colleagues created a computerized database, with the data entered on 80-column paper punch cards, using software that Sam G. Carmer borrowed from Washington State University. In hindsight, Ted wishes he had divided the column titled "Year named or released" into two. The first would be "Year named" and the second would be "Public release." This database no longer exists. The many thousands of punch cards were discarded after Sam Carmer died. Address: Dep. of Agronomy, Univ. of Illinois.

6736. Lin, C.F.; Su, Y.C.; Wan, Wen-Hsiang; Sooksan, R.; Gongsakdi, S.; Pichyangkura, S. 1977. Chinese red rice: Anka (Ang-kah). Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 547-53.
• ***Summary:*** Contents: Description. Patterns of production and consumption. Steps in production. Microbiology. Biochemistry. Toxicology. Economics.

Anka is also known as ang-kak, angkak, angquac, beni-koji, aka-koji, and red rice. It is used and is a commercial product in the southern provinces of China, in Taiwan, the Philippines, Thailand [and Okinawa].

In Taiwan, approximately 200 tons/year of anka are made. The average yearly per capita consumption here is about 12 grams.

Historically, Anka was apparently first noted in the Yuan (Mongol) dynasty (1260-1368). It was introduced to Taiwan by wine makers from Fukien [pinyin: Fujian] province of southern China about 100 years ago (Su and Wang, 1977). It is used to add both color and flavor to many foods including *hung-lu chiu* (red soybean cheese) [fermented tofu], and *fu chiu* (rice wine). A number of countries are gradually adopting natural pigments to replace coal-tar dyes, which may be carcinogenic. With anka there is no evidence of toxicity or carcinogenicity.

Figures show: (26) Flow sheet for the production of Chinese *chu chong* (from Su and Wang, 1977), starting with rice (stream 1) and *Monascus purpureus* (anka), Saccharomyces formosensis, polished glutinous rice, and rice wine (stream 2), which yields 2 liters *chu kong tsaw,* the inoculum. (27) Flow sheet for the production of Chinese red rice (from Su and Wang, 1977). (3) Flow sheet for the production of red rice in Thailand (from Sooksan and Gongsakdi, 1977).

There is one table.

Rock Island Foods (Ignacio, California), Shadowfax (Binghamton, New York), Starflower (Eugene, Oregon), Tree of Life (Augustine, Florida), United Naturals (Eureka, California), Westbrae (Emeryville, California), Lifestream Natural Foods (Vancouver, British Columbia, Canada), Manna Foods (Scarborough, Ontario, Canada).

Large health food distributors (8–also carry books): Akin (Tulsa, Oklahoma), Akin Southeast (Jacksonville, Florida), Balanced Foods (Bergen, New Jersey), Collegedale Distributors (Collegedale, Tennessee), Foods for Health (Phoenix, Arizona), Health Foods Inc. (Des Plaines, Illinois), Kahan and Lessin (Los Angeles, California), Natures Best (El Segundo, California).

Large booksellers [distributors] (3): Nutribooks Corp. (Denver, Colorado), Bookpeople (Berkeley, California), Landstrom (South San Francisco, California).

6742. Yamada, Koichi. 1977. Recent advances in industrial fermentation in Japan: Bioengineering report. *Biotechnology and Bioengineering* 19(11):1563-1621. Nov. [28 ref]
• ***Summary:*** Table 1 shows the production of miso, shoyu, and vinegar in Japan from 1968 to 1974. Production of both miso and shoyu have increased only slowly. Miso production increased from 538,156 tonnes (metric tons) in 1968 to a peak of 590,137 tonnes in 1973, then fell slightly to 587,228 tonnes in 1974.

Shoyu production increased from 1,026,643 kl (kiloliters) in 1968 to a peak of 1,274,987 kl in 1973, then fell slightly to 1,199,155 kl in 1974.

Advances in miso production: Halophilic (salt tolerant) bacteria such as *Pediococcus halophilus* and *Streptococcus faecalis,* and halophylic yeasts such as *Saccharomyces rouxii, Torulopsis versatilis,* and *Torulopsis etchellisii* were shown to be the more important strains. Pure cultures of these strains were used as starters for miso fermentation. Since much time, work, and skill are required to make traditional koji, commercial enzyme preparations with high polypeptidase activity and high proteinase activity are used for evoking the full flavors of miso.

Advances in shoyu production: A new type of cooker which can cook soybean meal at high temperatures for short times is now being used, and advances in koji technology have raised the enzymatic activity and lowered the level of contaminating microorganisms. As a result, nitrogen utilization has been raised to 90% from 60% in 1945 and the time required for ripening the moromi mash has decreased to 4-6 months from one year or more in the past.

Table XIX titled "Production of microbial enzymes in Japan" shows 7 major and 8 minor commercial enzyme preparations, the number of makers of each, the output per year (in tonnes and yen), and the main microorganisms used to make each. By far the most important enzyme in terms of tonnage is α-amylase (11,000 tonnes, 10 makers, *Aspergillus oryzae*), followed by protease (1,050 tonnes, 18 makers, *Aspergillus oryzae*), then glucoamylase (400 tonnes, 8 makers, *Aspergillus niger*). Address: Univ. of Tokyo and Sapporo Beverages Ltd., Tokyo 153, Japan.

6743. Yokotsuka, Tamotsu. 1977. Japanese shoyu. Paper presented at Symposium on Indigenous Fermented Foods, Bangkok, Thailand. Summarized in K.H. Steinkraus, ed. 1983. Handbook of Indigenous Fermented Foods. New York: Marcel Dekker, Inc. ix + 671 p. See p. 437-51. [50+ ref] Address: Kikkoman Corp., 339 Noda, Noda-shi, Chiba-ken, Japan 278.

6744. Cooney, John E. 1977. Selling American: Top soy sauce brewer in Japan shows how to crack U.S. market. Kikkoman studied the ways of the West, advertised on TV, moved in slowly. Some areas still won't buy. *Wall Street Journal.* Dec. 16. p. 1, 29.
• ***Summary:*** The fascinating–well researched and well written–story of how Kikkoman used Western marketing methods and TV advertising to put shoyu (the Japanese word for soy sauce) in millions of Americans kitchens. In one of their popular commercials, a chef, "resplendent in traditional white garb and floppy hat, is cooking hamburgers. 'Ah,' he says, 'you want to know my secret recipe?' Turning a little bottle of Kikkoman to the camera he sprinkles some on the sizzling meat. 'Add Kikkoman to almost anything,' he says."

In this way Kikkoman has been working to convince Americans that soy sauce is as American as hamburgers. To learn how to persuade the mass market takes time, especially for a foreign company that is also a pioneer. Kikkoman has been patient–studying American marketing techniques, working slowly but steadily–according to Shinichi Suzuki, presently head of Kikkoman's subsidiary in San Francisco, California. In 1957, when Kikkoman Corp. founded its U.S. subsidiary, soy sauce was unknown to many Americans. Moreover, many Americans at the time considered Japanese products inferior.

During World War II, Kikkoman has been stripped of its overseas holdings in Asia; now the company was eager to expand again, and it viewed the U.S. as a logical place to begin. It already has a small base here, since it had been exporting Kikkoman shoyu to Japanese Americans since the 19th century. It had also been importing large amounts of American soybeans and wheat to make shoyu in Japan,

© Copyright Soyinfo Center 2014

then shipping some of its shoyu (which contained mostly water) back to America–rather inefficient. Moreover, since the U.S. had defeated Japan in World War II, conquering the American mass market would be an especially sweet triumph.

Caution has long been a cornerstone of Kikkoman's business philosophy. The company traces its origins back to the 17th century when two families, the Mogis and Takanashis, began making shoyu in Noda, Japan. Shoyu is said to have come to Japan in the 6th century, when Buddhism was introduced. The new religion, advocating a vegetarian diet, prohibited the eating of meat and fish, which has long been used to make seasonings and sauces. These traditional products were slowly replaced by plant-based products, such as fermented shoyu and miso, and flavorful konbu (kelp) and shiitake mushrooms.

Gradually Kikkoman grew to become Japan's largest maker of soy sauce. Today shoyu is as widely used in Japan as table salt in America, and annual per capita consumption is Japan is about 2.5 gallons (10 liters) a year. "Japan has captured 35% of the market and its name is as familiar as Coca-Cola is here."

In 1957, the U.S. soy sauce market, then only $1 million a year was dominated by two brands, LaChoy (now owned by Beatrice Foods) and Chun King (now belonging to R.J. Reynolds Industries Inc.). Both companies had lines of Chinese foods and both made their soy sauce without using fermentation by a quick, chemical process. The few Americans who knew about soy sauce thought of it as a seasoning to be used in Oriental cookery.

Kikkoman hired an advertising agency, Grey Advertising, Inc., owned by Richard Guggenheim. He urged Kikkoman to Americanize soy sauce, and to emphasize its versatility as a seasoning. Kikkoman also had to explain that what goes under the name "soy sauce" in America would never be called that in Japan–because it was considered inferior.

Kikkoman chose to educate Americans using the most expensive but effective medium–TV. The ads explained how Kikkoman is specially brewed and aged, like beer. The American brands are made chemically. The slogan: "Add quality; add Kikkoman." A key decision was made to price Kikkoman a few cents higher than

Because TV advertising was so expensive, Kikkoman decided to educate one region at a time–starting in San Francisco, where its subsidiary was based. The advertising was effective, and by 1959 Kikkoman was ready to educate Los Angeles. Over the next 10 years, going slowly, one region at a time, Kikkoman expanded across America. As it grew, it used food brokers on the belief that "maintaining its own sales force would be too expensive; it still uses them."

In 1970, because of Kikkoman's cautious growth strategy, their shoyu was first distributed nationwide. In 1973 the company opened its first shoyu plant in the Western world, in Walworth, Wisconsin. By 1976 U.S. sales of Kikkoman products had grown to $11 million. In 1977, for the first time, the parent company in Japan stopped subsidizing its subsidiary's budget for advertising ($1 million) and promotion. By comparison, the parent company, with about $350 million/year in sales spends about $5 million on advertising–or 1.4% of sales.

Has Kikkoman's cautious approach been effective? First, Kikkoman is now the leading soy sauce brand in America. Second, a survey by Grey Advertising "found that two-thirds of all U.S. households had tried soy sauce and 61% of them are 'users,' that is, they buy more soy sauce when they run out."

6745. Birnbaum, Alfred. 1977. Re: Report on trip to Moriguchi Kakko Shokuhin, maker of Daitokuji natto [Daitokuji fermented black soybeans], with color slides. Letter to William Shurtleff at New-Age Foods Study Center, Dec. 24. 1 p. Handwritten and signed.

• ***Summary:*** The name, address, and phone number of the company's two locations are written in Japanese characters (Jc); see below. The company was founded 98 years ago [i.e. in about 1879]. At the first location in Kyoto, the company makes regular [sticky] large- and small-bean natto. At the second location, the company makes Daitokuji natto. Mr. Nakano (full name written in Jc) has 40 years experience making various types of natto [and fermented black soybeans].

A brochure states that Daitokuji natto was brought from Tang (?) China by monks to Murasaki-no (Jc) where it has been passed down for 650 years. The main ingredients are soybeans, barley, and salt which undergo a healthful, natural process for approximately 3 months, and because of the process later will not spoil. Daitokuji natto is said to have a subtle flavor (Jc, i.e. a flavor such that one cannot say exactly from where it comes)... a flavor reminiscent of Zen. Good with tea, extra special in *o-chazuke.*

© Copyright Soyinfo Center 2014

Daitokuji natto is a salt-natto rather than a sticky (*nebari*) natto. It keeps for 1½ years. Largely made as a tourist product.

The plant in Shiga prefecture makes approximately 1,200 kg/year of Daitokuji natto. The plant was moved to Shiga 5 years ago to provide the space needed for sun-drying the product on a large scale. A single vat holds approximately 25 kg.

Ingredients: Soybeans 15 kg (large beans are preferred because the ratio of contained seed to skin is larger and the beans are sweeter). Barley flour 10-15 kg. Rice koji 3-5 gm (1 handful). Salt 1½ kg.

Procedure: 1. Steam beans as for regular natto until completely soft. 2. Roast barley flour, add together with koji and mix thoroughly. 3. Ferment at approximately 33ºC (30-35ºC) for about 2 days in incubation room as for koji. Note: Higher temperatures used for sticky natto would turn the beans black. 4. Add 18% salt solution–1½ kg salt dissolved in 20 liters water; mix and let stand for about 3 days. 5. Move the vats outdoors to sun-dry (35-40ºC) for approximately 3 months; cover the vats at night or during bad weather.

Summer months are preferred for making Daitokuji natto because of the need for sun-drying–usually started in mid-July to August.

Daitokuji natto is also made in traditional wooden vats on a semi-small scale at Ikkyuji temple south of Kyoto (address in Jc and phone number given) as a product for tourists.

The following slides / photos in a numbered set, taken by Alfred, show how Daitokuji natto [Daitokuji fermented black soybeans] are presently made at Ikkyuji: (25) Five-foot diameter wooden vats in which Daitokuji natto are fermenting, outdoors. The wooden lids are not weighted. (26) The process is very similar to that for Hamanatto fermented black soybeans, except that unroasted barley flour is used, the brine fermentation lasts only 3 days, no gingerroot or sansho seeds are added, and the soybean koji is mashed than reshaped into soybean-sized balls. (27) At Ikkyuji all fermentation takes place outdoors in a lovely courtyard, surrounded by tile-roofed buildings. (28). Two men standing by the two wooden vats, which may be left uncovered. (29) A view looking down into a vat of Daitokuji natto, from which the brine has been removed. We like both Hamanatto fermented black soybeans and Daitokuji fermented black soybeans, but we prefer the former, since the latter have a sharper, slightly saltier flavor. (30) The Chinese ancestor of both these products is called *douchi,* which we see here next to the bag in which it is sold. Address: Tama-sô No. 1, Inokashira 1-28-30, Mitaka-shi, Tokyo 181, Japan. Phone: 0422-47-7130.

6746. *SoyaScan Notes.* 1977. Chronology of soybeans, soyfoods and natural foods in the United States 1977 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. 12. Laughing Grasshopper tofu shop starts making tofu in Millers Falls, Massachusetts. Founded by Richard and Kathy Leviton, Tom Timmins, and Michael Cohen in April 1976, it soon becomes the largest of the new breed of Caucasian-run U.S. tofu manufacturers. It was renamed The New England Soy Dairy in Nov. 1977, Tomsun Foods, Inc. in 1984, and Tomsun Foods International in 1986.

Jan. The Soy Plant starts making tofu inside Wildflower Community Bakery at Ann Arbor, Michigan. Steve Fiering is one of the organizers of America's first soyfoods co-op.

Jan. 20. Jimmy Carter inaugurated as president of the United States. Bob Bergland is Secretary of Agriculture.

March. Surata Soyfoods starts making tofu in Eugene, Oregon. America's second worker-owned soyfoods cooperative, organized by Benjamin Hills.

April 5. Takai Tofu & Soymilk Equipment Co. in Japan works with consultant William Shurtleff to acquire an English name, develop a unified equipment catalog, and establish international operations.

May. Flying Cloud Tofu (soon renamed The Tofu Shop, then Northern Soy) starts tofu production in Rochester, New York. Founders are Greg Weaver, Greg Mello, and Andy

© Copyright Soyinfo Center 2014

Schecter.

May 10-June 7. Shurtleff and Aoyagi travel to Indonesia to do field research on tempeh in preparation for a book on the subject.

Aug. 16. *Miso Production* by Shurtleff and Aoyagi published by New-Age Foods Study Center, the Center's first publication.

Sept. Article in *Mother Earth News* announces that tempeh starter and split whole soybeans are available from newly founded Farm Foods at The Farm in Tennessee. Orders start to pour in. Farm Foods continues The Farm's tradition, with a great deal of creative and influential work with soyfoods.

Sept. Swan Foods starts operation in Miami Florida, run by Robert Brooks and Mary Pung. They produce America's first commercial soymilk yogurt. After doing extremely innovative pioneering work with second generation tofu products and advertising them nationwide, they go out of business in Dec. 1978 from trying to grow too fast.

Sept. White Wave starts making tofu in a bathtub in Boulder, Colorado. Founded by Steve Demos.

Oct. The Tofu Shop, America's second soy deli, opens in Telluride, Colorado. Founded by Matthew Schmit, it was later renamed Far Pavilions.

Oct. 14. Bean Machines Inc., America's first supplier of tofu and soymilk equipment, begins operations in California under the direction of Larry Needleman. Most of their equipment is imported from Takai in Japan.

Oct. *Soycraft,* a newsletter and America's first periodical focusing on soyfoods, begins publication. Initiated by David and Danette Briscoe of Lawrence, Kansas.

Nov. Redwood Natural Foods, Inc. in Santa Rosa, California, launches the world's first vacuum packed tofu. Redwood developed the packing process using tofu made by Quong Hop & Co.

Nov. Paul Duchesne starts selling Fried Rice & Tofu Sandwiches in Fairfax, California. His operation later becomes Wildwood Natural Foods.

* *The Heartsong Tofu Cookbook,* by Bob and Toni Heartsong self-published in Florida.

* Passage of the 200 mile offshore fishing limit law has a major impact on Japan's protein supplies, increasing interest in and use of soy protein products.

* By the end of 1977 there are at least 13 commercial Caucasian-run tofu shops in America.

* The Food and Agriculture Organization of the United Nations (FAO) establishes a European Cooperative Network on Soybean in which 14 countries participate, exchanging information on soybean production.

* Genentech becomes the first company founded specifically to apply recombinant DNA techniques for commercial purposes.

* In China, under new post-Maoist economic policies, soybean acreage starts to increase after almost 20 years of decline based on grain-first policies. Soybean production began a slow increase in the mid-1960s, despite declining acreage.

6747. Tseng, Rose Y.L.; Smith-Nury, E.; Chang, Young Sook. 1977. Calcium and phosphorus contents and ratios in tofu as affected by the coagulants used. *Home Economics Research Journal* 6(2):171-75. Dec. [12 ref]

• ***Summary:*** Three commercial brands of tofu (all made by Azumaya in San Francisco) were analyzed. The firm tofu, coagulated with calcium sulfate, contained over 4 times as much calcium and over twice as much phosphorus as the softer silken tofu coagulated with glucono delta lactone. The calcium / phosphorus ratios of the firm and soft tofu samples were 2.0-2.5/1 and 1/1, respectively.

The amount of calcium in the tofu depended on the method used to measure it: (1) a titration method modified from the Association of Official Agricultural Chemists (1970) and (2) a method using the atomic absorption spectrophotometer. For tofu coagulated with calcium sulfate, by the first method it contained 208-209 mg of calcium per 100 gm, whereas by a second method it contained 166-170 mg/100 gm. "Tofu, a high protein food, is a good source of dietary calcium. Since the average American diet has a high phosphorus content and a low calcium/phosphorus ratio, tofu, particularly the firmer kind [made with a calcium coagulant], also would result in a better calcium/phosphorus ratio." The recommend ratio of calcium to phosphorus in the human diet is 1 to 1, however the average American diet has a ratio of 1 to 2.8. Address: Dep. of Home Economics, San Jose State Univ., San Jose, California 95192.

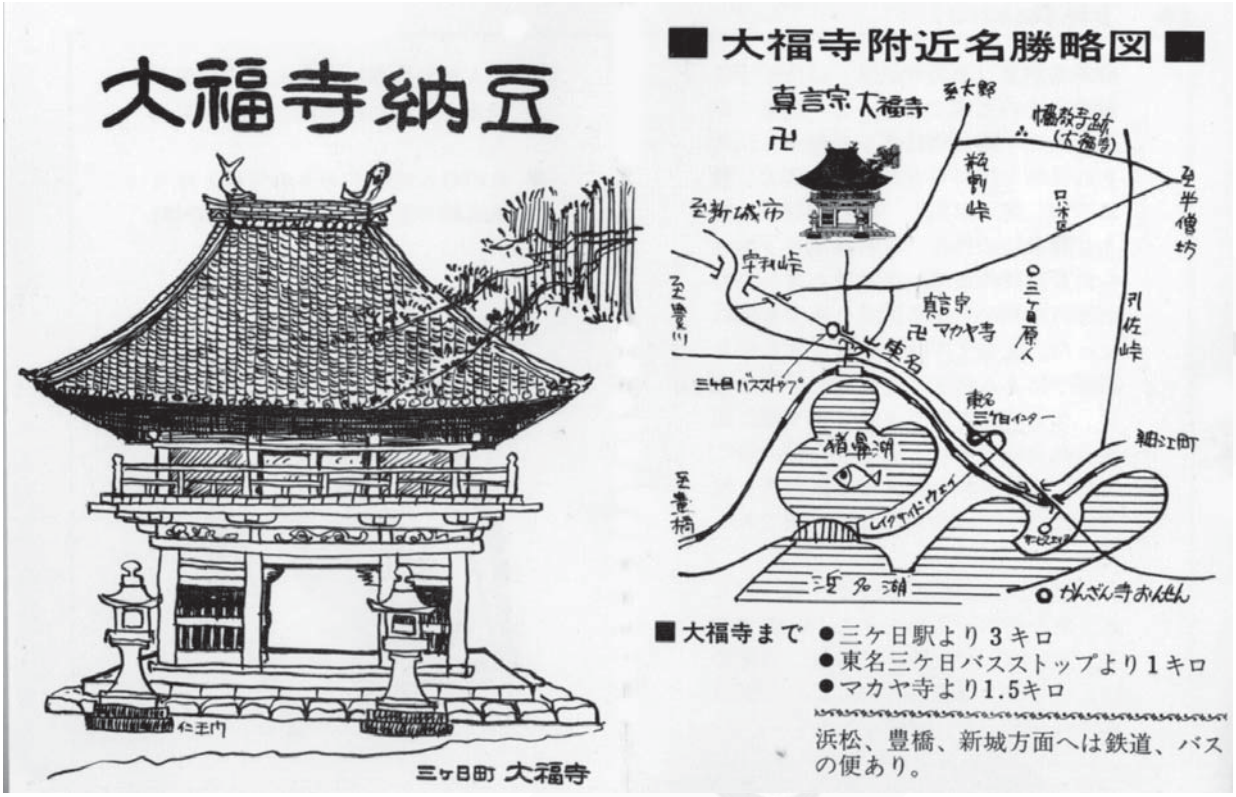
6750. Birnbaum, Alfred. 1977. Report on visits to Yamaya,

© Copyright Soyinfo Center 2014



Daifukuji, and Hôrinji–makers of Hamanatto (fermented black soybeans). Japan. 3 p. Unpublished manuscript. Undated.

• ***Summary:*** Yamaya: Process Alfred observed in the plant: Wash soybeans in a trough, soak them in a big wooden vat, pull plug at bottom of vat and drain fast so that beans on bottom are not soaked longer than those on top. Put soybeans in a 6-foot-deep steamer without pressure and blow in steam through many small holes in bottom. After steaming, leave overnight in steamer with lid on. Empty into pushcarts from lower door in steamer. Dump beans into mats (*mushiro*) that have been spread on floor indoors, break up any clumps of beans by hand (to aid koji growth), but do not crush individual beans. Fan bean with an electric fan to cool and dry.

Put roasted wheat flour (*kosen*) in bags. Mix roasted wheat flour and koji starter in winnowing basket (*mi*), then scatter mixture by hand over beans on straw mats. With two men holding opposite ends of straw mat, toss beans on mat to mix beans with flour and starter. Transfer mixture onto a conveyor belt which runs it into a modern koji incubation room (*muro*) where it is spread in a later 6 to 7 inches thick. After incubation for 20-25 days (temperature any stirring schedule are unknown), pipe the koji out onto a south-facing metal roof (at an angle of 15-20º to the horizontal) onto a piece of 3 by 6 foot polyethylene sheeting (which is sanitary, gives long use, and is inexpensive). After drying, drop the soybeans down a hole in front of a fan that blows away spores from the surface of the beans; if these are left on, the beans get bitter (*nigai*) during the second fermentation. Catch beans in small wooden kegs and transfer them to wooden kegs that hold 4.76 gallons (*4-to daru*). Pack soybeans in firmly in each keg without crushing with a wooden implement.

Put pressing lids atop beans on bottom row of vats, then top with heavy pressing weighs or a second row of vats and weights. The heavier the weights, the firmer the beans remain and the less likely to mash. Yamaya's yearly production is about 50 metric tons (tonnes).

Gingerroot: Cut into pieces 3/4 inch square by 1/16 inch thick. Put in a separate keg, just cover with soy sauce (*shoyu*). Pickle for 6 months to 2 years to get pickled gingerroot

The vibrator: put soybeans into hopper atop vibrator. One man breaks up any clumps of beans by hand, then drops them onto a vibrating screen (1/8 inch mesh); the man at the bottom adds pickled ginger by hand. Alfred is not sure where this step goes in the process.

Mr. Suzuki, the manager, says that, in Japan, only 1 person in 100 likes hamanatto.

Hamana has stopped making hamanatto; Yamaya is now their supplier.

Mr. Suzuki estimates that Horinji makes 3 tonnes a year and that Daifuku makes 2 tonnes a year. Alfred got the facts later.

Daifukuji: A pretty Shingon sect (Buddhist) mountain temple at the end of a long lane of cedars, 1 hour drive northwest of Hamamatsu. After Japan's war with Korea,

Toyotomi Hideyoshi (lived 1537-1598; a daimyo warrior and Japan's 2nd great unifier) gave lands to Daifukuji. They say they were the first place to make hamanatto. Today Daifukuji is very small and primitive; they were sold out of their hamanatto product when Alfred arrived. The head says it does not keep well in warm weather; mold grows on the soybeans. In the fall they make Hamanatto at most 4-5 times a week, and are finished in April or May.

Each time Daifukuji makes 1 (*koku*) or 750 kg of hamanatto, and they do this 5 times a year, from July to September; 150 to 200 kg dry soybeans makes 750 kg hamanatto. They do not use koji starter (*tane koji*) since the spores exist naturally in the koji trays and in the incubation room. They steam the soybeans in a wooden steamer that is placed over a caldron in which water is boiling; the steamer has 4 layers and each is square. They let the soy beans steam in the steamer overnight. A key ingredient is the middle hull of *sansho* pepper (*Zanthoxylum piperitum; sanshô no ki no chûkawa*) which is pickled in soy sauce (*shoyu*). This hull is removed, sun-dried, then pickled in 2 vats, 1 *koku* capacity each, with a pressing lid on each. After pickling, they are sun-dried for one day. Albert did not learn anything about the composition of the brining liquor or how long it takes. 50% is consumed locally (in the area of Hamamatsu) and the remaining 50% is consumed elsewhere–sold mostly in Tokyo department stores. It is sold out by the end of March. It is eaten as a side dish with rice, mixed with grated daikon and topped with shoyu. Also eaten atop hot rice, with green tea poured over the top (*ochazuke*). Sugar-coated hamanatto sold is a confection in Kyoto. Hôrinji [Horinji] is a Rinzai Buddhist temple. They make hamanatto in the spring and fall when they are not busy. They sell them at the front gate of the head temple (*honzan*), which is Hokoji in Okuyama, and at Seibu department stores. They are seasoned with gingerroot and sansho seeds (*sansho no mi*). The soaked soybeans are steamed in an open-top cooker at 0.1 to 0.2 kg per square centimeter pressure from 8:00 in the morning to 3:30 in the afternoon–about 7-8 hours. Then the steam is stopped and the beans are allowed to stand in the steamer overnight so that they darken–from yellow to brown. Then, in the morning, the beans are put into wooden koji trays which are stagger-stacked and incubated in the koji incubation room (*muro*) at 27-28ºC. with the occasional use of a small kerosene heater, (maximum temperature 35ºC) for 3 days to make soybean koji. On the second day, the beans in each tray are stirred by hand. When done, the soybean koji is sun-dried for 1 day on straw mats. Then they are pickled, under a pressing lid and weight, in 2/3 parts new salt water and 1/3 part old tamari soy sauce. Each wooden tub (*taru*) holds 45 kg for finished product. When finished, after about 6 months of pickling, the plug at the base of each wooden tub is pulled and the contents allowed to drain. The tamari that drains off is saved for use with a subsequent batch.

The gingerroot is processed separately. It is sliced into thin rounds, pickled in salt water and tamari, under a pressing lid and weight of about 20 kg, for 1-12 months–typically about 1 month. The sansho is also pickled separately, like the gingerroot, for 1-12 months. Only the finished gingerroot is mixed with the final product; the sansho is sold separately with the product in a bag. This year Horinji made 3 tons of hamanatto. The owner guesses that Yamaya made about 50 tons and Daifukuji about 5 tons.

Two small undated leaflets (in Japanese), one titled "Horinji Hamanatto," the other "Daifukuji Natto" each tells about the product and its history. They were given to Alfred during his visit to each place. Address: Tama-sô No. 1, Inokashira 1-28-30, Mitaka-shi, Tokyo 181, Japan. Phone: 0422-47-7130.

General properties of yeasts isolated from hamanatto]. *Kaseigaku Zasshi* (*J. of Home Economics of Japan*) 28(3):202-05. [15 ref. Jap]
• ***Summary:*** "Twenty-six strains of yeast were obtained from 'Hama-Natto,' a salty fermented food produced from soy bean near the Lake Hamana, Shizuoka prefecture. All the strains had a salt-tolerant activity and grew in a medium containing 20% sodium chloride, and 14 of these strains had a capacity of being grown even in a 26%-NaCl medium.

"These strains have been classified in the genera *Saccharomyces, Debaryomyces* and *Torulopsis. Saccharamoyces rouxii* was the most abundant and found in the products of Yamaya, Horinji and Hamana. *Debaryomyces* strains were only obtained from a product of Daifukuji, whereas several ones of *Torulopsis* were found from all products." • ***Summary:*** Excerpts from Aveline's new book, including 7 recipes and her illustration of a miso keg.

"When we first came to this country about 25 years ago, there were almost no good-quality whole foods available... We lived in New York near Columbia University. We could order one keg of Hacho [Hatcho] Miso once or twice a year from Japan in order to obtain the essential nutrients necessary for those who don't eat very much animal food. I am very grateful for Kiyuemon Hayakawa's several-hundred-year tradition of strong miso in Japan.

"Today, the importation of miso from Japan to the United States must be at least 10,000 times what it was 25 years ago. We are able to enjoy high quality miso like Barley Miso, Rice Miso, Brown Rice Miso, and others...

"I began writing this book about miso seven years ago; I now think it has fermented enough. During those seven years I gained a little more confidence through experience in teaching cooking, and also miso has become more familiar to the Western public."

• ***Summary:*** Not long ago, amazake had been declining in popularity as a sweet drink in Japan. However recently its popularity has begun to recover, probably due to the growing interest in natural foods.

In the Ryuno area, light shoyu (*usukuchi shoyu*) has long been made with amazake as an ingredient; it augments the sugar which was consumed during the fermentation, adds its own bouquet, and helps prevent coloration.

The authors found, using paper chromatography (PPC) and other techniques on five types of amazake, that amazake contains about 40% sugar. 50-80% of the total sugar in amazake is glucose, followed by 3.3–9.1% of isomaltose and maltotriose, and 5.5–8.9% of nigerose, maltose, and kojibiose.

Also discusses the changing content of fructose,

6780. Chang, Kwang-chih. 1977. Introduction. In: K.C. Chang, ed. 1977. Food in Chinese Culture. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 1-21.
• ***Summary:*** This book looks at food through a cultural framework, rather than a chemical or anthropological one. One of "the best ways of getting to a culture's heart is through its stomach." The Japanese scholar "Shinoda Osamu has almost singlehandedly carved out the field of Chinese food studies..." "Paleolithic hunters the world over relied heavily on animal flesh, which was cooked by a very small number of techniques." China's major legumes are the soybean, broad bean, peanut, and mung bean. Peanuts and sweet potatoes were brought to China by coastal traders during the Ming period.

Despite the "continuous introduction of dairy products and processes throughout the early historical periods, and despite the adoption of some dairy delicacies by the upper strata of society during the T'ang period, milk and dairy products, to this date, have not taken a prominent place in Chinese cuisine."

In China, the key distinction is between *fan,* grains and other starch foods, and *ts'ai,* vegetable and meat dishes. Fan is considered the main or primary food, and ts'ai the supplementary or secondary food. Grains have almost a sacred nature in Chinese food thought. Moreover, one should eat frugally and never overindulge in food.

"The overriding about food in China–in all likelihood an idea with solid, but as yet unrevealed, scientific backing–is that the kind and the amount of food one takes is intimately relevant to one's health. Food not only affects health as a matter of general principle, the selection of the right food at any particular time must also be dependant upon one's health condition at that time. Food, therefore, is also medicine." There are underlying principles governing the choice of food. "The bodily functions, in the Chinese view, follow the basic *yin-yang* principles. Many foods are also classifiable into those that possess the *yin* quality and those of the *yang* quality. When yin and yang forces in the body are not properly balanced, problems result. Proper amounts of food of one kind or the other may then be administered (i.e. eaten) to counterbalance the yin and yang disequilibrium... This belief is documented for the Chou period, several centuries before Christ, and it is still a dominant concept in Chinese culture." Many Chinese also distinguish between hot and cold foods.

Pages 17-18 note that one of the foods presented at graves is "dried bean curd." Address: Prof. of Anthropology, Harvard Univ., Massachusetts.

6781. Chicago Board of Trade. 1977. What in the world is happening to the price of soybeans? And why? Chicago. 16 p.
• ***Summary:*** Contents: Introduction, by William D. Hagerty,

© Copyright Soyinfo Center 2014

Jr. (chairman) and Warren W. Lebeck (president). What in the world is happening to the price of soybeans? And why? Why a shortage of soybeans? Soybean prices and future markets. The world situation. The final chapter.

"Four years ago, in the spring and summer of 1973, a series of seemingly unrelated events occurred in distant parts of the world. To mention but several: a change in ocean currents off the coast of Peru; the decision in Washington to officially devalue the U.S. dollar; drought that parched Africa and parts of Asia; an unparalleled boom in Western Europe and Japan. Their point of economic convergence was the world soybean market. The price of soybeans in Chicago soared to a record $12.90 a bushel and, in European markets, well above that."

"Subsequent to 1973, the price of soybeans sharply receded, declining to less than half their historic highs. Increased prices, as is their function, had given farmers the necessary incentive to increase production and the resultant larger supplies brought sharply lower prices. Too low! Generally depressed prices in the planning and planting months of 1976 caused farmers to shift several million acres of fertile cropland to other, more profitable crops. Soybean demand, however, was still clearly on an opposite course. The result is that soybean prices once again, in the spring of 1977, climbed to double digits." Address: Literature Services, Dep. SB, Chicago Board of Trade, LaSalle at Jackson, Chicago, Illinois 60604.

• ***Summary:*** Outline: As a major Japanese soybean crusher, processing whole soybeans into soybean oil and defatted soybean meal, Fuji Seiyu produced large amounts defatted soybean meal. In 1962-62 Fuji Seiyu began to make *Fuji Takaramame* (a by-product of tofu powder) and *Proplus* using soy protein from defatted soybean meal, even though these were not considered to be good soy protein products.

In 1967 Fuji developed isolated soy protein (containing more than 92% protein) from defatted soybean meal, and started to sell this FujiPro isolated soy protein. Since it was a completely new product and little was known about it, sales were slow in the beginning. But later it started to be sold to makers of second generation meat products (such as sausages or ham).

In 1969 Fuji started to sell Fuji Nikku ("Fuji Meat"), which is a textured protein product (*soshiki tanpaku seihin*) and this expanded their market among hamburger and hamburger ball (meatball) makers. Based on the above experience, Ralston Purina (America's leading soy protein manufacturer) got to know Fuji and invited the company to do a joint venture. Three years later, in Dec. 1973, the two companies contributed 200 million yen and founded a joint company named Fuji Purina Protein K.K. In 1974 they started to make and sell *FujiPur / FujiPua* (for "Fuji Purina"), a spun soy protein fiber. Presently, Fuji Seiyu is trying to expand into new, undeveloped markets for soy protein foods (p. 418).

For 1964 the Food Bureau (*Shokuryo-chô*) of Japan's Ministry of Agriculture, planned the following usage of soybean meal: Food 347,000 metric tons (tonnes). Feed 691,000 tonnes. All but 69,000 tonnes of the food use went for miso, shoyu, and tofu. Of this 69,000 tonnes, 40,000 tonnes went for soy protein foods (such as breads, biscuits, doughnuts, shortcake, ice cream, fish paste products, cheese, soup, etc.) and 30,000 tonnes for glutamic acid / MSG (p. 419).

Fuji decided to industrialize soy protein very early and also to make isolated soy protein their main soy protein product. Other Japanese companies that tried to enter the soy protein market failed because they produced only soy protein concentrate (p. 420).

Fuji Seiyu finished their research on isolated soy protein at the end of 1966, then started test production in their 1-tonne pilot plant. In June 1967, they started to build their full-scale plant, and finished by the end of the year; it had a capacity of 100 tonnes/month. The company named its first product Fuji Pro; this isolated soy protein contained more than 90% protein and about 6% moisture (p. 421).

Then the company found that they could use Fuji Pro in fish paste products, so they tried to sell it to companies making such products. But these manufacturers were very conservative, so after 6 months Fuji gave up and began selling it to secondary meat producers (p. 423).

The meat industry was also very conservative, but after many visits to these companies, Fuji got to understand them better. Some of these companies were already importing soy protein from the USA and using it in their meat products.

© Copyright Soyinfo Center 2014

Fuji's research & development department developed a sausage containing Fuji Pro and presented samples to the meat processors; they made many repeat visits. In 1968 Fuji received an order from a large meat processor; after that they received orders from medium and small processors one after another. In Nov. 1968 Fuji's sales finally reached 100 tonnes/month. Later, after many careful investigations, the Japan Agricultural Standards (JAS) decided to make isolated soy protein a JAS product with a standard of identity for use in ham, sausages, etc. In this way, sales of Fuji Pro expanded. But there was also another reason for expansion: Exports! Actually exports started earlier and were easier than sales to the domestic Japanese market. And it was because of the demand from abroad that Fuji decided to build their first full-scale plant in 1967, even though they didn't have any clear idea about their domestic sales. Fuji's exports went Shoemaker, a Dutch food company; this relationship started in about 1964 (p. 424).

At that time the Dutch company was selling soy protein made by Central Soya in the USA. Being dissatisfied with the product's quality and prices, they looked to Japanese oil makers to produce these products. They contacted several companies, including Fuji Seiyu, which answered their inquiry and told them: "We are still study isolates, but we have a product that contains 50% protein." They sent Shoemaker a sample of Fuji Takaramame. However Shoemaker wanted a soy protein isolate, so no business was transacted. But from that time on, the two companies stayed in close communication and began to exchange information. Shoemaker asked Fuji to develop a soy protein isolate, provided important suggestions concerning the research, and sent Fuji a report of the European market for such a product. Shoemaker's cooperation played an important role in the development of Fuji's isolated soy protein.

Initially, Fuji had placed heavy emphasis on developing soy protein products for second generation fish paste products, but after considering the potential demand in Europe, Fuji started to research soy proteins for meat products such as ham and sausage. Fuji Pro was developed to be highly elastic, emulsifiable, and water soluble–characteristics desired by the European market. Fuji sent some samples. Before they started commercial production, they signed a contract with Shoemaker as a sales agent; it named Fuji as a IPSO (International Protein Sales Organization) and exporter. Thus, it was because of the European market that Fuji could start commercial production without a domestic market, and it was this European market that enabled Fuji to sell isolates in Japan. Everything seemed backwards. For example, some Japanese from the meat industry went to Europe to study that industry. There they learned that soy protein (named IPSO) was being used in ham and sausages. Returning to Japan, they discovered to their surprise that the soy protein was made in Japan by Fuji. In 1969 Fuji's contribution to Japanese exports (oil and protein) was honored with an award (p. 425-26).

A knowledge of the overseas market for soy protein was a great help to Fuji as its soy protein products began to serve an international market. This also gave ideas for development of new products–starting with meatlike soy protein products. They received news from Bernard Hawley in England that textured soy protein products had been developed in the USA. Hawley was a nutritionist and a consultant (Hawley & Associates) and Fuji began to use his consulting services in April 1966 (p. 428). Hawley made many trips to Japan and he and Mr. Nishimura (the president of Fuji Seiyu) became great friends. In 1967 Fuji sent Hawley to the USA and asked him to study the market for textured soy proteins and the send Fuji a market report (p. 429). Meanwhile, the company president and a man from the planning department also went to the USA to study the market; they soon decided to start making textured soy protein immediately. They visited Wenger Manufacturing Co. in the USA, signed a contract in April 1968, and received a machine [extrusion cooker] that year. Actually they bought only the main body of the machine from Wenger; the other parts (including the power mill) were invented and designed by Fuji technicians (p. 430). Continued. Address: Tokyo, Japan.

6785. Fuji Seiyu K.K. (Fuji Oil Co.). 1977. Daizu tanpaku kogyo-ka e no michi [Road to industrialization of soy protein. Part II (Document part)]. In: Fuji Seiyu K.K. 1977. Fuji Seiyu 25 Nen-shi: Showa 21 nen 11-gatsu–Showa 51 nen 3-gatsu [Fuji Oil Company Ltd.: 25-year history, Nov. 1946 to March 1976]. Tokyo: Fuji Oil Co. 622 p. See p. 431-48. [Jap]

• ***Summary:*** Continued (p. 431): In 1969 Fuji Nikku ("Fuji Meat"), a textured soy protein product, was introduced and production started. At that time Texgran, a similar product made by Swift & Co. (USA) was being sold in Japan, but Fuji Nikku was the first such product to be made in Japan (70% protein, wet type). Many tests were made to determine the size and shape (p. 430-31). Finally Fuji decided to produce both large and small piece, in both wet and dry form.

The next problem was to find a market for the product in Japan. In 1969 they tried demonstrations at department stores in Tokyo, but sales were very slow. Fuji concluded that it was too early to sell the product to retail customers. Then they developed flavored and seasoned varieties of Fuji Nikku in tomato sauce, sold canned. Next they fried it for sale to portable food vendors, but that failed too. They produced only three lots before stopping. In 1969 Mr. Hariaki (presently director of the protein department) succeeded in selling 100 tonnes/month to a large company that made hamburgers and meatballs–the first sales of Fuji Nikku, caused largely by high meat prices. But when meat consumption fell, so did sales of Fuji Nikku (p. 433).

© Copyright Soyinfo Center 2014

In 1970 the Osaka branch of Fuji Seiyu sold 5 million yen of soy protein products; the Tokyo branch sold 10 million yen. Production grew and these two became independent as the Protein Division.

In about 1971 many new soy protein products were introduced in Japan (see large table, p. 435); major manufacturers included Nihon Tanpaku and Nihon Koyo. Now competition started. In 1971 a total of 15,000 metric tons of soy protein was made in Japan; Fuji accounted for about 50% of this. In 1972 Fuji bought a company which was producing protein under Nikka Oil. Fuji also did some joint ventures with Hohnen Oil Co. on their oil and protein project. In 1969 Ralston Purina had established its own research organization, Nihon Purina Corp. Their first joint venture was with Taiyô Gyogyo for pet foods. In Dec. 1973, after various trials and decisions, Ralston Purina invited Fuji to do a joint venture. Fuji Oil Co. and Ralston Purina decided to start their joint venture with one of Ralston Purina's products, Edipro-200, a spun soy protein fiber. They wanted to make it in Japan (p. 440-41). In July 1974 Fuji Purina Protein K.K. was founded capitalization of 200 million yen, contributed equally by both companies. The first product they made was named FujiPur (for "Fuji Purina"), the spun soy protein fiber. It sold quite well to companies making products from beef. One day they appeared on a popular Japanese TV program and Fuji's artificial meat was fed to a baby tiger; the animal wouldn't eat it. That was embarrassing! (p. 445).

Fuji Pro (soy protein isolate) was first sold to hamburger makers and then to makers of fish paste products. Around 1971 it was sold to makers of ready to eat frozen food (*osôzai*). For the future, the company is aiming at health foods and drinks, dairy products, confectionery, hospitals, schools, factory cafeterias, retort packages, etc. (p. 446).

In about Dec. 1974 Fuji started to sell soy protein food at retail for home use–rather than as an ingredient or raw material. Thus it took FujiPro 10 years and it took Fuji Takaramae 15 years to establish soy protein in Japanese society. Address: Tokyo, Japan.

6786. George, Susan. 1977. How the other half dies: The real reasons for world hunger. Montclair, New Jersey: Allanheld, Osmun & Co. xxix + 308 p. Index. 21 cm. [500+* ref]
• ***Summary:*** Soybeans are discussed in several places: Between 1972 and 1973 U.S. soybean production increased by 25% (p. 9).

Chapter 4, titled "Technology: Now who pays to do what to whom?" shows that no new technology, not even a new crop is neutral in the effects it has on different classes of people. A report on soybeans in Brazil commissioned by the French Government Center for External Trade showed that they are becoming an increasingly important crop there. Since Brazil can produce and sell its crop between the two U.S. soybean harvests, the government's official agricultural policy encourages Brazilian farmers to grow more soybeans since they are a profitable export crop. The price of soybeans is attractive, so farmers have abandoned corn, a traditional crop, as well as wheat (to a lesser extent) because soybeans demand less fertilizer. Since soybean production is easily mechanized, fewer Brazilians need be employed. Soybeans are usually crushed to make oil and meal. This complex processing technology is being taken over by the world's most competent processors–large multinational agribusiness firms, such as Cargill and Bunge. Small Brazilian processors are going bankrupt. Since Brazil's infrastructure for transporting and loading the soybeans is substandard, the World Bank has been kind enough to contribute half the price of new private export corridors to the seaports, which the Brazilian government has kindly declared necessary for the multinationals. No doubt the Brazilian soybean industry will be profitable for multinational agribusiness, but what will be the consequences for ordinary Brazilians. From 1970 to 1972, the price of corn, a traditional staple food and feed, has risen 60%, while the price of chicken has gone up 33%. Soybeans have drastically decreased the amount of land previously used for growing the *feijao* or black bean–another staple crop and key human protein source; during this period its price jumped by 275%. Rice production also suffered from the soybean competition. All of these developments hurt average Brazilians, and especially the poor.

In addition, real estate prices is areas best suited to soybean production have risen dramatically; one hectare in Rio Grande do Sul, which sold for 1,500 cruzeiros in 1972, sold for less than 10,000 cruzeiros less than a year later. Thus, smaller farmers with less mechanization are losing out to those who can afford to buy more than and agricultural equipment. Soybean production in Brazil directly counteracts the efforts of the Brazilian government to limit inflation (p. 67-69).

Chapter 6, titled "Planned scarcity," notes that in the USA, one acre in 6.5 is now planted to soybeans. Europe is only 2% self-sufficient in plant protein production. After World War II, Europe introduced American hybrid corn to replace local varieties; though the yield was higher, the protein content was lower. Thus a new protein source had to be found for feeding livestock, and U.S. soybean meal seemed to be the most rational and inexpensive solution. Export of soybean meal from the U.S. to Europe jumped from only 47,000 tons in 1949 to nearly 5 million tons in 1972-73. Major U.S. processors set up crushing mills in Europe. In short, the entire post-war European livestock industry has been developed on the basis of extensive use of low-price soybean meal. The U.S. established a "near-monopoly position for supply not only of Europe but of Japan and other nations."

Discusses the 1973 U.S. soybean export embargo, which began in June and sent prices soaring to $12 a bushel, from $2. The embargo was removed 3 months later and

© Copyright Soyinfo Center 2014

at year's end it became clear that the scare over shortages was unwarranted. The Food for Peace program introduced soya oil into countries like Spain and Tunisia that had never before tasted anything but their own olive oil. Even the butter-rich Netherlands now consumes more imported soy margarine than butter. "Far be it from me to suggest collusion I can't prove, but it is at least evident who profits from higher prices and who suffers. A futures market in soya meal was opened in London in April 1975 as a measure that might check price fluctuations." Yet the key fact is that European countries do not produce soybeans, nor any alternative protein crop.

Discusses the new effort to extend the use of soya beyond feeding animals by promoting TVP, and the international conference held at Munich, Germany, in Nov. 1973. Earl Butz (U.S. Secretary of Agriculture) led the American delegation; Hubert Humphrey stated: "Food is a new form of power. Food is wealth. Food is an extra dimension in our [U.S.] diplomacy." "Americans presented 24 out of the 38 papers (including 13 by agribusiness representatives and 10 by USDA people). Only one was by a nutritionist. "One sees absolutely no alternative to continued US MNC (multinational corporation) control of the world plant-protein production and prices." "The only rational way to offset price and foodstock manipulation by the giant traders would be to have grain stocks held in government hands, to be released or held back as the market situation demanded." The grain traders are "frantically opposed to any reserve system..." (p. 122-25).

Chapter 8, titled "Food aid?... Or weapon," discusses: Importance of feedgrains exports, Soybean Council of America, American Soybean Association, PL 480, promotion of soybean exports to Spain, Iran, and Korea, Ralston Purina and Cargill, Food for Peace counterpart funds used to finance research in recipient countries, "common defense" military expenditures (p. 172, 176).

Chapter 11, titled "What can 'they' do?" discusses alternative food sources, single-cell protein (SCP), America's energy-devouring food-production system which could exhaust U.S. fossil fuel reserves within 25 years, research by DuPont showing that when soybeans are experimentally flooded by carbon dioxide, they quadruple yields and fix more nitrogen (p. 239-40). Address: A Smith College graduate now studying at the Sorbonne. Fellow of the Transnational Inst.

6787. Igata, Sadaaki. 1977. Nihon kodai kokumotsu-shi no kenkyû [Research on the ancient history of cereal crops in Japan]. Tokyo: Yoshikawa Kobunkan (Koshikawa Bunkan). p. 130-49, 170. [3 ref. Jap; eng+]

• ***Summary:*** Introduction: Soybeans seem to have originated in East- or Southeast Asia. Origin of cultivation: (1) Literature" Soybeans are mentioned in the *Kojiki.* Norinaga Motoari accepted the myth of the Five Grains and thought that soybeans and the other four grains had been cultivated since the age of the Gods. Soybeans and adzuki beans are grouped together and mentioned as "beans" in the *Nihonshoki.*

(2) Archaeological study: According to a report in the journal *Toro* (Japan Archaeology Society, p. 358), wild soybeans (*tsurumame*) were excavated from the ruins of Toro.

On pages 148-49 is a section on *Edamame* (Green vegetable soybeans), which notes that the *Engishiki* (A.D. 927) describes the offering of fresh, podded soybeans at Buddhist temples. According to Taichi Fukazawa's report, soybeans were found in a pit in Komoriyama, Senya Village, Senhoku-gun, Akita prefecture, Japan. See "The pit from which grains were excavated," by R. Moriomoto (1933).

According to Dr. Nobuo Ito of Tohoku University, the naturally carbonized layer of soybeans dates back to the 1st or second century.

According to *Nara-cho shokuseikatsu no kenkyu* [Research on the eating habits of the Nara period (A.D. 710-784) in Japan], by S. Sekine (1969, p. 30), soybeans were excavated not only from the Komoriyama ruins, but also from the Yasuda Okayama ruins in Mioka Village, Kumage-gun, Yamaguchi prefecture, Japan, and from the Iba ruins in Hamamatsu city, Shizuoka prefecture, Japan.

Mr. Yoshinori Segawa mentioned that soybeans were found in the ruins of Taguchiyama, Maikata city, Osaka (*Sankei Shinbun Morning News,* 29 Sept. 1974). In summary, archaeological evidence from the Komoriyama ruins suggests that soybeans were grown in Japan by the 1st or second century A.D.

Comparison of Korea and Japan: Soybeans were cultivated in the southern Korean peninsula along with several kinds of grains, and these were found in the ruins of an army storage house in [illegible place name], Korea. These grains and beans date back to the middle of the 7th century A.D., but the earliest known mention of soybeans in Korean literature dates from the middle of the third century A.D. The author concludes that soybean cultivation seems to have started in Japan before it began in Korea, indicating that soybeans were not imported but were probably domesticated from wild soybeans.

Soybeans also appear in the *Sankoku-shiki* (Vol. 1, No. 1; Vol. 2, No. 2., Vol. 4, No. 4, and Vol. 23, No. 1).

Mr. Matsumoto wrote *Shina ni okeru Giso oyobi Shaso, Shimin seikatsu, kochi seido, kokumotsu no meisho no kenkyu* (A study of the Giso and Shaso storage houses, and the life of the Shimin people, the cultivated field system, and the names of grains). Page 148 states that "shu" includes both soybeans and azuki beans, and page 166 states that before the 6th century, both soybeans and azuki beans were cultivated. The "Five Grains" always includes "shu."

Process of cultivation: Soybeans and azuki beans are mentioned as emergency foods used to relieve shortages

© Copyright Soyinfo Center 2014

in A.D. 840. (See the *Zoku Nihon Koki,* vol. 9, and the *Reishûkai,* vol. 13). Therefore soybeans must have been grown widely, since they were offered to the government in place of millet when farmers could not afford millet in difficult situations.

According to the *Nihon Sandai Jitsuroku,* vol. 14, in March of A.D. 867 Japanese farmers burned the holly mountain to grow soybeans. This seems to indicate these farmers' active attitude toward growing soybeans.

In the 8th and 9th centuries, soybeans were grown in the Omi, Tanba (or Tamba), [two areas whose characters are not recognized], Bizen, Bitchu, Bingo, Kii, Awa, Sanuki, and Iyo areas. These are mainly centered around the Inland Sea area (*Seto-naikai*) of southern Honshu (Japan's main island).

The *Engishiki* (vol. 24) states that a certain island [characters not recognized] offered 24 *to* (1 *to* = 18 liters or 4.76 gallons) of soybeans.

Note: Concerning areas mentioned above in Japan in the 8th and 9th centuries: According to a map titled "The provinces of Japan" in *A history of Japan to 1334,* by George Sansome (1958, p. 2). Omi was located by today's Lake Biwa (Japan's largest lake), northeast of Kyoto. Tanba is located in the Kyoto area. Bizen, Bitchu, and Bingo are located adjacent to and directly north of the Inland Sea. Kii occupied what is today Wakayama prefecture and part of Mie prefecture. Awa, Sanuki, and Iyo were provinces on the northern side of Shikoku island.

miso available from Westbrae Natural Foods. Letter to food distributors and manufacturers. 1 p. Undated. Typed, with signature on letterhead. [2 ref]

• ***Summary:*** "For several years Westbrae has felt a major commitment to popularizing Japanese foods in this country. During a time when shortages of protein have become such a problem, the knowledge of soy-based foods is greatly needed by more people. Both miso and tofu are extremely healthy and inexpensive sources of protein and other nutritional benefits... yet many consumers are still not familiar with these products.

"To fill this information gap we asked Bill Shurtleff and Akiko Aoyagi, authors of *The Book of Tofu* and *The Book of Miso,* to write readable pamphlets on these topics. The authors have lived in Japan for the past five years studying and writing about traditional Japanese foods. You are probably familiar with their book(s)... I have taken the liberty of enclosing two copies of each pamphlet..."

"You may order either or both of these pamphlets with either the Westbrae logo, your logo, or no logo." This letter is printed on recycled paper. Address: Distributor Sales, Westbrae Natural Foods, Inc., 1224 10th St., Berkeley, California 94710. Phone: 415-524-0506.

6794. Matsumoto, Kosai, II. 1977. Traditional herbs for natural healing: Japanese plums (*ume*) and shelf mushroom (*reishi*)**.** Settsu City, Osaka, Japan: Kosai Matsumoto Office. 147 p. Illust. No index. 21 cm. [10 ref. Eng]

• ***Summary:*** Contents: Introduction. Letters of support. Part I: History of the Japanese plums (*Ume*)–born in China and raised in Japan. Japanese plums introduced as medicine. The use of Japanese plums as a protection against various diseases. Salted plums (Umeboshi) during the Samurai period. Plantings and location of the valuable plum trees. Plum extract, 160 years old. Plum extract's efficacy was accepted by both the Japanese army and navy. Relationship of Japanese plums for restoring acid-alkaline balance. Japanese plums are known as king of alkaline foods. The value of citric acid of Japanese plums. Chemical composition of Japanese plums. Why is citric acid good for your health Citric acid also metabolizes sugar. What is the citric acid cycle. Umeboshi conquers the Himalayas. Japanese plums have powerful antibacterial properties. Even radioactivity can be combatted by Japanese plums. Ume can balance your spirit (like a good tranquilizer). The unique properties of the Japanese plums. Ume has immediate effect on hangovers. Pregnant women need Japanese plums. The secret of beautiful skin. Ume as a source of stamina. A Japanese plum a day slows the aging process. The effective prevention of anemia. How to treat food poisoning with Ume. The best way to prevent a cold. Ume goes to work instantly on stomach pains. Ume has a remarkable effect on liver troubles. Good news for people who are suffering from stomach ulcers. The problem of high blood pressure. Plums for Athlete's foot, snake bites, and as a unique contraceptive. Japanese plums as seen through the eyes of oriental medicine... The best is yet to come. How to properly select Japanese salted plums. Japanese traditional health foods using plums.

Part II: Reishi–The shelf mushroom or monkey seat mushroom (*Polyporaceae*) of Japan.

The recipe section, titled "Japanese traditional health foods using plums" includes some that call for soy: Soy sauce with plum extract (p. 74; a good dressing for wakame seaweed salad). Crushed bean curd [tofu] with plum sauce (p. 80). Tasty dressings using salted plums (with soy sauce, p. 81). Plum dip (with soy sauce, p. 84).

A section titled "Soy beans" (p. 125) states: "The high level of vegetable fat and protein make soy beans the ideal food for daily health."

A map of Japan inside the front cover and facing page shows the nine major plum growing areas: From north to south they are: Mito Kairakuen Garden (Ibaragi [Ibaraki]). Yoshino plum district (Tokyo). Hyakusoen park (Tokyo). Soga plum district (Kanagawa). Atami plum gardens (Shizuoka). Mizunoo plum forest (Osaka). Kitano shrine (Kyoto). Tsukigase (Nara). Minabe plum forest (Wakayama). The spectacular flowers bloom in Feb. and March, moving from south to north.

A note/ad on page 146 states: "For your information. This book along with the following products are available from Soken Trading, Inc., P.O. Box 1705, Sausalito, California: Meitan Granules, Plum (Ume) Extract, Handpicked Umeboshi (Salted Plums), Plum Candy, and Kobai Reishi." A color photo on the rear cover shows Mr. Kosai Matsumoto II. He has three written other books about umeboshi and reishi. Address: 4-14-1 Shojaku, Settsu City, Osaka, Japan. Phone: 06-383-0911.

6795. Mote, Frederick W. 1977. Yüan and Ming. In: K.C. Chang, ed. 1977. Food in Chinese Culture. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 193-257. [38 ref]

• ***Summary:*** The Yuan (Mongol) dynasty (when China was under alien Mongol rule) lasted from +1271 to 1368. The Ming dynasty (when China was again ruled by Chinese) lasted from +1368 to 1644. In 1644 the Ming fell to the bandit Li Tzu-ch'eng, and Manchu invaders from the north [Manchuria] captured Peking, then soon conquered the rest of China–ushering in the Ch'ing dynasty (1644-1912). Note: The Ming period is one of the great eras of orderly government and social stability in human history. A population averaging around 100 million people lived during 276 years in comparative peace.

Page 212 notes that the growth of the palace eunuch staff is an important feature of early Ming government. The *Huang Ming tsu-hsün-lu* (Ancestral Admonitions), issued first in 1381 during the reign of the Ming founder,

© Copyright Soyinfo Center 2014

stipulated that separate bureaus within the palace eunuch staff be designated. The imperial wine bureau oversaw the production of wines, soybean meal, tofu, etc.

Page 200 notes that during this period "consumption of meat was very low and seems to have remained stable at low levels for many centuries... Because China also used virtually no dairy products, to maintain nutrition they had to supply protein, calcium, fats, and vitamins in many ways quite different from those our society employs. Vegetables, in one way or another, supplied all of those things. The soybean undoubtedly was the most important diet adjunct, being richer in protein than equivalent weights of red meat, richer in digestible calcium than equivalent amounts of milk, and also being an important source of oil and certain vitamins. Excellent cooking oils also were made from sesame seed, rape seed, and other plant materials (*T'ien-kung k'ai wu,* trans. by Sun and Sun, 1966, p. 215-21)."

Pages 240-41 note, under "Special ingredients: The Japanese specialist in the history of Chinese food and eating, Shinoda Osamu," has remarked that "Traditional China's diet was strikingly different from the Japanese in two respects: the consumption of oils and fats was four or five times higher in China, and everyday cooking demanded more basic materials. The things required to keep an ordinary kitchen going day by day in Yüan and Ming times are sometimes enumerated in the entertainment literature, encapsulated in the formula of 'the seven things.' Shinoda refers to 'Yüan drama' for one enumeration of those, probably having in mind the line spoken by a busy housewife: 'From the moment I get up in the morning, I'm busy with the seven things–fuel, rice, oil, salt, soy sauce, vinegar, and tea' (*San-shih chung,* p. 261)."

Also discusses: Peanuts (p. 198). Notes that during the last century and a half of the Ming period, from roughly 1500 to 1650 a number of important new crops entered China: Maize, sweet potatoes, peanuts, and tobacco. Vegetarianism (p. 221-25, 242). At private ceremonial banquets, vegetarian foods resembling forbidden meat dishes were served.

Pages 201 states: "Fish were commonly farmed in the ponds, regularly harvested, and sold live in the markets." However no mention is made of soybeans being fed to the fish. Address: Prof. of East Asian Studies, Princeton Univ., Princeton, New Jersey 08540. Phone: 609-452-4284.

6796. Nagayama, Hisao. 1977. Nattô no shinpi [The mystery of natto]. Tokyo: Arrow Shuppansha. 220 p. Illust. 19 cm. [14 ref. Jap]

• ***Summary:*** Contents: 1. The mystery of ancient natto (p. 11). The super power of natto bacteria. The mystery of fermentation and *saru zake.* Anthropoids and natto bacteria. The ancestors of Japanese are elephant hunters. People in the Jomon period were extremely omnivorous. Curiosity and *doki natto* (natto in earthenware containers). Natto that is 2100 years old was excavated. Mysterious Queen Himiko's beauty diet. Ancient natto as medicine.

2. Natto as a secret weapon in military provisions (p. 36). Natto's super power. The mystery of the Natto Road. Legend of the ancient path of Oshu. Oshu natto that went to Kyushu. Kato Kiyomasa's black soybeans (*kuromame*). Natto as a energy source for military commanders in the Sengoku period. The role of soybeans in the Russo-Japanese War. Natto on battleships of Japan's Pacific Ocean fleet in World War II. The German army paid attention to the power of natto.

3. A humorous history of natto (p. 57). Humorous *Hime Natto.* The mystery of *wara tsuto* (natto in a straw package) and *shimenawa* (a sacred Shinto straw rope and festoon). A petticoat government and *tataki natto* (pounded natto). The popularity of Edo sickness and *natto-jiru* (natto soup). The appearance of *natto-jiru* in classical documents. Natto protein saved the people who survived the great 1923 earthquake in Tokyo. The romance of *Yamataikoku* and longevity foods.

4. The topography of natto (p. 76). Stylized, illustrated map of natto in Japan. College natto in Sapporo. Vegetable natto. Hikiwaru natto in Tsugaru. Kônô natto. Bridegroom and bride natto. Natto musume (natto daughter). Rare taste food of natto "tozo." Hiyama natto in Akita Ondo (a famous folk dance song). *Masamune no Hôryô Natto. Deba natto. Ichiya natto no kuumondine. Goto natto. Teramichi natto. Hamanatto. Hatsu muko to natto wa nibange. Aizu no tsurushi natto. Sakata no O-shôgatsu sama. Yukiguni no daraku-jiru. Natto hachi. Romantic na hime natto. Momen natto. Yoi natto, yoi o-shôgatsu. Masakado no hoshinatto. Nakôdo natto. Mito natto. Yamaoku no natto-zato. Naisho mame. Shinobi no natto oke. Hettsui natto no ôzuto. Isshô natto. Natto chinmi no tôzô. Arakawa no momen natto. Edo no zaru natto. Okukido no Heike natto. Hate, hate nantoshô.*

Ancient natto. Hamanatto. *Natto chanoko. Shotoku Taishi no warazutsu natto. Ogi natto. Tanba no Yamaguni natto. Gosho no hôsei natto. Kaori no daizu. Take no kawa natto. Fuyugomori natto. Kaga no natto-jiru. Kôbashii korumame. Munetada natto.*

5. The wonders and medicinal effects of natto (p. 119). 6. Delicious ways of eating and cooking natto (p. 170–with many recipes). 7. An easy method for making natto (p. 202).

A photo on the rear cover shows Mr. Nagayama. Address: Shoku Bunka Kenkyusho, Toyotama-kita 4-31, Nerima-ku, Tokyo, Japan.

6797. Nakase, Kenji. 1977. Miso shôyu shiso Hotto Enmyô Kokushi [The Zen priest who introduced miso and shoyu to Japan: Hotto Emmyo Kokushi, or Kakushin (1207-1298)]. Kyoto: Zenkoku Jokai Shinbunsha. 292 p. Appendix: Miso and shoyu supply adjustment regulations. [Jap]

• ***Summary:*** A scholarly, carefully researched book on the early history of miso and shoyu in Japan.

• ***Summary:*** Pages 1-9 contain a detailed chronology of the fats and oils industry in Japan from A.D. 97 to 1973. Address: Japan.

6799. Nosan Gyoson Bunka Kyokai. 1977. Nôgyô gijutsu taikei. Sakumotsu-hen. Vol. 6 [Outline of agricultural arts and techniques. Crops. Vol. 6]. Tokyo: Nôsan Gyôson Bunka Kyokai. See p. 3-7. [Jap]
• ***Summary:*** Page 4 shows 2 pie charts with statistics from the year 1974. The 3,500,000 tonnes of whole soybeans consumed in Japan are used as follows: Soy oil 78% of the total, tofu and products 10.5% (except frozen tofu), miso 5.5%, natto 1.5%, frozen tofu 1.3%, kinako (roasted soy flour) 0.4%, shoyu 0.2%, and other 2.6%. The 2,20,000 tonnes of defatted soybean meal are used as follows: Livestock feed 84.6%, shoyu 7.5%, tofu 4.1%, miso 0.3%, other food uses 2.0%, other nonfood uses 1.5%.

A graph on page 7 shows soybean production in Japan and soybean imports. Imports were static from about 1895 to 1918 at about 100,000 tonnes, then they rose rapidly to about 1,000,000 in 1944. They dropped to almost zero following Japan's defeat in World War II, then starting in about 1954, skyrocketed, reaching 1 million tonnes in about 1960, 2 million tonnes in about 1968, and 3 million tonnes in about 1970. After about 1954, soybean production in Japan dropped steadily. Address: Japan.

6800. Purchio, Adhemar. 1977. Search for B-1 aflatoxin and similar fluorescent compounds in 'misso' [miso]. *Mycopathologia* 58(1):13-17. [5 ref. Eng]
• ***Summary:*** Reports the "results obtained using thin layer chromatography (TLC) with three different solvent systems and spectrophotometric analysis in order to differentiate between actual B-1 Aflatoxin and Aflatoxin-like substances. Twenty 'Misso' substances were studied and we could detect Aflatoxin in 3 of them. An Aflatoxin-suspected substance was also isolated. No Aflatoxin-producing *Aspergillus* was isolated from the samples analysed.

"Twenty samples of 'Misso' [miso] (a kind of condiment prepared with fermented rice and soybean) for human use were investigated. Eighteen of them were prepared in small industries [miso shops] in the state of Sao Paulo and two others... were obtained from families of Japanese origin which used in their preparation an old home process. This includes the fermentation of rice and soybean after previous contact with the open air and further natural mold contamination. Excluding the last two samples, all the others had been picked up in some supermarkets in Sao Paulo." Address: Faculdade de Medicina da Univ., de Sao Paulo Depto. de Microbiologia, C.P. 2921, Sao Paulo, Brasil.

• ***Summary:*** William Shurtleff contacted Takai Seisakusho, the largest and oldest manufacturer of tofu equipment in

© Copyright Soyinfo Center 2014

Japan, and asked if he could place an order for Farm Foods in San Rafael. Wataru Takai said that all the information about his equipment was on single-sheet color leaflets printed on both sides in Japanese. They agreed that Takai needed an English-language catalog of tofu equipment, the first such catalog ever to be created. The following glossy color leaflets (most numbered, all undated; each 25.5 x 18 cm, and printed with black and one color of ink on glossy white paper) were given to Shurtleff to use as the basis for his work: 1. Grinders. 2. To-100 system. 3. TM-100 system. 4. Boilers. 5. Mini-Star and other complete systems. 9. Hydraulic press. 10. Jack press, forming box table, and modern forming box. 11. Pressure cookers. 12. Tandem pressure cookers, and whole modern system. 13. Automated yaki-dofu broiler. 15. Three metal sinks, metal curding vat, tofu cutter, tofu forming box, silken tofu box and cutter. 16. Deep mixing plate, simple lever press. 17. Ganmodoki mixing machine. Draining racks. 18. Mechanized deep fryers. 20. Two-chamber manual deep-fryer. 24. Rotary feeder–to move soybeans. 28. Pump. 30. Mechanized tofu press. 32. Case washer. 33. Continuous roller extractors (4 models). 35. Mechanized soymilk maker. 36. Mechanized soybean soaker and washer. 37. Mechanized tofu cooling tank. 38. Automated TGS-2 whole system. 39. Automated whole system. 40. Automated TGS whole systems (Nos. 1-4 and 10). 134. Automated tofu factory TGS 7-9.

Unnumbered leaflets: TM-100 whole system and other equipment (blue). Micro mini-plant TGS-4 (green). Order form. Address: Ishikawa-ken, Japan.

6808. Takai Seisakusho. 1977. Takai no tôfu kikai [Takai tofu production equipment (Brochure)]. Takai Manufacturing Co., 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan: Takai Seisakusho. 6 p. [Jap]

• ***Summary:*** On the cover are two square arrays of dots, one green and one blue, offset slightly to give the impression of three dimensionality. In the lower right is the address and phone number of Takai headquarters and five branches.

When the brochure is opened, the two left panels contain six large black-and-white photos: (1) Outside of factory No. 2. (2) Inside factory No. 2 with finished equipment standing on the floor. (3) An aerial view of the long bay of factory No. 1 showing many machines under construction. (4) Eight draftsmen at work in the design room. (5) Three women office workers in a modern office. (6) The exterior of factory No. 1. In the upper left of the far left panel is basic information about the company, which was founded in 1917. The inner right panel shows photos of five Takai tofu and soymilk systems, with a description of each. On one back panel are photos of four more larger systems. On the other back panel is a chronology of the company. Address: Ishikawa-ken, Japan.

6809. Talking Food Company. 1977. Miso & tamari (shoyu): Foods steeped in culture (Leaflet). Charlestown, Massachusetts. 2 panels each side. Each panel: 21.5 x 14 cm. [2 ref]

• ***Summary:*** Printed with red ink on off-white paper. Contents: Introduction. Fabulous fungus from antiquity. Secret life of molds. B12 and the protein profile. Beyond vitamins. Is miso pasteurized? Miso and tamari in the USA. Recipes (3).

"In 1976 over 85 tons of traditional miso and 100,000 gallons of traditional tamari were shipped to natural food distributors in the USA by Muso Shokuhin of Osaka and Mitoku Ltd. of Tokyo."

Others in this series (copyrighted 1977) are: "More on sugar and how it got that way" (4 p.). "Fiber: Grandmother was right" (4 p.). Address: Charlestown, Massachusetts 02129.

6810. Yokotsuka, Tamotsu. 1977. Shokuhin Kagaku Daijiten: Shôyu [McGraw-Hill encyclopedia of food, agriculture & nutrition: Soy sauce]. Tokyo: McGraw-Hill Kodansha. See p. 309-310. [Jap]

• ***Summary:*** History: Hishio and Kuki production techniques came to Japan from China and Korea. According to the Taiho Ritsuryo (702 A.D.), various types of Hishio and Kuki and Miso (this is the Misho character–NOT the present Miso one) were made from soybeans in the Hishio Tsukasa of the Kunaisho. It is in later times that they started to use the liquid which was separated from the above three as seasonings. In the Kamakura (1185-1333 A.D.) period in the Wakayama prefecture they collected the liquid accumulated in the bottom of Miso Oke. In the Muromachi period (1338-1573 A.D.) they added water to miso and squeezed it to extract the liquid (called Usudare or Taremiso). Shoyu (which is different from miso) was first mentioned in Ekirinbon Setsuyoshu (1597 A.D.). Address: Kikkoman Corporation, Noda, Japan.

6814. American Soybean Assoc. ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. Held 25-27 Jan. 1978, Republic of Singapore. No index. 29 cm. [328 ref]
• ***Summary:*** Contains 34 papers, largely about the use of modern soy protein products. Individual papers are cited separately. The "registration list" (p. 127-35) is a detailed directory of participants and the press. The eight "Exhibitors" (p. 136) were American Soybean Association (Hudson, Iowa), DeKalb County Exports Inc. (Ottawa, Illinois), Intercom News (Kansas), Japan Vegetable Protein Food Association (Tokyo), Kikkoman Shoyu Co. Ltd. (Tokyo), Ralston-Purina (St. Louis, Missouri), United Vegetable Oil Co. (Pte) Ltd. (Singapore), and Wenger International Inc. (Kansas City, Missouri). Address: Hudson, Iowa.

6815. Aoki, Hiroshi. 1978. New soy protein food market and products in Japan. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 66-69.
• ***Summary:*** Contents: Introduction. General survey of the new soy protein food products in Japan. Influence of the establishment of 200-mile economic zones. Utilization of new soy protein products for traditional soybean foods. Concluding remarks.

Chronology of new soy protein food development:

1955–Undenatured, solvent-extracted, defatted soybean flakes start to be produced for use in tofu production. These flakes became the bases if the new soy protein products in Japan.

1960–Defatted soy flour for bread and confections.

1961–Soy protein concentrates for fish products.

1962–Soy protein extracts for dairy and meat products.

1965–Soy protein isolates.

1970–Spun soy protein fiber, and textured and structured protein.

Soymilk, which has not been a real traditional food in Japan (unlike China) can be viewed as a new protein product. Though no commercial trials have yet succeeded, very recent test market trials made by several manufacturers of soymilk made from whole soybeans and also from soy protein isolates, seem to suggest some possibilities of success. Address: Otsuma Women's Univ., Tokyo, Japan.

6817. Fukushima, D. 1978. Soy sauce manufacturing techniques. In: ASEAN Soy Sauce Committee, ed. 1978. Report of the ASEAN Workshop on Soy Sauce Manufacturing Techniques. Singapore. 252 p. See p. 138-47. Address: Kikkoman, Walworth, Wisconsin.

6818. Fukushima, Danji. 1978. Fermented soybean protein foods in Japan. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 39-42.
• ***Summary:*** There are three major kinds of fermented soybean foods in Japan: Shoyu, miso, and natto. "In Japan, about 439,500 tons of soybeans and defatted soybeans are used as the materials of these fermented soybean foods. Among these, 175,000 tons are used for shoyu, 195,000 tons are used for miso, and 69,000 tons are used for natto."

Table 1 shows the consumption of soybeans and defatted soybeans in Japan in 1976 for foods (1,026,000 tonnes) and feeds (1,980,000), for a total of 3,006,000 tonnes. Foods are divided into fermented (shoyu, miso, natto; 439,500 tonnes) and non-fermented (tofu and aburage, kori-tofu, and others; 586,500 tonnes). For non-fermented soyfoods 466,500 tonnes of soybean are used for tofu and aburage, 29,000 tonnes for kori-tofu, and 91,000 tonnes for other products.

"Recently, a new fermented drink using soybeans appeared on the market. This product is a drink which is made by the fermentation of soy milk by lactic acid bacteria. There are many patents related to these kinds of products, including a yogurt type, in Japan. Therefore many new fermented soybean foods may appear on the market in the future."

Other tables show: (2) Typical composition of different kinds of shoyu. (3) Annual production of purely fermented, semi-fermented, and chemical shoyu in 1976. (4) Annual production of Japanese Agricultural Standard mark shoyu in 1976. (5) Chemical composition of major types of miso.

Figures (flow sheets) show: (1) Shoyu manufacturing process. (2) Rice miso manufacturing process. (3) Natto manufacturing process. (4) Shoyu manufacturing process. Address: Noda Inst. for Scientific Research, Kikkoman Shoyu Co., Tokyo, Japan.

6820. Herron, Steve. 1978. Local elevator sells soybeans direct: Farmers get more for their beans at this Iowa co-op. *Soybean Digest.* Jan. p. 13.
• ***Summary:*** Last year Farmers Co-operative Elevator at Albert City, Iowa, sold 695,000 bushels direct to a Japanese grain buying firm. Not many regional co-ops export grain for dollars. "By making direct sales, the elevator saves brokers commissions." That means about 10 cents more per bushel for the farmer. Of all the grain handled by co-ops in Iowa, only 7% is exported. About 80% of the soybeans grown in the Albert City area have white hilums, making them good for human consumption. Manager Bruce Anderson hopes to contract a year in advance for a certain quantity and quality of soybeans. The Japanese are interested in large quantities of good quality edible, white hilum soybeans.

About 2½ years ago Anderson first made contact with a Japanese trading firm. He visits their New York office regularly. They come to Albert City once in the summer and once at harvest time to see how the soybeans are handled, stored, and separated. The process builds confidence. "The Japanese like to know who they're dealing with. They like to do business with people they feel they can trust."

6821. **Product Name:** Meipron (Bland Soy Protein Product).
Manufacturer's Name: Meiji Seika Kaisha, Ltd.
Manufacturer's Address: 2-4-16 Kyobashi, Chuo-ku, Tokyo, Japan. Phone: 03-271-1757.
Date of Introduction: 1978 January.
How Stored: Shelf stable.

6825. Wang, Jun Ryun; Lee, Yang Hee. 1978. Traditional soybean foods in Korea. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 43-47. [13 ref]
• ***Summary:*** "The origin of soy sauce and paste in Korean literature dates back to 683 A.D. (Shinmu King 3rd year of the United Silla period). Since an old Japanese literature [document], *Hwameyruitsuroku* [*Wamyô Ruijusho;* Collections of Japanese Names, by Subject], of Heyan [Heian] records that 'Maljang (Meju) is a Korean soy sauce and paste' and a record on Maljang was also observed in the ruins of Nara, it is evident that soy sauce and paste were introduced from Korea to Japan during the Nara period (645-793 A.D.). Therefore, it is believed that the beginning of

© Copyright Soyinfo Center 2014

their consumption in Korea should be in the third century of Kokuryo period."

"Soybean has been a major protein source in the Korean diet." In 1976 some 442,803 tonnes (metric tons) of soybeans were used in Korea as follows: oil and defatted meal 28.5%, curd (*tubu,* or tofu) 24.5%, paste (*doenjang*) 18.3%, soy sauce (*kanjang*) 10.6%, soy sprouts (*kongnamul*) 9.0%, hot soy paste (*kochujang,* made from meju, hot pepper flour, and cooked glutinous rice) 6.6%, soymilk (*kongkuk*) 0.14%, and other 2.4%. Other includes roasted soy flour (*konggomul,* used for coating rice cakes [mochi]), fried tofu (*yubu*), salted natto paste (*jeonkukjang / cheonkukjang*). *Doebiji* is fresh soybean puree, made by grinding soaked soybeans. When used as a food, it is usually cooked with vegetables, kimchi, and meat. Meju is balls of soybean koji like Japan's miso-dama. All fermented Korean soybean foods except Joenkukjang are prepared from meju. Its characteristic flavor results from *Aspergillus, Penicillium,* and *Mucor* species of molds on the surface of the balls and *Bacillus subtilis* on the inside. Damsuejang is a quick fermented soy paste made by crushing meju to a powder, adding a warm brine solution, then allowing it to ferment and ripen.

Note: This is the earliest English-language document seen (March 2009) that uses the word "Damsuejang" to refer to Korean-style soybean paste (miso).

The above usage is the equivalent of 12 kg per capita per year. The daily per capita consumption of soy sauce (kanjang) is 20 ml, of soybean paste (doenjang) is 15 gm, and of hot soybean paste is 10 gm. Most of the soy sauce (64%), doenjang (82%), and kochujang (76%) and all of the salted natto paste (joenkukjang) and quick fermented soy paste (damsuejang) are produced at a household level and consumed directly.

Both soybean production and imports have grown in recent years. In 1970 production was 231,994 tonnes, and imports were 36,291 tonnes for a total of 268,285 tonnes. In 1976 production was 294,949 tonnes (up 27% over 1970), and imports were 147,854 tonnes (4 times as much as in 1970) for a total of 442,803 tonnes (up 65% over 1970). Address: Korea Food Development Centre, Seoul, South Korea.

6826. Watanabe, Tokuji. 1978. Traditional non-fermented soybean foods in Japan. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 35-38. [7 ref]

• ***Summary:*** Contents: Introduction. Tofu and deep fried tofu. Kori-tofu. Miscellaneous. Conclusion.

In 1960 soyfoods supplied 15.6% of the daily per capita protein supply of 69.4 gm. In 1975 they supplied 12.7% of the 78.8 gm. The leading sources in 1975 were (1) fish and seaweed, (2) rice, (3) soyfoods, (4) wheat. Address: Kyoritsu Woman's Univ., Hitotsubashi 2-2-1, Chiyoda-ku, Tokyo, Japan.

6827. Clough, Jean. 1978. Kitchens that dish up naturally good food. *Chicago Tribune.* Feb. 3. p. A1.

• ***Summary:*** The Plowshare Cafe (6155 N. Broadway) serves macrobiotic food and is also a health foods store. They use foods grown locally, in season. In addition, all meat, dairy products, tropical fruits, most sweeteners, and many spices are not served. The Macro-plate ($2.50) includes brown rice, miso soup and sea vegetables. Miso "is a black creamy paste made of fermented soy beans." The sea vegetables included hiziki seaweed in tamari sauce. Also offered was a sandwich with seitan (made of gluten), "tofu, soy mayonnaise, sesame seeds, carrots, and natto miso, a less-aged miso that includes barley and ginger. Its a granular to be sprinkled on rice or sandwiches."

New Earth Cafe and Mama Peaches are also vegetarian restaurants. Address: Dr.

6828. *Toyo Shinpo* (*Soyfoods News*). 1978. Aamondo iri tôfu seeru de honkaku hatsubai: Kakihara Jôzô. Aitsugu shinshutsu, ninki yobu aamondo seihin [A start of full-blown sale of tofu with almonds: Kakihara Jôzô. One after another coming out with popular almond products]. Feb. 21. p. 3. [Jap]

• ***Summary:*** Kakihara Jozo is one of Japan's oldest natto makers. In the spring of 1977 they started making natto with almonds mixed in. The almonds improve the flavor of natto by reducing the strong smell. The company adds 10-15% almonds by weight in small chunks. 100 gm (regular size) retails for 85 yen, whereas 50 gm (mini size) retails for 40 yen.

The consumption of natto in the Kansai region (Kyoto–Osaka–Kobe) is only about 10% as much as in the Kanto region (Tokyo–Yokohama).

This company used to make shoyu, but they quit making shoyu and started to make miso and natto. Photos show: (1) A man. (2) Various natto products.

6829. **Product Name:** [Thick Soymilk].
Foreign Name: Tônyû Pururu.
Manufacturer's Name: Furuta Shokuhin Kogyo (Furata Foods Co.).
Manufacturer's Address: Japan.
Date of Introduction: 1978 February.
Wt/Vol., Packaging, Price: 60 gm poly cup.
How Stored: Refrigerated.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. This product was introduced in Feb. 1978 in a 60 gm poly cup, and distributed nationwide. Name of company with diacritics is: Furuta Shokuhin Kogyo.

• ***Summary:*** *300 Unique Natto Recipes* is a new cookbook, which includes some natto history. A restaurant specializing in natto, having a repertoire of over 300 dishes, is Hotel Sun Route in Awamori. They serve only natto dishes. The owner, Mr. Isamu Naraoka, loves natto and has been developing these recipes for the past 10 years. Examples include: Yamakake ryori, makimono ryori, nimono ryori, mushimono, mizumono, Pikata-fu, agemono, and nabemono ryori.

6833. Salao, Andy. 1978. Meet the tofu master [William Shurtleff]. *Expressweek* (*Manila, Philippines*). March 16. p. 31.
• ***Summary:*** Tofu master William Shurtleff, a 37-year-old American, is recognized in the US and Japan as one of the leading authorities on natural foods. He visited the Philippines at the International Conference on the Winged Bean held in January, 1978, and "went all the way to Quezon City to see the factory, which is operated by Cherry Food Industry. Its manager, Aida Yu, was thrilled to meet the tofu master." The company manufactures Nippon Tofu, which is made from thick soymilk and packed in a thick-walled polyethylene container, which is thermally sealed and will keep for 2-3 months. Contains a brief biography of Shurtleff and numerous extracts from *The Book of Tofu*. A photo shows Shurtleff looking at the company's tofu equipment.

6834. Tsumura, Haruo; Hashimoto, Yukio. Assignors to Fuji Oil Company, Ltd. (Osaka, Japan). 1978. Processed cheese-like product containing soy cheese. *U.S. Patent* 4,080,477. March 21. 6 p. Application filed 28 Oct. 1975. [3 ref]
• ***Summary:*** "A processed cheese-like product containing soy cheese as a part of the major ingredient is made by adding both a casein-containing substance derived from animal milk and a cheese emulsifying melting salt to natural soy cheese." This mixture is then agitated under relatively high shearing conditions, while heating to a temperature of 85ºC for a period sufficient to form the mixture into a softened, flowable consistency. The product is pasteurized, then the softened mixture is run into a suitable container and cooled. An excellent processed cheese results.

"The natural soy cheeses used in the invention can be any conventional soy cheese which has a protein content substantially made up of soy protein and preferably is formed by fermentation of soy milk with a lactic acid cheese starter culture and forming a curd from the fermented broth with conventional soy cheese coagulating agents..." Address: 1. Osaka, Japan; 2. Izumiotsu, Japan.

6844. Mori, Masao. 1978. Moyashi kôgengaku to sono bunka [Thoughts on bean sprouts and their culture]. *Ajinomoto-sha Ajiko News* No. 61. 9 p. April 30. [Jap; eng+]
• ***Summary:*** In 1974, consumption of all kinds of sprouts in Japan reached 260,000 tonnes/year. Per capita consumption is one of the highest among vegetables. The main seed sprouted is black mappe (*kokuryoku-tô*). In the old days, soybeans and mung beans (*ryoku-tô*) were the two most widely sprouted seeds. In Japan, sprout production as an industry started in the first decade of the 20th century, and after the Great Kanto Earthquake of 1923 it grew rapidly. During the period from about 1910 to 1915 the popularity of Chinese cooking grew rapidly in Japan. Because sprouts are widely used in Chinese cookery, they became firmly settled in the food tastes of regular Japanese. During the period from 1945 to 1965, the number of sprout products increased significantly. Producers were located mostly in the large cities of Yokohama, Tokyo, Osaka, and Kobe. Among the producers who joined the Japanese Bean Sprout Industry Association (*Mame Moyashi Kogyô Kumiai*) were 34 small producers and 667 individuals (insiders). The outsiders who didn't join the Association increased too.

The new seed for sprouting, black mappe [*Vigna mungo*], was originally imported from Burma only, but later Thailand entered the market, and became the main source of the beans starting in about 1965. In 1975 this seed cost less than 100,000 yen/tonne, but by 1977 the price had doubled, making it difficult for small producers to buy black mappe. So they started to mix mung beans with black mappe, but this made it difficult to produce sprouts of uniform quality.

The reason the Japanese switched from using soybeans and mung beans to using black mappe had to do with an incident in Nagasaki between China and Japan. The Chinese said the Japanese had treated their flag with disrespect. They got mad and for a while stopped trading with Japan–although the two countries are now becoming friendly again. Yet only a very small amount of soybeans and mung beans are imported from China.

It is believed that humans discovered the fact that seeds sprout in about 10,000 to 5,000 B.C. In the early Han dynasty, before the Christian era, the emperor of China wrote that "sprouts give health," and recorded their health effects. In Japan, the earliest record of bean sprout production dates from the Northern and Southern dynasties period (*Nanboku-cho*) (1336-1392). There is a legend that before that time the Chinese who landed by boat (accidentally) in Kyushu or Shikoku introduced sprouts to Japan. It is known that soy sprouts were made in Korea at an early date. There was a theory among the people in the sprout industry that soy sprouts were introduced to Japan when KATO Kiyomasa brought at least one Korean soy sprout maker to Japan at the time of Toyotomi Hideyoshi's war there (during the 1590s). Kato is said to have ordered the Korean to make soy sprouts using spring water from Suizenji park in Kyushu, and these sprouts are said to be Japan's first commercial sprouts–but

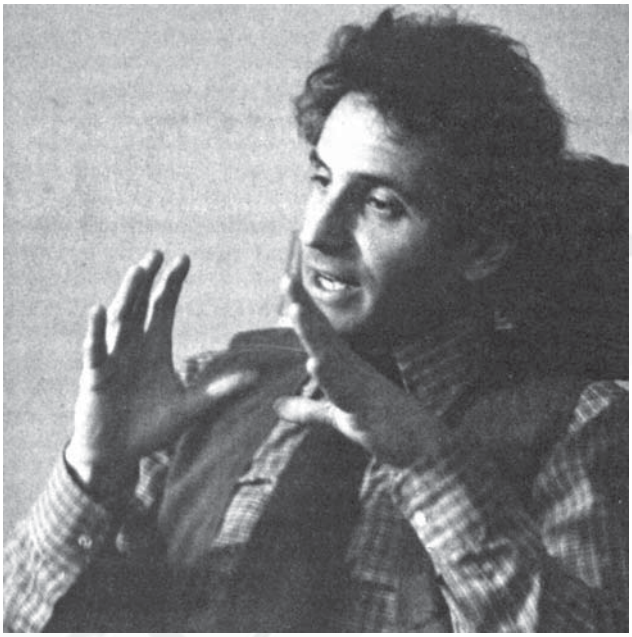
© Copyright Soyinfo Center 2014

there is so solid evidence or documents to prove that this really happened.

Japan's sprout industry consists almost entirely of small producers. In Kagoshima there are 75 producers–the largest number in any one part of Japan. Tokyo, Chiba, and Saitama together have 85 producers. Also Ashikaga in Tochigi prefecture (north of Tokyo) produces large amounts of sprouts. There are about 1,282 sprout producers in Japan. Of these 611 companies (with a 49% market share) have 1-5 workers, 553 companies (43%) have 6-20 workers, 95 companies (7%) have 21-50 workers, 13 companies (0.1%) have 51-100 workers, and 10 companies (40.1%) have 101-200 workers.

Professor Tadayoshi TAZAKI of Tokyo Agricultural and Industrial University (*Tôkyô Nôgyô Kôgyô Daigaku*), Agricultural Dept., proved that ethylene (*echiren*) gas can be used to produce fat sprouts–it prevents them from growing long and thin. Address: Shokuryo Gakuin Kyoju Kyoritsu Joshidai Koshi, Japan.

6845. Goldman, Sherman; Smith, Tyler. 1978. The two worlds of a small publisher: An interview with Nahum and Beverly Stiskin. *East West Journal.* April. p. 67-69.



• ***Summary:*** Nahum and Beverly Stiskin traveled to Japan and founded *Autumn Press.* "Over the last two years, EWJ has excerpted several of their remarkable books, including *The Book of Tofu, The Book of Miso,* and *The Book of Kudzu* [by Shurtleff & Aoyagi] which bring the world of the Orient to a new generation of modern Western readers, cooks, and healers."

The Stiskins established Autumn Press by publishing *Looking Glass God* which Nahum wrote after arriving in Japan in 1969. They borrowed money from their family and had the first edition printed by a local Japanese printer. Then they worked with Lima Ohsawa on her *Art of Just Cooking.*

For the first four years the company grew slowly, blunder by blunder. They both had to take other jobs in order to support themselves. Both their families felt they were making a great mistake by publishing books on subjects of little interest. But they were trying to contribute to a renaissance they saw happening. Their books deal with both theory and practice, from a wholistic perspective, and they try to address major issues confronting humans and society. They published feminist poetry by Ellen Bass and poems by the Korean dissident Kim Chi Ha.

The Book of Tofu has been Autumn Press' biggest success, with 90,000 copies in print after two years. Nahum believes that introducing tofu to the United States "is going to prove truly revolutionary. I think we see that revolution going on around us." Both are working to change the world. Four photos show Nahum Stiskin; one shows Beverly. Address: 1. Editor; 2. Contributing editor.

6846. Okamura, T.; Steinberg, M.P.; Tojo, M.; Nelson, A.I. 1978. Water binding of soy flours as measured by wide line NMR. *J. of Food Science* 43(2):553-55, 559. March/April. [12 ref]

6847. Shurtleff, William; Aoyagi, Akiko. 1978. Morinaga silken tofu: Package and pamphlet design for the American market. New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. 9 p. Unpublished manuscript.
• ***Summary:*** In Feb. 1978 Mr. Tadaharu Nishide of Morinaga Milk Industry Co., Ltd. asked Shurtleff and Aoyagi to redesign the Morinaga tofu package, and develop new text and a recipe for the package, plus a new recipe booklet. It was suggested that the product be named "Ever-Fresh Silken Tofu." The recipe was for "Creamy Tofu Dressing." The package colors were blue, yellow, and brown on white. Address: Tokyo, Japan. Phone: 03-925-4974.

6848. Shurtleff, William. 1978. Re: Proposal for establishing a Soycrafters Union or Cooperative in North America. Letter to all "Soycrafters in North America," April. 2 p. Typed, with signature on letterhead.
• ***Summary:*** This open letter, written on NAFSC letterhead and dated April 1978, was submitted to *Soycraft* newsletter, where it was published in June 1978 (which see). It led to the first national meeting of soycrafters in Ann Arbor, Michigan, on 28-30 July 1978 and the founding of the Soycrafters Association of North America at that meeting.

The letter begins: "Dear Soycrafters of North America: There has recently been growing interest in North America in

© Copyright Soyinfo Center 2014

starting a Soycrafters Union or Cooperative, perhaps along the lines of Japanese National Tofu, Miso, Shoyu, Natto, etc. Unions [Associations]. Such a development would seem to represent a great leap forward, of benefit to many in the expansion of consciousness and production of quality soyfoods in the Western world."

Note 1. This is the earliest document seen (Jan. 2003) in connection with the Soycrafters Association of North America (SANA).

Note 2. This is the 2nd earliest document seen (Sept. 2011) that contains the word "soyfoods." Address: Director, New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

6849. Wells, Patricia. 1978. What is this thing called tofu? *New York Times.* May 3. p. 19-20. Reprinted in the Boston Herald-American. June 15.
• ***Summary:*** "In the early 1970s the Hashizume Bean Cake Corporation came to life as a minor cottage industry tucked away in the basement of a giant red brick factory in Long Island City. Each day it churned out a few hundred pressed soybean cakes, or tofu, and supplied the handful of Japanese restaurants and Oriental specialty stores in business at the time in the New York area.

"Today, thanks to what one company representative called 'the American-natural-organic-people'... seven trucks loaded with tofu leave the steamy Hashizume factory each day."

"A combination of events awakened the West to the wonders of tofu. One was the 1975 publication of *The Book of Tofu,* an Autumn Press cookbook and resource manual that caught on quickly with natural food followers. The other is tofu's nutritional attributes.

"While traditionally Oriental tofu companies as Hashizume and Tanaka & Company, which is on Manhattan's West Side (326 Amsterdam Ave. at 75th St.), have profited from the Westernization of tofu, young, counterculture entrepreneurs throughout the country have taken advantage of the growing demand." These include the "Laughing Grasshopper New England Soy Dairy" (which now makes 5 tons of tofu a week, that's 20,000 cakes). "Other successful American-run tofu factories have mushroomed in Bethlehem, Massachusetts [actually New Hampshire; Crystal Springs], Summertown, Tennessee, and Island Springs, Washington" [sic, Island Spring, Inc., Vashon, Washington]. A description of the process for making tofu at Hashizume is given.

Page 20 is titled "The West wakes up to the wonders of tofu." "Following are recipes using tofu in both Oriental and Westernized versions. The Oriental recipes are included in *The Book of Tofu.* The others were developed by the people at Laughing Grasshopper and the Crystal Hills Tofu Shop in Bethlehem, N.H.: Tofu clam dip, Maple walnut bars, Tofu manicotti, Chilled tofu, Shoyu dipping sauce, Raspberry pudding, and Miso soup with tofu and onions."

6850. Freiman, Jane Salzfass. 1978. Sushi: A 'fast-food' fish dish from Japan. *Chicago Tribune.* May 12. p. B1.
• ***Summary:*** Begins with a description of sushi and the different types (such as nigiri sushi and maki sushi), then continues with a review of six sushi restaurants in or near Chicago. "Like other arts practiced in Japan, the preparation of sushi is an effortless performance requiring great skill." Sushi has been prepared in Japan since the mid-1700s. Each bite of sushi (a finger food) is dipped in a tiny sauce of shoyu or soy sauce just before it is eaten.

At Hamehachi the writer enjoyed "two delicious, sweet, stuffed deep-fried bean cakes called *inari sushi.* A complete order of six *inari sushi* is $3." Two photos show a *sushi-ya* (sushi chef, sushi-master) at work in his sushi bar or restaurant.

6851. West, Kenneth J. 1978. Re: Visit from soy sauce manufacturers in Japan. Letter to Dr. Walter Wolf, U.S.D.A., 1815 University Ave., Peoria, Illinois 61604, May 23. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Mr. Michiro Kotegawa and his son Daisure are planning to visit Dr. Wolf on the morning of June 22. Mr. Kotegawa is vice-president of a large soy sauce manufacturing plant in Japan. Address: Pacific Grain Co., 201 West North St., Farmer City, Illinois 61842. Phone: 928-2185. Cable: "Pacgrain".

6852. **Product Name:** [Mamy {Soymilk} (Orange, or Pineapple)].
Manufacturer's Name: Agro-Nippo Produtos Alimenticios Ltda.
Manufacturer's Address: Av. José Alves de Mira 185, Piribuba, Sao Paulo, Brazil.
Date of Introduction: 1978 May.
Wt/Vol., Packaging, Price: 200 ml plastic bags, ready to drink.
New Product–Documentation: Letter from Jane Cadwell Pautz. 1982. May 29.

Letter (e-mail) from Jaime Nakamura of Brazil. 2012. Oct. 9. "I am attaching a form from Public Division of Food (Sao Paulo State's Health Secretary), dated 3 May 1978, when samples of Mamy were collected in order to develop product tests. Mamy was the first soymilk produced in Brazil and, we believe, the first in the world to combine soymilk + fruit juice. Mamy was launched before 1978 initially in its pure format as usual soymilk produced in Japanese market (without any mix).

When Mamy was launched, it was impossible to be registered, since there were not laws to embrace that 'different milk.' The Brazilian President showed some kind of rejection regarding the taste of this new product–bad words in media. After all the investments, the Agro-Nippo

© Copyright Soyinfo Center 2014

team decided to find a solution to face these difficulties. After some tries, they decided to mix the juice of local fruits to minimize the strong taste of soymilk. And it worked! This is just a summary regarding the history of this company / brands.

The docs I'm sending to you are in Portuguese–anyway, I have the originals in my hand. There're more similar documents.

I hope to keep in touch with you in order to collaborate to enrich this kind of data and information.

6853. Japan Food Research Laboratories. 1978. Analysis of natural nigari. Tokyo, Japan. 1 p. [Eng]
• ***Summary:*** This is a report (analysis certificate no. 11040896) of natural nigari submitted by the Natural Salt Spread Association of Japan. The sample was received on 26 April 1978 and the assay conducted on 15 May 1978 at Laboratory No. 1.

Arsenic: not detected (below 0.1 ppm [parts per million]). Lead: 1.50 ppm. Zinc: 0.10 ppm. Total mercury: not detected (below 0.1 ppm). Iron: 11.3 mg%. Signed: H. Suda, inspector.

Note: See also the analysis of nigari conducted in Oct. 1977 by Curtis & Tompkins in San Francisco, California, for Westbrae Natural Foods. They analyzed only the lead content and found 1.75 ppm–16% more than was found by this Japanese laboratory. Address: Tokyo Head Office: 52-1 Motoyoyogi-cho, Shibuya-ku, Tokyo.

6854. Mori, H. 1978. Shôwa 52 nendo ni okeru shôyu, miso no kenkyû gyôseki [Review of annual achievements in shoyu and miso research]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 73(5):351-69. May. [532 ref. Jap]
• ***Summary:*** This important Japanese-language article, published each year in the May issue of this periodical, has two parts: (1) A review of the past year's major discoveries and developments in the fields of miso and soy sauce in Japan. (2) A bibliography related to those discoveries and developments. Address: Noda Sangyo Kagaku Kenkyusho.

6855. Nihei, Takao. 1978. Hawai ni okeru Nihon-shu, miso, shôyu no rekishi [A history of Japanese sake, miso, and shoyu in Hawaii]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 73(5):346-50. May. [Jap]
• ***Summary:*** In 1868, the first year of the Meiji Period, the first 153 Japanese immigrants arrived in Hawaii on board the three-masted sailing ship Scioto (Saioto-go). They brought with them miso and shoyu. This article otherwise contains no mention of soyfoods.

Note: This document contains the earliest date seen for soybean products in Hawaii (1868); soybeans as such had not yet been reported by that date. Address: Honolulu Shuzo Seihyo Gaisha.

6856. Okamoto, Susumu. 1978. Factors affecting protein film formation. *Cereal Foods World* 23(5):256-62. May. [10 ref]
• ***Summary:*** A very interesting and original technical paper about yuba which contains 55% protein and 25% lipids. For example: Electron microscope observations show that yuba consists of minute oil droplets, less than 5 microns in diameter, distributed irregularly throughout a protein membrane (Fig. 1). Address: Showa Women's Univ., Taishido, Setagaya-ku, Tokyo.

6857. *Daizu Nippo.* 1978. Beikoku de tôfu e no kanshin. NY Times mo kiji [Increased interest in tofu in the U.S. Even an article in The New York Times]. June 8. p. 4. [Jap]

6858. Shurtleff, William. 1978. Report with color slides on trip to Suzuki Jozo, Daifuku-ji, and Yamaya in central Japan to study method for making savory soy nuggets (*Hamanatto*). Nerima-ku, Tokyo, Japan: New-Age Foods Study Center. 1 p. Unpublished manuscript. June 8.

• ***Summary:*** We have coined the term "soy nuggets" to refer to a family of traditional fermented soyfoods that are known throughout East Asia. In China they are called shih, chi, touch'ih, or douchi. The two most popular varieties in Japan are Hamanatto (savory soy nuggets) and Daitokuji natto (Daitokuji soy nuggets). The Philippines and Malaysia have tausi or tao-si (soy nuggets).

Note: On 21 Nov. 2011 we decided, after 30 years of questioning, to change our name for this category of soyfoods to "fermented black soybeans" instead of "soy nuggets." We did this largely to conform more closely to current usage in English, where they are generally called "fermented black beans."

Soy nuggets are unrelated to regular sticky natto except both are fermented whole soybeans; soy nuggets are inoculated with a mold (*Aspergillus oryzae*) rather than a bacterium, are not sticky, are salted, and originated in China (rather than Japan) more than 2,200 years ago. Here we see savory soy nuggets and Daitokuji soy nuggets. Both look something like dark-brown to grayish raisins and have

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

a savory, slightly salty flavor resembling that of mellow Hatcho miso.

Shurtleff took many color slides of the Hamanatto process on this one-day train trip to Yamaya. The slides / photos are now in a numbered set as follows: 10. Close-up of Hamanatto (savory soy nuggets) and Daitokuji natto on white plates. Sprinkled over rice or rice porridge, served as an hors d'oeuvre with green tea or sake, or used as an ingredient in miso soups or cooked vegetables, they add zest to otherwise bland dishes. Some Westerners sprinkle them over curry or spaghetti sauces, or fried eggs. 11. Six different Hamanatto packages from Japan. 12. A closer view of the six packages. 13. Four more packages of traditional Hamanatto products. 14. One large maker of Hamanatto is Suzuki Jozo. Located near Hamamatsu in Central Japan, they also make shoyu. Their process for Hamanatto goes as follows: Soak soybeans for two hours, steam cook, then leave in the cooker overnight.

15. The next morning remove beans from cooker, crumble to break up any lumps, spread on rice-straw mats, then inoculate by sprinkling on the starter, *Aspergillus oryzae* mold spores. 16. Transfer inoculated beans by conveyor into the koji incubation room. 17. The room is a large shallow stainless steel box perforated with many holes to allow for air circulation. Here the beans are left to ferment at 35ºC (95ºF) for 4 days. 18. On the fourth day, dry the soybean koji in the sun on mats on the rooftops for 5 hours. 19. Put the koji in 70-liter (18.5 gallon) wooden vats, put on a heavily weighted pressing lid, pour in a 10% salt solution to cover the koji, and allow to ferment at the ambient temperature for 2 to 4 months. 20. After fermentation is complete, drain off the liquid tamari, spread the soy nuggets on mats on the rooftop, and sun-dry for 5 hours to make the finished product.

21. Savory soy nuggets (Hamanatto) are said to have originated in Hamamatsu at this temple, Daifukuji, about 350 years ago, and they are still produced there today. The photo shows the front gate to the temple. 22. Here we see the incubation trays, fermentation vats, and pressing weights that are used. 23. Here is the steamer in which the soaked soybeans are steamed. 23A. After being mixed with one-tenth their weight of roasted wheat or barley flour plus a little koji starter, they are placed in shallow wooden trays and incubated at 35ºC for 4 days to make a unique type of soybean koji. 23B. After the 2-4 month salt fermentation, the product in a small wooden vat looks like this. 23C. The liquid tamari is drained of and the product is briefly sun-dried. 24. Then it is mixed with a small amount of slivered gingerroot pickled in moromi (shoyu mash) and salt-pickled sansho seeds (shown here) to make the finished product.

Note 1. This is the earliest English-language document seen (Nov. 2011) that uses the term "savory soy nuggets" to refer to Hamanatto. By 1987 Shurtleff preferred to call these "Hamanatto soy nuggets."

Note 2. This is the earliest English-language document seen (Nov. 2011) that contains the term "Daitokuji soy nuggets."

Note 3. This is the earliest English-language document seen (Nov. 2011) that uses the word "douchi" to refer to soy nuggets, or the word "Daifukuji" (a temple name) in connection with soy nuggets. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

6859. Sheraton, Mimi. 1978. Restaurants: Stuffed cabbage and sushi on East Side. *New York Times.* June 9. p. C14.
• ***Summary:*** This is a review of Hatsuhana, a Japanese sushi restaurant at 17 East 48th St., New York City. "Advised by a Japanese friend, we ordered natto, a pungent mix of fermented [soy] beans, tuna fish and scallions; nuta, a sensual blend of raw fluke [flounder, a type of flatfish] and scallions in a satiny yellow sauce made of soy bean paste [miso], lemon and sake." Also salmon teriyaki, and "wrappings of spinach-green seaweed." All sushi and sashimi, nuta and natto are recommended.

6860. Kotegawa, Michiro. 1978. Visit with Dr. Wolf at NRRL (Interview). Conducted by Dr. Walter Wolf of NRRL, Peoria, Illinois 61604, June 22. 2 p. transcript.
• ***Summary:*** Mr. Kotegawa and his son visited Pacific Grain Co. (Farmer City, Illinois) and were referred to Dr. Wolf by Jerry West. Mr. Michiro Kotegawa was accompanied by his son, Daisure, who is at Stanford University working on his MBA degree (he has completed the 1st year and has one more to go). Also accompanied by his wife and daughter-law (?).

Fundokin Soy Co. makes 10,000 tons of miso per year in Japan; 60% of this is barley miso and 40% is rice miso. Their barley is imported from Australia.

Fundokin is one of the top 10 soy sauce manufacturers in Japan. They produce 12,000 tons of soy sauce per year.

The soybeans used for miso (and by other companies for tofu) are M-1, Amsoy, Corsoy, Harosoy and Chinese soybeans; all these are white hilum soybeans. They also buy defatted soybean meal from a soy oil company in Japan; they prefer high-protein meal.

Mr. Kotegawa is interested in a source of 4-ethyl guaiacol [4 ethylguaiacol; 4-EG]. A diagram of the molecule is shown. Note: It is a phenolic compound with the molecular formula $C_9H_{12}O_2$. Dr. Wolf was unanble to find it listed in any of the chemical catalogs.

The business card of Michiro Kotegawa is attached; one side is in Japanese, the other is in English. Address: President, Fundokin Soy Co., Ltd., Usuki City, Oita, Japan.

6861. Nihei, Takao. 1978. Hawai ni okeru Nihon-shu, miso, shôyu no rekishi. Nihon-shu II. [A history of Japanese sake, miso, and shoyu in Hawaii; Sake. II]. *Nippon Jozo Kyokai*

Zasshi (*J. of the Society of Brewing, Japan*) 73(6):446-52. June. [21* ref. Jap]
Address: Honolulu Shuzo Seihyo Gaisha.

6862. Saio, Kyoko; Watanabe, Tokuji. 1978. Differences in functional properties of 7S and 11S soybean proteins. *J. of Texture Studies* 9(1/2):135-57. June. [21 ref]
• ***Summary:*** 11S protein differs from 7S protein in that it makes much harder tofu gels which are more sensitive to the effect of phytic acid, and in which the S-S bonds appear to predominate. "The 11S protein precipitates faster and forms larger aggregates" [curds]. 11S gels have a higher water holding capacity and higher tensile values, and they expand more when heated.

Traditional soy protein foods in Japan include: Tofu: a protein gel coagulated from soybean milk. Kori-tofu: freeze-denatured, dried and porous tofu gel. Aburage: Tofu-gel expanded by deep-frying. Yuba: thin film formed on the surface of soybean milk. Kinako: flour of roasted soybeans. Miso: fermented salty paste of cooked soybean and rice mixtures. Soysauce: fermented salty liquid of cooked soybean and wheat. Address: 1. National Food Research Inst., Ministry of Agriculture & Forestry, Shiohama 1, Koto-ku, Tokyo, Japan; 2. Kyoritsu Women Univ., 2-2, Hitotsubashi Kanda Chiyoda-ku, Tokyo, Japan. Watanabe's present address: Kyoritsu Woman University, 2-2, Hitotsubashi Kanda, Chiyoda-ku, Tokyo.

6863. Shurtleff, Bill. 1978. News from New-Age Foods Study Center. *Soycraft* (*Lawrence, Kansas*) 1(3):3-5. June.
• ***Summary:*** This open letter begins: "Dear Soycrafters of North America: There has recently been growing interest in North America in starting a Soycrafters Union or Cooperative, perhaps along the lines of Japanese National Tofu, Miso, Shoyu, Natto, etc. Unions [Associations]. Such a development would seem to represent a great leap forward, of benefit to many in the expansion of consciousness and production of quality soyfoods in the Western world."

The author then summarizes five major functions of Japanese national trade associations related to soy products, and suggests how each of these be adapted to present American conditions and consciousness which are very different from those in Japan: Purchasing soybeans, maintaining a list of member shops, doing "soyfood publicity," publishing a newsletter, and establishing and running a nationwide center, information clearing house, and school for teaching production of low-technology "soyfoods" to people from both developed and developing countries.

"How might this basic model be adapted to the United States? First, since soyfoods are still quite new in the USA, we might want to form one united front cooperative or union for all soycrafters or producers of soyfoods, rather than trying to form individual unions for tofu & soymilk, miso, tempeh, shoyu, etc. Given such a joint union, it would seem that all of the functions performed by the Japanese unions would be of great potential value to producers in North America. The key point, however, is that for the Union to work it must be financially viable and sound. Thus it must be created and supported by individual members who understand clearly that its functions are in their best interest, both in the short and long run."

"Second, we must remember that the number of shops presently producing soyfoods here is still very small. We have the names of 95 tofu shops and/or soy dairies in the United States plus 6 more in Canada, 9 tempeh shops, 8 miso shops, and one shoyu factory (Kikkoman). Of these, about 41 of the tofu shops and soy dairies, 5 of the tempeh shops, and 2 of the miso shops are 'new-age' types, newly started by Caucasian Americans. This latter group would probably form the initial nucleus of the Soycrafters Union, however after the benefits of membership could be clearly demonstrated, the more conservative Japanese producers might be eventually interested in joining."

"At the proposed First North American Soycrafters Convention to be held in Ann Arbor [Michigan] July 28-30 the above suggestions might be discussed one by one..."

At the end of the article is a form which new or existing tofu or soymilk manufacturers in the U.S. are invited to fill out and return to Shurtleff so that he can list them in the next edition of *The Book of Tofu.* Its asks for the name, address, and phone number of the company, the person(s) in charge, the date tofu or soymilk production started, the approximate cost of getting started, the average quantity of soybeans used per week, the soyfoods produced (in order of importance), the main pieces of equipment purchased, and equipment the company plans to purchase in the near future.

Note the early use of the terms "soyfoods" and "soyfood" in this article. The term "soyfoods" was coined by Surata Soyfoods of Eugene, Oregon, in Dec. 1976.

Note 2. This is the earliest document seen (Feb. 2013) that contains the term "low technology" (or "low tech"). Shurtleff coined this term to refer to soyfoods that could be made, and had long been made, using simple, traditional technologies, appropriate to Third World countries or relatively poor areas. Address: Director, New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

6864. Birnbaum, Alfred. 1978. Re: Natto, the word *kara* and the history of early Japanese-Korean relations, and sea vegetables. Letter to William Shurtleff at New-Age Foods Study Center, Lafayette, California, July 12. 1 p. Handwritten (in pencil) and signed.
• ***Summary:*** Alfred will try to finish translating the chapter on Nattô from *Daizu Shokuhin* before he leaves Japan for southern California on about Aug. 10; he has found certain scientific terms hard to translate.

He has been reading a somewhat controversial Japanese-

© Copyright Soyinfo Center 2014

language publication titled *Nihon no naka no Kankoku bunka* (*Korean culture inside Japan*). It states that the Japanese word *kara* (as in *kara-natto*), meaning simply "from the continent" was first applied to Korea, from Korea's Sam-Han & Three Kingdoms periods and Japan's Kofun (A.D. 250-552), Asuka (552-645), and Nara (646-794) periods–before Japan had any relations with China. The first usage was the Chinese character (1 Cc = 1 Chinese character given) which, although it appears to refer to Han dynasty China, was adapted by the early Korean Japanese "Kara" clan (which Alfred believes later became the *Higashi-no-Aya* clan). The next usage was (1 Cc, pronounced "kara"), as in Sam-Nan clans of Korea and the Karakuni Jinja (4 Cc) in Nara (still extant). Then the character changed to (1 Cc), still meaning "Korea" (not salty), and finally (1 Cc)–all pronounced *kara*.

Note: This is the earliest English-language document seen (Nov. 2011) that contains the term "kara-natto."

Alfred was introduced to these studies in early Japanese-Korean relations and the falsifications in the *Kojiki* etc. by a Korean linguist in Los Angeles. It became obvious how twisted the stories on the Japanese side became and how anxious the ancient ruling class Japanese (who were largely Korean) was to prove it was separate and unrelated to Korea.

Concerning Hama-natto [from Yamaya]: It is a special product of Hamamatsu, used as an accompaniment to rice, tea, or fried egg yolks. Two sources give two processes.

He still hopes to find time for a trip to Kyoto, and he is still interested in working together on a book about sea vegetables. During Aug. he will stay with his parents in Rancho Palos Verdes, California. From Sept. he will be visiting a friend in Columbia, Maryland. Address: Tama-sô No. 1, Inokashira 1-28-30, Mitaka-shi, Tokyo 181, Japan. Phone: 0422-47-7130.

6865. Birnbaum, Alfred. 1978. Re: Hama-natto [or Hamanatto]. Letter to William Shurtleff at New-Age Foods Study Center, Lafayette, California, July 12. 1 p. Handwritten and signed.

• ***Summary:*** Concerning Hama-natto [from Yamaya / Yama-ya]: It is a special product of Hamamatsu, used as an accompaniment to rice, tea, or fried egg yolks. Two sources give two processes.

Process No. 1: Mix 2 liters of large steamed soybeans with 1 liter of roasted barley- or wheat flour. Add koji and incubate in a koji incubation room (30-35ºC) for 3-4 days. Then dry the product in the sun until its moisture content has dropped to 20-25%. Prepare a salt solution by mixing 0.5 liters salt with 2 liters water. Mix this salt solution with the dried molded soybeans in a vat, and place a pressing lid on top, weighted with a stone. Allow to ferment for several months. Remove and sun-dry, or add shoyu and sliced ginger. Note: The source of these instructions is given in Japanese: *Daizu–Sono tokuksei to tabekata* [Soybean: Their special features and ways of using them as food], by Masaaki. Kobayashi

Process No. 2: This is less precise. Cook large soybeans in salty *tsuyu*, composed largely of water seasoned with shoyu. Add koji and roasted barley- or wheat flour. Ferment for several months. Then add [finely slivered or diced] gingerroot (Ryûzô Nakano).

The package: Yamaya-ya Hamanatto, Main office: Shizuoka prefecture, Hamamatsu city, Naruko-machi, 8 banchi. Factory: Shizuoka prefecture, Hamakita city, Komatsu, 4880 banchi.

The nutritional composition of the Yamaya product is given: Protein 25.41%. Fat 10.44%. Non-nitrogenous substances [carbohydrates; *muchitsu-butsu*] 12.62%. Fiber 2.95%. Ash 14.51%. Moisture 34.07%. Per 100 gm: Vitamin B-1 0.21 mg. Vitamin B-2 0.53 mg. Calories 246. Address: Tama-sô No. 1, Inokashira 1-28-30, Mitaka-shi, Tokyo 181, Japan. Phone: 0422-47-7130.

6866. Elias, Stanley. 1978. In Japan, puffing goes continuous. *Food Engineering* 50(7):58-59. July.

• ***Summary:*** For the past several years, Kikkoman Shoyu Co., Ltd. has been using a continuous explosion puffing system, based on superheated steam, for treating granulated soybeans prior to further processing. Developed in-house, this system has also been tested on wheat and polished rice. The residence time is as short as 5 seconds, the pressure up to 15 psi (15 kg per square cm), and the capacity up to 4 tons/hour. After Japanese and U.S. patents are secured, Kikkoman plans to license the manufacturing rights to Kurimoto Iron Works. A schematic diagram shows the process. Photos show: (1) The control panel. (2) The puffing chamber and discharge hopper. (3) The rotary transfer valve, a key component. Address: Technical Editor.

© Copyright Soyinfo Center 2014

• ***Summary:*** Contents: Summary. Introduction. Method of study. Foreign material. Oil and protein content. Poisonous seeds and insect infestation. Weight analyses. Comparison of soybeans from Brazil and China. Conclusion.

"Most Japanese receivers expressed some dissatisfaction with the quantity of foreign material in the shipments they received; however, they were primarily concerned with the oil content and protein (nitrogen) content of the soybeans, weight shortages, and insect infestations.

"The Japanese importers mostly commented on the low oil content of the U.S. soybeans in comparison with that of the Brazilian soybeans. They wanted soybeans containing over 19 percent of oil. In most cases the oil content of U.S. soybean shipments sampled in 1973-76 was under 19 percent, whereas, in the Brazilian soybean shipments, it averaged over 20 percent."

"The presence of poisonous seeds, such as morningglory and crotalaria, among soybeans requires that additional steps be taken by oil processors to remove the seed residues. Most U.S. shipments contained poisonous seeds in greater quantity than the legal Japanese limit." Address: USDA, Beltville, Maryland.

6872. Photographs of people making tofu at New England Soy Dairy in Greenfield, Massachusetts, 31 July 1978. 1978. Greenfield, Massachusetts.

• ***Summary:*** These five black-and-white photographs (each 3½ by 5 inches) were taken on 31 July 1978 by William Shurtleff, when he and Wataru Takai visited the Soy Dairy shortly after the Soycrafters conference in Ann Arbor, Michigan. The photos and their negatives are now located in the Soyfoods Center archives. They show: (1) Grinder, pressure cooker and hydraulic press in operation. (2) Richard Leviton stirring nigari into hot soymilk in a curding barrel. (3) Richard Leviton ladling curds into a forming tray on a pressing table. (4) Shohaku Okumura, a Japanese Buddhist monk, cutting the finished tofu with a special stainless steel knife; a circular cooling tank, filled with water, is in the background. (5) Ditto, with Wataru Takai in the background.

6873. Photographs taken at the foundation meeting of the Soycrafters Association of North America in Ann Arbor, Michigan. 1978. Ann Arbor, Michigan.

• ***Summary:*** These photos were taken (by an unknown photographer from The Soy Plant) during the First Annual Soycrafters Conference (July 1978), hosted by The Soy Plant in Ann Arbor. Six of the photos are black-and-white, 5 by 7 inches, two each taken during an afternoon meeting in an herb shop, during lunch, and during a demonstration of making tofu by members of The Soy Plant. People clearly visible include Les Karplus, Kathryn Bennett-Clarke, Ken Lee, Andy Schecter, Pat Aylward, William Shurtleff, Larry Needleman, Jean Huffman (Lecanto, Florida), Jerry MacKinnon (cutting a large block of tofu into cakes), and Steve Fiering (pouring soaked soybeans into the hopper of a grinder).

Seven of the photos are color, 3½ by 5 inches, one each taken during the first evening meeting and during an afternoon meeting, and five taken during a demonstration of making tofu and other soyfoods by members of The Soy Plant. Clearly visible are Steve Fiering, Jerry MacKinnon, William Shurtleff, Andy Schecter, Dan Ecclestone, and Yasuo ("Yoshi") Yoshihara.

Two large (8½ by 11 inches) photos show Mike Kelly, dressed in a white T-shirt and apron: (1) Holding a ladle as soymilk runs into the filter cloth over a curding vat; (2) Ladling curds into a cloth-lined forming box.

There are also thirty tiny (1 by 1½ inches) black-and-white photos in the form of proof sheets. Clearly visible are Steve Fiering and Jerry MacKinnon (The Soy Plant), Jack Mizono (Azumaya), Steve Demos (White Wave), Christopher Hills (Surata Soyfoods), Jamie Stunkard and Pat Aylward (Joy of Soy), and Brian Schaefer (Evanston, Illinois).

Talk with Steve Fiering, a founder of The Soy Plant in Ann Arbor. 2000. Dec. 3. Chris Coon of The Soy Plant might have taken the above photos. The Fourth Avenue Food Co-op was around the corner from The Soy Plant's location at 211 East Ann St. They had a small herb section in their building. When The Soy Plant took over 211 East Ann St. they had one room of extra space facing the street. The food co-op moved their herb section into that room and expanded it to fill the room. They shared a portion of the rent on the space with The Soy Plant. The herbs were sold in gallon glass jars displayed on floor-to-ceiling wooden shelves.

6874. Shurtleff, William. 1978. Report on trip to first meeting of Soycrafters Association of North America (Ann Arbor, Michigan, July 28-30), and subsequent trip around USA with Mr. Wataru Takai visiting tofu companies (July 30 to Aug. 9). P.O. Box 234, Lafayette, CA 94549. 2 p. Aug. Unpublished manuscript.

• ***Summary:*** July 16-23–Mr. Takai (Director of the Overseas Department for Takai Tofu & Soymilk Equipment Co. in Ishikawa-ken, Japan) flies into San Francisco, California, from Japan. He stays in San Francisco, and is present at the installation of a Takai tofu system at Tokyo Foods (Tokyo Food Co.; Mr. Horinouchi) in San Mateo, south of San Francisco. Shurtleff drives Mr. Takai to visit various tofu makers in the San Francisco Bay Area: Traditional Tofu in Oakland (meet with Ray Nagai and Gary Sato, who are having lots of problems), Azumaya in San Francisco (Bill Mizono), Quong Hop in South San Francisco (Stanley Lee), and Wo Chong in South San Francisco (Walter Louie).

July 24–Shurtleff and Aoyagi drive Mr. Takai to Lake Tahoe, where they all stay for two days and one night at the Shurtleff family cabin near Meeks Bay. July 26–The first Takai catalog of small and medium scale tofu equipment (printed with dark brown ink on glossy white paper) arrives in the USA.

July 27–Takai and Shurtleff fly together from San

© Copyright Soyinfo Center 2014

Francisco to Ann Arbor, Michigan, on an afternoon flight.

July 28-30–Meeting in Ann Arbor of about 70 soycrafters (mostly tofu makers) from around the United States. The conference opens on the evening of Friday, July 28. The first meeting is held upstairs in a large room at the University of Michigan student union–slide shows and discussions. Attendees stay in the university dormitory–which is largely empty since it was summer. On Saturday there are meetings and practical workshops throughout the day at The Soy Plant, 211 E. Ann St., several blocks from the university. Mr. Takai notes: "New tofu makers are young vegetarian. Almost all Caucasian with long hair and beards. They eat tofu instead of meat." On Sunday, July 30, the Soycrafters Association of North America is founded. Steve Fiering, Jerry MacKinnon, Sue Kalen, and co-workers at The Soy Plant (211 East Ann St.), in Ann Arbor, Michigan, organized and hosted the meeting–which was a great success. We elected an executive director (Larry Needleman of Bean Machines, California) and a Steering Committee [board of directors] of six: Tom Timmins, New England Soy Dairy, Massachusetts. Lester Karplus, Vegetarian, Inc., Illinois. Steve Fiering, The Soy Plant, Michigan. Steve Demos, White Wave Tofu, Colorado. Kathryn Bennett-Clarke, Southwest Tofu, New Mexico. Bill Shurtleff, New-age Foods Study Center, California.

After the meeting, Shurtleff and Takai travel around the United States, by airplane and rented cars, visiting existing tofu companies.

July 31, Monday–Fly from Ann Arbor to Boston, Massachusetts. From Boston we drive (using a rented car) to the New England Soy Dairy (Tom Timmins and Richard Leviton) and Nasoya (John Paino and Bob Bergwall); both are quite new companies. Mr. Takai notes: "New England was very woody and beautiful. First saw soy mayonnaise at the New England Soy Dairy; it was served in a dip at dinner. Nasoya extracted soymilk with a big hydraulic press." Mr. Takai noted that Japanese eat tofu itself, whereas Americans generally use it as an ingredient in recipes.

Aug. 1–Spend the afternoon in Boston's Chinatown visiting two or three old and well-established tofu makers. While walking through a fancy building in the area, Shurtleff first sees someone (a secretary) using a word processor.

Aug. 2, Wed.–Fly from Boston to New York City. Visit Hashizume (Mr. Yokoyama) and Tanaka-ya (Mr. Murakami), both well established tofu makers run by Japanese Americans. We then take the run-down, graffiti-scrawled subway to visit Tokyo Food Processing Corp. (c/o Japan Food Corp.) at 40 Varick Ave., Brooklyn (Terry Terahira and Mr. Shimazaki); this is also an established Japanese-American company that makes tofu and other Asian foods in a bombed out-looking, scary part of the city. Mr. Shimazaki notes that tofu is starting to become popular in America, and their tofu is selling well. One afternoon Shurtleff is invited to be on the Gary Null Show (radio) to talk about tofu. While in New York City, Shurtleff stays with Larry Needleman at the home of his parents (Hy & Sylvia, in New Hyde Park, just outside New York City), while Mr. Takai stays at a hotel in the city. One night Needleman and Shurtleff have dinner with Mr. Takai, as his guest, at the Rainbow Restaurant in Manhattan, near the top of some skyscraper. Mr. Takai had a black-and-white photo taken of the three seated at a dinner table; it appeared in the Japanese newspaper *Hokuriku Chunichi Shinbun* on 14 Sept. 1978, and Mr. Takai kept the original. Soyfoods Center also has a copy (8 by 10 inches, filed at Soyfoods Center). Our last morning in New York City (Saturday, Aug. 5), we three travel by subway to the southern tip of Manhattan and take a ride on the Staten Island Ferry.

Aug. 6, Sunday–Shurtleff and Takai fly to Miami, Florida, to visit Swan Foods, founded by Robert Brooks and Mary Pung; a new and extremely innovative company making tofu and soymilk (with organic soybeans), plus a line of soy yogurt, tofu cheesecakes, etc. and full-page nationwide ads. Mr. Takai recalls that Mr. Brooks wanted to start a chain of tofu businesses across the United States. Shurtleff conducts (and tapes) a long interview with Robert Brooks and Pung, and visits their home and tofu plant.

Aug. 8–Fly from Miami to Summertown, Tennessee, to visit The Farm Tofu Shop (Alan Praskin). Mr. Takai recalls visiting Light Foods in St. Louis, Missouri, to deal with problems in their FM50 roller extractor.

Aug. 10–Fly from Tennessee to Denver, Colorado, to visit Denver Tofu (Mr. & Mrs. Haruhisa Yamamoto; an old, well-established Japanese-American company, which now filters all water used to make tofu). Shurtleff travels to nearby Boulder, Colorado, to visit White Wave on Pearl Street (Steve Demos, very new and small tofu maker).

Aug. 11–Fly from Denver to Los Angeles. Visit Hinode-ya (Mr. Yamauchi; an old, well-established Japanese-American company, perhaps the largest in America).

Aug. 12–Fly from Los Angeles to San Francisco.

Note: Mr. Takai's notes of his itinerary, which he wrote for himself in Japanese before and after the trip, indicate that he arrived in San Francisco on Aug. 12. But Shurtleff's notes indicate that he arrived in San Francisco and Lafayette on Aug. 9 (Wednesday). Shurtleff has clear memories of visiting Denver Tofu and White Wave, but no memories of visiting Tennessee or Los Angeles on this trip. Mr. Takai does not recall visiting Lake Tahoe. Address: New-age Foods Study Center, Lafayette, California.

• ***Summary:*** About the New England Soy Dairy, which now

© Copyright Soyinfo Center 2014

employs 20 people (14 production workers) and produces, on average, 2,400 lb/day of tofu containing 8.6 to 10% protein. The company has five owners, who constitute its board of directors. "Three of their employees are Japanese monks who live in nearby Charlemont. Their presence adds to the already spiritual atmosphere of the plant." Bud Foster's Supermarket in Greenfield was the first regular grocery to carry the New England Soy Dairy's tofu, and now Food Mart carries tofu as a regular item in 23 stores and Stop and Shop is starting to sell it as a specialty item.

Photos by Lionel Delevingne show: The inside of the plant with Ira Leviton (age 31 and a vegetarian) cutting tofu. Leviton pouring curds into cloth-lined forming box. Ira and Kathy Leviton, and Tom Timmins, standing behind a round soaking tank filled with cakes of fresh tofu.

6877. Lachman, Gaella; Elwell, Christian. 1978. Making miso in America. *East West Journal.* Sept. p. 54-59.
• ***Summary:*** A colorful account of making 1,000 lb of miso in the spring of 1978 with Noboru Muramoto at Asunaro, on Mt. Veeder, at 4600 Cavedale Road, Glen Ellen, California 95442. Phone: (707) 996-5365. Christian writes in the introduction that several years ago, upon returning from India and recovering with a serious bout with jaundice, he came across Naboru [sic] Muramoto's book, *Healing Ourselves* (Avon Books, 1973), "one of the few reliable guides to preventive medicine now available." After this he began to use food as medicine for the first time. Within a year he was attending seminars by Michio in Boston, Massachusetts, and learning about macrobiotics. He later learned that Mr. Kushi and Mr. Muramoto had both been students of George Ohsawa. While in Boston, Christian met Gaella, his wife to be. They left Boston to visit California, and from January to April 1978 they studied at Asunaro Eastern Studies Institute (established in the fall of 1976) in Glen Ellen, California, with Mr. Muramoto. By mid-April, in addition to miso, they had also learned to make soy sauce, saké, tofu, seitan, mochi, bran pickles, sauerkraut, tekka [miso], and bread. Natto making is also taught. A large photo shows the two of them cooking soybeans for making miso.

Note: Talk with Christian Elwell. 1996. Sept. 7. While Christian and Gaella were at Asunaro, Thom Leonard visited for a few days. Thom and Christian met and talked, recognized that they had a lot in common, and stayed in touch afterward. Christian eventually purchased Thom's Ohio Miso Co. He was already making miso experimentally, and he had plans to go back to Ohio to make commercial miso.

6883. Paschal, E.H., II; Ellis, M.A. 1978. Variation in seed quality characteristics of tropically grown soybeans. *Crop Science* 18(5):837-40. Sept/Oct. [13 ref]
• ***Summary:*** "Twenty-four soybean collections were grown in two different seasons in Puerto Rico to determine the extent of variation in the incidence of seed infection by fungi and its effect on seed viability under tropical conditions." Seed quality is a major obstacle to the expansion of soybean production in the tropics, where there is high temperature and humidity. Yet soybeans have been cultivated for ages in Southeast Asia (as in Indonesia) where conditions are unfavorable to the production of high quality seed, so varieties that perform well under these conditions might exist. INTSOY as initiated research to improve seed quality in soybean varieties adapted to tropical conditions. This study found that many of the varieties that yielded seed with superior quality were, indeed, from Southeast Asia.

Table 1 shows the origin or parentage of 24 soybean accesses. Twenty of these have PI (Plant Introduction) numbers and four have names: Arisoy, Hardee, Improved Pelican, and Jupiter. The origin of those with PI numbers is: Australia, Brazil, Colombia, Guatemala, Hawaii, India, Indonesia, Japan, Philippines, Surinam, Tanzania, and Thailand. Address: Dep. of Agronomy, Univ. of Illinois, Urbana, IL, and Dep. of Crop Protection, Univ. of Puerto Rico, Mayaguez, PR 00708.

6884. Shurtleff, William. 1978. Protein source for the future. *PHP* (*Japan*). Oct. p. 8-18, 79-82. Illust. 18 cm.
• ***Summary:*** Contents: Introduction. Ten reasons why soybeans will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost source of protein in almost every country of the world. 3. High nutritional value. 4. Time tested for over 2,000 years. 5. Remarkably versatile. 6. Appropriate technology ("Traditional soyfoods can be produced in cottage industries"). 7. New dairylike products. 8. Soybeans are hardy and adaptive. 9. Free nitrogen fertilizer from nodules on soybean plants. 10. Great productivity potential.

Discusses new patterns of soy protein utilization, with specific reference and descriptions of tofu, soymilk, tempeh ("Indonesia's most popular soyfood"), miso, shoyu, whole dry soybeans, roasted soybeans, fresh green soybeans, soy flour, kinako, soy sprouts, and textured soy protein (TVP), yuba, and natto. Concludes with a discussion of new developments in the Western world.

Note: This is the earliest English-language document seen (Aug. 2013) that contains the word "dairylike" (written as one word) in connection with soyfoods. Address: New-Age Foods Study Center, P.O. Box 234 (951½ Mountain View Dr.), Lafayette, California 94549. Phone: 415-283-2991.

• ***Summary:*** An American working at the Kikkoman Shoyu soy-sauce factory in rural Wisconsin has made a happy discovery; most Japanese make excellent employers. The factory is owned by the Japanese, staffed at the top with talented Japanese managers, and permeated by a Japanese worldview and way of doing business–including loyalty to the company and a consensus style of management. Both American workers and Japanese employers have difficulty adjusting to the new arrangement, but both are trying and–generally–succeeding.

6888. Nomura, Abraham; Henderson, B.E.; Lee, J. 1978. Breast cancer and diet among the Japanese in Hawaii. *American J. of Clinical Nutrition* 31(11):2020-25. Nov. [16 ref]
• ***Summary:*** The authors studied the diets of 6,860 men to examine the relationship between soy consumption and breast cancer risk. Soy intake was measured twice: Once during the period 1965-1968 and again during 1971-1975. During the first period, no association was observed between soy intake and breast cancer. However for the second period an inverse association was found between intake of miso soup and risk of breast cancer; the more miso soup consumed, the lower the rate of breast cancer. And a trend was found toward an inverse association between intake of tofu and subsequent risk of breast cancer; the more tofu consumed, the lower the rate of breast cancer.

Note: This is the earliest document seen (May 2000) indicating that soy may prevent breast cancer in humans. Address: 1. Director, Japan-Hawaii Cancer Study; 2.

Address: Central Research Labs, Kikkoman, Noda, Japan.

6890. *SoyaScan Notes.* 1978. Chronology of soybeans, soyfoods and natural foods in the United States 1978 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 25-27. International Soya Protein Food Conference held in Singapore, sponsored by the American Soybean Association. 400 people from 24 countries participated.

Jan. *Whole Foods* magazine starts publication in Berkeley, California, founded by Steven & Henrietta Haines, and Jim Schreiber. The first issue features an article titled "Making Money Making Tofu," about five tofu companies. Westbrae has a full-page color ad titled "Someday all of this will be as familiar as apple pie," showing five types of miso plus sea vegetables.

Feb. 17. Laughing Grasshopper tofu shop changes its name to New England Soy Dairy, Inc., the first company to use the term "soy dairy" in its name. Also in 1978 White Wave in Boulder, Colorado, publishes a charming poster announcing, "We've got an alternative. White Wave Soy Dairy." An illustration shows a man leading his cow, standing under a beanstalk, looking in wonder at the seeds, soybeans.

March. The Cow of China, America's third soy deli, run by White Wave, opens in Boulder, Colorado. It is later renamed Good Belly Deli.

April. Nasoya Foods Inc. starts making tofu and soymilk in Leominster, Massachusetts, inside a former dairy. Founded by John Paino and Robert Bergwall. May. 3. "What is this Thing Called Tofu" by Patricia Wells published in *The New York Times.*

May 22-25. Keystone Conference on Soy Protein and Human Nutrition held in Keystone, Colorado, organized by Ralston Purina. 105 registrants. The world's top researchers on the subject present 34 papers demonstrating a new scientific understanding of the quality of soy proteins for human nutrition. The influential 406-page proceedings, titled *Soy Protein & Human Nutrition,* are published in 1979, edited by Wilcke, Hopkins, and Waggle.

May. The Soy Deli opens at The Soy Plant in Ann Arbor, Michigan. America's fourth soy deli.

June. Brightsong Tofu, founded by Joel Brightbill and Bob Heartsong, starts making tofu in Redwood Valley, California. Sharon and Richard Rose bought the company in June, 1980 and in Nov. 1980 started The Real Food Tofu Cafe, a soy deli, adjacent to it.

June 26. First Takai catalog of tofu and soymilk equipment published, written by William Shurtleff. The first publication of its type in English, it helps start many new soyfoods companies.

July 28-31. First Soycrafters Conference held at The Soy Plant in Ann Arbor, Michigan. Conceived and organized by Steve Fiering. 75 people attend. The Soycrafters Association of North America (SANA) is founded, with Larry Needleman as the first president and a board of directors.

Sept. First issue of *Soyanews* published in Sri Lanka.

Oct. *The Farm Vegetarian Cookbook* (revised ed.) by Louise Hagler published by The Farm's Book Publishing Co. in Tennessee.

Oct. Morinaga Milk Co. in Japan starts to export their tofu in aseptic Tetra Brik cartons worldwide. They issue a color recipe booklet to accompany their tofu.

Oct. Kendall Food Co. starts to make America's earliest known commercial amazake in Brookline Village, Massachusetts. Amazake is made from koji, as are miso and shoyu. Not even in Hawaii was commercial amazake made before this.

Oct. 29-Nov. 3. World Conference on Vegetable Food Proteins held in Amsterdam, The Netherlands. More than 1,000 participants. Sponsored by the American Soybean Assoc. and others.

Nov. The Tofu Shop, America's fifth soy deli-restaurant, opened in Rochester, New York, by Greg Weaver. Large and very creative menu. Later called The Tofu Gardens, and The Lotus Cafe.

Dec. American Soybean Association moves its headquarters from rural Hudson, Iowa, to St. Louis, Missouri, into greatly enlarged, modern offices.

Dec. *The Book of Tofu* (extensively revised, Americanized edition), by Shurtleff and Aoyagi published by Ballantine Books in a mass-market paperback edition. By 1987 the two editions have sold over 450,000 copies.

Dec. *Tofu Goes West,* by Gary Landgrebe published by Fresh Press.

Dec. *How to Cook with Miso,* by Aveline Kushi published by Japan Publications.

Dec. *Tofu Madness,* by Olszewski published by Island Spring tofu company in Washington.

Dec. Growing use of the term "shoyu" and less misuse of the term "tamari" in publications, indicating awareness of the difference between these two types of soy sauce.

* *Peaking Out on Tofu,* by Matthew Schmit self-published in Colorado.

* Soymilk Piima, resembling the traditional Finnish cultured dairy product, first made (on a home scale) by Pat Connolly in southern California.

* Soy oil: The King with no crown. A series of studies initiated by the American Soybean Assoc. in 1978 showed,

© Copyright Soyinfo Center 2014

surprisingly, that although soy oil is by far America's widely used oil (accounting for 84% of all vegetable oils and 58.3% of all edible oils and fats), most consumers are simply not aware that they are using soy oil. When 1,200 female heads of households were asked "What oils can you think of?" only 17% mentioned soy oil (52% mentioned corn oil, 36% peanut oil, and 23% safflower oil), and only 7% reported having purchased soy oil in the past 6 months. The ASA Market Development Foundation promptly began a campaign to increase product recognition and loyalty, improve product image, and to encourage manufacturers worldwide to identify soy oil on product labels. The slogan used is shown at the start of this paragraph.

6891. **Product Name:** [Tofu].
Manufacturer's Name: Japanese Tofu Shop (name unknown).
Manufacturer's Address: Rio de Janeiro, Brazil.
Date of Introduction: 1978 December.
How Stored: Refrigerated.
New Product–Documentation: Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 400. There are at least two Japanese tofu shops in Rio de Janeiro, Brazil. Owner: Unknown.

6892. Kushi, Aveline Tomoko. 1978. How to cook with miso. New York, NY: Japan Publications Trading Co. 127 p. Dec. Illust. Index. 26 cm.
• ***Summary:*** Contents: Foreword. Preface. Introduction. 1. How to use miso for soup. 2. Miso soup recipes. 3. Miso condiments and relishes. 4. Miso sauces and spreads. 5. Side dishes with miso. 6. Miso pickles. 7. Miso for fun. 8. Make your own miso. Glossary. Standard tables of food composition.

"Happiness is the realization of one's eternal dream." Michio Kushi says that "The cooking of food is the highest of all human arts." Page 25, under "Special suggestions for miso," notes that miso soup with mochi stops bed-wetting, and gives a mother who has just had a baby strength to recover more quickly and also help in producing milk for breastfeeding. "Miso soup is good for relieving the effects of tobacco toxication, or too much smoking. In the old days in Japan, the long tobacco pipes were often washed in miso soup. It was said that this made them very clean. The morning after drinking too much alcohol, miso soup is very effective for restoring energy and clear thinking. When you burn your skin, if at that time you don't have any tofu or green vegetables available to apply to the burn, you can use miso as a healing paste."

The section titled "What is miso? (Comment from Michio Kushi)" (p. 27) states: "According to Japanese mythology, miso was a gift to mankind from the Gods, to assure man's health, longevity, and happiness. Miso has been an important food in the Orient since the beginning of its civilization, and now is becoming a popular food in the West." Note: The source of this mythological idea is not given.

Pages 55-57 contain a "Basic Recipe for Homemade Seitan," but it is not used with miso.

6893. *Politics Today.* 1978. Soy sauce for the goose. 5:64. Nov/Dec.
• ***Summary:*** This articles focuses on opposition by Japanese *mikan* (mandarin orange) growers to U.S. orange exports to Japan. But it notes: "Half of U.S. exports to Japan are agricultural products. The U.S. market hold is so complete that without the Midwest's soybean production, there might be no soy sauce on the table at Tokyo's famous restaurant, Benihana of New York. Indeed, as much as 80 or 90% of the soybeans, wheat, corn, animal feed, and lumber consumed in Japan comes from America."

6894. Shurtleff, William; Aoyagi, Akiko. 1978. From discards to delicacies [Okara]. *PHP* (*Japan*) 9(12):19-28. Dec. (From The Book of Tofu). [1 ref]
• ***Summary:*** Discusses the many uses of okara or unohana, the residue left over from making tofu or soymilk. Contains 8 recipes. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

6895. Thompson, Robert L. 1978. Brazil's expanding soybean production. *Soybean Digest.* Nov/Dec. p. SID-4, 6, 8, 10.
• ***Summary:*** "Japanese immigrant farmers introduced soybeans into Brazil over 65 years ago. However, the crop remained relatively unimportant until the late 1960's. Area planted to soybeans increased from 171-thousand hectares in 1960 to 5.1-million hectares in 1974...

"Soybean production is concentrated in the southern states where it got its start. Rio Grande do Sul and Parana account for 85% of production... For the three largest producing states as a whole, 88.4% of the increase in soybean area came at the expense of other crops and pasture, only 11.6% from new land...

"In the 1960's, when there was considerable excess coffee production in the world, the Brazilian government paid farmers to take out old coffee trees and plant another crop. In Parana some of this land was put into soybeans. Also, Parana is far enough south in Brazil to get frosts that damage coffee trees several years each decade. The severe frost of July 1975 killed over half the coffee trees in Parana and required the rest to be severely pruned back. Instead of replanting coffee many of these hectares went into soybeans, to produce a 'sure' crop the following year, instead of having to wait 3-5 years for the coffee trees to come into full production. (In addition, where coffee was replanted, soybeans were often planted in the rows between the trees

© Copyright Soyinfo Center 2014

for the first couple of years to reap some income from the land.)

"Brazil's wheat policy provided another stimulus. To an extent, soybeans got their start in Rio Grande do Sul doublecropping with wheat... A National Center for Soybean Research [CNPSo] was established in Londrina, Parana in 1976..." Address: Asst. Prof., Agricultural Economics Dep., Purdue Univ., Indiana.

6896. Ajinomoto K.K. 1978. Ajieki [Ajieki, HVP soy sauce (Brochure)]. Tokyo, Japan. 8 p. [Jap]
Address: Tokyo.

6897. **Product Name:** Seitan.
Manufacturer's Name: East West Center.
Manufacturer's Address: Moctezuma St., Ensenada, Baja California, Mexico. Phone: 52-667-61005.
Date of Introduction: 1978.
How Stored: Refrigerated.
New Product–Documentation: Talk with Carlos Richardson of Gold Mine. 1992. July 10. The first seitan sold commercially by Gold Mine (in about 1989) was purchased from Arturo Beamonte at the East West Center in Ensenada, in Baja California, Mexico.

Talk with Ygnacio Beamonte at the East West Center in Ensenada, Baja California, Mexico. 1992. July 13. Ygnacio and his wife, Loretto, began to make and sell seitan commercially in 1978 at East West Center on Moctezuma St., in Ensenada. He learned the seitan process in seminars taught by Jorge Badillo, a naturopathic doctor, who lived in Ensenada and introduced macrobiotics there; he now lives in Seattle, Washington. Jorge Badillo learned how to make seitan from Roy Steevensz at the East West Center and Kushi House in Hollywood. Later they moved to Melrose Ave. There are at least 2 places in Latin America making seitan. For details contact the Great Universal Brotherhood, an international organization which was started in Venezuela by Dr. La Ferriere (a famous French teacher) in the 1950s, and now teaches lacto-ovo vegetarianism, yoga, etc. In Mexico City and other big cities in Mexico people have started making gluten but not seitan. Ygnacio's brother, Arturo, started making seitan at the East West Center in about 1984. Then he moved to Oregon. In about 1986-87 he moved to the East West Center in San Diego, where he took over as seitan maker from David Jackson (who now lives in Arizona). The East West Center in San Diego no longer exists. In about 1989 Arturo returned to Ensenada and has been the seitan maker there from that time until today.

Ygnacio and Arturo taught the East West Center in Los Angeles a new process for making seitan using iridea [*Iridaea cordata*] seaweeds in place of kombu to make the seitan softer and creamier.

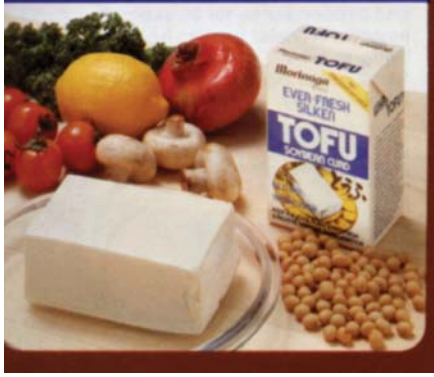
NATURAL SOY PROTEIN

Morinaga
BRAND
EVER-FRESH SILKEN
TOFU
SOYBEAN CURD



WHAT IS TOFU?

TOFU is one of the world's most popular sources of high-quality, low-cost protein. Yet unlike most other protein sources, TOFU is entirely free of cholesterol and very high in polyunsaturated fats.Excellent also for dieters, it contains only 52.6 calories per 100-grams! TOFU is, in short, the ideal food for every health-minded person.

A traditional, natural food discovered by a Chinese prince in 164 B.C., TOFU is now prepared fresh each morning at 38,000 shops in Japan alone, plus over 100 shops in America. It is the most important soy protein food throughout East Asia, a protein backbone of the diet for more than one billion people.

Remarkably versatile, TOFU can become a key ingredient in many of your favorite Western-style dishes including dressings, dips, spreads and hors d'oeuvres; salads, sandwiches, soups, and sauces; egg, vegetable, and grain preparations; barbecued and deep-fried specialties, casseroles, and even desserts . . . as the following tasty recipes show.

After opening the carton, keep it refrigerated and serve within 2 days. Slight separation of water from TOFU (as from yogurt) is perfectly normal.

Morinaga SILKEN TOFU

This SILKEN TOFU is packaged in a revolutionary new way—developed by Morinaga—that allows the TOFU, which contains no preservatives of any kind, to stay as fresh as the day it was made for up to six months *without refrigeration.* Even on hot summertime travels, picnics, or camping trips, it will never lose its freshness. The secret lies in the Tetrapak container, developed in Sweden and now used throughout the world, especially in areas without refrigeration. The mixture of pasteurized soymilk and coagulant is run into the package under highly sanitary conditions, sealed, and heated in water to form the TOFU. The laminated Tetrapak container thereafter keeps out all spoilage microorganisms.

Morinaga SILKEN TOFU is made with thick soymilk which gives it a rich and creamy flavor and silken smooth consistency, plus enough body and firmness that you can puree it, slice it, or fry it like regular TOFU. Since it is not packed in water, it is easier and neater to use than regular TOFU. and it retains its full natural sweetness, since it is made without separation of curds and whey. Delicate and tasty as a fine custard, it is perfect for

CREAMY TOFU DRESSING OR DIP

Makes 1½ cups

1 pack Morinaga SILKEN TOFU
2 tablespoons lemon juice
3 to 4 tablespoons oil
½ teaspoon salt
1 teaspoon natural soy sauce (shoyu)
½ to 1 clove of garlic, crushed
½ teaspoon dill seeds (optional)
2 tablespoons minced parsley

Combine all ingredients but the parsley in a blender and puree for 30 seconds, or until smooth. Serve chilled, topped with a sprinkling of the parsley. Delicious served over salads like a thick Roquefort dressing, as a dip with fresh vegetable slices or potato chips, as a topping for various cooked vegetables, or even as a sandwich spread. Store refrigerated or frozen.

Or, substitute ½ teaspoon curry powder and 2 to 3 teaspoons minced onion for the garlic and dill. Stir in parsley.

SILKEN TOFU & STRAWBERRY WHIP

Serves 4

1 pack Morinaga SILKEN TOFU
2 cups (7 oz.) strawberries
2 tablespoons honey
Several drops of pure vanilla extract

Combine TOFU, 1 cup strawberries, and the honey and vanilla in a blender; puree for 30 seconds, or until smooth. Spoon into four custard cups and top each portion with 3 to 5 strawberries. Serve chilled.

For variety, substitute 2 cups (7 ounces) fresh pineapple or peach chunks for the strawberries; or add ½ cup cold milk (soy or dairy) and puree to make a refreshing and healthful milkshake.

BREADED TOFU CUTLETS

Serves 2

1 pack Morinaga SILKEN TOFU, cut crosswise into 8 slices, each ½ inch thick
3 tablespoons whole wheat flour
Dash of salt and pepper
1 egg, lightly beaten
¾ cup bread crumbs, bread crumb flakes (panko), or corn meal
½ cup oil for shallow-frying
¼ cup ketchup
2 tablespoons Worcestershire sauce

ArrangeTOFU slices between triple layers of a clean dishtowel and allow to stand for 10 to 15 minutes to reduce moisture. Mix flour, salt, and pepper, then dust TOFU slices in flour mixture, dip into beaten egg, and dust with bread crumbs. Heat the oil in a large skillet and shallow-fry for 2 minutes on each side until crisp and golden brown. Mix ketchup and Worcestershire sauce; serve as a topping for the hot TOFU.

6909. **Product Name:** [Tofu].
Foreign Name: Tofu or Tau-Fu.
Manufacturer's Name: Roland A. di Centa.
Manufacturer's Address: Via Maffei, Milan, Italy.
Date of Introduction: 1978.
New Product–Documentation: Letter from Roland A. di Centa. 1993. Aug. 9. Roland was one of the first people to introduce soyfoods to Italy. He was very interested in macrobiotics and was a close friend of Michio Kushi. "My interest in food was to heal people with food and I had a lot of success using a holistic approach to help people with major diseases. For all these cures I used a lot of miso, tempeh, and tofu. Good miso was available. However tempeh and tofu had to be locally produced. I cured people from 1980 until about 1985." Roland started to make and sell tofu in Italy in 1978. He made it by himself out of his apartment at Via Maffei, Milan, Italy. For details on how he got started, see the 1993 letter cited above.

In the chapter titled *Oshôgatsu* (New Year's) is a section on Mochi tsuki (pounding mochi) (p. 27). Freshly pounded mochi is delicious when eaten with a garnish of grated daikon (giant white radish) mixed with sesame seeds and soy sauce. It can also be seasoned with soy sauce and wrapped in nori, "or a mixture of sugar, salt and *kinako* (soybean flour).

In the same chapter is a recipe for Ozôni (traditional soup with mochi) (p. 46). One optional ingredient is *"tofu* (bean cake)." Address: San Francisco.

6922. Beuchat, Larry R. 1978. Food and beverage mycology. Westport, Connecticut. AVI Publishing Co. x + 527 p. See p. 224-42. Illust. Index. 23 cm. [300+* ref]

• ***Summary:*** Chapter 9, "Traditional fermented food products" (p. 224-53), by Larry R. Beuchat, is cited separately.

In Chapter 13, "Metabolites of fungi used in food processing" (p. 368-96), by R.J. Bothast and K.L. Smiley, the section on enzymes (p. 378) begins: "Fungal enzymes have been used for hundreds of years, especially in the Orient. However, modern industrial enzyme technology probably started with Takamine (1894) [Note: In Sept. 1894 he was issued two U.S. Patents for "Process of making diastatic enzyme," Nos. 525,820 and 525,823] and his work with *Aspergillus oryzae.* Today many industrial enzymes are of fungal origin." These include α-amylase (from *Aspergillus oryzae* and *A. niger*), glucoamylase, pectic enzymes or pectinases, naringinase, invertase (sucrase), α-galactosidase, lactase (Beta-D-galactosidase), protease (from *Aspergillus oryzae*), rennet (called rennin, if pure; from *Mucor pusillus, Mucor miehei,* or *Endothia parasitica;* used in many types of cheeses), and glucose oxidase, cellulase, lipase, catalase.

There are also chapters on: 14. "Myctoxins," by N.D. Davis and U.L. Diener. 15. "Methods for detecting mycotoxins in foods and beverages," by L.B. Bullerman. 16. "Methods for detecting fungi in foods and beverages," by B. Jarvis. Address: Assoc. Prof., Dep. of Food Science, Agric. Exp. Station, Univ. of Georgia, Experiment, GA.

6923. Calkins, Peter H.; Huang, Kuang-Rong. 1978. Soybean production in Taiwan: A farm survey. *AVRDC Technical Bulletin* No. 11 (78-89). 27 p. (Shanhua, Taiwan). [15 ref. Eng]

• ***Summary:*** Describes profitability and yield from soybean, the motivations and problems of farmers, and the reaction of farmers in the past to measures such as the extension of improved varieties. Since 1973 scientists at the Asian Vegetable Research and Development Center (AVRDC) have been working to improve soybean's contribution to consumer diets and farmer incomes in Asia. In Taiwan soybean is used as a source of cooking oil, "milk, beancurd, sprouts, fresh seed, dried seed, flour and a green vegetable (the stems and leaves are fried)." It is also used to make textured vegetable protein products such as artificial chicken and fish; when cooked with miso, soysauce, and various spices, these "are practically indistinguishable from the real versions. Entire banquets of rice and little else but soybean are routinely served in the vegetarian restaurants and Buddhist monasteries of Taiwan."

"In 1976, the government of Taiwan started guaranteeing a price of US$277/tonne to encourage farmers to plant more soybeans. The response has been modest, largely because soybeans have not been as profitable as competing winter crops, such as adzuki beans." Table 1 (p. 2) shows that between 1967 and 1976, the area planted to soybeans in Taiwan decreased from 52,000 ha to 36,000

© Copyright Soyinfo Center 2014

ha, the farm price increased from US$188/tonne to $256/tonne, production decreased from 75,000 tonnes to 53,000 tonnes, but imports increased dramatically from 347,000 to 780,000 tonnes (more than doubling). Thus the total supply/consumption of soybeans in Taiwan (domestic production + imports) increased from 422,000 tonnes to 833,000 tonnes, while domestic production as a percentage of total consumption decreased from 18% to 6%.

"Before 1945 most soybean cultivars in Taiwan were of local origin, with an average yield of only 500-600 kg/ha. However, the government introduced Japanese cultivars such as 'Shih-shih' and Palmetto' in 1952. Since the early 1960s, scientists in Taiwan have also worked to develop improved cultivars by crossing cultivars introduced from abroad (in this report, the former will be termed 'improved' and the latter 'introduced' cultivars). As a result, the percentage of farmers planting introduced and improved cultivars has increased steadily, from about 53% in 1963 to 92% in 1976 and yield has risen to 1.5 tonnes/ha." Address: 1. Assoc. Agricultural Economist; 2. Research Assistant. Both: AVRDC, Shanhua, Taiwan.

• ***Summary:*** Part I of this work lists 200 old Japanese food/cookery books, each published prior to 1868, in alphabetical order. This book is exceptionally well researched and valuable. The author was born in 1928. The name of each is written in Chinese characters (*kanji*) with *furigana* attached to show how to pronounce them. (Unfortunately, no pronunciation help is given with authors' names.) The publication date and a 1-page summary of the contents is given. These 200 books were selected from well over 500 candidates based on 5 rules: They are not about medicinal uses, crop cultivation, or industrial food production (including oil extraction, flour milling, etc.); in the fields of confectionery and pickles, only the most famous books are included; some exceptions to the first four rules were made where inclusion was deemed of special interest to the reader.

Part II is 104 related books about food and cooking, listed chronologically.

Appendix 1 explains how to do research using old documents. Appendix 2 is a chronology of the 200 books from the year 1200 to the present. Appendix 3 is an index to the books in Part II, listed alphabetically by title. Note: There is no index in this book that allows one to see on which pages or in which books a certain food (such as natto) is mentioned. Address: Nôgaku Hakase, Shusai, Ryori Genten Kaidai, Japan.

6929. Kawamura, Wataru. 1978. Miso shôyu [Miso and shoyu]. Tokyo: Tokyo Shobo-sha. 376 p. 22 cm. Series: Nihon no Aji Meicho Senshû (Selected Great Books on Japanese Taste). Reprinted in 1983 as *Miso shoyu no hyakka* [*Encyclopedia of miso and shoyu*]. [Jap]
• ***Summary:*** Contents: Topography of miso in Japan (*Miso fudoki,* p. 7). Miso in festivals, rituals, customs, and sacred rites (*Miso saijiki,* p. 92). History of miso (p. 120). Classical miso cookery (short recipes, p. 139). Collection of beautiful words about miso in proverbs, poems, and songs (p. 169). A short history of shoyu (p. 187). Documents: History of miso and shoyu (p. 195). Kojiruien–Inshoku-bu (Food & drink section, on shoyu, p. 354). Chronology of miso (p. 366-72). Address: 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

6930. Kawamura, Wataru. 1978. Miso shôyu no hyakka [Encyclopedia of miso and shoyu]. Tokyo: Tokyo Shobo-sha. 376 p. 22 cm. Series: Nihon no Shokubunka Taikei (Japanese Food Culture Collections), no. 10. [Jap]
• ***Summary:*** This is a reprint of the author's 1978 book *Miso shôyu* [*Miso and shoyu*]. Address: 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan.

6931. Marukome Miso K.K. 1978. Go annai [Introduction (Brochure)]. Nagano, Japan. 10 p. 30 cm. [Jap]
• ***Summary:*** Contents: Introduction. About the company: Aerial color photo, statistics (factory is 39,000 square meters, annual production of miso is 30,000 tons/year), chronology of company (started in 1854). The miso production process, with 10 color photos including one of an automated koji room. The company's products (9 color photos, incl. Maru-chan). Film strips / Clips from color TV commercials. Map showing location of regional plants and sales offices. Marukome soybean farm in New South Wales, Australia. Address: Nagano City, Japan. Phone: (0262) 26-0255.

6932. Mitsubishi Kasei. 1978. Tônyû no eiyô kôka [Nutritional effect of soymilk]. Tokyo: MK. 38 p. [27 ref. Jap]

6933. Miyamoto, Tsuneichi; Shioda, Tetsuo. 1978. Shokuseikatsu no kôzô [The structure of Japanese food life]. Tokyo: Shibata Shoten. 266 p. Shoku Bunka no Hakken series #2. Japanese summary by Kawakami 1978. [Jap] Address: Japan.

6934. Murai, Gensai. 1978. Shoku seikatsu kokoroe-cho: Shokumotsu ni kansuru jûhachi nenkan no kenkyû [Things to be aware of in your way of eating: Eighteen years of research on foods]. Tokyo. 212 p. 20 cm. [Jap]*
• ***Summary:*** This originally appeared in the author's *Shôsetsu Shoku-dôraku* published in 1920.

6935. Nagata, Tairei. 1978. Fucha ryôri no rekishi. Fu "Fucha Ryôri-shô" gendai-go yaku [History of Fucha cookery. Supplement: Modern translation of the *Fucha Ryôri-sho*]. Japan. 172 p. Illust. 4 plates. 22 cm. [20+ ref. Jap]*
• ***Summary:*** The author was born in 1911. Fucha ryori is a type of Japanese vegetarian cookery, adapted from its Chinese ancestor.

6936. Nihon Yushi Kyokai [Japan Oils and Fats Assoc.]. 1978. Seiyu yôran [Handbook of oil processing]. Tokyo. [Jap]
• ***Summary:*** Pages 1-9 contain a detailed chronology of the fats and oils industry in Japan from A.D. 97 to 1973. Address: Japan.

6937. Passmore, Jacki. 1978. All Asian cookbook: Japan, China, Korea, India, Malaysia, Singapore, Indonesia, Laos, Thailand, Burma, Cambodia, Vietnam, Philippines, Sri Lanka. Secaucus, New Jersey: Chartwell Books. 224 p. Illust. (color photos). Index. 29 cm.
• ***Summary:*** Soy-related recipes: Vietnam: Soya sauce pork (Thit bho to, p. 71, with light soya sauce). Malaysia and Singapore: Mixed vegetables with salted black beans [fermented black soybeans] (the black beans are crushed, p. 103). Stuffed beancurd, peppers and black mushrooms (with 6 pieces hard beancurd, each 5 cm {2 inches} square, p. 103). Fried beancurd squares (Taukwa goreng, with 6 squares hard beancurd and dark soya sauce, p. 103). Chinese soup with pickled vegetables, beancurd and mixed meat (with 2 squares soft beancurd, p. 106).

Indonesia: Sweet pork (Babi kecap, with sweet soya sauce {kecap manis}, p. 118). Soya sauce sambal (with dark soya sauce, p. 124). Mixed vegetable soup (Sayur campur, with 2 cakes soft beancurd, p. 126).

Philippines: Lumpia (with dark soy sauce in the sauce, p. 136).

China: Fish with hot bean sauce (with hot bean paste or hoisin sauce, p. 146). Lobster with salted black beans and chili (p. 11). Stewed spare ribs with salted black beans (p. 159). Mixed green vegetables with salted black beans (p. 163). Hotpot of vegetables and beancurd (with 8 squares soft beancurd, p. 164). Ma po beancurd (with 6 squares soft beancurd, p. 166). Cold beancurd salad (with 6 squares soft beancurd, p. 166). Fried beancurd (with 8 squares soft beancurd, p. 166). Sharks fin soup (with dark soya sauce, p. 167). Wonton soup (with light soya sauce, p. 168).

Japan: Soya bean paste (miso, homemade from canned chick peas + soya sauce!, p. 178). Tuna glazed with miso (Gyoden, with dark miso paste, p. 180). Sukiyaki (with 3 squares soft bean curd, p. 187). Braised pork and leek rolls (Teriyaki, with light soya sauce, p. 188). Fried eggplant in miso sauce (with white miso paste, 194). Miso soup (miso shiru, with diced bean curd and white miso paste, p. 195).

© Copyright Soyinfo Center 2014

The Glossary includes: Bean paste, hot (made from chilies and soya beans, La do ban jiang, Chinese). Bean paste, salted (also known as yellow bean paste, made from soya beans, Taucheo, Chinese). Bean paste, sweet (either tien mien jiang or do ban jiang, made from soya beans, Chinese. See also hoisin sauce). Beancurd. Beancurd 'cheese,' fermented (in brine with chilies, wine, and spices, Dofu ru, Chinese). Beancurd skin [yuba] (yellowish, almost transparent sheets). Beans, salted, black: See Salted black beans. Kecap manis (Sweet, slightly thick soya sauce, Indonesian, Malaysian). Miso (Japanese). Soya sauce (light, dark, and sweet). Tahu (Malaysian): See beancurd. Taucheo (Chinese): See Bean Paste, salted. Taukwa (Chinese, hard beancurd). Tien mien jiang (Chinese): See Bean paste, sweet. Tofu (Japanese): See beancurd. Vinegar and soya sauce dip: "A sharp-flavoured Korean accompaniment made by blending 3/4 cup light soya sauce, 3 tablespoons white wine vinegar, 3 tablespoons ground sesame seeds and 2 teaspoons finely chopped spring onions. Serve in individual sauce bowls." Yellow bean paste: See Bean paste, salted.

Note: This is the earliest document seen (Feb. 2011) that contains Vietnamese recipes that use soy as an ingredient. Address: Australian-born food writer.

6938. Takahashi, Takeshi. 1978. Miso no kôyô [The virtues of miso]. Tokyo: Arrow Shuppansha. 215 p. [Jap]*

6939. Asahi Shokuhin K.K. 1978? Asashoku soimiruku [Asahi Foods Company's soymilk (Leaflets)]. Saitama-ken, Japan. 7 p. Undated. [Jap]
• ***Summary:*** These two leaflets discuss the company's product in detail.

6940. Asahi Shokuhin. 1978? Asashoku soi miruku [Asahi Shokuhin soymilk]. Saitama-ken, Japan. 8 p. Undated. [Jap]

6941. Birnbaum, Alfred. 1978? Re: Yuki-wari natto. Letter to William Shurtleff at New-Age Foods Study Center, Lafayette, California. 1 p. Undated. Handwritten in pencil.
• ***Summary:*** "A nattô resembling miso, featuring the nebari [stickiness] of nattô and the sweetness of koji. A two-fermentation product.

"Process: Regular nattô is minced finely with koji, shoyu and (kombu) dashi and fermented at 30º to 33ºC for 30-40 days."

Note: This top portion of page 2 of some letter from Alfred has been separated from the body of the letter; hence the lack of date and address.

6942. Kyoto Prefecture, Norinbu, Nosan Fukyuka. 1978? Kyôto-fu ka ni okeru tezukuri miso no jittai: 52 nendo seikatsu kaizen fukyû kadai shushu jigyô hôkoku [The present status of homemade miso in Kyoto prefecture: 1977 report of the enterprise to collect and popularize subjects that will improve the quality of daily life]. Kyoto. 65 p. Undated. Illust. 26 cm. [Jap]*

6943. **Product Name:** Marukome Country-style Miso Soup [With Wakame].
Foreign Name: Marukome Inaka Miso-shiru (Wakame Iri).
Manufacturer's Name: Marukome Miso K.K.
Manufacturer's Address: Nagano, Japan.
Date of Introduction: 1978?
Ingredients: Country-style (*inaka*) miso, dried wheat gluten (*fu*), wakame, negi onion, bonito powder, kombu, monosodium glutamate (*kagaku chômiryô*).
Wt/Vol., Packaging, Price: 4 packets, each 36 gm.
How Stored: Shelf stable.
New Product–Documentation: Package with Label sent by Dr. Walter Wolf of Peoria, Illinois. 2000. Aug. 5. The colorful package has a use-by date of 1978 Jan. 25. Size: 5¼ by 6½ inches. Foil pouch. Color photo of a reddish-brown bowl of miso soup. In the lower left is Maru-chan, the company logo.

Note: Below the list of ingredients we read that the company also makes Shinshu Miso and Akadashi Miso.

6944. Nihon Shoyu Kensa Kyokai [Japan Shoyu Inspection Assoc.]. 1978? Kensa jisshi yôryô, an [Points to watch in conducting practical inspections, proposals]. Tokyo. 8 p. Undated. [Jap]
Address: Tokyo.

6945. Yamaya K.K. 1978? Meibutsu–Yamaya hamanatto yuraiki (fu meshiagari-kata) [Famous products–Yamaya hamanatto: Origin and how to eat it (fermented black soybeans) (Brochure)]. Japan. 6 panels. Undated. 13 by 9 cm each. Front and back. [Jap]
• ***Summary:*** See next page. The cover of this small brochure is printed with reddish-brown ink on green, and the title in a vertical rectangle with black and red characters on white. The background of the cover panel shows an illustration of Hamamatsu from Hiroshige's "Fifty-three stages of the Tôkaido."

Of the 3 inside panels, the first two give the company history. The previous company, started in the Ansei period (1854-1860) was named Yamaya Tamari-ya. The company founder was Yosuke (or Yasuke) Suzuki.

One back panel begins: Natural foods (*Shizen shokuhin*)*:* Suggestions for use–with tea, sake, or beer, as is, or in a mixture with grated daikon and vinegar. Or put on ochazuke (a mixture of rice and tea). On the bottom half of that panel is a map showing how to get to the company.

On the middle back panel is a cartoon illustration showing two Japanese men seated under a pine tree enjoying a meal. Along the bottom is the company name, address, and phone number. Address: K.K. Yamaya factory, Shizuoka prefecture, Hamamatsu city, Naruko-machi 8 banchi. Phone:

浜納豆由来記

此の浜納豆の由来は今を去る事およそ六百年の昔、遠州三ケ日町大福寺の僧がこれを製し独自の風味と保存の効く所よりあまねく全国に知れわたり山椒の皮のからきを混ずる所からこれをから納豆と称した、その昔征韓の役起るや秀吉公肥前の那古耶に御出陣の際この唐納豆を下物に充てられ 唐納豆の字はからをおさめてまめといふ語に通ずる所より吉兆であると賞せられそれより七十名の御朱印の他に納豆料除地を賜り爾後徳川氏浜松御在城の日より元旦を吉例とし毎年之を進献しまり代々将軍家も賀上の例台には必ず是を添えられたとの事です、この唐納豆は浜名の郷より出づるをもって一名浜名納豆とも呼ばれた

Hamamatsu (0534) 52-2181 (main).

6946. *GOMF News* (*Oroville, California*)**.** 1979-1984. Serial/periodical. George Ohsawa Macrobiotic Foundation. Jan. 1979 to May 1984. Frequency: Monthly.
• ***Summary:*** Preceding title: The Macrobiotic. Succeeding title: Macrobiotics Today. Each issue is dated.

6947. Birnbaum, Alfred. 1979. Re: Comments on new condensed edition of *The Book of Tofu.* Letter to William Shurtleff at New-Age Foods Study Center, Jan. 26. 1 p. Handwritten (in pencil) and signed.
• ***Summary:*** He received the condensed version from Shurtleff and Aoyagi. "I think that the compact format should reach a large readership. Excellent work!"

"I particularly liked your having created a separate section on 'Fermented Tofu,' and of course, I noticed your updating the sections on nattô, Daitokuji nattô & hamanattô. No doubt you did considerable revision.

"On rereading some parts of the original edition for comparison I did have some questions (I am not sure if I had brought them up with you or not):

"P. 312, unabridged. 4 Chinese characters (Cc). You have read as 'Nishiyama Sodo,' though when I went there I was told it was called 'Saizan Sodo.' (Incidentally it was there that I had what I consider probably the finest tofu dinner I can remember).

pp. 309, 312, unabridged; p. 385 revised = 4 Cc. I have always heard this read as 'Fusa Ryôri,' not 'Fucha,' though perhaps the case is the same as with 2 Cc, which can alternatively be read 'sado' or 'chado' [the way of tea]. Note: Major Japanese dictionaries and glossaries all say *fucha ryôri.*

"Incidentally, have you seen the new Shufu-no-tomo English translation out on *Shojin Cooking* ($7.95)?"

6948. Belleme, John. 1979. Re: Starting a new miso company with Sandy Pukel and Michio Kushi. Letter to William Shurtleff at New-Age Foods Study Center, Jan. 1 p. Undated. Handwritten, with signature on letterhead.
• ***Summary:*** "Dear Bill–Last weekend Sandy, Michio and I got together in Boston to discuss the miso factory. We agreed on a few points. I know you are interested in the project so would like to keep you posted. Also, we need your opinion on a few points.

"First, thanks for sending your miso book, I have read it and found it very informative. We are now going full steam ahead. I am learning Japanese. Michio is going to Japan in May to set up an apprenticeship program for me. Sandy and I have started looking for the land..."

"Bill, If you were going to make miso in the U.S., based on climate, what state would you choose? Thanks, John Belleme."

Talk with John Belleme. 1999. Nov. 8. This letter was probably written in late December 1978 or very early January 1979. John dictated the letter to his wife, Jan, who actually wrote it. He can tell that because the handwriting is legible and there are no spelling mistakes. This idea later became Oak Feed Miso, Inc., then American Miso Co.

Note: This is the earliest document seen (April 2009) connected with American Miso Co., which started making miso in Aug. 1981 in Rutherfordton, North Carolina. John and Jan Belleme were the head miso makers. They learned how to make miso with the Onozaki family in Japan. Address: Oak Feed, 3030 Grand Ave., Coconut Grove, Florida 31333. Phone: 448-0076 (restaurant); 448-7595 (store).

6949. *Food Engineering.* 1979. Fermented protein foods: Japan has made considerable progress in fermentation technology using vegetable protein ingredients. 51(1):ef-16-17. Jan.
• ***Summary:*** This article is based, in part, on a similar one by Dr. Danji Fukushima of Kikkoman Foods, Inc. (Walworth, Wisconsin). Contents: Introduction. Variety of fermented foods. Important role in the diet. Eight good reasons for using fermentation in the production of foods (says Dr. C.W. Hesseltine). Hydrolyzed vegetable protein (HVP). MSG and Maggi.

A photo shows 2 cartons of Kibun Soena and two glasses of this fermented soymilk.

6957. Sakaguchi, Kinichiro. 1979. Shôyu no ruutsu o saguru [Searching for the roots of shoyu]. *Sekai* (*The World*) No. 398. p. 252-66. Jan. [Jap; eng+]
• ***Summary:*** A fascinating enquiry into the early history of fermented soyfoods by one of Japan's most eminent microbiology professors. For details, see *The Book of Miso,* and *History of Soybeans and Soyfoods,* both by Shurtleff and Aoyagi.

Yokotsuka (1986, p. 325) cites this as Sakaguchi. 1981. "Searching for the route of shoyu." *SEKAI* 398:252-266. This magazine is published by Iwanami Shoten in Tokyo.

"The *Chou-li* states that this jiang was made by mixing the meat of animals, birds, and fish with millet koji and salt, then pickling it in wine in a crock for a hundred days. It is quite remarkable that even at this early date the Chinese were consciously using the enzymes produced by the koji molds (whose airborne spores fell on the substrate naturally, rather than by deliberate inoculation), to make fermented foods such as jiang and fermented grain-based alcoholic beverages. It is also clear from the context that jiang was regarded as a highly prestigious food and a delicacy."

"Today's shoyu traces its ancestry back through early shoyu, then through the four fermented soyfoods tamari-shoyu, tamari miso, Hatcho miso, and savory fermented black soybeans (*Hamanatto*), and ultimately back to Chinese fermented black soybeans (*chi*). Miso, he asserts, traces its ancestry back through early Japanese misos and hishio to jiang. In the shoyu lineage, the koji is always made with either soybeans alone or a mixture of soybeans and cracked or ground wheat, whereas in the miso lineage the koji is usually (except for soybean misos) made from grain. Sakaguchi believes that the fundamental biochemical consequences of this difference in koji substrates are of much greater importance than the more superficial differences of consistency or form that have led researchers up until now to group solid or semisolid fermented soyfoods in the miso lineage and liquid products in the shoyu lineage. Thus it is not obvious that liquid shoyu stems from mushy jiang. In shoyu, the *Aspergillus oryzae* molds grow directly on the soybeans (and wheat) during the koji fermentation and their enzymes begin to digest the koji substrates, then continue to digest the soybeans (and wheat) during the subsequent brine fermentation. This *in vivo* and *in vitro* extended hydrolysis leads to the formation of complex metabolic compounds, a higher degree of protein hydrolysis and liquefaction, and the production of a richer and stronger flavor in shoyu than in miso. Sakaguchi argues that miso has a 3,000 year history dating from the development of jiang during the Chou dynasty in China, whereas shoyu has a 2,000-year history dating from the development of fermented black soybeans (*shih*) during the Han dynasty.

"It is important to note here that the ancient Chinese language seems to indicate that soy sauce derives from jiang and not from *shih,* as evidenced by the Chinese word for soy sauce, *jiangyou,* meaning 'the liquid extracted from jiang.' Moreover, most Chinese jiang and fermented black soybeans have both always been made with a soy-based koji. Sakaguchi's analysis is helpful, but lacking on a few points.

Morinaga BRAND EVER-FRESH SILKEN TOFU

Tastes As Fresh As Made This Morning

Six Month Shelf Life
No Preservatives –
No Refrigeration
Our revolutionary Tetra-pak container, developed in Sweden and used world-wide, keeps Morinaga Tofu as fresh as the morning it was made without preservatives or refrigeration for at least six months. With refrigeration, shelf life can be extended to one year. And the taste is still great.

Circle No. 28 on Reader Service Card.

U.S. Patent 4,000,326

Manufactured by Morinaga Milk Industry, Ltd., Tokyo, Japan
Exclusive Distributors — Mutual Trade Co., Inc. 431 Crocker Street, Los Angeles, CA 90013 (213) 626-9458

The jiang has not, as Sakaguchi argues, been made with a grain-based koji. Even in the earliest description of Chinese soybean jiang in the *Ch'i-min yao-shu* (described in detail in the Miso chapter) the koji is made primarily from soybeans. Thus while retaining the essence of Sakaguchi's argument, we would suggest that it be modified slightly to say that *both* shoyu and miso trace their ancestry back to *both* fermented black soybeans (*shih,* which existed prior to 206 BC) and to soybean jiang (which existed prior to AD 500).

"Dr. Sakaguchi considers there to be three main reasons that shoyu and miso were not developed in the West: (1) very few Westerners ever learned how to make koji using molds; (2) they had virtually no soybeans until the 20th century; and (3) the basic flavoring components of shoyu and miso, especially natural L-glutamic acid and inosinic acid, were traditionally unknown in the West."

"In 1944 Kinichiro Sakaguchi and Koichi Yamada discovered a new species of *Aspergillus* mold, which appeared widely in shoyu koji; they named it *Aspergillus sojae."*

Photos show: (1) Three ancient earthenware jars, from about the 1770s (Thunberg's time), in which shoyu was pasteurized and shipped to Europe. Address: Professor of fermentation science, Tokyo Univ.

6958. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tofu: Food for mankind. Condensed and revised. New York, NY: Ballantine Books. A division of Random House, Inc. xii + 433 p. Jan. Illust. by Akiko Aoyagi Shurtleff. Index. 18 cm. [60 ref]

• ***Summary:*** This book has been extensively revised and updated. Many names of Japanese tofu have been Americanized. Contents: Preface. Acknowledgements. 1. Protein East and West. 2. Tofu as a food. 3. Getting started: Favorite tofu recipes. 4. Soybeans. 5. Fresh soy puree. 6. Okara (Soy pulp). 7. Curds and whey. 8. Tofu & firm tofu. 9. Deep-fried tofu: Deep-fried tofu cutlets, deep-fried tofu burgers & treasure balls (tofu treasure balls, p. 269), and deep-fried tofu pouches. 10. Soymilk. 11. Silken tofu. 12. Grilled tofu. 13. Frozen & dried-frozen tofu. 14. Fermented tofu. 15. Yuba. Appendices: A. Tofu restaurants in Japan. B. Tofu shops and soy dairies in the West. C. Varieties of tofu in East Asia. D. Table of equivalents. Bibliography. Glossary. Contains 250 recipes and 100 illustrations. Price: $2.95.

This new edition features: (1) New recipes: Over fifty new American-style tofu recipes including Creamy Tofu Dressings, Tofu Teriyaki, Tofu Burgers, Tofu Eggless Egg Salad, and the like. The key to the book is an updated list of favorite tofu recipes plus suggestions for incorporating them into a weekly menu (p. 56). (2) New sections: An extensive new introduction to Soy Protein Foods (p. 66), dairylike products made from tofu (p. 150), dairylike products made from soymilk (p. 302) including soymilk yogurt (fermented), ice cream, kefir, mayonnaise, whipped cream, popsicles, buttermilk, and soy shakes. (3) New chapters: Fermented Tofu and Varieties of Tofu in East Asia. (4) New basic methodologies: The key recipes for homemade tofu and homemade soymilk have been simplified and improved. (5) Updates: A complete listing of the 120 tofu shops and soy dairies now operating in the West; over 60 Caucasian-run shops have opened in the past two years. (6) New Americanized tofu names: Including deep-fried tofu burgers, deep-fried tofu cutlets, deep-fried tofu pouches, deep-fried tofu puffs, silken tofu, wine fermented tofu, and fresh soy puree. A major goal of this book is to coin English names for tofu products that will catch on and come to be used in labeling commercial products, in cookbooks, etc. (7) No sugar.

Note 1. This is the earliest English-language document seen (April 2013) that contains the following terms related to deep-fried tofu: "fried tofu cutlets" or "deep-fried tofu cutlets" (p. v, to refer to *nama-agé*), "fried tofu burgers" or "deep-fried tofu burgers (to refer to *ganmodoki*), "tofu treasure balls" or "deep-fried tofu treasure balls" (p. v, 269, to refer to *Hiryozu*), "fried tofu pouches" or "deep-fried tofu pouches" (p. v, to refer to *aburagé*).

Page 110: "In Japan, tofu is also called *momen-goshi* ('cotton-filtered') to distinguish it from its popular counterpart *kinu-goshi* ('silken tofu')." Note 4. This is the earliest English-language document seen (April 2013) that uses the term "silken tofu."

Note 5. This is the 2nd earliest English-language document seen (Oct. 2011) that contains the term "Wine-fermented tofu" (p. 361).

In Jan. 1988 a new printing (but not a new edition) of this book (the 13th), slightly revised, appeared. It had a new cover and many new small illustrations. The subtitle was "Protein Source of the Future–Now!" The heading: "The World's Bestselling Book on Tofu." Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

6959. Shurtleff, William. 1979. Protein source for the future. *Cosmos* (*NSW, Australia*) 6(6):1, 4-5. Jan.

• ***Summary:*** Gives ten reasons why soybeans will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost protein. 3. High nutritional value. 4. Time tested. 5. Remarkably versatile. 6. Appropriate technology. 7. New dairylike products. 8. Hardy and adaptive. 9. Free nitrogen fertilizer. 10. Energy and resource efficient. "All of these ten factors work together synergistically, reinforcing one another, to give added weight to the prediction that soybeans will be a key protein source for the future on plant earth."

Note: This information was published in July 1979 in *The Book of Tempeh* (p. 21-24). Address: Lafayette, California.

(Document part). In: William Shurtleff and A. Aoyagi. 1979. The Book of Tofu. New York: Ballantine Books. 433 p. See p. 58-75. Chap. 4.
• ***Summary:*** Contents: Introduction. Soy protein foods– Traditional non-fermented soyfoods: Whole dry soybeans, soynuts, roasted soybeans, fresh green soybeans, soy sprouts, natural soy flour and soy grits, roasted soy flour (kinako).

Traditional fermented soyfoods: Tempeh, miso, shoyu (Japanese natural soy sauce), natto (fermented whole soybeans, including Japan's cracked natto {*hikiwari natto*} and finger lickin' natto {*yukiwari natto,* containing rice koji and salt}, and thua-nao from northern Thailand), soy nuggets (inc. Japan's Hamanatto and Daitokuji natto).

Modern western soyfoods (developed using high-level technology): Soy flakes, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun soy proteins, textured soy proteins (TVP is an ADM brand name), textured soy concentrates, soy oil products. Address: P.O. Box 234, Lafayette, California 94549.

6961. Suzuki, Tatsuro; Ohta, Teruo. 1979. Shihan nattô-kin no seishitsu ni kansuru kenkyû [Studies on the biological properties of commercial natto starters]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 34. p. 266-72. Jan. [7 ref. Jap; eng]
• ***Summary:*** The modern process of making natto uses a suspension of pure culture *Bacillus natto* spores as the starter culture. "The biological properties of four kinds of commercial natto starters which were" used for making natto in 1974 were investigated.

Eleven strains of natto bacteria separated from four commercial natto starters showed different characteristics on plate cultures. Seven strains were identified as *Bacillus natto* and four strains as *Bacillus lichenifomis.* Of the later four strains, each contained two types of bacillus spores at the level of 10^8 per 1 ml or 1 gram.

The 7 strains of *Bacillus natto* showed differences between one another in "the strength of hydrolysis of starch or gelatin and the production of acetyl methyl carbinol."

Note: 3-Hydroxybutanone, also known as acetoin or acetyl methyl carbinol, is a colorless or pale yellow to green yellow liquid with a pleasant buttery odor (Source: Wikipedia, Oct. 2008). Address: National Food Research Inst., MAFF, Tokyo, Japan.

• ***Summary:*** Contents: Introduction. 1. Soybean food uses in Asia. China: Soaking dry soybeans, tou chiang (soybean milk), tou fu (soybean curd), processed tou fu products, tou fu pi (protein-lipid films), huang tou ya (soybean sprouts), whole soybeans, fermented soybean foods, production and consumption.

Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products, yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), whole soybeans (edamame {fresh green soybeans}, whole dry soybeans, kinako), fermented soybean foods: Production and consumption.

Korea: Tubu (soybean curd), processed tubu product, soybean sprouts, whole soybeans (green soybeans, parched or roasted soybeans, boiled soybeans), soybean flour ("Soybeans are first roasted and then ground into flour. The flour is used extensively as an ingredient in food preparations." Note: The name of the roasted soy flour is not given), fermented soybean foods (Soy sauce and [soy] bean paste are commonly used in Korea as flavoring agents. Natto is also enjoyed). production and consumption [of soybeans in Korea].

Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder. "Soybeans of the white variety are roasted until no beany flavor can be detected. They are ground into a powder and mixed with such spices as garlic and chili"), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts,

green soybeans, roasted and boiled soybeans, kecap {soy sauce}, tauco {soybean paste}), food mixtures, production and consumption.

Thailand: Tofu (*tauhu*), soy sauce, green soybeans in the pods (*tourae*).

Philippines: Soybean sprouts, soybean coffee, soybean cake, soybean milk, tou fu and processed tou fu products, production and consumption.

Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. Middle East. References–Soybean food uses in Asia.

2. Soybean food uses in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References–Soybean food uses in Africa.

3. Soybean food uses in Europe and U.S.S.R.

4. Soybean food uses in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela. Mexico: New village process, commercial developments. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References–Soybean food uses in Latin America.

5. Soybean food uses in North America. United States. Canada. References–Soybean food uses in North America.

6. Soybean food uses in Australia. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprouts, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soy sauce, fermented soybean paste, fermented whole soybeans, natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. 9. Industrial production and selling prices of edible soybean protein products.

10. Barriers to accepting and using soybeans in food: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer.

Tables: (1) Soybean production, imports, and total supply in Taiwan, 1962-1975. (2) Consumption of soybean foods in Taiwan, 1964-1974 (incl. tofu, which increased from 18.75 kg per person per year in 1964 to 32.04 kg per person per year in 1974). (3) Supply and disposition of soybeans in Japan, 1971-1974. (4) Metric tons of whole soybeans used in the production of traditional foods (miso, shoyu, tofu and others) in Japan, 1970-1974, etc. Address: NRRC, Peoria, Illinois.

6965. *Whole Foods* (*Berkeley, California*). 1979. The food of the future. 2(1):22-24. Jan.

• ***Summary:*** The article begins: "Why devote an entire issue of *Whole Foods* to the subject of soyfoods? Soyfoods are a rapidly growing part of the natural foods industry..."

"The bringing of the 'Soyfoods Revolution' to the natural foods industry is the work of individuals, toying and playing with new recipes in their own kitchens and shops. No person deserves more credit for this revolution than William Shurtleff who, along with Akiko Aoyagi, wrote *The Book of Tofu*, and told us all how to do it. (An updated pocket-size version of *The Book of Tofu* is just off the presses of Ballantine Press.) Shurtleff travels the globe, sharing his expertise on soyfoods, covering topics as specific as chip-dip recipes and as broad as the role of soybean production in future patterns of world protein hunger.

"Other individuals, most of them with small soyfoods shops of their own, met recently to form the Soycrafters Association of North America (SANA), which is likely to serve as the backbone of the Soyfoods Revolution in the natural foods industry. [Note: This historic first meeting was held on 28-30 July 1978 at The Soy Plant in Ann Arbor, Michigan.] SANA selected Larry Needleman as its first president. Needleman, whose Bean Machines, Inc. imports the prime line of Takai tofu and soymilk equipment from Japan, has been a major source of information about soyfoods equipment for our industry.

"Needleman wrote about the spirit of the new organization at its first gathering in Ann Arbor.

"'Imagine a group of seventy people representing enthusiastic dedication (almost to the point of craziness) to the production and distribution of tofu and other soyfoods, gathered in an informal setting in a university town in the Midwest, with meetings scheduled from nine in the morning till eleven at night–and you've got a good idea of what went on... 'Sharing began immediately. Groups of people gathered here and there and began asking each other about their shop or organization. Those passing by would hear a familiar word such as 'yield' of [sic, or] 'pressure-cooker' and just stopped to join the conversation. It was apparent that here was a gathering destined to be stimulating and mutually beneficial...

"'The first evening, Bill Shurtleff set up a slide show about tofu and miso production in Japan. The presentation ran the gamut from small, traditional shops built over their own well, to large, fully-automated factories turning out tens of thousand of pounds per day. Bill answered questions and added a personal touch to the showing because he had shot the photos himself over a period of years, and was familiar with the language, traditions and production of the Japanese...

"'On Saturday morning, The Soy Plant showed us their method of producing tofu and soymilk. Those with less experience absorbed information and asked questions,

© Copyright Soyinfo Center 2014

and those with more experience volunteered information, clarified points and offered suggestions. Then Wataru Takai, the overseas manager for Takai Tofu and Soymilk Equipment Co., Japan's largest manufacturer of this equipment, explained principles behind each step of production, and the uses of the equipment...

"'At a later session, it was remarked that many soyfoods producers are operating on an inefficient and labor-intensive basis. Some felt this was a good way to begin, first becoming intimate with the steps of production and developing a market 'track record,' and then using that base to upgrade production by purchasing more sophisticated equipment. Others felt that the time and energy involved in putting together a makeshift shop which was outgrown in about six months would be better spent in the capital to start at higher technological level...

"'In one of the most popular and exciting discussions of the conference, the consensus of the group was that tofu and soymilk were the foods that Americans have been waiting for. A list of related products that have been marketed with incredible success included tofu burgers, no-egg salad, honey soymilk ice cream, tofu chip-dips and dressings, flavored soymilk, tofu 'mayonnaise,' and pressed, marinated tofu. There was unanimous agreement that it was these new soyfoods that would capture the interest and palate of middle America, people who had turned up their noses at that tasteless white cake of tofu floating in water...

"'Later we discussed the problems of proper storage and display of our products. In US food markets, tofu has usually been sold with Oriental foods in the vegetable section. Getting it moved to a cooler, more appropriate cheese display case, where it will stay fresh longer and compete favorably with dairy products, has met with resistance...

"'In the evening, another slide show by Bill Shurtleff showed us how tempeh, a key protein source for millions of people in Indonesia, is quickly and simply produced as a cottage industry in their homes. Having sampled this unusual food at lunch, we were eager to learn about it because it was delectable. Somewhere between a deep-fried fish cake and Kentucky fried chicken in flavor and texture, it lent itself to use in a seemingly endless variety of ways...'

