World. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p.

• ***Summary:*** This is a remarkable book by a remarkable man, with many deep insights into both traditional and modern cultures in Japan and the USA; it gives a unique, authentic view of Japanese culture, and makes liberal use of the Japanese names for things, such as food, utensils, techniques, houses, etc. He uses the Japanese words first, then explains what they mean (in parentheses) in English. Thus the book makes it easy and enjoyable to learn Japanese food-related words. Moreover, the book is brimming with interesting information about traditional soyfoods in Japan.

This record will focus on tofu: "Tofu, soybean cake–also called at the time [14th century] *shira kabe* or white adobe–was introduced by Zen Buddhist priests. Today, nearby most temples are small stands offering tofu handmade by the priests" (p. 27).

"A dish that was found on both this island [located south of Tokyo, 4 hours by boat south of Hachijô-jima] and in my home town [of Akita] was called *kayaki* or *kai yaki***.** *Kayaki* means shell bake. A large scallop shell is placed over the fire and filled with fish, tofu and seasoned vegetables. Miso, soy sauce, or *shottsuru* (juice from pickling fish) are added for taste" (p. 40).

His home town, Akita, is still famous for a dish named *kiritampo;* it is white rice that has been cooked and wrapped around a wooden handle about 16 inches long. The handle is secured in the *irori* [sunken fireplace] next to the fire to sear the outer layer of rice. Then the handle is removed. The Matagi–one tribe of mountain hunters in the Owu range near Akita–packed this same *kiritampo* for their long hunting expeditions. Originally the Matagi added mushrooms added mushrooms they found under the autumn leaves to complete the dish. "Today we add tofu and other ingredients to make a dish that can be found in the finest traditional restaurants" (p. 42-43). Also on page 43 the author explains the origin of sukiyaki; *suki* means spade and *yaki* means barbecue.

In the section on vinegar and pickling: Lightly sour Chinese cabbage mixed with tofu and chopped negi (Japanese onion / leeks), simmered with mater, miso and sakekasu (rice wine lees) makes a delightfully sour dish (p. 66).

"Mame rui–Beans: The most popular product made from soybeans is tofu and I will go into tofu in greater length in the section on products used daily. Here we shall explore how to safe fresh tofu for future use.

"A block of tofu can be cut into half-inch squares and freeze-dried to make *shimidofu***.** Another common name is *koyadofu,* named after Zen monks who lived on Mt. Koya near Kyoto who first discovered this process.

"We don't need to go back this far in history to find *shimidofu***.** It was common practice for farmers to hang tofu under the eaves of the house to dry. Although tofu came from China, the making of *shimidofu* is Japanese.

"The *shimidofu* available in markets today is sometimes processed with ammonia. There is a three-month shelf life for *shimidofu***.** If it is too old it won't soften again when soaked in water. Of course, it also doesn't taste very good.

"If the temperature where you live drops below 32º Fahrenheit for consecutive periods you can make *shimidofu* yourself. You can't make it in the freezer. You need to set it out where strong cold winds blow. Tofu turns yellow when it is freeze dried. Don't worry, this is natural."

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *shimidofu* to refer to dried-frozen tofu.

"Tofu is also preserved through pickling in salt. In Japan, tofu pickled in salt is no longer available. Salt pickling is still popular in China and in other parts of Southeast Asia (p. 92).

The chapter titled "Products used daily" begins: "Tofu–Soybean Curd: Americans frequently ask me what Japanese people eat on a daily basis. Sometime I get disappointed looks when I tell them. I think they expect me to describe some strange, exotic dishes never heard of here in the United States. In the larger cities and towns of Japan today, the younger generation's diet is not so different than here in the U.S. Milk, cheese, and ham are common sights in most young family homes.

"Visiting a home in the country which continues to practice the old customs is a slightly different story. In these homes (almost stubbornly) mostly traditional foods are served. If there is a difference between the traditional households of the past and present, it is in the way the foods are procured, not the foods themselves. Instead of making most everything at home, the people of the countryside visit the grocery store. The flavors therefore are not quite as fresh and good as they used to be.

"When I was a child, the tofu peddler came by early every morning blowing his horn and yelling, 'Tofu, tofu!' in a loud voice. His bicycle was equipped with a metal washtub filled with fresh water and the tofu he had made himself that day. He also carried other products, like *age* (deep-fried soybean puff), *yakidofu* (broiled tofu), *atsu age* (deep-fried tofu cutlet), and konnyaku (devil's tongue yam cake).

"The tofu peddlers made tofu in larger blocks than you buy in the United States. One block was called a *cho***.** You could buy a half or quarter *cho* if you wished.

"The tofu peddler was very familiar with our family and knew how much tofu or *age* we used daily. Knowing how much we needed, he filled the time with pleasantries and friendly conversation as he filled our bowl with the day's supply.

"Traditionally, the old tofu makers used the mineral nigari (bittern), found naturally in fresh sea water, as a solidifier during processing. The tofu found in the supermarkets is made with man-made solidifiers. The nutritional value of mass-produced tofu is rather less than

© Copyright Soyinfo Center 2014

tofu made in the traditional fashion. Tofu was brought to Japan by Japanese priests who went to China to study Buddhism. Today, for example, near the old temples of Kyoto there are tofu shops and restaurants that date back many, many generations.

"From its introduction, tofu was eaten by the people of the imperial courts. It was not until the Edo period (1603-1867) that tofu became popular among all classes. Since those earlier times tofu has become a major part of the Japanese diet, one of its daily foods.

"When I was a curator, I spent some time with an old man who made tofu for me in the style that was originally taught to him. I was surprised; his tofu was so hard you could tie blocks of it up with a rope and carry it. Naturally, the solidifier he used was nigari from fresh ocean water.

"Proverbs regarding tofu have been told for generations: something impossible is said to be 'like breaking your teeth eating tofu' or 'like picking up tofu with a pair of tongs.' A spoiled person 'has his tofu peeled.' Remarking that anyone can change: 'even tofu gets tight if cooked long enough.' I heard these proverbs on more than one occasion from my parents!

"The owner of one large tofu company in Denver told me about the first time he took a fresh tofu sample to one of the large local markets. The buyer took one bite and said, 'This is not tofu.' The new tofu maker was surprised and returned home to make another batch, believing in the traditional techniques he knew well. Again the buyer took a bite and said, 'This is not tofu, it is not sour. I have real tofu brought to me from California by truck. This tofu does not taste like the tofu I get from California.' I started laughing before he finished the story. The tofu shipped from California had begun to spoil en route. The buyer, not having anything to compare it to, thought all tofu was supposed to taste sour!

"Fresh tofu is a food high in nutritional value. However, because it has a high water content, it spoils easily. When you are buying tofu, I recommend you buy it at a store that has a good turnover rate, to make sure it is fresh. A bulging plastic cover indicates that gas is being released and the tofu is no longer fresh. After you have opened the package, submerge the tofu completely in fresh water. Tofu absorbs odors easily, so it needs to be covered. If refrigerated, tofu should last for three or four days.

"While I was running my restaurant, young mothers sometimes asked me for raw tofu for their children, but I always boiled it first. Like a sushi chef serving raw fish, it was my responsibility not to serve anything that might have spoiled" (p. 96).

Photos show: (1) Ishiusu–hand-turned stone mill grinding soybeans (p. 94). (2) Tofu products on a woven bamboo tray (1) Yakidofu. (2) Ganmo. (3) Tofu. (4) Atsuage. (5) Koyadofu. (6) Age (p. 96) (Continued). Address: Former owner and head chef, Domo restaurant, Denver, Colorado. Founder and chief instructor Nippon Kan Aikido and Cultural Center, Denver, Colorado.

9837. Homma, Gaku. 1991. Tofu, grilled tofu, and fried tofu (Document part). In: Gaku Homma. 1991. The Folk Art of Japanese Country Cooking: A Traditional Diet for Today's World. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p.

• ***Summary:*** Continued: "Tofu has been promoted here in the United States as a 'new age' food that is very good for you. Please remember that tofu distributed on a large scale and produced with chemical solidifiers may not be quite the same as the traditional product you may have read about. I suggest you boil the tofu just a little bit before serving, especially to children.

"Okara–Soybean mash: If you visit a tofu factory you will notice that the process results in two products. Unohana or okara is the soybean mash by-product. It used to be that the small tofu maker would give okara away. At large tofu factories today it is sold for animal fodder.

"Although the nutritional value of okara is high, it has always had the image of a by-product and was not marketable. This has been a problem for tofu makers. With two products of similar nutritional value, one was in demand with his customers, and one he kept in the back room!

"Today okara has become a popular diet food because it is filling, nutritious, and low-calorie. Larger Japanese markets in the U.S. now carry okara.

"When I was a child, the tofu shop gave okara away, but to use it in cooking you needed to add many other ingredients. Therefore people used to say that okara was free but expensive" (p. 94-97).

Note: In the index (p. 245), okara or unohana is defined as "Bean curd lees." This is the earliest English-language document seen (June 2013) that uses the term "soybean mash" or the term "Bean curd lees" to refer to okara.

When the author he was a child, he remembers the morning sounds of chopping as the tofu and scallions were cut for miso soup (p. 104).

The section on "Breakfast" states: "The most simple breakfast includes *ichihan, ichiju,* and *issai,* which means one bowl of rice, one bowl of soup, and one side dish. This simple meal is given during religious training, eaten for four or five days consecutively before a fast, or eaten to change one's diet or to lose weight." "The *ichiju* is either a kombu- or shiitake-based miso soup or a clear soup. The misoshiru (miso soup) contains a good balance of tofu and vegetables." "There are many *issai* (called *okazu*) but they can be divided into the following basic categories... *daizu seihin* [soy products] (tofu, fried tofu cutlets, grilled tofu, natto, and other soybean products) (p. 121-22).

The section titled *"Daizu seihin*–Soybean products" includes a subsection on "Tofu–Soybean cake" which begins: "Tofu's popularity is increasing rapidly in the United States. It is carried by most major grocery chains." Many different

© Copyright Soyinfo Center 2014

tofu products are available. "Occasionally, I still see tofu sold in a container which resembles a Chinese take-out box." "We have offered tofu-making classes at Nippon Kan. In these classes I don't think the end product, which can be purchased at the grocery store for $1 to $1.50, is as important as the time shared together experiencing part of Japanese culture.

"There are many tofu-related parables: trying to talk to someone who won't listen is like trying to hammer a nail into a block of tofu."

Four basic tofu recipes are given: (1) Yakko–Soft tofu served chilled. (2) Yaki dofu–Sauteed tofu. (3) Iri-dofu–Scrambled tofu (p. 139-41).

On pages 142-43 is a detailed, illustrated description of how to make tofu at home, using 2 cups dry soybeans and ½ teaspoon nigari.

In the section on breakfast recipes for *misoshiru* (miso soup) are recipes for: (1) Tofu to wakame. (2) Sogi tofu to negi–sliced tofu and Japanese leeks. (3) Kuzushi tofu to horenso–Mashed tofu with spinach. (4) Kyabetsu to age–Cabbage with deep-fried tofu puff. (5) Moyashi to age–Soybean sprouts with deep-fried tofu puff. (6) Kinusaya to age–Snow peas with deep-fried tofu puff (p. 153-56).

In the section titled "Dinner (Yushoku)" under aemono recipes are recipes for: (1) Shiraae–Vegetables and tofu flavored with miso. (2) Kaiso no ume shiraae–Sea vegetables and tofu flavored with miso and pickled plum. (3) Burokkori no shiraae–Broccoli and tofu flavored with miso and pickled plum (p. 178-79).

In the section on Nimono recipes (Poached dishes) are recipes for: (1) Hijiki or arame (with 1 age puff and 1/3 block had tofu). (2) Okara (soybean mash) sauteed with vegetables. (3) Koyadofu no tamagoni–Freeze-dried tofu with soft scrambled egg. (4) Niyakko tofu–Soft scrambled eggs with tofu, spinach and mushrooms. (5) Age no fukuroni–Stuffed deep-fried tofu puffs. (6) Iridofu–Scrambled tofu flavored with miso (p. 186-90).

In the section on Yakimono (grilled dishes for dinner) are recipes for: (1) Tofu no misozuke yaki–Broiled tofu pickled in miso. (2) Tofu no dengaku–Sauteed tofu with a variety of miso sauces. (3) Gisei dofu–Tofu omelette. (4) Yaki dofu–Fried tofu. (5) Age no hasamiyaki–Grilled tofu puffs (p. 210-12).

In the section on Agemono [deep-fried] recipes is a recipe for: (1) Age dofu–Deep-fried tofu.

In the section on Nabemono [one-pot cookery] recipes are recipes for: (1) Yudofu–Tofu in hot water. Kaisen yudofu–Tofu and seafood casserole. (3) Niku yudofu–Tofu and meat casserole. (4) Sankai yudofu–"Surf and turf" with tofu. (5) Torinabe–Chicken and vegetable casserole flavored with soy sauce. (6) Buta nabe–Sliced pork and vegetable casserole flavored with soy sauce (p. 222-24).

In the section on Sukiyaki nabe–Casseroles cooked with little liquid are recipes for: (1) Gyuniku sukiyaki–Beef sukiyaki (with yakidofu). (2) Butaniku sukiyaki–Pork sukiyaki (with yakidofu) (p. 230-31). Address: Former owner and head chef, Domo restaurant, Denver, Colorado. Founder and chief instructor Nippon Kan Aikido and Cultural Center, Denver, Colorado.

9838. Homma, Gaku. 1991. Kuromame (Black soybeans at New Year's) (Document part). In: Gaku Homma. 1991. The Folk Art of Japanese Country Cooking: A Traditional Diet for Today's World. Translated by Emily Busch. Berkeley, California: North Atlantic Books. xii + 270 p. See p. 51.
• ***Summary:*** "On December 15, the Japanese begin cooking the traditional foods for the New Year's celebration. These are called *osechi...* Black [soy] beans are cooked and sweetened to make *kuromame."* These foods "are not chosen for their nutritional benefits; they are meant for good luck." Address: Former owner and head chef, Domo restaurant, Denver, Colorado. Founder and chief instructor Nippon Kan Aikido and Cultural Center, Denver, Colorado.

9839. Hymowitz, T.; Bernard, R.L. 1991. Origin of the soybean and germplasm introduction and development in North America. In: H.L. Shands and L.E. Wiesner, eds. 1991-1992. Use of Plant Introductions in Cultivar Development: Proceedings of a symposium sponsored by Division C-1 of the Crop Science Society of America in Las Vegas, Nevada, 19 Oct. 1989. 2 vols. Part 1. CSSA Special Publication Number 17. Madison, Wisconsin: Crop Science Society of America (CSSA). 164 p. See p. 147-64. Chap. 9. Crop Science Society of America Special Publication No. 17. [34 ref]
• ***Summary:*** Contents: Introduction. Origin of the genus *glycine.* Origin of the soybean. Introduction of the soybean to North America (by Samuel Bowen in 1765). Experiment stations and technology. Introduced soybean germplasm. Cultivar development. *Glycine soja.* Wild perennial *glycine* species.

"The genus *Glycine* Willd is divided into two subgenera, *Glycine* and *Soja* (Moench) F.J. Herm. The subgenus *Glycine* contains 15 wild perennial species (Singh et al., 1988; Tindale and Craven, 1988). Thirteen of the species [*G. albicans* Tind. and Craven, *G. arenaria* Tind., *G. curvata* Tind., *G. canescens* F.J. Herm., *G. clandestina* Wendl., *G. curvata* Tind., *G. cyrtoloba* Tind., *G. falcata* Benth., *G. hirticaulis* Tind. and Craven, *G. lactovirens* Tind. and Craven, *G. latifolia* (Benth.) Newell and Hymowitz, *G. latrobeana* (Meissn.) Benth. and *G. microphylla* (Benth.) Tind.] are indigenous to Australia. All carry $2n = 40$ chromosomes (diploid) except for *G. hirticaulis* which is tetraploid, $2n = 80$.

"*Glycine tabacina* (Labill.) Benth. with $2n = 40$ or 80 chromosomes, has been found in Australia, Taiwan, south Pacific Islands (New Caledonia, Fiji, Tonga, Vanuatu, Niue) and west central Pacific Islands (Mariana, Ryukyu). All accessions of *G. tabacina* collected outside of Australia are

© Copyright Soyinfo Center 2014

tetraploid (2*n* = 80) and even within Australia, tetraploids predominate over diploid forms. *Glycine tomentella* Hayata has been found in Australia (2*n* = 38, 40, 78, or 80), Papua New Guinea (2*n* = 40, 78 or 80), Indonesia (2*n* = 80), Philippines (2*n* = 80), and Taiwan (2*n* = 80). Singh et al. (1987, 1989) demonstrated that the complexes of *G. tabacina* and *G. tomentella* evolved through allopolyploidization in Australia."

"The soybean was first introduced to North America in 1765 by Samuel Bowen, a seaman employed by the East India Company. Bowen brought soybean from China via London to Greenwich, his residence in the province of Georgia. Situated a few kilometers east of Savannah, the 180 ha of Greenwich (now a cemetery) became the center of his farming and manufacturing enterprises.

"By the late 1850s, soybean was evaluated for forage potential by many farmers throughout the USA (Hymowitz, 1987). However, the scientific approach for evaluating the crop had to wait until the emergence of the agricultural experiment stations at land grant institutions during the latter part of the nineteenth century."

Table 9-1 (p. 154-57) shows "Ancestral cultivars and their occurrence in pedigrees of U.S.- Canadian publicly developed grain-type soybean cultivars (excluding backcross-developed isolines covered in Table 3). Part A of this table is a summary by maturity group and part B is a summary by decade of release. Each part is divided into number of descendant cultivars, northern ancestors, southern ancestors, ancestors chosen for pest resistance, other, and number of ancestral cultivars. The ten most important northern ancestors (in descending order of importance with the number of occurrences in pedigrees in parentheses) are: Mandarin (143), Manchu (121), Richland (119), A.K. (108), Dunfield (83), Mukden (73), No. 171 (30), Pakota (27), L37-1355 (25), and Manitoba Brown (14). The 13 most important southern ancestors are: CNS (118), Tokyo (109), PI54610 (108), S-100 (82), Roanoke (42), Haberlandt (40), Arksoy (40), Palmetto (34), Biloxi (9), PI 60406 (7), Otootan (7), Laredo (4), Mammoth Yellow (5).

Table 9-2 (p. 158-59) shows the "Origins of major ancestral cultivars of the 221 cultivars developed at public institutions in the USA and Canada." For each cultivar is given: Descendant cultivars, maturity group, year of introduction, country and locality of origin, and original cultivar name.

Table 9-3 (p. 161) shows "Sources of genes backcrossed into domestic public soybean cultivars." The named varieties are Kanro, Mukden, Arksoy, Higan, Kingwa, and CNS. All 8 of the most important northern cultivars originated in China. Of the 12 most important southern cultivars, 9 originated in China, 2 in Korea, and 2 or 3 in Japan. Address: Univ. of Illinois, Urbana, Illinois.

9842. Loewen, Nancy. 1991. Food in Korea. Vero Beach, Florida: Rourke Publications, Inc. 32 p. Illust. (color photos). Index. 26 cm. Series: International Food Library.
• ***Summary:*** Juvenile literature: An introductory book for junior high school students. Text by Nancy Loewen. Recipes compiled by Judith A. Ahlstrom.

Contents: 1. An introduction to Korea. 2. A common heritage. 3. North and South Korea. 4. Agriculture and industry. 5. Holidays in Korea. 6. Food customs in Korea. 7. Korean foods. 8. A festive meal. 9. A red-meat meal. 10. A white-meat meal. 11. An everyday meal. Glossary of cooking terms. Korean cooking.

The Japanese took control of Korea in 1910 and remained in power until 15 Aug. 1945, when the country was liberated by allied forces. That didn't make Korea a free country, however. After 35 years of Japanese rule, Korea's political system was weak and the northern half of Korea was soon occupied by communist forces. The country was divided and in 1948 two new governments–one for the North and one for the South, were established. Then in 1950 North Korea invaded South Korea; the Korean War had begun; it lasted until 1953 with Korea still divided at Panmunjom–as it is today.

Korea still uses two calendars: the Gregorian calendar (used in the USA and in most other countries) and the ancient Chinese lunar calendar. Korea's older holidays are still observed based on the lunar calendar.

Common foods in Korea include rice, soy sauce, tofu, kimchi, and soybean sprouts.

9843. Lumpkin, T.A.; Konovsky, J.C.; Larsen, K.J.; McClary, D. 1991. Potential new specialty crops from Asia: Azuki bean, edamame soybean and *Astragalus.* In: Jules Janick and James E. Simon, eds. 1991. New Crops. New York: John Wiley and Sons. xxi + 710 p. See p. 45-51. Proceedings of the Second National Symposium, New Crops: Exploration, Research, and Commercilization. Indianapolis, Indiana, 6-9 Oct. 1991. [28 ref]
• ***Summary:*** For each of these three crops, the authors discuss the botany, production, and uses.

The astragalus discussed in this paper, *Astragalus*

© Copyright Soyinfo Center 2014

adsurgens Pall, is also known as upstanding milkvetch, green great wall astragalus, or *sha da wang* (which means "flourished in sand storms" in Chinese). *Astragalus sinicus* (pronounced us-TRAG-uh-lus SIN-uh-kus), called *renge* [or *genge*] in Japanese and also called Chinese milkvetch, is an annual forage crop grown during the winter.

Note: The Chinese herb known as *huang-qi,* sold in the USA as Astragalus, is *Astragalus membranaceus.* It is considered a superior tonic, used to "invigorate vital energy" or "qi," strengthen the body's resistance, promote tissue regeneration and diuresis, and disperse poisons. In China it is used in conjunction with chemotherapy to treat cancer patients, and to enhance the immune system. Address: 1,3-4. • ***Summary:*** Contains many color photos and black-and-white cartoons. On the front cover we read: Eat umeboshi ever day to be healthy. In *bainiku ekisu* (plum fruit extract) the beneficial effects of the ume plum are concentrated. Its sourness is the key to its way to health (*kenkôhô*). Address: Japan.

9845. Ogawa, Tadashi; Bando, N.; Tsuji, H.; Okajima, H.; Nishikawa, K.; Sasaoka, K. 1991. Investigation of the IgE-binding proteins in soybeans by immunoblotting with the sera of the soybean-sensitive patients with atopic dermatitis. *J. of Nutritional Science and Vitaminology* (*Tokyo*) 37(6):555-65. [24 ref]

• ***Summary:*** This soybean allergenic protein, which is most strongly and frequently recognized by the IgE antibodies in sera of soybean-sensitive patients with atopic dermatitis, has been characterized. The allergen was isolated from the crude 7S-globulin fraction by gel-filtration chromatography. It has a molecular weight of more than 300,000. Address: 1. Dep. of Nutrition, School of Medicine, The Univ. of Tokushima, Kuramoto-cho 3, Tokushima 770, Japan.

9846. Passmore, Jacki. 1991. The encyclopedia of Asian food and cooking. New York, NY: William Morrow. 320 p. Illust. by Jan Smith. Index. 24 cm. [44 ref]

• ***Summary:*** The most complete book of its type seen to date (May 2010), with many helpful cross references (although sometimes flawed). Soyfoods are mentioned throughout. Unfortunately, for Chinese foods, the author does not distinguish between Mandarin and Cantonese, or between pinyin (newer) and Wade-Giles (older) styles of romanization. For some of the "Also known as" it is not clear to which of several previous entries this refers (see "Soybean"). Sometimes she gives standard transliterations (azuki, miso, tofu, yakidofu) yet at other times she writes phonetically (ah meh)–as an aid to correct pronunciation.

Ame (ah meh, Japan): A sweet jelly made from millet.

Azuki bean (*Phaseolus angularis*). Native to China; used in China since the Han Dynasty (206 BC–AD 220): An [or anko] (Japan): A sweetened paste of ground azuki beans available in smooth (koshi-an) and crunchy [chunky] (tsubu-an or tsubushi-an). Sarashi-an: A flour of ground azuki beans. Also known as hong dow (China), dried red beans, red beans [adzuki beans, aduki beans]. See also: Red bean paste, sweet.

Bean curd: Also known as dou-fu, dow foo (China); tahu (Indonesia), momen tofu, tofu (Japan); ta hu, ta hua (Malaysia); tahure ([fermented tofu] Philippines); tauhu kau (Thailand); dau hu, dau hu chung (Vietnam); bean custard, soybean cake.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *ta hu* to refer to Malaysian-style tofu.

Illustrations of: Fried bean curd, pressed bean curd. Almond bean curd (non-soy). Bean curd "brains": Also known as doufu nao (China); taho (Philippines). "Cotton" bean curd: Also known as momen tofu (Japan). Freeze-dried bean curd [dried-frozen tofu]: Also known as koya tofu (Japan). Fried bean curd: Also known as char doufu, doufu pok (China); agedofu, atsu-age, nama-age (Japan); tauhu tod (Thailand), dau hu chien (Vietnam). Fried bean curd pouches: Also known as aburage, usuage (Japan). Gan modoki. Grilled bean curd: Also known as doufu kan [sic], gone (China); yakidofu (Japan). Instant bean curd. Okara. Pressed bean curd: Also known as doufu kan (China), taukwa, tauhu kuning (pressed yellow bean curd) (Indonesia, Malaysia); tokwa (Philippines); tauhu leong (Thailand); dau hu ki (Vietnam). Silk bean curd: Also know as kinugoshi tofu (Japan), shui doufu (China), taho (Philippines).

Note 2. The author seems to be confused about "Silk bean curd." Japanese kinugoshi is made from relatively thick soymilk, which is "set" using a coagulant but without any separation of curds and whey. Yet on page 26 we read: "In China the name [for silk bean curd] translates as 'water bean curd,' It has a very smooth, delicate texture achieved by straining the coagulated liquid through fine mesh, then allowing the strained curds to settle without pressing." This is not a description of silken tofu, but rather of Japanese regular tofu (*momen-goshi*) made without any pressing weights.

Contains a recipe for homemade "Bean Curd" plus 3 bean curd recipes.

Bean curd by-products: Bean curd skin [yuba], bean curd sticks: Also known as fu jook pin, gee jook (China), yuba (Japan), forng ta ohu [tauhu] (Thailand); rolled bean curd, second bamboo.

Fermented bean curd: Also known as foo yu, fu-ru, narm yu (China), tahoe, tahu (Indonesia, Malaysia), tausi

© Copyright Soyinfo Center 2014

(Philippines), bean curd cheese, Chinese cheese, pickled bean curd, red bean curd, soybean cheese.

Moldy bean curd. Bean curd cheese: See bean curd by-products (fermented).

Bean pastes and sauces: Shih and jiang from China: (1) Bean sauce (jiang) also known as taucheo or tau sa (Malaysia, Nonya and Singapore cooking), mien see [mian shi] (China), taoco [Pron. = tao-cho] (Indonesia), tuong ot (Vietnam), bean paste, brown bean sauce, yellow bean sauce. (2) Black bean sauce (a recent addition to the family of Chinese sauces. A major ingredient is puréed fermented black beans with a hint of garlic and star anise. It tastes best when freshly made). (3) Chili bean paste (in addition to chopped dried chilies, it sometimes contains fermented black beans): Also known as lat chu jeung, as lat chu jeung yau (Garlic) (China); kochujang (Korea); bean paste with chili; hot bean paste; Sichuan hot bean paste. (4) Dhwen-Jang (Korea). See also miso. (5) Hoisin sauce (China): A sweet, thick, reddish brown sauce. One ingredient is fermented soybean paste. Not to be confused with the Chinese barbecue sauce called sha cha jang. Also known as hoi sin cheung (China); barbecue sauce. (5) Soybean paste. Also known as mean see jiang (China). (6) Sweet bean paste. In this context it is not the sweet bean paste made from azuki beans, but rather a sweet, thick, dark brown sauce made of ground fermented soybeans and sugar. Its salty-sweet flavor is used in marinades and roast meats. Also known as tim mean jiang (China).

Bean sprout: Mung bean sprouts, silver sprouts (mung bean sprouts with the roots and seed pods removed), soybean sprouts (They "are large, up to 5 inches {12.5 cm} in length, a deep, almost yellow color and strong in flavor..."). Also known as: Daai dau nga choy (soybean sprout), ngunn nga choy (silver sprouts), nga choy, sai dau nga choy (mung bean sprout) (China); tauge (Indonesia); moyashi (Japan); kacang ijo, kacang djong, kacang padi (Malaysia); togue (Philippines); taun gawk (Thailand); gia (Vietnam); bean shoots.

Beijing duck sauce (recipe with ½ cup sweet bean paste). Vietnamese-style Beijing duck sauce (with ½ cup sweet soy sauce–kecap manis).

Black bean: See Fermented black bean. Black bean sauce: See Bean pastes and sauces. Fermented black bean sauce. Black soybean: See soybean.

Broad bean paste. Broad bean sauce: "The best is made in Pixian, a city in Sichuan province, where it is used instead of soybean-based seasoning sauces."

Brown bean sauce: See Bean pastes and sauces.

Che hau sauce (Che how, China): See Bean pastes and sauces (Hoisin). Chick-pea.

China: Has the "oldest and most well-documented cuisine in the world." Chinese cheese: See Bean curd by-products (fermented). Chinese hot bean paste: See Bean pastes and sauces.

Dau hu (Dow hoo, Vietnam): See bean curd. Dau hu chien (Dow hoo chee-ian, Vietnam): See Bean curd, fried. Dau hu chung (Dow hoo chee-ung, Vietnam): See Bean curd. Dau hu ki (Dow hoo kee, Vietnam): See Bean curd, pressed.

Dengaku (plus recipe).

Dhwen-jang (Dwen-jang, Korea). Similar to Chinese soybean paste or Japanese akadashi miso. Also known as Korean bean paste. Doufou Kan [doufu gan], China: Bean curd (grilled, pressed). Dou-fu (Dau-fu, China). See Bean curd. Doufu nao (Daufu-nou, China): See Bean curd "brains." Doufu pok (daufu pork, China). See bean curd, fried. Dow foo (dau fu, China): See Bean curd.

Edamame (e dah ma meh, Japan): See soy bean.

Fermented bean curd: See Bean curd by-products. Fermented bean curd cake. See Bean curd by-products; tempe.

Fermented black beans (Shih, China). With recipe for "Fermented black bean sauce" (p. 106). Also known as dau see (China), black beans, dried black beans, preserved back beans.

Fermented red rice. Flours and thickeners: Kuzu (Japan). Mung bean flour. Soy flour (incl. kinako, which "is used in confections and to make noodles... In China, a thick, nutty-tasting noodle is made from soy flour"). Foo yu (Fu you, China). See Bean curd by-products (fermented). Forng Tao Hu (Fong tao huu, Thailand). See Bean curd by-products, bean curd sticks. Fu jook pin (Fu juk pin, China): See bean-curd by-products, bean curd skin. Fu-ru (Fu yue). Gee Jook (Ji Juk, China): Bean curd sticks.

Gluten: Kau fu, kohana fu, matsutake fu, mein jin pau, nama fu, su tang, yaki fu. Also known as: Kau fu, mianjin, mein jin pau, su tang (China), kohana fu, yaki fu (Japan).

Gochujang (Korea). See also: Chili paste, chili sauce. Korean barbecue sauce.

Grilled bean curd: See Bean curd, grilled.

Hatcho miso: See miso, Hatcho. Hot bean paste. Hot black bean sauce. Inaka miso: See miso.

Japan: "Japanese cooks revel in the artistry of their craft. The Japanese love of nature is a challenge to present each ingredient as reminder of its origins: to bring nature to the table...," Regional cuisines are not of great importance in Japan; cooking methods (incl. Dengaku), salting (incl. Teriyaki), cutting and slicing techniques.

Kecap asin (Ket-chup a-seen, Indonesia): See Soy sauce, sweet and salty. Kecap cair (cha-ear, Malaysia): See soy sauce, light. Kecap hitam (Indonesia): See soy sauce, sweet and salty. Kecap ikan (Indonesia): See Fish sauce. Kecap manis (mah-niece, Indonesia): See Soy sauce, sweet and salty. Kecap petis (pet-is, Indonesia): See fish sauce. Kinugoshi tofu (Japan): See Bean curd, silk.

Kochujang (go-choo jang, Korea): See Bean pastes and sauces; chili pastes.

Koikuchi shoyu (Japan): See soy sauce. Continued. Address: Author of several books on Asian cuisine.

9847. Passmore, Jacki. 1991. The encyclopedia of East Asian food and cooking (Document part II). New York, NY: William Morrow. 320 p. [44 ref]

• ***Summary:*** Continued from p. 153: Korean bean paste: See Dhwen jang. Koshi-an (Japan): See Azuki beans (an). Koya tofu (Japan): See Bean curd, freeze-dried [sic].

Kuzu (Japan): See Flours and thickeners. Lentil (*Lens esculenta*)*:* Red lentil, Red mung beans.

Light soy sauce: See Soy sauce.

Lu soy (lo shui, China): See soy sauce.

Maltose: Made by fermenting germinated grains of barley. When used to glaze foods, may have soy sauce and red food coloring added. Also known as: Malt sugar, [barley malt syrup].

"Ma-po" dofu [Mabo-dofu]: See beef.

Mean see jiang [mian shi jiang] (min see jiang, China): See Bean pastes and sauces.

Mein jin pau [mien jin pau] (China): See Gluten.

Mianjin (China): Gluten.

Mien see (mien-si [mian shi], China): See Bean pastes and sauces.

Miso (Japan): (1) Hatcho-miso. (2) Inaka miso or Sendai miso. Also known as Red miso. (3) Shinshu miso. (4) Shiro miso.

Mochi. Monosodium glutamate. Also known as: Mei jing (China); aji-no-moto (Japan); servuk perasa (Malaysia); ve tsin (Vietnam), M.S.G., taste essence, taste powder.

Moyashi (Japan): See Bean sprout.

Mung bean. Also known as moong ke dal (India); kacang djong, kacang eedjo [hijau, katjang idjo] (Indonesia); kacang hiau (Malaysia); tau ngok (Thailand); dau xanh (Vietnam); green gram.

Nama-age (nah-mah ah-geh, Japan): See Bean curd, deep fried.

Nama fu (Japan): Raw / uncooked wheat gluten.

Natto (Japan). See soybean.

Noodles: (1) Bean curd noodles (China). Also known as Soy noodles, soy vermicelli.

Oils and fats: Soybean oil. (2) Bean curd skin noodles (China) [yuba noodles].

Peanut (with many foreign names and recipes).

Preserved black beans: See Fermented black beans. Pressed bean curd: See Bean curd (pressed).

Red bean paste, sweet: "An important ingredient in Chinese and Japanese cooking, sweet red bean paste is made by boiling the red azuki bean and mashing it to a paste with lard or oil, then cooking it until it is fairly dry or thick. In Japan, red bean paste is made in two textures: the smooth purée is koshi-an and the chunky version, with the beans only partly crushed, is tsubushi-an. It is a filling for cakes and sweet buns, and is used in several desserts." Also known as hong dow sar (China), an (Japan). Contains a recipe for Sweet red bean paste.

Red rice: See Fermented red rice.

Rice: Many type of glutinous and non-glutinous.

Rolled bean curd: See Bean curd sticks [dried yuba].

Seaweed: Many different types. Seaweed gelatin or Seaweed jelly: See agar agar.

Sendai miso (Japan): See miso.

Sesame seed: Black sesame seed, sesame oil, sesame paste, white sesame seed.

Shinshu miso (Japan). Shui doufu (China): See bean curd (silk). Silk bean curd: See Bean curd (silk).

Soybean (*Glycine max*)*:* (1) Black soybeans. (2) Fresh soybeans [edamame]. (3) Yellow soybeans. Soybean cheese: See Bean curd, fermented [fermented tofu]. Soybean condiment: See Bean pastes and sauces. Soybean milk. Also known as tau cheing, tau ni (China). With homemade soymilk recipe. Soybean noodle: See Noodles, bean curd. Soybean oil: See fats and oils. Soybean paste: See Bean pastes and sauces. Soybean sprout: See bean sprout. Soy flour: See Flours and thickeners.

Soy sauce: "An ancient seasoning, first used in China more than 3,000 years ago. Known in its original form as *shih,* it was a thin salty liquid in which floated fragments of fermented soybeans." "Soy sauce is to Chinese and Japanese cooking what the pungent, salty fish sauce known as nam pla or nuoc mam is to Thailand and Vietnam respectively." (1) Dark soy sauce. Also known as jang yau, see yau (China); koikuchi shoyu, tamari (Japan), kecap pekat (Malaysia); mushroom soy. (2) Light soy sauce: Thinner, saltier, and lighter in color and flavor. It is used in cooking where its light color will not spoil the color of the ingredients. Also known as sang chau, see yau (China), shoyu, usukuchi shoyu (Japan), kecap cair (Malaysia), toyo (Philippines), nam siew (Thailand), xi dau (Vietnam), thin soy sauce. (3) "Lu soy (China) is a 'master sauce' based on soy sauce with sugar, ginger, and five-spice, It is used for simmering poultry and other meats to give a rich flavor and to color the food a deep brown. Also known as lu shui (China)."

Soy sauce, sweet and salty: (1) "Kecap asin (Indonesia) is a thick, salty, dark soy-based sauce used to impart a strong color and flavor. Its sweet counterpart is *kecap manis.* It is similar to, but thicker than, several dark soy sauces used in Chinese cooking." (2) Kecap hitam (Malaysia) is a sweet dark soy sauce. Slightly less spicy than kecap manis. (3) Kecap manis (Indonesia) is a sweet, dark, thick, aromatic soy sauce, especially widely used with satay. "It is similar to, though finer in flavor than, Chinese sweet soy sauce" [tian mian jiang]. Also known as kecap bentang manis (Indonesia); sweet soy sauce. (4) "Sweet soy sauce (China) is a dark, sweet sauce combining soy sauce, sugar, and malt sugar. Its distinctive malt-like taste goes well as a dip for fried snacks, poultry, and seafood." It appears frequently on the table in homes and restaurants in Fukien province, opposite Taiwan on the coast of south-eastern China. For a recipe, see Sweet soy sauce pork (p. 230). Note: This is not

© Copyright Soyinfo Center 2014

generally a commercial product. (5) Tim cheong (Malaysia) is a thick, sweet, black soy sauce, similar to that used in China. In Malaysia it is served with poh pia. Its flavor is closer to that of kecap hitam than to kecap manis.

Sprouts, soybean. See Bean sprout, soybean. Sushi (describes many types, with recipes). Sweet bean paste or Sweet bean sauce: See Bean pastes and sauces.

Taho (Philippine bean curd brains). Tahoe (Indonesia or Malaysia, fermented bean curd). Tahu (Malaysia bean curd). Ta hua (Malaysia bean curd). Tahure (Philippine bean curd).

Tamari (Japan): See soy sauce. Taucheo (Malaysia or Singapore, bean pastes and sauces). Tauge (Indonesia bean sprout). Tauhu kao (Thailand bean curd). Tauhu kuning (Indonesia and Malaysia bean curd pressed). Tauhu leong (Thailand bean curd, pressed). Tauhu tod (Thailand bean curd, fried). Taukwa (Indonesia and Malaysia bean curd pressed). Tau sa (Malaysia bean paste and sauces). Tausi (Philippines, bean curd products [sic, fermented black soybeans], fermented).

Tempe (Indonesia, Malaysia): Fermented soybean cake [tempeh]. Oncom [Ontjom]. Tokwa (Philippine bean curd pressed).

Tosa soy sauce (Japan): The classic sashimi accompaniment. Recipe given.

Tsukemono: Takuan, umeboshi.

Usu-age (Japan): See Bean curd (fried) purses.

Winged bean. Yuba (Japan).

Brief biography: "For more than twenty years she has been professionally involved with Asian food as a writer, teacher, publicist, researcher, consultant, and, of course, cook. She has traveled extensively in Asia and lived in Hong Kong for more than ten years, working as a food writer on a number of newspapers and magazines, which led to a career as a food consultant. Her most recent book, *Asia the Beautiful Cookbook* was listed by *Publishers Weekly* as one of the best books of 1987." Address: Author of several books on Asian cuisine.

9848. Shufu-no tomo. 1991. Anzen shokuhin no hon: Munôyaku, mutenka no honmono shokuhin otoriyose gaido [The book of safe foods: A guide for getting real foods without agricultural chemical or additives]. Tokyo: Shufu-no-tomo-sha. 144 p. Illust. 26 cm. Tokubetsu henshû (Special edition). Shufu-no-tomo Seikatsu Series. 26 cm. [Jap]

• ***Summary:*** This beautiful book is about Japanese natural foods, organically grown without agricultural chemicals and processed without chemical additives. It is packed with color photos and descriptions of the products, the people and companies that make them, and the places where they are made. The name, address, and phone number of each company is included. Miso (p. 16-20). Shoyu (p. 21-27). Natto and tofu (p. 76-78).

Amazake (p. 16-17): Koji-ya Saburouemon, Nakamura 2-29-8, Nerima-ku, Tokyo, Japan. Phone: 03-3999-2276. 100 years old, 6th generation.

Miso & Shoyu (p. 18): Sendai Miso Shoyu, Kojo 1-5-1, Wakabayashi-ku, Sendai-shi, Miyagi-ken 982, Japan. Phone: 022-286-3151.

Miso & tamari (p. 19): Nakamura Jozo, Tatsuno-cho 1536, Yokkaichi-shi, Mie-ken 510, Japan. Phone: 0593-26-0456. Started 70 years ago. 3rd generation. About 15 years ago started to make naturally fermented soy products.

Miso (incl. barley miso; p. 20): Shirouza Shoten, Meihama 3-3-27, Nishi-ku, Fukuoka-shi, Fukuoka-ken 819, Japan. Phone: 092-881-0413.

Shoyu made with whole soybeans (p. 21): Kikkogo Shoyu Kondo Shoyu Moto, Yamada 733, Itsukaichi-machi, Nishitama-gun, Tokyo 190-01, Japan. Phone: 0425-95-1212.

Shoyu (p. 22-23): Kadocho, Kita-machi 7, Yuasa-machi, Arita-gun, Wakayama-ken 643, Japan. Phone: 0737-62-2035. 5th generation.

Shoyu (p. 24): Yamaki Shoyu, Kotobuki 3-3-16, Honsho-shi, Saitama-ken 367, Japan. Phone: 0495-24-6161.

Unpasteurized miso, and shoyu (p. 25): Shoku Seikatsu Kenkyu-kai, Miroku-ji 83, Fujisawa-shi, Kanagawa-ken 251, Japan. Phone: 0466-22-0635. Started in about 1970.

Shoyu, amazake base, koji, miso (p. 26): Inoue Shoten (Igeta Shoyu brand), Owari-machi 57, Kitakyo, Nara-shi 630, Japan. Phone: 092-741-5360. 4th generation. Started during the Genji era (1864-65).

Shoyu (p. 27): Jokyu, Daimyo 1-12-15, Chuo-ku, Fukuoka-shi 810, Japan. Phone: 092-741-5360. Started 135 years ago.

Natto (p. 76): Kuroishi Natto, Fukuroi 1-74, Kuroishi-shi, Aomori-ken 036-03, Japan. Phone: 0172-52-3958. Started 60 years ago.

Natto (p. 77): Shojiki Mura, Nishitakao 5-237, Kitamoto-shi, Saitama-ken 364, Japan. Phone: 0120-421351. A relatively new company.

Tofu (p. 78): Kurihara Shoten, Endo 2022, Fujisawa-shi, Kanagawa-ken 252, Japan. Started in about 1977. Address: Tokyo.

9849. Yamauchi, Fumio; Yamagishi, Tatsunori; Iwabuchi, Setsuko. 1991. Molecular understanding of heat-induced phenomena of soybean protein. *Food Reviews International* 7(3):283-322. [116 ref]

• ***Summary:*** "Heating is one of the most important and frequently used methods for denaturing food proteins for processing, preserving, and cooking (1, 2). The functional properties such as gelation, emulsification, foaming and hydration are reflections of the protein structure of the denatured state."

Tanford (1969) stated that "'protein denaturation does not affect amino acid sequence drastically, but does affect native quaternary structure.'" And Hermansson (1978) has said that "'denaturation is not specific and irreversible.'" So a broad definition of denaturation of food protein might

© Copyright Soyinfo Center 2014

state that, in it, "an individual protein is physicochemically modified to some extent."

Glycinin corresponds to the 11S protein, and Beta-conglycinin is the principal component of the 7S protein. Address: Dep. of Food Chemistry, Faculty of Agriculture, Tohoku Univ., Sendai-shi, Miyagi prefecture, Japan.

9850. Yokotsuka, Tamotsu. 1991. Nonproteinaceous fermented foods and beverages produced with koji molds. In: Dilip K. Arora; K.G. Mukerji; E.H. Marth, eds. 1991. Handbook of Applied Mycology. Vol. 3: Foods and Feeds. New York, NY: Marcel Dekker, Inc. x + 621 p. See p. 293-328. Chap. 10. [135 ref]

• ***Summary:*** Contents: 1. Introduction (Eight types of traditional fermented foods and beverages, early history of fermented foods, three types of microorganisms used for or found in food fermentations, distribution of fermented foods worldwide, koji in Japan and China, different meanings of the term "koji molds"). 2. Nonproteinaceous, nonalcoholic lactic-acid fermented foods. 3. Alcoholic fermented beverages: A. Made from sugar-containing raw materials. B. Saccharification processes in alcoholic beverage manufacture (malt and koji). C. Mixed culture dough inocula for food and beverage fermentation in Southeast Asia. D. Alcoholic beverages in China and Taiwan (chu / qu is Chinese koji). E. Yakju and Takju in Korea. F. Rhizopus vs. Aspergillus as enzyme producers in alcoholic beverage fermentations... H. Mirin, amasake [amazake], and lao-chao. 4. Vinegar.

Figures show: (1) The course of tropical storms (shown on a map of the world). (2) Classification of microbes (filamentous fungi, yeasts, bacteria) used to make fermented foods or beverages (based on sexual characteristics). Phycomycetes (septate mycelia, sexual spore formation) -> Mucor and Rhizopus (asexual spores are formed on top of sporangiophore which is covered with sporangium). Mycomycetes (nonseptate mycelia, asexual and sexual spore formation) -> Ascomycetes (sporeforming in special sacs or saci) -> Monascus, Saccharomyces and Zygosaccharomyces (spore is formed by budding or conjugation of two cells), Penicillium (no foot cells, no vescicle; penicillium means a brush), Aspergillus (asexual conidiophore are formed by splitting from sterigmata attached to top of conidiophore (vesicle)). Fungi imperfecti (spore nonforming) -> Torulopsis. Schizomycetes -> Eubactriales (bacteria) -> Acetobacter, Micrococcus, Pediococcus, Bacterium, Clostridium. (3) Famous Chinese wine-producing areas: They make Shandong yellow wine, Shaoxing (W.-G. shaohsing) wine, Fujian yellow wine. Note: Kaoliang liquor is a typical distilled wine in China. (4) Flow chart of process for making Shaoxing jiu (from glutinous rice). Address: Research Div., Kikkoman Corp., Noda City, Chiba prefecture, Japan.

9851. Yokotsuka, Tamotsu. 1991. Proteinaceous fermented foods and condiments prepared with koji molds. In: Dilip K. Arora, K.G. Mukerji, and E.H. Marth, eds. 1991. Handbook of Applied Mycology. Vol. 3: Foods and Feeds. New York, NY: Marcel Dekker, Inc. x + 621 p. See p. 329-73. Chap. 11. [118 ref]

• ***Summary:*** Contains a great deal of very interesting information. Contents: 1. Introduction. 2. Fermented soybean foods in East and Southeast Asia: A. Douchi (China), Hama-natto (Japan), and in-yu (Taiwan). B. Shuidouchi (Shandong province, China), thua-nao (Thailand), kinema (Nepal), and natto (itohiki natto) (Japan). C. Tempe [Tempeh] and Oncom [Onchom] (Indonesia) (Making soybean tempe, volatile flavor of tempe, chemical composition and nutritional value of tempe, tempe bongkrek). D. Fermented tou-fu (soybean curd) products: Sufu (China and Taiwan), Tofuyo (Okinawa, Japan).

3. Fermented salty condiments in a slurry or paste made from soybeans and cereals: A. Doujiang (touchiang) (China) and Tauco [taucho] (Southeast Asia). B. Doubanjiang (Toupanchiang). C. Tianmianjiang (Tienmienchiang). D. Gochujiang and Doenjang (Korea). E. Hishio (Japan). F. Miso (Japan) (Production and consumption of miso, making rice miso and barley miso).

4. Fermented salty liquid condiments made from soybeans and cereals: A. Japanese shoyu (Manufacture of koikuchi and usukuchi shoyu, manufacture of tamari shoyu). B. Soy sauce produced in east and southeast Asian countries other than Japan (Korea, Taiwan, Hong Kong, Singapore, Malaysia, Indonesia, Thailand, People's Republic of China {the process, acid hydrolysis, was illegal until recently}, chijhi or whole soybean soy sauce still made in the basins of the Zhujiang {Pearl} River and the Huanghe {Yellow} River).

5. Biochemistry involved in shoyu and miso manufacture: A. Selection of raw materials. B. Contribution of improved cooking methods of raw materials to increase the enzymatic protein digestibility. C. Selection and improvement of koji molds. D. Improvement in koji making. E. Microbial and chemical control of salty mash fermentation. F. Flavor evaluation of koikuchi shoyu. G. Stability of color of pasteurized shoyu. H. Nutritional concern about shoyu and miso (salt content). Safety of koji molds and shoyu (aflatoxins).

6. Conclusion.

Tables show: (1) Chemical composition of kinema, thua-nao, and douchi. (2) Changes in nitrogenous compounds during natto fermentation. (3) Changes of nitrogen compounds in sufu making. (4) Constituents of some types of miso. (5) Chemical composition of various kinds of genuine fermented shoyu in Japan. (6) Effect of cooking conditions of thoroughly moistened defatted soybean grits on the enzymatic digestibility of protein. (7) Differences between *A. oryzae* and *A. sojae* used for shoyu fermentation. (8) Proteinases produced by *Aspergillus sojae.* (9) Enzyme

© Copyright Soyinfo Center 2014

composition of koji as influenced by the difference of material. (10) Various metabolic patterns by lactobacilli in shoyu mash. (11) Digestiblilities of protein in shoyu, miso, natto, and tempe fermentations. (12) Results of quantitative analysis of flavor constituents in koikuchi shoyu.

Figures show: (1) Flow sheet of tempe making. (2) Flow diagram of sufu making from 1 kg soybeans (with all quantities of ingredients, temperatures, and times). (3) Flow diagram of rice-miso fermentation from 1,000 kg soybeans and 600 kg milled rice. (4) Flow diagram of koikuchi shoyu fermentation from 330 kg defatted soybean meal (or 400 kg whole soybeans) and 340 kg wheat kernels. (5) Flow diagram of tamari-shoyu fermentation from 800 kg defatted soybeans, 346 kg wheat, 20 kg roasted barley flour, and 439 kg NaCl. (6) Microflora changes in shoyu mash fermentation. (7) Classification of Aspergilli. (8) Fermented foods and condiments made from soybeans mixed with or without cereal grains or flour.

Hama-natto in Japan (p. 332): The Taiho Laws, which took effect in 701, mention an office in Japan's imperial court that dealt with several fermented soyfoods including *"douchi* [2 Chinese characters given] or *kuki* (1 Cc): in Japanese, miso and jiang (1 Cc) or hishio (1 Cc)..." "The method of preparing salted and unsalted *douchi* [fermented black soybeans] is described in the book *Yoshufushi* (1686) and elsewhere. According to the oldest record about douchi in Korea, in 683, the product apparently was not an important food commodity in that country.

Salted douchi [fermented black soybeans, which originated in China] appeared in Central Japan with names such as "Hama-natto, Daitokuji-natto, and others, and in Taiwan as *In-si."*

Concerning *shuidouchi* (*Chinese salted natto with minced ginger. p. 332-35*)*:* This unusual product can be considered an intermediate form between *douchi* (salted fermented soybeans / fermented black soybeans) and the itohiki-natto family of foods; unlike *douchi* it is fermented with a *Bacillus* bacterium rather than with an *Aspergillus* mold, but unlike natto it is a salted product and has ginger added. To make *shuidouchi:* Boiled soybeans are naturally inoculated with *Bacillus subtilis* and incubated at high humidity and at 30-40ºC. This preference for a high temperature may be why the *Chi-min yao-shu* (6th century China) recommended that, when making douchi [fermented black soybeans], the temperature during incubation be kept rather low. In Shandong, China, *shuidouchi* are made as follows: Clean, soak, and boil soybeans until soft. Place in a cloth bag and cover with straw, which is the best natural source of *B. subtilis.* After incubation for 1-2 days at 25-30ºC the soybeans will be covered with viscous substances. Mix the sticky soybeans with minced ginger and salt, then pack tightly into jars, and age for one week. They are now ready to consume (See references 5 and 6). Address: Research Div., Kikkoman Corp., Noda City, Chiba prefecture, Japan.

9852. Hayakawa, Tsuneo. 1992. Re: Hatcho miso company is now building its own miso museum. Letter to William Shurtleff at Soyfoods Center, Jan. 8. 1 p. Typed. [Eng]
• ***Summary:*** The museum is intended to let people know the old way of miso production and to make them more familiar with the company. Using several mannequins, old tools, and some documents owned by the management, the company has almost completed the main part of the museum. Tsuneo, a younger brother of the president, is in charge of collecting historical materials for the museum. He began work on this project 2 years ago; before that he worked for a newspaper company. He intends to make a miso literature corner in the miso museum. Mr. Kaneko, former chief of the general affairs section, retired 10 years ago. Address: Hatcho Miso, 69 Okan-dori, Hatcho-cho, Okazaki-shi, Aichi prefecture 444 Japan.

9853. Hayakawa, Tsuneo. 1992. Re: Building a Hatcho miso museum in Okazaki City, Japan. Letter to William Shurtleff at Soyfoods Center, Jan. 8. 1 p. Typed, with signature. [Eng]
• ***Summary:*** "Hatcho Miso Company (Goshikaisha Hatcho Miso in Okazaki City, Japan) is now building its own Miso Museum to let people know what the old way of miso production was and to make them familiar with the company." He asks for ideas and advice. Shurtleff responds with three specific suggestions. Address: c/o Hatcho Miso, 69 Okandori, Hatcho-cho, Okazaki-shi, Aichi prefecture, Japan.

9854. *Ag Innovation News* (*AURI–Agricultural Utilization Research Inst., Crookston, Minnesota*). 1992. Minnesota producing beans for the Japanese markets. 1(1):4. Jan.
• ***Summary:*** The Jameson-Williams Company, based in Jackson, Minnesota, is the leading U.S. company that is producing and marketing edamame [green vegetable soybeans] on a commercial basis. In a traditional Japanese sake ceremony held on 26 Sept. 1991, Jameson-Williams finalized arrangements with the Nishimoto Trading Company and two huge Japanese distributing companies which will market the Minnesota-grown edamame in Japan. One of the distributors is Asahi Brewery, which has more than $4,500 million annual sales. The other is Japan's largest Coca-Cola distributor.

"AURI invested more than $100,000 in research and technical assistance to refine edamame equipment and techniques... A a result of its partnership with AURI, Jameson-Williams has invested between $40,000 and $500,000 in buildings and equipment in Jackson."

9856. Larson, Donald W.; Rask, Norman. 1992. Industry note: Changing competitiveness in world soybean markets. *Agribusiness: An International Journal* 8(1):79-91. Jan. [11 ref]
• ***Summary:*** Contents: Introduction. World soybean production. Soybean and soybean product trade shares. Factors affecting competitiveness and trade: Costs of production, government policy. Conclusions. The GATT negotiations and the New Economic Order are based on the assumption of competitiveness in world markets. The landed cost of soybeans in Japan and at Rotterdam [Netherlands] favors Argentina and Brazil over the USA. The USA has steadily lost export market share for soybeans and soy products, from about 95% in early 1979 to 45% in 1990. During this time the Brazilian share has grown to 30% and the Argentine share to 16%. A fundamental shift from the export of soybeans to the export of more soybean products has occurred largely because of policies favoring product exports from Argentina and Brazil.

Tables show: (1) Soybean area harvested in six major producing countries in five groups of selected years from 1974 to 1990, and the percentage change during this time. The percentage changes are: Argentina +16,333%, Paraguay +10,000%, Brazil +96%, USA +20%, and China -43%. (2) Comparative soybean yields in the USA, Canada, Argentina, Brazil, Australia, and the world in 7 groups of years from 1975 to 1990. Canada usually has the highest yields. (3) Soybean production costs in Argentina ($127/acre), Brazil ($145/acre), and USA ($192/acre). (4) Production and marketing costs for soybeans landed in Rotterdam and Japan for Argentina, Brazil, and USA. In each port, Argentina has the lowest landed costs and USA has the highest.

Bar charts show: (1) Percentage shares of world soybean exports by major exporters (USA, EC-12, Argentina, Brazil, Paraguay, Others) 1980-1990. (2) Percentage shares of world soybean oil exports by major exporters (USA, EC-12, Argentina, Brazil, Others) 1980-1990. (3) Percentage shares of world soybean meal exports by major exporters (USA, EC-12, Argentina, Brazil, Others) 1980-1990. Address: Professors in the Dep. of Agricultural Economics and Rural Sociology, The Ohio State Univ.

9857. Shurtleff, William; Aoyagi, Akiko. comps. 1992. Bibliography of the soybean plant: Nomenclature, physiology, morphology, botany, taxonomy, and wild soybeans, with 1,266 references from 1100 B.C. to 1991, extensively annotated. Lafayette, California: Soyfoods Center. 352 p. Subject/geographical index. Author/company index. Language index. Printed 24 Nov. 1991. 28 cm. [1266 ref]
• ***Summary:*** This is the most comprehensive bibliography on the soybean plant ever published. Its scope includes soybean nomenclature and etymology, physiology, morphology, botany, taxonomy, wild soybeans, and wild glycine species closely related to the soybean. It is also the single most current and useful source of information on this subject available today, since 72% of all references (and most of the current ones) contain a summary/abstract averaging 206 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 24 different document types, both published and unpublished, every known foreign language publication on the subject, extensive translations of many Japanese and European works, and many original interviews Thus it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 17 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

9861. DeBona, Don. 1992. The miso market in America and The American Miso Co. (Interview). *SoyaScan Notes.* Feb. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The miso market in America is growing nicely. There are two distinct U.S. miso markets, the Asian-American (Oriental) market and the natural foods (macrobiotic) market. Don can only speak for the latter, and is best able to discuss his company's experience in that market. In the last 3-4 years, his production has grown on average 10-12% a year. He thinks that the causes of this growth are the wider availability of miso, and its greater accessibility to mainstream consumers who increasingly shop at natural food stores and chains such as Whole Foods Market and Bread & Circus. Neither the current recession nor the greater consumer awareness of dietary sodium affect miso sales. Most miso buyers are macrobiotics or vegetarians who are not very concerned about consuming too much sodium. People who buy his lower-sodium misos (sweet white [rice], sweet barley, mellow barley, or chickpea miso), do so not because of their lower sodium content but because they have different applications and flavors. He does not market his low-salt products as "low salt" nor does he see any great potential in making and marketing low-salt misos. Miso buyers generally know a lot about miso and about nutrition. He makes no nutritional claims on his miso products. His main concerns are with the taste and quality of his misos.

From the late 1960s until the very early 1980s, the non-Oriental U.S. miso market was largely a macrobiotic market. But the growth he has seen in the last 3-4 years is mainly to non-macrobiotic customers. He estimates that more than half the people who buy his miso do not think of them selves as macrobiotic, and perhaps a third of them have never even heard the word "macrobiotic." They buy it as a vegetarian natural food product; they like the taste, and see it a new and versatile seasoning. The dark misos provide a meatlike flavor but the sweet and mellow misos do not. People use mellow white miso is soups, salad dressings, or stir fries. Dark misos are used more in soups, whereas sweet misos are not very widely used in soups.

He would categorize the different varieties of miso (both from a production and sales viewpoint) as percentages of his total production as follows: 1. Long-term, traditional darker, 40% (23% barley and 17% rice). 2. Mellow miso (white or barley), 30%. 3. Sweet miso (white or barley), 20%. 4. Other (including non-soy): Chickpea, 10%.

Looking at the same categories for the American natural foods/macrobiotic market as a whole: 1. Long-term, traditional darker, 57% (35% barley, 15% rice, 7% soybean or Hatcho). 2. Mellow miso (rice or barley), 25% (American Miso Co. and Miyako Oriental Foods/Cold Mountain dominate this category). 3. Sweet miso (rice or barley; only American Miso makes or sells a true shiro miso), 10%. 4. Other (including non-soy): Chickpea, finger lickin' miso (a topping), natto miso, buckwheat miso, etc. 8%.

Two Japanese men now live and work at American Miso Co.; one was brought by John Belleme about 8 years ago, and one came about 3 years ago. They are in production. Don also has 2 American workers. They are like part of the family. He has never had soybean or Hatcho miso in his house and has never seen these Japanese eat it. Don does not particularly like the taste; it is dark, lacks sweetness and a complex bouquet due to its lack of grain, and is over-aged. Moreover, he feels it is more difficult to make because soybean koji is hard to make.

Westbrae sells a lot of miso on the West Coast but not much on the East Coast. Miso is said to be Westbrae's third best-selling product category. Don used to sell Westbrae's miso in the 1970s, when he worked for Laurelbrook Foods in 1980-81, shortly after Rod and Margy Coates were bought out.

Companies that make the miso in the USA using organically grown soybeans and grain include American Miso Co. (50% of natural foods market), and South River Miso Co. (10%); Westbrae and Miyako/Cold Mountain only use organic soybeans, but they call their miso "organic." New labeling regulations will soon make that illegal, and will probably cause most of the miso made in America to be made from organically grown soybeans and grains. Many consumers want organic miso.

The three largest makers of miso in America (for both markets), in descending order of production, are Miyako Oriental Foods, American Miso Co., South River, Junsei Yamazaki, and Traditional Foods. The major miso importers, again in approximate descending order, are Eden Foods, Great Eastern Sun (Mitoku Brand), Westbrae, Granum (Mitoku brand), and Tree of Life (Mitoku Brand).

In the U.S. natural foods market, American Miso Co. is the market leader. Don estimates the size of this market to be about 750,000 lb/year, but he would guess that Asian-American market is about twice this large (1,500,000 lb/year). His various misos retail for about $5.95 in 1 pound sizes or $3.95 in 8 oz sizes. When Don travels in America, he studies the shelves, and has been in almost every major natural foods store in the USA. He also regularly visits distributors and food brokers. But he does not try to keep systematic statistics on the market size.

American Miso Co. is growing rapidly, and it is hard to finance this growth from earnings. Don's plant is now too small relative to demand; it is bursting at the seams. He has added more vats and plans to add another building this summer, financing it with a bank loan. The company is owned by only two people: Don and his partner, Barry

© Copyright Soyinfo Center 2014

Evans. Barry used to have a lot of money, but he got out of the marijuana business–where he made the money. He is now in jail in Santa Barbara for selling marijuana. In went to jail in Jan. 1992 and expected to be there for about 2½ years. Much of the $500,000 startup capital for America Miso Co. came from Barry, but since then the company has largely had to finance itself. Financially the company is doing very well; they have made a profit every year for the past 3-4 years. Don is wary of bringing in more partners because of bad experiences in the past. Don has had a very good relationship with Barry Evans, and it has greatly benefited both of them and American Miso Co.

Don, whose ancestry is mostly Italian plus a little Irish, greatly enjoys running the company. His role has changed a lot. Up until last year, he made miso every week. How he does that much less, and focuses more on marketing. For the past 2-3 years he has also been president of Great Eastern Sun–a position he held before he came to replace John Belleme at American Miso Co. Most customers identify the company as "Miso Master" rather than "American Miso Co." Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

9863. *Illinois Soybean Farmer* (*Bloomington, Illinois*). 1992. Japan eyes landmark U.S. soybean shipment. 3(2):7-9. Feb.
• ***Summary:*** On 17 Sept. 1991 the 100 millionth metric ton of U.S. soybeans arrived in Japan at the port of Yokohama. The Daruma doll (which represents Bodhidharma) observed the event with open eyes. Only one eye of the Daruma doll is painted on when its owner sets a goal; this is to remind the owner to strive to meet the goal. The other eye is painted on after the goal is achieved.

The U.S. began exporting soybeans to Japan in 1946. Ten years later, in 1956, the American Soybean Association opened its first office in Tokyo. Roughly 2 million metric tons (73 million bushels) were exported to Japan during those first 10 years. During 1956 more than half a million metric tons were exported to Japan. Today, Japan is the single largest single-country consumer of U.S. soybeans, importing three million metric tons of soybeans each year. In 1984 the U.S. portion of the Japanese soybean market reached a peak of 93% and then began a slow decline. Today it has fallen to about 70%; the South American soybean share has risen to about 16%. Today about one-third of all soybeans in Japan are used as directly as human food.

9864. Kushi, Michio. 1992. Introduction to *Culinary Treasures of Japan*, by John and Jan Belleme. 16 p. Jan. Unpublished manuscript.
• ***Summary:*** This manuscript, which was published in a condensed form in the actual book, tells the story of Mitoku and their work to export traditional Japanese natural foods to the Western world. Michio Kushi was instrumental in getting Mr. Akiyoshi Kazama involved in this work. Mr. Kushi, who became a World Federalist after World War II, came to the U.S. in Nov. 1949 to study at Columbia University. He continuously sought ways of establishing world peace, and increasingly came to believe that a proper diet is the basis for health, happiness, and peace.

In April 1966 the author's wife, Aveline, opened a small store named Erewhon in Boston. Michio began to search for a Japanese source for foods that Erewhon would sell. He was introduced to Mr. Kazama (who lived in Tokyo) through a Japanese friend, Mr. Obayashi, who resided at that time in New York City. Michio felt that Mr. Kazama understood his desire for foods of high quality. So Mr. Kazama "began his search for food producers and manufacturers who were sincere and willing to supply the kind of quality we requested. I know that for him, at that time, it was a great gamble. It was also a painstaking and slow step-by-step process."

Mr. Kazama was born on 1 Feb. 1930 in Yamanashi prefecture. He graduated from Waseda University in Tokyo, then was selected to study business in the United States. After arriving in Chicago, Illinois, he was drafted by the U.S. government to serve in the American Army in Korea and in Japan from 1956 to 1958. Upon his return to Japan, he settled in Tokyo where he became an import agent for a German company dealing in optics and electronics. After the Kushis contacted him, he became involved in the emerging natural food business. [He founded a company named Mitoku. Mi = Michio. To = Tomoko (Aveline's given name in Japanese). Ku = Kushi].

In 1968 Mr. Kazama made his first shipment of Japanese natural foods to Erewhon; the order was worth $3,000. The Kushis first met Mr. Kazama in Boston in 1970. Over the years, the volume of Mitoku's exports steadily grew, and expanded to Europe, Australia, and the Middle East. Today Mitoku ships its products to about 35 countries. Approximately 40% of Mitoku's exports go to America, 40% to Europe, and 20% to Australia and other regions. Annual sales are about $10 million. Among the major suppliers are Sendai Miso Shoyu Co. Ltd., Hatcho Miso Co. Ltd., Hagoromo Miso, Ltd., Hanamaruki Miso Co. Ltd, San Iku Foods Co. Ltd.

Distributors of Mitoku's products include the following:

© Copyright Soyinfo Center 2014

In the USA: Westbrae Natural Foods Inc., Great Eastern Sun Inc., U.S. Mills Inc., Tree of Life Inc., and Shojin Natural Foods (Hawaii). In Canada: Koyo Foods Inc., Flora Distributors Ltd., and Timbuktu. In Costa Rica: Distribuidora de Productos Macrobioticos S.A. In England: Sunwheel Foods Ltd, Clearspring Natural Grocer, Meridian Foods Ltd. In France: Celnat, Tama. In Belgium: Lima N.V. In the United Arab Emirates: Emirates Trading & Marketing Est. In South Africa: Key Health. In Austria: Naturkostladen, Lebenszeichen. In Switzerland: S'lotusbluemli, Terrasana, Futonhaus. In Sweden: Kung Markatta. In Norway: Alternative Import. In Finland: Makro Bios. In Portugal: Armazens Da Matinha. In Spain: Kunga. In Italy: La Finestra Sul Cielo, Probios S.R.L., Dalla Terra al Cielo, Solo Natura. In Israel: Tivoli Ltd. In Australia: Pureharvest. In New Zealand: Enso. In Singapore: Nature's Best. In Yugoslavia: General Export. In Japan: Seibu Department Stores Ltd., Tokyu Department Stores Ltd. Among the countries reached indirectly through trans-shipment are Hungary, reached through Austria, various South American countries reached through the United States, and other countries such as Poland, Czechoslovakia, Iceland, Andorra, Ireland and the Caribbean Islands.

As Mitoku developed its international operations, Mr. Kazama hired many students from Western countries, including Blake Rankin (USA), Ferro Ledvinka (Italy), Christopher Geoffrey Dawson (New Zealand, starting 1979), Robbie Swinnerton (England), Terrie Adams (USA), and Michelle Harbroun (France).

"For the past 10 years, Mitoku has echoed and supported the macrobiotic perspective with its motto 'Isshoku-Dogen.' These words, though they have been forgotten in the last few centuries by the very people in the health care field who should remember them well, mean literally 'medicine and food have the same source,' and can be translated as 'food *is* medicine.' This saying has been used and known as part of the ancestral heritage of wisdom transmitted from generation to generation for several thousand years in Oriental countries such as China, Korea and Japan.

"In an attempt to preserve Japanese traditions, Japan has instituted a 'Living Treasures' program granting official recognition and support to [living masters in] various cultural areas such as theater, music, dance, sculpture, carpentry, weaving... and arts and crafts. Ironically, though, Japan has not granted the same official recognition to its traditional methods of food processing and production in spite of the fact that increasingly large numbers of people throughout the world are now appreciating traditionally processed Japanese food products and have become aware of their important health benefits. The Japanese traditional arts of producing miso, soysauce, tofu, natto, amazake, rice vinegar, sake, mirin, condiments and pickles as well as cooking methods and preparation are unique among the culinary practices of the world... These foods are also works of art... It is my hope and recommendation that official recognition and support be granted by the 'Living Treasures of Japan' to those who have dedicated their life to the traditional art of food production and processing in spite of the hardships and commercial disadvantages they are compelled to face in business competition and present-day economical conditions." Address: 62 Buckminster Rd., Brookline, Massachusetts 02146.

9867. *SoyaFoods* (*ASA, Europe*). 1992. French standards for tonyu [soymilk]. 3(1):2. Winter.
• ***Summary:*** Recently the French soyfoods association, SOJAXA, adopted the term 'tonyu' (the Japanese word for "soymilk") because of labeling restrictions in France and Europe. Now, in cooperation with SOJAXA, The French Standards Institute (AFNOR) has decided to develop standards for soymilk in France.

9868. Whiteman-Jones, Michael. 1992. Soyfoods poised for growth: New mass-market interest, product development and consumer interest are driving sales higher than ever. *Natural Foods Merchandiser.* Feb. p. 18-19.
• ***Summary:*** Last year soyfoods were introduced to mass-market consumers by two of America's corporate giants. (1) Archer Daniels Midland Co. (ADM of Decatur, Illinois) introduced the vegeburger to show that a delicious food product could be made from soy. ADM marketing specialist Lee Lensch says the soy burger is doing very well in test markets in Indiana, Illinois, and Minnesota. Versions of the product are being advertised nationally in corporate

© Copyright Soyinfo Center 2014

TV spots and on local TV in test markets. Buyers who gave the products shelf space at chains such as Kroger, SuperValue and Cub Foods now report brisk sales. (2) Protein Technologies International in St. Louis, Missouri, a subsidiary of Ralston Purina, is test marketing a soy-based beverage named First Alternative in Phoenix, Arizona.

Peter Golbitz, president of Soyatech Inc., a consulting company in Bar Harbor, Maine, notes that since the 1980s, Japanese companies (such as Nichii Co.) have invested at least $50 million in soyfoods manufacturing plants in the U.S.

"Retail sales of soyfoods are growing in America by about 5 to 7 percent a year, increasing to about $657 million in 1990, Golbitz says. The most rapid expansion is for soy milk, which is growing at a rate of about 20% a year, and second-generation soyfoods which are growing at a rate of about 15%... Soy milk consumption in Australia, where it is sold in grocery stores like milk, is about 10 times what it is in this country."

Worldwide, consumption of soyfoods now averages about 1.7 kg/person/year, and is expected to rise to 2 kg or more by the year 2000. Taiwan is the world leader with 15.5 kg/capita/year of soy, followed by Japan at 11.1 kg. A world map and table (largely compiled from FAO Food Balance Sheets) shows "Soyfood consumption: Yearly average per capita (Amount of change from 1979 to 1988)." The following countries are listed in descending order of consumption in kg/capita: Korea 17.1 kg (2.4%). Taiwan 13.0 (37.0%). Japan 10.8 (6.7%). Indonesia 6.3 (57.4%). Hong Kong 3.8 (-22.0%). Saudi Arabia 3.6 (342.9%). China 3.4 (-5.6%). Paraguay 2.8 (50.0%). Malaysia 2.3 (102.2%). Thailand 1.6 (162.5%). Zimbabwe 1.6 (22.2%). United States 1.4 (33.3%).

9870. Deck, Cecelia. 1992. '60s roots bear fruit: Ann Arbor's Eden Foods takes checkered path to become an industry leader. *Detroit Free Press.* March 2. p. 10F-11F. Cover story.
• ***Summary:*** One of the few food cooperatives and natural food stores that has survived from the 1960s, Eden Foods "has made it through the wacky '70s and the excessive '80s to the health-conscious '90s when, in a surge of reborn interest in natural foods, it has emerged as a for-profit, $20-million-a-year leader among organic food processors.

"Founded by idealists who cared more about getting their message of healthy eating to the public than about bottom lines... the company has never strayed from its mission: to bring organically grown food to the public." Tim Redmond recalls the early days when Eden operated out of an apartment on East William Street upstairs from Campus Bike and Toy. "During the summer, when all of the co-op members had left town or taken jobs elsewhere, former U-M [University of Michigan] football player Bill Bolduc bought out the company. 'No one really seemed to mind,' Redmond says... By 1970 Eden was running the biggest natural food store in the Midwest."

A competitor for 20 years has been the Cooperative People's Warehouse, which has been losing money for the past few years. After the retail store moved to Maynard Street, the company "opened a restaurant which gained fame for its chapati vegetarian sandwiches on Indian flat bread. A colorful mural painted on the alley wall near the store's entrance is still vibrant, though the store and restaurant had closed by the mid-1980s."

Soon the company "started licensing outside manufacturers to pack Eden-brand products such as canned beans, and began importing packaged food from China and Japan. Eden also started doing its own manufacturing–bottling oils, roasting and grinding sesame seeds."

After a fire in 1979 that caused about $800,000 in damage, Eden regrouped and opened its warehouse and manufacturing in an old factory in Clinton. "In 1982, Eden bought Schmidt Noodle Co., a vintage 1923 noodle maker in Detroit, that had been making Eden's organic pasta for about six years under license.

"The next year Eden began exporting organic soybeans to Japan and then importing Japanese-made Edensoy, a milk-like soy beverage that found an immediate market." Tim Redmond recalls that "Eden had never had a success like this in one product." According to Peter Golbitz, soymilk industry sales "zoomed through the 1980s to reach $52 million at retail last year. Edensoy had about a 40 percent share of the market."

"But importing Japanese soy milk and living at the mercy of the yen wasn't good enough, and Potter believed that the burgeoning soy milk market could justify a U.S. plant. So in 1987, Eden opened a soy milk processing plant in Saline in a joint venture with four Japanese companies. With redesigned aseptic packaging, Edensoy sales grew to 4,500 supermarkets nationwide as well as hundreds of natural food stores."

"Eden has had certification programs for its organically grown products since the early 1970s, but in 1988 the company joined the Organic Crop Improvement Association [OCIA], which strictly monitors crops to show that they are grown in soil that is pesticide free for three years and grown to organic standards. An audit trail can trace a can of beans to the field where the beans were grown."

9872. Macdonald, Bruce. 1992. How Erewhon got involved in wholesaling and distributing natural foods (Interview). *SoyaScan Notes.* March 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Erewhon went through three phases of selling: (1) Retail. (2) Wholesale, direct to natural food retail stores and restaurants. (3) Wholesale, to natural food distributors (such as Eden Foods). Bruce started phase 2, selling direct to natural food stores and restaurants, primarily in New York.

In the spring of 1969, during Bruce's tenure as general manager, Erewhon got into the wholesale business, running it initially out of their retail store at 342 Newbury Street. Paul Hawken was not involved in the wholesaling to other companies before he left for Japan. Their store was divided into 4 parts: The front half was the retail store, the back half contained the mill (a little 5-inch Meadows Mill later used for grinding whole-grain flours), a walk-in refrigerator, and packing tables (where Bruce recalls working with Jim Docker, packing little 1-5 lb paper bags of grains), an office, and the basement (connected to the ground floor by a dumb waiter), which was the warehouse for storage of commodities.

The wholesale business began in the basement. It started because Erewhon got a good deal on some sesame oil. A company named Sesame Products in Texas had developed the Egyptian salt method of naturally removing the hulls / husks of the sesame seeds. The company apparently went bankrupt, but actually they were a front for some illicit import dealings, such as electronic parts from Mexico. They got caught, and had to sell their high-quality oil. Bruce got the opportunity to buy (for Erewhon) all of their existing sesame oil for 10 cents on the dollar (90% discount). So he bought all the oil, most of which was in amber pint bottles, but the rest of which was in about 5-8 large drums. He trucked it to Erewhon's retail store at 342 Newbury St., and helped to unload it. He and co-workers put Erewhon labels on the amber bottles (Bruce does not remember who designed these labels; Paul Hawken had them designed), bottled the bulk oil manually, labeled that as well, and moved it all to the basement. Erewhon was now ready to jump into the wholesale business, and natural sesame oil was their first wholesale product. Somehow Bruce / Erewhon had to sell 250-300 cases of natural sesame oil. But since he had bought it at a 90% discount, he was able to sell it at a profit below the price of other sesame oils on the market. In the spring of 1969, Bruce put the oil on a truck and drove it to Greenberg's (125 First Ave.) in New York City, Paradox Restaurant, Georgie Abehsera's restaurant, etc. He also took Erewhon's whole line of products, including their new imports from Japan. "Greenberg's took on the entire line of Erewhon products. Suddenly, it just took off. A month or two later Erewhon was sending a van down to New York City ever week."

Next Erewhon expanded its line of mechanically pressed, unrefined oils. Bruce had seen some expeller-pressed corn oil at Paul Keene's Walnut Acres, so he ordered it from Shawnee Milling Co. in Shawnee, Oklahoma. Erewhon considered hexane solvent extraction to be the "big bad method" of removing oils, expeller pressing to be so-so (because the temperature in the worm-screw reached 140-160ºF), and hydraulic pressing to be the best since it kept the product coolest. This golden corn oil foamed upon being heated and tasted like butter in baked goods. Erewhon's third natural oil was a safflower oil. (In 1970 Paul Hawken wrote a pamphlet titled "The New Oil Story").

Next Erewhon added a line of grains. They got non-organic brown rice from Koda Brothers in Dos Palos, California. The company was owned by Japanese-Americans, who were the first to break out of the cooperative marketing scheme, in which all growers mixed their rice together. They had rubber rollers, which did not scratch the grain during dehulling. Their Kokuho-Rose white rice has been the rice of choice for 30 years among Japanese-Americans. Bruce thinks they may have first sold brown rice (in 100 lb peat bags) to Infinity in New York, then to Erewhon.

Then Erewhon added a line of products imported from Japan. These first arrived in about Nov. 1968, just as the Erewhon retail store at 342 Newbury St. was opening. All the Japanese imports came in bulk from Muso Shokuhin in Osaka, rather than individually packaged. Tamari (from Marushima) and miso (including bulk mugi [barley] and Hatcho miso), moromi, etc. came in wooden kegs, loose, rather than in containers, so there was lots of breakage. Most of these imported products were stored in the basement. Erewhon bought some noodles (soba and udon in 5 kg boxes) from Japan Foods, then from Nishimoto Trading Co. and also from Muso. The product line was very simple, consisting of no more than 400 different items. The best-selling wholesale items were the oils, tamari, miso, rice, and imported kuzu, umeboshi (salt plums) and azuki beans. In the retail store there was no produce case or freezer, no vitamins or supplements, no potatoes or dairy products.

© Copyright Soyinfo Center 2014

Initially, Erewhon's largest customer was the combined 4-5 macrobiotic study houses in Boston, Massachusetts, accounting for roughly 50% of sales. Erewhon had an old van that delivered the food to the study houses, initially at retail prices; this business kept the retail store afloat. By the late spring of 1969 the wholesale business began to take off, and the macrobiotic study houses were now allowed to buy at wholesale prices. Some additional delivery trucks were acquired.

The macrobiotic products, other than what Erewhon imported, were only available in health food stores, through Chico-San. Because of the high mark-ups at several stages in the process, these products were tremendously expensive for consumers. So Erewhon decided to sell direct to East Coast stores, cutting out the distributors, to keep prices down. Now things started to move very fast, and Erewhon soon achieved national distribution. "It was like introducing products into a vacuum. The whole natural foods industry was starting up, all these little places like Eden Foods in Ann Arbor [Michigan], Tom Swan in Chicago [Illinois], etc.

Bruce traveled to New York and lined up new wholesale customers among macrobiotic restaurants and food stores. Samsara, a macro restaurant in the lower east side run by George ("Georgie") Abehsera, was Erewhon's first customer and its biggest restaurant customer. (Michel Abehsera's younger brother, George later became the baron of the clay and soap business, Three Sheaves, Pierre Cattier, then Nature de France). Right around the corner was Arnie Greenberg, who had a deli on the lower east side, and was one of the first to merchandise macrobiotic foods; he rapidly became Erewhon's best customer. He was very busy selling a mish-mash of foods though he had no particular personal commitment to macrobiotics. Before him, Irma Paule in New York City had run "The Little Cupboard" but had gotten in trouble and was no longer in business at this time. Other good restaurant customers were the Paradox, and the Caldron (Gloria Bremmer at 308 E. 6th St.). The Good Earth, a retail store run by Townley, soon began to order; he was one of the original honest organic produce retailers. The restaurants and the food stores accounted for about equal sales volume for Erewhon. Erewhon shipped all its goods to New York (its sole market) via common carrier; Erewhon owned no delivery trucks of its own. There were no other natural food stores in Boston. One other unique customer was Jimmy Silver, who was macrobiotic, the manager of a rock band named Iggy Pop and the Stooges, and had hair down to his waist. He would drive down from New York with his cute little wife, Susie, and buy $300.00 of food at a time for the whole band. It was the biggest single order that Erewhon ever got in those days. Not long after that, Jimmy dropped out of the music scene and came to Boston.

Then Roger took over from Bruce as general manager in about Oct. 1969, right after Bruce married Maureen, his first wife, and left for Los Angeles to help start the branch of Erewhon there. The Erewhon store in Boston (at 342 Newbury St.) started with sales of about $400 a day. The day of Bruce's wedding, on a Saturday in about Oct. 1969 was the first day that the Erewhon store's sales topped $1,000 a day. It was a milestone day and in those days it seemed like big money. But two years later, Erewhon's sales were $20,000 a day.

In Los Angeles, Bill Tara had opened the doors, and put the bricks and boards up for a new Erewhon store. But Bill was never comfortable doing business; he preferred to teach macrobiotics. So Aveline Kushi encouraged Bruce to come to Los Angeles (where she was living at the time) and to get the West Coast branch of Erewhon started. So Bruce and Maureen moved to Los Angeles.

How did Erewhon finance this growth? At the beginning Erewhon, the trailblazer, was extremely profitable, since they had essentially no competition, and had thriving retail stores in Boston and Los Angeles. The dollar was very strong (from 1967 to 1971 one dollar was worth 355 yen), so Erewhon could buy an item for $1, sell it for $3.50 and still be $2 under any competition (mainly Chico-San). Erewhon invented the concept of a natural food store. Fred Rohe in San Francisco had developed a related idea, perhaps a little before and in parallel with Erewhon. His Sunset Health Foods, later named New Age Foods, was a modified health-food store that sold vitamins, whereas Erewhon was a pure natural foods store, that didn't sell vitamins. In addition, Erewhon had quality standards and a philosophy of foods that no one in the industry had.

After Bruce left, Erewhon moved into its first real warehouse on Farnsworth St. This represented the first real commitment to the wholesale business. A fleet of trucks was acquired. Eventually semis [semitrailers] were delivering all over New England. Address: P.O. Box 100, Cambridgeport, Vermont 05141. Phone: 802-869-2010.

9873. Macdonald, Bruce. 1992. The origin and development of Erewhon's operations in Los Angeles. Part I. 1969 to 1971 (Interview). *SoyaScan Notes.* March 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Erewhon started a retail store in Los Angeles because Aveline's youngest son, Hisao, had some form of leg disorder, congenital or from infancy, probably in his knee. Aveline found a Japanese doctor in Los Angeles who she believed (and it turned out that she was right) could cure it. But the doctor had to see Hisao almost daily. So in about August 1969 Aveline moved to California. Bill Tara went with her, while Michio stayed in Boston, Massachusetts. Aveline got a very nice house at 7511 Franklin Ave. in Hollywood. Later she moved into the former Japanese embassy, which was a mansion in a very nice neighborhood, several blocks away on [7357] Franklin Ave. Bruce also lived in this mansion. In Los Angeles, Bill Tara started Erewhon's second retail store, called Erewhon West, in large

© Copyright Soyinfo Center 2014

part because Aveline needed good macrobiotic food. Tara rented a very small space at 8003 Beverly Blvd. and called the new store "Erewhon West." Later the name changed several times, but it ended up being just "Erewhon." He got some cinder blocks and boards, ordered a shipment of food worth about $500 from Erewhon-Boston, then he opened the door for business.

Bruce was married on 13 Sept. 1969 to Maureen Traill in Boston. The marriage ceremony took place in the Old South Church, and some 200 people (including Michio Kushi) attended. It was the biggest wedding in the Boston macrobiotic community to date. Maureen had lived in a macrobiotic study house run by Susan Hillyard, and had studied cooking with Aveline Kushi and Susan Hillyard.

About 2 weeks after the wedding, in early October 1969, Bruce and his new wife left Boston. At that time, Roger Hillyard took over as general manager of Erewhon-Boston from Bruce. They drove to Los Angeles, arriving in late Oct. 1969. The first thing Bruce did was to build a walk-in cooler. Bill Tara, who was always more interested in the teaching, philosophical, and scholarly side of macrobiotics, left shortly after Bruce arrived. Bruce was more oriented toward the business side. Bruce became the head of the store, and Jimmy Silver soon came out from Boston to work with him at the store. Initially, sales were very slow: During the first two weeks that Bruce was there, there were *no* sales on eight of the days. Natural food stores were just beginning to open in the U.S. "That was Aveline's store. Wherever Aveline went, she had to have a store–to feed the study house. And it was unbearably hot. But eventually it did work."

Soon shipments of foods began to arrive directly from Japan, sent by Paul Hawken with whom Bruce talked frequently by phone. So in the summer of 1970 Bruce put out a wholesale price list and rented a warehouse (about 2,000 square feet) catty-corner across the street (something like 7990 Beverly Blvd.). One of their first wholesale accounts was Fred Rohe in San Francisco. Soon the first Erewhon products packaged in Japan began to arrive, and because of these retail packs the wholesale business took off. The first seitan came in shrink packs; it later came in jars. Tamari was the best-selling import, followed by miso, then umeboshi. The foods still arrived in small boxes or single kegs; containers did not begin until later. At about this same time Tom DeSilva, a lawyer who became a yoga instructor, applied for a job as a janitor; he just wanted to be around.

Erewhon West soon outgrew its first warehouse, in part due to a deal made with the Lundberg Brothers. Bob Kennedy of Chico-San was the pioneer in contracting with the Lundbergs to grow short-grain brown rice in California. The Lundbergs allotted a certain amount of acreage to organic brown rice and Chico-San agreed (in a contract) to buy all of the organic brown sold on that acreage. Chico-San had exclusive rights to all the organic brown rice produced by the Lundbergs. But Chico-San sold this rice for a high price (much of it in rice cakes or 1-lb bags), which prevented Kennedy from selling the amount he had contracted to buy. Chico-San was always in danger of breaking the agreement and losing his exclusivity. So [in early 1970] a side deal (contract) was made, between Erewhon and the Lundbergs, in which the Lundbergs packaged the unsold rice exclusively for Erewhon and labeled it "unsprayed." Chico-San would not allow it to be labeled "organic." Erewhon never talked with Kennedy or Chico-San about this side deal. "He hated our guts! But we did him a real favor; we sold the rice and we didn't really hurt him, since we were selling into an entirely new market–on the East Coast and in bulk and in boxcars."

With this arrangement, Erewhon got into the rice business in a big way, selling their rice for $11.00 a bag versus about $30.00 for the same product from Chico-San labeled "organic." Brown rice soon became Erewhon's biggest product; they sold it to Eden Foods, Laurelbrook, Tom Swan in Chicago [Illinois; he didn't last long], Tree of Life in Florida, Food for Health in Tucson (Arizona), some distributors in Northern California, Green Mountain Grainery in Boulder (Colorado), etc. It was rice that gave Erewhon nationwide distribution, putting their products in every natural food store in the USA. Bob Kennedy was furious but he was stuck with his 5-year contract. Note: The fire in early Aug. 1972 that burned Chico-San to the ground essentially rendered the contract null and void.

Now Erewhon-West began to catch up with Erewhon-Boston in sales because of two factors: They could get a shipment from Japan 3 weeks faster than Boston, and they were near the source of brown rice.

When Paul Hawken returned from Japan in Dec. 1969 he went direct to Los Angeles, but stayed only several weeks. He then went to San Francisco and worked for several months with Fred Rohe (they had become close friends) on writing educational pamphlets and trying to organize Organic Merchants. After returning briefly to Erewhon West in Los Angeles, he returned to Boston. Paul's direct contribution to starting Erewhon West was insignificant; he wasn't there long enough to do much. Bruce turned it into a real business. "Paul's real contribution was finding new suppliers and products in Japan (he toured Japan with Yuko Okada's father), getting the products labeled in Japan, then arranging for them to be shipped to Los Angeles in containers. Mr. Kazama and Mitoku came later. Erewhon had tried to order Hatcho miso from Muso, but Muso couldn't get it. But Mr. Kazama got it; he is a supreme negotiator! I've never met anyone quite like him.

"One of the secrets to Erewhon's success was always having, as a base, a successful retail store, that had a big mark-up and was generating cash. That was our "calling card." Then the warehouse could grow off of that. The store was also a wonderful place to test and develop new products. "A store is a cash business. With distribution, sooner or later,

© Copyright Soyinfo Center 2014

you have to give terms–such as net 30 days. Thus the adage: 'If you're going to grow a business, you need $2 in capital for ever dollar that you grow."

In late 1970, to keep up with the explosive growth, Erewhon rented a second warehouse at 8454 Steller Drive (10,000 square feet). In his "spare time," entrepreneurial Bruce founded two other businesses of his own: Pure & Simple, and The Natural Living Company. Pure & Simple, located in the Steller Drive warehouse, was the first of America's new wave of natural food snack companies. Bruce had talked over the idea with Paul Hawken, who felt that snack foods were not appropriate for Erewhon at that time. The company's first product was Corn Munchies, which was the first natural corn chip. They would make corn tortillas, cut them into wedges, fry them in sesame oil, and season them with tamari. The Corn Munchies soon became very successful. The Natural Living Co. made bodycare products and cosmetics, starting with Sesame Shampoo and Sesame Lotion. Bruce had met a brilliant chemist named Carlos de Villalvilla, a Cuban aristocrat who was head of research for Max Factor. He was a concert pianist with 2-3 PhDs. Bruce asked him to develop a line of cosmetics without preservatives or mineral oil (a vegetable oil should be used instead of a petroleum derivative). Carlos used sesame oil (which is very stable) as the vegetable oil in these first two products.

By early 1971 Erewhon had outgrown the 10,000 foot warehouse and another 20,000 square feet in an old bakery, from which they did all transshipments to distributors. The store expanded twice, taking over the corner fish store (live fish in aquariums), to 8001 Beverly Blvd. Jim Gronemeyer did the remodeling. Tommy DeSilva worked there, and ended up owning the business. Continued. Address: P.O. Box 100, Cambridgeport, Vermont 05141. Phone: 802-869-2010.

9874. Macdonald, Bruce. 1992. The origin and development of Erewhon's operations in Los Angeles. Part II. 1971 to 1991 (Interview). *SoyaScan Notes.* March 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In one of its first issues (the very first was published in Jan. 1971), *East West Journal* published an interview with Bruce while Erewhon–Los Angeles was at the peak of its activity. They arranged for imports of natural foods from Japan to come into Los Angeles. They developed labels for the products with nice stories about each product; Burton Block did the graphics and helped with the text. He later became famous with the Nutragena designs.

In early 1971 Bruce found out that Paul Hawken had somehow obtained some stock and thus ownership in Erewhon and had not mentioned it to Bruce.

So Bruce went back to Boston and discussed the matter with Paul. Paul said, essentially, "That's the way it is." Ultimately Bruce felt that Michio was to blame for the problem, but "when I found out that Paul had some stock, I felt he had broken a blood bond with me and had deliberately deceived me. I felt more disgust than anger towards Paul because I had considered him a very close friend.

"I was not upset at Michio. Basically I have always felt that he was just stupid. He had the greatest opportunity–like the founding of the computer industry and he was Bill Gates–and he couldn't comprehend the American entrepreneurial spirit. Michio's approach was the traditional Japanese one. You come to work for a company, we pat you on top of the head, you have lifetime employment, but don't ever ask to own any of it. But he was in a country that was entrepreneurial to its core. Hey, we don't mind working for nothing–at the beginning. He should have offered the people who conceived and built Erewhon partial ownership in the company to motivate them and to keep them around. Failing to do that was Michio's biggest mistake."

On 21 Jan. 1971 *The Wall Street Journal* ran a front-page feature story on the emerging new natural foods industry. A person from Merrill-Lynch came in and said, "We could package this business and raise millions for you."

Bruce had always thought that Aveline had always owned all the Erewhon stock–from day one to the bitter end. The Kushi's attorney, Morris Kirsner, had put it in her name because they were worried about something happening like had happened to Irma Paule who ran the Ohsawa Foundation in New York. After Beth Ann Simon (a former heroin addict) died in Nov. 1965, the FDA raided the Ohsawa Foundation late one night and found its Nature's Cupboard to be selling food, as well as books, recommending the food as a cure for illness. Charged with "false advertising," the center was closed down, and the focus of macrobiotic teaching shifted to Boston. Michio was always concerned about teaching and being a purveyor of the foods about which he was teaching.

Seeing no future for himself in Erewhon, Bruce left Erewhon forever in May 1971 to attend to his two other thriving businesses. Bruce, who had been president of Erewhon on the West Coast, had been willing to work hard to build the company for a small salary ($150/week), reinvesting all earnings, on the understanding that he would become a part owner later–the entrepreneurial way. That had been his basic approach, and he assumed Paul and Michio were thinking the same way. But it never happened.

Erewhon had more than 99% of the market share on all of the Japanese imports. Bob Kennedy was buying from Tokyo C.I., which was very tiny. They had excellent sources for oils and grains, had built "Erewhon" into the top brand name, and had developed an aura of almost invincibility and quality. In short, they owned the market they had created.

Who got Muso (in Osaka) exporting Japanese natural foods? Probably Michio talking to Mr. Okada. Lima Ohsawa was more closely associated with Tokyo C.I. than with either Muso or Mitoku. Bob Kennedy had a certain allegiance to Lima Ohsawa. Herman and Cornellia Aihara had a little conflict with Michio and Aveline Kushi; "it was never on the

© Copyright Soyinfo Center 2014

surface but it sure was underneath." The split began in 1961 when Herman and Cornellia, following Ohsawa's advice, moved to Chico, California, with the group (including Bob Kennedy) that started Chico-San, Inc. in early 1972; Michio and Aveline decided to stay on the East Coast. All four (Michio and Herman, Aveline and Cornellia) were best buddies up until 1961. After than, there was a certain coolness. Bruce remembers, for examples, that when he and others were out in California, they never invited Herman (a sensei) down to lectures or other events. That was unusual. Bruce thinks (but is not sure) that Bob Kennedy (Chico-San) never bought (or never bought much) from Muso.

What happened to Erewhon–Los Angeles? One of the people who financed the early growth of Erewhon was John Deming, whose family were wealthy rice [sic, oil] barons. He married Judy Coates, lived on a trust fund, and invested something like $150,000 to $200,000 in Erewhon. Paul Hawken was close friends with him, in part because Paul gone out with Judy Coates, then later married Judy's sister, Dora. Then (according to hearsay) something happened and John asked for his money back. Erewhon said they couldn't pay him, but offered him Erewhon–Los Angeles instead. "So Deming ended up owning the West Coast" [Erewhon–LA]. [Note: For John Deming's version of this, see Dec. 1994 interview with him].

When Bruce was in Los Angeles, Tom DeSilva had been his "right hand man." In a major policy goof, they put Jim Gronemeyer in charge of the warehouse–which was sort of running the company. That blew up rather quickly. Bruce was long gone, so he does not know the details. Then Tom DeSilva took over, before Deming came in (in 1973-74) and took over Erewhon L.A. Deming owned the company and John Fountain was the manager who ran it. He bought much more than he needed. Someone stole a lot of money; it was a sick scene. They moved the warehouse from Steller Driver down to Vernon; it just declined, although the retail store, run by Tom, did well. Then Tom bought the retail store from John Deming in 1980. It was named Erewhon Natural Foods, and it quickly expanded into neighboring storefronts as they became available, adding a vitamin section, a deli, and then a restaurant named Nowhere Cafe. In 1990 Tom heard a rumor that their landlord would not renew their lease and would, in fact, use the space to open similar businesses. Acting quickly on this news, Tom located a 12,000 square foot space at 7660 Beverly Blvd. next to CBS Television Studios in the street level of a five-story apartment building. The new Erewhon store had to be designed, built, and permitted from an empty shell; this was accomplished within a year. The new store opened in 1991 with annual sales exceeding $9 million.

During much of the early history of Erewhon, Paul Hawken was in Japan. Paul's main reason for going to Japan was so that Erewhon could develop consumer packages and have the products (tamari, miso, noodles, seaweeds, kuzu) packaged in Japan. Hawken didn't return from Japan until the Erewhon store and 2 warehouses in Los Angeles (8554 Steller Drive, plus part of an old gigantic bakery) were up and running at full speed. They could get imports from Japan 2-3 weeks sooner in Long Beach than in Boston. From the West Coast, they shipped the goods as far east as Chicago, Illinois.

Warren Clough of Shiloh Farms was involved with organic farming before Erewhon; Warren was a very early pioneer.

Very little documentation remains on the early history of Erewhon. In about mid-1971 *East West Journal* published an interview with Bruce about Erewhon, conducted by his first wife, Maureen. It contained a photo of Bruce, and a good chronology of developments at Erewhon–Los Angeles. That was the real active time for the West Coast. In Aug. 1973 Paul Hawken wrote a self-serving article in *East West Journal* titled "Erewhon: A biography. The view within," which is full of inaccuracies. Bruce thinks that Patricia Smith (Patti, in Monrovia, California) might have early Erewhon catalogues. She was working for Trader Joe's until several months ago. She now has a new job elsewhere. Address: P.O. Box 100, Cambridgeport, Vermont 05141. Phone: 802-869-2010.

9875. Hayakawa, Tsuneo. 1992. Re: History of Hatcho miso company. Letter to William Shurtleff at Soyfoods Center, March 17. 3 p. Handwritten. [Eng]

• ***Summary:*** There is firm evidence to show that this company was established in 1645. Most documents written during the Meiji period (1868-1912) state that the company was established in that year. "And a death register, which had been kept in the Buddhist temple where my ancestors' tombs stand, supports this view.

"Until about 1600, my ancestors lived in the area across the Yahagi River which runs 80 meters west of our company. Then very favorable social and economic conditions for a Miso company were realized. The stream of the Yahagi River became so broad that ships with heavy load could sail up and down very easily. Next, the Tokaido–Highway was improved...

"Therefore, present location at Hatcho-Miso Company became very suitable for production and sales activity of Miso. Foreseeing the future, one of my ancestors decided to move to Hatcho-cho to start the business. Besides, this place was gifted with good soybeans, pure water of the Yahagi River and excellent salt. Our company has more than one-hundred sales-record notebooks (*Daifukucho*). Some of them were written in the Edo period."

The president and top man at Hatcho-Miso company is now Kyûemon Hayakawa, his elder brother, who was born in 1916. His two sons are in charge of the actual daily business; one is vice-president and the other managing director. Address: Hatcho Miso, 69 Okan-dori, Hatcho-cho, Okazaki-shi, Aichi prefecture 444 Japan.

9876. Williams, Brian. 1992. Entrepreneur pins his hopes on a budding taste for tofu. *Cincinnati Post.* March 17.
• ***Summary:*** David Kimbel, in partnership with his Japanese wife, Chieko, has launched Chieko Tofu, Inc., a tofu manufacturing company in Cincinnati. He has made health foods for the past 14 years, starting with alfalfa sprouts in his basement, then expanding into bean sprouts [including soy sprouts]. His sprout company is named Sunsprout of Cincinnati. Chieko Tofu hit the stores in late Feb. 1992. The company makes tofu 3 days a week using organically grown soybeans. "Chieko, which has two employees in addition to Kimbel and his wife, produces 300 cases of tofu a week–there are 12 one-pound packages of tofu in a case [i.e. 3,600 lb/week]–and Kimbel sees the potential of reaching 450 cases a week within a month." Address: Post staff reporter, Ohio.

9877. *SoyaScan Notes.* 1992. The advantages and disadvantages of wheat gluten and seitan compared with soyfoods such as tofu and tempeh (Overview). March 19. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Advantages: 1. Wheat gluten and seitan can be made to have more of a meatlike texture and flavor in vegetarian food products using simple technology. 2. They are lower in fat and have a lower percentage of calories for fat.

Disadvantages: 1. Wheat gluten and seitan are much more expensive per unit of weight or unit of protein. 2. The process by which gluten is made is hard on the environment, unless they are made from vital gluten. If made from whole wheat, the wheat starch cause such severe water pollution and clogs up municipal sewage pipes to such an extent that many municipalities will not allow manufacturers to continue operation. 3. The process for making them is very wasteful, since wheat contains only about 14% protein. The rest of the wheat (mostly starch) is wasted–almost as if it were fed to livestock. 4. Gluten is a major allergen; many people are allergic to it. In fact many foods advertise that they are "gluten-free" and many gluten-free cookbooks and other books have been published. 5. Celiac (coeliac) disease and celiac sprue are serious disorders. Most people afflicted with them are advised to follow a gluten-free diet. 6. The quality of their protein is lower.

In summary, in countries such as China and Japan, where both gluten products and soy products have been known and consumed for centuries, soy products pervade the diet and are a significant source of protein, whereas gluten products are used in very small amounts as minor specialty products. In China, they are best known in vegetarian restaurants.

9878. Young, Rich. 1992. Early history of macrobiotics and natural foods in America (Interview). *SoyaScan Notes.* March 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** First the names of some good sources: For Infinity Foods and Shadowfax: David Simon, 201-209-1646 (now doing business as Wholesome Brokers, still into scientology, formerly with Erewhon and a macrobiotic). For early Erewhon: Evan Root, 617-566-4783, in Brookline; he is very down to earth and sensible, like Jimmy Silver. For Erewhon–Los Angeles: Tom DeSilva, 213-655-3537. For Essene: Howard and Denny Waxman (brothers who founded Essene, which is still in business in Philadelphia, Pennsylvania). For Laurelbrook: Margy Coates, 301-877-1695, is one of the angels on this planet.

Rich worked for the Kushis for over 13 years. He studied with them at Arlington Street Church before Erewhon existed. Evan and Peggy Taylor, Ronnie Coates and Marty Russell started Sanae; Rich worked there for 18 months, washing dishes and buying. Then he worked at *East West Journal* for 18 months when Robert Hargrove was editor, in advertising and sales. Then for the Seventh Inn for 18 months, shortly after it started and the two guys who founded it quit. It never got off the ground. Evan Root was followed by Ty Smith who was followed by Richard Sandler. Then in 1972 Rich went to work for Tom Chappel of Tom's of Maine (natural toothpaste).

Bruce Macdonald married Maureen Traill, his first wife, in the first "official" macrobiotic wedding in Boston, Massachusetts, at the Old South Church on Copley Square. Then Bruce and Maureen moved to Los Angeles where Bruce played a major role starting Erewhon-Los Angeles. Bruce has had 6 children by four women. Now Bruce runs home-based Right Hand Press which publishes the teachings of Linda Green, an Avatar, dowser, and pendulum-using spiritual teacher from Oklahoma.

Rich thinks that one of the first people to develop a process for putting soy sauce on nuts was Nik Amartseff, who created Nik's Snacks that were sold by Erewhon. Nik started out working with Fred Rohe's New Age Foods in San Francisco. Ask Rich about Erewhon's Hopi Seeds and Nik's Snacks.

Rich began to work at Erewhon in 1974 when Bill Garrison was the president; he continued until the company went bankrupt. When Paul Hawken left Erewhon, Bill Garrison took over. In 1975, under Bill, the company was losing money. Michio brought in Ty Smith on the condition that if Ty could make the company profitable, Michio would give Ty shares in the company. At 33 Farnsworth St., as president Ty (who Rich has great respect for) made the company profitable, but Michio reneged on the deal. So Ty left–he is now in Hawaii running a combination convenience store, deli and gas station. Tom DeSilva knows how to reach him. Then Michio brought in as president Jeff Flasher, who was very close to Ty and thus knew that Michio could not be trusted. One day Jeff went to Michio and said that

© Copyright Soyinfo Center 2014

Erewhon could stay at 33 Farnsworth Street and probably stay profitable, but it wouldn't grow as fast due to the limited space. Or Erewhon could move into a much larger warehouse and potentially sell a lot more food, but they would incur significant debt in the process. Jeff left the decision up to Michio and Michio decided to go for the larger warehouse, with the promise that he (Michio) would come through with a certain amount of money by a specified date. Michio was not able to do this.

Jeff Flasher is a wonderful person and his wife, Linda, at the time was extremely intelligent and helpful to Erewhon. Another reason for the downfall was the pressure of the full-line distributors, which led Erewhon to greatly expand its product line and to include many products of marginal quality. It was a choice between being a manufacturer (they made nut butters and granolas) and a brand name (from imports), versus competing with the full-line distributors. Michio chose the latter approach. That was a major reason for Erewhon's downfall. Address: Right Hand Press, Cambridgeport, Vermont.

• ***Summary:*** This is one of the best sources known on the subject, which includes much information on the export of shoyu from Japan to other parts of Asia and to the Netherlands by the Dutch East India Company (VOC).

