japan. Letter (e-mail) to William Shurtleff at Soyinfo Center, Sept. 27. 1 p. [Eng]
• ***Summary:*** Makiko, who lived in Canada for a year and studied the tempeh market there, has now returned to Japan and taken an interest in tempeh in Japan. She was invited by a friend to visit Ehime Prefecture Ozu Agricultural Senior High School (*Ehime Kenritsu Ohzu Nogyo Kotôgakkô*), a public agricultural high school on the island of Shikoku, where she met Mr. Yamada, the biology teacher. She imagined that he had a personal interest in tempeh but she did not know when or where he had developed that interest. She has just returned home from the one-day trip.

To her surprise, Mr. Yamada told her that teaching students how to make tempeh in the classroom is part of the biology curriculum–and has been for at least 10 years. The process is described as a lesson plan in the textbook and each student is required to make his or her own tempeh!

Mr. Yamada got soybeans from the local public market in Ohzu and he sometimes uses soybeans grown at the school. He ordered tempeh starter culture via the Internet. They made the tempeh at room temperature at the laboratory. In winter, he told me to use the experimental incubator installed in the school to keep the normal temperature. Even in September they can make it at room temperature; its often good over a bit 30ºC (and at least 25ºC). They also made okara tempeh.

The students then cooked and ate their fresh tempeh, in the form of tempeh cookies, tempeh yokan [contains no azuki beans], and tempeh donuts.

What a great way to learn about microbiology, molds, fermentation, fermented foods, and tempeh.

This shows that anyone can make tempeh at home. The only requirements are several cups of soybeans, some tempeh starter culture, and a warm place or incubator.

Makiko adds: "One interesting thing is that everyone can make tempeh at home and tempeh sushi seems to be good for everyone. My mum loves my tempeh sandwiches too!" Address: 27-1 Kamikarakawa, Iyo-city, Ehime 799-3134, Japan.

11396. Norton, Amy. 2011. Soy supplement may improve crow's feet: An experimental supplement derived from soy may help postmenopausal women smooth their "crow's feet" a bit, a small pilot study suggests (Web article). http://www.reuters.com. 2 p.
• ***Summary:*** "Crow's feet" are those lines that begin to appear in the skin at the corners of the eyes as one nears menopause.

The supplement is being developed by Tokyo-based drug and supplement maker, Otsuka Pharmaceutical. "It contains a compound named S-equol, which is made from fermented soy germ. The body can produce S-equal naturally, as a byproduct of digesting soy isoflavones." The compound is thought to attach to estrogen receptors in body cells, and may have weak estrogen-like effects. It is also thought that decreasing estrogen levels in post-menopausal women may contribute to skin aging.

11397. Kageura, Makiko. 2011. Re: Color photos of Daitokuji natto. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 28. 1 p. [Eng]

• ***Summary:*** "I went to Daitoku-ji [a large and famous Rinzai Zen Buddhist temple in northern Kyoto] to take some photos of Daitokuji natto. I saw various shops around the temple but finally decided on the Daitokuji Nattoku Ikkyu shop, which is officially named from the temple. I took some photos for you. I got two labels from Mr. Tsuda. I can send them to you if you want."

Photos show: (1) White and red labels. (2) Packages of souvenirs of Daitokuji natto. (3) A bag of Daitokuji natto. (4) One front view of the Daitokuji Nattoku Ikkyu shop. (5) Another front view of the Daitokuji Nattoku Ikkyu shop. (6) A close-up of Ikkyu's Daitokuji natto itself. It has

© Copyright Soyinfo Center 2014

a chunky texture and a flavor resembling that of any dark miso, especially Hatcho miso. (7) The main gate of the entire Daitokuji Zen temple.

Note 1. Makiko asked the head priest at the Ikkyu subtemple if he had any early dated documents from which we could learn something about the history of Daitokuji natto. He said "no."

Note 2. As of 5 Dec. 2011 we are not sure that Ikkyu still makes Daitokuji natto; the products they sell may be made by nearby Isoda at 41 Shimomonzencho, Murasakino, in Kita-ku, Kyoto. Or there may be other makers. Address: 608 Honyakushi, Nara City 630, Japan.

11398. Kageura, Makiko. 2011. Re: Color photos of Hamanatto. Letter (e-mail) to William Shurtleff at Soyinfo Center, Nov. 4. 1 p. [Eng]

• ***Summary:*** She ordered a package of hamanatto from Daifuku-ji. The photos show: (1) The front of the package, with white letters on a green background. Four vertical lines from left to right read: (1a) Nippon ganso (the founder in Japan). (1b) Daifukuji natto. (1c) Enshuu (A far-away province). (1d) Mikkabi Daifukuji (Made at Daifukuji).

(2) The back of the package. 7 lines from top to bottom read: (2a) Meishô: daifukuji natto. (2b) Genzairyo: daizu, hadaka-mugi, shio, sanshô (ingredients: soybeans, naked barley, salt, sansho {Japanese pepper}). (2c) naiyôryô: 180 guramu (weight: 180 gm). (2d) Hozon houhou: youreizou. (2e) Shoumi kigen (address in Hamamatsu): Heisei 24, 2 gatsu 29 nichi, 431-1411 Kôyasan Shingonshû, Daifukuji, Hamamatsu-shi, Kita-ku, Mikkabi chô, Fukunaga, 220-3, Japan.

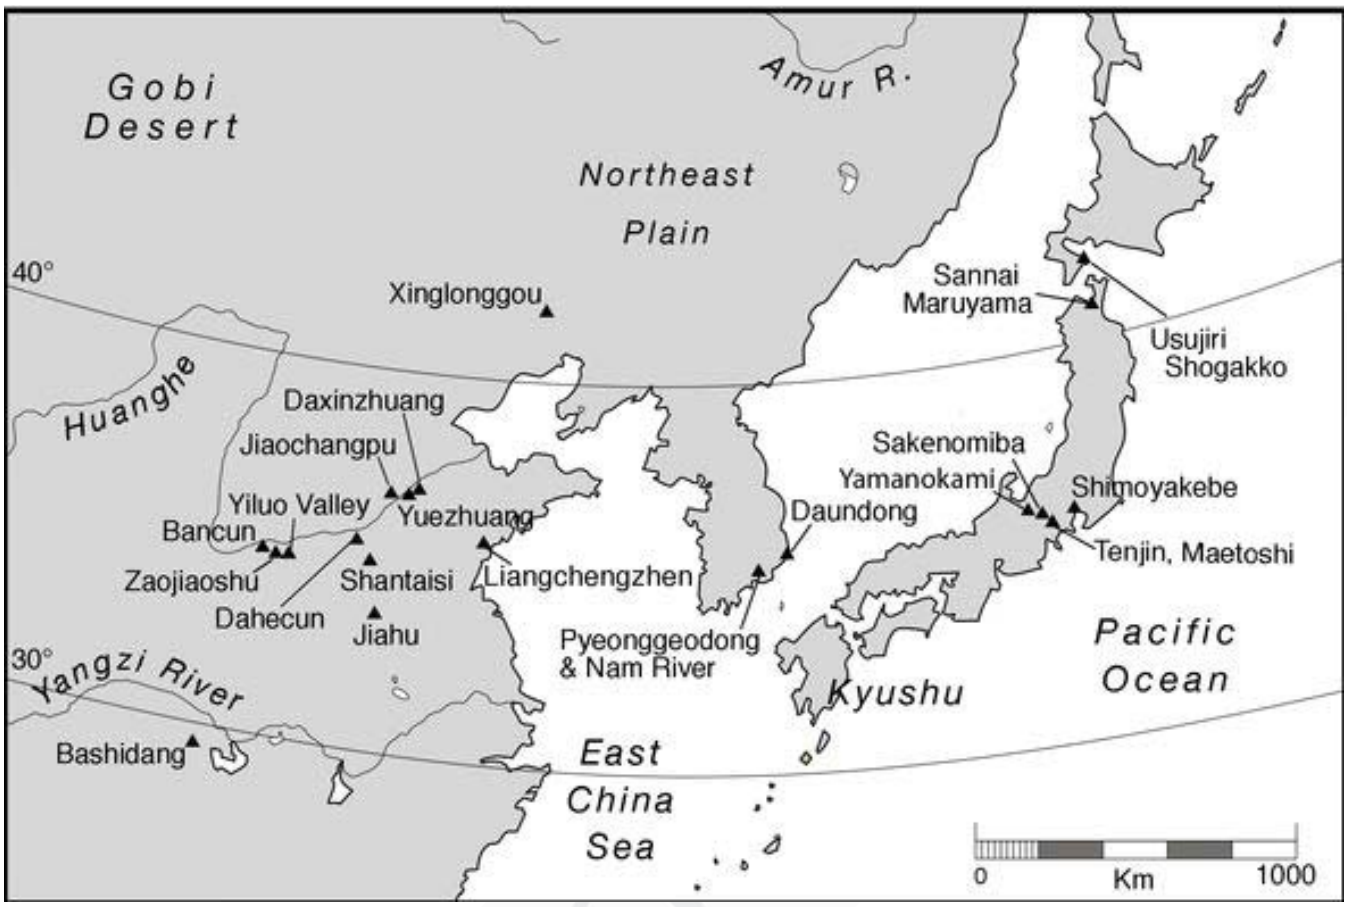
(3) The contents of this package of Daifukuji Natto on a white plate. (4) Illustration of the gate in front of Daifukuji, a Buddhist temple. (5) The two inside panels of a small brochure that came with these fermented black soybeans. The left panel tells the history of Daifukuji natto. The right panel is two tanka poems by two old Japanese poets: Oota Shokuzanjin and Fujino Shizuteru. Each poem mentions hamanatto. Address: 608 Honyakushi, Nara City 630, Japan.

11399. Lee, Gyoung-Ah; Crawford, G.W.; Liu, L.; Sasaki, Y.; Chen, X. 2011. Archaeological soybean (*Glycine max*) in East Asia: Does size matter? *PloS ONE* 6(11): e26720. doi:10.1371/ journal.pone.0026720. Published: Nov. 4. [69 ref]

• ***Summary:*** The authors, archaeologists, say that soybean adoption came earlier than previously thought. Moreover, domestication occurred outside of China, in countries such as South Korea and Japan.

"The recently acquired archaeological record for soybean from Japan, China and Korea is shedding light on the context in which this important economic plant became associated with people and was domesticated. This paper examines archaeological (charred) soybean seed size variation to determine what insight can be gained from a comprehensive comparison of 949 specimens from 22 sites. Seed length alone appears to represent seed size change through time, although the length x width x thickness

© Copyright Soyinfo Center 2014



product has the potential to provide better size change resolution.

"A widespread early association of small seeded soybean is as old as 9000-8600 cal BP in northern China and 7000 cal BP in Japan. Direct AMS radiocarbon dates on charred soybean seeds indicate selection resulted in large seed sizes in Japan by 5000 cal BP (Middle Jomon) and in Korea by 3000 cal BP (Early Mumun). Soybean seeds recovered in China from the Shang through Han periods are similar in length to the large Korean and Japanese specimens, but the overall size of the large Middle and Late Jomon, Early Mumun through Three Kingdom seeds is significantly larger than any of the Chinese specimens. The archaeological record appears to disconfirm the hypothesis of a single domestication of soybean and supports the view informed by recent phyologenetic research that soybean was domesticated in several locations in East Asia."

Note: "BP" stands for "Before the present" where "the present" is taken as 1950. "cal" means calculated to adjust for historically uneven distributions of carbon 14 in the environment. "AMS" stands for "accelerator mass spectrometry." AMS radiocarbon dating is a form of radiocarbon dating that is more precise and requires less carbon than conventional radiocarbon methods. Address: 1. Asst. Prof., Anthropology Dep., Univ. of Oregon; 2. Prof., Anthropology Dep., Univ. of Toronto Mississauga [Southern Ontario, Canada]; 3. Stanford Univ. Archaeology Center [Stanford, California].

11400. Iino, Maki. 2011. O-tofuya-san [A tofu maker / shop]. *Kagaku no Tomo.* Nov. 28 p. [Jap]

• ***Summary:*** This monthly magazine, titled "Friend of Science," is published for Japanese school children. This delightful November issue, written and illustrated by Maki Iino, follows a mother and her son as they visit the neighborhood tofu shop early in the morning and see the fresh tofu products in the window where the wife is selling them. The tofu maker kindly shows the boy every step in the process of making soymilk, then tofu, and preparing deep-fried tofu pouches (aburagé), cutlets (atsuagé) and tofu burgers (ganmodoki). The text is written entirely in hiragana (no Chinese characters) so young students can read along as they look at the large, charming color illustrations.

A smaller 8-page insert gives additional details. Address: Japan. Phone: 05 62 18 72 78. E-mail: info@soy.fr.

11401. Storup, Bernard. 2011. Re: New developments at Nutrition & Nature. Letter (e-mail) to William Shurtleff at Soyinfo Center, Dec. 13. 1 p. [Eng]

• ***Summary:*** "Dear Bill, I am writing you these few words as I had a very interesting discussion this afternoon with somebody I work with, here in Revel, and whose name is

© Copyright Soyinfo Center 2014

Taro Mikuriya.

"Taro-san is in fact making the 'link' between Nutrition & Santé, our mother company and Otsuka Group in Japan. He lives in Revel with his wife and children since 3 years. Not only he is indispensable for the company to help resolve the cultural misunderstandings which could appear between the teams of 2 countries, but he is also the best ambassador of the Soylution, with a deep understanding of the stakes of soyfoods in the world.

"I already told Taro in the past that if I am actually doing what I am doing in France that's partly because I met you one day...

"He is travelling quite a lot and will be in San Francisco this week. If there would be a possibility for you to meet him at your place, he could bring you some fresh products of our own as well as some documentation and could exchange a while with you. Of course he speaks the most perfect English, and I think you didn't forget your Japanese...

"As he is leaving France this evening he will contact you directly to see if it's possible to meet you.

"Here everything is OK. Françoise and I are grandparents since a few days (Aurore, our elder daughter had twins girls), and it's a real marker of time passing by. Best regards.

P.S. Yes. "In fact Nutrition & Nature is the new name of Nutrition & Soja since 1 Jan. 2011, as N&Soja merged with another small company called Céréalpes [Cerealpes] (making non-soya based vegetable burgers): both entities are now under one legal entity called N&Nature.

"Nutrition & Santé is the name of our mother company, which holds 100% of the shares of N&Nature." Address: B.P. 33, Z.I. de la Pomme, 31250 Revel (near Toulouse), France. Phone: +33 62 18 72 50.

11402. Mikuriya, Taro. 2011. About the Otsuka Group in Japan and Nutrition & Nature in Europe (Interview). *SoyaScan Notes.* Dec. 14. Conducted by William Shurtleff of Soyinfo Center. [Eng]

• ***Summary:*** For information about Nutrition & Sante in Europe go to http://www. nutrition-sante-brands.com. Click history and you can read the following (organized by decade):

1928–The Gerblé [Gerble] brand is created.

1934–The Céréal [Cereal] brand is created.

1972–Alain Chatilon founds Diététique & Santé (Dietetics & Health), a company affiliated to Rhône-Poulenc in 1974.

1975–Gerblé launches the first dietetic breakfast cereals.

1977–Isostar founds the first European Sports range.

1981–Diététique & Santé acquires Milical, the oldest brand of slimming foods on the market.

1982–Soy [Bernard Storup] launches the first range of Soya products.

1984–Isostar drinks launched in France.

1986–Gerblé becomes the top dietetics advertiser on national TV.

1990–Diététique & Santé becomes a subsidiary of the Sandoz group. 1993–Acquisition of Soy [Bernard Storup] and launch of a new subsidiary Nutrition & Soja.

1994–Diététique & Santé is born out of the merger of Diététique & Santé (Gerblé and Milical) with Cereal Wander Nutrition (Céréal and Isostar).

1994–N&S acquires Boribel and Boldofluorine brands.

1994–Launch of Gerlinéa, first product range of hypocaloric meal substitutes on supermarket shelves.

1996–Sandoz, shareholder in N&S, becomes Novartis.

2000–The Nutrition Observatory at Revel [France] is opened to the public.

2003–Creation of 3 N&S subsidiaries in Italy, Spain and Benelux [Belgium, Netherlands, Luxembourg].

2006–ABN Amro Capital Finance (now Abénex Capital), L Capital, and the new management team are the new shareholders of Nutrition & Santé.

2007–Milical launches a range of targeted slimming products.

2007–The Gerlinéa Nutri-Soins are THE slimming innovation in major retail outlets.

2007–The arrival of Céréal Bio revolutionises organic sales in major retail outlets.

Note: 2008 Dec. 22–The Otsuka Group (Japan) purchases Nutrition & Santé.

The organizational structure of the Otsuka Group, headquartered in Japan, is as follows. At the top of the structure, the apex group is Otsuka Holdings Co., Ltd.

Immediately below that is the Otsuka Group (which began in 1921, when Busaburo Otsuka established a factory manufacturing chemical compounds in Naruto, Tokushima Prefecture {now Otsuka Pharmaceutical Factory Inc.}).

The Otsuka Group has 3 divisions, one of which is the Otsuka Pharmaceutical Co., Ltd. Immediately below that is the Nutraceuticals Division, which has factories and sales operations on three continents: Japan, Europe, and North America. Operations in Japan are many and complex.

In Europe, the top organization is Nutrition & Santé (40 years old, with 1,100 people employed). This includes sales and marketing organizations in Iberia (Spain and Portugal, 200 people), the Benelux nations (50 people), and Italy (30 people). These organizations sell products made by Otsuka companies worldwide, including, for example, Soyjoy nutrition bars made in California by Pharmavite LLC.

Immediately below Nutrition & Santé is Nutrition & Nature (30 years old, 110 people) which has both manufacturing and sales. In Europe the main center of manufacturing and other operations is in Revel, France. Located in Revel are Nutrition & Soja [Nutrition & Nature] (29 years old, 110 employees) and Céréalpes [Cerealpes] (20 employees, which was purchased in 2008 by Nutrition & Soja and is located in Mane, France–southwest of Toulouse).

© Copyright Soyinfo Center 2014

Located in Castellterçol (Barcelona) Spain is Natursoy S.L. (23 years old, with 70 employees and a factory), a leader in the organic food market; it makes products from soy and wheat gluten. Natursoy was founded by Tomas Redondo and Carmen Asensio in 1988 in Castellterçol.

In the United States Otsuka owns Pharmavite LLC (founded in 1971), makers of Soyjoy nutrition bars and Nature Made vitamins, minerals, herbs and supplements. In Jan. 1989 The Otsuka Group acquired Pharmavite LLC–which according to the 2010 financial report had 961 employees. In October Pharmavite announced start of construction of a new factory and packaging facility in Opelika, Alabama. Taro says that Otsuka plans to keep the Pharmavite plant in Northridge, California, running at its present capacity. The new plant in Alabama will provide additional capacity for Pharmavite to supply the East Coast market of the USA.

In France, with Nutrition & Nature, Otsuka is trying to mainstream these products. Without changing the ingredients in the products, it has stopped marketing to only the niche bio / organic, vegetarian and vegan markets, and started to market to the much larger supermarket and chain store markets. For this, each product needs a new label. Address: B.P. 33, Z.I. de la Pomme, 31250 Revel (near Toulouse), France. Phone: +33 62 18 72 50.

11403. *SoyaScan Notes.* 2011. Why seitan has not become as popular as tofu as a source of plant protein in the USA (Overview). Dec. 21. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1. Historical: Tofu has been a basic food in all countries of East Asia for at least 1,000 years. This includes China, Japan, Korea, Vietnam, and Indonesia. So wherever people with ancestry from these countries live, tofu is made. It has no class affiliation and is inexpensive, so it is eaten by people of all classes and income levels from these countries. And it appears in virtually all cookbooks for these cultures. So there has long been a large demand for tofu in the USA.

2. Tofu manufacturers in the USA: Since 1900 there have been plenty of tofu shops to supply the demand. Between 1905 and 1975 at least 528 different Japanese-owned tofu manufacturers were established in the USA. Probably at least that many Chinese-owned tofu makers also started.

3. Seitan historical: It was invented in about 1962 by George Ohsawa, the macrobiotic teacher, together with Mr. Kiyoshi Mokutani, the owner of a small soy sauce company (Marushima shoyu) in Japan. So it has a very short history. And originally (starting in 1969) it was all imported from Japan.

4. Macrobiotics: Seitan has been limited mostly to macrobiotic community. Wikipedia says incorrectly that seitan is another name for wheat gluten. Not true. Seitan is a product made from wheat gluten just like tofu burgers are made from tofu.

5. Evolution of the meaning of the word: Seitan was originally a salty seasoning, not a protein source. But over the years the meaning of the word gradually changed; it came to refer to any wheat gluten seasoned with soy sauce.

6. Not widely made in the USA since not much demand.

7. Very expensive compared with tofu, in part because not widely available so had to be sent by UPS or mail.

8. Wasteful process. It is made from wheat by discarding all but about 14% of the original wheat and using only the protein. Or, if you start with "vital wheat gluten" (a powder) the quality of the seitan is not nearly as good as if you start with whole wheat flour.

9. Process causes pollution: Dumping all of that starch into any sewage system pollutes the system and usually leads to either a fixed fee or a fine on the manufacturer.

10. Few books about seitan, and no much press coverage or information. Only 3 books about seitan (with "seitan" in the title) have ever been published in English: Jacobs 1987, Wingate 1988, and Bates 1993. Just the opposite with tofu.

11404. Iso, Miyuki. 2011. Ohisama nattô, tamago de genki [Ohisama natto with eggs will make you healthy (Photograph)]. Tokyo: Doshinsha. 27 x 39 cm. [Jap]*

• ***Summary:*** A color photograph for children. Ohisama is a children's word meaning "Honorable Mr. Sun" and probably part of the name of a natto product. This photograph may well be an advertisement.

11405. Kanda, Sumiko; Ohshima, Taeko. 2011. Yûrei nattô [Ghost natto]. Tokyo: Arisukan. Unpaginated. 24 cm. [Jap]

• ***Summary:*** For a juvenile audience.

11406. Koshihara, Haruka; Yugi, Satomi. 2011. Bijin o tsukuru hakkôshoku reshipi: shikôji, amazake, yooguruto, nattô. kantan oishii karada ni yokute kirei ni nareru [Fermented food recipes to make you beautiful: shio-koji, amazake, yogurt, natto. Simple, delicious and good for your body; you'll become pretty]. Tokyo: Jakometei Shuppan. 87 p. 21 cm. [Jap]*

11407. Koshimizu, Masami. 2011. Kôji, miso, nattô, tenpe, amazake [Koji, miso, natto, tempeh, amazake]. Tokyo: Nosangyoson Bunkakyokai. 138 p. 21 cm. Internet resource. [Jap]*

• ***Summary:*** Note that all are Japanese fermented foods; miso, natto, and tempeh are fermented soyfoods.

• ***Summary:*** A historical chronology available in printed and electronic (Microsoft Word) formats from 400 B.C.

© Copyright Soyinfo Center 2014

(Hippocrates) to 31 Dec. 2010. Contents: Introduction (p. 1-4). Yin and yang (p. 4). Chronology (p. 5-125).

Macrobiotics books list (47 p.).

The International Macrobiotic Directory is available as a printed, bound book or as part of the e-book. The names are arranged alphabetically by country (and within the USA by state), with name, position, address, phone and fax numbers, and email if available (62 p. + 11 p. of yellow pages). Address: Publisher, 46 Howard Street, Waltham, Massachusetts 02451. Phone: 413-281-5584.

11409. Vos, Heidemarie. 2011. Passions of a foodie: An international kitchen companion, A to Z. Durham, Connecticut: Eloquent Books. An imprint of Strategic Book Group. 598 p. 26 cm.

• ***Summary:*** Best-selling author Heidemarie Vos recounts a fascinating story and her journey of putting together the world's first cross-referenced book regarding food-using more than five languages. This cookbook [which contains no recipes] will become an invaluable resource for your kitchen (from the publisher).

The Introduction states: "There are 7922 entries, 300,017 words... based on my own travels to 6 continents and over 40 countries." Note: This is somewhere between a dictionary (in 5+ languages) or brief encyclopedia of food names. It immediately sets the language and cultural context for each word, and ends with broader or narrower terms. For example: "Aburage: Japanese cooking = A fried bean curd... Also see Bean Curd." It contains more than its share of errors and outdated terminology and spellings. It is a "print on demand" book.

It includes: Aburage. Adzuki beans [sic], Agé. Aji Nomoto [sic], see monosodium glutamate. Aka miso–red bean paste. See Miso. Almond milk. Almond oil. Arachide / Arachis. See Peanut. Arachide oil. See Peanut oil. Bean cake, fermented: Chinese cooking, "fu yu" [fermented tofu]. Bean curd, pickled: Chinese cooking. [What is it?]. Bean curd cheese, red: Chinese cooking, "nam yu" or "nan yu" [red fermented tofu]. Bean curd: Oriental cooking. Known as "tofu" in Japanese or "dow fu" in Chinese. Pressed bean curd is "dow fu kon" [doufu-gan, pressed tofu].

"Bean curd, dried [yuba]: Chinese cooking = Known as 'tiem jook' [sweet yuba] / 'fu jook pei', other dialects are 't'ien ch'u' and 'fu pi chi'. It is soybean milk residue, which comes in a thin rectangular sheet or is curled into round sticks. They are usually tan- or cream-coloured with a shiny, glossy smooth texture."

Bean paste, red: Chinese cooking. "Made from soybeans and sugar mashed together then fried and dried out until it resembles sand." Used to fill Chinese moon cakes. Bean sauce, Chinese: Chinese and Asian cookery. Many types including "min see jiong" or "do bahn jiang." Incl. "Black bean sauce." Beans, black: Chinese cooking. "A pulse [sic] known as 'wu dow' / 'wu do' [Black soybeans].

"Beans, black salted fermented: Chinese cooking = Known as 'dow si / dou shih,' used as a vegetable or spice. Known as 'wu dow' dried and salted. They are dull, wrinkled, moist and tender and have an appetising fragrance, yet are pungent with a tangy salty flavor. Used as a flavor enhancer in dark sauces." Keep covered so they do not dry out... "Must be rinsed prior to use to avoid over-salting. Store in a closed jar in the refrigerator after opening."

Bean sprouts: Asian cooking [small green are mung bean sprouts, large yellow soybean sprouts]. Benne seeds: Sesame seeds are used to make sesame oil and tahini (sesame paste). Black beans, Chinese. Also known as 'salted black beans' or 'fermented black beans' and as 'dow si' (Chinese). China beans: See Soya / soy bean. Earth nut: See Peanut. Edamame: Japanese cooking. "Fresh soybean in or out of the pod." Firm tofu. Fried tofu puffs. Ground nut: See peanut. Hard tofu. Hydrogenated fats. See fats. Miso. Naahm yu: Chinese term. "A cheesy-looking bright red bean curd sauce" [Red fermented tofu]. Nam yu / Nan yu: See Bean curd cheese, red. Shoyu: Japanese cooking. Japanese soy sauce. Soy bean / Soya bean. *Glycine soja,* also known as "'China beans,' 'Butter Beans' and 'Haricot de Java' (French)." Soy bean jam / condiment. See Main see. Silken tofu. Silken firm tofu. Soya oil. Soya sauce. Soy sauce. Tamari soy sauce. Tofu. Tofu tempeh [sic].

Not listed: Amazake. Lecithin. Daitokuji natto. Fermented black beans. Hamanatto. Kudzu. Kuzu. Meat alternatives. Meat substitutes. Milk alternatives or substitutes. Milk, nondairy. Milk, soy. Natto. Seitan. Soy milk. Soy protein concentrate. Soy protein isolate. Soy protein, textured. Tempeh. Teriyaki sauce. Yuba.

Errors: Arame is not also known as "Hijiki." Address: Port Elizabeth, South Africa.

11410. *SoyaScan Notes.* 2012. Kinako recipes from Japan: An alphabetical list (Overview). Jan. 5. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Kinako (roasted whole soy flour) is widely used as an important ingredient in Japanese confections, including the following: Abekawa mochi. Kinako mochi. Ohagi.

11411. Barber, Linda. 2012. Re: Use of kinako in 1983 in cooking classs at Kobe College in Japan. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 6. 1 p.

• ***Summary:*** "One way I did use kinako in Japan for our Betty Crocker cooking was to mix a few tablespoons of kinako in our regular white flour for baking. At that time, getting whole wheat flour was very difficult, and I was into using ingredients my students could easily get in their own stores. We also mixed in a few tablespoons of nonfat dry milk powder to boost protein. I called it Power Flour.

"This mix did not change the taste or look of baked goods, but it did change the baking time. We baked the cookies or breads, cakes, etc. at a lower temperature, or for

© Copyright Soyinfo Center 2014

a shorter period of time. Since our ovens were convection (yes, even back then!) the cooking times had to be adjusted anyway." Address: 10868 North Cornell St., Indianapolis, Indiana 46280.

11412. Kageura, Makiko. 2012. Re: List of Japanese foods in which kinako is an important ingredient, with color photos. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 8. 2 p. [Eng]

• ***Summary:*** (1) Abekawa mochi.
(2) kinako ohagi (bota mochi).
(3) kinako cookies.
(4) kinako ice cream.
(5) kinako donuts.
(6) kinako scones (with okara).
(7) kinako butter (like peanut butter).
(8) horenso kinako-ae (spinach with kinako).
(9) kinako ame (a confection).
(10) kinako rollcake.
(11) kinako dashi.
(12) kinako furikake.
(13) kinako dressing.
(14) pumpkin with kinako.
(15) kinako zoni (traditional dish from Nara).
(16) warabi mochi.
(17) uzurin (a kind of warabi mochi).
(18) akumaki.
(19) nerikuri (nettabo and imomochi) (from Kagoshima and Miyazaki of Kyushu).
(20) sasamaki (from Niigata).
(21) yaseuma (from Oita).
(22) mitsu dango (from Ibaraki).
Address: 608 Honyakushi, Nara City 630, Japan.

11413. Barber, Linda. 2012. Re: Work with tofu and natto in Japan. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 9. 3 p.

• ***Summary:*** Introduction: Linda Barber Pike was born and raised in Milwaukee, Wisconsin. She graduated from the University of Wisconsin-Stout with a bachelor of science degree in Home Economics Education, specializing in urban education (1971). After teaching for 6 years in Milwaukee, she accepted a position at Kobe College teaching Oral English and Home Management. It was during this time that she became interested in Japanese cuisine and indigenous foods, especially tofu, and natto. After returning to the United States in 1982, Ms. Pike earned a Master of Science degree in Vocational Education from the University of Wisconsin-Stout. Her thesis, "Development, presentation, and evaluation of an instruction package on tofu for high school students" provided a model for introducing tofu to teenagers in a family consumer class setting.

Linda started a family with Marvin Pike in 1985 and moved to Indianapolis, Indiana. She returned to teaching in 1991 as a preschool teacher where her son, Dallis, was attending. In 1996 she accepted a position at Carmel High School, Carmel, Indiana in the Family and Consumer Science Department. She enjoyed teaching Foods and Nutrition, Foreign Foods, Child Development, and directed the on-site preschool that offered high school seniors the opportunity to teach 3 and 4 year olds. From 2005-07, Linda also enjoyed being an adjunct instructor for Ivy Tech Community College, Indianapolis, teaching child care licensure classes. Ms. Pike retired from all teaching in 2010, except for mentoring Dallis while he is earning a PhD in educational studies. Linda still enjoys reading books on tofu, sampling soy foods at Trader Joes, and serving her friends healthy snacks that contain tofu hidden in some form.

For most foreigners living in Japan, an English-Japanese dictionary was the most used book and carried everywhere.

© Copyright Soyinfo Center 2014

For me, it was *The Book of Tofu.* It wasn't long after I arrived in Kobe in 1977 to teach home management skills to the young women of Kobe College, that I discovered tofu. A low teacher's salary, and lack of western food stuff prompted me to shop in neighborhood markets. Tofu was always there. And it was always cheap. But, I had no idea how to prepare it. I needed a book in English that would help me use this food stuff.

Lucky for me, I discovered *The Book of Tofu.* I was drawn to the illustrations and recipes that used just a few ingredients. But what really sold me was the recipe for Tofu Ice Cream. A Wisconsin girl had to have her ice cream, but in Japan, it was expensive and not readily available.

My Japanese students and friends were amazed when I put tofu in a blender and added sugar and cocoa. They were amazed when I pulled it out of the freezer and scooped it into bowls. The were delighted with the taste. For me, it was the beginning of a soy food journey that continues to this day.

My students and I had faculty teas with tofu cookies, cheesecake and quiche. Soon these parties became news and I was asked to do short cooking segments at various T.V. networks. Making western-style recipes from a Japanese food such as tofu or natto was considered an oddity. I traveled all over Japan making T.V. appearances. For a tofu and natto company I developed recipes for their products and starred in their commercials to promote these products. I designed food layouts and recipes for their company's brochure. Various printed media companies were also expressing interest in recipes and ideas that used tofu and natto in western ways. I began giving magazine interviews about western ways to use Japanese soy foods. It was after I learned how to make tofu in my kitchen, that the Kobe YWCA asked that I teach classes to their Japanese members. My adult Japanese students did not know how to do this, as they purchased their tofu from supermarkets and small markets, much like Americans would buy bread from the grocery store and not know how to make bread from scratch.

I had fun creating western style recipes for tofu and natto and found it easy because of my background in food science. I simply used tofu in recipes where a protein like eggs was included. Because natto tasted like aged Wisconsin cheese to me, I included natto in dishes that used cheddar. One of my last projects included co-authoring a cook book, *The Tofu Gourmet* (in English), published in Japan. It is still available all over the world.

Besides recipes, *The Book of Tofu* became a travel guide for me. I wanted to visit the places, restaurants, and shops that were highlighted in the book. Mentioning *The Book of Tofu* and its author, Bill Shurtleff, I was welcomed in these shops and allowed to photograph how the foods were made. When asked to develop recipes for a company, I asked for a tour of the company and documented the manufacturing process. The photos of the natto factory are examples of such a tour.

I enjoyed meeting other Americans who were discovering the joys of tofu and natto. During one of these visits, Richard Leviton from Soy food magazine asked me to write an article for the journal. *Natto: The Taste of Japan* was written and printed in 1982. Natto was everywhere in Japan, but because of it's unusual texture was not liked by many Westerners. There was a lack of ideas on how to use it in recipes that might appeal to Americans. The article was my attempt to inspire Americans to incorporate natto in their meals.

I learned about the tofu making process by working alongside a tofu master in a small neighborhood tofu shop in Kyoto. This experience was arranged by the soy food trade newspaper, *Toyo Shinpo.* During my short apprenticeship I was intrigued by the meditative experience of making tofu. I carried that feeling of being present in my daily chores. Washing dishes were never the same for me. Seeing the craftsman's tools, many handed down from father to son, were honored and cared for. Today, my mother's well worn wooden spoon looks different to me. It is not just an old spoon, but something that holds a family spirit and it imparts that spirit into everything I stir.

I left Japan in 1982 to go back to school. I wrote my master's thesis on introducing tofu to high school students. Tofu ice cream and tofu spice cookies were the first ways my students experienced tofu.

When I taught preschool in the 1990s, I put my tofu making tools in the home making center, and served tofu carrot cake at snack time. The little ones learned how to say "Ohiyo" [Ohayô = "Good morning" in Japanese] and how to use chopsticks. They folded origami, and made fish kites. They dressed up in mama-san aprons and walked in tabi socks.

I returned to the high school classroom, this time in Carmel, Indiana, to teach foods classes. It was fun to expose young people to new tastes, culture and soy foods. For a special experience, the Japanese language teacher and I divided our classes. She taught my cooking class some Japanese phrases, and I taught her students how to prepare something with tofu.

The "way of tofu" changed my life, career, and my student's lives. Tofu not only nourished my body, but it nourished my spirit and experiences. And yes, *The Book of Tofu* is still on my bookshelf, complete with scribbles, and stains, right next to the not so worn English-Japanese dictionary. Address: 10868 North Cornell St., Indianapolis, Indiana 46280.

11414. Herz, Rachel. 2012. You eat that? Disgust is one of our basic emotions–the only one we have to learn–and nothing triggers it more reliably than the strange food of others. *Wall Street Journal.* Jan. 28-29. p. C3.
• ***Summary:*** This interesting article begins: "Nattô is a stringy, sticky, slimy, chunky fermented soybean dish that

© Copyright Soyinfo Center 2014

Japanese regularly eat for breakfast. It can be eaten straight up, but it is usually served cold over rice and seasoned with soy sauce, mustard, or wasabi."

For Westerners, nattô suffers from its alien smell and odor; it "smells like the marriage of ammonia and a tire fire... I've never met a Westerner who can take a bite of nattô on the first attempt. What Japanese love, we find disgusting."

A color photo shows natto on chopsticks being lifted out of a bowl partly filled with nattô; stretchy strings connect the upper nattô to the lower nattô. Address: Teacher and author, Brown Univ. [Providence, Rhode Island].

11415. Nguyen, Andrea Quynhgiao. 2012. Asian tofu: Discover the best, make your own, and cook it at home. Berkeley, California: Ten Speed Press. [viii] + 232 p. Illust. (color photos by Maren Caruso). Index. 24 x 24 cm. [21 ref]
• ***Summary:*** Another very attractive book and well-written book by Andrea Nguyen. In researching this book, Andrea traveled to many countries in East- and Southeast Asia. The color photos and the book design are both superb.

Contents: Introduction: East Asian stronghold (China, Japan, Korea), wavering Southeast Asia (Vietnam, Thailand, Cambodia, Laos, Singapore, Malaysia, Indonesia, Philippines, Myanmar / Burma), South Asian newcomer (India), tofu in America (Samuel Bowen, Benjamin Franklin, Commodore Matthew Perry, Civil War soldiers, Piper & Morse, George Washington Carver, Mildred Lager, World War II), alternative to mainstream (Boys Market in Los Angeles, *Diet for a Small Planet, The Book of Tofu,* Jeremiah Ridenour, Los Angeles Tofu Festival), tofu today (United Soybean Board Survey, Hodo Soy, Dong Phuong Tofu [Westminster, Orange County, California]).

Tofu buying guide: Tofu types (tofu blocks {silken, medium, medium firm, firm, extra firm, super firm}, pressed tofu, tofu noodles, tofu skin [yuba; an unfortunate term since yuba has nothing to do with tofu] {fresh tofu skin packets = dou fu bao, tofu skin rounds = dou fu pi or fu pi, dried tofu sticks [dried yuba sticks] = fu zhu or "tofu bamboo"}, fried tofu {fried tofu slices}, tofu pudding (like silken tofu but made by pouring rich soymilk into a tallish pot with a little calcium sulfate and tapioca starch dissolved in water in the bottom), fermented tofu {red or white}, soy milk).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "fresh tofu skin packets" or the term *dou fu bao* in connection with yuba.

Tofu cooking tips: Cutting, draining, frying.

Homemade tofu tutorial (incl. homemade soy milk, soy milk lees, homemade silken tofu, homemade tofu pudding, block tofu, confetti tofu, oboro tofu, zaru tofu, seasoned pressed tofu, tea-smoked pressed tofu, white fermented tofu, frozen tofu, fresh tofu skin, soy-simmered fried tofu).

Recipes–Fresh and satisfying: Snacks and starters. Soothing and soft: Soups and hot pots. Homey and wholesome: Main dishes. Versatile and delicious: Salads and sides. Religion and artistry: Mock meats. Building on traditions: Buns, dumplings, crepes, noodles and rice. Amazing transformations: Sweets and desserts. Basics. Ingredients (glossary). Acknowledgments. Measurement conversion charts.

Note 1. This book contains many recipes that use meat, poultry, or fish as ingredients.

Note 2. The Vietnamese term for tofu is *dau phu.* Address: Food writer, Santa Cruz, California.

11416. Katz, Ellix Sandor. 2012. The art of fermentation: An in-depth exploration of essential concepts and process from around the world. White River Junction, Vermont: Chelsea-Green Publishing Co. xxiii + 498 p. April. Illust. (photos and illustrations). Index. 25 cm. [109 (Chap. 10 + 11) ref]
• ***Summary:*** A marvelous book by self-described "fermentation revivalist" Sandor Katz, whose books and lectures have inspired thousands to rediscover the ancient art of fermentation.

In this book Katz redefines an old noun "ferment" (no longer used to mean enzyme) to mean fermented food(s). It works quite nicely. For example: "The Japanese soy ferment *natto* contains an enzyme called *nattokinase."* Although information on fermented soyfoods is found throughout the book (see the excellent index), most of it is found in two chapters, 10 and 11 (p. 274-335). The contents of these two: 10. Growing mold cultures: Introduction. Incubation chambers for growing molds (oven method, aquarium method, temperature controller, dedicated incubator designs). Making tempeh. Cooking with tempeh. Propagating tempeh spores. Making koji. Amazake. Plant sources of mold cultures. Troubleshooting. Sidebars: Microorganisms in my bed, a poem by qilo. Sculpting with tempeh. Ode to tempeh, by Spiky. Tempeh variations (chickpea tempeh, etc.).

Note: Koji is mentioned on 41 pages in this book, and especially on pages 296-300.

11. Fermenting beans, seeds, and nuts: Introduction... Spontaneous fermentation of beans. Idli / Dhokla / Khaman... Soybeans. Miso. Using miso. Soy sauce. Fermented soy "nuggets" [fermented black soybeans]: Hamanatto and douchi. Natto. Dawadawa and related West African fermented seed condiments. Fermenting tofu. Troubleshooting.

The section titled "Non-dairy milks, yogurts and cheeses" (p. 207-08) begins: *"Milk* has come to refer to any creamy liquid of substance, such as coconut milk. In our time soymilk has become a ubiquitous alternative to cow milk, but any nut or seed can be extracted as milk (or turned into cheese)." We have hemp seed milk and almond milk. "The seed milk ferment that most closely resembles its dairy analogue is soymilk fermented with yogurt cultures. You can ferment soymilk using the same procedure as dairy milk, and you can even buy commercial cultured soy 'yogurt' to use as a starter."

© Copyright Soyinfo Center 2014

Sidebars: Dosa variations. Miso generic proportions. Miso soup with William Shurtleff. In the middle of this chapter are 15 pages of very helpful color photos. Address: Short Mountain Sanctuary, in the hills of Tennessee.

11417. Japan Oilseed Processors Association (JOPA). 2012. Seiyu Sangyo to Nihon Shokubutsu-yu Kyokai 50 nen no ayumi [Progress of the oil milling industry and the Japan Oilseed Processors Association (JOPA) during the past 50 years]. Tokyo: Saiwai Shobu. [11] + 281 p. May 15. Illust. (color). No index. 27 cm.

• ***Summary:*** This beautiful hardcover book, printed on glossy paper, was written to celebrate JOPA's 50th anniversary. It was officially published on 15 May 2012 and distributed to the participants / members at the ceremony celebrating JOPA's 50th anniversary on that day. Although it was officially written by JOPA, the main author and researcher was Yoshinori Komura (executive director of JOPA) in cooperation with Mr. Tomoaki Kuwano (a writer from the publishing company, which publishes a magazine for Japan's oils and fats complex). This book is strengthened by its abundance of graphs and tables, but weakened by its complete lack of references and of an index.

Contents: Part I History of the oilseed industry in our country [Japan] (p. 3).

Chapter 1. Changes in the structure of the oil industry (p. 3): Section 1. Quickening of modernization of oil industry structure (p. 3), 1.2 Movement towards soybean trade liberalization (p. 5), 1.6 Expansion of demand for assorted (compound) feed and supply of soybean meal (p. 14), 1.6.1 Promotion of stockbreeding and supply increase of soybean meal (p. 14).