"Toward the end of the conference, discussion turned to marketing and finance. It was found that some firms lacked capital for growth, while others had enough capital but needed greater management skills to keep up with the growing demand for soyfoods. That demand is not uniform nationwide. Different regions show various levels of consumer awareness, interest in, and acceptance of soyfoods. Printed hand-out sheets and cooking classes were suggested as promotional efforts were an important part of the creation of a desirable image for soyfoods.

"Before leaving Ann Arbor, the participants formed the Soycrafters Association of North America as a trade association to promote soyfoods and exchange information among the members. With the founding of SANA, the Soyfoods Revolution took its longest recent stride. Soycrafters were no longer isolated persons, groups and shops, but had become a nationwide network devoted to the same purposes, sharing their experiences for mutual benefit and the ultimate benefit of the American consumer."

Note: The word "soyfoods" is used throughout this article.

• ***Summary:*** Describes a fermented cheese made from ground whole soybeans and dairy cheese. The agitated mixture is fermented by the enzymatic action of microorganisms in the natural cheese. Address: Asahimatsu, Iida, Japan.

6970. *Toyo Shinpo* (*Soyfoods News*). 1979. Nattô senka: Nattô no hozonshoku [Natto specialty products: Preservable types of natto]. March 21. p. 13. [Jap]
• ***Summary:*** Many recipes for making natto are given.

Note: Dr. Teruo Ohta says that the Tohoku region of Japan has the highest natto consumption at 200 gm per person per month. Next comes the island of Hokkaido and the Kanto region, each at 100-150 gm per person per month. In the Kansai (Kyoto–Osaka–Kobe) and Kyushu regions it is only about 50 gm per person per month. In 1968 there were about 1,600 commercial natto makers in Japan and they produced 80,000 tons of natto. In the old days, natto took 2-7 days to ferment.

6971. Fukushima, D. 1979. Fermented vegetable (soybean) protein and related foods of Japan and China. *J. of the American Oil Chemists' Society* 56(3):357-62. March. [10 ref]
• ***Summary:*** Contents: Abstract. Introduction. Soy Sauce: Fermented soy sauce: Japanese and Chinese styles of soy sauce and their characteristics. Manufacturing process. Comparison of fermented soy sauce with chemical soy sauce. Fermented soy paste. Chinese soybean cheese (sufu). Fermented whole soybean (natto). New fermented soybean products.

Tables show: (1) Types of fermented soy sauce (shoyu) in Japan. The five types are koikuchi shoyu [regular shoyu] (85.4% of total; 1.050 million kiloliters a year), usukuchi shoyu [light-colored shoyu] (11.1%), tamari shoyu (2.2%), shiro shoyu [clear shoyu] (0.4%), and saishikomi shoyu [twice-fermented shoyu] (0.3%).

(2) Consumption of whole soybeans and defatted soybeans in Japan, 1976 (one-third is for foods, especially shoyu, and two thirds is for feed).

(3) Typical composition of soy sauces recognized by the Japanese government. The five types are the same as those discussed in Table 1, however their names are spelled out in full.

Note 1. This is the earliest English-language document seen (April 2012) that uses the word "saishikomi" or the term "saishikomi shoyu" to refer to twice-fermented shoyu, which is one of Japan's five basic types of shoyu.

Note 2. This is the earliest English-language document seen (April 2012) that uses the term "shiro shoyu" to refer to light shoyu, which is one of Japan's five basic types of shoyu.

(4) Annual production of soy sauce by grade, as graded by the Japanese Agricultural Standard (JAS) in 1976. The 3 grades are special (53.4% of total), upper (26.0%), standard (12.9%), non-JAS mark (7.7%). Total production is 1.226 million kiloliters.

(5) Chemical composition of major types of miso in Japan. The five types are rice miso (sweet, semisweet, and salty), barley miso (semisweet), and soybean miso (salty). For each is given the color, aging time, chemical composition, and total tonnage produced.

Figures show: (1) Flow sheet for making koikuchi (regular) shoyu. (2) Flow sheet for making tamari (regular) shoyu.

(3) Two chromatograms comparing the organic acids of fermented and chemical (HVP) soy sauce. Fermented soy sauce has an abundance of lactic acid, whereas HVP soy sauce has an abundance of formic acid.

(4) Flow sheet for making rice miso. (5) Flow sheet for making sufu [fermented tofu]. (6) Flow sheet for making natto. (7) Flow sheet for making fermented soy milk drink. One such drink appeared on the Japanese market last year. *Lactobacillus casei, L. acidophilus,* and *L. bulgaricus* are typically used as starters for fermented soy milk drinks.

Concerning fermented whole soybean (natto): It is a traditional fermented food that originated in the "northern parts of Japan 1,000 years ago." It is usually served with shoyu and mustard.

Plant at Kurashiki-shi.

6976. Sakaguchi, Yukio. 1979. Opening remarks–Vegetable proteins in fermented foods and other products. *J. of the American Oil Chemists' Society* 56(3):356. March.
• ***Summary:*** "Miso, or soybean paste, one of the most important fermented soybean foods, was originally made in China. A missionary who was sent [from Japan] to China learned its production and modified it into a product suited to the Japanese taste in the 7th century. About 185,000 tons of soybeans are used for miso production annually.

"Another major fermented soybean food is soy sauce which was originally developed by the Zen Monk Kakushin in 1234. He also visited China and discovered that the liquid portion from Miso was very delicious. This liquid became the base for soy sauce, an essential ingredient in the Japanese diet. Soy sauce required the annual use of nearly 175,000 tons of soybean meal, the equivalent of 222,000 tons of soybeans.

"Natto, the third major fermented soybean product of Japan, originated in our country. In 1087, a ruler in the northern part of Japan discovered natto to be part of local farmers' diets. Today, nearly 60,000 tons of soybeans are consumed in its production.

"As Japan continues to draw from its historic past for a source of soy-based foods, we also are full participants in the new era of sophisticated vegetable protein foods. To promote utilization and production of this product, the Japan Vegetable Protein Food Association was organized in 1975."

6981. **Product Name:** [Bon Lact {Soy-Based Infant Formula} (Powder)].
Foreign Name: Bon Lact.
Manufacturer's Name: Wakodo Pharmaceuticals.
Manufacturer's Address: Kaji-cho 2-12, Kanda, Chiyoda-ku, Tokyo, Japan. Phone: 03-252-0331.
Date of Introduction: 1979 March.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 202. "One type of powdered soymilk, called *Bonlact,* is especially formulated for infants and growing children." An illustration shows the cylindrical container.

Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88.

6982. **Product Name:** [Senibon {Powdered Soymilk}].
Foreign Name: Senibon.
Manufacturer's Name: Wakodo Pharmaceuticals.
Manufacturer's Address: Kaji-cho 2-12, Kanda, Chiyoda-ku, Tokyo, Japan. Phone: 03-252-0331.
Date of Introduction: 1979 March.
New Product–Documentation: Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 313. "A maker of powdered soymilk brand-named Senibon." The company's name is given as simply Wakodo. The address and phone number shown above are also given.

• ***Summary:*** Contents: Abstract. Introduction. Discussion.
Address: Nisshin Oil Mills, Yokohama, Japan.

6984. Borsook, Henry. 1979. Henry Borsook–How it was: Oral history. *Engineering and Science* (*Caltech*). March/April. p. 23-39.
• ***Summary:*** This outstanding interview by Mary Terrall covers a wide variety of subjects, including the early history of multi-purpose food and Meals for Millions. "Borsook, noted for his work in protein synthesis and for his contributions to the field of nutrition, was born in London, England, in 1897, and came to Caltech in 1929. After retirement from Caltech in 1968, he continued his research until 1978 at the University of California at Berkeley. The Borsooks are now living in Santa Barbara.

MT (p. 27): Let's go back to the 1940s when you started to develop multipurpose food. HB: Yes, and the beginning of that story is really about Clifford Clinton, who was the son of missionary parents. In "China, as a child, he had seen famine, and he'd made a boyhood resolve that if he could ever do anything about helping hungry people, he would. So it was not surprising that when he grew up he went into the restaurant business." During the depression, starting in 1931, "he advertised that anyone who came to his cafeteria between 2:00 and 4:00 [in the afternoon] could get a free meal." Later he felt the offer was being taken advantage of, "so he charged a nickel for a meal. The last time I ate there, which was more than ten years ago, the menu said, 'You can order what you like–and you can pay what you like.'

"When the war came, with the enormous expansion

© Copyright Soyinfo Center 2014

of the armed forces from a couple of hundred thousand to twelve million, the army needed advice on how to feed a lot of people in camps quickly. And so they called in consultants from the restaurant business, and Clinton was one of those consultants.

"Then, one afternoon in early 1945–he'd phoned first–he and his wife and his public relations man [Ernest Chamberlain] came to see me. And before he began to talk his wife intervened and said, 'I want to apologize because my husband is coming here with a perfectly ridiculous proposal. I tried to dissuade him from coming but he's very stubborn, and so I want you to know that I feel a bit ashamed.' So I said, 'Well, you needn't be. You're here. Make yourselves comfortable and let's listen.'

"So Clinton began to talk, and he said that anybody who thought about it could see the war coming to an end, that in the countries where the war had been going on a lot of people were going to be hungry, and that there was going to be a shortage of food in Europe and Asia, and he wanted to do something about it. And he said he wanted me to do this–I was to devise a food where a meal would provide one-third of the Recommended Daily Allowances of everything, but it was to weigh not more than two ounces and it was to cost not more than three cents, it was not to offend any religious taboo, there should be an abundant supply of all the ingredients, and it wouldn't draw on the kinds of food Americans are accustomed to eat. (I said, 'You needn't worry–at that price."). Also it had to have an indefinite shelf life, be possible to eat in a variety of ways, and not take any special equipment to cook–a can of water and a stick of wood underneath should do it.

"And so we went on. I turned to his wife and I said, 'Well, it's not so wild as you may think, but there are two restrictions I would put on it. It's scientifically impossible to provide a third of the Recommended Daily Allowances in two ounces of anything. It is just not possible. We need about 700 or 800 calories as a minimum, and the most that two ounces would supply would be about 140 or 150 calories.' Secondly, I said, "I don't think it would be practical to put vitamin C in because we really don't know how to keep it.' At that time we didn't. But I said, 'Otherwise we could provide protein that's as good as meat or milk, and we could add all the vitamins and minerals that they need in two ounces, and I don't think it need cost more than about 3 cents a meal.' So he agreed and gave Caltech the sum of $5,000, which I was to use to develop this food.

"The food itself was no problem. I had a pretty good idea how to do it. It had to be a vegetable protein; animal proteins were too dear [expensive]. The best vegetable protein was soybean protein, and I knew that during the war we–the government–had greatly expanded the growth of soybeans for their oil. But after the oil was extracted, what was left over [the cake or meal] was thrown down the sewer. It was just wasted. So I knew this would be very cheap, and I knew it was available in large quantities. The vitamins and minerals I knew were also very cheap and there would be no problem about adding them.

"What I wanted the money for was to hire a cook who could develop recipes on how to use the food, how it should be cooked in different ways. And that was done. At the end of a year it was all ready, and we had a whole lot of recipes. One of the fruit and vegetable dehydrator companies in Los Angeles undertook to make it according to the recipe I had drawn up, and that was done. We decided to call it 'multipurpose food': MPF.

"Neither Clinton nor I wanted to patent this food, and we agreed that we would give the information to anybody who asked for it. But that wasn't going to get the food to hungry people, so Clinton, who was a religious man, set up this Meals for Millions Foundation, a nonprofit organization. I was one of the cofounders with two or three others. He hired a woman by the name of Florence Rose and his publicity man, Ernest Chamberlain, was the other, who really were the foundation. They sent out the appeals for money, they raised the money, bought the food, and so on.

MT: "So they raised the money from other sources. It wasn't just his money?

HB: "No, I don't think he put in much money after that, but it was certainly his idea, both to get such a food and then to set up the Foundation to give the food to people who needed it. And I know that when we had the food ready we thought it would be useful if the Food and Nutrition Board [of the National Academy of Sciences] would approve of it. We sent some to them, and they said, 'No, we believe that a good diet consists of meat, milk, fresh fruit, fresh vegetables, and this is not that.' So for more than ten years [1946-1956], we had no government support–in fact, government opposition. So the money was raised from private groups. Two large charitable organizations very soon began to give us large sums of money–$50,000 to $100,000 at a time–and we would send the food where they told us to. They were Catholic World Relief and Church World Service."

MT: "So other organizations made the arrangements with countries where the food was going?"

HB: "Yes, After we had the food, we arranged for the shipping." It was a very gratifying experience. "From the beginning I had insisted... that the formula was only one example." Other nutrients, such as peanut meal, could be used in countries were soybeans are not available. "The actual director of the Foundation was Florence Rose, and we sent her around the world. She had no trouble getting the Japanese to make a Japanese equivalent, and they did a very good job. And then in India she got the head of their Central Food Technological Research Institute to put together an Indian version of MPF, and he [V. Subrahmanyan] did a first-class job.

"I think we gave this man about $5,000 and he put together–out of peanut meal and chick pea meal, adding

© Copyright Soyinfo Center 2014

vitamins and minerals–a food that was every bit as nutritious as ours. He did a very good job of testing first on mice and rats, then on children who were malnourished. Then he persuaded an Indian businessman who had some money to put up a pilot plant near Madras [in southeast India; renamed Chennai in 1996], and the city of Madras undertook to buy the whole production for use in their school lunch program. They got going, and the Minister for Agriculture for India from New Delhi told people from the provinces [states] to come down to Madras, look, and copy it.

Then along came some representative from CARE, who said to the City Council of Madras, 'Look, we'll give you all the dry skim milk you want for nothing. Why do you spend your money on this food?' That killed the project for quite a long time, but it has started up again. Two missionaries in northern India, where they have soybeans, have arranged for the manufacture, and they're beginning to get it used and widely distributed.'

MT: "Now?"

HB: "Yes, they did this entirely on their own, without any connection with us at all. But now, to come back a little, it was clear that charity would only go so far, and it would be much better if these people learned how to help themselves. So we set up a school at the Meals for Millions Foundation in Santa Monica, where we teach three classes a year. It runs for 12 weeks with about a dozen students from different parts of the world, on scholarships of one kind or another, and they learn how to make food like MPF from what they have. We do more than that..."

MPF was always made with soy grits as the main ingredient, not with soy flour. Grits are a better material and a better word.

"The Meals for Millions Foundation was founded in 1946 and miraculously is still going, stronger than ever, really." Address: Prof. of Biochemistry, Emeritus, Caltech.

6985. **Product Name:** [Meiji Sunglow Soymilk (Plain)].
Foreign Name: Meiji San-guroo Tônyû (Pureen).
Manufacturer's Name: Meiji Milk Products Co. Ltd. (Meiji Nyugyo) (Marketer). Made in Japan by Marusan.
Manufacturer's Address: Kyobashi 2-3-6, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1979 April.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Meiji Nyugyo first made commercial soymilk in Japan in 1980.

K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. Meiji Nyugyo launched Meiji San-guroo Tonyu (Pureen) in a 200 ml long-life (aseptic) carton in March 1981.

Soya Bluebook. 1984. p. 62. "Sungrow Soy Beverage." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. Tremendous momentum was added to the new soymilk boom "in April 1979, when Meiji Milk Co., Japan's second largest dairy milk company (sales of $1,400 million in 1982), started to sell Sunglow soymilk (made by Marusan but with the Meiji brand). Meiji first began to make their own soymilk in their own plant in March 1981."

6986. **Product Name:** Kome Miso.
Manufacturer's Name: Shin-Mei-Do Miso Co.
Manufacturer's Address: 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.
Date of Introduction: 1979 April.
Ingredients: White rice koji, soybeans, salt, water.
New Product–Documentation: Letter/Order from Lulu Yoshihara. 1976. Nov. She orders a copy of *The Book of Miso, Vol. II.*

Letter from Lulu Yoshihara. 1981. Sept. 9; Martin. 1982. Comox District Free Press. Sept. 17; Leviton. 1983. Soyfoods. Winter. p. 36-37; Shurtleff & Aoyagi. 1983. Book of Miso. 2nd ed. p. 238. The company was started in April 1979 by Lulu Yoshihara. Leviton. 1982. In a Small Bright Building. Yasuo (nickname "Yoshi") grew up on a farm in Japan and already knew how to make miso. The shop can make about 10,000 lb of miso in a typical year. Yasuo & Lulu Yoshihara run the business.

Talk with Yasuo Yoshihara. 1996. March 22. Their first miso was a white rice miso named "Kome Miso." It was sold only to natural- and health food stores. His business is active and growing. They make brown rice miso and barley miso, each sold in 450 gm and 4.5 kg plastic tubs. Lulu does the bookkeeping.

6987. Watanabe, Tokuji. 1979. Developments in the processing of traditional soybean foods in Japan. In: Hideo Chiba, et al., eds. 1979. Proceedings of the Fifth International Congress of Food Science and Technology (1978-Kyoto). Tokyo: Kodansha Ltd.; Amsterdam and New York: Elsevier Scientific Publishing Co. xi + 436 p. See Chapter 2.1, p. 66-73. Illust. Author index. Subject index. 26 cm. Series: Developments in Food Science, Vol. 2. [9 ref]
• ***Summary:*** Chapter 2, titled "Efficient utilization of food resources," has three parts, of which this is the first. Contents: Introduction. Tofu (incl. "packed tofu" using GDL as a coagulant). Kori-tofu. Miso. Soy sauce (shoyu). Natto. Conclusion. A figure shows five flow-sheets, one for making each of the different foods mentioned above.

The importance of soybeans as a food ingredient in Japan is evident from the fact that nearly 1 million metric tons of soybeans, including those used after oil extraction, are consumed each year to make tofu, kori-tofu, natto, miso, soy sauce, and other foods. "The development of automated equipment for continuous processing has made mass production of these foods possible, ensuring evenness of quality and lowness of price, to the benefit of consumers." Address: Kyoritsu Women's Univ., 2-2-1 Hitotsubashi, Chiyoda-ku, Tokyo 101, Japan.

6992. Bianchini, Gilberto. 1979. Re: Plans to start a tofu shop in Rimini, Italy. Letter to Wataru Takai at Takai Seisakusho in Japan, June 30. 2 p. Typed, with signature. [Eng]
• ***Summary:*** "Ref.: Your letter of March 14, 1979. Dear Sir, As I said in my letter from Berkeley, California, I'm starting a tofu shop in Rimini, Italy. I do not have any automated machinery yet, and I'm working on a small scale, hoping to expand.

"I've solved some difficulties in coping with Italian government laws regarding soybean products; my immediate need is a hot sealing machine, for a good hygienic standard of packing the tofu cakes, and actually this machine is all that I can afford to buy from your Company. As I told you, my shop will surely be of interest in the future for other people from Health Food Centers in Italy.

"For the diffusion of this product, I'm going to distribute in most parts of the country some leaflets explaining what I experienced about soybean products in my visit to tofu producers in the USA. I am not in any condition at the moment of importing and selling your equipment, but my shop, when completely finished, will be a good showroom for others interested."

He then asks for prices of equipment (especially HS-KYO-300) CIF (if possible) to the Italian port of Livorno (preferably) or Genova. He also requests a complete chemical analysis of the natural nigari sold by Takai.

"Post Scriptum: I plan to pay a visit in the future to Japan; I am studying Oriental medicine and philosophy, and I appreciate very much your country's culture and tradition."
Address: Via Cuoco 9, 47037 Rimini, Italy. Phone: 0541-33670.

6996. Shurtleff, William. 1979. The tofu and soymilk industry in the United States (News release). Lafayette, California: New-Age Foods Study Center. 1 p. June.
• ***Summary:*** The first statistics compiled on the U.S. soyfoods industry. "There are presently 150 tofu shops and soy dairies in the U.S. Ninety of these, mostly run by Caucasian Americans, have opened within the past 3 years since publication of *The Book of Tofu;* they now have about 35% of the industry sales. The remaining 60 are Japanese and Chinese run; they have an estimated 65% of the market. The industry has a brisk sales growth rate of 25% per year.

"The largest tofu factory in the U.S. is the Matsuda-Hinode company in Los Angeles; they produce about 16,000 pounds of tofu a day under fourteen different labels. The largest of the new breed of Caucasian-run plants is the New England Soy Dairy in Greenfield, Massachusetts. Founded in 1977, it now produces some 4,500 pounds of tofu a day and expects revenues of $750,000 in 1979. In its April 12 front page story on the tofu industry, *The Wall Street Journal* focused on The New England Soy Dairy.

"The U.S. tofu and soymilk industry presently uses approximately 7000 tons of dry soybeans per year.

"In July of 1978, tofu and soymilk producers founded the Soycrafters Association of North America (SANA), an educational and trade association. Its quarterly publication *Soycraft* is the primary source of information on soy protein foods in the Western World. For details contact:

"Ira Leviton, president
"Soycrafters Association of North America
"305 Wells St.
"Greenfield, MA 01301

"Worldwide, the tofu and soymilk industry is rapidly expanding. There are presently a total of 211,000 producers, including 38,000 in Japan, 158,000 in mainland China, 11,000 in Indonesia, 2500 in Taiwan, and 1470 in Korea. The largest tofu factories, located in Japan, produce over 100,000 pounds of tofu a day (15,000 tons a year) and the largest soy dairy [Vitasoy], located in Hong Kong, produces 500,000 bottles of soymilk a day (150 million bottles a year).

"Most of the new tofu shops and soy dairies in the U.S. have gotten into production using the technical manual *Tofu & Soymilk Production* by William Shurtleff & Akiko Aoyagi (who also wrote *The Book of Tofu,* which now has over a quarter million copies in print). This technical manual is available for $17.50 from:

First published in Aug. 1977 as a rough photocopied manuscript with a yellow cover. [223 ref]
• ***Summary:*** Contents: Preface. 1. How to start a tofu shop or soy dairy. 2. Setting up shop; The community or village shop; The traditional caldron shop; The steam cooker plant; The pressure cooker plant; The soy dairy; The automatic steam cooker plant; The modern factory. 3. Ingredients. 4. Sanitation and safety. 5. Principles of tofu & soymilk production. 6. Tofu. 7. Firm tofu, pressed tofu & smoked tofu. 8. Foods made from tofu: Introduction, creamy tofu dressing, tofu chip dip, tofu mayonnaise, tofu cream cheese, cottage cheese, sour cream, tartare sauce, tofu eggless egg spread or missing egg salad, tofunafish spread or salad, tofu rice salad, tofu cheesecake (Sprucetree Baking Co. and White Wave), tofu pies, tofu creamies or tofu-coconut cream bars, tofu tarts, tofu turnovers, tofu puddings, fruit whips, custards and parfaits, tofu cinnamon rolls, tofu whipped cream, tofu icing and cream cakes, marinated tofu (fried or baked, p. 166), tofu jerkey [sic, jerky] (p. 166), teriyaki tofu, tofu teriyaki, savory baked tofu, savory pressed tofu (with five spice powder, *wu-hsiang toufu-kan*), nori rolls with brown rice & tofu, tofu & brown rice burgers, tofu baby foods, tofu in ready-made sandwiches. 9. Using okara, whey, curds & hulls. Deep-fried tofu (cutlets, cubes, burgers, treasure balls, burger balls, pouches, puffs). 11. Soymilk. 12. Dairylike products made from soymilk: Frozen soymilk desserts (soymilk ice cream, frozen soymilk yogurt, soymilk sherbets, soysicles, frozen soymilk custard, ice soymilk), fermented or cultured soymilks (soymilk yogurt, acidophilus soymilk, soymilk kefir, soymilk piima, soymilk buttermilk and other fermented milks), soymilk cheeses (unripened fresh, unripened soft {quark, queso blanco, panir, etc.}, ripened soymilk cheeses), soymilk mayonnaise, soy shakes and energy drinks, soymilk eggnog (soy nog), soymilk whipped cream, chip dips, puddings, custards. 13. Silken tofu & pressed silken tofu (Silken tofu is made from concentrated soymilk). 14. Lactone silken tofu (GDL). 15 Grilled tofu. 16. Fermented tofu. 17. Dried-frozen tofu. 18. Yuba. Appendix A: Resources. People & institutions connected with tofu & soymilk production. B: Weights, measures & equivalents. Bibliography. About the New-Age Foods Study Center.

See ¼-page ads in *East West Journal.* 1979. Dec. p. 4. 1980. Jan. p. 19.

Note 1. This is the earliest English-language book seen with the term "soymilk," spelled as one word, in the title.

Note 2. This is the earliest document seen (Feb. 2002) that mentions tofu jerky or any kind of soy jerky.

Note 3. This is also the earliest English-language document seen (April 2013) that uses the word "quark," or "queso blanco" in connection with soy cheese or tofu.

Note 4. This is the earliest English-language document seen (Sept. 2012) that contains the term "cultured soymilks" (or "cultured soymilk").

Note 5. This is the earliest English-language document seen (Sept. 2012) that contains the term "ripened soymilk cheeses" (or "ripened soymilk cheese").

Note 6. This is the 2nd earliest English-language document seen (April 2013) that uses the term "smoked tofu," but the first that uses it in its modern sense.

Note 7. This book contains the most detailed and complete descriptions seen to date (Oct. 2012) of how to make tofu, soymilk, and yuba on a commercial scale.

Note 8. This book was first printed on 1 Aug. 1977 in a photocopied and rough-typed edition with a yellow and black cover.

Note 8. Reviews of this book appeared in many publications: (1) Richard Leviton. 1980. *Soycraft* (Massachusetts). 2(1):63-64. Winter. "An indispensable operating manual for soyfoods entrepreneurs... The illustrations alone make the book a valuable reference tool... a sustained inspiration. The only book of its kind in English."

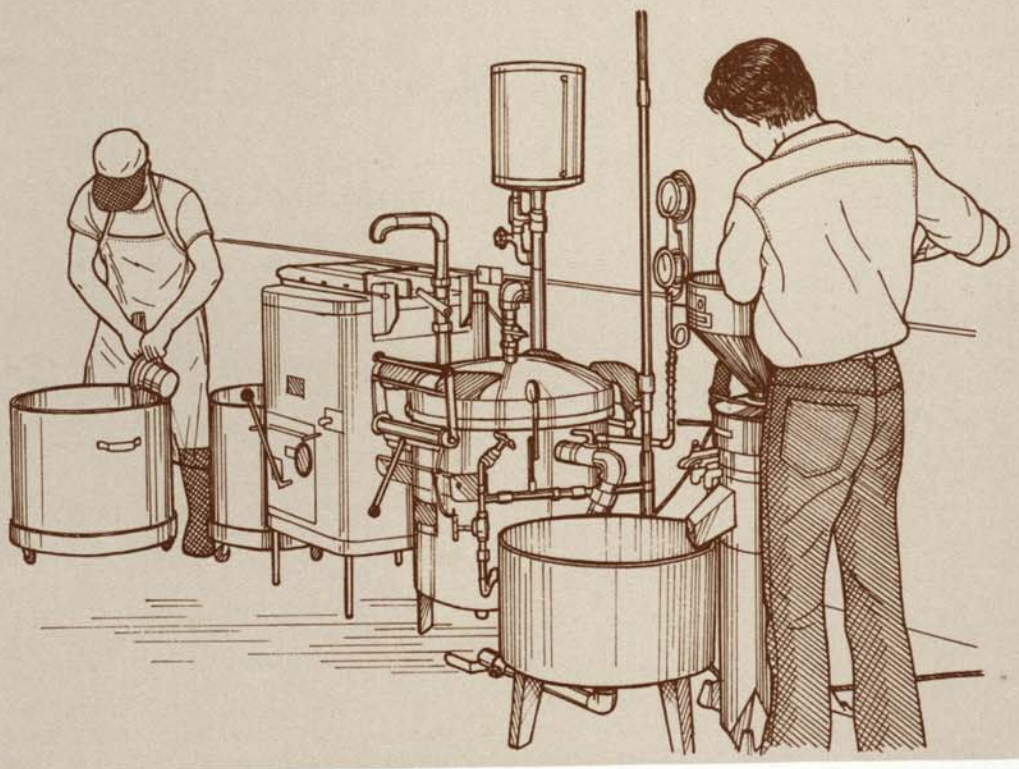
TOFU & SOYMILK PRODUCTION

THE BOOK OF TOFU , VOLUME II



WILLIAM SHURTLEFF & AKIKO AOYAGI

© Copyright Soyinfo Center 2014

START YOUR OWN TOFU PLANT OR SOY DAIRY

Tofu plants and soy dairies are now starting up all over the world in response to the burgeoning need for delicious and healthful sources of high-quality, low-cost protein. Making tofu and soymilk is not only a rewarding ancient/futuristic craft and source of right livelihood, it offers a practical yet revolutionary approach to meeting the world's critical food requirements.

After more than seven years of research, including extensive field studies in Japan, America, Taiwan, Korea, and Indonesia, William Shurtleff and Akiko Aoyagi, authors of the bestselling *Book of Tofu*, which has over a quarter million copies in print, now present . . .

TOFU & SOYMILK PRODUCTION

- A beautiful new craft and technical manual describing in rich detail how to start and run your own tofu plant or soy dairy on any of seven scales, from a community or village shop up to a modern factory.
- Over 430 informative illustrations; 336 pages
- Entire chapters on starting your business, selecting equipment and ingredients, sanitation, production principles.
- How to make tofu burgers or cutlets, creamy tofu dressings, tofu cheesecakes, dairylike soymilk, soymilk yogurt, ice cream, cheese, shakes, and mayonnaise, silken tofu, wine-fermented tofu, dried-frozen tofu, and ambrosial yuba.
- Hundreds of addresses of resource people and institutions plus a lengthy Bibliography and Index.
- A guidebook to a new vocation and a new way of life.

(2) *Food Chain* (Intermediate Technology, England). 1997. No. 20. March. p. 6. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

7004. Shurtleff, William. 1979. Report on trip to second annual meeting of Soycrafters Association of North America (Amherst College, Massachusetts, July 26-29), and subsequent visit to Rochester, New York. P.O. Box 234, Lafayette, CA 94549. 2 p. Aug. Unpublished manuscript.
• ***Summary:*** July 15–9:45. Akiko and I fly to New York City from Lafayette. The previous day our *Book of Tempeh* had arrived from Harper & Row, and we took it with us to the conference. Stay in a hotel near a park, with fear of being mugged or robbed in this unfriendly city.

We attend and I speak at Buckminster Fuller's World Games (about world hunger and world resources) in New York City. Have a nice talk there with Robert Rodale.

Akiko and I meet Uri Geller at his home / apartment–at his invitation, because he knows and admires our Book of Tofu; he is a very nice, healthy man with world-famous psychic abilities. He bends my house key before my eyes by psychic force, without touching it; I carry that useless house key on my key chain for years and show it to many people. Uri also replicates a drawing I made of a stick figure standing with both hands held high under a rayed sun; he was sitting across the room and could not see what I had drawn.

I do about 3 live radio broadcasts for Gary Null (WBAI Natural Living) and visit his home for taping segments; he is a bachelor. Also do an evening program on soyfoods for Annemarie Colbin at her home. And we have dinner at The Cauldron (that makes tofu–and probably tofu cheesecake–we visit the kitchen) and Souen (which makes tofu cheesecake), both macrobiotic restaurants.

While in New York City, Akiko and I visit our editors at Harper & Row headquarters–many stories up in Manhattan.

July 22–Overnight at Ira and Kathy Leviton's home at Sunrise Farm, 100 Heath Road., Colrain, Massachusetts.

July 24? Visit Michael and Shelley Cohen's Tempeh Works, which is preparing to open in a gas station in Greenfield, Massachusetts (production officially began on Oct. 1). I take 3 pages of handwritten notes and many photos for our forthcoming book *Tempeh Production* (see p. 95-98). I first describe each piece of equipment in the shop and illustrate some, then describe the process (20 lb of dry beans makes 52 lb of tempeh), and finally draw a detailed floor plan of the shop. This was the first batch of tempeh Michael had ever made in this shop. He sold 200 lb of tempeh to the Soycrafters Conference later that week.

July 25. Our book *Tofu & Soymilk Production,* published by our New-Age Foods Study Center, arrives from the printer (Braun Brumfield) in Ann Arbor, Michigan. It is the first book we have self-published properly, and the first to contain an ISBN (our second, 0-933332-01-7) and an LCCN.

July 26-29 (Thurs. to Sun.) Second Annual Soycrafters Association of North America (SANA) conference at Hampshire College in Amherst, Massachusetts, organized and run by Ira / Richard Leviton. 230 people attend. It is Akiko's first SANA conference. A magnificent event. Also first issue of *Soyfoods* magazine out, published by Leviton. One evening there is a square dance. I recall Jon Lee of New England Soy Dairy being a superb square dancer. I meet Paul Duchesne. Steve Earle from San Jirushi gives a wooden speech on the history of his company and the tamari they make.

RICHARD LEVITON

July 30-31. After the conference, with Richard Leviton driving and Jeremiah Ridenour on board, we visit The Tofu Shop, a soy deli at 686 Monroe Ave., Rochester, New York, founded by Andy Schecter, Greg Weaver, and Norman Holland. Very interesting. Ira takes lots of photos for an article in *Soyfoods* magazine. One nice one shows Akiko and Jeremiah Ridenour seated in the Deli at a table which is loaded with soyfoods dishes ready to eat.

While in Rochester, Shurtleff presented a lecture and slide show to 150 people at the Eisenhart Auditorium in the Rochester Museum and Science Center; it was sponsored by The Tofu Shop.

Aug. 2–We arrive back in Lafayette. Address: New-age Foods Study Center, Lafayette, California.

7005. Shurtleff, William; Aoyagi, Akiko. 1979. Using okara, whey, curds & hulls (Document part). In: W. Shurtleff and A. Aoyagi. 1979. Tofu & Soymilk Production: A Craft and Technical Manual. Lafayette, California: New-age Foods

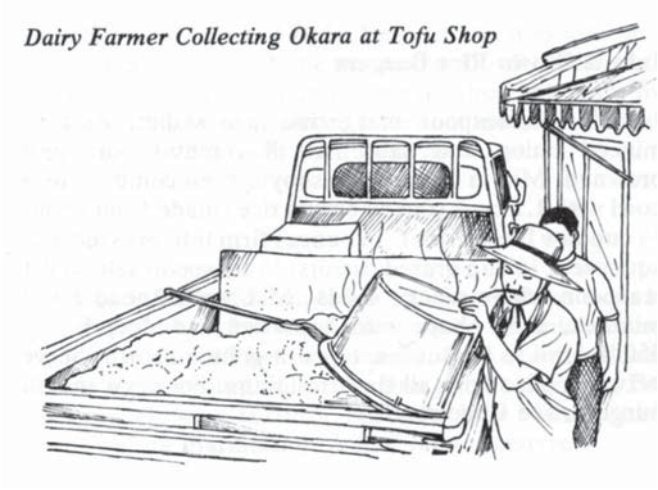
Study Center. 336 p. See p. 168-71. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm.



• ***Summary:*** This chapter begins: Okara (pronounced oh-KAR-uh), the insoluble residue from tofu or soymilk production (also known as soypulp or soy pulp) and whey are two byproducts of the tofu-making process.

Both can be put to a number of creative uses, which can serve as potential sources of income and utilize their nutrients. Curds can be sold at low prices for institutional use or as a ready-to-serve snack. Hulls can be ground to make soy bran.

Okara: Every pound of dry soybeans made into tofu or soymilk generates about 1.1 pounds or 2.5 cups (0.15 gallons) of well pressed, firmly packed okara, containing 76 to 80% moisture, 20 to 24% solids, and 3.5 to 4.0% protein. On a moisture free basis, this okara contains 23.6 to 24.0% protein, 8.1 to 15.2% fats, and 12.0 to 14.5% crude fiber. And it contains some 17% of the protein from the original soybeans. Not only is okara a rich source of dietary fiber, it contains higher quality protein (as measured by PER, protein efficiency ratio) than any other fraction in the tofu making process (Hackler et al., 1963, 1967), largely due to its high content of cystine, a limiting sulfur-containing amino acid. (Lysine is the first-limiting amino acid in okara.) To measure various PER values, soymilk was cold extracted and cooked at 100ºC for 1 hour. The numbers in parentheses are PER values: milk casein (2.86), okara (2.71), dehulled soybeans (2.51), tofu (2.20; coagulated with glacial acetic acid), soymilk (2.11), soy whey (1.93).

In poorer countries, a majority of the okara is used as food. With the growing awareness of the importance of crude fiber in human diets, okara can be utilized in foods specially formulated with a high fiber content. Plain or with the addition of suitable flavorings, okara can easily be dehydrated on a drum dryer to make a dry staple; the Johnson Boiler Co. in Japan makes drum dryers specifically designed for drying and flaking okara. Dried okara might be able to be milled to produce a high-fiber soy flour, which could be used as is in breads or roasted like kinako. The first three uses described below are nonfood.

Livestock Fodder: Most of the okara from Japanese and American tofu shops and soy dairies is fed to dairy cattle or hogs. Generally a local farmer picks it up from the shop daily in his truck and pays a small price for it (several cents a pound); in cities, some shops give it away or even have to pay farmers to truck it away. In China many makers of tofu, soymilk, or yuba run a hog farm adjacent to their shop and use the okara as a primary fodder source. Ruminants (cows, sheep, buffalo) can digest crude fiber (okara) and use it as a nutrient source. Monogastrics (chickens, hogs) cannot utilize nearly as much. While this way of using okara may be the most convenient, it is relatively wasteful of nutrients and brings only a low financial return.

Organic Compost: Added to a compost pile or turned directly into the soil, okara adds valuable nitrogen and organic nutrients, while helping to aerate and lighten heavy soils. Contact organic gardeners.

Pet Food: Okara makes a good addition to household or commercial dog or cat foods. In Japan some large factories sell much of their output to pet food manufacturers.

Soysage: This tasty sausage-like food, developed by The Farm in Tennessee, is now produced commercially at a number of U.S. tofu shops and soy dairies, and may be the simplest and best way to utilize okara. Packed with nutrition, it can easily be produced in large quantities.

White Wave in Boulder uses this recipe. Mix the following ingredients in a VCM-40 and blend well on low speed: 56 cups (15% gallons) okara, 21 cups each wheat germ and whole-wheat flour, 14 cups nutritional yeast, 10½ cups oil, 4 cups shoyu, 14 tablespoons each oregano, prepared mustard, and garlic, 9.3 tablespoons allspice, ½ cup salt, 6.7 tablespoons each fennel and sage, and 1 tablespoon cayenne, and a little diluted liquid smoke (hickory smoked water). (Some producers add enough soymilk to give the desired consistency.) Pack in specially made stainless steel tubes (each tube is 3 inches in diameter, 12 inches long, open at both ends, and capable of being opened and closed via a lengthwise overlap seam.) Seal both ends of tube with heavy aluminum foil. Fill a large pot with 2 to 3 inches of water, set a rack above the water, and stand the tubes upright on the rack. Steam cook at atmospheric pressure for 45 to 60 minutes, then allow to cool for easy removal. Open tube along side, slide out soysage, and cut it crosswise into 8-ounce disks, which are sold wrapped in plastic wrap. To serve, they are sliced into thin rounds and fried in oil on both sides until crisp and golden brown, then served like breakfast sausages (with scrambled tofu), used in sandwiches or pizza, or mashed and used like a vegetable pate.

Crystal Hills Tofu Shop makes several hundred pounds of soysage each week; it contains okara, whole wheat flour, wheat germ, nutritional yeast, oil, soy sauce, honey, herbs,

© Copyright Soyinfo Center 2014

and spices. Our favorite recipe is given in *The Book of Tofu* (Ballantine).

Baked Goods: Many tofu shops connected to bakeries use their okara like bran to add natural fiber and protein, and to give a crumbly texture to breads, muffins, brownies (usually made with carob), fudge, cookies (okara coconut macaroons or okara peanut butter cookies), okara & tofu gingerbread, or other baked goods. Try recipes for Wonderful Okara & Barley Flour Muffins, and for pancakes, waffles, leavened breads, and chapaties in *The Book of Tofu.* Okara might also work nicely in Japanese-style rice crackers (*senbei*). Okara contains 14.5% fiber on a dry weight basis versus only 4% for wheat bran; large amounts may cause intestinal distress in some individuals.

Okara Tempeh: One of the most delicious and creative ways we know of to use large amounts of okara is in the form of okara tempeh, a popular Indonesian fermented food that consists of okara (alone or mixed with soybeans) bound together into cakes or patties by a fragrant mycelium of *Rhizopus* mold. The spore starter is now available in North America and the fermentation takes only about 22 hours. The finished product, sliced and fried until crisp and golden brown, has a flavor described variously as reminiscent of "southern fried chicken," "savory veal cutlets," or "seafood fillets." The concept of a tofu and tempeh shop operating together (as many do in Indonesia) is most interesting, and several tofu shops in North America are now preparing both okara and soy tempeh. For full details see our *Tempeh Production* (New-Age Foods Study Center) and *The Book of Tempeh* (Harper & Row).

Okara Granola: White Wave Soyfoods in Boulder, Colorado uses okara, cashews, sesame meal, safflower oil, salt, and maple syrup. For our favorite recipe, see *The Book of Tofu.* Someone should also develop an okara granola (candy) bar that is not too sweet.

Okara Party Mix: Develop your own using toasted okara, nuts, sunflower seeds, shredded coconut, raisins, etc.

Soysage Pâté: At White Wave, this pate is served in delicious sandwiches. Ingredients include: soysage, tofu, soymilk mayonnaise, mustard, celery, pickles, and sunflower seeds. It is served on onion-herb bread with alfalfa sprouts, tomato, and pickle. Okara & Vegetable Saute: A number of tofu shops in Hawaii and Japan use their okara to prepare this dish which is sold chilled through delicatessens or natural food stores. For our favorite recipe see The Book of Tofu.

Okara Burgers: Also called Okara & Grain Burgers these were developed by Swan Foods in Miami, Florida. Ingredients include organic brown rice, okara, carrots, onions, garlic, whole-wheat flour, corn oil, sesame seeds, rolled oats, and sea salt. Mix the okara in a VCM with dry-cooked rice (use 2 volumes water to 1 rice), plus diced onions and carrots, garlic powder, a little flour, and the remaining ingredients. Puree well, then put the mixture through a Hollymatic Burger Press; the patties, which are not as firm as burger patties, drop out on patty paper. Freeze immediately or okara will sour. To serve, bake at 350ºF for 40 minutes (or deep-fry); serve between buns or toast with trimmings. Better than soyburgers but not as good as tofu burgers. For our recipe, see *The Book of Tofu.*

Okara Onchom: Another popular Indonesian fermented food, onchom (also spelled ontjom) is a close relative of tempeh, made and served in the same way but using a different starter culture, *Neurospora.* The finished product has overtones of flavor reminiscent of walnuts or almonds. Starter cultures for commercial use are available in small quantities from Dr. H.L. Wang, USDA/NRRC, 1815 N. University St., Peoria, IL 61604. Preparation is described in *The Book of Tempeh,* Professional Edition.

Other Food Uses: Okara can be used in salads (with mayonnaise, sliced vegetables, and seasonings), in miso as a substitute for part of the whole soybeans, as a primary ingredient in dry breakfast cereals, or as a hamburger extender. Address: Lafayette, California.

• ***Summary:*** The author was introduced to macrobiotics in upstate New York in about 1971. This is her first book on macrobiotics. It was originally published under the title of *An Introduction to Macrobiotic Cooking* by the East West Foundation, 17 Station Street, Brookline, Massachusetts 02146. Though copyrighted in 1978, the first edition appeared in Sept. 1979. The fourth printing was May 1981.

The chapter titled "Beans including tofu and natto" gives descriptions of and recipes for making: Japanese black beans (black soybeans, p. 54; "These beans are therapeutic for the sexual organs and will relieve an overly yang condition caused by too much animal food or fish.") Soybeans (p. 54. "These beans are the most yin of the bean family... It is recommended that soybeans be eaten only occasionally as a separate side dish. Because they are very yin, they should be cooked with yang vegetables such as lotus root or burdock, for balance. The best way to eat soybeans is in the form of *tofu, okara, natto, tempeh,* and, of course, miso and tamari.") Tofu, and Homemade tofu (curded with nigari, p. 54-55). Okara (p. 55-56). Tofu and corn. Tofu, onions and water cress. Dried tofu (dried-frozen, p. 57). Yuba (dried soy milk; how to make at home). Vegetables and dried soy milk (p. 57). Ganmodoki (Tofu and jinenjo patties, p. 57-58). Natto (description and how to make at home, p. 58-59).

Other soy-related recipes include: Tofu soup (p. 68). Miso soup (p. 69-70, basic, or quick). Watercress miso soup (p. 71). Daikon and sweet rice dumpling soup (with miso). Chinese cabbage and tofu miso soup (p. 71). Aveline Kushi's miso stuffed lotus root (p. 86). Tofu dressing (p. 91). Miso-tahini spread (p. 92). Miso-sesame spread (p. 92). Miso-lemon sauce (p. 93). Tofu dip (p. 93). Miso with scallions (p. 95). Tamari (description, p. 95). Tekka (made with Hatcho miso, p. 96). Miso pickles (p. 100-01). Tamari pickles (p. 101). Tofu plaster (p. 130). Ume-Sho-Kuzu drink (with umeboshi, tamari and kuzu, p. 131). Ume-sho-bancha (with tamari, p. 131). Use of tamari, miso, and tekka (p. 132).

Also includes instructions for making amasake at home (p. 116; it is a natural sweetener made from fermented sweet rice), and a recipe for Amasake bread (p. 107), instructions for making seitan at home (p. 46-47, using 3½ lb of hard spring or hard winter whole wheat flour; spring wheat flour produces a much softer texture of seitan than the winter variety), and recipes for seitan stew, seitan-barley soup, sauteed vegetables and seitan, stuffed cabbage with seitan, and seitan croquettes (p. 47-49), plus recipes for leftover seitan (p. 125). Address: East West Foundation, near Boston/ Cambridge, Massachusetts.

7012. Hymowitz, T.; Kaizuma, Norihiko. 1979. Dissemination of soybeans (*Glycine max*)*:* Seed protein electrophoresis profiles among Japanese cultivars. *Economic Botany* 33(3):311-19. Sept. [22 ref]
• ***Summary:*** Seed protein electrophoresis is shown to be a powerful tool for resolving problems of taxonomy, evolution, and paths of dissemination of domesticated plants. By the use of these seed protein banding patterns, which act like silent fingerprints, the movement of germplasm and the paths of dissemination of soybeans to and within Japan may be clarified.

Seed protein extracts from 477 cultivated Japanese soybean varieties were analyzed by polyacrylamide gel electrophoresis to determine the distribution of the alleles three trypsin inhibitor loci (Ti-a, Ti-b, Ti-3c) and two special protein loci (Sp1-a, Sp1-b) with respect to the maturity group and area of adaptation of each variety. A map (Fig. 2) shows Japan divided into 5 geographical areas. About 60% of the soybean varieties had the Ti-a allele. The frequency of the Ti-b allele was found to be highest in southeastern Japan and lowest in northeastern Japan. The Ti-c allele, discovered in 6 varieties, was traced to two possible sources adapted to the Tohoku area.

In conclusion, the writers conclude that the present population of cultivated Japanese soybean varieties was developed from two distinct sources of introductions: (1) A short-season crop cline or summer-season type having almost exclusively the Ti-a Sp1-b genotype. (2) The full-season crop cline having either the Ti-a Sp1-b or T1-a Sp1-b genotype. The full-season crop cline probably came from north-central China through to Japan. The short-season crop cline appears to have evolved in either Korea or on Kyushu, Japan's southernmost main island.

The problem of determining the origin of the short-season crop cline "is complicated by the fact that the movement of soybeans from Korea to Japan and vice versa across the Korea Strait has been going on since at least the third century A.D. and perhaps earlier."

Contains 3 figures and four tables. Address: 1. Crop Evolution Lab., Univ. of Illinois; 2. Iwate Univ., Morioka, Iwate, Japan.

[10 ref. Jap; eng]
• ***Summary:*** "The conditions of curd preparation from soymilk suitable for making cheese-like fermented soy protein foods were examined... Seven coagulants including 4 kinds of salts and 3 kinds of acids, and lactic fermentation using *Streptococcus thermophilus* as a starter were tested for preparing curd from soymilk... The curd by lactic fermentation with inoculation of lactic starter and yeast gave the most smooth body like cheese along with the decrease of hardness, springiness and chewiness during the incubation."

Oct. [6 ref. Jap; eng]
• ***Summary:*** As soybeans were stored for 1 year, the changes in their quality were measured and the effects of these changes on natto, tofu, and aburage were investigated under different temperatures (15, 25, and 35ºC) and humidity (RH = Relative Humidity 60, 70, and 80%). New crop (recently harvested) soybeans grown in the USA and China were used

© Copyright Soyinfo Center 2014

in this experiment.

Soybean quality deteriorated with time, and there were definite measurable changes in the ability to germinate / sprout, acid values, titratable acidity, Nitrogen Solubility Index (NSI), solids extracted in soakwater, and extraction rates of protein and solids into soybean milk.

The passage of time in storage led to harder cooked beans for natto, lower yield of soybean milk and tofu, lower coagulation rate in tofu, and less ability to expand during deep frying in aburage.

Increased temperatures and relative humidity increased the rate of soybean quality deterioration as measured above, and increased RH caused more deterioration than the increased temperature. Therefore, soybeans awaiting processing into natto, tofu, or aburage should be stored in a cool, dry place. Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

Suitability for food processing of stored seeds]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 35. p. 160-71. Oct. [11 ref. Jap; eng]
• ***Summary:*** The effects of dry treatment (drying) after harvest on the physical properties, chemical composition, and suitability for food processing of soybean seeds were investigated. The heat treatments were natural drying and air drying using heated and non-heated air at 20, 30, and 40ºC.

The seeds were then stored at 15ºC with RH (Relative Humidity) of 65% and 75%, at 30ºC with RH of 65% and 75%, and at room temperature and humidity in a paper bag for 30, 60, 120, 180, 270, and 360 days, respectively. These various storage conditions were further investigated for their effects on suitability for food processing.

At a given RH, the seed moisture rose as the temperature rose; many figures are given. Seed quality degenerated as storage time increased. The following decreased: absorbability of water in seeds, rate of germination, extractability of protein from soaked seeds by hot water, pH of soybean milk, and ratio of weight of steamed seeds to raw seeds. And the following increased: soluble matter and protein in soak water, moisture content, hardness and darkness of color of steamed seeds.

Conclusion: Soybeans should be stored in a cool, dry place, ideally at a temperature of 15ºC (50ºF) or below and an RN of 75% or below. Remarkable deterioration was observed at 30ºC with RH of 75%. Seeds heat dried at 40ºC showed a significant decrease in suitability for making miso, natto, or cooked soybeans. Tofu making was less affected by drying the seeds with heated air.

Nov. [11 ref. Jap; eng]
• ***Summary:*** Soy protein was mixed with ice cream or processed in proportions ranging from 0 to 100%. The mixtures were subjected to polyacrylamide gel electrophoresis (PAGE) or sodium dodecyl sulphate (SDS) at pH 4.0 to develop a formula for estimating the soy protein concentration. Comparison of densitograms for milk, cheese, egg yolk, egg white, wheat and soybean proteins indicated that PAGE with urea at pH 9.4 gave sufficient separation to distinguish milk from non-milk proteins but not to distinguish between non-milk proteins. Using SDS, milk and soybean proteins could be distinguished from each other and from egg and wheat proteins. Address: Hiroshima Daigaku Seibutsu Seisan Gaku-bu, Shokuhin Kagaku Kôza, Japan.

7031. **Product Name:** Mugi Miso. Renamed Barley Miso in about 1981.
Manufacturer's Name: Shin-Mei-Do Miso Co.
Manufacturer's Address: 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.
Date of Introduction: 1979 November.
Ingredients: Barley koji, soybeans, salt, water.
New Product–Documentation: Talk with Yasuo Yoshihara. 1996. March 22. Their second miso, introduced in November 1979, was a barley miso named "Mugi Miso." Sold only to natural- and health food stores, it was renamed "Barley Miso" in about 1981.

7032. Shurtleff, William. 1979. Rapid growth of tofu shops and soy dairies in North America (News release). Lafayette, California: New-Age Foods Study Center. 1 p. Nov.
• ***Summary:*** "There are presently 164 tofu shops and soy dairies in North America and, as shown in the accompanying graph, the increase in numbers is rapidly accelerating. Ninety-six of these run by Caucasian Americans have opened in the past 3 years since publication of *The Book of Tofu,* by Shurtleff & Aoyagi, which has sold over a quarter of a million copies. The industry has a brisk sales growth rate of 25 to 30% a year, and uses an estimated 35% of the industry sales; the 68 Oriental shops have 65%.

"The largest tofu factory in the U.S. is the Matsuda-Hinode company in Los Angeles; they produce about 16,000 pounds of tofu a day under 14 different labels. The largest of the new breed of Caucasian-run plants is the New England Soy Dairy in Greenfield, Massachusetts. Founded in 1977, it now produces some 4,500 pounds of tofu a day and expects revenues of $750,000 in 1979. In its April 12 front page story on the tofu industry, *The Wall Street Journal* focused on The New England Soy Dairy...

"Worldwide, the tofu and soymilk industry is rapidly expanding. There are presently a total of 211,000 producers, including 38,000 in Japan, 158,000 in mainland China, 11,000 in Indonesia, 2,500 in Taiwan, and 1,470 in Korea. The largest tofu factories, located in Japan, produce over 100,000 pounds of tofu a day (15,000 tons a year) and the largest soy dairy, located in Hong Kong, produces 500,000 bottles of soymilk a day (150 million bottles a year).

"Most of the new tofu shops and soy dairies in the U.S. have gotten into production using the technical manual *Tofu & Soymilk Production* by William Shurtleff & Akiko Aoyagi, which has just been published in both paperback and hardback editions." Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

7033. Ashford, Moyra. 1979. Sambas and scholarship: Japanese find the good life, exert influence in Brazil. *Los Angeles Times.* Dec. 20. p. D11.
• ***Summary:*** An estimated 700,000 Japanese reside in Brazil. But are they Japanese or Brazilians? In May 1888, slavery was officially abolished in Brazil. The first wave of Japanese immigration to Brazil began on 28 April 1928, when the steamship Katsuo Maru left the port of Kobe with 781 Japanese (incl. 198 families) on board. They arrived

© Copyright Soyinfo Center 2014

in Santos, Brazil, on June 5, all dressed in Japanese or Western dress. Brazilians were astonished. Most of the first immigrants came to Brazil to work on coffee plantations. Their goal was to get rich quick, and return to Japan. The first wave, which brought about 190,000 Japanese, lasted until 1941, when World War II began.

The second wave, which brought about 50,000 Japanese, lasted from about 10 years, from 1953-1962. These Japanese joined existing Japanese rural communities and intended to stay.

The third stage began in 1963 and is still going on, coincided with Brazil's economic miracle [and the dramatic growth in Brazil's soybean production]. It brought more companies than individuals. Address: Latin America Daily Post.

7034. *SoyaScan Notes.* 1979. Chronology of soybeans, soyfoods and natural foods in the United States 1979 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. Yvonne and Irene Lo incorporate The Soya Bean Products Co., N.A. in San Francisco as a marketing company and immediately begin to import and distribute Vitasoy, the world's most popular soymilk, to Canada from their parent company in Hong Kong. It is not yet sold in America due to an FDA ban on aseptic Tetra Pak cartons.

Jan. Soycrafters Association of North America headquarters moves to Colrain, Massachusetts. Richard Leviton takes over as Director. Decides to edit and publish *Soycraft* magazine.

Jan. "The Soyfoods Revolution" published as a cover story by *Whole Foods* magazine.

Jan. 15-18. Second International Workshop on Low-Cost Extrusion Cookers held in Dar es Salaam, Tanzania, with 43 participants.

Feb. Takai catalog of large scale equipment published.

Feb. 9. Judith Rubenstein, institutional consultant for the New England Soy dairy, initiates a correspondence with Carol Tucker Foreman, Director of Child Nutrition programs at USDA, on the subjects of tofu standards and acceptance of tofu in USDA Child Nutrition Programs, including the school lunch program. Four letters are exchanged between Feb. and Aug. 1979. This is the start of work of tofu standards and tofu in school lunch programs.

Feb. *Natural Foods Merchandiser* magazine starts publication, founded by Doug and Karen Greene.

March 11. KOPTI is founded in Indonesia. It soon functions as an active, effective trade association for Indonesian tempeh and tofu manufacturers. By June 1986 it has more than 12,000 members from 40 cooperatives, and is promoting mechanization of production.

March. Soycrafters Assoc. and Quong Hop & Co. have adjoining booths at the New Earth Expo in San Francisco. 6,000 people sample free tofu burgers, tofu chip dips. Farm Foods sells Ice Bean (soymilk ice cream) and tofu cheesecakes. Gilman Street Gourmet sells tofu burgers.

March. Oak Feed Miso Company founded by Sandy Pukel, John Belleme, and Barry Evans. Joe Carpenter, Michio Kushi, and James Kenny are also involved. It is soon renamed American Miso Co.

March 26-29. World Soybean Research Conference II held at North Carolina State University. The 897-page proceedings, edited by F.T. Corbin, are published in 1980.

March. Food Protein Council holds International Soybean Fair in Washington, D.C. Many Congressmen, consular officials, etc. attend and sample soy protein products and tofu dips.

March. The Ohio Miso Company, founded by Thom Leonard and Richard Kluding, begins production in Ohio. America's first Caucasian-run miso company.

March. Richard Leviton takes a 3-week soyfoods research trip to the Midwest. Establishes many important contacts.

April. *New England Soy Dairy Product and Merchandising Guide* published.

April 12. "Good Old Bean Curd Is Suddenly Popular, But You Call It Tofu" by W.M. Bulkeley published as a front page article in *The Wall Street Journal.*

May 24. "The Americanization of Bean Curd," an expansion of Bulkeley's April article, published in the *Washington Post.*

May. Quong Hop & Co. in San Francisco introduces vacuum packed firm tofu, tofu cutlets, tofu burgers, and teriyaki tofu. Each of the latter three products is the earliest known product of its type in America.

June. *The Tofu Cookbook* by Kathy Bauer and Juel Andersen published by Rodale Press.

June 29. An internal FDA memorandum is prepared by FDA headquarters personnel to set forth the agency's views on the attributes of tofu. Publication of a "pull date" on tofu packages is encouraged.

July. Farm Foods starts national advertising of tempeh starter and tempeh kits.

July. David Mintz, owner of Mintz's Buffet, a kosher Jewish deli in New York City, first learns of tofu from Pesach Lazaroff, a young Jewish vegetarian. That summer Lazaroff spends many hours working with Mintz as a paid consultant, developing kosher tofu recipes. Mintz later becomes rich and famous for developing Tofutti, a soy ice cream.

July. *The Book of Tempeh,* by Shurtleff and Aoyagi published by Harper & Row in both large-format paperback and professional hardcover editions. The world's first book about tempeh.

July. *Tofu & Soymilk Production,* by Shurtleff and Aoyagi published by The Soyfoods Center. This is the first book to use the term "soyfoods" in English.

July 17. "Tofu–The Oriental Way to High-Protein, Low-Calorie Meals" published by *Family Circle.*

© Copyright Soyinfo Center 2014

July 23. Judith Rubenstein (see Feb. above) writes the Commissioner of the FDA requesting that the agency establish a standard of identity for tofu. She notes that the Director of Nutrition and Technical Services for USDA suggested that FDA give top priority to this issue. Issues of imitation tofu products and bacterial contamination are raised.

July 26-29. Second Soycrafters of North America Conference: "Producing and Marketing Soyfoods," held at Hampshire College, Amherst, Massachusetts, organized by Richard Leviton and financed on a shoestring. A major milestone for the U.S. soyfoods industry. 230 people attend and the content is a great success, but Leviton loses $1,000 on the venture. The first issue of Soycraft magazine, written and published (1,900 copies) by Leviton, is distributed at the conference. In the keynote address, Shurtleff notes that the biggest challenges facing the industry are to build a strong trade association with adequate funding, and to develop soyfoods standards.

July. *Alimentacion Integral Para Una Vida Plena: Los Mil Usos de la Soya* (*Integral Nutrition for a Full Life: The Thousand Uses of Soya*), by Blanca Dominguez published by Editorial Posada in Mexico. The country's first book on soyfoods.

Aug. Robert Rodale and Rodale Press gives strong support to *Soycraft* magazine, with ads and a nice mention in an article, which brings in 135 subscriptions in November.

Sept. The Soycrafters Apprenticeship Program is started by Luke Lukoskie at Island Spring, Vashon, Washington. Here people can spend about 3 weeks getting hands-on experience in making tofu, soymilk, and tempeh.

Sept. Tempeh Works, America's first Caucasian-run commercial tempeh shop in a commercial building and making only tempeh, starts production in Greenfield, Massachusetts. Founded and run by Michael Cohen.

Sept. Many articles about the Amherst Soyfoods Conference published in national magazines, such as *New Age*.

Sept. New England Soy Dairy opens America's first in-house tofu & soymilk sanitation laboratory.

Sept. "Chinese Cuisine: Bean Curd" by Nina Simonds published in Gourmet magazine.

Nov. 26. A fire destroys Eden Foods warehouse and $800,000 inventory. The company, struggling for life, moves to rural Clinton, Michigan.

Oct. The Great American Tofu Cookbook by Patricia McGruter published by Autumn Press.

Dec. Rodale Press contacts Richard Leviton to announce plans to do a Soybean Newsletter, with Leviton as editor. The idea later falls through.

Dec. *Frijol Soja* (Soybeans) published in Peru by INTSOY.

Dec. *The Soysage Cookbook,* by Cloud and Burdett self-published in Vermont.

* San-J tamari starts to be imported to America from Japan.

* California and Maine become the second and third states to enact organic labeling laws. California's becomes a model and a standard for many other similar laws, and it is cited on many soyfood product labels. By 1988 there are 12 states with organic laws, and 5 more planned.

* Tofu production in Japan tops 1.1 million metric tons for the first time.

* Soybean research in America begins to shift from emphasis on production to emphasis on utilization.

* Syntex corporation of Palo Alto, California, recalls its soymilk Neo Mull Soy after it is found to be missing a key nutrient, chloride. Many children who used this product were mentally damaged.

* Lauhoff Grain Corp. acquired by Bunge.

* 1979-82. Years of the "salt craze." Growing concern with the level sodium in American food products begins to hurt sales of miso and shoyu. Continued.

7035. Aishima, T.; Nagasawa, M.; Fukushima, D. 1979. Differentiation of the aroma quality of soy sauce by statistical evaluation of gas chromatographic profiles. *J. of Food Science* 44(6):1723-27, 1731. Nov/Dec. [19 ref] Address: 1-2. Manufacturer's Name: Kibun Health Foods Co.
Manufacturer's Address: 1-11-8, Shin Sayama, Sayama-shi, Saitama-ken 350-13, Japan.
Date of Introduction: 1979.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64, 68-70. States that Kibun began making soymilk in 1977. By 1982 Kibun was the largest soymilk manufacturer in Japan and in the world.

7046. Ko, Tokubo. 1979. Kankoku no hakkô shokuhin [Korean fermented foods]. *Hakko to Kogyo* (*Fermentation and Industry*) 37(3):202-11. [75* ref. Jap]
• ***Summary:*** Shoyu and varieties of miso: 1. Historical background: The major foods used in Korea that contain soy are soy sauce (kan jang), soybean miso (doen jang), and red-pepper miso (kochu jang). Also there are jonkutsu jang, tamusu jang (makujang) and jupu jang. The suffix jang is the same as the Chinese chiang and the Japanese hishio, meaning mash. The origins of the varieties of shoyu and miso are not clear. But there was a character, tojang, in "Ronko" which was written by Oju? of the Gokan period. Also, there are some references to jang in the Analects of Confucius (Lun yu; Jap. Rongo). They indicate that jang existed years before Christ. In the "Kaitoyakushi?" there is a quotation from "Shintosho?" (618-907) that "shi" (fermented black soybeans or misodama) was a well known product of Bokkai (north of the Yellow Sea) in those days (Sakueki). It is thought that jang first appeared in Manchuria (Manshu was called Kokuri in those days) where soybeans were originally grown. Soybeans later spread to China and Japan.

In Korea the oldest record of any variety of jang was found in *Sangokushiki* (683) as "shôshi?". This indicates that people were already making shoyu and miso quite early on. In the *Ch'i-min yao-shu* (AD 530-550) a method of shi (or kaki) making was recorded. We guess that shi was the predecessor to today's meju (= misodama). The classic book Kyukosetsuyo? that was compiled in 1554 (Richo? period–Meisoo 9) is the oldest book that contains the techniques for making the Korean varieties of jang. About 8 different methods of production were recorded, amongst them the sink gan (chinjangho) and zojangho methods. In those days, meju (= misodama) was called misho. It is written that they steamed the soybeans, roasted and ground the wheat, then mixed the soy and the wheat in a 2:1 ratio. From this they made koji and dried it in the sun. That method was very similar to the koji-making method used in Japan. In Japan it was called kokori, hishio, or misho. Later, shoyu became known as jang? Miso became massho? and then returned to being called misho. Address: Presently: Tokyo Daigaku Biseibutsu Kenkyusho #3 Kenkyubu. Formerly: Seoul, South Korea. Tokoku Daigaku Shokuhin Kogakubu.

7054. Shurtleff, William. 1979. Names and addresses of makers of soy nuggets [fermented black soybeans] in Japan. Tokyo, Japan. 1 p. Unpublished manuscript. Handwritten, pencil.
• ***Summary:*** Note: Daitokuji natto and Hamanatto are both traditional Japanese types of fermented black soybeans.

At Daitokuji they may start in mid-July or August. Daitokuji natto we call "Savory soy chunks." (1) Moriguchi Kakko Shokuhin. Phone: 076-491-3568 or 492-0682. Mr. Nakano Takazo. Ushiwaka-cho 22, Murasaki-taki, Kita-ku, Kyoto 603. They also make large and small bean natto in Kyoto.

(2) Moriguchi factory in Shiga prefecture. Phone: 07495-2-1165. Nagahama Kojo, Kao-do, Umi-cho, Sakata-gun, Shiga-ken 526. Attention: Mr. Nakano Takazo. They have 40 years experience. Make 1,200 kg/year.

(3) Ikkyu, Daitokuji-nai [inside Daitokuji], Kita-ku,

© Copyright Soyinfo Center 2014

Kyoto. They make traditional Daitokuji natto but may be secret.

(4) Ikkyu-ji. Phone: 07746-2-0193. Aza-maki, Tanabe-cho, Kyoto-fu, 610-03. A second maker of Daitokuji natto. They seem to have taken the Ikkyu-ji name and started to compete with the original maker at Daitoku-ji. They make only 6 kegs a year, each keg holding 25 kg. 150 cm diameter and 75 cm deep. For temple and tourists. Only use the traditional process. Small scale. Makes ichi-mei Ikkyu-ji natto.

(5) Jofukuji natto. Are they in Nara?

(6) Tenryuji natto: Make at Tenryu-ji, Ukyo-ku, Kyoto–in Kyoto's Arashiyama district. Founded in 1339, it is the head temple of the Tenryu branch of Rinzai Zen Buddhism.

Hama-natto–which we call "Savory soy bits." (1) The top scholar is Hiroshi Ito at the National Food Research Institute. Phone: 645-9911.

(2) Factory: K.K. Yamaya shoyu. Phone: 053-587-0621. Komatsu 4880. Hamakita-shi, Shizuoka-ken 434. Attn: Mr. Suzuki Tsumotsu. Mechanized koji. Old vats. Makes miso and shoyu too. 30 minutes from Hamamatsu by Enshu railroad. Office in Hamamatsu city, Naruko-cho 8.

(3) K.K. Hamana. Phone: 053-433-6211. Joko-cho 1356. Hamamatsu-shi 431-32. Attn: Saito Shigeo. Eigo no Okiai. Mr. Suzuki.

(4) Daifuku-ji. Phone: 05352-5-0278. Related to Tokugawa Ieyasu. Mikkabi-cho, Fukunaga, Inasa-gun, Shizuoka-ken 431-14.

(5) Horinji. Phone: 0534-71-0838. Mr. Matsuyama Gizen (very nice). Tomitsuka-cho 1976, Hamamatsu-shi 432.

(6) Yamaya (new, from July 1976). Mr. Suzuki. Zaimoku-cho 30, Hamamatsu-shi 430. Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

7055. So, Enshi. 1979. Taiwan no hakkô shokuhin [Fermented foods of Taiwan]. *Hakko to Kogyo* (*Fermentation and Industry*) 37(2):102-12. [Jap; eng+]
• ***Summary:*** Includes a good map of Taiwan and its prefectures. In 1976 there were 433 soy sauce manufacturers in Taiwan. Taiwanese divisions of grading soy sauce plants numbered as follows: A (Ko) class, 39; B (Otsu) class, 12; C (Hei) class, 223; others 159. They produced the equivalent of 1,681,870 dozen bottles/month. Each bottle contains 540 ml of soy sauce, so 12 bottles contain 6,480 ml or 6.48 liters or 1.712 gallons. Thus Taiwan produces 10.89 million liters a month or 130.71 million liters/year of soy sauce. This is equivalent to 2.878 million gallons a month or 34.53 million gallons a year. Taipei prefecture produced 46.8% of this total, followed by Changhwa prefecture with 10.7%.

Soy sauce was initially made by monks. Because they didn't eat meat, it gave them important protein and fat. Gradually, it became more popular and spread to all parts of China. Monks also transmitted the method of soy sauce production to Japan and all over East Asia. It is said that around 1230 A.D., the Zen monk, Kakushin of Kofukuji, Kishu Yura, went abroad to southern Sung in China and brought back to Japan fermentation methods of Miso and Kinzanji Miso.

There are 3 types of soy sauce produced and sold in Taiwan today: (1) Tou-yu, soy sauce (*daizu shoyu*) which originated in China, (2) Inyu, black bean sauce which is the traditional Taiwanese soy sauce, and (3) Chemically prepared soy sauce (*kagaku shoyu*) which was invented in Japan. Processing techniques for making Koji and pressure-straining methods have made great progress in recent years. Address: Kokuritsu Taiwan Daigaku Kyoju, Ken Nogyo Kagaku Kenkyu-jo sho-cho, Nôgaku Hakase.

7058. Aihara, Cornellia. 1979. The calendar cookbook. George Ohsawa Macrobiotic Foundation, 1544 Oak St., Oroville, CA 95965. 253 p. [unnumbered]. Illust. by Nan Schleiger. Index. 17 x 24 cm.
• ***Summary:*** This macrobiotic cookbook is designed for cooking with the seasons. Breakfast and dinner menus are given for every day of the year. A glossary gives brief descriptions of the Japanese foods listed in the recipes. For example: "Tamari: traditional soy sauce (*shoyu*) made without chemicals. Tofu: curdled soy milk. Tekka: condiment of miso and vegetables cooked a long time." All recipes are numbered.

Soy-related recipes include: 2d. Baked mochi with kinako. 4. Kombu, age, albi nishime. 5. Black bean nishime [these are almost certainly black soybeans]. 8. Amasake. 8a. Amasake kanten. 13. Natto with pickled daikon leaves. 18. Vegetable miso soup. 20. Mackerel with ginger miso. 28 Wakame miso soup. 32. Kidney beans with miso. 35 Onion miso. 46. Burdock, carrot and lotus root with oily miso. 60. Vegetable oden (with stuffed age). 63. Collard greens with age nitsuke. 64. Home-made age (deep-fried tofu). 73. Home made natto I and II. 75. Northern white beans with miso. 80. Home made tofu and nigari. 80a. Clear soup with tofu and shingiku [sic, *shungiku* = chrysanthemum leaves]. 80b. Tofu-scallion miso soup. 82. Amasake cake with cream cheese frosting (3-layer, using 1 lb of dairy cream cheese). 87. Wheat gluten (made from 10 cups whole wheat flour and 4 cups unbleached white flour). 87a. Seitan (with wheat gluten

© Copyright Soyinfo Center 2014

and tamari soy sauce). 87b. Fresh wheat fu (with wheat gluten). 87c. Boiled fu. 87d. Fried fu (Gluten cutlet). 87e. Cutlet kabobs (with cooked wheat gluten). 97. Scallion miso. 100. Okara nitsuke (okara is "soybeans which are leftover after making tofu"). 132. Amasake cake. 135. Amasake yeasted doughnuts. 138. Vegetable kabobs with lemon miso sauce. 159. Koi-koku (carp soup with barley miso). 161. Amasake cake with fruit and nuts. 177. Buckwheat dumpling miso soup. 183. Cooked vegetable salad miso ai (miso dressing). 191b. Tomato sauce with miso. Amasake cookies. 197. Onion cream miso soup. 199. Soybean soup. 220. Tofu, snow peas and white rice miso soup. 229. Cucumber with miso. 233. Fresh corn tortillas with scallion and oily miso. 236. Toasted rice balls with soy sauce or miso. 244. Barley miso soup. 245. Tekka [miso]. 251. Pan-fried eggplant with lemon-miso sauce. 257. Green pepper with sauteed miso. 259. Tofu with mustard sauce. 261. Goma tofu (made from sesame butter and a little tamari soy sauce). 263a. Parsley miso pickles. 263b. Miso pickles. 266. Amasake wedding cake. 274. Shingiku miso soup. 290. Tofu with kuzu sauce. 294. Soybean nitsuke. 304. Kombu, dried tofu, age nitsuke. 305a. Millet and soybean soup. 329. Amasake crescent cookies. 333. Tofu-egg clear soup with watercress.

The Acknowledgments section begins: "After the French Meadows Summer Camp sponsored by the George Ohsawa Macrobiotic Foundation in 1972, I looked over the menus of the meals I served at camp. In revising them, I had the idea to keep a one-year record of menus. I thought this would be a practical, everyday help for those people beginning to cook...

"Since then, seven years passed." Address: Oroville, California.

7059. Aoki, Hiroshi; Ito, Kiyoe. 1979. Chôri to daizu [Cooking and soybeans]. Gakken Shoin K.K., Tokyo. 173 p. Illust. Index. 22 cm. [151 ref. Jap]

• ***Summary:*** Contents. I. Cooking and soybeans. II. Soybean molecules and soybean protein. III. Cooking and traditional soy protein foods. 1. Cooked whole soybeans (nimame), green vegetable soybeans (yude-mame, edamame), soy sprouts. 2. Roasted soy flour (kinako). 3. Tofu. 4. Deep-fried tofu pouches and tofu burgers (aburaage and ganmodoki). 5. Dried frozen tofu (kori-dofu). 6. Yuba. 7. Natto. 8. Tempeh. 9. Soymilk. 10. Miso (Miso soup, miso-ni, ae-mono). 11. Shoyu. IV. Cooking and new soy protein products. Address: 1. Prof., Otsuma Joshi Daigaku; 2. Prof., Tokyo Gaku Gei Dai.

• ***Summary:*** This is largely a compilation of information from many other books and articles. On the cover is a color painting of The Gardener (or Vertumnus), from his series, The Four Seasons, c. 1590, by Giuseppe Arcimboldo (or Arcimboldi) of Milano.

In Chapter 12, on China, the section titled "Meats and alternates" (p. 110-13) notes that the soybean is called the "Chinese Cow" [sic, "Cow of China"] because of its versatility. Soybeans are used as whole dry beans and as sprouts, or they can be made into a firm white curd called "Chinese cheese" [sic], which can be used in many different ways. Soybean milk may be used in much the same way that westerners use cow's milk. They are fermented to make the favourite condiment, soy sauce. "Bean curd sauce is fermented bean curd that is packed in jars and sold as red bean curd sauce or white bean curd sauce,..." Cantonese names for soy products are (p. 111-12): Mien chiang: A syrup-like sweet bean paste. Dow-foo (tofu). Foo yu (fermented tofu). Tiem jook (dried yuba, broken into pieces [sweet dried yuba sticks]). Wow doo [Wu dou]. Black soybeans. Dow see [doushi, fermented black soybeans]: Salted, fermented black bean paste [sic, fermented black soybeans] often garlic flavoured and used in small amounts as a condiment or seasoning.

In Chapter 30, on Japan, the section titled "Meats and alternates" (p. 336-37) notes that products made from soybeans include: (1) "Shoyu, a sweetish soy sauce made from wheat and barley [sic], soybeans, salt, and water." (2) Miso, or "fermented soybean paste," used mostly for flavouring soups [miso soup]. (3) Tofu, or soybean curd, is a staple in Japanese cookery. "Its smooth, custard-like texture and bland flavour make it an ideal ingredient. It is extremely versatile and readily absorbs other flavours. Many "restaurants in Japan take great pride in their tofu dishes."

In Chapter 31, on Korea, the section titled "Fruits and vegetables" (p. 350-51) discusses soybeans and their products at length. Soy sauce is used to season *kim* (nori) and other edible seaweeds. Soy sauce is an ingredient in "hot pepper mash" [*kochu jang*]. Soybeans are used to make "soybean mash" [*doen jang*]. Dry soybeans are roasted in an iron pot, then ground, and the roasted soy flour is used as a garnish over rice cakes [mochi] or plain cooked rice; children enjoy eating the coarser roasted bits that are sifted out of roasted flour or meal. Soybeans sprouts are eaten lightly cooked as a vegetable. Soybeans are also made into tofu (*tu bu*); a brief description of the process is given, in which the drained curds are left in their hemp bag to form a firm cake, which may be cut, dipped into soy sauce, or fried in sesame oil. "Oil can also be made from the soybeans, but it is not commonly used or prepared."

Although commercial soy sauce, made in factories, is now widely available, many Korean households still prepare their own soy sauce each fall. Boiled soybeans are pounded, molded into a cone shape, and set to dry until hard. They are then wrapped with rice straw, hung from eves, rafters or ceilings, and allowed to ferment for several weeks [until they become *meju*]. During the winter, these fermented cones may be stored in huge rice-straw bags kept in a cool place.

© Copyright Soyinfo Center 2014

In the spring, break the cone into small pieces and place in a large earthenware jar, nearly filled with water. Add salt, spices, red peppers, and a few charcoal lumps. Leave this in the sun for a few days [sic, 30-60 days] until the molded soybean chunks float to the top and the resulting liquid turns black. Ladle out and filter the black liquid, then boil it to make soy sauce. The solids remaining in the jar are used as soybean mash [after the charcoal is removed].

A portrait photo of the author, with a brief biography, appear on the rear cover and in the Introduction. Address: Ph.D. student, Ontario Inst. for Studies in Education, Toronto, Ontario, Canada.

• ***Summary:*** The prototype of soy sauce, a semi-liquid flavoring named *hishio*, was probably in use in Japan as early as the 8th century.

7063. Hasegawa, Takezi [Takeji]. 1979. An historical view of the development of Japanese industrial culture collections. In: P. Matangkasombu, ed. 1979. Proceedings of the Fifth International Conference on Global Impacts of Applied Microbiology. Bangkok: GIAM V Secretariat. xxxviii + 535 p. See p. 488-90. Held 21-26 Nov. 1977 in Bangkok, Thailand. [3 ref]

• ***Summary:*** The history of modern microbiology in Japan began with three key publications by foreign scientists who were studying sake in Japan. The first two, by the German scientist Korschelt, were published in 1876 and 1878. The third, by R.W. Atkinson, an professor from Britain, was published in 1881. These works aroused the interest of the Japanese government in the scientific administration of traditional fermentation industries. "Government interest in these industries led to the founding of the National Brewing Research Institute in 1904. One of its main research project was the microbiological study of sake brewing. To this end, numerous strains of microorganisms were collected for study in close cooperation with the University of Tokyo. In its first several years, the institute retained two excellent microbiologists, K. Saito and R. Nakazawa." A brief biography of each is given.

A chart shows the complex genealogy of Japanese culture collections. Japan's earliest culture collection began in the early 1890s at the Faculty of Agriculture, University of Tokyo. The second started at the Faculty of Agriculture, Hokkaido University in about 1920. In 1951 the Japan Federation of Culture Collections (JFCC) was founded. Today it is comprised of the 7 main culture collections in Japan: 1. The Faculty of Agriculture, Hokkaido Univ. 2. Inst. of Applied Microbiology, Univ. of Tokyo. 3. The Faculty of Agriculture, Univ. of Tokyo. 4. Inst. of Fermentation, Osaka. 5. Faculty of Technology, Hiroshima Univ. 6. Nagao Inst., Tokyo. 7. Faculty of Technology, Osaka Univ. Address: Inst. for Fermentation, Osaka Univ., Japan.

7064. Kohler, Jean Charles; Kohler, Mary Alice. 1979. Healing miracles from macrobiotics: a diet for all diseases. West Nyack, New York: Parker Publishing Co. 290 p. Index. 24 cm. [70* ref]

• ***Summary:*** This book is by and about people who were cured of cancer, apparently by following a macrobiotic diet, lifestyle, and worldview.

Miso soup is mentioned on pages 29, 30, 112, 122, 161, 169, 173. Miso-tahini spread p. 208. Miso, tekka, p. 131. Shoyu, p. 169. Soybeans, p. 122, 169. Soy ice cream, p. 214. Tamari, p. 112, 169. Tofu, p. 178 ("you can often find some tofu {some natural-foods stores are equipped to handle this perishable bean-curd}").

Seitan is mentioned on pages 202, 216, and 218.

The index also contains many entries for seaweed (edible), sesame oil, sesame seeds, sugar, sunflower seeds, tahini, umeboshi plum, vegetarian diets and nutrition, Zen, etc.

At age 16, while visiting a shrine in Akita (in northeastern Japan), Michio Kushi had a profound spiritual experience, which is described at length (p. 88). "I saw... that everything was being; everything was radiating light. I could then understand that everything is living, everything is breathing, including plants, grasses, trees, birds, and even houses, stones, and soil; everything without exception. Then I understood that life is nothing but light and vibration, or waves, and the universe is full of life, and is one continuity, yet is manifested in everything and every being."

Michio visited an organization in Tokyo named the World Government Organization. To Michio's surprise, the

© Copyright Soyinfo Center 2014

young people there "talked about food and cooking rather than world government. They introduced Michio to their teacher: Nyoichi Sakurazawa, whose name in the Western world was George Ohsawa."

"Ohsawa never spoke to Michio about food. It was always the view of the Universe he talked about–and of yin and yang."

Jean Charles Kohler (husband) was born in 1916 and Mary Alice Kohler (wife) was born in 1917.

Boiled/simmered (niru), steamed, broiled, fried, sauteed, tossed salad (with tofu dressing), soups, other, okara, deep-fried tofu cutlets, deep-fried tofu pouches, kôya-dofu. Part II: Chinese style tofu recipes. Tossed salad, steamed, boiled/simmered, deep fried, deep-fried tofu cutlets, deep-fried tofu pouches. Address: Tokyo, Japan.

7070. Ogawa, Hiroshi. 1979. Noda no taru shokunin [The craftsmen who make wooden kegs in Noda]. Nagareyama, Chiba prefecture, Japan: Ron Shobo. 150 p. Series: Furusato Bunko. [20+ ref. Jap]*

7071. Okita Enterprises, Inc. 1979. Masuko Sangyo Miniplant: Tofu & soy milk machine. 960 E. 12th St., Los Angeles, CA 90021. 12 p. Undated. 28 cm.
• ***Summary:*** A photo on the cover shows the Masuko Sangyo Miniplant on a blue background. Okita Enterprises is the sole agent in the USA for the equipment shown in this catalog. Okita has a training center at 723 S. Stanford Ave., Los Angeles, California 90021. The body of the catalog shows photos and gives details on the following equipment: The Miniplant and related parts (p. 2-5). The Super Masukoroider, a soybean grinder with special non-permeable grinding stones made by Masuko Sangyo K.K. in Japan (p. 6-7). Various sizes of manual and automatic tray packagers, the smallest of which is the Monkey Packer 1 (p. 8-9). The new Asahi Container (tofu pressing and forming box), made of stainless steel and Tofu-Tex "cloth" by Toyo Plant in Japan. Address: Los Angeles, California. Phone: (213) 629-2206.

7072. Okita Enterprises, Inc. 1979. Sany Ace "Unit": Unit type sanitary plant [Automatic tofu & soy milk machine]. 960 E. 12th St., Los Angeles, CA 90021. 6 p. 30 cm.
• ***Summary:*** On the cover is a photo of the Sany Ace plant on a blue and white background. The manufacturer is Sato Shoji Co. Ltd. in Japan. Okita Enterprises is an importer of this equipment. Contents: DEvelopment of the "Sany Ace (Unit)." Characteristics of Sany Ace. Flow sheet, with the names and a mechanical drawing of each piece of equipment in the system. Features of the grinding unit, boiling unit, and squeezing unit (with a photo of each). Option: Advanced separator for labor saving: Vibrating screen, Brown squeezing unit (with photos of both). Address: Los Angeles, California. Phone: (213) 629-2206.

7073. Okita Enterprises, Inc. 1979. Rietz Manufacturing Co. 960 E. 12th St., Los Angeles, CA 90021. 4 p. Undated. 28 cm.
• ***Summary:*** A black-and-white photo on the front cover

© Copyright Soyinfo Center 2014

shows a Rietz disintegrator on a green background. A black-and-white photo on the rear cover shows a Rietz tofu and soymilk cooker on a white background. The inside two pages show mechanical drawings of these two pieces of equipment integrated into the OK-FRSB 1000 tofu plant, which has a capacity of 10-15 gallons/minute. The text states that this "could very well become the Tofu plant of the future." Note: Rietz (c/o Bepex Corp.) is located in Santa Rosa, California. Address: Los Angeles, California. Phone: (213) 629-2206.

7074. Okita Enterprises, Inc. 1979. Brown International Corp. Sato Shoji Co., Ltd. 960 E. 12th St., Los Angeles, CA 90021. 4 p. Undated. 28 cm.
• ***Summary:*** A black-and-white photo on the front cover shows a Brown 2202 disintegrator-extractor on an orange-brown background. Black-and-white photos on the other three panels show the following pieces of equipment, each on a white background. (1) Okita-type separation unit consisting of a Sweco Separator and a Brown Extractor. (2) Brown 3900 continuous process screw extractor. (3) Sany Ace unit, made by Sato Shoji Co., Ltd. of Japan. Address: Los Angeles, California. Phone: (213) 629-2206.

7075. Okita Enterprises, Inc. 1979. Automatic tray packager: US 900 ss–electro-mechanical press, and US 90 ssa–compressed air press (Leaflet). 960 E. 12th St., Los Angeles, CA 90021. 1 p. Undated. 28 cm.
• ***Summary:*** A black-and-white photo on the front cover shows one of these large packaging units on a white background. The packaging machine is "for tofu, seafood, pickled vegetables, or any other product that may require a water tight seal." Produces 500 to 1,500 packages/hour. The dimensions of each machine are given. Address: Los Angeles, California. Phone: (213) 629-2206.

7076. Riker, Tom; Roberts, Richard. 1979. Directory of natural and health foods: A sourcebook for dietary revolution. New York, NY: Putnam (A Paragon Book). 320 p. Index. 37 cm.
• ***Summary:*** The first part of this book (p. 7-49) consists of essays on natural foods and nutrition (some reprinted). Part two is a commercial catalog/directory of natural foods available in 1979; it lists and describes (with may photos and labels) products from most of the major U.S. natural foods manufacturers. An Index (p. 293-308) lists participating companies alphabetically.

Soy-related products include: Hain Super-E Soy Oil and Crude [unrefined] Soy Oil (Los Angeles, California, p. 55). Health Valley Soy Moo (Montebello, California, p. 56). Edward & Sons Miso-Cup (Union, New Jersey, p. 57). Family Orchards Fruit & Nut mixes, incl. Back Packer+*, Hi-Fiber Mix+, Hi-Iron Mix+, Hi-Protein Mix+*, Hiker's Helper, Mixed Nuts*, Mountain Munchies*, Tamari Mixed Nuts* (+ = contains Soy Nuts; * = contains Tamari Peanuts) (Berkeley, California, p. 60-61). Niblack Tamari Pumpkin Seeds (Pepitas), Tamari Roasted Sunflower Seeds, Liquid Lecithin, Granular Lecithin (Rochester, New York, p. 72-73). Arrowhead Mills Unrefined Soybean Oil (Hereford, Texas, p. 75). Good Morning New England Granola incl. Cashew-Raisin Bran-ola (with okara soy fiber), Happy Trails Mix (with roasted soynuts) (Amherst, Massachusetts, p. 79). Elam's Soy Flour (Broadview, Illinois, p. 81).

A long section on Erewhon and its products (p. 84-108) is probably the reproduction of an Erewhon catalog. Erewhon is now located at 3 East Street, Cambridge, MA 02141. Following several pages about the company and its philosophy and standards, each of its major products is discussed in detail, often with nutritional analyses. A label for Soy Flour (organically-grown stone-ground, 24 oz.) is shown; the main recommended use is for making soy milk! A major part of the presentation is titled "Japanese food guide." Products described include: Umeboshi (2 pages): Plums pickled in brine (umeboshi). Umeboshi paste. Plum concentrate (*bainiku ekisu*). Miso (2 pages): Hatcho, waka-Hatcho, soybean, barley, brown rice, rice, and natto miso varieties. Tekka (made with Hatcho miso). Sweets made from mizu ame [rice syrup]. Nigari. Gomashio. Koji starters for various types of miso or shoyu. Goma-muso (60% barley miso and 40% whole sesame seed butter). *Gomamiso furikake* (with barley miso, whole roasted sesame seeds, and shredded nori seaweed). Kombu candy. Kokkoh. Dried tofu (*Kohya-dofu*). Brown rice sake. Mirin. Gluten cakes (*Kuruma-fu*). Seitan (Gluten cooked in shoyu). Rice crackers seasoned with tamari soy sauce. Kuzu (3 pages). Tamari and shoyu (4 pages; Johsen Shoyu is made in Sendai and tamari is made by San-jirushi Co.). Seaweeds (4 pages): Kanten, arame, hijiki, kombu, ne-kombu, nori, seasoned nori, kanten, kanten flakes, wakame, and mekabu.

Good Food brand Soy-Millet Bread (Austin, Texas, p. 120). Arrowhead Mills Bulgur-Soy Grits (p. 121). Erewhon Morning Cereal, and Infant Cereal (each containing soy beans). Chico-San Black Soybeans (imported), and Azuki Beans (Dainagon imported small red), and Lima Soy Sauce (Chico, California, p. 126-27). Arrowhead Mills 7 Grain Cereal, and Deaf Smith Crunch (granola-type cold cereal) (each contains soybeans, p. 130).

The section on pages 188-197 is titled "Soy." It lists Farm Foods Tempeh Kit, Tempeh Starter, Natural Nigari for Curding Tofu, Soyflour, Whole Cleaned Soybeans, Good for Ya Textured Vegetable Protein (Summertown, Tennessee, p. 189). New England Soy Dairy Tofu (with many tofu recipes, Greenfield, Massachusetts, p. 192-96).

The Redwood Sprouter Co. sprouter containing Soy Sprouts (1976, Austin, Texas, p. 202-04). Worthington Foods (a photo shows their line of 38 products). Millstone Burger-Like (with soy flour and TVP), Wheat Fries (with wheat gluten), Tender Cuts (with wheat protein and soy flour) (Penryn, California, p. 222-23). Sunrise Health Products

© Copyright Soyinfo Center 2014

Lecithin Granules (p. 274-75).

7077. Sato Shoji Co. Ltd. 1979. Hôsô-dôfu shisutemu [Bean curd product system]. Nakano 3-33-9, Nakano-ku, Tokyo, Japan. Manufacturer's catalog. [Jap; Eng]
• ***Summary:*** On the cover, a large rectangular color photo in a blue frame shows a a cake of tofu, served as chilled tofu with a dab of ginger on top, in a glass bowl, with green shiso leaves on one side. Near it is a pair of wooden chopsticks on a stand and a second smaller glass bowl. All three of these items are set atop eight pieces of green bamboo, which are on a background of white pebbles. On the inside 3-page spread, a color photo shows Sato's modern Sany System. Since 1958 Sato has specialized in tofu packaging machines. Its Sany Ace System is widely used. "Bean curd is protein source in the world!" On the back page is a flow sheet of the Sany System, plus three color photos showing finished and packaged tofu products, a case of packaged tofu, and the tofu displayed in the refrigerated section of a department store. Address: Tokyo, Japan.

7078. Sato, Yoshiya. 1979. Fûmi o uru otoko-tachi: Yonjû oku nin shijô ni idomu Kikkôman [The men who sell flavor: Kikkoman challenges a world market of 4 billion people]. • ***Summary:*** Bibliographies are given for soybeans (protein), soybeans (other nutrients), tofu, natto, other soyfoods, and azuki beans. Address: Nihon Joshi Daigaku, Kaseigaku-bu [Home Economics Dep., Japan Women's Univ.].

7082. Wang, Hwa L.; Hesseltine, C.W. 1979. Mold-modified foods. In: H.J. Peppler and D. Perlman, eds. 1979. Microbial Technology. 2nd ed. Vol. 2. Fermentation Technology. New York: Academic Press. 544 p. See Vol. 1, p. 95-129. [90 ref]
• ***Summary:*** Volume 1. Microbial processes. Volume 2. Fermentation technology. Contents: 1. Introduction. 2. Soy sauce. 3. Miso. 4. Hamanatto. 5. Sufu [fermented tofu]. 6. Tempeh. 7. Ang-kak (red rice, used as a color agent). 8. Absence of mycotoxins in fermented foods. 9. Conclusions.

For each food is given: General description, method of preparation, composition [chemical / nutritional]. In addition for tempeh is given: Tempeh-like products, biochemistry and physiology of *Rhizopus oligosporus,* changes occurring during fermentation, nutritional value.

"Soy sauce "is known as chiang-yu on China, shoyu in Japan, kecap in Indonesia, kanjang in Korea, toyo in the Philippines, and see-iew in Thailand. In the Western World the product is often referred to as soy sauce." Japan is the leader worldwide in sauce production; it has the largest fermentation plant and uses the most advanced technology.

Hamanatto: Products similar to Japan's hamanatto are known as tou-shih in China, tao-si in the Philippines, and tao-tjo [sic] in the East Indies [Indonesia]. A typical process for making hamanatto in Japan, based on information supplied by Dr. T. Kaneko of Nagoya Univ., Japan, is as follows: Wash soybeans, then soak, steam until soft, drain, and cool. Mix with parched wheat flour in the ratio of 2 parts soybeans to 1 part flour. Inoculate the soybeans with a short- or medium-stalked strain of *Aspergillus oryzae.* Incubate for 1-2 days until the beans are covered with a fragrant mycelium and have become soybean koji. Pack the soybeans in a container [wooden keg] with (for example) 2.5 kg soybean koji, 650 gm salt, 3.6 liters water and some freshly sliced gingerroot. Cover the container tightly and age under pressure for 6-12 months. Remove beans from liquid and dry them in the sun to give hamanatto. The composition of the brine may differ among manufacturers.; thus the finished hamanatto differs somewhat in taste and appearance. "Japanese hamanatto is rather soft, having a high moisture content. Chinese tou-shih has a much lower moisture content... and therefore is not so soft. Tao-tjo tends to have a sweet taste because sugar is often added to the brine."

Shoyu in Japan: Although there are more than 4,000 shoyu makers in Japan, the largest 4-5 companies produce about 50% of the total.

Note: A wide variety of dairy cheeses, especially of French origin, are made with surface mold growth. Typical varieties are Camembert, Coulommiers, and Brie. Address: NRRC, Peoria, Illinois.

Japan Times. vii + 408 p. See p. 108. 19 cm. [Eng; jap]
• ***Summary:*** A very useful book with excellent definitions of Japanese words in English. It is divided into nine parts; No. 2 is titled "dietary habits" (p. 79-131). Each definition has four parts: (1) The word is written in romanized English, with diacritical marks and a hyphen in compound words. (2) The word is written in characters. (3) A long definition is given in English. (4) Related words and "see also" words are given (romanized) and key words in the definition are defined in Japanese (Chinese characters).

Words only distantly related to soy are preceded below by an asterisk. Soy-related words: abekawa-mochi (with "sweetened yellow soybean powder–kinako"), abura-age (fried soybean curd), aemono, age-dama, age-dashi ("soybean curd fried lightly without a tenpura batter"), Aji-no-moto ("a popular brand of monosodium glutamate"), ama-zake, * an (sweet bean jam = azuki-an; Can be strained {*koshi-an*} or mashed {*tsubushi-an*}), dengaku-tofu, doburoku, eda-mame, fu ("dried, bread-like pieces of wheat gluten"), fucha-ryori ("Chinese-style vegetarian dishes served in some Japanese temples of Chinese origin"), gan-modoki, goma-ae, goma-shio (widely used with sekihan), hiya-yakko, inari-zushi, isobe-maki (with mochi, soy sauce and nori), kara-age, kashiwa-mochi (stuffed with sweet [azuki] bean paste), kina-ko ("yellowish soybean powder"), kishimen (seasoned with soy sauce and topped with a few pieces of fried bean curd), kitsune udon (seasoned with soy sauce and topped with a few pieces of fried bean curd), koji, koya-dofu, * kuzu-manju (a ball of sweet redbean paste {azuki-an} with a covering of kuzu starch), kuzu-mochi (with kinako), masu (a small square measuring box, usually made of Japanese cypress {*hinoki*}. The three sizes measure 0.18, 0.9 and 1.8 liters. It is constructed by dovetailing, without the use of nails or adhesive. It is used for measuring soybeans, cereal grains, or for drinking saké), miso, miso-shiru, miso-zuke, * mochi, nabe-mono (often contain tofu; examples are sukiyaki, yose-nabe, and mizu-taki), nama-gashi (traditional Japanese confections made with beans and/or glutinous rice, cooked but not baked), natto, * nori (a dried sheet of laver, a seaweed), * oboro (related to sushi, not soy), oden, * ohagi (coated with sweet redbean paste {*azuki-an*}), shiru-mono (the two basic types are clear soup and miso soup), * shiruko (sweet beanpaste soup with mochi; see zenzai), shojin-age, shojin-ryori, shoyu, suki-yaki, sukiyaki-nabe, suri-bachi, suriko-gi [suri-kogi], sushi, sushi-ya, teri-yaki, tofu, * ume-boshi (a Japanese pickled plum), wa-gashi (Japanese-style confectionery), wakame, warishita (soy sauce flavored seasoning), washoku = nihon-ryori, yaki-dofu, yaki-mono, yakko-dofu, yu-dofu, * zenzai ("a thick kind of sweet redbean soup").

Page 24 defines hiragana (lit. flat kana) as "The cursive form of *kana* script, one of the two sets of Japanese syllabary writing. *Hira-gana* is more commonly used than the other set called *kata-kana.* It is usually used for writing inflectional endings and function words not represented by Chinese characters (*kanji*)*."* Address: Tokyo, Japan.

7084. Yoshikawa, Koichi. 1979? [The correct way of making tofu and deep-fried tofu]. Yoshikawa Shoji Co., Honmachi Wako Building, 2-50 Kita-Kyuhoji-machi, Higashi-ku, Osaka, Japan. 24 p. [Jap; eng+]*
• ***Summary:*** Soyfoods Center has done a 16-page translation of this booklet. Address: Osaka, Japan.

7085. Shurtleff, William; Aoyagi, Akiko. 1980. Miso production: The book of miso volume II. Rev. 2nd ed. Lafayette, California: New-Age Foods Study Center (Renamed Soyfoods Center in Sept. 1980). 80 p. Jan. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [82 ref]
• ***Summary:*** This book describes how to start and run a commercial shop making miso on any of three scales. Contents: Introduction. 1. Setting up a traditional shop: Tools and ingredients. 2. Making red miso in a traditional shop. 3. Making red miso in a semi-traditional shop. 4. Making Hatcho and Mellow white miso in semi-traditional shops. 5. Making koji starter in a semi-traditional or modern shop. 6. Making light yellow miso in a modern factory. Appendix A: Resources; People and institutions connected with miso production. Bibliography. Measures, weights & equivalents. The Soyfoods Center. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

7086. Ebine, Hideo. 1980. Re: Answers to questions about miso, especially spray dried and freeze-dried miso. Letter to William Shurtleff at Soyfoods Center, Feb. 19–in reply to inquiry. 2 p. Typed translation of original letter only.
• ***Summary:*** Discusses: How to spray dry and to freeze dry miso; advantages and disadvantages of each. Of the roughly 200,000 tons of fresh miso made in Japan, less than 3-4% of the total is dehydrated. Thus, about 10,000 tons. Of this, an estimated 80% is freeze-fried and 20% spray dried. Dehydrated miso is used mainly in instant miso soups. The biggest maker of freeze-dried miso in Japan is Yamajirushi Miso in Nagano prefecture.

New developments with miso in Japan: Stricter sanitary codes for manufacturers. Less use of food additives. Sorbic acid-K (*Sorubin-san K*) is mostly phased out. Sulphite used to bleach soybeans is no longer used. Miso consumption in Japan is no longer increasing. More Japan-grown soybeans and rice are used in miso, which greatly improves the quality. Address: Applied Microbiology Div., National Food Research Inst., Ministry of Agriculture, Forestry and Fisheries, Yatabe, Ibaraki-ken, Japan.

7087. Aburai, Hiroko. 1980. Chôshi Shôyu Jôzôgyô Koyô Rôdô [Labor employment in the Choshi Shoyu fermentation industry]. *Kinsei* (*Modern History*) 4:24-40. Feb. [Jap]* Address: Japan.

7088. Marusan, Inc. 1980. Instant energy in a bowl. Marusan introduces naturally delicious instant miso soups (Ad). *Whole Foods* (*Berkeley, California*). Feb. p. 5.
• ***Summary:*** The top half of this full-page color ad is a photo showing yellow boxes and foil packets of this instant miso soup, and two bowls of the miso soup. The text begins: "Marusan Instant Miso Soup is an ideal pick-me-up for those who want a quick and convenient meal supplement at home, on the job, or when travelling." The products are imported by offices in New Jersey and Rosemead, California. Address: P.O. Box 507, Bergenfield, New Jersey 07621. Phone: (201) 385-5367).

7089. McGregor, Otis. 1980. Report from Ontario [Soya-Bean Growers' Marketing Board]. *Soycraft* (*Colrain, Massachusetts*) 1(2):10-11. Winter.
• ***Summary:*** "The Ontario Soya-Bean Grower's Marketing Board is a growers' board. In 1949, soybean growers in Ontario petitioned the Agriculture Department to establish a marketing plan and soybeans were declared as a regulatory commodity under the Ontario Farm Products Act. Soybean production in Ontario started in tests plots at the Ontario Agricultural College, Guelph, in 1893. By 1927, O.A.C. evaluated over 100 varieties. The Harrow Research Station began soybean plots in 1923 and later produced such varieties as Harman, Hardome, Harasoy, Harlan, Harcor, Harwood.

"Soybean acreage in Ontario competes with field corn."

Soybean production in Canada is 98% of Ontario origin. Ontario is deficient in production to meet the needs of the three crushing plants which now possess a daily production capacity of 3,550 tons. To be self-sufficient, production would require 1.2 million acres. Last crop year, the Ontario crushers purchased 13 million bushels from the U.S. which enter Canada tariff-free.

"In 1954, the Board, endeavoring to achieve greater competition in the marketplace, exported soybeans to Europe. In 1974, with the variety Harwood, the Board entered the human consumption market in Japan. Harwood, having a greater water-soluble protein, soon became distinguished in that market for tofu and miso.

"The Board negotiates on behalf of its 16,000 growers, the terms and condition of sales from the farm-gate to dealers and processors."

"Editor's note: Soybeans that the Board markets, suitable for tofu-making, include Hodgson, Wells, Harosoy 63, Harcor, Amsoy 71, Maple Arrow, and Evans." Address: Secretary-Manager OSBGMB, Box 1199, Chatham, ONT Canada N7M 5L8, Canada.

• ***Summary:*** Comments by and photos of Luke Lukoskie of Island Spring, Richard Kaneda of Kanai Tofu Factory, Tom Timmins of New England Soy Dairy, Steve Demos of White Wave, Kathryn Clarke of Southwest Tofu. Comments also by Bill Shurtleff of New-Age Foods Study Center, Bob Bergwall of Nasoya Foods, Steve Fiering of The Soy Plant, Robert Dolgin of Farm Foods, and Norman Holland of Northern Soy.

7093. Strayer, George M. 1980. The battle of the coconut cow. The early days of the American soybean industry and its surprising similarity with today's soyfoods movement. *Soycraft* (*Colrain, Massachusetts*) 1(2):50-53. Winter.
• ***Summary:*** Contains an excellent history of Strayer's work with soybeans, and an early history of the American Soybean Association. So far as George has been able to determine, his father, Bert Strayer, "was the first man west of the Mississippi River to use a combine on soybeans." One had been used successfully the year before by the Garwood brothers in Illinois. "We worked with the International Harvester Company and bought the first of their combines to be used on soybeans. It was a power take-off drive machine with a folding platform. The outer end of the cutting platform folded up so that the combine could be driven through farm gates. It was a machine designed for farm use on grains and for a one-man operation. We soon learned that on soybeans the operation was a two-man job–one man driving the tractor and keeping the cutting platform in the right position on the rows, while the other man controlled the cutting height while riding on the tractor platform.

"For a period of several years, we had the only combine being used on soybeans in this entire area. The combine carried a tank, the top of which held about twenty-five or thirty bushels that could be removed from the tank by driving a wagon or truck under the edge of the tank and pulling a

© Copyright Soyinfo Center 2014

lever which opened four holes along the tank bottom and allowed the soybeans to run out."

In Sept. 1927 George Strayer attended his first meeting of the American Soybean Association, held at the University of Illinois. "One thing that sticks indelibly in my mind is a statement made by W.K. Kellogg, of Kellogg's cereals, Battle Creek, Michigan. He said: 'Some day people in the U.S. will realize how foolish it is to feed one hundred pounds of soybeans to livestock and get back a very small poundage of meat products which have a protein inferior to the protein fed to the livestock."

The "Battle of the coconut cow," as Strayer calls the margarine-butter controversy, was the battle to get margarine legalized in America. First they had to work on the federal level, which took six years of cooperative work by the soybean, cotton and the margarine industries. "Then we went into fourteen different states to change the state laws. We were successful in getting a small tariff placed on coconut oil in favor of soybeans at the federal level.

"In September 1940, the Board of Directors of the ASA met in Dearborn, Michigan and decided we needed a publication because here we are, growing soybeans all over the country, but who knows what's going on, what's being grown, the same thing soycrafters are now discussing. I took the job as editor of the *Soybean Digest* and we started out with sixteen pages and had a heck of a time finding advertising to support it. Before my career as editor ended, the magazine was going into seventy countries with as high as one hundred twenty pages per issue. It was designed for people who grew soybeans, giving them the kind of information soybean growers needed. And the growing association went just as far as we could in promotional and legislative work to protect the interests of soybean growers.

"During the World War II period, the U.S. acreage in soybeans doubled, then redoubled, because we had been dependent on other areas of the world for our fats and oils, but the supply lines were cut off. At the end of the war we had far more soybeans than we could assimilate. Have you ever eaten white margarine? It tastes the same as yellow margarine, but doesn't look nearly as good. Back then we had a federal law that said it was all right to make margarine, put it in a plastic bag, and put in a little capsule of yellow coloring matter which the consumer would work through the bag [by squeezing the bag innumerable times] to color the margarine. The legislation banning the sale of yellow margarine and making the sale of white margarine difficult went back to the days of the 'coconut cow' which had been a major issue before soybeans came into the picture to any extent. Right after the war we went to Washington and spent enough time there to have the federal margarine law changed to allow the manufacture and sale of colored margarine. Margarine is now in second place as a user of soybean oil in the U.S. and margarine consumption is approximately twice as much per capita as butter. When we were working on changing the law, it was the reverse."

"The German army had used soy protein during the war and issued a soybean cookbook to army chefs on how to use soy protein, soy flour in army diets. Our basic answer was, yes, soy protein will eventually become a major part of the protein source for Germany, just as it will in much of the world."

"In 1955 I was asked to go to Japan to make a study of whether American soybean growers ought to be looking at Japan as a market for our beans. Keep in mind that soybeans came to us from the Orient and here we were talking about selling soybeans back to Japan. I spent seven weeks there and visited many miso, tofu, natto, kinako and tempeh [sic] plants, and I decided that, yes, there was a market. But the first thing a Japanese buyer would tell me was, you can grow excellent soybeans in the U.S. but why do we get such poor quality beans from you? One of the first things we did was change the federal grading standards in a manner which made it possible for the Japanese buyer to purchase soybeans on a federal grade that was meaningful. In 1956 I did the same job in ten countries of northern Europe and wherever I went, I heard the same story about poor quality soybeans. At that time we were in the process of changing the grading standards through public hearings. Today more than fifty percent of all soybeans grown in the U.S. go into the export market as raw soybeans, meal, or oil.

"Prior to World War II we were not an exporter of soybeans. A quarter of my time between 1955 and 1967 was spent outside the U.S. contacting potential buyers; I also helped establish the Japanese-American Soybean Institute, an unheard of concept previously because the miso makers didn't talk to the oil crushers or tofu makers. There was no liaison, no cooperation among the commodity groups–each operated independently.

"Our first job was to form this institute with representatives from each of the trade groups on the Board. Today Japan imports over one hundred million bushels of soybeans each year from us–our largest customer for U.S. soybeans outside our own country.

"Soy protein is the most successful food ingredient in the world because it is the most nearly complete of all the known vegetable proteins. There is no other vegetable protein grown widely and in quantity that can begin to match soy protein, It is the most nearly balanced in the ten essential amino acids of any vegetable protein. When we talk about soy protein, we mean something that has a potential far beyond anything we have yet realized,..."

7097. Belleme, Jan. 1980. Re: Studying miso-making with the Onozaki family in Yaita, Japan (Letter to the editor). In: Edward Esko and Wendy Esko. 1980. Macrobiotic Cooking for Everyone. Tokyo: Japan Publications, Inc. 272 p. See p. 138-39. Nov.
• ***Summary:*** "John and I arrived in Tokyo late in October. After a few days there, we visited the Sendai Miso-Shoyu (Soy Sauce) Company and then went to Yaita (about halfway between Tokyo and Sendai) to meet our miso teacher. This experience has surpassed our wildest dreams. We are living with this family in their 300-year old grass-roofed house in a very traditional part of rural Japan. This family has been on this land for over 500 years.

"The miso shop is perfect for our study. It's fairly small and very traditional–most of the work is done by hand, with the aid of just a few simple machines. The Onozakis make no compromises in terms of quality. They make a 1½ year kome [rice] miso aged in huge cedar vats held together with braided bamboo. This miso, very mellow, delicious, and unpasteurized, can be eaten every day without becoming tired of it. We work alongside the Onozakis 6½ days a week, so we have gotten a great deal of experience. For the whole month of March, Mr. Onozaki has put John in charge of making the *koji,* which is the most important and difficult part of making miso. He is to make all the decisions regarding temperature, seeding, and ventilation, so by the time we leave we should feel confident enough to do it on our own.

"The family consists of a 78-year-old grandmother, her son and his wife, and three daughters. They are a very hard-working, thoughtful, and humble family of samurai descent. The women in the area, and Mrs. Onozaki in particular, are just unbelievable. Mrs. Onozaki does the work of three people and doesn't even know it. She (and most women around here) know everything they need to know, from childcare to gardening, cooking, pickling, natural remedies (both foods and herbs), sewing, flower-arranging, and keeping their husbands happy. I have so much to learn from her. I have never seen her angry, in fact she is usually smiling and has a great sense of humor.

"Our schedule is intense. Before breakfast, I must wash our clothes in ice-cold mountain water (they have no hot running water), clean our room, and steam the rice. After a simply breakfast we begin work at 8:00. The work is hard and long and the conditions over the past 2½ months have been either extreme cold or extreme hot (cold in the shop, hot in the *koji* room). After work we have dinner, wash up, and retire to our room for a few hours of studying, writing, taking notes on what we learned during the day, etc.

"For the past 2 months the average morning temperature in the house has been 0ºC (35ºF.). The only heat is provided by the *kotatsu,* or the small table with a built-in heating unit."

"The old people are our favorites–we love to listen to their stories. They're incredibly strong and hard-working; many working well into their 70's and even 80's. For just one of several examples, there's a 79-year old man working here now. He's doing the plaster work on the Onozaki's new storage building. Every morning he's up at 6, eats breakfast, packs a light lunch and takes off on his 10-speed for the bitter-cold 5-mile ride to work. He works out there by himself all day, every day. I could go on and on about the old folks–there's the 70 year-old barrel-maker who came to repair 3 of Mr. Onozaki's miso vats; the 69 year-old 'traveling saleslady' who walks from house to house with a huge pack of wares on her back; the 85 year-old man who came bicycling up on his day off to buy some miso; the 78 year old grandmother we live with, etc., etc. They are such an inspiration to us.

"We are the only foreigners living for miles around and the only Americans most of these people have ever talked to, so of course we attract a great deal of attention. Recently we have attracted the attention of the media. It all started when a local newspaper came to interview us and take our picture. This was followed by a magazine story, then Japan's leading national newspaper, the *Asahi,* came. This resulted in one live radio interview, another magazine story and two fifteen minute TV stories on 2 national networks. All of this interest took us very much by surprise. They are mostly interested in our views on American foods as opposed to traditional foods, our ideas on Japanese tradition, and the relationship between food, health, and tradition. So, as you can see, this has been a most rewarding experience..." Address: Yaita, Japan.

March. [11 ref. Jap; eng]
• ***Summary:*** Soybeans imported from the United States (IOM = Indiana, Ohio, Michigan) and China, as well as two different kinds of soybeans grown in Japan for making natto were stored at different temperatures (15, 25 and 35ºC) and relative humidities (RH) (60, 70 and 80%).

"Changes in the content of sugars and starches in these samples during storage were as follows: (1) All samples tested showed a similar pattern of change of sugars during storage." (2) Under the conditions of 15ºC and 60 or 70% RH, virtually no change in sugars was observed during storage for 12 months. (3) A greater change was found at 15ºC and 80% RH than at 25ºC and 60% RH. (4) An increase in raffinose content concomitant with a decrease in stachyose content was clearly observed at 25ºC and 80% RH. (5) At the start of storage, the samples contained little low molecular weight sugars except pinitol, but the content of these sugars increased significantly during storage. These sugars included such sugar alcohols as sorbitol and galactitol. Glucose and galactose showed only a slight increase. (6) No change in starch content "was detected in these samples except for the one Japanese sample which showed a decrease during storage at 25ºC and 35ºC." Address: 1-3, 4 National Food Research Inst.; 4. Okame Natto.

7101. Nikkuni, Sayuki; Itoh, Hiroshi; Takagi, Hitoshi; Suzuki, Tadano; Ebine, Hideo. 1980. [Utilization of soybean cooking drain]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 36. p. 163-70. March. [30 ref. Jap; eng]

• ***Summary:*** Linda Barber, an American home economics and lifestyle teacher, has the theme "Cooking with Love." She says "I like tofu very much." There is a steady stream of applicants for her "Tofu Cooking" classes at the Kobe YWCA, and for the next year twice as many classes each month are planned. Three photos show Linda Barber in a white apron making tofu on a kitchen scale and teaching Japanese about Western-style tofu cookery.

7107. Kikkoman International Inc. (KII). 1980. Kikkoman: the company and its soy sauce (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Shurtleff and Aoyagi visited Kikkoman's office in Japantown, armed with a list of questions.

Why doesn't Kikkoman use alcohol as a preservative in their shoyu in the USA? (1) Some people, such as Seventh-day Adventists, object to its use in foods. (2) There is a high tax on U.S. products containing added alcohol (ethyl alcohol = ethanol); for shoyu it is about $0.15 per gallon of shoyu. (3) Kikkoman believes that sodium benzoate, which has been approved by the FDA, is safe. It is contained in some natural foods such as dry shiitake mushrooms and cranberries.

Kikkoman conducted a chemical analysis of San Jirushi tamari. The regular contains 2.5% ethanol (alcohol) and the low-salt (low-sodium) contains 3.5%. Ordinarily tamari in Japan contains only about 0.1% ethanol. Therefore they must be adding alcohol as a preservative and not listing it on the label. This tamari also contains 6-10% carbohydrates. If it contained no wheat, it have only 5-6% carbohydrates. Therefore they must be adding wheat.

Saccharomyces rouxii and Torula are yeasts, not molds; they can eventually form a white film on the surface of shoyu. They are salt tolerant. Most are killed by heat treatment (*hiire;* also called pasteurization). In the old days, Japanese would just filter off this white film.

To make their shoyu (soy sauce) Kikkoman uses a specially made soybean meal called *kakko daizu.* More of the natural soybean oil is left in it, and the nitrogen solubility index (NSI) is 25-30% instead of the typical 10%. It has a flaky rather than a meal-like, texture. Who makes it for Kikkoman in the USA? At Walworth, Wisconsin, is any soybean oil left over from the process? If yes, what is done with it?

In Japan Kikkoman uses whole soybeans in their Tokusen (Special) grade soy sauce. Why?

Beatrice Foods makes La Choy soy sauce (America's #2 brand) and RJR Foods made Chun King, but Del Monte recently bought RJR Foods, so Del Monte now makes Chun King.

The three JAS (Japanese Agricultural Standard) shoyu grades (in Japan) are Tokkyu (which has 1.50 or more grams of nitrogen per ml volume of shoyu = w/v), Jokyu and 1.35 to 1.49 gm, and Hyojun has 1.2 to 1.35 gm. Higher in nitrogen than all of these is Tokusen, which is not recognized by JAS. Who uses the word Tokusen? Kikkoman does. U.S. shoyu is equivalent to Tokkyu in nitrogen content. Kikkoman makes no Hyojun grade. More than 90% is Tokkyu. Grades lower than Tokkyu are made by Kikkoman only on special request. The specific gravity of shoyu is 1.19.

In Japan, the real name for "tamari" is tamari shoyu. The definition of tamari shoyu from the Ministry of Agriculture (*Norinsho*) is vague. The word *kikaku* means "standard of identity."

Hawaiian-style shoyu is called amakuchi (sweet); it is made in Japan but sold in Hawaii, not in the USA. It does not have an identity in the JAS standards, but it is considered a type of *koikuchi* (regular shoyu). After fermentation, a natural sweetener (typically *kanzo,* an extract of liquorice root) is added. It contains less salt than typical *koikuchi.*

Milder soy sauce (Kikkoman's green label) has the salt removed after fermentation by use of the ion exchange membrane method–the same used to extract salt from sea water. This is done after pressing but before heating.

Lots of HVP / chemical soy sauce is made and consumed in Kyushu–Japan's southernmost main island; lots of it is sweet.

After shoyu is pressed, the oil layer on top and the bottom layer of high molecular weight substances are both discarded. The middle is the choice. The process is called "clarification" (*seicho*).

Kikkoman says the last time they made a product made by blending shoyu of different ages (1, 2, and 3 years old) was in the 1940s. Ask Dr. Yokotsuka or Fukushima. In 1967 Kikkoman was making a Tokusen consisting of a mixture of 1 year and 2 year fermented shoyus. They called it an 18-month shoyu. If they now had to return to "naturally fermented" with temperature control (*tennen jôzô*) they would ferment the shoyu for 1 year, then mix winter *shikomi* and summer *shikomi.*

The Chinese traditionally did temperature controlled fermentation by placing the large earthenware jars in a courtyard in the sunlight.

Concerning heat treatment or pasteurization (*hiire*), people nowadays like a lighter colored shoyu than formerly. Kikkoman's heat treatment is done using a plate heater at 82ºC. There are two methods of heating: (1) Put hot shoyu into a large open top tank and allow it to cool very slowly. During this time, lots of the natural alcohol evaporates off (0.3 percentage points of the total). (2) Run the shoyu through a plate cooler after a plate heater. Get details of times and temperatures from Drs. Yokotsuka or Fukushima.

© Copyright Soyinfo Center 2014

After heat treatment there are almost no enzymes left in the shoyu. All the molds have been killed but a small number of spore-forming bacteria and yeasts survive–about 10 to 100 per ml.

Semichemical shoyu is called *shinshiki shoyu* ("new-style shoyu") in Japanese. Kikkoman stopped making it about 15 years ago. There are an estimated 4 commercial shoyu makers in Hawaii and 24 in the United States, but only 5 of those in the U.S. make fermented shoyu; the rest just mix ingredients to make quick HVP soy sauce. One can do this in a small room. The American Soybean Association might have the addresses of these companies. Why are they not in the Soya Bluebook? One may be in Seattle [Washington]. The shoyu makers in Hawaii are Diamond & Marumasa, Honolulu Sake and Shoyu, Aloha Shoyu, and Island Shoyu. U.S. shoyu makers include Jan-U-Wine and Sona, both in Los Angeles, Chinese Maid, and Reese Finer Food Co.

In making shoyu, something is filtered with a ceramic filter. What? And at what stage?

The emperor of Japan does not use shoyu made by Kikkoman at their Goyo Gura in Noda. It is forbidden for him to use any special products. No one is allowed to supply him specially–even as a gift. The imperial household must pay for everything on the open market.

Dehydrated shoyu is most widely used in dehydrated instant ramen–in the broth packet; it is also used in making beef jerky and salami / sausages.

In making tamari shoyu, salt water is always added (to the presscake?) to get *assaku tamari,* which is usually called niira tamari. Why didn't San Jirushi mention this?

What is *bansui? Ichiban* ("number one") is the shoyu itself. The 2nd extraction (*ni-ban*) is made by washing the presscake with salt water; this is called shokuen-sui. Only makers of low-quality shoyu do this nowadays. *Ensan* means hydrochloric acid; it is used in making HVP.

To make saishikomi shoyu, the koji is mixed with shoyu rather than with salt water. Saishikomi is also called kanro shoyu; it is used to season sashimi and sushi.

HVP/ chemical soy sauce costs 10-15% less than Kikkoman.

Shiro shoyu is made in Nagoya. They roast the soybeans and steam the wheat. See flow chart. The moromi is fermented for 3 months. It is salty, and is used in *nimono* (dishes simmered in broth). It is 1/3 as light as usukuchi = much lighter than usukuchi. Usukuchi does not add rice koji any more. They add mirin instead.

The character for *hishio* first appeared in Japan in about 600 AD. In which document? Hishio Tsukasa? Continued. Address: San Francisco, California.

7108. Kikkoman International Inc. (KII). 1980. Kikkoman: the company and its soy sauce. Part II (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: Yamasa, Higeta and Kikkoman do not use any HVP in making shoyu. In the USA, HVP is made with stronger hydrochloric acid (HCL) than is used in Japan, so the former takes less time to make and is lower in quality.

Formic acid and levulinic acid are the main ones that show up on gas chromatograms of chemical soy sauce.

Most Chinese soy sauce made in the USA contains HVP says Kikkoman. See also interview with David Hall on this same date.

In their color film, Kikkoman showed that they were using whole soybeans since at that time all of their exported soy sauce was made with whole soybeans. Note: The use of whole soybeans also looks better and raises less questions. Concerning Kikkoman's reluctance to use the word "mold" in connection with koji, a key ingredient in soy sauce: Dr. Hesseltine used the word "yeast" instead of the correct word "mold" to describe the making of koji. Japanese are comfortable with the world "mold" in connection with food, but most Americans are not–even though many enjoy mold-ripened cheeses.

Sendai shoyu is not really traditional shoyu since: (1) They don't use little wooden koji trays. (2) They use koji starter (moreover, pure culture koji starter) rather than airborne yeasts. (3) Traditionally neither yeasts nor bacteria were added to the moromi. (4) Traditionally, moromi was made only during the cold months; if it were produced during the summer, it was made with chilled water to slow down the fermentation process. How was the water chilled?

Ajinomoto is a major maker of HVP, a tan liquid. How is it shipped? As a liquid or a solid?

Kikkoman says the term *tennen jôzô* ("naturally fermented") refers to the way they make shoyu. We say it means fermented at the natural temperature of the environment without any heat control. Is there any formal definition of *tennen jôzô?* Must it be made with whole soybeans? This creates a lot of environmental pollution during disposal of the salty oil. Ask Haga-san at Sendai.

Fermented shoyu is *hon-jôzô.* Semichemical shoyu is *shinshiki-jôzô.*

Farmer Jones uses shoyu in curing bacon and in making liverwurst ("liver sausage").

Note: Liverwurst is an anglicisation of the German word, "Leberwurst." Liverwurst normally contains pigs' livers, rather than calves' livers and also contains veal. Most liverwurst varieties are spreadable. The sausage is usually made with pork. Only about 10-20% of the sausage is actually made using pork liver, which is enough to give it a distinctive liver-taste. Other ingredients are meat, fat, and spices including ground black pepper, marjoram, allspice, thyme, ground mustard seed, or nutmeg (Source: Wikipedia, at Liverwurst, Sept. 2011). Address: San Francisco, California.

7110. Belleme, John. 1980. Making miso in Japan. *GOMF News* (*Oroville, California*). April. p. 2.
• ***Summary:*** This is a letter sent by John Belleme, the last manager of the Oak Feed Store (a macrobiotic food shop at 3030 Grand Avenue, Coconut Grove, Florida), to Jim Kenney, current manager at Oak Feed. John and his wife, Jan, are presently in rural northern Japan studying miso making from a "traditional clan called the Onozaki." John starts: "This is our 11th day at the Onozaki koji-ten. We've settled into a daily pattern now. Our schedule is very, very intense. However, like the Onozakis, we never seem to get tired. It is obvious to us already that the energy in this fine miso originates in our garden, is transformed in the kitchen and transmuted in our bodies. We then work this energy into the miso with our hands." John then describes in detail how the miso is made by hand there. It is aged for about 18 months. After 6 months, and again after 12 months the entire contents of the vat is turned upside down, by shoveling. "Mr. Onozaki gets up at 4 a.m. after sleeping no more than five hours and I've never seen him a bit tired..." Address: Northern Japan [10 miles north of Yaita city, Tochigi prefecture].

7111. Beshoar, John M. 1980. Japan: Soybean imports to rise, decrease seen for soybean meal. *Foreign Agriculture.* April. p. 30.
• ***Summary:*** Includes a table showing Japan's imports of soybeans and soybean meal by country of origin, calendar 1976-80. Address: Agricultural Attaché, Tokyo.

• ***Summary:*** Because of uncertainties in international soybean trade, the Ministry of Agriculture, Forestry, and Fishery in Japan is planning to set aside soybean reserves to avoid possible shortages. This article analyzes changes in soybeans stored under conditions that cause significant changes in qualities important to food uses of soybeans–such as tofu. Address: 1-3. National Food Research Inst., Ministry of Agriculture, Forestry, and Fishery [Japan].

7113. **Product Name:** Brown Rice Miso.
Manufacturer's Name: Shin-Mei-Do Miso Co.
Manufacturer's Address: 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.
Date of Introduction: 1980 April.
Ingredients: Brown rice koji (only a little bran removed), soybeans, sea salt, water.
Wt/Vol., Packaging, Price: 450 gm plastic tub.
New Product–Documentation: Talk with Yasuo Yoshihara. 1996. March 22. Their third miso, introduced in April 1980, was Brown Rice Miso. They put the brown rice through a rice polisher to remove a just little bit of the bran; this is necessary so the koji culture can grow. This miso is sold only to natural- and health food stores.

7114. Yoneda, Soei. 1980. Shôjin ryôri, osôzai: Take-no-Gosho fû [Zen vegetarian cookery, side dishes: Kyoto Take-no-Gosho style]. *Kurashi no Sekkei* (*Designs for Living*) No. 131. 196 p. April. Illust. 30 cm. (Tokyo: Chuo Koronsha). [Jap]
• ***Summary:*** Filled with hundreds of lovely color photos of prepared dishes, steps in preparation, Zen temples and their art treasures, gardens, and buildings. Many of the recipes include soyfoods, especially tofu, miso, shoyu, and okara. Includes a color portrait of Soei Yoneda (p. 5) and the story of her life and work (p. 165-67). Address: Abbess, Sanko-in Zen temple, Honcho 3-1-36, Koganei-shi, West Tokyo (Musashi Koganei Station).

7115. Earle, Steve. 1980. Re: Tamari and other types of shoyu in Japan. Letter to William Shurtleff at Soyfoods Center, May 7. 5 p. Typed, with signature on letterhead. [2 ref]
• ***Summary:*** A long, excellent letter containing detailed answers to ten questions from Shurtleff about tamari in Japan.

"Dear Bill, Thank you for your two recent letters of April 13th and 18th. I must apologize for the delay in reply, however various guests from overseas have kept me away from the office.

"All of your questions have been taken up with our technical staff, and in particular with our plant manager, Mr. Nakamura. The matters to do with the Kikkoman lab tests are the most urgent, however I will choose to address them separately. The following pertains to your questions of April 13th.

"You may want to cross-reference some of this information with Kikkoman or other suppliers. I respect your right, and would even encourage, you to do so, however I would ask that in doing so you do not show or pass on our letters, either in original or copy. I would like to ask this of you as a personal favor.

"1. Ref your questions 1, 2, & 3: I am enclosing a copy of the most recent Japan Agricultural Standard (JAS) schedule as it pertains to Shoyu. In addressing the JAS schedule it is a good idea to remember that these standards are subject to the political influence of the major shoyu manufacturers (most notably Kikkoman). Note for example that the `total nitrogen` requirements for the different grades

© Copyright Soyinfo Center 2014

('tokkyu', 'jokyu', and 'hyojun') are more stringent for 'tamari-shoyu` than for `koikuchi-shoyu`.

"As the Shoyu industry is a good bit larger than the Tamari industry Tamari is classified as a Shoyu ('tamari-shoyu`), whereas from a historical perspective it should obviously be the other way around.

"The five official classes of shoyu are, as you say, `koikuchi-shoyu`, 'usukuchi-shoyu`, 'tamari-shoyu`, 'saishikomi-shoyu`, and 'shiro-shoyu`. Each of these are graded 'tokkyu', 'jokyu', or 'hyojun' according to total nitrogen, organic constituent ('ekisu'), alcohol, color, and other criteria.

"A recent addition to this schedule is a grading above 'tokkyu' which is called 'tokusen' and requires a nitrogen content of 1.65% for koikuchi and 1.76% for tamari-shoyu.

"As mentioned above, the nitrogen and ekisu criteria for tamari-shoyu are consistently higher than are those for koikuchi-shoyu, even though the two are often sold in the same market places.

"There are no stipulations regarding proportions of soybeans to wheat in tamari-shoyu other than that the ingredient in the production of the koji should be predominantly soybeans. Mr. Nakamura says however that it is generally agreed within the industry that tamari-shoyu contains no more than 15-20% wheat. The JAS definitions are evidently not very strict or binding, as San-Jirushi has the option of calling its 'Honjozo' class product either tamari-shoyu or koikuchi-shoyu.

"Your definition of 'tamari' as being made entirely from soybeans and 'tamari-shoyu' being made with up to 20% wheat is essentially the same one that we have used in our marketing through San-Jirushi International to distinguish between the two classes of product. We ask you to bear in mind however that same definitions are not necessarily subscribed to in Japan: All tamari is classified as 'tamari-shoyu,' and a product containing a small proportion of wheat may be referred to as tamari.

"One further distinction between tamari-shoyu and shoyu which should perhaps be made clear in your book is the purpose for using wheat in the respective products, aside from the proportions used, The koji in shoyu, as you know, is made loose ("bara-koji") whereas the koji used in tamari and tamari-shoyu is made in extruded balls ("miso-dama"). while the wheat used in shoyu is an essential ingredient to the koji and contributes significantly to the flavor and aroma of the finished product, the wheat in tamari-shoyu is used primarily to provide the gluten necessary to form the miso-dama when defatted soybeans are used. It makes a difference of less than half a percent in the carbohydrate content of the finished product and does not add significantly to flavor,

"2. Ref your question no. 6: Our conflicting statements regarding salt content are indeed misleading. They are due to different criteria used in the U.S, and Japan; JAS stipulates that salt and other nutrients be measured in terms of grams per 100 ml while the FDA requires that they be stated in grams per 100 grams. 16% is the JAS figure and `3.3% is grams per 100 grams. Note likewise that Kikkoman Shoyu contains 17.5g salt by the Japanese method and 14g by the U.S. method.

"3. Ref your questions 7 & 8: San-Jirushi currently produces about thirteen different soy sauce products. Many of these are for specialized industrial purposes (such as the rice-cracker industry) and others are sold under private label. The major products however are: 'Kibiki' (2 Chinese characters), 'Sashimi-damari`, 'Ryotei Tamari' (4 Cc), 'Takujo-Shoyu' (4 Cc), 'Tokusen-Honjozo' (5 Cc), 'Honjozo' (3 Cc), 'Jokyu' (2 Cc), and 'Tei-En' (2 Cc).

"Of the above, 'Ryotei-Tamari' and 'Takujo-Shoyu' are registered product names that belong to San-Jirushi. 'Kibiki' and 'Sashimi-damari' are accepted generic terms within the industry. 'Tokusen,' 'Honjozo,' and 'Jokyu` are all defined by JAS.

"San-Jirushi produces about 8,000 kl of soy sauce per year, Approximately half of this is 'Honjozo' class. Another 25% is 'Tokusen' class (9 sui), and the remaining 25% is divided between the other classes. 'Kibiki' class is sold predominantly to the rice-cracker industry,

"I should also mention to you that San-Jirushi produces 8,000 kt [kilotons] of miso per year. The majority of this is akadashi and mame miso, which means that we produce more soybean miso than any other single company (more for example than Marusan or Kakukyu).

"4. Ref your question no, 4: The cylinder that stands in the center of the vat is commonly called "sashioke" (3 Cc) or "do-oke" (2 Cc), The ones used at San-Jirushi are of barrel-like construction made from wooden staves and bound

© Copyright Soyinfo Center 2014

typically with bamboo, The top end is wider than the bottom end, so that the bottom end of one will fit snugly into the top end of a second one, Ordinarily two sections joined this way are used in one vat.

"The sashi-oke is stood in the vat when it is empty and the moromi is filled in around it. It is not actually perforated: There are notches in the bottom end which make mousehole-like openings when faced against the bottom of the vat,

"There is a second kind not used here made from bamboo strapped together into a cylinder shape which does allow the liquid to seep in from the side.

"San-Jirushi evidently prefers the wooden type as it keeps all of the liquid circulating from bottom to top.

"Liquid is scooped from the sashi-oke with long-handled ladles and poured on top of the vat (ordinarily over the stones resting on top), This operation is called "Kakuhan" (2 Cc) and is performed ideally twice a day during the first two months of fermentation. Thereafter it is reduced to once a day, or once every several days as is judged necessary by the attendant. Kakuhan is necessary in order to keep the moromi ("miso" [mash]) moist at the top, as well as the bottom, of the vat.

"5. Ref your question no, 11: The answer to your questions regarding the addition of salt-water during the 'assaku' procedure is an emphatic No: San-Jirushi does not wash the press cake with salt-water or add salt-water at any time during the pressing procedure as it is felt that this is detrimental to the quality of the product, It may be a common practice among other manufacturers however.

"6. Ref your question no 5: The name 'tamari' does not seem to have appeared until the Kamakura era, The records we referred to are the ones from the Nara period mentioning 'hishio', notably (8 Cc) *Todaiji Shosoin Monsho.* It has been interpreted from these writings, and particularly the characters used in naming the different forms of hishio, that the original type of grain hishio (2 Cc) which came from China was made entirely from soybeans, and that the liquid from it, or else a moromi-like form of it, was used as a seasoning. The *Todaiji Shosoin Monsho* was written in the first half of the 8th century, so perhaps our statement should have read '8th century' instead of '7th.' I have been told however that there is earlier mention of hishio–maybe you know if this is so." Continued. Address: San-Jirushi Corp., 1-chome, Meisei-dori, Kuwana, Mie 511, Japan. Phone: (0594) 22-3333.

7116. Earle, Steve. 1980. Re: Tamari and other types of shoyu in Japan (Continued–Document part II). Letter to William Shurtleff at Soyfoods Center, May 7. 5 p. Typed, with signature on letterhead. [2 ref]

• ***Summary:*** Continued. "7. Ref. your question no. 10: Based upon our knowledge of the industry (not, in other words, on official figures) the major producers of tamari-shoyu are as follows in order of size. I don't have a handy access to their addresses however perhaps you could find these out through the Japanese business office in San Francisco.

"San-Jirushi (Mie Prefecture)
"Yamami (Aichi, near Nagoya)
"Nakagawa Jozo (Aichi)
"Ichibiki (Aichi)
"Yamaizumi (Aichi)
"Kanami (Aichi)
"Kameya Gomei (Aichi)
"Sato Jozo (Aichi)
"Yamashin (Aichi)

"Morita is the same as Yamaizumi. Okazaki Marusan is, I believe, the second largest producer of miso in Japan, however they do not produce tamari.

"The product they are now marketing in the U.S. is not sold in Japan, and is not considered suitable for sale according to the standards within the industry It is (by their own admission) the liquid that comes off of the top of their vats of soybean miso. Because of its high ammonia content it is in most cases thrown away, or else added to aminosan-eki to produce low cost products.

"These last comments are not meant as accusations, as I respect Marusan's right to sell where they can find a market. It is the feeling of San-Jirushi however that their product reflects poorly upon the 'tamari' name.

"8. Ref your question no. 10: I would be happy to read over your draft before it goes to print and can perhaps offer advice and suggestions. In the event however that you do draw on any of the material supplied from here I would request that you make mention of San-Jirushi and/or my name where it is appropriate in the chapter.

"If there are other ways we can be of help, please let me know. Mr. Sato has suggested supplying photographs to be used for illustration purposes; if these would be useful too you let us know which parts of the plant you would want portrayed.

"We appreciate your interest and will hope to hear from you again. With best wishes,..."

cc. San-Jirushi International.

On 18 April 1980 William Shurtleff wrote Steve Earle asking if San-J was correctly representing the ingredients in and composition of the tamari it was selling in the USA. Tests by Kikkoman U.S.A. seemed to indicate that San-J was misrepresenting its tamari. Earle admitted that the tamari sold by San-J in the USA was indeed being misrepresented–as follows:

8 May 1980. Dear Bill.

"The following is with regard to your letter of April 18th concerning the tests done on our product by Kikkoman, U.S.A.

"The results obtained by Kikkoman are quite accurate and correspond in fact with the nutritional information that we are circulating. We admit that the samples in question are indeed misrepresented. The product contained is one

© Copyright Soyinfo Center 2014

manufactured for the Japanese market and differs slightly from the descriptions in our San-J advertising.

"This is a mistake. At the time that the product was being formulated for bottling and shipment there was apparantly a misunderstanding at the technical end of our operation as to which product was required. The formula used entails a blending of sake-mirin prior to pasteurization. The mirin serves primarily as a flavoring and secondarily helps to preserve the product. It is high in alcohol and natural sugars, which accounts for the high figures for alcohol and carbohydrate in the finished product.

"Mirin is quite commonly used this way in the soy sauce industry. Kikkoman for example uses it in their products here in Japan. The big difference of course is that they list it on the label.

"We did not discover that the product had been mistaken until very recently, and are both most embarrassed and most concerned as a result. I would like to ask, Bill, that you trust the problem is being attended too and that you please keep it entirely confidential until it is resolved. Please also understand that the samples tested by Kikkoman were in fact 'samples,' and that the product has not as yet been sold in any significant volume.

"Subsequently San-J Tamari will in fact be the pure tamari as described on our label and in our advertising, and we will also issue new nutritional data accordingly.

"Your cooperation in this matter will be deeply appreciated. Thank you, and best regards..." Address: San-Jirushi Corp., 1-chome, Meisei-dori, Kuwana, Mie 511, Japan. Phone: (0594) 22-3333.

7117. Kudo, Shiro; Hayashi, Mitsuyoshi. Assignors to Asahimatsu Kori-dofu K.K. 1980. Process for producing fibrous food materials. *U.S. Patent* 4,204,005. May 20. 7 p. Application filed 16 Dec. 1977. 1 drawing. [9 ref]
• ***Summary:*** Whole soybeans are soaked in water until fully hydrated (40-55% water). Then they "are passed through a very narrow gap between two grindstones [see drawing] which rotate at high speed (the size of the gap and the sped of rotation depend on both material and desired product but 0.2 mm or less is favorable when fibrous protein is to be made from soybeans)." In this grinding process the whole soybeans are converted into fibers in less than one second. Address: Japan.

7118. Bannar, Robert. 1980. Let's talk tofu. *Food Engineering* 52(5):126-28. May.
• ***Summary:*** Contents: Introduction. What is tofu (Shurtleff, New England Soy Dairy). How do you serve tofu? How do you make tofu? (discusses Morinaga tofu). Tofu, step by step. Nutritional data: Tofu vs. lean beef. A photo shows a package of Morinaga Ever-Fresh Silken Tofu.

7119. *Food Product Development.* 1980. Oriental specialty miso expands market horizons. 14(5):26. May.
• ***Summary:*** About Kikkoman Instant Miso-Shiru Soy Bean Soup Mix, available in red (aka) and white (shiro). "Following the lead of its soybean cousin tofu, miso is beginning to break away from its limited market in gourmet, ethnic, and health food stores and filter into select supermarkets." A photo shows the front of the two packages, written in both Japanese and English.

7120. Mori, H. 1980. Shôwa 54 nendo ni okeru shôyu, miso no kenkyû gyôseki [Review of annual achievements in shoyu and miso research]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 75:384-410. May. [625 ref. Jap]
• ***Summary:*** This important Japanese-language article, published each year in the May issue of this periodical, has two parts: (1) A review of the past year's major discoveries and developments in the fields of miso and soy sauce in Japan. (2) A bibliography related to those discoveries and developments. Address: Noda Sangyo Kagaku Kenkyusho.

7121. Okada, M.; Miyura, Y.; Komeyasu, M. 1980. [Effect of heat treatment on flavor of soy milk]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 27(5):245-51. May. [Jap; eng]*

7122. **Product Name:** [Soyalac {Soymilk} (New Plain Type)].
Foreign Name: Soiyarakku Neo Sutoreeto Taipu.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1980 May.
Wt/Vol., Packaging, Price: 250 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Neo Sutoreeto Taipu was introduced in May 1980 by Saniku Fuuzu in a 250 gm can and distributed nationwide.

7123. Tanimura, Wahachiro; Kamoi, I.; Obara, T. 1980. Daizu kakô shokuhin no toripushin inhibitaa ni kansuru kenkyû. II. Distribution of trypsin inhibitors during processing of soybean sprouts]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 27(5):240-44. May. [7 ref. Jap; eng]
• ***Summary:*** Trypsin inhibitor (TI) activity in soy sprouts was determined after different germination times. Sprouting reduced TI activity; soybean sprouts had about 80-85% of the TI activity found in soaked unsprouted soybeans. More than 99% of the TI activity of soy sprouts was found in the cotyledon, and the rest was contained in the axis (sprout). After 4 days of germination, the cotyledon contained 64.6

© Copyright Soyinfo Center 2014

mg of TI activity and the axis 0.83 mg. Boiling in water for 5 minutes completely inactivated the inhibitor from the cotyledon, but that of the axis still remained. Address: 1. Dep. of Nutrition; 2. Dep. of Agricultural Chemistry. Both: Tokyo Univ. of Agriculture, Setagaya-ku, Tokyo 156, Japan.

7124. Tanimura, Wahachiro; Kamoi, I.; Obara, T. 1980. Daizu kakô shokuhin no toripushin inhibitaa ni kansuru kenkyû. III. [Study on trypsin inhibitor in soybean foods. III. Address: 1. Dep. of Nutrition; 2. Dep. of Agricultural Chemistry. Both: Tokyo Univ. of Agriculture, Setagaya-ku, Tokyo 156, Japan.

7125. Westbrae Natural Foods. 1980. Wholesale food catalog: Spring 1980. Emeryville, California: Westbrae. 23 p. 22 by 28 cm.
• ***Summary:*** On the cover, the lettering is in dark blue and dark red on a tan background. Contents: Westbrae juices. Honey butters. Unsweetened spreads. Preserves. Applesauce. Nut butters (Almond butter roasted, cashew butter roasted, cashew butter raw, cashew-peanut-date butter, raw sesame tahini, toasted sesame tahini, peanut butter crunchy, peanut butter smooth, peanut butter crunchy salted, organically grown Valencia peanut butter crunchy). Cereals (mostly granola, incl. cashew granola, maple almond granola).

Trail mixes: Bay to Breakers trail mix (with sunflower seeds and Valencia peanuts, both roasted and coated with shoyu), Chisholm trail mix (with sunflower seeds, cashew pieces, and almonds, each roasted and coated with shoyu).

Roasted nuts (bulk, 12-25 lb; * = 9 oz package also available): Tamari almonds*, Tamari cashews*, Tamari Chisholm mix*, Tamari Valencia peanuts, Tamari pepitas (pumpkin seeds), Tamari sunflower seeds*, Tamari nutroaster's mix*, Deluxe tamari nut mix, roasted Spanish [peanuts] splits for butter stock, roasted Valencia peanuts. Packaged nuts.

Wholegrain pasta (incl. Soy linguini). Westbrae miso (imported from Japan): Red miso, brown rice miso, barley miso, Hatcho miso, soybean miso, natto miso. Cold Mountain miso (made in Los Angeles): Light yellow, mellow white, red. Sea vegetables: Kombu, hijiki, arame, wakame, nori. Atlantic Mariculture dulse.

Westbrae tamari and other Asian foods: Johsen shoyu-tamari, Traditional (true) tamari–wheat free, White tiger tofu sauce, natural nigari, agar flakes and sticks, umeboshi salt plums, rice wine vinegar, brown rice wine vinegar, ramen with soup stock.

Helpful tools (incl. Learning Tree tofu kit, wok, vegetable steamers, vegetable brush, utility knife). Informational pamphlets: What is miso? What is tofu? Miscellaneous (incl. falafel mix, tabouleh mix, Ak Mak crackers, sea salt, mayonnaise, black spiced olives, kosher dill pickles). Oils. Sweeteners. Bakery products. Dried fruit. Beans (incl. azuki beans, soybeans). Grains. Nuts and seeds. Non edible (drums, jars, and bottles). Glossary of manufactured products showing ingredients. Address: 4240 Hollis St., Emeryville, California 94608; 4841 Eastern Ave., City of Bell, CA 90201 (10 miles southeast of Los Angeles). Phone: (415) 658-7518 (orders).

7126. Gevaert, Pierre. 1980. Re: Early work with tamari and miso in Europe. Letter to William Shurtleff at Soyfoods Center, June 11–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Your note about the misuse of the term 'tamari' is correct." Lima started producing tamari in 1968. It first appeared on the market in 1961, under the name "tamari." Production continued until 1966. "Our shoyu, called and registered as 'tamari' at George Ohsawa's request, was a dark, rather thick liquid very similar to real tamari even though our product was made from 5% soybeans and 50% wheat. I think this was because we aged the product for at least 3 years, and some of it was even older because we could sell only a small part of the production. In 1967 we had such large stocks of miso and tamari that we stopped their production and cured our weak financial situation by selling off these stocks. We still remember the good Lima Tamari, and when we started to import from Japan, we always mixed at least 1/3 of Japanese tamari to approach our own quality.

"This month we will produce a good quality of miso in our French artisanal factory running on water energy." Address: P.V.B.A. Lima, Edgar Gevaertdreef 10, 9830 Sint-Martens-Latem, Belgium. Phone: (09) 82.41.76.

7127. *Daizu Tanpaku Shinbun* (*Soy Protein Newspaper*). 1980. [Ministry of Agriculture (Norinsho) report on the Japanese tofu industry]. June 15. [Jap]
• ***Summary:*** Percentage of tofu shops using various amounts of dry soybeans per day: 0-30 kg 32.0%, 30-60 kg 31.5%, 60-300 kg 28.1%, 300+ kg 8.4%.

Various types of ownership: Sole proprietorship 81.6%, limited co. (Ltd.) 10.3%, corporation 4.9%, cooperative and other 2.3%.

When the tofu shops were started: After 1945 56.0%, before 1941 15.8%, Taisho period 10.2%, Meiji period (1868-1912) 8.8%, pre-Meiji 0.7%, after 1967 8.5%.

Source of income: Tofu making only 73.4%, tofu plus another job 26.6%.

Number of workers in tofu plant: 1 worker 18.5%, 2 workers 28.4%, 3 workers 16.8%, 4 workers 12.6%, 5-9 workers 14.2%, 10-19 workers 4.7%, 20 or more workers 4.8%.

The biggest problem for the small shops is that the large plants sell their tofu at very low prices.

Address: Nosan Kacho, Tokachi Nogyo, Kyodo Kumiai Rengokai.

7135. *Toyo Shinpo* (*Soyfoods News*). 1980. Shinseihin: "Mugi" "Genmai" Nattô. Daizu wa hitotsubumo haitte imasen [New products: "Barley" "Brown Rice" Natto. Not a single soybean is included]. July 1. [Jap]
• ***Summary:*** A photo shows the front of four new natto packages. These two types of natto are made using only cereal grains, without the use soybeans or any other beans. However the cereal grains are cooked in soybean cooking liquid; their natto-like strings come from this soybean liquid, which contains 0.17% protein. This is a good way of using leftover natto cooking liquid. The grains have no natto smell; with a light taste, they are good as part of a bread-based breakfast.

Note: There used to be a chlorella natto, but it was involved in a scandal and disappeared from the market. There was also kombu natto–a nice concept.

7136. Reed, M.H. 1980. A tour of Japanese cuisine. *New York Times.* July 20. p. WC1.
• ***Summary:*** There are now nine Japanese restaurants in Westchester. This is a review of each of those restaurants, in order of preference. Note: Westchester County is the southernmost county in mainland New York State, located just north of Long Island. The county seat is White Plains. Connecticut is on the east and the Hudson River is on the west.

The first restaurant is Koto–the reviewer's favorite. They serve a "hearty misoshiru soup;... fried bean curd with a fine dipping sauce (age-dashi-tofu), sukiyaki (one cooks one's own here...)."

7137. Dimock, Janet. 1980. Practicing macrobiotics: Hilltown couple seeks to improve quality of their lives. *Daily Hampshire Gazette* (*Northampton, Massachusetts*). July 30. p. 16.
• ***Summary:*** The Winston Donovan family of Huntington Road is moving to Boston to be near the Kushi Institute, where Winston has studied macrobiotics with Michio Kushi since January. Their daughter, Traci, aged 17, will go too. Winston ran a home-building business, but 2½ years ago he "found himself in the hospital (at the age of 38) recuperating from a heart attack and diagnosed as suffering from 'an incurable kidney disease,' he said. The next step was a dialysis machine and a kidney transplant, the doctors projected...

"At this point they seriously began to consider macrobiotics. Support for the idea was forthcoming from Dr. William Shevin, formerly of the Worthington Health Center, who introduced them to foods such as tofu (a soybean product). Since that time, Donovan explained that

© Copyright Soyinfo Center 2014

he is off medication and he sees a doctor only for a periodic checkup." A photo shows Winston and Joan Donovan.

Illust. by Akiko Aoyagi Shurtleff. Index. 23 cm. A co-production of Ost-West Bund e.V. and Ahorn Verlag. Translated from English by Rainer Bosch and Gudrun Klein. [43 ref. Ger]
• ***Summary:*** Contents: What is miso? Foreword. Acknowledgments. Part I. Miso: Nutritional value and varieties. 1. Soybeans, protein and the world food crisis. 2. Miso as a food. 3. The miracle of fermentation. 4. The varieties of miso.

Part II. Cooking with Miso (400 recipes). 5. Getting started–principles, kitchen utensils, preparation. 6. Recipes from East and West. Part III. The Preparation of Miso.

Part III. The production of miso. 7. Making miso at home and in communities. 8. Japanese farmhouse miso. 9. The traditional miso shop. 10. The modern miso factory. Appendixes: A. The history of chiang, miso, and shoyu, and their historical significance. B. The chemistry and microbiology of miso fermentation. C. Miso additives. D. Miso with seafoods, chicken, and meat. E. When you want to study miso in Japan. F. People and institutions worldwide connected with miso. G. Natural food stores in German-speaking countries. Bibliography. Glossary. About the authors and their work (autobiographical).

Published in both hardcover and paperback editions. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

7141. *Soyfoods.* 1980. Soyfoods to the American taste: An interview with Drs. Clifford Hesseltine and Hwa L. Wang. 1(3):58-62. Summer. [1 ref]
• ***Summary:*** Dr. Hesseltine has just returned from a six-week trip to East Asia. In Taiwan he studied soy sauce fermentation and gave advice on setting up a national collection of microorganisms used in soybean fermentations. In Indonesia he attended an international symposium on various aspects of fermentation as a method a processing foods, with an emphasis on soybeans in Southeast Asia. "These people look to us in the West as far as science is concerned. Suddenly we see scientific institutions in the U.S. and now in Europe being interested in high protein foods made from soybeans. The East Asians follow and say, 'Well, if its very interesting for the West, then we should be interested in it.'" There is increasing interest in traditional, lightly-processed soyfoods.

Way back in 1963 the NRRL did research on making tempeh perforated plastic bags. Today, "on the island of Java, 90 percent of tempeh is now produced using plastic bags, including the tempeh I saw being sold on the street,..."

Dr. Wang, who was born and raised in China, recently returned there to visit family. She noted: "To me, it is a very sad story... Even tofu is rationed now. You can't buy tofu every day, probably once a week." "Soy sauce is not hard to get. Miso never had as much importance as in Japan... Tofu and soymilk are the two foods that were very common before. We stayed at a hotel and we only had soymilk once a week, in the morning for breakfast. And tofu, I don't even remember having eaten any."

"Dr. Hesseltine: Natto is one of the most rapidly growing fermented soyfoods in Japan, which surprised me, over something like miso. Natto has become more popular because it's supposed to be the great aid for digestion. In the new form, natto is much more acceptable as a food because the old, traditional type is sticky (it's a real mess) and this isn't. This is coated, so what you get is like small peanuts coated with powder; they don't stick to your hands."

Dr. Hesseltine: "What I saw in Taiwan really fascinated me–pressed tofu sheets [*pai-yeh*]. We would like to see the soycrafters making some recommendations [for us] as to practical areas of research for soybeans."

Portrait photos show (1) Dr. Clifford Hesseltine. (2) Dr. H.L. Wang. Two photos of each, seated. Address: NRRC, Peoria, Illinois.

Soyfoods 1(3):10. Summer.
• ***Summary:*** In this letter, the author tells of the founding, activities, products, and production process of this small miso company. Her husband and co-worker, Yoshi, is Japanese. They have the capacity to make 80 gallons/week of miso but are operating below capacity for lack of space and firewood. Their main miso variety is rice (kome) miso. Barley miso will be ready in early 1981 and brown rice miso will be ready in the fall of 1981. "Our markets are the Japanese food coops and natural food stores. We started in spring 1979 and have just sold our first miso. Our first experimental batch was made in February 1977." Address: Shinmei-do Miso Co., Wren Rd., Denman Island, BC, Canada, V0R 1T0.

7144. Ochi, Hirotomo; Blenford, D.E. 1980. The soy sauce explosion: Worldwide demand for this centuries-old Japanese food ingredient has been stimulated by the development of new drying techniques to produce it in powder form. *Food Processing Industry* (*UK*) 49(585):25, 27, 29. Aug.
• ***Summary:*** Natural flavors are increasingly in demand worldwide. The many different kinds may be divided into three main types: (1) Extracts, as from beef, chicken. bonito, mushroom, or onion. (2) Fermented products, e.g. soy sauce or wine. (3) Hydrolyzed products, such as HVP or yeast.

"Soy sauce (or Shoyo sauce [sic, shoyu]) is a liquid seasoning which was originally developed in Japan [sic] via the fermentation process. There are two main types of soy sauce in Japan, strong and weak [sic] (koigushi [sic, koikuchi] and usugushi [sic, usukuchi]). In 1977 an estimated 1,200 million liters of soy sauce was made in Japan, equivalent to about 10 liters per person per year.

During the 1960s, with the development of new drying techniques, soy sauce and various extracts were introduced in powdered form. The most popular method of drying was spray drying. Using dextrin, gelatin, or gum as carriers, the powders were made using 70-90% soy sauce solids together with 10-30% of the carrier. Table 1 gives the chemical composition of two typical soy sauce powders. HVP powders are inferior to soy sauce powders.

In Japan one of the major applications for soy sauce powder is for instant and cup noodle soups. In 1977 the production of these two products was 2.6 billion meals, requiring the use of 3,000 tons of soy sauce powder. The total amount of soy sauce powder made in Japan in 1977 was 4,000 to 4,500 tons.

Soy sauce powder, which was first produced in the 1960s, can be made using either of 3 processes, each of which has advantages and disadvantages: (1) Spray drying was the most popular drying method. Using dextrin, gelatin, or gum as carriers, the powders contained 70-90% soy sauce solids and 10-30% of carrier. (2) Freeze drying, gives the product with the best flavor but the processing costs are very high and four times as much energy is used as in spray drying. (3) Continuous vacuum drying takes place in a vacuum chamber under conditions of low temperature and short residence time. It was developed by Nikken Food Co. in Japan. Energy consumption is much less than with spray drying and the soy sauce flavor is unchanged. The resulting products, in the form of granules or porous powders, have excellent solubility. Address: 1. President, Nikken Food Co., Komaba 1-37-7, Meguro-ku, Tokyo, Japan.

7145. Ferretti, Fred. 1980. Brown rice and whole grain at Amherst. *New York Times.* Sept. 3. p. C1.

7146. Dwan, Lois. 1980. Trader Vic's: Divided, not conquered. *Calendar* (*Los Angeles*). Sept. 7. p. 98. Sunday.
• ***Summary:*** Trader Vic Bergeron, born in 1902, started his first restaurant, Hinky Dinks, in Oakland. In 1938 he announced he was going to go fancy, and sent everyone home to put on a jacket. Now he owns 20 fine restaurants extending from San Francisco (opened in 1951) to the Beverly Hills Hilton (opened in 1955) to Tokyo, from London to Munich. Today Trader Vic "is into tofu," as is his vice president, Chan Wong. "He rolls it into little balls with minced ham and spices, coats them with Japanese bread crumbs (*panko*), deep fries. He serves big chunks of *tofu* in a sauce with thin beef. He makes a terrine with chicken livers and *tofu,* garlic, mace, nutmeg, brandy... No cholesterol. Fantastic." A photo shows Trader Vic seated at his desk, smiling and gesturing. Address: Los Angeles.

7147. *Toyo Shinpo* (*Soyfoods News*). 1980. Shokubunka kenkyûka Nagayama-shi, Nihon sôzô gakkai de kôen: Sekai ni rui o minai kansei sareta shokuhin nattô [Mr. Nagayama, a food culture researcher, lectured at a creative Japanese academic meeting: There is only one complete food like nattô in the world]. Sept. 11. [Jap]
• ***Summary:*** During the natto fermentation, vitamin B-2 increases fivefold. Natto sells best in the winter, whereas tofu sells best in the summer. A photo shows Mr. Nagayama standing in front of a blackboard, holding some papers.

7148. Kushi, Michio. 1980. Re: Thoughts on phasing out use of the word "tamari" to refer to naturally fermented shoyu. Letter to William Shurtleff at Soyfoods Center, Sept. 13. 1 p. Typed, with signature.
Address: 62 Buckminster Rd., Brookline, Massachusetts 02146.

7149. Soyfoods Center. 1980. Re: Morinaga Ever-Fresh Silken Tofu. Letter to U.S. natural and health food distributors, Sept. 17. 2 p. Typed, without signature on letterhead.
• ***Summary:*** This form letter, written by William Shurtleff, begins: "As you well know, one of the brightest new stars on the natural- and health foods horizon is *tofu.* Recent statistics

© Copyright Soyinfo Center 2014

published by the Soycrafters Association of North America show that $33.7 million of tofu (retail value) were sold in the U.S. during the past year, and that the market is expanding at the remarkable rate of 25 to 30 percent a year!"

Soyfoods Center has been working as a consultant for the Morinaga company of Japan, which is one of Japan's largest and oldest producers of fine foods... Morinaga has developed a high-quality new product called Morinaga Ever-Fresh Silken Tofu. This tofu is packaged in a revolutionary new way–developed by Morinaga–that allows the tofu to stay as fresh as the day it was made for up to six months without refrigeration or preservatives of any kind... The secret lies in the Tetra Pak container, developed in Sweden and now used throughout the world."

"For you, as a distributor of natural and health foods, this tofu has several important advantages: 1. No refrigerated distribution required." 2. No spoilage losses or returns. 3. Wonderful silken-smooth texture. 4. Color recipe brochure. 5. Excellent price. 6. Private branding available. 6. Free trial offer.

"Free sample offer: Please clip here. YES. Please send me one carton of Morinaga Ever-Fresh Silken Tofu and 24 free color recipe brochures, free of all charge and obligation." A form for the person's name, company name, address, and phone is provided. "Please return this form to: The Soyfoods Center, P.O. Box 234, Lafayette, California 94549." Address: P.O. Box 234, Lafayette, California 94549. Phone: (415) 283-2991.

7150. *Japan Economic Journal* (*Tokyo*). 1980. Fuji Oil Co. (Osaka, Japan) has developed the world's first filled cheese, made by adding vegetable oils and soybean protein to skimmed milk after fermentation and maturation. Sept. 23. p. 14. *

• ***Summary:*** It is cheaper than ordinary cheese, possesses cheese's unique flavor and has low cholesterol. For now the firm will sell it to confectioners.

7151. Thalman, Margaret Morse. 1980. Re: William J. Morse, her father, and their trip to East Asia. Letter to William Shurtleff at Soyfoods Center, Sept. 23. 3 p. Handwritten.

• ***Summary:*** "Here is our itinerary after leaving Dairen [today's Dalian, Manchuria], Aug. 20, 1930.

Aug. 22–Arrive Heijo, Korea (Pyongyang).
Sept. 17–Leave Heijo for Seoul.
Sept. 21–Leave Seoul for Heijo.
Sept. 25–Leave Heijo.
Sept. 29–Arrive Mukden, Manchuria.
Oct. 1–Kungchuling.
Oct. 4–Arrive Dairen.
Oct. 19–Leave Dairen.
Oct. 20–Arrive Peiping, China.
Nov. 9–Leave Peiping.
Nov. 10–Arrive Dairen.
Dec. 18–Leave Dairen (by ship).
Dec. 21–Arrive Kobe, Japan.
Dec. 22–Nara & Kyoto.
Dec. 23–Leave Kyoto (8 a.m.). Arrive Tokyo (5 p.m.).
1931–Remained in Tokyo until...
Feb. 17–Left Tokyo.
Feb. 26–Arrive Honolulu, Hawaii.
March 4–Arrive San Francisco, USA.

"Discovered another small notebook that my father had kept from Feb. 18, 1929 to Oct. 6, 1929. On Feb. 23 he wrote:

"'In the afternoon went to Vitacolor Motion Picture Lab where we saw the new Vitacolor motion pictures which were excellent. Had a long talk with Mr. Dupont, the inventor.

"'Feb. 25–In the afternoon went to Vitacolor Lab to see colored movies taken by Mr. Dorsett. Obtained our colored motion stuff and bid goodbye to Mr. Dupont.'"

"In Tokyo, Hokkaido and Dairen they rented offices, set up darkrooms and developed their own still and motion picture films.

"Mr. Beattie was interested in chestnut blight. Mr. and Mrs. Beattie met us when we first arrived in Tokyo and were very helpful in showing us around the city.

"Mr. Dorsett's main interest was in persimmons." Address: 22 Interlaken Rd., Eastchester, New York 10709.

7152. Sass, Lorna J. 1980. A couple on a tofu mission in the West. *New York Times.* Sept. 24. p. C3. Reprinted in the San Francisco Chronicle. Nov. 12. p. 22.

• ***Summary:*** About William Shurtleff and Akiko Aoyagi, authors of *The Book of Tofu.* A large photo shows each person. "The two people most responsible for catapulting tofu from the wok into the frying pan are William Shurtleff and Akiko Aoyagi." In the early 1970s they began to work on introducing this inexpensive foodstuff, high in protein and free of cholesterol, to the United States. Concerned that there is a world food crisis, they are committed to the philosophy expressed in the book *Diet for a Small Planet,* that if people in Western cultures relied on beans and grains rather than meat, the problem would start to improve. Shurtleff says that they wanted to find a way to make soy foods appealing to Big Mac [hamburger] fans. "'We decided to try to do for tofu and other soy foods what Johnny Appleseed did for apples.'"

A graduate of Stanford University in physics and industrial engineering, Shurtleff first became interested in natural foods and a healthy diet starting in 1968, while living at the Tassajara Zen Mountain Center near Carmel Valley, California. In 1971 he went to live in Japan where, as a student with little money, he found he could eat for as little as 30 cents a day by relying on tofu as his major source of protein. There he met Miss Akiko Aoyagi, a Tokyo-born fashion designer who was also fine cook. Using the seven different types of Japanese tofu, she prepared her favorite

© Copyright Soyinfo Center 2014

tofu recipes for him. A turning point came when they shared a meal at Japan's oldest haute cuisine tofu restaurant [Sasa-no-yuki, in Tokyo].

At the time they had no publishing experience and only about $100 between them. Yet within several weeks they had found a publisher and were hired on a part-time basis by an American company to do interpreting, that paid enough to free them to research the subject thoroughly for the next four years.

In December 1975 their first book, *The Book of Tofu,* as published by Autumn Press, a small publisher originally headquartered in Japan and now in Massachusetts, interested in both tofu and vegetarianism. The book was received so enthusiastically–over 100,000 copies are now in print, that Ballantine Books decided last year to publish a revised mass market pocket-book edition.

In 1975 they founded the New-Age Foods Study Center, with offices in Tokyo and Lafayette. Their center has published three volumes: *Tofu and Soymilk Production* ($17.95), *Tempeh Production* ($15.95), and *Miso Production* ($17.95). These books are directed at people interested in manufacturing "soy foods." In 1978 they helped to found the Soycrafters Association of North America. Last July the association held its third annual conference.

Lorna Sass is also the "general editor of the forthcoming reprint series of significant historical cook books." Address: Culinary historian, New York.

7153. Weiss, Martin G. 1980. Re: Recollections of William Morse and work with soybeans (Continued–Document part II). Letter to William Shurtleff at Soyfoods Center, Sept. 26. 3 p. Typed, with signature.

• ***Summary:*** Continued: "You may enjoy just a bit of irony. After the collections made by W.J. and Dorsett, Japan overran China. After World War II when we were on friendly terms with China, we were told that the Japanese had mandated that standard varieties would be grown throughout and many of the village varieties were lost. We then had requests for seed of some of their old varieties–and Dorsett's and W.J.'s accurate notes enabled us to replace some of the varieties lost to China!

"Back to W.J. While in the Orient he became very fond of Chinese and Japanese foods. He brought recipes back. When I was invited to his home in Takoma Park, D.C., he took delight in preparing the Japanese dish, Suki Yaki [sukiyaki], on a grill while we were sitting at the table–just like the Japanese girls do in Tokyo. And, it was just as delicious as the Suki Yaki I've eaten in Tokyo!

"Every year, W.J. would make a field trip–to the State Agricultural Experiment Stations with an interest in soybeans. In the early days he would allocate a small amount of Federal funds to each State who wanted to try soybeans–just a little 'seed money.' He looked forward to those trips, and, particularly when he acquired assistants stationed in the States. He would take us along to visit the adjoining States.

In his capacity as 'Soybean Project Leader,' he was just that. He was never dictatorial, never demanding. As long as his employees were 'trying' he seemed satisfied. You were on your own. If asked advice he would give a kindly opinion. He dearly loved to visit 'his boys' as he called us.

"Every winter 'his boys' would gather at Urbana to survey plans for the ensuing year, and he liked nothing better than to spend an evening with 'his boys.' The ideal evening–meet in a bar and have a few drinks (his chief assistant, Mr. Cartter, was a Christian Scientist so he was never invited) and then to a Chinese restaurant for an oriental dinner.

"A personal note (may help you)–his wife [Edna] was diagnosed by 'us boys' as being very dominating, unfriendly, and almost anti-social. She seemed 'severe.' We thought she dominated W.J. That's why he loved his field trips and an evening with his boys–he could, and did, relax!

I've rambled on and on. But it may serve to give you background. In summary, W.J. would never rank high in this era of forceful and domineering executives. He was a kindly man, always willing to encourage and give moral support to his subordinates. He was loved by all, and his employees worked hard–they never wished to disappoint him."

Sincerely,..."

Note: Talk with Martin Weiss. 1980. Oct. 4. I should visit the USDA National Agricultural Library in Beltsville, Maryland. While there, find out where Morse's films and the original report of his 1929-31 trip to the Orient.

Weiss was a youngster compared with Morse; they all called him 'Mr. Morse.' "We looked up to him too much–with respect or reverence or something like that.

Morse's office in Beltsville had no maps on the walls. It did have "a raft of files and many food samples. A typical government office."

Weiss knew that Morse smoked but was not aware that he was a heavy smoker.

Weiss was a professor of plant breeding and genetics at Iowa State University; that's important. Address: 11122 Emack Rd., Beltsville, Maryland 20705.

7154. Zell, Fran. 1980. Restaurants: Johnny's–With a split personality at your service. *Chicago Tribune.* Sept. 28. p. D12.

• ***Summary:*** Includes a review of the Japanese restaurant Kyori, 316 N. Michigan Ave. "You can make a meal on the appetizers alone, which include such tasty little side dishes as *agedofu,* ($2.25), three cubes of deep-fried *tofu* in a ginger sauce;..." Chicken teriyaki is also served. Address: Restaurant critic.

7155. Belleme, John. 1980. Re: Building a miso factory in North Carolina. Pasteurizing miso and selling dry koji. Letter to William Shurtleff at Soyfoods Center, Sept. 29. 2 p. Typed, without signature or letterhead.

© Copyright Soyinfo Center 2014

• ***Summary:*** "Our miso project is going quite well. This summer I located the remaining equipment in New Jersey and ordered our vats from Arrow Tank Co. in Buffalo [New York]. The owner is stone deaf; it was an interesting afternoon.

"We are now leveling the site for the miso factory. It's going to be one of those metal Butler buildings, about 4,000-sq-feet. Besides the miso project, we are working on other projects such as building a structure for summer camps, shiitake mushroom farming, and preparing our land for growing soybeans. There's just Jan. and I, so our hands are full."

While in Japan, John noticed that Mr. Onozaki's wife and most older traditional people never boil their miso soup. "People go out of their way to buy Mr. Onozaki's unpasteurized miso. These people believe that there is a very beneficial bacteria in miso which is killed by heat. More specifically, old people in rural Japan strongly feel that if you smoke, it is best to drink unpasteurized miso every day.

"On the other hand, the people at Sendai [Miso Shoyu Co.] and Michio [Kushi] believe this is nonsense. I have great faith in the wisdom of tradition. People that live close to the earth do not waste their time if not for good reason. Also, the people at Sendai pasteurize all exported miso, much of which is sold by Erewhon." John asks Shurtleff's opinion on these matters.

John would like to sell some of the koji he makes as dry koji. He asks how to dry it and the effect of drying on the enzyme activity of the koji. "Finally, do you know anything about the nutritional benefits of koji in making amasake or pickles?"

Talk with John Belleme. 1980. Oct. 3. The rebuilt cypress vats are 7 feet tall and 5 feet in diameter. Each costs $1,000 with stainless steel hoops. John is deeply interested in macrobiotics. Address: Route 3, Box 541, Rutherfordton, North Carolina. Phone: (704) 287-2940.

7156. Aihara, Cornellia. 1980. Corneliasan's corner: Tamari. *GOMF News* (*Oroville, California*). Sept. p. 3-4.
• ***Summary:*** George Ohsawa called his soy sauce 'Ohsawa Soy Sauce,' when he started teaching macrobiotics in Europe around 1957. He made a Frenchman the sole distributing agent for macrobiotic foods imported from Japan. This agent later began to import cheap, poor quality soy sauce from Japan under the name 'Ohsawa Soy Sauce.' As a result, Ohsawa had to import traditional natural soy sauce from Japan once again. He could no longer use the name 'Ohsawa Soy Sauce' because the other importer had copyrighted the name. Ohsawa therefore called the traditional natural soy sauce imported from Japan 'tamari'–even though, in the strict sense of the word, it was not tamari.

"Tamari sauce was a historical precursor to soy sauce and is available today in very limited quantities. It is a by-product of a particular type of miso that is made with only salt and soybeans (with a bit of koji enzyme). Its flavor and taste-enhancing qualities are not as distinctive as natural traditional soy sauce.

"*The Calendar Cookbook* was published last year but was written in 1972 when I was using natural soy sauce; in this as well as in *Macrobiotic Child Care* (1979) I called it 'tamari.' This was a mistake. I meant natural soy sauce, not tamari. Really, tamari means the liquid that comes to the bottom of the barrel under stone pressure when making miso... Making 100 pounds of miso, only one or two cups of tamari come. But I don't like to take this tamari off–I mix it up with the miso. If you remove it, the miso is less sweet... I never used tamari in my cooking.

"Last summer in Japan, Mr. Murata of Ohsawa Japan introduced us to the Yamaki factory. They are using good quality salt, not commercial government salt." Address: GOMF, 1544 Oak St., Oroville, California 95965.

7159. Hodgson, Moira. 1980. Restaurants: Sushi and more and new Italian. *New York Times.* Oct. 10. p. C22.
• ***Summary:*** A review of Sushiko, a small Japanese restaurant in New York City between Broadway and Eighth Avenue, which has a "sushi bar." Inexpensive side orders include: "Natto, mustard-colored fermented soybeans, gooey and unusual, were seasoned with mustard, chopped scallions and soy sauce, and had an extraordinary and subtle flavor, tasting slightly smoky, resembling food that has been cooked over charcoal. Bean curd came in large moist squares in a bowl of water, accompanied by a sauce of dried tuna [sic, bonito] flakes and scallions mixed with soy."

Paper-thin yakinori (toasted nori) could be used as a

© Copyright Soyinfo Center 2014

wrap for natto. Spectacular nasu shigiyaki was an eggplant sliced in half, covered with miso sauce, and grilled. Misoshiru [miso soup] is a rich brown soybean soup. Tofu is added to a tossed American-style salad.

7160. Ellis, Merle. 1980. A reunion with Japanese food: The butcher. *Los Angeles Times.* Oct. 16. p. K10.
• ***Summary:*** "If good food, simple preparation, beautiful presentation and economy are some of the things you look for in a meal, look to the Japanese."

Three recipes are given. Mizutaki means (literally) "water + boiling." "Legend has it that Samurai warriors (and ancient Mongolian warriors in China before them) used their helmets to cook a meal of whatever was at hand in a helmet full of boiling water." That is mizutaki. A "Mongolian hot pot" is a special utensil used for this dish, when available. The mizutaki recipe calls for "1 block tofu (soy bean cake) cut in 1-inch cubes." The Mizutaki sauce recipe calls for ¼ cup soy sauce.

Note: This article, titled "Japanese cuisine: Simple, beautiful and economical" also appeared in the *Hartford Courant* (Connecticut) (Oct. 16, p. E12). Address: Staff writer.

7161. Institute of Food Technologists' Expert Panel on Food Safety and Nutrition. 1980. Monosodium glutamate (MSG). A scientific status summary. *Food Technology* 34(10):49-53. Oct. Also published in Sourcebook on Food and Nutrition, 3rd ed. 1982. p. 135-39. [38 ref]
• ***Summary:*** Glutamic acid is one of the most common natural amino acids. The various salts of glutamic acid are used to enhance flavor. The sodium salt of glutamic acid, usually called MSG (for monosodium glutamate), is by far the most widely used glutamate, although potassium, ammonium, and calcium glutamates have been used in low-salt formulations as salt substitutes.

In East Asia, cooks have long used the sea vegetable *Laminaria japonica* (called "kombu" in Japanese) to make a tasty soup stock. The link between the seaweed flavor and glutamate (first isolated in 1866) was discovered by Professor Kikunae Ikeda of the University of Tokyo in 1908. He demonstrated that kombu contained generous amounts of glutamate and that it was the seaweed component responsible for food flavor enhancement. The Japanese began production of glutamate almost immediately. Thirty years passed before it was produced in North America from corn and wheat gluten. Today, MSG is produced in the USA from sugar beet molasses in a fermentation process. Or it may be extract directly from sugar beets.

"Glutamate is ubiquitous in nature and is present in both food and the human body, either as one of the amino acid building blocks of protein and peptides, on in its free form. The glutamate bound into a protein structure has no flavor enhancing properties–only the free form has that, and then only the 'L isomer.' Protein-rich foods such as human milk, cow's milk, cheese, and meat have a high content of bound glutamate, while most vegetables contain little, because of their low protein content. However many of these vegetables–such as mushrooms, tomatoes, and peas–do have high levels of *free* glutamate. In fact, some investigators have suggested that this explains the effectiveness of mushrooms and tomatoes in enhancing the flavor of other foods, in much the same way as seaweed."

"Glutamate exists as part of the human body in both free and bound form. The human body contains 14 to 17% protein, of which about one-fifth is glutamate. An adult weighing 70 kilograms (156 pounds) contains, on the average, 2 kilograms (4.4 pounds) of glutamate in his protein... The free glutamate concentration of the brain is about 100 times as in the blood." Address: Chicago, Illinois.

7162. Mochizuki, Tsutomo. 1980. Re: Bacteria found in the greatest numbers in traditional Japanese miso. Letter to William Shurtleff at Soyfoods Center, Oct.–in reply to inquiry. 1 p.
• ***Summary:*** The most abundant bacterium in traditional Japanese miso is *Pediococcus halophilus,* a lactic acid bacterium. No other prevalent species are found. Note: Dr. Mochizuki, an expert on miso, retired in 1982. Address: Shinshu-Miso Research Inst., Nagano city, Japan.

7166. Barber, Linda. 1980. Re: Thinking of writing a book about natto in English. Letter to William Shurtleff & Akiko Aoyagi at New-Age Foods Study Center, Nov. 7. 1 p. Handwritten (aerogram).
• ***Summary:*** Thank you for sending a copy of *Tofu and Soymilk Production.* "I'm spinning from all the new information."

"I wrote to you before about my work with tofu in Japan and now I'm beginning to study natto as well. Through my interest in tofu I met Hisao Nagayama (author of *Natto no Shimpi* and free lance writer about food culture). He wants to work with me, hopefully, to get a book about natto in English. I really feel honored but because of our language barrier, there are many problems. I remembered that the Center has many resources and, I hope, about natto! I don't need the slides you advertized in your catalog, but any other information would be great! Could you let me know what is available and how much it would cost?"

"Thank you..."

Note 1. Linda and a Japanese author wrote a booklet (25 pages) in Japanese titled *Tôfu, Nattô Ryôri* [Tofu and Natto Cookery] which was published in Japan in 1981.

Note 2. Nishinomiya is a city located in Hyogo prefecture, Japan, between the cities of Osaka and Kobe. Address: c/o Kobe College, 4-1 Okadayama, Nishinomiya, 662 Japan.

• ***Summary:*** The patent for the world's first salt-free miso. Note: A similar patent was granted on 28 May 1981. Japanese Patent 1,048,853. Address: Chuo 5-6-2, Ueda-shi, Japan.

7168. Watanabe, Hidekazu. 1980. Re: Early work by San-iku Foods in Japan with tofu and soymilk. Letter to William Shurtleff at Soyfoods Center, Nov. 20. 5 p. Handwritten, with signature on letterhead. [Jap; eng]
• ***Summary:*** Starting in about 1955 Dr. Harry Miller began to recommend that the Saniku school in Japan serve soymilk instead of dairy milk to its students. But the school decided not to do this because they thought the taste of the soymilk was not very good and it was considered less nutritious than cow's milk; moreover, it would cost a lot of money to buy soymilk equipment.

In 1957 Mr. Hanzo Ueda (who had previously worked at the post office in Hachioji and was a Seventh-day Adventist) was running a tofu shop. He and Mr. Hidekazu Watanabe were making soymilk at the tofu shop, packing it in 180 ml bottles, and selling it around Hachioji–under Dr. Miller's guidance.

In 1959 people from the Saniku school visited the tofu shop and gained confidence. They bought similar (but not identical) equipment, and started to produce soymilk at the school. They bottled it in 180 ml containers and started to serve it to 500 students at every meal.

Ten years later, in 1969, they started to produce Soyalac infant formula soymilk with help from Loma Linda Foods in America. They produced it at College Health Foods–a separate organization from the Saniku school.

Dr. Miller gave us helpful advice on technical and nutritional matters, and furthermore he always supported our spirit and spirituality as we developed the soymilk plant (1959) and the infant formula (1969). In 1969 Luppy Kôsan began to make Luppy soymilk. This was the first really serious commercial soymilk product in Japan.

Note: See also Mr. Watanabe's follow-up letter of July 1981. Address: San-iku Foods, Sodegaura-machi, Chiba-ken 299-02, Japan.

7169. Fabricant, Florence. 1980. Authentic and traditionally Japanese. *New York Times.* Nov. 23. p. LI27.
• ***Summary:*** This is a review of the Japanese restaurant Kura Barn, 479 New York Ave., Huntington [on the north shore of Long Island]. One of the favorites is "fried tofu."

"Tofu, the snowy, slippery soybean curd that has no flavor whatever but plenty of nutritional value, is transformed into mildly seasoned patties, deep-fried and bathed in a rich black mushroom sauce for a particularly splendid appetizer." Address: Restaurant critic.

7170. Andoh, Elizabeth. 1980. At home with Japanese cooking. New York, NY: Alfred A. Knopf. 254 p. Illust. by Michiko Fujiwara. Index. 25 x 22 cm.
• ***Summary:*** A beautiful, intimate and very useful book, approachable and suffused with a unique tranquility and charm. The illustrations (line drawings) are exquisite.

Contents: Acknowledgments. Introduction. A note about the romanization of the Japanese language (Hepburn system). In the Japanese kitchen: Techniques and equipment–Grilling, broiling, steaming, braising and simmering, frying, dry roasting, grinding, crushing and mixing, using knives (four types, and how to hold and use them), skewering, straining and mashing, grating, pots and pans, miscellaneous equipment (chopsticks, rice paddle, rice tub, flat fan, bamboo mats, bamboo trays, metal mold, etc.). Meals and menu planning. The recipes: Soups, rice, noodles, braised and simmered foods, grilled and skillet-grilled foods, deep-fried foods, steamed foods, mixed, sauced and tossed foods, pickles, sweet things and beverages. In the Japanese kitchen: Foodstuffs. Suggestions for ordering Japanese foodstuffs, A glossary of Japanese terms.

The very helpful glossary includes (soy related): Abura agé: fried bean curd [tofu]. Aka miso: dark bean

© Copyright Soyinfo Center 2014

paste [miso]. Daizu: dried soybeans. Eda mamé: fresh soybeans. Kikkoman: brand name of soy sauce. Kinako: soy flour [roasted]. Marukomé miso: brand name of medium fermented bean paste. Miso: fermented bean paste. Miso shiru: soup thickened with fermented bean paste. Natto: fermented sticky soy beans. Okara: by-product of fresh tofu-making. Saikyô miso: light bean paste, a brand and regional name. Sendai miso: dark bean paste, a brand and a regional name. Shinshû Ichi miso: medium bean paste, a brand and regional name. Shiro miso: white (or light) bean paste. Shôyu: soy sauce. Teri yaki: glaze grilling. Tôfu: bean curd. Usu kuchi shôyu: thin or light soy sauce. Yuba: thin brittle sheets of soy milk (by-product of tôfu-making).

Note: This is the earliest English-language document seen (April 2013) that uses the word *Abura-agé* (hyphenated with diacritics) to refer to deep-fried tofu pouches.

Also includes: Each of the basic sea vegetables / sea greens used for food in Japan (ao nori, hijiki, konbu, nori, wakamé, etc.). Umé-boshi: pickled plums.

The book contains excellent recipes and descriptions (see the index) using bean curd [tofu] (7 recipes), eda mamé (1), fried bean curd (*abura agé*) (5), grilled bean curd (*yaki-dôfu*) (3), miso (17), and soybeans, dried (1); natto is not mentioned.

Elizabeth concludes the Introduction by explaining: "What I've tried to write here is the very book I wish I'd had with me when I started out fourteen years ago."

About the author (last page and with portrait photo on inside rear dust jacket): Elizabeth, who was raised in New York and graduated from the University of Michigan, traveled to Japan in 1966 to study Japanese, lived with the Andoh family on the island of Shikoku, and married into that family two years later. Shortly after her marriage, she enrolled in a class at the Yanagihara School of Classical Japanese Cooking, where she studied for six years. She has a daughter, Rena, to whom this book is dedicated.

The copyright page states: "Many of the recipes which appear here were originally printed in slightly different form in *Gourmet* magazine, 1975, as part of a 6-part series entitled 'The Seasonal Japanese Kitchen,' by Elizabeth Andoh." Address: Tokyo, Japan.

7171. Barber, Linda Lee. 1980. Let's cook: A beginner's cook book–starring "Pooh," the culinary cat. Translated by Kazuko Kagotani and Tomoko Matsuda. Kobe, Japan: Published by the author. 102 p. Nov. Illust. No index. 30 cm. Comb bound. [Eng; Jap]

• ***Summary:*** Letter (e-mail) from Linda Barber. 2012. July 7. A bi-lingual step-by-step cookbook for children that uses tofu and kinako in the recipes. I developed the recipes, my sister Wendy, illustrated them, and my assistants Kazuko and Tomoko translated them. I haven't seen anything like this before. I wrote this while I was in Japan in the early 80's. It is self published.

The recipe for "Tofu cheesecake" (p. 64-67) calls for many ingredients including "momen-dofu" (450 gm), 2 eggs, crumb crust, natural sugar, yogurt cheese, lemon, etc. The crumb crust and yogurt cheese must be prepared in advance; the recipes are in this book.

The recipe for "Power flour" (p. 68-69) calls for Kinako. To make this Power flour: Measure into a bowl: 1 kg all purpose flour, 5 tablespoons nonfat dry milk granules, 5 tablespoons wheat germ, and 5 teaspoons kinako. Mix well. "Store in a cool place in a covered container, and use this flour mixture when a recipe calls for flour." This recipe alone contains 15 illustrations. Many subsequent recipes in this book call for Power flour.

The recipe for "Moon bread" (p. 78-81) calls for 450 gm "momen tofu" and produces croissants with a tofu filling.

The recipe for UFO's (p. 82-85) begins: "This cookie has an Unidentified Food Object... tofu! They are really out of this world with a glass of milk!!!" Address: Kobe College, 4-1 Okadayama, Nishinomiya 662, Japan.

7172. Esko, Edward; Esko, Wendy. 1980. Macrobiotic cooking for everyone. Tokyo: Japan Publications, Inc. 272 p. Nov. Foreword by William Tara, Director, Community Health Foundation, London, England. 26 cm. [50 ref]

• ***Summary:*** The authors studied in Japan (mostly Kyoto), from Sept. 1978 to May 1979, at which time they returned to Boston. In the summer of 1979 "more than 100 delegates from various regional centers throughout the United States and Canada met in Boston for the first North American Congress of Macrobiotics." Part I of this book discusses the theory of macrobiotics and Part II gives recipes. Unfortunately, the book has no index, and the bibliography gives no years of publication. There are chapters on: Seitan, fu, and noodles (incl. soba), and Sea vegetables.

Soy-related recipes include: Brown rice and soybeans (p. 90). Miso soft rice (p. 96). Somen with deep-fried tofu (p. 118). Kenchin soup (with deep-fried tofu cubes and tamari, p. 130). Okara soup (p. 132). Miso soups (p. 137-143; 12 recipes are given plus a long letter from Jan Belleme, about how she and her husband, John, who arrived in Japan in late October 1979, are now living with the Onozaki family and studying miso-making there–p. 138-39). Sauteed cucumbers and miso (p. 154). Boiled cabbage, sweet corn, and tofu (p. 155). Udon-vegetable bane (with deep-fried tofu, p. 159). Steamed kale and tofu (p. 161). How to make sprouts (incl. soybean sprouts, p. 177).

Chapter 5 is titled "Bean dishes, including tofu and natto." It states (p. 178-79, without citing the source) that "In China and Japan there is a proverb, 'A man who eats too many beans becomes a fool.'... Lima beans and soybeans are both very yin, and require thorough chewing. They should be eaten only on occasion and in small quantities... Kombu can be placed on the bottom of the pot when cooking chickpeas, soybeans, lima beans or kidney, pinto and navy beans. I

© Copyright Soyinfo Center 2014

have found that kombu definitely improves their flavor, and because of its high mineral content, creates a very balanced dish." To pressure cook soybeans so that they do not clog the steam escape valve, first boil them for 30 minutes. Skim the foam off the top as it rises, and when no more foam rises to the surface you may place them in a pressure cooker and continue cooking until done. Recipes include: Japanese black beans (black soybeans). Soybeans with kombu and burdock. Soybeans with lotus root and salmon. Following a long discussion of tofu, Homemade tofu. Tofu with scallions. Tofu with bonito flake broth. Baked tofu with miso/lemon sauce. Broiled tofu. Tofu loaf. Steamed tofu rolls. Deep-fried tofu cakes. Aburage (Age or deep-fried tofu). Stuffed age pouches. Okara. Okara croquettes. Sautéed natto. Natto rice or noodles. Natto tempura. Dried natto.

Note 1 This is the earliest English-language document seen (April 2013) that uses the term "broiled tofu" to refer to grilled tofu.

Hijiki with soybeans (p. 193). Hijiki and deep-fried tofu (p. 194). Tempuraed tofu-nori rolls (p. 198). Koi-koku (Carp miso soup, p. 220). Daikon and tamari. Scallion miso. Green peppers and miso (p. 224). Miso condiments (p. 226). Tamari. Moromi (p. 227). Rutabaga-tamari pickles (p. 233). Quick miso pickles (p. 234). Tofu tamari dressing (p. 236). Tofu-sesame dressing. Shiro-miso-tofu dressing. Miso dressing (p. 237). Tamari-lemon dressing. Tamari-rice vinegar dressing. Miso-tahini dressing (p. 238). Miso-rice vinegar dressing. Miso walnut dressing. Miso-tahini spread. Sesame miso spread. Miso-nut spread (p. 239). Lentil-miso spread. Lima bean miso spread (p. 240). Tofu dip (p. 243). Amazake (p. 247-48). Clear broth soup with tofu & scallions (p. 253). The glossary lists many soy products plus azuki beans, sea vegetables (many types), gluten, koji, kuzu, mochi, natto, nigari, okara, seitan, tekka, tempeh, umeboshi, unohana (okara), and yuba.

Macrobiotic periodicals include: *East West Journal* (Brookline, Massachusetts). *Kushi Institute Study Guide and Kushi Inst. Newsletter* (Brookline, MA). *The Order of the Universe* (East West Foundation, Brookline, MA). *The Macrobiotic Review* (East West Foundation, Baltimore, Maryland). *Spiral* (Community Health Foundation, London). *Le Compas* (Paris). Note: The date each periodical began publication is not given.

The lengthy section on seitan (p. 110-13) gives a detailed recipe for making seitan at home using the short method and 3½ lb hard spring wheat flour or hard red winter wheat flour. The broth is made with kombu and tamari. Seitan recipes include: Seitan stew. Seitan fried rice. Stuffed mushrooms (with sauce). Stuffed squash or Hokkaido pumpkin. Address: Boston, Massachusetts.

• ***Summary:*** Contents: Introduction. A family of distinctively varied foods. A storehouse of high-quality protein. Low in saturated fats: free of cholesterol; an ideal diet food. Natural backbone of the meatless diet. Buying and storing tofu. Making tofu at home and in communities. Soybeans, tofu, and the world food crisis. Tofu shops in Japan. Cooking with tofu (13 recipes). Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

7176. Tsuchiya, Kunio. 1980. Minami no tôfu, kita no tôfu: Hiden–Rokujô-dofu o tazunete [Southern tofu, northern tofu: Secrets of the art–A visit to Rokujo tofu]. *Daizu Geppo* (*Soybean Monthly News*). Nov. p. 22-32. [Jap]

7177. *Toyo Shinpo* (*Soyfoods News*). 1980. [Nutritional analysis of tofu using various coagulants]. Dec. 1. [Jap; eng+]
• ***Summary:*** Table 1 gives the nutritional composition of two types of tofu: Regular handmade tofu, and lactone silken tofu (made by machine). Analyses are given for three types of regular tofu, each made with a different coagulant/curding agent. For each of these four types of tofu, the content of water, protein, fat, calcium, and magnesium per 100 gm is given.

The calcium content (per 100 gm) of the four types of tofu is as follows, with the coagulant shown first: calcium

© Copyright Soyinfo Center 2014

sulfate 139 mg, natural nigari 42 mg, magnesium chloride 36 mg, lactone silken tofu coagulated with GDL (glucono delta lactone) 14 mg. Note that tofu coagulated with calcium sulfate contains more than 3.8 times as much calcium as that coagulated with magnesium chloride (refined nigari).

The tofu curded with calcium sulfate contains 89.0% water, 3.6% protein, 1.7% fat, and 25 mg of magnesium. The tofu curded with magnesium chloride (refined nigari) contains 88.6% water, 5.3% protein, 2.9% fat, and 84 mg of magnesium.