Chronology and basic concepts: Almost all shoyu (soy sauce) exported from Japan during the 1600s and 1700s (and all soy sauce exported officially or legally) was exported from a tiny man-made island named Dejima in Nagasaki Harbor. Most of it was exported by the Dutch East India Company (VOC), which was the only European company allowed to trade with Japan during this period of isolation from 1600 to 1854. The Japanese government classified all soy sauce exported from Deshima into two basic types: (1) Official trade freight (*motokata nimotsu,* also called *compania nimotsu*), and (2) Private trade freight (*waki nimotsu,* also called *yakusha / sojya* {staff / sailor} *nimotsu*). Official trade freight was the kind engaged in by the Dutch East India Co.; this freight was recorded in the Nagasaki Trading Firm Journal. Private trade freight referred to the goods traded privately by Dutch sailors and by the chief and staff working at the Nagasaki Trading Firm.

Note: In about 1600 the Chinese obtained an official trade permit and settled in Nagasaki. At the peak of Chinese activity there, about a century later, as many as 190 Chinese ships a year were visiting Nagasaki, and one-sixth of the town's population hailed from the East Asian mainland.

1609-1641–The Dutch East India Co. (VOC) maintains a trading post at Hirado, a small island off the northwest coast of Kyushu.

1634–Dejima (literally "protruding island," also spelled Deshima), a small artificial island in Nagasaki Harbor is constructed as ordered by shogun Iemitsu; it originally accommodated Portuguese merchants.

1638-1639–The Portuguese (and other Catholic nations) are expelled from Japan for suspected complicity in the Shimabara Revolt of 1637.

1641 May–The Dutch East India Co. is moved from to Hirado to Dejima, where they were kept almost like prisoners on the tiny island. For 200 years, Dutch merchants were generally not allowed to cross the little bridge from Dejima to Nagasaki, and Japanese were likewise banned from entering Dejima. From 1641 to 1853 the Dutch are the only Western nation allowed to trade with or to enter Japan, but solely on Dejima. Chinese and Korean traders are still welcome, but their movements are restricted.

Dutch ship arrivals: From 1641 to 1671 an average of 7 ships per year. From 1671 to 1715 about 5 per year. From 1715, only 2 ships were permitted each year; this was reduced to 1 ship in 1790 and again increased to 2 ships in 1799.

1647–Exporting of shoyu (soy sauce) to Asia from Japan (as official trade freight) began. The first shipment was 10 kegs (*taru / balien*) sent to Amping, on today's Taiwan, by the VOC's Taiwan Trading Firm. From 1647 to 1720, this shoyu was exported from the Nagasaki Trading Firm to each regional trading firm in Asia, including today's Hanoi, Vietnam (1652); Ayuthaya, Thailand (1657), Jakarta, Indonesia (1659), Malaca, Malaysia (about 1660), 250 km northwest of Phnom Penh, Cambodia (1665), Paliacatta, 40 km north of Madras, India (1666), Bengal region. India (1666), Colombo, Sri Lanka (1670), Surat, northwest coast of India (1672), Amboina, Banda, and Ternate, in the Moluccas, Indonesia (1693), Sulawesi Island (Celebes), Indonesia (1693).

Note: This document contains the earliest date seen (May 2010) for soybean products (shoyu) in Cambodia (1665); soybeans as such had not yet been reported by that date.

1685–The Shogunate at Edo limits the amount of "private trade freight" to 400 *kan* (1 kan = about 3.75 kg), or about 1,500 kg or 3,300 lb.

© Copyright Soyinfo Center 2014

1669 March 31–20 kegs of shoyu are shipped from Japan to Batavia on a Chinese ship (Source: Diary of Casteel Batavia). This is the earliest document seen showing a Chinese ship exporting shoyu from Japan.

1687–20 kegs of shoyu made in Kyoto (1 keg = about 29.104 liters) is shipped to the Ceylon (today's Sri Lanka) trading headquarters. It is believed to have been made by a sake brewer in Kyoto. At that time, Sakai city, a southern suburb of Osaka city, was located on the edge of Osaka Bay at the mouth of the Yamato River. It is one of the largest and most important seaports in Japan during the Medieval era, and is also famous in the Kyoto/Osaka area (along with Kyoto) for its soy sauce production. During the period 1764-1780 shoyu was made in Sakai by 4 manufacturers, including Shobei Hosoya. Soy sauce made in Sakai was transported by ships along the Inland Sea (north of Shikoku), through the narrow straight between northern Kyushu and Shimonoseki, around the north and west sides of Kyushu, to Nagasaki. These ships from Sakai were called the "Sakai Raw Silk Carrier Boat" or *Sakai Bune.* They had been authorized to ship imported silk from Nagasaki since the Keichô period (1596-1611) of Edo era. The ship was empty going back from Sakai to Nagasaki and the space was used for soy sauce exports. Much of the shoyu exported from Japan to the Netherlands is thought to have been made in the Kyoto / Osaka area. It was probably made mainly in Sakai, while that made in Kyoto was exported in small amounts for special occasions. Extremely low priced shoyu is thought to have been made in Kyushu, and exported to China. None of the shoyu exported during the Edo / Tokugawa period (1600-1867) was made in the Edo / Tokyo (*Kanto*) area.

1711–In the Chinese and Western Freight Log it is recorded that 61 kegs of shoyu (56 large kegs and small kegs) as well as 40 kegs of miso were exported as "official trade freight," whereas 867 kegs were exported as "private trade freight." Thus, the private freight (in this rare year where records exist) was about 8 times as much as the official freight.

1712–Some 999 kegs of shoyu and miso are exported as "private trade freight," Unfortunately we are not told how many of these contained shoyu and how many contained miso.

1721-1792–The VOC exports Japanese shoyu only to its trading headquarters at Batavia (today's Jakarta, Indonesia); from there it is transferred to each regional trading firm.

1737–The VOC first exports Japanese shoyu to the Netherlands, from its Batavia headquarters. Thus, Japanese soy sauce first arrived in the Netherlands (and in Europe) in 1737. All this shoyu was exported as "official trade freight." This export route was used until 1760. During the 24 years from 1737 to 1760, approximately 46,000 liters of soy sauce were exported from Dejima to the Batavia headquarters, and 15,600 liters (about 1/3 of the total) were then shipped from Batavia to the Netherlands. In 1742 and 1743, no shoyu was transshipped from Batavia to the Netherlands. Thus, during the 22 years that shoyu was transshipped from Batavia to the Netherlands as "official trade freight" was about 707 liters/year. The amount exported was calculated based on the capacity of the "large keg" (29.104 liters); the small keg held exactly half this capacity (14.552 liters). In addition, a substantial amount of shoyu was presumably exported from Batavia to the Netherlands as "private trade freight."

Also in 1737 the limit of 400 *kan* on "private trade freight" is abolished, so that any amount can be exported in this way.

1790–Shoyu is first exported from Japan in comprador bottles; these bottles, made of grey / white porcelain, were recorded as "sterilized soy sauce" and 550 of them were used this year to export shoyu.

1795–The book titled *Travels in Europe, Africa, and Asia, Made between the Years 1770 and 1779...,* by Charles Peter Thunberg (a Swede) is published in English. An entry from about the year 1776 (Vol. 4, p. 107), in the chapter on Commerce, reads: The traffic in *Soy* [sauce]... is more considerable [than that of tea. Japanese] soy is much better than that which is brewed in China. For this reason, soy is not only exported to Batavia [Jakarta], in the wooden kegs in which it is made, but likewise sold from thence to Europe and to every part of the East Indies. In some places in Japan too the soy is reckoned still better than in others; but, in order to preserve the very best sort, and prevent its undergoing a fermentation, in consequence of the heat of the climate, and thus being totally spoiled, the Dutch at the Factory [at Desima / Dezima / Dejima] boil it up in iron kettles, and afterwards draw it off into bottles, which are then well corked and sealed [by applying bitumen / coal tar to the stopper]. This mode of treatment renders it stronger and preserves it better, and makes it serviceable for all kinds of sauce.

Note: This early discovery of pasteurization and sealing in porcelain bottles explains how the Dutch were able to keep this soy sauce from spoiling becoming overfermented while it was being shipped from tropical Japan, to Batavia [Jakarta], across the Equator, around the Cape of Good Hope (south of Africa), then all the way to the Netherlands.

1799–The Dutch East India Co. (VOC) is dissolved.

1804-1829–A total of 2,672 kegs of shoyu is exported in Chinese ships during most of these 26 years from Japan. About 153 kegs/year are exported (range: 12 to 322 kegs, but with no exports in 1805, 1816-18, 1824-28).

1854–Japan's policy of self-imposed national isolation is abolished / ended. Shoyu can be exported freely, without limits.

Some 670 liters a year went to Holland. The soy sauce to be sent to Holland was put in a special container with special outside packaging. The shoyu that was exported was made mostly in Kyoto. In 1765 the famous French-language *Encyclopedia,* by Denis Diderot, had a section on soy sauce.

A careful analysis of the records shows that there were two sizes of wooden (cedar) kegs used for exporting soy sauce from Japan. The "large taru" had a capacity of 29.1 liters, whereas the "small taru" had about half that capacity. Note: However during the 20th century, the typical wooden taru used for packaging soy sauce, had a capacity of either 9 *shô* (16.2 liters) or (later) 10 *shô* (18 liters = 4.75 gallons U.S.). Each cedar keg had a wooden lid, was held together with braided bamboo hoops, and tied with packing rope. Address: Lecturer, Tokyo Metropolitan Daisan High School of Business Studies; Dep. of Literature and Graduate School of Hosei Univ., Tokyo, Japan.

• ***Summary:*** The "Comprador Merchant Guild" refers to the group of merchants who were authorized to coordinate the trading of commodity goods, exported products and freight between the Dutch staff at the Nagasaki Trading Firm [Dutch East India Company, or VOC] or the Dutch sailors and Japanese merchants.

Comprador is the Portuguese word for "buyer." The Comprador Merchant Guild, an abbreviation of the "Merchant Guild for the Sales of Various Goods at Dejima," was established in 1666 by 16 merchants under the authorization of Michisada Kono, the governor of Nagasaki. (The number of members increased to 17 at one stage.) They were the privileged group of merchants whose marketing rights were assured by the governor of Nagasaki.

The Comprador Merchant Guild was generally thought to have sold goods to Dutch merchants, but actually they worked for the Dutch merchants as their buyer in order to gain margin profits. The name, "Merchant Guild for the Sales of Various Goods at Dejima" refers exactly to this kind of activity.

In Nagasaki, in addition to the Comprador Merchant Guild, there was the Interpreter Guild, a group of interpreters who assisted the transaction of trading private freights. They gained commissions by interpreting and coordinating the trading of *waki nimotsu* ("private trade freight") under the license granted by the governor of Nagasaki in 1670. In the *Nagasaki Public Service Yearbook* written in 1701, 16 comprador guild merchants were counted as part of the 90 guild interpreters. Hence the comprador guild merchants and guild interpreters were treated as having the same social status.

History of the Comprador Merchant Guild: As mentioned in Panel 14, the guild was established in 1666 under the authorization of Michisada Kono, governor of Nagasaki. We now are going to take a closer look at the history of the Guild. (Excerpt from Episodes associated with Comprador Bottles, Masao Ichikawa).

In 1642, when the Hirado Dutch Trading Firm [part of the Dutch East India Co., or VOC] was relocated to Deshima / Dejima, a tiny artificial island in Nagasaki harbor, Heizaemon Koyanagi and Bunzaemon Kujiraya, two merchants engaged in the marketing of Dutch merchant goods in Hirado, accompanied the Dutch merchants and were given permission to continue business operations in Nagasaki. Later, in 1653, when the business became more prosperous, they recruited Rihei Hirayama and three other merchants from Hirado. Hence the merchant guild by this time was organized by six merchants. In 1666, Hikozaemon Murata and another nine merchants joined and

© Copyright Soyinfo Center 2014

the 16-member guild was established. Since then the number of the guild merchants has remained the same, except for a certain period when it consisted of 17 merchants.

The number of guild shares was fixed at 16. There were no restrictions concerning exchange of shares, and they were transferred to member's descendents, friends or relatives. In 1858, when a trading treaty with the Netherlands, England, France and Russia became effective, the guild ceased to enjoy its commercial privileges, and the original purpose of the guild disappeared. So in June 1868 the merchant guild branched out into new businesses including the manufacturing and/or distribution of bread. In 1874, however, because of a slump in business, the Comprador Merchant Guild dissolved; the shares and sales office were sold, and the assets divided between the guild merchants.

Besides their regular business operations, the Comprador Guild Merchants were ordered by the Edo Shogunate to accompany the Dutch to Edo in 1844, 1850 and 1855, and to supervise them in the purchase of prohibited goods or to assist them as transaction agents. Address: Lecturer, Tokyo Metropolitan Daisan High School of Business Studies; Dep. of Literature and Graduate School of Hosei Univ., Tokyo, Japan.

9883. Yamawaki, Teijirô. 1992. The Comprador soy sauce bottle (1-2). In: Yamawaki, Teijirô. 1992. "Soy Sauce Export in the Edo Period–According to the Nagasaki Trading Firm Journal." A Translation of *Edo jidai shôyu no kaigai yushutsu.* Noda, Japan: Kikkoman Institute for International Food Culture (KIIFC). 16 panels. See panels 8, 9, and 13. [Eng]

• ***Summary:*** The amount of soy sauce exported from Japan was recorded by the barrel in the Nagasaki Trading Firm Journal. But not all of this soy sauce was actually exported in barrels; some of it was exported in sterilized glass bottles (called "kerder bottles"), which were soon replaced by sterilized grayish white pottery bottles (called "comprador bottles").

The records show that two sizes of barrels were used to export soy sauce. The capacity of the small barrel was about 14.5 liters (3.8 gallons), roughly half of that of the large barrel (approximately 29.104 litres, or 7.78 gallons).

The pottery bottles [many of which still exist and are even sold or displayed on the Web] were made in Imari or Hasami near Nagasaki to cover the shortage of glass kerder bottles. They were then replaced with the pottery bottle similar to the baked bottle currently used as sake bottles (*tokkuri*). [Note: Both types of bottles were ordered, examined, paid for, and supplied by the Comprador Merchant Guild].

The full name of the comprador bottle shaped like a sake bottle is "comprador soy sauce bottle," in order to distinguish it from the comprador sake bottle.

According to Mr. Yamawaki, a comprador bottle

contained about 552 millilitres [a little more than 1 pint or half a quart] and 550 of them were used for the first time in 1790 for soy sauce export. These bottles of soy sauce are recorded in the Journal as "sterilized soy sauce." Soy sauce exported as official trade freight (*motokata nimotsu*) was discontinued in 1793. Eventually in 1799, the Dutch East India Company was dissolved. The Nagasaki Trading Firm subsequently came under the supervision of the East Indian Governor-General in Batavia, and soy sauce exports were resumed. At this time, the bottles were modeled after the ones used in 1790.

It was suggested by the late local historian, Mr. Masao Ichikawa, also a former notary in Amakusa, Nagasaki, that the comprador bottles came in two different styles.

They have the letters (all caps) "JAPANSCHZOYA" or "JAPANSCHSOYA" written on the shoulder. The early comprador bottles have handwritten letters on them and are grey/white porcelain. Two of the three bottles exhibited are the early comprador bottles. One of them, which is of yellowish earth-color, is considered to have been used even earlier than the white porcelain bottle.

Late comprador bottles have "JAPANSCHZOYA" and "CPD" stamped. "CPD" is the monogram that came from "comprador". On the opposite side of the bottle, a circular or oval stamp in Western characters or in Chinese characters, referring to the Nagasaki Comprador Trading Company or the Nagasaki Comprador Store, is seen. According to Mr. Yamawaki, the term, "trading company" came to be used during the Meiji period. This means that the late comprador bottle with the Chinese character stamp was also used during the Meiji period.

© Copyright Soyinfo Center 2014

The capacity of comprador bottles differs from bottle to bottle. The capacity of one bottle exhibited in the Noda City Local Museum is 575 millilitres while that of another bottle is 460 millilitres (See: *Comprador soy sauce and soy sauce produced in Tokatsu region,* by Norio Tanaka). Based on the amount of soy sauce and the number of the bottles exported, Mr. Yamawaki assumes that a bottle contained approximately 522 millilitres.

As mentioned in Panel 8, "JAPANSCHZAKY" is seen on the shoulder of the bottles of the same shape used for sake export.

Transportation of Comprador soy sauce bottles: It must have been very difficult for the Dutch to maintain the quality of the soy sauce they shipped all the way to the Netherlands by way of Batavia, right on the equator and around the Cape of Good Hope. How did Dutch merchants prevent the products from spoiling without any of the refrigeration or vacuum packaging technology we have today?

The following is an excerpt from the 1795 book *Travels in Europe, Asia, and Africa, Made between the Years 1770 and 1779,* by C.P. Thunberg, a Swedish doctor and botanist who worked for the Nagasaki Trading Firm as a medical doctor.

"Japanese people produce extremely high-quality soy sauce, much better than the Chinese equivalent. A large amount of soy sauce is shipped to Batavia, India and Europe. The Dutch discovered a reliable method for preventing soy sauce from being degraded or fermented at a high temperature. They boil soy sauce in an iron pot and pack it into bottles applying bitumen (coal tar) to the stopper." (Translated by Tamaki Yamada; Thunberg's 1795 book is in English).

Note: All this took place long before Appert's invention of canning in 1809 and Pasteur's invention of pasteurization in 1862. In fact pasteurization had been practiced in Japan for 200 to 300 years before this time.

In 1790, 550 comprador bottles were used for the first time to export "sterilized soy sauce". This seems to refer to the soy sauce that was boiled and packed into bottles with coal tar-applied stopper, as described by Thunberg.

A photo shows a page that mentions soy sauce from the trading records of the Dutch East India Company (National Central Archive, Hague, the Netherlands). Address: Lecturer, Tokyo Metropolitan Daisan High School of Business Studies; Dep. of Literature and Graduate School of Hosei Univ., Tokyo, Japan.

9884. Macdonald, Bruce. 1992. Introduction to macrobiotics and early work at Erewhon (Interview). *SoyaScan Notes.* April 5. Conducted by William Shurtleff of Soyfoods Center. • ***Summary:*** Bruce was born on 5 Feb. 1946 in New London, Connecticut. In 1964 he entered the University of Connecticut, and essentially majored in LSD. He was an early buyer (for personal use only) of LSD from the Boohoo Church in Florida. This "Church" was the original importer of LSD from Sandoz Labs in Switzerland. Arthur Klets was head; Timothy Leary and Richard Alpert were involved.

At Christmas, 1965, Bruce dropped out of the university because he had a kidney disease that just wouldn't go away. He went to a doctor who gave him, sequentially, 4-6 varieties of antibiotics. Each one worked for several weeks until the microorganisms became resistant. Seeing that he was on a dead-end road at age 18, he freaked. He took a bus to New York and, to his surprise, sitting next to him was Kathy Bellicchi (who is now living in Brookline, Massachusetts). She was from Bruce's home town and he had known her in passing when they were younger, but he hadn't seen her in a while. She said to him, "Just eat brown rice and salt and it will go away. I know somebody that I'd like to introduce you to. He's got a little teeny restaurant in New York City called L'Epicerie [at Second Ave. and 57th St.]. He is Michel Abehsera." Bruce recalls: "Michel is a rather spell-binding personality; also really smart and well-spoken. In 15 minutes he had me absolutely convinced that this was what I needed to do. And he was right. So I rented this apartment for $69 a month on Stanton, down on the Lower East Side" [of Manhattan, New York City]. For the next year, Bruce worked at a boring job for Bennett Brothers (an old, established mail order company in Manhattan selling trinkets–not natural foods) to pay the bills, and he began to study macrobiotics, and yin/yang. Finding a chart which showed buckwheat to be the most yang grain, he decided to start eating buckwheat as his main food. After receiving a call from an old friend, Bort Carleton, in Vershire, Vermont (a good, clean, quiet place for healing) he moved there and began living in a cabin with Bort (a shoe and boot tycoon in Boston), who was also involved with macrobiotics. Later, Bort also sponsored a macrobiotic study house. Soon Bruce was cured–permanently–of his kidney disease. He became a true believer in macrobiotics. He and Bort would drive to Boston to listen to Michio Kushi's lectures in the old church.

In June 1967 Bruce moved to Boston, and began to live in the University Road study house. After four quick affairs with lovely young women ("I was really yang"), Michio called him over to 216 Gardner Road and asked him to "chill out" (calm down) with these girls, since Michio was "involved" with the same young ladies. Michio and Aveline had initially gotten together in a marriage arranged by George Ohsawa, who sent Aveline to America to marry his best student. Michio and Aveline had an "open marriage," and both of them had affairs with younger people of the opposite sex the whole time that Bruce was in Boston. This was well known in the upper echelons of the still small macrobiotic community.

By late 1967 Bruce was working as a carpenter for Michio's landlord (Mr. Fogelman), redoing his house at 216 Gardner Rd. Paul Hawken hired Bruce to be the contractor and carpenter to remodel the new Erewhon retail store at

© Copyright Soyinfo Center 2014

342 Newbury St. Bruce did most of the design and contract work, then he assisted Jim Docker (a master carpenter) in the remodeling, getting thick planks from Boston piers for the floors, and constructing the shelves with dowels rather than nails. Erewhon had a little store below street level at 303-B Newbury Street, that later became Tao Books. While the business was at 303-B Newbury, in Aug. 1968 the first imports from Japan started to arrive from Muso Shokuhin. These included tamari (soy sauce) and miso. But Erewhon was unable to get Hatcho miso ("the Emperor's miso") in foil packs, and that was Erewhon's first contact with Mr. Kazama; he was able to get that product for Erewhon in less than boat-load quantities. From then on, Erewhon started to import from both Muso and Kazama / Mitoku. The Erewhon store at 342 Newbury St. opened in November 1968, on Thanksgiving day, and several months later, in March 1969, Paul Hawken went to Japan. Paul asked Bruce to take over as general manager of Erewhon. Roger Hillyard ran the retail store in the front of the building.

What finally happened to Erewhon? Michio always said that Erewhon was a school; he should have said it was a business. Address: Right Hand Press, P.O. Box 100, Cambridgeport, Vermont 05141. Phone: 802-869-2010.

9885. Macdonald, Bruce. 1992. The development of Erewhon: Early financing and suppliers (Interview). *SoyaScan Notes.* April 5. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** How did Erewhon finance its rapid early growth? Initially there was a deal with the State Street Bank in Boston to borrow about $25,000. Bruce was on the West Coast so he didn't really know the details. But State Street said "no," so they switched to New England Merchants bank. Bruce believes that Paul Hawken flew back from Japan to negotiate that loan–in about 1970 or early 1971. They got a slug from New England Merchants–probably in the neighborhood of $100,000. Also, the Japanese companies were giving Erewhon some time to pay; it was Mitoku at the beginning, then Muso later on. Bruce saw some of Erewhon's filings for the bankruptcy. As he recalls, Erewhon owed Muso about $200,000 and Mitoku (Mr. Kazama) about $200,000 to $250,000. That was quite surprising to Bruce. Apparently, right up to the end, Erewhon had been buying in roughly equal quantities from Muso and Mitoku. "Money was always extremely tight. Let's say you double your sales. As you increase your inventory, you also increase your accounts receivable–the money that people owe you. Bruce used to buy commodities from Cornucopia. "I used to order about $8,000 worth a week and he gave me three weeks to pay. So essentially he invested $24,000 in commodities–money that he never saw again. When the 4th week came I paid the 1st week, on the 5th week I paid the 2nd week–but I always owed him $24,000. We did that with all our suppliers, but at the same time we were extending credit to all the people we were selling to. There is a rule of thumb; as your sales explode, you need $3 in capital for every dollar increase in sales. You need a dollar for the extra inventory, a dollar for the extra receivables, and you need a dollar for the extra equipment you need to buy to service it. That could be moving into a new warehouse, buying a new flour mill or new trucks or pallet jacks. But we didn't have those three dollars. So we had to squeeze 'em and it was always very tight."

Who were the early, important organic farmers who grew crops organically for Erewhon. Arrowhead Mills (from Hereford, Deaf Smith County, Texas) was a major supplier of winter wheat, rye, corn, soybeans, pinto beans, etc. for about the first 3 years, before Erewhon had developed any of its own sources; that came later, after Paul Hawken returned from Japan. Paul probably visited Arrowhead Mills in Texas about 50 times; Bruce visited maybe 3 times, but he remembers the long windrows of composted cow manure that were eventually put on the fields. Frank Ford was a real farmer, who believed in working with nature. There was an older fellow, whose name now escapes Bruce, who was the brains behind Arrowhead's farming. He had studied Ehrenfried Pfeiffer's biodynamic method and had developed this method of keeping the soil fertile. "It was the most amazing thing. They were able to grow such good quality wheat and other crops in part because they were enriching their soil like nobody else in that area."

Ted Whitmer, the spring wheat farmer in Montana, was another early supplier. He did not have a contract with Erewhon; he just grew the wheat and sold it (in his bags) to anyone who would buy it. Spring wheat is a high-gluten wheat that is used for bread. Winter wheat, which grew in Texas, is higher in minerals because it is in the ground longer (you plant it in the fall), but it doesn't have much gluten. Lewis B. Cox, an organic farmer from Washington state, grew gorgeous pastry wheat, sold in his bags. Paul Keene at Walnut Acres was a retail mail order operation; Erewhon didn't buy much from him. Shiloh Farms, in those days, was Arrowhead Mills' big distributor. Erewhon didn't buy much from them because they bought from Arrowhead direct.

The contract farming came later. There was a 5-year contract between Bob Kennedy and the Lundbergs. The Lundbergs had been growing rice for decades. When they contracted to grow brown rice for Chico-San, they decided to leave the local rice co-operative (which mingled together all the rice grown by its members); they had to keep their organic rice separate. Leaving the co-op was a big risk for them, in part because they now had to sell all their non-organic rice by themselves–with no help from the co-op. Paul Hawken did all the rice negotiations with the Lundbergs. Even after Erewhon sold all this "unsprayed" rice, they could not buy rice labeled "organic" from Lundberg for a number of years. That was when Paul Hawken went out to contract for organic rice farmers in the South–Carl Garrich in Lone

© Copyright Soyinfo Center 2014

Pine, Arkansas, and Willow Farms in Louisiana. That rice was sold in Erewhon's bags and those were some of the first contract farming deals. At that point, Erewhon really began to have an impact on the expansion of organic farming in the United States.

But the person who should be given the credit for contracting organically grown crops, from farmers who had not previously grown organically, is Bob Kennedy of Chico-San. He was the innovator! Paul Keene was another innovator–a decade before Arrowhead Mills [1946-47 vs. 1960]. As far as someone from outside, specifying an organic product and agreeing to buy and market it–that was Bob Kennedy. The Lundbergs had a big family farm when Kennedy first approached them. They were concerned about all the chemicals they were using. But they had to make a rather major investment; they had to install a rubber roller rice mill which they bought from Japan. They also had to break away from the rice co-operative for their organic rice. So for them, it was a huge commitment, and they deserve plenty of credit as well.

Bruce knows nothing about Erewhon's early operations in Canada; that was strictly from the East Coast and must have come later. "The Erewhon branches in Toronto and Milliken, Canada, were related to a guy named something like Fredericks, who was extremely wealthy. He had had been a vegetarian for many years and one day woke up paralyzed. Someone involved with macrobiotics got him on a macrobiotic diet and he had a remission. He set up something but it never amounted to a hill of beans."

Bruce was not involved in Erewhon's exports to places like Sunwheel in the UK. Erewhon never exported much of anything, except to Canada. The Japanese foods were sent directly to Europe. Eden Foods was by far the leader in exporting macrobiotic and natural food products to Europe.

The first soy sauce that Erewhon *sold* was probably purchased from Infinity, a small company in New York. "A $1,000 order would be the largest that they ever got." Infinity was importing soy sauce from Japan before Erewhon. For a short time, Erewhon was by far Infinity's largest customer–before Erewhon began importing from Japan. When Erewhon stopped importing from Infinity, that was one of two reasons for Infinity's decline; the other was that Howard Rower began moving up in the Scientology hierarchy. The first soy sauce that Erewhon *distributed* was probably imported from Japan through Muso and made by Marushima. Address: P.O. Box 100, Cambridgeport, Vermont 05141. Phone: 802-869-2010.

9886. Macdonald, Bruce. 1992. Ceres, Shadowfax, and Erewhon (Interview). *SoyaScan Notes.* April 5. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Frank Calpeno, who was heavily into macrobiotics, started Ceres as a natural food distributor in Colorado Springs, Colorado. "He was a sweetheart of a guy." He was going to be a Green Mountain Granary retail store in Colorado Springs; George Slavin made a deal with him. Whatever the deal was, that ruined the basic idea of the retail store. By the time Bruce arrived (ca. 1972) Frank ran his own natural foods retail store in Colorado Springs; not until years later did he become a distributor. He may have been doing a little distributing before 1980, which is when Bruce left Colorado, but not much. He was not a major player.

Shadowfax was a little natural foods distributor that was established in about 1970-71 by Charlie Smail in Binghamton, in upstate New York. Bruce thinks they were not macrobiotic, but they were strictly natural foods. They started at about the same time as Laurelbrook. They were going great guns for a while and then they petered out. Bruce was on the West Coast so he does not know what happened to them.

Mottell was another small natural foods distributor in New York; he was also going great guns for a while (roughly 1970-1980), but didn't last for long. New York was a tough market for distributors; they came and went.

Essene started as a strict macrobiotic retail store that was one of the original distributors of Erewhon products. "When we first set up all of these distributors down-line from Erewhon, they were one of the first–along with Food for Life in Chicago (Illinois), Eden Foods in Michigan, Green Mountain Granary in Colorado, Westbrae in Emeryville, etc. Most of these people had natural foods stores and Erewhon helped them to expand into being distributors–based on the model of Erewhon. They modeled themselves after Erewhon and bought a large percentage of the products they distributed from Erewhon." Their catalogs were often identical or almost identical to that of Erewhon. This all happened shortly after Bruce left for the West Coast, so in about 1970-71. Essene was run by Denny and Howard Waxman; they still exist. Within the last year or so they moved out of the tiny store they had into a larger, nicer space. The only one Bruce can think of that did not start as a retail store was Laurelbrook.

What does Bruce think was responsible, above all, for creating that Erewhon model? "Paul Hawken and myself. We established the quality standards, the retail store look and environment, the packaging design, the price list and catalog content and design, etc."

Was Bruce ever aware of a power struggle within Erewhon in Boston? No. The chain of authority was always clearly established and respected. In later years things got a little weird with Bill Garrison (who ran the company into the ground), Ty Smith (who rebuilt it). Erewhon made a comeback under Ty, who was the last real live wire to run the place, before it went into its long, slow erosion and decline.

A decisive even was the lawsuit, which had to do with Erewhon's refusal to sell to co-ops. The co-ops sued Erewhon. That was the straw that broke the camel's back. Even though Erewhon won the lawsuit, but they lost because

© Copyright Soyinfo Center 2014

the legal fees cost them something like $250,000. There was not enough money to pay these fees and Erewhon never recovered. And Erewhon made other mistakes after that. Trying to become a full-line super-distributor. Doubling the number of items in the catalog. Moving into a huge and expensive warehouse. The labor union strike, etc.

Bruce hired Jeff Flasher out of jail in Los Angeles–where he first worked for Erewhon, L.A. In about 1970 Bruce got a letter from a guy named John Beverage, who was in jail. He said that he could get out if he could prove he had a job. Bruce wrote him back, "You've got a job." John Beverage came to Erewhon West Coast, worked for 3-4 months and was a wonderful, sweet guy. He developed a very successful company making alfalfa sprouts in Boulder, Colorado throughout the 1970s and into the 1980s. Unfortunately he died of a liver disease several years ago.

Anyway his roommate and best friend in jail was Jeff Flasher–who had been caught dealing pot [marijuana]. When John Beverage was working at Erewhon he told Bruce that he had a friend, Jeff Flasher, who was coming up for parole, and he asked Bruce if he would do the same thing for Jeff. Bruce said, "sure." Jeff Flasher became the miller for Erewhon West Coast. Several years later Bruce heard that Jeff was president of the company. "I was astonished."

Bruce believes that by focusing more on one product, Erewhon could have become a dominant force. San-J has built up and now owns the real tamari market, which means the market for natural soy sauce. They have nearly 70% or the market. While Bruce was at Green Mountain Commodities, San-J became the dominant player. They do all the bottling for Eden now. It happened when the dollar collapsed relative to the yen. Remember, in 1987 a dollar would buy 255 yen; it now buys about 130 yen. So, basically, all Japanese imports doubled in price, which enabled San-J–an American manufacturer of tamari and shoyu–to take such a large share of the market; they were $2 a bottle less expensive. Eden Food was a major importer of tamari [natural shoyu] from Japan, as was Westbrae with their Johsen. Tree of Life was a major importer and Arrowhead Mills used to sell quite a bit.

Some big questions: Why didn't Erewhon West Coast move to San Francisco, since 95% their wholesale business was in northern California? It made no sense for Erewhon West Coast to be in Los Angeles–which had a tropical climate. Erewhon West Coast was a major factor in Erewhon's early growth, largely because they could bring containers imported from Japan into the USA through the West Coast. "We began to rival the East Coast in sales for a while." One month, the East Coast did $390,000 a month in sales while the West Coast did $330,000 a month. Why did Michio Kushi fail to grasp America's entrepreneurial spirit? Why was he not honest and straightforward in his offers of stock ownership in Erewhon with Paul Hawken, Ty Smith, and Bruce Hawken? Address: P.O. Box 100, Cambridgeport, Vermont 05141. Phone: 802-869-2010.

9887. Macdonald, Bruce. 1992. Work after leaving Erewhon in May 1971. Part II (Interview). *SoyaScan Notes.* April 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: During the time when Jimmy Carter was president and interest rates were at 18% (these were hard economic times), Bruce's flagship retail store, Green Mountain Granary in Boulder (which had been a grocery store for 130 years) was condemned by the City of Boulder. They said the building was in a 100-year floodplain, and they condemned every building from 4th Street at the tip of the mountains all the way to Broadway–but actually they wanted to build their own Justice Center and Library in this area. So instead of invoking "eminent domain," they used this back-handed method. In about 1980 Bruce sold what was left of the company to his manager Seth Feldman.

Bruce then moved from Boulder to Boston. Tony Harnett, of the natural foods retail chain Bread & Circus, called Bruce and asked Bruce to come and work with him. After Erewhon went bankrupt, Tony was in big trouble; he had been getting most of his supplies from Erewhon. There was a little distributor in Connecticut named Earthbound. After Erewhon's demise, all five of Tony's retail stores tried successfully to order from Earthbound. But the next week when they tried to order again, Earthbound said, "Sorry, but we don't have enough capital." So Earthbound promptly went out of business. Consequently, Tony asked Bruce to start him a warehouse so he could supply his five stores. Bruce set it up in Watertown, and before long they had sales of $120,000 a week with three people–a very efficient operation. Then Bruce asked Tony for a share of the company, and Tony said "no."

Then Michelle Abehsera's younger brother, Georgie [George], called Bruce to say that he had just sold Nature de France (clay soaps) and he wanted to start a natural food store. Bruce left Boston in Dec. 1982, went down to New York City, and that was the beginning of Commodities, which they opened in March 1983. It was soon the biggest natural food store in New York City. At he beginning, Bruce and Georgie were equal partners in the company. But he was becoming a very, very orthodox Jew. So every Friday at 3:00 he would sell Bruce his 50% of the company, then he would buy it back Sunday morning. But Friday night and Saturday were the two times the company had its biggest income–about 50% of the weekly total. This was great for Bruce personally. Then a rabbi in Israel told Georgie that this way of doing business was not "Kosher" enough, so Georgie he asked Bruce to buy him out–which Bruce did–but it was hard.

Commodities had signed a 10-year lease in 1982, starting at about $3,000 a month and gradually increasing each year to $7,000 a month. But in the meantime, Robert De Niro and George Lucas had started Tribeca as a state of the

© Copyright Soyinfo Center 2014

art film editing facility in New York; in 1989 De Niro bought the old Martinson Coffee factory on Franklin and Greenwich in Tribeca–a 300,000 square foot building a block from the Commodities natural food retail store. They invested millions of dollars in equipment, and before long every celebrity known to man started coming to Tribeca in limos. So, with 3 years to go on the lease, when Bruce eventually went to his landlord to renegotiate his 10-year lease, the landlord said the first year's lease would be $30,000. "You can't run a grocery store paying that kind of rent." So Bruce sold Commodities to his ex-girlfriend and moved up to Vermont and basically retired.

That next summer (1990) he met Linda Green, "a walk-in angel," at an annual dowser's conference in [Danville?] Vermont. In the early 1990s, Bruce studied with Linda from Oklahoma. He actually lived in her monastery in Guthrie, Oklahoma–where she lived. He lived there 3-4 months and practiced spiritual dowsing, but he went there on and off for a year while she was there with the whole group. "We were dowsing these evil ratios and putting them in Solomon's seals (a star inside of a circle) and then in a black box–many tens of thousands of them. For high-level dowsing, we used an Aurameter, a very, very sophisticated and super-sensitive device (no electricity is involved) for sensing energy fields. Its a long story. She had a amazing personal charisma–such a pure spirit. I'd never met anyone like that before–not even remotely close. She just turned my life in a completely new direction. It was a wonderful, wonderful experience. She asked me to start a publishing company. So I went to Vermont and published five of her books (several thousand copies were sold or given away) and organized four different conferences (one in Toronto, Canada; one in Burlington, Vermont) to introduce her and her work to people."

Bruce (and Richard Young) published books at Right Hand Press (which Bruce started) in Cambridgeport, Vermont, about the work and teaching of this angel.

"She died three years later and the group basically disbanded; she predicted her death because she had too many "dreaming bodies"–many more than her body could withstand. Bruce has healed a number of people of chronic illnesses using spiritual dowsing. "You should go to this annual dowsing conference, where the dowsers all meet at this little town in Vermont. Old water dowsers, who come out of the hills, can tell you how deep a source of water is, how many gallons per minute you'll get. They use different dowsing devices. I became proficient using that Aurameter; I can find anything–such as energy blockages in other people–if they are the right soul-type. It's real. You can laugh or not, but I've seen it work again and again." She was an "uneducated nurse." She said there were two people born in the last century who came from a more evolved planet: Rudolf Steiner and Nikola Tesla (1856-1943). Tesla figured out a way to get free electricity.

In 1992, his daughter Crystal's senior year, Bruce was in Boulder, Colorado. He moved to North Carolina in 1993 where he remains in 2011. Bruce has moved 55 times in 40 years.

In 1993 Bruce bought the Macrobiotic Wholesale Company, which had been a division of Great Eastern Sun. Barry Evans, owner of Great Eastern Sun, had sold it to a German guy named Kurt Schmidt, who ran it (with his wife) for about five years, then sold it to Bruce and Yuko Okada, who renamed it Macrobiotic Company of America (MCOA). Since MCOA had been part of Great Eastern Sun, they imported from Mitoku in Japan–not from Muso. In Feb. of 2000 there was a hostile takeover of MCOA by Bruce's partner Yuko Okada of Muso. There were lawsuits back and forth, they settled, and Bruce had to sign a non-compete agreement for a year. In Feb. 2002 Bruce started his present company, Natural Import Company, also in Asheville, North Carolina. Norio Kushi ran MCOA for Yuko. As soon as Bruce left, Mitoku stopped selling to MCOA–but Mitoku had accounts receivable from MCOA. MCOA went bankrupt before Bruce's new company opened. Norio sold down the $400,000 inventory and did not replace it; he was selling his seed corn. Norio started spending money lavishly, and 14 months later he went bankrupt. Address: P.O. Box 100, Cambridgeport, Vermont 05141. Phone: 802-869-2010.

9888. Kushi, Aveline. 1992. The origin of seitan and how it came to America (Interview). *SoyaScan Notes.* April 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Aveline thinks George Ohsawa coined the term "seitan," but Aveline is not sure when he coined it. Since he died on 23 April 1966, he probably coined it in the early- to mid-1960s. She first heard the term from George Ohsawa, she thinks in the early 1960s while she and Michio were still living in New York; they moved to Massachusetts in 1963. Shortly after hearing about seitan, she bought some canned gluten-based meatlike products made by Seventh-day Adventist food companies, probably in New York. She does not remember how, where, or when she first learned to make seitan. Beginning shortly after her last son was born in 1964 in Boston, she taught many of her macrobiotic students how to make seitan starting with high-protein wheat flour. She taught seitan-making in almost all of her cooking classes, and she taught how to use the starch like kuzu as a thickener to make creamy soups. Starting in about 1984-85 she started to use the starch, together with rice syrup, to make sweet dumplings for desserts.

The first seitan imported to America was made by Marushima Shoyu Co. on Shodoshima in Japan. George Ohsawa went to visit the company, talked with Mr. Mokutani (who is still the chairman, and a close friend of the Kushis, and a great admirer of Ohsawa), and showed him how to make it. Marushima began to make seitan commercially in the late 1960s. It was imported to America by Muso Shokuhin at about the same time the first miso and shoyu

© Copyright Soyinfo Center 2014

were imported. She thinks it came in small jars, and was so salty that she used it as a seasoning in place of soy sauce in stews (such as soybean stews) or cooked it with vegetables; this cooking made it softer. She is not sure which Japanese company (Muso or Mitoku) exported this seitan to America, or which American company imported it, but it probably started to be imported in about 1969.

Concerning wheat gluten, about 15 years ago, the Kushis, through Mr. Kazama, convinced a Japanese manufacturer of dried wheat gluten (*fu*) to make the product from whole wheat flour. Since that time it has been imported to America by various importers of macrobiotic foods.

Follow-up talk with Aveline. 1992. July 8. She has just talked with Lima Ohsawa (age 93) by phone in Japan. Lima has no recollection of ever making seitan in a cooking class in America, or of ever teaching anyone in America how to make it. Initially Aveline thought she might have learned to make seitan from Lima, but after talking with Lima she thinks she may have learned to make it herself by trial and error, after she moved to Boston. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6869.

9889. Kushi, Michio. 1992. The main reasons for Erewhon's decline and bankruptcy, and current work with macrobiotics worldwide (Interview). *SoyaScan Notes.* April 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Michio has thousands of files in his basement, and some of them probably contain early catalogs and other information about Erewhon. Erewhon definitely started to import from Mitoku first, and then Muso–but they were about the same time. Michio set up all these connections before Paul Hawken went to Japan. Mr. Kazama came to America and they talked about the items Michio wanted to import. Then Muso was approached. Michio thinks Erewhon started importing foods from Japan 1-2 months before Hawken went to Japan. Hawken and Evan Root went to Japan at the same time. The main purpose of Hawken's trip was to study Japanese language and culture, and to set up more good connections for Erewhon and to arrange for products to be packaged individually; previously all were shipped in bulk. Paul didn't find out any new sources, Mr. Kazama did that.

Michio believes that there were two main reasons for Erewhon's decline and bankruptcy: (1) The company tried to expand too much too fast. At the end it was selling 4,000 products; (2) This rapid expansion led to Erewhon having many poor quality products. The company should have concentrated on high quality macrobiotic foods. Management wanted to have a wider selection of products, in part because competitors were offering a wide selection. Also, Erewhon gave up its virtual monopoly on macrobiotic-quality products imported from Japan and revealed many secrets about the Japanese manufacturers and suppliers of those foods and how those foods were made. If he had to do it over again, Michio would concentrate on only the best quality foods, and let the company grow slowly and naturally. For example, the quality of tamari soy sauce began to decline at a very early date. Likewise with the umeboshi plum and sea vegetables. "The quality of every product was declining because of too rapid growth in the company's sales. Moreover the educational activities didn't keep up with the company's growth. Muso and Mitoku have been keeping good quality as best they can but the so-called other natural food buyers, who were not concerned with macrobiotics, also started to go to Japan and buy those products, not only from Muso and Mitoku, but from other suppliers too–especially suppliers of soy sauce and miso with lower quality. These inferior quality products were retailed for a cheaper price at stores in America. The public did not know about the difference in quality, so Erewhon began to face big competition.

Even though Aveline owned Erewhon, neither she nor Michio ever received any salaries or money from the company. They wanted to let the management of Erewhon have a free hand, so they didn't tell them how to run it–to slow growth and concentrate on keeping quality high. "Erewhon was more like an educational place." There were debates over whether or not Erewhon should carry organic cheese and vitamins. Michio and Aveline opposed carrying these products, but let management do as it wished.

At the time Erewhon was growing most rapidly, the company needed money to finance the expansion, but bank interest rates were extremely high–about 15-18%. Inventory control for 4,000 items is very difficult and expensive; it requires a large warehouse and shallow inventories. During the last few years, Erewhon was able to fill only 40-50% of its orders because so many items were out of stock. Also as the company grew, many non-macrobiotic employees had to be hired to drive the delivery trucks, and they created a labor union. Erewhon had to battle with this union for 1½ to 2 years, and that cost a great deal of money. Truck drivers cut prices to stores in order to try to meet the prices of competitors. Financial difficulties piled up starting at the time when interest rates jumped and the union was formed.

Bill asks why Aveline and Michio didn't give talented managers a share of the ownership in Erewhon to motivate them to stay with the company. Michio says that Paul Hawken owned one-third of the Erewhon shares. Evan Root owned shares in Sanae. The Kushis paid all or part of Evan and Paul's travel and living expenses in Japan. Paul got his one-third shares after he returned from Japan and became president. When he resigned, he was definitely paid for the value of his shares. Paul wrote from California that he needed the money and offered to sell back his shares. So Michio and Aveline sent him the money and Paul sent his shares back to them. Only later did Michio learn that Paul needed the money because of his divorce from Dora Coates. Other people (whose names Michio also remembers) also owned some shares. Michio does not feel that giving

© Copyright Soyinfo Center 2014

managers ownership would have helped Erewhon. Michio thinks that the people who managed Erewhon during its last 5 years had the necessary business skills necessary to manage a company of that size that was growing rapidly.

Another reason for Erewhon's fall was that Michio did not pay serious enough attention to what was happening at Erewhon. He was too involved in teaching in America and Europe. At the time he noticed what was happening and stepped in, the situation had already become too serious. There was much sloppiness allowed by management, even though their intentions were good. He should have noticed a year before. It was a very sad situation. "Yet Erewhon had meaning as a pioneer company. That spirit still remains. My purpose at present is to continue education all over the world. Macrobiotics is now spreading all over the world, even to the Soviet Union, Thailand, and Japan. In Leningrad some 300 medical doctors are now studying macrobiotics as a group to help find a solution to the health problems of their country. His books are being translated into many Eastern European languages. Also it is very important to reach the scientific, medical, and nutrition professions–as well as governments. Their attitudes are now rapidly changing. Macrobiotics is now growing tremendously. My main concern with natural foods is that the quality be kept very good. My current effort is to elevate the quality of each product. For example, miso should definitely be fermented for 2-3 years. Soybeans and grains should all be organically grown, and only very good sea salt should be used–such as that made by S.I. Salt, an American company in New Mexico, and Lima salt in Europe [from Lima Foods in Belgium]. Michio now goes to Japan twice a year, and there he gives many lectures all over the country, helps to set up chapters of One Peaceful World, and works with food makers on product quality. He also formed the Japan Organic Natural Food Association (*Yûki Nosui Sanbutsu Kyôkai*) in Japan, of which he is president. About 200 companies are members.

On the one hand, Michio is happy with the way his work is going now. "But of course, I am always dissatisfied too. My time and my ability are limited. I can't help as many people as I would like. The demand is so great. So I always feel sad on that point. Whenever you talk with people from Erewhon, please extend my best wishes. And say always that Michio is thinking of them and their happiness. I hope sometime in the future we can get together. Then we can talk more about how to build one peaceful world–and not only food, but more about health, families, government, economics, and spiritual matters, and how to make the many countries more united and harmonious in one world. Let's work together." Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6869.

9890. Root, Evan. 1992. Recollections of early work with Erewhon and Sanae. Trip to Japan with Paul Hawken (Interview). *SoyaScan Notes.* April 11. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter of April 29.

• ***Summary:*** Evan (his first name rhymes with "heaven") does not have any early Erewhon catalogs, but he thinks Marc van Cauwenberghe might have some in his library on macrobiotics. He does have a letter to the general public announcing the opening of the first Erewhon retail store on 9 April 1966. It was at 303-B Newbury St., below street level. Initially Evan owned (titularly) 100% of the stock in Erewhon, but soon he passed it to Aveline Kushi after legal documents were drawn up. While he was at Erewhon the little retail store sold the following soy products: whole soybeans and probably soy flour (probably from Walnut Acres or a Mennonite community, both in Pennsylvania), soy sauce and miso (probably both obtained from Infinity Foods in New York; Infinity imported these products from Japan). Hamanatto was also sold. No tofu was sold at the store, but firm tofu was available from nearby Chinatown.

The Kushis imported miso, shoyu, condiments, etc. from Japan about twice while Evan was managing the Erewhon retail store. This direct importing was infrequent and the quantities were small due to the lack of cash. It was much easier to buy from Infinity or Chico-San and not tie up the money. In fact it was the norm to stretch out those friendly distributors as long as possible for payment.

Before he left Erewhon, in Oct. 1967, Evan personally hired Paul Hawken, with Aveline's permission, to take his place. Then Evan opened the first macrobiotic restaurant in Boston, named Sanae (meaning "young rice plant" in Japanese); it opened in early 1968 on Newbury St. In late March 1969, Evan and Paul Hawken left Boston and traveled to Japan together. Several months before they left, Evan had been given 50% of the shares of stock in Sanae by the Kushis for the work he had done at Sanae. The Kushi's lawyer, Morris Kirsner, had drafted the agreement to read that if Evan did not return to management of the company within 18 months, he would agree to sell this stock back to the Kushis at an agreed-upon price. Evan thinks that Paul had a similar type of stock arrangement in Erewhon, but he is not sure what it was (Note: See interview with Aveline Kushi, March 1993). Evan went to Japan mainly to study the language and culture. He ended up staying there 3 years and 7 months, largely in Tokyo (Setagaya-ku, Shoin-jinja-mae). He studied Japanese at the Tokyo School of Japanese Language. After 18 months, there was a lad name Hiro Fujieda living with the Kushis in Boston. Rather than Hiro pay rent to the Kushis, Hiro's family would pay Evan monthly in Japan on a monthly basis–until the value of the stock was paid off. Evan used this money to support his studies.

After about a year, in late 1971 or early 1972, Evan went to work for Muso Shokuhin in Osaka. He translated letters that arrived from Europe and America into spoken Japanese, and then answered the correspondence. By the end of his

© Copyright Soyinfo Center 2014

stay in Japan, Muso was exporting quite a volume of natural foods and exports were a big part of the company focus. Evan thinks that Ty Smith took his place when Evan left.

Returning to Boston in early Oct. 1972 (along with Mr. Masuda and Michelle Matsuda), Evan became an employee of Sanae after several months, working as maître d'. In 1971, while Evan was in Japan, Sanae had expanded to open another larger branch restaurant in Boston, originally called "Sanae" but informally called "Big Sanae," then later formally named The Seventh Inn (at 269 Boylston St.). When Evan was in Japan, he heard that the restaurants were not doing well, so Yuko Okada (originally of Muso Shokuhin, who was working at Erewhon) took over management of Sanae. Hiroshi Hayashi, a top cook in a lineage, traveled to Boston from Japan, bringing with him his disciple, Chika Abe, to take charge of cooking at Sanae. His disciple, Mr. Yozo Masuda, later joined them. Hayashi is now at a restaurant named Latacarta in Peterborough, New Hampshire (Phone: 603-924-6878).

Evan's recollection is that Paul Hawken's trip to Japan was more to study the language and culture, but he did work on Erewhon business while he was there. Moreover, he returned from Japan after about 9 months to work at Erewhon. Evan feels that few of the people involved in early macrobiotic businesses saw themselves strictly or even mainly as businessmen. "None of us were in it, as I saw it, for the money. For us, the whole thing was a Cultural Revolution with respect to Japan." Evan also identified strongly with the phrase "Biological Revolution."

When Paul Hawken returned from Japan, he built Erewhon into a big natural foods company. Address: 541 Washington St., Brookline, Massachusetts 02146. Phone: 617-566-4783.

9891. *Toyo Shinpo* (*Soyfoods News*). 1992. [Average household expenditures for tofu, aburaage, natto and konnyaku in Japan in 1991 by region]. April 11. p. 2. [Jap]
• ***Summary:*** Average per household expenditures for various soyfoods; yen figures are not adjusted for inflation. The 11 regions (chihô) are: 1. Tokyo-to. 2. Hokkaido. 3. Tohoku Chiho 4. Kanto. 5. Hokuriku. 6. Tôkai. 7. Kinki. 8. Chûgoku. 9. Shikoku. 10. Kyushu. 11. Okinawa.

Average per household expenditures for tofu are highest in Shikoku (9,045 yen, up 22.9% from the previous year). They are 2nd highest in greater Tokyo (8,218 yen, up 3.8%). They are lowest in Hokuriku (6,835 yen, down 2.0%).

Average per household expenditures for aburage and ganmodoki (deep fried tofu pouches and burgers) are highest in Hokuriku (5,772 yen, up 3.7% from the previous year). They are 2nd highest in Kinki (5,170 yen, up 10.5%). They are by far the lowest in Okinawa (701 yen, down 0.7%).

Average per household expenditures for natto are highest in Tohoku Chiho (the northeast prefectures) (4,709 yen, up 20.6% from the previous year). They are 2nd highest in Kanto (4,133 yen, up 13.1%). They are by far the lowest in Okinawa (923 yen, down 13.5%).

9892. DeBona, Don; Callebert, Mark. 1992. Update on Lima Foods and Euronature (Interview). *SoyaScan Notes.* April 19 and 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following is based on a talk that Don had in North Carolina with Mark Callebert, general manager of Lima Foods in Belgium, then a direct interview with Mark in Belgium on April 23, followed by a letter from Mark on June 16 with exact dates. Mark has worked with Lima for about 16 years (since 1 Sept. 1975).

The Gevaert family sold Lima in May 1988 to a company named Vibec in Quebec, Canada. Vibec was a construction company (they were not involved with foods) and the owners spoke French. The contact with Vibec was made via Henry Lucy, a Frenchman who was on the Lima board of directors (and also a shareholder), who was a friend of Michio Kushi (Michio had healed Henry's wife), who had quite a lot of money, and who also had a construction company in Africa. Michio was also on the Lima board for a while. Vibec purchased Lima as a way of getting involved in the new European market without borders which will begin at the end of 1993. However Pierre Gevaert and his son, Daniel (who was production manager at Lima, France), kept their property and mill in the south of France where Lima used to make miso. At that time Lima had a lot of financial problems. Pierre Gevaert owned the majority of the stock in Lima, and his relatives (mostly his brothers and sisters) owned the rest. Mark and Frank Stevens (Pierre Gevaert's son-in-law) played key roles in negotiating the deal, then stayed on to run the company. On 22 April 1989 Lima purchased Jonathan P.V.B.A., which is still a fully owned subsidiary (daughter company) of Lima. But the marriage of Lima (a Belgian natural foods company) and Vibec (a Canadian construction company) was a strange one, and for that reason it didn't last long.

Then in September 1989 Lima was purchased from Vibec by Euronature (pronounced as in French, YU-ro na-TYUR), a large international food company headquartered in Paris, France. Euronature is a holding company that was founded in June 1989; the president of Euronature was able to raise a lot of money from banks and insurance companies to create the holding company. Frank Stevens was killed in an automobile accident in Nov. 1989.

Lima is presently doing well, is financially very solid, and the future looks bright. Lima has sales of about $15 million a year, but the company is not yet profitable. Mark feels that they will become profitable when sales reach about $17 million/year. Their traditional high standards of food quality are completely supported by Euronature. Pierre Gevaert (born 21 July 1928 now in his mid-60s) no longer owns any part of Lima and neither he nor his son have been active with the company since it was purchased by

© Copyright Soyinfo Center 2014

Euronature. Pierre lives in the south of France and works on his organic farm there. Lima is still headquartered at Sint-Martens-Latem in Belgium.

Euronature has 4 major divisions: (1) Natural foods division, including Lima Foods, Lima's bakery and muesli factory, and several natural foods distribution companies; (2) Gourmet division; (3) Seafoods division (Euronature's largest), with branches scattered throughout Europe; (4) French specialty foods division.

Lima's largest product lines are their muesli products (which they make at their own plant), their bakery (located 6 km from Sint-Martens-Latem in Belgium), their sesame division (they make tahini and gomashio, and were one of the first to grow sesame seeds organically), and their tomato canning division (located in the south of France, it makes tomato sauces and ratatouille). Lima's leading soyfood products are tamari, shoyu, organic miso, their soymilk products (including regular and Mocha-Soy soymilk, and Soy Desserts, all made by Alpro in Belgium), fresh tofu salads, and tofu in cans and jars. Imports from Japan are now quite small, representing only about 10% of Lima's total sales. Although Lima no longer makes its own miso, it still sells quite a lot of miso–much of it from past batches made by Jan Kerremans in the south of France. Lima is now looking for other sources, including American Miso Co. in North Carolina. Jan now works part time as a consultant for Alpro in Belgium.

Jonathan's main products are now seitan and tofu (both fresh [pasteurized] and in jars), plus many second-generation products made from seitan and tofu, such as fresh tofu spreads, tofu pates, seitan brochettes, etc. Jonathan makes all of the seitan, tofu, and related products sold by Lima. Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

9893. Wilson, Lester A.; Murphy, Patricia A.; Gallagher, Paul. 1992. Soyfood product markets in Japan: U.S. Export opportunities. Ames, Iowa: MATRIC (Midwest Agribusiness Trade Research and Information Center). x + 64 p. April.
• ***Summary:*** Contents: Figures. Tables. Acknowledgments. Introduction. I. Soybean processing (by Wilson and Murphy). Food from soybeans: Soybean chemical composition, environmental influences on soybean composition. Soyfood manufacture: Soymilk, tofu, momen tofu, kinugoshi tofu, packed tofu, aseptically-packaged tofu, deep-fried tofu, kori tofu. Tofu-related research: Recent studies at Iowa State University, summary, future research. Other nonfermented soyfoods: Yuba, kinako, texturized soy protein foods. Fermented soyfoods: Miso, shoyu, natto, tempeh. Japanese Agricultural Standards (JAS). Identity preservation and transportation. U.S. soybean quality and the Japanese market: Grain quality, judging quality, potential new markets.

II. Japanese soyfood markets (by Gallagher). Demand and growth prospects: Consumption patterns, demand analysis, forecasts. The U.S. share of the food soybean market: Sources and uses, market share analysis, determinants of relative prices, prospects. Trade and trade barriers: Soybeans, processed products. Summary and recommendations.

Appendixes: A. Excerpts from specifications and standards of food additives, etc.–Manufacturing and storage of tofu. B. Excerpts from standards and certification systems in Japan. C. Additional agricultural standards for soybeans. References.

Table 2.1 shows soybean use for soyfood production in Japan; actual (1986) and projected (2000). Soybeans for tofu are expected to increase from 524,000 to 609,700 tonnes. Soybeans for miso are expected to decrease from 156,000 to 101,600 tonnes. Soybeans for natto are expected to increase from 92,000 to 118,600 tonnes. Figures 2.1 to 2.4 show Japanese per capita consumption of tofu, natto, miso, and soy sauce from 1965 to 1988. Tofu: Japanese annual per capita consumption of tofu has risen since 1965, except that it fell during 1973-1977. In 1965 about 3.6 kg/capita of soybeans were used to make tofu, increasing to 4.4 kg/capita in 1988. If 1 kg of soybeans yields 2.8 kg of tofu, then per capita tofu consumption in 1988 was 12.32 kg or 27.1 lb.

Natto: Japanese annual per capita consumption of natto has risen steadily, from a little less than 0.4 kg in 1965 to 0.6 kg in about 1968, to 0.8 kg in 1988.

Miso: Japanese annual per capita consumption of miso fell from 8 kg in 1965 to about 5.4 kg in 1985, then it began to rise to about 5.7 kg in 1986.

Soy sauce: Japanese annual per capita consumption was about 12 liters in 1965. It fell to 11 liters in 1967, rose to 13 liters in 1973, then fell to 9.8 liters in 1985, after which it rose for 1 year. Address: 1-2. Prof. of Food Science and Human Nutrition; 3. Assoc. Prof. of Economics. All: Iowa State Univ. Phone: 515-294-0160.

9894. Creighton, Barry. 1992. Cable Springs Bakery and recollections of Tan Pups in Boston (Interview). *SoyaScan Notes.* May 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Barry started baking while he was living in Los Angeles, California, at a macrobiotic study house run by Carolyn Heidenry. Then he moved to Boston and continued selling (out of his apartment) the baked goods he had developed in Los Angeles. He and Cathy were married about a year later on 7 Jan. 1974 then in August 1974 they started Cable Springs Bakery as an incorporated official business.

At that time (Aug. 1974) he is quite sure that a product named Tan Pups (skewered seitan deep-fried in a breaded batter) were on the market. Barry thinks that Tan Pups were probably introduced 6-12 months before his bakery opened, i.e. in early 1974 or late 1973. The Tan Pups may have been

© Copyright Soyinfo Center 2014

made by the Queensberry Bakery [actually they were not], which was run by two brothers (whose names Barry does not remember); it was a natural foods- rather than a macrobiotic bakery. Both his Cable Springs Bakery and Queensberry Bakery sold their products at the Erewhon retail store on Newbury Street in Boston. They were sort of competitors, and Barry first saw Tan Pups in that Erewhon store. Barry also recalls that Tan Pups were on the market when his son, David, was born on 3 March 1975. But not long after that, Queensberry Bakery went out of business, and their Tan Pups were therefore no longer available. Barry almost bought Queensberry Bakery, but after a series of negotiations decided not to. Cable Springs Bakery was sold to Bruce Berman in August 1975; Barry had owned the business for a year. Then he and Cathy went to Vermont. Cathy learned about seitan from Michio Kushi during a consultation concerning her daughter, Eliza's, broken leg. She learned how to make seitan from Kathy Bellicchi at the Beacon Hill Study House in Boston, and she learned how to make kofu (raw wheat gluten) from Lima Ohsawa's book *The Art of Just Cooking.* Cathy developed a recipe for Tan Pops in 1975 in Vermont. The best Tan Pops are made by the longer double deep-fry process that Cathy developed for seitan burger parties in Cambridge.

Today at their community in Alaska, they still make Tan Pops on their full-moon night feasts. His daughter makes most of the Tan Pops; she learned from him and Cathy. To made double-fried Tan Pups: Make raw wheat gluten dough and cut it into large chunks (4 by 1½ by 1½ inches). Get 3 pots going on the stove: (1) A pot of oil for deep-frying; (2) A pot of boiling water; (3) A pot of broth containing 12 cups water, 1½ cups tamari, 30 thin slices of ginger, and lots of kombu. Deep-fry the chunks, dip them in the boiling water, then simmer in the broth for 1 hour. Drain and cool. Skewer chunks on chopsticks. Prepare a tempura batter containing 4 cups each corn flour, pastry flour, and unbleached white flour, 2 tablespoons sea salt; add water to mud consistency. Dip skewered chunks in tempura batter and deep-fry again. Address: Foundations Inc., HC2, Box 564-B, Kasilof, Alaska 99610. Phone: 907-262-2824.

9895. Root, Evan. 1992. Cable Springs Bakery in Boston and Tan Pops in Alaska (Interview). *SoyaScan Notes.* May 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Barry Creighton started Cable Springs Bakery in Boston. Initially it was run out of his home, but in about late 1974 it became "official." Their main product was a line of about ten varieties of "pies," which were square filled pastries baked in trays with a layer of dough on top and bottom, then cut into squares (they had no dough on the sides). They had Rice-Sea Vegetable Pie (with hijiki), Bean Burrito, then the sweeter ones with fillings of apricots, apples, etc. Kathy Bellicchi worked with them, and later purchased part of the business making cookies. Bruce Berman (who now lives in Chicago, Illinois) finally bought the whole business.

While in Boston, the Creightons must have gotten to know and grown to love Tan Pops. About 5 years ago they moved to Alaska, where they are part of a macrobiotic community of 4 families and 25-30 children living in Kasilof, on the Kenai Peninsula. The community, named Foundations Inc., grows a lot of its own food, and they generally eat quite simply. But on the night of each full moon, they have a feast. To this day, for these full moon dinners, they make about 100 Tan Pops (skewered, deep-fried seitan), which everyone loves–especially the children. They do not sell the Tan Pops commercially. Evan has visited them from time to time. They might know about the origin of Tan Pups in Boston. They have a great love for the food revolution and for kindred spirits who share that interest. Their address is presently HC2, Box 564-B, Kasilof, Alaska 99610. Phone: 907-262-2824. Evan does not know anything about Tan Pups.

Note: As of March 2003 there is a macrobiotic of 5 families named Ionia (website Ionia.org) living on the Kenai Peninsula in Alaska–150 miles south of Anchorage. They make their own tofu and homeschool their children. They try to teach their children traditional values–which do not include reading, writing, or arithmetic. All of the parents studied with Michio Kushi during the 1970s. Address: 8 Ayleston St., Jamaica Plain, Massachusetts 02130. Phone: 617-566-4783.

9896. Bellicchi, Kathy. 1992. Recollections of seitan in Boston from 1970 (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Aug. 1969 Aveline Kushi had moved to Los Angeles where her youngest son, Hisao, had undergone traditional Japanese bone massage therapy. Kathy arrived in Boston in early 1970 when Aveline had just returned briefly from Los Angeles. At that time Aveline gave some cooking classes in Boston which Kathy attended, and Kathy remembers that Aveline taught how to make seitan in these classes. That was the first time Kathy had ever heard of seitan. Before that time, Kathy had lived in New York, had been macrobiotic since 1965, and had cooked with Michel Abehsera and many other macrobiotics in New York; she never heard of seitan while in New York prior to early 1970. But the Ratners chain of restaurants in New York did serve Protose Steak made of wheat gluten.

Kathy recalls that in the early 1970s seitan was considered by macrobiotics to have medicinal properties. For example, when Cathy Creighton arrived in Boston and Eliza had a broken leg, many people suggested that Eliza be fed seitan to help the leg to heal.

To make seitan back in the early days, Kathy would grind a special type of hard Minnesota wheat into flour, knead flour and water together thoroughly to make a dough,

© Copyright Soyinfo Center 2014

then let that dough stand under water–often for several hours. She would then further wash the raw wheat gluten, strain the starch water to separate the bran (which settled to the bottom), dry the bran on cookie sheets in an oven, and use it to make bran pickles. The starch water would be used to thicken a seitan stew–so everything was used. Most people made seitan by first deep-frying the wheat gluten, then cooking it in a tamari-ginger broth to make seitan; everyone said it had to be deep-fried first, and Tan Pups probably came from that concept. Kathy thinks that this method may have come from George Ohsawa to Herman Aihara to Aveline Kushi. To make seitan stew, chunks of seitan were simmered with chunks of onions, carrots, and other vegetables; just before it was served, some of the starch water was added to give the stew a nice sheen and little thickness. It turned clear when added.

She remembers that Tan Pups were made by the Queensberry Bakery in Boston. Kathy does not recall the names of the two brothers who ran the Queensberry Bakery. Matthew Chait, an actor who had a cart named the Ricycle at Boston University, worked out of the Queensberry Bakery; he or Vern Verona might know more about Tan Pups. Address: 55 Meadowbrook Rd., Brookline, Massachusetts 02167. Phone: 617-734-1380.

9897. Sinclair, Valerie. 1992. Japanese cuisine is several settings. *New York Times.* May 10. p. NJ 13.
• ***Summary:*** This is a review of the Japanese restaurant Sukeroku (68 Route 23, corner of Pompton Ave., Little Falls, in upstate New York–near Utica, between Albany and Rochester). About four years ago a new owner added a karaoke bar to the sushi bar and tatami rooms. Some dishes illustrate well the contrast in textures so prized in Japan. For example "raw squid rings with chopped fermented [soy] beans (ika natto)."

9898. Adlercreutz, Herman; Hämäläinen, E.; Gorbach, S.; Goldin, B. 1992. Dietary phyto-oestrogens and the menopause in Japan (Letter to the editor). *Lancet* 339(8803):1233. May 16. [7 ref]
• ***Summary:*** The authors of this letter theorize that diet is a possible reason for the differences in menopause symptoms between Japanese and American women. The scientists had studied the phyto-estrogen excretion of a small sample of Japanese women with mean age 50 eating "a traditional Japanese low-fat diet". Phyto-estrogens come from plants; when consumed, they act like endogenous estrogens, the estrogens produced by the body. Menopausal symptoms are associated with a drop in a woman's production of endogenous estrogens.

The Japanese women excreted up to 1,000 times more phyto-estrogens than American women consuming a Western diet. This result was a positive finding for the Japanese subjects; the scientists attributed the high levels with high intake of soyfoods, which are rich in phyto-estrogens.

Although the scientists did not specifically study the effects of phyto-estrogens on menopause, they believe that soyfoods may act like a hormone replacement "pill", closing the gap created when endogenous estrogen levels drop during menopause.

Note: According to Peter Golbitz of Soyatech, Japanese eat an average of 26 pounds of soyfoods per person each year, while Americans eat only about 4 pounds. Address: 1-2. Dep. of Clinical Chemistry, Univ. of Helsinki, SF-00290 Helsinki, Finland; 3-4. Nutrition/Infection Unit, Dep. of Community Health, Tufts Univ. School of Medicine, Boston, Massachusetts.

9899. Chait, Mat. 1992. Early recollections and work with the Ricycle and soyfoods in Boston, 1970-1972 (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the late 1960s Mat had started graduate school in counseling psychology at Hunter College in Manhattan, New York. But under the influence of yoga, Swami Satchitananda, Hinduism, vegetarianism, and macrobiotics, he decided to drop out and to study macrobiotics in Boston with Michio Kushi. He arrived in Boston in about December 1969. Nine months later, Mat started operating the Ricycle at Boston University in September 1970 at Boston University. He recalls: "The design of the Ricycle was absurd. It consisted of a steam table (which without its food weighed 600-700 pounds) welded onto the back of a girls bicycle. To move the Ricycle, he pedaled it (rain or shine; or pushed it up even gradual hills), but it was so heavy and clumsy as to be almost immobile." At night it was kept in the garage of the macrobiotic study house at 6 Ellery Street.

During the first 6 months, Barbara Grace prepared most of the desserts and whole grain breads at the kitchen of a big study house across from the Brookline High School. Marion (who had an Italian last name) prepared the vegetable and grain dishes in another study house. (Note: Marion married Frank Calpeno, who owned Ceres Natural Foods, a fairly big macrobiotic food distribution business in Colorado Springs, Colorado; they moved to Colorado in the early 1970s). Dora Coates (whose parents started Laurelbrook Foods) also cooked for Mat for a while. The business took off quickly, with the help of many magazine and newspaper articles. Mat got a loan, so in early 1971, in the dead of winter when it was too cold to be out on the street, Mat built a kitchen inside the Erewhon warehouse, and it began operation at the end of March 1971. Since Paul Hawken was in California at the time, Mat got permission from the acting president of Erewhon.

Every day the Ricycles would offer a grain dish, whole grain bread, a vegetable dish, a dessert, and often a soup–but there was a different menu every day. A number of popular

© Copyright Soyinfo Center 2014

dishes contained soy as an ingredient. A miso-tahini spread was usually available with the bread. Miso soup and Miso Rice were often served. For Miso Rice, miso was mixed with a little water then stirred into a pressure cooker of hot rice that had just been cooked, and allowed to stand for a few minutes. Mat vividly recalls that on days when he had to stand in front of Boston University in the freezing cold for 6 hours without moving, the miso soup would keep him warm. After Mat opened the kitchen at Erewhon, he contracted with David Kailin of Crane's Call Bakery, a macrobiotic bakery, to make most of the desserts and other baked goods for the Ricycle. Sometimes the vegetable dish of the day had tofu in it, or the grain dish had miso in it.

While building the kitchen inside Erewhon, Mat constructed two more Ricycle carts. Mat launched these in the spring of 1971; one served its macrobiotic lunches on weekdays at MIT in Cambridge, and the other in downtown Boston at government center. He was unable to get permit to operate at Harvard Square. The other 2 Ricycles were operated by people that Mat employed; they were paid a percentage of their sales.

One year at the Christmas reunion, Mat did an elaborate impersonation of Michio Kushi (complete with makeup and a built-up nose construction), wrote, sang, and led the audience in a song about miso to the tune of "Get me to the church on time." The words went: "I'm drinking miso in the morning. Hatcho or mugi is sublime. Aveline or my daughter, go heat up the water, and get my miso soup on time. If you use onion, sautee it first, if you use daikon, it satisfies your thirst. For I'm drinking miso in the morning..."

Mat left Boston in about December 1972 to take an acting job in New York. At the time he sold and shipped all 3 Ricycles to an eccentric millionaire's son in Texas. He does not have any recollection of Tan Pups being on the market but he does remember seitan imported by Erewhon from Japan, perhaps by Japan Foods, in the form of little dark salty chunks. Perhaps Robert Hargrove might know more about this. Perhaps Erewhon made the Tan Pups.

Concerning Paul Hawken's departure from Erewhon in late 1973, it has always been Mat's understanding that Aveline Kushi owned the company but that the Kushi's negotiated to pay him $30,000 when he left.

Mat once visited Erewhon's little farm in Keene, New Hampshire. They made sauerkraut there on the top floor of a building; one would jump up and down on the cabbage in a barrel to press it. Address: 8-23rd Ave., Apt. 302, Venice, California 90291. Phone: 213-465-0383 or 213-469-5408.

9900. Kendall, Charles. 1992. Near involvement with tofu in Boston (Interview). *SoyaScan Notes.* May 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In 1975, before *The Book of Tofu* was published, Aveline Kushi encouraged Charles to start a tofu shop in the Boston area. His feeling was "It was too strange. No one's going to buy it–floating in water. No one knew what to do with it." In 1976, after *The Book of Tofu* had been published (Dec. 1975) and after he was married (spring of 1976), Aveline made the suggestion to him again.

At one point Charles was planning to go to Japan to study with a tofu maker for 12-18 months. The East West Foundation or Michio or both had set up the program. Charlie had his visa, work permit–everything but the airline ticket. But when it was found that the tofu maker was very religious and was trying to push his religion on others, Aveline and Michio said that perhaps he should not go. Bill Tims finally ended up going. Charles recalls: "I was very envious of Bill. I wanted to go but at the last minute the Kushis said 'Don't go. Don't go Charley. We found out that this guy is part of some fanatic religious sect.'"

When Tims returned, he told Charles that he had absolutely no desire to make tofu in America. Charles was very surprised to hear this. Tims offered to show Charles how to do make tofu and how to get started. The people who started Nasoya may have learned something from Tims. Address: Owner, Kendall Food Co., 46A Route 112, Worthington, Massachusetts 01098. Phone: 413-238-5928.

9901. Tims, William. 1992. Studying macrobiotics in Boston and tofu making in Otake, Japan (Interview). *SoyaScan Notes.* May 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bill grew up in Oklahoma. In 1969 while attending the University of Oklahoma he developed an interest in Oriental culture, philosophy and religion. He started studying Buddhism and Taoism. One day he came across a little spiral-bound book titled *Zen Macrobiotics* by George Ohsawa. Within several months he quit school and hitch-hiked to Boston, arriving in Jan. 1970.

He lived in a study house with Tom and Mary Hatch, then lived with Michio and Aveline Kushi on Boylston Street, before they moved to 62 Buckminster Rd. First he worked as a carpenter, then starting in early 1972 he worked at the Erewhon warehouse. Paul Hawken was president of Erewhon, but he left Boston, then came back and left again.

In about the spring of 1975, at one of Michio Kushi's "Way of Life" talks, which he gave every Tuesday and Thursday night, Michio said that he had made arrangements for 3 Americans to go to Japan to study traditional food processing. Bill never saw a written announcement of this. Bill signed up for the program along with about 20 other people. Bill had to return to Oklahoma in the summer of 1975, but he returned to Boston in Dec. 1975. He expected that he, Charles Kendall, and one other person would be leaving for Japan in Jan. 1976. He was surprised to find that he was the only one going. Everyone else, for reasons unknown to him, had backed out. He was a bit curious and suspicious as to why no one else wanted to go.

In Jan. 1976 Bill flew to Japan. He spoke no Japanese

© Copyright Soyinfo Center 2014

and had almost no money. It was his understanding that if he paid his flight to Japan, in exchange for the work he would do in Japan, he would be provided with a room and board, a small salary, and a flight back to America. Michio and Aveline had never suggested to Bill that he start a tofu shop in America after he returned, and Bill never had a interest in making tofu. He was going to Japan mainly to learn about the country and its culture; the tofu was accidental. In Osaka, Bill met Lima Ohsawa. An older man who was a friend of Lima's became Bill's guide. After several days in Osaka they took a train together to the little village of Otake, about 15 miles south of Hiroshima. They were greeted with great fanfare and met by a man who was the tofu master–who spoke no English. Bill never understood the relationship between the tofu master and Michio Kushi. The tofu master set Bill up in small apartment with a bike, 5 minutes bike ride from the tofu shop. Bill's guide spent 2 days with Bill at the village translating (since no one else in the village spoke English), then he left. Many villagers asked Bill if he was a soldier from a nearby U.S. military base.

Bill worked hard at the tofu shop with 7-8 other employees (mostly older women), not including delivery boys, for the next 7-8 months, until August. The master was very much a traditionalist; he was the only person Bill met in Japan who ate brown rice, but he never mentioned macrobiotics. The master was a hard worker, very stern and yang, but a good, strong, often loving man who treated Bill specially and kindly. Bill has very good memories of him. He made nigari tofu and 13-14 different product (incl. egg tofu, burdock tofu, various deep-fried types), and his dream was to have his style of tofu shop all over the world.

For Bill, the best times were when the master allowed him, twice a week, to take the company truck alone, all day, to deliver okara to dairy farmers in the countryside. Bill was able to do a bit of exploring of temples, shrines, and gardens on these trips. Sometimes the master would be gone for 1-2 days and Bill was responsible for the tofu shop from start to finish. Most of the tofu was delivered to huge supermarkets in Hiroshima. The villagers were amazingly kind to Bill.

But there were difficulties. The master belonged to several different Buddhist sects; Bill was required to go with the master to every religious meeting he attended. Bill hated this because he couldn't speak any Japanese, he had to sit on his knees in seiza for hours at a time, and he was tired from 6 days of hard work at the tofu shop. He desperately wanted some time off from the long hours, both to rest and see more of Japan. At times Bill felt like he was being "used" to work long hours for meager pay, and at other times he realized that this was what a traditional Japanese apprenticeship required. Moreover he was delighted to have this opportunity, difficult though it was.

Returning to America, Bill attended Herman and Cornellia Aihara's annual summer camp in California, then he returned to Boston on about 1 Sept. 1976. Ed Esko and Stephen Uprichard immediately offered him a job at the East West Foundation. He worked there until 1982, eventually becoming vice-president.

Bill was the second American (after William Shurtleff) to study tofu-making in Japan with a traditional Japanese master. Tims and William Shurtleff met in November 1976 at Ken and Ann Burns' house at 16 Warren Street in Boston–shortly after Tims had returned from Japan. Tims was happy to see that Shurtleff and Akiko Aoyagi were doing a nationwide tour to introduce Americans to tofu. Before Bill Tims went to Japan in Jan. 1976 it was difficult to get tofu in Boston; it was considered a luxury. But after he came back, a number of tofu products were being sold commercially–including a tofu cheesecake made by a Boston woman. He also remembers big slabs of seitan (Wheatmeat) sold at Erewhon.

In 1982 Bill moved to Arkansas to start Mountain Ark, along with Frank Head, Joel Wollner, and Tom Monte. Frank was the only one who ever had any financial involvement in Mountain Ark, and he is the only one of the original four left at the company, which is currently for sale and will be liquidated if it is not sold by June 30. Bill never worked at Mountain Ark.

Four or five 5 years ago a news flash came on CNN that there had been a terrible earthquake in Otake, Japan, the little village where he had lived. He watched the destruction on TV with sadness. Several years ago he heard that the old tofu master had died.

Bill now runs his own business, Natural Health Center, which he and his wife Carol started in 1983. He does macrobiotic consultations and sells macrobiotic foods by mail order. Address: Natural Health Center, 45 North Hartman, Fayetteville, Arkansas 72701. Phone: 501-521-9105 (or 9195).

9902. Sandler, Matthew; Sandler, Helen. 1992. Early work with natural foods in Boston. Plans to launch a soymilk product named Luppy (Interview). *SoyaScan Notes.* May 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Matthew's brother, Richard Sandler, arrived in the Boston area on 1 Jan. 1968. Matt drove him to 29 University Ave. knowing nothing about macrobiotics except that he ate with Richard once at the Paradox restaurant in New York City. Those were the early days. Nahum Stiskin and Richard Sandler, were already in Boston when Matt arrived in about late 1968. Matt moved to Japan in about 1969; Nahum Stiskin was living in Kyoto, Japan (where he arrived in May 1969), when Matt arrived. Steve Helfer (a student of macrobiotics) had arrived in Japan before Matt. After a while, Matt brought Helen to Japan so they could get married–which they did in about 1971, at the Jewish Community Center. Matt had known Helen when they were in Boston; they lived together a macrobiotic study house.

Helen and a lot of other Americans studying

© Copyright Soyinfo Center 2014

macrobiotics in Japan took cooking classes, taught in Japanese, from Lima Ohsawa in Tokyo at Tokyo C.I. (Centre Ignoramus). Matt and Helen left Japan in about 1971-72, returning first to New York, and then to Boston in about 1973. He finally left Boston in 1984.

While in Boston, Matt started a bakery named Matthew's All Natural, located in Woburn, just outside of Boston. It's first products were sweets such as carrot cakes. The discovery of barley malt, a complex carbohydrate sweetener, was a major breakthrough for the company. Helen Sandler developed a line of English Muffins sweetened with barley malt, and then a line of whole-grain breads which were introduced in 1979. The company soon became quite large and successful, and it is still in operation. The bakery did not use soy in any form in its products.

Evan Root started the original Sanae. Matt's brother, Richard Sandler, who arrived in Boston before Matt, started The Seventh Inn (also called Big Sanae). He rented the space and made it into a restaurant with his own hands; his partner was Warren Durbin (originally a film editor from California who came to Boston to study macrobiotics and who now lives in Vermont). Richard is now a photographer living in Greenwich Village (Phone: 212-777-7138).

Barry Creighton invested a lot of money in his Cable Springs Bakery; it was a good idea, but ahead of its time, so it wasn't that successful. When it went bankrupt, Kathy Bellicchi took it over. Helen Sandler (who had her own company) then shared the bakery with Kathy, and baked cakes there starting in about 1975. Helen does not remember any commercial soy products in Boston, except the Tofu Cheesecake sold at Sanae (it was a Sanae special) and 1 or 2 other restaurants in the late 1970s. Matt liked the Tofu Cheesecake; Helen didn't. Matt recalls that the Tofu Cheesecake was sold, pre-sliced, at a number of retail stores, including Erewhon. He thinks it was sold in the first tier of products that Erewhon sold out of the cooler. He thinks it was made by an underground business that made only this product. Helen experimented with "Tofu Cream," made by mixing tofu, vanilla, and maple syrup–but it was never commercialized since it had such a short shelf life and the retail stores had no refrigeration.

Another excellent product in Boston was Tan Pups, made by Nik Amartseff and his wife. It was a natural meatless hot dog made of seitan, deep-fried on a stick. Nik was one of the most creative food product developers in Boston at the time. He also developed the formulations for most or all of the Erewhon cereals, granolas, and snacks, as well as their labels and packaging. "He was a real fertile mind."

Matt is planning to launch a soy dessert named Luppy (in 2 flavors), within the next 6 months. The product will be aseptically packaged in tubs. His company is named Luppy Foods. He remembers Luppy soymilk from Japan as a soymilk sweetened with brown sugar and sold in little bottles.

When Yuko Okada first brought soymilk to the USA, he started by trying to make a deal with Knudsen. That didn't work out and for some reason he had a problem with Eden Foods in Michigan at the beginning. So Yuko called Matt, who at that time was still owner of Matthew's All Natural bakery, and asked Matt if he wanted to distribute the soymilk product over his route which extended from Maine to Philadelphia. Matt also distributed foods frozen and refrigerated as far west as Denver. The product Yuko was offering was quite similar to the Luppy soymilk Matt had enjoyed in Japan. Before Matt could say yes, Yuko had made a deal with Eden Foods to import.

Update on Matt's soymilk dessert. 1992. July 15. It will be a pudding-type product, the soymilk will be supplied by American Soy Products in Michigan, and it should be on the market by about Nov. 1992. Address: P.O. Box 10277, Aspen, Colorado 81612. Phone: 802-869-2010.

9903. Jacobs, Lenny. 1992. Macrobiotic pioneers–where are they now? (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Nahum Stiskin is now in New York City in the field of investments. His former wife, Beverly Stiskin, lives in Brookline, and is an Alexander therapist. Nahum has a black cloud and a real bitter feeling regarding his past life. He doesn't like to talk with people. Lenny ran into him 8 years ago at an ABA show and he said to Lenny, "Don't bother me." Mr. Ehud Spurling, the owner of Inner Traditions Press in Rochester, Vermont also knows how to reach Nahum.

Bill Garrison is on the West Coast somewhere. He applied for the job of financial manager of the Kushi Foundation. Anthony "Tony" Harnett is owner of Bread and Circus in Newton, Massachusetts. Jim Ledbetter is in Southern California; the Kushis keep in touch with him. Jim started *Order of the Universe* magazine. Robert Hargrove is in the Brookline area where he owns Robert Hargrove and Associates.

Nik Amartseff got involved with cocaine at some point in about the late 1970s and his life fell apart. But now its back together.

Marcea Newman now lives in Australia; Lenny saw her at Anaheim not long ago and spent a lot of time with her and her husband (who has designed a very interesting Chinese herbal database on a Macintosh computer); its a very expensive diagnostic tool. You can enter your symptoms and it will suggest which herbs to take, or you can key in the name of an herb, and it will tell you all about it.

Eric Utne was the manager of Erewhon in about 1970 or 1971. He came to Boston in the late spring of 1969, at the same time as Lenny's wife to be. Lenny arrived in Boston in the summer of 1969 from Chicago, Illinois. He left Boston for Minneapolis in 1971; then Eric Utne, Lenny, and Peggy

© Copyright Soyinfo Center 2014

Taylor (who is now the editor at *New Age Journal*) started a restaurant at the University of Minnesota named Whole Foods. They ran it for 2 years. Then Eric and Peggy returned to Boston, and Eric went to work at the *East West Journal.* Lenny left for Boston in the fall of 1973; he wanted to start a bakery, then he and Bob Phelps (who now runs Redwing Books) planned to start a seaweed harvesting business. The Robert Hargrove, Eric Utne, and several other people (the majority of the staff of East West Journal) asked Michio Kushi to either give them the magazine (free of charge) or they would quit. They did quit and started New Age Journal. Michio Kushi asked Lenny if he would please work for East West for a few months, which he did–though he ended up staying for years until he finally left to work at East West Journal.

The Seventh Inn was a really successful restaurant, but Michio refused to share any of the ownership with the people who ran it and he tried to control it too much. Originally called Sanae, it was started by Richard Sandler (who selected the location and designed the kitchen, but never really worked there after it was in business), Evan Root, and others. Lenny was a cook there. Richard and another guy named Warren Durban quit before the restaurant was finished, and they gave it over to Lenny and Bill Anton (who is still in Japan). Then Yuko Okada and Hiroshi Hayashi started to run it; they changed the name to The Seventh Inn. There were two Sanae Restaurants, one on Newbury St. and the other on Boylston St. Address: New Age, Brighton, Massachusetts. Phone: 617-787-2005.

9904. *Supermarket Business* (*New York*). 1992. Aseptic tofu joins other natural foods enroute to Russia. May.
• ***Summary:*** "Morinaga Nutritional Foods, makers of Mori-Nu Tofu, donated over 100 cases of its aseptic tofu–close to a ton–as part of a hunger-busting effort targeted at the former Soviet Union. In all, some 20 tons of natural food products were sent to St. Petersburg in early April.

"The Hunger relief effort was coordinated by Marlene Wolford, a Corpus Christi, Texas-based organic food promoter, and Dr. Mikhail Zykov, a macrobiotic food advocate. Along with the aseptic tofu, which has a 10-month shelf life without refrigeration, natural foods companies sent brown rice, sea vegetables and other health food products.

"Participating companies included Eden Foods of Clinton, Michigan, which gave away more than 14 tons of products, and Arrowhead Mills, Country Grown Foods, Goldmine Natural Foods, Lifetree Products, Ocean Harvest, Traditional Foods and Pacific Bakery, among others.

"Separately, Morinaga Nutritional Foods' parent company, Morinaga Milk Industry, recently sent thousands of pounds of its infant formula to the former Soviet Union from its headquarters in Japan."

A photo shows Mr. Kumoda, head of Morinaga Nutritional Foods, standing with a co-worker and many cases of tofu in front of a large white banner on which is written: "Mori-Nu Tofu: To Russia with Love"

9905. Ponseele, Jos van de; Verfaillie, Magda. 1992. Re: History of Jonathan P.V.B.A. in Belgium. Letter (fax) to William Shurtleff at Soyfoods Center, June 6–in reply to inquiry. 2 p.
• ***Summary:*** Jonathan was the first company in Europe to make seitan for sale commercially. Jos van de Ponseele, the founder of Jonathan, first learned about seitan during a 9-month stay [with his wife and family] at the Kushi Institute in Boston, Massachusetts, from March to December 1976. There he tasted the seitan prepared by Aveline Kushi. He thought it would be a good meat substitute for the growing group of vegetarians in Europe. [Note: Jos was a butcher with a large meat processing operation before he became a macrobiotic vegetarian]. In Boston, he learned how to make seitan on a home scale from Tamara Uprichard. Then, at the very end of his stay in Boston, he started up medium-scale production of seitan with two Americans; he no longer remembers the name of the company or the names of his American partners. They sold seitan to macrobiotic study houses in Boston and to the Erewhon retail store.

Returning to Belgium, he founded Jonathan. The name "Jonathan" came from a famous book titled *Jonathan Livingston Seagull* [by Richard Bach, 1970. This is a parable about a seagull who loves to fly and practice flight, high and alone, for the joy of flying, while his fellow gulls are busy eating. He is eventually banished from the flock for daring to violate the earth-bound traditions of gull society. Eventually he is taken to a higher world where other gulls, like him, seek perfection and liberation from all limitations. Finally he returns to earth to tutor other outcast gulls in the art of advanced flight.]

Jos hired a man named Ludo Peeters as his first employee and they set up the business in a garage at Holleweg 53, 2180 Ekeren, near Antwerp, Belgium. The company's first product, made entirely by hand, was plain fresh seitan. It was introduced some time in 1977. The product name on the label was simply Seitan, written in 4 languages (Dutch, French, German, and English). It was packaged in 250, 500, and 1000 gm carton dishes with a transparent plastic film lid. With seitan, the big challenge for Jos was to introduce an entirely new and valuable product to the market. Two months after introducing seitan, Jonathan started making tofu and soymilk. Ludo continued to work at Jonathan for many years, eventually becoming managing director.

On 2 Feb. 1979 Jonathan was officially registered as Jonathan P.V.B.A. (the latter abbreviation means something like "Ltd." i.e. a company in which the owner has limited responsibility). Also that year Jonathan introduced a fresh seitan burger, then in Jan. 1980 the company moved to its present location at Antwerpsesteenweg 336, B-2080

© Copyright Soyinfo Center 2014

Kapellen, Belgium. At the new location they introduced a number of new seitan products: Seitan Paté (Feb. 1980, sterilized), Seitan Goulash (late 1980, sterilized), and Seitan Schnitzel (1981, fresh). From 1985 on, Jonathan introduced a series of different ready-to-eat meals in which seitan was a major ingredient. Jos sold Jonathan and left on 1 April 1989. Magda started Mycelia P.V.B.A. in 1984 and kept the company small until Jos had sold Jonathan. After that they expanded Mycelia to its present size, producing 5,000 liters of mycelium daily. They are both shareholders in Mycelia. Address: Jean Bethunestraat 9, B-9040 Gent, Belgium. Phone: 91-28-7090.

9906. Stincheum, Amanda Mayer. 1992. Fu and yuba, tasty specialties of Kyoto. *New York Times.* June 7. p. XX6, XX26 (Sunday).
• ***Summary:*** These two foods are "so tied to place, history and freshness that they can really be fully enjoyed only in Kyoto." Fresh wheat gluten (*nama fu*) has a chewy but tender consistency. Fresh yuba (*nama yuba*) comes in "delicate, semi-soft, tissue-thin sheets skimmed from the surface of simmering soy milk." Both are almost never found outside Japan, and rarely outside Kyoto.

Describes how fu is made and served. Fu was brought to Japan from China during the Muromachi period (late 14th to 16th centuries). Rich in protein, it developed as part of the vegetarian cuisine that evolved in Buddhist temples. Because Buddhists refrain from killing sentient beings, all temple foods were (and still are) derived from plants. Kyoto became famous for fu, in part because of its abundance of Buddhist temples, and in part because of the quality of its well water. At the peak of its popularity in the 1800s, fu was made in over 100 specialty shops in the city. The name of one street, Fuyacho, still attests to the former aggregation of fu makers in this area.

Today Fuka, founded 160 years ago and located just west of the Imperial Palace, is one of the very few shops that makes only fu and nothing else. The proprietor, Koboro Shoji, makes all the classic varieties of fu, which are listed and described.

An equally interesting and detailed description of making yuba at Yubahan is also given. Asano Tomizo is the 9th generation of yuba makers who have practiced their craft since 1716. Address: Japan.

9907. Bergh, Barbara. 1992. The Canadian oilseed processing sector: A profile. In: Statistics Canada. 1992. Grain Trade of Canada 1990-91. Ottawa, ONT, Canada: Statistics Canada. See p. 23-32. [Eng; Fre]
• ***Summary:*** Contents: Oilseed situation. Crushing industry. Vegetable oils. Vegetable oilmeals. Economic value of the industry. Policy issues and recommendations by the Canola Marketing Task Force. "The main oilseed crops produced in Canada are [in descending order of the amount produced], canola, soybeans, flaxseed and sunflower seed. There has been an almost continuous increase in the production of oilseeds since 1950, with the largest increase being in canola production which will reach a record 4.3 million tonnes in 1988/89. There was a record 1.3 million tonnes of soybeans produced in 1990/91. A bar chart shows the amount of Canada's four major oilseeds produced every 5 years from 1950 to 1990. "Only small amounts of oilseeds are imported into Canada, but significant amounts are exported. In 1990/91, 99% of canola exports went to Japan, while soybean exports were destined mainly for the U.S., Netherlands, Portugal, Hong Kong, Japan and Singapore."

One of Canada's three soybean crushing plants closed in 1991 causing a drop in soybean crush capacity from 3,700 to 2,500 tonnes per day. Of this, CanAmera Foods in Hamilton, Ontario, has 1,270 tonnes, and ADM Agri-Industries Ltd. [in Windsor, Ontario] has 1,250.

"The two major oilseeds processed in Canada are canola and soybeans, with small amounts of sunflower seed and flaxseed also being crushed. Canola is crushed mainly for its oil as its seed yields about 40% oil and 60% meal. Soybeans are crushed more for the meal since they yield about 78% meal and only 17.5% oil. Sunflower seed yields 42% oil and 35.5% meal, while flaxseed yields 34% oil and 63% meal...

"In 1990/91, 44% of the domestic canola crop was crushed, compared with 72% for soybeans, 70% for sunflower seed and 1% for flaxseed."

"In 1990/91, 0.8 million tons of crude vegetable oils were produced in Canada... Canola oil accounted for 74% of total vegetable oil production in Canada, followed by soybean oil at 21%, sunflower oil at 4% and linseed oil at 1%. In addition, approximately 25.0 thousand tonnes of corn oil are produced annually."

"Soybean meal is the major vegetable oilmeal used in Canada, accounting for 76% of the total oilmeal consumption in 1990/91. Canola meal is next, accounting for 22% of total domestic use, followed by sunflower and linseed meals which accounted for 1% or less." Soybean meal contains 48% protein, whereas canola meal contains only 36-37% protein; it contains more fiber than soybean meal and has less digestible energy.

As of 1 Jan. 1992, Canadian soybeans, crude soybean oil, soybean meal, canola seed, crude and refined canola oil and meal all have tariff-free access to the USA. Refined soybean oil will be duty free as of 1 Jan. 1995. Address: Market Analyst, Canadian Oilseed Processors Assoc., 1010-360 Main St., Winnipeg, Manitoba R3C 3Z3, Canada. Phone: 204-942-3408.

9908. Santiago, Librado A.; Hiramatsu, M.; Mori, A. 1992. Japanese soybean paste miso scavenges free radicals and inhibits lipid peroxidation. *J. of Nutritional Science and Vitaminology* (*Tokyo*) 38(3):297-304. June. [20 ref]
• ***Summary:*** The antioxidative and free radical scavenging

activity of miso was demonstrated by electron spin resonance spectrometry. Miso may act as an antioxidant by scavenging free radicals.

This article was summarized in *Cereal Foods World* (Jan. 1993, p. 33-34) under the title "Move over vitamin E; Here comes miso." Address: 1&3. Dep. of Neurochemistry, Inst. for Neurobiology, Okayama Univ. Medical School, 2-5-1 Shikata-cho, Okayama 700; 2. Yamagata Technopolis Foundation, Yamagata 900. All: Japan.

9909. Belleme, John. 1992. Santa Fe Organics and seitan (Interview). *SoyaScan Notes.* July 1. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Santa Fe Organics is owned by 3 people: James MacCreight (of Santa Fe, New Mexico) and John each own 45%, and Sandy Pukel (owner of Oak Feed Store in Florida) owns 10%. James got involved because he knew of John's work at American Miso Co., and he was a friend of Barry Evans. Barry was the majority owner of that company but he was sent to jail in early 1992 in California with a 7-year sentence, of which he must serve at least one-third. John got bought out of American Miso Co. in 1986 for two reasons: He had conflicts with Barry, and there were indications that Barry was making his money illegally. He wanted to get out "before the whole thing came down on our heads. My equity in the company might have been confiscated by the federal government." Before Barry went to jail, he made a deal such that his two companies (American Miso Co. and Great Eastern Sun) were not affected. After John left American Miso, he and Sandy Pukel formed a partnership with Blake Rankin and established Granum East. They ran that for 2½ years then sold it to great Eastern Sun in 1988. From that time until 1990 he and his wife, Jan Belleme, did a lot of writing.

James MacCreight, a former Hippie, had made money investing in real estate in Philadelphia, Pennsylvania, where he also founded and owned George's Restaurant (a lovely place named after George Ohsawa). One day in late 1990 he called John and said "I'd like to do something with you. What would you like to do?" They spent a lot of money starting a miso shop adjoining John's home in Saluda, North Carolina, but then John decided it would not be grand enough to meet James' expectations. So they dropped the miso project after 6 months before the equipment even went in. James heard about Seitan Mama's, and they decided to make seitan instead. John had been interested in seitan since 1974, and in Feb. 1978 his wife, Jan, had started an early and very successful seitan company in Coconut Grove, Florida named Seitan Mama's, which see. In early 1991 a huge building became available at an excellent price 10 miles from John's home in Saluda at 906 Locust St. in Columbus, North Carolina. Their first line of 4 retorted seitan products in glass jars was introduced in June 1991. Originally they had planned to be a wholesale company, selling pallets via commercial trucking lines or UPS directly to larger stores (mostly on the East Coast) with a broker; it was hoped that this approach would keep the retail price down. Now they sell only through distributors.

Santa Fe Organics produces its seitan using a huge Japanese-made gluten-making machine (ordered through Mitoku) and an automatic cutter. The company has 3 production workers. To the machine they add flour, water, and salt (or nigari). The salt helps develop a little more gluten, and gives a tighter product with a higher yield. John's machine will process 150 kg (330 lb) of flour per run (which takes 2½ hours). Paddles in the machine knead the flour with water for about 30 minutes to develop the gluten, then the loaf sits undisturbed under water for about an hour, then the dough is rinsed by kneading it under water for about 1 hour; 100 kg of flour yield about 45 kg of fresh gluten. John orders his wheat flour freshly milled once a week from a mill 50 miles away. Fresh milling is very important for good yield and taste. He uses organically grown hard winter wheat. John uses a mixture of whole wheat and unbleached white flours. They key to getting flavors to penetrate to the core of the seitan lies in retorting at 250ºF under pressure (which causes the seitan to expand and become porous allowing flavor penetration) plus the proper mixture of flours. The more whole wheat flour used, the greater the flavor penetration and concentration–but the product is somewhat bready and less dense. The more unbleached white flour used, the greater the density, chewiness, and meatlike texture of the final product. The proportion of flours varies with each product.

John has no problem with starch disposal. The local government looked at the starch and its effects on the local sewage system carefully, and actually encourages Santa Fe Organics to dump it into the sewage system. Eventually John would like to find ways to use the starch, as in stews.

Sales of Santa Fe Organics seitan are large and growing–although the company is still not profitable. A new conflict has arisen in that one owner wants to own a larger percentage of the total shares.

Plans for the future: (1) A new line of 3 Seitan Sloppy Joe products, due out in August; (2) They may have a ravioli maker in Atlanta, Georgia, make Seitan Ravioli using they would ship to Atlanta. They will be sold frozen, 18-22 units in a 13 oz bag, like the Soyboy Ravioli from Northern Soy in Rochester, New York; (3) Sell frozen 6-8 oz chunks or slabs of seitan in bulk (12 lb in a plastic bucket) to restaurants and foodservice institutions, then help them to work out recipes. They hope to have Tree of Life or Cornucopia distribute the product; (4) John's wife, Jan, is now finishing writing a vegetarian cookbook for the Avery Publishing Group. It will contain a whole chapter on seitan. (5) John would like to write a book on miso.

Mitoku has sold two Japanese-made gluten-making machines to the Western world; one was sold to Lima Foods in Belgium. The retort process that both Jonathan and Santa

© Copyright Soyinfo Center 2014

Fe Organics use is a very technical process; one must be set up with a license and follow federal regulations. According to Chris Dawson, Lima imported this machine for Jonathan– which made the seitan that Lima sold. The other machine went to the Erewhon warehouse, where it sat for years, until it was sold to the people who started Upcountry. Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

9910. Richardson, Jean. 1992. Sierra Natural Foods is out of business. Ohsawa Japan has stopped exporting (Interview). *SoyaScan Notes.* July 8. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** When Ohsawa America was having problems surviving, Lane Seiger offered their mail order business to Gold Mine Natural Food Co., then offered their import business to Sierra Natural Foods. Gold Mine purchased their Japanese imports from Sierra.

In July 1991, Sierra Natural Foods declared bankruptcy and went out of business. At the time they owed Ohsawa Japan a lot of money, which they never paid. Following this unfortunate experience, Ohsawa Japan stopped exporting products to America. Prior to this, Nama Shoyu (Unpasteurized Shoyu, made by Yamaki Co., run by Mr. Kitani) was the best seller of all the products Sierra imported from Ohsawa Japan. After Sierra's bankruptcy, in March 1992, Gold Mine began importing macrobiotic foods from Muso in Japan. Address: Co-owner, Gold Mine Natural Food Co., 1947 30th St., San Diego, California 92102. Phone: 619-234-9711.

9911. Aihara, Cornellia. 1992. Early recollections of seitan (Interview). *SoyaScan Notes.* July 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Cornellia first learned how to make *kofu* (raw wheat gluten) from a Japanese book about *Shojin Ryori* (Buddhist Vegetarian Cookery) that Lima Ohsawa sent her. The book used only white flour to make kofu, but Cornellia substituted whole wheat flour. She does not remember when she first heard the word seitan or from whom she learned the process for making kofu into seitan. Nor does she know who coined the term "seitan." She never saw George or Lima Ohsawa make seitan in America. Cornellia thinks that in earlier times in Japan, seitan was called "shigure."

Cornellia first made seitan in about 1970 in San Francisco. In her *Chico-San Cookbook* (1972), Cornellia first wrote about seitan, giving a recipe for making "Seitan" at home (#516). The ingredients listing called for 10 cups wholewheat flour, 4 cups unbleached white four, 5 cups water, and 2 teaspoons salt. After making the basic plain gluten, pull it into 1-inch pieces and drop these into boiling water. Boil until the pieces rise to the surface of the water. Then: "Sauté 1 tablespoon of fresh minced ginger in 1 tablespoon sesame oil. Add 1 cup of soy sauce and bring to a boil. If you wish to store the Seitan for any length of time use more soy sauce, up to 2 cups, depending on how long it will be kept. Add the cold gluten pieces and simmer, covered, for 3 hours, stirring frequently. Remove the cover and continue cooking until all the liquid is gone. Stored in the refrigerator, it will keep a long time. Cook it with vegetables or use it to season soups and stews."

In her book *The Dô of Cooking* (*Ryorido*)*. Vol. 1* (1972, March) Cornellia gave a similar recipe for seitan (p. 71-72). Part 1 described how to make wheat gluten and part 2 described how to use that wheat gluten to make seitan. After 1970 Cornellia taught many macrobiotic students how to make seitan in her cooking classes. In later years she used only whole wheat flour, omitting the unbleached white flour.

Herman Aihara does not remember when he first heard the world seitan. He is not interested in food from this viewpoint; his interest is in philosophy. Address: Vega Study Center, 1511 Robinson St., Oriville, California 95965. Phone: 916-533-7702.

9912. Yamazaki, Kazuko. 1992. Early recollections of seitan (Interview). *SoyaScan Notes.* July 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Kazuko (the wife of Junsei Yamazaki) is sure that George Ohsawa coined the term "seitan" quite a while before he died in April 1966. She first became interested in macrobiotics in Japan in about 1962-63 (Showa 37-38). In about 1965 she may have seen seitan sold at macrobiotic food stores in Japan. Ohsawa Japan also sold seitan, probably by 1962-65; Marushima Shoyu K.K. may have made that seitan. She probably first heard the term "seitan" from Lima Ohsawa, who frequently taught how to make and use kofu (raw wheat gluten) and perhaps seitan in her cooking classes. The first seitan she saw or tasted was sold in little cubes or pieces that were very dark, hard, and salty. In Japan, Chinese people at one store in Aoyama, Minato-ku, Tokyo, made kofu (raw wheat gluten), and she once went there to buy some. She and Lima also tasted a delicious sausage-like product made from soybeans by the Chinese; she does not remember what it was called, but it was not called seitan. Lima Ohsawa often used that kofu in her cooking classes.

After George Ohsawa died, Lima Ohsawa traveled to Taiwan with a group of Japanese and there she met an interesting group of Taoist vegetarians. Some people in that group were very skilled at using wheat gluten in cookery. After returning to Japan, Lima invited that group of Taoist vegetarians to Tokyo. Kazuko met them in Tokyo. At that time they made a product closely resembling seitan. Later they started a business making it in Japan and began selling some to Ohsawa Japan.

One person in Japan who might well know the early history of seitan is Aiko TANAKA. She is now about 65 years year old but she began studying macrobiotics with Lima Ohsawa when she was about 18 years old. She went

© Copyright Soyinfo Center 2014

to Taiwan and had a lot of contact with the group of Taoist vegetarians. Address: Route 1, Box 1333, Orland, California 95963. Phone: 916-865-5979.