Section 2. Steps toward stabilized growth (p. 17), 2.2 America's political strategy of soy export ban and its effect on our domestic market (p. 18), 2.4 Expansion of rapeseed oil extraction / production and increase of demand for soybean meal (p. 22), 2.4.2 Expansion of demand for soybean meal and increase of import (p. 23), 2.5.1 Arrival of era for importing large quantities of soybean meal (p. 27), 2.6.2 Sudden rise of soybean price and rapid drop of soybean oil extraction (p. 42), 2.8.3 Pressure of imported soybean meal (p. 51).

Chapter 2. Changes in the market for domestic oil for food (p. 54), 2.2 From soybean oil to rapeseed oil and then to palm oil (p. 56), 2.5 The day palm oil exceeds soy oil (p. 69).

Chapter 3. Changes in the world oilseed market (p. 73), 3.1 World oilseed market that followed after soybeans (p. 73), 3.1.1 American soybeans that supported the world's oilseed market (p. 74), American soybean production expanded smoothly (p. 74). Sudden big rise of American soybeans (p. 74), 3.1.2 Increase of South American soybean production, America's rival (p. 77), South American soybeans exceed American soybeans (p. 79), 3.2 Palm oil production's increased production, it passed soy oil (p. 81), 3.5.4. 50,000,000 tons of soybean imports arrive daily (p. 89).

Part III. Materials (p. 217).

1. 50 year chronology / timetable of the Japan Oilseed Processors Association (p. 217).

2. Lists of companies and industry members of the Japan Oilseed Processors Association (updated to March 2012) (p. 253).

3. List of successive officials of the Japan Oilseed Processors Association (p. 254).

(3.1) List of successive presidents (p. 254).

(3.2) List of successive vice presidents (p. 254).

(3.3) List of successive directors / trustees (p. 257).

(3.4) List of successive supervisors (p. 259).

4. Changes of yields of oil extraction from various oilseed materials (p. 260).

5. Changes of production amount from various oilseeds (p. 262).

6. Chronology (timetable) of the Japan Oilseed Processors Association: Committees and sectional meetings (p. 264).

7. List of overseas expeditions of the Japan Oilseed Processors Association (p. 265).

8. Historical tables of 10 biggest news events each year, by year for Japan's oilseed industry (p. 267).

Tables:

1-1-1. 1961 Index (indicator) of main oil industry.

1-1-2. Non-trade liberalized items related oil production in the beginning days of Japan Vegetable Oil Association (April 1962 to present).

1-1-3. Changes in the production amount of assorted (compound) feed and its factory numbers after supply and demand stabilization law for amount of assorted (compound) feed.

1-1-4. Production amount of assorted (compound) feed and amount of usage of soybean meal.

1-1-5. Changes of tax on vegetable oils at main of import/export negotiation time.

1-3-1. Summary of America's export regulations for soybeans and cotton seeds.

1-3-2. Amount of soybean production in Brazil's Cerrado area.

1-3-4. The Big Three companies of oil production capacity in Europe.

Page 189. This table has no number or title, but it mentions soybeans.

Page 190. This table has no number or title, but it mentions soybeans.

Graphs (and photos):

1-1-5. Changes of vegetable oil production by (various) oil seeds.

1-1-7. Changes of price index (1970 average = 100).

1-1-8. Changes of supply of soy oil and rapeseed oil.

1-1-10. Changes of supply of soybean meal.

© Copyright Soyinfo Center 2014

1-1-11. Amount of importing soybean meal by supplying country after 1980.

1-1-12 (photo) American soybean farm–you can see a clear difference in the amount of other weeds growing.

1-1-14. Changes of oil production by various oilseeds.

1-1-15. Changes of oil supplies by various oilseeds (large classifications).

1-2-2. Changes of vegetable oil supplies by composition percentages of various oil seeds.

1-2-3. Changes of supply by various seed oils.

11418. Soyfoods Council (The). 2012. Soyfood myths: Get the facts. *Iowa Soybean Review* (*Iowa Soybean Association, Urbandale, Iowa*) 23(7):7. Spring.

• ***Summary:*** "Myth #1: Anybody who has had breast cancer should avoid traditional soyfoods such as tofu and soymilk.

"Actuality: The American Cancer Society says breast cancer patients can safely consume up to three servings of traditional soyfoods per day.

"Myth #2: People in Japan and other Asian countries consume only small amounts of soyfoods and use them primarily as condiments.

"Actuality: The results from large surveys indicate, on average, Japanese and Shanghai adults consume 1 1/2 servings of soyfoods per day.

"Myth #3: Soyfoods cause mineral deficiencies or imbalances.

"Actuality: Evidence unequivocally shows calcium absorption from soymilk and cow's milk are similar.

"Myth #4: Soyfoods contain estrogen and men who eat them may experience feminization or even impairment of their fertility

"Actuality: Soyfoods do not contain estrogen and evidence indicates soyfoods do not feminize men. Soy doesn't lower testosterone levels or sperm concentration.

"Myth #5: Soyfoods should be avoided because they are harmful to the thyroid.

"Actuality: More than 20 clinical studies have shown neither eating soyfoods nor using soybean extracts cause thyroid problems."

11419. Shurtleff, William. 2012. The global value chain for soybeans (Editorial). *SoyaScan Notes.* June 12.

• ***Summary:*** "The value chain is a concept from business management that was first described and popularized by Michael Porter in his 1985 best-seller, *Competitive Advantage: Creating and Sustaining Superior Performance"* The value chain concept can be applied at various levels of activity, such as a worldwide level, an industry-wide level in a particular country, or at the level of a particular company operating in a specific industry. The key links in a value chain are those points at which value is added to products. Quantitative data are necessary to analyze the amount of value added (Source: Wikipedia at value chain, June 2012).

In the global soybean chain we have identified four major links or points: (1) Soybean production: This is highly fragmented, with hundreds of thousands of farmers, both large and small, growing soybeans. However some of those farmers are organized into groups, often cooperatives (such as AGP in the United States).

(2) Crushing and other soybean processing. Crushing soybeans to make crude soy oil and defatted soybean meal is main way that soybeans are processed. However in East Asia, whole soybeans are also processed into human foods, such as tofu, miso, soymilk, tempeh, etc. Large soybean crushers which operate worldwide include Cargill, ADM, Bunge, AGP, Sanbra (Brazil) etc. Defatted soybean meal is further processed to make animal feeds, soy sauce, etc. Crude soy oil is further refined to make edible vegetable oil biodiesel, etc.

(3) Transportation / distribution of soybeans and/ or soybean products. Major firms (which are vertically integrated) include Cargill, ADM, Bunge, Dreyfus, the Noble Group of Hong Kong, etc.

(4) End use / retail: The main end uses for soybeans are: From whole soybeans–human foods, often divided into four types: (a) Traditional East Asian fermented soyfoods, such as miso, tempeh, natto and its relatives. The largest makers are miso makers and natto makers in Japan. (b) Traditional East Asian non-fermented soyfoods, such as tofu, soymilk, edamame, roasted soy flour, yuba. The largest makers are tofu makers and soymilk makers in Japan, Hong Kong, and USA. From defatted soybean meal: animal feeds, soy sauce, modern Western soy protein ingredients: textured soy flour / textured vegetable protein (TVP in ad ADM trademark), soy protein concentrates, textured soy protein concentrates, soy protein isolates, and textured soy protein isolates. The largest makers of animal feeds are the same as the major soybean crushers: Cargill, ADM, Bunge, etc. From crude soybean oil: Refined soybean oil and biodiesel. The largest refiners of soybean oil are the major soybean crushers. From refined soybean oil: Edible vegetable oil, salad dressings, margarine, etc. Address: Founder and owner, Soyfoods Center, Lafayette, California. Phone: 925-283-2991.

11420. Shurtleff, William. 2012. Thoughts about tofu and sexual desire (Editorial). *SoyaScan Notes.* June 20.

• ***Summary:*** This line of though began with an e-mail (on June 19) from Mark Messina:

"Have you ever come across in your reading of original texts anything that makes reference to the kinds of statements below that are very prevalent on the net? The source on the net is the Weston A. Price Foundation, yet there are no citations to the original source documents.

"In fact, a popular tradition in Japan is for wives to feed their husbands tofu when they want to prevent pregnancy! Buddhist monks traditionally eat tofu to lower their libido."

"It is widely known throughout Asia that when a woman

© Copyright Soyinfo Center 2014

does not want to have sexual relations with her husband any more, she feeds him more and more tofu! Monks in monasteries needing to be celibate are urged to eat more tofu and soy products. In Asia, it is common knowledge that soy reduces sexual urge and ability."

Mark then adds: "I just checked another 20 comments about the monks and only found one referenced.

"Ancient monks used to eat extra tofu to help them to easily maintain their vows of celibacy." (2).

"Reference 2 is to Kaayla Daniels' book, *The Whole Soy Story.*–Thanks, Mark.

I (Shurtleff) look for this quote in Daniels' book and soon find it on page 11. It states:

"Liu-An's initial reason for turning soybean dross into tofu gold was his desire to add a low-cost protein to the vegetarian monastic diet (19-21; see Shurtleff & Aoyagi twice + Keshun Liu). Over time the monks may have noticed that randy behavior declined when tofu consumption went up. The aptly named "meat without a bone" soon appeared regularly on monastery menus as an aid to spiritual development and sexual abstinence, a dietary strategy validated by recent studies showing that the plant-form of estrogens (called phytoestrogens) in soy can lower testosterone levels (22; see Fallon and Enig, 'Tragedy and Hype') (See Chapters 28 and 29).

Shurtleff adds: "I'll bet that bit of speculation is the origin of all the information you found on the Web."

When Messina sees this quotation and comment he asks Shurtleff: "To be clear, as far as you know, the above statement has no basis in fact. It wasn't added to the menu as an aid to sexual abstinence? I understand selectively citing studies and misinterpreting data but making something up is quite weird."

Shurtleff then repeats that, so far as he knows, the above statement has no basis in fact.

Shurtleff then shows the two initial statements / quotations that Messina sent to Akiko Aoyagi and asked her to take 10-20 minutes reading and thinking about them, then to see if she could find any similar information in Japanese on the Web.

She was born and raised in Japan, and graduated from college there. She obviously has spent more time thinking about and working with tofu than most Japanese–except tofu makers.

She said: 1. She has never heard anything like either of these two statements. So far as she knows they have no basis in fact.

2. She could not find anything like either of these two statements in Japanese on the Web.

In short, she has the same opinion about the two statements that Shurtleff does. They were invented, probably (at least the first) by Kaayla Daniels on page 11 of her book *The Whole Soy Story.* Address: Founder and owner, Soyfoods Center, Lafayette, California. Phone: 925-283-2991.

11421. Tsai, Minh. 2012. Making and marketing yuba at Hodo Soy Beanery (Interview). *SoyaScan Notes.* July 4. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** During the past 8 years Hodo Soy has been very effective and innovative in introducing yuba to people in the Bay Area of California. Part of this success has been through effort and part has been (Minh modestly admits) through timing and luck. "We are very fortunate to be in the Bay Area. The only two other places it might work are Los Angeles and Manhattan, New York."

Yuba is now an important and profitable product for Hodo Soy, accounting for about 20% of total sales. However the yuba tables take up about half of all Hodo Soy's manufacturing space.

What are the key's to yuba's success for Hodo Soy? First, education. We have worked to educate our customers who are chefs at restaurants about the large amount of labor that goes into making yuba and contributes to its high price (about $15 a pound). We have also met with chefs in restaurants and explained that 1 ounce of yuba is quite a good serving size; so each serving costs less than $1.00. And it looks great on the menu and on the dish." Minh also educates chefs about yuba's versatility (use it as a wrap, put it in soups, etc.) which enables them to develop recipes. The chefs have developed innovative recipes using yuba and their customers seem to enjoy their creations. Most people really love the taste of yuba. "People think of it as a starch-free, gluten-free noodle. It's always al-dente; it doesn't fall apart."

"I believe that we have been doing more education on tofu and yuba than all the big tofu-makers combined." Minh does 95% of this education himself–in person. He enjoys this teaching quite a bit, and he knows these chefs personally.

Yuba has brought a lot of positive publicity to Hodo Soy. It has been called everything from "the lingerie of tofu" to "the sashimi of tofu." Daniel Patterson, chef at Coi restaurant described yuba as tofu's "elegant and sexy cousin" (New York Times, 6 Aug. 2006). This is important in terms of branding, as the company is known to be the introducer and maker of this new product.

Minh (who has Chinese ancestry) was smart (and innovative) to call the product "yuba" instead of "bean-curd skin"–like most Chinese restaurants. But there was another reason he called it yuba. "Our research shows that, as far as willingness to pay for food at a premium price, the Japanese are at the top of the list. They know what it is and they realize it is expensive. And the majority of our Asian customers are actually Japanese." But Hodo Soy's Asian customer base is still relatively small; Minh mission is to introduce high-quality soyfoods to mainstream America.

Hodo Soy sells mostly "mature yuba" (plain fresh yuba) and value-added yuba products, such as Spicy Yuba Strips. From time to time he has requests from high-end restaurants for "nama yuba," which is soft, formless yuba that is not

© Copyright Soyinfo Center 2014

yet mature and fully formed. Each chef wants a particular texture, so Minh sells it to them on a customized basis–and requires that the chef come to Hodo Soy the first time to make exactly the texture of yuba they want.

Hodo Soy delivers all its own yuba and tofu products; they have four delivery vehicles that deliver to 50-60 accounts in the Bay Area–both restaurants and natural grocery stores; Rainbow Grocery in SF, Tokyo Fish Market, and Berkeley Bowl all carry Hodo Soy's fresh yuba. They have a "make to order approach" and a restaurant must order 4-5 days in advance. Value added products are sold through chains such as Costco, Whole Foods Markets in Northern California, Andronico's, and Molly Stone's.

The two Bay Area restaurants that have done the most to introduce yuba are Coi (Daniel Patterson, in SF's North Beach) and The Slanted Door (Charles Phan; modern Vietnamese cooking near the Ferry Building). Other restaurants that offer may serve yuba include Cyrus (Healdsburg), The French Laundry (Yountville, California), and Ozumo (Oakland and San Francisco).

Hodo Soy has never done focus groups or taste panels with yuba.

Minh first made yuba in about May 2004 when he was tinkering with Sogo Tofu in San Jose. They had a yuba table (with 10-12 frames) that they weren't using. Sogo Tofu was initially built as an adjunct to a large Chinese health grocery store–sort of a Chinese Whole Foods. This store (named Sogo) was part of a chain named Marina Foods, which has a handful of stores in the Bay Area. Sogo, the grocery store, has since closed down but the tofu shop continued to operate. Minh asked Sogo Tofu to make yuba for him, then he experimented using this yuba in recipes, and introduced these dishes to his customers at farmers' markets. The people who owned and operated Sogo Tofu were relatives of Minh's wife. The three yuba dishes, starting in May 2004, were Soy Omelette, Yuba (Fresh), and Poached Yuba Loaf. Minh quickly learned the people at farmers' markets really liked these products. They learned about yuba from him, and he learned from them. The first soy product gave them was the Poached Yuba Loaf, followed by Soy Omelette (yuba marinated in soy sauce and a little brown sugar, then pan fried in a little oil). People were generally surprised at the texture and taste, but they found it to be delicious and asked, "What is it?" He replied, "It's yuba." They asked back, "What's yuba?" So he explained. Eventually they came to want the plain fresh yuba so they could experiment with their own recipes. Another early yuba product was Spicy Yuba Strips (made at Sogo Tofu starting in Dec. 2004); this is still a best-seller at retail outlets for Hodo Soy Minh's 5th yuba product was Sesame Yuba Strips (made at Sogo Tofu and discovered by accident; the other ingredients were toasted sesame paste / butter, a little brown sugar and soy sauce).

To take a step back: Minh approached tofu-making very much from a Western food processing and food science point of view. He wanted to leave the basic traditional methods (as shown for example, in a flow chart) unchanged but introduce modern equipment to do the work of lifting, pressing, scooping, and slicing, and modern methods for measuring temperatures, times, and Brix, etc. Minh soon realized (in about 2004-05) that he needed to supervise the making of tofu at Sogo Tofu. But he was just a beginner. How can a beginner, in a traditional Chinese family and craft, tell his experiences aunts and uncles to change. "It was an impossible situation. After about 2 years Sogo had reached saturation–in terms of quality, sanitation, good manufacturing practices, and traceability of ingredients. Starting at the end of 2005, our sales for the next 2-3 years basically remained static. In 2006 we decided to build a plant in Oakland, and that took about 2 years." Minh traveled a lot, learned a lot, visited some tofu companies, and made some mistakes. As Minh prepared to open his tofu plant in Oakland, he realized that he "did not want to hire anyone with legacy tofu experience. I wanted to teach them from the very beginning."

Minh's wife, Jean Ku, was not directly involved with the tofu and yuba business at all. But she has been a tremendous supporter by bringing home the income to support the family during the early years. Jean is a top executive at the Energy Foundation–Program Manager for the China Sustainable Energy Program. Although it has been in existence for only 20 years, the Energy Foundation is the biggest contributor to the reduction of carbon dioxide in China. The foundation began with the sole mission of reducing carbon dioxide, and it identified China as the biggest potential culprit. Its founder decided to focus all of its resources on China. So a foundation based in San Francisco has been focused on China's CO2 problems for 20 years! Amazing. It is responsible for the very progressive energy policy in China today–which is more progressive than that of the U.S. One of the advantages of a dictatorship is that it can move policy much more quickly than is possible in a democracy. The Energy Foundation has learned a great deal about problem solving during these 2 decades and the model has now been expanded to Brazil and India. She is doing exactly what she finds most interesting and important–critical to the future of the planet. "She loves what she does, and she is very grateful, just like I am, that we have work that we love." Continued. Address: Founder, Hodo Soy Beanery, 2923 Adeline Street, Oakland, California 94608. Phone: 510-735-4587.

11422. Welters, Sjon. 2012. Re: Photos of and basic information about making koji by hand at Rhapsody Natural Foods in Vermont. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 9. 3 p.

• ***Summary:*** Sjon attaches many color photos he just took of his koji-making process. "We started to make koji this January because there was no organic koji available on a

© Copyright Soyinfo Center 2014

commercial scale. We got the basics from your book *Miso Production* and talked a lot with our friends George and Trees Rozing, who've been making koji and amazake since the early 1980's. The basic recipe we followed is in your book and for the sake of propriety we'd prefer to keep the details to ourselves at this point and refer to your book, which basically tells it all. After all those years it is still *the* reference book."

(a) Day 1: Polish brown rice. The outer layers of brown rice prevent penetration of the koji mold. (b) Comparison of polished rice (in scoop) and brown rice. (c) Rice bran removed from brown rice during polishing. (d-e) Late afternoon–rinse polished rice. (f) Late afternoon–soak rice overnight.

(g) Day 2: Divide rice among steamer pans. (h) Steam rice in steamer. (i) Steamed rice. (j) Break up steamed rice with rice paddle. (k) Cool steamed rice. (l) Add koji spores. Sprinkle them evenly over rice to inoculate. (m) Pile inoculated rice. (n) Inoculated rice ready to be covered with cloth for the night. (o) Temperature and humidity of rice and room.

(p) Day 3: Morning, aerate rice. Temperature is 96ºF. (q) Noon rice temperature is 108ºF. (r-s) Noon, divide rice into trays. (t) Room temperature and humidity. (u) Rice is fermenting. (v) Rice is fermenting at high humidity.

(w-y) Day 4: Koji is done–ready. Three views.

Comments by Sjon: It was a challenge to take pictures in the koji room, because of the high humidity that fogged up the camera lens all the time.

Questions by Shurtleff, answers by Sjon. Q1. Why do you use no wood? Several people have contacted me recently saying their health inspectors will not allow wood. Ans. "Actually behind the current wall which is a sheet of aluminum covered insulation is cedar. The koji table is also made from cedar and I even made a cedar koji tray. The problem was that the cedar gave such a strong aroma to the koji that was overwhelming, and gave a distinct flavor to the amazake made from that koji. So my advice is to try cedar that is well aged, although I am not sure the cedar smell will ever go away. Here in the West people want a cleaner, more neutral flavor? Health inspectors need to read up, because in The Netherlands the same argument was used in the 1970s for distributing organic vegetables to the natural food stores in wooden crates. Turns out that the wooden ones were really clean, while the plastic ones were contaminated although they looked clean, in terms of bacterial contamination."

Q2. Do you now prefer not to use wood? Ans: "George Rozing changed to all stainless steel because he kept having to deal with chipped trays, wood splinters in the koji, etc."

Q3. I see your trays are stainless steel. What are the other containers made of? Ans: "At the moment we use perforated aluminum sheets covered with baking sheet paper, but have stainless steel trays on order. Although you would think so, perforated actually does not work better, solid trays give better koji."

Q4. Is all this koji for use in making amazaké? Ans: "We are in the process of starting miso production. We got wine barrels that we are now making watertight by soaking them in water, because they'd not been used for a while. But our amazake is now 100% organic and soon we'll have new labels showing that.

"By the way, I also got a lot of information from watching many hours of YouTube videos put on the web by Japanese sake makers. Fascinating. Steaming was the biggest hurdle, but we overcame that by watching all those videos to see how they did it. Eventually, through trial and error we figured it out, though: small scale koji makers should use MarketForge steamers." Address: Founder and general manager, Rhapsody Natural Foods, 72 Danville Hill Rd., Cabot, Vermont 05647-9622. Phone: 802-563-2172.

11423. Palmer, Sharon. 2012. The plant-powered diet: The lifelong eating plan for achieving optimal health, beginning today. New York, NY: The Experiment. xx + 412 p. Foreword by David L. Katz, MD, MPH. [228 ref]

• ***Summary:*** A positive attitude toward traditional soyfoods is found throughout this excellent book. The traditional Japanese diet (p. 19-20)–one of the healthiest–leads to an average life expectancy of 80 years for men and 85 years for women. The Japanese diet is characterized by a "Focus on soy foods. Whole soyfoods such as edamame, tofu, and miso are regular features of the diet."

The section titled "Soy, the superfood" (p. 58-59) describes the basic types of soyfoods and their benefits. The next section is "A word about soy meat alternatives" (p. 60-61) including veggie burgers, soy meat crumbles, and vegetarian hot dogs.

The "Plant-based dairy alternatives guide" (p. 72-76) includes various types of soy milk, soy milk yogurt, and soy ice cream.

The word "soy" appears on 55 pages of this book, "tofu" on 54 pages, "tempeh" on 18 pages, "soy foods" on 17 pages, "seitan" on 15 pages, "edamame" on 10 pages, "soybeans" on 10 pages, "soy milk" on 8 pages, "soy sauce" on 6 pages, "miso" on 6 pages, "soy milk yogurt," "soy ice cream" and "soybean oil" on 2 pages each, and "soy cheese" and "soy cream cheese" on 1 page each.

Includes "75 original plant-based recipes for every meal–all with nutritional data." "A 14-day meal plan with action alerts to get you started." "Essential information on the healthiest plant food–whole grains, vegetables, fruits, nuts, legumes, and even herbs, spices, dark chocolate (rich in polyphenol antioxidants), coffee (contains many beneficial antioxidants), tea (rich in polyphenol antioxidants, and takes the place of high-calorie, high-sugar drinks), and wine.

Virginia Messina, in her blog The Vegan RD, says this: "It's a book that makes the scientific case for eating fewer animal products and more plant foods while admitting that

© Copyright Soyinfo Center 2014

there is no precise definition for 'plant-based diet.' The information in the book is balanced, honest, and practical, and the recipes–which appear to all be vegan–look really nice. In the forward to the book, Dr. David Katz, of the Yale University Prevention Research Center says this about Sharon's book: 'So much of modern health advice is about marketing a particular perspective that such a balanced and moderate approach is a truly surprising and welcome departure.'

"I agree, and it's the thing that made this book stand out for me. Admittedly, I wish the book had included more perspective on making compassionate food choices. When animals are part of the discussion (and I think they should always be part of the discussion) a vegan diet is the one and only best way to eat. When the focus moves away from animals, then diet-related issues become somewhat less clear. So far, no one has proven that a vegan diet is healthier than other plant-based ways of eating, and it's unlikely that they ever will. So, this isn't a book I would use to promote veganism–it presents a vegan option, but not a vegan imperative–but, it is one I would use to promote healthy plant-based eating for those who are looking for that type of information."

About the author: "Sharon received her Bachelor of Sciences Degree with Honors from Loma Linda University, California. She enjoyed a diverse 16-year dietetics career with experiences as a clinical dietitian, wellness dietitian, chief clinical dietitian, food and nutrition services director, and consultant dietitian." Address: RD (Registered Dietitian), P.O. Box 1052, Duarte, California 91009.

Address: Rio Grande do Sul, Brazil.

11425. Kikkoman Corporation. 2012. Annual report 2012. Year ended March 31, 2012. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 47 p. 28 cm. [Eng]
• ***Summary:*** Net sales in yen decreased by 0.01% to ¥283,239 million. Net income in yen increased by 15.6% to ¥8,963 million.

Under "Major group companies–Kikkoman Corporation, Japan (p. 44) is listed: Kikkoman Soyfoods Company, 2-1-1 Irifune, Chuo-ku, Tokyo 104-8553, Japan. Phone: +81 (3) 3206-0778. This company was formerly Kibun Foods.

Under "Corporate History" we read (for the first time): "2008 Aug.–Kibun Food Chemifa Co., Ltd. (now Kikkoman Soyfoods Company) becomes a wholly owned subsidiary of Kikkoman."

A photo (p. 2) shows Yuzaburo Mogi (Honorary Chief Executive Officer and Chairman of the Board of Directors) and Mitsuo Someya (President and CEO). On this page we read that Kikkoman's sales decreased because of "lower demand for soy sauce and the termination of sales of some beverages and casual wines." Address: Noda, Japan.

11427. Heinbaugh, Pat. 2012. Re: Pat is an expert on Mr. Shinzo Ohki of the Oriental Show You factory in Columbia City, Indiana. Letter (e-mail) to William Shurtleff at Soyinfo Center, Oct. 1-2. 1 p.
• ***Summary:*** "Greetings, my name is Pat Heinbaugh, and I am a research volunteer for the Whitley County Historical Society, Columbia City, Indiana. I am currently assisting the local Rotary Club with an article they wish to publish in a future edition of *The Rotarian* magazine. The local club wishes to focus the article on Mr. Shinzo Ohki, who was founder of the Oriental Show You Factory in Columbia City, in the early 1900's. Mr. Ohki was a 40+ year member of the club, as well as a man who'd come from Japan to Columbia City in the earlier 1900's. Among Mr. Ohki's interests, was the return of Samurai swords, which had been taken by American soldiers during World War II to their proper owners. He was able to return at least two of the swords. My wish to you, is that I might obtain copies of any information you have on Mr. Ohki, whether it be about his product, or the return of the swords. I've read several portions on your soyinfo page, and am asking how I might obtain copies of any / all information about Mr. Ohki.

Bill, yes I do have the information, in the form of a full bottle of Oriental Show You sauce, as well as a larger empty bottle. Also a copy of the patent for bottle. I have frequent communication with Ohki's grand daughter, Tanya Watanabe, who lives in Nikko, Japan. Mr. Ohki graduated from Columbia City High School, which is our local high school, and our museum has a picture of him with his graduating class. We have several items in the museum that were gifted to us by friends of Ohki, after his death.

Mr. Ohki's brewmaster was Esta Keirn, and his daughter, Nancy Knepple verified a lot of facts / figures for me. The company was sold to a company in Ohio, and Mr. Keirn went with the company for a period of about 9 yrs, then he retired. I believe Mr. Ohki is credited with being one of the first companies to have fermented soy sauce. I

© Copyright Soyinfo Center 2014

know several people in our town who worked for Mr. Ohki, especially during the 1930s and 1940s, and the building that was the factory is still, in part, in tact, on Factory Avenue, Columbia City. In his earlier years, Ohki went to Detroit, started a factory, but it failed, so he returned to Japan, to learn more about factory operations, as well as to marry his wife, Taka. They returned to Columbia City and it became their hometown. He was a highly regarded and philanthropic man, helping many people in this area. Some oldsters tell me that their older siblings who worked in the factory returned home with bags of warm noodles.

There is also a recipe book published by Oriental Show You, Columbia City, with many recipes in which one could use the sauce. This book was evidently given / sold to, possibly restaurants, etc. I have several copies of this booklet. Also, there is a 1938 video done for the Columbia City Fire Department, which shows a clip of workers in the Show You Factory, as well as Mr. Ohki coming out of the Presbyterian Church on a Sunday morning. And also a clip of Ohki's daughter, Grace, playing in the high school marching band, as they marched around our courthouse. Address: Volunteer researcher, Whitley County Historical Society, 6850 N. Wise Rd., Columbia City, Indiana 46725. Phone: patheinbaugh@yahoo.com.

11428. Shurtleff, William; Aoyagi, Akiko. comps. 2012. History of Yuba–The film that forms atop heated soymilk (1587-2012): Extensively annotated bibliography and sourcebook. Lafayette, California: Soyinfo Center. 418 p. Subject/geographical index. Printed 1 Nov. 2012. 28 cm. [733 ref]

• ***Summary:*** This is the most comprehensive book ever published about the history of yuba. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of this unique soyfood. It is also the single most current and useful source of information on this subject.

Contents: Search engine keywords. Explanation of the Chinese and Japanese characters on the title page. Dedication. Acknowledgments. Introduction: What is yuba? In what countries is yuba widely used? Why do we call it "yuba" instead of "bean curd skin"? Our main purpose in giving English-language names to Asian soyfoods. Brief chronology / timeline of yuba (1587-2012). Alphabetical list of names of yuba (useful for searching digital / electronic text). About this book. Abbreviations used in this book. How to make best use of this digital book–Search it. Five pages of color photos. Contains 64 photographs and illustrations. http://www.soyinfocenter.com/books/159. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11430. Nespoto, Massimo. 2012. Le soja au Japon: mythe ou réalité? [Soy in Japan: myth or reality?] *Alternatives Végétariennes* No. 109. Sept/Nov. p. 20-22. [Fre]

• ***Summary:*** The Japanese consume soy in many forms: The main fermented soyfoods are miso, shoyu, and natto. The main nonfermented soyfoods are tofu, soymilk, yuba, okara, Koyadofu, edamame, daizu [whole soybeans], and moyashi [soy sprouts]. A brief description of each is given.

There follows and interview with a traditional tofu maker, Shuji Uemura, owner of Uemura Tofu, who arises each morning at 3:30 a.m. Color photos show: (1) The outside front of Uemura Tofu shop with blue and white norens hanging. (2) Mr. Uemura standing inside his shop. (3-4) Freshly made tofu in a cooling tank and in individual tubs. (5) Many packaged soyfoods in Japan. Address: Prof., Univ. of Lorraine.

11431. Skiff, James. 2012. MicroSoy Corporation in Jefferson, Iowa, maker of MicroSoy Flakes, has closed, apparently permanently (Interview). *SoyaScan Notes.* Dec. 5. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** MicroSoy Corporation closed in Feb. 2012. Itaru "Terry" Tanaka, CEO, age 64, committed suicide on 17 Nov. 2011. He had been "cooking the books" for a number of years and he owed a local farmers' cooperative lots of money.

Note: Terry was born in Fukuoka, Japan to Hitoe and Moriyuki Tanaka. He grew up mainly in Yokohama, Japan and graduated from Kanagawa University with a degree in economics. He was survived by his wife, Yoko, his two

© Copyright Soyinfo Center 2014

daughters, Miho and June, and his son, Jay. He has three brothers and a sister in Japan. Address: Mattoon, Illinois.

11432. Condiss, John. 2012. Recollections of Caroline Yuki Takamine, Kathryn Anne Kramer, Ted Kramer, and the Takamine family (Interview). *SoyaScan Notes.* Dec. 7.
• ***Summary:*** (1) Kathryn Kramer: John and Kathryn Anne "Kathy" Kramer were married on 15 April 1972 in Tucson, Arizona at St. Demetrios Orthodox Church. John is Greek. It was a gigantic, gigantic wedding–the mayor and other officials, all the Republicans because of Carolyn Yuki, who was a very important and fun to be around. "We were married for about a year; we went together for maybe 6 months before that. I met her, with Ted and Carolyn [pronounced KAR-uh-lun] on a holiday in Mexico. I was there with a friend and we bumped into them. Ted was real animated and a lot of fun and Carolyn at that time was head of the Republican party in Pima County. She had M.S. [multiple sclerosis]. She died on the floor of her garage in her condominium and wasn't found until three days later. She couldn't get up because of the M.S. She was using a walker. There were a million people, her friends, who would have loved to come and help her. She had so many friends. She was a gregarious woman. She was funny. She was delightful to be around. If she was in the room, you were having fun. She was never a complainer about her disease. You would never sense she had a disease, and she never complained. It was always getting worse. She died in her garage, The door was shut. I guess she was going out to her car. I'm pretty sure (but not positive) that Carolyn died before her husband, Ted.

Kathryn, my ex-wife, was an expert in English riding. We opened Condiss (my name) training stable where she taught kids to ride and train horses. I loved it. I cleaned the stalls and trailered all the horses for all the horse shows. We were on a horse-show circuit. She was very good. "Then I caught my ex-wife, Kathryn, committing adultery. Then she started going with a baseball player who had spring training in Tucson. She knew he was married. I was a cop at the time I married her. Then this baseball guy left Kathryn–walked out the door. He had a wife and family back at his house. She picked up a gun, and as he left and closed the door, she shot herself and killed herself. She was a hysterical girl. Before that, she picked up my police pistol over something ridiculous. I was trying to go to work, putting my uniform on, and she picked up my police gun and put it to her head. It took me about 15 minutes to talk her down–and it was over nothing. She was that way; she wanted to make statements all the time. And she was a cheater, too. She chased after pro athletes and this baseball guy that was shacking up with her–even though he was married. He said he couldn't do it any more; he was gonna leave. And he did. He heard the shot, and he came back and reported it. I suspect from being a cop–and I worked homicide–she angled the pistol against the side of her head, pointed up. I think she just wanted to scare him, but I'm not sure. I'm the only one who thinks she did not want to kill herself. I think she meant to shoot straight up, but when she pulled the trigger she accidentally jerked the gun. I think she meant to make a statement; that was her way. The bullet penetrated her skull, went around inside because it was a small caliber. I went to the hospital, met Ted and Carolyn there. They both loved me, and they were sorry for what she did to me. So we were very close friends. I saw Kathryn on the table. She was unconscious, in a coma. Eventually she died.

(2) Carolyn Yuki Takamine married a guy named Kramer [Theodore "Ted" W. Kramer III]. John married Carolyn's daughter. Carolyn's father [Jokichi "Jo" Takamine] committed suicide, did he not? I was told that he jumped out a window. Ted Kramer told me that again and again, as well as at the funeral of his daughter who committed suicide. They had no reason to tell me this if it weren't true. They weren't proud of it. Carolyn was never a liar. That family is prone to suicide. Carolyn and Ted had only two children. Kathryn had a brother named John, but John Condiss is fairly sure that Ted Kramer and Carolyn Takamine were not John's parents. He is quite sure that Kathryn Kramer was Ted and Carolyn's only child. John Condiss does not remember, if he ever knew, who John Kramer's parents were. John Condiss recalls: "Carolyn Yuki took to me like a son. We were very, very close. She came to my second wedding and was good friends with my new wife and myself. She was very happy that I found the girl that I found. She was the most interesting person in this family. Every Christmas she would bring us something she had made–I think it was for breakfast. She realized she had M.S. before meeting me, and [being born in May 1923] she was about 49-50 at the time. The M.S. was already apparent but she was still active, active, active in politics. I opened a restaurant and she filled it with people. When she came to my second wedding, she gave us a couple of real old Takamine-acquired dishes, made in Japan. She was with us every Christmas–came to my house. She and her husband, Ted, separated and eventually divorced. They were separated before Kathryn committed suicide. Ted came and lived with us–for a while. I liked Ted a lot, but he got pretty bossy about his daughter, Kathryn. One night I was making dinner. I put him in his place and told him he had to move. He was not going to come into my house and tell me how my wife and I should handle things. But we stayed friends. He started crying when I walked into the funeral home [after Kathryn's death]. They both loved me and I loved them. They were great people. And my 2nd wife loved them. John, Kathryn's brother–I think he committed suicide.

Note: John died on 27 June 1999 at age 57 at his home in Tucson. His wife was Dianna Kramer.

"John was a city attorney. I think he became a city judge, but I'm not sure. John got caught with marijuana–possession of marijuana. He was so arrogant he thought he

© Copyright Soyinfo Center 2014

could do anything. He really did a lot of terrible things to his wife. I don't mean beatings, just bad things. She was abused by him, not physically but sexually. He tired to get her to do things with his friends; it was terrible. Now I'm thinking it was his wife Marilyn who committed suicide or she died early–I'm not sure which one. He was a real jerk. She was a hospital delivery room nurse at Tucson Medical Center. We had become friends, and sort of stayed friends when we saw each other after Kathryn committed suicide and I was remarried. She helped deliver one of my kids. It was delightful having her in the room.

(3) What kind of person as Ted Kramer? "Ted was a friendly drunk. What was his business. I think he was a consulting engineer. He was a big talker. I invited him to stay with us because I was trying to help him. I'm a Greek guy; we take in family. Finally–I didn't yell at him. I just told him, Ted, it's not a pleasure having you here any more and I think you should find another place to stay. He did find another place but I don't know how much longer he lived after Kathryn's death. I lost track of him after Kathryn's funeral. Note: Ted Kramer died on 2 Nov. 2000 in Tucson, Arizona.

"Of Carolyn and Ted descendants, the only person I knew about was the fellow who committed suicide. Carolyn used to laugh with me about how she was blond even though her father was Japanese, and Kathryn was blond. Neither of them looked at all Japanese. Carolyn Yuki was a pretty woman, even during the time of her disease. And Kathryn was pretty. John didn't look like one of them. Ted was very thin and he drank too much. I know there was an aunt–probably on the Takamine side–that Carolyn was hoping she would inherit some money from. They were always talking about inheritance in that family–waiting for it. Actually Carolyn needed money near the end but she wasn't into thinking or talking about inheritance. She wasn't waiting to be the rich lady. She lived her life.

"I recently lost my Greek restaurant–The Olive Tree–after 32 years so I'm in pretty bad shape financially. Now I run a hot dog stand in Pinetop, Arizona. I'm earning much less money and having way more fun. But I'm struggling. My younger son is named Nick; his business is repairing and installing computers and video cameras.

John Constantine Condiss was born on 11 May 1944 in Chicago to Constantine John Condiss (who was born about 1916) and Jane Kourakos Condiss (who was born on 26 June 1922). They were married in about 1944. John was the eldest child; he had a brother, James, 2½ years younger than him. His father died at age 54 of a heart attack. "After I was a policeman, I joined up with two Greek guys. One was a chef from Detroit, the other was a cafe operator. They needed a Greek guy who spoke English. I had just married Kathryn. Deciding to stop being a cop was probably the hardest thing I have ever done. I was the first sniper in the state of Arizona and formed the first SWAT (Special Weapons and Tactics) team in the state. Went to the FBI academy and trained. I loved all of that. But I saw as I got promotions I was being taken off the street and put behind a desk. Then these guys made me an offer and I took it. They were both lazy so I learned everything they knew, I began cooking, then at one point told them not to bother coming in any more because they offended people. And after about 7 years I had to sue them to get my portion because I wanted out. Then I opened The Olive Tree, a Greek restaurant; we were written up in Gourmet magazine, New York Times, Los Angeles Times. I finally had to close it in about 2006. The no smoking ordinance hurt us. I had probably the most popular bar in town. Senator Jon Kyl and Senator John McCaine hung out there. It got to be where I lost $15,000 a month out of my pocket just from the smoking ordinance. Then the payroll tax was the last straw. Picture it this way; today I owe nothing on payroll and tomorrow I owe $100,000 a year out of my pocket. Then the sales tax in Arizona went up 3 times in two years. It all cut into my check. I had 38 to 42 employees. But I wasn't making money any more. We were grossing a million dollars every year. I went through 3 recessions. All my friends who had restaurants went under and I made it. I lost more money when the restaurant was packed at the end than when it was empty, because I could not raise my prices." John now lives in the White Mountains in eastern Arizona. Address: Pinetop, White Mountains, eastern Arizona.

11433. Shurtleff, William; Aoyagi, Akiko. comps. 2012. History of soynuts, soynut butter, Japanese-style roasted soybeans (*irimame*) and *setsubun* (with *mamemaki*) (1068-2012): Extensively annotated bibliography and sourcebook. Lafayette, California: Soyinfo Center. 590 p. Subject/geographical index. Printed 17 Dec. 2012. 28 cm. [1336 ref] • ***Summary:*** This is the most comprehensive book ever published about the history of soynuts, soynut butter, Japanese-style roasted soybeans (*irimame*) or *setsubun* (with *mamemaki*). It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of these unique soyfoods. It is also the single most current and useful source of information on this subject.

Contents: Search engine keywords. Dedication and acknowledgments. Introduction: What are soynuts and soynut butter? Roasted soybeans East and West. Brief chronology / timeline of soynuts and soynut butter (1068-2012). About this book. Abbreviations used in this book. How to make best use of this digital book–Search it. Six pages of color photos. Contains 114 photographs and illustrations. http://www.soyinfocenter.com/books/161. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11434. Shurtleff, William; Aoyagi, Akiko. 2012. The book of tofu: Protein source of the future–Now! 2nd ed. Revised. Lafayette, California: Soyinfo Center / www.createspace.

com. 344 p. Dec. 22. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]
• ***Summary:*** This edition, published as a print-on-demand book by www.createspace.com, is 8 pages longer than any previous edition. The entire Glossary (with all illustrations) from the original 1975 edition is included, as is the updated Preface, the complete "Directory of Tofu Manufacturers" in the Western world (as of Feb. 2001), and the complete bibliography of 321 entries. After the Index is an updated full page of information about Soyinfo Center, then the original photo of Shurtleff and Aoyagi in 1975 from the original edition, and updated page "About the Authors," with new photos of Bill and his son Joey at Yosemite in 1994 and Akiko Aoyagi Shurtleff at the Lafayette Reservoir in 1999.

Then comes the section "Sending Tofu in the Four Directions," with a new photo of William Shurtleff with his tofu master's family at Sangen-ya Tofu Shop during his apprenticeship period, Tokyo, circa 1974. On the last page is (1) Information about the book *Tofu & Soymilk Production* and (2) about the SoyaScan database, which now contains more than 90,000 records from 1100 B.C. to the present. To order a customized search of this remarkable database, contact Soyinfo Center at 925-283-2991 or www.soyinfocenter.com.

Thanks to Akiko for redesigning the front and rear covers, and for skillfully and artistically integrating all the pieces into this newly revised edition. Address: P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11435. Deutsch, Jonathan; Murakhver, Natalya. 2012. They eat that? A cultural encyclopedia of weird and exotic food from around the world. Santa Barbara, California: ABC-CLIO, LLC. 220 p.
• ***Summary:*** The first entry under the letter "N" is "Natto. Natto is a traditional Japanese food." "Bacterial fermentation yields its strong earthy aroma, often compared to ripe cheese, rotten mushrooms, or body odor, and mucilaginous texture (*neba-neba* in Japanese), the combination of which makes natto an acquired taste for many."

"Natto's strong odor and status as an everyday breakfast food in some parts of Japan give it important iconic status. For foreigners living in or visiting Japan, enjoying natto is considered a sign of Japanese acculturation, of having made the transition from visitor to resident."