Table 2 compares the nutritional composition of machine-made lactone silken tofu (given above) with handmade silken tofu that contains a chemical additive (Glycerin fatty acid ester = *Guriserin shibosan esuteru*) used to prevent burning while cooking the soybean puree, and improve the tofu yield and texture; each type is coagulated with GDL. The calcium content is 14 mg vs. 129 mg.

Table 3 shows tofu yield using 3 different coagulants: From 1 kg of soybeans a manufacturer can get: 2.75–3.25 lb of tofu coagulated with nigari; 3.50–4.00 lb of tofu coagulated with calcium sulfate; or 4.50–5.00 lb of tofu coagulated with GDL.

The analyses were conducted by the Omiya Consumers' Living Center in Japan.

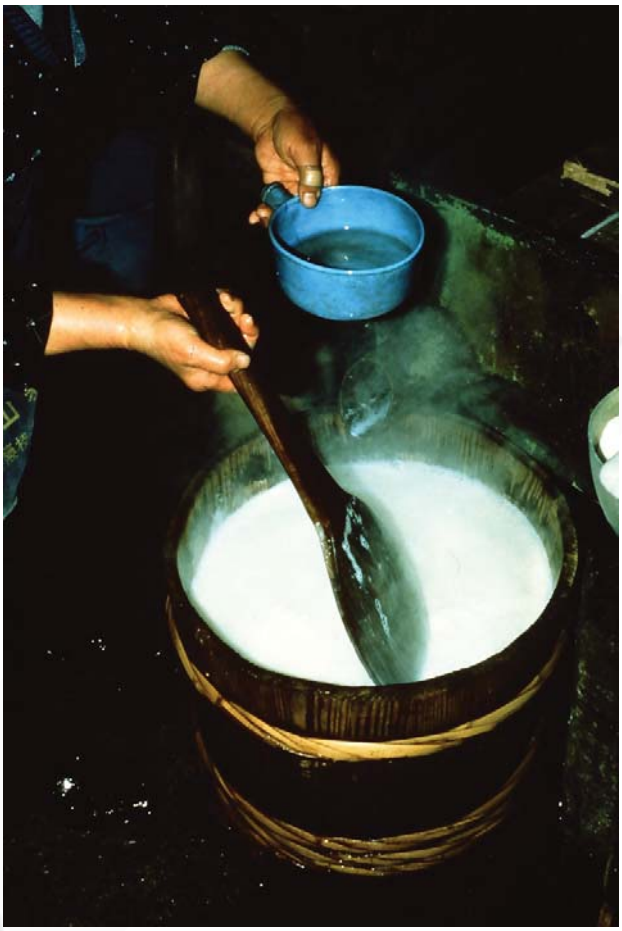
7181. Barber, Linda. 1980. Color slides taken at a small tofu shop in rural Japan. Kobe, Japan. 1 p. Based on e-mail of 2 Nov. 2012.

• ***Summary:*** Linda took these color slides at a tofu shop in a very rural farm town in Japan while on a trip that friends arranged for her. She writes (Nov. 2012). "I loved the old tools and the owners / makers who were a mother and son. It was like going back in time." (1) A traditional stone grinder mounted on stone supports, surrounded by traditional tofu-making utensils. (2) Soaked soybeans being ground between granite stones, which are now turned by a motor. The fresh soy puree runs down into a metal can.

(3) Stirring the soy puree as it cooks and foams up in the caldron. (4) Ladling the cooked soy puree into a coarse pressing sack–as the steam rises.

(5) After the soymilk has been pressed out, only okara (soybean residue) remains in the flattened pressing sack. (6) While stirring hot soymilk with a paddle in the curding vat,

© Copyright Soyinfo Center 2014



the mother prepares to pour in a nigari solution slowly so as to transform the soymilk into curds and whey.

(7) Ladling the curds into a cloth-lined wooden forming box. (8) Pouring the last of the curds from curding vat into the cloth-lined forming box, where they will be pressed into tofu.

(9) A young man (at another tofu shop) carefully cutting a large block of tofu in the cooling sink into individual cakes of tofu, which will remain under water in the sink until they are sold. Address: Resident Director of Practice House and Oral English Instructor, Kobe College, 4-1 Okadayama, Nishinomiya, Japan.

7184. *Madison Survey & Alumni News* (*Madison, Tennessee*). 1980. Obituaries: Ella Mae Webber. Dec.
• ***Summary:*** Ella (Verney) Webber was born 17 June 1886 in southern Michigan, and died 22 Oct. 1980, at age 94, at Dunlap, Tennessee. In 1912 she was married to Perry A. Webber. In 1913 they were appointed by the General Council (G.C.) Foreign Missions Board to go to Japan, where they pioneered Seventh-day Adventist educational work in that country. From a very small beginning in the crowded compound in Ogikubo, a suburb, the school has grown into Japan Missionary College with hundreds of students.

Their two sons, Alfred B. Webber and Harry V. Webber, were born in 1919 and 1923 respectively. After a year in Hawaii, the Webbers were sent back to Japan in 1925 to move the college into the country. The buildings were erected by the teachers and students. Industries were started and farm work carried on. The Food Factory, small in its beginnings, grew into a major industry.

Feeling the need for more education, in 1928 the Webbers enrolled in Michigan State University. After 3 years of training, several years were spent at Madison College, where they taught and Ella earned her B.S. degree in 1935. Also in 1935 the G.C. Mission Board again asked the Webbers to return to Japan to carry on the school program of the Japan Missionary College.

In 1953 the Webbers started a self-supporting work at Mount Akagi, Japan. This pioneering program included educational, industrial, and medical work.

Before retiring, Ella again taught at Madison college. Before Perry's passing in January, 1973, much of Ella's time was spent in his care. Her later years were spent in Lodi, California, with her son, Alfred, until he received his appointment to return to Japan, then she moved to Wildwood [Wildwood Sanitarium, a self-supporting Seventh-day Adventist convalescent home and health care facility in Wildwood, northern Georgia].

They returned again to Madison in 1959, and worked there for about ten years until Perry's health failed. He died at Wildwood Sanitarium and was buried in their cemetery.

The last 5 months of her life were spent at Stone Cave Institute, Dunlap, Tennessee. She died in a hospital in Dunlap and was buried in Wildwood Cemetery Hill. She is survived by her two sons–Dr. Alfred B. Webber, missionary in Tokyo, Japan; Dr. Harry V. Webber of Modesto, California; and 5 grandchildren.

Dec. [9 ref. Jap; eng]
• ***Summary:*** The purple specks caused by the fungus *Cercospora kikuchii* is the most common disease which develops on the soybean seed coat. Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

7186. Udaka, Kyoko; Fukazawa, Chikafusa. 1980. [Changes in soybean reserve protein components and protein body formation during seed development]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 37. p. 223-36. Dec. [22 ref. Jap; eng]
• ***Summary:*** Contains 8 electron micrographs and 3 scanning electron micrographs. Figure 1, an electron micrograph of a thin section of a developing soybean cotyledonary cell, and subsequent related figures show: CW = cell wall. V = vacuole. N = nucleus. Nu = nucleolus. DP = dense particle of protein. ER = endoplasmic reticulum. RER = rough endoplasmic reticulum. Ve = vesicule. PB = protein body. St = starch granule. AP = amyloplast. Cyt = cytoplasm. Vm = vacuole membrane (tonoplast). PB' = vacuole-like body with a scattering of electron-dense material.

Reprinted from *Michurin Seibutsugaku Kenkyu* (*Studies in Michurin Biology*) 14(1):27-40 (1978). Note: "Michurin Biology" (from Russia during the oppressive Lysenko era) included the study of acquired characteristics. Address: 1. National Food Research Inst. 7187. Williams, Dudley G. 1980. Japan's newest soybean crushing firm to open plant in Kyushu. *Foreign Agriculture* 18(12):19-20. Dec.
• ***Summary:*** Japan's oilseed crushing industry is the largest export customer for U.S. soybeans, taking 3.7 million tons in 1979. The new plant, which will have a capacity of 10,000 to 17,000 metric tons per month of soybeans will be Japan's 12th devoted almost exclusively to soybean crushing. Most of the country's large soybean crushing plants are located at dockside in Yokohama and Kobe. Of Japan's 1979 soybean imports totaling 4.13 million metric tons, Kobe handled the most (24.4%), followed by Yokohama (18.1%), Chiba 12.5%, and Nagoya 10.4%. Address: U.S. Agricultural Counselor, Tokyo.

7188. *Soya Bluebook.* 1980-1994. Serial/periodical. St. Louis, Missouri: American Soybean Assoc. Called Soybean Blue Book from 1947-1966; Soybean Digest Blue Book from 1967-1978; Soybean Digest Bluebook in 1979; Soya Bluebook from 1980 to 1994.

• ***Summary:*** A directory and information book (general and statistical) for the soybean production and processing. In 1987 the *Soya Bluebook* contained seven major sections: Organizations (incl. Associations), Soy Directory (Crushers, Soyfoods, Industrial Products), Soybean Manufacturing Support Industries, Marketing and Auxiliary Services, Soy Statistics, Glossary, Standards and Specifications. Well indexed, with color maps. In the early 1980s the Bluebook started to include many more foreign soyfood manufacturers.

The book contains many tables, including: "World Soybean Production," which gives area and production in specified countries (1974-1980). In 1980 this included: North America: Canada, Mexico, United States. South America: Argentina, Brazil, Bolivia, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay. Europe: Bulgaria, France, Hungary, Romania, Spain, Yugoslavia. Soviet Union. Africa: Egypt, Ethiopia, Nigeria, South Africa, Tanzania, Uganda, Zaire. Asia: Burma, China (Mainland), Taiwan, India, Indonesia, Iran, Japan, Kampuchea [Cambodia], Korea (north), Korea (South), Philippines, Thailand, Turkey, Vietnam. Oceania: Australia. World total.

In early 1988 the American Soybean Association sold the *Soya Bluebook* to Soyatech, owned by Peter Golbitz. His first print run was 8,800 copies. Yellow pages were added. In Dec. 1989 Soyatech announced that in 1988 estimated readership was 10,265 in 55 countries. 33.6% of the buyers were soybean processors / manufacturers, 28.7% were importers, exporters, transporters or marketers, 15.0% were suppliers of soybean processing or handling equipment and manufacturing support services, 9.9% were consultants, booksellers, or periodicals, 8.7% were organization or government agencies, and 4.1% were colleges, universities, libraries, and information centers. By region, 64.3% were sold in North America, 15.2% in Europe, 9.1% in Asia / Pacific / Oceania, and 9.1% in Latin America.

The 1991 Soya Bluebook appeared in Aug. with a new larger (8½ by 11-inch) format and 264 pages. The indexing system is more complete and the pages are tabbed for easy access to each section. The "reference" section was expanded by adding nutritional information on soyfoods, a new chart of soyfoods products, and soybean oil trading standards.

Health Foods Business. 1992. Nov. p. 218. *Soya Bluebook* now reports its circulation to be 3,000.

Talk with Joy Froding of Soyatech. 1995. Jan. 12. The 1994 print run of Soya Bluebook was 2,300 copies. An estimated 4 people read each copy.

Price of the Soya Bluebook (1 book sent to USA, Canada, or Mexico): 1992 = $28 (if paid before June 1; $38 afterward). 1993 = Same price. 1994 = $38 (no prepayment discount; Available July 1994; this book has fold-out indexing tabs and 272 pages. The order form announcing the '94 Soya Bluebook states: "For 47 years Soya Bluebook has served as *the* noted information source for the world's soybean industry"). Starting in Jan. 1994 four issues of *Bluebook Update* are available free of charge to all who subscribe to or are listed in *Soya Bluebook.* 1995-96 = $38 ($48 after 1 June 1995; then in Nov. 1995 the price is raised to $58; incl. indexing tabs, 292 pages). This 1995-96 issue is titled "Soya Bluebook Plus: the annual directory of the world oilseed industry." Crops featured on the front cover are "soya, corn, cottonseed, palm, canola, rapeseed, and sunflower." Address: St. Louis, Missouri; Bar Harbor, Maine (After Jan. 1988).

7189. **Product Name:** [Soy Flake Number 1].
Foreign Name: Daizu Fureeku No. 1.
Manufacturer's Name: Ajia Protein.
Manufacturer's Address: Main Office: Miyanomori Palace, Miyanomori 4 jo, 11 chome, Chuo-ku, Sapporo-shi, Japan. Phone: (011) 644-1760.
Date of Introduction: 1980.
Ingredients: Whole soybeans.
Wt/Vol., Packaging, Price: 15 or 30 kg (33 or 66 lb).
How Stored: Shelf stable, 10 month shelf life.
New Product–Documentation: Leaflet. 1983. *Daizu Fureeku No. 1: Gyokai no machinozonde ita kakumei-teki genryô desu* [Soy flake Number 1: The revolutionary ingredient that the industry has long been waiting for]. 4 p. Describes whole (non-defatted) soybean flakes that are used to make tofu in Japan. Stored under the proper conditions (in a cool, dry, dark place), they are guaranteed to keep their quality for 10 months. They are packaged in quantities of 15 kg and 30 kg (33 or 66 lb). An annotated flow sheet of the process for using the flakes to make tofu is given.

A table shows that from 30 kg of Soy Flake No. 1, a tofu maker can obtain 400 cakes (400 gm each) of regular tofu, compared with only 250 cakes if whole soybeans were used. This implies that the flakes give a 60% higher yield of tofu per unit weight than whole soybeans.

The address of the factory is Aza-Toyoni, Hirô-machi, Hirô-gun, Hokkaido.

Talk with (call from) Art Mio of Morinaga. 1990. March 28. He says that Morinaga has used these flakes to make tofu, and the resulting tofu is more bitter than that made from whole soybeans.

Letter from David Nichols of Nichii Co. of America. Asia Protein Co. was established in 1977 by Mr. Chikaarashi; they started to make soy flakes in 1980.

Leaflet (3 panels each side) sent by Nichii Company of America (Torrance, California 90505). 1993. Jan. 28. "Science meets the soybean. And tofu will never be the same again."

Ad (full page, black, green, and red) in *Natural Foods*

• ***Summary:*** A survey on the acceptability of tempeh was carried out by 50 members of a taste panel at the authors' school in Osaka, Japan. "The results of the survey indicated that the appearance of tempeh was lower than that for flavor, taste, stickiness, and texture. More than 76% of the panel members favored tempeh over natto (the result may be different if a survey is carried in Kanto district). Among methods of cooking tempeh, deep fat frying was most favored. Salt was evaluated as the best seasoning for tempeh rather than coriander or curry. The panel also compared the meat burger, the meat with soyprotein burger, and the tempeh burger. The meat only was given the highest rating, the meat with soybean protein second, the tempeh burger was the lowest. However, it was found that the tempeh burger could be acceptable." Address: Teikoku Women's Univ., 173, 6-chome, Todacho, Moriguchi-shi, Osaka, Japan.

7192. Hinode Tofu Company. 1980. Hinode Tofu. Natural soy protein (Leaflet). Los Angeles, California. 1 p.
• ***Summary:*** This color leaflet describes 6 tofu types with 8 recipes. Address: 526 Stanford Ave., Los Angeles, California 90013.

New Product–Documentation: Product with Label purchased in about 1980 in Kichijoji, Tokyo. White on red, and red on white. Surprisingly no ingredients are listed, but the ingredients are probably water, soybeans, and natto culture (*Bacillus subtilis*). The front panel reads: Across the top, 6 medium-size white characters: Living natural food (*Ikita shizen shokuhin*). In lower right, many small white characters: Name of marketing company.

Across the top, upside down, in small red letters on white:

This product is made by using the most vital nattô bacteria which was added to the highest class domestic soybeans, for the best among natto products.

The nattô's strong bacteria controls the bad bacteria in your body to make your stomach pleasant.

No additives are used.

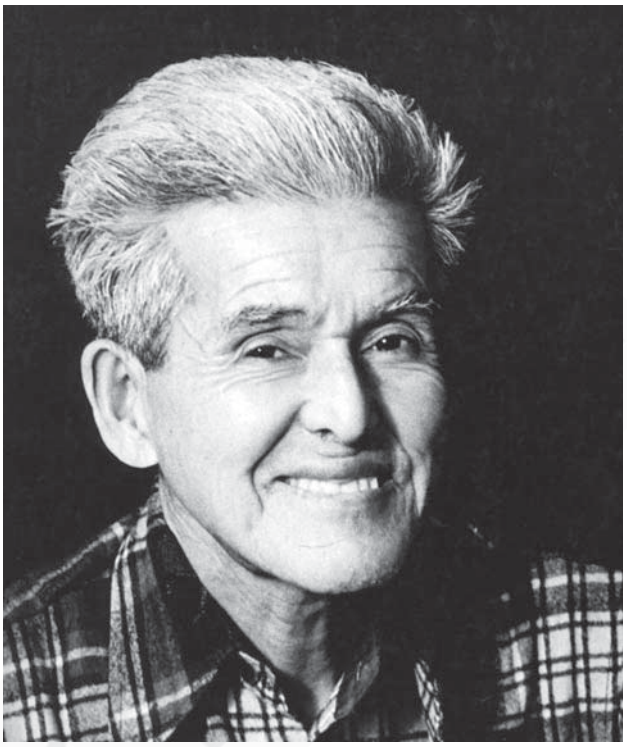
7204. Aihara, Herman. 1980. Learning from salmon. Oroville, California: George Ohsawa Macrobiotic Foundation. xiii + 156 p. Illust. No index. 22 cm.
• ***Summary:*** This is a collection of Herman Aihara's writings, over the past 20 years, compiled by Sandy Rothman, editor of GOMF. Each article or essay is dated. Contains a good early history of macrobiotics in the USA, and of Chico-San (p. 26-35).

Herman was born Nobuo Nishiyama on 28 Sept. 1920 in Arita, Kyushu, Japan. In about 1940 Herman started to attend George Ohsawa's lecture meetings. He was fascinated by the philosophical part of Ohsawa's teaching (yin and yang) but showed little interest in the food, which was cooked by Ohsawa's students. These meals consisted of brown rice, hijiki seaweed, carrots, burdock and red beans [azuki beans]. Herman was in college where his classmates laughed at him for his interest in yin and yang, which were considered old, obsolete ideas in Japan. His classmates were busy digesting 20th century Western science–on their way to becoming the future engineers of Sony, Toyota, Datsun, and Toshiba (p. 2).

During his first year in college, Herman was chosen for the crew of a rowboat race representing his class. He was the heaviest among the crew, so he was positioned as



number one. He trained every day during the summer. In the hot weather he ate shaved ice with sugar syrup. His stomach cramped. Since he thought he understood macrobiotics, he ate salt to balance the yin of the ice and sugar. "What a silly mentality."

After graduating from college, he began to cook for himself–but he became weak and skinny. His friend became worried, since he was "one of the most athletic students" (p. 4). But the real cause of his sickness was arrogance; he thought he understood macrobiotics but his practice was unwise. During World War II he worked at his father's factory. When the war ended in 1945 he lived at home. Since food was very scarce in those days (they had to buy foods on the black market) he ate whatever his mother cooked–including white rice and sugar.

He started to learn social dancing in the newly opened dance halls. "Social dance was a new fashion after American forces occupied Japan. When people were starving to death just after the war, I was a playboy, chasing sexy girls at various dance halls.

"My father worried about my behavior and hurried my marriage. I married because my parents were agreed, but I myself was not much attracted to her. My wife committed suicide before our marriage passed one year. It was the end of autumn. She climbed a mountain alone, drank poison, and died without giving anyone her reasons." Herman was shocked and depressed for a long time. He lost his mind for a month. "How pitiful a man I was. My wife could not rely on me" (p. 5).

Herman decided to become an independent man and he chose George Ohsawa as his life's teacher and he asked

© Copyright Soyinfo Center 2014

Ohsawa if he could stay at his unique school. Ohsawa's teaching was about how to understand and acquire infinite freedom, absolute justice, and eternal love. He inspired his students greatly, and told them it was their own fault if they were not happy. The food you eat is one of the most important factors that influences a person's health and happiness.

Herman landed in San Francisco in 1952 at age 32 to start a new life. His wife was sick, and two of their babies died.

Before March of 1961 Ohsawa visited Europe and saw many beautiful macrobiotic restaurants and clinics in Belgium, France, Italy, Germany, Switzerland, and England. The Lima factory in Belgium produces macrobiotic foods. Macrobiotic restaurants include Au Riz Dore, and Longue Vie.

Like the salmon, Ohsawa took his most adventurous trip late in his life (p. 77). He held his first American macrobiotic lectures in 1960 on Long Island, New York. They lasted for 2 months. At that time Herman was manager of the first macrobiotic food store in the USA, in New York City [Named Ginza, it had been started by Herman in 1960.] In 1960 Herman went to Europe to solve visa problems, then in about late 1960 he returned to New York and started publication of *Macrobiotic News,* a magazine that contained mostly Ohsawa's lectures. In 1961 Ohsawa returned to New York for a summer camp in the Catskill Mountains. After the camp he said that followers of macrobiotics should leave New York because nuclear war was immanent. 36 people, including 15 families, decided to move to Chico, California, which they had calculated was the safest place from nuclear fallout. Arriving in Sept. 1961, they soon founded Chico-San, which was the first macrobiotic food production and distribution company in the USA. The first store was in the basement of a small shop. Herman began to import miso, tamari, and other traditional, natural foods from Japan (p. 31).

Some followers of macrobiotics stayed in New York to keep up the Ohsawa Foundation and food store. One customer got sick and died [Beth Ann Simon died in Nov. 1965]. The FDA came in and closed the store. Bob Kennedy became president of Chico-San and soon began America's first successful production of Rice Cakes.

Herman moved to San Francisco in about 1971 (p. 35). At the end of 1970, John Deming Jr. had given him some land in Mendocino. In Sept. 1972 a fire, started by a rice-cake machine, burned down the Chico-San factory (p. 34) and most of its inventories of food. Chico-San started making money in about 1978.

Western medicine is interested only in treating symptoms. Medical professionals are largely ignorant of the influence of diet on health, and even block the development of the dietary approach to healing.

Page 155: "The author: Herman Aihara was born in Arita, a small town in southern Japan, on September 28, 1920. The town is famous for its production of porcelains called *Imari-ware* or *Kakiemon-ware.* Imari is the name of the port from which Arita porcelains were shipped to Europe... His birth family was too poor to support ten children, and so at the age of nine Herman was adopted into his uncle's home in Tokyo. His family name was changed to Aihara. He grew up without knowing his actual mother... His 'stepfather' owned a factory that produced iron materials for the national railways and telephone companies, and Herman chose metallurgical engineering as a life work. He was accepted by the school of engineering at the reputable Waseda University." Address: Oroville, California.

7205. Akizuki, Tatsuichiro (Shinichiro). 1980. Taishitsu to shokumotsu: Kenkô e no michi [Physical constitution and food: The way to health]. Tokyo: Kuriei Shuppan-bu. 61 p. [Jap]

• ***Summary:*** Author's first name is given as Tatsuichiro. Kawamura says this is mistaken.

7206. Bell, Richard E. 1980. Soybeans in world trade. In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Proceedings. Boulder, Colorado: Westview Press. xv + 897 p. See p. 763-66.

• ***Summary:*** Soybean trade is growing very rapidly. In 1977-78 the volume of world trade in soybeans and soybean products totaled 35.6 million tonnes (metric tons); this was up 66% for 5 years earlier. Last year the value of world trade in soybeans and products was more than $8.5 billion.

In 1977-78 world utilization / consumption of soybeans was a record 77 million tons; 85% of these soybeans were crushed for oil and meal. Only in East Asia are soybeans used on a large scale for human food.

In recent years, the growth in world soybean consumption is the result of two trends: (1) Rapid expansion in world demand for high protein feed, especially in North America, Europe, the Soviet Union, and parts of East Asia; and (2) Growth in world demand for edible vegetable oil, especially in developing countries. North American and Western Europe have shown the largest growth in soybean consumption, followed by the Soviet Union and Eastern Europe.

In Brazil, soybean production has increased 13 fold during the past 10 years, and nearly 80% of the increase was exported as beans, meal or oil, with most of these exports headed for Western and Eastern Europe.

As a result of rising world demand, prices received by farmers have risen about 45% in the last 5 years, in real currencies–adjusted for inflation. The higher prices have, of course, further encouraged expansion of soybean acreage. In the U.S. soybeans have passed both corn and wheat to become the top cash crop.

In Brazil, government policies have actively encouraged

© Copyright Soyinfo Center 2014

soybean production while also protecting the country's soybean crushing industry through a combination of tax incentives, export subsidies, and export controls on raw soybeans. Argentina has also increased its soybean production in recent years, but not nearly as much as Brazil.

Government policies have also encouraged greater consumption of soybeans in Western Europe, especially in the European Community (EC)–and in the Soviet Union and Eastern Europe, by trying to raise living standards by increasing meat consumption.

In Japan, international policies limiting offshore fishing have encouraged more livestock production and consequently the demand for soybean meal used as a feed.

Twenty years ago the European Community made a commitment during a world-wide trade negotiation not to impose any import duty / charge on soybeans imported into EC countries. "This concession is the most important one ever granted an agricultural product in international trade negotiations and is in large part responsible for the large growth in soybean consumption in Western Europe in recent years."

Japan plans to make a similar concession in the world trade negotiations soon to be concluded in Geneva, Switzerland. At that time, the world's two largest soybean importers will be committed by treaties to the duty-free entry of soybeans.

An extremely important development in the world soybean market was the emergence in 1978-79 of the Soviet Union as a net importer (estimated at 70,000 metric tons) of edible oils and fats for the first time in history. There is no indication that this trend will be reversed. Address: Executive Vice President, Riceland Foods, Stuttgart, Arkansas 72160.

7207. Carter, O.G.; Skurray, G.R.; Cunich, J.; Honey, S. 1980. Quality assessment of Australian soybean varieties for the production of Japanese foods (Abstract). In: F.T. Corbin, ed. 1980. World Soybean Research Conference II: Abstracts. Boulder, Colorado: Westview Press. 124 p. See p. 35.
• ***Summary:*** Japan imports 3,600,000 tonnes (metric tons) of soybeans each year for use as food and crushing. Previous studies have shown that the ratio of 7S to 11S proteins and the ratio of phosphorus to nitrogen are important in determining the texture of tofu. However this study shows that these ratios are not as important as the amount of calcium sulfate used as a tofu coagulant. Variation in the first two ratios could be counteracted by changing the amount of calcium sulfate used. Address: Hawkesbury Agricultural College, Richmond, NSW 2753, Australia.

7208. Doi, Tadao; Takeshi, Morita; Chonan, Minoru. 1980. Hôyaku Nippo jisho [Vocabulary of the language of Japan]. Tokyo: Iwanami Shoten. xxxiv + 862 p. 27 cm. [Jap; Por]
• ***Summary:*** This is a Japanese-language translation of the original 1603 edition, *Vocabulario da Lingua de Iapam,* the second earliest dictionary of the Japanese language compiled by Europeans. Soy-related terms in this dictionary, which are translated from the original hard-to-read Portuguese into modern Japanese, are described in detail at the reference for the original 1603 dictionary, which see.

In the Forward, the author notes that this is the entire translation of the Nagasaki edition of the Japanese Portuguese Dictionary. The original title is *Vocabulario da Lingoa de Iapam com a declacaraçao em Portugues* (Japanese dictionary with explanation in Portuguese), published in 1603 by the Japanese Society of Jesus (Nihon Iezuzu-kai). In 1604 a second dictionary was published, titled *Arte da Lingoa de Iapam Composta Pello Padre Iaao Rodriguez* (1604-1608).

Christian priests traveled by boat to Japan to teach the Japanese Christianity. As a result, they left many historical documents. Francis Xavier first arrived in Japan in 1549 and only 54 years later his group published this remarkable Japanese dictionary. The year 1603 was also the year that Tokugawa Ieyasu became the shogun (Seiitaishogun, or highest ranking samurai), founding the Tokugawa Shogunate or Edo period. In Japanese history it was the turning point at which the country changed from the medieval period to the modern one. This dictionary is a very unique mirror which reflects this period and is regarded as an important document that raises many questions in Japanese cultural history. The dictionary is indispensable in Japanese linguistic history since it contains many Japanese words of the period with explanations in Portuguese. In those days the Japanese had dictionaries that focused on Chinese characters (kanji) and simple dictionaries for waka and renka poems. This dictionary picked up a wide range of words from daily conversation, organizing and defining them in modern dictionary form. The original edition was stored in a secret place in Europe, inaccessible to Japanese, who therefore had to largely depend on a 19th century French translation by Leon Pajes. A rotogravure edition of the book stored at Oxford University entered Japan during the Taisho period (1912-1926) and was studied. Only recently was a facsimile copy of the original edition published, and it is being used increasingly.

This dictionary was produced by the Japanese Society of Jesus [Jesuits] to further their goal of spreading Christianity. The 1603 dictionary was developed to help the priests understand dialects, lower-class speech, and the confessions of the local common people. The 1604 dictionary focused on the speech of the upper classes and more educated people. Thus the 1603 dictionary collected words the priests needed to understand, while the 1604 dictionary collected those that they wanted to use.

• ***Summary:*** Contents: Fermented soybean foods. Non-fermented soybean food. Conclusion. References.

The following statistics show the amount (tons) of whole soybeans / defatted soybean grits / total of whole and grits consumed for various soybean foods and feeds in Japan in 1976.

Fermented soyfoods: Shoyu (soy sauce) 10,000 / 165,000 / 175,000, miso 190,500 / 5,000 / 195,500. Natto 69,000 / 0 / 69,000.

Non-fermented soyfoods: tofu and aburage (fried tofu pouches) 411,500, 55,000 / 466,500. Kori-tofu (dried-frozen tofu) 29,000 / 0 / 29,000. Others 16,000 / 75,000 / 91,000.

Animal feeds: 30,000 / 1,950,000 / 1,980,000. Thus total use for foods and feeds is whole soybeans 756,000. Defatted soybean grits 2,250,000, total of both 3,006,000. By type of use, animal feeds account for 65.9% of total Japanese usage of whole soybeans and defatted grits, non-fermented soyfoods account for 19.5%, and fermented soyfoods account for 14.6%. The top three food users are tofu (466,500 tons, 45.5% of all food uses), miso (195,500), and shoyu (175,000). There are 35,000 tofu plants in Japan.

Fermented soybean foods described are shoyu (soy sauce; 5 types), miso (3 basic types, 6 varieties), sufu (Chinese soybean cheese), tempeh (fermented soybean cake), natto (fermented whole soybeans; itohiki-natto and hama-natto), and fermented soymilk (recently a new fermented soybean product appeared on the market in Japan. It is a soy milk drink fermented by lactic acid bacteria).

Non-fermented soybean foods described are tofu (soy milk curd), aburage (fried tofu pouches), kori-tofu (dried-frozen tofu), yuba (coagulant film of soy milk), kinako (roasted soybean powder), moyashi (soybean sprouts), and soybeans. Production, chemical composition, and use of each of these foods is discussed.

Figures (flow sheets) show: (1) Shoyu manufacturing process. (2) Rice miso manufacturing process. (3) Sufu manufacturing process. (4a) Tempeh manufacturing process. (4b) Natto manufacturing process. (5a) Tofu manufacturing process. (5b) Kori-tofu manufacturing process. Address: Kikkoman Foods Inc., P.O. Box 69, Walworth, Wisconsin 53184.

• ***Summary:*** The section titled *Daizu* (soybeans, p. 48-49) begins with the often-told story of Ogyû Sorai (1666-1728), one of the outstanding Confucian scholars of the Edo / Kamakura period and official tutor to the shogun. When Sorai was young and poor, he was unable to afford any food other than okara, the lees of tôfu (soybean curd). The local tofu maker would occasionally take pity on him and treat him to a feast of fresh tofu. Yet far from being malnourished or sick from his okara diet, the young man thrived on this protein-rich food, and went on to become a great man.

The great soy triumvirate–soy sauce, miso, and tofu–towers high in Japanese cookery. Other foods from the soybean are soy milk, soy oil, and yuba.

A song from the Edo period states: "The nightingale stays far from the crowds.

"Twelve kilometers from the saké shop,

"Eight kilometers from the tofu shop."

A large photo shows a tofu-maker cutting cakes of tofu.

A yatai (p. 66) is a movable nighttime street stall from which food and drink are sold. They are a compact wooden restaurant on wheels. The food may include oden, fried bean-curd cakes [fried tofu].

On pages 44-45 is a section on "Umeboshi (pickled plums) and on pages 46-47 a section on "Kaisô (algae; seaweed [sea vegetables]). These include wakame, which is invariably found floating in the morning's miso soup. Also nori, tengusa / agar, hijiki, and konbu. Address: Tokyo.

Table 2. Production of soybean in Japan and USA (m/t)

Year	Production		Import to Japan	
	Japan	USA	Total	from USA
1930	388,600			
1935	288,600	1,330,890		
1940	314,200	2,124,073		
1945	170,400	5,527,233		
1950	446,900	8,144,361		
1955	507,100	10,170,129		
1960	417,600	15,113,236		
1965	229,700	23,014,067		
1970	126,000	30,911,089	3,243,790	2,952,449 (91%)
1975	125,600	42,279,200	3,333,753	3,041,186 (91%)
1976	109,500	34,425,246	3,554,343	3,286,815 (92%)
1977	110,800	48,226,752	3,602,450	3,427,801 (95%)
1978	187,900	50,199,088	4,260,041	4,142,540 (97%)

and production is very large. The author presents an early history and genealogy of miso, shoyu, and natto based on the Japanese-language writings of Prof. K. Sakaguchi and Prof. M. Nakano. Shi [fermented black soybeans] were recently found in an ancient Chinese tomb of the 2nd century B.C. "The word *shoyu* or *chiang-yu* never appeared in any old Chinese manuscripts. Nevertheless I wonder if the origin of Japanese shoyu might be the Chinese *chiang* in the Ming dynasty or an earlier period. Anyhow, the question is still: When did the Chinese start making koji from a mixture of soybean and wheat? And when and where was filtration of soybean *chiang* successfully commenced. As for the later, it is quite possible that the filtration was started in Japan."

In 1977 the following amounts of fermented soyfoods were produced in Japan: miso 620,902 tonnes (using 190,000 tonnes of whole soybeans and 1,579 tonnes of defatted soybean meal), shoyu 1,228,244 tonnes (using 11,788 tonnes of whole soybeans and 180,000 tonnes of defatted soybean meal), and natto 120,000 (using 71,000 tonnes of whole soybeans).

Table 2 shows soybean production in Japan and the USA every 5 years from 1930 to 1978. Production in Japan was 388,600 tonnes in 1930, 288,600 tonnes in 1935, 314,200 tonnes in 1940, 170,400 tonnes in 1945, 446,900 tonnes in 1950, 507,100 tonnes in 1955 (a peak), 417,600 tonnes in 1960, 229,700 tonnes in 1965, 126,000 tonnes in 1970, 125,600 tonnes in 1975, 109,500 tonnes in 1976 (a low), 110,800 tonnes in 1977, 187,900 tonnes in 1978. The first year for which imports are shown is 1970, when 3,243,790 tonnes were imported, 91% of which from the USA. In 1978 4,260,041 tonnes were imported, 97% from the USA.

Table 6 shows miso production in Japan from 1967 to 1976. Factory production grew from 535,000 tonnes in 1967 to a peak of 650,000 tonnes in 1973, down slightly to 630,000 tonnes in 1976. Farmer (household) production decreased steadily from 207,000 tonnes in 1967 (39% of factory production and 26% of total production) to 67,000 tonnes in 1976 (11% of factory production and 10% of total production). Total production and annual per capita consumption decreased from a peak of 789,000 tonnes in 1967 (7.8 kg/capita) to a low of 697,000 tonnes in 1976 (6.5 kg/capita).

Table 7 shows the number and capacity of miso factories in Japan and their production in 1959, 1968, and 1977. The number of factories decreased dramatically during this 18-year period (to from 2,987 to 1,996), but the total amount of miso produced increased from 503,000 tonnes to 621,000 tonnes, and the percentage of all miso made by large factories (those making 3,751 tonnes/year or more) rose from 15% to 52%, while the percentage of all miso made by small factories (those making 1-375 tonnes/year) decreased from 29% to 14%.

Table 8 shows the materials used in making shoyu in Japan from 1968 to 1977. The amount of whole soybeans

© Copyright Soyinfo Center 2014

decreased from 15,000 tonnes to 9,000 tonnes, the amount of defatted soybean meal increased from 147,000 tonnes to 176,000 tonnes, the amount of wheat increased from 127,000 to 178,000 tonnes, and the amount of salt from 170,000 tones to 204,000 tonnes. The amount of amino liquor (HVP) decreased from 140,000 tonnes to 89,000 tonnes.

Table 9 shows shoyu production in Japan from 1967 to 1976. Factory production grew from 1,201 kiloliters (kl) in 1967 to a peak of 1,403 kl in 1973, down slightly to 1,349 kl in 1976. Farmer (household) production decreased steadily from 20 kl in 1967 (1.67% of factory production 1.63% of total production) to 9 kl 1976 (0.66% of factory production and 0.66% of total production). Total production and annual per capita consumption increased from 1,221 kl 1967 (12.0 liters/year) to a high of 1,411 kl in 1973 (12.6 liters/year), then down slightly to 1,355 kl in 1976 (11.9 liters/year). Table 10 shows that in 1977 there were 3,135 shoyu factories in Japan. Of these, 2,654 (85% of the total) were in the smallest scale, having 10 or fewer employees, while 5 had 201-300 employees, and 8 had 301 or more employees.

Fig. 2 shows the percentage of shoyu that is distributed through various channels as it moves from the factory to large or small consumers. Address: College of Agriculture, Meiji Univ., Ikuta, Tama-ku, Kawasaki-shi, Japan.

• ***Summary:*** A color booklet with a large label from Kikkoman soy sauce on the front and rear covers. Opposite each page of recipes is a full-page color photo of one of the preparations. Contents: The family of Kikkoman. Meat. Seafood. Grills. Poultry. Vegetables. Large or small, Kikkoman comes in a package that's right for your business.

7217. Lu, Gwei-Djen; Needham, Joseph. 1980. Celestial lancets: A history and rationale of acupuncture and moxa. Cambridge, London, New York, New Rochelle, Melbourne, Sydney: Cambridge University Press. xxi + 427 p. Illust. Index. 26 cm. [300+* ref]

• ***Summary:*** Contents: List of illustrations. List of tables. List of abbreviations. Authors' foreword. 1. Introduction. 2. The *ching-lo* system and its classical theory. 3. Historical growth of the system. 4. Moxibustion. 5. Therapy and analgesia; physiological interpretations. 6. Influences on other cultures. 7. The lore of vital spots. 9. Conclusions. Bibliographies.

This is a wonderful, scholarly study of two of the most ancient therapeutic techniques of Chinese medicine. "Acupuncture is the implantation of very thin needles into subcutaneous connective tissue and muscle at a great number of different points on the body's surface: moxibustion is the burning of *Artemisia tinder* (moxa) either directly on the skin or just above it. For 2500 years the Chinese have used both techniques to relieve pain and to heal a wide variety of illnesses and malfunctions.

"Dr. Lu and Dr. Needham, in this preview of an important section of *Science and Civilisation in China,* give a full historical account of acupuncture and moxibustion in the theoretical structure of Chinese medicine, and combine this with a rationale of the two techniques in the light of modern scientific knowledge. The book is in no sense a clinical manual: rather is it a contribution, judicious and enlightened, to that oecumenical medicine which will eventually combine all the true powers discovered in China and Europe."

Authors' Foreword: "Many conclusions which had formerly to based on philological arguments about the dating of texts, have now received dazzling confirmation from archaeological discoveries, as for example the four manuscripts on silk which contain descriptions of the acu-tracts and were recovered only very recently from the Han tombs of the -2nd century at Ma-wang-tui. These scrolls reveal a development of acupuncture a good deal earlier than the *Nei Ching.* And from that same -2nd century there are the acupuncture needles found among the grave-goods of the Prince of Chung-shan, Liu Shêng. Or one could instance the acupuncture texts intended to accompany those life-size bronze figures demonstrating acu-points which were introduced first in the +11th century, texts which were later discovered inscribed on stone tablets that had been buried in the gate bastions of a city wall. It is to be expected that future archaeological finds will throw much further light on the development of Chinese medicine as a whole."

"The *Huang Ti Nei Ching* (Yellow Emperor's Manual of Corporeal Medicine) is the oldest and most famous of the Chinese medical classics... We date the *Su Wên* part of it (Questions (and Answers) about Living Matter) in the -2nd century, and the *Ling Shu* (Vital Axis) in the -1st." Acupuncture is first discussed in this remarkable book.

Concerning moxa, page 171 states that it was often desired to apply the stimulus of a heat treatment only, without actual cautery. This was called *wên chiu* (warming moxibustion) or "moxa that left no scar on the skin. The classical way of doing this was to use a layer of some vegetable substance between the skin and the burning incense-like cone. One technique was to have it burn down on a layer of soya-bean paste (*tou chiang chiu*); or else a slice of garlic, or a slice of ginger could be interposed."

Note: This is the earliest English-language document seen (March 2009) that uses the term "soya-bean paste" to refer to miso–in this case *tou chiang / doujiang* (Chinese-style miso).

Pages 268-69 state: "It was throughout the second half of the +17th century that information about acupuncture began to attract the attention of Europeans. The very first writer, so far as we can see, who spoke about acupuncture was the Dane Jacob de Bondt (1598-1631) who in his

© Copyright Soyinfo Center 2014

capacity as surgeon-general for the Dutch East Indian Company at Batavia had come into contact with Chinese and Japanese physicians." The first illustrations (four) of the acupoints in the Western world appeared in Willem ten Rhijne's book of +1683. Andreas Cleyer in his *Specimen Medicinae Sinicae* (1682) gave detailed illustrations of acupuncture (p. 276-83). The German naturalist Englebert Kaempfer (1651-1716) gave the clearest account to date of acupuncture which he observed among the Japanese (p. 287-92). Address: 1. Assoc. Director; 2. Director. Both: East Asian History of Science Library, Cambridge, England.

7218. Mogi, Koya. 1980. Recent progress of soy sauce manufacturing in Japan. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 88-101. Held 10-14 Dec. 1979 in Taipei, Taiwan. 13 tables. 6 figs. [2 ref]

• ***Summary:*** Contents: Introduction. Manufacture: Treatment of raw materials, koji making, aging, pressing, refining. High temperature and short time cooking method. The following tables are included: 1. Classification of shoyu (5 kinds, 3 grades, 3 production methods). 2. Some characteristics of different kinds of shoyu (kinds, color, soybean:wheat ratio). 3. Typical composition of 5 different kinds of shoyu. 4. Differences in koikuchi shoyu grades (total nitrogen, soluble solids except NaCl, alcohol). 5. Differences in shoyu production methods (hon-jozo, shinshiki, amino acids liquid mix). 6. Shoyu production of different kinds in 1977 (koikuchi 917,738 kl = 85% of total, usukuchi 124,829 kl = 11.6% of total, tamari 23,437 kl = 2.2% of total, shiro 4,456 kl = 0.4% of total, saishikomi 3,072 = 0.3% of total). 7. Shoyu production in different grades in 1977 (special 59.3% of total, upper 27.5%, standard 13.2%). 8. Shoyu production by different methods in 1977 (hon-jozo 66.9% of total, shinshiki-jozo 28.4%, amino acids liquid mix 4.7%).

The innovation of treating soybeans using the high temperature and short time cooking method increased the yield of shoyu very much and was patented in Japan, the USA, and Canada. The protein in raw soybeans is undenatured and cannot be hydrolyzed (digested) by the enzymes of koji molds. Therefore it is necessary to denature the soybean protein by cooking so that it can be hydrolyzed. "The phenomenon of the so-called 'N-property' (turbidity nature) appears, if portions of soybean protein remain undenatured. 'N-property' is the phenomenon that *shoyu* becomes turbid when it is diluted and heated. This is the appearance of insoluble form of undenatured protein and remarkably diminishes the commercial value of *shoyu.*

"Undenatured protein is soluble in water, especially saline water, and goes into the product. If the product contains undenatured protein, 'N-property' described above appears as a coagulant when *shoyu* is diluted to the concentration fitted to the specified cuisine and/or further heated. However, excess denaturation also makes soybean protein undecomposable by proteolytic enzymes. Thus, over-denaturation results in a decrease of the yield of *shoyu* and an increase of the production cost.

"Steam cooking has been used as a means to increase digestibility of soybean protein. Technical know-how of so-called 'NK-method' developed by Mr. Tateno *et al.* of the author's company in 1952 has been generally used by many soy sauce manufacturers. It was an epoch-making method of soybean treatment in *shoyu* making. Before that time, the utilization rate of nitrogen was about 66 to 70%. A utilization rate of nitrogen is defined as a percentage of soluble nitrogen in *moromi* mash to total nitrogen in the raw materials used. In this method, soybeans are cooled rapidly after cooking to prevent excess denaturation. Soybeans are steamed at 0.9 to 1 kilogram per square centimeter gauge pressure for 30 to 60 minutes (average 45 minutes) and then cooled as soon as possible with the aid of jet condenser to reduce the pressure inside the cooker. Thus, the utilization rate of nitrogen attained by the 'NK-method' is 81 to 82%. After many years, the 'NK-method' was first replaced with 'high temperature and short time cooking method' in about 1970.

"It has long been believed that the treatment of the 'NK-method' is best with steam at 0.9 kilograms per square centimeter for 30 to 60 minutes and that either higher temperature or longer time causes excess denaturation and decrease of the utilization rate of nitrogen. However, the author's results of bench-scale experiments indicate better digestibility of soybeans when the conditions of higher temperature and shorter time are used for denaturation of protein." Address: Kikkoman Shoyu Co., Ltd., Plant No. 7, 339 Noda, Noda-shi, Chiba-ken, Japan.

7219. Nagahori, Takashi; Motai, H.; Okuhara, A. 1980. Shôyu no N-nitoroso amin seisei yokusei busshitsu [On the substances in shoyu to suppress the nitrosation of dimethylamine]. *Eiyo to Shokuryo* (*J. of Japanese Society of Food and Nutrition*) 33(3):151-60. [39 ref. Jap]

• ***Summary:*** Amino acids in shoyu competitively inhibit formation of nitrosamines from nitrite and amines. Shoyu, miso, and protein hydrolysates suppress nitrosation by 60-70%, by means of Van Slyke reactions between amino acids in the soyfoods and nitrites. Rates of suppression are: regular (*koikuchi*) shoyu 62-65%, tamari shoyu 69-79%, and rice miso 71-77%. Address: Central Research Labs., Kikkoman Shoyu Co. Ltd., Noda, Japan.

• ***Summary:*** How to make and use wheat gluten in a vegetarian diet, with 250 American and international recipes. Contents: Acknowledgements. Author's note. Part I. Introducing wheat "meat": 1. The cost of the meat-centered diet: How meat consumption affects ecology, economy and health, food economy, fuel conservation, water reserves and pollution, heart disease, cancer and meat eating, premature aging, chemical residues in meat, medical costs. 2. Introducing wheat "meat": a low-cost, homemade alternative to meat (gluten meats cost about $0.15 per serving). 3. How to make "meat" from wheat: Preparing raw gluten (from 7 cups whole wheat flour), seven varieties of wheat "meat," cutlets (a veal substitute), steak (a mock beef steak), ground gluten (a hamburger taste-alike), spiced links (an alternative to sausage), roast with a beef flavor, seawheat (a clam alternative), poultry pieces (chicken-flavored wheat "meat), using the reserved starch, bran and germ: Gluten-free crackers, and cold crunchy cereal.

Part II. Hundreds of international ways to serve wheat "meat": 4. All-American wheat meat recipes. 5. Mexican wheat "meat" food. 6. Latin American. 7. British. 8. French. 9. Spanish. 10. Italian. 11. Austrian. 12. Greek. 13. African. 14. Indian (from India). 15. Chinese. 16. Japanese wheat "meat" cooking.

Note 1. Tamari soy sauce and miso are used to flavor a number of recipes in this book. Other soy-related recipes include: Spiced bean curd and cutlet (with tofu, p. 212). Spares with black beans (mock spare ribs with "Chinese prepared black beans [fermented black soybeans], p. 216). Family-style bean curd (with tofu, p. 219). Poultry with orange-flavored soy sauce (p. 228-29). Seawheat in soy and ginger sauce (p. 229). Seawheat with bean curd and vegetables in casseroles (p. 230). Seawheat with vinegared miso (p. 231). Note 2. This book does not mention "seitan," but a Japanese recipe titled "Seawheat in Soy and Ginger Sauce" is quite similar; It uses tamari soy sauce and grated gingerroot, and kombu is used in making Seawheat, a clam alternative. A photo on the inside back dust jacket shows Nina and Michael Shandler.

Talk with Michael Shandler in Amherst, Massachusetts. 1992. Jan. 14. He and Nina became vegetarians in 1969. They were first introduced to wheat gluten in about 1970; at that time they were served gluten steaks by a friend, Jayanti Peterson, in Santa Cruz, California. At the time their book was published, they were probably not aware of "seitan." They did not know of any other books on gluten when they were writing their book–which is why no gluten books are listed in their bibliography. The book sold about 2,000 copies

© Copyright Soyinfo Center 2014

in hardcover and 5,000 to 6,000 in quality paperback; it went out of print 6-7 years ago. They have had many requests for the book since it went out of print. He is an organization development consultant and Nina is a child psychologist. Food is their hobby. Their best-selling book is *The Complete Guide and Cookbook for Raising your Child as a Vegetarian* which has sold over 50,000 copies (Shocken & Ballantine). Address: Amherst, Massachusetts. Phone: 413-549-1671.

7227. Shibasaki, M.; Suzuki, S.; Tajima, S.; Nemoto, H. Kuroume, T. 1980. Allergenicity of major component proteins of soybean. *International Archives of Allergy & Applied Immunology* 61(4):441-48. *
• ***Summary:*** Allergenic activities of major component proteins of soybean 11S-, 7S- and 2S-globulins were examined by the radioallergosorbent test (RAST) and by RAST inhibition experiments with the sera from soybean-sensitive patients.

7228. Shufu-no-tomo sha. 1980. Wa-yô-ka no tôfu ryôri [Japanese, Western, and Chinese-style tofu cookery]. Tokyo: Shufu-no-tomo-sha: Shufunotomo Bunka No. 568. 84 p. Illust. No index. 19 cm. [Jap]
• ***Summary:*** Contents: Healthy menu. New discovery of taste. Making tofu recipes more filling by adding some oil. The main character of the diet. Tofu side dish for wines (sake). Contains many recipes.

The entire rear cover contains a color ad for Higashimaru Shoyu (usukuchi), and shows the label in a size that all ingredients are legible. Address: Tokyo, Japan.

7229. Tsuchiya, Kanji. 1980. Tônyû: Yomigaetta dentô shokuhin [Soymilk: Traditional food that's make a comeback]. Tokyo: Shokuhin Kenkyusha. 176 p. 2nd edition published in Dec. 1982. Illust. 17 cm. [Jap]
• ***Summary:*** This is the best book seen on soymilk in Japanese. For contents and details, see the enlarged 2nd edition (Dec. 1982). A portrait photo on the rear cover shows the author, Kanji Tsuchiya, and gives a brief biography. Address: Technical consultant, Okazaki Marusan, Japan.

7230. Tsuji, Shizuo; Sutherland, Mary. 1980. Japanese cooking: A simple art. New York and Tokyo: Kodansha International. 518 p. Introduction by M.F.K. Fisher. Illust. (510 line drawings by Yoshito Suzuki. 16 color pages, mostly photos). Index. 27 cm.
• ***Summary:*** This is a beautiful and informative book by a great Japanese chef, though the awkward English terminology often sounds like "Japlish." The illustrations are very nicely done, but the artist's name does not appear in the book. Tsuji is the author of 29 books on gastronomy, travel, and music. His basic thesis is that "like Japanese and poetry, cooking is simply the result of an acute awareness of the seasons, Freshness and naturalness are the *sine qua non* of Japanese cuisine."

This definitive treatise on Japanese cooking, the most complete and well-thought-out to date, is written by the head of the *Ecole Technique Hoteliere Tsuji,* the technical hotel school in Osaka, Japan. This is the "largest school training professional chefs in Japan," according to the publisher.

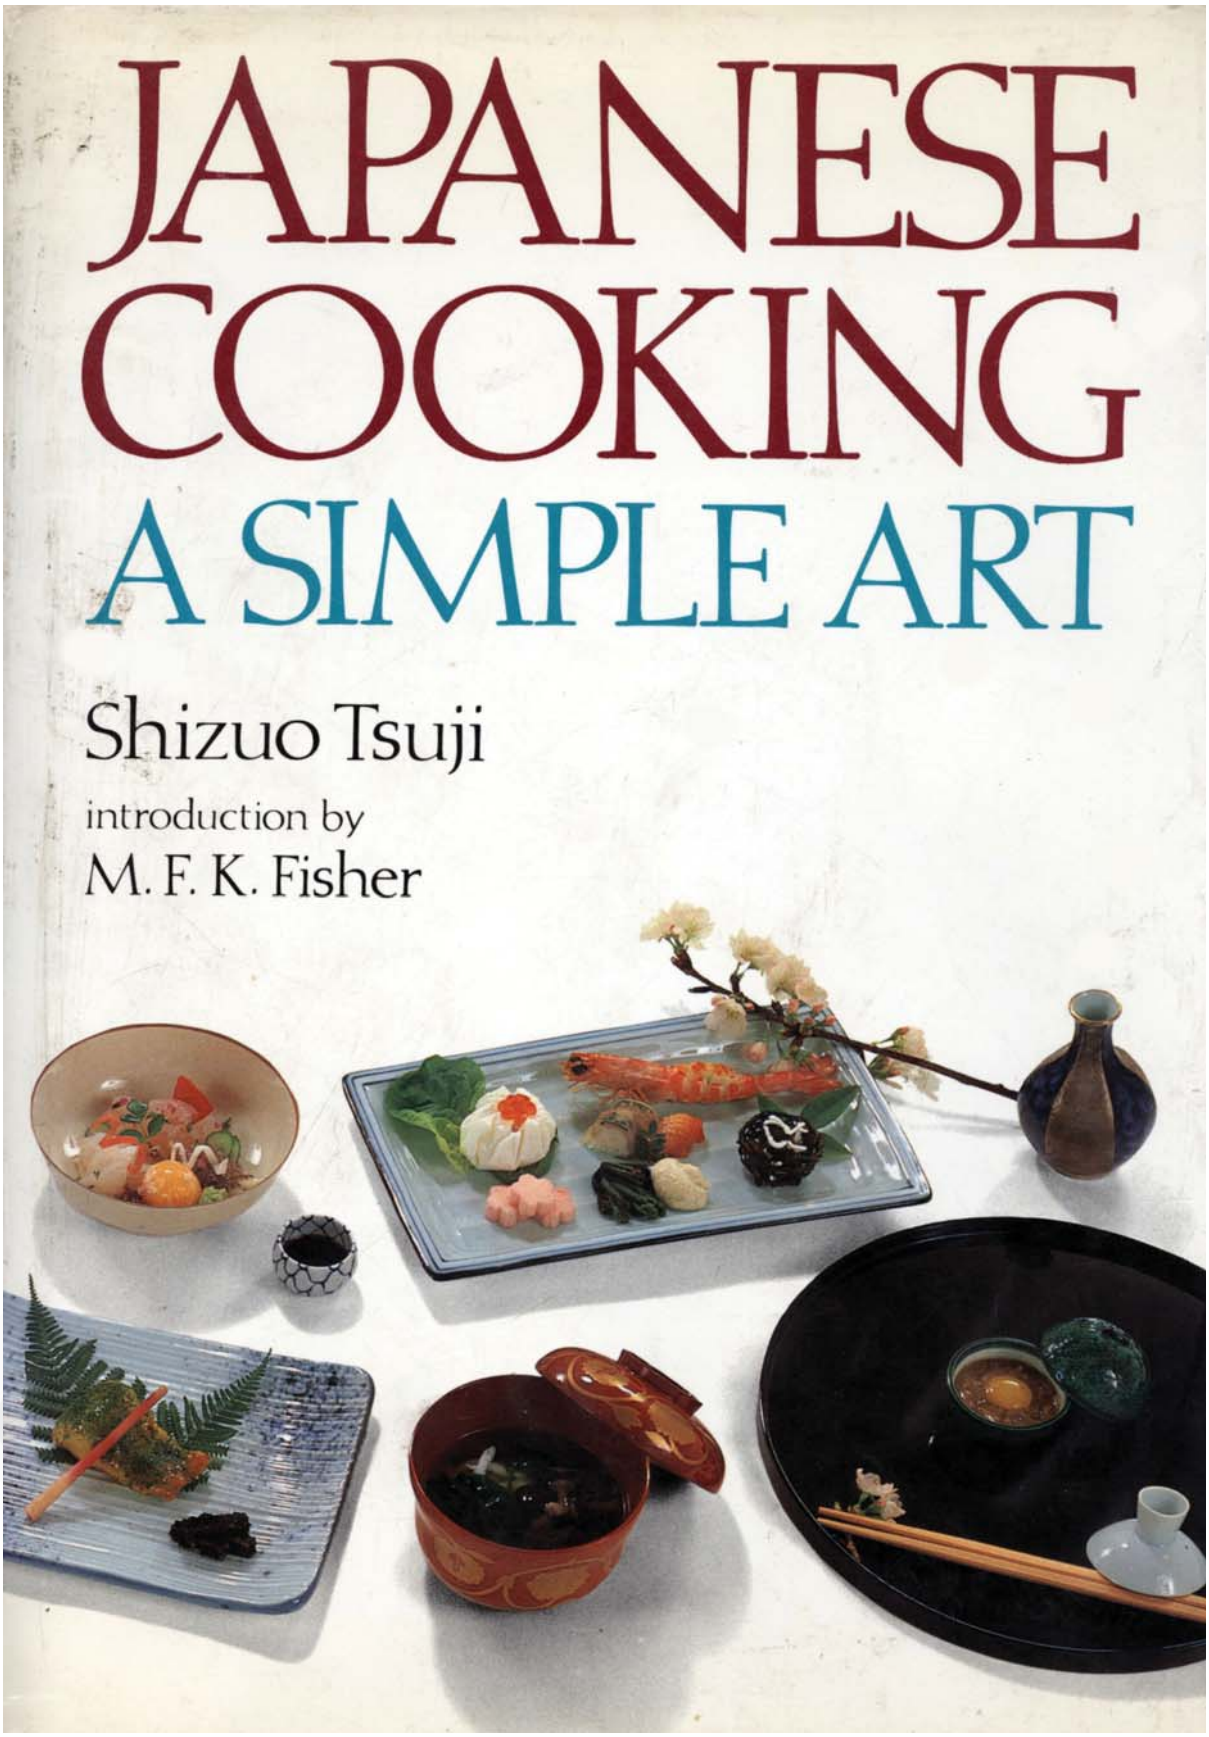
The excellent "Ingredients" section (p. 53-100) gives detailed descriptions (with Japanese characters) of: Azuki beans (p. 55). including red rice (*sekihan*) and "sweet red-bean paste" (*an*). Bean curd (*tôfu,* p. 56-61) incl. *momen* tofu (regular; "The type described here as 'regular' is known in Japan as *momen*–'cotton' tofu... 'Cotton' bean curd is the type most commonly used in Japan"), *kinu-goshi* (silk tofu), *yakidôfu* (lightly broiled or grilled bean curd), atsu-age or nama-age (thick cakes), aburage or usu-age (thin deep-fried tofu), ganmodoki (mixed tofu), *kôya-dôfu* or *kôri-dôfu* ("freeze-dried bean curd"), *yuba* ("soybean milk 'skin'" [soybean milk skin]), *okara* ("bean curd pulp or 'lees'").

Note 1. This is the earliest English-language document seen (April 2013) that contains the term *atsu-age* or the term *usu-age* or the term "thin deep-fried tofu" (all regardless of hyphenation), all of which refer to types of Japanese of deep-fried tofu.

Miso (p. 76-77) incl. shiro-miso, Shinshû-miso, inaka-miso, Hatchô miso, akadashi miso. Soybeans and edamame. Soy sauce (shôyu, p. 90-93) incl. Natural Japanese soy sauce, synthetic soy sauce, Kikkoman, light soy sauce (*usukuchi shôyu*), tamari ("In Japanese cooking tamari is generally used as a dipping sauce or a base for basting sauce such as Yakitori Sauce"). "Dutch traders in Nagasaki in the seventeenth century exported soy sauce to Europe, and it was the secret seasoning served at the court banquets of Louis XIV of France" (sic). Kuzu (p. 93-94). Wheat gluten (p. 98, 60).

Soy-related recipes include: Making soups (p. 151-56). Miso soup (*Miso-shiru,* p. 156-57). Ginger soy sauce (*Shôga-jôyu,* p. 172). Ponzu sauce (p. 172, with soy sauce and tamari). Mustard-vinegar miso sauce (*Karashi-su-miso,* p. 172-73). Dengaku, dengaku miso toppings, and bean curd dengaku (*Tôfu dengaku*) (p. 190-93). Teriyaki (p. 199-202, 370; the meaning in the United States is now different from the original meaning in Japan. Definition and history, homemade teriyaki sauce, teriyaki yellowtail, chicken teriyaki, steak teriyaki). Egg "tofu" (*Tamago-dôfu,* p. 216). Dressings for aemono (salads, p. 246, incl. white tofu dressing, white miso dressing, red miso dressing). Rice with miso soup and pickles (p. 270-71). Nori-roll sushi (*Nori-maki,* p. 300, with freeze-dried bean curd). Fox noodles (*Kitsune udon,* p. 312). Pickling vegetables (*Tsukemono,* p. 315, 318, with miso). Pureed corn soup (*Tômorokoshi surinagashi-jiru,* p. 347, with miso). Thunder soup (*Kaminari-jiru,* p. 349, with "1 cake *tôfu* (bean curd)" and "2-3 cakes thin deep-fried *tôfu* {*aburage or usuage*}, cut into julienne strips). Potatoes simmered in miso (*Jaga-imo*

© Copyright Soyinfo Center 2014



© Copyright Soyinfo Center 2014

miso-ni, p. 393). Radish with white miso sauce (*Furofuki daikon,* p. 394). Chinese cabbage and deep-fried tofu (*Age-dôfu hakusai-ni,* p. 398). Tortoiseshell tofu (*Tôfu bekkô-ni,* p. 398-99). Fried and simmered freeze-dried tofu (*Kôri-dôfu age-ni,* p. 399-400). Gold purses (*Fukuro,* p. 400, with thin deep-fried bean curd). Deep-fried tofu (*Agedashi-dôfu,* p. 412-13). Green beans with sesame-miso dressing (*Sandomame goma-miso ae,* p. 420). Savory okra (cold) (*Okura wasabi-joyu,* p. 420-21). Tangy white salad (*Shirazu-ae,* p. 421-22). "River Bank" oyster stew (*Kaki dote-nabe,* p. 433-34, with miso). Simmering tofu (*yudôfu,* p. 436-37). Mushroom rice (*Shiitake gohan,* with "1 cake thin deep-fried bean curd (*aburage* or *usuage*)," p. 438-39). Soybeans in the pod (*Edamame,* p. 471-72).

Murasaki (p. 287): Japanese love *sushi* so much that they have developed a special aficionado's vocabulary. "At a *sushi* restaurant, you do not ask for soy sauce as *shôyu,* but, rather, as 'purple,' or *murasaki.* Every shop has its own house sauce, made by reducing soy sauce or thicker *tamari* sauce over heat with *saké, mirin,* bonito flakes and so on." Since the resulting sauce is darker than regular soy sauce, the name *murasaki* seems appropriate.

The recipe for Abe River mochi (Abe-kawa mochi) uses "1 cup kinako (roasted soybean flour)" as a major ingredient (p. 469).

Concerning azuki beans (red beans; characters small + bean) (p. 55): "This small, red bean is the legume you will most frequently encounter in Japanese cooking besides soybeans (*daizu*). It is used in the cooking of many countries, so it is stocked in most supermarkets throughout the United States. For some historical reason this bean is commonly spelled *adzuki.* This spelling is a Victorian romanization; phonetically, *azuki* is correct.

"These beans are steamed with glutinous rice on special occasions to make the festive red rice (*sekihan;* p. 280). They are more commonly boiled with sugar to make sweet red-bean paste (*an*), which forms the base of a large percentage of Japanese sweet confections (see p. 327). *An* is made in two textures: smooth puree (*koshi-an*) and 'chunky,' with beans partially crushed (*tsubushi-an*). If there is no time to make *an* from scratch, ready-made *an* is available canned and stocked in most Japanese food stores."

Note 2. This is the earliest English-language document seen (March 2006) that uses the term "sweet red-bean paste" to refer to sweet azuki bean paste [*azuki-an*], or the term "smooth puree" to refer to *koshi-an,* or the term "chunky" to refer to *tsubushi-an.* Address: Tsuji Professional Culinary Inst., Osaka, Japan.

7231. Wang, H.L. 1980. Research on Oriental fermented foods at the Northern Regional Research Center. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 1-14. Held 10-14 Dec. 1979 in Taipei, Taiwan. 6 tables. [21 ref]

• ***Summary:*** Contents: Introduction. Objectives and approaches. Introduction of pure culture strains. Enzymes produced by the molds. New compounds formed by the molds. Nutritional value of fermented foods. Conclusion.

"Not until the late 1950s were studies on Oriental food fermentation begun in the United States at the Northern Regional Research Center in Illinois and the Agricultural Experiment Station in Geneva, New York. The United States Department of Agriculture under Public Law 480, has also provided grants to foreign countries for research on fermented soybean foods. These arrangements have broadened our knowledge of the size and scope of Oriental food fermentations.

"The original objective of our Center's research with respect to Oriental food fermentations was to solve the problems involved in the use of U.S. soybeans by the Japanese *miso* industry. The results of that research project stimulated our interest in Oriental food fermentations, especially those based on soybeans." Address: NRRC, Peoria, Illinois.

7233. Glutamate Association. 1980? A fact finding guide to monosodium glutamate. 5775 Peachtree-Dunwoody Rd., Suite 500-D, Atlanta, GA 30342. 8 p. Undated.

• ***Summary:*** Contents: Introductory information about this book. What is MSG? How MSG is used. How MSG is made. How MSG works. History of MSG. MSG and the body. Safety of MSG. Hypersensitivity. MSG and sodium in the diet. Identifying MSG. Regulation of MSG. Glutamate–a remarkable substance. Summary.

MSG is the sodium salt of glutamic acid, and an amino acid. "The various forms of glutamic acid are generically referred to as glutamate." MSG is a fine, white crystal which imparts no characteristic flavor of its own. "MSG works well with some foods already containing high levels of glutamate such as meats, poultry, seafood, and some vegetables." "An estimated 50% loss in the natural glutamate content of some vegetables has been observed within 24 hours after harvesting."

History of MSG: Japanese cooks have used kombu (*Laminarina Japonica*), a sea vegetable, since ancient times to make their favorite soup stocks. They were not aware that kombu "contained generous amounts of naturally occurring free glutamate, and it was this substance that enhanced the flavor" of their soup stock.

"The link between seaweed, monosodium glutamate, and flavor was discovered in 1908. In that year, Professor Kikunae Ikeda of the University of Tokyo isolated

© Copyright Soyinfo Center 2014

monosodium glutamate while experimenting with the dried seaweed in an attempt to unlock the flavor enhancing secret. He believed that what the Japanese called 'umami,' or tastiness, existed in addition to the basic tastes–sweet, sour, salty and bitter–and could be crystallized from foods.

"Dr. Ikeda became so impressed with the effect of MSG on food flavor that the production of monosodium glutamate was immediately undertaken on a commercial basis in Japan. Production in the United States began in the 1940's. Today, MSG is manufactured in 15 countries throughout the world accounting for a volume of approximately 200,000 tons annually."

Tables show: (1) The glutamate content of various foods. (2) Comparison of glutamate ingested in foods with glutamate added to foods as a flavor enhancer. Address: Atlanta, Georgia.

7234. Morinaga Milk Co. 1980? The wonder food from Japan! Morinaga brand Ever-Fresh Silken Tofu (Poster). Shiba 5-33-1, Minato-ku, Tokyo 108, Japan. 1 p. Undated. 36 x 41 cm. [Eng]

• ***Summary:*** "Your body will love the high plant protein... Your waistline, the low calories... And your heart, the total absence of cholesterol."

Note: This poster is in a wooden frame and can be hung on a wall. In the lower right corner is a pouch where recipes can be placed on the poster. Address: Tokyo, Japan.

7235. *New York Times.* 1981. Dining out guide: Japanese restaurants. Jan. 4. p. D55.

• ***Summary:*** This is a list of the 11 best Japanese restaurants in New York City based on reviews that appeared in the New York Times. One of these is Hatsuhana, which features a sushi bar. Among the recommended dishes is "natto, a pungent mix of fermented [soy] beans,..."

7236. Belleme, John. 1981. The master of hoops. *East West Journal.* Jan. p. 60-65.

• ***Summary:*** Mr. Arai (*Arai-san*) of Japan is a master cooper or maker of barrels and vats (*oke-ya-san*). Standing only 4 feet 8 inches tall, he is also a local legend, herbal doctor, and, folk singer, and the best talker in the community. "In the seven months my wife Jan and I spent studying fermented foods in the village of Shimo Isano, north of Tokyo, we

© Copyright Soyinfo Center 2014

met many of these hardy oldsters. However Arai-san is exceptional; his skill, strength, and wittiness are rare at any age." The Bellemes' miso teacher was Mr. Onozaki. Tells how Mr. Arai makes traditional wooden Japanese barrels, and gives a personality sketch. "He does not experience his life as a fleeting moment in time but rather as part of an ancestral stream flowing out of ancient history.

Large photos show: 1. Jan Belleme and Mr. Arai (full page). 2. Mr. Arai collecting and splitting large pieces of bamboo, then braiding them into the large hoops that hold together a wooden vat. 3. Mr. Arai making a small pickle barrel. 4. Then drinking saké after work.

7237. Chico-San, Inc. 1981. Chico-San products: A catalog of unique natural foods. P.O. Box 1004, Chico, CA 95927. 28 p. Revised Jan. 1981.
• ***Summary:*** Contents: A message from the president, J. Robert Kennedy. Chico-San rice products: Rice Cakes (6 varieties; plain, millet, or buckwheat, each salted or unsalted), Carob Crunch (carob-coated rice cakes in plain or mint flavors), Golden Rice Nuggets, Yinnies candies (Taffy made from rice and barley; Caramel made from rice, barley, oat powder, raisins, almonds, sesame oil, coconut, rice bran, lecithin, natural vanilla, and agar agar).

Yinnies brand Rice Syrup ("A pure, natural sweetener made from rice, water, and barley malt..."). "How Yinnies brand Rice Syrup is made: Chico-San's process involves the conversion of the natural starches in the rice into complex sugars. Extended low temperature cooking allows the enzymes from the malted grains to create a fermentation which occurs in a liquid mash. After an optimum period of fermentation, the process is halted and liquid squeezed from the mash. This liquid is then vacuum cooked at low temperature, bringing the syrup to the proper consistency." Yinnies brand rice syrup and refined sugar comparison. This rice syrup is high in maltose.

How Chico-San guarantees Oriental-type organically-grown brown rice (describes in detail how the rice is grown in California). Chico-San whole grains, seeds and beans (Incl. organically-grown brown rice, sweet brown rice, sesame seeds, black soybeans, and azuki beans). Chico-San condiments: Lima soy sauce, soybean puree (miso, in 3 types, mugi, kome, or hacho), barley koji, kuzu, malt vinegar malt vinegar, salt plums, nigari (for tofu making), sesame oil (light or dark), tekka. Chico-San imported seaweeds: Hijiki, kombu, wakame, nori, sea vegetable gelatin (kanten). Herb teas and other products. Chico-San cookbooks. Chico-San special recipes–including recipes for Sesame miso spread, Black soy beans, Azuki beans, and Wakame miso soup. Address: Chico, California.

7238. Fukushima, Danji. 1981. Re: History of tofu in Japan. Letter to William Shurtleff at Soyfoods Center, Jan. 22–in reply to inquiry. 1 p. Typed, with signature on letterhead. [2 ref]
• ***Summary:*** Tofu was first introduced into Japan in the 8th century; from that time until about the 12th century it was called "okabe." Source: Tomomi Kono. 1970. *Encyclopedia Japonica.* Tokyo: Shogakukan. Vol. 13, p. 227. Please see enclosed photocopy.

Fermented tofu originated in China in the 5th century A.D. Source: T. Watanabe, H. Ebine, and T. Ota. 1971. *Daizu Shokuhin.* Tokyo: Korin Shoin. p. 196. Please see enclosed photocopy.

In Japan today, several factories produce 50,000 to 100,000 packages of packaged tofu per day.

By separate mail, Dr. Fukushima is sending a copy of a color slide showing Kibun's Soena. Address: Kikkoman Foods, Inc., Walworth, Wisconsin 53184.

7239. Kamen, Sy; Kamen, Betty. 1981. The tofu connection (filmstrip). New York, NY: Cold Spring Harbor. *
• ***Summary:*** This entertaining and educational color filmstrip, created and produced by Sy and Betty Kamen, consists of two different parts, each of 79 frames and lasting 15 minutes. Part One, "The Making of Tofu," depicts how tofu is made in both the traditional Japanese shop and in a large-scale American tofu plant. Part Two, "Tofu–America Style," features a cooking class led by Madeline Fox of the New England Soy Dairy. She prepares tofu meatballs and buckwheat spaghetti, tofu sloppy joes, tofu salad, tofu dip, tofu fruit cream, and tofu chocolate mousse.

The Tofu Connection is available from Encore Visual Education Inc., 1235 South Victory Boulevard, Burbank, California 91502 (Catalog No. 203); the price is $46 for both filmstrips and audio cassettes. Address: Cold Spring Harbor, New York.

© Copyright Soyinfo Center 2014

• ***Summary:*** Contents: Introduction. Delightfully varied; highly versatile. A nutritional treasure trove. The varieties of miso (including a table). The preparation of miso. Traditional natural miso and quick modern miso. A brief history of miso. Buying, storing, and using miso. Miso in Japan. Traditional Japanese miso shops and modern factories. Making miso at home. Favorite miso recipes. Address: Authors: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

7243. Tsuchiya, Kunio. 1981. Minami no tôfu, kita no tôfu: Aizu Tajima no tsuto-dofu ni tsuite [Southern tofu, northern tofu: Tsuto-dofu from Aizu Tajima]. *Daizu Geppo* (*Soybean Monthly News*). Jan. p. 39-47. [Jap]
• ***Summary:*** Aizu Tajima is a place in the northeast prefectures (Tohoku Chiho), near the border of Fukushima prefecture and Tochigi prefecture. During the Edo period it was a major town through which travelers passed. Tsuto-dofu is wrapped in a bamboo mat (*sudare*), then boiled in water until small holes form in the tofu.

7244. Fabricant, Florence. 1981. A good place to sample sushi: Dining out. *New York Times.* Feb. 1. p. LI17.
• ***Summary:*** This is a review of the two-star Japanese restaurant Taiko. Recommended dishes include "fried bean curd appetizer."

"Hot appetizers of deep-fried bean curd, the squares of tofu finished with a crunchy coating and seasoned with a gingery sauce..."

"Rich miso soup with diced bean curd provides a warmly restorative interlude between the main courses, especially on a biter winter evening."

Sukiyaki casserole includes "bean curd in a soy-based broth."

Note that the word "soy" (used by itself, at this late date) refers to soy sauce.

7245. Stop & Shop. 1981. Happy Chinese New Year! (Ad). *Hartford Courant* (*Connecticut*). Feb. 1. p. V5.
• ***Summary:*** "La Choy, 10 ounce bottle–Soy Sauce–69¢... Soy bean cake–Tofu 1 pound package–89¢." Also includes Azumaya egg noodles, egg roll wrappers, wonton wrappers (each in a 1-lb. package).

7246. Wakai, Ted. 1981. Dictionaries and raw fish (Letter to the editor). *Los Angeles Times.* Feb. 1. p. I14.
• ***Summary:*** Discusses the meanings of the words "sushi" and "sashimi." Not all sushi contains raw fish. His understanding is that "that sushi is a type of rice dish or delicacy made in a variety of sizes, shapes, recipes, appearances, tastes, etc. It comes rolled in seaweed [nori] or egg omelette, rolled into a ball, pushed through a mold, filled into a bag of deep-fried bean curd, loose, etc." Address: Oxnard, California.

7247. Takeda Chemical Industries, Ltd. 1981. Display ad: Report by Mr. Shinbei Konishi, President. *Times* (*London*). Feb. 4. p. 20, cols. 1-2.
• ***Summary:*** Includes a financial summary and a summary of the activities of each of the company's divisions. In April 1980, the Food Products Division introduced "'Soft Shoyu Takeda,' a low-salt soy sauce." Address: Japan.

7248. Hymowitz, Theodore. 1981. Re: Introduction of vegetable soybeans to America. Letter to William Shurtleff at Soyfoods Center, Feb. 5. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** William "Morse was the first to popularize vegetable soybeans [in the USA] and indeed the Dorsett-Morse expedition [to East Asia] introduced a great many 'vegetable type' soybeans into the U.S. However, Hahto, a vegetable type soybean was introduced into the U.S. from Japan in 1915. Vegetable type soybeans are nothing more than large seeded soybeans. Hahto seed weighs 27.8 grams per 100 seed. Morse mentions Hahto on page 7 of the U.S.D.A. Farmers Bulletin No. 1520 [April 1927]. He also mentions the variety Easycook which was first introduced into the U.S. in 1894. So please forget about Morse being the first to introduce vegetable soybeans in the U.S. Rather he recognized the potential of soybeans as a vegetable crop and introduced many such accessions into the U.S.

"There are vegetable type soybeans in China. In fact I had some in Shanghai."

Note: William Morse was aware of the suitability of the Hahto variety for use as "immature or green soybeans" as early as 1923, when he and C.V. Piper showed a photo of shelled Hahto soybeans with pods in their classic book *The Soybean* (p. 222). The caption below the photo reads: "Seeds and pods of the Hahto variety of soybeans, the seeds being especially valuable as a green vegetable." Morse was also aware of the special characteristics of Easycook and Hahto as mature or dried beans. On page 259 of the same book we read: "The Easycook and Hahto varieties need no more preparation than the ordinary bean as they cook up very readily." Address: Prof., Plant Genetics, Dep. of Agronomy, 1102 S. Goodwin Ave., Turner Hall, Univ. of Illinois, Urbana, IL 61801.

7249. Webber, Harry. 1981. Perry Webber, Madison College, and Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 8. 2 p. transcript.
• ***Summary:*** Harry Webber, the son of Perry A. Webber, attended Madison College from 1930 to 1935, then 1939-1943. He left in 1943 to go to medical school. Harry remembers the foods served at Madison. Vigorost was a gluten meat invented by Perry. There was also Nutmete or Notmete, and several others. They were served to students and widely retailed at health food stores. Ed Bisalski, the sales manager, traveled around the USA selling these foods.

© Copyright Soyinfo Center 2014

Perry Webber first went to Madison in about 1931. He earned his doctoral degree at Michigan State, graduating in about 1930-31, then went to Madison. Years before that he had been a missionary in Japan.

Harry went to Japan with his father, Perry, for 3 years. Harry's mother has written a biography of Perry; he will send Soyfoods Center a copy. Emmanuel Missionary College asked that she write the book. His interest was in food chemistry. He was head of the chemistry department at Madison. In the early 1930s he got interested in soy.

P.A. Webber and his family went to Japan from 1935 to 1939, then came back to the USA just before World War II, and went to Madison College–where Perry did lots of work with soyfoods.

Perry Webber was good friends with Dr. Harry Miller and he got interested in soymilk through Dr. Miller, probably first in Japan. He visited with Dr. Miller in Japan and saw his program, but Perry was interested in soymilk before 1935. His brother was in Tokyo at the Adventist hospital.

Sam Yoshiwara knew Perry Webber well and was one of his students in Japan. Perry sponsored him to come to the USA. Sam worked in the food factory at Madison College.

There is a small book about Sutherland and Madison by a man who taught Spanish at Madison. Address: M.D., 913 Meadowwood Dr., Modesto, California 95355. Phone: 209-521-1410 OF. 209-529-4291 HM.

7250. Elwell, Christian. 1981. Re: Ohio Miso Company, now owned by the Elwell family, has been renamed South River Miso Co. Letter to William Shurtleff at Soyfoods Center, Feb. 12. 1 p. Handwritten, with signature on letterhead.
• ***Summary:*** "Dear Bill, Please find enclosed a copy of two fliers we have sent out to our customers. The dated inventory notice I have just sent to our wholesale customers. The other sheet, announcing our move to Conway, Massachusetts, as the South River Miso Co., has been sent out to old customers of Ohio Miso in December, 1980, and to answer enquiries as they come in.

"I am making design plans for our building at present. We plant to be in production here in the fall of 1981.

"I am particularly pleased with the two year barley miso this year, which Thom made in Ohio in spring, 1979. Upon sampling this miso, Michio Kushi said it was of a quality that he would recommend it to patients and for people using miso in healing through macrobiotics. One of our aims is to be able to provide a steady supply of this and 3 year barley miso of consistent quality. I am sending along a sample to you under separate cover.

"With best wishes, Christian Elwell."

One leaflet/flier, handwritten on tan paper and titled "Dear friends, old and new," begins: The Ohio Miso Company has changed ownership. As of November, 1980, the Elwell family has purchased... The other lists miso varieties, prices, and inventory. Address: South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

• ***Summary:*** Howes was the International Director at the General Conference in Washington, DC, until he retired. Soyfoods are a rapidly growing component of Adventist food work worldwide. Discusses: Sanitarium Health Food Co. in Australia, DE-VAU-GE in West Germany, Granose Foods in England. A major new component is low-cost extruders making TVP. Address: 6471 Penn National Drive, Fayetteville, Pennsylvania 17222. Phone: 717-352-7239.

7252. Sheraton, Mimi. 1981. Restaurants: Tempura treats, a neighborhood spot. *New York Times.* Feb. 13. p. 58.
• ***Summary:*** This is a review of Inagiku, a Japanese restaurant inside the Waldorf-Astoria at 111 East 49th St. They serve "soba (cold buckwheat noodles enlivened with soy sauce and scallions),..." and "small dishes such as nimono, a combination of simmered vegetables and bean curd [tofu]..." Also teriyaki fish.

"At one dinner we asked a waiter for natto, a cool side dish of fermented soybeans in a spicy, eggy sauce..."

7253. Hesseltine, C.W. 1981. Aflatoxins in soyfoods (Interview). *SoyaScan Notes.* Feb. 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Concerning the 1969 *Time* magazine article on aflatoxins in homemade miso and soy sauce in Korea–There is a lot of incorrect information in the literature based on a problem with determining aflatoxins, since not all things that fluoresce are aflatoxins. A test for fluorescence needs to be followed by a chemical test. He found that one-third to one-half of all oats sampled in the USA contained fluorescent material that looked like aflatoxin–but was not. The oats were fed to animals and no problems resulted.

A study in Japan showed that when homemade miso was properly inoculated, it contained no aflatoxins, but when inoculated with natural spores, it did contain some aflatoxins. He has never seen any figures on the aflatoxin content of the latter miso. He has seen no evidence to indicate that there are problems with aflatoxins in naturally inoculated homemade misos. Good studies conducted in Japan have found aflatoxins in homemade miso but they were found only in a few samples and the levels were so low that there was no problem. No aflatoxins have ever been found in commercial misos as far as he knows. In short, he feels there is no risk is consuming any type of miso.

Dr. Hesseltine is now on a low-sodium diet and has therefore started eating a lot of tofu. In addition, he and Dr. Wang are conducting an interesting study on microbial spoilage of tofu. Address: NRRC, Peoria, Illinois.

7254. Yoshimura, Sam. 1981. Re: Chronology of work at Madison Foods and reminiscences. Letter to William Shurtleff at Soyfoods Center, Feb. 20. 2 p. Typed, with signature.

• ***Summary:*** 1937-1943. Sam attended Madison College and received a B.S. degree in nutrition in 1941. "At that time extensive study on soy beans and human nutrition was conducted at the college under the direction of Francis Dittes, (Ph.D. in nutrition) Phillip Chen, (Ph.D. in chemistry) and Perry Webber (Ph.D. in nutrition). Madison Foods (owned by the college) was manufacturing various canned and dried vegetable protein products including Kre-O-Soy (soy milk) and Cheze-O-Soy (seasoned tofu) and marketed them nationally. I received valuable experience working in the food plant.

1943-1946. Sam went to Emmanuel Missionary College located in Berrien Springs, Michigan (now renamed Andrews University), and received a B.S. degree in agriculture in 1945.

1945-1956. Sam returned to Japan and re-established San-iku Foods (owned by the Japan Missionary College). The college was closed during World War II. The company made canned and baked products based on wheat and soy proteins and marketed them extensively, including at Mitsukoshi, Seibu and other department stores. A series of pilot scale tests of soy milk production was conducted under the direction of Dr. Harry Miller. However, they did not start commercial production due to the somewhat weak public response to the product.

1956-1963. He worked for Madison Foods in Tennessee, where he was responsible for managing the production, research, and development program. Various canned vegetable protein products were produced. Madison Burger based on wheat and soy protein and improved Cheze-O-Soy were well accepted by the market. At the beginning of 1962, production of Infa Soy using Dr. Harry Miller's formula, was started under the direction of his son, Willis Miller; J.B. Craw was general manager at that time.

1963-1964. Sam left Madison Foods and went to work for Madison Hospital (owned by the organization). He was assigned to develop economical vegetable protein products suitable for hospitals, schools and other institutions. A series of frozen products including the so-called "Sam's Chicken," made with wheat protein [gluten] and tofu, were formulated. The product was well accepted by institutions as it had a torn chicken-like texture. "It was a least expensive product. I understand a dish prepared with Sam's Chicken (supplied by Southern Missionary College) received recognition at the International Restaurant Show in Chicago several years ago.

1965 to present. He joined Worthington Foods after Worthington acquired Madison Foods. Worthington sent him to Africa Basic Foods Inc. in Uganda, East Africa, to assist development of soy protein products. During his 6-month stay the company produced soy milk, tofu, CSM (combination of corn, soy and powdered skim milk) and other high protein products for hospitals and the school lunch program. It was a missionary project for the company to take part in solving kwashiorkor problems. It was an unforgettable and rewarding experience for Sam. He is a staff member of the R&D department, especially assigned to develop new products. He is also a professional member of the Institute of Food Technologists.

For information regarding Krem-O-Soy and other products from the early days of Madison Foods, contact Dr. Register (Chairman, Dep. of Nutrition, Loma Linda Univ.) or Dr. Shirou Kunihara at the same university. They were students at Madison College and did R&D work for the food plant. The son of Dr. Philip Chen (deceased) is at the Weimar Institute, Box A, Weimar, California 95736. Address: 8200 Colonial Meadows, Westerville, Ohio 43081. Phone: 614-882-0625.

• ***Summary:*** Contents: Introduction. Growing up (1879-1902): Birth, early contact with Dr. J.H. Kellogg, marriage. Early years in China (1903-1911). Washington, DC (1912-1925). Pioneering soymilk in China (1925-1939): Research, development of plant, destruction of plant 13 Aug. 1937, U.S. patent, No. 2,078,962 for soymilk process and equipment, work before return to U.S. Introducing soyfoods to America (1939-1949): In Mt. Vernon, new products, work with AMA, American Soybean Assoc. speaker and lifetime member 1958, contact with K.S. Lo and Vitasoy. Research and work around the world (1949-1977): Quick visit to Shanghai, death of second wife, sale of International Nutrition Foundation, Taiwan work, Indonesian plant, Trinidad, Libya, Japan, old age and relationship with William Shurtleff, the "Great Man." Contains 5 photos, and a sidebar titled "Early History of Soymilk."

Among the many people who pioneered in bringing soyfoods to America and to the West, two men of great vision, dedication, and perseverance deserve special mention: Dr. Harry W. Miller and William J. Morse. Dr. Miller, the well-known 'China Doctor'(after his biography by that title), was a world-famous missionary doctor and surgeon, and founder of more than 15 Seventh-day Adventist hospitals around the world. He was one of those unique individuals who was both a dreamer and a doer, and who inspired almost everyone who knew him.

© Copyright Soyinfo Center 2014

"Like W.J. Morse, he considered it his personal 'responsibility to awaken the West to the wonders of the soybean and to promote its use as food. (But where Morse was interested in soybean agronomy, livestock feeding, and food, Miller was interested only in food uses.) Dr. Miller can also be considered the founder of the modern soymilk renaissance in Asia. The development and popularization of soyfoods, and especially soymilk, was his lifelong hobby and despite his other numerous and demanding careers, he never lacked the time, over a span of almost 75 years, to continue his ongoing research and work in this new field that he loved so well.

"Growing Up (1879-1902): The first of five children of Amanda Ehlers and John Oliver Miller, Harry was born in a log cabin on a farm in the small town of Ludlow Falls, Ohio (just north of Dayton) on 2 July 1879. His father was a school teacher. He later wrote that he delighted in working on the family farm but found it 'disgusting' to have to kill and eat the animals he had raised. When he was 12, Harry's parents became Seventh-day Adventists. Two years later, after much study, at the annual camp meeting, he and a friend decided to be baptized and become Adventist church members.

"At age 15 Harry entered secondary school at the Adventist-run Mt. Vernon Academy in Mt. Vernon, Ohio. He loved the strict, puritan atmosphere, the vegetarian diet, and the teachings of the church. In 1898, at age 19, he enrolled in medical school at the newly opened, Adventist-run American Medical Missionary College in Battle Creek, Michigan, which was associated with Dr. John Harvey Kellogg's Battle Creek Sanitarium (founded in 1866), the largest and most progressive medical institution of its kind in America at that time, and the birthplace of modern dietetics. Opposing the popular cures of the day (drugs, bleeding, etc.), the sanitarium recommended diet (especially a simple grain-based vegetarian diet), exercise, hydrotherapy and good mental health as the foundations of healthful living and natural healing. These teachings had a lifelong effect on Miller.

"Working to pay his own tuition, room, and board, Miller led guided tours through the sanitarium and food factory, which forced him to learn more about the various foods (America's first meat analogs and breakfast cereals) and how they were made. Miller was deeply influenced by the personality and teachings of Dr. J.H. Kellogg, who personally taught a number of the classes Miller attended, treated him like a son, and helped put him through college. One of America's great pioneers of both nutrition and of soyfoods, Kellogg stressed to the small class the importance of preventive medicine, nutrition, and diet. He strongly opposed the use of alcohol, tobacco, caffeine, and narcotics. Miller later noted that almost all the students in the small class lived past the age of 90; Kellogg lived to age 91, Miller to 97½ and one classmate to 101.

"Miller graduated in 1902 and was married to a classmate-doctor, Maude Thompson, the same year. During an internship autopsy, Dr. Miller cut his finger badly and suddenly contracted systemic blastomycosis, an infection considered at the time to be fatal. With deep faith he prayed to God, promising that if he were to be healed, he would go anywhere in the Lord's service. To the astonishment of his doctors, Miller was miraculously healed. This greatly deepened his faith. Shortly thereafter a call came from the Adventist church for a missionary doctor in China. Miller accepted the challenge. For the rest of his life he prayed for his patients before all operations (minor or major), and, according to others, apparently his great faith was rewarded by their recovery.

"Early Years in China (1903-1911): In October 1903, Dr. Miller and Maude, together with another physician couple, sailed for China, stopping briefly in Japan. In Kobe, at the home of fellow Adventists, Myrtle Lockwood first introduced Miller to soyfoods serving an entree called Tofu Loaf, with which Miller was particularly impressed. In China the couple went deep into the interior, near the center of Honan Province, where they found great poverty and malnutrition. They both learned Chinese, dressed like the local people, and even adopted the hair style of a long queue and shaved pate. They also ate Chinese foods, and soon Miller was visiting local tofu shops, learning about and sampling tofu, yuba, curds, soymilk, and the like. He found that tofu was much more widely consumed than soymilk, although the latter was quite widely used as a spicy hot breakfast soup and a warm, sweetened beverage. Dr. Miller later said (1961) that many Chinese and other East Asians told him that they did not drink much soymilk since they believed it caused them intestinal disturbances, which tofu did not. Perhaps this was why soymilk was not generally fed to infants-and children.

"In 1905, Dr. Miller's beloved wife died suddenly of an unknown disease. He was 26. 0ut of his deep sadness grew an even deeper commitment to help the impoverished and suffering millions of China. After a brief return to America two years later, where he married Marie Iverson, Miller returned to Shanghai. Two daughters were born in 1908 and 1910. Then Dr. Miller contracted a severe unknown disease and was forced to return to America in 1911.

"Washington, D.C. (1912-1925): Miller eventually managed to heal himself of what he later learned was a vitamin deficiency illness called sprue. During recovery he taught the Bible at Mt. Vernon Academy, his former alma mater and in 1912 his first son. Harry Willis, Jr., was born. Soon he was called to the position of medical superintendent and surgeon of the Adventist-run Washington Sanitarium and Hospital, which he developed into a Mecca for congressional leaders of the day. He became consulting physician to three U.S. presidents. In Washington he pioneered new techniques of thyroid goiter surgery, which lowered fatalities from 50

© Copyright Soyinfo Center 2014

percent to about one percent. He eventually performed over 6,000 goiter surgeries around the world. In Washington he also met Dr. W.J. Morse and Dr. J.A. LeClerc, both soy pioneers from the USDA. He later wrote that these men filled him with 'inspiration, enthusiasm, and information,' and both later made frequent visits to Miller's soymilk plant in Ohio. In 1915 a fourth child, Clarence, was born.

"Prior to 1917 the Sanitarium had used a lot of dairy products on its vegetarian menus, but in that year, with World War I under way, all milk supplies from the local dairy were requisitioned by the Walter Reed Military Hospital. The sanitarium bought its own herd, but the problems that Miller found with contamination, animal disease (tuberculosis), and the like, convinced him of the need to develop a good alternative to dairy milk. In the small food plant connected with the hospital, where several soyfoods were already being produced for use in the lacto-vegetarian diet, Miller began a few basic soymilk experiments in 1925." Continued. Address: Lafayette, California.

7257. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part II). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "Pioneering Soymilk in China (1925-1939): In 1925 Miller accepted the church's invitation to return to Shanghai to develop a network of Adventist health care facilities, the first of which was the Shanghai Sanitarium and Hospital, which opened January 1, 1928, with Dr. Miller as medical director. Deeply touched by the high infant mortality rate caused by malnutrition, Dr. Miller began again in 1926 to turn his attention to soymilk, working on it steadily in his spare time at a small food plant located behind the hospital building. A growing number of orphaned infants began to appear at the hospital. Their only hope of finding food was to find a wet nurse or to be fed cow's milk, which was very expensive in China and which not all infants tolerated well.

"Dr. Miller was determined to develop a soymilk that had good flavor and digestibility, could be formulated to nutritional equivalency to mother's milk, was low in cost, and had a good storage life. Preparing his soymilk at the small soy plant in the typical Chinese way, with cold extraction of the soymilk from the okara, followed by cooking, he began to study ways to remove the beany flavor and make the soymilk more digestible.

"On his medical travels in other parts of China, and in Korea and Japan, he visited tofu shops and studied their methods. He believed that the beany flavor resulted from natural oils in the soybean; perhaps if the soymilk were spray dried and then reformulated with fresh soy oil, the flavor would improve.

"In the early 1930s, returning to America on furlough, he purchased the necessary equipment for a small soy dairy and had it shipped to China; a motorized stone mill, an American extractor, and a small homogenizer. Soon he was making improved formulated soymilk for the babies, patients, and staff at the Shanghai Sanitarium. The Chinese, too, liked the flavor. Some friends cajoled that it was 'undignified for a talented surgeon to be always playing around with beans.' Miller was undaunted, yet the beany flavor persisted.

"One day, in the mid 1930s, the breakthrough came as he was standing in the kitchen of the compound working with slurry from a tofu maker. He later wrote: 'I heard a divine voice behind me that said "why don't you cook it longer with live steam?" No one had ever thought of that before. Soon the staff and patients noticed the improved flavor and digestibility, and he added some soy oil or peanut oil during homogenization to make it even better. With new enthusiasm he began more baby feeding experiments. Soymilk was added to what was called the sanitarium's 'Universal Diet,' which also included whole wheat bread and half polished rice, plus other soyfoods. During a trip to the Philippines at this time he learned from refiners of coconut oil that steam distillation and flash pasteurization improved flavor of foods containing fats by driving off volatile oils and gases.

"So promising was the new product that Miller began to move forward on three fronts: controlled feeding studies on infants, establishment of a commercial soy, dairy, and application for a U.S. patent. In 1932 Dr. Miller had established the Vetose Nutritional Laboratory for furtherance of his research. For two years (1936-37) he fed formulated soymilk to several hundred small children at the Shanghai Clinic, running control tests with fresh cow's milk and various types of American and European prepared baby foods. The study turned out well and the results were published in the April 1936 issue of the prestigious *Chinese Medical Journal*, an English-language publication read widely in the U.S. and China. Here it was officially noted that babies could be nourished from birth fully as well with soymilk as with animal milks. This led to increased interest in the product. Dr. Miller later wrote: 'I regarded that work as of far greater importance than the building up of the sanitarium because it had to do with the preservation of thousands of lives that otherwise would be lost if they did not have a proper substitute for mother's breast milk, since cow' milk is beyond the economic level of the Chinese people and almost all Oriental races.' In later years follow-up infant feeding studies were done by other researchers using Dr. Miller's soymilk at the Indigent Hospital in the Philippines, at Tokyo University, and at Ohio State University at the Children's Hospital in Columbus, Ohio.

"In January 1936 Dr. Miller and his oldest son, Willis (who did much of the plant design and equipment construction and was the production manager), opened a full-scale soy dairy, the first of its kind in the world, on Pingliang Road in Shanghai, not far from the Shanghai clinic. The milk was cooked with live steam in open-top kettles. Soon a fresh

© Copyright Soyinfo Center 2014

liquid beverage, called Vetose Soya Milk, was available in natural, chocolate, and acidophilus flavors, in half-pint and quart bottles. The tangy acidophilus, cultured, bottled (but not sterilized) and delivered chilled was a real favorite. Ice cream was sold to institutions and meat analogs were under development. Production skyrocketed, doubling each month. Eventually the entire city of Shanghai had a soymilk route with thousands of families receiving door to door deliveries (by three-wheel pedicycles with carts behind them) of 3,000 quarts and 4,000 half-pints a day. The commercial product sold for less than dairy milks and cost less than one-fourth as much to produce. The soymilk proved so successful that it was soon included in rations for the Chinese army. A system for making dehydrated soymilk was also set up using a locally made Grey Jensen spray dryer; the government planned to use the dehydrated soymilk in rations that were lighter in weight and could be stored longer.

"But the Japanese were now invading China and on August 13, 1937, just eight months after the plant opened, it was totally destroyed by Japanese crossfire and bombs. (At the same time another soy dairy was being run by Julean Arnold of California and Nellie Lee, a Chinese, both of the China Nutritional Aid Council, in Dr. Fu's Children's Hospital in Shanghai. They provided their soymilk to 25,000 to 37,000 refugee children a day and distributed millions of biscuits containing 40 percent okara from their soy dairy.) The Japanese occupied Shanghai in November, 1937, and soon thereafter the Shanghai Sanitarium was closed, to become a refugee center. The political situation forced Miller to leave Shanghai.

On May 4, 1937, while his Shanghai soy dairy was still in full swing, Dr. Miller was awarded U.S. Patent No. 2,078,962. He introduced methods for eliminating beany flavor, and for the use of a centrifuge, and an homogenizer. In the patent he referred to his product as 'vegetable milk;' however subsequent pressure from the powerful dairy industry and the USDA convinced him to Latinize the name to Soya-Lac. This term was first used in late 1939 for Miller's first American soymilk; the spelling had been changed to the present one-word Soyalac by September 1941.

"Miller's patented process was as follows: Soak 1 part by weight of soybeans in 8 parts of water at 60 to 75ºF for 6 to 10 hours. Grind well in a burr mill, adding a little water while grinding, to produce a mixture of 20 gallons water and 25 pounds ground beans. Extract the soymilk through a fine cloth in a centrifuge at 2,500 RPM in either of two ways: (1) before heating; or (2) after bringing to a boil, stirring constantly, in a caldron and simmering briefly. Now to the simmering soymilk add 7 pounds each grain sugar (dextrose, maltose) and oil plus 3 ounces salt. Return to the boil and simmer, stirring constantly, for 30 to 60 minutes, or until the flavor changes from 'beany' to 'nutty.' Homogenize in a colloid mill or homogenizer to give a milk containing 3.5 to 4 percent protein and 5 percent fat. Cool, bottle, and refrigerate, or dehydrate.

"From late 1937, Dr. Miller was in Hankow-Wuhan establishing the Wuhan Sanitarium Hospital, where he also had a small soy dairy. Eventually over 15,000 Chinese refugees, escaping the Japanese troops in the north, filled the hospital compound. Finally in January 1939, as the war got too hot, Dr. Miller left China and returned to America in April of that year." Continued. Address: Lafayette, California.

7258. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part III). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "Introducing Soyfoods to America: Undaunted, Dr. Miller returned to the U.S., convinced that soymilk was destined for worldwide acceptance. He decided to settle in Mt. Vernon, Ohio, where he had formerly gone to school and later taught. Dr. Miller's oldest son, Willis, had returned from Shanghai after the plant there had been destroyed and in 1938 started his own business, Miller's Soy Foods, in Utica, New York. Later that year it moved to Washington, DC, and was successfully marketing canned soymilk, okara spreads, and gluten cutlets.

"When Dr. Miller returned to the U.S. he suggested that he and his son go into business together; Willis liked the idea. Working with his son, Dr. Miller set up a company called the International Nutrition Foundation and then began searching for a suitable site in Mt. Vernon for their new soy dairy. Soon they found a 140-acre farm, containing a number of fine springs, located several miles outside of town–and for the remarkably low price of $7,000. Dr. Miller borrowed money from his brother Clarence to purchase this farm, then moved into the one large house on the property. Willis moved his soyfoods equipment from Washington, DC, into a garage near the house and got the plant running while the new buildings were being built. In April 1939 Clarence, Dr. Miller's second son, left his job in Washington, DC, and went to Mt. Vernon to help with the work; he later became accountant and treasurer of the soy business. To help raise money for the soymilk operation, Dr. Miller set up a private part time medical practice, with an office in one wing of the local hospital. Although he had very little money, Dr. Miller made plans for a 60- by 130-foot building, which he planned to enlarge later by adding a second story. A local high school had been recently torn down and he obtained all the bricks for free if he would haul them away. So each evening after his medical work was done, Dr. Miller and his sons trucked the bricks over to their land, cleaned them, and built the new soy dairy building. The surgeon's skilled hands were not too delicate for the rough work. The original building still stands strong; today it houses the office, lab, and pilot plant where Loma Linda still makes Soyalac.

"The new plant was completed in the fall of 1939 and

© Copyright Soyinfo Center 2014

the first products, canned Soya Lac (made in a pressure cooker and fortified with vitamins and minerals) and Soy-A-Malt were available late that year; powdered Soya Lac was first produced in 1940. But contrary to Miller's expectations, the American public was simply not ready for soymilk; acceptance was painfully slow. He decided that, in order to survive, he would have to develop new products, try to get his soymilk approved by the American Medical Association, and, in the meantime, sell his soymilk and related soyfoods to ready markets in East Asia.

"With his typical boundless energy, Dr. Miller, now 61 years old, started by setting up a plant near the soy dairy to can fresh green soybeans of the tasty, large-seeded or vegetable variety, which were grown on the farm. Partially because of the mushrooming growth of interest in soyfoods during World War II (due to the rationing and high prices of meat, milk, eggs, and cheese), these found a ready market and became his most profitable product, with 40,000 cases a year being sold at supermarkets and health food stores around the Midwest by 1943. The company's best selling product (which was not as profitable due to the high production costs) was Miller's Cutlets, a canned gluten entree. He began to develop other meat analogs similar to those developed initially by Dr. J.H. Kellogg at Battle Creek. He now perfected his acidophilus soymilk but sold it only to the local Mt. Vernon hospital since he did not want to kill the culture by sterilization required for long distance distribution. (In 1934, Kellogg had patented a similar acidophilus soymilk.) He made tofu from his basic soymilk and did extensive experiments, working with Ohio State University, in making a fermented tofu cheese; tofu was pressed as hard as possible, inoculated with Cheddar microorganisms, then allowed to ripen. The product was fairly good but often excess moisture in the tofu led to the growth of unfriendly bacteria. Next came a soymilk ice cream. Dr. Miller put all of his medical income into the soyfoods business and by 1940 the company was producing an exciting line of vegetarian soyfoods and meat substitutes, sold nationwide, mostly at health food stores. A pamphlet of that year lists the following, all sold under the brand name 'Miller's': Soya Lac, a liquid soymilk in natural and chocolate flavors sold in 13 ounce and 30 ounce cans. Soy-A-Malt, spray dried soymilk in natural and chocolate flavors in one-pound cans. Soya Sauce, produced in South China. Soya Curd, made by coagulating Soya Lac with lactic acid to make curds, then blending this with tomato puree, pimento, and soy sauce. Soya Loaf, made from a seasoned mixture of okara (soy pulp and gluten). Soya Spread, for sandwiches, also made from okara and sold in 16-ounce jars. Whole Soya Bean Flour, a naturally alkaline full-fat soy flour. Green Soya Beans, canned, vegetable type. Giant Soya Beans, cooked and canned mature vegetable-type soybeans, and Soya Beans with Tomato Sauce, edible soybeans canned with tomato puree and malt.

"Products added years later included Vegetable Chili Con Carne and Vegetable Chop Suey, both sold in 16-ounce jars with wheat gluten used in place of meat. In 1942 Kellogg's Battle Creek Food Company had a similar line of soyfoods: Soy Protose (a meat analog), Soy Gluten Wafers, canned Green Soybeans, Soy Flour, Soykee (soy coffee), and Soy Acidophilus. A few years later Dr. Miller developed Vege-Links, the world's first meatless wiener, made of seasoned okara and wheat gluten packed in a sausage casing, and Vege-Chee, a cheese analog made of curdled soymilk."

Note: This is the earliest English-language document seen (Oct. 2013) that uses the term "cheese analog" to refer to a Western-style soy cheese.

"During the years that he was developing new products, Dr. Miller made countless trips to the American Medical Association trying to convince them that the research he had done in China proved that his Soyalac was an acceptable substitute for dairy milk in feeding both infants and adults. But the AMA, apparently strongly influenced by the dairy industry, refused to grant any recognition to the product. Finally, after one fruitless trip, a member of the board took Dr. Miller aside and explained frankly that he would never get endorsement for his product unless he started to market his product specifically for that 7 percent of U.S. infants who are allergic to cow's milk, and avoided unfriendly comparisons with cow's milk. Dr. Miller was not too pleased, since he had hoped that soymilk would gradually replace cow's milk in the American diet. He felt that soymilk made much more efficient use of the world's land to feed people, and that it was a lower cost, more healthful product of comparable nutritional value. Yet he reluctantly accepted the AMA's advice and within a few months had their approval. Soyalac began to be prescribed by physicians for allergic infants and soon started to sell quite well." Continued. Address: Lafayette, California.

7259. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part IV). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "From 1939 to 1941 most of Miller's powdered soymilk and some of his other soyfoods were sold in the Philippines and China. However World War II cut off his business, so he began to promote his soymilk more vigorously in the U.S. not only as an allergy-free infant formula that would not clog the nipple, but as a healthful beverage that alkalized the bloodstream and was good for diabetics, postoperative patients, ulcer and colitis patients, and those with atherosclerosis.

"Before World War II started, Dr. Miller had set up a branch of his International Nutrition Laboratory and a Soymilk plant in the Philippines at 41 Nagtahan in Manila. It was run by Paul Sycip (pronounced SIS-up), a private Chinese Christian (but not Adventist) businessman, who had come briefly to Mt. Vernon to learn Miller's process, and

© Copyright Soyinfo Center 2014

buy equipment. Miller was in the Philippines helping to set up the plant when the Japanese attacked. During the war the Japanese stole all of the soymilk equipment but did not harm the building. In 1948 Mr. Sinclair Pinnick, a foreman at the Mt. Vernon plant since 1944, went to the Philippines, took new equipment, and got the plant reestablished. It produced regular soymilk, the first ever in the Philippines.

"The expanding success of Soyalac encouraged the growth of competing products but Dr. Miller didn't mind. A true evangelist, he was happy to see the message finally reaching the people.

"To fully appreciate Dr. Miller's great energy and diverse talents, we should note that during the early 1940's, as he developed, produced, and marketed his line of innovative new soyfoods, he also maintained an active medical practice, partially because the other two doctors at the hospital where he worked were called for military duty, and partially to support his work. Prior to World War II he would fly to the Philippines about once a year, do 12 to 15 thyroid surgeries a day for two to three weeks, give half of his income to the hospital there, then return to America with the balance. In 1942 he and his brother bought the local hospital in Mt. Vernon where he worked; his son Clarence came in to manage, renovate, and expand it. Miller was the only surgeon in Knox County (population 35,000).

"At his Mt. Vernon soy dairy, Miller was always the first one to start the day's work. One day, while experimenting with a new formula, he cut off end of his finger in a food grinder. He calmly picked up the severed part, walked into his office, and sewed it back on.

"During the years he spent introducing soyfoods to America, Dr. Miller was one of the most active supporters of the American Soybean Association, a regular speaker at conventions and contributor of articles to the Soybean Digest. His first speech was "The Role of the Soybean in Human Nutrition" (1940) and his first article "Soybeans and the Orient" (1943), was followed by "Feeding the World with Soya" (1946), "Survey of Soy Foods in East Asia" (1948), and others. Then in September 1958 he was made an honorary member of the Association and awarded a gold medal.

"By the late 1930s the seeds that Dr. Miller had planted in East Asia began to sprout. It is interesting to note that most of the remarkable expansion of interest in and production of soymilk that has taken place throughout Asia during the last half of the twentieth century can trace its origins directly back to the work of Dr. Miller.

"While Dr. Miller was in Shanghai, an Adventist named Howard Hoover had come and learned the soymilk process, then started his own soy dairy and health food plant in a mission school in Canton in about 1938. This was the first offshoot.

"In 1940 Mr. K.S. Lo of Hong Kong asked Hoover if he would help him set up a plant. Hoover got approval from Miller, then went to Hong Kong and designed Lo's first plant. [Note: K.S. Lo recalls the origin of has company quite differently; we accept his version of the story]. By 1940 Lo's Hong Kong Milk Factory was making homogenized soymilk and selling it in natural and chocolate flavors, like dairy milk, in standard half-pint bottles sealed with a paper cap and hood. The soymilk was sweeter and a little thinner than Miller's and had more of the natural (so-called beany) flavor, which the Chinese prefer. By 1942, when the Pacific War broke out, Lo's company had gone broke. But in 1945, after the war, the company reopened as the Hong Kong Soya Bean Products Co., Ltd, and reintroduced their product, now called Vitasoy, not as a milk substitute, but as the world's first soymilk soft drink. By 1974 Vitasoy passed Coca Cola to become Hong Kong's best selling soft drink, with sales of 150 million bottles a year. In the meantime many other large soymilk plants had started up in Singapore, Malaysia, and Thailand.

"In 1948 the Chinese Quartermaster Department, with the help of Dr. Miller's son, Willis, set up the largest soymilk plant in the world in Shanghai, using a process patterned after that used in Ohio, to make spray-dried soymilk. Costing over $1,000,000, it had a capacity of 5 tons of dry soymilk every 12 hours. The dried soymilk would be mixed with puffed rice, pressed into wafers, and packed into cans, then opened in the field and soaked with hot water for rations. The plant was completed and ready for operation (Dr. Miller was at the dedication ceremony) just prior to the Communist takeover of Shanghai in 1949.

"Research and Work Around The World (1949-1977): In 1949, at age 70, Dr. Miller accepted the invitation of the Adventist church to take over the direction of the Shanghai Sanitarium and reestablish a soy dairy there. China was in the throes of revolutionary war and Shanghai was still held by the Nationalist forces. A daring pilot dropped Miller at the besieged Shanghai airport, hardly pausing to stop. But Shanghai fell to the Communists in May 1949; Miller was soon evacuated, and returned to America.

"In 1950 Dr. Miller's second wife died. Shortly thereafter he decided to sell his Mt. Vernon business. There was the increasing pressure of running a food plant and although sales were good ($1.25 million gross in 1950) profits were only $120,000 due to high taxes. He wanted to devote more of his time to research and medicine. Although offered a large sum of money by a private company outside the Adventist denomination, he decided to divide the company into two parts, the meat analogs and the soymilk plus related products, and sell these to Adventist-run firms. In June 1950 he sold the meat-analog part of his business (gluten meats, nut loaves, frankfurters, etc.) to Worthington Foods in Worthington, Ohio, a private company owned by Adventist laymen that had been making meat analogs since 1939. They bought the patents, recipes and formulas, equipment, technology, and good will that went with Miller's

© Copyright Soyinfo Center 2014

meat analog business. Most of these analogs contained no soy. Worthington kept the brand name "Miller's" for several years thereafter as they sold Miller's Cutlets, Miller's Burger, Miller's Stew, Vege-Links, and the like. Willis Miller worked with Worthington for some time after the sale.

"In early 1951, Dr. Miller sold the rest of his business at a very low price (book value) to Loma Linda Foods of Riverside, California. This sale included the Mt. Vernon land, buildings, equipment, technology, and recipes and formulas for soymilk, canned fresh green soybeans, Vege-Cheese (a canned tofu cottage cheese) and related products. All these products continued to be produced in Ohio. Loma Linda Foods, an integral part of the Seventh-day Adventist Church, was founded in 1906 and had run a plant in Riverside making meat analogs, soymilk, and other foods since 1936. Dr. Miller had always believed that the process for making soymilk was not something that he had originated; the key to it had been a gift to him from a higher power. Thus, he felt it was simply not his to sell. So he gave the process to the Adventist church but sold the rest of the business to Loma Linda Foods (they operate the Mt. Vernon plant to this day), and loaned them the money to buy it. They paid him in installments and he returned half of the money to them for them to set up laboratories and a pilot plant in their headquarters at 11503 Pierce Boulevard in Riverside (the town was then called Arlington). Here he established the International Nutrition Research Foundation, which he further endowed heavily with his own funds; 95 percent of its future research was on soyfoods. He bought a home nearby. For the three years following his wife's death he worked intensively on soyfoods research. In 1951 Loma Linda first introduced Soyagen, a lightly fortified soymilk for adults to match their Soyalac for babies. Miller did extensive work on further eliminating the beany flavor from soymilk using a vacuum pan and flash pasteurization. By 1958 his labs had developed new and improved soymilks, soy cream, improved acidophilus soymilk and ice cream, cottage cheese, a soy-cream cheese spread, cholesterol-free cheese, and a non-dairy margarine." Continued. Address: Lafayette, California.

7260. Shurtleff, William. 1981. Dr. Harry Miller: Taking soymilk around the world (Continued–Document part V). *Soyfoods* 1(4):28-36. Winter.

• ***Summary:*** Continued. "In 1953, at the age of 74, he married for a third time (his wife was about 35) and shortly thereafter was asked to establish an Adventist Sanitarium in Taipei, Taiwan. With it, of course, he started a soy dairy at a school, which supplied the school, the Sanitarium, and the surrounding community with soymilk daily. In 1956, when it came time for Miller to leave Taiwan, Generalissimo Chiang Kai-shek personally gave him China's highest award, the Blue Star of China, in appreciation for his tireless service to the people of China in saving the lives of thousands of infants with the use of soymilk and in establishing some twelve sanitarium-hospital clinics. At the time, the Generalissimo, who had been a former patient of Dr. Miller's, recalled how he had become so fond of the sanitarium's soymilk that he had once sent his private plane over 1,000 miles to Shanghai to replenish his supply.

"In 1954 the World Health Organization became interested in Miller's work with soymilk. His oldest son, H.W. (Bill) Miller supervised the construction of a joint FAO / UNICEF soymilk plant in Yogyakarta, Java, Indonesia, which opened in 1957 and produced about two tons a day of a spray-dried soymilk called Saridele.

"After filling in for other surgeons in Trinidad and Libya from 1956 to 1957, Miller went to Japan in 1957 to spend seven months as medical director and surgeon at the Tokyo Sanitarium-Hospital. He was now 79. Despite his busy medical routine, he found time to set up a small soymilk pilot plant in the hospital kitchen where they made soymilk, soy whipping cream, soy ice cream, and soy spread, which were served to the staff and patients. In cooperation with the Japanese Ministry of Health, he then developed the concept of helping existing small tofu producers to set up a soymilk operation right in their shops by adding on a boiler, pressure cooker, homogenizer, cooler, and bottler. The equipment could be installed for less than $2,000 and would enable each plant to produce 150 pounds of tofu and 200 gallons of soymilk a day using three trained workers. Miller personally helped at least one small rural tofu shop set up such a system; their soymilk was sold fresh and hot or cold and bottled for half the price of fresh dairy milk.

"Starting in about 1955 Dr. Miller began to recommend that the Adventist-run Japan Saniku School serve soymilk instead of cow's milk to the students; however the staff hesitated because of questions about its nutritional value and flavor. In 1957 two Japanese Adventists, Mr. Hidekazu Watanabe and Mr. Hanzo Ueda (who ran a tofu shop at the time) started making Japan's first soymilk on a small scale in Hachioji, Tokyo, bottling it in 180-ml bottles, and selling it locally. Mr. Watanabe later described the great value to them of Dr. Miller's ongoing technical, nutritional, and spiritual guidance.

"After some time, directors of the Saniku School visited the small soymilk plant, liked the soymilk flavor, and understood its nutritional value. In 1959 they bought similar equipment, set up a small plant in the school, and started to produce soymilk, which was bottled in 180-ml bottles and served to the students at every meal. In 1969 the Saniku School set up an independent food production company called College Health Foods (which later became today's Saniku Foods) and through it, with the help of Loma Linda Foods in America, began to produce Soyalac soymilk infant formula. That same year, the Luppy Soymilk Company started and went on to produce Japan's first widely popular commercial soymilk.

© Copyright Soyinfo Center 2014

"By 1980 Japan's largest soymilk producers were Kibun Foods (33,000 pacs a day), Saniku Foods (23,000 pacs a day), Okazaki Marusan (23,000 pacs a day), and Mitsubishi Kasei (18,000 pacs a day), A typical pac is 200 ml (6.8 fluid ounces).

"Prior to 1960, a small soymilk plant similar to those established by Miller in Japan, was set up at the Adventist-run Mountain View College in Central Mindanao, Philippines. The college farm raised edible soybeans and the 700 students were served fresh soymilk each morning for breakfast and fresh tofu for lunch.

"In 1960 Dr. Miller again accepted the invitation of the Adventist church to start a new hospital, this time in Hong Kong. As always, it was accompanied by a little soymilk plant. By 1960 soy dairies had also been established in Hong Kong at the South China Union College and at an Adventist-run college in Bandung, Indonesia.

"Dr. Miller spent most of his time from 1960 to 1973 in East Asia. He practiced surgery until the age of 93. In 1961 his biography *China Doctor* by Raymond S. Moore was published by Harper & Bros. In 1963 Dorothea Van Gundy Jones in *The Soybean Cookbook* wrote: 'Certainly Dr. Miller has done more than any other person to introduce soybeans and soybean products, especially the milk, to the population of this country.'

"In 1973 Dr. Miller formally retired from medical practice and returned to California, where he spent the last few years of his life doing the work he loved so much: soyfoods research. He lived about one mile from Loma Linda Foods in Riverside, and he walked to work each morning. He continued his experiments with tofu and soymilk, making improved acidophilus soymilk, tofu-based cheese, and cheese spreads. He made a good tofu-based Cheddar cheese but could not make it melt. His later years were not as productive as they might have been since, in old age, he had lost most of his sense of smell; when he would ask others how new products tasted, they would often tend to flatter him instead of giving an honest and objective response. Yet this work was still of real potential value.

"In 1972 the Southern Asia Division of the Adventist church asked Mr. Pinnick of Mt. Vernon to go to India to set up a soymilk plant at their Spicer Memorial College in Poona. In March 1973 Dr. Miller flew over from Hong Kong to help the operation get started. Pinnick writes: 'He would work all day with us at the plant (at age 94) then spend nearly-every evening speaking to some group on healthful living. There seemed to be no limit to his endurance.'

"Starting in 1975, while in Japan, I exchanged numerous letters with Dr. Miller. He typed each letter himself and was always full of questions about new developments in tofu and soymilk production in Japan. In 1976 he sponsored and hosted a program about tofu and soymilk that my wife and I did for several hundred members of the faculty and community of Loma Linda University, La Sierra campus. During the day of our visit he took us through his pilot plant and described his latest experiments making tofu-based fermented cheese spreads. He seemed extremely alert and well informed.

"Dr. Miller died on New Year's Day, 1977, at the age of 97, just as he was getting ready to go to his beloved church.

"Harry Miller was a shining example of what the Chinese call 'The Great Man.' He dedicated his life to the welfare of all beings, human and nonhuman. He chose a life of voluntary simplicity, finding his real joy in giving. Close associates estimate that, in professional fees alone, he turned over some $2.5 million to the hospitals, church, and nutritional work with which he was connected. Spiritual values were at the center of his life. Though world famous, he was the most humble of men; though very busy, he had time for each person who needed him. His vision was fifty years ahead of his time. He left an indelible impression on the world. Would that he could he here with us now to see the blossoming of his work in America and around the globe.

"The author wishes to give special thanks to Dr. Miller's two sons, Willis and Clarence, and to Glen Blix, plant manager at the Loma Linda Mt. Vernon plant, for extensive information provided in interviews and letters. For a bibliography of Dr. Miller's publications, send a SASE to *Soyfoods* magazine." Address: Lafayette, California.

7261. Shurtleff, William. 1981. Early history of soymilk. *Soyfoods* 1(4):31. Winter.

• ***Summary:*** Note: This was published as a sidebar to the article "Dr. Harry Miller: Taking soymilk around the world."

"It is important to understand Dr. Miller's soymilk research, writing, and product development in their proper historical perspective.

"Soymilk is thought to have been developed in China by Liu An, King of Huai-nan in about 164 B.C. In most parts of China, soymilk has long been used as a spicy hot breakfast soup (*sien tou-chiang*) or as a warm, sweetened beverage (*t'ien tou-chiang*). Yet it had not traditionally been used as a substitute for mothers milk or cow's milk in infant feeding. and its nutritive value for infant feeding was virtually unknown. By 1923, as described with photographs by Piper and Morse in their classic, *The Soybean,* a soymilk factory in Changsha, China (p. 231) was selling soymilk in bottles, each sealed with paper, and carried in baskets suspended from shoulder poles. This was 13 years before Dr. Miller's soy dairy opened in Shanghai.

"The first known mention of soymilk in a Western publication was in 1895 by H.C. Prinsen Geerligs, a Dutch scientist who lived and traveled in Southeast Asia, and wrote an article entitled *'Einige Chinese Voedingsmiddelen Mit Soyabonen Bereid'* [Some Chinese Foods Made with Soybeans]. The first English-language article on soymilk, entitled 'Soybeans and Soybean Products,' was published by H. Trimble in 1896 in the *American Journal of*

© Copyright Soyinfo Center 2014

Pharmacology. In 1906 Katayama in Tokyo, Japan, wrote 'Condensed Vegetable Milk,' and in 1907 J. Rurah published the first article on infant formulas entitled 'The Soybean in infant Feeding' in *Archives of Pediatrics,* followed in 1910 by 'The Soybean as an Article of Diet for infants.' Some 30 journal articles had been published by 1928 and at least 66 by 1936. In 1926 Dr. Ernest Tso of the Peking Union Medical College published his first of many studies in English on feeding infants water-extracted soymilk. Entitled 'Soybean Milk–Infant Feeding,' it appeared in the *American Journal of Physiology.* He published five more similar studies prior to 1931.

"The first patent for soymilk was issued to Li Yu Ying in Britain in 1910. A German patent was issued to Goessel in 1911. The first U.S. patents were issued to Goessel (1913), Li Yu Ying (1913) and Monahan and Pope (1915); the latter was the first issued to American citizens. By the time Dr. Miller started his soymilk research in 1925, some 30 patents had been granted; there were 66 patents by the time Dr. Miller received his in 1936.

"Soymilk was being produced in the West as early as 1911, when a Chinese plant near Paris was reported to produce soymilk, fermented soymilk, tofu, soy sauce, soy flour, soy bread, soy preserves, etc. (Beltzer 1911). Allergy to cow's milk and lactose intolerance stimulated the development of the first soy-based infant formulas in the U.S. Most of these were made from soy flour and contained the fiber in the soymilk. In 1929 Mead Johnson Co. produced the first soy-based infant formula in America. Called Sobee, it was made from a mixture of full-fat soy and barley flours homogenized with olive oil, had a dark tan color and beany flavor, and contained many complex carbohydrates that led to intestinal gas (flatus) and poor-smelling stools, but in 1929 it was a godsend to infants allergic to cow's milk (Sarett 1976). Also in 1929 Dr. Ernest Tso in Peking published a nutritional study of Sobee, entitled 'A Vegetable Milk Substitute in North China,' in the *American Journal of Physiology.* (At this time Dr. Miller knew both Dr. Tso and Sobee well). The second commercial soymilk in America was developed by Dr. Julius F. Muller. In 1934, while director of allergy research for the Borden Company, he developed a soymilk product for his own child, who was highly allergic to dairy milk. in 1936-37 this liquid milk, made from homogenized soy flour, was introduced by Borden as Mull-Soy. In 1934 Dr. J.H. Kellogg received the first U.S. patent on a method for making acidophilus soymilk; Miller had produced a similar product in China in 1936.

"By 1935 Henry Ford was running a soymilk pilot plant near his main automobile factory in Michigan. By 1936 Loma Linda Foods was making soymilk in southern California. By 1938 Dr. Miller's son, Willis, was making canned soymilk in New York and Washington, DC, and in early 1939 Jethro Kloss had written *Back to Eden* containing many creative soymilk recipes and he may have been producing soymilk at his health food factory near Nashville, Tennessee... all this prior to Dr. Miller's introduction of Soyalac to America in the fall of 1939.

"Although it is clear that Dr. Miller was not the first to do research on soymilk, receive a patent, or produce a commercial product, he still deserves great credit for almost single-handedly popularizing the use of soymilk on a large scale around the world, especially for feeding infants suffering from allergies or malnutrition, for starting the first large scale commercial soy dairy in East Asia and assisting in the foundation of many subsequent ones, and for producing the first major commercial fiber-free soymilk in America, a product that was generally considered to be better tasting and less prone to clog nipples than the various flour-based products, although at least one set of tests showed it to have a significantly lower protein quality as measured by PER (Gyorgy 1962).

"Although Dr. Miller originally intended soymilk for general consumption, it has come to be most widely used in America for feeding babies. Today, the U.S. infant formula market is comprised of 75 percent dairy milk based products and 25 percent soymilk; Soyalac has only five to six percent of the latter market (all competing products are made from soy protein isolates). A full 75 to 80 percent of all Loma Linda's soymilk goes to feed babies." Address: P.O. Box 234, Lafayette, California.

thermophile, *Thermus thermophilus* HB8, which codes for a leucine biosynthetic enzyme, was cloned in *E. coli* using the recombinant plasmid, pBR322 as a vector. Address: Lab. of Biochemical Reactions and Biocatalysts, Mitsubishi-Kasei Inst. of Life Sciences, Minamiooya, Machida, Tokyo 194, Japan.

7264. Ohta, Teruo. 1981. Re: Answers to questions about natto. Letter to William Shurtleff at Soyfoods Center, March 4. 1 p. Handwritten, with signature on letterhead. [Jap]
• ***Summary:*** The six largest prefectures in Japan in terms of annual natto production and per capita expenditure.

(1) Ibaraki prefecture makes 27,000 metric tons/year. In Mito city the annual per capita expenditure on natto is ¥4,789.

(2) Miyagi prefecture makes 18,000 metric tons/year. In Sendai city the per capita expenditure is ¥2,569.

(3) Hokkaido prefecture (island) makes 9,000 metric tons/year. In Sapporo city the per capita expenditure is ¥2,375.

(4) Tokyo city (*Tokyo-to*) makes 4,500 metric tons/year. In Tokyo city the per capita expenditure is ¥1,737.

(5) Tochigi prefecture makes 2,700 metric tons/year. In Utsunomiya city the per capita expenditure is ¥3,028.

(6) Aomori prefecture makes 1,800 metric tons/year. In Aomori city the per capita expenditure is ¥3,894.

1. The character for natto first appeared in the Shin Sarugakuki (1058-68), by Fujiwara Akihira, however this concerned fermented black soybeans not itohiki natto.

4. Natto research was published in 1905 by Dr. Shin Sawamura.

5. The English translation of *kosokin* is *Bacillus subtilis.*

6. The English translation of *eiyo saibo* is "vegetable cell."

7. Dr. Hanzawa Makoto of Hokkaido University was the father of modern Natto production.

9. In *Daizu Shokuhin* Dr. Ohta states that the ratios of ingredients for making natto hishio are (by weight) natto 5, koji 4, and salt 1.

12. Today in Japan, most commercial natto makers use only one strain of natto bacteria, not two. Address: Tsukuba, Japan.

7265. Sheraton, Mimi. 1981. Restaurants: East side steak and side dishes of Japan. *New York Times.* March 20. p. C16.
• ***Summary:*** This is a review of the one-star Japanese restaurant Aikahana (at 1034 Second Ave. in New York City). Recommended dishes include "deep-fried bean curd with special sauce."

Aikahana "offers one of the most complete and interesting listings of the small side dishes that most Japanese restaurants reserve for their Japanese customers and rarely include on the English menus."

The writers favorite small side dishes include "squares of bean curd in ice water [chilled tofu; *hiya yakko*], which made them as firm and delicate as fresh farm cheese; bean curd fried in a fresh brown sauce with shrimp;..."

• ***Summary:*** Linda took these color slides during a trip in 1981 to Yuba Han, an old yuba making company in Kyoto. She got the idea of visiting Yuba Han from *The Book of Tofu,* by Shurtleff & Aoyagi. Photos show:

(1) Top of a traditional caldron (with ladles, dippers and a water source) where soaked, ground soybeans are cooked. (2) Traditional stone weights and wooden lever used to press thick soymilk from okara in pressing sack. (3) From soybeans to yuba.

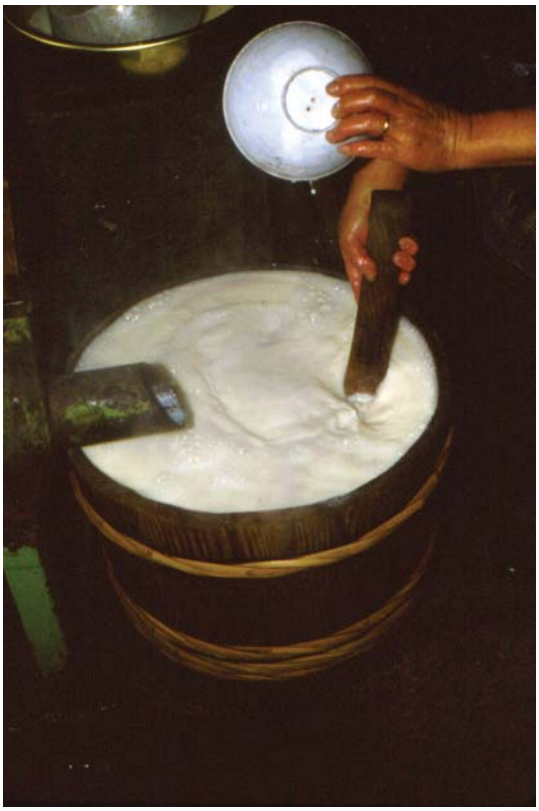
(4) Soymilk cooked in large flat pans. Film forming on top of milk. Film has been lifted off, drained and then rehung on dowels / long round sticks to dry. (5) Craftsman (yuba maker) taking off films of soymilk and preparing to stretch over dowels. (6) Craftsman standing between two double rows of simmering soymilk in steamy room. (7) Craftsman working on far side of two rows of yuba trays. (8) Fresh yuba and drying yuba hanging on dowels over frames in which yuba is forming. (9) Ditto. (10) Yuba hanging on dowels as it dries. (11) Flat pieces of dried yuba in a box, ready to be sold. (12) Fresh yuba used as a wrap around a filling of tofu and vegetables. Address: Resident Director of Practice House and Oral English Instructor, Kobe College, 4-1 Okadayama, Nishinomiya, Japan.

7268. Barber, Linda. 1981. Color slides taken at a small tofu shop in Kyoto where she worked for a month. Kobe, Japan. 1 p. Based on e-mail of 9 May 2012.

• ***Summary:*** Linda took these color slides in early 1981 in Kyoto, Japan, at a small neighborhood tofu shop (whose name she does not remember) where she worked for a month. The shop was owned and operated by a husband and wife under the same roof as their home.

(1) A 60-kg sack of whole soybeans grown in Japan. (2) Soaked and drained whole soybeans in a woven bamboo colander, with dipper, shortly before grinding. (3) Tofu shop utensils: Metal caldron and hand turned screw press for pressing soymilk from okara. (4) Tofu shop utensils: Wooden curding vat (foreground), metal pressing box (rear), and nigari in earthenware vessel on floor. (5) Mixture of simmering soybean puree and water rising in the caldron, ready to be stirred down by bamboo defoamer rod / whisk resting in bowl of defoamer (*awakeshi*). (6) Steaming cooked

© Copyright Soyinfo Center 2014



soy puree being ladled by from caldron into pressing sack. (7) Soymilk pressed from okara in pressing sack runs into wooden curding barrel. A new batch of soybean puree is cooking in the background. Forming cloths line perforated forming box in foreground. (8) Soymilk pressed from okara runs through fine-mesh straining cloth into wooden curding barrel. (9) Wife wrings last of soymilk out of straining cloth into curding barrel. (10) Stirring nigari coagulant into hot soymilk in curding barrel. (11) Ladle of soymilk curds in ladle set in cloth-lined forming box. (12) Curds pressed to make tofu, ready to be cut into cakes. (13) Tofu cut into cakes next to cooling sink. Address: Resident Director of Practice House and Oral English Instructor, Kobe College, 4-1 Okadayama, Nishinomiya, Japan.

7269. Fukushima, D. 1981. Soy proteins for foods centering around soy sauce and tofu. *J. of the American Oil Chemists' Society* 58(3):346-54. March. [41 ref]

• ***Summary:*** Contents: Abstract. Introduction. Soy sauce varieties: Koikuchi, usukuchi, tamari, saishikomi, and shiro shoyu. Soy sauce manufacturing process (for each of the 5 types). Miso. Other fermented products: Tempeh and natto. Tofu and related products: Regular and silken tofu, dried-frozen tofu, deep-fried tofu. Fermented tofu (Sufu). Other soy products: Soy milk, fermented soy milk beverages, yuba.

This paper discusses traditional Oriental soy protein foods which are growing rapidly in popularity in the USA among non-Asian-Americans.

"Generally speaking, soy sauce is divided into two groups: fermented soy sauce and chemical soy sauce. Fermented soy sauce has a long history as a human food, whereas chemical soy sauce has a history of only several decades. In fermented soy sauce, the proteins and carbohydrates contained in the materials are hydrolyzed very slowly under mild conditions below 30ºC for over six months, whereas in chemical soy sauce they are hydrolyzed quickly by hydrochloric acid at 80ºC for 8-10 hours. Chemical hydrolysis is a cheap and rapid process, but during the hydrolysis, various secondary reactions occur and produce undesirable compounds, e.g. dark humins, furfurol, dimethyl sulfide, hydrogen sulfide, levulinic acid and formic acid, which are not present in fermented soy sauce. Furfurol, dimethyl sulfide and hydrogen sulfide, which have strong, bad odors in themselves, are derived from pentose, methionine, and sulfur-containing amino acids respectively. Furthermore, tryptophane, one of the nutritionally important amino acids, is destroyed almost completely. As shown in Figure 1 [two chromatograms], the main organic acid of fermented soy sauce is lactic acid, whereas the main organic acid of chemical soy sauce is formic acid. Levulinic acid, present in chemical soy sauce, does not exist naturally.

"To improve the odors of chemical soy sauce, semichemical soy sauce was devised. It is made by hydrolyzing raw soybeans with a lower concentration of

© Copyright Soyinfo Center 2014

hydrochloric acid (7-8%) as the first step, followed by fermenting the hydrolysate with osmophilic yeasts in the presence of wheat koji." In Japan, chemical soy sauce is not used as a soy sauce in itself, but as an extender for fermented soy sauce.

Table 1 gives the typical chemical composition (per 100 ml) of the five varieties of traditional soy sauce in Japan, including Bé [Baumé; a measure of the relative density of liquids], sodium (koikuchi is lowest at 17.6%, usukuchi is highest at 19.2%), total nitrogen (koikuchi has 1.55 gm, tamari has 2.55 gm or 65% more), formol nitrogen, reducing sugar, alcohol (koikuchi is 2.2%, by far the highest), pH (ranges from 4.6 to 4.8), and color.

A brief description of each of the five traditional varieties: (1) Koikuchi: This "dark-colored" shoyu is by far the most popular of the five types of fermented soy sauce in Japan, comprising 85% of the total. It is an all-purpose seasoning with a strong aroma, complex flavor, and deep, reddish-brown color. These characteristics are mainly derived from the use of equal amounts of wheat and soybeans in the koji; (2) Usukuchi [light-colored] shoyu is characterized by a lighter, red-brownish color and a milder flavor and aroma. It is used mainly for cooking when one wishes to preserve the original flavor and color of the food itself. As in koikuchi, equal amounts of soybeans and wheat are used in the koji, but the fermentation is done under conditions which prevent the development of a dark color. (3) Tamari shoyu has a higher amino acid content, but it lacks aroma. The koji is made primarily from soybeans with little or no wheat. (4) Saishikomi (twice-fermented) shoyu is made using equal amounts of wheat and soybeans in the koji, but using raw (unpasteurized) soy sauce instead of salt solution, which is mixed with the harvested koji. Saishikomi is characterized by aroma and full-bodied taste. (5) Shiro (clear, or "white") shoyu is made by using a very high ratio of wheat to soybeans in the koji, and further by fermentation under conditions which prevent dark color development. It is characterized by a very light yellow to tan color, though the amino acid content is very low because of the low soybean content in the koji. Flow sheets (Figures 2-5) show the process for manufacturing koikuchi, usukuchi, and tamari shoyu. Each has three basic parts: Koji making process, brine fermentation process, and refining process.

Concerning soy sauce production and consumption: The total annual production of soy sauce in Japan in 1979 reported by the Japanese Agricultural Standard (JAS) was 1,252,431 kiloliters (kl). In 1979 in Japan, about 70% of the soy sauce products in Japan were purely fermented, 25% contained some semichemical soy sauce, and the remaining 5% contained chemical (HVP) soy sauce. The most recent estimates of annual consumption of soy sauce in the USA are as follows: Fermented soy sauce 17,850 kl; Chemical (HVP) soy sauce 25,500 kl. Within fermented soy sauce, production of koikuchi soy sauce is estimated to be 16,500 kl/year.

In Japan an "instant tofu powder" is actually a spray-dried soy milk. This product was made and introduced by *Nihon Tanpaku Kogyo* (Japan Protein Industry) about 15 years ago (ca. 1966) and was used mainly as a raw material for making regular or silken tofu in order to save time. "Recently, however [1973], the product was placed on the market as an instant powdered tofu [named *Hausu Hontôfu*] by Hausu [House] Foods Co."

Other figures show: (5) Manufacturing process of rice miso. (6) Manufacturing processes of soy milk used for making tofu, regular tofu, and silken tofu. (7) Manufacturing process of freeze-dried tofu (kori-tofu). (8) Manufacturing process of fermented soy milk beverage. *Lactobacillus casei, L. acidophilus,* and *L. bulgaricus* are usually used as starters. One such product recently appeared on the market in Japan.

7270. Hymowitz, T.; Kaizuma, Norihiko. 1981. Soybean seed protein electrophoresis profiles from 15 Asian countries or regions: Hypotheses on paths of dissemination of soybeans from China. *Economic Botany* 35(1):10-23. March. [30 ref]

• ***Summary:*** This is a remarkable, pioneering paper that presents new evidence, based on seed protein electrophoresis, concerning the paths of dissemination of the soybean from its place of origin in northeast China.

Soybean seed protein extracts from 1,603 accessions obtained from 15 Asian countries or regions (not including Japan) were analyzed for the presence of alleles of 2 proteins. The countries were: Northeast China [Manchuria] (661 accessions), Korea (417), India (219), south and central China (142), Thailand (34), Indonesia (33), Philippines (20), Taiwan (18) USSR (16), Nepal (14), Malaysia (13), Vietnam (5), Afghanistan (5), Pakistan (4), and Burma (2). Three alleles of the Kunitz trypsin inhibitor, designated as Ti-a, Ti-b, and Ti-c, are electrophoretically distinguishable from one another by their Rf values. The seed protein beta-amylase has 2 alleles, designated as Sp1-a and Sp1-b, which are electrophoretically distinguishable from one another by their Rf values.

About 94% of all accessions had a Ti-a allele. "Only the Korean and Central Indian soybean populations have a high frequency for the Ti-b allele. Within Korea, the soybeans from those districts that lie closes to Korea have a high frequency for the Ti-b allele whereas the soybeans from those districts that lie closest to China have a low frequency for the Ti-b allele. The Ti-b allele is not present in soybeans from the Philippines, Vietnam, Thailand, Malaysia, Burma, Nepal, Pakistan, and Afghanistan. Only 1 accession each from Taiwan and Indonesia have the Ti-b allele.

"The Sp1-a allele is not present in soybeans from Taiwan, Vietnam, Thailand, Malaysia, Indonesia, Burma, Pakistan, and Afghanistan. The highest frequency of the

© Copyright Soyinfo Center 2014

Sp1-a allele occurs in soybean germ plasm from northern India and Nepal.

Soybean germ plasm pools: "At present we recognize 7 soybean [germ plasm] pools (SGP) in Asia which are as follows: (1) northeast China and the USSR; (2) central and south China; (3) Korea; (4) Japan; (5) Taiwan and southeast Asia; (6) north India and Nepal; and (7) central India. The eastern half of north China, where the soybean emerged as a domesticate around the 11th century B.C. is considered the most probable center for dissemination of germ plasm...

"The soybeans from Asia (including Japan) were divided into 3 gene centers... The primary soybean germ plasm pool, or in Vavilov's terminology the primary gene center, is China... From the first century A.D. to the Age of Discovery, soybeans were introduced and land races were established in Japan, southeast Asia and southcentral Asia. These regions comprise the secondary gene center for soybeans... Japan should be considered a very active microcenter and northern India a passive microcenter within the secondary gene center.

"Central India may be considered a recent or tertiary soybean gene center. Another tertiary soybean gene center lies within the U.S., while incipient tertiary centers are being established in South America and Europe. The concept of primary, secondary and tertiary gene centers unifies time and space relationships with regard to the establishment of new genetic combinations within the species *Glycine max.* Another feature of this concept is that it establishes the foundation upon which future soybean germ plasm collection activities can be built."

Maps show: (Fig. 2) Korean peninsula divided into 9 districts showing geographical distribution of the Ti and Sp1 alleles. (Fig. 3) India, with 5 states outlined, showing geographical distribution of the Ti and Sp1 alleles. One of these states is Assam, which includes the Brahmaputra valley; soybeans analyzed from Assam contain no Ti or Sp1 alleles.

Paths of dissemination: Fig. 4 is a map on which an oval shows the primary gene center of the soybean in China (in the region about 200 miles southeast of Beijing, in the moist, low plain near the mouth of the Yellow River (*Huang Ho*), largely in Hopei and Shantung provinces) and on which arrows show the paths of dissemination of the soybean from China to Korea, Japan, Taiwan, Malaysia, Indonesia, and northern India. "By combining seed protein banding data with available historical, agronomic and biogeographical literature, we have developed an hypothesis concerning the dissemination of the soybean from China to other countries or regions in Asia. Our ideas are based partly upon the pioneering studies of Nagata (1960) who primarily used physiological and morphological data to point out possible paths of dissemination of the soybean from China to the rest of the world.

"In developing our hypothesis, we identified 2 major restraints concerning the movement of the soybean. One restraint is physiological and the other historical. Due to the fact that soybeans are day-length sensitive, they spread much easier between east and west than between north and south. Hence, in the dissemination process quantum latitudinal movement of soybeans was rare. Secondly, according to Ho (1975) the movement of the soybean out of its home area did not take place until the seventh century B.C. Therefore, the trial and error period for the adaptation, establishment and dissemination of the soybean from region to region within China, after the seventh century B.C., proceeded at a very rapid rate. As part of the dissemination process, the soybean was moved back and forth across geographical areas as a consequence of wars, famine, emigration, immigration, and trade.

"The suggested paths of dissemination of the soybean from the eastern half of north China to other regions in Asia are shown in Figure 4 and summarized below:

"1. The soybeans grown in the U.S.S.R. (Asia) came from northeast China.

"2. The soybeans grown in Korea are derived from 2 or 3 possible sources–northeast China, north China and the introduction of soybeans from Japan especially in the southern part of Korea.

"3. The soybeans grown in Japan were derived from the intermingling of 2 possible sources of germ plasm–Korea and central China. Most probably the first points of contact were in Kyushu and then the soybean slowly moved northward to Hokkaido. In addition the soybean moved southward from Kyushu to the Ryukyu Islands where they came in contact with the soybeans moving northward from Taiwan.

"4. The soybeans originally grown in Taiwan came from coastal China.

"5. The germ plasm source for the soybeans grown in southeast Asia is central and south China.

"6. The soybeans grown in the northern half of the Indo-Pakistan subcontinent came from central China.

"7. The soybeans grown in central India were introduced from Japan, south China and southeast Asia." Address: 1. Prof. of Plant Genetics, Dep. of Agronomy, Univ. of Illinois; 2. Assoc. Prof., Faculty of Agriculture, Iwate Univ., Morioka, Iwate, Japan.

7280. Webber, Alfred B. 1981. Perry Webber, Madison College, and Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, April 3. 2 p. transcript.
• ***Summary:*** Alfred is a son of Perry Webber. Perry's first interest in soyfoods started in Japan, during his first stay there in 1912. He loved Japanese food, and he ate lots of it, but he especially liked Inari-zushi, which contained aburage [deep-fried tofu pouches]. He used to go to the Shinoda sushi-ya, a sushi shop in Kanda (now Awajicho)–stopping in on his way to language school. At one time they named a type of sushi type after him, calling it the "Webber Sushi. He was used in some of their promotional material. Perry was also very fond of tofu and of miso soup, but he got interested in soyfoods via aburage. The thought is was a delicious form of protein, not known or used in U.S.

2. Perry met Dr. Harry Miller in about 1936 when Miller was a missionary in China; a number of meetings were held in Shanghai. Alfred was attending the SDA Far Eastern Academy in Shanghai, when his dad came from Japan to China. The main reason for Perry's trip was for him to set up a research lab for analyzing soymilk products in Dr. Miller's soymilk plant in Shanghai. Perry was biochemist and had graduated with a PhD.

Not much soy used in the early days of Saniku Foods. In 1935 Saniku started using soy, he thinks. But mostly they used puffed rice and wheat, and nutmeat.

Madison Foods had difficulty processing soy flour to make into milk, before it was made into tofu. They ordered a mill from Japan for this and began grinding whole soaked soybeans to make tofu. Perry liked plain tofu and wanted to sell it like this in the U.S., but at Madison they wanted to season it to make "Soy Cheese" [seasoned tofu]. Perry helped to develop Vigorost (which Alfred loved) and Yum.

Alfred thinks production of soymilk at Madison was started in 1935-37, when Perry had returned to Japan. During those years it really became a commercial product. When Perry returned to Madison in 1939-40, Madison was already well into production. So Alfred does not know to what extent Perry helped to develop it.

Another person who knows details is Sam Yoshimura, a student of Perry's in Japan. He is the best man to talk to about production of soyfoods in the U.S. He was a great friend of Perry's, and he developed new food products.

Perry was treasurer of the American Soybean Association (ASA) in about 1933 or 34. He may have been secretary too. Alfred went with Perry to the ASA convention at Baton Rouge, Louisiana, where Perry gave a slide show and lecture on soybeans and soyfoods in the Orient. Alfred also went with Perry to the research labs at Ford Motor Co. and talked with Edsel Ruddiman; they did not meet Henry Ford, however Perry gave a talk to leading Ford research scientists.

Perry was a great friend of Dr. John Harvey Kellogg. He did research work for the Kellogg Food Co. He visited Dr. Kellogg and talked about soyfoods. He also developed preservatives for crackers for the Sanitarium Food Co.

Alfred suggests I talk with Ed Bisalski, who is now in Arkansas. Address: M.D., 24424 Univ. Ave., No. 122, Loma Linda, California 92354.

placed on enhancing rather than eclipsing the natural flavors of the food–and as with most things Japanese, those flavors generally are subtle."

At Shirakawago, a restaurant in Shinjuku, Tokyo, you dine in an ancient wooden farmhouse built in the Gassho (praying hands) architectural style. Brought from the Japan Alps in 1958, it transports you back to the Edo period.

Zakuro, a restaurant in Asakusa, you can enjoy Tokyo's most delicious *shabu-shabu* (beef and fresh vegetables). The latter "vary with the season, but mushrooms, soy bean curd [tofu], bamboo shoots, spinach, green onions and chrysanthemum leaves are usually included." All are cooked in a pot at the table and served with a number of sauces.

At Nabeya you can enjoy paper-thin slices of *fugu* (blowfish) "dipped in a piquant sauce (soy and shredded ginger)" an eaten like any other sashimi–except that *fugu,* if not properly prepared, can be poisonous.

Gakkô kyûshoku deno nattô juyô fueru, Karushiumu Nattô no shûhen ["Healthy Nattô" with calcium added is on the market, made by Tokusan-sha (KK): It has a good reputation with a regular distribution too. School lunch program usage approved calcium (natto) "Kalner." The demand for natto increased school lunches because of calcium nattô]. April 21. p. 16. [Jap]

• ***Summary:*** A photo shows the front of four new natto (with calcium added) packages.

7283. Aumayr, Andrea; Hara, Toshio; Ueda, Seinosuke. 1981. Transformation of *Bacillus subtilis* in polyglutamate production by deoxyribonucleic acid from *B. natto. J. of General and Applied Microbiology* (*Tokyo*) 27(2):115-23. April. [21 ref]

• ***Summary:*** A specific regulator gene (or genes) is reported to be involved in PGA production of *Bacillus natto.* The gene could be transferred from *Bacillus natto* Asahikawa to *Bacillus subtilis* Marburg 168 by the DNA-mediated transformation.

Note: This is the earliest document seen (Jan. 2012) that mentions the Asahikawa strain of *Bacillus subtilis* (*natto*). Address: 1. Dep. of Food Science and Technology, Faculty of Agriculture, Kyushu Univ., Hakozaki, Fukuoka 812, Japan.

7284. Belleme, John. 1981. The miso-master's apprentice. *East West Journal.* April. p. 51-54.

• ***Summary:*** Describes how John and Jan Belleme learned to make miso at the Onozaki household in Japan. They were located in an old Japanese farming village 10 miles north of Yaita city [Tochigi prefecture]. They plan to set up a miso-making operation in Rutherfordton, North Carolina. The Onozaki family started making fermented foods on a large scale 200 years ago, at first saké, and later koji (fermented rice). Now the family makes about 120 tons of natural miso each year. Mr. Takamichi Onozaki is the miso master. The process for making the miso is described in detail. Based on a 6½-day weekly cycle, it begins when 1,500 pounds of rice is milled, washed, and soaked overnight. All of the koji is handmade. Onozaki miso is now sold in America at natural food stores or can be purchased in 11-pound boxes from Oak Feed Stores (3030 Grand Avenue, Coconut Grove, Florida 33133).

Photos show: (1) A wedding portrait of the Onozakis in traditional Shinto robes taken 25 years ago. (2) Mrs. Itsuko Onozaki, the miso master's wife, today. (3) The Onozaki's thatch-roofed home, seen from the back hillside. (4) Traditional living room with *kotatsu*s (heated tables). (5) Jan chats with Onozaki grandmother, age 78. (6) Mrs. Onozaki and a neighbor wash rice for miso. (7) Koji is transferred from a huge wooden fermentation crib into wooden trays. (8) Jan, Mrs. Onozaki, and a cousin pour hot soybeans into a grinder; they will be extruded to a paste, then blended with koji. (9) John Belleme washes soybeans in a huge pressure cooker. (10) In front of gigantic cedar vats, Mr. Onozaki and John scrape mature koji from koji trays in preparation for making miso. (11) Seated around the *kotatsu,* Onozaki grandmother reads from the family scroll while John listens. John and Jan Belleme. The miso-making process in Japan.

7288. *Soybean Digest.* 1981. 25 years in Japan. Largest soybean customer. April. p. 48.
• ***Summary:*** In 1956, 25 years ago, when U.S. soybeans producers began market development efforts in Japan, imports to that country totaled only 717,000 tonnes (metric tons) valued at only $5.5 million. The standard cooking oil was rapeseed. Today, Japan is the largest consumer of soybeans as human food, Soybean meal in livestock feeds has increased to over 2.4 million tonnes and soy oil commands a 47% share of the total Japanese vegetable oil market. A photo shows Yoshiko Kojima, American Soybean Assoc. nutrition specialist in Japan, who helped started the first ASA program in Japan 25 years ago.

In 1980 Japan imported 4.4 million tones of soybeans. Some 97% (4.3 million tonnes) originated in the USA. Value: Over $1 billion. Last year the Japanese soybean industry invested $3.55 in market promotion activities for every $1 invested by U.S. farmers and government.

7289. *Toyo Shinpo* (*Soyfoods News*). 1981. Tônyû shijô no ?? [Soymilk market in Japan]. May 11. p. 3. [Jap]
• ***Summary:*** Mr. Machida estimates that the amount of soymilk produced in Japan was 4,000 tonnes (metric tons) in 1978, 8,000 tonnes in 1979, and 10,000 tonnes in 1980, worth 300 million yen (US$13 million). The retail price for 200 ml averages 60 yen. Much effort is being put into promoting the slogan "Drink the healthful alkaline beverage" on TV. In March of this year, Meiji Nyugyo started making SunGlow Soymilk.

7290. *Hawaii Herald.* 1981. Honolulu sake: Bending with the winds of change. May 15. p. 6-7.
• ***Summary:*** A history of the Honolulu Sake Brewery and Ice Co., which was started in about 1908 and is still in business. Originally called the Honolulu Japanese Sake Brewing Co. Ltd., it is said to be the first sake brewery in the Western world. Numerous trials (such as Prohibition and Hawaii's warm climate) marked its history, but continual innovation led to survival. When World War II started a law prohibiting the use of rice in making sake was enforced. So the company switched to making shoyu. Under the label of Marumasa Soy sauce and later Diamond Shoyu, the locally made products soon became popular in Hawaii. It was another innovation that kept the company alive. Owners include Tajiro, Daizo, and Shinzaburo Sumida. Photos show the plant in 1912 and the delivery trucks in 1919. Address: Hawaii.

7291. Bisalski, Ed. 1981. Madison Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, May 30. 2 p. transcript.
• ***Summary:*** Edwin M. Bisalski, along with Perry A. Webber and Frances L. Dittes, was one of Madison's soyfoods pioneers. Ed was born in 1903 in Pennsylvania. He arrived at Madison in 1931 as a college student, then in Sept. 1933 he went to work with Madison Foods, eventually being made General Manager and Chairman of the Board, a post he held until March 1945. During this time he did an outstanding job building up the small food company, introducing soyfoods to America and to other Adventist Groups, getting endowments, enlarging the plant, and directing soyfoods research and development efforts. In 1935, Bisalski spoke about soyfoods and Madison at the American Soybean Association's annual convention / meeting at Evansville, Indiana. In 1939 U.D. Register and Shiro Kunihara joined Madison Foods' R&D staff and made key contributions at this critical stage.

In 1941, under his direction, a major expansion of Madison Foods took place. A practically new plant, with one section five stories high, was constructed. The work was completed in Oct. 1942 at a cost of $35,000. By late 1942 Madison was distributing its foods to the 48 states and to some countries overseas. In 1945 Bisalski left the food company to finish his education. Shortly thereafter, also because of the end of World War II, sales began to fall, so it was never necessary to use the new plant to capacity. During the 1950s sales continued to drop sharply; during that decade, Madison foods just managed to break even.

In 1946 Ed received his BS degree in nutrition from Madison then did graduate study in nutrition and education at Peabody College and Michigan State University. In 1948 he returned to Madison Foods this time as sales manager, a position he held until leaving in 1951 to continue private work in the area of healthful foods. He later became a science teacher, retired in 1971, and in 1981 (at age 78) was writing a book on nutrition. Address: 3123 E. Miller Rd., Bancroft, Michigan 48414. Phone: 517-634-5203.

7292. **Product Name:** [Asashoku Soymilk (Dairylike, Coffee, or Orange)].
Foreign Name: Asashoku (Soimiruku, Koohii, Orenji).
Manufacturer's Name: Asahi Shokuhin.
Manufacturer's Address: San Shain 60 40F, 3-1-1,

© Copyright Soyinfo Center 2014

Higashi-Ikebukuro, Toshima-ku, Tokyo 170, Japan.
Date of Introduction: 1981 May.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Products with Labels (Tetra Brik cartons), purchased in Tokyo in June 1983. 200 ml. Each carton has an illustration of a lion on 3 panels. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk*. 2nd ed.]. p. 73. States that these 3 flavors, in 200 ml Tetra Brik cartons, were introduced in May 1981, and distributed to most of central Japan.

7293. Fillip, Janice. 1981. The amazing tofumobile. *East West Journal*. May. p. 38-40.
• ***Summary:*** Marc Horwitz has developed and runs a bicycle-powered vehicle for delivering tofu from Wildwood Natural Foods in downtown Fairfax to local natural foods stores. A state champion bike racer and avid cyclist. Marc takes about two and a half hours to service his route in Marin County. Paul Duchesne (whose photo is shown) recalls that an article in *East West Journal* that mentioned a book on tofu production (*Tofu & Soymilk Production* by Shurtleff & Aoyagi) inspired the founding of the business. Wildwood presently produces about 240 lb/day of tofu. Horwitz "envisions a time when the neighborhood tofu route joins the neighborhood paper route as a revenue source for local kids. The dream of a tofumobile network may be realized in the near future. Paul Orbuch and Marc Horwitz are discussing the logistics of combining automobiles and tofumobiles to deliver Wildwood products to Berkeley, a community 25 miles across san Francisco Bay from Fairfax."

Note: Talk with Paul Duchesne. 1989. Aug. 26. This vehicle was Paul's idea, inspired by the bicycle driven by Japanese tofu makers. Paul and Marc developed the actual vehicle together. Address: California.

7294. Hesseltine, C.W. 1981. Future of fermented foods. *Process Biochemistry* 16(3):2-6, 13. April/May. [11 ref]
• ***Summary:*** Discusses shoyu, miso, natto, and tempeh in Korea, the USA, and Japan. There are nine factors that favor the increased use of fermented foods. Address: NRRC, Peoria, Illinois.

7297. San-Jirushi International, Inc. 1981. This old timer solves some modern processing problems (Ad). *Food Processing* (*Chicago*) 42(5):126. May.
• ***Summary:*** "Who would believe a 1200-year-old natural

© Copyright Soyinfo Center 2014

seasoning could prove effective for: (1) enhancing and retaining natural flavors in frozen and canned foods and snacks, and (2) reducing sodium in processed foods without leaving them dull and bland."

"San-J Tamari is brewed from whole soybeans only, in a traditional process that dates from the 7th century.

"By laboratory analysis, San- Tamari contains 30% more organic protein than any popular soy sauce sold in the U.S. This protein, in the form of 18 amino acids, enables San-J Tamari to effectively replace salt as an all-purpose, reduced-sodium seasoning."

A large vertical photo shows a 61 fl. oz. plastic bottle of SanJ Tamari. Address: 3235 Boulevard, Colonial Heights, Virginia 23834. Phone: (804) 520-1513.

7298. Sano, Rinji. 1981. Minami no tôfu, kita no tôfu: Tôfu kasutera no kokyô [Southern tofu, northern tofu: The birthplace of tofu kasutera]. *Daizu Geppo* (*Soybean Monthly News*). May. p. 36-40. [Jap]
• ***Summary:*** The Japanese word *kasutera* comes from the Portuguese *castella* meaning a spongecake. It is probably named after the kingdom of Castile, which is now in Spain. Japanese kasutera is a damp, rich, sweet spongecake with a light, delicate texture. It is made from flour, eggs, malt syrup, and a mixture of finely granulated large-crystal sugar.

In Yokote city, Akita prefecture, scraps of tofu are sometimes added to the ingredients when making this delicious and popular spongecake; it is served with tea.

7299. Sugiyama, Mieko; Griffis, Gil. 1981. Japan–Soybean market extraordinary. *Soyworld* (*American Soybean Association, St. Louis, Missouri*) 3(2):1, 4-5. Spring.
• ***Summary:*** A concise overview.

7300. Wang, Hwa L. 1981. Oriental soybean foods: Simple techniques produce many varieties. *Food Development* 15(5):29-34. May.
• ***Summary:*** Methods of preparation are given for the following soyfoods: Tofu, soy sauce, miso, hamanatto, sufu, tempeh, natto. A table gives local names, descriptions, and uses for traditional East-Asian non-fermented soyfoods: "Fresh green soybeans (mao-tou, edamame)," soybean sprouts (huang-tou-ya, daizu no moyashi), soybean milk (tou-chiang), protein-lipid film (tou-fu-pi, yuba), soybean curd (tofu, tou-fu, tubu, tahoo, touhu, taufoo, dou-fu, dan-fu), and soybean flour (tou-fen, kinako). Local names, organisms used, substrate, and description of the product are given for traditional East-Asian fermented soyfoods: soy sauce, miso, hamanatto, sufu, tempeh, and natto.

Note: This is the earliest English-language document seen (April 2013) that uses the word "taufoo" to refer to Chinese-style tofu. Address: NRRC, Peoria, Illinois.

7301. Hale, William C. 1981. Re: Etymology of the terms soy and soya. Letter to William Shurtleff at Soyfoods Center, June 2. 1 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** "English borrowed the words *soy* and *soya* from the Dutch around the end of the seventeenth century. The Dutch, as merchants, had direct contact with the Japanese at this time, which is why we borrowed our words from their word *soja.* The Dutch word is probably from Japanese *shôyu,* soy. It is really impossible to tell at this point what is the relationship between Japanese *shôyu* and Chinese (Pekingese, Pinyin transcription) *jiànyóu.* Some of our sources indicate that the compound *shôyu* was formed in Japanese first and that the Chinese formed their own compound (in characters) on the model of the Japanese." Address: Etymologist, G.&C. Merriam Co., 47 Federal Street, Springfield, Massachusetts 01101. Phone: 413-734-3134.

7302. Phillips, Kathryn. 1981. It's tough to be a tofu tycoon but Stein finally is on his way. *San Diego Union.* June 8. p. B-2.
• ***Summary:*** "Will soybean curd become a household word? Gary Stein, age 32, is father of San Diego's first full-scale tofu factory... About 3 years ago, Stein, a vegetarian who has been eating tofu since 1971, decided to get serious about a hazy dream he had of someday opening a tofu shop. He became an apprentice of sorts to Haruki and Mitchiko Koba at Oriental Groceries in downtown San Diego. The Kobas make about 90 lb of tofu each day for a few restaurants and regular customers. After about 13 months, Stein was ready to strike out on his own. The problem was money. Digging up financing for the novel business took some creative thinking. He received about $2,000 through a weekly newspaper advertisement promising readers that for a $100 investment, they would receive 1 lb of tofu a week until the investment was returned. Other money to start the business came in from relatives, friends and, in some cases, strangers who had heard about Stein's plans."

"He signed a lease on an abandoned service station next to a health-food restaurant at Fifth and Quince... Problems with the boiler and in getting certain equipment from Japan delayed the expected January opening about 5 more months. The factory is now turning out about 130 lb of tofu each day, and he and partner Sean Meloy hope to be making 300 lb daily in a few months to sell to local restaurants and markets." Stein is a tall, slender man who meditates 2½ hours each day and studies Taoism. Address: San Diego, California.

7303. Iino, Catherine. 1981. Sushi: When the urge hits, yield, then deal with the leftovers later. *Washington Post.* June 11. p. E1, E22.
• ***Summary:*** When her brother came to visit and wanted Chinese food for dinner, she "steamed the fish [rockfish] with black bean sauce." This article includes a recipe for

© Copyright Soyinfo Center 2014

"Steamed bass with Chinese black bean sauce," whose ingredients include "1 tablespoon preserved black beans (available in Oriental groceries)." Then: "Press the black beans with one side of a cleaver to crush," then saute the beans and garlic in sesame oil to release their flavors. Spread this mixture over the fish, then sprinkle on ginger.

Note: This is the earliest document seen (Sept. 2008) in all major U.S. newspapers digitized by ProQuest that uses the term "preserved black beans" to refer to fermented black soybeans. The new term appears in only 3 documents, in 1981, 1989, and 1999.

7306. *Daizu Geppo* (*Soybean Monthly News*). 1981. Saikin no tônyû shijô o kataru [Discussion of Japan's soymilk market today]. June. p. 4-23. [Jap]
• ***Summary:*** On May 22 industry leaders from various companies met to discuss the market. The industry is only about 10 years old. In 1980 the value of soymilk was estimated to be about 3,000 million yen, and in 1981 it was 5,000 million yen. About 3,000 tons of soybeans are used to produce soymilk compared with 450,000 tons for tofu. Soymilk and cow's milk complement one another as products, rather than competing. One is animal and the other is vegetable. Kids need more animal protein and adults need more vegetable protein. Soymilk gives stamina whereas dairy milk gives growth. The price of soymilk is a little higher than that of dairy milk. About 10% of Japanese are allergic to dairy milk. Kibun makes soymilk potage (thick and creamy soup) and also ice cream. Drinking a 50:50 mixture of soymilk and dairy milk gives a better flavor and complementary nutrition. At any department of the Kibun company they answer the phone by saying "Tonyu no Kibun" (Kibun, the soymilk company).

7307. *Daizu Geppo* (*Soybean Monthly News*). 1981. Tônyû-rui no Nihon Nôrin Kakaku (JAS) ni tsuite [Japan's JAS standards for soymilk]. June. p. 24. [Jap]
• ***Summary:*** This is the earliest document seen (Sept. 2000) concerning soymilk standards or a standard of identity for soymilk.

7308. **Product Name:** [Kibun Soymilk Ice Cream].
Manufacturer's Name: Kibun.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1981 June.
How Stored: Frozen.
New Product–Documentation: Shurtleff & Aoyagi. 1985. Tofutti & Other Soy Ice Creams. p. 94. "Japan's first modern soymilk ice cream was made by Kibun no later than June 1981." Soya Bluebook. 1987. p. 92. Address: Shinbashi 3-2-5, Minato-ku, Tokyo 105.

7309. **Product Name:** [Midori Soymilk (Plain, Soft, with Barley Malt Syrup, or Fermented)].
Foreign Name: Midori Tônyû (Sutoreeto, Sofuto, Bakuga, Hakko).
Manufacturer's Name: Kyushu Nyugyo.
Manufacturer's Address: Kyushu, Japan.
Date of Introduction: 1981 June.
Wt/Vol., Packaging, Price: 200 ml aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. Note: Midori means "green" in Japanese.

7310. **Product Name:** [Soyalac Healthy Child {Soymilk}].
Foreign Name: Soiyarakku Genki na Ko.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1981 June.
Wt/Vol., Packaging, Price: 425 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Genki no Ko was introduced in June 1981 in a 425 gm can and distributed nationwide.

7311. Shurtleff, William; Aoyagi, Akiko. 1981. Survey of tofu production in the United States. Lafayette, California. 1 p. June. Unpublished manuscript.
• ***Summary:*** This is a handwritten (in pencil) table with 8 columns: (1) Shop name. (2) Type of shop. (3) Date interviewed. (4) Lbs of [whole] dry soybeans per week. (5) Lbs of tofu per week. (6) Size of building (square feet). (7) Sales ($). (8) Notes.

© Copyright Soyinfo Center 2014

The survey began in April 1977 and continued to Jan. 1981. Only key information in each row will be included below.

The Soy Plant [Ann Arbor, Michigan]. March 1979. 2,000 lb/week of tofu. Jan. 1981. 5,600 lb/week of tofu.

Rochester Tofu [New York]. Jan. 1978. 1,000 lb/week of tofu.

Surata Soyfoods [Eugene, Oregon]. June 1978. 900 lb/week of tofu.

Island Spring [Vashon, Washington state]. June 1978. 5,500 lb/week of tofu. Jan. 1981. 2,300 lb/week of tofu.

Lecanto Tofu [Lecanto, Florida]. April 1978. 600 lb/week of tofu.

The Farm [Soy Dairy, Summertown, Tennessee]. June 1977. 1,125 lb/week of tofu.

New England Soy Dairy [Greenfield, Massachusetts]. March 1979. 4,050 lb/week of dry soybeans and 22,500 lb/week of tofu. Nov. 1978. 8,250 lb/week of tofu.

Swan Foods [Swan Gardens; Montana or Florida]. Confidential.

Ota Tofu Co. [Portland, Oregon]. April 1977. 4,165 lb/week of tofu.

Quong Hop & Co. [South San Francisco, California]. 10,000 lb/week of dry soybeans and 32,000 lb/week of tofu.

Azumaya [South San Francisco, California]. March 1979. 18,000 lb/week of dry soybeans. Building is 40,000 square feet. They are building a new, larger tofu factory.

Matsuda-Hinode [Los Angeles, California]. 27,000 lb/week of dry soybeans.

Northern Soy [Rochester, New York]. Aug. 1980. 2,000 lb/week of dry soybeans.

White Wave [Boulder, Colorado]. $450,000 sales in 1980. Jan. 1981. 5,833 lb/week of tofu.

Joy of Soy [Minneapolis, Minnesota]. June 1981. 4,000 lb/week of tofu. Traditional Tofu [Oakland, California]. June 1981. 15,000 lb/week of tofu.

Sunshine Soy Co. [Danny Paolucci, Coral Gables, Florida]. June 1981. 3,750 lb/week of tofu.

Panda Food Products [Woodhaven, New York]. June 1981. 14,000 lb/week of tofu (sold in bulk).

Nasoya Foods [Leominster, Massachusetts]. Jan. 1981. 11,700 lb/week of tofu.

Note: In 1979 the U.S. tofu industry used about 7,000 tons/year of dry soybeans. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

7312. Sugimoto, Hiroshi; Nishio, M.; Horiuchi, T.; Fukushima, D. 1981. Improvement of organoleptic quality of fermented soybean beverage by additions of propylene glycol alginate and calcium lactate. *J. of Food Processing and Preservation* 5(2):83-93. June. [10 ref]

• ***Summary:*** A fermented soybean beverage having a low viscosity and protein content (with 5.5% acidity {w/v} as lactic acid) was prepared by lactic acid fermentation of soymilk with *Lactobacillus casei.*

During the fermentation, an undesirable off-flavor that developed could be significantly reduced by the addition of propylene glycol alginate (PGA). A powdery-gritty sensation could be masked by addition of calcium lactate with the PGA. Address: Central Research Labs., Kikkoman Corp., 399 Noda, Noda-shi, Chiba-ken 278, Japan.

7313. Watanabe, Hidekazu. 1981. Re: Early work by San-iku Foods in Japan with tofu and soymilk. Letter to William Shurtleff at Soyfoods Center, July 19. 2 p. Handwritten. [Jap]

• ***Summary:*** Discusses the early history of this product. "The Ueda Tofu Shop in Hachioji helped with the development of our first soymilk in 1957; I was there at the time. In those days our name was *San-iku Gakuin Shokuhin-bu,* not San-iku Foods. The purpose was to provide a place of labor for the students and opportunities to learn food processing. It was not a business. Dr. Perry Webber was the principal of our school at the time. I think that our company did not make commercial soymilk before 1957. The food company is said to have been founded in 1928 in connection with the school, but legally it did not become an independent company until December 1970."

Note: In 1969 the food company, named College Health Foods (later renamed San-iku Foods), introduced Soyalac soymilk. Address: San-iku Foods, Sodegaura-machi, Chiba-ken 299-02, Japan.

7314. *Toyo Shinpo* (*Soyfoods News*). 1981. [Japanese soymilk companies and their products]. July 21. p. 25. [Jap]

• ***Summary:*** A large and very interesting table shows that 14 companies are now selling soymilk in Japan, and 7 companies are making it. For each company is given: Soymilk product name in Japanese [and English]. Volume (all are 200 ml). Retail price in yen: Either 70 or 80 yen. Package type (all are Tetra Brik Aseptic; each has a straw attached to the back). Shelf life: All are 60 days.

The manufacturers are: (1) Kibun Foods: Plain Soymilk (Tonyu Sutoreeto [Straight]). Vegetable Soymilk (Tonyu Yasai). Fruit Soymilk (Tonyu Kaju). Barley Malt Soymilk (Tonyu Bakuga).

(2) Okazaki Marusan: Marusan Soymilk (Marusan Tonyu). Marusan Orange (Marusan Orenji). Marusan Barley Malt (Marusan Bakuga).

(3) Mitsubishi Kasei: Maburon. Maburon Orange (Maburon Orenji). Maburon Coffee (Maburon Koohii). Maburon Honey (Maburon Hachimitsu).

(4) Meiji Nyugyo: Sunglow Soymilk (Sanguroo Tonyu).

(5) Midori Shokuhin. Midori Soymilk Plain (Midori Tonyu Sutoreeto). Midori Soymilk Soft (Midori Tonyu Sofuto).

(6) Asahi Shokuhin: Soymilk (Soimiruku). Soymilk Orange (Soimiruku Orenji). Soymilk Coffee (Soimiruku Koohii).

© Copyright Soyinfo Center 2014

(7) Saniku Foods: Soya Neo Cocoa (Soia Neo Kokoa).

Note: A large black-and-white photo in this issue or a nearby issue this year shows 25 different soymilk packages, including 3 Soyalac cans.

7315. Bader, Kenneth. 1981. Re: History of the American Soybean Association. Letter to William Shurtleff at Soyfoods Center, July 25–in reply to inquiry. 1 p. Handwritten, without signature.

• ***Summary:*** Dr. Bader and staff answered six questions: (1) In what years were each of the ASA overseas offices opened? Tokyo, Japan 1956. Hamburg, Germany 1969, and again in 1969. Taipei, Taiwan 1970. Brussels, Belgium 1970. Mexico City, Mexico 1971. Vienna, Austria 1974. Madrid, Spain 1976. Seoul, Korea 1979. Singapore 1979.

(2) What is the present size of the ASA overseas staff? 50. St. Louis staff? 110. Total American staff? 134.

(3) What was ASA membership in 1955? 5,400. In 1960? 5,900. In 1970? 12,368. What is present ASA membership? 20,028.

(3) How many soybean growers does the ASA represent in the 24 states having checkoff programs? 510,000.

(4) What is meant by the term "Third Party Services" in your annual budget? It is your main source of income! "It is the value of funds and services in joint projects provided by soybean and related trade organizations, private firms, institutes, and other parties. In other words, if ASA invests $10,000 in a soy oil promotion project and it is matched by $20,000 in the same project by a manufacturer, we count the $20,000 a 'third party funds.'"

(5) When was the Human Nutrition Center opened in Mexico? Early 1980. What are a few of its main activities related to soyfoods? "Identify and introduce acceptable soy food dishes in Latin America. Train nutritionists on soy products. Work with governments and institutions on soy nutrition." Address: CEO, American Soybean Assoc., St. Louis, Missouri.

7316. Barber, Linda. 1981. Report with color slides on trip to natto maker, Marumiya, in Kumamoto City, Kyushu, Japan. Kobe, Japan. 1 p. Based on e-mail of Jan. 2012.

• ***Summary:*** Linda took these color slides during a trip to this natto maker in southern Japan.

(1) Soybeans (usually small in size) cooked in a pressure cooker.

(2) Soybeans inoculated with natto bacteria and put into large bins.

(3) Lots of bins!

(4) Beans are wrapped in rice straw for fermentation The rice straw was used at this factory, but natto was also fermented in foam trays as shown in last slide. Wonder if the rice straw is still used?

(5) Wrapped packages are laid in plastic basket trays for fermentation.

© Copyright Soyinfo Center 2014

(6) Plastic basket trays of wrapped inoculated soybeans in temperature controlled rooms for fermentation.

(7) Natto unwrapped.

(8) Sticky strings of good natto.

(9) Typical serving suggestion.

(10) Natto sushi.

(11) Six natto products from this factory (from top left to bottom right): Tokyo Natto. Tokuyo Natto. Oyako Natto, Kawa-muki Natto. Natto packaged in rice straw. Small packet of natto (with orange cover). Address: Resident Director of Practice House and Oral English Instructor, Kobe College, 4-1 Okadayama, Nishinomiya, Japan.

7317. Barber, Linda. 1981. Tofu banzai. *Soyfoods* No. 5. p. 8. Summer.

• ***Summary:*** "Japan has over a 1000-year history of tofu cuisine. When most Japanese e hear 'tofu' they think of the traditional dishes: Yudofu*, Dengaku, Hiya yakko, and of tofu as an ingredient in stews and soups. But through the tofu cooking class at the Kobe YWCA, over 100 women have learned what Americans know about tofu. Now when the students hear 'tofu' they think of tofu cheesecake, tofu pizza, okara coffee-cake, and tofu mayonnaise. Altogether they have learned over 25 recipes and have the skill to adapt and create recipes using okara and tofu instead of milk, cheese, or eggs.

"Why all this new interest in tofu? For three main reasons: (1) rising cost of food–tofu is still one of the cheapest sources of protein available in Japan. (2) The Japanese are fascinated by foreign foods and their diets are gradually changing toward Western-style foods. (3) The informed Japanese consumers are trying to eliminate 'instant' and other chemical-polluted foods from their diets, thus tofu and other traditional natural foods are taking on a new importance. Also, cooking with tofu requires very little time, skill, or special equipment in order to produce attractive, nutritious, low-cost menus. Even children have enjoyed preparing okara fudge, tofu shakes, and tofu cheese rolls!

"Besides making Western-style tofu foods, the class has learned how to make tofu at home. In the past, this skill was learned at home, and passed on from mother to daughter. But now this craft is hardly ever practiced at home. The students of the YWCA felt that they wanted to know how to make delicious nigari tofu so that this part of their history would be preserved in their homes. Along with making tofu, the women learned about the storage of tofu, nutrition, soybean economics, and the value of whey. During this 'tofu seminar' the participants also saw how to freeze-dry tofu to make tofu chunks* and how to preserve okara so it can be used in a variety of ways later on. For most of the students this was the first time they could see how tofu was made. Tasting the warm, sweet tofu, they agreed that this was the best tofu they had ever eaten. This special lecture was so popular that it had to be repeated in the spring.

"Since that class these students have reported that they make tofu at home at least once a week 'just to keep in practice' and

© Copyright Soyinfo Center 2014

because 'my husband likes it!' Probably the biggest result of the class was the change in attitude of the student's families toward tofu. One parent said her son was upset that she didn't keep tofu in the refrigerator at all times. 'When he comes home from school he wants to make tofu cookies. It's funny. He never cared for tofu before, and he always hated being in the kitchen!'

* Yudofu–simmered squares of tofu served with a dipping sauce. Dengaku–tofu broiled on a stick with a variety of miso toppings. Hiya yakko–chilled tofu served with a sprinkling of shoyu, green onions, and shaved bonita. Tofu chunks–tofu that is frozen at home, thawed, seasoned, and dried in a slow oven. This can be stored for long periods of time without refrigeration and later reconstituted and used like ground meat.

Photos shows Linda Barber in a kitchen in Japan teaching five Japanese women how to make tofu. Address: Kobe, Japan.

7318. Belleme, John. 1981. The miso master with a big heart: Making miso in a Japanese village. *Soyfoods* No. 5. p. 64-66. Summer.
• ***Summary:*** Describes how John and Jan Belleme learned to make traditional Japanese miso from the Onozaki family in a small farming village 10 miles north of Yaita, in Tochigi prefecture. Contains 5 photos of the miso-making process and a detailed description of that process.

7319. Koyanagi, Tatsuo; Nakahara, K.; Uehara, A. 1981. Kôsankazai (BHT) o ataeta rato no hatsuiku shôgai ni oyobosu daizu shokuhin oyobi mechionin no tenka kôka [Effects of soybean foods and methionine on the growth of rats fed with an antioxidant (BHT)]. *Eiyogaku Zasshi* (*Japanese J. of Nutrition*) 39(4):165-70. July. (Chem. Abst. 95:218965 1981). [13 ref. Jap; eng]
• ***Summary:*** BHT = Butylated hydroxytoluene. The growth of rats fed with 0.3% BHT was stunted, but it was least stunted when they were fed with fortified natto. In the preparation of natto, the addition of 1% methionine to the soybeans at the time of soaking in water did not give rise to any disagreeable flavor; so fortification with methionine at this level appears to be a practical way to improve the nutritional value of natto. Address: Tokiwa Junior College [Mito City, Ibaraki Pref., Japan].

7320. Lindell, Wallace A. 1981. ASA marks 26 years of soybean market development in Japan. *Foreign Agriculture.* July. p. 26.
• ***Summary:*** In 1956, the year the American Soybean Assoc. opened an office in Japan, U.S. exports of soybeans to that country totaled 570,000 tons, valued at $5.4 million. 4 million tons of U.S. soybeans worth more than $1,100 million went to Japan in 1980. Here are some ASA gains over the years since 1956: Japan's production of formula feed has grown from about 1 million tons to 22.5 million tons, and the soybean meal component of the feed has more than doubled, from 5% to over 11%. Dairy cattle numbers have increased by 4 times to 2 million head. The swine herd has expanded from 1.1 million head to 10 million. There was virtually no broiler industry in 1956; today there are approximately 130 million broilers in feed on any given day. Soy oil, then a pariah in the consumer market, now represents 46% of Japanese vegetable oil production, and production of new types of soy protein foods, nonexistent in 1956, is increasing by 15% a year. Address: Acting editor, Foreign Agriculture, Foreign Agricultural Service.

Klein. [43 ref. Ger]
• ***Summary:*** Contains 500 recipes. Contents: How to use this book. Preface. Acknowledgements. 1. Protein East and West. 2. Tofu as a food. 3. Getting started. 4. Soybeans. 5. Fresh soybean puree (*Frisches Sojapüree*). 6. Okara. 7. Soymilk curds and soymilk (*Sojaquark und Sojamolke*). 8. Tofu (History, how to make at home, basic preparatory techniques). 9. Recipes for regular and firm tofu. 10. Deep-fried tofu: tofu cutlets, burgers, and pouches (*Vorfritierter Tofu: Tofuschnitzel, Tofuburger, Tofutaschen*). 11. Grilled tofu (*Gegrillter Tofu*). 12. Frozen and dried-frozen tofu (*Gefrorener Tofu und gefriergetrockneter Tofu*). 13. Fermented tofu (*Fermentierter Tofu*). 14. Soymilk (*Sojamilch*). 15. Silken tofu (*Seidentofu*). 16. Yuba. 15. Tofu and yuba in China, Taiwan, and Korea. 17. Farmhouse tofu for large families. 19. The ethos and tradition of handmade tofu production. 20. Making tofu in a traditional shop. Appendices: A. Tofu restaurants in Japan. B. Varieties of tofu in East Asia. C. People and institutions connected with tofu worldwide (Incl. directory of tofu manufacturers). D. Sources of supply for tofu production. Bibliography. Glossary. Favorite tofu recipes. About the authors and their work (autobiographical). Tofu–An opportunity for poor and rich lands. The tofu kit (from Sojaquelle in West Germany and Oekullus in Switzerland).

Note 1. This is the earliest publication seen (April 2013) that uses term "Tofurei" to refer to tofu shops / manufacturers. The term was coined by Gabriele Furth-Kuby of Ahorn Verlag.

Note 2. "Sojaquark" is used to refer to soymilk curds rather than to tofu. Published in a hardcover edition only.

Note. This is the earliest German-language document seen (Sept. 2013) that mentions soy cream cheese (p. 104), which it calls *Tofu-Käsecreme*. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

7323. Shurtleff, William. 1981. William Morse: The father of soybeans in America (Continued–Part II). *Soyfoods* No. 5. p. 56-60. Summer.
• ***Summary:*** Continued: "It is truly remarkable that the authors were able to write such a complete and detailed book when neither of them had been to East Asia. (Morse would later spend two years there; 1929-1931.) Most of the book was actually written by Morse who, nevertheless, kindly listed Piper as the senior author. He gathered his information and photographs by extensive correspondence with researchers throughout East Asia and apparently drew heavily on a large collection of books on Chinese agriculture called the Swingle Collection, named after Walter T. Swingle of the Office of Crop Physiology, who spoke Chinese, had traveled extensively in the Orient collecting plants and the books, and had housed them at the USDA library, where Morse did much of his research. Decades ahead of its time, *The Soybean* soon became the standard work on the subject and was referred to by many as 'the soybean bible.' Dr. Piper died in February 1926 at the age of 69.

"Morse's fine work was already starting to give real substance to Piper's dream. In 1920, Morse helped to found the American Soybean Association (ASA) and thereafter helped to unify and direct an ongoing program of research and experimentation. Morse distributed seed from new introductions to anyone interested in soybeans. Among his closest contacts at the State Agricultural Experiment Stations were W.L. Burlison in Illinois and C.B. Williams in North Carolina. As late as 1927, most soybean agronomy research was still done on plots in Washington, D.C. outside the USDA south building. Morse sent out seeds to the states but farmers had problems; they shattered at maturity, were hard to harvest, and were abrasive on the binder canvas in those days before combines. Thus in the early years the tide of interest in soybeans ebbed and flowed. Doubters were always ready to laugh at anyone who talked of the soybean becoming a major U.S. farm crop. But this only served to spur Morse on to greater efforts. He was a very effective extension worker with many contacts, a deep knowledge of his subject, and good intuition. His desk at the USDA soon became the clearing house for information about the soybean. In 1927 he wrote: 'We may keep this work going and place the soybean where it belongs–in the King row with King Corn and King Cotton.'

"The Dorsett-Morse Expedition to East Asia (1929-1931): In the late 1920s it became evident to the USDA that the soybean had definite promise as a crop in America and it was decided to send W.J. Morse and P.H. Dorsett to East Asia for two years on what was officially known as the Oriental Agricultural Exploration Expedition (but which people interested in soy usually call the Morse Expedition) to 'make investigations regarding the utilization of the soybean in Oriental countries and the securing of varieties that might be of value to widespread American conditions' (Morse, 1929). In 1929 when the expedition left, Morse was age 45 and had worked on soybeans with the USDA for 22 years. Dorsett (1862-1943), now age 67, was a plant explorer from the USDA Office of Plant Introduction; he was described by a fellow agricultural explorer, David Fairchild, as one of the most ingenious and indefatigable workers he had ever known. Whereas Morse was a specialist, interested in soybeans, Dorsett was a generalist, interested mainly in persimmons, but also in grasses, forages, and other plants.

"During the expedition, Morse and Dorsett kept detailed daily journal notebooks, which were typewritten after the trip and bound in 17 hardback volumes. These volumes, primarily the work of Dorsett, also contain correspondence plus thousands of black-and-white photographs taken by both men. In the bound volumes there are several references to a 'special report on the soybean and its products' that Morse intended to write. Apparently he never completed it, although

© Copyright Soyinfo Center 2014

he did complete detailed chapters on tofu and soymilk. The only original copy of the documents described above is in the archives of the American Soybean Association in St. Louis, Missouri. [Note: As of 2011, it is in Rare and Special Collections, at the National Agricultural Library, Beltsville, Maryland].

"The group arrived in Tokyo on March 18, 1929, and set up headquarters. In August they traveled to Hokkaido, the northernmost island of Japan and center of soybean production, where they studied both soybean cultivation and food uses. In December 1929 they returned to Tokyo and spent full time until March 1930 collecting soyfoods and studying their production and use. On April 1, 1930, they arrived in Dairen, Manchuria, to study soybean cultivation and oil extraction. Dorsett left Morse in the summer of 1930 and went to Peking. He did not rejoin Morse on the trip, although he wrote regularly. Morse went to Korea on August 22, to Mukden in Manchuria on September 29, back to Dairen, the oil-processing capital of East Asia, and then to Peking on October 20; Morse apparently spent only 20 days in China on the entire trip. In late December they took a ship from Dairen back to Kyoto and then Tokyo. On February 17, after several more months of soyfoods research in Tokyo, they sailed for America, arriving in San Francisco on March 4, 1931. Morse's collection efforts–months of tramping through the fields of East Asia–were a bonanza. He discovered that almost every village in the Orient had its own distinctive soybean varieties, developed during thousands of years of close cultivation and inbreeding. Unlike their Western counterparts, Chinese farmers didn't think of looking for improved varieties in nearby villages and then growing these in their own village. They loyally grew the varieties that had been handed down by their honorable ancestors, and wouldn't dream of growing a variety handed down by someone else's ancestors. Morse's major accomplishments on the expedition were: (1) he collected approximately 4,600 distinct soybean seed samples representing roughly 2,000 soybean varieties and including 150 large-seeded vegetable type varieties collected mostly in Korea and Japan; all of these were introduced into the U.S. germplasm collection; (2) he realized for the first time the superiority and potential of the vegetable-type soybeans for food use and later played the leading role in propagating them and teaching others of their value; (3) he developed a much better understanding of soybean growing methods and technology; and (4) he collected more than [commercial] 250 food products made from soybeans, which he took back to America, and did by far the most extensive studies on soyfood production of any Westerner up to that time.

"In his journals and letters, Morse wrote more than once that he was 'amazed at the extent to which the soybean was used for food in Japan.' He was intrigued by the techniques for making tofu, miso, shoyu, natto, and other soyfoods, spent many days in small shops with producers, and described their processes in great detail, taking hundreds of pages of typed text with hundreds of photographs.

"The two-year trip was a tremendous adventure for both Morse and Dorsett. Morse later remarked that he considered it the highlight of his career. He was finally able to fully grasp the great potential of the soybean, which he had only been able to glimpse through his years of reading and work in America." Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

7324. Shurtleff, William. 1981. William Morse: The father of soybeans in America (Continued–Part IV). *Soyfoods* No. 5. p. 56-60. Summer.

• ***Summary:*** Continued: "Moreover, in the U.S. only about 11,350 tons of soybeans (a mere 0.02 percent of the total U.S. crop) are used directly as food in a lightly processed form that allows the virtues of the vegetable-type bean (better flavor and texture, higher protein, larger seeds) to shine through. About half of the U.S. vegetable-type soybeans are exported to soyfoods producers in Japan and Europe and half are used for American soyfoods. The major uses, in order of importance, are for tofu, soynuts, soymilk, whole canned (mature) soybeans, and tempeh.

"Bill Morse was a strong supporter of the American Soybean Association. He was at the founding meeting in 1920 and was elected president three times (1924, 1925, and 1932). Pioneer soybean grower, E.F. 'Soybean' Johnson later said that 'for many years the ASA existed mainly through Morse's untiring efforts.' He was the mainspring that kept the clock ticking year after year through good times and bad. In 1944 George Strayer said: 'Morse might be called the 'daddy' of the American Soybean Association as well as of the soybean in America, since our organization has probably leaned on him more than any other man through the years. He has always been a guiding light and missed few if any meetings (except 1929-31 when he was in Asia). It is doubtful if anyone can equal his record.'

"Morse was a highly competent researcher and a prolific writer. Between 1910 and 1950 he wrote some 87 articles and bulletins on soybeans and soyfoods, including The Soybean–in addition to making hundreds of speeches. Many of his articles appeared in publications of the American Soybean Association. He was editor of the Association's first publication in 1928 entitled *Proceedings of the American Soybean Association,* which contained 192 pages of papers given at the annual ASA conferences between 1925 and 1927. He contributed several papers to this volume, including 'The Distribution of Soybeans in the U.S.' (1927). He was also a frequent contributor to the *Soybean Digest,* which the ASA started in November 1940.

"The first article on soyfoods run by *Soybean Digest* was an article by Morse about vegetable-type fresh green soybeans entitled 'Shanghied... A Super Food' (July 1941). His second article was also on vegetable-type soybeans,

© Copyright Soyinfo Center 2014

'Soys in Food: Future of Vegetable Varieties' (September 1945). In 1951 he wrote 'What's in a Name,' describing the significance of the poetic names given to varieties of soybeans in East Asia.