9913. Troy, John. 1992. Update on Wizard's Cauldron and work with miso (Interview). *SoyaScan Notes.* July 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John makes many lines of products that contain miso. "The Wizard" line, sold through Joel Dee of Edwards & Sons, contains three products: Hot Stuff, Stir Crazy (a stir-fry sauce), and Sweet & Sour Sauce. The Premier Japan line is also exclusive to Edwards and Sons. The Simply Delicious line consists of many salad dressings, such as Lemon Tahini, Ginger Plum (with umeboshi plums), Tofu Poppyseed, and Miso Sesame (the only miso product in this line). His favorite salad dressing (which is also his best-seller) is the Miso Sesame; it is sweetened with rice syrup, and contains both clear shoyu and white miso. "It's really nice."

A fourth line, called "Troy's" is a line of sauces, such as a steak sauce and a poultry sauce. Three of these products contain miso: Miso Magic (a sauce for grains and vegetables), and Cracked Peppercorn Steak Sauce, and Honey Mesquite Barbecue Sauce. John's favorite sauce is his Thai Peanut Sauce. A fifth, called Harbor Lites, is a line of six seafood sauces–all of which contain either soy sauce or miso. The Garlic Grill contains miso. There is also a Ginger Soy in this line.

American Natural Foods (ANF), started in 1984, attracted many local investors who finally got control of the board of directors and encouraged John to do things that went against his beliefs; the company eventually lost about a million dollars, and John lost everything he had. It didn't go bankrupt; it's still alive but John "walked away from it." It's sole product is Miso Mustard, which is made by Morehouse Foods.

At the end of 1985 John was penniless, and had to draw unemployment to buy groceries. "But it was a real blessing in disguise." John started doing some consulting work. In 1986 he started a new company named "Wizard's Caldron," which was initially just a consulting company. John was able to buy the trademark for Hot Stuff away from ANF, then cut a deal with Joel Dee. In Oct. 1987 Edwards and Sons became the exclusive distributor of his Premier Japan line and his Wizard Baldour condiments and sauces, including Hot Stuff. He saved enough money to buy a little plant, then started real small, making food products again. The new company's first product line, the Simply Delicious salad dressings, was launched in 1989. The company has been growing and growing, until now it is a very healthy little company with one million dollars of annual sales. This is the first time John has owned his own plant; previously he always had to use co-packers. "I'm just having a wonderful time with it, but it was a hard lesson to learn." John buys his miso from Don DeBona of American Miso Co. He also uses a lot of clear shoyu, which he buys from San-J; they make it in Japan. He consulted for San-J, and when he visited their plant in 1986 he noticed some stuff dripping from a vat. They said it was clear shoyu which they said they used in sauces, dashi, etc. He brought back a 5-gallon pail to the USA, and eventually made it a featured ingredient in his line of salad dressings. Address: The Wizard's Cauldron, 8411 Hwy. NC 86 N, Cedar Grove, North Carolina 27231. Phone: 919-732-5294.

9914. Mokutani, Kiyoshi. 1992. The invention and development of seitan in Japan (Interview). *SoyaScan Notes.* July 12. Conducted by William Shurtleff of Soyfoods Center. Followed by a letter of July 1992.
• ***Summary:*** In 1959 Mr. Mokutani met Sakurazawa Nyoichi (George Ohsawa) and his wife Lima, and started to study macrobiotics with them, and to eat a macrobiotic diet–after he had undergone two surgical operations for a gastric ulcer and a duodenal ulcer in 1959 and 1960.

In the spring or summer of 1961 he first developed a sample of what is now called *seitan* using only wheat gluten and shoyu as ingredients (no ginger or kombu). He extracted the gluten from wheat flour in his own company. His first goal was to develop a wheat gluten product made from organically grown wheat. He also wanted to make a type of low-fat *tsukudani* made without animal products. Note: *Tsukudani* is a dark and salty Japanese condiment typically prepared from small cubes of shellfish, fish, beef, kombu, or vegetables (gobo [burdock], fuki [butterbur, coltsfoot]) that have been simmered for a long time in soy sauce.

In the fall of 1961 he took a sample of the new product he had invented to George Ohsawa. He took great interest in it and at that point Ohsawa coined the term "seitan" to refer to this product. The term "seitan" had never existed previously in Japan. Ohsawa usually wrote the term "seitan" using the katakana syllabary and characters, however when he occasionally wrote it in Chinese characters, he used the character *sei* (also pronounced "nama" in Japanese) meaning "fresh" or "raw" (since it is made from fresh wheat gluten), plus the character *tan* which is the first character in the Japanese word *tanpaku,* meaning "protein." Ohsawa also gave him instructions for improving the product by mincing the wheat gluten and simmering it in soy sauce. Today on the front of each bottle of seitan is written *"Sakurazawa Nyoichi shido"* (Made with guidance from George Ohsawa).

Initially, in 1961 and early 1962, he had no intention to sell seitan; he sent samples free of charge to macrobiotic people throughout Japan.

In 1962 Mr. Mokutani started to manufacture seitan for commercial production. Marushima Shoyu K.K. (Marushima Shoyu Co., Inc.), of which he was director and head of the technical department, was the first to make seitan in Japan. After production began, most of the seitan made by Marushima Shoyu K.K. was sold (in small glass jars) to the macrobiotic food wholesalers in Japan (such as

© Copyright Soyinfo Center 2014

Muso Shokuhin, Ohsawa Japan, and Tsurushima [located in Yamaguchi-ken]) and to the macrobiotic community. The first company to export Marushima's seitan was Ohsawa Japan, Inc. (where Lima Ohsawa's sister was president). It was imported to the USA by Bob Kennedy of Chico-San, located in Chico, California.

A friend of Mr. Mokutani's named Mr. Tsurushima owned a company in Yamaguchi prefecture; it made soba and noodles, and sold many macrobiotic foods. Mr. Mokutani asked Mr. Tsurushima to sell his seitan, which Mr. Tsurushima did.

Mr. Mokutani is currently president of two companies: Marushima Shoyu Co., Inc., and Junsei Shokuhin Marushima Co., Inc. (located at Higashi Onomichi 9-2, Onomichi cit, Hiroshima prefecture). The latter company sells soy sauce as well as more than 800 kinds of natural foods. They also sell freeze-dried gluten product which can be marinated in seasoning then grilled as a fat-free meat substitute, or mixed with meat as a seasoning to reduce the meat's total fat content. Address: Chairman, Junsei Shokuhin Marushima Co., Inc., Higashi-Onomichi 9-2, Onomichi-shi, Hiroshima-ken 722, Japan. Home address: Niihama 1-3-57, Onomichi city, Hiroshima prefecture. Phone: 848-20-2506.

9915. *SoyaScan Notes.* 1992. The remarkable food-related creativity that took place in Boston from the late 1960s until the late 1970s, especially within the macrobiotic community (Overview). July 13. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** A flowering of original food product development took place in Boston during this period. There were a number of reasons for this (1) The meeting of two food cultures, Japanese and American, together with new ideas related to diet and health, as embodied in the macrobiotic teachings of Michio and Aveline Kushi. Just as the meeting of two ocean currents leads to a region at the boundary of great biological activity and development, so does the meeting of two cultures. Young Americans were introduced to a host of new basic foods which they quickly began to use and process in new ways. These included miso, tofu, seitan, amazake, umeboshi salt plums, sea vegetables, rice syrup, rice cakes, azuki beans, mochi, and many more.

To cite but four examples: (A) Seitan: Japanese had used seitan as a salty condiment or seasoning. By late 1972 Americans had transformed it into a succulent meat substitute. (B) Tofu: It had never occurred to Japanese to put tofu in a blender. By the mid-1970s Americans in Boston were combining it with a sweetener to make delectable dairyless tofu cheesecakes and cream pies, or to make low-fat, cholesterol-free salad dressings, dips, and spreads. (C) Amazake: Japanese serve this as a hot beverage like tea, most in teahouses; The only flavoring used is gingerroot. Americans transformed it into delectable ice creams (free of dairy products and sugar), or thick, sweet drinks resembling milk shakes sold refrigerated in plastic bottles. Americans also used amazake as an all-purpose natural sweetener in place of sugar, honey, or maple syrup. They also learned to make a rice milk resembling amazake using commercial purified enzymes instead of koji; at this point, the line separating amazake and rice syrup became somewhat blurred. (D) Rice Syrup: Japanese use *amé* or *mizuamé,* made from koji, as the basis for taffy-like candies or, in very limited ways, as a sweetener. Americans soon began to make rice syrup using commercial enzymes instead of koji and to use it as an all-purpose natural sweetener in place of sugar, honey, or maple syrup.

(2) The closely-knit, almost communal nature of the macrobiotic community in Boston, was one in which many people, mostly young people (including many women), were working closely together with a common vision. New ideas were shared more than guarded or patented. Joel Wollner notes that it was almost like the art community in Paris during the impressionist era of the late 1800s.

(3) The Erewhon retail store (opened in April 1966) provided a ready testing ground for new local products. Many got their start in one or more of these stores. The Erewhon Trading Co. (which started importing Japanese natural and macrobiotic foods in Aug. 1968), and which began wholesaling and distributing in the spring of 1969, greatly helped to expand the market for good products.

(4) The community was fortunate to have a number of exceptionally talented entrepreneurs in the food business, including Paul Hawken, Bruce Macdonald, Roger Hillyard, Bill Tara, and many others. Many of these individuals later left the area to start their own food companies.

(5) It was during this period that the natural foods, macrobiotic foods, organic foods, and vegetarian movements (all closely related, and often based on similar philosophical, ethical, and spiritual values) began to grow in the United States, in part in reaction to the overly-processed, overly chemicalized, unhealthful foods produced by big food companies, and the highly-chemicalized food growing techniques used by American farmers–and in part because of the leadership and inspiration of the community in Boston.

9916. Shurtleff, Akiko Aoyagi; Sandler, Matthew; Okada, Yuko. 1992. Memories of the delectable gluten cutlets served at Tenmi, near Shibuya station in Tokyo, Japan (Interview). *SoyaScan Notes.* July 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Yuko Okada thinks that Tenmi first started in about 1968. By the early 1970s, a 10-minute walk from Shibuya station, it was a combination macrobiotic restaurant and food store. The restaurant was named *Tenmi* (Heaven + Flavor) and the store was named *Shizen Shokuhin Senta* (Natural Foods Center). Both were located at Sakuragaoka 4-3, Shibuya-ku 150, Tokyo. Phone: 03-496-7100. Both were still there in 1983.

© Copyright Soyinfo Center 2014

The head of the restaurant (and a longtime friend of George Ohsawa), Mrs. Michi Ogawa, made one of the most delicious meatless entrees that we have ever tasted–called *Kôfu Katsu* (Gluten Cutlets). *Kofu* (raw wheat gluten) was simmered in a seasoned broth, then dipped in batter, dusted with Japanese-style bread crumbs (*panko*), and deep-fried. Crisp on the outside, succulent and juicy on the inside, it had a flavor and texture remarkably like that of a pork cutlet. It was served on a bed for thinly-sliced strands of cabbage and topped with one's choice of a natural *tonkatsu* (pork cutlet) sauce (based on soy sauce), or a wedge of lemon.

Such a tasty cholesterol-free menu item could be a hit at almost any restaurant in the Western world–served with either of the above sauces, or with tartar sauce.

From an historical point of view, these Gluten Cutlets, made with seitan, were completely different from the typical Japanese macrobiotic seitan, which was a dark brown salty seasoning or hors d'oeuvre to eat while a person was drinking, as a yang balance for the yin of the alcohol. Address: 1. Soyfoods Center, Lafayette, California 94549; 2. P.O. Box 10277, Aspen, Colorado 81612; 3. Muso Co., Ltd., Kosei Bldg., 2nd Floor, Tanimachi 2-5-5, Chuo-ku, Osaka 540, Japan. Phone: 1. 510-283-2991.

9917. *Toyo Shinpo* (*Soyfoods News*). 1992. Tôfu, aburaagé, nattô, konnyaku noki nami ni fushin: Jisshitsu de zennen dôgetsu hi 0.5% no gensho [Consumption of tofu, aburaage, natto and konnyaku in Japan from 1976 to 1991: Decreased 0.5% from the same month last year]. July 21. p. 2. [Jap]
• ***Summary:*** Per household consumption of various soyfoods; yen figures are not adjusted for inflation. Tofu consumption rose from 85.73 cakes costing 5,020 yen in 1976, to 86.89 costing 6,047 yen in 1980, to a peak of 90.43 costing 6,761 yen in 1983, dropping to 88.48 costing 7,337 yen in 1985, down to 83.42 costing 7,323 in 1990, down to 78.76 costing 7,699 yen in 1991.

Consumption of aburaagé and ganmo (deep-fried tofu pouches and burgers) rose from 2,950 yen in 1976, to 3,472 in 1980, to a local peak of 4,080 in 1984, dropping to 4,057 in 1985, down to 3,898 in 1990, then rising to a recent peak of 4,253 in 1991.

Natto consumption rose from 1,034 yen in 1976, to 1,289 in 1980, to 1,655 in 1985, to 2,532 in 1990, to an all-time peak of 2,532 yen in 1991.

9918. *Toyo Shinpo* (*Soyfoods News*). 1992. Kyôto de Tenpe kenkyû-kai sôkai [General meeting of the Tempeh Study Group in Kyoto]. Aug. 21. p. 1. [Jap]

9919. GEM Cultures. 1992. Catalog [Mail order]. 30301 Sherwood Rd., Fort Bragg, CA 95437. 9 p. Aug. [4 ref]
• ***Summary:*** This catalog celebrates the company's 12th anniversary. The first section is titled "Powdered cultures for soycrafters." On page 1: "Powdered Tempeh Starter, PTS: Tempeh is a delicious Indonesian, cultured soyfood with a chewy texture. Whether your interest is in exotic foods, eating lower on the food chain for health, social or economic reasons, or cutting back on meat, cholesterol, or calorie consumption, tempeh fills the bill. A vegetarian source of Vitamin B-12, this versatile food can be fried in the traditional manner or baked, broiled, steamed, or barbequed. Easily cultured without special equipment, homemade tempeh tastes and smells wonderful, slices better, and costs far less than commercial tempeh.

"The tempeh mold, *Rhizopus oligosporus,* that binds the cooked soybeans together into a sliceable cake, is grown on an entirely vegetable medium. Mature spores are harvested and combined with sterile organic rice flour for easy and accurate measuring on every batch. Complete culture directions and recipes are included. One pound of dry soybeans prepared as directed will make 1 3/4 pounds of tempeh. Preparation time–less than 2 hours. Incubation time–about 24 hours at 85 F (32 C). Kept cool and dry, PTS has at least a 6-month shell life at full potency.

"Kit PTS, 11gm, three 1-pound batches (makes 5+ pounds). $2.50 each.

"Big PTS, 35 gm, ten 1-pound batches (makes 18 pounds). $4.00 each.

"Half Kilo PTS, 500 gm, packaged in bulk. $35.00 each.

"Full Kilo PTS, 1000 gm, packaged in bulk. $65.00 each.

"Powdered Natto Starter: Called *Natto* in Japan and *Thua-nao* in Thailand this cultured soyfood has a strong, somewhat persistent, unique flavor. The bacteria, *Bacillus subtilis* var *natto,* that culture the cooked soybeans make a sticky, viscous polymer during the 6-12 hours of incubation which creates whispy threads evident when the cultured soybeans are pulled apart. A good source of protein, this robust soyfood adds zest to any grain or noodle dish, soup or sandwich. A little goes a long way, so what is not intended for use in a day or two may be easily frozen.

"Natto Starter Kit: This packet contains complete culture directions, recipes, and enough spore to start 3 recipes of natto, each making 5 cups or 1½ pounds.

"Bulk Natto Starter: A concentrated spore preparation, this vial has sufficient spore to start 48 pounds of dry soybeans. Prepared according to the included directions it will therefore make about 86 pounds of natto.

"Natto Starter Kit: Makes 4½ pounds. $2.50.

"Commercial Natto Starter: Makes 86 pounds. $10.00."

Also: Amazake, miso, shoyu, and tamari starters from Japan. Five types of *tane koji* (koji starter) imported from Japan. Commercial miso and shoyu koji spore packets. Organic light rice koji. Natural salts for curding tofu: Natural nigari, Terra Alba calcium sulfate. Self-renewing cultures: Kombucha tea fungus. Fresh sourdough. Seed miso. Fresh fil mjolk, fresh viili, fresh kefir curds. Cookbooks with culture. Sea vegetables from the Mendocino Sea Vegetable

9920. Morinaga Nutritional Foods, Inc. 1992. Dear Mori-Nu: Last Thanksgiving I tried your wonderful pumpkin pie recipe for the first time... (Ad). *Health Foods Business* (*Elizabeth, New Jersey*). Aug. p. 27.
• ***Summary:*** This full-page color ad continues: "I still can't believe that a dessert this good can be cholesterol free and so low in saturated fat (the Bad kind). I hope that you give out the recipe again this year so that everyone... Sincerely Suzanne Newsome, Sherman Oaks, California."

In the center of the ad is a large horizontal photo of the tofu pumpkin pie, surrounded by pumpkins and vegetables and one package of Mori-Nu Silken Firm Tofu. The recipe for "No cholesterol pumpkin pie" is given. Address: 2150 W. 190th St., Suite 110, Torrance, CA 90504.

9921. Takai Seisaku-sho. 1992. [Takai systems catalog '93]. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 56 p. 30 cm. [Jap]
• ***Summary:*** Black-and-white photos show the company's many pieces of equipment and systems for manufacturing tofu and soymilk. The catalog is divided into 5 sections: 1. Transporting and soaking systems. 2. Soymilk production systems. 3. Curding and forming systems; Poached tofu systems. 4. Cooling systems; Hot-pack systems. 5. Deep frying systems. Address: Kanazawa, Ishikawa-ken, Japan. Phone: 0762-48-1355.

9922. Roach, William. 1992. Re: Kyoto Food Corp. (Terre Haute, Indiana) would like to supply you with tofu. Letter to Richard Rose, Sharon's Finest, P.O. Box 1368, Santa Rosa, CA 95402, Sept. 17. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "The New Orleans Food Ingredients Fair was an exciting event for all those who attended. We at Kyoto Food Corporation are especially excited about the possibilities for Kyoto Tofu to be used in a variety of Products.

"We want you to know that we are ready and willing to assist you in any way we can in the development and inclusion of Kyoto Tofu as a part of your product developments." Address: 1050 West 35th St., Terre Haute, Indiana 47802. Phone: 812-235-9505.

9923. Reid, T.R. 1992. Japan's 'first' star in space: Shuttle crew member fascinates home crowd. *Washington Post.* Sept. 19. p. A1.
• ***Summary:*** "Tokyo–News Flash from Florida: NASA has nixed fermented soybean paste" [natto]. The Japanese have taken a strong interest in Mamoru Mohri, age 44, a Japanese who is now aboard the space shuttle Endeavour, orbiting the Earth. This is a bit surprising since he is not the first Japanese in space; Toyohiro Akiyama rode in a Soviet rocket to the Mir space station in Dec. 1990.

Before takeoff there were some stories about Mohri's efforts to take common Japanese items on board. "Mohri had hoped to bring along some snacks made of *natto,* a stringy, smelly dark paste of fermented soybean. Evidently fearing that loose strands floating weightlessly around the crew quarters might cause international tension, NASA nixed natto. To soften the blow, NASA agreed to let Mohri bring along some *umeboshi,* a spicy pickled plum." Address: Washington Post Foreign Source, Tokyo.

9924. Waxman, Howard. 1992. History of Essene, natural foods retailer and distributor (Interview). *SoyaScan Notes.* Sept. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Essene began in March 1969 as a macrobiotic natural foods retail store named Essene Macrobiotic Supply at 2031 Samson St. in Philadelphia, Pennsylvania. Primarily a juice and snack bar, it was founded by Denny Waxman, Charles Smith (Smitty), and Stanley Petrowski; Stanley left after several months. Howard was not involved with the company at that time. After about a year, the growing retail store moved to 320 South St. (at 3rd) in Philadelphia and changed its name to Essene Traditional Foods.

By Feb. 1971 a distribution company, also named Essene Traditional Foods, was started in the retail store–following the Erewhon model. An ad in *East West Journal* (Feb. 1971, p. 10) shows that "Essene," at 320 South St., was a distributor and wholesaler of natural and traditional foods, including miso, tamari, sea vegetables, and organic grains, vegetables, and beans. They made stone-ground wheat flour on the premises. The distribution company soon outgrew the store and by May 1972 had moved into a small warehouse at 58th & Grays Ave., Philadelphia PA 19143. Then it moved to a larger warehouse in Boyertown, about 1 hour drive outside Philadelphia. The distribution company went out of business in about 1976-78; it had been in business for about 5 years.

In 1981, when Bill Tara returned to the United States to become director of the Kushi Institute of Boston, Massachusetts, Denny Waxman, head of the Philadelphia East West Center, went to London to run the Community Health Foundation and the Kushi Institute. He stayed two years. Denny now lives in Portugal.

The retail store is still in business, owned by Howard. He moved to his present address about 3½ years ago, from 320 South Street, Philadelphia, PA 19147. Address: Owner, Essene Natural Foods, 719 S. 4th St., Philadelphia, Pennsylvania 19147. Phone: 215-922-1146.

9925. Morinaga Nutritional Foods, Inc. 1992. Pure tofu. Perfect package (Ad). *Vegetarian Times.* Sept. p. 24.
• ***Summary:*** This full page color ad shows a burning candle, sunflowers and other flowers, and two packages of Mori-Nu Silken Tofu, one opened, surrounded by nuts, vegetables, and soybeans in a wooden bowl.

© Copyright Soyinfo Center 2014

The caption at the bottom reads: "Mori-Nu is silken style tofu in a revolutionary package, which keeps Mori-Nu Tofu fresh and ready to eat for months, without irradiation, preservatives or refrigeration. Mori-Nu's smooth texture and soft, firm and extra-firm varieties make it perfect for any recipe. Write and we'll send you our favorites.

"From appetizers to desserts, Mori-Nu Tofu is part of your lifestyle."

9926. Sambuichi-Rumley, Elize J.; Lai, A.; Hirakawa, T.; Kido, Y.; Shizuka, F.; Kishi, K. 1992. Protein deficiency potentiates lipid peroxidation in growing rats exposed to hyperoxia. *Nutrition Research* 12(9):1101-12. Sept. [28 ref]
• ***Summary:*** Growing male Wistar rats were fed *ad libitum* casein or soy protein isolate (SPI) based diets containing 5 or 20% protein for 3 weeks. Half of the rats were exposed to 95% oxygen (hyperoxia), 12 hours/day, during the last 5 days. The results indicate that hyperoxia, as well as protein deficiency, potentiates *in vivo* lipid peroxidation (which was measured by thiobarbituric acid reactive substances–TBARS).

"In conclusion, it appears that dietary protein may play some important roles in the detoxification of free radicals by the maintenance of scavenger enzyme synthesis as well as antioxidant concentrations." Address: Dep. of Nutrition, School of Medicine, The Univ. of Tokushima, 3-18-15 Kuramoto-cho, Tokushima, 770-Japan.

• ***Summary:*** The six people are: Gil Griffis, American Soybean Association. Steve Howell, Stratco. Bill Ayres, Interchem. Jim Blaauw, Kansas Soybean Assoc., Kenlon Johannes (MSMC). Bill Tallent, USDA.

Thank you all for attending the meeting to discuss the possibility of a biodiesel demonstration project in Japan. We agreed it is best to work initially through Bill Ayres and C. Itoh, the Japanese trading company. Address: Secretary, State Board of Agriculture, Kansas.

9931. Wolff, David. 1992. Early developments with soybeans in Harbin (Interview). *SoyaScan Notes.* Oct. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** David recently finished a PhD in history at the University of California at Berkeley. His thesis was about the Russian thrust into Harbin, focusing on the years 1895 to 1904, but with some history up to 1914. He reads and speaks Russian and did extensive original research in the Imperial Russian Archives (now called the Central Government Historical Archive, which is the central repository for all pre-revolutionary Russian documents) at St. Petersburg (formerly Leningrad). These documents, which were filed before the Russian Revolution, have just become available to outside researchers.

In 1895 Harbin was a small town. His thesis, filed in the UCB history department, does not focus on soybeans or the soybean trade in Harbin, but there is information about soybeans in several places. In Chapter 3, "Demography" see the section on Jews. Russian Jews were given incentives to leave the system which was oppressing them in Russia and to go as a vanguard for the Russians to Harbin and develop the city. There is an anecdote about a man named Kabalkin wandering through the Chinese marketplace in Harbin with his son, looking at all the soybeans, and saying, like a visionary, "Look, this is the future gold of Manchuria." There may be something about soy in Chapter 4 about the Russian War Laboratory–the Commercial Bureau of the Chinese Eastern Railway.

Kabalkin was a Russian Jewish businessman from somewhere in southwestern Russia, near the Ukraine area. He had made his fortune by developing systems for moving grain on the railways, and specifically by developing financial instruments by which he could take out loans against their grain that was being transported on the railways, then pay off the loans after the grain was sold. He did not own any railways but he worked closely with the government-owned railways, increasing their profits by increasing the amount of grains shipped and the tariffs collected. He was the first person to conceive of the idea of exporting soybeans from Manchuria to Europe–before the Japanese. He presented a proposal to this effect in 1903, but then the war broke out [Russo-Japanese War, 1904-05] and obscured his idea. He was closely connected with Count S.Y.

© Copyright Soyinfo Center 2014

Vitya, who was the minister of finance and probably the most powerful minister in Russia from about 1891-1903, and who developed all of the Russian railroads and economy. Vitya thought of Harbin, a little colony out in Manchuria, as his own little kingdom within a kingdom.

Kabalkin tried unsuccessfully to work out his ideas for exporting soybeans to Europe with the Russians. In Jan. 1908 Kabalkin exported his first shipment of soybeans from Vladivostok to Europe, but his operations were poorly capitalized. Then in about 1912 he decided to set up a joint venture with British capital. This company, named something like the Anglo-Russian Trading Co., then tried to compete with the Japanese, but the Japanese already had a big head start.

The Anglo-Chinese Trading Company [Kabalkin Oil Mills] was set up at Harbin to crush soybeans into oil and meal; by 1937 the company was owned by Kabalkin's son and was using hydraulic presses, with a capacity of 220 tons/day.

David is now having his thesis published, hopefully as two books. The thrust of the book is Harbin as an unusual kind of Russian city. The first book will examine what is unusual about Harbin from a Russian history perspective. The second book will talk about the interactions between Harbin and the surrounding Manchurian culture, and how a region can be formed out of a conflict. One of the conflicts is over who will control the soybean trade and therefore the wealth of Manchuria. There will be a chapter on the soybean trade. Most of the information in the second book was not in David's thesis.

In 1946 the Tokyo office (the number 2 office after that at Dairen) of the South Manchuria Railway Co. was raided by the U.S. marines. They loaded the entire library onto a boat and shipped it to Washington, DC. Later they also took the whole army archive. Much of it was microfilmed by the Library of Congress. It was the best collection in the world on that subject until the Japanese Diet Library in Tokyo decided to enhance their collection by drawing together everything that was in Japan then microfilming everything that they didn't have that was in Washington, DC. The American government considered the Kantô-gun and the South Manchurian Railway Co. the two agents of Japanese imperialism in Manchuria. Address: Princeton Univ., Dep. of Sociology, Green Hall, Princeton, New Jersey 08544. Phone: 609-258-2851 or 609-683-1844.

9932. Belleme, John; Belleme, Jan. 1992. Culinary Treasures of Japan: The art of making and using traditional Japanese foods. Garden City Park, New York: Avery Publishing Group Inc. xiv + 232 p. Illust. by Akiko Aoyagi. Index. 25 cm.
• ***Summary:*** Contents: Acknowledgments. Foreword. Preface. Map of Japan showing where 21 traditional foods sold by Mitoku are made. 1. Kuzu: The wonder root. 2. Mirin: Sweet rice wine. 3. Miso: A health secret to savor. 4. Mochi: The sweet rice treat. 5. Noodles: Traditional Japanese fare. 6. Rice malt: Heavenly sweet water. 7. Toasted sesame oil: Cooking oil supreme. 8. Shiitake: Miracle mushrooms. 9. Soy sauce: King of condiments. 10. Tea: A national institution. 11. Snow-dried tofu: Protein powerhouse. 12. Umeboshi: Venerable pickled plums. 13. Vegetables of the sea: Underwater harvest. 14. Brown rice vinegar: Japan's liquid treasure. 15. Traditional vessels: Vats, crocks, and barrels. Glossary. Worldwide importers.

Concerning soy sauce, this book discusses Sendai Shoyu and Miso Co., Johsen, tamari, Mansan Brewing Co. founded by Oguri family in 1875, almost destroyed in Sept. 1959 by the fierce Ise-wan typhoon, "discovered" in 1982 by Akiyoshi Kazama of Mitoku. Now a macrobiotic staple.

For details on the uncondensed introduction to this book see Kushi (1992) "Introduction to *Culinary Treasures of Japan.*" Though very interesting, it contains a number of factual errors and statements that leave the wrong impression. Address: Saluda, North Carolina.

9933. Hesser, J.M. 1992. The world wheat gluten market (Interview). *SoyaScan Notes.* Oct. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In March 1981 Matt took over management of the International Wheat Gluten Assoc. (IWGA); it was the first association he managed. At the time, there were 11 members, all manufacturers of dry powdered wheat gluten from Canada, Australia, and American. His first project was to bring European (western and eastern), and Japanese manufacturers into the association. Today the IWGA has 23 members from around the world; all are still manufacturers of dry powdered wheat gluten. The annual output of the individual member companies ranges from about 4,000 tonnes to 35,000 tonnes. Companies that make wet wheat gluten tend to be very small, often cottage industries.

IWGA publishes a quarterly newsletter sent to members and an annual newsletter with a circulation of about 350. Address: International Wheat Gluten Assoc., 4510 W. 89th St., Prairie Village, Kansas 66207. Phone: 913-341-1155 or 1156.

9934. Shurtleff, William; Aoyagi, Akiko. comps. 1992. Bibliography and sourcebook on Seventh-day Adventists' work with soyfoods, vegetarianism, and wheat gluten, 1866-1992: Detailed information on 835 published documents (bibliographic), 602 commercial food products, 207 unpublished archival documents, 158 original interviews (many full text) and overviews. Lafayette, California: Soyfoods Center. 407 p. Subject/geographical index. Author/company index. Language index. Printed Oct. 15. 28 cm. [1606 ref]
• ***Summary:*** This is the most comprehensive book ever published on the work of Seventh-day Adventists (SDAs) with soyfoods, vegetarianism, or wheat gluten. In each of

© Copyright Soyinfo Center 2014

these closely-related areas SDAs have been the pioneers and leaders over a period of 70 to 130 years, and they have had the good fortune to be able to watch their visionary ideas gain increasing worldwide acceptance. Moreover, they have founded and successfully run many pioneering food companies that have transformed their ideas into commercial products and made them available to consumers worldwide.

The scope of this book includes all known publications, commercial food products, and archival documents, plus many original interviews, from earliest times to the present, worldwide. Thus it is also the single most current and useful source of information on this subject available today, since 83% of all references (and most of the early and current ones) contain a summary/abstract averaging 131 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 33 different document types, both published and unpublished; every known foreign language publication on the subject– including 55 in German, 25 in Spanish, 23 in French, etc.; extensive translations of many of the Japanese and European works; 158 original Soyfoods Center interviews and overviews never before published. Thus it is a powerful tool for understanding the development of these subjects and related products from their earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 17 years, the bibliographic records in this book feature (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 602 commercial food products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

9935. Yasuda, Masaaki; Sakaguchi, M.; Otonari, H.; Okuhama, S.; Kinjyo, S.; Hongo, F.; Toyama, S. 1992. Okinawa ni okeru tôfuyo no seizo ni kansuru kenkyu. VII. Tôfu kanso kotei ni okeru biseibutsu no hatasu yakuwari [Studies on the manufacture of tofuyo in Okinawa. VII. The role of microorganisms during dehydration of tofu cubes]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 39(10):870-77. [17 ref. Jap; eng]

• ***Summary:*** Tofuyo is a unique type of fermented tofu made in Okinawa Prefecture, Japan. It is made from partially dehydrated tofu cubes fermented in moromi (mash) of red rice koji, salt and awamori (distilled liquor). The quality of the finished product is always affected by the quality of the tofu cubes, which are always dehydrated at room temperature. Microorganisms (mainly bacteria) which grow on the surface of the cubes are thought to play an important role in the process. These bacteria were screened to find what species and strains / varieties produced high proteinase enzyme activity. *Bacillus* TYO-67 was found to have by far the greatest enzyme activity. After tofu cubes were inoculated with this strain, changes in the protein and nitrogen composition of the cubes during dehydration at room temperature were measured. Cubes which were uninoculated were used as a control. The pure protein content of the inoculated cubes was lower than that of those which were not inoculated; thus, the former were considered more digested / hydrolyzed than the latter. The values of water soluble nitrogen, 4% trichloracetate soluble nitrogen, and 75% ethyl alcohol soluble nitrogen to total nitrogen and free amino acids of the cubes all increased during dehydration, and the increases in the inoculated cubes were greater than in those which were not inoculated. The ripening time of the inoculated cubes was shorter than that of the cubes which were not inoculated. Therefore, we can say that dehydration of tofu cubes at room temperature is a sort of "prefermentation" by bacteria in the process of making tofuyo.

Tables show: (1) Proteinase activity of various bacteria isolated from the surface of tofu cubes. (2) Changes of free amino acids composition of tofu cubes which were either inoculated or not inoculated with *Bacillus* TYO-67.

Figures (graphs) show: (1) Changes is moisture content and pH of tofu cubes during dehydration for 60 hours. The moisture decreased and the pH increased. (2) Changes in the pure protein content of inoculated and uninoculated tofu cubes during dehydration. Both decreased but that of the inoculated cubes decreased slightly faster. (3) Changes in the content of water soluble nitrogen, 4% trichloro acetic acid soluble nitrogen, and ethyl alcohol soluble nitrogen of inoculated and noninoculated tofu cubes during dehydration. All increased but that of the inoculated cubes increased faster. (4) Changes in the hardness of tofuyo during a ripening period of 150 days. That made from inoculated tofu cubes decreased faster than that made from uninoculated

9936. Louie, Elaine. 1992. 43 peaceful acres of Japan in Connecticut: A retreat that evokes home. *New York Times.* Nov. 12. p. C8.
• ***Summary:*** On weekends, Isao Aiba, his wife Lisa Sorce, and their two kids live Japanese style on 43 acres in Lime Rock, Connecticut, in the foothills of the Berkshires. And the family shares their retreat with 3-10 Japanese guests each weekend.

"Every two months, Ms. Sorce drives to Yaohan, a Japanese supermarket in Fort Lee, New Jersey, to stock up on raw fish, pickles, tiny dried fish and natto, a natto, a fermented [soy] bean favored in the north and east of Japan."

At home in Connecticut, her breakfasts typically include miso soup.

9937. Griffis, Gil; Wiedermann, Lars. 1992. Marketing food-quality soybeans in Japan: A manual on how to profit from the niche market in Japan for value-added soybeans. 5th ed. St. Louis, Missouri: United Soybean Board. 25 p. Nov. 28 cm.
• ***Summary:*** Contents: Introduction. Japan: Desired soybean characteristics, tofu (procedure for making tofu, desired soybean characteristics, color of hilum, seed size {the larger the better, preferably more than 20 grams/100 beans}, color of cotyledons, hull, composition, special notes, American interpretation), miso (same categories of information as tofu), natto (ditto; seed size: The smaller the better, with a maximum of 5.5 mm diameter. Round shape is preferred to oval in order to limit swelling during the soaking and boiling processes), food quality soybean varieties (name or code-name of 42 varieties, maturity zone, release year, used to make what soyfoods), distribution channels, marketing channels, protocol, pricing, organically-grown soybeans.

Taiwan: Introduction, list of 4 major buyers, users, and trade associations. Korea. Southeast Asia. United States.

Appendix I. Distribution systems for soybeans used for food in Japan: Tofu (23,000 tofu shops of which 13,000 are members of the Tofu Association), natto, miso.

Appendix II. Food soybean imports by country of origin, 1984-1991. USA is the largest supplier (845,000 tonnes in 1991), followed by China (279,000), then Canada (28,000). Total imports, which have stayed about constant during this period, were 1,152,000 tonnes in 1991.

Appendix III. Distribution by usage of soybeans used for food–1991, direct use only in tonnes (metric tons). Tofu: 607,000 tonnes total, of which 562,000 come from the USA and Canada, 25,000 from China, and 40,000 from Japan. Up 2% from 1989.

Miso: 171,000 tonnes total, of which 38,000 come from the USA and Canada, 121,000 from China, and 12,000 from Japan. Up 0.5% from 1989.

Natto: 147,000 tonnes total, of which 87,000 come from the USA and Canada, 50,000 from China, and 10,000 from Japan. Up 9% from 1989.

Other: 39,000 tonnes total, of which 20,000 come from the USA and Canada, none from China, and 19,000 from Japan. Total food use of 964,000 tons is up 2% from 1989. Source: Japanese trade newspapers and trade associations. These figures do not include a estimated 492,000 tonnes of soybeans used indirectly (in the form of defatted soybean meal) for soy sauce, 222,000 tonnes used for soy protein, and 20,000 tonnes for other indirect uses.

Appendix IV. Directory of direct importers of food-quality soybeans for each is given: Home office in Japan. Representative office in the U.S.

Appendix V. Traders of food-quality soybeans (3 companies).

Appendix VI. Soy food organizations in Japan (tofu, miso, soymilk, packaged tofu, natto). Appendix VII. Helpful contacts.

Food quality soybean varieties (with maturity group / zone, and year released; table, p. 5): Chico (00, 1983), Grande (0, 1976), Proto (0, 1989), Minnatto (0, 1989), NattoKing [Nattoking] (I, 1988), Disoy (I, 1967), Vinton (I, 1978), Vinton 81 (I, 1981), King Natto (I, 1985), Kato (I, 1989), Magna (II, 1967), Prize (II, 1967), Marion (II, 1976), LS201 (II, 1989), Provar (II, 1969), Beeson (II, 1969), Kanrich (III, 1956), Kim (III, 1956), LS301 (III, 1989), Verde (III, 1967), IL2 (III, 1989; from Illinois), Hawk (III, ?), Emerald (IV, 1975), Vance (V, 1986), Camp (V, 1989), Hartz 936X (VI, 1981), Hartz 914 (VI, 1989), Hartz 922 (VI 1989), Merrimax (?, 1986).

Note: This report was originally published in Sept. 1989, mainly for use by the American Soybean Association office in Tokyo. Address: 1. Division Director for Asia; 2. Country Director for Japan. Both: American Soybean Assoc.

9941. McReynolds, Thomas. 1992. Low-fat and defatted tofu, and other new developments at Morinaga (Interview). *SoyaScan Notes.* Dec. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Kenji Mizoguchi (Manager, Product Development Section, Food R&D Lab.) at Morinaga's central research laboratory in Tokyo, Japan, has been able to remove the fat from soymilk in order to make a 1% tofu (it contains 1% fat by weight) or a non-fat tofu. Tom has recently tasted the 1% fat tofu and thought it was excellent. Morinaga is planning to introduce this product in 1993 and Tom feels it will soon become the company's best-selling product.

Currently Mori-Nu firm silken tofu is the company's best-seller, followed by the extra-firm, with the soft in last place.

Tom is just putting the finishing touches on a new book to be titled *Tofu and You.* It was written by a lady who had a long-term weight problem until she married a Chinese man and started eating tofu. It is not a vegetarian book. It comes with a 28-day diet plan, and the book will accompany cases of Mori-Nu tofu. Morinaga hopes to launch the book together with their new low-fat tofu.

The company will also be publishing a newsletter to be sent to dietitians; Mark Messina is working with Tom on this project. The first edition should be out in Jan. 1993 and will be about 4 pages in length. A tentative title is *Soya Nutrition Update.* Tom would like it to be a professional rather than a commercial publication.

Update. Dec. 10. Morinaga's lab in Tokyo can remove the fat from soymilk using a mechanical process, but the process now involves the addition of isolated soy protein. The plant for doing this must remain in Japan. Address: Marketing Consultant, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 213-728-4325.

9942. McCloud, Tina. 1992. Natto: A breakfast dish that's an acquired taste. *Press* (*Newport News, Virginia*). Dec. 7.
• ***Summary:*** "It's the color and consistency of pork and beans, but sticks together like stretched chewing gum." The owner of two Japanese restaurants in Newport News, Mr. K. Nishikawa, notes that "nibbling natto seems a pretty disagreeable way to start the day. Unembellished natto has 'no flavor and smells funny.'" He imports the fermented soybean product frozen from Japan. The key lies in the seasoning. In northern Japan, natto is widely eaten as a breakfast food, served over steamed rice and mixed with mustard and soy sauce. Some people mix in onions and raw egg. The sushi chef at one of Mr. Nishikawa's restaurants serves natto in sushi.

9943. *Toyo Shinpo* (*Soyfoods News*). 1992. Nattô to tenpe wa kyôzon dekiru ka? [Can natto and tempeh coexist?]. Dec. 11. p. 7. [Jap]
• ***Summary:*** The bacterial culture used in the natto fermentation can cause spoilage problems if it gets into tempeh cultures–and it can get in quite easily unless strictly controlled.

9944. Vaidya, Achutananda. 1992. Re: Pioneering and making tofu and other soyfoods in Nepal. Letter to William Shurtleff at Soyfoods Center, Dec. 26. 9 p.
• ***Summary:*** "I started making tofu in 1974. I did not have any connection with my uncle in starting my tofu company, however I did have a chance to see him make tofu at his residence in Kathmandu, and from that time I got the idea in my mind to make tofu myself. I learned the details of the process in Nepal from Mr. Akifumi Nakamura of Kobe, Japan, a member of the Japan Overseas Cooperation Volunteers (JOCV), who worked at the Central Food Research Laboratory in Kathmandu, which was also my office in 1974. I worked together with him as a counterpart for two years learning how to make tofu. During his stay there I learned wholeheartedly the process of making tofu. I learned from him that this food product called "Bhatmas-ko-paneer" in Nepali is known as "tofu" in Japan. Vita-Tofu is the brand-name of my tofu. This tofu is not packaged. It is sold in the form of rectangular cakes out of water-filled cans or bowls because most of the local vegetable shops do not have refrigerators. Even to this day sale of tofu is difficult during the hot summer months because of lack of refrigeration in food retail stores. At the start, for the first 4-5 years, I delivered my tofu from door to door because even at that time the people of Kathmandu did not know about tofu. They did not want to buy it because they did not know how to cook it.

"From July 1979 to March 1980 I was invited to Japan for 9 months training at the Akita Prefecture Brewing Laboratory. During that time I also learned in detail the processes for making soy sauce, miso, and soyamilk. During that period I also got a chance to read *The Book of Tofu, The Book of Miso, Miso Production,* and *The Book of Tempeh* all of which helped me very much. I still have all those books. In 1985 I was invited by the Rotarians of Akita-Aomori to return to Japan for 1 month (Jan/Feb. 1985) to receive further technical training in making tofu, miso, soy sauce, soyamilk, moyashi (sprouts), koji, fruit fermentations for wine, etc. Today I produce tofu, soy sauce, and miso in my small factory in Kathmandu. I currently have an electric wet grinder imported from Kyoto, Japan, in 1976. My other equipment (a basket pressing machine and tofu presses) were all made in Nepal by Nepalese mechanics."

Accompanying this letter are 27 color photos showing the following: Vita Tofu in Nepal. Making koji with his wife in Nepal. Studying and making tofu, miso, and shoyu in Japan in 1980 and 1985. His business card notes: "Food

• ***Summary:*** In 1988 vegetable soybean production was established in Thailand by Japanese and Taiwanese manufacturers. Most of the soybeans are exported to Japan. Major Thai manufacturers include Chareon Pokapan C. Ltd. and Amphol Frozen Food Co. Ltd. In Thailand, soybeans are grown only during certain seasons as an intercrop. Therefore processing plants typically operate only 1-2 months per year due to shortages of vegetable soybeans.

Vegetable soybeans are presently one of the cash crops promoted by the Thai government as a supplementary crop to rice, corn, and cassava. Farmers can earn US$1000 to 1250 per ha growing this new crop. Since growing vegetable soybeans for fresh pods is labor intensive, and farmers have a limited supply of labor, each household can grow only 0.3 ha. Production is concentrated in the central and northern regions of Thailand. Varieties preferred and promoted by the manufacturers are AGS 292, Kaohsiung No. 1, Ryokkoh, and Tsurunoko.

Harvest of the pods begins at 3:00 in the morning. The pods are stored in nylon net bags that facilitate air circulation. The pods are sprayed with water and covered to maintain good quality. They must be transported to the processor within 6 hours to prevent the glucose in the beans from changing to starch. The value of vegetable soybeans depends on their degree of sweetness.

Upon arrival at the processing plant, the pods are cleaned in water. Only grade A and B pods are sorted out for blanching in water at 100ºC for 2½ minutes. The pods are then soaked in ice water, graded, and packaged in 1-kg plastic bags. Address: Rice and Field Crop Promotion Div., Dep. of Agricultural Extension, Thailand.

• ***Summary:*** Vegetable soybean is called *turag* in Thai. The breeding program at the Chiang Mai Field Crop Research Center in Thailand is working to develop improved vegetable soybean cultivars for local consumption and export. For local consumption, the large-seeded Nakhon Sawan 1 is recommended. For export: About 30 years ago, private companies began breeding vegetable soybeans for export to Japan. They have released more than fifty varieties, among which the following are now widely used: Tzurunoko [Tsurunoko], Ryokkoh, Kegon, Hatsutaka, Taishoshiroge, Nakate Kaori, Suzumo, Enrei, Fukuda, Raityo, Shirobata, Tamasudare, Hakutyo [Hakucho], and Siratsuyu [Shiratsuyu].

Eight tables show varieties, the 100-seed weight, and days to maturity. Vesoy #4, BPI #4, Tzuronoko, and Ryokkoh have performed very well. Vesoy #4 has a 100 seed weight of 56.4 gm. Address: Chiang Mai Field Crop Research Center, Dep. of Agriculture, Thailand.

8500 B.P. to 100 B.P. The origin of agriculture in China can be dated from about 7000 B.P. "The prevailing view is that agriculture began in Korea and Japan in the third millennium B.P. with the initiation of rice-based agrarian societies by both the diffusion of crops and ideas and the migration of people. Evidence is mounting, however, for earlier archaeological origins in these two areas" (p. 7).

In China, any cite with ceramics and no evidence of metallurgy is considered Neolithic. Pottery-bearing sites before 8500 B.P. are termed early Neolithic (p. 13). During the Neolithic, dependence on food production gradually increased.

Illustrations show: (1) Map of 10 vegetation zones of East Asia. (2) Diagram summarizing Northeast Asian chronology in northern China, Korea, southwest Japan, and Northeast Japan, from 8000 B.P. to 500 B.P. Arrow width is roughly proportional to the degree of dependence on food production. (3) Map showing location of 59 East Asian sites [archaeological, in China, Korea, and Japan] mentioned in the text. Address: Assoc. Prof. and Chair of the Dep. of Anthropology, Univ. of Toronto, Canada.

9958. Fruin, W. Mark. 1992. The Japanese enterprise system: Competitive strategies and cooperative structures. Oxford, England: Oxford University Press (At the Clarendon Press). viii + 397 p. Illust. Index. 25 cm. [5 soy ref]

• ***Summary:*** The appendix of this book contains tables (p. 329+) showing the 200 largest industrial firms in Japan in the years 1918 (Kikkoman was 80th, p. 331), 1930 (47th, p. 337), 1954 (126th, p. 346), 1973, and 1987. Kikkoman does not appear in the last two.

Letter (e-mail) from Mark Fruin. 2011. Dec. 20. "Kikkoman falls out of the largest 200 industrial firms in 1973 and 1987. It's not so much that Kikkoman didn't do well in those years as other industries and firms grew a lot faster by comparison. Its revenue base stayed relatively small–soy sauce, other soy foods, and various other endeavors that were not that large relative to the Toshibas, Hitachis, Hondas and Toyotas of the world."

Among the 200 "largest industrial firms in Japan in 1918 and 1930, Noda Shoyu Company represents the only major Japanese corporation that became large on the basis of an indigenous technology [shoyu manufacture] and represents organizational and managerial continuity from the Tokugawa era" (p. 86).

A separate section (p. 108) titled "Noda Shoyu (Kikkoman)" notes that this company was one of the few successful rural enterprises; its manufactured products were packaged and branded at Noda, in rural Chiba prefecture, in the countryside. Although located a day's sail from Tokyo in the late 1800s, Kikkoman evolved rapidly into a dynamic and thriving enterprise as its management created a cluster of related businesses to support its manufacturing activities. In 1900 Kikkoman established its own bank; in 1904 its own research and development laboratory; and in 1911 it helped to build a railroad line from the nearby town of Kashiwa [situated between Noda and Tokyo] through the town of Noda. "As soon as practical, during the 1910s and 1920s, hydraulic presses, steam boilers, conveyor belts, and transfer lines for bottling and canning were installed (p. 108).

Noda Shoyu / Kikkoman is also mentioned or discussed on pages 87 (Kikkoman was subjected to the longest labor strike in pre-World War II Japan {1927-28}; Fruin "posits its outbreak as a clash between traditional methods of labor organization and management and modern requirements for high-volume production and an attendant need for direct management of the production function"), 129, 154-55, 309 (local governments–such as that at Noda–were often unable to "muster adequate resources for social welfare and community benefits." So Kikkoman "financed railroads, grammar schools, cultural centers, water works, fire departments and town halls in Noda for exactly these reasons"), 320, and 324. Address: Palo Alto, California.

9959. Harlan, Jack R. 1992. Crops and man. 2nd ed. Madison, Wisconsin: American Society of Agronomy, Crop Science Society of America. xii + 284 p. Illust. Author index. Subject index. 21 cm. [495* ref]

• ***Summary:*** Contents: Foreword. Preface. 1. Prologue: The Golden Age. 2. Views on agricultural origins. 3. What is a crop? 4. What is a weed? 5. Classification of cultivated plants. 6. The dynamics of domestication. 7. Space, time, and variation. 8. The Near East. 9. Indigenous African agriculture. 10. The Far East. 11. The Americas. 12. Epilogue: Who's in charge here?

A table (p. 57) lists the world's 30 leading food crops in terms of estimated edible dry matter (million metric tons). The top 5 are: Wheat (468), maize (429), rice (330), barley (160), and soybean (88). These top 5 are all annuals.

Page 73 lists crops indigenous to the Chinese region. The pulses include soybean (northeastern China) and adzuki beans (*Vigna angularis,* southern China). Cereals and pseudocereals include Japanese millet (*Echinochloa frumentacea,* eastern China), buckwheat (*Fagopyrum esculentum,* western China) Tartar buckwheat (*F. tataricum,* western China), rice (southern China to India), proso millet or broomcorn millet (*Panicum miliaceum,* northern China), Italian millet or foxtail millet (*Setaria italica,* northern China). Oil crops include tung oil (southern China) and rapeseed (temperate China). More and more people are being fed by fewer and fewer crops. The human species is currently an eater of grass seeds–like canaries.

The section on "The gene pool system: Species" (p. 106-09) notes that in 1971 Harland & de Wet proposed three informal categories: Primary Gene Pool (GP-1), Secondary Gene Pool (GP-2), and Tertiary Gene Pool (GP-3). In the first edition of this book (9175) Harland claimed that soybean had neither GP-2 nor GP-3. Since then, soybeans have been bred

© Copyright Soyinfo Center 2014

with their wild perennial relatives, resulting in hybrids.

Tables on pages 152-53 list the major gene banks in the international system. The designated base collections for soybean are USDA (Beltsville, Maryland), and NIAS (National Institute for Agricultural Sciences, Tsukuba, Japan).

Recorded History in East Asia: "Chinese civilization, as distinct from previous cultures, can be said to have begun with the founding of the Shang dynasty sometime before 1500 BC. At about 1300 BC, the Shang capital was established at An-yang and the city was captured by the Chou tribe in 1027 BC... Essentially all of the Shang literature falls between 1300 and 1027 BC and consists of oracle bone inscriptions and writing on cast bronze objects... Among the earliest compilations of Chinese literature is the *Book of Odes* (*Shih Ching*) assembled from bits and fragments from the 11th century to the middle of the 6th century BC. Botanically, it is the most informative of early literatures and mentions about 150 plants as compared to 55 in Egyptian literature, 83 in the Bible, and 63 in Homer (Ho, 1969). In the *Odes, Panicum* millet is mentioned 27 times, the mulberry 20 times, and *Artemisia* is mentioned 19 times with some 10 varieties. The soybean is first mentioned in 664 BC in connection with tribute paid to the Chou by the Shan-Jung (Mountain Jung) tribe... Northern China: The agriculture that evolved in the north China uplands was based on the millets, soybean, and a suite of fruits and vegetables" (p. 198-99).

"Soybean: The wild soybean is a small, slender creeping vine bearing a few small pods with small, black seeds. The plant is widely distributed from southern Siberia, through Manchuria, throughout the eastern coastal plain of China, and Westward to Szechuan. It is rather weedy and is often found in city parks under the shade of trees. Presumably, it was once a woodland or temperate forest plant before the natural vegetation was removed for agriculture. The changes under domestication have been enormous.

"Evolution of bush types from vines is common under domestication. It has happened in American beans, African cowpeas, oriental soybeans, and others. The viny ancestral types are usually retained as well, and trailing forms of soybean are still grown for fodder." Address: Prof. of Plant Genetics, emeritus, Crop Evolution Lab., Dep. of Agronomy, Univ. of Illinois, Urbana, Illinois.

9960. Hayakawa, Isao. ed. 1992. Food processing by ultra high pressure and twin-screw extrusion. Lancaster, Pennsylvania, and Basel, Switzerland: Technomic Publishing Co. xii + 153 p. Illust. Index. 23 cm. *

• ***Summary:*** Contains 13 chapters by Japanese authors on current processing techniques using extrusion cooking (10 chapters) and ultra high pressure technology (3 chapters). Soybeans are discussed extensively. Address: Assoc. Prof. of Food Science and Technology, Kyushu Univ., Japan.

9961. Iwata, Masakazu. 1992. Planted in good soil: A history of the Issei in United States agriculture. 2 vols. New York, NY: Peter Lang Publishing. American University Studies. Series IX. History. Vol. 58. [500* ref]

• ***Summary:*** Soybean production in the USA is not mentioned in this book, but in Vol. 1: Page 124. Saburôji Yoshimura of Ogden, Utah, recalls that for the $6.00 a month that he and others of his work gang paid for food, they received only a limited amount of rice "along with *miso shiru* or soy bean paste soup and *kyabeji no tsukemono* or pickled cabbage."

Page 205. In Vacaville, California, in the early 1900s, "the Issei obtained Japanese products from their fellow countrymen whose shops carried supplies such as rice, soy sauce, and other Oriental items."

Page 297 notes that in California, as in the other Pacific Coast states, "Japanese farmers purchased American clothes almost exclusively, but their food was largely of foreign origin. Soy sauce, *sake* (rice wine) and other delicacies were imported from Japan. In later years many of these items were manufactured here and in Hawaii, but in 1910 it was reported that from 50 to 70 percent of the food consumed by the Japanese farmer was imported."

Volume 1 of this book discusses in detail the Wakamatsu Tea and Silk Farm Colony, which was established in 1865 in Coloma in the Gold Country near Sacramento. They came with the intent of growing bamboo, tea plants, raising fish, etc. The colony lasted for only 12-18 months, then failed. In Vol. 1, the famous pioneering Wakamatsu Colony is mentioned on at least 12 pages including p. 36-43, 60-62, and 64.

In Vol. 2, miso is mentioned on p. 554 (In Washington state "*miso shiru,* or soy bean paste soup," was enjoyed by Issei farmers for breakfast).

In Vol. 2, Chapter 17, titled "The Southwest–Violence in Arizona" includes a discussion of the Tadano family. In 1913, "an unforgettable year," Arizona passed an Alien Land Law which prevented Japanese who were not born in the USA from owning land in Arizona (p. 676). However they could lease land or real property in the state for a period of up to five years. In 1916, Issei Tadeshi Tadano, arrived in Arizona from California's Imperial Valley and grew cantaloupes under paper covers, which hastened their maturation (p. 677). The new method was soon used by other Issei farmers. In 1921 a revised Alien Land Law prevented Issei from both owning and leasing land in Arizona. A crisis took place in 1934 when White farmers took the law into their own hands and tried to drive all Japanese from the lands of the Salt River Valley. "In the early morning hours of September 13, six masked riders armed with machine guns and rifles raided a lettuce ranch operated by Magoichi Inouye, Truma Yamamoto, and Takeshi Tadano. In the Tadano situation, the raiders fired in the direction of Tadashi

© Copyright Soyinfo Center 2014

Tadano, the son of the rancher [Takeshi], who had been asleep in the field guarding an irrigation watergate to prevent the repetition of the flooding of the newly planted lettuce field by vandals [on Sept. 9, footnote 68]. At the first shot the son fell to the ground and feigned death. The gang excitedly started for their cars but did not leave the scene until they had pushed the youth's pickup truck into the Grand canal [footnote 69, refers to photo].

"After their departure, the son dashed back to his home and reported the details to his father who placed calls to the sheriff's department and the Japanese community leaders." A week after the Tadano shooting incident, Arizona night riders struck again at another farm in a yet another act of intimidation (p. 696-97). Not much was ever done by the Arizona authorities for the Japanese. Note: Eventually the Tadano family went into the business of making soy sauce.

In Vol. 2, a Glossary (p. 891-95) defines *Miso* shiru (p. 893) as "Soy bean paste soup."

At the end of Vol. 2 (p. 957-60) are three maps (with legend) of Japanese American farming settlements in the United States: (1) Western United States. (2) Central United States. (3) Eastern United States. For example, in Washington state there were communities in Seattle, Yakima, Moses Lake, and Spokane.

Note: This is the earliest English-language document seen (Aug. 2011) that uses the term "soy bean paste soup" to refer to miso soup. Address: 879 N. Vail Ave., Montebello, California 90640. Phone: 213-723-4389.

9962. Kawakami, Kozo. 1992. Tsurezure Nihon shokumotsu-shi. 2 v [Leisurely history of Japanese foods. Vols. 1-2]. Tokyo: Tokyo Bijutsu. Illust. 21 cm. [35+ ref. Jap]
• ***Summary:*** Vol. 1 (vi + 151 p.) contains chapters on: Ryokutô [ryokuto] (bundô, yaenari; p. 74-76, mentions tofu. Note: Kinch 1879 says *Phaseolus radiatus subtriloba* = bundô). Ganmodoki and hiryozu [tofu burgers] (p. 85-89; 9+5 ref.). Yose-dofu (p. 89-99; 13 ref.). Itoko-ni (p. 108-10; 13 ref.; with soybeans, azuki beans and tofu). Gomashio (p. 128-30; 7 ref.).

Vol. 2 (3 + 151 + 5 p.): A color illustration titled (*Nori-zukuri no zu*), by Katsukawa Shunsen (?) on the dust jacket shows women making nori in old Japan. They are chopping freshly collected nori and drying it in sheets. Another old 3-part illustration of making nori is printed on the cover. Contents (centered on foods and treats from the sea) includes: Nori and kawa-nori (from the sea and from rivers. p. 1-5; 35 ref. 1 illust.). Asakusa nori, Kassai nori, Shinagawa nori, and other nori from the Pacific Coast and Inland Sea (*Setonai-kai*) during the Edo Period (p. 8-16, 39 ref. 4 illust.). Nori from the Japan Sea (*Nihonkai*) No. 1: Izumo nori, Uppuri nori, and Kamoji nori. Uppuri is a place near Izumo, and Kamoji is a wig-like hair filler (p. 17-20, 21 ref.). Nori from the Japan Sea (*Nihonkai*) No. 2: Kuro nori, Yuki nori, Noto nori, and Kasashima / Kasajima of Echigo nori (p. 21-24, 21 ref.). The story of river nori, Shiba river nori, Nikko nori, and Kikuchi nori (p. 25-30, 26 ref. 1 illust.). Dried frozen tokoroten (*kôri tokoroten*), made from frozen seaweed (p. 98-102, 3 ref.). Mizukara (a spicy food made from kombu, p. 103-05, 16 ref.). Musubi kombu, musubi kanpyo, and musubi sayori (musubi means "tied up in like a bow in a special way;" p. 106-10, 25 ref. 2 illust.). Musubi yamaimo (mountain glutinous yam) and musubi tofu (both tied up in a special decorative way. p. 111-14, 14 ref.). Also contains other interesting illustrations and chapters. Address: Japan.

• ***Summary:*** Soybean is an important crop in Thailand. Fresh soybean pods ("Tau Rae") are used as vegetables domestically and are also exported; their export volume has increased rapidly during the past 2 years. Thailand now exports about 5,000 tonnes (metric tons) per year, frozen, to Japan. The main growing area is in northern Thailand. Research is being conducted on variety improvement.

9971. Velde, Paul van der; Bachofner, Rudolf. eds. 1992. The Deshima diaries marginalia, 1700-1740. Tokyo: Japan-Netherlands Institute. xxiii + 595 p. Illust. (some color). 27 cm. Series: Nichi-Ran Gakai gakujutsu sosho, No. 12.
• ***Summary:*** Translation of marginal notes from official diaries kept at the Dutch factory in Nagasaki. Dutch resident merchants lived from 1641 to 1860 on the artificial isle of Deshima in Nagasaki Bay; during this time they were the only European or Western country allowed to trade with Japan. After Japan opened its doors to Western trade in the 1850s, the Dutch lost their trade monopoly.

Soy [sauce] is mentioned only once, but not as an item of export from Japan, in an entry for 29 April 1724 (p. 287).

In the index there are many entries for saké (p. 586, 591) and seaweed (p. 586)–mostly as presents for Dutch officials.

None of the following are mentioned in the index: Beans, mebos, miso, catchup, kecap, ketchup, ketjap, sauce, umeboshi. Address: Netherlands.

with no-till. Ten myths about conservation tillage. Ontario Soybean Growers' Marketing Board Newsletter–new format (insert). Ad for symposium "Soybeans in Canada: Beyond 100 Years," organized by the Ontario Soybean Growers' Marketing Board, to be held 28-30 March 1993 in Toronto, Ontario, Canada at the Regal Constellation Hotel; gives names and photos of speakers. Breeding the soybeans of the future. Genetic ingenuity.

In the Newsletter, an article titled "Profile of Larry Miehls, Soybean Board Chairman," notes: "Sixty-five percent of Ontario's soybeans are grown in five counties–Essex, Kent, Lambton, Middlesex, and Elgin... Today the majority of acres goes to two Ontario crushing plants. Twenty percent of the crop is exported and half of that is for human consumption." Therefore breeders need to concentrate on developing soybeans with more sugar, more protein, and less oil. "There is also a trend toward whole roasted beans for animal feed, and I see this as a major area of growth... For food quality soybeans, Japan remains the board's largest export customer.

"Pacific rim customers are interested in buying Ontario soybeans because of their high quality. Canada is also credited with strict grading standards, good processing people–the cleaners and the baggers–and farmers who keep up-to-date. Natto and tofu quality soybeans are popular among the Pacific rim customers. 'The breeders have done a good job of developing beans to meet customer needs...

"'The Harovinton, a tofu bean, was developed at the Harrow Research Station with a lot of board support. It's really starting to take off,' says Larry."

9977. Potter, Michael. 1993. Re: A brief chronology of Eden Foods. Letter to William Shurtleff at Soyfoods Center, Feb. 14–in reply to inquiry. 2 p.
• ***Summary:*** William Shurtleff sent Michael Potter a chronology of Eden Foods that he (Shurtleff) had compiled from various sources, and asked for Potter's comments, which follow. This letter is a follow-up to a letter written by Potter to Shurtleff on 1 March 1992.

"Eden Foods, Inc. was first incorporated as a non-profit corporation in the winter of 1967/1968, I believe. It was later (Bill Bolduc told me, in a manner that was not consistent with state law) reincorporated (after Ron Teeguarden pulled out) as a regular corporation under the name Eden Organic Foods, Inc. This WAS done by Bill Bolduc in November of 1969.

"Mr. William Shurtleff, traditionally corporations do not define the date they were *founded* as the date they became 'officially' or legally 'incorporated.' Commonly, decades separate these two occurrences, sometimes centuries.

"These thoughts will loosely follow your 2-page 'chronology of key events.' Eden was buying and selling soyfoods, tamari and miso, for more than 2 years prior to Nov. 4, 1969.

"During the spring of 1970 I became a partner of Joyous Revival natural foods in Birmingham, Michigan. I developed a relationship with Bill Bolduc... [the Eden's store's manager], as we were both attempting the same things and respected the quality of the work each other was doing. Frequently Bill B. asked me to move to Ann Arbor.

"After a falling our with my partners in December 1970, I visited Bill and Judy [his wife] in January 1971 and was hired by Bill on the spot, at his home, in his kitchen. My first job was to help a failing new Eden retail outlet in downtown Detroit on the campus of Wayne State University. (I never lived in Detroit at the time. I lived in Walnut Lake 30 minutes north.) By late spring or early summer 1971, after closing this Eden store, my pregnant wife Carol and I moved to Ann Arbor where I assumed responsibility for the Eden Foods store at 211 South State St. It is of interest that Eden Foods' name had already been legally changed back to just Eden Foods, Inc., when I moved to Ann Arbor.

"During the winter of 1971/1972 I was given what amounted to 13.5% of the common stock of Eden Foods, Inc. The share holdings then broke down: Bill Bolduc and Tim Redmond owned the same number of shares, but Judy Bolduc owned a small number of shares so the Bolducs owned the largest block.

Mid-Summer, July 1973, Bill thought the company was going out of business and after I stepped into a near fist fight between Bill and Tim outside the warehouse we were sharing with Mid West Natural Foods; I told them 'that if they'd just quit fighting and leave things alone, all would be well.' Bill immediately offered to sell me all of his stock. I asked Bill how much he wanted for it. After a very brief pause he said "$2,500." I told him that I'd try to get the money. We parted. Bill left and Tim and I went back to work. The next day I

© Copyright Soyinfo Center 2014

visited a friend named Ray Suber and asked him to help me purchase the stock. He said he would and to come back the next day. I did and was given $2,500 cash as a 'contribution to the natural foods movement.' With the $2,500 I purchased all of Bill and Judy's Eden Foods, Inc. stock. Neither Bill nor Judy 'sold their stock back to the company.' They sold it to me for cash. They were glad to get out because they were convinced the company couldn't make it."

From a talk on 31 Oct. 1993: There was a 51% Tim Redmond / 49% Michael Potter share holding configuration in Eden Foods, but it lasted for less than a year. When Michael bought all of the Bolduc's stock, he owned the majority of Eden Foods' stock. But he realized that Tim Redmond's father might withdraw his $10,000 if he knew Michael had majority ownership, and if that happened Eden would not be able to survive. So Michael immediately (as part of the transaction with the Bolducs) gave Tim enough of his stock so that Tim owned 51% and Michael owned 49%.

About 3 months later, Michael loaned about $44,000 in cash to Eden Foods. This was money that Michael's father had entrusted to him. But Michael became uncomfortable having no control over something for which he was responsible–both the company and his relationship with his father. Michael discussed his feeling with Tim, and Tim agreed to give Michael equal ownership in exchange for Michael converting his $44,000 loan into an investment in Eden Foods. Now neither partner could make a major decision without the other's agreement–a good situation for Eden Foods.

"In September 1973, at Royce Seeger's home, I received the unanimous recommendation of an employee steering committee and became Bill Bolduc's successor as president of the company. My first goal was to get us away from MidWest Natural Foods for moral and ethical reasons. I located a new facility in the process of being constructed and developed a relationship with the owner/builder, John Sheer. In the spring of 1974 we relocated to that 4601 Platt Road, Ann Arbor warehouse.

"During this period I was building and moving Eden's retail store to 330 Maynard St. in Ann Arbor. The move actually took place in the summer of 1973. It included a large store, a large fast food (chapati sandwiches, etc.) deli, and a natural foods bakery named Sun Bakery, that relocated itself from Kalamazoo, Michigan. These three operations were under one roof in a 6,000 square foot old printing plant at the University of Michigan's campus, leased by Eden Foods, Inc. This operation paid off all Eden's debt and paid for the new warehouse, computer, offices, trucks and equipment. The wholesale operation was carried by the retail until late 1974 after trucks were put out on regular routs throughout the Mid-west.

In October 1974 I made my first of eleven trips to the People's Republic of China (Eden made a total of 13 trips between Oct. 1974 and Nov. 1979) and stopped in Japan on the way back to visit Yuko Okada at the Muso Company. Prior to 1974 Eden Foods imported shipments from Mr. Kazama of the Mitoku Co. in Japan. After my visit to Muso, seeing their educational activities, their macrobiotic center activities, etc., I decided to import Japanese foods exclusively from Muso. Tim Redmond had cultivated the Mitoku connection and initiated our first Japanese imports.

"Spring 1979 Cliff Adler is hired by myself to do sales work for Eden in Chicago. During that summer he lends Eden Foods $100,000, for which he is paid bank interest rates.

"After the Nov. 27, 1979 warehouse fire Cliff converted his $100,000 to stock in February 1980 as Tim Redmond left, certain that Eden was finished. Tim's stock was redeemed with Eden giving him title to our operations at 330 Maynard St. In one transaction Tim was bought out by the company, Cliff and I became 34% shareholders, 10% was sold to Frank Dietrich of Natural Foods, Inc. (Toledo, Ohio) for $100,000 and the following percentages of Eden Foods' common stock were given to Eden managers shortly after we laid off 35 people: Ronnie Roller 5%, Michael Gordon 4%, Mark Cook 4%, Kathy Knor 3%, Bill Swaney 3%, and Bob Duha 3%. This free stock was limited to book value and had to be sold to Eden Foods whenever the person left the company regardless of the reason for leaving. It could not be sold another way.

"In early 1984 when Mike Gordon left Eden his stock was awarded to Michael Potter as a bonus by the Board of Directors... to be continued." Address: Chairman, Eden Foods, Inc., 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

rich and creamy desserts, and traditional tofu recipes.

"You can claim your Mori-Nu prize in your supermarket produce section or health food store. Mori-Nu. Pure tofu, perfect package." At the lower right is the red Mori-Nu logo. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504.

9980. Kanazawa, Takemichi; Tanaka, Makoto; Uemura, Tsugumichi; Osanai, T.; Onodera, K.; Okubo, K.; Metoki, H.; Oike, Y. 1993. Anti-atherogenicity of soybean protein. *Annals of the New York Academy of Sciences* 676:202-14. March 15. [18 ref]

• ***Summary:*** "Numerous papers have been published (Sirtori et al. 1977; Descovich et al. 1980) indicating that the proteins isolated from soybeans are effective in preventing the risks of atherosclerosis" [Note: Atherosclerosis is a condition in which fatty material collects along the walls of arteries. This fatty material thickens, hardens (forms calcium deposits), and may eventually block the arteries. Atherosclerosis is a type of arteriosclerosis. The two terms are often used to mean the same thing].

Because the taste of extracts made from *raw* soybeans is unpleasant, it has been difficult to make soy protein drinks without sugar, "which is very injurious to the arterial wall" (Kanazawa et al. 1984; Bunag et al. 1983).

Okubo et al. (1992) and Kudou et al. (1990) have devised a method for removing the undesirable taste from the extracts of raw soybeans.

Soycream was found to reduce the size of low density lipoprotein (LDL) particles and soymilk protected LDL from peroxidation.

9984. Roller, Ron. 1993. The Andersons in Maumee, Ohio, and Pioneer Seed Company's "Better Life" label (Interview). *SoyaScan Notes.* April. 3. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Andersons own a big elevator in Maumee, Ohio. They have specialized in IOM soybeans for many years. They trade with Mitsui (or perhaps Mitsubishi), which sells the soybeans in Japan to food processors (Ron does not know what type of soyfoods were made). When American Soy Products started operations in Michigan, the Andersons were the only people doing anything with Beeson variety soybeans. They had a Beeson program where they were contracting Beesons with growers and paying them a premium of $0.50 per bushel; the soybeans were grown

© Copyright Soyinfo Center 2014

"commercially" (i.e. non-organically). Beesons were the only identity preserved soybeans that they handled. Now the Andersons have an organic program and they are starting to contract organic soybeans for the Japanese market.

Ron has had ongoing discussions with Pioneer Seed Co., which is also involved with a number of Japanese trading companies for organic soybeans. Pioneer has a Specialty Crop Division, which handles the "Better Life" label. Soybeans sold under this label are guaranteed to have been grown without pesticides or herbicides–but chemical fertilizers may be used. These beans are sold in Japan. The majority of very large farms (800-1,200 acres) in Ohio and Nebraska grow soybeans organically without the use of animal manure. They use green manure in the form of cover crops, add soil balancing minerals (such as P and K, phosphates and potassium) as needed, and practice crop rotation. Ron has two main objections to the use of chemical fertilizers: (1) They rely on petroleum products for their nitrogen content; (2) They are harder on the environment and ground water. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176.

9985. Meyer, Edwin W. 1993. Early research on the structure of soy protein (Interview). *SoyaScan Notes.* April 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** At Central Soya, Ed hired a very brilliant and rather independent young protein chemist, Nicholas Catsimpoolas. "He laid wide open the basic structure of soy protein–the soybean storage proteins." Prior to the time that Catsimpoolas started his research, the understanding of the basic structure of soy protein was not clear. It was known that the storage proteins were composed of different types of proteins but he actually showed what the subunit structure was of the various proteins, and the linkages. He could diagram it up to a point. He showed, for example, that glycinin, one of the major storage proteins, was a polymer made up of two units, and each unit was composed of 6 subunits, and they were connected by disulfide bonds and ionic bonds, and the like. "I consider him a pioneer in that area. But I don't want to detract in any way from Dr. Walter Wolf's very significant contributions in the same field at about the same time. Dr. Wolf was working on a little bit different level. Shortly after Catsimpoolas began publishing in about 1969, the Japanese jumped into the field of basic structure research, and they contributed very significantly. Catsimpoolas left Central Soya in 1973 and went to MIT as a professor of nutrition and food science."

Every soybean cell contains a host of soybean proteins. The storage proteins are the nitrogenous materials that nurture the seedling when it starts growing. Examples of non-storage proteins are enzymes plus many others. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

9986. *Toyo Shinpo* (*Soyfoods News*). 1993. Tôfu shohi suryo no suii [Changes in tofu consumption in Japan]. April 11. p. 1. [Jap]
• ***Summary:*** Tofu consumption in Japan (in terms of cakes per household) has decreased by 12.4% since 1983. The weight of 1 cake is not given but it is probably 300 gm. The statistics for each year are as follows: 1983–90.43 cakes/household. 1984–89.16 cakes. 1985–88.48 cakes. 1986–85.40 cakes. 1987–86.43 cakes. 1988–85.07 cakes. 1989–81.87 cakes. 1990–83.42 cakes. 1991–78.76 cakes. 1992–79.26 cakes.

9987. Angier, Natalie. 1993. Chemists learn why vegetables are good for you: Certain plant ingredients can inhibit cancers. *New York Times.* April 13. p. C-1, C9. Science section.
• ***Summary:*** An illustration shows a bowl of miso soup. Researchers at Children's University Hospital in Heidelberg, Germany, have isolated a compound named genistein from the urine of those who eat a traditional Japanese diet rich in soy products (like miso soup) and vegetables (especially cruciferous vegetables–those from the cabbage family). Dr. Lothar Schweigerer, his student Theodore Fotsis, and their co-workers discovered that, in test tubes, genistein blocks angiogenesis, the growth of new blood vessels. Their work was published in the current issue of the April issue of the *Proceedings of the American Academy of Sciences.*

An illustration shows genistein blocking the growth of new capillaries that supply blood to some tumors. It also retards proliferation of some cancer cells.

People consuming a traditional Japanese diet were found to have 30 times as much genistein in their urine as typical Westerners. This could explain why Japanese men, who leave their country for several years to work in the USA or Europe, find their rate of prostate cancer rises sharply. Tiny prostate tumors, which have been kept from growing by, say, daily intake of miso soup, would be free to grow on a Western diet.

Dr. Judah Folkmann of Harvard Medical School (Cambridge, Massachusetts), who has pioneered our understanding of how tumors grow, found this to be a "fascinating report." He noted that this is the first time scientists have reported that certain dietary factors, found in the urine, could inhibit the proliferation of blood vessels. Blocking angiogenesis has the potential for providing an ideal type of therapy, since it would attack the tumor while leaving normal tissue intact. Only rarely do new blood vessels grow in the adult body–except to meet the sinister demands of malignant tumors. So any compound that blocked angiogenesis would have few side effects.

At present, only about 5% of the approximately $1.8 billion annual budget of the National Cancer Institute is spent on prevention; most of rest is spent to find high-profile cures, such as gene therapy. Dr. James Duke, an economic botanist

© Copyright Soyinfo Center 2014

with USDA, thinks the country would be much better off if we spent $1 billion a year on cancer prevention–including education on diet and cancer.

A large table titled "Potential cancer fighters in foods" (p. C9) includes flavonoids, plant sterols, vitamin E, genistein, (all found in soy products) and fiber. Fiber dilutes cancer-causing compounds in the colon and speeds them through the digestive system. It discourages the growth of harmful bacteria and promotes the growth of healthful ones. And it may foster production of a healthier form of estrogen.

9988. Pinault, Pascal. 1993. Re: Tama–France's best importer of Japanese natural foods. Letter to William Shurtleff at Soyfoods Center, April 27. 5 p.
• ***Summary:*** Tama is located at 883, rue de Bernau, 94500 Champigny / Marne, France. Phone: (1) 49-83-79-94. Fax: (1) 47-06-37-85. Tama traces its origins to the 1960s when it was part of a restaurant, Le Bol en Bois, the first vegetarian place in Paris. This restaurant (at 35, 40 Rue Pascal, 75013, Paris) now specializes in macrobiotic cooking. They added a health food store and a "new age" book shop.

"Tama distributes Mitoku products and excellent miso, soy sauces, amasaké, kuzu, Japanese seaweeds, mochi, etc. They have an excellent list of books concerning natural foods and cooking. They print their own brochures about tofu, seaweeds, and others. Tama has a subsidiary branch named Tofu-Daizou which makes the best tofu in France, as far as I know." Address: "Caplet," 97226 Morne Vert, Martinique, French West Indies 0033. Phone: 596 55-56-57.

9989. Miso [Miso]. 1993. Television broadcast. Channel 18. KTSF. California. April 25. Sun. 7:00-7:30 P.M. [Jap]
• ***Summary:*** This program is part of the series "Tsuiseki" (The Chase). Address: Japan.

9990. Nagayama, Hisao; Tokue, Akihiko. 1993. The naked kitchen: Nattô.*Look Japan* (*Tokyo*) 39(445):24-25. April.
• ***Summary:*** "Natto is formidable fare–fermented soy beans with a sticky, slippery consistency and a pungent odor that lingers long after the last swallow. But once you get used to these deliciously gooey beans, you will likely find yourself hooked... Natto first appeared [in Japan] 1,000 years ago, but it did not catch on until about 700 years later, when it became a favorite among the residents of the capital city at the time, Edo (old Tokyo)." Upper class Kyoto residents used to call natto *"ito"* (thread), "a delicate reference to the minute, sticky threads that cling to the lips of even the most careful natto-eater."

Color photos show: (1) Natto being lifted with chopsticks from a bowl, with its many threads stretching downward. (2) Natto atop a bowl of white rice. (3) Various traditional and modern natto packages, including natto wrapped in rice straw. (4-6) Three steps in eating a package of natto: Simply empty the natto packet into a bowl, add chopped green onions and soy sauce, and stir until sticky strings form.

9991. Nagayama, Hisao; Tokue, Akihiko. 1993. The naked kitchen: Miso. *Look Japan* (*Tokyo*) 38(444):24-25. March.
• ***Summary:*** A nice introduction to miso. Color photos show: (1) A bowl of miso soup. (2) Four different types of miso, each on a wooden spoon. (3) Miso Dengaku.

9992. Yen, Irene. 1993. Roland A. di Centa, the man who introduced tofu to Italy (Interview). *SoyaScan Notes.* May 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Irene recently visited with Roland at his home in France near Cannes (Address: Residence Port Azur Apt. B110, 79 Ave. Frìzes Rousians, F-06220 Golfe Juan, France). He told her that he introduced tofu to Italy using *The Book of Tofu* by Shurtleff and Aoyagi. He made tofu in his home kitchen in Italy and sold it commercially. Newspaper articles were written about his work. He was quite involved with macrobiotics and close to the Kushis. He no longer lives in Italy and is no longer involved with making soyfoods.

Roland, who is about age 50, was born in Germany to German parents, but his surname is Italian and his family originates from Italy, from a small village called Centa. He is second or third generation German. He lived in Germany until age 18, then lived in Italy for 10 years and France for 10 years. At one point he was married to a Vietnamese woman, who grew up in France. He was also a fashion photographer for the French fashion magazine *Elle.* A jack of all trades, he currently owns a business named Punshon Ltd. in Lugano, Switzerland, works as a consultant on many subjects, moves around a lot, and is quite affluent. He has a 60-foot sailing boat ported near Nice, France.

Note: Card from Roland. 1993. July 13. His address is now 3, Boulevard d'Aguillon, 06600 Antibes, France. Address: Berkeley, California.

9993. Brink, Susan. 1993. Can tofu stop cancer? As its uses multiply, the soybean looks more like a magic bullet. *U.S. News and World Report* 114:77. May 31.
• ***Summary:*** The magic bullet in soybeans could be genistein, a crystalline substance with almost no nutritive value, which is found almost exclusively in soybeans. "More than 200 scientific papers on genistein's possible role in cancer prevention have been published since 1987. Among the most intriguing is a German study in the April 1993 *Proceedings of the National Academy of Sciences,* which found that, in the test tube, genistein blocks angiogenesis, the process in which new blood vessels grow–and which is needed to nourish malignant tumors.

"The German research feeds speculation that genistein may be one dietary substance that explains the difference in some cancer rates between the United States and Asia. The American breast-cancer rate, for example, is 22.4 per

© Copyright Soyinfo Center 2014

100,000, almost four times Japan's rate of 6 per 100,000. The American prostate-cancer rate is 15.7 per 100,000, also roughly four times the Japanese rate of 3.5 per 100,000. A high-fat diet has long been suspected as a cancer-causing culprit. That could be true. But while Americans eat more fat, they also eat fewer plant foods, including soy...

"In the meantime, try making this summer's fruit shakes with soy milk–and see if anyone notices."

Note: This is the earliest document seen (June 1999), with "soy" in the title, and which suggests that soy might reduce one's risk of prostate cancer.

9994. Kohyama, Kaoru; Yoshida, M.; Nishinari, K. 1993. Rheological study on the gelation of soybean 11S protein by glucono-delta-lactone. *J. of Agricultural and Food Chemistry* 40(5):740-44. May. [32 ref]
Address: 1&3. National Food Research Inst., Kannondai, Tsukuba, Ibaraki 305, Japan; 2. Kanagawa Prefectural Inst. of Agriculture, Terdanawa, Hiratsuka, Kanagawa 259-12, Japan.

9995. Nagayama, Hisao; Tokue, Akihiko. 1993. The naked kitchen: Tofu. *Look Japan* (*Tokyo*) 39(446):24-25. May.
• ***Summary:*** Color photos from Fujiya in Tokyo show: A tofu maker cutting a large block of tofu into 60 cakes; Dried-frozen tofu, regular (momen) tofu, and grilled tofu (yaki-dofu); Three types of deep-fried tofu; Yu-dôfu in a *nabe* with kombu. Note: H. Nagayama, born in 1934, is a food historian and Japan's leading authority on the authentic recreation of Japanese period meals.

9996. *Ontario Export Soybeans* (*OSGMB*). 1993. Happenings. 6(2):-2. May.
• ***Summary:*** "March 28-30, 1993 the Ontario Soybean Growers' Marketing Board in conjunction with Agriculture Canada and the Ontario Ministry of Agriculture and Food, staged 'Soybeans in Canada: Beyond 100 Years,' a symposium marking 100 years of soybeans in Canada. Over 350 delegates and 30 exhibitors made the show a tremendous success. A strong list of internationally renowned speakers drew large crowds. Mr. Tetsu Minagawa, of Mitsubishi, Tokyo, spoke on Japan's market for soyfood products. Mr. Michael Loh, Export Development Officer of the Ontario Ministry of Agriculture and Food (OMAF), highlighted the potential for soybeans in the Asia Pacific region as we approach the year 2000.

"In conjunction with the Symposium the Board sent Centennial awards to companies in the Asia/Pacific region, in recognition of their important contributions to expanding the market potential for Canadian soybeans."

Presentations were made in three countries by Michael Loh on behalf of OSGMB. The companies recognized were: In Hong Kong: Dah Chong Hong Ltd., Vitasoy International Holdings Ltd., and Law Man Tung Trading Co. Ltd.

In Singapore: Singapore Sin Seng Lee Trading Co., Asia Corporation, and Yam Thye & Co.

In Malaysia: Yeo Hiap Seng, Chop Lee Kit Heng, Tan Ban Huat, Tung Lieng Trading Co., Thye Huat Chan, and Lun Heng. Address: Chatham, Ontario, Canada.

9997. Yasuda, Masaaki; Matsumoto, T.; Sakaguchi, M.; Kobamoto, N. 1993. Okinawa ni okeru tofuyo no seizo ni kansuru kenkyu. VIII. *Monascus* zoku kin o mochiita tofuyo no jukusei katei ni okeru kagaku seibun no henka [Studies on the manufacture of tofuyo in Okinawa. VIII. Changes in chemical components of tofuyo prepared by *Monascus* fungus during fermentation]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 40(5):331-38. [18 ref. Jap; eng]
• ***Summary:*** Tofuyo is an excellent type of fermented tofu made in Okinawa Prefecture, Japan. Crude protein and crude fat contents of tofuyo decreased during ripening, but is reducing sugars increased. The sodium chloride (NaCl) content of the product remained almost constant at about 3%. "Digestion of soybean protein was examined by slab polyacrylamide gel electrophoresis. Some polypeptide bands of soybean globulin, such as α'-, α-, beta-subunits in beta-conglycinin," an acidic subunit in glycinin in the water-insoluble fraction of tofuyo disappeared after 3-months ripening, but that of the basic subunit in glycinin remained. The main constituent of the body of tofuyo was found to be the basic subunit in glycinin and other polypeptides (whose weight in kilodaltons is given).

"The ratio of water soluble nitrogen to total nitrogen (called protein solubility ratio, or ripening ratio) reached" 36.3% after 3 months of ripening. "The ratio of trichloracetic acid soluble nitrogen to total nitrogen reached" 35.0% after 3 months of ripening.

A table shows: Changes in the chemical composition of raw tofu, dehydrated tofu, tofuyo. and *moromi* (mash) prepared by *Monascus* fungus during ripening periods of 0-5 months.

Figures (graphs) show: (1) Changes in ethyl alcohol concentration pH, activities of various enzymes (α-amylase, glucoamylase, proteinase) in the moromi mash during ripening periods of 0-5 months. (2) Changes in pure protein content of tofuyo during ripening periods of 0-5 months; it decreased. (3) (3) Changes in protein solubility ratio of tofuyo during ripening periods of 0-5 months. (6) Changes in the ratio of trichloracetic acid-soluble nitrogen to the total nitrogen during ripening periods of 0-5 months. These nitrogen contents are shown on an oven dried basis. Address: Dep. of Bioscience and Biotechnology, Univ. of the Ryukyus, 1 Senbaru, Nishihara-cho, Okinawa 903-01.

© Copyright Soyinfo Center 2014

cysteine-rich family. *J. of Molecular Biology* 231(3):877-87. June 5. [29 ref]
Address: 1-3. Institut Laue-Langevin, Avenue des Martyrs, F 38042, Grenoble, France; 4. Dep. of Biology, Faculty of Science, Niigata Univ., Niigata 950-21, Japan.

9999. Carper, Jean. 1993. Colon cancer frighten you? Avoid red meat. Miso power unmasked. *Advance* (*Staten Island, New York*). June 16.
• ***Summary:*** In a new study, researchers at the Columbia University College of Physicians and Surgeons found that women who ate the most saturated fat and red meat were more likely to have polyps–small precancerous growths that can lead to colon cancer years later. This research reinforces warnings from a recent Harvard study which showed that "women who ate a daily main dish of red meat–about five ounces of beef, pork or lamb–upped their risk of colon cancer two and a half times compared with women who ate meat less than once a month."

For more than a decade, Japanese studies have shown that consumption of miso helps prevent cancer. "Researchers from Japan's Okayama University Medical School now believe they have unlocked miso's health-promoting secret. Miso is an anti-oxidant. In experiments, miso neutralized free radicals, rampaging molecules in the body that attack cells and help create a wide array of diseases, including cancer. Miso also helped protect fats in the body from becoming rancid and able to foment disease activity, including artery clogging.

"Miso derives its antioxidant powers from chemicals in soybeans and from substances created by fermentation, researchers say."

10000. Vorih, Susan W. 1993. Re: History of Ralston Purina's and Protein Technologies International's work with industrial soy proteins. Letter to William Shurtleff at Soyfoods Center, June 17 and July 9–in reply to inquiry. 3 p. + 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Ralston Purina became involved with isolated soy proteins through the acquisition of four soybean processing plants from Procter & Gamble (Buckeye Division) in 1958. One P&G plant, located in Louisville, Kentucky, had an industrial soy protein isolate operation built [in about 1946-47] to produce product for their 'Spic and Span' house cleaner. This was not economical for P&G and conversion was made [starting in about 1953] to produce industrial isolated soy proteins for the paper coating industry. This conversion was taking place at the time of the Ralston Purina acquisition, which was finalized on December 10, 1958. At this time, Ralston Purina only had an interest in expanding its soybean solvent extraction processing capacity, but the idle isolate manufacturing facility just acquired became of interest.

"There was no link in this acquisition with Mr. E.F. 'Soybean' Johnson of Soy Products Corp. in Louisville. Johnson, a former Ralston Purina employee, joined Soy Products Corp. in mid-1947.

"Ralston Purina decided to modify the Louisville isolate process for paper coating products; the plant began production on June 13, 1959. A series of hydrolyzed and non-hydrolyzed products under the ProCote brand name was produced and sold successfully to the paper coating industry. Under Protein Technologies International management the facilities have been modified and expanded to become the world's leading producer of Industrial Polymer Isolated Soy Protein products today.

Ralston Purina began research on food-grade isolates starting in late 1959 under the direction of Mr. Bill Brew in St. Louis. Many consultants were paid for information. Pilot plant work was also performed in St. Louis prior to first contacts with Mr. Bob Boyer. Mr. Boyer was a spun protein specialist for products made from the Ralston-Purina developed liquid curd process. Other spray-dried products were developed from curd by the company.

Ralston Purina began more active involvement with food-grade isolated soy proteins in 1960 when the company started food-grade isolated soy protein research and pilot plant work at its headquarters in St. Louis, Missouri. A semi-works plant to produce edible soy proteins was erected in 1961 at Louisville, and both spray-dried and spun fiber proteins began to be produced and sold in October 1962. The spray-dried edible isolates, brand-named Edi-Pro A and Edi-Pro N, were sold to food processors. Mr. Bob Boyer [who began working as a full-time consultant on soy protein for Ralston Purina in early 1960 and joined the company as technical director of protein products sales, working under Donald B. Walker, vice president in charge of Ralston Purina's soybean division] was instrumental in directing soy protein spun fibers and sales.

Mr. Frank Calvert was hired in September 1963 to head up Ralston Purina's R&D work on food-grade isolated soy protein in St. Louis. Calvert received a BS degree in chemistry from the Edison Institute of Technology while working at the Ford Motor Co. in Dearborn, Michigan. In 1965 Calvert was named director of soybean research, and in 1967 director of research of the Protein Division. In 1969 Calvert was promoted to director of research, New Venture Management, and finally in 1971 vice president and research director, New Venture Management. During these years, Calvert developed new soy protein isolation processes, 70 percent soy protein concentrate products, and modified soy protein coating compositions for industrial use. Calvert is considered a visionary in soy protein research and the accomplishments of his career were honored when the Protein Technologies International plant at Memphis was dedicated to him in 1973 in recognition of his years of service and dedication to protein technology."

Ralston Purina first made and sold Supro 610 in Oct.

© Copyright Soyinfo Center 2014

1966. Spun soy protein fiber production was discontinued in 1967. The special equipment was dismantled and parts were sold off for scrap metal. Production of other food-grade soy proteins, such as extruded protein, was started commercially at St. Louis and Memphis in 1973. Wet textured edible soy proteins were produced commercially in Memphis and Osaka, Japan (through a joint venture) in 1975.

"In 1970 the 'Protein Project' became part of the New Ventures Group of Ralston Purina with the Protein Project headed by Paul H. Hatfield. Included in this early business development team were Dr. D.H. Waggle, R&D; Mr. Henry T. James, Director of Engineering, now retired; and B.P. Schwartz, Manufacturing. This team, working as a multi-functional and multi-disciplined team, emphasized process reliability, superior quality and performance products, combined with a worldwide perspective of market development.

Ralston Purina "expanded food grade isolate capacity with new facilities at Memphis, Tennessee, beginning production on April 10, 1973; Pryor, Oklahoma, beginning production on December 1, 1976; and Ieper, Belgium, beginning production on August 21, 1979. This expansion easily vaulted the company into the position of world leader in food-grade isolated soy proteins by 1976."

Note 1. Much of the above information was provided to Susan and her assistant, Jane Phelps, by Henry James, a former employee of Ralston Purina working in the area of soy proteins.

Note 2. On 1 July 1987 Ralston Purina Co. established Protein Technologies International as a wholly-owned subsidiary, with 92 researchers. The first official use of the term "Protein Technologies International" began in March 1987.

Note 3. Concerning the Buckeye Cotton Oil Co. In Nov. 1943 it had soybean processing mills in Louisville, Kentucky (large), and Memphis, Tennessee (medium-sized). By 1948 the company's plant in Louisville was making soy flour and soy lecithin. By 1949 (and probably by 1946) the company had become a subsidiary of Procter & Gamble and its headquarters were in Ivorydale, Ohio; O.H. Alderks was involved with soybean processing in Buckeye's technical division. Address: Communications Manager, Protein Technologies International, Checkerboard Square, St. Louis, Missouri 63164. Phone: (314) 982-1983.

10001. Weiner, Michael. 1993. New developments with Amano and Yamashita (Interview). *SoyaScan Notes.* June 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Michael works as a consultant for Peter Joe of Sunrise Market Ltd. and with Amano Foods. He used to consult with Mandarin Enterprises in British Columbia. Now his main work is as a broker, representing various U.S. companies such as Vitasoy, Knudsen, Santa Cruz, etc. Amano still makes all of Westbrae's organic miso. Amano is trying to construct a 60,000 square foot plant. They had a joint venture with Yamashita but it fell apart. Now Yamashita is constructing their own 60,000 square foot soy sauce plant in Oregon. The ground breaking will take place in a couple of weeks. Michael does not feel that this will be much of a threat to Amano, which plans to sell a lot of Amano products in supermarkets. The market is big and growing rapidly. Soyfoods now are given large amounts of shelf space (8-16 linear feet) in the produce section of all supermarkets in western Canada (British Columbia, Alberta, and Manitoba). A major reason for this is that Mandarin and Sunrise have an excellent relationship with the people in charge of the produce section in western Canadian supermarkets. Initially Michael helped to establish some of these relationships; these companies got a few facings for their tofu. Then Mandarin added their tofu burgers. Then Sunrise added Yves Wieners and soy cheese. The products sold, which is proof that exposure will work. Michael was involved in trying to make the same thing happen in Ontario with the Loblaws chain, and in Quebec, but they were never allowed to give the program a try–not even in 1-2 stores.

Safeway supermarkets are so sold on soyfoods that they have developed special open-front, vertical, refrigerated "Tofu Products" cases that are placed adjacent to the produce case, but have a lower temperature. They are quite large and contain everything from soy drinks to tofu, soy cheese to meatless hot dogs. Soyfoods are very widely available on Vancouver Island.

Sunrise and Michael jointly import Mori-Nu tofu into Canada from Japan. Also Sunrise distributes some juice products for which Michael is the broker. Mori-Nu does not sell well in supermarkets because it's retail price is too high. Address: President, New Age Marketing, P.O. Box 39590, White Rock, BC, V4A 9P3, Canada. Phone: 604-538-0127.

10002. *Toyo Shinpo* (*Soyfoods News*). 1993. Tôfu gyôsha-su ni-man kendai o iji [The number of tofu shops in Japan is still above 20,000]. June 21. p. 1. [Jap]
• ***Summary:*** As of Dec. 1992 (Heisei 4) there were 20,140 registered tofu shops in Japan, 725 less than 1 year earlier. The number in each prefecture is also given.

10003. Kushi, Michio; Kushi, Aveline; Jack, Alex. 1993. Macrobiotic diet: Revised and enlarged edition. Tokyo and New York: Japan Publications. 400 p. June, Illust. Index. 21 cm. [67 ref]
• ***Summary:*** Edited by Alex Jack, this is the revision of a book with the same title first printed in 1985. The table of contents of this edition is identical to that of the 1985 edition. However, this edition has been "expanded to include information on natural foods that have recently become available; the latest research on cancer and diet; AIDS and diet; the U.S. government's landmark report on Diet and Health, and the China Study; as well as a wealth

© Copyright Soyinfo Center 2014

of information on the impact of our dietary choices on the earth's environment" (from the rear cover).

Since the physical dimensions (21.2 cm tall) are smaller, the text is on different pages. For example, Japanese black beans (see below).

The chapter on "Beans and bean products" has the following contents: Daily use. History. Quality. Varieties: Azuki beans, black-eyed peas (sometimes known as yard-long beans), black turtle beans, broad beans, chick-peas, great northern beans, kidney beans, lima beans, lentils, mung beans, navy beans, peas, pinto beans, soybeans (p. 195-99) (introduction, miso, natto, okara, soy flour, soy grits, soy milk, soy oil, shoyu, tempeh, tofu {incl. nigari, fresh tofu, soft tofu, firm tofu, deep-fried tofu, pickled tofu, fermented tofu, frozen tofu, dried tofu}), viilia, soy yogurt, yuba.

For information on cooking soy, see p. 204-07. Note: Natto is not usually made with koji (p. 207). For "Health benefits" and for "Soy foods and cancer research" (p. 208-09).

Black soybeans (also known as "Japanese black beans") are mentioned as follows: "The smaller varieties of azuki beans, lentils, chick-peas, and black soybeans contain less fat and oil and are preferred for daily use" (p. 60). "Bean rice: Besides azuki beans, other beans and legumes such as lentils, chick peas, yellow or black soybeans, and [common] black beans can be cooked together with brown rice in a proportion of 10 to 15 percent beans and 85 to 90 percent rice" (p. 121). The chapter titled "Beans and bean products" (p. 189) begins: "In the standard macrobiotic diet, whole dried beans and bean products are usually eaten daily or several times per week and comprise about 5 to 10 percent of the volume of total food consumed. Beans that are more northerly in origin, smaller in size, and contain less fat and oil than other varieties, such as azuki beans, lentils, chick peas, and black soybeans are eaten most frequently." In the same chapter, the section on "Cooking methods" (p. 200). "In general, chick peas, black soybeans, and other hard beans should be soaked 6 to 8 hours or, preferably overnight, if boiled, and a minimum of 2 hours if pressure cooked." "In order to allow the inside and outside of the beans to cook evenly, beans are usually seasoned toward the end of cooking... In the Far East, a small strip of kombu is traditionally added to the bottom of a pot of beans. The mineral-rich sea vegetable adds flavor to the beans... and improves their digestibility." "Shocking is a traditional method of preparing beans in the Far East." It is described in detail (p. 201). In the section titled "Soybeans" (p. 204) black soybeans are also discussed.

"Natto is a fermented soybean product that resembles baked beans connected by long sticky strands. Its strong odor takes some adjusting to but once appreciated natto is enjoyed regularly as a small side dish or condiment" (p. 196). Address: 1-2. Brookline and Becket, Massachusetts.

10004. Messina, Mark. 1993. Are you ready for the age of the soybean? *Mori-Nu Healthy Life* (*Los Angeles*) 5(2):1. 2nd quarter.

• ***Summary:*** "The food that has been at the center of the Chinese diet for the past 20 centuries is taking the United States by storm. Over the past decade more that 2,000 new soyfoods have entered the market. The soyfoods industry is big and growing. Chances are, many of you are already familiar with some of these products, which range from tofu to soymilk to pizza topped with mozzarella-like soy cheese.

"But soyfoods aren't just hot–they're healthy! Consider the following:" Discusses recent scientific studies showing the health benefits of soy. And getting all of these health benefits is easy.

Note: This 6-page issue (each page 8½ by 11 inches) also contains: (1) Editor's column, by Susan Buchér. (2) Soy research updates. (3) "The exercise diet," by Holly Rudin-Braschi, M.A. Get fresh: Examples of healthy fresh vegetables. (4-5) Recipes and coupons. (6) Reader's forum (letters from readers). Order form for Mori-Nu Tofu or books or videos. Application for membership in the "Health for Life" club, which gets you: 4 issues of Healthy Life. Mori-Nu recipes. 12 Mori-Nu Tofu 15¢-off coupons. Address: PhD.

10005. Morinaga Nutritional Foods, Inc. 1993. The star. The supporting cast (Ad). *Health Foods Business* (*Elizabeth, New Jersey*). May. p. 41.

• ***Summary:*** The left half of this 8½ by 11 inch color ad shows the three different types of Mori-Nu tofu stacked one atop the other. The right half shows the "supporting cast of product brochures, recipe tear-offs, videos, a display merchandiser [that displays 24 packs of tofu] and the new, highly acclaimed, *Tofu and You–A Personal Weight-loss Program and Healthy Eating Plan...* To join the Mori-Nu Fan Club call 1-800-NOW TOFU."

This ad also appeared in *Natural Foods Merchandiser* (June 1993, p. 58). Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 310-787-0200.

10006. Nagayama, Hisao; Tokue, Akihiko. 1993. The naked kitchen: Shôyu. *Look Japan* (*Tokyo*) 39(447):24-25. June.

• ***Summary:*** Color photographs of 4 types of shoyu in shallow plates, each with a pattern on the bottom, show that shiro shoyu is the lightest in color, followed by usukuchi shoyu, koikuchi shoyu, and finally tamari (the darkest). Usukuchi, popular in the Kyoto area, is salty as well as light. "Among the more celebrated local varieties is Nagoya's shiroshôyu, a nearly transparent liquid whose slightly sweet taste sets it apart." No sashimi is complete without shoyu.

10007. Ogawa, Tadashi; Tsuji, H.; Bando, N.; Kitamura, K.; Zhu, Yue-Lin; Hirano, H.; Nishikawa, K. 1993. Identification of the soybean allergenic protein, *Gly m* Bd 30K, with the soybean seed 34-kDa oil-body-associated protein.

© Copyright Soyinfo Center 2014

Bioscience, Biotechnology, and Biochemistry 57(6):1030-33. June. [11 ref]
• ***Summary:*** This soybean allergenic protein, which is most strongly and frequently recognized by the IgE antibodies in sera of soybean-sensitive patients with atopic dermatitis, has been characterized. The allergen was isolated from the crude 7S-globulin fraction by gel-filtration chromatography. It has a molecular weight of more than 300,000. Address: 1. Dep. of Nutrition, School of Medicine, The Univ. of Tokushima, Kuramoto-cho 3, Tokushima 770, Japan.

10008. Shurtleff, William; Aoyagi, Akiko. comps. 1993. Tempeh and tempeh products–Bibliography and sourcebook, 1815 to 1993: Detailed information on 616 published documents (extensively annotated bibliography), 423 commercial tempeh products, 216 original interviews (many full text) and overviews, 247 unpublished archival documents. Lafayette, California: Soyfoods Center. 449 p. Subject/geographical index. Author/company index. Language index. Printed June 4. 28 cm. [2078 ref]
• ***Summary:*** This is the most comprehensive book ever published about tempeh and tempeh products. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of this subject. Its scope includes all known information about tempeh, worldwide, from 1815 to the present, plus detailed information on each of the following four closely related subjects–the first three of which are popular Indonesian foods:

1. Onchom (125 records; also spelled ontjom or oncom; peanut presscake or okara fermented with *Neurospora*). *Neurospora* is the single most important mold used in genetic and biochemical research; 2. Tempeh bongkrek (49 records; made from grated coconut or coconut presscake). 3. Non-soy relatives of tempeh (54 records, such as winged bean tempeh). 4. Early studies on *Rhizopus* molds in which tempeh is not mentioned (43 records).

This book is also the single most current and useful source of information on each of these five subject, since 79% of all records contain a summary/abstract averaging 125 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 35 different document types, both published and unpublished; every known publication on the subject in every language–including 175 in Japanese, 140 in Indonesian, 96 in German, 68 in Dutch, etc.; 216 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of tempeh and related products from their earliest beginnings to the present.

The bibliographic records in this book include 616 published documents and 247 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

It also includes details on 423 commercial tempeh products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

10009. *Toyo Shinpo* (*Soyfoods News*). 1993. Kaigai foto: Chûgoku, Unnanshô ni atta kotsubu nattô [Overseas photo: Natto made from small-seeded soybeans found in Yunnan province, China]. July 11. p. 2. [Jap]
• ***Summary:*** A photo taken in China, at about the time this article was written, shows the soybeans on a circular tray. The article states: In Yunnan province of China, their culture and foods are very much like Japanese–or so we hear. The gate of Tokukôshû, [?] shi, at their open market, their vendors selling nattô among rakkyô pickles and mountain vegetable (*yamana sansai*) pickles. Their natto soybeans are smaller than those of Japan and their natto does not have as much stickiness / stringiness as Japanese natto. But their natto does have that special natto taste spreading in your mouth. They said "Everyone loves natto." I am not surprised since they are part of the same Ye Shulin culture (*Shôyôjurin bunka*) their food culture might also be similar. The price of their natto was 1 gen (about 23 yen) for 1 cup.

Note 1. Yunnan is a large province located in the far southwest of China; the capital is Kunming. The province borders on Burma, Laos, and Vietnam. Ethnic minorities in Yunnan account for about 34% of its total population. Major ethnic groups include Yi, Bai, Hani, Zhuang, Dai and Miao.

Note 2. Since the 1970s, Japanese anthropologists have proposed the theory that Yunnan province, in southern China, is the source of Japan's culture. One early wave of people migrated from there to Japan. In addition to rice cultivation, there are many cultural similarities.

10010. Rich, Robert. 1993. More on Rich Products Corporation's work with soy-based dairy analogs

© Copyright Soyinfo Center 2014

(Interview). *SoyaScan Notes.* July 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Rich Products does not have any documents in its archives on the various small companies (such as Delsoy Products) that were the first to make soy-based whip toppings starting in about 1944-45. However Bob remembers them well and what they did. Delsoy started with a filled cream named Devonshire Topping which they sold mostly in Detroit, Michigan. Then they came out with a soybean cream that was not frozen. The majority of their early sales were in the filled cream. Delsoy was never sold in Buffalo, New York, and thus was not a competitor to Rich's Whip Topping. Even after Whip Topping was frozen, Delsoy was never much of a competitor. Bob is not sure when Delsoy was launched, but he has the feeling that it was on the market only several months before his Whip Topping.