11436. Ishitsuka, Makoto. 2012. Ibaraki-ken nazotoki sanpo: nattô, ankô, nabe kara antoraa, su kômon sama made hitachinokkuni niwa ima mo mukashi mo miryoku ga ippai Ibaraki ni itte mippe [A walk through mysterious Ibaraki prefecture: natto...]. Tokyo: Shinjin-butsu Ooraisha. 287 p. 15 cm. Internet resource. Series: Shinjinbutsu bunko I-8-1. [Jap]*
• ***Summary:*** Mito, the capital of Ibaraki prefecture, located just north of Tokyo, is famous for its small-seeded soybeans, long preferred by manufacturers of natto.

11437. McDougall, John A.; McDougall, Mary A. 2012. The starch solution: Eat the foods you love, regain your health, and lose the weight for good! Emmaus, Pennsylvania: Rodale Press. xx + 348 p. [374 ref]
• ***Summary:*** This book presents the case against the "Paleo Diet." Dr. McDougall defines starches as follows (p. 7): (1) Grains: Barley, buckwheat, corn, millet, oats, rice, rye, sorghum, wheat, and wild rice. (2) Legumes: Beans, lentils, and peas. (3) Starchy vegetables: Carrots, Jerusalem artichokes, parsnips, potatoes, salsify, sweet potatoes, winter squashes (acorn, banana, butternut), yams. The least processed starches are the best; brown rice is better than white.

"You've probably heard about the benefits of a plant-based diet–one that reduces or eliminates animal foods like meat, dairy, and eggs. This concept does not go far enough. Without the addition of starch, a diet of low-calorie leafy greens like lettuce and kale, crucifers like broccoli and cauliflower, and fruits like oranges and apples will leave you feeling hungry and fatigued" (p. 8).

The Glycemic Index idea is incorrect (p. 160-63; foods such as potatoes and rice, which have relatively high GIs, are good for you).

Soy foods in Asian diets (p. 141). Not all soy foods are the same: The fake ones and the highly refined ones are not eaten in traditional East Asia diets. Those which are eaten are edamame (green vegetable soybeans boiled in their pods), soy milk, soybean sprouts, soy sauce, soy flour, tempeh, tofu, yuba, okara, miso, and natto. "A traditional family in Japan or China gets fewer than 5% of their daily calories from soy." Fake soy foods (highly processed) cause harm (p. 142-44). The most highly processed soy ingredient is soy protein isolates–to be avoided. Concerns over soy lead to changing recommendations–especially for infants (p. 144-45). Which soy foods are healthiest (p. 196).

The word "soy" appears on 75 pages in this book, "tofu" on 44 pages, "soy sauce" on 32 pages. "soy milk" on 21 pages, "soy foods" on 9 pages, "miso" on 6 pages, "soy protein isolates" and "soybeans" on 5 pages each, "edamame" and "soy flour" on 3 pages each, "tempeh" on 2 pages, and "natto," "soybean sprouts," "soy protein concentrates" and "textured soy flour" on 1 page each. Address: 1. M.D. Both: Santa Rosa, California. Phone: (707) 538-8609.

• ***Summary:*** Exquisite! Wonderful writing. Superb photography. Get this book–now! "The only vegan cookbook that celebrates eating and enjoyment rather than emphasizing the politics of a vegan lifestyle,..."

The word "tofu" appears on 38 pages in this book, "soy" on 13 pages, "soy sauce" on 5 pages, and "yuba" on 3 pages. The headnotes to Yuba spring rolls (p. 128-30) states: "Most Westerners aren't familiar with yuba, but I have a feeling that's about to change. A traditional food from China and Japan, yuba is the skin that forms on the surface of heated soymilk. It is gently lifted off the simmering soymilk in sheets and either used fresh or dried and then reconstituted. It has a slightly nutty flavor and a chewy texture." It is available at most larger Asian groceries. If unavailable, packaged egg roll wrappers make an acceptable substitute.

A full-page color photo (p. 129) shows sheets of yuba, a whole gingerroot, and several bottles of soy sauce. Address: Graphic designer, photographer, writer, and cook with a passion, Los Angeles.

11440. Marra, Toshie. 2013. Re: There is no entry for soybean sprouts in the *Nihon Kokugo Daijiten* (Japanese Language Dictionary). Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 4. 1 p. 28 cm.
• ***Summary:*** She found there was no entry in this dictionary for any of the following: "daizu no moyashi," "daizu moyashi," or "moyashi daizu."

Note: Published by Sokgaku-kan, this is the largest Japanese language dictionary published. Based on historical principles, it resembles the *Oxford English Dictionary.* The 20-volume first edition was published from 1972 to 1976.

The 14-volume second edition was published from November 2000 to December 2001. It includes substantial additions to and improvements over the first edition. The height of each volume in the 2nd edition is much larger. The 2nd edition has roughly 500,000 entries and supposedly 1 million example sentences. It was composed under the collaboration of 3000 specialists, not merely Japanese language and literature scholars but also specialists of History, Buddhist studies, the Chinese Classics, and the social and physical sciences, over the course of 40 years. (Source: Wikipedia, at Nihon Kokugo Daijiten, Jan. 2013). Address: Reference Librarian, East Asiatic Library, Univ. of California, Berkeley.

11441. Colliver, Victoria. 2013. Prostate cancer: Soybean, mushroom extract offers hope. *San Francisco Chronicle.* Feb. 27. p. C2.
• ***Summary:*** In a study published in the journal *Endocrine-Related Cancer,* researchers at Cal Davis say a nontoxic extract cultured from soybeans and shiitake mushrooms could extend the life of prostate cancer patients who have not responded well to commonly used therapies.

The extract, known as genistein-combined polysaccharide, or GCP, is a proprietary pharmaceutical made by a Japanese company. Tests so far have been done only on cells in laboratories (in vitro) and in lab animals.

"Prostate cancer cells feed off testosterone, so many treatments for the disease focus on lowering testosterone levels."

11442. Canadian Soybean Council; Conseil Canadien du Soya. 2013. Canadian Soybean Council 2013 mission to Asia–a networking success (News release). Guelph, Ontario, Canada. 1 p. March 1.
• ***Summary:*** Guelph, Ontario (March 1, 2013)–Representatives from the Canadian soybean industry recently returned home from an international trade mission in Asia promoting Canadian soybeans. The theme of this year's program was Canada's commitment to soybean research and how the entire soybean industry works together to make sure Canada is providing the highest quality products to its customers.

"The program was held from January 27th–February 1st in the countries of Taiwan and Japan. The program was sponsored by the Canadian Soybean Council (CSC) and coordinated by the Canadian International Grains Institute (Cigi). Representatives for the program included individuals

© Copyright Soyinfo Center 2014

from CSC, Cigi, Grain Farmers of Ontario, the Canadian Grain Commission, the Canadian Soybean Exporters Association as well as an IP soybean farmer from Ontario.

"The trade mission was part of ongoing market development activities conducted by CSC to strengthen marketing opportunities for Canadian soybean producers..." Address: 100 Stone Road West, Suite 201, Guelph, ONT N1E 7K7, Canada.

11443. *SoyaScan Notes.* 2013. Three early students of soyfoods in Japan after World War II: A.K. Smith, William Brandemuhl, and William Shurtleff (Overview). April 15. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Dr. A.K. Smith, had a strong academic background, having earned MA and PhD degrees from Columbia University. His interest in East Asian soyfoods began in about April 1948 when he began to write questions about fermented soyfoods to Lewis B. Lockwood, PhD and microbiologist. By June 1948 he had departed from the United States on a 3-month study tour that would take him to China, Japan and Korea. He collected samples of 100 microorganisms used in fermenting soyfoods. His articles on "Oriental use of soybeans as food" began appearing in *Soybean Digest* in Feb. 1949. He was mainly interested in fermented soyfoods; his articles about each food were accurate but relatively short.

William Brandemuhl studied soyfoods only in Japan. He arrived in Kyoto, Japan in Jan. 1963 and became a research fellow at the Department of Agricultural Economics, Kyoto University, Kyoto, Japan. Between Feb. 1963 and May 1964 (15 months) he conducted field research on soybean utilization in Japan. In June 1963 (after William had been in Japan for 4 months), Tomoko completed her graduate studies, graduated from the University of Wisconsin, and (since her scholarship was finished), returned to Japan–to be with William and to help him with his research in Japanese, which he spoke only moderately well. She traveled with him throughout Japan and translated for him during the many interviews he conducted. William's monthly check from Honeymead paid for his room and board–but not for his travel and research, so he had to work part time doing English translation for a Japanese company. On trips, he took many photos using his expensive Nikon camera. Tomoko's family lived near Kobe, where she and William were married on 8 Aug. 1964–three months after he finished his field research.

William's primary interests were: (1) To describe in detail, with photos, how each of different Japanese soyfoods were made. He was extremely thorough. (2) The place of each food in Japanese culture. (3) The industry of which each food was a part and its trade associations (if any). (4) The future of that food in Japan. He was not particularly interested in transmitting these foods and their technology to the United States, and he took almost no interest in carefully selecting names for these foods (or the equipment used to make them) which would give them the best chance of catching on in the best chance of catching on in the United States.

William Shurtleff first visited Japan for 3 months in the summer of 1967 while a student at Stanford University; he lived in a Zen temple in Kyoto, practiced meditation each evening, and studied Japanese language and culture. After graduating from Stanford and living for 2½ years at Tassajara Zen Mountain Center, he arrived in Japan on 16 Jan. 1971 with the intent of becoming fluent in Japanese so he could translate the writings of Dogen Zenji, an early Soto Zen master. For the first year he lived with a Japanese family in Kyoto and became a full-time student at the *Nihongo Gakko,* a Japanese language school in Kyoto. At the end of that year he moved to Kyoto, where he entered a university to continue his Japanese language studies. While in Tokyo, he became close friends with Akiko Aoyagi, a Japanese artist and cook. In Oct. 1972 he first visited and met Mr. Toshio Arai, a Japanese tofu master under whose guidance Shurtleff would later become an apprentice. In Dec. 1972 he started to write a booklet for Americans about tofu; he believed that tofu could be a very positive addition to the American diet and that young Americans would enjoy making tofu as a new occupation. On 13 Jan. 1973 he signed a contract with Autumn Press, a small publishing company in Japan owned by Americans Nahum and Beverly Stiskin. For the next 2½ Shurtleff and Aoyagi researched and wrote *The Book of Tofu,* which was published in Dec. 1975. Shurtleff made enough money to live in Japan by working as an interpreter, translator and researcher for his father's tool company. The story of this adventure is told in the Preface to *The Book of Tofu* (see 2001 or subsequent editions). Shurtleff's interests and work were different from those of William Brandemuhl in several important ways: (1) He spoke very good Japanese. (2) His initial focus was almost entirely on tofu, although he later wrote a book about miso. (3) He was just as interested as Brandemuhl in describing accurately how tofu (and other soyfoods) were made in Japan, but primarily with the intent of transferring this technology to the United States and other parts of the world. To this end he was deeply interested in choosing names for soyfoods and equipment that would help them take root in their hew homes. On 13 June 1978 Shurtleff and Aoyagi, after being married, moved from Japan to live in the United States. For the rest of his life Shurtleff did research on and wrote books about soyfoods, and simultaneously worked to introduce them to the United States. By late 1999 soyfoods had become important foods in the USA; soy sauce, soymilk and tofu had become mainstream foods.

11444. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of tofu and tofu products (965 CE to 2013): Extensively annotated bibliography and sourcebook.

© Copyright Soyinfo Center 2014

Lafayette, California: Soyinfo Center. 4004 p. Subject/geographical index. Printed 20 May 2013. 28 cm. [13302 ref] • ***Summary:*** This is the most comprehensive book ever published about the history of tofu or tofu products. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of this ancient and interesting soyfood. It is also the single most current and useful source of information on this subject.

Contents: Search engine keywords. Dedication and acknowledgments. Introduction: Brief chronology / timeline of tofu and tofu products. About this book. Abbreviations used in this book. How to make best use of this digital book–Search it. Ten pages of color photos. Contains 538 photographs and illustrations. http://www.soyinfocenter.com/books/163.

Brief chronology of tofu and tofu products.

965 CE–Tofu is first mentioned in China in a document, the Qing Yilu (Wade-Giles: Ch'ing I Lu) [Anecdotes, Simple and Exotic], by Tao Ku. It states: "In the daily market were several catties of doufu. People of the region called doufu the 'vice mayor's mutton.'" It goes on to tell the story of a vice mayor named Jishu, who was so poor that he couldn't afford to buy mutton. Instead he bought a few pieces of tofu every day and ate them as a side dish with rice. Soon people in the area came to call tofu the "vice mayor's mutton." The story implies that tofu was widely consumed in China in those days and that it was less expensive than mutton.

1183–Tofu is first mentioned in Japan in the diary of Hiroshige NAKAOMI, a Shinto priest of the Kasuga shrine at Nara; the tofu was used as an offering at the shrine's altar.

1457–The word "tofu" is first written in Japan with the characters used today.

1603–The word "tofu" is first mentioned in a European-language (Portuguese) document, Vocabulario da lingoa de Iapam... [Vocabulary of the language of Japan], the earliest dictionary of the Japanese language compiled by Europeans (Jesuits living in Nagasaki, Japan). Tofu is referred to as Cabe, Tôfu, or Taufu.

1613–The word tofu is first referred to (though indirectly) for the second time by a Westerner, Captain John Saris, in the log of his trip to Japan. He wrote "Of Cheese [probably tofu] they haue plentie. Butter they make none, neither will they eate any Milke, because they hold it to bee as bloud [blood], nor tame beasts." This is the earliest English-language document that mentions tofu in connection with Japan.

1665–Tofu is first mentioned specifically by a Westerner, Domingo Fernández de Navarrete, in his book A Collection of Voyages and Travels. Navarrete, who served as a Dominican missionary in China, wrote: "Before I proceed to the next chapter, because I forgot it in the first book, I will here briefly mention the most usual, common and cheap sort of food all China abounds in, and which all men in that empire eat, from the emperor to the meanest Chinese, the emperor and great men as a dainty, the common sort as necessary sustenance. It is call'd teu fu, that is, paste of kidney-beans. I did not see how they made it. They draw the milk out of the kidney-beans, and turning it, make great cakes of it like cheeses, as big as a large sieve, and five or six fingers thick. All the mass is as white as the very snow, to look to nothing can be finer. It is eaten raw, but generally boil'd and dressed with herbs, fish, and other things. Alone it is insipid, but very good so dressed and excellent fry'd in butter. They have it also dry'd and smok'd, and mix'd with caraway-seeds, which is best of all. It is incredible what vast quantities of it are consum'd in China, and very hard to conceive there should be such abundance of kidney-beans. That Chinese who has teu fu, herbs and rice, needs no other sustenance to work; and I think there is no body but has it, because they may have a pound (which is above twenty ounces) of it any where for a half-penny. It is a great help in case of want, and is good for carriage. It has one good quality, which is, that it causes the different airs and seasons, which in that vast region vary much, to make no alteration in the body, and therefore they that travel from one province to another make use of it. Teu fu is one of the most remarkable things in China, there are many will leave pullets for it. If I am not deceiv'd, the Chineses of Manila [Philippines] make it, but no European eats it, which is perhaps because they have not tasted it, no more than they do fritters fry'd in oil of Ajonjoli ([sesame seed] a very small seed they have in Spain and India, which we have not) which the Chineses make in that city and is an extraordinary dainty."

1704–Friar Domingo Navarrete's book is published in English. This is the earliest English-language document that mentions tofu in connection with China.

1770 Jan. 3–James Flint in Capringe writes Benjamin Franklin in London (in response to an inquiry from Franklin) a detailed description of how the "Chinese convert Callivances into Towfu" (soybeans into tofu).

1770 Jan. 11–The earliest document seen in which an American mentions tofu is a letter written by the famous Benjamin Franklin (who was in London) to John Bartram in Philadelphia, Pennsylvania. He sent Bartram some soybeans (which he called "Chinese caravances") and with them he sent "Father Navarrete's account of the universal use of a cheese made of them in China, which so excited my curiosity, that I caused enquiry to be made of Mr. [James] Flint, who lived many years there, in what manner the cheese was made, and I send you his answer. I have since learned that some runnings of salt (I suppose runnet) is put into water, when the meal is in it, to turn it to curds."

1821–The second earliest reference seen to tofu in America, and the first to be published in the USA, appeared when A.F.M. Willich of Philadelphia mentioned it in The Domestic Encyclopedia. Speaking of soybeans (which he called "the seeds of the Chinese plant Dolichos soja"), he writes: These seeds are used in China and Japan as food; they

© Copyright Soyinfo Center 2014

are made into a kind of jelly or curd, which is esteemed very nutritious, and which is rendered palatable by seasonings of different kinds."

1870 Dec.–The term "Bean curd" is first used by Emil V. Bretschneider, writing in English in the *Chinese Recorder and Missionary Journal* (Foochow, p. 173). He says: "Bean-curd is one of the most important articles of food in China." Then he gives an accurate description of how it was made.

1880–Tofu is first made in Europe by Paillieux, in France, for the Society for Acclimatization (but not on a commercial scale).

1878–The earliest tofu company in the USA, Wo Sing & Co., is in business at 708½ Dupont St. in San Francisco, making both fermented and regular tofu.

1896 June–Tofu first appears in print in an American scientific journal (*American Journal of Pharmacy*), in an article by Henry Trimble, a pharmacist, titled "Recent Literature on the Soja Bean."

1905–Five tofu shops are now owned and operated by Japanese in the United States: (1) Minato-ya, 24½ Quincy St., San Francisco, California. (2) Murata-ten (Renamed Murata Tofu-ya by 1906), P.O. Box 51, Isleton, California. (3) Nishi Tofu-ya, 87 Japanese Alley, Sacramento, California. (4) Okumura Kuraoka Tofu-ya [Tofu Shop] (Renamed Okumura Tofu-ya by 1906), 632 N. 6th St., San Jose, California. (5) Ichino Tofu-ya / Shintaro Kodama, 446 Jackson St., Los Angeles, California. Note that all are located in California. (Source: Zaibei Nippon-jin Nenkan; The Japanese-American Yearbook. 1905).

The first Japanese tofu shop in Washington State was in operation by 1906 (in Seattle); in Utah by 1907 (Ogden); in Nevada by 1908 (Reno); in New York by 1911 (Brooklyn, NYC), and in Idaho by 1913 (Sugar City). Thus, almost all of the earliest known tofu shops in the United States were started by people of Japanese ancestry–most of them in small communities in California, Oregon and Washington.

By 1910 at least 61 Japanese tofu shops had been established in the USA, by 1920 at least 166, by 1930 at least 293, by 1940 at least 392, and by 1950 at least 425. Continued. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11445. Nakamura, M. 2013. Kibun's interest in and involvement with soymilk (Interview). *SoyaScan Notes.* July 11.
• ***Summary:*** Kibun Food Chemifa is now 100% owned by Kikkoman. Address: Home Economist for Kibun, Japan. Phone: 544-2781.

11446. Nakamura, Mitsunoba. 2013. Re: When did Kikkoman acquire Kibun Food Chemifa Co., Ltd? Letter (e-mail) to William Shurtleff at Soyinfo Center, July 12–in reply to inquiry. 1 p.
• ***Summary:*** In Kikkoman's 2012 Annual Report, the "Corporate History" section states: "2008 August–Kibun Food Chemifa Co., Ltd. (now Kikkoman Soyfoods Company) becomes a wholly owned subsidiary of Kikkoman."

Mr. Nakamura found in other news that Kibun had been acquired via a share swap.

In 2004 Kikkoman first invested in Kibun Food Chemifa.

In June in 2006 Kibun Food Chemifa became a consolidated subsidiary of Kikkoman in June 2006 Address: Kikkoman International Inc., P.O. Box 420784, San Francisco, California 94142-0784.

11447. Nakamura, Mitsunoba. 2013. Re: The soymilk industry and market in Japan today. Letter (e-mail) to William Shurtleff at Soyinfo Center, July 23–in reply to inquiry. 1 p.
• ***Summary:*** Mr. Nakamure got these statistics by e-mail from Kikkoman's headquarters in Japan. The leading manufacturers of soymilk in Japan today are:

1. Kibun (Kikkoman) 53%
2. Marusan 20%
3. Meiraku 10%
4. Sugoi Daizu (Otsuka) 5%
5. Toraku 4%

Others 8%

In 2012 the total shipment of soymilk in Japan was 256 million kiloliters. In 1984 it was 110 million kiloliters. Therefore Japanese are consuming a little more than twice as much soymilk today as they were in 1984.

The value of the soymilk market in Japan is approximately 45,000 to 50,000 million yen (about US$450 million to $500 million). Address: Kikkoman International Inc., P.O. Box 420784, San Francisco, California 94142-0784.

11448. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of soymilk and other non-dairy milks (1226-2013): Extensively annotated bibliography and sourcebook. Lafayette, California: Soyinfo Center. 2,972 p. Subject/geographical index. Printed 30 Aug. 2013. 28 cm. [8761 ref]

Contents: Scope for Soymilk: This book focuses on the use of soymilk as a beverage. Soymilk has long been the most widely consumed non-dairy milk worldwide. Soymilk also appears as a step in the process for making tofu, yuba, soy yogurt, soy ice cream, soy cheese, fermented soymilk (incl. soy acidophilus milk), etc. Each of these soy products is or will be the subject of a separate book.

Amazaké, a thick fermented non-dairy rice beverage from Japan, usually served hot, topped with a dab of grated gingerroot, is also the subject of a separate book.

Use in East Asia: Only in China has soymilk (*doujiang*) long been used as a beverage. Traditionally it was been served hot, ladled from a caldron for breakfast, at the place where it was made either sweetened or as the base of a salted soup served with deep-fried crullers. It was not used to feed infants or as an infant formula.

Starting in the 1920s, a small number of companies in China started to make and sell bottled soymilk.

In Hong Kong, Vitasoy was launched in 1940 by K.S. Lo as a nutritious food for refugees fleeing during World War II. By 1968 it had captured 25% of the Hong Kong soft drink market, second only to Coca-Cola.

In Japan, bottled soymilk arrived in about 1957. The first soymilk boom started in about 1980; the many brands of soymilk were all sold in 180 ml aseptic cartons.

In the United States and Europe, soymilk started to become popular in the 1980s. The first two brands sold nationwide were Vitasoy and Edensoy, both aseptically packaged so they did not need refrigeration. The first superstar of soymilks, Silk, was launched by White Wave of Boulder, Colorado, in early 1996. It was sold in the dairy case in gable-top cartons that looked like typical milk cartons.

The first widely popular rice milk was Rice Dream, launched in June 1990 by Imagine Foods of Palo Alto, California

Brief chronology of soymilk and other non-dairy products.

1226–Kitab al-tabik [A Baghdad Cookery Book], by al-Baghdadi et al. is the earliest document seen that mentions a non-dairy milk–almond milk.

1365?–Yiya Yiyi [Remnant Notions from I Ya], by Han Yi is the earliest document seen that mentions soymilk, which it calls doufujiang.

1390–"Almond milk" is first mentioned in English in The Forme of Cury. It came to be widely used in Europe during Lent–the first popular non-dairy milk in the Western world.

1640 ca.–Soymilk is probably in use in China by the beginning of the Qing dynasty (H.T. Huang 2006).

1704–Soymilk is first mentioned in English by Domingo Fernandez Navarrete in his book A Collection of Voyages and Travels. Navarrete served as a Dominican missionary in China.

1790?–An undated painting of hawkers selling soymilk (doujiang) in China, by Yao Wenhan, is from the Qing dynasty.

1790–Soymilk is mentioned by Juan de Loureiro in his book The Flora of Cochin China. Loureiro was a Portuguese Jesuit missionary who lived in what is now Vietnam. He notes that soymilk is part of the process for making tofu.

1866–Soymilk is first discussed as a drink in its own right by the Frenchman Paul Champion, who traveled in China. In a French-language article he stated that the Chinese had taken their cups to tofu shops to get hot soymilk, which they drank for breakfast.

1896 June–Soymilk is first referred to in the United States by Henry Trimble in the American Journal of Pharmacy.

1897 July 7–The term "soy-bean milk" (or any cognate / relative thereof) first appears in a USDA or U.S. government publication: C.F. Langworthy. 1897. "Soy beans as food for man." USDA Farmers' Bulletin No. 58. p. 20-23. July 7. The table, titled "Comparison of the composition of soy-bean milk and cows' milk," gives the nutritional composition of the two liquids. The same term next appeared in Dec. 1916 in a USDA Bulletin by Piper & Morse, and then on 7 Feb. 1917 in a USDA Weekly News Letter.

1897 Nov. 16–Peanut cream and peanut butter are now being made in Kokomo, Indiana by Lane Bros. (Kokomo Daily Tribune, p. 4). This is the earliest document seen that contains the term "peanut cream."

1899–Almeda Lambert of Battle Creek, Michigan, in her book Guide for Nut Cookery, describes how to make "peanut butter, peanut cream, peanut milk, raw peanut milk and cream, almond milk, hickory milk, pine-nut milk, chufas milk and cocoanut milk" at home. This is the earliest document seen that contains the term "peanut milk" or the term "cocoanut milk."

1906 April–Katayama, in Japan, reports that he has made "A condensed vegetable milk" from soy-beans.

1909–The first soy-based infant formulas and soymilk made from full-fat soy flour are developed in the United States by John Ruhräh, a pediatrician. He reports his results in the Archives of Pediatrics (July 1909).

1910–The world's first soy dairy, named Caséo-Sojaïne, is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. In December 1910 he applies for the world's first soymilk patents (British Patents No. 30,275 and 30,351). The first patent is titled "Vegetable milk and its derivatives." He is issued both patents in Feb. 1912.

1913 June 13–Li Yu-ying is issued the first U.S. soymilk patent (No. 1,064,841), titled "Method of manufacturing products from soja." He filed the application on 10 Oct. 1911.

1914–Maria M. Gilbert, in her book Meatless Cookery,

© Copyright Soyinfo Center 2014

gives a recipe for "Rice milk."–the earliest know use of this term.

1917–Soymilk is being produced commercially in the U.S. by J.A. Chard Soy Products in New York City.

1921 Sept. 23–Vita Rice Products plans to build a factory to make "rice milk products," including Vita Rice Milk, in San Francisco (San Francisco Business, p. 20).

1921–Leon Rouest of France gives the first detailed discussion (in French) of calf-milk replacers based on soymilk.

1929 Nov.–T.A. Van Gundy, founder of La Sierra Industries in Arlington, California, launches La Sierra Soy Milk, and becomes the first Seventh-day Adventist worldwide to make soymilk commercially. The product was canned and the beany flavor removed by live steam processing.

1929 Dec.–Bottled soy bean milk is now widely made and sold in China. "One large factory in Peking now makes and distributes over a thousand bottles of [soy] milk daily; in Shanghai two factories each meet an even greater daily demand. The industry is bound to grow rapidly to greater dimensions" (Adolph and Wang 1929).

1931–Madison Foods of Madison, Tennessee, introduces Madison Soy Milk–the world's earliest known soymilk to be fortified with calcium and the second commercial soymilk product made by Seventh-day Adventists in the USA. Madison Foods is a company run by students and faculty within Madison College, a pioneering work/study school.

1936 Jan.–Dr. Harry W. Miller and his son, Willis, start making Vetose Soya Milk, sold in natural or chocolate flavors in sterilized half pint or quart bottles at their Vetose Nutritional Laboratories in Shanghai, China. Dr. Miller is a Seventh-day Adventist physician, a student of Dr. John Harvey Kellogg, and a medical missionary living in China. The world's first "soy dairy," this company also made soy ice cream and Acidophilus Vetose (a cultured soya milk)–both launched in Jan. 1936. But Japan was invading China. Within months after the soy-milk business began booming, a Japanese bomb blew up the soy dairy.

1936 April–The earliest known English-language document to contain the modern word "soymilk" is: Miller, Harry W.; Wen, C. Jean. 1936. "Experimental nutrition studies of soymilk in human nutrition." Chinese Medical Journal 50(4):450-59. April. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11449. Kikkoman Corporation. 2013. Annual report 2013. Year ended March 31, 2012. 250 Noda, Noda-shi, Chiba 278-8601, Japan. 51 p. 28 cm. [Eng]

• ***Summary:*** Net sales in yen increased by 6.0% to ¥300,200 million. Net income in yen increased by 22.6% to ¥11,012 million.

A very interesting section titled "The Kikkoman Group's growth story" (p. 6-13) states: Long-term strategies of globalization and diversification have spurred a strong phase of growth for the Kikkoman Group. A bar graph shows overseas soy sauce sales volume [volume sold] from 1974 to 2013. It has increased from about 10,000 kl in 1974 to 187,000 kl in 2013, an increase of almost 19-fold. A pie chart shows that about 80% of the volume is in the USA, 11% is in Europe, and 9% in Asia and Oceania.

In North America (p. 8) soy sauce sales have increased by 31% since 2002 for a compound annual growth rate (CAGR) of 2.5%. Kikkoman has a 56.3% share of the U.S. home-use market.

In Europe (p. 9) soy sauce sales have increased 3.23-fold since 2002 for a compound annual growth rate (CAGR) of 11.2%.

In Asia and Oceania (p. 9) soy sauce sales have increased by 42% since 2002 for a compound annual growth rate (CAGR) of 3.3%.

Japan (p. 10) Kikkoman is the leading maker of soy sauce, with a 31.0% share of the Japanese soy sauce market (including Group company Higeta Shoyu Co., Ltd.). Also in Japan the soy milk market is expanding, so in June 2013 Kikkoman opened its 3rd domestic soymilk plant in Ibaraki. For calendar year 2012, Kikkoman had a 52.6% share of the Japanese soymilk market.

A photo (p. 2) shows Yuzaburo Mogi (Honorary Chief Executive Officer and Chairman of the Board of Directors) and Noriaki Horikiri (President and CEO).

Note: For some reason, that is not explained in this report, during the past year Noriaki Horikiri replaced Mitsuo Someya as President and CEO of Kikkoman.

On page 3 we read that Kikkoman's sales of soy sauce decreased but "this was outweighed by growth in sales of food products and sake and wine. Strong sales of soy milk and Del Monte beverages also contributed to growth. In overseas operations, sales of soy sauce grew steadily, centered on North America and Europe." Address: Noda, Japan.

11450. Shurtleff, William; Aoyagi, Akiko. comps. 2013. History of soy ice cream and other non-dairy frozen desserts (1899-2013): Extensively annotated bibliography and sourcebook. Lafayette, California: Soyinfo Center. 782 p. Subject/geographical index. Printed 1 Oct. 2013. 28 cm. [1838 ref]

• ***Summary:*** This is the most comprehensive book ever published about the history of soy ice cream other non-dairy frozen desserts. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of these interesting desserts. It is also the single most current and useful source of information on this subject.

best use of this digital book–Search it. Seven pages of color photos. Contains 203 photographs and illustrations. http://www.soyinfocenter.com/books/167.

Contents: Background and context: Soy ice cream is largely a United States phenomenon. This is not surprising. The USA has the world's largest per capita consumption of (dairy) ice cream. As a result of the U.S. counterculture and vegetarian movements of the 1960s and 1970s, America was home to a large number of entrepreneurs with new ideas. And the number of Americans who keep a kosher diet has long been very large. Kosher rules say that one cannot eat meat and dairy products at the same meal; hence an interest in developing non-dairy products.

Moreover, the soyfoods movement originated in the United States in the early 1970s, and by the end of this decade was steadily developing momentum. Many of the entrepreneurs who developed soy ice creams were involved with other soyfoods before they branched out into soy ice creams and other non-dairy frozen desserts.

Brief chronology of soy ice cream and other non-dairy frozen desserts.

1899–Almeda Lambert, a Seventh-day Adventist of Battle Creek, Michigan, in her *Guide for Nut Cookery* (452 p.), publishes the world's earliest known recipes for non-dairy ice creams: Ice cream (made of almond or peanut cream). Ice cream made of peanut milk. Almond ice cream.

1918 March–Arao Itano of Japan is the world's first person to conceive of making an ice cream from soy. In an article titled "Soy beans as human food, in the *Massachusetts Agricultural Experiment Station Bulletin* No. 182 he states "Vegetable butter, ice cream, oil (table use) and lard (cooking): The manufacture of these articles from soy beans further investigation."

1921 April–At a meeting of the Ways and Means Committee of the U.S. House of Representatives, George Washington Carver, a professor at the Tuskegee Institute, "astonished both the members and spectators with visible proof that he can manufacture one hundred and forty-five different foods and useful articles, including milk and cream, from peanuts." From it he has also made ice cream, which he says was the finest he ever tasted (St. Louis Globe Democrat, April 3, p. 3).

1922 Nov. 28–Lee Len Thuey, a citizen of the United States and a resident of Indianapolis, Indiana, is the world's first person to be issued a patent for a soy ice cream. Titled "Frozen confection and process of making same," he filed the application on 18 Oct. 1920. It was made from tofu, flavoring, and a sweetener.

1930 Sept.–The term "soybean ice cream" first appears in the Proceedings of the American Soybean Association (p. 3-6). At 12:00 noon a "special soybean lunch" was served at the University of Illinois South Farm, prepared by ladies of the First M.E. Church. The desserts were "soybean ice cream, and soybean ice."

1930–The world's first commercial soy ice cream is introduced by Jethro Kloss, a Seventh-day Adventist, at Takoma Park Station, Washington, DC. Named Soy Ice Cream and honey sweetened, it is sold in strawberry, chocolate, and vanilla flavors. He named his company the Scientific Food & Benevolent Association. By 1934 he was serving his soy ice cream at his lectures in Florida (Miami Daily News, 1934, April) and in 1935 he included a recipe for soy "Ice cream" (non-dairy; made with "4 qts. Soy bean milk") in his herbal classic Back to Eden (p. 105).

1930s early–Henry Ford's soy researchers, Robert Boyer and Edsel Ruddiman, develop an experimental soy ice cream at Greenfield Village in Detroit, Michigan. It is based on fresh tofu curds and soy protein isolates. By August 1935 Henry Ford was serving soy ice cream for dessert at VIP and press luncheons held at the Ford Engineering Laboratory in Dearborn (Literary Digest 1935 July 27; Simonds 1938; Strother 1961).

1936–Vetose Nutritional Laboratories in Shanghai, China (run by Dr. Harry W. Miller and his son, Willis, both Seventh-day Adventists), starts to sell soy ice cream in small quantities (Raymond Moore, 1961, p. 182).

1945 April 16–The term "frozen dessert" is first used in connection with soy in an article titled "Who's who and why" (about Herbert Marshall Taylor and Delsoy), by Fred L. Olmsted, published in the Detroit News (p. 4).

1945–The modern term "soy ice cream" first appears in that remarkable book *The Useful Soybean: A Plus Factor in Modern Living*, by Mildred Lager of Southern California. In her "recipe" for "Soy ice cream" (p. 250) she notes that "Soy milk may be used in place of regular milk in ice-cream recipes."

1946 March–The word "dairylike" first appears in connection with soy in an article titled "Imitation or improvement? Dairy `replacement' products widening market, seeking to equal margarine's success," by Lawrence E. Doherty in Food Business (p. 22-23, 56).

1951–Robert Rich, founder of Rich Products Corporation of Buffalo, New York, introduces Chill-Zert–a non-dairy soy ice cream (Buffalo Evening News, 1952). Rich had learned how to make soymilk from Henry Ford's researchers. The U.S. Food and Drug Administration (FDA) seized the product, claiming that it should be labeled "imitation chocolate ice cream." Rich Products fought back, in state after state, and eventually won. All subsequent makers of non-dairy ice cream owe Robert Rich a huge debt of gratitude.

1968 May–In their classic vegan cookbook, *A Good Cook–Ten Talents,* Frank and Rosalie Hurd (both Seventh-day Adventists; he is a Doctor of Chiropractic) have five recipes for non-dairy ice creams, one in which "rich soy milk" is an ingredient and four in which "soy milk powder" is an optional ingredient.

1969 Aug.–The term "non-dairy frozen dessert" first

© Copyright Soyinfo Center 2014

appears in an article titled "How to make parevine," by Wendell S. Arbuckle in the American Dairy Review.

1971–Heller Enterprises of New York launches Heller's Non-Dairy Frozen Dessert, perhaps the first commercially successful non-dairy frozen dessert based on isolated soy proteins.

1976 Aug.–A new wave of interest in soy ice creams begins with the introduction of Ice Bean by Farm Foods in San Rafael, California. Developed at The Farm in Summertown, Tennessee, it was soon sold nationwide.

1979 summer–Pesach Lazaroff introduces David Mintz to tofu. That summer Lazaroff spent more than 100 hours working with Mintz as a consultant.

1980 July–Jolly Licks Ice-C-Bean is introduced by Mark Brawerman of San Francisco, California. Marketed and distributed by Jolly Licks, it is sold in six flavors. Later that month the product name is changed to simply Jolly Licks and the name of the marketer-distributor is changed to Pacific Trading Co. In Nov. 1982 Pacific Trading Co. was renamed Living Lightly.

1980 Dec.–Farm Foods starts a national ad campaign for Soy Ice Bean with full-page color ads in national magazines: *New Age, Whole Foods, East West Journal,* and *Vegetarian Times.*

1981 Aug.–Tofutti is first sold at Mintz's Buffet, a kosher Jewish deli on Third Ave. in Manhattan's chic Upper East Side. Developed by David Mintz (and Pesach Lazaroff) this was the product that made soy ice creams famous and attracted huge amounts of free media publicity. Tofutti was first sold in this deli as a soft-serve non-dairy frozen dessert in 9 flavors. During the previous two months it had been sold in the deli under other names: Tofu Time Non-Dairy Frozen Dessert (the first flavor was carrot-raisin), then Tofu Time Tofu Ice Kream.

1982 June–Farm Foods presents Ice Bean at the American Booksellers Convention in Anaheim, California.

1982 July–The term "Dairy free" first appears in a leaflet titled "Tofutti: Dairy free," created by Mintz's Buffet of New York City.

1982–Tofutti begins to be sold outside Mintz's deli in New York City, including at a number of the city's most stylish eateries–such as Bloomingdale's and Zabar's.

1983 April–Rice Dream, a non-dairy frozen dessert based on amazake (cultured rice) in launched in 3 flavors in pints by Gloria Gilbert, owner of Fresh Foods, in Boulder, Colorado. The product had been developed in 1980 (non-commercially) by Barbara Svenning and Marty Roth in Santa Fe, New Mexico. They sold their business, Community Kitchens, to Gloria. Steve Demos of White Wave in Boulder made Gloria's Rice Dream. It was on the market for only 3-6 months. On 10 Feb. 1984 Robert Nissenbaum (who was already making amazake) purchased the name Rice Dream from Gloria for $2,000.

1983 June–The world's first non-dairy ice cream sandwich is launched by Farm Foods of Summertown, Tennessee. Made of Ice Bean (soy ice cream) sandwiched between two carob coated honey wafers, it comes in three flavors: Honey Vanilla, Carob, or Peanut Butter. Continued. Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

11451. Gildersleeve, Colleen. 2013. Discovery of antique Choshi Shoyu Co., Ltd. soy sauce bottle in Oregon (Interview). *SoyaScan Notes.* Oct. 7.

• ***Summary:*** The glass bottle, which can be dated using the company name, is about 100 years old. The color is turquoise and height is about 20 inches. Around the bottom of the bottle is written: Choshi Shoyu Trade Mark. The Choshi company logo, which appears in raised glass on the bottle, is located between the words "Trade" and "Mark."

She writes: "My parents Leland and Sybil Lambert, Leland having been raised on the 'home place' returned to Oregon in 1952 and purchased the adjoining 100 acres that lay directly to the west, which is now the address 40565 SW Gibson Rd. This Leland Lambert property was where I found the bottle in the woods 'dump.'"

"I remember my father talking about a Japanese family of onion farmers whose last name was Furukawa, who lived very locally (perhaps on the adjacent lot) the 1940's era." Address: Lambert Farm, 14750 SW Spring Hill Rd., Gaston

Contents: Background and context:

Background: The soybean was introduced to North America in 1765 by Samuel Bowen, a seaman employed by the East India Company, who brought soybeans to Savannah, The Colony of Georgia, from China via London (Hymowitz & Harlan 1983). The second soybean introduction to North America was by Benjamin Franklin. In 1770 he sent seeds from London to the botanist John Bartram in Philadelphia, Pennsylvania. In 1851 the soybean was introduced to Illinois (via California), and thence to the rest of the Corn Belt by Benjamin Franklin Edwards (Hymowitz 1987). By the year 1889 there were only a small number of soybean varieties in North America and none of them had names.

In 1890 C.C. Georgeson et al. described four soy beans, two of which Georgeson had brought to Kansas from Japan where he had been a professor. Two of the soy beans had Japanese names and two had descriptive / generic English names.

Also in 1890 William P. Brooks described two soja beans which he had brought to Massachusetts from Japan. One soy bean variety had a Japanese name and one had a descriptive / generic English name.

The main contributions of this book are to clarify the earliest known date that each new, named soybean variety was mentioned in print or old letters, and (2) the relative importance of early named varieties based on how often each was mentioned in the literature. Working over several decades, we have searched our SoyaScan database of more than 90,000 records to find the earliest date mentioned. Moreover, we carefully cite the source of our information on each variety.

Which old soybean varieties are mentioned most often in the literature? The following is a list of the number of different documents in this book in which the most popular varieties are mentioned–in descending order of popularity:

Ito San–420
Manchuria–324
Mammoth Yellow–303
Peking–246
Virginia–241
Hollybrook–234
Haberlandt–232
Wilson–231
Biloxi–221
Medium Green–199
Otootan–173

What is a variety? All soybeans are members of the same genus and species–*Glycine max* (L.) Merr. However, just as there are many types of apples (Granny Smith, McIntosh, Golden Delicious), so there are many varieties (called "cultivars"–cultivated varieties–by professionals) of soybeans–each having slightly different characteristics and germplasm. Only the most promising or widely cultivated varieties are given names. Varieties can be crossed by traditional plant breeders to create new varieties with desired traits. For example, a gene for drought resistance can be backcrossed into a high-yielding variety.

Do most soybeans have yellow seed coats? No. The wild ancestors of the soybean all have black seed coats. Since the late 1970s, almost all the soybeans in the USA have had yellow seed coats. Most Americans, including many soybean farmers, have never heard of soybeans that were black, green, brown, white, red, bicolored, or mottled. But have yellow soybeans always predominated in America?

"Previous to the numerous introductions by the United States Department of Agriculture beginning in 1898, not more than eight varieties of soy beans were grown in the United States, namely, Ito San, Mammoth, and Butterball, with yellow seeds; Buckshot and Kingston, with black seeds; Guelph or Medium Green, with green seeds; and Eda and Ogemaw, with brown seeds." Thus of these eight pre-1898 varieties, 3 varieties (37.5%) had yellow seeds, 2 varieties (25%) had black seeds, 2 varieties (25%) had brown seeds, and 1 variety (12.5%) had green seeds (Piper & Morse 1910). The following table shows the earliest known date that each early, named soybean variety was mentioned in print or old letters, followed (if known) by the color of the seedcoat / seed and hilum (seed scar). Our focus is on those mentioned before 1924, but we include those named later if they are large seeded or specialty varieties (e.g., high protein). Notice that many early soybean names describe the time of maturity (early, medium early, etc), the color of the seed, and/or the seed size. This table also cites key publications about soybean varieties.