"In November 1949, when Morse retired after 42 years of service, he was known throughout the world, but especially in the U.S. and East Asia, for his work on soybeans and soyfoods. In 1907, when he started work, the soybean was such a small crop that no records of its production were kept. One measure of the success of his work is the amazing expansion of the crop from about two million bushels in 1919 to 9.4 million in 1929, 91 million in 1939, and 200 million in 1949.

"On retirement, Morse turned his work over to Martin G. Weiss, a professor of plant breeding and genetics from Iowa State University. From his home in Takoma Park, Maryland, where he had lived since 1917, Morse moved to Eastchester, New York, next door to his daughter, Margaret, who had accompanied him on the trip to East Asia. During the last ten years of his life he worked from time to time on his book on soyfoods (which, unfortunately, he never finished), did a lot of reading and gardening (he planted his own vegetable-type soybeans and enjoyed them each spring as fresh green soybeans, or later in the season, as mature cooked soybeans), and kept in active touch with the world of soybeans and soyfoods through many visitors and an extensive correspondence. He continued to enjoy soyfoods in his home meals.

"On the morning of July 30, 1959, at age 75, William J. Morse died of a cerebral hemorrhage at his home in Eastchester, New York.

"The work of Bill Morse runs like a bright thread through the whole tapestry of soybean and soyfood development in the Western world. We can pay no greater tribute to the man than to carry on his work and help fulfill his dream.

"For their help in providing information related to this article, the author would like to thank Mrs. Walter Thalman (Morse's daughter), George Strayer, Martin G. Weiss, Theodore Hymowitz, Jackson Cartter, R.W. Howell, and Verna Donavan." Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

7325. Yokotsuka, Tamotsu. 1981. Recent advances in shoyu research. In: George Charalambous and G.E. Inglett, eds. 1981. The Quality of Foods and Beverages: Chemistry and Technology. Vol. 2. New York: Academic Press. 390 p. See p. 171-96. Proceedings of a Symposium of the Second International Flavor Conference. Held 20-21 July 1981 at Athens, Greece. [140 ref]

• ***Summary:*** Contents: Introduction. Manufacture: Treatment of raw materials, koji making, mash making and aging, pressing, refining. Flavor evaluation of koikuchi shoyu. Flavor components of shoyu. Some recent research and technological progress in shoyu manufacturing: Treatment of raw materials, koji molds and koji making, control of mash (temperature of mash, period of mash fermentation, microbes in mash), refining (pressing of mash, pasteurization, color of shoyu). 7326. Sass, Lorna J. 1981. Soy foods: Versatile, cheap and on the rise. *New York Times.* Aug. 12. p. C1, C6. Widely syndicated.

• ***Summary:*** The article begins: "Soy foods have come west and, apparently, are here to stay. No longer restricted exclusively to the world of woks and cleavers, soybeans in America are now patted into soyburgers, and tofu (soybean curd) is puréed into soy mayonnaise, baked into 'cheesecake' and fried as 'cutlets,' while soy milk emerges from the blender as a frothy carob shake or from the freezer as cantaloupe 'ice cream.'

"Because soy foods are an inexpensive source of protein, low in fat and completely cholesterol-free, they have been attracting more and more attention among the growing number of weight-conscious, health-conscious and dollar-conscious Americans. Until recently, soy sauce was the only soy product familiar to most Americans.

Contains a long discussion of David Mintz (owner of Mintz's Buffet, a kosher delicatessen at 1040 Third Avenue at 62nd Street). He makes a tofu ice cream, and a tofu-spinach quiche. "A large Japanese company wants to buy exclusive rights to distribute Mintz's tofutti 'ice cream' in Japan. 'The more dishes I make with tofu, the better my business is,' said Mr. Mintz." He is frequently called upon to cater "tofu weddings."

Also discusses Light Foods in St. Louis (Missouri), and the Rochester Soy Deli (in New York). "Two of the people most responsible for introducing soy foods to Americans are William Shurtleff and his wife, Akiko Aoyagi, who in 1975 wrote 'The Book of Tofu,' a comprehensive cookbook and introduction to the untapped potential of soy foods as an alternate source of protein."

There follow seven recipes featuring tofu and tempeh: Mintz's tofu herb dip. Breaded tofu cutlets (with frozen tofu. Might also be called "Fillet of tofu," plus a note on how to freeze tofu at home). Tofu tartare sauce. Tempeh salad. Carob-tofu-mint pie. Whole wheat pastry crust (with soy milk and soy oil). Lotus Cafe not-dogs (meatless hot dogs).

Next comes a section titled "Learning more about soy: A listing of useful books." For example: "There is no more thorough book on the history and myriad Oriental forms of tofu than the profusely illustrated *"Book of Tofu,"* by William Shurtleff and Akiko Aoyagi (Autumn Press / Random House; 334 pages; $8.95). First published in 1975, it is credited by most tofu cookbooks as the one that 'spread the light.' The hundreds of recipes, mostly Oriental in style, will fascinate adventurous cooks. Beginners may

© Copyright Soyinfo Center 2014

prefer the condensed, somewhat more Americanized version (Ballantine, 433 pages, $2.95)."

The long article ends with a helpful sidebar titled "How to buy and store tofu." "A four-ounce piece of tofu (bean curd) sells for about 30 cents..." One main difference "between the tofu sold in health food stores and the Oriental-style tofu sold by many greengrocers is the type of coagulant used. Tofu from health food stores is almost always made with nigari (primarily magnesium chloride and trace mineral elements derived from evaporated seawater), while Oriental tofu makers generally use calcium sulphate."

A photo shows Katherine Iselin with some of the special sandwiches at the Tofu Shop, a fast-food soy deli in Rochester, New York. She is wearing a Soyboy Tofu T-shirt. On the wall behind her is the restaurant menu.

Note: A similar article titled "Out of the wok and into the frying pan" appeared in *The Durham Sun* (9 Sept. 1981, Section B).

Another similar article titled "More budget-conscious Americans are hitting the soy–its not just sauce" appeared in the *Chicago Tribune* (29 Oct. 1981, p. W_A21).

7327. Hooten, Dan. 1981. Dawson Mills' protein analog plant. Protein prices. Isolate markets. Functional properties desired by industry (Interview). *SoyaScan Notes.* Aug. 17. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.
• ***Summary:*** Dawson Mills invested $11 million in their protein analog plant. It was intended to have a capacity of 9.5 million lb/year but was actually capable of producing only about 400,000 lb/month or 4.8 million lb/year.

Soy protein prices (per lb): Flours and grits: $0.14. Concentrates: $0.31-33. Isolates: $1.02–from Ralston Purina and Grain Processing Corp. $0.90–from ADM. Note that ADM is working off inventory that they have accumulated since start-up. A number of Central Soya's former isolate customers have gone to other suppliers.

Isolate markets: (1) Health foods. (2) Infant formulas–Some doctors go to soy formulas directly to avoid potential allergy problems with cow's milk. (3) Milk products. (4) Meat emulsions–In Europe fat, water and isolate are emulsified and then frozen. This emulsion is later mixed with meat in the preparation of products that are "stuffed into casings or cans."

Japan is still a net importer (2-3 million lb/yr) of isolates.

Functional properties desired by industry: (1) Film forming ability–with strength. (2) Casein-like properties (the imitation cheese market is now about 150 million lb–uses 40 million lb of casein). Casein sells for $1.35-$1.40/lb. Address: Dawson Food Ingredients.

7328. *Toyo Shinpo* (*Soyfoods News*). 1981. Tôfu zukuri wa nintai desu. Linda Lee Barber [Making tofu takes patience. Linda Lee Barber]. Aug. 21. p. 7. [Jap]

• ***Summary:*** A comprehensive history of the subject. Contents: Botany and plant characteristics. Etymology of the term "soybean" and vernacular names. History of soybean taxonomy and scientific names. Origin, domestication, and dissemination in Asia. Individual country dissemination in Asia. Dissemination to Europe. Dissemination in the U.S. South America and Africa. Address: Lafayette, California. Phone: 415-283-2991.

7330. Spencer, Colin. 1981. Mean bean. *Guardian* (*England*). Aug. 28. p. 7.
• ***Summary:*** Ironically, the protein-rich soy bean is the dullest of all the dried peas and beans. Few of the soy-bean recipes in cookbooks sound even vaguely appetising. Soy beans were first grown in England at Kew in the late 1700s. Most soy beans stocked in wholefood shops are round and beige, but some are small and black; they both taste about the same. Describes how to soak, then cook whole soybeans so as to inactivate the "'trypsin inhibitor,' which blocks an trypsin enzyme essential for the digestion of protein." They should be cooked for 4-5 hours or pressure cooked for 25 minutes. After cooking, the whole soy beans can be crushed (with a potato masher) or pulped in a blender to yield a thick grainy puree. Describes various ways of preparing the cooked pulp. "Served with a miso sauce, these soy bean croquettes can be far more delicious than they sound."

In the USA, small "packets of dry roasted soy beans, salted like peanuts," are sold in plain, salted, garlic, and barbeque flavors. Describes how to roast your own at home, using an oiled baking tray. "Toss the roasted beans in a flavoured salt." Or you can grind the unsalted roasted beans to make kinako. "In Japan they sweeten kinako and use it to coat confectionery. It must be the only example of chewy treats which could be good for you."

Gives recipes for: Sesame dry soybeans. Soybean Russian salad. Soy bean fritters. Black soy bean casserole.

7332. Kushi, Aveline. 1981. My favorite tempeh recipes: Cooking with a versatile Indonesian staple. *East West Journal.* Aug. p. 62-65.
• ***Summary:*** "Tempeh became popular in this country about two years ago. Bill Shurtleff was largely responsible, and I will always be grateful to him for this. Tempeh is not available in Japan, so I did not eat it while I was growing up.

"Tempeh is a very nice *whole* food. It gives great energy, especially to vegetarians, and it is very appealing to someone who is craving animal foods."

"I'm in my fifties and I stopped menstruating several years ago. The first time I ate tempeh–it was pan-fried with just a brush of oil, and cooked with onions and tamari–my menstruation returned for a time! So I think that tempeh perhaps helps to increase sexual vitality for women and strengthen men's and women's sexual organs." Contains 11 tempeh recipes: Tempeh with arame (a sea vegetable). Kinpura (with burdock and tempeh). Cabbage-roll tempeh. Tempeh with vegetables. Fried rice or noodles and tempeh. Paella without fish. Tempeh in soup. Tempeh macaroni salad. Barley stew with tempeh. Shish-ke-bab. Tempeh with kombu, daikon, and shiitake. A large photo shows Aveline Kushi smiling and cutting carrots. A large ad (p. 65) shows *The Book of Tempeh* by Shurtleff & Aoyagi.

7333. Lukoskie, W.M. Luke. 1981. Island Spring is pleased to announce that we are now distributing two fine brands of nigari (Leaflet). Vashon, Washington. 1 p. Typed, with signature on letterhead. Single sided. 28 cm.
• ***Summary:*** For the past year, Island Spring has sold Akoho Kasei unrefined nigari, a product of China imported through Japan. It has been filtered and contains beneficial trace elements and minerals. It sells for $24.80 per 20 kg F.O.B. Seattle.

The new line of refined nigari (magnesium chloride) is made by Yoshikawa, the oldest nigari maker in Japan. Approved by the FDA, it sells for $18.00 per 20 kg F.O.B. Seattle. Island spring will rebate $2.00 per bag for the Akoho nigari and $1.00 per bag for the Yoshikawa product to the Soycrafters Assoc. of North America. Address: P.O. Box 747, Vashon, Washington 98070. Phone: (206) 622-6448.

7334. **Product Name:** [Soymilk (Dairylike, or with Barley Malt Syrup)].
Foreign Name: Tônyû (Shiro, Bakuga-iri).
Manufacturer's Name: Nagano Tomato.
Manufacturer's Address: Japan.
Date of Introduction: 1981 August.
Wt/Vol., Packaging, Price: 195 gm can.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Nagano Tomato first made commercial soymilk in Japan in 1981.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. These products were introduced in Aug. 1981 in 195 gm cans and distributed nationwide.

7337. Okita Enterprises Inc. 1981. Presents tofu and beansprout study tour of Japan (Leaflet). Los Angeles, California. 2 p. Front and back. 28 cm.
• ***Summary:*** This second annual tour will run from Sept. 24 (leaving Los Angeles for Tokyo) to Oct. 3. It will be led by Hideyoshi Okita, president of Okita Enterprises Inc. and organized by Japan America Tours. The price: $1,365.55.
Address: Los Angeles, California.

7338. *Soyworld* (*American Soybean Association, St. Louis, Missouri*). 1981. ASA honors Kojima for service to U.S. farmers. 3(3):8. Summer.
• ***Summary:*** Petite Yoshiko Kojima commands great respect in the Japanese food industry. Ms. Kojima joined ASA's Tokyo staff in 1956 when American soybean growers opened their first foreign office. In the 1960s, she "initiated the first soy foods seminar in Japan, escorted study teams to the U.S., developed and distributed soy food recipes and participated in food shows. Today Japan's soy-food industry is the world's single largest buyer of American variety soybeans. At a recent 25th anniversary program presented for the Japanese soybean industry, in honor of ASA's 25 years in Japan, ASA President Frank Ray presented Ms. Kojima a special plaque in recognition of her service to U.S. soybean producers.

A photo shows Yoshiko Kojima holding the plaque; Frank Ray is in the background.

The 1960's: In 1962 the Minnesota Soybean Growers Association, the first affiliated state soybean association, was founded; by 1981 some 22 other state soybean associations had been founded. Growers' fund market development in 1966, history of checkoff. 1970's: Move to St. Louis in 1978, publication program, efforts required for rise in soybean production. 1980's: Major programs, organization, membership and funding, budget, overseas offices and exports, staff, education and publications. Address: Lafayette, California. Phone: 415-283-2991.

7341. Yoshihara, Lulu. 1981. Re: History of and update on Shin-Mei-Do Miso Company. Letter to William Shurtleff at Soyfoods Center, Sept. 9. 3 p. Handwritten, with signature.
• ***Summary:*** "Shin-Mei-Do Miso started commercial production in April 1979. I studied miso making with the traditional masters at Maruman Miso Company in Iida City, Nagano Prefecture, Japan. Maruman still operates a *tezukuri* [hand crafted] shop as well as a huge factory and I was able to compare both processes and the resulting kinds of misos. Last spring my husband, Yoshi, visited them and received many compliments about our miso, as well as constructive criticism.

"We make two types of miso: *Kome* (organic soybeans, Kokuho Rose rice, sea salt, well water) age 1-1½ years, and *Mugi* (organic soybeans, Canadian barley, sea salt, well water) aged 22 months (2 summers).

"We also have 2 experimental batches of *genmai* [brown rice] miso made with whole organic brown rice (Lone Pine). This fall we will start making moromi miso, a type of naturally sweet finger-lickin' miso from a recipe we received from our teacher in Japan.

"This summer Yoshi and two local carpenters built a new addition to our miso workshop..." Address: Shin-Mei-Do Miso Co., Wren Rd., Denman Island, BC, Canada, V0R 1T0.

7345. Aiba, Shuichi. 1981. Development of microbial industry in Japan. *Kukem Dergisi* (*J. of KÜKEM, Turkey*) 4(2):1-6. Special Issue of the Second National Congress of Culture Collections and Industrial Microbiology (KÜKEM). [Eng]

• ***Summary:*** Contents: Preface. Brief history of development: Up to 1945, 1946-1960, 1961-1980, 1981. Economic aspects: Vista, antibiotics, amino acids (esp. glutamate), nucleotides, enzymes, miscellaneous (citrate, gluconic acid). Epilog.

The modern fermentation industry, characterized by mechanization and quality control, was motivated and triggered by the appearance of antibiotics. Before 1945, besides the brewing of alcoholic beverages, the Amylo-process and acetone-butanol were the most representative of large-scale fermentations in the pre-war and during the war days. In the former, starchy materials were saccharified aerobically by the use of *Aspergillus oryzae.* The period from 1946 to 1960 was characterized by two major developments: the emergence of the penicillin industry and the production of amino acid (glutamic acid) by fermentation. Bioengineering became sophisticated. During the period 1961-1980 biochemical engineering and computers came to be widely used.

The fermentation industry in Japan is large. In 1974 it produced $8,404,000,000 worth of products. The largest segments were liquor $6,300,000,000 (75.0% of the total), antibiotics $1,183,000,000 (14%), fermented foods $550,000,000 (6.5%), amino acids $250,000,000 (3.0%), and other (nucleotides, yeast, ethanol, enzymes, organic acids) $121,000,000 (1.5%).

The main amino acid is glutamic acid, of which the Ajinomoto Co. has almost 50% of the market. Production peaked at 100,000 tons/year in 1971 and had fallen to 73,000 tons by 1975. The main nucleotides are inosinic acid and guanylic acid. The main enzymes are alpha-amylase (12,000 tons/year), protease (1,500 tons/year), and glucose isomerase (300 tons/year). Miscellaneous includes citrate, lactic acid, and gluconic acid (each organic acids). Genetic manipulation of microorganisms is expected to revolutionize the fermentation industry.

Note: This periodical about microbiology is published twice a year by the Center for Culture Collections of Microorganisms (KUKENS) in Istanbul, Turkey. Address: Prof. Dr. Dep. of Fermentation Technology, Faculty of Engineering, Osaka Univ., Yamada-kami, Suita-shi, Osaka, Japan.

7353. Boyer, Robert A. 1981. Development of meatlike products based on spun soy protein fibers. Part II (Interview). *SoyaScan Notes.* Oct. 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Now somewhat desperate, Boyer decided to try a meat company anyway. He went to Swift & Co. in Chicago, Illinois, in 1950 and they immediately liked these ideas and bought exclusive rights to the patent from 1950-1954 (in 1955 they converted to nonexclusive). In 1950, the war scarcity psychology still prevailed. American consumers and food produces had watched in astonishment during the war as meats became so scarce and expensive that only a few could afford them. Thus it was easy to sell the notion that even after the war, as world population continued to rise, plant proteins would play an increasingly important role in diets throughout the world. Boyer worked with Swift for five years, but in considerable secrecy. Swift told him that if their Livestock Relations Department found out that Swift was doing research on meat analogs, "all hell would break loose." Eventually Swift made and test marketed new soy protein products. However in 1952-53 livestock producers in America were in such bad shape economically that they marched on Washington, DC, demanding a better price for their products. Swift, fearing the possibility that the media might get word of their new project and come out with headlines reading "Swift Making Synthetic Meats from Soy Protein," decided to shut down the project. None of the products was ever marketed commercially.

In 1951-52 Unilever bought a license from Boyer for spun protein isolate production throughout the rest of the world. Boyer went to England and worked with Unilever in their peanut protein isolate plant and research labs near Liverpool. Here, for the first time, his process was used in the making of sausages containing fibers of peanut protein isolate.

In 1956 Boyer returned to America and went immediately to Worthington, who had now been thinking about taking a license on Boyer's spinning patent for seven years. The first food-grade soy protein isolates were just becoming available, so the company bought the patent rights for the health food industry and asked Boyer to work with them as a consultant. Worthington eventually did more with Boyer's discovery than any company in America.

After Worthington purchased Boyer's license (for the health food trade), other large food companies followed suit: Ralston Purina, General Mills, and Nabisco. General Foods developed their own related process. In 1962 Boyer joined the research staff of Ralston Purina as a Protein Scientist; he worked there until his retirement in 1971, at which time he became a Protein Consultant for Miles/Worthington.

After General Mills took a license on Boyer's product, they built a commercial-sized fiber spinning plant at Cedar Rapids, Iowa, and developed their Bontrae line which featured Bac-O's, a spun fiber analog resembling cooked bacon bits and launched in 1965. The venture was impressive in scope and the product was a real sensation, the biggest thing that had happened to Boyer's idea to date. (The product is now made with extruded soy flour.) The whole venture had a profound effect on the thinking of other large food producing companies concerning soy protein foods. Boyer was now spending 50% of his time with Worthington and 25% each with General Mills and Ralston.

Boyer's years of research eventually began to pay off in terms of handsome royalties from his patents, of which he now had more than thirty, some shared with Ford. These lasted until the patent expired in 1971. Now any company can use the protein spinning process without having to buy a license or pay fees. In 1981 the main American companies using spun protein fibers in foods were Worthington Foods, Dawson Mills in Minnesota (which bought General Mills' equipment), Loma Linda Foods in California, and Ralston Purina. In Europe there are two companies in the Netherlands, one in Denmark (Nutana), and one in Belgium using food-grade spun protein fibers. In Japan, Nisshin Oil Mills Ltd. built the first plant to spin edible soy protein fibers in 1968. In 1976 Fuji Purina Protein Ltd., a subsidiary of Fuji Oil Co. and Ralston Purina, introduced Fujipur SP-90 spun soy protein fibers.

Most manufacturers of meat analogs in the U.S. agree that the general market has been disappointing, but that the idea is simply ahead of its time, which will inevitably come

© Copyright Soyinfo Center 2014

as meat prices continue their rapid rise. The vegetarian or "motivated" market (and especially the Seventh-day Adventist sector) showed a steady increase each year. No sales figures are available on the total market size.

When asked in 1980 how he liked the newest generation of meat analogs, Boyer replied that he found the quality disappointing, since the producers have to make compromises in equipment and processing to keep costs down. A researcher can get much better textures and flavors in his lab working by hand. Another problem is the subtle beany flavors that result from isolates and from typical defatted soy meal rather than specially defatted soy meal that can be made to contain almost no beany flavor. Boyer eats store-bought meat analogs (including bacon bits) from time to time but not as a regular part of his diet. He prefers Worthington products to Loma Linda. He likes meat, too, and also uses tofu quite a bit.

How about the future? Harkening back to the years of his work with Ford, Boyer said in 1981, "We're at the Model T stage right now with analogs. I'm impatient to get to the Lincoln Continental stage." He feels that the products still have a very bright future, and that when the price of meats rises to 10 or 20% above those of the analogs, sales will start a period of steady growth. Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

7354. Fuller-Rowell, Steve. 1981. Re: Translations of and comments on selected quotations concerning soybeans and soyfoods from the book *Daikanwa Jiten* [Chinese-Japanese historical dictionary]. compiled by Tetsuji Morohashi (Tokyo, 1955-60). Letter to William Shurtleff at Soyfoods Center, Oct. 14. 36 p. Typed, with signature. [Eng]

Chronology:

1904–Artificially frozen tofu was displayed at the Fourth Industrial Exhibition in Japan.

1923–The Matsuo Kori-dofu Union was established.

1925 Dec. 25–The Association of Kori-dofu Unions in Nagano prefecture was established.

1930–The Anonymous Asahimatsu Improved Kori-dofu Union was established.

1932–The Anonymous Asahimatsu Improved Kori-dofu Union was reorganized as Asahimatsu Improved Kori-dofu Company, Ltd.

1932–Misuzu-dofu Sales Union (predecessor of the present Misuzu Tofu, Inc.) was established.

1935–Responsibility-guaranteed Suwa Sales Union (the predecessor of the present Daiya Tofu, Inc.) was established.

1937–Kori-dofu Union of East Tsukuma County in Matsumoto City (the predecessor of Miyama Tofu, Inc.) was established.

1939–The All Japan Kori-dofu Association was founded.

1939–The factory for making artificially frozen tofu was built in Matsuo village by Asahimatsu Improved Kori-dofu Company, Ltd.

1940 May–The All Japan Kori-dofu Union Association was established in order to serve as an organization controlling the distribution of soybeans, the raw material.

1941–The Asahimatsu Improved Kori-dofu Company, Ltd. built a branch factory in Korea.

© Copyright Soyinfo Center 2014

1943–The All Japan Kori-dofu Industry Union Association was established under an order given by the Ministry of Agriculture and Forestry.

1944–The All Japan Kori-dofu Industry Union Association was re-established as The All Japan Kori-dofu Industry Control Union.

1945–The Asahimatsu Improved Kori-dofu Company, Ltd. gave their factory to Fujikura Aircraft Industry Company, Ltd. to be used as a munitions factory.

1945 Aug. 15–The Korean branch factory of Asahimatsu Improved Kori-dofu Company, Ltd. was closed due to the termination of World War II.

1945–The All Japan Kori-dofu Industry Control Union was dissolved.

1947 March–The All Japan Kori-dofu Industry Association was established and joined the Japan Soybean Association.

1950 Dec. 19–The Asahimatsu Kori-dofu Company, Ltd. was established having a total capital of 3,750,000 yen.

1950–The naturally frozen tofu industries were struck by the unusually warm winter.

1951 Jan. 19–The factory of the former Asahimatsu Improved Kori-dofu Company, Ltd. (4873 Matsuo village) was purchased from the Fujikura Aircraft Industry Co., Ltd. and reconstruction of the factory began.

1951 April–The Soybean Control Order was abolished.

1951 May 15–The Asahimatsu Improved Kori-dofu factory started operation. The average daily production was 30 sacks (1 sack = 60 kg = 132 lb) of soybeans. Labor productivity per unit was 13.90 hours/1,000 cuts.

1952–The products of Kansai (the Kyoto-Osaka area) and the natural products from all areas in Japan declined steeply.

1953 Feb.–The All Japan Kori-dofu Industry Cooperative Union Association was founded.

1954 July 1–Asahimatsu's factory was designated by the Ministry of Labor as a model plant having safety and sanitation management.

1956 Aug.–The second construction of the SupeCo style dryer was completed. A current style thawing machine was installed which made the flow of operation continuously automatic.

1957 Nov.–The third construction of a freezing process and boiler was completed. A combustion machine for coal powder was introduced. A new chimney for the boiler was built. The average daily productivity was 112 sacks.

1958 Oct.–'Asahi-dofu' was used as food by the observation party of Showa base at the South Pole.

1958–Competitive sale of kori-dofu began.

1959 March–The first TV commercials for the Kori-dofu industry began in the Osaka area.

1959 Jan. 1–The 'meter' rule was put into practice.

1959–A specialized dryer for cubes was newly installed. Sprinkler-type thawing equipment was completed. The complete continuous operation by exchanging labor made the increase in productivity possible after the completion of the third construction.

1960–The average daily productivity: 154 sacks. Productivity of labor per unit: 7.50 hours/1000 cuts.

1962 July–Began sales of soft tofu.

1962–Began refrigeration of products.

1963 Feb.–Frequent occurrence of browned and hardened products.

1963 July–Tenryû plant began full-scale operation.

1963 Oct. 24–Success in making the products soft. Became number one in both quality and productivity among the industries.

1963 Nov. 1–Awarded by the Japan Food Sanitation Association an official commendation for having a well controlled sanitary plant. Began to use heavy oil as boiler fuel at Iida plant. The average daily productivity: At Iida plan, 97 sacks; at Tenryû plant, 136 sacks. Productivity of labor per unit: 6.50 hours/1000 cuts (at both Iida plant and Tenryû plants).

1964 July 7–Awarded by the Nagano Labor Standards Bureau of Ministry of Labor an official commendation for having a well controlled and safe plant. Stabilization of quality of 'soft' products.

1966 Oct.–Shinshu Tofu Co. Ltd. was entirely destroyed by fire.

1966 Nov. 1–Awarded by the Minister of Health and Welfare an official commendation for having a sanitary plant.

1966 Nov.–Misuzu-tofu Co. Ltd. expanded its plants and began to make 'soft' products.

1967 July 1–Asahi-dofu Sales Co. Ltd. was founded.

1967 July–Development at Iida plant of a forming box which does not require removal of whey.

1967 Dec.–Daiya Tofu Co. Ltd. began a plant to work in concert with Asahimatsu Kori-dofu Co. Ltd.

1968 April–Daiya Tofu Co. Ltd. tied up with Asahimatsu Kori-dofu Co. Ltd. Asahimatsu has 53% of the Japanese market.

1968 June 22–Asahi Dofu Sales Co. Ltd. was dissolved. Shinshû-dofu Sales Co. Ltd. was established. Ginseki Kori-dofu Co. Ltd. consigned production to Misuzu Kori-dofu Co. Ltd. Established a sales company entering into partnership with Misuzu Kori-dofu Co. Ltd.

1969 March–Decision to install a test plant which treats liquid effluent waste by the lagoon method inside Asahimatsu Kori-dofu Company's plant.

1969 July 21–'New Asahi-dofu' began to be sold.

1970–Wrapping and boxing machines were introduced at the Iida plant. Specialized dryer for cubes was completed. Percentage of good products at Iida plant is 96% and that of Tenryû plant is 95.3%. The average daily productivity at the Iida plant: 232 sacks, and at the Tenryû plant: 224 sacks. Productivity of labor per unit at the Iida plant: 3.97 hours/1000 cuts, and at the Tenryû plant: 3.28 hours/1000

© Copyright Soyinfo Center 2014

cuts.

1970 Jan. 1–Genichi Akaba became the new president of Asahimatsu Kori-dofu Co. Ltd.

1970 May–Genichi Akaba, the president of Asahimatsu Kori-dofu Co. Ltd. took office as the chief director of the Kori-dofu Industry Association Union of Nagano prefecture.

1971 Aug. 17–An overseas training program was established. The first trainee was sent to the University of Illinois. A liquid waste management facility was completed.

1972–Operations began in January in the Iida plant and in August in the Tenryû plant. 'Asahikoya with Seasoning' was developed and began its sales with a test market.

1972 Aug. 17–A second trainee was sent to the University of Illinois.

1973–'Asahikoya with Seasoning' was introduced to the public in the Tokyo market. Misuzu Tofu Co. Ltd. began to sell Koya-dofu with seasoning.

1975 Jan.–Tie-up with Mitsubishi Shoji in sales. President Fukui of the National Nutrition Research Institute and the nutritionist Kozu reported the results of an experiment using kori-dofu for preventing anemia.

1976 July–The machine for dehydrating okara at the Tenryû plant began operation.

1976 Oct. 23–The 30th anniversary of Asahimatsu Company was celebrated and a party was held. The percentage of good products at the Iida plant was 96.0%; at the Tenryû plant was 96.4%. The average daily productivity at the Iida plant was 244 sacks (1 sack = 60 kg of soybeans); at the Tenryû plant was 251 sacks. The productivity of labor per unit at the Iida plant was 1.99 hours/1000 cuts; at the Tenryû plant was 1.80 hours/1000 cuts. Address: 1008 Dashina, Iida-shi, Nagano-ken 399-25, Japan.

7359. *East West Journal.* 1981. A soyfoods trailblazer looks back... & ahead [Interview with Dr. C.W. Hesseltine]. Oct. p. 30, 32-33.

• ***Summary:*** This interview was conducted by William Shurtleff of Soyfoods Center.

"Shurtleff: How did you become interested in soyfoods?

"Hesseltine: In 1958 a Japanese man, Kazuo Shibasaki, came to work for us here at USDA. Shibasaki was one of Japan's leading researchers in the area of fermented foods, particularly miso. He came to the United States to help us develop fermented food products and to help improve the quality of our soybeans so that they could be used in fermented soyfoods.

"Shurtleff: Did you feel then that there was any potential for soyfoods in the U.S.?

"Hesseltine: Not really. I didn't have any interest in the field to know what the potential was. But about a year after Shibasaki arrived we began to notice something and organized meetings involving people interested in soyfoods. Soyfood products were available for sampling. I remember having one of our meetings in a local hotel in Peoria. We were serving miso on crackers and on cucumbers, and the chef of the hotel, who had nothing to do with the meeting, came in and tried some of the miso spread and really became interested in it.

"Shurtleff: How did the interest in miso and tempeh grow over the years? When did you find America knocking at your door, so to speak?

"Hesseltine: There was no sudden interest in the two foods. It was gradual as we continued to publish papers on the value of miso and tempeh in the mid-1960s.

"Shurtleff: Which has sparked the greatest interest?

"Hesseltine: I think it's been in tempeh, for the simple reason that we've done more work with tempeh than most other fermented soyfoods. Also in comparison to, say, miso or shoyu the process of making tempeh is much simpler. And tempeh is a food that you can consume in large quantities without the problem of eating too much salt.

"Shurtleff: Roughly how many people have written requesting tempeh starter kits for use at home over the past five years?

"(Tempeh starters are packages of spores to start the fermentation of the soybeans. -Ed.)

"Hesseltine: It's hard to estimate. I think we've sent out 30,000 to 40,000 starters, and there are repeats on that, but I would guess that represents about 20,000 different individuals.

"Shurtleff: Has there been an interest comparable to that for any other [NRRC] food project that you know of?

"Hesseltine: No, nothing on that scale. Even back in the penicillin days, there was no such response."

A photo shows Dr. Hesseltine talking with people at the 1981 Soycrafters Association Convention.

Note: Dr. Hesseltine says that okara can be used as a feedstock for making ethanol (ethyl alcohol) and methanol. Address: Chief, Fermentation Lab., USDA/NRRC, Peoria, Illinois.

7360. Sugawara, Akiko. 1981. Amerika no tôfuyusan [American tofu company (K. Tanaka & Co. in New York City)]. *Living Book.* Nov. 11. p. 82. [Jap]

• ***Summary:*** Sugawara, Akiko. 1981. The Living Book (Japan). Nov. 11. p. 82. In this 3 by 4 inch sidebar to a larger article on tofu, color photo shows the front of K. Tanaka & Co. in New York, Founded in 1903, the company is located on Amsterdam St. The 45 year old owner, Mr. Keisuke Murakami, succeeded to the shop ownership 20 years ago. His tofu sells for $0.50 a piece. He previously worked for Pan Am. The shop also sells other Japanese foods. His 3 workers also make Spinach Tofu Pie and Tofu Lasagna. Address: 326 Amsterdam Ave., New York, NY (Manhattan's West Side).

7361. J.D. 1981. Nofu [The Koba family of Oriental Groceries in San Diego will soon stop production of

© Copyright Soyinfo Center 2014

handmade tofu]. *Reader* (*San Diego, California*). Nov. 25. p. 3. City Lights section.
• ***Summary:*** "Chill news is blowing through San Diego's Japanese-American community: Haruki and Michiko Koba are going out of business. This means soon, very soon, it will be impossible to buy handmade tofu anywhere in Southern California." The Kobas have made tofu by this painstaking process for the past 33 years; but now the city is buying the building which houses their oriental groceries storefront, with plans to demolish it and replace it with a park. "The Kobas will be moving out sometime shortly after the beginning of next year. (The city offered to help them relocate, but the couple decided it wasn't worth the trouble to move the business.) They first began paying $45 a month for a single room in the building in late 1947, not long after Haruki was discharged from the U.S. Army. Born in Coronado, he had studied business at the University of Redlands until the outbreak of the war, when he volunteered for the service (and fought in France and Italy). When he got out, he and his wife had the chance to buy the foundering tofu business, which another second-generation Japanese-American had been operating unsuccessfully."

"Haruki had a cousin in Tokyo who wanted to emigrate to the United States, so the cousin worked in a tofu factory there [in Tokyo] to learn the manufacturing process, then came to San Diego to aid the Kobas."

"They rise before dawn and usually by 6 in the morning Haruki and Michiko arrive at the storefront, where Haruki grinds about 13½ lb of yellow soybeans. He uses an old electric grinder equipped with volcanic stones... He harbors a few other secrets which he declines to divulge." Toward the end of the tofu-making process, Michiko fills wooden forms with the softly congealed curd. The Kobas sell the 1½-lb cakes in the front of the store for $0.89 apiece. "Up to last year, Haruki also sold them (along with the fried tofu cakes called *age,* which Michiko also makes) from the back of a truck. Just like a milkman, he plied a regular route."

Contains a nice photo of Mr. and Mrs. Koba.

7362. Caloussis, Mr. 1981. Nestle's work with soymilk (Interview). *SoyaScan Notes.* Nov. 27. Conducted by William Shurtleff of Soyfoods Center. [Eng]
• ***Summary:*** Nestle is now making and marketing soymilk in Malaysia and Singapore. The Singapore venture started in 1979; it is doing well. Nestle owns the controlling interest, with minority local ownership. They are now test marketing their soymilk in Thailand. Nestle is also test marketing a powdered soymilk to health food markets in the Philippines. Named "Vita," it is made at a pilot plant in Japan. Nutrend is a weaning food product made in the Philippines from locally grown soybeans and wheat.

Thimonnier in Lyons, France, makes Flexi-pouch, but it is more expensive [than aseptic packaging] when you take into consideration the cost to deliver one unit.

Maggi is owned by Nestle; seasonings are their main products. Maggi really grew on its dehydrated soups–an instant food at the start of the industrial revolution. Kempthal is near Zurich, and Maggi is still located there. The original owner was Julius Maggi in Switzerland. This story is told in a book on the history of Nestle, which Mr. Caloussis will send. The man in charge of Nestle public relations is Mr. Edward Fasel in Vevey, Switzerland.

Concerning Nestle and infant formulas: In the late 1900s Mr. Nestle started making infant weaning foods out of cow's milk and cereal. Today each country has its own independent marketing program. The problem for Nestle started in England with a book titled *The Baby Killers.* Then another group in Nestle spoke out against Nestle, and Nestle sued them. This got big, negative press coverage. Infant formulas are only 3-4% of Nestle's business. The company's best-selling products are Nescafe (coffee) and various milk products.

7363. Suzuki, Tsuguyoshi; Okazaki, M.; Kashiwazaki, H.; Moriyama, M.; Takemoto, T-I. 1981. Changing food consumption of Japanese immigrants in the lowland of Bolivia. *Ecology of Food and Nutrition* 11(2):103-16. Nov. [13 ref. Eng]
• ***Summary:*** During a 3-day period in July and August 1975, dietary records of 34 households of Japanese immigrants in the lowlands of Bolivia were analyzed for the amounts and types of food consumed. The colony of Japanese immigrants, *Colonia San Juan de Yapacaní,* was established in 1955 on the basis of a governmental agreement between Bolivia and Japan. From 1955 until 1974 a total of 297 households, including 1,649 individuals, immigrated into the colony; the majority came during the first ten years. Among the items consumed were soybean products (not including soy sauce; consumed by 79.4% of the households), *tsukudani* (small fish cooked in soy sauce), wakame, nori, and kombu (3 sea vegetables), *furikake* (a seasoning containing nori), and azuki beans. "Among legumes, soybeans occupied the top position even after excluding the consumption of soybean sauce. The usual preparation was miso (soybean paste fermented and salted) and tofu (soybean curd), raw or fried, which the colonists could buy from a tofu shop in the colony."

Adzuki beans were boiled with glutinous rice and served at celebrations. "Immigrants procured the seed from Japan or Brazil and cultivated the beans." Also served was *kintsuba* (a sweet adzuki bean cake). One of the most widely used seasonings was soybean sauce, used in 85.3% of the households. Address: 1. Dep. of Human Ecology, School of Health Sciences, The Univ. of Tokyo, Tokyo, Japan.

7364. Keirn, Esta. 1981. History of Oriental Show-You Company in Columbia City, Indiana (Interview). *SoyaScan Notes.* Dec. 5. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

© Copyright Soyinfo Center 2014

• ***Summary:*** The Oriental Show-You Company began production of Japanese-style fermented soy sauce (shoyu) in Columbia City, Indiana, in 1924. The company had been started in 1918 in Detroit, Michigan, by Shinzo Ohki, a Japanese man, who began by importing shoyu and tea from Japan. In 1922 Mr. Ohki went to Japan to learn the method for making shoyu, then late that year he moved his business to Columbia City and by 1924 was making shoyu, along with mung bean sprouts. Chow Mein noodles, Chop Suey, and Jigg's Corn Beef and Cabbage. The company was quite small, making about 12,000 gallons of shoyu a year; this was sold mostly in the Midwest, and only east of the Mississippi River. In 1932 Mr. Esta Keirn joined the company and soon became production manager. In 1946 the company published a 15-page booklet titled "Oriental Recipes," showing show to use shoyu. In 1963 [sic, 1943] Beatrice Foods (which had sold La Choy HVP soy sauce since the early 1930s) acquired the company and Mr. Keirn stayed on to supervise production of Beatrice's first fermented shoyu. Beatrice still makes a fermented shoyu.

The only other early maker of shoyu that Keirn knows of was a Japanese man in San Francisco who started in about 1945-46. Keirn talked with him, obtained a sample of his shoyu, and analyzed it. Keirn heard rumors of a little Chinese soy sauce producer in New York City but was never able to talk with him or to get a sample of his product. Keirn has no documents, articles, or price lists. Address: 401 Catherine Ave., Columbia City, Indiana 46725. Phone: 219-248-8742.

7365. Burns, Ken. 1981. Re: George Ohsawa and a brief history of macrobiotics in America. Letter to William Shurtleff at Soyfoods Center, Dec. 9–in reply to inquiry. 7 p. Typed, with signature. [1 ref]

• ***Summary:*** An excellent, in-depth history by a very knowledgeable source, who occasionally teaches a course in Boston on the history of macrobiotics in the USA. With numerous fond personal recollections and character sketch of Ohsawa. 1959 Dec.–Ohsawa first visited the USA. 1960 Jan.–He published, in mimeograph form, his astonishing book *Zen Macrobiotics* in English in New York City. "Although not in great detail, here he introduced miso, tamari, and tofu to the general public. The first two especially quickly become essential ingredients in the diet of almost all macrobiotic people in the US.

"During January, February, and March [1960] he lectured extensively at the Buddhist Academy in New York City. He returned to the US in July and lectured at the First American Summer Camp on Long Island daily for two months.

"The Second American Summer Camp was held in July and August of 1961. I am not sure whether he was present or not. This was in Wortsboro, New York. In that year also, thirteen macrobiotic families left New York and moved to Chico, California on his advice. The next year, 1962, they founded the first American macrobiotic food distribution and processing center in this country.

"In 1963, in the summer he came to the US again and lectured in Boston, NYC, and at the Chico Summer Camp.

"In 1964, he lectured at the Big Sur Summer Camp.

"In 1965, he lectured at Mayoro Lodge near Pulga, California.

"In 1966, on April 24th [or 23rd] he died in Japan.

"All in all, George Ohsawa visited this country either five or six times, each time lecturing, and speaking to the people individually without rest. He was ceaselessly active. I have heard many anecdotes concerning him during that period. As best I can determine, his affect on people was quite simply shattering–they had never seen anything like it.

"According to Madame Ogawa (who spoke in great and loving detail of him at the 1981 French Meadows Summer Camp) he was a very sharp dresser and had quite an eye for beauty in the female of the species. She was so obviously still in love with this 'terrible man.'

"Jacques DeLangre... never tires of telling about the time when they were descending the mountain after a long and intensely yangizing summer camp. Their car rounded a bend and there!, suddenly!, was a huge patch of luscious juicy *blackberries!* The car as though it had a mind of its own, screeched to a halt, all the doors flew open, and all the passengers were catapulted into the middle of that patch. It would be hard to imagine a clearer, cleaner-cut example of the attraction of yang to yin. Their ecstatic reverie was broken, a few moments later, by the sound of another car coming around the bend. 'Oh my God, it's Ohsawa himself; what will he say?' (In those days people were, understandably, a little naive in their application of yin and yang.) Well, that second car did just exactly what the first one had done–the screeching halt, the doors flying open, and of a sudden there was George Ohsawa right in the middle of that patch too, crying out in his basso profundo voice, 'Oh blackberries, they are sooo delicious!'

"That voice–possibly there is the key to understanding Ohsawa's impact in this country; I didn't personally meet him; he died about a month after I began macrobiotics in 1966. But I have heard him on many tapes, poorly-recorded as most of than were. And I have spoken to others who did know him personally, and sooner or later they get around to mentioning his voice. Peter Magnusson here in Boston describes it as the kind of voice that rattled the windows. I have done a course here in Boston I call 'The Healing Power of the Spoken Word;' and for that course I have listened to all the recordings of the great speakers of this era that I can get my hands on–Kennedy, Churchill, Roosevelt, William Jennings Bryan, John L. Lewis, etc. Probably the best orator in the world today (or was anyway, I haven't heard him lately) is Fidel Castro. His is a warm, rich, full voice, capable of a startling range of thoroughly human emotions–from the righteous indignation and anger of an oppressed people

© Copyright Soyinfo Center 2014

through endless shades and nuances to a profoundly warm and compassionate voice that might be that of your very best friend. Take that voice in account and you can understand Castro's success against seemingly insurmountable odds in Cuba. Well, I can tell you of an even better voice–that of Ohsawa. Peter Magnusson goes on to say that when he spoke it seemed as if the very world itself was speaking. As I have said above, his was a profoundly rich, deep voice, ranging from bass to baritone. But at the same time it was very delicate, sensitive, and poised, as ready to go up as down, as ready to go left as right–flexible! But the one quality that his voice had that I have never heard equaled I can sum up with one adjective–Vibrant.

"Probably this is not the kind of material you can use in your book, but I have taken a lot of time here on it anyway. The reason is that all the discussions I have heard about Ohsawa and his impact on this country have centered on what he said and not how he said it. Otherwise, how are we to explain how he was able to inspire so many people, along than Michio and Aveline Kushi, Herman and Cornellia Aihara to literally give up everything and come to a strange land to struggle against apparently insurmountable odds. Because that's what they did, arriving here penniless, operating on a wing and a prayer so to speak. And it is to them that we must go in the next chapter of this little story:"

Note: People were also attracted to the great sense of happiness, vitality, love of life (*joie de vivre*), and purpose that Ohsawa radiated. Continued. Address: Boston, Massachusetts.

7366. Burns, Ken. 1981. Re: George Ohsawa and a brief history of macrobiotics in America (Continued–Part II). Letter to William Shurtleff at Soyfoods Center, Dec. 9–in reply to inquiry. 7 p. Typed, with signature. [1 ref]
• ***Summary:*** Continued: "Michio Kushi, giving up a promising career in some area of international politics, arrived in New York in 1949. Still a little uncertain, and actually quite new to the macrobiotic way of life, himself, he did not immediately begin to teach the macrobiotic way of life on a full-time basis. Besides, his English wasn't sufficient, and he had to work full-time to support himself. To do this he engaged in many types of work such as managing a department store, elevator operator, and other types of odd jobs. Also, at this time, he had some connection with Columbia University. (Whether as a student or as a teacher or both, I am not quite sure. Maybe, if this is important, you could contact him, but I don't know if he would have the time to answer you.)

"In 1951, he was joined by Aveline (Tomoko) Kushi who had lived for a year and a half in Ohsawa's school 'Maison Ignoramus' near Tokyo. In 1961, instead of going to Chico as many other macrobiotic families did on the advice of George Ohsawa, they stayed in New York, not long afterward finding their way to Boston. Just how this happened I am a little uncertain. According to Peter Magnusson whom I have mentioned above, there was a certain fellow, whose name is probably forever lost, who was from this area and who convinced them that this was where they would have their greatest success. After all, the great ideological movements, the ones that had affected this country mast profoundly, had come, mainly, out of New England.

"So, it was in 1963, I think, they arrived here, living successively in Cambridge, Wellesley, and Brookline. From this time dates the tradition of study house–always they had a full complement of 'students' with them–many of whom were withdrawing from psychedelic drugs and perfectly outrageous 'lifestyles.' They must have thought Americans were very strange people, indeed, (At least the ones they knew.) But if they didn't, their neighbors sure did. By some magic or sleight-of-hand, they always managed to end up in some rather elegant houses in some rather elegant neighborhoods. Thus, in one or more cases, they were asked by the authorities to move.

"But, sure enough, it was here in the Boston area that they had found a medium in which they could really function well. Not long after, regular lectures were started in the Arlington Street Church where we would troop dutifully and eagerly in under the watchful eyes of a bust of William Ellery Channing, one of the founders of American Unitarianism. In the beginning, there weren't many people present at these talks–maybe six, eight or ten. (And even in the spring of 1967 when my wife and I arrived after spending a year in Detroit knocking our heads against this strange thing called 'macrobiotics' there might be only twelve, fourteen or sixteen.)

"But the spirit of adventure and camaraderie was simply exquisite. And the lectures were tremendously exciting–one moment we would be on the outer rim of the Milky Way Galaxy, examining its structure, and the next moment we would be examining the spirals on our fingertips. People who were here when we got here and whose names you may have heard were Evan Root, Bill Gleason, and Paul Hawken (and by the way, I think Paul Hawken has a company out there in your area–maybe you can contact him). Also Joe Leis and Jim Gronemeyer whose whereabouts I don't know. Not long afterward came Bill Tara and Ron Kotzsch who are still active in macrobiotics. The Word was out and people were coming from everywhere.

"In 1965 Erewhon was started, also on a wing and a prayer, right in the Kushi's home in Brookline. It moved in 1966, I think to a location on Newbury Street [April 1966 to 303-B Newbury St., below street level] where I used to see Mr. Kushi putting rice and aduki beans in little white paper bags. Evan Root and Paul Hawken originally managed the store [Evan first, then Paul Hawken more than a year later] and later on Bill Tara also had a hand in it. But it was definitely Paul Hawken who set his stamp on the store, and

© Copyright Soyinfo Center 2014

who had the most to do with it becoming what it eventually became–the largest handler of macrobiotic and natural foods in the country. At present there is a little difficulty there, but if you know the history of Erewhon, you cannot help but be convinced, as am I, that everything will came out all right.

"Also in 1965, certainly in 1966, Mr. Kushi began to travel around the country giving talks on macrobiotics as well as consultations. I wonder if his experience in other cities was anything like his experience in Detroit. It simply never dawned on us that he might need any money for traveling expenses, etc. I wouldn't be surprised if on a lot of these tours Michio Kushi didn't arrive back home with a lot less money than he started out with.

"But now I must get down to the gist, the 'nitty-gritty' of this story. There is something that is not explained here. The tremendous success of macrobiotics in this country is not really explained here. Of course some people will say that macrobiotics has not been a tremendous success. But I say it has. If you will look at its history from beginning to end, noting that it has never received any funding or any support from powerful organizations, that it has always operated on a wing and a prayer (I'll use that phrase again), then I think you can agree with me that its success has been miraculous.

"Well, one of the chief reasons for that is to be found in the behaviour of Mr. Kushi. Over the years he has literally given himself away, literally used himself up so many times over that you would swear there is simply nothing left to use up anymore. He has seen hundreds of thousands of people in formal consultations and as many more in informal consultations. And an awesomely large percentage of these consultations have been with crazy, sick, and desperate people anywhere and any time of the day or night. (And I ought to know, I was one of them.) I am not being overly sentimental here, nor am I stretching anything to make something seem true that isn't true. As a matter of fact, for various reasons I sometimes wish it weren't true, because for some people it has led to a 'cult of the personality' that limits their own development.

"To round out the list of macrobiotic developments that are more or less Boston based: The *East West Journal* commenced publication in January of 1971, its purpose being 'to explore the unity underlying apparently opposite values: Oriental and Occidental, traditional and modern, visionary and practical.' I think that's pretty well what it has done; and in the process it has helped more people to substantially change their lives than any publication I know of. Although many dedicated and talented people have been involved with it over the years, the two people who have had the most to do with creating and directing the *East West Journal* have been Lennie Jacobs and Sherman Goldman." Continued. Address: Boston, Massachusetts.

7367. Burns, Ken. 1981. Re: George Ohsawa and a brief history of macrobiotics in America (Continued–Part IV). Letter to William Shurtleff at Soyfoods Center, Dec. 9–in reply to inquiry. 7 p. Typed, with signature. [1 ref]

• ***Summary:*** "Even a short history of the macrobiotic movement in the US would be incomplete without the mention of two more people. The first of them is Shizuko Yamamoto who arrived in this country in June, 1965, at the suggestion of George Ohsawa. Having improved her own health tremendously through receiving and giving Shiatsu massage, as well as through the practice of Okido as taught by Masahiro Oki, once in this country she began to practice and eventually to teach these techniques. With them, she has deeply impressed (that could work out to be a pun, couldn't it?) many tens of thousands of people with the power of Oriental medicine. And since she invariably accompanies her treatment with macrobiotic dietary advice, she has no doubt caused many thousands of individuals to change their diet for the better–individuals who would not have done so merely on the strength of a verbal approach. But once again–going beyond the facts–what Shizuko has really accomplished in those thirty thousand treatments and in those hundreds of massage seminars in the US and Europe is to show people the spirit of Oriental medicine and of macrobiotics. I have seen her do this many times, and all I can say is that it is an awe-inspiring spirit indeed.

"Finally, I think it just to make some mention of a man who has not been active in macrobiotic circles for some seven or eight years; Michel Abehsera. Coming to New York in 1961 from France where he had studied with Ohsawa, he was part and parcel of the macrobiotic scene there throughout the sixties. He was a friend of and co-worker with the Kushis and the Aiharas, worked at the Ohsawa Foundation, and somewhere around 1968, opened a beautiful macrobiotic gourmet restaurant called, I believe, l'Epicerie. I think his greatest contribution, though, came in the form of two books: *Zen Macrobiotic Cooking* in 1968 and *Cooking for Life* in 1970. The both of them made macrobiotic cooking open to a wider public. Better cook books may have come after–I can't be certain about that–but none so charmingly and humanely written. Michel did a fair amount of lecturing in those days, making at least two cross-country tours, but eventually he withdrew from macrobiotic activity (around 1972) and completely devoted himself to the study and practice of Hasidic Judaism. Speaking for myself alone, I can say that his presence is sorely missed in the macrobiotic world.

"This brings me to the end of this 'little' history of the macrobiotic movement in this country. To go into it in any detail at all would require me to write a book of many hundreds of pages–there is an enormous cast of colorful characters waiting to troop out upon the stage on a moment's notice. If I called in one, I would have to call in them all–there wouldn't be any end to it.

"I don't know, however, how much help this will be to you with your book. At very least, maybe this can help

© Copyright Soyinfo Center 2014

you in the search for more information. I have asked John Belleme (Route 3, Box 541, Rutherfordton, North Carloina 28139) who has recently started making miso on a large scale to contact you. At any rate, I wish you the best of luck with your book–I look forward to seeing it in print. If I can be of any further help to you, please contact me.

"Cordially & Sincerely, Ken Burns." Address: Boston, Massachusetts.

7368. Earle, Steve. 1981. Re: Origin of the term "tamari" and history of San-Jirushi. Letter to William Shurtleff at Soyfoods Center, Dec. 19. 2 p. Typed, with signature on letterhead. [2 ref]
Address: San-Jirushi Corp., 1 Meisei-dori, Kuwana, Mie 511, Japan. Phone: (0594) 22-3333.

7369. Hughes Markets. 1981. Christmas (Ad). *Los Angeles Times.* Dec. 21. p. I19.
• ***Summary:*** The section titled "Foods of the Orient" includes: Kikkoman soy sauce, gallon can–$4.35. Fresh age, Hinode 1.8 oz.–83¢. Kikkoman 10 oz. Tempura Sauce–95¢. JFC soy bean flour 7 oz. Kinako–69¢. Hime black [soy] beans 6.35 oz., Kuromame amani–99¢. Wheat cake [sic, dried frozen tofu] 3.5 oz. Misuzu Koya Dofu–$1.19.

Also includes: Umeya frozen Mochi. Kokuho rice. Hime rolled kelp–Honporo Maki. Hime dried seaweed–Sushinori [Sushi nori]. Kikkoman sweet cooking sake–Aji Mirin. Ozeki sake. Bamboo tips. Dried gourd strip–Kezuka Kampyo [Kanpyo]. Rice vinegar–Mitsukan Su. Sliced pickled ginger–Miyako Kizami Shoga. Dried mushrooms–Miyako Shiitake. M.S.G.–Asahi Aji.

Note: Hughes now has 21 stores in the greater Los Angeles area–all open 24 hours a day. "We welcome food stamp shoppers."

7370. Yokotsuka, Tamotsu. 1981. Re: Earliest known use of the word *chiang-yu.* Letter to William Shurtleff at Soyfoods Center, Dec. 22. 1 p. Handwritten on letterhead. [1 ref]
• ***Summary:*** "As far as I know the first or earliest references to *chiang-yu* may be in Japan. It is in the *Ekirinbon-setsuyoshu* publicised in 1597 in Japan." Address: Senior Vice President, Kikkoman Corp., 339 Noda, Noda-shi, Chiba-ken 278, Japan. Phone: 0471 (24) 1111.

7371. *SoyaScan Notes.* 1981. Chronology of soybeans, soyfoods and natural foods in the United States 1981 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. *Soyfoods* magazine issue No. 4 published. Silver cover. 10,000 copies published. Steve Fiering loans SANA money for mailing it and agrees to make a loan for a test mailing.

Jan. Union activity begins at New England Soy Dairy.

Jan. Boxed tofu (1 lb. vacuum packed in a box with a window) first made by Zakhi Soyfoods in Fort Wayne, Indiana. This important innovation of packaging tofu in a box was later employed by New England Soy Dairy (1982), Quong Hop & Co. (1983), Swan Gardens (1983), and White Wave (1985).

Jan. Hain Food Co. starts nationwide color ads for Natural Onion and Jalapeno (Soy) Bean Dips.

Jan. Travis Burgeson of Pacific Tempeh near San Francisco, CA, introduces the world's first commercial tempeh burger.

Jan. Paul's Tofu & Tempeh, the first European tempeh company in Europe outside of the Netherlands, opens in England.

Jan 20. Ronald Reagan inaugurated as president of the United States. His Secretary of Agriculture is John R. Block. The regulatory climate in Washington begins to shift toward less federal regulation and more encouragement for industries to regulate themselves. The Republican administration favors free-market policies with less government regulation and involvement.

Jan. 23. Legume, run by Gary and Chandri Barat, is incorporated in New York, then that month moves to Verona, New Jersey.

Feb. 2. Island Spring in Washington becomes America's first unionized tofu plant.

Feb. San-Jirushi International starts its first major American ad campaign using the slogan "San-J is the real tamari." The full-color, full-page national ads aim to clarify the confusion between tamari and shoyu created by the macrobiotic movement.

Feb. Soyfoods Unlimited tempeh plant starts operation in San Francisco area. It is the most modern U.S. tempeh plant, although output is small.

Feb. Vitasoy soymilk and Morinaga tofu start to be imported and sold in the USA from Hong Kong and Japan respectively, immediately after the FDA lifts its ban on aseptic Tetra Pak type cartons. Morinaga tofu was sold by Beech Nut California Corporation, a joint venture with

© Copyright Soyinfo Center 2014

Beech Nuts Food Corp., established in 1977 in San Jose, California.

Feb. "Soyfoods Catching On" by Judith Brown published in *USDA National Food Review.* About tofu and tempeh.

Feb. Many tempeh plants switch to using GEM cultures tempeh starter.

March 1. Svadesha Pflanzen-Feinkost, West Germany's first commercial tofu company, starts production. Founded by Swami Anand Svadesha (Rudiger Urban) in Fuerth im Wald.

March. Institute of Food Technologists meeting at New England Soy Dairy. Tour, dinner, and speeches.

March. Richard Leviton on National Public Radio's "All Things Considered" talks for 10 minutes about soyfoods to 2 million people.

March. *The Book of Miso,* by Shurtleff and Aoyagi published by Ballantine Books in a mass market paperback edition.

April. USDA decides to establish tofu standards, then announce them in the Federal Register, but this plan is dropped in September, amid controversy over changes in the School Lunch Program.

April. Dr. Cook at Kansas State University publishes a paper on the possible inhibitory effects of soy proteins on nonheme iron absorption in humans. USDA becomes concerned.

April. *Tofu at Center Stage,* by Gary Landgrebe published by Fresh Press. First tofu cookbook containing many recipes calling for use of meat.

April. Bean Machines introduces new sanitary disintegrators/ grinders for tofu and soymilk production.

April. "The Miso-Master's Apprentice," by John Belleme published in *East West Journal.*

May. "The Amazing Tofumobile," by Janice Fillip, about Wildwood Natural Foods, published in *East West Journal.* Revival of interest in small tofu shops in areas where there is a high density of interest and high food consciousness, and rediscovery of soyfoods craftsmanship.

May. *Tofu Boken* by Ted Nordquist and Tim Ohlund published by Aros Sojaprodukter in Sweden. Europe's first book on tofu.

June. *Tofu Fever in New York,* by Megan B. Murray notes that David Mintz is making 275 gallons of tofu ice cream a week. This is the earliest known publication on his work with soy ice cream. He had been making it for 3-4 months.

June. "Surprise, It's Soy" by Barbara Bassett published in *Bestways.*

June. FIND/SVP survey of the U.S. tofu industry and tofu consumer survey published. 33% of respondents in major metropolitan areas were aware of tofu and 10% had purchased it. Predicts market will grow 32% a year for the next 6 years... an over-optimistic prediction.

June 29. "Trader Vic Bergeron Offers Timely Tips for Tofu" by Rose Dosti published in *Los Angeles Times.*

July. *Soyfoods* magazine is incorporated by Richard Leviton, and offers stock.

July 8-12. Fourth Annual Soycrafters Convention at Colorado State University. 240 people from 18 nations attend, 210 pay. First National Tofu Cheesecake Bakeoff and Soyfoods Equipment / Supplies Expo in the western world.

July. Mary Tolan selected Registered Young Dietitian of the Year by the American Dietetic Association. Invited to present speech on "Tofu–Food of the Future" at ADA convention in Philadelphia.

July. *Tofu Cookbook,* by Sally Sheppard published by Jack's Beanstalk.

July. "Soybean Ice Creams: Getting your Licks In" by Richard Leviton published in *Vegetarian Times.*

July. Soyfoods Center is working to build the world's largest library of documents on soyfoods, each with a bibliographic card, filed by author. Also building a large library of color slides on soyfoods.

Aug. "Tofu, Tofu Everywhere," by Karen Dukess published in *The New York Times'* Business section.

Aug. "Soyfoods: The Future Is Here but Are You Ready" by Alan Richman published by *Health Foods Business* as a cover story.

Aug. 12. "Soy Foods: Versatile, Cheap and on the Rise" by Lorna Sass, and "A Source of Quality Protein" by Jane Brody published in *The New York Times,* and syndicated nationwide.

Aug. "My Favorite Tempeh Recipes" by Aveline Kushi published in *East West Journal.*

Aug. *Delights of Tofu,* by Fox, O'Connor and Timmins published by New England Soy Dairy.

Aug. *Das Tofu Book,* by Shurtleff and Aoyagi published in Germany by Ahorn Verlag.

Sept. "Soyfoods Report" published by *Natural Food Merchandiser.*

Sept. *Home Soyfood Equipment,* by Ray Wolf published by Rodale Press.

Sept. 13. At SANA Board of Directors Meeting held near San Francisco, the Soycrafters Association of North America has its name changed to Soyfoods Association of North America to broaden scope and support base.

Sept. SANA and The Soyfoods Center do a major press release on soyfoods production and consumption in America to 250 key media. Many magazines publish this report and conduct radio interviews.

Sept. Okita Enterprises takes 22 tofu and bean sprout makers to Japan for a 10-day tour. SANA executives Richard Leviton and Luke Lukoskie make important contacts with Japanese tofu trade officials and publications.

Sept. USDA publishes tofu regulations in the Federal Register, then withdraws entire school lunch revisions and revokes permission given to the Santa Cruz (Calif.) school

© Copyright Soyinfo Center 2014

system to use tofu in school lunches.

Sept. Dr. Hirayama of the National Cancer Center in Japan announces that miso soup is effective in combating stomach cancer and stroke.

Oct. "Things Go Better With Soyburgers: The New All-American Food" by Richard Leviton published in *East West Journal* as a cover story.

Oct. *Cook with Tofu,* by Christina Clarke published by Avon Books in mass market edition.

Oct. John Belleme's American Miso Corp. begins miso production in North Carolina.

Oct. Workers at Hinode Tofu Co. in Los Angeles go on strike for 2 weeks.

Oct. *Nasoya Tofu Cookbook,* published by Nasoya Foods.

Oct. *O Livro da Soja,* by Jane Cadwell published in Brazil by Editora Ground. One of the country's first books on soyfoods.

Nov. 10. Erewhon, America's natural foods pioneer, files for Chapter 11 reorganization under the U.S. bankruptcy laws. On 2 April 1982 Erewhon is sold to Nature Food Centers.

Nov. Autumn Press, publisher of *The Book of Tofu,* original edition, files for Chapter 11 bankruptcy.

Nov. New England Soy Dairy announces 28-Day Self Life Advantage Pasteurized Tofu in a 2/3 page ad in *Natural Foods Merchandiser.*

Nov. Soyfoods Unlimited advertises tempeh burgers in *Natural Foods Merchandiser.*

Nov. The Ministry of Agriculture and Forestry in Japan announces a Japanese Agricultural Standard (JAS) for soymilk. The soymilk boom in Japan starts.

Dec. *Juel Andersen's Tofu Kitchen* published by Bantam Books in mass- market paperback.

Dec. "World's Best Tofu Cheesecake" by Richard Leviton published in *Vegetarian Times.*

Dec. Food Protein Council, a trade association, changes its name to Soy Protein Council, since all of its members make only soy protein products.

Dec. *La Soya y Sus Derivados* (*Tofu, Tempeh, Miso*), by Shurtleff and Aoyagi published by Quadernos de Natura in Mexico.

Dec. *The Tofu-Miso High Efficiency Diet,* by Yoshiaki Omura M.D. published by Arco Publ.

Dec. *Cooking with Tofu.* by Mary Anna DuSablon published by Garden Way.

Dec. There are now 158 tofu manufacturers and 41 tempeh manufactures in the USA.

Dec. The Farm Vegetarian Cookbook published as *Soja Total* in German.

* Global economic activity is shifting from the Atlantic to the Pacific. In 1981 Asia passed Europe to become the largest market for U.S. agricultural products. In fiscal 1981 Japan bought $6,700 million worth of U.S. farm products.

* Soybean breeders, which have formerly focused their research efforts on increasing quantity (yield) of soybeans, now start to give more attention to quality (composition). Increasing total protein, methionine, and oil, and decreasing linolenic acid and antinutritional factors are priorities.

* U.S. soybean exports reach their peak this year of 25 million metric tons (tonnes). By 1987 they have fallen to 18 million tonnes, a 28% drop, due largely to competition from Brazil and Argentina, and to foreign subsidies. The market changes from a seller's to a buyer's market.

7372. Aishima, T. 1981. Glass capillary chromatographic profiles of soy sauce aroma correlated with sensory assessment. *Agricultural and Biological Chemistry* 45(12):2847-53. Dec. [22 ref]
Address: Noda Inst. for Scientific Research, Noda-shi, Chiba 278, Japan.

7373. Kiang, Y.T. 1981. Inheritance and variation of amylase in cultivated and wild soybeans and their wild relatives. *J. of Heredity* 72(6):382-86. Nov/Dec. [17 ref]
• ***Summary:*** The cultivated soybean is *Glycine max* and the wild soybean is *Glycine soja.* Eleven wild relatives include *Neonotonia wightii,* which is a perennial with long climbing vines. It is widely distributed in Africa, Southeastern Asia, and Taiwan, and is commonly called the perennial wild soybean. Seed of *Neonotonia wightii* showed no amylase activity except in two accessions from South Africa. Some enzymes of cultivated soybeans have been studied electrophoretically, but there is only one brief report of isozyme analysis of the wild soybean (*Glycine soja*).
Address: Assoc. Prof. of Plant Science and Genetics, Univ. of New Hampshire, Durham, NH 03824.

7374. Kitamura, Keisuke; Kaizuma, Norihiko. 1981. Mutant strains with low level of subunits of 7S globulin in soybean (*Glycine max* Merr.) seed. *Ikushugaku Zasshi* (*Japanese J. of Breeding*) 31(4):353-59. Dec. [16 ref. Eng; jap]
Address: Dep. of Agriculture, Faculty of Agriculture, Iwate Univ., Morioka, Japan 020.

7375. Marking, Syl. 1981. Checkoff: An export builder? Part II. *Soybean Digest.* Dec. p. 37, 40, 42.
• ***Summary:*** "U.S. farmers now export more soybeans–worth a whopping $8.6 in 1980–than they grew in 1965." Export expansion statistics for many countries are given: Japan–The Japanese paid $1 billion for U.S. soybeans in 1980. In 1956 about 20 million bushels of U.S. soybeans were used in Japan, compared with about 160 million in 1980–an 8-fold increase in 24 years. Some 95% of the soybeans consumed in Japan are U.S. soybeans. The Japanese presently use more than 36.7 million bushels of U.S. soybeans for direct human consumption.

North Europe: In 1960, about 40 million bushels of U.S.

© Copyright Soyinfo Center 2014

soybeans were exported to this 6-nation region–mostly to Germany. That figure as jumped to about 170 million bushels in 1980. Soy oil consumption has risen from 367,000 metric tons in 1977 to 550,000 in 1980–a 50% increase.

Mexico: In 1980, Mexico imported about 55 million bushels of U.S. soybeans. Oilseed crushers predict that Mexico will be crushing 3 million metric tons of soybeans (120 million bushels) by 1985.

Southeast Asia: Just before 1975, when U.S. soybean market development started here, Southeast Asia imported about 16 million bushels a year. In 1981 that figure will rise to about 55 million bushels.

Taiwan: Since 1969, annual U.S. soybean exports have grown by 14%. In 1985 Taiwan is expected to import 60 million bushels of U.S. soybeans.

Every checkoff dollar invested by U.S. soybean farmers is matched by at least two dollars from other sources.

7376. Shurtleff, William; Aoyagi, Akiko. 1981. La soya y sus derivados: Tofu, miso, tempeh [The soybean and its products: Tofu, miso, tempeh]. *Quadernos de Natura* (*Editorial Posada, Mexico*) No. 20. 87 p. Dec. [3 ref. Spa]
• ***Summary:*** Contents: Introduction: The miracle of soya, by Ma. Teresa Piazza. 1. Soya: Source of protein. Ten reasons that soy will be the protein source of the future. 2. Tofu: Introduction A family of distinctive foods. A storehouse of high-quality protein. Cost of protein from different sources. Low in saturated fats: free of cholesterol; an ideal diet food. Natural backbone of the meatless diet. Buying and storing tofu. Making tofu at home and in communities. Soybeans, tofu, and the world food crisis. Table of different tofu varieties. Tofu shops in Japan. Our favorite tofu recipes.

3. Miso: Introduction. Delightfully varied; highly versatile. A nutritional treasure trove. The varieties of miso (including a table). The preparation of miso. Traditional natural miso and quick modern miso. A brief history of miso. Buying, storing, and using miso. Miso in Japan. Traditional Japanese miso shops and modern factories. Making miso at home. Our favorite miso recipes (contains 16 recipes).

4. Tempeh: Introduction. Rich in protein and vitamin B-12. Tempeh comes west (a brief history). How tempeh is made. The miracle of fermentation. Buying and storing tempeh. Tempeh for Latin America. Our favorite tempeh recipes (contains 8 recipes).

Note: This book is largely a Spanish-language translation of three English-language brochures written by the authors in the late 1970s: What is tofu? What is miso? What is tempeh? Chapter 1 is summarized from the first chapter of *The Book of Tempeh.* Address: Soyfoods Center, P.O. Box 234, Lafayette, California.

7377. Tsuchiya, Kanji. 1981. Processing equipment for soy milk. English translation of a Japanese article in Beverage Japan (31 Dec. 1981, p. 18-23). 13 p. Unpublished manuscript.
• ***Summary:*** An excellent technical work by one of Japan's leading authorities on soymilk product and equipment, who is also Marusan's chief soymilk technician. Contents: 1. Worldwide interest in health foods and the soymilk boom. 2. The basic way of thinking about processing soymilk. 3. Processing and equipment. Flowcharts, ingredients, dehulling and enzyme inactivation (dry heating, soaking in hot water, grinding in hot water, grinding in water without oxygen, intercepting air with nitrogen, steaming), grinding and separation, formulation and sterilization, deodorization and homogenization. Address: Seikensha Co., Midori 4-18-2, Sumida-ku, Tokyo. Phone: 03-634-2061.

7378. Wolf, Walter J. 1981. Foreign travel report. Peoria, Illinois. 4 p. Dec. 18. Typed, with signature.
• ***Summary:*** "Country visited: Japan, Oct. 10-21, 1981. Purpose of trip: (a) Participate in the U.S./Japan Cooperative Program in Natural Resources (UJNR), Protein Resources Panel Meeting; (b) participate in UJNR panel study tour; (c) visit research institutes and industrial laboratories working on soybean proteins; and (d) participate in symposium on soy protein foods. Summary: The UJNR meeting in Tsukuba included 10 presentations by seven Japanese research workers from six different research institutes and three U.S. scientists from three USDA regional research centers. Topics discussed included... (f) single cell protein production from soybean cooking waste waters; (g) soybean storage; (h) food uses of soy protein; and (i) nutritional evaluation of soy proteins. The study tour included a visit to a miso and soy milk factory which was impressive and confirms earlier reports that soy milk has become very popular in Japan in the past 5 years. Visits to industrial laboratories revealed that soy proteins are now used in a large variety of foods. Flavor is one of the last problems holding back development of soy protein-based foods."

The UJNR program, initiated in 1964, plays an important role in implementing the policy of scientific cooperation between the United States and Japan. The protein panel was organized in 1968, and there are now 17 different panels in UJNR.

Dr. Ebine reported that about 790,000 metric tons (29 million bushels) of soybeans are used in traditional Japanese foods–miso, natto, tofu. Organizations visited included Okazaki Marusan Co. Ltd (makes miso, soy milk, and soy yogurt), Research Institute for Food Science of Kyoto University at Uji, Nisshin Oil Mills Ltd., Ajinomoto Co., Inc., Fujipurina Protein Ltd. (Fuji Oil Co. has a joint venture with Ralston Purina Co.). Address: Leader, Meal Products Research, Oilseed Crops Lab., Northern Regional Research Center, Peoria, Illinois 61604.

7379. **Product Name:** [Lecithin].
Manufacturer's Name: Ajinomoto Co. Inc.

Manufacturer's Address: Kyobashi 1-5-8, Chuo-ku, Tokyo 104, Japan. Plant at Yokohama.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 56.

7380. Ajinomoto, K.K. 1981. [Soy protein product]. *Japanese Patent* 5,636,900. [Jap]*
• ***Summary:*** Solvent extraction of soy protein with aqueous ethanol removed undesirable odor and taste components from soy products.

7381. Chiba, H.; Sasaki, R.; Yoshikawa, M.; Ikura, K. 1981. [Storage of soybean under high temperature and low humidity]. *Eiyo to Shokuryo* (*J. of Japanese Society of Food and Nutrition*) 34(3):201-09. [Jap]*

7382. Dronne, Yves. 1981. Le problème mondial du soja [The problem of soybean worldwide]. Paris: Institute National de la Recherche Agronomique. [Fre]*
• ***Summary:*** Gives details on Japanese consumption of industrially processed plant proteins (tons/year of defatted soybean meal equivalent): Unfermented: Tofu 84,200, Dried-frozen tofu 22,400, Other products. including texturized soy protein 87,800. Fermented: Soy sauce 173,000, miso 157,400, natto 55,200. Total: 580,000

Concerning Japanese consumption of new "purified" protein in tons/year. In 1971/1977 total consumption was 27,300/44,000. Of this the amount made from soybeans was 15,900/17,000 and the amount made from wheat gluten was 11,400/27,000. As for the texture, the amount sold in the form of a powder was 17,400/19,600 and the amount sold in textured form was 9,600/24,400.

In 1977, of powdered products, the amount from soybeans was 9,500 (6,000 isolates and 3,500 concentrates) and from gluten 10,100. Of the textured products, the amount from soybeans was 7,500 (6,000 dry extruded, 1,500 moist, and no paste), whereas the amount from gluten was 16,900 (200 dry extruded, 12,000 moist, and 4,700 paste). Address: Paris, France.

7388. Hirayama, Takeshi. 1981. [Does daily intake of miso reduce gastric cancer risk?]. Paper presented at 40th Annual Meeting, Japan Cancer Assoc. 1 p. English abstract. [Jap; Eng]
• ***Summary:*** Daily intake of miso was found to significantly reduce gastric cancer in an ongoing study of 122,261 males and 142,857 females aged 40 or above in 29 health center districts in Japan 1966-78, the rates being 171.9, 210.2, 246.0, and 255.9 in males and 77.8, 85.3, 97.5, and 113.6 in females in daily, occasional, rare, and non-consumers respectively. These relationships remained significant when observed by smoking habit and socio-economic status. The observed beneficial effect could come from substances in the miso, but it is also possible that this just reflects the effects of some other substance(s) closely associated with the intake of miso soup, such as green-yellow vegetables. Address: Epidemiology Div., National Cancer Center Research Inst., Tokyo, Japan.

Manufacturer's Address: Japan.
Date of Introduction: 1981.
Ingredients: Sugar, sesame oil, spices, soy sauce, lard, starch, oyster sauce, salt, monosodium glutamate, soy bean paste, red pepper, beef extract, citric acid.
Wt/Vol., Packaging, Price: 7 oz (200 gm). In foil packet in paperboard box with full-color photo on cover.
How Stored: Shelf stable.
New Product–Documentation: Label in Japanese. Distributed in the USA by Nishimoto Trading Co., Los Angeles, CA 90058. Mix diced tofu with this sauce to make the popular Chinese recipe, Mabo-dofu.

7391. **Product Name:** [Textured Soy Protein].
Manufacturer's Name: Japan Protein Co. Ltd.
Manufacturer's Address: Sumiyoshi-cho, Izumisano, Osaka, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 58.

7392. **Product Name:** [HiProton Whole Fatted Spray Dried Soy Protein, Proton-SA No. 1 Defatted Spray Dried Soy Protein].
Manufacturer's Name: Japan Protein Industry Co. Ltd. [Nihon Tanpaku].
Manufacturer's Address: 1920 Ogawahigashi-cho, Kodaira City, Tokyo, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 63.

7393. **Product Name:** [Proton-NA No. 1 Isolated Soy Protein].
Manufacturer's Name: Japan Protein Industry Co. Ltd.
Manufacturer's Address: 1920 Ogawahigashi-cho, Kodaira City, Tokyo, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 63.

7394. Kanda, H.; Hesseltine, C.W.; Wong, F.E. Assignors to Nisshin Seiyu K.K. 1981. [Method for making soybean milk yogurt]. *Japanese Examined Patent* 5,628,130. [Jap]*
• ***Summary:*** Dried whey and sweetener are mixed with soybean milk, the mixture is heat sterilized and stabilizers are added. After cooling, the mixture is cultured with a combination of *Lactobacillus acidophilus* NRRL B1910 and *L. acidophilus* NRRL B-2092 in roughly equal proportions. These strains can utilize the raffinose in soybean milk, responsible for flatulence, and at the same time contribute to the removal of the beany taste. In an example, 20 gm dried whey and 50 gm sugar were added to 1 liter soybean milk and the product was incubated at 37ºC for 24 hours. It had a pH of 4.2 and combined 9 times to 8 viable cells/gm; it kept well at 5ºC for 19 days and had an acceptable flavor and smell. Address: 1. Nisshin Seiyu K.K.; 2. USDA NRRC, Peoria, Illinois.

7395. Kawamura, Wataru. 1981. Amerika-ban Miso no hon [The Book of Miso published in America]. *Shin Eiyo* (*New Nutrition*) p. 62-66. Month unknown. [1 ref. Jap]
Address: Japan.

7396. Kobayashi, T. 1981. Insect pests of soybeans in Japan. *Tohoku National Agricultural Experiment Station, Miscellaneous Publication* (*Japan*) No. 2. 39 p. *
Address: Japan.

7397. **Product Name:** [Soy Protein].
Manufacturer's Name: Kyowa Hakko Kogyo Co. Ltd.
Manufacturer's Address: Otemachi 1-6-1, Chiyoda-ku, Tokyo, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 63.

7398. **Product Name:** [Togurt {Soymilk Yogurt} (Strawberry)].
Foreign Name: Tôguruto.
Manufacturer's Name: Marusan-Ai Co., Ltd.
Manufacturer's Address: Okazaki-shi, Aichi-ken 444-21, Japan. Phone: 0564-45-3111.
Date of Introduction: 1981.
Ingredients: Soymilk, strawberry jam, barley malt syrup, gelatin, agar, calcium chloride.
Wt/Vol., Packaging, Price: 100 gm round paper cup with foil lid.
How Stored: Refrigerated.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 61. "In 1981 Marusan-ai introduced Japan's first soymilk yogurt." Package with Label sent by Dr. Walter Wolf of Peoria, Illinois. 2000. Aug. 5. On 16 Oct. 1981 Dr. Wolf visited the Okazaki Marusan Co. in Okazaki, Japan, and (according to his "Foreign Travel Report" of 18 Dec. 1981) picked up a sample of this "yogurt-like product called 'Togurt' which is flavored with is flavored with fruit. Mouth feel and flavor of Togurt were very good." Package: 1.75 inches diameter (lid) by 2¼ inches tall. White,

7400. **Product Name:** [Maxten {Textured Vegetable Protein}].
Manufacturer's Name: Miles-Kyowa Co. Ltd.
Manufacturer's Address: Aoyama Building 2-3, Kita-Aoyama 1-chome, Minato-ku, Tokyo, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 58.

7401. **Product Name:** [Mitsukan Ma-Bo Tofu Seasoning Mix].
Foreign Name: Mitsukan Ma-Bo Tôfu no Moto.
Manufacturer's Name: Nakano Vinegar Co. Ltd.
Manufacturer's Address: Japan.
Date of Introduction: 1981.
Ingredients: Dehydrated soy sauce, powdered miso, sugar, potato starch, salt, powdered chili paste, dehydrated chicken extract, dehydrated garlic, dehydrated ginger, dehydrated oyster extract, monosodium glutamate (to enhance flavor).
Wt/Vol., Packaging, Price: 1.89 oz (54 gm). 2 foil packets in paperboard box with color photo of recipe on front. $1.08.
How Stored: Shelf stable.
New Product–Documentation: Label in Japanese. Mix diced tofu with this sauce to make the popular Chinese recipe, Mabo-dofu. Recipe on back.

7402. **Product Name:** [Nikko-Mame Defatted Soybean Flakes for Shoyu and Miso, Sakae-Mame Soy Flour for Tofu, ProtFlour Soy Flour for Food and Milk Replacer, Nikoprotein High Protein for Food].
Manufacturer's Name: Nihon Koyu Co. Ltd.
Manufacturer's Address: No. 32 Bungocho, Higashi-ku, Osaka, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 63.

7403. **Product Name:** [Lecithin].
Manufacturer's Name: Nihon Koyu Co. Ltd.
Manufacturer's Address: No. 32 Bungocho, Higashi-ku, Osaka, Japan. Plants at Kurashiki, Mizushima, Okayama.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 56. Offices at Fukuoka, Hiroshima, Nagoya, Okayama, Osaka, Takamatsu, Tokuyama, Tokyo.

7404. **Product Name:** [Nikofimee {Spun Soy Protein Food}].
Manufacturer's Name: Nihon Koyu Co. Ltd.
Manufacturer's Address: No. 32 Bungocho, Higashi-ku, Osaka, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 58.

7405. **Product Name:** [Nikko-Mame {Defatted Soybean Meal for Shoyu and Miso}, and Sakae-Mame {Soybean Meal for Tofu}].
Manufacturer's Name: Nikko Oil Mills Co. Ltd.
Manufacturer's Address: Kanda Ogawamachi 2-12, Chiyoda-ku, Tokyo, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 63; 1982. p. 67, 76.

7406. **Product Name:** [Nisshin Lecithin].
Manufacturer's Name: Nisshin Oil Mills, Ltd.
Manufacturer's Address: Shinkawa 1-23-1, Chuo-ku, Tokyo, Japan. Plants at Kobe & Yokohama.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 56.

7407. Ryo, S.; Baba, K. 1981. [Effects of natto (soybean) intake in lactation on the increase of vitamin K in human milk]. *Shusanki Igaku* (*Perinatal Medicine*) 11:1191-95. (Chem. Abst. 96:5278). [Jap]*

7408. Saio, K. 1981. [Soybean storage and processing]. *Nogyo Oyobi Engei* (*Agriculture and Horticulture*) 56(1):143-49. [Jap]*
Address: Japan.

7409. **Product Name:** [Showa Soy Flour, and Sangyo-Mame Soy Flour {For Making Tofu}].
Manufacturer's Name: Showa Sangyo Co. Ltd.
Manufacturer's Address: Uchikanda 2-2-1, Chiyoda-ku, Tokyo 101, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 63; 1986. p. 87; 1987. p. 78. Sangyo-Mame is still being made.

7410. **Product Name:** [Showa Lecithin].
Manufacturer's Name: Showa Sangyo Co. Ltd.
Manufacturer's Address: Uchikanda 2-2-1, Chiyoda-ku, Tokyo, Japan.
Date of Introduction: 1981.

New Product–Documentation: Soya Bluebook. 1981. p. 56.

7411. Tsuchiya, Kanji. 1981. Tônyû seizô no shin gijutsu to sôchi kara hôsô made [New technology and equipment for soymilk production, including packaging]. *Beverage Japan* 4(2):18-24. Translated as "Processing equipment for soy milk". [Jap; eng]
Address: Director, Malsan Food Co., Ltd., Tokyo, Japan.

7412. Tôfu seihin to eiyô [Tofu products and nutrition]. 1981. Aichi Prefecture, Japan: Aichi Prefecture Tôfu Shokô Kyokai. [Jap]*
• ***Summary:*** This booklet contains 13 chapters, one of which is about soyfoods and health. The trypsin inhibitors in tofu and soymilk are said to be effective in treating diabetes.
Address: Japan.

7413. **Product Name:** [Yakult Soymilk (Dairylike)].
Foreign Name: Yakuruto Rakkumii.
Manufacturer's Name: Yakult (Yakuruto Honsha).
Manufacturer's Address: Japan.
Date of Introduction: 1981.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Toyo Shinpo (Soyfoods News). 1982. July 21. "The soymilk industry and market in Japan." States that Yakuruto first made commercial soymilk in Japan in 1981.

Label, Tetra Brik carton, 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

Note: In 1971 in Japan more than 17 million bottles a day of a beverage containing live lactobacilli were consumed. Most of these were made by Yakuruto [Yakult] (Yakult Institute for Microbiological Research, Kunitachi-shi, Tokyo, Japan).

7414. **Product Name:** [Gotoku Soy Flour].
Manufacturer's Name: Yoshihara Oil Mill Ltd.
Manufacturer's Address: Naka Noshima 3-6-32, Kita-ku, Osaka, Japan.
Date of Introduction: 1981.
New Product–Documentation: Soya Bluebook. 1981. p. 63; 1986. p. 87. Company name is now Yoshihara Oil Mills Ltd. Address is now Uchisaiwai-cho 1-2-2, Chiyoda-ku, Tokyo, Japan.

7415. Akizuki, Tatsuichiro. 1981. Nagasaki 1945: The first full-length eyewitness account of the atomic bomb on Nagasaki. Translated by Keiichi Nagata. London, Melbourne, and New York: Quartet Books. 158 p. Edited and with an introduction by Gordon Honeycombe. [Eng]
• ***Summary:*** In the chaos that followed the explosion of the atomic bomb over Nagasaki, Dr. Akizuki tirelessly tended nearly 200 seriously-ill patients. Today he still works in that hospital. The book describes Dr. Akizuki's feelings that miso helps alleviate the effects of radiation. A powerful and moving account. Address: Japan.

7416. Aoki, Hiroshi. 1981. Misoshiru sanbai kenkô-hô [Three bowls of miso soup daily for good health]. Tokyo: Goma Books. 220 p. Illust. 20 cm. [Jap]
• ***Summary:*** Miso soups and health recipes. He worked for food companies, including Ajinomoto, for 30 years on development of new soy protein foods. A popularizing book. Discusses Hirayama.

Contents: Preface. Why are miso soups and soyfoods appreciated again now? 1. The many benefits from eating

© Copyright Soyinfo Center 2014

miso soups and soyfoods every day. 2. The Japanese people have forgotten the goodness of miso soups and soyfoods. 3. Healthy soyfoods: From miso to soymilk (miso, natto, shoyu, tofu, deep-fried tofu pouches, dried-frozen tofu, yuba, okara, kinako {roasted whole soy flour}, soymilk, soy oil). 4. Miso soups and soybean cooking make a healthy body. Soybean recipes which are suited to people in the younger generation. Mother's favorite recipes are good for health, too. Appendix. Maps of Japan showing areas of miso soups and natto.

7417. Barber, Linda; Matsuda, Tomoko. 1981. Tôfu, nattô ryôri [Tofu and natto cookery]. Kumamoto City, Kumamoto prefecture (on the island of Kyushu), Japan: Marumiya Co. 25 p. Illust. (color photos). No index. 22 cm. [Jap]

• ***Summary:*** Contents: Recipes of tofu and natto: 13 western style, 2 Japanese.

Note: A photo shows Linda (left) with co-author, Tomoko Matsuda; she translated Linda's recipes into Japanese. She was also Linda's assistant at Kobe College, and she traveled everywhere that Linda went as a friend and translator. She also helped Linda with food styling.

7418. Barber, Linda. 1981. Color slides taken during a visit to a shoyu maker in Japan. Kobe, Japan. 1 p. Based on e-mail of 9 May 2012.

• ***Summary:*** Linda took these color slides in 1981 somewhere in Japan. The factory, whose name she does not remember, was automated and fairly large. They made Daisho-brand shoyu.

(1) Labeled bottles showing the ingredients used in making shoyu: Defatted soybean meal, wheat, salt, and koji starter.

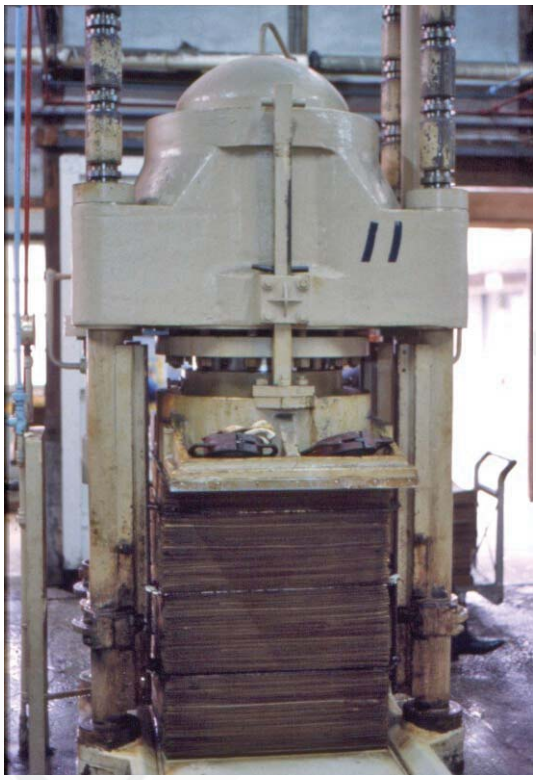
(2) Salt in a concrete storage area.

(3) A large automated koji-making room.

(4-5) Two views of a woman working at the plant. She is looking at moromi that has just been run into a pressing sack.

(6) A hydraulic press, slowly pressing out the shoyu, leaving behind residue in the sacks.

(7) Bottles of Daisho shoyu in crates. Address: Resident Director of Practice House and Oral English Instructor, Kobe



College, 4-1 Okadayama, Nishinomiya, Japan.

7419. Barber, Linda. 1981. Color slides of making soymilk curds and tofu at home in Japan. Kobe, Japan. 1 p. Based on e-mail of 9 May 2012.

© Copyright Soyinfo Center 2014

• ***Summary:*** (1) Fresh homemade soymilk curds, ready to be served, seasoned with soy sauce. (2) Fresh homemade tofu, placed in cold water in a bowl to be chilled. (3) Homemade frozen tofu; its spongy porous texture absorbs sauces like magic. (4) Tofu can be used as a source of protein in a wide variety of dishes–including many healthy desserts. Address: Resident Director of Practice House and Oral English Instructor, Kobe College, 4-1 Okadayama, Nishinomiya, Japan.

7420. Bernard, R.L.; Nelson, R.L. 1981. USDA Germplasm Collection Inventory–1900 to 1977. Urbana, Illinois: University of Illinois. 37 p. Typed Ms.

• ***Summary:*** "Information on the origins of introduced United States and Canadian named varieties and all strains identified by FC numbers and PI numbers introduced through 1977 (PI 420.388).

"This is a working paper. Please report any errors to R.L. Bernard, Turner Hall, Univ. of Illinois, Urbana, Illinois 61801. A final document will be issued later in 1981.

"Soybean Germplasm Manual 1."

Gives contact information for the Northern Collection (Maturity Groups 000 to IV, Richard Bernard and Randall Nelson) at the Univ. of Illinois, and the Southern Collection (Maturity Groups V to X, Edgar Hartwig and Calton Edwards) at Stoneville, Mississippi.

This detailed work consists of a 3-page introduction followed by many tables.

This "collection of soybean cultivars, herein referred to as strains, from throughout the world" is maintained by the USDA "in cooperation with the Illinois and Mississippi Experiment Stations. The collection is in two sections, the northern or early-maturing strains... at Urbana, Illinois, and the southern or late-maturing ones... at Stoneville, Mississippi. The collection was established in 1949 with the objective being to obtain and maintain all significantly different soybean strains from throughout the world with emphasis on land races of eastern Asia, where soybeans originated. It was initially assembled by L.F. Williams at Urbana and E.E. Hartwig at Stoneville under the supervision of M.G. Weiss, leader of USDA Soybean Investigation, and J.L. Cartter, director of the U.S. Regional Soybean Laboratory [at Urbana, Illinois].

"The strains of the collection may be divided into three parts corresponding to their designations: 1. United States and Canadian named varieties (cultivars)...

"2. FC strains consisting of foreign introduction and domestic strains identified by a series of numbers assigned by the former Forage and Crops section of the USDA. This series was used until about 1956.

"3. PI strains, consisting of foreign introductions identified by the system described in the following section.

"In addition to the soybean germplasm collection outlined above, collections of genetic types and isolines, wild soybeans (*Glycine soja*), and perennial *Glycine* species are maintained, and lists of this material are available from the curator at Urbana."

"In 1949 when this collection was established they were able to gather from the USDA and various state experiment stations 1,521 strains, which is *19%* of the original 7,873 introductions made through 1944."

"The last page of Table 1 [p. viii] shows the results of the two large Asian collecting expeditions, the first by USDA plant explorer P.H. Dorsett [and his son, Jim] in 1924 to 1927, and the second by Dorsett and USDA soybean specialist W.J. Morse in 1929-1931. The soybeans obtained by them (5,417 varieties) represent 69% of the total received from 1900 to 1944 and make up 82% of the pre-1945 strains in the present collection."

"The major additions in recent years have been the 861 from Japan in 1977 and the 1,823 from South Korea in 1976."

"Maturity Group 00 was split into 000 and 0 in 1981 with the earliest ones in 000."

"The varieties introduced up until about 1908 (36) are mostly hay-type varieties. Those from 1910 to 1927 (61) are mostly grain-type and include virtually all of the introductions ancestral to the present U.S. commercial varieties. Those of 1929 and 1932 (41) were from the Dorsett and Morse expedition and are mostly vegetable types released for human food and home-garden use."

Tables: (1) PI numbers assigned by year, and number of strains in the USDA Soybean Germplasm Collection. The last page of Table 1 shows that from 1924 to 1927 Dorsett sent back 966 soybean PI numbers of which 260 (26.9%) are still in the collection. From 1929 to 1932 Dorsett and Morse sent back 4,451 soybean PI numbers of which 986 (22.2%) are still in the collection.

(2) A statistical history of soybean introduction.

(3A) Soybeans introduced from 1900 to 1944 by country and within country by year.

(3B) Soybeans introduced from 1945 to 1977 by country and within country by year.

(4) Number of strains in the Collection by country.

(5) Number of strains in the Collection by maturity group.

Origins of introduced soybeans which became U.S. and Canadian named varieties.

Origins of soybean strains identified by FC numbers.

Origins of soybean strains identified by PI numbers.

Note: This unpublished typescript was updated and published in two volumes in 1987 as INTSOY Series No. 30 and in 1989 as INTSOY Series No. 31. Both are extremely useful and interesting. Address: Urbana, Illinois.

7421. Brown, Lester R. 1981. Building a sustainable society. New York, NY: W.W. Norton & Co. xiii + 433 p. Index. 21 cm. [686* ref]

© Copyright Soyinfo Center 2014

• ***Summary:*** Contents: Preface. 1. Introduction. Part I: Converging demands. 2. Eroding the base of civilization (example of reasons for the collapse of one of the major centers of Mayan civilization in Guatemala): The historical expansion of cropland, thinning topsoil, spreading deserts–the human hand, the loss of irrigated land, conversion of cropland to nonfarm uses, the cropland prospect. 3. Biological systems under pressure: Deforesting the earth, deep trouble in oceanic fisheries, grasslands for 3 billion ruminants, per capita consumption trends, future resource trends, oil–the safety valve. 4. Twilight of the age of oil: The rise of oil, our petroleum culture, the emergence of OPEC, the decline of oil, giving up on nuclear power, coal–the stopgap, beyond the age of oil. 5. The changing food prospect: The loss of momentum, the North American breadbasket, growing food insecurity, land productivity trends, substituting fertilizer for land, the grain-livestock economy, the new food-fuel competition, the food price prospect. 6. Emerging economic and social stresses: Competing demands, rereading Ricardo, a new source of inflation, slower economic growth, rising unemployment, social stresses.

Part II: The path to sustainability. 7. Population–a stabilization timetable: The existing projections, the changing backdrop, a stabilization timetable, the family planning gap, social improvement and fertility, incentives for smaller families, China's one-child family program, inflation as a contraceptive force, a gradual awakening. 8. Preserving our resource underpinnings, land-use planning, ensuring soil security, stabilizing biological systems, reforesting the earth, preserving the web of life, beyond the throwaway society, conserving energy. 9. Renewable energy–turning to the sun: Wood as a fuel, energy from waste, planting energy crops, falling water, harnessing the wind, tapping the earth's heat, rooftops as collectors, electricity from sunlight, solar architecture, the renewable energy potential. 10. The shape of a sustainable society: The changing global energy budget, a sustainable transportation system, the resurgence of agriculture, new industries, new jobs, the future of urbanization, simpler life-styles among the affluent, third world reinforcement, greater local self-reliance, from the growth to sustainability. 11. The means of transportation: Urgency of the transition, role of the market, financial carrots and sticks, change through regulation, financing the transition, reorienting R&D programs, role of leadership. 12. The institutional challenge: Overcoming vested interests, the role of corporations, religions–an ecological theology, universities–getting involved, public interest groups, the communications media. 13. Changing values and shifting priorities: Values in transition, voluntary simplicity, conspicuous frugality, equity–the two dimensions, redefining national security, a new economic yardstick, a sense of excitement. Notes. Acknowledgments.

In the chapter titled "The Changing Food Prospect," a table (p. 106) shows per-capita meat and poultry consumption in selected countries in 1978 (in kilograms): USA 111, France 86, Poland 79, USSR 51, Brazil 32, Japan 29, China 21, India 1.1. "One way of increasing meat production when food supplies are tight is to switch to those animals such as chicken that convert grain into meat most efficiently. Pages 107-08 discuss soybeans: "In spite of efforts to raise the efficiency of grain conversion into livestock products, competition between people and livestock for scarce grain supplies seems certain to intensify as pressures on the world's agricultural resource base increase. While the growing demand for animal protein has not so far raised the share of the grain harvest fed to livestock, it has generated an enormous demand for soybean meal for livestock rations. Since 1950, the world soybean harvest has multiplied fivefold, climbing from 18 million tons to 85 million."

"As rising affluence has converted the global appetite for livestock products into effective demand, the market for soybeans, an ideal protein complement to cereals in livestock and poultry rations, has grown rapidly. Growth has been particularly rapid since 1970 when the world fish catch leveled off. Between 1970 and 1980, the world soybean harvest has doubled from 42 million tons to 85 million tons, with nearly all the increase being consumed by livestock."

The great challenge for our planet in the 1980s is to build a sustainable society. The three main threats to civilization are (1) Soil erosion, (2) Deterioration of three biological support systems (forests, grasslands, and ocean fisheries), and (3) Rapid depletion of oil reserves with no alternatives in place. Our world has a short-term focus, to wring as much as possible from the land while destroying it in the long run.

"Eight centuries before Christ, a Mayan civilization began in the lowlands of Guatemala. For more than seventeen centuries its population grew steadily until suddenly, around A.D. 900, the society collapsed. Within decades the population fell to one-tenth its previous level. The apparent reason: soil erosion." Address: Worldwatch Inst., Washington, DC.

7422. Ethnic Studies Oral History Project. 1981. Uchinanchu: A history of Okinawans in Hawaii. Honolulu, Hawaii: Ethnic Studies Program, University of Hawaii at Manoa. xxvii + 631 p. Plus 3 unnumbered pages of plates. Illust. Index. 25 cm.

• ***Summary:*** Chapter 6, titled "Issei life histories," includes a history of Tsuru Yamauchi (p. 488-509, based on an interview with Michiko Kodama), the mother of Shoan Yamauchi, who founded Hinoichi Tofu, the largest tofu company in the United States.

Tsuru Kamiawa was born in 25 Dec. 1890 (Meiji 23; the year of the tiger) in Shuri, Okinawa, into a poor family that had once been "of samurai lineage." When she was

© Copyright Soyinfo Center 2014

age 3, the family moved to the countryside, to Itoman and Ahagun, where she was raised. When she was about 13 or 14 [1903-04] she learned to make tofu, grinding the [soy] beans by hand early in the morning. She made one kettleful each morning, then sold it on a sidewalk where things were for sale. She also tended her own agricultural field, where she grew and harvested various crops.

She was married in about 1908 (Meiji 41) as a "picture bride," to Shokin Yamauchi, who was the eldest of four boys and two girls. At the time of the marriage, he was away in Kauai, Hawaii, cutting sugarcane, so she went to live with his parents–who were kind to her, but who also lived in a small, crowded rented house of one room. There was a tofu shop next door, and she was careful never to waste tofu or okara.

In 1910 she went to Wapiahu, Hawaii (on a 15-day trip by ship via Japan), to meet her husband for the first time. They lived deep in the canefields, where her husband worked, in one big crowded cottage in Camp 35. In 1911 she had her first child, a daughter. They usually ate tofu once a week only, but they had it twice in one week only about once a month. The people who made it carried it by foot from Wapiahu to sell it to them. The sugarcane workers worked hard, six days a week, with only Sunday off. They moved to Camp 1 and then to Camp 10, where they lived for 8 years in the middle of the canefields. For breakfast they now had miso soup and daikon pickled in miso. By the age of 30 Tsuru had had 4 children, most born with a midwife and all without a doctor. The children's grandfather on their husband's side [i.e., her husband's father, Mr. Yamauchi, had come to live with them in Hawaii].

Around 1919, after being away from home for 8-9 years, she returned with her 4 children to visit parents in Itoman, Okinawa. After 4 years in Okinawa, she return alone to Hawaii to be with her husband; later on they called their children one by one to be with them in Hawaii. In Hawaii she found a job where her husband was then working, at the Hawaii Military Academy on 18th Avenue. She worked in the boarding school–even though she spoke almost no Hawaiian or English. She had three more children in 1925, 1927, and 1929–bringing the total now to seven. When Mr. Yamauchi decided to start working for the Ewa landing pier, she worked as a housemaid (for very little money), until 1937, when she started to work at Libby's cannery–starting at 30 cents an hour. She worked at Libby's for three years (during the pineapple season), then during the off-season she worked at a tuna canning factory for 20 cents an hour. It smelled terrible. Around that time she also did housecleaning in Kahala, two or three houses a week. Their small income helped to pay for the elder children's school tuition in Japan.

Then on 15 July 1940, with almost no money, they purchased an existing tofu shop [Haruko Uyeda Tofu] and renamed it Aala Tofu Co. She made the tofu and ran the shop; her husband had a job gardening. In 1938 her boy came back from Okinawa. He helped her to make tofu while he was going to school. "Later this boy [Shoan Yamauchi] when to the States and is now involved in the tofu business in a big way. He had gone to America for a vacation, intending to play, but he started making tofu there and lives in Los Angeles."

In Hawaii the tofu was made differently from the way she had learned to make it in Okinawa; in Hawaii the okara was cooked with the slurry before it was removed. Since they had no machines at that time, it took a long time to make tofu and was hard work. They got up and started work at 1-2 o'clock in the morning. They ground the [soy] beans with a stone mortar [sic, hand-turned stone mill].

Kanai Tofu, run by Mr. Kanai, is the oldest tofu shop in the area. "We've been doing it for 40 years and he was before us. There was one more on River Street, Green Mill, which used to be on Maui, came afterwards. After the war others also came up–Aloha Tofu and other smaller ones that do the work themselves. Many are Okinawans" (p. 505). At the shop they also made and sold *age* (fried bean curd), konnyaku, and okara. Pig keepers would buy the okara very cheaply for feed.

The tofu business stopped for about 3 weeks after Pearl Harbor and the start of war. Then business was good and tofu sold well because of food shortages. In 1942 they started a noodle shop (*saimin-ya*) to augment their income. They used their age to make "cone sushi." During the war, their son [Shoan Yamauchi] doing tofu went into the U.S. army when his number came up. Fortunately, there was no internment of Japanese or Okinawans in Hawaii.

Today, one of their boys is in jewelry; three are in tofu. Her girl who was born in Okinawa now lives in California with her family. Tsuru was age 91 at the time of this interview. Her life consisted mostly of ceaseless hard work and poverty. Life is good now in Hawaii.

Note: Tsuru Yamauchi died in 1990 in Hawaii. Address: Manoa, Hawaii.

Address: Kikkoman Central Research Lab.

7431. Omae, Kinjiro; Tachibana, Yuzuru. 1981. The book of sushi. Tokyo, New York and San Francisco: Kodansha International Ltd. Distributed through Harper & Row. 127 p. Foreword by Jean-Pierre Rampal. Illust (some color; 40 color plates). Index. 27 cm.
• ***Summary:*** Shôyu (soy sauce) is discussed in depth on pages 99-100. The section titled "Sushi shop vocabulary" (p. 20) states that *murasaki* refers to soy sauce, which is usually called "shoyu."

The section on "Materials" (p. 56) states that soy sauce is absolutely essential to sushi–as essential as rice, rice vinegar, wasabi (nose-tinglingly sharp when freshly grated), pickled ginger, nori, and tea.

Natto and tofu (p. 49) are mentioned as sushi ingredients. Address: 1. Former chairman, Tokyo Sushi Assoc., then president of the Federation of Japan Sushi Shops.

7432. Omura, Yoshiaki. 1981. The tofu-miso high efficiency diet. New York, NY: Arco Publishing, Inc. xvi + 221 p. Index. 21 cm. [70 ref]
• ***Summary:*** Contents: Acknowledgments. Foreword. A natural, balanced diet for health, weight loss, and longevity. 1. The benefits of a diet based on traditional Japanese foods. 2. How being overweight affects your health. 3. Why certain foods? What is needed to maintain health (The key concept is balance). The diet plan: Changing your eating habits. 4. What is misoshuru? Miso, tofu, and seaweed. 5. The first two weeks: Rapid weight loss. 6. The third week: Transition. 7. The maintenance diet. How to calculate your individual calorie requirements. Food plan. Adapting Japanese foods and cooking methods. 8. Representative Japanese and American menus. 9. Japanese foods and how to shop for them. 10. Some Japanese cooking methods which you can adapt to American foods. 11. Some recipes for Japanese dishes. Changing your lifestyle. 12. Exercise. 13. The mental side of losing weight: How your mind can help your body. Appendices: 1. Charts and records for your personal use. 2. Nutritional information on miso, tofu, seaweed, and green tea. 3. Vitamins. 4. Distributors of Japanese foods. Bibliography: Cookbooks and foodbooks, nutrition books and articles, books in Japanese, books and articles on health and weight control by alternative approaches. Notes.

7433. Photograph of various types of Chinese and Japanese of soy sauce sold in the San Francisco Bay Area. 1981.
• ***Summary:*** Back row (left to right): Superior Soy, Longevity Brand Soy Sauce, Superior Soy, and Westbrae White Tiger Tofu Sauce. The first three brands are Chinese style.

Front row (L-R): Westbrae tamari, illegible, Kikkoman soy sauce in table-top dispenser, illegible. Longevity Brand Soy Sauce.

The Chinese brands were purchased in San Francisco Chinatown by William Shurtleff, who also shot the photo at home on Mountain View Dr. in Lafayette, California.

7434. Sakaguchi, Koichi. 1981. Tomago no okazu, tôfu no okazu 500 sen [500 selected egg side dishes and tofu side dishes]. *Kamakura Orange Series* No. 2. 274 p. Illust. Index. 26 cm. (Kamakura Shobo, Tokyo). [Jap]
• ***Summary:*** Contents: Recipes–Eggs: Omelet, frying, boiling, tojiru, poaching, scrambling, steaming, raw, soups (Japanese, western, Chinese styles), sandwiches, drinks, lunch ideas, good cooking information–Do you know about eggs? Tofu: Raw, sauteed, stir-fried, fried, cooked in sauce, steamed, salads (*aeru*), soups (Japanese, western, Chinese styles), broiled, okara, deep-fried pouches, koya-dofu, deep-fried, ganmodoki (tofu burgers), good cooking information–Do you know about tofu? Writing about my challenge in tofu making. How to make menus.

American Linda Barber is mentioned on page 242.

7435. Sakata, Dai. 1981. Furushô Masakichi den [Biography of Masakichi FURUSHO]. Kumamoto, Japan: Aso-sha. 261 p. [Jap]*
• ***Summary:*** Mr. Furusho was a merchant in Kumamoto, Kyushu, Japan. His father started making shoyu in 1906 (Meiji 39) and received a kunsho award for promoting business.

7436. Sanford, James H. 1981. Zen-man Ikkyû. Chico, California: Scholars Press. xv + 321 p. Plus 7 unnumbered leaves of plates. See p. 279. Illust. Index. 24 cm. Series: Harvard Studies in World Religions, No. 2. (Harvard Univ. Center for the Study of World Religions). [126* ref]
• ***Summary:*** Chapter 5, "Tokugawa tales," explains (p. 245) that this compilation, made during the Tokugawa or Edo period (1600-1867), contains about 200 different stories collected about Ikkyû. While these collections purport to be a sort of popular biography of the eccentric figure, "few contain any certain biographical data save the most obvious sort, such that Ikkyû was a Zen monk of the 15th century who was known for his odd ways." Some of the talks are clearly not biographical.

The section titled "Poems for patriarchs" (p. 277-79) contains a poem that Ikkyû is said to have written a poem on the back of a painting of the Japanese Buddhist patriarch, Nichiren. The 2nd line read: "Priests like two piles of bean flour" (*Mame no ko ni fun Bôzu*). "Mame no ko" is an early word for *kinako* or "roasted soy flour." According to the endnotes, this poem is from: Tsujimoto Motosada. 1844. *Ikkyû shokoku monogatari.* 2 vols. In Kôda rohan, ed. 1911. Nihon Bungei Sôsho, Vol. 18. Tokyo: Tôô-dô.

Given the above words of caution, we cannot be sure that Ikkyû ever wrote the words *mame no ko,* and if he did, when.

Note: Ikkyû, a Zen priest, lived 1394-1481. A "Chronological table" (p. xiv-xv) includes Ikkyû's connections with Daitoku-ji, a Zen temple in northern Kyoto:

"1440–Ikkyû serves briefly as Abbot at Abbot of Daitoku-ji's Nyôi-an.

"1444–Nippô Sôshun appointed Abbot at Daitoku-ji.

"1447–Ikkyû attempts protest suicide after turmoil at Daitoku-ji.

"1452–Ikkyû settles into his Katsuro-an hermitage in Kyoto.

"1453–Daitoku-ji burns.

"1467–Onin war begins. Katsuro-an is destroyed.

7441. Teraoka, Hisayuki; Morii, F.; Kobayashi, J. 1981. Shokuhin-chû ni fukumareru 24 shu no genso ryô oyobi ichi nichi no genso sesshu-ryô ni tsuite [The concentrations of 24 elements in foodstuffs and the estimate of their daily intake]. *Eiyo to Shokuryo* (*J. of Japanese Society of Food and Nutrition*) 34(3):221-39. See p. 232-35. [Jap]

• ***Summary:*** The 24 chemical elements whose concentrations are given are: potassium (K), phosphorus (P), magnesium (Mg), calcium (Ca), sodium (Na), iron (Fe), silicon (Si), zinc (Zn), manganese (Mn), aluminum (Al), copper (Cu), boron (B), strontium (Sr), lead (Pb), titanium (Ti), barium (Ba), nickel (Ni), vanadium (V), molybdenum (Mo), silver (Ag), cadmium (Cd), cobalt (Co), tin (Sn), and chromium (Cr).

Concentrations (in micrograms per 100 gm) of these elements were measured in the following soyfoods: Soybeans 1,200, tofu (momen/regular) 410 (average of 2 samples), tofu (natural foods, probably made with nigari) 280, tofu (kinugoshi/silken) 280, and natto 770.

These aluminum concentrations were about average compared with the other foods tested. Examples of foods with much higher aluminum concentrations were: kombu seaweed 33,000, tsukushi (a vegetable) 22,000, white sesame seeds 4,400.

Note: This is the earliest document seen (Aug. 2002) that gives the concentration of aluminum in soybeans or soyfoods. Address: Inst. for Agricultural and Biological Sciences, Okayama Univ., Kurashiki, Okayama, Japan.

7442. Yokotsuka, Tamotsu; Sasaki, M. 1981. Risks of mycotoxin in fermented foods. *Advances in Biotechnology* 2:461-66. [37 ref. Eng]

• ***Summary:*** "In the production of Japanese fermented foods such as shoyu, miso, and sake, the major enzyme source is *Aspergillus* molds such as *A. oryzae* and *A. sojae.* Many investigators have failed to find a single aflatoxin producer among the *Aspergillus* molds used for food fermentation. Some cultures produced fluorescent compounds having Rf values resembling those of aflatoxins, further investigations, however, indicated that these compounds were 7 kinds of nontoxic pyrazine compounds including flacacol, isocoumarin compounds, lumichrome, and other compounds than aflatoxins. *Aspergillus* molds were also checked for

7447. *Tetra News*. 1981? Soymilk becomes new mainstay of product lines at Okazaki Marusan Co. Undated.
• ***Summary:*** Okazaki Marusan Co. was established in 1952 and has grown rapidly in the past 3 decades to become one of Japan's five major miso manufacturers. Miso presently accounts for over 80% of the company's total sales revenues. Mr. Michinobu Nabeta, Managing Director, says the company's short-term objective is "to become a health foods manufacturer."

"The first product resulting from Marusan's R&D program for soymilk launched a decade ago was 'Doujan' (Chinese for soymilk) which was commercialized eight years ago. 'Doujan contains the essence extracted from pearl barley and kelp and is a health food that is marketed through a health-conscious consumer organization that has a good reputation,' Mr. Nabeta comments.

"It's Marusan Tonyu (soymilk) in a 250 ml gable-top carton went on sale 2 years ago, and last year Tonyu in a Tetra Brik Aseptic 200 ml carton was introduced... The company's 'Tonyu,' 'Orange Tonyu' and 'Malt & Tonyu,' all in Tetra AB cartons [and on the market by 21 July 1981 in 200 ml cartons] are distributed nationwide to supermarkets; thus, the sale of these products is growing.

"In recent years the soymilk market [in Japan] has expanded steadily, and it is estimated that the market will grow from ¥3,100 million in 1980 to ¥5,000 to ¥6,000 million this year. 'The market will reach ¥6,000 million or thereabouts this year; many believe the market will grow by 30% in 1983, though part of the industry predicts a ¥10,000 million market. In the future we expect the market to grow to a ¥50,000 million to ¥60,000 million market, or comparable to the tomato juice market. Our company and other soymilk suppliers hope that the soymilk market will eventually share 10% of the cow's milk market,' Mr. Nabeta says."

"The company has been tapped by some U.S. companies [including Eden Foods] for soymilk manufacturing ventures in the U.S., but Mr. Nabeta believes the company should concentrate on the domestic market, at least for the time being."

7448. *Toyo Shinpo* (*Soyfoods News*). 1982. [Lots of talk of nigari and many interested in calcium sulfate]. Jan. 1. [Jap]
• ***Summary:*** Last year nigari was not used that much; but there was much talk about it.

7449. *Toyo Shinpo* (*Soyfoods News*). 1982. [Japanese national tofu statistics for 1981]. Jan. 1. [Jap]
• ***Summary:*** In 1981 in Japan, the average amount of money spent on tofu per family was 6,274 yen, which bought about 87 cakes of tofu. The amount spent on aburage [deep-fried tofu pouches] per family was 3,534 yes, which bought about 93 pieces.

In 1980 the amount of soybeans used nationwide was 319,568 tonnes (metric tons) for tofu and 112,108 tonnes for deep-fried tofu pouches and tofu burgers (aburage and ganmodoki).

In 1981 the amount of soybeans used nationwide was 328,557 tonnes for tofu and 115,157 tonnes for deep-fried tofu pouches and tofu burgers (aburage and ganmodoki).

7450. Evans, Barry. 1982. Re: The American Miso Company announces the opening of its miso shop in North Carolina. Linden's Elf Works is sole agent in marketing and distribution. Letter to Friends of The American Miso Company, Jan. 4. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Dear Friends–We at The American Miso

© Copyright Soyinfo Center 2014

Company are proud to announce the opening of our miso shop in Western North Carolina. This long awaited dream of making American miso has evolved from a genuine need here in the United States for an unpasteurized miso made with organic ingredients and fermented under natural conditions in large wooden vats."

"Through the joint efforts of producer John Belleme and his teacher, Takamichi Onozaki from Yaita, Japan, we are now making absolutely delicious miso that will strengthen the body and delight the palate.

"The Lindenself Foundation, doing their business as Linden's Elf Works, located in Piedmont, North Carolina, has been appointed as the sole agent in marketing and distribution of The American Miso Company brand products... Their address is Route 1, Box 43-D, Rougemont, North Carolina. Your phone contact is John Troy at... 919/364-2723. Enclosed is the Linden's Elf Works distributor price sheet which includes all the pertinent information for your upcoming Spring catalogue. With kindest regards, Barry Evans, President."

Note 1. This letter was precipitated by Erewhon Trading Company's announcement in Nov. 1981 that it was filing for Chapter 11 bankruptcy. Note 2. This is the earliest document seen (June 2000) that mentions the company's new name, "The American Miso Company." Note 3. This is the earliest document seen (July 2000) that John Troy of Elf Works in connection with miso or soy.

Note 4. Talk with Barry Evans, owner of American Miso Co. 2000. June 29. Linden's Elf Works never distributed any miso made by AMC; Great Eastern Sun, Barry's new company, was the distributor. During the first year or two, John Troy purchased a significant percentage of the miso made by AMC for his sauces and dressings. To this day, he remains an important friend and advisor, but the percentage of miso he buys is now quite small. Joel Dee, a pioneer with his Miso Cup, worked with John Troy. Joel lived in the little town Saluda, North Carolina, where John Belleme lives today. Last year, Joel introduced Organic Miso Cup using miso from AMC; he is now a significant customer. Address: President, The American Miso Company, Rutherfordton, North Carolina.

7451. Iizuka, Hiroshi. 1982. Re: Early history of shoyu. Letter to William Shurtleff at Soyfoods Center, Jan. 8. 2 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** As Dr. Yokotsuka suggested in his letter [of 22 Dec. 1981], the word *chiang-yu* seems most likely to have been used for the first time in Japan. The first reference in Japan [to shoyu or chiang-yu] is generally regarded as the Ekirinhon-setsuyoshu [Ekirinbon]. The best history of shoyu he can think of is the Kikkoman Shoyu-shi (1968). "The best shoyu historian that we know is Mr. Morio Ichiyawa [sic, Ichiyama], the author of the original edition of the above-mentioned book. Mr. Ichiyama used to work for Kikkoman and was long engaged in the compilation of the company's history. After having served as the [Noda] City Museum Curator, he leads a retired life in Noda City. He is 85 years old." Address: Senior Asst. Manager, Planning, International Operations Dep., Kikkoman Corp., 25 Kanda Nishiki-cho 1-chome, Chiyoda-ku, Tokyo 101, Japan. Phone: 03-233-5610.

7452. Stone, Dave. 1982. History of Ralston Purina's work with edible soy protein products (Interview). Conducted by William Shurtleff of Soyfoods Center, Jan. 13. 1 p. transcript.
• ***Summary:*** In 1961 Ralston Purina made its first edible soy protein product, a soy protein isolate.

In the mid-1960s Ralston started to make a textured soy flour, Supro-50. They still make this but do not emphasize it much.

In 1970 Ralston opened Purina Protein Europe, in Brussels. This was a sales and marketing office that imported Ralston Purina products from the U.S. It is still going great.

In Oct. 1962 Ralston introduced its first spun soy protein fiber (named Textured Edi-Pro).

In 1972 Ralston introduced its first soy/dairy blend (Dairy-Pro).

In 1973 Ralston Purina started its joint venture (named Fuji Purina) with Fuji Oil Co. of Japan; it is still in operation.

In 1977 Ralston introduced its first textured soy protein isolate; it was in granule form.

In 1979 in Ieper, Belgium, Ralston opened a plant making a line of isolate products made from soybean flakes purchased on the open market in Europe.

Edi-Pro was an isolated soy protein.

Ralston's protein division buys its raw materials from the Ralston Commodities Group. Address: Protein Div., Ralston Purina Co., St. Louis, Missouri. Phone: 314-822-3187.

7453. Sheridan, Margaret. 1982. Touring a tofu factory 6,000 miles east of the Orient. *Chicago Tribune.* Jan. 14. p. 1, 3.
• ***Summary:*** Tofu is on the rise in America, where there are now about 150 tofu shops. Although a growing number of supermarkets are now selling tofu, and more restaurants are serving it, it is still new to many Americans. There are four tofu factories in Chicago; this article is based on a visit to one of them, MU Tofu, run by Rebecca and Yoshihara Uchida. The word "MU" comes from her maiden name, Miller, two years ago, and his family name, Uchida. They met in 1977, when they both worked in the field of cameras. "A common interest, tofu and its manufacture, started to jell when he was transferred back to Japan. She followed, they married," and decided to start a tofu shop. So they apprenticed themselves to a tofu maker–who thought they were crazy. Describes how soft and firm tofu are made at MU Tofu. "Uchida believes tofu has the same marketing potential as yogurt." He believes it will become part of the

© Copyright Soyinfo Center 2014

American diet. Includes recipes for Tofu lasagna, Potato surprise, Cheese tofu dip, and Tofu carrot cake. A photo shows Yoshihara Uchida removing tofu from a metal forming box.

Note: This is the second earliest document seen (Feb. 1999) which compares the potential market for tofu with the current market for yogurt.

• ***Summary:*** Decreasing water activity (Aw) was found to be a practical way to reduce browning. Address: Dep. of Food & Nutrition, Ochanomizu Univ., Ohtsuka 2-1-1, Bunkyo-ku, Tokyo 112, Japan.

7457. Ichishima, Eiji; Kato, M.; Wada, Y.; Kakiuchi, H.; Takeuchi, M.; Takahashi, T.; Takimami, K.; Hirose, Y. 1982. Spore fatty acid composition in *Bacillus natto,* a food microorganism. *Food Chemistry* 8(1):1-9. Jan. [23 ref. Eng]

• ***Summary:*** Natto is a popular and economical fermented food in Japan. In 1976, 124,000 metric tons (tonnes) of natto were produced. The growth of *Bacillus natto* on the surface of natto soybeans creates compounds that are parts of its characteristic tastes and flavors, such as tetramethylpyrazine. Address: 1-6. Dep. of Agricultural and Biological Chemistry, Tokyo Noko Univ., Fuchu, Tokyo 183, Japan; 7-8. Central Research Labs., Ajinomoto Co., Inc., Suzukicho, Kawasaki 220, Japan.

7458. Morinaga, Takamasa. 1982. [Re: On saishikomi or double-fermented shoyu]. Letter to William Shurtleff at Soyfoods Center, Jan.–in reply to inquiry. 2 p. [Jap; eng+]

• ***Summary:*** Saishikomi shoyu is said to have originated in about 1780 in Yanai city, Yamaguchi prefecture; this is written in the History of Yanai city in Yamaguchi-ken. (Note: Yamaguchi prefecture is the southwestern-most prefecture on Honshu, Japan's main island, located just to the north of Kyushu.) Traditionally saishikomi shoyu was produced in the five prefectures in the Chugoku-Chiho of southwestern Honshu: Yamaguchi, Shimane, Hiroshima, Okayama, and Tottori. Recently, however, its has begun to spread throughout Japan.

In the old days, saishikomi shoyu was another name for *Kanro Shoyu.* The latter was a special item (*tokusan-hin*) of Hiroshima and Yamaguchi prefectures, but there is very little documentation for this early product. Later [after World War II] the two names were unified by the Japanese Agricultural Standards (*Nihon Norin Kikaku*).

Generally saishikomi shoyu is used as a "pouring shoyu" (*kake-shoyu*), especially valued on sashimi and sushi. But recently it is also starting to be used as an all-purpose shoyu in cooking.

According to the Japan Agricultural Standards (JAS) there are two types of saishikomi shoyu: *Honjozo* type (traditionally fermented) and *shinshiki-jozo* type (semi-fermented using HVP = *aminosan-eki*). Yamaguchi prefecture produces the largest amount of *Honjozo.* The three largest manufacturers of this product, in descending order of size, are: Yanai Shoyu Ltd., K.K. Sagawa Shoyu-ten, and K.K. Shimaya. K.K. Shimaya produces a "Soft Type" of Saishikomi (1.8% total nitrogen) which is developing a good reputation.

The above-mentioned *shinshiki-jozo* type of saishikomi shoyu is also made in Chugoku-Chiho, but mostly on the northern side, bordering the Japan Sea in Tottori and Shimane prefectures. In addition, Kinoene Shoyu K.K. of Noda city in Chiba prefecture also started to sell this type of saishikomi. They use up to 20% of an ingredient named "sweetness extract (*Umasa Ekisu*)." Address: K.K. Shimaya, Fukukawa 637, Oaza, Shin-Nanyo-shi, Yamaguchi-ken, Japan.

eikyô [Influence of dry treatment after harvest on quality of soybean seeds. VI. Influence of combine harvesting and drying of low moisture seed on qualities for soybean food processing and tests for factory production of tofu and natto]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 39. p. 23-31. Jan. [7 ref. Jap; eng]

• ***Summary:*** Two harvesting methods and 4 drying methods were tested with the middle-sized seed variety Kitamishiro (Table 1). Address: 1. National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan; 2-4. Hokkaido National Agric. Exp. Station, Memuro, Hokkaido, Japan.

7461. Wood, Brian J.B. 1982. Soy sauce and miso. *Economic Microbiology* 7:39-86. Jan. A.H. Rose, ed. Fermented Foods. [50 ref]

• ***Summary:*** Contents: 1. Introduction. 2. The preparation of soy sauce: Introduction, preparation of raw materials (the beans, wheat), mixing, koji, moromi. 3. Of beans, microbes, and miso: Beans, microbes, miso. 4. Trade in soy sauce: Introduction, statistics. Table 1 (p. 64-66) shows exports of soy sauce in 1978, in tonnes (metric tons) from Hong Kong, Korean Republic, Singapore, Japan, and total, to almost every country in the world (with each country's population in millions), grouped by region as follows:

1. North America: Canada, USA (#1)–Regional total imports: 6,052.3 tonnes.

2. South and Central America [and Caribbean]: Argentina (#3 in region), Bolivia, Brazil, Chile, Costa Rica, Ecuador, El Salvador, Guatemala, Guyana, Honduras, Mexico (#2), Nicaragua, Panama, Paraguay, Surinam, Venezuela (#1), Granada, Jamaica, Trinidad and Tobago, total. Former Dutch West Indies–Regional total imports: 1,046.4 tonnes.

3. Europe: Austria, Belgium, Czechoslovakia, Denmark, Finland, France (#4 in region), Germany (West #3), Greece, Italy, Netherlands (#2), Norway, Portugal, Spain, Sweden, Switzerland, UK (#1), USSR–Regional total imports: 3,017.7 tonnes.

4. Near and Middle East: Bahrain (#3), Egypt, India, Iran (#2), Iraq, Jordan, Kuwait, Oman, Qatar, Saudi Arabia (#1), United Arab Emirates, Yemen Arab Republic–Regional total imports: 1,193.5 tonnes.

5. Far East and Western Pacific: Brunei, Hong Kong (#3 in region), Indonesia, Japan, Korea (South), Macao, Malaysia (#2), Philippines, Sabah (#1; A state of Malaysia from 1963; Formerly British North Borneo), Sarawak (A state of Malaysia from 1963), Singapore, Taiwan, Thailand–Regional total imports: 3,139.4.

6. Pacific and Australasia: Australia (#1 in region), Cook Islands, Christmas Islands, Fiji, Guam (#2), Nauru, New Caledonia, New Hebrides, New Zealand, Oceania n.c.s. (#3), Papua New Guinea, Portuguese Timor, Samoa and Tonga, Solomon Islands, Tuvalu (Ellis Island), U.S. Oceania–Regional total imports: 1,647.5 tonnes.

Note: This is the earliest document seen (March 2010) concerning soybean products (soy sauce) in Kiribati (Christmas Islands), in Nauru, in Qatar, in Portuguese Timor (later renamed Timor-Leste [East Timor]) or in Tuvalu. This document contains the earliest date seen for soybean products in Kiribati (Christmas Islands), in Nauru, in Qatar, Portuguese Timor, or in Tuvalu (1978); soybeans as such have not yet been reported.

7. Africa: Algeria, Canary Islands, Ethiopia, Gambia, Ghana, Kenya, Libya, Malagasy, Malawi, Mauritius (#2 in region), Nigeria, South Africa (Republic of, #1), Sudan, Réunion Islands (#3), Tanzania, Zaire. Other African countries–Regional total imports: 365.7 tonnes. World total imports: 15,731.5 tonnes, of which 6,192.8 tonnes from Hong Kong, 1,233.5 tonnes from South Korea, 1,713.6 tonnes from Singapore, 6,591.6 tonnes from Japan. The value in pounds sterling and in pounds sterling per tons of soy sauce is given for each exporter.

Other tables show: (2) Soy sauce exports (in tonnes and value) each year from 1976 to 1976 from Hong Kong, South Korea, Singapore, and Japan. A large percentage of Hong Kong's exports are re-exports (probably from China). (3) Total soy sauce exports from Japan, 1976-1978, by container type, with amount and value. (4) Soy sauce and miso production in Japan every 5 years from 1965 to 1978 (in tonnes). (5) Soy sauce and miso production in Japan for export in 1976, 1977, and 1978. Miso production (in tonnes) averaged about 40% of soy sauce production, and miso exports (in tonnes) averaged about 13% of soy sauce exports. (6) Imports of soy sauce into Hong Kong, Singapore, and the USA from exporting countries in 1978 (with figures for exports from China in 1976 and 1977). (7) Re-exports of soy sauce (made in China) from Hong Kong and Singapore in 1978 to major importing countries worldwide, by region, by country. Small countries that are the destination of this soy sauce include: Honduras, Nicaragua, Panama, Venezuela, Trinidad and Tobago, Former Dutch West Indies [also called Netherlands Antilles; they are part of the Lesser Antilles and consist of two groups of islands in the Caribbean Sea: Curaçao and Bonaire, just off the Venezuelan coast, and Sint Eustatius, Saba and Sint Maarten, located southeast of the Virgin Islands. The islands form an autonomous part of the Kingdom of the Netherlands], Pakistan, Saudi Arabia, United Arab Emirates, Brunei, Sabah, Sarawak, Fiji, Nauru, Oceanea (non-U.S.), Oceanea (U.S.), Papua, Samoa and Tonga, Solomon Islands, Ghana, Malagasy Republic, Togo. Total from Hong Kong: 2,945.3 tonnes, and from Singapore 109.5 tonnes.

(8) Exports of miso (in tonnes) from South Korea and Japan in 1978 to major importing countries worldwide, by region, by country. The leading importers are: USA (622), Saudi Arabia (353), Singapore (66), Bahrain (64),

© Copyright Soyinfo Center 2014

Netherlands (38), Iran (29), Iraq (29) France (28), German Federal Republic (23), Smaller importers include: Chile, Guyana, Surinam, Bangladesh, Iran, Iraq, Jordan, Kuwait, Quatar, Saudi Arabia, United Arab Emirates, Yemen Arab Republic, Sabah, Fiji, Guam, New Hebrides, Papua New Guinea, Samoa, Solomon Islands, Algeria, Canary Islands, Ghana, Kenya, Libya, Mozambique, South Africa Republic, Zaire.

Note: This is the earliest document seen (June 2007) concerning soybean products (miso) in Quatar. This document contains the earliest date seen for soybean products in Quatar (1978); soybeans as such have not yet been reported.

(9) Exports of miso from South Korea and Japan in 1976, 1977, and 1978 (quantity and value each year; no importing country names are given).

5. Tour of South East Asia: Technical and scientific aspects, trade aspects. 6. Acknowledgments. References

The chapter on Trade states: Soy sauce and soy paste (miso) are traded between all countries of South East Asia. The Korean Republic's exports nearly quadrupled in tonnage. The Kikkoman Company's production facility in Wisconsin produced 21,6000 tonnes of soy sauce in 1978. This was equal to 3 times the total exports from Japan in the same year. Japan's total share of the world soy sauce market remains very healthy. Miso exports are still small in comparison with soy sauce. On a rising market Japan's exports still only represent 0.2% of its annual miso production; "clearly there is considerable room for expansion here."

Miso is of greater relative importance to Korea than it is to Japan. Among the European countries, Belgium and Holland import the greatest amount of miso on a per capita basis. Spain imports a fair amount of miso. The U.S.A. and Canada had total miso imports totaling about 10% of their soy sauce imports.

"In Thailand, there are about 50 soy sauce factories, the majority of which are small, producing less than 100 kilolitres per year, although it should be noted that most of them also produce soybean paste and soybean cheese [probably tofu]. The total annual consumption of soy sauce in Thailand is estimated at about 6,000 kilolitres (about 7,200 tonnes).

"In Malaysia, there are about 140 soy sauce factories producing in total an estimated 5.5 million gallons of soy sauce per year according to the proprietor of a leading brewery in Kuala Lumpur. This is about 21,000 tonnes per annum" (p. 84). Address: Dep. of Applied Microbiology, Univ., of Strathclyde, Glasgow [Scotland], U.K.

7462. Wollner, Joel. 1982. History of Erewhon, macrobiotics, and soyfoods in America (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 2. 2 p. transcript.

• ***Summary:*** Evan Root was the first attendant at the Erewhon retail store, below street level at 303-B Newbury Street. He lacquered the walls with Michio. Evan is a great storyteller, very intelligent. The initial store was just one room, about10 by 20 feet. Very few people came in to buy food, so it was more like a stock room than a store. Some evenings there were lectures there. Redwing Books now occupies that space. Most of the food (a tin of miso, a keg of tamari) was just being sent by the Kushis' friends from Japan as gifts; it didn't go through customs.

The Kushis got nigari and made tofu at home. It was not for sale, but for dinner guests and cooking classes. Joel made some tofu using lemon juice when nigari was not available.

As tofu started to become more popular, Erewhon started to buy it from a tofu maker in Boston's Chinatown. First they just bought and sold that tofu, but before long (in about 1973-74) they convinced him to start making nigari tofu for them. They guaranteed to buy what he made, and they sold him the nigari at cost. This might have been the first nigari tofu made in USA. A lot of nigari tofu is still made in Boston's Chinatown. Joel thinks the tofu maker was located on Tyler, Street, perhaps Yah Kee. Nigari came in 66 pound sacks from Japan. Erewhon also sold small quantities of nigari in the retail store. Chinatown was Erewhon's main source of tofu until Laughing Grasshopper appeared.

What was the macrobiotic movement's contribution to the history of soyfoods in the United States? Macrobiotic teachers and students talked and wrote about them, ate them, and sold them. They felt soyfoods were an important part of a good diet. They educated people and developed a market for soyfoods. Few Americans had eaten miso and tofu at home before 1966–the year Erewhon started. Macrobiotics were the first Caucasian Americans to really use soyfoods regularly. Before that, soyfoods (except perhaps soy sauce) were just interesting oddities. Once could say that the macrobiotic movement introduced soyfoods to America.

As for tofu, Joel thinks that Michio Kushi's students misinterpreted his remarks about tofu being yin. Macrobiotics now eat tofu regularly, 3-4 times a week. There are endless ways to prepare it. It's been years since Joel has heard that tofu is "too yin."

What did *The Book of Tofu* (published in Dec. 1975) do for tofu? It expanded its relevance for the Western diet. Before that book, most of the tofu in the United States was consumed by people of East Asian ancestry.

Charles Kendall played a key role in making and introducing natto, mochi, and amazake to Caucasian Americans. He made these foods in his home and sold them locally. Initially, it was not a formal / legal business. But today his business, Kendall Foods, sells $500 a week of these three foods. He has been making natto for 4-5 years. He was America's first Caucasian natto maker. Natto was served in macrobiotic restaurants in Boston.

The latest soyfood to hit Boston has been tempeh. It's been a phenomenal success. Macrobiotics are going crazy

© Copyright Soyinfo Center 2014

over it. Thom Leonard has been giving lots of tempeh classes for the past 1½ years. For more than a year, lots of sandwich makers in Boston have been making and selling tempeh sandwiches. Tempeh is made into cutlets, burgers, tempeh mock-tuna salad. Why is it so popular? Because it is rich and meaty in texture and flavor–the opposite of rice. Most macrobiotics crave rich, meaty foods.

Ron Kotzsch is very close to the Kushis. A very unpretentious person with a wonderful sense of humor, he is now teaching in North Carolina. He is friends with Helen and Scott Nearing. He toured China and Japan with John Denver, the singer and songwriter–who did a benefit for Michio's new college.

How does Joes see the future of Erewhon? He thinks the company will focus on manufacturing only. Now is the critical time. He'd give Erewhon a 30-70% chance of survival. Address: Boston, Massachusetts.

7463. Takase, Katsumaro. 1982. Re: History of Higashimaru Shoyu K.K. and light-colored (usukuchi) shoyu. Letter to William Shurtleff at Soyfoods Center, Feb. 5–in reply to inquiry. 1 p. [Jap; eng]
Address: 100-3 Tominaga, Tatsuno-cho, Tatsuno-shi, Hyogo prefecture 679-41, Japan.

7464. Dwan, Lois. 1982. In Japanese dining, let the chef do the worrying. *Los Angeles Times.* Feb. 7. p. L94.
• ***Summary:*** This article contains many errors. *Teri* is not the word for sauce, but rather that word for "shine" or "shining." *Miso-shiru* (miso soup) is not made from "fermented bean-cake" but from fermented soybean paste.

7465. Hillyard, Roger. 1982. History of Erewhon, natural foods, and macrobiotics in America. Part I (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 7. 2 p. transcript.
• ***Summary:*** Roger got involved with macrobiotics in San Francisco in about 1965. He lived in San Francisco, was doing light shows at the Avalon Ballroom, read the book *You are All Sanpaku* [by Sakurazawa Nyoiti (George Ohsawa); English version by William Dufty], and got involved. Also in about 1965, Herman Aihara and Bob Kennedy used to come to town to lecture in a church on Oak Street. Bill Tara and Paul Hawken, who were filmmakers, lived in a warehouse on lower Mission St. described in the *Electric Kool-Aid Acid Test,* by Tom Wolfe (largely about Ken Kesey and the Merry Pranksters). "A little macro scene started. We heard that Boston was macro Mecca."

Roger arrived in Boston in Oct. 1969. Erewhon started when Michio and Aveline Kushi were living in Cambridge, Massachusetts; in their basement they had a little food, which they would sell to people who came to hear Michio lecture. "The food was but a vehicle to the larger teaching. The food is like an asana or yoga posture, but the goal is enlightenment. You can get stuck on the food. That is why Michio had very, very little involvement in Erewhon's food business. His focus was on the philosophy of macrobiotics and spreading it."

The Erewhon store was (at the time) in the basement of today's Redwing Books. Evan Root started the store, but he wanted to get out of it into a restaurant. Paul Hawken took over the sleepy little store. Bill Tara (who was from Santa Cruz) also worked there for a while. The tiny store had few customers, a very limited selection of products, and a little mail order business. Shortly after Roger arrived, the Erewhon store at 342 Newbury Street opened–in Nov. or Dec. 1969. Bruce Macdonald and Jim Docker helped to renovate the new store. The whole thing was called Erewhon Trading Co. In Feb. 1970 Roger started to work in this retail store.

Shortly thereafter, Paul Hawken went to Japan. At that time the only companies importing food from Japan were Chico-San and Infinity Foods in New York; both were macrobiotic. Erewhon bought from them, and then started doing a little wholesaling. After Paul went to Japan, Erewhon started importing directly from Japan. Paul got in touch with Mr. Kazama and helped to get Mitoku into the natural food export business. Kazama was an old friend of Obiyashi, who was an old friend of Michio Kushi's from Columbia University. Muso was shipping to Chico-San and Infinity. Erewhon imported from Muso and Kazama. Roger thinks Mitoku started in about 1970-71. Before that they sold soccer shoes and cranes. The fact that Paul was in Japan was instrumental in getting Erewhon's imports started.

The Erewhon retail store would sometimes get huge shipments, such as a 40-foot-long truck of rice that filled up the whole Erewhon storeroom. It was something like Kokuho Rose [a brand of short grain brown rice grown by Koda Bros. in Dos Palos, California]; it was not organically grown. There was really no room for it, and no refrigeration. At about this time the Lundberg Brothers in California started growing brown rice organically. At one time a boxcar of 100,000 lb of Lundberg rice arrived, so Erewhon needed more warehouse space. Also involved were Jean Allison (from California) and Wally Gorell (from the San Francisco Calliope Co). In about mid-1970 Erewhon leased a 10,000 square foot warehouse space on the 5th floor of 33 Farnsworth St. [a big brick warehouse] in Boston. The space had a nice milling room. Then the wholesale business took off. Roger left Boston in April 1971. He had been running both the distributing company and the wholesale company, but there was a store manager. The retail store expanded into its back room. Then the wholesale business grew like mad. Orders came from non-macro natural foods stores, from new macro groups, etc.

How did the natural food movement get started? As Roger recalls, it was not started by macros. In about 1966 or 1967 Sunset Natural Foods became New Age Foods,

© Copyright Soyinfo Center 2014

an early natural foods store run by Fred Rohe. The natural food movement sprung out of the new consciousness–the counterculture–as did macrobiotics. The macrobiotic movement fed the natural foods movement. One Erewhon customer was Mr. Natural in Carbondale, Illinois. Although he was not a macro, he bought miso, tamari, rice, etc. There were lots of other non-macro stores like that too. But there were also lots of macro stores. Bill Tara opened a store and macro center on the 14th floor of a downtown building in Chicago; out of that grew Food for Life. Tom Waxman started Essene in Philadelphia, Pennsylvania. These were two mini-Erewhons. Each started as a small retail store, then became a wholesaler. Erewhon provided the model.

Erewhon set up a branch distributor in Canada, which later became Manna Foods, with Gene Newman, a macro. Westbrae was a Berkeley political organization started by Bob Gerner, making granola. Erewhon West was connected with Bruce Macdonald. Bill Tara, with Aveline Kushi's prodding, started the Erewhon store in Los Angeles; it did a little distributing. Bruce Macdonald went to Los Angeles, then Bill Tara left for England–Roger doesn't know why. Erewhon West started growing. Jimmy Silver ran the Big Sanae, which became the Seventh Inn. Roger then went to Texas and in Jan. 1972 he worked with Deaf Smith for about a year. Later Erewhon West was sold to John Fountain, but really to John Demming–as a separate business from Erewhon.

The Well [a wholesale and distribution company in San Jose, California] was an offshoot of Fred Rohe's New Age Foods, ca. 1969-1970. It was never macrobiotic. Fred sold stock in his business, had 2 stores in San Francisco, then opened a big natural foods store [actually a supermarket] named New Age Natural Foods on California Street in Palo Alto. The whole thing was a fiasco; the Palo Alto store never made money.

Deaf Smith Farms was established as a joint venture between Erewhon and Arrowhead Mills; it never worked out. In April 1971 Bruce Macdonald started a marketing company named Pure & Simple. In March 1972 Roger started working at the Well in San Jose. Bruce went to Green Mountain Grainery in Boulder, Colorado. Gradually The Well became Pure & Simple, and started importing from Mr. Kazama and Muso.

Paul Hawken was the first person to work with farmers to get them to grow grain organically for Erewhon. One of these was Carl Garrich of Lone Pine, Arkansas–after Erewhon moved to 33 Farnsworth Street. Roger did a lot of work with farmers at Arrowhead Mills, but not connected with macrobiotics.

Major macrobiotic wholesale distributors: Erewhon East and West, Laurelbrook (later), Food for Health, Essene, Manna in Canada (later). Llama (later) was not macro.

Macrobiotics played the major, primary role in introducing soyfoods to America. A little was also coming through Japan Foods [San Francisco] and Nishimoto [Trading Co., Los Angeles]. The macros made these foods available, but don't overcredit it; the time was ripe and it just happened. The main contribution of macrobiotics was simply making these foods available and teaching about them. Michio always said that macrobiotics is not just about food and the diet.

"It was frightening when we stopped to think about it. The business was doubling and tripling at a crazy rate." Roger still has his early notes but no accounting books. Continued. Address: California.

7466. Hillyard, Roger. 1982. History of Erewhon, natural foods, and macrobiotics in America. Part II (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 7. 2 p. transcript.

• ***Summary:*** While Roger was in Boston, no tofu was sold at the Erewhon retail store at 342 Newbury St.–since there was no refrigeration and no room. He thinks tofu was introduced after Erewhon got 33 Farnsworth St.

The trickiest question, which has no place in this book, is about work as a disciple / discipline vs. for money / as business. Work can be a spiritual practice (*karma yoga*), and that is how many of the early workers at Erewhon viewed it.

Roger does not know why so many people left Erewhon. Maybe Michio Kushi planned it that way. He does not know why Erewhon went bankrupt; maybe it was because the company was undercapitalized, there was no worker equity, and Michio did not know American business. "Maybe Michio did not care so much. Distributing foods was always a minor focus for Michio."

Other macrobiotic food distributors outside the U.S. were Lima in Belgium (by far the earliest), Harmony and Sunwheel in England, and some company in Italy. Address: California.

7468. Hayashi, Kazuya. 1982. [Re: Use of enzymes in modern shoyu production in Japan]. Letter to William Shurtleff at Soyfoods Center, Feb. 15. 5 p. Handwritten, without signature. [Jap; eng]

• ***Summary:*** Dr. Hayashi specializes in the use of enzymes (especially protease) in shoyu at Kikkoman's Central Research Laboratory. 1. Use of enzymes with shoyu in Japan: The use of added commercial enzymes was approved by the newly revised Japan Agricultural Standard (JAS, 1980). The use of an enzyme-treated solution in "new-type shoyu" [*Shinshiki*] and amino-acids mixed type shoyu was approved. However only a few commercial products in Japan today are actually made with the use of commercial enzymes because (1) the enzymes are too expensive, (2) the effect of the enzymes is not significant since most manufacturers use the "all-koji" method, and (3) in a salt solution of high concentration, the effect of the enzymes is greatly reduced. Examples of actual current use: The Shono Starch Co. Ltd. uses enzymes form making a product named "Umamigen." Corn is treated with an enzyme solution in making shoyu. Kikkoman has a patent on making shoyu using 100% enzyme solution. It calls for the use of yellow koji enzyme (peptidase) and glutaminase. The quality is fine but the product is too expensive. This method is good when the presence of aflatoxins could be a problem. In the future a low-salt, high-temperature digestion method may allow the use of enzymes (cellulase digestion, peptidase digestion).

2. High temperature fermentation method: This research was started in about the 1920s. The research on low-temperature fermentation began in about the 1930s. In the early period, this was called the *sokujo* or "rapid method" of fermentation; the temperature was raised to 30-35ºC. The quality was bad due to elution of some key flavor components, and because the glutamic acid content was lower. Also, the environment was not favorable to microbial growth. Use of the low-temperature method produces better quality shoyu. Use salt water (less than 5ºC) for starting. For the first 15-30days, keep at 15ºC. After one month, raise the temperature to 25-27ºC to complete the fermentation, then maintain at about 20ºC. This is suitable for the breakdown of the material by bacteria.

3. Addition of yeasts and lactic acid bacteria to the shoyu fermentation process began around the 1960s. Only the yeast *Saccharomyces rouxii* is used in practice. *Torulopsis* is for experimental use only. Lactic acid bacteria are not yet adapted to actual production. Use of epoxy-lined tanks is also important.

4. Bansui (using a second pressing of the shoyu): Only a few shoyu makers use this method since the product quality is bad and it cannot be sold. For details, see Kimura 1914.

5. Chemical shoyu: During the Taisho period (1912-1926) and Showa period (1926+) Dr. K. Kurono/Koruna Kanraku at the Fermentation Research Institute did early work. The use of amino acids spread. In the early Showa period Ajinomoto company was a leader under Dr. Hori Shinichi. During the period 1945-55 Mieki, a glutamic acid solution, was produced in large quantities (180,000 kiloliters). Improvement of amino acid solution purification led to cheap but tasty shoyu. Then came new-type (*Shinshiki*) shoyu. Bunzo Rokusho and the Mantetsu [Manchurian Railway] Research Institute did research in the early Showa period. During the period 1945-55 new-type shoyu making became widespread. Defatted soybean meal was digested with a weak acid and wheat koji was added to make shoyu.

6. History of the use of POBB (Para-oxy Butyl Benzoate): 1924–Sabalitscka discovered this food preservative. 1934–Dr. Kurono tested the effect on shoyu. 1937–Its use was approved for use in shoyu by the Japanese government. 1948–Use was approved as a food additive. The effect is great but the solubility is low.

7. Making koji for miso: The use of koji boxes is more popular, but the rotary drum is also used.

8. The future of the shoyu manufacturing process: Treatment of raw material and koji making will be spontaneous and automatic. Use of outdoor fermentation tanks. Continuous pressing. Improve sanitation by using a closed system. Digestion without salt. Liquid fermentation. Automatic control of microorganisms. Introduction of computerized system. Use of new raw materials and new microorganisms. Introduction of the fixed-enzyme method. Use of membrane filtration method. Address: Central Research Lab., Kikkoman, Noda, Japan.

7469. *Toyo Shinpo* (*Soyfoods News*). 1982. Zenkoku hanbai [Table shows wholesale and retail prices of tofu in each prefecture in Japan]. Feb. 21. p. 5. [Jap]

• ***Summary:*** The average wholesale price of 1 cake (400 gm) of tofu is 68 yen.

7470. Ishii, Masaaki. 1982. Miso production and consumption in the United States (Interview). *SoyaScan Notes.* Feb. 23. Conducted by William Shurtleff of Soyfoods

Center.
• ***Summary:*** As of Sept. 1981 Miyako Oriental Foods makes more than 500 tonnes (metric tons) of miso a year. U.S. mainland miso consumption is about 1,500 tonnes. Of this, 834 tonnes is imported from Japan. Address: Manager, Agriculture, JETRO, Japan Trade Center, Bank of America Tower, 555 S. Flower St. 24th Floor, Los Angeles, California 90071.

7471. Tallent, W.H. 1982. Shoyu update. *Northern Regional Research Center, Notes from the Director* No. 1493. p. 2-3. Feb. 26.
• ***Summary:*** "On February 22-23, Drs. H. Hashimoto (manager, quality control) and D. Fukushima (executive vice president and general manager) of Kikkoman Foods, Inc., visited the Center [NRRC]. Their Walworth, Wisconsin, plant, which began producing fermented shoyu in 1973 with a capacity of 2.6 million gallons per year, now has expanded to produce about 5.2 million gallons. Their fermentation is based upon wheat and soybeans. Currently they have about 45% of the soy sauce business in the United States and sales are increasing rapidly.

"Total U.S. sales of soy sauce in 1956 was about 1 million dollars (consumption 15 ml per capita per year); this has now increased to 100 million dollars (148 ml per capita per year). Many years ago we supported yeast genetic work on this fermentation based upon Dr. L.J. Wickerham's (NRRC, retired) demonstration that the shoyu yeast had mating types and that improved strains could be developed in a genetic improvement program.

"Kikkoman now has a whole line of dehydrated products based on shoyu that are used to make instant teriyaki sauce for chicken, beef, and seafood. A relatively new product is a steak sauce that contains applesauce, shoyu, spices, and salt. H.L. Wang and C.W. Hesseltine (FL [Fermentation Lab]) supplied the Kikkoman visitors with information on tempeh and pointed out the similarities of the preparation of this food with their method of producing koji for the shoyu fermentation. Drs. Hashimoto and Fukushima also talked with W.J. Wolf and other Meal Products Research (OC [Oilseed Crops]) members concerning isoflavone analysis, phosphatidyl-choline autoxidation, and nutritional properties of soybean proteins." Address: Center Director.

7472. **Product Name:** [Soymilk Mousse with Barley Malt Syrup].
Foreign Name: Bakuga-iri Tônyû Muusu.
Manufacturer's Name: Asahi Foods (Asahi Fuuzu).
Manufacturer's Address: Japan.
Date of Introduction: 1982 February.
Wt/Vol., Packaging, Price: 2 x 100 gm plastic cup.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Bakuga-iri Tônyû Muusu was introduced in Feb. 1982 by Asahi Fuuzu in 2 x 100 gm plastic cups and distributed nationwide.

7473. Kanno, Akishige; Takamatsu, H.; Takano, N.; Akimoto, T. 1982. Nattô ni kansuru kenkyû. I. Nattô seizô kôtei ni okeru toseibun no dôkô [Studies on natto. I. Change of saccharides in soybeans during manufacturing of natto]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 29(2):105-10. Feb. (Chem. Abst. 96:161110). [29 ref. Jap; eng] Address: Asahi Shokuhin Co. Ltd., 180-2 Wado, Ushibori-machi, Namekata-gun, Ibaraki-ken, 311-24 Japan.

7474. Leviton, Richard. 1982. Silken tofu and fried pouches: Inside the Japanese tofu industry. *Soyfoods.* Winter. p. 18-25.
• ***Summary:*** Leviton is on a 15-day tour of Japan's tofu industry. He is part of "Okita Enterprises' whirlwind tofu and beansprout study tour, expertly arranged by Hideyoshi Okita and Charles Ishikawa of Los Angeles. Twelve tofu entrepreneurs and eight bean sprout enthusiasts [total 20] will bus their way through Tokyo traffic for 8 days in late September [1981] searching for the state-of-the-art of the Japanese tofu industry, and two of us will remain another week for more far-flung tofu travels."

Discusses: Takatsuka Marugo (the world's largest tofu factory; it makes 50 tons/day of tofu), Kinugoshi, Ikuta, Yahima Tofu Food Co. ("Yahima's lagoon wastewater treatment system, located underground, processes 350 tons of plant water daily"), Asahi Shokuhin (Established in 1972, it is today owned by Seiyu Stores. "Asahi Shokuhin has three factory locations employing 420 workers and a product line that includes six styles of tofu {totaling 100,000 packages each 10½ ounces}, konnyaku {yam starch cake}, noodles, natto {3,000 packs}, soymilk {10,000 units each 200 ml}, deep-fried tofu cutlets {80,000} and fresh juices–on a daily basis), Asahimatsu Kori Tofu Co. (a 30 year old firm that controls 53% of Japan's dried frozen tofu market. It owns what is "probably Japan's 2nd largest tofu factory and, possibly, its most automated. At each of Asahimatsu's three plants, 400,000 cakes {½ ounce} of dried frozen tofu {*kori-dofu*} are produced daily, five days a week. The company is situated deliberately in this fairly remote montane region near the Tenryu River because the combination of cold winter weather and abundant fresh water were originally favorable manufacturing conditions"), Japan Packaged Tofu Assoc. (One of Japan's two tofu trade associations; the other is the more traditional All Japan Tofu Association. "JPT Chairman Shunichi Minamoto explains that packaged lactone silken tofu {*juten-dofu*} has become popular in Japan in only the last ten years but today there are 67 manufacturing plants and 25,000 JPT members; *juten-dofu* has captured 10% of the tofu market as well." The average daily production of one plant is 30,000 cakes {made from 2,284 kg of soybeans} compared with 700 cakes for traditional "cut" tofu). Ninomiya Tofu Factory ("a

© Copyright Soyinfo Center 2014

showcase for equipment designed and installed by Norimoto Ikeba, president of Toyo Plant Company, a production design outfit... At Ninomiya we examined Toyo Plant's stainless steel continuous trough-style cooker and their linear version of the carousel curder that can accommodate a coagulant blend of magnesium chloride and calcium sulfate"), Dr. Yoshiro Machida (president of Japan's Food Engineering Research Institute, who offered tofu-making tips), Ikuta Tofu Co., Takai Tofu & Soymilk Equipment Co. (in Kanazawa, Japan), Oga Tofu Factory in downtown Kanazawa, the fabled corner tofu shop (Both of such shops visited "were works of art, exceptionally clean, tidy, and aromatic and were filled with the joy of making tofu"), *Toyo Shinpo* newspaper (a thrice-monthly newspaper for Japan's soyfoods industry. The editors said that 85% of all tofu today is sold through supermarkets and that the number of factories has decreased by 10,000 in the past ten years. Yet annual per capita tofu consumption remains high, in a population of 110 million, 10 million cakes of tofu are consumed daily, or 40 x 10½-ounce packages per person per year), tofu moves into supermarkets, soymilk in Japan (is made by at least five principal companies, including Mitsubishi, Kibun, Asahi Shokuhin, Kyushu Milk, Okazaki Nagoya, and sales have skyrocketed to $250 million since 1976. Industry experts link this boom with the introduction of UHT aseptic Tetra Pak technology in which 80% of the soymilk is packaged), Linda Barber and new excitement about tofu ("An American home economist teaching at Kobe Girls College in Nishinomiya, Ms. Barber has appeared on national television demonstrating tofu mayo, tofu Bavarian creme pie, tofu quiche, tofu tea bread, and tofu ice cream; she has been the subject of six articles in *Toyo Shinpo,* and interviewed on Radio Japan"). Contains many photos of huge tofu factories and small, traditional neighborhood tofu shops.

A sidebar, titled "What an American tofu-maker learned," by Richard Leviton, gives seven main points plus other observations. There is no mention of bean sprouts in Japan. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

7475. **Product Name:** [Malvabo Barley Miso, Rice Miso].
Foreign Name: Malvabo Kornmiso, Rismiso.
Manufacturer's Name: Malvabo.
Manufacturer's Address: Malvabo, 19 063 Örsundsbro, Sweden. Phone: 0171-60456.
Date of Introduction: 1982 February.
Wt/Vol., Packaging, Price: 400 gm. Packed in a plastic tofu package.
How Stored: Shelf stable.
New Product–Documentation: Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 255. The company is listed as Aros Sojaprodukter, Bergsvagen 1, 19063 Örsundsbro, Sweden. Run by Ted Nordquist & Tim Ohlund. Phone: 01-716-0456.

Talk with Ted Nordquist. 1985. Jan. 7. The miso is made in 12-15 crocks, each containing 30 liters. Tim Ohlund handles it. He opens one crock every 3rd or 4th month. The contents is sold when he opens it. Ted thinks it tastes fantastic, better than imports. Tim reads and experiments a lot. It is a mellow miso, mild and not very salty.

Talk with Ted Nordquist. 1988. March 27. Tim Ohlund is making miso in the basement of Ted's plant, Aros Sojaprodukter. He has been making it since about 1979, but Ted is not sure when Tim started to sell it commercially. His company is Malvabo, which is the name of the town where he lives. He is very interested in microbiology. He makes many different kinds of miso: wheat, oat, etc. He has about 20 crocks with 30 kg in each crock. He used to be an owner of Aros, but Ted bought him out in 1984.

Talk with Ted Nordquist. 1990. Nov. 23. The miso company has always been owned by Tim, never by Aros. From the beginning, Tim made the koji at home in Malvabo near Örsundsbro, then cooked the soybeans and mixed and ground them with the koji and salt at Aros. He fermented the miso in the basement of Aros in 30-100 liter ceramic crocks. Initially Tim operated without a company name and sold the miso directly to stores and individual customers. Then in late 1988 he started and registered his first company, named Timoteus, which makes and sells two products: miso and koji. Tim is now employed by Ted, manufacturing and delivering tofu, but Tim still makes miso; he does not make tempeh.

Letter from, then talk with, then letter from Tim Ohlund, founder and owner of Malvabo and of Timoteus Kojiprodukter HB. 1991. May 14 and May 30 and June 5. Tim was born in Seattle, Washington, and raised in America, but with Swedish ancestry. He first visited Sweden as a tourist in Dec. 1967 and liked it so much he decided to live there some day. But he was drafted into the U.S. Army for 2 years, spending 1 year in Vietnam. After being discharged in Fort Lewis, USA, he traveled directly to Japan to pursue his interest in Zen Buddhism. He spent 10½ months in Japan practicing Zen meditation. There, in Aug. 1970, he also became acquainted with miso (he was very interested in it, but didn't learn how to make it) and with macrobiotics. He left Japan and took the train across the USSR to meet his parents in Sweden. He has lived in Sweden since that time (1971). In Sweden his interest in both miso and macrobiotics grew. He started reading about miso, then he decided to returned to Japan in the summer of 1973 to study food processing (including miso and tofu making) for 2½ months. He lived in Kyoto and learned a little about miso there and in Hida Takayama–but not enough to make his own miso. Back in Sweden he read books on miso by macrobiotic teachers Herman Aihara and Michio Kushi. Using their instructions, he started to experiment with making miso and koji at his home named Malvabo (pronounced MAL-vuh-bo), at 19063 Örsundsbro, Sweden in Jan. 1975. The instructions

© Copyright Soyinfo Center 2014

didn't work and for the first 2 years the results were "quite disastrous." He first was able to make koji and miso after reading *The Book of Miso* by Shurtleff and Aoyagi, and scientific journal articles by Hesseltine and Steinkraus.

When Aros Sojaprodukter began making tofu in Örsundsbro in Feb. 1981, Tim was a part owner and he was able to expand his miso production using space in the Aros basement. But production was still on a small, experimental scale and none of the miso was sold.

In Feb. 1982 Tim first started to sell the barley miso and rice miso he was making at home; initially he sold only very small amounts, and only directly to friends. The first year he sold about 35 kg of rice and barley miso to friends. Tim wanted to sell organic miso made with all organically grown ingredients, but initially he could not obtain organic polished rice or barley. In Sept. 1983 he first produced an organic miso using oat koji and yellow peas–but not for sale. In April 1984 he started using the brand and company name "Malvabo" (address 19063 Örsundsbro, Sweden) and first sold miso to a retail food store–actually to several stores. The brand "Malvabo" appeared on the hand-written labels for his rice and barley miso. Tim was the first person in Sweden or in Scandinavia to make miso commercially. At the time he started, two type of miso were being imported from Japan: Regular miso by Japanese food stores in Stockholm, and macrobiotic/natural food miso via Lima in Belgium. Natural Hatcho miso had been in Sweden in small quantities since at least 1971.

In Sept. 1985 Tim first sold the organic miso he had developed in late 1983. Then in 1986 he and his family moved from the house name Malvabo to another house on the same farm named Härvstagård. In Nov. 1988 Tim registered his company: Timoteus Kojiprodukter Handelsbolag (HB), Härvstagård, 19 063 Örsundsbro, Sweden. Phone: 0171-65106. The largest amount of miso he has ever sold in one year is about 1,000 kg. He has never made any other fermented soyfoods commercially, except tempeh. Tim wasn't able to register his company name (after waiting nearly 2 years for the bureaucratic processing) as a trademark. Now he may have to change the name or remain small and lay low. Another big multinational company has a product with a similar name and also a grain-based foodstuff.

Innovations: Tim has been developing an oat koji since 1977, and has been making an oat-yellow pea miso, and a barley-yellow pea miso since 1978. In Feb. 1980 he started using water-lock stoneware crocks with superior results. His products have succeeded because of better flavor, use of organic ingredients, and because they are produced in Sweden and not pasteurized. See also Timoteus Kojiprodukter. 1988, Nov.

7476. Ontario Soya-Bean Growers' Marketing Board. 1982. "Canadian soyabean mission, South East Asia, Feb. 12th–27th, 1982: Mission member reports." 1982. Canadian soyabean mission, South East Asia, Feb. 12th–27th, 1982: Mission member reports. Chatham, Ontario: Ontario Soya-Bean Growers' Marketing Board. 12 p. Feb. 12 p. Feb. 24 x 11 cm. [Eng]

• ***Summary:*** Contents: Comments, by Peter H. Epp, Chairman. Japan: Home Shokuhin Tofu Manufacturing Co., Komatsuya Shokuhin (natto mfg. plant), Nihon Miso (manufacturing plant), Japan Miso Assoc., Japan Tofu Assoc., Federation of Japan Natto Manufacturers' Cooperative Society, Wako Shokuryo Co. (makes natto; Jacob Hartz in Arkansas supplies them with "936X" variety small-sized natto soybeans; Wako also supplies Nihon Miso Mfg. Plant), X-Can Far East Ltd. Korea: Seoul meeting at embassy, Chung's Food Ltd., Agriculture and Fisheries Development Corp., Korean Soybean Curd Cooperative Manufacturing Assoc. Singapore: Okura & Company Ltd., Eng Huat Pte. Ltd., Intraco. Malaysia: Yeo Hiap Seng Co. Ltd. (the largest manufacturer of soymilk in Malaysia and Singapore). Follow-up. Conclusion.

Each of the following members of the mission wrote a chapter in this book, discussing each visit mentioned in the contents: Peter H. Epp, Bernard Calhoun, Otis McGregor, Richard I. Buzzell, M.D. Pennell (General Manager, R&D, H.J. Heinz Company of Canada Ltd.), Michael Loh (Export Development Specialist, Ontario Ministry of Agriculture and Food).

Details are given on the soybean characteristics desired for each type of soyfood product, especially in the chapter by Dr. Buzzell. Popular soybean varieties include: For Miso: Enlei [Enrei], Fujimejiro, Harcor.

For natto: The main natto specifications are: 1. Seed size–small but fully developed, less than 5.0 mm diameter if possible. 2. Round seed. 3. Total sugar content < 22%. 4. Oil content > 19%. 5. White / yellow hilum. Best natto varieties: Jizuka (the smallest, from Ibaraki prefecture) and Suzuhime (small, from Hokkaido), "two domestic [Japanese] varieties used for superior quality natto, were priced at $100 U.S. for 60 kg. The U.S. varieties which have been, and are being used presently, are not satisfactory. Both Nattawa and Pioneer 1677 varieties should adapt well to the natto product." Jennett (H24) from the USA is good. (p. 5, "Natto specifications Japan, unnumbered page near rear).

For tofu: Amsoy, Coles, Harcor.

Letter from Fred Brandenburg of OSGMB. 1994. Nov. 9. "Regarding export promotion before 1982, any activities would have been part of larger government sponsored trade missions. For example, in 1979 Otis McGregor participated in a mission to Asia which was co-ordinated by Michael Loh. It included a number of marketing boards and associations from Canada."

Note: This is the earliest document seen (Dec. 1998) that (apparently) mentions the soybean variety Enrei. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

• ***Summary:*** Small portrait photos (p. 2) show mission members: P. Epp, B. Calhoun, A. Ford, O. McGregor, Michael Loh, Dr. R. Buzzell, M. Pennell. The first four men are from the Ontario Soya-Bean Growers' Marketing Board. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

7478. **Product Name:** [Haimaru / Haimiru Soyalac {Soymilk} (Plain, or Cocoa)].
Foreign Name: Haimaru Kokoa, Haimaru Soiyarakku.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1982 February.
Wt/Vol., Packaging, Price: 180 gm foil retort pouch (standing pouch).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Haimaru Kokoa, and Haimaru Soiyarakku were introduced in Feb. 1982 by Saniku Fuuzu in a 180 gm standing pouch and distributed nationwide.

• ***Summary:*** The contents is identical to that of the original Aug. 1979 edition, but the publisher's name has changed to Soyfoods Center from New-Age Foods Study Center. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

7480. Suzuki, Hiroshi. 1982. Daizu kakô shokuhin no hinshitsu [Quality of processed soybean foods]. *Nyu Fudo Indasutori* (*New Food Industry*) 24(2):42-49. Feb. [2 ref. Jap]
• ***Summary:*** Discusses mostly natto and tofu. This journal is published by the Tokyo Metropolitan Agric. Exp. Station. Address: Tokyo-to Nogyo Shikenjo.

7481. Belleme, John. 1982. Re: New developments at American Miso Co. Letter to William Shurtleff at Soyfoods Center, March 3. 2 p. Typed, without signature or letterhead.
• ***Summary:*** "We got a really good response from our light miso. People reported using it for dressings, dips and even desserts. We have decided to market our white miso through our wholesale company in bulk only during the winter. We also plan to market a mellow barley and a mellow rice miso, both of which should have a good shelflife.

"Mr. Onozaki just visited our factory for two weeks. He said our koji is some of the best he has ever seen. I was really worried about our koji and his comments settled my anxious mind. He also said our long-term miso is developing fine.

"The ownership of our factory is finally settled. The following will not be participating: Erewhon, Michio [Kushi], Mitoku, Johsen, Oak Feed and Sandy Pukel. This leaves only Barry Evans and myself, we are now the sole owners."

"I am sending you 10 pounds of Mr. Onozaki's rice miso. It is hopefully just like the miso we are making. We are getting a really good response from the East Coast macros; they love Mr. Onozaki's miso. Last year we imported 20,000 pounds.

"Barry and I are starting a wholesale company in Asheville. It's tentatively called Great Eastern Sun Trading Company. We are specializing in hard-to-get macrobiotic foods–will send you a catalog in a few weeks."

Note 1. This is the earliest document seen (March 2006) that mentions Great Eastern Sun, a macrobiotic trading company in North Carolina.

Note 2. On 31 May 1982 John wrote a 2-page typed letter to Dr. Hiroshi Ito at the National Food Research Institute asking for help in making a white miso. Address: Route 3, Box 541, Rutherfordton, North Carolina. Phone: (704) 287-2940.

7482. Root, Evan. 1982. Re: History of macrobiotics. Letter to William Shurtleff at Soyfoods Center, March 4–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Here is my reply to your questionnaire." Discusses Sanae, Erewhon, Paul Hawken, Michio Kushi. The original Erewhon store started in April 1966 at 303-B Newbury St. Prior to that, some food sales were done from the Kushi's home on a very small scale.

In Oct. 1967, Paul Hawken took over the management of Evan Root moved up the street to commence renovations for Sanae Restaurant. Paul was the main force in expanding and developing Erewhon in the early days. Prior to him it was mainly a cracker barrel style store where people came in to talk philosophy and swap recipes, whether or not they bought anything.

Sanae opened its doors to the public in Feb. 1968.

In the early days of Erewhon one of the suppliers not to be overlooked is Japan Food Corporation. From them we bought seaweeds, fish flakes, gourd strips, and most importantly from your point of view, Hatcho miso. Chico-San and Infinity Foods were in operation before Erewhon and we got most of the Japanese items from them except for a couple of kegs of miso that Junsei Yamaguchi put up in the Kushi's basement.

I do not know this for a fact, but I have speculated

© Copyright Soyinfo Center 2014

that the early tamari that was available when I first got into macrobiotics in 1964 may have been, in fact, real tamari as I distinctly remember that it was thicker and richer than what became available a little later. Address: Relationships, 39 Harvard St., Brookline, Massachusetts 02146. Phone: 617-739-3300.

7483. Fabricant, Florence. 1982. Japanese food with inventiveness: Dining out. *New York Times.* March 7. p. LI19.
• ***Summary:*** This is a review of the two-star Japanese restaurant Asahi Tokyo (2 Village Square, Glen Cove, New York). Recommended dishes include "fried bean curd." One of the many delicious appetizers is "squares of deep-fried bean curd with a tangy dipping sauce..."

7484. Aihara, Herman. 1982. Re: Introducing miso and soy sauce to America. Letter to William Shurtleff at Soyfoods Center, March 15–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Miso and 'tamari' were imported in America by Ginza, Inc., managed by H. Aihara, in 1961 in New York City. The brand name was not remembered.

"After 16 families moved to Chico and started Chico-San, Chico-San imported Marushin soy sauce and miso. Ohsawa arranged the manufacture and export in Japan. Ohsawa always supervised and examined the products.

"Ohsawa told us to call natural soy sauce 'tamari'. The reason is, he named natural soy sauce 'Ohsawa Soy Sauce' in Europe and gave its sole agency to someone else. This guy started to import bad soy sauce and called it 'Ohsawa Soy Sauce.' Then, Ohsawa began importing a good one by himself, but could not use the name 'Ohsawa Soy Sauce.' Therefore, he called soy sauce 'tamari.' (A mistake, I think.) Chico-San has been importing the best quality of miso and soy sauce (named 'tamari') even though the cost was higher than other, lower grades." Address: President GOMF, P.O. Box 426, Oroville, California 95965.

7485. Hohn, Jane R. 1982. Re: History of HVP. Letter to Mr. Milan Drake, Beatrice Foods, La Choy Food Products Co., 901 Stryker St., Archbold, Ohio 43502, March 16. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Dear Mr. Drake: It was certainly a pleasure meeting you last week and discussing HVP's. I think we have found suitable answers for your questions about HVP's.

"1. Who made the first HVP and where? Was it Maggi in Switzerland or Ikeda in Japan. Ans: We think China and Japan made the first soy sauce as acid hydrolysates. Fermented soy sauce was made, probably, as far back as 3,000 B.C.

"2. When was HVP commercialized and in what products? Ans: We believe the Chinese and Japanese made acid hydrolyzed HVP prior to 1940. No definite data available on this.

3. When and how was it first used in the U.S.? Ans: Huron Milling Co. made HVP in 1934. Liquid was sold as #6 Sauce for use in soy sauce. Dry powders were sold to the U.S. Government for use in C-Rations during World War II.

"4. When and by whom was it first used in soy sauce? Ans: We think LaChoy used it first in the U.S. #6 liquid was sold for this purpose. The Chinese may have used it prior to this, but again, we don't know for sure." Address: Hercules Incorporated, PFW Div., 33 Sprague Ave., Middletown, New York 10940. Phone: (914) 343-1900.

7486. Rothman, Sandy. 1982. Re: History of work with macrobiotics and soyfoods in America. Focus on Herman and Cornellia Aihara, and Chico-San. Letter to William Shurtleff at Soyfoods Center, March 17. 5 p.
• ***Summary:*** Also discusses Alcan Yamaguchi, Zen Teahouse, Paradox, Michio Kushi, Musubi, Irma Paule. Address: GOMF, Oroville, California.

7487. Lopez, Alejandro. 1982. El trabajo del maestro Ejo Takata con la soya en Mexico [Re: The work of Zen master Ejo Takata with soya in Mexico]. Letter to William Shurtleff at Soyfoods Center, March 19. 3 p. Typed, with signature. [Spa; eng]
• ***Summary:*** In 1969 Rev. Ejo Takata, a Japanese Zen monk and later Zen master who first arrived in Mexico in 1967, began his work with soyfoods. That year, while traveling in the mountains of Oaxaca state, he became aware of the malnutrition among the Mixes and Mazatecos Indians. With the help of the Japanese agronomist Toshihiko Onuki and of a group of Mexicans from the School of Agriculture of Chapingo and of his Zen A.C. community, he established an experimental soybean farm in Oaxaca and promoted the cultivation of soybeans and the use of soyfoods among the Indian communities. He taught the Indians how to make soymilk and how to use the okara (soy pulp) in making corn tortillas. He gave demonstrations in more than 100 communities and in almost all of these the soyfoods were received with such enthusiasm that they became and remain a part of the daily diet. They are made from soybeans now grown locally by the Indians. In 1971 Takata and co-workers opened a dining room at the Universidad Nacional Autonomo de Mexico. During the next 6 months they gave demonstrations and prepared 200 meals a day based on soyfoods including soymilk, okara with green vegetables, tortas with fresh soy puree, tofu in various recipes, crackers (*galletas*), breads, etc. In 1972 they began to give soyfoods demonstrations to the National Workers Syndicate of the ISSSTE, and to peasants and farm workers' organizations. They traveled widely into the countryside and their presentations and food were always well received. This work played a significant role in paving the way for soyfoods in Mexico. In 1973 the President of Mexico, Lic.

© Copyright Soyinfo Center 2014

Luis Echeverria, at a reception, recognized Rev. Takata for the work he had done with soybeans and soyfoods, then inaugurated a national soy program. In 1976 Takata and colleagues established an organization to teach appropriate technology (for food and energy), including soyfoods production. This work expanded in 1981 to the application of Japanese low-cost soyfoods equipment to small businesses, and participation in a national food program called Sistema Alimentario Mexicano (SAM). Takata and his co-workers have demonstrated vividly what individuals can do to help bring soybeans and soyfoods to the people in a country where they are not known. Address: Lic. Alejandro Lopez, Zen A.C., Ave. Revolucion #2036, San Angel, Mexico, DF, Mexico.

7488. *Toyo Shinpo* (*Soyfoods News*). 1982. T-shyatsu [Yoshikawa Shoji is giving away American T-shirts to people who buy his nigari or sumashiko]. March 21. [Jap]
• ***Summary:*** This sort of idea for publicity didn't used to exist. Tofu makers are now very interested in T-shirts and a lot of them have been ordered.

7489. Kojima, Yoshiko. 1982. Re: The soymilk industry in Japan. Letter to William Shurtleff at Soyfoods Center, March 25–in reply to inquiry. 4 p. Typed, with signature on letterhead.
• ***Summary:*** In Japan, at present the four largest soy milk makers are given below in descending order of production [largest first]:

1. Kibun Health Foods K.K., 1-11-8, Shin-Sayama, Sayama-shi, Saitama pref. 350-13. Tel. No. 0429-53-7001.
2. Okazaki Marusan K.K., 1, Aza Arashita, Niki-cho, Okazaki-shi, Aichi-pref. 444-21. Tel. No. 0564-45-3111.
3. Mitsubishi Chemical Foods Co., Ltd., 5-13-12, Ginza, Chuo-ku, Tokyo 104. Tel. No. 03-542-6499.
4. Kyushu Milk Co., Ltd., 4311 Moto-machi, Oita-shi, Oita-pref. 870. Tel. No. 0975-43-4135.

About 40 companies are producing soy milk in Japan. Those who are the members of Soy Milk Association are shown on the attached sheets.

The first commercial soy milk in Japan was made in 1959 by Saniku Foods–Food Div. of Seventh Day Adventist group in Japan under the instruction of Dr. Harry Miller.

With best regards, Sincerely,...

The attached sheets are titled "List of soy milk producing companies in Japan who belong to the Japan Soymilk Association." The name, address, and phone number of 17 companies are given. These include the four largest soymilk makers given on page 1. Address: Associate Country Director for Human Nutrition, American Soybean Association, 11th Floor, Akasaka Tokyu Building, 2-14-3 Nagata-cho, Chiyoda-ku, Tokyo 100, Japan.

7490. Rothman, Sandy. 1982. Re: Meeting with Bob Kennedy and Herman Aihara. Additional criticisms of William Shurtleff. Letter to William Shurtleff at Soyfoods Center, March 26. 1 p. Typed, with signature.
• ***Summary:*** "As mentioned before, not only would a proper visit and interview with Bob and Herman have provided the cheapest, least stressful means of obtaining your research–it would have also brought a current relationship with the two principals into current focus."

Accompanying this letter are three pages of typed comments by Rothman (on the back of GOMF letterhead) concerning Shurtleff's chapter titled "History of Macrobiotics and soyfoods" and answers to Shurtleff's numbered "Questions about history of macrobiotics and soyfoods" (1982), plus the pages 1-18 of the chapter carefully edited. Also pages 2, 7-10, and 15-17 edited by Herman Aihara, and page 9 edited by Peter Milbury. Address: GOMF, 902 14th St., Oroville, California 95965. Phone: (916) 533-7702.

7491. Kushi, Michio; Kushi, Aveline. 1982. Re: History of work with macrobiotics and soyfoods in Boston. Letter to William Shurtleff at Soyfoods Center, March 29. 2 p. Typed, without signature on letterhead.
• ***Summary:*** These are answers (dictated to a typist) to a list of questions sent by William Shurtleff of Soyfoods Center.

1. Why were George Ohsawa's students given Western names? "Right after the second world war, and after the Americans took over Japan, George Ohsawa wanted everyone to speed up their lifestyle. For this reason he gave Western names to his students, taking those names from Western heroes born in the same month. We think that perhaps it was his intention to have them go to America to spread macrobiotics. As a teacher, George Ohsawa adopted the western style of having his students call him by his first name, George. Almost all his students were given new names."

5. Prior to 1959, which macrobiotic teachers were in New York? "Michio Kushi was lecturing and giving seminars in New York at that time, along with other friends."

9. When was the Ohsawa Foundation in New York City established? By whom? "The Ohsawa Foundation was founded in 1960 or 1961, by Michio, Irma Paule and other friends. Michio was the first President of the 2nd Avenue location. The Musubi Restaurant was by Mr. Sato, Alcan Yamaguchi, and Junsei Yamazaki. Irma Paule was later to take over the East West Foundation and set up the 2nd Avenue location.

12. When and where were Michio and Aveline married? They were "married in 1953 in New York. They [first] met in New York but had been corresponding from Japan through George Ohsawa's study house [Maison Ignoramus?] before that time.

13. Cornellia and Herman [Aihara] were married in New York and had also been corresponding from Japan.

© Copyright Soyinfo Center 2014

14. What was Musubi in New York City? Musubi "was a restaurant and food store but not a gift shop. They sold miso and shoyu from Japan the George Ohsawa had sent."

16. When did Michio Kushi start and stop lecturing at Arlington Street Church in Boston? "He started in 1965 and stopped in 1970."

18. When did Michio organize the first East West Institute? "1965."

19. When did the Kushis move from New York to the Boston area? What prompted this? "In 1963 [sic, March, 1964] Aveline and the children moved to Martha's Vineyard [an island off the south of Cape Cod in Massachusetts] for 6 months because it was a much better environment for natural living. Michio was still working in New York. In September 1963 [sic, 1964] they moved to Cambridge, Massachusetts with Michio, who at that time stopped all business and put all his efforts toward macrobiotic education. The death of Beth Ann Simon and the FDA crackdown came after Erewhon was established.

20. Erewhon started in the Kushi home in 1963 in Cambridge. In 1965 [sic. April 1966] it was established as a company on Newbury St.

25. When did Sendai Miso Shoyu start making natural shoyu. Who set this up? When did they start to sell it? "Mr. Kazama [of Mitoku] set it up" and would know the answers to the other questions. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146.

7492. Kordel, Lelord. 1982. Low-protein diet unwise–Can be dangerous to health: Eat and grow younger. *Japan Times.* March 31. p. 11.
• ***Summary:*** The author does not advocate a vegetarian diet, but rather advocates a high-protein diet with plenty of meat and believes that "high-starch dishes" are bad.

7493. Baba, Keiko; Saio, Kyoko. 1982. [Comparison of soybean tissue extracted with different solvents]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 40. p. 206-08. March. [7 ref. Jap; eng]
• ***Summary:*** The solvents used were hexane, defatted with *n*-hexane then washed with alcohol, chloroform, chloroform-methanol, methanol, and acetone. Eight photomicrographs show the microstructure (5000 x magnification) of cotyledonary tissue, with the following structures labeled: CW: cell wall. PB: protein body. Sp: Spherosome. The soybeans used were 1976 IOM soybeans.

• ***Summary:*** Reprinted from *Cereal Chemistry* 58:260-64 (1981). Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

7500. **Product Name:** Fuju Soy Sauce (Koikuchi Shoyu).
Manufacturer's Name: Nepal Soya Industries.
Manufacturer's Address: 9/374 Bhedashing, Jamguthi, Kathmandu, Nepal. Phone: 229130.
Date of Introduction: 1982 March.
Ingredients: Soybean, wheat, salt, water, Japanese Sozae [starter culture].
Wt/Vol., Packaging, Price: 1 liter.
How Stored: Shelf stable.
New Product–Documentation: Letter from Mr. Achutananda Vaidya of Nepal Soya Industries. 1992. Dec. 26. He started making tofu in Kathmandu in 1974. "In 1979-80 I was invited to Japan for 9 months training at the Akita Prefecture Brewing Laboratory. During that time I also learned in detail the processes for making soy sauce, miso, and soyamilk. During that period I also got a chance to read *The Book of Tofu, The Book of Miso, Miso Production,* and *The Book of Tempeh* all of which helped me very much. I still have all those books. In 1985 I was invited by the Rotarians of Akita-Aomori to return to Japan for 1 month to receive further technical training in making tofu, miso, soy sauce, soyamilk, moyashi (sprouts), koji, fruit fermentations for wine, etc. Today I produce tofu, soy sauce, and miso in my small factory in Kathmandu." His business card notes: "Food Technology in Brewing from Japan. Products & Suppliers: Tofu (Vita), Soyamilk (Vitabean milk), Soya Curd, Soya Sauce, & Miso."

Letter from Mr. Achutananda Vaidya of Nepal Soya Industries. 2002. April 12. He started to make this soy sauce in March 1982. A label sent in April 2002 is for "Fuji Soya Sauce (Natural Fermentation)." Red and white on blue.

7508. Tally, Gene. 1982. The Coca-Cola Company's work with soymilk in Brazil (Saci) and Mexico (Samson) (Interview). Conducted by William Shurtleff of Soyfoods Center, April 2. 2 p. transcript.
• ***Summary:*** The Coca-Cola Co.'s (CCC) first protein drink was a whey product in Surinam–the forerunner of Sansom in Mexico. Gene is quite sure that none of the early Samson products contained soy. The trademarks say that the protein source can be whey or soy but all have been whey.

CCC has never marketed a soy based beverage outside of Brazil–where they marketed Saci. Coke's first financial success with a protein fortified beverage was with whey Samson in Mexico. In Brazil, soy Saci was a financial disaster. After inflation gets under control in Brazil, CCC will try a joint venture there with mass market retail soymilk. They will steer clear of government programs such as the school feeding program.

In Japan, Fuji Purina does not like to produce soy protein isolate because the effluent causes environmental problems and expenses. They do make some but they buy most of what they use or sell from Ralston Purina in the USA. Address: Coca-Cola Co., Atlanta, Georgia.

7510. Hawken, Paul. 1982. History of Erewhon and macrobiotics in America. Part I (Interview). Conducted by William Shurtleff of Soyfoods Center, April 18. 3 p. and 5 p. transcripts.
• ***Summary:*** Hawken played an important and very innovative role in establishing the natural foods industry in America and in building Erewhon into a major distributor of macrobiotic and natural foods.

Chico-San imported foods from Tokyo CI (Centre Ignoramus); Muso didn't exist at that time.

The Kushis never made tofu or nigari tofu. They were not big tofu eaters, largely because tofu was considered too yin–ridiculous. Then people started craving it, and buying it from Chinatown. But the tofu they bought was not made with nigari.

By the mid-1960s there were roughly 300 to 2,000 people actively involved with macrobiotics in the USA–including Michio Kushi's students, Herman Aihara's students, and those in New York and Boston.

Beth Ann Simon had started using heroin again before she died [on her No. 7 macrobiotic diet]. The family covered it up, blaming Japanese and tamari. But she was not the only one who died. George and Lima Ohsawa's only child died

© Copyright Soyinfo Center 2014

within a year of being born in Tokyo (according to Lima) from excess salt.

Erewhon was started by Aveline Kushi, not by Evan Root. Paul does not know who gave Erewhon its name [it was Aveline Kushi]; of course, it is "Nowhere" scrambled, as in the title of the famous 1872 novel by Samuel Butler about a utopian island divested of machinery. Originally various people would drive to Pennsylvania to see the Mennonites and Walnut Acres. It was a buying club for students who lived in the Kushi's house in Cambridge, Massachusetts. Foods such as wheat, [whole-wheat] flour, oatmeal. Nothing imported from Japan. It was started with $500 cash in the basement of the Kushi's house. It backed into being a store since it was cheaper to buy larger quantities. The food was divided up into little bags and a price was written on each. It was sort of a way of buying food for people at the Kushi's house, like Aveline doing her shopping for 10-12 people in the first big macrobiotic study house. It began to outgrow the house and outside students wanted good food. It was never seen as a business or a money-making venture. Good food was so difficult to get in those days.

Another source of good food was Infinity Foods in New York City, started and owned by Howard Rower; they had a warehouse and were wholesaling by mid-1965. Soon Howard was importing miso and tamari (shoyu / soy sauce) from Tokyo CI. "This 'guaranteed' its quasi-medicinal effects. Otherwise it didn't work. It was actually the best food–really." Then Howard started to import directly from the manufacturers of miso and shoyu in Japan: Hatcho miso and Marushima shoyu (whose owner knew Ohsawa intimately). Paul visited Marushima in 1969. Paul thinks Marushima bought their shoyu from other shoyu factories on the island, or maybe they made it in the early days. Paul thinks there is a big difference in taste between shoyu made from whole soybeans and that made from defatted soybean meal (*dasshi daizu*). Paul was suspicious of Marushima shoyu in 1970; he demanded that Muso Shokuhin change to Johsen [Sendai Miso Shoyu] as their source; Johsen has a long history and the owner was also one of Ohsawa's cronies.

Paul left Erewhon in 1973. He went to Japan three times. The first trip was in March 1969, when he set up Mitoku in the natural foods business; before that they were an importer of hockey equipment. Muso was called Osaka CI; neither of those two companies were exporters before that time.

In the early days of the below-ground store in Boston, more of the foods came from Lima Foods in Belgium than from Japan. The miso and shoyu in those day came from Infinity Foods in New York City. They did not carry tofu because there was no refrigeration. None of the food was sent by the Kushis' friends.

In the early days of that store, Evan Root just tended the store, which had sales of about $20–$30 a day. The store was Aveline's idea. Evan was Aveline's lover–and not the only one. The store was originally called simply "Erewhon." Paul later added the words "Trading Co." when he incorporated it in the late fall of 1967. Paul and Aveline each owned 50% of the corporation. During its first year as a corporation, sales went from $1,000/month to $9,000/month–and not because it was macrobiotic. Erewhon was the first natural food store (as opposed to health food store) in America. It sold no pills. Many of the customers were not macros; they wanted whole foods. In mid-1968, as Paul was ready to leave Erewhon, someone came into the store and asked: "How do you know the oil is cold-pressed? And how do you know the grains are organically grown? He couldn't answer. So he wrote letters and found out that most were not what they claimed to be. Then Paul decided to use Erewhon to create a true food supply. He went directly to farmers. He didn't trust anyone. The idea was to know where the food came from and to have no middlemen between Erewhon and the producers.

In Oct. 1968 the little Erewhon retail store moved up and across the street to a new location at 342 Newbury Street. At that time they began to sell wholesale and to import from Japan, by correspondence with Mr. Kazama. The first import order from Japan, dated Aug. 1968, was *aka miso* (red rice miso–superb) from Sendai Miso Shoyu and Marushima shoyu. Soon customers who used to drive 400 miles to buy staples from Erewhon started to open their own stores. The natural foods business mushroomed. Erewhon started selling tofu in 1968 at 342 Newbury; they got it from a Chinese tofu maker in Boston. Nigari came in much later, after 1973. Neither Evan nor anyone else wanted to work at or run Erewhon; they all wanted to teach macrobiotics.

Paul was selling whole dry soybeans at that time, but mostly non-macros were eating those soybeans. Erewhon's first supplier, in mid-1968, was a wheat grower in North Dakota. Carl Garrich in Lone Pine, Arkansas, was much later. Paul got his first soybeans from a guy in a boxcar who was an insurance salesman, but who worked one day a week selling soybeans and wheat. Paul also bought soybeans from Deaf Smith County, Texas. Paul knew Frank Ford of Deaf Smith County in the early days. Paul was vice president of Arrowhead Mills before Roger Hillyard even worked for them. He ground his flour in a boxcar.

Paul wrote a long and detailed article about the early history of Erewhon titled "Erewhon: A biography. The view within," published in the Aug. 1973 issue of *East West Journal*. He was upset at the time. It was critical of the Kushis, and Paul explained why he was about to leave Erewhon. Robert Hargrove, editor of the journal, ran it anyway. Since then, Erewhon's history has been sanitized. Continued. Address: California.

7511. Hawken, Paul. 1982. History of Erewhon and macrobiotics in America. Part II (Interview). Conducted by William Shurtleff of Soyfoods Center, April 18. 3 p.
• ***Summary:*** Continued: Erewhon grew rapidly. One year

after moving to the new location they had sales of $35,000 to $40,000 a month, both wholesale and retail. Paul thinks Erewhon had a retail catalog from 1967 to 1970. Paul was president (until 1973, when he left) and half owner. Then he left for Japan. Before leaving he made a great error, by signing over his half of the stock to the corporation in case something happened to him. It was put in escrow, but he could never get it back. When Paul left for Japan, Roger Hillyard, Bill Tara, Bruce Macdonald, and Jim Docker were all working for Erewhon. He had hired many or all of them, and everything was in place for takeoff. Erewhon did not get its big brick warehouse until July 1970.

When Paul first went to Japan in the spring of 1969, He traveled with Mr. Kazama of Mitoku, visited many factories, and set up sources. He tried to find out where Tokyo CI and Osaka CI were getting their foods. He was in Japan for about 9 months, from March to December.