Concerning the article by F. Olmsted in the 16 April 1945 issue of the *Detroit News,* Bob (who worked for the War Food Administration or WFA) never heard of the WFA issuing an order placing a 19% limit on all fats used in any dairy product. This information was probably supplied to Olmsted by Herbert Marshall Taylor, who Bob remembers as "a wild man." Bob conjectures that maybe the reason Taylor switched to a soy-based topping was to allow him to ship the product across state lines. In those times a company could not sell a filled cream product (which was what he had) across state lines, and there were only 7 states in which filled milk products could be made and sold within the state. In fact the Milnot Company had a plant near Litchfield, Illinois, situated exactly on the state line between Illinois and Indiana. They had a filled milk processing room on each side of the line, i.e. in each state. They never made a soy-based product. At one time, Milnot started shipping its filled milk across a state line either to test the law or because they thought they could get away with it. The government seized their product and took the president to court. He was judged guilty and had to spend the weekend in jail until he could get a bail bond. He was sentenced to a year in jail but he never served time because president Franklin Roosevelt gave him a presidential pardon.

Rich Products was involved in about 40 lawsuits with various states involving its non-dairy products–and the company won them all. But if the lawsuits had taken place a few years earlier, Bob thinks Rich Products could have been beaten. The climate was changing, led by more favorable attitudes toward legalization of margarine–which replaced a dairy product. The first lawsuit against Rich Products took place in California in 1949. The charge was that Whip Topping was an imitation dairy product, and hence illegal. Arguing that the product was a replacement, not an imitation, the company won the case.

Most of the subsequent cases were against Coffee Rich (a non-dairy coffee whitener) starting in 1961. Whip Topping was not much of a threat to the dairy industry. Most milk routes used to take out 6 half pints of heavy cream (38-40% fat; housewives would use it to make whipped cream) in the morning and maybe bring back 8 in the afternoon–due to souring, etc. So heavy cream was not of much interest to milk dealers. But Coffee Rich was a real threat because much more light cream (19-20% fat; for use in coffee) and medium cream (28-30% fat; for use on cereal) was than heavy cream.

Last Wednesday (July 7) Bob celebrated his 80th birthday. He is still chairman of the board of Rich Products Corp., his son Robert Jr. is president, and Herb Kusche is executive vice president. Last year his company did $940 million is sales. Next year, which will be the company's 50th anniversary, they expect to go over $1,000 million. The company has a research department in Buffalo with 75 researchers, plus 6,000 employees and 26 plants worldwide. They have 7 people in their London office, 5 in the Hong Kong office, 6 in Mexico City, 2 in Singapore, 2 in Brisbane (Australia), and 2 in Tokyo–all their own people.

The Freeze Flo process has become very successful, especially in frozen fruits and in their great-tasting product named Bettercreme–which was launched in April 1977 and which keeps fresh without bacterial growth or spoilage at room temperature without preservatives. It is sold as such to foodservice organizations and bakeries, which keep it frozen, then whip it for use on cakes and pies; the latter will go stale before the Bettercreme! It is also used as the filling in Rich's Frozen Chocolate Eclair. Though the company spent a lot of money hoping to find medical applications for the Freeze Flo Process, nothing has yet been commercialized.

Rich Products does not have a good archives with documents from the early years of the company. "In those days we didn't save things, although we have nice displays in our memorabilia room here in our 250,000 square foot building which is called Rich Renaissance Niagara. Our offices and research center are in that building–but it houses no manufacturing operations."

Bob has heard that Edsel Ford died of either ungulate fever or cancer of the intestine. If it were ungulate fever, that could be one more reason why Henry Ford was so interested in promoting the use of soymilk–as at the Henry Ford Hospital. Bob thinks they also served a soy coffee cream (soymilk thickened with propylene glycol) at the hospital.

Note from Ford Bryan, researcher at the Ford Archives, in response to an inquiry from William Shurtleff. 1993. Aug. 9. "I'm fairly certain Henry Ford disliked cows as a boy–long before Edsel's illness. We do not seem to have a copy of Edsel Ford's death certificate. As far as we know, the cause of Edsel's death was cancer of the stomach, perhaps complicated by ungulate fever."

Talk with Herb Kusche, executive vice-president of Rich Products. 1993. July 14. "Bob Rich has a memory like an elephant; its superb." Address: Chairman of the Board, Rich Products Corp., P.O. Box 245 (1150 Niagara St.), Buffalo, New York. Phone: 716-878-8000.

10011. Katoh, Kiyoaki. 1993. Current status of tempeh in Japan (Interview). *SoyaScan Notes.* July 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Third Asian Symposium on Non-Salted Soybean Fermentation and the International Soybean Food Fair will be held in Akita, Japan, on 4-6 June 1994. There is a legend in Japan that natto originated in Akita, and there is also a large natto manufacturer there. Many countries in Southeast Asia will participate. He is still very involved in tempeh issues in Japan, and maintains a close contact with Indonesian tempeh researchers. The Tempeh Study Group (*Kenkyu-kai*) has its regular meeting twice a year and 60-70 people (including himself) typically attend. A very good and popular restaurant in Shibuya, Tokyo, named Jembatan Mérah (Red Bridge), features many delicious tempeh dishes. They feature ethnic foods, including Thai and Vietnamese cuisines. The chef of the restaurant used to work with Torigoe Seifun. Their tempeh is made by the village cooperative shop in Hyogo prefecture (initiated as part of a local community activation program). This tempeh shop ships their tempeh all over Japan, including to the Indonesian embassy in Tokyo, several Indonesian restaurants in Tokyo, and to individuals who order it. The only other tempeh shop, also part of a village activation program, is led by Prof. Kazuko Noguchi (a woman) of Saga. When Mr. Kanasugi died, the natto people discontinued their interest in tempeh. All the large private companies (Marusan, Torigoe Seifun) also stopped. Address: Tajimaya rice company, International Affairs, Japan.

10012. Katoh, Kiyoaki. 1993. New developments with soyfoods in Africa (Interview). *SoyaScan Notes.* July 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mrs. Yasuko Torii is very involved in efforts to introduce soyfoods to southern Africa and South Africa, especially Capetown. Katoh joined FAO (the Food and Agriculture Organization of the United Nations) in 1987 and was a biotechnology officer there for 2 years and very much committed in Africa. He was active in work with soybeans in Nigeria, Cameroon and other countries. He has written about that work. The crucial question is how to interest African people in using soyfoods. There is now increasing South-South cooperation. For example, Indonesian people are very interested in transferring tempeh technology to Africa. The German government is sponsoring such a program on tempeh and Dr. Darwin Karyadi is leading the Indonesian work; the minister of Science and Technology, Dr. Habibi, is very keen on this. The best man to contact concerning soya in Africa is Dr. Shiv R. Singh (pronounced Sin), who used to work with IITA at Ibadan, Nigeria, and is now Director of the Western Africa Department of the World Bank in Washington, DC. He is the key man with soya in Africa. Address: Tajimaya rice company, International Affairs, Japan.

10013. *Toyo Shinpo* (*Soyfoods News*). 1993. Nattô chûshin ni shinpojiumu: 94 nen 6 gatsu Akita de kokusai Nattô kaigi hiraku [Symposium centered on natto: International Natto Symposium will be held in June 1994 in Akita]. July 21. p. 27. [Jap]

10014. Demos, Steve. 1993. New developments with soyfoods in America (Interview). *SoyaScan Notes.* July 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Vitasoy purchased Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in May or June 1993 for an estimated $4-$5 million. Azumaya did not sell their building or the land on which their plant is situated. So now Vitasoy owns two large tofu manufacturers on both coasts of the USA: Nasoya in Massachusetts, and Azumaya in California.

Mr. Yamauchi sold the rest of his ownership in House Foods & Yamauchi, Inc. to House Foods of Japan. [Note: Another industry observer states that the sale took place in about April 1993 for about $2 million].

Bill Bolduc is now running a soymilk plant in the Midwest; he now makes Westbrae's soymilk. Steve sees the future of soymilk as being packaged in the new extended shelf life (ESL) gable-top carton and sold as a commodity for a lower price like cow's milk rather than as a specialty flavored beverage.

Anders Lindner told Steve in March that DE-VAU-GE wanted to sell their soymilk plant. He offered to sell the used plant to Steve for a good price in German marks. Steve never responded.

White Wave now makes about 100,000 lb/week of tofu (of all kinds). The company's reduced fat tofu is selling very well. Quong Hop is stating on two red-on-white stickers on their package that (1) their tofu is "The original reduced fat tofu;" and (2) "The original reduced fat–High protein tofu: Serving size 4 oz., Fat per serving 3 gm. Protein per serving 14 gm." Lab tests run by more than one company indicate that Quong Hop's tofu actually contains far more fat.

Steve bought Veggie Life from Leonardo Laudisio much more for the name than for the product (meatless burger) or its formula.

Update: 1993. Nov. 24. Talk with Leonardo Laudisio. On about November 8-10 White Wave secured preferred vendor status from Whole Foods Markets. They now are installing their cold-storage "set" in the individual stores; one is now in the Berkeley store. At the top in large letters is written "White Wave Vegetarian Cuisine" with the oval White Wave logo is bas relief. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301. Phone: 303-443-3470.

10015. Executive Committee Secretariat. 1993. The Roots

of Biotechnology in Monsoon Asia: The Third Asian Symposium on Non-Salted Soybean Fermentation and International Soybean Food Fair. Akita Cultural Center, Akita City, Japan: 4-6 June 1994 (Leaflet). Akita, Japan. 2 p. July.
• ***Summary:*** The executive committee for this event is: Chair: Prof. Tadao Watanabe. Vice-Chair: Prof. Fumio Yamauchi. Indonesia Advisor: Dr. Darwin Karyadi. United Nations University (UNU) Food and Nutrition Programme Advisor: Dr. Abraham Besrat.

The symposium hopes to focus on South-South cooperation for technical transfer of soybean technologies (koji, tempe, natto) to Africa in order to alleviate an impending protein crisis beyond the year 2000.

Program outline: Part I: International Soybean Food Fair–Industrial/commercial exhibition and cooking demonstration of ethnic cuisine using soybean products. Part II: Public Symposium–World soybean overview with perspectives for international technical cooperation in Africa. Part III: The Third Asian Symposium on Non-Salted Soybean Fermentation. Session 1. Koji for fermented soybean (Kikkoman, Nagano Miso Institute, China, Korea, Akita). Session 2. Natto in Asia–Microbiology, enzymology, health-medical studies. Kinema of Nepal, Tuanao [Thua-nao] of northern Nepal, Bhutan. Session 3. Tempe (Overview by Dr. Darwin Karyadi, contributions from Indonesia, Germany, USA, Japan and others–on microbiology, biochemistry, nutrition, physiology, medical studies, cooking, and industrial development). Part IV: The Role of Soybeans in Africa–The Perspective beyond 2000 (organized in cooperation with UNU Food and Nutrition Program). Sessions: Agriculture of Sub-Saharan Africa and soybean development (World Bank, IITA, JICA). Tofu technology adapted to West Africa (Dr. Nakayama, IITA). Indigenous fermented legumes in West Africa. Introduction of soy into Sub-Saharan African diet. Achievements of UNU Tempe Training Program (Indonesia/UNU; with Poster presentation of UNU funded research). Proposal on South-South cooperation.

Technical tours will be organized from three participating countries: Indonesia, USA, Germany. Address: c/o Akita International Assoc., Aidex Building 8th floor, 2-1-60 Sanno, Akita City, Japan 010. Phone: 0188-64-1181.

10016. Matsuo, Masako; Hitomi, Eri. 1993. Suppression of plasma cholesterol elevation by okara tempe in rats. *Bioscience, Biotechnology, and Biochemistry* 57(7):1188-90. July. [18 ref]
• ***Summary:*** Okara tempeh is rich in soy fiber and also contains some soy protein. Isolated soy protein and casein contain no fiber. In comparison to casein, cholesterol levels in rats consuming isolated soy protein decreased by approximately 20%, whereas those consuming fermented and non-fermented okara decreased by about 30%. Address: Gifu Woman's Univ., 80 Taromaru, Gifu 501-25, Japan.

10017. Lo, Yvonne. 1993. New developments with Vitasoy (Interview). *SoyaScan Notes***.** Aug. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** William Shurtleff begins by congratulating Yvonne for the purchase of Azumaya, and for thereby becoming the largest tofu manufacturer in the Western world. Asked if this indicates that K.S. Lo and Vitasoy plan to move from Hong Kong to the USA in 1997 when control of Hong Kong is returned to China, Yvonne says "No," noting that Vitasoy International Holdings Ltd. plans an active program of investment in the food industry in China.

The purchase of Azumaya was finalized on 27 May 1993. Vitasoy only purchased the company; they did not purchase the building or land since Azumaya never owned these. The actual negotiations took a long time; they were conducted by Yvonne and Vitasoy (USA) Inc., which also officially made the acquisition. But this is not a key point since Vitasoy (USA) Inc. is a subsidiary of Vitasoy International Holdings Ltd. (headquartered in Hong Kong). Michael Ho will soon start to run the financial end of Azumaya; Bill Mizono plans to retire at the end of this year. Bob Bergwall, tofu production manager at Nasoya Foods in Massachusetts, was planning to move to California and take over as production manager at Azumaya but, unexpectedly and very tragically, his wife died of an aneurysm. They have a very young baby, which Bob now has to take care of. No articles about the acquisition of Azumaya have yet been published; Vitasoy has been very busy and they are not especially interested in publicizing the acquisition.

Concerning the larger picture of the soyfoods industry, profit margins for manufacturers are shrinking, and a new and more difficult relationship is developing between manufacturers and distributors. Address: President, Vitasoy (USA) Ltd., 99 Park Lane, Brisbane, California 94005. Phone: 415-467-8888.

10018. Mizono, Bill. 1993. More on the history of Azumaya (Interview). *SoyaScan Notes***.** Aug. 5. Conducted by William Shurtleff of Soyfoods Center.
Address: Azumaya Inc., 1575 Burke Ave., San Francisco, California 94124. Phone: 415-285-8500.

10019. Centa, Roland A. di. 1993. Re: Introducing tempeh and tofu to Italy. Letter to William Shurtleff at Soyfoods Center, Aug. 9–in reply to inquiry. 4 p. Typed, with signature. Followed by a letter of Sept. 10 answering questions.
• ***Summary:*** Roland was one of the first people to introduce soyfoods to Italy. He was very interested in macrobiotics and was a close friend of Michio Kushi. "My interest in food was to heal people with food and I had a lot of success using a holistic approach to help people with major diseases. For all these cures I used a lot of miso, tempeh, and tofu. Good miso

© Copyright Soyinfo Center 2014

was available. However tempeh and tofu had to be locally produced. I cured people from 1980 until about 1985.

"As I am a businessman I was always business minded in order to produce, make a profit, and be able to realize my ideas–which always cost. I am educated in international law and advise corporations who want to expand abroad.

"Tempeh: There was only tempeh available for Paris, made by a lady there named Anita Dupuy, who delivered and sold it to Le Bol en Bois (a macrobiotic restaurant in Paris) and to some consulates and embassies (such as the Philippines). As I was busy elsewhere I sent Giovanna Mazzieri (of Milan, Italy) to Paris [for 1 week in Feb. 1983] to study the process. She was a very busy lady and a fan of macrobiotics after I healed her husband of a very difficult disease. She was very smart and she produced tempeh in Milan in about 1980 [actually mid-1983]. It was perfect and of very good quality. It was sold in a few health food stores. (Letter from Roland of Sept. 10 says Giovanna's tempeh was never sold commercially in stores; she produced tempeh only non-commercially from Feb. 1983 until today. Roland taught her to make tofu in June 1982; she started to make and sell it shortly thereafter).

"Actually it never took off commercially and eventually was used only for selected people, me and my patients. At that time I was very strict in eating macrobiotic. I was very sensitive to the quality of tempeh: I didn't like the acid taste. On the island of Bali I once ate some tempeh which was very acid. Therefore I used to deep freeze it in order to have it ready when we wanted tempeh with perfectly good taste. Today it is no longer produced, or only in small quantities, for the use of the family of Giovanna and some friends in Italy. As I am no longer living in Italy and I stopped curing people, unfortunately I don't use tempeh any more myself. I was interested to find out whether it worked in curing people. It did! However in order to make a profession and profit-making enterprise, I preferred to do other jobs.

"Tofu: Tofu was produced by myself. I am sure I was the only one who produced it on the basis of your teaching the first time in Italy in 1978. After seeing an ad in the *East West Journal,* I ordered your *Book of Tofu* by mail.

"Tofu already existed in Italy in Chinese restaurants in all the major cities. They called it Tau-Fu. After studying your book, I went to many kitchens in order to observe how it was produced, and with the cooks I ate the okara which was never offered to the clients of the restaurants but was seasoned very hot for themselves. The main restaurant I studied at was "La Muraglia," which means "The Wall" and which still exists.

"I then bought the Tofu Kit [made by Larry Needleman of The Learning Tree] which was advertised in the *East West Journal.* With this kit I started to make my first tofu. It was at once of very good quality.

"I started to make the equipment following the instructions in your book and twice a week produced 10 kg of tofu, which was used by my family, and sold in health food stores and later to my patients. I sold the tofu also in bakery shops where I offered the clients free samples to taste before they eventually bought it. I had a few sales. I produced the tofu in the kitchen of my apartment on Via Maffei in Milan. I got up very early and at 8 A.M. the kitchen was clean–you couldn't see anything left of the production. My wife [who was Vietnamese] didn't want to have a mess in the kitchen when she got up.

"Before I going to work as a consultant in the morning, I delivered the tofu to various shops. I didn't sell as a company because the quantity was too small to justify a commercial set-up yet. After about a year, when the whole business was working well, I transferred everything to a friend of mine who was looking for a job. He did it also in his apartment, but had problems with the neighbors who saw the kettles steaming on his balcony and they wondered what he did in his place. As nobody knew what tofu was, he said he was making some kind of cheese. The neighbors thought he might even have cows in his flat, and they managed to kick him out of his rented apartment after he had been making tofu there for about one year.

"When we heard that a company from Rimini [located 200 miles southeast of Milan and run by Gilberto Bianchini] had also started to produce tofu, we stopped production I didn't get the feedback in profit from this business; I preferred to use my time in other operations and buy the tofu made by Gilberto Bianchini at health food stores in Milan. I am sure I would have had success in Italy if I had continued. But I didn't have the support of my family, even though my wife was Vietnamese, and therefore I oriented myself to other activities. Someone who makes 10 kg of tofu in his kitchen before going to work must be a bit crazy–right?

"Nowadays in France I eat tofu about 2-3 times a week, as does my companion, Barbara, and our 4-year-old Carolina.

"Tofu-Kit: In about 1979 I produced about 100 tofu kits, which I sold for 30,000 lires to friends and other people who were interested in making their own tofu. As it was actually a copy of the American tofu-kit which I bought in the U.S., I wanted to see whether there was a real interest in this product before marketing it in Italy. Since it didn't sell very well, I didn't go ahead with it. Eventually I planned to buy the copyright from the tofu-kit people in the U.S. In 1979 I also published booklets in Italian and French titled "Tau-Fu Kit" and Tofu Kit" respectively. One was sold with each tofu kit; they were not sold separately.

"You have been for me a kind of guru, without knowing each other, because I have a lot of admiration for your approach. You are probably successful because you did only this: Writing about things related to soya." Address: 3, Boulevard d'Aguillon, 06600 Antibes, France. Phone: (33) 07-80-70.

10020. Gain, Jeff. 1993. The origins and history of the New Uses Movement. Part III (Interview). *SoyaScan Notes.* Aug. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Question: The Reagan and Bush administrations both wanted to make agriculture more subject to market forces and less dependent on government subsidies. How important was that background in creating a climate where the ideas advocated by the New Uses Council were given a fair hearing? Answer: It was quite important. There was a mind-set that said "Let's put agriculture back to work," and the new uses really opened up new market opportunities and relieved pressure from imports.

Who coined the term "New Uses Movement"? "I believe it was the group of us who developed the New Uses Council–Sam Brownback, Paul O'Connell, Allen Tracy, and myself. We talked a lot about this terminology." Jeff would guess the term "New Uses Movement" was first used in about 1987.

David E. Wright (a history professor at Michigan State University, Lansing) is writing a book about the chemurgy movement and he is making every effort to find documents about the movement. "He and I have talked about these matters at length. He's heard me speak and I've had David speak at 2-3 of our meetings."

Where did the term "value-added" come from and when did it originate? [Note: According to *Webster's Dictionary,* the term "value-added tax" was first used in 1967]. "This term goes back a number of years before 1984, though it first started to be used widely in the mid-1980s. I was involved in a lot of discussions about value-added products in the mid-1970s in Illinois and I used the term in speeches and writings from that period. In the Illinois Department of Agriculture, people like Gordon Ropp who was secretary and a state legislator and a farmer near Bloomington, Illinois, used the term at that time. Much of the early discussion came from the meat industry in the 1970s–talking about processed pork and beef–when the Japanese shut out red meat imports and wanted to produce their own. It was one of the reasons for the U.S. Meat Export Federation in the early 1980s. Then there was the big concern over the balance of trade that was a major issue in 1983-85. Talk with Jimmy Minyard about this; he's a walking encyclopedia. He was the Deputy Administrator of the USDA Foreign Agricultural Service (FAS) for about 25 years in the 1960s and 1970s. He helped design the cooperator programs, where the American Soybean Association (ASA) and the Feed Grains Council, the mink breeders, the Diamond Walnut people, and others (67 cooperator groups) have overseas offices to promote agricultural commodities and products. Helen Miller (who would know how to contact Jimmy Minyard) is executive director of the U.S. Cooperator Council; they were in the same offices as ASA until the latter closed their offices recently. To reach her, call the U.S. Feed Grains Council in Washington, DC. Currently he is retired and is now living in the Washington, DC, area."

Jeff and Hal Smedley helped organize the U.S. Cooperator Council in about 1978-79, wrote the contract with FAS, and established an office when he was at the ASA. Helen Miller was the first and only employee. Since Jeff had an office and staff in Washington, DC, he volunteered to provide office space for Helen, whom the Council hired. Helen was partially funded by the FAS because Jimmy Minyard wanted one person who was in charge of working with all of the cooperator groups.

Question: How much of the interest in New Uses was influenced by the fact that, in the case of soybeans, countries such as Brazil and Argentina, were underselling U.S. soybeans and taking away American overseas markets for soybeans and soy products? "This is an interesting question. One of the reasons I was so interested in making this idea of new uses happen this time was just that situation, where I saw our own government undercut our own industry through four soybean and corn embargoes from 1973 to 1980 [they started in June 1973, Oct. 1974, Aug. 1975, and Jan. 1980; the reason for the first 3 was to control domestic prices, whereas the fourth was directed against the USSR for its invasion of Afghanistan] I watched the Germans and the Japanese invest heavily in South America and other areas to strengthen infrastructure and set up our competitors and make them efficient producers. The U.S. was no longer considered a reliable supplier. Long before I went to work for ASA on 1 Aug. 1977, I was concerned that the international markets for all of our agricultural commodities were too unstable because of U.S. State Department and international policy objectives. Thus, in one sense, the New Uses Movement grew out of U.S. government embargoes starting almost 15 years earlier." Update: 1994. Oct. 3. Jeff resigned as head of the Corn Growers Assoc. on 1 Oct. 1994 after holding the post for over 10 years. He now lives in Hardin, Illinois. The new CEO is a woman, Chris Wehrman. She is the first female and also the first registered dietitian to serve as the CEO of a membership-based commodity organization (See *Soybean Digest* Oct. 1994, p. 19).

As of mid-1996, Jeff is with the AARC Corporation (USDA), in Hardin, Illinois. Address: Chairman, New Uses Council, c/o National Corn Growers Assoc., 1000 Executive Parkway #105, St. Louis, Missouri 63141. Phone: 314-275-9915.

10021. Tenuta, Albert. 1993. Soybean cyst nematode. *Ontario Soybean Growers' Marketing Board Newsletter.* Aug. p. 2.
• ***Summary:*** "The soybean cyst nematode (SCN) has been a major pest of soybeans for at least a century and maybe much longer. It was first reported in Japan in 1915 and since has been found in Egypt, Korea, China, Taiwan, Columbia, Argentina, Brazil (unconfirmed), the United States and Canada. In 1954, the nematode was found for

© Copyright Soyinfo Center 2014

the first time in North America in Hanover County, North Carolina. This particular area has a history of growing flower bulbs imported from Japan. The first report of soybean cyst nematode in Canada occurred in two fields in Kent County in 1987 and has since been identified in five other counties."

"What is soybean cyst nematode?... It is called a cyst nematode because the swollen, egg-filled adult female (200-600 eggs) is referred to as the 'cyst stage'." Address: Ridgetown College of Agricultural Technology, Ridgetown, ONT, Canada.

10022. Todd, Daniel; Zhang, Lei. 1993. Political and technical factors impinging on port operations: The case of Manchuria. *GeoJournal* 30(4):441-54. Aug. [28 ref]
• ***Summary:*** "Five key events have shaped port-hinterland relations in Manchuria, and accordingly, have dictated the scale and scope of port operations. They are, in chronological order: (1) The Treaty of Tientsin and the attendant opening of Newchang (Yingkou) to foreign trade in 1862. (2) The lease to Russia in 1898 of the tip of the Liaodong peninsula and the founding thereon of the port of Dalny (Dalian). (3) The seizure of Dalian by Japan in 19O5. (4) The closure of Manchuria's ports to foreign trade with the accession of communist rule in China in 1949, and (5) The reversal of that policy in no uncertain terms during the 1980s consequent upon China's conversion to "open port" thinking.

"Scarcely acknowledged because less perceptible, changes in the technology governing the characteristics and employment of ships have been equally critical in regulating port operations in this part of northern China. In particular, the twin driving forces leading to ship enlargement and specialisation have induced fundamental reorganisation of both waterfront and inland transfer facilities."

In 1907, the Japanese opened two ports on the Yalu river: Dandong and its outport of stillborn Tatungkow. Dandong, by far the larger of the two, was designed to take small steamers of 2,000 tons and as a transshipment point for Yalu River junks. Yet it was constrained from the outset by its location 40 km from the mouth of the Yalu. By 1917 it exported mostly [soy] beans and bean cake.

Figures show: (1) Map of contemporary Manchuria with major ports, cities, railroads, provincial boundaries, and mineral-rich areas. (2) Early port trade of Yingkou and Dalian. Dalian trade began in 1907 and passed Yingkou in about 1912. (3) Today's port facilities of Dalian. (4) Port throughput of Dalian and Yingkou after 1952; Dalian has grown rapidly to 49.5 in 1990, compared with 2.37 for Yingkou. (5) Map of hinterlands of Dalian and Yingkou ports. Address: Dep. of Geography, Univ. of Manitoba, R3T 2N2 Winnipeg, Manitoba, Canada.

10023. United Soybean Board. 1993. Value-added soybean summit: Gaining a competitive edge globally (Booklet). Chesterfield, Missouri: USB. 8 panels. 23 x 10 cm.
• ***Summary:*** This booklet describes an educational conference that is being organized and will be held on 20-21 Sept. 1993 at the Hotel Washington in Washington, DC. Contents: Why a summit? Summit objectives. Checkoff at work. Tentative agenda. Who should attend the summit? Benefits of attendance. How to register (cost of conference is $75.00).

The main topics on the agenda are: Adding value: The next frontier in commodity marketing. Heeding the call for improved grain quality. Protein content: Can we do better? Tapping the potential of improved oil characteristics. Molding the market for soy-based plastics. Spinning greener fibers from soybeans. Building new markets by adding value to building materials. Changing industry strategies for value-added future.

Established in 1991, the United Soybean Board (USB) uses checkoff dollars generated by soybean sales to conduct research and promotional activities–such as this summit. A letter dated 13 Aug. 1993 accompanying this booklet bills the conference as a "first-ever event. Secretary of Agriculture Mike Espy and Director of the Japanese Oilseed Processors Association Hiroshi Higashimori are just two of the dynamic speakers who have been invited to address" the conference. Address: 16305 Swingley Ridge Dr., Suite 110, Chesterfield, Missouri 63017. Phone: (314) 530-1777 or 1-800-989-8721.

10024. Sakaguchi, Noboru. 1993. Re: Early history of tempeh in France. Making good nigari tofu in France. Letter to William Shurtleff at Soyfoods Center, Sept. 3–in reply to inquiry. 1 p. Handwritten. [Jap; eng+]
• ***Summary:*** "In 1981 Anita [Dupuy] started making tempeh with a man named Jean-Luc Alonso. Anita was in charge of the commercial aspects of the business and Jean-Luc did the production. The company is no longer in business. I recently talked with Jean-Luc and I think he will be sending you more details. His address is presently "Gaia," 11 rue François Chancel, 31190 Auterive, France. Anita is now in the Netherlands.

Concerning our tofu production, in August 1985 we moved to a suburb of Paris named Champigny and changed the name of our company to Daizou. We have been producing tofu ever since. I am beginning to understand that making good tofu using natural nigari is based on getting good soybeans, so I have become very interested in agricultural issues and have begun to study agriculture. The key question is whether we can grow good soybeans in Europe.

Note: The letterhead and envelope read: Tama–Distribution de Produits Naturels. Address: Tama, 883 rue de Bernaü, Z.I. du Plateau, 94500 Champigny-Sur-Marne, France. Phone: 49 83 79 94.

10025. Nichii Company of America, Inc. Mycal Group. 1993. Reduced fat tofu: Setting the record straight (Ad).

Natural Foods Merchandiser. Sept. p. 81.
• ***Summary:*** This full-page red, green, and white ad contains questions and answers about reduced fat tofu. Address: 23440 Hawthorne Blvd., Suite 140, Torrance, California 90505. Phone: 213-791-0010.

10026. Shurtleff, William; Aoyagi, Akiko. comps. 1993. Bibliography of koji–grains and/or soybeans cultured with *Aspergillus oryzae:* 535 references from 700 B.C. to 1993, extensively annotated. Lafayette, California: Soyfoods Center. 151 p. Subject/geographical index. Author/company index. Language index. Printed Sept. 5. 28 cm. [535 ref]
• ***Summary:*** Kôji is a Japanese word, now widely used in the Western world in the scientific and popular literature on fermented foods, Japanese foods, and natural foods. In Chinese, koji is called *ch'ü,* and the koji process was developed in China at least seven centuries before the Christian era.

The word koji was first used in an English-language document in 1867 in James C. Hepburn's *A Japanese and English Dictionary.* The earliest English-language scientific article seen in which koji was discussed in detail was R.W. Atkinson's "Brewing in Japan," published in the prestigious journal *Nature* on 12 Sept. 1878. In recent years, interest in koji has increased steadily. This bibliography lists 128 documents published since 1980 which discuss koji; 74% of them are written in English.

When Aspergillus oryzae, a mold, is cultured on cooked grains and/or soybeans in a warm place, the result is koji, which is rich in various types of enzymes. Its fragrant white mycelium, which looks somewhat like the surface of a tennis ball, has a delightful aroma resembling that of mushrooms.

Koji usually serves as the basis for a second fermentation, in which its enzymes help to hydrolyze (break down or digest) carbohydrates, proteins, and lipids (fats). Rice koji, barley koji, and soybean koji are used to make three different types of miso. Wheat and soy koji is used as the basis of the soy sauce fermentation. Rice koji is used to make both Japanese amazaké (non-alcoholic) and saké (rice wine). Soybean koji is used to make soy nuggets (also known as Hamanatto, Daitokuji natto, Douchi, Chinese black beans, etc.).

This is the most comprehensive bibliography ever published about koji. It has been compiled one record at a time over a period of 18 years, in an attempt to document the history of this subject. It is also the single most current and useful source of information on this subject available today, since 59% of all records contain a summary/abstract averaging 185 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 25 different document types, both published and unpublished; every known publication on the subject in every language–including 242 in Japanese, 226 in English (plus 75 with an English summary), 33 in German, 11 in Chinese, etc.; 16 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of koji and related products from their earliest beginnings to the present.

The bibliographic records in this book include 478 published documents and 28 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 33 commercial koji products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

10027. *Toyo Shinpo* (*Soyfoods News*). 1993. Atopii ni kiku: Amaransezu nattô [Effective against atopy: Amaranth natto (new product)]. Oct. 1. p. 13. [Jap]
• ***Summary:*** A photo shows the front panel and one side of this new commercial natto product made with soybeans and amaranth.

Note: Atopy includes atopic dermatitis, eczema, etc.

10028. Johannes, Kenlon. 1993. SoyDiesel questions and answers. Jefferson City, Missouri. 6 p. Oct. 8. [Eng; Jap]
• ***Summary:*** Very well done and informative! Three pages are in English, and 3 pages are a Japanese translation of the English pages. The questions are: 1. What is SoyDiesel? 2. How is it made? 3. Why not use ethanol instead of methanol? 4. What is biodiesel? 5. How popular is biodiesel? 6. Why promote SoyDiesel / Biodiesel in the U.S.? 7. Isn't it more expensive [than regular diesel]? 8. Why would anyone use higher priced soybean-based fuel? 9. How much energy is used to produce the fuel? 10. Doesn't SoyDiesel gel in the winter? ("The gel point is slightly higher than #2 diesel, 30ºF, but there are pour point depressants available

© Copyright Soyinfo Center 2014

to lower the gel point to -40ºF"). 11. What environmental advantages are there? 12. What projects are taking place now? 13. Where is the fuel being made? (In the U.S., Procter & Gamble is making the fuel in Kansas City and it is being marketed by Interchem Environmental Inc. of Overland Park, Kansas). 14. When will it be available at the pump? 15. How is the [soybean] checkoff involved in this? 16. What can I do? Address: Executive Director, National SoyDiesel Development Board, P.O. Box 104898, 1907 Williams St., Jefferson City, Missouri 65110-4898. Phone: 1-800-841-5849.

10029. Richardson, Al. 1993. Companies using Nichii Soy Flakes, and new developments (Interview). *SoyaScan Notes.* Oct. 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The main American user of Nichii's soy flakes is White Wave of Boulder, Colorado, which uses the flakes in only one product–its reduced fat tofu. White Wave also makes a private label reduced fat tofu for Tree of Life in Florida. Other users are: Ashland Soy Works (Ashland, Oregon), which will be introducing a reduced fat tofu, made from 100% soy flakes, this month; Sacramento Tofu uses soy flakes only in their firm-style tofu; Calco of Dallas, Texas, uses flakes in their firm-style tofu. They buy a truckload about every 5 months. They also use whole soybeans; Dorothy Hwang, a PhD chemist, of Michigan Soy Products Co., Inc. (in Royal Oak, Michigan) uses both soy flakes and soybeans. Dr. Les Wilson made the very valuable discovery that soy flakes can be used to make reduced fat tofu.

Quong Hop recently put a sticker on their Nigari Firm Tofu that says "The original reduced fat tofu," which is in violation of FDA regulations. At the new Whole Foods store in Palo Alto, Al recently saw Wildwood's firm tofu with a little sticker on the front that said "Low fat," also a violation. The real problem is that Wildwood's tofu retails for $0.99, Quong Hop's is $1.29, and White Wave's tofu, the only real reduced fat tofu is $1.49.

Nichii has just landed a big agreement with Korea and is now shipping them about 60 tons/month of soy flakes from the plant in Iowa. They are expected to be buying 100 tons/month at the end of this year. Those flakes are being used entirely to make tofu and soymilk. They are buying it for the convenience in dealing with rush orders, and the water and space savings–not for the reduced fat properties.

Nichii's plant in Iowa is now producing a little less than 1,000 tons/month. 95% of this is non-organic soybeans and 5% is organic. There is an increase in demand from Japan for organic flakes. The plant runs a little less than 4 days a week, 10 hours a day.

95% of all soy flakes make in this plant are sold outside America, mainly to Japan and Korea. Al visited Japan earlier this year. All of the flakes in Japan are used for making tofu; none is used in meat products. Nichii/Mycal has about 250 retail stores but just a few of them make fresh tofu in the store using Mr. Chikaarashi's tofu-making machine; yet that number is increasing. 90% of the tofu sold is purchased from outside tofu manufacturers, many of them very large. Nichii sells three types of tofu, each clearly labeled: That made soybeans, that made from a mixture of soybeans and Nichii soy flakes, and that made entirely from Nichii soy flakes. Nichii says "We'll buy your tofu if you use our flakes." None of tofu sold in Japan and made from flakes is promoted for its low fat content. Address: Nichii Company of America, Inc., 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505. Phone: 310-791-0010.

10030. Redmond, Tim. 1993. New developments at the Soyfoods Association of America (SAA) (Interview). *SoyaScan Notes.* Oct. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tim has been very active in shepherding SAA during the past year. He is the vice president, on the executive committee, and a director. The original $30,000 grant to SAA from the American Soybean Association increased to about $40,000. SAA will soon be sending 3,000 packets to the media and 5,000 packets to health professionals. Each packet contains fact sheets, a soyfoods brochure, and a brochure announcing the "First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease," which is scheduled to be held on 20-23 Feb. 1994 in Mesa, Arizona. In addition, Tim is now drafting a letter to new and prospective members, including San-J (which has never joined), Worthington Foods, Kikkoman, Ralston Purina, etc. SAA needs more money to promote soyfoods on a broad basis.

Michelle Edwards, Dan Burke's long-time secretary, is now the Executive Director of SAA.

Tetra Pak Inc. has donated $50,000 to SAA over a period of 3 years, primarily to aid in the development of soymilk standards. Note: This is the largest single grant ever received by the Soyfoods Association. As of Jan. 1995, according to Dan Burke (Treasurer of SAA) the funds are being used mainly to pay for legal advice (from Hyman, Phelps & McNamara in Washington, DC) on the standards and to promote soyfoods. Peter Golbitz, who has spent a great deal of time in compiling the standards, has not received any payment for his time. Address: Vice President of Marketing and Sales, American Soy Products, Inc., 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

10031. Seeger, Royce. 1993. Recollections of work with Eden Foods (Interview). *SoyaScan Notes.* Oct. 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** At age 18 Royce was introduced to macrobiotics by Jimmy Silver. He was never involved with the food buying co-op before Eden Foods started. He started working for Eden Foods in about the fall of 1970 at the store on State Street. He was married with a child, he needed a

© Copyright Soyinfo Center 2014

job, and he was interested in macrobiotics, so the job was a natural. At the time he started work, Bill Bolduc, Mark Retzloff, and Tim Redmond were working at that store. After he had worked there about a year, Michael Potter arrived. Initially he ran the cash register, stocked the shelves, and ran the 8-inch stone flour mill grinding wheat, corn, rye, rice, etc. into flour. Shortly after he started work, he also began to mill soy flour. Tom Vreeland grew the soybeans organically. Royce toasted the soybeans lightly, about half way, so that the flour could be milled more easily and was still yellow. The roasting got rid of the heavy raw taste, but some raw soy flour taste still remained. Initially the soy flour was sold in paper bags, but the bags became very oily, so they switched to packing it in 3 sizes of cello bags which we heat sealed. The bags were considered biodegradable. Eden couldn't buy too large a supply since they became brittle after a while. A printed label was affixed by hand to each cello bag. The flour was also sold in big 25 lb paper flour bags, which were stamped with a rubber stamp to indicate the contents.

Eden also made Kokoh, a macrobiotic baby cereal, which contained roasted soy flour and was also packed in the small cello bags. All the ingredients were roasted together and then ground; soy was one of the ingredients. The soy was roasted longer than it was for the flour.

Eden was also importing miso in kegs from Japan. Employees would pack the miso into 1- and 2-lb bags. Eden still imports its miso in bulk kegs.

In those days the store wasn't making much money; it had just come from being a co-op, so often the only pay employees got was to have their bills paid–such as rent, so they didn't get evicted. They didn't really get a pay check. In about 1973 Royce quit work at Eden to do some construction work for a friend, and then moved to Arizona to be with his wife's parents. After about 10 months he returned to Ann Arbor and went back to work for Eden Foods. This time he stayed until 1978, running the mill and doing packaging. Then he left for a second time; he needed to make more money.

In 1982 Royce returned to work for Eden for a third time. He started working in production at a small bottling line where Eden bottled soy sauces (imported in 55 gallon drums from Japan), vegetable oils, and vinegar. Eden still bottles its soy sauce this way. One person runs the filler, which fills 6 bottles at a time; he slides in 6 bottles, pulls down the lever which fills them, then he puts them on a conveyorized line. The next person on the line puts on caps. Finally, at a labeling machine, one person labels one bottle at a time. Then he went back into running the mill, grinding flours. Royce has been working at Eden, more or less, since 1982. However in 1987 he developed testicular cancer, which had spread throughout his lymph system. His weight dropped to 155 lb and parts of his spine had to be removed. The cancer is now in remission and he feels like he is getting stronger. Royce now serves as Michael Potter's driver, since Michael is not allowed to drive at all by himself. Royce likes working at Eden Foods, even though he is not an official employee, since he is receiving disability payments. Address: 133 S. Clinton, Manchester, Michigan 48158. Phone: 313-428-0973.

10032. Brown, Alan. 1993. Kinmata: Fine dining at a Japanese inn. *Bon Appetit* 38(10):118-22. Oct.
• ***Summary:*** Kinmata Ryokan is a nearly 200-year-old traditional Japanese inn located in Kyoto at 407 Shijo-agaru, Goko-machi, Nakagyo-ku. The owner, Haruji Ukai, who is also the chef, is the seventh generation of his family to run the inn; he greets each new guest in person when they arrive. The food at Kinmata, which is "as delicious as it is beautiful," features *kaiseki* cuisine. There are only seven rooms in two-story Kinmata and no private bathrooms. Contains two miso recipes: Broiled bean curd and eggplant with miso (Kinmata's version of dengaku). White miso soup with shrimp. Address: Free-lance travel writer based in Tokyo.

10033. Morinaga Nutritional Foods, Inc. 1993. Mori-Nu. The lowest fat tofu in the world. The others are just plain tubby (Ad). *Health Food Business.* Oct. p. 37.
• ***Summary:*** A large color photo shows two Tetra Brik cartons of Mori-Nu Lite Silken Tofu. One is Extra Firm and the other is Firm in consistency. On each front panel is written, in large letters: "Only 1% fat." A table shows that the Extra Firm contains only 1 gm of fat and 35 calories, but 6 gm of protein per 3 oz serving. This gives the consumer "The highest protein to fat ration (6:1) and less calories than any other tofu."

This ad also appeared in HFM (Nov., p. 9), and *Natural Foods Merchandiser* (October 1993, p. 79; Oct. 1993, p. 79; July 1994, p. 14).

10034. Morinaga Nutritional Foods, Inc. 1993. Pure tofu. Perfect package. The world's lowest fat tofu. Guaranteed first-day fresh (Tear-off recipe pad). 2050 W. 190th St., Suite 110, Torrance, California 90504.
• ***Summary:*** This color tear-off recipe pad (6½ by 4 inches), developed by Susan Bucher of Bucher & Russell in Los Angeles, was introduced in Oct. 1993. On the back is a recipe for savory spinach dip, a nutritional analysis, and a half-page answer to the question: "How can a protein-rich food like Mori-Nu Tofu retain all of its nutrition for months–without refrigeration?" Address: Torrance, California. Phone: 1-800-669-8638.

10035. Hillyard, Roger. 1993. Work with Erewhon, Arrowhead Mills, and The Well (Interview). *SoyaScan Notes.* Nov. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Fred Rohe started out working for Thom's

© Copyright Soyinfo Center 2014

Natural Foods, a retail store in San Francisco. Then Fred bought Sunset Health Foods (a health foods retail store at 1319 Ninth St. in the Haight-Ashbury district of San Francisco) and renamed it New Age Natural Foods–at the same address. Roger thinks it was in about 1965 or 1966, because he was living in San Francisco at that time and had just gotten involved in macrobiotics–in Jan. 1966. He started buying his foods from Marina Health Foods (on Chestnut) but when Fred opened his store, Roger started buying his foods there.

At some point Fred bought a chicken farm, transformed it into a natural chicken farm, and created New Age Resources as the company that owned it.

Then Fred teamed up with Phil Parenti / Parente and they did two big things at about the same time: (1) They opened a second store on California Street in Palo Alto, which was a natural foods supermarket (perhaps the first of its type in the USA). David Mastandrea was the manager and Nik Amartseff may have run the deli. At the time the store opened in Palo Alto, Roger was on the East Coast in Boston with Erewhon. (2) Fred and Phil started a distribution company named New Age Distributing.

Then they got into financial difficulties; they had tried to do too much too fast. The stores reverted to Fred and the distribution company and chicken ranch went to Phil. That's when Phil renamed the distribution company The Well. But legally and corporately, it was still New Age Natural Foods–which was the parent company of The Well. Phil was active from day to day at The Well. Then The Well purchased Pure & Simple from Bruce Macdonald; the products at that time were apple juice, corn chips, and fruit butters. By the time of the natural distributors conference at Pajaro Dunes, California, the line had expanded to other fruit juices and Japanese imports, which were coming from Mr. Kazama of Mitoku–all sold under the Pure & Simple brand and distributed by The Well, which was now a master distributor. Some of these products were sold to other distributors, and all were sold to retail stores.

Irwin Carasso, the founder of Tree of Life, sponsored the natural food distributors conference in St. Augustine, Florida. Roger thinks Irwin was the 2nd or the 3rd person who began importing natural foods directly from Mr. Kazama in Japan–First Erewhon, then Pure & Simple, then Tree of Life. Eden Foods started importing after Tree of Life, and after that St. Augustine conference; but they imported from Muso. Initially Erewhon had insisted that everyone import the Japanese products under the Erewhon brand; they maintained that monopoly for quite a while.

At the time the *Deaf Smith Country Cookbook* was published (1973), Roger and his ex-wife Susan (and 2 kids) were living and working in Hereford, Texas. They spent a year there. While Susan was working on the cookbook, Roger was contracting with local farmers for everything from grains to maple syrup, helping to establish Arrowhead's line of consumer packaged products (graphics, copy, etc.) and (most important) he got Arrowhead's distribution system and network going, selling to other distributors. Roger was employed by Arrowhead. Irwin Carasso was one of the first to be named a wholesaler of Arrowhead Mills' products. Next came Shadowfax. The NNFA convention that year was in Washington, DC.

When they left Texas, after a year, they hopped back in the school bus, drove to Los Angeles and hung out there for a couple of weeks (staying with Bobby Orgo, who worked for Erewhon in Los Angeles), then they drove to Atascadero, but they had no destination. They went to visit Bruce Macdonald (who at that time was living in Santa Cruz, California, and working each day for The Well–Pure & Simple). He sold the Pure & Simple brand than went along with it from Southern to Northern California.

Roger, Susan and their family ended up living in Soquel, California (near the Pacific Ocean and Santa Cruz), in about mid-March 1973; his youngest son was born on March 29, right after they got settled. Jean Allison (from Boston) came out and helped Susan for a while.

The Well went out of business in about 1979. It continued to grow and expand. In very few years, it grew from $3 million to $10 million in sales. The peak year was in about 1978, then it went rapidly downhill. It had the wholesale distribution entity, a small production facility in San Jose where it manufactured fruit butters and bottled tamari and some oils, and also raised alfalfa sprouts. Then (in about 1976-77) it bought out Max Kozek, the organic wholesale supplier from Los Angeles. It also had a project to produce 40 acres of organic carrots in the San Joaquin Delta, and about 10 acres in Borrego Springs (east of San Diego). It also had some acreage of organic apples and peaches (small, real old, so there was not production and it was not of high quality), and substantial crop investments in organic produce via contracts with individual growers, as with John Mason who was a hothouse tomato grower in California. Then it bought a wholesale distribution company [Essene Traditional Foods] in Boyertown, Pennsylvania. With all those ventures, scattered near and far, The Well was (1) undercapitalized, and (2) it lost an incredible amount of money on some of its individual ventures, such as the organic carrots (nematode problems). Phil Parenti owned most of the stock at this time, but he did not have a controlling percentage. The other main stockholder was not a regular participant in the company; Roger does not remember his name. Roger had only stock options. The Well just folded up shop and disappeared; it was not sold to anyone. But the Pure & Sample brand name was sold to Jimmy Silver and John Fountain. Phil Parenti went to Monterey, California, and worked with his father in property development. Roger does not know where he is now. Address: Farley's Coffee Shop, #1315 18th St., Potrero Hill, San Francisco, California 94107. Phone: 415-648-1545.

10036. Reischauer, Edwin O. general editor. 1993. Japan: An illustrated encyclopedia. 2 vols. Tokyo: Kodansha Ltd. Illust. (color). 29 cm. *
• ***Summary:*** First ed. 12,000 entries. Entry words also in Japanese. Also cited as: *Kodansha Encyclopedia of Japan* (by WorldCat) and *Encyclopedia of Japan* (by JapanKnowledge, which says of it): This work "enjoys a solid reputation for its accurate and elegant English, written by first-class Japanologists chiefly from prestigious Harvard University. In addition to functioning as an ordinary encyclopedia, it can be a great help for explaining Japan or matters relating to Japan in English, or when you wish to express delicate nuances of the Japanese language in English." Release date by JapanKnowledge: Feb. 2002. http://www.japanknowledge.com/contents/intro_e/cont_eoj.html. Address: Japan.

10037. Adlercreutz, Herman; Markkanen, H.; Watanabe, S. 1993. Plasma concentrations of phyto-oestrogens in Japanese men. *Lancet* 342(8881):1209-10. Nov. 13. [10 ref]
• ***Summary:*** Two Finnish and one Japanese scientist teamed up to see if diet could explain why Japanese men have a lower death rate from prostate cancer than Western men, even though both groups have about the same incidence of prostate cancers. The scientists speculated that the Japanese diet may keep small prostate cancers from growing into deadly tumors.

"A low mortality from prostatic cancer is found in Japanese men consuming a low-fat diet with high content of soy products–a rich source of isoflavonoids." Isoflavonoids are the plant version of the female sex hormone estrogen, which has been shown to inhibit cancer cells in the test tube. The researchers therefore investigated the isoflavonoid level in the blood (plasm) of 14 Japanese who ate the typical soy-rich Japanese diet and 14 Finnish men who ate the typical dairy-and-meat diet of Finland. The levels of the estrogen-like isoflavonoids were 7 to 110 times higher in the blood of the Japanese men than in the Finns. Genistein, a tyrosine kinase inhibitor, was the isoflavonoid that occurred in the highest concentration (geometric mean 276 nmol/liter). The authors hypothesize that these high phytoestrogen levels may inhibit the growth of prostate cancer in Japanese men, which may explain the low mortality from prostatic cancer in that country. Address: 1-2. Dep. of Clinical Chemistry, Univ. of Helsinki, Mellahti Hospital, SF-00290 Helsinki, Finland; 3. Epidemiology Div., National Cancer Center Research Inst., Tokyo, Japan.

10038. Reis, Ademar. 1993. History of his work with soyfoods, seitan, and gluten (Interview). *SoyaScan Notes*. Nov. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ademar, age 46, was born on 2 May 1947 in Santos, Sao Paulo, in Brazil. In the early 1950s when Brazil started growing more soybeans. His mother was a very well educated person and she liked to read; she also had many children and the family was rather poor, so they could not afford to buy meat, milk, or other animal products. Not far from their home was an agricultural department. His mother would send him there, and they would give him free soybeans, which he and his mother would cook or use to make soymilk.

He entered law school in Brazil in the early 1970s, but upon graduation he became an actor and had a theater group. At the time, life in Brazil was very hard and repressive due to the military government. He went against the government and he had to flee the country in June 1973. Since he had several Brazilian friends living in Los Angeles, he went to live with them there. One day while shopping at Erewhon on Beverly Blvd. in Los Angeles he learned about the East West Center.

He moved into the East West Center, a macrobiotic commune on [7357] Franklin Ave. in Hollywood, California 90028. At that point his girlfriend, Iseti, joined him from Brazil; they were married in America in Oct. 1975. First he started working as Roy Steevensz' assistant making foods. Then in late 1973 or early 1974 he started a company named East West Cookery, where he made Soy Burgers, which he sold to many health food stores in and around Los Angeles, including the Erewhon retail store. To make the burgers he would soak whole soybeans, pressure cook them until soft, then cool and mash them for use as a binding agent. He would mix the mashed soybeans with cooked brown rice and fresh onions, parsley, and carrots. He would shape the mixture into patties, which he baked in an oven. He made the burgers in the kitchen of the big East West Center. In terms of logistics, he would wake up at 4:00 in the morning, cook the soybeans and let them cool. Later, after others had finished breakfast in the kitchen, he would shape and bake the burgers. He would put these between buns, with lettuce, tomatoes, etc. and distribute them to stores.

After several years he decided that he wanted to move to Boston to be close to Michio Kushi. He and his wife, Iseti, went to live at the Kushi macrobiotic study house in Newton, Massachusetts. In Newton he tried to support his wife (who was pregnant) and himself by doing some translation of articles from a Brazilian newspaper. After a few months, they realized they could not make a living doing translation, so Ademar decided to move to Somerville, re-activate East West Cookery, and start making Soya Burgers again–just about the same time his son was born (in October). After making the down payment on the apartment, they found themselves out of money. So they went to see Aveline Kushi (who he met when she lectured in California) at her home in Brookline. She gave him $500 to get his business started and she put only one condition on the gift: "Don't put too much garlic in the food." He has kept in touch with her over the years.

© Copyright Soyinfo Center 2014

The Seventh Inn made the bread for Ademar's burgers' buns. First he made the burgers out of his home in Somerville, Massachusetts, but he was caught by the Board of Health, so he had to move to a commercial kitchen.

One day a young man named David came from San Diego (where he had been a lifeguard), tasted Ademar's product, and ended up working with the company for a year. Tom was also an artist, and before he left, he drew a logo, wrote "Season's Harvest" in it, and gave it to Ademar as a present. In 1977 decided to rename his company Season's Harvest. Between the late 1970s and the early 1990s Ademar developed a line of about 20 different types of sandwiches (including Solar Burger sandwiches [with Wheatmeat made from Seitan], in 1976), many different burritos (including and a Tofu and Brown Rice Burrito, in about 1978), 20 different types of salads, and carrot juice. In about 1980 Season's Harvest introduced Tuna Salad and Chicken Salad, each containing textured soy protein concentrate; these are the only two products in his line that are not vegetarian.

Until 1987 Season's Harvest did its own distribution throughout the area (Massachusetts, Connecticut, New York, Philadelphia [Pennsylvania], etc.). Then from 1987 to 1990 the company turned over part of its distribution to a natural foods distributor named Country Barn. In 1990 Country Barn went out of business, with large unpaid debts to Season's Harvest. Ademar picked up two distributors in New York: Craig Coester and Ed Wolf.

Looking for a bigger market, in the winter of 1991 Ademar contacted a little company in Massachusetts named Idyllwild Farms, which prepares food and puts food together for major airlines. He made a presentation but nothing developed. One day Continental Airlines contacted Idyllwild saying, "Look, we're having a lot of requests for vegetarian meals, what can you come up with?" Idyllwild spent a great deal of time trying to find meals that were acceptable to Continental's headquarters in Texas, but to no avail. As a last resort, in about December 1992, they went to Ademar. He set to work modifying the Dream Burger. It was an instant hit at Continental–so they asked for more vegetarian products and a dish with mushrooms and onions. Ademar designed the Vegetable Patty. Then they wanted something for breakfast, so he made the Veggie Breakfast Sausage. The first order from Idyllwild arrived in March 1993–the last arrived on 29 July 1993. Idyllwild declared bankruptcy, and Ademar lost $12,000 that Idyllwild owed his company. It was a small disaster. Fortunately, Ademar was able (by great good fortune) to reestablish his contact with Continental and today they are still ordering from him. Idyllwild had hidden the names of its suppliers. Subsequent soy- or gluten-related products included: Dream Burger (1991, June, to be renamed Dreamburger in 1994), Vegetarian Meatball, and Vegetarian Bacon Bits (1992, Feb.), Seitan (1992, June), Cajun Burrito (1992, Nov.), Vegetable Patty (1993, March), and Veggie Breakfast Sausage (1993, March).

Ademar is now looking for a plant or company to make his Veggie Breakfast Sausage. He met Ernie Mucke, who is a fourth-generation sausage maker and who owns a traditional sausage company named Mucke's. Ernie, who is in his late 30s, grew up working in the plant and knows every detail of the machinery. His 4-year-old son has many allergies so his wife started cooking vegetarian meals, which Ernie likes, so now he is very open to vegetarianism. Ernie's wife's brother, who had spiritual powers and lived in Arizona, was Ernie's spiritual guide. Just before he died, this spiritual guide told Ernie that someone would come into his (Ernie's) life and his sausage plant would be transformed, and he would end up making vegetarian foods. Ademar and Ernie are now working out plans together.

In about mid-1992 Sysco, America's largest food distributor, began to carry Ademar's products; he is with their Hallsmith Sysco division. About 6 months ago he also got into J.P. Food Services (Monarch); Harvard University buys his products. The last few months, in working with Protein Technologies International, ADM, and Central Soya, Ademar has learned many new things about food technology and product formulation. So now he is reformulating many of his products. Currently his best-selling products are Bean & Cheese Burrito, Hoomus [Hummus], Tabouleh [Tabbouleh], and Dream Burger–in that order. He now owns the largest natural-food sandwich company in New England–followed by New World.

Ademar has kept good records of his years of pioneering work with natural foods; his files may be able to add more detail and accurate dates and names to this story. He still uses macrobiotic principles in formulating his recipes to balance yin and yang, but he is not as strict as he used to be; he now eats tomatoes and eggplants. Address: Founder and owner, Season's Harvest, 52 Broadway, Somerville, Massachusetts 02145. Phone: 617-628-1182.

10039. Hesseltine, Clifford W.; Kato, Eihachiro. 1993. Natto, a little-known fermented soybean food. Peoria, Illinois. 116 p. Nov. Unpublished typescript. 28 cm. [422 ref]
• ***Summary:*** This is the most complete document seen on natto in English. Written by two eminent microbiologists, it contains a superb bibliography. Contents: Introduction. Microorganisms. Production and process. Industrial production. Enzymes: Proteases, other enzymes, fibrinolytic activity. Vitamins. Nutritive value and use. Antibacterial activity. Mucilage. Lipids. Compounds produced by ***B. natto.*** Plasmids. Phages. Nitrogen fixation. Soybean varieties used. Natto-like foods. Future possible uses of ***B. natto.*** Books containing information on natto. References.

Talk with Dr. Hesseltine. 1994. Aug. 4. This review of the literature is similar to the one he did on miso with Dr. Shibasaki. He has not worked on this book for quite a while, in part because Dr. Kato (whose family is in the natto business) does not answer his letters. He and Dr. Kato

© Copyright Soyinfo Center 2014

compiled the bibliography together, mostly from Chem. Abstracts (English) and Nakazawa 1950 (Japanese). Dr. Kato translated about 20 pages of the Japanese documents. Dr. Kato did some work on natto in Peoria with Drs. Hesseltine and Wang; they told him that if he would make a table of their results, they would write the rest of the article; he never replied. Dr. Hesseltine has copies of many of the Chem. Abstracts summaries but not many of the original documents cited.

Note: This book made an important contribution to the book *History of Natto and its Relatives* (*1405-2012*), by William Shurtleff and Akiko Aoyagi published in Feb. 2012 in pdf digital format on Google Books Address: 1. 5407 N. Isabell Ave., Peoria, Illinois 61614; 2. Meiji Univ., Tokyo, Japan.

• ***Summary:*** This very interesting chapter is about breeding soybeans for food uses. Contents: Introduction: Domestication for soyfood use, westward spread. Cytology: Karyotype, aneuploids, chromosome interchanges, interspecific hybridization. Genetics: Linkage maps, restriction fragment length polymorphism and amplification DNA length polymorphism. Breeding objectives: Important soyfoods, heightened Western interest in soyfoods. Germplasm resources. Reproductive biology: Flower biology, cross-pollination, male sterility. Breeding strategies and methods. Genetic traits and soyfood variety development: Seed size, protein and oil content, oil composition, lipoxygenase genes, sugar content, swell ratio, hilum color, protein composition and texture. Biotechnology and its applications: Rapid multiplication of valuable genotypes, somaclonal variation, introgression of valuable traits from perennial species (especially of subgenus *Glycine* into *G. max*), other uses, transformation, criteria of successful germline transformation event, *Agrobacterium*-mediated transformation, protoplast transformation and regeneration, transformation by particle bombardment, cell, protoplast and tissue culture, regeneration from immature / mature cotyledons or immature embryos, regeneration from leaves, protoplast culture and plant regeneration. Future prospects.

Tables: (1) Major producers and consumers of soybean, 1989-90. (2) Soybeans consumed as soyfoods in Japan in 1986. (3) Publicly released US soybean varieties developed for (or utilized in) the soyfoods market. (4) Agronomic and chemical characters of Japanese and US varieties grown at Clayton, North Carolina, USA, in 1988. (5) A partial listing of soybean seed requirements for selected soyfoods consumed in Japan. (6) Selected Japanese soyfoods varieties. (7) Traits genetically engineered into soybeans.

10050. Bud, Robert. 1993. The uses of life: A history of biotechnology. Cambridge, MA; New York, NY: Cambridge University Press. xvii + 299 p. Illust. Index. 24 cm. [557 ref]

• ***Summary:*** Contents: List of illustrations. Foreword by M.F. Cantley (Concertation Unit for Biotechnology in Europe {CUBE}). Acknowledgements. Introduction. 1. The origins of zymotechnology: Introduction, the chemical roots of zymotechnology, from zymotechnology to organic chemistry, the biological alternative, agriculture, brewing, zymotechnics as trademark (zymotechnology, fermentation, the Zymotechnic Institute of Chicago [Illinois]). 2. From zymotechnology to biotechnology. 3. The engineering of nature. 4. Institutional reality. 5. The chemical engineering front. 6. Biotechnology–the green technology. 7. From professional to policy category. 8. The wedding with genetics. 9. The 1980s: between life and commerce. Epilogue. Notes. Sources.

Chapter 1, a fascinating history of the early days of biotechnology, discusses: Emil Christian Hansen, Berlin's *Institut für Gaerungsgewerbe,* Louis Pasteur (p. 6-7), the German father of chemistry and Prussian court physician Georg Ernst Stahl (1659-1734), his interest in phlogiston, zymotechnics and practical teaching of brewing, in 1762 the word *zymotechnie* entered the exclusive dictionary of the Académie Française (p. 8-9), Mary Shelley and her novel *Frankenstein* (published in 1817; Frankenstein's teacher, Professor Walden, admired the results of chemistry), the 1928 synthesis of urea by Friedrich Woehler caused the distinction between natural and chemical products to blur and almost disappear, the implications were explored by his friend, the brilliant chemist, teacher, and publicist Justus Liebig who shared Stahl's faith in practical applications, Liebig came to be increasingly identified with the chemistry of agriculture and physiology, and organic chemistry, his pupils August Hofmann and James Muspratt, Adolf Baeyer

© Copyright Soyinfo Center 2014

who was Liebig's successor at Munich created a school based on the study of natural products (p. 10-11), Emil Fischer, Baeyer's greatest pupil, explored the carbohydrates and proteins, competition in Germany between organic chemistry and biochemistry, German Professor Julius Wiesner and his book *Raw Materials of the Plant World* (*Die Rohstoffe des Pflanzenreiches*) (p. 12-13).

"In 1857, Pasteur demonstrated that lactic acid fermentation was the result of the action of live microbes. Through the next decade, he debated increasingly hotly with Liebig who insisted on the purely chemical origins of fermentation phenomena. Pasteur constructed a new scientific discipline based on his understanding of microbes, 'microbiology.' Where chemistry was characterized by the balance, the new science had its own central instrument, the microscope" (p. 14).

The 19th century in Europe saw the rise of major cities such as Paris and London, and the expansion of the industrial revolution in Britain. "Academic leaders argued that they should play their part in helping a development of the society that would avoid the division into a declining agricultural sector and an impoverished industrial proletariat.

"The first German agricultural college was established in the year of Prussia's humiliation at the hands of the French, 1806, by a practical agriculturalist much impressed by British achievements, A.E. Thaer. His academy at Möglin was combined with the newly established University of Berlin in 1810. Largely inspired by Thaer's example, twenty agricultural colleges were founded in German-speaking lands between 1818 and 1858. The development of trades traditionally closely associated with agricultural development would also enable organic change."

"So far the emphasis was on teaching. However, all over Europe research followed.

"In France, Boussingault founded his private agricultural research laboratory at Bechelbronn in 1835, and Lawes and Gilbert established their laboratory at Rothamsted near London in 1842. These initiatives inspired, in Germany, the foundation of a research laboratory at Möckern (Moeckern), in 1851. Two years later, another followed in Chemnitz. By 1863, there were seventeen and, by 1877, fifty-nine so-called research stations in Germany. In the United States, the Morrill Act of 1863 and the Hatch Act of 1887 sustained the development of land grant colleges and associated agricultural research stations [sic, experiment stations] (p. 16-17)."

Brewing was an agricultural industry and increasingly big business in Germany and Britain, the foundation of the world's first major chemical association, the Chemical Society of London in 1841 was driven by the energies of Robert Warington, German leaders were J.J. Steinmann (1799-1833) and Carl Balling–who espoused the term *Zymotechnik* in the 4th volume of his classic text on brewing (*Account of the Progress of the Zymotechnic Arts and Sciences*). "Just as agricultural centres had moved from a purely educational role to a greater influence on research, so this process could be observed in the special case of brewing. The first great centre, established in 1872, was at the school at Weihenstephan near Munich where brewing had been taught for more than twenty years. Its formation was driven by the entrepreneurial pharmaceutical chemist Carl Lintner, who within three years of arriving at Weihenstephan in 1863 had founded his journal, *Bayerische Bierbrauer.* In the first volume, Lintner ran a series of historical articles about the life of Balling, as the first of the founders of zymotechnics 'for future cultural historians' (p. 18-19)."

Emil Christian Hansen and the damaging effects of wild yeasts, Balling identified the role of yeast in brewing before Pasteur, debate over use of the words zymotechnology vs. Pasteur's microbiologie (p. 20-21). Alfred Jorgensen popularized the word "zymotechnics," John Ewald Siebel started a journal titled *Zymotechnic Magazine* in Chicago and in 1901 he founded the Zymotechnic Institute. "Siebel was widely respected and sufficiently renowned to be the focus of a 1933 *History of Brewing in America.*

Chapter 2 (p. 48-49) discusses William J. Hale, Henry Ford, and the rise of Chemurgy in America. "Hale did not distinguish too fastidiously between the boundaries of chemistry and used his word rather as others had employed 'zymotechnology.'" A photo shows "Henry Ford demonstrating the strength of a car body made from soya bean-based plastic in 1941."

Chapter 5 (p. 106-09) discusses Japan as the dominant center of the fermentation industry by the 1960s, and the koji mold. "In Japan, the development of microbiology was closely related to agricultural development and found an institutional home in the Agricultural Chemistry Society established in 1924. So, for all the special features of Japanese culture, the concept of a microbiology harnessed to agriculture closely paralleled chemurgy in the United States. There is a strange irony in this, since the promoters of chemurgy were strongly nationalistic and particularly anti-Japanese.

In 1936, the key appointment of Kin-ichiro Sakaguchi as professor of agricultural chemistry at the University of Tokyo established the reputation of the nation's premier department of industrial microbiology."

The Danish firm of Novo Industri emerged as the world's largest enzyme manufacturer. Not until 1974 did Novo and Gist Brocades in the Netherlands develop cheap and effective methods for using enzymes to convert the glucose in corn to fructose (glucose isomerase). Otto Röhm (Roehm) patented an enzyme preparation for washing in 1913, and his company Röhm & Haas marketed their presoak product 'Burnus' for about 50 years.

The subsection titled "Biogas and gasohol" (p. 132-33) notes that in 1974, a sugar magnate in Brazil, Urbano Stumpf, persuaded the country's president that alcohol made

© Copyright Soyinfo Center 2014

from sugar could by itself power all Brazil's cars, replacing petroleum. Brazil committed great resources to this program and by 1980 was seen as a model to the world. America, too, was interested in reviving what Hale had called "agri-crude" and what was coming to be called "gasohol."

The subsection on "single-cell protein" (p. 133) discusses chlorella, tempeh, soya texturized to make an artificial meat, and growing microorganisms on petroleum for food. Max Delbrueck had called yeast an "edible mushroom."

Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 164-172. RAPA Publication (FAO), No. 1993/6.

• ***Summary:*** Contents: (1) Introduction. (2) FAO's involvement in soybean research and development in Asia. (3) The FAO-executed projects: National projects (Sri Lanka, Vietnam, Philippines), regional projects. (4) Other FAO-supported activities: Networking (Global Soybean Research Network, Asian Soybean Network), evaluation (Buhler's Full-fat soybean processing technology, Plenty's soymilk production in Sri Lanka, Danish Turnkey Dairies soymilk plant).

Tables: (1) Soybean production, area harvested, and yield in developing and developed countries in Asia: Developing countries: Bhutan, Cambodia, China, DPR Korea (north), India, Indonesia, Iran, Laos, Malaysia, Myanmar, Nepal, Pakistan, Papua New Guinea, Philippines, Rep. of Korea (south), Sri Lanka, Thailand, Vietnam. Developed countries: Australia, Japan, New Zealand. (2) Activities involving soybean sponsored by RAS/82/002 (1983-89). (3) Activities involving soybean sponsored by RAS/89/040 (1990-93).

Regional projects RAS/82/002: "During the period of 1983-89, an FAO-executed and UNDP-funded project, RAS/82/002, entitled "Research and development of Food Legumes and Coarse Grains {FLCG} in the Tropics and Sub-Tropics of Asia" was operated. This project involved Bangladesh, Indonesia, Lao PDR, Nepal, Pakistan, the Philippines, Republic of Korea, Sri Lanka, Thailand, and Vietnam. The project was planned in two phases; the duration of Phase I was 2 years, and activities began in September 1983. The proposed UNDP contribution for this phase was US $450,000 and the actual expenditure was US $454,394. Phase II was approved in August 1985 but implemented in July 1987 and concluded in June 1989. Total UNDP contribution for both phases was US $1,331,453.

"The long-term objective of the project was to increase production of FLCG in the participating countries in order to bridge the gap between the demand for protein-rich food for domestic needs and export markets and the actual production. One of the main goals of the project was to establish a network of national institutions, linked with international institutions capable of advancing the relevant development objective of participating countries through coordinated research and extension activities."

RAS/89/040: "A follow-up project of RAS/82/002, entitled 'Regional Cooperative Programme for the Improvement of Food Legumes and Coarse Grains in Asia', funded by UNDP, is being executed by FAO. It became operational in April 1990 and has a termination date of December 1993. Four more countries (China, India, Myanmar, and Malaysia) joined the network in this follow-up phase. The Government of Indonesia continues to provide the Secretariat."

Table 1: Bhutan: Soybean production increased from 900 tonnes (metric tons) in 1981 to 1,300 tonnes in 1991.

Cambodia: Soybean production increased from 1,100 tonnes in 1981 to 16,000 tonnes in 1991–growing at 28.0% a year on average.

North Korea: Soybean production increased from 350,000 tonnes in 1981 to 460,000 tonnes in 1991–growing

© Copyright Soyinfo Center 2014

at 2.5% a year.

Iran: Soybean production increased from 62,000 tonnes in 1981 to 105,000 tonnes in 1991–growing at 0.8% a year.

Laos: Soybean production increased from 3,900 tonnes in 1981 to 4,200 tonnes in 1991–growing at 1.3% a year.

Papua New Guinea: Either had no soybean production or no information was available.

New Zealand: Soybean production decreased from 300 tonnes in 1981 to 100 tonnes in 1991–decreasing at -11.0% a year. Address: 1. Regional Plant Production Officer (Industrial Crops), 2. Regional Agricultural Engineering and Agro-Industries Officer: Both: FAO/RAPA, Bangkok, Thailand; 3. Senior Officer, Plant Production and Protection Div., FAO, Rome, Italy.

10053. Fujita, Frank. 1993. Foo, a Japanese-American prisoner of the Rising Sun: the secret prison diary of Frank "Foo" Fujita. Denton, Texas: University of North Texas Press. xviii + 371 p. Foreword and notes by Stanley L. Faulk. Introduction by Robert Wear. Illust. Index. 25 cm. Series: War and the Southwest, No. 1.

• ***Summary:*** Page 148: "As the war progressed and supplies diminished, the carpenters were not permitted to build coffins anymore. Instead *miso* barrels were used. *Miso* is a reddish brown paste made from soy beans and has a very good flavor. The barrels were about thirty inches in diameter and twenty-four inches tall. A dead body would not fit into a barrel that size, so the bones of the corpse were broken in order to cram the body into the barrel... the dead were taken away and cremated."

Page 149-50: The mosquitoes were even worse than the fleas and bed bugs because their bites would itch for a much longer time. "Everyone complained so much that the Japanese decided to let us cover the large cracks between the planks of the walls and the ceiling. They gave us stacks of old Japanese newspapers to be torn into strips... The galley made up a lot of rice or wheat paste, and each room was issued two soy sauce buckets full of paste to stick the newspaper strips up with."

Page 163: He liked to catch little smeltlike fish, from 3-6 inches in length, "then he would have me cook them for him. He liked them cooked whole by dipping them in a soy sauce and sugar mixture and then broiling them over the coals in the hibachi."

Page 293: "Our noon chow was one bread bun per man and nothing else. They were mildewed and almost inedible. There was a very small amount of *miso,* a fermented soybean paste, mixed with some parched soybeans, and we drew lots to see who would share this... Cigarettes were now back down to one per day."

10054. Kataoka, Haruyo. 1993. Japan: A cookbook. Munich, Germany: Mosiak Verlag. 157 p. Index. [Eng]*

• ***Summary:*** This book contains one section (2 pages) that discuss tofu, including how to make tofu at home, followed by 15 tofu recipes. Other dishes using soy appear elsewhere, like Plum Wine with Soya, Milk Jelly, and some dishes that use miso as an ingredient.

Note: This book was originally published by in 1990 Mosiak Verlag in German.

10055. Kitamura, Keisuke. 1993. Country Report 6–Japan. In: N. Chomchalow & P. Narong, eds. 1993. Soybean in Asia: Proceedings of the Planning Workshop for the Establishment of the Asian Component of a Global Network on Tropical and Subtropical Soybeans. Bangkok, Thailand: FAO Regional Office for Asia and the Pacific. viii + 218 p. See p. 64-69. RAPA Publication (FAO), No. 1993/6.

• ***Summary:*** Contents: (1) Production and uses. (2) Research activities. (3) Germplasm.

Germplasm: "Soybeans were introduced from abroad since the old days. Genetic resources of landraces were continuously collected and surveyed since the beginning of this century. In recent years, a number of soybean varieties were introduced from many foreign countries and international institutions, including Korea, China, Nepal, Thailand, USA, AVRDC, etc. Today the total soybean accessions are about 6,000 including wild soybeans. They are conserved and managed in the National Center of Genetic Resources within the National Institute of Agrobiological Resources."

Figures: (1) Scheme of domestic soybean price in Japan. (2) Geographical distribution of soybean varieties according to their ecotypes and location of soybean breeding stations in Japan.

Tables: (1) Planted area, production and yield of soybean in Japan. Total planted area has decreased from 306,000 ha in 1960 to 146,000 ha in 1990. Production has decreased from 418,000 tonnes (metric tons) in 1960 to 220,000 tonnes in 1990. Yield has increased from 1,360 kg/ha in 1960 to a peak of 1,790 kg/ha in 1990. (2) Trends of soybean supply and demand. Japan's imports have increased from 3,244,000 tonnes in 1970 to 4,330,000 tonnes in 1991, when 97.3% of the soybeans used in Japan were imported. Uses of soybeans in 1990: Oil 3,630,000 tonnes–up from 2,505,000 tonnes in 1970. Food 725,00 tonnes–up from 522,000 tonnes in 1970. Fermented products (miso, shoyu, natto) 196,000 tonnes–down from a peak of 208,000 tonnes in 1980. Animal feed 95,000 tonnes–up from 10,000 tonnes in 1970. (3) Trends of soybean price. (4) Trends of seed production. (5) Soybean research activities in Japan. (6) Objectives of the respective breeding stations for soybean. (7) Characteristics of the leading and some unique soybean varieties in Japan. For each of 15 varieties gives: Name, year registered (1928-1991), breeding method (crossing, pure line, mutation, back-crossing), ecotype, weight of 100 seeds, seed color, hilum color, characteristics. Address: National Agricultural Research Centre, Tsukuba City, Japan.

10056. Lock, Margaret M. 1993. Encounters with aging: Mythologies of menopause in Japan and North America. Berkeley, California: University of California Press. xliv + 439 p. Illust. Index. 24 cm. [552* ref]
• ***Summary:*** This is an extremely interesting, carefully researched, original book. However, soy is not mentioned. Contents: List of illustrations. Acknowledgments. Prologue: Scientific discourse and aging women. Part 1: Japan: Maturity and *kônenki.* 1. The turn of life–Unstable meanings. 2. Probabilities and *kônenki.* 3. Resignation, resistance, satisfaction–Narratives of maturity. 4. The pathology of modernity. 5. Faltering discipline and the ailing family. 6. Illusion of indolence–Ideology and partial truths. 7. Odd women out. 8. Controlled selves and tempered bodies. 9. Peering behind the platitudes–Rituals of resistance. 10. The doctoring of *kônenki.* 10. "Invisible messengers." 11. The making of menopause. 12. Against nature–Menopause as herald of decay. "An act of freedom." Epilogue: The politics of aging. Flashes of immortality. Notes. Bibliography.

Concerning hot flashes and night sweats (p. 29-30): Dr. Mori Ichirô, who works in Kyushu, has spent the greater part of his career doing research on *kônenki.* He thinks that neither its definition not its symptoms coincide with the current Western concept of menopause. Few Japanese accept the idea that *kônenki* is a state that demands medical care–such as hormone replacement therapy. Rather, it is a natural part of the aging process. Herbs can be effective against a wide range of *kônenki* symptoms (p. 296-97).

Concerning osteoporosis in postmenopausal Japanese women: Although the research is limited, there are strong indications that the incidence of osteoporosis among Japanese (and Chinese) women is less than half that of women living in North America–despite the fact that the bone density of East Asian women is less than that of Caucasian women (p. 295).

The life expectancy of Japanese women is the longest in the world. Japanese medicine is oriented toward prevention and primary care.

Some of the early articles advocating estrogen replacement therapy were written by Robert Wilson and his wife as early as 1963. Their research was funded by Wyeth Ayerst, the pharmaceutical company that makes Premarin and has the largest investment in production and sales of estrogen replacement therapy. Advertisements by Ayerst in medical journals of the time urged doctors to "Keep her on Premarin" and used the slogan "When a woman outlives her ovaries..." To keep women free of "senile decay," Wilson advocated not only that declining estrogen be replaced, but also that another crucial ovarian hormone, progesterone, whose principal function was to prepare the lining of the uterus for a fertilized egg, should also be replaced (p. 348-49). This view of menopause as a deficiency disease is increasingly criticized by modern women, who often also consider it demeaning of women and based on propaganda from pharmaceutical companies.

"The Women's Health Network suggests less expensive, safer, and 'more natural' forms of prevention against chronic disease, such as dietary changes, dispensing with cigarettes and excessive alcohol, and environmental improvements..." Dietary changes have significantly reduced the rate of heart disease among men. "Moreover, a diet high in soybeans has recently been linked not only to a reduced incidence of hot flashes but also to lower incidence of breast cancer among premenopausal women (*Lancet,* 1991, p. 1197)" (p. 354-55).

Not all "women with bone fractures have osteoporosis and not all women with osteoporosis have fractures–facts that are often confused. Moreover, there is no simple relation between bone mineral density and incidence of osteoporosis" (p. 355). Address: Medical anthropologist, McGill Univ., Montreal, Canada.

10057. Loewe, Michael. ed. 1993. Early Chinese texts: A bibliographical guide. Berkeley, California: Society for the Study of Early China (SSEC) and Institute of East Asian Studies (IAES), Univ. of California, Berkeley. xiv + 546 p. Index of Chinese, Japanese and Western scholars. 24 cm. Series: Early China Special Monograph Series, No. 2 [31 ref]
• ***Summary:*** This important reference work provides basic information and aids with which to begin the study of an early Chinese text. The 64 texts are arranged in alphabetical order. Chinese names and terms are transliterated using the Wade-Giles system, with minimal hyphenation, and without use of the character *ê.* For each work, a knowledgeable scholar (or sometimes two) discusses most or all of the following: Contents, structure, and established conclusions, sources of the work, authorship and date of composition, transmission / history of the text and early commentaries, newly discovered manuscripts, principal editions, selected studies, translations, Japanese editions, and Indexes. discusses the date of composition, and indicates questions of authorship and authenticity.

Appendix II contains 5 chronological tables: (1) Western Chou kings (1099 to 771 BC), with the name and reign years of each. (2) Eastern Chou kings (770 to 256 BC). (3) Former Han emperors, with the personal name, dynastic title, and reign years of each. (4) Hsin dynasty (the only ruler was Wang Mang, 9 to 23 AD). (5) Later Han emperors, with personal name, dynastic title, and reign years.

"This book is not designed for those who are new to Chinese studies; it is addressed principally to those who are embarking on research after completing some three or four years of a course of basic training and are therefore familiar with the fundamental developments of China's literary and historical traditions."

Note: The Society for the Study of Early China (SSEC) has no physical location. The editor's surname is pronounced LOW-ee. Address: Grantchester.

10058. Matsumoto, Valerie J. 1993. Farming the home place: A Japanese American community in California, 1919-1982. Ithaca, New York: Cornell University Press. ix + 262 p. Illust. (photos). Index. 24 cm. [100+* ref]
• ***Summary:*** A very interesting look, spanning three generations, at the Cortez Colony, in Cortez, Merced Co., San Joaquin Valley, central California, the last Japanese Christian farming community formed by Kyutaro Abiko in 1919. It is written from a feminist perspective.

In the lean early years at Cortez, "the settlers' diet was limited; meals often consisted of *miso* soup and rice,..." (p. 47).

New Year's was the major holiday of the year. Everyone would partake of carefully prepared traditional Japanese dishes such as chicken *teriyaki, ozoni* (a soup containing mochi, symbolizing prosperity), *mame* ([soy] beans, symbolic of good health), and sushi (vinegared rice "rolled in sheets of toasted seaweed or stuffed into soybean wrappers [deep-fried tofu pouches]) (p. 78).

A glossary of terms (p. 231) includes: an (sweetened red bean paste), azuki (red beans), kinako (soybean flour), mame (beans), miso (fermented soybean paste), nori, shoyu (soy sauce), sushi, teriyaki (broiled meat cooked with soy sauce, wine, and ginger).

Photos show: Abiko family portrait, 1925 (p. 27). Address: UCLA.

10059. Moran, J.F. 1993. The Japanese and the Jesuits: Alessandro Valignano in sixteenth-century Japan. London and New York: Routledge. 242 p. *
• ***Summary:*** Contains many original translations of his work. The arrangement of the material is thematic rather than chronological, and the themes are, for the most part, the same which preoccupied Valignano himself. Address: SJ, Yamaguchi, Japan.

10060. Nagai, Toshirô; Kiuchi, Kan. 1993. [Development of natto starters]. *Daily Foods Science* 13:24-30. [50+ ref. Jap]*

10061. Okubo, Kazuyoshi. 1993. Tôfu, nattô [Tofu and natto]. Tokyo: Nihon Hoso Shuppan Kyokai. 189 + [1] p. Illust. 19 cm. Series: Kenkoshoku, Karada ni Naze ii No?, no. 3. [10+ ref. Jap]*
• ***Summary:*** Kazuyoshi Okubo was born in 1938.

10062. Pitchford, Paul. 1993. Healing with whole foods: Oriental traditions and modern nutrition. Berkeley, California: North Atlantic Books. xxii + 656 p. Illust. Index. 26 cm. 2nd ed. 1996. 3rd ed. 2002 (both by same publisher). [536 ref]
• ***Summary:*** Contents: 1. Origins. Part I: The roots of diagnosis and treatment. 2. Yin-yang and beyond. 3. Qi vitality. The six divisions of yin and yang: 4. Heat/cold–The thermal nature of food and people. 5. Exterior/interior: Building immunity. 6. Excess and deficiency.

Part II: Essentials of nutrition. 7. Dietary transition. 8. Water. 9. Protein and vitamin B-12.

10. Oils and fats. 11. Sweeteners. 12. Salt. 23. Condiments, caffeine, and spices. 14. Vitamins and supplements. 15. Calcium. 16. Green food products. 17. Survival simplified. 18. Enjoyment of food. 19. Food combinations.

20. Fasting and purification. 21. Food and children.

Part III: The five element and organ system. 22. Five elements: Seasonal attunement and the organs in harmony and disease. 23. Therapeutic use of the five flavors. 24. Wood element. 25. Fire element. 26. Earth element. 27. Metal element. 28. Water element.

Part IV: Diseases and their dietary treatment. 29. Blood sugar imbalance [diabetes]. 30. The stomach and intestines. 31. Blood disorders. 32. Cancer and regeneration diets. 33. Other degenerative disorders.

Part V: Recipes and properties of vegetal foods. 34. Vibrational cooking. 35. Grains. 36. Breads. 37. Legumes–Peas, beans, and lentils: Healing properties of legumes, improving the digestibility of legumes, techniques for cooking legumes, miso, tempeh, tofu. 38. Nuts and seeds. 39. Vegetables.

40. Sprouts. 41. Salads. 42. Seaweeds: Agar-agar, dulse, hijiki and arame, kombu and kelp, nori, wakame, Irish moss and Corsican (*Alsidium helminthocorton;* it is sold as a tea and discharges worms. 43. Soups. 44. Sauces. 45. Condiments: Chutneys and relishes. 46. Spreads and patés. 47. Pickles. 48. Grain and seed milks (incl. sesame seed milk, almond milk, almond milk shake, sprouted grain milk {oats, rice, millet, barley}, cooked grain milk). 49. Rejuvelac and yogurt.

50. Fruit. 51. Desserts. Appendixes: Recipe locator. Bibliography (180 references, mostly alternative; Oriental philosophy. Chinese medicine: Theory and foundations. Chinese dietary therapy. Ayurvedic and Tibetan medicine. Western approach to nutrition. Healing the spirit and mind. Chinese herbology. Western herbology. Healing with food. Green foods. Amaranth. Seaweeds. Vegetarian, macrobiotic, vegan. Children. Ecology, politics, and ethics of food. Degenerative diseases and immunity. Toxins and radiation. Cookbooks. Food catalogs, guides, and references. Sources of data for tables, charts, and nutritional statistics). References and notes (356 refs, mostly scientific). Resources index (Incl. Soyfoods Center).

The following are listed in the index (f = most important pages): Acid-forming foods (p. 235f, 240). Aduki [azuki] beans (p. 26, 34, 50, 60, 68, 77, 178, 273, 305, 307, 319, 362, 467f). Amaranth (lots, 419-20f). Amasake (p. 98, 152-53, 155, 160, 163, 275, 287, 592f). Animal products (lots). Aspergillus oryzae (p. 592). Ayurveda (lots). Black sesame seed (lots, 492f). Black soybean (60, 68, 288, 317, 324, 327,

© Copyright Soyinfo Center 2014

468). Bran (p. 332) and its role in relieving constipation (345-46). Buckwheat (lots, 422f). Buddha. Calcium (lots). Cancer. Cheese (but no soy cheese). Cholesterol. Cigarette smoking. Coldness, bodily. Dampness, bodily. Deficiency. Digestibility (Improving the digestibility of legumes, p. 471-73). Five elements system. Free radicals. Gerson, Max and cancer therapy (p. 41, 126, 162, 365-66, 381). Goiter. Gomasio (sic, gomashio; sesame salt, p. 272, 566f). Heart / Heart/mind. Heat (lots). Hijiki. Ice cream (p. 291, 305 [no soy]). Job's tears (p. 381, 383). Kasha (buckwheat, p. 422). Kelp. Kloss, Jethro (p. 366, 381). Koji (p. 479). Kudzu (p. 22, 25, 29, 60, 289, 299, 309, 317, 414f). Lecithin (lots, p. 127, 470, 414f). Legumes (lots, p. 466-471, 473f). Macrobiotics (p. 3-4). Marijuana (lots). Menopause (p. 181-82, 362-364f, 441, 468, 497). Microwave cooking (p. 20). Milk). Mind, Chinese Zen concept of. Miso (p. 33-34, 60, 72-74, 78, 81, 90, 92, 98, 101, 105-06, 150, 159, 164, 195, 221-22, 272, 275, 315, 376, 479-82f; natto miso p. 482). Mochi (p. 436-37f). Mother's milk–to increase. Mucus. Nails, dry and brittle (p. 285). Oils (incl. soy oil, p. 138-41) Omega-3 fatty acids. Nori. Protein (lots). Qi [chi, p. 16-17]. Quinoa. Rice syrup. Schweitzer, Albert (365). Sea palm (p. 541). Seaweed (lots, p. 540-55f–see also Agar, alaria, arame, bladderwrack, Corsican, dulse, hijiki, Irish moss, kelp, kombu, nori, ocean ribbon, sea lettuce, sea palm, wakame). Seitan (p. 446-47). Sesame butter (p. 81, 492). Sesame seed (lots, 492f). Soybean (p. 52, 56, 60, 105, 124, 161, 178, 232, 235n, 250, 300, 466, 470f; children and soy products 253-54; soy sprouts p. 22, 34, 122, 291, 470f; see also miso, soy sauce, tempeh, tofu).

The section titled "Soybean" (p. 470) begins: "Cooling thermal nature; sweet flavor; strengthens the spleen-pancreas; influences the colon; moistens conditions of *dryness;* supplements the kidneys; cleanses the blood vessels and heart, improving circulation; helps restore pancreatic functioning (especially in diabetic conditions); promotes clear vision; diuretic; lowers fever; highly alkalizing and eliminates toxins from the body; boosts milk secretion in nursing mothers. Also used as a remedy for dizziness, childhood malnourishment (especially in the form of tempeh and soy milk), skin eruptions, constipation, edema, excessive fluid retention and toxemia during pregnancy, and food poisoning. For the imbalances during pregnancy and for food poisoning, drink soybean juice (prepare as 'aduki juice' above). Soybeans are a natural source of lecithin–a brain food.

"Unless well-cooked, soybeans inhibit the digestive enzyme trypsin, making them [sic] difficult to digest. The fermentation process, such as used in tempeh, tofu, miso, and soy sauce, also eliminates the beans' trypsin-inhibiting effect.

"Soybean sprouts are cooling with a sweet flavor. They are diuretic and used to treat spasms, arthritis, food stagnation, *heat*-type coughs and other heat conditions marked by one or more signs such as yellow tongue coating, yellow mucus, and scanty, dark yellow urine."

Soy sauce (p. 34, 78, 81, 98, 105-06, 150, 159, 164, 195, 222, 272, 277, 315, 414f, 480). Spirulina. Sprouting (p. 232-33). Sprouts (lots, p. 528-30f). Steiner, Rudolf (p. 19-20, 504). Stomach (beneficial foods, stomach/duodenal heat and, strengthening food). Stress. Sugar (lots). Superoxide dismutase (SOD). Sweating–night sweats (p. 24, 117, 441). Sweeteners. Sweet rice (p. 433f). Tahini (sesame, p. 106, 225, 493). Tempeh (p. 22, 34, 56, 60, 96, 99, 105, 124, 216, 221, 242, 250, 290, 307, 310, 482-86f; vitamin B-12 and p. 98). Thirst. Tobacco. Tofu (p. 22, 25, 34, 55-56, 60, 68, 81, 105, 124, 242, 250, 290-91, 300, 303, 307, 310, 317, 327, 486-89f). Tomato. Tongue coating and digestion (p. 399). Umeboshi plums (p. 78, 159, 222, 272, 307, 414, 583f). Umeboshi vinegar (p. 414). Urinary incontinence and deficiency of kidney qi (p. 318-19). Urination, frequent, from kidney qi and yang deficiencies (p. 318). Valerian root. Vegan (p. 5, 95, 137, 261, 389, 502). Vegetarianism (p. 81-82, 95). Vitamin B-12. Vitamin E. Vitamin K. Wakame. Warming foods (p. 18-20, 26-27). Warts. Watermelon. Wind, bodily (foods which quell, 286-89; incl. black soybean, p. 468). Yang. Yin.

Talk with Heartwood Institute. 1997. Nov. 12. This is basically a massage school that also offers retreats. Paul's background is in the martial arts and massage. He graduated from a college after 4 years but the name of the college is not available. He also did 2 years of graduate work at an institution whose name is not available. The Institute sent their catalog/brochure. Address: Director, Heartwood Inst. Wellness Clinic and Oriental Healing Arts Program, 220 Harmony Lane, Garberville, California 95542. Phone: 707-923-5000.

10063. Shimizu, Kay. 1993. Tsukemono: Japanese pickled vegetables. Tokyo: Shufunotomo / Japan Publications. 112 p. Illust. (color). Index. 27 cm. [Eng]

• ***Summary:*** Tsukemomo are Japanese pickled foods, primarily vegetables. Drying and pickling were two of the earliest ways of preserving food. If you've never tried Japanese tsukemono, get ready for a delicious surprise. This excellent book is a good place to start. We would start with takuan and umeboshi (p. 22).

Soy related recipes: Basic *miso-zuke* (p. 36-37). Spicy pickled celery (Celery *miso-garame*) (p. 37). *Koji / miso / kasu* tsukemono base (p. 39). Amazake (p. 40-41). Daikon radish pickled in koji (*Bettara-zuke*) (p. 41). Scallions in shoyu (*Rakkyo shoyu-zuke*) (p. 43). Garlic with soy sauce (p. 64). Garlic with bean paste [miso] (p. 64). Okra and onion pickles (*Okra shoyu-zuke*) (p. 70). Soy-flavored daikon pickle (*Daikon shoyu-zuke*) (p. 82, 84). Asparagus with bean paste (Asparagus *miso-zuke*) (p. 87). Spicy cabbage tsukemono (Cabbage *shoyu-zuke*) (p. 88). Cooked and pickled kelp (*Nori tsukudani*) (p. 97). Soy sauce pickled vegetables (*San-bai-zuke*) (p. 98).

© Copyright Soyinfo Center 2014

A 2-page glossary includes: "Age (abura-age)–deep-fried soybean cake (*tofu*). An–sweetened red *azuki* beans prepared as a paste for confections. Amazake–non-alcoholic creamy-thick hot drink prepared from rice fermentation with the addition of rice koji.

"Drop lid. A necessary item for Japanese pickling. A wooden cover which is smaller in diameter than the pot opening, so lid will lay flat on top of food, and weight can be placed on top of lid."

Dou-ban-jiang–spicy Chinese brown bean paste, contains chili. Koji–a yeast-like rice mold that works primarily to convert starches into sugars during a fermentation process.

Mirin–a thick sweet wine made from glutinous rice, used primarily for cooking. Miso–fermented soybean paste. Mochiko–glutinous rice flour. Mochi–glutinous rice that has been pounded until soft and sticky, then formed into cakes. Mochi-gashi–a confection made from glutinous rice.

Natto–fermented soybeans with sticky texture and strong aroma. Nori–edible seaweed, laver. Shoyu–Japanese soy sauce, considerably lighter than Chinese soy sauce, which should not be substituted for shoyu.

Suribachi–Japanese pestle and mortar (earthenware bowl with ridged edges). Tsukudani–food simmered with shoyu, sugar, mirin and water until almost all liquid evaporates.

Ume–Japanese plum; technically a species of apricot, but usually translated as plum. Umeboshi–pickled plum. Wakame–an edible seaweed, thinner and softer than konbu kelp. Wasabi–Japanese green horseradish, most familiar in the west as a mound of pungent green paste served with sushi or sashimi.

Note: Real wasabi is very expensive, and is a completely different plant from horseradish, from a different genus and species. Real wasabi is rarely found outside Japan and is much more potent than its imitation, "western wasabi"–a mixture of horseradish, mustard, and green food coloring. Address: Saratoga, California.

10064. Shinshu-Miso Research Institute. 1993. *Report of the Shinshu-Miso Research Institute* No. 34. p. 1-119. [Jap; eng] Address: Nakagosho 469-6, Nagano-shi 380, Japan.

10065. Tamura, Linda. 1993. The Hood River Issei: An oral history of Japanese settlers in Oregon's Hood River Valley. Urbana and Chicago, Illinois: University of Illinois Press. xli + 337 p. Foreword by Roger Daniels. Illust. Index. 23 cm. [605* endnotes]

• ***Summary:*** A superb book, carefully researched and well. By telling, in depth, the story of one small community of Issei in Hood River, Oregon, from their youth in Japan until their return home after the brutal internment camps, she captures the exquisitely the story of the ordeals faced by the first generation of Japanese (such honest, hard-working people) in racist America. Through her many interviews, the Issei are able to speak for themselves, in their own words, throughout this book.

Soy-related passages: funyu = fermented bean cake = 59! miso = p. 65, 67, 77. Soy sauce = 25, 26, 66, 75, 138. soybean = p. 26.

Page 58: Sekihan (steamed rice mixed with red beans [azuki]). Page 134: O-hagi (sweetened bean jam filled with mashed rice).

Linda Tamura is a native of Hood River and a third-generation Japanese American. Address: Prof. of education and chair of the Education Dep., Pacific Univ., Forest Grove, Oregon.

10066. Taylor, Sandra C. 1993. Jewel of the desert: Japanese American internment at Topaz. Berkeley, Los Angeles, Oxford: University of California Press. xix + 343 p. Plus 8 unnumbered pages of plates. Illust. Maps. Index. 24 cm. [125 + 808 endnotes]

• ***Summary:*** This is "the only in-depth narrative history of both an assembly center and a concentration camp" (Gary Y. Okihiro, rear cover). The camp, Topaz, was in Utah, but the assembly center, Tanforan Racetrack, was in San Bruno, northern California.

Contents: 1. Japanese San Francisco. 2. From Pearl Harbor to evacuation. 3. Life in a racetrack. 4. Welcome to Utah. 5. The jewel of the desert. 6. Dissension, departure, and grim determination. 7. An end and a beginning. 8. Nikkei lives: The Impact of Internment. 9. Coming home, wherever that is. Abbreviations. Notes.

Tofu is mentioned 5 times and miso twice. Address: Prof. of History, Univ. of Utah.

10070. *Toyo Shinpo* (*Soyfoods News*). 1994. Tôfu, nattô was gan o yôbô suru? Kôka no kaime e ekigaku chôsa susumu [Do tofu and natto prevent cancer? Advancing epidemiologic research to elucidate effects]. Jan. 21. p. 11. [Jap]

10071. O'Brien, Jim. 1994. Can tofu stop cancer? Research shows soy foods cut risk of breast, prostate cancers *Your Health.* Jan. 25. p. 21-22. [1 ref]
• ***Summary:*** Mark Messina, PhD, a nutritionist and former researcher at the National Cancer Institute for 5 years, states that "There's strong evidence to indicate that soy can lower cancer risk, especially of the breast and prostate." Messina says that "soy may contain 'anti-estrogens,' compounds that perform many of the necessary and beneficial functions of real estrogen, but not the harmful stuff (for example estrogen is vital for reproductive health, but researchers believe it may spur growth of many breast cancers).

In Japan, where the diet is rich in soy [and much lower in fat], the breast cancer rate is much lower than in the USA. Every year in Japan roughly 7 women per 100,000 die of breast cancer and 28 per 100,000 are diagnosed with the disease; the corresponding figures for U.S. women are 27 and 105.

Japanese men also have low rates of prostate cancer. 3.5 per 100,000 Japanese men die of this disease every year but it kills 15.7 per 100,000 American men–also nearly a fourfold difference.

10072. Macdonald, Bruce. 1994. Macrobiotic Wholesale Co. is now Macrobiotic Company of America (MCOA) (Interview). *SoyaScan Notes.* Jan. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bruce (who was one of the early important figures in Erewhon) bought this company from Kurt Schmitz on 15 Sept. 1993. Kurt, who is about age 65, had come to North Carolina from California to retire. He had worked at Hewlett-Packard for more than 20 years. He purchased the company (named Macrobiotic Wholesale Co.) in Aug. 1986 from Great Eastern Sun; Barry Rand negotiated the deal. At the time the company had sales of about $170,000/year; now its sales are well over $1,300,000/year and the last two months have set sales records. Bruce renamed it Macrobiotic Company of America. Bruce used to live in Vermont, but he now lives in North Carolina. Kurt is interested in possibly starting a miso manufacturing company in North Carolina–which has long been considered by macrobiotic teachers to have an ideal climate for making miso (hot summers, cold winters, somewhat humid). The American Miso Company is only 50 miles away. Bruce would like to move the company up to the northeast; he feels it is situated in the wrong place.

Macrobiotic Wholesale Company used to be a division of Great Eastern Sun. Great Eastern Sun sold products to distributors, whereas Macrobiotic Wholesale Company sold directly to retail stores. The distributors got upset with Great Eastern Sun for wearing two hats, so Great Eastern Sun decided to sell Macrobiotic Wholesale Company. Barry Evans still owns Great Eastern Sun.

Note: Half of MCOA is owned by Muso Shokuhin of Japan. When William Shurtleff asked Bruce about this on 4 April 1997, Bruce confirmed that it was true. When the company was purchased from Kurt Schmitz on 15 Sept. 1993, Yuko Okada of Muso put up 95% of the money and Bruce put up 5%–using his own funds. Yuko borrowed all or most of the 95% to make the purchase, and MCOA is paying him back. Bruce agreed to manage the company in exchange for 50% ownership, which he still has. Muso owns the other 50%. He did not tell the true story to Shurtleff in 1994 because Muso wanted to keep this semi-confidential. Address: Owner, Macrobiotic Company of America, 799 Old Leicester Hwy, Asheville, North Carolina 28806. Phone: 704-252-1221.

10073. Nichii Company of America, Inc. 1994. Re: Closing of Torrance office and the relocation of its headquarters to the state of Iowa. Effective March 1, 1994. Letter to customers, suppliers, and financial institutions, Jan. 31. 2 p. Typed, with signature on letterhead. [Eng; jap]
• ***Summary:*** The new address in Iowa will be: Soyflaking Plant, 21 Mycal Drive, Jefferson, Iowa 50129. Telephone: (515) 386-2100. Fax: (515) 386-3237. This announcement comes in the form of a formal printed card in English and Japanese, and a letter from Itaru "Terry" Tanaka, Director and General Manager. After March 1, Al Richardson and Pamela Ochoa will no longer be employed by Nichii Co. However Mr. Richardson will serve as an independent sales

representative for soy products in the USA. Address: 23440 Hawthorne Blvd., Skypark 2, Suite 140, Torrance, California 90505. Phone: (310) 791-0010.

10074. Agriculture Canada, Oilseeds Division, International Markets Bureau, Markets and Industry Services Branch. 1994. Oilseed sector profile. Ottawa, Ontario, Canada. [iv] + 23 + 1 + 12 p. Jan. 28 cm. Spiral bound. [3 ref]

• ***Summary:*** Contents: Foreword. 1. Introduction. 2. The seed production subsector: Canola, soybeans, flaxseed, sunflower, mustard, safflower, composition.

3. The processing subsector: Background, crushing plants, industry statistics, methods of processing, oilseed crushings, vegetable oils, vegetable oilmeals, economic value of the industry. 4. The marketing subsector: Oilseeds marketing, hedging, processed oilseed products marketing.

5. Organizations: Canola, soybeans, flaxseed, crushers. 6. The environment: Domestic, international.

Appendix A: Role of the federal government in the Canadian oilseeds industry: Research, regulation, marketing. Appendix B. Oilseed industry directory: Industry association, oilseed processing companies, oilseed sector trading companies, research / education institutions, government, others.

Soybeans (p. 3): "Soybeans were introduced into Canada in 1893; however they did not become a commercial oilseed crop until the late 1920's. In that year [sic, about March 1930], the first soybean crushing plant [Milton Oil Refineries, Ltd.] was built in Milton, Ontario. The introduction of modern crushing mills occurred in the late 1930s. Increased demand for vegetable oil and protein meal during the early 1940's firmly established the crop and by 1950, soybeans had become a major cash crop in Ontario. Strong promotional efforts by the crushing industry assisted in continued expansion of the crop. During the 1980s, soybeans were introduced into Québec, the Maritimes and Manitoba as a source of livestock feed... In Québec, whole soybeans have become a viable alternative feed source. In other regions, whole soybeans are only a minor ingredient for livestock."

The soybean growers, like their canola counterparts, have shown a high degree of cohesion and organizational ability. In 1949, the Ontario Soybean Growers' Marketing Board was founded. The Board represents 25,000 producers and negotiates the pricing arrangements for Ontario soybeans. Its functions are discussed in more detail further in this report. The handling, crushing, and exporting of soybeans and soybean products is handled by private companies.

"Canadian soybean production has increased sharply from the late 1970's when up to 60 percent of Canadian soybean requirements had to be imported. In 1987, domestic production reached a level capable of supplying most internal demands for crushing (Table 3). Although some soybeans are still being imported from the U.S., Canada exports a larger volume of high quality white hilum soybeans for food utilization in Asian and European markets.

Domestic crush of these larger crops has made Canada self-sufficient in soyoil production; however, soymeal is still in a deficit position. About 600,000 tonnes representing close to 50 percent of domestic soymeal utilization requirements needs to be imported yearly.

"Up to 1991, the soybean crushing industry was operating below capacity." In that year, Victory Soya Mills in Toronto was closed. "The result is that the crushing capacity now meets the production of soybeans for crushing. Therefore, without an increase in crushing capacity, Canada will remain a net importer of oilmeals. Nevertheless, increasing the crush is economically questionable until a viable market outlet is found to absorb the additional soyoil produced. The 1992 elimination of the U.S. crude soyoil tariff (18%) could ease the situation. The two companies crushing soybeans in Canada are corporately linked to large multinational corporations, with major U.S. operations. Therefore, without tariff, the unrestricted movement of soyoil between the two countries is a possibility."

"Economic value of the industry (p. 12): The oilseed crushing industry makes a large and positive contribution to the Canadian economy. It is a processing industry and as such it provides enhanced strength to the economy through value-added contributions and the financial multiplier effect. In 1992 (table 16) the direct economic benefits were $1,810 million, and the contribution to the Canadian balance of payments was $599 million in total import replacement and $322 million in export earnings for a total contribution of $921 million.

Tables show: (3) Canadian supply and disposition of soybeans, soyoil and soymeal, 1988-1993. (5) Oilseed crushing facilities in Canada. Owners and their soybean crushing plants are: ADM Agri-Industries Ltd. (Windsor, Ontario): 1,250 tonnes capacity per 24 hours. CanAmera Foods (Hamilton, Ontario): 1270 tonnes capacity per 24 hours.

(7) Oilseed crushings in Canada: The soybean crush was #2 largest in Canada after canola and ahead of sunflower seed. The soybean crush was 908,200 tonnes in 1988, then 916,000 tonnes in 1989, then 1,083,500 tonnes in 1990, then 943,600 tonnes in 1991, and 995,200 tonnes in 1992.

(8) Vegetable oil production in Canada. Soybean oil is #2, far behind canola oil and far ahead of sunflower oil. During these 5 years, soybean oil production ranged from a low of 159,000 tonnes in 1988 to a high of 194,800 tonnes in 1990.