1890 Dec. Yellow Soy Bean–Yellow
1890 Dec. Eda Mame–Yellow (straw), hilum pale
1890 Dec. Kiyusuke Daizu

1897 Mar. Medium Early Black–Black
1897 Mar. Medium Early Green–Green
1897 Medium Late Black–Black

1897 fall–The Section of Foreign Seed and Plant Introduction (FSPI) is organized within the USDA in Washington, DC, with David Fairchild in charge. Its mission is to centralize introduction activities. The new Section is within the Seed Division. On 22 March 1898 Congress allocates $20,000 for the collection, purchase, testing, and preparation of foreign seeds, plants, bulbs, shrubs, and trees.

1898–The Section soon began publishing its periodical *Foreign Seeds and Plants Imported by the Section of Seed and Plant Introduction*–the single best source of information on early soybean introductions to the USA. A permanent sequential S.P.I. number was assigned to each new seed or plant introduced. The earliest Seed and Plant Inventory numbers for "Glycine hispida–Soja bean" are #480 (received March 1898 through Prof. N.E. Hansen, from South Ussurie, Siberia) and #647-56 (received March 4, 1898, through Hon. A.E. Buck, from Tokyo, Japan). Over the next century many new soybean varieties entered the USDA through this route, each bearing an S.P.I. number. All were tested (mostly at USDA plant introduction gardens) for their adaptability to U.S. growing conditions. Only the most promising were given a name.

1907 May Yosho–Yellow (olive)

1907 May 27–"Soy Bean Varieties," by Carleton R. Ball is published in USDA Bureau of Plant Industry, Bulletin No. 98. 30 p. This publication started a new system for naming soybeans, giving them common names such as Buckshot, Ogemaw, and Ito San. It first classified and then described all of the 23 known soybeans that had a name, first by color (there were 6 black and 6 yellow varieties), within color by seed size, and within seed size by maturity. This is the earliest document seen which tries to standardize early soybean varietal names / nomenclature to prevent confusion. It also gives a list of 29 synonyms, and of 86 S.P. I. numbers. Four full-page photos show the pods (side view) and seeds (side and front views) of (typically) five soybean varieties.

1923 Feb. Southern Prolific–Yellow (straw), hilum light brown

1923 Feb.–The Soybean, by Piper & Morse is published. This is the first comprehensive book about the soybean written in English, and the most important book on soybeans and soyfoods written up to this time. It describes 43 soybean varieties and lists 7 synonyms.

1923 Mar. Hamilton–Brown or auburn (reddish brown)

1923 Mar. Hurrelbrink

1927 April–Soy Beans: Culture and Varieties, by W.J. Morse is published as Farmer' Bulletin (USDA) No. 1520. 34 p. It describes 59 soybean varieties and lists 44 synonyms.

1929 Sept. Laredo–Black

1935 Aug. Rokusun (large seeded)–Yellow (straw), hilum brown

1935 Aug.–"Green vegetable Soybeans," by W.J. Morse, is published in Proceedings of the American Soybean Association (p. 44-45). This is the earliest document seen that mentions large-seeded, vegetable-type soybeans in the USA.

1936 Mar. Bansei (large seeded)–Yellow (straw), hilum pale / colorless to light

1936 Mar. Chusei (large seeded)–Yellow (straw), hilum yellow

1936 Apr. Chame (large seeded)–Brown, hilum brown

1936 Apr. Fuji (large seeded)–Green, hilum black

1936 Apr. Goku (large seeded)–Yellow (straw), hilum yellow

1936 Apr. Hakote (large seeded)–Yellow (olive), hilum black

1936 Apr. Higan (large seeded)–Yellow (straw), hilum brown

1936 Apr. Hiro (large seeded)–Black

1936 Apr. Hokkaido (large seeded)–Yellow, hilum, colorless

1936 Apr. Jogun (large seeded)–Yellow (straw), hilum pale / colorless

1936 Apr. Kanro (large seeded)–Yellow (straw), hilum pale to brown

1936 Apr. Kura (large seeded)–Black plus olive yellow, hilum black

1936 Apr. Nanda (large seeded)–Yellow (straw), hilum pale

1936 Apr. Osaya (large seeded)–Yellow (straw), hilum yellow

1936 Apr. Sato (large seeded)–Black, hilum black

1936 Apr. Shiro (large seeded)–Yellow (olive), hilum brown or black

1936 Apr. Sousei (large seeded)–Yellow (olive), hilum brown

1936 Apr. Suru (large seeded)–Yellow (straw)

1936 Apr. Toku (large seeded)–Yellow (straw), hilum brown

1936 Apr. Waseda (large seeded)–Yellow (straw), hilum pale to brown

1936 April–"Soybean introductions named in January 1936," W.J. Morse issued as a 2-page leaflet by USDA Bureau of Plant Industry, Division of Forage Crops and Diseases. The named introductions include 20 new large-seeded vegetable-type soybeans. Dorsett and Morse obtained most of these in Japan during their trip to Asia in 1929-1931.

1937 Agate (large seeded)–Yellow (straw) and brown, hilum brown

1937 Aug. Giant Green (large seeded)–Green, hilum black

1937 Sept. Funk Delicious (large seeded)–Yellow (straw), hilum pale

1938 May Illington (large seeded)

1938 May Imperial (large seeded)–Yellow (straw), hilum pale

1938 May Tortoise Egg (large seeded)

1938 May Willomi (large seeded)–Yellow (straw), hilum pale-brown

1938 May–"A study of Soybeans with Reference to their Use as Food," by Woodruff and Klass is published as Illinois Agricultural Experiment Station, Bulletin No. 443 (p. 421-67). In it they list 17 soybean varieties, six of which showed special merit for table use. Four are new large-seeded vegetable-type soybeans.

1938 Sept. Sioux (large seeded)–Yellow (olive), hilum black

1938 Sept. Aoda (large seeded)–Green, hilum light brown

1939 Mar. Emperor (large seeded)–Yellow (straw), hilum light brown

1939 March–"Eighteen varieties of Edible Soybeans: Their Adaptability, Acceptability and Characteristics," by Lloyd and Burlison is published as Illinois Agricultural Experiment Station, Bulletin No. 453 (p. 385-439). This is the most complete and interesting report on this subject

11454. Brown, Lester R. 2013. 10 things to know about food on World Food Day. *www.earthpolicy.org.* Oct. 16. [1 ref]
• ***Summary:*** "Today is World Food Day. It offers the opportunity to strengthen national and international solidarity in the fight to end hunger, malnutrition, and poverty. With falling water tables, eroding soils, and rising temperatures making it difficult to feed growing populations, control of arable land and water resources is moving to center stage in the global struggle for food security. Here are some facts to consider:

"1. There will be 219,000 people at the dinner table tonight who were not there last night-many of them with empty plates. Ensuring adequate food supplies was once a rather simple matter, the sole responsibility of the ministry of agriculture. When governments wanted to accelerate growth in the grain harvest, they simply raised the support price paid to farmers. Now that is changing. Securing future food supplies has become incredibly complex. It may now depend more on policies in the ministry of health and family planning or of energy than in the ministry of agriculture itself.

"2. Today, with incomes rising fast in emerging economies, there are at least 3 billion people moving up the food chain, consuming more grain-intensive livestock and poultry products.

"Today, the growth in world grain consumption is concentrated in China. It is adding over 8 million people per year, but the big driver is the rising affluence of its nearly 1.4 billion people. As incomes go up, people tend to eat more meat. China's meat consumption per person is still only half that of the United States, leaving a huge potential for future demand growth.

"3. In India some 190 million people are being fed with grain produced by overpumping groundwater. For China, there are 130 million in the same boat.

"Aquifer depletion now threatens harvests in the big three grain producers-China, India, and the United States-that together produce half of the world's grain. The question is not whether water shortages will affect future harvests in these countries, but rather when they will do so.

"4. In Nigeria, 27 percent of families experience foodless days. In India it is 24 percent, in Peru 14 percent.

"The world is in transition from an era dominated by surpluses to one defined by scarcity. Not eating at all on some days is how the world's poorest are coping with the doubling of world grain prices since 2006. But even as we face new constraints on future production, the world population is growing by 80 million people each year.

"5. Water supply is now the principal constraint on efforts to expand world food production.

"During the last half of the twentieth century, the world's irrigated area expanded from some 250 million acres in 1950 to roughly 700 million in 2000. This near tripling of world irrigation within 50 years was historically unique. Since then the growth in irrigation has come to a near standstill, expanding only 10 percent between 2000 and 2010.

"6. Nearly a third of the world's cropland is losing topsoil faster than new soil is forming, reducing the land's inherent fertility.

"Future food production is also threatened by soil erosion. The thin layer of topsoil that covers the earth's land surface was formed over long stretches of geological time as new soil formation exceeded the natural rate of erosion. Sometime within the last century, the situation was reversed as soil erosion began to exceed new soil formation. Now, nearly a third of the world's cropland is losing topsoil faster than new soil is forming, reducing the land's inherent fertility. Soil that was formed on a geological time scale is being lost on a human time scale. Peak soil is now history.

"7. The generation of farmers now on the land is the first to face manmade climate change.

"In addition to wells going dry and soils eroding, both at an unprecedented pace, the generation of farmers now on the land is the first to face manmade climate change. Agriculture as it exists today developed over 11,000 years of rather remarkable climate stability. It has evolved to maximize production within that climate system. Now, suddenly, the climate is changing. With each passing year, the agricultural system is more and more out of sync with the climate system.

"8. At no time since agriculture began has the world faced such a predictably massive threat to food production as that posed by the melting mountain glaciers of Asia.

"Mountain glaciers are melting in the Andes, the Rocky Mountains, the Alps, and elsewhere, but nowhere does melting threaten world food security more than in the glaciers of the Himalayas and on the Tibetan Plateau that feed the major rivers of India and China. Ice melt helps sustain these rivers during the dry season. In the Indus, Ganges, Yellow, and Yangtze river basins, where irrigated agriculture depends heavily on rivers, the loss of glacial-fed, dry-season flow will shrink harvests and could create potentially unmanageable food shortages.

9. After several decades of raising grain yields, farmers in the more agriculturally advanced countries have recently hit a glass ceiling, one imposed by the limits of photosynthesis itself.

"In Japan, the longtime leader in raising cropland productivity, the rise in the yield of rice that began in the 1880s essentially came to a halt in 1996. Having maximized productivity, farmers ran into the inherent limits of photosynthesis and could no longer increase the amount they could harvest from a given plot. In China, rice yields

© Copyright Soyinfo Center 2014

are now just 4 percent below Japan's. Unless China can raise its yields above those in Japan, which seems unlikely, it, too, is facing a plateauing of rice yields. Yields of wheat, the world's other food staple, are also plateauing in the more agriculturally advanced countries. For example, France, Germany, and the United Kingdom–Europe's leading wheat producers–had been raising wheat yields for several decades, but roughly a decade ago, all three hit plateaus. Corn yields in the United States, which accounts for nearly 40 percent of the world corn harvest, are starting to level off. Yields in some other corn-growing countries such as Argentina, France, and Italy also appear to be stagnating.

"10. To state the obvious, we are in a situation both difficult and dangerous.

"The world today desperately needs leadership on the food security issue to help the world understand both the enormity of the challenge we face and the extraordinary scope of a response, one that, among other things, requires a total restructuring of the energy economy. The scale of this economic restructuring is matched only by the urgency of doing so. Political leaders talk about cutting carbon emissions 80 percent by 2050, but if we stay on the current trajectory the game will be over long before then. If we want to stabilize climate, we need to cut carbon emissions far more rapidly. President Obama needs to understand both the gravity and urgency of the tightening food situation and the consequences of leaving it unattended. We are not looking at 2030 or 2050. We are looking at an abrupt disruption in the world food supply that could be just one poor harvest away." Address: Earth Policy Inst., 1350 Connecticut Ave., N.W., Suite 403, Washington, DC 20036. Phone: 202-496-9290.

11455. Hymowitz, Theodore. 2013. Illinois has storied history with soybeans: From the Auckland to Lincolnland. *Illinois Field and Bean* (*Illinois Soybean Assoc.*). Nov. p. 5-6. Special issue.

• ***Summary:*** This excellent overview of the history of the soybean in Illinois begins: "On Christmas Day in 1850, the U.S. merchant ship *Auckland* sailed from Hong Kong for San Francisco, Calif., carrying a shipment of sugar. About 500 miles off the coast of Japan the *Auckland* came across the *Eiriki maru,* a Japanese vessel drifting helplessly on the sea. The crew of 17 was removed from the ship and taken aboard the *Auckland.* The Japanese took aboard some of their belongings, including navigational equipment and agricultural foodstuffs.

"On March 4, 1851, the *Auckland* arrived at the port of San Francisco. The Japanese were not permitted to leave the ship and were kept in quarantine until March 16. The youngest member oil the Japanese crew was a 14-year-old boy named Hizoko. Subsequently, Hizoko changed his name to Joseph Heco and was the first Japanese to become a naturalized U.S. citizen."

Also discusses Dr. Benjamin Franklin Edwards of Alton, Illinois, John H. Lea of Alton, Osborne and Mendel (1917), Garner and Allard (1920), North Carolina, University of Illinois professors William I. Burlison (administration), J.C. Hackleman (extension) and Clyde M. Woodworth (plant breeding). Funk Bros. Seed Co., A.E. Staley Mfg. Co., ADM, Richard Bernard, wild perennial soybeans.

Includes a brief biography and portrait photo of Prof. Hymowitz. Address: Prof. Emeritus, Univ. of Illinois. Phone: 1-800-525-0177.

11456. Spots at front of book: History of soybeans and soyfoods in Japan. 2014.

• ***Summary:*** (a) Graph of soybean production in Japan, 1878-1984. Soybean production in Japan was first recorded in 1878. From that date until its all-time peak in 1920, it climbed steadily.

In 1905, after the Russo-Japanese (1904-05), victorious Japan, through the Portsmouth Treaty, became the lessee of the Kwantung Leased Territory (1,337 square miles), the southernmost point of Manchuria. It contained the greater part of the southern branch of the Chinese Eastern Railway, which is now known as the South Manchuria Railway. This was Japan's first foothold on Manchuria.

In 1910 (Aug. 22) Japan annexed Korea as Chosen, a colony; this harsh domination lasted until 1945–the end of World War II.

After about 1910, Japan started to import small but steadily increasing amounts from Korea and Manchuria. These imports finally became so large that they led to a decrease in soybean production in Japan.

1931–"Manchurian Incident," also called the "Mukden Incident" took place on the night of 18 September 1931. A bomb exploded on the tracks of the Japanese railway north of Mukden. Japanese Colonel ordered a full-scale attack against the Chinese troops in Mukden, and General Honjô, hearing of the crisis, called out the whole Kwantung Army–which proceeding to take over Manchuria.

By early 1932 the conquest of all Manchuria had been completed. In March 1932 Manchuria was proclaimed an independent state named Manchukuo or Manchoukuo under the last Ch'ing ruler (P'u-yi).

The Lytton Commission of the League of Nations visited Manchuria in the spring of 1932 and condemned Japan as an aggressor. The report was adopted by the League of Nations, from which Japan withdrew in protest the following year. Japan was now in control of Manchuria, the world's greatest producer of soybeans.

1941–Japan attacks Pearl Harbor; soybean production plummets during the war. But it quickly climbed after Japan surrendered in 1945 and imports from the USA began.

11457. Spots at front of book: Okara and soy fiber. 2014.

I made the cloth from soybeans."

11459. Spots: Fermented black soybeans, Daitokuji natto, Hamanatto. 2014.
• ***Summary:*** The first four photos all show Daitokuji natto. The photo showing three packages of Daitokuji natto, each with a bowl of the contents below are (from left to right): (1) Daitokuji Zuihon. (2) Honke Isoda. (3) Daitokuji Ikkyu. Each product has a somewhat different taste and appearance. (4) Another closer view of a different brand of Daitokuji natto made in Kyoto by another maker. (5) View using the "Google Ngram Viewer" of the relative frequency of appearance in books digitized by Google, from 1800 to 2000 of the three case-sensitive terms "black bean sauce" (by far the most frequent), "fermented black beans," and "hamanatto." (6) Fermented black soybeans on a mat. (7-8) Chinese characters for douchi / doushi.

(9) A red banner or label with white lettering, probably obtained in about 1978. Here is what it says: Top right two Chinese characters (2 Cc): Enshû = another name for Western Shizuoka prefecture, which is located southwest of Tokyo; the largest city in the prefecture is Hamamatsu. Top left (2Cc): Meisan = Specialty product. Right side half way down. Two smaller Cc: Ganso = Originator = The first or original maker. Four largest Cc in middle. Hamana Natto = Hamanatto. Four smaller Chinese characters in lower left: Daifukuji sei = Made at Daifukuji temple [located in western Shizuoka prefecture].

Note: A Chubu region (Japan) website titled "Travel to Ten Thrilling Scenic Sites" states: Daifuku-ji temple is an old temple of the Shingon sect that is located in a secluded mountain overlooking Lake Inohana. The temple owns many treasures, including Fugen-jurasetsunyo-zu (Samantabhadra and Ten Princesses Iron Fan). There is also a famous garden in the kaiyu style which is suspected to have been built during the Muromachi period. Hantoshi-zakura cherry blossoms which bloom little by little from October to the beginning of March are also a must-see. Daifukuji natto (natto=fermented soy bean product) made here has a history of being presented to the Ashikaga or Tokugawa Shogun Families.

11460. Spots: Natto. 2014.
• ***Summary:***

11461. Spots: Roasted soy flour (kinako). 2014.
• ***Summary:*** (a) Nestlé KitKat Kinako Ohagi, a traditional Japanese confection coated with roasted soy flour (kinako). (b) Kinako in a bluish-white Japanese bowl. (c) Rounds of mochi dango coated with roasted soy flour. (d) Two skewered mochi dango coated with kinako. (e) In Korean *k'ongaru, k'ong karu, konggaru* ("roasted soybean powder") is widely used to cover rice cakes (mochi). (f-g) It can be found at most Korean grocery stores. (h) In Indonesian *Bubuk kedele* means roasted soy flour. (i-j) Sari Bubuk Kedelai (from Indonesia). (k-l) *Bubuk kedele* as a coating for mochi (pounded rice cakes) in Indonesia. (m-n) Two views of Japanese kinako. (o) Sifting kinako. (p-q) Two bags of Shirakiku kinako from Japan. (r) Korean konggaru. (s) A Korean woman coating a food with *konggomul* (roasted whole soy flour). (t) Indonesian lontong (rice steamed in banana leaves, sliced and served topped with *bubuk kedelai*).

11462. Spots: Soy sauce. 2014.
• ***Summary:*** (1) View using the "Google Ngram Viewer" of the relative frequency of appearance in books digitized by Google, from 1800 to 2000 of the three case-sensitive terms "soy" (the most frequent), "soy sauce," and "shoyu" (increasing in use since about 1980).

Note that "soy" changed its meaning in about the 1980s. Originally it had referred to soy sauce. Then, as "soy sauce" began to replace, it came to be used as a general term for soybeans, soyfoods, and the "essence" of both. For example: "The health benefits of soy." (2) Soy jar, used for storing soy sauce, from Santa Cruz, California. (3) A traditional illustration of Japanese men probably pouring moromi into a vat so it can start fermenting. (4) Japanese men working around large fermentation vats bound with braided bamboo hoops. (5) A pottery jar that once held soy [sauce] manufactured by Sollonyama, Nagasaki, Japan. (6-7) A wide illustration (divided vertically into halves) of a Noda

(k) A glass jar filled with roasted soynuts. (l) "Mom–I really like this stuff!"

11465. Spots: Whole dry soybeans. 2014.
• ***Summary:*** (a) View using the "Google Ngram Viewer" of the relative frequency of appearance in books digitized by Google, from 1800 to 2000 of the three case-sensitive terms "soybean" (by far the most frequent), "soybeans," and "soy bean" (decreasing in use since about 1918). (b) Whole dry soybeans in round Japanese *zaru* made of woven bamboo. (c) Mamechan cooked whole soybeans with kombu (dark strips) in Japan. (d) Bowls of boiled black and yellow soybeans. (e) Whole dry soybeans in a plastic bag. (f) Budo-mame. Cooked whole soybeans in a light-green bowl. (g) Budo-mame, sweet-salty cooked whole soybeans, a popular Bento (Japanese lunch box) filler. (h) Soaked yellow soybeans in a large glass bowl. (i) Nimame in a white bowl. (j) Simmered black soybeans (nimame) in a blue and black bowl. (k) Yellow soybeans being soaked in water. (l) Eden Organic Black Soy Beans. (m) Demand Dyer's Pork and Beans (With and Without Tomato Sauce).

11466. Spots: Yuba. 2014.
• ***Summary:*** (a) Sheets of yuba in a clear Japanese soup. (b-c) Fresh yuba rolls. (d) Sheets of yuba at Hodo Soy (Oakland, California) hanging over steaming soymilk. (e) Fillings in a yuba wrapper. (f) Pieces of reconstituted yuba sticks in a soup. (g) Bundles wrapped in yuba. (h) A package of Chinese dried yuba sticks. (i) Dried yuba sticks on a table. (j) A Japanese yuba label. (p-v) Chinese and Japanese characters for doufu pi, doufu i, and yuba–on title page.

11467. History of the International Soybean Processing and Utilization Conferences (ISPUC) (Overview). 2014. Compiled by William Shurtleff of Soyinfo Center. [Eng]
• ***Summary:*** (1) 1990 June 26 to July 4–International Soybean Processing and Utilization Conference (ISPUC-I) held in Jilin, China.

(2) 1996 Jan. 8-13–International Soybean Processing and Utilization Conference (ISPUC-II) held in Bangkok, Thailand. Proceedings published.

(3) 2000 Oct. 15-20–International Soybean Processing and Utilization Conference (ISPUC-III) held Tsukuba, Japan. Proceedings published. Theme: Dawn of the innovative era for soybeans.

(4) 2004 Feb. 29 to March 5–International Soybean Processing and Utilization Conference (ISPUC-IV) held in Foz do Igussa, Brazil.

(5) 2008 Dec. 10-14–International Soybean Processing and Utilization Conference (ISPUC-V) held in Bhopal, India.

(6) 2011 Oct. 31 to Nov. 2–International Soybean Processing and Utilization Conference (ISPUC-VI) St. Louis, Missouri. Also described as the "Soy & Grain Trade Summit... in association with USSEC–U.S. Soybean Export Council." The website promotes it as "The critical strategic event of the agribusiness calendar." The sessions are: Soybean processing session I. Soy in health and human nutrition. New soy quality traits and unique soy foods, ingredients and applications. Soybean processing session I. Soy in animal nutrition. Explore the wild side of soy session (will explore some of the lesser-known, new and novel applications for soy from around the world).

11468. History of the International Symposium on the Role of Soy in Preventing and Treating Chronic Disease and the subsequent International Soy Symposium (Overview). 2014. Compiled by William Shurtleff of Soyinfo Center. [Eng]
• ***Summary:*** (1) 1994 Feb. 20-23–First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, held in Mesa, Arizona. Proceedings published in the *J. of Nutrition,* March 1995 Supplement (p. 567S-808S).

(2) 1996 Sept. 15-18–Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, held in Brussels, Belgium. Proceedings published in the *American J. of Clinical Nutrition,* Dec. 1998 Supplement (p. 1329S-1544S).

(3) 1999 Oct. 31 to Nov. 3–Third International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, held in Washington, DC. Proceedings published in the *J. of Nutrition,* (4) 2001 Nov. 4-7–"Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, held in San Diego, California. Proceedings published in *J. of Nutrition,* March 2002 Supplement (p. 545S-619S).

(5) 2003 Sept. 21-24–Fifth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease,

© Copyright Soyinfo Center 2014

held in Orlando, Florida. Proceedings published in *J. of Nutrition,* 2004 May Supplement (p. 1205S-1293S).

(6) 2005 Oct. 30 to Nov. 2–Sixth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, held in Chicago, Illinois. This is the first year that no conference proceedings were published. However a 52-page symposium program was published in Nov. 2005 by the American Oil Chemists' Society (Champaign, Illinois). (7) 2007 March 7-9–7th International Soy Symposium: Role of Soy in Health and Disease Prevention, held in Bangkok, Thailand. No proceedings were published, but a 100-page bound color booklet contains the program, long abstracts, organizational and sponsor information. The conference in Bangkok lasted only 2 days versus 4 for all the others and it consisted mostly of review presentations. The most important presentations were summarized in the *Soy Connection* (summer 2007, Vol. 15, No. 3). (8) 2008 Nov. 9-12–International Soy Symposium held in Tokyo, Japan.

11469. *SoyaScan Notes.* 2014. Soyfoods historical research and writing wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1. Early history of Chinese soyfoods companies and products in America and Europe. Especially Chinese tofu manufacturers in San Francisco and Los Angeles from 1850 to 1910.

2. Statistics on soyfoods in China during the 1980s.

3. The Swedish trading mission in Canton during the 1700s and 1800s and its work with soy sauce.

4. A lengthy, scholarly history (with an extensive bibliography) of soybeans and soyfoods in China written by a Chinese.

5. A lengthy, scholarly history (with an extensive bibliography) of soybeans and soyfoods in Japan written by a Japanese.

6. A lengthy, scholarly history (with an extensive bibliography) of soybeans and soyfoods in Korea written by a Korean.

7. A history of the health foods industry in America, 1930-1980.

8. A book on mochi or how mochi came to the West, with a clear chronology of commercial mochi manufacturers in the western world.

9. A scholarly history (with an extensive bibliography) of each of the following soyfoods in Japan, written by a Japanese with a long-term involvement in the field: natto, miso, shoyu, tofu.

10. Explain why Linnaeus stated in *Hortus Cliffortianus* (1737, p. 499) that the soy bean was grown in the colony of Virginia in North America.

11. A lengthy, scholarly history (with a good bibliography) of Chinese growing and processing soybeans in California. They must have grown them between 1849 and 1899! (13 Sept. 1991)

12. Visit the best libraries and centers in Germany for doing research on soybeans and soyfoods (See #37465) and try to get missing old documents.

13. Try to document the statement that the soybean was used as a coffee substitute during the Civil War in the USA (1861-1865).

14. Use the Coker family archives in South Carolina to write a history of the company's pioneering work with the soybean.

15. A history of early experimental gardens such as those that the Portuguese developed on the Cape Verde Islands, the British at Kew, Nairobi, Singapore, and the colony of Georgia (the Trustees' Garden of Georgia, a government experimental farm at Savannah, laid out in 1733), the Spanish (under Cortez / Cortés) in today's Mexico, etc. Did soybeans appear in any of them? When did they first appear in each?

16. Learn much more about Korean natto. Did it exist in Korea before Korea became a Japanese colony? Try to find some references, as in early studies of food in Korea. How widely was it made and used? Try to find some estimates of annual production. How was it served? What was its distribution in Korea in 1900? 1950? 2000?

17. A scholarly biography of Clifford E. Clinton of Los Angeles.

11470. *SoyaScan Notes.* 2014. Commercial soyfoods products wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1. Organic, non-GE soy protein isolates (2002/03). 2. A very low calorie soy beverage for weight loss in hospitals. Must be able to be used as a sole source of nutrition. 3. More smoked tofu in America.

4. Meatless pepperoni, sausage shaped, for use atop a meatless pizza. 5. Natural shoyu brewed in America, ideally as part of a joint venture with a Japanese shoyu company. 6. A vegetarian Worcestershire sauce, with no anchovies (John Troy developed "The Wizard's Worcestershire Sauce" for Joel Dee's Premier Japan line in about 1995; it was vegetarian).

7. A low-calorie, low-fat tofu. Fat and calorie content should be at least 30% lower than that made from whole soybeans. The easiest way to make this product would be to run soymilk made from whole soybeans through a decanting centrifuge (like a cream separator) to remove the desired amount of fat, just like the dairy industry does to make low-fat or non-fat milk. There is a big potential market for such a product since 1% fat milk has now passed low-fat milk (2%) as the best-seller in American supermarkets (11 Sept. 1991). 8. Bland soymilk base (11 July 1997). Presently no company (including International ProSoya Corp. of Canada, Pacific Foods of Oregon, and Ted Nordquist dba TAN Industries, Inc. etc.) offers this product.

© Copyright Soyinfo Center 2014

9. A soy-based kefir made from authentic kefir grains/ cultures plus FOS (fructooligosaccharides), a dietary fiber derived from chicory roots. FOS feeds and increases the level of "good guy bifidobacteria by up to five times in the gastrointestinal tract, and boosts the body's absorption of calcium and other minerals by up to 50 percent." See article in *Ag Innovation News* (April 1999, p. 3, 14).

11471. *SoyaScan Notes.* 2014. Soyfoods big ventures wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** The Soyfoods Association should team up with other interested parties (such as Protein Technologies International) and petition the FDA to outlaw the use of the term "non-dairy" on the label of (or otherwise in connection with) products which contain sodium caseinate or any other product derived from cow's milk. This would open the way to many new soy-based dairylike products.

A joint venture with a Japanese company such as Sendai Miso Shoyu to brew Japanese-style shoyu in America in the traditional way. Large amounts are now imported from Japan.

11472. *SoyaScan Notes.* 2014. The languages and writing systems of East Asia, including Korea, China, and Japan (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** According to *East Asia: The Great Tradition,* by Reischauer and Fairbank (1960, p. 15-18), the two main language groups of East Asia are the Sinitic (or Sino-Tibetan, the largest group) and the Altaic. Within the Sinitic group, Chinese is by far the largest and historically the most important subdivision. The main Sinitic languages inside China are Mandarin, Wu (near Shanghai), Kan, Min (near Fukien / Fujian), Hsiang, Cantonese, Miao-Yao (southwest China), and Tibetan. Note that these are different enough from Mandarin to be considered virtually independent languages rather than dialects. Sinitic languages outside China include Burmese, Thai, Vietnamese.

The three major Altaic languages (named after the Altai Mountains in Mongolia) are Mongolian, Turkish (in the west), and Tungusic (in the far northeast). Peoples speaking Altaic languages, unlike the agriculturist Chinese, were nomads. "Korean and Japanese show close structural resemblances to the definitely Altaic languages, and the Koreans and Japanese may, therefore, be two eastern extensions of Altaic-speaking people into predominantly agricultural areas."

Concerning the Korean writing system, in the late 600s (7th century), a system called idu, using Chinese characters for phonetic purposes was developed as an aid to rendering Chinese texts into Korean. Though never extensively used, it was the beginning of Korea's native writing system. In the mid-1400s an excellent phonetic system for writing the Korean language was developed by the ruler named Sejong. Originally known as onmun ("vernacular writing") but known today as han'gul ("Korean letters") it was officially adopted by royal decree in 1446. "Han'gul is perhaps the most scientific system of writing in any country... Finally, the advantages of an alphabetic script and a syllabary (in which each symbol represents a whole syllable) are combined by bunching the individual letters into syllabic groups" (p. 435-36). [Note: the bunching makes use of a word processor more difficult than the linear alphabetic Indo-European languages]. Although han'gul was simple, it was little used during the next 5 centuries; scholars emphasized the Chinese written language. "It was not until after the liberation of Korea from Japanese rule in 1945 that han'gul came into its own as the primary method of writing in Korea."

In Japan, the development of purely phonetic scripts (called the Kana Syllabaries, hiragana and katakana) arrived in the early 800s and were attributed to Kôbô Daishi (Kûkai), Japan's most beloved and best known Buddhist saint, who founded the Shingon sect in Japan in about 806 and built his monastic headquarters atop Mt. Koya in 816. "The development of the kana was no doubt influenced by the Sanskrit studies of Buddhist monks and their knowledge of the alphabets of India. The kana, however, did not constitute alphabets but were syllabaries, in which the symbols represented whole Japanese syllables., which at that time invariably consisted of one of the five vowels (a, i, u, e, o) usually preceded but never followed by a consonant. Thus they required a minimum of 47 different symbols, instead of the 14 that would have sufficed to write 10th century Japanese with an alphabet... Thus hiragana and katakana constituted a less simple and flexible system than an alphabet would have provided."

11473. *SoyaScan Notes.* 2014. The best libraries for Asian-American studies in California (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Mr. Seizo Oka of San Francisco, whose life work is writing a history of Japanese in America, has built an excellent library of documents on this subject. These archives have many early documents including America's best collection of early Japanese-American City Directories. Mr. Oka used to work for Bank of Tokyo, renamed Bank of California, and his project was part of the California First Bank History Project. The bank provided him with financial support. But they withdrew their support in late 1989, and on 15 Dec. 1989 the library had to be closed. But, with community support, it was reopened in Dec. 1990 in a new room at the same location: History Archives of the Japanese Cultural & Community Center, 1840 Sutter St., #206, San Francisco, CA 94115.

The second library is the Japanese-American Library, located at 1619 Sutter St, on Octavia & Sutter on the entire ground floor (1,500 square feet) of Hinode Towers (P.O.

© Copyright Soyinfo Center 2014

Box 590598, San Francisco, CA 94159. Phone: 415-567-5006). The director, Karl Matsushita, a graduate of UCLA in his mid- to late-40s, has collected for 20 years. Founded in 1969 (at the time of student demands for Ethnic Studies Programs) by Karl and a group named Center for Japanese-American Studies from Ethnic Studies Program, it became independent from the group in 1985. The library has at least 10,000 documents, lots in boxes, mostly post-war. They have no early city directories. The pre-war material is mostly in English. They have little or no information on soyfoods. They are planning to computerize the library to make it compatible with the University of California at Berkeley, Stanford, and Harvard-Yenching libraries. In the meantime they are typing 3x5 catalog cards for their documents.

Two libraries at the University of California have excellent, large collection of documents, many very early and many archival, on Chinese and Japanese in America. The Bancroft Library focuses on the far western USA. The Asian American Studies Library is more nationwide in scope. Its holdings include monographs, serials, theses and dissertations, conference papers, student research papers, and non-print media. It is the best source of Chinese-American documents in California. Many documents came from the Chinese Historical Society in San Francisco. Unfortunately no one on the staff can read or speak Japanese none of their Japanese-language documents can be cataloged.

A major library is found at the Asian-American Studies Center at UCLA; it is complemented by the East Asian Library at UCLA, which has mostly Asian-language materials. Hosokawa (1969) notes that "the Japanese American Citizens League, a nationwide organization of fewer than 25,000 members, launched in 1962 what was called the Japanese American Research Project. Funds were contributed by members and other interested persons and $100,000 presented to the University of California at Los Angeles. UCLA in turn undertook to seek out and preserve documentary materials and gather and analyze information relating to the Japanese Americans. Despite its modest scale this research project proved to be of sufficient academic and sociological interest that the Carnegie Corporation and the National Institute of Mental Health, a federal agency, provided grants for detailed studies into specific contributions by Japanese Americans to the American way of life." A number of independent papers, both popular and scholarly, have resulted from this project.

Another interesting group, which has no library, is the Center for Japanese-American Studies.

11474. *SoyaScan Notes.* 2014. Chronology of Soyfoods Center: The work of William Shurtleff and Akiko Aoyagi. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1. Introducing soyfoods to the West: Popular books (1972 Oct.–1979 July).

The Book of Tofu:

1972 Oct. 22–First visit to San-gen-ya tofu shop in Tokyo. Mr. Toshio Arai begins to teach William Shurtleff the traditional art of making tofu.

1972 Dec. 22–Meet Nahum Stiskin of Autumn Press. Start to write tofu booklet.

1973 Jan. 13–Sign contract for *Book of Tofu* with Autumn Press.

1973 March 2–Visit Sasa-no-yuki tofu restaurant in Tokyo.

1975 Dec. 12–*The Book of Tofu** published by Autumn Press.

* = Book illustrated by Akiko Aoyagi.

1978 Dec. 22–*The Book of Tofu** published by Ballantine Books in a mass-market pocketbook edition that retails for $2.95.

The Book of Miso

1974 Feb/March–Study miso and shoyu in Japan on trip with Bob Gerner, head of Westbrae Natural Foods.

1974 May 7–Start to write *The Book of Miso,* table of contents.

1975 April–Autumn Press accepts idea of publishing *The Book of Miso.* Contract signed Aug. 18.

1976 Sept. 23–*The Book of Miso** published by Autumn Press.

1976 Sept. 29–1977 Feb. 3–Tofu & Miso America Tour. We do 70 public programs, many TV and radio interviews, drive our van 15,000 miles in 17 weeks.

The Book of Tempeh

1977 May–To Indonesia for one month of tempeh research.

1978 Feb. 27–Sign contract with Harper & Row.

1979 July 14–*The Book of Tempeh** published by Harper & Row.

2. Working to build a soyfoods industry in the Western world (1977 April–present)

1977 April 5–Establish Takai Tofu and Soymilk Equipment Co.

1977 Aug. 16–First Takai catalog of tofu and soymilk equipment published.

1977 Aug. 16–*Miso Production** published by Soyfoods Center–the first book we self-published.

1978 July 28-30–The Soycrafters' Association of North America is founded in Ann Arbor, Michigan. William Shurtleff helps to organize the inaugural meeting, is a founding member, and a member of the first board of directors.

1978–Soyfoods Center starts to develop a mailing list (typed so as to fit on pressure sensitive labels) of all people who have purchased books or contacted us.

1979 July 15–*Tofu and Soymilk Production** published by Soyfoods Center.

1979 July–The first issue of *Soycraft* magazine is published by Richard Leviton, director of Soycrafters' Association in Massachusetts. Each mailing is based on the

© Copyright Soyinfo Center 2014

use of Soyfood Center's mailing list–free of charge.

1980 March 10–*Tempeh Production** published by Soyfoods Center.

1980 Sept.-Dec.–Our mailing list of about 5,000 names and addresses, divided into 70 coded categories, is computerized by Parallel Procedures in San Francisco. This was done primarily to help Richard Leviton of *Soycraft* magazine.

1981 Dec.–There are now 10,900 names on our computerized Soyfoods mailing list, rising to 13,800 names by May 1982.

3. Documenting the history of soybeans and soyfoods (1980 Oct.–present)

1980 Sept. 10–Start to build what we hope will become a large library at Soyfoods Center with regular trips to the University of California at Berkeley library system.

1980 Oct. 22–Start writing *History of Soybeans and Soyfoods.*

1984 June 1–History book manuscript is now completely in our word processor: 2,500+ pages, 70+ chapters.

1984 June 21–Soyfood Center's annual summer intern program begins. Irene Yen, a Stanford student starting her senior year, is our first summer intern.

1984 July 17–*History of Tempeh published*–our first history book.

4. Studying the burgeoning soyfoods industry and market (1982 Sept.–1985 Feb.)

1982 May 16–*Soyfoods Directory and Databook* (1st edition) published. Renamed *Soyfoods Industry and Market: Directory and Databook* on 26 Feb. 1983. 3rd edition.

1982 Sept. 10–*Soyfoods Labels, Posters, and Other Graphics* published. But there is a much larger significance. We have now started a "Graphics Collection," separate from the documents in our library. The graphics are mostly for soyfood products, and they are filed alphabetically by product. These graphics will much later (starting March 2008) become the "face" of our digital book series published online.

1984 Feb. 25–*Soymilk Industry and Market* published.

1985 Feb. 22–*Tofutti and Other Soy Ice Creams* published.

1990 May 8–*Tofu Industry and Market in Europe* published.

1990 July 17–*Soymilk Industry and Market in Europe* published.

1994 Jan.–*Soyfoods Industry and Market: Bibliography and Sourcebook* published.

5. Foreign language editions of our books are published (1980 -)

1980 July–*Das Miso Buch** (hardcover and paperback) published by Ahorn Verlag (Wolfgang and Gabriella Furth-Kuby) in Germany.

1981 Aug.–*Das Tofu Buch** (hardcover) published by Ahorn Verlag in Germany.

1988 Nov.–*Das Tempeh Buch** (hardcover) published by Ahorn Verlag in Germany–6 years after the project started.

1988 Nov.–New German pocketbook editions of *Das Tofu Buch* and *Das Miso Buch* (paperback) published by Goldmann Verlag.

6. Developing a computerized information center (1980 Dec.–present).

1980 Dec. 12–Mailing lists of Soyfoods Center and Soyfoods magazine merged and computerized by Parallel Procedures in San Francisco. 5,500 names in 50 categories.

1983 Sept. 28–Install first computer at Soyfoods Center, IBM-PC with 20 MB hard disk and word processing software to use for writing our book on *History of Soybeans and Soyfoods.*

1985 May 9–Install Revelation database manager software for developing a computerized bibliographic database on soya.

1985 July 31–Finish keying all 6,677 file cards (3x5 inch) into our computerized database. Our library is now computerized.

1985 Aug. 30–Our computerized database, containing 9,500 bibliographic records, is now available for use by the public.

1986 Sept. 1-16–The first of many trips to do library research at the USDA National Agricultural Library, Library of Congress, and National Library of Medicine–America's three national libraries, all located in and about Washington, DC.

1987 July 6–Start entering Commercial Soy Products into our database.

1987 Oct. 11–*Bibliography of Soymilk, from 1578 to 1987: With 1,584 References* published–our first bibliography.

1987 Oct. 19–Coin the name SoyaScan, start using it to refer to our computerized database, and apply for a registered trademark, which we are issued on 19 July 1988.

1993 Feb.–Install a Novell 5-user network to link our various computers.

1995 Feb. 11–We enter the 50,000th record into our SoyaScan database.

1997 Nov. 24–We enter the 55,000th record into our SoyaScan database.

1997 Nov. 24–We enter the 55,000th record into our SoyaScan database.

2000 May 9–We enter the 60,000th record into our SoyaScan database.

2004 Oct. 3–We enter the 70,000th record into our SoyaScan database.

2008 Aug. 31–We enter the 80,000th record into our SoyaScan database.

2013 July 29–We enter the 90,000th record into our SoyaScan database.

7. Current status of computerized information–2013

© Copyright Soyinfo Center 2014

January 1

SoyaScan database now contains 90,799 records from 1100 B.C. to the present, including 76,165 published documents, 15,760 commercial soy products, 6,044 original interviews and overviews, and 6,866 unpublished archival documents.

More than 83.6% of all SoyaScan records have a summary/abstract averaging 161 words in length.

More than 43,000 records (47% of the total) are for documents published before 1970.

Thirty five major books in the series Bibliographies and Sourcebooks on Soya, produced from the SoyaScan database, are now available, published by Soyfoods Center.

Soyfoods Center Library owns about 75,000 documents, almost all of which have a record in the SoyaScan database.

SoyaScan Directory now contains the name, address, and phone number of 20,300 people and organizations worldwide actively involved with soyfoods and soybeans. Each entry is coded to show the type of activity, e.g. 2A = Tofu manufacturers.

8. Collecting and Publishing Information on Vegetarianism and Other Non-Soy Food Products that can Replace Animal Products.

1984 Oct. 31–Create our first vegetarian keyword (subject heading) VegeAnim = Vegetarian Diets and Animal Rights.

1988 Feb. 21–*Amazake and Amazake Frozen Desserts: Industry and Market in North America* published. Updated bibliographic supplement published in March 1995.

1992 Oct.–Start actively collecting information specifically on vegetarianism and veganism, and entering it into our new VegeScan database.

1992 March 4–*Bibliography of Vegetarianism: 1,755 References from A.D. 1170 to 1992, Extensively Annotated* published (360 p. large format, preliminary edition).

1992 June 12–*Sourcebook on Wheat Gluten Foods and Seitan* published. Expanded edition published in Jan. 1994.

2013 Jan. 1–VegeScan database now contains 8,800 bibliographic records on vegetarianism and veganism from 238 B.C. to the present.

Best selling books from Soyfoods Center (English-language editions only, as of Jan. 2013).

The Book of Tofu–600,000 copies sold.

The Book of Miso–140,000 copies sold.