When he returned, he opened [sic] Erewhon in Los Angeles; Roger Hillyard was still in charge of Erewhon in Boston. Then he moved to San Francisco and started Organic Merchants with Fred Rohe, and started writing "The Sugar Story," "The Oil Story," and other leaflets. His main interest was now in providing accurate information about foods. In mid-1970 Erewhon stopped its mail order catalog and business when it moved into the brick warehouse.

Originally Erewhon West (Los Angeles) and Erewhon Boston were one; about 4 years later they split in two.

When Paul left in 1973, Erewhon was contracting directly with something like 57 farms in 35 states producing organically grown foods, including lots of produce. This program began in 1968, included the Lundberg Brothers (who grew brown rice organically in Northern California), and led to the wholesale business. Paul and Erewhon helped many other natural food companies to get started.

The Natural Food Distributors Association [Organic Merchants] was not successful because it was Paul's idea and he left. Lack of money and fundraising were secondary. His goal was to see cooperation in the industry.

In conclusion Paul says: "Read the article [in *East West Journal*] and then we should talk again. You'll have a lot more questions." He asks Shurtleff to send him a photocopy of the article as well as the final draft of the chapter on the history of macrobiotics (including Erewhon); he'll be glad to recheck it. Address: California.

7514. Shurtleff, William; Aoyagi, Akiko. 1982. History of yuba. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 15 p. April 26. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction, definition. Etymology. Part I: History of yuba in East Asia. China and environs. Japan. Part II: History of yuba in the West. Europe. United States.

Japan: There has been considerable speculation about when and how yuba was introduced to Japan. Some have said that it was brought by Chinese Buddhist monks as early as the 10th century, others that it was brought back by Japanese monks visiting China in the 13th century. It is also said that Masashige Kusunoki, a famous samurai, used it as provisions during the siege of Chihaya castle during the 14th century. Yet the earliest known written reference to the food appears in the *Wakan Sanzai Zukai* (1711), with the next known references being in the *Isei Teikun Ourai* (c.

© Copyright Soyinfo Center 2014

1730), *Kyonan Rubetsu-shi* (1813), and *Kotto-shu* (Santo 1815). Japan's oldest existing yuba shop started in 1716, so it is quite likely that yuba existed on a commercial scale by the late 1600s, if not earlier. It may well have been used from time to time as a food in Buddhist temples centuries earlier. As noted at Etymology above, it was probably introduced from China, but it may also have been developed independently in Japan.

Japan's earliest center of yuba production and utilization was in Kyoto, the ancient capital, which remained the center during the 1980s. Yuba has the strongest gourmet image of all Japanese soyfoods, and Kyoto yuba soon developed strong associations with both the vegetarian cuisine of the Buddhists and with the elegant cuisine of the nobility and aristocracy. It soon became one of the indispensable delicacies in both Zen Temple Cookery (*Shojin Ryori*) and in the exquisite Tea Ceremony Cuisine (*Kaiseki Ryori*). In the *Shojin Ryori Kondate-shi,* published between 1818 and 1830, about half the recipes included yuba in one form or another, eloquently attesting to its popularity. A children's song (whose date or origin is probably in the early 1800s) sung in Kyoto near the base of Mt. Hie, the home of a famous complex of Buddhist temples, asks "What do the monks eat on Mt. Hie?" The response is "Yuba no tsukeyaki," the name of a yuba preparation. During the 1970s and 1980s in Kyoto, in restaurants serving Shojin or Kaiseki cuisine, yuba might well appear in more than half the dishes in a typical six-course meal. Some Japanese restaurants, such as the beautiful Sorin-an near Kyoto, specialize in yuba cuisine. Gradually the Japanese developed many unique forms and ways of folding yuba, plus a number of ready-to-eat yuba delicacies (deep-fried chips, pouches, and rolls) that were unknown in China and which have become popular tourist items in Kyoto. Shurtleff and Aoyagi (1975) have given illustrated descriptions of each of these types.

The Kyoto yuba industry traces its origins to at least the early 1700s. The four oldest existing yuba shops started in 1716, 1791, 1804, and 1833. The owner of the oldest shop is now the ninth generation. A picture of one of the oldest and most beautiful shops, Yuba Han, appears on the cover of The Book of Tofu (Shurtleff and Aoyagi 1975). Kyoto's yuba shops have always been small, family-run operations, often connected with the family home. Of the 20 shops existing in 1981, 4 started during the Edo period (1600-1868), 5 during the Meiji period (1868-1912), 4 during the Taisho period (1912-1926), and only 6 started after 1926. Thus the industry is old and well established. In 1874 the German Ritter gave a nice 85-word description of how yuba was made in Kyoto, noting that a little wood ash was added to the soymilk to raise the pH."

"The number of yuba shops in Kyoto has gradually decreased from the peak of 67 in 1911. It fell to 35 in 1919, then climbed to 55 in 1929, and finally decreased slowly to 20 in the late 1970s. Number of employees ranged from 172 in 1911 to 71 in 1925, then back up to 151 in 1955, the last year for which we have data. Sales reached a peak of 183,506 yen in 1929 and were 52,433 yen in 1955 (Tanaka 1955). By the 1970s the Japanese yuba industry used less soybeans than any other Japanese soyfood industry, only several hundred metric tons a year (Watanabe 1969). And a typical shop used only 50-150 pounds of dry soybeans a day to make 400 to 1,200 sheets of yuba. One pound of dry soybeans yields about 0.5 pounds of yuba on a dry weight basis. Partly because it is still made on a very small scale by slow, traditional, labor-intensive methods, and partly because of its image as a gourmet food (rather than a food for the people, as it is in China), yuba in Japan in 1975 sold for about 15 times as much per pound (fresh or dry) as it did in China. Starting in the mid-1970s some modernization of the small shops (especially heating the soymilk with pressurized steam) took place, but most traditional yuba craftsmen prefer their traditional and very beautiful methods. In 1982 there were two yuba trade associations in Kyoto. One, consisting of the six oldest companies, was the *Kyoto Yuba Kumiai;* the other, consisting of 10 shops in Kyoto and one in nearby Otsu was the *Kyoto Yuba Seizo Hanbai Jigyo Kyodo Kumiai.* The two do not cooperate much with each other.

"In 1980, in addition to the 20 yuba shops in Kyoto, there were 3 in Utsonomiya and Nikko (the other main yuba center, 60 miles north of Tokyo), 1 in Otsu (just east of Kyoto), and an estimated 7 elsewhere in Japan, for a total of 31. Gross net sales of the yuba produced in Kyoto were 520 million yen, or about $2.3 million. This was estimated to be 80% of the total sales and production of all yuba in Japan." Address: Lafayette, California. Phone: 415-283-2991.

7515. Dreyer, Lawrence. 1982. Re: International fair and symposium on soya products in Salzburg. Letter to William Shurtleff at Soyfoods Center, April 27. 2 p. Typed, with signature. [Eng]

• ***Summary:*** "The Way of Nature (*Weg der Natur*), a foundation, was established in Austria with the express purpose of disseminating information about macrobiotics, food, and their relationship to our health. Each of the founding members have had at least 2 months training at a temple in Japan." The foundation plans to hold an international fair named Bio Life 2000 in Salzburg from 17-20 Nov. 1982. "The foundation has, for the past two years been linked to a Natural Food Shop and has been, for this period, producing tofu and miso. This shop will be represented at the Fair and will be exhibiting and selling macrobiotic foods, snacks, and drinks. To run concurrently with the Fair, the Foundation is also planning a symposium on Soya products, Miso, Tofu, Tempeh, etc.

"The program will include lectures and discussions on planting and growing soya beans, making soya products, the suitability and advantages of soya products in the diet of Mankind with particular emphasis on the peoples

© Copyright Soyinfo Center 2014

of the West, and the substitution of soya products for animal products as a source of protein. There will also be demonstrations on cooking natural foods and the production of tofu and miso.

"The symposium will be conducted in both English and German and possibly also in French. The media, press, radio and TV have all expressed a keen interest in this fair, so a wide coverage is assured. We would be delighted if you, as the initiator of the use of tofu in the West, would be prepared to participate in this fair."

Note: A handwritten letter from Lawrence Dreyer (1983 Feb. 15) states that this fair was never held. His company is still producing tofu with equipment purchased in Japan a couple of years ago. Address: Director.

7516. Endo, Y. 1982. [Re: Yamashin shiro shoyu (clear shoyu)]. Letter to William Shurtleff at Soyfoods Center, April 30–in reply to inquiry. 2 p. Handwritten, with signature on letterhead. [Jap; eng+]

• ***Summary:*** Shiro shôyu was invented by the people of Mikawa-koku, Shinkawa-machi (presently Aichi-ken / Aichi prefecture, Hekinan-shi), after getting a hint from the seasoning liquid (*uwajiru*) that rises from Kinzanji-miso. The latter is a type of finger lickin' miso (*namémiso*) which was tasty, light colored and was made about 180 years ago–at the end of the Edo / Tokugawa period, Kansei-Bunka. That area is well known for making tamari (which has a dark color and strong flavor) and red miso (*akamiso*) from the old days. It was probably from necessity that the local people worked to develop a seasoning that brings out the flavor of each food.

Therefore shiro shôyu is a very local product. It is made mainly in Aichi prefecture. At present, the largest manufacturer is Yamashin Shoyu K.K. [the writer's company].

Shiro shôyu is different from regular Japanese [*koikuchi*] shôyu in that it has less fragrance and a lighter color. Therefore it is used in foods that require a subtle flavor, such as *nimono, chawanmushi, suimono* (clear soups), noodle dishes, etc. In early times, it was considered to be the best seasoning for enhancing the flavor in the food itself, and was used only in high class restaurants, noodle shops, etc. More recently, it has become popular among regular householders. For Japanese love subtle tastes and the natural colors of foods; this shôyu doesn't mess up either of these. In Western-style cooking it is good is soups, stews, cabbage rolls, gratin, etc. In Chinese cooking try it in ramen noodles, sweet and sour pork (*subuta*), *happosai,* stir-fried vegetables, etc. In Japanese cooking it is tasty in clear soups, soba (buckwheat noodles), udon noodle broth (*tsuyu*), vegetable cooking, omelets (*tamago yaki*), and *zoni* (meatless soup with mochi and vegetables).

"Although you asked for early documents, we are not aware of any. Nor do we know how shiro shôyu was used in the olden days. In our company we have no old records; they were destroyed by fire. We are very sorry that we cannot help you on that.

"We have heard one interesting story. At the end of the Edo / Tokugawa period, in 1857 (Ansei 4), Townsend Harris, the United States' ambassador, brought a letter from president James Buchanan [president 1857-1861] and visited Edo Castle to meet with the 13th shogun, Tokugawa Iesada (ruled 1853-1858). In the Willow Room (*yanagi no ma*) of Edo Castle they had a meal and shiro shôyu made by our company was used, under the name of Mikawa Shiro Tamari.

"Instead of answering your individual questions, we would like to give you this overview. Please excuse us. If you need further details, please let us know." Address: Yamashin Shoyu K.K., 3-36 Nishiyama-cho, Hekinan-shi, Aichi-ken 447, Japan.

7517. Mizono, Jack. 1982. History of Azumaya (Interview). *SoyaScan Notes.* April 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Azumaya started in about 1920 in Stockton. Jack does not know the name of the man who started it. A Mr. Teranishi bought the company in 1926 and moved it to San Francisco in about 1928. His son took over the business in 1930 and ran it until 1936, then sold it to Mr. Sakamaki, who ran it for 6-12 months, then in Feb. 1937 sold it to George and Jack Mizono, and their mother and father. The father was named Saichi Mizono.

George, the eldest brother, worked at Azumaya from the time his family bought it. The father loved tofu. Jack joined them as soon as he graduated from high school. The business was closed during World War II, but after the war the 4 brothers ran it. It was very slow, a real struggle. In the early 1960s business started to pick up. At that time, they delivered direct to stores. The Berkeley Co-op was their first account outside the Japanese stores. They sold tofu to the Co-op loose, in bulk, before Azumaya began individual packaging. After Azumaya began packaging, there was resistance from the Co-op. People complained and feared bad sanitation. Address: Azumaya Inc., 1575 Burke Ave., San Francisco, California 94124. Phone: 415-285-8500.

7518. Palucci, Jeno. 1982. Brief history of Chun King soy sauce (Interview). *SoyaScan Notes.* April 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jeno founded Chun King in 1945. The company first began selling ready-made soy sauce in about 1947.

Note: A search of the U.S. Patent and Trademark Office database shows that the "Chun King" trademark (more specifically a "Word Mark") was first used and first used in commerce on 1 Jan. 1948 and was first registered (by Chun King Corporation, Duluth, Minnesota) on 16 Sept. 1957. The trademark was to be used for "Various canned unitarily packed foods." A list of these foods is given, and includes "Soya Sauce." Actually Chun King registered two

© Copyright Soyinfo Center 2014

similar "Word Marks. Both have the word "Chun" written in rounded Oriental-looking letters above the word "King." Both words are the same height, the same width, and the same "typeface" or design. In one, the wards are written in outline letters and in the other in solid black letters.

Chun King never made fermented soy sauce. They bought their nonfermented soy sauce by the barrel from a plant in Toledo, Ohio, run by the Donofrio Brothers, then repackaged it under the Chun King label. He does not remember the company's name but their technician was a man (perhaps Lou Minor) who had worked for La Choy. This man first got Jeno interested in soy sauce before he started buying from A.E. Staley. In the late 1940s and 1950s Jeno was not aware of any fermented soy sauce being made in the USA; it was all made from HVP. Kikkoman introduced fermented soy sauce to the USA by importing it from Japan.

Jeno thinks Chun King may initially have bought its soy sauce from A.E. Staley Mfg. Co.–but he is not sure. It was shipped by the barrel. Starting in the late 1950s, Jeno bought HVP from Staley and started blended his own soy sauce; he recalls that Staley sold both HVP and blended soy sauce.

When Jeno started selling soy sauce, La Choy had about 60% of the U.S. market and the remaining 40% was divided up among Chinese-, Japanese-, and Korean-American manufacturers. One Polish fellow in Chicago, Illinois, named Ben Gee, was also in the business. In the 1950s it became a battle between La Choy and Chun King, and in the end, when Jeno sold out, Chun King was definitely the market leader. But now La Choy has again taken the lead. Chun King is trying to re-capture the lead with a big ad campaign and a catchy jingle.

Jeno is quite sure that all Chun King soy sauce is presently made in Cambridge, Maryland. The company's plant used to be in Duluth, Minnesota, but after he sold the company, the Duluth plant was closed, and he bought it back.

Jeno also grew mung bean sprouts; he tried sprouting soybeans but was not successful. Address: Jeno's Inc. (Pizza), 525 Lake Ave. South, Duluth, Minnesota 55802. Phone: 218-723-5555.

7519. Chico-San, Inc. 1982. Choice imported natural foods (Ad). *Bestways.* April. p. 65.

• ***Summary:*** A half-page black-and-white photo shows Lima Ohsawa, wearing a kimono and carrying a tray of Japanese foods, including Lima Soy Sauce. "Top quality natural foods and condiments are imported from Japan under the

© Copyright Soyinfo Center 2014

supervision of Mrs. Lima Ohsawa, Chico-San's specialist in macrobiotic foods."

Chico-San imports from Japan include Lima Soy Sauce, soybean puree (miso), mineral-rich mercury-tested seaweeds, azuki beans, black soybeans, barley koji, kuzu, nigari, and tekka. "Soon, a companion for Lima Soy Sauce–Lima Tamari–Wheat Free–Whole soy beans–Rice & zestful–Naturally brewed in wooden casks for about 2 years." Address: Chico, California 95926.

• ***Summary:*** Mechanism of formation of viscous material of "natto" using DNA transformation as a genetic technique, growing on steamed soybeans. Address: Japan.

7521. Jacobs, Leonard. 1982. The Chico-San story: Popularizing rice cakes in America. *East West Journal.* April. p. 58-61.
• ***Summary:*** A history of Chico-San, including Bob Kennedy. "In 1981 Chico-San and Arden, the two companies who manufacture rice cakes on a national scale, sold approximately 9 million bags of rice cakes to natural foods stores."

In 1968 "Chico-San was beginning to work on a project which would change the entire course of natural foods in the U.S." That year, "Bob Kennedy, Chico-San's president, had begun negotiating with the Lundberg brothers of Wehah Farm in Richvale, California for them to grow totally organic brown rice. The vision of Kennedy and his associates encouraged these farmers to invest considerable time and energy in a very risky project. The Lundbergs were successful, and this success has been an inspiration and incentive for many other large-scale farmers to grow grains organically–a development that has had far-reaching consequences on the health of millions of people.

The story of Chico-San and Bob Kennedy is one of a dedication to quality that is continually renewed and strengthened. But the development of Chico-San was not always so clear. Kennedy was a studio trumpet player in the 1950s, working for the Columbia Broadcasting Company in New York City. 'I was feeling good and didn't really have any serious health problems, but around 1960 I heard of a Japanese man who was lecturing on natural health care and Oriental philosophy, and I was interested,' Kennedy recently said. This man was George Ohsawa, the teacher of macrobiotics, whom Kennedy eventually met at a summer camp in upstate New York in July of 1960. 'Ohsawa's message was very inspiring, and a few of us felt compelled to put his ideas into practice immediately,' Kennedy recalled.

Ohsawa, after a trip to Japan, returned to America near the end of that year and lectured on the possibility of nuclear war as a result of U.S. / Soviet tensions. He warned that New York City could be one of the first cities to be destroyed and advised his students to leave. Several key members of this early group began to search out areas of the country that would be safe from bombs or fallout and that would also be suitable for growing rice.

They finally decided on the town of Chico in the Sacramento Valley in Northern California, an area of fertile farmland, where rice was already being grown. They felt confident that eventually organic brown rice would also grow there. Thus, in October, 1961, thirty-two of these early pioneers left New York City to travel across the country in a caravan of VW buses, vans, and station wagons, to settle in Chico, California. The American pioneering spirit had been reinforced with Ohsawa's spirit of adventure and change–a combination that set them on the path they are still traveling today.

The group was considerably diverse, including five professional trumpeters, a painter, a wood-carver, a Harvard economist, a TV soap opera star, an engineer, and a social worker. Most of these early settlers have since moved on to other things, but not all. Dick Smith, one of the trumpeters, is now vice president of Chico-San and continues to work there, but now with his three children. Kennedy's wife and two of their four children also work with the company. And Herman and Cornellia Aihara, both of whom had been students of Ohsawa in Japan, have remained involved with Chico-San, although their primary interests are in macrobiotic education through lectures and cooking classes.

"But back in 1961 Aihara and Kennedy were the originators of the food company. They decided to call it Chico- San, 'san' being the Japanese word signifying respect. Aihara had contacts in Japan for importing foods such as miso, tamari soy sauce, umeboshi plums, and sea vegetables. They began a small food store in the city of Chico to introduce these products to the local community, which did not, however, buy them. 'Unfortunately, Japanese foods were not what people had in mind when they considered health foods,' Kennedy said. 'The only way we could get any sales was to begin some sort of classes on the value of these foods and macrobiotics in general.' So Kennedy and Aihara began travelling up and down the Coast giving lectures on philosophy and Oriental medicine. However, even with these classes, sales were not justifying the type of products these men were offering.

"The next step was to introduce a small bakery into the back of the store. Keeping true to their macrobiotic ideals, the bread they baked was an unyeasted loaf made from freshly ground whole wheat, and the best quality oil, sea salt, and water available; no sweeteners were added. Again they had put their principles ahead of conventional business practices and bottom line motives, and again they had created a product with limited immediate demands. So when Ohsawa visited Chico in the summer of 1963 for a lecture series, Kennedy confided in him about the difficulties

© Copyright Soyinfo Center 2014

they were experiencing. Ohsawa laughed at the idea of difficulties standing in the way of ideals and mentioned that a new possibility for a popular food product might be rice cakes. Apparently puffed rice cakes were well-liked in Japan and machines were available to mechanically manufacture them." Continued.

7522. Jacobs, Leonard. 1982. The Chico-San story: Popularizing rice cakes in America (Continued–Part II). *East West Journal***.** April. p. 58-61.

• ***Summary:*** Continued: "By the end of the year, Ohsawa had located an old rice cake machine in Japan and shipped it to Chico. Kennedy had it refurbished and assembled and began the first rice cake manufacturing in America. (Basically, rice cakes are made by soaking rice, adding measured portions into individual molds, heating them under pressure, and then releasing the pressure so they puff uniformly and take on the shape of the mold.) However, this first machine was manually operated and required a strenuous effort to stamp out individual crackers. Since the operation of the machine was sending the employees to the chiropractors more and more frequently, Kennedy redesigned it to operate more automatically. Eventually he created a design which worked fairly easily, and they began selling the rice cakes as quickly as they could manufacture them.

"To ensure the quality of the rice, Kennedy and Aihara started searching for the best rice farmers in the area. Eventually they found a Farmer Koda who was growing a strain of short grain brown rice 200 miles south of Chico [Koda Farms in South Dos Palos]. Although his rice was of excellent quality, he was located in an area of cotton growers who used large quantities of chemicals. Kennedy felt compelled to find another farm which was relatively free of surrounding chemicalized agriculture and which would be willing to experiment with growing completely organic brown rice. In 1968 he signed a contract with the Lundberg's of Wehah Farm [Richvale, California], guaranteeing the purchase of their first organic crop. This was a considerable risk on each side, since at best the farmers felt the yield would be half as much as the conventional crop, and even then the weeds and insects, especially during the paddy stage, would be extremely competitive with the rice. However, the experiment proved successful, and we all have been benefiting ever since. (Other farmers have since begun producing organic brown rice, most notably Farmer Garrich of Lone Pines Farm in Arkansas.)

"Interestingly, with the recession of 1973 and 1974, the price of organic rice increased quite a bit and the demand for organic rice cakes decreased considerably, so Chico-San discontinued the organic rice cakes–selling only organic rice. However, by 1976, they were able to reintroduce the organic rice cakes and the demand has again been on the up-swing.

By the late '60s/early '70s the FDA began a close scrutiny of the relationships between food companies and educational programs. They would not allow promotion of foods based on educational or health claims. As a result Kennedy and Aihara established the George Ohsawa Macrobiotic Foundation (GOMF) to continue the educational activities separately from the food company. Kennedy became the director of Chico-San, Aihara the director of GOMF. This relationship has proved very productive for both sides as each continues to promote the other. Aihara is still involved in the selection and quality control of the food products, and he gives weekly classes to approximately thirty-five of the seventy-five staff members of Chico-San. Kennedy began to devote himself completely to the development of the food company.

"In addition to enlarging the ware- house space, Kennedy looked for ways to expand and improve the product line. In 1974 he brought Junsei Yamaguchi into the company to begin manufacturing miso and tamari soy sauce according to Chico-San's standards. Chico-San also began to produce yinnie rice syrup, a traditional sweetener Kennedy had discovered on one of his trips to Japan. Yinnie syrup is a whole grain product made from malted wheat and rice and has a much lower concentration of refined sugars than most other malted grain sweeteners such as barley malt or corn syrup. During this time Chico-San had acquired additional rice cake machines purchased from Japan, but Kennedy felt that these machines could be improved. Eventually he developed a completely hydraulic machine which was capable of increasing the supply of rice cakes up to the market demand. Unfortunately, soon after they got the new machine into production, it shorted out, blew up, and caused a fire which totally destroyed the Chico-San warehouse, all the incubating miso and tamari, and the majority of their other products. The founders of Chico-San had escaped the threat of destruction in New York, but over a decade later they witnessed their almost total devastation in California.

"However, by that time the company had developed a strong reputation in the market. In addition, Kennedy was willing to withstand considerable odds and start from scratch. So within a year of the fire (and a loss of $250,000 beyond the insurance settlement), he began again with a larger warehouse and what he considered to be better rice cake machines. Presently, Chico-San is making rice cakes twenty-four hours a day, seven days a week. It is selling these cakes in the natural foods stores, and has distribution in the supermarkets and (under the label of Landau and Kemach) in the Jewish Kosher foods stores. Kennedy is also attempting to get his rice cakes into the institutional food services, such as hospitals and prisons, but finds this to be very slow. 'The bureaucracies involved are very difficult to work with. But we do have a few public schools in California using rice cakes in the lunch programs,' Kennedy claims.

Although Chico-San never got back into miso and tamari production, it did expand its own product line by increased importing of traditional macro- biotic foods

© Copyright Soyinfo Center 2014

from Japan. These include Lima Soy Sauce (named after George Ohsawa's wife, Lima), miso, barley koji, kuzu, and rice malt vinegar; the sea vegetables hijiki, kombu, wakame, nori, and kanten; nigari (for making tofu); tekka (a condiment rich in iron); umeboshi plums; and the Japanese teas kukicha, mu, and renkon (lotus root). In this country Chico-San makes yinnie syrup, yinnie taffy candies, rice cakes, carob-covered rice cakes, and rice nuggets. Chico-San also publishes the *Chico-San Cookbook,* which was written by Cornellia Aihara. The products sold by Chico-San undergo close scrutiny by Kennedy, Smith, and Herman Aihara. They are very careful about quality control and generally agree about standards. One exception has been the carob-covered rice cakes. It is difficult to solidify the carob without adding some type of refined sweetener. Although they have been experimenting with yinnie syrup, at this point they are using fructose but without consensus within the company as to whether it is a healthful ingredient. Besides the manufacturing company in Chico, Kennedy is planning to reopen the Chico-San retail store. He has also opened up a warehouse and rice cake plant near Trenton, New Jersey and is considering opening up another outside of London [England]. In addition, Kennedy and Aihara went to Japan in early December, 1981, to conclude formal discussions with the Ohsawa C.I. macrobiotic teaching organization in Tokyo, concerning the creation of a distribution company called Ohsawa U.S.A. Lima Ohsawa's sister, Flora, will be in charge of this company which will allow for the increased distribution of many Japanese macrobiotic specialty foods.

• ***Summary:*** This is a typewritten table with 8 columns: The three main ones are (1) Company name. (2) Date started operations. (3) Tofu production in April 1982 (in 1,000 lb/week). Companies are arranged in descending order of tofu production.

Hinode Tofu Co. (Los Angeles, California; 1937?). 140.
Azumaya, Inc. (South San Francisco, California; 1920?). 110.
Aloha Tofu Co. (Honolulu, Hawaii; 1950?). 60.
Quong Hop & Co. (South San Francisco, California; 1906). 43.
England Soy Dairy (Greenfield, Massachusetts; Jan. 1977). 36.
C.R. Food (Los Angeles, California; April 1979). 28.5.
Wy Ky (Los Angeles, California; July 1970). 28.
Wo Chong & Co. (San Francisco, California; 1928). 24.
Kanai Tofu Factory (Hawaii; 1923). 16.
Traditional Tofu (Oakland, California; 1978?). 17.
Mighty Soy, Inc. (Los Angeles, California; Aug. 1980). 16.6.
Eastern Foods Corp. (Minneapolis, Minnesota). 15.
Panda Food Products (Woodhaven, New York; 1981). 15.
Nasoya Foods (Leominster, Massachusetts; April 1978). 12.
Island Spring (Vashon, Washington; Dec. 1976). 12.
Swan Gardens (Miami, Florida). 12.
Sam Sung Food Inc. (Washington, DC; 1980). 11.
Ota Tofu Co. (Portland, Oregon; 1919). 10.4.
Victor Food Products (Scarborough, Ontario, Canada; Feb. 1978). 10.
Hashizume Food Products (New York City, New York; 1969). 10.
Soyfoods of America (Duarte, California; 1981?). 10.
White Wave (Boulder, Colorado; Sept. 1977). 9.
The Soy Plant (Ann Arbor, Michigan; Sept. 1977). 7.
Chicago Tofu Co. (Chicago, Illinois; 1960). 6.
Nomura Tofu Co. (Chicago, Illinois; 1975). 6.
Northern Soy (Rochester, New York; May 1977). 6. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

7526. *Soybean News.* 1982. Pioneer developer of soybeans for the North deceased. Dr. Sven A. Holmberg. 33(3):4.

© Copyright Soyinfo Center 2014

April.
• ***Summary:*** Dr. Holmberg, Head of the Holmberg Soybean Breeding Institute at Fiskeby, Norrköping, Sweden, passed away on 10 Nov. 1981 at the age of almost 88 years.

In the 1930s he had become interested in the soybean and speculated about its possibilities in Sweden. In 1938 he studied soybean breeding in the USA, and in 1939-40 he made his first expedition to Japan and Sakhalin. In the severely cold climate of the Hokkaido islands he found soybean types which he considered valuable for breeding in Sweden. In 15 years he developed strains which matured and yielded comparatively well in middle Sweden, where Fiskeby is located. In 1957 he returned to the Far East [East Asia] to collect more material. In 1970, when almost 70 years old, he made a third expedition to Siberia and Japan. "In the meantime he studied soybean breeding in the USA and Canada. He learned that his breeding material was successfully used in North American programs. Dr. Holmberg cooperated and counseled with Dr. J.W. Lambert, soybean breeder, University of Minnesota.

"The most interesting [and commercially important] varieties bred by Dr. Holmberg are Fiskeby V, Brävalla, and Träff. Although other promising varieties are in early stages of development, it is anticipated it will take 15 to 20 more years for soybeans to reach major crop status in Swedish agriculture according to a friend. The intention of Dr. Holmberg was to make the crop food for man.

"A friend has written 'Sven Holmberg has done the fundamental work with soya bean for Northern Europe. The inheritors of his material and his ideas will have to fulfill his work. This is the best way to honor the man who devoted himself so enthusiastically and so intelligently to the breeding of soya bean in the North.'"

A photo shows Sven A. Holmberg in his later years, standing in a field of soybeans. He is facing the camera, wearing a long black coat, holding a sheaf of papers in his left hand and a cane in his right.

7535. Shurtleff, William; Aoyagi, Akiko. 1982. History of roasted soy flour, soy coffee, and soy chocolate. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 20 p. May 29. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction. Etymology. Use of the term "roasted whole soy flour." In Korean, *konggaru* means "roasted soybean powder." Part I: History of roasted soy flour in East Asia. China. Japan. Other East Asia. Part II: History of roasted soy flour in Europe. Part III: History of roasted soy flour in the United States. Part IV: History of roasted soy flour in the Third World. Part V: History of soy coffee. Europe. USA. East Asia. Part VI: History of soy chocolate. Europe. USA. Part VII: History of roasted soynut butter. Part VIII: Outlook for roasted soy flour.

Etymology: In China as early as the third century BC, roasted soy flour was known as *tou hsieh* ("bean powder or shavings"). By the 1700s it was also called *tou fen* ("bean flour") and by the 20th century it was called *huang tou* in standard Chinese (Mandarin) and *wong-dow* in Cantonese. Both terms mean "yellow bean." It is not known when these terms originated.

In Japanese in olden times, roasted soy flour is said to have been called *mame-ko* ("bean flour," written with the same characters as tou fen in Chinese). Later (the date is unknown) it came to be called kinako ("yellow flour"). Roasted soy flour is called *bubuk kedele* in Indonesian and *konggomul* in Korean.

In English, most of the early references to roasted soy flour were descriptive / indirect, such as "roasted soybeans ground into a fine powder" (Piper and Morse 1923). It was also referred to as "roasted bean flour" (Horvath 1927), "kinako" (Smith 1958) and "roasted full-fat soy flour" (Harper and Lorenz 1974; Shurtleff and Aoyagi 1975). The shortened term "roasted soy flour" was first used in 1976 by Shurtleff and Aoyagi in their *Book of Miso.* On packaging, to emphasize the fact that the flour is not defatted, it may be labeled "Roasted Whole Soy Flour."

Roasted soy flour is called *gerostetes sojamehl* in German and *harina de soya tostada* in Spanish. No French name is known.

Note. This is the earliest English-language document seen (Nov. 2012) that contains the term "roasted whole soy flour." Address: Lafayette, California. Phone: 415-283-2991.

7536. *Daizu Geppo* (*Soybean Monthly News*). 1982. Tottori meisan, tôfu chikuwa [Tofu chikuwa, famous product of Tottori prefecture, Japan]. May. p. 30-39. [Jap; eng+]
• ***Summary:*** It was first produced about 120-150 years ago, in the late Edo or early Meiji periods. To use up leftover tofu, tofu makers mixed it with starch, shaped it into dumplings, and steamed it. In later years they mixed in fish paste. The formula now is: tofu 55-65%, fish meat 25-35%, starch, seasonings (salt, sugar) 10%. The preparation is described.

ice cream). Present market.

Recent introductions of commercial soymilk products include: Green Spot Bangkok (1960), Coca Cola test market of SACI in Brazil (1969), Singapore Cold Storage (1969), Kibun, Japan (1976), and Ace Canning (1980). Address: Alfa-Laval South East Asia, Singapore.

7538. Leviton, Richard. 1982. Discovering Japanese soyfoods. *Vegetarian Times* No. 57. May. p. 60-62, 65. [1 ref]
• ***Summary:*** Recently Richard Leviton traveled to Japan with a group of Americans to get a firsthand look at the Japanese soyfoods industry. There he got his first look at the fabled neighborhood corner tofu shop. He discusses tofu (the Japanese consume 10 million cakes a day) and tofu manufacturers (large and small), types of tofu include silken tofu (called kinugoshi), fresh soft tofu called momen. "In the typical supermarket we counted as many as 60 different soyfood items (often several brands or product sizes), ranging from fresh miso and tofu to packaged soymilk and shoyu, natto, dried frozen tofu, yuba rolls and kinako powder."

Also: Takatsuka Marugo (a large tofu maker that churns out 100,000 lb/day of tofu), Yuba Han (a traditional yuba shop in Kyoto), Asahimatsu Kori-dofu Co., natto, Hamanatto, soymilk, cooked soybeans with wakame, soy sprouts, kinako powder, packaged green soybeans in the pods, miso (fresh and freeze-dried), Linda Barber (an American home economist who is teaching at Kobe Girl's College in Nishinomiya, and also teaching American-style tofu recipes to Japanese housewives via television and the print media), and Sasa-no-Yuki, a 279-year old restaurant that specializes in tofu cookery.

Photos show: (1) Eleven different tofu dishes in bowls as served at Sasa-no-Yuki restaurant in Tokyo. (2) A man hanging up fresh yuba at Yuba Han. (3) Members of the group seated on tatami mats on the floor around a huge table enjoying dishes served at Sasa-no-Yuki. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

• ***Summary:*** Contents. Introduction. Preparation tips. Recipes–1. Cheese 2. Egg. 3. Just tofu. 4. Meat. 5. Sea foods. 6. Vegetables. 7. Salad. 8. Soup. 9. Dessert.

Reissued in 1988 under a new title: "Quick & Easy. A taste of tofu: Mastering the art of tofu cooking."

7541. **Product Name:** [Nisshin Soymilk (Plain, Coffee, of Mixed Fruits)].
Foreign Name: Sutoreeto, Koohii, Furuutsu Mikksu.
Manufacturer's Name: Nisshin Oil Mills, Ltd. (Nisshin Seiyu K.K.).
Manufacturer's Address: Shinkawa 1-23-1, Chuo-ku, Tokyo, Japan.
Date of Introduction: 1982 May.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. These products were introduced in May 1982 in 200 ml Tetra Brik cartons, and distributed only in the Kantô, Tôkai, Chubu, and Kinki regions, which is most of central Japan from Tokyo to Osaka.

7542. Shurtleff, William; Aoyagi, Akiko. 1982. Soyfoods directory and databook. 1st ed. Lafayette, California: Soyfoods Center. 21 p. May. 28 cm. 2nd ed. published in June as Soyfoods Industry: Directory and Databook. 56 p. [24 ref]
• ***Summary:*** A detailed study of the rapidly emerging soyfoods industry and market. Contains original statistics compiled by the Soyfoods Center through interviews with companies. Contents: 1. Names and addresses of soyfoods manufacturers in the Western world, plus major soymilk, miso, shoyu, and yuba manufacturers in East Asia. 2. Analysis of the soyfoods industry in the U.S. 3. Soyfoods production statistics for America and the West. 4. America's prime soyfoods market regions. 5. The tofu industry in the West: Three-year analysis of the tofu industry in the West. The U.S. Tofu market: overview and outlook. Graph of number of tempeh and tofu manufacturers in the West. North America's twenty largest tofu manufacturers. 6. Analysis of the soymilk industry in the United States. 7. Key institutions working with soyfoods in the West.

Note: This is the first market study published by Shurtleff and Aoyagi. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

7543. **Product Name:** [Tempeh].
Foreign Name: Tempeh.
Manufacturer's Name: Traditions du Grain.
Manufacturer's Address: 16 Avenue Jean-Jaurès, 94400 Ivry, France. Phone: 46.71.89.88.
Date of Introduction: 1982 May.
New Product–Documentation: Note: Ivry is a suburb of

© Copyright Soyinfo Center 2014

Paris, located about 7 km (4 miles) southeast of the city's center. Letter from Sjon Welters. 1982. April 16. Traditions du Grain is a macrobiotic centre which is setting up a tempeh shop. They will start in summer. Contact Jean Luc Alonso, 16 Rue Jean Jaureo, Ivry 92200, France. Soyfoods Center Computerized Mailing List. 1982. July 23. Owner: Jean Luc Alonso. No phone.

Letter from Anita Dupuy and Jean Luc Alonso of Traditions du Grain. 1983. May. "We introduced tempeh 1 year ago on a commercial scale. I think there is no other tempeh production in Paris (or France) on a commercial scale."

Richard Leviton. 1983. Oct. 16. Trip to Europe with American Soybean Assoc. Jean Luc Alonso, a tempeh maker 20 miles from Paris at Traditions du Grain, runs France's first tempeh shop. Ad in Le Compas. 1986. No. 26. p. 34.

Talk with (call from) someone from France. 1989. Dec. 11. Jean Alonso and Rachel Revesz are starting a new tempeh shop in Bergerac, France, to make soya tempeh. The company has no name yet.

Letter from Rachel Revesz. 1989. Dec. 11. "The former tempeh-workshop in Paris was called Tradition [sic, Traditions] du Grain. It existed for 2½ years. Jean-Luc Alonso was selling only in Paris and its suburbs. The production and sales were small. Nobody knew about tempeh and the work needed for making it known exceeded his financial capabilities. Ten years later, after more experience in macrobiotics and business, we plan to start our new project. It will be a plant of 600 square meters located in the countryside 9 km from Bergerac in Dordogne, near Bordeaux, with a maximum production (during the first year) of 12,000 pieces of tempeh (300 gm each) per month. We also plan to produce 10,000 tempeh burgers and 10,000 croquettes monthly, as well as a bit of fried tempeh, all prepared with spring water. They will be vacuum packed. Before starting, we did a market study, which gives us hope. During the first year we will be 3 persons working in the enterprise, which will be called Enzo Future Foods, located in Queyssac, 24140 Villamblard, France."

Letter from Roland A. di Centa. 1993. Aug. 9. Roland was one of the first people to introduce soyfoods to Italy. He was very interested in macrobiotics and was a close friend of Michio Kushi. "My interest in food was to heal people with food and I had a lot of success using a holistic approach to help people with major diseases. For all these cures I used a lot of miso, tempeh, and tofu. Good miso was available. However tempeh and tofu had to be locally produced. I cured people from 1980 until about 1985... Tempeh: There was only tempeh available for Paris, made by a lady there named Anita Dupuy, who delivered to Le Bol en Bois (a macrobiotic restaurant in Paris) and to some consulates and embassies (such as the Philippines). As I was busy elsewhere I sent Giovanna Mazzieri (of Milan, Italy) to Paris to study the process [in Feb. 1983]. Anita taught Giovanna how to make tempeh. Giovanna was a very busy lady and a fan of macrobiotics after I healed her husband of a very difficult disease. She was very smart and she produced tempeh in Milan in about 1980 [sic 1983]. It was perfect and of very good quality. It was sold in a few health food stores." Anita Dupuy is at Rue du 18 Juin, 25-94400 Vitry [Ivry?], France. Vitry [Ivry?] is a suburb of Paris.

Letter from Giovanna F. Mazzieri. 1993. Oct. 6. She went to Paris for one week in February 1983 and Anita Dupuy taught her how to make and cook with tempeh. At the time, Anita was definitely selling her tempeh to many shops in Paris, including Le Bol en Bois, other natural food or macrobiotic shops, and also to the Indonesian Embassy in Paris. She returned to Milan, Italy and made tempeh non-commercially starting in mid-1983.

7544. Tsuchiya, Kunio. 1982. Minami no tôfu, kita no tôfu: Tottori meisan "Tôfu chikuwa" o tazunete [Southern tofu, northern tofu: A visit to "tofu chikuwa," a famous product of Tottori prefecture]. *Daizu Geppo* (*Soybean Monthly News*)**.** May. p. 30-39. [Jap]
• ***Summary:*** Ordinarily the Japanese word *chikuwa* refers to a kind of fish paste.

7545. **Product Name:** [Yakult Soymilk (Plain, Coffee, Orange, With Corn)].
Foreign Name: Yakuruto Rakkumii (Tônyû Pureen, Koohii, Orenji, Koon).
Manufacturer's Name: Yakult (Yakuruto Honsha).
Manufacturer's Address: Japan.
Date of Introduction: 1982 May.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Toyo Shinpo (Soyfoods News). 1982. May 1. Yakuruto has started selling four flavors of soymilk (Plain, Orange, Corn, Coffee) in Tetra Brik cartons for about 80 yen per pack, They are buying the soymilk from Mitsubishi Kasei, but they are planning to develop their own fermented soymilk later.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. States that Yakult (a famous Japanese maker of fermented dairy milk products) introduced these 4 products in May 1982, in 200 ml long-life packs, and distributed them in Tokyo, Nagoya, and Osaka.

Product with Label (200 ml Tetra Brik carton) purchased in Tokyo in June 1983. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

7546. **Product Name:** [Soymilk (Plain, Coffee, or Banana)].
Foreign Name: Pureen, Koohii, Banana.
Manufacturer's Name: Yamato Shokuhin (Yamato Foods).
Manufacturer's Address: Japan.

© Copyright Soyinfo Center 2014

Date of Introduction: 1982 May.
Wt/Vol., Packaging, Price: 200 ml blow-molded polyethylene pack (*buro yôki*).
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. These products were introduced in May 1982 in 200 ml buro packs.

7547. Shurtleff, William; Aoyagi, Akiko. 1982. History of fermented black soybeans (formerly soy nuggets) (shih or chi, douchi or doushi, hamanatto, Daitokuji natto). Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 27 p. June 4. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction. Etymology. How fermented black soybeans are made. Part I: History of fermented black soybeans in China. Early developments; Han Dynasty (206 B.C.-229 A.D.). Developments from the third to the 16th century. The *P'en-tsao Kang-mu* (1578). 17th to 20th century.

Part II: History of fermented black soybeans in Japan. Early developments (746-1700's). Daitokuji fermented black soybeans in Kyoto (*Daitokuji natto*). Savory fermented black soybeans in Hamamatsu (*hamanatto*). Modern developments with fermented black soybeans (1900-1982).

Part III: History of fermented black soybeans in Southeast Asia. Philippines (*tausi* or *tao-si*). Malaysia (*tao si*).

Part IV: History of fermented black soybeans in the West. Europe. United States.

7548. Wells, Patricia. 1982. Fast food on the fast track: On–or near–Japan's railroads, box lunches are first-class fare. *New York Times.* June 20. p. XX37.
• ***Summary:*** "In much of the world, fast food has become a synonym for mediocre, mass-produced fare." But not so in Japan. The *ekiben* (box lunch for train travelers) has a long tradition of high quality, inexpensive, healthful food. A part of almost every box lunch is a tiny container of soy sauce for seasoning.

One excellent part of this box lunch, "a favorite of Japanese children, is inari zushi, seasoned rice wrapped with fried bean curd or tofu that's been boiled in a sweet sauce."

7549. Bo, Thi-an. 1982. Hishio to shôyu no engen to sono seisan gijutsu ni tsuite. I. [On the origins of chiang and shoyu, and their production technology. I.]. *Nippon Jozo Kyokai Zasshi* (*J. of the Society of Brewing, Japan*) 77(6):365-71. June. [9 ref. Jap; eng]
• ***Summary:*** This is one of the most interesting and carefully researched articles seen up to this time on this subject. The author (Ho Keian in Japanese), is a Chinese graduate of Iwate University in Japan. He sent this article to the university alumni association on the university's 80th anniversary. Shoyu has become a world-class seasoning. Even in Moscow they have built plants to produce soy sauce and chiang (miso).

The earliest chiang was made with meat, fish, and shellfish; later, as agriculture advanced, beans and grains were used. The two main types of chiang are (I) those made using flesh as a main ingredient and (II) those made solely from plants. The flesh chiangs can be further subdivided: IA. Those made from animal and bird flesh. IA1. Made without bones (mentioned in the Shih Ching [Classic of Food], the Chou Li [Rituals of the Chou Dynasty, 3rd century B.C.], the Li Chi [Book of Rites, 2nd to 3rd century B.C.], and the I Li); IA2., Made with a large amount of liquid (mentioned in the Chou Li and Li Chi); IA3. Made with flesh and bones (mentioned in the Chou Li, I Li, and Ch'i-min Yao-shu [Essential techniques for the peasantry of Ch'i, written by Chia Ssu-hsieh in A.D. 535]); IB. Made with fish or shellfish, including IB1. Fish chiang (mentioned in the Chou Li, Ch'i-min Yao-shu), and IB2. Fish intestine chiang (mentioned in the Ch'i-min Yao-shu). The non-flesh or vegetable chiangs (II) can be divided into: IIA. Those made with beans including IIA1. Chiang (mentioned in the Chou Li (3rd century B.C.), Lun Yu [Analects of Confucius, after 479 B.C.], Shih Chi [The Historical Record by Ssu-ma Ch'ien, ca. 90 B.C.], and Chi Chiu P'ien [48 to 33 B.C.]). IIA2. Bean (Soybean) chiang (tou-chiang, mentioned in the Ch'i-min Yao-shu). IIA3. Small (Red/Azuki) bean chiang (mentioned in the Nung Sang I Shih Chi Yao [+1314]). IIB. Chiang made from other vegetable materials including: IIB1. Wheat chiang (mentioned in the Shih Ching); IIB2. Wheat flour chiang (mentioned in the Pen-ts'ao Kang-mu [Compendium of Materia Medica, by Li Shih-chen, A.D. 1578-97] and the Chü Chia Pi Yung Shih Lei Ch'uan Chi [+1301]); IIB3. Coconut chiang (Mentioned in the Ch'i-min Yao-shu); IIB4. Barley chiang (mentioned in the Pen-ts'ao Kang-mu); and IIB5. Mustard chiang (mentioned in the Li Chi and Chih Ching).

It is interesting to note that the earliest meat and fish chiang was made with koji, typically millet koji. Koji is also used today to make some of the fish sauce called Shottsuru in Akita prefecture in Japan. Shottsuru has a 3,000 year history.

The use of the terms "hai" (meat chiang) and "chiang" in the Chou Li imply that some chiang was made from ingredients other than meat. An illustration from the Han dynasty shows a hole in the bottom of a chiang pot for drawing off soy sauce. The *Ssu Min Yüeh Ling* by Ts'ui Shih from the Later Han (25-220 A.D.) uses the term "ch'ang

© Copyright Soyinfo Center 2014

chiang" to refer to refined/filtered soy sauce. The *Ch'i-min Yao-shu* also uses two terms for refined chiang that seem to be referring to types of soy sauce. Thus it seems relatively sure that chiang has a history of about 3,000 years from the Chou dynasty (1122-256 B.C.) and soy sauce has a history of over 2,000 years since the Ch'in (221-206 B.C.) or Han (206 B.C.–A.D. 220). In the literature of the T'ang dynasty it is not rare to use soy sauce for medicinal purposes.

Soy sauce came from chiang, which was made from soybeans and wheat flour or wheat; it is still widely produced today. But from shih (fermented black soybeans) came tamari and kuan-tou soy sauce (kuan-tou is a region in Fukien / Fujian in southeast China). Only soybeans were used to make these types of soy sauce. The first tou-shih (fermented black soybeans) was made from soybeans only, with *Aspergillus oryzae* mold. If salt was added, the product was called hsien tou-shih; if none was added, it was called tan tou-shih. Later they started to use *Mucor* (as in Szechuan tou-shih) or *Rhizopus* mold species. Today most tou-shih is made with Aspergillus. This is the ancestor of tamari shoyu and kuan-tou soy sauce. Address: Iwate Daigaku Nôgaku-bu, Sogaku 80 shunen no gosukuji ni kaete; Present address, China.

7550. Bunka Shuppan Kyoku. 1982. Miso no hon: Tsukutte tabeyô. The miso [The book of miso: Let's make and eat]. Tokyo: BSK. 96 p. June. Illust. 25 cm. [Jap]
• ***Summary:*** This colorful book, with many color and black-and-white photos, is packed with Japanese miso recipes. Pages 18-21 describe how to make koji at home in a home-made incubator. Pages 30-31 are a review by Wataru Kawamura of *The Book of Miso* by Shurtleff and Aoyagi; includes a photo of the two authors. Page 22 describes how to use koji to make amazake. Address: Shibuya-ku, Tokyo, Japan.

7551. Katsuta, Keiko; Hayakawa, I.; Nomura, D. 1982. Teinôdo dope no rinjinoaranin bôshi kôka to bôshi tokusei [Inhibition of lysinoalanine formation and spinnability of low protein concentration dope]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 56(6):435-40. June. [13 ref. Jap; eng]
• ***Summary:*** A large amount of lysionalanine (LAL) was found in spun soy protein fibers. Various methods for inhibiting its formation were studied. Describes dopes for the preparation of synthetic fibers from soybean protein, inhibition of lysinoalanine formation, and spinnability. The amount of LAL increased in direct proportion with increasing protein concentration; this might be attributed to the increased frictional heat generated by the high viscosity dope. "Low temperature and low alkali treated fibers prepared from 14% protein showed decreased LAL formation." Address: Dep. of Food Science and Technology, Faculty of Agriculture, Kyushu Univ., Hakozaki, Higashi-ku, Fukuoka 812, Japan.

7552. **Product Name:** Vege-Pro (Soymilk) [Coffee & Malt, Blended Juices, Plain (Dairylike), or Lactic Fermented].
Manufacturer's Name: Kibun Health Foods Co.
Manufacturer's Address: Saitama-ken, Japan.
Date of Introduction: 1982 June.
Ingredients: Coffee: Water, soybean, corn syrup, malt extract, corn oil, coffee extract, caramel (color), calcium lactate, sucrose fatty acid ester, salt, artificial flavor, carrageenan. Blended Juices: Water, soybean, corn syrup, orange, apple and pineapple juice from concentrate, propylene glycol, citric acid, calcium lactate, carotene, paprika, artificial flavor.
Wt/Vol., Packaging, Price: 6.75 fluid oz, 200 ml Tetra Brik Aseptic carton.
How Stored: Refrigerated.
Nutrition: Per 6.75 fl oz.: Coffee: Calories 140, protein 4 gm, carbohydrate 20 gm, fat 5 gm. Blended Juices: Calories 110, protein 3 gm, carbohydrate 22 gm, fat 2 gm.
New Product–Documentation: Labels. 1984. 2.5 by 3.25 inches by 1.5 wide. Paper carton. Coffee: Red, black, yellow, white on brown. Bird flying over coffee beans illustration. Blended Juices: Red, green, black, white on yellow. Bird flying over fruit illustration. Vegetable: Red, yellow, black, white on green. Bird flying over trees illustration. "Vege-Pro tastes so much richer than ordinary vegetable juice. Enjoy this extra-refreshing blended vegetable drink that supplies protein and vitamins. What a delicious way to treat yourself to good nutrition everyday." Tetra Brick packages, 3 color, 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Vegetable protein drink." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 33, 46.

carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. States that these products were introduced in June 1982 and distributed nationwide. Name of company with diacritics is: Kyôdo Nyûgyô.

7555. **Product Name:** [Mapron Soymilk (Dairylike with Honey)].
Foreign Name: Mapuron Tônyû (Hachimitsu-iri).
Manufacturer's Name: Mitsubishi Chemical Foods Co., Ltd. (Mitsubishi Kasei Shokuhin).
Manufacturer's Address: Ginza 5-13-12, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1982 June.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. In June 1982 Mitsubishi Kasei Shokuhin launched Tonyu Mapuron (in Hachimitsu-iri flavor) in 200 ml aseptic cartons.

7556. **Product Name:** [Marusan Soymilk (Dairylike or with Barley Malt Syrup)].
Foreign Name: Marusan Tônyû, Bakuga Tônyû.
Manufacturer's Name: Okazaki Marusan K.K. (Marusan-Ai Co., Ltd.).
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21 Japan.
Date of Introduction: 1982 June.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. In June 1982 Okazaki Marusan introduced 2 soymilk products, each in 500 ml long-life cartons: Marusan Tonyu, and Bakuga Tonyu. These products are distributed mostly in central Japan (in the Chûbu Chiho), in the area around Okazaki.

7557. Shurtleff, William; Aoyagi, Akiko. 1982. Soyfoods industry: directory and databook. 2nd ed. Lafayette, California: Soyfoods Center. 56 p. June. 28 cm. [24 ref]
• ***Summary:*** A detailed study of the rapidly emerging soyfoods industry and market. Contains original statistics compiled by the Soyfoods Center through interviews with companies. Contents: 1. Terminology: The many types of soyfoods. I. Traditional low-technology soyfoods. 1A–Nonfermented soyfoods: Fresh green soybeans, whole dry soybeans, soynuts and soynut butter, soy sprouts, whole soy flour & grits, roasted soy flour [kinako] & soy coffee, soymilk and dairylike soymilk products, tofu (eight types), okara or soy pulp, yuba.

1B–Fermented soyfoods: Tempeh, miso, soy sauce, shoyu & tamari, natto & thua-nao, fermented tofu & soymilk, soy nuggets [fermented black soybeans] (Hamanatto & tou-ch'ih).

II. Modern soy protein foods: Defatted soy flour, grits & flakes, soy protein concentrates, textured soy protein products, soy protein isolates.

III. Soy oil products: Soy salad oil & cooking oil, soy oil margarine & shortening, soy lecithin.

2. Soyfoods industry directory: Names and addresses of over 850 soyfoods manufacturers in the Western world, plus major soymilk, miso, shoyu, and yuba manufacturers in East

8. Analysis of the soy sauce / shoyu and miso industries worldwide. Statistics on fermented soyfoods in East Asia. The soy sauce market in the United States (1981). U.S. imports of soy sauce. Graph (1947-1981. Source: U.S. General Imports, Schedule A. Commodity by Country. U.S. Dept. of Commerce, Bureau of Census). U.S. imports of soy sauce. Table (1947-1981. Source: U.S. General Imports, etc. See above). The shoyu / soy sauce market in Japan. Graph. (1886-1980. Includes: Number of manufacturers. Per capita consumption. Shoyu production. Kikkoman's market share (%)). The miso market in Japan. Graph. (1930-1980. Includes: Per capita consumption. Total miso production. Factory production. Number of manufacturers. Home production. Amount of soybeans used). Overview of the miso market in the United States. Miso exports from Japan (1981). Japan's ten largest miso manufacturers and their output.

9. Other: Analysis of the soynuts industry in the U.S. North America's larger soyfoods delis, cafes & restaurants. The soybean crushing industry; overview.

10. Soyfoods terminology and standards (Glossary of soyfoods terms): I. Traditional nonfermented soyfoods: Fresh green soybeans, okara, roasted soy flour (soy coffee, soy chocolate), soybeans, soymilk (soymilk ice cream, soymilk soft serve, frozen soymilk yogurt, soymilk mayonnaise, soy shakes, soy nog, soymilk whipped cream), soynuts, soy sprouts, tofu (regular tofu, deep-fried tofu {deep-fried tofu cutlets called nama-age or atsu-age in Japan, deep-fried tofu burgers or burger balls, called ganmodoki or hiryozu in Japan, deep fried tofu pouches (called aburage in Japan; the words "deep-fried" may be dropped from the names after the initial usage, and in recipes or on package labels, if desired}), silken tofu {made without separation of curds and whey, called kinugoshi in Japan; modern types, all made with glucono delta-lactone as coagulant, and all known in Japanese as juten-dofu, are packaged lactone silken tofu, bagged lactone silken tofu (fukuro-dofu), sealed lactone silken tofu (buro-dofu), and Ever-Fresh Lactone Silken Tofu (in Tetra-Pak}), grilled tofu, frozen and dried-frozen tofu. (Note 1. It is illegal to describe the latter product as "freeze-dried tofu," since freeze-drying is a completely different process), terms associated with making tofu {fresh soy puree, a coagulant or curding agent, forming box, filter bag or pressing sack, tofu comes in cakes, not blocks}), whole soy flour, flakes and grits, yuba.

II. Traditional fermented soyfoods: Fermented soymilk products (soymilk yogurt {Soy Yogurt, Soyogurt, Soygurt}, acidophilus soymilk, soymilk kefir, viili, piima, buttermilk {Soy Kefir, etc.}), fermented tofu (wine-fermented tofu, brine-fermented tofu), miso (rice miso, barley miso, soybean miso, Chinese soybean chiang), natto (thua-nao from Thailand and kinema from Nepal; all are non-salted), fermented black soybeans [fermented black soybeans] (Chinese fermented black soybeans know as shih, tou-ch'ih, tou-shih, or dow-si; savory fermented black soybeans called Hamanatto in Japan, Daitokuji fermented black soybeans called Daitokuji natto in Japan, Philippine fermented black soybeans called tausi or tao-si in the Philippines, Indonesian soy nugget paste called tauco, formerly spelled tao-tjo, Malaysian soy nugget sauce called tao-si), soy sauce (shoyu. The five basic types of Japanese shoyu are: regular shoyu called koikuchi shoyu in Japanese, light-colored shoyu called usukuchi shoyu, tamari shoyu, clear shoyu called shiro shoyu, and rich shoyu called saishikomi shoyu), tempeh, other fermented soyfoods.

Note 2. This is the earliest document seen (Sept. 2012) that uses the word "Soygurt" to refer to soy yogurt.

III. Soy oil and modern soy protein foods: soy oil, defatted soy flour, flakes and grits, soy protein concentrate, soy protein isolate, textured soy protein products (TSP, TVP is a registered trademark of the Archer Daniels Midland Company and cannot be used as a generic name for this product), meat analogs (foods typically made from spun soy protein fibers to resemble meat, fish, or poultry products).

11. Names of soyfoods around the world: Names of 40 products. Brazilian / Portuguese names. British English names. Chinese names (fermented tofu is Toufu-ju or Sufu). French names, German names. Japanese names. Spanish names.

12. Key institutions working with soyfoods in the West: The Soyfoods Center, Soyfoods Association of North America, INTSOY, American Soybean Association, Bean Machines, Inc., Soycrafters Apprenticeship Program, USDA Northern Regional Research Center, Sojaquelle.

7558. **Product Name:** [Soymilk (Barley Malt Syrup, Orange, or Dairylike)].
Foreign Name: Tônyû (Bakuga, Orenji, Chôsei).
Manufacturer's Name: Sugiyo.
Manufacturer's Address: Japan.
Date of Introduction: 1982 June.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. These products were introduced in June 1982 in 200 ml Tetra Pak and paper pack cartons, and distributed nationwide.

7559. Tajiri, Takashi. 1982. Jinkô taiyô tôshô-sha ni yoru mame-rui moyashi saibai no kairyô [Studies on cultivation and keeping quality of bean sprouts. VI. Improvement of bean sprouts cultivation by the application of artificial sunlight lamp (Studies on cultivation and keeping quality of bean sprouts. IV.)]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 29(6):359-65. June. [8 ref. Jap; eng]
• ***Summary:*** Sprouts of soybeans, mung beans, and adzuki beans cultivated in dark chambers at 30ºC were improved by application of artificial sunlight from a lamp at 2500 lux for 1 hours each day from 48 hours after planting. The sprouts were elongated and thickened, weight increase was accelerated, and vitamin C content was considerably increased. The cultivation period was shortened by 1-2 days. Both lower intensity light (500 lux) and higher intensity (5,000 and 10,000 lux) gave comparatively less favorable results. Address: Lab. of Food Process, Faculty of Agriculture, Kinki Univ., Kowakae, 3-4-1 Higashi-Osaka-shi, Osaka-fu, 577 Japan.

7560. Tamura, Shôzaburo. 1982. Re: History of the Japan National Miso Association. Letter to William Shurtleff at Soyfoods Center, June–in reply to inquiry. 3 p. Handwritten, translation of original letter only. [Jap; eng+]
• ***Summary:*** The Japan National Miso Association (*Zenkoku Miso Kogyô Kyôdô Kumiai Rengôkai*) was founded on 17 Nov. 1960. Japan's first nationwide miso trade association was founded on 11 Jan. 1940. Its name was *Zenkoku Miso Kogyô Kumiai Rengôkai.* In 1944 [during World War II] it became a controlled company (*Tôsei Gaisha*), and in 1948 its name was changed to *Zenkoku Miso Kogyô Kyôkai.* Finally in 1960 it became the present *Zenkoku Miso Kogyô Kyôdô Kumiai Rengôkai.*

According to Dr. Hideo Ebine, the earliest known article on miso published in a scientific journal was: Kellner, O. [Oskar Johann]; Nagaoka, M.; Kurashima, Y. 1889. "Researches on the manufacture and composition of miso.'" *Bulletin of the College of Agriculture, Tokyo Imperial University* 1(6):1-24. Dec. Dr. Ebine is head of the Central Miso Research Center, which is in the same building as the miso association.

Concerning statistics on the amount of miso produced in Japan over the past century: There are good statistics on shoyu since it has been taxed nationwide since the Meiji period, but there are no such reliable statistics on miso because it was not taxed, and also because a great deal of miso was made in individual homes in the early days. Address: Zenkoku Miso Kogyô Kyôdô Kumiai Rengôkai, Tokyo, Japan.

7561. *Toyo Shinpo* (*Soyfoods News*). 1982. Kontesuto [Tofu cooking contest]. July 1. [Jap]
• ***Summary:*** Recipes are given for the top three winning recipes in the content: (1) Tofu layer cheesecake. (2) Soy cake pizza. (3) Tofu white mousse.

7562. Japan Packaged Tofu Association. 1982. U.S. Soycrafts Study Tour: Member list. Japan. 3 panels each side. Each panel: 19.4 x 10 cm.
• ***Summary:*** This glossy black-and-white leaflet gives a portrait photo and basic information about each of the 22 Japanese who will attend the Seattle soyfoods conference. For each person the following information is given: Member of the Packaged Tofu Association: Yes or no (all are members). Name written in Japanese characters. Name written in Roomaji (Roman letters, last name first). Name of person's company, his position, and the full company address. The leader of the group is Mr. Minemoto Shunichi of Asahi Foods Co. in Tokyo.

Note: Mr. Wataru Takai may have helped to organize this group, although he was not a member of it.

Europe. Part IV: History of natto in the United States.

Note: This is the earliest English-language document seen (Jan. 2012) that uses the word "Joenkuk-jang" to refer to Korean-style natto. Address: Lafayette, California. Phone: 415-283-2991.

7564. *Toyo Shinpo* (*Soyfoods News*). 1982. Tônyû no peeji: 2-3 baizô no urigae o tassei. Sudeni 150 oku shijô keisei no koemo [The soymilk industry and market in Japan: Sales have increased 2-3 fold to an estimated 15,000 million yen per year]. July 21. p. 26. [Jap; eng+]

• ***Summary:*** Industry sources say that the Japanese soymilk market has already reached about 15,000 million yen. The order in which companies started making or marketing soymilk is: 1959 San-iku Foods. 1969 House Shokuhin. 1972 Ishihara Food Center. 1974 Tokyo Soymeal, Kenbi-Sha, Okazaki Marusan. 1976 Asahi Shokuhin, Soken-sha, Kyushu Nyugyo. 1977 Kibun, Natural Foods. 1979 Mitsubishi Kasei Shokuhin. 1980 Chiba Seisen Shokuhin Kogyo, Meiji Nyugyo. 1981 Yakuruto, Nagano Tomato, Morinaga Nyugyo. 1982. Seven-Up Inryo. Among these, House Shokuhin and Tokyo Soymeal have discontinued.

Major Japanese brands of soymilk, aseptically packaged in Tetra Brik cartons are (percentages indicate market share): Kibun Foods (Plain, Yogurt flavored, Fruit, Barley Malt & Coffee), 41.7%; Okazaki Marusan (Plain, Orange, Barley malt), 23.3%; Mitsubishi Kasei (Maburon plain, Orange, Coffee, Honey), 10.0%; San-iku Foods (Soya Neo Cocoa), 8.0%; Kyushu Nyugyo, 6.0%; Meiji Nyugyo (Sun-Glow), 5.8%; Kenbisha, 2.5%; Asahi Shokuhin (Plain, Orange, Coffee), 2.5%; Soken-sha, 1.3%; and Natural Foods, 1.3%. Most sizes are 200 ml, which retail for 75 yen with a 60 day shelf life.

Companies with the largest number of different soymilk products are: (1) Okazaki Marusan has 15 products including soymilk in a Pure-Pak carton (500 ml for 150 yen) and in a can (195 gm); (2) Kyushu Nyugyo has 13 products incl. Midori Tonyu; (3) San-Iku Foods has 10 products, including canned soymilk; (4) Kibun has 8 products. Mitsubishi Kasei is taking a different approach; they have only 5 items (honey, coffee, fruits, sour, and plain) but are aiming at large production.

Kibun's sales have been very good, especially after they switched to the Brik Pak-type carton. Last year they had sales of 2,500 million yen and they are aiming to double that this year. Industry analysts believe that Kibun will be the industry leader for a while.

Mitsubishi Kasei established Mitsubishi Kasei Shokuhin in January of this year, and transferred all soymilk sales to that new department. They are hoping this year's sales will be three times as large as last years, hopefully 1,800 to 2,000 million yen. They are now constructing a new soymilk plant in Okayama, and when it is done they hope sales will reach 8,000 million yen.

Okazaki Marusan has grown 20-fold in the past 5 years. They predict this year's soymilk sales to be 2,000 million yen.

A photo shows 24 soymilk products. Most are in Brik Pak Aseptic cartons. Three Soyalac products are in cans. One product is in a retort pouch.

7565. *Toyo Shinpo* (*Soyfoods News*). 1982. Kissaten de ninki jôshôochû. Tôfu "aisukuriimu" mada mada uremasu. Jishin tappuri no tenchô. Mr. Pû [Tofu ice cream is becoming popular in tea parlors, such as Mr. Poo's. He has confidence he sell a lot more]. July 21. [Jap]

• ***Summary:*** Soymilk ice cream is selling well in this tea house at 380 yen for a dish. The owner calls it "tofu ice cream." The owner, Mr. Yamanouchi, got the idea when he traveled to Los Angeles. He has been selling it for 4 years, since 1978.

Note: This is the earliest Japanese-language document seen (Sept. 2013) that mentions soy ice cream, which it calls *Tôfu "aisukriimu."*

7566. *Toyo Shinpo* (*Soyfoods News*). 1982. *Nattô no Hon* hakkan: Ryôri 80 hin o shôkai. Bunka Shuppan Kyoku, Nagayama-shi ra kyôcho [*The book of Natto* is published: Introducing 80 recipes. Co-authored by Bunka Shuppan Kyoku and Mr. Nagayama]. July 21. [Jap]

• ***Summary:*** A photo shows the front cover of the book, which retails for ¥1,200. At top of book's title page (in English): "Natural Taste in Kitchen." Below the Japanese title: "The Nattow."

7567. *Toyo Shinpo* (*Soyfoods News*). 1982. [Quick soymilk cooling machine, manufactured by Toritsu Reiki Seizo K.K.]. July 21.

• ***Summary:*** The counter-top machine is for keeping retail soymilk cool. The company is located at 4-26-6 Ueno, Taito-ku, Tokyo 110, Japan. Phone: 03-841-0330.

7568. **Product Name:** [Asashoku Soymilk (Plain, or Dairylike)].
Foreign Name: Gen Tônyû, Asashoku Soimiruku.
Manufacturer's Name: Asahi Shokuhin.
Manufacturer's Address: San Shain 60 40F, 3-1-1, Higashi-Ikeburo, Toshima-ku, Tokyo 170, Japan.
Date of Introduction: 1982 July.
Wt/Vol., Packaging, Price: 1 liter Pure Pak cartons.
How Stored: Refrigerated.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. States that these 2 products, in "L packs" (1 liter Pure Pak cartons), were introduced in July (Gen) and August (Soimiruku) of 1982, and distributed to most of central Japan.

7569. Barber, Linda. 1982. Natto: The taste of Japan.

© Copyright Soyinfo Center 2014

Soyfoods. Summer p. 70-71.

• ***Summary:*** "Some people say that the taste of Japan is a bowl of miso soup, but I would have to say it is natto, Japan's original soyfood. Unlike miso or tofu, natto was discovered in Japan. The story goes that someone wrapped his meal of cooked soybeans in straw (the 'baggie' of 1000 years ago), and after a couple of days, unwrapped the bundle and found *Itohiki* natto. These fermented soybeans, held together by slippery filaments, were soon to become the traditional topping to a bowl of rice served at breakfast and dinner to millions of Japanese people.

"Today, natto is made by soaking washed soybeans overnight, then draining and pressure cooking them. After another draining, the beans are inoculated with *Bacillus subtilis* (*Bacillus natto*) while still warm, scooped into perforated plastic bags and wrapped in straw (or they often are sometimes run into styrofoam containers that have holes for air circulation), then incubated at 40-45ºC (104-113ºF) for about 14-18 hours.

"Care is taken in not letting the natto get too hot. In natural fermentation the beans produce some heat on their own and keeping the temperature below 55ºC (121ºF) is important. After the 14 hours, the natto is put into cold storage, wrapped with a labeling band, boxed and shipped. One of the charms of natto is that it takes very little space or complicated equipment to manufacture.

"Not only is natto easy to produce, but it has high nutrition going for it too! This soyfood is 17% protein, 60% water, 10% fat, 10% carbohydrates, 2% fiber, 2% ash. As for other nutrients, natto has 0.07 mg vitamin B1, 0.50 mg B2, 1.1 mg niacin, 3.3 mg iron and 90 mg calcium. Also, research has shown that when we compare cooked soybeans with natto, the levels of thiamine, riboflavin and B12 are higher in natto thanks to the fermentation process.

"Yet, some experts say that the most beneficial characteristics of natto can't be found on a nutrition chart. The wonder of natto lies in its bacterial medicinal qualities. Do the digestive enzymes present in natto prevent or cure digestive diseases? Or is natto only beneficial because it is a good natural food and an excellent source of protein that the body can easily assimilate because of the fermentation process? Without being caught in the medical discussion crossfire, it can be said for sure that natto is a nutritious food that can give any diet a new flavorful zing.

"Many people, even those with adventurous taste buds, find natto as a food quite a challenge. Actually, only about half of the Japanese care for it. Even so, most bars, sushi shops, and Japanese-style restaurants offer natto as daily fare.

"In Japan, natto is served in many ways. And now, with the rising cost of food, natto has taken on new dimensions. Once served only as a topping for rice or in miso soup, creative Japanese cooks now serve natto sushi, natto spaghetti, natto udon (wide, white wheat noodles), natto omelet, natto gyoza, natto sandwiches, natto tempura, chopped natto with cuttlefish, deep fried natto, natto salad, natto with mochi, and even a liqueur made with natto.

"After getting over my initial 'gag' reaction to eating natto, I was pleasantly surprised to find it tasted very much like a strong, rare cheese, I soon began making natto pizza, natto lasagna, and toasted natto sandwiches. At only 25 calories for 100 grams (3½ oz) my mind was turning spins developing recipes for this marvelous slippery stuff.

"Natto lends itself to western-style dishes quite nicely. How about natto fettucini, natto crepes, natto French onion soup, natto tortillas, natto frittata, nattoburgers, baked potatoes with natto topping, fried eggplant with natto, natto egg salad, or natto moussaka? My latest natto creation is Natto Dip: Mix together 2 cups tofu mayonnaise, ½ cup chopped green onions, l/8 teaspoon pepper, ½ cup chopped parsley, 10 oz. cooked and chopped spinach, ¼ cup natto, and salt (or shoyu) to taste. Serve with crackers or raw vegetables. Superb!

"Once you purchase a carton of natto you can keep a supply going like you do yogurt, but expect to buy a fresh starter every 3 or 4 batches. For home-style natto, boil soaked soybeans, drain and add a cube of purchased natto. Mix, and put into containers. I suggest styrofoam cups, fast food containers, or paper cups. Make sure they are clean and free from any other bacteria. Cover the inoculated beans with clear wrap (make holes with a hot needle for air ventilation). Set the cups, or containers, in a foam ice chest or wrap in a heating pad, or simply use a yogurt maker. lncubate for about 18 hours.

"If at the end of 18 hours your product is grayish in color, and forms a long string (filament) when you touch your finger to the surface, you know you've succeeded. Chill the natto, then enjoy it in one of the ways suggested above. You can always have natto on hand as it freezes well too!

"Before you say 'Naa' to natto, let me give you some hints that will make natto easy for you to swallow:

"1. The most important is to make sure that the natto you buy is *fresh.* It should be grayish in color with a little odor. When you touch natto, a lone string will form–the longer the better. Natto has a shelf life of about 1 week (I prefer to eat mine the day I buy it). If the natto is bad, it will taste bitter, smell very strong, and may even have mouldy spots or crystals on the surface. Junk it!

2. "Eat it as the Japanese do, in small amounts. The most traditional way is to mix the natto with a raw egg yolk, chopped green onion, mustard and a dash of shoyu. Scoop a little of this onto your next bowl of rice. I've also had this condiment served in a small dish alongside a cold beer. I'm sure it would make a hit even in Milwaukee!

"3. To get over the natural gooeyness of natto, serve it in foods where you would expect, and want, some 'slip.' Natto acts like melted cheese. How about glueing a taco together with a topping of natto?

© Copyright Soyinfo Center 2014

"Another type of natto I like is dried natto (*hoshi natto*). Sold as a snack food, this soyfood is very salty in taste, resembles raisins coated with flour, and is unslippery to the touch. Yet, it has a gooey mouthfeel. Enjoy this type with a cup of green tea, or sprinkle a few grains on a bowl of rice. As a break from tradition, chop up a few and use them as a salty seasoning to whatever you cook: soups, stews, casserole baked goods, or even apple pie.

"In reading or talking about natto, one often runs across the kind referred to as *Hamanatto.* Unlike *Itohiki* natto, this 'natto' is made by a different process and uses the bacteria [sic, mold] *Aspergillus oryzae.* Hamanatto originated in China. Nutritionally it is 34% water, 28% protein, 14% fat, 13% carbohydrate, 2% fiber, 10% ash. Calcium is listed as 140 mg, iron 8.3 mg, and sodium as 2,900 mg.

"As you can see from the sodium count, Hamanatto is quite salty and the taste is reminiscent of Hatcho miso. Blackish and chunky, this 'natto' is sometimes referred to as 'Soy Nuggets' [fermented black soybeans], or 'Raisin-like Natto' by some Westerners.

"No matter how you eat it, natto is an intriguing soyfood. This natural, whole food is indeed a taste of Japan, and after 1000 years it's still going strong in a world of fast foods.

"The author, a trained home economist who lived in Japan for many years, has recently returned to her home in Wisconsin."

Photos (taken by Linda Barber in July 1981) show: (1) Natto sold retail, packaged in rice straw. (2) Some natto being lifted, using chopsticks, up from a package of natto. Four photos showing "How natto is made" commercially in Japan. (3) The soybeans are steam cooked. (4) Then inoculated with natto bacteria. (5) Run into containers and incubated 14-18 hours. (6) Then packaged, boxed, and shipped.

Note: This is the earliest document seen (Jan. 2012) that mentions *hoshi natto* ("dried natto"). Address: Japan and Wisconsin.

7572. *Daizu Geppo* (*Soybean Monthly News*). 1982. Matsuyama no kansôage [Dried Aburaage from Matsuyama]. July. p. 26. [Jap; eng+]
• ***Summary:*** Gives a description of his it is made. It contains 3.5% moisture and 52.9% fat versus 44% moisture and 31.4% fat for regular age (tofu pouches). It will keep for 3 months in a cool place. Four companies in Matsuyama now make it.

7573. Fruin, W. Mark. 1982. Three centuries of Kikkoman: Growing pains & organizational change. I. *Soyfoods.* Summer. p. 58-60.
• ***Summary:*** Contents: Introduction. Family specialization as the key to success. Beyond the limits of the family. Becoming a corporation.

"The first family in Noda to specialize in shoyu fermentation was known as the Kashiwa household. It was initiated in 1764 when a son of Takanashi Hyozaemon, descendant and namesake of the first Takanashi to brew shoyu in Noda in 1661, was adopted into the family of Mogi Shichizaemon of the same town. He was adopted for the express purpose of marrying Shichizaemon's daughter." Two years later after the marriage, "this couple established a separate branch household (a formal legal and religious process) to engage exclusively in the manufacture of shoyu, they unknowingly founded a dynasty which would guide the fortunes of the shoyu industry in Noda and in Japan for the next two centuries. Because it was specialized [in] shoyu fermentation, the Kashiwa household quickly became the largest independent brewer in Noda. Even after 1887 when most of the local brewers, including the Kashiwa house, formed a cartel, the head of the Kashiwa family was normally the chief officer of the cartel association, and in 1917 when eight Mogi and Takanashi families formed a company, the first president of the Noda Shoyu Company, Limited (precursor to the Kikkoman Corporation) was Mogi Shichirouemon, the Fifth, head of the Kashiwa line."

Photos show: (1) Three different techniques for pressing the sauce from fermented mash, around 1923, at Noda, Japan. (2) A forklift truck in the warehouse of the Kikkoman plant in Walworth, Wisconsin.

7574. **Product Name:** [Soymilk (Plain, With Vegetable Juice, Fruit, Barley Malt Syrup)].
Foreign Name: Tônyû (Sutoreeto, Yasai, Kajû, Bakuga).

7578. Ebine, Hideo. 1982. Re: Retirement from the National Foods Research Institute, Japan. Chapter on nyufu. Kibun's soy yogurt. Letter to William Shurtleff at Soyfoods Center, Aug. 13. 1 p. Handwritten, with signature on letterhead. [Eng]
• ***Summary:*** On 1 April 1982, Ebine retired from the National Food Research Institute (NFRI).

In the 1971 book *Daizu Shokuhin* (by Watanabe, Ohta, and Ebine), the chapter on *Nyufu* [fermented tofu] was written by Ohta.

In 1981 Kibun started to sell commercial soy yogurt in Japan. Address: Japanese Society of Food Science and Technology, 2-1-2 Kannondai, Yatabe-machi, Tsukuba-gun, Ibaraki 305, Japan.

7579. Richman, Phyllis C. 1982. Do it yourself sushi: Japanese call the style temaki and most can master it. *Washington Post.* Aug. 15. p. D1.
• ***Summary:*** The section titled "Condiments" notes that those used to make sushi always include ginger, "soy sauce; *wasabi* (Japanese horseradish);..."

"Interesting possibilities: *umeboshi* (salted plums, pitted and mashed);... slices of dark, fleshy *shiitake* mushrooms marinated in sugared soy sauce;... *natto* (fermented soybeans);..."

7580. Hagiwara, Y. Assignor to Japan Natural Food Company Ltd. 1982. Soy sauce from tear grass and process for production thereof. *U.S. Patent* 4,346,114. Aug. 24. 6 p. Application filed 25 Feb. 1981. [3 ref]

7581. Gall, N. 1982. The Brazilian connection. *Forbes* 118:118-22. Aug. 30.
• ***Summary:*** "Brazil now earns as much from soybeans as from coffee. In that startling fact is the story of a great crop migration–and a moral for U.S. farm policy makers." In 1973 when President Nixon announced an embargo on the export of U.S. soybeans, the Marubeni Trading Co. of Japan bought 50,000 acres of land in the Dourados region of what is now the state of South Mato Grosso. As Marubeni hoped, soybeans thrived there. Since the Nixon embargo, between 1974 and 1981, America's share of the world soybean trade has dropped from more than 90% to 67%.

7582. Adolphe, D. 1982. Canola–Canada's no. 1 oilseed. *Notes on Agriculture* (*Guelph, Ontario*) 18(1):5-7. Aug.
• ***Summary:*** "'Canola' is the term now applied to those special modern rapeseed varieties with five percent or less erucic acid and three milligrams per gram or less glucosinalates, measured normally. The name refers to the seed, oil, meal, protein extractions and seed hulls, from, or of, varieties known in the industry as 'double low' rapeseed.

"History suggests that rapeseed was cultivated as early as the 20th century B.C. in India and was introduced to China and Japan at about the time of Christ."

"Ancient civilizations in Asia and along the Mediterranean used rapeseed oil for lighting [illumination] because it produced a smokeless white flame.

"Rapeseed was grown in Europe as early as the 13th Century and during later centuries developed acceptance for both cooking and lighting."

In Canada, commercial rapeseed production began in 1943 following the blockade of Asian and European sources of rapeseed oil in the early 1940s [during World War II]. The oil was urgently needed as a lubricant for the rapidly increasing number of marine engines in naval and merchant ships. Since the early 1960s rapeseed acreage has increased dramatically in Western Canada and spread across the three prairie provinces. Canola was developed in Canada in the 1970s.

"Canola is used entirely for its oil and protein content. It contains 40 percent oil by weight. Rapeseed oil was limited to industrial uses until 1958 when it was classed as an edible oil for human consumption in Canada.

"Canola is the greatest supplier of vegetable oil to

© Copyright Soyinfo Center 2014

the Canadian market. In 1980, Canola oil accounted for 46.8 percent of the edible oil market and soybean oil 31.9 percent."

"Canola oil is used mainly in the production of margarines, shortenings, and salad oils."

"The most popular use of canola oil is in cooking and salad oils..."

Note: This is the earliest document seen (Jan. 2005) that mentions "canola oil." Address: Canola Council of Canada, 301-433 Main St., Winnipeg, Manitoba, R3B 1B3, Canada.

7583. **Product Name:** [Thick Soymilk Coffee].
Foreign Name: Tônyû Pururu Koohii.
Manufacturer's Name: Furuta Shokuhin Kogyo (Furata Foods Co.).
Manufacturer's Address: Japan.
Date of Introduction: 1982 August.
Wt/Vol., Packaging, Price: 60 gm poly cup.
How Stored: Refrigerated.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. This product was introduced in August 1982 in a 60 gm poly cup, and distributed nationwide. Name of company with diacritics is: Furuta Shokuhin Kôgyô.

7584. McGregor, Otis. 1982. Soybeans–The human consumption approach. *Notes on Agriculture* (*Guelph, Ontario*) 18(1):13-14. Aug.
• ***Summary:*** "In 1974 the Ontario Soya-bean Growers' Marketing Board launched a program directed to the human consumption market... In 1974 the Ontario soybean export market represented a single shipment of white hilum soybeans to Japan for processing into tofu, miso and natto. Today tofu and miso are becoming popular in Ontario.

"Since 1975 the Ontario Soy-Bean Board has experienced remarkable success in moving soybeans into the human consumption market and the diets of Canadians. Two cookbooks have been printed by the Board and distribution has exceeded 70,000. Tofu shops have emerged in Ontario, to the extent that franchising is in the offing. Toronto has restaurants serving soybean meals... Today, the Ontario Soya-Bean Growers' Marketing Board actively promotes whole soybeans in one pound bags in various supermarkets." Address: Ontario Soya-bean Growers' Marketing Board, Chatham, ONT, Canada.

7585. **Product Name:** [Meiji Sunglow Soymilk (With Barley Malt Syrup)].
Foreign Name: Meiji San-guroo Tônyû (Bakuga).
Manufacturer's Name: Meiji Milk Products Co. Ltd. (Meiji Nyugyo).
Manufacturer's Address: Kyobashi 2-3-6, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1982 August.
Wt/Vol., Packaging, Price: 200 ml aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. Meiji Nyugyo launched Meiji San-guroo Tonyu (Pureen) in a 200 ml long-life (aseptic) carton in March 1981.

Soya Bluebook. 1983. p. 63. "Sungrow Soy Beverage." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. Note that Meiji started to market Sunglow soymilk, made and private labeled for them by Marusan, in April, 1979.

7586. Nagata, Y.; Ishiwaki, N.; Sugano, M. 1982. Studies on the mechanism of antihypercholesterolemic action of soy protein and soy protein-type amino acid mixtures in relation to the casein counterparts in rats. *J. of Nutrition* 112(8):1614-25. Aug. [30 ref]
• ***Summary:*** Secretion of neutral and acidic steroids in rats was increased when the low-fat, cholesterol-free diet contained isolated soy proteins. Address: Lab. of Nutrition Chemistry, Kyushu Univ. School of Agriculture, Fukuoka 812, Japan.

7587. Pure Sales. 1982. Some soy sauces are called tamari. But they're not! San-J is the real tamari (Ad and poster). *East West Journal.* Aug. Inside front cover.
• ***Summary:*** This ad is a combination of black-and-white and color. In black-and-white are 5 quarts of so-called tamari under the following brands: Westbrae, Erewhon (2), Llama, and Pure & Simple. In color are 2 bottles of San-J Tamari (wheat free, in 5.7 oz refillable dispenser and 20 oz glass bottle). The text explains that this real tamari is: Made only from soybeans. Mellower, smoother, richer than regular soy sauce. More protein than regular soy sauce. San-J Tamari will enhance any dish. A concentrated, economical product. Address: 250 Newport Center, Newport Beach, California 92660. Phone: (714) 760-1076.

7588. Sattilaro, Anthony; Monte, Tom. 1982. Physician, heal thyself: A doctor's remarkable recovery from cancer and the diet he's convinced was responsible. *Life.* Aug. p. 62, 64, 68, 70. [1 ref]
• ***Summary:*** "This article was excerpted from *Recalled by Life: The Story of a Recovery from Cancer,* (c) 1982 by Anthony J. Sattilaro with Tom Monte, due from Houghton Mifflin in September."

Four years ago, Dr. Sattilaro, President of the Methodist Hospital in Philadelphia, was dying of cancer. Today, after changing his lifestyle [primarily by adopting a macrobiotic diet, including brown rice, miso soup, and sea vegetables,], prescribed by Deny Waxman and Michio Kushi, he is totally free of this disease. Several photos show Dr. Sattilaro–and two x-rays of his upper body. Address: 1. M.D., Philadelphia [Pennsylvania].

7589. **Product Name:** [Safflower Soymilk (Plain, or Cocoa)].
Foreign Name: Benibana Tônyû (Pureen, Kokoa).
Manufacturer's Name: Soken-sha K.K.
Manufacturer's Address: 724 Katakura-cho, Kanagawa-ku, Yokohama-shi 221, Japan.
Date of Introduction: 1982 August.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. Sôken-sha introduced Benibana Tônyû (in plain and cocoa flavors) in Aug. 1982 in 200 ml long-life packs and distributed it nationwide.

7590. *Toyo Shinpo* (*Soyfoods News*). 1982. [Feeding okara to escargot (land snails)]. Sept. 1. [Jap]
• ***Summary:*** Wikipedia (June 2013) says of Escargot: "Escargot is a dish of cooked land snails, usually served as an appetizer in France and in French restaurants. The word is also sometimes applied to the living snails of those species which are commonly eaten in this way." The species most often eaten is *Helix pomatia.*

This *Toyo Shinpo* article states that these snails eat okara and any other vegetable foods, such as cabbage, daikon, carrots, Chinese cabbage, rice bran, leftover rice, bread, noodles, etc.

The snails are being sold to first class hotels and restaurants.

7591. Shurtleff, William; Aoyagi, Akiko. 1982. History of soybean crushing: Soy oil and soybean meal. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 157 p. Sept. 16. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction: Description of soybeans are transformed into oil products and meal. Etymology. Basic concepts. Terminology. Processing (brief description of modern hexane solvent extraction and refining). History of soybean crushing worldwide: Oil and meal production and trade. History of soybean crushing in China (to 1949): Origins and early references, early observations by foreigners, the crush-stone mill and wedge press, uses of soy oil in China. History of soybean crushing in Manchuria (to 1949). History of soybean crushing in the People's Republic of China (1949-1980's). History of soybean crushing in Japan. History of soybean crushing in Europe: Early references and research (1855-1909), introduction of soy oil and meal to Europe (1907-1919), the interwar period (1920-1939), the war and postwar period (1940-1959), the modern era (1960-1982). History of soybean crushing in the United States–oil and meal: Early references and research (1893-1909), introduction of soy oil and cake to America (1910-1919), establishing America's soybean crushing industry (1920-1929), takeoff of the U.S. soybean crushing industry (1930-1939), soybean oil and meal during World War II and the 1940's, modern soybean crushing and oil refining processes, developments during the 1950's (oil), soybean meal and the American meat-centered diet, 1960-1982, problems with the meat centered diet and feedlot system, changes in meat and poultry consumption, new protein models, the future. History of soybean crushing in Third World countries: Third World–three routes to soy oil use, Brazil, Mexico and Argentina, India, Sri Lanka. Address: Lafayette, California. Phone: 415-283-2991.

7592. Martin, Debra. 1982. 1000 years old and very new [Shin-Mei-Do Miso]. *Comox District Free Press* (*Canada*). Sept. 17. Friday.
• ***Summary:*** Six years ago, Lulu and her husband, Yoshi Yoshihara moved to Denman Island from Vancouver, where Yoshi worked as a projectionist for Pacific Cinemathique. He continued to commute from the Island to work, seeing his family only once a week–an arrangement that was not satisfactory. So they both decided to figure out a way to make a living on the island.

An idea came from a cookbook [*The Book of Miso*] she purchased in Seattle [Washington] at a Japanese supermarket. They already knew about miso, so they tried making some small experimental batches at home. But they soon decided the only way to really learn the process would be from a Japanese master.

"Lulu took their four-year-old son and went off to Japan for eight months, staying with Yoshi's mother, and then with a family that operated a large miso factory in Iida City, located in a mountainous part of Japan with a climate similar to Denman Island's.

"She was fortunate to be taken under the wings of a miso master who had worked at the factory for 40 years and was in charge of the hand-made miso division there."

"This hands-on experience gave her an idea of what the koji should look like, taste like, and smell like, knowledge hard to gain from books.

Lulu and Yoshi started making miso in earnest from 1979. Photos show: (1) Yoshi standing by a stack of koji trays in sauna-like koji incubation room. (2) Lulu at her stove making miso soup. (3) Yoshi standing on a ladder by a wooden vat of miso, handing a pail down to Lulu. (4) Different Shin-Mei-Do miso products, packaged and bulk.

7593. Ohta, Teruo. 1982. Tenpe wa kôtanpaku shokuhin [Tempeh is a high-protein food]. *Zenkoku Shokuhin Shinbun* (*National Food News*) No. 433. Sept. 21. [Jap]
• ***Summary:*** The oil in tempeh becomes rancid more slowly than most oils. Tempeh starter culture is sold at supermarkets in Indonesia. The author is planning to use electrical engineering (*denshi kôgaku*) to help make tempeh starter culture. Address: Nosuisho Shokuryo Sogo Kenkyujo, Oyo Biseibutsu Bucho: National Food Research Inst. (Shokuhin

Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

7594. Rasmussen, Carol. 1982. Japan's delicacies lose nothing in translation at Star Market. *Chicago Tribune.* Sept. 23. p. N_B1 or W_B1.
• ***Summary:*** "We in the United States are known for our culinary curiosity." We're learning to eat raw fish and Japanese sushi. A good place to explore Japanese food and culture is Star Market, 3349 N. Clark St. in Chicago. The small grocery store is owned and run by two Japanese couples. It is the epitome of order, neatness, cleanliness and warm hospitality.

The various type of tofu include: (1) *"Kinu goshi"* [*Kinugoshi*], which "has been silk-screened [sic, curded as a gel, without separation of curds and whey] so that its texture is very fine like silk." (2) *"Momen goshi,* which is regular tofu." and (3) "tofu pouches" that can be stuffed with vinegared rice, cooked chopped vegetables, soy sauce and sugar [to make a type of sushi named *Inari-zushi*].

7595. Hara, Toshio; Ueda, Seinosuke. 1982. Regulation of polyglutamate production in *Bacillus subtilis* (*natto*)*:* Transformation of high PGA productivity. *Agricultural and Biological Chemistry* 46(9):2275-81. Sept. [30 ref. Eng]
• ***Summary:*** The viscous or "sticky" material in natto, produced by *Bacillus subtilis,* consists of polysaccharide (levan-form fructan) and polyglutamate (PA). Address: Dep. of Food Science & Technology, Faculty of Agriculture, Kyushu Univ., Hakozaki, Fukuoka 812, Japan.

7596. Leviton, Richard. 1982. In a small bright building: Cottage soy industries on Vancouver Island. Colrain, Massachusetts. 15 p. Sept. Unpublished typescript.
• ***Summary:*** Discusses Sooke Soyfoods (Wayne Jolley), Thistledown Soyfoods, Shin Mei Do Miso, and Metta Tofu. Note: This article was commissioned by *East West Journal* but never paid for or published. For a good summary, see: *Soyfoods.* 1983. Winter. p. 36-37. "Cottage soy industries thrive on Vancouver Island."

Concerning Shin Mei Do on Denman Island: Lulu Yoshihara recalls: In 1976 we picked up *The Book of Miso* at Uwjimaya department store in Seattle [Washington]. It didn't look like it would be all that hard [to make miso] or take that much time or technology. Plus miso wasn't perishable and didn't need to be marketed right away. Ray [Lipovsky] was already here doing tofu and that gave us the idea we could do a little home soy business on the island and make a living. So I went to Japan in 1977 to find a miso teacher. We've been together since 1971. Address: Colrain, Massachusetts 01340.

7597. Miyako Oriental Foods, Inc. 1982. Re: Invitation to open house of new miso factory (Folded card). Baldwin Park, California. 2 panels. [Eng; Jap]
• ***Summary:*** One panel is in English, the facing panel in Japanese. "You are cordially invited to an open house of our new Miso factory... on Friday, September 24, 1982 5:00 p.m. to 7:00 p.m., 4287 Puente Avenue, Baldwin Park, California 91706. Phone: (213) 962-9633. Sadao Nakagaki, Chairman. Noritoshi Kanai, President. Teruo Shimizu, Factory Manager." At the bottom of the English panel is a map showing the way to the new facility. Address: Baldwin Park, California.

7598. Quirk, Beatrice Taylor. 1982. Ah, so you want to try miso: A mountain couple is practicing the ancient art of making this Japanese food. *Carolina Lifestyle.* Sept. p. 23-25.
• ***Summary:*** Describes the work of John and Jan Belleme, and their American Miso Co. in Rutherford County, North Carolina. John Belleme is a 39-year-old Florida native who worked as a research biologist for the Veterans Administration in Miami, dealing mostly with cancer and chemotherapy. Thinking that there had to be a better way to deal with it, John started reading about natural foods, natural lifestyles, and traditional medicines in traditional cultures. In the mid-1970s the Bellemes adopted a macrobiotic diet, which is based on grains and includes only foods from the local environment. They eat no animal foods or dairy products, but they do eat fish.

Then in 1979 they left for Japan to study miso making with Takamichi Onozaki and his family, with whom they lived and worked for 8 months–in their 300-year-old home. They then returned to North Carolina, and spent almost a year building their miso factory, which began production in Sept. 1981. They made about 90,000 lb of light and dark miso in the first 9 months of operation.

A photo shows Jan Belleme and Japanese helpers preparing rice to make koji. Contains recipes for Light miso dressing for salad, Miso-broiled fish, and miso soup. Address: Charlotte, North Carolina.

three documents that were requested but that Kikkoman was unable to find.

Also tells Shurtleff how to obtain a copy of the cookbook *Practical Shoyu Cooking: Delicious Dishes with Japanese Soy Sauce,* by Chu Shinojima and Tamako Ashihara, It is distributed in the USA by Japan Publications Trading Co., which has offices in San Francisco and New York City. Address: Manager, International Operations Dep., Kikkoman Corp., 25 Kanda Nishiki-cho 1-chome, Chiyoda-ku, Tokyo 101, Japan. Phone: 03-233-5610.

7601. *Toyo Shinpo* (*Soyfoods News*). 1982. Tônyû ôte meekaa. Zokuzoku to setsubi zôkyô. Gosanke no shea arasoi shiretsu. Shijô 40% nerau Kibun. Kôchô no Nisshin wa jisha seisan e [Japan's biggest soymilk manufacturers: They have greatly improved their capabilities. The 3 big makers (Kibun, Marusan, Mitsubishi) are competing vigorously for market share. Kibun is aiming at 40%. Nisshin plans to produce its own soymilk]. Oct. 1. p. 1. [Jap]

• ***Summary:*** Sales of soymilk in Japan have doubled every year. By August of 1982 soymilk sales had already reached 5,000 million yen, which is double that of last year. Kibun is constructing two new soymilk plants; one each in Gifu prefecture and Hiroshima prefecture. They are expected to open in April 1983 and each plant will be able to produce 300,000 cartons per day. After these two plants open, Kibun will have a total production capacity of 1,200,000 cartons/day which is 40% of Japan's total soymilk industry capacity.

In June Okazaki Marusan completed the equipment to produce soymilk in large cartons (500 ml each). They now produce 300,000 cartons/day of 200 ml each, and 4,000 cartons/day of 500 ml. So far this year, up to September, Marusan has sold about 3,000 million yen of soymilk. They are hoping to expand their market share to 30% from their former 10%.

Mitsubishi Kasei Shokuhin was founded in February of this year; it became an independent company from Mitsubishi Kasei Kogyo. Their production at Kashima in Ibaraki prefecture is 270,000 cartons/day, each 200 ml. Mitsubishi is constructing a new plant at Kurashiki (Mizushima), in which they can produce 300,000 cartons/day (200 ml each). After these two new plants open Mitsubishi will have a capacity of 600,000 cartons/day. After the spring of 1983 they expect to be Japan's second largest soymilk manufacturer, with a capacity of 600,000 cartons/day and sales of 5,000 million yen/year. They are planning to open two more plants in the Chukin and Kyushu areas next year.

Meiji Nyugyo started to sell soymilk in March 1981 with a brand made by another company and private-labeled for them. In July 1982 they opened a new plant of their own. By March 1983 they hope to have soymilk sales of 1,500 to 2,000 million yen. Their former sales were 500 million yen. They have plans to expand production and hope to become the industry's second largest producer as soon as possible.

7602. Miko Seisakusho. 1982. Nigari tofu kikai ni [Machine for making natural nigari tofu (Ad)]. *Toyo Shinpo* (*Soyfoods News*). Oct. 11. p. 8. [Jap]

• ***Summary:*** A full page ad. A photo shows the machine.

7603. Noda, F.; Sakasai, T.; Osaki, K.; Akao, T. 1982. [Quick brewing of soy sauce]. *Japanese Patent* 1,120,398. Oct. 28. [Jap]*

• ***Summary:*** Attempts to shorten the time for soy sauce production have included a quick hydrolysis of raw materials with no or low salt content; another was a process divided into anaerobic lactic acid fermentation, aerobic yeast propagation, and anaerobic alcohol fermentation.

7604. Tallent, W.H. 1982. UJNR Toxic Microorganisms Panel. *Northern Regional Research Center, Notes from the Director* No. 1524. p. 3. Oct. 29.

• ***Summary:*** The meeting was held at the Food Research Inst., Univ. of Wisconsin, from Oct. 17-22. United States was represented by Dr. C.W. Hesseltine, NRRC. "In scientific sessions, 2½ days were devoted to mycotoxin and bacterial toxins. After a tour of the Biotron on the University of Wisconsin Campus, the panelists visited the Kikkoman plant at Walworth, Wisconsin. This plant in 10 years has doubled in size; it now uses 30,000 acres of soybeans and at least as many acres of wheat in soy sauce (shoyu) production. The operation is controlled by 6 team leaders, who develop consensus decisions with others in their groups. The terms 'foreman' and 'supervisor' are never used. Turnover of employees is only a tenth that of American companies, and absentee figures are only a fifth of that found in industries in the surrounding area. Last year production of shoyu amounted to 5 million gallons in this plant. Shoyu is sold in various quantities, up to 50-gallon drums; these larger quantities are sold to other [food] companies for flavoring purposes.

Note: Lite shoyu is being discussed. This plant supplies the U.S., Canada, and parts of Europe. The fermentation tanks are 17,000 gallons capacity. Address: Center Director.

7605. Chico-San, Inc. 1982. Would the *real* Tamari please stand up!? (Ad). *New Age Journal* (*Boston, Massachusetts*). Oct. p. 7.

• ***Summary:*** Chico-San thanks San-J for exposing the practice of labeling soy sauce as Tamari. Chico-San's Tamari is real! "It contains no wheat and is brewed naturally from only whole soybeans, water and sea salt." Address: P.O. Box 1004, Chico, California 95927.

Natto Association, would like to see tempeh become popular throughout Japan. Address: Zenkoku Natto Kyodo Kumiai Rengokai, Fuku Kaicho.

7607. Newell, C.A.; Hymowitz, T. 1982. Successful wide hybridization between the soybean and a wild perennial relative, *G. tomentella* Hayata. *Crop Science* 22(5):1062-65. Sept/Oct. [22 ref]

• ***Summary:*** "Hybrids between the soybean [*Glycine max* (L.) Merr.] and a wild perennial relative, *G. tomentella* Hayata, were obtained for the first time through in vitro ovule culture. The F-1 plants were vegetatively vigorous and resembled the wild male parent morphologically. The chromosome numbers were consistent with a hybrid origin. The plants flowered profusely but were sterile." The use of wild perennial *Glycine* species might become feasible for broadening the germplasm base of the soybean.

"The genus *Glycine* Willd. as currently delimited is divided into two subgenera, *Glycine* and *Soja* (Moench) F.J. Herm." Within the subgenus *Glycine,* five species are found only in Australia: *G. canescens, G. clandestina, G. falcata, G. latifolia,* and *G. latrobeana. G. tabacina* is found in Australia, South China, Taiwan, the Ryukyu Islands, Mariana Islands, and other South Pacific Islands. *G. tomentella* is found in Australia, South China, Taiwan, Philippines, and Papua New Guinea.

Note: This is the earliest document seen (May 2001) describing wide hybridization and the successful transfer of genes from one species of *Glycine* to another, i.e., between the cultivated soybean (*Glycine max*) and its wild perennial relative. Address: Dep. of Agronomy, Univ. of Illinois, Urbana.

7616. Nelissen, Tomas. 1982. Re: Jakso and soyfoods in the Netherlands. Letter to William Shurtleff at Soyfoods Center, Nov. 9. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "Maybe you still remember me from the time we were in Japan; once we met at Kichijoji station, next to Mitaka station. You tasted my genmai [brown rice] miso at a coffee-bar (next door).

"At this moment I am living in Holland with my wife Yvonne and two children. We set up a farm called Jakso. The whole idea is about becoming self-sufficient from the 30 hectares of land (including 6 hectares of fruit trees), a sourdough bakery, a soyfoods workshop, a futon workshop and educational activities.

"For the three workshops we "cut" the big barn into two halves and made a third floor. We built a very nice wood-burning bakery which produces all kinds of bread, cookies and savories. The soyfoods workshop makes tempeh and tofu, as well as seitan. Year-round we produce an average of about 1,500 pieces of tempeh a week at 210 grams each, about 50 kg of tofu a day and a little less than 100 kg of seitan.

"We distribute our products all over Holland... in a 100 km circle around the farm. Our future products will be miso, shoyu, amasake and mushrooms. These are the products we studied in Japan for about 4 years...

"There are 12 people working on the farm (plus 7 children)... The meals are on a macrobiotic base." Address: Director, Jakso, St. Natuurlijke Land- en Tuinbouw, Voorne 13, 6624 KL Heerewarden, Netherlands. Phone: 08877-2189.

7617. *Toyo Shinpo* (*Soyfoods News*). 1982. Seibu Shokuhin-kan ni okeru... [In newly opened Tokyo food department store there are two tofu retail shops]. Nov. 21. [Jap]
• ***Summary:*** In the newly opened Seibu Food Department Store (Ikebukuro, Tokyo) there are two tofu retail shops. One is "Homemade Tofu Shop Asahi" (*Tezukuri Tofu no Mise Asahi*) where Japanese soybeans and natural nigari are used to make fresh tofu in the department store. The price, 180 yen per cake, is high.

The other one is Tanaka Tsune; they bring tofu from Kyoto every morning. The price, 190 yen per cake, is also high. Yet both are selling very well.

7618. Aihara, Herman. 1982. History of work with macrobiotics and Chico-San (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 29. 5 p. transcript.
• ***Summary:*** Oroville is located about 23 miles southeast of Chico, California. Shurtleff visited Herman Aihara at his home with a tape recorder and about 75 questions.

The first East West Institute in New York City was established in about 1960 by Lao Shastri, a woman disciple of George Ohsawa. She studied Sanskrit at Cambridge, and was a distinguished scholar and an authority on the subject. It was her idea to have such an institute. She met Ohsawa in India and he advised her to stop eating sugar. She was in New York City when Ohsawa was there; he stayed at the Riverside Buddhist Academy, a cultural center. She was a very aggressive woman but very quiet, and she wore a sari. She convinced famous people to be directors of the Institute. She lived at what became Herman's house before Herman came to the USA. She died while relatively young, not long after late 1961.

In 1965, about 4 years later, Michel Abehsera, re-opened

© Copyright Soyinfo Center 2014

and activated the East West Institute.

Lima Ohsawa's maiden name was Sanae Tanaka. Her second marriage was to George Ohsawa.

Ohsawa's first name was Nyoichi, not Joichi. Yukikazu was has original first name, written with the same Japanese characters. He just took "Georges" as his French name. Larry Korn says Joichi became "Georges."

The village was named "Hi no Haru." Ron Kotzsch got it wrong. Herman has heard this 100 times.

The correct spelling of Kaibara's given name is Ekiken, not Ekken.

Herman does not know of Lima Ohsawa's daughter, Fumiko. But he heard that her second child, Mari, died of excess salt.

The system of yin-yang (*in-yo*) was first used by Ohsawa in about 1929 in a book of lectures entitled *Shokuyo Kogi Roku* (*Lectures on Macrobiotics / Macrobiotic Studies*); he has a copy at home. He was still working in the Shokuyo-kai. Ask Hashimoto Masanori, who is doing a lot of research on Ohsawa and early macrobiotic history, at Nippon CI in Tokyo.

Before Ohsawa's first visit to the United States there was a little bit of talk about macrobiotics with Michio Kushi at Michio's apartment, with a few people coming in but no real lectures. So Ohsawa's first series of lectures was the first real transmission of macrobiotics to the USA. Michio and Herman did not know much about macrobiotics before Ohsawa's first visit. Herman studied with Ohsawa in Japan for only 1 month, and Michio had met Ohsawa only 3-4 times. Herman came to the USA to study the helicopter aviation industry, not to teach macrobiotics; he studied at a technical institute in Brooklyn. However Herman read a lot of Ohsawa's books in Japan. So when Herman came to the USA he was personally very interested in macrobiotic philosophy (not so much in the diet, but with no thought of teaching).

Aveline Kushi came to the USA a long-time student of Ohsawa. She believed the diet was very important and she influenced Michio.

After Ohsawa's first series of lectures, Herman got interested in teaching macrobiotics. Why did Ohsawa stay with Harman? Most others were afraid of him. It is not correct to say that Herman was Ohsawa's closest student. Michio was also close because of lots of correspondence he had had with Ohsawa. Ohsawa tried to convince Michio of the value of macrobiotics.

When did Michio change careers? He had been at Columbia University for about 1 year. Then, on his own, he got the idea of working for world government ["a one-worlder"], to promote "one peaceful world. Herman has a draft of Michio's paper on this subject, including publications and schools, by about 1952-53. Michio was in Europe in 1952. Ohsawa said that "One Peaceful World" must include diet. At that point Michio started his serious interest in macrobiotics. Michio was initially involved in business.

In 1955 Azuma, a small gift shop selling Japanese handcrafts, was opened at 802 Lexington Ave. at 62nd St. by Cornellia and Herman Aihara, Michio, and Roland Sato. Michio focused his efforts on this business–not on teaching macrobiotics. In 1956 Michio and Herman started Ginza, a similar gift shop down town at 9 West 8th Street; they did not include Roland Sato who was very angry at this time. Both of the gift shops were very successful. They were established to impress Takashimaya–a leading department store chain in Japan [see Emerson 1958]–and to prove that a branch of Takashimaya could be successful in New York City.

Michio was an interpreter in the U.S. Dept. of the Interior to guide foreign visitors; he earned $45 per day. One visitor was the director of Takashimaya, Michio convinced him to start a branch of Takashimaya in New York City. Michio then worked for Takashimaya, and eventually rose to become vice president of the branch.

Musubi was started by Alcan Yamaguchi in the fall of 1960 (not in the late 1950s), near Greenwich Village. Zen Tea House was different; it was also started in 1960, but by an American, after Ohsawa's first lectures. After that, Musubi (another restaurant) was established. Herman did not supply the carpentry (as stated in Shurtleff's draft history of macrobiotics in the USA). Miso and shoyu were served in both restaurants.

At Ginza, starting in 1956, Herman sold a little food; people came to buy food there after Ohsawa's lecture, including miso and shoyu. It was the only place in the USA you could buy macrobiotic foods. It was a back-room operation and the food was imported from Ohsawa Japan. As soon as Ohsawa started lecturing in the U.S. he imported 20 [wooden] kegs of shoyu. It was sold at intermissions and after his lectures.

Junsei Yamazaki first arrived at Chico in 1963, stopped only briefly, then went to New York City that same year. Thus, Yamazaki was not connected with Musubi in 1960, but he did help them starting in 1963, when Michio was managing the shop at a new location. In 1960 Herman sometimes helped Alcan Yamaguchi at Musubi.

The first summer camp on Long Island was about 2 months long, with lectures by Ohsawa only on weekends. Some people stayed during the week. 1,000 to 2,000 people attended.

The Ohsawa Foundation in New York City was founded in 1961 by Michio, Irma Paule, etc. Herman was in Europe at the time. He left for Europe in about Jan/Feb. of 1961 and returned in the fall. Then he was elected president of the Ohsawa Foundation.

Herman's first macrobiotic publication was *Macrobiotic News,* which started in 1960; its maximum circulation was several hundred. It continued until he moved to Chico in 1961, and then was re-continued.

© Copyright Soyinfo Center 2014

The macrobiotic periodical *Macrobiotic Monthly* was started in Los Angeles in 1965 by Herman and Lou Oles. Its title then changed into the *Macrobiotic.* It ceased publication in 1978. Its maximum circulation was over 1,000.

Publishing at Chico started in 1962. Herman's present periodical is *GOMF News,* which has a circulation of about 650. Concerning books that Herman and Cornellia have written: *Miso and Tamari* has sold about 10,000 copies (lots through Nutribooks). *Soybean Diet* has sold about 10,000 copies. *The Dô of Cooking* (1972, four seasonal volumes) has sold about 10,000 copies. *The Calendar Cookbook* (1979) has sold about 5,000 copies. The *Chico-San Cookbook* was first published in 1972. But *Zen Cookery* has sold about 50,000 copies.

Attendance at French Meadows summer camps was about 100 to 200. Address: Oroville, California.

7619. Aihara, Herman. 1982. History of work with macrobiotics and Chico-San. Part II (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 29. 5 p. transcript.

• ***Summary:*** Continued: Chico-San imported their first Japanese foods from Herman personally. At that time, there was no Muso and no Nippon CI. Ohsawa Japan (which started in about 1965) was the trading / export company and Nippon CI was devoted to education. Before Muso was "Three Boys," the "Three L" (*San-L*) company. Ohsawa told them to take charge of exports. Then Mr. Okada took over from them. Osaka was PR and education. "Three L" (which started in about 1962 in Osaka) was whom Chico-San was importing from. George Ohsawa kept a careful watch over what was being exported from Japan. Chico-San later imported from both Muso (Osaka) and Ohsawa Japan (Tokyo). Note: Did Ohsawa have two trading companies? If so, why?

The first edition of *The Book of Judgment* was printed in Japan in about 1956, then revised in 1966. There is no publication date in the book. This book came after *Zen Macrobiotics.* It is actually *The Philosophy of Oriental Medicine* (subtitled The Book of Judgment), probably first written in French.

Herman has just started writing a biography of Ohsawa, but he is too busy, so it will not be finished for a long time.

The Ohsawa Foundation in Paris was started by 1956 by George Ohsawa. The Ohsawa Foundation in Tokyo started before 1960. The Ohsawa Foundation in Los Angeles was started in 1965 by Lou Oles, an older Jewish trumpet player. The Ohsawa Foundation of New York was founded in 1961 by Michio Kushi and Irma Paule. The name "GOMF" was coined in 1970.

Herman has a green 8½ by 11 inch edition of *Zen Macrobiotics.* Herman says the date was about 1960. It shows that the Ohsawa Foundation then existed in New York, Paris, Brussels, and Tokyo. It also contains lots of recipes. I copied some pages. Copyright date of the fifth edition was 1966, Ignoramus Press, the Ohsawa Foundation, 1424 N. Curson Ave., Los Angeles.

Michio Kushi was Ohsawa's senior student in the sense that he came to America first. I should omit the concept that Herman was Ohsawa's closest associate. Herman and Michio simply have different styles. Michio has broad appeal; he has started a mass movement, and is more businesslike. Herman appeals to a small group, deeply; he works more with individual students.

Lou and Shayne Oles got involved with macrobiotics during the second summer camp, in 1961. They traveled with the group from New York to Chico. He was a famous trumpet player, worked with Benny Goodman. In California he emphasized publishing more than his trumpet. His first publication was titled *Spiral;* 1-2 issues were published. Then *Macrobiotic Monthly.* After Beth Ann Simon's death, Chico-San was separated from educational work. Lou Oles went to Los Angeles and that year established the Ohsawa Foundation; he did education and publication. He published three books: *Zen Macrobiotics, Book of Judgment,* and *Guidebook for Living.* Jacques DeLangre helped him. Lou died in 1967 of cancer. He got depressed when George Ohsawa died; he started drinking coffee, which may have activated his cancer growth. Shayne continued his work. Lima asked Herman to be president, so he traveled to Los Angeles once a month. In those days they sold lots of *Zen Cookery* books. The Ohsawa Foundation in Los Angeles closed in about 1970.

Yes, Ohsawa was age 72 when he died. He died April 24 (Japan date) in Japan.

The spirallic multidimensional scale from yin to yang was Peter Milford's idea, not Herman's. It is generally a linear scale.

Infinity Foods, founded by Howard Rower, is still in existence. Herman thinks they started in about 1962, and they imported foods from Japan.

Chico-San established only one organic grower–the Lundbergs for rice. The controversy was complicated. The Lundbergs and Bob Kennedy of Chico-San made a contract. Eventually there was a lawsuit between Chico-San and Lundberg [but it was resolved before it went to court]. Herman thinks Lundberg sued Bob Kennedy.

In 1963 Herman went on the lecture circuit with Bob Kennedy as they tried to educate people about the macrobiotic foods that Chico-San was selling.

The first summer camp without Ohsawa was 1967 (or perhaps 1968).

Macromuse is published in Washington, DC, by Michael Rosoff. It started in 1981.

Chico-San was founded in Jan. 1962. In Nov. 1962 Chico-San's first location (a retail store) opened, downstairs with hearing aid company. It moved upstairs to a different location and opened on 6 March 1962; they had an open

© Copyright Soyinfo Center 2014

house.

In 1973 the Aiharas established the Vega Institute, a residential program for macrobiotic studies in San Francisco. Then in 1974, they moved the Vega Institute and the George Ohsawa Macrobiotic Foundation to Oroville, a town southeast of Chico, where the Aiharas continued their work, together with their students. Herman and Cornellia Aihara moved to Oroville instead of Chico because it was more rural and because Peter Milbury, a high school teacher in Oroville, knew of some good land. The Ohsawa Foundation in San Francisco bought the land, and then they moved. Herman owns the Vega Institute on Oak Street.

Junsei Yamazaki came to the USA in 1963. Ohsawa told him to help Americans grow brown rice. First he tried in New York, but there was not enough sun. He originally graduated with a degree in fermentation from a major Japanese university, but he then became a rice farmer. Then in New York City he went to work with Michio at Musubi near Takashimaya–for little pay. The Chico group invited him to Chico. He worked on the rice cake machine–again poor pay. Like Herman he also worked with orchids.

In 1971 Herman invited Noboru Muramoto to be on his lecture trip. His first guest was Alcan Yamaguchi in 1970. Herman read Muramoto's articles in a Japanese magazine. He had family problems in Japan and was happy to stay here. Herman was his guarantor, and he became a permanent resident.

Chico-San began baking in March 1962 in an upstairs store; Herman was the first baker.

Herman talked with Michio Kushi this summer. They have a friendly relationship but both are very busy.

Junsei Yamazaki's plans with Chico-San are not clear; he may end up working on his own.

A good Japanese-language biography of George Ohsawa is *Kakumei-ji,* by Matsumoto Ichiro; he interviewed Lima Ohsawa.

Herman likes the term "a macrobiotic" better than "a macro" or "a macrobiotic student / follower."

Cornellia arrived in the U.S. in 1955.

The Ohsawa Foundation did not move from Chico to Los Angeles; it never existed in Chico–only in Los Angeles.

Overview of macrobiotic contribution. Typical Americans overemphasize the importance of protein (even though nutritionists may not agree). Most people who stop eating meat start consuming more dairy products. Macrobiotics avoid dairy products and go straight to grains plus legumes–with little mention of protein.

Mari Metz has a good color photo of Herman and Cornellia together.

Erewhon was hurt by high interest rates and inflation.

In 1960 the handbound book Zen Macrobiotics was made in Herman's apartment in New York City. In it Ohsawa used the word "syoyu" [shoyu]. He changed to tamari because when he introduced soy sauce to Europe he initially called it "shoyu." He then gave exclusive distribution rights to a European to distribute Ohsawa's selected shoyu. The man called it "Ohsawa Shoyu," but then in about 1960-61 he started importing low-quality shoyu from Japan and selling it under the same brand name. Ohsawa could do nothing to stop him. That was when Ohsawa started using the word "tamari" to refer to natural shoyu. Herman heard this story directly from George Ohsawa–whose name in Japanese is pronounced OH-sawa.

Herman says a healthy person may eat 12-16 ounces of tofu a week, but it is not recommended for cancer patients who need a diet that is more yang.

Herman came from Kyushu, moved to Tokyo at age 9. He likes natto. Address: Oroville, California.

7620. Aihara, Cornellia. 1982. Macrobiotic kitchen: Key to good health. Tokyo: Japan Publications, Inc. 140 p. Illust. Index. 26 cm.
• ***Summary:*** This book was originally published under the title *The Chico-san Cookbook* (1972). This completely revised and enlarged edition was published in Nov. 1982. Address: Chico, California.

7621. Barber, Linda. 1982. Tofu sampler. Menomonie, Wisconsin: University of Wisconsin-Stout Print Shop. 24 p. Nov. 22 cm. [7 ref]
• ***Summary:*** A saddle-stitched (stapled) booklet of creative American-style tofu recipes with an orange cover and black lettering. Contents: What is this thing called tofu? Tofu mayonnaise. Deviled tofu salad. Tofu mayo dip. Tofu cheese rolls. Tofu burgers. Chinese steamed buns with tofu. Nail soup (with heart-warming story about the hobo who came for dinner). Tofu pancakes. Tofu quiche. Easy pie crust. Tofu jumbles. Tropical tea bread. Dark mystery cake. Chocolate tofu creme. Tofu ambrosia pudding. Banana cream pudding or pie filling. Tofu cheesecake. Bread crumb crust. Tofu carrot cake. Tofu nog. Tofu peach frozen dessert. One more idea [about a beautiful geisha in Japan who used tofu externally as an aid to beauty]. A sampler of soyfood books [cites 7 books].

E-mail from Linda Barber Pike in reply to questions after she sent booklet to Soyinfo Center. 2012. May 11. "The booklet was developed for a presentation I gave to the Vocational, Technical and Adult Education meeting in Wausau, Wisconsin, November 19th, 1982. The title of my workshop was 'Creativity with Tofu... The Food of the Future,'

"The first printing was done by the print staff at the University of Wisconsin-Stout, Menomonie, Wisconsin. About 30 booklets were printed. I was a grad student earning a Masters degree in Vocational and Adult Education. I completed the degree in 1983. I used the booklet as a take home for the participants. There were about 30 home economics teachers there.

© Copyright Soyinfo Center 2014

The second printing was done about 16 years later; I was married and a teacher. I used it for my students who were enrolled in the foreign foods class, Family Consumer Science Department, Carmel High School, Carmel, Indiana, 1998. The reason the pages are out of order in this booklet, second printing (1998) is that the student print shop at Carmel High School messed up... I had about 35 students enrolled in this class. About 40 booklets were printed in second printing. This booklet is very typical of what we used to make for our students for classroom use and hopefully, the participants in both situations would take the booklet home and use the recipes! Address: Menomonie, Wisconsin.

7622. Greenwood, Rebecca. 1982. Smokey Mountain miso: Traditional and modern methods unite to create a fine domestic miso. *East West Journal.* Nov. p. 50-53.
• ***Summary:*** About John and Jan Belleme and the American Miso Co., located in the Smokey Mountains [sic, Great Smoky Mountains] in the small town of Rutherfordton, North Carolina. The company started making miso in August 1981 and now makes 5,000 pounds a month. "John has a determined air about him. You get a sense that here is a man who, if he's going to do anything, is going to do it all the way." John's main interest is in making high-quality miso.

Almost all miso sold in the U.S. today is made by a fully automated process and pasteurized. The Bellemes spent seven strenuous months studying miso-making with Takamichi Onozaki in Japan. They now have three goals in making miso: (1) Sell unpasteurized miso–which should be refrigerated. (2) Produce miso using traditional methods, including wooden vats, handmade koji, and slow, natural fermentation–rather than the faster and more commonly used forced heat method. (3) Use the high quality ingredients, including certified organically grown soybeans and rice, unrefined sea salt, and deep well water. This miso will be distributed by Great Eastern Sun Trading Co. which is partially owned by the Bellemes' friend and fellow investor, Barry Evans, of Miami, Florida.

The American Miso Co. is located on 100 acres of rural land and consists of two buildings totalling some 3,400 square feet. The small building is used for storage and milling rice. The big one is where the miso is made and aged–for up to 18 months in huge, custom-made cypress vats which hold 8,000 pounds of miso each. When each vat is full, it is topped with 1,000 pounds of rocks which add pressure during the fermentation. Presently three types of miso are aging here: three short term (Sweet White Miso, Mellow Rice Miso, and Mellow Barley Miso) and one long term (Red Brown Rice Miso).

The secret of good miso lies in making good koji–by hand. John removes up to 90% of the bran from the rice for short-term miso, but only 10-30% for long-term miso. The company's pride is its koji room.

The Bellemes' dream is greater than just making miso. They have started constructing another home on their rural property to accommodate students in a living and learning environment. Each summer they plan to hold workshops which will include miso-making, gardening, natural foods cooking, philosophy, and meditation. A large photo shows John Belleme standing by the soybean cooling table and as the huge steamer basket overhead discharges a load of freshly cooked soybeans.

Note: The Great Smoky Mountains (often shortened to Great Smokies) is a range of the Appalachian Mountains extending along the North Carolina-Tennessee boundary. A part has been set aside as Great Smoky Mountains National Park. Address: Co-director, Rocky Mountain Inst. of Macrobiotics, Boulder, Colorado.

7623. JETRO (Japan External Trade Organization). 1982. Beikoku no miso shijô [The American miso market]. Los Angeles, California: Nihon Boeki Shinkokai. 32 p. Nov. [7 ref. Jap]
• ***Summary:*** Contains detailed statistics on the total U.S. market and on individual miso manufacturers in the contiguous 48 states and Hawaii. Of the miso consumed in the USA, about 63% is consumed by Asian Americans and 37% by Caucasian Americans. The age of miso consumers: 20s 10%. 30s 32%. 40s 26%. Fifties 32%. Sixties 10%. Address: Nihon Boeki Shinkokai, Los Angeles, California.

7624. Kushi, Michio. 1982. Cancer and heart disease: The macrobiotic approach to degenerative disorders. Tokyo: Japan Publications, Inc. 224 p. Nov. Illust. Index. 26 cm. [50* ref]
• ***Summary:*** Contents: Foreword, by Michio Kushi. Foreword by Edward Esko. 1. The macrobiotic approach, by Michio Kushi. 2. Cancer and diet. 3. Diet and heart disease. 4. Macrobiotics, preventive medicine, and society. 5. Case histories. Appendixes: Food policy recommendations for the United States, by Michio Kushi. East West Foundation–Diet and health related activities, 1972-1982. Bibliography.

Many of the subchapters in this book are written by physicians. For example, William P. Castelli, M.D., contributed a 5-page original article titled "Lessons of the Framingham Heart Study." There are also articles by Robert S. Mendelsohn, M.D., Keith Block, M.D., and Christiane Northrup, M.D. Miso, tempeh, natto, tofu, and soy sauce are all discussed as foods that can be used to help in the prevention and cure of these two major diseases. Address: Brookline, Massachusetts.

1981 Japan bought over $6,700 million worth of U.S. farm products. China and Korea each bought over 2,000 million, and Taiwan over $1,000 million.

7626. Oak Feed. 1982. Catalog and price list. Coconut Grove, Florida. 1 p. Back to back. 36 cm.
• ***Summary:*** At top of page 1: "Your Japanese connection: Importers and wholesale distributors of macrobiotic foods. Lowest wholesale prices available. Abbreviations: E = Erewhon. M = Mitoku. W = Westbrae. * = New product. Contents: Miso and tamari. Sea vegetables. Tea. Noodles. Condiments. Vinegars, pickles & mirin. Beans. Crackers. Miscellaneous foods. Kitchen utensils. Body care products. Medicinal products.

Miso and tamari: Onozaki miso (11 lb or 44 lb). Tamari-filled dispenser (W). Organic shoyu (Lima Ohsawa). Authentic tamari (4.75 gal. or dispenser). Hatcho miso (M). Soybean mame miso (M). Mugi (barley) miso (unpasteurized). Mugi miso (W). Genmai (brown rice) miso (W). Genmai (brown rice) miso (unpasteurized, 44 lb). Organic brown rice miso (unpasteurized, 22 lb). Kome (white rice) miso (W). Instant miso soup (light or red, M). Soba (buckwheat) miso (M). Natto miso (22 lb or 2.2 lb).

Condiments: Goma muso. Goma muso furikake (M). Tekka. Jinenjo tekka (M). Seitan condiment. Umeboshi. Roasted sesame oil. Black sesame salt. Black tahini.

Also: Barley miso pickles. Aduki beans [azuki]. Black soybeans. Kuzu. Address: 3030 Grand Ave., Coconut Grove, Florida 31333. Phone: (305) 448-7595.

7627. **Product Name:** [Marusan Soymilk Soup (Potage Style)].
Foreign Name: Marusan Tônyû Suupu.
Manufacturer's Name: Okazaki Marusan K.K. (Marusan-Ai Co., Ltd.).
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21 Japan.
Date of Introduction: 1982 November.
Wt/Vol., Packaging, Price: 180 ml pack. Retails for ¥130 per pack.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Article in Toyo Shinpo (Soyfoods News). 1982. Nov. 1. Marusan's 6 new products. Soymilk Soup (potage style). Shelf life: 70 days at regular room temperature. 180 gm per pack; 30 packs per case. 1 pack costs 130 yen. Heat a pack in boiling water for 5 minutes, then serve.

7628. *Toyo Shinpo* (*Soyfoods News*). 1982. [Recipes for tofu cheesecake and Chocolate cream pie]. Dec. 1. [Jap]
• ***Summary:*** A photo shows both prepared dishes.

7629. *Toyo Shinpo* (*Soyfoods News*). 1982. [Mitsubishi Kasei expands their soymilk production]. Dec. 1.
• ***Summary:*** Mitsubishi is building soymilk plants in Kurashiki-shi (city) and Ibaragi-ken (prefecture). The plants are expected to be completed sometime in the spring of 1983.

At that time Mitsubishi will become the 2nd largest soymilk maker in Japan, after Kibun. They are also planning to develop and sell yogurt-type soymilks. Their goal is 1.6 million packs per day (50,000 metric tons/year).

7630. *Toyo Shinpo* (*Soyfoods News*). 1982. [Daie, large supermarket and department store company, has launched their own brand of soymilk]. Dec. 1.
• ***Summary:*** Daie is pronounced dai-EH. The brand will be Captain Cook Cut & Balance. They have four flavors: Plain soymilk (200 ml). Coffee soymilk (200 ml). Mixed fruits soymilk (200 ml). Soymilk ice (ice cream?) (500 ml).

7631. Cauwenberghe, Marc van. 1982. Re: George Ohsawa's early work with soyfoods from 1956, especially miso and soy sauce. Letter to William Shurtleff at Soyfoods Center, Dec. 2. 5 p. [12 ref]
• ***Summary:*** The earliest document seen, written by Ohsawa, that mentions miso is the *Guide Pratique de la Medicine Macrobiotique d'Extreme-Orient,* which appeared in 1956. He arranged for miso and soy sauce to be imported to Europe from Japan and he organized the production of miso and soy sauce in France and Belgium in the Lima Foods factory by putting two of his Japanese students, Clim Yoshimi and "Jim" Takanami, to work there. Both are still living in Belgium. Clim's address: c/o Kusa, Sportstraat, 319, 9000 Gent, Belgium. The home-made tofu he sells at his store is known as the best.

Klim wrote a book in Japanese on macrobiotics titled *Shin Shokuryo-ho,* which he translated into English as Macrobiotics–The biological and physiological foundation of Zen. It contains recipes using miso, tamari, soy sauce, and tofu. "In 1972 I attended cooking classes by Aveline Kushi where she was teaching tofu making and tofu recipes. In 1974 Michio Kushi gave a month long seminar on natural agriculture and food processing. This included the preparation of tofu and miso. The seminar was published in the series 'Michio Kushi Seminar Reports.'" Address: East West Foundation, 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-734-3853.

7632. Kojima, Yoshiko. 1982. Re: The kinako industry in Japan. Letter to William Shurtleff at Soyfoods Center, Dec. 13–in reply to inquiry. 2 p. Typed, with signature on letterhead. [Jap]
• ***Summary:*** There is a kinako trade association in Japan: Zenkoko Kinako Kogyo Kai (National Kinako Manufacturers Association), c/o Nihon Shokuryo Shinbun, 2-9-19, Shibaura, Minato-ku, Tokyo 108, Japan. Phone: 03 (455) 5701. Contact person: Mr. Yasuo Tanaka.

There are about 60-70 kinako manufacturers in Japan

© Copyright Soyinfo Center 2014

and 19 of them belong to this association.

The estimated annual usage of dry soybeans is about 8,000 tons and the total production of kinako is about 7,200 tons annually. Large makers are thought to have a monthly output of 25-30 tons per month.

One such large maker is Ogawa Sangyo Co., Ltd., 6-31, Edogawa, Edogawa-ku, Tokyo 132, Japan. Phone: 03 (680) 4306.

One small traditional maker is Tanaka Seifun-Jo, 3-28, Minami-Ohi, Shinagawa-ku, Tokyo 140, Japan. Phone: 03 (761) 8275.

The names and addresses of two other comparatively large makers are given.

Ms. Kojima is unable to find any estimates concerning the annual usage of soybeans for *iri-mame* (dry roasted soybeans) in Japan. Address: Associate Country Director for Human Nutrition, American Soybean Association, Tokyo, Japan.

7633. *SoyaScan Notes.* 1982. Chronology of soybeans, soyfoods and natural foods in the United States 1982 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. White Wave in Colorado is the first company to get its tofu placed in the yogurt / dairy case in supermarkets.

Jan. Legume, Inc. launches Tofu Lasagna, frozen in a box. It is soon followed by Tofu Ravioli.

Jan. *The Incredible Tofu Cookbook, California Style,* by Immegart and Dansby self published.

Jan. New England Soy Dairy launches "Year of the Dog" Chinese New Year tofu promotion and nets 47% immediate sales increase.

Jan. Island Spring survives industry's first publicized tofu recall and the discovery of new tofu spoilage microorganism, *Yersinia enterolitica.*

Jan. ADM becomes sponsor of "This Week with David Brinkley" on Sunday ABC TV, with 4.4 million viewers.

Jan. Soyfoods Unlimited in California introduces tempeh burgers and ships them air freight to East Coast markets; Pacific Tempeh in California follows suit.

Feb. Yuba is first produced and sold commercially in the Western world by Ken Lee of Soyfoods of America, in Duarte, southern California. Trial production had begun in Nov. 1981.

Feb. *Soyfoods* magazine No. 6 (yellow cover) published.

Feb. Many large ads run by San-J (tamari), New England Soy Dairy, and Legume in major national trade journals.

Feb. Unicorn Restaurant in Miami has $15,000 gourmet, soy / natural foods banquet to welcome chef Ron Pikarski, who makes elegant tofu dishes and carves a swan from soy butter.

Feb. Nasoya buys $50,000 Kutter vacuum-packaging machine, which helps to popularize this packaging style for tofu.

March. *Tofu Fantasies,* by Juel Andersen published by Creative Arts.

March. USDA issues new school lunch regulations, fails to approve tofu for use.

March. Inaccurate, damaging article on iron binding by soy proteins appears in San Francisco Chronicle and Los Angeles Times.

March. Fifteen soyfoods companies exhibit at Natural Foods Expo, Anaheim, CA. Richard Leviton gives key speech. 5,000 visitors see expo. Pacific Tempeh unveils new full-color tempeh burger poster.

March. Big increase in European soyfoods companies; there are now 11.

March. Name of *The Beanfield* newsletter changed to *Soyfoods Monthly.*

March. Great Eastern Sun trading company founded in North Carolina by Barry Evans.

April. At New York's International Food Show, Quong Hop, Yeo's, and President brand soymilks, and Veda's Bayou Delights (tofu / tempeh pot pies) exhibit. ADM serves soy isolate ice cream and soymilk.

April. Quong Hop unveils its new Soy Deli marketing concept for retail using posters and tofu entrees sold frozen.

April. Jack's Beanstalk in Utah does creative work at introducing tofu to institutions. Develops 30 bulk recipe cards scaled to 100 servings.

April. ADM unveils work with glucono delta-lactone (GDL) and soy isolates in making tofu.

April. *Toyo Shimpo,* Japan's tofu newspaper, gives extensive coverage to upcoming Soyfoods Come West conference in Seattle.

May. Island Spring releases two 5-minute color video tapes demonstrating tofu cooking for showing in supermarkets.

May. Public schools in Hawaii granted permission to use tofu in meals.

May. *Soyfoods Directory and Databook.* by Shurtleff and Aoyagi published by Soyfoods Center, the first book of its type listing all soyfoods companies and industry and market statistics, 21 pages. Second edition published in June as *Soyfoods Industry: Directory and Databook,* 52 p.

May. William Shurtleff and Mark Fruin receive a grant from Kikkoman to write a book on soy sauce.

May. *Cook with Tofu,* by Christina Clarke is 2nd runner-up in R.T. French's Tastemaker awards for cookbooks.

May. Clearway Tofu sponsors the first Mother's Day Tofu Fair in Santa Cruz, California, with tofu recipe competition, music, and prizes.

June. Vitasoy USA runs color display ads for soymilk on San Francisco buses.

June. Kibun of Japan exhibits four flavors of soymilk in Tetra Pak cartons at National Restaurant Show in Chicago.

June 16. *The New York Times* runs an article on Dieter Hannig, Director of Food Research for Hilton Hotels. His many tofu recipes on microfiche are sent to 86 Hiltons worldwide.

June. Bestways magazine begins 3-part series on soyfoods by Bonnie Mandoe.

June. *The Soy Dairy: A Way to Save the Small Farm,* by MacCormack published by Sunbow Farm.

June. *The Book of Nigari Technique* (in English) published by Yoshikawa Kagaku in Japan.

June. Metta Tofu Products in Denman Island, B.C., Canada, introduces Frozen Buddha soymilk ice cream.

June. Haarmann & Reimer debuts flavors for tofu and okara at IFT convention in Las Vegas.

June. Royal American Foods is launched in Kansas City with $1 million startup capital to sell TVP entrees, tofu-like products via multi-level marketing system.

June. Granny Goose Potato Chips does extensive radio advertising in California for a new potato chip. Ad makes frequent, positive reference to tofu. First national radio ads mentioning tofu.

June. Farm Foods presents Ice Bean at American Booksellers Convention at Anaheim, California, along with previews of their new tofu cookbook.

July. "Discover Tofu" published by *Cosmopolitan* magazine.

July. Farm Foods receives a U.S. trademark for "Ice Bean" as a soy ice cream.

July. Light Foods excites NNFA convention in New Orleans with debut of Light Links, the world's first tofu hot dogs.

July. Eden's Orchard tofu / soymilk ice cream introduced in New York by Heller Enterprises.

July. Richard Jennings announces a new formula for okara / barley tempeh; later purchases Southwest Soyfoods, relocates company in Santa Fe, New Mexico. Continued.

7634. *SoyaScan Notes.* 1982. Chronology of soybeans, soyfoods and natural foods in the United States 1982 (Continued) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. July. Turtle Island releases liquid tempeh starter to industry.

July. *Soyfoods* magazine No. 7 published by Richard Leviton, with 4-color cover (brown border) and glossy paper.

July. Bean Machines introduces its new Continuous Pressurized Slurry Cooker. July. *Tofu: Einladung ins Schlaraffenland* (Tofu: Introduction to the Land of Milk and Honey), by Walter Daenzer published by Verlag Bewusstes Dasein in Zurich, Switzerland (in German). Europe's third tofu book.

July. *Using Tofu, Tempeh & Other Soyfoods in Restaurants, Delis & Cafeterias,* by Shurtleff and Aoyagi published by The Soyfoods Center.

July. Soyfoods Come West, the Fifth Annual Soyfoods Convention and Expo, in Seattle draws 250 people from 12 nations and makes a profit. Plans are made for a new tofu trade group to represent the larger manufacturers. Gary Barat of Legume and Steve Snyder lead this effort to break away from SANA.

July. *Diet for a Small Planet,* by Frances Moore Lappe, a completely revised edition, published by Ballantine Books. Over 2 million copies of the book have been sold since 1971. The new edition contains many new soyfoods recipes, including 8 tofu and tempeh recipes submitted by Shurtleff and Aoyagi as part of a recipe contest.

Aug. The BBC of London, England, runs a 30-minute program on the U.S. tofu industry and market.

Aug. "Why Are Soyfoods Catching On?" by Judy Brown published in *Whole Life Times.*

Aug. Soy Protein Council in Washington, D.C. releases filmstrip on soy proteins.

Aug. *Tofu, Tempeh, Miso & Other Soyfoods,* by Richard Leviton published by Keats. 32 p., 15,000 copies printed.

Aug. Mexico announces that it can no longer meet its foreign debt repayment obligations. The first major debtor nation to do so.

Sept. New England Soy Dairy launches herb and spice preflavored tofu in colorful boxes. This is an important innovation in tofu packaging.

Sept. Miyako / Cold Mountain Miso in Los Angeles moves into new plant, has $15,000 reopening party.

Sept. Dr. C.W. Hesseltine, at USDA Northern Regional Research Lab., receives $50,000 research grant to study shelf life of tofu, tempeh, miso.

Sept. *Soyfoods Labels, Posters, and Other Graphics,* compiled and edited by Shurtleff and Aoyagi, published by Soyfoods Center. 185 p.

Sept. Soyfoods Unlimited runs full-page color ads for tempeh burgers in national magazines: *Vegetarian Times* and *New Age.*

Sept. Richard Leviton plans to move to Ann Arbor. Steve Fiering offers to recapitalize Soyfoods magazine and buy typesetting equipment. Plan dropped by Fiering in October.

Oct. Legume Inc. has its first of many public stock offerings; raises $100,000 from sale of stock plus $100,000 from a loan. Legume thus becomes the first of the new wave of soyfoods companies to be publicly owned. In Nov. 1983 Legume raised $600,000 more, two-thirds from sale of stock and one-third from debt.

Oct. Richard Leviton does "Soyfoods in the Heartland" nationwide tour with 13 programs, 11,000 miles. Net loss of $300 but lots of fun.

Oct. *Tofu Cookery,* by Louise Hagler published by The Farm's Book Publishing Co.

Oct. *Tofu Cookery* by Fusako Holthaus published by Kodansha, New York. Japan's first tofu book aimed at the

© Copyright Soyinfo Center 2014

American market. Both this and the Farm's tofu book are America's first tofu books with color plates.

Oct. Beatrice Wittels' CSC sponsors World Food Day in Philadelphia, with speech by Richard Leviton and soyfoods banquet. 200 people, including a Pennsylvania senator, attend.

Oct. South River Farm Miso Co. opens in Massachusetts as nation's second Caucasian-run miso manufacturer. It was formerly Ohio Miso Co.

Oct. "The Hilton Hotel's Gourmet Tofu Dishes" by Clare Barrett published by *Vegetarian Times.* Dishes made from Dieter Hannig's tofu recipes are shown in full color.

Nov. Unicorn Restaurant in Miami prepares three tofu turkeys for Thanksgiving Day.

Nov. Restaurant Business magazine praises Legume products as "tasty, superb."

Nov. Whole Life Expo held in New York. Farm Foods gives speech on soyfoods.

Nov. "Mainstreaming Soyfoods" by Richard Leviton published by *Vegetarian Times.*

Nov. Campbell Soup makes offer to buy Legume stock. Quaker Oats is reported to make tender to buy any of America's largest tofu makers. But nothing happens.

Nov. Pacific Tempeh introduces nitrogen-flush vacuum packaging for tempeh.

Nov. Well Bean Soy Deli in Santa Cruz changes its image to "Fast Natural Foods" after soy deli sales sag.

Nov. *East West Journal* publishes article on The Bridge tofu company in Connecticut.

Nov. Lane County Natural Foods Assoc. sponsors large, Natural Horizons Expo in Eugene, Oregon. Richard Leviton gives speech. Surata Soyfoods and Devi's Country Soy Sausages have exhibits.

Nov. *Quick & Easy Tofu Cookbook,* by Yukiko Moriyama published by Joie in Japan. Aimed at American market; over 400 full-color photos but poor English translation.

Nov. *La Magie du Tofu* (The Magic of Tofu), by Tremblay and Boyte published by Stanke in Montreal. Canada's first original tofu cookbook. It becomes a best-seller.

Nov. *Le Plaisir de la Cuisine au Tofu* by Marie Poirier published by Unisoya in Quebec, Canada.

Nov. *Cooking with Tempeh,* by Claire Seguin published by Higher Ground Press. America's second tempeh cookbook.

Dec. Robert Davis of Light Foods helps establish a soup kitchen in St. Louis; will provide okara and tofu scraps free of charge to the city's indigent.

Dec. Nasoya restyles their tofu dips as "Vegi-Dips" in new containers.

Dec. Soyfoods of America runs $2,800 large display ad in Los Angeles Times (circ. 1 million) with tofu recipes.

Dec. *Washington Post,* in the Style section, says frozen yogurt is "Out" and frozen tofu desserts are "In."

Dec. Swan Gardens, Miami, after 3 years of R&D, announces informally that it has three flavors of "meltable" cheeselike tofu. It is introduced as Soya Kaas in Feb. 1986.

Dec. *Le Tofu dans le Cuisine Macrobiotique,* by Eddie H. Hara published in France by Editions de la Maisnie.

Dec. Since 1974, 25 books on tofu have been published in the U.S. In 1981 and 1982 publication of books on tofu in North America and Europe reaches its peak, with 12 published each year.

Dec. There are seven brands of tempeh burgers on the market; four brands of frozen tofu ravioli; 8 brands of soy ice creams.

7635. Aihara, Cornellia. 1982. Traditional barley miso and koji. *GOMF News* (*Oroville, California*). Dec. p. 3.
• ***Summary:*** Describes how to make each on a home scale yielding about 100 pounds. Address: GOMF, 902 14th St., Oroville, California 95965.

7636. Eden Foods, Inc. 1982. George Ohsawa first introduced "tamari" to North America. The product he gave us was a traditionally brewed SHOYU... (Ad). *East West Journal.* Dec. p. 11. Also in Vegetarian Times, Jan. 1983, p. 36.
• ***Summary:*** "..., made of soybeans, wheat, water & sea salt, fermented for many months and pressed.

"He called it Tamari because he thought that Shoyu was too difficult a word for Westerners to say and because it would differentiate Shoyu from commercial, chemical soy sauces.

"In Japan, Tamari is the by-product of making soybean miso, from soybeans, sea salt, and water. A very small amount of this is made compared to the amount of Shoyu brewed. In Japan, Tamari is most commonly used in food processing while Shoyu is used in cooking and on the table. Both are excellent foods. The original 'Eden Tamari-Shoyu' is macrobiotic soy sauce. This is the product Eden has marketed as Tamari since 1967, because George Ohsawa called it 'Tamari.'

"Recently, real Tamari (Wheat Free) has been imported into the U.S.A. Mr. Ohsawa did not anticipate this. Now there are two products on the market being called Tamari. Shoyu & Tamari"

Note: This is an early macrobiotic effort to distinguish between tamari and shoyu. "Eden offers: Tamari Natural (Shoyu) Soy Sauce and Tamari Wheat Free." Address: Clinton, Michigan 49236.

7637. Eden Foods, Inc.; Muso Shokuhin. 1982. What was once a flight of fancy... (Ad). *Vegetarian Times.* Dec. p. 24.
• ***Summary:*** This full-page color ad shows the colorful Muso crane logo flying at the top. Across the bottom in bold letters is written "Eden." The page is filled with boxes of

© Copyright Soyinfo Center 2014

macrobiotic natural food products imported by Eden from Muso in Japan. These include: Bulk miso, bulk kuzu, ramen, bulk sea vegetables, bancha tea, natural soy sauce (tamari), umeboshi, soba miso, Hacho miso, and vegetable brush. In the background is a landscape of terraced rice paddies. Address: [Clinton, Michigan].

7638. Hara, Toshio; Aumayr, Andrea; Fujio, Y.; Ueda, S. 1982. Elimination of plasmid-linked polyglutamate production by *Bacillus subtilis* (*natto*) with acridine orange. *Applied and Environmental Microbiology* 44(6):1465-58. Dec. [21 ref]
• ***Summary:*** Natto is a traditional Japanese fermented food produced from soybeans by *Bacillus subtilis* (*natto*). It consists of a polysaccharide (levan-form fructan) and a polyglutamate (PGA). The composition of its viscous material is mainly gamma-PGA, containing D- and L-glutamate in varying proportions.

Three known strains of *Bacillus subtilis* (*natto*) are Asahikawa, F, and M. Address: Dep. of Food Science and Technology, Faculty of Agriculture, Kyushu Univ., Hakozaki, Fukuoka 812, Japan.

7639. Kim, Kil Hwan. 1982. Kohng, dubu wa kohng nah mul eh kwah hak [The science of soybeans, tofu and soy sprouts]. Seoul, South Korea: Korean Science Foundation. 211 p. Dec. Illust. Index. 21 cm. [200+ ref. Kor]
• ***Summary:*** Contents: I. Soybeans. Introduction. World soybean production: Areas of production, quantities produced, amount produced in Korea, amount imported to Korea, chemical composition of all soybeans. How to use soybeans: Foods and processed soybean foods (sauces, tempeh, natto), industrial uses. Nutritional composition of soybeans: Common components, protein and amino acids (protein, essential amino acids, necessary protein intake, necessary amino intake, chemical score, biological value of soybean protein, the need to heat soy protein, the use of soy protein as a protein supplement), soybean oil (components of soybean oil, oil assimilation / absorption), other nutritional components (carbohydrates, vitamins, minerals), references.

II. Tofu. Introduction. Kinds of tofu and production: Soybean curd (production in factories, production at home, instant tofu, kinugoshi tofu, grilled tofu, frozen tofu, how to freeze and dry tofu). Movement of nutritional values during tofu processing: Movement of common nutrients, movement of amino acids. Nutritional components of tofu: Tofu protein, tofu protein as a protein supplement, digestion of tofu, calories in tofu, fat and cholesterol, minerals and vitamins, toxins, *hwe bun* in tofu. Tofu and group meals: School meals in Japan, in America, in Korea. Tofu factories and associations involved with tofu: Member list of food associations in Korea, regular member and extra member list of tofu packaging associations in Japan, directory of tofu shops and factories in North America, in Europe, in other countries, list of companies selling tofu coagulants, list of tofu restaurants in Japan. References.

III. Soy sprouts. Introduction. Production of soy sprouts: Soybean varieties, selecting and washing the soybeans, soaking, watering the sprouts, machines for cultivating soy sprouts, maintenance. Nutritional composition of soy sprouts: Common nutrients, increase of vitamin C during growth, changes in vitamin C during heating, changes in riboflavin during heating. Glossary.

Soybeans arrived in Korea in about 200 B.C. (p. 11). Contains many useful tables. Address: Korea.

7640. Kudo, Kenichi; Sano, Rinji; Sato, Jirô. 1982. Daizu kakô shokuhin no shôhi to eiyô ni kansuru jakkan no kôsatsu [Thoughts on soyfoods consumption and nutrition]. Tokyo: Daizu Kyokyu Antei Kyokai. 22 p. Dec. [Jap]
Address: Daizu Kyokyu Antei Kyokai (Soybean Supply Stabilization Assoc.), Minato-ku, Tokyo, Japan.

7641. Shurtleff, William; Aoyagi, Akiko. 1982. History of soya in Third World countries to which they have recently been introduced: Latin America, Indian Subcontinent, Africa, and the Middle East. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 5 p. Dec. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction: Third World countries in which soy is "new." History and potential in "new" Third World countries: When introduced to each region, active history started in 1960 (protein gap) and 1970's: International Soybean Program (INTSOY), American Soybean Association (ASA), high prices, international conferences, call for further research, the potential: population and hunger. Basic approaches to introducing soybeans and soyfoods: Can't introduce like rice or wheat, need utilization training, how to get it, whole dry soybeans in Brazil and India, the traditional trickle-down approach (Japan–all village centered, Korea, Indonesia), the national integrated approach (examples of it–Sri Lanka, basic components: Cooperative funding, training center, well educated and inspired teachers, a publication, farm extension workers and farmers, soyfoods extension workers and resident students, soyfoods users–food industry and institutional, the people/villagers), the single enterprise integrated approach (examples of it, Soya Production and Research Association, Uganda, CARE in Costa Rica, teach farmers, guarantee crop, make food, advertise it), the commune village integrated approach (examples–the Farm, teach farmers, establish communal business, all use the food), the free market-government aid/extension/research approach (examples–Egypt, Brazil, oil mills and exports), the soyfoods missionary/mass movement approach or village uplift (examples–Blanca Dominguez, soyfoods movement in America, show others, they teach others, encourage starting of small businesses, broad-based,

© Copyright Soyinfo Center 2014

teach all over via books, programs, later start schools). Soyfoods applications: Oil, flour, textured soy flour (TSF), as is, traditional vs. new countries. Production and marketing approaches: Soybean crushing plant (oil and defatted meal, meal to fortify or TSF), middle level low-cost extrusion or soy dairy, small decentralized village and cottage industries, all traditional countries took this approach. Address: Lafayette, California. Phone: 415-283-2991.

7642. Tsuchiya, Kanji. 1982. Tônyû. Shinban [Soymilk. 2nd ed.]. Tokyo: Shoku no Joho-sha. 223 p. First edition was published in 1980. Illust. 17 cm. [Jap]

• ***Summary:*** This is the best book seen to date on soymilk in Japanese. A detailed chronology of tofu and soymilk is given on pages 173-76. Over 20 years ago, when Mr. Tsuchiya was plant manager of the *Kyôdo Nyûgyo* dairy milk plant at Matsumoto, he became interested in using soy protein to replace dairy protein. Although soybean crushers had investigated the use of defatted soybean meal, the techniques for removing the beany flavor and smell were not yet good enough to allow substitution of soy protein for milk solids. At that time there was a shortage of imported nonfat milk for use in ice cream bars. It was said that a small numbers of manufacturers of the inexpensive ice cream products were already using some soy protein to increase their over-run. "Discovering this, Nisshin Seiyu, after some research, found a method of removing the beany smell by fermentation with a yeast; they asked if Kyodo Nyugyo could make a test run of 10 kg of spray-dried soymilk in our plant. So they dissolved soy powder (*daizu-ko;* which had been defatted at a low temperature) in water, added yeast, waited until the reaction was finished, diluted it with some water, and put it in a spray dryer. Yet the spray drying caused some protein denaturation and an increase in the viscosity of the soy powder, which made it difficult to pump the solution to the top of the spray dryer. Glucose was used to replace half the soy powder. The spray-dried powder would not dissolve in water and the resulting mixture had a muddy brown color, a flavor that was too sweet, and a beany flavor. It was useless. They had discovered that defatted soybean meal and nonfat dried milk behave differently. Defatted soybean meal contains about 20% sugars, but less than 1/3 of these are water soluble and many have a very complicated structure and high viscosity."

Therefore they started to study the basic nature of defatted soybean powder (*dasshi daizu-ko*) and after much trial and error, in 1961 they applied for a Japanese patent on "The method of refining defatted soybean powder" (*Dasshi daizu-ko no seisei hôhô*). They were issued the patent (#16,658) in 1962. The key to the success of this patent was the use of meta potassium bisulfite (*meta jûaryusan karium*), which lowers the viscosity, bleaches it and increases the amount of soluble nitrogen. Not enough of the beany flavor had been removed, yet at that time it was an excellent product, which could be used in place up to 30% of nonfat dried milk to make an ice cream product without a beany flavor. Mr. Masaharu Sato (who is presently head of the soybean department of Kyodo Nyugyo's central research lab) was the person who contributed most to the discovery. He is now conducting research on tofu and soymilk. "I still see him often since we are both members of Soyfoods Development Study Group (*Daizu Shokuhin Kaihatsu Kenkyû-kai*). He recently told me, 'After that incident, I became captivated by soy protein.'"

"After about 2 years of research, during the summer we received an order from Nisshin Seiyu for 200 tons of soy protein. Our plant had been losing money for a long time, and this discovery helped to make some profit during my time of work there. I will never forget it. I feel real gratitude to Nisshin Seiyu for helping us to become captivated by soybeans."

At about that time dairy farmers throughout Japan began to compete with one another in a price war which lowered milk prices. The battle between them and the owners of dairy milk companies got worse and worse. Among the leaders of this struggle were progressive dairy farmers in Matsumoto. "Although we made soy powder very secretly, one of the plant workers, who was the son of a dairy farmer, leaked the secret. This caused an uproar (we were using soy powder instead of dairy milk) and the local farmers asked us to stop immediately. However we decided to continue making soy powder for various reasons: (1) We had to fulfill the order that we had accepted; (2) Since we simply processed soy and sold it to another company, this had no effect on our plant's use of unprocessed dairy milk; (3) The soy business allowed out plant to operate profitably and this allowed us to return some money on the dairy farmers' investment." For a variety of complex reasons related to this conflict, Mr. Tsuchiya was fired as plant manager for Kyodo Nyugyo's Matsumoto dairy milk plant. Though his retirement was very near, he left the dairy industry without regret to continue his research on soy powder (p. 14-19).

"Meeting with Dr. Miller: During the period 1965-1969 I was involved in the founding of Taiwan Ryokusô Kogyô Kôshi, and I took a leadership role in constructing modern plants to make powdered soymilk and chlorella. One of the leaders in the chlorella industry, the late Dr. Yoshio Takechi, was in charge of the chlorella cultivation department and I was in charge of chlorella product development and of powdered soymilk production. In 1966 Dr. W.A. [sic, Harry W.] Miller (who was a founder of Loma Linda Foods) and his son visited our company, under the guidance of Dr. Taisei of Taikei University. At that time Dr. Miller stood on the platform atop our spray dryer, which was 20 meters tall and had 500 liters/hour capacity. Admiring it, he said: 'I've never seen a soymilk plant which has this much facilities!' He also tasted the soymilk (from which the beany flavor had been removed) and said 'I wonder if you have to refine soymilk

© Copyright Soyinfo Center 2014

to this degree for Chinese people.' His words left a strong impression in my memory. Sure enough, when the factory was completed and we launched our canned soymilk powder, we heard Chinese saying, 'This is not real soymilk. It's an imitation.' But we did a good marketing campaign and soon the soymilk started selling. When my 2-year contract ended, I returned to Japan. After that, the products produced in this plant were used as food for the Taiwanese army and were not sold to the public. Moreover, because of the chlorella boom in Japan, the spray dryer was used for chlorella and soymilk production stopped. Since I had great expectations for this plant, I was greatly disappointed.

"Right after I returned to Japan in 1970, I was asked to provide technical assistance to Keijô Shison Shokuhin Kenkyusho, a research lab in Korea headed by pediatrician Son Zaien. I visited there several times and even drafted a floor plan, then suddenly the Japanese government told me that the money which had been available for helping Koreans was no longer available, so I could do no more" (p. 18-21; see p. 53 for more on soymilk in Korea). Continued. Address: Technical consultant, Okazaki Marusan, Japan.

7643. Tsuchiya, Kanji. 1982. Tônyû. Shinban [Soymilk. 2nd ed.] (Continued–Document part II). Tokyo: Shoku no Joho-sha. 223 p. First edition was published in 1980. Illust. 17 cm. [Jap]

• ***Summary:*** Continued. Pages 31-32. In the literature of Japan's Muromachi period it is written that after eating confections (*tenshin* such as okashi, oyatsu) they ate light and simple food (*tanpaku na tabemono*). One of the latter was called *tofu no uwamono,* which means yuba.

A flow diagram (p. 35-36) gives Chinese names of soymilk, yuba, fermented tofu, etc.

Part III (p. 39-64) titled "Soymilk around the world," has chapters on the USA, Korea, Hong Kong, China, Taiwan, Southeast Asia, and Europe. Soymilk in America (p. 47-52) includes a 1975 table showing major manufacturers of soymilk and soy-based infant formula, their location, and the names of their products. Soymilk in Korea (p. 53-54): In 1968 the Keijo Shison Shokuhin Kenkyujo made soymilk using the regular tofu making equipment adjusted to make a product as similar as possible to dairy milk, then bottled it in cider bottles, pasteurized it, and sold it. They made 500 to 800 bottles a day and sold it nationwide. It was brownish in color and tasted like soybean cooking liquid; there was no comparison between that and today's soymilk in quality. The head of this research lab was Dr. Son Zaien, who also ran the children's hospital and was a professor of pediatrics at Seoul Medical University. As a pediatrician his concern was that the soymilk promote the growth and health of children; he was not concerned about its acceptance among adults. The children accepted it within 2-3 days. Later, in May 1982, Tsuchiya visited Korea again. They had developed their own method of making soymilk and the soymilk plant had been expanded. Now they produced 500,000 bottles a day (180 cc each, retort sterilized); they call it Vegemil / Vegemeal. It contains added fat and sugar to make it closer to dairy milk., but the sugar content is 10%, which is sweeter than Japanese soymilk. The plant is built on a lot of 4-5,000 tsubo and has 24 retort sterilizers; each machine has 2,500 bottles capacity. Tôhô Yuryô, as part of a Korean technical joint venture with Kibun in Japan, is going to make 120-130,000 Tetra Brik cartons (each 200 cc). Also other dairy milk makers (Sojû and Sangan) are going to have some sort of equipment to start making soymilk. Also, I head that Tôa Shokuhin (K.K.), a pharmaceutical company, is planning a joint venture with Meiji in Japan to make soymilk.

Also, Lotte Chilsung Beverage Co. is planning to use Marusan's (Japan) technology to make soymilk. They are constructing a plant to start to making soymilk in Feb. 1983.–The population of Korea is about 40 million and the GNP 24,000 million won (unit of currency) a year; it is the largest in Asia. But it is a tough war for market share among these fine companies.

Soymilk in Taiwan (p. 57-61): People who were born in Taiwan [the former Japanese colony of Formosa (1895-1945)] have Japanese food habits and don't like soymilk as much as the Chinese. Also, Taiwanese young people don't like soymilk much. In mainland China people only drink water that has been boiled and cooled–just as they do with tea. The same with soymilk. They boil soymilk in a flat pan (*hira-nabe*) for 20-30 minutes before selling it. The buyers don't buy it without seeing that it has been properly boiled. If you cook soymilk in a flat pan for a long time, you can eliminate much of the beany smell and flavor, the antidigestion substances, and harmful bacteria. They don't care about a little burned flavor, bitterness, or beany flavor. But this is ancient wisdom. There they continue to drink soymilk up to this day and it is still very popular. It is said that the annual sale of soymilk in Taiwan is about 5,000 million yen.

In China, sellers of ice candy (like ice Popsicles) call out loudly *kaishui bingo. Kaishui* means boiled and cooled water. *Bingo* means Popsicle.

In the Philippines, about 10 years ago, the University of the Philippines developed soymilk and a blend of soymilk and coconut milk for American children. It was test marketed among the students and teachers of elementary schools, junior and senior high schools, and universities. It was acceptable only to comparatively well educated people. A 200 ml bottle (about 7 ounces) sold for 15 cents, making it more expensive than most other drinks. The taste was plain but the bean smell was not completely removed. In October 1982 Dr. William G. Padorina and other economically influential people came to Japan at the request of President Ferdinand Marcos and studied Marusan's soymilk plant. They are planning a Food Development Symposium in Feb. 1983 and they would like to have nutritious soy products

© Copyright Soyinfo Center 2014

that contain coconut oil (they account for 70% of the world's production). They have asked Marusan to cooperate in the effort.

In Denmark, a company named Starna [Nutana?] makes various soyfoods such as textured soy flour (*daizu nikku*), defatted soymilk, and soymilk. They are selling these products in Denmark and neighboring countries. *The Book of Tofu* by Shurtleff and Aoyagi is mentioned on pages 46 and 117.

Okazaki Marusan makes a soy yogurt named *Tôgurt / Tôguruto* in Japanese. The character *tô,* which means bean, is also the first character in the word *tôfu* (p. 71). Address: Technical consultant, Okazaki Marusan, Japan.

7644. Tsuchiya, Kanji. 1982. [Soymilk in Japan, and its history (Document part)]. In: Kanji Tsuchiya. 1982. Tônyû. Shinban [Soymilk. 2nd ed.]. Tokyo: Shoku no Joho-sha. 223 p. First edition was published in 1980. [Jap]

• ***Summary:*** Building a plant specialized in making soymilk (p. 21-24): After my two overseas attempts ended in failure, I returned to studying the basics. With the help of a friend, I had a soymilk test plant (55 liters/hour) built on the outskirts of Sendai, in the Tohoku region. There I worked on making soymilk with less beany flavor and better digestibility. Over a period of about 2½ years I completed development of a new heating system (Japanese Patent No. 19,928 issued in 1973), and also completed a report on digestibility of soymilk with my co-worker Kazuhiro Ootomo. In order to test the results of my research, I went to Tokyo in 1974. I found an investor, taught my techniques to Tokyo Soymeal K.K., spent 9,000,000 yen, and started to build a soymilk plant in the Tokyo area. At about this time other early soymilk manufacturers like House Luppy, Soyalac, etc. were building the market slowly but steadily, making about 10,000 to 20,000 packs/day. Our company, Tokyo Soymeal, cut into this market share, and spent 3 very tough years. But finally we were producing 6,000 packs/day and we first started to break even financially. Our soymilk product, named Soymeal, marketed as a soft drink, had a good flavor and was accepted as a new type of soymilk by consumers.

"However I realized at that time that soymilk was being sold only in the health food market. Because of that, no regular mainstream consumers bought our soymilk since distributors placed it only in Diet- and Health food stores, and in the drug section of other stores. Thus our share of the milk or beverage markets was extremely small, and expansion was difficult. Our next step was to change consumers preconceptions about soymilk.

"I want to make a tasty soymilk: Rather than placing emphasis on health or medical care, beauty care, changing one's constitution, etc. I wanted to make a soymilk product that was simply delicious and nutritious. But unfortunately our Soymeal company had to close its plant in December 1978 because the landlord sold the land on which the plant was located. This land was located next to the Tachikawa U.S. military base, and when the U.S. army gave the land back to the Japanese government, the price of land in the whole area rose. Thus our landlord wanted to sell his land too.

"In order to use my past effort and experience to make a new start, I was planning to build a plant in the Chûbu area. I did not have the means to do this by myself, but by good fortune, in 1979 Okazaki Marusan K.K. decided to help this enterprise and I was accepted as a member of their company. And furthermore it is planned to build a plant that can produce 4 times as much soymilk as plants that existed in May 1980. I would like to produce the best soymilk in Japan. The Japanese Department of Food, Agriculture, and Forestry is now studying soymilk with the intent of establishing a JAS standard in 1980."

Pages 50-52 show a chart of different brands of soymilk and soy-based infant formulas sold in the USA, with the name of the manufacturer, ingredients, and/or composition. These include: Loma Linda Food Co. of Arlington, California (Soyagen [liquid or powder], Soyalac); Mead Johnson & Co. of Evansville, Indiana (Metrecal, Sobee); Dietetic Food Co. Inc. of Brooklyn, New York (Diamel no Sorina); Ovaltine Food Products of Villa Park, Illinois (Ovaltine, 2 types which contain soy protein); Gerber Food Products of Fremont, Michigan; Plus Products of Los Angeles, California; Borden Co. of New York (Mullsoy, 2 types); Pavo Co. Ice of Minneapolis, Minnesota.

Early history of soymilk: In the *Teikun Orai,* written during the Muromachi (Ashikaga) period in Japan, the word *tofu-kan* appears in the section titled *Shojin Ryori* (Buddhist Vegetarian Cookery). That word used to mean "tofu soup" but it actually refers to what Japanese today call soymilk (*tônyû*). In the book *Sôgo Daisô-shi,* written in about 1417-1473 by Ise no Jôshin, there is a section on cooking okara (*unohana*). Mr. Tsuchiya thinks this soup was similar to today's soymilk except that the okara had not been removed. The author was the ancestor of Ise no Teijô, who lived during the Tokugawa (Edo) period and wrote that the word *Tofu-kan* should actually be pronounced *Tofu-ko,* and means "soup" (*shiru*). When the last character is pronounced "kan" it means "yokan." Note: Could Mr. Tsuchiya be confusing Manpukuji's tofukan (hard tofu) with the word tofukan that means soymilk?

A table (p. 72-75) lists all Japanese soymilk products made to date, including the name of the manufacturer, the exact date of introduction, range of distribution, package size and type, and retail price. Products sold by the following companies are listed: Kibun, Okazaki Marusan, Mitsubishi Kasei Shokuhin, Meiji Nyugyo, Kyushu Nyugyo, Nisshi Seiyu, Asahi Shokuhin, Kyodo Nyugyo, Yakuruto Honsha, Furuta Shokuhin Kogyo, Morinaga Nyugyo, Sugiyo, Koshin Nyugyo, Kenbi-Sha, Saniku Foods / Fuuzu, Nagoya Seiraku, Nagano Tomato, Zenkoku Nokyo Chokuhan (Nokyo),

© Copyright Soyinfo Center 2014

Yamato Shokuhin, Sokensha, Ishihara Fuudo Senta, Chiba Seisen Shokuhin Kogyo, Asahi Fuuzum Sebun-Irebun (7-11), Fukushima-ken Rakuren, Nacuraru Fuuzu (Natural Foods), Sebun Appu Inryo (7-Up). This entire table has been translated by Soyfoods Center; printed copies are filed with the book. The word processing filename is d:\w\hss\MilkJap1.doc. In addition, most of these soymilk products have a commercial soy products (CSP) record in the SoyaScan database. Address: Technical consultant, Okazaki Marusan, Japan.

7645. **Product Name:** [Natto, Agé, Okara].
Foreign Name: Natto, Ague, Okara.
Manufacturer's Name: Agro-Nippo Produtos Alimenticios Ltda.
Manufacturer's Address: Av. José Alves de Mira 185, Piribuba, Sao Paulo, Brazil.
Date of Introduction: 1982.
New Product–Documentation: Letter from Jane Cadwell Pautz in Sao Paulo, Brazil. 1982. May 29. The company sells natto, sprouts (mung bean type), agé (*ague*)*;* sometimes they sell the okara in the open market.

Note: We have no idea when each of these products was introduced. This is the earliest known commercial natto maker in Brazil.

7646. **Product Name:** [Essam Protein-S,L, Prorich, and Ajipron-E,M,S].
Manufacturer's Name: Ajinomoto Co. Inc.
Manufacturer's Address: Kyobashi 1-5-8, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1982.
New Product–Documentation: Soya Bluebook. 1982. p. 61.

7647. **Product Name:** [Fuji Pure-SP {Structured Soy Protein}].
Manufacturer's Name: FPPM Limited.
Manufacturer's Address: SKF Building, Shiba-Daimon 1-9-1, Minato-ku, Tokyo, Japan.
Date of Introduction: 1982.
New Product–Documentation: Soya Bluebook. 1982. p. 62.

7648. Fruin, W. Mark; Tsunehiko, Yui. comp. 1982. The 200 largest industrial firms in Japan for 1918. Unpublished manuscript. Updating of original 1980 document.
• ***Summary:*** This table is published in Mark Fruin's book "The Japanese Enterprise System" (1992, Oxford). Address: 1. Prof. of History, California State Univ., Hayward.

7649. **Product Name:** [New Soyeese {Structured and Textured Soy Protein}].
Manufacturer's Name: Fuji Oil Co. Ltd.
Manufacturer's Address: Nissei Midosuji Hachimancho Building, 6-1 Hachimancho, Minami-ku, Osaka 542, Japan.
Date of Introduction: 1982.
New Product–Documentation: Soya Bluebook. 1982. p. 62.

7653. **Product Name:** [Kikkoman Instant Shiro Miso Soup (Soybean Paste Soup, White)].
Foreign Name: Shiro Misoshiru.
Manufacturer's Name: Kikkoman Corporation.
Manufacturer's Address: Noda 278, Chiba-ken, Japan.
Date of Introduction: 1982.
Ingredients: Powdered miso, dried seaweed, wheat gluten, bonito powder, monosodium glutamate, dried green onions, disodium inosinate, disodium guanylate.
Wt/Vol., Packaging, Price: 1.4 oz (40 gm). Foil packed containing 4 individual packets. Each makes 2/3 cup.
How Stored: Shelf stable.
New Product–Documentation: Label. 1982. 5.5 by 7 inches. Plastic packet. Orange, red, brown and green on white. Full color picture of wooden bowl of soup on tray. Foil packets inside are 2.75 by 4 inches. Red, brown and black on white. Bowl of soup on front, instructions on back. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Distributed by Kikkoman Corporation, Noda 278, Japan." Text on label in both English and Japanese.

7654. **Product Name:** [Kikkoman Instant Aka Miso Soup (Soybean Paste Soup, Red)].
Foreign Name: Aka Misoshiru.
Manufacturer's Name: Kikkoman Corporation.
Manufacturer's Address: Noda 278, Chiba-ken, Japan.
Date of Introduction: 1982.
Ingredients: Powdered miso, dried seaweed, wheat gluten, bonito powder, monosodium glutamate, dried green onions, disodium inosinate, disodium guanylate.
Wt/Vol., Packaging, Price: 1.4 oz (40 gm). Foil packet

7655. *Kurima.* 1982. Okinawa no shoku: Tôfuyô [Okinawan foods: Tofuyo fermented tofu]. No. 9. p. 164. [Jap; eng+]
• ***Summary:*** Some people compare *tofuyo* with Chinese-style fermented tofu (*funyû*), however tofuyo has a more complicated flavor. It is good to drink millet brandy (*awamori*) as you nibble on tofuyo. People used to make tofuyo at home but it takes too much time, so nowadays it is found mainly at specialized restaurants.

Tofu is cut into squares about 1 inch on a side and the pieces are dried in the shade for a few days until they get slimy. They are washed with millet brandy and immersed in rice malt which has been moistened with millet brandy. You may start to eat tofuyo after one month, but it seems to reach its peak of flavor after 6 months. Tofuyo is a type of cheese created in Okinawa, where tofu and millet brandy are loved. It is sold at Urizen, 388-5 Anni, Naha city, Okinawa. Phone: 0988-85-2178. Hours: 5:30 p.m. to midnight. Closed the 2nd and 4th Sunday of each month.

Note: As of Nov. 2011 *awamori* is made from Thai-style long-grained Indica rice (not millet) and black koji mold, indigenous to Okinawa; after distillation it is often aged like whiskey.

7656. Maki, Toshio. 1982. Shokuhin oyobi kankyô-chû no N-nitoroso kagô-butsu–sono ganryô to bakuro-ryô ni tsuite [N-nitroso compounds in foods and the environment–the occurrence and exposures]. *Eisei Kagaku* (*J. of Hygienic Chemistry*) 28(5):249-58. [Jap]*
• ***Summary:*** Volatile and non-volatile N-nitrosamines were sampled in foods. The highest volatiles were in broiled dried fish, chewing tobacco, niboshi (dried small sardines), and smoked and flavored fish.

0.1 to 0.8 micrograms per kilogram (parts per billion, ppb) of N-nitroso-dimethylamine (NDMA) was detected in miso and shoyu. Similar amounts were also found in other Japanese foods. The author thinks that there is no danger in consuming these foods because of the very small amounts of NDMA, mostly less than 1 ppb.

7657. Marusan Inc. (Importer). Made in Japan. 1982. Kori-Tofu (Natural Dried-Frozen Tofu) (Brochure). 1 Branca Rd., East Rutherford, NJ 07073. 4 p.
• ***Summary:*** Contains nutritional information and 14 recipes.
Address: East Rutherford, New Jersey.

7658. **Product Name:** [Soymilk].
Manufacturer's Name: Meito Milk Co.
Manufacturer's Address: Japan.
Date of Introduction: 1982.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

7659. Mori, S.; Nunomura, N.; Sasaki, M. 1982. Correlation between sensory preference and compounds of Japanese soy sauce flavor (Abstract). In: Abstracts of Papers Presented at the Annual Meeting of the Agricultural Chemical Society of Japan. See p. 36. *
Address: Central Research Labs., Kikkoman Shoyu Co., Noda, Japan.

7660. **Product Name:** Angel Brand Mabo Tofu Sauce.
Manufacturer's Name: Morinaga Milk Industry Co., Ltd.
Manufacturer's Address: 5-33-1 Shiba, Minato-ku, Tokyo 108, Japan.
Date of Introduction: 1982.
Ingredients: Water, vegetable oils (soybean oil, sesame oil), soy sauce, tomato catsup, garlic, sugar, modified food starch, textured vegetable protein (soy flour and caramel coloring), ginger, salt, potato starch, monosodium glutamate, tobanjan (brown bean sauce) waxy corn starch, beef extract, hydrolyzed plant protein, dehydrated leek, chicken extract, oleoresin, paprika, disodium inosinate, disodium guanylate, yeast extract, spices.
Wt/Vol., Packaging, Price: 5½ oz (156 gm).
How Stored: Shelf stable.
New Product–Documentation: See next page. Label. 1982. 6.5 by 3.25 inches. Red, blue, green and black on yellow. Color photos show: (1) A package of Morinaga Ever-Fresh Silken Tofu. (2) A shallow blue and white dish of tofu rectangles in Mabo Tofu Sauce. Two illustrations show how to prepare this tofu dish: (1) Pour Angel Mabo Tofu Sauce into saucepan, add Angel Tofu, cut into ½ inch cubes. (2) Simmer and stir gently at times for two minutes. If more minced meat is required, add to the mixture according to your taste.

[Jap]
• ***Summary:*** In addition to Kikkoman, shoyu, and Mark Fruin, discusses pickles, sushi, sake, and instant ramen (Cup O'Noodles).

7664. **Product Name:** [Marusan Soy and Azuki Milk].
Manufacturer's Name: Okazaki Marusan K.K. (Marusan-Ai Co., Ltd.).
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21 Japan.
Date of Introduction: 1982.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Ron Roller of American Soy Products. 1992. Feb. 26. One interesting product is a soy & azuki milk, which Marusan launched in about 1982; Ron is not sure if it is still on the market.

7665. Okubo, K.; Furubayashi, Y.; Takahashi, K. 1982. [Flavor of glycosides contained in soymilk]. *Shokuhin to Kaihatsu* (*Food Processing*) 18(6):16-21. [Jap]*
• ***Summary:*** Saponins and their aglycones/aglicons, sapogenols, in soybeans contain bitter flavors. Saponin A has the greatest intensity of bitter flavor, about 3 times that of saponin B and sapogenol A. Therefore saponin is very important as a compound responsible for the bitter flavor in soymilk. 73% of Saponin A resides in the soybean cotyledon, 8% in the hypocotyl, and 19% in the hull. Though the hypocotyl and hull account for only 7.2% of the weight of a typical soybean, they contain 27% of the Saponin A. Therefore the first step in the most modern soymilk processes is the removal of the hull and cotyledon by dehulling to remove about one-third of the beany flavor.

7667. **Product Name:** [Soyees].
Foreign Name: Soiizu.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1982.
New Product–Documentation: Letter from San-iku Foods. 1990. June. This product was introduced in 1982.

7668. **Product Name:** [Vege Hamburg {Meatless Hamburger}].
Foreign Name: Beji Hanbaagu.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1982.

© Copyright Soyinfo Center 2014

New Product–Documentation: Letter from San-iku Foods. 1990. June. This product was introduced in 1982.

7669. Shin-Mei-Do Miso Company. 1982. What is miso (Leaflet). Denman Island, British Columbia, Canada. 2 p. Front and back. 28 cm.
• ***Summary:*** Side 1 is an introduction to miso. Side 2 is recipes, plus a plug for *The Book of Miso,* by Shurtleff & Aoyagi. Address: Denman Island, BC, Canada, V0R 1T0. Phone: 335-0253.

7670. Song, Puju; Wishnok, J.S.; Tannenbaum, S.R. 1982. [Determination of volatile nitrosamines in soy sauce]. *Zhonghua Yufangyixue Zazhi* (*Chung-hua Yu Fang I Hsueh Tsa Chih; Chinese J. of Preventive Medicine*) 16(3):147-49. (Chem. Abst. 97:108644e). [Chi]*
• ***Summary:*** Nine commercial soy sauces. purchased at U.S. retail stores, and including representative samples from Hong Kong, China, Thailand, Japan, and Korea, were examined for the possible presence of volatile N-nitroso compounds. All samples contained substances which gave positive responses on a nitrosamine-selective detector (Thermal Energy Analyzer; TEA). These signals, in addition, disappeared or were reduced following ultraviolet irradiation; this behavior is characteristic of nitrosamines. Two of the TEA-positive substances had gas chromatogram retention times and gas-chromatogram-mass spectrometer behavior suggestive of *N-nitrosodimethylamine* and *N-nitrosomorpholine,* respectively. Address: Beijing Medical College, Beijing, China.

7671. **Product Name:** [Soymilk].
Manufacturer's Name: Takeda Yakuhin.
Manufacturer's Address: Japan.
Date of Introduction: 1982.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64.

7672. **Product Name:** [Lecithin].
Manufacturer's Name: Toyo Oil Mills Co. Inc. Subsidiary of Ajinomoto Co. Inc., Tokyo.
Manufacturer's Address: 230 Shinminato, Chiba-shi 260, Japan.
Date of Introduction: 1982.
New Product–Documentation: Soya Bluebook. 1982. p. 59; 1985. p. 79. Brand is now given as Ajinomoto Lecithin.

7673. **Product Name:** [Yamashin Shiro Shoyu {Clear Soy Sauce}].
Manufacturer's Name: Yamashin Shoyu Co. Ltd.
Manufacturer's Address: Nishiyama-cho 3-36, Hekinan-shi, Aichi-ken 447, Japan.
Date of Introduction: 1982.
New Product–Documentation: Letter from Yoshiko Kojima, Associate Country Director for Human Nutrition, American Soybean Assoc., Tokyo. 1982. March 25. Yamashin is Japan's largest maker of shiro shoyu. The company's address is given.

Corti Brothers website. 2006. July 22. www.cortibros.biz. A color photo shows a bottle of this soy sauce in a clear bottle against a light wood background. The label has black Japanese characters on a white background. The near-black sauce is in a clear bottle. Price: $6.99 per bottle (360 ml; #6039). Quantity in stock: 0 (zero). "Rarer is the white soy sauce, Shiro Shoyu, made from wheat rather than soy. It is made in central Japan and is used when you do not want to change the color of a dish. It is darkish amber in color. The scent and flavor are lightly smokey, meaty, and very pleasant, but light. This is the soy sauce to use when you want a delicate flavor."

7674. **Product Name:** [Soymilk].
Manufacturer's Name: Zenno.
Manufacturer's Address: Japan.
Date of Introduction: 1982.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64, 74. Zenno is Japan's biggest co-op.

7675. **Product Name:** [Soymilk and Dairy Milk Blend].
Manufacturer's Name: Zenno.
Manufacturer's Address: Japan.
Date of Introduction: 1982.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64, 74. Zenno, Japan's biggest co-op, introduced a soy-dairy blend in 1982 but dropped it after 6 months.

7676. Adachi, Iwao. 1982. Nihon shokumotsu bunka no kigen [Origins of Japanese food culture]. Tokyo: Jiyu Kokuminsha. 470 p. See p. 69-70, 113. [Jap; eng+]
• ***Summary:*** Kinako (Yayoi period): Also called "mametsuki" in Japanese, kinako is written with characters that mean "yellow soy flour." In the *Wamyosho,* it is called "Daizu-iri" or "Mametsuki." From these expressions we can learn that since ancient times, people have pounded soybeans in a mortar (*usu*). Stone mortars came to Japan during the Nara period (A.D. 710-784) and finally became popular among the people in about the middle of the Edo/Tokugawa period. Kinako was brought to Japan from China through Korea. Kinako is probably mentioned in the *Engi Shiki.* At a certain festival the people served at the altar 5 measures each of magarimochiki and mametsuki, and 10 measures of daizumochiki. These may have been the early names for kinako-mochi and/or azuki mochi.

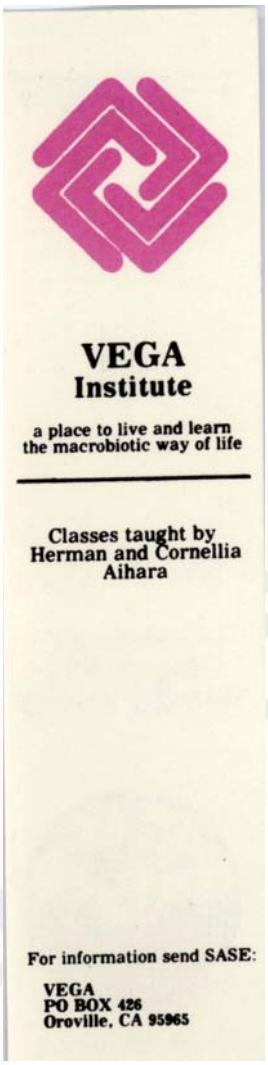
Tamari: The original form of shoyu was tamari. The by-product of tamari was miso. And the original form of miso was *kuki* [fermented black soybeans], which was a seasoning

© Copyright Soyinfo Center 2014

developed in China. More on the history of kuki is given under "miso." The government office (yakusho) for miso was built at the imperial court (kyutei) in A.D. 701 (Taiho 1). Therefore tamari started there at the same time. In the book *Yamato Honso* (Japanese materia medica) by Ekiken Kaibara, tamari (written with the characters for bean + oil) was mentioned. But on the sign board (kanban) of Yuasa Shoyu (which was started in the Tenshô period, 1573-1592), Tamari Shoyu was written (and "tamari" was written with the single character for "tamaru"). In the *Vocabulary of the language of Japan* (1603; Nippo Jisho) tamari was defined in Portuguese: "Tamari, a very delicious liquid taken from miso which can be used as a seasoning when cooking foods." Furthermore, in the *Oshufushi* (1684) it is written that "The liquid from shoyu is tamari." During the Middle Ages (chûsei) in Japan, shoyu was written with the characters for bean + oil, but during the Tenshô period (1573-1592) it came to be written with the single character for "tamaru." Tamari and shoyu were first distinguished during the Kyôhô period (1716-1735). In the Chubu region of central Japan (Chûbu-Chiho; Toyama, Ishikawa, Fukui, Yamanashi, Nagano, Gifu, Shizuoka, and Aichi prefectures) one special kind of miso, which is a by-product of shoyu, is called "tamari-miso."

7677. Aihara, Cornellia. 1982. The *dô* of cooking: Complete macrobiotic cooking for the seasons. Oroville, California: GOMF Press (George Ohsawa Macrobiotic Foundation). 230 p. Illust. by Carl Campbell. Index. 28 cm.

• ***Summary:*** This is a compendium of four seasonal cookbooks, each with the title *The Dô of Cooking* (*Ryorido*), first published individually in 1971. Contents: Preface. Introduction. Selecting good foods. The secret of cooking. Spring. Summer. Autumn. Winter. Glossary. Cutting styles. Topical index (within each major food category {grains, grains with vegetables, seaweeds, beans and tofu, etc.}, recipes are listed alphabetically). Recipe index (of all recipes).



Contains many recipes calling for: Miso, natto, tofu (regular, deep-fried, and frozen). Also: Amazake, azuki beans, kuzu, mochi, sea vegetables, seitan (wheat gluten), sesame seeds and gomashio.

Near the front of the book is a biographical sketch and photo of Cornellia Aihara. She was born in 1926 in Fukushima, Northern Japan. She learned macrobiotics from George Ohsawa when he came to her town (Aizuwakamatsu) for lectures; this changed her life. While in school, she began corresponding with Herman Aihara, who was living in New York. In 1955 he invited her to New York. Although they had never met, she trusted him and went to American with only ten dollars in her pocket. They were married soon after her arrival in New York. There they engaged in retail business. When Mr. and Mrs. Ohsawa came to the USA from Europe, Cornellia studied macrobiotic cooking by helping Mrs. Lima Ohsawa at the first macrobiotic summer camps on Long Island in 1960; in the Catskill Mountains in 1961; at the University of California at Chico in 1963; and at the Big Sur Camp in 1964. Since 1961 Cornellia has devoted her life to the teaching of macrobiotic cooking, childcare, home remedies, and philosophy. Since 1965 Cornellia and Herman Aihara have organized fourteen macrobiotic summer camps in California; her cooking has been the biggest attraction.

On the cover is a large color photo of freshly prepared food, including slices of deep-fried tofu. Address: 902 14th St., Oroville, California 95965.

7678. American Soybean Assoc. 1982. Tofu and the American soybean. *Checkoff Successfile.* Japan #105. 2 p.
• ***Summary:*** Contents: Summary. The problem. ASA's program and execution. Results. "In 1958 Japan's tofu industry used only 955,000 bushels of U.S. soybeans. Government restrictions and the tofu industry's quality

© Copyright Soyinfo Center 2014

standards held back the growth of U.S. imports by the tofu industry." Meanwhile Japanese tofu makers were using nearly 8 million bushels of soybeans grown in Japan or imported from China.

Step 1. ASA arranged for two senior Japanese food scientists to spend several months at USDA's Northern Regional Research Lab in Peoria, Illinois. They conducted research on tofu and miso to determine which U.S. soybean varieties worked best. "At the same time, ASA, the Japan Tofu Association, and the Food Research Lab of the Japanese Ministry of Agriculture repeated the tests using various varieties of U.S. soybeans.

"The result was the development of a soft tofu production method, which gave reduced loss of water-soluble proteins and higher yields of tofu [because the tofu contained more water]. "Most important to U.S. farmers it was discovered that U.S. soybeans were the most suitable to the new process."

Next a "series of technical seminars were held in which demonstrations were presented to illustrate the superior quality of U.S. soybeans and the new processing methods." Gil Griffis, ASA director for Asia, says, "We succeeded in destroying the myth that only Japanese and Chinese soybeans could serve the tofu market."

ASA's next goal was to increase tofu consumption in Japan. In cooperation with the Japan Tofu Association, ASA conducted a nationwide series of cooking classes from the back of a kitchen-equipped bus that traveled from city to city. New tofu recipes were developed to appeal to the young homemaker. Several of the cooking seminars were televised, thus expanding the audience. "In addition, attractive posters were created and displayed outside nearly 25,000 tofu shops in Japan.

"Results: After 22 years of promoting U.S. soybeans to the Japanese tofu industry, the U.S. has made great inroads into the market. Last year Japan's tofu industry used nearly 17 million bushels of soybeans. Nearly 16 million bushels of the total industry purchases [about 94%] came from the U.S.–the production of over half a million acres of U.S. soybeans."

A large graph shows "Consumption of whole soybeans in foods" from 1975 to 1980 [in Japan]. Tofu and others has risen from 525,000 tonnes (metric tons) to about 590,000 tones. Miso has remained unchanged at about 180,000 tonnes. Photos show: (1) ASA's Ms. Kojima with a Japanese man making tofu in a traditional shop. (2) An ASA cooking class attended by women. (3) A Kentucky Fried Chicken outlet in Japan. Address: St. Louis, Missouri 63141.

7685. American Soybean Assoc. 1982. ASA consultants solve problems, spread information. *Checkoff Successfile.* Technical Consultants #1300. 2 p.
• ***Summary:*** "Problem: Foreign livestock producers need technical assistance in developing profitable livestock industries and formulating balanced feed rations. Oil processing techniques must be modernized to increase efficiency.

"Program: The ASA technical consultant program was launched in 1957 when the first ASA-sponsored consultant went to Japan to help the fledgling Japanese hog industry.

"Results: Since 1957, ASA has sent more than 200 highly trained animal nutritionists, soybean oil technicians, veterinarians and other experts to 76 nations. Altogether, ASA has coordinated and sponsored almost 500 technical trips to help foreign customers improve livestock and processing industries. Their assistance shows customers that U.S. farmers 'service what they sell–a key factor in increasing demand for U.S. soybeans and products.'"
Address: St. Louis, Missouri.

• ***Summary:*** Packed with recipes and color photos, this book also describes how to make tofu at home (a wooden tofu kit is pictured on page 95), and gives a brief history of tofu (by Abe Koryu), with two early woodblock prints. One print (p. 91) from the *Wakoku Shoshoku E-zukushi,* by Hisakawa

© Copyright Soyinfo Center 2014

MORONOBU (a famous Japanese artist of the Edo period) (1685) shows a Japanese man carrying two water-filled wooden tubs of tofu suspended by 4 ropes at each end of a shoulder pole. He is selling tofu, probably in Kyoto. To his left is walking a kimono-clad woman, with a similar wooden tub (covered with a cloth but probably containing tofu) atop her head. She probably bought the tofu from him. Both people are bare footed. The caption says: "Please eat tofu. I came all the way from Nara."

The other print (p. 92) titled "Tofu seller" (*Tofu uri*) from the book *Shichijû-ichiban Shokunin-zukushi Uta Awase*, by Mitsunobu TOSA (1657) shows a Japanese woman seated on her heels in the seiza position on the ground behind a short table (about 4 inches high, 4½ feet long, and 14 inches wide). On the table is one large cake of tofu (about 10 inches square and 3 inches high) and four smaller pieces (each about 6 inches square and 1 inch high).

7687. Dunn, John R.; Reynolds, B.J.; Eversull, E.E.; Skinner, R.A.; Thurston, S.K. 1982. Cooperative involvement and opportunities in oilseeds. *ACS Research Report* No. 13. v + 47 p. 28 cm. [28 ref]

• ***Summary:*** A very important and original report showing the relationship between all aspects of soybeans and other oilseed crops in the USA, and between cooperative and noncooperative soybean processors. Contents: Highlights and recommendations. Oilseed crop production: Soybeans, cottonseed, peanuts, flaxseed, sunflowerseed. Overview of cooperative oilseed system: Cooperative oilseed flows, cooperative organizational approaches, vertical integration by individual cooperatives, horizontal coordination by groups of cooperatives, vertical coordination by groups of cooperatives. Oilseed crushing: Soybeans, cottonseed, sunflowerseed / flaxseed, peanuts, potential new locations for cooperative crushing, parts inventory for processing cooperatives. Processing plant output: Soybean plant output, cottonseed mill output. Processing plant costs: Soybean plant costs, cottonseed plant costs, economies of scale. Raw product marketing. Oilseed pricing mechanisms. Transportation of oilseeds and oilseed products: Cooperative control of transportation modes, transportation by cooperative soybean processors. Refining, product manufacturing, and marketing: Demand for vegetable oil products, vegetable oil refining, increasing cooperative refining activity, marketing of vegetable oil products, manufacturing and marketing meal products, cooperative brand name oilseed products, retail product quality assurance association. The export markets for U.S. oilseeds: Global demand for oilseeds, global oilseed processing, world oilseed trade flows. Cooperative involvement in oilseed exporting: cooperative export flows, level of cooperative involvement, considerations for expansion of cooperative exporting, advantages and risks for cooperatives in oilseed exporting, the need for unified cooperative export efforts. Challenges for oilseed cooperatives: Rail transportation, energy, growth, competitive pressures and the need for coordination. Selected oilseeds references. Appendix tables.