(9) Vegetable oil trade. During these 5 years, soybean oil imports to Canada were very small, ranging from a low of 4,000 tonnes in 1989 to a high of 16,000 tonnes in 1990. Soybean oil exports from Canada were even smaller, ranging from a low of 1,000 tonnes in 1989 to a high of 5,300 tonnes

© Copyright Soyinfo Center 2014

in 1991. Both soybean crushers also have their own soy oil refineries. The capacity of the ADM Agri-Industries Ltd. refinery (Windsor, Ontario) is 159,000 tonnes per year, whereas that of CanAmera Foods (Toronto) is 147,000 tonnes per year.

(13) Vegetable oilmeal production: Soybean meal is #2, behind canola meal but far ahead of sunflower meal. During these 5 years, soybean meal production ranged from a low of 698,300 tonnes in 1988 to a high of 835,800 tonnes in 1990.

(14) Vegetable oilmeal trade. During these 5 years, soybean oil imports to Canada were large, and vastly larger than any other oilmeal, ranging from a low of 565,400 tonnes in 1990 to a high of 692,100 tonnes in 1988. Soybean meal exports from Canada were very small, ranging from a low of 200 tonnes in 1989 to a high of 33,100 tonnes in 1992. By contrast, large amounts of canola meal (about half of the total amount produced each year) were exported.

(18) Soymeal imports by province. The top 3 in 1988 were: Ontario 326,026 tonnes. Manitoba 169,687 tonnes.

(19) Soybean exports by major markets: The top 8 in 1992 were: USA 69,135 tonnes. Portugal 62,515 tonnes. Netherlands 27,349 tonnes. Former USSR 20,752 tonnes. Hong Kong 19,376 tonnes. Singapore 17,268 tonnes. Japan 11,306 tonnes. Malaysia 10,687 tonnes. Quebec 137,365 tonnes. Total 1992 245,668 tonnes.

(24) EC-12 production of major oilseeds, 1989-193. In 1992-93 the leading oilseeds produced in the European Community were: Rapeseed 6,217,000 tonnes. Sunflowerseed 3,940,000 tonnes. Soybeans 1,294,000 tonnes. Cottonseed 606 tonnes. Linseed 316 tonnes. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8324.

10075. Gervais, Marc; Theriault, Sylvana; Bernard, Eric. 1994. Oilseed sector profile [Canada]. Ottawa, Ontario, Canada. [iv] + 23 + 1 + 12 p. Jan. 28 cm. Spiral bound.
• ***Summary:*** Contents (each accompanied by tables and charts; each section covers the years 1991-1994): Imports of soya beans for sowing (almost all come from the USA, followed by Chile and Japan). Imports of soya beans for oil extraction (almost all come from the USA). Imports of soya beans, nes [meaning unclear] (almost all come from USA, followed by Taiwan, China, and Japan).

Imports of soya-bean oil crude, whether or not degummed (almost all comes from the USA, followed by France). Imports of soya-bean oil and its fractions, refined but not chemically modified (almost all comes from the USA, followed by Singapore). Imports of veg fats & oils & fractions hydrogenated, inter or re-esterified, refined or not (almost all comes from the USA followed by UK and Netherlands). Imports of animal or veg fats & oils...

Imports of soya bean flour and meals. Imports of soya sauce (main suppliers are: USA, China, Japan, Hong Kong, Taiwan, Philippines, South Korea). Imports of protein concentrates and textured protein substances (almost all comes from USA). Imports of Soya-bean oil-cake and other solid residues, whether or not ground or pellet (almost all comes from USA). Imports of bran, sharps and other residues of leguminous plants, pelleted or not (almost all comes from USA).

Exports of soya beans for sowing (most goes to USA, followed by France, Germany and Austria). Exports of soya beans, for oil extraction (most goes to Netherlands, followed by France, Portugal and Spain). Exports of soya beans, nes (most goes to USA, followed by Hong Kong and Singapore). Exports of soya bean flour and meals (almost all goes to USA). Exports of soya-bean oil crude, whether or not degummed (almost all goes to the USA). Exports of soya-bean oil and its fractions, refined but not chemically modified (almost all goes to Pakistan, followed by USA). Exports of veg fats & oils & fractions hydrogenated, inter or re-esterified, refined or not (almost all goes to the USA). Imports of animal or veg fats & oils... (almost all goes to USA).

Exports of soya sauce (main buyers are UK, Japan, United States, Finland, Cuba).

Exports of protein concentrates and textured protein substances (almost all goes to USA). Exports of Soya-bean oil-cake and other solid residues, whether or not ground or pellet (almost all goes to USA). Exports of bran, sharps and other residues of leguminous plants, pelleted or not (almost all goes to USA). Address: Trade Evaluation and Analysis Div., International Markets Bureau, Markets and Industry Services Branch, Agriculture Canada, Ottawa, Ontario, Canada.

10076. Morinaga Nutritional Foods, Inc. 1994. Our popularity is spreading: New Mori-Nu Lite Tofu (Ad). *Vegetarian Times.* Jan. p. 31.
• ***Summary:*** This full-page color ad shows a pack of Mori-Nu Lite Silken Tofu (Firm) on a wooden table surrounded by cubes and slices of tofu, and Eggless Egg Salad in a bowl and on a sandwich. There is a recipe for this Eggless Egg Salad made with Mori-Nu Lite. A table comparing this Eggless Egg Salad with regular egg salad (½ cup each) shows the following: Calories 57 vs. 181. Fat 1.3 gm vs. 17.3 gm. Cholesterol 0 mg vs. 218 mg. Sodium 131 mg vs. 148 mg. Protein 6.3 gm each. Mori-New Lite silken tofu contains only 1 gm of fat per serving. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 310-787-0200.

10077. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Wheat gluten and seitan–Bibliography and sourcebook, A.D. 535 to 1993: Detailed information on 462 published documents (extensively annotated bibliography), 363 commercial gluten and seitan products, 208 original interviews (many full text) and overviews, 104 unpublished archival documents. Lafayette, California: Soyfoods Center.

© Copyright Soyinfo Center 2014

347 p. Subject/geographical index. Author/company index. Language index. Printed 9 Dec. 1993. 28 cm. [922 ref]
• ***Summary:*** This is the first bibliography ever published about wheat gluten or seitan, and the most comprehensive book ever published on this subject. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of these two interesting foods and food ingredients. Its scope includes all known information about this subject, worldwide, from A.D. 535 in China to the present.

This book is also the single most current and useful source of information on this subject, since 95% of all records contain a summary/abstract averaging 207 words in length.

This is one of more than 40 bibliographies on vegetable proteins being compiled by William Shurtleff and Akiko Aoyagi. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 32 different document types, both published and unpublished; every known publication on the subject in every language–including 736 in English, 68 in German, 61 in French, 26 in Chinese, etc.; and 208 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of gluten, seitan, and related products from their earliest beginnings to the present.

The bibliographic records in this book include 462 published documents and 104 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 363 commercial gluten and seitan products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included.

Introduction (p. 7-8): Gluten is a complex protein (composed of gliadin and glutenin) found mainly in wheat, but also in corn, barley and rye. It is best known for its ability to give elasticity and cohesiveness to bread, allowing it to rise. Vital wheat gluten, a cream-colored, free-flowing power, is most widely used to fortify flour and baked goods, but it also finds many other applications. One of the newest and most rapidly growing of these is its use as the main protein source in meatlike products.

Seitan is a Japanese word, coined in 1961 by George Ohsawa (Sakurazawa Nyoichi), a Japanese-born teacher of macrobiotics. He gave this name to a meatlike product developed by one of his students, Mr. Kiyoshi Mokutani. The product was first made commercially in 1962 by Marushima Shoyu K.K. in Japan. It was made by simmering raw wheat gluten in a broth, typically consisting of water, shoyu (soy sauce), kombu (a sea vegetable), and ginger. Seitan was first imported to the Western world in about 1969 by Erewhon, a macrobiotic and natural food company in Boston.

The earliest publication seen that mentions the word seitan is a 34-page macrobiotic cookbook titled Cooking Good Food, published in 1969 by Order of the Universe Publications in Boston. The author, whose name does not appear in the book, is Jim Ledbetter.

Since 1969, interest in and consumption of seitan in the United States and Europe has increased steadily. It continues to be used mostly as an alternative to meat and the macrobiotic community deserves much of the credit for its growing popularity. This book gives details on 104 commercial seitan products that have been developed and launched, mostly in the United States and Europe, and cites 80 published documents (including 40 cookbooks or articles with recipes) in which seitan is discussed. 73% of the published documents are written in English.

The history of gluten can be divided into various periods, a number of which are first documented in this book: Here are a few highlights.

Early History in China: The earliest Chinese reference seen to wheat gluten is in the *Ch'i-min yao-shu,* the world's earliest encyclopedia of agriculture, written by Chia Ssu-hsieh in A.D. 535. It describes *po to,* a type of noodle made largely from freshly-washed wheat gluten. By the Sung dynasty (960-1279) wheat gluten was being called by its present name, mien chin. It was widely used in place of meat, in various forms, by Buddhists in China. The first 17 citations in this bibliography, all published before 1600, come from China, as do 23 of the first 26 citation published before 1803.

Discovery by Scientists in the Western World: The earliest known reference to wheat gluten in the Western world was in 1745 in a Latin treatise titled *De Frumento* (Concerning Wheat), published in Italy. It describes how Beccari, a Professor of Medicine in the Anatomy and Chemistry Institute of Bologna, Italy, prepared a dough from wheat flour, then washed it with water to isolate the gluten. However as early as 1597 the term gluten had been used to refer to "The albuminous element of animal tissues" sometimes called animal gluten. In 1800 William Henry wrote in his book titled An Epitome of Chemistry: "Gluten

© Copyright Soyinfo Center 2014

forms the basis of the muscular or fleshy parts of animals." Numerous early observers noted that the gluten in wheat had distinctly meat-like or animal-like properties.

The first two English-language publications to mention wheat gluten appeared in 1803 in London. John Imison, in his *Elements of Science and Art* gave an excellent definition of wheat gluten. European chemists, especially those in France and Germany, took great interest in gluten, in its properties, and in the individual proteins of which it was composed. By 1900 they had issued more than 62 publications on the subject, compared with only 18 in the USA. In America, the first scientific publication on wheat gluten appeared in 1893, by Osborne and Voorhees in Connecticut.

First Use as a Food in the West in Diabetic Diets: In 1836 and 1841, the French scientist A. Bouchardat, while doing research on diabetes, discovered that gluten was good for use in diabetic diets–which were supposed to have little starch. He proposed feeding diabetics with gluten bread that contained only one-sixth the starch of regular wheat bread. His proposal caught on and for the next century gluten came to be widely used in Europe and the United States mainly in diabetic diets. Many commercial diabetic food products were manufactured. 48 records in this book discuss gluten in diabetic diets.

Seventh-day Adventists in America Discover Gluten: The first original publication on wheat gluten in the United States appeared in 1882. It was an advertisement for Sanitarium Foods published in *Good Health* magazine. This company was located in Battle Creek, Michigan, and directed by Dr. John Harvey Kellogg, a famous Seventh-day Adventist physician who headed the Battle Creek Sanitarium. The ad mentions Gluten Wafers, Diabetic Food, and Gluten Food. The Seventh-day Adventists soon became pioneers in introducing gluten-based foods, especially meatlike products, to America. 256 records in this book relate to Adventists, including 174 commercial gluten products. In November 1929 La Sierra Industries in Arlington, California (founded and run by T.A. Van Gundy), introduced the world's first meatlike product based on wheat gluten. It was named La Sierra Soy Gluten. From this small beginning many other Seventh-day Adventist companies launched commercial meatlike products based on gluten: The two leaders were Worthington Foods (Worthington, Ohio; 67 products) and Loma Linda Foods (Riverside, California; 48 products).

Popularization of Seitan in America and Europe: All early seitan products in the Western world were made by members of the macrobiotic community. In America the first two commercial seitan products were introduced in Oct. 1972, made by Nik and Joanne Amartseff in Boston. Tan Pups, consisting of skewered deep-fried seitan in a breaded batter, were so delicious that just their aroma drew passers-by into the store. Piroshki (filled with seitan) were also innovative. America's third seitan product was Wheatmeat, sold as small meatball-like chunks in bulk. Its creator, John Weissman, made many of America's earliest and most innovative seitan products and he still owns the trademark on the term "Wheatmeat."

In Europe, the first three seitan products were all made by Jonathan P.V.B.A., founded and owned by Jos Van De Ponseele, who learned how to make seitan in Boston. They were Seitan (1978), Seitanburger (1979), and Seitan Pâté (1980). Since 1972 at least 62 commercial seitan products have been launched in the USA and 38 in Europe.

The Rise of Gluten Worldwide: Starting in the early 1960s interest in and use of gluten by cooks and food processors began to increase rapidly (see p. 335). The number of records in this book grew from 320 in the 1960s, to 476 in the 1970s, to 749 in the 1980s. In 1974 the first of many gluten cookbooks was published by LeArta Moulton. In 1979 the International Wheat Gluten Association was founded by 11 wheat gluten manufacturers; it now has 23 members worldwide. Today most wheat gluten is sold as vital wheat gluten, and used in baked goods or to fortify flour. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

10078. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Soymilk and soymilk products–Bibliography and sourcebook, 1500 to 1993: Detailed information on 3,120 published documents (extensively annotated bibliography), 968 commercial soymilk products, 506 original interviews (many full text) and overviews, 462 unpublished archival documents. Lafayette, California: Soyfoods Center. 1,105 p. Subject/geographical index. Author/company index. Printed 3 Nov. 1993. Published Jan. 1994. 28 cm. [5528 ref]
• ***Summary:*** This is the most comprehensive book ever published about soymilk and soymilk products. It has been compiled, one record at a time over a period of 18 years, in an attempt to document the history of this subject. Its scope includes all known information about soymilk and soymilk products (including soy-based infant formulas, fermented soymilk, and soy-based calf milk replacers) worldwide, from 1500 to the present.

This book is also the single most current and useful source of information on soymilk, since 83.5% of all records contain a summary/abstract averaging 170 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 40 different document types, both published and unpublished; every known publication on the subject in every language–including 296 in French, 270 in Japanese, 190 in German, 105 in Spanish, etc.; 466 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful

© Copyright Soyinfo Center 2014

tool for understanding the development of soymilk and related products from their earliest beginnings to the present.

The bibliographic records in this book include 3,120 published documents and 462 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 968 commercial soymilk products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

10079. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Soyfoods industry and market–Bibliography and sourcebook, 1985 to 1993. Lafayette, California: Soyfoods Center. 361 p. Subject/geographical index. Author/company index. Language index. Printed 11 Jan. 1994. Published Jan. 1995. 28 cm. [985 ref]

• ***Summary:*** This is the second of the two most comprehensive books ever published on the soyfoods industry and market worldwide.

In May 1982 the first study of the burgeoning soyfoods industry in the Western world was compiled by Shurtleff and Aoyagi, and published by Soyfoods Center. In April 1985 the fifth edition of that book, titled *Soyfoods Industry and Market: Directory and Databook* (220 pages), was published. It contained statistics through 1984, the market size and growth rate for each soyfood type, rankings of leading soyfoods manufacturers of each soyfood type and the amount each produced, analyses, trends, and projections. This book is published to update the 1985 market study.

In the decade since 1984 the soyfoods market has continued to grow at a very healthy rate, with some soyfood types (such as soymilk) growing at a truly astonishing sustained rate–in both the USA and western Europe–as the statistics in this book show so vividly. In 1975 only 75 new commercial soyfood products were introduced in the USA, yet that number skyrocketed to 217 in 1979, reaching an amazing 422 new products in 1987.

During the decade from 1984 to 1994, Soyfoods Center has invested most of its time and resources in the production of SoyaScan, the world's largest computerized database on soyfoods, which contains more than 44,500 records as of Jan. 1994. This database also includes a wealth of carefully researched statistics and analyses of the soyfoods market; those from the start of 1985 to the end of 1993 are contained in this book. Its scope includes all known information on this subject, worldwide. Its focus, however, is statistics, analyses, and trends concerning the soyfoods industry and market in the United States and Europe.

In May 1990 Soyfoods Center conducted an in-depth study of the tofu market in Europe (137 pages), and in July 1990 of the soymilk market in Europe (261 pages). All original interviews and published records from both of these market studies, plus a summary of each study, are included in the present book.

The SoyaScan database is composed of individual records. One record might be an original interview with the head of the largest soymilk company in Europe, on the size and growth of the soymilk market in Europe, and new trends in that market, conducted by William Shurtleff of Soyfoods Center. Another might be a published article or an unpublished document concerning the growth of the market for soy yogurts or soy sauce in America.

This book documents the growth of each product category in every country worldwide. The book contains three extensive and easy-to-use indexes: A subject/geographical index, an author/company index, and a language index. These allow you to find the exact information you need on the soyfoods industry and market quickly and easily. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

10080. *Toyo Shinpo* (*Soyfoods News*). 1994. Ibaraki no shin meisan-hin. Nattô senbei. Ibaraki-ken Kôgyô Gijutsu Sentaa [New product from Ibaraki prefecture. Natto senbei (crackers) from the The Ibaraki Prefectural Industrial Technology Center]. Feb. 2. p. 7. [Jap]

10081. *Toyo Shinpo* (*Soyfoods News*). 1994. Chiba no shin meisan-hin ni piinattsu iri nattô. Igyôshu kôryû de kaihatsu hanbai. 10082. McReynolds, Thomas. 1994. Morinaga's new interest in soymilk (Interview). *SoyaScan Notes.* Feb. 3. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Morinaga has been looking seriously at manufacturing soymilk in America for the last 6 months, and very seriously for the last 4 months. The major reason is the value of the Japanese yen, which has fallen steadily

© Copyright Soyinfo Center 2014

against the dollar over the years. From 1964 to 1971 the yen was steady at about 360 yen per dollar. In 1972 it fell below 300, in 1978 it fell below 200, and recently it dipped briefly below 100 yen per dollar; it is now at about 108-109. This makes it expensive to import products from Japan. A second reason is that Morinaga would like to build its own plant in America. But they are looking for a partner in the venture to help minimize the risk. There are two pieces to the formula. The partner must join Morinaga in manufacturing costs, and land and factory development. The partner must also be a potential buyer of the soymilk with an established market, provided the product is made to their quality, volume, and price specifications. Address: Marketing Consultant, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 213-728-4325.

10083. Sanger, David E. 1994. Tokyo's tips for New York. *New York Times.* Feb. 6. p. SM28-SM29.
• ***Summary:*** Japan is the world champion at managing the chaos of urban life. So here are some ideas from Tokyo that America would do well to import. (3) Obasans. Every block in Tokyo has one such lady who sees that everyone on the block packages their garbage correctly. "But our neighbors give us a break, viewing our absence of training in this regard as one of those many cultural handicaps–along with a lack of appreciation for natto, a particularly potent fermented [soy] bean dish–that are beyond our control."

Another idea is gun control; handguns are prohibited in Japan. Tokyo had a grand total of eight gun-related murders in 1992, about as many as New York City has every two days. Japanese can own rifles and shotguns but the licensing and storage requirements are very strict. Address: Tokyo bureau chief of the New York Times.

10084. *Toyo Shinpo* (*Soyfoods News*). 1994. Tô denrai no tôfu-kan. Matsumoto rôho ga dentô o mamoru. Ishiusu de hiki, jigama de taku. Mukashi-nagara no seihô o miru [Tofu-kan transmitted from T'ang dynasty China. The Matsumoto Rôho shop at Uji near Kyoto preserves an ancient tradition, grinding with a stone mill and cooking in a caldron. Here you can see the ancient process]. Feb. 21. p. 5. [Jap]
• ***Summary:*** This full-page article contains 20 photos showing each step in the process of making Chinese-style pressed tofu. During the Edo period (1600-1868) the head priest at Manpuku-ji temple in Uji had a lot of visiting monks from China; he may have learned the process from one of them. Soaked soybeans are ground in a traditional stone mill. The soymilk is cooked in a caldron over a wood fire. Firm curds are ladled into many small cloth-lined forming boxes. The cloths are folded over the curds in each box, and the curds are allowed to drain. Then each little packet is removed from its forming box and 6-8 are put in another forming box, where they are pressed under a wooden pressing lid and two heavy stone weights. For seven generations the Matsumoto family in Uji has been keeping alive this tradition, imported long ago from China. The shop's address: Matsumoto Rôho (Matsumoto Tôfukan-shô), Gokasho Shinkai 2, Uji-shi, Kyoto-fu, Japan. Phone: 0774-31-8604. Note: Rôho means "old shop."

10085. Johannes, Kenlon. 1994. Re: Short answers to your questions on SoyDiesel. Letter to Junji Kawasaki, The Institute of Energy Economics, Japan (Nippon Enerugi Keizai Kenkyusho), Shuwa Kamiyacho Bldg., 3-13 Toramomon 4-chome, Minato-ku, Tokyo 105, Japan, Feb. 23. 2 p. + 9 p. attached articles. Typed, with signature on letterhead. [Eng; Jap]
• ***Summary:*** Good answers to 9 questions in Kawasaki's letter of 20 Dec. 1993. This letter is accompanied by 9 pages of assorted documents on biodiesel in Japan. Address: Executive Director, National SoyDiesel Development Board, P.O. Box 104898, 1907 Williams St., Jefferson City, Missouri 65110-4898. Phone: 1-800-841-5849.

10086. Clifton, Claire. 1994. Flavor of the month: Soy sauce. *Guardian* (*England*). Feb. 26. p. A39.
• ***Summary:*** The writer and Yan-Kit So, the Chinese cookery writer (a woman) tasted more than a dozen soy sauces. They were astonished to find how much the quality varied. Fo Shan Superfine, made in Guangdong, China, was considered the best. The other two brands they liked were Kikkoman (Japanese) and the Kim Ve Wong brand from Taiwan.

Yan-Kit So's latest cookbook is the magnificent *Classic Food of China* (Macmillan).

10087. *Agri-Book Magazine* (*Exeter, ONT, Canada*). 1994. Far East market can double. 20(5):29. Feb.
• ***Summary:*** Canada is selling more and more soybeans for food uses to East Asia. Thailand is the only country in the region that is self-sufficient in soybean production. Japan (population 123 million) imports more than 1 million tonnes per year, Taiwan imports 250,000 tonnes, Indonesia 150,000 tonnes, Korea 120,000 tonnes, and Malaysia 100,000 tonnes. Singapore and Hong Kong import all the soybeans they use.

In 1993 Ontario produced a record 1.7 million tonnes. Only 500,000 tonnes of this (29.4%) was exported, and only a fraction of that was suitable for making soyfoods such as tofu, natto, soymilk, Taiwanese fermented tofu (*foo yee*), etc. A large color photo shows ladies in Taiwan packing fermented tofu in jars.

Ontario has captured 56% of the Hong Kong market, and about 14% of the Malaysian market. But the Asian market is becoming more competitive because exporters from the USA are beginning to offer soybeans in bags as well as bulk shipments. Michael Loh, the OSGMB coordinator for export development, thinks Canada can achieve its goal of doubling soybean exports by the year 2000.

10088. *Soybean Digest.* 1994. ASA team discusses U.S. soybean quality issues in Japan. Mid-Feb.
• ***Summary:*** Japanese officials and the managing director of the Japanese Oilseed Processors Association (JOPA) said U.S. soybeans are generally one percent higher in foreign Material (FM) and one percent lower in oil content that their competitors from Brazil. Japan challenged the U.S. to eliminate these differences within 10 years. Japan is the single largest consumer of total U.S. soybean exports.

10089. *Tofu Times: Emerging Soyfoods Trends* (*Morinaga, Torrance, California*). 1994--. Serial/periodical. Morinaga Nutritional Foods, Inc., 2050 W. 190th St., Suite 110, Torrance, CA 90504. Bimonthly. Susan Bucher, editor. Vol. 1, No. 1. Jan/Feb. 1989.
• ***Summary:*** Formerly titled *Mori-Nu Healthy Life.* Each issue, typically 6 pages, discusses the merits of tofu and Mori-Nu silken tofu. Recipes and coupons are included. Issues were published in Feb., June, and November/December 1994. Address: Torrance, California.

10090. Lumpkin, Tom. 1994. Update on work with edamamé (green vegetable soybeans) in the state of Washington (Interview). *SoyaScan Notes.* March 1 and April 13-14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** His program has had several setbacks during the past few years, but it will recover. First, John Konovsky (one of Tom's students who specialized in edamamé) stopped his active involvement in the program about 18-24 months ago. He is still enrolled and he plans to graduate this fall. The book that John Konovsky was writing, which was to be titled *Edamamé: The Vegetable Soybean,* is now on hold and probably won't be published for at least 2 years–unfortunately. Tom has a full-time woman editor working on the various book. John got very excited with the commercial possibilities of edamamé that he decided to start his own business, named East-West Seeds in Olympia, Washington–where John now also resides. His main activity is importing and exporting seed for edamamé; he is also doing a little breeding himself. The book was delayed because John is totally involved in his new business and Tom has so many other projects. For example, he just finished a long review article on wasabi, which was published in the June 1993 issue of *Economic Botany.* Ms. Chadwick, who is in his program, is an expert in wasabi; she is running wasabi farms in Oregon and Washington.

Second, about 3 years ago, Stokely USA (related to Stokely-Van Camp), a major food processor, bought out the local edamamé processor Tom's group was working with. All was going quite well, then Stokely declared Chapter 11 bankruptcy; they are still functioning, but they cut back all their operations except their very core business (such as potatoes and peas). The Japanese and Tom's group begged Stokely to keep processing edamamé, but they were under orders from the head office, so the last crop of edamamé they processed was in 1992. With no processor, local farmers had no incentive to grow the crop. But Tom is confident that he can rebuild the edamamé program. He is a professor with tenure, going up for full professor this fall.

Update of 13-14 April 1994. Tom has just taken a new degree student into his program. Born in Washington state, she speaks and reads both Japanese and Chinese fluently, and has lived in both Japan and China for years. She will help Tom finish the book on edamamé, probably do some translation of documents, and hopefully take responsibility for re-establishing edamamé commercially in Washington state. John Konovsky is currently working as a soil scientist for Soil Conservation in Olympia, while also trying to establish his new company East-West Seeds. Two copies of the full bibliography on edamamé have been made; Tom and John each have one, but the library on which the bibliography is based is housed solely within Tom's program. Address: Head, East Asian Crop Development Program, Dep. of Crops and Soil Sciences, Washington State Univ., Pullman, WA 99164-6420. Phone: 509-335-2726.

10091. *Toyo Shinpo* (*Soyfoods News*). 1994. Urete imasu. Nagai no jun-tôfu. Shufu ni ninki no "Oboro Tôfu" [Nagai's pure Oboro Tofu is selling well. It's popular among housewives]. March 1. p. 7. [Jap]
• ***Summary:*** This product is unpressed tofu curds. A photo shows that tray, similar to a typical water-pack tofu tray, with a sealed film lid.

10092. *Toyo Shinpo* (*Soyfoods News*). 1994. Atarashii fûmi no shokuzai. Tsurumaru Sangyô no 'Chûka Dôfu.' Wadai no shin shôhin [Tsurumaru Industry's "Chinese Tofu" is a new food ingredient with a new flavor: People are talking about it]. March 1. p. 7. [Jap]

10093. Konovsky, John. 1994. Work with edamamé. Part I (Interview). *SoyaScan Notes.* March 3 and 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John grew up on a soybean farm in Indiana. From 1983 to 1985, after graduating from Earlham College in Richmond, Indiana, he felt like traveling outside the USA so he went to Japan on an Earlham College program as a paid English teacher, in a rather isolated area in Iwate prefecture. At that time he had little interest in how the Japanese grew or used soybeans. But in Japan he found that many of the people he knew were growing *edamamé* (green vegetable soybeans) and quite a few grew them on the bunds of rice fields as *azemame.* So he picked up an interest in edamamé from this experience, and he collected some germplasm, which he brought back to America and grew in his garden.

After working for several years in the produce industry in America, he decided to go back to Japan. He entered a

© Copyright Soyinfo Center 2014

program at Washington State University (at Pullman, run by Tom Lumpkin) to study Japanese crops–specifically wasabi [*Eutrema wasabi* or Japanese horseradish]. He wanted to introduce this as a new Japanese crop to America, grow it in western Washington state, and sell it to American sushi shops–where it is grated and added to shoyu, then served with sashimi (raw fish) or soba (buckwheat noodles). Tom Lumpkin was already very interested in edamamé, and when he learned that John was growing edamamé, he began trying to convince John to change his interest from wasabi to edamamé. Tom felt edamamé would be a more successful commercial crop than wasabi. Wasabi is very hard to grow–it needs little mountain valleys with plenty of pure water at 10ºC running year round, and it must be harvested by hand. Moreover it is a virtual nightmare to get the necessary environmental permits for growing plants in the water. This requires discharge permits, etc. Finally Tom convinced John to study edamamé; and his program had money that would allow John to travel to Japan to study edamamé.

So after a year at Washington State University, John went back to Japan on a Fulbright fellowship to study edamamé for a little less than 2 years at Iwate University, under the guidance of Dr. N. Kaizuma. Dr. Kaizuma had been a student of Dr. Tadao Nagata, who had spent his life doing very creative research on the dissemination of soybeans to Japan and worldwide. John spent about half of his time in Japan gathering literature and trying to track down and cite every known Japanese-language document on edamamé. He also spent a little time gathering wasabi germplasm. Initially his research advisors told him "There is nothing to find on edamamé." As of 1991 he had what he feels is a complete bibliography of Japanese-language publications. The key man on edamamé in Japan today is R. Masuda, who is at the National Food Research Inst. at Tsukuba. In 1989 he published the only review of the literature on edamamé, in the journal *Reito* (*Refrigeration;* 64:359-76). This is a key article.

John left the edamamé (green vegetable soybean) program at Washington State Univ. (WSU) in 1992 to start his own company. He plans to graduate from WSU with a MSc degree in crop science in the fall of 1994. He is presently breeding edamamé, and has a number of lines. The WSU program conducted large scale edamamé trials in Washington state from 1989 to 1992. Stokely USA invested a lot of money trying to bring edamamé into production, but the Japanese were never quite satisfied with the quality of the crop. John did all the seed procurement and they used top quality Japanese breeding lines, mostly Sapporo-midori and Sayamusume. The edamamé were packed as frozen pods in individual 500 gm plastic bags with labels for retail sale. The Japanese really liked the taste of the edamamé but the appearance of the frozen pods was always borderline. There were three appearance problems: The pods were small, a little too light green in color, and they tended to have bruises on the surface as a result of being mechanically harvested. More than 99% of the edamamé worldwide (basically in Taiwan, Japan, and China) are harvested by hand, not by machine. The Taiwanese are starting to experiment with machine harvesting. Tom feels that each of these 3 appearance problems is basically a technical problem that can be solved. Stokely USA shut down their edamamé operations for various reasons: The Japanese lukewarm reaction to the edamamé produced in Washington state, Stokely's tight financial condition, and orders from the parent company. Continued. Address: East-West Seeds, 728 33rd Lane N.E., Olympia, Washington 98506. Phone: 206-754-2423.

10094. Konovsky, John. 1994. Work with edamamé. Part II (Interview). *SoyaScan Notes.* March 3 and 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** A Chinese woman, who is a student in Tom Lumpkin's program, gets a few articles set to her from China every month on edamamé. Her father is the former head of the Chinese Academy of Agricultural Science. She was a librarian in China. Tom is close friends with their family. Getting articles from China in this way is a slow process, but Tom's program probably now has about 100 such articles. Tom will probably include citations for these documents in one of his future publications on edamamé–probably the book titled *Edamamé–The Vegetable Soybean.* John was the sole author of first draft of this book.

Dean McCleary did most of the work on the azuki book and he wrote the final draft, but he will probably not be listed as the main/first author.

John's new company is mostly focused on edamamé variety development, i.e. breeding, then supplying those seeds to local growers. Now he is brokering edamamé seeds, importing them from East Asia. He also has other jobs, related to agriculture but not to soy, which support him financially while he is building his company.

John speaks very highly about the program at WSU; it is a very unique program that offers opportunities not found in any other graduate program in the country. It is still fairly well funded.

For edamamé to succeed in America, some organization (probably a company) will have to be willing to invest considerable money and time in the product. It has great potential and Americans like it, and now that production problems have basically been solved, introducing edamamé to the USA is basically a marketing problem. The subtle appearance problems that Japanese had would probably not be problems for most Americans who have not developed the fine level of discrimination that the Japanese have. John thinks it will take some time to solve the appearance problems for the Japanese.

Concerning the question: How does one say in Japanese–"Large-seeded, vegetable-type soybeans?," John

© Copyright Soyinfo Center 2014

does not think there is such a Japanese term. Most soybeans grown today in Japan are large seeded and most of these are used for edamamé or seed production the next year. He did not hear the term *Nihon daizu* ("Japanese soybeans") very often. The introduction of true "field-type" soybeans is relatively recent. Summer-type and autumn-type soybeans refer more to maturity groupings than to seed size. The Japanese have their system, which is more complex than the maturity group system.

While in Japan, John heard the terms *natsu-daizu* (summer type soybeans) and *aki-daizu* (autumn type soybeans) used frequently. This is a fundamental distinction, although there are gradations in between. Summer soybeans correspond to U.S. Maturity Groups 000 through II, from northern latitudes. Maturity Groups V and greater correspond to autumn soybeans. Currently in Japan, almost all green vegetable soybeans (edamamé) are produced using summer type soybeans, because all the farmers want to get to market as early in the year as possible and summer soybeans are a short-season crop. Traditionally in Japan, edamamé were harvested later in the year (September or October) for *mame-meigetsu* (the bright moon of edamamé). Japanese would go outside to view the moon while enjoying freshly harvested edamamé and beer. But nowadays the peak of the edamamé season is in August, around the time of *O-bon.* So there has been a major historical shift toward an earlier harvest.

The Japanese word *dadacha-mame* is a vernacular term from Yamagata prefecture that refers to a specific type of edamamé which, when, mature have a brown seed coat and a much stronger taste (perhaps higher sugar content). It sells for a premium price.

John is still interested in the scholarly side of edamamé but he doesn't have the time for it. He now needs to earn money, which he hopes to do via his new company East-West Seeds. He is tired of school and is no longer very interested in finishing his degree program at Washington State Univ.

Two Chinese scholars who are very interested in the history of the soybean in China are GAI Junyi (of the Soybean Research Institute, Nanjing Agricultural University) and SUN Huan (head of the Soybean Institute, Jilin Academy of Agricultural Sciences, Gongzhuling). Address: East-West Seeds, 728 33rd Lane N.E., Olympia, Washington 98506. Phone: 206-754-2423.

Nippon Shokuhin Kogyo Gakkaishi (*J. of the Japanese Society for Food Science and Technology*) 41(3):184-90. [21 ref. Jap; eng]
• ***Summary:*** Tofuyo is a unique fermented soy protein food made in Okinawa Prefecture, Japan. Crude protein content decreased during ripening. "Digestion of soybean protein was examined by slab polyacrylamide gel electrophoresis. Some polypeptide bands of soybean globulin, such as α'-, α-, beta-subunits in beta-conglycinin," an acidic subunit in glycinin in the water-insoluble fraction of tofuyo disappeared after 3-months ripening, and that of the basic subunit in glycinin still remained. As maturation of tofuyo proceeded, it was found that soybean protein was hydrolyzed by proteases in the moromi (mash). During maturation, the amount of total free amino acids increased, and high levels of glutamic acid, aspartic acid, alanine and proline were found.

Tables show: (1) Changes in chemical composition of tofuyo prepared by *Aspergillus oryzae* during various ripening periods. (2) Changes in the free amino acid composition of tofuyo prepared by *Aspergillus oryzae* during various ripening periods.

Figures (all graphs) show: (1) Changes in ethyl alcohol concentration, pH and activities of various enzymes in the moromi (mash) during ripening periods of 0-5 months. (3) Changes in protein solubility ratio of tofuyo during ripening periods of 0-5 months. (4) Changes in the ratio of trichloracetic acid-soluble nitrogen to the total nitrogen during ripening periods of 0-5 months. Address: Dep. of Bioscience and Biotechnology, Univ. of the Ryukyus, 1, Senbaru, Nishihara-cho, Okinawa 903-01.

10102. **Product Name:** Tanpacky Vegetable Sliced Ham.
Manufacturer's Name: YCM Associates Inc. (Marketer-Distributor). Made in Japan.
Manufacturer's Address: 22808 Lockness Ave., Torrance, CA 90501. Phone: (310) 530-8863.
Date of Introduction: 1994 March.
Ingredients: Soybean protein, canola oil, soy sauce (soybeans, wheat, salt), honey, salt, apple cider vinegar, natural smoked flavor, natural seasoning.
Wt/Vol., Packaging, Price: 5.64 oz (160 gm).
How Stored: Refrigerated.
New Product–Documentation: Leaflet (8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West (Anaheim, California). 1994. March 10-13. "It's extra low cholesterol. Vegetable sliced ham. You can serve in the raw or cooked. No preservatives. No animal fat."

• ***Summary:*** In this box lunch, which retails for 1,000 yen at the Bullet Train line in Kyoto, there are 7 soyfoods: Seasoned, cooked rice with soybeans. Cooked and seasoned tofu burger (*ganmo*). Fried dried-frozen tofu (dusted with flour). Cooked black soybeans. Tofu shûmai (*shao-mai* steamed dumplings filled with tofu). Fried okara. Fresh yuba. Sesame tofu. An illustration shows the placement of foods in the octagonal box. With the recent boom in healthy foods in Japan, the popularity of this lunch among women has increased sharply.

• ***Summary:*** A photo shows a pack of dried okara (30 gm), sauce (100 gm), mountain veggies 60 gm (with liquid included 70 gm). Retails for ¥200/pack. 6 packs per carton.

10105. Schmitz, Tom. 1994. Tofu cook believes she nourishes body and soul: Linda Lam, tofu maker. *Mercury News* (*San Jose, California*). April 3. p. 1E, 3E.
• ***Summary:*** A large color photo shows Linda Lam and her husband Thom Tran at their Fuji Fresh Tofu Co. in Japantown, San Jose. They make tofu 6 days a week, as well as tofu pudding, soymilk (in plastic quart jugs), tofu spring rolls, Okinawa tofu, and Peking tofu. Linda Lam learned to make tofu as a girl in Vietnam, where she was taught by the monks at her local Buddhist temple. She stayed at the monastery during school vacations, preparing meals and studying the scriptures. "Three decades later, Lam remains a devout Buddhist. And her faith in tofu is equally strong." She and her family are vegetarian. She uses nigari as a curding agent in making her tofu.

Before leaving Vietnam in 1979, she worked as a high school teacher. Later she ran a catering service.

10106. LaBarr, Connie. 1994. The Nebraska Soybean Program's work with soybeans, edamamé, and other soyfoods (Interview). *SoyaScan Notes.* April 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In early 1994 Connie and several other people developed a very original and creative 6-panel leaflet titled "What is Edamamé" for food writers and Nebraska consumers. The Nebraska Soybean Program is now giving away edamamé [green vegetable soybeans] to many people in the state. Dr. Jim Specht, a soybean breeder in the Department of Agronomy at the University of Nebraska (309 Keim Hall), has developed a soybean variety in which all of the pods grow on the stem–and none grow on the branches. This will make it easier to harvest and process the plants for edamamé. The plants are now being grown in Nebraska, and the seed supply is being expanded for commercial production. Dave Lang, at the University of Nebraska's Food Processing Center, is involved with the marketing of

© Copyright Soyinfo Center 2014

this new product; he sees Japan as the primary market for the product. Based on what she has heard and seen, Connie feels that there is also a large market here in America. Jim Weyer (pronounced WEER), the director of the Nebraska Soybean Program, is a very forward thinking person. Both he and Connie think there is a big potential market for soyfoods in Nebraska, so they presented a proposal to the United Soybean Board (USB) to market soyfoods (in addition to soy oil) in America. But USB and the American Soybean Association (ASA) don't seem to see that as a valuable market–so the Nebraska proposal was not approved. Nevertheless, the Nebraska program will being doing things to market soyfoods, with focus on things like genistein in cancer prevention and the ability of soy protein to reduce the risk of heart disease. In talking to consumers, Connie finds many people who are interested in soyfoods recipes. She has served tofu cheesecakes and soy cheese to some groups with excellent results.

Besides Nebraska, Minnesota is also doing some work with edamamé. A company there named Minnesota Edamame is selling edamamé to Japan; the pods which do not have the desired number of beans are shelled, frozen, and marketed as "Sweet Beans." The response has been good. Growers in some other states may be growing edamamé under contract with the Japanese.

Note: The Nebraska Soybean Program is the primary contractor for the Nebraska Soybean Board. Address: Director, Consumer Information, Nebraska Soybean Program, 301 Centennial Mall South, Box 95144, Lincoln, Nebraska 68509. Phone: 1-800-852-2326.

• ***Summary:*** A large photo shows the poster which explains that there will be an international soyfoods fair in Akita prefecture from June 4 to 6 (3 days). It is being organized by the Asian Symposium on Non-Salted Soybean Fermentation *Ajia Muen Hakkô Daizu Kaigi* and the Japan Organization Committee *Nihon Soshiki Iinkai.*

10108. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Green vegetable soybeans (*Edamamé*) and vegetable-type soybeans–Bibliography and sourcebook, 3rd century A.D. to 1994: Detailed information on 648 published documents (extensively annotated bibliography), 30 commercial green vegetable soybean products, 20 original interviews (many full text) and overviews, 28 unpublished archival documents. Lafayette, California: Soyfoods Center. 265 p. Subject/geographical index. Author/company index. Printed April 13. 28 cm. [718 ref]

• ***Summary:*** This is the most comprehensive book ever published about green vegetable soybeans and vegetable-type soybeans. It has been compiled, one record at a time over a period of 19 years, in an attempt to document the history of these two closely related subject. Its scope includes all known information about green vegetable soybeans and vegetable-type soybeans, worldwide, from the 3rd century A.D. to the present.

This book is also the single most current and useful source of information on green vegetable soybeans and vegetable-type soybeans, since 91% of all records contain a summary/abstract averaging 215 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 30 different document types, both published and unpublished; every known publication on the subject in every language–including 614 in English, 37 in Japanese, 30 in French, 18 in German, etc.; 20 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of green vegetable soybeans and vegetable-type soybeans from their earliest beginnings to the present.

The bibliographic records in this book include 648 published documents and 28 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 30 commercial green vegetable soybean products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

10109. *Toyo Shinpo* (*Soyfoods News*). 1994. Mikka kakete tsukuru Edo no ippin: Kokyû senro tsuranuku Shibazaki Nattô no Amano-ya [It takes 3 days to make Edo's {Tokyo's} best quality natto: Amano-ya pushes its high class Shibazaki brand natto]. May 1. p. 10. [Jap]

© Copyright Soyinfo Center 2014

• ***Summary:*** A large photo shows the outside of the plant. Ten smaller photos show key steps in the process.

10110. *Toyo Shinpo* (*Soyfoods News*). 1994. Okara de oishii doonatsu ga dekiru [How to make delicious doughnuts using okara]. May 1. p. 5. [Jap]
• ***Summary:*** Photos show three steps in the process, including deep-frying the doughnuts.

10111. *Toyo Shinpo* (*Soyfoods News*). 1994. [Cooking with okara]. May 1. p. 15. [Jap]
• ***Summary:*** Three photos show two different prepared dishes plus a portrait of a Japanese woman.

10112. *SoyaScan Notes.* 1994. Foods of East Asian origin that the macrobiotic movement/community has played a leading role in introducing to America, starting in about 1960 (Overview). May 10. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** These include brown rice, rice cakes, miso (many types), shoyu (traditional Japanese-style soy sauce), tamari (Japanese soy sauce containing little or no wheat; prior to about 1980 many practitioners of macrobiotics referred to natural shoyu as "tamari," thus inadvertently popularizing real tamari, which now may be better known in the USA than it is in Japan), natto (fermented soybeans), seitan (wheat gluten seasoned with a soy sauce broth; this word was coined by George Ohsawa), amazake (thick rice beverage), umeboshi salt plums, sea vegetables (kombu, wakame, hijiki, nori, etc), tofu, soymilk, alternatives to dairy products (macrobiotics do not consume dairy products), buckwheat noodles (*soba*), kuzu, rice syrup, barley malt syrup, azuki beans, sesame seeds, sesame salt (*gomashio*), daikon (white radish) and daikon pickles, kabocha (Hokkaido pumpkin), shiitake mushrooms (also known as Chinese black mushrooms, they have a firm "meaty" texture), burdock, jinenjo (glutinous yam).

They have done this by starting and running many natural food companies to import, distribute, manufacture or grow these foods; by writing cookbooks and other books about these foods; by teaching classes (including many cooking classes in which these foods are used); by influencing other people to do all of the above.

The Japanese names of many of these foods have become anglicized and are now the standard English-language names.

The macrobiotic movement also played a major role in introducing "tahini" or sesame butter (a Middle-Eastern food) to America, starting with George Ohsawa's book *Zen Macrobiotics* in 1960. Of the first 20 records in the SoyaScan database that mention "tahini," 14 are associated with macrobiotics. Likewise, 22 of the first 50 records are associated with macrobiotics.

10113. Alonso, Jean-Luc. 1994. Re: History of his pioneering work with tempeh in France. Letter to William Shurtleff at Soyfoods Center, May 16. 4 p. Handwritten. [Fre]
• ***Summary:*** "Mr. Sakaguchi has forwarded to me the letter which you sent him on 15 Aug. 1993. You were asking him for information about the first producers of tempeh in France. You mentioned the existence of a woman. In fact, she and I were associates. Her name at the time was Anita Dupuy. We began producing tempeh in September 1981 in Paris. [Note: Soyfoods Center records indicate that this company did not start production until about May or June of 1982].

Since then Anita was divorced and has remarried to a Dutchman; she lives in Holland, and goes by a different name. I do not know her address. She is teaching French, which is what she was doing before she left France.

A brief history: While staying in the United States for the purpose of studying at the Kushi Institute of Boston [Massachusetts], I came up with the idea of producing tempeh in France. Upon returning to France, I began experimenting with its production and began looking for material and a place to produce it. Mutual friends introduced me to Anita Dupuy who also wanted to make tempeh. Thus we became associates for this adventure. We rented an old butcher shop. The small business was named *Traditions du Grain.* We were producing 100 to 200 cakes of tempeh (each weighing 300 gm) per week. Anita was in charge of the business while I took care of making the tempeh. Except for fried tempeh and sandwiches, we did not make any second generation products. This may explain our lack of success. For two years we did not receive a salary. In addition, understanding between Anita and me went downhill for several reasons.

After two years, I quit the business. Anita continued for a while, then sold the company to another person, who continued for a year or two and then finally stopped.

In 1985, another business in Montpellier named Athanor started producing tempeh, plus a pâté with tempeh and amasake as the main ingredients. This company was not much more successful than Traditions du Grain–It closed its doors in 1987. I do not know the names of the owners of this business.

In 1989, a new attempt was made by the firm named Renaitre (meaning "to be reborn") close to Cahors. Another failure. One year later the business closed its doors.

During that time, in 1987, a company named Soleil de Lalise (meaning "the sun of Lalise"), located near Agen, also began to make tempeh and tofu. These products are still sold by this firm. Their address is: Domaine de Galise, 32260 Tachares, France. Phone: 62.65.35.63.

"As for myself, I produced tempeh at the communal level from 1987 to 1989, within the framework of a macrobiotic center. Then the center closed down. I continued alone for a small local micromarket (friends and acquaintances). In late 1989 and early 1990 I was in contact

© Copyright Soyinfo Center 2014

with you. I was planning to make tempeh on a large scale. I almost bought the business Renaitre that I mentioned earlier.

"The most amusing aspect is that while visiting the Renaitre plant, I recognized equipment or material that I had purchased for Traditions du Grain. Renaitre had bought it when Traditions du Grain closed down. In the end, the deal did not go through. In the meantime, my wife [Rachel] and I moved to a new location.

"In October 1992 we began producing Essene bread and other baked goods. This business [Gaia, in Graulhet] is going very well.

"In France, tempeh did not meet with large success because nobody invested energy and money in *information.* For now we are dedicating ourselves to making Essene bread but we have not given up on the idea of producing tempeh. We are just waiting until we have the means to do things seriously." Address: Gaia, 7, rue du Mail, 81300 Graulhet, France. Phone: 63 42 16 03.

10114. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*). 1994. Export market development. 7(2):1. May.

• ***Summary:*** "Ontario's soybean exporters are reaching into new markets in the Asia / Pacific region in an effort to expand sales for food use. Three Ontario companies raveled with representatives of the Ontario Soybean Growers' Marketing Board and Agriculture Canada to Indonesia, Taiwan and Korea, February 27-March 8, 1994.

"Ontario companies have been exporting food quality soybeans to Japan, Hong Kong, Malaysia and Singapore for almost 20 years. Soybean exporters are optimistic about prospects of doing business in the region since the economies of these new markets are booming and showing a willingness to lower trade barriers and thereby improve our access to their markets."

A photo shows OSGMB's Second Vice Chairman Tom Lassaline making a presentation to Canada's ambassador to Indonesia Mr. Larry Dickenson.

10115. Kikkoman great grilled recipes and more. 1994. Lincolnwood, Illinois: Publications International. 95 p. May 17. 21 cm. Series: Favorite Brand Name Recipes, Vol. 5, No. 68.

• ***Summary:*** This color book is saddle stitched, so it looks like a magazine. Contents: Summertime and the grillings is easy with Kikkoman. From the butcher shop. Burgers, ribs & kabobs. Pleasing poultry. From the sea. Magnificent mealtime salads. Savory side dishes.

10116. Clifford, Mark. 1994. Profile: K.S. Lo, Hong Kong. Milk for the millions. Grandson of indentured servant in Malaysia epitomises the Overseas Chinese success story. *Far Eastern Economic Review.* June 9. p. 78.

• ***Summary:*** K.S. Lo is the grandson of an indentured servant who had been sent to work in Malaysia's tin mines. K.S. Lo was born into the poverty of a Hakka family in China's rural Guangdong province, the son of a would-be scholar who moved to Malaysia after failing China's imperial exams. Mr. Lo lived in Malaysia from age 10 to 20. In 1930 the future soy-milk magnate relocated to Hong Kong to attend Hong Kong University, where he studied commerce and law. After graduation, he worked as a secretary to Malaysian-Chinese property magnate Eu Tongseng.

"But a trip to Shanghai in 1937 [sic, 1936], on a mission to wind up a failed business that one of Eu's sons had started, forever changed Lo's life. Shanghai in those days didn't have much of a nightlife for sober sorts like Lo, so he often passed his evenings at the YMCA reading and listening to lectures. One of those lectures, given by an American diplomat from Nanjing, was called 'Soyabean: The Cow of China' and it extolled the role that soya had historically played in the Chinese diet."

Describes the founding and early history of Vitasoy. In 1940 he set up a soy milk factory in Hong Kong's Causeway Bay district. The company got off to a slow start. "It was only when Vitasoy opened a retail store that sales took off.

"War put an end to the business after less than two years. Fortunately, Lo managed to sell the firm's stock of soybeans and sugar before the Japanese commandeered the company headquarters, giving him enough money to survive the nearly four years of war which followed.

"What he did with the proceeds of the sale was typical of Lo's inclination to go against the grain. Rather than investing in gold, the usual Chinese store of value, Lo bought useful products such as telephone wire and tins of anti-malaria medicine."

In 1942, Lo smuggled his family over the border into China, where a tobacco-farming venture flopped. So he returned to doing what he knew best: soy. His wife made cakes and he made soy milk; the business thrived. Vitasoy was first listed on the Hong Kong Stock Exchange earlier this year; now run by his son, Winston, it has annual sales of more than HK$1 billion. The company produces more than one million drinks a day.

"To fully understand Lo, it is necessary to understand his parents. From his mother, Lo imbibed a do-good instinct. From his scholarly father, he acquired a taste for the finer objects in Chinese culture. His teapot collection, which is being readied for a world tour, was born after he stumbled on a collection of Yixing teapots in a Hong Kong antique store. Now, more than 3,000 antique teapots later, Lo is the major benefactor of the Hong Kong Museum of Tea Ware." A photo shows K.S. Lo, smiling.

10117. Kushi, Aveline. 1994. Early work with tempeh (Interview). *SoyaScan Notes.* June 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Her first son, Norio, was born on 15 Dec. 1954.

© Copyright Soyinfo Center 2014

Her youngest son, Hisao, was born on 8 June 1965. Then she and Michio moved from Wellsley to Boston, Massachusetts, and started Erewhon in April 1966. In Aug. 1969 Aveline moved to Los Angeles (California), where her youngest son, Hisao, underwent traditional Japanese treatment for a bone problem. After about 2 years she and her son returned to the Boston area. At about this time, she and Michio took their first or second trip to Europe. During a visit to Amsterdam, Netherlands, she was with Adelbert Nelissen (who was a student of macrobiotics and is now running a Kushi Institute there), who took her and Michio, after a seminar, to an Indonesian restaurant. There she tasted tempeh for the first time, realized it was made from soybeans, and liked it very much–in fact much better than natto. She also realized that most Americans would like tempeh better than natto–another fermented soyfood. She told Adelbert: "You must learn how to make tempeh." After returning to America, she sent an American man to Amsterdam to learn how to make tempeh. She also brought back tempeh and started to show it to people, and to use it, in her cooking classes in Boston. Everybody liked it. And it was easy to make. Address: 62 Buckminster Rd., Brookline, Massachusetts 02146. Phone: 617-232-6869.

10118. Lipson, Larry. 1994. Makoto Sushi rolls out superb cuisine. *Daily News of Los Angeles* (*California*). June 17. p. L44.

• ***Summary:*** This is a review of the Japanese sushi bar Makoto Sushi at 17930 Ventura Blvd., Encino, California. "Recommended items: Sushi, sashimi, oshinko pickles, edamame soybeans, scallop sashimi, yellowtail collar, baked halibut or barracuda, baby squid [calamari] in miso sauce, soba, special salads."

Note: This is the earliest English-language document seen (July 2009) that contains the term "edamame soybeans." The combination seems to be a way of explaining to customers who are unfamiliar with the word "edamame" that they are basically soybeans. Address: Daily New restaurant critic.

10119. Luedtke, Bob. 1994. Brief history of Jameson-Lambert Co. and Minnesota Edamame (Interview). *SoyaScan Notes.* June 20 and 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bob started working for Jameson-Lambert Co. in 1986, managing farmland for outside investors. Jim Lambert was his boss. At that time Jameson-Lambert was primarily a farm management company that also did some brokerage work. He placed ads in the *Minneapolis Tribune* advertising the company's services. Reiko Weston (that is the correct spelling of her name) contacted him; she wanted to buy land to grow edamamé. He first met with Reiko in the fall of 1987. He talked her out of buying the farmland and got her to contract with local growers and a canning factory. That project started taking a lot of Jameson-Williams' resources. So the company spun off the brokerage firm that it had and some other projects in order to concentrate on the edamamé because the edamamé looked to have a brighter future.

The first commercial edamamé crop in the Western world was planted in mid-1988 (2 acres grown by one farmer near Truman, Minnesota–about 17 miles north of Fairmont) harvested in September 1988. The crop grew well, giving a good yield. But there were problems in harvesting the beans in the pods using a new mechanical picker that required careful adjustment so that it harvested most of the pods without damaging them. 7,000 lb came out of the field–including green beans in the pods (of varying degrees of maturity and quality), foreign material, stems, leaves, everything. Only 2,000 lb was of saleable quality edamamé–the rest went to a cattle feeder. Bob contracted with a local processor (Fairmont Foods of Fairmont, Minnesota) and they washed, blanched, froze, and packed the first crop. In about October 1988, he sold the 2,000 lb to Nishimoto Trading Company in South San Francisco (California). Nishimoto used this product mostly as samples for their distributors.

The product name on the stick-on labels was simply "Edamamé." It was sold frozen in 1-lb plastic bags. Most of the product was sold on the West Coast of the USA, where it was sold mostly in Japanese grocery stores. The company sent samples to Japan but never sent or sold any quantities.

In 1989 the company expanded its acreage dramatically to about 300 acres, rising to 350 acres in 1990. Mr. Lambert owned a grain elevator in Huntley, Minnesota, so all of the growers for these 2 years were located around Huntley. The crop was pre-processed (washed and cooled) in Huntley, then shipped to Tony Downs Foods in St. James, Minnesota for the blanching and freezing. In 1991 Jameson-Williams purchased a building and built their own processing plant in Jackson, Minnesota; they still use this facility. Acreage in 1991 grew to 400 acres. In September, the company signed a 5-year contract with Nishimoto Trading Co. to sell them edamamé. Nishimoto intended to distribute the product mostly in the USA. But two nights into the harvest, on September 18, there were 2 nights of unusually early severe frost, that damaged the crop–even though edamamé are typically harvested about a month earlier than typical dry soybeans. The average first date of frost in that area is October 5–so frost is not usually a big danger. Nishimoto was unwilling to buy any of the 1991 crop–a disaster! Jim Lambert was still president of the company; there were some other things going on at the time that Bob would rather not get into. The company has not dealt with Nishimoto since 1991 and the contract is no longer in effect.

Acreage grew to 450 acres in 1992 and about 500 acres in 1993, but both years the crop suffered from rain–meaning 3 years in a row of weather-related damage. Yields were pretty good but the pods were smaller than ideal. Bob

© Copyright Soyinfo Center 2014

considers a good yield to be about 3,200 to 3,300 lb/acre of saleable green beans in the pods. If the beans were allowed to mature, the yield would be about 45 bushels per acre (1 bushel = 60 lb) of dry soybeans per acre (2,700 lb of dry beans without the pods).

In about May of 1992, Jim Lambert, who was the owner of Jameson-Williams Company, sold his company to another man whose name is confidential. At that time Lambert left the company and got out of the edamamé business. One of the reason's Lambert was "let go" had to do with misrepresentations made in Sept. 1991 when the contract was signed with Nishimoto. At that time the company name was changed to Minnesota Edamame. The other man is still part owner; they just finished another joint venture with Minnesota Waxy, Bob is now the manager of Minnesota Edamame. All of the company's operations are now in Jackson, Minnesota.

Essentially all of the edamamé that the company has sold have been sold in the United States, mostly on the east and west coasts. They generally sell the product, private labeled in frozen 1-lb retail packs, to two Japanese-run trading companies: Mutual Trading Co. (Los Angeles) and JFC [Japan Foods Corp., with headquarters in San Francisco and offices across America]. Nishimoto plans to buy edamamé from the 1994 crop. They pack the product under 4-5 different labels. Bob thinks the product ends up mostly in Asian-American grocery stores, with a little sold to restaurants. This year Bob's company has also sold 3 truckloads (90,000 lb) of *mukimamé* (under private label) primarily to a Chinese-American trading company in New York; the generic name on the label is something like edible green frozen soybeans. The company is now in the process of developing its own label. The Japanese are not interested in *mukimame.*

As for the future: The soybeans they are now using have pods that are a little too small for the Japanese market. The edamamé imported to the USA from Taiwan are the second-grade products–not good enough to sell to Japan. The Taiwanese edamamé beans don't grow well in Minnesota. He is working on breeding improved varieties with the University of Minnesota, the University of Illinois (Dr. Richard Bernard), Iowa State University, and some private companies. It is quite easy to develop a large-seeded, good tasting edamamé bean, but it is harder to breed in resistance to phytophthora and other diseases–and the process takes a long time. He is not discouraged and thinks the product has a bright future. One new direction is to develop *mukimame,* shelled green soybeans. They are working with the state of Minnesota and some private individuals to introduce the product as "Sweet Beans" to Caucasian-Americans. His market research shows that there is enough of a stigma associated with the word "soybeans" that they don't want that term to appear prominently on the label.

Bob has been in touch with Pillsbury, but they have dropped their edamamé project–apparently because they don't want to be the first into the market. He is trying to sell to natural and health food stores.

This year Bob's company has planted about 700 acres of edamamé, up from 500 acres last year. Last year's bad rains destroyed about half the crop. He could have sold twice what he harvested. The variety of soybean he grows do not do taste quite as good when grown further south (as in southern Illinois) as they do in Minnesota. This year Richard Bernard (who is partly retired) has 2,500 varieties of soybeans for edamamé growing in his test plot at the University of Illinois. He has grown edamamé for many years, and he has found that the taste of one variety varies depending upon the area where it is planted. The Japanese like the beans best that are grown in southern Minnesota; they like a sweetness. He is looking into breeding in more sweetness. Address: Manager, Minnesota Edamame, Route 1, Box 53A, East County Road 34, Jackson, MN 56143. Phone: 507-847-3591.

Food). I first learned how to make tofu in London at the Community Health Foundation, Old Street 98, in 1976 or 1977. Then I gained additional experience in making Japanese-style nigari tofu from Centers and individuals in France and Belgium. I first visited the United States in late 1978 and early 1979. On 9 Feb. 1979 I visited you [William Shurtleff and Akiko Aoyagi] at New-Age Foods Study Center in Lafayette, California, having a good impulse in tofu pioneering, to talk about making tofu in Italy.

"In 1980 I visited a friend, Mr. Franco Pagliano, in Milan; that city had many Chinese restaurants. Mr. Pagliano had learned how to make tofu from Mr. Roland di Centa. was supplying these Chinese restaurants with a small quantity of tofu (he made it the Chinese way, with calcium sulfate), but he was soon forced to stop production because he had difficulties producing, unofficially without the proper permits, in his apartment. It was a really good experience for me to get to know Chinese and Japanese people; Franco was very skillful and shared many secrets with me. Then after several months he called me to say that he was going to stop tofu production and that he could introduce me to his clients–which he did, including a Japanese restaurant, Suntory Italia, which had not previously accepted his Chinese-style tofu. I had contacts in Milan and met Mrs. Giovanna Mazzieri at a conference in Milan, where tofu was presented to the public and the press, together with the Italian Chefs' Association. I remember that on that occasion I first had a large number of tofu kits sold through Mrs. Mazzieri.

"I survived financially making tofu for the first couple of years. I sold my tofu to the Chinese restaurants of Milan, driving there once a week from Rimini in my small refrigerated car (280 km each way). I soon got tired of the trip, but actually I was motivated and satisfied and full of curiosity for the Chinese and Japanese atmosphere. Meanwhile, I was stopping to deliver my tofu at all of the macrobiotic and natural food shops and restaurants along the way (in Cesena, Forlì [Forli], Faenza, Bologna, Modena, Reggio Emilia, Parma, etc.). During those years I did promotion for soyfoods, including cooking classes.

"In July 1982 I attended the Soyfoods Conference in Seattle, Washington (we met again) because of my interest in large-scale production and in making a report on soyfoods, together with a lady dietitian from Bologna (I forget her name) supported by the University of Bologna. She continued introducing the many good qualities of soyfoods to those in her field, medical doctors and nutritionists. For more information on this, contact the Sunsoy Food company in Bologna.

"After my 1982 trip to the USA (now having with me color slides, literature, and information), I developed contacts with the largest food distributing company in Italy, Coop Italia, but the people in charge believed that it was too early to distribute tofu widely in Italy–the market was not yet ready... maybe in the future. Even though they were open to innovative ideas, the negative answer was disappointing.

"I remember there was a time in 1983 when I had the luck of meeting a Japanese girl, Fusako Aoki, who was just passing through Rimini–a very rare occasion. She helped me in tofu-making classes for about 3 months, in Rimini and other cities. Meanwhile many people visited me to learn about making and selling tofu (future competitors)!

"I had enough technical skills to develop and build (mostly by myself) a stainless steel continuous open-air steam cooker (not pressurized! a secret for good tofu), a second-hand Weston (from the USA) vibrating screen, a good stainless steel hammer mill. This was really good equipment for those times, the only equipment of its kind in Italy that I knew of.

"I was in charge of everything–production, sale, promotion, and new product development. Unfortunately I was not able to grow from the individual to the team aspect of the work. I exhausted myself, ending production in June 1988. In that year I was supplying centers in cities like Rome, Firenze [Florence], Torino [Turin], Bologna, Treviso, and Ravenna–mostly in northern and central Italy. The demand was growing and it reached the point that in places like Florence, Rome, and Torino people started companies to make soyfoods. At that point, I could survive only by diversifying products, improving packaging, moving into a larger factory at a new location, and expanding the company and the number of employees.

"I could not do this, and after a project of moving in Toscana near Florence, to live and work there, I had to discontinue my activities. The other reason was that my family was growing rapidly; I had 2 children in 1985 and 1987, and I did not want to jeopardize or endanger my family's personal financial situation. Looking back, I think I made the right choice, but I feel good when someone remembers me for my good tofu. I sold my equipment at a low price to a company named Food for All in Verona, then helped them with my knowledge of making and selling tofu. They are connected to the Ananda Marga Society, are supporting activities in India, and are really nice people.

"While in business, I was producing: Tofu (vacuum packaged or in bulk), tofu spreads (various flavors), tofu burgers, tofu mayo (fresh or long-life, in glass jars), seitan, seitan burgers, spreads, soymilk (sometimes, and only fresh), and various tofu desserts (fresh and perishable). I only made small batches of tempeh, for personal use and experimentation (not sold commercially) using cultures from the USA. Near the end of my activities, I produced 400 kg (and up to 600 kg) of tofu (base product); officially I had only one (maximum two) part time workers, with good help from my relatives.

"The only company (apart from the person of Mr. Pagliano) I know that made tofu before I did was the Poporoya company in Rome, which produced and sold it at his branch in Milan, the Poporoya-shop, a Japanese shop.

© Copyright Soyinfo Center 2014

"People introducing soyfoods in Italy were the macrobiotic centers: Mr. Ferro Ledvinka from Rome, Mr. Alois Grassany from Bologna, and Mr. Roberto Marocchesi from Torino.

"I still see an opportunity in the future for making and selling tofu and tofu products in Rimini; this would be for me and my friends, but it would work only if it was connected with a larger project of a vegetarian cultural center. Who knows? Now I am a 'natural wood' carpenter." Address: Via Cuoco 9, 47037 Rimini, Italy.

10124. Fellman, Louis. 1994. History of pioneering work with tofu cheesecake, Sprucetree Baking Co., and Soy Delites. Part II (Interview). *SoyaScan Notes.* Aug. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** So in about January 1985 Louis started a company named Soy Delites, Inc. that made nothing but tofu pies. Several friends invested money. "I did what a lot of people do. I took every credit card and maxed it out to the limit, then got on my knees and prayed every night. We went through some trials and tribulations like many companies do." At first he sold only whole pies, but then he realized he needed to sell packaged, individual serving. Eventually he found a company that made little wedge-shaped containers for pie slices. Louis moved his business into a bagel bakery in Matawan, near where he was living. Then Louis started baking the pies in little round 6-ounce tins with a little plastic lid on each. With a nice label and the new size, the product started selling well. He also made 6-inch pies for people who wanted something bigger. Fillings included banana-almond, carob-coconut, and mint carob chip. Toppings included strawberry, blueberry, raspberry. Richard Worth, who started Sorrel Ridge, made very thick batches of his preserves in 3-gallon containers as toppings for his tofu pies. When Richard left the company, it became very difficult to get a good topping that Louis did not have to cook.

Neshaminy Valley distributed the product from the outset, and a Boston distributor back-hauled the tofu pies to Boston, Massachusetts, where they sold well at Bread-and-Circus. But Louis couldn't get his products into supermarkets or mass market stores. He was making a very modest living, but the satisfaction was there. Eventually Louis bought his own shop for Soy Delites at 568 Broadway, Long Branch, New Jersey. Then he started distributing Mediterranean foods (hummus, tabbouleh) made by another company.

In about 1988 Mark Brancato, who had a concession at the Delacorte Theater–free Shakespeare in the Park, approached Louis and they worked together to develop improved Mediterranean foods. Louis made these foods and first sold them to Mark in the summer of 1988. Then he took some samples to some of his customers. "They loved them. They didn't want the brand I was distributing any more." The demand kept increasing. Meanwhile, Louis was having problems getting delivery of tofu from Nasoya. So he started buying his tofu from Jeff Connerton of Fresh Tofu in Easton, Pennsylvania. The quality was inconsistent. Finally he looked at the who situation and realized that the tofu pies were not carrying their own weight. So he let them die. Louis made his last tofu pie in about 1988-89.

The tofu cheesecakes sold well, but there were several problems in making them profitable. First their production required a great deal of labor and therefore were not as profitable as Louis had hoped they would be. Second, the packaging was difficult because each pie was so delicate. He sold them refrigerated, but some stores kept them in the freezer, which hardly changed the quality at all. They were distributed by several distributors–but not by enough of them.

What are they keys to selling tofu cheesecakes profitably? (1) Find a good source of high quality, reasonably priced tofu, ideally one that has kosher certification. Find an acceptable sweetener. Maple syrup makes by far the most delicious tofu cheese, but it is too expensive. So Louis used honey, which he detests, both in terms of flavor and philosophy. Rice syrup is not sweet enough. Rice syrup, brand-named Rice Nectar, is now very readily available on the East Coast, made by T&A Gourmet. Perhaps a mixture of maple syrup and Rice Nectar would make a good sweetener. (2) Use the proper mixer and blade to make the tofu filling very smooth; Louis used a Stefan model made in Germany, not a Hobart VCM. (3) Develop good packaging for the product. (4) Get good distribution for the product, which hinges very much on the packaging, freshness, and shelf life.

In 1992 Louis changed the name of his company to Abraham's Natural Foods, whose main products are Mediterranean-style foods like hummus, tabbouleh, baba ganouj, etc. The market for these latter types of foods was much larger than the market for tofu pies. For a while he made both the tofu pies and the Mediterranean-style foods. Louis' partner from Sprucetree, Howard Grundland, went out of business (he was divorced, and moved), so Louis took over the production of Howard's Sweet Rice Cookies (made with a flour from mochi / glutinous rice). The original recipe, which is macrobiotic, came from Aveline Kushi or Murray Snyder. But the tofu pies were not as profitable as Louis had hoped they would be. So the demand for the hummus and other products basically squeezed out the tofu pies. The Bridge (in Middletown, Connecticut) is now a distributor of Louis' products. Few companies can survive on one product: The companies that make Tabasco Sauce, Pepsi, and Coca-Cola are exceptions.

Louis still pays Howard a small royalty on the Sprucetree Sweet Rice Cookies–which are still selling very well. As of Aug. 1994 Howard Grundland can be reached at 410-239-9791. Murray Snyder (phone: 212-308-3818) is in Manhattan, New York, running a macrobiotic center where he does teaching and consulting. Mark Medoff was planning to go to law school. Louis has been out of the organized

macrobiotic scene for years. Address: Abraham's Natural Foods, P.O. Box 4201, Long Branch, New Jersey 07740. Phone: 908-229-5799.

10125. Wang, Huei-ju; Murphy, Patricia A. 1994. Isoflavone composition of American and Japanese soybeans in Iowa: Effects of variety, crop year, and location. *J. of Agricultural and Food Chemistry* 42(8):1674-77. Aug. [25 ref]
• ***Summary:*** The amounts of 12 isoflavones were measured in 8 American and 3 Japanese soybean varieties by using C_{18} reverse-phase high-performance liquid chromatography.

The isoflavone content of Vinton 81 soybeans was measured each year from 1989 to 1991; it ranged from 1176 to 3309 micrograms per gram. The isoflavone content of soybeans grown in different locations in 1991 ranged from 1176 to 1749 micrograms per gram. Thus crop year seemed to have a much greater influence on isoflavone content in Vinton 81 than did location. Isoflavone content of the other 7 American varieties ranged from 2053 to 4216 micrograms per gram. The yearly variation in the content of individual isoflavones soybeans can be different by a factor of five, and of total isoflavones by a factor of more than two.

The isoflavone content of the 3 Japanese soybean varieties (Keburi, Kuro daizu [black soybeans], and Raiden) ranged from 2041 to 2343 micrograms per gram. Address: Food Science and Human Nutrition, 2312 Food Sciences Building, Iowa State Univ., Ames, Iowa 50011.

10126. Mio, Art. 1994. Update on Morinaga Nutritional Foods (Interview). *SoyaScan Notes.* Sept. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Morinaga is now selling about 420,000 cases/year of their different types of Long Life tofu. Sales increased very little last year. The company will have to sell 800,000 cases to break even. During its entire history in America, Morinaga has not had a single year when it made a profit. It continues to lose money every year, but not enough to cause a crisis in Japan or to lead Japanese management to decide to discontinue the product or operations in America.

As the value of the dollar continues to fall against the yen, it becomes increasingly expensive to import tofu from Japan, and thus either the retail price of tofu must rise accordingly or profit margins must drop. It was Mr. Ono's decision to establish Morinaga selling tofu in America, and he is still the person who must make the big decisions about the company. Mr. Kumoda is in charge of Morinaga's operations in America. Many people lose face, each step of the way up the ladder, if they admit that things are not going well. Art has to bend with the wind. Even if he makes a suggestion, it just goes up the ladder.

Bill Shurtleff's observations: Someone needs to look carefully at the total Morinaga situation and make some big decisions, such as to build a plant in America. There is no leadership–the company is just drifting, and losing money every year. No one has a strong belief in the product.

The basic problem is not to find a good slogan to sell Mori-Nu Tofu but to address the fundamental structural questions about the company's future. What is needed is to find a creative way to finance a plant in America. What are the product's unique characteristics? Long Life tofu. Silken tofu. Address: National Sales Manager, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8636.

10127. Grundland, Howard. 1994. Sprucetree Baking Co. and tofu creme pies (Interview). *SoyaScan Notes.* Sept. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sprucetree conceptually originated in about 1970 or 1971 in Boston, Massachusetts, where Howard was lived in Michael and Gretchen Swain's macrobiotic study house for 3 years (1970-1973). Howard and his roommate, Gary Gaiser, used to visit Crane's Call, a bakery then owned by David and Loretta Kailin. Crane's Call made a fantastic rice bread in loaves–which was naturally leavened (no added yeast), using brown rice and sweet [glutinous] brown rice as a sourdough starter. David and Loretta inspired Sprucetree, which later made a similar bread.

In 1972 Howard traveled down the East Coast from Boston to Key West, including Baltimore (Maryland) and Philadelphia (Pennsylvania). He remembers meeting Murray Snyder in Baltimore a day or two before Murray left for Brazil to study and teach macrobiotics. After Howard returned to Boston, Stanford Lessans, whom he had met in Baltimore, offered to back him in a bakery. Howard had no previous commercial baking or business experience. In mid- to late 1972 David and Loretta had sold Crane's Call to Howard Goldman and the name was changed to the Queensberry Street Bakery. Howard Grundland now began studying baking with Howard Goldman there. Howard bought a small grain mill and began milling flour at the Swain house. With David's and the Goldman brothers allowing him to use their bakery on the weekends, Howard began making a small amount rice bread in late 1972 or early 1973. There was no sense that Howard was a competitor; he sold some bread to Erewhon–as did Queensberry. Early in the summer of 1973 Howard packed up his Volkswagen bus and moved to Baltimore to start his bakery. He lived in a macrobiotic study house run by Miles and Susan Kierson on Park Heights Avenue in Pikesville (in northwest Baltimore) and again met Murray Snyder. Sprucetree Baking Co. started in 1973, and was initially located in the kitchen of the macrobiotic study house. Howard held another job during the day and would bake rice bread 2-3 evenings a week. He would deliver his bread from Baltimore to Washington, DC. In about Sept. 1973 Stanford Lessans bought him a regular commercial "sugar bakery" at 6657 Belair Road in Overlea, a suburb in northeast Baltimore. The company opened its doors in Oct. 1973. During the first year, Howard had no

© Copyright Soyinfo Center 2014

paid employees, but from the first day he was assisted by Michael Hare (volunteer) and about 10 other people who were members of the local macrobiotic and "new-age" communities, including Jeffrey Bergen and Murray Snyder (who was also organizing the East West Foundation). Their first product was rice bread. He has an old label which shows that the ingredients were: Organic whole wheat flour, filtered water, organic brown rice, organic sweet brown rice, and sea salt. Note that it contained no added sweetener. His second product was raisin strudel.

Howard is not certain how the recipe for tofu pie [which resembled a cheesecake] originated. He thinks that "Murray Snyder whipped out his old California recipes, and among his recipes was the recipe for tofu pie." Howard does not where in California Murray got this recipe. Murray can be reached in New York City at 212-308-3818. Howard would guess that the tofu pie was launched in about 1974 or early 1975 (about 18 months after the bakery started on Belair Road), and definitely when the bakery was located on Belair Road bakery. By the time the company moved across town to 4105 Aquarium Place at Reisterstown Road, Baltimore, in 1976 or 1977, they no longer made them using a blender. Howard is quite sure that Louis Fellman began to work for Sprucetree when the company was still on Belair Road. [Louis is certain he began to work for Sprucetree in August 1977]. Howard has an article dated 24 Jan. 1980 telling about the company, located at Aquarium Place, and founded in 1973. He also has an undated article titled "Sprucetree Baking Co.: They do things naturally," by Mike Lipske from about 1974 (the article says he was age 25) published in the *Baltimore Sun.* The tofu pies are not mentioned but Sprucetree had just purchased a cookie machine, and Laurelbrook Foods in Bel Air, Maryland was located nearby.

Sprucetree was the first company that Howard knows of that made this kind of product; many companies later copied the product. The product was originally named either Blueberry Tofu Pie or Tofu Blueberry Pie. At times the made either blueberry or strawberry, but the strawberry was usually too costly. "Michio Kushi would shake his head; he couldn't believe that we were blaspheming tofu to such a degree. Aveline Kushi used to eat our tofu pies frequently." Howard does not remember whether tahini and lemon juice were part of the original recipe–but he thinks they were. The tofu pie was not a major income earner for Sprucetree. Breads and cookies made most of the money. "My concept of Sprucetree was to have everything that you could want at a bakery presented in a natural foods form, and as close as possible to macrobiotic quality. We made eclairs (with tahini, apple juice, lemon juice and vanilla filling–no eggs) and doughnuts. We developed many creative, unique products." They also made an apple-tahini pie, seasonal strawberry and pumpkin pies, and a fruitcake for Christmas–all pretty much "macrobiotically correct." The tofu pies were always sweetened only with maple syrup (never with honey), which was expensive, though labor costs were not high. But they were priced to be sell at a profit. Sprucetree made both 8-inch diameter pies (which had the filling on a Graham-cracker type crust made of 2 types of whole-wheat flour, barley malt syrup, safflower oil, and a little salt) and a 3-inch tart (with no crust in a little pie tin), sold refrigerated. The filling was mixed in a 60-quart Hobart VCM, poured into a gallon measuring cup, then poured into the tins. After being baked and cooled, the blueberry topping was put on. The big pies were packaged in pie boxes with a clear window; the individual tarts were initially overwrapped with Saran wrap, later packed in a sealed package. They sold the whole pie, mostly to stores, which generally sliced them and sold them by the slice, either at a juice bar or re-wrapped and refrigerated. Some people would buy whole pies.

The tofu pies were the only product in which Sprucetree used tofu, but they did use soy flour in a 7-grain bread, and they made a sesame-soy bread (based on whole wheat with soy flour, and sesame seeds on top).

By the mid-1980s the natural baking industry had become very competitive. The trend was toward both better quality products and less concern about quality (such as more use of white flour and yeast). Matthew's was becoming very popular and affecting his sales. The company was forced out of its location at Aquarium Place in about 1985-86 and had to move to a shell at 4200 Mortimer Ave. Sprucetree finally went out of business in about Feb. or March of 1988. Address: P.O. Box 13, Hampstead, Maryland 21074. Phone: 410-239-9791.

10128. Belleme, John. 1994. New developments with rice beverages and natto (Interview). *SoyaScan Notes.* Sept. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** At the recent Natural Products Expo on the East Coast there was a big battle of the rice beverages. Westbrae has just launched two new rice beverages in aseptic cartons with spouts; one is regular strength and the other is concentrated. This may be the first natural foods product in an aseptic carton with a spout. Imagine Foods then switched to a carton with a spout. Then Imagine Foods put out a big poster explaining why their Rice Dream is superior to Westbrae's. John prefers the flavor and texture of Rice Dream.

John's main business is now exporting to Mitoku. There is a big demand for organically grown soybeans in Japan. John has a standing order from Mitoku for 1,000 tons of small-seeded organically-grown soybeans to be used in Japan for making natto. Tommy Carter at North Carolina State University in Raleigh is breeding natto-type soybeans. Charles Kendall, a natto manufacturer in Massachusetts, is now testing the soybeans that Carter breeds. It is a nice relationship. Address: P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

© Copyright Soyinfo Center 2014

10129. Andoh, Elizabeth. 1994. Where Tokyo's young crowd likes to eat: Choice tables. *New York Times.* Sept. 18. p. 165.
• ***Summary:*** A look at popular restaurants in Tokyo. "One sampler is made up of five rolls of sushi–one each of tuna, omelet, natto (sticky fermented [soy] beans), mentaiko (spicy cod roe) and fresh ama ebi (shrimp).

Also mentions: "chilled cubes of silky bean curd," "miso-thickened broth with wakame, or sea tangle," "fried bean curd," and "sweet adzuki beans."

10130. Snyder, Murray. 1994. Tofu cheesecake, Marcea Newman Weber, and macrobiotics (Interview). *SoyaScan Notes.* Sept. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Murray remembers that Sprucetree Baking Co. made a tofu cheesecake, but he does recall being the source of the recipe. He was the originator of the Sweet Rice Cookie–which Sprucetree also made. When Murray thinks of that cheesecake, he thinks of Marcea Newman (who was married to Dan Weber in December 1982 in Australia, so her name is now Marcea Weber. She and Dan and her children live in Faulconbridge, NSW, Australia). Marcea is a native of New York, but in about 1969-1970 she went to California to study macrobiotics (perhaps with Herman or Cornellia Aihara); she ended up at a macrobiotic study house in San Francisco run by Nan and Dave Schleiger. Murray first met Marcea in California, then she returned to New York.

Murray arrived in Boston on Valentine's day in Feb. 1971. He stayed there studying macrobiotics until Oct. 1972. A little later in 1971 Marcea Newman moved to Boston from New York. He and Marcea got their own apartment and lived together in Boston during 1971 and 1972. At this time Marcea was baking (very carefully testing and converting old family recipes to macrobiotics; her mother was an excellent baker) and she taught Murray how to bake. At the time she did not sell her baked goods. It was from some recipes that she gave Murray that he evolved into the Sweet Rice Cookie, the Babka, etc. Using recipes given or taught to him by Marcea, Murray rented out the kitchen in the Erewhon warehouse and started to do some baking.

In 1974 Marcea's pioneering book titled *The sweet life: Marcea Newman's natural-food dessert book* was published. It contains a recipe for "Cheesecake Tofu Pie" (p. 37), as well as many other innovative desserts and dairylike products that use tofu as a major ingredient. "Marcea was the person who developed the Tofu Cheesecake that Souen, a macrobiotic restaurant in New York City, eventually made and sold. She was very friendly with them and she lived nearby in New York. She also knew the people at The Caldron restaurant."

Murray still has a book of large-scale recipes for baked goods that he made at Erewhon from 1971 and later gave to Howard Grundland. It contains recipes for Sweet rice cookies, Dried fruit square, Babka peanut square, Chestnut bar, Kanten cake, Apple crunch, Apple-tahini juice pie, Rice bread. There are no tofu recipes in that book.

Murray can think of only two ways that he could have been the source of the recipe for tofu pie [cheesecake] made by Sprucetree starting in 1975 or 1976: (1) He suggested that Howard Grundland use the recipe in Marcea Newman's book *The Sweet Life;* (2) He brought Howard a tofu cheesecake made in New York City by either The Caldron or Souen; (3) He could have learned the recipe from his ex-wife, Pam. Note: For more on America's first tofu cheesecake see letter from Marcea Newman Weber, Oct. 1994.

People that Murray remembers living in Boston during 1971 and 1972 were Michael Rosoff, Lenny Jacobs, Jim Ledbetter, Eric Utne and his brother (Tom?), Phil Levy, Paul Hawken, Bruce Gardner, Tom Hatch, and Matt Chait. Matt Chait used the Erewhon kitchen before Murray began baking there. Matt developed the Ricycle, which were bikes with food trays that went out to the colleges. Tony Harnett also worked in that kitchen; he went on to do Bread and Circus. Matt and Murray created Macrojacks–the original caramelized popcorn with barley malt, raisins, and peanuts "which is now made by 2-3 other companies and sold all over the place." In late 1971 or early 1972 they had purchased their heat sealer, boxes, and labels, and they began to make and sell Macrojacks–fairly large quantities. They were all ready to make this into a big business, but circumstances prevented that from happening.

Murray was in Brazil from Oct. 1972 to April 1973. He returned to Baltimore, Maryland, and in 1973-75 he probably made trips up to New York. When he thinks of early tofu desserts, he thinks of the cheesecakes made at Souen (in New York City; it was started and owned by Yama, a Japanese man) and The Caldron (in New York City; it was originally owned by a man named Marty Schloss, plus his wife, Glory, and mother [Seena], who were a good friend of Marcea's). The Caldron had an extensive baking operation, and they may have made a tofu cheesecake even before Souen. Whenever Murray went to New York he would always go to The Caldron to see what innovative new products they had, and he would always bring a number of items back to Baltimore for people to taste test. Marcea would probably remember if The Caldron was known for making a cheesecake, and when and where they got the idea and recipe.

Murray agrees that a remarkably large percentage of macrobiotic students and teachers in the early days were Jewish. He would guess that in 1971-72 roughly 30-35% of the macrobiotic students in Boston were Jewish. "One reason is that many Jewish people of that era were seekers. They were looking for answers; they wanted to know what life was all about and how they could help society. There were unexplained things that were not being talked about in their religion, culture, schools, etc. Historically, there is a strong thread of humanistic ideals within the Jewish culture.

© Copyright Soyinfo Center 2014

The macrobiotic movement, as he used to know it, is presently very stagnant. Many old problems have never been resolved. Not everybody wanted to follow a strict, Japanese model–and rightly so. "But I think more people are eating what we would consider to be macrobiotic-type food and loosely following what we consider to be a macrobiotic diet. There is definitely a lot of literature and books being sold under the guise of macrobiotic education. Somewhere down the line, macrobiotics may even become invisible because the basic tenets are going to be integrated a lot of educational and wholistic teachings." Murray is a macrobiotic counselor and teacher, but he is "trying to offer a much broader, more flexible, more embracing way to present macrobiotics without creating a dogma."

• ***Summary:*** Iowa State University plans to host a workshop titled "Marketabilty of Soybeans and Soyfoods in Japan and the Pacific Rim" on 28-30 Nov. 1994 at the University in Ames, Iowa. Lester Wilson of the Center for Crops Utilization Research and Paul Gallagher of the ISU Department of Economics are organizing the event. For more information call 515-294-3394.

10133. *Bluebook Update* (*Bar Harbor, Maine*). 1994. Bühler process advances soymilk and soya flour. 1(3):1, 4. July/Sept.
• ***Summary:*** Buehler Ltd. of Uzwil, Switzerland, makes milling equipment that can transform whole soybeans into an ultra-fine soya powder, which can be made directly into soymilk or used as an ingredient in foods or baked goods. In early 1994 Buehler's latest soya flour and soymilk plant began operation in Italy. The company reports it has installed a total of 13 systems in 8 countries including France, Italy, Switzerland, Brazil, Taiwan, Ethiopia, China, and Japan.

10134. Business Trend Analysts, Inc. 1994. The health and natural food market: Past performance, current trends, and opportunities for growth. 2171 Jericho Turnpike #342, Commack, NY 11725. 325 p. Sept. Price $995.00. *
• ***Summary:*** Chapter 3 of this report, the first of seven chapters that discuss individual product categories, is titled "The Market for Soy Foods: An in-depth analysis of historical, current, and projected sales. Trends in the U.S. market for soy foods. Manufacturers' total sales of soy foods. Manufacturers' sales of soy foods, by distribution channel. Total retail sales of soy foods. Retail sales of soy foods, by distribution channel. Retail sales of soy foods, by type: Soy sauce, tofu, second generation, soymilk, miso, soynuts, tempeh. Worldwide soybean production, total and per capita. U.S. production of soybean oil. New product introductions in the market for soy and vegetarian foods, including names of manufacturers, brand names, and product descriptions.

Under "Report Highlights and Special Features" we read that after the 3-year recession, most product categories posted strong gains, but "several segments failed to cash in on the growth bonanza. Manufacturers' sales of soyfoods were up a meager 2½%, while the market for frozen health foods declined slightly... One-third of consumers under the age of 35 feel it is extremely important that the food products they purchase are natural; the percentage is even higher among older consumers. Over 40% of adults believe they will contract heart disease or cancer." Today 68% of adults are overweight, up from only 58% a decade ago.

Overall report Contents: 1. Executive summary. 2. Overall market dynamics (including Soyfoods). 3. The market for soy foods. 4. The market for herbal teas. 5. The market for dairy foods. 6. The market for grains and cereals. 7. The market for frozen foods. 8. The market for snack foods. 9. The market for groceries. 10. The health food consumer. 11. The health/natural food store industry. 12. Competitor profiles. 13. Industry directory. Address: Commack, New York. Phone: 516-462-2410.

10135. *Newsletter of the Soyfoods Association of America* (*San Francisco, California*). 1994. Yamasa builds in America. Sept. p. 1.
• ***Summary:*** "Yamasa Corporation, the world's second largest manufacturer of soy sauce, has constructed a 65,000-square-foot plant in Salem, Oregon, USA. Yamasa has been manufacturing soy sauce in Choshi, Japan, for 350 years. The company decided to build their plant in Oregon because of very high demand for their soy sauce in the U.S., especially on the West Coast." Salem's temperate climate and water quality are also similar to those of Choshi.

In 1992, Yamasa sold 1.3 million gallons of soy sauce in the United States, all of it imported. When fully operational, the new plant will be able to produce 1.7 million gallons per year.

Haru Sushi in El Segundo states: "You can begin your meal with a nice hot bowl of edamame, the absolutely addictive cooked soybeans in their pods that make peanuts seem silly by comparison (and which are nutritionally significantly more satisfying), move through some miso soup (wonderful on chilly evenings), and then tuck into the usual hit parade of sushi items that make so many of us so happy..."

10137. Thompson, Keith. 1994. Breeding soybeans for use in making soy oil or natto at Jacob Hartz Seed Co. (Interview). *SoyaScan Notes.* Oct. 11-12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Hartz is making more progress in fatty acid modification for the oils industry than they are in Oriental soyfoods, in two areas: (1) Increasing saturated fatty acids to about 30% so that the oil need not be hydrogenated in applications where hydrogenation (which creates *trans* fatty acids) was traditionally used; (2) Reducing saturated fatty acids to the level of canola oil; Hartz already has a "low-saturate soybean" with only 7.5% saturated fatty acids (as opposed to 6% in canola oil) but none of the oil companies are interested. They run strictly on cost and are not willing to pay a premium. Moreover, a specialty oil would require that the beans be "identity preserved" yet even a small solvent extraction plant (such as Riceland Foods in Stuttgart) has a capacity of 50,000 bushels/day. The oil companies say it will cost a lot of money to put a low-saturate soy oil on the shelf and they do not think they can gain market share. Keith hopes that Hartz can pursue this more to find a company interested in a niche market, such as an all-natural oil that is low in saturated fatty acids. The industry seems more interested in (1) than in (2). Monsanto has concluded that it is too costly to make these changes using genetic engineering, but not too costly (and worth doing) using classical breeding.

Hartz has hired a food scientist, Dr. Keshun Liu, who is actively involved in Hartz's mutation breeding program for fatty acids. He does a lot of analysis of the oil content of these soybean mutants, using a gas chromatograph. He also does quite a lot of analysis on natto beans and a little on soybeans for tofu.

In terms of Oriental soyfoods, Hartz has for many years sold a large quantity of specialty soybeans to natto makers in Japan. They have worked closely with natto makers to breed in several characteristics that they require, such as small seed size. Hartz's Japanese partner [Yaichiro Mogi of Asahi Shokuhin] was very scientifically oriented and had good analytical capabilities. They came to Hartz and said "Here's what we want in a natto bean." Hartz bred to their specifications and it worked. Keith thinks that Hartz may have the world's biggest program for breeding soybeans for natto. Hartz's sales of natto beans constitute about 50% of the company's total sales. Hartz's soybean breeders continue to communicate with natto makers (more than does Hart's food scientist) but there doesn't seem to be a lot of change in terms of what they are looking for in a good natto soybean.

Natto makers are willing to pay a good premium for their soybeans because natto beans are inherently lower yielding and have many special characteristics that are difficult to breed and select for. The breeder must get high yield and disease resistance for the farmer plus 3-4 characteristics desired by the natto makers. Address: Food and Export Manager, Jacob Hartz Seed Co., P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 800-932-7333.

10138. Thompson, Keith; Brown, Edward. 1994. Breeding soybeans for use in making tofu at Jacob Hartz Seed Co. Part I (Interview). *SoyaScan Notes.* Oct. 11-12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In late 1987 Keith Thompson visited Soyfoods Center and he and William Shurtleff worked together to design a system that Jacob Hartz Seed Co. could use to more effectively breed soybeans for food uses. The purpose of this interview is to find out if that system was implemented, and if so how, and how it is working.

Hartz has hired Dr. Keshun Liu, a PhD in food science. His job is basically trying to interface between soybean breeders, Keith, and the soyfoods industry.

There are three main problems in breeding soybeans for use in making tofu. The first and biggest problem is that most tofu makers never seem to be willing to pay a premium price for their soybeans–unless the soybeans are organically grown, in which case tofu makers will pay huge premiums. The big market for tofu beans is in Japan. Hartz sells about 40,000 bags/year (each 50 lb) to tofu makers in the USA; one tofu maker in Hawaii buys about half of these. From these companies, Hartz is able to get a premium of about $2.50 per bushel over the CBOT (Chicago Board of Trade) price. Until tofu makers are willing to pay a premium for soybeans that give tofu with better yield and quality, they must be willing to accept varieties that are already developed. Tofu beans are pretty much a commodity, since there are a lot of large-seeded, clear hilum beans grown in the Midwest that perform pretty well for tofu. Natto makers are willing to pay a good premium for their soybeans because natto beans are inherently lower yielding and have many special characteristics that are difficult to breed and select for. Because Hartz has limited storage, they breed in the areas where they can get the best premiums. Hartz hedges 100% of its soybean transactions. So it tends to charge a fixed dollar amount (its margin) over the CBOT price.

In growing out new varieties, Hartz contracts with farmers to grow the beans, then buys back 100% of these beans at a pre-determined price, bags them in a Hartz bag, and sells them to soyfoods makers. It does not prefer that farmers sell its beans to soyfoods makers, though farmers have the right to do this. Hartz's 428-acre breeding farm is used solely to produce breeder and foundation seed stock–

© Copyright Soyinfo Center 2014

the first 2 generations. The Plant Variety Protection Act of 1972 gives plant breeders some rights over the products they produce in their breeding programs, and prohibits farmers from selling protected seed to other farmers–like a seed company. But farmers can save their own seed and plant it in the future–which means he doesn't have to buy seed from a seed company for a long time. Hartz doesn't like that and he thinks there is a movement to mitigate that. For example, farmer-saved wheat seed was so extensive that Pioneer Hi-Bred withdrew from the market. All Hartz's varieties are plant variety protected.

When Keith entered this business in 1978 there were 8-9 soybean varieties in 3 different maturity groups in the entire southern USA (13 states) that the farmer could choose from; now he has about 150-200 varieties to choose from. Breeders have incrementally increased yield, disease resistance, targeted soil type adaptability, etc.

Soybean farmers generally look carefully at and plant the latest, best yielding varieties since they expect to get better yield, disease resistance, etc.–and save money. Why do soyfoods manufacturers not think the same way. Why would they not be willing to pay more for a new bean that will give them a 10% higher yield? Keith does not know. He thinks these manufacturers get a variety that works well and don't want to change their process. He often cannot even get them to test a new variety; its too much trouble (not surprising). Another problems is that some tofu manufacturers like one variety very much, and others don't like it at all. But the three missing links in this process are (1) research in the breeder's lab to show how the new soybean variety behaves in making tofu (yield, taste, composition, price per pound of tofu, etc.) and (2) comparing the performance of this variety with varieties used by major tofu manufacturers; (3) compiling the results of this research as information that can be easily understood by any soyfoods maker. Breeders now do this for soybean farmers but not for soyfoods makers. Is the tofu market too small for a breeder to make this investment? Not if you include East Asia, Southeast Asia, the USA, and Europe. For many years Singapore and Hong Kong have imported mostly Canadian beans with a pretty low margin. Japan has a tradition of buying IOM beans out of the Midwest, but IOM is no longer a meaningful term because we change varieties so fast. It used to be a large-seeded, clear-hilum mix of several varieties but now it can be almost anything. A portion of the users of Japan's 500,000 metric tons to make tofu is willing to pay a premium for variety soybeans. Hartz exports about 3,000 tons/year to Japanese tofu makers, but they still don't have a good variety. Continued. Address: 1. Food and Export Manager; 2. PhD, Soybean Breeder. Both: Jacob Hartz Seed Co., P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 800-932-7333.

10139. Thompson, Keith; Brown, Edward. 1994. Breeding soybeans for use in making tofu at Jacob Hartz Seed Co. Part II (Interview). *SoyaScan Notes.* Oct. 11-12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The second problem is that the science of breeding soybeans for tofu is not well understood. We still don't understand the basic theory as to what constitutes a good soybean for making tofu–a good tofu bean. What are the main compositional factors that affect tofu yield, flavor, and consistency (hardness or softness). It is not clear what characteristics breeders should select for when breeding tofu beans–except for the bean's physical appearance. Keith has a very close Japanese contact who is doing excellent work at a lab in a university in Japan, trying to understand what causes one soybean to be better than another for making tofu. He has made a lot more progress than Hartz has, and his work is quite confidential. Hartz has tried to get permission from the Japanese for Dr. Keshun Liu to visit that lab, but they won't even talk about it. Keith's talks about this university researcher with Takashi Matsumoto who is in a large trading company, but he doesn't recall the name of the tofu researcher at the university. The trading company is funding the research and is very forward looking.

The third problem is that the Japanese who buy soybeans that will eventually be used for making tofu have a number of strong preconceptions about the way these soybeans should look–regardless of the amount and quantity of tofu that can be made from them. They want a soybean with very large seed size (less than 2,000 seeds/lb), a clear hilum, and dull-luster–that looks like a typical soybean grown in Japan. If the soybean doesn't look like that, they don't care how good the tofu yield or flavor are. The Japanese seem to prefer what are called "Vinton-type" soybean varieties for making tofu. These include Vinton [a Midwest variety introduced in 1978 by breeder Walt Fehr and Iowa State University] and Harovinton (from Harrow, Ontario, Canada). These are large-seeded clear hilum beans [perhaps traditionally called vegetable-type soybeans]. "Vinton-type" soybeans now sell (cleaned and in bulk) for only about $0.80 to $1.75 over the Chicago Board of Trade (CBOT) price. That is not enough of a premium to attract Hartz. Hartz has developed on soybean that seems to have excellent characteristics for making tofu. But the Japanese don't want this soybean because it doesn't look like what they are used to. It is oblong and not as uniform as usual.

Eddie Brown hasn't given up on tofu beans; he is doing a lot of work and making a lot of crosses. Hartz has 40 acres of a variety it will be harvesting in the next 2-3 weeks and releasing next year that was selected primarily based on seed size, but also protein content. This line is quite large seeded, with 1,400 seeds/lb. Yet agronomically, it is a second or third class variety, so Hartz must charge more for it to counterbalance its lower yield. It is difficult to grow large-seeded soybeans in the south since it is generally true for soybeans that the further you go north and the earlier the maturity group, the larger the seed size and the more

© Copyright Soyinfo Center 2014

the percentage of clear hilum varieties. Some of this is genetic and some environmental. Varieties north of Boothill, Missouri are usually indeterminate, whereas those to the south are determinate. Determinate plants grow to a certain height and then start blooming; indeterminate varieties start blooming when the plants are very small and bloom until they reach normal plant height.

Keith thinks that true Vinton is not grown much any more. The new Vinton-types, developed by Midwest breeders, look like a Vinton but the yield is much better for the farmer. These Vinton-types sell for about $0.80 to $1.75 over the CBOT price.

One reason the Japanese may be demanding Vinton-type soybeans having a certain appearance is so that they can blend our $8/bushel beans with their domestic beans [Nihon Daizu], which are much more expensive, then sell the blend as if they were all Japanese-grown soybeans.

Japanese are limiting themselves greatly by demanding large-seeded soybeans. Eddie has only 10-15 breeding lines available to him in large-seeded soybeans compared with 2,000 to 3,000 lines of regular-sized soybeans. Breeders in the Midwest have a much larger germplasm base to work with on large-seeded clear-hilum varieties.

Hartz would like to have more of its soybeans grown organically because they could get a huge premium for those soybeans–no doubt about it. Hartz is already producing some organic natto beans, primarily with one big rice grower who is OCIA certified. His main crop is rice, and he has his own rice mill, rice bagging, and rice marketing system. Most rotations in the South are based on either rice or cotton. It is very difficult to find organic acreage in the South unless you find a rice farmer who is philosophically committed to organic farming [like Carl Garrich of the Lone Pine in Arkansas]. Even if Hartz offers farmers a premium of $4/bushel over the CBOT price they are not interested. It doesn't work well with a rice rotation.

Once a soybean seed company makes the commitment to breed soybeans for tofu, it must develop at least a small bench-top tofu-making system in order to quantify and compare different varieties. You need a program and a systematic way of making tofu and measuring the results. You must be able to prove that one soybean is significantly better than another for making tofu–in terms of yield, or flavor, or fat content, or genistein level, whatever. This becomes the basis of marketing the soybean to tofu makers. Address: 1. Food and Export Manager; 2. PhD, Soybean Breeder. Both: Jacob Hartz Seed Co., P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 800-932-7333.

10140. Roller, Ron. 1994. Breeding soybeans to use for making soymilk in America. Part I (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ron finds that 1 pound of soybeans yields roughly 8.8 pounds of regular non-flavored soymilk and 11.88 pounds of lite soymilk. For regular soymilk, the solids content of flavored soymilk is less than that of "original" or dairylike soymilk. In 1993 an estimated 9.8 million gallons or 81.6 million lb of soymilk were sold in the USA and Canada. Of this, about 80% was regular and the rest was lite. To make this much soymilk required about 8.78 million lb or 146,333 bu or 3,982 metric tons of soybeans. Almost all of these soybeans were organically grown. Soyfoods manufacturers have to pay about 70% more for organically grown soybeans than for non-organic.

Ron knows that most soybean breeders are breeding soybeans for food uses–especially large-seeded food-grade soybeans for the export market. Many of the large-seeded soybeans are selected for high sugar content and processability (cooking with the seedcoat on, dehulling, etc.). Ron has contacted almost all the seed companies and has asked them for "food use clear-hilum soybeans." They say they are working on such products but say they are all sold to Japan. These seed companies are generally working on large-seeded, high-protein, Vinton-type, clear-hilum soybeans. Ron does not think most companies are interested in phytochemicals yet, but Prof. Maurice Bennink at Michigan State is studying the effect of genistein on colon cancer.

Enrei is a very large-seeded Japanese soybean, with a clear hilum, high sugar content, good taste, and seedcoat that is suitable for both harvesting and dehulling during processing. There is an Enrei industry (association and breeding program) in Toyama, Japan. They treat this variety as if each bean was a gold nugget. They hand-cultivate the plants. Ron has had Michigan State working on Enrei soybeans in their breeding program, and he is developing a program to grow it.

When Ron chooses a soybean variety for making soymilk, the most important factor is the taste of the resulting soymilk. For good taste he wants a soybean with high sugar content, high protein, and relatively low fat–but he is not sure what causes a soybean to taste good. A panel of 5-6 experienced people from American Soy Products (ASP) tests the soymilks in a 4-5 sample blind test, always with the same control sample–where the control sample is their basic soybean, that every panelist can distinguish from the other samples every time with no problem whatsoever. Second is the protein and oil content of the soybean: high protein, low fat. Third is availability of the seed. Fourth is the price. They pay a premium of 60-70% above the Chicago Board of Trade (CBOT) price for specialty, organically grown soybeans. In 1994 the price went as high as $18/bushel, but it used to be $8-9. Many people are willing to pay high prices for organically grown Vintons, but Ron is not willing to pay that for Vintons, he doesn't buy them. But there are other soybeans he will pay more for. Other factors: The region in which it will grow. Processability (easily dehulled and does not produce much foam when cooked). Clear hilum. Large

© Copyright Soyinfo Center 2014

seed size. Many of these characteristics are interrelated. In terms of the agronomic characteristics: Seed yield, including disease resistance, lodging and shatter resistance, emergence, etc.

Ron contracts directly with farmers for all the soybeans he buys. Some varieties he uses are confidential, others are not. ASP developing varieties that they do not want their competitors to know about. He also buys some varieties bred by Pioneer Hi-Bred: his growers can go to their local elevator and buy that seed. Ron generally tells the farmers with whom he contracts to grow his soybeans what varieties he would like them to grow and where they can go to buy those varieties. Once he tells this to the farmers, the farmers generally tell the industry and ASP's competitors often grow the same varieties. "We are continually testing soybeans to find the best ones for our process and product. It's more selection than breeding. We're taking a number of soybean varieties and storing them in specific bin locations, then blending the varieties to create or maintain a certain, consistent taste and product." Ron generally buy's large-seeded soybeans (but not the biggest), because experience has shown that they taste best, and the sugar content seems to have something to do with the good flavor. But for one variety, the flavor changes from field to field, and from one growing area to another. As ASP's demand for soybeans has grown, so has their growing area, and this requires the use of more varieties of soybeans. Moreover, Ron would not take the risk of growing all their soybeans in one geographical area–since they could then all be destroyed by flood, frost, drought, etc. A good soybean for soymilk must yield well for the farmer and make good soymilk. Continued. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

10141. Roller, Ron. 1994. Breeding soybeans to use for making soymilk in America. Part II (Interview). *SoyaScan Notes.* Oct. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** How often does Ron change the soybean variety he uses? He has several base varieties, which are kept secret and which he tries to build on. Every year he tries to find new soybean varieties which are like the base varieties but which will grow in other geographic areas. Moreover the acreage for a particular variety must be expanded slowly as it proves itself both agronomically and from a food point of view. When Ron contracts with a farmer he contracts bushels, not acres. That is, guarantees to pay a certain amount per bushel if the farmer plants a certain number of acres, never just a certain amount per acre planted. This way, both sides take a risk: If the farmer has a large yield, then Ron must buy more soybeans than he wants to. ASP has been hurt before by contracting acres, when there was a flood or frost. Each farmer must get certified, which pretty much guarantees that he has grown the soybeans organically. After a while, ASP knows which growers it can trust, and they become part of ASP's steadily expanding grower base or network.

There are probably very few U.S. soyfood manufacturers that have enough volume that they need to contract directly with farmers. But those that are big or have a large need for organic soybeans must contract directly with farmers to assure themselves an adequate supply of the type of soybeans they want.