The Book of Tempeh–47,950 copies sold.

Tofu & Soymilk Production–5,020 copies sold.

Other–9,200 copies sold.

Total–820,070 copies sold.

2007 Dec. 29.–We start to publish digital soy history books in PDF format on our website (www.soyinfocenter.com), free of charge. Each book contains many color photographs, illustrations, and sometimes maps. Our first book is "History of Soybeans and Soyfoods in the Middle East." On 20 Jan. 2010 we also publish the first of these books on Google Books; soon we publish all past books in this series on Google Books as well. By Sept. 2013 we have published 48 books in this series. The largest of these books, *History of Tofu and Tofu Products*, published on 20 May 2013, contains 4,004 pages (8½ x 11 inches), 13,302 references in chronological order, and 538 photographs and illustrations. Address: Lafayette, California. Phone: 925-283-2991.

11475. *SoyaScan Notes.* 2014. The best libraries and centers in Japan for doing research on soybeans and soyfoods (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** The two best general libraries are: (1) The National Diet Library (*Kokuritsu Kokkai Toshokan*), Nagata-cho 1-10-1, Chiyoda-ku, Tokyo 100, Japan. This is Japan's "Library of Congress." As of 1989 this library owned 4.18 million books / monographs, 42,000 current periodicals, 240,000 maps, 135,000 microforms, 266,000 sound recordings. (2) Tokyo University, Department of Agriculture Library (*Tôkyô Daigaku, Nogaku-bu Toshokan*), Yayoi-cho 1-1-1, Bunkyo-ku, Tokyo 113, Japan. Phone: 03-815-8391. They own the following journals: Byochugai Zasshi, Yakugaku Zasshi (1905-13), Nogaku Kaiho, Sapporo Norin Gakkai-ho, Nogyo Oyobi Engei, Rikagaku Kenkyusho Hokoku (1932-38).

11476. *SoyaScan Notes.* 2014. Chronology of Korea. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1st century B.C.–Recorded history began.

688 A.D.–The country was united in a kingdom under the Silla dynasty. It was at times associated with the Chinese empire.

1592-98–Invaded by Japanese under Hideyoshi.

About 1637 shut out foreign contacts.

1876–Forced to grant treaty ports to Japan, which recognized Korean independence. 1894-95–Sino-Japanese war caused by Korea uniting with Japan in a time of internal disorder in order to resist Chinese interference (Korea was considered a Chinese vassal). The treaty that concluded this war recognized Korea's complete independence.

1904-04–Russo-Japanese War caused in part by rivalry between Russia and Japan over Korea.

1907–Became a Japanese protectorate.

1910–Japan forcibly annexed Korea as a province called Chôsen.

1945 July–At the Potsdam conference, the 38th parallel was designated as the line dividing the country into two zones of occupation: Russian in the north and American in the south.

1945 Aug. 10–Russian troops enter Korea. Aug. 15–

© Copyright Soyinfo Center 2014

Korea celebrates Victory over Japan Day, which liberated Korea from colonial rule. 1945 Sept. 8–U.S. Troops enter Korea. The Soviet military organizes socialists and communists and blocks efforts to let the Koreans unite their country.

1948 May 1–North Korea declares independence. The Democratic People's Republic of Korea founded in north Korea; its capital is P'yongyang. 1948 May–The South Koreans declare independence and form the Republic of Korea with Seoul as the capital. Dr. Syngman Rhee is chosen president. 1948 Aug. 15. South Korea gains independence. Freed from Japanese control upon defeat of Japan at the end of World War II.

1950 June 25–Over 60,000 North Korean troops invade South Korea in a surprise attack, starting the Korean War. The North is the stronger state, both industrially because of its mineral and hydro-power resources, and militarily because of Soviet armament for offensive warfare. The attack is immediately condemned by the United Nations Security Council. June 27–The U.S. under president Truman, backed by the United Nations Security Council, sends in Air Force and Naval troops under the unified command of General Douglas MacArthur. Troops from many countries in the United Nations join the fight. June 30–Truman approves air and ground strikes against the north.

1950 Sept. 15–General Douglas MacArthur launches a surprise amphibious invasion of Korea at Inchon, South Korea, behind the North Korean Army's lines. The battle of Incheon resulted in a decisive victory and strategic reversal in favor of the United Nations (UN). The operation involved some 75,000 troops and 261 naval vessels, and led to the recapture of the South Korean capital, Seoul, two weeks later.

1951 April 11–General MacArthur's increasingly public disagreement with the fixed American policy of no more than a limited war led to his dismissal by President Truman. 1951 July–Truce talks begin at Panmunjom, but drag on for 2 years (due to Stalin's stalling tactics) while sporadic fighting continues.

1953 July 27–After 3 years of fighting, an armistice is signed. A closed border at about the 38th parallel is established. U.S. troops remain in the south, and U.S. economic and military aid are continued. War casualties were: Chinese about 900,000, North Korean 520,000, South Korean 300,000, American 142,000 (the 4th largest in U.S. history).

1960 April 26–A movement spearheaded by college students forces the resignation of president Syngman Rhee in South Korea.

1961 May 16–In an army coup, General Park Chung Hee becomes chairman of the ruling junta. In 1963 he is elected president. A 1972 referendum allows him to be reelected for 6-year terms unlimited times. 1979 Oct. 26–Park is assassinated by the chief of the Korean CIA.

11477. *SoyaScan Notes.* 2014. Translations of documents on soya from Asian languages to English, wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1. Translate from Chinese: C.N. Li, comp. 1958. Dou-lei [*Varieties of beans*]. This book contains every known quotation about soybeans published in China from 1100 B.C. to recent times–100 pages total on soybeans. It is a treasury of key historical information that has never been translated into English.

2. Translate from Japanese: Wataru Kawamura. 1958. *Miso enkakushi* [*History of miso*]. 817 p. 22 cm. The definitive book on this subject. Pages 187-213 list all early Japanese books mentioning miso, with a summary of what each says.

11478. *SoyaScan Notes.* 2014. Chronology of China, from 1912. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1912 Jan. 1–China becomes a republic (ending the rule of emperors) following the Wuchang Uprising inspired by Dr. Sun Yet-sen.

1931 Sept. 18–Japan seizes the Northeastern Provinces (Manchuria) and sets up a puppet state that they call Manchukuo. 1933–The border state of Jehol is cut off as a buffer state. 1937 July 7–Japan invades China proper.

1949 Sept. 21–The People's Republic of China is proclaimed in Peking by the Chinese People's Political Consultative Conference under Mao Zedong. The USA refuses to recognize the new regime. 1949 Dec. 8–The Kuomintang government, under Chiang Kai-shek, moves to Taiwan, 90 miles off China's southeastern coast.

1950 Feb. 15–China and the USSR sign a 30-year treaty of "friendship, alliance and assistance. 1950 Nov. 26–The PRC sends armies into Korea to aid the North Koreans and forces a stalemate. 1951–China invades Tibet and a communist government is installed in 1953. 1949-1952–Industry, agriculture, and social and economic institutions are forcibly molded to fit Maoist ideals. However frequent changes in policy and violent factionalism interfere with economic development. As estimated 800,000 people are executed during this period according to a statement by Mao Zedong in 1957, but opponents claim much higher figures. 1958-60–The Great Leap Forward tries to accelerate the pace of economic development through intensive labor on huge new rural communes, and through ideological purity and enthusiasm. The program caused resistance and was largely abandoned. Serious food shortages developed, and the government was forced to buy grain from the West. 1958-61–Famine in China leads to about 27 million deaths; it is caused by Mao's destructive collectivization of agriculture.

1960s–Relations with the USSR deteriorate, with disagreements on borders, ideology and leadership of world communism. The USSR cancelled aid accords, and China, with Albania, launched anti-Soviet propaganda drives.

© Copyright Soyinfo Center 2014

1965–The Great Proletarian Cultural Revolution is launched in an attempt to oppose pragmatism and bureaucratic power and instruct a new generation in revolutionary principles. Massive purges take place. A program of forcibly relocating millions of urban teenagers into the countryside is launched. By 1968 the movement had run its course; many purged officials returned to office in subsequent years, and reforms in education and industry that had placed ideology above expertise were gradually weakened. But some date the Cultural Revolution from 1966 to 1976.

1971 Oct. 25–The United Nations General Assembly ousts the Taiwan government from the UN and seats the PRC in its place. The U.S. supports admission of the PRC but opposes Taiwan's expulsion. 1972 Feb. 21-28–U.S. President Nixon visits Beijing, China, on invitation of Zhou Enlai, ending years of antipathy between the two nations. He called his 8-day visit a "journey for peace." 1973 May-June–China and the USA open liaison offices in each other's capitals. 1976–Mao Zedong and Premier Zhou Enlai die. 1978 Dec. 15–The U.S. formally recognizes the PRC as the sole legal government of China. 1979 Jan. 1–Diplomatic relations are established between the USA and China. 1979 Feb. 17–In retaliation for Vietnam's invasion of Cambodia and alleged persecution of ethnic Chinese in Vietnam, China attacks 4 Vietnamese border provinces and heavy border fighting ensues.

1981 Jan. 25–In a continuing "reassessment" of the policies of Mao Zedong, Mao's widow, Jiang Quing, and other Gang of Four members are convicted of "committing crimes during the Cultural Revolution." By the mid-1980s, China's new leadership under the pragmatists Deng Xiaoping and Zhao Ziyang has introduced decentralized decision-making, material incentives, specialization by household and production region, and greater dependence upon international trade. This is a move from rigid central planning toward market-oriented socialism. 1989 May 4–Some 100,000 students and workers stage a march in Beijing to demand democratic reforms. The demonstrations continue during a visit to Beijing by Soviet leader Mikhail Gorbachev on May 15-18. This was the first Sino-Soviet summit since 1959. A million people gather in Beijing to demand democratic reforms and the removal of Deng and other leaders. There are protests in at least 20 other Chinese cities, Martial law is imposed May 20 but is mostly ignored by the protesters. 1989 June 3-4–Chinese army tanks and personnel carriers attack Tiananmen Square, outside the Great Hall of the People, which is the main scene of the demonstrations and hunger strikes. According to the *World Almanac* (1997), an estimated 5,000 students and workers are killed, 10,000 injured, and hundreds arrested.

1997 Sept. 19–Jiang Zemin (who was mayor of Shanghai in 1989) emerges as the most powerful political figure in China. He is reelected president of the Communist Part for another 5 years. His political allies also win powerful positions during this week's party congress. His main rival is gone from the powerful 7-man Politburo Standing Committee. Most significant is the promotion to No. 3 in the Party of Ju Rong-ji, China's economic leader and strategist, who is known to be hard on corruption. He will probably become the country's next prime minister when Li Pung retires in March 1998. Like Jiang, Ju Rong-ji is from Shanghai; he was closely associated with the renaissance of that city. To him will lie the tasks of implementing Jiang's ambitions plans to sell off or shut down vast amounts of the country's state-owned firms. Chinese people feel good about the new leadership, and their ability to deal with the challenges ahead. Thus reform in China continues to be economic, but not yet political. The leadership is centrist, with almost no opposition from the left or right. China sits atop two massive contradictions and questions: (1) Is it a communist economy moving toward capitalism? To whom will it sell the state-owned industries and how? (2) Is it an authoritarian political system moving toward democracy?

11479. *SoyaScan Notes.* 2014. The visionary work of Henry Ford and his researchers with soyfoods–then and now: Popularized the use of soybeans as foods in America (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Before Henry Ford began his pioneering work with soybeans in the early 1930s, most American consumers and farmers thought their only use was as feed for animals. Ford and his researchers and chefs played a major role in developing a remarkable variety of tasty and nutritious American-style foods from soybeans, and in publicizing these foods and their health benefits nationwide.

Prior to 1934 (according to records in the SoyaScan database) only about 188 commercial soyfood products had been introduced in America. Of these, 78 had been launched in the Hawaiian Islands, so only 110 had been introduced on the American mainland. Of these 110, at least 46 were made by Asian-American companies primarily for Asian-Americans (such as Chinese-Americans, Japanese-Americans, etc.). Thus only 70 products were made by Caucasian-American companies, and, of these, 27 products were made by Seventh-day Adventist companies and sold mostly to other Seventh-day Adventists. In short, between 1766-1767 (When Samuel Bowen launched America's first two commercial soy products–Soy-based Vermicelli Noodles and Bowen's Patent Soy [Sauce]) and 1934, only 43 commercial soy products had been introduced by Caucasian-American companies, not including Seventh-day Adventists.

Henry Ford's ideas about introducing American-style soyfoods took their first clear form on August 13, 1934, when he presented an all-soy gala dinner banquet for the American media at the immensely popular Ford Exhibit in the Century of Progress World's Fair in Chicago, Illinois. Note first that he chose a world-class event to introduce

© Copyright Soyinfo Center 2014

the little-known Cinderella crop. Now listen to the names of dishes on the menu: "Tomato juice seasoned with soy bean sauce. Salted soy beans. Celery stuffed with soy bean cheese [tofu]. Puree of soy bean. Soy bean cracker. Soy bean croquettes with tomato sauce. Buttered green soy beans. Pineapple ring with soy bean cheese [tofu] and soy bean dressing. Soy bean bread with soy bean relish. Soy bean biscuit with soy bean butter. Apple pie (soy bean crust). Cocoa with soy bean milk. Soy bean coffee. Assorted soy bean cookies. Soy bean cakes. Assorted soy bean candy."

This menu represented a fresh, new vision of soyfoods in America! Note the creative use of tofu in a pineapple ring and as a celery stuffing, and of soymilk with cocoa.

But this was just the beginning. By Aug. 1935 Ford was serving soy ice cream for dessert at VIP and press luncheons held at the Ford Engineering Laboratory. In about 1936 Ford's Edison Institute published a 19-page booklet titled "Recipes for Soy Bean Foods," which contained 58 innovative American-style preparations including: Soy bran bread. Cinnamon buns. Muffins (for diabetic patients). Waffles (with soy flour). Scalloped green soy beans. Omelette (with tofu). Salad soy bean sprouts. Gingerbread. Honey soy bean ice box cookies. Macaroons. Coconut balls (with chopped soynuts). Lady fingers. Soy bean chocolate bars. Apple sauce cake. Doughnuts. Soy bean custard (with soymilk).

In 1938, when Ford researcher Bob Smith invented a new and greatly improved type of soymilk (based on soy protein isolates), Ford and his researchers focused on developing new dairylike products based on this soymilk, including a non-dairy whipped cream, and an improved soy ice cream. The soymilk itself was widely served at Ford institutions in and around Dearborn, Michigan.

Indeed a strong case can be made that Henry Ford and his coworkers played the leading pioneer role in developing American-style soyfoods and introducing them in a big way to America. In so doing, they set the stage for the rapid rise of soyfoods consumption among typical Americans that began in a small way during World War II, and in a big way starting in the 1970s and continuing into the 1990s.

11480. *SoyaScan Notes.* 2014. The visionary work of Henry Ford and his researchers with soyfoods–then and now: Developed spun soy protein fibers to replace wool and fur in auto upholstery, felt hats, and other non-food industrial products (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** The first textile filament spun from a protein derived from a plant/vegetable source (specifically from soybeans) was developed by Ryohei Inouye of Japan. On 5 March 1938 he received the Fuji prize award for his discovery. At about this same time, the same product was being developed by Robert Boyer and William T. Atkinson at the Ford Motor Co. In April 1938 Boyer displayed his first soy fiber (for use in auto upholstery) at the Fourth Annual Conference of the Farm Chemurgic Council, in Omaha, Nebraska. The earliest article seen on Boyer's soy fiber appeared in *Science News Letter* on 7 May 1938. Boyer and Atkinson applied for the first U.S. patent for industrial (non-edible) spun soy protein fibers in June 1941; it was issued in June 1945 (No. 2,377,854).

In early 1942 the Ford Motor Co. began operation of a pilot plant at Highland Park, Michigan, that produced 1,000 pounds per day of soybean "wool," a synthetic fiber, at less than half the cost of sheep's wool. Soon a fabric containing 25% soybean wool and 75% sheep's wool was used in the sidewall of some cars used by Ford company employees. And Henry Ford began sporting a suit made of soybean fiber on special media occasions.

In November 1943, under pressure to produce machinery for World War II, Ford sold its entire soy protein and soybean fiber spinning operations to The Drackett Co. of Cincinnati, Ohio. On 2 Dec. 1943 Drackett began commercial production of Soybean Azlon, the world's first commercial fiber made from plant proteins. The fibers were used mainly in felt hats by the American Hat Corporation.

11481. *SoyaScan Notes.* 2014. Historical research on the dissemination of the soybeans worldwide: Wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** In the record titled "Countries, overseas dependencies, and Canadian provinces in which we have no record of soya ever having been cultivated (Overview)," try to find when and where soybeans were first cultivated in each of these geographical areas.

Africa: In 1873 Prof. F. Haberlandt obtained soybeans from Tunisia. What was his source? When, how and from where were these soybeans first introduced to Tunisia?

Asia–Central: In 1873 Prof. F. Haberlandt obtained soybeans from Transcaucasia. What was his source?–Perhaps the Republic of Georgia. When, how and from where were these soybeans first introduced to Transcaucasia. Clarify when and where soybeans were first cultivated in the Republic of Georgia (before 1911, maybe before 1873), and in Kazakhstan (before 1940), and in general in Transcaucasia. Learn more about the work of G. Sturua with soybeans.

Canada–The story of the arrival of the soybean in Canada between 1855 and 1894 needs to be researched. There must be some early records, similar to those from the Commissioner of Patents.

Europe–Western: Make a good translation of F. Haberlandt's 1878 classic *Die Sojabohne*, accompanied by 2 maps of the places in Europe where Haberlandt and his cooperators grew soybeans (one of the area in 1878 and one now; travel in Eastern Europe to get these) and a database for making a good overview: What kind of people tested

© Copyright Soyinfo Center 2014

the soybeans? (Gutsbesitzer, Freiherr, Schloss-gaertner, agricultural institutions, etc.). Who got the best yields and where? In Aug. 1878 Prof. Friedrich Haberlandt wrote: "In Tirol [Tyrol, Austria] the soybean is called the Coffee Bean (*Kaffebohne*) and used to prepare a coffee substitute." When and how were these soybeans introduced to Tirol?

Europe–Eastern: Write a biography of Mr. Ovsinskii (Also spelled Ovsinski, Owinsky, Ovinsky) of Podolia, Ukraine (See Sempolowsky 1900) who traveled to Asia, introduced soybeans to Russia, was the first man in Russia to grow and test them extensively, then publicize their many virtues.

USA: Write a good history (with a good bibliography) of Chinese growing and processing soybeans in California. They must have grown them between 1849 and 1899! Likewise with Japanese growing soybeans in California.

11482. *SoyaScan Notes.* 2014. Definition of the green vegetable soybeans and edamamé (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Green vegetable soybeans are called edamamé (pronounced ay-dah-MAH-may) in Japan and at some Japanese-American food stores and restaurants. are harvested at the fresh green stage, slightly before they mature and dry. In East Asia, the entire soybean plant is often uprooted at this stage, tied into a bundle, and sold with the green soybeans in their pods attached to the plant. Removed from the plants, the pods are usually boiled in lightly salted water for 15-20 minutes, then allowed to cool, and served in the pods as a snack or an hors d'oeuvre. To enjoy, push the beans with your fingertips from the pods into your mouth. Discard the pods. Like potato chips, these nutritious little morsels are positively addicting. In July or August, any American soybean farmer can easily enjoy green vegetable soybeans served in this way.

Green vegetable soybeans contain more protein than any other fresh vegetable; they are also an excellent source of dietary fiber and an easy way to add the benefits of soy to typical American diets.

Traditionally in East Asia, and increasingly in America, green vegetable soybeans are grown from what are called "vegetable-type" or "food-grade" soybeans, which have an East-Asian pedigree and are larger seeded and better tasting than typical "commercial" soybeans that have been bred as a source of soybean oil and meal.

Green vegetable soybeans are now more and more widely available in America, and especially in California, Hawaii, and Minnesota. Look for them at supermarkets (usually in the produce section), Asian-American food stores, natural food stores, and Trader Joe's. In California and Hawaii, the most popular brand, from Yamato, is sold at many supermarkets and natural and Asian food stores, precooked, in the pods, and ready to eat. Edamamé are also sold frozen in three different forms: Shelled, in the pods, or mixed with other vegetables (such as baby broccoli), in the frozen vegetable section of supermarkets. Address: Soyfoods Center.

11483. *SoyaScan Notes.* 2014. Definition of the yuba (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Yuba is the film that forms atop soymilk when it is heated. If you have ever simmered a pot of milk over very low heat or set a bowl of hot milk aside to cool, you have no doubt noticed the thin, delicate film that soon forms on the milk's surface. The longer it is allowed to set, the firmer and thicker it becomes. And if you have ever tried lifting this film off and tasting it, you may have found it to be soft, warm, and delicious.

In the same way, if fairly thick soymilk is gently heated in shallow open pans at 80-90ºC, a cream-yellow, bland flavored film gradually forms on its surface. The films are successively removed from the soymilk surface using a long skewer or chopstick, and hung up on the skewer in racks to dry. Each successive film becomes a little thicker and sweeter than the one before it. In Japan, this delicacy is called yuba. In China, it is called *tofu p'i* or *fuzhu.* In Chinese restaurants it is often called "bean curd skin." Scientists sometimes refer to it as a "protein-lipid film."

Fine-quality yuba has been made in America (Los Angeles, California, area) by one company since Feb. 1982. It is sold there in three forms: Fresh frozen sheets, half-dried sheets, and dried sticks. These products are sold mostly to Chinese restaurants. A large amount of dried yuba, in many different shapes, is also imported to America from East Asia and sold at Asian-American food stores. The dried yuba sheets may also be named bean curd skin, bean curd sheets, or dried bean curd. The twisted u-shaped rolls may be labeled dried yuba sticks or rolls, bamboo yuba, or bean curd sticks. The sweet bottom yuba is called tien chu in Mandarin Chinese, tiem jook in Cantonese, and ama-yuba in Japanese.

Yuba is most widely used as a wrapper for other foods. However small amounts can be added to soups or stir fries, and fresh yuba can be pressed into molds and steamed to make chewy, tasty meatlike products. Deep-fried yuba makes delicious, crisp and crunchy protein-rich chips–which some people prefer to potato chips. Address: Soyfoods Center.

11484. *SoyaScan Notes.* 2014. Chronology of soymilk worldwide–1950 to present. Part II. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1950's–Soymilk enters the modern era as it begins to be marketed in bottles like soft drinks, largely due to work by K.S. Lo of Vitasoy in Hong Kong and Yeo Hiap Seng in Singapore.

1957–Japan's first commercial soymilk, sold in bottles, named *Tônyû*, is introduced by the Ueda Tofu Shop in Hachioji, Tokyo. Dr. Harry Miller was the inspiration for and

© Copyright Soyinfo Center 2014

helped to establish the shop.

1960s–In Japan, soymilk slowly increases in popularity. New manufacturers are: Nihon Tanpaku Kogyo (1962). College Health Foods (later renamed San-iku Foods) in Chiba prefecture with its Soyalac (1969, also inspired and aided by Dr. Harry Miller). Luppy Tanpaku (House Shokuhin) in Saitama prefecture with its Luppy soymilk (1969).

1965–ProSobee, the world's earliest known non-dairy infant formula based on soy protein isolates, is launched by Mead Johnson & Co. of Evansville, Indiana.

1966–The enzyme lipoxygenase is discovered by scientists at Cornell University [Ithaca, New York] to be responsible for the "beany" flavor in soymilk. A process is developed which could be used to help eliminate this flavor.

1967–Soymilk begins to be packaged aseptically in Tetra Pak cartons. This allows it to be sold without refrigeration for six months or more. The first such product was Beanvit, made by Yeo Hiap Seng Ltd. in Singapore and packaged in a disposable tetrahedron-shaped container.

1970's and 1980's–Soymilk becomes a popular beverage throughout Asia, spreading to Europe, Australia and the United States.

1979–Hong Kong Soya Bean Products Co. Ltd. starts to export Vitasoy, packed in Tetra Brik cartons, to selected countries throughout the world. By the early 1980s exports were going to over 20 countries, both developed and developing. Exports to the USA began in 1980. 1980 Jan.–DE-VAU-GE Gesundkostwerk, a Seventh-day Adventist food company near Hamburg, Germany, launches GranoVita Soja Drink in 500 ml Tetra Brik cartons; this soymilk product is made by N.V. Vandemoortele (one of Europe's largest oilseed crushers, founded in 1934) in Izegem, Belgium.

1980 June–N.V. Alpro is founded by Vandemoortele to take over production of this soymilk. Inspired and headed by Philippe Vandemoortele, Alpro purchased the land on which it was located from Vandemoortele, and became an independent manufacturer. Alpro quickly became Europe's leading producer of soymilk, making private-label brands for scores of companies.

1983 July–Edensoy brand soymilk is launched by Eden Foods of Clinton, Michigan. Imported from Japan (where it is made by Marusan-Ai Co.), it is sold in plain and carob flavors in stand-up foil retort pouches.

1984 Feb.–The first comprehensive study of the soymilk market in the U.S. is published by Soyfoods Center of Lafayette, California. It estimates that total soymilk consumption in the U.S. in 1983 (not including soy-based infant formulas) was 2.68 million gallons (26% of this was imported), and total production of soy-based infant formulas was 32 million gallons.

1984 Aug.–Westsoy Natural brand soymilk is launched by Westbrae Natural Foods of Emeryville, California. Imported from Japan (where it is made by San-Iku Foods), it is sold in one flavor in standup foil retort pouches.

1984 Oct.–Westbrae Natural Malted's, a thick soymilk resembling a milk shake, are launched in many flavors by Westbrae Natural Foods, imported from Japan.

1986 Nov.–Edensoy starts to be made in America by American Soy Products (ASP) at a large, modern plant in Saline, Michigan, and sold in Tetra Brik aseptic cartons. ASP is a joint venture of 4 Japanese companies and Eden Foods.

1988 Nov.–Pacific Foods of Oregon, launches its first soymilk product, Naturally Northwest Soy Beverage [Plain], in a 1-quart Tetra Brik Aseptic carton. The company's new factory is in Tualatin, Oregon.

1990 April–WestSoy Lite, America's first "lite" soymilk, with a low fat content, is introduced in plain, vanilla, and cocoa flavors by Westbrae Natural Foods. Made by adding water to regular soymilk, the product is less expensive to make, but also contains less nutrients.

1990 June–Alpro opens a new soymilk plant at Wevelgem, Belgium. Costing about US$15 million and having a capacity of 45 million liters a year, it is reputed to be the largest in the world. Alpro now makes about 70% of the soymilk in Europe.

1990 Sept. 24–The company name is changed to Vitasoy International Holdings Ltd. from Hong Kong Soya Bean Products Co. Ltd.

1991–There are at least 35 processors or marketers of soymilk in the U.S., increasing production to approximately 9.8 million gallons. Consumption is estimated to be growing at between 15 and 20% per year since 1984.

1993–More than 200 scientific journal articles about soymilk have been published in English, and at least 80 English-language patents on soymilk have been issued between 1912 and 1993.

1994 Jan.–Soy-Um, a low-priced and attractively packaged soymilk, is launched by J&G Inc., a product developer and distributor in Chicago, Illinois. The product is made in Oregon by Pacific Foods.

1995–A market study is published, estimating that $108 million of soymilk was sold in the U.S. in 1994. This equates to approximately 13.5 gallons of soymilk. By 1995 sales are projected to have risen to over $130 million, or approximately 16.3 million gallons.

11485. *SoyaScan Notes.* 2014. Chronology of tofu worldwide–965 A.D. to 1929. Part I. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 965 A.D.–Tofu is first mentioned in China in a document, the *Qing Yilu* (Wade-Giles: *Ch'ing I Lu*) [Anecdotes, Simple and Exotic], by Tao Ku. It states: "In the daily market were several catties of doufu. People of the region called doufu the 'vice mayor's mutton.'" It goes on to tell the story of a vice mayor named Jishu, who was so poor that he couldn't afford to buy mutton. Instead he bought a few pieces of tofu every day and ate them as a side

© Copyright Soyinfo Center 2014

dish with rice. Soon people in the area came to call tofu the "vice mayor's mutton." The story implies that tofu was widely consumed in China in those days and that it was less expensive than mutton.

1183 A.D.–Tofu is first mentioned in Japan in the diary of Hiroshige NAKAOMI, a Shinto priest of the shrine at Nara; the tofu was used as an offering at the shrine's altar.

1489–The word "tofu" is first written in Japan with the characters used today.

1603–The word "tofu" is first mentioned in a European-language (Portuguese) document, *Vocabulario da lingoa de Iapam...* [*Vocabulary of the language of Japan*], the earliest dictionary of the Japanese language compiled by Europeans (Jesuits living in Nagasaki, Japan). Tofu is referred to as *Cabe, Tôfu,* or *Taufu.*

1613–The word tofu is first referred to (though indirectly) for the second time by a Westerner, Captain John Saris, in the log of his trip to Japan. He wrote "Of Cheese [probably tofu] they haue plentie. Butter they make none, neither will they eate any Milke, because they hold it to bee as bloud [blood], nor tame beasts." This is the earliest English-language document that mentions tofu in connection with Japan.

1665–Tofu is first mentioned specifically by a Westerner, Domingo Fernández de Navarrete, in his book *A Collection of Voyages and Travels.* Navarrete, who served as a Dominican missionary in China, wrote: "Before I proceed to the next chapter, because I forgot it in the first book, I will here briefly mention the most usual, common and cheap sort of food all *China* abounds in, and which all men in that empire eat, from the emperor to the meanest *Chinese,* the emperor and great men as a dainty, the common sort as necessary sustenance. It is call'd *teu fu,* that is, paste of kidney-beans. I did not see how they made it. They draw the milk out of the kidney-beans, and turning it, make great cakes of it like cheeses, as big as a large sieve, and five or six fingers thick. All the mass is as white as the very snow, to look to nothing can be finer. It is eaten raw, but generally boil'd and dressed with herbs, fish, and other things. Alone it is insipid, but very good so dressed and excellent fry'd in butter. They have it also dry'd and smok'd, and mix'd with caraway-seeds, which is best of all. It is incredible what vast quantities of it are consum'd in *China,* and very hard to conceive there should be such abundance of kidney-beans. That *Chinese* who has *teu fu,* herbs and rice, needs no other sustenance to work; and I think there is no body but has it, because they may have a pound (which is above twenty ounces) of it any where for a half-penny. It is a great help in case of want, and is good for carriage. It has one good quality, which is, that it causes the different airs and seasons, which in that vast region vary much, to make no alteration in the body, and therefore they that travel from one province to another make use of it. *Teu fu* is one of the most remarkable things in *China,* there are many will leave pullets for it. If I am not deceiv'd, the *Chineses* of *Manila* [Philippines] make it, but no *European* eats it, which is perhaps because they have not tasted it, no more than they do fritters fry'd in oil of *Ajonjoli* ([sesame seed] a very small seed they have in *Spain* and *India,* which we have not) which the *Chineses* make in that city and is an extraordinary dainty."

1704–Friar Domingo Navarrete's book is published in English. This is the earliest English-language document that mentions tofu in connection with China.

1770 Jan. 3–James Flint in Capringe writes Benjamin Franklin in London (in response to an inquiry from Franklin) a detailed description of how the "Chinese convert Callivances into Towfu" (soybeans into tofu).

1770 Jan. 11–The earliest document seen in which an American mentions tofu is a letter written by the famous Benjamin Franklin (who was in London) to John Bartram in Philadelphia, Pennsylvania. He sent Bartram some soybeans (which he called "Chinese caravances") and with them he sent "Father Navarrete's account of the universal use of a cheese made of them in China, which so excited my curiosity, that I caused enquiry to be made of Mr. [James] Flint, who lived many years there, in what manner the cheese was made, and I send you his answer. I have since learned that some runnings of salt (I suppose runnet) is put into water, when the meal is in it, to turn it to curds."

1821–The second earliest reference seen to tofu in America, and the first to be published in the USA, appeared when A.F.M. Willich of Philadelphia mentioned it in *The Domestic Encyclopedia.* Speaking of soybeans (which he called "the seeds of the Chinese plant *Dolichos soja"*), he wrote: These *seeds* are used in China and Japan as food; they are made into a kind of jelly or curd, which is esteemed very nutritious, and which is rendered palatable by seasonings of different kinds."

1870 Dec.–The term "Bean curd" is first used by Emil V. Bretschneider, writing in English in the *Chinese Recorder and Missionary Journal* (Foochow, p. 173). He said: "Bean-curd is one of the most important articles of food in China." Then he gave an accurate description of how it was made.

1880–Tofu is first made in Europe by Paillieux, in France, for the Society for Acclimatization (but not on a commercial scale).

1878–The earliest tofu company in the USA, Wo Sing & Co., is in business at 708½ Dupont St. in San Francisco, making both fermented and regular tofu.

1895–Hirata & Co. in Sacramento, California, the earliest known Japanese-American company in the USA, starts making tofu.

1896 June–Tofu first appears in print in an American scientific journal (*American Journal of Pharmacy*), in an article by Henry Trimble, a pharmacist, titled "Recent Literature on the Soja Bean."

1906–Quong Hop & Co., the oldest existing tofu maker in America today, starts making tofu in San Francisco,

© Copyright Soyinfo Center 2014

California.

1910–Europe's first commercial soyfoods manufacturer, named *Caséo-Sojaïne,* is founded by Li Yu-ying, a Chinese citizen, biologist and engineer, at 46-48 Rue Denis Papin, Les Vallées, Colombes (near Asnières), a few miles northwest of Paris. By May 1911 he was making and selling tofu, and by August 1911 he had added smoked tofu, pressed tofu sheets, fermented tofu cheese (in Gruyere, Roquefort, and Camembert flavors), and soymilk.

1923–The two oldest existing Japanese-American tofu companies (House Foods & Yamauchi Inc. of Los Angeles and Aala Tofu Co. of Honolulu) are founded in Hawaii. They both began as H. Iwanaga Daufu at 1031 Aala St. in Honolulu. In 1926 the company was renamed Shoshiro Kanehori Tofu, and in 1937 Haruko Uyeda Tofu, still at the same address. In about 1939 the company was purchased by Mr. and Mrs. Shokin Yamauchi, who later renamed it Aala Tofu Co. Their son, Shoan Yamauchi, made tofu at the family company until 1946, when he went to Los Angeles, purchased the Hinode Tofu Co., and began making tofu there in 1947. After becoming Matsuda-Hinode Tofu Co. in 1963, the company was renamed House Foods & Yamauchi Inc. in 1983.

1929 Nov.–T.A. Van Gundy, a Seventh-day Adventist and founder of La Sierra Industries in Arlington, California (near Riverside), becomes the first Westerner to make tofu commercially when he introduces La Sierra Soya Cheese. This tofu was canned and pimiento was added to prevent graying after canning. Continued.

11486. *SoyaScan Notes.* 2014. Chronology of tofu worldwide–1930 to present. Part II. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1930s early–Azumaya Tofu Seizo-sho (later renamed Azumaya Co.) starts making tofu, *yaki-dofu* (grilled tofu), and *ganmodoki* (fried tofu patties) in San Francisco at 1636 Post St. between Buchanan and Laguna streets. The company is owned by Mr. Teranishi, who may have started it as early as the early 1920s. In Feb. 1937 it was sold to George and Jack Mizono, and their mother and father (Saichi Mizono).

1932, Dec.–Madison Foods, part of Madison College in Madison, Tennessee, was making Soy Cheese, then by 1939 they had launched Cheze-O-Soy (seasoned tofu), and by 1940 they were making a canned tofu bologna named Yum.

1934–By this year Loma Linda Food Co. (Adventist) in Loma Linda, California, was making Loma Linda Vege-Cheese (canned tofu with pimiento).

1942 Sept.–Dr. Harry Miller, a Seventh-day Adventist doctor who had worked for many years in China as a medical missionary, begins making Miller's Soya Cheese (tofu) at Mt. Vernon, Ohio.

1944 Sept.–Butler Food Co. in Cedar Lake, Michigan, introduces Butler's Soynut Cheese. Note that the first five Caucasian-run tofu companies in the Western World were all founded and run by Seventh-day Adventists. Note also that each of these five Seventh-day Adventist tofu products used the word "cheese" in the name and that each was canned. 1957 Aug.–Shizuka Hayashi, head of the Japanese-American Soybean Institute in Tokyo, publishes (in *Soybean Digest*) the earliest English-language statistics on tofu in Japan. "There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day." In 1957 Japan will use somewhere between 160,000 and 308,000 tons of soybeans to make tofu.

1958–The world's first packaged tofu is sold in Los Angeles, California, by Matsuda Hinode Tofu Co. Mr. Shoan Yamauchi, owner, conceived of the idea of putting individual cakes of tofu each in a plastic bag with water, sealing the bag with a heat sealer, placing the bag in a stiff paper deli carton with a wire handle, then folding over the top. The process was labor intensive. This happened at about the same time that a letter from journalist George Yoshinaga had led the city to pass a new regulation requiring tofu to be packaged in individual containers.

1958–Tofu is first sold in a U.S. supermarket–Boy's Market supermarket chain (which had about 12 stores at the time) in Los Angeles. The tofu was sold in individual packages (see above) and made by Matsuda Hinode Tofu Co., whose owner, Mr. Shoan Yamauchi was responsible for this major innovation, and for seeing the mainstream potential of tofu.

1965–The Library of Congress establishes the subject heading "Tofu" as the official name for that food in cataloging books for libraries across America. However, in the mid-1970's disputes arose there about the proper form of romanization of that term. The dispute was resolved by the decision to use the common English term "Bean Curd" instead.

1966–Tofu is first packaged in plastic trays/tubs, the type so widely used today. Again, Mr. Yamauchi conceived of the idea. He went to the Sealright Company in Los Angeles that made Sealright trays and asked them to make a waterproof plastic tray for his tofu. Mr. Yamauchi created three specific early innovations in tray packaging: (1) A very deep tray, holding 26-28 ounces; (2) A method for heat sealing a plastic film to the flange of a tray which had cold water flooding over the flange; (3) High-speed sealing machines to pack and seal the tofu in his plant.

1975 March–Alec Evans, owner of first of the new breed of Caucasian-run tofu shops, starts to make "Tofu" in Corvallis, Oregon. His Welcome Home Bakery and Tofu Shop is the sixth Caucasian-run tofu company in America.

1975 Dec.–*The Book of Tofu,* by Shurtleff and Aoyagi, is published by Autumn Press. This book, which had sold about 550,000 copies by 1997, played a major role in introducing

© Copyright Soyinfo Center 2014

tofu to the Western World.

1977 Aug.–Takai Tofu & Soymilk Equipment Co. publishes its first English-language equipment catalog, which helps many American and European tofu shops to get started.

1977 Sept.–White Wave, owned by Steve Demos, starts making tofu at 1738 Pearl St., in Boulder, Colorado.

1977–Morinaga Milk Industry Co., Ltd. in Japan introduces the world's first aseptically packaged tofu in a Tetra Brik carton. It is named "Morinaga brand Tofu. Soybean Curd." In 1978 the name was changed to "Morinaga brand Ever-Fresh Silken Tofu."

1977–Swan Foods Corporation, owned by Robert Brooks and Mary Pung, starts making "Tofu–Organic" at The Soybeanery, 5758½ Bird Rd., Miami, Florida. This is the first tofu in the Western World labeled "Organic." Swan Foods is also the first American company to make a wide variety of soyfoods, and the first to open a soy deli–which had a take-out menu.

1978 April–Nasoya Foods, owned by John Paino and Bob Bergwall, starts making Nasoya Organic Tofu (water pack) at Mechanic Street Exit, Leominster, Massachusetts.

1978 Dec.–*The Book of Tofu,* by Shurtleff and Aoyagi, is published by Ballantine Books in a mass-market edition that retails for $2.95.

1979 July–*Tofu & Soymilk Production,* by Shurtleff and Aoyagi, is published by Soyfoods Center in California. This book is used to start hundreds of tofu manufacturing companies throughout the Western World and in some Third World countries.

1982 April–There are 242 tofu manufacturers in the Western World, including 173 in the United States.

1985 June–The Library of Congress decides to change its subject heading from "Bean curd" back to "Tofu." This, perhaps more than any other single thing, makes the word tofu "official."

1983–House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1989 Dec.–Sixty-five books (each more than 48 pages long) on tofu have been published in the Western World since 1970. Each one has the word "tofu" or its equivalent in the title. Forty of these books were published in the United States, 6 in Canada, 5 in Switzerland, 5 in Japan (but written in English for sale primarily outside of Japan), 3 in West Germany, 3 in France (but 2 of these were published simultaneously and primarily in Quebec, Canada), 2 in England, and 1 each in Italy, Sweden, and Brazil.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy) acquires Nasoya Foods of Leominster, Massachusetts.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California for an estimated $4-$5 million.

1993–House Foods Corp. of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is renamed House Foods American Corporation.

1997 March 12–House Foods America Corporation holds the opening ceremony for America's largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles.

11487. *SoyaScan Notes.* 2014. Chronology of Charles Christian Georgeson (1851-1931) of Kansas and Alaska. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1851 June 26–Born in Denmark on the island of Langeland. 1872–Emigrated to the USA. 1878–Graduated from Michigan Agricultural College with a B.Sc. degree. 1878-1880–Associate editor for the *Rural New Yorker* of New York City. 1880 fall–Chosen professor of agriculture and horticulture at the Texas Agricultural and Mechanical College. 1882–Received an MSc degree from the same College. 1885–Invited to teach in Japan. 1886-1889–From early 1886 to late 1889 he is employed by the Japanese government for 4 years as Professor of Agriculture at the Imperial College of Agriculture and Dendrology at Komaba, near Tokyo, Japan. 1887 Dec. Publishes "Fertilizer Experiments with Rice," which is *Bulletin of the College of Agriculture, Tokyo Imperial University* No. 1. 1889 fall–He returns to the United States. Very shortly thereafter he is offered the position of professor of agriculture in the Kansas Agricultural College at Manhattan, Kansas. 1890 Jan.–He accepts the offer and remains at the college for nearly 8 years until Sept. 1897, when the final dispersion of the old faculty took place at the hands of the Populist party. 1890 April–He receives a considerable consignment of seeds directly from Japan for experimental trial in Kansas. Among these seeds are three varieties of soya beans (including one later identified as the famous Ito San) and one or two varieties of adzuki beans. 1890 June 7–Writes his first article, titled "Farm Notes," that mentions soya beans in *The Industrialist* (Manhattan, Kansas). He reports that he grew both his Japanese and American ("home-grown") soybeans. "In all cases we find that home-grown seed has given us the best stand."

1890 Dec.–Writes his first article about testing azuki beans in Kansas. 1893 Jan.–Sent to Europe by the U.S. Secretary of Agriculture to investigate the thriving dairy industry in Denmark. 1898 March–Appointed special agent in Charge of the Alaska agricultural investigations, and at once started for Sitka, Alaska.

1925 Jan.–Publishes the earliest document seen about soybeans in Alaska or the cultivation of soybeans in Alaska. It appears in "Report of the Agronomist in Charge," *Alaska Agric. Exp. Stations, Annual Report.* The soybean varieties Mandarin and Pekin [Peking] were planted on 15 May 1923

© Copyright Soyinfo Center 2014

for use as silage.

1927–He retires. 1931 April 1–Dies at his home in Seattle, Washington. He is nearly 80 years of age.