Tables related to soy: (1) Regional shares of U.S. regional soybean production; Averages for 1959-69, 1970-79, 1976-79. (6) Soybean crushing capacity; total cooperative and noncooperative. Cooperative share of crushing capacity, 1971-1979 crop years. (7) Number of soybean crushing mills, U.S. total, co-op, and non-coop. Average mill capacity; U.S., co-op and non-co-op, 1971-1979 crop years. (8) Soybean crushed, U.S. total, cooperative crush, nonco-op crush, cooperative share of total crush, 1971-1979 crop years. (9) Utilization of soybean crushing capacity; U.S. overall average, noncooperative average, 1971-1979 crop years.

(10) Soybean crushing capacity shares and cooperative shares of crushing capacity, by region, 1979. (11) Soybean crushing capacity and proportion of soybean production which may be crushed within each region, 1979. (12) Structural characteristics of the domestic soybean processing industry in terms of plant numbers and capacities, 1979. (16) Production of soybean oil and oil products by cooperatives, 1971-1979 crop years (Million pounds and percentage; Crude oil, degummed oil, lecithin and by-products, refined oil, hydrogenated oil). (17) Soybean meal production by cooperatives, 1971-1979 marketing years (Thousand tons and percentage; Total, high protein meal, low protein meal, mill feed production).

(20) Processing costs for cooperative soybean processing plants, 1971-1979, alternative years. (24) Soybean receiving methods by cooperative plants, 1971-1979 crop years (by rail, cooperative owned truck, other truck). (25) Soybean meal shipment methods by cooperative plants, 1971-1979 (by rail, co-op truck, other truck, barge). (26) Soybean oil shipment methods by cooperative plants, 1971-1979 (by rail, truck, barge). (27) U.S. utilization of soybean oil, by products, by crop years, 1964-1979 (million lb): Shortening, salad and cooking oil, margarine, other edible, total food, total non-food, total domestic disappearance.

(30) Total and per capita consumption of fats and oils, food and industrial products, USA, 1963-1979 (million lb and per capita) (butter, lard, margarine, shortening, edible oils, all [oleaginous] food products, all industrial products, all products). (31) Margarine: Fats and oils used in manufacture, United States, 1965-1979 (incl. soybean, cottonseed, peanut, corn, coconut, safflower, other vegetable, lard, beef tallow). (32) Shortening: Fats and oils used in manufacture, United States, 1965-1979 (incl. soybean, cottonseed, peanut, etc.). (34) Selected oilseeds, vegetable oils, and oilseed cakes and meals: value of U.S. exports, annual 1973-1979. (35) Major U.S. oilseed and products exports, 1973-1979 (Soybeans, sunflowerseed, cottonseed, peanut). (36) Global soybean annual crushing capacities of

• ***Summary:*** Production statistics for miso and natto from 1970-1979 were presented. Miso increased from 552,207 tonnes in 1970 to a peak of 590,137 tones in 1973, followed by a gradual decrease to 567,776 tons in 1979. Natto production increased from 100,000 tonnes in 1970 to 158,000 tonnes in 1979. Statistics on the production of fermented black soybeans (Tera Natto or Hama Natto) are not available, but are roughly estimated at 10,000 tons.

An outline is then given of the chemical composition of the different types of miso and natto as well as their methods of manufacturing. Of the many beneficial characteristics of miso, the following are worthy of note: it has strong antioxidative activity, a strong buffering activity, and a bactericidal like effect against pathogens.

"Natto is one of the typical and popular soybean foods in the Japanese diet. It is classified into 2 major types; one is called Hama Natto which resembles soybean miso in colour and flavour; the other is called itohiki natto. When referred to simply as natto, it generally means itohiki natto. Natto is a unique soybean food, fermented by *Bacillus natto.* The surface of fermented natto is covered with characteristic viscous and slimy substances consisting of *B. natto* cells and polymers of glutamic acid." Address: Applied Microbiology Div., National Food Research Inst., Ministry of Agriculture, Forestry and Fisheries, Yatabe, Ibaraki-ken, Japan.

• ***Summary:*** The section in soy sauce was translated by Jun Makino and published in Crackerbarrel (Chico, California). 1983. April. p. 6. As follows: "Most Japanese soy sauce makers depend on inferior quality defatted soybeans for their main ingredients. The suppliers of these defatted soybeans are fertilizer dealers, who also sell them for livestock feed and fertilizer... In order to make an inexpensive product, many soy sauce makers have adopted the dubious practice of buying the waste water by-product of monosodium glutamate manufacturing. This waste water is used in the processing of acid-hydrolyzed soy sauce to improve its poor flavor.

"Japan's top soy sauce manufacturers produce approximately 380,000 kl [kiloliters] of soy sauce each year, and 170,000 kl of that is chemical soy sauce used in mixture... During 1975 to 1979 some 224 patents on soy sauce manufacturing technology were obtained..." Address: Prof. of Food Technology, Meiwa Women's College, Japan.

7692. Haas, Peggy Wagoner; Gilbert, L.C.; Edwards, A.D. 1982. Fresh green soybeans: Analysis of field performance and sensory qualities. Kutztown, Pennsylvania: Rodale Research Center, and Rodale Test Kitchen. 25 p. No. NC-81-9. 28 cm. [2 ref]
• ***Summary:*** "This study of fresh green soybean lines and varieties was conducted over a 2-year period [May 1980 to Dec. 1981] at the Rodale Research Center." Both field performance and sensory qualities of the soybeans were investigated. "It is hoped that more interest in this valuable garden crop will be generated among seed companies and plant breeders. The appeal of fresh green soybean varieties merit their inclusion in seed catalogs." Varieties with large seeds (where 100 seeds weigh more than 20 gm) were selected.

Varieties that received the highest "mean overall likeability" from a taste panel were Prize (from Burpee Seed Co., Warminster, Pennsylvania; "bright green color; loose hulls; sweet, nutty, buttery flavor"), Mikawashima (from Takii & Co., Kyoto, Japan), and Early Green Okuhara.

Table 4 (p. 17) shows the best varieties identified in this study. Part I shows eight varieties found to be exceptional in both field and sensory qualities: Altona and Envy (from Johnny's Selected Seeds, Albion, Maine), Okuhara Early Green, Improved Hakucho, Hakucho 3, and Early Hakucho (from Takii & Co.), Early Green Okuhara (Redwood City Seed Co., Redwood City, California), and Edible Soybean (Burgess Seed & Plant Co., Bloomington, Illinois). Part II shows varieties and lines which tasted as good as those in Part I but which showed some undesirable plant habits when grown in Eastern Pennsylvania: Prize (from Burpee), Disoy (Gurney Seed Co.), Prize (Earl May Seed Co.), Mikawashima (Takii & Co.), Tsurunoko (Redwood City Seed Co.), and Jefferson (USDA Soybean Germ Plasm Collection–Not available commercially).

Table I shows 1981 field performance summary of 30 fresh green soybean varieties: Foe each variety is given: RRC#, variety name or pedigree number, source, days to plump green, number of days beans in table ready condition, weight in grams of pods from 100 plants, relative plumpness of pods filled with beans (5 = pods very plump, beans large & round within pod), plant height in cm at mature green stage, relative plant canopy rating (5 = excellent coverage), plant stature and distinctive field characteristics. Named varieties tested: Elf, Jefferson, Frostbeater, Prize, 36 Hodgson, Fiskeby V, Disoy, Prize, Altona, Wilkin, Envy, Panther, Okuhara Early Green, Takii's Extra Early, Fulbasket, Improved Hakucho, Hakucho 3, Mikawashima, Early Hakucho, Express Green, Tsurunoko, Early Green Okuhara, Edible Soybeans, Butterbean. Address: Kutztown, Pennsylvania.

• ***Summary:*** Contents: Preface. Introduction. Contains 100 recipes in Japanese alphabetical (IROHA) order. Tofu Hyakuchin new selected edition. [A modern edition of old *Tofu Hyakuchin* book.] Dengaku. Various thoughts on tofu. Address: Obaku, Japan.

7695. Hirayama, Takeshi. 1982. Relationship of soybean paste soup [miso soup] intake to gastric cancer risk. *Nutrition and Cancer* 3(4):223-33. [15 ref. Eng]
• ***Summary:*** Consumption of miso soup was found to protect against stomach cancer, as long as the soup's salt concentration was kept to a minimum. "Daily intake of soybean paste soup was found to significantly reduce standardized mortality rates for gastric cancer in an ongoing large-scale prospective study of 122,261 males and 142,857 females aged 40 and above in 29 Japanese health center districts, 1966-1978. The gastric cancer standardized mortality rates were 171.9, 210.2, 240.0, and 255.9 per 100,000 males, and 77.8, 85.3, 97.5, and 113.6 per 100,000 females in daily, occasional, rare, and noningesters, respectively... The risk-reducing effect has also been observed in case-control studies in the past, for both males and females and in urban and rural areas. This beneficial effect could arise from selected compounds such as protease inhibitors and/or other nutritious substances included in the soybean, but it is also possible that it merely reflects the effect of some frequent accompaniment to soybean paste soup, such as green-yellow vegetables...

"According to the national nutritional survey conducted by the Ministry of Health and Welfare in 1979 for 6,000 randomly selected households (21,000 persons), 40.5% of Japanese ingest soybean paste soup daily at breakfast. Another 6.7% ingest it at their evening meal."

In both men and women smokers, frequent consumption of miso soup was found to protect against stomach cancer (Table 3).

"Recently, an animal experiment bearing on the present issue was conducted in Korea [Kim, J.P.: Personal Communication, Oct. 1981]. Rats were fed various gastric carcinogens, and incidence of gastric cancer was reported to be significantly lower in those animals also fed soybean paste soup." Address: Epidemiology Div., National Cancer

7696. Holthaus, Fusako. 1982. Tofu cookery. Tokyo: Kodansha International. 159 p. Illust. Index. 27 cm. Though published in Japan, this book was sold mainly in America.
• ***Summary:*** Contents. Introduction. Recipes: 1. Hors d'oeuvres. 2. Soups. 3. Main dishes. 4. Salads. 5. Sauces, dips, and spreads. 6. Breakfast and lunch. 7. Baking. 8. Desserts. Address: Japan & Washington state.

7697. Iibuchi, Sadaaki; Yano, Yoshimasa; Kawashima, Masao; Nakagawa, Keizo. 1982. Energy analysis of a kori-dofu plant. *J. of Food Engineering* 1(1):17-29. [35 ref]
• ***Summary:*** In a plant which used 13 operations to process 6 tons/day of soybeans to make dried-frozen tofu (kori-tofu), total energy consumption per 1 kg of dried-frozen tofu was 27.1 MJ of fuel energy plus 8.3 MJ of electrical energy. This total of 35.4 MJ of energy required to produce 1 kg of product is rather high compared to the energy required to make other foods. The waste-water treatment consumed more energy than the entire manufacturing process. The analysis was made in 1980 on a plant owned by Habutae Tofu Co. Ltd., Kanazawa-shi, Japan. The term "exergy" (the ability of work) is used frequently. Address: 1-2. Dep. of Agricultural Chemistry, The Univ. of Tokyo, Tokyo 113, Japan; 3-4. Habutae Tofu Co. Ltd., Kanazawa-shi, 921, Japan.

7698. Kanoe, M.; Kido, M.; Komatsu, T.; Toda, M. 1982. Growth inhibitory effect of *Bacillus natto* on several microorganisms of animal pathogenicity. *Bulletin of the Faculty of Agriculture, Yamaguchi University* (*Yamaguchi*) 33:1-24. [Jap; eng]*
Address: Yamaguchi Univ.

7699. Ko Swan Djien. 1982. Indigenous fermented foods. *Economic Microbiology* 7:15-38. A.H. Rose, ed. Fermented Foods. [67 ref]
• ***Summary:*** Contents: 1. Introduction. 2. Foods fermented by moulds: Roles of the moulds. 3. Foods fermented by bacteria: Fermented vegetable products, fermented fish products, fermented seeds (natto, thua-nao, dagé), fermented starch-rich raw materials (fermented maize products, fermented rice products, fermented cassava), fermented plant juice.

4. Foods fermented by a mixture of moulds and yeasts: Ragi, micro-organisms, fermented starch-rich raw materials.

5. Foods firstly fermented by moulds [as in making koji], followed by a fermentation with a mixture of bacteria and yeasts (the salt-tolerant yeasts are species of *Saccharomyces* and *Torulopsis;* the bacteria are species of *Pediococcus* and *Streptococcus*)*:* Tane koji, soy sauce, other fermented soybean products (tauco {porridge or dry consistency}, miso, hamanatto {which is soft and has a high moisture content}, tou-shih {which has a much lower water content than hamanatto and is therefore not so soft}. These "fermented soybean products are also used as flavouring agents in cooking as well as table condiments or as a side dish").

6. Specific aspects of fermented foods: Mould species, lactic-acid bacteria, yeasts, salt. 7. Acknowledgement. References.

Concerning soy sauce (p. 30-31): "Japanese *shoyu* is made from equal amounts of soybeans and wheat." The "raw materials are inoculated with tane koji which contains spores of selected strains of *Aspergillus oryzae* and *A. soyae.* In less sophisticated soysauce factories throughout South East Asia, mould species grow spontaneously on the soybeans by natural contamination from the air and from the bamboo trays on which soybeans of former batches were incubated (Bhumiratana et al., 1980). The moulds involved are species of *Aspergillus, Rhizopus,* or *Mucor.* Some Indonesian *kecap* manufacturers inoculated the cooked soybeans with tempe [tempeh] inoculum which contains spores of *Rhizopus oligosporus."*

7706. Nakano, Eisha; Stephan, Barbara B. 1982. Japanese stencil dyeing: Paste-resist techniques. New York and Tokyo: Weatherhill. ix + 143 p. Index. 27 cm. [46* ref]
• ***Summary:*** Both authors are women living in America. Eisha Nakano, a graduate of the junior division of the Women's University of Fine Arts, Tokyo, is a stencil artist with long experience teaching katazome (stencil dyeing) to Westerners. The katazome process consists of cutting a paper stencil, preparing the resist paste (made of glutinous rice flour [*mochiko*] and rice bran [nuka]), choosing and preparing the fabric or paper which will be dyed, applying the paste to the fabric or paper using the stencil, letting the paste dry, preparing and applying sizing to the fabric or paper, dyeing the fabric by applying the dye or pigment with a brush, sometimes steaming the fabric, then washing off the paste to reveal the design, and finishing the fabric. The cloth is not dyed in the areas where paste was applied; thus katazome is the direct opposite of the silk-screen technique. Soybeans have traditionally been used in the katazome process in two ways: As sizing and as pigment-binding agents.

Chapter 6, "Sizing the fabric," states (p. 69-73). "The sizing most widely used for katazome, however, is *gojiru* [actually uncooked diluted soybean liquid, or soymilk], a liquid extracted from soaked and ground soybeans. The reason that soybeans are such a good sizing agent is not just that they are cheap and plentiful but also that they are rich in protein, which has adhesive-like qualities. Once the liquid is brushed onto the cloth, the protein begins to undergo a structural change, known as denaturation, whereby it is rendered insoluble. This not only makes the sizing permanent; it also helps reinforce the bond between the fiber and the subsequently applied dye, ensuring good colorfastness... As sizing, the soybean liquid is highly diluted, so the effect is little more than a light starching."

To prepare the soybean sizing for 5-6 meters (16-20 feet) of narrow-width cotton fabric, choose a dry warm day. Soak about ¼ cup (50 gm) whole soybeans in ample water for 5-6 hours in summer or overnight in winter. Drain off the water and have ready an equivalent volume of fresh water. Crush the softened soybeans in a blender or suribachi, adding the fresh water as necessary. Pour the liquified [liquefied] soybeans into a cloth filter bag made of organdy or coarse muslin then squeeze over a bowl to extract the

© Copyright Soyinfo Center 2014

concentrated uncooked soymilk, whose volume should be about equal to that of the swollen beans. Now dilute the concentrated soymilk with 8 to 10 parts water, or until it has the translucence of nonfat milk. Now apply the soybean liquid sizing to the fabric using a wide brush following the details given. Stretch the fabric tight and allow it to dry. The soybean liquid must be used fairly quickly, lest it spoil.

Concentrated soybean liquid is also used in traditional Japanese pigment dyeing as a thinner and binder for many pigments. "Pigments differ from dyes in that they are opaque, are insoluble in water, and have little or no affinity for textile fibers. Instead of penetrating the fabric, the finely ground particles lie on the surface, held by any number of film-forming binders. In traditional Japanese dyeing, this binder has generally been derived from soybeans... In traditional pigment dyeing, the color is bound to the fabric through a change in molecular structure that occurs when the protein found in the soybeans dries and turns into an insoluble compound. For the color to be fast, the soybean liquid with which the pigment is mixed must be fairly concentrated, much more so than when used as sizing." Whereas the volume of water added to concentrated soybean liquid for sizing is 8-10 parts, for mixing pigments it should be 1 part for detail or accent color, or 3 parts for background color. After dyeing, the color is fixed with alum solution.

Talk with John Marshall (24 July 1991), a Berkeley artist who was apprenticed to a natural dyer in Japan from 1971-1976 and who uses natural plant dyes: Protein is used in a number of ways in ethnic textile dying. The Japanese and Chinese use soymilk as their source of protein. The people in Pompei used egg white / albumin, while those in Okinawa use dairy milk. The purpose is to coat the fabric and to serve as a primer or *gesso* on which the natural dyes are applied. Real gesso is powdered marble and a binder. In Japan, a dyer would stretch a piece of fabric made from any natural fiber, then apply the soymilk to it using a brush; 1 coat is usually enough but some artists use 2-3 coats. John makes his own soymilk from whole soybeans; he learned how in Japan as part of the dye process. In traditional Japanese dyeing the cloth was not immersed or dipped in the soymilk. Let the cloth dry until it is no longer wet, then it is ready to be dyed, for example using tie-dye (dunked), paste-resist (made from powdered glutinous rice and bran; leave it stretched, as with katazome), batik (with wax resist), or a solid color. Address: 1. Cincinnati, Ohio; 2. USA.

7719. Yoneda, Soei; Hoshino, Koei; Schuefftan, Kim. 1982. Good food from a Japanese temple. Tokyo, New York, and San Francisco: Kodansha International. 224 p. Illust. Index. 27 cm.

• ***Summary:*** An outstanding, beautiful book, the best seen to date on Buddhist Vegetarian Cookery (*shojin ryori*)–after you get past the poor, almost embarrassing introduction, written by Robert Farrar Capon of New York. The author, Sôei Yoneda, is a great Zen Abbess and cook, and a visit to Sankô-in, a Rinzai nunnery, is an unforgettable experience. The recipes are arranged by season: Spring, summer, autumn, winter, all seasons. For every recipe, both a Japanese and an English-language name are given. Soy-related recipes include: Soybean rice (*mame gohan,* p. 73). Unohana rice (with fried okara, p. 75). Thick-rolled sushi (with dried-frozen tofu, p. 75). Tofu rice (p. 80). Soy bean dashi (p. 82). Miso soups (p. 85-88; 14 recipes, one for each month but two for Jan. 1 and 2–White miso Ozoni and Zen temple ozoni–and one for all seasons–Saké lees soup). Pickling with miso (p. 89). Rape blossoms with miso-mustard dressing (p. 93). Bamboo shoots with vinegar-miso dressing (p. 98-99). Quick oden (with tofu, p. 107-08). Green beans with miso dressing (p. 113-14). Eggplant with miso sauce (p. 123). Zucchini with sesame-miso sauce (p. 129). Steamed zucchini with three-color miso (p. 130-31). Jade nuggets (*kizami nattô no ao-jiso age,* p. 136). Pine cones (*matsukasa,* with tofu, p. 151). Miso-pickled vinegared konbu kelp (p. 153). Crisp turnip with sesame-miso dressing (p. 158). Amazake (p. 162). Daikon with miso sauce (*daikon oden,* p. 170). Brussels sprouts with miso sauce (p. 179-80). Dried-frozen tofu mélange (p. 181-82). Not exactly hamburger ("patties" with dried-frozen tofu and okara, p. 182). Simmered dried-frozen tofu (p. 182-83). Dried-frozen tofu tempura (p. 183). Konnyaku in miso dressing (p. 184). Fried unohana (*iri unohana,* with thin deep-fried tofu and okara, p. 187; "The mash or lees (*okara*) remaining after making tofu are inexpensive, plentiful, and nourishing–ideal everyday temple food. By itself *okara* is not interesting, but it is brought to life by the addition of a little oil and a few other ingredients"). Inari-zushi (p. 189-90). Grilled usuage (with thin deep-fried tofu, p. 190). Deep-fried usuage (p. 190-91). Golden sushi rolls (with usuage, p. 191). Rôbai (Sanko-in fresh wheat gluten, p. 192-93). 7729. Kennedy, J. Robert. 1983. History of Chico-San and macrobiotics in America (Interview). Conducted by William Shurtleff of Soyfoods Center, Jan. 6. 2 p. transcript.
• ***Summary:*** Rice cake production started in Canada.

The following are not that important: (1) The conflict over Erewhon buying organic brown rice from the Lundbergs. (2) Erewhon taking away Chico-San's New York market (Bob didn't even know this). (3) Lawsuit (that never went to court) between Chico-San and Lundberg.

The initial contract with the Lundbergs to grow brown rice exclusively for Chico-San was risky for Chico-San; they agreed to pay higher prices if the yield was low. Michio and Paul Hawken tried to get the Lundbergs to break the contract. Bob does not know who went to who. Did the Lundbergs go to Erewhon or vice versa? Why did this happen? Problems

© Copyright Soyinfo Center 2014

arose in the third year of the contract. The first year, the Lundbergs grew only 67-70 acres of brown rice, which Chico-San sold by the end of January. The second year, Chico-San also sold all the rice that the Lundbergs grew. The third year was the fire at Chico-San, and Chico-San was unable to sell all the rice they had agreed to sell. Michio came to California with Aveline and they tried to talk the Lundbergs into selling some organic brown rice to Erewhon. But there was no conflict. Michio used to phone Bob Kennedy at nights in those days asking if Erewhon could buy organic brown rice at no profit to Chico-San. Bob said "no." That is not a conflict, and there were no bad feelings.

There was no lawsuit between the Lundbergs and Chico-San–just some litigation prior to what could have been a lawsuit, concerning the third year and the fire. Chico-San was out of business for almost a year because of that fire, and could not sell all the rice they had contracted to sell that year. The litigation led to changes in the original contract: (1) Chico-San could and would pay for the rice over an extended schedule. (2) The Lundbergs could sell the organic brown rice to other customers.

Why is Chico-San a loner in the natural food industry? They are a manufacturer and importer which uses other distributors; they do not generally distribute themselves–unlike Erewhon. However now they have some big trucks, used to distribute their own products in the San Francisco Bay Area.

Erewhon was able to take away Chico-San's New York market because Erewhon was price cutting; Kennedy refused to cut prices. Also, Erewhon sold direct to some markets, delivering their own products in their own trucks–unlike Chico-San which generally used other distributors. Many other companies besides Erewhon did this too. Most of those companies are gone now, but Chico-San remains!

Whenever Paul Hawken would talk to Bob Kennedy he always seemed to have a chip on his shoulder [a sort of grievance].

Initially Chico-San had an exclusive agreement with Ohsawa. Chico-San broke that in deference to Michio when Aveline set up Erewhon. This is a big, important point that should not be forgotten.

Ohsawa's first lectures in the USA, in early 1960, were at the Buddhist Academy in New York City.

There were two main reasons the group that formed Chico-San left New York and traveled to California: Rice (most important) and nuclear safety. Ohsawa strongly supported the group's efforts. Ohsawa tried to set up Japanese companies to supply Chico-San, but it was difficult. Then Muso Shokuhin [Muso Foods], in Osaka, came into the picture, and Chico-San started to order from them. Then they went back to ordering from Tokyo. There were some problems between the export companies in Tokyo and Osaka. Ohsawa Japan was the export company and Nippon CI was the educational arm.

The amount of miso and shoyu that Chico-San sells today is proprietary [confidential] information. Chico-San is now in serious talks with some manufacturers in Japan.

Chico-San started to make rice syrup in 1972. Bob traveled to Japan twice, visited some *amé* [rice syrup] makers, and got information on quantities, temperatures, etc. It's a fermentation process.

Chico-San expects to have a new rice cake plant in New Jersey in operation by December 1981. The plant will make only rice cakes but Chico-San will store

warehouse some of its Japanese foods in the plant. The next plant after that will be in Canada, then one in Europe after that. If these are successful, Chico-San will add distribution of Japanese products. They will sell both organic brown rice (from the Lundbergs and from Arkansas) and non-organic commercial brown rice–each clearly labeled.

What are Chico-Sans plans concerning miso and shoyu? In collaboration with Ohsawa Japan, two Japanese makers of miso and shoyu are very interested in coming to the U.S. and helping Chico-San to set up a plant in the U.S. They would provide technical assistance and be part shareholders / investors. Junsei Yamazaki plans to return to the Chico area, possibly this spring. He studied fermentology, so he may be the process overseer.

In 1961 Chico-San received its first imports from Japan, from Tokyo, from George Ohsawa himself. Previously Herman Aihara in New York had ordered these imports from George Ohsawa. He had received 2-3 shipments before Chico-San was incorporated. George Ohsawa encouraged Muso to get started. Three companies tried to get started and folded before Muso took root. Bob will try to find the details (date and products) of Chico-San's first shipment from Muso. Bob also has George Ohsawa's early correspondence.

Bob would like to read the final draft of Shurtleff's History of Macrobiotics. Peter Milbury will look at it too. Address: Chico, California.

7730. Sheraton, Mimi. 1983. Restaurants: Japanese fare for theater nights. *New York Times.* Jan. 14. p. C18.
• ***Summary:*** This is a review of Sushiko, a Japanese restaurant at 231 West 55th St., between Broadway and Eighth Ave. in New York City. They sell: "fried half-eggplant mellowed with miso sauce, topped with sesame seeds; soybean cakes [tofu] in seaweed soup with vegetables; oshitashi [o-shitashi, o-hitashi], a salad of marinated spinach with soy sauce and crunchy flakes of dried bonito, and natto, winy, fermented soybeans in an egg and scallion sauce."

And "zaru soba, cold buckwheat noodles with soy sauce, horseradish and scallions were refreshing." "Broiled fish, meats and poultry, done teriyaki-style are stringy and less interesting..."

7731. Hawken, Paul. 1983. More history of Erewhon and macrobiotics in America (Interview). Conducted by William

© Copyright Soyinfo Center 2014

Shurtleff of Soyfoods Center, Jan. 16. 2 p.
• ***Summary:*** The following are Hawken's comments on a draft history of Erewhon, by Shurtleff. Erewhon was not the "General Motors of the natural foods industry." What vanity! By 1980 various natural food distributors had expanded until they were 2-4 times as big as Erewhon–and very profitable. Erewhon was known throughout the industry as being undercapitalized, mismanaged, a laggard, behind the times. Its market share declined from 1973 on. By that time, Landstrom [in Southern California] had crossed over from health foods to natural foods and had sales of $100 million a year.

Erewhon was not the victim of runaway expansion–unless you mean expansion of new products. From 1973 to 1981 Erewhon barely managed to double its sales–and it did this largely by adding new products such as vitamins, jam, yogurt; these products were in conflict with its basic philosophy of good food. After a while it would sell almost anything, but its core business and market share were declining. Inflation was another major factor that helped to double its dollar sales. There was lots of movement but very little real growth from 1973 to 1981.

The story of the relationship between the Lundberg brothers, Chico-San, and Erewhon concerning organically grown rice is not well known. Bob Kennedy still does not believe this story. In 1968 [sic, fall 1969; see Hawken 1973, "Erewhon: A biography"], before the Lundbergs signed a rice contract with Chico-San, two [sic, one] of the brothers walked into the Erewhon store in Boston [Massachusetts] and said, "We're growing organic rice; do want to buy some? Paul said, "Sure." They went back to Chico-San but Chico-San said, "Don't worry, we'll sell the rice to Erewhon." The risks on Chico-San's part were overstated. Paul knows the contract well. The Lundbergs were appalled to see Chico-San's mark-up on their rice; Chico-San basically doubled the price per pound. Paul said he would not buy rice from Chico-San at that price. Though very likeable people, the Lundbergs didn't realize how the contract would restrict them and their market. The Lundbergs put pressure on Chico-San to lower their prices on rice, and Chico-San did. However Paul is sure that Chico-San was unable to sell the volume of rice that it had contracted to buy. And this was long before the fire at Chico-San. So the contract was broken. The Lundbergs had been desperately looking for a way to get out of that contract. During that time Paul had set up Carl Garrich (Lone Pine, Arkansas [in March 1971]) as a grower of organic rice for Erewhon. After the contract was broken, Paul and Erewhon designed the Lundberg's rice bag using a Currier & Ives design. Paul believes that "people should know where their food is coming from." Erewhon had no pretensions of controlling organic rice.

Chico-San had been putting out the word in the rice valley of northern California that they wanted to buy organic rice. It was the Lundbergs, however, who developed a very clever method for growing the rice to Chico-San's basic specifications–no chemicals. The Lundbergs came to Erewhon before actually growing the rice, or at least before harvesting it.

Paul was shocked when he first heard of the contract between Chico-San and Lundberg. By trying to control this rice, Bob Kennedy blew it. Chico-San had an exclusive for only 2 years; it probably expired at the end of the 2nd year, before the fire. Erewhon was definitely buying rice from the Lundbergs before Chico-San burned down.

Chico-San was upset at all the natural food companies up and down the East Coast and even in California–Food for Life, Janus, and others. Erewhon's whole mission was to get good food to the people. Chico-San's rice was expensive because it underwent so many mark-ups. Chico-San had antipathy to all macrobiotics other than their own version. Paul had no antipathy for Chico-San. The Lundbergs deserve the credit.

The issue of Paul's losing his Erewhon stock. This is not correct as written. The macrobiotic movement has a huge gap between the stated goal and the reality. The falling out in which Paul was involved concerned what he viewed as Michio's dishonesty. When Paul came back from Japan, he did not realize that the stock was no longer his. A year later, when he drew up a stock ownership plan, he said that he wanted his stock back. Michio said he would give it back to Paul but not to the others. It wasn't that clear. He never said "No, you can't have your stock back." Michio is somewhat anti-Semitic and very rich. Address: California.

7737. Kennedy, Robert. 1983. A message from our president [History of Chico-San]. *Crackerbarrel* (*Chico, California*) 1(1):2. Jan.
• ***Summary:*** This article, which gives a brief history of Chico-San, Inc., is in the first issue of a new Chico-San newsletter.

"There is a lot of excitement at Chico-San these days. Twenty years have passed since we opened in a little basement room to grind sesame seeds by hand for gomasio [gomashio], and repack bulk shipments of miso and shoyu (then called tamari) from our suppliers in Japan. From that meager beginning, Chico-San has become a leader in many areas of food manufacturing and distribution and has gained annual sales substantially in the millions.

"We are grateful for our achievements and we are proud that the complement of Chico-San employees had the loyalty, talent, tenacity and integrity that it took to bring us to this satisfying twenty-year plateau, I refer to this as a plateau because we are now reorganizing our efforts to put more emphasis on our Japanese imports. These are quality foods, called for in George Ohsawa's macrobiotic dietary precepts, that are not yet manufactured in this country.

"It was in 1959 that George Ohsawa with Lima Ohsawa first introduced his philosophy of the Far-East and his concepts of diet to the U.S. public. It was in New York City where hundreds of people attended his 'dinner lectures.' The food was orchestrated by Lima while George took care of the philosophy and other pertinent subjects.

"It was from these lectures that 32 people collected under the umbrella of Ohsawa's teachings and moved to Chico, California where they could work together to pass along what they were learning.

"Some of the names–Herman & Cornellia Aihara, Alvin & Nina Bauman. Dick & Penny Smith, Bill & Dorothy Salant, Teal Ames, me and my wife, Betty.

"As we camped on the way from New York to Chico, we had nightly campfire meetings during which time we defined and prioritized our purpose for moving. Everyone agreed that first on our list of priorities would be to set up a food company that would provide the best available products necessary to the macrobiotic dietary instructions of Ohsawa. All of us were working on various degrees of health problems and we knew that our physical and mental betterment would parallel the quality of the food we ate. It was our resolve then that Chico-San, Inc., our new company name, would carry only the best foods available. This has been our policy and it is our responsibility to people who seriously relate good health to good food.

"Chico-San was incorporated in March 1962, and after Chico-San had been in business a few months the health food industry began seeing food products with foreign-sounding names on its shelves–names such as Tamari–Miso–Kombu–Hijiki–Kuzu–etc. All products first introduced by Chico-San.

© Copyright Soyinfo Center 2014

Later on Chico-San introduced the first organically grown rice to the health food industry, while our rice cakes became one of the industry's most popular sales items.

"In 1972 Chico-San was consumed by fire of such severe consequences that we were put out of business for almost a year. When we did return it was necessary for us to concentrate on our most popular items. These were items that we manufactured–rice cakes–rice syrup–candies made of rice syrup–these products would give us our best chance to regain solvency because they offered better profit margins.

"We continued to carry the Japanese products because it was our responsibility to those that had come to depend on Chico-San for quality, however by this time there were several companies [including Erewhon] competing for the sale of the Japanese products. Through their price cutting policies a market was created that was not profitable, consequently they had to lower their costs by buying products from dubious sources. Many such companies have since gone bankrupt.

"Twenty years ago when Ohsawa's macrobiotic diet was new to America it was taken with scepticism but now that there have been many dramatic cures accorded to it, its popularity is gaining by great strides. This makes Chico-San's responsibility greater than it has ever been because more and more people are being attracted to the Ohsawa regimen.

"Since Chico-San started it has always been the Ohsawas, both Lima and George, who have given Chico-San its quality control regarding the Japanese imports. We have only carried products recommended to us by them and chosen by them for their own use. Since Mr. Ohsawa's death several years ago Mrs. Ohsawa was given the recognition by people world-wide for being the most knowledgeable person in regard to her husband's work.

"Chico-San uses Ohsawa Japan, Inc. in Tokyo as its only supplier for its imports, This is a company started by George Ohsawa and now run by Lima Ohsawa's sister, Flora Tanaka. The very strict supervision of the company and the uncompromising attitude of its employees comes from years of collective study under Ohsawa.

"Jun Makino, a representative to Chico-San. Inc. from Ohsawa Japan, Inc. in Tokyo, has recently joined us in Chico. He is now busily engaged in translating hordes of material being sent to us from Ohsawa Japan. pertaining to macrobiotic foods and how they have traditionally been used.

"This additional information will appear in our newsletters; it will also be included in our pamphlets and catalog as space and time permit.

"Jun will be in charge of our Japanese imports and will also take over our mail order department.

"Peter Milbury is back with us to help with our expanded efforts. Peter is our operations director, a job designed to assist me as president in the performance of executive duties,

"We have added several others to our complement, so that we can increase our effectiveness as a macrobiotic foods supplier. We'll introduce them to you in future issues of the newsletter because we would like you to get to know the people that supply your food.

"Our excitement on our 20th anniversary is genuine as we confirm our dedication of 20 years ago. to bring you the best quality available."

Also includes articles on imports from Japan and winter recipes using miso and soy sauce. Address: Chico-San, Inc., P.O. Box 810, Chico, California 95927.

7741. Hattori, Terumitsu. 1983. The soy sauce / shoyu industry in the United States (Interview). *SoyaScan Notes*. Feb. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The production of soy sauce in the United States has been growing (on average) at 7-8% a year since about 1970, and Kikkoman production has been growing at 13% a year during that same period.

Kikkoman presently makes 20,000 kl (kiloliters) a year; estimated total U.S. production (fermented + HVP) is 40,000 kl/year. Imports of soy sauce to the USA are 10,000+ kl/year. Thus in 1982 total US consumption was 50,000 kl (58,750 metric tons) per year. Kikkoman produced about 50% of the soy sauce made in the USA; this was 40% of total U.S. consumption.

In Feb. 1983 U.S. per capita consumption was 216.1 ml = 253.9 gm = 14.65 tablespoons of shoyu.

Conversion figures–Relative density: (1) Regular shoyu: 1.17 to 1.18 (so 1 gallon weighs 9.8 lb). (2) Milder shoyu: 1.13 to 1.14. Usukuchi shoyu (20% salt): 1.19 to 1.20. 1 million gallons = 3.785 million liters = 3.785 kiloliters. 1 kiloliter = 264.18 U.S. gallons = 2,200.6 lbs of water.

Note: Comparing this with miso. In Sept. 1981 total

© Copyright Soyinfo Center 2014

U.S. miso consumption (production + imports) was 1,500 metric tons. This is only 2.5% as much as U.S. soy sauce consumption. So per capital U.S. miso consumption = 6.34 gm/year = 1.1 tablespoons per year. 1 level tablespoon of miso weighs 17.3 gm. 1 level teaspoon of miso weighs 5.76 gm. 1 tablespoon of regular shoyu weighs 17.33 gm. Address: Kikkoman International Inc., 50 California St. #3600, San Francisco, CA 94111. Phone: 415-956-7750.

7742. Kushi, Aveline. 1983. Miso in Boston (Interview). *SoyaScan Notes.* Feb. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Aveline thinks Junsei Yamazaki made miso in New York then brought it to Cambridge before the group went to Chico, California. Best to ask him. Aveline and others called Yamazaki to ask him to come to Cambridge to make miso there; he came and made miso and rice cakes, then he brought the things [such as miso] he had made elsewhere. She can't remember where; it could have been, either Cambridge or New York–probably New York.

Aveline does not remember who the first Caucasian to make miso in America was. But in about 1973 Aveline held some informal miso-making classes for those interested in doing so. They brought ready-made store-bought koji and made miso using that koji. She held these classes in several places. At each class they made about 1 keg = 18 liters. They also made mochi.

Aveline always calls George Ohsawa "Sakurazawa sensei." Important.

In about 1978-79, after Aveline's book *How to Cook with Miso* was published [in Dec. 1978], Yamazaki came to Boston to teach koji-making. Address: Brookline, Massachusetts.

7743. Leonard, Thom. 1983. Pioneering work with miso in America (Interview). *SoyaScan Notes.* Feb. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In the fall of 1974, Thom Leonard made his first batch of barley koji and barley miso using a recipe in Herman Aihara's new book titled *Soybean Diet.* The 80-pound batch of miso was aged in a soy sauce keg from Hong Kong. He then made 80-pound batches of chunky wheat miso in the fall of 1975 (he later pickled tofu in it) and of barley miso in early 1976. After moving to Fayetteville, Arkansas, he and Jim Hemminger made larger scale miso equipment and on 15 April 1977 packed their first 35-gallon cedar vat with brown-rice miso. Soon over 1,000 lb were aging in the vats. This miso was sold to and distributed by the Ozark Cooperative Warehouse.

Thom and Richard Kluding founded the first Caucasian-run miso company in North America, Ohio Miso Co. in Monroeville, Ohio. They began production on 13 March 1979. By Jan. 1980 Ohio Miso was making several varieties of miso: brown rice, barley (one or two year), mellow brown rice, mellow red, and black soybean; output was 2,400 lb/week.

Then in the spring of 1980 Leonard and Kluding split up, largely because of interpersonal problems. In the summer of 1980 Leonard taught miso classes at the macrobiotic Spiral Inn and Moniteau Farm in Missouri. Then in late 1980 he taught 2 classes on making miso, natto, tofu, and tempeh at the Kushi Institute in Boston, Massachusetts, with 30-40 people per class. In 1981 and 1982 he taught 8 similar classes out of his home in Boston, plus four 3-day residential workshops on the same subjects. All were sold out every time. In 1983 he plans to travel Ireland to start a miso plant in County Kilkenny. Friends of his own several old buildings. The Irish government will help pay startup costs, covering 45% of the required startup capital plus 25% of the rent for the first 5 years. He hopes to start in July 1983 and to be producing miso by late 1983. He hopes to make 100,000 to 200,000 pounds of mostly barley miso, both mellow barley and 12-24 month barley miso. Thom's constitution is so yang that he can't eat much miso–which is also very yang. But this week he enjoyed miso soup twice, which is more than he has had for the past year.

Note: Thom and his wife went to Ireland but they never started a miso plant or commercial miso production there. Address: Brookline, Massachusetts.

7744. Root, Evan. 1983. Miso in Boston (Interview). *SoyaScan Notes.* Feb. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** When Evan arrived in Boston in March 1966, there were three 18-liter kegs in the Kushi basement containing aging miso that had been made by Junsei Yamazaki. Evan is not sure when Junsei made them, but probably on the East Coast.

He can't remember any early people making miso. Now Thom Leonard is teaching miso-making classes at the Kushi Institute and Christian Elwell is making miso on his own. It seems to Evan like lots of people are doing it now. Address: Brookline, Massachusetts.

7745. Yamazaki, Junsei. 1983. Work with miso and macrobiotics in America (Interview). *SoyaScan Notes.* Feb. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In May 1963 Junsei first arrived in the U.S. in San Francisco, from Japan. He first went (by bus) to Chico, California, to help with the installation of small rice cake machines. After the July 1963 summer camp at French Meadows, California, he went to New York, arriving in August. Initially, he did nothing with soyfoods in New York. But there was a group in New York, composed or a woman or women; he can't recall the name. It was not Irma Paule, but rather some woman whose husband had died in a car accident. They asked him to teach them how to make miso, and he taught her how to make miso.

© Copyright Soyinfo Center 2014

Initially Herman Aihara (pronounced AI-ha-ra) had to work as a guard to earn money in Chico; the macrobiotic group in Chico had no income. Some group raised money for him to do something in New York or Chico.

In about Nov. 1963 Michio Kushi opened the Genpei restaurant on the first floor of the Diamond Jim Building on 46th Street in New York City. In the basement Junsei made koji, then used it to make about 100 pounds of miso. He showed the process to a Caucasian woman and child. The miso was not used in the restaurant. Junsei took it to Boston, Massachusetts, where it was used by Michio and Aveline Kushi themselves.

In March 1964 Junsei returned to Chico-San in Chico, California. While making rice cakes there, he made miso in the interim. Starting in about 1965, when Chico moved to a bigger place, he made about 20 whiskey barrels full of miso; each barrel held 320 lbs of miso. He did not really teach miso making to anyone. The real teacher of miso among macrobiotics was Mr. Noboru Muramoto.

In Boston, Erewhon wanted to make miso within their building. They asked Yamazaki to tell them the best place, so he went to Boston. He did not teach any classes to students then, unlike what Aveline recalled.

In 1980 Junsei and his wife bought land in Orland, in northern California (Zip code 95963). He wants to make miso using good ingredients, either cooperatively or in individual homes. He is now working as a guard for a construction firm. He also wants to grow ume plum trees for making umeboshi [salt plums]; he tried this in Washington state but failed. Address: Orland, California.

7746. Kendall, Charles. 1983. Early work making miso in America (Interview). *SoyaScan Notes.* Feb. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In about 1974 Charlie heard that someone up at Erewhon Farms in New Hampshire, a macrobiotic community, had made miso. That person was part of a group of people who tried to start a farm in New Hampshire. In 1976 Charles made a batch of miso at home using ready-made store-bought koji and following instructions from one of Michio Kushi's lectures.

Note: At Tassajara Zen Mountain Center (in the Santa Lucia Mountains, California), the students made miso long before 1974. The method was transmitted by Zen priests from Japan. Ask Loring Palmer and Ed Brown for more details. Address: Ashburnham, Massachusetts.

7747. Palmer, Loring. 1983. How to make the "bean revolution" succeed in America. Miso making at Tassajara (Interview). *SoyaScan Notes.* Feb. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** If the "bean revolution" is ever to succeed in American, we must learn the Julia Child method for getting rid of the flatulence-causing substances in beans. Loring learned this from someone at the Minneapolis, Zen Center (Minnesota), and it may also be in her book on beans.

Soak the beans in 10 times their volume of water. Then bring to a boil. Allow to cool and discard the water. Again add the same amount of water, cook the beans as required, then discard the cooking water again. Serve the beans. Since flatulence factors or oligosaccharides are water-soluble sugars, most will dissolve in the water and be discarded with it. This method can also be used in cooking the soybeans for miso.

Loring has no memories of making miso at Zen Mountain Center at Tassajara in the Santa Lucia Mountains; he was in San Francisco when we made miso at Tassajara. In 1972 Loring made miso from ready-made koji, a process he learned from Herman Aihara. Address: Boulderado Hotel, Boulder, Colorado.

7748. Rankin, Blake. 1983. Early work making miso in America (Interview). *SoyaScan Notes.* Feb. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In late 1975 and early 1976 George Gearhardt taught a number of miso classes on the West Coast; Blake did not. But George Gearhardt and Blake made miso back in 1974-75, after Blake returned from a trip to Japan. The maximum in the works was 500 pounds–back in the days when they owned Janus Natural Foods, in Seattle. In early 1974 they made a number of small batches, then when those turned out well they made a number of larger batches at Janus. They made barley miso first using bulk dried koji from Japan, but for big batches, in 1975, he had redwood koji boxes made and they made koji themselves, using Janus' kitchen. At the end of 1975, when doing a 30-day koji run he did informal classes inviting 6 people from the Seattle Zen Center. A single big batch was 40-50 pounds; then some people in the Zen center made miso using the groups koji. Blake also made miso using eastern Washington soft white wheat.

How did Blake learn to make miso? Probably from notes he had taken in Japan while visiting miso plants there–plus (maybe) Herman Aihara's books and maybe some comments from Junsei Yamazaki. His notes alone would not have been detailed enough. Blake does not know of any Caucasians who made miso in the USA before he did. The only person he knows who made miso in the USA before he did is Junsei Yamazaki.

Blake lost all his notes at the time of Janus' bankruptcy. When Blake returned from Japan at the end of the 1970s, the miso was all gone.

Blake does not know where George Gearhardt is now–probably in Spokane or Seattle. Cooking classes at the Federal Way Natural Food Store. He imports Taiwan tatamis for $72 each plus shipping. Blake left in Aug. or Sept. to go to Japan. George moves a lot. Address: Washington state.

7749. Milbury, Peter. 1983. Soy sauce and tamari analysis: Meeting with Tomio Kitani of Yamaki Co. Chico, California: Chico-San Inc. 4 p. Feb. 14. Unpublished manuscript.
• ***Summary:*** Present at this meeting to discuss soy sauce quality were Bob Kennedy, Jun Makino, Peter Milbury (Chico-San), T. Murata (Ohsawa Japan), and Tomio Kitani (Yamaki Co.). There are 2 ways to tell if soy sauce is made by natural fermentation of whole soybeans, or if it is "mixed with acid hydrolyzed defatted soybean meal." (1) Visit the maker and dip into the moromi. (2) Use a combination of sensorial and laboratory testing. Address: Chico-San Inc., P.O. Box 810, 1264 Humboldt Ave., Chico, California 95927. Phone: 916 891-6271.

7750. Arikawa, Minoru. 1983. Work with miso in America (Interview). *SoyaScan Notes.* Feb. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Norio Company was started in 1919 by Mr. Masaichi Norio in San Francisco, at 1531 Geary St. He made only *shiro miso* (probably sweet white, mellow white, or light yellow miso) and exported most of it to Hawaii. In about 1932 the company was moved to 1532 Post St., on the outskirts of San Francisco's Japan-town. There it was run by Mr. and Mrs. Minoru Arikawa and son, who were relatives of the founder. The U.S. government forced the family to close the business (then making about 180,000 lb of miso a year) when World War II started in late 1941. They resumed after the War but retired in 1972 and the business was closed to make room for a high-rise condominium.

In 1941 Fujimoto was the biggest miso maker in the continental USA. He thinks there were three miso manufacturing companies in the continental USA, all on the West Coast.

He thinks Yamaizumi was started in Los Angeles in the 1930s, probably by a man from Fukuoka. He thinks Yamaizumi was both the company name and the brand name. Address: San Francisco, California. Phone: 415-387-7217.

7751. Milbury, Peter. 1983. Chico-San, miso, and soy sauce (Interview). *SoyaScan Notes.* Feb. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bob Kennedy thinks that Junsei Yamazaki made a total of 20 barrels of miso from 1965 to 1972. Only 3-4 were in the building that was burned down by the fire at Chico-San. The rest came to maturity and were mixed with imported miso. Mr. Yamazaki also made about 3 barrels of fermented shoyu (soy sauce) at Chico-San in about 1965. Chico-San feels that SANA (Soyfoods Assoc. of North America) should establish soy sauce terminology, standards, and an analysis program. Importers could help set it up to protect themselves.

Mr. Kitani is Chico-San's advisor for fermented soyfoods. He is a manufacturer in Japan. Chico-San now has a four-stage plan to make miso and shoyu in Chico. 1. Import bulk miso from Mr. Kitani and let it age in Chico. Adjust the ambient temperature by opening and closing doors and windows. 2. Make miso in Chico using koji imported from Japan under refrigeration. 3. Make koji in Chico. 4. Make shoyu in Chico. Address: Chico-San, Chico, California.

7752. Milbury, Peter. 1983. Junsei Yamazaki's work with miso and shoyu at Chico-San. Work of Mr. Kitani (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 17. ½ p. transcript.
• ***Summary:*** Bob Kennedy thinks Mr. Yamazaki made a total of 20 barrels of miso from 1965 to 1972. Only 3 to 4 were destroyed by the fire. The rest came to maturity and was mixed with imported miso. Mr. Yamazaki also made about 3 barrels of fermented soy sauce at Chico-San–in about 1965.

Peter believes SANA should develop soy sauce terminology, standards, and analysis techniques. Importers would use these to protect themselves.

Mr. Kitani, a manufacturer, is Chico-San's fermented foods advisor. Chico-San now has a four-stage plan to make miso and shoyu. 1. Import bulk miso from Mr. Kitani and let it age in Chico. Adjust the ambient temperature by opening and closing doors and windows. 2. Make miso in Chico using koji imported from Japan under refrigeration. 3. Make koji in Chico. 4. Make shoyu in Chico. Address: Chico-San Inc., P.O. Box 810, 1264 Humboldt Ave., Chico, California 95927.

7753. Miyashita, Masa. 1983. Re: Soy sauce in Europe. Letter to William Shurtleff at Soyfoods Center, Feb. 21–in reply to inquiry. 2 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** There are presently no manufacturers of fermented soy sauce in Europe. The following is an estimate of the amounts and types of soy sauce are consumed in Europe: Japanese fermented 1,800,000 liters; Chinese fermented 1,500,000 to 2,000,000 liters. Indonesian style 1,000,000 to 1,500,000. Chemically made (HVP) or mixed 600,000 liters.

Per capita consumption of all types is about 17 ml/year, and about 5 ml/year for Japanese-style soy sauce. Both figures are far below their corresponding U.S. figures. The main markets are the UK and the Netherlands. Kikkoman's share of the Japanese soy sauce market in Europe is about 70%. Kikkoman's sales in terms of volume are growing at about 6% a year. Kikkoman has no immediate plans to build a shoyu manufacturing plant in Europe. The main emphasis now is on broadly promoting interest in Japanese culture, and more narrowly on Japanese food culture. Address: Kikkoman Trading Europe GmbH, Duisburger Strasse 3, D-4040 Neuss, West Germany. Phone: (02101) 2 20 89.

7755. *Toyo Shinpo* (*Soyfoods News*)**.** 1983. [Soybean recipes: Curry, omelet, tempura]. Feb. 21. [Jap]
• ***Summary:*** Photos show: (1) Soybean curry. (2) Omelet with soybeans.

7756. Ebine, Hideo. 1983. Re: Dipicolinic acid and retirement from the National Foods Research Institute, Japan. Letter to William Shurtleff at Soyfoods Center, Feb. 22. 1 p. Typed, with signature. [Eng]
• ***Summary:*** Note: *The Book of Miso,* by Shurtleff and Aoyagi (1976) states (p. 26): "In 1972, a number of Japanese scientists doing agricultural research stimulated by Dr. [Shinichiro] Akizuki's writings discovered a substance in miso which they called Zybicolin. Produced by miso and natto yeasts, it has the ability to attract, absorb, and discharge from the body radioactive elements such as strontium. The discovery received front-page coverage in all of Japan's major newspapers." Yet Shurtleff never cited the actual article–in part because he learned of it just as *The Book of Miso* was about to go to press.

Director Ebine has tried to locate the article mentioned above but has not been able to find it–and he has never heard of it, although he has long been a miso research scientist. Zybicolin is probably "dipicolinic acid," which is found in miso and natto, and which has a strong combining activity to minerals including radioactive minerals such as strontium.

Ebine retired from the National Food Research Institute (NFRI) in March 1982 and immediately (in April 1982) began his present work as director of the Central Miso Research Institute. Address: Director, Central Miso Research Inst., Shinkawa 1-24-19, Chuo-ku, Tokyo 104, Japan.

7757. Nasuno, Seiichi. 1983. Re: N-nitroso compounds and nitrosamines in Japanese fermented soyfoods. Letter to William Shurtleff at Soyfoods Center, Feb. 23–in reply to inquiry. 2 p. Typed, with signature on letterhead. [5 ref. Eng]
• ***Summary:*** "We have an official certificate from the National Institute of Health (NIH) of Japan to certify that the regular Kikkoman soy sauce is free from volatile nitrosamines on the basis of the examination of volatile N-nitroso compounds in a soy sauce product performed on January 23, 1978, at the NIH of Japan.

"The test was performed by a Shimadzu gas chromatograph equipped with an alkali-flame ionization detector and minimum detection limit for N-nitrosodimethylamine was 0.1 ng (1 ppb in soy sauce)."

"Nitrosamines are reaction products of nitrite and amines. Very small amounts of nitrite and amines were found in cereals such as rice, wheat and soybeans used as raw materials for miso and shoyu making. Moreover, amino acids in shoyu competitively inhibit nitrosamines formation from nitrite and amines."

"In conclusion, we feel that the problem of nitrosamines in miso and shoyu is not serious and that miso and shoyu are quite safe in the viewpoint of cancer risks." Note: Five references are cited in the letter to document each point. Address: Director, Bioscience Lab., Kikkoman Corp., Central Research Laboratories, 399-Noda, Noda-Shi, Chiba-ken, Japan. Phone: 0471-24-1111.

7758. Smith, Grant. 1983. The current soy sauce industry and market in the United States (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 23. 2.2 p. transcript.
• ***Summary:*** Interpreting U.S. soy sauce statistics is difficult. Early production statistics are probably low and later statistics are probably high due to three possible points of confusion: (1) Are the figures only for soy sauce or for soy sauce plus teriyaki sauce? If they include teriyaki sauce, that would be a terrible distortion since teriyaki sauce contains about 20% soy sauce and 80% other ingredients–such as vinegar, water, seasonings, etc. What percentage of Kikkoman's total liquid volume is teriyaki sauce and what percentage of teriyaki sauce is shoyu? Kikkoman likes to include teriyaki sauce in their overall numbers to prove that they are number one. Some non-Kikkoman teriyaki sauce is junk. (2) The problem of gallons and pounds in Kikkoman's output. In the trade journals, the Kikkoman plant was described as having a capacity of 25 million pounds. But 10,000 kiloliters is 2.5 million gallons. The design of their fermenters suggests 2.5 million gallons annual output. Staley only makes concentrates. (3) SAMI data does not include Kikkoman's burgeoning foodservice and restaurant business.

Smith thinks that looking only at soy sauce statistics,

© Copyright Soyinfo Center 2014

Kikkoman is no bigger than LaChoy. In Japan, roughly one-third of all soy sauce is nonfermented.

Grant Smith likes Kikkoman soy sauce and uses it in his own cooking. Austin Co. built the plant in Walworth, Wisconsin, to 2.5 million gallons capacity. Address: A.E. Staley Co, Decatur, Illinois.

7759. Marbach, William D.; Ukai, Nancy. 1983. Tokyo's soybean blockade. *Newsweek.* Feb. 28. p. 63.
• ***Summary:*** "Archer-Daniels-Midland of Decatur, Illinois would like to export soy isolate to Japan so that it can cash in on the latest Japanese health-food craze–soybean milk. (Making soybean milk, or *tonyu,* from soy isolate is simple: just add water, flavors and heat). The trouble is that ADM's soy isolate is a threat to an industry the Japanese would like to develop to replace the old-fashioned way of making tonyu by crushing and boiling the beans.

"When ADM applied to the Japanese Ministry of Agriculture for a 'Japan Agricultural Seal' (JAS)–without which Japan's quality-conscious consumer would resists the product–the request was denied. 'According to the Japanese Agricultural Standard, whole soybeans must be the main ingredient of soy milk,' the ministry ruled...

"'The product must already be on the Japanese market before we consider it a candidate for the JAS mark,' said one ministry official. A Japanese Catch-22...

"Fuji Oil Co., a big soybean processor, already makes lower-grade isolate for other products and is reportedly getting ready to enter the booming $100 million tonyu [soymilk] market." Address: Tokyo, Japan.

7760. Coyle, William T. 1983. Japan's feed-livestock economy: Prospects for the 1980s. *USDA Economic Research Service, Foreign Agricultural Economic Report* No. 177. iii + 79 p. Feb. [64 ref]
• ***Summary:*** Consumption of livestock products during the 1980s by Japanese consumers will grow at a slower rate than during the period 1960-1980. Much of the feeds for Japan's livestock will be imported from the USA. By 1990 it is estimated that Japan will be importing about one-third more U.S. grains and soybeans than are imported at present. The Japanese market for imported beef will also grow. Japanese imports of soybeans are expected to reach 6 million tons by 1990. Japan has only about 1% as much arable land as the USA. Address: Agricultural Economist, USDA, Economic Research Service, Washington, DC 20250.

7761. Fruin, W. Mark. 1983. Three centuries of Kikkoman: Growing pains & organizational change. II. *Soyfoods.* Winter. p. 52-55. [1 ref]
• ***Summary:*** "Editor's Note: In Part One, Mark Fruin recounted Kikkoman's origins as a family specialization in 1661 that expanded into a community cartel, then a corporation by 1917. In this concluding section, the author follows the Kikkoman story through the trauma of strikes, antitrust and competition in the 1920s to their current international status.

"The Great Noda Strike of 1927-28: Major change is rarely accomplished without cost, and part of the cost of incorporation in 1917-18 was a succeeding decade of labor difficulties culminating in the Great Noda Strike of 1927-28. The strike and the turmoil leading up to it were caused to a considerable degree by the incorporation of the Noda Shoyu Company. The incorporation, we have said, was motivated largely by the opportunity for a much expanded market for Noda shoyu made possible by advances in production and distribution technology (biochemical and mechanical advances in shoyu fermentation as well as the development of local and more distant railway connections). Unfortunately, such advances in the technology of production and distribution far outstripped the methods of labor organization then prevalent in the shoyu industry.

"Factory workers in pre-World War One Japan were still a minority, relative to those employed in farming and in shop work. Except for textile workers (who were female, young, and closely supervised), most factory hands were male, at least in their twenties, and poorly educated. Such workers were not employed for long at the same factory because either the demand for workers was erratic or the supply of workers was itself uncertain. This latter point was related to the nature of labor organization in Japan at that time.

"Factory workers were of two sorts. Perhaps most were seasonal workers, taking off from the farm for temporary factory work during the winter months. Others worked year-round and they did so typically as members of a work-gang. Work gangs or crews were hired out by labor contractors and supervised by labor bosses. In the case of the Noda Shoyu Company, this resulted in a system of labor organization called internal contracting in which gangs or crews of workers were hired by outside contractors and supervised by foremen within factories while the owner-managers of the enterprise had little or no direct control over workers and over the pace or design of work. Owners, in this sense, were not managers of the production process.

"Incorporation of the Noda Shoyu Company was propelled by technical change and the opportunities this created in the marketplace. Yet such opportunities could not be realized without a thorough reorganization as well as centralization of the production process. Not only were the steps of production and distribution becoming increasingly interdependent through mechanization but such interdependency required a more skilled and better managed workforce.

"The Mogi-Takanashi brewers who had formed the company in 1917, turned to this problem of labor organization by 1919. What they proposed was revolutionary. Their plan was to transform the seasonal, decentralized, and piecemeal character of labor organization into something

© Copyright Soyinfo Center 2014

more permanent, centralized, and systematic. This was to be accomplished by converting independent labor contractors into factory foremen, by rewarding workers with better pay and more opportunity for promotion, by studying the production process and rationalizing its flow, and by setting standards of work performance. In short, the company officers sought to restructure the nature of factory work and the character of the employment system. Given this far-reaching plan, it is understandable that many workers, seeing a total reforging of their livelihood and lifestyle, rebelled.

"Labor troubles had appeared in Noda as early as 1921 but the real difficulties did not emerge until 1925 and 1927-28. During these later years, many but not all of the workers of the Noda Shoyu Company as well as many laborers from ancillary industries in town struck the company under the leadership of the Yuaikai, later renamed the Sodomei or General Federation of Labor in Japan. This slightly left-of-center union had been losing ground in Japan since the end of World War One when the economic downturn following the conclusion of hostilities and an ideological fragmentation within the union movement itself had weakened the movement in Japan and dispirited its leaders and followers.

"Largely in an effort to revive its earlier momentum and to regroup its failing leadership, the Sodomei union targeted the Noda Shoyu Company as a major site of its union efforts after 1925. This led to the longest strike on record in prewar Japan lasting in Noda for 218 days in 1927-28. In spite of the duration of the strike, the union had miscalculated: the resolve of the Mogi-Takanashi owners held fast; the dissatisfaction of the workers diminished, and the strength of the union leadership deteriorated. The Sodomei union was so disgraced and demoralized by its failure in Noda that it never regained sufficient internal cohesion or external support to effectively direct workers again in prewar. Japan. The Noda Shoyu Company, by contrast, through its victory in the strike, was able to centralize, monitor, and control workers and the work process, so that the company could become the most important shoyu maker in Japan. The market share of the company which had never exceeded 8.8% before 1926 had become, by 1936, 14.5% of the market.

"Antitrust and Competition: For two decades, the Noda Shoyu Company ran without serious difficulty, even surviving the ravages of the Pacific War without damage to plant and equipment. It was only *after* the war that the company suffered from the war, when it fell afoul of the peacetime policies of the American-led Allied Occupation of Japan. In order to disarm Japan and to prevent another rise of militarism, the victorious allies launched a comprehensive program of reform with the aim of democratizing the country. Part of this called for the deconcentration of economic power in Japan and to pursue this, antitrust regulations, modeled after those found in the United States, were introduced into Japan.

"The Noda Shoyu Company was caught in this antitrust program, not so much because its own market share was overwhelming but more because it cooperated with other makers on matters of output and price. This had been the practice among brewers in Japan since before the turn of the century, as illustrated by the founding of the Noda Shoyu Brewers' Cartel in 1887.

"Occupation policies sought to undo this collusion by bringing antitrust charges against the Noda Shoyu Company and four other major makers in the early 1950s. The charges were upheld and the Noda Shoyu Company was forced not only to relinquish the cornerstone of its prewar marketing position but also, as a consequence, to develop a new marketing strategy for the future. Moreover, a drop in the per capita consumption of shoyu in Japan at the end of the 1950s further compounded the difficulty of determining a new direction for the firm.

"The senior managers of the company, descendants of the original Mogi-Takanashi brewers who incorporated in 1917, decided, as their ancestors had done four decades earlier, to alter dramatically the complexion of shoyu manufacture in Noda. They abandoned completely the market-sharing and price-fixing agreements of the prewar period and substituted in their place a strategy of high volume, low cost production and distribution of their product–a strategy of all-out competition against other producers in Japan. In this, they were entirely successful, raising their market share from 14% in 1952 to a one-third share by 1980." Continued. Address: Dep. of History, California State Univ., Hayward.

7762. Fruin, W. Mark. 1983. Three centuries of Kikkoman: Growing pains & organizational change. II (Continued, Document part II). *Soyfoods.* Winter. p. 52-55. [1 ref]
• ***Summary:*** Continued: "The company succeeded by advertising its product widely and by embarking on an ambitious consumer education program. A planning and research department to coordinate these efforts was founded in 1957-58. Research teams were formed to study the amount and fluctuation of demand; at house-to-house consumer education program was begun and this was backed up by extensive media promotion. The goal of all of this was not only to sell more Kikkoman shoyu but also to make an old and rather traditional Japanese product seem new and even somehow modern; that is, to create a new image for shoyu.

"New distribution channels to supermarkets, chain, and department stores were opened, and the entire distribution network for shoyu was streamlined, expanded, and better managed. Various sizes and shapes of containers for shoyu were test marketed. The most popular of these, such as the Mann-Pack which combined a number of different Kikkoman products, were sold nationwide.

"In short, once Kikkoman ended its market-sharing agreements and turned wholeheartedly to expanding its market share (at the expense of others), the challenge was

© Copyright Soyinfo Center 2014

no longer whether enough shoyu could be made but whether or not it could be sold. Kikkoman proved it could be sold, and in the process became an aggressive marketing-oriented enterprise, trans- forming not only its own structure but also the image of shoyu itself: from a local East Asian sauce into an international best-selling seasoning.

"The Internationalization of Kikkoman: Once Kikkoman expanded production and reorganized their firm, it was natural enough to look overseas for new markets. The forecasting, sales, and marketing tools that had been developed for the home market were applicable to foreign markets as well. The Noda Shoyu Company (renamed the Kikkoman Shoyu Company in 1964 and the Kikkoman Corporation in 1980) had acquired some international experience before World War Two when as much as 10% of production was shipped overseas. Most of this, however, was in the so-called yen bloc or Japanese colonial territories. The postwar internationalization of shoyu, by contrast, has had different marketing aims as Kikkoman has sought to sell shoyu in North American and Western European markets to persons of non-Japanese descent.

"Kikkoman had exported small amounts of its shoyu to these Western markets before the war, and even after the war during the anti-trust hearings of the 1950s, the company had continued to sell limited amounts of its shoyu in the North American market, especially in Hawaii and on the West Coast. Such sales were almost entirely to Japanese and Japanese-American customers, however.

"When the company decided to vastly expand production and distribution of shoyu, it knew that it would have to expand beyond this limited overseas market. In 1956, Kikkoman entered the American market more completely by convincing a number of Safeway stores to carry shoyu. In the next year, Kikkoman International Inc., a wholly owned American subsidiary of Kikkoman in Japan, was established and soon located permanently in San Francisco. After a decade of 20 to 30% rates of increase in annual sales, Kikkoman contracted in 1967 with Leslie Food Company, a subsidiary of Leslie Salt Company in Oakland, California, to bottle Kikkoman Soy Sauce on a commission basis shipped in bulk from Japan. Another four years of continued increases in sales (increases now in the range of 15 to 20% annually) convinced Kikkoman that it could successfully make and sell shoyu on its own in North America. Following an exhaustive property search through five Midwestern states and after a spirited campaign to persuade local voters of the economic and ecological safety of locating a shoyu plant in their town, Kikkoman opened its first wholly-owned North American shoyu factory in Walworth, Wisconsin, in 1973. The plant had a 2.5 million gallon capacity in the initial year of operation.

"Subsequent events have shown Kikkoman to be absolutely correct in its decision to open a plant in the United States: not only have sales continued to rise at the rate of about 10% a year but the American embargo on the sale of soybeans to Japan in 1973-74 was nicely side-stepped by Kikkoman as a result of its Wisconsin plant; Moreover, the transportation costs of shipping both raw materials to Japan and finished goods from Japan were avoided, thereby saving about 25% of the total production cost of fermenting shoyu in Japan for sale in the United States.

"The increased sales of Kikkoman in this country, however, have less to do with the cost savings accrued from local manufacture than with the decision to market shoyu in North America as an all-purpose, international seasoning rather than one limited to Oriental cooking. Even though the Asian American population is one of the more rapidly growing ethnic populations in the United States and in spite of the increasing popularity of Asian food here, increases in the sales of Kikkoman shoyu have outstripped both developments.

"This is possible because Kikkoman Shoyu is positioned as a general seasoning, good with anything and good over everything. Although most Japanese would blanch at many of the ways shoyu is used in the United States–as an ice cream topping, for example–the managers at Kikkoman International only smile at the versatility of their product and the imagination of delighted American users.

"Takanashi Hyozaemon and his descendants in Noda would have been pleased."

7763. Leviton, Richard. 1983. Profile: Hinode Tofu Company. *Soyfoods.* Winter. p. 33-36.

• ***Summary:*** Hinode, America's largest tofu producer, with 1981 sales of $3.85 million, makes 150,000 pounds of tofu a week (30,000 lb/day) in the 15,000 square foot plant on 2 floors. 5,400 pounds of soybeans are used each day, 5 days a week. The company employs 60 people, with 50 in production at $4.50/hour plus medical insurance and benefits. Hinode handles at least 6 dealer brands (worth 10% of their tofu volume) and 20% of Hinode brand tofu is sold outside California. The emphasis today is to restrict private labeling and to promote the Hinode trademark instead. 85% of the tofu is sold at supermarkets and 15% at natural/health food stores. All tofu has been made with calcium sulfate since 1981. The shelf life of the pasteurized (60 minutes at 180ºF or 82ºC) is 28 days. The challenge is to get a fresh tofu texture after pasteurization.

In 1939 Yamauchi's mother purchased the Aala Tofu Co. in Hawaii, a company Shoan's brother still manages today. In 1947, after studying tofu-making at Aala, Shoan Yamauchi moved to Los Angeles and bought the existing Hinode Company; in 1957 he bought the Matsuda Tofu Co. Both

© Copyright Soyinfo Center 2014

plants produced handmade tofu in traditional, kettle-style shops. By 1957 Yamauchi had 22 employees making tofu. The Hinode plant had 5,500 square feet and Matsuda 4,500; between them they made about 3,000 pounds of tofu a day (2,000 cakes weighing 24 oz. each).

During the next 12 years, Yamauchi relocated one or another of his plants three times. In 1969 he consolidated them at 526 Stanford Street, purchased new, more productive equipment, and increased total volume to 7,500 pounds daily. He had 27 workers and turned $1 million in sales. In 1981 the company was traumatized when the 75% Mexican labor force voted to unionize–a strife-filled time. Then in 1982 Yamauchi committed his company to undoubtedly the most ambitious expansion plan to date. He spent $600,000 on new tofu equipment featuring new Nagasawa and Sany Ace systems and slated another $500,000 for construction of a new 16,000 square foot warehouse and processing building across the street. Steve Snyder joined Hinode in 1980 as western sales manager. Mr. Yamauchi owns a prosperous Santa Ana restaurant and a large interest in Airtight Containers. He is preoccupied with tofu quality, which he considers the key to success. John Yamauchi, age 22, is being groomed to take over the company sometime in 1983.

Peak seasons are Christmas, New Years, and Chinese New Years: sales typically rise 15%. Special products include tofu cutlets (4,000 units/week at 5 oz.) and tofu pouches (30,000 puffs/week at 1 oz. each).

Photos show: (1) Nine packages of tofu made by Hinode. (2) Shoan Yamauchi, age 66, standing in front of equipment in his plant. 7767. *Soyfoods.* 1983. Cottage soy industries thrive on Vancouver Island. Winter. p. 36-37.

• ***Summary:*** Wayne Jolley's Sooke Soyfoods, which opened in early 1981, produces 1,800 lb/week of nigari tofu. Thistledown Soyfoods, run by Jan Norris, opened in October 1981. Each week the company produces 350 lb of tofu, 150 lb of tempeh (vacuum packed), and 75 lb of soy pate from okara. At Shin Mei Do Miso, Lulu and Yoshi Yoshihara have been making miso since 1979. They now produce 10,000 lb of 3 styles of miso each year. Metta Tofu is owned by "Ray Lipovsky, who might be North America's original cottage tofumaker as he's been coagulating soymilk with sea water since 1975... Besides producing 600 pounds of nigari tofu every week, Lipovsky is hot on the trail of Frozen Buddha, his multi-flavored line of frozen soymilk ice cream, already producing 360 gallons weekly."

Also on the island in Victoria, though too large for the cottage scale, is Dayspring Soycraft Corporation, operated by Michael Hsieh. Hsieh, a trained dentist, and his brother, Steven, and their families, emigrated to British Columbia from Taiwan and decided to launch a pressure cooker tofu plant in 1982.

Differences in the chemical composition and suitability for food processing between upland and drained paddy field cultures / crops]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 41. p. 14-33. Feb. [33 ref. Jap; eng]

• ***Summary:*** The chemical composition and suitability for making tofu, miso, natto and cooked whole soybeans were investigated with 78 seed samples of 31 varieties which were grown in upland and drained paddy fields at five Agricultural Experiment Stations in 1980.

The qualities tested were chemical composition (moisture, protein, and oil content) and suitability for food processing as measured by weight of 100 seeds, weight increase ratio of soaked seed, germination ratio, solid matter content of soaking water, solid matter extractability, pH, color of soybean milk, weight increase ratio by steaming, moisture content, softness, and color of steamed seeds. Drained paddy field cultivation, as compared with upland cultivation, gave high moisture and heavy weight of 100 seeds, and low *x* color value of soybean milk and steamed soybean seeds.

From the results of contribution ratios, it was shown that the moisture content of soybean seeds was influenced by cultural conditions, whereas the chemical composition of protein and oil, and all the suitabilities for food processing were influenced by variety. • ***Summary:*** Red koji (*beni-koji*), made my growing *Monascus* mold on steamed rice, is an important material for manufacturing *tofuyo* (red soybean cheese). Optimum conditions for producing red koji were investigated. Two kg of steamed rice inoculated with 120 gm of koji starter (tané-koji, ground in water) was wrapped in a cloth and incubated at 32ºC. After 38 hours of incubation, the temperature of the materials was controlled (kept from overheating) by mixing them by hand. When the moisture level in the koji

© Copyright Soyinfo Center 2014

dropped to 30% or less, the koji was sprayed with water to add moisture. By these treatments, the growth of the mold and the formation of red pigment in the koji were markedly enhanced. Optimum incubation time for the koji after inoculation was 150 hours (6¼ days). The highest production of enzyme activities and pigment from the koji was obtained by using autoclaved non-glutinous rice; these two factors were not affected by storage conditions of -20ºC for 12 months. The alpha-amylase and saccharifying amylase of the koji were alcohol-tolerant, but the protease was not.

Note: This is the earliest document seen (Nov. 2011) that describes how to make tofuyo or fermented tofu on a commercial scale. Address: Dep. of Agricultural Chemistry, University of the Ryukyus, Okinawa.

7770. Oka, Tadashi. 1983. [History of the soymilk industry in Japan]. *Toyo Shinpo* (*Soyfoods News*). March 1. [Jap]
• ***Summary:*** In 1957 (Showa 32) one tofu maker in Hachiôji, Tokyo, was making several hundred 180 cc bottles of soymilk and selling it. This tofu maker was a Seventh-day Adventist and it is said that he received Dr. Harry W. Miller's guidance when learning how to make soymilk.

It is said that after visiting this tofu shop, in 1959 Saniku Gakuin [a Seventh-day Adventist school] decided to serve soymilk in their school lunch program.

So Seventh-day Adventists pioneered modern soymilk in Japan.

Around 1962 Nihon Tanpaku Kôgyô [Kogyo, K.K.] ordered Japan's self-defense forces (*jieitai*) to do taste tests of their soymilk. This company was making soymilk powder and selling it, so they were looking for a market for their product. But there were some problems with its heavy smell, so that flavored soymilks (such as orange) were popular, but their plain soymilk was not well accepted.

Mr. Kanji Tsuchiya, who had been working for Kyôdô Nyûgyô (Kyodyo Nyugyo, a dairy milk company) for more than 10 years, got very interested in developing soymilk. In 1965-69 he helped to set up a soymilk plant in Taiwan (capacity 500 liters/hour). But the soymilk made in his plant didn't have its natural beany flavor, so Taiwanese consumers thought it was fake. Dr. Harry W. Miller, who visited his plant at that time, told him that he didn't have to refine soymilk that much for Chinese customers.

Mr. Teisuke Yabuki, of Japan's Ministry of Agriculture (Monbu-sho, Gakumu, kyoku-cho) started soymilk research because of Ryukichi Sekiya, who was interested in soymilk and used lactic acid bacteria to remove the beany flavor when making soymilk. He conducted taste tests and a kindergarten and an elementary school, but the taste was unacceptable and nobody was interested. He asked other people to do this research but didn't get good results. Mr. Yabuki asked if he could do his research and development on soymilk and asked Onihara (Shinnojo?) at Tokyo Agricultural University (*Tokyo Nôgyô Daigaku*) to do the research. At that time Mr. Yabuki was the president of Yakult (Jôtô Yakuruto Hanbai K.K.). He continued Mr. R. Sekiya, spent 9 years and a lot of money, and at last in 1968 he was able to start a small scale soymilk pilot plant. He bottled his soymilk and gave it away to his friends, to test the product and the process; his energy went into his product No. 1.

In Oct. 1969 Mr. Yabuki named his soymilk Luppy and started selling it. This was exactly 10 years after Nihon Saniku Gakuin started to provide soymilk in their own way.

But Mr. Yabuki was the president of Yakult at that time; he was selling about 13,000 bottles per day of Yakult [a small probiotic beverage] and had about 500 workers. He had to build a soymilk plant in Sept. 1968, found Luppy Tanpaku Kagaku Kenkyûsho and chose the package (Tetra Pak Aseptic) for his soymilk. Finally he was asked to choose between Yakult and Luppy. He suffered a lot but finally chose Luppy, resigning as president of Yakult. Mr. Yabuki had been using the Yakult sales and distribution network to sell his soymilk. On 31 Dec. 1972 he severed his relationship with Yakult.

It happened this way. When Mr. Yabuki was talking to Yakult's main office (*honsha*) House Shokuhin Kôgyô K.K. got interested in soymilk and started trying to persuade Mr. Yabuki into working for them. House Shokuhin Kôgyô K.K. made powdered tofu and had been selling it and were interested in soyfoods.

In April 1973 House Luppy (K.K.) was founded. Mr. Yabuki became its president and took responsibility for making the company's soymilk; House Shokuhin took charge of marketing and selling the soymilk.

A large food manufacturing company like House entering the soymilk was expected to have a big effect on expanding that market.

In 1973, soymilk brands in Japan were: (1) Soyalac (canned) made by Saniku Foods. (2) Shinko White made by Shinkô Shôbai. (3) Bonlact made by Wakôdo (Wakodo). (4) Luppy made by House Luppy. Because of expensive packaging and the use of fructose and honey, Luppy was quite a bit more expensive than the others (45 yen per 180 cc at that time).

In Nov. 1974 Tokyo Soymeal started. The technician Kanji Tsuchiya, who was from Kyôdo Nyûgyo, helped to make this soymilk plant. Mr. Tsuchiya's main idea was to make good-tasting soymilk in a clean, modern plant, resembling a dairy milk plant.

A chronology looks like this:

1959–Nihon Saniku Gakuin.

1969 Oct.–Luppy Tanpaku Kagaku Kenkyusho (Yakult / Yakuruto).

1971–Saniku Foods.

1972 April–House Luppy (New company from Luppy Tanpaku Kagaku Kenkyusho). They closed in 1979.

1973 Nov.–Tokyo Soymeal. They closed in Dec. 1978.

1975 July–Asahi Shokuhin.

© Copyright Soyinfo Center 2014

1976–Kyodo Nyugyo.
1976–Marusan.
1977–Kibun / Kibon.
1981–Mitsubishi. But Mitsubishi had started testing soymilk in about 1972.

7771. *Toyo Shinpo* (*Soyfoods News*). 1983. Issetai atari nenkan oyobi ikkagetsu-kan no hinmoku-betsu shishutsu kingan [Amount of money spent and amount of soyfood products consumed per household per year and per month in Japan, 1977-1982]. March 1. [1 ref. Jap]
• ***Summary:*** Gives figures for tofu, ganmodoki, natto, other, shoyu, miso, soy oil, and margarine. Tofu consumption is lowest in February and highest in August, followed by July, May, and June. Natto consumption is highest March then February, and lowest in August. Shoyu consumption is highest in July then May, and lowest in January then February. Miso consumption is highest in April then May, and lowest in January. Soy oil consumption is highest in July and lowest in January. Address: Japan.

7772. *Toyo Shinpo* (*Soyfoods News*). 1983. [Yukijirushi Milk Co., one of Japan's largest milk companies, started selling soymilk on 10 March 1983]. March 1. [Jap]
• ***Summary:*** Their brand name is Yukijirushi Soymilk (*Yukijirushi no Tonyu*). They are selling three flavors: (1) Plain–90 yen retail. (2) Barley Malt Coffee–100 yen retail. (3) Yogurt flavor–100 yen retail.

Each is sold in 250 cc Tetra Brik cartons with 90 days shelf life. From one pack you can get all your vitamin E requirement for one day (a man needs about 10 mg, and each pack contains 15 mg). Yukijirushi is buying raw soymilk material from Nisshin and making it into their soymilk now. A photo shows the front of each of the 3 packages.

7773. *SoyaScan Notes.* 1983. How to eat natto (Overview). March 22. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** David and Suzanne Greenslade: The only way they ever ate natto in Japan was: Put 1 packet of natto in a bowl. Add 1 raw egg, 1 tablespoon shoyu [Japanese-style soy sauce], and ¼ minced green onion (*negi*). Stir vigorously with chopsticks. Pour over hot rice and eat. OK to mix with the rice. It was served that way all over Japan and in Los Angeles.

Akiko Aoyagi Shurtleff, who was born and raised in Tokyo, never ate natto this way. She added to the natto: *katsuobushi* (shaved, dried, fermented and smoked skipjack tuna {*Katsuwonus pelamis,* sometimes referred to as bonito}, minced green onion, shoyu and Japanese-style mustard {*karashi*}).

In the Japan's northeast prefectures (*Tôhoku Chihô*) Akiko has heard that some people use sugar instead of soy sauce.

7774. Kawamura, Wataru. 1983. Re: Miso in America, and new edition of *The Book of Miso.* Letter to William Shurtleff at Soyfoods Center, March. 4 p. Handwritten, with signature and stamped seal. [1 ref. Jap]
• ***Summary:*** Mr. Kawamura, widely known in Japan as "Miso Sensei" (miso teacher), is the author of many books about miso and miso soup. He is deeply interested in the many different kinds of miso in Japan and their history. Address: 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan. Phone: 0466-22-1351.

7775. Krieger, Verena. 1983. Re: History of work with tofu in Japan, Illinois, and Switzerland. Letter to William Shurtleff at Soyfoods Center, March. 2 p. Typed, without signature. [1 ref. Eng]
• ***Summary:*** "The year of 1973 I spent in Japan, where I got to know tofu and learned how to make it. The following years I spent in the U.S., working at several natural foods restaurants using soyfoods as important parts of the menu. The last of these jobs was at It's Natural (Brian Schaefer), where we made our own tempeh. We were also the first (and an important) customer of Mu-Tofu of Chicago.

"In 1979 I returned to Switzerland, where I first started to sell a Tofu-Set [tofu kit, for making tofu at home], using it in private cooking classes. (The publication 'So mache ich Tofu,' is the instruction booklet, accompanying the set, written by me and printed by the Ahorn-Verlag.)

"In 1980, just before going to the Soyfoods Conference in Illinois, I approached Morga, asking them if they were interested in producing tofu. They had all the right equipment and I even went there to make tofu for them once, but we could not come to terms, since they wanted to sell a sterilized tofu with long shelf life at room temperature. But such tofu was already on the market from Belgium, made by Lima. I wanted the fresh product.

"I then started to make tofu in my home kitchen for a local vegetarian restaurant. In the spring of 1981, I heard about Hans-Ruedi Oppliger, who was then also making tofu in his home kitchen for a natural foods store. I contacted him and we decided to join efforts in creating a market. But it was only after 'Yesterday Steak, Tomorrow Tofu' was published that we could start full scale production. We set up the Sojalade with 3 other people and founded a co-op. This co-op has now 9 members and both Hans-Ruedi and I are still part of it. (Hans-Ruedi does not have a shop of his own.) The Sojalade was set up in August 1981, but Restaurant Sesam in Bern and Restaurant La Moisson (both macrobiotic) had been making tofu for their own use for several months, or even years before us. Soyana started their tofu production in February 1982.

"The Sojalade is now also working on a project to help organic farmers get started with soybean cultivation... By the spring of 1983 interest in tofu production has become

© Copyright Soyinfo Center 2014

quite considerable. Therefore, the Sojalade has instituted a small apprenticeship program, where we train people in tofumaking for at least ten days. Since we can only take one person at a time, we already have a waiting list till June."

Update: 1990 April 9. Verena is now writing cookbooks, and has 5 in print. One on beans just been published. Her tofu cuisine is still in print. A condensed version has been taken over and distributed by Migros. She is no longer involved with Genossenschaft Tofurei, which is quite a distance from her home. She was on the board of directors but she keeps in touch and she still has some money involved.

Note: This is the earliest document seen (Feb. 2013) that mentions Migros in connection with soy. Address: Bruchmattstr. 24, CH-6003 Lucerne, Switzerland. Phone: 041-22 50 34.

7776. *Soyanews* (*Sri Lanka*). 1983. Preparing soya sauce. 5(7):2. March.
• ***Summary:*** "The Bureau of Ceylon Standards is presently engaged in the formulation of a standard specification for Soya Sauce." A flow chart shows how traditional Japanese soya sauce (shoyu) is made. Proportions are given. For more details, see *The Book of Miso,* by Shurtleff and Aoyagi.

7781. Sheraton, Mimi. 1983. Restaurants: Sushi and sashimi, the best in the city. *New York Times.* April 15. p. C1-2.
• ***Summary:*** This is a review of Hatsuhana, a Japanese restaurant at 17 East 48th St., between Fifth and Madison Ave. in New York City. "Natto, a combination of raw fish with an earthy cheeselike paste of aged soy beans, is wonderful whether you have it with a white-flesh fish, tuna, clams, squid or the most subtly flavored toro–fatty tuna. A sunny yellow vinegar sauce made of lemon juice, bean paste [miso] and sake is the basis of nuta, a salad made with plain or fatty tuna, white fish, clams or squid."

"The eye-opening wasabi horseradish should be mixed into soy sauce before sushi and sashimi are dipped in, and lacy slivers of radish [daikon] add a nice contrast."

7782. Hughes Markets. 1983. Foster Farms chicken (Ad). *Los Angeles Times.* April 21. p. M25.
• ***Summary:*** The section titled "Oriental Foods" includes:
Hinode tofu, 19-oz pkg. $0.59
Morinaga tofu, 10 oz. box [aseptic] $0.49.
Yamasa soy sauce, 1-gal. can $4.45.
Sesame cookies, Tohato Harvest, 7 oz. $0.89.
Ramen, Yee Fu Mein 3 oz. pkg. 5 for $1.00.

Wartime advances and breakthrough (1940-1959). The modern period (1960-1982). Part III: History of margarine in other countries. Indian Subcontinent. East Asia and Japan. Latin America and Africa. Address: Lafayette, California. Phone: 415-283-2991.

7784. *Crackerbarrel* (*Chico, California*). 1983. Are natural soy sauces really natural? Laboratory analysis shows some are not! 1(2):1, 6. April.
• ***Summary:*** Recent laboratory analyses... States that three of four brands tested contain 0.91-0.98% glycerin. "A natural soy sauce should have a minimum of 1.0% glycerin. If the sample has less than 0.5% glycerin, then it must have been made from defatted soybeans." Two brands contain levulinic

© Copyright Soyinfo Center 2014

acid (12-17%). Alcohol content ranges from 1.26 to 2.52%.

The four brands of soy sauce commonly sold in American natural foods stores showed the presence of artificial additives in two of them. The tests were performed last November, by the Japan Food Research Laboratories, in Tokyo.

Chico-San pioneered the importation of natural soy sauce over 20 years ago. Address: Chico-San, Inc., P.O. Box 810, Chico, California 95927.

7785. Leviton, Richard. 1983. The Westbrae story. *East West Journal.* April. p. 22-26, 28-29.
• ***Summary:*** An excellent history of Westbrae Natural Foods. Westbrae was founded in late 1970 by Robert Gerner, Kristin Brun, and Margaret and Bob Ortiz. The foursome secured an abandoned supermarket at 1336 Gilman Street and opened for business in Feb. 1971. Their main products were granola and dried pears. In 1971 Gordon Bennett, finishing a 2-year stint as a conscientious objector, was driving a Goodwill Industries truck in Berkeley while living at Zen Center. He stopped by one day at Westbrae for lunch, asked for a job, and soon found himself hired part time to sweep and move cases. In 1972 they started distributing foods and in the late fall of 1973 the group purchased their Gilman Street store and relocated the warehousing to a new 2,000 square foot building nearby at 1224 10th St., Berkeley, California 94710.

In Feb/March 1974 Gerner (then president and chairman of the board) went to Japan and traveled the country with guide and interpreter William Shurtleff (who was studying tofu in Japan) to search for quality sources of soy sauce, miso, and other traditional Japanese natural foods. About 9 months thereafter Westbrae began to import natural foods from Japan via Mr. Kazama of Mitoku. By late 1974 annual sales had reached $2 million. Between June and Sept. 1976 the retail store at 1336 Gilman Street was renamed from Westbrae Natural Foods to Gilman Street Gourmet. In September 1977, Westbrae Natural Foods moved its warehouse and offices to Emeryville from Berkeley, into a much larger building. "Today Westbrae is a successful, confidant, and growing $7 million corporation of 25 employees at work in a bustling 50,000 square foot warehouse sandwiched between Oakland and Berkeley in Emeryville, California." Gordon Bennett (whose photo is shown) is president. Over the years the company has had a strong interest in soyfoods. Address: 100 Heath Rd., Colrain, Massachusetts 01340.

7786. Makino, Jun. 1983. Imported from Japan: A visit to the Yamaki Miso-Shoyu Company. *Crackerbarrel* (*Chico, California*) 1(2):1, 6. April.
• ***Summary:*** Mr. Tomio Kitani is the company's owner and a third generation master maker of soy sauce and miso. The factory is relatively small. It uses whole soybeans, organically grown locally, and does not pasteurize the miso. Mr. Kitani's grandfather started the company over 58 years ago. He recommends that miso be aged for more than a year. Chico-San is now importing this miso to America. Address: Chico-San, Inc., P.O. Box 810, Chico, California 95927.

7789. Schick, Rabbi Michael. 1983. How Chico miso and soy sauce are made kosher. *Crackerbarrel* (*Chico, California*) 1(2):4-5. April.
• ***Summary:*** The author, traveling from San Francisco with Jun Makino (director of imports for Chico-San Inc.), visited Mizoguchi Soy Sauce Inc. in Honjo/Kimitsu, Chiba prefecture, Japan, owned by Mr. Hideo Mizoguchi. The business is over 100 years old. He gives a description of the process for making miso and shoyu at the plant, illustrated by 3 photos. He then visited Meiji Seifun Co. in Fukuyama/Hiroshima and described the miso process. He certified all products kosher, for import by Chico-San. Address: Chico-San, Inc., P.O. Box 810, Chico, California 95927.

7790. *Shokuhin Nippon* (*Japanese Foods*). 1983. [Special issue on soymilk in Japan]. 15(5):1-104. April. [Jap]
• ***Summary:*** On the cover is a photo of Kibun soymilk in a Tetra Brik package. Address: Japan.

7791. *Soybean Digest.* 1983. Move over Cola (Letter to the editor). April. p. 4.
• ***Summary:*** "On page 80 of the February 1983 issue of Soybean Digest, you reported the popularity of a soybean drink among the Japanese. As soybean producers, we were very interested and would like more information on this beverage.

"E.S. Reed, Elizabeth City, North Carolina.

"'Soymilk is an inexpensive and easy way for protein-deficient people to upgrade their diets,' says Steve Chen, ASA director of Taiwan. That 's a major reason why the protein-rich drink is so popular in Eastern countries.

"Making soymilk is basically a three-step process: soaking soybeans and grinding them in water and straining the mixture. The process is an old one-discovered by the

© Copyright Soyinfo Center 2014

Chinese about 2000 years ago. Later modifications have added new flavors: vanilla, strawberry, peanut, chocolate, milk, coffee and apple.

"Japanese soymilk industry sources predict that by 1985 the soymilk industry in Japan will use 3.6 million bushels of soybeans. So the popular drink also provides a good market for US. soybean exports.–Ed."

Note: ASA (American Soybean Association) is starting to get interested in soyfoods! But only overseas, so far.

7792. *Soyfoods Monthly* (*Colrain, Massachusetts*). 1983. Soyfoods Association rejuvenated at first meeting of new board, new goals. 3(4):1. April.
• ***Summary:*** "Thirty two industry members attended a 2 hour planning session of the new Soyfoods Association in Anaheim, February 7 and appointed board of directors and officers. Michael Austin was selected the new Executive Director following Richard Leviton's resignation. Board members include: Gary Barat, Legume (President), Yvonne Lo, Vitasoy USA (Vice President), Tom Timmins, New England Soy Dairy (Vice President), Dan Burke, Pacific Soybean (Treasurer), Richard Leviton, *Soyfoods Magazine* (Secretary), Travis Burgeson, Pacific Tempeh; Michael Fountain, SanJi [San-J] Int'l.; Jim Miller, Quong Hop; Jack Mizono, Azumaya; Morris Shriftman, Tree of Life; Robert Tepper, Farm Foods; Shoan Yamauchi, Hinode Tofu Co. An initial pledge of $12,000 from 14 companies was received at this organizational meeting."

7793. Sunset international vegetarian cook book. 1983. Menlo Park, California: Lane Publishing Co. 96 p. April. Illust. 28 cm. Retitled Vegetarian Favorites in 1987.
• ***Summary:*** This book is by the editors of Sunset books and Sunset magazine; the supervising editor is Maureen Williams Zimmerman. A table titled "Choosing nutritiously" (p. 5) shows that soybeans are a good source of thiamin (B-1), niacin, vitamin B-6, folic acid, calcium, and iron. Another table titled "Protein partnerships" (p. 7) states that soybeans and soyfoods (soybean curd/tofu, soy flour, soy milk, and tempeh), like dairy products and eggs, have no limiting amino acid. Soy-related recipes include: Miso grilled mushrooms (p. 14; Japan). Golden tofu cauliflower soup (p. 34; Thailand). Greens & tofu in peanut sauce (p. 48; Thailand). Stir-fried tofu & vegetables (p. 50; Vietnam). Whole wheat & soy pasta (p. 52). Mandarin pancakes with spicy tofu filling (p. 70; China). Address: Menlo Park. Phone: 415-321-3600.

7794. Taira, Harue. 1983. Daizu no hinshu kairyô. Saibai to hinshitsu [Soybean varietal improvement. Cultivation and quality]. *Nippon Jozo Kyokai Zasshi* (*J. of the Brewing Society of Japan*) 78(4):241-48. April. [43 ref. Jap] Address: National Food Research Inst. (Nôrin Suisan-shô Shokuhin Sôgô Kenkyu-jo) [Tsukuba, Japan].

7795. *Tofu no Kagaku to Gijutsu: Kako to Kaihatsu* (*The Science and Technology of Tofu: Processing and Development*). 1983--. Serial/periodical. Published originally by Daizu Tanpaku Kaihatsu Kyokai, Okubo Kenkyu-shitsu, Shokuhingaku-ka, Tohoku University, Sendai-shi, Miyagi-ken, Japan. Later by Mr. Teruo Masuda, president of Zenkoku Daizu Tanpaku Kenkyu-kai (Japanese National Soy Protein Research Society) and Sanyu Shoji KK, Tangi-cho 1, Hachioji-shi, Tokyo-to, Japan. Vol. 1, No. 1. April 1983. [Jap]
• ***Summary:*** According to Toyo Shinpo (1 May 1988, p. 16), this periodical is not for sale, but is given away upon request. It contains a lot of scientific and technical information on tofu production. Publication re-commenced in March 1988 with Vol. 3, No. 1.

Letter from Mr. Teruo Masuda. 1988. Sept. 3. He is planning to resume publication as a serial. The first new issue, Volume 3, Number 1 was published in March 1988 by the Zenkoku Daizu Tanpaku Kenkyukai (Japanese National Soy Protein Research Society). This was an organization of about 50 to manufacturing companies throughout Japan to study scientific production of tofu. Mr. Masuda's company makes and sells tofu equipment. Address: Tokyo, Japan. Phone: 0426-91-3885.

7796. Dreyer, Lawrence. 1983. Re: Work with soya in Austria. Letter to William Shurtleff at Soyfoods Center, May 1. 3 p. Handwritten, with signature. [Eng]
• ***Summary:*** "Herr Anton Wolf was here yesterday and told me that only 100 hectares of soybeans were planted in Austria in 1982. The yield was about 2,500 kg/ha."

Dreyer's main work is as the architect of the additions they are making to their facilities in Wiener Neustadt. At present they have a small shop and restaurant. There will be a new area for producing tofu on a small scale, gluten, mochi, bread. "At present we produce a limited quantity of tofu with equipment bought in Japan... A group of people loosely related to us uses a small centrifuge to make soymilk. This group has also recently started making tempeh... I have given copies of your chapter on "History of Soya in Austria" to Anton Wolf." Address: Weg der Natur, Austria.

7797. *Toyo Shinpo* (*Soyfoods News*). 1983. [Kanazawa Tofu Association has developed a soymilk sold in gusseted plastic pouches]. May 1. [Jap]
• ***Summary:*** It is sold in tofu shops and at kiosks in or near train stations. A photo shows the front of the package.

7798. Richard, Lou. 1983. History of Fearn Soya Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, May 6. 1 p. transcript.
• ***Summary:*** Elwood has Dr. Fearn's files. Lou called Elwood and Elwood said he will send (loan) Soyfoods Center

© Copyright Soyinfo Center 2014

everything he has. Lou will send (loan) Soyfoods Center some coins and invoices from about 1935. In about 1947-49 Dr. Fearn's secretary, Renee, went home with lots of the company records.

Fearn Natural Foods was at 1206 N. 31st Ave., Melrose Park. In 1955 they moved to 355 West Ontario. Then in 1968 they moved to their present address at 4520 James Place in Melrose Park, Illinois. In 1982 the company name was changed from Fearn Soya Foods to Fearn Natural Foods.

Lou is quite sure Dr. Fearn died in 1947–not 1949. since that was the first year he (Lou) started to work in the company; he graduated from 8th grade in 1947. In 1949 he was a sophomore in high school.

A box arrived from Fearn via UPS in early May 1983, several days after this interview. It contained a wealth of early documents in 21 different files. The names of the files were: 1. Stubs of cancelled checks, 1946-47. 2. Walker = Purchase order to Fearn from H.W. Walker Co. in Chicago. 3. Harriett Assoc. (anti-Communism). 4. Large ledger of orders received in 1937. 5. Small ledger of orders received in 1936-37. 6. Dr. Fearn's circulars and labels, old. 7. Miscellaneous bills, 1947. 8. Vitona. 9. P.A. [Paul] Richard. 10. Personal, Dr. Fearn (incl. lots of photos, but no good ones of him). 11. Products, processes, machinery (Dr. Fearn). 12. Professional correspondence, as with Le Clerc. 13. Miscellaneous deals and ventures (Dr. Fearn). 14. Manufacturers (incl. Loma Linda). 15. Golden Mix. 16. Financial, incl. cancelled signed checks. 17. Fearn Foods = Fearn International. 18. Correspondence–Malcolm McBride and Viana deal. 19. Miscellaneous old trucking bills & unusual items. 20. English connections. 21. Correspondence, Belleville in Southern California.

Included in the shipment were many coins that Dr. Fearn apparently collected during his travels, including coins from the following countries–listed alphabetically. The number of coins from each country, and the range of dates that appear on the coins are shown in parentheses. Note that Dr. Fearn was probably in a particular country on or after the latest date: Austria (3, 1924-1925), Belgium (4, 1870-1917), Canada (3, 1842-1918), China (40, all undated, but "10 cash" token coins with square hole in center, minted from 1853-1861), Germany (Deutsches Reich, 45 coins, 1874-1927), Great Britain (6, 1856-1922), Japan (7, 1889-1923), Luxembourg (2, 1906-1916), United States (1, 1916). Address: Melrose Park, Illinois 60160.

7799. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo*). 1983. Niowanai nattô [Natto that doesn't smell: Tempeh]. May 20. Evening ed. p. 14. [Jap]
• ***Summary:*** Tempeh is very different from natto: it is fermented with a mold, whereas natto is fermented with a bacterium. Natto is indigenous to Japan, whereas tempeh is indigenous to Java, and neither is widely consumed in the country of the other. Yet both are fermented soyfoods.

Natto is growing more popular as a breakfast food in Japan–related to the growing interest in natural foods, vegetable protein, and riding the same wave of popularity as soymilk. Young people are eating less rice. In 1982 each family in Japan spent ¥1,531 on natto, up 12% from the previous year. Dr. Teruo Ohta says one reason Japanese have the greatest longevity is because they eat a lot of plant protein instead of animal protein. Representative of these plant protein foods are soyfoods. But miso and shoyu contain salt, and tofu and soymilk contain no dietary fiber. Natto (like tempeh) is doubly good in that it contains fiber but no salt.

But the rice Japanese usually eat with natto is steadily decreasing; will this eventually cause a decrease in natto consumption as well? Maybe only those older than middle age are the main natto consumers.

This article uses the term "tempeh natto" three times. Note: We think this is unfortunate and confusing. Last year Dr. Ohta visited natto plants in Indonesia. Medical research shows natto is good for health.

Did natto originate in China? Was that Chinese natto salted or not? Was it disseminated by Buddhist monks to Japan and Southeast Asia?

Next month the Japanese National Natto Association will send a delegation to Java (Indonesia) to study tempeh.

7800. *Toyo Shinpo* (*Soyfoods News*). 1983. [Tamura Yakuhin has created a new company, Tamura Kassei K.K. which is selling soymilk in a new type of Pure Pak carton]. May 21. [Jap]
• ***Summary:*** This carton is a five-layer laminate: Polyethylene, paper, polyethylene, aluminum, and polyethylene. The soymilk stays fresh at room temperature for 60 days. The brand is Tamura Tonyu, sold in 3 flavors: 1. Plain Soymilk (*Jun Tonyu*) in 200 and 300 ml. 2. Dairylike Soymilk (*Chosei Tonyu*) in 200 and 300 ml. 3. Soymilk Soup (*Tonyu Suupu*) in 80 and 300 ml.

The soymilk, made by a new natural method, has a good flavor.

7801. *Zenkoku Shokuhin Shinbun* (*National Food News*). 1983. Nattô Kenkyû-kai no kappatsu na katsudô (nattô-kin tenpe) o Zennôren tsûjô sôkai [The Natto Study Group's vigorous activity (with "tempeh natto") at the Japan Natto Association's general meeting]. No. 452. May 21. [Jap]
Address: Japan.

7802. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo*). 1983. Amerika-jin ga kangaeta nihon ryôri [Japanese foods an American developed]. May 25. [Jap]
Address: Tokyo, Japan.

7803. Ikawa, Kazuhisa. 1983. Higashi Ajia fukugo bunka-ken. Tôfu bunka to nattô no toraianguru [East Asia's culture

© Copyright Soyinfo Center 2014

complex. Tofu culture and the natto triangle]. *Asahi Shinbun* (*Asahi Daily News, Tokyo*). May 28. p. 11. [Jap]

7804. Ikawa, Kazuhisa. 1983. Ajia fukugô nattô-ken: Tôfu bunka to Nattô toraianguru [Asia's multi-combined natto zone: Tofu culture and the natto triangle]. *Mainichi Shinbun* (*Mainichi Daily News, Tokyo*). May 28. p. 11. [Jap]
• ***Summary:*** Contains three maps showing the "natto triangle." The three points on the triangle lie at Japan (natto), Java (tempeh), and Bhutan + eastern Nepal (kinema).

Note: All these foods are un-salted, however tempeh is fermented with a mold whereas natto and kinema are both fermented with bacteria. Therefore, Java should not be part of the "natto triangle."

7805. Hara, Toshio; Ueda, S.; Sakaki, Y. 1983. Restriction endonuclease mapping of pUH1 in *Bacillus subtilis* (*natto*): Note. *Agricultural and Biological Chemistry* 47(5):1143-44. May. [14 ref]
• ***Summary:*** Figures show: (1) "Agarose gel electrophoresis of fragments of pUH1 digested with two restriction endonucleases."

(2) A "restriction endonuclease cleavage map" of the circular plasmid pUH1. There are ten cleavage points.

Note: This is the earliest document seen (Jan. 2012) that shows this remarkable circular illustration of a plasmid, a type of DNA which is separate from the chromosomal DNA and which is capable of replicating independently of the chromosomal DNA. Address: 1-2. Dep. of Food Science & Technology, Faculty of Agriculture, Kyushu Univ., Hakozaki, Fukuoka 812, Japan; 3. Research Lab. for Genetic Information, Kyushu Univ. School of Medicine, Maedashi, Fukuoka 812, Japan.

7808. **Product Name:** [Kibun Soymilk (With Coffee, With Fruit Juice, Tonyu, Yogurt-Type)].
Manufacturer's Name: Kibun Co. Ltd.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1983 May.
Ingredients: With Coffee: Soybeans, water, glucose, fructose, malt extract, coffee powder, corn oil, coffee flavor, salt.
Wt/Vol., Packaging, Price: HK$1.20 per 200 ml carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Imported by: Kibun Foods Singapore PTE, Ltd., 15, Fishery Port Road, Singapore 2261. When William Shurtleff was in Singapore in May 1983 he purchased these four products and saved the labels. The products are made in Japan.

7809. Steinkraus, Keith H.; Cullen, R.E.; Pederson, C.S.; Nellis, L.F.; Gavitt, B.K. eds. 1983. Handbook of indigenous fermented foods. New York, NY: Marcel Dekker. ix + 671 p. May. Illust. Index. 26 cm. Microbiology Series, Vol. 9. [200+ ref]
• ***Summary:*** Contents: Foreword by E.J. Da Silva. Preface. 1. Indonesian tempeh and related fermentations: Protein-rich vegetarian meat substitutes. 2. Indigenous fermented foods involving an acid fermentation: Preserving and enhancing organoleptic and nutritional qualities of fresh foods.

3. Indigenous fermented foods in which ethanol is a major product: Types and nutritional significance of primitive wines and beers and related alcoholic foods.

4. Indigenous fermented amino acid / peptide sauces and pastes with meatlike flavors (p. 433-571): Introduction.

(A) Soy sauces: Japanese shoyu: Koikuchi, usukuchi, and tamari; Chinese chiang-yu, by Tamotsu Yokotsuka (p. 437-51). Taiwanese soy sauce, by Liu (p. 451-56). Malaysian soy sauce: Kicap, by Ong, Mercian, Poesponegoro and Tanuwidja (p. 456-61). Indonesian soy sauce: Kecap, by Saono, Poesponegoro and Tanuwidja (p. 461-65). Korean soy sauce, by Chang (incl. homemade kanjang and meju, p. 465-66). Taiwanese black bean sauce: Inyu, by Jan et al. (p. 466-67). Philippine taosi [fermented black soybeans], by Steinkraus (p. 467).

(B) Fermented soybean pastes: Japanese miso, by Ebine, Shurtleff and Aoyagi (p. 468-79). Indonesian tauco, by Saono et al. and Winarno (p. 479-82). Korean Doenjang and kochujang, by Chang, Shurtleff and Aoyagi (p. 482-87).

(C) Fermented fish-shrimp sauces and pastes (p. 487-526).

(D) Fish-soy sauce and fish-soy paste, by Ismail (p. 526-30).

(E) Miscellaneous Oriental fermentations. Japanese natto (itohiki natto), by Hayashi and Ota (p. 530-45). Japanese Hama-natto (hamanatto) and related products (incl.

© Copyright Soyinfo Center 2014

yukiwari natto, p. 545-47). Chinese red rice: Anka (Ang-kah [ang-kak, angkak]), by Lin, Su and Wang, Sooksan and Gongsakdi, and Pichyangkura (p. 547-53). Chinese sufu, by Su and L.-P. Lin (incl. nyufu, p. 553-61). Note: Chapter 4 contains about 195 references.

5. Mushrooms: Producing single cell (microbial) protein on ligno-cellulosic or other food and agricultural wastes.

6. General papers related to indigenous fermented foods: Contributions of the western world to knowledge of indigenous fermented foods of the orient, the importance of microbial genetics in indigenous food fermentations, new uses for traditional food fermentations, mycotoxin problems in indigenous fermented foods and new methods for mycotoxin analysis.

Less widely known fermented foods include: Idli, dosa (dosai, puda), dhokla, khaman (with soy, 131-35), enjera (162), tef/teff (164), wot (165), hopper (173), kishra (175), lambic (179), ogi (with soy, 189-98), mahewu (203), gari (208), dahi (249-57), srikhand and lassi (256-57), laban rayeb, laban zeer, yogurt (257-59; cultured soy yogurt is mentioned on p. 616), liban, mast, mass, taw (260), tairu (with soy, 260-65), kishk or kushuk (267), Metchnikoff (266), trahanas or tarhanas (271-76), rabdi, jalebi (275), koumiss (276), kefir (277-80).

Alcoholic beverages and foods: Honey wine, mead, metheglin (305), tej (306), sugar cane wines, basi, bubod, binubudan (307), palm wine or toddy (315-28), pulque (328-37), kaffir (344), tesguino (352), bouza (357), pito (358), busaa (365) sake (373-79), yakju and takju (379), tape = tapeh (381-400), ragi (381), tapuy (400), lao-chao (402), madhu (406), brem (408), tropical vinegar (410-14), nata (414-20), tea fungus (421), nuoc-mam (516-21).

Reviewed in Scientific American (Nov. 1983, p. 37), and in Bio/Technology (1984. p. 364). Address: Inst. of Food Science, Cornell Univ., Geneva, New York.

7810. Wakabayashi, Keiji; Ochiai, M.; Saito, H.; Tsuda, M.; Suwa, Y.; Nagao, M.; Sugimura, T. 1983. Presence of 1-methyl-1, 2,3,4-tetrahydro-β-carboline -3-carboxylic acid, a precursor of a mutagenic nitroso compound, in soy sauce. *Proceedings of the National Academy of Sciences, USA* 80(10):2912-16. May. [33 ref]

• ***Summary:*** Japanese-style fermented soy sauce (shoyu) was found to contain precursors of bacterial mutagens. The authors postulated that these substances may be related to the relatively high incidence of stomach cancer in Japan, which is 8-fold higher than that observed in the united states. The model advanced by these researchers holds that nitrite in the gastrointestinal tract (from consumption of vegetables containing nitrate) might react *in vivo* with the mutagen precursors in soy sauce, resulting in generation of one or more carcinogenic nitroso compounds. Address: National Cancer Research Inst., Tsukiji 5-1-1, Chuo-ku, Tokyo 104, Japan.

7811. Yokotsuka, Tamotsu. 1983. Nihon no shôyu [Japanese shoyu]. Paper presented at spring meeting of Nihon Kagaku Kai at Doshisha University, Kyoto, Japan. 6 large-format pages. Handwritten, unpublished manuscript. [Jap] Address: Kikkoman Corp., Noda-shi, Japan.

7812. Kanasugi, Goro. 1983. Tempe no hôkoku to setsumei [Tempeh: Report and explanation]. *Zenkoku Shokuhin Shinbun* (*National Food News*) No. 453. June 1. p. 2. [Jap]

• ***Summary:*** Tempeh recipes developed and tested by Mr. Kanasugi include karinto, otsumami, subuta-style yakimeshi, curry rice, tempeh sauteed with vegetables or with pickles, gyôza, harumaki (spring rolls), croquettes, cutlets, agé balls fukumeni style, steamed bread, saka manju, egg bread, Kinzanji miso, Tekka miso, sanbaizu aenuta, jashiki-agé, mameita, Inari-zushi, norimaki, oden, fukumeni, shio mamemochi, ohagi, hijiki nikomi, salad, stew, etc.

In Japan it is very difficult to omit all of the meat from a traditional meat recipe, so Mr. Kanasugi leaves in 10-20% for flavor, and substitutes tempeh for the rest. His dream is to establish a chain of specialty tempeh restaurants in Japanese cities. He would like to ask a professional cooking teacher to develop some popular tempeh recipes suited to the needs and tastes of the people.

• ***Summary:*** "I would check the reference to Paul Hawken *owning* 50% of the stock in Erewhon. My reason for this is as follows: During this period of time there were many discussions which took place between myself, Paul, the Kushi's and others regarding an equitable distribution of stocks in the company to the management. No plan was ever finalized. Paul's desire was 50% for himself. Michio and Aveline were hesitant since that would have meant that future stock participation by management would be severely limited. It was my understanding that the upshot of these discussions was that Aveline would hold the shares in her name in trust until such time that an equitable proposal was put forward by management. In lieu of stock participation, many employees including Paul, myself & Roger Hillyard were given cash bonuses and extensive time off from our work to pursue our own travels and study. (Paul went to

© Copyright Soyinfo Center 2014

Japan under such an arrangement, Roger traveled through the U.S. and I traveled through Europe.)"

"Paul did not 'set-up' Mitoku & Muso. They were already in operation and exporting. Paul did however, cement a good relationship with these companies and make more efficient arrangements for shipping and quality control.

"As per Paul's shock regarding the shares. I can only say as stated above, plus the fact that what you want and what you have are two different things, if the shares had been legally his, they could not have been taken away and Paul could never be accused of having been ignorant of the law in business matters."

"Erewhon in Los Angeles was started by myself and Aveline Kushi. I had moved to Los Angeles to set up a center there immediately after establishing a center in Chicago [Illinois] and getting the shop opened. The shop was opened in 1970 and our original purchase of miso and tamari were made through Chico-San. We later received our first direct shipment from Japan prior to Paul's arrival. I was joined by Bruce Macdonald and we began distribution up the California coast as far north as San Francisco, distributing miso and tamari as well as some Japanese condiments and seaweeds to small co-ops and natural food shops. Our biggest customers were the co-ops in Berkeley and Fred Rohe in San Francisco."

"What can I say regarding Paul's impression of Erewhon in 1970? We were all younger then. My impression was that Erewhon was a very happy place to work at Farnsworth Street. There was a high degree of comradery [camaraderie] and a poor understanding of business. The words arrogant and dogmatic were words often used to describe Paul–rightly or not.

"Bill, I hope these comments are not in any way taken to be disparaging of Paul and his involvement in the natural foods movement. His energy and vitality combined with his sharp business sense was one of the main driving forces behind the wide distribution of Japanese foods. Combined with Michio's educational work, this forged the beginning of the wide acceptance that we are now seeing for many of the traditional food items. It would be sad, I think, to allow Paul's own personal frustrations to overly color what was an exciting and adventurous experience for all involved." Address: The Kushi Institute, P.O. Box 1100, Brookline, Massachusetts 02147. Phone: (617) 731-0564.

7815. Shurtleff, William. 1983. In Beijing (June 10-11) (Document part). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 20-23. Unpublished manuscript.

• ***Summary:*** Soy sauce, miso, and fermented tofu (*doufu-ru*) are all sold at one type of store, a pickle shop that sells salted foods. I visited one of these named *Tien Yuan Jiang Yuen.* A color photo shows various types of soy sauce sold in Beijing.

In the market, the sign above the soyfoods section reads *Douzhi Shipin.* In this section they sell *fuzhu* (bamboo yuba [dried yuba sticks]), Doufu-fen (a type of soy flour made in Beijing), cubes of fried tofu (1 inch on a side, called *doubao*).

Note: This is the earliest English-language document seen (April 2013) that contains the term *doubao.*

In 1949 the East Asiatic Co. (which is owned by rich Danes) was the leading exporter of soybeans from China. They started exporting soybeans from China in the 1920s. When exporting, they had offices in Dalien (Dairen), Harbin, etc. The company now has about 80,000 employees worldwide. It is the biggest company in Denmark and the biggest foreign trading company in China, except for several Japanese companies such as Marubeni, Nissho Iwai, etc.

June 11, Saturday. Beijing seminar #1 in downstairs room. Talk with Mr. Chen of the Food and Fermentation Research Institute. Mr. Chen says the most popular vegetable oils in China are: 1. Peanut. 2. Soy (not generally refined). 3. Rapeseed.

Two organizations do research on soyfoods in Beijing: (1) His Food and Fermentation Research Institute (under MinLight, the Ministry of Light Industry); three people who work there are Mr. Chen, Mr. Dai Jiakun, and Mrs. Xu Lin. (2) Beijing Municipal Food Research Institute; contact Mr. Dai Xinjun (Dong [East] Zongbu Lane, Beijing).

Four acid tests for the buyer of any soymilk process and equipment: (1) Equipment cost (fixed). (2) Processing cost (including labor, energy, water, etc.). (3) Soymilk flavor. (4) Protein and solids recovery (percentage).

The Chinese name for thin pressed tofu sheets ("1,000 sheets / 1,000 folds) is Qianzhang or Baiyeh.

The best local markets (which have more variety of produce in the winter) are: Chongwen Vegetable Market and Xidan Vegetable Market (Chinese characters are given for both). The Chinese term for "soyfoods" is *dadou shipin* ("soybean products").

There is a new Chinese method (in Shanghai) for continuous pressed tofu sheets.

Commercial soy products made by Mr. Chen's institute: (1) Formulated soymilk for infant food. (2) Soy protein concentrate. (3) Later a modern soymilk plant will use this to make (1). Plain and sweetened soymilk in glass bottles, plus fruit (citrus = orange flavor) and malt. There are some technical problems with using plastics bags as soymilk containers; they leak and are fairly expensive. Later he will work on a lactic soymilk drink.

Research on soy sauce: Improved method. Low salt, done in factories in Beijing and Shanghai.

Most soy oil in Beijing is not refined. People like the flavor OK, but they do not know the refined flavor. Rapeseed oil is used mostly in South China. In Beijing, mostly peanut and soy oil; peanut is more expensive and has a higher class image. Rapeseed is the cheapest but people don't like it.

© Copyright Soyinfo Center 2014

The debate over more meat vs. more protein. Recently Chinese officials have come to understand the problem better. Send him *Diet for a Small Planet,* by Lappé.

In 3-4 months, Mr. Chen will send me an article about soyfoods in China–Tell Ira Leviton.

I visit a bookstore and buy a pinyin dictionary and a book (published last year in Chinese) about tofu. Visit the Forbidden City and a very famous square in central Beijing. Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

7816. Foley, Terrence B. 1983. Work with soybeans and soyfoods in China (Continued–Part II) (Interview). In: William Shurtleff. 1983. Log of Soyfoods Research Trip to China and Japan: 29 May to 10 July. Lafayette, California: Soyfoods Center. 117 p. See p. 27-28. Unpublished manuscript.

• ***Summary:*** Continued. Soy oil: 90% is degummed crude, packed in 55 gallon drums and distributed by trucks. Shanghai is the leading center of oil refining. Only 20% of China's internal is solvent extracted; the rest is expelled. Largest plant is 350 tonnes/day, solvent extracting. Most are 50-150 tones/day. Oil is rationed. In retail shops it's pumped out of 55-gallon drums into your personal bottle, about 1 liter/month. Only about 5-10% of all soy oil in China is refined, and much of that by commercial crushers.

People in Northeast China and Shanghai like soy oil especially. Canton only uses peanut oil. It's also a function of price. After refining, they make margarine, shortening, and dressings in Shanghai. In China, there is a problem with sickness from eating raw veggies in salads.

The Chinese are extremely conservative with food. They do not like foreign food. During his soymilk tour to Japan, the group ate no Japanese food at all on the trip. They found a Chinese restaurant for every meal!!!

Do the Chinese prefer refined soy oil to crude?

In 1997, the U.S. Wheat Association built a full-scale bakery in China. Ed Quinones and Dennis Blankenship were very excited about the potential of soymilk worldwide. Quinones is the regional manager for Asia and Latin America. He is Terry's boss. A 6 man team & the American Soybeans Association agreed to build China a soymilk pilot plant. Now, they want a big one, with one factory equaling 2,000 L/hr. Mr. Pan thinks 2,000 L/hr is the ideal plant size. The China soybean embargo also affects the ability to raise funds for the Chinese market. Everyone likes the idea but doesn't have the money beyond $30,000 for the demo plant.

Cyrus Eaton's company pioneered trade with the Communists. It got together with Farmland, the largest agricultural co-op in the USA. Gene Vickers and Bob Bergland of Farmland-Eaton (in Crystal City, Virginia) are working on the Manchuria plant project. He is concerned that they may not be up to it. He hears that it's off.

Question #8. No idea; total blank. Only 5% of the soybeans in China are used for feed. There is a lot of unease and soybean trips and inhibitors. A little soybean meal is still used for fertilizer. Most solvent extraction is done with variants of the Rotocel design, not the Desmet.

Question #13. Everyone fries everything, like doufu and soy sauce. There is a great need for milk. Soy flour won't succeed until the Ministry of Commerce does better toasting or does subsequent toasting in food plants. There is great potential in China for tofu and soymilk. The Chinese system "falls apart in the middle from bureaucratic sludge."

There are no trade associations in the Chinese soyfoods industry; this is one reason for the slowness to modernize.

The Chinese don't know much about soy protein isolates and concentrates, but they are convinced they can be used to advantage. They want to make them in China, not import them. They aren't sure which applications are best. There are lots of applications for tofu and soymilk production. USA uses concentrates and isolates in modern foods; China has no modern foods.

Alfa-Laval. The concept of offering soymilk to Beijing on a 1 year trial basis is still under discussion and isn't yet finalized. John Wilson will decide. It's probably about 500 liters/hr, not 2000 liters/hr. It's not yet in the bag, at all. That project will not obviate the need for the American Soybean Association's $30,000 pilot plant. In Shenyang and Shanghai, he's not sure whether or not Alfa-Laval has contracts, but they have made some progress. These are autonomous municipalities, so they have their own funds.

The crux of the American Soybean Association's programs are teams and technical travel. Terry wants to draw more on East Asian trips. Countries are at various stages of development here, but the Chinese have no interest in low level technology. All third world countries must have the *best,* yet they espouse self-sufficiency, not small-is-beautiful. They eschew foreign or traditional things.

Soybean acreage in China: Heilongjiang. World Bank. Heilongjiang is reducing soybean acreage by 20%.

Exports from China: Exported meal. Low price, low quality. The cost of U.S. soybeans delivered to South China is probably less than the cost of soybeans "imported" from Heilongjiang.

The Chinese have never imported much U.S. soybeans, around 500,000 tonnes maximum. They cut this off after the textile quotas squabble, only because it wasn't important to them. This is a symbolic gesture. They could do without it. Terry expects they will be a *net* soybean importer over the next 5-10 years. Brazil has no export office in China, but does have a few traders.

Terry does not know how much soybeans are grown on the banks of rice paddies or about the Jilin seminar, as he was not invited. He's not interested in Chinese expansion of soybean production and, like Susan, does not think it will expand much.

American Soybean Association dispenses technology;

© Copyright Soyinfo Center 2014

China must receive and implement it.

In Beijing, the Chinese eat fermented black soybeans when they have a fever.

The word for "soybean" is *da dou*, not *huang dou. Da dou fen* refers to soy meal and cake. *Dou bing* is soybean cake.

The American Soybean Association (ASA) is like an agricultural extension office. They dispense publications and do translations.

Foley does not now get *Soyfoods* magazine. What a shame.

American Soybean Association is committed to upgrading Chinese soybeans and animal technology.

There is a 25% discount on books bought by Foley from us. Send him a list of all of our books and check history materials.

Foley would like Leviton to come to China when he visits East Asia but visas are nightmarish to get, as are hotel reservations.

The tofu and soymilk production plant in Tientsin (which is Peking's port) is under the Ministry of Commerce. Also, there are oil plants in the southern suburbs.

We talked for a long time about the need for a Soyfoods Industry Directory in China, giving names, addresses, phone numbers, and key contact people of major organizations or researchers involved actively with soyfoods. We made a sample table of contents. Terry will follow up on this. Perhaps give it to Beth as a project. I met Beth in the Beijing Hotel that night and we discussed it. Address: Director, China Office, American Soybean Assoc.

7817. Andersen, Kurt. 1983. "The new Ellis Island." *Time.* June 13.
• ***Summary:*** A neighborhood of Japanese immigrants was thriving in downtown Los Angeles in Little Tokyo when Beverly Hills was empty land. The area was renamed Bronzeville during World War II when its residents were interned; but now it has been retaken by the Japanese, and is again a main gathering spot for the roughly 175,000 Japanese-Americans scattered around the county. "A brand new, $12.6 million cultural complex provides reminders of home: a lush, still garden of camphor and golden-rain trees, a sleek theater for Japanese-language productions, a brick plaza for a snack of age tofu (deep-fried soybean curd) and a stroll."

7818. *Soybean Update.* 1983. Demand focus–Where the big bean markets are (Special feature). June 13. p. 3-6.

7819. Okada, Mrs. 1983. Kibun's interest in and involvement with soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, June 21. 1 p. transcript.
• ***Summary:*** Kibun was founded in 1938 as a company selling foods from the sea (seafoods such as *kamaboko, tsukudani, Oden no zairyo*). In 1969 Mr. Nozaki of the R&D department started research on soymilk. In 1973 a laboratory for soymilk was set up in Saitama city, Saitama prefecture. and commercial soymilk production started there in 1977. The product, brand-named Soena, was sold in 200 ml wide-mouth cups. The first flavors, all introduced that year, included a lactic fermented product, pineapple, etc. (see slide).

In about 1973 Kibun started to diversify out of just foods. Today they are a conglomerate, with more than 50 companies, including companies doing advertising, food engineering, publicity, and selling computers.

Kibun does not use the traditional Illinois method, or any variation thereof. They couldn't use it since Mitsubishi bought the rights to the Illinois patent for the Japanese market and Kibun bought the rights for overseas. So Mr./Dr. Nozaki developed and patented a new method; there are many patents, including equipment patents (the food engineering company makes these machines).

Over the years they have launched many flavors including vegetable juices with soymilk (carrot) but in June 1983 they have just 4 flavors, of which plain is the best seller. Their lactic flavored product is new and has always been fermented. In May 1983 they opened two new soymilk plants, one in Hiroshima and one in Gifu, both bigger than the original Saitama plant.

Their working arrangement at present with Alfa-Laval is *not* a typical joint venture. Alfa-Laval is in the business of selling equipment. When they find a client they agree, according to a contract existing between Alfa-Laval and Kibun, to tell the potential client that their preferred soymilk process supplier is Kibun. Thus Alfa-Laval is like a matchmaker for Kibun. Kibun then signs a separate contract with the potential soymilk manufacturer. It could be a joint venture or a license of the Kibun patents and technology, including patented equipment, made by Kibun's food engineering company.

Kibun's soymilk operations are run by a separate company called Kibun Health Food Co., established in 19 (exact date unknown).

Mr./Dr. Nozaki would be willing to meet with me, but what would we discuss? Its all secret.

Does Alfa-Laval get a kickback from introducing a potential client to Kibun? Address: Home Economist for Kibun, Japan. Phone: 544-2781.

7820. Tsuchiya, Kanji. 1983. Soymilk industry and market in Japan (Interview). Conducted by William Shurtleff of Soyfoods Center in Japan, June 26. 2 p. transcript. [Eng]
• ***Summary:*** We saw this large sign (1 by 3 feet) in a local tofu shop window: *Mainichi Ippai. Tofuya no jun Tonyu*– which means: "A glassful every day! Pure / Plain soymilk from your local tofu shop."

All Tetra Brik Aseptic soymilk is much more expensive

© Copyright Soyinfo Center 2014

than cow's milk.

In the 2nd edition of Tsuchiya's book, only the production section has been changed; it contains a newer and more complete description of the soymilk production process.

Lord Liu An of Wainan who supposedly invented tofu was from the far south of China, near Vietnam. Tie this into the Java tofu discovery.

See p. 220 of Tsuchiya's book for a tofu and soymilk chronology.

Get used books in Japan at Kanda used bookstores.

Of the various books Tsuchiya owns on the history of Japanese foods, the best is the tattered old book, *Nihon Shokumotsu-shi,* by Adachi and Sakuria. 1934. See Kinako (p. 203). Okara (p. 291).

Cows milk came to Japan from China in the *Kotoku Tenno* era, in Choreki 3rd year.

Heian Period, first used the character for milk (in the word Raw / Fresh Milk) in the *Shinsen Seishiroku* (2 Chinese characters given).

In Tsuchiya's Soymilk book, p. 36. *Toju* = bean liquid, first appeared in the Kamakura period, in the book *Jidai Kamonjo.*

Kibun bought Alfa-Laval machines but they did not work; they had to be cleaned every 4 hours. So Kibun developed a steam infuser that injects steam into the plate heater. Kibun did not apply for a patent. Alfa-Laval now makes the machine Kibun invented, and also has no patent. With a patent you reveal a secret process. It's too risky.

Mr. Yamauchi of Hinode often visited with Marusan in Japan.

In Japan, Marusan is thought to be No. 1 in total soymilk production and sales–if you include bulk soymilk. Marusan has 3 soymilk factories in Okazaki, plus one each in Chiba and Aichi. Bulk soymilk is canned by other companies and used in bread, etc.

There was a big jump in soymilk production in Japan in 1982.

Companies that Marusan sells soymilk to resell it under their own brand.

Mitsubishi also sells a lot of bulk soymilk.

To date, 25 companies have been permitted to use the JAS mark.

Companies who buy Marusan's bulk soymilk include Sakura Shokuhin, Dai Tonyugyo, Nagano Tomato, and 2-3 others. Second largest soymilk maker in (total production) is Kibun. No 3 is Mitsubishi (which makes lots of bulk), Meiji and Asahi are tied for 4th.

Defoamer. Most soymilk makers use a defoamer. Silicon resin is popular but expensive. They also use monoglycerides or sugar esters. Marusan uses a high temperature process that requires no chemical defoamer.

To make lactic fermented soymilk inoculate it with *L. Bulgaricus* and *L. thermophilus,* and hold at 37ºC for 18-20 hours to produce lactic acid. Some products are sold with lactic acid bacteria still alive. These are sold as dairy products and often have 3% added milk solids.

Marusan makes a firm soymilk yogurt sold only in Aichi Prefecture in plain, strawberry, and orange flavors, in a *happo styrol* package shaped like a Quonset hut. When was it introduced?

Many Japanese soymilks use calcium lactate to fortify the product with calcium. It coagulates the milk but the structure is later broken up with an homogenizer.

Tsuchiya prefers to use calcium carbonate, which does not dissolve or coagulate.

For emulsifiers, monoglycerides are outlawed. Sugar esters (*shoto no shibosan* ester) are okay. Some researchers believe that monoglycerides cause cancer = are carcinogenic.

Chakukoryo are artificial / synthetic flavors = chemically synthesized.

Marusan prefers to use maltose, a complex sugar, since it does not brown upon high temperature treatment or get caramelized or bitter.

Asahi no longer uses the defatted soymeal method. It is too expensive.

Since about 1981 all major manufacturers of soymilk in Japan have used roughly the same process. Tsuchiya published a key article on the basic process. Marusan was not upset, and within 6 months all had standardized their processes. This process is based on the 1967 Cornell discovery of the effect of heat on lipoxygenase enzymes.

Adding sodium bicarbonate improves the protein recovery, but its use is not allowed in pure (*jun*) soymilk except to neutralize old beans... and then one need not list it on the label.

The KEY is to crush the soybeans before adding boiling water, otherwise there is off flavor development at the center of the beans. Marusan has a patent; see page 131 of 1st edition of Tsuchiya's Soymilk book. #28385? Kibun has no patents.

Ask Tsuchiya all relevant DTD questions.

Tsuchiya has a 1932 Encyclopedia (*Hyakka Jiten*). Copy p. 1169 soymilk, p. 1184 tofu. See also Mame maki, kinako, moyashi, Okashi.

Kibun bought 50 copies of Tsuchiya's book on Soymilk.

Compare Marusan and Kibun flavors. Tsuchiya is a consultant for Marusan. Marusan has: 1. No additives. 2. High temperature processing.

Kibun makes no plain/pure soymilk.

Marusan is thinking of building a plant in Los Angeles, perhaps with Hinode / Mr. Yamauchi.

Does Kibun use any other artificial flavors besides milk flavor?

Which company (when) first used the present soymilk process in Japan? What are the key "know how" steps? Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

7823. *Nikkei Sangyo Shinbun* (*Japan Economics and Industry News*). 1983. Daizu hakkô no shizen shokuhin. Torigoe Seifun. Tokushu kin tsukai. Kusami naku [A natural fermented soyfood: Tempeh is made by Torigoe Seifun using a special microorganism to get rid of beany flavor]. June 30. p. 15. [Jap]
• ***Summary:*** Fukuoka prefecture–Torigoe Seifun announced that from the middle of July they will start to make tempeh (tenpe) on a commercial scale and sell it nationwide to institutions. In September it will be sold to retailers–natural food stores, restaurants, department food stores, and supermarkets. The company plans to make and sell 15 tonnes a month. A description is given of how the tempeh is made. In about 1975 Torigoe Seifun started to R&D on tempeh together with the department of Agriculture at Kyushu University. Mr. Heiki, president of Torigoe, thinks tempeh will become a regular part of the food life of Japan.

Note: This story was also run on the same day in other major Japanese newspapers: *Mainichi Shinbun* (p. 8). *Yomiuri Shinbun* (p. 10). *Nishi Nihon Shinbun* (p. 8). A photo of sliced tempeh ovals, cubes, and sticks appeared in the last two articles.

• ***Summary:*** Showed that the approximately six-fold higher rates of breast cancer in the USA than in Japan were not due to differences in age at first birth, nulliparity or age at menopause, but that differences in age at menarche and post-menopausal weight could explain some 70% of the difference in rates. They suggested that the remaining difference in breast cancer rates may be due to differences in hormone levels in the premenopausal period.

7828. **Product Name:** [Meiji Sunglow Soymilk Ice Cream (Vanilla, or Chocolate)].
Foreign Name: Meiji Sanguroo Tônyû Aisu (Banira, Chokoreeto).
Manufacturer's Name: Meiji Milk Co. Ltd.
Manufacturer's Address: 2-3-6- Kobayashi, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1983 June.
Ingredients: Soymilk, sugar, vegetable oil, flavors, emulsifier, stabilizer, calcium sulfate, salt, vitamin C, colors.
Wt/Vol., Packaging, Price: White plastic tub.
How Stored: Frozen.
New Product–Documentation: Label. 1983, undated. Blue, red, green, and white. Shurtleff & Aoyagi. 1985. Tofutti & Other Soy Ice Creams. p. 94. This is Japan's best-selling brand of soy ice cream. 500 ml sells for 350 yen ($1.48).

Note: This is the earliest Japanese-language document seen (Sept. 2013) that uses the term *Tônyû Aisu* to refer to soy ice cream.

Alfa-Laval. 1988, June. Soyfoods: Old traditions with new potentials. p. 9. Shows a color photo of the front of the package.

7829. Shurtleff, William. 1983. Yuba: The creamy film on soymilk. Often sold in the U.S. as "bean curd skins," this popular Chinese soyfood has a rich taste and surprising uses. *Soyfoods.* Summer p. 73-76.

• ***Summary:*** This is primarily a history of yuba with five black-and-white photos of yuba being made at Yuba Han in Kyoto.

"When soymilk is gently heated in shallow, open pans at 80 to 90ºC, a creamy-yellow, bland-flavored, concentrated protein-lipid surface film gradually forms. This is called yuba. The films are successively removed from the soymilk surface using a long skewer, hung to air dry, and marketed as fresh or dried sheets, sticks, or chips, or made into a variety of meatlike textured protein products.

"In standard Chinese (Mandarin), yuba is called *tofu-p'i,* which means 'tofu skin' or 'tofu film'. It is less commonly known as *tofu-i* ('tofu robes') and *yu p'i* ('oil skin'). According to the *Pen Chao Shih Chien* (1695), at that time this food was most widely called *tofu-lao,* where the character *lao* refers to either an old woman or a wet nurse.

"Yuba is actually a Japanese word. As presently written, the character *yu* means 'hot water' and the *ba* means 'leaf' or 'flat thing.' The etymology of the present term, however, is both obscure and complex, being intricately linked with the early history of the food itself. Reference to this food first appeared in Japan in the *Pen Chao Shih Chien* published in 1695.

"The next mention of yuba was in the *Wakan Sanzai Zukai* (1711), which referred to it as *tofu-p'i,* the present Chinese term. Interestingly the text notes that 'The wrinkled look of the film resembles (the skin of) an old woman.' This explanation seems to imply that the earlier term *lao* or *uba* was used because of the similarity of yuba and an old woman's face. The term yuba first appeared in 1813 in the *Kyonan Rubetsu-shi.* This new term's origin was explained as follows.

"'On Yuden Mountain, a sacred holly mountain in the feudal province of Dewa, there was an inn, Kinshiya Inn, visited by many pilgrims who came to the mountain to pray. The esteemed vegetarian cuisine was prepared by an old woman who was very skilled at making a variety of delicious foods from ground soybeans and soymilk. One of the foods was a thin film, which she fried before seasoning it. Others liked it so much that they began to make it themselves

© Copyright Soyinfo Center 2014

sometimes in the shape of bags and squares. In Kyoto, the capital, they used it in vegetarian dishes. Since the new food had been created by the old woman of Yuden Mountain, people named it yuba, where *yu* is taken from the Yu of Yuden mountain, meaning 'hot water' and *ba* is the character for 'old woman.'

"There are also other explanations of the origin of the term. For example, *uba* (Tofu-p'i has traditionally been called yuba; however, this is a mispronunciation. Its real name is uba.) may be written with two characters meaning 'upper' and 'waves,' signifying that it is the 'upper waves of tofu.' It is not clear when or why the present characters meaning 'hot water' and 'leaf' came to be used, but they are thought to be of relatively recent origin.

"In early times, yuba was probably heated in shallow, circular, round-bottomed pots over a bed of coals. The round sheets of yuba, each draped over a skewer, were dried slowly over a weak bed of coals. This method can still be seen in some villages in Taiwan.

"Worldwide, yuba is most widely used in China, Taiwan, Japan and Hong Kong. Sold fresh or dried, generally in sheets, at prices anyone can afford, yuba is also made into a remarkable variety of ready-to-eat foods. The 'bamboo yuba' made by rolling up fresh yuba sheets, then hanging them over a line to dry, so they come out looking like a V-shaped beige rope, with each leg about 7 inches long, are also popular, as is the thick sweet yuba that forms on the bottom of the pan during simmering.

"The world's first meat analogs, made from yuba, were developed in China, probably at least several hundred years ago, probably by Buddhist chefs in temples, monasteries, or Buddhist vegetarian restaurants. The earliest process for making these 'meatless meats' probably consisted of rolling sheets of yuba around a filling of minced and seasoned pieces of yuba, tying closed the bundles with string, and steaming for 30 to 50 minutes, or until a meaty texture and flavor developed. The finished products are still widely sold as vegetarian sausages, drumsticks and liver.

"Later, sheets of fresh or rehydrated yuba were mixed with various seasonings (usually including soy sauce) and packaged into the hollow two-piece molds (typically shaped like a chicken or fish), which were then clamped shut and steamed for about 50 minutes. When the form was opened, behold: a perfectly shaped, tender chicken–with no bones. The finished product was then usually deep-fried (whole), carved, and served. Monks would enjoy these exotic dishes on special occasions and Buddhist laymen would enjoy them on the traditional 'meatless' days, the first and fifteenth day of each lunar month. Today in any major Chinese or Taiwanese city, one can view in the display case of the many Buddhist vegetarian restaurants (as well as in market stalls) almost perfect replicas of plucked hens, roosters, and ducks, light brown fish (complete with fins, gills, eyes, and mouth), juicy hams, tripe, liver, and rolled meats, all made from yuba and bearing such fanciful names as Buddha's Chicken or Buddha's Duck. Rich red sausage links hang in rows and deep-fried drumsticks are handsomely arranged on a large platter, together with a life-sized pig's head-made of yuba, of course.

"Since earliest times, there have been thousands of small yuba producers throughout China. However in the early 1970's, a number of large, modern factories came to be built in Hong Kong and Taiwan using updated methods. The soymilk was heated with steam from a boiler, the soymilk was run into the steaming trays using pipes and gravity flow, while the yuba was made in both round and square compartments, and much of it was dried indoors using dry steam heat. Production costs dropped, output skyrocketed, and the yuba began to be sold worldwide, mostly in overseas Chinese food stores and restaurants.

"Chinese-style yuba eventually began to spread to areas with large Chinese populations in Southeast Asia. Today in Malaysia, for example, one can find dried yuba strands (*tau ki* or *fu chok*), dried yuba sheets (*tau put*), sweet thick yuba (*t'im chok*), vegetarian sausage (*chak tie*), vegetarian duck (*chai ak*), vegetarian salted fish (*chai kiam hu*), or vegetarian meat (*chai tu kar*). Similar foods, such as yuba sausage, are found in Singapore." Address: Soyfoods Center, Lafayette, California.

• ***Summary:*** This table contains six columns: Manufacturer, brand name, package size, type of packaging, launch date, and distribution (nationwide).

The manufacturers are: Kibun. Okazaki Marusan. Mitsubishi Kasei Shokuhin. Meiji Nyugyo. Kyushu Nyugyo. Nisshin Seiyu. Asahi Shokuhin. Kyodo Nyugyo. Yakuruto Honsha. Furuta Shokuhin Kogyo. Morinaga Nyugyo. Sugiyo. Koshin Nyugyo. Kenbi-sha. Saniku Foods (Saniku Fuuzu). Nagoya Seiraku. Nagano Tomato. Zenkoku Nokyo Chokuhan (Nôkyô). Yamato Shokuhin. Sokensha (Sôkensha). Ishihara Fuudo Sentaa. Chiba Seisen Shokuhin Kogyo (Kôkyô). Asahi Fuuzu. Sebun Irebun (7-11). Fukushima-ken Rakuren. Nacuraru Fuuzu (Natural Foods). Sebun Appu Inryo (Seven-Up). Address: Lafayette, California.

7831. Shurtleff, William. 1983. Soymilk seminars in China, May-June 1983, and proposals for future DTD work with soymilk. Singapore. 12 p. 28 cm.

• ***Summary:*** This report begins: "1.1 The Key Question DTD must face and study in depth is the potential for soymilk worldwide during the next 5-20 years in East Asia (especially China), the Third World in general, and in industrialized nations.

© Copyright Soyinfo Center 2014

"Will soymilk be a minor part of DTD's income (l-2%) or does it have the potential of being 20-30% of sales in 10 years? If the latter is true, then it is essential that DTD start now to develop a stronger commitment to soymilk and greater expertise in this field.

"1.2 Evidence of Potential Growth

"1.2.1 Hong Kong–This was the first market for modern soymilk, pioneered by Vitasoy (soydrink made by Hong Kong Soya Bean Products Company Ltd.) from l945. Vitasoy's production grew from 50 million packs in l962 to 100 million in 1970, to 130 million in 198l. Yeo Hiap Seng and Coca-Cola Hi-C also have significant shares of the Hong Kong market.

"1.2.2 Japan–Production nationwide grew from 4 million litres in 1978 to 46 million litres in 1982, worth US$61 million.

"1.2.3 South East Asia–Since 1975 soymilk has taken off in all these nations except Indonesia. Competition is fierce.

"Major Untapped Markets–China is unquestionably the largest untapped market. It has a long tradition of using soymilk, is interested in modernization, is committed in 'Masterplan 2,000' to greatly expanding production of both soy and dairy milk, has a major need for the nutrients of soymilk (protein, calories, minerals), and could make many products from this milk such as ice cream, ice stick, yoghurt, tofu, yuba, etc. This China market is as big as all others combined." Address: Singapore.

7832. Shurtleff, William. 1983. Yuba: The creamy film on soymilk (Continued–Document part II). *Soyfoods.* Summer p. 73-76.

• ***Summary:*** Continued. "There has been considerable speculation about when and how yuba was introduced to Japan. Some have said that it was brought by Chinese Buddhist monks as early as the 10th century, others that it was brought back by Japanese monks visiting China in the 13th century. It is also said that Masashige Kusunoki, a famous samurai, used it as provisions during the siege of Chihaya castle during the 14th century. Japan's oldest existing yuba shop started in 1716, so it is quite likely that yuba existed on a commercial scale by the late 1600s, if not earlier. It may well have been used from time to time as a food in Buddhist temples centuries earlier.

"The earliest center of yuba production and utilization in Japan was in Kyoto, the ancient capital, which remains yuba's center to this day. Yuba has always had the strongest gourmet image of all Japanese soyfoods, and Kyoto yuba soon developed strong associations with both the vegetarian cuisine of the Buddhists and with the elegant cuisine of the nobility and aristocracy. Yuba soon became one of the indispensable delicacies in both Zen Temple Cookery (*Shojin Ryori*) and in the exquisite Tea Ceremony Cuisine (*Kaiseki Ryori*).

"A children's song (whose date of origin is probably in the early 1800s) sung in Kyoto near the base of Mt. Hie, the home of a famous complex of Buddhist temples, asks 'What do the monks eat on Mt. Hie?' The response is 'Yuba no tsukeyaki,' the name of a yuba preparation. Today in Kyoto, in restaurants serving *Shojin* or *Kaiseki* cuisine, yuba might well appear in more than half the dishes in a typical six-course meal. Gradually the Japanese developed many unique ways of folding yuba, plus a number of ready-to-eat yuba delicacies (deep-fried chips, pouches, and rolls) that were unknown in China and which today are popular tourist items in Kyoto.

"The Kyoto yuba industry traces its origins to at least the early 1700s'. The four oldest existing yuba shops started in 1716, 1791, 1804, and 1833. The owner of the oldest shop, Yuba Han, is now the ninth generation. Kyoto's yuba shops have always been small, family-run operations, often connected with the family home. Of the 20 shops existing in 1981, 4 started during the Edo period (1600-1868), 5 during the Meiji period (1868-1912), 4 during the Taisho period (1912-1926), and only 6 started after 1926. Thus the industry is old and well established.

"The number of yuba shops in Kyoto has gradually decreased from the peak of 67 in 1911. It fell to 35 in 1919, then climbed to 55 in 1929, and finally decreased slowly to 20 in the late 1970s. A typical shop used only 50 to 150 pounds of dry soybeans a day to make 400 to 1,200 sheets of yuba. (One pound of dry soybeans yields about 0.5 pounds of yuba on a dry weight basis.)

"Gross net sales of the yuba produced in Kyoto was about $2.3 million, estimated to be 80% of the total sales and production of all yuba in Japan.

"The earliest known reference to yuba by an American was by Langworthy in 1897; he published a nutritional analysis, which was reprinted by Abel of the USDA in 1900. In 1905 Oshima published the results of Japanese nutritional research in English. In 1914 Loomis noted that Chinese-style yuba (*toufu-p'i*) was being imported to the U.S. 'in the form of vitreous, brittle, yellowish sticks.' In 1923 Piper and Morse published 1½ pages of by far the best information to date in English, (plus a photograph of sheets of yuba hanging to dry on sticks over steaming pans of soymilk) and two nutritional analyses of yuba. In 1926 Horvath wrote that in China up to 30 yuba films were removed from soymilk and sold separately at a high price before selling the low-fat milk. In 1927 Horvath gave a nutritional analysis of 5 types of Chinese and Japanese yuba, using data from Embrey, Adolph, and the Tokyo Hygienic Laboratory.

"In the U.S. yuba has long been served in a variety of dishes at most Chinese restaurants, where it is called 'bean curd skin,' the literal translation of the Chinese name *toufu-p'i.* The first company in America to make ready-to-eat yuba delicacies was The Soy Plant in Ann Arbor, Michigan. In the spring of 1980 Jura McDowell developed Yuba Rolls

© Copyright Soyinfo Center 2014

using yuba made on a kitchen scale. It was cut into 3½-by-5-inch rectangles, filled with seeds, sauteed vegetables, and seasonings, then rolled tightly. The next year a Tempeh Dog was developed by wrapping soybeans, in inoculated to make tempeh, in a sheet of yuba then incubating the roll. It came out looking like a hot dog.

"In 1981 the first yuba manufacturing company in the Western world, Soyfoods of America, began operation in Duarte, California, near Los Angeles (see Soyfoods, No. 6, 1982). The owner, Mr. Ken Lee and his technical director Lawrence Wu, both Chinese Americans, built a modern, semi-mechanized plant, drawing on Wu's research in modernizing yuba production. While their main market initially was to be stores which imported yuba from East Asia (especially Hong Kong), they also hoped to reach the Caucasian market.

"The first known scientific study of yuba (in any country) was done in 1970 by Mr. L.C. Wu at the University of Florida who wrote his MS thesis ('Lipid-Protein Films for Human Consumption') on yuba. Wu and his colleague, R.P. Bates, published subsequent detailed studies in 1972, 1973, and 1975 of methods for increasing the yield and quality of yuba, and of the basic endothermic polymerization involved in yuba formation. In 1975 they discussed texturization, noting that 'these films, when properly laminated, make good meatlike structures.' Also, they reported, without using binders, desired flavors can be incorporated into the films. Their method of alkali extraction, while giving a high yield of yuba, gave a very low PER (1.26). Also in 1975 H.O. Jaynes and W.N. Chou at the University of Tennessee developed a method for making yuba from soy protein isolates using oven drying in Teflon-coated pans.

"Does yuba have a future in the West? I think so. Because it is expensive, only small amounts can be used as wrappers and delectable fillings to make exciting new foods, such as tasty hors d'oeuvres, crisp yuba chips (more delicious than potato chips), and meat analogs, but the development of less labor-intensive, more mechanized methods for making yuba would do wonders in aiding its increased use." Address: Soyfoods Center, Lafayette, California.

7833. *Soyfoods.* 1983. Profile: Azumaya tofu company. Summer. p. 34-37.

• ***Summary:*** One of the best studies of Azumaya ever published, including an in-depth history. The family-run company, which has 70 employees, is now America's second largest tofu manufacturer, making 110,000 pounds/week of tofu and shipping it to 20 states. The plant, with 6,000 square feet of tofumaking space, starts operation at 3:00 A.M. each morning. The 147,000 Asian Americans in San Francisco are a major market.

Jack Mizono's parents bought the business from a Mr. Sakamaki in June 1937. According to Jack, "Azumaya Company had been founded in Stockton, California, in 1920 by a Mr. Teranishi, who later moved it, in 1927, to San Francisco; in Feb. 1936 he sold it to Sakamaki."

"In 1937 Azumaya was processing soybeans on Post Street in a nondescript building all of 35-by-40 feet, or 1,000 square feet. In 1940 the rent went up considerably and they moved to Geary Street, setting up shop in the basement of a 25-by-40 foot building. Their equipment was traditional: stone grinder, gas steamers, large kettles, brick-reinforced wok cookers; they hand-scooped soymilk into flour sacks, hand twisted them, then hung them from hooks to lever press out the soymilk. Jack and brother George were Azumaya's principal tofumakers then but their parents still helped with the tofu pouches, burgers, and grilled tofu.

"Jack didn't like tofumaking too much. The work started at three in the morning, he wasn't making a living from it, he had to paint houses, refinish floors on weekends, and his wife, Aya, worked as a seamstress. I'll try this for a few years to help my parents, Jack said to himself. For the generation of new Caucasian tofu companies, this would seem like 1976 all over–the good old traditional, laborious, back-straining, unprofitable, daylong adventure.

"The war in 1941 seriously disrupted the business and their lives. The Mizono family was involuntarily 'resettled' in a government camp in California; after a few years there, Jack was sent to Utah, then to New York City where he worked 6 months in the shipyards. Then he was drafted into the U.S. Army. Finally in 1947 the Mizono family reassembled in San Francisco to re-open Azumaya."

"Azumaya remained on Geary Street for about 10 years until their neighborhood underwent 'redevelopment' and the Mizonos lost their occupancy rights. Once again they packed up their tofu plant and in 1957 settled on [855] Golden Gate Avenue where they invested $25,000 in constructing a 25-by-75 foot building (to which they added an additional 25-by-100 feet soon after). They were still using the labor intensive manual tofumaking tools.

"Around this time, Jack Mizono made the acquaintance of Mr. Kunishi, the proprietor of Sacramento Tofu Company, which had opened in the Capitol in 1948. Kunishi introduced Mizono to high technology Japanese equipment and showed him the proper import channels. In 1957, when Azumaya ordered its first pressure cooker system and hydraulic press, Jack's brothers, John and Bill, joined the company and together the four Mizonos ran the plant. In production 6 days weekly, Azumaya began making 7,200 pounds of tofu a week.

"Then in 1968 the Mizono clan made a move that would continue to favorably affect their business for the next 15 years. Packaging. Shoan Yamauchi of Hinode Tofu Company in Los Angeles had already begun to package tofu in 21 ounce sealed plastic tubs and had acquired a special blow-mold form from Sealright Containers. Yamauchi agreed to supply Mizono with tofu tubs which Azumaya initially

© Copyright Soyinfo Center 2014

sealed with a laborious primitive hand sealer until 1971 when they bought a semi-automatic Japanese model. At the time, Azumaya was making 3 weekly deliveries to accounts in the East Bay, and 4 to San Jose, but the bulk of their tofu sales were right in San Francisco. With the new packaging system on line, facilitating wider distribution and longer shelf life, their tofu sales nearly doubled in the next year.

Once again it came time to move the plant. This time, in 1970, it was to [95] Boutwell Street. Redevelopment had edged them out and Azumaya needed more production space for expanding sales. The brothers sold their Golden Gate building, took the $40,000 to buy the new equipment and construct a 40-by-120 foot building to which they soon added another 30-by-120 feet. In 1973 they added noodles to their product line and downscaled the size of their packaged tofu from 21 ounces to 16 ounces for supermarkets.

"In 1975 they began shipping tofu out of state, a smart move apparently, as in 1983 about 50% of Azumaya sales were out of state. In 1978 noodle production represented only 20% of their business but by 1983 pasta madness had blossomed and noodles are half their wholesale business. The company began to grow fast. By 1978 Azumaya's gross sales topped $1 million; by 1980 their tofu production was 48 bushels [60 lb each] of soybeans a day, 6 days weekly, or about 43,000 pounds of tofu every week.

"In late 1979 Azumaya purchased 2½ acres of land and began the process of moving into their present, very modern plant. Once installed at Burke Avenue, Azumaya introduced pasteurization to obtain a longer shelf life for their widely, and increasingly wider, distributed tofu. Tofu lovers in Illinois, Missouri, Oregon, Georgia, and Massachusetts are now able to buy Azumaya brand tofu." Regular and firm tofu are code dated for 21 days, silken for 30 days. Azumaya investigated vacuum packaging but dismissed it because they found it couldn't produce a dependably long shelf life and it tended to compact the tofu, making the texture undesirably dense; a 19-ounce block ended up weighing only 16 ounces after the 2-hour treatment.

"Once a year Jack travels to Japan to monitor the latest tofu and noodle equipment innovations." His tofu equipment can now process 18 bushels (1,080) lb of dry soybeans an hour to yield 3,000 pounds of tofu an hour (yield = 2.77). Last year Azumaya switched from the Sweco vibrating screen to the traditional roller extractor. A detailed discussion is given of Azumaya's progressive employee benefit package, including medical insurance, bi-annual bonuses, pensions, and profit sharing. In total in 1982, these benefits "cost Azumaya $40,000 for medical insurance, $120,000 for pensions and profit sharing, and $45,000 in bonuses and raises–$2,928.57 per employee, to be exact. With a program as comprehensive as this, it is not too surprising that Azumaya operates productively and it doesn't have a union, nor is likely to."

Photos show: Three views of the inside of the plant. Azumaya's products. John, Dorothy, Aya, and Jack Mizono.

7834. **Product Name:** [Torigoe Gold Tempeh (Semi-Prepared Fingers, or Patties)].
Foreign Name: Goorudo Tenpe / Gold Tempe.
Manufacturer's Name: Torigoe Seifun (Torigoe Flour Milling Co.).
Manufacturer's Address: 6-5-2 Hakozaki-Futo, Higashi-ku, Fukuoka, Kyushu 812, Japan. Phone: 092-651-3269.
Date of Introduction: 1983 June.
Ingredients: -
New Product–Documentation: See next 2 pages. Talk with and Label from Kazuhiro Takamine, from the R&D Dept. of Torigoe Flour Milling Co. Ltd. 1984. Feb. 5. This was Japan's first commercial tempeh product, launched by Torigoe in June 1983. The 'tempeh fingers' were dipped into a batter, dusted with bread crumbs, packed in a shallow tray, together with 2 packets of tartar sauce, and sold frozen. The consumer would then deep fry them to serve crisp and crunchy with the sauce. The patties were made by pressing the ground trimmings from the patties into patties, then proceeding as for the fingers.

Five-page color brochure (in Japanese) titled "Torigoe Tempe." Brought by Kazuhiro Takamine. 1984. Feb. 4. New product. Beloved in the 21st century, born from soybeans, 100% fermented natural food. Shows tempeh fingers, patties, and cubes–with recipes.

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 66-68. Soya Bluebook. 1987. p. 95.

7835. Wang, H.L.; Swain, E.W.; Kwolek, W.F.; Fehr, W.R. 1983. Effect of soybean varieties on the yield and quality of tofu. *Cereal Chemistry* 60(3):245-48. May/June. [14 ref]
• ***Summary:*** Tofu was made on a laboratory scale from five U.S. and five Japanese soybean varieties. Protein content of the soybeans was positively correlated with the protein content and the protein:oil ratio of the resulting tofu (dry basis). The tofu yield was positively correlated with protein recovery during processing, but not with the protein content of the soybeans. Varieties that have a light hilum and high protein content are preferred for making tofu.

Table 1 (p. 246) shows the physical and chemical properties of 5 U.S. and 5 Japanese soybean varieties. The U.S. varieties (Coles, Vinton, Weber, Hodgson, and Corsoy) contain, on average (on an as-is basis) 42.18% protein (range 40.8% to 45.1%), 18.8% oil (range 17.9% to 19.4%), and 19.24 gm per 100 beans (range 17.74 gm to 24.71 gm for Vinton). The Japanese varieties (Kitamusume, Tokachi-Nagaha, Wase-Kogane, Yuuzuru, and Toyosuzu) contain, on average (on an as-is basis) 42.84% protein (range 40.8% to 45.2%), 18.0% oil (range 17.3% to 19.4%), and 23.69 gm per 100 beans (range 17.53 gm to 35.51 gm for Yuuzuru). Thus, the American soybeans contain, on average, 1.5% less protein and 4.6% more oil than their Japanese counterparts,

and the weight per 100 seeds is 18.2% less. Address: 1-3. NRRC, Peoria, Illinois. 4. Dep. of Agronomy, Iowa State Univ., Ames.

7836. Kanasugi, Goro. 1983. Re: Thanks for meeting with the Natto Association in Japan to discuss tempeh. Letter to William Shurtleff at Soyfoods Center, July 5. 1 p. Handwritten, with signature. [Jap]
• ***Summary:*** On 2 July 1983 an interesting meeting was held at the Natto Association headquarters in Tokyo, Japan. Five leaders of the Association, Dr. Teruo Ohta and Kiyoaki Katoh from the National Food Research Institute (NFRI), William Shurtleff from Soyfoods Center, and Mrs. Yasuko Torii (author of books on natural foods and farming) met for 6 hours to discuss developments with tempeh in the USA and strategies and tactics for introducing tempeh to Japan. This is a thank-you note for attending that meeting and the dinner afterwards. Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan. Phone: 048-644-1323.

7837. Tsuchiya, Kanji. 1983. Gusseted foil retort pouches (Interview). Conducted by William Shurtleff of Soyfoods Center in Japan, July 6. 1 p. transcript. [Eng]
• ***Summary:*** In Japan this pack is called a "stand pack." The process patent and machines are owned by Robert Bosch GmbH in West Germany. The packaging and printing in Japan is done by Toppan Insatsu, a big printing company. There is very little problem with leakers outside the filling plant. The product can be stored at room temperature without problems, especially if it is hot packed (at 95ºC). The filling process resembles that for Tetra Pak, but no hydrogen peroxide (*kasanka suiso*) is used. If it is not hot packed, it is usually retorted, like a can. The laminated plastic material will withstand this. Marusan was the first in Japan to introduce this pack, in about 1981. They now have 2 machines, each putting out 6,000 packs an hour.

Tsuchiya thinks this is the *best* pack for China and other Third World countries. The hot pack product would have a storage life at room temperature of 1 month without refrigeration; only 1 in 10,000 would spoil. Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

7838. *SoyaScan Notes.* 1983. Early history of fermented black soybeans in China and Japan (Overview). July 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Fermented black soybeans are a fermented, salted soybean product that comes in small soybean-sized chunks that are very dark brown or black in color, fairly firm, and very salty. Used as a seasoning, fermented black soybeans have many names worldwide. In English cookbooks they are often called "fermented black beans" or "salted black beans." In China they are called Douchi or Doushi (in pinyin), Tou-shih or Toushih, Tou-ch'ih, or Dow-si or Dow See (in Canton). They are China's oldest known soyfood. In 1972 fermented black soybeans were unearthed from a Han dynasty tomb–Mawangdui #1–in the eastern suburbs of Changsha in Hunan, China. They were dated from the Western Han Dynasty (206 B.C. to 24 A.D.). Daitokuji Natto are said to have been introduced to Japan by Ikkyu Sojin (lived 1396-1481), a famous priest and Zen master of the Rinzai sect, and a literary figure noted for his eccentricities. In 1474 he became head of Daitokuji temple, located in the northern part of Kyoto. It is said that he learned the method for making fermented black soybeans originally transmitted from China and passed it on to his students and disciples, one of whom founded Ikkyu, a small shop that in the 1980s was located just outside the gates of Daitokuji's huge compound. Ikkyu, the first commercial producer of Daitokuji natto, has carried on the tradition to this day, largely as a secret transmission.

Note: This is the earliest document seen (Nov. 2011) which states that the tradition of making Daitokuji natto is said to have been started by Ikkyu Sojin (lived 1396-1481).

Another traditional maker of these Kyoto-style fermented black soybeans is Ikkyuji, located south of Kyoto. It is said that the priest Ikkyu left Daitokuji for Ikkyuji and took the fermented black soybean tradition with him. Ikkyuji's fermented black soybeans, a unique product, are called *Ichimei Ikkyuji Natto.* In 1984 about 330 pounds a year were made in traditional wooden vats for tourists.

Fermented black soybeans (specifically *Daitokuji natto*) have long been a part of the *Shojin Ryori* (Buddhist Vegetarian Cookery) tradition in Japan; they are best known at the temple named Ikkyuji (also called Ikkyu-dera).

Note: Most of the above information was collected by William Shurtleff and Alfred Birnbaum in 1978 during visits to several old manufacturers of fermented black soybeans in Japan.

7839. *Zenkoku Shokuhin Shinbun* (*National Food News*). 1983. Tenpe nattô kenkyû keika to suishin kikaku [Progress in research on "tempeh natto" and plans to make it succeed]. No. 456. July 11. p. 6. [Jap]
• ***Summary:*** Dr. Ohta studied tempeh for 30 years under Dr. Masahiro Nakano. The Japanese Natto Association is trying to obtain a patent on the tempeh making process, and hopes to publish a tempeh cooking pamphlet. Address: Japan.

7840. *Zenkoku Shokuhin Shinbun* (*National Food News*). 1983. Shisatsu Haken-in kikoku hôkoku Zennôren Tenpe kenkyû-kai [The Japan Natto Association's Tempeh research group presents its homecoming report after being sent to study tempeh]. No. 456. July 11. p. 6. [Jap]
• ***Summary:*** On 18 June 1983 the group had a regular meeting and listened to the report of the tempeh study group that has just returned from Indonesia. Mr. Ose, the chair, told the members that it is unfortunate that the mass media are doing stories on tempeh before it is firmly established in and

© Copyright Soyinfo Center 2014

adapted to Japanese culture. He asked members of the group to please refrain from publicizing tempeh before it is ready.

7841. Ota, Mr. 1983. Mitsubishi Trading Company's interest in and involvement with soymilk (Interview). Conducted by William Shurtleff of Soyfoods Center, July 18. 2 p. transcript.

• ***Summary:*** Mr. Ota is in the USA trying to find a company to do a joint venture making soymilk in America, for two purposes. (1) To sell powdered soymilk in Japan, especially to the baking industry, and especially small bakers, who cannot buy liquid soymilk in bulk. (2) To sell soymilk in USA to help offset or underwrite the costs of (1).

In Japan, Marusan, Kibun, and Mitsubishi all have the same installed capacity for soymilk production.

Recently Kibun, a relatively small company, underwent a severe cash flow crisis by overdoing their expansion. So they had to turn to Kamogawa Kikai, a much larger company, and ask them to make most of their soymilk. Kamogawa is a Kibun associated company. I think Kibun makes only 30% of their own milk. Kamogawa can borrow money much more easily than Kibun. Marusan is also vulnerable for the same reason.

Mitsubishi Shoji (the Trading Co) thinks that Meiji will eventually be the strongest soymilk supplier in Japan. All soymilk makers can be divided into three major types: (1) Smaller companies making soymilk as one of various products (Marusan, Kibun), (2) Dairy Companies (Meiji, Morinaga, Yukijirushi), and (3) Soft Drink and Beer Companies (Kirin, etc.).

All soymilk makers in Japan are now making big profits. The ex-factory production and overhead costs for one 200-ml pack of soymilk, including the package itself is about 25 to 30 yen ($O.105 to $0.126). Of this, by far the biggest portion is the carton, and a Tetra Brik carton costs about 10 yen ($0.042); it costs slightly less for big manufacturers who have more bargaining power to negotiate with Tetra Pak. Mitsubishi says that in most cases there is no need to sell soymilk in Tetra Pak in Japan, and predicts that many companies will soon abandon it for less expensive packaging, such as Pure-Pak, which costs about half as much as Tetra Pak. Meiji will be strongest for three reasons: 1. They have very good dairy experience and dairy distribution routes. 2. They can easily use Pure-Pak or have big bargaining power to get lower Tetra Pak Prices. 3. The head of the company, Mr. Shimaura, wants to greatly expand Meiji's soyfoods operations.

Japanese have three basic beliefs conducive to soymilk sales that Americans don't have. 1. Plant protein is better than animal protein. 2. Alkaline foods are good for health. 3. Soyfoods are good for you.

In the old days (pre-1960s), soymilk didn't taste good, but it was thought to be good for you. Samurai drank soymilk in Kyushu. The big improvement in soymilk flavor has bean one major reason for its recent rise in popularity.

Nowadays Kibun and Marusan are doing lots of TV advertising. There are even articles in porno magazines claiming that drinking soymilk will increase one's sexual energy and potency. The vitamin E in soymilk also is thought to help this and to slow the aging process.

Japanese consumers of soymilk tend to be those with an above average level of education. Many drink soymilk for rational reasons, which (says Mitsubishi) is why most prefer dairylike to plain. In Japan plain is called *Jun* (pure) and dairylike is called plain.

Soymilk was Mitsubishi Kasei's first food product–ever! Mitsubishi bought equipment and know how from House Shokuhin (when?). Mitsubishi sells lots of soymilk to other companies, who package it under their own brand.

Meiji's soymilk production process is almost entirely automated. Only 3 workers are required. One to discard defective packages, one to package cartons in crates, and one for general checkup and inspection.

IOM (Indiana, Ohio, Michigan) soybeans have high moisture content. Kibun uses IOM, which is why they do not make plain (*Jun*) soymilk. But IOM cost $295 a tonne (metric ton) whereas the better quality Beeson, an identity preserved soybean, cost $506 a tonne, or about 71% more. Yet from the farmer, both cost the same. The difference is mostly in the handling costs.

In Japan there is no formal/JAS distinction between whole soy flour and powdered soymilk. They are used interchangeably and both called "soymilk." Many companies in Japan now make one of these two products, as for use in breads, noodles, etc. The sales in 1982 were 3 billion yen ($1O.98 million), increasing to an expected 7 billion yen in 1983. Because of high energy costs for drying soymilk in Japan, Mitsubishi is considering producing powdered soymilk in America, using Beeson soybeans. Whole soy flour is called *zenshi daizu-fun* = full-fat soy flour. Virtually all of the Tetra Pak soymilk in Japan is sold refrigerated–even though it need not be. The canned soymilk may or may not be refrigerated. Address: Mitsubishi Shoji.

7842. *Toyo Shinpo* (*Soyfoods News*). 1983. Beikoku de no daizu shokuhin no genjô. Beikoku wa ima tenpe buumu. Nihon demo chikaku ryûkô. Amerika de katsuyaku-chû no Shurtleff fusai ni kiku [The current status of soyfoods in America, where there is now a tempeh boom. Will it soon become popular in Japan? Let's ask the Shurtleffs, who are at the center of the activity in America]. July 21. p. 30-31. [Jap]

• ***Summary:*** Photos show Shurtleff and Aoyagi. Many other photos (from Soyfoods Center color slide sets) show tempeh and other soyfoods in America.

7843. *Toyo Shinpo* (*Soyfoods News*). 1983. [Tofu shop soymilk: Many have a soymilk dispenser that is succeeding]. July 21. p. 36. [Jap]

© Copyright Soyinfo Center 2014

• ***Summary:*** 90 tofu shops in Kobe have a soymilk dispenser. Customers can drink soymilk on the spot or buy 1 liter of soymilk for 380 yen, including the cost of the container (polyethylene).

In Aichi, soymilk is most popular among people in their 40s, Most like a paper pack rather than a can, plastic, etc.

7844. Noda, F.; Sakasai, T.; Osaki, K.; Akao, T. 1983. [Continuous quick brewing of soy sauce]. *Japanese Patent* 1,159,337. July 25. [Jap]*
• ***Summary:*** Attempts to shorten the time for soy sauce production have included a quick hydrolysis of raw materials with no or low salt content; another was a process divided into anaerobic lactic acid fermentation, aerobic yeast propagation, and anaerobic alcohol fermentation.

7845. **Product Name:** [Dried Natto].
Foreign Name: Hoshi Nattô.
Manufacturer's Name: Azuma Shokuhin K.K.
Manufacturer's Address: Tochigi-ken, Japan. Phone: 0268-24-9313.
Date of Introduction: 1983 July.
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 80 gm. in plastic bag. Retails for ¥180 in Tokyo (July 1983).
How Stored: Shelf stable, 6 month shelf life.
New Product–Documentation: Product with Label

purchased in July 1983 by William Shurtleff at a department store in Tokyo, Japan. The label, printed black on red, is 1.75 by 4.5 inches wide on each side. The total package is 6 by 5 inches. Shelf life: 6 months. How to store: Keep in a sealed glass jar.

Back panel. Dried natto (*hoshi nattô*) has existed in Japan since ancient times. (Note: Natto was probably made in farmhouses, then sun-dried to preserve it). Now we make it in a modern factory. Eat it as *ochazuke* (put it atop a bowl of rice, then pour tea over it), or with beer. Or store it as an emergency food.

Note: As of Jan. 2012 the dry natto is still in the plastic bag, and smells fine.

7846. Fukushima, Danji. 1983. Fermented soy foods in the United States. *INTSOY Series* No. 25. p. 117-19. B.J. Irwin, J.B. Sinclair, and Wang Jin-ling, eds. Soybean Research in China and the United States (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** Although chemically hydrolyzed soy sauce is widely consumed, fermented soy sauce has an annual growth rate of 15%. La Choy and Chun King, the two largest producers of chemical soy sauce, are assumed to have a combined annual production of 20,000 kiloliters. Most of the fermented soy sauce is produced by Kikkoman Foods, Inc. and annual production has reached 19,000 kiloliters.

Soy sauce manufacturing consists of three main processes: koji making, brine fermentation, and refining. Major improvements in the soy sauce process are (1) high temperature short time cooking of the soybean flakes to increase the yield, (2) use of an artificial mutant of *Aspergillus sojae* which produces twice as much proteolytic enzyme, (3) use of automatic koji making equipment, and (4) use of *Pediococcus halophilus* and *Saccharomyces rouxii,* and proper temperature control during brine fermentation. Address: Kikkoman Foods, Inc., Walworth, Wisconsin.

7847. Hinode Tofu Co. 1983. Hinode summer series of tofu recipes (Leaflet). Los Angeles, California. 8 panels each side. Each panel: 7.5 x 12.7 cm.
• ***Summary:*** The 8 color recipes include: Fruit Smoothies, Tofu Cheese-less Pie, Fruit Salad with Tofu Dressing, Broccoli a la Hollandaise, Tofu Crab Quiche, Tofu Banana Nut Bread, Enchilada Tofu Casserole, Minestrone Soup.

On the last panel is a coupon: 15¢ off on your next purchase of Hinode Tofu. And: "If you know anyone else who would like a set of Hinode's Summer Series of Tofu Recipes, send a self-addressed, stamped envelope to: Hinode Summer Series, 526 Stanford Ave.,..." Address: 526 Stanford Ave., Los Angeles, California 90013.

7848. Hymowitz, Theodore. 1983. Germplasm collection, management, and evaluation: The subgenus *Glycine.* *INTSOY Series* No. 25. p. 69-70. B.J. Irwin, J.B. Sinclair,

© Copyright Soyinfo Center 2014

and Wang Jin-ling, eds. Soybean Research in China and the United States (College of Agric., Univ. of Illinois at Urbana-Champaign).

• ***Summary:*** "The genus *Glycine* Willd. is composed of two subgenera, *Glycine* and *Soja* (Moench) F.J. Herm. The soybean, *G. max* (L.) Merr., and its wild progenitor *G. soja* Sieb. and Zucc., together make up the subgenus *Soja.* Both species are annual and diploid with 2n=40, and hybridization between them can be readily effected. Together they form the primary gene pool of the cultivated soybean.

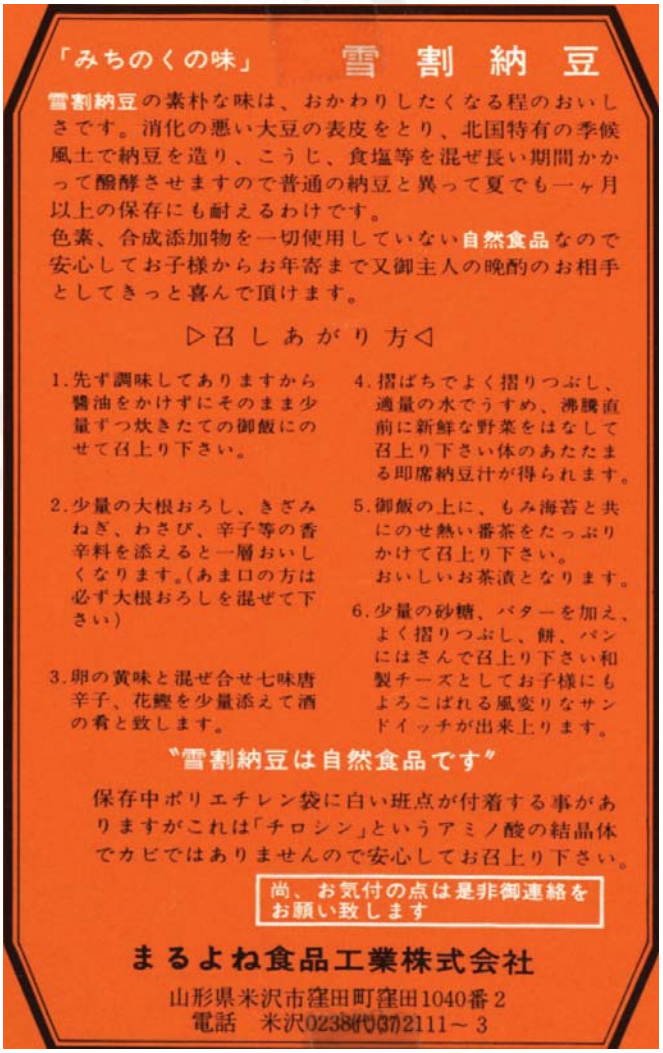
"The subgenus *Glycine* comprises seven wild perennial species: *Glycine canescens* F.J. Herm., *G. clandestina* Wendl., *G. falcata* Benth., *G. latifolia* (Benth.) Newell and Hymowitz, and *G. latrobeana* (Meissn.) Benth. are diploids (2n=40) native to Australia; *G. tabacina* (Labill) Benth. is predominantly tetraploid (2n=80) with occasional diploids, and distributed in Australia, Taiwan, and the Ryukyu Islands [Japan], as well as several countries in the South Pacific; and *G. tomentella* Hayata represented by tetraploid (2n=80) forms in China (Taiwan), the south coast of China and northern Philippines, and diploid, tetraploid, and aneuploid (2n=38, 40, 78, 80) forms in Australia. From a taxonomic standpoint the members of the subgenus *Glycine* also are candidates for gene exchange with the soybean, and therefore potentially useful for broadening the germplasm base of the crop.

"Preliminary investigations have shown that the perennial species carry resistance to diseases such as soybean rust, yellow mosaic virus, and powdery mildew. Physiological traits exhibited by perennial material such as drought tolerance, salt tolerance, and day neutrality also may be of potential use." Address: Prof. of Plant Genetics, Univ. of Illinois at Urbana-Champaign.

7849. **Product Name:** [Kikkoman Instant Tofu Miso Soup (Soybean Paste Soup with Tofu)].
Foreign Name: Tôfu Misoshiru.
Manufacturer's Name: Kikkoman Corporation.
Manufacturer's Address: Noda 278, Chiba-ken, Japan.
Date of Introduction: 1983 July.
Ingredients: Powdered miso, dehydrated tofu, dried seaweed, monosodium glutamate, powdered yeast extract, powdered dried bonito, dehydrated leek.
Wt/Vol., Packaging, Price: 1.5 oz (30 gm). Foil packet containing 3 individual foil packets. Makes 2/3 cup.
How Stored: Shelf stable.
New Product–Documentation: Label. 1983. 5.5 by 7 inches. Plastic packet. Brown, red, green, and yellow on white. Full color picture of wooden bowl of miso soup on tray. Individual foil packets inside are 2.75 by 4 inches. Brown, black and red on white. Picture of bowl of soup on front, instructions on back. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Distributed by Kikkoman Corporation, Noda 278, Japan." Text on label in both English and Japanese.

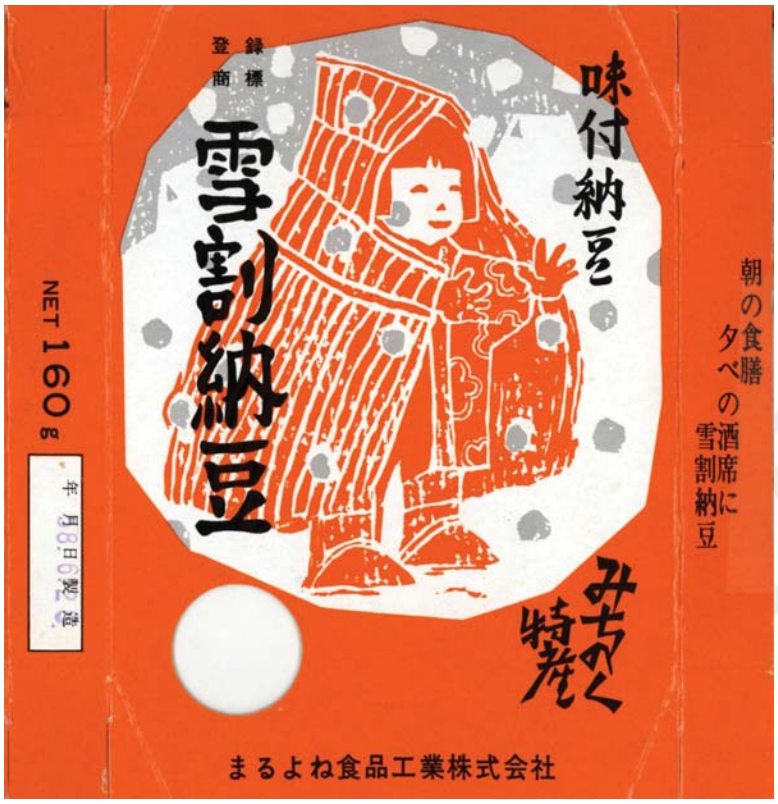
Note: This is the earliest known commercial soy product that uses dried-frozen tofu as an ingredient.

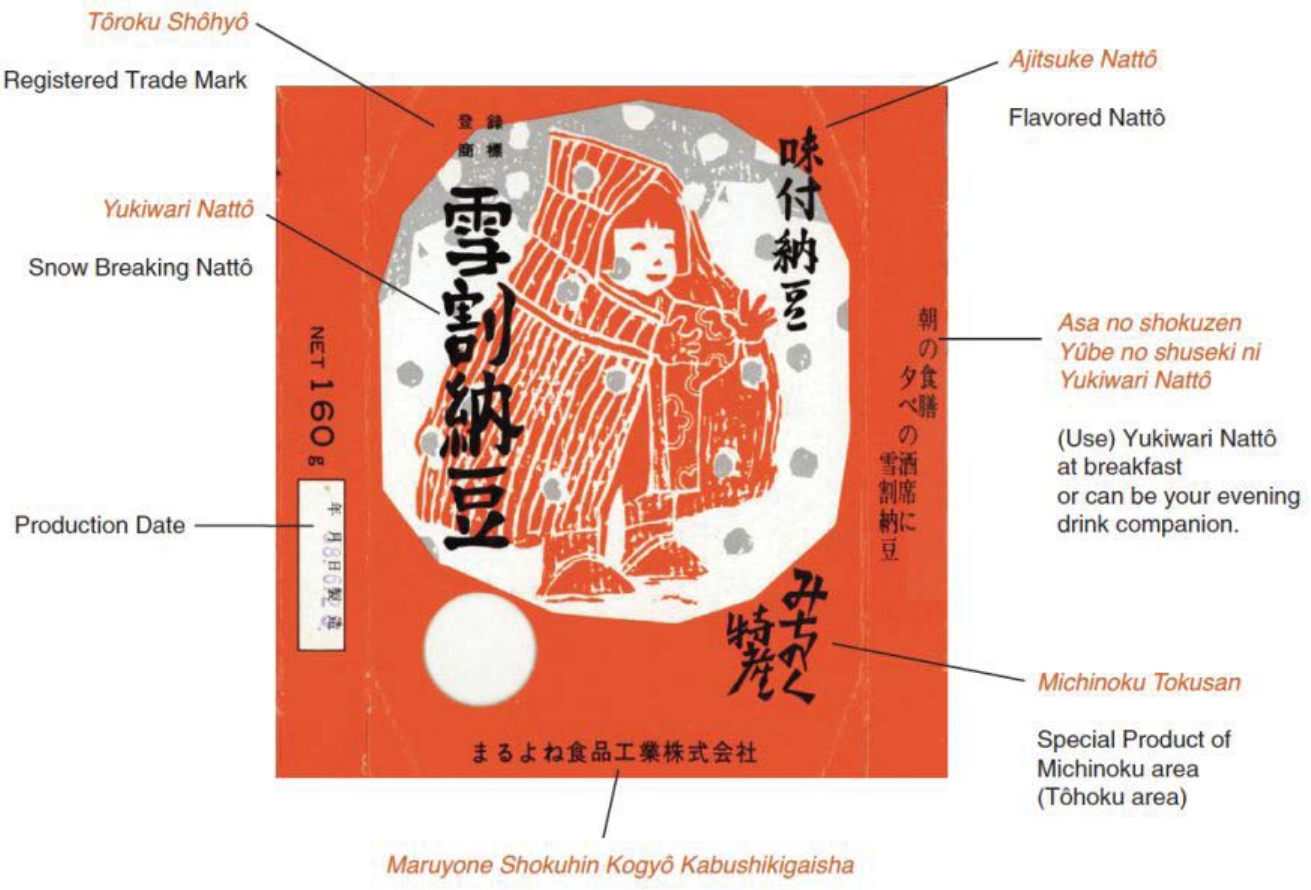
7850. **Product Name:** [Yukiwari Natto].
Foreign Name: Yukiwari Nattô.
Manufacturer's Name: Maruyone Shokuhin Kogyô K.K.
Manufacturer's Address: 1040-2, Kubota, Kubota-cho, Yonezawa-shi, Yamagata-ken, Japan. Phone: Yonezawa 0238 (main), (37) 2111-3.
Date of Introduction: 1983 July.
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 160 gm. Retails for ¥180 in Tokyo.
How Stored: Refrigerated.



New Product–Documentation: Product with Label purchased in July 1983 in Tokyo. Black and white on orange background. Paperboard box. Surprisingly, no ingredients are listed on the package. However the ingredients are probably water, soybeans, natto starter (*Bacillus subtilis*), rice (made

© Copyright Soyinfo Center 2014





© Copyright Soyinfo Center 2014

into koji using Aspergillus oryzae mold culture), and salt.

The front panel reads: Upper left, 4 small Chinese characters: Registered trademark (*tôroku shôhyô*). Down left side, 4 large bold Chinese characters: Yukiwari Natto ("snow-breaking natto"). Down upper right, 4 medium-size Chinese characters: Flavored / seasoned natto (*ajitsuke nattô*). Down far right, many small Chinese characters: Use yukiwari natto at breakfast, or it can be your evening drink companion (*Asa no shokuzen. Yûbe no shuseki ni Yukiwari Natto*). Lower right, 6 medium size characters: Special product of the Michinoku area [Yamagata prefecture, northeast prefectures (Tohoku Chiho), Japan] (*Michinoku tokusan*). Across the bottom, in many small characters is the name of the manufacturer, Maruyone Shokuhin...

The back panel reads: Taste of Michino-ku, Yukiwari Nattô.

The simple taste of Yukiwari Nattô is delicious and makes you ask for more. It has a one-month shelf life even in summer because, after removing the hard to digest outer hulls of soybeans to make it into nattô, we then add kôji and salt and ferment it for a long time. Since this natural food has no artificial coloring nor additives, it can be enjoyed by anyone from young kids to seniors–or your husband's drinking companion.

How to eat it:

1. It is already seasoned. You can eat it over freshly cooked rice without adding any shoyu.

2. Add a little bit of graded daikon, chopped green onion (*negi*), and wasabi or *karashi* mustard (a mixture of ground mustard seeds and horseradish; hotter than European mustard) to make it even tastier. If you have a sweet palate, please be sure to mix in graded daikon.

3. Mix with egg yolk, seven-spice red pepper (*shichimi togarashi*), and/or bonita flakes to make a side dish for your drink.

4. Grind well in your *suribachi* (traditional mortar), add some water and cook it in a pot, then just before it comes to a boil, sprinkle in some fresh vegetables to make an instant natto soup (*nattô-jiru*).

5. Serve it over a rice in a bowl, sprinkle on some nori, and add boiling hot bancha tea to make delicious *ochazuke.*

6. Add a bit of sugar and butter, then and mash it. Spread it on mochi or bread. It becomes a Japanese-style cheese-like food and this unusual sandwich will be enjoyed by kids.

Yukiwari Nattô is a Natural Food. Some white spots found in the polyester bag during storing, it is not a mold. It is called tyrosine (*chiroshin*), a type of amino acid so you can eat it safely.

Note: Ohta (1975, p. 228) says that *Goto Natto,* which appeared in the early 1600s, is the ancestor of Yukiwari natto; it appeared as a special / famous product (*meibutsu*) of Yamagata prefecture, Yonezawa-Chiho.

7851. Norin Suisan-sho, Nosan Engei Kyoku, Hatasaku Shinko-ka. 1983. Daizu ni kansuru shiryo [Statistics concerning soybeans]. Tokyo, Japan. 157 p. 26 cm. [Jap]

• ***Summary:*** This yearly report, published by Japan's Ministry of Agriculture, Forestry, and Fisheries (MAFF), is packed with detailed statistics on soybean production, trade, and utilization in Japan. The table on p. 129 gives statistics on miso production, shipments, and use of raw materials by prefecture and for Japan as a whole. In 1981 Japan produced 575,782 tonnes of miso and shipped 578,610 tonnes. Raw materials used were 14,417 tonnes of domestically grown whole soybeans, 167,539 tonnes of imported whole soybeans, 103,611 tonnes of polished rice, 24,667 tonnes of polished barley, 476 tonnes of defatted soybean meal, 71,325 tonnes of salt, and 96 tonnes of cornmeal (used mainly in Nagano and Hyogo prefectures). The top 5 miso producing prefectures were Nagano (164,510 tonnes; 28.6% of Japan's total), Aichi (54,529), Niigata (38,156), Aomori (28,602), and Hokkaido (25,908). The source of these statistics is: Shokuryô-cho, Kakô Shokuhin-ka, Kome Mugi Kakô Shokuhin Seisan Dotai, Tokei Chosa.

The table on p. 130 gives similar statistics on shoyu for 1981. In 1981 Japan produced 1,190,618 kiloliters (kl) of shoyu and shipped 1,118,799 kl. Raw materials used were 6,473 tonnes of whole soybeans, 175,205 tonnes of defatted processed soybean meal (*dashi kakô daizu*), 177,407 tonnes of wheat, 204,777 tonnes of salt, and 80,642 kl amino acid liquid (*amino-san,* either purchased or made on site). The top 7 shoyu producing prefectures were Chiba (424,498 kl; 35.7% of Japan's total), Hyogo (203,374) Aichi (59,201 kl), Kagawa (45,430 kl), Fukuoka (36,575 kl), Oita (31,860 kl), Mie (30,354 kl), The source of these statistics is the same as for the miso statistics, above.

The table on p. 132-33 gives statistics on consumption of shoyu (in 100 ml), miso (100 gm), whole soybean foods (yen), tofu (cakes = *cho*), aburagé and ganmodoki (yen), natto (yen), and other soyfoods (yen) from 1963 (Showa 38) to 1981. Under shoyu, miso, and tofu is given the amount of money spent (*kingaku*), the quantity purchased (*sûryô*), and the price. Annual shoyu consumption per household has decreased from 30.5 liters in 1963 to 16.3 liters in 1981. Annual miso consumption per household has decreased from 18.4 kg in 1963 to 12.1 kg in 1981. Tofu consumption per household has remained about constant, with 87.3 cakes in 1963 and 86.9 cakes in 1981. A breakdown is also given for each food by annual household income, with 5 income levels. One grouping is for all households (including those with a retired head of household or on welfare) and the other is only households with at least one working member. In each case, the higher the household income, the greater the consumption. In the case of tofu, for example, households with an annual income of less than 2.65 million yen consumed 76.1 cakes of tofu, while households with an annual income of more than 5.8 million yen consumed 99.3 cakes. Next is a breakdown by age of head of household.

© Copyright Soyinfo Center 2014

Generally, the younger the head of household, the less the consumption. In the case of tofu, households whose head was 24 years or younger consumed 55.5 cakes/year, while households whose head was age 60-64 consumed 95.4 cakes. The source of these statistics is the *Kakei Chosa Nenpo* (*Sôri-fu, Tôkei-kyoku*).

The table on pages 134-35 shows consumption per household by geographical area of the same foods as the previous table. Geographical areas include: all of Japan, all cities, cities with 50,000 or more population (broken down into large, medium, and small), cities with less than 50,000 population, towns and villages (*machi* and *mura*), 14 major regions, and large cities. Note: Statistics by prefecture are not given. In the case of tofu, the highest consumption is cities with less than 50,000 population (92.0 cakes), while the lowest is in medium-sized cities with more than 50,000 population (84.2 cakes). The regions with the highest tofu consumption are Tohoku (the northeast prefectures; 101.9 cakes) and Chugoku (southwest provinces; 98.1 cakes), while the lowest two are Hokkaido (58.3 cakes) and Okinawa (72.3 cakes). The cities with the highest annual tofu consumption per household are Toyama city (118.9 cakes), Morioka city (118.4), Yamaguchi city (107.9), Matsuyama city (102.9), Fukushima city (102.8), Tokushima city (102.0), Fukui city (100.7). The source of these statistics is the same as for the statistics on p. 132-33.

Tables on pages 136-39 give a detailed nutritional analysis of soybeans and each of 23 soyfoods made in Japan. The following minerals are listed: calcium, phosphorus, iron, sodium, and potassium. Vitamins: A (retinol, carotene, international units), B-1 (thiamine), B-2 (riboflavin), niacin, and C. Soybeans grown in Japan contain, on average, 35.3% protein and 19.0% fat, compared with 33.0% protein and 21.7% fat for soybeans grown in the USA, and 32.8% protein and 19.5% fat for soybeans grown in the China. Address: Tokyo, Japan.

7852. **Product Name:** [Natto].
Foreign Name: Nattô.
Manufacturer's Name: Seiyu Stooa K.K. (Marketer-Distributor). Made by Asahi Shokuhin K.K.
Manufacturer's Address: (1) Seiyu: 1-18-21, Minami Ikebukuro, Toshima-ku, Tokyo, Japan; (2) Asahi Shokuhin: 1911 Naga-cho, Mochida-aza (?), Oo-aza, Gyôda-shi, Saitama-ken, Japan.
Date of Introduction: 1983 July.

© Copyright Soyinfo Center 2014

Ingredients: Whole soybeans.
Wt/Vol., Packaging, Price: 100 gm. Retails for ¥38 in Tokyo (July 1983).
How Stored: Refrigerated.
New Product–Documentation: Product with Label purchased in July 1983 by William Shurtleff at a Seiyu department store in Tokyo, Japan. The label, printed brown and pea green on white, is 5 by 6 inches wide. At the far right are the names and addresses of the marketer and the distributor. To the left of that, in white characters on a pea-green background: Small seeded, whole soybeans. Below that is the weight (100 gm) and Seiyu's price (38 yen). The two large brown characters in the center read (from top to bottom): "Natto." To the left of that, in white characters on a pea-green background: Mustard [packet] included. Below that, in smaller brown characters: Refrigeration: Please keep it in a refrigerator and eat it as soon as possible. At the far left, in small brown characters: Contains no chemical additives, such as preservatives or artificial coloring. We try our best for good quality. If, by chance, you find any bad product, please take it to the store where you bought it so that they can give you a replacement.