Ron would be very interested to know more about how the composition of a soybean affects its flavor. He has a good deal of respect for Pioneer Hi-Bred Seed Co. He thinks they have good seeds, a good staff and research department, and a good distribution system. And they have generally been reliable. They have helped Ron find soybeans for certain growing areas that they sell. He likes the fact that they are national, spanning the breadth and width of the U.S. soybean growing area, and selling all maturity groups. However, 3-4 years ago, Pioneer Seed Co. got into the cultivation, cleaning, bagging, and export of organic soybeans–with their Better Life program (no pesticides or herbicides, but they can use chemical fertilizers). So they began to compete with Ron for organic farmers to grow their seeds, and they pay the farmers more than Ron does.

Pioneer has a pretty extensive base of soybean customers in Japan for regular soybeans, Better Life soybeans, natto beans, large-seeded soybeans, and organic soybeans. Their Specialty Crops Division has penetrated the Japanese market in many areas. Their employees travel frequently to Japan, they speak Japanese, they have an office there, and they're plugged in. They study those industries in Japan, find out what they want, then they come back and try to breed that into a soybean. As far as Ron can tell, Pioneer is the leader in breeding soybeans for food uses in terms of both volume and specific varieties.

Another company doing research in this area is Jacob Hartz Seed Co. in Arkansas. They are working on some large-seeded soybeans but they are having a lot of trouble. Ron has a low opinion of the soybeans Hartz breeds for making natto; he studied that market intensively.

There has been a demand from Japan to supply some organic beans, so many of the U.S. companies that supply soybeans to Japan have begun small organic programs (not because they want to–they hate it), just to satisfy their Japanese customers. Even though Mitsui or Mitsubishi or Marubeni don't want a lot of organic soybeans, they want enough in a tight market to drive the price way up. It was because of the Japanese demand plus a small soybean crop that organic soybean prices were so high in 1994. Country Life went out of business, with unpaid debts of $400,000 to $500,000. Some of the farmers formed cooperative marketing groups; they grow varieties desired by the Japanese, and pool their resources in cleaning and bagging, so they can export containers to Japan and eliminate U.S.

© Copyright Soyinfo Center 2014

middlemen or soybean brokers. Ron feels the price for organic soybeans will stabilize at about $10-$12 per bushel.

If Ron worked closely with a soybean breeder and seed company, he would want the right for the farmers with whom he contracts to be able to buy the seed from the seed company. His company is unique in having a large number of cooperating organic growers, and that gives ASP the lowest price and highest quality. If Ron contacts the growers early and tells them what ASP will pay per bushel of organic beans, that becomes the standard base contract price for other companies too. Word travels fast. Nichii buys directly from soybean farmers, but Ron thinks Vitasoy buys from a middleman (a soybean broker or trading company such as Pacific Soybean and Grain). Some soyfoods manufacturers buy through soybean brokers–the biggest of which are Pacific Soybean and Grain, American Health and Nutrition, and Purity Foods. Domestic soyfoods manufacturers get deluged with calls from farmers who want to grow soybeans just for them at a premium price and sell direct without a middleman. The middlemen or soybean brokers tend to survive on export business.

This is a very complicated issue–particularly seen from the viewpoint of a seed company that wants to breed better soybeans for food uses. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

10142. Brown, Lester R.; Kane, Hal; Ayres, Ed. 1994. Vital signs 1994: The trends that are shaping our future. New York, NY: W.W. Norton & Co. 160 p. 24 cm. [200+* endnotes]

• ***Summary:*** Discusses (with graphs) important trends that effect a sustainable society in the following areas: Food, agricultural resources, energy, atmosphere/air, economy, transportation, the environment, society/population/medical, and military.

World soybean production per person (p. 28-29) rose steadily from about 7 kg in 1950 to about 21 kg in 1979. Since then it has been flat, averaging about 20 kg, which was also the estimated figure for 1993. Total world production of soybeans has increased steadily from about 18 million metric tons (tonnes) in 1950 to a record 116 million tons in 1992, falling by 4% to 111 million tonnes in 1993. Heavy rains and flooding in the U.S. Midwest, the world's principal growing region, accounted for the decline. Although the U.S. soybean harvest decreased nearly 16% from the previous year, it still accounted for nearly half of the world harvest. Brazil, with a harvest of 23 million tonnes, remained solidly in second place. Argentina edged out China for third place. Soybean yields in China are about 33% lower than those of the 3 leading western producers (which range between 2 and 2.5 tonnes per hectare). The USA regularly exports one third of its soybean crop as unprocessed beans and enough of the remainder as meal so that about 50% of the crop is exported. By contrast, Argentina and Brazil crush most of their soybeans domestically and export them largely as meal, keeping much of the soy oil for domestic use. China exports a small proportion of its crop as beans, largely for food use in Japan and other Asian countries. The leading importers of soybeans are Japan, Germany, the Netherlands, and Spain.

Population trends (p. 98-99): In 1993, the world added 87 million people to its numbers, down slightly from the 88 million in 1992–thanks largely to a dramatic fertility decline in China, home to more than one-fifth of the world's population. Total world population in late 1993 was an estimated 5.557 billion. 94% of the new people lived in developing countries, home to 78% of the world's population. Africa has the world's fastest growing population. The average annual growth rate in world population peaked in about 1962 at 2.2%. It had fallen to 1.75% in 1986 and was 1.56% in 1993. Yet the slowdown in the world's growth rate is happening much more gradually than was expected just a few years ago. In 1982 the United Nations projected that world population would stabilize in the year 2100 at 10.2 billion–almost twice what it is today. The U.N. now projects that world population will grow until it reaches 11.6 billion sometime after 2200. Address: Worldwatch Inst., 1776 Massachusetts Ave., N.W., Washington, DC 20077-6628.

• ***Summary:*** This full-page color ad shows a large pumpkin pie on a cloth on a cutting board. Behind it is a package of Mori-Nu Lite Tofu and a cornucopia of vegetables and fruits. A recipe is given for "Dairy-free, Low-fat Pumpkin Pie" using 1½ packages of Mori-Nu Lite Tofu–Firm. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 310-787-0200.

10144. Ontario Soybean Growers' Marketing Board. 1994. Ontario soybeans. P.O. Box 1199, Chatham, Ontario N7M 5L8, Canada. 7 p. Oct. Unpublished typescript.

• ***Summary:*** This is a compilation of 7 transparencies containing current statistics. 1. History. 2. Ontario soybeans: Production and disposition. Shows the number of tonnes produced, crushed, imported, and exported from 1944 to 1994. Production increase dramatically from 1,200,000 tonnes in 1989 to 2,100,000 tonnes in 1994. In 1989 about 95% of the soybeans produced were crushed, but in 1994 only about 55% were crushed. Exports rose more than 3-fold between 1989 and 1994, while imports decreased.

3. Ontario soybean exports: 1993–by destination. Of the 407,061 tonnes exported, 55.7% went to Europe, 24.4% went to Europe, 5.9% went to Japan, 5.7% to Hong Kong, 3.2% to Singapore, 2.5% to Malaysia, and the rest to Other.

4. Ontario's soybean industry consists of 20,000 soybean

© Copyright Soyinfo Center 2014

growers, 300 dealers, 2 crushers, 28 roasters/extruders, and many soyfoods manufacturers.

5. Soybean pricing. OSGMB has no price setting powers. A major U.S. port, Toledo, Ohio, is used as a price reference point for Ontario soybeans. 6. OSGMB Mission Statement. 7. Role of OSGMB. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

10145. Tomomatsu, Hideo. 1994. Health effects of oligosaccharides: Ingestion of oligosaccharides increases the bifidobacteria population in the colon, which in turn contributes to human health in many ways. *Food Technology* 48(10):61-65. Oct. [90 ref]

• ***Summary:*** Contents: Introduction. Consequence of toxic fermentation products: Variety and amount of toxic compounds, enzymes participating in toxic compound formation, possible causes of carcinogenesis, possible causes of aging and adult diseases. Benefits of oligosaccharide ingestion: Proliferation of bifidobacteria and reduction of detrimental bacteria, reduction of toxic metabolites and detrimental enzymes, prevention of pathogenic and autogenous diarrhea, prevention of constipation, protection of liver function, reduction of serum cholesterol, reduction of blood pressure, anticancer effect, production of nutrients. Dosages and side effects. Oligosaccharides vs. dietary fiber. Natural Occurrence.

"Oligosaccharides are one of the most popular functional food components in Japan, but they are relatively unknown in the United States. The Japanese produced 40 million lb ($46 million) of nine different types of oligosaccharides in 1990. The number of consumer products containing oligosaccharides reached 450 in 1991 and included soft drinks, cookies, cereals, and candies."

Oligosaccharides are "preferentially consumed by beneficial intestinal bacteria, bifidobacteria, in the colon." Bifidobacteria suppress the activity of putrefactive bacteria and thereby reduce the formation of toxic fermentation products.

Various natural foods are known to contain oligosaccharides. Soybean oligosaccharides [galactooligosaccharides or GOS] are different from fructooligosaccharides [FOS], which are found in many vegetables (such as onion, garlic, burdock, asparagus, etc.).

Note 1. Although bifidobacteria suppress many bad bacteria in the colon / digestive tract, no experimental evidence was given from animal trials that their consumption prolongs the life or improves the health of animals.

Note 2. The early (and later often ridiculed) theories about Elie Metchnikoff and Dr. John Harvey Kellogg concerning bacterial putrefaction in the colon and digestive system may be vindicated by this interesting article and review of the literature. For examples of ridicule see *Nuts Among the Berries,* by Ronald Deutsch. Address: Quaker Fellow, The Quaker Oats Co., John Stuart Research Lab., 617 W. Main St., Barrington, Illinois 60010.

10146. Goh, Francis Nyang Kuang. 1994. Re: Chronology of Unicurd Food Co. (Pte.) Ltd. in Singapore. Letter to William Shurtleff at Soyfoods Center, Nov. 3. 2 p. Typed, with signature on letterhead.

• ***Summary:*** 1978–This company, originally named Unicurd Food Co., is founded as a partnership by two housewives, Mrs. Tan Ai-Wang and Madam Chiang-Kuei Chin. Note: The term "Madam" is used (in writing only) to address a women when it is not clear whether or not she is married; used like "Ms." in American English.

1979 late–The company begins to make and sell tofu, operating on a small scale in a combination 2-story shop and home, with the residence located above the shop. The approximate size was 800 square feet of production space. They produced mainly *juten tofu* (lactone silken tofu), packed in 300 gm trays (known as 2B shape in Japan) and also 250 gm sausage-shaped polyethylene bags (known as sakura tofu in Japan), at the rate of about 150 kg/day. Also this year the company was changed from a partnership to a "private limited company."

1980–The company moved into a factory building at Block 1012, Aljunied Ave. 3, #01-35/37, Singapore 1438. The building, of about 2,400 square feet, was constructed by the Government of Singapore. The company was incorporated as a private limited company with capital of $220,000 Singapore dollars, invested by six shareholders. The company name is changed to Unicurd Food Co. Pte. Ltd. They diversified the product line to include Chinese firm and extra firm tofu. Production increased to 700 kg/day.

1981–The company encountered cash-flow problems and was sold at par value to the present directors, Mr. Francis Goh Nyang Kuang and Mr. Goh Eng Huat, who are cousins, and who were not among the six original shareholders. Prior to this time, the highest annual sales had been S$500,000 (1 US$ = 1.48 S$). Part of the purchase agreement is that Mr. Ma Wen Yi, the managing director of the company, would continue to work for the company for six months to help with the transition. The new owners engaged a young graduate, Mr. Richard Tan, to learn from Mr. Ma. During this time, Mr. Francis Goh visited the company each workday for about 1 hour in the morning and 2 hours in the evening.

1982–Mr. Richard resigned and the owners decide to engage Mrs. Goh (maiden name: Kua Lay-Eng) to run the company. Prior to her appointment, she worked as a Personnel & Administration Executive in a multinational company. Also in 1982 the company purchased an automatic soymilk plant and other machinery from Foodpak Pte Ltd. (a tofu factory in Hong Kong) and from Japan for its new factory, which was built by the government and had an about 3,600 square feet, located at Block 6020, Ang Mo Kio Industrial Park 3, #01-156/160, Singapore, 2056.

1983–Introduced Beancurd Jelly, a new product.

© Copyright Soyinfo Center 2014

1984–Introduced Pressed Soft Tofu, a new product. This year Unicurd began to promote tofu in Singapore as a nutritious and healthy food (a pioneering concept) by cooking demonstrations, radio publicity, regular factory tours for visitors (in groups of about 40), and annual participation in a national health promotion campaign organized by the government, using display posters, participation in an exhibition during which the company demonstrated tofu cooking and highlighted its nutritional value, and participation in a program whereby all nutritious foods sold in supermarkets were highlighted with special posters and labels.

1985–The company takes over the adjacent factory (Block 6020 Ang Mo Kio Industrial Park 3, #01-154, Singapore, 2056), increasing its area to 5,000 square feet.

1986–Introduced Tofu Puffs, a new product.

1987 Nov.–Mr. Goh joined the company as a full-time Managing Director; prior to this he usually spent 2 hours at the company each evening and a full day on Saturday.

1988 June–Recruited a Japanese manager to upgrade machinery. Introduced new Japanese tofu and pickles targeted at the Japanese community.

1989–Introduced three new Japanese-style tofu products: *Hiya-Yakko* (Chilled Tofu), *Momen-Dofu* (Traditional Japanese Firm Tofu), and *Nama-Agé* (Deep-Fried Tofu Cutlets).

1993 Nov.–In view of the rapid market growth for silken tofu and other products, the company began to look for a bigger factory. Sales have increased more than six-fold in the past ten years.

1994 Nov. 4–Construction of the new factory starts–floor area of 26,500 square feet on 40,000 square feet of land. It is expected to be completed in about one year. The company plans to invest about $2.5 million Singapore dollars in the new factory and another $1.5 million Singapore dollars (1.01 million U.S. dollars) in the purchase of more automatic equipment.

The company's accomplishments: Tofu in Singapore was traditionally sold in the market without packaging. After purchasing the company, Francis and the other new owners gradually convinced local consumers to accept packaged tofu. Moreover, their continuous promotion of tofu as a nutritious and healthy food (it was viewed as a poor-people's food before) stimulated sales immensely. Singapore consumers have now accepted tofu as a nutritious, healthy food.

Now some recollections and comments from Mr. and Mrs. Goh. Mrs. Goh: "When I joined the company, tofu was still considered a poor-man's food and tofu makers were generally fairly small in scale. The public had a low image of the tofu industry. I decided to resign from working in a reputable company for various reasons: (1) I had full confidence in the potential of the tofu business. Though the growth of the company was slow during the early years, it increased constantly; (2) For the success of small and medium-scale traditional food manufacturers, it is not possible to engage many high-ranking managers, who generally specialize in one field. It is also not easy to engage a person with a diversity of skills who is willing and able to run all aspects of a small traditional food company; (3) We owned the company and Francis did not have sufficient time to manage it. I decided to shoulder the responsibility, particularly after we moved to Ang Mo Kio Industrial Park (1982), when we invested another S$500,000; (4) Before Francis joined the company as full time managing director, my work was very taxing. I had to take charge of practically everything and the working hours were very long. However the work was challenging and the satisfaction was enormous, particularly when the company expanded rapidly." Mrs. Goh is still very active with the company on a day to day basis. She is in charge of Accounts and Sales and Marketing.

Mr. Goh adds: "I am currently in charge of the company overall, and particularly production, quality control, and other external matters (overseas visitors, Government liaison, and overseas purchasing). We have recently employed a local manager and a food technologist (from China). We plan to let them take over all the routine supervisory jobs and the development of new products. This will allow us to reduce our work load so we can invest more time in strategic planning. For example, we may soon take over a small tofu manufacturer and use it to develop a new brand to market similar products of lower value to capture a bigger share of the low-price market. Unicurd will concentrate on existing products and developing new high-value products.

"I would only express regret for joining the company on a full-time basis a bit late. I never realized that the tofu business would be so interesting and challenging. Through the Company, I joined different organizations, such as the Singapore Food Manufacturers Association, and the Association of Small and Medium Enterprises, and played an active role. I made many new friends and learned a lot about the food industry in Singapore, especially about traditional foods such as soysauce, chili sauce, dumplings, noodles, etc. I was also nominated by the Government to join several overseas study missions."

Update: On 24-25 March 1995 a group of six soybean experts from Canada visited Unicurd. Their names and titles are given. On March 24 Mr. Goh arranged for a meeting between them and five tofu makers and 3 council members from the Singapore Food Manufacturers' Association. A copy of the paper Mr. Goh presented during the meeting is attached.

Update: On 30 May 1996 Unicurd Food Co. Pte Ltd. moved to 18, Senoko South Road, Singapore 758089. Phone: +65 759-2855. A photo shows the new factory.

Update: In April 2008 the Vitasoy Group acquired the entire equity of Unicurd Food Co., (Private) Ltd. ("Unicurd"), a leading manufacturer and marketer of

soyfoods in Singapore. Address: Managing Director, Unicurd Food Co. (Pte.) Ltd., Blk. 6020 Ang Mo Kio Industrial Park 3, #01-154/156/158/160, Singapore 2056. Phone: 482-5454.

10147. Cloud, Jon. 1994. Re: Work with organic farming in Canada. Letters to William Shurtleff at Soyfoods Center, Nov. 14 and Dec. 27–in reply to inquiry. 2 p. and 1 p. Typed, with signature on letterhead.

• ***Summary:*** To the best of John's knowledge, the first soybeans grown organically in Canada (after 1960) were produced in 1974 in Wainfleet, Ontario, under contract with John. They started growing organically because John was willing to "issue them contracts guaranteeing floor prices and ready sales." "Through extensive field work with these and other growers, the quality and field yield of organic soybeans have steadily increased." John now works in a cooperative arrangement with W.G. Thompson & Sons Ltd. in Blenhein, Ontario, Canada. This arrangement "allows us to secure soybeans at harvest, clean them, and store them in facilities that maintain that quality. I'm still training farmers in organic methods."

"I'm no longer at Soy City Foods. I sold my interest there on 1 Jan. 1994 and now I am gratefully involved in taking the industry to its next level of expansion with W.G. Thompson & Sons.

"I began working with Thompson in May 1994. We have a partnership where they are responsible for marketing the complete line of organic commodities. My responsibility is the operational grower / production side of the business. I train farmers in growing techniques so that the organic acreage can be greatly expanded.

"Presently we have about 295 growers on our mailing list. Approximately 50% of these growers produce organic soybeans, and about 40-50 of them produce them in any one year. However many of these growers have limited soybean sales due to their dairy operations and/or position in the 7-year crop rotation. In Ontario there are over 1,500 farmers growing crops organically but mostly on mixed farms [with non-organic crops]. Probably no more than 60-70 of these grow soybeans organically. Due to crop rotations, the acreage in organic soybeans fluctuates dramatically from year to year; anywhere from 1,000 to 2,500 acres of organic soybeans would be under production in any given year. This means that the bulk of their commodities are going for beef and dairy operations. About one fourth of the 1,500 are cash croppers. The number of farmers has not changed appreciably in the past four years but the size of the farms has. The smaller farms have opted for market garden operations while the larger farms are more efficient at cash cropping–things like soybeans, wheat, and spelt.

"At present we market a full line of organic commodities including soybeans which we ship globally. Other organic crops include spelt, soft white winter wheat, hard red spring wheat, rye, buckwheat, barley, corn, and sunflowers. When you take into consideration that soybeans constitute only one of the commodities in the rotation, you can see that the tonnage is greatly expanded by handling all of the commodities. It is our hope that we will be able to move quickly 4,000 to 5,000 acres of soybeans. The vast majority of our current soybeans are high protein for tofu or soymilk.

"Ontario sells few organic soybeans to East Asia because the bulk of our production has historically been shipped to Europe. That has changed this year with Japan receiving its first shipments. Other Pacific Rim countries started receiving minimal amounts of organic soybeans in 1992 and 1993.

"Although I was forced to leave the Ontario Oil Protein Seed Crop Committee because of excessive work load, I still sit as an ad hoc member of that committee in a technical assistance capacity to the plant breeders in designing higher quality soybeans. My two latest projects focus on soluble protein increases and elimination of trypsin inhibitors in soybeans."

John encloses a leaflet titled "Training in organic production techniques: Workshop schedule for the winter of 1994-1995." There are two 4-day workshops each month, one in Blenheim and one in Toronto, Ontario. Each workshop costs $25.

Update: 1995 May 17. Acreage of organic soybeans in Ontario is up about 300% over last year and acreage for all organically grown crops in Ontario is up about 100%. John contracts 75% or more of the organic acreage in Ontario. One crop that is rapidly expanding is spelt. It has a better flavor and protein content than typical wheat, and it lacks one of the glutens to which some people are allergic.

Update: 1999 March 20. Talk with an associate of W.G. Thompson. Jon Cloud now has a very bad reputation with at least one manager at W.G. Thompson. According to this manager, Cloud misrepresented his relationship with the company and did some unscrupulous things, then disappeared leaving some unpaid debts. Address: Cloud Mountain Inc., 342 Indian Rd. Cres., Toronto, ONT M6P 2H1 Canada. Phone: (416) 762-0940.

10148. Kennedy, J. Robert. 1994. How rice syrup and grain syrup came to America from Japan (Interview). *SoyaScan Notes.* Nov. 14. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Chico-San was launched on 6 March 1962 in Chico, California, as a retail store and a wholesale business, capitalized with $10.000. The first Yinnies grain syrup (rice and barley) and Yinnies (rice syrup candies) that Chico-San sold in America were made in Chico-San's food plant at 1262 Humboldt Avenue, in Chico, California, and sold in about 1971. The Yinnies syrup was on the market about 2-3 months before the candy. The candy was made by boiling down the syrup a little more, then pulling it like taffy using a regular taffy-pulling machine (Bob's idea, never conceived

© Copyright Soyinfo Center 2014

of in Japan). So already Bob and developed two American innovations: Growing koji on brown rice, and pulling Japanese-style rice candy to give it a texture like taffy. Bob recalls that the demand for the Yinnies syrup (which was used as an all-purpose natural sweetener, especially by macrobiotics) was greater than the demand for the Yinnies confection. These macrobiotic products were made using the traditional Japanese koji process, except that the koji was made from organically-grown brown rice, grown by the Lundberg Brothers at Wehah Farms in Northern California.

Bob used to visit Japan 2-4 times a year in the early 1970s, because Chico-San was importing a large number of Japanese food products and Bob went to visit the farmers and suppliers. During these visits, Lima Ohsawa took him to visit several traditional Japanese shops that made rice syrup (*amé* or *mizuamé*) from koji. Bob observed carefully and took a few notes, which may still be in his diaries (which are in storage). He may have ordered a few samples from Japan, but they were not sold in America.

Bob dabbled and experimented with making rice syrup for at least two years before the product was launched commercially. During this time he learned how to make koji and rice syrup mostly from Mr. Junsei Yamazaki who had emigrated to Chico from Japan in 1963 (sponsored by Bob Kennedy) to make miso and natural shoyu for Chico-San. After graduating from Tokyo Agricultural University, Yamazaki had been a rice farmer in Japan for 17 years. In 1964 he began his first experimental production of miso and shoyu in Chico. His first large batches were made in mid-1970. Since he had to make koji for both miso and shoyu, it was an easy step to make rice koji for amazake. The amazake was cooked, filtered (to removed the fiber), then simmered slowly to yield rice syrup–a slow but relatively simple process. By the late 1960s or early 1970s Yamazaki was making small batches of rice syrup on an experimental basis in the back room at the Humboldt Ave. plant. By 1971 production of rice syrup was in full swing; it was sold in a 12 oz. glass jar and labeled "Yinnies Grain Syrup."

On 14 Sept. 1972 disaster struck. A fire at the Chico-San plant and warehouse at 1262 Humboldt Ave. destroyed 90% of the company's natural food inventory worth approximately $350,000. The company moved to 2244 West First Street in Chico and struggled to get back on its feet. For several months, they continued to make Yinnies syrup from koji in the traditional way in a newly-built koji room. But the demand for this syrup was much greater than the amount that could be made using the traditional koji process. Bob had a friend named Carl Abbott, who worked at a nearby nut plant (Continental Nut Co.) and was also a very bright food chemist. So right after the fire Bob asked Carl if he could do some research to find a way to expand output of rice syrup using natural enzymes with organically grow brown rice to maintain the natural quality and without addition of chemicals–such as caustic chemicals. Carl met with experts at Miles Laboratories (who had never worked with brown rice before), determined the best commercial enzymes, then made adjustments in cooking times and temperatures to fit the needs of the enzymes. Bob is not sure, but he recalls, two enzymes were purchased from Miles: Alpha-amylase to liquefy the rice, and gluco-amylase to break down the rice carbohydrates into sugars (mostly maltose). When Chico-San switched over to using commercial enzymes with brown rice to make rice syrup, they discontinued the use of koji.

In 1971 and 1972 sales of Chico-San's rice cakes began to increase dramatically. After the 1972 fire, it took the company about a year to get back to manufacturing any significant volume of rice cakes. By 1973 the demand for rice cakes was growing like mad. Bob had to build new and better machines that could keep up with the demand. Sales of Yinnies syrup were also growing nicely. Then the company ran out of space at the location on West First Street. So on 1 Jan. 1979 the company moved its Rice Cake machines back to the original address at 1262-1266 Humboldt Ave.–which had been renovated after the fire, and on which Chico-San how had a 10-year lease. Chico-San retained 6,000 square feet of its location on West First Street for the manufacture of Rice Syrup. At about that time Bob met Pat and Cheryl Mitchell, owners of California Natural Products (CNP) in Manteca, California. They were making various syrups, but definitely not from rice.

Note: Robert Nissenbaum of Imagine Foods (23 Nov. 1994) strongly disagrees with this 1979 date. He is certain that in the summer of 1984 he visited the Chico-San plant that was making rice syrup. It was located in Chico, in a sort of garage at the end of an alley. He was buying rice syrup from Chico-San at the time for use as a sweetener in amazake he was making in Missouri, and he wanted to find out why the quality was so inconsistent. He thinks that CNP first began making rice syrup under contract for Chico-San after August 1984.

Bob Kennedy decided to contract with CNP for production of all his Rice Syrup. Bob sold all Chico-San's Yinnies syrup equipment to Pat and Cheryl; this equipment was compatible to whatever they were doing. He also told them all his secrets for making brown rice syrup and had them sign a non-disclosure agreement and a contract which stated that CNP would make rice syrup only for Chico-San. Chico-San guaranteed in writing to buy a specified amount of rice syrup. "Everything went fine until I sold the business to Heinz."

When Heinz bought Chico-San on 16 Nov. 1984, they wanted it all or nothing. If they decided after six months that there were parts of the business they did not want, Bob could buy those parts back. Chico-San carried $100,000 to $150,000 inventory of Japanese food imports. Bob expected to be able to buy back the Yinnies syrup business if Heinz decided not to pursue it, but the contract wording, unfortunately for Bob, allowed Heinz to essentially trade

© Copyright Soyinfo Center 2014

the rice syrup business to CNP. Bob lost track of what was happening between Heinz and CNP. He was supposed to work for Heinz as a consultant for about a year, but he didn't like it so he asked to be released from that obligation–which they did after about 3 months. "If I had had a crystal ball at the time, I would have kept the rice syrup business, but at the time I did not think much about it. I was really a little burned out with Chico-San. I was doing 10-12 hours a day for years. It was quite a relief to be free of it."

Bob Kennedy knew about Robert Nissenbaum, who was developing Rice Dream non-dairy ice cream before Chico-San was sold to Heinz. Chico-San was shipping hydrolyzed rice (made by CNP) to Robert Nissenbaum before Nissenbaum was aware of CNP. [Note: Robert Nissenbaum–see interview of Nov. 1994–says he bought only rice syrup from Chico-San, and he became aware of CNP at about the same time as Chico-San, before CNP was processing rice]. Then Chico-San was sold to Heinz in Nov. 1984 and Rice Dream (made with rice beverage from CNP) started to be manufactured in Palo Alto, California, in Jan. 1985. Address: Chico, California. Phone: 916-891-0970.

10149. Ziegler, Jan. 1994. Soybeans show promise in cancer prevention. *J. of the National Cancer Institute* 86(22):1666-67. Nov. 16.

• ***Summary:*** "Epidemiologic evidence indicates that Asian women have a lower incidence of breast and colon cancer, better response to cancer treatment, and fewer problems with menopause than Western women. And among the apparent reasons for this is that Asians, in general, consume more soy products–tofu included–and green tea."

But Daniel Sheehan, PhD, National Center for Toxicology Research, Jefferson, Arkansas, says: "I disagree that soy has been proven safe."

10150. Voldeng, Harvey D. 1994. Dr. Sven Holmberg and breeding short-season soybeans (Interview). *SoyaScan Notes.* Nov. 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Voldeng said in March 1993: "When you look into Dr. Holmberg's work, it was remarkable. He was a very, very good soybean breeder. Nobody in Europe, even up until now, has conducted breeding programs on the scale and with the number of crosses that he did." He got big results on a small budget, with funding coming mostly from a small private seed company and perhaps some from the Swedish government.

Dr. Holmberg's program at Fiskeby was closed down after his death in Nov. 1981 and some of the work was taken up by a young lad in southern Sweden. Dr. Voldeng has quite a bit of correspondence, pedigree lists, and other documents on file from Dr. Holmberg, and he will look there for details and to see if Holmberg's soybeans were tested in other northern European countries, especially Norway, Finland, Denmark, Ireland, or Iceland. [Note: Ireland is located the furthest south of these countries, on about the same latitude as northern Germany, and south of the southern tip of Sweden].

The soybean breeder before Dr. Voldeng was Dr. Lorne Donovan, who was the successor to Dr. Dimmock. In the mid- or early 1960s, Holmberg worked his way over on a cattle ship from Norway one year (he obviously was paying his own way), and spent some time with Dr. Donovan in Canada. Dr. Voldeng met Dr. Holmberg once, in about 1978-1980, when he was still some fairly active. "He went out to the field with me. He had fairly severe arthritis, so he had to walk with a cane. His sister lived with him, and we all drove out to the field. We walked around the plots. He had a very good program, though it was not that large. In Eastern European countries, such as Poland, they had programs and 100 times more financial support than he had, but they made practically no crosses. Holmberg made hundreds of crosses, and that was not easy in the climate and latitude of Fiskeby. He was a remarkably good soybean breeder, there is no question about that." Dr. Voldeng does not know what his academic training was. He heard that before World War II, the Swedish government could see that a problem was coming, that they could be blockaded for vegetable oils. So they paid for his trip to Hokkaido, Japan, and the Kurile Islands to collect soybeans. "He told me, 'When I got to those places I could see birch trees and it looked just like Sweden. So I knew that if I found soybeans there, they could be adapted to Sweden.' He was right, but it took a lot of work to adapt them. He knew exactly what he was looking for.

Dr. Voldeng thinks that. Dr. Holmberg's program is no longer active. "It was more a labor of love that his father had started and he continued. Eventually they were purchased by one of the big plant breeding companies in Scandinavia–probably Hilleshög (which focused on breeding hybrid sugar beets), when Dr. Sven Holmberg was in his later years; he supervised the transfer. Hilleshög was later sold to Volvo, and then to Syngenta AB–so it seems unlikely that any archives or photos survive. He made little or no money from his soybean work though he has contributed immensely to short-season soybeans worldwide.

Note: A letter from the Fiskeby Board AB in June 1994 states that Dr. Holmberg's Institute, which used to be in Fiskeby, Norrköping, Sweden, no longer exists. Address: Agriculture Canada, Central Experimental Farm (CEF), Building #110, Ottawa, ONT K1A 0C6, Canada. Phone: 613-995-3700 x 7653.

10151. Archer Daniels Midland Co. 1994. First quarter report to shareholders, and a report on the 71st Annual Shareholders Meeting. Box 1470, Decatur, IL 62525. 16 p. 20 x 9 cm.

• ***Summary:*** Comments by president James R. Randall. ADM is a growth company that continues to grow in three basic ways. First, by continuing to expand the basic

© Copyright Soyinfo Center 2014

businesses: crushing, refining, milling, etc. Second, to grow vertically and upgrade basic products into higher margin items. Central Soya's feed division was purchased along with a worldwide network of premix plants to give ADM excellent distribution of its amino acids and vitamins for animal feeds. By the end of 1995, ADM will be producing all three of the vitamins known as antioxidants. "Our soy protein businesses also continue to grow. Our European concentrate plant is now at full capacity and is being expanded. Our U.S. isolate and concentrate business is well ahead of previous years." Pillsbury's sales of ADM's vegeburgers are "up nearly 900 percent over a year ago. Our third growth area is to grow internationally. There are 94 million new people added to the face of the globe annually and feeding people is our business." These people are being added in "Asia, Africa, Central and South America, places where we have little or no presence, and we need to be there. In the past year we have formed partnerships and have plants in Turkey, Greece, Bulgaria, Hungary, and Czechoslovakia in Eastern Europe. ADM is forming new alliances in Asia.

Comments by Michael Andreas, vice chairman of the board and executive vice president. There is no free trade in today's world. "Twenty years ago soybean farmers in the U.S. couldn't agree on a program for soybeans because the cost to produce them varied so widely from north to south. So they opted for so-called free trade with a low loan rate as a safety net. It all sounded pretty good. Over the last 15 years, however, I observed the following. Ten million acres of soybeans disappeared from the U.S., while areas in Argentina and Brazil increased 14 million acres where land was cheaper and subsidized credits were available. An additional 18.7 million oilseed acres were planted in Canada and Europe, again with heavy subsidies. Twenty-two soybean factories [crushing plants] were closed in our country, while fifty sprung up in South America and Europe. Our share of the world market in soybean products was cut in half. In fact, over 20,000 soybean farmers left the business, and 50,000 jobs were lost at home. And you know we still have the same program today.

"Let's look at Japan. They are truly the masters of managed trade. After the war, Japan put an extremely high tariff on imported vegetable oil but none on raw materials like soybeans and canola, so they could create jobs at home. Factories sprung up in the '50s and '60s like wildfire when they set their systems in place. Canada responded by growing more and more oilseeds and subsidizing exports with cheap freight to the ports. Canada became a colony again. They got no factories, no jobs. Why not?

"Japan had all the factories because they could pay a premium for raw materials (in this case subsidized raw materials), run their factories, and charge the consumers double the market for their products. Taxes on the profits were collected by the government and used to help subsidize automobile exports. Sound complicated? As I said, this was managed trade, and it worked like a charm.

"And don't think for a minute that China hasn't learned from these tricks of the trade. They're putting the same systems in place as fast as they can."

Comments by Dwayne O. Andreas, chairman of the board and chief executive. He discusses the many accomplishments of the Clinton administration, including opening up trade with China. "The second thing he did that is absolutely super for agriculture and ADM is that he got NAFTA through the Congress over the opposition of his labor constituency, one of the greatest achievements for trade of this century. Our exports to Mexico have tripled just since NAFTA, and they are going to triple again." Address: Decatur, Illinois.

10152. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*). 1994. What's new in exports? 7(3):4. Nov.

• ***Summary:*** "The Canadian 1993 crop year saw major export soybean increases in many areas..." A pie chart shows 1993 Canadian exports by destination region and country. In descending order of tonnage, they are: Western Europe 226,733 metric tons (tonnes), USA 99,401, Japan 24,185, Hong Kong 23,286, Singapore 12,930, Malaysia 10,362.

10153. IITA. 1994. Annual report 1993. Ibadan, Nigeria: International Institute of Tropical Agriculture (IITA). 65 p. 28 cm.

• ***Summary:*** Contents: Director General's report. Research perspectives. Resource and crop management. Crop improvement. Plant health management. International cooperation. For the record.

IITA experienced funding cutbacks in 1993 and in 3 of the last 5 years, but in 1993 still had core funding of US$20.8 million and additional Special Project Funding of US$13,267,000, totaling $34,086,000. IITA is actively involved in environmental work, trying to achieve agroecological sustainability, using integrated pest management and other techniques. A color map (p. 9) shows agroecological zones of humid and subhumid tropical Africa. The four main zones are: Arid and semi-arid lands, mid-altitude savanna and woodlands, moist savanna (good for soybeans and other legumes), and humid forest.

In West Africa, for all crops, population-driven agricultural systems occupy 66.5% of the land area, while market-driven systems occupy the other 33.5%. Three countries–Nigeria (40%), Côte d'Ivoire (28%), and Ghana (12%)–together account for 80% of the area in West Africa where the systems are market driven. Kudzu (*Pueraria*) is being tested extensively with good results in fallow systems for sustainable farming. Earthworm cast production is highest under kudzu live mulch.

The section on "Crop Improvement Highlights 1993" (p. 21-24) discusses: Seed of IITA soybean varieties were

© Copyright Soyinfo Center 2014

available in the commercial sector, sold by Pioneer Hi-Bred and UAC in their catalogs. The effectiveness of promiscuous nodulation of soybean in farmers' fields was confirmed in 1993. Soybean in Nigeria: As crop's commercial success grows, researchers address linked problems. Ghana and Malawi are promoting soybean production. From 1987 to 1993 the soybean utilization project has been funded by the International Development Research Centre (IDRC) of Canada and the Japan International Cooperation Agency (JICA). In Feb. 1991, the project identified 21 companies in Nigeria which used soybean as an ingredients in their products or projects. By 1993 that number had jumped to 50. "In July 1993, IITA held a workshop of small-scale and industrial soybean processors, which brought together the whole spectrum of producers from the cottage-industry to large-scale levels, as well as soybean growers." Production and marketing information gathered by the IDRC project was reviewed. Producers and processors exchanged views on development of soy-based food products and the associated equipment and machinery for their manufacture." Today the demand for soybeans in Nigeria exceeds the supply.

In 1992 only 4.3% of IITA's core budget went to cowpeas and soybeans, decreasing to 3.1% in 1993. Page 50 shows the 33 main IITA donors in 1993. Those giving more than US$1 million are: USAID ($9,727,000), World Bank ($4,200,000), Japan ($3,584,000), Canada ($1,448,000), and Netherlands ($1,400,000).

During 1993/94 IITA improved soybean germplasm was released in Ghana, Nigeria, and Zaire. Address: PMB 5320, Oyo Road, Ibadan, Nigeria.

10154. Morinaga Nutritional Foods Inc. 1994. Why tofu? Exciting new research indicates tofu is the food of the future (Color videotape). 2050 W. 190th St., Suite 110, Torrance, CA 90504. 10 minutes. VHS. Nov. Price: $4.95.
• ***Summary:*** This 10-minute color video is designed to introduce tofu to dietitians and other health professionals. Contains the latest scientific information showing that consumption of soyfoods reduces one's risk of heart disease and cancer. Morinaga will send out a copy to anyone who requests it, if they pay only the postage and handling.

The video is accompanied by a 2-panel brochure that contains basic information about tofu, 7 tofu recipes, and an order form. Address: Torrance, California. Phone: 1-800-NOW-TOFU.

10155. Morinaga Nutritional Foods, Inc. 1994. The word is out: Tofu is in (Ad). *Vegetarian Times.* Nov. p. 79.
• ***Summary:*** This full-page color ad shows: (1) A carton of Mori-Nu Silken Tofu (Firm) on a wooden cutting board surrounded by cubes of white tofu, green vegetable soybeans, and whole dry soybeans; (2) Cartons of the five types of Mori-Nu Tofu; (3) A tofu-chocolate creme pie topped with sliced bananas.

Five paragraphs compare the conventional wisdom about tofu with the "Word on the street," which is about Mori-Nu Tofu. Examples of the conventional wisdom: "Tofu is a strange, spongy substance found only in exotic Asian dishes." "All tofu is made by hand, cut into blocks and floated in unappetizing plastic tubs filled with water." "Tofu need to be refrigerated, spoils quickly and should be eaten right away." "Tofu is high in fat." "Tofu is a food of the past."

This ad also appeared in the Feb. 1995 issue (p. 51) of this magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 310-787-0200.

10156. Deming, John W., Jr. 1994. Work with Erewhon and the natural foods industry, 1969-1971. Part I (Interview). *SoyaScan Notes.* Dec. 28-29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John was born on 27 June 1947 in Tacoma, Washington, where his parents were stationed after World War II, though they came from the South. His mother, who was from Arkansas, was the daughter of the founder of Murphy Oil, and the sister of the man who made it into a Fortune 500 company. So John's family was in petroleum business and quite wealthy. Coincidentally, Murphy Oil is also a major soybean grower. John grew up in Louisiana. He attended Tulane University in New Orleans, Louisiana, until 1967, majoring in English. He spent his junior year in Europe (Wales and Spain), then returned to Tulane. He was active with SDS and psychedelics, then dropped out in early 1969.

Buying an old Volkswagen bus with tuition money from his parents, he drove to Vermont. There he helped to develop one of the first communes in Vermont–named Johnson's Pasture and located 15 miles west of Brattleboro–and played a key role in making it work. There were no "macroids" [followers of macrobiotics] in the commune. In May 1969 Deming met John and Chris Abrams at the commune; they would later introduce him to macrobiotics and become close friends. Realizing he had some money from an inheritance (he began to receive substantial amounts of money from various trusts starting at this time) and tired of the commune, he decided to move to California. "That was where the hippie scene was most intense, and I wanted to do my own thing." So he got in a Volkswagen bus with 9 other people and drove to Mendocino County, California.

There, in Sept. 1969, he used part of his inheritance to purchase (from his great aunt who lived in Berkeley) 55 acres of beautiful land, an old fishing camp on the Noyo River and on the Skunk Railroad Line west of Fort Bragg, California. On the land he started his own commune and lived lightly on the land (which had no electricity) until Aug. 1970. In the summer of 1970 John and Chris Abrams came to California to live with John on his land. (John's father was a well-known heart surgeon and professor at Harvard

© Copyright Soyinfo Center 2014

Medical School). Chris developed terrible eczema on her hands soon after they arrived, but she cured it with a 10-day rice diet–based on the macrobiotic teaching of George Ohsawa. She gave John Ohsawa's book *Zen Macrobiotics,* which he read in one or two nights. This was his introduction to macrobiotics. "I was so taken by the book and so impressed by Chris and by the cure of her eczema, that I decided very quickly to dedicate much time and energy to the philosophy and diet of macrobiotics. I got deeply into it. I read everything George Ohsawa wrote and I was just floored. I went for the whole thing hook, line, and sinker. I wanted to save the world and I thought that this was the way to do it. After using pot all summer, I went on a 10-day rice diet. I had never felt better in my entire life." John now had long hair and a big beard. He soon began to visit Herman Aihara about every two weeks and to learn about macrobiotics from him. After a while, John was the only person left on the land, so in late 1970 he decided to give it to Herman Aihara. Herman later cut down all the redwood trees, sold them for cash, and finally sold the land for cash.

John got into the natural foods movement in 1970. New England, New York, and California were hotbeds of this new-age, vegetarian type activity and John wanted to bring it to the South. He hoped to become a leader of this movement. So he drove to Jackson, Mississippi, where he met a Jewish woman named Renée Rosenfeld, about 55 years old from Belgium, who was really into macrobiotics. They started a little macrobiotic restaurant in her house; they typically served 5-6 people lunch that they prepared themselves. After about 2 months, in Nov. 1970, they started a small natural foods store (about 3,000 square feet, paid for by John) named the Singing River Granary. It was successful as a business. At his store John read a short essay by Paul Hawken published as a brochure, which he felt was the best single statement he had seen about why he was interested in macrobiotics and what the philosophy meant to him. John thought, "I've got to meet this guy Paul Hawken. He has a gift with words." One day in early 1971 Roger and Susan Hillyard from Erewhon drove into town to find out who was buying so much macrobiotic food from Erewhon. Roger was going from Boston to Los Angeles to set up Erewhon–Los Angeles. He loved the store and he said "Any time you want to come to work with us, you're welcome." John took a trip to visit Erewhon–Los Angeles, arriving right after the big earthquake struck the San Fernando Valley near Los Angeles on 9 Feb. 1971. He liked what he saw. Aveline was there, living in a big macrobiotic study house with Tom DeSilva and others. Returning to Mississippi, John sold Singing River Granary in Aug. 1971, moved to Los Angeles, and went to work with Erewhon. He began by helping Jim Gronemeyer (a very colorful figure) to expand the Erewhon retail store. John met Paul Hawken when Paul came to Los Angeles and invited all the Erewhon employees down to a beach house he had rented at Carlsbad (about 80 miles southeast of Los Angeles). Dora, Paul's wife, was also there, wearing a bikini on the beach, about 6 months pregnant, and looking lovely.

In mid-Sept. 1971 John flew to his cousin's wedding in Boston, then visited the Erewhon warehouse (at 33 Farnsworth St), where he talked to "Big Bill" Garrison, the manager, who offered John a job. "I realized that here I was in Boston at the center of the center, the heart of the heart of everything. A stoned-out hippie in Tucson, Arizona, once told me that Michio Kushi knows more about the Universe than any other person on the planet. I knew I wanted to study with Michio." Continued. Publishing Group. xi + 185 p. Foreword by Nikki and David Goldbeck. Illust. Index. 26 cm. [20 ref]
• ***Summary:*** Contents: Acknowledgments. Foreword. Preface. Introduction. 1. A Newly discovered ancient food. 2. Making your own seitan. 3. Appetizers and snacks. 4. Sauces and marinades. 5. Soups and stews. 6. Salads and salad dressings. 7. Side dishes. 8. Elegant entrées and hearty casseroles. 9. Desserts. Manufacturers of seitan and seitan products. Mail-order distributors. Bibliography.

In the Introduction, Barbara Jacobs writes (p. 2-3): "In 1970, when we first tasted seitan, it was a tasty but exotic snack food, owing its extremely salty flavor to the fact that it was an imported Japanese specialty food, flavored for the Japanese taste. In addition to being heavily salted, this seitan was hard, chewy, and quite expensive. It was really just a snack food to be eaten while drinking beer. Unfortunately, no one involved in the natural foods movement in this country was familiar with the methods used to make this food.

"In 1971, Leonard became the head chef at the Seventh Inn, one of Boston's first natural foods restaurants. During that time, he and I began our search for different traditional food-preparation techniques and studied with experts in all areas of cooking and baking. In March 1971 a young Japanese woman named Yumie Kono came to work at the Seventh Inn. It was Yumie who taught us how to make seitan. Even macrobiotics leaders Michio and Aveline Kushi–experts in the preparation of healthy Japanese foods–had never actually made seitan."

In 1975 Jonathan's Seitan Shop in Antwerp, Belgium, began to make seitan. In the mid-1970s, a seitan product named Tan Pups had become a very popular snack food. "Created in Boston, tan pups were similar to the country fair specialty of dough-covered hot dogs on a stick. Tan pups were pieces of seitan that had been dipped in flavored batter and deep fried. Boston area natural foods stores carried these healthy snacks as staple items."

The basic recipe for seitan (p. 20-21) involves simmering 2-2½ cups of freshly homemade wheat gluten in a "basic broth" of 4 cups water, ¼ to ½ cup natural soy sauce, a 3-inch piece of kombu (a sea vegetable), 4-6 slices (1/8 inch) of fresh gingerroot (optional), and 1 tablespoon sesame oil (optional). Address: Medfield, Massachusetts.

10163. Konovsky, John; Lumpkin, T.A.; McClary, D.C. 1994. Edamame: The vegetable soybean. In: A. Desmond O'Rourke, ed. 1994. Understanding the Japanese Food and Agrimarket: A Multifaceted Opportunity. Binghampton, New York: Food Products Press. xiii + 217 p. See p. 173-81, 196-99. Illust. Index. 23 cm. [52 ref]
• ***Summary:*** Contents: Introduction. History. Quality. Variety selection. Production. Current research. Summary.

Note: In the superb first draft of this paper: The authors review more than 160 Japanese publications concerning vegetable soybeans, concentrating on the period from 1920 to the present. More than 120 of the articles are in scientific journals dating from 1921 to the present. In general these research articles and publications can be categorized into seven research areas: Agronomy and crop management (37%), biochemistry (15%), breeding and germplasm (12%), harvesting and processing (12%), statistics and marketing (12%), plant physiology (9%), and plant pathology (3%). Address: East Asian Crop Development Program, Dep. of Crop and Soil Sciences, Washington State Univ., Pullman, WA 99164-6420.

10164. Mindell, Earl. 1994. Earl Mindell's food as medicine. New York, NY: Simon & Schuster. 393 p. Index. 22 cm. [97 ref]
• ***Summary:*** Here Mindell, who would write *Earl Mindell's Soy Miracle* in 1995, gives a preview of his growing belief in the health benefits of consuming soy. Phytochemicals (p. 13, 25): Genistein, which is found in the urine of those who eat soy-based foods, appears to block the growth of new capillaries that supply blood to some tumors. Researchers hypothesize that genistein may be responsible for the low incidence of certain forms of cancer among "Japanese, who eat a diet rich in soy foods."

Phytates (p. 28) found in soybeans and cereal grains deactivate steroidal hormones that promote tumors. However excessive intake of phytates is known to interfere with absorption of minerals such as calcium.

Protease inhibitors (p. 29), found in soybeans and soyfoods, can prevent the conversion of normal cells to malignant ones.

Calcium (p. 65): Tofu curded with calcium sulfate is a good source of calcium. Sodium (p. 83-84): Recommends the use of reduced-salt soy sauce.

Breast cancer (p. 215-16): "Soybeans and soy products (soy milk, tofu, etc.) may also provide some protection against breast cancer." Women in East Asia who eat a lot of soy products have 10-15% lower circulating estrogen levels than Caucasian women and must lower rates of breast cancer.

Osteoporosis (p. 242-44): Eat tofu (curded with calcium sulfate), miso, and other traditional soy products.

Menopausal symptoms (p. 261-63): Japanese women seem to have less discomfort. Mindell thinks this may be because the Japanese diet is rich in soy products (tofu, miso, soybeans, etc.). Address: R.Ph, PhD, registered pharmacist and Prof. of Nutrition at Pacific Western Univ. in Los Angeles. He lives in Beverly Hills, California.

10165. Miyako Oriental Foods, Inc. 1994. Cold Mountain Miso: Ethnic versatile seasonings (Portfolio). Baldwin Park, California. Six inserts. 31 cm.
• ***Summary:*** The portfolio jacket was printed in about 1993 or 1994. The six inserts (all leaflets), printed over a period of ten years, include: (1) "Miso: Made from organic soy bean" (March 1995; two sides, color photo of four products

© Copyright Soyinfo Center 2014

on front, recipes on the back). (2) "Cold Mountain Miso: A traditional taste of Asia to the modern world" (March 1997; two sides, color photo of four products on front). (3) "Miso: Made from organic soybeans" (1983; two sides, printed brown on light beige). Gives specifications for three types of miso. (4) "Miso: Made from organic soybeans" (1983; two sides, printed brown on tan). Gives specifications for Cold Mountain dehydrated miso. (5) "Fermented black bean paste: Versatile seasoning" (1995; two sides, printed brown on light blue). Gives specifications for Cold Mountain fermented black bean paste. Ingredients: Black soybean, rice, salt, water, *Aspergillus oryzae.* (6) "Dehydrated fermented black bean paste: Versatile seasoning" (1996; two sides, printed brown on light gray). Gives specifications for Cold Mountain dehydrated fermented black bean paste. Address: 4287 Puente Ave., Baldwin Park, California 91706. Phone: 818-962-9633.

10166. Nagano Chushin Agricultural Experiment Station. 1994. Summary of soybean breeding activities in Nagano. Nagano prefecture, Japan. 6 p. [Eng]
• ***Summary:*** Page 3 contains an excellent map titled "Soybean Research Network in Japan." It lists and shows each of the 6 soybean breeding centers, the 7 experiment stations for testing specific characteristics, and the 15 experiment stations for testing local adaptability. Graphs show precipitation and average air temperature year-round at 5 of the main stations. The chief soybean breeder is Nobuo Takahashi. This station has developed and released 16 registered and 6 non-registered soybean varieties between 1962 and 1991; the most famous are Enrei (released in 1971), Tanrei (1978), Tamahomare (1980), Tachinagaha (1986), Ootsuru (1988), Ayahikari (1991).

Breeding objectives: 1. High yielding ability: more than 4.5 tonnes/ha in experimental fields. 2. Late planting adaptability: more than 3.0 tonnes/ha after winter wheat. 3. Suitability for mechanical harvesting: lodging resistance, non-shattering, lowest pod weight. 4. Resistance to diseases and nematodes: Soybean mosaic virus, soybean cyst nematode, black root rot, purple seed stain. 5. Seed quality: large seeds (more than 30 gm per 100 seeds), small seeds for natto (less than 10 gm per 100 seeds), appearance (hilum color, seed coat cracking, etc.), high protein (more than 45%), suitability for food processing. 6. Soybean varieties for special [food] use: Black soybean for kuromame, green soybean for kinako, large and flat soybean for hitashimame. Address: Shiojiri, Nagano prefecture, Japan.

10167. Suzuyo Kogyo Co. Ltd. 1994. [Soybean selection washing, automatic steaming, filling / packaging systems (Leaflet)]. In: Pamphlets on Performance of Factory Automation by Suzuyo's High Quality Steam System. Tokyo: Suzuyo Kogyo Co. Ltd. [Jap]*

10168. Asahi Food Processing Co. 1994? Soybean materials and tofu quality: Soybean use at Asahi. Gyoda-shi, Saitama-ken, Japan. 13 p. 28 cm. Undated. [Eng]
• ***Summary:*** This very interesting report was produced by the Tofu Research Team in the company's Foods Laboratory. It shows how a top Japanese tofu manufacturer evaluates soybeans and processes for making tofu. Each year Asahi uses 4,900 tonnes (metric tons) of soybeans, of which 3,000 tonnes (61.2%) are IOM from the USA and 1,900 tonnes (38.8%) are grown in Japan. Contents: Flow sheet for making soymilk and tofu.

Chemical composition and viscosity of soymilk and hardness of tofu, made using 26 different soybean varieties and 3 coagulants–GDL, calcium sulfate, and magnesium chloride. The main soybeans are Enrei, Toyosuzu, Suzuyutaka, Nanbushirome, Tachinagaha, Yamabe daizu (+ or -), IOM, Vinton, Beeson, Kunitz, Zane, Forrest, 9 experimental Canadian soybeans bred at Harrow [Ontario], Best One (Harrovinton [Harovinton]), plus soybeans from Nepal, Celebes, and Chiang Mai.

Chemical composition of 26 soybean varieties and subunit composition of their protein (11S, 7S, etc.). Composition of other soybeans tested: Vinton organic, Tachiyutaka, Tamahomare, Fukuyutaka, Murayutaka, Raisen, Nakasennari, etc. Variables affecting tofu breakage, and tofu compression. Graph showing effect of A-4 subunit on viscosity change of soymilk after addition of magnesium chloride. Graph showing viscosity curves after addition of magnesium chloride coagulant (0.2%) to soymilk derived from 8 different soybean varieties (Note: Enrei gives the lowest viscosity and Vinton the highest). Dendrogram of cluster analysis on principal component score for Japanese soybean cultivars (Best suited for tofu are Enrei, Toyosuzu, Fukuyutaka, Shirosennari). Note: *Webster's Dictionary* defines dendrogram (a term first used in about 1953) as "a branching diagram representing a hierarchy of categories based on degree of similarity or number of shared characteristics esp. in biological taxonomy."

Three dimension chart of factor loading. Chart (2 pages) of variables affecting tofu quality: Vertical columns: Deliciousness (Color, taste, flavor, texture), nutrition, sanitation, cost. Horizontal columns: Points/characteristics, soybeans, extraction of soymilk, coagulation operation to make tofu, viewpoints (notes), Enrei, IOM. Address: 2-17-8 Mochida, Gyoda-shi, Saitama-ken, Japan.

• ***Summary:*** Howard grew up in a Jewish family in Boston, Massachusetts. In about 1964 or 1965 he got interested in macrobiotics. John Hammond, his next door neighbor and a blues singer, was involved in macrobiotics and he told Howard about it one day. So Howard went to the Ohsawa Foundation in New York City, which was run by Irma Paule in those days. He bought some groceries from her and began practicing macrobiotics. George Ohsawa came to New York in 1965 for a summer camp (See Kotzsch 1985, p. 137) and Howard met him. "Ohsawa said he was looking for a guy like me and he wanted me to grow rice in New York state. I found out that was a pretty impossible task so I asked him to pick something easier. He said 'Okay, grow kuzu.' I said, 'Okay, when you get back to Japan, send me some kuzu plants.' And he said, 'Oh no. That's not the Zen way. The Zen way is for you to do it yourself, now.' I spent about 6 months finding out what a kuzu plant was. Finally I got some old agricultural bulletins that described how good kuzu was, then later described how bad it was. I finally managed to find somebody in the South who dug up some kuzu in the winter and sent it to me. I grew it in my garden in New York. The next year when Ohsawa came, I sat him down under this huge kuzu vine, like an arbor, at the back of my house. I said 'There's the kuzu you wanted.' I took some of the kuzu roots and actually extracted kuzu from them and put it in a test tube. I showed it to Ohsawa, told him it was the first kuzu ever extracted in New York, and gave him the test tube. He was astonished and delighted. He said, 'Now we have to begin to work. I knew I was right. You *are* the man I'm looking for. You must begin to import macrobiotic food products from Japan at once. I will ship them to you.' So we started this relationship and in 1965 I began importing foods from Ohsawa in 1965. He used to send me tamari [soy sauce] and miso in beautiful little 18-liter wooden kegs, tied with rope." Howard sold these products to health food stores and to Michio Kushi.

Also during 1965 Howard read a book about grain and he got very interested in freshly-ground flour. A grain of wheat is alive, but as soon as you mill it, it dies. After 5 days the taste and nutritional value have both declined. So people should mill flour, then keep it refrigerated, and use it as soon as possible. So Howard bought a little home flour mill, and set it up in his house. He ground some wheat flour, his wife made some bread, and they really liked the bread. They served the bread to friends who came to dinner, then they wanted fresh flour, so he made flour for them. Pretty soon he was delivering flour to people, then a health food store wanted to sell it, so he had a label made, even though he didn't have a company name at all. So he threw the *I-Ching* to help him choose a name. The hexagram was "Perseverance Furthers." He was going to name the company "Thomas J. Perseverance" so it would sound like a real person. His brother, who was visiting at the time, said "That's a stupid name. You might as well call it Infinity if you're going to have a dumb name." Howard liked the name Infinity, and decided to name his company The Infinity Co. However, later he did have some labels printed on which Perseverance Foods was the company name–just for fun. He once had a lawyer named Bill Pratt, so he sold "William Pratt Old Barrister" brand honey. One of his children pinched his thumb in the flour mill at home and his wife became concerned that a more serious injury could happen. Moreover everything in the house began to dusted with a thin layer of flour.

Howard started The Infinity Company in about 1965 at 188 Duane Street in New York, in the lower Manhattan neighborhood named Tribecca. It distributed, imported, and manufactured natural foods. George Hannides (pronounced HAN-uh-dees) came to work with him, and he later became a minor working partner.

Howard had a friend who practiced karate in a loft at 188 Duane Street, and his landlord gave Howard a small space that had a desk in it on another floor of the same building. So Howard moved in his mill and started doing business as The Infinity Company. Within 2-4 years Howard incorporated the company and changed the name to The Infinity Food Company. Then the health food stores began asking Howard to make other kinds of fresh flour, such as rye flour or corn meal. He did, and soon the product line had expanded to 250 different products. Eventually he had two 30-inch flour mills plus a 24-inch mill and some little 8-inch ones. He had a room full of mills, and milling was a large part of Infinity's manufacturing business. In addition, at one point, the company was getting truckloads of dried fruit and of fruit juices from California, plus jams and jellies made without sugar from the City of Industry, California.

"Michio Kushi was operating out of a house on Harvard Square in Cambridge. He was selling groceries in the hallway. He had started out in New York, then he ran into some kind of terrible financial trouble. He fled to Cambridge to avoid his creditors. His wife, Aveline, ran the business and he was the guru. In the early days, Michio was Erewhon's biggest asset. He used to go around and lecture, then people would say 'Where can we get this food,' and he'd say 'Go to Erewhon.'" Howard is not sure whether or not he ever sold products to Erewhon in the early days. Howard is not sure whether or not he began importing foods before Erewhon. "Erewhon didn't have any kind of an operation going on when I had my warehouse. They became important later. In the beginning, they may have been getting some products from Ohsawa in Japan at the same time I was. Erewhon was located in the Kushi house in Cambridge, where a few of the real loyal macrobiotics lived with the Kushis and helped to pay the rent. They had sort of a grocery display in the hall, and they sold some foods. In the early days, Erewhon bought miso, tamari and other typical macrobiotic products from Infinity." Continued. Address: 84 MacDougal St., New York, NY 10012. Phone: 212-982-3620.

10171. Silver, Jimmy. 1995. Purchase of the Erewhon and Pure & Simple brand names from John Deming (Interview). *SoyaScan Notes.* Jan. 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** From the day that Jimmy began to work for Erewhon–Los Angeles in 1976, he always believed that John Fountain owned the company and that John Deming was only an investor. "For years, John Fountain ran that company into the ground. I have no idea why Deming wasn't paying attention to what was happening. Then Deming showed up and said to me 'Listen, this company really belongs to me, and I need to know what you think about what's happening.' I told him, then he said 'I'm going to get rid of Fountain and I really need to have you stay. It's going to be a great opportunity for you.' But when he found out what was really happening, and there was going to be work involved, he became somewhat dismayed by the whole thing. It was totally bizarre."

So Jimmy stayed on and worked for John Deming, who sacked John Fountain in late 1978 or early 1979. Jimmy then hired Jeffrey Hilgert. In early 1980, Jeffrey negotiated with Shade Foods (a maker of yogurt toppings in Belmont, California) for Erewhon–Los Angeles to buy the Pure & Simple name, plus a few jam products, from Shade. No physical assets were purchased. Payments were made over a period of several years.

Jimmy had recommended to John Fountain that Erewhon–Los Angeles be converted from a wholesale distributor to a master distributor of branded products that were sold nationally. When John Deming came in, he liked the idea and told Jimmy to make the change. So Jimmy arranged for K&L, Nature's Best, and many other distributors to take on the line of products that Erewhon–Los Angeles had formerly distributed for itself. The Erewhon–Los Angeles warehouse and offices were moved from Vernon to Santa Ana, California. The Santa Ana warehouse was much smaller–no more than 8,000 square feet. It housed only the imported Japanese products and Johnson's Spaghetti Sauce.

When Jimmy and Jeff Hilgert bought Erewhon–Los Angeles from John Deming in mid-1980, they basically wanted the right to use two names: Pure & Simple, and Erewhon. Erewhon–Los Angeles was a very small company, with sales of only about $35,000 a month at the time, and there were large debts which Silver and Hilgert agreed to pay off for Deming. "He said, 'I have to have this amount of money'–which was a ridiculous sum. He should have just given us the company and walked away. It wasn't really worth anything, except that it had these two valuable names–if it could control them.

"John presumably had an agreement with Michio Kushi which allowed him to use the name Erewhon in exchange for paying royalties–a percentage of the sales of the business–to Michio. This is what all the subsequent problems hinged on. After Erewhon went bankrupt, they informed John (without our knowing it) that they were going to require us to stop using the Erewhon name–because we had no right to it, because Deming had never executed the appropriate documents with Michio and wasn't paying Michio any royalties. The agreement that John had told us he had with Michio–that he had sold us–did not exist! By the time we discovered this, we had already paid him something like $80,000 to $100,000. I didn't find out until much later that Erewhon notified him that they were going to withdraw the use of the name from him. At that point, John came to us and said 'Look, you still owe me several hundred thousand dollars for the business, but I'd like to accelerate the payments because I really need cash, and in exchange I'll reduce the amount of money you owe me to $250,000.' He wanted us to pay the balance due over 6 months rather than over something like 5 or 10 years. So we began accelerating the payments. He knew that both he and we would be sued by Erewhon, but we didn't know it. After we had paid him $180,000 of the $250,000, Erewhon sued us. We we went to John and asked him to defend us against the Erewhon suit since we still believed he had this agreement with Michio. Even though we had paid him $180,000 and were in the process of paying the rest, he refused to defend us. He told us it was our problem, that he didn't think it was a productive use of money, and that he thought he thought we should just walk away from it. So Jimmy hired a lawyer to defend himself, and asked John to produce a copy of his signed contract with Michio. I guess we neglected to scrutinize his agreement with Michio at the beginning because we trusted him and he had been using the Erewhon name for years. John did show us a copy of a written agreement at the time we made the deal, but the agreement had time frames on it, and it had to be renewed and renegotiated, and he said he was in the process of doing that. I learned a lot from this experience, but the tuition was high.

"In June 1980 we signed the agreement to purchase Erewhon–Los Angeles from John Deming, then we renamed it Pure Sales, which had two major lines of branded products: Erewhon, and Pure & Simple–plus Johnson's Spaghetti Sauce. At the same time we were paying Deming, we were also paying Shade Foods for rights to use the Pure & Simple name. We took Deming's business from $35,000 sales a month to about $350,000 a month within about a year.

Concerning names: Erewhon–Los Angeles had been a natural foods distribution company in Vernon, California, run by John Fountain. There was a time when Jimmy used both the names Erewhon–Los Angeles and Erewhon West, then Erewhon West took precedence as a name when the company became a master distributor of branded products and its products began to be distributed nationwide. The name change took place before Erewhon–Boston declared bankruptcy.

© Copyright Soyinfo Center 2014

"After Erewhon refused to allow us to use the Erewhon name, we had to come up with a new name and re-label all our products in 90 days at a cost of something like $50,000 to $90,000. I called the pasta "Johnson's" and the tamari So' Tamari, So' Pasta, etc." John had had his lawyer, Fred Marks, write several very specific sentences into the agreement describing the conditions under which we would not have to pay John. There was a hearing in Boston, Massachusetts, and we had to go before a bankruptcy judge there. When we lost the lawsuit, because there was no valid agreement between Deming and Kushi, our lawyer asked the judge to issue the order in the language that Deming's lawyer had written into our contract. And he did and the judge did. We got a court order losing to Erewhon but it was worded in John's lawyer's language. So we went back to John and said 'We're not going to pay you for the balance due.' We told him we thought he should pay back the $180,000 we had already paid. He refused. After a month or two he sued us for the $50,000. So we counter-sued him for everything that we had paid him plus our costs of relabeling–a total of about $250,000 to $350,000. John came to us and said that he would drop his suit if we would drop ours. We did not pursue our case because we wanted to focus on our booming business and we did not have the resources to prosecute a lawsuit–nor were we willing to go through the emotional energy drain. So we walked away from it. John had lots of money and for him the whole thing was like a monopoly game. Address: President, Pure Sales, P.O. Box 5116, Irvine, California 92716-5116. Phone: 714-540-5455.

10172. Drosihn, Bernd. 1995. The soyfoods market in Germany. New developments at Viana Naturkost (Interview). *SoyaScan Notes.* Jan. 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bernd's company, Viana, is now one of the two largest tofu manufacturers and soyfoods marketers in Germany. The other large company is Life Food in Freiburg. Their brand name is Taifun, and they have been growing rapidly for the last two years.

The tempeh market is very small in Germany. There are only two manufacturers: Hamburger Tofu Manufaktur (Christian Nagel, in Hamburg) and Viana. There is now only one real miso manufacturer in Germany: Kanta Kozaki GmbH in Urbach near Stuttgart. Viana stopped making miso 2 years ago, however Viana sells miso made by Kanta Kozaki in glass jars under the Viana label. A Japanese man (Hiroshi Kozaki) and a German man (Karl Selgmann) run the company together. They have been making miso for 3-4 years. Viana also sometimes makes koji for Kanta Kozaki.

Bernd and Albert Hess are planning to attend the Natural Products Expo West in Anaheim, California, March 10-12, 1995. Address: Founder and president, Viana Naturkost GmbH, Willi Graf Str. 88, 53881 Euskirchen-Kuchenheim, Germany. Phone: 02251-56076.

10173. Brennan, Jennifer. 1995. The emperor's soy sauce. *Gourmet.* Jan. p. 92-93, 135-36.

• ***Summary:*** This noted Anglo-Indian food writer describes her visit to the Goyo-gura in Noda, where Kikkoman still makes soy sauce in the traditional way. A Kikkoman guide tells her that the Goyo-gura is "The home of the imperial soy sauce," which is supplied to the emperor of Japan. Noda, located in northwest Chiba prefecture, is cradled between the Tone and Edo rivers.

The buildings remind her of "old London mews houses." The soybeans are steamed in cast-iron kettles called *shikake-gama.* Wheat is roasted with a wooden paddle in a large shallow iron vessel, resembling an oversized wok, by a master roaster (*mugi-iri*). Unrefined salt is dissolved in fresh well water and the resulting brine is boiled and strained to remove any bitterness or impurities. The koji, made with wheat, soybeans and *Aspergillus oryzae* culture, is stirred twice a day. It is mixed with brine to become moromi, which is allowed to ferment in large cedar vats for one year. The room holding these vats "is a visual explosion." A wall of glass separates the viewers from the vats, which hold batches of moromi in varying stages of maturation and are buried up to their rims in the wooden floor. Every surface–floor, walls, and ceiling–is painted a vivid glossy orange. "If one could walk into the center of a pumpkin, this is what it might be like." The orange color has symbolic connections to Shintoism.

In the old days, after the fermentation was finished, the moromi was poured into cotton sacks, which were stacked in a wooden pressing chamber called a *fune,* or boat. The liquid shoyu was pressed out into a tub, then poured into a vessel to be heated to stop the fermentation; finally it was bottled in ceramic containers. To evaluate the quality of the shoyu for color, aroma, consistency, and flavor, professional tasters use small white dishes called *kikimi-zara.*

A room beyond the tasting chamber serves as a small museum. There are ceramic jugs in which soy sauce was first exported to Europe from Nagasaki in the mid-1600s by the Dutch. A porcelain bottle on display, decorated with the raised Kikkoman logo, held the shoyu that was awarded a special prize at the Vienna International Exposition of 1873. A sepia photograph shows the old *takasebune* flatboats on the Edo River carrying shoyu down to the city of Edo–today's Tokyo. Another photo shows members of the imperial family visiting the Goyogura. (Note: No photos are shown in this article). As she leaves, the author is presented with the "ultimate personal souvenir... It is a scarlet-labeled bottle in a simple beige carton–the emperor's *shoyu."* Her search is complete.

Two small maps show the locations of Noda and Choshi in Japan. Address: Author of several books on Asian cuisine.

Industrial utilization of soybeans (non-food, non-feed)–Bibliography and sourcebook, A.D. 980 to 1994: Detailed information on 2,538 published documents (extensively annotated bibliography), 65 commercial industrial soy products, 78 original interviews (many full text) and overviews, 59 unpublished archival documents. Lafayette, California: Soyfoods Center. 683 p. Subject/geographical index. Author/company index. Language index. Printed 18 Dec. 1994. Published Jan. 1995. 28 cm. [2720 ref]
• ***Summary:*** "A revolution in soybean utilization has been gaining momentum since the late 1980s in the United States. It is described by phrases such as the 'New Uses Movement,' 'value-added soy products,' or 'industrial uses of soybeans.' But few people alive today realize that this is the third–and probably the biggest–wave of a revolution that has taken place at least twice before. The first wave, which had no name, lasted from 1909 until the end of World War I. The second wave, called the farm Chemurgic Movement, began in 1929 (at the start of the Great Depression), reached its peak from 1936 to 1941, and subsided in the late 1940s after World War II.

"Industrial utilization of soybeans refers to uses other than for food and feed. The oil may be used, for example, as an ingredient in printing inks, diesel fuels, paints, resins, soaps, as a dust suppressant, etc. The protein may be used to make adhesives, plastics, artificial wool, paper coatings/sizings, fire fighting foams and a host of other products. Soy oil has always been more widely used in industrial products than soy protein.

"This is the most comprehensive book ever published about industrial utilization of soybeans. It has been compiled, one record at a time, over a period of 19 years, in an attempt to document the history of this subject. Its scope includes all known information about this subject, worldwide, from A.D. 980 to the present.

"This book is also the single most current and useful source of information on this subject, since 81% of all records contain a summary/abstract averaging 181 words in length."

"A Brief History of Industrial Utilization of Soybeans–As early as 980 A.D. the Chinese were using soy oil, a semi-drying oil, mixed with tung oil, for caulking boats. It was widely burned as an illuminant in oil lamps to light homes and temples, until the 1920s, when it was replaced by kerosene. By the 1920s it was also widely used in China to make soft soaps (that were known for their ability to give a good lather in hard water), lacquers, paints, printing inks, and waterproof cloths and umbrellas.

"By the 1500s, soybean cake began to be widely used in China as a fertilizer, primarily as a source of nitrogen and organic matter, but also for its content of phosphorus and potassium.

"The earliest known reference to industrial uses of soybeans in the West was in 1880, when Bryan, an American, noted that soy oil could be used as a substitute for linseed oil in paints, or be burned in lamps.

"The first use of the soybean for industrial purposes in the western world began in about 1909, when the price of linseed and cottonseed oils skyrocketed worldwide. Soy oil began to be used in large quantities in soaps, and experimentally in paints, first in England, then in the United States. Henry A. Gardner of the Paint Manufacturers Assoc. of the U.S. began extensive research on the use of soy oil to partially replace linseed oil in paints and varnishes. By 1916 the main use of soy oil in America was in soaps, where it replaced cottonseed oil. Manchuria also used large amounts of soy oil in soaps.

"In 1909 Goessel, a German, developed and patented the first rubber substitute from soy oil. In 1912 Beltzer, a Frenchman, developed soy protein plastic, Sojalithe, which he soon produced commercially on a large scale. In 1917 Satow, a Japanese, published the first of many articles from that country on the use of soybean proteins to make plastics.

"The heyday of interest in industrial utilization of soybeans took place in America during the 1930s and the Great Depression, spurred largely by the work of Henry Ford, the farm Chemurgic Council (founded in 1935), the Chemurgic movement, and the U.S. Regional Soybean Industrial Products Laboratory (founded in 1936 at the University of Illinois, Urbana). The goal was to make industrial products from farm crops to help depressed farmers. The soybean was one of the great success stories of the Chemurgic movement. In 1933, the peak year percentage-wise, a remarkable 70% of all soy oil in the USA went into industrial, non-food uses–primarily paints and varnishes, followed by soaps, linoleum, and oilcloth.

© Copyright Soyinfo Center 2014

Large amounts of soy flour were made into plywood glue, especially by the I.F. Laucks Co. In 1936, the peak year for publications, some 59 publications on industrial uses appeared. In 1935 the Glidden Co. in Chicago built the first small plant for production of industrial grade soy protein isolate, which the called 'Alpha' protein.

"Active work in this field accelerated during World War II, when soybeans were used to make products that were in short supply. In 1941, after imports of tropical oils from Southeast Asia had been suddenly cut off by the Japanese military, use of soy oil in industrial products skyrocketed to its historical peak in absolute terms: 74.25 million lb. were used that year. Of this, 56% was used in paint and varnish, and 33% in soap. But by 1944 industrial uses of soy oil had fallen to only 17 million lb.

"During the 1950s, a period of huge surpluses for most U.S. farm crops (and forecasts of soybean surpluses... which never materialized), research focused on industrial products that could alleviate the surpluses. During the 1960s, as surpluses disappeared, the concern for world hunger and protein shortages grew, and petroleum came to dominate industrial utilization, soybean research switched from utilization to production.

"The mid-1980s in America saw a rebirth of interest in research on soybean utilization, especially industrial utilization. Foreign competition from Brazil and Argentina, and huge surpluses of soy oil drove U.S. farmers, led by the American Soybean Association, to develop new value-added products for new markets.

"Statistics compiled by the U.S. Dept. of Commerce, Bureau of Census, Industry Div. (Reprinted in *Soya Bluebook '94,* p. 234) show that in the year beginning Oct. 1992 (the latest statistics available), the main industrial uses of soy oil were in resins and plastics (95 million lb.), paint and varnish, fatty acids and 'other inedible' (163 million lb.). These nonfood uses totaled 296 million pounds in 1992/93, accounting for 2.5% of total U.S. domestic soy oil utilization. Rapidly growing new uses included printing inks, diesel fuels, and dust suppressants–to mention but a few.

"One of the shining examples of industrial uses of soybean oil in the USA is in soy inks. In 1987 the oil from 9,000 bushels of soybeans went into soy inks, but by 1993 this figure had skyrocketed to 4,000,000 bushels–a 444-fold increase in just 7 years! In 1994 about 10% of all U.S. printing inks, about 44 million pounds, were made from soy oil. About 90-95% of all daily newspapers used soy inks for color and one-fourth of the estimated 50,000 commercial printers regularly used it." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

Beni koji to ki koji no heiyo ni yoru tofuyo no seizo [Studies on the manufacture of tofuyo in Okinawa. X. Production of tofuyo using the combination of red and yellow kojis]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 42(1):38-43. Jan. [15 ref. Jap; eng]

• ***Summary:*** Red koji was prepared by growing molds of the genus *Monascus* on steamed rice. Yellow koji was prepared by growing *Aspergillus oryzae* molds on steamed rice. In this study, tofuyo prepared with either or both of these types of koji was investigated. "The product obtained by using the combination of red and yellow kojis was preferred" to that made by only one koji. The most desirable product was obtained by using the mixed koji of composed 75% yellow koji and 25% red koji.

Crude protein content, hardness, and cohesiveness of tofuyo were found to decrease during the ripening period. Address: Dep. of Bioscience and Biotechnology, Univ. of the Ryukyus, 1, Senbaru, Nishihara-cho, Okinawa 903-01.

10178. Ham, P. Marc. 1995. The work of Semences Prograin Inc. (Micronisation Canada Inc.) in Quebec (Interview). *SoyaScan Notes.* Feb. 1. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This company was established in 1980 and is now a leader in Canada in the field of value added soy products. About two-thirds of their business is making full-fat micronized soybeans for use in animal feeds (mainly dairy cows, plus hogs and poultry), and one-third is in breeding and growing soybean seed (they presently grow about 2,000 acres year for use as soybean seed). They now have two micronizing plants which produce the Micro Flake, the Micro Milled product and the Micro Elite (made from higher protein soybeans, with high bypass). Mark believes that a micronized product makes better feed than that produced on a low cost extrusion cooker. Extrusion may be better for monogastric animals than it is for dairy. They have a research and development program for new soybean varieties. They also contract with a winter nursery in Chile for reproduction during the winter. They buy about 55,000 tonnes/year of soybeans for processing into animal feed and for exporting to the Pacific Rim. They are one of the largest companies in Quebec that buy soybeans and keep them in Quebec. The big trading houses buy soybeans then export them mostly to Rotterdam, Netherlands, to the European crush market. Prograin keeps its Maple Glen varieties identity preserved. They screen soybeans to sort them into 3 sizes. The big beans (18/64 inch and over) are sold to Japan for use as green vegetable soybeans, the medium sized beans (500 tonnes/year) are used in the Chinatown in Quebec to make tofu and soymilk, and the small soybeans are used by 3 companies for making soy sprouts in Quebec. They have a natto program as well. Address: Semences Prograin Inc. (Micronisation Canada Inc.), 145 Bas Riviere Nord, St-Cesaire, Quebec, J0L 1T0, Canada. Phone: (514) 469-5744.

10179. Weber, Marcea Newman. 1995. Re: Work with natural foods and tofu in England and Australia. Letter to William Shurtleff at Soyfoods Center, Feb. 12–in reply to inquiry. 3 p. Typed, without signature.

• ***Summary:*** Marcea and Daniel Weber met in Boston in about 1972, and both studied macrobiotics. They left Boston in 1974 to live in England because Daniel wanted to study acupuncture in one of the acupuncture schools in Buckinghamshire. They stayed there for 6 months and then moved to London, where they connected with Bill Tara, who was working at starting an East West Centre. Marcea began teaching cooking classes and started a Wholefoods Bakery with an English woman. This continued for 1½ years.

During this time Marcea met Bruce Gyngell, an Australian who met Michio Kushi while he was in London. Michio suggested that Bruce change his diet, so Bruce came to the East West Centre and studied cooking. He was looking for a cook for himself. He was at that time living in England and working for one of the television studies. He was the person responsible for bringing television to Australia, so he was quite influential. He wanted macrobiotics to find its way to Australia, so he invited Marcea and Daniel to visit Australia and bought them each a round-trip ticket. He said they could see if they wanted to stay and start a centre in Australia. So in 1976, after visiting Japan and Oki sensei and his Oki Yoga Dojo in Mishima, Japan, for several weeks, they arrived in Australia, and have lived there ever since. In December 1982 Marcea and Daniel Weber were married in Australia.

"The Soy Bean Factory was established in Dec. 1978, when Michael De Campo, Yoshiko Wright and Marcea Weber started a company devoted to producing traditional Japanese tofu using nigari (a sea water extract) as a coagulating agent. The fresh Japanese-style tofu began to arrive in the health food stores and Japanese supermarkets around April 1979." As far as Marcea knows, theirs was the first Caucasian-run tofu company in Australia. It was her idea to start the company. Shares were issued at the beginning. Marcea initially invested about $5,000 to $7,000, Yoshiko Wright was brought in to invest about $3,000, and Michael De Campo invested about $3,000 or a little less. His main role was making the tofu and working with Marcea on improving product quality.

"The Soy Bean Factory was located just outside Chinatown and in the central district of Sydney, New South Wales, Australia. We concentrated on making a tofu equal in quality to the fresh tofu sold in Japan today. We were able to service people who wanted fresh tofu by selling it straight from the Factory to the public, as well as packaged in a plastic container with a plastic film on top."

The Soy Bean Factory ceased operation in October 1981. Note: On 8 Nov. 1981 Marcea wrote Bill Shurtleff, on a letterhead of the East West Foundation, 363 George St. in Sydney: "Our factory has shut down, and now one of the Chinese producers [Sin Ma Trading Co., 9 Meeks Road, Marrickville (in southwestern Sydney), NSW] is allowing us to use their premises to make our tofu... We are hoping to start another factory with more capitol behind us. Unfortunately, we were grossly undercapitalized, and this was our downfall." While making tofu at Sin Ma Trading Co., The Soy Bean Factory continued to use its original name, since they had lots of packaging and labels, and no need to change names.

"After getting into the swing of making Japanese-style tofu and using the packaging equipment, we decided to find a source of organically grown soybeans that would produce the same quality tofu as the non-organic beans we had been using. In 1983, after several months and many trials, we finally found a bean that would give almost the same quality, though with a small drop in tofu volume [yield].

"As the demand increased up to as much as 600 pieces per week of tofu (each piece weighed 300 gm), we began to look for larger premises, which were found in Leichhardt (about 7 miles southwest of downtown Sydney), so by early 1982 we had re-located to 355 Parramatta Road, Leichhardt, NSW 2040–and had started making tofu. At that time, Yoshiko Wright and Michael De Campo sold their shares to John Fenwick and me, and the name of the company was changed to Soyfoods Australia. Still having a controlling interest in the business, I hired Tony Wondal, a Chinese man, to help operate the business. A year later (in about 1983), after an increase of sales, John decided to sell his shares to Ross Ebert, and we moved to even larger premises at 14/2 Paton Place, Manly Vale (northeast of downtown Sydney), New South Wales. After a year of production and trying to make soymilk without proper soymilk equipment, I decided to sell my share of the company to Ross Ebert. I was expecting my first child in August 1985 and didn't want to be tied down to any business. So I left the tofu business and never looked back! As far as I know, Ross never put any new products out on the market and so the business only sold tofu–and still does today with new owners.

Note: In Sept. 1986 Ross B. Ebert had just spent $100,000 on fairly sophisticated soymilk equipment. He was selling soymilk fresh to Coles supermarkets in plastic bottles. In Nov. 1988 Lindsay Kotzman purchased the business, which was named Great Australian Pty. Ltd. In July 1990 Jennifer Young purchased the business, still located at 14/2 Paton Place. "The Company is Great Australian Tofu Pty. Ltd., trading as Soyfoods Pty. Ltd."

As far as Marcea knows, Sin Ma Trading Co. and Castle Trading Co. were both tofu manufacturers. Address: 56 St. Georges Cres., Faulconbridge 2776 NSW, Australia.

10180. Anderson, Barb. 1995. Whose beans are best? There's more than one way to compete. *Soybean Digest.* Feb. p. 30-32.

• ***Summary:*** Soybeans from Brazil and Argentina are

© Copyright Soyinfo Center 2014

generally considered to be better than U.S. beans in terms of overall quality and estimated processed value (EPV). "Overall quality includes more than protein and oil contents and foreign material (FM)." If just oil content and FM are used as criteria, Brazilian soybeans beat U.S. beans almost every time. However if we add free fatty acid levels, moisture, splits, damaged kernels, and test weights to the criteria, the U.S. is able to nearly even the score. Also, the prices used must be those at the destination, not the point of origin. The U.S. could become much more competitive by reducing the FM to less than 2% in its No. 2 soybeans. Most U.S. export customers was less FM.

The U.S. market share in Japan has dropped, averaging less than 81% during the last 4 years because of increased South American imports and quality.

10181. *ASA Today* (*St. Louis, Missouri*). 1995. Customer service to Japan. Part II. 1(4):2. Feb.
• ***Summary:*** "Unfortunately the U.S. share of the Japanese [soybean] market has declined. As recently as 1985, U.S. growers held a 95% share of this market. Over the last four years, the U.S. average market share was only about 80%, with Latin American producers gaining at our expense. A significant part of this loss is directly attributed to quality.

"'Grading of our soybeans on a globally accepted standard is where we need to go now for the future,' stated ASA's [American Soybean Association's] Director for Japan, Kent Nelson... One of the grading criteria that U.S. farmers must continue to improve is foreign material (FM). The Japan Oil Producers Association (JOPA) estimates that the crushing value of Brazilian soybeans is currently $0.20 to $0.25 per bushel higher than American beans, and that up to half of this difference is attributed to FM. The other main differences are the lower levels of oil and protein in U.S. beans, issues which are currently being confronted by researchers."

10182. Hara, Toshio; Saito, Hiroyuki; Iwamoto, Nobuhide; Kaneko, Shinji. 1995. Plasmid analysis in polyglutamate-producing *Bacillus* strain isolated from non-salty fermented soybean food, *kinema,* in Nepal. *J. of General and Applied Microbiology* (*Tokyo*) 41(1):3-9. Feb. [17 ref]
• ***Summary:*** Reports that the plasmid of *Bacillus subtilis* (*natto*) isolated from Japanese natto resembles that of *Bacillus subtilis* isolated from thua nao (of Thailand) and kinema (of eastern Nepal and environs).

Note: This issue is dedicated to the memory of Kin-ichi Sakaguchi (1897-1994); he died on 9 Dec. 1994 at age 97. A memorial appears on pages 1-2; a full-page portrait photo faces page 1. Address: 1-3. Microbial Genetics Div., Inst. of Genetic Resources, Faculty of Agriculture, Kyushu Univ., Higashi-ku, Fukuoka 812, Japan.

10184. *Ontario Soybean Growers' Marketing Board Newsletter.* 1995. Japanese miso mission visits Ontario. Feb. p. 4.
• ***Summary:*** Five Japanese miso manufacturers, who collectively purchase 180,000 tonnes/year of soybeans for their miso requirements, visited Ontario to see for themselves the excellent quality and appearance of Ontario soybeans. These 5 men represent over 1,600 miso manufacturers in Japan. They also met with OMAFRA Minister Elmer Buchanan. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

10185. Krizstan, Jan. 1995. Re: Work with seitan and soyfoods in Slovenia. Letter to William Shurtleff at Soyfoods Center, March 1. 2 p. Typed, with signature.
• ***Summary:*** Jan phoned on 6 January 1995, then wrote a long letter dated March 1. His first name is pronounced "Yan." He was born in 1967 in Ljubljana, the capital of Slovenia, where he now lives. He worked for two years on Slovenian television, then in 1992 he quit because of unhealthy working conditions. He had already been a vegetarian for 2 years and he knew that many people are looking for and need healthy food, but they don't know how to get it. So he started a small private company named "Izvor" ("The Source") and in Sept. 1992 started (together with friends) to publish a magazine in Slovenian titled *Bio Novice* ("Bio News") that would connect these people. The main subjects were growing plant foods in accordance with Nature, healthy diets, ecology, alternative medicine, and the culture of peace and non-violence. "It was very difficult, because we started with almost no money, but we published 15 issues of *Bio News.* In December 1994 we had to stop publishing because of big financial problems.

"One of my friends [Vesna Crnivec] translated some paragraphs from *The Book of Tofu* about preparing home made tofu and made an article. We published her translation, a summary of the Introduction, and some of Akiko's illustrations in one of the first issues of *Bio News* (See issue 5/6, letnik 1993, p. 40-44). Some readers (especially women) showed great interest in it! Later I translated some paragraphs from *The Book of Tofu* and published them (together with Akiko's good illustrations) in issues 14 and 15 of *Bio News.* At the end of the article I gave the address of Soyfoods Center for all people interested in ordering your books.

"Last year I was attracted to making seitan and tofu from organic wheat and soybeans. Mr. Mirko Trampus is my very good friend. He has an organic farm in Metlika (1 km

© Copyright Soyinfo Center 2014

from the border with Croatia, in southeastern Slovenia). He has been growing wheat, soybeans, and daikon organically for the last 6 years with very good results. We decided to make a kitchen in his house for transforming Mr. Trampus' soybeans, wheat and daikon into tofu, tempeh, natto, soymilk, seitan and pickled daikon.

"A few days before New Year 1995 I visited all Ljubljana's bookshops, because I wanted to find some information about tofu and seitan. What a surprise! There was your *Book of Tofu.* I found it once again and bought a copy. I was so happy. Not far away I found the book *Cooking with Seitan* by Barbara and Leonard Jacobs, with a foreword by Aveline Kushi.

"Now (at the end of February 1995) we are making about 50 kg of seitan per week by hand. We sell it in some 20 healthy food shops all over Slovenia." He would like to start making tofu, soymilk, natto, and tempeh, Later he would like to make miso too. "Our aim is preparing 100% vegetarian foods of the highest possible quality, made from organically grown soybeans, wheat, and daikon. Now we need more information. Presently Mr. Trampus grows about 12,000 kg of wheat and 9,000 kg of soybeans per year. Prof. Spanring is our good friend. He helped Mr. Trampus to choose the best varieties of soybeans for making tofu and the wheat with the highest gluten content for seitan. Now we use hard winter wheat. We mill it into flour in our own mill with stones. From 100 kg of wheat flour we get about 23 kg of very dark brown seitan.

"Up until now, all of the starch has been rinsed by hand, but we have constructed an automatic rinsing machine which will be prepared for use very soon. We presently rinse using only warm water at about 30ºC. We discard all the starch (putting it on compost heaps on the fields), but later we will use it as an ingredient in cooked soymilk puddings."

Jan would like to order *The Book of Tempeh.* He is looking for a source of tempeh starter. Tempeh is largely unknown in Slovenia, but he would like to introduce it because it is a healthy food and tastes very good. Address: Mestni trg 22/1, 68330 Metlika, Republic of Slovenia. Phone: (386) 068 59 481.

10186. Walsh, James. 1995. Suiting foreign tastes: Designer foods being made to fit standards in Japan, world market. *Star Tribune* (*Minneapolis, Minnesota*)**.** March 5.
• ***Summary:*** There is a growing demand for "designer" beans–a "value-added" product. Minnesota researchers (such as those at the University of Minnesota College of Agriculture) have developed, and Minnesota farmers are growing and selling, soybean varieties especially tailored for Asian niche markets. Proto soybeans are large-seeded, and high in protein, excellent for making tofu. They are often grown under contract with Asian companies. Minatto soybeans are a small-seeded variety, sold to the Japanese for making natto. Chico soybeans, also small seeded, are used to make soy sprouts.

According to John McLaughlin, an international trade representative in the Minnesota World Trade Office. One promising and rapidly expanding new U.S. market is for organic foods. U.S. domestic sales of organic foods have risen dramatically from about $178 million in 1980 to almost $2,000 million in 1993, according the *Natural Food Merchandiser* magazine. The Japanese alone pay more than $1,400 million a year for organic food, and that market has grown 80% a year for the past 5 years. Minnesota, which boasts 150,000 acres of organically certified cropland, is working hard to court these buyers.

Jim Orf, a professor and soybean researcher at the Univ. of Minnesota, notes that of the 20 to 30 soybean varieties developed by his university since the late 1970s, seven have been developed specifically for Japanese food use. In addition, private companies in Minnesota contract with Japanese buyers to develop and grow soybean varieties.

SunRich, a company in Hope, Minnesota, that grows soybeans and waxy corn for Japan, "also has developed edamame, the boiled green soybean that Japanese eat as bar snacks. But so far, U.S. versions of that food have not met Japanese taste standards." Allan Routh, a soybean farmer from New Richland, Minnesota, and part-owner of SunRich, grows 20-40% of his crop for export. He must work hard to meet the standards set by Japanese buyers, but the Japanese offer premiums of $0.25 to $1.50 per bushel.

10187. Anand, Karen. 1995. Get fresh at TK's: Good food guide. Bon appetit. *Times of India* (*The*) (*Bombay*)**.** March 7. p. A4.
• ***Summary:*** Top quality ingredients and an informal ambience make it a pleasure to dine at TK's, the Hyatt Regency's new Japanese restaurant. TK's stands for Teppan Yaki Kitchen. Newcomers may wish to wish to choose from one of the four reasonably priced set menus (two are vegetarian), each of which includes 5 courses, such as "Japanese miso soup and dessert." Three sauces comes with grilled dishes; the "soya ginger sauce" is used primarily to season seafood, but it is delicious on many other foods.

10188. Gruenwald, R. Jay. 1995. Update on The Simple Soyman, The Bountiful Bean, Long Life Foods in Minnesota, and Kyoto Food Corp. (Terre Haute, Indiana) (Interview). *SoyaScan Notes***.** March 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jay has been with The Simple Soyman for 12 years. On 23 Sept. 1994 The Simple Soyman bought The Bountiful Bean, moved it from Ridgeway to Milwaukee, and merged it into The Simple Soyman. In Dec. 1994 he moved the new larger company to a new address: 3901 North 35th St. (P.O. Box 16677), Milwaukee, Wisconsin 53216. Phone: 414-444-TOFU. Simple Soyman still produces Hummus and Taboolie [both contain tofu], tempeh, and tofu under the

© Copyright Soyinfo Center 2014

Bountiful Bean brand. The Simple Soyman will continue to make its Deepockets (Calzone-style [Italian] and Empanada-style [Mexican]; both contain frozen tofu), dips, spreads, etc. Most are made with soy. The company does a lot with frozen tofu, using it in place of TVP, which causes intestinal gas. The business is still struggling, "but hopefully with the addition of The Bountiful Bean business and distribution in Madison, we'll get going. Being in this for 12 years now, we've got to start making a living at it pretty soon. Basic tofu is still not very profitable. We started working out of the Magic Bean's kitchen with one product. When they went bankrupt we basically bought their equipment and moved to 4877 N. Green Bay Ave., Milwaukee, Wisconsin. The building we are in now is 4,500 square feet. The factory is nicely laid out."

R. Jay has heard from a packaging company that a new tofu company named Long Life Foods is scheduled to start in Perham, Minnesota. They are said to be using a special type of package (not water pack) which gives the tofu a very long shelf life.

Kyoto Food Corp. (KFC) in Terre Haute, Indiana, declared bankruptcy in about May or June 1994. He heard that KFC had a verbal agreement from a big chain like Kroger to carry their tofu, then Azumaya, which was the brand Kroger was carrying, lowered their price. So Kroger stayed with Azumaya and that dealt the death blow to KFC [not true; see March 1995 interview with William Roach]. They were trying to sell their building and plant (which they owned and designed to make tofu) for about $1.3 million. He thinks that the company was run by a couple, an American man and a Japanese woman [William and Toni Roach]. Bruce Rose is thinking of buying the company. Address: Owner, The Simple Soyman, 3901 North 35th St. (P.O. Box 16677), Milwaukee, Wisconsin 53216. Phone: 414-444-8638.

10189. Roach, William. 1995. The rise and fall of Kyoto Food Corp. in Terre Haute, Indiana (Interview). *SoyaScan Notes.* March 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In about Dec. 1993 Kyoto Food Corporation (KFC) stopped making tofu and ceased all operations. At that time they were making about 57,000 lb/month of tofu. William estimates that roughly 70% of their customers were Asian Americans. They delivered their tofu using their own delivery vehicles–to ensure freshness and give better access. They did not declare bankruptcy and no bills were left unpaid. Their plant, which was built specifically for making tofu, has been standing idle, with all the equipment in place, for about 18 months.

KFC was one of the first big tofu manufacturers in the Midwest. There were three main causes for the company's failure: First, a severe cash flow problem experience by their Japan-based parent company, Kyoto Koseikai, which owns a supermarket chain in Japan and also owned 90% of KFC. Kyoto Koseikai invested heavily in land in Japan. But during a 2-month period of economic hardship, this land lost one-third of its value on paper. When Japanese banks called in loans from Kyoto Koseikai, they were squeezed. So the ultimate cause was the loss of land value and the banks in Japan. The Kobe earthquake was only peripherally related.

Second, they had made a big mistake in hiring a so-called "marketing expert" named Robert Mattix, and paying him big money. Mattix went to school at Michigan State University in East Lansing, had good-looking credentials, and laid out big plans to reposition the company's products, etc. He turned out to be a con artist, who has pulled this same trick on at least 4 other companies, using the same lawyer to draft his employment contract. Robert gave away a lot of tofu, but sold little. William has learned that it is very difficult to get accurate background information on high-paid executives. Former employers of employees that were unsatisfactory are afraid to talk because of fear of a lawsuit from the employee. When William finally realized what was happening and fired Mattix, Mittix turned around and sued KFC (as was his pattern to do) for breach of contract. This man cost KFC $290,000, but even more important, he cost them one year of lost time. When Mattix left, William took over as sales manager.

Third, the policies of the company were dictated by Japanese who did not understand the American market very well. For example, for the first year, KFC was allowed to make only one product, fresh water-packed tofu. It was sold in a 12-oz size, when 16 oz would have been better. The local Japanese manager, Mr. Yamashita, refused to do any private labeling, which could have greatly expanded sales. Mr. Yamashita left 6 months before the company stopped production.

Since the company stopped production, there have been two serious buyers. Kyoto Koseikai has set the selling price for the plant in Terre Haute at $900,000 and will not negotiate for a lower price. The first potential buyer was a Mr. Park, a Korean-American who own as big tofu company named Obok Foods in Southern California. The second was a group of Chinese who have a joint venture with Bruce Rose of Tofu International Ltd. They already make tofu together in Ann Arbor, Michigan. William feels there is a good chance that the factory in Terre Haute will be sold; he would like to get back in the business if possible. His wife Toni (Setsuko) who is Japanese-American was actively involved in the day to day operations of Kyoto Foods; among other things, she translated most of the Japanese-language correspondence. Address: Terre Haute, Indiana. Phone: 812-533-1400.

10190. Hymowitz, Ted. 1995. Plate tectonics and the dissemination of the soybean (Interview). *SoyaScan Notes.* March 24. Conducted by William Shurtleff of Soyfoods Center.

© Copyright Soyinfo Center 2014

• ***Summary:*** Plate tectonics has nothing to do with the cultivated soybean, *Glycine max,* but it helps explain the dissemination of the wild perennial relatives of the soybean. Plate tectonics has to do with the pool of genetic material which ultimately ended up in Australia, versus that pool which we seen in China and Japan today. Ted is interested in the distribution of the genus *Glycine* (pronounced glai-SEE-nee). The question is "Is the distribution of the wild perennials associated with the distribution of the soybean. The answer is "No."

Ted believes that the ancestors of both the wild perennials and the cultivated soybean were in Cambodia, Laos, and Vietnam. This has nothing to do with his contention that the soybean was first domesticated in the eastern half of North China around the 11th century B.C. These ancient ancestors existed something like 4 to 10 million years before the soybean was domesticated, roughly 3,000 years ago. From this pool of genetic material that moved north, *Glycine soja,* the farmers of China domesticated the soybean.

The Australian plate is moving closer and closer all the time to the plate in the southern part of Asia–especially Indonesia and Papua New Guinea. Eventually the two plates hit, and one plate went under the other. At that time there was a golden opportunity for what he believes to be the *Glycine* to move down from Southeast Asia into Australia. The plants that moved south remained perennials. But the plants that went north from this center were annuals; they eventually became the wild annual soybean, *Glycine soja.* Kudzu comes from that same pool. Botanists know that perennials can't survive in the cold north, so when tropical plants move north they often become annuals in order to survive.

Confounding this whole issue of plate tectonics are wild birds. They can move the seeds of wild perennial relatives of the soybean over long distances. Some seeds retain their viability during the time they are eaten by the birds, digested, and excreted. One day while Ted was sitting alone on the Pescadores Islands, he asked himself, "How could the wild soybean have gotten here?" To demonstrate this bird theory of movement, Ted and his colleagues took material that they collected on Taiwan, Pescadores Islands, Okinawa etc. and they crossed it from the material from Australia. The resulting seeds were fertile. That shows that the genetic material had to come from Australia because on the Philippines and Taiwan you only find the polyploids; you don't find diploids. The ancestors of the polyploids, those 16 species, are only found in Australia. But the polyploids, the ones composed of more than one genetic background, are found in Taiwan and elsewhere. Address: Prof. of Plant Genetics, Univ. of Illinois, Urbana, Illinois.

10191. Azevedo, Chris; Gallagher, Paul. 1995. Trends in Japan's soybean market. Paper presented at a conference titled "Producing Soybeans for the Soyfoods Market." 8 p. Held 2 March 1995 at Ames, Iowa. [6 ref]
• ***Summary:*** The pages and most tables in this report are unnumbered. One table shows per capita annual consumption (in lbs) of soybeans in selected Pacific Rim countries in 1974, 1984, and 1994, as follows, in descending order of pounds consumed per capita in 1994: Indonesia: 9.2, 14.0, 23.2. South Korea: 21.4, 18.8, 20.1. Japan 11.0, 15.3, 16.7. North Korea: 11.8, 12.2, 11.2. Malaysia: 2.9, 5.2, 10.3. China: 14.7, 13.0, 9.7. Thailand: 1.2, 3.9, 3.9. Philippines: 0.4, 0.5, 0.8. Sources: (1) USDA; (2) U.S. Bureau of the Census, World Population Profile, 1994 and 1984; (3) Statistical Yearbook, Statistical Office of the United Nations, New York, NY.

Another table shows annual soybean consumption in million metric tons in 1974, 1984, and 1994, as follows, in descending order of amount consumed in 1994: China: 5.237, 6.193, 5.350. Indonesia: 0.546, 1.072, 2.105. Japan: 0.716, 0.830, 0.950. South Korea: 0.328, 0.358, 0.410. North Korea: 0.083, 0.109, 0.117. Thailand: 0.023, 0.092, 0.105. Malaysia: 0.015, 0.036, 0.090. Philippines: 0.007, 0.013, 0.025. Source: USDA.

A final table shows the amount of soybeans used (in thousand metric tons) in Japan, by product and total, each year from 1978 to 1993, as follows: Use of soybeans for tofu rose from 486 in 1978 to a peak of 531 in 1984, falling to 492 in 1993. Use for natto rose from 71 in 1978 to a peak of 109 in 1993. Use for miso rose from 182 in 1978 to a peak of 185 in 1980, falling to 173 in 1993. The total rose from 750 in 1978 to a peak of 927 in 1992, falling to 920 in 1993. Address: Iowa State Univ. Phone: 515-294-0160.

10192. Chen, Hua-Ming; Muramoto, Koji; Yamauchi, Fumio. 1995. Structural analysis of antioxidative peptides from soybean β-conglycinin. *J. of Agricultural and Food Chemistry* 43(3):574-78. March. [18 ref]
• ***Summary:*** Protease hydrolyses of a soybean protein, Beta-conglycinin (7S protein), yielded antioxidative activity against the peroxidation of linoleic acid in an aqueous system at pH 7.0. Address: Dep. of Applied Biological Chemistry, Faculty of Agriculture, Tohoku Univ., Sendai 981, Japan.

10193. Furuhata, Hideki. 1995. Japanese soyfoods markets. Paper presented at a conference titled "Producing Soybeans for the Soyfoods Market." 9 p. Held 2 March 1995 at Ames, Iowa.
• ***Summary:*** This paper consists of nine very interesting statistical tables, one on each page. Table 1 shows the supply and demand for soybeans in Japan from 1984 to 1992 (in tonne = metric tons). The supply of Japanese-grown soybeans decreased from 126,000 tonnes in 1984 to a low of 73,000 tonnes in 1992, and imports increased from 4,401,000 tonnes in 1984 to 4,725,000 tonnes in 1992. The demand for soybeans from crushers has stayed about steady, ranging from a low of 3,428,000 tonnes in 1991 to

© Copyright Soyinfo Center 2014

a high of 3,928,000 tonnes in 1985. Demand for food uses has increased from 786,000 tonnes in 1984 to a high of 927,000 tonnes in 1992 (up 18%). Demand for use as feed has increased from 55,000 tonnes in 1984 to 95,000 tonnes in 1992.

Table 2 shows soybean utilization in Japan by type of food product from 1987 to 1994: Use of soybeans for tofu and aburage stayed about steady at 498,000 tonnes, by far the largest food use. Use for miso decreased slightly from 180,000 tonnes in 1987 to 170,000 tonnes in 1994. Use for natto grew strongly from 97,000 tons in 1987 to 110,000 tonnes in 1994. Use for kori-tofu (dried-frozen tofu) grew slightly from 29,000 tonnes in 1987 to 30,000 tonnes in 1994. Use for soy sauce grew strongly from 5,350 tonnes in 1987 to a record 25,300 tonnes in 1992, dropping slightly to 23,000 tonnes in 1994. Use for soymilk decreased slightly from 4,000 tonnes in 1987 to 3,100 tonnes in 9994. Total use of soybeans for food in Japan grew slowly from 875,350 tonnes in 1987 to 930,000 tonnes in 1994 (up 6%).

Table 3 shows Japanese population and per capita consumption of soyfoods from 1982 to 1992. Population grew from 103,720,000 to 124,452,000 during this period, while per capita consumption grew from 6.8 to 7.4 kg/capita (up 8.8%).

Table 4 shows per family expenditures and consumption per year on tofu, natto, miso, and soy sauce from 1982 to 1992. For example, expenditures on tofu increased from 2,535 yen in 1982 to 7,992 yen in 1992, while consumption fell from 87.98 cakes to 79.26 cakes. Thus in 1992 the average Japanese family consumed 1 cake of tofu every 4.6 days.

Table 6 shows imports of soybeans for food from the USA, Canada, and China from 1982 to 1992. Imports from the USA are subdivided into IOM, Beeson, and other identified varieties. In 1992 about 88.7% of food-grade soybeans imported to Japan from the USA were IOM. Moreover, of all these soybeans imported for food use in 1992, about 76.6% came from the USA, 21.5% from China, and 1.85% from Canada.

Table 6 shows the amount spent per capita by people of different 5-year age-groups on four soyfood products. The average person in the age 60-64 year group spent ¥2,976 on tofu, ¥1,539 on miso, ¥1,490 on soy sauce, and ¥1,098 on natto. The average person in the age 30-34 year group spent ¥1,581 on tofu, ¥603 on miso, ¥508 on soy sauce, and ¥708 on natto.