11488. *SoyaScan Notes.* 2014. Chronology of miso and soybean chiang. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1st century B.C.–Soybean chiang is first mentioned in China in the *Shih chi* [*Historical records*] by Ssu-ma Ch'ien, and in the *Chi chiu p'ien* [*Primer on addressing matters*], by Shih Yu.

535 A.D.–The *Ch'i min yao shu* in China gives the first detailed descriptions of making soybean chiang–and other soyfoods.

701–Soybean hishio, miso, and fermented black soybeans start to be made in Japan by the *Hishio Tsukasa,* a government bureau. References to these seasonings are found in documents published between 730 and 748.

901-08–The modern word for *miso* first appears in Japan in the *Sandai Jitsuroku.*

927–The *Engi Shiki* gives the first details about the production of soybean hishio-miso in Japan.

1597–Miso is first mentioned by a Westerner, the Florentine Francesco Carletti; he calls it *misol.*

1712–Englebert Kaempfer, a German who lived in Japan, is the first European to give detailed descriptions of how miso and shoyu are made in Japan. Also mentions koji.

1727–Miso is first mentioned in an English-language publications, *The History of Japan,* by E. Kaempfer. He spells it *"Midsu,* a mealy Pap, which they dress their Victuals withal, as we do butter."

1779–The word "miso" ("that is used as butter") first appears in an English-language publication, the *Encyclopaedia Britannica.* 1847–The word "miso" first appears in print in the United States, in a letter from T.W.H. of Cambridge, Massachusetts, to the *Farmers' Cabinet and Herd Book.*

1908–Miso is first made commercially in the continental United States by the Fujimoto Co. of San Francisco, California. Brand name: Kanemasa Miso.

1921–The term "bean paste" is first used to refer to miso by J.L. North of England in the *Illustrated London News.*

1929–Amano Brothers, Canada's first commercial miso maker, starts in Vancouver, British Columbia. Founder: Mr. Teiichi Amano. 1960–Dr. C.W. Hesseltine and K. Shibasaki, of the Northern Regional Research Laboratory in Peoria, Illinois, publish the first of many important scientific articles on miso.

1963–Michio and Aveline Kushi, teachers of macrobiotics in Boston, start to teach Americans about miso.

1966 April–Aveline Kushi (with Evan Root) starts Erewhon, a pioneering retailer in Boston, that soon starts selling miso.

1968–Erewhon expands to become an importer and distributor of natural and macrobiotic food. Their first two misos, Mugi Miso and Hacho Miso, are imported from Japan.

1976 June–Miyako Oriental Foods, a division of Yamajirushi Miso Co. in Japan, starts making miso in Los Angeles. Owned by Noritoshi Kanai. Brands: Yamajirushi, Kanemasa, Yamaizumi.

1976 Sept.–*The Book of Miso,* by Shurtleff and Aoyagi, is published by Autumn Press of Hayama, Japan. This is the first book about miso in the Western world.

1978 Oct.–The Ohio Miso Co., the first Caucasian-run miso company in the Western world, is founded by Thom Leonard and Richard Kluding. They begin miso production on 13 March 1979.

1978 Nov.–Joel Dee of Edward & Sons (New Jersey) launches Natural Instant Miso Cup, an instant miso soup made with freeze-dried miso from Japan.

1978 Dec.–Miyako Oriental Foods of Los Angeles introduces Cold Mountain Firm Granular Rice Koji, the first koji sold commercially in the USA. In 1979 they start selling Cold Mountain Miso, the first miso with an American-style brand.

1979 Oct.–John and Jan Belleme arrive in Japan to study traditional miso–and koji-making with the Onozaki family in Yaita, Japan. They are the first Caucasians to do this, and then to return to the West to start making miso commercially. From 1981 on they write many superb articles about miso, published in America.

1979 April–Shin-Mei-Do Miso is founded by Lulu and Yasuo Yoshihara in British Columbia, Canada.

1981 April–John Troy of Elf Works, Ltd. in Chapel Hill, North Carolina, launches Hot Stuff, an early and very successful American miso product. He first learned about miso from Joel Dee.

1981 Aug.–John and Jan Belleme begin full-time, large-scale production of miso and koji at Erewhon Miso Co. in Rutherfordton, North Carolina. By early 1982 their company is renamed American Miso Co. with Barry Evans as the new owner.

1982 Oct. 25–Christian and Gaella Elwell start making miso and koji at South River Miso Co. in Conway, Massachusetts. Earlier that year they purchased The Ohio Miso Co. Address: Lafayette, California. Phone: 925-283-2991.

11489. *SoyaScan Notes.* 2014. Chronology of green vegetable soybeans and edamamé (incl. maodou) worldwide–A.D. 1275 to 1939. Part I. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** First a few basic definitions: (1) "Vegetable-type soybeans" refers to certain large-seeded soybean varieties developed for use as a vegetable crop. (2) "Green vegetable soybeans" refers to vegetable-type soybeans harvested at the green stage for use as a vegetable. The beans can be

© Copyright Soyinfo Center 2014

cooked and served in or out of the pods. (3) "Edamamé" is the Japanese term for green vegetable soybeans cooked and served in the pods, often as a snack–like peanuts in the shell. The green beans are popped out of the pods directly into the mouth of the person eating them.

Before 7th century BC–The *Shijing* (*Book of Odes*) is China's earliest classic and the earliest document seen worldwide that mentions the soybean, which it calls *shu.* It does not mention green vegetable soybeans. Zheng Xuan (Wade-Giles: Chêng Hsüan), the most important commentator of the 2nd century AD, confirms that *shu* refers to the soybean and that soybean leaves, called *huo,* can be pickled–presumably when green, then presumably eaten.

AD 100–The term *Sheng dadou* [Chinese characters: raw / fresh + large + bean] appears in both *Shennong bencao jing* (*Classical pharmacopoeia of Shen Nung*) and later (about AD 450-500) in the *Mingyi bielu* (*A critical record of famous doctors. A materia medica*). However a careful analysis of the context by a Chinese scholar who is an expert in the history of Chinese foods and of soybeans (H.T. Huang, PhD) indicates that this term refers to raw soybeans rather than fresh green soybeans. Therefore, surprisingly, we know of no early reference to green vegetable soybeans in China.

1275 July 26–The word "edamamé" first appears in Japan when the well-known Buddhist saint Nichiren Shônin writes a note thanking a parishioner for the edamamé he left at the temple. In: In: *Nichiren Shonin Gosho Zenshu* (*The Collected Writings of Saint Nichiren*).

1406–The Ming dynasty famine herbal titled *Jihuang bencao,* by Zhu Xiao is the earliest Chinese document seen that describes: (1) eating the tender leaves of soybean seedlings (*doumiao*)*;* (2) eating the whole pods of young soybeans, (3) eating green vegetable soybeans; (4) or grinding the green beans for use with flour. The last three uses are recommended for times of famine only.

1620–*Maodou* (Chinese characters: hairy + bean) are first mentioned in the *Runan pushi* [*An account of the vegetable gardens at Runan*], by Zhou Wenhua. "*Maodou* has green, hairy pods. It is also called *qingdou* ('green beans).' It is mentioned in the *Bencao* [materia medica] literature [we are not told which book], which states that it has a sweet flavor, is neutral, and nontoxic. It can be used medicinally mainly to 'kill bad / evil chi.' It stops bodily pain, eliminates water [reduces edema], dispels heat in the stomach, reduces bad blood, and is an antidote to poisonous drugs... Boil the beans in the pods until done, then remove the beans from the pods and eat them. The flavor will be sweet and fresh. Or you can remove the beans from the pods before cooking, then cook the beans in lightly salted water. Or the beans can be placed on a metal screen over a charcoal fire to roast or dry them... They can be served with tea or fruits, as a snack." This is also the earliest document seen that gives medicinal uses for green vegetable soybeans.

1855 April 12–T.V. Peticolas of Mount Carmel, Ohio, is the first Westerner to mention green vegetable soybeans. In an article on soybeans in the *Country Gentleman* (p. 12) he writes: "They are inconvenient to use green, being so difficult to hull."

1856–Only a year later, at least two Americans have apparently figured out how to shell them with ease, and to enjoy them. Thomas Maslin of Virginia writes: "They are fine for table use, either green or dry..." Abram Weaver of Bloomfield, Iowa, praises them in the *Report of the Commissioner of Patents, Agriculture* (p. 256-57). "I had some of them cooked, while green, at their largest size, and found them delicious."

1890 Dec.–The first large-seeded vegetable-type soybean variety arrives in America. Named Edamame, it was introduced from Japan by Charles C. Georgeson, who had been a professor of agriculture in Japan. Other early large-seeded varieties included Easycook (introduced in 1894 from Shandong Province, China) and Hahto (1915, from Wakamatsu, Japan).

1915 Jan.–William J. Morse (of USDA's Office of Forage Crop Investigations), the man most responsible for introducing green vegetable soybeans and vegetable type soybeans to the United States, mentions them for the first time in a USDA special publication titled "Soy beans in the cotton belt": "The green bean when three-fourths to full grown has been found to compare favorably with the butter or Lima bean."

1917–During World War I, USDA researchers conduct cooking tests on many soybean varieties in search of an inexpensive source of protein that lacks the typical unpleasant beany flavor and will cook quickly. Only two such varieties are found–Hahto and Easy Cook; both are large-seeded. Some progress is made in convincing Americans to eat these varieties–but only as whole dry soybeans.

1923 March–*The Soybean,* by Charles V. Piper and William J. Morse, published by McGraw-Hill (329 p.), is the first major book written about this plant in the United States. It contains a long section titled "Immature or Green Soybeans" (p. 221-22) that includes a description, nutritional analysis, recipe ideas. It also includes the first photograph in a U.S. publication of green vegetable soybeans, showing many cooked, open pods on a white plate. The caption reads: "Seeds and pods of the Hahto variety of soybeans, the seeds being especially valuable as a green vegetable." Between 1915 and 1929 Morse mentioned green vegetable soybeans in more than 20 publications.

1929-32–During the USDA sponsored Dorsett-Morse Expedition to East Asia, William J. Morse (now a soybean expert) and P.H. Dorsett were surprised to learn that: (1) Soybeans are widely "used as a green vegetable" or as "green vegetable beans," served in the pods. (2) The seeds for these soybean varieties are sold by horticultural seed companies, are listed with the garden beans in their seed catalogs, and

© Copyright Soyinfo Center 2014

are larger and sweeter than regular soybeans. On 24 April 1929, while in Tokyo, Dorsett made the first edamamé purchases, seven varieties with "Edamame" in the varietal name from T. Sakata & Co. They eventually collected more than 100 varieties of large-seeded vegetable-type soybeans (other suppliers included Yamato Seed Co. in Tokyo) and had them grown for a year at USDA's Arlington Farm in Virginia. (3) Edamamé account for less than 1% (actually 0.8%) of all the soybeans used in Japan. (4) Green soybeans are salt-pickled in the pod in Hokkaido, the northernmost main island. (5) The soybean seeds are planted at intervals of several weeks in the same field, then, when ready, the plants are uprooted and sold in bundles. On 15 July 1929 Morse wrote: "Saw many plantings of soybeans from just coming up to ready to pull for market. It is extremely interesting to note how they are planted for succession. We saw many plantings of beans ready for pulling for market with rows interplanted as seedlings or transplants just coming into bloom." Near Tokyo, three crops of vegetable soybeans are grown during the season–early, medium and late season. The 8,000-page typewritten report is interspersed with many photos of green vegetable soybeans at various stages from the farm to the table.

1929 July 20–A letter from William Morse in Tokyo is read before the attendees at the Tenth Annual Meeting of the American Soybean Association in Guelph, Ontario, Canada, and later published in the *Proceedings of the American Soybean Assoc.* (Vol. 2., p. 50-52). It is the first publication in which Morse describes his many new discoveries concerning vegetable soybeans.

1931 Jan. 3–Morse writes in his log in Tokyo: "At one of the department stores, in the vegetable market section, we found small bundles of soybean sprouts and also some bundles of green vegetable soybean plants." This is the earliest document seen that contains the term "green vegetable soybean(s)."

1934–Vegetable-type soybean varieties that yielded well at Arlington Farm are sent to many state agricultural experiment stations for further trials. In addition, extensive investigations of the cooking qualities and composition of the green shelled and dry edible soybeans are conducted at various departments of home economics. The green beans are found to be one of the most nutritious vegetables ever analyzed.

1935 Dec.–Dr. John Harvey Kellogg of Battle Creek, Michigan, is the first person on record to can green vegetable soybeans, or to consider harvesting them mechanically. In a letter dated Dec. 9 he writes to William Morse at USDA. "We have been doing some experimenting this year with growing and canning shell soy beans. I am having a couple of cans sent you so you can see what our product is like. We think it is very fine. The few thousand cans we put up went off like hot cakes... One of the difficulties in the way of the soy shell bean business is the expense of picking from the vines and shelling the pods. Do you know of any machinery that is used for either of these purposes?"

1935 Aug.–Rokusun, the first vegetable-type soybean is mentioned in a U.S. publication–followed in March 1936 by Bansei, and Chusei. These soybeans are now publicly available in the U.S.

1936 April–A 2-page leaflet titled "Soybean introductions named in January 1936" is published by the USDA, Bureau of Plant Industry, Div. of Forage Crops and Diseases. It is the first official publication in which varietal names are given to the new vegetable type soybeans introduced by Dorsett and Morse from Japan and tested at USDA's Arlington Farm. Twenty varieties suitable for use as a "green vegetable" are listed, together with their seed color, days to maturity, and region of the USA best suited for production. This is the earliest English-language document seen that mentions the following vegetable-type varieties–all with Japanese names: Chame, Fuji, Goku, Hakote, Higan, Hiro, Hokkaido, Jogun, Kanro (in USA), Kura, Nanda, Osaya, Sato, Shiro, Sousei, Suru, Toku, and Waseda. It is also the earliest document seen in which soybeans are classified by use as "green vegetable" or "dry edible bean" or both.

1936 July–Green Shelled Soy Beans (canned) are first sold in the USA by Dr. John Harvey Kellogg's Battle Creek Food Co. in Battle Creek, Michigan. This is the earliest known commercial green vegetable soybean product in the USA.

1936 Oct. 30–A long article titled "Canning green soy beans," by Corinne Loskowske, appears in the *Herald,* published by the students of Henry Ford's Edison Institute. They have mechanized the canning process. They canned and sold 500 cans in 1935 and 1,000 cans in 1936. Similar canned green soybean products soon follow: 1939–Mother's Choice Brand Green Vegetable Soybeans (Canned), by the Fox Valley Canning Co. of Hortonville, Wisconsin.

1939 March–"Eighteen Varieties of Edible Soybeans," by J.W. Lloyd and W.L. Burlison is published at the *University of Illinois Agricultural Experiment Station, Bulletin* No. 453. The 58-page report is the most detailed and interesting to date, being based in part on comments received from 1935 to 1938 from more than 685 home gardeners, market gardeners, and canners in Illinois. The university offered to send free seed and growing instructions to any gardener who would test the green soybeans and submit frank comments in writing. The new way of growing and eating soybeans got rave reviews. For example: "Fresh soybeans had a satisfying flavor... They were delicious... We like them better than peas or beans... I served soybeans to all guests this summer and most everyone liked them... Everyone who tried them said they were splendid... We have never eaten beans as good... The beans were delicious to eat and were universally liked by my family and guests. In fact it took persuasion to leave any for seed."

During the 1930s William Morse and the University of Illinois took the lead in popularizing both green-vegetable soybeans and vegetable-type soybeans in the USA. Continued. Address: Lafayette, California. Phone: 925-283-2991.

11490. *SoyaScan Notes.* 2014. Chronology of green vegetable soybeans and edamamé (incl. maodou) worldwide–1940 to 2001. Part II. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Continued: 1940 Dec.–Vegetable-type soybeans (Bansei and Jogun) are first offered for sale in the USA, by Strayer Seed Farms of Hudson, Iowa (Ad in *Soybean Digest,* p. 12).

1941-1945–During World War II, green vegetable soybeans are grown in Victory Gardens in the Midwest and at least six new canned products are introduced. By 1945 some 44 large-seeded vegetable-type soybean varieties have been named and released in the USA.

1944 Sept.–The first English-language advertisement for green vegetable soybeans appears in *Soybean Digest* (p. 61). Titled "Meet the vegetable cow," it is a full-page, black-and-white ad run by Dr. Harry Miller of the International Nutrition Laboratory, and a former student of Dr. John Harvey Kellogg. It shows the head of a cow made entirely from soybeans. The horns, forelock, parts surrounding the eyes, nostrils, and mouth are made of soybeans in their [green] pods.

1946–The Japanese government (*Norinsho* or Ministry of Agriculture, Forestry, and Fisheries) starts keeping statistics on domestic edamame area, production (weight including pods), and yield. In 1946 these figures were about 7,000 ha and 30,000 metric tons (tonnes). Yields peaked in 1969 at almost 10 tonnes/ha. In about 1982 both area (14,000 ha) and production (122,000 tonnes) peaked, then began a very slow decline as imports rose dramatically (Lumpkin & Konovsky 1991, p. 123).

1950s early–Varietal improvement of vegetable-type soybeans starts in Taiwan.

In the United States, the period from 1935 to 1947 saw the first wave of interest in green vegetable soybeans and vegetable-type soybeans. But after World War II, interest almost disappeared. A second and even larger wave of interest began in the late 1960s and has continued to grow.

1966 July–Mr. Noritoshi Kanai, President of Mutual Trading Co. (MTC, Los Angeles, California), imports the first edamame and the first frozen edamame to the United States. They are imported from Japan and sold under Mutual's Miyako brand to local restaurants. Initially only two cases of 30 x 10.5 oz bags/case are imported as a trial. The company next imports frozen edamame on 1 July 1970; during 1970 MTC imports 70 cases from Japan and again sells them to restaurants (Personal communication with Atsuko Kanai of MTC, June 2001).

1972–Taiwan exports 472 tonnes of green vegetable soybeans, yet total area and production of these soybeans are negligible. By 1989 that figure had jumped 77-fold to 34,821 tonnes, with Japan buying 99% of the exports in frozen form. Japan's total consumption that year was about 160,000 tonnes–by far the largest in the world.

1980 Sept.–The sushi "boom" in California begins when the very popular TV miniseries and epic drama *Shogun,* based on the novel by James Clavell, created a great interest in traditional Japanese culture among Americans. With the sushi, they drank Japanese beer and saké. In America, beer is usually served with peanuts. But, true to tradition, Japanese restaurants served edamamé, free of charge, with the beer. Atsuko Kanai of Mutual Trading Co. recalls: "It was a mass sampling of the edamamé without people having ordered it! So the success of sushi, Japanese beers, Japanese saké, and edamamé, are all tied in together."

1982 April–Researchers at AVRDC in Taiwan [Shanmugasundaram et al.] publish their first two investigations on "immature green soybeans."

1982–Rodale Research Center in Kutztown, Pennsylvania, publishes as excellent 25-page report titled "Fresh green soybeans: Analysis of field performance and sensory qualities," based on two years of research [May 1980 to Dec. 1981]. It identifies eight varieties found to be exceptional in both field and sensory qualities and gives the address of the seed company from which each can be purchased. Rodale Press (publisher of *Organic Gardening & Farming* magazine) also did pioneering work in introducing green vegetable soybeans to Americans, with at least 23 articles or books on the subject between 1962 and the present.

1985–AVRDC in Taiwan starts research on mechanical harvesting of vegetable soybeans.

1987–Reiko Weston, a Japanese woman who owns Fuji-Ya, a Japanese restaurant in Minneapolis, Minnesota, decides she wants to try growing edamame in Minnesota rather than paying more for an imported product. The same business savvy that earned her the titles of U.S. and Minnesota 'Businesswoman of the Year' sparked research in 1987 by Jim Lambert of the Jameson-Williams Company into the viability of raising this new crop. Unfortunately, Weston died shortly before the first year's crop was harvested." Jameson-Williams steadily increases their production of edamame from 7,000 pounds in 1988 to the 350,000 pounds in 1990. In Nov. 1990 Lambert describes Jameson-Williams as "the only commercial producer of edamame in the U.S." He has experimented with hundreds of edamame varieties.

1991 June–Yamato Flight Kitchen of Burlingame, California, starts serving edamame on Japan Airlines flights from San Francisco to Japan.

1991 Aug. 5–An article in the *St. Paul Pioneer Press* (Minnesota) states that Jameson-Williams' company name has been changed to Minnesota Edamame Co. The

© Copyright Soyinfo Center 2014

Nishimoto Trading Co. of Tokyo likes the taste and look of these green soybeans so much that they decided last week to place more than $100,000 worth of their bagging and packaging equipment in the Minnesota Edamame plant. In September, Minnesota Edamame will start using Nishimoto's equipment to ship 1 million pounds of partially processed immature soybeans to Japan. That's a big jump from the 7,000 pounds shipped in 1988. Minnesota Edamame has contracts to supply Nishimoto with 3 million pounds of the soybeans from the 1992 Minnesota crop, 6 million pounds in 1993 and 15 million pounds by 1996. Unfortunately, quality problems in Minnesota prevented these rosy predictions from coming true.

1991 June–Yamato Flight Kitchen starts serving edamame on United Airlines flights from San Francisco to Japan.

1991 April 29 to May 2–The first international workshop / symposium on green vegetable soybeans is held at Kenting, Taiwan. The excellent proceedings, titled *Vegetable Soybean: Research Needs for Production and Quality Improvement,* were edited by S. Shanmugasundaram of the Asian Vegetable Research and Development Center (AVRDC) in Shanhua, Tainan, Taiwan. These are the first English-language proceedings and the first English-language book devoted to green vegetable soybeans. AVRDC has become a leader in research on green vegetable soybeans in Asia–in part because this crop has now become Taiwan's leading agricultural export, with most of the sales going to Japan.

In these proceedings is an especially interesting paper titled "A critical analysis of vegetable soybean production, demand, and research in Japan," by Thomas A. Lumpkin and John Konovsky of Washington state; it contains extensive new information on the history of edamame plus a superb bibliography of 187 references. In about 1986 Lumpkin founded the East Asian Crop Development Program at Washington State University (WSU), in Pullman, Washington. In the summer of 1989 he first grew a trial crop of edamame (20 varieties); this was reported in a 1989 publication. By 1991 he is full-time head of a team of 12 people in this program, all of whom except himself are working part-time, developing East Asian plants–including edamamé–to be grown in Washington state. Lumpkin is interested (among other things) in documenting the history of various East Asian crops. He has collected about 400 varieties of edamamé; the germplasm is maintained at Pullman.

1994 April–The first bibliography devoted to green vegetable soybeans, with 489 references, compiled by Shurtleff and Aoyagi, is published by Soyfoods Center in Lafayette, California.

1994 May 27–Tak Kimura ("Mr. Edamamé"), a food broker from Concord, California, introduces Eda Mame, America's first refrigerated, ready-to-eat edamamé–first sold at Whole Foods Market in Berkeley, California. 8 ounces of precooked, lightly salted green soybeans are packed in a plastic tray with a clear film lid by Yamato Flight Kitchen of Burlingame, California. In Oct. 1994 the first local supermarket to carry Tak's product was Mollie Stone's, an upscale supermarket with six stores in the San Francisco Bay Area. In Feb. 1998 Safeway supermarkets in Northern California become the first large supermarket chain to carry this product, again with Tak Kimura as the broker. By Jan. 2000 this edamamé product was served on United Airlines. Wholesale sales grew from $18,000 in 1994 to more than $540,000 in 1998. In 1998 the market for edamame in the USA (especially on the West Coast) exploded!

1994 July 1–Minnesota Edamame is renamed SunRich Foods. Their 1994 edamame crop is a record 750,000 lb–but still not enough to meet demand.

Other important "firsts" among commercial products after 1990: 1995 Jan.–Sweet Beans (SunRich Inc., Minnesota). 1996 Jan.–Freshlike Baby Broccoli Blend (with 40% green soybeans; Dean Foods Vegetable Co.). 1996 Dec.–Frozen Organic Sweet Beans (Sno Pac Foods, Inc.). 1997 June–Birds Eye Baby Broccoli Blend (Dean Foods Vegetable Co.). 1997 Sept.–Trader Joe's Edamame (frozen in the pods, imported from China by Seaside Farms). 1998 Feb.–Cold Mountain Eda-Mame (Mutual Trading Co., Inc., frozen). 1999 April–Edamame–Blanched Soybeans (retail or foodservice; Seapoint Farms, formerly Seaside Farms). 1999 Aug.–Melissa's Soybeans (Edamame) (Melissa's World Variety Produce). 1999 Oct.–Edamamé (Frieda's, Inc.). 2000 May–Freeze-Dried Green Soybeans in Salsa, Indian Spice, and Sweet & Sour flavors (Eat Your Heart Out, New York; the first freeze-dried and the first flavored or spicy edamame).

In 1999 at least 8 new edamame products were introduced, followed by 9 in the year 2000, and 5 more by May 2001.

2001–The U.S. company with the most innovative and extensive line of edamame products, the best and most colorful graphics (labels and ads), and the most extensive advertising, is Seapoint Farms of Huntington Beach, California, founded in 1997 by soyfoods pioneer Kevin Cross.

2001 July–At least 70% of the green vegetable soybeans consumed in the USA are imported, mainly from China or Taiwan. The two main U.S. growers are SunRich in Minnesota and Cascadian Farms in Washington state. Address: Lafayette, California. Phone: 925-283-2991.

11491. *SoyaScan Notes.* 2014. The development of conventions and systems for naming soybean varieties in the United States (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** (1) Japanese varietal names imported to USA: In 1891 the first two soybeans with varietal names appear in the United States. They are Eda Mame and

© Copyright Soyinfo Center 2014

Yamagata Cha-daidzu, both imported from Japan by Prof. Charles Georgeson of Kansas State Univ. He apparently left the Japanese varietal names unchanged. Other early varieties which apparently kept their Japanese names were: Kiyusuke daizu (1890-1892), Asahi (1901), Bakajiro (1902), Rokugatsu (1902), Yoshioka (1902), Hahto (1918).

(2) Varieties named in the USA by maturity and color: In 1894 the first three varieties were named in the USA. The form of the two-word name was maturity plus color: Medium Black, Medium Green, and Early White.

(3) Three-word names introduced: In 1896 the first three-word name was introduced: Extra Early Dwarf. It was also the first name to include the size of the plant ("Dwarf"). In 1897 three more three-word names appeared, each specifying the maturity more precisely: Medium Early Black, Medium Early Green, Medium Late Black.

(4) Single-word names introduced: Black (1900), Yellow (1900), Mammoth (1902), Green (1904).

(5) Japanese names given by American soybean workers: By 1902 Ito San was named by Mr. E.E. Evans, a soybean breeder in West Branch, Michigan, in honor of Marquis Ito, the Japanese statesman. "San" is an honorific suffix in Japanese. So "Ito San" means "the honorable Mr. Ito."

(6) American place names become part of variety names: In 1903 Wisconsin Black was introduced. It was followed by Ogemaw (1904, a county in Michigan where E.E. Evans lived and bred soybeans), Amherst (Massachusetts, 1907), Manhattan (Kansas, 1907), Arlington (Virginia, 1910), Auburn (1910), Columbia (1910), Virginia (1915), etc.

(7) The names of American and European soybean workers used in variety names: In 1907 the variety Haberlandt is named after the first Friedrich J. Haberlandt of Vienna, Austria, the first Westerner to conduct large-scale soybean trials or to write a book about soybeans. Also in 1907 the variety Meyer is named after Frank N. Meyer (1875-1918), an early USDA plant explorer in Asia who sent back hundreds of soybean varieties. Also in 1907 the variety Nuttall is named after Thomas Nuttall of the Botanic Garden, Cambridge, Massachusetts. He cultivated soybeans is the summer of 1829 and wrote an early article about them in Oct. 1929. Also in 1907 the variety Baird is named for Reverend W.M. Baird, a missionary, who secured the seeds in Korea, and had them sent to the USA. Also: Wilson (1909), Brooks (1909), Morse (1909), Hansen (1910), Fairchild (1910), Nielsen (1910).

(8) Fanciful American names: Hollybrook (1906), Buckshot (1907), Butterball (1907), Cloud (1909), Hope (1909), Acme (1910).

(9) Numbers are included in soybean variety names–usually at the end: Ohio 9035 (1914), O.A.C. 81 (1914), Wilson-Five (1918), O.A.C. 211 (1922).

11492. *SoyaScan Notes.* 2014. Definition of teriyaki and teriyaki sauce (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Etymology: Formed from the Japanese verbs *teru* "to shine or be glossy or bright" and *yaku* "to grill or broil" (traditionally over charcoal or coals, using a hibachi, a small, usually round charcoal brazier).

Teriyaki, a Japanese appetizer, is said to have originated in Japan during the Edo period (1600-1867; see *The History and Culture of Japanese Food,* by Naomichi Ishige, 2001, p. 116; he does not cite his source). The word "teriyaki" originally referred to fish (or occasionally poultry), cut into small pieces, marinated in a Mirin-Shoyu sauce, skewered on bamboo skewers, grilled on the hibachi, and basted / brushed occasionally with the sauce; the mirin was considered the key to the glossy appearance. Note: Mirin is sweetened sake for cooking or seasoning. Shoyu is regular Japanese-style soy sauce.

As the recipe became Westernized in the early 1950s, it was transformed; the mirin was often omitted, garlic (ideally fresh, crushed), and a small amount of sweetener (such as sugar or pineapple juice) were added, and chunks or thin strips of beef were often used in place of fish. The teriyaki sauce was used initially as a marinade, then later in the cooking process for basting while grilling.

Although teriyaki originated in Japan, it came to the United States largely from Hawaii in the early 1950s, and was soon viewed by Americans as an Hawaiian recipe and dish. American versions may skewer chunks of fruit (such as pineapple) or vegetables (green or red bell peppers) alternatively with chunks of meat. Vegetarian versions usually use pressed firm tofu or seitan in place of meat. Address: Soyfoods Center.

11493. *SoyaScan Notes.* 2014. Chronology of early isolated soy protein (soy protein isolate) developed for food use. 5 June 2011. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1911–Beltzer develops isolated soy protein (ISP) for food use in France.

1921–Satow develops ISP for food use in Japan.

1935–First U.S. patent for ISP issued to Buruss & Ruth.

1932–The Glidden Co. (Chicago) first develops ISP for food use in the USA but did not yet make a commercial product.

1939–Albusoy, made by The Glidden Co. in Chicago, is launched. It takes the place of egg albumen (egg whites) in a wide variety of products, especially confections.

1942–Central Soya Co. launches a similar whipping compound named Soy Whip–also meant to replace an animal product–egg whites.

1945–Rich Products Corp. (Buffalo, New York), during World War II when whipping cream is unavailable, launches Whip Topping, made from "Soy Cream," based on ISP. It is also soon sold frozen, and is a smash success.

1946–Borden Co., Whitson Products Div., launches

© Copyright Soyinfo Center 2014

Soyco–a "soy albumen whipping agent."

1947–Vegetable Products Corp. (Saline, Michigan) launches Wonder Whip–a soy-based non-dairy whip topping.

1948–Rich Products Corp. launches Whip Topping, based on isolated soy protein, in a pressurized aerosol metal can.

1950–Presto Food Products (Industry, California) launches Mocha-Mix Coffee Creamer (later renamed Mocha Mix Non-Dairy Creamer)–based on ISP.

1951–Rich Products Corp. launches Chil-Zert, the first non-dairy frozen dessert (ice cream)–based on ISP.

1951–Hoffman Products (York, Pennsylvania), Subsidiary of York Barbell Co., launches Bob Hoffman's Hi-Proteen (powder)–based on ISP.

1952–Rich Products Corp. launches Sundi Whip, a non-dairy fountain topping in a pressurized can- based on ISP.

1952–Rich Products Corp. launches Rich's Chocolate Eclairs (non-dairy and frozen), filled with Rich's Whip Topping.

1959–Central Soya Co. (Chicago, Illinois) launches Promine–food-grade ISP in two types; D is dispersible, R is regular.

1962–Ralston Purina launches Edi-Pro–spray-dried ISP.

Observations:

1. Using plant proteins to replace animal proteins is generally a good thing for many reasons, and is definitely a long term green trend.

2. Many people who are unable (allergies, lactose intolerance, heart condition, etc.) or unwilling (vegan, kosher) to use dairy products are extremely grateful for non-dairy alternatives made from soy protein.

3. One of the Buddhist precepts is not to find fault with others... which may be interpreted to include other things. There is a place for just about everything if it is used wisely. The few groups criticizing isolated soy proteins are those promoting animal products (meat, dairy and eggs); they are therefore criticizing the competition–soyfoods and edible soy products.

11494. *SoyaScan Questions.* 2014. Questions about the history of Worcestershire sauce. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** The history of this sauce has never been well documented and there are some interesting unanswered questions and contradictions in the history as it is popularly presented.

To answer these questions it would be best to travel to Worcester, England, and to spend at least 1-2 weeks there.

Have any local newspapers or magazines (near Worcester) been digitized so that they can be searched electronically for information on this subject. If yes, which ones and for what years? Ideally we would start by searching publications dating back to the 1830s.

In what year and month did Lea and Perrins first sell their Worcestershire sauce (about 1837)?

Did they make and sell the first seasoning named "Worcestershire sauce"?

What was the name and address of the second company to make "Worcestershire sauce?"

If the Worcestershire sauce made in Worcester used soy sauce as a major ingredient, when did it start to be used? From the very first batch?

In what foreign country (Japan, China) was Lea and Perrins soy sauce made? By which company? Did the same company (and only one company) make this soy sauce up until World War II?

How was this soy sauce transported to Worcestershire? Was it first transported by boat? Up the River Severn?

When did the transportation switch from boat to train / rail? Were any photos ever taken of the soy sauce being unloaded from the vehicle in which it was transported. Or were any news stories ever published of the arrival of a shipment of unknown goods from East Asia?

Try to locate the company John Duncan's Sons or John Duncan & Sons (or their archives) of New York. Do they have any records showing when they first imported Worcestershire sauce? Do they have any early labels or records showing ingredients?

Which organizations or individuals in Worcestershire know the most about or are most interested in the history of Lea and Perrins and / or of Worcestershire sauce? From Web: (1) Worcestershire Historical Society, Tettenhall, Wolverhampton. (2) Worcester and District Industrial Archaeology / local History Society, Redditch, Worcestershire. (3) Worcestershire Local History Forum, Trinity Street, Worcestershire. Has this story ever been told in any histories of Worcester or Worcestershire? Have any articles ever been published on this subject? (See a local Worcester library). When did soy sauce switch from being shipped in wooden kegs / casks to more modern containers such as barrels or drums?

Did Lea & Perrins ever make its own fermented soy sauce? If so, starting when? Where? How did they learn the process? How long was it fermented.

What year and month (during World War II) did Lea and Perrins stop using fermented soy sauce from Asia and start using HVP? But note that about April 1978, when Craig Claiborne of *The New York Times* visited the plant in Fair Lawn, New Jersey, he was told that "soy" (probably referring to the soybean hydrolysate in HVP) was one of the ingredients, and that the mixture was fermented. He noted a pleasant smell around the 35 giant wooden curing vats–each holding a total of 6,0000 gallons. No one would tell him how long the base for the sauces is aged, but he estimated a minimum of two years.

How long has Lea & Perrin's sauce been fermented at different points in its history? Is it fermented now? In New Jersey? If so, for how long? If not, when did fermentation

© Copyright Soyinfo Center 2014

stop?

11495. *SoyaScan Questions.* 2014. Questions about the history of tempeh in Japan. Further research needed. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1. When was *Taiwan Sotokufu Chuo Kenkuyujo* founded? 2. When did NAKAZAWA Ryoji start to work at the Taiwan lab? When did he finally leave for Japan?

3. In what year did NAKANO Masahiro start to work at the Taiwan lab? 4. In Nakazawa's *Hakko Bunken-shu* (11 volumes, 1950-65), is there any reference to tempeh under *Penicillium?* There is NOT any reference under *Rhizopus.*

5. Was any research on using defatted soybean meal (*dashi daizu*) to make tempeh done in Japan after World War II? (Dr. Nakano does not remember any).

6. Did Ohta or Karauchi write a very early article on tempeh in about Showa 7 or 8? (1932-33)? Ohta mentioned this.

7. Get a citation for Ohta's article on tempeh in *Nihon Jozo Kyokai Zasshi* from about 1980-81.

8. Try to get the early article (1947-48) from *Nosan Seizo,* written by Ohta or Nakano.

9. What were the main reasons that the Natto Association started to take a serious interest in tempeh in about 1981-82? When did this interest start? What people were most actively involved at the beginning?

10. What is the substrate used for growing tempeh spores at NFRI? Rice? Bread? Potatoes? Potato starch?

11. Is there a tie between Kalki's research on lactic acid and production of B-12 in tempeh?

12. When did the *Natto Gyokai News* (or any natto newspaper) publish its first article on tempeh? I'd like to get copies of recent and important articles it has published, as about the June 1983 trip to Indonesia.

13. Who is Mr. Kikuchi, at natto meeting, in charge of making tempeh spores?

14. How many pages does Nakazawa have on *Rhizopus?*? Does he mention tempeh at *Penicillium*?

15. Who wrote the early article on tempeh at Kyushu University that interested Torigoe?

16. Did Ohta or Karauchi write an early article on tempeh in about Showa 7 or 8 (1932-33)? Ohta mentioned this.

17. Try to get the article (about 1947-48) from *Nosan Seizo,* written by Ohta Teruo or Nakano Masahiro.

20. Who made the early tempeh starter in Japan?

21. When did Takashin start to make tempeh? How many kilograms do they now make per week?

11496. *SoyaScan Questions.* 2014. Questions about the history of Chico-San, Inc. in Chico, California. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1. When did Chico-San first start operation as a business in Chico, California? What did they do and what was their address? Shumway says (1961 Dec. 8): Believers in eating "natural" foods, they have started the "Chico-San" Bakery and plan to share the profits. They will bake breads with no sugar and little yeast.

They also plan to start a restaurant where the menu will show the exact number of calories per serving, and where live music will be provided by group members.

2. Did they ever start that restaurant? If they did, when did it open and at what address? Did it get any reviews in the local paper? How long did it last?

3. When did Chico-San's first imports arrive from Japan? What products were they and where (at what address) did they store them?

4. When and why did Chico-San first move into the basement of a small hearing aid shop in Chico. What was the address and what was the name of the hearing aid shop?

5. At the time of the fire on 14 Sept. 1972, Chico-San's warehouse was located at 1262 Humboldt Ave. in Chico. When and from where did the company move there? What was the size of the building?

11497. Hackler, Vincent. 2014. Nattokinase and the company that put it in the map (Interview). SoyaScan Notes. Feb. 7. Conducted by William Shurtleff of Soyinfo Center.
• Summary: Nattokinase, an enzyme isolated from natto, has been shown in scientific studies to reduce one's risk of heart disease when consumed regularly as a supplement. Vincent works closely with Japan Bioscience Laboratory (Nihon Seibutsu Kenkyujo) to study and disseminate the benefits of nattokinase. This company put nattokinase on the map. They have funded 14 human trials and 13 non-human trials that show the efficacy of the product. They have also funded one human study that shows the safety of nattokinase.

How does the enzyme work in the human body? Nattokinase decreases the ability of blood to clot. This "thins the blood" and might protect against conditions caused by blood clots such as stroke, heart attack, and others. Natto has been used (mainly in Japan) as a folk remedy for diseases of the heart and circulatory system (cardiovascular disease) for hundreds of years. Nattokinase, the chemical in natto that is probably responsible for its effects, was discovered by a University of Chicago researcher, Dr. Hiroyuki Sumi. Nattokinase has also been found to lower C-reactive protein (CRP), a protein found in the blood, the levels of which rise in response to inflammation. CSP is synthesized by the liver. Measuring CRP level is a screen for infectious and inflammatory diseases. Rapid, marked increases in CRP occur with inflammation, infection, trauma and tissue necrosis, malignancies, and autoimmune disorders. Because there are many disparate conditions that can increase CRP production, an elevated CRP level does not diagnose a specific disease. CRP is used mainly as a marker of inflammation.

Nattokinase is used for cardiovascular diseases

including heart disease, high blood pressure, stroke, chest pain (angina), deep vein thrombosis (DVT), "hardening of the arteries" (atherosclerosis), hemorrhoids, varicose veins, poor circulation, and peripheral artery disease (PAD).

It is also used for pain, fibromyalgia, chronic fatigue syndrome, endometriosis, uterine fibroids, muscle spasms, infertility, cancer, and a vitamin-deficiency disease called beriberi.

11498. Vélez, Luisa. 2014. Re: The story of Rustono's work with tempeh in Japan. Letter (e-mail) to William Shurtleff at Soyinfo Center, Feb. 7. 2 p. [Eng]

• Summary: "Rustono was born on 3 Oct. 1968 in Grobogan, Central Java–in a very poor village without electricity. His father's name was Parwoto Utomo and his mother's name was Paryumi. Both of his parents finished elementary school in Grobogan, Central Java. His father's occupation was kepala desa which means 'leader of the village,' the one who takes care of the needs of the village and villagers.

"As a child, he used to walk to school and back to home where he used to take care of 3 buffalo. He used to take them to the field to eat grass, and he lay down in their backs to see the sky. His first dream was to fly in an airplane, like the ones he saw from the fields. Later, in 2011, his first dream met his 12th dream, when he ate his own tempeh as part of the menu of Garuda, Indonesia's famous airline.

"Rustono is self taught in English. He began to learn when he worked in the hotel Sahid Yogyakarta (in the city of Yogyakarta), from 1990 to 1997 as a bellboy; he practiced with the guests at the hotel.

"Rustono met his Japanese wife in Indonesia at the hotel where he worked. Her name is Tsuruko Kuzumoto.

"Rustono's story with tempeh started before he got married. Before living in Japan, he asked for her permission to do business in Japan. Without her permission, he would prefer to stay in Indonesia. She said, 'Yes.'

"Rustono arrived in Japan in 1997; he and his wife were married in Uji, on the southern outskirts of Kyoto city, in Kyoto prefecture. Tsuruko's parents lived in Kyoto.

"After arriving in Japan he looked around for 3 weeks to find a good idea for a business. He noticed that in Japan there were many foods from other countries, but none from Indonesia. He also observed that there were many foods made from soybeans, so he thought that making tempeh might be a great idea for a business; he decided to start this dream, even it seemed very hard and full of obstacles. To fulfill that dream, he worked in part-time jobs in Japan's food industry for 3 years and 6 months to learn about Japanese food regulations and to gain knowledge and experience in that field.

"In 1998, after earning enough money for the rent and for saving enough money to make his dream come true, he got some soybeans and called his mother in Indonesia to learn how to make tempeh. She explained the process to him step by step, by telephone, and she sent him tempeh starter from Indonesia. He didn't have good results for 4 months and finally he got information about the importance of the quality of water for making tempeh. Since it is better to use spring water, he went to the temple and got 20 bottles of water from there (which came from a mountain spring). The tempeh was very good quality this time.

"Even though his tempeh was good, he was not yet confident enough to sell his tempeh because of the strict rules in Japan regarding food, so he didn't offer his tempeh to anybody.

"He decided to return to Indonesia to learn more. Even though many tempeh makers refused to teach him, around 60 of them welcomed him and taught him for 3 months; they were from Grobogan, Yogyakarta, Semarang, East Java and other places.

"He started making tempeh in Oct. 1998 in Kyoto. His tempeh was named Rusto's Tempeh from the beginning. His first production after returning from Indonesia was 40 pieces and they were sold to Indonesian students living in Japan. The first tempeh he sold was sold to his friends, Heri Susanto and Setyo Budi in Yawata, Kyoto, in 1998. He didn't sell his tempeh to Japanese people until he got his government and license got a government certificate and started producing and selling officially in Shiga in 2002.