7853. **Product Name:** [Vanilla Safflano (Soymilk Ice Cream)].
Foreign Name: Safflano Tônyû Aisu.
Manufacturer's Name: Soken-sha.
Manufacturer's Address: 724 Katakura-cho, Yokohama, Kanagawa-ken 221, Japan.
Date of Introduction: 1983 July.
Ingredients: Soymilk, kappuring sugar, unrefined sugar, safflower oil, stabilizer, vanilla bean, lemon extract.
Wt/Vol., Packaging, Price: 140 ml x 3 per pack.
How Stored: Frozen.
New Product–Documentation: Label. 1983, undated.

Drawing of Jack and the Beanstalk on the box. Shurtleff & Aoyagi. 1985. Tofutti & Other Soy Ice Creams. p. 94-95.

7854. *Toyo Shinpo* (*Soyfoods News*). 1983. [Mitsubishi this year will increase the number of its soymilk vending machines in Japan to 3,000]. Aug. 1. [Jap]
• ***Summary:*** They now have 2,000.

7855. Richie, Donald. 1983. Tofu cooking: The Asian bookshelf. Book reviews / features. *Japan Times*. Aug. 6 (8/6/83).
• ***Summary:*** "Tofu is certainly the single Asian food best known in the West" [assuming that soy sauce is considered a seasoning rather than a food].

Tofu originated in China, where it is said to have been invented by an official of the T'ang dynasty [618-907].

"During the Han dynasty [202 BC to AD 220] it is said, overly honest and/or underpaid government staff were called 'tofu officials.'

Note: There is an obvious contradiction here.

Tofu "first entered Japan during the Nara period [710-794] having been brought back by Japanese envoys. Since there were mostly priests tofu was a welcome adjunct to their diet. Buddhist vows prohibited their eating meat–and in the Zen sect they could not eat fish either.

"The earliest document concerning tofu in Japan shows that it was fully domesticated by 1183." In 1782 a best-seller, published in Osaka, was titled "One Hundred Rare Tofu Recipes" [*Tofu Hyaku-chin*].

In Japan, tofu is served in ways that "retain the delicate tofu taste." By contrast, in China, "tofu is often prepared with meat or fish and serves mainly as a nutritional base.

"The West had long known Chinese tofu but it was not until Japanese food became popular abroad that tofu became loved for itself. At the same time the health-food boom occurred and shortly after that appeared a most important tofu document, *The Book of Tofu* by William Shurtleff and Akiko Aoyagi. Tofu had arrived in the West." Address: Japan.

7856. *Toyo Shinpo* (*Soyfoods News*). 1983. [Gojiru]. Aug. 11. [Jap]
• ***Summary:*** Asia Protein is developing a Gojiru dry mix to add to miso soup.

7857. *Toyo Shinpo* (*Soyfoods News*). 1983. [The main reasons for Japan's soymilk boom]. Aug. 11. [Jap]
• ***Summary:*** Japanese are getting more interested in health. Concept of the healthy elite; the elite must be healthy. Influence of U.S. vegetarians. Popularization of long-life [Aseptic / UHT] packaging [which has a long shelf life, even without refrigeration]. The flavor of soymilk has improved greatly. Mass communications in Japan took an interest in soymilk. Japan's dairy milk industry (Meiji Nyugyo, etc.)

got interested in soymilk which gave a impetus to the new industry.

JAS [Japanese Agricultural Standards] were established for soymilk.

Note: The above are not in any particular order. They came out of a conference on soymilk.

7858. *Zenkoku Shokuhin Shinbun* (*National Food News*). 1983. Zennôren Ose kaichô kôki kôsô [Japan Natto Association's chief for the second half of the year, Mr. Ose, and his plan]. No. 458. Aug. 11. p. 1. [Jap]
• ***Summary:*** Mr. Ose would like to get a patent on the tempeh process which the association has developed.

7859. Torii, Yasuko. 1983. Re: New developments with tempeh and tofu in Japan. Letter to William Shurtleff at Soyfoods Center, Aug. 14. 2 p. Typed, without signature (carbon copy). [Eng]
• ***Summary:*** Tempeh: "(1) There was a seminar on soyfoods on Aug. 5. The topics were: 'Tofu and Japanese foods in the U.S.,' by Prof. Okubo. 'Does tempeh fit into the Japanese diet,' by Prof. Katsuyoshi Tsujimura of Tokyo. A party was held after the seminar to celebrate the 15th anniversary of the Soyfoods Development Association. Many businessmen showed interest in tempeh.

"(2) Mr. Kato of the Ministry of Agriculture [*Nôrinsho*] arranged for a meeting for Nihon Kogyo KK and Kyodo Press on Aug. 9. I prepared soy and okara tempeh, and Mr. Kato brought Torigoe's tempeh. According to Mr. Kato, articles on tempeh will be distributed to many local papers thru Kyodo Press. Nihon Kogyo seems to be interested in producing [tempeh] starter. A few researchers are going to visit the U.S. in September to attend a convention and they hope to visit some tempeh and tempeh starter factories in California. Is it possible to make such arrangements for them?

"(3) Mr. Sakata of Shibata Shoten [a publishing company] visited Natto Kumiai [Japan Natto Association] and attended the soyfoods seminar. A final decision concerning publication will be made in a few days.

"(4) Natto Kumiai has distributed tempeh cultures to some members to study production. A meeting is scheduled in September and I was asked to attend and talk about tempeh."

Also discusses: Publication of The Book of Kudzu in Japanese. The Book of Tofu on NHK-TV. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

7860. Kanasugi, Goro. 1983. Re: Work with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, Aug. 23. 2 p. Typed, without signature. [Jap]
• ***Summary:*** Ose Noboru, head of the Natto Assoc. is very ill so work to introduce tempeh to Japan is not advancing well. In 1981 Teruo Ohta brought tempeh back from Indonesia and introduced it to the Natto Assoc. in May when he lectured about it at Hanamaki hot springs (*onsen*) in Iwate prefecture. In Sept. 1981 he presented another lecture on tempeh to the Association at Yamanashi prefecture. In May 1983 at the Ueno restaurant (*Seiyoken*) in Tokyo the Natto Assoc. decided to pursue tempeh research and popularization, including recipe testing. Ohta and Kanasugi will be advisors on the project. Mr. Ebara is in charge of tempeh cultures. In June 1983 the Natto Association sent a team of 3 men to Indonesia to study tempeh. Mr. Kanasugi, Mr. Hisao Nagayama (a natto historian), and Mr. Kikuo Chiba spent 5 days in Jakarta, Bogor, and Yogyakarta, looking at tempeh production and visiting KOPTI. The trip was successful and on their return (on June 18) they presented a report. In July the Natto Assoc. founded a research laboratory in Omiya city (Saitama prefecture) and at the end of July it started to produce tempeh spores for members of the Association only, and (perhaps) to introduce tempeh as "tempeh natto" in Japanese confections and as a meat extender. The year 1983 has been proclaimed as the "first year of tempeh in Japan" (*Tenpe Gannen*). Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan. Phone: 048-644-1323.

7861. Ohsawa, Lima. 1983. "Tamari" ni tsuite [Re: Concerning the word "tamari"]. Letter to Bob Kennedy, President of Chico-san, Inc. in California, Aug. 24. 2 p. Typed, translation of original letter only. [Jap]
• ***Summary:*** This letter was written to Bob Kennedy in response to his request for information on the origins of the use (actually misuse) of the term "tamari" by George Ohsawa and the macrobiotic movement. The translation is by Akiko Aoyagi of Soyfoods Center.

"In about 1958 or 1959 George Ohsawa gave a lecture at a university in Hamburg, West Germany. The lecture hall was packed with some 400 to 500 people. Among them was a young man whose name I don't clearly recall (perhaps it was Egel?). He was running an organic school in Germany. After the lecture he came to Mr. Ohsawa and earnestly enquired about various aspects of the Unique Principle.

"At that time there was also some talk about shoyu. As soon as he tasted this shoyu, he registered the word 'shoyu' as his own trademark and brand name, so that only he could sell it under this name. We came to know about this later and thought that it was a terrible thing for him to do. We were troubled by his action, for in Germany the law concerning registered trademarks was very strict. Therefore, in Germany, we were unable to call shoyu by its proper name, 'shoyu.' Out of sheer necessity, we decided to call shoyu by the name 'tamari.' After that, people in Europe started to call shoyu by the name 'tamari.'

"In Japan we call the liquid from soybean miso by the name 'tamari shoyu,' and it has been used in fine restaurants and for high class recipes. It is a type of shoyu.

© Copyright Soyinfo Center 2014

"After this incident, shoyu came to be called tamari. People overseas started to become familiar with the product and its new name, and they came to be used regularly." Address: Tokyo, Japan.

7862. Belleme, John. 1983. Re: Problems at American Miso Co. Progress on white miso. Letter to William Shurtleff at Soyfoods Center, Aug. 30. 1 p. Typed, with signature on letterhead.
• ***Summary:*** After a year of confusion and misunderstanding, the problems at American Miso Co. may be nearing a final resolution. About three months ago, John hired a lawyer. A draft of the final contract between him and the majority shareholder has been passed back and forth recently. He hopes it will be signed in the near future.

John has learned a great deal about white miso through constant experimentation–and very little from Japanese correspondence. He now understands the basic process for making unrefrigerated white miso. At present, Great Eastern Sun, the miso company's sole distributor, is selling about 50,000 pounds of white miso annually. It does very well unrefrigerated, but needs to be refrigerated for long-term storage. Address: Route 3, Box 541, Rutherfordton, North Carolina. Phone: (704) 287-2940.

7863. **Product Name:** [Marusan Sukoyaka (Healthy) Tempeh].
Foreign Name: Marusan Sukoyaka Tenpe.
Manufacturer's Name: Marusan-Ai Co., Ltd.
Manufacturer's Address: Aza-Arashita, 1 Jungi-cho, Okazaki city, Aichi prefecture 444-21, Japan. Phone: 0564-45-3112.
Date of Introduction: 1983 August.
Ingredients: Soybeans, culture.
Wt/Vol., Packaging, Price: 250 gm vacuum pack.
How Stored: Frozen.
New Product–Documentation: Letter from Naoki Kawai. 1984. Gives a brief history of Marusan's work with tempeh. Their first commercial tempeh product was launched in Aug. 1983, a few months after Torigoe's tempeh product. Shurtleff & Aoyagi. 1985. History of Tempeh. p. 68-70. Soya Bluebook. 1987. p. 95.

Color leaflet. 1989, received. 5 by 7 inches. Full color. 4 panels. Front panel shows sliced tempeh, fried tempeh cutlets, and kabobs, and nori-wrapped tempeh fingers. Inside gives nutritional information. Back panel gives 6 Japanese style tempeh recipes with a color photo of each finished dish. Label received from Ebata sensei. 1989. Aug. 4.25 by 3.12 inches. Green on white. Self adhesive. "Fermented soyfood. Please store at -18ºC." Illustration of 4 soybean leaves. Note: This tempeh is quite thick, 1 to 1 1/8 inches thick.

Form filled out by Naoki Kawai. 2001. June. Marusan-Ai stopped making tempeh in 1990. Mr. Kawai still works for Marusan-Ai; the address has not changed.

7864. **Product Name:** [Soy Harmony Powdered Soymilk {With Added Vitamins and Methionine} (Prune, or Royal)].
Manufacturer's Name: Nihon Harmony K.K.
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1983 August.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Toyo Shinpo. 1984. Feb. 21. It can be added to hamburger, meatballs or other meat dishes to give more protein or made into a drink or dessert. 450 gm can costs 4,000 yen.

7865. Oshikiri, Susumu. 1983. Okara o shuzai to suru shokuhin no seihô [Process for manufacturing a food in which okara is the main ingredient (Okara tempeh)]. *Japanese Patent Application* 155,358. Application filed 24 Aug. 1983. [Jap]*

7866. Shurtleff, William. 1983. Log of soyfoods research trip to Hong Kong, China, Singapore, and Japan: May 29 to July 10, 1983 (Unpublished report). Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 117 p. Aug. Unpublished manuscript.
• ***Summary:*** Contents: Hong Kong: K.S. Lo and Vitasoy. May 29 (Sunday)–Plane from Hong Kong to Guangzhou City (Canton) in Guangdong (Kwantung) province. China: Guangzhou (May 29-30), Zhengzhou, Beijing, Harbin, Beijing #2 (Scurlock, Chen Xi-Hau, Joe Rakosky, Terrence Foley, local markets, vegetarian deli). Singapore: STS and Anders Lindner, Alan Yeo, American Soybean Association (Don Bushman, Sabrine Lee, Lars Wiederman).

Japan: Seiyu department store, Kibun, ASA Tokyo (Ms. Kojima), Kanji Tsuchiya, Japan Soymilk Assoc., Sano Rinji, Kikori, Prasad and natural foods, Goro Kanasugi and tempeh, Tsuchiya soymilk #1, Kikkoman at Noda (Yokotsuka #1, Mizunuma, Plant #6 modern, Yokotsuka #2, Goyo Gura, Noda Museum, Noda Library, Mr. Ichiyama), Morinaga, Kikkoman Tokyo, Japan Packaged Tofu Assoc., Natto statistics, Asahimatsu, Natto-tempeh meeting, Mr. Katoh, Nakano Masahiro, Mr. Iitsuka of Kikkoman, Daizu Shokuhin Kaihatsu, Tsuchiya #2, Nagayama, soynuts, oil association, kinako, Ishige, Mr. Mori and soy sprouts, Katoh, Arai-san, Kodansha, Nagayama and kinako, Dr. Nakano #2, Arai shoyu, Tsuchiya #3, Tenmi. Address: Lafayette, California.

7867. Shurtleff, William; Aoyagi, Akiko. 1983. The book of tofu. 2nd ed. Berkeley, California: Ten Speed Press. 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. Aug. 28 cm. [321 ref]
• ***Summary:*** Three parts of this new edition have been extensively revised and updated: (1) "Tofu Makers in the West" (p. 313-16) has been updated and now includes 310 tofu producers in the Western world (with the name, address,

© Copyright Soyinfo Center 2014

phone number, and contact person for each company), arranged by state or foreign country. This is the only tofu book containing such a directory.

(2) The "Bibliography" (p. 319-324) has been greatly expanded and updated. It now contains 321 publications on tofu, including all known scientific and nutritional journal articles, the 33 books about tofu written in North America since publication of the first edition of *The Book of Tofu* in 1975, and other key articles and books about tofu from East Asia and Europe, the earliest from Europe dating back to 1613!

(3) An updated listing of "People and Institutions Connected with Tofu" in the U.S. and around the world, including researchers, major tofu manufacturers in Japan, trade associations, publications, equipment dealers, and tofu apprenticeship programs.

The "Glossary" (p. 325-27) has been condensed to make space for the expanded bibliography and back matter. There is a new page about the Soyfoods Center (p. 333). The page "About the Authors" (autobiographical) has been expanded, and the photograph has been updated. "Sending Tofu to the Four Directions" (p. 335) and the inside rear cover have both been updated. Still contains 500 vegetarian recipes–both western and eastern style.

Note: A news release of 17 Aug. 1983 states: "The Book of Tofu, which introduced the Western world to tofu and inspired the founding of more than 200 tofu shops and soy dairies in North America, has sold 340,000 copies to date, making it the world's best-seller on this popular new 'protein source of the future.'" Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

7868. *Toyo Shinpo* (*Soyfoods News*). 1983. Tônyû paudaa [Soymilk powder; Kyushu Nyugyo {Kyushu Milk Co.} is developing it]. Sept. 1. [Jap]
• ***Summary:*** It has no soy or "beany" flavor and dissolves well.

7869. *Toyo Shinpo* (*Soyfoods News*). 1983. Tônyû paudaa [Marusan changed its name to Marusan-Ai in Jan. 1983]. Sept. 1. [Jap]
• ***Summary:*** The word "Ai" is written with the character meaning "Love." Marusan has also launched a new Matcha (green tea) soymilk, but Nisshin came out with that flavor first.

7870. *Toyo Shinpo* (*Soyfoods News*). 1983. [Japan soymilk sales in 1982 were 12,500 million yen, up 56% over 1981]. Sept. 1. [Jap]

7871. Tsuchiya, Kanji. 1983. Re: Soymilk in Japan. Letter to William Shurtleff at Soyfoods Center, Sept. 6. 1 p. Handwritten. [Eng]
• ***Summary:*** "Thank you for sending me your book with your letter. I am very glad you described the Tokyo Soy Meal-Nikkan soymilk process and my work."

Thank you also for telling other soymilk companies about me and my work. At the end of July I received a letter from Mr. Anders Lindner of Soya Technology Systems (STS) in Singapore. He asked if he could me meet here in Japan in September. I replied saying that would be fine. We have not yet decided a date. Sincerely,... Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

7872. Shurtleff, William; Aoyagi, Akiko. 1983. William J. Morse and Charles V. Piper: History of work with soyfoods. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 26 p. Sept. 10. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction: Transformation of soybean from curiosity to main crop, Morse key man. Early years (1884-1929): Birth and university, early breeding work under Piper at USDA, joint writings with Piper, *The Soybean* in 1923, tribute to Piper. The Dorsett-Morse expedition to East Asia: Purpose of expedition, 2 main objectives and minor objectives, participants and Washington, DC, contact (Ryerson), previous expeditions, departure, gear, Japan March-Oct. 1929, periodic writing, photos, collections, seasonal cycle, 2 trips to Hokkaido, 6 weeks in Korea, back to Japan until April 1930, Manchuria (Dairen) April-Oct. 1930, Dorsett ill, Morse's first trip to Korea, Morse letter to Burlison and American Soybean Growers Association, little soyfood in Manchuria, Dorsett to Peking, Morse's last trip to Korea, Morse's hectic 19-day trip to China, Morse back to Dairen, Morse to Japan Dec. 1930–Feb. 1931, Morse's return to USA Feb. 17, 1931, Dorsett's return March 27, trip a great adventure, strong friendship, 2 letters from Dorsett to Morse, logs, photos, and notebooks, special reports (*Soybeans in Manchuria* and articles for *Soybean Digest*), 4 major accomplishments of expedition, conclusion (a landmark). Later years in America (1931-1959): Return to USA, descriptions of his character, work in USA with soyfoods, continued breeding work, long-term results of collecting efforts not what they might have been, supporter of American Soybean Association, writing career, retirement, growth history of soybean crop, death at age 75 in 1959, tribute. Address: Lafayette, California. Phone: 415-283-2991.

7873. Hattori, Terumitsu. 1983. The soy sauce market in the USA (Interview). Conducted by William Shurtleff of Soyfoods Center, Sept. 19. ½ p. transcript.
• ***Summary:*** His rough estimate of market shares, including imports, is as follows: Kikkoman 40%. LaChoy 30%. Chunking 12%. Imports from Hong Kong, China, Taiwan, and Korea 9%. Imports from Japan 8%. Other USA HVP soy sauce 1-2%.

© Copyright Soyinfo Center 2014

The products imported from Taiwan, Korea, and China are about 90% Shinshiki shoyu [a mixture of HVP and fermentation], as judged by levulinic acid assays. He does no know when this started. If levulinic acid is in the shoyu, it contains HVP.

Three types of Pearl River Bridge soy sauce are now being imported to the USA: Light, dark, and mushroom. Only one (the light?) has little or no levulinic acid. In a month, he'll have more accurate data. Address: Kikkoman Marketing & Planning Inc., 50 California St., Suite 3600, San Francisco, CA 94111.

7874. Fruin, W. Mark; Shurtleff, William. 1983. A soyfoods training center network: Soyfoods technology transfer from the United States and Japan to East, Southeast, and South Asia. Palo Alto, California. 29 p. 28 cm.
• ***Summary:*** Contents: 1. Introduction. 2. Japan: Asia's leading source of soyfoods technology. 3. America: World's leading supplier of soybeans. 4. Soybeans in U.S.-Asian economic and trade relations. 5. The aims of this proposal. 6. Groups interested in expanding food uses of soybeans in Asia. 7. The Sri Lanka success story. 8. United States-Japan soyfoods technology transfer. 9. Project investigators, collaborators, advisors. 10. Conclusion.

"This proposal calls for research in East Asia and America leading to the development of a basic plan and strategy for the establishment of a network of soyfoods training centers in East Asia, starting in the Peoples' Republic of China, India, Indonesia, and Thailand. Numerous large organizations in Japan, the United States, and East Asia are vitally interested in this area. We intend to involve them in the development of the basic concept and its implementation."

Note: This Fulbright grant proposal was submitted on 28 Sept. 1983 to Ms. Jennifer Keefe, Program Officer, Council for International Exchange of Scholars, Eleven Dupont Circle, N.W., Washington, DC 20036. Accompanying it were CVs for Fruin and Shurtleff, plus letters supporting the project from the following collaborators: Kanji Tsuchiya (Japan), Gunnar Lynum (American Soybean Assoc. director for Japan), Tokuji Watanabe (Prof., Food Science Lab., Kyoritsu Women's Univ., Japan), Harold E. Kauffman (INTSOY Director, Urbana, Illinois), Michael A. Phillips (Director, Market Development, ASA, St. Louis, Missouri), and P.S. Bhatnagar (All India Coordinated Research Project on Soybean, G.B. Pant Univ. of Agriculture and Science, Pantnagar, UP, India). Address: 1. Prof., 4060 Amaranta Ave., Palo Alto, California 94306; 2. Director, Soyfoods Center, P.O. Box 234, Lafayette, CA 94549.

7876. Ito, Kiyoe. 1983. Soy beans as a source of protein in Japan. In: Ajia-Chiku Kokusai Kaseigaku Kaigi Hokoku (Proceedings of the International Asian Conference on Nutrition). See p. 60-61. Held Aug/Sept. 1983. [Eng]
• ***Summary:*** Rice cultivation began in Japan about 2,000 years ago. Buddhism was imported to Japan from China through Korea, and with it the prohibition against eating meat [of four-legged animals]. "Therefore, the diet and cuisine depended exclusively on rice, bean, vegetables, and fish. Especially, soy beans have been widely used as materials for plant protein foods such as miso (fermented soy bean paste), tofu (bean curd), shoyu (soy sauce), yuba (dried soy milk film) and others." Also describes the increasing westernization of the Japanese diet, especially after World War II. Address: Tokyo Gakugei Univ., Tokyo, Japan.

7877. Leviton, Richard. 1983. Report on soyfoods research trip across America, September 1983. Colrain, Massachusetts. 8 p. Unpublished typescript.
• ***Summary:*** Visited or discusses: Grainaissance (makes amazake and mochi), Brightsong (Dik / Richard Rose), Sonoma Specialty Foods (California), Northern Soy (Rochester, New York), Southwest Soyfoods (Richard Jennings), White Wave (Steve Demos, Boulder, Colorado), Quong Hop & Co. (South San Francisco, California), Modern Fare (Loveland, Ohio), Soyfoods Unlimited (Valerie, Gary and John Robertson, San Leandro, California). Soyfoods Center (Lafayette, California), Soyfoods of America (Doug Fiske and Ken Lee, Los Angeles), Real Foods (Polk St., San Francisco), Tumaros (Los Angeles), Unicorn (Terry Dalton, Florida), Japantown and Rainbow Grocery (San Francisco), Berkeley Natural Grocer and Berkeley Co-op (Bob Gerner, California), Hinode Tofu Co., Edensoy, Farm Foods, New England Soy Dairy, and Nasoya (Leominster, Massachusetts). Legume (Gary & Chandri Barat, New York City), Lotos / Lotus Cafe (Greg Weaver, Rochester, New York).

NRRL (Hesseltine and Wang, Peoria, Illinois): Their work is in mixed starter culture fermentation, vitamin B-12 work. Japanese man from Tokyo to work one year on natto at NRRL, paid by Japanese government. B-12 can withstand some heat during cooking and the percentage of B-12 lost depends on the initial percentage present. Natto research: examine all Japanese publications for review article. Experiment using U.S. soybeans to make natto since the Japanese buy Chinese beans for their thinner seed coat. See

© Copyright Soyinfo Center 2014

what happens to the oil to protein ratio during fermentation. Natto as such has no possibilities in the U.S. as it is a slimy food with a rotten smell; hard to tolerate. There might be vitamin B-12 in natto produced by *Bacillus subtilis.* Koreans have done lots of B-12 research with kimchee and other pickled vegetables. Earl Swain died this summer of a heart attack at age 36. Natto research will help U.S. soybean exports. USDA bureaucrats are making it difficult for Dr. Hesseltine to do natto research. They have 65 objectives, but Dr. Wang's projects don't fit any of them clearly, so they won't mention "food" in their research outlines, just fermentation methods. Secretary of Agriculture John Block [served 1981-86 under President Ronald Regan] says the U.S. needs more ag exports and more basic information about crops uses, so he is in support of this natto research.

Out of business: Michiana Soyfoods, St. Ignatius shop, Sunshine Soy, Heartsong, probably Joy of Soy and a Korean shop in Salt Lake City, Utah.

Concerning soymilk: 10. In Oak Park, Illinois, a natural foods retailer says Edensoy outsells San-J by two to one. (Note: San-J imports "To-Neu Natural Soy Beverage" made in Japan by Kibun). Teenagers buy the carob Edensoy along with popcorn in the store, and use it as a soft drink. But most retailers say the Eden package [stand-up foil retort pouch] is a disaster; it is impossible to open without scissors, then if you squeeze, it sometimes spills out. San-J [in a Tetra Brik carton] is convenient but the taste is poor and the front graphics are confusing–too many words and images. According to Shurtleff, both are inferior products compared to Japan's best.

22. Concerning Edensoy at the NNFA show in Denver, Colorado: Mike Potter says "it went over great." He sold two container loads right away. People liked the package and the taste. About 4,000 people sampled it and were "generally amazed." The results were as good as they could want; it generated interest and excitement. Now they are setting up the distribution system. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

7878. Shurtleff, William; Aoyagi, Akiko. 1983. The book of miso. 2nd ed. Berkeley, California: Ten Speed Press. 278 p. Illust. by Akiko Aoyagi Shurtleff. Index. Sept. 28 cm. [223 ref]

• ***Summary:*** Contents: What is miso? Preface to the second edition. Preface to the first edition. Acknowledgments. Part I. Miso: Savory, High Protein Seasoning. 1. Soybeans, protein and world hunger. 2. Miso as a food. 3. The miracle of fermentation. 4. The varieties of miso: Regular Miso: Rice miso (red / aka, light-yellow / shinshu, mellow red / amakuchi akamiso, mellow beige / amakuchi tanshoku, mellow white / shiro koji, sweet red / edo or edo ama-miso, sweet white / Kyoto shiro miso), barley miso (karakuchi mugi, mellow barley / amakuchi mugi), soybean miso / mamé miso (Hatcho miso, soybean miso / mame miso, tamari miso). Special Miso: Finger lickin' miso / Namemiso (Kinzanji miso, moromi miso, hishio, namémiso, natto miso, goto miso), sweet simmered miso / nerimiso. Modern Miso: Akadashi miso, dehydrated or freeze-dried miso, low-salt / high-protein miso.

Part II. Cooking with Miso (400 recipes). 5. Getting started. 6. Recipes from East and West. Part III. The Preparation of Miso. 7. Making miso at home and in communities (incl. Homemade natural shoyu, and Homemade namémiso, p. 184). 8. Japanese farmhouse miso (how to make miso at home). 9. The traditional miso shop. 10. The modern miso factory. Appendixes: A. A history of miso and soybean chiang. B. Other East Asian misos: Chinese chiang, Korean jang and Indonesian Taucho. C. The microbiology and biochemistry of miso fermentation. D. Miso manufacturers in the West. E. People and institutions connected with miso. F. Miso with seafoods, chicken, and meat. G. Measures, weights, and equivalents. H. So you want to study miso in Japan? 7882. Nakano, Masahiro. 1983. Re: Introducing tempeh to Japan. Letter to William Shurtleff at Soyfoods Center, Oct. 1–in reply to inquiry. 2 p. Handwritten. [Jap]
• ***Summary:*** One of Japan's greatest living microbiologists, Dr. Nakano and co-workers introduced tempeh to Japan. They were the first to make it on a small (noncommercial) scale and serve it to others. But they were never interested in popularizing it–then or now. He was a scholar and research microbiologist for a nonprofit organization. He is now retired. "When I was in the Japanese Army in Java, although I was fortunate in having a chance to see and hear things in my field of interest, I did not do actual research. I have a subconscious desire to avoid developing the things I learned there."

The Taiwan Governor-General's Research Institute (*Taiwan Sotokufu Kenkyujo*) was founded in 1909. Dr. Ryoji Nakazawa, the great microbiologist, worked at that lab from 1907 until 1940, when he returned to Japan; he died in 1975 at age 96. For more on tempeh, see Dr. Nakazawa's *Taikan Kinen Ronbun-shu,* his collected papers compiled and published when he retired. Dr. Nakano started to work at this Taiwan lab in 1934. Address: Dr., Kugayama 1-2-7, Suginami-ku, Tokyo 168, Japan. Phone: 03-334-6911.

7883. Reed, M.H. 1983. Where China and Japan meet: Dining out. *New York Times.* Oct. 2. p. WC25.
• ***Summary:*** This is a review of the one-star restaurant Sakura (56 Garth Road, Scarsdale, New York), which has both Japanese and Chinese menus–although the Japanese dishes were preferred.

"Good, too, were age-tofu [fried tofu] and cold yakidofu [grilled tofu], fragile blocks of silken bean curd complemented nicely by a sharp sauce sprinkled with bonito flakes."

7884. Potter, Michael. 1983. Edensoy and Eden Foods (Interview). *SoyaScan Notes.* Oct. 3.
• ***Summary:*** Eden Foods has already sold 3 containers of Edensoy, imported from Japan. Each container holds 61,800 foil packs. People taste the carob first and they like it. But in both Australia and the UK, they switched to plain, making it the most popular there.

The Eden Foods warehouse was burned by arsonists outside the company. The principals took a lie detector test and passed with flying colors, then the insurance company refused to pay; so they had to settle out of court. Address: CEO, Eden Foods, Clinton, Michigan. Phone: 544-2781.

7885. Noda, Fumio; Hayashi, K.; Mogi, K.; et al. Assignors to Kikkoman Shoyu Company Ltd. (Chiba, Japan). 1983. Method of producing koji products. *U.S. Patent* 4,407,826. Oct. 4. 8 p. Application filed 17 Sept. 1981. Application also filed in Japan on 12 Sept 1978. [6 ref]

• ***Summary:*** "In a method for producing a fermentation product which comprises inoculating a mold in a substrate and cultivating it, the improvement which comprises adding

"(A) at least one compound selected from the group consisting of salts of aliphatic carboxylic acids having 1 to 4 carbon atoms, and

"(B) at least one compound selected from the group consisting of chlorous acid, hypochlorus acid, sulfurous acid, hyposulfurous acid, pyrosulfurous acid, salts of these acids, hydrogen proxide, bleaching powder, chloramine-B, chloramine-T, halazone and acrylamide

"at any time ranging from a step of preparing the substrate to the step of cultivation." Address: 1. Kamagaya; 2. Kashiwa; 3. Noda. All: Japan.

7886. Wilson, John C. 1983. Early work with soymilk and recent developments (Interview). *SoyaScan Notes.* Oct. 4. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Wilson has been involved with soymilk since 1967, when he was technical manager for Cold Storage Group (CSG) in Singapore and Malaysia. His background was in dairy technology. To help CSG launch a soymilk, he studied traditional tofu processes in Singapore, then mechanized the process. He set up CSG's first line in Kuala Lumpur in 1969, actually at Petaling Jaya, a satellite of Kuala Lumpur. The soymilk was sold under the Magnolia brand, but owned by CSG.

This was not the first soymilk in the area. Alfa-Laval sold Yeo Hiap Seng a UHT plant for soymilk operation in about 1967, and another in 1969.

Note: The 2nd plant in Singapore Shurtleff visited was owned by Cold Storage Group.

Wilson joined Alfa-Laval in 1971. Alfa-Laval was researching soymilk from a particular angle, with no success. By 1977 Wilson had been in Africa and Australia. He found a big demand for soymilk plants in Asia.

For Ace Canning, he designed the Lam Soon plant in Kuala Lumpur, Malaysia.

In 1978 sold a plant to Kickapoo, in Bangkok, Thailand, with reduced beany flavor soymilk, but strong cooked = burnt flavor. They copied the overcooked flavor of Greenspot, overcooked through sterilizing in the bottles.

Legislation in Bangkok says manufacturers must add 50% by weight of soybeans of nonfat dry milk (NFDM). This makes it a healthy product, if not it's a luxury product. Greenspot got this legislation passed after people developed a taste for Greenspot's product. Greenspot has been in business since the mid-1960s. That legislation has been in force from the mid-1970s until now. So it forces all soymilk to contain NFDM. There is a heavy tax on pure soymilk without NFDM.

Nestle started in about 1980 in Bangkok. They have not done well. But they had bad luck with Bonus in Singapore. The Department of Health banned its production claiming it was not properly sterilized.

The greatest successes: Vitasoy #1 in Southeast Asia. Kibun #1 in Japan. Kibun has now commissioned three new factories, which are now on stream. They use machinery from Alfa-Laval and from others. Alfa does the engineering, Kibun does the formulation

Alfa-Laval and Kibun have an agreement which was signed in late 1982. If a customer licenses the process from Kibun, Alfa-Laval will supply the plant. Kibun will supply technical know-how, formulation, and quality control, and receive the license fee direct. There are separate fees and no kickbacks between Alfa-Laval and Kibun. and Alfa-Laval can supply anyone else with plants. Kibun is expert in formulation and Alfa-Laval is strong in plant design.

The Japanese soymilk process is basically the Illinois process with a clarifier toward the end. He is surprised that the Illinois Patent office is not complaining. The basic concept is to inactivate the enzymes at the bean stage before grinding. However cooking prior to grinding dramatically lowers the protein yield to 40-45%. The key to a standardized way of comparing yields (of protein) is to specify an acceptable level of remaining fiber, which he suggests be l% or less by volume after a standard centrifugation test. If you have less fiber, you get much lower yields. We need an international standard for fiber.

Lawrence Johnson at the University of Texas claimed 82-85% protein yield with steam injection (*Journal of Food Science* 46(1): 239-43, 48) but Alfa-Laval's tests showed that it didn't work.

Wilson has a super set of color overhead projector slides on soymilk. Invite him back again to do a show for us.

Kibun uses its own process with Alfa-Laval equipment, not Alfa-Laval's process. Kibun licenses others to use its process then usually asks Alfa-Laval to supply the plant. Alfa-Laval buys grinders from Switzerland.

Alfa-Laval's most important contribution is not just the equipment but the automated system and automatic cleanup = clean in place (CIP). Perhaps their main component is the Sterilizer. Two types = Steritherm or VTIS = Vacu therm. Japanese like this, but its expensive and expensive to run. And it strips out added fruit aromas.

Wilson (1983) said that US laws on UHT are ridiculous and antiquated. Makes it very expensive to build machines for the US market. The real problem is Not the hydrogen peroxide problem.

In killing = inactivating enzymes, the protein solidified in the fiber like hard-boiled eggs.

Alfa-Laval is in the lead in simplifying and automating tofu plants. They are now testing a plant that allows 1 man and a computer to make tofu from beans to packaging.

Cost effective soymilk: Absolute lowest output is 11OO liters/hr. Practical lowest is 1500 liters/hr. Local laws affect the price. They have many systems for different markets; China different from Japan. The really economical plant is

© Copyright Soyinfo Center 2014

2,000 liters/hr.

The three key considerations in determining a plant are (1) The type of soymilk (beany or not) desired. (2) The type of packaging. (3) The output in liters per hour. Address: Soya Process Product Manager, Alfa-Laval, Box 1008, S-221 03, Lund, Sweden.

7887. Oda, Lorraine. 1983. Tofu enjoys increasing popularity. *Hawaii Herald.* Oct. 7. p. 5. Friday.
• ***Summary:*** Jack Tsuneyo Uyehara manages Aloha Tofu Factory Inc. His father, Kamesaburo, brought the plant in 1951 from a pig farmer, Kamehachi Shimabukuro, who used the okara for pig feed. Back then the factory was located on Dillingham Blvd. and produced only tofu and abura-age. Today the plant on Akepo Lane in Kalihi produces each week: 3,500 pieces of soft, firm, and mini-tofu, 6,000 pieces of aburage, 2,000 packages of natto, and enough atsu-age and nama-age to supply stores in Oahu. The four Uyehara brothers run the company.

Note: This is the earliest document seen (Dec. 2001) that contains industry or market statistics for natto by individual companies. Address: Editorial Asst., Honolulu.

7888. Wakayama, Mary. 1983. The oldest sake factory in the West: From 1908 to 1983. *Hawaii Herald.* Oct. 7. p. 1, 4.
• ***Summary:*** A history of the Honolulu Japanese Sake Brewing Co. Ltd., which started in 1980 when Tajiro Sumida began making sake in Honolulu for Japanese laborers in Hawaii. Starting more than 25 years ago, under the direction of an expert brewmaster, Takao Nihei, who received the Japan Brewery Association's award for excellence in 1970, the quality of the sake has improved tremendously. Takara Masamune and Musume are Honolulu Sake's foremost sake products. The company also manufactures shoyu (Diamond shoyu, Marumasa Soy Sauce, Island Shoyu, as well as Diamond Teriyaki Sauce), vinegar (Diamond-Su) and mirin (Takara Masamune). A photo shows that "Honolulu Japanese Sake Brewing Co. Ltd." Address: Hawaii.

7889. Leviton, Richard. 1983. Société Soy, France's largest tofu manufacturer (Document part). In: R. Leviton. 1983. Report of Trip to Europe with American Soybean Assoc. 82 p. Unpublished manuscript. See Oct. 16.
• ***Summary:*** This tofu plant in Cerny, the largest in France, is distinguished for its dairy style machinery innovations. Bernard Storup is the 4th generation of a cheesemaking family; his brother, a cheese specialist, went to cheese school. Societe Soy uses 6 workers two days a week to produce 5,000 lb/week of tofu and 10,000 Tofu Croques (burgers) in 6 flavors. Burger sales are rising rapidly, and may hit 20,000 by Dec. 1983. Both products are vacuum packed for a 3 week shelf life, refrigerated. They use the "tofou" spelling and Soy not soja for the company name so they could trademark both in France. They plan to replace their Takai W30-C system with dairy style equipment. The new equipment has curd tanks on a raised platform; the curds flow into a 4x12 foot stainless steel shallow bed trough. One or two large pneumatic presses press the whole lot, then it gets cut all at once. The company reached break-even after 12 months. Their tofu wholesales for 14 French francs/ kg which is $0.80/lb. Breakeven is 2,000 lb/week of tofu. Bonneterre distributes 40% of their tofu. Bonneterre started in 1963 but in 1980 nearly went bankrupt and was acquired by a large dairy company [Triballat].

Societe Soy began production in Sept. 1982. France has at least 5 other tofu manufacturers, whose weekly output combined is about 3,500 lb. Paris, then the Marseilles, Mediterranean Coast, are the best markets in France for Tofu, and the typical customer is female, educated, age 25-35. The 13,000 Japanese and 200,000 Chinese in Paris can't get enough tofu. Paris has 3-5 small tofu producers, but sprouts are their main line. Societe Soy tofu has 12.3% protein, 24 day shelf life with hot packing at 60ºC, no cooling tank involved, pasteurization after vacuum packing in vertical steam tank. The company is energetic, professional, and quite aware of sanitary procedures and the need for appropriate packaging. The future of tofu is believed to lie in mixing it with other foods, possibly meat or cheese, or to follow the Asiatic example of using strong spices. Tofu needs a strong, memorable flavor. Americans have been too strict in their essentially vegetarian approach to formulating soyfoods.

For financing, Bernard got 25,000 francs then 60,000 francs from banks for a novel business plan competition that he won twice. His total initial investment was 250,000 francs or US$30,000; half of this came from the government. Address: Colrain, Massachusetts.

7890. Lindner, Anders. 1983. Soymilk worldwide and STS (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 20. 1 p. transcript.
• ***Summary:*** On Oct. 20 Anders Lindner, managing director of STS, visited Soyfoods Center, where this interview was conducted.

Seikensha built all the key Marusan soymilk equipment. Anders was shown through the Marusan plant in Okazaki.

Seikensha is a 55-year-old company. Ask for their catalog. They are now building small soymilk plants and dehulling equipment.

Deodorizer is the name for the vacuum stripper,

STS's best prospects for soymilk plants are in South Africa, Cameroon, Indonesia, India, Thailand, maybe Sinaloa, Mexico, China, and Taiwan. Taiwanese want to use soy protein isolates to keep investments low.

Tetra Pak's biggest competitor is Pure-Pak. Ex-Cell-O / Excello Corp. makes Pure Pak Machines. They make their money on the machines, and license the packaging to many local companies. Tetra's biggest competitor for aseptic

© Copyright Soyinfo Center 2014

packaging is Jagenberg Co. in Germany. Their packaging system is called Block Pack (sp?) Their aseptic system is called Combi Bloc. Get their address from the German consulate. Address: STS, Singapore.

7891. Hara, Toshio; Zhang, J-Ren; Ueda, Seinosuke. 1983. Identification of plasmids linked with polyglutamate production in *Bacillus subtilis* (*natto*). *J. of General and Applied Microbiology* (*Tokyo*) 29(5):345-54. Oct. [26 ref]
• ***Summary:*** "Fourteen of 18 strains of *Bacillus subtilis* (*natto*) were found to harbor plasmids." Twelve strains, which required biotin for growth and produced a viscous substance, contained a single plasmid species. These plasmids, which included four whose names are given, "were classified into the same type of pUH1, the functional plasmid encoding gamma-glutamyltranspeptidase (gamma-GTP) gene," based on their molecular weights and restriction patterns.

The regulatory gene for polyglutamate synthesis is encoded on a 5.7 kb plasmid, pUH1.

Note: Plasmids of this type are known as "natto bacterium plasmids."

Whereas many strains of *Bacillus subtilis* have been found to "contain a number of endogenous plasmids, the physiological role of these plasmids has not yet been identified." Address: Dep. of Food Science & Technology, Faculty of Agriculture, Kyushu Univ., Hakozaki, Fukuoka 812, Japan.

7892. IBPGR. 1983. Genetic resources of soyabean. Rome, Italy: International Board for Plant Genetic Resources, Secretariat. 19 p. 30 x 21 cm. Oct. IBPGR Working Group on the Genetic Resources of Glycine Species, held at the International Soybean Program (INTSOY) at the University of Illinois, Urbana, 9-11 Aug. 1982. [2 ref]
• ***Summary:*** This report, distributed free to developing countries but with restricted distribution to developed countries, was written after an ad hoc Working Group on the Genetic Resources of *Glycine* was held. A minimum list of descriptors is included. Address: Crop Genetic Resources Centre, Plant Production & Protection Div., FAO, Via delle Terme di Caracalla, 00100, Italy.

7893. Inano, Mitsuko. 1983. On behalf of soybeans. *Nutrition Today.* Sept/Oct. p. 24-25. [1 ref]
• ***Summary:*** A large illustration on the top half of the first page shows Commodore Perry lined up on the left with many soldiers and flags. On the right is a single Japanese man, with head bowed, holding a small pot containing one small soybean plant. The caption reads: "A member of the Japanese court presents Commodore Perry with a soya plant brought back to the 'western world." For years after that, the soybean was known as the 'Japan Pea."

The author recalls that one of her favorite snacks as a child in Japan was "green soybeans" grown by her mother in the back yard. She describes how they were prepared and eaten. "Then in the evening they were served to father as the accompaniment to his before-dinner drink."

When I encountered the phrase 'for human consumption' or 'for human use' in article on soybean research in recent years, I became annoyed and frustrated. Long forgotten is that fact that for centuries people in certain parts of the world have been using soybeans as a staple food..." Address: PhD, RD, Dep. of Home Economics, Univ. of Arkansas, Fayetteville.

7894. Kitamura, K.; Davies, C.S.; Kaizuma, Norihiko; Nielsen, N.C. 1983. Genetic analysis of a null-allele for lipoxygenase-3 in soybean seeds. *Crop Science* 23(5):924-27. Sept/Oct. [18 ref]
Address: 1-2. Post-doctoral associate, of Agronomy, Purdue Univ., West Lafayette, Indiana 47907; 3. Prof. of Plant Breeding, Iwate Univ., Morioka, Japan; 4. Assoc. Prof. of Agronomy and Research Geneticist, USDA-ARS, Purdue Univ., West Lafayette, Indiana 47907.

7895. Nagayama, Hisao. 1983. Kenkô-shoku nattô [Natto, the health food]. Tokyo: Nosan Gyoson Bunka Kyôkai (Asakusa 7-61, Minato-ku). 209 p. Illust. 19 cm. [Jap]
• ***Summary:*** This popular book, filled with funny (sometimes naughty) cartoons discusses all aspects of natto, its history, nutritional value and health benefits, how to make natto at home, and even how to grow soybeans. It contains 80 natto recipes, each illustrated. The book was first printed in Oct. 1983; 6th printing Sept. 1986. Hisao Nagayama was born in 1934. Address: Toyotama-kita 4-31, Nerima-ku, Tokyo, Japan. Phone: 03-992-3735.

7896. Okada, Noriyuki; Hadioetomo, Ratna Siri; Nikkuni, S.; Katoh, K.; Ohta, T. 1983. Vitamin B-12 content of fermented foods in the tropics. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 43. p. 126-29. Oct. [7 ref. Eng]
• ***Summary:*** Vegetarian foods containing significant amounts of vitamin B-12 per 100 gm according to a biological assay method using *Lactobacillus leichmanii* were: tempeh (Indonesia) 4.6 mcg (micrograms), natto fermented soybeans (actually thua-nao, Thailand) 1.5 mcg, and fermented tofu (Singapore, also called Sufu) 1.1 mcg. Flesh-based foods with a high B-12 content included Ka-pi shrimp paste (Thailand) 5.3 mcg, kung-jom fermented shrimp (Thailand) 2.5 mcg, fish sauce, 3 month fermentation (Thailand) 2.4, and fish sauce (Thailand) 1.3 mcg, and fish sauce (Japan) 1.0 mcg.

Of these foods transported from tropical countries, tempeh was especially interesting because it is made of soybeans and had the highest B-12 content of any food measured. However not all tempeh samples contained such

© Copyright Soyinfo Center 2014

large amounts. "For example, a fresh sample of tempeh which was transported from Indonesia as rapidly as possible contained a very low amount, 0.7 mcg/100 gm, and tempehs prepared in the laboratory by using the tempeh-making fungus, *Rhizopus oligosporus,* contained only 0.02 to 0.06 mcg/100 gm. However the low vitamin B-12 content in tempeh which was transported from Indonesia increased to a value of 8 mcg/100 gm when the sample was incubated at 30ºC, unlike in the tempeh prepared in the laboratory. It is probable that microorganisms accompanied with tempeh-making fungus were associated with the production of vitamin B-12 in Indonesian tempeh. Further studies will be required to identify the microorganisms capable of producing vitamin B-12, and useful for the fermentation food industry." Address: 1,3-5. National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan; 2. Bagian Mikrobiologi, Departemen Botani, Fakultas Pertanian, Institut Pertanian Bogor, Jl. Raya Pajajaran, Bogor, Indonesia.

Oct. [12 ref. Jap; eng]
• ***Summary:*** "Natto has long been considered to contain vitamin B-12. The B-12 content of natto determined by a microbiological assay method using *Lactobacillus leichmannii* ranged from 0.01-0.08 micrograms/100 gm. These values are almost the same as those reported by other authors. Although the commercial nattos analysed were not perfectly pure products, the possibility that the B-12-like activities detected in natto were produced by contaminants could be ruled out, since comparable values were found in purely fermented nattos made by using several strains of *Bacillus natto* isolated from commercial samples. However *B. natto* did not produce detectable amounts of B-12 in the liquid medium in which *B. megaterium,* known as a B-12 producer, did. Moreover the response of the natto extract to *L. leichmannii* was different from that of the B-12 standard and that of the 'natto' extract made by using *B. megaterium.* It is probable that the B-12-like activities detected in natto did not correspond to that of B-12." organic suppliers in the U.S., first imports from Japan 1968, 1970 natural foods boom, National Food Distributors Association, *East West Journal,* Autumn Press founded in Japan by macrobiotic student from Boston, Boston institutes, centers, and foundations from 1972 on, increasing popularity of soyfoods (tofu, tempeh, and miso) in Boston, Erewhon from 1973 to bankruptcy in 1981 and sale to Ronald Rossetti in 1982. Development of macrobiotics in New York City: Void after departure of Aihara group and Kushis, establishment of Infinity Foods in mid-1960's, Michel Abehsera's restaurants, cookbooks, and tour. Development of macrobiotics in California: Influence of Chico-San on natural foods movement to 1970, Lundberg rice 1968-69, Yamazaki miso and shoyu 1970, 1972 fire in Chico-San warehouse, educational activities and institutions, growth of Chico-San, Noboru Muramoto. Nutritional views of macrobiotic diets: General critical attitude from 1965 to 1977, not countered by macrobiotic leaders, scientific studies pro and con, specific critique of the diet, turnaround in attitude since 1977 (*Dietary Goals* published by U.S. Senate's McGovern Committee), Dr. Mendelsohn, Nathan Pritikin, cancer cures and Anthony Sattilaro (1980). Macrobiotics in Europe and Latin America: First European company Lima N.V., other distributors, centers, publications, tours, active in South America since 1954. A major contribution: Type of overall influence on soyfoods, number of followers in 1981. Address: Lafayette, California. Phone: 415-283-2991.

7901. Shurtleff, William; Aoyagi, Akiko. 1983. George Ohsawa and the macrobiotic movement: Noboru Muramoto (Document part). Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 46 p. See p. 39-40. Nov. 10. 28 cm. Unpublished typescript.

• ***Summary:*** "In June 1971 Noboru Muramoto emigrated to America from Japan and lived with the Aiharas in San Francisco at GOMF. In Japan he had studied Chinese literature and philosophy at Tohoku University and Kanazawa University, then began his own study and practice of herbal medicine. He had begun studying Ohsawa's writings in 1942, then studied with Ohsawa after 1964, while running a family business cleaning the cotton from futons. In 1973 he gave a series of lectures in New York which were published that year as the popular book, *Healing Ourselves* (Avon/Swan House). Many uses of miso and natural shoyu were given; soybeans and tofu were not recommended in the book, except that tofu was used in making poultice-like 'plasters' for use in healing. In 1974 Muramoto started Rising Sun, a macrobiotic storefront containing the Herb Tea Co. in San Francisco. Here he gave classes on making miso and shoyu. In November 1976 he acquired Top of the World Ranch on 140 acres of land near Glen Ellen, California, and established Asunaro Institute, a residential program of macrobiotic studies. He also published a newsletter 'Asunaro Notes.' At Asunaro he set up a regular shop for making miso and shoyu, complete with a nice koji incubation room. Many unique and American-style misos were developed, including some made with peanuts, garbanzos (chickpeas), azuki beans, and even natto. A number of Americans apprenticed at the miso-shoyu school. A nice article about the school, 'Making Miso in America,' appeared in the *East West Journal* (Lachman 1978). In March 1979 Muramoto displayed his miso and shoyu equipment and samples of his products at the famous New Earth Exposition in San Francisco. He also sold these products at Rising Sun, and some customers swore that they were the best in America."

Note: On 11 Jan. 1976 William Shurtleff attended a class on how to make miso at Rising Sun (Judah Street, San Francisco), given by Noboru Muramoto. Jimmy Udesky was there, as were about 15 other people.

On 19 Sept. 1977 William Shurtleff and Akiko Aoyagi visited Muramoto sensei at his place, Asunaro, in Glen Ellen, California. He makes miso there and teaches miso making. Shurtleff interviews him about his life and history of interest in macrobiotics and soyfoods. We stay overnight and help him the next morning with royalty problems connected with his book *Healing Ourselves;* he is quite sure he is not being paid the royalties due based on his contract with the publisher. Address: Lafayette, California. Phone: 415-283-2991.

7902. Aoyagi, Kazuko; Aoyagi, Akiko; Shurtleff, William; Bennett, Gordon. trans. and comp. 1983. Japanese standards for soy sauce ("shoyu"): English-language translation. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 14 p. Nov. [1 ref. Eng]

• ***Summary:*** Contents: Translators introduction: Brief history of shoyu standards in Japan and the USA. 1. Definition of fermentation methods: Basic fermented method (*honjozo hoshiki*), semifermented HVP method (*shinshiki jozo hoshiki*), semifermented HVP and acid HVP mixed method (*aminosaneki kongo hoshiki*), semifermented HVP and enzyme HVP mixed method (*koso shorieki kongo hoshiki*), semifermented HVP–acid & enzyme HVP mixed method (*aminosaneki koso shorieki kongo hoshiki*), semifermented HVP–enzyme & acid HVP mixed method (*koso shorieki aminosaneki kongo hoshiki*). 2. Definition of varieties of shoyu: Regular shoyu (*koikuchi shoyu*), light-colored shoyu (*usukuchi shoyu*), tamari (*tamari shoyu*), double-fermented shoyu (*saishikomi shoyu*), clear shoyu (*shiro shoyu*).

3. Standards for varieties of shoyu: Regular shoyu, light-colored shoyu, tamari, double-fermented shoyu, clear shoyu. 4. Analytical methods: Degree of color, total nitrogen content, soluble solids, alcohol content, direct reducing sugar. 5. Labeling requirements: Items to be listed, particulars for each item listed, prohibited terms.

Brief history: "In 1963 the Japanese Ministry of Agriculture and Forestry (*Norinsho*), with the support of the Japanese Shoyu Association, set the first JAS (Japanese

© Copyright Soyinfo Center 2014

Agricultural Standards) for shoyu. The 1963 JAS shoyu standards were revised in July 1970 with Norinsho Notification #974. Companies choosing voluntarily to make their shoyu to these standards were allowed to print the prestigious JAS mark on their labels. These standards were revised again in 1980.

"In January 1976 in the United States the Federal Supply Service of the General Services Administration established America's first soy sauce standards for use by all federal agencies. The classified all soy sauce into two types: Type I–Soy Sauce (fermented), and Type II–Soy Sauce (non-fermented). These standards were revised on 5 May 1978 as Fed. Spec. EE-S-610G.

"In late 1983 the Japanese shoyu standards were first translated into English and work began to adapt them to American needs and conditions." Address: 1. Albany, California; 2-3. Soyfoods Center, P.O. Box 234, Lafayette, California 94549; 4. Westbrae Natural Foods, P.O. Box 8711, Emeryville, CA 94662.

7903. Hesseltine, C.W. 1983. The safety of shoyu. Paper presented to the Japan Soysauce Brewers' Assoc. meeting. 36 p. Held 29 Nov. 1983, Tokyo. [33 ref]
• ***Summary:*** Historical background: In 1953, Dr. Hesseltine went from the fermentation industry to the Northern Regional Research Laboratory (Peoria, Illinois) as head of the ARS [Agricultural Research Service] Culture Collection. He had only a faint idea of how shoyu was made and he had never heard of miso, natto, or tofu. Shortly after his arrival, probably in 1953, he received a visit from Prof. Kin-ichiro Sakaguchi of the University of Tokyo, an authority on traditional Japanese fermented foods and one of the founders of the modern fermentation industry in Japan. Records show that in 1953 Dr. Sakaguchi received cultures from the ARS collection. His laboratory trained many students and much of his work was directly related to food fermentations involving soybeans and cereals.

In 1948 Dr. A.K. Smith of the NRRL visited Japan and China and recognized the tremendous amount of soybeans being used as human food. "The Western world had little or no understanding of the importance and use of these foods in the diet of Oriental people. He strongly recommended to anyone who would listen that there should be research on these foods and an exchange of scientists." In 1949 and later in 1958 Dr. Smith published a detailed report of his travels. In late 1958 two eminent Japanese scientists, Dr. Kazuo Shibasaki and Dr. Tokuji Watanabe arrived in Peoria to study traditional soybean foods. Dr. Shibasaki (who later became Professor of Agricultural Chemistry at Tohoku University) worked with Dr. Hesseltine on miso fermentation, and Dr. Watanabe worked with Dr. Smith on tofu.

"Before the year was up I became utterly fascinated with the process of making koji and with the delicious foods that could be made from the lowly soybean. But even broader than these studies on fermented foods was the concept of the solid state fermentation and the enzymes that could be made with this technique. Ever since that year of work with Dr. Shibasaki, I have been interested in fermented foods–not just those used in Japan, but worldwide." Address: NRRC, Peoria, Illinois.

7904. Kanasugi, Goro. 1983. Tempe o Nihon de tsukuru [Making tempeh in Japan]. *Shin Eiyo* (*New Nutrition*) No. 168. Nov. [Jap]
• ***Summary:*** The Natto Association had a meeting where members brought 100 tempeh dishes. A cooking teacher was there and she made 5-6 tempeh dishes from tempeh made by Mr. Kanasugi; they were very popular. The members made their tempeh as follows: First the Association obtained tempeh starter from Indonesia and propagated it in a room at Mr. Kanasugi's plant. They distributed the starter to the members, who then made tempeh and used the tempeh to make dishes. Mr. Kanasugi owns a restaurant named Mame-no-ko ("child of the soybean"), where he serves tempeh in place of meat. For example, diced tempeh is served with vegetables, or made into tempura or karinto. He also makes *okoshi,* a crunchy millet (*awa*) based confection containing 20% tempeh. Ground tempeh is mixed into a ground beef cutlet. The guests like tempeh served in these ways. The Natto Assoc. is thinking of publishing a book on tempeh. A photo shows Goro Kanasugi and various tempeh dishes. Address: Zenkoku Natto Kyodo Kumiai Rengo-kai, Fuku Kaicho.

7905. Leviton, Richard. 1983. Report of soyfoods research and speaking trip to Europe with American Soybean Assoc., Oct. 8–Nov. 15, 1983. Colrain, Massachusetts. 82 p. Unpublished typescript. 28 cm.
• ***Summary:*** Describes visits to or discusses: ASA Belgium (Dennis Blankenship, Rita Batens, Michael Martin), Parma, Euvepro Conference, Parmalat, Guy Coudert and Dr. Sabin president of ONIDOL, Anuga, Jonathan, Société Soy (Bernard Storup, Jean de Preneuf), Le Bol en Bois, Budapest (Hungary), Agrimpex (Hungary), Migros, Sojalade / Die Genossenschafts Tofurei (Verena Krieger), Galactina, Soyana (Walter Daenzer), Alpro (Belgium; Philip Vandemoortele and Christian Daems), Aarhus (Denmark), Witte Wonder, Manna, Cauldron Foods Ltd. (Phillip Marshall, Peter Fagan). Contains a directory of principal people contacted, listed by country. Those not mentioned above are: England: Wild Oats Wholefoods (Mike & Loes Abrahams), British Arkady Co. (Bill Pringle), Sunworld Inc. (David White), Health Foods Manufacturers' Association (Britain). 7908. Shurtleff, William; Bennett, Gordon. 1983. Proposal for a Soy Sauce Council of North America. Lafayette, California: Soyfoods Center. 2 p. Unpublished typescript. 28 cm.
• ***Summary:*** Contents: Definition. Purpose. Membership. Funding. Communication, proposals, and voting. Initial activities: Standards, soy sauce press release program. Your participation.

"Definition: The Soy Sauce Council of North America (commonly referred to as the "Soy Sauce Council") is an organization within the Soyfoods Association of North America." This idea was proposed by the authors, a cover letter, questionnaire (containing 10 questions, mostly related to terminology), and 4-page list of potential members were drafted, and a mailing was done to all potential members. Eleven companies responded to the questionnaire and their responses were tabulated. The respondents were: Chico-San, Erewhon, Granum, Kikkoman-Wisconsin, Kikkoman-International, Mandarin Soy Sauce, Mountain Ark, Pure Sales, San-Jirushi, Westbrae, and Mark Fruin.

But Michael Austin and at least one other leader of the Soyfoods Association did not like the idea, so it was never implemented. Address: 1. Director, Soyfoods Center, Lafayette, California; President, Westbrae Natural Foods.

7909. Yasuda, Masaaki. 1983. Tôfuyô to beni kôji [Okinawan fermented tofu (tofuyo) and red koji]. *Nippon Jozo Kyokai Zasshi* (*J. of the Brewing Society of Japan*) 78(11):839-42. Nov.; 78(12):912-15. Dec. [72 ref. Jap; eng+]
• ***Summary:*** How to eat tofuyo (p. 839): In the *Gyozen Honzo* (*Food Herbal*) (1832, a book about food and medicine) the physician TOKASHIKI Tsûkan Peichin wrote: Tofuyo has a delicious flavor and is good for the stomach. It makes eating a pleasure and is good for various types of sickness" (Ref. #9; Note: This book contains the earliest direct reference seen (June 2012) to tofuyo. Peichin refers to a high-ranking officer). It seems that tofuyo was consumed by the upper classes during the Ryukyu Ocho period in Okinawa and it was also used as a food for recovering after a sickness, and as a side dish. According to old people in Okinawa, Tofuyo was popular among upper class people in Shuri or Naha, during the Taisho period (1912-1926) and at the beginning of the Showa period (1926+). It was eaten with tea by ladies or with millet brandy (*awamori*) by men. But it was too for the regular people to afford. The best way to eat tofuyo is to place one cube of it (2-3 cm on a side) on a small dish and eat it with chopsticks or a toothpick a little bit at a time.

Note on the geography and history of the Ryukyu Islands (also called Luchu or Loochoo Islands): This chain of islands extends in a 600-mile long arc southward from the southern tip of Kyushu (Japan's southernmost main island) down to Taiwan. It includes Okinawa, Sakishima, and the Amami island groups. The population in 1970 was 945,000. The chief town is Naha on Okinawa. History: In 1372 these islands came under the political influence of China. In 1451 they became a tributary to Japan as well as China, and 1609 a Japanese protectorate (part of Satsuma-Han). Thus the islands have long had cultural ties with both Japan

© Copyright Soyinfo Center 2014

and China. During Japan's Edo period (1600 to 1868) the kingdom of Ryukyu formally belonged to China, but in fact it was more closely tied with the Satsuma Han, a powerful domain in southern Kyushu. Like China and Japan, Ryukyu had its own emperors and dynasties. The imperial palace was on the island of Okinawa, in the southern city of Shuri. Imperial messengers (*sakuho-shi*) were frequently sent to Okinawa from China and there were cultural exchanges between the two countries. In 1871 the Meiji government in Japan made Ryukyu part of Kagoshima prefecture. In 1872 they made it Ryukyu-Han. After this change, Shôtai (lived 1845-1901) became king of the Ryukyu-Han. In 1879 Ryukyu became an integral part of Japan. Under the Japanese, the Amami group belonged to Kagoshima prefecture and the Okinawa and Sakishima groups constituted Okinawa prefecture. In 1945, after World War II, it was placed under a U.S. military government. In 1966 it received local self-government, and in 1972 was returned to Japan.

History of tofuyo in Okinawa (p. 839-40). The earliest document seen concerning soybeans in Okinawa appeared in 1534 in the *Record of the Messengers to Ryukyu* (*Shi Ryukyu Roku;* Ref. #16). Thereafter soybeans became a widely grown crop (Ref. #17). The *History of Ryukyu* by Ryukyu Opu (1713, Ref. #19) noted that it was not clear at the time when and how tofu came to the country. Although this uncertainty still remains, tofu is thought to have arrived in Ryukyu in the mid-1600s. According to the *Various Records of the Messengers to Ryukyu* written by Osho? (Wang-shu?, Ref. #18) in 1683, tofu was widely available at that time in Okinawan market places. being produced by many companies. It was an important food not only for the local people, but also for the Chinese imperial messengers (Refs. #20-22). Okinawa's tofu was a firm tofu, made in the Chinese way by pressing the soymilk out of the okara before cooking it. This method was also traditionally used in Korea and southern Japan (in Kumamoto–Itsugi-mura, Yamaguchi, Ishikawa, and Koichi prefectures). The method was probably introduced to Okinawa by Chinese imperial messengers or by exchange students, although it could have been brought from Japan by Buddhist monks, who served it in their temple cuisine.

Note: For much more detail about the history of tofu-ru in the Ryukyu islands, please see "History of Fermented Tofu" on Google Books and on the Soyinfo Center website. Address: Dep. of Agricultural Chemistry, University of the Ryukyus.

7910. *Nihon Shokuryo Shinbun* (*Japan Food News*). 1983. Nebaranai nattô. Marukin Shokuhin Sangyo SunSeed. Shôhin-ka ni seikô [The natto that isn't sticky–SunSeed Tempeh from Marukin Foods. They succeeded in commercializing it]. Dec. 1. [Jap]
• ***Summary:*** A photo shows a packet of Marukin SunSeed Tempeh.

7911. *Toyo Shinpo* (*Soyfoods News*). 1983. Izen juyô junchô [The demand is still strong for soymilk in Japan]. Dec. 1. [Jap]
• ***Summary:*** It is said in regular newspapers and food industry newspapers that in 1983 soymilk industry sales reached 35,000 million yen and are expected to grow well in 1984. But Mr. Okayama of the soymilk association thinks the figure was more like 25,000 million yen, and that next year the industry will reach 35,000 million.

Sales in 1980 were 3,000 million yen. In 1981 6,000 million yen. In 1982 12,000 million yen.

Plain soymilk (Jun) showed the best growth, and 200 ml was the most popular size. Large volume packages didn't sell well. In summer dairylike soymilk (*chosei tonyu*) and soymilk drinks (*tonyu inryo*) sold well but as a year-round product plain soymilk (nothing added) was the best seller.

1982 sales up to August were: Kibun 9,500 million yen. Nisshin Seiyu 2,700 million yen. From Sept. 1982 to Sept. 1983 Marusan-Ai almost reached their goal of 6,500 million yen.

7912. *Toyo Shinpo* (*Soyfoods News*). 1983. [Kibun is still the biggest soymilk maker in Japan, with a 45% market share]. Dec. 1. [Jap]

7913. *Toyo Shinpo* (*Soyfoods News*). 1983. [Study of health food buyers in Saitama prefecture, Japan]. Dec. 1. [Jap]
• ***Summary:*** The biggest buyers of health foods in Japan are women in their 50s and 60s; they are more interested in men. Sea vegetables and vinegar are the two health foods used most frequently (both are alkaline foods and are rich in minerals).

When asked which foods they believed are good for their health, these women replied: Sea vegetables 89.3%. Vinegar 87.9%. Yogurt 71.6%. Health tea 34.4%. Prunes 22.6%. Sports drinks 16.0%.

7914. Mikami, Yasuo. 1983. Re: The soymilk market in Japan. Letter to Richard Leviton, Director, Soyfoods Association of North America, Sunrise Farm, Heath Rd., Colrain, MA 01340, Dec. 7. 1 p. Typed, with signature on letterhead. [Eng]
• ***Summary:*** "We thank you for your visit to our stand at the ANUGA in Cologne. You may recall, we discussed the situation of soybean products such as soy milk, soy protein etc in Japan.

"Soy milk market of Japan has been surprisingly expanded during this several years and the total consumption of this year will be one hundred million dollars which is approximately 3 percent of regular cow milk market.

"We are also interested in soy products market in U.S.A.

"We shall be grateful if you will let us have the

© Copyright Soyinfo Center 2014

contemporary situation and the forecast of soy products including To Fu [tofu], soy milk and etc. in United States.

"We do hope to hear from you soon, and remain. Very truly yours,..." Address: Marketing Div., Nisshin Oil Mills, Ltd., Shinkawa 1-23-1, Chuo-ku, Tokyo 104, Japan..

7915. Hesseltine, C.W. 1983. Awards from the Emperor of Japan and the Japanese Shoyu Association. Nitrosamines and the safety of shoyu (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 16. 1 p. transcript. Address: NRRC, Peoria, Illinois.

7916. Breuls, René F. 1983. Re: Tempeh production by a natto manufacturer in Japan. Letter to Cynthia Bates at Farm Foods, Summertown, Tennessee, Dec. 19. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "The natto producer which we have been supporting and provided with samples so far has produced the best Tempeh in Japan. They have interested the Natto Association to backup their efforts. Dr. Ohta, the advisor to the Natto Association, is receiving small [tempeh] samples from the U.S.A. which he gives to our people to continue their experiments. We do not know from where in the U.S.A. he receives them.

"Our natto producer is now getting a number of natto producers together to start a joint venture tempeh factory. Because of contamination hazards the producers cannot use their own natto factories although the equipment is not so much different.

"In Southern Japan some marketing trials are made to see consumer reactions to this new soy product. It is expected that next year the Tempeh will be launched in Japan with all the necessary advertising and promotion.

"We will supply the spore powder when it will be required in commercial quantities. Please find enclosed our cheque for US$70. Please send us 100 gram spore powder so our people can familiarize themselves with it." Address: Asiatic Company Ltd., C.P.O. Box 1942, Tokyo 100-91, Japan. Phone: (03) 273-0773.

7918. Hughes Markets. 1983. Merry Christmas! (Ad). *Los Angeles Times.* Dec. 22. p. I30-I131.

• ***Summary:*** Two full pages of ads. The section titled "Happy holidays from Hughes Markets!" (p. I30) includes: "Fresh Hinode age [deep-fried tofu pouches] 1.5 oz. pkg.–79¢. Kikkoman soy sauce gallon can–$4.39. Kikkoman Aji Mirin, 10 oz. bottle, sweet cooking sauce–$1.59. Hime kuromame amani 6.35 oz. can, Black [soy] beans–95¢."

The section titled "Foods of the Orient holiday specials!" (p. I31) includes: "JFC Kinako 7 oz. pkg. Soy bean flour–69¢... Misuzu koya tofu, 3.5 oz box Wheat cake [sic, Dried frozen tofu]–$1.15." Also: "Hime sushinori dried seaweed, Kikkoman tempura sauce, Su Hiro kombu maki Rolled kelp, Umeya frozen mochi."

7919. Shurtleff, William; Aoyagi, Akiko. 1983. History of soy flour, grits, flakes, and cereal-soy blends. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 128 p. Dec. 24. Unpublished typescript. Available online at www.soyinfocenter.com.

• ***Summary:*** A comprehensive history of the subject. See also: History of Roasted Soy Flour. Contents: Part I: What are soy flour, grits, flakes, and cereal-soy blends? Introduction: Developed in the West, difference from roasted soy flour. Soy flour. Soy grits and flakes. Cereal-soy blends = soy-fortified blended foods. Etymology and nomenclature: German, French, U.S. English, U.S. whole soy flour, British English. Overview of world soy flour history.

Part II: History of soy flour, grits, and cereal-soy blends in Europe and Australia. The early years (1767 to 1899). 1900 to 1919. Between two wars (1920-1939). 1940-1959. 1960 to 1983.

Part III: History of soy flour, grits, flakes, and cereal-soy blends in the USA. The early years (1767-1919). 1920 to 1939. The 1940's and World War II. Meals for Millions and multi-purpose food. 1960 to 1980's. Food for Peace Program. Low cost extrusion cookers. Soy flour, grits, and flakes in America.

Part IV: History of soy flour, grits, and cereal-soy blends in Canada.

Part V: History of soy flour, grits and cereal-soy blends in Asia. Introduction. Bangladesh. China. India. Indonesia. Japan. Korea. Philippines. Sri Lanka (Thriposha). Taiwan. Thailand. Vietnam.

Part VI: History of soy flour, grits, and cereal-soy blends in Latin America. Introduction. Bolivia. Brazil. Chile. Colombia. Costa Rica. Ecuador. Guatemala. Guyana. Mexico. Paraguay. Peru. Venezuela.

Part VII: History of soy flour, grits, and cereal-soy blends in Africa. Introduction. Ethiopia. Ghana. Kenya. Nigeria. Rwanda and Burundi. South Africa. Tanzania. Uganda. Zimbabwe.

Part VIII: History of soy flour, grits and cereal-soy blends in the Middle East.

Note: This is the earliest English-language document seen (Nov. 2013) with the term "cereal-soy blends" in the title. Address: Lafayette, California. Phone: 415-283-2991.

7920. *SoyaScan Notes.* 1983. Soymilk and dairy milk prices in California, December 1983 (Overview). Dec. 28. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Lafayette, California, whole fluid cow's milk retails for $0.39/pint (1 pint = 16 ounces) and nonfat cow's milk retails for about $0.43/quart. Milk is the least

© Copyright Soyinfo Center 2014

expensive popular beverage, less expensive than Coca-Cola, beer, or orange juice. Prices of unflavored fluid soymilks are as follows: Vitasoy, 8.4 oz. Tetra Brik sold to the Asian-American market $0.35 (which is the equivalent of $0.67 per pint), Quong Hop Soy Fresh 10.16 oz. Pure Pak carton $0.59 ($0.89/pint), Wildwood Yosoy pint plastic bottle $1.05, Brightsong Honey-Vanilla pint plastic bottle $1.08, San-J To-Neu 6.76 oz. Tetra Brik $0.74 ($1.75/pint), Edensoy 6.0 oz. retort pouch $0.74 ($1.97/pint). Vitasoy, the least expensive soymilk, is 1.72 times as expensive as cow's milk. The average price of the pint equivalents of all 6 U.S. soymilk products mentioned above is $1.24 a pint (which would be $2.48/quart). Thus the average soymilk in a typical pack is 3.53 times as expensive as dairy milk per unit volume.

7921. Hughes Markets. 1983. Happy New Year! (Ad). *Los Angeles Times.* Dec. 29. p. J24-25.

• ***Summary:*** The section titled "Foods of the Orient holiday specials" includes: Kikkoman soy sauce, gallon can–$4.25. Fresh Hinode age, 1.8 oz.–79¢. Kikkoman 10 oz. JFC soy bean flour 7 oz. Kinako–69¢. Kikkoman Tempura Sauce 10 oz bottle–$1.09. Hime Kuromame amani, Black [soy] beans–95¢. Misuzu Koya Dofu 3.5 oz. box Wheat cake [sic, Dried frozen tofu]–$1.15.

Also includes: Frozen Umeya mochi. Shirakiku bamboo tips. Ozeki sake. New crop Kokuho rice. Hime sushinori [Sushi nori] Dried seaweed. Kikkoman Aji mirin–Sweet cooking sake. Mitsukan Su–Rice vinegar. Miyako kizami shoga–Sliced pickled ginger. Miyako shiitake–Dried mushrooms. Tamandi Sushipoko–Sushi seasoning. Kezuka kampyo [kanpyo]–Dried gourd strip. Suhiro Kumsu Maki–Rolled kelp [konbu].

7922. *SoyaScan Notes.* 1983. Chronology of soybeans, soyfoods and natural foods in the United States 1983 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. 16. Larry Needleman decides to sell Bean Machines. Looking for a buyer. Jan. 24. "Legume, Company Finds Niche Selling Frozen Foods Made with Tofu, published by The Wall Street Journal.

Feb. *Soyfoods* magazine No. 8 published by Richard Leviton. Blue cover, 5,000 copies

Feb. 6-8. Sixteen soyfoods companies exhibit at the Natural Foods Expo. in Anaheim, California. A new trade association named Soyfoods Association of America (SAA) is formed; it is basically a restructured version of the original Soyfoods Association of North America, which was founded in July 1978 and which now ceases to be active. SAA elects a new board of directors; Michael Austin is chosen new Executive Director and Gary Barat of Legume becomes new President. Fourteen companies pledge $12,000. Headquarters established in New York City.

Feb. 7. The First Great Tofu Burger, a dry mix, made in Oakland, introduced at Anaheim Natural Foods Expo.

Feb. 18. Wm. Shurtleff has idea for forming a Soy Sauce Council to help encourage soy sauce companies to join Soyfoods Association, develop soy sauce terminology and standards, and eliminate mislabeling.

Feb. Jack's Beanstalk, innovative tofu company in Salt Lake City, goes out of business.

March 10. *Soyfoods Industry and Market: Directory and Databook 1983* published by Soyfoods Center, accompanied by glossy flyer and catalog of professional publications and services.

March 10. *Tempeh Primer,* by Juel Andersen and Robin Clute, published.

March 14. Connecticut Agricultural Experiment Station, in Bulletin 810 "Quality of Tofu and Other Soy Products," reports high bacterial and coliform counts. A virtual expose, revealing the tofu industry's erratic quality control, it gets wide media coverage and hurts sales of New England and New York tofu companies.

March. Hinode Tofu Co. starts major tofu ad and coupon campaign, with full-page ads in four national magazines. Most extensive national publicity ever done for tofu. Triggers lawsuit from a rice company over the Hinode brand, with which Hinode Tofu Co. is subsequently forced to part.

April 27-30. Six soyfoods companies exhibit at Whole Life Expo in San Francisco, as part of Soyfoods Association's booth. Shurtleff presents a speech and color slide show.

April. Hartz Seed Co. is purchased by Monsanto.

May. *The Au Naturel Tofu Manual,* by Chloe & Abraham Fox self-published in Canada. Vol. 1 is *Tofu Recipes for Families.* Vol. 2 is *Modern Jewish Tofu Cooking.*

May 3. Michael Austin mails out Soyfoods Association Charter Member letter. By year's end $18,000 in membership fees had been raised.

May 4. Richard Leviton decides to move to California.

May 8-11. Hinode Tofu Co. exhibits five flavors of Tofu Parfait at the prestigious and influential Food Marketing Institute convention in Chicago, a major national supermarket convention, attended by 20,000.

May 9. Dr. Hwa L. Wang of USDA NRRC speaks on "Tofu and Tempeh as Potential Protein Sources in the Western Diet" at the American Oil Chemists' Society symposium on "Potential New Protein Sources" in Chicago.

May 16. Quong Hop & Co. introduces the first Soy Deli cooler display case to Raley's supermarkets in Reno and Sacramento. In July they introduce the idea to Safeway supermarkets in California. By August there are Soy Delis in ten Safeway supermarkets in the San Francisco Bay Area.

May 18. The New York Times article on "Bacteria in Soy Products" as a follow-up on the Connecticut tofu contamination report.

May 24. Wm. Shurtleff goes to China for three weeks to study soyfoods, sponsored by Danish Turnkey Dairies;

© Copyright Soyinfo Center 2014

the first trip for this purpose since Dr. A.K. Smith of the USDA went there in 1949. Shurtleff writes 75-page report on *Soybeans and Soyfoods in China: 1949-83.* After China, Wm. and Akiko Shurtleff spend 3 weeks studying the soymilk industry and market in Japan.

May 31. Leviton and Wang speak on the soyfoods industry at Iowa State University conference on grains and legumes.

June. Worthington Foods introduces Tofu Garden Patties, developed for the health food market as part of a larger new line of natural food products, all sold under the Natural Touch brand. This is a new trend for the company and they commit money to promoting it. In 1984 they launch Okara Patties (which contain okara as the 4th ingredient).

June. *Quantity Tofu Recipes for Institutions & Restaurants,* by Gary Landgrebe published by Soyfoods magazine and Fresh Press.

June. *The Magic of Tofu,* by Jane O'Brien of Ireland published by Thorsons in the UK.

June. *Tofu: Not Just for the Health of It,* by Jana H. Crutchfield self-published.

June. *Handbook of Indigenous Fermented Foods,* edited by Keith H. Steinkraus, published by Marcel Dekker. Extensive original material on traditional soyfoods. It soon becomes a classic.

June. *Soyfoods* magazine No. 9 published, 7,000 copies. *Soyfoods Newsletter* published in new typeset, 4-page format with new design.

June. Torigoe Seifun, Japan's fifth-largest flour miller, starts production of tempeh. This is the earliest known commercial tempeh ever made in Japan.

July 1. Quong Hop & Co. purchases Pacific Tempeh Co.

July. INTSOY publishes *Proceedings of the First China/USA Soybean Symposium,* held July 1982 at the University of Illinois.

July 3-Aug. 22. Richard Leviton in England, lectures on soyfoods in London and Leicester, and does some soyfoods research.

July 25. Soyfoods Association meeting in Denver. Tom Timmins, president of Tomsun Foods Inc. (one of the companies seriously affected by negative publicity on tofu quality) is asked to be head of the Soyfoods Association's Standards Committee, and to appoint people to work with him on the development of standards, especially tofu standards. In October he sends a 4-page survey letter concerning soyfoods standards to the 18-person Soyfoods Association Standards Committee that he has appointed.

July 28-Aug. 2. Second US/China Soybean Research Symposium, held in Jilin, China

July. NNFA show in Denver. Eden Foods surprises the natural foods industry by launching designed-for-America Edensoy in plain and carob flavors. Made in Japan by Marusan-Ai and exported by Muso, it is packed in a 6-ounce retort pouch. San-J's To-Neu brand soymilk is also debuted in Tetra Brik cartons.

Eden Foods is the first Caucasian-American company to import soymilk, and their gamble soon pays off; sales skyrocket, sparked by an extensive magazine advertising campaign. Between Sept. and Dec. 1983 over 1 million packs are sold. A host of competitors rush to follow Eden's lead... and many of them go to Muso. Eden objects.

July 31. Fifth Anniversary of the founding of the Soyfoods Association of North America.

Late July. Hot, dry summer weather heats up the price of soybeans from $6/bu to over $9.50/bu in August and September, falling back to $8 in December.

Aug. 15. *Time* magazine article on stylish ice creams has a paragraph on Tofutti soy ice cream.

Aug. 15. Delegation of four soyfoods experts from People's Republic of China spends 5 hours at The Soyfoods Center. First stop of the first Chinese soyfoods team to visit the USA.

Aug. 15. Soyfoods Center makes the first photocopy of the entire Log of the Dorsett-Morse Expedition to East Asia, 1929-31. 6,170 pages. The only original is owned by the American Soybean Assoc. in St. Louis.

Aug. Farm Foods serves Ice Bean soymilk ice cream at the American Soybean Association convention in Nashville, Tennessee.

Sept. Legume in New Jersey, in their second public stock offering in 15 months, raises an additional $400,000 ($300,000 net).

Sept. Continental Soyfoods, run by Pat Aylward in Minneapolis, goes out of business.

Sept. 9. Leviton leaves Massachusetts, moves Soyfoods magazine to Encinitas, California. But he decides to leave there a week later.

Sept. 21. New Ten Speed Press edition of *The Book of Miso,* by Shurtleff and Aoyagi published. Extensively revised. Shows miso consumption in U.S. has increased 300% since 1975.

Sept. 25. Open House at new headquarters of Soyfoods Center for 30 people, including Nancy Dailey, who is writing a major story on soybeans for *National Geographic* magazine, and for Richard Leviton, newly arrived in California. Shurtleff shows color slides of soyfoods in China.

Sept. 26–Oct. 1. Symposium on "Soybean in Tropical and Subtropical Cropping Systems" held at Tsukuba, Japan. About 200 people attended. Proceedings were published in 1985.

Sept. 28. Soyfoods Center buys its first computer and begins computerization, which soon leads to development of the world's three largest computerized databases focusing on soyfoods and the soybean industry–from which this chronology is compiled.

7923. *SoyaScan Notes.* 1983. Chronology of soybeans, soyfoods and natural foods in the United States 1983

© Copyright Soyinfo Center 2014

(Continued) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. Oct. 9 to Nov. 14. Leviton travels to Europe as a consultant for the American Soybean Association. Gives six speeches on soyfoods in Italy, Belgium, Denmark, France, Netherlands, and Hungary. The 50-minute speech in Italy is about the soyfoods industry in the USA, presented to 150 members of EUVEPRO, the European Vegetable Protein Association. Leviton studies soyfoods throughout Europe, the first representative of the American soyfoods movement to do so. He reports that virtually all tofu in Europe is vacuum packaged. On Oct. 28, ASA Belgium Office expresses interest in sponsoring a European Soyfoods Conference and a European Soyfoods Newsletter. Leviton writes a 56-page report on the trip.

Oct. New England Soy Dairy starts to sell its tofu under the Tomsun brand.

Oct. The world's first spray-dried tofu is introduced by Clofine Dairy & Food Products of Linwood, New Jersey. St. Peter Creamery first began spray-drying soymilk powder in late 1984, and tofu in the summer of 1985, under the Oberg patent.

Oct. Kikkoman: Company, Clan, and Community (358 p.) by W. Mark Fruin published by Harvard University Press as part of their series Studies in Business History.

Oct. Major reorganization of The Farm in Tennessee. It is no longer a cooperative. Every participant must pay his/her own way. All workers earn wages. The soy dairy sells its tofu and soymilk to Farm residents. Farm Foods becomes an independent, for-profit corporation.

Nov. Hymowitz and Harlan's "The Introduction of the Soybean to North America by Samuel Bowen in 1765" published in Economic Botany. This brilliant piece of historical research pushes the introduction date back 39 years, and shows that by the late 1760s Bowen, in Georgia, was making soy sauce and exporting it to England. It also credits Benjamin Franklin with the earliest known reference by an American to tofu, in 1770.

Nov. 11. Wm. Shurtleff and Gordon Bennett (Westbrae Natural Foods) mail out a packet including proposed U.S. soy sauce standards, English translation of Japanese Shoyu Standards, and proposal for formation of a Soy Sauce Council to 60 companies connected with soy sauce in the USA.

Nov. Soyfoods Assoc. officers meet with David Mintz of Tofu Time (maker of Tofutti) asking him to either use tofu as an ingredient in Tofutti or drop the term "tofu" from his product name and stop stating or insinuating that his product contains tofu.

Nov. 11. William Shurtleff writes a strongly worded letter to Mintz threatening to report the matter to the Securities and Exchange Commission and the FDA if Mintz fails to stop deceptive practices. Mintz quickly re-adds tofu to Tofutti.

Nov. 19. House Shokuhin Kogyo, a major Japanese food company, invests $2.5 million in Hinode Tofu Co. in Los Angeles as part of a joint venture to expand tofu production.

Nov. 25. Dr. Clifford W. Hesseltine of the USDA NRRC receives the award of the Third Class of the Order of the Rising Sun from the Emperor of Japan in recognition of the meritorious services he has rendered: proving the safety of Japan's traditional fermented foods, training Japanese scientists, and promoting technical cooperation in the field of food fermentation between the United States and Japan.

Dec. New England Soy Dairy, in a half-page article in *Inc.* magazine, is named as one of America's 500 fastest growing small private companies.

Dec. Inari Trading Co. in Michigan develops a delicious Christmas Soynut Sampler with seven flavors of Super Soys, including yogurt-coated, carob-coated, and butter-toffee. Runs full page color ad in Soybean Digest.

Dec. *International Bibliography of Soybeans* (3 volumes, 2,500 pages) published in Brazil. 19,571 references total, under 75 subject headings, all published during 1970-1982. Volume III contains author and subject indexes. Mostly soybean agronomy, but 1,584 references on soyfoods.

Dec. 1. The title of *Soyfoods Monthly* is changed to *Soyfoods Newsletter.*

Dec. 5-7. Symposium on Soybean Utilization held at Ibadan, Nigeria, Sponsored by IITA. First event of this type in Africa.

Dec. 8. Tofu Time Inc. in New York raises $3.2 million ($2.4 million net) in their first public stock offering, to finance national marketing of Tofutti soy-based ice cream.

Dec. 10. Doug Fiske becomes majority owner (55%) of *Soyfoods* magazine, Leviton owns 45%. Fiske will take over most publishing responsibilities. Leviton moves to San Francisco Bay Area.

Dec. Soyastern starts to make tofu in West Germany. By 1987 they are the country's largest tofu manufacturer, making 4,000 kg/week.

* *Eurosoya,* the annual publication of the European Cooperative Network on Soybean, begins.

* Soymilk production peaks in Japan at 116,724 kl. By 1986 it has fallen to 43,392 kl, which is only 37% of the peak.

1983 New Trends:

New Capital and Expertise are Flowing into the Soyfoods Industry, leading to many exciting new ideas and products and marketing programs. A dozen or so large companies with nationwide marketing are emerging.

New Emphasis on Soyfoods Marketing, now that production techniques have been fairly well mastered, is seen throughout the industry, and is reflected in new editorial and advertising policies of *Soyfoods* magazine.

Brand-Name Promotion by larger companies is surpassing generic or commodity promotion.

Stylish Second-Generation Products, prepared

© Copyright Soyinfo Center 2014

convenience soyfoods, are appearing with better product quality, better marketing and promotional programs, and better packaging and graphics. These are the fastest growing component of the soyfoods industry.

Extensive Professional Advertising of Soyfoods in natural and health food consumer magazines, as by Legume, Eden Foods, San-J, Hinode, Edward & Sons, and Pure & Simple. Each of these companies run very attractive, professional ads. Brightsong Light Foods has top graphics for a small company.

Exhibits at National Trade Shows are now a matter of course: The Natural Food Merchandiser show, followed by the National Nutritional Foods Association (NNFA) show are most popular.

Tofu Market Control is Increasingly Concentrated in the hands of large manufacturers, who distribute nationally and have professional marketing. Most companies are getting much more professional, but many small tofu companies are going out of business. The total number of companies is stabilizing.

Soymilk Makes its First Big Splash in the American Caucasian Market, led by Eden Foods' Edensoy. Vitasoy has big plans for early 1984. Vitasoy had the largest total imports in 1983, but mostly sold to the Asian-American market. Large new soymilk plants are planned to open in 1985.

East Asian Soymilk Sales are Skyrocketing, leading to a general soyfoods Renaissance, and reevaluation of traditional soyfoods staples. Production of soymilk in Japan tops 100,000 metric tons (tones) for the first time, reaching 116,724 tonnes, up 71% over last year. The per capita consumption of soybeans in Japan is 5.8 kg/year, up 3.6% from last year.

Soy Ice Cream is becoming fashionable. Made with tofu, soymilk, and/or isolated soy protein, it is emerging as a major way that Americans are discovering soyfoods.

Tofu industry is vulnerable to sanitation and credibility problems as vividly demonstrated by the Connecticut quality / contamination report in March and subsequent adverse publicity, and by a Tofutti mislabeling incident in November. The industry urgently needs standards and better sanitation. Tofu souring and spoilage is the tofu industry's number one problem.

The Soy Deli Concept: Defunct or Ready for Takeoff? No new openings and some closings. But more and more natural food and vegetarian restaurants are starting to use soyfoods, and Chinese and Japanese restaurants are increasing their traditional use. In Soyfoods No. 9, Leviton calculated that as much as 16% of all tofu made in the U.S. is being served in restaurants, but this figure is probably far too high. Most promising, plans by Tofu Time/Tofutti to open a chain of natural, fast food restaurants featuring tofu, soymilk and other soyfoods could bring the Soy Deli concept new life and widespread publicity as a healthful alternative to McDonald's, Burger King, and the like.

European Soyfoods Industry is Flourishing, with lots of innovation. Large producers of tofu and tempeh are emerging in the Netherlands.

Tempeh is Starting to Take Off in Japan and interest is rising rapidly: 13 articles were published on tempeh in Japan this year, followed by 20 in both 1984 and 1986.

7924. Kamata, Yoshiro; Kato, Takehiro; Yamauchi, Fumio. 1983. [Denaturation of protein in steamed soybeans]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 30(12):704-08. [Jap; eng]*

7925. Tsuchiya, Kunio. 1983. Tenpe Gannen no hassoku o tataete. Daizu shokuhin no kakumeiteki yakuwari [In praise of the first year of tempeh in Japan. The revolutionary role of soyfoods]. *Daizu Geppo* (*Soybean Monthly News*). Dec. p. 24-30. [Jap]

7926. **Product Name:** [Furusato Miso].
Foreign Name: Furusato Miso.
Manufacturer's Name: American Biofoods, Inc.
Manufacturer's Address: P.O. Box 62, Hazlet, NJ 07730.
Date of Introduction: 1983.
Ingredients: Water, soybeans, rice, salt.
Wt/Vol., Packaging, Price: 16 oz.
How Stored: Refrigerated.
New Product–Documentation: Label. 1983, undated. 5.25 by 6 inches. Plastic. Red, green, yellow and white. Recipes for miso soup and dressing. "No chemical preservatives added."

7927. **Product Name:** [Asahi Kôya-dofu (Dried-Frozen Tofu)].
Foreign Name: Asahi Kôya-dofu.
Manufacturer's Name: Asahi Shokuhin K.K.
Manufacturer's Address: Nagano-ken, Japan.
Date of Introduction: 1983.
How Stored: Shelf stable.
New Product–Documentation: This colorful Japanese-language label was purchased in Japan in mid-1983. It is orange, red, yellow and black on white. On the front panel, a color photo shows a prepared dish containing two pieces of dried frozen tofu, 5 snow peas, a mushroom, and a shrimp. Logo: JAS seal of approval.

7928. Daizu Fureeku No. 1: Gyokai no machinozonde ita kakumei-teki genryô desu [Soy flake Number 1: The revolutionary ingredient that the industry has long been waiting for (Leaflet)]. 1983. Hokkaido, Japan. 4 p. [Jap]
• ***Summary:*** Describes whole (non-defatted) soybean flakes that are used to make tofu in Japan. Stored under the proper conditions (in a cool, dry, dark place), they are guaranteed to keep their quality for 10 months. They are packaged in quantities of 15 kg and 30 kg (33 or 66 lb). An annotated

© Copyright Soyinfo Center 2014

flow sheet of the process for using the flakes to make tofu is given.

A table shows that from 30 kg of Soy Flake No. 1, a tofu maker can obtain 400 cakes (400 gm each) of regular tofu, compared with only 250 cakes if whole soybeans were used. This implies that the flakes give a 60% higher yield of tofu per unit weight than whole soybeans.

The address of the factory is Aza-Toyoni, Hirô-machi, Hirô-gun, Hokkaido.

7929. Eden Foods, Inc. 1983. Process for making soy milk [in Japan, by Marusan] (Leaflet). Clinton, Michigan. 2 panels each side. Each panel: 28 x 21.6 cm. Undated.
• ***Summary:*** Printed with dark green ink on glossy white paper. The purpose of this very interesting leaflet is to give a detailed technical description of the process for making and packaging (in retort pouches) Edensoy soymilk, and to give a floor plan showing the different pieces of equipment used and their location in the building. We applaud Eden Foods for their openness in disclosing exactly how their soymilk is made and packaged.

"Process for making soy milk (the numbers refer to the machines on the diagram): "Cleaned soybeans are fed through a cyclone chamber (105) removing loose skins and hulls. Then the beans are mechanically compressed (crushed slightly) to loosen the skins away from the rest of the bean (106). Next into the enzyme invalidator (106) where they are slowly augured through and cooked with steam, which enters the chamber at 266 ºF, and pressure, which is maintained at 57 lb/sq. in. (201).

"Steam is continuously being added and removed. This releases and destroys enzymes that cause undesirable smells. Enzymes are carried away in the spent steam. The soybeans are in this enzyme invalidator (201) for 30 seconds. From here they go into a grinder (203) and are mixed with hot water (80-85%) and then pumped into the ultrimizer colloid mill (205) where the particle size is reduced to pass through a 200 mesh screen. This is then pumped into a centrifuge (207), which removes the fiber down to about 11.5% solids. This liquid is then decanted in the receiving tank (208) and then deaerated by vacuum in the deaerating tank (209). Soy liquid is now moved to agitating blending tanks (211), and then pumped to seasoning tanks (213), where other ingredients are added. The liquid is now between 122ºF and 140ºF. It is now moved to the first homogenizer (216) and then back to the seasoning tanks (211).

"From there it goes into pasteurizing and smell removing (218) where it is heated with steam and pasteurized at between 266ºF and 275ºF. It is now moved to the high pressure homogenizer (219) and homogenized at 194ºF and 220 lb/sq. inch. The liquid is now passed through a plate cooler (220) where its temperature is reduced to 35 ºF and stored in aseptic tanks (221).

"CIP unit (222) is used to flush and clean the system.

"Once moisture has been introduced to the beans, the only surface that the mash or liquid comes in contact with is SUS 316L stainless steel.

"The soy milk has a specific gravity of between 1.03 and 1.04. The percent of solids is controlled by testing the soy milk after production, then adding the other ingredients to bring it up to standard.

"The soy liquid is tested for solids, pH, Brix: first, after mixing with other ingredients, second, just before packaging, and third, after it comes out of the retort."

"Process for packaging and retort sterilization of soy milk." The same kind of detailed description is given. "The filling machine is a Bosch Form, Fill, and Seal Machine, model number BMR-200ST. It is in a separate packaging room.

"The film used is an RF-P high temperature laminate manufactured by the Toyo Seikan Kaisha Co., Ltd. of Japan." Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: (517) 456-7424.

7930. Hinode Tofu Co. 1983. Tofu: The nutritious ingredient of 1,001 delicious meals (Leaflet). 526 Stanford Ave., Los Angeles, CA 90013. 1 p. Single sided. 28 cm. Also run in numerous magazines, with a coupon. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.
• ***Summary:*** "With no taste of its own, it tastes like whatever you mix it with. It can be sweet as apples, hot as chili, or tart as lemons. Colorless, it takes on the color of other ingredients. Red with tomato. Green with spinach. You can make it crumbly, chewy, or silky smooth in texture, depending on preparation. It is low in fat and calories. It has no cholesterol. It's a low-cost source of high-quality protein." Address: Los Angeles, California.

7931. Hinode Tofu Co. 1983. Fitness food. High in protein; low in saturated fats, calories and carbohydrates; devoid of cholesterol: Hinode Tofu is the nutritious ingredient of 1,001 delicious meals (Leaflet). Los Angeles, CA 90013. 1 p. Single sided. 28 cm. Color. Run in numerous magazines, with a coupon.
• ***Summary:*** "High in protein, low in saturated fats, calories and carbohydrates, devoid of cholesterol: Hinode Tofu is the nutritious ingredient of 1,001 delicious meals." Address: 526 Stanford Ave., Los Angeles, CA 90013.

7932. **Product Name:** [Soy Flour, Soy Protein Concentrates, Soy Protein Isolates].
Manufacturer's Name: Hohnen Oil Co. Ltd.
Manufacturer's Address: Mitsui Life Insurance Building, 1-2-3 Ohtemachi, Chiyoda-ku, Tokyo, Japan. Plants at Shimizu & Kobe.
Date of Introduction: 1983.
New Product–Documentation: Soya Bluebook. 1983. p. 6.

• ***Summary:*** The title of the *Tofu Hyakuchin*, Japan's most famous early tofu cookbook, may be translated "One hundred rare and favorite tofu recipes."

7948. Tsumura, ? 1983. Mame no hanashi arekore [Assorted stories about beans]. *Hachiju Nendai* (*The 1980s*) No. 14. p. 30-31. [Jap]
• ***Summary:*** In Japanese culture, beans are considered to be powerful in getting rid of evil and in bringing good health–as in the *mame-maki* ceremony of throwing roasted soybeans at Setsubun. Black soybeans are always included in dishes served at New Years, and beans are generally a part of festive occasions and meals. Part of the reason for this has to do with the word "mame," which can mean either bean or "diligent." Thus, "Mame ni hataraku" means to work diligently. When people visit a sick person in Japan, that person usually gives the visitors rice cooked with azuki beans (*o-sekihan*); the beans and the colors symbolize both celebration and regaining health (so one can work diligently).

During the Japanese New Year, a decoration of pine boughs, bamboo, and plum branches (named *kado-matsu*) is set at the front gate of each house to symbolize the hope that the New Year will bring vigor and long life, strength, steadfastness, and virtue. Stalks of the soybean plant are sometimes also included in the *kado-matsu.*

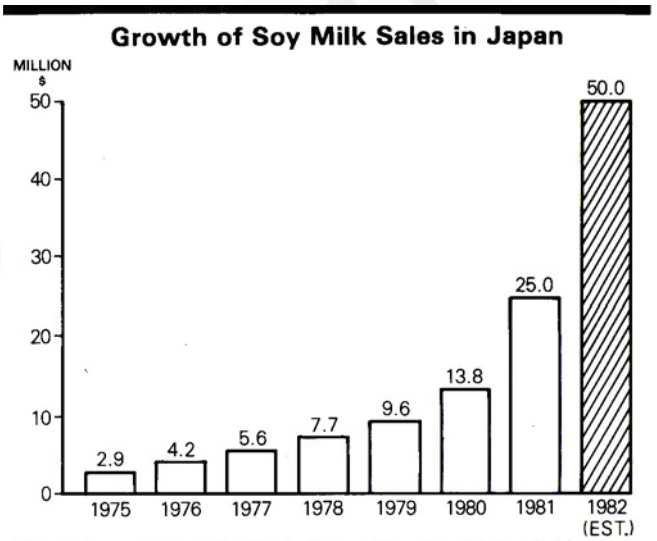
Manufacturer's Address: Tokyo, Japan.
Date of Introduction: 1983.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Label, Tetra Brik carton, 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center; Shurtleff & Aoyagi. 1984. Soyfoods Industry & Market. p. 63-64, 66. This is Japan's largest dairy products company, with sales of $1,776 million in FY 1982.

Color photo on cover of Journal of the American Oil Chemists' Society. Dec. 1984. The 250 ml Tetra Brik carton is dark blue, light blue, and white on beige.

7956. American Soybean Assoc. 1983. ASA helps quench Asian thirst for soymilk. *Checkoff Successfile.* Asia #804. 2 p.
• ***Summary:*** Problem: Soymilk has been a staple in China for centuries. "But the 'beany' taste limited its appeal. Also, in many areas soymilk was made and sold by roadside vendors, and production was inefficient or unsanitary.

"Program: ASA promoted soymilk in Japan, Taiwan, Korea and Singapore. ASA staff worked with food companies to stimulate large scale soymilk production. ASA technicians helped develop new, appealing soymilk flavors. ASA participated in food shows, gave demonstrations and sent out educational pamphlets depicting soymilk's health benefits and good taste.

"Results: Asian soymilk consumption has soared. Consumption in Japan is expected to jump over 200 percent from 1981 to 1982, using almost 1 million bushels of soybeans. Korean soymilk consumption has doubled, requiring over 1 million bushels of beans. Taiwan consumers are drinking over 180,000 gallons of soymilk daily, using over 950,000 bushels of soybeans annually."



The rapid growth of soymilk sales in Japan reflects the nutritious drink's increasing popularity in Asia.

A bar chart shows "Growth of soy milk sales in Japan" from 1975 to 1981, with 1982 estimated. The growth has been exponential.

7957. Azumaya Inc. 1983. Tofu! New way to serve the world's oldest meat substitute. Meet the bean that thinks it's meat. San Francisco, California 94124. 1 p. Undated. 21 x 43 cm.
• ***Summary:*** This two-color poster is printed yellow and white on brown. To the left is a yellow soybean cartoon character (registered trademark), whose two arms are held up in a gesture of joy, legs are short and feet are oval. His big smile comes up to the level of his eyes and eyebrows. Below him is written in white: "Hi! I'm li'l soy." In the lower right corner: "Write for recipes. Send self-addressed stamped envelope to: Consumer Services, Azumaya Inc." Beside the address is the Azumaya company logo: The letter "A" inside a sort of four-leaf clover with four arrows pointing at it. Address: 1575 Burke Ave., San Francisco, California 94124.

581 p. See p. 324-47. Held 1-3 Dec. 1980 at Raleigh, North Carolina. [9 ref]
• ***Summary:*** Reviews studies concerning the use of isolated soy protein with minced fish in some Japanese food products. Minced fish is the basis for surimi, a wet fish protein which is the major ingredient in various traditional Japanese fish paste products–such as kamaboko. Alaska pollock is the fish used to make surimi. When properly manufactured, isolated soy protein can have excellent gelling properties. It has been commercially successful in gelling minced fish in Japan. Ralston Purina has worked with Fuji Oil Co. of Japan in developing products. Address: Ralston Purina Co., St. Louis, Missouri.

• ***Summary:*** Philipp Franz von Siebold lived 1796-1866.

7961. Fruin, W. Mark. 1983. The origins of shoyu (Document part). In: M. Fruin. 1983. Kikkoman: Company, Clan and Community. Cambridge, MA: Harvard University Press. xiv + 358 p. See p. 14-16. [4 ref]
• ***Summary:*** "The production of shoyu, one of the traditional products manufactured in the countryside [of Japan], grew enormously during the Tokugawa Period (1603-1867) because of a dramatic increase in its market, primarily urban residents. Whereas before the 17th century only 1 or 2 percent of the Japanese population lived in cities, by 1725 roughly 20 percent did so. The increased demand for shoyu was met primarily through an increase in capacity based on the entrance of new producers and the expansion of established brewers...

"The forerunner of modern shoyu appears to have been *miso tamari,* the liquid that forms during the process of fermenting rice or soybeans to make a soft, cheeselike product. The most popular and likely story of shoyu's origins relates how Kakushin, a Japanese Zen priest who had studied at the Kinzanji Temple in China, returned to Japan in the middle of the 13th century and began preparing a type of miso that became a well-known local specialty of Yuasa, the town near Kakushin's temple in the province of Kii (today's Wakayama prefecture). By the end of the 13th century the liquid had come to be called tamari and was sold commercially along with the miso. From such beginnings, a great variety of experimentation with the ingredients and methods of tamari fermentation was launched. Although tamari probably found favor initially in Buddhist monasteries as a condiment for a vegetarian diet, the popularity of tamari-type seasonings was related more to the prevalence of battlefields than of meditation halls during the period of civil wars that raged across Japan from the thirteenth to sixteenth centuries. Soldiers apparently found the versatility and transportability of the seasonings to their liking. Shoyu, which evolved from these tamari seasonings by adding wheat to the fermentation mash, appeared during the 16th century.

"The first soy sauce made in the area of modern Noda was brewed in about 1560 by Iida Ichirobei and respectfully presented as tribute taxes to the local warrior family in the following years. The Iida family, ostensibly fleeing the carnage and confusion of the Onin Wars (1467-1477) in the Home Provinces around Kyoto, arrived in the area of Noda early in the 16th century and by mid-century were engaged, among other pursuits, in the manufacture of tamari, a type of soy sauce that by now was made entirely from soy beans...

"Iida's first brew was closer to tamari than shoyu in consistency, taste, and aroma...In Eastern Japan the manufacture of a shoyu rather than tamari soy sauce like Iida's seems to have originated in or near the town of Choshi at the mouth of the Tone River on the northeastern tip of the Boso Peninsula, which guards the entrance to Tokyo Bay like an extended crab's claw. The Hamaguchi families of Choshi originated as branch households of the main Hamaguchi house of Hiromura village in Kii, not surprisingly the same province where Kinzanji miso and miso-tamari appeared and where the Hamaguchi of Hiromura were among the earliest commercial brewers of shoyu in Japan.

"The Hamaguchi transplants in Choshi, along with Tanaka Genba and his descendants, began the manufacture of shoyu early in the 17th century. Higeta shoyu was first produced here in 1616, Yamajo in 1630, and Yamasa in 1645.

"It was not until the latter half of the 17th century, however, that Noda followed Choshi in the manufacture of a soy sauce that was closer to shoyu than the thick, dark tamari was. In 1661 Takanashi Hyozaemon XIX began brewing shoyu in Noda; using a work force of twenty that included fifteen contract laborers, he produced 3,000 gallons his first year." Address: Prof. of History, California State Univ., Hayward.

7962. Fujimori, Ikuo. 1983. Daizu. Shizen kindaabukku [Soybeans. Natural children's book]. Tokyo: Fureberu-kan K.K. 30 p. Illust. by Akira SETO. 26 cm. [Jap]
• ***Summary:*** A children's book with superb color illustrations. Shows how to make natto, tofu, and soy sprouts at home. agé. Address: Daizu kairyo no dai-ichi ninsha [President, Takeya Miso Co., Nagano, Japan].

7963. Hesseltine, C.W. 1983. Microbiology of Oriental fermented foods. *Annual Review of Microbiology* 37:575-601. [50 ref]
• ***Summary:*** Contents: Introduction. Historical account. Importance of mixed cultures. Microorganisms used.

"The Japanese Food Agency, Ministry of Agriculture, Forestry, and Fisheries (1979), gave the following figures for 1979: miso, 567,776 tons; shoyu, 1,252,431 kiloliters; and natto, 158,000 tons. In Korea, 35% of the 442,803 metric tons of soybeans produced is fermented. Indonesia uses about 75,600 tons of soybeans in making tempeh.

"There is considerable ancient writing in Chinese publications about foods made by fermentation, but the first scientific reports are only about 100 years old. From 1878 until the beginning of World War I, there was an explosion of papers and reports dealing with fermented foods and drinks... In general, studies between 1881 and 1914 were devoted to the description of the product and the local name and to the isolation and description of the microorganisms associated with the fermentation. A number of organisms new to science were described and illustrated. Additional information was given on the action of the fungus on the substrate, suggested uses of the fungus in processes that could be exploited in European technology, and a description of the substrate preparation, food use, and native methods of food preparation.

"This period of research ended abruptly with the advent of World War I, as the exchange of students and cooperation between Japan and Germany ceased. Food fermentation studies resumed in the 1950s and today considerable interest exists. This renewed interest stems from the concern with nutrition, the great enthusiasm for vegetarian and natural foods, the search for less expensive, high-protein foods, the influence of foreign students studying in the West, the need to expand export markets, the need to add products to convenience foods to add zest and flavor, and the interest in the activities of microorganisms used in fermented foods." Address: NRRC, Peoria, Illinois.

7964. Hoshikawa, Kiyochika. 1983. Encyclopedia of Japan: Soybeans. San Francisco and Tokyo: Kodansha International. See vol. 7, p. 239. [Eng]
• ***Summary:*** Soybeans were introduced to Japan in the early years of the Yayoi period (ca. 300 B.C. to ca. A.D. 300) and have continued to be one of Japan's main food crops. Of the annual Japanese consumption of about 3,500,000 tonnes (metric tons), about 2,600,000 are crushed to make soybean oil and meal. Domestic production is presently (1978) about 190,000 tonnes/year, with Hokkaido producing the most. Besides these, about 100,000 tonnes of soybeans are produced in Japan for green soybeans (*edamame*), which are boiled in the pods and shelled while eaten as a snack, often with beer. Small quantities are also grown for green livestock feed.

Note: This is the earliest document seen (July 2001) which states that edamame are consumed with beer. Address: Japan.

7965. Joshi Eiyo Daigaku. 1983. Tôfu kukkingu [Tofu cooking]. Tokyo: JED Shuppan-bu. Kyo no Okazu No. 9. 128 p. Illust. Index. 19 cm. [Jap]
• ***Summary:*** Contents: From tofu in Japanese to tofu in English: Modern thoughts on tofu. Ikuko Hisamatsu's healthy tofu menu: Homemade tofu, western style tofu recipes, second generation tofu products and recipes, okara, natto, soymilk. Fujiko Sakami's Japanese style recipes: Homemade second generation tofu products taste better, Japanese style tofu recipes, okara. Seiko Osato's Chinese-style recipes: Introducing the taste of the homeland of tofu in China, Chinese second generation tofu products. Other comments: The history of tofu, the roots of tofu, the challenge of homemade tofu, tricks of Western style tofu recipes, European and American tofu cooking. Note: A color photo accompanies each recipe. Address: Tokyo, Japan.

7966. Konishi, Kiyoko. 1983. Japanese cooking for health and fitness. Tokyo: Gakken Co. Ltd. 120 p. Introduction by Susan F. Stirn (U.S. Embassy, Tokyo). Illust. (color photos). No index. 27 cm. Produced in conjunction with Kikkoman. [Eng]
• ***Summary:*** This attractive book, with many large color photos on glossy paper is crippled by lack of an index. Soy-related recipes include: Miso soups (p. 23, 25). Photos (p. 26) show small packets of Kikkoman's Instant Miso Soup. The photo of sukiyaki includes a bottle of Kikkoman Sukiyaki Sauce (which contains soy sauce); the Sukiyaki recipe includes "1 block tofu." A large photo (p. 39) includes a Kikkoman soy sauce dispenser. Grilled salmon with teriyaki sauce (the sauce contains sugar, sake or dry wine, mirin and soy sauce, p. 60). Tempura (the dipping sauce contains dashi, mirin, and soy sauce, p. 64). Salmon-tofu balls (with "1 block tofu," p. 69). Salad of tuna and wakame with soy sauce dressing (p. 72). Salad of short-necked clams with miso dressing (p. 73). Soybeans cooked with chicken wings (with "10 ounces {300 gm}, or about 2 cups dried soybeans," p. 85).

The section titled "Tofu and other dishes" (p. 89-97) includes Fresh tofu with condiments (*Hiyayakko,* p. 92; a photo, p. 90, shows a Kikkoman soy sauce dispenser). Sauteed tofu topped with shrimp and vegetables (p. 92). Tofu sauteed with ground chicken and vegetables (p. 93). Boiled vegetables with tofu dressing (p. 93). A glossary each (hard to use) covers fish and shellfish; vegetables, grains, seaweed varieties, and processed foods; seasonings, spices and seeds. One full-page photo (p. 102) shows processed

© Copyright Soyinfo Center 2014

foods, including: Thin, deep-fried tofu (*abura-age*). Thick, deep-fried tofu (*atsu-age*). Bean curd (*tofu*). A second full-page photo (p. 103) shows seasonings, spices and seeds, including: Five forms of Kikkoman regular soy sauce (*shoyu*)–dispenser, 150 ml glass bottle, 250 ml plastic bottle, and low-salt (green label, 500 and 250 ml). Two varieties of soybean paste (*miso*). Bottles of Kikkoman soup base for noodles and tempura (*memmi* [*menmi*]), sukiyaki sauce, teriyaki sauce, extract of bonito (*katsuo-dashi*), and extract of kelp (*konbu-dashi*). Japanese horseradish (fresh *wasabi*). White sesame seeds, black sesame seeds, and sesame oil (*goma-abura*).

A full page (p. 106) titled "Japanese cooking and soy sauce" discusses: Kikkoman soy sauce–a long history (it was first made in 1630). How does Kikkoman soy sauce gain is flavor, color, taste and aroma. Why is Kikkoman called the "liquid spice"? How to preserve the fine quality of Kikkoman. Address: Tokyo, Japan.

7967. Koshiyama, Ikunori. 1983. Storage proteins of soybean. In: W. Gottschalk and P. Hermann, eds. 1983. Seed Proteins: Biochemistry, Genetics, Nutritive Value. The Hague, Boston, and London: Martinus Nijhoff / Dr. W. Junk. viii + 531 p. See p. 427-50. [104 ref]
• ***Summary:*** Contents: Introduction. The composition of soybean storage proteins. Isolation and characterization of soybean storage protein components (globulins, ultracentrifugal components or fractions, subunit structure).

"The 11S globulin. Among the ultracentrifugal components, the initial effort of the isolation was done for the 11S component. The partial purification and characterization of the 11S component were first studied by Wolf and coworkers, and the first ultracentrifugal pure isolation was accomplished in 1965 [by Mitsuda, Kusano, and Hasegawa in Japan]... Immediately thereafter, the 7S protein was isolated in ultracentrifugally pure state [by Koshiyama]." Address: Central Research Lab., Kikkoman Shoyu Co., Noda-Shi, Chiba-Ken, Japan.

7968. Kushi, Michio; Jack, Alex. 1983. The cancer prevention diet: Michio Kushi's nutritional blueprint for the relief and prevention of disease. New York, NY: St. Martin's Press. xi + 460 p. Index. 22 cm. [32 ref]
• ***Summary:*** In this book, cancer preventing effects are attributed to miso (p. 50-51, 220-21, 304-06), and to soybeans (p. 51, 154-55, 293, 306). Natto, soymilk, tamari, tempeh, and tofu are also discussed.

Pages 50-51 note: "A ten-year study completed in 1981 by the National Cancer Center of Japan reported that people who ate miso soup daily were 33 percent less likely to contract stomach cancer than those who never ate miso soup. The study also found that miso was effective in preventing heart and liver diseases...

"Soybeans, a major source of protein in the macrobiotic diet, have been singled out as especially effective in reducing tumors. The active ingredient in soybeans is called a protease inhibitor. Laboratory tests show that soybeans and certain other beans and seeds containing this factor added to the diet prevent the development of breast, stomach, and skin tumors. Whole soybeans and soy products, including miso, tamari soy sauce, tofu, tempeh, and natto are staples of the macrobiotic diet... At St. Luke's Hospital in Nagasaki, a group of macrobiotic doctors and patients who had survived the atomic bombing on August 9, 1945 subsequently protected themselves against potentially lethal doses of radiation on a diet of brown rice, miso soup, sea vegetables, and sea salt."

Pages 220-21 contain a long excerpt from the account of Dr. Tatsuichiro Akizuki, director of internal medicine at St. Francis's Hospital in Nagasaki. He survived the world's first atomic bomb attack on 9 Aug. 1945. He believed that the main reason that neither he nor any of his co-workers at the hospital suffered or died from radiation was because of their diet, based on miso, brown rice, and sea vegetables.

Pages 293, and 304-06 summarize a number of publications which seem to show that consumption of soybeans, miso, or soymilk may prevent cancer. Pages 391-99 contain soyfoods recipes. Address: Boston, Massachusetts.

7969. Ohara, Teruko; Sakami, Fujiko; Osato, Seiko. 1983. Mame mame hyakuchin now [One hundred favorite bean recipes, now]. Tokyo: Shibata Shoten. 132 p. Illust. Index. 19 cm. [Jap]
• ***Summary:*** Contents: Preface. Western style bean cookery, by Teruko Ohara. Japanese style bean cookery, by Fujiko Sakami. Chinese style bean cookery, by Seiko Osato. Contains many color photos of edamame (ready to eat) and green vegetable soybeans in prepared dishes.

Address: Iiyamachi, Nagano-ken, Japan.

7971. Otsuka, Shigeru. 1983. Encyclopedia of Japan: Soy sauce. San Francisco and Tokyo: Kodansha International. See vol. 7, p. 239. [Eng]
• ***Summary:*** The prototype of soy sauce was *hishio,* a pasty substance made by adding fish to salt; it is known to have been made in the Yayoi period (ca. 300 BC–ca. AD 330). Shoyu as we know it today was first made in Japan during the Muromachi period (1333-1568).

Koikuchi shoyu, the most widely used type, is fermented for a relatively long time and is relatively thick. Usukuchi shoyu is fermented for a shorter time. "The addition of amazake (a sweet rice wine) gives the latter a delicate color, flavor, and aroma, making it suitable for seasoning

© Copyright Soyinfo Center 2014

vegetables, white-fleshed fish, and clear soups."

There are also local varieties and variations of soy sauce. In Akita prefecture, *shottsuru* is made with fish; it is pale yellow and contains no soybeans. In the Nagoya area, light-colored shiro shoyu is made. Since aroma is most important, it is recommended that shoyu be added just before a dish is ready to be served. Also, once the container is opened the flavor and color of shoyu begin to deteriorate, so it should be used quickly. Address: Japan.

7972. Otsuka, Shigeru. 1983. Encyclopedia of Japan: Tôfu. San Francisco and Tokyo: Kodansha International. See vol. 8, p. 35. [Eng]

• ***Summary:*** (bean curd). Tofu is said to have been first made by the Chinese 2,000 years ago and introduced to Japan in the 7th century. Describes briefly how tofu is made and the different types of tofu. Aburaage and namaage are made by frying tofu from which excess water has been pressed. Gammodoki is made the same way, with bits of carrot and sesame seeds added. Koridofu is made by freezing and drying tofu. Okara, the substance left after extracting the liquid *tônyû,* has a unique texture and flavor. Yakidofu is made by toasting squares of bean curd made firm by extracting excess water. The *Tofu Hyakuchin,* a cookbook written during the Edo period (1600-1868) lists 100 methods of cooking tofu. It can be used in soups or sukiyaki. As yudofu, it is kept warm in a pot of hot water and seasoned with a dipping sauce of soy sauce, minced scallion, and spices. As hiyayakko, it is eaten the same way but chilled. As dengaku tofu, it is covered with a miso mixture and broiled. Address: Japan.

7973. Questions on the history of tempeh in Japan (Overview). 1983. Lafayette, California. 1 p. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Contains 15 questions. Address: Founder and Director, Soyfoods Center, Lafayette, California.

7974. Sams, Craig; Sams, Ann. 1983. The brown rice cookbook: A selection of delicious, wholesome recipes. New York and England: Thorsons Publishers Inc. 128 p. Illust. by Clive Birch. Index. 20 cm.

• ***Summary:*** Page 14 gives a description of soya sauce, shoyu, tamari, and miso. Soy-related recipes include: Miso soup with brown rice (p. 30). Miso sauce (p. 54). Tamari sauce (p. 55). Miso rice (p. 125). Craig Sams has also written a book titled *About Macrobiotics.*

"In the early 1960's many people in Europe and the U.S.A. were attracted to the ideas of Georges Ohsawa, a Japanese who had rediscovered the importance of dietary balance in traditional Eastern medicine." He taught macrobiotics, a dietary system in which brown rice plays a major role. "In the world of pop music the expression 'brown rice sandwiches' was used in association with the musicians who adopted wholefood diets." Then in the mid-1970s came the bran boom with an upsurge of interest in sources of dietary fibre, including brown rice.

Why did brown rice ever lose its once pre-eminent position to white rice? "The answer lies partly in the fact that while white rice will keep almost indefinitely, brown rice should be fresh. It attracts insects once it has been husked, so it needs more care in storage and more attention to efficient distribution." White rice also cooks more quickly.

"Pythagoras would not let his students eat beans because he believed they inhibited the higher intellectual processes. However, it is likely that this was because the prevalent bean of classical Greece was the fava bean–harmless in itself but with a hard brown skin which, if regularly eaten, can lead to favism, symptoms of which are deterioration of vision and mental faculties."

7975. *SoyaScan Questions.* 1983. Questions about the history of tempeh. Further research needed. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1. Learn more about the early history of tempeh in Indonesia before 1875. There must be some earlier references by missionaries, travelers, traders, etc.

2. Learn more about tempeh (tou chiah ping) in China.

3. Were there no references to tempeh by Indonesians prior to Soetan in 1956? Not even dictionaries?

4. How does the vitamin B-12 content of fresh tempeh compare with that of cooked (boiled, fried) tempeh?

5. Which was the first commercial European tempeh Co? Firma E.S. Lembekker in Jan.1959? Ask them about Firma ENTI?

6. Where was ENTI founded? When did they start to sell tempeh commercially? Where did the April 1946 founding date come from? Europe? van Dappern?

7. Did Robert van Dappern learn to make tempeh from the man who started Firma ENTI? If not, from whom? When did he move his plant to Kerkrade (about 1972-73)? When did he buy the $1 million plant (about 1980-81)? In mid-1982 was production 7,000 lb/wk or 10,000 lb/day as Ike said? How much tempeh does he make now each day? Each week?

8. What have Hedger and Basuki done with tempeh at Wales and what are they planning to do (O'Neill 1980)? Did they ever start a tempeh plant?

9. How many pages does Nakazawa have on Rhizopus? Does he mention tempeh at Penicillium?

10. Who wrote the early article on tempeh at Kyushu University, Japan, that interested Torigoe?

11. Get full citations for and copies of the following documents: Wigman, pre 1900.

12. Did Ohta or Karauchi write an early article on tempeh in about Showa 7 or 8 (1932-33)? Ohta mentioned this.

13. Try to get the article (about 1947-48) from Nosan

© Copyright Soyinfo Center 2014

Seizo, written by Ohta Teruo or Nakano Masahiro.

14. When did the *Natto Gyokai News* (or any natto newspaper) publish its first article on tempeh. I'd like to get copies of all early and recent important articles it has published.

15. Dr. S.O. Robson, Netherlands. Reward of $1 per year for citations on tempeh prior to 1875. Maximum $100.

16. K.K. Fuji was interested in Japan since 1980, says Dr. Wang at NRRC. Who are they? Who is Nihon Kogyo?

17. Get samples of Michael Cohen's new tempeh bags and labels.

18. Get answers to all the questions I wrote to Watanabe and Takamine in Kyushu.

19. Who made the early tempeh starter in Japan?

20. KOPTI: Please send me the names and locations by city of Indonesia's five largest tempeh companies. How many kg of tempeh does each make per week?

21. Get a full bibliographical citation for Kawarai.

7976. Steinkraus, K.H. 1983. Industrial applications of Oriental fungal fermentations. In: J.E. Smith, D.R. Berry, and B. Kristiansen, eds. 1983. The Filamentous Fungi. 4 vols. Fungal Technology. London: Edward Arnold. See p. 171-89. Chap. 7. Illust. Index. 24 cm. [35 ref]

• ***Summary:*** Contents: Introduction. The koji principle. Soy sauce / Japanese shoyu as indigenous fermentations. Japanese miso. Japanese saké. Indonesian tempe / oncom–fungal fermented traditional meat analogues. Indonesian tapé ketan and tapé ketella fermentations. Conclusions. Address: New York State Agric. Exp. Station, Geneva, NY 14456.

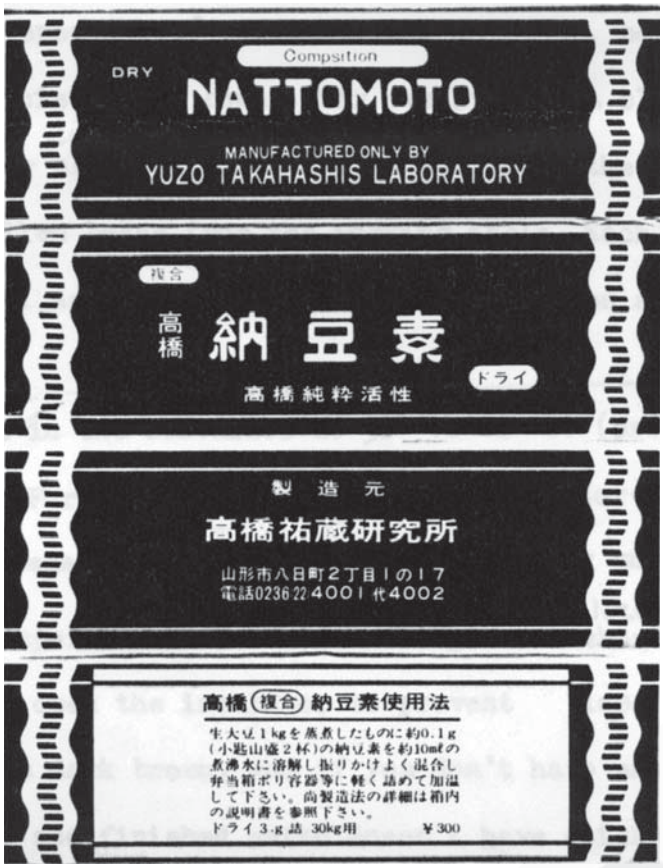
7983. Kikkoman Corporation. 1983? [All-purpose seasoning. Since 1630. Kikkoman naturally brewed soy sauce. Brewed by Kikkoman Foods, Inc. in the U.S.A. (Brochure)]. 23 p. Undated. No place of publication given. [Jap]
• ***Summary:*** This color booklet gives an artistic introduction to Kikkoman's many activities and products (both soy and non soy, such as tomato sauces, wines, etc.) Only the rear cover is in English.

7984. **Product Name:** [Korumame (Dried Salted Natto)].
Manufacturer's Name: Marumiya K.K.
Manufacturer's Address: Obayashi 287, Otsu-cho, Kikuchi-gun, Kumamoto-ken, Japan.
Date of Introduction: 1983?

7985. Nisshin Oil Mills, Ltd. 1983? [Soybean proteins (Catalog)]. Japan. 1 p. Undated. [Jap]
• ***Summary:*** This 1-page color leaflet shows 5 soy protein products made by Nisshin. For each, a photo shows the product in a shallow white bowl, and a nutritional analysis is given; for the first three the package (a 10 kg multiwall paper sack) is also shown. The products are: Soymee S (textured soy protein, 51% protein and 1% fat, probably textured soy flour). Sol-P 600 (powdered product for use in various kinds of fish paste, based on soy protein concentrate; 64% protein and 1% fat). Sol-P-S (powdered soymilk, 27.5% protein and 28.5% fat). Imitation bacon bits (31.5% protein and 39.4% fat). Full fat soybean flour (39% protein and 20% fat). Address: Japan.

7986. Takahashi Yuzo Kenkyusho. 1983? Nattô seizô-hô [Method for making natto at home (Leaflet)]. Yamagata-shi, Japan. 1 p. Undated. [Jap; eng+]
• ***Summary:*** This company makes *Nattomoto,* a dry, commercial natto starter. A copy of the label accompanies the pamphlet. The pamphlet explains: 1. Choose 1 kg well dried, new crop soybeans. Remove any bug-eaten or immature beans, as well as sand, stones, dust, etc.
2. Wash well and soak in 2½ their volume of water overnight to allow them to expand well. The average soaking time is 12 hours in summer, 24 hours in winter.

© Copyright Soyinfo Center 2014



3. Drain off the water and discard. Steam-cook the soybeans as follows: Cook for 8-9 hours in a cooking pot or 5-6 hours in a square *seiro* steamer [see *The Book of Miso,* p. 176]. The cooked beans should be yellowish dark brown in color and you should be able to crush them easily between your thumb and finger tip.

4. Drain the cooked beans in a clean colander. When they are still hot, dissolve 0.1 gm (2 heaping spoonfuls) of Takahashi natto starter in 10 ml boiled and cold water; sprinkle this on the beans. Mix evenly with a clean spatula. Quickly pack the inoculated soybeans into a heat resistant container (metal, glass, or Tupperware plastic) and cover it. Do not touch the beans with your fingers or pick up any beans that may have fallen from the work table.

5. Incubate the beans in the container at 38ºC to 42ºC (ideally 40ºC or 104ºF) for 20-24 hours. For your incubator, a chicken incubator is ideal, but you can use a heater or boiler room, a homemade incubator (box with a heat source underneath), etc. But the temperature should never exceed 42ºC. During incubation, do not open the incubator to prevent loss of moisture. If you overheat, the natto becomes dark brown, and if there is not enough moisture it becomes too dry and crumbly, has a bad taste, and the sticky natto strings do not develop properly.

6. After incubation, remove container from incubator and leave to cool.

There is also a short "Easy lunch box natto making method." A Japanese lunch box is metal. Using this method, if you cook the soybeans well, you don't have to worry about the moisture. Address: 2-1-17 Yoka-machi, Yamagata-shi 990-91, Japan.

7987. Tsuchiya, Kunio. 1983? Daizu no juyô to ryûtsû ni tsuite [On soybean demand and distribution]. Kumamoto Prefecture, Japan: Kumamoto-ken Keizai-ren. 39 p. Undated. [12 ref. Jap]
• ***Summary:*** A rich and compact source of statistics, with much time-series data, about soybeans in Japan. Address: Kumamoto prefecture, Japan.

7988. *Toyo Shinpo* (*Soyfoods News*). 1984. Wadai no "tenpe." Seihin shôkai. Sono hinshitsu to saikin no ugoki. Shokuhin gakusha mo hyôka [People are talking about tempeh. Product introduction. Its quality and latest trends. Food researchers also value it]. Jan. 1. p. 29. [Jap]
• ***Summary:*** At the end of 1983 Torigoe Seifun started test marketing tempeh at a major department store in Kyushu. Taste testing done among college girls in Japan shows that they prefer tempeh (76.4%) to natto. Torigoe Seifun says that after marketing tempeh to industrial users (institutions and food processors) at 1,500 yen/kg, they have received many enquiries. They haven't decided the price for home use yet. Their goals: (1) Tempeh production of 15,000 kg/month; (2) Sales of 100 million yen from July–Dec. 1983; (3) In three years their sales goal is 2,000 million yen.

• ***Summary:*** Preservative (*hozon ryo*). Antioxidant (*sanka bôshizai*). Artificial flavor and/or fragrance (*chakko*). Sweetener (*kanmi*). Emulsifier (*nyûka*). Foam extinguisher (*awakeshi*). pH regulator (*pH chôsei*). Quality improver (*hinshitsu kairyo*). Coagulant (*gyôki, gyôkozai*).

7990. Rakosky, Joseph, Jr. 1984. Rich Freeze, Central Soya's soy ice cream (Interview). *SoyaScan Notes.* Jan. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Rakosky started work with The Glidden Co. as a bacteriologist, then went with Glidden to Central Soya in 1958. By 1963 Central Soya had begun development of a soy ice cream based on their Promine-brand isolated soy proteins. A memo dated 21 April 1964 referred to a pilot-plant run to produce a dry mix for the product. In 1965 the innovative new non-dairy frozen dessert was granted a registered trademark: Rich Freeze. The product was initially developed for a company in Japan since that country had a shortage of dairy products. But there were many problems–for example, they had to remove all sugar to avoid huge import duties. Using a Taylor Soft Serve machine Central Soya prepared samples using the dry mix and gave them out in Japan, but finally the deal fell through.

© Copyright Soyinfo Center 2014

Then, in about 1970, Central Soya gave out more samples at a big international food convention in Washington, DC, and at ANUGA in Europe (spiked with brandy). They also talked with the U.S. navy about using it on ships. The fat was coconut fat and it was a good product, but it was never commercialized. He thinks this was the world's first soy ice cream made from soy protein isolates. Address: 5836 Crain St., Morton Grove, Illinois 60053. Phone: 312-966-7660.

7991. Chico-San, Inc. 1984. Why does Chico-San bother to import soyfoods? (Ad). *Natural Foods Merchandiser.* Jan. p. 9 (unnumbered) of 12-page color advertising insert. Soyfoods Pavilion '84. Marketing soyfoods in America.
• ***Summary:*** A 4½ by 7½ inch black-and-white ad. Because the quality of fermented soyfoods made in Japan is considered better. Chico-San's miso-shoyu master is Mr. Tomio Kitani. He uses Japanese soybeans and sea salt rich in minerals. His Nama Shoyu, which takes 4 years to make, is the only unpasteurized soy sauce available in America. It is also the only shoyu with a salt content lowered by techniques not involving extraction or additives. "Taste is the difference."

This ad also appeared in *Macromuse* (1984, Spring, p. 35). Address: Chico, California 95926.

Production of tofu for use in making tofuyo]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 31(1):19-23. [7 ref. Jap; eng]
• ***Summary:*** "Tofuyo is a traditional food in Okinawa, and is made from soybean curd with koji, salt, and awamori (distilled liquor)." It was found that the texture of the tofu affects the quality of the tofuyo. The texture is, in turn, affected by the type of coagulant and its concentration, and the pressure under which the curds were pressed to make tofu. The best conditions were as follows: Final concentration of the calcium sulfate coagulant: 20 mM. Final pressure on the curds: 38 gm per square centimeter. Hardness of the curd: 110,000 to 110,000 dynes per square centimeter. Final moisture of the curd: about 76%.

The best quality of Tofuyo was obtained when tofu of hardness 200,000 to 300,000 dynes per square centimeter was gradually dehydrated at room temperature (25ºC). Hardness of the finished tofuyo: 14-18 dynes per square centimeter. Address: Dep. of Agricultural Chemistry, University of the Ryukyus.

© Copyright Soyinfo Center 2014

• ***Summary:*** A very well written and accurate history of Erewhon from its founding in 1966, to its declaration of Chapter 11 bankruptcy in the fall of 1981. The company was able to clear its $3 million indebtedness by paying 11 cents for each dollar owed. In early 1982 "the company was sold by the Kushis to Ron Rossetti, owner of the Nature Food Centres retail chain. Later that year [in July] Rossetti accepted as financial partners Charles T. Verde and Cynthia C. Davis, who became respectively president and vice president of marketing. Since then the operation has been totally in their hands. Erewhon has a production facility at Natick, Massachusetts." A photo shows Davis and Verde with 5 Erewhon products.

"The story of Erewhon is a dramatic one. Founded in Boston in 1966 on the thinnest of shoestrings it soon began to grow at a phenomenal rate. By the mid '70s it was the most powerful force in the burgeoning natural foods industry, respected as a leader and innovator, with annual sales of over ten million dollars. Several troubled years culminated, however, in 1981 with a petition for protection under the Chapter Eleven 'bankruptcy' statute. Only a change in ownership and management prevented the disappearance of the company altogether. Phoenix-like, it has continued but is substantially changed. Erewhon's history is instructive as well as dramatic. It reveals something basic about the nature of 'new age' or idealistic, service-oriented business, and the perils of success, as well as failure, for those who practice it.

"In 1965 Michio and Aveline Kushi, a Japanese couple in their forties, moved to Boston. Their purpose was to teach macrobiotics, the philosophy, way of life, and diet formulated by their mentor, Georges Ohsawa. They rented a house on a side street in North Cambridge. Michio began to lecture in the evenings, and Aveline prepared meals for the lecture guests and gave cooking classes.

"The core of their message was simple. Food is a primary factor in physical health, and also in emotional, psychological, and even spiritual well-being. The key to health and happiness is a proper diet, based on whole cereal grains, beans, and indigenous vegetables and fruits. As Ohsawa had written: 'Food is the basis of life. If food is good then all else will be good as well.'

"Those who came and were convinced wished, of course, to follow the recommended diet. Its elements however were difficult or impossible to obtain. One could no more buy organically grown brown rice in Boston in 1965, than one could purchase samples of the British crown jewels. So the Kushis ordered extra sacksful of rice, oats, wheat flour, and kegs of miso and tamari, stashed them in their hall closet, and began to sell to students.

"In April, 1966, with the help of young former actor Evan Root, the Kushis rented a small basement store on Newbury Street in Boston. With shelving and counters made from planking and cinder blocks, they began to sell a modest array of whole foods. These were macrobiotic staples, with an occasional jar of sesame or apple butter thrown in for excitement. Root and the Kushis decided to name the store 'Erewhon' after the utopia in Samuel Butler's novel, an imaginary place where people had to take responsibility for their own health and where it was a crime to get sick.

"Erewhon was a company therefore founded not on the profit motive but out of a desire to serve the public. From the outset it had two primary aims: to make available the highest quality natural whole foods, and to educate the public in the importance and proper use of these foods. The store was a natural and necessary extension of the educational activities of the Kushis, and their hope to effect positive healthful change in individual lives and in the society as a whole. At base, it was a kind of missionary enterprise.

"Root managed the tiny business for about a year, then left to start Boston's first macrobiotic restaurant. Shortly thereafter, Paul Hawken and Bill Tara arrived from the never-never land of San Francisco's Haight-Ashbury to study with the Kushis. Bright, energetic, gifted with business sense and intuition and committed to the Kushis and their ideas, the two took over and began to develop Erewhon. They moved the store to a larger, more attractive site, greatly expanded the product offering, and began a mail order department. The business began to take off rapidly–more rapidly perhaps than anyone anticipated or hoped.

"The next decade was a period of headlong and often dizzying growth for Erewhon; It began to manufacture and distribute its own product line. It opened retail outlets in Los Angeles, Hartford, Cambridge, and Brookline. In a short time it had grown into a large, influential and respected corporation. Throughout, it strove to remain true to its ideals of quality and education. Rather than merely responding to consumer demand the company sought to help the public understand the importance of quality food products. It succeeded to a remarkable degree. Erewhon's most impressive accomplishments were that it:

"+ originated and developed the term and concept of 'natural foods' (a direct translation of the Japanese *shizenshoku*) to distinguish its products from the pills and elixirs of the older 'health food' industry.

"+ manufactured, or contracted manufacturing, according to strict specifications a product line that set industry standards for purity and quality.

"+ developed new sources of quality commodities. For example, it encouraged a farm in Arkansas to grow organic rice, promising to then buy and market the crop.

"+ established the 'down-home country store' ambiance as a model for natural foods stores. The plain wood floors and panelling, the bulk bins and indirect lighting, influenced scores of new businesses.

"+ showed broad ecological and social concern: in its retail outlets it encouraged bulk sales to avoid wasteful packaging; it began to use biodegradable cellophane for its packaged foods; it supported coops and communes through

© Copyright Soyinfo Center 2014

direct wholesale transactions; and it began to distribute to supermarkets in order to reach the general public.

"+ published educational flyers and pamphlets on food and nutrition, and used its packaging to provide information to the consumer." Continued.

8008. Kotzsch, Ronald E. 1984. Natural foods pioneer Erewhon (Continued–Part II). *East West Journal.* Feb. p. 24-29.

• ***Summary:*** Continued: "In these years the company was unique not only in its activity in the marketplace but in its internal organization as well. Erewhon was basically an extended family, held together not by blood bonds but by common beliefs and aspirations. The Kushis, 'Mom and Pop,' exercised an ultimate but benevolent authority. Day to day management and much long term policy making was in the hands of a succession of young, idealistic 'adopted sons,' Hawken and Tara, followed by Roger Hillyard, Bruce MacDonald, Ty Smith, Bill Garrison, Jeff Flasher, and others. Most of the employees at all levels were macrobiotic and were committed to the Erewhon mission. Hence there was little or no gulf between managers and workers. All wore the same outfit of jeans and vests, and went to the same lectures and parties. All ate their macrobiotic lunch provided free in the company lunchroom. People worked hard for modest wages but were recompensed by a clean, harmonious environment, and by job security. One could leave for an extended period and return assured of a position. The company took care of its own.

"There were of course tensions, but they were minor and in retrospect seem almost humorous. There was the great debate, for example, over whether the retail store should carry tomatoes, potatoes, bananas, and other reasonably wholesome but not strictly macrobiotic foods. The decision in the end was 'yes,' the rationale being that if people wanted these foods, Erewhon should give them the best available. It couldn't expect every customer to be macrobiotic. In general it was a heady, idyllic period.

"Somewhere, somehow, though, things began to go wrong. A decision was made to move the factory and warehouse to a large facility in East Cambridge and to expand the product line and the distribution network. The transfer and expansion took much more time, energy, and money than anyone expected. Large bank loans were made just when interest rates were skyrocketing. Suddenly the company found itself deeply in debt, struggling to keep up repayment schedules. Meanwhile, because of rising production costs, smaller profit margins, and increased competition, revenue from sales decreased. Anxious to generate more cash, Erewhon expanded its product line even more, including yogurt and cheeses, vitamins and supplements. Amid an atmosphere of ideological compromise there were more loans, more interest, more pressure.

"Within the company serious problems of morale and loyalty were developing. At the new expanded facility the family model of organization ceased to pertain. Fewer and fewer of the employees were actually macrobiotic. It was growth and size that led to difficulties among the lower echelons, the people roasting granola and loading rice on trucks. Doing dull work for a large impersonal company, even when it has a grand, altruistic design, is still doing dull work for a large impersonal company.

"There were indications of theft, waste, malingering, and abuse of privilege throughout the company. Between the managers and the workers a perceivable gap opened. Separation was followed by resentment and discontent. There was a unionization initiative, a strike, and then a movement to 'de- unionize' the company. In the end the union was voted out. The cost, in legal fees, was a quarter of a million dollars, and in time, energy, and harmony, almost incalculable.

"As a result of these various pressures the company became less and less able to pay its bills. Finally, in the fall of 1981, it filed for bankruptcy under Chapter Eleven–a front page story in the *Boston Globe.* The natural foods industry's Rock of Gibraltar had begun to slip beneath the waves.

"Every failure has much to teach us. In Erewhon's near fatal crisis one key lesson may be that 'small is beautiful.' For an organization fueled by idealism and held together by personal commitment, growth past a certain point is a dangerous gamble. Many, perhaps most, of Erewhon's difficulties stemmed from the decision (perhaps never explicitly made) to expand as much as possible. This led to a rate of growth which the company simply was not able to handle. An organization presided over by 'Mom and Pop' and managed by 'inspired amateurs,' few of whom had prior management training or experience, was not ready to cope with the pressures and decisions. Educated, shrewd professionals were needed. When high-priced consultants were finally brought in, it was too little too late.

"The disaster could perhaps have been avoided. Erewhon might have consciously rejected the intoxicant of growth and decided to remain small. It could have remained a local purveyor of macrobiotic products and used its resources to establish similar firms or franchises in other regions. The bananas, yogurt, and vitamins might have been left to others. Even had it not chosen to limit its size, Erewhon might have avoided serious problems with preemptive innovations. A few competent business people early on might have helped. The labor relations crisis might have been avoided by introducing job rotation, a profit-sharing plan, and employee stock options. Had the Kushis, who remained sole owners throughout, been more willing earlier to share that ownership and control, financial partners could have been taken in. The cash flow and interest payment problems would have been eased.

"Of course, with the cheap wisdom of hindsight, it is

© Copyright Soyinfo Center 2014

easy to array above the smoldering ruins the 'what if's' and the 'might have been's.' The fact remains that as it was organized and run the company could not survive in the slack economy of 1979-1981.

"Happily though, Erewhon did not disappear. In early 1982, after several months in the limbo of negotiation, the company was sold by the Kushis to Ron Rosetti, owner of the Nature Food Centres retail chain. Later that year Rosetti accepted as financial partners Chuck Verde and Cynthia Davis, who became respectively president and vice president for marketing. Since then the operation has been totally in their hands.

"Recently I met with Verde and Davis, who were accompanied by Jeanne Bock, a pre-Chapter Eleven employee of Erewhon who now handles public relations for the company. Verde, an affable, energetic man in his forties, has a master's degree in marketing, and worked for years in management and marketing at Mennon and Gillette. Davis is a tall, articulate, business-like woman with a Harvard MBA and also with experience at Gillette. We sat in a plush meeting room at Erewhon's production facility in Natick, Massachusetts and discussed the company's recent past, its present, and its future."

The rest of the article is about plans for Erewhon's future.

• ***Summary:*** A comprehensive overview, worldwide, with extensive historical information. The first study of its type, with many statistics, graphs, and tables. Volume 1 is the market study, and Volume 2 is black-and-white copies of soymilk labels and other graphics.

Contents: 1. Introduction. 2. Directory of soymilk manufacturers and related companies worldwide. 3. Definitions and varieties of soymilk. 4. Overview of world soymilk industry and market, and future outlook. 5. United States soymilk industry and market. 6. Japan. 7. Korea. 8. China. 9. Taiwan. 10. Hong Kong. 11. Singapore and Malaysia. 12. Southeast and South Asia: (13. Vietnam. 14. Thailand. 15. Philippines. 16. Indonesia. 17. India. 18. Sri Lanka). 19. Europe (Incl. Plamil Foods in England, Tetra Pak Group in Sweden, Alfa-Laval and John Wilson in Sweden, Danish Turnkey Dairies–DTD and Soya Technology Systems (STS), Alpro / Vandemoortele in Belgium, Nestle, F. de Selliers in Belgium, Dansk Soyakagefabrik in Denmark, Lima Andiran in France, Galactina in Belp, Switzerland, and Semper A.B. in Sweden).

20. Latin America. 21. Africa. 22. History of Vitasoy in Hong Kong. 23. Two modern soymilk manufacturing processes: Marusan and Alfa-Laval. 24. Etymology of the word "soymilk" worldwide. 25. Analysis of ingredients in 49 popular Japanese soymilk products. 26. Bibliography. 27. About the Soyfoods Center. A table on p. 12 gives an overview of world soymilk production in 1983 ranked in descending order of annual per capita consumption. These statistics do not include China (PRC) or soy-based infant formulas, usually made from soy protein isolate. 1. Taiwan, 210 million liters, 11.1 liters / capita, growing at 30% per year. 2. Hong Kong, 39.1 million liters, 7.5 liters / capita, growing at 10% per year. 3. Singapore, 11.2 million liters, 4.7 liters / capita, growing at 15% per year. 4. South Korea, 67.0 million liters, 1.60 liters / capita, growing at 60% per year. 5. Malaysia, 21.4 million liters, 1.53 liters / capita. 6. Japan, 131.8 million liters, 1,10 liters / capita, growing at 101% per year. 7. Thailand, 50.0 million liters, 1.00 liters / capita. 8. USA, 9.6 million liters, 0.04 liters / capita. Total world production: 548.3 million liters.

Page 36 gives an overview of the U.S. market for soy-based infant formulas and adult soymilk. Production of soy-based infant formulas (on a ready to serve basis) in 1983 was as follows: Ross Laboratories made 14,720,000 gallons of Isomil (i). Mead Johnson made 14,080,000 gallons of Prosobee. Loma Linda made 2,240,000 gallons of Soyalac. And Wyeth Labs made 960,000 gallons of Nursoy. Thus 32,000,000 gallons of soy-based infant formula were made in the USA in 1983.

Also in 1983, consumption of soymilk by adults in the USA was as follows: 1,743,000 gallons were made by specialized soymilk manufacturers in the USA (Loma Linda Soyagen 1,000,000 gallons; Worthington Soyamel 670,000 gallons, Miller's Soy (private label) 73,000 gallons). 690,000 gallons were imported (328,000 gallons of Vitasoy by Vitasoy USA, 254,000 gallons of Yeo's by YHS, 50,000 gallons of Edensoy by Eden Foods, 25,000 gallons of President by President, 25,000 gallons of Kibun by Kibun, 8,000 gallons of To-Neu by San-J International).

© Copyright Soyinfo Center 2014

250,000 gallons were made fresh by tofu companies (45,000 gallons by Mighty Soy, 41,000 gallons by Victor Foods [Scarborough, Ontario, Canada], 39,000 gallons by Quong Hop & Co., 35,000 gallons by Wy Ky, and 90,000 gallons by others).

Yield. 1 ton of raw soybeans yields approximately 4,320 gallons of soymilk. Conversion: 3.785 liters = 1 gallon.

On page 56 is a table of "Large natural food distributors in the US" with the dollar figure being estimated annual sales in millions of dollars."

1. Rainbow Distributing (Denver, Colorado) $13.
2. Arrowhead Mills (Hereford, Texas) $12.
3. Eden Foods (Clinton, Michigan) $10.
4. Rock Island Foods (Ignacio, California) $10.
5. Westbrae Natural Foods (Emeryville, California) $9.
6. Pacific Rim (Seattle, Washington) $7.
7. Cornucopia Natural Foods (Coventry, Rhode Island) $7.

Total estimated sales for the top 7 distributors: $68 million a year.

• ***Summary:*** "Alfa-Laval, the world's largest supplier of dairy plants and systems, with some 10,000 employees, celebrated its hundredth anniversary in Sweden in 1983. It was a pioneer in the development of UHT (ultra high temperature) sterilization plants for dairy milk in the early 1960s. Continuous process UHT, guaranteeing milk and juices a shelf life of a month or more without refrigeration, and giving milk a much better flavor than autoclaved sterilized milk, caught on rapidly in Europe and many developing countries. By 1978 UHT milk, which slowly replaced pasteurized and refrigerated milk, had about 40% of the market in Europe. Alfa-Laval made UHT systems based on both direct heating (injection of high pressure steam into the milk flow to bring the temperature up to 135–140ºC) and indirect heating (in a plate heater, to 140ºC for 4 seconds). Alfa-Laval's direct system was called VTIS (Vacu-Therm Instant Sterilizer) and their indirect system, considered the more advanced and economical of the two, was called Steritherm.

"Starting in the early 1960s Alfa-Laval began to sell soymilk system components to soymilk manufacturers in East Asia. The UHT VTIS system was found to work very well, since the vacuum stripped off beany flavors. Alfa installed a VTIS for Yeo Hiap Seng in 1967 and one for Hong Kong Soya Bean Products Co. (makers of Vitasoy) in 1974.

"A key man behind Alfa-Laval's growing interest in soymilk is John Wilson, who got involved with soymilk in 1967, as technical manager for the Cold Storage Group (CSG) in Singapore and Malaysia. His background was in dairy technology. To help CSG launch a soymilk product, he studied traditional tofu processes in Singapore, then mechanized them. He set up CSG's first soymilk line in Petaling Jaya, a suburb of Kuala Lumpur, Malaysia, in 1969, and then another in Singapore later that year.

"In 1971 Wilson joined Alfa-Laval and started developing complete process lines for soymilk, based on a suspended (unfiltered) product made from full-fat enzyme-active soy flour. But only one plant for making suspended soymilk was ever sold (to Africa in 1982). In 1978 soymilk technology R&D was centered under John Wilson in Alfa-Laval, at Lund, Sweden. Systems for making clarified (filtered) soymilk with low bean flavor were developed.

"Alfa-Laval sold complete soymilk lines to Lam Soon (Ace Canning) in Kuala Lumpur, Malaysia (operation started in December 1979) and Kickapoo, in Bangkok, Thailand (from Feb. 1981). By early 1984 they had sold equipment or entire plants to at least twelve soymilk manufacturers in East Asia, including many of the largest (Hong Kong Soya Bean Product Co., Kibun, Dong Bang, President, Siam Food Prods., etc.).

"In 1981-82 Alfa stepped up its soymilk activities dramatically. It published attractive and informative 10-to-15-page large-format booklets on soymilk and its production in English, Chinese, and French, and began heavy promotion worldwide. Alfa-Laval went after the China market in a big way. They offered to install a soymilk plant in Beijing for the Ministry of Light Industry to use for one year, free of charge on a trial basis. Their 12-page brochure in Chinese on soymilk (*Douru*) was widely circulated. During a 3-month period in 1983 they sent five soymilk delegations to China, and began to set up an office in Hong Kong, run by a China trader with ten years experience, to focus on the China market.

"In late 1982 Alfa-Laval and Kibun (in Japan) formed a powerful alliance by signing an important, interesting, and unorthodox agreement. Alfa-Laval supplied Kibun with some of Kibun's original soymilk equipment, but eventually Kibun had to modify it extensively. Now, when Alfa-Laval finds a new equipment client, they tell the client, according to the agreement, that Kibun is their preferred supplier of the soymilk process. Kibun then signs a separate contract with the client for technical assistance, including product formulation and quality control. This could be a joint venture, a license for Kibun patents and technology, and/or purchase of actual patented equipment made by Kibun's food

© Copyright Soyinfo Center 2014

engineering company. Likewise, when Kibun licenses others to use its process, it often asks Alfa-Laval to supply the plant. There are no kickbacks between Alfa-Laval and Kibun. The arrangement works nicely since Alfa-Laval is strong in plant design, while Kibun is strong in processing technology and formulation. Yet Kibun holds no soymilk patents.

"Alfa-Laval has made a major contribution to soymilk production by being the world's first company to develop and sell an automated soymilk system. Their system is based on their UHT sterilizer, and incorporates an automated clean-in-place cleanup system. By inactivating the soybean enzymes at the bean stage, before grinding, the system produces a good-tasting soymilk. The economical plant size has a capacity of 2,000 liters/hr, with 1,500 liters/hr the economical minimum." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

8012. Shurtleff, William; Aoyagi, Akiko. 1984. K.S. Lo and the history of Vitasoy in Hong Kong and North America. (Document part I). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 130-153.

• ***Summary:*** Starting in the late 1950s a renaissance of interest in soymilk began in East Asia, eventually spreading from its center in Hong Kong to all countries in the area, and from there to other parts of the world. The company that inspired this development was K.S. Lo's Hong Kong Soya Bean Products Co., Ltd. (HKSBP), makers of the world-famous soymilk, Vitasoy. As of 1984, no person alive had done more to further the world's interest in soymilk (or in soyfoods) than K.S. Lo.

Early Years (1910-1944). Lo Kwee Seong was born on 2 February 1910 in Kwangtung, China. At age 10 he went to Malaya with his mother and at age 20 he went to Hong Kong. In 1935 he graduated from the University of Hong Kong with a BA degree in commerce and business. After graduation he joined the company where his father worked and was soon appointed Hong Kong manager of the firm's real estate branch.

The story of Vitasoy begins in the winter of 1937, when K.S. Lo, then 27 years old, happened to be in Shanghai on other business. There he attended a talk entitled "Soya Bean: The Cow of China," presented by the American Julean Arnold, then the commercial attaché to the American Embassy in Nanking, and actively involved in relief work using soymilk. Lo later wrote (1964), "Arnold called the soybean the 'Cow of China' and practically attributed to it the preservation of the Chinese race. He said the fact that the Chinese as a race were able to maintain their physical fitness for over 5,000 years in a land where meat was so rare was entirely due to the people's inclusion of soybeans in their diet. I was impressed by his talk and came away with soybeans stuck in my mind." Even after Lo returned to Hong Kong, Arnold's message kept returning to him.

Several years later, in 1939, following the Japanese invasion of China, the first wave of Chinese refugees arrived in Hong Kong. A refugee camp was set up in Argyle Street, Kowloon. A small group of volunteers, including Lo, went to see what could be done to help. Most of the refugees were sick or suffering from malnutrition, including beri-beri and pellagra. Seeing this, Lo again recalled Julean Arnold's message of the promise of the soybean. With the group of friends he raised some money and purchased some soybeans and brown sugar, a stone mill, a kettle, and some cheese cloth. The group set up a small soymilk shop right in the camp and taught the refugees how to make soymilk for themselves. Each refugee received one bowlful every morning. Lo later wrote: "The results were quite startling, as many of them showed significant improvement in their health after the first month. This little experiment gave me full confidence in the nutritional value of soy bean milk and I decided to make it available to the masses of people in Hong Kong who could not afford to buy cow's milk" (Lo, personal communication, March 1981).

In 1939 Lo and four of his friends got together and formed The Hong Kong Soya Bean Products Company (HKSBP), with paid-up capital of HK$15,000. (The company name was expanded to The Hong Kong Soya Bean Products Company, Ltd. in March 1940). The original plant and processing equipment, designed by the founders and located at Causeway Bay (on the site where the Plaza Hotel now stands), officially began operations on 7 March 1940. In his inaugural speech, Lo stated that the company's aim was to provide nutritious soymilk for the masses at the lowest possible price–an aim that has not changed over the years. In those days, when nutritional deficiency diseases such as beri-beri and pellagra were still widely prevalent in Hong Kong, this aim was doubly urgent and important. Yet the day after the plant opened, exactly nine bottles of the product, called VITAMILK, were sold. A dozen delivery boys delivered Vitamilk door-to-door each morning. The strongest supporter of the fledgling operation was a Brit, Dr. Selwyn-Clarke, then director of Medical and Health Services. The only government official aware of the nutritional value of soymilk, he gave orders that all government hospitals should use the new product instead of cow's milk for all third-class patients.

The first few years were filled with problems. Lo wrote in 1964: "We soon found that, even among us Chinese to whom the soybean was by no means new, there was a strong prejudice against soy milk. They not only did not believe its nutritional values, but they also thought it could cause diarrhea, indigestion, and stomach ache. At that stage the taste of our product, too, left much to be desired. Many customers found it hard to take, because of the strong beany flavor and the slightly bitter taste. Another problem we had to face was the keeping quality of the soy milk. We followed the dairy industry by packing it in standard half-pint milk

© Copyright Soyinfo Center 2014

bottles and sealing them with a paper cap and hood. They spoiled even quicker than milk unless they were kept under refrigeration all the time. As they were packed like dairy milk, we had no choice but to market them as a milk substitute. It was not until years later that we found it was a mistake to adopt such a marketing approach. For among the Chinese community, giving milk to children was considered to be a Western luxury, which only the very rich could afford. And of course to the rich, cost was no problem."

Sales continued to be slow, only 300-400 bottles a day. During the summer, sometimes as many bottles spoiled as were sold. Something had to be done. Lo began working with Dr. Y.T. Chiu, who had a written his PhD thesis at Cornell University in 1927 on methods for improving soymilk and its production, and in 1929 had published an article on the subject in China. Their goal was to get locals schools to start using Vitamilk. Speeches on soymilk and nutrition by Chiu were followed by tasting sessions conducted by Lo at the schools. The idea worked. In fact it was a major breakthrough, and today schools remain the company's single most important customer. After the first year, distribution was extended from Hong Kong Island onto the Kowloon peninsula on the mainland. There a combination soymilk cafe and distribution depot was set up. The spot proved popular with students and young people.

In the spring of 1941, Howard Hoover, who had started and run a small Seventh-day Adventist soy dairy in Canton (Guangzhou), had left that city after it fell to the Japanese. While waiting to return to the US he worked with Lo for 6 months. He taught Lo how to homogenize coconut oil into the soymilk to give it a richer flavor then helped to install the company's first Cherry Burrell homogenizer.

By mid-1941 sales of Vitamilk had risen to 1,000 bottles a day. But that was far below the break-even point, and by December 1941, when World War II broke out, the company went broke. Lo, abandoned by his partners, had sunk HK$30,000 of his own money into the venture.

Sixteen days later Hong Kong surrendered to the Japanese. Four months after the occupation Lo left for Free China (the part of China not occupied by Japanese), taking with him his family of four children. They finally settled down as refugees in a small town called Linshan on the border between Kwantung and Kwansi, west of Canton. Here again the soybean provided Lo with a livelihood and probably saved the family's life. Lo put up a makeshift building and called it The Cafe. After buying a stone mill, he started to make soymilk and home-made cakes, and thus made a living until World War II was over. Their fifth child, Irene, was born during this hard time. Lo's wife had no breast milk to feed her since she had not nursed the other children. Irene was thus raised on soymilk which, the family felt, saved her life. Continued. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

• ***Summary:*** Continued. An overview of HKSBP's market position in the early 1980s showed the following. By 1980 sales (by number of cartons or bottles) of the many and varied non-soy Vita products had passed sales of Vitasoy. Sales of Vitasoy were growing steadily, from 130 million Tetra Brik cartons and bottles (converted to 250-ml equivalents) in 1980 to 150 million in 1983, for a 5% compound annual growth rate in a mature market. In 1983 all products made by HKSBP's accounted for 35% of the Hong Kong Beverage market, second only to the Swire/Coca-Cola Company's products with 42%. Vitasoy, which had had no competition from brand-named soymilks since 1961, suddenly had to worry about competitors again. Nestle's Bonus (launched in 1978), President's soymilk (launched in 1980), and Coca-Cola's Hi-C soymilk (launched June 1982) took away some of Vitasoy's market monopoly. Yet in 1983, according to Hong Kong Beverage Association statistics, Vitasoy had a commanding 96% of the fast-paced Hong Kong soymilk market, versus only 4% for Hi-C. Bonus and President had insignificant shares. Hong Kong had the world's second highest per capita consumption of soymilk (after Taiwan), about 8.2 liters a year. In 1983 Vitasoy was given a new slogan which proclaimed: "Taste the Feeling."

In 1980-81 Vitasoy prices in Hong Kong dollars were as follows: Bottles, 60 cents for 7 oz. and 80 cents for 10 oz. of plain Vitasoy and 80 cents for 8 oz. of malted Vitasoy; Tetra Brik (250 ml or 8.45 oz.), 90 cents for plain and $1.00 for malted. Ingredients in the plain (sweetened) Vitasoy sold in Hong Kong were water, soybean solids, soy oil, cane sugar (5.5%), and salt, plus vitamins A, B-1, B-2, and niacinimide. The exported Vitasoy contained no added vitamins. A typical 250-ml carton of Vitasoy for export contained 100 calories, 16 grams (6.1%) carbohydrates, 5 grams (2.0%) protein, and 3 grams (1.1%) soy oil. In 1981 the company had sold more Vitasoy in bottles than in Tetra Pack, but sales of the latter had increased by 50% a year since 1978. In 1983 sales in Tetra Pak led bottles 6 to 4.

For HKSBP China represented the great untapped market of the future, but also the great unknown. In 1983 HKSBP made two small but important new moves into China, building on experience from the Kwong Ming Dairy Farm. First, the company began to export Vitasoy to China's new Special Economic Zones. And second, they worked with the Chinese on a venture in Shanghai called Jing Jiang United Food Processing Co. Ltd. Initially HKSBP worked as a technical consultant on the project, but negotiations were underway for a joint venture. In August 1983 the plant's first product, Vita orange drink, was produced for a national sports meet. It is hoped that soymilk, perhaps called Vitasoy,

© Copyright Soyinfo Center 2014

will be the company's next product.

Vitasoy in North America. Vitasoy was the first Asian soymilk to be imported to North America. This venture was pioneered by K.S. Lo's two entrepreneurial daughters, Yvonne and Irene. Yvonne, who actually ran the operation, had graduated from a Canadian university then worked for 6 years as a city planner in Toronto, before realizing that her heart was really in business and marketing. In January 1979 Yvonne and Irene incorporated The Soya Bean Products Co., N.A. Inc. (SBPC) as a marketing company for HKSBP's products in North America. They opened headquarters that month on Bush Street in San Francisco, then began immediately to market and distribute plain and malted Vitasoy in Canada, in 8.4-oz. (250-ml) Tetra Brik cartons. In February 1981 they introduced the same products to the USA, immediately after the FDA lifted its ban on Tetra Pak (because of a disproven concern over hydrogen peroxide residues from sterilization). By 1982 some 3.2 million cartons of Vitasoy a year were being sold in the US and Canada.

The venture was so successful that in April 1982, to raise capital and facilitate long-term operations with Hong Kong, Yvonne and Irene sold their company to HKSBP, which renamed the US affiliate Vitasoy USA, Inc. The parent company now took a serious interest in the US market. In 1983 sales of Vitasoy increased to 5 million cartons, up a whopping 60% from the previous year. The 1983 figure equaled 328,125 gallons or 1.24 million liters. An estimated 90% of this soymilk was sold to the Oriental market; of this, 80% was sold to Chinese, and the rest to Vietnamese, Filipinos, and other ethnic groups. Roughly 45% of all Vitasoy was sold in the three western coastal states. Vitasoy distributed its own products in the San Francisco Bay Area (the single area of greatest sales), northern California, Oregon, and Washington. Other companies, appointed by Vitasoy, sold the product in southern California, and elsewhere in the US and Canada, in 10 market areas designated as having a high concentration of Oriental Americans.

In 1983 Vitasoy was by far America's leading imported soymilk, accounting for just under 50% of total soymilk imports. Heady with success, Vitasoy USA announced in late 1983 that it would launch two American-style products in March 1984 at the big natural foods trade show in Anaheim, California. These would be called Vitasoy Original and Vitasoy Coconut. Each would bear the subtitle: "Natural Soy Drink, Sweetened with Maple Syrup." They would be marketed to the natural and health food trades as a healthful and nutritious beverage, under the slogan "Taste the Goodness." Marketing to mainstream consumers was also planned. Prices in the two markets were expected to be $0.65 and $0.55 respectively (maple syrup was a major part of the product cost), as compared with $0.35 for Vitasoy with a higher water content, sweetened with sugar, sold in the Asian-American market.

In developing these products Vitasoy USA did extensive and thorough, original research on American attitudes to and taste preferences for soymilk. Working with American marketing and product development professionals, they ran "focus group" and "intercept" studies. In September 1982 Yvonne Lo and Hilton Tsui issued a 59-page in-house report titled Market Study of Soymilk Beverage, packed with original information, plus an overview of the US beverage industry and a marketing plan.

Most important, the company announced in late 1983 (after an unsuccessful attempt to acquire majority ownership of the New England Soy Dairy) that it had purchased land in Brisbane, California (just south of San Francisco) and had signed a contract to build a large soymilk plant there. This plant, scheduled to open in 1985, would clearly introduce a new stage in the history of soymilk in America, for HKSBP would be the first major Asian soymilk manufacturer to start a plant in the West.

The Present and Future. The year 1984 saw the Hong Kong Soya Bean Products Co., Ltd. as the world's third largest manufacturer of soymilk (after Kibun in Japan and Chung's Food in Korea), and one of the largest exporters. The tiny size of the Hong Kong market (only 5.2 million people, compared with 120 million in Japan and 42 million in Korea) had been a major factor limiting the company's growth. But now HKSBP was poised on the edge of an era of great potential growth in a world market. The challenges of internationalization, diversification, public versus family ownership, exports versus local manufacture, marketing Asian products in the West, company name changes with diversification, etc. all bear striking resemblance to those faced by Kikkoman, as discussed in Chapter 79 of our book *History of Soybeans and Soyfoods.* We expect that HKSBP, though much smaller than Kikkoman, will follow many of the same patterns; hopefully it will be as successful as Kikkoman has been.

The relatively small Hong Kong market will play a smaller and smaller role in the company's future. The greatest potential for growth may well lie in China. Efforts to introduce Vitasoy into school lunch programs in Third World countries and to help such countries make better use of domestic soybeans for human nutrition could bear great fruit in countries such as Mexico, India, Argentina, Brazil, Paraguay, and Indonesia. In these areas, domestic joint-venture plants probably hold greater promise than imports, since they help rather than hurt foreign exchange balances. Note: Three updates:

1990 Aug. 3–Vitasoy acquires Nasoya Foods (Leominster, Massachusetts).

1990 Sept. 24–Company name changed to Vitasoy International Holdings from Hong Kong Soya Bean Products Co. Ltd.

1993 May 27–Vitasoy acquires Azumaya Inc. (South

San Francisco, California). Azumaya (Originally Azumaya Tofu Seizo-sho) had been making tofu in San Francisco since at least 1930. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

8014. Shurtleff, William; Aoyagi, Akiko. 1984. Japan: Soymilk industry and market (Document part). In: Shurtleff and Aoyagi. 1984. Soymilk Industry and Market: Worldwide and Country by Country Analysis. Vol. 1. 177 p. See p. 63-81.

• ***Summary:*** Historical. Soymilk was not a part of the traditional diet in Japan, as it was in China. Cow's milk, which entered Japan in about 1000 A.D., likewise, never became a part of the basic diet. Reference to soymilk (then called *toju* or "bean liquid") may have appeared as early as the 1100s, but the first clear reference was not published until 1895, when Inouye did one of the world's first nutritional analyses of soymilk, and compared it to cow's milk. In 1906 Katayama wrote two articles on soymilk; in one he described preparation of a fermented soymilk cheese, similar to Swiss cheese. Yet both Inouye and Katayama wrote in English. In 1924 Sato Yoshitane wrote a book called *Daizu Kakko,* which is said to contain the earliest known reference to the word soymilk (*tônyu*), written with the present characters.

From this time on (and perhaps from an earlier date) some Japanese (an estimated 1% of the population) would order fresh soymilk from their local tofu shop, usually for health-related reasons, as in diabetic diets or for mothers who had difficulties with breast feeding, or because it was thought or found to be a health-giving beverage.

The earliest known commercial production of soymilk in Japan dates back to the influence of Dr. Harry Miller. In 1957 two Japanese Seventh-day Adventists, following his inspiration, started making soymilk in Hachioji, Tokyo, and selling it locally in 180 ml cartons. In 1958 Dr. Miller set up a small soymilk plant in the kitchen of the Adventist Tokyo Sanitarium. It was used to make soymilk, soy whipping cream, soymilk ice cream, and soy spread, which were served to the staff and patients. In 1959 a small soymilk plant was established in the Seventh-day Adventist Saniku School. From this year, Japan's oldest existing soymilk company, Saniku Foods, traces its origin.

A chronology of the starting date of Japanese soymilk companies is as follows. Only three, each followed by an asterisk, are no longer in business:

During the period from 1973 to 1976 soymilk started to become quite popular in Japan, largely because of developments in processing technology that made it possible to produce soymilk with a bland (non-beany) flavor, and because of promotion by the new soymilk companies. In 1974 Japan's first major book on soymilk was published. By 1976 the Japanese were making the best soymilk in the world–by Western standards.

A new era began in 1976 when Kyushu Milk Co., a long-established, middle sized dairy milk company, started making soymilk. Tremendous momentum was added to this new direction in April l979, when Meiji Milk Co., Japan's second largest milk company also started to sell soymilk (made by Marusan but with the Meiji brand). Meiji first began to make their own soymilk in their own plant in March 1981. That same month Morinaga Milk Co. was licensed by Mitsubishi to distribute their soymilk. Quickly thereafter each of the other major Japanese milk companies (Meito, Yuki-jirushi) followed suit, joining the wave of the future rather than fighting it. Their analysis was that fundamentally soymilk and cow's milk were complementary rather than competing products, and that making soymilk would allow a company to expand its market size by reaching people who did not ordinarily drink cow's milk. In retrospect, this analysis has proven to be correct.

What has since often been called "The Soymilk Boom" really started in Japan in about 1981-82. The main reasons for this were:

1. A growing interest among Japanese in good health and nutrition, through improved diet. A corollary of this was the concept that the elite should be especially healthy, both to improve their own performance and well being, and to set an example for others. The American health, natural foods, soyfoods, and vegetarian movements all had a significant influence on Japanese attitudes toward good health.

2. Improved soymilk quality/flavor, and a growing number of varieties and flavors.

3. Popularization of packaging (such as Tetra Brik aseptic cartons) that would give the soymilk a long shelf life, allowing nationwide distribution from one large soymilk plant.

4. Strong interest and support by the media/mass communications followed, after 1981, by extensive advertising and promotion on TV (especially by Kibun and Marusan), in the print media, and with in-store demos by soymilk companies.

5. The aggressive marketing of soymilk by all of Japan's major milk companies.

6. The establishment of Japanese Agricultural Standards (JAS) for soymilk in May 1981.

7. Large numbers of tofu shops starting selling fresh soymilk (containing its natural "beany" flavor), starting in about mid-1982.

8. Large manufacturers and distributors of beverages and related food products started to buy soymilk in bulk from manufacturers, then to market and distribute it under their own labels. Examples: Kirin Beer, Kagome (a large ketchup maker), Suntory, etc.

From 1978 to 1983 the soymilk market in Japan, on average, more than doubled each year, making it the fast growing food market in Japan! Many new brands started appearing in 1982 and there was a big jump in production. Soymilk was the star and darling of the media and it played

1977 Kibun, Natural Foods

1979 Mitsubishi Foods

1980 Chiba Seisen Shokuhin Kogyo

1981 Yakult, Nagano Tomato, Meiji Milk Co., Morinaga Milk Co.

1982 Seven-Up Inryo, Meito Milk Co., Zenno, Takeda Yakuhin

1983 Yuki-jirushi Milk Co, Tamura Kasei. There are rumors that Kikkoman and Ajinomoto may start soon.

Market Size and Growth Rate: The following statistics show the increase in size of the Japanese soymilk market:

Year	Production (Metric Tons)	Ex-Factory Value (Million Yen)	Ex-Factory Value (Million US$)	Raw Soybeans Used (Metric Tons)
1975			2.9	
1976			4.2	
1977			5.6	
1978	4,000		7.7	
1979	8,000		9.6	
1980	10,000	3,000	13.8	
1981	17,280	6,000	25.0	3,000
1982	68,245	13,000	61.2	9,039
1983	131,750 est	25,000 est	108.2	17,500 est

Leading Soymilk Manufacturers and their Market Share. All major soymilk companies can be divided into three types: (1) Medium sized food companies making soymilk as one of various products (Marusan, Kibun), (2) Huge dairy companies (Meiji, Morinaga, Yuki-jirushi), and (3) Soft drink and beer companies (Kirin, etc.).

Toyo Shimpo (21 July 1982) gave the market shares of major soymilk manufacturers as follows. Inexplicably, the total comes to 110.1%

1. Kibun Foods 41.7%
2. Okazaki Marusan..... 23.3%
3. Mitsubishi Kasei..... 10.0%
4. Saniku Foods 8.0%
5. Kyushu Milk Co. 6.0%
6. Meiji Milk Co. 5.8%
7. Kenbi-sha 2.5%
8. Asahi Shokuhin 2.5%
9. Soken-sha 1.3%
10. Natural Foods 1.3%

Others 7.7%

These figures can be misleading, however. In mid-1983 Kibun, Marusan, and Mitsubishi all had the same installed capacity for soymilk production. One top industry analyst claimed that Marusan's actual production was larger than Kibun's, but that much of Marusan's soymilk was sold in bulk to other companies (Sakura Shokuhin, Dai Tonyu-gyo, Nagano Tomato, and 2-3 others), who repackaged and sold it under their own brands, or used it in breads, etc. After Marusan in total (including bulk) production were Kibun,

a major role in enhancing the image and sales of all soyfoods in Japan.

Market Size and Growth Rate: The following statistics show the increase in size of the Japanese soymilk market: Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

8015. Tsumura, Takashi; Tsuruta, Shizuka; Inoue, Mamehiko. 1984. Kenko-shoku tôfu [Tofu, the health food]. Tokyo: Nobunkyo (Nosan Gyoson Bunka Kyokai). 236 p. Tezukuri Nihonshoku Shirizu (Handmade Japanese Foods Series). [27 ref. Jap]

• ***Summary:*** The third author, Mr. Inoue, opened his tofu shop in 1981 and is making tofu coagulated with natural nigari. The second author, Ms. Tsuruta, translated *The Farm Vegetarian Cookbook* into Japanese. This book is not vegetarian. Contents: Part I. Japanese tofu cookery. Chinese and Korean tofu cookery. Futuristic tofu cookery. Part II. The real face of tofu. How tofu is made. How to make tofu by yourself. History of Japanese and Chinese tofu. Part III. One statement from a tofu maker. Aiming for traditional tofu production.

This book contains numerous old illustrations (line drawings) of tofu in Japan. Page 208 shows a tofu vendor carrying two tubs of tofu at the ends of a shoulder pole (tenbin). He is wearing a straw hat, Japanese kimono, and high wooden clogs (geta). It is from the book "Illustrated Edo Period Food Life Dictionary" (Zusetsu Edo Jidai Shoku Seikatsu Jiten), compiled by the Society for the Study of the History of Japanese Customs (Nihon Fuzoku Shigaku-kai).

Page 209 shows the interior of a tofu shop from the Edo period. It adjoins the family home. A woman with a child on her back is grinding the soybeans in a hand-turned stone mill. A man is sitting on the end of a lever press, pressing the soymilk out of the okara. It is from the book "Illustrations of Edo Period Occupations" (Edo Shobai Zue), illustrated by Kazuma MITANI.

Page 210 shows a tofu makers wife cutting tofu above a cooling tank. It is from a book on Japanese occupations (Shokunin Zokushi Hokkugo), with illustrations by Yui Nashimoto. Address: 1. Freelance writer; 2. Author, vegetarian cooking specialist, co-owner of a natural foods restaurant, and translator of the Farm Vegetarian Cookbook; 3. Owner of tofu shop Shonan Mamehiko in Shonan, Kanagawa-ken.

8016. Knoblauch, Mark. 1984. Restaurants: Kotobuki's creative Japanese dishes as pretty as a picture. *Chicago Tribune.* March 4. p. K10.

• ***Summary:*** This is a review of the Japanese three-star restaurant in Chicago. The restaurant features sushi and sashimi. *"Inari sushi* ($5.25 for 7 pieces), popular in Japan, doesn't show up often on this side of the Pacific. This type wraps sushi's mounds of vinegared rice in pockets of deep-fried bean curd." It never contains any fish, so some like to order it with raw tuna as a side dish. An unusual version of teriyaki is pork *miso-zukeyaki,* which is pork marinated in miso, then cooked teriyaki style.

8017. Shurtleff, William; Aoyagi, Akiko. 1984. History of soy protein concentrates, isolates, and textured soy protein products. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 25 p. March 4. Unpublished typescript. Available online at www.soyinfocenter.com.

• ***Summary:*** A comprehensive history of the subject. Contents: Definition of types of products. Part I: History of modern soy protein products from origin to 1964. Soy protein isolate: Tofu, Nagel in New York 1903, Beltzer in 1911, Ajinomoto in 1919, Cone and Brown patent in 1928, Glidden (first plant in U.S. for production of industrial grade soy protein isolate) in 1935, first study of use of soy isolates in food (Woodruff at University of Illinois, 1938), Glidden first company in the West to produce a soy protein isolate for use in food (1939, enzyme-modified), Glidden first with large-scale production of non-enzyme modified isolates (1957), Worthington Foods introduced Soyamel in 1952 (first soymilk based on isolate). Soy protein concentrates: First developed and introduced in Germany in 1925, first commercial food-grade concentrates and first patent from Griffith Laboratories in 1959. Textured soy protein products: Developed in China 1,000 years ago, made from tofu or yuba, earliest Western meat analogs developed by John Harvey Kellogg about 1896 (without soy), first synthetic industrial protein fiber (Lanital, made from casein) introduced in Italy 1936, first industrial (non-food) soy protein fibers in 1938 from Robert Boyer of Ford Motor Co. (used for upholstery), Boyer got patent for use in food (1951), rights purchased by Worthington, Dr. Harry Miller's soya loaf in 1939, Worthington first to produce a meat analog based on spun soy protein fibers in 1960, textured soy flour (TSP or TVP) introduced as food ingredient in U.S. in 1964.

Part II: History of modern soy protein products in the U.S. from 1965 to 1981. 1964 Belden report from Harvard Business School *Protein Paradox.* Commercial Protein Foods Studies Program of the U.S. Agency for International Development (AID) encouraged U.S. firms to develop protein foods for the Third World in 1967. General Mills Bac-O's test marketed 1966. Producers. February 1971 breakthrough when USDA authorized use of TVP in school lunch programs. 1972 *Soybeans. Chemistry and Technology,* edited by Smith and Circle, contained all the research on nutrition and processing up to that time. 1973 high beef prices led to beef-soy retail blends. Appearance of TSP cookbooks, starting in 1971. First World Soy Protein Conference held in Munich, Germany, in 1973. In 1974 Miles Laboratories/Worthington Foods introduced Morningstar Farms meat analogs, the first soy protein meat analog entrees marketed to mainstream America. Textured

soy concentrates and other concentrate developments. New developments with isolates. New flavorings. New textured soy flour development. 1978 Keystone Conference on soy protein and human nutrition sponsored by Ralston Purina. Problems with government regulation.

Part III: History of modern soy protein products outside the U.S. and Europe (1960-1981): Japan. China. Other Asia: Philippines, India, Sri Lanka. Latin America: Colombia, Mexico. Address: Lafayette, California. Phone: 415-283-2991.

8018. Kawarai, Kumiko; Kikuchi, Kyoji; Aoki, Sadao. 1984. Tenpe hakkô katei ni okeru seibun no henka [Change in nutrients during tempeh fermentation]. *Tochigi-ken Miso Shoyu Gijutsu Kaishi* (*Tochigi Prefecture Miso and Shoyu Technical Journal*) No. 34. p. 28-32. March 15. [Jap] Address: Tochigi-ken Shokuhin Kogyo Shidosho.

8019. Storup, Bernard. 1984. Re: New developments at Société Soy. Letter to William Shurtleff at Soyfoods Center, March 22. 3 p. Typed, with signature on letterhead (photocopy). [Eng]

• ***Summary:*** "A brief history of Société Soy: Oct. 1981–Sept. 1982. Search for a place to settle near Paris, choose and install equipment. The company's first commercial production began in June 1982.

"Oct. 1982–May 1983. Production of tofu (firm for the natural food market and soft for the Japanese community–30,000 Japanese living in Paris); distribution by our own means in Paris only.

"From May 1983. Nationwide distribution of firm tofu–vacuum packed, 24 day shelf-life–and tofuburgers (called 'Croque Tofou') by Paris based distributors (actually, from Rungis, which is the biggest market of its kind in the world, and a key point for fresh products for western Europe).

"We carry 5 types of burgers (see labels), with 26 day shelf-life (we could put 2 months, according to a strict microbiological survey we ran, but prefer to shorten it in order to have a more regular rotation).

"This week have begun a nationwide advertising promotion for 'tonic burgers' (in Paris subway, on the national radio); it is run by a fast food chain that wants to promote a more dietetic way of eating. We make the burgers.

"We should double our production within the next 6 months; We don't really have time to develop new products, at least for this year.

"We are presently making 2,500 kg/week of tofu, including 1,400 kg/week of burgers; one year ago we were making 1,000 kg/week.

"Some news from Europe: Several types of soymilk have recently been put on the market: Lima Soya Drink, Sojal, and Soyo.

"I think the biggest tofu manufacturer in Europe is Vanka-Kawat in Rijswijk, Holland. They sell about 30,000 pieces of tofu (250 gm and 450 gm) per week, mostly for the Asian (Indonesian) community. They also make sprouts and tempeh. They have an automatic plant with only European equipment; there is no way to visit it.

"The French dairy lobby (France is the world's leader in cheese consumption) has recently clearly defined its new priorities: fight by all means against all kinds of substitutes for dairy products–above all soymilk." Address: Société Soy, Plateau de l'Ardennais, 91590 Cerny, France. Phone: (6) 457 52 01.

8020. Vansickle, Janice. 1984. Bean worth weight in gold. *Windsor Star* (*Essex County, Ontario, Canada*). March 26. p. B1-B2.

• ***Summary:*** Soybeans are now Essex County's major field crop and the third largest cash crop in Ontario province (with a value of more than $203 million in 1982), but few people know what happens to the golden nuggets after they leave the farm. Most of the soybeans are crushed in Canada to make soybean oil and meal. Last week the Ontario Soya-Bean Growers' Marketing Board held a symposium in Toronto titled "Ontario soybeans–A journey into the next century." Sheldon Hauck, vice-president of the Soy Protein Council in the USA and one of the speakers estimated that soy protein is an ingredient in over 2,500 readily available grocery store items. Contains a nice history of the soybean in Canada. Ontario now exports soybeans to 20 countries, "including major shipments to Japan, which buys only top quality soybeans and turns them into soyamilk, soyaflour, tofu, miso–a soyapaste for soup–and natto–a fermented soybean used as an appetizer." Speaker after speaker confirmed a bright future for soybean exports. Moreover, all supermarkets in Windsor now carry tofu, a soya curd. Soy oil is found in margarine and cooking oils. Soy protein appears in soya sauce, simulated bacon bits, and infant formulas. The H.J. Heinz Company in Leamington has been working with the marketing board to develop a line of processed soybean products for the retail market.

Ontario's three soybean crushing plants are experiencing hard times, in part due to competition from canola oil (which enjoys subsidized freight rates); they are operating at 62% of capacity and could be forced to shut down. Photos show: A pair of cupped hands holding soybeans. Peter Epp, chairman of the Ontario Soybean Growers Marketing Board.

Note: This is the earliest English-language document seen (March 2009) that uses the term "soyapaste" to refer to miso. Address: Star agriculture reporter.

8022. Gotoh, K. 1984. Historical review of soybean cultivation in Japan. *Tropical Agriculture Research Series* No. 17. p. 135-42. March. International Symposium on Soybean in the Tropics and Subtropics. [24 ref. Eng]
• ***Summary:*** Contents: Abstract. Before the Meiji era (-1866): Dissemination, instructions to farmers. Traditional cultivation (1867-1945): Characteristics of this period, special methods of cultivation. Scientific approaches (1946-1977): Characteristics of this period, genetic resources, cultivation practices recommended, physiological studies, planting density, differences between record yields and average yields. Recent situation (1978-): Take-off in yields, problems in the near future.

"The time when the soybean was introduced from the northern part of China to Japan is not precisely known. The earliest reference to soybean appeared in the Kojiki (completed in 712 AD) and Nihonsyoki [Nihonshoki] (in 720 AD). They referred also to rice, barley, Italian millet (*Setaria italica* Beauv.), Japanese millet (*Echinochloa frumentacea* Link), and adzuki beans (*Vigna angularis* (Willd.) Ohwi and Ohasi). Thus, it appears that soybeans were grown as one of the important crops in olden times."

Nagata (1959) proposed that soybeans first entered Japan in the northern part of the country, having been disseminated from Korea. Prior to that they had arrived in Korea from north China. "Nagata's assumption that soybean may have been introduced to the northern part of Japan seems plausible. In 1932 and 1933 at the Komoriyama ruins located in Senhata, Akita Prefecture, which date back to the Jyômon (Jômon) era (see Note) carbonized soybeans and hulled rice were found in an old house. The dating of this specimen of soybean was not performed since radio-carbon was not available at that time. As will be mentioned later, a large number of land races have been found in Tohoku, as a result of extensive surveys conducted in the early 1950s. Apart from the Nagata's hypothesis it is probable that soybeans may have been first introduced as an important medicinal herb and later as a food crop into the ports along the Japan Sea.

"Instructions to farmers: *Engishiki* (completed 927 AD) which described in detail the regulations on crop products (for example, exchange rates of soybeans with bundles of rice and barley for yearly tribute), stated that the Kinki, Chugoku, and Shikoku districts [all located in southwest Japan, from Kyoto in the northeast to just above Kyushu in the southwest] were the main soybean production areas, as shown in Fig. 1.

"*Seiryôki* (published around 1560) which is the oldest Japanese book of agronomy, identified two types of soybeans, namely summer and autumn types. *Aizu-nôsyo* (1684) and *Hyakusyô-denki* (around 1688) described in detail the characteristics of many cultivars, and various cultivation practices, namely ridging and intercropping with barley. *Nôgaku-zensyo* (1697) outlined the principles and practices of soybean management already widely applied, and mention was made of vegetable beans (Edamame) [green vegetable soybeans]. *Kôka-shunjyû* (1707) described special types of soybeans, such as boiled soybeans (Nimame). This book also described how to grow soybeans on dikes or levees between paddy fields. *Seikei-zusetsu* (1804) outlined the methods of soybean production as recent practices."

Note: According to Fairbank, Reischauer, and Craig's *East Asia: Tradition and Transformation* (1973, p. 327): "The earliest neolithic culture, named Jômon for its characteristic "cord-pattern" pottery, spread throughout Japan about 6,000 years ago. The Jômon people lived in sunken pit dwellings and subsisted by hunting, fishing, and gathering nuts, roots, and shellfish. They left behind extensive shell mounds and a wealth of pottery, unsurpassed in richness and imaginativeness of design by any other stone-age culture in the world." Note that they did not practice agriculture. In the third century B.C. Jômon culture was replaced by Yayoi culture in western Japan and by the end of the first century B.C. it had spread as far east as the Kantô plain. Address: Faculty of Agriculture, Hokkaido Univ., Nishi 9, Kita-ku, Sapporo, Japan.

8023. Gotoh, K. 1984. Historical review of soybean cultivation in Japan: Traditional cultivation (1867-1945) (Document part). *Tropical Agriculture Research Series* No. 17. p. 137-38. March.
• ***Summary:*** "1. Characteristics of this period: When the Meiji era started in 1867, acreage of cultivated soybean was approximately 400,000 ha with grain yields of 0.5 ton/ha on the average. In 1908 the acreage became the largest during the history of soybean production in Japan, namely, 487,700 ha, and the highest production was recorded in 1920, namely, 547,800 tons.

"Since the beginning of the Showa era in 1926, imports of soybeans have increased. Imports accounted for 60% of annual consumption in 1928 and 70% in 1938. Thus, acreage of soybeans decreased gradually, especially in the Kanto and Tosan areas, in contrast with the increase of production in Hokkaido.

"As for the cultivars, Iwate No 2 and Ou No 13 were released in 1920 and 1929 in Tohoku. They were bred through artificial crossing. Norin No 1 and No 2 were released from the Ibaraki Agricultural Experiment Station in 1939 and 1940 in Kanto. Dairyu-hodaka and Nagaha-hadaka derived from crossing were released in 1936 and 1939 in Hokkaido. Thus before the time of release of these cultivars, land races and strains derived from pure line selection were grown in Japan.

"Determinant type of cultivars was mainly grown. Dewamusume was the first indeterminate cultivar recommended in Honshu and it was released in 1977 from the Tohoku Agricultural Experiment Station. The reason why the indeterminate type was not grown remains unknown.

© Copyright Soyinfo Center 2014

It can be inferred that the slightly larger variation of grain size in the indeterminate type than in the determinate type may not be favorable for marketing. One of the interesting characteristics of soybeans in Japan is the size of grains which are large. Furthermore, there are many kinds of grains with varying size and seed coat color which have been produced for special usages.

"Fertilizers used consisted of ashes, barnyard manure, rice bran, and dried fish (sardines), when available. In 1904 superphosphate was applied...

"So far the scale of soybean cultivation per farm had been rather small. In the areas where upland crops were grown, soybeans were produced under marginal and poor conditions, and in the areas where paddy rice was grown soybeans were grown on dikes for farmer's own consumption. According to the results of a survey conducted in 1961, ratio of amounts of commercial use to total products was 49% on the average throughout Japan. The scale was such that only Hokkaido and Iwate Prefecture produced more than 200 kg per farm.

"2. Special methods of cultivation: In the cultivation of soybeans on the dikes of paddy fields damage due to dry conditions and various pests (diseases and insects) is limited. Due to the presence of sparse stands, sunshine and wind easily pass through the canopy and fairly high yields of grains with high quality could be obtained. However, there were some disadvantages. For instance, the decrease of rice yields was somehow inevitable and weeding was rather laborious.

"Transplanting of seedlings was practiced extensively. Planting date was earlier (for instance 10 days) than the usual date, and seedlings 15 to 30 days of age after planting were used. Transplanting caused growth depression, and thus plant height was reduced. Flowering was delayed, but maturity was hastened...

"Topping has been widely applied. It also depresses the growth. When topping is performed in the early stages of growth, secondary branches are increased, and flower and pod numbers are also considerably increased. Flowering and maturity are delayed slightly. In this treatment deep root system may be obtained. Cultivars adopted for topping treatment should have many branches. They must be sown earlier than the usual date. Since topping reduces growth remarkably, it must be applied under fertile soil conditions.

"Ridging is generally practiced in soybean cultivation as well as weeding, and lodging may be prevented to some extent...

"During this period intercropping systems were occasionally adopted, with soybeans being grown mainly with cereals (barley and common millet (*Panicum miliaceum* L.)) and cotton." Address: Faculty of Agriculture, Hokkaido Univ., Nishi 9, Kita-ku, Sapporo, Japan.

8024. Gotoh, K. 1984. Historical review of soybean cultivation in Japan: Scientific approaches (1946-1977) (Document part). *Tropical Agriculture Research Series* No. 17. p. 138-40. March.

• ***Summary:*** "1. Characteristics of this period: Extensive research work on soybean breeding and cultivation started after World War II. Nagata (1955) wrote a book on soybeans in a comprehensive manner, based on domestic and foreign information. It may be said that Nagata's publication was the first well written Japanese book on soybeans.