Table 7 shows the source of soybean used to make four soyfood products in 1984, 1990, and 1992. In 1992, of the 498,000 tonnes of soybeans used in tofu and aburage in Japan, 74.8% of the soybeans were IOM from the USA, 6.0% were Beeson (USA), 8.0% were other U.S. varieties, 3.0% were from China, and 8.0% were grown in Japan. Of the 30,000 tonnes use to make dried-frozen tofu, 86.7% were IOM and the rest were from China. Of the 108,000 tonnes used to make natto, 55.5% were from the USA and Canada, 39.8% were from China, and 4.6% were grown in Japan. Of the 176,000 tonnes of soybeans used to make miso, 88.0% were from China, 5.7% were white-hilum beans from the USA, and 6.25% were grown in Japan.

Table 8 shows that production of soybeans in Japan from 1982 to 1994 has decreased sharply. In 1982 some 262,300 tonnes were produced on 147,000 ha with a yield of 1,782 kg/ha. In 1994 some 98,800 tonnes were produced on 26,500 ha with a yield of 1,620 kg/ha.

Table 9 is two charts showing the distribution system for (1) Imported soybeans from suppliers to end users, and (2) Domestic soybeans from farmer to end users. Farmers sell to the Zenno Nokyo or a collector. Address: Mitsui & Co. Phone: 515-294-0160.

10194. Iowa State University. 1995. Producing soybeans for the soyfood market: Conference schedule and registration (Leaflet). Ames, Iowa. 3 panels each side. Each panel: 22 x 9 cm.

• ***Summary:*** On Thursday, 2 March 1995, Iowa State University held a 1-day conference titled "Producing Soybeans for the Soyfoods Market" at the Holiday Inn Gateway Center, Ames Iowa. No proceedings were published. Schedule: Wednesday evening: Tour of Iowa State University's Pilot Plant and Center for Crops Utilization and Research. Soyfoods tasting reception follows at the Holiday Inn Gateway Center for conference registrants. Thursday. Morning session: Markets, trade, and policy. 8:30 a.m.–Welcome and introductions, by Lester A. Wilson. 9:00–Japanese soyfoods markets, by Hideki Furuhata, Mitsui & Co. 9:45–Growth potential for soyfood beans in Asian markets, by Lester A. Wilson. 10:30–Break. 10:45–U.S. participation in soyfoods markets in the Pacific Rim, by Robert Neal, Agri-Grain Marketing. 11:30–Trade policy changes and opportunities, by Paul Gallagher. 12:15–Lunch. Afternoon session: Soybean varietal effects on soyfood quality. 1:30 p.m.–The effect of varietal characteristics on perceived soyfood quality, by Keisuke Kitamura, Chief, Legume Breeding Lab, MAFF [Ministry of Agriculture, Forestry and Fisheries], National Agricultural Research Center, 3-1 Kannondai, Tsukuba, Ibaraki 305, Japan. 2:15–Soybean breeder panel discussion, with Keisuke Kitamura, Walter Fehr (ISU), Dennis Strayer (Strayer Seeds), Tom Brumm (MBS Seeds), Clark Jennings (Pioneer Hi-Bred Intl.), Jerry Lorenzen (FTE Genetics). 2:45–ISU research presentations: (1) Soybean varietal and storage effects on tofu processing–Pilot plant study, by Lester A. Wilson and Patricia Murphy. (2) Rapid quality testing with near-infrared whole grain analyzers, by Charles Hurburgh. 3:30–Break. 3:45–Health benefits of soyfoods, by Mark Messina (American Soybean Association health consultant); Isoflavones in soybeans and soyfoods, by Patricia Murphy (ISU Dep. of Food Science and Human Nutrition). 5:00

p.m.–Closing comments and questions.

Conference sponsors: Midwest Agribusiness Trade Research and Information Center (MATRIC, Iowa State Univ.). Center for Crops Utilization Research (ISU). Utilization Center for Agricultural Products (UCAP, ISU). Iowa Soybean Promotion Board. MSGA/MSPRC (Minnesota Soybean Growers Assoc. / Minnesota Soybean Research & Promotion Council). Registration fee: $100 before Feb. 15, or $125 thereafter.

A five-page directory of the 74 attendees is attached. Address: Ames, Iowa.

10195. Kanazawa, Takemichi; Osanai, T.; Xiao, S-Z.; et al. 1995. Protective effects of soy protein on the peroxidizability of lipoproteins in cerebrovascular diseases. *J. of Nutrition* 125(3S):639S-646S. Supplement. March. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease. [30 ref. Eng]

• ***Summary:*** It has been shown that peroxidized low density lipoprotein (LDL) is an important risk factor in the pathogenesis of atherosclerosis. Administration of soycreme suppressed peroxidized lipoprotein. Furthermore, blood cholesterol concentrations were reduced by the administration of soy protein. Therefore soy protein may be useful in the prevention and/or treatment of atherosclerosis. Address: 1. The Second Dep. of Internal Medicine, Hirosaki Univ. School of Medicine, 5 Zaifu-Cho, Hirosaki-City 036, Aomori-Ken, Japan; 3. Beijing Research Center for Immunology, Beijing, China.

10196. Mogi, Yuzaburo. 1995. Re: Selection to become President and Chief Executive Officer of Kikkoman. Letter to William Shurtleff at Soyfoods Center, March 3. 1 p. Printed, with signature.

• ***Summary:*** "On February 6th, the Board of Directors selected me to become President and Chief Executive Officer of Kikkoman Corporation, effective that date."

Note: This printed announcement was sent to friends and shareholders of Kikkoman. Address: Tokyo, Japan.

10197. Murphy, P.A.; Wang, H.-J. 1995. Isoflavone content of selected soybeans and soyfoods (Abstract). *J. of Nutrition* 125(3S):806S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.

• ***Summary:*** 29 commercial soybean foods were obtained and classified into soy ingredients, traditional soyfoods, and second generation soyfoods. 12 soybean varieties (8 American and 4 Japanese) were also obtained. The concentration and distribution of isoflavones in these was analyzed using HPLC (high performance liquid chromatography) and photodiode array detection. Twelve isomers were quantified: 3 aglycones (daidzein, genistein, and glycetin [sic, glycitein]), as well as 9 glucosides (daidzin, genistin, glycitin; 6"-O-acetyl-daidzin, -genistin, glycitin; 6"-O-malonyl-daidzin, -genistin, glycitin).

Among traditional soyfoods, there were differences between nonfermented and fermented. Higher levels of glucosides were found in nonfermented soyfoods, while higher levels of aglycones were found in fermented soyfoods. Second generation soyfoods contain only 6-20% the isoflavone levels as whole soybeans.

In Vinton 81 soybeans grown during the three years 1989-1991, variation in total isoflavones was threefold, with crop year having a much greater influence than location. Isoflavones in seven other American soybean varieties ranged from 2,053 to 4,216 micrograms per gram. Address: Iowa State Univ., Dep. of Food Science and Human Nutrition, 2312 Food Sciences Building., Ames, IA 50011.

10198. Ontario Soybean Growers' Marketing Board. 1995. Technical soybean mission: Japan, Hong Kong, Malaysia, Singapore. March 10-26, 1995. Chatham, Ontario, Canada. 23 p. 28 cm. [Eng]

• ***Summary:*** Contents: Participating members: Dr. Karen Lapsley, Mr. Ron McDougall, Mr. Michael Loh, Mr. Doug Jessop (food technologist and tofu expert, Harrow Research Station), Mr. Kim Cooper (marketing specialist, OSGMB). Note: This is the first Canadian soybean mission in which a food technologist (Doug Jessop) participated. Background. Mission objectives. Acknowledgements. Mission details–Japan: Canadian embassy.

Japan Miso-Co-op Industrial Association: Japan imports about 250,000 tonnes {metric tons} of soybeans from China each year, and about 150,000 tonnes of that amount is for the miso market. The remaining miso soybeans come from Canada, USA, and Japan. The best soybean for making miso comes from the Hokkaido area of Japan. It is a large, white hilum type, perhaps Toyomasuri. Generally the larger the soybean the better for making miso. Japanese miso makers need two types of soybeans from Canada: (1) Normal SQWH (Special Quality White Hilum); average values for color, taste and texture are acceptable though higher values would be preferable; (2) High Premium Soybeans; they would consider paying a premium for better color, taste, and texture.

Azuma Natto Foods Co. Ltd.: This natto company uses 7,000 tonnes/year of soybeans making them the third largest natto maker in Japan. They use 65% USA, 25% Japanese, and 15% Canadian soybeans. There are four sizes of natto: Small natto < 5.5 mm accounts for 72% of the natto market in Japan; Large natto, 5.5 to 6.2, account for 18%. Extra large natto > 8.5 mm account for 18%. Split seed natto account for 10%. Factors in assessing the suitability of soybeans for natto are: Fat content should be less than 19%. Total sugars–Group 1 contains sucrose, fructose, and glucose, group 2 contains raffinose and stachyose. Calcium affects the hardness or softness of natto. The ideal range is

© Copyright Soyinfo Center 2014

180-250 mg/100 gm. Sanwa Company–Tofu manufacturer.

Wed., March 15–Japan Tofu Association: There are over 20,000 tofu makers in Japan, and 53 of these are members of this association, with half of the 53 being in the Tokyo area. Only 185 tofu manufacturers in Japan have 30 or more employees. Tofu makers consider there are two types of organic soybeans: true organic and semi-organic. The association imports about 2,000 tonnes of each type from the USA; they are OCIA certified.

Home Foods Company Ltd. uses 4,000 metric tons of soybeans a year, mostly a blend of 70% Chinese white hilum and 30% U.S. white hilum. The soys from the USA are I.O.M. soybeans, especially the "High Super" variety. For the more premium market they use a blend of 50% Japanese soys and 50% Harovinton soybeans. They have also just started blending 50% Chinese and 50% Canadian white hilum soybeans. The two most important criteria for their soybeans are high protein and high total sugars. Sugar levels of Chinese soybeans (24-25%) are higher than those of Canadian soybeans (23-24%).

Thursday, March 16–Takeya Miso Co.: Ikuo Fujimori, President. Takeya has two plants employing 100 production workers and using 5,000 to 6,000 tonnes of soybeans yearly. 70-80% of their products are sold in supermarkets. For years they have been using the U.S. soybean variety Kanrich.

Nagano Chushin Agricultural Experiment Station: They have been breeding soybeans since 1957 and in that time have developed and released 17 varieties, the most famous being Enrei. The staff of 34 includes 5 soybean breeders. Dr. Nobuo Takahashi has been breeding soybeans for over 18 years. Japan has domestic soybean area of 370,500 acres (150,000 ha); it is decreasing, so imports are increasing.

Nagano Miso Industrial United Co-operatives: This group consists of 8 local co-ops made up of 160 miso manufacturers, who pay a fee to this group based on sales. There was a detailed discussion of the types of sugars in soybeans necessary for good miso.

Friday March 17–National Food Research Institute. Tsukuba is developing into a science research park, now containing over 200 different research institutes. NFRI, originally founded in 1934 as the Rice Institute, moved to Tsukuba from Tokyo in 1973. Thirty years ago, all tofu in Japan was made with Japanese soybeans. Dr. Toshiro Nagai spoke about natto: In 1992 the natto needs of Japan were met by soybeans from China (45%), USA (38%), Canada (17%), and Japanese domestic (8%). Natto consumption has increased by about 10% for each of the last few years. Dr. Sayuki Nikkuni spoke about miso: In 1992 the miso needs of Japan were met by soybeans from China (87%), USA (6%), Japan (6%), and Canada (1%). Dr. Kaoro Koyama spoke about tofu: In 1992 the soybeans for tofu totaled 490,000 tonnes and came from USA (390,000 tonnes; 80%), Canada (50,000; 10%), Japan (20,000; 4.1%), China (20,000; 4.1%), and South America (10,000; 2.0%).

Asahi Food Processing Co. Ltd. This plant, which has 350 employees and operates 365 days/year, was established in 1972 and produces tofu, fried tofu, natto, noodles, and juices. They use 15 tonnes of soybeans daily or 4,900 tonnes/year, of which 38.8% are grown in Japan and the remaining 61.2% are IOM from the USA. Each day they make 120,000 cakes of tofu, 100,000 pieces of fried tofu, and 20,000 packages of natto. Most of the soybeans they use in production are dehulled. They use about 500 tonnes/year of OCIA certified soybeans from the USA and some semi-organic soybeans from Japan. The prices they pay per kg of soybeans are: IOM 30-40 yen; Vinton, identity preserved varieties, and Harrovinton [Harovinton] 100 yen; organic 120-140 yen; Enrei (Japanese) 400 yen.

Saturday, March 18–Hong Kong. Canadian High Commission. Canada Packers (Hong Kong) Ltd.

Monday, March 20. Shenzhen Economic Zone: This area of 30 square km, just outside the Hong Kong border, contains 1 million people or 60% of the provincial population, all of whom require a special permit to work in the area. This economic zone is booming, basically due to spiralling costs in Hong Kong, where many businesses and factories are closing and moving to this area, where land and labor costs are much lower.

Shenzhen Vitasoy (Guang Dong) Foods & Beverage Co. This plant, which is only one year old, produces a major share of the soymilk for Hong Kong. They are able to import soybeans at a low tariff rate because they ship the majority of their finished products back into Hong Kong. The plant uses Canadian SQWH (Special Quality White Hilum) soybeans, but has problems with uneven seed size. They presently receive the soybeans in 45 kg jute bags, but would prefer strong 45 kg poly-lined paper bags. A small percentage of dairy milk is mixed with the soymilk, which is thought to improve its texture and taste.

Tuesday, March 21. Dah Chong Hong, Ltd. This was the first company to import Canadian soybeans for food use in the early 1970s. Dah Chong pointed out that Ontario soybeans were experiencing increasing competition from Quebec soybeans, especially in the past two years. The Quebec soybeans are 5-10% less expensive, due to lower basis levels, lower freight costs, and being more aggressive in a new market. Their quality is similar to Ontario, though the seed coat color is somewhat darker. There are about 50 tofu makers in Hong Kong, 10 larger size and 40 smaller size, although there is not a large difference in size. Consumers believe that packaged tofu is not as fresh as that purchased fresh daily from local markets.

Amoy Food Ltd. (Dr. Alain Butler; This plant makes soy sauce and other sauces used in cooking. They use only Canadian soybeans, the Maple Glen variety from Quebec). Wed., March 22. The group visited Hung Tao Soya Bean Products Pty., a traditional Hong Kong tofu and soybean sprout plant in the New Territories.

© Copyright Soyinfo Center 2014

Thursday, March 23–Malaysia. Canadian High Commission. Yeo Hiap Seng (Malaysia) Berhad (Contains excellent details on the company). Chop Lee Kit Heng Sdn. Bhd. (A soybean trader selling to end users in Malaysia).

Friday, March 24–Singapore. Canadian High Commission. Yeo Hiap Seng Ltd. (Singapore). Meeting with nine tofu manufacturers in Singapore. (The name of each company is given. There are 40 tofu makers in Singapore, and the majority now use Canadian soybeans. Tofu growth in the last 5 years has been very rapid and competition is fierce). Asia Corporation Pte. Ltd. (This company accounts for about 70% of the soybeans imported into Singapore and Malaysia. They first brought Canadian soybeans into the area in 1978). Canadec Private Ltd. Sing Yeap Trading Pte. Ltd.

Saturday, March 25–Unicurd Food Company Pte. Ltd. (Mr. Goh gave a tour of his facility and discussed his plans for a new plant in late 1995). Yam Thye & Co. (Warehouse).

Encore Ltd.: Sylvia B. Hollenstein, managing director. This company, based in Switzerland, uses Swiss technology to produce soy yogurts, chocolates, and noodles in Switzerland from Chinese soybeans–mostly for the taste. The products are shipped from Switzerland to the company's 3 retail stores in East Asia; they plan to expand to 10 retail stores by the end of 1995.

Appendixes A through J, issued as a separate document, contain extensive and detailed information and some published documents related to the technical mission. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

Address: Kyushu National Agricultural Exp. Station, Ministry of Agriculture, Forestry and Fisheries, Nishigoshi, Kumamoto 861-11, Japan.

10200. Negru, Matthew. 1995. Tofu and soybeans in Nepal (Interview). *SoyaScan Notes*. April 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Matthew lived in Nepal for many years and was married to a Nepalese woman named Laxmi "Latchoo" Lama [now named Mrs. Laxmi Sharma]. They started and owned a woodworking business named Laxmi Wood Craft. In 1987 all foreigners (except those who were married to Nepalese at the time) had to leave the country because the Nepalese government simply stopped renewing visas.

Matthew recalls that when he was in Kathmandu, there were two tofu shops in operation: One was somewhere on the Ring Road and the other was run by a Japanese man and woman; they may not have been married, and they may have had a partner. Matthew first bought tofu in Kathmandu in about 1981-82 and he first met the Japanese tofu makers in about 1985-87; they lived in a house behind the palace, and he thinks they had their tofu shop in Thamel, which is the tourist district of Kathmandu. The tofu was most widely sold at a big market named Asan Tole in Kathmandu. At the end of the market is a sort of square where two streets join; one may be named Bothahiti. There is a line of ships which sell tofu–along with other things. They keep the tofu immersed in water in 5-gallon biscuit tins. The tofu was quite good and tasty. The shops were run by Nepali people, probably the Newari, who are the indigenous tribe of the Kathmandu valley. Most of the tofu in Kathmandu was sold here, but occasionally it was also sold elsewhere.

The Newari own little earth-floored shops, sort of a Nepali saloons, where indigenous whiskey is served–mostly to Nepalese men. There they also serve delicious soybean snacks–such as soybeans fried in mustard oil with special spices. There are thousands of festivals in Nepal–every group has some, and the food served at these festivals is generally delicious. Some of these preparations contain soya. Matthew would like to know if Sherpas, Tibetans, or Thakalis have ever made tofu traditionally. Address: c/o Riverdale Immigrant Women's Centre, 1326 Gerrard St. East, Toronto, ONT M4L 1Z1, Canada.

* (p. 86+; tofu is mentioned). Chirimen-fu (p. 88+). Tosa-fu (p. 91+). Shian-fu * (p. 94+; tofu is mentioned). Yamakawa-fu and Chiyo-fu (p. 97+).

Azuki beans and Aka (red) azuki beans (p. 101+). Dainagon azuki (a special variety of azuki beans) (p. 106+). Azuki no suri-jiru (Soup of pureed azuki) (p. 109+).

Hishio–the other name is shoyu no mi (Moromi mash & shoyu presscake) * (p. 115+). Suri-Hishio (ground hishio) * (p. 121+). Ume-bisho and Yubi-hishio * (p. 125+). Hishio and shishi-bishio * (p. 130+) Azuki Kai (Azuki porridge), Aka-kai (Porridge), Uncho-juku (Porridge) (p. 133+) Unzo-kai (Porridge) and Unzo (p. 138+). Kowaii and Seki-han (Rice recipes; Sekihan is red azuki rice) (p. 141+). History of shiso (Shiso leaves are translated as "Beefsteak leaves") (p. 148+).

Asazuki (p. 150+). History of Karashi and Keshi (p. 153+). What is Araragi? ÿ(p. 158+). Tade / Tadé (p. 163+). Itachi hajikami and Inu sansho (p. 167+). History of sansho (Sansho seeds are one type of spice) (p. 170+) Hajikami and Shoga (Ginger) (p. 174+). History of myoga (A Japanese leafy plant with a strong flavor that is often used for a topping for Hiyayakko Tofu) (p. 178+). Myoga-take (p. 181+).

Sai? Seki (Chinese Name) and Niragi * (p. 184+). Kawakami sensei and the Rikagagu Kenkyujo (Note: *Rikagaku* means physics and chemistry), by MATSUSHITA Sachiko, Honorary Professor of Chiba University (p. 190+). 96 Years of my father's life by Kozo Kawakami's eldest son (Tadashi? / Tsutomu?) (p. 192+). My father, Kozo Kawakami,–A view from his 2nd son (p. 194+).

A photo (p. 191) shows the members of the Rikagaku Kenkyujo seated together on tatami mats in a room. A separate outline sketch and legend shows the name of each member.

The section titled "Kawakami sensei and the *Rikagaku Kenkyujo,"* by Prof. Matshita states (p. 190): I was able to receive his guidance for 20 years ever since I became a member of the Ryôrisho Genten Kenkyu Kai, a study group that started in 1994. They met at Keio University's old wooden classroom. These people studied old culinary documents together. I listened to his lecture on the *Ryôri Monogatari.* I could not do my present work that involves Edo period culinary literature without his influence.

I also saw him at the members meeting, visited his home, listened to his talks, and took a look at his sketchbooks on many occasions. On those occasions, he enjoyed talking about his experience at Riken (Rikagaku Kenkyusho) before the war and his teacher Dr. SUZUKI Umetaro. His work on the history of Japanese Food History got started after he retired. His work before his retirement was on agricultural chemistry (*nogei-kagaku*). He worked mostly on Vitamin A at Dr. Umetaro SUZUKI's Lab. in Rikagaku Kenkyusho until he moved to Manshu Kokuritsu Tairiku Gakuin in 1937. He received his PhD in Agriculture.

I first met him at a funeral of the late TSUJI Michiyo sensei in June 1989 held at Enmeiji Temple in Urawa. The late TSUJIMURA Michiyo sensei was in the same lab as Kawakami sensei.

The photo on the next page shows the golden age of Riken group who worked under Dr. Suzuki. I made a copy of one of the 3 photos from late TSUJIMURA Michiyo Sensei's album. He didn't have any photos from our days in Manchuria, so I was very happy and drew the picture below. The man in the center in the dark suit is Kawakami sensei.

Letter (e-mail) from Naomichi Ishige, Japanese food historian. 2008. May 18. KAWAKAMI Kozo, who passed away in 1994, was the foremost philologist on Japanese food culture. Thus, his writing is reliable enough. Continued. Address: Japan.

10202. Kawakami, Kozo. 1995. Tsurezure Nihon shokumotsu-shi: Dai 3 kan [Leisurely history of Japanese foods. Vol. 3]. Tokyo: Tokyo Bijutsu. 195 + 3 p. Illust. Index. 21 cm. [Jap]

• ***Summary:*** The chapter titled natto (*itohiki nattô;* p. 21-23) states: Within the natto family, there are dry types, *shiokara natto* (salty natto) and *itohiki natto* (regular / sticky natto) which can make sticky threads when it is moist, stirred with a pair of chopsticks, and picked up (as with chopsticks). It is thought that shiokara natto appeared in the Heian period because its name appears in the book titled *Shinsarugakuki* in around 1062 as *tsuki shiokara natto* (pounded salty natto) and *shiokara natto* (salty Natto). But for itohiki natto, no clear (definite) document was found, so people thought it appeared in late Edo period. But I don't think in that way. There might be a blank period in the literature, but you cannot say no document was found. There are some documents that mention itohiki natto. I am going to mention them here.

The first is *Shojin Gyorui Monogatari* (1320-1380). It is a story (fictional) of a battle between shojin ryori (Buddhist vegetarian cookery) and gyocho ryori (fish and poultry cooking). It is told that the book's author is called *Nijo Kanpaku* (the word *kanpaku* means a high ranking government officer who assisted the Japanese Emperor politically, or is a nick name for a person who is very powerful) whose real name was Nijo Yoshimoto and was well known for his talent in literature.

This story was written around 1320-1380, near the end of the Kamakura Bakufu and during Nanboku-cho period. (The books called Teikun Orai {1350} and Isei Teikun Orai {1370} were written during the same period.) This story is one of the documents that mentions itohiki natto.

The next document is *Noritoki-kyo-ki* (the diary of Noritoki) written in Ouei 12 nen (in 1405). I was told that there was an entry of December 19; "Rokkaku gifted itohiki natto." So I thought that since I had read this whole book before, I decided to check my notes about this book and

© Copyright Soyinfo Center 2014

then I found out that I, too, noted itohiki natto (mentioned) in Ouei 12 nen, Dec. 19. Although I didn't write "Received Itohiki Daizu from Rokkaku (person's name)", it was maybe Itohiki Natto which was given by Mr. Rokkaku. I confirmed this by checking with Mr. Takeshi TOYOTA's *Chusei Shogyo-shi* (History of Middle Age Commerce) and also my old notes.

After that, there are no documents mentioning natto until the *Tamon-in Nikki* (Diary of Tamon-in) in an entry dated Eiroku 11, May 21 (May 21, 1568). In this diary he wrote "Tried drying natto but then it got wet from the humidity of rainy air. So mix salt into *netaru natto* ('slept natto') by roasting salt well and while the salt is very hot, mix it into natto and dry the salted natto again. It won't get moist from the rainy season. *Meizen-bo* (A Zen monk?) said so." *Netaru natto* ("slept natto") means fermented natto and is itohiki natto. But the document just before this was written in 1405, so there is a gap of over 100 years between those two documents; that is the shortcoming of the literature (that mentions itohiki natto).

Then the next document is from late in the early Edo period. "Kefukigusa (Kefukiso?)" in 1645. "Kefukigusa" is a textbook for Haikai (Haiku and Renka). In this book published by Iwanami Buko, Ooyu (?), saliva of a cow, 3 wheels, strings for the puppet. etc. and also natto were listed among the (supportive) words (to make Haiku and Renka). Therefore there must have been natto at that time. To summarize: I checked and confirmed the Noritoki-kyo-ki, and also if there are other documents that can be found on related subjects. The documents on itohiki natto can be traced from the present all the way back to the period of *Natto Taro Itoshige.* But I really think that probably it continuously goes up to the period of Natto Taro Itoshige. Note: This is his guess after checking the documents.

Bibliography:

(1) *Shojin Gyorui Monogatari:* published by the Konnyaku Association in the book called "Konnyaku Kyokai Shi" (History of Konnyaku Association"). This book contains the whole story of the *Shojin Gyorui Monogatari.*

(2) *Tamon-in Nikki:* "Netaru Natto" (was mentioned) in it. Eiroku 11 (1568) May 21

(3) *Kebukiso* (*Kebukigusa?*) 1645. *Tsukeku for itohiki* (adding word for the word Itohiki). Re-published as Iwanami Bunko Bon and it was mentioned in Iwanami Bunko Bon page 109. (Note: He forgot to mention this book's year of publication.)

(4) *Edo Ryori Chu.* 1673. "Nese Natto" Nihon Ryori Taikan, Dai 2 Kan 118-1. (Volume 2, 118-1)

This chapter was written in Heisei 5 nen (1993) Dec. 2.

An illustration (p. 23) includes some writing: On the top container: Kinzanji Misho (Miso?) is written. Note: The Chinese characters are *Mi* as in Miso and the character for *hishio.*

On the bottom container is written "natto."

This illustration came from *Wakan Sansai Zue.* Address: Japan.

10203. *Alternative Fuels Online Today* (*Environmental Information Networks, Inc*). 1995. Japan recycling food oils for biodiesel: International report. April 20.
• ***Summary:*** "The current issue of "Biodiesel Report" (March) notes that efforts are underway in Japan to produce and use biodiesel fuel from waste food oils."

10204. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*). 1995. Technical mission to the Far East. 8(1):3. April.
• ***Summary:*** Five members from the Canadian soybean industry visited Japan, Hong Kong, Malaysia, and Singapore from March 10-25, 1995. Members included Dr. Karen Lapsley (Chairperson of the Centre for Food & Animal Research, Ottawa, Ontario), Mr. Doug Jessop (Food Technologist from the Harrow Research Station, Harrow, Ontario), and Mr. Ron MacDougall, Mr. Michael Loh, and Mr. Kim Cooper (OSGMB, Chatham, Ontario).

10205. FreeLife International. 1995. FreeLife: Experience the incredible benefits of FreeLife's exclusive Soy Miracle products (Leaflet). Milford, Connecticut. 3 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** This 6-panel color glossy leaflet promotes Dr. Earl Mindell's Soy Miracle (registered trademark) products. On the front panel Dr. Mindell (R.Ph. and PhD) states: "The Soy Miracle Ultimate Body Program is an amazing new breakthrough that makes it simple and easy to have the body you've always wanted in 8 short weeks."

The inside three panels describe the Ultimate Body Program and color photos show four soy products used in the program: Soy Miracle Ultimate Shake (Chocolate Royale, Creamy Vanilla Almond), Soy Miracle Ultimate Body Toner, and Soy Miracle Ultimate Antioxidant. "Dr. Earl Mindell's interest in the nutritional benefits of the soybean began several years ago when he tried to answer the question, 'Why do the Japanese live longer and healthier lives than do Americans?' Dr. Mindell discovered that the key to the longevity of the Japanese is their lifelong consumption of soy foods which are high in isoflavones such as *genistein, daidzein,* and *saponins.* His mission became to bring the miraculous benefits of soy to the American public by developing the ultimate soy-based nutritional program for men, women, and children–a program that could be enjoyed every day!

"Utilizing thirty years of study and nine trips to Japan, Dr. Mindell developed the revolutionary Ultra Soy Complex (trademark) I, II, and III, his *exclusive* blends of the most powerful components of the soybean... The Ultra Soy Complex is Dr. Mindell's most closely guarded secret!"

One back panel describes "How you will benefit from

© Copyright Soyinfo Center 2014

the Soy Miracle Ultimate Body Program!" Fat loss/Body sculpting. Vibrant energy. Optimal health. Increased mental alertness. Total body development.

In the middle back panel, a color photo shows Dr. Mindell with his various books and products. "Dr. Earl Mindell is widely considered the world's leading authority on vitamins and nutrition. Earl Mindell's *Vitamin Bible* is the all-time bestselling book on nutrition with over six million copies in print. Translated into twenty-seven languages..."

Talk with Luke Taffuri, Vice-President of Operations, FreeLife International (354 Woodmont Rd. #5, Milford, Connecticut 06460. Phone: 1-800-882-7240). 1995. May 30. To buy these products, you must be sponsored by a distributor. Cost: $61.25 for each of 4 products incl. shipping. Antioxidant is $19.60. Shake is $18.55. Body toner is $18.55. How much genistein is in these products? If each day you take one serving of a shake and two antioxidant pills plus two body toner pills, you will get 20 mg/day of genistein, plus 16-17 mg/day of daidzein. These products were introduced on 1 Feb. 1995, at the same time as Dr. Mindell's book became available. The company, FreeLife, was started in 1995; it has the exclusive 15-year rights to all of Mindell's products. The president of the company, Mr. Ray Faltinsky, happened to be in Los Angeles, California, and he was talking to Dr. Mindell's agent. Ray suggested the idea of this company. He met with Earl Mindell and said that if Dr. Mindell would formulate the products, FreeLife would market them. Address: Milford, Connecticut 06460.

10206. Fujimori, Ikuo. 1995. Canadian soybeans for miso manufacturing in Japan. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*) 8(1):1. April.
• ***Summary:*** "I have been using Canadian soybeans constantly since 1975, which I first tested soybeans from Ontario. I chose the variety 'Harwood' because of its large size, white hilum, and high sugar content... These first soybeans were bagged shipments in containers, and now we receive the soybeans in bulk containers.

"In 1978 I visited soybean growing areas in Ontario. I found a new variety "Harcor" to be one of the better varieties for miso making... The majority of the Ontario soybeans purchased are SQWH (Special Quality White Hilum), namely mixed varieties of white hilum soybeans. At the same time we have bought some 'IP' (Identity Preserved) varieties in limited quantities."

"In the 1980s, I joined with four soybean missions to Canada, sponsored by the governments of Canada and Ontario, and also by the Ontario Soybean Growers' Marketing Board (OSGMB). I gained much information and knowledge about Ontario soybeans. I was impressed by the co-operative system between the OSGMB, the governments of Canada and Ontario, the soybean producers and the industry personnel involved. I was also impressed by the work of keeping quality standards by the Canadian Grain Commission, and by the study of developing new soybean varieties for food use at the Harrow Research Station. Using Canadian soybeans, I found the quality rather stable compared to Chinese soybeans. That is a big advantage for miso manufacturing."

In December 1994 the Japanese Miso Manufacturers Association visited Ontario. As of 1995 "the quality of Chinese soybeans seems unstable and their ability to supply is fluctuating. Therefore many miso makers are now thinking of using Canadian and American white hilum soybeans instead of Chinese soybeans."

A photo shows Mr. Fujimori, Fred Brandenburg of OSGMB, and Elmer Buchanan (Ontario Minister of Agriculture).

Note: This bi-annual newsletter was formerly titled *Ontario Export Soybeans.* Formerly 2 pages, green on yellow, it is now 4 pages, dark green and brown on tan. Address: President, Takeya Miso Co., Nagano, Japan.

10207. McCarthy, Paul. 1995. Dietary phytoestrogens: Scientists stalk potential soy chemopreventives. Research round-up. *Oncology Times* (*New York, NY*). April. p. 19-20.
• ***Summary:*** A good overview and summary, highlighting the work of leading researchers. According to biochemist Kenneth D.R. Setchell, PhD, investigations in this relatively new field began in his laboratory in the early 1980s. Dr. Setchell is Director of the Clinical Mass Spectrometry lab and Professor of Pediatrics at Children's Hospital Medical Center in Cincinnati, Ohio. He found equol, a phytoestrogen metabolite that is structurally similar to estradiol-17B, in human urine. He then determined that eating soy had the greatest effect on equol levels; 40 gm/day of soy protein made equol levels in the blood and urine jump 5,000 times above baseline.

This led him to measure phytoestrogen levels in Asians; he found their levels to be very high. Since weak estrogens have both estrogenic and anti-estrogenic effects, he hypothesized that soy might have properties similar to tamoxifen (a drug which is widely used in the successful treatment of hormone-dependent breast cancer in humans) and that a diet high in soy might explain the lower rates of breast and prostate cancers in Asia. Several key experiments conducted by Setchell, Dr. Stephen Barnes, and others, previously published in scientific journals, are then described.

The results have been provocative, but the mechanism behind the anticancer actions of soy remains unclear. Dr. Setchell is not convinced that it is as simple as his 1984 hypothesis, that the phytoestrogens in soy act like tamoxifen. Since then it has become clear that phytoestrogens also act as antioxidants. Moreover, genistein is a potent inhibitor of protein kinases, the key enzymes involved in the regulation of the phosphorylation of cells.

Herman Adlercreutz, M.D., PhD, of the University

© Copyright Soyinfo Center 2014

of Helsinki in Finland, has studied the anticancer role of soy in prostate cancer and is interested in the mechanism. Soy's estrogenic properties might suppress the growth of prostate tumors. This makes sense because prostate cancer is treated with estrogen. Dr. Adlercreutz has shown that genistein is one of the strongest known natural inhibitors of angiogenesis; it helps to cut off the blood supply that tumors need to grow. Alternatively, soy can suppress the production of gonadotropin secretions by the hypothalmus. This may cause a secondary decrease in testosterone production, which may be reflected in the lower levels found in Japanese men. And lifelong lower testosterone levels may postpone the development of prostate cancer.

Dr. Barnes has observed that prostate-specific antigen (PSA) values fall sharply in men with prostate cancer after that start a soy regimen. So he has started a systematic investigation of PSA values and other bio-markers of prostate cancer to determine if they can be favorably altered by soy.

Some researchers believe that soy could substitute for estrogen-replacement therapy (ERT). Barry R. Goldin of Tufts University School of Medicine notes that a Japanese woman on a traditional high soy diet (about 55 gm/day) is getting the daily equivalent of a low dose of Premarin. Already Dr. Adlercreutz and Mark Whalqvist, MD, Chairman of the Department of Medicine at Monash University in Melbourne, Australia, offer a soy alternative to women who are reluctant to take ERT.

Dr. Margo N. Woods at Tufts is now conducting a study on soy and breast cancer in a group of 200 women. She will be studying levels of serum hormones, luteinizing hormones (LH), and follicle-stimulating hormones (FSH), and trying to correlate them with diary recorded hot flashes and night sweats.

No one knows if consuming large amounts of soy could prove harmful to humans; soy researchers typically respond that the Chinese and Japanese have no apparent problems. But fertility specialist Claude L. Hughes, Jr., PhD, MD, raises important questions. Associate Professor of Comparative Medicine and Obstetrics & Gynecology at Bowman-Gray School of Medicine of Wake Forest University (Winston-Salem, North Carolina), Hughes urges researchers to look at both risks and benefits, especially for humans and other animals in their early developmental stages. He "said he wouldn't be comfortable with his pregnant wife eating large amounts of soy. Nor would he want to expose a neonate [an infant less than 4 weeks old] to soy-based formula." Dr. Hughes sees puberty as another opportunity for research. He is feeding soy to peripubertal male and female monkeys to see if it "perturbs the events of puberty from a reproductive/endocrine point of view."

"After puberty, except when a woman is trying to conceive, he said he expects that soy will prove to be a good addition to Western diets and possibly chemopreventive for breast and prostate cancers."

Photos show Dr. Kenneth D.R. Setchell, Dr. Margo N. Woods, and Dr. Claude L. Hughes.

10208. *Ontario Soybean Growers' Marketing Board Newsletter.* 1995. Producing soybeans for the soyfood market. April. p. 3.

• ***Summary:*** In early March, 1995, Iowa State University conducted a seminar titled "Producing Soybeans for the Soyfoods Market." Topics covered included an introduction to soyfoods (complete with tasting at Iowa State's Center for Crops Utilization Research facility), a review of Japan's soyfoods market, trade policy changes and challenges, quality assessment, and the effects of varietal characteristics on soyfood quality.

Speaking on Japan's soyfoods market, Hideki Furuhata of Mitsui & Co. reported that consumption of tofu and natto is increasing slowly in Japan, while miso and soy sauce are decreasing. China has been supplying Japan with 250,000 to 300,000 tonnes/year of soybeans, mainly for making miso and natto. Japan imports between 120,000 and 130,000 tonnes/year of identity preserved soybeans, up from 100,000 tonnes 5 years ago. For example, 50,000 tonnes of Vintons were imported in 1994.

Bradley Hildebrand of Cargill in Minneapolis, Minnesota, reported that the U.S. exports about 130 million bushels/year of soybeans to Japan. About 30 million bushels (23% of the total) are used to make soyfoods. Most of the soybeans used for soyfoods in Japan are "IOM" beans because they are grown in Indiana, Ohio, and Michigan. IOM soybeans are not any specific variety or hilum color, but they are generally higher in protein and better in quality than other U.S. soybeans. They trade at a premium of 10-20 cents per bushel over other U.S. soybeans in Japan. IOM soybeans are traded on the Japanese grain exchange. For shipment to Japan, IOM soybeans are railed to Baltimore (Maryland) or Norfolk (Virginia) for shipment via panamax size vessels. They may also be railed to Mobile (Alabama) or New Orleans (Louisiana) for vessel shipment.

Hildebrand reported that IOM soybeans will keep the largest market share due to their low price, however there is a market for variety soybeans. He said that Vinton is the most popular variety for making tofu in Japan, but it does not yield high enough in the field to make it price competitive. "He suggested that breeders need to develop a high-yielding soybean with Vinton's tofu-making characteristics. However he said the market for variety soybeans is not huge and is easily flooded." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

10209. Perlmutter, Johanna F. 1995. Book review: *Encounters with Aging: Mythologies of Menopause in Japan and North America,* by Margaret Lock (1993). *J. of the American Medical Association* 273(17):1394. May 3. [1 ref]

© Copyright Soyinfo Center 2014

• ***Summary:*** In this pioneering and now famous study, the author interviewed more than 1,000 Japanese women on the subject of menopause (in Japanese, in Japan) over a period of 20 years. The interviews were designed to establish what symptoms these women had experienced after menopause, and how they thought about it. She explains that Japanese women find menopause less traumatic than American women. She compared her findings with the results of a study of 2,000 Canadian women. The Japanese diet, rich in soyfoods, was identified as a major reason because of the natural phytoestrogens found in soyfoods.

Webster's Dictionary defines menopause, a term first used in 1872, as "the period of natural cessation of menstruation occurring usually between the ages of 45 and 50." The author acknowledges several problems with terminology in this study. First, there is no term for menopause in Japanese; therefore a term that is thought to be similar was used. Second, in English the terms "menopause" and "mid-life crisis" are not clearly separated. From the responses quoted in this book, the term used may be closer in meaning to "mid-life crisis" than to "menopause."

Acknowledged cultural problems also exist: Japanese women are polite and want to please. They may give the answer they think the interviewer wants to hear. Because they tend to be shy, they may be embarrassed by the questions being asked and thus may not be completely truthful in their responses. Address: M.D., MPH, Beth Israel Hospital, Boston, Massachusetts.

10210. Shimizu, Teruo. 1995. Recent developments at Miyako Oriental Foods (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Miyako's miso business is growing rapidly. They can no longer keep up with demand. This summer Miyako plans to triple its production volume. They hope to buy another plant nearby and make miso in both their current plant and at the new location. Note: As of Feb. 1994 Miyako reported that it was making 2.2 million lb/year of miso.

In 1982 Miyako started importing freeze dried miso and spray dried miso from its parent company in Japan. But the high cost of Japanese imports resulting from the steady decrease in the value of the U.S. dollar has led Miyako to develop its own freeze-dried product in California. They are working with Mercer Processing Inc. in Palo Alto, which does the freeze drying. Later, they plan to use this freeze-dried miso to formulate other products, such as instant miso soups.

In addition, they plan to develop a spray-dried miso (which is lower quality and less expensive, and contains maltodextrins).

Miyako has started getting my enquiries for products from companies in Canada and Mexico because of NAFTA. Address: Vice President, Miyako Oriental Foods Inc., 4287 Puente Ave., Baldwin Park, California 91706. Phone: 818-962-9633.

10211. Allen, Andrea Horwich. 1995. Can isoflavones give soy mainstream acceptance? *Food Product Design.* May. p. 20-21.
• ***Summary:*** Researchers now believe that a family of phytochemicals present in soy, called isoflavones, may actually reduce the risk of atherosclerosis by preventing the formation of plaque on artery walls. One isoflavone, genistein, which is present only in soy, also fights cancer by inhibiting the growth of cancer cells. Genistein appears to mimic the effects of estrogen so that the body produces less of that hormone, thus reducing the risk of estrogen-dependent cancers, especially breast cancer. One study of Japanese men suggests that those who eat a diet high in soy protein have a lower incidence of prostate cancer.

Representatives from Morinaga Nutritional Foods, Westbrae, and Pillsbury Green Giant are trying to take advantage of the new discoveries by educating their customers. The FDA seems unlikely to be ready to approve a soy-related health claim such as "Includes your daily intake of soy." ADM, who makes the Green Giant frozen burgers, is said to retain Mark Messina, PhD, as a consultant. A large photo shows a carton of WestSoy Low Fat Soy Drink (Vanilla). Address: Assoc. Editor.

10212. The memorial service for Dr. Kwee-seong Lo, B.A., LL.D., O.B.E., C.B.E., J.P. 1995. Hong Kong. 6 p. 22 cm.
• ***Summary:*** This service was held at 4:00 p.m. on 11 May 1995 at St. John's Cathedral, Garden Road, Hong Kong. A nice portrait photo (p. 1) shows K.S. Lo, who lived 2 Feb. 1910 to 5 May 1995.

Obituary: "Dr. Kwee-seong Lo was born of Hakka descent in Meixian county in Guangdong province, China, on February 2, 1910. His father, Chin-hing Lo, took the family to live in Malaya when Kwee-seong was still young. Following his graduation from secondary school in 1929, Kwee-seong moved to Hong Kong to study Economics at the University of Hong Kong, from where he graduated [with a BA degree] in 1934.

"As war engulfed East Asia in the 1930's, causing much suffering among the Chinese population, Dr. Lo turned his attention to improving standards of health through the provision of nutritious of food at affordable prices. On a business trip to Shanghai in 1936, he attended a seminar entitled "Soya Bean–the Cow of China" non the nutritional value of the soya bean, which had been a major source of protein for the Chinese for more than 3,000 years. He knew this was the solution he had been looking for and, pooling all resources, he founded Hong Kong Soya Bean Products Company in 1940, the forerunner of today's Vitasoy International Holdings, Ltd."

Discusses the history of the company, and joint ventures with China starting in 1979 with Kwang Ming Dairy Farm in

© Copyright Soyinfo Center 2014

Shenzhen. "This signified the first step in fulfilling Dr. Lo's ideal of "Nation Saving by Industry."

Though busy with his business, K.S. Lo made time for an active life of public service. In 1961 he was honoured as a Justice of the Peace (J.P.). In 1971 he was awarded the Officer Order of the British Empire (OBE), and in 1979 the Commander of the British Empire (CBE). In 1982 he was awarded an honorary doctorate of Law by the University of Hong Kong–thus becoming Dr. Lo. In 1994 he retired from the position of Chairman of Vitasoy International.

His many public, business, and personal contributions are then discussed. In 1986 his book titled *The Stonewares of Yixing* was published.

Dr. Lo has his early education in a Methodist School in Malaya where he had his first contact of Christianity. He was baptized in a church located at the Mount of Double Happiness, Lin County, Guangdong, during the period of Japanese occupation of Hong Kong. At that time, he had a very deep religious experience. In the last part of his journey on earth, he experienced the revival of his faith and consequently a renewal of his relationships with God and his family members. He therefore faced his destiny with peace and joy.

"Dr. K.S. Lo passed away peacefully in Queen Mary Hospital on 5th of May, 1995. Although he has now left us to sleep in the arms of God, Dr. Lo will not be forgotten. His achievements and his qualities live on and will be remembered by those whose lives he touched." Address: Hong Kong.

10214. Lazzaro, Don. 1995. History and current status of soymilk in Australia (Interview). *SoyaScan Notes.* June 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ceres Natural Foods is their holding company and Pureharvest is their trading name. They made this name change in 1982 since they found the word Ceres was difficult for many people to pronounce. The first soymilk they imported to Australia was made by Saniku in Japan and imported from Mitoku.

Don is interested in macrobiotics. In early 1979 he took over the running of a small macrobiotic and natural foods retail store in Melbourne named Ceres Wholefoods. The only way he could make it viable was to try to buy at better prices, so in April 1979 he started a wholesale and import company, which he named Ceres Natural Foods, also in Melbourne. There was a company named Real Foods (run by Michael Pels) in New South Wales, Australia, that was importing, through Mitoku in Japan, tamari, soy sauce, miso, tofu, etc. Real Foods was the first company in Australia to import foods from Mitoku in Japan.

Don knew Michael from when they both used to live in Sydney in about 1978. Michael purchased some rice cake machines (the same kind used by Chico-san) through Mitoku from Airin Co. These machines were very poorly engineered and constructed. Michael has already sold 168 of these machines to Quaker.

When Don took over the Ceres Wholefoods retail store in 1979, he approached Michael and asked to be the distributor in Victoria of the food products Michael was importing from Japan through Mitoku. Michael said okay, and Don began distributing. Don asked Michael to import some soymilk from Mitoku, which he did in mid-1980. The stick-on label over the Japanese label said Ceres Natural, in Choc-Malt and Natural flavors. But the first soymilk in Australia was imported from Japan in about 1977-78, through Muso by 3-4 health food stores named Russel's; it was made by Marusan in a stand-up plastic pouch. Not much of it was sold. In about 1980-81, Michael decided to get out of the whole import business in order to focus on making rice cakes. So Mitoku Mr. Kazama and Chris Dawson asked Don to become their importer in Australia. Don also ran a 3rd company, a center that provided information and advice on macrobiotics.

Jim Wilson, who was running Spiral Foods in Australia, had been importing from Mitoku. He convinced Mitoku not to sell to Don, his competitor; Mitoku agreed. Mitoku then approached Saniku, and in about 1981 Don began importing soy milk made by Saniku through Mitoku. Don sold it under the same label he had used before. The Muso started to import some soymilk packaged in Tetra Brik cartons through Spiral Foods. Don got the same product from Kibun, and on it began to use the name Pureharvest.

In short: Four companies pioneered in importing soymilk to Australia: Real Foods, Russel's, Spiral Foods, and Ceres Natural Foods. There was also a little relatively beany Chinese soymilk sold in the ethnic Chinese market. Ceres, as a result of its Tetra Brik package, managed to get fairly good distribution into the grocery / supermarket trade, starting in late 1983 or early 1984. By this time Ceres was by far the biggest seller of soymilk in Australia. They were importing five 20-foot containers per month of the Kibun soymilk product. Ceres was actively promoting this soymilk, doing trade shows, etc.

In 1986 Ceres was approached by a small soymilk maker named Australian Natural Foods (ANF) in Sydney; basically they had old machinery and were in trouble. They approached Don asking if they could make a soymilk for him. They worked out an exclusive deal and formula, and

© Copyright Soyinfo Center 2014

in Nov. 1986 Ceres launched this as Aussie Soy in its first 1 liter package, in Tetra Brik. Sales shot up. It was trucked in a dairy tanker to Bon Lait in Victoria (almost 1,000 miles away) where it was packaged in a dairy that had a Tetra Brick packaging machine. In about 1990-91 ANF first got its own Tetra Brik packaging machine. That same year ANF launched its own soymilk product, named So Natural, to compete with Sanitarium's So Good. It is made from whole soybeans, and is very similar to the Aussie Soy product they have long made for Don.

As early as 1980 Sanitarium Foods was importing Soyalac in tins / cans. They sold it mostly to Seventh-day Adventists through their own retail stores. Then in April 1987 Sanitarium Foods launched their own So Good soymilk (made from a blend of soy protein isolates, made and packaged by dairy companies) in Australia. They went into it in a big way, with a national campaign. It was the best thing that ever happened to Don and Ceres, because this campaign grew the market dramatically. By April 1987 Ceres was selling 10,000 cartons / month of their Aussie Soy, not including their Japan imports. One year later the figure had skyrocketed to 60,000 cartons / month, increasing to 152,000 on year after that.

Nevertheless, according to the *Australian Grocery Industry Marketing Guide* (1995), Sanitarium has 71% of the dairylike (unflavored) Australian soymilk market, followed by Vitasoy at 7% (they launched in about 1991, and have done a very aggressive marketing campaign), then So Natural (made by ANF) at 5%, Sun Gold at 5%, and Aussie Soy at 4-5%. Of the total Australian soymilk market, flavored soymilks account for only about 5% of the total; the remaining 95% is dairylike; its a milk alternatives market. Each of the three major supermarket chains in Australia (Woolworth's Safeway, Franklin's, and Cole's) has its own soymilk brand. Franklin's has an isolate soymilk made by ANF, starting about a year ago. Sun Gold, made by Associated Dairies of New South Wales, is almost identical to So Good, made by the dairy company that used to mix Sanitarium's product. In about 1990 Sanitarium set up their own soymilk mixing and packaging factory.

Today the soymilk retail market in Australia is $45 million, with a population of only 17 million people. This is huge on a per capita basis. This market has three main segments: (1) Middle class, educated, with some allergies–70%. (2) Age 50 and older, concerned with cholesterol–20%. (3) Natural foods and vegetarian–10%.

In late 1993 and early 1994 Don approached Berrivale Orchard Ltd. (a cooperative of fruit growers, headquarters in Berri, South Australia) to see if they would be interested in making a soymilk product for Ceres / Pureharvest–because Don's relationship with ANF had become intolerable.

In 1979, to get tofu to sell at his retail store, Don used to go to Chinatown in Melbourne twice a week. He bought it from a little Chinese company (whose name he does not remember) located opposite Victoria Market. He would take a couple of buckets and carry it home in bulk, under water. Address: Pureharvest, 15 Ardena Ct., East Bentleigh, Victoria 3166 Melbourne, Australia.

10215. Reuters. 1995. Rotting beans make sweeter feet. *Toronto Star* (*Ontario, Canada*). June 20. p. A16.
• ***Summary:*** A Japanese biotechnology firm named Capital Corp. (president Tsutomu Harada) has launched a product (Niowan 201) using natto bacteria to remedy acute foot odor. Natto, sticky fermented soybeans, are widely eaten with rice for breakfast in the northern half of Japan.

The company, based in Osaka, "combines dormant natto bacteria with sawdust and rice bran into thin packs worn under the feet. The other ingredients preserve the bacteria until they are activated by the heat and humidity of the feet, neutralizing the bad smell."

10216. Roach, William. 1995. Update on Kyoto Food Corp. in Terre Haute, Indiana (Interview). *SoyaScan Notes.* June 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Kyoto Food Corp. has still not been sold and prospects for a sale seem to be dimming. One potential buyer was the owner of Obok Foods in Los Angeles. Last week the local health department shut him down for health code violations. His equipment is so old that it is basically useless. He is now trying to sell an island he owns in New York. If and when he succeeds, he may buy Kyoto Food's equipment. In the meantime, his tofu is being made and private labeled by House Foods & Yamauchi Inc. in Los Angeles.

Some overseas Japanese and Chinese buyers seem to be interested in buying the company, but William thinks they do not have much money. U.S. Immigration law states that any foreigner who invests $500,000 or more in a U.S. venture gets a "green card" which guarantees permanent residence.

Update: Talk with JIm Skiff of LongLife Foods. 1996. March 26. Bill Roach has sold all his tofu-making equipment at a low price to some tofu company on the East Coast of the USA. Jim does not know what has become of his factory in Terre Haute. Address: Terre Haute, Indiana. Phone: 812-533-1400.

10217. Wallis, Claudia. 1995. The estrogen dilemma. *Time.* June 26.
• ***Summary:*** "Americas no. 1 drug is an elixir of youth, but women must decide if it's worth the risk of cancer."

"San Francisco nutritionist Linda Ojeda, author of *Menopause Without Medicine,* advocates soybeans, which contain a natural progesterone as well as estrogen. The low rate of menopausal complaints among Japanese women may be due in part to their consumption of tofu, she suggests. To relieve hot flashes, Ojeda recommends 6 oz. of tofu four times a week,..."

10218. Evans, Barry. 1995. The American Miso story. In: Great Eastern Sun. 1995. Pricelist. Effective June 5, 1995. 37 p. See p. 2-3.

• ***Summary:*** "This spring, as we complete our sixteenth year of operations at the American Miso Company, we are moved to reflect back on the path we have traveled to reach this point. In the spring of 1979, a group of people approached Michio and Aveline Kushi with the idea of forming a new company to produce miso in the United States using traditional methods and only the finest organic ingredients. With the Kushi's enthusiastic support, the Erewhon Miso Company was created to supply Erewhon with miso to distribute throughout the United States. From this distant perspective, it is difficult to remember how powerful a force Erewhon was in the natural foods industry at that time. Dominating the market in the Northeast, Erewhon was the largest distributor of natural food in the United States with strong connections to distributors for its name brands in other regions.

"With Erewhon as our partner, master distributor, and a major investor, we moved ahead confidently with our plans to build a miso factory in the Piedmont Region of North Carolina. The Kushis entreated Akiyoshi Kazama, founder of Mitoku Trading Company, a major supplier then as now of high-quality Japanese natural food to the U.S. market, to put aside any narrow concerns of self interest and find us someone to train our would-be miso makers in the rapidly fading art of traditional miso manufacture. In a selfless spirit of international cooperation, Mr. Kazama searched for someone who still made miso the old-fashioned way, yet was open-minded enough to invite strangers into his home (literally).

"After many false starts amid a lengthy search, Mr. Kazama finally located, in the mountains of Yaita Prefecture north of Tokyo, Takamichi Onozaki, a country miso maker of the old school. Mr. Onozaki, generously opening his home and his heart to *gaijin* [foreign] seekers after knowledge from half a world away, agreed to house and train an American couple, John and Jan Belleme, for an entire miso-making season. From November, 1979, until June, 1980, Mr. Onozaki taught his students all the miso lore he had accumulated from a lifetime of miso making in his small, rural miso factory staffed entirely by local farmwives. This was intermediate technology with a vengeance!

"Upon the Bellemes' return to America, we rapidly constructed our factory building near Rutherfordton, North Carolina, and Mitoku arranged to ship us our new equipment from Japan. By late 1980 we had begun to make our first experimental batches of rice miso. As the miso slowly aged in its huge cypress vats, great events developed hidden from our eyes which were to have a profound effect on the young Erewhon Miso Company. In July, 1981, Michio and Aveline Kushi journeyed to Rutherfordton for the official christening of the miso plant. The beautiful and joyous ceremony left not a dry eye in the gathering; later we discussed Erewhon's ambitious plans to package and market the rapidly ripening miso.

"A glorious road into the future seemed to lay open before us, but Erewhon's financial condition was rapidly deteriorating as too rapid expansion took its toll on a company stretched to the limit by its success. One month later we received the stunning news that Erewhon had filed for bankruptcy. In one of the saddest stories we have ever had the misfortune to be a part of, the Kushis lost control of the company they had nurtured from its birth, and we lost our only customer, a major investor, and our major source of inspiration and guidance.

"At first we were devastated by the blow fate had dealt us, but we had nowhere to go but forward as we had already made a huge financial and emotional investment in our project. Severing our ties to the past, we renamed our enterprise the American Miso Company and began a desperate search for marketers for our product. When we were unable to find anyone to help us, we resolved to set up our own marketing company and do the job ourselves. Thus, out of the direct necessity, Great Eastern Sun was born in December, 1981. Mitoku, itself almost destroyed in the storm of the Erewhon disaster and eager to rebuild, agreed to export Japanese natural food to Great Eastern Sun. GES processed its first order in April, 1982, and sold the first American Miso in September of that same year.

"In the fall of 1981, Mr. Onozaki came to Rutherfordton on an inspection trip to see exactly how well his students had learned their lessons. He stayed and worked in the factory alongside our own crew, patiently reviewing our practices and refining our procedures until he pronounced himself fully satisfied. He had never left Japan before in his life. In the fall [sic, spring] of 1982, Mr. Onozaki dispatched his daughter and son-in-law to America to work for several months in the miso factory just to make absolutely certain that everything remained kosher. In late 1985, John and Jan Belleme turned over the operation of the factory they had built to their successor, Don DeBona, who remains as miso factory manager to this day. Three books and many projects later, the circle comes round again as the Bellemes are now Mitoku's U.S. representatives.

"Although our miso was sold only in bulk for its first two seasons, our familiar tubs with the Miso Master logo soon arrived on the scene and sales slowly but steadily grew. Starting with eight barrels, we added six in 1986, seven in 1989, five in 1991, and fifteen more in 1993 for a total of 41 of these leviathans, each holding over four tons of two-year miso. In order to house our expanding activities, we built a second factory building as big as the first in 1992, and we are already experiencing a shortage of space once again as demand continues to grow. Two years ago we began to export our miso to Europe where it is distributed by Lima throughout the continent. The American Miso Company

10220. Natural lifestyle magazine and mail-order market. 1995. Asheville, North Carolina: Natural Lifestyle Supplies. 55 p. Catalog. 28 cm.
• ***Summary:*** A macrobiotic mail-order catalog with several nice articles, it sells many types of soyfoods and related products, including the full line of Kushi Cuisine, organic soybeans (yellow and black), azuki beans, amazake, Rice Dream soymilk (p. 27), Edensoy soymilk, Westbrae Malteds, Nasoya Vegi-Dressings, Nayonaise, Farmhouse Tekka, organic soy sauce, fresh tofu, snow-dried tofu, kuzu, and miso. Publisher: Tom Athos. Editor and graphic design: Debbie Athos.

On page 5 is a nice ½-page article, "Dr. Spock goes macrobiotic." It begins: "I've been practicing transcendental meditation twice daily since my late seventies. I swim every day, and I try to take short walks after meals. I go to bed at 9 p.m. and get up at 5 or 6 a.m. I do 50 minutes of Yoga stretches each morning. Mary gives me daily massage for my weakened legs. I've been eating a macrobiotic diet for two years. It includes practically no fat, no meat, no sugar and no dairy products. I lost fifty pounds in the first few months and I was eating as much food as I wanted.

"Turning point: Until a few years ago, my health had gradually deteriorated, beginning with a heart arrhythmia at age 65. In 1987 my heart stopped altogether, long enough to drop me face first on the marble floor of the Copley Plaza Hotel in Boston. So they sewed a pacemaker under my skin, with an electric wire into my heart to keep it beating adequately. Three years ago I had a brief stroke-like episode that reduced my talk to gibberish for 15 minutes, and I was put on a blood thinner to prevent a more serious stroke. My legs were gradually getting weaker and less coordinated; the neurologist said it would be progressive. For a year I had repeated attacks of severe bronchitis that required antibiotics; that scared my internist. In 1991, I was introduced to a Belgian-trained physician who had become a macrobiotic counselor. He put Mary and me on a macrobiotic diet." His health improved steadily. "I feel much more alive and alert. After dropping 50 pounds, I lost all my subcutaneous fat, so I get cold easily,... My cholesterol level has gone from over 200 to 123; Mary's was 285 and is now 124. We found that our annual pharmacy bill went from $5,000 to $780."

"Once you decide to take your healing into your own hands, any sense of powerlessness and hopelessness ebbs away." Address: 16 Lookout Drive, Asheville, North Carolina 28804-3330. Phone: 1-800-752-2775.

10221. Chajuss, Daniel. 1995. Concern about phytosterols in soy molasses and other soy products (Interview). *SoyaScan Notes.* July 2. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** The rations for all milk cows in Israel are calculated by computers. Researchers in Israel have found that cows which give lots of milk have fertility problems, and find it more difficult to get pregnant. It was found that this was because they received more soybean meal in their rations. It is now recommended that additional protein (above a certain level) come from non-soy sources.

In 1963 Daniels' company, Hayes Ashdod Ltd., introduced a product named "soy molasses," which is a concentrated extract of soy solubles obtained during the production of soy protein concentrate using aqueous alcohol extraction. This product was used in animal feeds and as a source of oligosugars [oligosaccharides] for elderly people to maintain proper digestive-tract flora and regularity (mainly in Japan). It was later found that soy molasses has a high content of phytoestrogens. If it is fed to animals, the dose must be measured carefully, lest it have harmful effects. In cattle, it increases infertility, making it more difficult for the cattle to get pregnant. In rats it delays the positioning of the fertilized egg in the ovary. It is thought (but not yet 100% clear) that the harm is caused by the phytoestrogens at certain levels. Researchers are now studying the problem. Address: Managing Director, Hayes General Technology Company Ltd., Misgav Dov 19, Mobile Post Emek Sorek, 76867 Israel. Phone: (972) 8 592925.

10222. Smith, Patricia. 1995. Tyler Smith and Erewhon, Los Angeles (Interview). *SoyaScan Notes.* July 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tyler Smith negotiated the sale of Erewhon, Los Angeles, to John Deming and John Fountain. Tyler recently told Patricia that when John Deming and John Fountain took

© Copyright Soyinfo Center 2014

over Erewhon, Los Angeles, it was their intent to use it to test the ideas of Andrew Galambos in practice. John Fountain tried to apply the ideas of Galambos among employees in the daily operations of the company. Patricia could feel the changes immediately–even though she didn't find out until much later that John Deming owned the company. "We were all committed to Erewhon as a macrobiotic food company." New words and language started to be used. Patricia eventually took Galambos' basic course.

Tyler first met Michio Kushi through a series of lectures at Stanford University in May 1968; the lectures were organized by William Shurtleff as part of an Esalen at Stanford program, of which he was head. Tyler was a first-year student at Stanford Law School at the time. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

10223. Skiff, James. 1995. Experiences with Minnesota Edamame (Interview). *SoyaScan Notes.* July 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Two years ago, Jim and his partner, Shichi, at LongLife Foods were in contact with two of the original owners of Minnesota Edamame, which has recently changed its name to SunRich. At one point they had asked Jim and his partner to take over the company. Jim talk with Bob Luedtke at a seminar last week. The man who started the company was Jim Lambert (now at Colorado State Univ. working on an ag program). Skiff first talked with Lambert 2-3 months ago, but he was out of the company before Skiff first met the owners. Minnesota was not using any Japanese soybean varieties–only U.S. field varieties that they grew because they were high in protein. They tried to sell them to the Japanese; it didn't work so the company went broke. Bob Luedtke has been unable to find any Japanese varieties that yield well in Minnesota. The company's new majority partner, Alan Routh, has tried to for the last two years to buy soybean varieties from Skiff and he has refused. Routh has a seed company in southern Minnesota, is a soybean farmer from New Richland, Minnesota, and part-owner of SunRich. Some 18-24 months ago Jim had discussions with Dr. Lyle Joyce, a well-known heart surgeon who orchestrated the exit of James Lambert, who was then owner of the company, and who sold 75% of his interest to SunRich.

Jim has heard both sides of the story about why Lambert was ousted. Lambert says the company directors refused to give him the time needed to develop a program to grow the Japanese soybean varieties that he wanted to grow. The other side says that Lambert was spending too much money and not getting commensurate results. Jim Skiff has known and worked with Minnesota Edamame over numerous years and he is "not at all impressed with the company." Jim's partner, Shichi, told Jim that the company didn't know what they were doing and were using U.S. field-grade soybeans. The first time Jim and Shichi met the owners (Dr. Lyle Joyce and Bob Luedtke), after Lambert's exit, the owners didn't even know how to cook the edamamé; they had to ask Shichi to show them how. Dr. Joyce invited Skiff and his partner to take over the edamame operation if they would move their LongLife Foods tofu plant into the area as well. Jim told Joyce that the quality of the water in southern Minnesota was unacceptable; it didn't even meet drinking water standards. At that time Dave Hansen was in charge of growing the edamame and Luedtke was in charge of the processing plant.

Jim and his partner are now having large-seeded vegetable-type soybeans of Japanese pedigree grown by various farmers near their tofu plant. Address: LongLife Foods, Ltd., Box 180, Perham, Minnesota 56573. Phone: 218-346-6667.

10224. Burton, Thomas M.; Kilman, Scott; Gibson, Richard. 1995. Corn plot. Investigators suspect a global conspiracy in Archer-Daniels case: They see signs of collusion with firms in Europe, Japan on grain products. Let's go to the videotape. *Wall Street Journal.* July 28. p. A1, A5. Friday (West).
• ***Summary:*** It looks like an international conspiracy, complete with videotapes and hundreds of audio tapes of key meetings–thanks in large part to the help of whistle-blower and top ADM executive Mark E. Whitacre, age 38, who headed the fast-growing BioProducts division and reported to Michael Andreas. Since his undercover role was disclosed, Mr. Whitacre has been barred from ADM facilities, but he remains on the company payroll.

Federal investigators are working with a Chicago federal grand jury. The investigation is focusing on: ADM executives–Vice President Michael D. Andreas and Group Vice President Terrance S. Wilson (head of ADM's corn processing division). Andreas, age 46, who runs many of the daily operations of the $12.5 billion-a-year grain processing giant, has long been considered the heir apparent to his father, 77-year-old Dwayne Andreas, chairman and CEO. Although Michael Andreas has a reputation as a super-salesman and has long been groomed for the top post, he has stayed out of the public spotlight.

One key subject of the investigation is lysine, a fermented by-product of corn processing. It is made by feeding corn-derived dextrose to microorganisms. A videotape appears to show collaboration among competitors to limit the supply of lysine in order to keep prices high. Lysine, an amino acid, is added to the feed of hogs and chickens to speed growth of their lean muscle. Other possible evidence of a conspiracy comes from internal company documents obtained by the government during the past 3 years. They show lysine target sales and actual monthly sales of each manufacturer including Ajinomoto Inc. and Kyowa Hakko's BioKyowa unit (both of Japan), and ADM itself. Though not well known, lysine is a big profit-maker and a key ingredient in the feed industry. About 500 lb/year are made and keeping the price high is worth millions of

© Copyright Soyinfo Center 2014

dollars to manufacturers. The Japanese were the first to make lysine commercially in the 1960s. ADM, which calls itself "supermarket to the world" has a reputation for entering a new market in a big way. It did that in the case of lysine, constructing what is believed to be the biggest fermentation plant in the world at its sprawling complex at Decatur, Illinois. ADM entered the lysine market in 1991 and today can produce about 250 million lb/year of lysine, about half the world's total output.

ADM's market entry triggered a slide in lysine prices for well over $1 a pound to nearly 60 cents. Then in 1992, for reasons that aren't clear, prices rebounded sharply to about $1 a pound–despite the much larger supply of product. This area is of special interest to investigators. Some lysine users believe their ability to switch to soybean meal, a natural source of lysine, keeps synthetic lysine prices in check. However poultry growers are more dependent on synthetic lysine because birds each much less feed, making soybean meal a less effective source of lysine.

ADM is believed to have spent roughly $1,500 million establishing its BioProducts division, which Mr. Whitacre ran during the 3 years he surreptitiously helped the U.S. government gather information about possible ADM price collusion. Products made by the BioProducts division, in addition to lysine and citric acid, include lactic acid, monosodium glutamate, and xanthan gum. They are believed to generate some of the company's highest profit margins and about 15% of ADM earnings.

Another key subject is citric acid, also derived from corn processing, which is used in the detergent, food, and beverage industries. ADM entered the citric acid market in 1991 when it bought a thriving manufacturing plant from Pfizer Inc.–and today it is the leading U.S. maker of citric acid. ADM is said to have documents showing citric acid sales targets and actual sales for ADM, the Hoffman-LaRoche Inc. U.S. unit of Switzerland's Roche Holdings Ltd. and Germany's Bayer AG (which makes citric acid at its plant in Elkhart, Indiana).

Besides studying lysine and citric acid, federal investigators are also looking at high-fructose corn syrup and possible violations of antitrust laws in connection with its sale. ADM is one of the biggest manufacturers in the $3 billion-a-year worldwide market. 75% of the product is used to sweeten soft drinks.

The federal investigation is now 3 years old. Investigators are still examining documents they seized from ADM headquarters in late June. Other companies are still handing over to the government documents subpoenaed by the grand jury.

10225. Fugh-Berman, Adriane. 1995. Managing menopause: Is hormone replacement therapy the road to take? *Vegetarian Times.* July. p. 72-75.

• ***Summary:*** With so many natural alternatives available, it makes sense to try the drug-free path first. Menopause begins, on average, at about age 50. The hormone estrogen helps reduce hot flashes, night sweats, and vaginal dryness. Hormones may also offer protection against osteoporosis and heart disease. But estrogen can also increase breast cancer rates, and lead to many other unpleasant side effects such as weight gain, bloating, depression, nausea, breast tenderness, breakthrough bleeding, and growth of uterine fibroids.

Some plant foods such as soyfoods, lima beans, fruits, berries and grains contain estrogens known as phytoestrogens that may be helpful for menopausal symptoms. Populations that consume significant amounts of soyfoods, such as Japanese women, don't complain of hot flashes; one theory holds that the high soy intake in Japan may serve as natural hormone replacement therapy. Another important factor may be that in Asia, the elderly are held in high esteem, and aging does not have the negative associations that it does in the USA. Address: M.D., On the board of the National Women's Health Network.

10226. Morrison, E.M. 1995. East Meets West in Perham. *Ag Innovation News* (*AURI–Agricultural Utilization Research Inst., Crookston, Minnesota*) 4(3):1, 4-5. July.

• ***Summary:*** James Skiff and Shichiro Sato teamed up this spring to start LongLife Foods, a tofu manufacturing company, with help from AURI. Skiff, age 47, is an American businessman and former executive with the Foremost Dairy Co. who has extensive experience in dairy processing and international food distribution; he is in charge if marketing and sales. Sato, age 46, is a Japanese who grew up working in tofu shops in Japan and has been involved in agricultural development, commodity trade, vegetable production, ranching, and fisheries; he manages the tofu production. They believe their 10,000 square foot plant in Perham's east industrial park is the Midwest's only tofu manufacturing plant and has the third largest capacity in the country. Their stainless steel tofu equipment was imported from Japan. A major distributor, H. Brooks, began this spring to supply their tofu to grocery chains such as Rainbow Foods and Byerleys.

LongLife Foods claims to be the only U.S. tofu processor using soybeans grown in Japan or Japanese-pedigree soybeans. Says Sato: "There is no question that Japanese soybeans are superior in taste and quality." In Japan, people have spent centuries developing high-protein soybeans for human consumption. By contrast, American varieties were developed mainly for crushing into oil and meal (for livestock feeds). Rather than adapt American soybeans, Sato and Skiff are working to grow Japanese soybeans in Minnesota. In 1993 and 1994 Sato supervised field trials using Japanese seeds to determine the most suitable varieties for local production. LongLife Foods then contracted with 6 Minnesota farmers to grow the selected varieties for making tofu.

© Copyright Soyinfo Center 2014

LongLife is working to please two groups of consumers. Asian-Americans already like the flavor of their tofu made with Japanese soybeans. In dozens of taste tests conducted in the region last year, LongLife Tofu won high praise, especially from Asian-Americans. But in the long run, LongLife is aiming to attract the 97% of the market that is non-Asian. "The company's early market research showed that traditional-style tofu in water pack was unattractive to most Americans. It looks strange to them, Skiff says–'like a hunk of Cheese floating in water. There's nothing else like that on the market.'"

In an effort to appeal to both groups, LongLife has decided to make silken tofu. Photos show: Skiff and Sato holding tofu packages in front of tofu processing equipment at their plant. Four cubes of chilled tofu is a dish, with a tulip nearby. A silken tofu and strawberry smoothie in a milk shake glass. Soaked soybeans being run into a kettle. A close-up of a package of their silken tofu. Mr. Sato eating silken tofu with chopsticks from a tofu tub.

Talk with Shichiro Sato. 1995. Aug. 4. He put together his tofu system by buying individual pieces from many equipment makers he visited in Japan. In Japan, he worked at the tofu shop of a friend when he was younger. He is now successfully growing Enrei soybeans in Minnesota; most farmers he talks to want to grow them under contract, so he tests them and chooses those who meet his standards.

10227. Johnson, Duane. 1995. Growing green vegetable soybeans in Colorado (Interview). *SoyaScan Notes.* Aug. 11. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Dr. Johnson has been growing green vegetable soybeans in Colorado since May 1991. The initial research was funded by the agricultural experiment station, and a paragraph on this work appeared in the annual report for that year. Nothing about this work has appeared in other official publications since all subsequent research has all been privately funded [by Seedex Inc.], and the source of funding asked that they not publish it. But he does have reports with results that he can send out. All of his research is conducted based on Japanese standards. If he uses a mechanical harvester, it results in a 30% loss (by Japanese standards) just from bruised and broken pods. He feels that one obstacle for U.S. consumers is the high price, due to hand harvesting, but this is not a problem for Japanese consumers. Duane's group can deliver 1 pound bags to Los Angeles, California, for about $1.50/lb.

The green vegetable soybeans grown in Colorado are quite sweet, which is considered good; Brix readings (that measure sweetness) are 10½ to 12. Duane believes these soybeans are an excellent food and alternative snack. Some American company has got to market the crop seriously.

Duane knows about the Minnesota crop, but he believes that they are not using a true edamamé soybean. They are using a tofu-type soybean that has some edamamé qualities. He and coworkers have tried the Minnesota product and they feel the flavors is not nearly as good as theirs. He is growing true Japanese varieties, but the varietal names are confidential. All of his edamamé are grown under irrigation. He plants May 22 and harvests Aug. 10, which is 75 days–so it doesn't require much money or time. Address: Dep. of Soil and Crop Sciences, PC118, Colorado State Univ., Fort Collins, CO 80523. Phone: 303-491-6438.

10228. Iwata, Masakazu. 1995. Early history of Japanese farming and agriculture in California (Interview). *SoyaScan Notes.* Aug. 23. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Gary Okihiro says that Dr. Iwata is the foremost expert on Japanese agriculture in California. He was a professor for many years at Biola University, a small Christian religious college in Los Angeles. He has written a book on Japanese farming in America titled *Planted in Good Soil: A History of the Issei in United States Agriculture.* This is a general work. He has seen no evidence or records that mention Japanese issei growing soybeans in the United States. Their main crop was rice. Soybeans are not even mentioned in his book, but on page 297 he notes that soy sauce was imported from Japan to the USA. In his book he discusses in detail the Wakamatsu Tea and Silk Farm Colony, which was established in 1865 in Coloma in the Gold Country near Sacramento. They came with the intent of growing bamboo, tea plants, raising fish, etc. The colony lasted for only 12-18 months, then failed.

He is aware that there were early tofu manufacturers in California and he thinks it is an interesting question to ask where they got their soybeans.

He has a friend named Fred Wada, who lives near him, and whose parents ran an early tofu shop in Fresno. Address: 879 N. Vail Ave., Montebello, California 90640. Phone: 213-723-4389.

10229. Evans, Barry. 1995. Chronology and history of Oak Feed Miso, Inc. and American Miso Co. of North Carolina. Part I. 1947 to 1979 (Interview). *SoyaScan Notes.* Aug. 25. With follow-up talks on 4 Dec. 1999, and 29 June and 2-7 July 2000. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Barry was born on 25 Feb. 1947 in Reading, Pennsylvania. His father was in the army reserves. He has been an avid reader since he was about age 9. He did very well on his SAT exams, and entered Princeton University in the fall of 1965 on an ROTC scholarship; there he majored in history, a subject in which he is deeply interested to this day. After 3 years he left Princeton (in a squabble over a project) and attended Temple University in Philadelphia for one year. Returning to Princeton for a fifth year in college, he graduated in 1970. He has been a "natural foods enthusiast" since he was in college. He entered the U.S. Army in Feb.

© Copyright Soyinfo Center 2014

1971, living off post at Fort Knox (Kentucky), formally applied as a conscientious objector, and was honorably discharged in Aug. 1972 with full veteran's benefits. He returned to Temple Univ., enrolled in a PhD program in history, but left after 3½ semesters. In June 1974 he became a vegetarian–though he regularly eats fish. In 1977, while living in Coconut Grove, Florida, he first heard about macrobiotics and heard Michio Kushi speak in Coconut Grove. He became a devoted follower of macrobiotics, which he still is. Barry heard about the miso venture through Kathy Kashdan, his housekeeper, who was the sister of John Belleme's ex-wife. Sandy Pukel (pronounced pyu-KEL), who owned the Oak Feed Store, was the pasha (local chieftain) of the large macrobiotic community (satrapy) in Coconut Grove. Sandy was also extremely close to Michio, and they were often in touch. Sandy was probably Michio's closest friend among American followers of macrobiotics. The day after Michio's lecture, Barry went to Sandy's Oak Feed Restaurant (where he had previously spent much time) and asked to see John Belleme, the manager of Oak Feed Store, who was seated at a table in the Oak Feed Restaurant with Sandy Pukel, talking with Edmund Benson about the miso company idea. Barry walked over to the table and introduced himself, and said he might like to be involved with the miso company; neither he nor John knew one another, but their paths were soon to become deeply intertwined.

1978 fall–Sandy Pukel, John Belleme, and Michio Kushi start to discuss the idea of a miso manufacturing company in America. John Belleme became interested in this idea in the fall of 1976 in Brookline, Massachusetts.

1978 fall–Various people buy shares in the new miso company. Jim Kenney $5,000. Frank Head intended to buy shares, but never did. At either that time or later Edmund Benson invested about $25,000 of $50,000 that he had formerly pledged.

1978 fall–Pukel and Belleme make a deal through a real estate agent to buy the property in Rutherfordton, North Carolina, on which the American Miso Co. now stands. As Barry recalls, this was the very first concrete move toward starting a miso company other than John taking Japanese Berlitz lessons, which he started at about the same time. They bought something like an option on the property. They put something like $1,000 to $5,000 down as good-faith money and had about 6-12 months to come up with the rest of the down payment of $15,000 to $20,000. John Belleme rode up to North Carolina on his motorcycle to help make the down payment and sign the original land deeds *before* Barry invested any money. Maybe John also rode up again later.

1979 Feb. 28–Oak Feed Miso, Inc. is incorporated. The initial directors and officers are Sanford J. Pukel (President, 3030 Grand Ave., Coconut Grove, Florida 33133) and John Belleme (Secretary-Treasurer, 5490 W. 1 Ct., Hialeah, Florida 33012). It is not clear who owns how much stock at this time. Oak Feed Miso was discussing a joint venture with Erewhon to establish the actual factory, which would then be called the Erewhon Miso Co.

1979 April–Five of the six months have passed. Barry (now age 32) becomes involved as an investor in the miso company, contributing initially $50,000, which more than covers the urgently needed down payment. He thinks Sandy could have found a way to make the next land payment without his money, but perhaps not easily. Barry had not been previously involved in the miso project in any way. Barry believes that by this time Sendai Miso-Shoyu and Mitoku (Mr. Kazama) had very little interest in serious participation in the Erewhon Miso Co. Michio may have wanted them to be involved, but they did almost nothing to demonstrate their interest. At best they may have said "keep us posted." But nothing ever happened.

1979 Oct.–John and Jan Belleme leave for Japan to study miso making. After "camping out" in Mr. Kazama's office for a while, he ends up studying with Mr. Onozaki. Barry's investment helps, but the checks sent to the Bellemes in Japan are written by Sandy Pukel on the Oak Feed Miso account.

1979 Nov. 18–Barry is in a horrific bicycle accident in Pennsylvania. He flies over the handlebars, into a field, breaking 5 vertebrae and 9 ribs. After a 14-hour operation, he spends 6 months flat on his back in the hospital and 1 year in a full-body cast. He was paralyzed from the waist down for quite some time. He did not eat one bite of hospital food; he had all natural-food meals brought in. Continued. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

10230. Evans, Barry. 1995. Chronology and history of Oak Feed Miso, Inc. and American Miso Co. of North Carolina. Part II. 1980 (Interview). *SoyaScan Notes.* Aug. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: 1980 June–John and Jan Belleme return to the USA from Japan. A letter shows that by late summer John had started to order miso-making equipment. Barry is sure that the wooden vats come from Arrow Tank Co. (Buffalo, New York) the only traditional barrel maker left in the United States–a very interesting place. The vats are all traditionally made, from old recycled wine barrels and other old wood. Over the years, the miso company has bought all its vats from Arrow Tank Co. The first 35 vats were cypress, but when those ran out, the next five were fir (they took a long time to season), and last 5-6 were redwood (they worked better).

Concerning Joseph and Patricia Carpenter: Barry never met them and he understands that their being asked to leave when the Bellemes returned was a traumatic, landmark event in their lives. Barry was once in prison for 32 months, and was on probation for three years after that, and was

© Copyright Soyinfo Center 2014

awaiting prison for 2 years before he actually went. But when it was over, he let it go and went on with his life. After John returned from Japan, Barry heard about the Carpenters situation from John and Sandy, who said (generally) that they had not done much while they were there, and they did not seem very motivated. But, in all fairness, maybe they didn't have any clear instructions as to what they were supposed to do. For him, their whole role in the miso company was always very hazy. But until Barry took a hand in things, the whole company was very "loosey-goosey." Nobody had any clear instructions as to what was to be done. Only John and Jan Belleme know the details of what actually happened. Sandy is a "conflict avoider" so he would have been ambiguous. John was not a conflict avoider. John, who was never a hippie and was very yang after his stay in Japan, came back to find these two hippie types on the land. "This culture clash may have had a lot to do with it." Also, there was only one house, so the two families would have had to live together.

1980 summer–Each time the company needed more money, they would come to Barry–since he was the only one they knew who had any and was willing to invest it. This summer, when the building had to be constructed, the equipment ordered and paid for, and land payments made, Barry started to invest a lot more money, and to own more and more shares. When he invested his second $50,000 he began to pay more attention to who else owned shares. "As I began to sniff the wind a little more, I sensed that I was surrounded by phantom shareholders, and was the only one actually investing any money." Sandy and Michio didn't want Barry to be on the board of directors, and they wanted his stock to be Class B, which did not enable him to vote–even though he was now the leading investor. Barry confronted Michio on this while on an airplane en route from Boston to Florida; Sandy was also on the plane. Barry made it plain that he would not invest any more money (he was being asked for about $90,000 more) unless he could be on the board of directors, and all the stock (not just his) would be voting stock. Michio and Sandy reluctantly agreed. All this came to a head at an important meeting in Miami in the summer of 1980, shortly after John and Jan returned from Japan.

When the Belleme's returned from Japan, people began to realize that this miso company might really happen. Negotiations had been taking place throughout 1979 and 1980. Three or four versions of an ownership contract / agreement had been presented but never signed; there would be 14-15 more over the next year, and none of those was ever signed either. The negotiations ended with Erewhon's bankruptcy. The discussions were really between the Erewhon group (comprised of Michio, Aveline, Morris Kirsner–their attorney–and Evan Root) and the Oak Feed Miso group (comprised now of Barry, John and Jan Belleme, and David Young–their attorney). Sendai Miso-Shoyu and Mitoku were not even mentioned; they were out of the picture. Mr. Kazama, owner of Mitoku, probably feared and doubted the potential new American miso company. "The issue was: Who would control the company, Erewhon or us? And how many shares would each person or company own?" Each group wanted to own a majority of the shares. This meeting went on for several days at various places, including restaurants, the Oak Feed Store, and the office of David Young–the Oak Feed Miso group's attorney. Note: See also meeting of 27 Sept. 1981.

Barry, who was on crutches, flew in from Reading, Pennsylvania, accompanied by his close friend and confidant, Saul Goodman, a macrobiotic healer and shiatsu practitioner. Barry could not travel by himself, and this was the first trip he had taken after his bike accident. David Young was concerned that the Oak Feed group was being asked to put up almost all of the money yet would not have control; yet he was ambivalent. Sandy Pukel was a member of the Oak Feed Miso group, but he was also ambivalent; he was really on Michio's side. He felt that Erewhon's participation was absolutely vital, and whatever had to be given up to get that participation was appropriate. Everyone should trust in Michio, and Michio would provide.

Sandy was and is one of Michio's closest friends and confidants in the whole world. Sandy and Mona Schwartz were the co-heads of the Florida Macrobiotic Association. An excellent macrobiotic teacher and cook, Mona ran a study house in the Miami area, where Barry ate many of his meals for the first several years that he was practicing macrobiotics. So did Dr. Keith Block. Mona first told Barry how close Michio and Sandy were, and how much each influenced the other's thinking.

Barry recalls that Michio and his attorney, Morris Kirsner, were so demanding and unreasonable in what they wanted that even Sandy hesitated. He wanted to give them more than Barry and John, but he didn't want to give them everything they wanted. Negotiations dragged on and on because they were taking this unrealistic negotiating stance. So it was easy for Barry and John, who saw increasing signs of weakness in Erewhon, to begin to fight a war of attrition and prevent anything from happening.

The Board at that time had five members–including John Belleme, Sandy Pukel, Edmund Benson, Barry, and one other person–which was probably not Michio. Only four other people besides Barry invested money in the miso company: Edmund Benson $20,000, Frank Head (who started Mountain Ark) $5,000, the Japanese cook at the Oak Feed Restaurant (Yozo Masuda) $10,000, and Jim Kenney $5,000. Barry bought out the first two, and Jim died before the company began operations. Sandy Pukel, as one of the company's founders, got a number of "founders shares" for free, which Barry eventually bought back from him.

1980 fall–A document shows that at this time "John and Jan go on Erewhon payroll and start construction of Erewhon

© Copyright Soyinfo Center 2014

Miso in Rutherfordton, North Carolina." They begin by leveling the land. They went on the payroll of the Erewhon Trading Co., not the Erewhon Miso Co., since the latter company did not have a payroll and never really existed. Of course, Michio and Aveline owned Erewhon and all or most of its stock. Barry recalls that Erewhon was supposed to put up a certain amount of money for their share of the joint venture, and then provide the additional services of buying all miso made by the new miso company, packaging, and distributing it.

Barry recalls that much of the automatic miso-making equipment came from Japan–some or all of it from the Fujiwara Brewing Co. in Hiroshima. John visited them in 1983 when the miso company was considering adding a soy sauce plant near the miso plant. Continued. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

10231. Evans, Barry. 1995. Chronology and history of Oak Feed Miso, Inc. and American Miso Co. of North Carolina. Part III. 1981 to 1982 (Interview). *SoyaScan Notes*. Aug. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: 1981 Jan. 31–Oak Feed Miso, Inc. IRS tax returns (for the fiscal year ending Jan. 31) show losses of $89,000 for the last year with no sales. Note: The land was purchased on a mortgage, with about $20,000 down payment.

1981 March–The miso building is essentially complete, but some equipment still had to be ordered–from Japan and the USA.

1981 early–Michio and Aveline Kushi can see that Erewhon is heading for bankruptcy. They try urgently to raise money. Sandy Pukel loans the Kushis $100,000–and thereby wins their eternal gratitude and friendship. Sandy never gets the money back. Barry is upset, because he believes that this was money he gave to Sandy as his investment in the miso company. Essentially, Barry then had to give Sandy more money which he finally did invest in the miso company–as follows: Sometime later in 1981, to make things more complicated, Sandy (who is now short of cash) asks Barry if he would be willing to invest in Oak Feed Store and Restaurant with the understanding that Sandy will use the money to buy the shares he had pledged to buy in Oak Feed Miso, Inc. Barry accepts the deal, and Sandy invests the $80,000 to $90,000 in Oak Feed Miso–which makes Barry happy.

1981 July–The opening ceremony for Erewhon Miso Co. is held at Rutherfordton, North Carolina. This was "the crowning moment of the early phase of the miso company. We were all still together at that point, including Michio. We had a big, beautiful sign out on the road in front of the factory, put up for the opening ceremony, that read 'Erewhon Miso Co.'–even though that was never the name of the company. The delegation from Erewhon was Michio, Aveline, and Evan Root. Evan was overwhelmed by the emotion of it all–just crying like a baby. John and Jan Belleme were there, as was a woman from Asheville who did the photography. Sandy Pukel must have also been there, though Barry has no clear recollection of this. Yet tension between Barry and Sandy had been growing. "Without Sandy and Michio, the project never would have happened." By now many people could see that Erewhon was headed for bankruptcy, but "Even at the time of the opening, everyone thought Michio would pull another rabbit out of his hat in the end," to save Erewhon. In late summer and early fall Barry attended several meetings called to discuss Erewhon's perilous financial condition. These meetings were all held in the area of Boston, Massachusetts, sometimes in the office of Morris Kirsner, the Kushi's attorney. Barry was invited largely because they hoped he would help bail out Erewhon.

1981 Aug.–John and Jan Belleme start making miso in North Carolina; the soybeans and grains are contributed by Erewhon Trading Co. But by August or September the Kushis can see that Erewhon's bankruptcy is imminent, so they stop sending John his paycheck and additional raw materials. This creates a crisis; everything must be rethought with Erewhon out of the picture. John may have sent out feelers to Westbrae and Eden to see if they wanted to take over Erewhon's role as distributor of the miso–they didn't.

1981 Sept. 27–At an annual meeting of Oak Feed Miso, Inc. all shares are converted to Class A voting shares. Major shareholders are: Barry Evans 1400 shares. Sandy Pukel 1400 shares. John Belleme 900 shares.

1981 Nov. 18–Erewhon Trading Co. files for bankruptcy protection under Chapter 11 of the federal Bankruptcy Act. For the next several months, "various wolves were circling around, trying to grab hold of the half-dead body. Finally U.S. Mills and Nature Food Centres Inc. grabbed it and dragged it off to its lair." As part of the deal, Michio had to agree that he would only do endorsements through the new owners. So Michio, who had lost control of his own destiny for quite some time, could not be involved with the miso company any more. Barry thinks Sandy realized that and his heart went out of the miso company project at that point. Consequently, all deals between the miso company and Erewhon come to an end. Barry thinks that Erewhon Trading Co. invested a total of about $15,000 in the miso company in the form of payments and miso ingredients. After Erewhon was purchased out of bankruptcy, the new owners, Chuck Verde and Cynthia Davis, never got this investment back. When they called, Barry took the position that the costs and difficulties the miso company had endured because of Erewhon's collapse were much greater than $15,000. Barry added that if they took the matter to court, he would sue them for breach of contract. In fact, the miso company barely survived that collapse.

Over the past four months Barry, who admires Michio as a spiritual leader, has come to realize that he cannot be

© Copyright Soyinfo Center 2014

counted on to help establish the new miso company. He has grown tired of all the difficulties with Erewhon and Michio; as a practical businessman, he was "a nightmare."

1981 late–Marty Roth now enters the picture. When John Belleme left his job as manager of Oak Feed Store to study miso in Japan, Jim Kenney took over from him. Jim was an epileptic; while traveling on vacation in East Asia about a year later, he died tragically at about age 27–Barry heard he choked on the seed of an umeboshi salt plum that he was using to try to control an epileptic fit. So in about July or August 1981 Sandy brought in Marty Roth, who had been running the Natural Cafe in Santa Fe, New Mexico. Marty was soon working as manager (or assistant manager) of Oak Feed Store. Marty (a very inventive and creative guy) and Barry (a co-owner of the store) quickly find they get along well and work together effectively. Marty didn't want to stay in Miami, and his job with Sandy wasn't working out. When Marty told this to Barry, Barry said that he was planning to establish his own import company in North Carolina, and that company was also going to take over distribution for the miso factory. It is not crystal clear to what extent Barry lured Marty away from Oak Feed Co. and to what extent Marty would have left anyway.

1981 Dec.–Great Eastern Sun (GES) is organized. The first employee and manager is Barbara Arrow, who arrived in Dec. 1981.

1982–Jan. GES orders its first container of natural foods from Mitoku (Mr. Kazama) in Japan.

1982 Jan. early–Marty Roth moves from Florida to North Carolina to run Great Eastern Sun (GES)

1982 Jan.–Barry makes another investment in the miso company and thereby replaces Sandy Pukel as the largest shareholder. Barry buys out remaining shareholders–except Jim Kenney who is no longer living. Sandy proposes to Barry a deal whereby he would trade Barry all of his stock in the miso company for all of Barry's stock in Oak Feed Store. Barry accepts, but with the added condition that Barry could import goods from Mitoku in Japan.

1982 Jan. 4–Barry Evans sends out a letter on American Miso Co. letterhead to potential customers that begins: "Dear Friends–We at The American Miso Company are proud to announce the opening of our miso shop in Western North Carolina." It ends: "The Lindenself Foundation, doing their business as Linden's Elf Works, located in Piedmont, North Carolina, has been appointed as the sole agent in marketing and distribution of The American Miso Company brand products... Your phone contact is John Troy at... 919/364-2723. Enclosed is the Linden's Elf Works distributor price sheet which includes all the pertinent information for your upcoming Spring catalogue. With kindest regards, Barry Evans, President." When Marty Roth sees this announcement, he argues that GES should distribute AMC's miso; Barry agrees. So John Troy and Elf Works never did distribute any AMC miso.

1982 Jan. 31–Oak Feed Miso has losses of $67,000 for the previous year with no sales. Total loss: $157,000.

1982 Feb. 26–Sandy Pukel and Barry Evans sign an agreement whereby Sandy gets out of Oak Feed Miso and Barry gets out of Oak Feed Store and Oak Feed Restaurant by an exchange / trade of stock. Barry recalls that Sandy left the miso company reluctantly for two reasons. First, because he saw the miso company as "his baby" and he liked to be in control–not so much because he saw it as a company with a bright and profitable future. And second, because Michio wasn't involved any longer, and couldn't be because of what had happened to Erewhon. Barry never asked Sandy (or any of the other shareholders) if he could buy their shares. They all approached him with the idea. First, for example, Edmund Benson wanted to get his money back, so Sandy bought his stock. Yozo Masuda's stock was included in the deal with Sandy.

1982 March 22–Great Eastern Sun is incorporated.

1982 April 19–At the annual meeting of the shareholders of Oak Feed Miso, the name is officially changed to American Miso Co. This change is filed with the state of Florida on 5 May 1982, and signed by Barry Evans and Janet Belleme. The final stamp of filing is 19 May 1982. Barry notes: "In numerology, this date (May 19) is a 44 number, since 5 + 19 + 1 + 9 + 8 + 2 = 44. Forty-four is the number of ultimate business success." Barry did not plan to incorporate the company on this date. "It was just the order of the universe."

1982 May 18–Great Eastern Sun sells its first food products to a natural food store; they were imported from Japan.

1982 mid- to late- The principals of the American Miso Co. are now Barry Evans, John and Jan Belleme, and Mrs. Kenney. Barry started with 1,400 shares, got 1,400 from Sandy, 100 from Yozo, 250 from Edmund, and 200 from Gary Dukeman (a friend of his)–for a total of 3,350. John and Jan had about 850 shares. John had been given about $20,000 worth of shares as a founder of the company, and because he went to Japan to learn how to make miso, and because he had worked for a modest salary (less than $20,000/year) as a miso maker in North Carolina. Mrs. Kenney had 50 shares. On a percentage basis, Barry owned 78.9% of the miso company, John and Jan Belleme owned 20%, and Mrs. Kenney owned the rest. Continued. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

10232. Iwata, Masakazu. 1995. Re: The pioneering work of Gonshiro Harada (died 1943) with koji, tofu, miso, natto, and okara in California. Letter to William Shurtleff at Soyfoods Center, Aug. 25. 1 p. Typed, with signature.

• ***Summary:*** Mr. Iwata is the author of *Planted in Good Soil: A History of the Issei in United States Agriculture* (1992). Yesterday he contacted Fred Harada, "whose father had a

© Copyright Soyinfo Center 2014

tofu manufacturing establishment in the Fresno area... He is a good source of information. His father, Gonshiro Harada (died 1943), an Issei (first-generation Japanese immigrant to the USA) from Hiroshima Prefecture, was a master koji-maker who learned his trade in Japan. He opened a store in Fresno in the 1920s but went broke during the depression of 1929; he was a creditor unable to collect from credit customers. Subsequently, in 1939, he relocated in Fowler, about 10 miles southeast of Fresno, where he and his wife and family (nine children) established the Harada Tofu Co. and manufactured such foods as tofu, kamaboko, agé, miso, natto, okara, and other related items, peddling them to the Japanese farmers in a broad area of Central California. Of course the company handled vegetables and other grocery goods on their route consisting of several hundred customers.

"Fred indicates that his father was an innovative entrepreneur who made much of his own tofu-making equipment." Fred believes his father got at least some of his soybeans from rice growers in the Colusa region, who grew soybeans as a sideline. "He mentioned that the Koda rice farms in South Los Baños may have had some acreage in this crop."

Fred Harada can be contacted at 637 North 6th Street, Montebello, CA 90640. Phone: 213-721-8455. Best to contact him after 7:00 p.m. Address: 879 North Vail Ave., Montebello, California 90640. Phone: 213-723-4389.

10233. Iwata, Masakazu. 1995. Re: Early soybean cultivation by Japanese rice growers in central California around the time of World War I. Letter to William Shurtleff at Soyfoods Center, Aug. 25. 1 p. Typed, with signature.

• ***Summary:*** Yesterday Dr. Iwata contacted Fred Harada, "whose father had a tofu manufacturing establishment in the Fresno area... He is a good source of information... My conjecture would have been that much of the soybeans for the tofu came from abroad, but according to Fred, some of the Japanese rice growers, whose heyday in rice farming was around the time of World War I [1914-1918] in the Colusa region, grew soybeans as a sideline. He mentioned that the Koda rice farms in South Los Baños may have had some acreage in this crop.

"I have a section in my book (*Planted in Good Soil: A History of the Issei in United States Agriculture.* New York: Peter Lang Publishing, 1992) on the Koda farms, utilizing information from interviews and the Keisaburo Koda biography in Japanese (*Koda Keisaburo Den,* 1965), but found no mention of soybean production. You might contact Edward Koda (P.O. Box 6, South Dos Palos, California 93665), the son of the founder, about this. I believe the operation is now in the hands of Ross, the third generation heir.

Fred Harada can be contacted at 637 North 6th Street, Montebello, CA 90640. Phone: 213-721-8455. Best to contact him after 7:00 p.m.

Update: Letter from Dr. Iwata. 1996. Dec. 6. "Most likely the Chinese who arrived in California around the time of the Gold Rush of 1849 introduced soybeans from China." Address: PhD, 879 North Vail Ave., Montebello, California 90640. Phone: 213-723-4389.

10234. Blank, Christine. 1995. Organic soy products: Industry remains optimistic. *Organic Food Business News* (*Altamonte Springs, Florida*) 7(8):5-7. Aug.

• ***Summary:*** "Even though Japanese demand for organic soy is falling this year," new studies proclaiming the health benefits of soy products have sparked optimism among manufacturers for higher sales in the near future. Supply of organic soybeans is now greater than demand as the Japanese, who have been willing to pay premiums for organic soybeans during the past two years, have lost interest.

Terry Tanaka, executive director of Nichii Company of America, Inc. (Jefferson, Iowa) exports 95% of its organic soybean flakes to its parent company in Japan. Tanaka had been planning to ship 140 tons/month of flakes to Japan, but is now shipping only 50 tons/month, due to sagging consumer interest. The company sends its flakes by rail to Seattle, Washington, whence they travel by cargo ship to Japan.

David Singsank is co-owner of American Health and Nutrition in Ann Arbor, Michigan. His company is now selling an organic soy protein product named Manna to wholesalers for use in bulk bins in co-ops and natural food stores. It has a chewy texture and will cost wholesalers $0.75 to $0.90/lb.

When prices skyrocketed last year, some soyfood manufacturers had to raise prices or discontinue products. For example, White Wave in Boulder, Colorado, started using commercial (non-organic) soybeans in two of its products that had been organic last season. Now the company is reported to have switched back to organic ingredients when many of its customers complained. White Wave is said to use at least 95% organic ingredients in its soy products, including tofu, soymilk, and tempeh.

New contract prices are about $14/bushel FOB for cleaned clear hilum soybeans and $19/bushel FOB for Vinton. OCIA (president Tom Harding) is the main certifier of organic soybeans; others include Farm Verified Organic (FVO), Oregon Tilth, and Quality Assurance International. Reciprocity is a major issue for soyfoods manufacturers.

Jan Remak, vice president of marketing at Vitasoy (Brisbane, California) says that Vitasoy soymilk is sold in some major supermarket chains, such as Kroger, Fred Meyer, Lucky, and Ralph's. Address: Staff writer.

Soy protein ingredients: Soy grits and flour, soy protein concentrates, soy protein isolates. Soy nutrition: Soy protein, fat and calories, phytochemicals. Food bean market. Summary.

Two "different types of soybeans have emerged: oil beans and food beans. This is particularly true in the US soy market..."

Of the fourteen phytochemicals, seven are present in soybeans. These seven are phytates, isoflavones, carotenoids, coumarins, triterpenes, lignans, and phenolic acids. Phytochemicals have been shown to affect human health as much as vitamins and minerals, and many of them have anti-cancer properties. The discovery of phytochemicals may change how the nutritional value of food is assessed.

The world market for soybeans for food use is estimated at about 1 million metric tons (tonnes). In Japan alone about 830,000 tonnes are made into soyfoods as shown in a pie chart as follows: Tofu (552,000 tonnes, 63.4%), miso (180,000 tonnes, 21.5%), natto (90,000 tonnes, 10.7%), soymilk (10,000 tonnes, 1.2%), soy sauce (5,000 tonnes, 0.6%), and others (22,000 tonnes, 2.6%). In the USA the food bean market is estimated at 50,000 tonnes. Other major markets for food beans are in Korea, China, Taiwan, Hong Kong, Singapore, Malaysia, and Thailand. Food-grade soybeans can be sold by the growers at a premium of 5-20% above the base price. The demand for food beans is increasing steadily. Address: 1. Vice President, R&D, Riceland Foods, Stuttgart, Arkansas; 2. Project Leader, Soy Food Lab., Jacob Hartz Seed Co., Stuttgart, Arkansas.

10237. *Soya Bluebook Plus.* 1995-1997. Serial/periodical. Bar Harbor, Maine: Soyatech, Inc. Peter Golbitz, publisher and editor. Frequency: Annual.
• ***Summary:*** Preceded by Soya Bluebook. A directory and information book for the soybean processing and production industries. One of the most valuable sources of worldwide information on soybeans. The first issue (shipped Sept. 1995) is titled "Soya Bluebook Plus: the annual directory of the world oilseed industry." Crops featured on the front cover are "soya, corn, cottonseed, palm, canola, rapeseed, and sunflower." Contents (most sections are marked with a fold-out tab): Organizations and government agencies: White pages, yellow pages. Oilseed product processors and marketers. Equipment supplies and services. Oilseed statistics. Oilseed reference: Oilseed glossary, standards and specifications, oilseed technical charts and tables. Indexes: Comprehensive index, advertiser index.

Concerning the year: The edition published in mid-1994 was titled '94 Soya Bluebook. The edition published in mid-1995 was titled '95-96 Soya Bluebook. The edition published in Sept. 1996 (the 50th edition) was titled '97 Soya Bluebook. The change was made to give the company extra time (16 months) to market the latest edition before the next year arrived. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

10238. Fujita, Mitsugu; Hong, Kyongsu; Ito, Yae; et al. 1995. Transport of nattokinase across the rat intestinal tract. *Biological and Pharmaceutical Bulletin* 18(9):1194-96. Sept. [11 ref]
• ***Summary:*** Nattokinase (NK) is reported to cause the degradation of fibrinogen in the plasma of normal rats. It is absorbed from the rat's intestinal tract. Address: 1-3. Biotechnology Research Laboratories, JCR Pharmaceuticals Co., Ltd., 2-2-10 Murotani, Nishi-ku, Kobe 651-22, Japan.

10239. Messina, Mark. 1995. Isoflavone intakes by Japanese were overestimated (Letter to the editor). *American J. of Clinical Nutrition* 62(3):645. Sept. [8 ref]
• ***Summary:*** Dr. Messina, an expert on soy nutrition, argues that Japanese daily per capita isoflavone is about 50 mg, rather than the figure of 150-200 mg used by Cassidy et al. in 1994. This is a key letter in setting 50 mg/day of isoflavones as the proper dosage. Address: 1543 Lincoln Street, Port Townsend, Washington 98368.

10240. Morinaga Nutritional Foods, Inc. 1995. Made for each other. Introducing new Mori-Nu Mates (Ad). *Natural Foods Merchandiser.* Sept. p. 107.
• ***Summary:*** This full-page color ad shows a packet of Mori-Nu Mates Chocolate Pudding & Pie Mix next to a package of Mori-Nu Lite Silken Tofu. "Dairy free. Low fat. All natural. Quick and easy." Blend one packet of this mix with one package of Mori-Nu Lite Tofu to make a rich and creamy, low fat chocolate mousse.

This ad also appeared in the Dec. 1995 issue (p. 65) and in the Jan. 1996 issue (p. 57) of this magazine.

And in the Feb. 1996 issue (p. 29) and the March 1996 issue (p. 37) of *Vegetarian Times* magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10241. Shurtleff, William; Aoyagi, Akiko. comps. 1995. Dietary fiber and soy fiber–Bibliography and sourcebook,

© Copyright Soyinfo Center 2014

1445 to 1995: Detailed information on 633 published documents (extensively annotated bibliography), 203 commercial soy fiber products, 111 original interviews (many full text) and overviews, 95 unpublished archival documents. Lafayette, California: Soyfoods Center. 315 p. Subject/geographical index. Author/company index. Language index. Printed Sept. 10. 28 cm. [883 ref]

• ***Summary:*** There are three basic types of soy fiber: Okara (soymilk pulp), soy bran (ground soybean hulls / seed coats), and soy cotyledon fiber (soy polysaccharides).

Okara: In the process of making soymilk or tofu, the liquid milk is separated by filtration from the insoluble fiber. This nutritious by-product, called okara (its Japanese name) or soy pulp, has been used for centuries as a source of food, feed, and fertilizer.

Soy bran: Soybean hulls, a by-product of the process of crushing soybeans to make oil and meal, can be ground to a light-colored, high-fiber flour generally known as "soy bran."

Soy cotyledon fiber: In the process of isolating the protein from defatted soybeans (i.e., of making isolated soy protein), the fiber is removed by filtration. We call this fine white powder "soy cotyledon fiber; it differs from okara in five ways: (1) It does not contain soybean hulls; (2) It has been defatted and thus is lower in fat; (3) It has been treated during processing with mild alkali; (4) It has a much finer texture than okara; and (5) It is almost always sold in dry form, whereas okara is rarely dried.