"Rustono and his wife had 2 children (daughters) Noemi Kuzumoto (born 21 April 1998) and Remina Kuzumoto (born 17 January 2001); both born in Kyoto, they both use Kuzumoto as their family name since Rustono (like many people from Java) has no family name.

"He moved to Shiga prefecture in 2001 after realizing that the type of water was very important for a fine quality tempeh; in Shiga spring water was available. The move to Shiga was complicated. The building of the factory started 2001 and was over in 2002. It was all done by hand, including cutting the trees. Remina was already born and was about 8 months old when they moved to Shiga. When they moved Rustono still worked part-time in a food company and needed to save money for buying material and building the factory. Every day, whenever he had time, he went from Kyoto to Shiga to work on the factory, until they finally moved to a rented house in Shiga.

"The next step was to apply for a government permit / certificate to manufacture tempeh, a fermented food unknown to Japanese food and health inspectors. So Rustono had to educate them and prove that this traditional Indonesian food was safe. At first, the government office denied to give the certificate because there were details to change. Many times he got 'no' for answer but he kept on making the necessary changes until he was finally given the certificate to manufacture tempeh.

"He eventually got two government certificates (from the *Hokenjô*), one in February 2002 for production capacity of 500 pieces of tempeh and other one dated 2 Dec. 2003 for

© Copyright Soyinfo Center 2014

capacity of 1000 pieces.

"After building the factory they saved money to build their own home. Some years later they decided to buy a new house, big enough to welcome friends all around the world.

"Their present address is: Sakashita cho 257-1, Katsuragawa, Otsushi [Otsu city], Shigaken [Shiga prefecture], Japan.

"He built his tempeh factory by himself, in the winter, and got the attention from journalists who immediately wrote newspaper articles about him. Later on his business grew until now he is called the 'King of tempeh.'

"Rustono is eager to help tempeh grow and spread around the world. His dream from the beginning was to be a tempeh professional. There are still many challenges but there is a big will to overcome obstacles. He is happy to receive people from any country to teach them how to make tempeh, and after that he will continue to sharing guidance. People are invited to go to Japan to stay with him and learn, enjoy and start producing tempeh in their countries. He is very confident because he is a professional and makes tempeh in a country with very high standards of quality. If he was successful in Japan, he can show others to be successful in other countries.

"Rustono is a member of the Tempe Society of Japan (*Nihon Tenpe Kenkyu-kai*), which now has 20 members and with an average of 60 people attending each meeting, including listeners. He was invited to join by Horii Sensei when he was well known in Japan for his tempeh. This association has one meeting per year and members are specialists in soybeans, nutrition, molds, fermentation, etc. The meetings take place all over the country, using a seminar format, to be updated and share new knowledge. The main purpose of this association is education and networking. The society also publishes the *Journal of the Tempe Society of Japan* (*in Japanese*).

"In 2009 I read Rustono's success story in a newspaper in Mexico, and in 2012 I wrote to him to say that his story inspired me. Since then he mentored me to grow my business in Mexico, which started in 2005. Now we are in one team working together to spread tempeh all over Mexico and other countries in Latin America for the future. We know about people making tempeh in Australia, New Zealand, Canada, USA, Italy, Costa Rica, Brasil, France, Hungary, Poland, Korea, India, Pakistan and Mexico.

"In 2012, Rustono and I participated together in seminars in Indonesia, Jakarta and Yogyakarta, sharing our stories with tempeh producers and students at universities, as well as participating in TV interviews about the importance of tempeh around the world and it's future as a global food. It was so interesting and exciting to share with them how tempeh is appreciated in other countries, seen as a very nutritious and healthy food.

"I enclose for you the government certificate given to Rustono with the dates and quantities, as well as some pictures about his story.

"I also enclose a picture of a French lady, Ana Larderet, who stayed in Japan for 1 month to learn from him how to start a tempeh business in Europe.

Photos show: (1) Certificate to make 1,000 pieces of "Rusto's Tempeh" dated 2003 Dec. 2. (2) A color photo of their small child, Noemi, trying to help in packing tempeh. (3) Rustono in Shiga building his factory. (4) Rustono and other Japanese at a meeting of the Tempeh Society of Japan (*Nihon Tenpe Kenkyu-kai*) (5) Rustono standing next to another member of the Tempeh Society of Japan. Last minute additions:

11499. Young, Louise. 1998. Japan's total empire: Manchuria and the culture of wartime imperialism. Berkeley, California: University of California Press. xiii + 487 p. Map. Index. 23 cm. Series: Twentieth-Century Japan. *

• Summary: Contents: Part I: Making of a total empire–Manchukuo and Japan. 1 Jewel in the crown: the international context of Manchukuo.

Part II: Manchurian incident and the new military imperialism, 1931-1933. 2. War fever: imperial jingoism and the mass media. 3. Go-fast imperialism: elite politics and mass mobilization.

Part III: Manchurian experiment in colonial development, 1932-1941. 4. Uneasy partnership: soldiers and capitalists in the colonial economy. 5. Brave new empire: utopian vision and the new intelligentsia.

Part IV: New social imperialism and the farm colonization program, 1932-1945. 6. Reinventing agrarianism: rural crisis and the wedding of agriculture to empire. 7. Migration machine: Manchurian colonization and state growth. 8. Victims of empire.

Part V: Conclusion. 9. Paradox of total empire.

From the publisher's description: "In this first social and cultural history of Japan's construction of Manchuria, Louise Young offers an incisive examination of the nature of Japanese imperialism. Focusing on the domestic impact of Japan's activities in Northeast China between 1931 and 1945, Young considers 'metropolitan effects' of empire building: how people at home imagined and experienced the empire they called Manchukuo. Contrary to the conventional assumption that a few army officers and bureaucrats were responsible for Japan's overseas expansion, Young finds that a variety of organizations helped to mobilize popular support for Manchukuo–the mass media, the academy, chambers of commerce, women's organizations, youth groups, and agricultural cooperatives–leading to broad-based support among diverse groups of Japanese. As the empire was being built in China, Young shows, an imagined Manchukuo was emerging at home, constructed of visions of a defensive lifeline, a developing economy, and a settler's paradise."

A new, semi-privately-held company was established with a capitalization of 200 million yen to operate the railroad and to develop settlements and industries along its route (p. 25).

11500. Ketsueki sarasara no saishû heiki tenpe ga kiku!: niowanai nebaranai yume no yô na nattô ga yatte kita [To make your blood flow better, tempeh works as the ultimate weapon. It doesn't smell. It's not sticky. The natto you dreamed for has finally arrived]. 2003. Tokyo: Shufu no Tomo-sha. 67 p. [Jap]*

• Summary: Note: What's going on here? Two very similar books about tempeh, both published in 2003 in Japan by Shufunotomo-sha. Each with the same number of pages. But

© Copyright Soyinfo Center 2014

with clearly different yet similar titles.

Could one have been published first, sold out, and then the title was changed before the second printing the same year?

Toshie Marra, Librarian for the Japanese Collection, C.V. Starr East Asian Library, University of California (Berkeley) replies: "Because the two books share the same ISBN, I believe these records are for the same book. This happens occasionally–two different titles are taken by different catalogers, especially because two different sets of cataloging rules are used in Japan and in the U.S. By the way, WorldCat contains records created by U.S. catalogers and those created by Japanese libraries in two separate records." She sends a photo of the cover which proves she is right; all of the words in the title and subtitle appear on the very busy cover. There was only one book, and not two printings.

11501. Tenpe ga kiku! Ketsueki sarasara no saishû heiki [Tempeh works! The ultimate weapon for making your blood flow better]. 2003. Tokyo: Shufu no Tomo-sha. 67 p. [Jap]*
• Summary: A 2nd record (from WorldCat/OCLC) for an early popular Japanese book about tempeh.

11502. Oki, Satsuki. 2005. Tenpe no oishii reshipi: chô mo ohada mo wakagaeru wadai no daizu shokuzai [Delicious tempeh recipes: A soyfood that's good for your digestion and skin, and makes you look young]. Tokyo: Hôken 127 p. [Jap]* Address: Japan.

11503. Oishiku tabeyô tokachi no tenpe [Let's eat delicious tokachi tempeh]. 2005. Obihiro, Japan: Kunau Magajin. [Jap]*

11504. Koike, Yoshiko. 2006. Koike Yoshiko no tezukuri shokuhin kakô kotsu no kotsu. 3, Tsukemono sôzai okowa mochi tenpe konnyaku kunsei [Yoshiko Koike's tricks for homemade foods. No. 3. Japanese pickles, common side dishes, sekihan made with glutinous rice, mochi, tempeh, konnyaku, and smoked foods]. Tokyo: Nôsan Gyoson Bunka Kyôkai. 146 p. [Jap]*
• Summary: The Japan word okowa can refer to either kowa-meshi or sekihan. Okowa refers to a festive dish made by boiling glutinous rice with azuki beans (which are red and add a festive color to the dish). Sekihan is usually made by boiling regular (non-glutinous rice) with azuki beans.

11505. The South Manchuria Railway: Important facts (from Wikipedia). 2014. Retrieved 18 Feb. 2014.
• Summary: Introduction: "South Manchuria Railway was built as a part of the Chinese Eastern Railway in 1898-1903 by Imperial Russia according to the Russian-Chinese convention and the Convention of Peking 1860. The South Manchuria Railway Company (Minami Manshu Tetsudo Kabushiki-gaisha, or Mantetsu) was a company founded in the Empire of Japan in 1906, taken over after the Russo-Japanese War (1904-1905), and operated within China in the Japanese-controlled South Manchuria Railway Zone. The railway itself ran from Lüshun Port at the southern tip of the Liaodong Peninsula to Harbin, where it connected to the Chinese Eastern Railway.

History: "Following the Japanese victory over Imperial Russia and the signing of the Treaty of Portsmouth, the southernmost section of the southern branch (Harbin–Port Arthur) of the China Far East Railway was transferred to Japanese control. The last station remaining in Russian hands was Kuancheng (Kuanchengtze, in contemporary spelling); the first Japanese station was Changchun [1, 2]. A new, semi-privately-held company was established with a capitalization of 200 million yen to operate the railroad and to develop settlements and industries along its route.[3] The organizing committee was headed by General Kodama Gentaro, and after his death, by General Terauchi Masatake

"Over 75% of Mantetsu's income was generated by its freight business, with the key to profitability coming from soybean exports, both to Japan proper and to Europe. Soybean production increased exponentially with increasing demand for soy oil, and for soy meal for use in fertilizer and animal feed. By 1927, half of the world's supply of soybean was from Manchuria and the efforts by Mantetsu to expand production and to ship to export ports was a classic example of an extractive colonial economy dependent on a single product [8].

"The South Manchuria Railway was also charged with a government-like role in managing the rail transportation system after the formation of Manchukuo in 1932. By 1938, Mantetsu had 72 subsidiary companies, development projects in 25 urban areas and carried 17,515,000 passengers per year [9]. Between 1930-1940, the Japanese population of Manchukuo rose by 800,000 making ethnic Japanese the majority in many of the towns and cities served by Mantetsu. Mantetsu prided itself on state-of-the-art urban planning, with modern sewer systems, public parks, and creative modern architecture far in advance of what could be found in Japan itself. These things were possible due to Mantetsu's tremendous profitability, and its political power to seize property and silence opposition and dissent at will through its political connections to the military and totalitarian national leadership [10]."

An asterisk (*) at the end of the record means that SOYFOODS CENTER does not own that document.
A plus after eng (eng+) means that SOYFOODS CENTER has done a partial or complete translation into English of that document.
An asterisk in a listing of number of references [23* ref] means that most of these references are not about soybeans or soyfoods.

American Soybean Association (ASA)–Activities, Offices, and Influence in Europe (Western and Eastern). 4293, 4347, 5049, 5372, 5569, 5577, 5749, 5935, 6214, 6230, 7315, 7340, 8251, 8897, 9373, 9454, 10319, 10430, 10441

American Soybean Association (ASA)–Activities, Offices, and Influence in Latin America. 5049, 6214, 6303, 6574, 7041, 7315, 7641, 10441, 11070

American Soybean Association (ASA)–American Soybean Institute (1969-1973), an Industry-Wide Association. 5550, 5569

American Soybean Association (ASA)–Certificate / Certificates of Meritorious Service. 6105

American Soybean Association (ASA)–Checkoff Programs (Legislated / Mandatory Funding. State Programs Starting in North Carolina in Sept. 1966, National Programs–SPARC–Starting in 1989-1991), and State Promotion Boards (Research & Promotion Councils). 5577, 5580, 5600, 5606, 6214, 7315, 7340, 7375, 7678, 7679, 7680, 7681, 7682, 7683, 7684, 7685, 7956, 8214, 8885, 10023, 10455, 10512, 10884

American Soybean Association (ASA)–Funding and Fundraising Before Checkoff Program or 1971. Voluntary or from USDA (FAS or ARS). 4230, 4232, 4240, 4248, 4290, 4306, 4335, 4349, 4406, 4436, 4442, 4542, 4608, 4636, 4642, 4963, 5197, 5372, 5550, 5551, 5569, 5577, 5600, 5606, 10884

American Soybean Association (ASA)–Honorary Life Members. 4347, 4434, 4446, 4760, 5736, 6105, 7340, 9169

American Soybean Association (ASA)–Japanese-American Soybean Institute (JASI). 4230, 4236, 4240, 4247, 4249, 4253, 4256, 4259, 4290, 4293, 4297, 4306, 4317, 4330, 4338, 4339, 4347, 4349, 4356, 4357, 4358, 4363, 4425, 4426, 4430, 4433, 4434, 4437, 4442, 4446, 4448, 4485, 4505, 4514, 4515, 4526, 4559, 4574, 4597, 4600, 4608, 4611, 4621, 4626, 4629, 4636, 4652, 4660, 4661, 4669, 4680, 4708, 4734, 4740, 4742, 4743, 4748, 4759, 4760, 4764, 4774, 4810, 4827, 4830, 4839, 4870, 4874, 4904, 4915, 4925, 4959, 4995, 5003, 5015, 5046, 5047, 5048, 5050, 5056, 5072, 5074, 5079, 5084, 5087, 5098, 5099, 5109, 5161, 5164, 5166, 5173, 5192, 5202, 5275, 5347, 5365, 5366, 5368, 5372, 5377, 5458, 5468, 5479, 5560, 5599, 5727, 5749, 7093, 7299, 8071, 10351, 11486

American Soybean Association (ASA)–Legislative Activities. 3748, 5600, 5606, 10020

American Soybean Association (ASA)–Meetings / Conventions (Annual) and Meeting Sites. 2373, 2647, 2919, 3079, 3667, 3756, 4446, 5939, 7041

American Soybean Association (ASA)–Members and Membership Statistics. 4544, 5577, 5600, 7315, 7340, 9502, 9770, 10441, 10884, 11007

American Soybean Association (ASA)–Officers, Directors (Board), and Special Committees. 2776, 3667, 3685, 3764, 4347, 4398, 4543, 4756, 5370, 6067, 7315

American Soybean Association (ASA)–Periodicals, Including Soybean Digest, Proceedings of the American Soybean Assoc., Soybean Blue Book, Soya Bluebook, Late News, etc. 3779, 4338, 4597, 5345, 5372, 5684, 6527, 7093, 7188, 7340, 8569, 8835, 9983, 10446, 10884

American Soybean Association (ASA)–Soybean Council of America (June 1956-1969). Replaced by American Soybean Institute (Est. 11 July 1969). 4248, 4293, 4347, 4349, 4492, 4544, 4597, 4629, 4642, 4905, 4915, 4958, 4963, 5049, 5197, 5201, 5372, 5550, 5560, 5727, 5749, 6786, 7340, 9454, 10884

American Soybean Association (ASA)–State Soybean Associations and Boards (Starting with Minnesota in 1962). 5577, 6527, 7340, 9502, 10106, 10194, 10319, 10340, 10455, 11004, 11089, 11103, 11322

American Soybean Association (ASA)–State Soybean Associations and United Soybean Board–Activities Related to Food Uses of Soybeans / Soyfoods, or Soy Nutrition, in the United States (Not Including Soy Oil or Edible Oil Products). 3079, 3170, 3425, 3427, 3725, 3756, 3779, 4434, 4756, 5939, 6303, 7188, 9502, 10030, 10106, 10194, 10248, 10312, 10319, 10340, 10405, 10406, 10523, 10561, 10629, 11004, 11322

American Soybean Association (ASA)–Strayer. *See* Strayer Family of Iowa

American Soybean Association (ASA)–United Soybean Board (USB, Established 1991, Chesterfield, Missouri). 10023, 10106, 10248, 10319, 10351, 10512, 10523, 10561, 10629, 11322

American Soybean Association (ASA) or United Soybean Board–Activities Related to Food Uses of Soybeans / Soyfoods, or Soy Nutrition, Outside the United States (Not Including Soy Oil). 3730, 4197, 4222, 4226, 4236, 4358, 4406, 4425, 4515, 4526, 4542, 4559, 4600, 4621, 4626, 4629, 4660, 4669, 4740, 4748, 4764, 4810, 4816, 4830, 4904, 4963, 5056, 5072, 5079, 5109, 5165, 5275, 5347, 5458, 5460, 5569, 5599, 5749, 5919, 6204, 6303, 6356, 6388, 6554, 6814, 7641, 7678, 7905, 7956, 8122, 8173, 8251, 9212, 9370, 9378, 9408, 9577, 9591, 9937, 10453

Amino Acids and Amino Acid Composition and Content. Solvent extraction equipment. *See* Soybean Crushing–Equipment–Solvent extraction

Solvents–Ethanol (Ethyl Alcohol)–Used for Soy Oil Extraction, or Washing / Purification of Soy Products (Protein, Lecithin, Saponins, etc.). 2499, 2562, 2581, 2637, 2653, 2698, 2701, 2708, 2709, 2710, 2748, 2749, 2834, 2835, 2927, 2981, 3010, 3071, 3072, 3074, 3090, 3211, 3360, 3367, 3368, 3369, 3370, 3499, 3578, 3618, 3672, 3694, 3702, 3704, 3707, 3746, 3752, 3763, 3936, 4025, 4184, 4427, 4451, 4464, 4844, 4976, 5141, 5272, 5567, 5836, 7380

Solvents–Hexane–Used Mainly for Soy Oil Extraction. 3756, 4184, 4458, 4464, 6130, 6216, 7591, 8232, 9053, 9284, 9394, 9419, 9491, 9514, 9872, 10301

Solvents–Trichloroethylene (Trichlorethylene, Trichlor). 4012, 4184, 4458, 4464

Solvents Used for Extraction of the Oil from Soybeans (General, Type of Solvent, Unspecified, or Other). See also Ethanol, Hexane, and Trichloroethylene Solvents. 541, 654, 803, 829, 908, 1183, 1294, 1527, 1687, 1806, 1927, 1931, 2034, 2099, 2152, 2167, 2186, 2317, 2432, 2704, 2761, 2827, 2851, 2859, 2968, 3145, 3173, 3293, 3838, 3912, 3922, 3981, 4023, 4225, 4538, 5020, 5310, 5541, 6027, 6345, 6567, 6815, 7609, 7687, 9803, 10137, 10280

Solvents Used for Extraction of the Oil from Soybeans: Benzene / Benzine / Benzol / Benzin. 1464, 1643, 1685, 1689, 1748, 1796, 1841, 1852, 1853, 1860, 1908, 1915, 1920, 1974, 1977, 1988, 2096, 2117, 2118, 2127, 2140, 2153, 2217, 2324, 2370, 2375, 2474, 2638, 3346, 3349, 3483, 5017, 5018, 5019

Solvents Used for Extraction of the Oil from Soybeans: Naphtha / Naphthas. Also spelled Naptha / Napthas. 1299, 1319, 3947, 4458

Solvents, industrial. *See* Release or Curing Agents for Concrete or Asphalt, Industrial Solvents, Hydraulic Fluids, and Other Minor or General Uses

Solvents. *See* Soybean Crushing–Solvents

Soup, miso. *See* Miso Soup

Sour Cream Alternatives (Non-Dairy–Usually Contains Soy). 6395, 6401, 7003, 7479, 7907, 9621, 9762, 10492, 10859, 11260

South Manchuria Railway and the South Manchuria Railway Company (*Minami Manshu Tetsudo Kabushiki Kaisha*). 1140, 1184, 1227, 1262, 1305, 1323, 1347, 1357, 1361, 1362, 1373, 1379, 1407, 1408, 1414, 1473, 1475, 1516, 1546, 1586, 1604, 1605, 1617, 1635, 1636, 1641, 1644, 1645, 1647, 1651, 1685, 1689, 1696, 1699, 1748, 1767, 1781, 1793, 1841, 1860, 1919, 1921, 1949, 1961, 1990, 2059, 2070, 2074, 2080, 2081, 2093, 2112, 2119, 2120, 2127, 2128, 2140, 2142, 2146, 2150, 2153, 2157, 2158, 2163, 2167, 2170, 2173, 2177, 2181, 2182, 2186, 2196, 2217, 2219, 2256, 2278, 2301, 2304, 2311, 2324, 2347, 2350, 2352, 2353, 2357, 2360, 2367, 2395, 2415, 2429, 2433, 2480, 2481, 2482, 2483, 2547, 2555, 2562, 2617, 2635, 2637, 2638, 2652, 2653, 2681, 2701, 2702, 2703, 2704, 2705, 2707, 2708, 2709, 2710, 2712, 2713, 2714, 2715, 2718, 2754, 2796, 2811, 2841, 2845, 2851, 2873, 2879, 2887, 2913, 2923, 2927, 2955, 2956, 3009, 3024, 3025, 3048, 3055, 3069, 3071, 3072, 3074, 3079, 3081, 3088, 3090, 3091, 3092, 3094, 3135, 3138, 3144, 3146, 3206, 3207, 3211, 3219, 3223, 3269, 3284, 3293, 3302, 3303, 3304, 3306, 3314, 3317, 3346, 3349, 3360, 3388, 3459, 3483, 3499, 3578, 3606, 3618, 3671, 3673, 3704, 3707, 3752, 3755, 3763, 3888, 5017, 5019, 5057, 5324, 6134, 7468, 9931

South River Miso Co. (Conway, Massachusetts). Including Ohio Miso Co. 6877, 7250, 7743, 7744, 8900, 9026, 9132, 9861, 10447, 10698, 10703, 10704, 10705, 10711, 10745, 10767, 10789, 10958, 11488

Soy Cheese–Etymology of This Term and Its Cognates / Relatives in Various Languages. 7258, 11260

Soy Cheese–Fermented, Western Style, That Melts. May Contain Casein (Cow's Milk Protein). 1873, 5189, 5446, 5782, 6241, 6515, 6539, 6834, 6969, 7003, 7019, 7068, 7240, 7258, 7304, 8308, 8320, 9105, 9761

Soy Cheese–Non-Fermented, Western Style, That Melts. Typically Made with Tofu or Isolated Soy Proteins. Usually Contains Casein (A Protein from Cow's Milk). 5177, 6515, 6898, 7509, 7634, 8832, 9100, 9768

Soy Cheese Industry and Market Statistics, Trends, and Analyses–By Geographical Region. 8750

Soy Cheese or Cheese Alternatives–General, Western Style, That Melts. Often Contains Casein (Cow's Milk Protein). 5260, 5647, 5936, 6352, 7150, 7260, 8010, 8014, 8750, 8928, 8998, 9079, 9155, 9240, 9346, 9449, 9806, 10001, 10004, 10245, 10251, 10291, 10451, 10523, 10758, 10954, 11073, 11103, 11150, 11172, 11208, 11276, 11448

Soy Cheesecake or Cream Pie, Usually Made with Tofu. 6240, 6395, 6401, 6404, 6573, 6727, 6874, 7003, 7004, 7034, 7171, 7326, 7357, 7371, 7455, 7479, 7561, 7621, 7628, 7907, 8086, 8096, 8143, 8447, 8521, 8578, 8650, 8773, 8887, 9036, 9162, 9621, 9762, 9901, 9902, 9915, 10106, 10122, 10124, 10127, 10130, 10155, 10257, 10438, 10445, 10448, 10530, 10548, 10559, 10560, 10649, 10742, 10859, 11260, 11342, 11413

Soy Chocolate (Toasted Soy Flour) (Also includes use of non-roasted Soy Flour or Soymilk in Making Chocolate). 592, 1574, 1585, 1646, 1735, 1784, 1869, 1870, 2148, 2149, 2170, 2292, 2472, 2484, 2951, 3333, 3390, 3557, 7535, 11429

Soy Coffee (Roasted Soy Flour)–Etymology of This Term and Its Cognates / Relatives in Various Languages. 529, 637, 1391, 1585, 2029, 2236, 2292

Soy Coffee–Made from Roasted Soy Flour or Ground Roasted Soybeans. 529, 549, 569, 570, 586, 587, 590, 591, 592, 617, 637, 650, 686, 691, 703, 708, 710, 736, 819, 837, 841, 847, 851, 852, 859, 874, 876, 905, 907, 913, 924, 940, 972, 974, 983, 995, 1004, 1011, 1334, 1335, 1338, 1374, 1381, 1383, 1391, 1412, 1416, 1427, 1442, 1453, 1469, 1496, 1533, 1543, 1551, 1574, 1585, 1610, 1646, 1735, 1741, 1742, 1784, 1806, 1815, 1827, 1837, 1847, 1869, 1870, 1884, 1887, 1896, 1906, 1935, 1974, 2001, 2016, 2029, 2078, 2148, 2149, 2170, 2226, 2234, 2236, 2243, 2292, 2325, 2472, 2484, 2662, 2728, 2736, 2759, 2768, 2817, 2838, 2923, 2951, 2961, 3043, 3214, 3253, 3323, 3333, 3390, 3469, 3491, 3557, 3560, 3689, 3740, 3779, 3781, 3788, 3961, 4506, 5511, 5749, 6405, 6553, 6637, 6964, 7258, 7535, 7557, 8064, 11429, 11469, 11481

Soy Cream Cheese–Etymology of This Term and Its Cognates / Relatives in Various Languages. 7322, 11260

Soy Cream Cheese, Usually Made of Tofu or Soy Yogurt. 6027, 6395, 6958, 7003, 7259, 7322, 7479, 7867, 7907, 8404, 9105, 9141, 9310, 9355, 9621, 9762, 9768, 10492, 10582, 10859, 10897, 11145, 11260, 11423, 11434

Soy Flour–Whole or Full-fat. 193, 393, 439, 509, 592, 702, 735, 736, 738, 768, 788, 824, 849, 932, 1081, 1105, 1141, 1210, 1511, 1805, 1847, 2106, 2113, 2126, 2171, 2324, 2462, 2474, 2484, 2717, 2843, 2848, 2951, 3173, 3371, 3384, 3469, 3561, 3636, 3727, 3887, 3948, 4492, 4506, 4668, 4949, 4953, 5095, 5182, 6281, 6379, 6395, 6401, 6433, 6637, 7258, 7557, 7766, 7841, 7919, 7985, 8011, 8199, 8822, 8828, 9523, 9730, 10041, 10052, 10533, 10683, 11208, 11260, 11316

Soy Flour Equipment. 5219

Soy Flour Industry and Market Statistics, Trends, and Analyses–By Geographical Region. 4961, 5095, 6514, 6637, 7919, 8271, 9041, 9523, 10079, 10533

© Copyright Soyinfo Center 2014

Soy Flour Industry and Market Statistics, Trends, and Analyses–Individual Companies or Products. 4024, 4509, 10079, 10683

Soy Flour or Defatted Soybean Meal in Cereal-Soy Blends, with Emphasis on Dry Products Used in Third World Countries (such as CSM, WSB, etc.). 592, 4492, 4961, 5347, 5603, 5713, 5896, 6130, 6573, 6577, 6637, 6823, 6964, 7254, 7641, 7919, 8271, 10079, 11157

Soy Flour, Defatted or Partially Defatted, Used as an Ingredient in Second Generation Commercial Products Such as Baked Goods, Pasta, etc. 6720

Soy Flour, Grits and Flakes (Usually Defatted)–Etymology of These Terms and Their Cognates / Relatives in Various Languages. 509, 735, 788, 824, 1344, 1412, 7919

Soy Flour, Grits, Meal, Powder, or Flakes–For Food Use (Usually Defatted or Low-Fat). See also Soy Flour–Whole or Full-fat. 272, 319, 509, 735, 758, 788, 824, 838, 1070, 1278, 1309, 1310, 1319, 1336, 1338, 1344, 1346, 1352, 1357, 1365, 1369, 1386, 1410, 1412, 1416, 1427, 1457, 1464, 1475, 1483, 1489, 1509, 1511, 1518, 1536, 1543, 1554, 1565, 1574, 1585, 1596, 1599, 1610, 1719, 1735, 1742, 1784, 1786, 1796, 1806, 1827, 1832, 1867, 1869, 1870, 1878, 1884, 1885, 1887, 1891, 1894, 1906, 1914, 1921, 1934, 1935, 1938, 1953, 1971, 1974, 1978, 1991, 2008, 2016, 2026, 2051, 2076, 2078, 2081, 2110, 2143, 2148, 2149, 2159, 2170, 2175, 2192, 2223, 2226, 2237, 2243, 2245, 2251, 2292, 2325, 2357, 2433, 2474, 2484, 2517, 2557, 2622, 2727, 2736, 2759, 2761, 2774, 2775, 2817, 2821, 2833, 2834, 2835, 2836, 2843, 2912, 2923, 2929, 2961, 2963, 2972, 2999, 3049, 3053, 3079, 3151, 3159, 3191, 3276, 3323, 3328, 3333, 3349, 3363, 3371, 3379, 3384, 3385, 3387, 3395, 3425, 3427, 3436, 3438, 3466, 3469, 3483, 3491, 3503, 3557, 3559, 3561, 3584, 3586, 3612, 3624, 3628, 3646, 3647, 3689, 3693, 3700, 3705, 3722, 3754, 3755, 3756, 3779, 3781, 3783, 3784, 3787, 3802, 3837, 3842, 3873, 3880, 3887, 3894, 3896, 3899, 3900, 3947, 3961, 4023, 4024, 4049, 4222, 4350, 4375, 4401, 4433, 4440, 4454, 4459, 4460, 4474, 4483, 4484, 4509, 4535, 4536, 4580, 4595, 4597, 4626, 4629, 4636, 4669, 4711, 4730, 4745, 4771, 4792, 4800, 4801, 4811, 4842, 4845, 4904, 4905, 4906, 4908, 4913, 4958, 4962, 4970, 5056, 5079, 5094, 5097, 5102, 5109, 5126, 5163, 5171, 5172, 5189, 5213, 5241, 5249, 5272, 5274, 5290, 5294, 5347, 5355, 5356, 5357, 5358, 5378, 5406, 5423, 5461, 5507, 5549, 5567, 5586, 5596, 5603, 5663, 5683, 5709, 5712, 5746, 5760, 5774, 5779, 5782, 5783, 5797, 5806, 5815, 5817, 5836, 5850, 5888, 5911, 5925, 5926, 5934, 5941, 5962, 5996, 5998, 6010, 6027, 6057, 6059, 6063, 6110, 6130, 6160, 6173, 6216, 6254, 6279, 6292, 6306, 6334, 6345, 6360, 6379, 6395, 6401, 6422, 6514, 6524, 6637, 6670, 6738, 6788, 6814, 6815, 6823, 6846, 6884, 6958, 6959, 6964, 6984, 7005, 7036, 7039, 7076, 7142, 7188, 7210, 7226, 7280, 7300, 7327, 7383, 7392, 7402, 7405, 7409, 7414, 7542, 7557, 7584, 7641, 7661, 7687, 7766, 7793, 7815, 7816, 7867, 7919, 7932, 8020, 8045, 8051, 8122, 8220, 8251, 8265, 8271, 8283, 8325, 8413, 8417, 8441, 8442, 8444, 8447, 8450, 8453, 8493, 8562, 8569, 8693, 8885, 8911, 8946, 9002, 9041, 9072, 9135, 9141, 9192, 9224, 9240, 9310, 9355, 9375, 9523, 9851, 9890, 9960, 10000, 10003, 10069, 10075, 10079, 10127, 10133, 10174, 10236, 10243, 10245, 10248, 10251, 10372, 10424, 10439, 10451, 10499, 10523, 10533, 10567, 10575, 10582, 10649, 10688, 10707, 10709, 10746, 10855, 10897, 10946, 11014, 11103, 11145, 11221, 11260, 11266, 11359, 11434, 11437, 11479

Soy Flour, Grits, and Flakes–Enzyme Active (Whole / Full-Fat, Unheated). 6027, 8011, 9730, 10575

Soy Flour, Grits, and Flakes–Use in Brewing Beer, Such as ADM Pro-zyme Flakes and Soybean Brew Flakes. 3276, 3961, 6027

Soy Flour, Textured (Including TVP, Textured Vegetable Protein). 5615, 5692, 5810, 5923, 6157, 6165, 6254, 6306, 6815, 6884, 6959, 7076, 7251, 7353, 7382, 7386, 7452, 7641, 7660, 7985, 8017, 8325, 8946, 9041, 9224, 9380, 9523, 9730, 9735, 9779, 9787, 10000, 10071, 10245, 10355, 11218

Soy Flour, Whole or Full-fat–Etymology of These Terms and Their Cognates / Relatives in Various Languages. 439, 592, 768, 3469

Soy Ice Cream (Frozen or Dry Mix)–Imports, Exports, International Trade. 8346, 8352, 8354, 8367, 8403, 8404, 8471, 8475, 8477, 8479, 8592, 8650, 8768, 9089, 9108, 10451, 11450

Soy Ice Cream (General–Usually Non-Dairy). 1887, 2106, 3173, 3425, 3624, 3756, 3803, 3954, 4460, 4502, 4597, 4898, 5115, 5610, 5645, 5665, 5779, 6027, 6130, 6240, 6395, 6401, 6573, 6709, 6784, 6958, 6965, 7003, 7030, 7034, 7064, 7229, 7256, 7257, 7258, 7259, 7260, 7308, 7326, 7347, 7357, 7371, 7455, 7479, 7509, 7537, 7557, 7565, 7596, 7621, 7630, 7633, 7642, 7767, 7828, 7831, 7853, 7866, 7867, 7878, 7907, 7923, 7990, 7998, 8010, 8014, 8051, 8086, 8139, 8167, 8169, 8196, 8209, 8231, 8232, 8240, 8241, 8250, 8266, 8271, 8277, 8303, 8316, 8346, 8352, 8354, 8367, 8371, 8375, 8399, 8400, 8403, 8404, 8410, 8411, 8447, 8471, 8475, 8477, 8479, 8524, 8534, 8548, 8558, 8569, 8592, 8597, 8650, 8734, 8743, 8768, 8879, 8885, 8895, 8920, 8928, 8954, 8998, 9040, 9057, 9079, 9089, 9108, 9134, 9141, 9152, 9225, 9234, 9346, 9365, 9398, 9451, 9502, 9604, 9610, 9612, 9621, 9700, 9707, 9762, 10069, 10079, 10245, 10445, 10451, 10554, 10560, 10581, 10582, 10622, 10651, 10712, 10801, 10859, 10892, 10897, 10920, 10954, 11132, 11133, 11145, 11208, 11260, 11345, 11423, 11434, 11450, 11474, 11493

Soy Ice Cream–Etymology of This Term and Its Cognates / Relatives in Various Languages. 1887, 6395, 7565, 7828, 8240, 11450

Soy Ice Cream–Non-Soy Non-Dairy Relatives (As Made from Amazake, Fruit Juices, Peanuts, Field Peas, etc.). 1873, 8240, 8871, 9040, 9234, 9558, 9915, 10148, 11287, 11450

Soy Ice Cream Industry and Market Statistics, Trends, and Analyses–By Geographical Region. 8240, 10079, 11450

Soy Ice Cream Industry and Market Statistics, Trends, and Analyses–Individual Companies. 7767, 8240, 8241, 8346, 8352, 8354, 8411, 8768, 9089, 9108, 10079, 11450

Soy Ice Cream, Homemade–How to Make at Home or on a Laboratory or Community Scale, by Hand. 11450

Soy Molasses or Soy Solubles–A By-Product of Making Soy Protein Concentrate Using the Aqueous Alcohol Wash Process. Rich in Isoflavones. 10221, 10533

Soy Oil–Etymology of This Term and Its Cognates / Relatives in

Soybean Crushing–Explosions and/or Fires in Soybean Solvent Extraction Plants (Making Soy Oil and Soybean Meal). 5310, 9803, 11138

Soybean Crushing–Processing Capacity and/or Storage Capacity of Individual Plants–Statistics. 1689, 1925

Soybean Crushing, Including Production and Trade of Soybean Oil, Meal or Cake, Margarine, or Shortening–Industry and Market Statistics, Trends, and Analyses -. 1299, 1308, 1374, 1389, 1398, 1409, 1418, 1439, 1445, 1465, 1466, 1475, 1543, 1565, 1683, 1685, 1796, 1819, 1881, 1899, 1915, 1920, 1921, 1922, 1928, 1939, 1956, 1995, 2016, 2031, 2046, 2055, 2071, 2096, 2108, 2111, 2128, 2152, 2172, 2177, 2186, 2226, 2293, 2294, 2295, 2296, 2297, 2317, 2347, 2353, 2357, 2471, 2777, 2851, 2867, 2919, 2928, 2998, 3346, 3349, 3551, 3581, 3617, 3662, 3663, 3711, 3779, 3783, 3887, 3947, 3954, 4197, 4333, 4437, 4597, 4621, 4764, 4904, 4959, 4994, 4996, 5010, 5018, 5033, 5085, 5102, 5107, 5193, 5265, 5276, 5294, 5345, 5368, 5379, 5460, 5549, 5684, 6130, 6230, 6311, 6345, 6467, 6523, 6669, 6670, 6686, 6799, 7188, 7288, 7320, 7687, 7783, 7964, 8020, 8174, 8271, 8569, 8766, 8780, 8789, 8835, 8849, 8872, 8885, 8897, 8939, 9030, 9084, 9112, 9224, 9242, 9337, 9523, 9684, 9907, 10079, 10137

Soybean Cultural Practices–No-Till, Conservation Tillage, and Minimum Tillage Farming / Agriculture. 4901, 5029, 6527, 9974, 10044, 10382, 10502

Soybean Meal (SBM) (Defatted). Formerly Called Bean Cake, Beancake, Soybean Cake, Oilmeal, or Presscake. 279, 438, 439, 486, 490, 509, 541, 565, 574, 586, 589, 590, 613, 654, 655, 665, 667, 673, 686, 708, 709, 710, 711, 716, 736, 768, 773, 785, 796, 804, 824, 837, 840, 843, 844, 845, 847, 860, 868, 874, 933, 937, 946, 953, 967, 990, 1017, 1025, 1026, 1045, 1063, 1079, 1084, 1086, 1087, 1092, 1110, 1132, 1133, 1147, 1166, 1187, 1193, 1198, 1199, 1200, 1201, 1213, 1227, 1229, 1231, 1232, 1238, 1241, 1242, 1243, 1245, 1246, 1248, 1249, 1250, 1251, 1253, 1254, 1255, 1256, 1260, 1262, 1265, 1266, 1271, 1278, 1281, 1283, 1287, 1289, 1291, 1294, 1299, 1302, 1303, 1307, 1309, 1310, 1311, 1314, 1315, 1316, 1319, 1320, 1321, 1322, 1323, 1324, 1326, 1330, 1332, 1333, 1334, 1336, 1337, 1338, 1344, 1346, 1348, 1350, 1356, 1361, 1362, 1363, 1368, 1369, 1370, 1371, 1372, 1374, 1379, 1381, 1383, 1384, 1386, 1389, 1390, 1393, 1394, 1398, 1401, 1403, 1409, 1410, 1413, 1414, 1416, 1427, 1430, 1435, 1436, 1437, 1438, 1439, 1442, 1443, 1444, 1445, 1447, 1449, 1451, 1464, 1465, 1466, 1473, 1475, 1476, 1477, 1478, 1480, 1483, 1485, 1489, 1490, 1492, 1505, 1509, 1514, 1516, 1520, 1521, 1526, 1533, 1536, 1541, 1543, 1551, 1553, 1554, 1569, 1570, 1574, 1599, 1605, 1617, 1618, 1635, 1636, 1637, 1642, 1643, 1651, 1666, 1673, 1678, 1680, 1683, 1684, 1685, 1687, 1688, 1689, 1696, 1697, 1710, 1711, 1719, 1722, 1739, 1740, 1742, 1754, 1762, 1767, 1772, 1774, 1780, 1784, 1789, 1790, 1791, 1793, 1796, 1803, 1804, 1806, 1815, 1817, 1825, 1831, 1832, 1841, 1856, 1857, 1858, 1859, 1860, 1863, 1868, 1869, 1870, 1878, 1880, 1881, 1884, 1890, 1896, 1899, 1900, 1902, 1903, 1906, 1907, 1913, 1920, 1921, 1926, 1928, 1929, 1931, 1932, 1934, 1935, 1946, 1948, 1953, 1954, 1956, 1968, 1973, 1974, 1991, 2006, 2016, 2023, 2031, 2041, 2045, 2046, 2048, 2069, 2071, 2076, 2078, 2080, 2081, 2085, 2086, 2089, 2096, 2097, 2100, 2111, 2112, 2117, 2118, 2119, 2124, 2128, 2130, 2140, 2141, 2146, 2147, 2148, 2149, 2150, 2152, 2153, 2154, 2161, 2167, 2172, 2177, 2183, 2184, 2186, 2190, 2194, 2203, 2207, 2208, 2217, 2218, 2219, 2226, 2237, 2243, 2249, 2251, 2255, 2256, 2270, 2275, 2278, 2292, 2299, 2304, 2314, 2317, 2324, 2325, 2356, 2367, 2386, 2387, 2422, 2429, 2432, 2433, 2451, 2462, 2465, 2474, 2475, 2484, 2496, 2505, 2517, 2533, 2541, 2546, 2557, 2569, 2608, 2609, 2635, 2639, 2652, 2703, 2704, 2712, 2714, 2715, 2717, 2718, 2731, 2736, 2753, 2755, 2759, 2775, 2776, 2777, 2778, 2781, 2782, 2786, 2794, 2807, 2821, 2834, 2840, 2841, 2845, 2851, 2864, 2867, 2869, 2871, 2875, 2913, 2916, 2917, 2919, 2921, 2923, 2928, 2930, 2940, 2951, 2955, 2956, 2957, 2961, 2962, 2968, 2972, 2977, 3003, 3030, 3043, 3048, 3063, 3131, 3135, 3137, 3138, 3139, 3145, 3148, 3151, 3159, 3168, 3174, 3182, 3222, 3224, 3250, 3253, 3259, 3275, 3291, 3323, 3333, 3346, 3349, 3360, 3367, 3368, 3369, 3370, 3379, 3380, 3384,

Soybean Varieties USA–American Coffee Berry–Early Introduction. Renamed Ito-San by about 1902. 913, 1004, 1005

Soybean Varieties USA–Amherst–Early Introduction. 1190, 1456, 1991, 2244, 4362, 9209, 11491

Soybean Varieties USA–Aoda–Large-Seeded and / or Vegetable-Type. 3422, 3427, 3511, 3623, 3628, 3662, 3705, 3722, 3785, 3896, 3900, 4362, 5742, 8172, 8844

Soybean Varieties USA–Arlington–Early Introduction. 1456, 1771, 1789, 1991, 2039, 2068, 2479, 3389, 4362, 6735, 8844, 10358, 11491