"The progress of research works was compiled by Saito (1972; breeding), by Kaizuma and Fukui (1972; quality breeding), by Konno (1972; physiology) and by Matsumoto and Ohba (1972; production techniques) in the Proceedings of the Symposium on Food Legumes held at the Tropical Agriculture Research Center in 1972.

"In the early stage of this period, production of soybeans for oil was attempted. However, since the quantity of soybeans imported from the USA increased, especially after 1961 when the Japanese market was opened for soybean importation, production became restricted to protein use or food.

"During this period the constraints on soybean production were analysed in each area in Japan...

"Thus breeding for overcoming these hazards was undertaken and cultivars showing cool weather tolerance, cyst nematode resistance, virus disease resistance, resistance to several important diseases, and lodging resistance were released in each location.

"One of the important objectives of breeding was to obtain cultivars with white hilum of grains which was requested from the processing industry, especially for miso production. Thus, 30 of a total of 43 cultivars released from 1961 to 1977 had white hilum. As mentioned previously, large seed size was preferred for consumption, and the cultivars with large seed size became predominant. However, several cultivars with small seeds were maintained for natto production.

"2. Genetic resources: During the period 1952-1954 surveys on land races of soybeans were conducted and the data were summarized in 1957. According to the results, Tohoku had abundant genetic resources. Almost all of the land races were grown in dikes surrounding paddy fields and some were used for soiling under alluvial and diluvial soil conditions and for the cultivation of vegetable beans.

"It was well known that the wild soybean (*Glycine soya* Sieb. *et* Zucc.) is native to Japan, except for Hokkaido. However, in 1973 this variety was observed along the river Saru in the Hidaka area of Hokkaido and thereafter along several rivers there...

"3. Cultivation practices recommended: Several research workers attempted to introduce modern technology for the management of soybeans...

"4. Physiological studies: Fukui and Arai (1951) classified cultivars, based on the length of growth from

© Copyright Soyinfo Center 2014

germination to flowering and flowering to maturity. This classification which does not correspond with the maturity groups of the USA is widely used in Japan. Groups Ia, Ib, and IIa belong to the so-called summer type, IIb, IIc, IIIb, and IIIc to the intermediate type, and IVc and Vc to the autumn type, respectively...

"5. Plant density: Although progress has been made in the understanding of soybean characteristics as a crop, the cultivation of soybean in practice is still based on sparse planting on an individual plant basis. This concept may be due to the fact that under the hot and humid conditions prevailing in Japan luxuriant growth and severe lodging are likely to be associated. Thus plant growth must be inhibited and the number of branches must be increased for increasing the number of nodes in turn results in the increase in the number of pods. Consequently, cultivars bred before 1960 were generally adapted to such growing conditions. However, several cultivars bred after 1961 had a stiff stem and seemed to be adapted to dense planting. These findings suggest that the plant type has been changing from the branching type to the main stem type in which a larger proportion of pods occurs on the main stem, and lodging resistance becomes far more important.

"6. Differences between record yields and average yields: During this period record yields were obtained in several Agricultural Experiment Stations and in some yield contests as outlined in the paper of Gotoh (1982). However, the average yield of soybeans was low as usual, namely, less than 1.5 tons." Address: Faculty of Agriculture, Hokkaido Univ., Nishi 9, Kita-ku, Sapporo, Japan.

Address: National Food Research Inst., Japan.

8028. Mogi, Ken. 1984. The history of shoyu (soy sauce) brewing in the United States. The story of the Oriental Show-You Company. San Francisco, California: Kikkoman. 3 p. March. Unpublished manuscript. Combined with a subsequent interview of Ken Mogi by W. Shurtleff on 20 April 1984.
• ***Summary:*** "Early in this century, Mr. Shinzaburo Mogi, one of the Mogi family's ancestors, tried to make shoyu in America. Mr. Mogi was born in 1872 and later came to America in about 1892. He studied at college in Maryland but had an eye problem so he gave up studying and returned to Japan. In 1904, the year his daughter Katsuko was born, he was in Toronto selling Japanese bicycles, involved in a trading business unconnected to Kikkoman. According to the memory of Mr. Tsuneo Tanba, who worked with Mr. Mogi very closely (and later told his story to Morio Ichiyama, Kikkoman historian), Mr. Mogi managed a shoyu plant in Denver, Colorado, in 1907; it was not successful. Later, he had some contact with a shoyu project in Toronto, Ontario, Canada. Though I traveled to Denver, I could not get any information on this."

Note: On 7 Feb. 2005 Ken Mogi wrote William Shurtleff at Soyfoods Center (in response to some questions about the existence of the Denver soy sauce plant): "I talked with Komiya. Mr. Shinzaburo Mogi had the New Testament reading meeting with 5-6 people during lunch break when Mr. S. Mogi was living in Noda [Japan] during World War II. Mr. Komiya told me that he remembered that Mr. S. Mogi mentioned the Denver story." However Ken Mogi is does not know (1) if S. Mogi ever wrote anything about a soy sauce plant in Denver, (2) when and where S. Mogi told this story to Mr. Tanba, and (3) when and where Mr. Tanba told Mr. Ichiyama about S. Mogi's supposed soy sauce plant in Denver. Ken Mogi encloses a photo of Mr. Shinzaburo Mogi at about age 30.

Mr. Mogi's daughter, Mrs. Katsuko Yoshida, who is living in Tokyo, does not remember anything about Denver or her father starting a soy sauce plant in Denver. However she did tell me the story about "Oriental Shoyu" in Indiana.

Katsuko lived in Chicago with her parents in the 1920's (maybe 1920-1926). Mr. Mogi worked for Yamato Shokai, selling Japanese silks. They found the product "Oriental Shoyu" in the market and were very much impressed. They visited the plant in Indiana and later Mr. Mogi became a

© Copyright Soyinfo Center 2014

stockholder in that company.

Mr. Esta Keirn started employment with the Oriental Show-You Co. on 28 Oct. 1932 as a [mung] bean sprout washer. He continued until 1 Nov. 1961, when the company was sold to Beatrice Foods Inc. and turned over to La Choy Food Products. Mr. Keirn worked for La Choy for 8 years. He never met Mr. Mogi but he heard several things about him from Mr. Ohki.

Shinzo Ohki, the founder of the company and one of 8 children, was born in 1884 in Kamakura, Japan. He immigrated to the USA in 1901, landing in Seattle, Washington. Eventually he ended up in Columbia City, Indiana, where he graduated from high school. He then graduated from college in New York City. Upon graduation he started in business as a tea merchant in Detroit. To expand his line, he imported soy sauce in small wooden kegs from Japan. This he bottled and sold along with his tea. He could not expand his tea business but the soy sauce business kept growing.

Wishing to expand by adding other products to his line, he returned to Columbia City, took in a partner to gain capital, and set up in a vacant canning plant (Vance Canning Co.). This is when he incorporated and took the name of Oriental Show-You Company, Inc. Then, in 1917, Mr. Ohki went to Japan to obtain the formula (and also a wife) and some instruction in making soy sauce so he could manufacture his own. Upon coming back to Columbia City, Indiana, he enlisted the help of someone from the USDA to work out the koji culture. Fermentation was set up in large wooden beer vats. Equal parts soybeans, wheat, and salt were aged for 24 months, then pressed and bottled. According to Mr. Keirn, the company produced as much as 30,000 gallons of shoyu in one year. The plant in Columbia City was vacant for some time and now most of it has been torn down, but the adjacent adobe and brick buildings are still standing.

Note 1. Much of this story was published in the Japanese-language newspaper *Rocky Mountain Jiho* (Denver, Colorado), 25 Jan. 1984. p. 4.

Kenzaburo's great grandfather was the first president of Noda Shoyu K.K. (today's Kikkoman). Shinzaburo Mogi was the latter's brother.

Note 2. The story was also written by Marilee Kreps in about 1984 under the title "Shoyu pride: Columbia City's soy sauce factory one of many in the United States." The name of the newspaper, which was published in Columbia City, Indiana, is now known–nor is the date or page. It states: "Until 1962 the company, located on Factory Avenue, was a thriving business in this town, and contrary to what some believe, it was [named] the 'Shoyu Company,' not the 'Show-You Company.'" The Oriental Shoyu Company was established in 1917 by Shinzo Ohki in Columbia City. The factory was closed in 1961.

Note 3. On 7 Feb. 2005 Kenzaburo Mogi IV of Kikkoman, Japan, sent William Shurtleff a hand-drawn map showing the location of the four buildings that were part of the Oriental Show-You Company in Columbia City, Indiana. They were located between the railroad track and Factory Avenue, near Line street. These photos show: (1) The office building. (2) The printing and boiler shop building. (3) The remains of the soy sauce plant, with hand-drawn arrows pointing the areas on the cement floor used for the moromi tank, koji making, and pressing. (4) Close-up of the cement base of the moromi tank. (5) Close-up of the space on the cement floor, between the moromi tank and outside wall, where the heater was. (6) Close-up of the area used for pressing (*assaku*) the soy sauce from the moromi. (7) Mr. Esta Keirn standing in a grassy field in front of the chow mein building, which once shared a wall with the soy sauce plant. (8) Granite tombstone of the founder, Shinzo Ohki (1883-1967) and his wife, Taka (1889-1963). (9) Mr. Esta Keirn. Address: Kikkoman Marketing and Planning Inc., P.O. Box 784, San Francisco, California 94101.

• ***Summary:*** The author grows 500 acres of soybeans in Ontario. Soybean production in Canada is subsidized by the federal government. "Until 1973, the only export of any consequence was to the United Kingdom, mainly because of the preferential trade benefit. This was phased out in the early 1970s and export sales greatly diminished. In 1973, after years of frustration, the Soybean Board subsidized a shipment of about 30,000 bushels to Japan for the human consumption market, mainly miso and tofu. Since then, the quality of Ontario soybeans has become so renown in the Pacific Rim countries that 1982 exports to this area accounted for 2.2 million bushels. The potential of this market is almost unlimited...

"In summary, I would like to say that I am excited about our soy production. It is like a new lease on life to grow something other than corn. We'll probably never get rich at it, but we'll enjoy trying." Address: Farmer, Moore township, Lambton County, ONT, Canada.

• ***Summary:*** Soybeans were first exported from Canada about 12 years ago when a Japanese house approached the Ontario Soybean Grower's Marketing Board for a trial shipment to Japan. The trial worked out very well and in a short time Ontario's soybean exports became a multi-million dollar business. Ontario soybeans are very clean, the quality is comparable to Japanese and Chinese soybeans, and the supply is consistent. However the price is high in relation to Chinese and U.S. soybeans. As a result, Ontario soybeans are sold in high-priced markets, as for making premium quality miso or soyamilk. The supply of Chinese soybeans is irregular. Address: Manager, Grain Trading Section, Okura & Co. America Ltd., New York, NY.

8039. Wernham, Les. 1984. Exports–Problems and opportunities [for Canadian soybeans]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 246-53.
• ***Summary:*** Soybean exports from Ontario have expanded dramatically during the past 10 years; in 1982 they reached a high of 132,000 tonnes worth $44 million. The East Asian market including Japan, Korea, Hong Kong, and Malaysia accounted for 81% of Ontario's export soybean sales in 1983, with an additional 8% going to Europe. The main buyers in 1982 were: Japan 47,414 tonnes, Netherlands 19,545 tonnes, Singapore 18,039 tonnes, Indonesia 16,652 tonnes, Hong Kong 15,234 tonnes.

Most of these soybeans are sold for human consumption. "For example, one of Sweden's foremost pharmaceutical manufacturers has in the past years been that country's largest single importer of Canadian soybeans. Taking about 3,000 tons annually, this company produced a patented intravenous nourishment called Intralipid." Tiny soybeans (5 mm diameter or less) are used to make bean sprouts and natto. For soybean exports, freight constitutes an average 21% of the net delivered cost to the buyer in his country. They are shipped in bagged or bulk (20 or 40 foot) containers. The main focus of breeding should be to develop varieties that do not carry a common bitterness or beany flavor. Address: Grain Manager, King Grain, Chatham, ONT, Canada.

8040. *Mainichi Daily.* 1984. Researchers say miso good anticancer agent. April 1. p. 12 (B). Sunday. Summarized in East West Journal as "Miso and Cancer Update," July 1984, p. 11. [1 ref. Eng]
• ***Summary:*** Miso contains substances capable of controlling the growth of cancer. This finding was announced by a team from Tohoku Univ. in Sendai, Japan, headed by Prof. Shuichi Kimura. A formal report will be presented at the meeting of the Agricultural Chemical Society of Japan to be held this month in Tokyo. "The finding also confirms the popular belief in the effectiveness of miso soup against cancer, especially stomach cancer. The specific anticancer substances in miso appear to be combinations of fatty acids and ethanol, or ethylesters of fatty acids. The most effect of these is linolenic acid ethylester. In all, these anticancer ethylesters of fatty acid content account for some 0.5% of miso. Yet they are 'so effective against cancer that 10 milligrams, or the amount in an ordinary cup of miso soup, can completely eradicate the toxicity of 5 micrograms of benzypyrene, a powerful carcinogen,' according to Prof. Kimura. 'One kilogram of beef, entirely charred, can produce only 1 microgram of this carcinogenic chemical, thus indicating how miso soup is effective against cancer.'"

8041. Kawamura, Wataru. 1984. Re: Miso in America. Letter to William Shurtleff at Soyfoods Center, April 9. 1 p. Handwritten, with signature. [1 ref. Jap]
• ***Summary:*** Mr. Kawamura is widely known in Japan as "Miso Sensei" (miso teacher). Address: 2-4-7 Kugenuma, Tachibana, Fujisawa-shi, Kanagawa-ken 251, Japan. Phone: 0466-22-1351.

8042. Hesseltine, C.W. 1984. Re: NRRL history and culture collection. Dr Church, Dr. Raper, and Dr. Thom. Letter to William Shurtleff at Soyfoods Center, April 10. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "In 1984 the NRRL culture collection contained 77,000 strains of molds, yeasts, and bacteria. It was staffed by 6 full-time curators," of which two maintained the mold collection.

According to Dr. Raper, Dr. Church left USDA and went to a small college in Urbana, Ohio. Dr. Raper also provided a number of accounts about Dr. Thom.

"You might be interested to know that we have Dr. Thom's original notebooks and his entries of the Aspergilli and Penicillia. I also rescued a drawerfull of correspondence on soy food going back into the 20's and perhaps earlier about miso, shoyu, and other soy foods. For instance, there is one folder with nothing but Japanese and Chinese labels of soy foods." Address: Chief, Fermentation Lab., USDA/NRRC, Peoria, Illinois.

8043. Simpson, Rita J. 1984. Re: 1982 statistics on production of soybean-based products in Tetra Brik packages. Letter to William Shurtleff at Soyfoods Center, April 18. 1 p. Typed, with signature on letterhead.
• ***Summary:*** The products include plain and flavored soybean milk, plus tofu (million liters):

Japan 51.0
Hong Kong 15.0
Malaysia 11.5
Korea 7.0
Thailand 4.0
Singapore 2.5

"Our international office is aware of your need for the 1983 statistics and I will forward them when received."

8044. Sterngold, James. 1984. On foot in Hokkaido: Much of the northern isle is parkland. *New York Times.* April 29. p. XX9, XX32.
• ***Summary:*** The writer stays at a spa near Mount Asahi. The standard Japanese breakfast begins with a bowl of rice and salty broiled fish, generally salmon. "Then there is natto. This is a gooey, though plain tasting, concoction of fermented soybeans said to be packed with nutrition, but a little much for some sensibilities first thing in the morning. Even many Japanese wrinkle their noses at the mention of natto the way many Americans do the first time they hear of eating raw fish. Also common are raw egg and nori [pressed seaweed], which are eaten with the rice."

8045. Cusumano, Camille. 1984. Tofu, tempeh, & other soy delights: Enjoying traditional Oriental soyfoods in American-style cuisine. Emmaus, Pennsylvania: Rodale Press. x + 261 p. Illust. Index. April. 23 x 20 cm.
• ***Summary:*** Each chapter on a specific food describes (with illustrations and nutritional information) how to prepare that food at home, followed by many recipes. Contents: 1. The coming age of soyfoods cuisine. 2. Tofu 3. Tempeh. 4. Soymilk. 5. Japanese soyfoods. 6. Whole dry soybeans. 7. Fresh green soybeans. 8. Soy sprouts. 9. Soy flour and soy grits. 10. Soy sauces. 11. The soyfoods pantry.

Scattered throughout the books are 1-page descriptions of various American soyfoods companies, each accompanied by a black-and-white photo. Photos show: Greg Weaver and two other workers at The Lotus Cafe, Rochester, New York (p. 83). Sharon Rose of Brightsong Light Foods, Petaluma, California (p. 142). Steve and Sara Yurman of The Soy Shop, Atlanta, Georgia (p. 169). A craftsman cutting tofu at Tomsun Foods, Greenfield, Massachusetts (p. 195). Toby Alves of Blair Island Natural Foods Restaurant, Eugene, Oregon. A worker making brown rice and tofu sandwiches at Wildwood Natural Foods, Fairfax, California (p. 235). The company is owned by Bill Bramblett, Paul Orbuch, and Frank Rosenmayer.

Note: As of Sept. 1989 some 25,688 copies of this book had been sold by Rodale Press. It was sold out and will not be reprinted. Address: Rodale Press, Emmaus, Pennsylvania.

8046. Leviton, Richard. 1984. Japanese soyfoods. In: Camille Cusumano. 1984. Tofu, Tempeh, & Other Soy Delights. Emmaus, Pennsylvania: Rodale Press. x + 261 p. See p. 144-49.
• ***Summary:*** Contents: Brief biography of Leviton and introduction. Deep-fried and grilled tofu treats: age, atsuage, ganmo, yaki-dofu, doufu-gan. Tofu haute cuisine (at 280-year-old Sasa-no-Yuki in Tokyo, dried-frozen tofu, wine-fermented tofu). Delights of soymilk and yuba (incl. Yuba Han). Natto, miso, and savory soy condiments (incl. Hamanatto or "savory fermented black soybeans," thua nao from Thailand, and natto miso). And still more: Cooked soybeans with wakame, "soy sprouts packed in a sausagelike clear tube, green soybeans in the pods, *kinako* powder (a flour made from dry roasted soybeans, used as a basis for confections or nut butters), freeze-dried instant miso soup powder, instant silken tofu powder (just add water and stir), and dry meat sauces for tofu." Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

8047. Leviton, Richard. 1984. The organic Garden of Eden: A Michigan-based natural foods company [Eden Foods] stresses quality and fidelity. *East West Journal.* April. p. 18, 20-23.
• ***Summary:*** A good history of Eden Foods (although the early dates are incorrect), which has blossomed from a student-run co-op in Michigan in 1967, to a nationally recognized name in 1984. Based on an interview with Mike Potter, who had become interested in macrobiotics in 1967 when, sick with hepatitis in California, he met Herman and Cornellia Aihara and found that macrobiotics "all articulated my own intuition." Potter is now a seasoned businessman, with 13 trips to the People's Republic of China and 7 to Japan.

"Eden's beginnings are a little vague, Mike Potter explains... In July 1967 a group of students in Ann Arbor began distributing macrobiotic staples from Boston. This effort eventually led to a co-op called Eden Foods; in 1968 it became a full-fledged, though small, retail store. Around 1969 Potter visited Ann Arbor and the brand new Eden Foods. At the time, he was busy managing a natural foods store in nearby Birmingham [Michigan].

"In these days Judy and Bill Bolduc and Tim Redmond owned the 1,500 square foot Eden store. By 1971 the group was milling flour and baking granola and they asked Mike [Potter] to become a manager with an ownership position. In 1973 they moved the manufacturing end into a much larger building a half block away, and sales topped $175,000 a year. By late 1973 Eden was sharing a building with competitor Midwest Natural Foods and co-distributing products. They also relocated their retail store, adding on a natural foods restaurant and a whole grain bakery, and employed 25 people. By 1972 Potter and the Bolducs had begun to distribute their products using first a Dodge van, then a couple of refrigerated twenty-food trucks. But all this relocating and moving the retail store about, which had been underwriting the wholesale and manufacturing aspects, used up their cash flow. Financial troubles ensued. Mike bought out the Bolducs. 'I can make this thing work, he told them.

"Potter traveled to Japan and made important contacts with Muso, a leading macrobiotic supplier. Eden imported Erewhon-branded products directly from Japan. They started searching Michigan farms for organic crops... A cornerstone

© Copyright Soyinfo Center 2014

of Eden policy since 1973 is support of local Michigan farmers. Eden supports sixteen farms in Saginaw Bay which grow organic grains and beans (and three organic rice growers elsewhere) for a total of 6,000 acres [in 1984]–up from 1,000 in 1977... In 1977 Eden opened Turtle Island restaurant, which stayed open until the fire. In 1978 Eden started to advertise in magazines. But the company had grown wobbly, bureaucratized, and unwieldy."

"Late in the evening of November 26, 1979 the Eden warehouse was consumed and destroyed by flames... An estimated $800,000 in inventory, machinery, and supplies were lost, much of it irreplaceable, since the eventual insurance settlement covered barely one half the loss. Most old-timers at Eden agree that the fire was ultimately highly beneficial... 'The fire was constructive,' says Ron Roller. 'The energy here was stagnated, with too many departments each claiming a turf. The management was in disarray; a change was needed...' The Eden of 1979–2,400 products, 100 employees, a natural foods restaurant, a whole grain bakery, a retail store in Ann Arbor, several tractor trailer trucks, a $50,000 computer with eight terminals, a 10,000 square foot building–burned to the ground. Eden, somehow, was out of operation for only two weeks after the fire. Immediately it began to function in an empty 5,000 square foot building next door (the truck garage). They got the cash flowing again on an inventory staggeringly depleted. The insurance company gave them a depressingly small advance against damages and refused to settle on the claim. Eden was advised to declare bankruptcy." About a year after the fire, construction on the new building was completed. By 1980 Eden had moved into this 20,000 square foot building at 701 Tecumseh Road in the tiny town of Clinton, Michigan, (population 2,000) about 60 miles southwest of Detroit. It was 27 months [2¼ years] before the final settlement.

In 1982 Eden imported 25 container loads (each weighing 35,000 lb) of Japanese natural foods, including natto miso and buckwheat miso. Ron Roller is now purchasing manager, Bena Burda is sales manager, Bill Swaney is production manager, and Kathy Nohr is office manager. Cliff Adler and Mike Gorman are also key co-workers. The company has nine shareholders, of whom seven are daily employees. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

8048. *Macrobiotics Today* (*Oroville, and Chico California*). 1984--. Serial/periodical. George Ohsawa Macrobiotic Foundation. April 1984 to present. Frequency: Monthly, then bimonthly.
• ***Summary:*** Preceding title: GOMF News. Each issue is dated. All issues from Aug. 1984 to May 1985 had the subtitle: Natural Living. Place of publication changed in Jan. 2001 to Chico, California.

Note: The Jan/Feb. 1990 issue was designated Vol. 30, No. 1, and was also described as the 250th issue. At that time the magazine frequency changed from monthly to bimonthly, which it remains. As of April 2011 the current issue is Vol. 51, No. 3. So this periodical is in its 51st year, always published by the same publisher.

Carl Ferré states in an e-mail of 10 May 2011: "Herman was listed as publisher from May 1985 until he died February 25, 1998. (By the way, Cornellia died on the same day, February 25. eight years later)."

8049. Ohta, Teruo. 1984. Seijinbyô o fusegu to Amerika de hyôban no Jawa nattô, tenpe [Tempeh, Java natto, prevents geriatric diseases and is popular in America]. *Watashi no Kenko* (*My Health*). April. p. 66-69. [Jap]
Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan: Bucho, Norin Suisansho.

8050. Okazaki, H.; Kano, U.; Kimura, S. 1984. [Investigation of the anti-mutagenic substance in miso]. Paper presented at the annual meeting of the Agricultural Chemistry Society of Japan. 1 p. English abstract. Held 1-4 April 1984 in Tokyo. [Jap; Eng]
• ***Summary:*** No mutagens were found in miso. Some antimutagens were identified in the lipid fraction of miso. Ethylester of unsaturated fatty acids, especially that of linolenic acid, showed a strong anti-mutagenic effect. Ethylester of linolenic acid seemed to be formed from linolenic acid which was liberated from the glycerides in soybeans by the microorganisms in miso and ethyl alcohol produced by the yeast during fermentation of miso.

8051. Shurtleff, William; Aoyagi, Akiko. 1984. Soyfoods industry and market: Directory and databook 1984. 4th ed. Lafayette, California: Soyfoods Center. 203 p. April. 28 cm. [325 ref]
• ***Summary:*** Traditional soyfoods, which include tofu, tempeh, soymilk. miso, soy sprouts, soynuts and soy sauce accounted for $465 million in annual domestic retail sales. High-tech, modern soy protein foods, which include soy flour and grits, soy protein isolates and concentrates, extrusion textured soy flour and meat analogs, totaled $501 million. When the two sectors are tallied together, Americans spent $966 million in 1984 for soyfoods... not including soy oil or exported products. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

• ***Summary:*** New York–This is about fashion model Connie Cook, who is always on the go. Starting at 9:20 in the morning, her day ended at 11:30 p.m. with a fitting session at Arnold Scaasi's studio on Fifth Avenue.

"'Once I get there he doesn't let me stop for food,' Cook said over a Japanese dinner of grilled bean curd, sushi and two Kirin beers, before the Scaasi appointment."

8056. Tsuchiya, Kanji. 1984. Re: Soymilk in China, Hong Kong, and Japan. Letter to William Shurtleff at Soyfoods Center, May 12. 5 p. Handwritten. [Jap]
• ***Summary:*** Thanks for the complimentary copy of your book *Soymilk Industry and Market* (SIM). "The content is really outstanding. This is the world's most detailed and in-depth report on soymilk, and I doubt anything will surpass it in the future."

He recommended it at a special soymilk seminar. Ms. Kojima of ASA reviewed it in *Nittokyo News* (Japan Soymilk Assoc. Newsletter). He'll try to get it reviewed in *Toyo Shimpo* and he'll recommend that Marusan buy a copy at future meetings.

His recent trip to China: In Hong Kong he found Kibun soymilk in department stores. He met with Vitasoy's asst. director. He found Vitasoy deodorizing technology far inferior to that of Japan. Vitasoy agrees and wants to improve it. The plant is old fashioned. He says they soak the soybeans, then grind. Really? Their milk is too sweet.

In Peking, they have decided to install a 350 liter/hr test plant he designed in the Central Government's Heikokyo division, food fermentation Industry Science Research Lab, which is 30 km northwest of Beijing. He went there to discuss installation and train the workers. The site is now under construction. For 2 days he met with technologists, who asked many good questions. It is a 3-stage plant, compact, all automatic and continuous, like a scaled-down Marusan plant that will fit in a space 5 x 10 meters. Improved design will give 10% higher yield than Marusan's plant. They are also planning to make tofu with it, leaving the okara in to give a higher tofu yield and firmer texture.

This equipment will be shipped from Tokyo at end of May and arrive in Peking in mid-June. No packaging equipment has yet been ordered. They plan for now to sell in bottles thru refrigerated outlets.

(p. 4). The same type of plant exactly will be installed in the Liaoning Food Industry Research Lab. in Shenyang city. He held a 3-day workshop there. The equipment will be shipped from Tokyo in mid-July. He will go back there in 3 months. Starting on June 18 somewhere in these northeast provinces there will be a 1-week soymilk expo and workshop. In June he'll go back to these two places to help with production runs. On SIM p. 93 the following is a more detailed explanation of what happened. At that time 20 engineers from the Peking Government were sent to visit the Marusan plant. They came in 5 or 6 groups at different times. Tsuchiya took them on tours of the plant. They said that in China there is a long history of making soymilk so they don't need to learn anything from Japan.

They felt the Japanese were too sensitive about beany flavor, so Japanese equipment was not suited to make soymilk for Chinese tastes, and moreover they didn't want to spend/waste all that much money. But they later realized, after researching the details of the processes and equipment used by Kibun, Alfa Laval, and DTD that Marusan had the equipment that they needed, so they decided to order it.

Page 5: Part of the equipment they ordered will be made by Seikensha, which made most of the equipment in each Marusan plant. If test results in China are good, they will install full-scale plants of 2,000 to 4,000 liter capacity in various places in China. They want to keep production decentralized and small enough so that the equipment does not stand idle.

China's knowledge of sanitation and complex technology is too rudimentary to allow aseptic packaging. He thinks they will either retort or perhaps for groups that use a lot at one time (communes, schools, factories) ship it fresh and chilled in bulk.

Other provinces that have asked Marusan for bids are Henan, Hebei, Fujian, and Canton (Guangzhou). So it looks like Tsuchiya will be busy for the next 2-3 years.

Best wishes. Address: Tokyo [Technical consultant, Okazaki Marusan, Japan].

8057. Fruin, W. Mark. 1984. History of Higeta Shoyu Co. 4060 Amaranta Dr., Palo Alto, CA 94306. 4 p. May 15. Unpublished manuscript.
• ***Summary:*** Higeta shoyu is one of the oldest brands of soy sauce in Eastern Japan, tracing its history back to the Hamaguchi brothers who migrated at the beginning of the 17th century from Hiromura in Wakayama prefecture (across the river from Yuasa, the birthplace of shoyu in Japan) to Choshi on the eastern tip of the Miura Peninsula, which curves around the top of Tokyo Bay. The Black Current, which runs northward from Wakayama to Choshi, carried

© Copyright Soyinfo Center 2014

the Hamaguchi brothers' ships. They had the foresight to transport shoyu from its place of origin in western Japan to the newly opened vistas in the 17th century of Tokyo and the Kanto plain hinterland.

Around 1615 the elder of the two Hamaguchi brothers established Hiroya, a food distribution company in Tokyo (then Edo), while the younger brother ventured into the manufacture of Yamasa shoyu. For the next several centuries, Yamasa was noted as a good but local shoyu, indistinguishable from other local brands except for the access to the Tokyo market, which it enjoyed through Hiroya.

In 1914 the elder Hamaguchi joined with two other Choshi families, Tanaka Genba and Fukui Kichibei, to form the Higeta Shoyu Co. Ltd. Each family continued to produce their own brands of shoyu but around 1925 Higeta, which had been Tanaka Genba's brand, became the sole company brand. An ambitious plan of expansion of expansion was drafted to leapfrog Higeta over Yamasa its local rival. But Higeta became overextended and in 1937 Kikkoman stepped in and purchased 80% of Higeta's outstanding shares.

As Higeta was brought into the fold of Kikkoman companies, the involvement of the original investors changed. Tanaka Genba gradually withdrew. The Fukui family remained active in the company until the 1970s, but then they too withdrew. Only the elder branch of the Hamaguchi has stayed with the firm throughout the postwar era, and they now constitute the firm's top management and own some 30 percent of the company stock; the Mogi-Takanashi families from Kikkoman control another 20 percent (Kikkoman had to divest itself of Higeta during the economic deconcentration programs of the Allied Occupation of Japan); the wider Hamaguchi family claims another 20 percent, with the remaining shares widely scattered.

Higeta differs noticeably from the other major shoyu companies in Japan. Most importantly, since 1966 it has relied entirely on Kikkoman for its marketing, concentrating its energies instead on manufacturing. This has saved Higeta the expense of trying to establish its name as a national brand. It spends less than 3 percent of its sales on advertising, and most of this is directed toward institutional sales, where Higeta is strong. It dominates the market for shoyu in noodle shops in Tokyo, for example, claiming 80 percent of soba and udon shops. Overall, about 65 percent of sales go to such institutional customers and 35 percent of the home market.

Because Higeta has relied on Kikkoman for its marketing since 1966, most of its line of minor products, like miso and sauce, have nearly disappeared through the lack of an independent marketing effort. In fact, 90 percent of its sales come from the sale of shoyu, and 90 percent of the shoyu it makes is koi-kuchi [koikuchi] or Eastern style shoyu. In short, Higeta is a single-product company.

But the single-mindedness of Higeta is its strength. It leads Japan in shoyu production know-how. Higeta, for example, in cooperation with Hitachi Ltd. was the first maker to automate the koji culturing step of production, reducing the labor force required for this stage from 250 to 30 people. Indeed, Higeta, because of these strengths, is the third largest maker in Japan with 7 percent of the total production, even though the Higeta brand is only the fourth largest selling shoyu in Japan. This difference is explained by the fact that Higeta's production excellence is so well established than many firms buy filtered but unrefined shoyu from Higeta to brand as their own product.

Higeta's manufacturing superiority comes from the concentration of all of its production and brewing know-how in just one plant in Choshi since 1973. The highly efficient design of this factory means that Higeta has the lowest operation costs of any company in the industry and even Kikkoman is not above buying shoyu from Higeta to sell as its own. Nevertheless, the lack of marketing muscle means that most Japanese only sample Higeta in their favorite noodle shops.

Higeta is known among afficiandos for its quality. This is derived from a combination of color, aroma, and taste which is unique among large mass producers of shoyu. Address: Palo Alto, California. Phone: 415-858-2226 or 327-0857.

8058. Murata, Kiku. 1984. Re: History of her work with tempeh. Letter to William Shurtleff at Soyfoods Center, May 16–in reply to inquiry. 2 p. Typed, with signature. [Eng]

• ***Summary:*** Her profession is biochemical nutritionist.

One of the first companies to make tempeh in Japan was Marusan-Ai Co., best known as a miso manufacturer (1 Aza Arashita, Niki-cho, Okazaki City, Aichi prefecture, 444-21, Japan. Phone: 0564-45-3111). They started research on tempeh production about 10 years ago. In Feb. 1984, after introduction of tempeh to dieticians, they started to distribute tempeh for the school lunch program. For that purpose they made a pamphlet (which Murata sensei will send to Shurtleff with copies of requested papers). They also started to sell tempeh to caterers. They presently make about 30 metric tons per month of tempeh.

She initially went to Dr. Gyorgy's laboratory to work on the mechanisms of cirrhosis production in animals fed a high sugar diet. Then she gradually got involved with tempeh.

Note: For details see the book *History of Tempeh: A Fermented Soyfood from Indonesia* by Shurtleff and Aoyagi (1985). Address: Teikoku Women's Univ., 173-6 Thodacho, Moriguchi City, Osaka, Japan. Phone: 06-902-0791.

• ***Summary:*** An extremely well researched and well written book about America's greatest and most colorful plant explorer, who introduced many soybean varieties to the USA. These include: PI 19184 and PI 19186, both received by the USDA in Aug. 1906.

Contents: Maps. Preface. Acknowledgments. Setting the stage: 1. The past is prologue. 2. In the beginning. 3. Rendezvous with destiny. The first expedition: 4. Stranger in China. 5. The first winter. 6. Journey to the north. 7. The journey continued. 8. Assignment to the Wu Tai Shan. 9. The riches of Shantung (Shandong). 10. A harvest for America. 11. A plant explorer at home. The second expedition: 12. Europe revisited. 13. Bridge to Asia. 14. Delay and frustration. 15. Privation and postponement. 16. The Tien Shan. 17. The Altai Mountains. 18. The alfalfa project. 19. The Volga to the Potomac. 20. Interlude in America. The third expedition: 21. Peking (Beijing) via Siberia. 22. A delayed journey. 23. The long march begins. 24. The border of Tibet (*Xizang*). 25. Lanchow (*Lanzhou*) and return. 26. Departure via Chekiang (*Zhejiang*). 27. Home by a southern route. The fourth expedition: 28. Peking (Beijing) via Japan. 29. *Terra sancta.* 30. The wild pears. 31. Impasse in Ichang (I-ch'ang or Yichang). Journey's end: 32. Aftermath. 33. His contemporaries speak. 34. Meyer's legacy today. 35. Envoi. Appendixes: A. Meyer's plant introductions. B. Meyer germplasm available today. C. Recipients of the Meyer Medal. Notes. Bibliography.

"Ever since Marco Polo's return from fabled Cathay [in 1295] Westerners had longed for the horticultural treasures of China, where earth's richest flora had survived untouched by the Third Ice Age that had covered much of Europe and North America. The Chinese government, however, had limited foreigners for centuries to the open ports of Canton and Macao. After the Opium Wars of the 1840s resulted in greater privileges for Westerners, Robert Fortune, a Scottish plant hunter, spent nineteen years near the treaty ports, occasionally managing to travel two hundred miles into the interior disguised as a Chinese beggar with shaved head and pigtail. Later, amateurs like the French missionary-botanist Father Armand David and the Irish consular official Dr. Augustine Henry collected dried herbarium specimens of many new plants, revealing the richness and variety of China's flora" (p. 6).

At the beginning of the 20th century, a new window of opportunity opened for plant explorers in China. The crushing defeat of the Boxer uprising and the Chinese government in 1901 by the European powers, gave these powers a chance to extend their influence. Plant hunters could finally travel with a fair degree of safety into western China. In 1899 Veitch and Sons, a famous English nursery firm, sent a young collector named Ernest H. Wilson to find the ornamentals described by Father David. Wilson collected seeds of three hundred species, nine hundred pressed specimen, and thirty-five Wardian cases of living plants before he returned to England in 1902. Realizing that agricultural exploration would yield equally great rewards, David Fairchild, head of the infant Foreign Seed and Plant Introduction Section of the USDA, eagerly anticipated sending an explorer to China. But first he needed to find the right man to search vast areas, identify useful plants, and transport them to America.

"In 1889 Beverly T. Galloway, head of the Division of Plant Pathology of the USDA, had brought nineteen-year-old David Fairchild to Washington to join five plant pathologists who were working in attic rooms of the old red

© Copyright Soyinfo Center 2014

brick department building. Galloway's Wisconsin classmate, P. Howard Dorsett, soon joined the group. A little later, Fairchild's Kansas State classmate, shy and scholarly Walter T. Swingle, arrived with his growing library of agricultural references in five or six languages. Seeking an opportunity to learn about the flora of foreign countries, Fairchild accepted a Smithsonian fellowship to study in Europe. Aboard ship he met Barbour Lathrop, a well-to-do gentleman who later took him on an extended tour of the Pacific and showed him fruits, grains, and ornamental plants that could be valuable in America. Returning to Washington in 1897, David Fairchild knew exactly what he wanted to do with his life.

"With the help of W.T. Swingle, he conceived a plan to divert twenty thousand dollars of the funds appropriated for the wasteful Congressional Seed Distribution Service in order to finance a section for the specific purpose of introducing new and useful crops into the United States. He enthusiastically presented this idea to the secretary of agriculture, James Wilson, who approved the plan and asked him to organize the new section. Housed on the fifth floor under the eaves of the old Department of Agriculture building and staffed by one teenage secretary, the Foreign Seed and Plant Introduction Section became a reality when Congress passed the revised appropriation bill in July, 1898."

"Though David Fairchild traveled for the next several years as a special agent of the Foreign Seed and Plant Introduction Section, he never forgot his hope of sending a long-term plant explorer to China. In England he visited Augustine Henry to try to persuade that distinguished amateur botanist to return to Asia as a collector for the Department of Agriculture. Though Dr. Henry declined Fairchild's offer, his enthusiastic account of the unexplored fertile plains and useful plants of the western Chinese provinces made a deep impression on David Fairchild.

"He returned to Washington in 1903, determined to initiate agricultural exploration in the Orient. By this time the Foreign Seed and Plant Introduction Section had become a part of the Bureau of Plant Industry directed by Beverly T. Galloway. Galloway agreed that the collector Fairchild sought must be a good botanist who could recognize those plants that were both new and useful; a practical gardener who could gather and transport live material–scions and cuttings as well as seeds; and a man of great endurance who could tolerate all sorts of physical discomforts and walk thousands of miles where no roads existed. Choosing a plant hunter who combined these qualifications became Fairchild's chief concern" (p. 7-8).

In June 1904 Fairchild "began a series of visits to experiment stations and individual correspondents who were testing plants being introduced by the USDA. In Boston [Massachusetts], he called on Charles Sprague Sargent, the director of Harvard's world-famous Arnold Arboretum. Though these two men devoted their lives to related goals, their personalities offered a sharp contrast. Sargent, a Bostonian of ample means, assured social position, and established reputation, was strong-willed and often sarcastic, while the younger man from the Kansas prairies attracted friends everywhere because of his diplomacy and enthusiasm. Sargent mentioned that he was negotiating for the services of E.H. Wilson, who was making his second journey to the Orient for Veitch and Sons. Because of the rivalry that was developing between these two leaders in American plant exploration, this information spurred Fairchild's desire to send a collector to China" (p. 8).

When Fairchild returned to Washington, DC, in October 1904, he had still not met or even heard of Frank N. Meyer. Meyer had arrived in Washington, DC, on 20 Aug. 1901 with a letter of introduction from Hugo de Vries to Erwin F. Smith. Smith found Meyer a modest job as a gardener in the USDA greenhouses in Washington, DC.; here Meyer worked for about 10 months–from 23 Oct. 1901 to 31 Aug. 1902. Then resigned, left Washington, DC, and for the next 4 years he traveled to Mexico and across the USA, stopping to work for the USDA in various places.

For some time, Adrian J. Pieters, who had befriended Meyer and was also of Dutch extraction, and who had directed the Foreign Seed and Plant introduction office during the last months of Fairchild's travels abroad, had been thinking of recommending Meyer to Fairchild as the man Fairchild sought. Eventually Pieters made his recommendation. Similar strong recommendations came to Fairchild from Erwin Smith, Galloway, and George Oliver, Meyer's supervisor in the greenhouses. "In March [1905] Fairchild asked Pieters to wire Frank Meyer to ask whether he would be interested in going to China as an agricultural explorer. At last Fairchild had made his decision; time would test the wisdom of his choice" (p. 9). In Dec. 1905: "En route by sea to Tientsin, at Chefoo (Yantai) Meyer called on Dr. Yamei Kin and Mrs. John L. Nevius, the widow of a medical missionary who had introduced Western fruit trees there. These ladies, friends of David Fairchild, shared their considerable knowledge of the flora of northern china and showed Meyer several fine gardens. They also invited him 'to take many a cup of tea' and to eat a typical Chinese dinner."

"Fairchild (p. 108) requested twelve more tins of the roasted soybean coffee. He had served it to Mrs. Fairchild and Mrs. Bell without their realizing that it was not 'the ordinary coffee used by our family.'"

Talk with Isabel Cunningham. 1998. Aug. 1. Much of the story of how Fairchild and Meyer met is told in Fairchild's superb book, *The World Was My Garden* (1938). See p. 315 etc. Address: 212 Wardour Dr., Annapolis, Maryland 21401. Phone: 301-268-2384.

8065. Fruin, W. Mark. 1984. History of Yamasa Shoyu Co. 4060 Amaranta Dr., Palo Alto, CA 94306. 4 p. Unpublished manuscript.

© Copyright Soyinfo Center 2014

• ***Summary:*** Yamasa is the second largest shoyu producer in Japan [after Kikkoman] and one of the oldest in Eastern Japan, having been established in 1645 [sic]. It is located in Choshi, the fishing village at the eastern tip of the Miura Peninsula, where Higeta Shoyu is likewise headquartered.

Note: The Hamaguchi family, originally from Kishu (today's Wakayama prefecture), started making Yamasa *brand* shoyu in Choshi in 1845. But not until 1928 was a company established or incorporated as Yamasa Shoyu Inc. (Source: *Shashi: Choshi Shoyu* (1972)).

Along with Higeta and Kikkoman (located in the city of Noda), Yamasa is one of the big three producers of shoyu in Chiba prefecture in Eastern Japan. Indeed, Higeta and Yamasa were founded by brothers who migrated to Choshi from Hiromura in Wakayama prefecture. One brother, the elder Hamaguchi, went into the food distribution business in Tokyo, opening an enterprise which continues today under the name of Hiroya. The younger brother began to make shoyu–among other endeavors; and that was the start of Yamasa Shoyu.

Yamasa's leadership in the shoyu industry was established early. In 1895, it founded a research laboratory for the study of mechanical and chemical improvements to the process of shoyu fermentation. This may have been the first industrial research laboratory in Japan. At the turn of the 20th century, Gihei Hamaguchi, then the eldest son of the principal owner of Yamasa and himself president of the company at a later time, traveled to England to study chemistry and fermentation technology. Address: Palo Alto, California. Phone: 415-858-2226 or 327-0857.

8066. Fruin, W. Mark. 1984. History of Marukin Shoyu Company. 4060 Amaranta Dr., Palo Alto, CA 94306. 5 p. Unpublished manuscript.

• ***Summary:*** Marukin is the smallest of the Big-5 shoyu makers in Japan, with about 3-4% of the market. It is best known for its location on the island of Shodoshima, in the inland sea. In 1809 Takahashi Bunuemon was the first of many to make shoyu on Shodoshima, inaugurating a local industry that boasted 400 producers by 1878. In fact, Takanashi was not the first but only the first for whom records of his shoyu brewing activities survive.

Marukin was the first joint stock company in Japan established for the purpose of making shoyu. This occurred in 1907 when 165 investors put up 300,000 yen in assets. Most of these investors were shoyu makers themselves, so that Marukin has had a strong communal flavor from the start as the largest amalgamated shoyu maker on Shodoshima island.

Although located in Western Japan and not too far from the Higashi Maru Shoyu Company, Marukin has always been a koi-kuchi [koikuchi] or dark-colored shoyu maker. The techniques of shoyu manufacture were learned, it is said, directly from Yuasa, the seaport in Wakayama prefecture which was the birthplace of shoyu. In all likelihood, the traffic in men and materials to and from Shodoshima during the late sixteenth century, when Osaka Castle was being built, provided the opportunity for learning shoyu manufacturing. By boat, Shodoshima is only a half-day's sail from Yuasa.

Once the techniques of shoyu production were established on Shodoshima, production and producers increased rapidly. From a relatively late start in the early nineteenth century, shoyu producers jumped to 400 in a hundred years and production climbed to rank Shodoshima as one of the major manufacturing sites in Japan. But with so many small makers in competition with one another, the industry was in disorder. Prices were not fixed, quality was poor, shipping schedules were not reliable, and branding was not dependable.

It was at this juncture that Marukin Shoyu was formed in 1907. With the establishment of a joint stock company, a rationalization and regularization of shoyu manufacturing could occur.

In 1905, a shoyu research laboratory was founded by Kinoshita Chujiro who would become President of the Marukin Shoyu Company when it was established two years later. Kagawa prefecture likewise opened a shoyu research facility in 1910.

In 1916, the two research institutes merged, thereby raising the quality of information concerning shoyu manufacturing to all interested parties. By 1930, Marukin Shoyu was being sold in Tokyo and Eastern Japan heralding its transformation from a local to a national manufacturer. In 1934 and again in 1962, three and then four smaller makers were bought up by Marukin Shoyu which aimed to consolidate its position as the fifth largest shoyu maker in Japan both by internal expansion as well as by the acquisition of other shoyu plants.

Even today, some 80 percent of Marukin Shoyu is carried to market by ship. The company owns and leases a fleet of 11-ton freighters which ply the Inland Sea and the coastal waters of Japan. Address: Palo Alto, California. Phone: 415-858-2226 or 327-0857.

8067. Fruin, W. Mark. 1984. History of Higashimaru Shoyu. 4060 Amaranta Dr., Palo Alto, CA 94306. 5 p. Unpublished manuscript.

• ***Summary:*** Higashimaru is known in Japan as the major manufacturer of usukuchi or light-colored shoyu, which is also saltier than regular (koikuchi or dark-colored) shoyu. Light-colored shoyu is associated with Western Japan where it is widely used in the cuisine of Osaka and Kyoto, to season the popular white fish and fresh vegetables. As of 1984 some 80% of light-colored shoyu is sold in Western Japan, yet light-colored shoyu accounts for only about 13% of total shoyu sales in Japan.

Higashimaru is located in Tatsuno City, a castle town

© Copyright Soyinfo Center 2014

situated astride the Ibo River in Hyogo prefecture. Because of the favorable inland climate found near Tatsuno and because of the purity of the Ibo River waters, Tatsuno has long been famous for the manufacture of sake as well as shoyu. Indeed sake seems to have been Tatsuno's principal product during the 16th and 17th centuries, but at Nada City near Kobe on the Inland Sea became the leading center for sake brewing, Tatsuno gradually came to specialize in shoyu production.

Shoyu was first made in Tatsuno in about 1567 and by the late 17th century there were more than 100 shoyu makers in the castle town. Many have disappeared. Three of the most successful from among so many at the start of the 20th century were the Asai, Kataoka, and Nakahara households.

These three families joined in 1942 in a partnership to make shoyu. In 1949 they consolidated their efforts behind one brand, Higashimaru, which was formerly the Asai family's brand. Before the Asai family had taken over Higashimaru Shoyu in the mid-1800s, this shoyu had been made by the Lord of Tatsuno, the Daimyo Wakizaka. He had been transferred to Tatsuno in 1672 and was the only aristocrat known to be the founder of a shoyu company in operation today.

Somewhat after the time when Lord Wakizaka established a shoyu plant in Tatsuno, another local entrepreneur–it is not known who–added a step to the shoyu manufacturing process in Tatsuno that remains today one of the most distinctive steps of Higashimaru Shoyu. Around 1809, a sweet sake called amazake, a nonalcoholic rice wine, began to be added to the fermented shoyu (*kiage shoyu*) just before it passed to the pressing and pasteurization stages of production. Address: Palo Alto, California.

8069. Yamanaka, Mitsuaki. 1984. Re: The work of Takashin Ltd. with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, May. 3 p. [Jap]

• ***Summary:*** Our company, Takashin, Ltd. (*Takashin Shokuhin*) is a member of the Japanese National Natto Association (*Zenkoku Natto Kyôdô Kumiai Rengokai*). In early 1983, with director Ose's announcement of *Tempe Gannen* (The First Year of Tempeh) we started basic research on tempeh production and on second generation tempeh products–with other members in full force. From the beginning of 1984, under the leadership of our president Makito Takato, we are making progress on marketing and commercialization. We are also consulting with Oita-sensei, the top tempeh researcher in Japan, from the Ministry of Agriculture and Forestry Research Center (*Nosui-sho Shokuhin Sôgo Kenkyû-sho*).

We are now preparing to build a tempeh plant, with tempeh-making equipment, in order to make consistently good quality tempeh at low price for the market.

To answer your questions: 1. In April 1983 our president attended the Association meeting. Since then we have been doing research on tempeh. As a new fermented food in Japan, tempeh appealed to our president's progressive nature. We believe it has many advantages over natto.

2. July 1983. Right after Mr. Kanasuki / Kanasugi of the association returned from Indonesia, we invited him to our company and asked him to teach us how to make tempeh. In Sept. 1983 we started to sell hamburger with tempeh.

3. We are making and selling both tempeh (40 kg/day) and second-generation tempeh foods (20 kg/day)–such as hamburger, croquettes, cutlets, etc.

4. Monthly production is 1,500 kg.

7. We are selling our tempeh and tempeh products through natural foods restaurants and natural foods stores. We tried to test market our products in regular food stores but it didn't sell well because of lack of promotion and publicity. Address: Tachibana 1-29-2, Sumida-ku, Tokyo 131, Japan. Phone: 048-644-1323.

8070. Shurtleff, William; Aoyagi, Akiko. 1984. History of soy sauce, shoyu, and tamari. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 118 p. June 6. Unpublished typescript. Available online at www.soyinfocenter.com.

• ***Summary:*** A comprehensive history of the subject. Contents: What is soy sauce? Etymology. World overview. Part I: History of soy sauce in China and Taiwan. Early Chinese soy sauces (shih-you and jiangyou). The 1800's. 1900-1948. 1949-1980's (People's Republic of China). Taiwan. Hong Kong. Part II: History of soy sauce in Southeast Asia and Korea. Dissemination and common characteristics. Association of Southeast Asian Nations (ASEAN)–general. Philippines (1912-). Thailand (1974-). Malaysia (1970-). Singapore. Indonesia. Vietnam. Korea. Part III: History of shoyu in Japan. Hishio (jiang), tamari, and other forerunners of shoyu (700-1600). The development of shoyu (1500-1700). Standardization of the shoyu formula (1716-1867). The rise of shoyu in Japan (1750-1867). Overview of origins. Shoyu during the Meiji period (1868-1911). Shoyu from 1912-1945. The postwar period and modern times (1945-1981). Part IV: History of soy sauce in Europe. Part V: History of soy sauce in Australasia and the Pacific. Part VI: History of soy sauce in the United States. Part VII: History of soy sauce in Latin America, Africa, the Indian Subcontinent, and the Middle East.

The period during World War I was one of consolidation

for the shoyu industry. In 1914 three of the larger manufacturers at Choshi (Higeta, Jigamisa, and Kagidai) merged to become Choshi Shoyu Co. Ltd. In 1917 eight (later nine) major manufacturers in Noda, all related by descent or marriage, withdrew from the Noda cartel and joined to form a corporation, the Noda Shoyu Company, Ltd., which later became Kikkoman Inc. The company began operations on 1 January 1918, and quickly modernized its entire organization. In 1925 it restructured itself by amalgamating four related companies under the control of a holding company, thus greatly increasing its capital and scope. In 1918 Choshi Shoyu Co. changed from a limited partnership to a stock corporation and adopted a common trademark, Higeta. The Hamaguchi family, originally from Kishu, which ran Yamasa in Choshi, chose not to join the Choshi Shoyu Co. Rather, in 1928 they incorporated as the Yamasa Shoyu Co., Inc. Address: Lafayette, California. Phone: 415-283-2991.

8071. Kira, Motoo. 1984. Re: History of Marukin Shokuhin's work with tempeh. Letter to William Shurtleff at Soyfoods Center, June 8. 5 p. Handwritten, with signature. [Jap; eng+]
• ***Summary:*** Marukin Foods: The first natto company to start large-scale production of tempeh in Japan was Marukin Shokuhin (Marukin Foods Industry Co. Ltd.). Located in Kumamoto, Kyushu (Japan's southernmost main island), they were (in 1984) one of Japan's Big Five natto manufacturers, and they also made several other foods such as roasted soy flour (kinako), tofu, and konnyaku. In about 1964 Mr. Hayashi of the Japanese-American Soybean Institute suggested that Marukin start to study tempeh. At that time Marukin was looking for a new product, so Mr. Haruo Kato (the brother of Marukin's president and chief of natto production, research, and development) began with great interest to collect material and investigate this little-known fermented soyfood. Kato obtained tempeh culture from an unknown source in 1964 and was soon making small batches of tempeh. However the company eventually came to believe (incorrectly) that tempeh culture could interfere with the natto fermentation, and taste tests of tempeh led Kato to feel that it might be difficult to introduce tempeh into Westernized diets in Japan. So interest in tempeh waned. In July 1982 Marukin and eleven other small- to medium-sized soyfoods manufacturers from throughout Kyushu joined to establish the Kyushu Soyfoods Industry Association (*Kyushu Daizu Shokuhin Kogyo Kumiai*). Marusan's president, Itsuo Kira, became head of the cooperative Association. To help them compete with larger companies, and supported by Japanese government aid, they built a large and modern factory (6,600 square meters), with a daily capacity of 15 tonnes of natto and 6 tonnes of kinako and soy soup base (*gojiru no moto*). In April 1983, this new natto factory, the largest in Japan, started production, employing 85 workers. Marukin decided to use its former natto factory to make tempeh, since there was a growing interest in soyfoods and healthful foods, and since they already had extensive experience in making fermented soyfoods. In November 1983 Marukin Foods launched SunSeed brand tempeh. An article on the product in the 1 December 1983 issue of the *Japan Food News* (*Nihon Shokuryo Shimbun / Shinbun*) was headlined "nonsticky natto" and by May 1984 they were selling 1,500 packs of 200 gm each (300 kg) daily, about 4,620 lb (2,100 kg) a week or 9,150 kg a month. They were also developing secondary tempeh products, including snack foods, paste-type foods, and fried foods. The person in charge of tempeh production and sales was Moto-o Kira, eldest son of the president, Itsuo Kira, and next to top man in the company. Marukin sold its tempeh in department stores and in supermarkets at their own in-store booths. To promote tempeh, the company employed two professional nutritionists to do demonstrations and lectures at cooking classes. Marukin soon hopes to sell tempeh to school lunch programs. Address: Manager, tempeh production, 380 Yoyasu-machi Kumamoto-shi 860, Japan. Phone: 096-325-3232.

• ***Summary:*** Urizun, a restaurant in Naha (Asato 388-5), the capital of Okinawa Prefecture, is a "rare combination of superb food and ambiance." It was started 12 years ago by Tsuchiya Saneyuki, because of his passion for awamori, "the Okinawan liquor distilled from Thai rice and aged like whiskey." Its flavor resembles that of shochu, which is distilled from potatoes in southern Kyushu.

Urizun serves Tofuyo ($1.30), Okinawa-style fermented tofu with a sharp taste. Another popular dish has a dressing of miso and vinegar. Another Okinawan standard is a "creamy white tofu made of peanuts."

Note: The colorful paper wrapper (see next page) for Urizun's tofuyo looks like this. The text (in Japanese) has four parts: (1) The vertical white hiragana character's to the right of large central brown characters are *Urisun no* which means "Urisun's." (2) The small white hiragana characters to their left (called *furigana*) are *Tôfu-yo*. They explain how to pronounce the large central brown characters. (3) The three large central brown Chinese characters are pronounced *Tôfu-yo*. (4) The black characters to the left give the name, address and phone number of the restaurant, Urizun.

うりずんの**豆腐よう**をお買上げ下さいましてまことにありがとうございます。

豆腐ようの歴史は非常に古く、琉球王朝時代に中国から乳腐として伝わり、王朝料理座に於いて研究され、琉球独特な代表的珍味として造られたものの一つと言えましょう。

うりずんの**豆腐よう**は伝統的な手法を基に近代的な技術をとり入れて造られたもので、厳撰された大豆やもち米等の植物性原料と酒を使い、人工甘味料・人工着色料や防腐剤等の食品添加物は一切使用しておりません。

栄養豊かな自然食品で健康促進・精力補強食として安心してお召し上れます。

召し上り方

●漬汁から角切の**豆腐よう**をとり出し、酒の肴として舌先に少しづつのせて味わうとき、とろける様な微妙なコクが口いっぱい広がっておいしく頂けます。

●御飯と一諸に頂きますと、チーズとは違った風味があって食欲を増進します。

●漬汁の利用法としては、すりつぶした生ニンニクと適量の食塩を加えますと、格別おいしいバーベキューソースが出来上ります。

●商品保護には万全を期しておりますが、お気付の点がございましたら、ぜひご連絡をお願いいたします。

保存期間六カ月

or China. U.S. soybeans are believed to be unsuited for making natto since they remain hard after cooking, and they produce natto that has less sweetness and stickiness (*nebari*) than desired. He is now trying to find U.S. soybeans suited to making natto. He has found that the environment and conditions under which the soybeans are grown has more influence on the natto than the varieties themselves. He thinks that natto has many potential uses in a dried powdered form that could be mixed with other foods. He plans to return to Japan in late Aug. 1984. He has an extensive collection of publications on natto, which he is willing to share.

In Japan, he teaches at Meiji University in the agricultural chemistry dept., fermented foods research lab. He worked under Dr. Masahiro Nakano for a long time when he was there. His father (Haruo Kato) and brother (Itsuo Kira) produced natto after World War II in Kumamoto prefecture, Kyushu. They also tested tempeh for about 15 years. Their company is named Marukin Shokuhin Kogyô K.K. In July 1983 they established the Kyushu Soyfoods Association (*Kyûshu Daizu Shokuhin Kogyô Kumiai*) with Japanese government aid, and in Uto-chi, Kumamoto prefecture, they built a new plant. Marukin shokuhin is mainly handling the sales. Mr. Kato has no direct connection with Marukin. Address: NRRC, Peoria, Illinois.

© Copyright Soyinfo Center 2014

Yoshida who, as a young samurai had asked Commodore Perry in 1854 to take him to America. He was convinced that Japan needed to study Western technology to survive. Perry refused and, following the course of honor, he turned himself in and was imprisoned. On 21 Nov. 1859, at age 29, he was executed by the shogun. One feudal domain, the *han* of Choshu, one town, Hagi, and one school, Yoshida's Shoka Sonjoku, were always near the center of the struggle to restore the emperor to power and topple the inept Tokugawa shogunate.

Inserted in this issue is a superb 4-page chronology of Japan titled "Historical Japan." On the other side is an equally fine map of Japan, extensively annotated with key events.

1543–The first Europeans known to have set foot on Japan were three Portuguese shipwrecked on Tanega Shima (located a little southeast of the southern tip of Kyushu). Western commerce, guns, and Christianity arrive with Portuguese traders.

1549–A Jesuit mission headed by St. Francis Xavier landed at Kagoshima and was given permission to preach. By 1614 Christian missionaries could claim 300,000 followers throughout Japan.

1639-1854–Nagasaki, in southwestern Kyushu, was a Christian stronghold and the only port that allowed foreigners–Dutch and Chinese traders. Address: National Geographic Illustrations Staff.

8083. Kanasugi, Goro. 1984. Re: Work with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, June. 4 p. Handwritten, with signature. [Jap]
• ***Summary:*** Mr. Kanasugi, vice president of the Japan Natto Assoc., started a soyfoods restaurant named Mame-no-ko ("child of the soybean") in Omiya city, Saitama prefecture. By mid-1983 he was serving tempeh there as an alternative to meat in various side dishes: tempura, harumaki (spring rolls), karinto (sweet fried dough cake), curried sauce, sauteed vegetables, croquettes, and various others. He also sells ready-to-eat tempeh dishes at his take-out deli. Many of his recipes contain 10-20% chicken or meat.

Mr. Kawashima of Tsukuba told him that his tempeh has a very good flavor. Lots of big Japanese companies are now looking at tempeh manufacturing. Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan. Phone: 048-644-1323.

8084. Kuishimbo (The Glutton). 1984. June. New soyfoods restaurant or deli. Kuishimbo, Hagiwara 3-13-5, Oita-shi, Oita, Japan.
• ***Summary:*** Toyo Shinpo. 1988. June 1. p. 9. "Sato Shokuhin Kogyo Company has a tofu restaurant called 'The Glutton' in Oita which serves appetizing tofu and fish dishes." Mr. Junichi Sato, president of Sato Shokuhin Kogyo is the owner of the company and restaurant. In addition to being a tofu shop, they also have a fish menu. They are open from 5-12 P.M. every night, except the 1st and 3rd Sundays of each month. They opened for business four years ago.

• ***Summary:*** Gives recipes for: Apricot tofu pie. Banana-coconut tofu pie. Orange tofu pie. Carob-almond tofu pie. "At a time when almost everyone seems to be borrowing ideas from Japan, is it possible that the people of that nation could learn something from us? You *bet* it is!... In less than a decade, Americans have adapted tofu to the Western palate. . . and Occidental cooks have really pioneered the development of a number of tofu desserts. The creations include a mouth watering array of pies, cheesecakes, puddings, cakes, cookies, delicate pastries, and even ice creams!"

8087. Watanabe, Tokuji; Kishi, Asako. 1984. The book of soybeans: Nature's miracle protein. New York, NY: Japan Publications. 191 p. June. Illust. General index. Recipe index. 26 cm. [21 ref]
• ***Summary:*** Contents: Introduction. Part 1. General information: 1. Characteristic traits: Agronomic and other biological characteristics, physical properties, chemical properties, soybean protein, properties of soybeans as food material. 2. Current ways of using and processing

© Copyright Soyinfo Center 2014

soybeans: Throughout the world, traditional ways of using and processing, new soybean food products. 3. Tofu and other nonfermented soybean food products: Tofu (Cotton or regular tofu, silken tofu {*kinugoshi*} and soft tofu, packaged tofu, new equipment), deep-fried tofu, dried-frozen tofu (*Kôri-dôfu*), soy milk, yuba, roasted soy flour (*kinako*), soybean sprouts.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *Kôri-dôfu* to refer to dried-frozen tofu.

4. Miso and other fermented soybean products: Miso, natto, Hama-natto (tera-nattô), soy sauce, sufu, tempeh. 5. Other ways of eating soybeans–Simple traditional Japanese foods: Parched soybeans, boiled soybeans (*budo-mame; hitasahi mame*), beaten and mashed [or ground] soybeans (*go,* or (from edamamé) *zunda or jinda*), molded soybean mash (*jinta-dôfu*), molded mashed soybeans and rice flour (*shitogi*), soybean soybean-mash paste. 6. New soybean protein products.

Note 2. This is the earliest document seen (Nov. 2008) that mentions *zunda.* The text (p. 84) reads: "When fresh green soybeans (edamame) are used in cooking, they are boiled for from ten to twenty minutes; ground; and flavored with salt, sugar, and soy sauce. The resulting dish is called *zunda* or *jinda."*

Note 3. Zunda is a healthy and tasty snack or treat made from mashed edamamé. It is sweet, rich in protein, high in fiber and emerald green. It is said to have originated hundreds of years ago in Japan in Miyagi prefecture. In and around Sendai (capital of Miyagi prefecture) one can find many shops and booths that sell zunda cakes, zunda mochi treats, and zunda shakes, all made from edamamé (green vegetable soybeans). One well-known company in Japan that markets delicious zunda products is Zunda Saryo.

Part 2. Cooking with soybean food products: Tofu, yaki-dôfu (toasted tofu), kôri-dôfu (dried-frozen tofu), nama-agè, abura-agè, gammodoki, yuba (soy-milk film), nattô, miso, soy milk, soybeans, bean sprouts. Afterword. Bibliography.

In the chapter on tofu, pages 43-44 discuss okara or *unohana* (the residue remaining after soy milk production); a photo shows it in a glass bowl. "Though it formerly appeared on many Japanese tables seasoned and cooked with vegetables, today it is most often fed to animals. As the number of animals raised in urban and suburban areas decreases, however, tofu manufacturers are finding it harder to dispose of residue."

Page 99 notes of tofu: "At a certain temple in Kyoto is a plaque bearing the following inscription, which, while comparing this food to religious faith, clearly shows the esteem in which the Japanese people hold tofu. 'Religious faith should be like tofu: it is good under any circumstances. It is good boiled, grilled, or fried. Raw, chilled, served with soy sauce and other seasonings, it is good with steamed rice. Simmered in hot water and flavored, it is good with sake. Because it is soft, old people and sick people welcome it, but children and young people like it too. Men like it, women like it; poor and rich both like it. Though common, it has elegance enough to find a place in the upper class.

"'It cuts clean and well for use in clear broths. It is good in the meatless diets of religious training. It can be crushed for use in miso soup. It is used all the time and in all seasons. It is inexpensive yet numbered among the delicious treats. It is welcomed everywhere, in mountains as well as in big cities. It is well received at dinners for dignitaries and guests yet is convenient enough for college students who do their own cooking. Women especially should be like tofu. The mature and cultivated person should be tender, yet firm, like tofu. Though apparently tasteless, it is delicious. Though apparently ordinary, it is extraordinary.'"

Other ways of eating soybeans (p. 83-84): (1) Parched–"Parched gently in unglazed ceramic dishes made for the purpose," then tossed by people at Setsubun in February around their houses as they chant "'Demon out! Good luck in!' Then they pick up the beans and eat them. Parched soybeans are included in some varieties of *mochi* (glutinous rice cake) and in *okoshi* a confection made of puffed rice bound together with sugar syrup. In the past they were eaten with salt, miso, or soy sauce."

Note 4. In the USA, parched soybeans are called "dry roasted soynuts."

Tables show: (1) World production of soybeans (1977-1982). (2) Price trends in dollars per ton for wheat, soybeans, and corn (1970-1981). (3) Soybean yields in the USA and Japan (1974-1981). (4) Chemical composition of soyfoods: Tofu, abura-agè, kôri-dôfu, yuba, kinako, soybean sprouts, nattô, miso (dark yellow), soy sauce (common), soybean (Japanese). (5) Statistics on production of modern soybean products in Japan (1975-1981). (6) Annual production and prices of modern soy protein products in the USA (May 1983).

Japan once produced a million tonnes (metric tons) of soybeans annually. This figure decreased dramatically during World War II. After the war, as soybean imports from the United States steadily increased, Japan's domestic crop gradually fell to the level of no more than 100,000 tonnes. In 1977 it was 111,000 tonnes, yet by 1982 it had jumped to 226,000 tonnes as rice acreage was reduced.

All photos are black and white. Figures show: (2) Line drawing of soybean plant with flowers and leaves. (2) Cross section of soybean seed-coat and cotyledon. (3) Graph of protein solubility (NSI) of defatted soybean meal at different pH values. (4) Graph of protein solubility (NSI) of defatted soybean meal at different concentrations of calcium chloride. (5) Graph of relationship between time and temperature of soaking soybeans in water (colder water temperature requires longer soak time). (6) Flow sheet for making regular tofu. (7) Photo of regular (*momen*) "cotton tofu." (8) Line drawing of grinder (horizontal type) used with soaked soybeans when

(50) Photo of a jar and a cup of sufu [fermented tofu]. (51) Diagram showing relationships between modern soy protein foods.

Note 5. Surprisingly, edamamé, one of the most popular soyfoods in Japan, is mentioned only once, in passing (p. 84) in this book.

Photos on the rear cover show Tokuji Watanabe and Asako Kishi. A brief biography of each is given.

Tokuji Watanabe: Born in 1917 in Tokyo, he graduated from the Faculty of Agriculture of Tokyo University in 1941, with Doctor of Agriculture. In 1945 he entered the National Food Research Institute (NFRI), of which he became director in 1971. In 1977 he resigned that position and became a professor at the Kyoritsu Women's University, where he now teaches. Address: 1. D. Agr., Kyoritsu Women's Univ., Tokyo.

8088. Watanabe, Tokuji; Kishi, Asako. 1984. Hama-nattô (Tera-nattô). In: Tokuji Watanabe and Asako Kishi. 1984. The Book of Soybeans: Nature's Miracle Protein. New York, NY: Japan Publications. 191 p. See p. 75-76.

• ***Summary:*** To make Hama-natto: Ingredients: Selected soybeans, wheat, salt, and ginger. Soak soybeans in water at about 20ºC for 3-4 hours, then drain and steam for 5-6 hours. Allow to stand in the steaming vessel overnight [so that their color darkens]. When their temperature has fallen to less than 40ºC, mix soybeans with toasted and ground wheat (sometimes barley is used instead) and inoculate with koji starter (*tane-koji*). Mix well and distribute among shallow wooden koji boxes. Store these [typically in a koji incubation room] at from 30-35ºC for 50 hours, until beans are covered with a fragrant mold mycelium.

Spread out beans and dry in the sun until a mixture that formerly contained 30-35% moisture contains only 20-25% moisture. [The color of the beans will also become still darker]. Place molded beans in a vat, just cover with brine (Baumé 15 degrees), cover with a pressing lid, weight the lid, and allow to stand for 6-12 months. (Sometimes soy sauce is used in place of brine).

Spread the beans on clean lines in a clean place and dry once again in the sun. Finally mix with ginger that has been pickled in soy sauce.

"Hamma-natto retains the shape of the original soybeans but is a lusterless blackish color." It has a high salt content (about 10%) and a low water content (36-38%), and it keeps for a long time. Hama-nattô is a specialty of a city named Hamamatsu in Shizuoka prefecture, which is adjacent to Aichi prefecture; the latter is famous for its soybean miso [including Hatcho miso]. Clearly there is a close relationship between Hama-natto, a sort of salted soybean koji, and varieties of soybean miso.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Tera-nattô" (or "tera-natto") to refer to fermented black soybeans. Address: 1. Kyoritsu Women's Univ., Tokyo.

8089. Watanabe, Tokuji; Kishi, Asako. 1984. Roasted soy flour (*Kinako*). In: Tokuji Watanabe and Asako Kishi. 1984. The Book of Soybeans: Nature's Miracle Protein. New York, NY: Japan Publications. 191 p. See p. 62-63.

• ***Summary:*** Kinako is made by grinding whole roasted soybeans to a fine powder, which is used as an ingredient in a wide variety of Japanese confections and as a coating for mochi. The soybeans used to make kinako must be carefully selected and cleaned. "Chinese soybeans are preferred for their flavor." Some kinako has a greenish color; it is made from whole dry soybeans having green cotyledons and a green seedcoat.

© Copyright Soyinfo Center 2014

The select soybeans are first roasted. Traditionally this was done in a flat pan at 160ºC for 10-20 minutes. Recently, however, a kind of rotary roaster used for roasting chestnuts has become popular. Small, smooth stones are added to ensure even heating, and the soybeans are roasted at 220ºC for about 30 seconds. Then they are ground in a high-speed grinder. To produce the best quality kinako, the soybeans are cracked and dehulled before grinding. The powder is then sieved through a 0.4 millimeter mesh screen fitted around the grinder.

In Japan about 200 factories use a total of 6,000 tons of soybeans each year to make kinako. Typical plants have a production capacity of about 80 kilograms (176 lb) per day, however large factories that produce kinako as calf feed can make more than 5 tons a day.

Dry roasting at the proper temperatures destroys harmful trypsin inhibitors and improves the digestibility (and flavor) of soybean protein. However, overheating can destroy lysine, an essential amino acid that is abundant in soybeans. Address: 1. Kyoritsu Women's Univ., Tokyo.

8091. Wilson, John C. 1984. The manufacture of soymilk which is not contaminated with undesirable "beany flavor," resulting from enzyme induced oxidation of fats. Paper presented at the Singapore Inst. of Food Science & Technology Symposium. 19 p. Held June 14-15 at the Hyatt Hotel, Singapore. [8 ref]

• ***Summary:*** Introduction: "This paper anticipates a series of questions and tries to inform the reason for things pertaining to our topic according to the perspective from which we see things in 1984." Who are the real giants? Shall we not give tribute?" 1. What is the interest in the world regions for a soymilk without the traditional 'beany flavour'? What need creates an interest, creates a demand of such proportions? China, South East Asia, North East Asia, North America, hippies, vegetarians, tofu, *The Book of Tofu,* by Shurtleff and Aoyagi.

2. What is the history behind the long delayed but sudden phenomenal development of this product? Dr. Harry W. Miller in Shanghai (1936), K.S. Lo (of Vitasoy) in Hong Kong [1941], in-bottle sterilizing by K.S. Lo, development of UHT processing and aseptic packaging by Yeo Hiap Seng in Kuala Lumpur, Malaysia (1967), the advent of the brick shaped aseptic carton. The traditional soymilk process: "Filtering off the fibrous material,... one is left with the basic soymilk extract or soybase to which some sugar is added" (p. 8). Improvements in soymilk flavor: Cornell hot-grind process. University of Illinois hot water blanch method "is the basis of most modern soymilk processing." Developments in Japan since the mid-1970s, which have grown "out of the Illinois process but overcoming the 'chalkiness' by a filtration step using a decanter or some form of continuous filtration." The quality is excellent but the yield of protein is unfortunately only about half compared to the almost 100% achieved by the original Illinois method."

3. What are the developments in the market areas? Soyfoods industry and market statistics published annually by Shurtleff. Trends in: Japan, South East Asia, Indian Subcontinent, Mid East [Middle East], Europe (Flavor is not as good as in Japan. "There is also a political impediment. It would be suicidal to set up a soymilk industry as a 'substitute cow's milk...' considering today's ailing European dairy industry and the militant stand of the European dairy farmer. But as surely as margarine has come and been accepted, a prime quality soymilk will come to Europe. It is a matter of time"). Africa (financing troubles, the good work of IITA in Ibadan, Nigeria). South America ("A market spoilt! Take Brazil–the world's 2nd largest producer and exporter [of soybeans]. People have had inferior quality product almost forced down their mouth"). North America.

4. What is the state of the art in the manufacturing technique for a "bean free" tasting soymilk? (Contains a flow chart with 13 steps, of which No. 10 states: "Blend ingredients: Blend into the soybase the ingredients necessary to a particular formulation, e.g., sugar, vegetable fat, emulsifier–stabilizer, flavouring–aromas," p. 16)

This paper deals with the phenomenal growth of the soymilk industry in northeast Asia, and the likeliness that its influence will spread worldwide in the near future.

Note: This is the earliest English-language document seen (Aug. 2013) that uses the word "soybase" to refer to a concentrated form of soymilk. However, no definition of the degree of concentration or total solids content is given. Address: Soya Process Product Manager, Alfa-Laval, Box 1008, S-221 03, Lund, Sweden.

• ***Summary:*** Red rice koji (beni-koji), prepared by growing *Monascus* on steamed rice, is an important material used in making red fermented tofu (Tofuyo), which has long been manufactured in Okinawa. The ripening of this food is greatly affected by the quality of the koji, and its protease is thought to be the key enzyme. Although fungal proteases have been studied in depth, information on the enzymes produced by the *Monascus* mold has previously been very limited. Address: Dep. of Agricultural Chemistry, Univ. of the Ryukyus, Nishihara, Okinawa 903-01, Japan.

Address: Tokyo, Japan.

8094. *Toyo Shinpo* (*Soyfoods News*). 1984. [Good quality natto maker invented a new method to produce old fashioned flavor; high quality natto]. July 21. [Jap]
• ***Summary:*** The company name is Hôya Natto K.K. [Hoya Natto], Aoba-cho 2-39-9, Higashi Maruyama-shi, Tokyo, Japan. Phone: 0423-94-6600. The company has 75 workers. Capital: 9 million yen. Capacity: 200,000 packages/month.

Mr. Kiuchi believes that natto should be fermented slowly, for a long time, just like it was made in traditional farmhouses. Ten years ago when he built the new plant, he started to use *issanka tanso* and to slowly increase the fermentation time. Present commercial manufacturers typically ferment their natto for 13-15 hours.

His new process produces stickier and stronger flavored old-fashioned natto. His natto is getting popular among lovers of natto and of natural foods. In this term his sales rose 50% to 430 million yen. He uses only Japanese soybeans which are 3 times as expensive as imported Chinese soybeans. He also uses a method which requires strict control of the temperature of water–which he thinks is very important. He sets the water temperature at 7ºC in winter. He calls this method *sumibi zukuri* (which is also his brand). He mainly uses rice straw, kyôgi bamboo shoot peels, and Japanese rice paper for packages [instead of plastic trays].

8095. Fruin, W. Mark. 1984. History of Yuasa Shoyu and Tezukuri Shoyu Co. 4060 Amaranta Dr., Palo Alto, CA 94306. 3 p. Unpublished manuscript.
• ***Summary:*** Yuasa was the birthplace of shoyu in Japan and the first major center of shoyu production. Today only one company, Tezukuri Shoyu, makes soy sauce in a town where 150 years ago more than 10% of the population were shoyu makers. Tsuneo Kanno, now head of the company, is the fifth generation of Tezukuri Shoyu brewers in Yuasa. He explained the decline of the soy sauce industry in this town in the following way: "Shoyu brewers remained too small too long, and they failed to pay attention to marketing. Even as recently as 1952, there were 23 shoyu makers in Yuasa, but now there is only me." In 1954 he was called back from Waseda University to take over the family business. "With a labor force of 10, 3 family members and 7 paid workers, Kanno produced 149 kiloliters of shoyu in 1983. Most of this, 110 kiloliters, was made from whole soybeans grown in Mimasa, near Okayama City. The wheat was also locally grown in Shiga. Only the salt was imported."

"Today all that is left of the birthplace of shoyu in Japan are Tezukuri Shoyu and a small museum. In 1983, Kanno opened the only museum in Japan devoted exclusively to the history of shoyu. About 100 visitors a month come to the museum to see, among other things, the foot-driven, wooden wheat-cracking machine used 150 years ago and to sample Kanno's Tezukuri Shoyu." Address: Palo Alto, California. Phone: 415-858-2226 or 327-0857.

8096. Marson, Alan. 1984. Tofu: A new health food from Japan. *Bakers' Review* (*Watford, England*). July. p. 31, 34.
• ***Summary:*** "Are bakers in this country missing out on potentially lucrative markets by ignoring some of the current trends in our eating habits?... The consumer is now looking for healthy ingredients in everything that he eats."

"Whether we like it or not, it is a fact that in the U.K. we have a tendency to follow closely on the heels of the Americans when it comes to innovation. This time however, they have got it right, because they have latched on to an ingredient that fulfills many of the criteria for healthier bakery lines. It is called tofu... Tofu is extremely high in protein and yet low in calories. An ideal extender for the health-conscious."

"In the US, the use of tofu is estimated to be growing at the rate of 25-35% per year. There are now 150 plants producing well over 45 million pounds of the food, which in monetary terms means about £25 million worth."

"According to Paul Jones, managing director of Paul's Tofu, suppliers of baked products to Holland & Barratt, he is successfully using tofu in the manufacture of quiches, savoury pasties and cheese cakes: 'I also use it for icing and toppings,' he said. 'It is white, delicate and blends well."

"A domestic version of Tofu is already being sold in this country through Sunwheel Foods–part of the Holgran Group of companies. Roy Harris, the company's sales and marketing director reports that sales last year were up over 35 per cent on the previous year."

"We have already seen the rise of the Vegeburger, and following closely behind is the Tofuburger. Now is the time for bakers to be seeking ways of cashing in on this relatively

© Copyright Soyinfo Center 2014

new–but nevertheless enthusiastic–search by the British housewife to find foods that she knows will at least do her family no harm–if not a great deal of good."

"As there would appear to be no cost differential between choosing eggs or tofu as an ingredient, perhaps it would be worthwhile to do a little experimenting on a limited scale, by producing something in the take-away snack line–which in itself is an expanding market and ripe for further growth. Don't be put off by its bland flavour for its is this very blandness which makes it usable for so many different types of dishes. There is no reason why tofu–although a basic food in itself–should not be utilised to a high degree of sophistication, even to gourmet levels."

• ***Summary:*** Contents: 1. Introduction. 2. Etymology. 3. World Overview. 4-8. History of Tempeh in Indonesia–discusses (for the first time) the world's earliest known reference to tempeh in the *Serat Centini* [also spelled *Serat Centhini*] manuscript, which was probably written in about A.D. 1815. 9-11. History of Tempeh in Europe and Australia. 12-15. History of Tempeh in the United States and Canada. 16-18. History of Tempeh in Japan. 19-23. History of Tempeh in Asia (China, Taiwan, Southeast Asia, India, Sri Lanka). 24. History of Tempeh in Latin America. 25. History of Tempeh in Africa. 27. International Interest. 28. U.S. and Third World Problems.

The world's largest tempeh manufacturers are as follows:

Company name, Country, Year Started, Avg. Weekly Production

1. Marusan-Ai, Japan, 1983, makes 15,148 lb/week = 6,885 kg/week

2. Tempe Production Inc., Netherlands, 1969, makes 13,200 lb/week = 6,000 kg/week

3. Quong Hop/Pacific Tempeh, USA/CA, 1980, makes 7,000 lb/week = 3,182 kg/week

4. White Wave, USA/CO, 1979, makes 5,850 lb/week = 2,659 kg/week

5. Soyfoods Unlimited, USA/CA, 1981, makes 5,800 lb/week = 2,636 kg/week

6. Torigoe Flour Milling, Japan, 1983, makes 5,770 lb/week = 2,623 kg/week

7. The Tempeh Works, USA/MA, 1979, makes 5,500 lb/week = 2,500 kg/week

8. Marukin Foods, Japan, 1983, makes 4,620 lb/week = 2,100 kg/week. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

8103. Kira, Motoo. 1984. Re: More history of Marukin Shokuhin's work with tempeh. Letter to William Shurtleff at Soyfoods Center, Aug. 4. 4 p. [Jap; eng+]
• ***Summary:*** Answers to Shurtleff's questions: (1) From the end of last year until the beginning of this year, Marukin was making 1,800 kg/week of tempeh. However presently (July 1984) they make only 15 kg/month in order to use it for developing second generation food. They have stopped making tempeh for the general market.

(2) Marukin's president is named Itsuo Kira.

(3) In July 1982 the twelve manufacturers of natto, kinako, and *gojiru no moto* in Kyushu all got together and founded the *Kyushu Daizu Shokuhin Kogyo Kumiai* (Kyushu Soyfoods Association). In April 1983 we built a large plant in Uto / Udo city on the outskirts of Kumamoto city. The capacity of the plant for making natto is 250,000 shoku per year (1 shoku = 100 kg; so 25 million kg/year). And kinako and Gojiru no moto is 6 tons. Marukin makes 80% of the total production of this plant, and the plant is run by Marukin's people with Marukin's technical assistance.

(4) As I wrote you in my last letter, Mr. Haruo Kato took charge of researching and developing new fermented soyfoods. He was also very interested in tempeh and was doing tempeh research and development when he died on 3 Dec. 1983. He did not leave clear records of the history of his work with tempeh. However his records show that in about 1950 he experimented with making tempeh. In 1963 in Kumamoto he attended a lecture given by Mr. Dr. Iwao at the National Nutritional Research Center and Dr. Kato became deeply interested in the subject of that lecture, "A growth quickening factor in tempeh." He again started his research on tempeh, and in Feb. 1964 Hayashi-kaicho (a leader) and he tried to get a copy of Dr. Iwao's paper as well as tempeh starter culture. "I am sending you the article that was sent by Hayashi-kaicho to Mr. Kato." Address: Manager, tempeh production, 380 Yoyasu-machi Kumamoto-shi 860, Japan. Phone: 096-325-3232.

8104. Kanasugi, Goro. 1984. Re: More on work with tempeh in Japan. Letter to William Shurtleff at Soyfoods Center, Aug. 7–in reply to questions. 2 p. Handwritten. Plus 4 p. translation. [Jap]
• ***Summary:*** To answer your questions: (1) Mame-no-ko restaurant and deli opened on 10 Feb. 1977. (2) Tempeh started to be served at Mame-no-ko in late May 1983. "I got tempeh starter from Teruo Ota sensei and soon tried to make tempeh. It turned out well and the first dish served was tempeh sauteed with vegetables.

(3) My natto and tempeh plant is located about 150 meters (500 feet) away from Mame-no-ko. We make tempeh there about once a month. (4) At Mame-no-ko we use tempeh once or twice a week in various dishes; we use 15-20 kg/month.

(5) At our plant we make 100 to 200 kg/month of tempeh, entirely for use in second generation soyfood products. (6) I would estimate that, on average, about 500 people per day eat the tempeh we make, both at the restaurant and deli and from retail stores.

(7) I depend on Ota sensei for tempeh starter so I don't know who makes tempeh starter in Japan. Soon the research center for making cultures in Tokyo will start making tempeh starter. (8) I think that Takashin started to make tempeh in about Aug. 1983, and that they now make about 50-100 kg/month.

(10) I am enclosing a copy of a *Shin Eiyo* magazine article about tempeh.

Here is my recipe for tempeh jam. I have just received very big news. The Japanese government has announced that it will help development and popularization of tempeh in Japan. They told the Japanese Natto Association that they will lend ¥8.7 million as part of a program to promote practical use of new technologies. Address: Shimo-cho 3-6, Omiya-shi, Saitama-ken 330, Japan. Phone: 048-644-1323.

• ***Summary:*** The effect of oxygen supply, initial pH, and inoculum quantity on growth and fermentative ability of *Pediococcus halophilus* and *Saccharomyces rouxii* isolated from shoyu moromi (Japanese soy sauce mash) was studied. Also the interaction of the two organisms in static cultures under aerobic and anaerobic conditions was studied. The major medium used was shoyu koji extract. In mixed culture, at an initial pH of 6.0, growth and lactic acid production of P. halophilus was inhibited by S. rouxii under aerobic conditions; growth of S. rouxii and alcoholic fermentation was inhibited by P. halophilus under anaerobic conditions. At an initial pH of 5.6, growth of P. halophilus declined, regardless of aeration conditions. Similar results were obtained using shoyu moromi medium instead of koji extract medium. Results may be directly applied to moromi fermentation during shoyu production. Address: Research Labs., Yamasa Shoyu Co., Choshi, Chiba-ken 288, Japan.

8111. **Product Name:** [Soymilk Yogurt].
Foreign Name: Tônyû Yôgu.
Manufacturer's Name: Saruda Shoten K.K.
Manufacturer's Address: Fuchu city, Tokyo, Japan.
Date of Introduction: 1984 August.
How Stored: Refrigerated.
New Product–Documentation: Toyo Shinpo (Soyfoods News). 1984. Aug. 21. "Nattô meekaa ga uru. Tônyû yooguruto shohin [Soymilk yogurt sold by natto maker]."

Soymilk yogurt is being sold by a natto maker, Saruda Shoten K.K., which makes equipment for secondary tofu and soymilk products in Fuchu city, Tokyo. This company invented the soy yogurt machine and has created joint ventures with 9 tofu makers and 3 natto makers throughout Japan who are selling the product. Three are in Kyushu, 3 in Tohoku, 3 in Tokai-chiku, 2 in Chugoku, and 1 in Kanto. The soymilk plant is small and automatic, costing about 4,000,000 yen. Then they need a yogurt incubator. Natto makers know fermentation techniques better than tofu makers. They use a Bulgarian yogurt culture. The brand name is Tonyu Yôgu. The product is sold most in supermarkets. A black-and-white photo shows 2 packs of the product.

8112. Sato Co. Ltd. 1984. Jyuten is new tofu. Sato equipment since 1958 (Ad). *Soyfoods.* Summer. p. 5. [Eng]

• ***Summary:*** In this full-page ad, photos show three machines: Continuous soymilk cooker (Sany Ace Special). Okara squeezer (Big Boy II Model). Soymilk filling/packing machine (ST-4000). 8113. Shurtleff, William. 1984. Japan's first and largest tempeh companies. *Soyfoods.* Summer p. 30-32.

• ***Summary:*** "The first Japanese known to study tempeh and publish information about it was microbiologist Dr. Ryoji Nakazawa in 1928. Following that pioneering work, tempeh research continued at the Department of Applied Microbiology, founded in 1944 within the National Food Research institute, and, during the late 1950s and early 1960s, at the Food and Nutrition Laboratory at Osaka City University. Although information was made available to commercial interests and they were encouraged to develop tempeh products, the idea never took root.

"Despite considerable research on tempeh during the 1960s and 70s, no commercial production took place. In the early 1980s new interest arose among potential producers for various reasons: First, the rising popularity of tempeh in the United States and Europe; second, the growing internationalization of the Japanese diet; third, the increasingly positive image of soyfoods as a source of high-quality nutrition; and fourth, the activities of KOPTI, the new tempeh-makers trade association in Indonesia. In 1982. working with KOPTI in Indonesia and with an eye on the U.S. and European soyfoods markets, Takai, a large Japanese manufacturer of tofu and soymilk equipment, developed and patented a combination cooker and wet dehuller to aid in modernizing the tempeh-making process.

"The first company to take serious interest in commercial tempeh production was Torigoe Flour Milling Co. (*Torigoe Seifun*), the nation's fifth-largest flour miller.

© Copyright Soyinfo Center 2014

With wheat quotas fixed by the government and supplies always limited, Torigoe was looking to diversify. In 1975 Hiroto Nakagawa, head of Torigoe's R&D department, received an article on tempeh from Kyushu University's Department of Food Science and Technology. When Nakagawa asked for more details, Dr. Tadao Watanabe in the department asked one of his students, Kazuhiro Takamine, to study tempeh in greater depth. In 1976 Takamine joined Torigoe's R&D group and the company began to do cooperative research with the department at Kyushu University on tempeh and other fermented foods.

"In 1979, with research beginning to look promising, Dr. Watanabe recommended that Torigoe send Takamine to the U.S. for further study. In 1980, working in the University of Minnesota Department of Food Science and Nutrition under Dr. William Breene and with Indonesian Ph.D. candidate Abdul Ribai, Takamine began to realize the great potential of tempeh. In 1981, having returned to Japan with solid practical and theoretical knowledge of tempeh, Takamine set out to convince the management of Torigoe that they should invest in a tempeh plant. But the leaders were hesitant, fearing that tempeh might not be suited to Japanese tastes. For various reasons. company attitudes gradually changed:

"First, Takamine developed a tempeh with an improved and milder flavor. Second, it was learned that the prestigious National Food Research Institute (NFRI) was researching tempeh. Torigoe's head of R&D went to NFRI in February 1983 and showed them Takamine's product. NFRI researchers, surprised and impressed, told other companies that tempeh looked more promising than ever and even persuaded the Japan Natto Association to consider it carefully.

"Third, a growing number of articles on tempeh, many from the NFRI, began to appear in Japanese newspapers. And fourth, Dr. Watanabe from Kyushu began giving lectures to dietitians. nutritionists, and home economists on the high nutritional value of tempeh.

"In June 1983 Torigoe started making tempeh at their Fukuoka flour mill in a pilot plant that cost $50,000 and had a capacity of 33,000 pounds of tempeh a month. They made the key decision not to sell plain tempeh, but rather to make two semi-prepared products. both called Gold Tempeh. One was tempeh cut into pieces the shape of small french-fried potatoes. These were dipped in a batter made of vegetable juices, wheat flour, salt, and spices, dusted with bread crumbs, packed in a shallow tray with two packets of tartar sauce, and sold frozen. The consumer deep fries them to serve crisp and crunchy with the sauce. The second product was made by simply pressing the ground trimmings from the first product into oval patties (no binding was used), then enrobing them in the breaded batter. The products were introduced to a school lunch program in Kyushu and became very popular. They were also test marketed in several natural food stores, again with good results. On June 30, the *Nikki Sangyo Shinbun,* a large Japanese business newspaper, reported on a tempeh press conference held by Torigoe the day before. Following this, in mid-July 1983, Torigoe started commercial-scale production. Sales in 600-gm packs to institutions (schools, hospitals, natural food restaurants) began in July, and sales in 140-gm packs to retailers (natural food stores, department stores and chain supermarkets) started in November 1983. Packaged in beautiful full-color boxes with handsome flyers, the tempeh could be used in Western, Japanese or Chinese-style cookery, or as a snack food. Each of the two forms of Gold Tempeh, weighing 140-gm, cost 250 yen (about $1.05). Nutritional value (17.5% protein, rich in vitamin B-12) was stressed in marketing.

"By early 1984 the company was making 24,200 pounds of tempeh a month, making it the sixth-largest tempeh manufacturer in the world–and the product was only in the test market stage! Sales of about $420,000 were projected for the first year.

"In early 1984 a major, exciting move was made by Marusan-Ai, one of Japan's most dynamic and forward-looking food companies, and one of the country's largest manufacturers of soymilk and miso. Marusan-Ai had been researching tempeh production since the early 1970s. They decided to make their tempeh at their main plant in Okazaki city, Aichi prefecture, and to incubate the tempeh in shallow plastic trays. In January they introduced their tempeh to dietitians and in February they began to distribute pasteurized, refrigerated bulk tempeh (500-gm and 2.5 kg) for use in local school lunch programs and hospitals, and by caterers. They published a 27-page booklet titled 'A New Soy Protein Food for Tomorrow: Marusan's Healthy Tempeh.' which included a description with photographs of their tempeh production process and eight Japanese-style recipes. In April they began selling 125-gm cakes retail to consumers. By May, Marusan was producing 30 metric tons (66,000 pounds) of tempeh a month, making them by far the largest tempeh manufacturer in the world. They have big plans to expand production considerably in June

"Two large natto companies began making tempeh in early 1984: Marukin Shokuhin Kogyo in Kyushu, and Takashin in Tokyo–both prompted by the Japan Natto Association's promotional work for tempeh. Other companies now seriously considering tempeh production include Yukijirushi (Snow brand), Japan's largest dairy products company (with 1982 sales of $1.8 billion), and Kibun, a huge food company and Japan's largest soymilk manufacturer.

"William Shurtleff.

November	8.4	47.1	63	2.4
December	3.2	37.8	53	2.1
Year	11.6 avg.	52.8	1,245 total	49.0

* Temperatures are monthly averages from 1941-1970; Sendai elevation is 38.9 meters, or 128 feet above sea level; Sendai latitude is 38.3°N, about the same as Washington, DC, St. Louis, MO, Colorado Springs, CO, Chico, CA, Lisbon, Portugal or Athens, Greece.

• ***Summary:*** Discusses the temperature and precipitation in Sendai, Japan.

"Over the years, various people interested in starting miso companies in North America or Europe have asked us what we consider the ideal climatic conditions. We generally answer that the climate, ideally, should be similar to that of the city of Sendai, North-eastern Japan, where it is relatively cool, even in the summer and quite cold in the winter, where the humidity is relatively high, and where the water and air are both pure.

"The following meteorological data on temperature and precipitation in Sendai, available here for the first time in English, should prove valuable in siting future miso plants. Of course. miso is made throughout Japan. Sweeter misos are usually made in the warmer climates." Address: Soyfoods Center, P. O. Box 234, Lafayette, California.

8115. *Soya Bluebook.* 1984. Industrial product manufacturers, and non-food uses of soy oil in the USA. p. 80-95, 205. Aug.

• ***Summary:*** Product categories are: Adhesives/coatings (7 U.S. companies / 6 foreign companies), industrial lecithin (8/43), industrial soy flour (4/25), industrial soy oil (10/47), paints & varnishes (5/3), resins (5/3), soaps (0/30), soy sterols & tocopherols (3/11), soybean fatty acids (6/36).

In 1982, nonfood utilization of soy oil totalled 205 million lb., or 2.1% of total U.S. soy oil usage (97.9% was for foods). Of this, 96 million lb was used for resins and plastics, 38 millions lb for paint and varnish, 16 million lb for fatty acids, and 55 million lb for other nonfood uses.

Manufacturers of soy sterols and tocopherols include– In the USA: Distillation Products Industries, Kingsport, Tennessee 37662; Durkee Foods Div. of SCM Corporation, Cleveland, Ohio 44115 [Formerly The Glidden Co.]; Henkel Corporation, Minneapolis, Minnesota 55435. In Japan: Ajinomoto Company Inc., Chuo-ku, Tokyo; The Nisshin Oil Mills Ltd., Chuo-ku, Tokyo. In Europe: Cargill B.V., Amsterdam, Netherlands; Industrie Chimiche Italia Centrale S.p.A. (ICC), Ancona, Italy; Italiana Olii e Risi S.p.A., Ravenna, Italy; S.I.O. S.p.A. (SIO), Modena, Italy. There are also 3 manufacturers in Brazil and one in India.

8116. *Soyfoods.* 1984. U.S. tamari plant sited [by San-J International in Virginia]. Summer. p. 34.

• ***Summary:*** The Japanese tamari company, founded in 1804, plans to build a $7 million plant on 28 acres in Chesterfield County, near Richmond, Virginia. "According to Michael Fountain at the company's offices in Colonial Heights, Virginia, a production manager has been hired, imported and/or domestic machinery is being procured and plant design is underway. Tamari. teriyaki sauce and possibly shoyu will be produced at the new plant. The complex will also house administrative offices. Construction is slated to begin in late 1985 or early 1986."

8117. **Product Name:** [Yoshikawa Nigari {For Making Tofu}].
Manufacturer's Name: Yoshikawa Shoji Co.
Manufacturer's Address: Honmachi Wako Building, 2-50 Kita-Kyuhoji-machi, Higashi-ku, Osaka, Japan.
Date of Introduction: 1984 August.
New Product–Documentation: Ad in Soyfoods. 1984. Summer. p. 46. "Since 1861. We've been making high-quality nigari for 5 generations. Factory in Okayama. U.S. Agent: Island Spring."

8118. *Toyo Shinpo* (*Soyfoods News*). 1984. Zennenhi 30% no daun ka. Yume no inryô tônyû ni kageri genshô [Dream drink soymilk sales in Japan down 30% from last year?]. Sept. 11. p. 1. [Jap]

• ***Summary:*** Soymilk sales in Japan reached their peak during the first quarter of last year. This year's first quarter is down about 20% from that figure according to the Japan Soymilk Assoc. (Nihon Tonyu Kyokai). And they expect a drop of 60-70% in the second quarter compared to last year.

During the peak last summer, soymilk sales were 25,000 million yen wholesale and 32,000 million yen retail. At

© Copyright Soyinfo Center 2014

that time a continued rise in the market was expected. But since that time the demand has decreased, and total sales this year are expected to be about 30% below those of last year. The basic causes for the drop are: 1. The companies did not develop a good strategy for launching new products. 2. The initial costs for starting soymilk production are high. 3. Soymilk shelf life is short. But the biggest reason was that Kibun, Marusan Ai, Asahi Shokuhin, Mitsubishi, and other large manufacturers expanded their production, then large beer makers (Pokka, Toyô Seiraku, etc.) joined the market. Over-production resulted leading to price wars in the marketplace. Since then a number of smaller companies have dropped out of the market.

• ***Summary:*** Contents: Summary. 1. Introduction: Ten reasons why soybeans will be a key protein source for the future. 1. Soyfood products. A. Non-fermented soyfoods: Fresh green soybeans, soybean sprouts, soynuts, soymilk, soy flour, yuba or soy protein film, tofu. B. Fermented soyfoods: Soy sauce, miso, tempeh, natto, fermented tofu, fermented black soybeans (tou-shih, hamanatto). 3. Soyfoods markets and trends in the Far East: Taiwan, China, Japan, South Korea, Indonesia, Malaysia, Singapore, Thailand, Philippines. 4. Soyfoods markets and trends in the U.S. 5. References. Plus 15 tables and 8 figures.

"It is our [American Soybean Association's] strong intention that marketing and consumption of soy protein should not in any way deter the expansion of the production and sale of as much animal protein as the world can be expected to produce in the years ahead. Soy protein foods are being intentionally brought to the market to complement and not necessarily to replace animal protein products."

"Taiwan imported 1.41 million tonnes (metric tons) of soybeans in 1983 and used about 250,000 tonnes as soyfoods for direct human consumption, which made Taiwan one of the highest in per capita consumption of soyfoods (13.2 kg or 29 lb) in the world. In the past 10 years (1974-1983), the consumption of traditional soyfoods showed an average increase of 3% per year as compared to 12% and 8.1% for poultry and soy oil, respectively. The market for packaged soymilk, soy pudding and tofu has also been expanding rapidly in recent years in Taiwan." Table 7 shows the production of soymilk in Taiwan, which grew from 103,600 tonnes in 1974 to 210,000 tonnes in 1983, for an average growth rate of 8.2% a year.

China produces about 9 million tones of soybeans a year, and about half of these are consumed as soyfoods, giving a per capita consumption of 4.5 kg of soyfoods. "An improvement in the general economy and soyfood technology and equipment will bring a sharp increase in soybean demand and more soyfoods consumption."

In South Korea soymilk consumption has increased more than seven-fold in the last 4 years. Currently about 10,000 tonnes of soybeans are used to make 70,000 tonnes of soymilk. "It is projected that soymilk production in Korea will double in 1984 as compared to the previous year."

Indonesia continues to be Southeast Asia's largest consumer of soybeans as food. In 1982/83 soybean consumption was 6.7 kg per capita. Indonesia consumes about 1 million tonnes of soybeans annually, 60-65% of them in the form of tofu and 35 to 40% as tempeh.

Malaysia consumes only about 30,000 tonnes of soybeans per year as food. In Singapore, more than 75% of the population of 2.5 million are Chinese. Therefore tofu, soysauce, and soymilk are the predominant traditional

© Copyright Soyinfo Center 2014

soyfoods consumed.

Thailand consumes about 40,000 tonnes of soybeans a year as food, mainly in the form of tofu. The Philippines uses only 5,000 tonnes of soybeans annually for food, mainly as tofu.

To summarize (Table 6), annual per capita consumption of soybeans in various East Asian countries, in descending order of the amount consumed, is as follows: Taiwan 13.2 kg (population 19 million); Japan 8.3 kg (population 120 million); South Korea 7.5 kg (population 40 million); Indonesia 6.7 kg (population 150 million); Singapore 6.25 kg (population 2.4 million); China 4.5 kg (population 1,000 million); Malaysia 2.1 kg (population 14 million); Thailand 0.8 kg (population 50 million); Philippines 0.3 kg (population 15 million). Address: Director, American Soybean Assoc., Room 603, Kwang-Wu Building, No. 386, Tun Hua South Road, Taipei, Taiwan.

8123. Epp, Peter H. 1984. Growers' interest in supplying export markets. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 42-45. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** In 1954 Ontario soybean growers began to seek export markets when the Ontario Soybean Growers' Marketing Board organized the first export of Canadian soybeans to the United Kingdom.

In the late 1960s, samples of Canadian soybeans were forwarded to Pacific Rim countries to try to determine whether Canadian varieties were acceptable to the tofu and miso markets of those countries.

The replies indicated that Japanese food manufacturers preferred U.S. varieties such as Kanrich, Amsoy, Corsoy, Ohio, and I.O.M. (Indiana, Ohio, Michigan) soybeans.

In 1970 an export promotion booklet titled "Cansoy" was introduced to 52 foreign countries promoting the story of Canadian soybeans.

"Ontario soybean samples continued to be forwarded annually but received no support or interest until the spring of 1972. At that time the C. Itoh people in Toronto indicated the Harwood variety, produced by the Harrow Research Station, possessed qualities favorable to the manufacture of tofu and miso. C. Itoh was willing to purchase a shipment of 750 tons for further testing by some of their customers. The soybean board made several important decisions: (1) To include a letter with the soybeans from the Canadian Grain Commission stating that the shipment consisted of 85-90% Harwood variety soybeans. In other words, the identity of the Harwood variety had been preserved or maintained, and not mixed with other varieties. This marks the start of Canada's identity preserved (IP) program and a strong commitment to providing the soybean characteristics that Asian food products wanted. (2) To pay $6,920 of the total freight and stevedoring costs to Japan.

In Feb. 1982 the OSGMB sponsored its first export mission to Asia–to Japan, South Korea, Hong Kong, Singapore, and Malaysia.

Since the Harwood variety, Dr. Buzzel of the Harrow Research Station has devoted a great deal of time breeding soybean varieties suitable for the edible market. Address: Chairman, Ontario Soya-Bean Growers' Marketing Board, Chatham, ONT, Canada.

8124. Fujimori, Ikuo. 1984. Users' requirements [of soybean varieties] for miso. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 10-11. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** "In 1983, 1,600 miso makers in Japan produced 570,000 tonnes of miso. They used a total of 181,000 tonnes of soybeans comprised of approximately 121,000 tonnes from China, 20,000 tonnes of domestic soybeans [grown in Japan], and 20,000 tonnes of Canadian white hilum soybeans and others." The desirable characteristics of soybeans for making miso are as follows: A yellow or white hilum. The larger the seed size the better (more than 18 gm per 100 seeds); larger soybeans tend to be more consistent in texture, taste and color. The thinner the hull (seed coat) the better, but not easy to split. The cotyledon cells should be light yellow. The less foreign materials, and damaged and split beans the better; corn is an especially undesirable foreign material. The four key cooked conditions: 1. The texture of the cooked soybeans must be soft; 2. The soybeans should absorb water quickly and thereby cook quickly; 3. The soybeans should have a high carbohydrate content; 4. The color of the cooked soybeans must remain bright yellow. Address: Executive Vice-President, Takeya Miso Co. Ltd., Suwa, Japan.

8125. Hara, Toshio; Shiraishi, A.; Fujii, H.; Ueda, S. 1984. Specific host range of *Bacillus subtilis* (*natto*) phages associated with polyglutamate production: Note. *Agricultural and Biological Chemistry* 48(9):2373-74. Sept. [17 ref. Eng]
• ***Summary:*** On the surface of natto is a "viscous material consisting of polysaccharide (a levan-form of fructan) and polyglutamate (PGA)." PGA consists of L- and D-glutamate in varying proportions.

"The host range of bacteriophages isolated from an abnormal fermented 'natto' completely coincides with the 5.7-kb [kilobase molecular weight] plasmid-harboring strains of *Bacillus subtilis* (*natto*). These findings have led to the suggestion that the infective bacteriophages for *Bacillus* species which can produce PGA as a capsular or extracellular mucilaginous material might recognize PGA as a receptor on phage adsorption." Address: Dep. of Food Science & Technology, Kyushu Univ., Hakozaki, Fukuoka 812, Japan; 2-3. Faculty of Home Life Science, Fukuoka Women's Univ.,

Kasumigaoka, Fukuoka 813.

8126. Hayashi, Nobu. 1984. Users' requirements [of soybean varieties] for natto and tofu. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 12-14. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** From January to June 1984 soybeans imported to Japan from the USA had the lowest CIF price (US$331.31 per tonne), followed by soybeans from China ($350.16), with Canadian soybeans being the most expensive ($408.62).

The preferred characteristics of soybeans for natto are: Small in size, round in shape, and clear hilum. Beans should have a firm skin (seed coat) free of cracks. High sugar and amino acid contents. High carbohydrate and low calcium contents. "However the real suitability of the soybeans is determined by the taste of the natto."

The preferred characteristics of soybeans for tofu are: High protein and low oil contents, especially a high nitrogen solubility index (NSI) which affects the yield of tofu. The larger the seed size the better. Hilum color is not a big problem but a light-colored hilum is preferred since it may give a whiter tofu. A thin and firm skin (seed coat) which reduces the soaking time required. "Like natto, the real suitability is known only when the tofu is tasted." For all soybeans, it is very important that the price be competitive. Address: Gomei Shoji Co., Tokyo, Japan.

8127. Just In Foods, Inc. 1984. Miso Master (Ad). *East West Journal.* Sept. p. 8. Expanded ad in East West Journal. 1986. Nov. p. 81.
• ***Summary:*** At the top of this one-third page black-and-white ad is the Miso Master logo, an illustration showing the head and shoulders of a Japanese miso master, with a knotted headband, in front of a large wooden vat of miso. The text reads: "The Miso Master is truly one of Japan's National Treasures. With roots that go back centuries, he is an intimate of the land, knowing its seasons and sharing its changes. He is artist and scientist, blending the best of both tradition and technology.

"The making of Miso is a way of life. To master this life requires hard work, long hours and great sensitivity. Miso is a living good. It is vital and strengthening, full of vitamins and minerals, beneficial bacteria and rich in the highest quality protein. Miso is an extraordinary source of essential nutrition.

"Miso Master products are dedicated to the spirit of the Miso Master. Our Miso is made by hand in the old, traditional way: aged in wood, unpasteurized, using only organic grains and beans, with pure water and salt form the sea. All of the ingredients in our products are the very best: like brown rice vinegar, natural mirin, and delicate grain sweeteners.

"Miso Master products are made with reverence for a way of life. They are both nutritious and delicious, because food that is truly best for you to eat–tastes best too."

Note 1. This ad also appeared in the October issue of this magazine (p. 21).

Note 2. This is the earliest ad seen run by Just In Foods or American Miso Co. It is also the earliest document seen that mentions "Just In Foods." But notice that American Miso Co. is not mentioned! Address: Box 541, Route 3, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

• ***Summary:*** The three lipoxygenase isozymes (designated L-1, L-2, and L-3) in crude seed extracts of normal soybeans were resolved clearly by an improved SDS-polyacrylamide gel electrophoresis technique.

Note: An isozyme is an isoenzyme. *Webster's Dictionary* defines isoenzyme (a term first used in 1960) as "any of two or more chemically distinct but functionally similar enzymes." This is the earliest document seen that contains the word "isozyme." Address: Dep. of Agriculture, Faculty of Agriculture, Iwate Univ., Morioka, Iwate 020, Japan.

8130. Loh, Michael. 1984. An overview of export markets for edible soybeans. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 1-9. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** "Ontario first exported edible soybeans in 1972 and over 12 years have built it into a $40 million business. 1981 was our best year when exports totalled $46 million... The bulk of Ontario's soybean exports are sold to the Far East [East Asia]–Japan ($8 million in 1983), Singapore ($6 million), Hong Kong ($3.5 million), Malaysia ($1 million), Indonesia, and Korea." In these countries soybeans are consumed in the daily diet of the people. In Japan, for example, they are made into miso, tofu, natto, soymilk and shoyu. Korea also makes soy sprouts, Indonesia makes tempeh, and Singapore, Malaysia, and Hong Kong make dried yuba. In addition, sales to the Netherlands, United

© Copyright Soyinfo Center 2014

Kingdom, and France are quite significant.

Concerning Ontario's market share of soybean imports for food use: Japan imports 877,300 tonnes, of which 27,000 tonnes or 3.1% is from Ontario. Singapore and Malaysia import 36,000 tonnes, of which 20,000 tonnes or 55.0% is from Ontario. Hong Kong imports 20,000 tonnes, of which 10,000 tonnes or 50.0% is from Ontario.

Japan's sources of its 877,300 tonnes of imported soybeans are as follows: USA 570,000 tonnes (65%), China 280,000 (32%), Canada 27,000, South America 300.

Japan uses its 877,300 tonnes of imported soybeans as follows: tofu 485,000 tonnes (55.3%), miso 180,000, natto 185,000, soymilk 25,000, cooked soybeans 10,000, shoyu 6,500, other 85,800. Within these figures, Ontario's soybeans are used as follows: Miso 20,000 tonnes (11.1% of the total), natto 5,000 tonnes (5.9%), and tofu 2,000 tonnes (0.4%). Address: Export Development Specialist, Ontario Ministry of Agriculture and Food, Toronto, Canada.

8131. Ohta, Teruo. 1984. Kongetsu no kotoba: Muen daizu shokuhin tempe kaihatsu ni omou [Words for this month: Development of tempeh, an unsalted fermented soyfood]. *Daizu Geppo* (*Soybean Monthly News*). Sept. p. 2-3. [Jap]
• ***Summary:*** "In Feb. 1982, as a part of the International Scientific Technology Cooperative Research Project of the Science and Technology Administration (Kagaku Gijutsu-cho), the Agricultural University (Bogor, Indonesia) and the National Food Research Inst. (Japan) decided to do cooperative research on the development of technology for making practical use of microorganisms. As part of the negotiations and field research, I got the opportunity to study the actual situation of tempeh production and consumption in various areas of Indonesia." A photo shows Ohta sensei. Address: Norin Suisan-sho Shokuhin Sogo Kenkyu-jo, Oyo Biseibutsu Bucho [Tsukuba, Ibaraki-ken, Japan].

8132. Taj Majal Hotel (The). 1984. It all started with a tree house... Yes. Today we are happy to be able to offer you so many different ways to pamper your palate (Ad). *Times of India* (*The*) (*Bombay*). Oct. 3. p. 9.
• ***Summary:*** One of the five restaurants in the hotel is the House of Ming, which features: "The magical crispness of Jumbo Prawns. The flavourful wonder of creations like Jade Chicken, Dry Lamb in Chilli Sauce, Bean Curd with Oyster Sauce, Eggplant in Hot Garlic Sauce..." Address: Number One Mansingh Road, New Delhi 110 001, India.

• ***Summary:*** Contains one large photo of women in a factory apparently packaging natto.

8134. Nakamura, Masao. 1984. Natto gets its due. *Daily Yomiuri* (*Japan*). Oct. 13.
• ***Summary:*** Although more and more foreigners are becoming fond of Japanese food (such as sushi, instant ramen, sashimi, tempura), few are willing to eat natto (fermented soybeans). "Even many Japanese reject natto for its odd flavor and gooey consistency.

"But during the Tsukuba Expo '85 next July at Tsukuba Science City, Ibaraki-ken, an international conference on natto is to be held.

"Natto is salt-free, like Indonesia's 'tempe' and Nepal's 'kinema.' The three are based on fermented soybeans and form a dietary culture common to East Asia."

A small round portrait photo shows Masao Nakamura. Address: Staff writer, Japan.

8135. Torii, Yasuko. 1984. Re: New developments with tempeh in Japan. Tofuyo now sold in Tokyo. Letter to William Shurtleff at Soyfoods Center, Oct. 16. 2 p. transcript. Handwritten on lined paper. [Jap; eng+]
• ***Summary:*** Mrs. Torii thinks that tempeh will spread and become popular in Japan. It is now rapidly growing in popularity.

Mr. Kanasugi's restaurant Mame-no-ko opened in March 1976. He makes the tempeh in a walled-off room in his natto factory.

Takashin tempeh is served as tempeh cutlets at Alicia's in Shimokitazawa, where it is a popular entree.

The first tempeh discussion group (*Danwa-kai*) in Japan was at Kyushu University, Fukuoka, on 30 July 1984. The Japanese-language program is enclosed. The next will be in Tokyo on 9 Nov. 1984. The one after that will be in Osaka. At the first discussion group (as the program shows) the activities were speeches, discussion of winged bean tempeh, tempeh cookery, tempeh in Indonesia, and future activities. Membership is ¥3,000. Watanabe Tadao is in charge.

Preparations are now underway for the international tempeh and natto symposium (Non-Salted Soybean Foods).

Natural House sells tempeh in four places: Aoyama, Shimokitazawa, Kichijoji & Akasaka. The tempeh is made by Kanehara Shoten. Natural House also sells nigari tofu.

Mr. Kanasugi's method makes good, firm, tasty tempeh, with no dewatering. Prof. Watanabe and Mrs. Torii have both visited him and both praised the method. His tempeh miso is very delicious. She gives the recipe. Like Namé Miso it is good on sliced cucumber or with ginger.

Mrs. Torii (whose mother is Okinawan) has found Okinawan fermented tofu (*tofuyo*) sold in Tokyo; she includes a label: Tofu maker: Mr. Y. Yamada. K.K. Maruyama (also known as Okinawa Dento Shokuhin-jigyo Kyôdo Kumiai). Eight pieces in a glass jar retailed for ¥2,000. She found this product sold at two department stores in Tokyo: (1) Seibu Department Store, in Yûrakucho. (2) Matsukakaya, in Ginza. 2-10-26 Matsuo, Naha-shi, Okinawa-ken 900, Japan. Phone: (0988) 63-0236.

© Copyright Soyinfo Center 2014

Mrs. Torii says tofuyo is like Chinese-style fermented tofu (*doufu-ru*) except milder and more expensive. She finds it to be delicious. It is sold in a plastic bag inside a book-sized box. It is made by Urizun, a restaurant in Naha, Okinawa. Molded tofu is immersed in a brining liquor of Ryukyu Awamori, which is clear shochu spirits.

Note: Mrs. Torii brought a small sample of *tofuyo* to Soyfoods Center in 1984 during one of her many visits. Shurtleff and Aoyagi both tasted it straight (as is) and found it the most delicious fermented tofu they have ever tasted. It would make a delicious spread on crackers. Address: Kamitsuchidana 324, Ayase-shi, Kanagawa-ken 252, Japan. Phone: 0467-76-0811.

8136. Kantha, Sharmila. 1984. Beancurd and Baratanatyam: A dancer's life seems to be a hard one, specially when on tour. When the dance troupe from Kalakshetra passed through Chengdu during its China tour,... *Times of India* (*The*) (*Bombay*). Oct. 21. p. A5.
• ***Summary:*** Note: "Kalakshetra is a cultural academy dedicated to the preservation of traditional values in Indian art, especially in the field of Bharatanatyam dance and Gandharvaveda music" (Source: Wikipedia Sept. 2010). It was founded in 1936 at Adyar, Chennai [named Madras until 1996], by Rukmini Devi Arundale, along with her husband, Dr. George Arundale.

The Indian dance company was well received in China. It asked for vegetarian meals. Meals of 15 dishes (not including rice, curds, and noodles) were not uncommon. "Beancurd and mushroom, prepared in an extraordinary variety of ways, were practically staple servings." Address: Number One Mansingh Road, New Delhi 110 001, India.

8137. *Nihon Keizai Shinbun* (*Japan Economic Newspaper*). 1984. "Nomu" kara "taberu" e. Tônyû-kei shokuhin [From drinks to foods. Japanese foods based on soymilk]. Oct. 21. p. 20. [Jap]
Address: Tokyo.

8139. Yoshimura, Sam. 1984. Re: Update on work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Oct. 21–in reply to inquiry. 1 p.
• ***Summary:*** Shurtleff writes: "I just read a little blurb about you, written by your wife, that was in the *Madison Survey.* It indicated that you were now in Canada and again making soyfoods. Could I ask a few questions for use in the Adventist chapter of our history book?

1. What is your present address and postal code. Ans: See above.

2. When did you leave Worthington Foods? Ans: Sept. 30, 1981 (Retired).

3. Could you please tell me a little about your new business? When did you start selling products? Are you working alone or with another company? What products do you make? Can you send me some descriptive or promotional literature on your products?

Ans: "Name of company: MGM Brans. I am a technical consultant of the above company. We started selling products in January 1982.

"Our main product is meat analogs–franks, sausages, sandwich slices, chicken nuggets & burgers. Currently we are developing tofu-based meat alternates [alternatives] & other products."

Note: Sam does not send any labels or descriptive literature. Address: Home: 19 Masedale Cres., Willowdale, ONT M2J 3A3 Canada; Plant: MGM Brans, 59-F Howden Rd., Scarborough, ONT M1R 3C7. Phone: 416-473-9254 or 416-752-6600.

8140. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo*). 1984. Nattô, sekai ni shinshutsu [Natto-tempeh is marching into the world]. Oct. 24. [Jap]
• ***Summary:*** This article is entirely about tempeh, yet it is called natto!

8141. *Yomiuri Shinbun* (*Yomiuri Daily News, Tokyo*). 1984. Nattô sekai ni [Natto is marching into the world]. Oct. 24. [Jap]
• ***Summary:*** This article is about tempeh in general and about the world conference on Asian non-salted fermented foods in July 1985 in Tsukuba, Ibaragi prefecture, Japan.

Prof. Watanabe Tadao (Kyushu University) is the head of the conference. They are planning to invite specialists from Thailand, Indonesia, Nepal, China, Korea, USA, Holland, and Denmark.

The wife of Mr. Kawashima (of Tsukuba University) has been developing tempeh recipes suited to Japanese tastes. This subject was on HNK TV on the 6:30 p.m. "News Center 630," on Oct. 17, 1984. Mrs. Kawashima got interested in tempeh when she was living in Indonesia with her husband (a food researcher); they lived there for a long time.

Photos show: (1) A traditional Indonesian tempeh maker in his shop. (2) Mrs. Kawashima holding a plate of prepared tempeh.

8142. Rakosky, Joseph, Jr. 1984. Soy protein isolate plant in northwestern China (Interview). *SoyaScan Notes.* Oct. 25. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.
• ***Summary:*** Rakosky stated that a soy protein isolate plant, located in northwestern China, is owned by Fuji Oil Company of Japan. The output, which is only 1,000 tons/year, is exported to Japan.

© Copyright Soyinfo Center 2014

According to a paper presented by Xiao Jiajie (Paper No. 2) at the NAS Conference in St. Louis, Missouri, the plant is located in Jilin Province. Address: 5836 Crain St., Morton Grove, Illinois 60053. Phone: 312/966-9660.

8143. Barber, Linda; Lampert, Junko. 1984. The tofu gourmet. Tokyo: Shufunotomo Co. 129 p. Oct. Illust. Index. 27 cm. [Eng]
• ***Summary:*** A beautiful book, packed with superb color photos. Contents. Preface. Preparing, buying, and storing tofu. Recipes–1. Dips, sauces, main dishes. 2. Desserts. On the inside back dust jacket are biographies of Linda Lee Barber and Junko Lampert.

The color dust jacket of the first printing (1984) shows sculpted green kiwis atop a refrigerator tofu cheesecake, whereas that of the second printing (1989) shows a layered "Man's cake" topped with delicate alfalfa sprouts, thinly sliced red radishes, and slivered carrots.

The book was published in London, England in 1986 by Portland House/Windward. Address: Japan.

Oct. [8 ref. Jap; eng]
• ***Summary:*** The two black soybean varieties grown in Hokkaido were Chuseihikarikuro [Chusei-hikari-kuro = medium bright black] and Tokachikuro [Tokachi-kuro = Tokachi black]; the latter was bred in 1984 at the Hokkaido Prefectural Tokachi Agricultural Experiment Station. Tokachikuro, by comparison, showed a significantly large number of cracked seeds, a lower protein content, and a higher oil content. However no differences between the two were observed in their suitability for the preparation of cooked soybeans. In sensory tests for commercial products, Tokachikuro was characterized by large seed size, good taste, and a tendency to change color during cooking. Address: 1. National Food Research Inst. 8163. Takeyama, Emiko; Fukushima, M.; Okamoto, S. 1984. Daizu no kannetsu shori ga shokumotsu sen'i teiryô ni oyobosu eikyô ni tsuite [Influence of dry heating of soybean on its dietary fiber determination]. *Showa Joshi Daigaki Kiyo.* Nov. p. 1-8. [4 ref. Jap; eng]

• ***Summary:*** The authors noted in a previous paper that kinako was surprisingly high in neutral detergent fiber (NDF) as analyzed by the method of Van Soest. To find out why, they examined soybean flour treated with heat at high temperature–the method used for making kinako. It was discovered that the NDF fraction of dry-heated soybeans contained a nitrogen component, whose amount increased with increased heating. Results suggested that protein and other soluble soybean components became insoluble during dry heating and the products were added to the NDF fraction when dietary fiber was determined. Address: Showa Joshi Daigaku.

8164. *Vegetarian Times.* 1984. People who have popularized vegetarianism. Nov. p. 28-29, 58-60.

• ***Summary:*** Introduces each person with a brief biography (those followed by an * also contain a photo of the person): Paavo Airola*, Mollie Katzen*, Jay* & Freya Dinshah, Alex Hershaft, Andreas Cahling*, Nellie Shriver, Peter Singer, Herman & Cornellia Aihara, Michio Kushi*, Gary Null*, Dick Gregory, the Seventh-day Adventists, Michael Jacobson, Nikki & David Goldbeck*, The Farm (Summertown, Tennessee; Margaret Dotzler*, Louise Hagler*, and Cynthia Bates*), Jim Mason*, Francis Moore Lappé*, Paul Obis, Laurel Robertson, Carol Flinders & Bronwyn Godfrey, Bill Shurtleff & Akiko Aoyagi*.

8165. Wollner, Joel. 1984. Re: Mountain Ark Trading Co. Letter to William Shurtleff at Soyfoods Center, Undated. 2 p. Typed, with signature.

• ***Summary:*** Joel recently left Mountain Ark and moved back to Massachusetts. Sjon Welters is now at Nasoya–on Joel's introduction. He agrees that Macrobiotic people are especially ill-informed about Japanese foods. Last month *East West Journal* ran an article on kuzu. Address: 62 Gilrain Terrace, Florence, Massachusetts 01060. Phone: 413-586-3291.

8166. Kennedy, J. Robert; Milbury, Peter. 1984. The sale of Chico-San to H.J. Heinz Co. (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 18. 1 p. transcript.

• ***Summary:*** Peter: Chico-San was sold on 16 Nov. 1984. The sale price is confidential, but it was large and all cash. Bob Kennedy, who will soon be age 65, has a full-time contract for 6 months, then 6 months on a half-time basis, then a retainer after that. Bob sold the business because he could no longer finance the runaway expansion of the rice cake business, and so he could retire to do his own work with food. One big question is what Heinz will do with the macrobiotic product line–mostly imports. The marketing, sales, and product development liaison for Chico-San in Pittsburg is Mary Ann McCullough, Heinz USA, Div. of the H.J. Heinz Co., P.O. Box 57, Pittsburg, Pennsylvania 15230. Phone: 412-237-3812.

Bob: The original intent was to sell only the rice cake portion of Chico-San. But the rice syrup business was also sold. If Heinz wants to get behind the macrobiotic foods with all their financial and with Chico-San macros in control of that division–that's one idea they are now studying. Heinz is interested in the macrobiotic program as a program for the future. But it may not be compatible. Herman Aihara may be hired as a food consultant; he and Peter Milbury might stay in that division. Bob thinks the key is to preserve the quality of the foods, and not to put pressure on small suppliers. Right now he doesn't think it will work, but it might. If it doesn't work out, Bob will set up another company. The

© Copyright Soyinfo Center 2014

contract allows him to keep the brand names and buy back inventories. Bob has joint ventures starting to be planned with Japanese friends. Bob has already established a new company to continue his work with macrobiotic foods. He wants to cut his work load and get away from nuts and bolts. "We're not selling just food products; we're selling a philosophy. There are two levels of macrobiotic foods: Medicinal quality foods, and regular products."

Bob's organization starts with Lima Ohsawa, then goes through Ohsawa Japan, then Herman and Bob Kennedy, Peter Milbury, and Joel Wollner. All of this organization could go into the macrobiotic division of Heinz. For example, Heinz could use miso in their barbecue sauces. Address: Chico, California.

8167. Yoshimura, Sam. 1984. Soy ice cream and soymilk at Madison College (Interview). *SoyaScan Notes.* Dec. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sam arrived at Madison College, Tennessee, in 1937. In about 1940 Mr. Shiro Kunihara, a student from Japan like Sam, made soymilk at Madison and Sam thinks he also made a soy ice cream, working with Harold M. "Pop" Mathews. Both the soymilk and the ice cream were served in the school dining hall when Sam was there. The ice cream was also served in the cafeteria. Mr. Kunihara is retired from Loma Linda University. Address: 8200 Colonial Meadows, Westerville, Ohio 43081. Phone: 614-882-0625.

8168. *SoyaScan Notes.* 1984. Chronology of soybeans, soyfoods and natural foods in the United States 1984 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. A highly influential 10-year, $150 million study released by the National Heart, Lung, and Blood Institute in Washington, D.C. proves for the first time a direct relationship between high blood cholesterol and the risk of heart attack, the nation's number one killer.

Jan. Legume, Inc. launches an all-natural line of cholesterol-free low-calorie Italian and international gourmet tofu-based frozen entrees in stylish full-color packages: Tofu Tetrazzini, Cannelloni Florentine, Vegetable Lasagna, Tofu Bourguignon, Sesame Ginger Stir-fry, Stuffed Shells Provencale, Tofu Manicotti, and Tofu Lasagna. Jan. Eden Foods becomes the sole import agent for Muso Shokuhin in the United States.

Feb. 25. *Soymilk Industry and Market: Worldwide and Country-By-Country Analysis,* by Shurtleff and Aoyagi published by Soyfoods Center. 177 pages, 640 references. $350.

Feb. Marusan-Ai, Japan's second largest soymilk maker and one of the five largest miso makers, starts to market tempeh. They publish a 27-page tempeh booklet and by May are producing 30 tonnes (66,000 lb.) of tempeh a month, making them the largest tempeh manufacturer in the world. During 1984 at least five Japanese food companies are making tempeh, leading to a mini-boom of this soyfood which was first sold commercially in Japan in 1983.

March 2. Based on responses to his Oct. 1983 survey, Tom Timmins drafts preliminary 3-page tofu standards (2 pages of which are microbiological standards) that he circulates to the Soyfoods Standards Committee, inviting comments. On March 6 Wm. Shurtleff of Soyfoods Center expands these, keys them into the Center's word processor, and returns them to Timmins.

March 2. Problems start between Eden Foods and the U.S. Food and Drug Administration (FDA). FDA sends Eden a strongly worded letter citing eleven claims in Eden's brochures that the agency considers erroneous, including the company's apparent endorsement of Edensoy as an infant formula. FDA asks Eden to recall the brochure in which Edensoy is promoted as "Good for Babies." An infant became ill due to copper deficiency on an Edensoy diet.

March 8. Soyfoods Association of America members have 12 pages of impressive color advertisements and information about soyfoods and the Association in Natural Foods Merchandiser, in preparation for the NFM Anaheim Natural Foods Expo in March. Full-page color ads by Legume, Erewhon shoyu, Vitasoy, San-J, Tofutti, Edensoy, and Pure & Simple soy sauce.

March 11-13. At the Natural Foods Expo at Anaheim, the Soyfoods Association organizes the first Soyfoods Pavilion, a 16-booth cluster of soyfoods companies and products, which is the hit of the Expo and a show of strength for the industry. Lots of delicious free food draws throngs from the 9,000 Expo attendees.

March 11. At Anaheim, Vitasoy launches its first designed-for-America soymilk, in natural, coconut, and chocolate flavors, each sweetened with maple syrup, and imported from Hong Kong. Many subsequent eye-catching, health-oriented full-page color ads are run in national health magazines.

March. American Soybean Association's Belgium Office publishes the first issue of *Soya Foods,* a 6-page newsletter edited by Michael Martin, Protein Market Development Manager. It will be issued three times a year in English, French, Dutch, and Italian. This is a completely new direction for ASA in the Western world... but it doesn't last long.

March 29. First draft of the Tofu Standards, 15 pages double spaced, is compiled by Shurtleff. Timmins allocates $2,000 to retain two Washington, DC, attorneys who are specialists in foods and regulations to assist the committee in developing professional standards. The draft is circulated to 38 people who are asked to respond to a poll on 14 key issues.

March 29. The term "second generation" products is first applied to soyfoods by Wm. Shurtleff in the new tofu standards. A computer-related term indicating one step more

© Copyright Soyinfo Center 2014

advanced, it quickly replaces the term "secondary," which has a slightly negative connotation.

April 7. *Soyfoods Industry and Market: Directory and Databook 1984* (4th ed.) by Shurtleff and Aoyagi published by Soyfoods Center. 215 pages, $95.

April 13. Richard Leviton resigns as co-director of *Soyfoods* magazine and decides to discontinue his active involvement in the U.S. soyfoods movement. He plans to go to England to write a novel about King Arthur; he leaves in late April.

April 20. *Tofu, Tempeh, & Other Soy Delights,* by Camille Cusumano published by Rodale Press. It is widely and positively reviewed by national media.

April 27. The term "soymilk" is legalized for use in Canada, after a lengthy and expensive court battle by Victor Food Products. The court ruled that this is the "common and ordinary term" for the product, used since about 1918 in scientific articles and commerce. Thus it cannot be squelched by dairy interests.

April. New England Soy Dairy, America's largest Caucasian-run tofu manufacturer, changes its name to Tomsun Foods, Inc.

May. *Nutritional Cooking* with Tofu by Christine Liu published by Graphique Publishing in Michigan.

May. American Natural Foods (formed in Jan. 1984 by John Troy, creator of miso-containing Hot Stuff) has a private stock offering that raises $150,000. In October ANF debuts a line mainstream American sauces and seasonings, each featuring miso, that are delicious and beautifully marketed.

May. *Die Tofu Kueche* (The Tofu Kitchen), by Verena Krieger, Swiss soyfoods pioneer, published by Tanner + Staehelin Verlag in Zurich. 171 pages with many photos.

June 7. "Tofu" by Barbara Hansen and "Tofu: Americanization of a Soy Food" by Karen Gillingham published in the *Los Angeles Times.*

June. Landstrom Distributing Co. of San Francisco, files for Chapter XI bankruptcy. Keene Distributors of Texas, and Collegedale of Tennessee, both profitable, well-run companies, are also pulled under, innocent victims of the Landstrom collapse. All three units were owned by Nutritional Foods, Inc. and all were major natural / health foods distributors. These bankruptcies seriously hurt the natural foods industry as well as many individual companies; sales and confidence plummeted nationwide. In late 1984 Fillmore Foods purchased Landstrom, and Balanced Foods purchased Collegedale and Keene.

June. Migros, Switzerland's largest supermarket chain, launches Tofu Nature, its own brand of tofu, made at Conserves Estavayer S.A., with widespread publicity and excellent product information on both tofu and soybeans. It is marketed together with dairy products and eggs. The launch was considered a great success; supply was not able to catch up with demand until late December.

June. *The Book of Soybeans,* by Tokuji Watanabe and Asako Kishi published by Japan Publications. 191 p.

July. Kikkoman completes its second major shoyu (Japanese-style soy sauce) plant outside Japan, in Singapore. The 18,000 square meter factory, with a capacity of 3,000 kl (792,500 gallons) a year and 40 employees, costs $14 million. It will make shoyu and teriyaki sauce. Official opening ceremony was Nov. 21.

July. The requirement in effect since 1965 that isolated soy protein used as an ingredient in meat and poultry products must contain titanium dioxide as a tracer, is removed from federal meat and poultry products inspection regulations, following a petition by ADM, Grain Processing Corp., and Ralston Purina.

July 9. "Its Trendy, Tasty and Tofutti" (2/3 page) by J.D. Reed published in *Time* magazine (U.S. circulation 4.3 million). Probably the biggest media coverage for tofu in U.S. history. Tofutti hits the big time!

July 17. *History of Tempeh,* by Shurtleff and Aoyagi published by Soyfoods Center. 102 pages, including 375 references. Continued.

8169. *SoyaScan Notes.* 1984. Chronology of soybeans, soyfoods and natural foods in the United States 1984 (Continued–Part II) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. July 26. At the NNFA (National Nutritional Foods Association) show in Atlanta, Great Eastern Sun rolls out Ah Soy, its new line of soymilk imported from Saniku Foods in Japan, in vanilla, chocolate, and plain flavors, in foil retort pouches. After the show, the Soyfoods Association board meets. Steve Snyder replaces Michael Austin as director of SAA. The next day, SAA directors Snyder, Burke, and Barat travel to St. Louis to meet with the staff of the American Soybean Association to discuss possible areas of mutual interest. ASA appears friendly and open minded, and offers to discuss specific future joint projects. A potential line of communication is opened.

July 30. *People* magazine (circulation 2.8 million) article on Tofutti titled (ineptly) "A Happy Zealot Turns Curd (Yuck!) into a Creamy Treat."

July. "The Soyfoods Industry: Growing Like a Beanstalk" by B. Bialick published in *Whole Life Times.*

Aug. 9. *Soyfoods* magazine No. 10 (color cover) published by Doug Fiske. 7,000 copies printed at a cost of $11,200. Magazine's focus has been changed from production to marketing of soyfoods. This is the last issue of this pioneering magazine.

Aug. 12-17. World Soybean Research Conference III held at Iowa State University. Heavy emphasis on soybean production and agronomy; relatively little new material on soyfoods. Soyfoods movement is not represented.

Aug. 20. Ralston Purina introduces Checkerboard Farms

© Copyright Soyinfo Center 2014

TenderLean, America's first branded ground beef product consisting of 75% ground lean beef and 25% textured soy protein isolate. Some meat journals are harshly critical and many meat departments refuse to carry it. Ralston withdraws the product.

Aug. 24. Westbrae Natural launches WestSoy Natural, a plain soymilk similar to Ah Soy but lower in price and made with organic ingredients. Imported in a foil pouch from Saniku Foods in Japan, it is the company's first soymilk.

Aug. 31. San-J International Inc. announces that it will construct a soy sauce plant (44,000 square foot, $5 million) in Virginia on a 27-acre site just north of Colonial Heights.

Sept. Chico-san, Inc. introduces unpasteurized miso in a revolutionary "Pressure Release Package," a plastic bag with a one-way valve that allows the escape of the carbon dioxide produced naturally during fermentation.

Sept. 9-14. Gloria Vanderbilt announces that she, in conjunction with Dolly Madison and Frusen Gladje, will launch a tofu ice cream.

Sept. 27-28. First European Soyfoods Workshop held in Amsterdam, The Netherlands, at the Grand Hotel Krasnapolski, organized by the American Soybean Association's Belgium office. ASA reports attendance as 105 people from 14 countries, but participants report a maximum of 50 participants. Talks on tofu, soymilk, tempeh, distribution, and microbiological standards, all later published in the Proceedings. There is a large Expo with soymilk equipment from Alfa-Laval and Soya Technology Systems prominently featured. A very successful event, and another ASA first!

Oct. *The Tofu Gourmet* by Linda Barber and Junko Lampert published by Kodansha in Menlo Park, CA. 129 p. Many color photos.

Oct. 15. "Here Tofutti, There Tofutti," a full-page, very positive article with 2 color photos published in *Newsweek* magazine (circulation 3 million).

Oct. 23. The joint managing directors of the International Food Information Service, owners of Food Science and Technology Abstracts (FSTA, the world's largest, oldest, and most widely used food-related computerized database) visit William Shurtleff at The Soyfoods Center to discuss putting the 6,500 bibliographic records in The Soyfoods Center Library into FSTA, thus making this information available worldwide. Both parties are very interested in the project but technical problems remain to be solved.

Oct. Westbrae Natural Foods launches Malted's, billed as "thick and rich non-dairy soy delights." Marketed like a milkshake and imported from Japan in a foil pouch, they come in three flavors: vanilla, carob, and cocoa-mint.

Oct. Three member team from PLENTY Canada spends one month in Sri Lanka, funded by the Canadian International Development Agency, studying the country's soyfoods program. They learn, teach, and introduce tofu ice cream.

Nov. 13. A.E. Staley Manufacturing Company, America's oldest existing soybean crusher, announces that its soybean crushing operations are for sale.

Nov. 20. Tofu Time's first Tofutti Shop opens in uptown Manhattan, New York. A fast-food retail outlet with a slick, red-and-white plastic, almost gaudy, decor.

Nov. 16. Chico-san Inc. is purchased by H.J. Heinz Co., largely for its rice cake business.

Nov. 21. After years of searching, William Shurtleff, with help from Nancy Florida in Java, discovers an 1815 reference to tempeh in the *Serat Centini,* from the Court in Solo, Java. This pushes the earliest reference to tempeh back 60 years and has it originating in Indonesian rather than in Dutch culture.

Nov. 30. America's first Tofu Standards are issued by the Soyfoods Association's Tofu Standards Committee, in part to help stem the rising tide of products bearing the name "tofu" that contain little or no tofu.

Nov. Galactina, a Swiss manufacturer of soymilks since 1969 (they make Vita Drink / Enteroform, a soymilk sold to in vanilla, chocolate, and strawberry flavors to the dietetic and pharmaceutical markets for tube feeding), starts test marketing tofu in Swiss supermarkets. Attractive recipe booklet attached to each packet, which is pasteurized for a 6-week shelf life.

Dec. Excellent, 19-page cover story on "Soymilk and Soyfoods," published in the prestigious *Journal of the American Oil Chemists' Society.* 1984 is the Society's 75th anniversary.

Dec. Ralston Purina, in its 1984 annual report, notes: "The Company has entered into preliminary agreement with Cargill, Inc., to sell six of the Company's seven soybean [crushing] plants." It also reported strong, steady growth in sales of soy protein products, from about $98 million in 1980 to $152 million in 1984, for an 11.5% compound annual growth rate (but only 4.5% after adjusting for inflation).

Dec. Gloria Vanderbilt's Glace, a soy-based nondairy ice cream, starts being test marketed in Los Angeles, in nine flavors.

Dec. A poll of readers by *Vegetarian Times* magazine finds that 53.1% of readers used tofu one or more times during the past 7 days; 29.4% used it 3 or more times.

Dec. 31. Brightsong Light Foods in Petaluma, California, receives the first funds of a $500,000 equity investment from a Hong Kong investor, who had seen an article praising Brightsong in Venture magazine. Brightsong greatly expands its product development and promotion.

* American Soybean Assoc. phases out its Human Nutrition Dept., headed for years by Judy Trujillo.

* Chicago Board of Trade starts trading options contracts on soybean futures. Continued.

8170. *SoyaScan Notes.* 1984. Chronology of soybeans,

© Copyright Soyinfo Center 2014

soyfoods and natural foods in the United States 1984 (Continued–Part III) (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued. 1984 New Trends: Growing Awareness of Dangers of Excess Cholesterol and Fat Consumption. Since cholesterol became a public health issue in the mid-1950s, the medical profession has been uncertain about the degree of its dangers, largely due to lack of medical evidence from long-term human studies. Yet for years the American Heart Association, United States Dept. of Agriculture, and the Soyfoods Association have been urging Americans to lower their blood cholesterol levels by eating less of the foods rich in cholesterol and saturated fats. In Jan. 1984 the long-awaited medical evidence was finally released, dramatically and extremely visibly. There were repercussions throughout the entire food and health care industries. The public started to pay serious attention.

Then on March 26 *Time* magazine ran a landmark cover story on the dangers of cholesterol. On 13 December *The New York Times* ran a major front-page report titled "Panel Suggests Many in U.S. Need to Reduce Cholesterol" containing the "the most far-reaching health recommendations yet made on cholesterol and heart disease" by an expert panel, convened by the National Institutes of Health. Numerous prestigious groups lowered their recommended safe cholesterol intake levels. These developments made soyfoods (which, like all non-animal products are free of cholesterol) look better than ever nutritionally, and increased their consumption significantly.

It has been known for several decades that consumption of polyunsaturated fatty acids (such as those found abundantly in soybeans) reduces serum cholesterol. During the 1970s Americans were encouraged to reduce consumption of saturated fats and cholesterol and increase consumption of polyunsaturates. Now this advice is changing. The new message is to "Reduce the intake of dietary fat." All fat, including polyunsaturated. In fact, these very words now appear as the first of four dietary guidelines on the letterhead of the prestigious American Institute for Cancer Research.

Continued Drop in U.S. Beef and Red Meat Consumption. From a high of 94.4 lb per capita in 1976, beef consumption has steadily declined, falling to 77.3 lb in 1982, a drop of 18.1% in only 6 years. During the same period, total red meat consumption (including pork, lamb, mutton and veal) fell from 163.6 lb to 148.0 lb, a drop of 9.5%. Many consumers switched to lower priced, lower cholesterol chicken, which rose from 42.7 to 52.9 lb per capita. Still, total annual U.S. meat and poultry consumption increased by over 4 pounds during his period (Stucker and Parham 1984).

Rise and Decline of the Soyfoods Association. The Soyfoods Association of America (SAA) got off to a promising start in 1984 with a successful fund raising drive. Then in March, soyfoods companies took 16 adjoining booths to form the Soyfoods Pavilion, capturing the spotlight at the Natural Foods Expo in Anaheim. It looked like the "soyfoods movement" was maturing into the "soyfoods industry." But for the rest of the year the Association was largely inactive. This was disappointment to many, since interest in soyfoods in America had never been higher.

Prior to the founding of SAA in 1983, its active forerunner SANA (Soyfoods Association of North America) had six major ongoing activities: (1) Publication of Soyfoods magazine, a quarterly that actually came out about twice a year; (2) Publication of the monthly Soyfoods Newsletter, a key source of communication within the industry between issues of the magazine; (3) An annual summer Soyfoods Conference and Expo, drawing participants from around the world; (4) Periodic press releases; (5) Writing a steady stream of excellent articles on soyfoods for publication in national magazines; (6) An association phone and mail service to respond to outside enquiries for information.

The person primarily responsible for initiating and carrying out all these activities was Richard Leviton. Though funding was hard to obtain, he worked hard, wasted nothing, and made many personal and financial sacrifices for a cause he believed in. Leviton's many and diverse talents, and especially his talents as a careful researcher and outstanding popular writer, were of tremendous aid to the incipient soyfoods movement. In late April, after 5 years of devoted effort and feeling a bit "burned out," he left the soyfoods movement and moved to England to pursue his long-cherished career as a novelist. Leviton, more than any other person, was responsible for the rapid rise and visibility of the soyfoods movement in America. His departure was a major loss to both the association and the magazine. He and his creative efforts will be sorely missed.

Only the last of the six major activities initiated by Leviton has been continued by the "new" Soyfoods Association. However it did initiate the excellent Soyfoods Pavilion at the annual Natural Foods Expo and it started subscribing to the valuable Luce Clipping Service. There were board meetings in June 1984 and Jan. 1985. By summer of 1984 the Association was looking for a replacement for Executive Director Michael Austin, who was also "burned out." In August he was temporarily replaced by Steve Snyder, former marketing director for Hinode Tofu, but shortly thereafter Snyder was hired as national sales manager by Vitasoy USA. After that there was no executive director. Despite relatively large initial pledges, the Association's balance was always low which meant that, lacking Leviton, activity largely came to a stop. The only significant new activity was the development of tofu standards by the Association's Standards Committee.

Unlike the original Soyfoods Association, the "new" one took little interest in small soyfoods companies, arguing that they had no money. The "new" association was therefore composed mainly of larger companies with regional or

© Copyright Soyinfo Center 2014

national distribution and not truly representative of the industry.

Rapid Rise in Soymilk Imports. The boom in soymilk imports, started during the past two years by Vitasoy and Edensoy, accelerated during 1984. New products included Vitasoy's new American flavors, Westbrae Natural's Malteds, and Great Eastern Sun's Ah Soy. All three were very widely advertised in eye-catching color ads. Most of the adult soymilk beverages sold in America are still imported from Japan. Strangely this dramatic development has gone largely unnoticed by the media, which has been focusing its attention on Tofutti.

Two new companies and products were mentioned only briefly by Shurtleff and Aoyagi in their two-volume book *Soymilk Industry and Market: Worldwide and Country-by-Country Analysis,* published in Feb. 1984. The first of these was Westbrae's Malteds and Westsoy. Although Westsoy was launched in August and Malteds in October, sales of both for 1984 were roughly $700,000 or 1.67 million units. They quickly became the best-selling products in the company's history.

From late July when Great Eastern Sun launched Ah Soy, the product was a "fantastic success." During the period from 1 Nov. 1984 to 25 Jan. 1985 (just under one fiscal quarter) 525,000 unit packs of four flavors were sold. By March 1985 Ah Soy accounted for 15-20% of GES's total sales.

Big Food Companies Increasingly Interested in Tofu. Those studying tofu for use in foods include Quaker Oats, CPC International, International Multifoods in Minneapolis, Pillsbury, and Campbell's Soup.

8171. Belleme, John; Belleme, Jan. 1984. Miso, the ABC's of an ageless food. *East West Journal.* Dec. p. 62-66. [1 ref]
• ***Summary:*** Miso is said to break down and discharge cholesterol. Scientists studying Japanese populations have discovered that those who regularly drink miso soup suffer significantly less from some forms of cancer and heart disease. Japan's Tohoku University has recently isolated chemicals from miso that cancel out the effects of some carcinogens.

A fine variety of traditionally-made miso is available in the refrigerator section of natural foods stores in small tubs or the recently introduced plastic bag with a one-way valve that prohibits the entrance of air. For the busy cook who wants to add flavor and protein, miso gives 22 grams of protein per tablespoon. Dark miso has a meat-like quality; light miso, a dairy-like quality. Light, sweet miso contains twice the niacin and 10 times the lactic acid bacteria as dark, saltier miso. Dark miso is higher in protein and because of its larger proportion of soybeans, contains more fatty acids, which have been shown effective as anti-carcinogenic agents.

Sweet miso can be used instead of milk in mashed potatoes or creamed soups, and with tofu and lemon and lemon or rice vinegar in place of sour cream, in salad dressings and sauces. Sweet miso and sake or mirin combine well in sauces. Address: Rutherfordton, North Carolina.

8172. Hymowitz, Theodore. 1984. Dorsett-Morse soybean collection trip to East Asia: 50 year retrospective. *Economic Botany* 38(4):378-88. Dec. [38 ref]
• ***Summary:*** Contents: Introduction. The plant explorers–Dorsett and Morse (a biographical sketch of each). Oriental Agricultural Exploration Trip (gives all key dates, places, and events on the trip). Dorsett-Morse collection. Soybean collection (a detailed discussion, including history and varieties): "This paper is devoted to the analysis of the 4,451 soybean (*Glycine max*) accessions collected by P.H. Dorsett and W.J. Morse during their plant exploration trip to east Asia 1929-1931. Until about 1950 the collection was used primarily for the development of vegetable type soybean cultivars. During this period many of the accessions were lost. Today only 945 of the original 4,451 accessions are available in the United States soybean germplasm collection. From the 1950s to the 1980s, as soybean production increased in the United States, so did plant pathogen problems. The Dorsett-Morse soybean accessions have been extremely valuable to plant pathologists and breeders as sources of resistance to certain pathogens. Individual genotypes in the collection have been used for genetic studies on morphological, physiological and biochemical traits. Due to the development and distribution of higher-yielding soybean cultivars, farmers in East Asia are no longer growing lower-yielding landraces. Although these landraces are now extinct in east Asia, many were collected by Dorsett and Morse and are preserved in the United States soybean collection. Over the years, the Dorsett-Morse collection has increased in value and will be as useful to soybean scientists in the future as it has been in its first 50 years of existence."

"According to Piper and Morse (1923) no more than 8 soybean cultivars were grown in the United States prior to 1898. In 1898, the Office of Foreign Seed and Plant Introduction was established within the United States Department of Agriculture (USDA) to centralize introduction activities. Introduced plants were assigned permanent numbers under the Plant Introduction (P.I.) designation system. The first soybean listed in the P.I. system was P.I. 480 from South Ussurie, Siberia. The seeds were received from Professor N.E. Hansen in March, 1898 (Cook, 1898).

"Between 1898 and 1928, approximately 3,000 accessions of soybeans were introduced into the United States from China, Japan, Korea and India (Bernard, 1983). The collections were made principally by P.H. Dorsett, F.N. Meyer, and C.V. Piper. In the mid-1920s it was apparent to the USDA that the soybean was becoming a major American crop. Funds were allocated to send 2 plant scientists on a major expedition to Japan, Korea and northeast China,

© Copyright Soyinfo Center 2014

primarily to collect soybean germplasm and also to collect seed and propagating material of other crops of interest."

"Dorsett-Morse Collection: Dorsett and Morse sent back to Washington, DC, approximately 9,000 accessions of seed and propagating material (Ryerson, 1930). About half the accessions collected were soybeans (Table 1); the other half consisted of representatives from 230 genera. Individually or jointly, Dorsett and Morse collected germplasm from fruit and vegetable markets, food and flower shows, experiment stations, botanical gardens, seed companies, farms, factories making soybean and other food products, processing plants, and from the wild. In certain instances they contacted individuals to make collections of specific indigenous plants. In addition, they pressed 814 herbarium specimens, mostly 5 sheets each. They also brought back boxes containing butterfly, moth, wasp, spider and ant specimens.

"The explorers returned with 3,350 black-and-white still pictures, 6,700 ft of standard black-and-white motion picture negative and 2,400 ft of colored motion picture negative. Lastly, they brought back 210 publications, 341 different soybean food products and 236 bamboo-made articles (Dorsett and Morse, 1928-1931)."

"The Dorsett-Morse collection trip cost approximately $25,000. Even with today's inflated dollars the benefits gained by United States soybean farmers, processors, and consumers greatly exceed the original collection cost."

Talk with Ted Hymowitz. 1998. June 15. In fact, the value to American farmers of one soybean introduced by this expedition, P.I. 88788, which is a source of resistance to soybean-cyst nematode (SCN) races 3 and 4, is greater than the cost of the entire expedition–several times over. Interestingly, it was not until the late 1980s and 1990s, some 60 years after the expedition, that the resistance contained in this one soybean began to be utilized by U.S. soybean breeders. This is a good example of the importance of collecting and preserving germplasm, whose value may not be known until many years later.

Tables show: (1) Soybean accessions introduced into U.S. by Dorsett and Morse and currently available in the U.S. soybean collection: 1929–366 in original collection / 126 currently available. 1930–2,261 / 554. 1931–424 / 206. 1932–1,400 / 59. Total–4,451 / 945 (=21.2% currently available).

Table 2. 41 of their soybean introductions that by simple selection became cultivars in the USA and Canada, with P.I. number, place of origin, and Maturity Group: Cultivar names: Agate, Aoda, Arisoy, Bansei, Bansei (Ames), Cherokee, Chusei, Delsoy, Emperor, Etum, Fuji, Goku, Green and Black, Hakote, Hidatsa, Higan, Hokkaido, Imperial, Jackson, Jefferson, Jogun, Jogun (Ames), Kanro, Kanum, Kura, Magnolia, Mendota, Nanda, Osaya, Rokusun, Sac, Sato, Seminole, Shiro, Sioux, Sousei, Tastee, Toku, Waseda, Willomi, Wolverine.

Table 3. Eight "vegetable-type soybean cultivars developed in the U.S. by hybridization and selection from germplasm introduced by Dorsett and Morse:" Disoy, Kanrich, Magna, Perry, Prize, Shore, Verde, and Yelnanda.

Table 4. Selected soybean introductions by Dorsett and Morse with resistance to certain pathogens: Column 1, organism (Fungal, bacterial, viral, and nematode pathogens). Col. 2, Disease. Col. 3, Source of resistance (PI numbers).

Table 5. Introductions by Dorsett and Morse listed in the soybean genetic type collection: Column 1, lines (11). Col. 2, P.I. number. Col. Description (Narrow leaflet, dense pubescence, black pod, etc.).

Note: This is the earliest English-language document seen (Oct. 2013) that uses the term "landraces" (or "landrace," spelled as one word) to refer to indigenous soybean varieties. Address: Crop Evolution Lab., Dep. of Agronomy, Univ. of Illinois at Urbana-Champaign, Urbana, IL 61801.

Argentina: Soybean production in Argentina is increasing rapidly, just as it did in Brazil a decade earlier, and for much the same reasons. Argentina's economy is heavily in debt, inflation is high and widespread, the policy environment is uncertain, and there are cash flow problems. However the soybean is seen as part of the solution to these problems. Soybean production has increased from about 0.027 mmt (million metric tons) in 1970/71 (beginning April), to about 0.496 mmt in 1975/76, to an estimated 4.150 mmt in 1982/83 (see table 5.9, from USDA, FAS).

About 85% of the soybeans cultivated win Argentina are double cropped with wheat. They compete for land with cattle and corn. The stage of very rapid growth in soybean production appears to be nearing an end as Argentina's farmers are reaching the limit of the land on which it is easy to grow soybeans.

Soybean crushing has been slow to catch up with production. Table 5.9 shows that the soybean crush increased from 0.021 mmt in 1970/71 to an estimated 1.907 mmt in 1982/83. Because of this, Argentina has become the world's second larger exporter of whole soybeans, exporting 135% more than Brazil in 1982/83. However policies are now in place which will lead to expansion of Argentina's crushing industry. In early 1983, whole soybeans were subject to a 25% export tax while oil and meal were subsidized by 10%.

Exports of whole soybeans from Argentina began in 1973/74 with 0.050 mmt, but returned to zero in 1975/76. Thereafter they skyrocketed from 0.111 mmt in 1976/77 to a peak of 2.776 mmt in 1979/80, falling slightly to an estimated 2.151 mmt in 1982/83.

Exports of soybean meal have been modest, ranging from 0.25 and 0.28 mmt between 1976/77 and 1980/81 (table 5.10, from USDA ARS). But consumption of soybean meal in Argentina has been increasing, approximately doubling between 1973/74 and 1982/83. A similar pattern emerges for soybean oil, but both exports and domestic demand are modest (table 5.11, from USDA ARS).

In the future, Soybean production in Argentina is expected to expand, although not as rapidly as during the last 10 years. The percentage of soybeans crushed in Argentina is expected to increase, and the country's exportable surplus of soybean meal and oil will probably grow.

Japan is the world's single largest importer of soybeans. Between 1970 and 1980 soybean imports to Japan increased by 31%.

Japan produces relatively small and declining amounts of oilseeds; primarily rapeseed, soybeans, and peanuts. Today Japan is a highly developed industrial nation and agriculture contributes only a small amount to the gross domestic product. In 1961 Japan's agricultural land area peaked at 15.1 million acres, declining to about 13.3 million acres in 1978. "The area of orchards, permanent plantations and arable grasslands has increased considerably since 1960, while the area of ordinary upland fields (where oilseeds are grown) has dropped to about one-half its 1960 size."

Brazil: Beginning in the mid-1960s, Brazil started an aggressive export development program. Its goals were: (1) To slow the rate of inflation. (2) To diversify exports. (3) To increase exports of value-added products. (4) To maximize foreign exchange earnings. One commodity that benefited from this program was the soybean. Soybean production in Brazil rose from 1.50 mmt in 1970/71 to 15.20 mmt in 1981-82 (table 5.6, USDA FAS).

Various factors account for the dramatic growth in Brazilian soybean production: (1) The climate in southern Brazil makes it possible to double crop wheat and soybeans. Double cropping is the practice of consecutively producing two crops of either like or unlike commodities on the same land during the same year. The government's high support price for wheat substantially increased wheat area and encouraged double cropping. In 1975 some 50-70% of the soybean area in the major producing areas was double cropped with wheat.

(2) Because of import controls on nitrogen fertilizer, soybeans may have become more attractive to Brazilian farmers as a legume that fixes nitrogen in the soil. Since Brazil has produces relatively little of its own nitrogen fertilizer, and that fertilizer is relatively expensive, soybeans

© Copyright Soyinfo Center 2014

are attractive because they require little nitrogen fertilizer and (as a legume) they add their own nitrogen to the soil.

(3) Both Brazilian coffee policy and frosts have contributed to the increase in Brazilian soybean production. During the 1960s, when there was considerable excess in international coffee supplies, the government paid farmers to remove old coffee trees and plant other crops. Especially in the State of Parana, much of the new crop acreage was planted to soybeans. In July 1975, when severe frost killed over 15 percent of the coffee trees in Parana and severely damaged all the rest, much of this newly available land also went into soybeans.

(4) Brazilian soybeans tend to have a relatively higher oil content than their U.S. counterparts (19% vs. 17.7%). So in 1973 and 1974 when vegetable oil prices in world markets rose dramatically, cultivation of soybeans in Brazil became more profitable. As Thompson (1979) writes: "There is simply no other crop or beef which can compete with soybeans on a profit per hectare basis."

(5) Brazil's poultry industry is growing rapidly, so the domestic demand for soybean meal as a protein feed supplement has increased significantly.

Table 5.6 titled "Brazil, soybean supply and disposition," shows that soybean production increased from 1.509 mmt in 1970/71 to 12.835 mmt in 1982/03. The soybean crush increased from 0.932 mmt in 1970/71 to 12.728 mmt in 1982/03. Exports of whole soybeans increased from 0.290 mmt in 1970/71 to a peak of 3.516 mmt in 1975/76, then decreased to 0.810 mmt in 1982/03.

Brazil's policies designed to expand soybean crushing capacity and exports have been very successful; Brazil is presently the world's largest exporter of soy meal and soy oil (tables 5.7 and 5.8). Because of this emphasis on crushing soybeans in Brazil, the country's exports of whole soybeans have decreased since their peak in 1975/76 when exports where 33.5% of domestic production to only 6.3% of total production in 1982/83. Meanwhile, exports of soybean meal have increased from 0.588 mmt in 1970/71 to a peak of 8.582 mmt in 1981/82. And exports of soybean oil meal have grown from 0.003 mmt in 1970/71 to a peak of 1.212 mmt in 1981/82. Address: Ontario, Canada.

8175. *Michigan Food News.* 1984. Michigan products a hit in Japan. Dec.
• ***Summary:*** Candied soynuts in a variety of flavors made by Leonard M. Stuttman of Inari, Ltd. in Mason, Michigan, were one of more than 200 products made by 27 different companies exhibited last month at a special Michigan fair at the Tokyu Department Stores. "'We sent over more than a ton of products and it was gone in the first three days of the six day fair,' says company president Leonard M. Stuttman. INARI, which stands for International Nutrition and Resources, Inc., was founded in 1978 by Stuttman, who had worked for the American Soybean Association. 'Basically I've had a love affair with the soybean since the early 1950's,' he says...

"Stuttman says his soynuts are more like a more nutritious peanut, with a third more protein and less fat. Sixteen people work in his Mason plant on 200 State Street producing the soynuts." A photo shows Leonard Stuttman, president of Inari Ltd., standing with representatives of the Tokyu Department store who selected items for sale at the Michigan Products Fair.

© Copyright Soyinfo Center 2014

leadership in these areas relatively recently, only since the 1950s. Before World War II, Kikkoman (known then as Noda Shoyu Co.) was not able to garner more than about 10% of the shoyu market in Japan. "The incentive to invest in new production capacity came from the Occupation policy of disbanding producer cooperatives; Kikkoman's growth had been limited by a network of interlocking market sharing agreements among the major shoyu producers, but once Occupation authorities removed these barriers, Kikkoman was free to grow as large as it could." Letter from San-iku Foods. 1990. June. This product was introduced in 1984.

8194. Watanabe, Y.; Tada, M.; Kawamoto, K.; Oozumi, G.; Kajiwara, Y.; et al. 1984. [A case-control study of cancer of the rectum and colon]. *Nippon Shokakibyo Gakkai Zasshi* (*J. of the Japanese Society of Gastroenterology*) 81:185-94. [Jap]*
• ***Summary:*** Subjects who consumed whole soybeans and tofu had an 80% lower risk of rectal cancer. Specifically, the authors, in a study involving 65 rectal cancer cases and controls, and 138 colon caner cases and controls, found that the consumption of soybeans and tofu both one to two times a week and three or more times a week, compared with nonconsumption of these foods, was associated with lower rectal cancer risk (Relative Risk = 0.15 and 0.12 respectively). They did not find a significantly decreased risk of colon cancer (Relative Risk = 0.63).

• ***Summary:*** This is a color photo of a large beige metal display rack with six shelves holding products including the following: (1) Samurai snacks, soup plum drops. (2) Tamari brown-rice wafers, Tamari brown-rice crackers. (3) Miso ramen, Instant miso soup. (4) Organic shoyu, tamari, mild soy sauce, Johsen tamari shoyu, Tofu sauce. (5) Kukicha (tea), Umeboshi (salt plums), Shiitake mushrooms, Agar flakes, Kuzu, Miso (in plastic bags; brown rice, red, barley, Hatcho). (6) Seaweeds (Wakame, kombu, hijiki, nori, sushi nori), Jinenjo soba, Somen, Brown rice noodles. At the top is the banner featuring the head of a samurai. One accompanying leaflet (printed black on white) is titled "Westbrae Natural product inventory. 4-foot Japanese foods section." A second leaflet titled "'Ichi-Ban' Westbrae Natural–No. 1 supplier of macrobiotic food in the U.S." lists the products by category. In the upper left corner are the Japanese characters for "Ichi-Ban" above a line drawing of Mt. Fuji. Address: Emeryville, California.

8196. Bertrand, Jean-Pierre; Laurent, Catherine; Leclercq, Vincent. 1984. Soja. Aus dem Franzoesischen von Felicitas Schaetzl [Soya. Translated from the French by Felicitas Schaetzl]. Zurich, Switzerland: Unionsverlag. 130 p. [Ger]
• ***Summary:*** This book gives a very good overview (from the French point of view) of the development of the soybean plant in the context of world agriculture. Contents: 1. The soybean in the world economy: Portrait of a "sacred grain," soybean meal / cake–a high-value feed, soy oil–from diesel motors to ice cream, soy protein–the industrialized protein, producers and users. 2. The soya complex: Consumers and producers without power, the producers–a club with contradictions, the multinationals in the middle of the soya chain, the international wholesale business, the commodity exchange as a barometer.

3. How prices are determined: Subsidy politics in the USA, price guarrantees in Brazil, the price of soybean meal and soy oil. 4. From sacred bean to soya complex–a look back: Colonial times, Europe becomes curious, the American soya complex is born, the struggle over margarine, soybean meal becomes successful, the war as a big opportunity, soya conquers America, soya against cotton–the oil battle.

5. Soya from the Americas conquers the world: The Marshall Plan–the first clever offensive, Public Law 480–food aid with a club-foot, trade pressure under the banner of free trade. 6. The politics of the importing countries: U.S. soya vs. EU cereal grains, France–the model of protein dependency, in the maze of European agrarian politics, Japan–the free way for imports. 7. The embargo of 1973–Trade war and crisis: the exchange awakens.

8. Brazil–The new soybean giant: The export sector is nursed back to health, credit–but not for everyone, the export boom, the equal weight problem. 9. The newcomers–Argentina and Paraguay. Paraguay, a little appendage of Brazil?, startup difficulties in Argentina, help for Soviet stock-farming.

10. The new questions: The Eastern Bloc in the conflict of goals, industrial comeback of the soybean in China, developing countries–meat and oil for the poor? 11. The reverse side of the "Soya Model:" Brazil–Flight from the land, dependency, and hunger, Tunisia–adulterated olive oil, Senegal as loser in the peanut / soya battle, a model of supply dependency.

12. Which alternatives? A "protein plan" in the European Union, better utilization of the green forage stock, industrial amino acids–a way out / escape? 13. Plant- vs. animal protein: Industrial soya protein–food of the future?, the Third

World, a large market with the ability to pay, a future with contradictions. Address: France.

8197. Bray, Francesca. 1984. Science and civilisation in China. Vol. 6, Biology and biological technology. Part II: Agriculture. Joseph Needham series. Cambridge, England: Cambridge University Press. xxvii + 724 p. Illust. Index. 26 cm. [1487* ref]

• ***Summary:*** Contents: List of 271 illustrations. List of 13 tables. List of 17 abbreviations. Author's note. Introduction: General characteristics of Chinese agriculture, agricultural regions, origins of Chinese agriculture. Sources: The *yüeh ling* or agricultural calendars, agricultural treatises, state-commissioned compilations, monographs, supplementary sources, the content of the Chinese sources and the implications for historical interpretation, a comparison with European tradition. Field systems: Land clearance and reclamation, shifting cultivation, permanent fields. Agricultural implements and techniques: Tillage implements, sowing, fertilisation, weeding and cultivation, harvesting and threshing and winnowing, grain storage. Crop systems: Crop rotation, millets and sorghum and maize, wheat and barley, rice, legumes (incl. soybeans and adzuki beans [*Phaseolus angularis, or hsiao tou*]), oil crops, tuber crops, fibre crops, vegetables and fruits. Conclusions–Agricultural changes and society–stagnation or revolution?: Did China contribute to Europe's agricultural revolution?, agricultural revolution in China?, development or change?

Bibliographies: Abbreviations. Chinese and Japanese books before + 1800: 254 references. Chinese and Japanese books and journal articles since + 1800: 306 references. Books and journal articles in Western languages: 778 references. Note: There are 560 references in Chinese.

"This book is dedicated to the memories of Shih Shen-han of the Northwestern Agricultural College, Wukung, Wang-Yü-hu of the Peking Agricultural College, and Amano Motonosuke of Osaka University, without whose pioneering work on the history of agriculture in China this volume would not have been possible."

The section titled "Monographs" (p. 74-75) notes that farm tools and machines were not considered interesting by Chinese writers. "It would never have occurred to an educated Chinese to attempt to benefit mankind by improving the design of the plow, and there is none of the technical, experimental literature that we find in the West on such topics." Address: Cambridge, England.

8198. Bray, Francesca. 1984. Legumes (Document part). In: F. Bray. 1984. Science and Civilisation in China. Vol. 6, Biology and Biological Technology. Part II: Agriculture. Joseph Needham series. Cambridge, England: Cambridge University Press. xxvii + 724 p. See p. 510-14. [49 ref]

• ***Summary:*** Note: Chinese characters are given for all italicized Chinese words or terms. Although legumes were among the earliest plants to be domesticated in West Asia and the Americas*, there is no solid evidence that legumes were cultivated in China in prehistoric times, even though several species were native to China, and even though legumes played a very important role in Chinese agriculture from the late Chou [ca. 722 B.C.] onwards.

* Footnote: In the Near East and Europe carbonised peas and lentils, assumed to be domesticated, have been identified at farming sites dating as far back as 7000 B.C. Various species of *Phaseolus* beans seem to have been domesticated in Peru and Mexico by the 6th millennium B.C. And groundnuts are believed to have been domesticated in the upper Amazon regions, in South Bolivia and North Argentina well before 3000 B.C.

"Though remains of leguminous species have been found in one or two Chinese neolithic sites, they have been identified as broad beans (*Vicia faba*) and groundnuts (*Arachis hypogaea*)*;* since the former is believed to have been introduced to China from Western Asia in Han times [220 B.C.–220 A.D.] and the latter is a native American species, the authenticity of these identifications is doubtful, to say the least" (Footnote: K.C. Chang. 1977. *The Archaeology of Ancient China,* 3rd revised ed.).

"There are apparently no references to legumes in the Shang oracle records, and the earliest uncontested evidence for the cultivation of leguminous plants in China is found in Chou bronze inscriptions and in the *Shih Ching.* Both these sources refer to a crop called *shu* (Chinese characters given), and the early form of the character clearly depicts the nodules on the roots of the plants (Fig. 237). The term *shu,* though also used to refer to legumes in general, is primarily associated with the soybean, *Glycine max* (L.) Merrill, and its presence in these writings is usually taken to signify the domestication of this crop" (Footnote: Hu Tao-Ching {1963} in fact postulates a much earlier domestication [it must have been domesticated and well known long before it appeared in inscriptions on bronze vessels in 1024 B.C.]; Ping-To Ho {1975, p. 70} believes that domestication occurred about 1000 B.C.)

"In later lexicographical texts the term *shu* is usually qualified when soybeans are referred to: *jung shu, jen shu,* and *ta shu* are mentioned (Footnote: In the *Erh Ya* and its commentary for example), and this does suggest that even in pre-Han times *shu* was used as a generic term for legumes rather than a specific term for soybeans. The modern term for soybean is *ta tou,* 'greater bean,' a term which first appears in the -1st century *Fan Sheng-Chih Shu.* In classical times the term *tou* was applied only to a type of 'wooden vessel or dish containing flesh sauces at sacrifices or feasts' (Bretschneider 1882, vol. II, p. 162), but by Han times it seems that it was also used as a general term for pulse crops, as it still is today.

"Whether or not the unqualified term *shu* in early texts and inscriptions should be understood to refer to soybeans or to legumes in general, there is no doubt that the soybean

© Copyright Soyinfo Center 2014

was domesticated in China some time around the beginning of the Chou, for texts describing -7th-century events refer to soybeans (*jung shu*) as novel introductions to the Central States, whereas by the time of Mencius [Meng tzu, c. 371-c. 289 B.C.] they had already become a staple food of the common people (Footnote: P.T. Ho 1975, p. 79).

"The presumed wild ancestor of the soybean, *Glycine ussuriensis* Regel & Maack or *G. soja* L. is native to northeast China and the adjacent areas of Manchuria, Korea, and Japan (Footnote: Hymowitz 1970, 1976), and it may be significant that the cultivated soybean was called *jung shu* for Jung was the name commonly given to the Tungusic tribes of Northeast China in Chou times. The *Kuan Tzu* states that in the -7th century Duke Huan of Ch'i (Footnote: Ch'i covered most of modern Shantung) led an expedition to the territory of the Mountain Jung and brought back 'winter onions and soybeans (*jung shu*) for dissemination throughout the various states' (P.T. Ho 1975, p. 78)."

An alternative interpretation of *jung* and of its (then) homophone *jen* is that it simply meant large and luxuriant (Bretschneider 1882, vol. 2, p. 164), for the soybean is a large, bushy plant which grows up to 6 feet tall. Its modern name of *ta tou* can be attributed to its growth habit, and not to the size of its beans which are only about as big as a lentil. Fig. 238 (*Shou Shih T'ung K'ao,* 1742) shows an illustration of a soy bean plant.

"The soybean's rapid conquest of Chou China is a tribute to its superior qualities, qualities so outstanding that they frequently provoke outbursts of surprising lyricism in modern writers: 'that miracle, that noblest of crops, that wondrous plant, the soybean' (Anderson & Anderson 1977, p. 346)." The ancient Chinese were more moderate in their praise, perhaps because they were unaware of the benefits of modern nutritional analysis. The chief virtues of the soybean for the ancient Chinese "were that it produced good crops even on poor land, that it did not deplete the soil, and that it guaranteed yields even in poor years, so that it made a useful famine crop." It gave 3-4 times the yield of millet. The *Fan Sheng-Chih Shu* says that in former times (presumably the late Chou) it was customary for peasants to plant 5 *mu* per capita of soybeans to guard against famine. Soybeans were widely grown in China from Chou times on, "but they were not held in high esteem for their gastronomic qualities." The Chinese appreciated soybeans most when they were fermented to make sauces (*jiang*) or relishes (*shi*), or transformed into beancurd (*doufu*). These foods were generally made from yellow soybeans, although the *Qimin Yaoshu* (+544) recommends black soybeans. The various fermentation processes were discovered in early times; they improved the soybean's palatability and its nutritional properties. Address: Research Fellow, East Asian History of Science Library, Cambridge, England.

8199. Brennan, Jennifer. 1984. The cuisines of Asia: nine great oriental cuisines by technique. New York, NY: St. Martin's Press. ix + 542 p. Illust. (line drawings). Index. 24 cm.

• ***Summary:*** The "Nine great Oriental cuisines" are those of "China, India, Indonesia, Japan, Korea, Malaysia, The Philippines, Thailand, Vietnam" (as stated on the book's cover). The book contains many recipes, yet it is largely organized into chapters by cooking techniques: barbecuing, steaming, stir-frying / using a wok, deep-frying, etc.

The chapter on "Japan" discusses soybeans, miso, tofu, and shoyu on pages 44-45. Soyfoods are said to be the 2nd largest source of protein in the Japanese diet.

The section on "Soybeans" (p. 97-104) includes a discussion of the names of various soyfoods in different Asian languages and countries. For example: "The basic bean curd is called *tau-fu* in Cantonese, *tau-hu* in Hokkien, and *tofu* in Japanese." Or consider this (p. 99): "During the basic process of making bean curd, at the stage where the bean and water mixture is boiled, a skin or residue forms on the top. This skin [yuba] is skimmed off and dried. It is commercially available in sheets... and in the form of sticks that bear the picturesque name of 'second bamboo' [dried yuba sticks] in Chinese, meaning that they are the second residue from the curd."

There follows a 3-page table titled "Soybean products" (p. 101-03) which has four columns: Description, Chinese name [Cantonese], Japanese name, comments.

Note: Before proceeding, we believe that the design of this table is fundamentally flawed. (1) Why are the names of the basic soyfoods not given in the other languages with which this book is concerned, including Mandarin Chinese, Korean, Indonesian, Vietnamese, Filipino, etc.? (3) Why is no English name given for each basic soyfood product? Sometimes the description is the English name, yet that name is rarely the name a person would use if they were selling the product in an English-speaking country. (3) Why are so many common "soybean products" omitted from this table, such as the various basic other types of Japanese miso and of Japanese shoyu (besides koikuchi shoyu), fermented black soybeans (douchi, dow see), soymilk, soy sprouts, roasted soy flour, whole soy flour, soybean oil, textured vegetable protein, etc. These problems are easily solved with alternate table designs. For example, have one table for each language, with the name of each soyfood product given first in English and then in the language of that country. Put the description and comments in a glossary to avoid repetition. Or, have a glossary entry for each soyfood, with the English name, description, comments.

The table is divided into four basic types of soybean products. After each, we will give the Cantonese name and then the Japanese name, and we will indicate disagreements using [sic]. NL = Not listed.

(1) Bean curd: Tau fu fu [sic] = kinugoshi tofu. Tau fu = momen tofu. NL = yaki tofu [sic, yaki-dofu]. NL = koya

© Copyright Soyinfo Center 2014

tofu or kori tofu [sic, koya-dofu or kori-dofu]. Tau fu pok = abura age. Fu chu = yuba [sic, fu chu is dried yuba sticks. Yuba in Mandarin is doufu pi]. fu joke [sic, fu jook] (bean curd sticks) = NL. Tim joke [sic, tiem jook] (sweet bean curd sticks) = NL. tau fu kon [Mandarin: doufu gan; pressed tofu].

(2) Soy sauce: Light = chan ch'an or sang chu = usu kuchi shoyu [sic, not the same]. Dark, medium = see yu chan yan = shoyu [sic, see yu is soy nugget sauce, not made in Japan. Japanese shoyu is not traditionally made in China]. Dark, heavy, sweet = chu yan = NL.

(3) Fermented bean pastes and cheeses. Black bean paste = dau see tau ch'ih = NL. Sweet, white bean paste = NL = shiro miso. White soy cheese [fermented tofu, should be classified under tofu] = pai doufu-ru or foo yee or foo yu = NL. Red soybean paste = NL = aka miso. Red soy cheese or spiced red bean curd = hung doufu-ru or nom yee or nam yu.

(3) Miscellaneous soybean productions. Soy jam = yun shi jeung = NL. Whole fermented soybeans = NL = nato [sic, natto]. Red bean sauce = saang see jeung = NL. Soybeans and malted rice = NL = moromi miso. Hoisin sauce = hoisin = NL.

In the "Basic recipes" section is a recipe for Indonesian dark sweet soy sauce (*ketjap manis*).

The Glossary (p. 499-515) contains the following soy-related entries: "Bean Curd (*tofu,* Japanese; *tao foo,* Chinese; *tahu,* Indonesian and Thai; *tokwa,* Philippines): A curdled, soft, cheeselike preparation made from soybean milk. Used as a source of protein in Asian cooking. Available loose or in packages."

Bean paste, red sweet [from azuki beans]. "Substitute Chinese sweet red bean paste, p. 132."

Bean paste, yellow (Chinese).

"Beans, black salted fermented. (Called dow see in Chinese) These are very salty soybeans, sold in cans in Chinese markets. Used with garlic as a flavoring for fish and pork dishes. substitute: Soybeans, cooked until soft and seasoned with plenty of soy sauce."

Bean sprouts: Usually refers to mung bean sprouts, "although alfalfa and soybean sprouts are also used."

Hoisin sauce: Soybeans are a major ingredient, along with garlic, chili peppers, and various other spices and ingredients.

Miso. Oyster sauce: "A Chinese sauce, made from oysters cooked in soy sauce and brine." Used as a seasoning with cooked foods and as a table sauce. See recipe p. 146.

Red bean sauce: "A strong table sauce made from mashed soybeans." Available in cans from Chinese stores.

Soy sauce

Also contains entries for: Kombu. Monosodium glutamate (MSG; "I do not use it nor do I recommend its use"). Mung beans.

The index contains 28 entries for soybean, 22 for soy sauce, 14 for miso, 6 for bean paste, oyster sauce, teriyaki, 4 for bean curd–deep fried, hoisin sauce, vegetarian dishes, 2 for ketjap, and 1 each for beans–black salted fermented, bean curd–fermented, jam–soy, jang (see miso), milk–soybean, ragi, shoyu (see soy sauce), soybean oil, sukiyaki, tahu, tau-fu or tau-hu (see bean curd), tempe [tempeh], textured vegetable protein (TVP), tofu (see bean curd), tou shih [fermented black soybeans],

About the author (from the rear cover): "Jennifer Brennan grew up in Pakistan and India and has spent many years in Southeast Asia. She is the author of *The Original Thai Cookbook."* She is "Winner of the IACP [International Association of Culinary Professionals] Award for the Best Literary Food Writing."

8200. Bromfield, Kenneth R. 1984. Soybean rust. American Phytopathological Society, 3340 Pilot Knob Rd., St. Paul, MN 55121. 65 p. Monograph No. 11. [124 ref]

• ***Summary:*** This monograph is one of the most important contributions to the understanding of soybean rust. The author reviews the importance of leaf rust in countries where the disease occurs and gives detailed information for each country about when the disease and pathogen were first recorded.

The disease is caused by *Phakopsora pachyrhizi* Sydow. Research on soybean rust...

Early reports on soybean rust in Asia include Japan 1902, India 1906, Taiwan 1914, and Philippines 1914.

The section titled "The Americas" (p. 7) states: In the Americas, the soybean rust pathogen has been reported on a number of leguminous species as *P. pachyrhizi* or as one of its synonyms, the most common being *P. vignae.* Countries from which the pathogen has been reported and the year of first report are: Puerto Rico (1913), Mexico (1917), Cuba (1926), Trinidad (1926), St. Thomas (1926), Colombia (1933), Guatemala (1940), Brazil (1940 as *P. crotolariae,* 1979 as *P. pachyrhizi*), Venezuela (1943), Chile (1962), and Costa Rica (1976).

Note: Letter (e-mail) from Morris Bonde, USDA / ARS Foreign Disease–Weed Science Research Unit. 2005. April 6. The rust reported on soybeans on all these Western Hemisphere countries can be assumed to be *Phakopsora meibomiae.* Address: USDA ARS, Plant Disease Research Lab., Fort Detrick, Frederick, Maryland 21701.

the soybean for *National Geographic* magazine. This handwritten log is filed in Soyinfo Center file cabinets by country keyword. Thus, the portion concerning Sri Lanka (p. 13-43, 57-64) is filed with the documents concerning South Asia (AsSo) in 1984. The first person he met in Sri Lanka was Mr. S. Pathiravitana, editor, *Soyanews.*

8203. Just In Foods, Inc. 1984. Cooking with miso–General principles (Card). Rutherfordton, North Carolina. 1 p. Front and back. 12 x 14 cm.
• ***Summary:*** This card, printed front and back, gives a brief, general description of miso. It begins: "Every morning millions of Japanese wake up to a hot, stimulating bowl of miso soup. Miso (pronounced 'mee-so') is a delicious, very versatile fermented soy food. Loaded with protein, high in vitamin B12, essential amino acids and minerals, but very low in fat and calories, miso is a concentrated source of many nutrients." After describing the nutritional and medicinal value, varieties and colors, versatility, and use in miso soup, it concludes: "According to ancient Japanese mythology, miso is a gift from the Gods. We at the American Miso Company are striving to maintain the simplicity and purity of this previous gift."

On the front of the card: An illustration at the lower right shows a wooden keg of miso bound with three ropes that join at the top. The company logo of crossed sheaves of grain in a circle appears at the top right. Address: Box 541, Route 3, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

8204. Kagaku Gijutsu-cho, Shigen Chosa-kai (Science & Technology Bureau). 1984. Shitei shokuhin seibun hyô [Standard tables of food composition in Japan. 4th ed.]. Tokyo. 370 p. Introduction by R. Kagawa, Joshi Eiyo Daigaku. 28 cm. [Jap; Eng]
• ***Summary:*** Pages 76-80 gives a nutritional analysis of the following Japanese soyfoods: Soybeans: whole domestic (dry, or boiled), USA whole dry, Chinese whole dry. Green immature: raw, or boiled. Soybean sprouts: raw, or boiled. Defatted soybeans: whole, or dehulled. Kinako (roasted, ground soybeans). Budô-mame. Tofu: regular (momen), silken (kinugoshi), soft, packed, Okinawa tofu, grilled (yaki-dofu), nama-agé (deep-fried tofu cutlets), abura-agé (deep-fried tofu pouches), ganmodoki, kori-dofu, Tofu chikuwa (steamed, or roasted). Natto: Itohiki natto, goto-natto, tera-natto (fermented black soybeans). Miso: Rice koji miso (ama miso, light yellow miso, dark yellow miso), barley koji miso, soybean koji miso, dried miso, kinzanji miso, hishio miso. Okara. Soymilk: regular, reconstituted, soft drinks. Yuba: Fresh, or dried.

Page 254 gives the amino acid composition of soybeans, tofu, dried frozen tofu, yuba, okara, natto, and 3 types of miso. Address: Japan.

8205. Kikkoman. 1984. Kikkoman (Singapore) PTE. LTD. (Brochure). Tokyo: Kikkoman Corp. 9 p. [Eng]
• ***Summary:*** Construction of this plant began in Aug. 1983. "The completion of the facility in July 1984 was celebrated with a push-button ceremony to signal the beginning of Kikkoman Soy Sauce production in Singapore." The plant cost $14 million to build. The grand opening of the Kikkoman shoyu plant in Singapore was on 21 Nov. 1984. Located at 7 Senoco Crescent, Singapore 2775, the plant has a production capacity of 3,000,000 liters a year, an area of 18,000 square meters, and 40 employees. Address: Tokyo.

8206. Liu, Chiung-Pi; Shanmugasundaram, S. 1984. Frozen vegetable soybean industry in Taiwan. In: Proceedings of the Symposium on Vegetables and Ornamentals in the Tropics. See p. 199-212. Held 27-28 Oct. 1982 at Universiti Pertanian Malaysia, Malaysia. [Eng; mal]
• ***Summary:*** The term "vegetable soybean" refers to "immature green soybeans, either in pods or as shelled beans." Vegetable soybean varieties were introduced into Taiwan in about 1967 by Japanese trading companies. Frozen soybeans now constitute about 45% of all frozen vegetables exported from Japan, making them the most important and profitable frozen vegetable exported from Taiwan. Approximately 60% of Taiwan's frozen soybeans are exported through Japanese trading firms, especially C. Itoh Co. Ltd., Mitsui Bussan Co. Ltd., Mitsubishi Co. Ltd., Marubeni Co. Ltd., and Toshoku Co. Ltd. In 1981 Taiwan exported 25,000 tons of frozen vegetable soybean pods worth US$21 million to Japan. These frozen exports have been rising steadily since 1975, as shown in Fig. 1.

Although new varieties of vegetable soybeans are now being tested, 95% of the vegetable soybean area in Taiwan is planted with the variety Tsurunoko ("Child of the crane"), known to Taiwanese farmers as #205. In Taiwan an estimated 4,600 ha were planted to vegetable soybeans in 1980, increasing to 5,300 ha in 1981. Most of this area is concentrated in Pintung and Kaohsiung counties in southern Taiwan (just below the Tropic of Cancer), but significant amounts are also planted to the northwest in Changhwa and Taichung counties. The primary cropping season is autumn.

Table 6 shows expenditures (in US dollars per year) on selected foods in Taipei, Taiwan, from 1977 to 1981. The figures 1977–1981 for various soy-related foods are: Soybean curd (tofu) 7.9–7.1. Soybean curd cake (okara) 9.3–8.4. Soybean milk 3.0 (1978)–5.0. Vegetable soybean without pod 2.5–2.6. Soybean 0.5–0.6. Address: AVRDC, Tainan, Taiwan.

8209. Saito, Akio. 1984. [Chronology of soybeans in Japan, 1970 to 1984] (Document part). In: Akio Saito. 1985. Daizu Geppo (Soybean Monthly News). Feb. p. 16-18. [Jap]
• ***Summary:*** 1970–Soybean cultivation area in Japan drops to 95,500 ha, falling below 100,000 ha for the first time. Soybean cultivation area in Japan is nearly 10% of total cultivation area for all crops.

1970–Soybean imports rise to 3,243,790 tonnes, passing 3 million tonnes for the first time.

1972–Production of defatted soybean meal reaches 2,035,000 tonnes, topping 2 million tonnes for the first time. Production has risen 2.8 fold during the past decade.

1972–Production of deep-fried tofu pouches (*aburage*) reaches 200,000 tonnes.

1973–Soybean imports reach 3,635,000 tonnes, up 7% over last year despite U.S. export regulations.

1973–Some 2,740,000 tonnes of soybeans, representing about 80% of all soybeans in Japan, are crushed to make soy oil. 1973 Jan. 27–An extraordinary Cabinet meeting is held and the decision is made to import soybeans from the USA urgently. The price of soybeans in late 1972 was 3,000 yen per 60 kg sack but now it has become very difficult to get them even if you pay 15,000 yen per 60 kg. Soybeans are called "yellow diamonds."

1973 June 27–President Richard Nixon sets new regulations for U.S. soybean exports. These give the Japanese tofu, miso, and soy oil industries a big "shock."

1973 July 6–The Japanese government passes a new law that forbids soybean brokers or sellers in Japan from buying up and selling at inflated prices 16 important items–including soybeans.

1973 July 12–The Japanese Department of Commerce announces that it permits the export of soybeans for special food uses, such as tofu and high-quality misos, which were planted under previous contracts.

1973 Sept. 7–The U.S. Department of Agriculture removes all regulations that concern exports of agricultural products.

1973 Oct. 17–OPEC nations decide to regulate the production and supply of crude petroleum. This leads to huge price increases in petroleum products–known in Japan as the "oil shock." Japanese buy up toilet paper and wash detergents causing much confusion.

1974–Good quality miso now retails on average for 251 yen/kg, up 22.4% from last year. The average retail price of shoyu in Tokyo is 434 yen for 3 liters, up 33.5% from last year.

1974 Feb.–The Japanese Ministry of Agriculture and Forestry asks manufacturers of tofu, natto, deep-fried tofu pouches, and dried-frozen tofu to reduce the retail prices of their products to the levels they were at in November 1973.

1974 July 30–In order to get rid of AF2 (a preservative widely used in tofu), the City of Tokyo decides to make a public announcement of all foods which may contain AF2 and announces that food inspections will start immediately, on August 1.

1974 Aug.–The Japanese Ministry of Public Welfare forbids the usage of AF2.

1974 Oct.–The JAS food certification system, formerly applied to widely distributed foods, is applied to tofu, natto, konnyaku, etc., which are foods that are distributed over a small area.

1975–The typical price of Tofu in Tokyo is 60-70 yen per 300 gm. Yet in supermarkets it averages 50 yen, and some sell it for as little as 25 yen.

1976–Soybean production in Japan drops to 109,500 tonnes, the lowest level since 1878 when production statistics started to be recorded.

1978–The soybean cultivation area reaches 127,000 ha, topping 100,000 ha for the first time in 9 years.

1978–Soybean imports rise to 4,260,000 tonnes, topping 4 million tonnes for the first time. This is 4.5 times as much soybean imports as 20 years ago.

1978 Aug.–Unbranded generic foods, such as shoyu, miso, and salad oil, start to be sold. They retail for about 30% less than major branded products.

1979–Tofu production continues to rise, reaching 1,114,000 tonnes, and topping 1.1 million tonnes for the first time.

1980–Production of natto reaches 153,000 tonnes, up 33% compared with 10 years ago (when it was 115,000 tonnes).

1981–The area occupied by registered soybean varieties rises to more than 60% of total soybean area.

1981 Per capita consumption of miso drops below 6 kg/year to 5.9 kg/year, down 30% compared with 20 years ago (when it was 8.4 kg) This is a reflection of the health food movement in Japan.

1981 Sept.–Dr. Hirayama of the National Cancer Center announces that miso soup has some effect on lowering the death rate from stomach cancer, stroke, and sclerosis of the liver.

1981 Nov.–The Ministry of Agriculture and Forestry announces JAS (Japanese Agricultural Standards) for soymilk. The soymilk boom starts. The total yen value of the soymilk by all major Japanese manufacturers is 5,000 million yen.

1982–There are now 77 registered varieties of soybeans cultivated in Japan. Two of these (Norin 1-go and Norin 5-go) have a Norin [Ministry of Agriculture] number, and 25