Soybean Varieties USA–Asahi–Early Introduction. 1010, 1011, 11491

Soybean Varieties USA–Auburn–Early Selection (1907). 1453, 1456, 1789, 1991, 2244, 4362, 9209, 10358, 11491

Soybean Varieties USA–Austin–Early Introduction. 1318, 1453, 1456, 1991, 2180, 2479, 3379, 4362, 6735, 8844

Soybean Varieties USA–Baird–Early Introduction. 1190, 1275, 1456, 4362, 9209, 11491

Soybean Varieties USA–Bakaziro / Bakajiro–Early Introduction. Renamed Amherst by May 1907. 1041, 1043, 1091, 1105, 1991, 4362, 11491

Soybean Varieties USA–Bansei–Large-Seeded and / or Vegetable-Type. 3225, 3227, 3228, 3240, 3387, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 3722, 3727, 3785, 3896, 3900, 4362, 4542, 5679, 8172, 8844, 11452, 11453, 11489, 11490

Soybean Varieties USA–Barchet–Early Introduction. 1453, 1456, 1510, 1803, 1906, 1934, 1980, 1991, 2005, 2039, 2068, 2148, 2149, 2180, 2246, 2479, 3389, 3511, 3662, 4362, 6735, 8844, 10975

Soybean Varieties USA–Best Green–Early Introduction. Renamed Hope by 1910. 1011, 1035, 1041, 1043, 1105, 1190, 1991, 4362

Soybean Varieties USA–Biloxi–Early Introduction. 1803, 1906, 1934, 1935, 1980, 2039, 2068, 2180, 2243, 2244, 2246, 2248, 2479, 2518, 3043, 3268, 3389, 3511, 3646, 3662, 4362, 6735, 8844, 9209, 9839, 10557

Soybean Varieties USA–Black–Early Introduction. Renamed Buckshot by May 1907. 1190, 2118, 11491

Soybean Varieties USA–Black Ebony–Early Introduction. 10358

Soybean Varieties USA–Black Eyebrow–Early Introduction. 1789, 1803, 1906, 1934, 1991, 2005, 2039, 2068, 2091, 2148, 2149, 2155, 2244, 2246, 2248, 2479, 2504, 2518, 2928, 2929, 3389, 3511, 3662, 3781, 4362, 6735, 8844, 10358

Soybean Varieties USA–Black Round–Early Introduction. 1041, 1105, 10358

Soybean Varieties USA–Brindle–Early Introduction. 1453, 1456, 4362, 9209, 10358

Soybean Varieties USA–Brooks–Early Introduction. 1453, 1456, 4362, 9209, 11491

Soybean Varieties USA–Brown–Early Introduction. 1456, 1991, 2479, 2504

Soybean Varieties USA–Brownie–Early Introduction. 1190, 1275, 1456, 4362, 9209

Soybean Varieties USA–Buckshot–Early Introduction. 1190, 1257, 1275, 1278, 1318, 1453, 1456, 1543, 1548, 1991, 2226, 2246, 2518, 4362, 9209, 10358, 11491

Soybean Varieties USA–Butterball–Early Introduction. 1190, 1275, 1278, 1453, 1456, 2226, 2246, 2518, 4362, 9209, 10358, 11491

Soybean Varieties USA–Chame–Large-Seeded and / or Vegetable-Type. 3230, 3240, 3389, 3427, 3511, 3623, 3628, 3662, 4362, 9209, 11489

Soybean Varieties USA–Chernie–Early Introduction. 1453, 1456, 1548, 2233, 2479, 3389, 3511, 3662, 9209, 10358

Soybean Varieties USA–Cherokee–Large-Seeded and / or Vegetable-Type. 4362, 8172, 8844

Soybean Varieties USA–Chestnut–Early Selection (1907). 1453, 1456, 1822, 2246, 2479, 2518, 3389, 3511, 3662, 3905, 4362, 6735, 8844, 10557

Soybean Varieties USA–Chiquita–Early Introduction. 1789, 1803, 1906, 1991, 2180, 2243, 2244, 2245, 2246, 2248, 2479, 2518, 3389, 3511, 3662, 4362, 9209, 10975

Soybean Varieties USA–Chusei–Large-Seeded and / or Vegetable-Type. 3226, 3227, 3228, 3240, 3387, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 4362, 8148, 8172, 8844, 10545, 11489

Soybean Varieties USA–Claud–Early Introduction. 10358

Soybean Varieties USA–Cloud–Early Introduction. 1453, 1456, 2244, 4362, 6735, 8844, 10358, 11491

Soybean Varieties USA–Columbia / Columbian–Early Introduction. 1456, 2246, 2479, 2518, 3389, 3511, 3662, 4362, 6735, 8844, 11491

Soybean Varieties USA–Delsoy–Large-Seeded and / or Vegetable-Type. 4362, 8172, 8844

Soybean Varieties USA–Disoy–Large-Seeded and / or Vegetable-Type. 6136, 7692, 8172, 9937

Soybean Varieties USA–Duggar–Early Introduction. 4362, 9209, 10557

Soybean Varieties USA–Dunfield–Early Introduction. 2479, 2928,

© Copyright Soyinfo Center 2014

2929, 3379, 3387, 3389, 3511, 3662, 3900, 4362, 5725, 6020, 6735, 8844, 9839

Soybean Varieties USA–Early Black–Early Introduction. Renamed Buckshot by May 1907. 1041, 1043, 1091, 1190, 1456, 1991, 2155, 4362, 10358

Soybean Varieties USA–Early Brown–Early Introduction. 1257, 1366, 1453, 1456, 1906, 1934, 2039, 2068, 2180, 2246, 2248, 2479, 2504, 3151, 4362, 9209

Soybean Varieties USA–Early Dwarf–Early Introduction. 965, 980

Soybean Varieties USA–Early Dwarf Green–Early Introduction. 1991

Soybean Varieties USA–Early Green–Early Introduction. 1190, 1366, 1543, 1906, 2479, 3511, 4362

Soybean Varieties USA–Early White–Early Introduction. Renamed Ito-San by about 1902. 870, 879, 893, 919, 931, 955, 1190, 1366, 1456, 1906, 4362, 11491

Soybean Varieties USA–Early Yellow–Early Introduction. Renamed Ito San by about 1902. 983, 1011, 1190, 1366, 1456, 1548, 1906, 2374, 2479, 2504, 3151, 3511, 4362, 6106, 10260, 10725

Soybean Varieties USA–Easycook / Easy Cook–Early Introduction. Large-Seeded and/or Vegetable-Type. 2180, 2245, 2246, 2248, 2472, 2479, 2736, 2759, 3387, 3389, 3427, 3511, 3612, 3628, 3662, 3705, 4362, 4542, 6735, 7248, 8844, 11489

Soybean Varieties USA–Ebony–Early Introduction. 1190, 1278, 1453, 1456, 2155, 2244, 2246, 2479, 2518, 2928, 2929, 3387, 3389, 3511, 3662, 4362, 6082, 6735, 8844, 10358

Soybean Varieties USA–Eda–Early Introduction. 1190, 1453, 1456, 2226, 2518, 4362, 9209, 10358

Soybean Varieties USA–Eda Mame–Early Introduction. Renamed Ito San by 1910. 782, 806, 812, 820, 850, 870, 875, 893, 1456, 4362, 10545, 10984, 11491

Soybean Varieties USA–Edna–Early Introduction. 9209, 10358

Soybean Varieties USA–Edward–Early Introduction. 1453, 1456, 1510, 4362, 9209

Soybean Varieties USA–Elton–Early Introduction. 1453, 1456, 1510, 1906, 1934, 2180, 2244, 2246, 2479, 3389, 3511, 3662, 4362, 6735, 8844

Soybean Varieties USA–Emerald–Large-Seeded and / or Vegetable-Type. 9937

Soybean Varieties USA–Emperor–Large-Seeded and / or Vegetable-Type. 3628, 3662, 3705, 3785, 4362, 4542, 8172, 8844

Soybean Varieties USA–Etum or Eatum–Large-Seeded and / or Vegetable-Type. 3626, 3628, 3662, 3785, 3799, 4362, 8172, 8844

Soybean Varieties USA–Extra Early Black–Early Introduction. Renamed Buckshot by May 1907. 1190, 1412, 1456, 2233, 4362, 10358

Soybean Varieties USA–Extra Early Dwarf–Early Introduction. 913, 1004, 1005, 1011, 11491

Soybean Varieties USA–Fairchild–Early Introduction. 1456, 4362, 9209, 10358, 11491

Soybean Varieties USA–Farnham–Early Introduction. 1453, 1456, 4362, 9209

Soybean Varieties USA–Flat Black–Early Introduction. Renamed Flat King by May 1907. 4362, 10358

Soybean Varieties USA–Flat King–Early Introduction. 1190, 1453, 1456, 4362, 9209, 10358

Soybean Varieties USA–Flava–Early Selection (1907). 1453, 1456, 4362, 9209

Soybean Varieties USA–Fuji–Large-Seeded and / or Vegetable-Type. 3231, 3240, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 3727, 4362, 4542, 8172, 8844, 11489, 11490

Soybean Varieties USA–Funk Delicious–Large-Seeded and / or Vegetable-Type. 3361, 3427, 3511, 3628, 3662, 3705, 3896, 3900, 4362, 4542, 8844

Soybean Varieties USA–Gardensoy–Large-Seeded and / or Vegetable-Type. 11039

Soybean Varieties USA–Giant Green–Large-Seeded and / or Vegetable-Type. 3362, 3628, 3705, 3785, 4362, 4542, 5742, 6082, 8844

Soybean Varieties USA–Goku–Large-Seeded and / or Vegetable-Type. 3232, 3240, 3389, 3427, 3511, 3623, 3628, 3662, 4362, 5742, 8172, 11489

Soybean Varieties USA–Gosha–Early Introduction. Renamed Manhattan by May 1907. 1041, 1091, 1105, 1991, 4362

Soybean Varieties USA–Grande–Large-Seeded and / or Vegetable-Type. 9937, 10275

Soybean Varieties USA–Green–Early Introduction. 1190, 2479, 11491

Soybean Varieties USA–Green Medium–Early Introduction. Renamed Guelph by May 1907. 1041, 1043, 1105, 1991

Soybean Varieties USA–Green Samarow–Early Introduction. Renamed Samarow in 1907. 1190, 1366, 1456, 4362

Soybean Varieties USA–Green and Black–Large-Seeded and / or Vegetable-Type. 3628, 4362, 8172, 8844

© Copyright Soyinfo Center 2014

Soybean Varieties USA–Guelph–Early Introduction. 1190, 1191, 1257, 1318, 1366, 1453, 1455, 1456, 1543, 1803, 1906, 1991, 2005, 2148, 2149, 2180, 2226, 2243, 2246, 2247, 2248, 2429, 2479, 2518, 3379, 3511, 4362, 6735, 8844, 10358

Soybean Varieties USA–Habaro–Early Introduction. Also spelled "Habara" in Canada. 1456, 1548, 2244, 2246, 2479, 2504, 2648, 3379, 3389, 3511, 3662, 3900, 4362, 5725, 6735, 8844, 10260, 10557, 10725

Soybean Varieties USA–Haberlandt–Early Introduction. 1190, 1254, 1257, 1318, 1453, 1456, 1789, 1803, 1906, 1991, 2005, 2148, 2180, 2244, 2245, 2246, 2248, 2429, 2479, 2518, 2928, 2929, 3379, 3389, 3427, 3511, 3662, 3733, 3781, 3900, 4362, 6136, 6735, 8844, 9839, 11491

Soybean Varieties USA–Hahto–Early Introduction. Large-Seeded and / or Vegetable-Type. 1905, 1906, 1957, 2005, 2039, 2068, 2082, 2148, 2149, 2180, 2243, 2245, 2246, 2248, 2479, 2518, 2736, 2759, 3170, 3387, 3389, 3427, 3511, 3612, 3628, 3662, 3785, 4362, 6735, 7248, 8844, 11489, 11491

Soybean Varieties USA–Hakote–Large-Seeded and / or Vegetable-Type. 3233, 3240, 3389, 3427, 3511, 3623, 3628, 3662, 4362, 8172, 8844, 11489

Soybean Varieties USA–Hamilton–Early Introduction. 2244, 2246, 2479, 2518, 2928, 4362, 9209

Soybean Varieties USA–Hankow–Early Introduction. 1091, 1190, 1294, 1309, 1456, 1464, 4362, 9209, 10358

Soybean Varieties USA–Hansen–Early Introduction. 1456, 4362, 9209, 11491

Soybean Varieties USA–Higan–Large-Seeded and / or Vegetable-Type. 3234, 3240, 3387, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 4362, 4542, 8172, 8844, 9839, 10545, 11489

Soybean Varieties USA–Hiro–Large-Seeded and / or Vegetable-Type. 3235, 3240, 3389, 3427, 3511, 3623, 3628, 3662, 4362, 9209, 10358, 11489

Soybean Varieties USA–Hokkaido–Large-Seeded and / or Vegetable-Type. 3236, 3238, 3240, 3387, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 3722, 3727, 3728, 3896, 3900, 4194, 4362, 4542, 4810, 5221, 5222, 5231, 5912, 8172, 8844, 11489

Soybean Varieties USA–Hollybrook–Early Introduction. 1190, 1257, 1275, 1278, 1318, 1366, 1453, 1456, 1510, 1543, 1789, 1803, 1906, 1934, 2005, 2148, 2149, 2155, 2180, 2246, 2248, 2479, 2504, 3389, 3511, 3662, 3948, 6281, 6735, 8844, 9293, 11491

Soybean Varieties USA–Hollybrook Early–Early Introduction. Renamed Midwest by 1948. 4362

Soybean Varieties USA–Hongkong / Hong Kong–Early Introduction. 1456, 2479, 3389, 3511, 3662, 3900, 4362, 6735, 8844, 10358

Soybean Varieties USA–Hoosier–Early Introduction. 2246, 2479, 2518, 3389, 3511, 3662, 4362, 6735, 8844

Soybean Varieties USA–Hope–Early Selection (1905). 1453, 1456, 4362, 9209, 11491

Soybean Varieties USA–Hurrelbrink–Early Introduction. 2928, 3389, 3511, 3662, 4362, 8844

Soybean Varieties USA–Illington–Large-Seeded and / or Vegetable-Type. 3409, 3628, 4362, 4542, 6082, 8844

Soybean Varieties USA–Imperial–Large-Seeded and / or Vegetable-Type. 3410, 3427, 3511, 3623, 3628, 3662, 3785, 4362, 4542, 8172, 8844

Soybean Varieties USA–Indiana Hollybrook–Early Development. 2479, 3511, 4362

Soybean Varieties USA–Ito San–Early Introduction. Synonyms–Medium Early Yellow, Early White, Early Yellow, Kaiyuski Daizu, Kiyusuki Daidzu, Kysuki, Yellow Eda Mame, Dwarf Early Yellow, Early, Eda Mame, Coffee Berry. 1091, 1190, 1257, 1275, 1318, 1366, 1453, 1455, 1456, 1510, 1789, 1803, 1906, 1934, 1991, 2005, 2091, 2148, 2149, 2155, 2180, 2226, 2233, 2236, 2243, 2244, 2245, 2246, 2247, 2248, 2429, 2472, 2479, 2496, 2504, 2518, 2863, 2928, 2929, 3379, 3389, 3511, 3662, 4362, 6106, 9209, 10358, 11452, 11453, 11487, 11491

Soybean Varieties USA–Jackson–Large-Seeded and / or Vegetable-Type. 3627, 3628, 4362, 4542, 4622, 6136, 8172

Soybean Varieties USA–Jefferson–Large-Seeded and / or Vegetable-Type. 3628, 4362, 7692, 8172, 8844

Soybean Varieties USA–Jet–Early Introduction. 1456, 1991, 2479, 4362, 9209, 10358

Soybean Varieties USA–Jogun–Large-Seeded and / or Vegetable-Type. 3240, 3387, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 3727, 3785, 3896, 3900, 4362, 4542, 5742, 8172, 8844, 11489, 11490

Soybean Varieties USA–Kahala–Large-Seeded and / or Vegetable-Type. 6316

Soybean Varieties USA–Kaikoo–Large-Seeded and / or Vegetable-Type. 5677

Soybean Varieties USA–Kailua–Large-Seeded and / or Vegetable-Type. 5678, 6316

Soybean Varieties USA–Kanrich–Large-Seeded and / or Vegetable-Type. 4362, 4542, 5808, 5910, 5911, 5941, 5994, 6136, 6680, 6698, 8123, 8172, 9937, 10198, 10275

Soybean Varieties USA–Kanro–Large-Seeded and / or Vegetable-Type. 2429, 3238, 3240, 3387, 3389, 3427, 3511, 3623, 3628, 3646, 3662, 3705, 3785, 3896, 3900, 4362, 8172, 8844, 9839, 10545, 11489

Soybean Varieties USA–Kanum–Large-Seeded and / or Vegetable-Type. 3628, 3662, 3785, 4362, 8172, 8844

Soybean Varieties USA–Kentucky–Early Introduction. 4362

Soybean Varieties USA–Kentucky A–Early Selection. 9209

Soybean Varieties USA–Kim–Large-Seeded and / or Vegetable-Type. 4362, 4542, 6136, 9937

Soybean Varieties USA–Kingston–Early Introduction. 1190, 1192, 1257, 1318, 1453, 1456, 2226, 2429, 2518, 3242, 3379, 4362, 6735, 8844, 10358

Soybean Varieties USA–Kiyusuke Daizu–Early Introduction. Also spelled Kiyusuki, Kiuski, Kaiyuski, Kuiske, Keyuska, Kysuki. 782, 806, 812, 820, 841, 850, 870, 875, 876, 893, 952, 1190, 1456, 4362, 11491

Soybean Varieties USA–Kura–Large-Seeded and / or Vegetable-Type. 3239, 3240, 3387, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 4362, 8172, 8844, 10358, 11489

Soybean Varieties USA–Laredo–Early Introduction. 1980, 2180, 2246, 2479, 2518, 2558, 2928, 3043, 3387, 3389, 3511, 3662, 3900, 4362, 5749, 8844, 9839, 10358, 10394, 10557, 10975

Soybean Varieties USA–Large Black–Early Introduction. 1190, 1456, 3905, 4362, 10358

Soybean Varieties USA–Late Mammoth–Early Introduction. 965, 980

Soybean Varieties USA–Lexington–Early Introduction. 1803, 1906, 2246, 2479, 2518, 3389, 3511, 3662, 4362, 8844, 10557

Soybean Varieties USA–Lowrie–Early Selection (1908). 1453, 1456, 4362, 9209

Soybean Varieties USA–Magna–Large-Seeded and / or Vegetable-Type. 6136, 8172, 9937

Soybean Varieties USA–Mammoth–Early Introduction. 1039, 1190, 1318, 1353, 1453, 1455, 1456, 1543, 1771, 1774, 1789, 1803, 1906, 1934, 2005, 2039, 2148, 2149, 2180, 2226, 2243, 2244, 2245, 2247, 2248, 2330, 2429, 2479, 3379, 10358, 11491

Soybean Varieties USA–Mammoth Brown–Early Introduction. 2246, 2479, 3379, 3389, 3511, 3662, 4362, 9209

Soybean Varieties USA–Mammoth Yellow–Early Introduction. 1091, 1097, 1190, 1257, 1366, 1508, 1774, 1803, 1957, 1991, 2245, 2246, 2374, 2479, 2496, 2518, 2863, 2928, 3256, 3328, 3379, 3389, 3511, 3662, 3733, 3899, 3900, 4362, 6735, 8844, 9839

Soybean Varieties USA–Manchu–Early Introduction. 1803, 1906, 1934, 1991, 2005, 2091, 2148, 2149, 2155, 2180, 2244, 2245, 2246, 2248, 2479, 2504, 2648, 2928, 2929, 3043, 3151, 3256, 3387, 3389, 3511, 3662, 3733, 4362, 5725, 6020, 6735, 8700, 8844, 9839

Soybean Varieties USA–Manchuria–Early Introduction. 2479, 3728, 4362, 6735, 8844

Soybean Varieties USA–Mandarin–Early Introduction. 2091, 2155, 2180, 2244, 2246, 2479, 2504, 2518, 3151, 3379, 3387, 3389, 3511, 3646, 3662, 3733, 3900, 4362, 4542, 5725, 5910, 5941, 5994, 6020, 6106, 6735, 8844, 9839, 10260, 11487

Soybean Varieties USA–Manhattan–Early Introduction. 1190, 1456, 1510, 1991, 4362, 9209, 11491

Soybean Varieties USA–Medium Black–Early Introduction. Renamed Buckshot by 1948. 812, 870, 879, 893, 919, 955, 1014, 1190, 1366, 1456, 4362, 10358, 11491

Soybean Varieties USA–Medium Early Black–Early Introduction. Renamed Buckshot by 1907. 919, 1011, 1091, 1190, 1456, 4362, 10358, 11491

Soybean Varieties USA–Medium Early Green–Early Introduction. Renamed Guelph by about 1907. 919, 1014, 1091

Soybean Varieties USA–Medium Early White–Early Introduction. 812, 813, 875

Soybean Varieties USA–Medium Early Yellow–Early Introduction. 1091, 1366, 2155

Soybean Varieties USA–Medium Green–Early Introduction. 812, 814, 870, 879, 893, 955, 1004, 1005, 1190, 1257, 1318, 1366, 1453, 1455, 1456, 1906, 2155, 2226, 2243, 2244, 2246, 2247, 2479, 2496, 2504, 2518, 3389, 3511, 3662, 4362, 6735, 8844, 10358, 11491

Soybean Varieties USA–Medium Late Black–Early Introduction. 919, 11491

Soybean Varieties USA–Medium White–Early Introduction. 812, 815

Soybean Varieties USA–Medium Yellow–Early Selection (1905). Renamed Midwest by 1923. 1257, 1318, 1453, 1456, 1548, 1789, 1803, 1906, 1934, 1991, 2005, 2148, 2149, 2180, 2246, 2374, 2479, 3379, 3511, 4362

Soybean Varieties USA–Mendota–Large-Seeded and / or Vegetable-Type. 3896, 3900, 4362, 8172, 8844

Soybean Varieties USA–Merko–Early Introduction. 1453, 1456, 2155, 2246, 2479, 3389, 4362, 9209

Soybean Varieties USA–Merrimax–Large-Seeded and / or Vegetable-Type. 9937

Soybean Varieties USA–Meyer–Early Introduction. 1190, 1318, 1335, 1453, 1456, 2558, 3468, 4362, 9209, 10358, 11491

Soybean Varieties USA–Midwest–Early Introduction. 2244, 2245, 2246, 2248, 2429, 2479, 2518, 2928, 2929, 3389, 3511, 3662, 4362, 6735, 8844

© Copyright Soyinfo Center 2014

Soybean Varieties USA–Mikado–Early Development. 1789, 1906, 1934, 2180, 2244, 2246, 2479, 2518, 2728, 2863, 3389, 4362, 6553, 9209

Soybean Varieties USA–Minnesota 166 and Minnesota 167–Early Selections. 2504

Soybean Varieties USA–Minsoy–Early Introduction. 2246, 2479, 2518, 3379, 3389, 3511, 3662, 3900, 4362, 6735, 8844, 10975

Soybean Varieties USA–Mokapu Summer–Large-Seeded and / or Vegetable-Type. 5679

Soybean Varieties USA–Mongol–Early Introduction. 1822, 1906, 2155, 2246, 2479, 4362

Soybean Varieties USA–Morgan–Early Introduction. 1456, 4362, 9209

Soybean Varieties USA–Morse–Early Introduction. 1456, 1732, 2180, 2244, 2246, 2479, 3389, 3511, 3662, 4362, 6735, 8844, 10557, 11491

Soybean Varieties USA–Nalrade–Early Introduction. 1011, 1012

Soybean Varieties USA–Nanda–Large-Seeded and / or Vegetable-Type. 3240, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 4362, 8172, 8844, 11489

Soybean Varieties USA–Natsu–Early Introduction. 1456, 4362, 9209

Soybean Varieties USA–Nemo–Early Introduction. 1456, 4362, 9209

Soybean Varieties USA–Nielsen–Early Selection. 1456, 4362, 9209, 11491

Soybean Varieties USA–Nigra–Early Introduction. 1456, 2180, 4362, 9209, 10358

Soybean Varieties USA–Nuttall–Early Introduction. 1190, 1456, 1543, 4362, 9209, 10358, 11491

Soybean Varieties USA–Ogemaw / Ogema–Early Development. Synonym–Dwarf Brown (Morse 1948). 1091, 1190, 1275, 1318, 1453, 1456, 2155, 2226, 2233, 2246, 2479, 2496, 2504, 2518, 2923, 3242, 3331, 3389, 3511, 3662, 4362, 8844, 10358, 11491

Soybean Varieties USA–Ohio 9001–Early Introduction. 2244, 4362

Soybean Varieties USA–Ohio 9016–Early Introduction. 2244

Soybean Varieties USA–Ohio 9035–Early Development. Renamed Hamilton by 1923. 2479, 2928, 4362, 11491

Soybean Varieties USA–Okute / O'kute / O'Kute–Early Introduction. 1456, 4362, 9209

Soybean Varieties USA–Olive Medium–Early Introduction. 1091, 2155

Soybean Varieties USA–Osaya–Large-Seeded and / or Vegetable-Type. 3240, 3241, 3389, 3427, 3511, 3623, 3628, 3662, 3733, 4362, 8172, 8844, 10545, 11489

Soybean Varieties USA–Otootan / O-too-tan–Early Introduction. 1673, 1980, 2246, 2479, 2518, 3268, 3387, 3389, 3511, 3662, 3900, 3961, 4362, 6735, 8844, 9209, 9839, 10358, 10975

Soybean Varieties USA–Peking / Pekin–Early Selection (1907). 1453, 1456, 1771, 1789, 1803, 1906, 1934, 1991, 2005, 2039, 2068, 2148, 2149, 2155, 2180, 2243, 2244, 2246, 2248, 2479, 2518, 2928, 2929, 3054, 3379, 3387, 3389, 3511, 3662, 3728, 3948, 3961, 4362, 6281, 6735, 8844, 9293, 10358, 10557, 10975, 11487

Soybean Varieties USA–Perley's Mongol–Early Selection (1912). 2479, 4362

Soybean Varieties USA–Pingsu–Early Introduction. 1453, 1456, 1771, 4362, 9209, 10358

Soybean Varieties USA–Pinpu–Early Introduction. 2246, 2479, 3389, 3511, 3662, 4362

Soybean Varieties USA–Prize–Large-Seeded and / or Vegetable-Type. 5808, 6136, 6688, 7692, 8172, 9023, 9937

Soybean Varieties USA–Protana–Specialty, High Protein. 11452, 11453

Soybean Varieties USA–Proto–Specialty, High Protein. 9937, 10186, 10275, 10286

Soybean Varieties USA–Provar–Specialty, High Protein. 9937

Soybean Varieties USA–Riceland–Early Introduction. 1190, 1318, 1453, 1456, 1510, 4362, 9209, 10358

Soybean Varieties USA–Rokugatsu–Early Introduction. 1041, 1091, 1105, 1991, 11491

Soybean Varieties USA–Rokusun–Large-Seeded and / or Vegetable-Type. 3170, 3171, 3240, 3387, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 3722, 3785, 3799, 4362, 5742, 6136, 8172, 8844, 11489

Soybean Varieties USA–Sac–Large-Seeded and / or Vegetable-Type. 3628, 3629, 3896, 3900, 4362, 5742, 8172, 8844

Soybean Varieties USA–Samarow–Early Introduction. 1190, 1257, 1275, 1318, 1453, 1456, 1543, 2226, 3379, 4362, 9209

Soybean Varieties USA–Sanga–Large-Seeded and / or Vegetable-Type. 8844

Soybean Varieties USA–Saskatoon–Early Introduction. 9209

Soybean Varieties USA–Sato–Large-Seeded and / or Vegetable-Type. 3240, 3243, 3389, 3427, 3511, 3623, 3628, 3662, 4362, 5742, 8172, 8844, 10358, 11489

© Copyright Soyinfo Center 2014

Soybean Varieties USA–Sedo–Early Introduction. 1453, 1456, 4362, 9209

Soybean Varieties USA–Seminole–Large-Seeded and / or Vegetable-Type. 3628, 3662, 3896, 3900, 4362, 8172, 8844

Soybean Varieties USA–Shanghai–Early Introduction. 1456, 1803, 1906, 2479, 3948, 4362, 6281, 9293, 10358

Soybean Varieties USA–Sherwood–Early Introduction. 1456, 4362, 9209

Soybean Varieties USA–Shingto–Early Introduction. 1453, 1456, 4362, 6735, 8844, 10545

Soybean Varieties USA–Shiro–Large-Seeded and / or Vegetable-Type. 3240, 3244, 3389, 3427, 3511, 3623, 3628, 3662, 4362, 8172, 8844, 11489

Soybean Varieties USA–Sioux–Large-Seeded and / or Vegetable-Type. 3427, 3428, 3511, 3628, 3662, 3770, 3780, 4362, 8172, 8844, 10545

Soybean Varieties USA–Sooty–Early Selection. 2479, 2518, 3389, 3511, 3662, 4362, 8844, 10358

Soybean Varieties USA–Sousei–Large-Seeded and / or Vegetable-Type. 3240, 3245, 3387, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 3785, 3799, 4362, 5742, 8172, 8844, 10545, 11489

Soybean Varieties USA–Southern Prolific–Early Introduction. 2479, 2518, 3389, 3511, 3662, 9209

Soybean Varieties USA–Soysota–Early Introduction. 2479, 2518, 3389, 3511, 3662, 4362, 6735, 8844

Soybean Varieties USA–Stuart–Early Introduction. 1456, 4362, 9209

Soybean Varieties USA–Suru–Large-Seeded and / or Vegetable-Type. 3240, 3246, 3389, 3427, 3511, 3623, 3628, 3662, 4362, 9209, 11489

Soybean Varieties USA–Swan–Early Introduction. 1453, 1456, 1510, 4362, 9209

Soybean Varieties USA–Taha–Early Introduction. 1453, 1456, 2244, 4362, 9209, 10358

Soybean Varieties USA–Tamarat Sukun–Early Introduction. 1011, 1013

Soybean Varieties USA–Tarheel / Tar Heel / Tar-Heel–Early Introduction. Renamed Tarheel Black by May 1915. 2518, 10358

Soybean Varieties USA–Tarheel Black / Tar-Heel Black / Tar Heel Black–Early Introduction. 1906, 1991, 2180, 2244, 2246, 2479, 2518, 3389, 3511, 3662, 4362, 6735, 8844, 10358

Soybean Varieties USA–Tashing–Early Introduction. 1453, 1456, 4362, 9209

Soybean Varieties USA–Tastee–Large-Seeded and / or Vegetable-Type. 3628, 3631, 3662, 3705, 3785, 4362, 8172, 8844

Soybean Varieties USA–Toku–Large-Seeded and / or Vegetable-Type. 3240, 3247, 3389, 3427, 3511, 3623, 3628, 3662, 3705, 4362, 8172, 8844, 11489

Soybean Varieties USA–Tokyo / Tokio–Early Introduction. 1190, 1194, 1257, 1366, 1453, 1456, 1789, 1803, 1906, 1934, 1991, 2005, 2148, 2149, 2180, 2244, 2245, 2246, 2248, 2479, 2518, 3227, 3228, 3256, 3389, 3427, 3511, 3662, 3722, 4362, 6020, 6735, 8844, 9839

Soybean Varieties USA–Tortoise Egg–Large-Seeded and / or Vegetable-Type. 3411, 3727, 5742, 6082, 8844

Soybean Varieties USA–Trenton–Early Introduction. 1456, 4362, 9209

Soybean Varieties USA–Verde–Large-Seeded and / or Vegetable-Type. 6136, 8172, 9937

Soybean Varieties USA–Very Dwarf Brown–Early Introduction. 1366

Soybean Varieties USA–Vinton–Large-Seeded and / or Vegetable-Type. 7835, 9023, 9025, 9155, 9937, 10139, 10140, 10168, 10198, 10208, 10234, 10243, 10395, 10435, 10973

Soybean Varieties USA–Vinton 81–Large-Seeded and / or Vegetable-Type. 9937, 10125, 10197, 10257, 10365

Soybean Varieties USA–Vireo–Early Introduction. 1453, 1456, 4362, 9209

Soybean Varieties USA–Virginia–Early Selection (1907). 1789, 1803, 1906, 1934, 1991, 2039, 2068, 2148, 2149, 2180, 2243, 2244, 2246, 2248, 2479, 2518, 2558, 2769, 2776, 2928, 2929, 3043, 3379, 3387, 3389, 3511, 3662, 3728, 3900, 4362, 8844, 10557, 10975, 11491

Soybean Varieties USA–Waseda–Large-Seeded and / or Vegetable-Type. 3240, 3248, 3389, 3427, 3511, 3623, 3628, 3662, 4362, 8172, 8844, 10545, 11489

Soybean Varieties USA–Wea–Early Introduction. 2246, 2479, 2518, 3511, 3662, 4362, 6735, 8844

Soybean Varieties USA–White Eyebrow–Early Introduction. 2324, 2479, 4362, 9209

Soybean Varieties USA–Willomi–Large-Seeded and / or Vegetable-Type. 3412, 3427, 3511, 3623, 3628, 3662, 3705, 3727, 3785, 3799, 4362, 4542, 8172, 8844

Soybean Varieties USA–Wilson–Early Introduction. 1318, 1453, 1456, 1789, 1803, 1806, 1991, 2005, 2148, 2149, 2155, 2244, 2246, 2248, 2479, 2518, 2776, 2928, 2929, 3389, 3511, 3662, 4362, 6735,

Soybean Varieties USA–Wilson-Five / Wilson Five / Wilson 5 / Wilson-5 / Wilson V–Early Selection (1912). 1906, 1934, 2039, 2068, 2148, 2149, 2180, 2246, 2479, 2518, 2928, 3379, 3387, 3389, 3511, 3662, 4362, 8844, 10358, 10975, 11491

Soybean Varieties USA–Wing's Extra Select Sable–Early Development. 10358

Soybean Varieties USA–Wing's Pedigreed Sable–Early Development. 4362, 10358

Soybean Varieties USA–Wing's Sable–Early Development. 10358

Soybean Varieties USA–Wisconsin Black–Early Introduction. 1318, 1456, 2155, 2180, 2233, 2246, 2479, 2518, 2923, 3151, 3387, 3389, 3511, 3662, 4194, 4362, 6735, 8844, 10358, 11491

Soybean Varieties USA–Wolverine–Large-Seeded and / or Vegetable-Type. 3628, 3632, 3785, 4362, 5742, 8172, 8844

Soybean Varieties USA–Yamagata Cha-daidzu / Yamagata Chadaidzu / Yamagata-cha Daidzu–Early Introduction. Renamed Eda by about 1907. 806, 820, 841, 850, 870, 875, 1456, 4362, 11491

Soybean Varieties USA–Yellow–Early Introduction. 1190, 1366, 1456, 1906, 2479, 4362, 11491

Soybean Varieties USA–Yellow Marvel–Large-Seeded and / or Vegetable-Type. 3628, 4362, 8844

Soybean Varieties USA–Yellow Soy Bean or Yellow Soy–Early Introduction. 782, 820, 850, 870, 875, 893, 952, 955, 1004

Soybean Varieties USA–Yokoten / Yokotenn–Early Introduction. 1906, 2246, 2479, 2518, 3389, 3511, 3662, 4362

Soybean Varieties USA–Yoshioka–Early Introduction. Renamed Yosho by May 1907. 1041, 1105, 1991, 2118, 2121, 11491

Soybean Varieties USA–Yosho–Early Introduction. 1190, 1456, 1991, 2244, 4362, 9209

Soybean Variety Development and Breeding–New Soybean Varieties in the USA. 813, 814, 815, 1010, 1012, 1013, 1039, 1191, 1192, 1194, 1905, 3171, 3225, 3226, 3230, 3231, 3232, 3233, 3234, 3235, 3236, 3238, 3239, 3241, 3243, 3244, 3245, 3246, 3247, 3248, 3361, 3362, 3378, 3409, 3410, 3411, 3412, 3422, 3428, 3626, 3627, 3629, 3631, 3632, 3680, 3701, 3801, 5677, 5678, 5679

United States–States–Wyoming. 2591, 3329

United States Department of Agriculture (USDA)–Agricultural Adjustment Administration (AAA, 1933-1942) and Agricultural Adjustment Agency (1942-1945). 3783, 3899

United States Department of Agriculture (USDA)–Agricultural Cooperative Service. Including Farmer Cooperative Service (FCS, 1926). 7687

United States Department of Agriculture (USDA)–Agricultural Marketing Service (AMS). 4362

United States Department of Agriculture (USDA)–Agricultural Research Service (ARS, Established 1953). Including Agricultural Research Administration (1942-1953). 3802, 4335, 4406, 4436, 4442, 4595, 4608, 4666, 4753, 4842, 4905, 4906, 4924, 4962, 5029, 5094, 5161, 5364, 5367, 5380, 5529, 5532, 5576, 6136, 6637, 6693, 6869, 7894, 7903, 8200, 8327, 8445, 8844, 8885, 8932, 9498, 9828, 10387, 10405, 10545, 11030

United States Department of Agriculture (USDA)–Arlington Experimental Farm at Arlington, Virginia (1900-1942). 1003, 1007, 1105, 1275, 1335, 1353, 1453, 1669, 1690, 1803, 1822, 1906, 1957, 2113, 2155, 2243, 2246, 2251, 2373, 2374, 2518, 2619, 2647, 2671, 2729, 2838, 3363, 3387, 3388, 3389, 3511, 3893, 11489

United States Department of Agriculture (USDA)–Bureau of Agricultural Economics (1922-1953). Including Bureau of Markets and Crop Estimates (1921-1922), Bureau of Markets (1913-1921), and Office of Farm Management and Farm Economics (1905-1922). Transferred in 1953 to USDA's Economic Research Service. 3048, 3509, 3887, 3888

United States Department of Agriculture (USDA)–Bureau of Agricultural and Industrial Chemistry (1943-1953). Including Bureau of Agricultural Chemistry and Engineering (1938-1943), Bureau of Chemistry and Soils (1927-1938), and Bureau of Chemistry (1901-1927). Transferred to the Agricultural Research Service (ARS) in 1953. 1415, 1732, 1940, 1950, 1959, 1962, 1969, 1983, 2015, 2030, 2079, 2084, 2156, 2223, 2258, 2259, 2260, 2261, 2262, 2271, 2469, 3053, 3756, 3804, 3806, 3831

United States Department of Agriculture (USDA)–Bureau of Human Nutrition and Home Economics (1943-1953). Including Bureau of Home Economics (1923-1943), Office of Home Economics (1915-1923), and Nutrition and Home Economics Work in the Office of Experiment Stations (1894-1915). Transferred to the Agricultural Research Service in 1953. 924, 974, 987, 1391, 1523, 3363, 10905

United States Department of Agriculture (USDA)–Bureau of Plant Industry, Soils, and Agricultural Engineering (1943-1953). Including Bureau of Plant Industry (1901-1943), Office of Plant Industry (1900-1901), and Division of Agrostology (1895-1901). Transferred to Agricultural Research Service in 1953. 907, 919, 951, 1017, 1034, 1035, 1041, 1043, 1045, 1097, 1105, 1190, 1254, 1275, 1278, 1285, 1318, 1335, 1353, 1358, 1453, 1454, 1455, 1456, 1598, 1648, 1669, 1673, 1690, 1716, 1803, 1804, 1813, 1822, 1828, 1845, 1889, 1906, 1934, 1935, 1980, 2005, 2047, 2048, 2082, 2165, 2176, 2185, 2226, 2233, 2234, 2235, 2236, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2251, 2255, 2258, 2281, 2283, 2285, 2328, 2330, 2337, 2338, 2359, 2373, 2424, 2479, 2496, 2518, 2557, 2558, 2560, 2603, 2604, 2605, 2607, 2612, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2631, 2633, 2639, 2640, 2644, 2646, 2647, 2649, 2655, 2657, 2658, 2659, 2665, 2667, 2668, 2669, 2671, 2725, 2726, 2727, 2729, 2730, 2731, 2733, 2734, 2736, 2739, 2740, 2742, 2743, 2744, 2745, 2746, 2747, 2750, 2751, 2755, 2759, 2760, 2763, 2764, 2767, 2768, 2769, 2772, 2775, 2776, 2784, 2786, 2807, 2822, 2823, 2824, 2826, 2828, 2829, 2830, 2831, 2832, 2838, 2847, 2848, 2856, 2867, 2898, 2905, 2908, 2956, 2957, 2958, 2963, 3043, 3083, 3170, 3189, 3227, 3228, 3240, 3275, 3331, 3353, 3358, 3363, 3387, 3388, 3389, 3427, 3467, 3468, 3503, 3511, 3583, 3628, 3685, 3725, 3730, 3743, 3754, 3755, 3764, 3785, 3788, 3799, 3802, 3811, 3893, 3896, 3897, 3898, 3899, 3900, 3905, 3961, 3993, 4017, 4123, 4215, 4543, 5372, 5725, 6020, 6136, 6556, 6735, 7151, 7153, 7248, 7323, 7324, 7420, 7872, 8064, 8172, 8232, 8844, 9211, 10358, 10497, 10511, 10557, 10558, 10752, 10884, 10905, 10975, 11030, 11489, 11491

United States Department of Agriculture (USDA)–Economic Research Service (ERS). 4863, 5294, 6212, 6635, 6730, 7760, 9497

United States Department of Agriculture (USDA)–Foreign Agricultural Service (FAS, Est. 1953) Including Office of Foreign Agricultural Relations (1939-1953). Foreign Agricultural Service (1938-1939). 3634, 3663, 3711, 3737, 4173, 4230, 4240, 4306, 4333, 4335, 4338, 4340, 4349, 4406, 4436, 4442, 4542, 4636, 4756, 4764, 4827, 4864, 4963, 5549, 5550, 5577, 5606, 5702, 5749, 5944, 6201, 6670, 6680, 7320, 9337, 9454, 9624, 9764, 9805, 10020, 10319, 10884, 11013

United States Department of Agriculture (USDA)–Office of Experiment Stations (1888-1955). Transferred to the Cooperative State Experiment Station Service in 1961. 875, 892, 924, 974, 987, 1028, 1147, 1148, 1149, 1150, 1151, 1152, 1391, 3358, 3581

United States Department of Agriculture (USDA)–Patent Office and Commissioner of Patents, Agriculture (Forerunners of USDA). 427, 434, 436, 440, 441, 445, 448, 450, 453, 454, 455, 456, 457, 460, 462, 464, 476, 477, 478, 479, 483, 496, 1455, 2247, 3358, 3828, 3893

United States Department of Agriculture (USDA)–Section of Foreign Seed and Plant Introduction (Established 1898 within the USDA with David Fairchild in Charge). Transferred to Bureau of Plant Industry (1 July 1901). Later Referred to as the Office of Foreign Seed and Plant Introduction and then the Office of Foreign Plant Introduction. 951, 958, 959, 1031, 1035, 1041, 1045, 1105, 1190, 1220, 1254, 1275, 1278, 1325, 1335, 1353, 1453, 1456, 1598, 1648, 1716, 1732, 1803, 1845, 1889, 1934, 1935, 2032, 2047, 2165, 2176, 2185, 2243, 2255, 2281, 2283, 2285, 2337, 2338, 2374, 2492, 2557, 2558, 2616, 2620, 2622, 2623, 2624, 2625, 2626, 2628, 2629,