All three of these products are high-quality, inexpensive sources of dietary fiber. This bibliography emphasizes their food uses, and contains all known publications on their nutritional and medicinal value.

This bibliography also contains extensive information, including the most important publications starting in the mid-1970s, on the importance of dietary fiber in human diets. Dietary fiber was the "forgotten nutrient" until physicians working in Africa noticed that Africans who moved from the countryside into the cities, replacing their traditional high-fiber low-fat diets with European-style diets, quickly became afflicted with a host of European-style diseases. The many studies that have tested the "fiber hypothesis" have shown that dietary fiber is a very important part of a balanced, healthful diet, and that it can offer major benefits in helping to prevent and reverse many serious Western diseases.

This is the most comprehensive book ever published about soy fiber. It has been compiled, one record at a time, over a period of 20 years, in an attempt to document the history of this subject. Its scope includes all known information about this subject, worldwide, from A.D. 1445 to the present.

This book is also the single most current and useful source of information on this subjects, since 97% of all records contain a summary/abstract averaging 181 words in length.

This is one of more than 50 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 34 different document types, both published and unpublished; every known major publication on the subject in every language–including 750 in English, 55 in Japanese, 36 in French, 36 in German, etc.; 111 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of soy fiber and dietary fiber from their earliest beginnings to the present.

The bibliographic records in this book include 633 published documents and 95 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

The book also includes details on 203 commercial soy fiber products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

10242. Teranaka, Takeyori; Ezawa, Makoto; Matsuyama, Jun; Ebine, Hideo.; Kiyosawa, I. 1995. Kome miso, mugi miso, oyobi mame miso [Inhibitory effects of extracts from rice-koji miso, barley-koji miso and soybean koji miso on the activity of angiotensin I converting enzyme]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 69(9):1163-69. [14 ref. Jap; eng]

• ***Summary:*** Angiotensin I converting enzyme is abbreviated ACE. Address: 1-3, 5. Dep. of Agriculture, Tamagawa Univ., 6-1-1. Tamagawa-Gakuen, Machida-shi, Tokyo, 194; 4. Central Miso Research Inst., 1-26-19, Sinkawa [Shinkawa], Chuo-ku, Tokyo, 104, Japan.

10243. Wilson, Lester A. 1995. Soy foods. In: D.R. Erickson, ed. 1995. Practical Handbook of Soybean Processing and Utilization. Champaign, Illinois: American Oil Chemists' Society Press; St. Louis, Missouri: United Soybean Board.

viii + 584 p. See p. 428-59. Chap. 22. [41 ref]
• ***Summary:*** Contents: Introduction. Soybean chemical composition. Unfermented soy foods: Soymilk, tofu (momen, kinugoshi or silken, packed tofu, aseptically packaged tofu, deep-fried tofu, kori tofu or dried-frozen tofu), other nonfermented soy foods (yuba, kinako or roasted whole soybean flour, fresh {edamame} and canned soybeans, texturized soy protein-based foods). Fermented soy foods: Miso, shoyu (soy sauce), natto, tempeh, sufu. Japanese Agricultural Standards. Identity preservation and transportation. Soybean quality characteristics: Overview, judging quality (tofu, miso, natto). Note: This is the earliest English-language document seen (Nov. 2012) that contains the term "roasted whole soybean flour."

Tables: 1. Nonfermented soy food products and common names by country. 2. Fermented soy food products and common names by country. 3. Chemical composition of soy foods. 4. Per capita annual consumption of soybeans (kg) in selected Asian countries (China, Indonesia, Japan, Korea, Malaysia, Philippines, Thailand; for the years 1968, 1978, 1988, 1994).

Figures: 1. Flowchart of refrigerated and shelf-stable soymilk production. 2. JAS seal of approval. 3. Diagram of equipment used in large scale tofu production (each piece of equipment is numbered and labeled). 4. Flowchart of regular tofu production. 5. Graph showing percent transmittance of whey versus coagulant concentration for soymilks at 6% solids made from Weber, Vinton, and Amsoy soybeans. A concentration of 0.023 N was selected as the optimum coagulant concentration, since it gave the most transparent whey. 6. Graph showing percent transmittance of whey versus coagulant concentration for Amsoy soymilk at concentrations of 4, 5, and 8% solids. Concentrations of 0.018N, 0.019N, and 0.035N, respectively, were selected as optimum coagulant concentrations. 7. Flowchart of kinugoshi (silken) tofu production. 8. Flowchart of packaged tofu production. 9. Flowchart of aseptically packaged tofu production. 10. Flowchart of kori (dried-frozen) tofu production. 11. Diagram of equipment used in large scale production of dried-frozen tofu (each piece of equipment is numbered and labeled). 12. Flowchart of miso production. 13. Diagram of the interactive factors producing the characteristic attributes of miso. 14. Flowchart of tempeh production. Address: Iowa State Univ., Ames, Iowa.

10244. Zender, Sandra. 1995. Re: Early Japanese tofu companies in Fowler, California. Letter to William Shurtleff at Soyfoods Center, Oct. 11–in reply to inquiry. 2 p. Handwritten.
• ***Summary:*** "I have been unable to provide you with verification that Fowler had tofu factories in the 1930s. I checked old volumes of yearbooks, newspapers, books on Japanese culture in the area, and local historians. According to local historians and long time residents there were three tofu factories in Fowler. The oldest was Watanabe, the next was Harada, and the most recent was Soga. I contacted a Mr. Honda who is in his mid-80s and says Watanabe was before the 1930s. He believes he was about 10 when Harada was in business. [Note: If Mr. Honda is now age 85, he would have been born in 1910, and would have been age 10 in 1920.] Unfortunately these are only anecdotal sources. I will turn this inquiry over to the county reference and history departments to see if the names of these businesses occur in old city directories dating from that time." Address: Librarian, Fowler Branch Library, 119 E. Merced, Fowler, CA 93625. Phone: 209-834-3114.

10245. Albertson, Ellen. 1995. Super soy: The newest miracle food. *Self.* Oct. p. 148-151, 204. [1 ref]
• ***Summary:*** The subtitle continues: "Okay. One more time. Scientists are telling us they've found the nutritional Holy Grail, a simple food that prevents heart disease and cancer. Do we believe them? Yes!"

"Soy may be so effective that it actually crosses the line from nutritional to medicinal."

This article begins with a summary of the meta-analysis by Dr. James Anderson published in the *New England Journal of Medicine* (3 Aug. 1995). It reported soy in the diet can significantly lower high cholesterol." It also notes that: (1) "Genistein, a powerful natural chemical unique to soy," may stop the growth of cancer cells. (2) The natural estrogens in soybeans may "help alleviate postmenopausal symptoms." In Japan, where soy is typically eaten daily, there is no word for "hot flashes."

Photos and definitions of various soyfood products are given: Tempeh, soy flour, tofu, textured vegetable protein, soy milk. A section titled "15 delicious ways to add soy to your diet," gives serving suggestions for these and other soyfoods at breakfast, lunch, snack, and dinner.

A full-page table on p. 204 rates the best (B) and worst (W) of the following, with nutritional information, taste, texture, and comments: Hot dogs: B–Yves Veggie Cuisine Tofu Wieners. 10246. Barnard, Neal. 1995. Hormone replacement increases cancer risk. *Good Medicine* (*PCRM, Washington, DC*) 4(3):14-15. Fall. [10 ref]
• ***Summary:*** "The *New England Journal of Medicine* of June 15, 1995 [p. 1589-93], reported that hormone replacement therapy increases the risk of breast cancer. This was not news to most doctors. But many have continued to prescribe hormones because they feel that the benefits to the heart and bones outweigh the cancer risk. In the doctor's mind, it is a case of 'choosing your disease.' Will it be heart disease and osteoporosis from too little estrogen, or breast cancer from too much?" But there are other approaches.

"Horse hormones: The most popular estrogen product is Premarin from Wyeth-Ayerst Laboratories. Although doctors sometimes describe it as 'natural' for women, it is actually a horse estrogen. On farms in North Dakota and Canada, 75,000 mares are impregnated and then confined from the fourth month through the end of their eleven-month pregnancy so their urine can be gathered in a collection harness. After they give birth, the mares are reimpregnated. Their foals usually end up as horse meat, and the urine estrogens are packed into pills. The trade name 'Premarin' is simply a condensation of the words 'pregnant mares' urine'–hardly a natural substance for human beings to swallow. While Premarin contains estradiol and estrone, two types of estrogen which are made in humans, it also contains an enormous amount of *equilin,* a horse estrogen that never occurs at all in humans.

"Estrogen supplements can have serious side effects... Women taking estrogen supplements have 30 to 80% more breast cancer risk than other women.

"Why are so many doctors prescribing them? Most of the push relates to osteoporosis and heart disease... About a quarter of white women over sixty have compression fractures of their vertebrae, and many develop hip fractures due to gradual loss of bone." But estrogens rarely arrest bone loss; at best, they simply slow it. Other approaches can be much more effective. Remer & Manz (1994) reported that eliminating animal protein from the diet can cut urinary calcium losses in half. Many other studies show that populations following plant-based diets have enviably low rates of hip fracture. Cutting salt, caffeine, and tobacco smoke intake can further reduce calcium losses. According to J.R. Lee (1990) a different hormone, progesterone, appears to increase bone density. "It is derived from yams or soybeans, has no side effects, and is sold without a prescription as a transdermal cream."

"Of course, it is not just estrogen pills that increase cancer risk. Estrogen production within a woman's body is increased by high-fat diets and overweight. The result is a higher risk of cancer. The National Cancer Institute reports that cutting fat to 20% of calories will reduce a woman's estrogen levels by 17%, which is a good first step in cancer prevention."

"There is no Japanese word for hot flashes: It has long been known that menopause is much easier for Asian women than it is for most Westerners. Hot flashes are reported by only about 10% of Japanese women at menopause." Bones also tend to be stronger in Asia. "Broken hips and spinal fractures are much less common. The most likely explanation is this: Throughout their lives, Western women consume much more meat and about four times as much fat as do women on traditional Asian rice-based diets, and only one-quarter to one-half the fiber. The result is a chronic elevation of estrogen levels. At menopause, the ovaries' production of estrogen comes to a halt, causing a violent drop in estrogen levels. Asian women have lower levels of estrogen both before and after menopause, and the drop appears to be less dramatic. The resulting symptoms are much milder or even non-existent. Those who enter menopause on a low-fat vegetarian diet often breeze right through it." Address: M.D.

10247. Fujita, Mitsugu; Hong, Kyongsu; Ito, Yae; Fujii, R.; Kariya, K.; Nishimuro, S. 1995. Thrombolytic effect of nattokinase on a chemically induced thrombosis model in rat. *Biological and Pharmaceutical Bulletin* 18(10):1387-91. Oct. [28 ref]
• ***Summary:*** "Intravascular thrombosis is one of the main causes of a wide variety of cardiovascular diseases. Platelet aggregation and thrombogenesis play an important role in these diseases." Nattokinase is a fibrinolytic enzyme which cleaves fibrin. Address: 1-3. Biotechnology Research Laboratories, JCR Pharmaceuticals Co., Ltd., 2-2-10 Murotani, Nishi-ku, Kobe 651-22, Japan.

10248. United Soybean Board. 1995. Introducing the soy-a-mid: How soybeans fit into the eating plan described in the USDA's Food Guide Pyramid (Brochure). Chesterfield, Missouri: USB. 6 p. 29 cm.
• ***Summary:*** This food pyramid emphasizes dairy products (the "Milk, Yogurt and Cheese Group") and meats (the "Meat, Fish, Poultry, Dry Beans, Eggs & Nuts Group"), plus products made with soybean oil. "Right now you're probably eating a ½ cup's worth of soybeans every day without even realizing it."

"Plant foods in the Meat Group, such as beans, peas, lentils and nuts, provide protein, but this protein is not 'complete.' Animal protein is 'complete,' that is, it contains all of the eight amino acids required for proper nutrition. Plant proteins–*with the exception of soybeans*–need to be combined with grains or animal proteins to provide all the eight amino acids. Soybeans and soybean products, such as tofu and soybean flours, are one of the few plant protein sources that contain complete protein.

Soybeans belong to "The Pod Squad–legumes," which are not easily classified into one food group. "The soybean is something of a nutritional superstar, even among members of

© Copyright Soyinfo Center 2014

the Pod Squad... New medical research suggests that certain non-nutritive components in soybeans may work to reduce the risk of cancer. Many foods that come from soybeans are derived from the various components of the bean... Soy protein is extracted from the bean to be used in a host of manufactured foods form surimi to pancake mixes. Foods derived from whole soybeans, such as tofu and tempeh, are used as a primary protein source in many Asian countries. Tofu is also a good source of calcium in Asian diets where milk and milk products are seldom consumed. In fact, a Food Guide Pyramid in China or Japan would see tofu playing a major role in the third tier of the diagram.

"'Think Soybeans'–Whether you're spreading soybean margarine on your pancakes fortified with soybean flour, or experimenting with tofu in your stir-fry, remember that soybeans are a versatile food that can play an important role in your personal food guide pyramid."

An excellent illustration shows a whole soybean, divided like a pie chart into its major macronutrients. Address: P.O. Box 419200, St. Louis, Missouri 63141-9200.

10249. Kanno, Akishige; Takamatsu, Haruki. 1995. Studies on natto. V. Determination of gamma-polyglutamic acid in natto using cetyltrimethylammonium bromide]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society of Food Science and Technology*) 42(11):878-86. [27 ref. Eng; jap]

• ***Summary:*** A simple and rapid spectrophotometric method has been established for determination of gamma-polyglutamic acid (gamma-PGA) which is the sticky material in fermented soybean food natto. The method is based on the complex formation between gamma-PGA and cetyltrimethylammonium bromide (CET) (from journal@rchive). Address: Asahi Shokuhin Co. Ltd., 180-2 Wado, Ushibori-machi, Namekata-gun, Ibaraki, 311-24, Japan.

10250. Kushi, Michio. 1995. Guide to standard macrobiotic diet: Kushi Macrobiotics Corp. edition. Becket, Massachusetts: One Peaceful World Press. 64 p. Nov. Illust. No index. 22 cm.

• ***Summary:*** Introduction. Part I–Basic principles of standard macrobiotic diet. Part II–Summary of daily dietary recommendations. Part III–Standard macrobiotic dietary practice: Whole grains, soup (incl. miso soup), vegetables, beans (incl. azuki beans, black soybeans, tofu, dried [frozen] tofu, tempeh, natto, okara), sea vegetables, fish and seafood, fruit, pickles, nuts, seeds snacks, condiments, seasonings, garnishes, desserts, beverages, modifications, helpful eating hints. Part IV–Proposed one week meal planner. Macrobiotic resources: The Kushi Institute, The One Peaceful World Society. Kushi Macrobiotics Corp. background (formed in May 1994 to market a line of natural, macrobiotic foods). Michio Kushi: Brief biography (Age 69, he is Chairman of the Board and Director of Research of Kushi Macrobiotics Corp.). On the rear cover is a portrait photo of Michio Kushi with his autograph in both English and Japanese.

Note: This book is designed to promote the Kushi Cuisine line of macrobiotic foods. A half-page black-and-white photo of that line of foods is shown facing the inside rear cover. The slogan is: "Perfect replacements for imperfect foods." Kushi Macrobiotics Corp. is located at Three Stamford Landing, Suite 210, Stamford, Connecticut 06902. Phone: 203-973-2929. Address: Becket, Massachusetts.

10251. Melina, Vesanto; Davis, Brenda; Harrison, Victoria. 1995. Becoming vegetarian: A complete guide to adopting a healthy vegetarian diet. Summertown, Tennessee: The Book Publishing Co. x + 262 p. Foreword by Suzanne Havala. Index. 26 cm. [20 ref]

• ***Summary:*** An excellent vegetarian and vegan sourcebook and cookbook by three registered dietitians. Contents: Acknowledgements. Foreword. Introduction. 1. What is a vegetarian? 2. The evidence is in. 3. Without meat–exploding the myths. 4. Without dairy products. 5. Veganism: More food for thought. 6. Fats and oils: A balancing act. 7. Fiber: The gift from plants. 8. The vegetarian food guide: Putting it all together. 9. Vegetarian nutrition in the growing years. 10. Vegetarian diplomacy. 11. From market to meals. 12. Recipes: Simple treasures. Appendixes: 1. Glossary. 2. Nutrition recommendations.

This book contains a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, miso, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus wheat gluten, seitan, rice milk, sea vegetables, adzuki beans (p. 66, 162), quinoa, amaranth, macrobiotics, phytochemicals, plant estrogens found in tofu and other soy products (p. 75; they may contribute to positive calcium balance and have a protective effect on the bone health of Chinese and Japanese women), dietary fiber.

Talk with Vesanto Melina. 1996. July 22. This book was originally published in Canada in May 1994 by Macmillan Canada in Toronto. A revised U.S. edition was published in Nov. 1995 by The Book Publishing Co. in Summertown, Tennessee. Address: Canada.

10252. Morinaga Nutritional Foods, Inc. 1995. Made for each other. I want low fat. I want dairy-free. And I want chocolate (Ad). *Vegetarian Times.* Nov. p. 66.

• ***Summary:*** This full-page color ad shows a packet of Mori-Nu Mates Chocolate Pudding & Pie Mix next to a package of Mori-Nu Lite Silken Tofu. On the left side of the ad, standing is a lovely, slim, long-haired Japanese-American lady dressed in a tight black skirt. Her head is thrown slightly back and she half laughs, half smiles, while she eats with a silver spoon from a little glass bowl of Mori-Nu Chocolate Dream Pudding tofu dessert that she holds in her right hand.

© Copyright Soyinfo Center 2014

The mix is sweetened with Sucanat. "Indulge your taste for chocolate without guilt."

This ad also appeared in the Jan. 1996 issue (p. 29) of this magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10253. Nelson, Kent. 1995. Re: Soydiesel. Letter to Kenlon Johannes, National Biodiesel Board (NBB), Missouri, Dec. 13. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "I appreciate your coming to Asia to promote biodiesel and look forward to working closely with you."

"I have been talking with the Vice Chairman of the Nagano Winter Olympic Committee (ex-vegoil crusher who owns 35 gas stations) for a while now about getting them to use soydiesel in the '98 Games. While it's been an uphill battle with no supplies, no testing having been done, no precedents, they have remained open minded and willing to listen The other members of his firm would like to know about biodiesel in Europe. For example, was it used in the French Winter Games in 1990? How much is sold in the EU / Germany? Is it common? Is it expensive compared with other fuels? Does the government give it preferential tax credit? Other subsidies? Is there anything else you know about the EU and biodiesel?"

He has other questions about the USA. Address: American Soybean Assoc., 7th floor, Tameike Tokyu Bldg., 1-1-14 Asakusa, Minato-ku, Tokyo 107, Japan. Phone: (03) 5563-1414.

10254. Ledvinka, Ferro. 1995. Introducing macrobiotics and soyfoods to Italy (Interview). *SoyaScan Notes.* Dec. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ferro was a pioneer of macrobiotics in Italy. In the process he also helped to introduce soyfoods, especially to Florence. He first learned about macrobiotics when he read a book on macrobiotics in Italy. He started eating a macrobiotic diet. In Rome there was a macrobiotic center founded and run by Marquesa Parvolo, who had been cured of leukemia or a blood disease by George Ohsawa several years before. In 1971 he heard a lecture at this center in Rome by Rob Dobrin, who gave him Michio Kushi's address in Boston, Massachusetts. In the summer of 1972 he traveled to Boston to study macrobiotics, and there he learned how to make tofu and seitan. After leaving the USA, he returned to Italy, living in Rome. From there he worked to spread macrobiotic food and philosophy to all major Italian cities.

In Jan. 1977 Ferro went to Japan to work with Mr. Kazama at Mitoku, exporting macrobiotic foods to Italy and other European countries. The first Italian company to order these foods (including Japanese miso and tamari) was ProBios in Florence. They were followed by two Italian Macrobiotic Centers, located in Rome and Milan. In Oct. Ferro left Japan, returned to Italy, lived in Rome for a while, then moved to Florence, where he established the pioneering Fondazione Est-Ouest at via de Serragli 4, in Florence. This was a combination macrobiotic restaurant and macrobiotic study center. Ferro also worked for a while with ProBios. He taught various people to make tofu, seitan, and tempeh–but none of the restaurant customers would buy or eat these strange new foods. So Ferro decided to fry them and serve them as a snack, free of charge, before each meal. A Tuscan proverb says that "Even a slipper, if fried, tastes good." In this way people in Florence started to eat these new foods. The restaurant made and served these foods from about 1982 to 1985. Then people who were working in the restaurant moved to another place, became independent, and they started a small food factory named Soyalab. The founder of Soyalab, Matteo Iacovelli, is now the chairman of the Kushi Institute in Milan. Another person who helped a lot on the way was Alfredo Ingannamorte. These people learned how to make tofu and tempeh in Boston. Alfredo studied at the Kushi house in Becket. Matteo worked at a macrobiotic restaurant (Open Sesame) in Brookline Village. Address: Via Pellicceria 6, 50123 Firenze (Florence), Italy. Phone: 055-827 274.

10255. Huang, H.T. (Hsing-Tsung). 1995. Early history of soybeans and soyfoods in China (Interview). *SoyaScan Notes.* Dec. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The early *jiang* in China was made from meat or fish. The *jiang* used by Confucius was almost surely made from meat and fish. Many of the ancient books were annotated during the Han dynasty in an attempt to explain the meaning of certain words and passages. A very eminent scholar in the late Han dynasty (about 100 A.D.), talking about events in roughly 500 B.C., said that the *jiang* used by Confucius was made from meat and fish.

The soybean was not an important crop in China until the early Han, say 200 to 300 B.C. The soybean is mentioned in the *Book of Odes,* which is the most ancient and most reliable of Chinese books, not as a crop but as a plant that people gathered from the wild. Then is are a series of books that were traditions of the Chou dynasty; these were codified and gathered by about 300 B.C., but in them there are not many references to the soybean. However by the time of the Western (Former) Han (206 B.C. to 8 A.D.) there were references in the literature to cartloads and big urns of *jiang* [Chinese-style miso]; *shi* (fermented black soybeans) was also mentioned many times in the literature. Both these foods had become commodities.

Soy is also found in the Han Tomb No. 1 at Ma-wang-tui (pronounced "ma-wang-DUI"), a big archaeological find in China. A woman ruler was buried here in about 165 B.C. with all the 5-6 major grains, including wheat, barley, rice, 2 kinds of millet, soybean (*shu*), and hemp. Also found in the tomb were several seasonings including "soy sauce (*jiang*),

© Copyright Soyinfo Center 2014

shi ('salted darkened beans'), and leaven (*qu*)."

The earliest reference to pasteurization in China concerns pasteurization of wine, around the 11th century, long before the Japanese were pasteurizing shoyu before shipping it to Holland. He is not aware of any early reference to the Chinese pasteurizing soy sauce, but he will look again. However soy sauce is so highly salted that it does not require pasteurization, whereas wine does. The wine was filled into to earthenware jars with a small mouth, which was covered with cloth or leaves, then sealed with mud.

Dr. Huang will travel to China next month (to Foochow, capital of Fujian province) and he hopes to see some of the existing traditional fermentation processes. Soymilk was not an important traditional food in China, but it was becoming important when he traveled there in the 1940s with Dr. Joseph Needham. When they visited northern China, early in the morning people would have a huge iron wok of hot soymilk, which they sold for breakfast. Joseph liked the soymilk with bits of *youtiao* (deep-fried bread sticks; W.-G. *yu t'iao*).

One of the chapters in Dr. Huang's book deals with nutrition in China. The Chinese diet is said to be lacking in calcium. It is well know that for calcium to be absorbed, you need lactose, and the ability to tolerate lactose. Thus, it would be surprising to find higher bioavailability of the calcium in soymilk or tofu. Before the time of Confucius (551-479 B.C.) the Chinese ate a lot more animal products than they do now, but the agricultural system developed with the emphasis on grains, less emphasis on animal products, and no emphasis on milk–probably because of the lactose intolerance of the Chinese people. Thus, the Chinese never developed a dairy industry. Mongols are not as lactose tolerant as northern Europeans, but they are heavily dependant on animal milks as a source of food. They get around this problem by converting animal milk into yogurt. This fermentation converts the lactose to lactic acid, which both solves the lactose intolerance problem and extends the life of the product by lowering the pH.

Another interesting problem: Europeans are the only ones who make true cheese, using rennet. The Mongolians and all the pastoral people in Asia rely on various animal milks, including horse's milk to make koumiss, and they even make a type of cheese that is sort of like cottage cheese, coagulated by acid. Dr. Huang thinks the discovery of rennet is one of those major, accidental discoveries that is very rare. If you wash an animal stomach carefully before using it to store milk, that will wash all the rennet away. Another such major discovery is the Chinese discovery of *chu* or koji. Address: 309 Yoakum Parkway #403, Alexandria, Virginia 22304.

10256. Johannes, Kenlon. 1995. Re: Shipment of fuel to JOMO. Letter to Kent Nelson, ASA-Japan, Dec. 28. 3 p. Typed.

• ***Summary:*** JOMO refers to the JOMO Technical Research Center, Saitama prefecture, Japan. The fuel [soy biodiesel] supplier is Ag Environmental Products; contact Bill Ayres or Doug Pickering. They will ship it in 5-gallon plastic containers. The cost will be 500,000 yen, paid for by the American Soybean Association, 7th floor, Tameike Tokyu Bldg., 1-1-14 Asakusa, Minato-ku, Tokyo 107, Japan. Attached are 3 letters, two of these from ASA-Japan. Address: Executive Director [National Biodiesel Board, Missouri].

10257. Davis, Susan K. 1995. Bite into the tofu market. *Soybean Digest.* Dec. p. 18j, 18l.

• ***Summary:*** Some U.S. soybean farmers (such as Peter Yoder of London, Ohio) are earning good money by growing food-grade soybeans for the Japanese tofu market. They pay careful attention to harvesting and handling, reduce split, and have no cracked beans. The beans are usually shipped to Japan in containers just used to ship Japanese goods (such as auto parts) to the USA. This is a very difficult market to break into; once you do you must work hard to stay there and build brand equity, according to Gunner [Gunnar] Lynum, head of Strategic Marketing Development in Kankakee, Illinois. Machinery and labor costs are much higher, and you need special handling and/or packaging, plus extra marketing time. Premiums of up to 50% above standard prices are available to farmers who grow soybeans organically for the Japanese organic tofu market, according to Yoshiko Kojima, a consultant to the American Soybean Association.

The top ten tips for growing soybeans for tofu use are: Grow clear hilum beans. Be sure the protein is above 45% on a dry weight basis. Keep the oil low (18%). Keep the sucrose level high. Plant Vinton 81 or Beeson 80, or the new FG1 or FG2. Don't use artificial drying. Have uniform large-size soybeans. Keep these soybeans identity preserved, separate from other soybeans. Ship only soybeans with good eye appeal. Clean the soybeans of dirt and weed stains. Color photos show: A tofu shake with tofu cubes and sliced strawberries. A tofu chocolate cream pie.

10258. Hirose, K.; Tajima, K.; Hamajima, N.; Inoue, M.; Takezaki, T.; Kuroisha, T.; Yoshida, M.; Todudome, S. 1995. A large-scale, hospital-based case-control study of risk factors of breast cancers according to menopausal status. *Japanese J. of Cancer Research* (*Gann*) 86:146. *

• ***Summary:*** This study in Japan found that in premenopausal women (but not postmenopausal women) the consumption of tofu 3 or more times per week was associated with a statistically significant decreased risk of breast cancer (of approximately 20%), in comparison with the consumption of tofu less than three times per week.

Saskatoon, Saskatchewan: University Extension Press, Univ. of Saskatchewan. ix + 367 p. See p. 153-66. Chap. 13. [14 ref]

• ***Summary:*** An outstanding history of soybean breeding and production in Canada. Contents: Introduction. Evolution of the soybean crop in Canada. Early breeding efforts. The emergence of soybean as a significant Canadian crop (1940-70). The modern soybean breeding era [1970 on]. Current breeding objectives and methods.

Before 1930, soybeans were "grown primarily for annual forage production when traditional forage crops failed to survive Ontario winters." The appearance of two short-lived soybean crushing facilities in southwestern Ontario [at Milton in about 1930 and Chatham by April 1933] aided the transition of soybeans from a fodder crop to a grain legume crop.

"Evolution of Canada's soybean crop since 1949 reflects the expertise of soybean producers, dramatic improvement in production technology, improved and earlier maturing cultivars, improved domestic processing capacity and significant export market development."

"Soybean in Canada was born in the vision of C.A. Zavitz, arguably a man 50 years ahead of his time. Zavitz, who was head of the Field Crop Department of the Ontario Agricultural College (OAC) meticulously evaluated and selected soybean introductions for both fodder and grain production for 30 years (Zavitz 1927)."

"In 1893, Zavitz planted the first Canadian soybean crop, probably as a replacement for a field pea that failed to establish that year." Over the years, "Zavitz and two of his colleagues W.J. Squirrel and A.E. Whiteside, evaluated about 100 soybean introductions from the Orient [East Asia] via the United States and Japan for forage and grain production (Zavitz 1927)."

Early soybean breeding in Canada (before 1920) primarily involved the meticulous separation and selection of pure lines from heterogeneous seed introductions. "For example, Zavitz selected and evaluated 34 lines from nearly 10,000 plants from the Habaro cultivar obtained from the" USDA in 1909 (Zavitz 1927).

In 1923 A.E. Matthews and F.W. Dimmock of the Central Experimental Farm (CEF [part of the Dominion Experimental Farms]) conducted a soybean trial at the Harrow Research Station (HRS). "Dimmock continued soybean testing at Harrow until 1929, when Casper Owen took over (Ward 1978)."

The pioneering work of Zavitz (OAC), Dimmock (CEF) and Owen (HRS) to identify and develop soybean varieties adapted to southern Canada created "a base of soybean germplasm and technical knowledge that would support evolution of the soybean crop during and after" World War II.

During and after the war, the main soybean breeders in Canada were C.W. Owen at HRS and F. Dimmock at CEF. Varieties released after 1940 were mainly the result of pollinations among earlier selections from plant introduction and of pedigree selection procedures (Bernard et al. 1988).

The rapid growth in Canadian soybean production in mid-1940s can be attributed to: A large growth in the demand for oil and protein during the war, the appearance of Victory Mills Ltd. in Toronto, improved varieties, promotion and extension efforts by Ivan M. Roberts (of the Field Husbandry Dept. of OAC in 1948 but agronomist for Victory Mills by 1953), and improved inoculant produced by the Microbiology Dept. of OAC. From the 1940s until the late 1970s nearly all of Canada's soybeans were produced in five southwestern Ontario counties: Elgin, Essex (incl. Pelee Island in the middle of Lake Erie; a southernmost point in Canada), Kent, Lambton, and Middlesex (see map near front of book).

Key soybean varieties of the period 1940-1970 are shown in Table 3. One key variety was Harosoy, released by HRS in 1951. Other key soybean breeders were Baldur Stefansson (from 1952) at the University of Manitoba that lead to Portage and Altona. G.E. Jones (from 1953) at OAC that led to Vansoy. John Giesbrecht (from 1959) at Morden (southern Manitoba) that led to Morsoy. A.A. Hildebrand was a pathologist who pioneered early research on phytophthora root rot; he worked with Owen to establish a program of disease resistance breeding at Harrow.

The 1960s: In 1961 Dimmock retired from CEF and was replaced by Lorne Donovan as an adjunct to his corn breeding program. In 1963 Owen retired from HRS and was replaced by R.I. Buzzell. Very early maturing introductions came from Sven Holmberg of Sweden. "Holmberg's material proved to be significant germplasm for Canadian soybeans. He derived it from crosses involving Manchurian and northern Japanese germplasm selected under the cool short-season environments (58º30'N) of Fiskeby, Sweden (Tanner 1973)."

Harosoy 63 dominated Canadian soybean production by the late 1960s. During this decade "two Ontario counties (Essex and Kent) produced nearly two-thirds of the Canadian soybean crop."

In 1974 H. Voldeng took over the soybean breeding program at CEF. In 1976 W. Beversdorf joined the University of Guelph with split responsibilities in soybean and field bean breeding and genetics. In 1982 G. Ablett initiated a soybean breeding program at the Ridgetown College of Agricultural Technology (RCAT). In 1976 CEF released Maple Arrow, a milestone cultivar, with parentage that included a Holmberg line. Maple Arrow, which was

© Copyright Soyinfo Center 2014

well adapted to the short-season areas of Ontario, combined with the higher prices of the early 1970s, sparked a soybean expansion northward and eastward.

The last two sections of this chapter are the longest and most detailed.

Figures show: (1) Graph of soybean production in Canada, 1945-1991. (2) Average yield of soybeans in Canada, 1938-1992.

Tables: (1) Early soybean selections and evaluation (OAC No. 211, Mandarin, Habaro No. 20405, Early Yellow). For each is given: Average height (inches), green fodder production (tons / acre). Yield of grain (lbs / acre). Source: Zavitz 1927.

(2) Early Canadian soybean cultivars (OAC 211 {released 1923}, A.K. (Harrow) {1933}, Mandarin (Ottawa) {1934}, Kabott {1937}, Pagoda {1939}, Goldsoy {1938}). For each is given: Source (pedigree, e.g., Habaro). Institution (e.g., OAC). Year licensed or released (1923-1939). (3) Canadian soybean cultivars of 1940-1970 (Harman {released 1943}, Capital {1944}, Manchu (Montreal) {1944}, Harly {1951}, Harosoy {1951}, Acme {1953}, Comet {1953}, Hardome {1953}, Crest {1957}, Merit {1959}, Portage {1964}, Altona {1966}, Harwood {1970}, Vansoy {1970}). For each is given: Pedigree, institution, year.

(3A) Public and private breeding of soybeans, Canada and USA, 1973-1992. The impact of privately funded soybean breeding programs has increased steadily since 1973, when the first privately bred variety was registered in Canada. This "private" variety was bred by N.R. Bradner in the USA and introduced to Canada by St. Clair Grain and Feed (a division of Maple Leaf Mills Ltd.). In 1973 in Canada there were 170 acres of privately bred soybean seed compared with 14,181 acres developed by publicly funded breeders. In 1982 the figures were 6,066 and 27,354 respectively. In 1987 the figures were 28,148 and 29,960 respectively. And in 1992 the figures were 43,004 acres private and 26,727 acres public. In this 20-year period, 120 private soybean varieties and 51 public varieties were registered. 27% of the private varieties and 81% of the public varieties came from U.S. breeding programs.

(4) Typical breeding cycle in the University of Guelph breeding program. Columns: Year and season, activity, location. The typical cycle is about 8 years. (5) Canadian soybean breeding programs (1991): Columns: Organization (public sector and private sector). Breeder (6 + 5 = 11 breeders in both sectors).

The Ontario Soybean Growers' Marketing Board identified export opportunities for both large-seeded yellow hilum cultivars (for tofu and miso) and small-seeded cultivars (natto type) in Pacific Rim markets. "The first natto-type emerged from CEF [Central Experimental Farm, Ottawa] in 1981, six years after D. Durksen of Continental Grain Company reported the potential export opportunity for small-seeded soybean to Japan. King Grain (N.R. Bradner) and CEF (Harvey Voldeng) each released three additional natto-type cultivars (Nattoking 86, Nattoking 87, Nattoking 88, Canatto, Nattosan and TNS) during the 1980s" (p. 8-9). Address: 1. Ciba Seeds, Greensboro, North Carolina; 2. Agriculture and Agri-Food Canada Research Station, Harrow, Ontario; 3. Ridgetown College of Agricultural Technology, Ridgetown, Ontario; 4. Agriculture and Agri-Food Canada Research Station, Ottawa, Ontario.

10261. Inoue, Shôroku. 1995. Kinako dorinku ga kiita! [The kinako drink worked / was effective!]. Tokyo: Makino Shuppan. 72 p. 26 cm. [Jap]
• ***Summary:*** Kinako is roasted whole soy flour. The author was born in 1941.

10262. Kikkoman International, Inc. 1995. Kikkoman industrial products (Brochure). San Francisco, California. 6 p. 28 cm.
• ***Summary:*** On the cover of this glossy color brochure is a 12 oz bottle of Kikkoman all-purpose soy sauce against a textured beige background. "The world's leading soy sauce manufacturer offers two lines of naturally brewed soy sauce for the industrial market: one liquid and one dehydrated. And that means a world of natural flavor solutions for you." For each product is given the product name and code, description, benefits / applications, and ingredients.

The liquid products are: Soy sauce. Preservative-free soy sauce. Lite soy sauce. Less salt soy sauce. Teriyaki sauce. Premium soy sauce–PTN (Higher total nitrogen than regular soy sauce. Ingredients: Water, soybeans, wheat, and salt).

The dehydrated products are: Dehydrated soy sauce–SN-1 (spray dried). Dehydrated soy sauce–KS-32. Dehydrated soy sauce–RS-50. Dehydrated teriyaki sauce. Natural flavor enhancer. Dehydrated soy sauce–HN. Granulated soy sauce.

On the rear cover is a description of naturally brewed soy sauce, and a comparison of it with non-brewed soy sauce (which "is often opaque with a harsh, overpowering flavor and pronounced chemical aroma"). A table lists other industrial products from Kikkoman. Address: P.O. Box 420784, San Francisco, California 94142-0784. Phone: (415) 956-7750.

10265. Nakano, Makiko; Smith, Kazuko. 1995. Makiko's diary: a merchant wife in 1910 Kyoto. Translated with Introduction and Notes by Kazuko Smith. Stanford, California: Stanford University Press. xii + 256 p. With introduction and notes by Kazuko Smith. Illust. Maps. Index. 24 cm. [100+* ref]
• ***Summary:*** This diary was written by Makiko Nakano (1890-1978). A somewhat blurry photo of her (taken ca. 1910) faces the title page. Sample pages from her actual diary are shown occasionally (see p. 56). She is married and her parents also both live in Kyoto. Tofu and miso were a regular part of her family's diet.

Jan. 1 [1910] (p. 57). Jan. 1. New Year's day. Black [soy] beans (*kuromame*) are served for lunch.

Feb. 1 (p. 81): "Because it was a cold night with a howling wind outside, I decided it would be a good chance to make frozen tofu. I took the tofu I bought for this purpose out onto the big roof, poured hot water over it, and left it there overnight. It was bitter cold. I thought my ears were going to freeze." Endnote (p. 82): "5. *Kôya-dôfu* or *shimi-dôfu.* Freezing coarsens the tofu, which then takes on a distinctive flavor when cooked in a mixture of soy sauce and sugar."

"The family custom was to serve the same menu on the first day of each month." That menu was miso soup. salad of grated radish and carrots, and broiled mackerel."

Feb. 2. As soon as she awoke in the morning, she thought about the tofu she had left outside the previous night. She hurried up to the roof in spite of the cold. "It was frozen solid. In fact it was so thoroughly frozen and stuck to the board that pouring hot water over it did not help much to loosen it." She was finally able to dislodge it by pounding it with a hammer for some time. She cooked it with *katsuo-dashi* right away and served it to her husband for breakfast. He complained about it (p. 82).

On Feb. 2 she again put out tofu on the roof to freeze. First thing next morning she rushed up to se it. "It was beautiful! I soaked it in hot water first, then cooked it in soy sauce, *sake,* and sugar. It was perfect and he liked it! My experiment was a success."

Note: This is the earliest English-language document seen (April 2013) that uses the term *shimi-dôfu* to refer to dried-frozen tofu.

Kôya-dôfu is mentioned on page 93. Regular tofu is mentioned on pages 10, 24, 25, 60, 68, 87, 89, 93, 117, 227. Soy sauce is mentioned on pages 82, 83, 225, and 252. Miso is mentioned on about 21 different pages (see index). Address: Kyoto, Japan.

10266. Northrup, Christiane. 1995. Heal your symptoms naturally. Potomac, Maryland: Phillips Publishing Inc. 18 p. 28 cm.
• ***Summary:*** In the section titled "Natural healing for menopause" (p. 1-3) Dr. Northrup advises women to take natural progesterone, since their body stops producing its own progesterone during menopause. This supplement provides relief from both hot flashes and mood swings for many women. "For two weeks out of every month, use a little progesterone cream on the soft areas of your skin, changing sites often... Another form of natural progesterone is plant progesterone. There are many sources. The most common are soy foods and yams (not sweet potatoes)." Also take a safe form of estrogen–estriol. It can be applied as a vaginal cream and may protect against breast cancer. "Natural estrogens such as estriol have been in use for over 50 years, and are considered generic. Although these natural hormones aren't very common in the U.S., estriol is one of the more popular estrogens in Europe." To find a U.S. source call the Women's International Pharmacy at 1-800-279-5708.

"Natural plant hormones with estrogen-like effects are found in soy products, such as soy milk, tofu and miso, in addition to cashews, peanuts, oats, corn, wheat, apples and almonds. Japanese women go through menopause more easily than American women, partly because their diet is so high in the natural estrogens found in soy products. (Note: If you still have your uterus, never take estrogen of any kind without balancing it with progesterone.)"

In the section titled "Natural healing for breast cancer" (p. 6-7) notes that you can lower your risk through diet. "Eat soy products, You can also protect your breasts with tofu. A study published in the September 1994 issue of the *American Journal of Clinical Nutrition* demonstrated that women who ate 60 grams of soy protein per day (about 2 ounces) had changes in the estrogen levels that were similar to the effects of tamoxifen–an antiestrogen drug that is undergoing study as a possible prophylactic agent in women who are at high risk for breast cancer.

"The effects of soy protein on hormonal levels are thought to be from estrogen-like substances in soybeans called isoflavones. These behave like partial estrogen agonists/antagonists, which means they help increase the effects of estrogen in women who have estrogen levels that are too low, while helping to decrease the effects of estrogen in women whose estrogen levels are too high.

"While we're waiting for more research on the subject, I'd recommend adding soy protein to your diet regularly. In addition to tofu, soy protein is found in tempeh, miso and natto. These products are sold in many grocery stores and in almost all health food stores." Address: M.D. (gynecologist), Women to Women, Yarmouth, Maine.

10267. Whitley County Historical Society (Indiana). 1995. Whitley County and its families, 1835-1995. Paducah, Kentucky: Turner Publishing Co. 232 p. See p. 21. Illust. 1 map. 29 cm. *

© Copyright Soyinfo Center 2014

• ***Summary:*** The entry for "Shinzo Ohki" (p. 21) states: "Shinzo Ohki died at age 84 just after beginning a game of golf–a game he loved.

"Ohki was born in Japan in 1883, one of nine children. He studied English and went to night school, saving enough money to come to the United States. He became acquainted with Mr. and Mrs. William Distin of Columbia City, Indiana, and was employed in their home." In 1907 he graduated from Columbia City High School, and in 1911 from New York University.

Ohki founded the Oriental Show-You Co., in Columbia City, Indiana, "for the production of oriental sauce [soy sauce] and chop suey. He sold the company in 1962 to Beatrice Food Company of Chicago [Illinois]. During its operation there, the company distributed its products throughout the Midwest and employed many people.

"Ohki was a trustee and elder in the Columbia City Presbyterian Church and was an active Rotarian."

10268. Gorbach, S.; Golden, B.; Adlercreutz, H. Assignors to Tufts University. 1995? Method of treatment for menopausal and pre-menstrual symptoms (Soy isoflavones and menopause). *U.S. Patent* 5,498,631. Application filed April 1992. *

• ***Summary:*** This is a patent for "method of use." It is a method of lessening post-menopausal symptoms through administration of isoflavones. No one else can make this claim. Another company could sell isoflavones, but without the claim that they relieve menopausal symptoms.

This is a short patent, only 2½ columns long. It contains only one example, which is not an example of the invention. It is a paragraph or two from one of their earlier articles, saying that they measured the estrogen content of urine from Japanese women, and they noticed that it was high in isoflavones. Conclusion: The cause is the soy they consume. They are aware of the article by Wilcox.

10269. Yasuda, Masaaki. 1995? Characterization of tofuyo (Fermented tofu) (Web article). http://www.agriqua.doae.go.th/worldfermentedfood/I _12_ Yasuda.pdf. 12 p. Undated. Printed 3 Nov. 2011. [12 ref. Eng]

• ***Summary:*** Contents: Introduction. Process for making tofuyo (3 steps): 1. Process for making tofu and dehydrated tofu. 2. Process for making rice koji (inoculated with *Monascus* mold to make red rice koji). 3. Soaking and ripening. Chemical and physical characterization of tofuyo: 1. Chemical changes during the ripening period. 2. Physical changes of tofuyo during the ripening period. Physiological function of tofuyo. Characterization of tofuyo making ("The major characteristics in tofuyo making are that we do not have a process of molding on tofu-cubes and brining as done for sufu. Red-koji and awamori are used in our process").

Tables: (1) "Effect of steaming methods and varieties of rice on the production of enzymes and pigment of red koji." (2) "Changes in chemical composition of tofuyo prepared by *Monascus* fungus during the ripening period." (3) "Changes in breaking charcteristics of tofuyo during the ripening period" (breaking strain, breaking stress, breaking energy). Flow chart of making tofuyo.

Figures: (2) Graph of "Changes in protein solubility ratio of tofuyo during the ripening period." The ratio steadily increases.

"Tofuyo is very similar to the foods called sufu, tou-fu-ju and furu in China or tau-hu-yee in Thailand and its root is considered as sufu in China. It was brought to Okinawa from Fujian, China and has been introduced since at the period of the Ryukyu dynasty in the 18th century."

"Traditionally, tofuyo is consumed directly as relish with liquor such as awamori or as cakes served with tea Recently it has been used in sushi, cracker-spread, and many kinds of hors-d'oeuvre in the restaurants. Because tofuyo is a cream cheese-type product and has a mild flavor it would be expected to be suitable for use in western countries due to cholesterol free and low salt vegetable food for health" (p. 7). Address: Dep. of Bioscience and Biotechnology, Univ. of the Ryukyus, Senbaru, Nishihara-cho, Okinawa 903-0213, Japan.

10270. Johannes, Kenlon. 1996. Re: Video on biodiesel production. Letter to Mr. Wilhelm Hammer, Vogel & Noot, Industrieanlagenbau GMBH, 8055 Graz, Austria, Jan. 11. 13 p. Typed, with signature on letterhead.

• ***Summary:*** Vogel and Noot's video on biodiesel plant production was mailed to Mr. Y. Araki, Muko-shi, Kyoto, Japan. Attached to the cover letter are 12 p. of letters and articles related to biodiesel in Japan. One is a small article (no date or source) which states: "Japanese town builds methyl ester facility. Aito-cho, a town in Shiga Prefecture, Japan, is constructing a facility to produce methyl ester from used household edible oil... the town plans to recycle the spent edible oil for use as a biodiesel fuel."

The NSB letterhead has a new logo in the upper left corner. The word "Biodiesel" (a registered trademark) is written in all capital letters with the first three letters solid blue and the rest with a thin black outline. Above and to the left of the "Bio" is the thin blue outline of a white cloud. Address: Executive Director, National Biodiesel Board, 1907 Williams St., P.O. Box 104898, Jefferson City, Missouri 65110-4898.

10271. Hymowitz, Ted. 1996. Thoughts on growing soybeans in tropical Third World countries such as Cuba: Beware of plant diseases and insects (Interview). *SoyaScan Notes.* Jan. 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Tropical countries have no winter, so the diseases and insects continue to accumulate, until they get out of hand. The warmer the country and the closer to the

© Copyright Soyinfo Center 2014

equator, the bigger the problem. The main way of combating diseases is by breeding in resistance to specific diseases; this is done in the southern states of the USA. But there are limits to its effectiveness, so farmers tend to spray on more and more agrichemicals to combat both insects and diseases. Diseases have been devastating to soybeans in Indonesia, Taiwan (which now grows mainly green vegetable soybeans for Japan), Malaysia, and they will become devastating to soybeans in new countries like Cuba. In Southeast Asia, the main disease is soybean rust. Note: Havana, Cuba, lies on the Tropic of Cancer, 22.5º north of the equator; Sao Paulo, Brazil, lies on the Tropic of Capricorn, the same distance south of the equator.

In Illinois almost no chemical sprays are used against insects or diseases, but herbicides are widely used at both the preemergence and emergence stages. These herbicides do not end up in the soybeans, whereas the chemicals sprayed on the plants when they are more mature do end up in the seeds. Address: Prof. of Plant Genetics, Univ. of Illinois, Urbana, Illinois.

10272. Kushi Macrobiotics Corp. 1996. Kushi Cuisine order form. Stamford, Connecticut. 2 p. Revision #3. Jan. 19.
• ***Summary:*** This 1-page (back-to-back) photocopied order form lists 26 meals, seasonings, and snacks, which range in price from $4.39 to $0.99. Soy-related items include: Buckwheat noodles (soba style) + soy-ginger sauce (4 servings, $4.39). Quick brown rice + red azuki beans & onions (4 servings, $2.59). Instant miso soup + garden & sea vegetables + shiitake mushrooms (12 servings, $3.99). Instant chicken-free vegetarian noodle soup + tofu & mushrooms (6 servings, $3.99). Traditional premium (shoyu style) soy sauce (10 oz, $2.99). Wheat-free premium (tamari style) soy sauce (10 oz, $3.59). Postage for $0 to $10.00 is $4.95. Address: P.O. Box 1434, Stamford, Connecticut 06904. Phone: 1-800-200-4184.

10273. **Product Name:** [Mansan Tamari Shoyu].
Foreign Name: Tezukuri osashimi tamari.
Manufacturer's Name: Corti Brothers (Marketer-Distributor). Made in Aichi prefecture, Japan, by Mansan Shoten.
Manufacturer's Address: Corti Bros.: 5810 Folsom Blvd., Sacramento, CA 95819. Phone: 916-736-3800.
Date of Introduction: 1996 January.
Ingredients: Whole soybeans, well water, salt, sake [to preserve freshness].
Wt/Vol., Packaging, Price: 300 ml glass bottle. Retails for $7.99 (Jan. 1996).
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 1 tablespoon (15 ml): Sodium 890 mg. Calories 10. Protein 1 gm.
New Product–Documentation: Sample (product with Label) sent by Darrell Corti of Corti Brothers in Sacramento. Corti Brothers Newsletter. 1996. Winter. p. 5-6. "The Mansan company has been making shoyu since 1874. Both a sake producer and a shoyu brewer, the plant outside Nagoya is a remarkable amalgam of traditional equipment and technology and modern science." Darrell was the first Westerner to visit the plant. He had to remove his shoes and put on clean slippers so as not to introduce foreign microorganisms. "Seeing the battery of enormous cedar casks packed with stones, the daily ladling process, and the scrupulous cleanliness is an extraordinary experience." The processing of this soy sauce takes up to 18 months. Soybean koji is mixed with water and salt, then placed in enormous cedar casks. "A bamboo bucket is inserted into the mash and large flat river stones are piled on top to keep the mash submerged. The fermenting liquid is ladled out of the bucket which acts like a percolator and is poured over the stones daily to trickle down on the rest of the mash, assisting fermentation and concentrating the liquid. With the daily aeration and the long production cycle, the [tamari] shoyu becomes thick and dense. It turns a rich, dark brown color and has an enticing aroma."

Talk with Darrell Corti. 1996. His company started selling this product in Jan. 1996. He visited the factory in Japan in about 1990-91. The company has an excellent laboratory.

10274. Doidge, Brian. 1996. Canadian soybean export prospects for 1996. *Canadian Export Soybeans* (*OSGMB, Chatham, Ontario, Canada*) 9(1):3-4. Jan.
• ***Summary:*** "The recent formation of the Canadian Soybean Export Association (CSEA), serves to focus attention on this rapidly growing sector of the Canadian soybean industry." The 1994/95 crop set a new record with soybean exports of 524,254 tonnes (19.26 million bushels). Another strong year is projected for 1995/06.

Note: The CSEA is an association of major Canadian soybean exporters; the association does not itself export. One of its major objectives is to lobby the Canadian government for funding and promotional support.

Talk with Michael Loh of Canada. 1996. Jan. 24. Members of CSEA include W.G. Thompson, Maple Leaf Foods, Cargill, etc. Nutrisoya, Inc. will also be a member.

A half-page table (p. 3) shows Ontario soybean supply and demand for 4 years from 1992/93 to 1995/96. Under soybean supply, statistics show: Acres harvested, beginning stocks, production, imports, and total supply. Under soybean supply are: Crush, export, seed, other domestic use, and total use. Plus ending stocks and average price per bushel.

A full-page table (p. 4) lists Ontario soybean exports for 4 years from 1991/92 to 1994/95. Ontario's top four export customers in Asia in 1994/95 were: Japan (25,988 tonnes), Hong Kong (23,311), Singapore (22,502), and Malaysia (16,231). Others are Indonesia, North Korea, Philippines, and Taiwan. The top 4 customers in Western

© Copyright Soyinfo Center 2014

Europe in 1994/95 were: Netherlands 73,654 tonnes, Spain 61,134, France 51,119, Belgium 15,428. In Eastern Europe, Poland bough 10,000+ tonnes in 1993/94 and 1994/95 and Uzbekistan bought 7,117 tonnes in 1993/94. Total exports have grown steadily from 238,809 tonnes in 1991/92 to 495,772 tonnes in 1994/95. Address: Education and Business Manager, Ridgetown College of Agricultural Technology.

10275. Ma, C.Y.; Buzzell, R.I.; Jessop, D.B.; Buttery, B.R. 1996. Evaluation of soybeans for tofu processing. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 1(1):1-2. Jan.

• ***Summary:*** Contents: Introduction. Tofu yields and texture. Flow properties of soymilk. 11S / 7S globulin ratio. Correlation among soymilk and tofu variables. Conclusions.

In this study, eight Ontario, five USA, and two Japanese soybean cultivars covering a wide range of protein content were evaluated for their tofu processing properties, using glucono delta lactone as a coagulant. Table 1, titled "Characteristics of soymilk and tofu prepared from 15 soybean varieties," lists the following varieties (in descending order of soymilk protein; a water to dry matter ratio of 7 was used in making soymilk and tofu): BARC-6, AC Proteus, Proto, Harovinton, Raiden, Enrei, HP202, Secord, TK-89, Kanrich, RCAT Calico, Maple Arrow, RCAT Angora, Grande. This table contains the following vertical columns: Soybean protein (highest was BARC-6 at 53.4% on moisture-free basis), soymilk protein (highest was 6.1% from AC Proteus), soymilk yield (highest was 5.7 kg/kg from Maple Arrow), tofu yield (highest was 4.6 kg/kg from Harovinton and Raiden), tofu firmness (highest was 0.42 N/mm from Enrei), tofu rigidity (highest was 1680 G', Pa from Maple Arrow), soymilk viscosity (highest was 7.73 from BARC-6), and soymilk 11S/7S (highest was 5.44 from Secord; It has been reported that soybeans with a high 11S/7S ratio will produce firmer tofu).

Conclusion: "Results show that Canadian tofu varieties such as Harovinton have excellent tofu processing properties (yields, textures, etc.) comparable to or exceeding those of Enrei, a Japanese tofu variety." Address: 1. Centre for Food & Animal Research, Agriculture & Agri-Food Canada, Ottawa, Ontario, Canada; 2-4. Harrow Research Centre, Agriculture & Agri-Food Canada, Harrow, Ontario.

10276. Chandwani, Umesh. 1996. No need for plant expansion: New issue snapshot. *Times of India* (*The*) (*Bombay*). Feb. 12. p. 19.

• ***Summary:*** The capital market often teaches painful lessons to greedy investors. SUL India Limited (formerly Soya Udyog Limited) may be an example of this. The company is now entering the market with a public issue–which does not seem necessary. Last year the company utilized only 57% of its solvent extraction capacity and 31.9% of its oil refinery capacity.

Note: An interesting bar chart next to this article shows foreign direct investment in India, from 1991 to Nov. 30, 1995–in descending order of each country's investment (in million rupees). The USA is by far the largest foreign investor with 146,498, followed by the UK at 39,051 (only 26% as much as the U.S.), and Japan at 18,190.

10277. Nelson, Kent. 1996. Re: Soydiesel. Letter to Kenlon Johannes, National Biodiesel Board (NBB), Missouri, Feb. 23. 1 p. Typed, on letterhead.

• ***Summary:*** "Spoke with representatives at Apollo Group today. They are still very interested in introducing Soydiesel at the '98 Winter Olympics [to be held at Nagano, Japan]." They would like info on the use of Biodiesel (who, what, when, how much) at the 1992 Summer Olympics in Barcelona, Spain, and an update on the 1996 Summer Olympics in Atlanta, Georgia, USA. "Obviously the more precedents the better for us." Address: American Soybean Assoc., 7th floor, Tameike Tokyu Bldg., 1-1-14 Asakusa, Minato-ku, Tokyo 107, Japan. Phone: (03) 5563-1414.

10278. Ferré, Carl. 1996. The greatest gift of all: In memory of Sensei Muramoto–November 5, 1920–October 9, 1995. *Macrobiotics Today* (*Oroville, California*). Jan/Feb. p. 25-26.

• ***Summary:*** Noboro Muramoto (1920-1995) was a teacher of macrobiotics, born in Japan. He was author of the books *Healing Ourselves* and *Natural Immunity: Insights on diet and AIDS.* Carl attended all of Muramoto's lectures at the 1977 French Meadows camp. Almost a year later Carl began

© Copyright Soyinfo Center 2014

to work with Herman and Cornellia Aihara at the Gorge Ohsawa Macrobiotic Foundation in Oroville, California.

The cause of Muramoto's death (at age 75) is not given, but "he died peacefully and without pain... He leaves behind his loving wife, Ida, and older son Yuki, from a previous marriage, and two darling daughters who will perhaps miss him the most."

"Publisher's note from *Natural Immunity:* Herman Aihara.

"Noboru Muramoto was born in Toyama Prefecture, central Japan, in November of 1920 [5 Nov. 1920]. As a young man he wanted to be a doctor of Western medicine, but he studied Oriental medicine, especially Chinese herbal medicine, instead.

After graduating from Tohoku (Imperial) University in economics, he worked in the business field. At that time he had read George Ohsawa's books and studied macrobiotics. However, Ohsawa had left Japan, and he didn't meet him until a few years before Ohsawa's death in 1966. When Ohsawa died, Mr. Muramoto was elected as the head of Nippon C.I. (Centre Ignoramus), the Tokyo macrobiotic center.

"In 1971 we invited Mr. Muramoto to the summer lecture tour held by the George Ohsawa Macrobiotic Foundation in the United States. His lecture at our French Meadow Summer Camp that year was his first English lecture, and it attracted many listeners. One of these people was Michel Abehsera, a New York writer, who later compiled his lecture notes taken from Muramoto's talks and created the book *Healing Ourselves.* This was later published by Avon and has been one of our best macrobiotic books as well as a favorite in the natural self-healing movement.

"After finally emigrating to California in 1976, he established Asunaro, a teaching center, in Sonoma County, where he became one of the first macrobiotic consultants on the West Coast. In 1979 he relocated in southern California, where he continued to teach macrobiotics and to manufacture high quality traditional foods such as miso, umeboshi, and natural salt.

"Mr. Muramoto is an avid reader gifted with a good memory and his lectures always surprise and illuminate the listener, inspiring interest in any subject. In this latest work he introduces his considerable knowledge of Western medicine and history accumulated during his more than forty years of study. However, his writing is not just an accumulation of knowledge but rather the total conclusion of his thinking after four decades of study in sickness, healing, and a macrobiotic approach in diet."

A portrait photo shows Noboru Muramoto.

10279. Quincannon, Jane. 1996. Sensei Muramoto: A gentle man. *Macrobiotics Today* (*Oroville, California*). Jan/Feb. p. 27-28.

• ***Summary:*** "Sensei" is the Japanese word for teacher. The writer studied and worked with Noboru Muramoto. "This scholarly and energetic man was quiet, humble, and one of the least arrogant persons I have ever known. And the hardest working. Sensei was up at dawn each day to write, study history, science or economics, to weigh grams of Chinese herbs for his teas, to clean his sea salt, produce traditionally fermented foods, and tend his vast garden. His vitality and commitment was inspiring.

"At age 15, Noboro Muramoto met George Ohsawa, the founder of the modern macrobiotic movement, after reading the senior teacher's books on healing. As Sensei tells it, 'I had a very bad condition, was overweight, with Vitamin B deficiency, eye trouble, and always tired. I went to the doctor, got treatment, but never got better. I found George Ohsawa's book. It is amazing what kinds of diseases can be cured just by food.'

"'Immediately I decided to try this diet: Brown rice, miso soup, a pickle–very simple food. Soon I got well. Since that time, I never forgot this diet. At George Ohsawa's classes I learned directly from him, a very interesting person. His subjects were almost always philosophy and principles. I had a great interest in the healing power of food. I was his last student, for a short time, but I still received a big influence.'"

Muramoto "Sensei met Herman and Cornellia Aihara shortly after the 1966 death of George Ohsawa. He first met Michio and Aveline Kushi in 1971, when he was invited to lecture in New York City."

"In 1972, Sensei moved to San Francisco to create, with the Aiharas, the Herb Tea Company" [Rising Sun / Herb-T Company].

"In 1983, Sensei Muramoto, with Lino Stanchich, created Great Life Products Company, in order to manufacture and distribute high quality macrobiotic foods made from his special sea salt. Lino and I had the privilege of working with Sensei for three years making varieties of miso and its by-product, tamari, along with barrels of pickled umeboshi plums made with home-grown shiso leaves. Students came to our school, Asunaro, in the hills of Southern California, to study traditional food production and receive Sensei's information and enjoyable teachings... Sensei's dream has been that every macrobiotic household produce such foods as miso, umeboshi, tamari, shoyu, as well as mochi, tofu, tempeh, tekka and other healing, delicious condiments. To that goal he dedicated his life."

"Sensei named his school Asunaro, which is translated from the Japanese to mean 'Tomorrow is perfect.'" "And work he did, up until the last day of this lifetime."

A photo shows Muramoto sensei standing in front of a blackboard, outdoors, at one of the G.O.M.F. French Meadows summer camps. Address: New Jersey.

10280. Holt, Stephen. 1996. New developments with commercialization of soy isoflavones (Interview). *SoyaScan*

© Copyright Soyinfo Center 2014

Notes. March 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Holt's first soy product, Genista (pronounced juh-NIS-tuh), is now on the market. It is basically a soy protein isolate that contains about 2 mg/gm of isoflavones; no isoflavones are added to the product. Genista was just presented yesterday to a large meeting of Midwest cardiologists, and there was enormous interest in the product. The soy protein is much better than Mevacor, a drug used to lower cholesterol, that has many undesirable side effects. Combining James Anderson's meta-analysis studies and his own research, Dr. Holt decided that 30 gm of Genista would lower blood cholesterol by 20-30% over a period of 3-6 months as an adjunct to a low-cholesterol diet. His company is trying to be very responsible in the way they market the product, together with lifestyle changes. They market a health plan, so as not to give consumers a false sense of security.

Take Care, sold by Protein Technologies International, contains anywhere from 0.68 to 2.39 mg/gm of isoflavones; no isoflavones are added. But PTI has not come out with a recommended dose in a format that will lower blood cholesterol. Bodybuilders consume up to 6 gm of protein per kg of body mass. Apparently if they take this protein as soy protein it seems to be efficiently handled, which is quite interesting. Protein Technologies International is conducting a study with Romanian athletes; they are measuring urinary mucoproteins, which are some indicator of efficiency of renal handling.

Genista is based on his own research and that of Dr. James Anderson, which says that if you consume 30 gm of a soy protein isolate containing a standardized amount of isoflavone, you will lower your cholesterol. He has quite good early success. He has a joint venture with Charles Day, PhD, of Kentucky who has a developed an agricultural process for making almost pure isoflavones from soybeans. They have just received investment money from Japan to turn this into a large-scale commercial process. The cost of the key piece of equipment is about $6-8 million. They use a proprietary technique and a patented heat-tank solvent extraction process to process partially defatted lightly heat treated soybean meal (usually used for chicken feed) to extract the isoflavones, which are lipophilic. From 4 tons of the meal he can extract 1 kg of isoflavones of 85% purity; they are composed mainly of genistein. As far as he knows, his is the only company in the extracting isoflavones commercially, and enriching products with isoflavones. He has about $6 million of orders on paper for isoflavones from a variety of nutriceutical manufacturers. Why isn't a big company like ADM doing this? "They are looking at it, but they haven't got the science right or the process; we have."

His second product will be Genista-Plus, which will contain 20 mg/gm of isoflavones and will be enriched with isoflavones. Another product, Phyto-Est, will contain 25 mg/gm of isoflavones; it has come out of the joint-venture agreement with Charles Day and the Japanese. It will on the market as soon as they can get a label on it. These products will be sold in double-oh capsules. The capsules of Phyto-Est are already made.

The Italian National Health Service has been giving out soy protein isolate as a free item in their health care preventive approach, mostly to people with kidney (renal) failure who tend to have high cholesterol levels. It has been shown repeatedly in that experience to be quite effective. In addition, soy proteins lower blood pressure, improve renal efficiency and renal handling, and promote calcium retention–which in turns lowers blood pressure.

Dr. Holt says Twin Laboratories is now selling a product named "Twinlab Genistein." In Jan. 1996 Dr. Holt began publication of a new periodical titled *Nutriceutical News International: An information source on natural remedies.* He is Editor in Chief and president of Natus, Inc., New York. His portrait appears on the front page. Stephen Yaskin, M.S., is editorial editor. To subscribe, send $19.95 for 6 issues, payable to Natus, Inc., 200 Clearbrook Rd., Elmsford, NY 10523.

Note: This is the earliest document seen (Sept. 2001) that contains statistics about the soy estrogen industry and market. Address: M.D., Natus Inc., 2388 28th Street, Long Island City, New York 11105. Phone: 718-721-1496.

10281. Macdonald, Bruce. 1996. New developments at Macrobiotic Company of America (MCOA). Acquisition of Mountain Ark Trading Co. in Fayetteville, Arkansas (Interview). *SoyaScan Notes.* March 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Bruce's Macrobiotic Company of America (MCOA) used to sell tofu kits to Mountain Ark but then they stopped re-ordering because they planned to sell the company. When Mountain Ark was under the stewardship of Frank Head and others they were macrobiotic oriented. But 3½ years ago Frank sold the company to Ozark Cooperative Warehouse in Fayetteville. "There wasn't a person in that organization that ever had a bowl of miso soup in their life–I don't think. So they began to steer the company away from macrobiotics toward a mainstream natural food company. One of the first things they did was to put in a line of tomato products. So their macrobiotic customers began to run away."

MCOA acquired Mountain Ark on 1 Feb. 1996. Bruce purchased the company name, toll-free phone number, and mailing list of 5,700 customers. He did not purchase any of their inventory. The company is now located at 799 Old Leicester Highway, Asheville, North Carolina 28806–at MCOA. Phone: 1-800-643-8909. Bruce plans to carry the tofu kit on a regular basis–though it sells slowly. The kit is imported from Japan. The cost changes with each container imported. It retails for about $20-25.00. In Oct. 1993,

© Copyright Soyinfo Center 2014

Mountain Ark sold the kit for $36.99 + $4.95 shipping.

The innovation of this whole scenario is that, over the last 10 years or so, all of the companies that were involved with macrobiotics either went bankrupt or ran away from it. When Bruce took over MCOA 3 years ago he changed its direction and went headlong into becoming the largest variety supplier of macrobiotic foods on the planet. The company started to grow–even in the big natural foods stores–such as Fresh Fields. Macrobiotic foods is the most misunderstood category in the health food industry. For the big stores he printed up a best-seller list of 200 items that could be put in a "macrobiotics section." Now Bruce is in the process of putting macrobiotic sections in all the Fresh Fields stores. "Because we import direct then distribute direct to retail stores, we are able to offer them prices on these foods that are 25-30% less than a normal distributor. The old way of doing business was, for example, Eden Foods imports it, marks it up 30 or 35%, and sells it to Cornucopia, who marks it up 25-30% and sells it to the store." His wholesale and retail catalogs have a great selection of foods. The only difference is that the retail prices are 10% higher. These low retail markups give a real break to macrobiotic consumers. MCOA also provides information by phone.

Note: MCOA is owned equally by Muso Shokuhin of Japan and by Bruce Macdonald. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

10282. Macdonald, Bruce. 1996. Big problems at Kushi Macrobiotics (Interview). *SoyaScan Notes.* March 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Michio and Aveline have big problems on their hands at their new company Kushi Macrobiotics. "Basically, you've got a bunch of high rollers from the commercial food industry thinking that, with slick packaging and cheap ingredients, they can create a product line that is double the price of Fantastic Foods' and not nearly as good in quality... They just don't have a clue of the sophistication of the natural foods shopper. They've got five guys each making $125,000 a year, and they haven't sold a thing yet. Norio Kushi is making $80,000 a year, and he is barely at the level of knowing how to brush his teeth in terms of business experience."

Its just amazing. They raise $1 million privately to start off with. They blew through that with surveys, etc. As Jimmy Silver said aptly, 'Basically what they found out with their million dollars was that people weren't interested in what they were selling.' What they are doing is basically the antithesis of what macrobiotics stands for. Then they proceeded to use no organic ingredients and made it a corporate policy to not use anything from Japan–except brown rice vinegar, of which they are buying a low quality product from Eden Foods. They then raised 6 million with a public offering, and now have less than $4 million left. They are going through money like crazy. They have a 40,000 square foot warehouse in New Jersey, with 10,000 square feet of offices and 3 people in there. None of the distributors that Bruce knows have picked up the Kushi line.

One little disaster got the president fired. They did a line of 4-5 bean dishes. Some jerk didn't realize that you don't add salt to beans when you cook them. So they advertised a 25-minute cooking time on the package; well you could cook this for 25 years and it would never be right. So this guy ordered a production run worth hundreds of thousands of dollars, without checking it with Michio, who is in charge of quality control. It is all garbage.

So 3 weeks ago Aveline called up Bruce in a panic. She thought she was creating another Erewhon. There is a peculiar lack of judgment throughout this whole process. Since Michio is in charge of quality, they do production runs of the whole line and then they send the finished products to Michio. Aveline tried tasting this bean dish and a few others and she was horrified, just beside herself. She says to Bruce, "We want to buy your company." Bruce says, "Okay, $5 million and you can have it." Bruce went to the Kushi's home in Brookline and spent 3 days with them. Aveline looks better and healthier than she has in years. They are now planning to go an acquisition binge; the first company they have their sights on is some cracker company. "I laid out a plan for them, including a major change in the 7-member board of directors. Michio can remain as chairman. You can keep three of the 'financial wizards' on the board, but the other three have got to be Yuko Okada (of Muso Shokuhin), Christopher Dawson, and me. We'll take all the losses at the beginning, then turn the company into a worldwide macrobiotic company."

Bruce's Macrobiotic Company of America is doing very well financially. When he acquired it, sales were less than $900,000 a year. This year he will probably do $3 million. Everyone from Lenny Jacobs on down told Bruce that macrobiotics was dead. True, it has changed, but it alive in new ways. For example, a guy name Horse Schultz is the chairman of the Ritz-Carleton Hotel Chain; he is having his chefs trained at the Kushi institute, and has sent out a memo to all of his hotels worldwide that by a certain date they will be offering macrobiotic quality meals at all hotels in addition to the traditional fare. They are converting one hotel at a time. Bruce is now flying miso down to Cancun. Horse Schultz's cancer is now in remission. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

10283. Mountain Ark Trading Co.; Macrobiotic Company of America. 1996. The "new" Mountain Ark consumer direct catalog–spring 1996 [Mail order]. 799 Old Leicester Hwy., Asheville, NC 28806. 37 p. March 15. 28 cm.
• ***Summary:*** This is a very comprehensive mail order catalog, with an excellent index, for macrobiotic whole

© Copyright Soyinfo Center 2014

foods, specialty cookware, cookbooks and books on natural healing, futons, furniture, etc. Soy-related products include: Aduki beans–precooked, amaranth, amazaki concentrate, amazaki [amazake] pickles, arame (sea vegetable), barley malt, black soybeans, brown rice malt, brown rice syrup, cookbooks, dulse (sea vegetable), fu (dried wheat gluten), green nori flakes, hamanatto, hijiki, Hokkaido azuki beans, Hokkaido black soybeans, Japanese plums (*umeboshi*), jinenjo soba, Job's tears, kamut, kanten bars, kelp granules, kinako, kombu cha, kuzu, miso, mochi, natto miso, natto starter spores, nigari, nori, quinoa, sea palm–California, seaweed sesame shake, seaweed cookbook, seitan, shoyu, soy sauce, tamari, tofu making kit, tofu–dried, wakame. Many of these products are imported from Japan.

Bruce Macdonald of Macrobiotic Company of America acquired the company from Frank Head of Fayetteville, Arkansas, on 1 Feb. 1996. The entire catalog can be viewed on the Internet at http://www.mountainark.com. Address: Asheville, North Carolina. Phone: 1-800-643-8909.

10284. Yoshihara, Yasuo. 1996. Update on Shin-Mei-Do Miso Co. (Interview). *SoyaScan Notes.* March 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Yasuo speaks with a slight Japanese accent. Shin-Mei-Do Miso Co. is active and growing. They make brown rice miso and barley miso, each sold in 450 gm and 4.5 kg plastic tubs. Lulu does the bookkeeping. The demand for their miso on the west coast of Canada is increasing so they stopped distributing to Eastern Canada. Within the last week a person from eastern Canada called him about starting a miso factory in eastern Canada, and he had a similar enquiry last year. He may be interested in teaching potential miso makers as an apprentice for pay–depending on the conditions. Shin-Mei-Do sells all of its miso to natural foods wholesalers. Amano in Vancouver makes most of the miso sold in Oriental food stores in British Columbia. Moreover, a huge amount of miso (many tons) is imported from Japan. Westbrae packages imported Japanese miso and has nothing to do with Amano–as far as Yasuo knows. Yasuo doubts that Amano ever made miso for Westbrae. Yasuo has never made miso to be sold under another brand. Shin-Mei-Do is basically still a very small operation. Yasuo does not want to become a big company where the miso is made largely by machines. Address: Shin-Mei-Do Miso Co., 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.

10285. Skiff, James. 1996. Troubles at LongLife Foods in Perham, Minnesota (Interview). *SoyaScan Notes.* March 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** LongLife Foods is in a financial squeeze with an uncertain future. Jim is no longer actively involved with the company, though he is still on the board of directors and still has his money in the company. He is now trying to resign from the board. Jim originally raised all of the money to start the company; Shichi presented himself as an accomplished tofu maker–which, it turns out, he was not. Shichi has taken control of the company and is trying to raise money. The funds he thought he was going to get from Japan never materialized. He does not have the money to buy Jim out. It is a strange situation. Shichi wants to make the best quality Japanese-style (soft) tofu–even if that is not what the market wants. Jim's has stepped back, knowing that his only hope is if the company somehow succeeds.

Jim is looking to start a new company and has been in touch with William Roach of Kyoto Food Corp. in Terre Haute, Indiana. He would like to make firm tofu, plus perhaps egg roll wrappers, wonton skins, and wheat gluten. He has a building (28,000 square feet) in southern Minnesota. Jim formerly worked with Foremost, in their dairy division, specializing in international management. He spent much time out in the Pacific Basin. Address: Perham, Minnesota 56573. Phone: 218-346-5159.

10286. Skiff, James. 1996. New developments with tofu and soybeans in North Dakota (Interview). *SoyaScan Notes.* March 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** A very interesting and active man, and an expert on tofu, is Dr. Sam K.C. Chang, Associate Professor in the Food and Nutrition Department, North Dakota State University, Fargo, North Dakota. Sam originally came from Taiwan and he has many strong contacts there. He is doing research on soybean varieties best suited for tofu, has a tofu pilot plant obtained from the Taiwan Tofu Makers Assoc., and has a number of Taiwanese students, including one who has graduated and is now producing tofu at Nasoya. Sam does lots of work for the North Dakota Soybean Association. He also breeds soybeans for food use, and the Sinner Brothers both support his research and grow out the soybeans that he breeds.

Plenty of soybeans are grown in the Red River Valley area of North Dakota, which has red soil–some of the best in the USA. The Sinner Brothers are one of the big growers, with more than 2,000 acres in soybeans. Their soybean variety is Proto, which is not as large as most Japanese varieties but a little larger than typical U.S. varieties. It has a beige hilum, which makes tofu less white than is ideal. The protein level is not as high as desired for tofu. Sam Chang has been experimenting with Proto soybeans in his tofu plant and labs. The 2-3 Sinner brothers are part of a company named Sinner Bros. and Bresnahan (P.O. Box 549, Casselton, ND 58012. Phone: 701-347-4900). Casselton, where they have both their farmland and office, is a small town 15 miles directly west of Fargo. Bob Sinner markets and exports lots of Proto soybeans (along with beef) to Japan, where they are used mostly in foods.

The Sinner family is one of the most important in

© Copyright Soyinfo Center 2014

agriculture in North Dakota. Bob's father, George Sinner, was governor of North Dakota for several terms and was recently a nominee for U.S. Secretary of Agriculture. Dan Glickman of Kansas won the job in Feb. 1995 but George Sinner was one of the top 2 or 3 people under consideration.

Update: 1997. Dec. 8. Jim will soon be meeting with Bob Sinner, who does not own a soybean cleaning plant. Jim would like to work with him, to clean his soybeans as part of a larger program of offering non-GMO soybeans. The Sinners now grow soybeans in North Dakota, South Dakota, Minnesota, Michigan, and New York. Next year they will add production in Nebraska and perhaps one other state. Bob apparently has two big customers in Japan; both are large tofu manufacturers. Most of the beans Bob sells are not organic–because organic soybeans are now too expensive and too scarce. Jim will talk to him about marketing his soybeans as GMO-free. Address: Perham, Minnesota 56573. Phone: 218-346-5159.

10287. *Food for Thought* (*Hinoichi Tofu, Los Angeles, California*). 1996. Hinoichi turns 50 in grand style [in 1997]. First edition. p. 1. [Eng]

• ***Summary:*** "Hinoichi just gets better with time. Hinoichi long known for its leadership in bringing tofu to American consumers, first opened its doors in Los Angeles in 1947. Next year, as Hinoichi celebrates its first anniversary in business, it will open a brand new production plant. House Foods of America, marketer of the Hinoichi brand, has announced the new plant will be located in Garden Grove, California, and will feature state-of-the-art equipment. Hinoichi will be ready to meet America's growing tofu needs into the 21st century."

Note: This 4-page newsletter (8½ by 11 inches) also contains the following: Tofu–The joy of soy: Past, present and future. Bring salt intake down by spicing up your diet. Phascinating [sic] phytochemicals. Tofu: The right food for any diet. Two clip and save recipes. Two coupons for Hinoichi Tofu: 25¢ off. On account of your bones. Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

10288. *SoyaScan Notes.* 1996. Interesting new developments at the Natural Products Expo West (Anaheim, California, March 15) (Overview). March. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** The big development was the introduction of two refrigerated, extended shelf life (ESL), gable-top, regional soymilk products. One was Silk, by White Wave, and the other was by Nancy Potter.

Kushi Macrobiotic Corp. is in the process of changing its name to Kushi Natural Foods Corp.

An aseptically packed non-dairy beverage named "Organic Oat Milk" was also introduced (with T-shirts) from Sweden. It tasted good. The U.S. distributor is Nordic Farmers, 4848 South Highland Dr., Suite 211, Salt Lake City, Utah 84117. Phone: 801-272-9759. But as of May 17 they have not yet gotten any product in stock.

Michael Potter was conspicuous by his presence at the show. He had a physical problem (perhaps some type of palsy–not a stroke; one half of his face froze up and it was very noticeable), but it has since gotten much better, though there is some lingering effect. When he was in jail, he had an altercation with someone and his head was smashed against a desk; at the time it injured one of his eyes, which has never been quite the same again. He swiped a shuttle van and was soon in handcuffs. Several weeks after the show, during the week of April 4-8, Michael was in San Francisco (where his son Ki lives) talking with his Japanese partners in American Soy Products (ASP) about investing more money in the company to expand the size of the soymilk plant in Michigan; the plant is apparently running at near full capacity.

10289. Soyfoods Association of America, Standards Committee. 1996. Voluntary standards for the composition and labeling of soymilk in the United States. Accepted by the Soyfoods Association of America, March 1996. Bar Harbor, Maine. 15 p. Unpublished manuscript. 28 cm. [22 footnotes]

• ***Summary:*** Contents: Purpose of voluntary standards. History and terminology: History, existing standards in other countries, terminology. Definition and classification of soymilk products: Soymilk definition, soymilk classification (soymilk, soymilk drink, soymilk powder, soymilk concentrate). Labeling of soymilk products: General, modifiers to the statement of identity, use date labeling, refrigeration information labeling. Microbiological guidelines for soymilk. Standards Committee; Adoption and amendment of standards.

A table (fig. 1, p. 5) titled "Soymilk standards for various countries," lists minimum protein, fat, and soybean solids requirements for various soymilk products. In the following, the minimum protein content is given for various products: Japan (soymilk 3.8%, blended soymilk 3.0%, soymilk beverage 1.8%, soy protein beverage 1.8%), Taiwan (soymilk 2.6%, formulated soymilk 2.0%, soy drink 1.4%), Singapore (soymilk 2.0%, soy drink >2.0%), France (soymilk {tonyu} >3.6%, fortified soymilk {extra tonyu} >3.8%), and Thailand (soymilk 2.0%). Fat content ranges from 0.5% in Taiwan to >1.5% in France; it is not specified in Japan or Singapore.

A table (fig. 2, p. 11) titled "Soymilk composition," defines four different types of soymilk in the USA. The three numbers after each are for minimum percentages of soy protein, soy oil (fat), and total solids: Soymilk 3.0, 1.0, 7.0. Soymilk drink 1.5–2.9, 0.5, 3.9. Soymilk powder 38.0, 13.0, 90.0. Soymilk concentrate 6.0, 2.0, 14.0.

Note 1. These standards, which are very similar to the last draft, were accepted by the Soyfoods Association of America in March 1996. A note on page 2 of a final draft

© Copyright Soyinfo Center 2014

circulated in April 1997 states that the Soyfoods Association was formed in 1989; it was actually established in July 1978.

Note 2. In a letter dated 27 June 1996, Peter Golbitz, Standards Committee Chair, notes that the Soyfoods Association of America "is filing a formal 'Citizen's Petition' for a common and usual name for 'soymilk.' Along with this petition, we will be submitting a copy of our standards. We need to have copies of all documents cited in our standards when we make this filing." He asks that Shurtleff send copies of 10 hard-to-find documents located in the Soyfoods Center library. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207/288-4969.

10290. Yasuda, Masaaki; Kinjyo, Sakie; Miki, Eizo. 1996. Okinawa ni okeru tofuyo no seizo ni kansuru kenkyu. XI. Tofuyo no jukusei katei ni okeru hadan tokusei, kuripu kyodo oyobi bisaikozo no henka [Studies on the manufacture of tofuyo in Okinawa. XI. Changes in breaking characteristics, creep behavior and microstructure of tofuyo during fermentation]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 43(3):322-27. March. [8 ref. Jap; eng]

• ***Summary:*** Tofuyo has a unique texture like that of cream cheese. Changes in the textures and microstructures of tofuyo made with red koji (genus *Monascus*) and/or yellow koji (genus *Aspergillus*) are investigated. The values of breaking stress and breaking energy for tofuyo decreased during the ripening period. The value of each viscoelasticity coefficient on the creep analysis of tofuyo also decreased during ripening. "An electron microscopic observation revealed that fat molecules seemed to bind with proteins," and that "the structure of soybean protein which formed the body of tofuyo changed from fibriform to small particles which connected each other during fermentation." These phenomena appear to be strongly affected by the degree of degradation [hydrolysis] of soybean protein in the tofu. Address: 1-2. Dep. of Bioscience and Biotechnology, Univ. of the Ryukyus, 1, Senbaru, Nishihara-cho, Okinawa 903-01.

10291. Bloch, Hannah; Mondi, L.; Nash, J.M.; Smilgis, M. 1996. The man's cancer: Prostate cancer is reaching epidemic levels in the United States. *Time.* April 1. p. 58-65. *

• ***Summary:*** Both genetics and environment seem to influence prostate cancer. Black Americans have a 37% higher risk of contracting the disease than whites. In countries such as China and Japan, where diets are low in fat and high in vegetables, the incidence of prostate cancer is extremely low. But prostate-cancer rates for first- and second-generation Japanese are considerably higher than in Japan. This suggests an environmental factor, probably the change to a Western diet.

Researchers at Sloan-Kettering have found that tumors grow more rapidly in mice fed a high-fat diet than those on a low-fat diet. And when the mice on high-fat diets are switched to low-fat ones, the growth of their tumors slows.

Dr. Milken, a physician in Santa Monica, California, who works with prostate-cancer patients, serves only non-fat, vegetarian meals, prepared by a private dietitian. A typical lunch might contain a tofu egg-sandwich (the "egg" is actually tofu with mustard and spices), a soy-based drink, and Egg McNothing (a fat-free crumpet with soy cheese, vegetarian bacon, and scrambled egg whites).

"Why all the tofu and soy? Milken points to tests showing that soy products reduce tumors in rats."

10292. *SoyaScan Notes.* 1996. Big changes at Muso (Overview). April 18. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Muso's business has been severely hurt by the yen-dollar exchange rate, and the fact that Japanese exports are becoming much more expensive for foreigners. So Muso is now trying to import organically grown foods and ingredients–such as organically grown soybeans.

10293. Elliott, Julia. 1996. Re: Using soy to treat menopausal symptoms–A summary of personal experience. Letter to William Shurtleff at Soyfoods Center, April 22. 1 p.

• ***Summary:*** This letter is a summary of Julia's 1996 book: "This book pertains to an alternative to traditional hormone replacement therapy. It was brought about due to the side effects that I had experienced while on traditional Premarin and Provira hormone replacement therapy. [Note: Premarin contains conjugated estrogens and Provira contains medroxy progesterone; many women take the two drugs together]. Among the problems that I was experiencing were weight gain, water retention, mood swings and symptoms that likened gall bladder problems. Testing proved that there were no gallbladder problems.

"I was at an age that didn't suggest menopause, 36, thus my doctor at that time prescribed the Premarin / Provira program. I wanted to know more about why and what my options were. I sought literature pertaining to this issue and found that there was very little. I did find that there were some herbal remedies to ease menopausal symptoms, but some of that information sounded pretty profound and quite involved. I wanted to find something that was simple and easy to use. I was interested in retaining an estrogen level that would help protect me from the osteoporosis and heart disease that sometimes occur with menopause. The herbal remedies did not seem to do all of that.

"In a conversation with a friend from Japan, he remarked that women in his country did not seem to suffer menopausal symptoms like American women. I delved into the Japanese culture to find out what the answer was. It seems that the answer was in their diet. Grains, rice, vegetables, and SOY. They ate little or no red meat, and they didn't eat the dairy products that Americans do. In

© Copyright Soyinfo Center 2014

my research I found that there are doctors and researchers conducting case studies on menopausal women consuming soy and soy products. They were in the early stages in 1994, and didn't have results at that time.

"I decided to have my own personal case study. I started eating soybeans every day in an effort to raise my estrogen. It worked. My doctor has charted my progress since the first day. He claims 'We educated you about menopause, and you educated us about the soybean.' My estrogen levels today are at the level of a woman only half way to menopause.

"This book tells more about the details involved and includes some recipes to use. This is information that should be available to women in an effort to show them that there are alternatives for those who are not candidates for the traditional HRT. It is written in a personal style that is easy to read and straight to the point. It does not eliminate the doctor; however, it does eliminate the prescribed medication. It is necessary to have a doctor monitor you.

"You do need to replace your estrogen. Many women claim they breeze through this period of their lives, but they are not aware of the hidden damage that can result in the absence of estrogen: osteoporosis, heart disease, deterioration of skin tissues, hair (sometimes it leaves your scalp and ends up on your face), hot flashes, etc. Without proper estrogen balance we can lose our femininity. At this age we really don't want that."

Follow-up talk with Julia. 1996. Sept. 22. She has started doing workshops at a local health food store, sharing her experiences concerning soy and menopause with about 15 women at a time. Address: 10 Guyton St., Kingston, New York 12401. Phone: 914-338-6368.

10294. Saekel, Karola. 1996. Tallying the tofu. *San Francisco Chronicle***.** April 24. Food section. p. 2, col. 5.
• ***Summary:*** This article gives the results of a special taste panel which rated the flavor and texture of ten brands of tofu sold in the San Francisco Bay Area. The article begins: "Thanks to better nutrition information and the availability of good and easy recipes, tofu has escaped from its niche as a strictly ethnic and/or health fanatics' food and found its way into many Western kitchens."

The rankings: 1. Trader Joe's tofu (19 oz, $0.89 = $0.75/lb!). 2. Hinoichi (14 oz, $1.09). 3. Wo Chong (14 oz, $0.79). 4. Global Protein Foods (12 oz, $1.89). 5. Golden Gate (19 oz, $1.63). 6. Soy Deli (made by Quong Hop & Co., 12 oz, $0.99 to $1.39). 7. Mori-Nu (shelf-stable, 10.5 oz, $0.85 to $1.29). 8. Kikkoman (shelf-stable, 10.5 oz, $1.29). 9. Azumaya (14 oz, $0.98 to $1.19). 10. Wildwood Natural Foods (16 oz, $1.39 to $1.59).

Note: This is the earliest (and only) English-language document seen (April 2003) that uses the term "health fanatics" (or "health fanatic"). Address: Chronicle staff writer.

10295. Esposito, Andi. 1996. Nationwide tofu boom has Nasoya Foods working round-the-clock. *Sunday Telegram* (*Worcester, Massachusetts*)**.** April 28. Business section.
• ***Summary:*** Every minute a 36-pound block of tofu slides off the Nasoya production line. It is cut into 1-pound cakes, packed in plastic tubs, bathed with artesian well water, sealed, and pasteurized. The processing lines are now working 24 hours a day, six days a week. The 28,000 square foot factory and its 68 employees are so busy that there is barely room to install the sealing equipment just arrived from Japan. The administrative staff has had to move across the street. It was only 6-7 years ago that Nasoya made tofu on one shift, 3 days a week. But production has risen 20 percent in just the last 12 months, according to Frederick B. Ceconi, plant manager. Today the plant makes 12 million pounds of tofu a year. It is sold at more than 3,000 grocery stores, and more than 60% of the sales are to mainstream supermarkets. The company, which was purchased in 1990 by Hong Kong-based Vitasoy, needs a new building.

The latest tofu boom dates from the publication of an article by Dr. James Anderson in the Aug. 3, 1995 issue of the *New England Journal of Medicine***.** He reported that soy protein can lower serum cholesterol levels, providing protection against heart disease. Address: Business Editor.

10296. Akiyama, Y. 1996. Effects of temperature and osmotic pressure [on] soaking of soybeans. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 138-43. [4 ref]
• ***Summary:*** When making tofu commercially, the greater part of the processing time is the water. Soybean should be soaked for 10 to 18 hours depending on the water temperature and any substances dissolved in the water. Adjustment of the soak time is therefore a key to flexible production management. Soybeans are normally soaked in water at ambient temperature to avoid the fuel costs of heating or cooling the water.

The kinetics of water absorption by soybeans were studied. The rate of water absorption could be expressed by a semi-empirical equation which is analogous to Newton's law of cooling. "The rate of heat loss of a body is proportional to the difference in temperatures between the body and its surroundings." Water uptake is slower if "hard water" is used. Hard water is water that has high mineral content (in contrast with "soft water").

Figure 1 shows the rate of water absorption by soybeans at three temperatures: 20ºC, 30ºC, and 420ºC. Absorption is (of course) fastest at 40ºC. Address: Akita Research Inst. of Food & Brewing, 4-26, Sanuki, Arayamachi, Akitashi Akita

(010-16), Japan.

10297. Isobe, Seiichiro; Uemura, Kunihiko; Noguchi, Akinori. 1996. Dewatering of soybean residue "okara" by electro-osmosis and screw press. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 523-27. [5 ref]
• ***Summary:*** "The Screw press is used for liquid-solid separation in food processing. To enhance the separation efficiency and the application of dewatering from soybean residue 'Okara,' a twin screw press with ceramic filter was designed and examined. Electro-osmosis also reduce the water in the Okara. The water content was decreased by the screw press treatment from 85% to 74%. The batch test of dewatering from Okara with electro-osmosis also reduced the water up to 40% and the sample was heated by ohmic-heating during treatment (8OV). Electro-osmosis treatment using low frequency (O.5Hz) alternative current (AC) was attractive to reduce the water and heat the sample. Electro-osmosis has the effects of dewatering and pasteurization of Okara. We are trying to combine it into a continuous system (cf. screw press)." Address: Food Engineering Lab., National Food Research Inst., 2-1-2, Kannondai, Tsukuba, Ibaraki 305, Japan.

Address: Food Engineering Lab., National Food Research Inst., 2-1-2, Kannondai, Tsukuba, Ibaraki 305, Japan.

10299. Monma, M.; Terao, J.; Ito, M.; Saito, M.; Chikuni, K. 1996. Carotenoid components in soybeans. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 51-57. [15 ref]
• ***Summary:*** Carotenoids are a widespread class of natural pigments that is responsible for the color of many fruits, flowers, insects and marine animals. Lutein was the major carotenoid component in common yellow soybeans. Xanthophylls were found in a variety having a black seedcoat and in several mature soybeans having a green seedcoat. A trace amount of Beta-carotene was found in a Japanese variety of green soybean.

Table 1 shows the lutein and Beta-carotene contents in mature and immature soybean seeds in micrograms/gram. Among four varieties of immature seeds (three Enrei varieties and one Koitozairai) the lutein content ranges from 9.71 to 24.30, and the Beta-carotene content ranges from 4.67 to 45.30. Address: National Food Research Inst., Ministry of Agriculture, Forestry, and Fisheries, Tsukuba, Ibaraki 305 Japan.

10300. Morinaga Nutritional Foods, Inc. 1996. Good things come in threes [Mori-Nu Mates] (Ad). *Natural Foods Merchandiser.* April. p. 33.

All natural. Dairy-free." Blend one packet of this mix with one package of Mori-Nu Lite Tofu. Two packs of Mori-Nu Lite (Firm and Extra Firm) are shown.

This ad also appeared in the October issue (p. 37). Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10301. Nakajima, Mitsutoshi; Snape, Jonathan B.; Reddy, K. Kondal; Nabetani, Hiroshi. 1996. Application of membrane technology to soybean processing. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 508-14. [15 ref]
• ***Summary:*** The various types of membrane technology include ultrafiltration (UF), microfiltration (MF), nanofiltration (NF), electrodialysis (ED), and reverse osmosis (RO).

Contents: Abstract. Introduction. Soybean oil processing: Solvent recovery (by reverse osmosis), degumming (UF membranes can be used to remove phospholipids from soybean oil in hexane), lipid separations (separation of tri-, di-, and mono-glycerides and fatty acids from soybean oil by membrane technology), removal of contaminants (such as nickel catalysts from hydrogenated oils), removal of pigments (pigments in soybean oils include chlorophyll, carotenoids, xanthophyll, and their derivatives; use of expensive bleaching earth might be eliminated), wastewater treatment (a typical soybean oil extraction plant {1000 tonnes/day} generates 1,000 cubic meters of waste water each day; each liter contains 100 mg of suspended solids). Soybean protein processing and Beta-amylase production: Soybean saccharides processing, soysauce and

© Copyright Soyinfo Center 2014

other seasonings production. Conclusions.

Membrane technology has been widely accepted in many separation processes, including bioseparation. Although only a few industrial membrane processes have been installed for soybean processing, membrane technology has many potential applications in this broad field. One of the main advantages of membrane technology over conventional processing operations is that much lower temperatures can be used. This leads to large saving in energy costs associated with heating, and minimizes the thermal damage to heat-sensitive soybean components. Figure 1 shows how soybean oil might be processed using MF, UF, NF and RO purification near the beginning of the process, and nitrogen with gas separation membrane between the "refined soybean oil" and "packed oil" stages.

Ultrafiltration can be used to remove low molecular substances such as phytic acid. "When soy milk was processed by UF diafiltration, 86% of the oligosaccharides were removed," and the soymilk quality was improved because off-flavors were reduced (Asahi Kogyo Group, 1987). The Kibon [Kibun] Group (1987) has used UF to concentrate soymilk. Soybean has high Beta-amylase activity, and soybean whey has been used for Beta-amylase production. Recently a new industrial plant for Beta-amylase production that uses defatted soybean meal has been installed (Nomura et al. 1994). (p. 512).

Note: This is the earliest document seen (March 2002) that uses the term "nanofiltration" in connection with soy. Address: 1&4. National Food Research Inst., MAFF, Tsukuba, Ibaraki, Japan 305; 2. Nippon Lever B.V., Shibuya, Tokyo, Japan 150; 3. AP Agricultural Univ., Hyderabad, India.

10305. *Soyafoods* (*ASA, Europe*). 1996. Kikkoman to build European production plant. 7(1):2. Spring.

• ***Summary:*** Kikkoman, the world's largest maker of soy sauce, plans to built its first European plant in Hoogezand, the Netherlands. Work is scheduled to start in July 1996 with a completion date of March 1998. The plant will have a capacity of about 4 million liters/year. Kikkoman currently imports about 20 million bottles of soy sauce to the European market from its plant in Singapore.

But Kikkoman may face some new competition. A Japanese company named Wadakan has announced that it also plans to make soy sauce in the Netherlands, in

© Copyright Soyinfo Center 2014

Zoetermeer, starting in Nov. 1996, with initial production of 10 million liters/year.

Kikkoman also has plans to build a second plant in the United States, to complement their existing plant at Walworth, Wisconsin.

10306. *Soyafoods* (*ASA, Europe*). 1996. New soya products at FiE '95. 7(1):6-7. Spring.
• ***Summary:*** "Every year the Food Ingredients Europe Exhibition seems to get bigger and bigger, with more exhibitors and more visitors." Last year's FiE, held 7-9 November 1995 in Frankfurt, Germany, was no exception, and many soy products–especially soy sauces and related seasonings–were on display.

Miwon Co. Ltd. (Seoul, Korea) has developed a range of ingredients under the brand name SoyaDeli. Products include FiberPro, PeptiPro, FlavorPlus, and FlavorBase.

Kikkoman Trading Europe GmbH (Heerdter Lohweg, Germany) introduced FVP Paste, made by enzymatic hydrolysis and concentrated in a vacuum.

Wan Ja Shan International (Middletown, New York) is one of the largest makers of naturally brewed soy sauce and Oriental sauces in the USA. Their products include soy sauce, preservative-free soy sauce, stir-fry sauce, hoisin sauce, teriyaki sauce, tamari soy sauce, dehydrated soy sauce, dehydrated teriyaki sauce, and clear soy sauce.

Ajinomoto Europe Sales GmbH (Hamburg, Germany) was selling San-J Tamari in both liquid and dried forms.

Nikken Foods (Tokyo, Japan) is a large maker of natural food flavors. Exported mainly in powdered form, these include a wide array of soy sauce, natural flavor enhancers, and other fermented products, including white miso powder and red miso powder.

Inproba BV (Baarn, Netherlands) offers a wide selection of about 160 Oriental products, both at retail and to the food industry. These include various soy sauces and other soy products, and they can also develop custom recipes for their customers.

Upcoming FiE exhibition and conferences: 1996 Nov. 12-14 at Paris, France; 1997 at London, UK; 1998 at Frankfurt, Germany.

10307. Tyler, Jim; Neville, Jan. 1996. Wellspring Natural Food Co. Mail order catalog. Amherst, Massachusetts: Wellspring. 32 p. 28 cm.
• ***Summary:*** This is the first issue of this catalog, and Wellspring started in 1996. Soy-related products include: Miso, shoyu, black soybeans (from Hokkaido, Japan), yellow soybeans (organic), azuki beans, snow-dried tofu, kuzu, miso ramen, kinako, natto miso chutney, tekka miso, soymilk, and amasake.

Jim has been a macrobiotic teacher and counselor since 1975-76 and Jennifer was a chef at the Kushi Institute. Main competitors include Gold Mine and other such companies. This catalog is service oriented, easy to use, and more than 80% of the products have lower prices than the competition. Address: P.O. Box 2473, Amherst, Massachusetts 01004. Phone: 1-800-578-5301.

10308. Vinning, Grant. 1996. Wholesale market analysis of green vegetable soybean in Japan and Taiwan. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 488-96. [1 ref]
• ***Summary:*** Contents: Price profiling. Background and table showing names of green vegetable soybeans in English, Chinese (mao dou = "hairy bean"), Indonesian (kedelai, kacang jepu, kacang bulu, dele, dekeman, gadele, kedele), Japanese (eda mame), Malaysia (kacang bulu rimau), Philippines (utau, balatong), Thailand (thua lueang, thua phra lueang, thua rae) and Vietnam (dau nanh rau, day tuong, dau nanh). Production trends in Japan. Wholesale throughput and prices in Japan. Monthly wholesale throughput and price data. Japanese imports of frozen and fresh edamame. Taiwan production, wholesale prices, and export volumes. Conclusion.

Japan is the world's largest importer of edamame and Taiwan is the major supplier. It appears that Japan's domestic production is decreasing but demand is not. Taiwan's production will probably not be able to meet the export demand. The demand-supply gap is estimated at 10,000 tonnes (metric tons) and is widening. While Thailand and China may attempt to fill this gap with frozen products, freshness is a major issue.

Note: This paper contains numerous graphs, however they have no units on the x or y axis, so are almost impossible to interpret. Address: Asian Markets Research, 157 Horizon Drive, Westlake 074, Australia.

10311. Routh, Allan. 1996. SunRich, soymilk, Davisco, St. Peter Creamery, Prosource, and Northern Milk Products in Alexandria, Minnesota (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Allan (whose surname rhymes with "south") is CEO and one of the owners of SunRich. His company manufactures both liquid and spray-dried soymilk at a plant in Alexandria, Minnesota. They own this plant as part of a joint venture with Northern Milk Products. The company in Alexandria is named Northern Milk Products, but in the '95-'96 Soya Bluebook Plus the company name is given as Prosource, Inc. (P.O. Box 1058, 601 Third Ave. West, Alexandria, MN 56308. Phone: 612-763-2470). Sales are handled through SunRich.

Question: What happened to St. Peter Creamery, of St. Peter, Minnesota?; they introduced Soy Supreme Spray-Dried Soymilk Powder in Dec. 1984 and Soy Supreme Spray-Dried Tofu Powder in July 1985. Answer: Allan used to be part of the soy process with St. Peter Creamery (located in St. Peter, Minnesota), which was owned by the Davis family and which is no longer in business. The Davis family also owned LeSeur Cheese and Lake Norden Creamery; all these companies (including St. Peter Creamery) are now named Davisco. Stan Davis, the main man, is now retired, but his sons and grandsons are involved. The soy part of the business (the Oberg Division of St. Peter Creamery) was a joint venture between St. Peter and Ed Oberg, and Lou Osterbur. Dr. E.B. Oberg had some patents when he was at Carnation. These patents were only part of the complex, which included "know-how" and process subtleties that made the product taste so good. Like every spray-drier and custom spray-dried in Minnesota and the Midwest, St. Peter was an old dairy plant and a custom processor. This sort of plant used to belong to coops, then individuals would buy them. St. Peter installed its own soymilk. They made soymilk from whole soybeans, then spray-dried it. Soymilk ceased being made at St. Peter in about 1989 because St. Peter decided they wanted to go a different direction and soymilk sales weren't really taking off. The soymilk equipment was partially moved to Northern Milk Products in Alexandria, Minnesota–located about 150 miles northwest of St. Peter. More precisely, they reconstructed a soymilk line in Alexandria that they thought was a little better than what they had at St. Peter. Allan has been with Minnesota Waxy (which started as a corn company) from the early days. Minnesota Waxy purchased the process from Oberg and Osterbur, and Northern Milk owned the physical plant.

Now Allan's joint venture company makes Soy Supreme, which used to be St. Peter Creamery's main soymilk product, made at their plant. But when the general manager at St. Peter, Dennis Anderson, decided to go into business for himself, he bought 3-4 plants–one of which was in Alexandria. So they moved the process to his plant in Alexandria. Basically the same technology that was used to make Soy Supreme (a dry product) is now also being used to make a liquid product, but Allan thinks his company has made significant improvements compared to E.B. Oberg's product.

SunRich is not really company with its own retail products. They sell foods to food manufacturers. They supply Westbrae with soymilk. They have made most of Westbrae's soymilk for a while–a number of tankers each week. They also have other soymilk clients. Most of their spray drying of soymilk is done in the neighboring town of Bertha, but they also have two spray driers in Alexandria. Northern also processes some milk products in Alexandria, and they do some specific separations on oats for customers like Quaker Oats. Zumbro, which is a similar company to Northern Milk in Alexandria, does not spray dry the milk made in Alexandria. Dennis Anderson is still in Alexandria.

Minnesota Waxy (recently renamed SunRich) has always been a specialty grain company. Initially their main product was waxy starch corn, which contains an all amylopectin starch; it has a much larger starch molecule than regular amylose starch or common corn starch. Waxy starch is used in many food applications, such as those that must be freeze-thaw stable, or products that must hold more flavor that is more available. It has many desired functional properties, and can be used to strip cholesterol from eggs. They also grow about 800,000 bushels of specialty, identity preserved soybeans per year, representing about 30% of their total specialty grain business. The soybeans are sold to soyfood manufacturers in both Japan and the USA. All of their corn and soybean production is contracted with farmers. SunRich is a corporation that has about 200 farmer shareholders; it is not a co-op. They have been in business for almost 20 years, and now they contract with a lot of non-shareholder farmers as well all over the Midwest. About 5% of SunRich's business is in organically grown crops, especially soybeans, and they are emphasizing it more and more.

Talk with Allan Routh of SunRich. 1997. April 18. He used to work with Davisco (St. Peter Creamery) making soymilk solids, but that was years ago. They have been out of that business for 5 years or more. Northern Milk Products is now named Northern Food and Dairy; it is owned by Dennis Anderson in Alexandria, Minnesota. Allan now jointly

© Copyright Soyinfo Center 2014

processes a lot of soy solids products with them. Prosource is one individual who works out of Northern Foods and Dairy; he does processing up there too. Allan's products are doing well. "Our biggest struggle is just to get big enough to support them." Address: CEO, SunRich Inc., P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976 or 507-451-3316.

10312. Routh, Allan. 1996. New developments with Sweet Beans (green vegetable soybeans) at SunRich (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Allan (whose surname rhymes with "south") is CEO and one of the owners of SunRich. Minnesota Waxy did quite a bit of work in the early days on *edamamé* (in the pods) for export. They wanted to develop a soybean that could be grown and processed in the USA, that would be acceptable to Japanese consumers, mainly in Japan, but also in the USA. They did some exports for a while, but a great deal of varietal needed to be done before the product would be completely acceptable, and that could take years, so Minnesota Waxy started to work with shelled green soybeans, and that has been where they have focused their efforts in recent years. To this end they registered the trademark Sweet Beans.

Dean Foods will soon start using Sweet Beans in some of their products, first under the Freshlike label, then later probably under the Birds Eye label. The first rollout, which is scheduled for September or October 1996 under the Freshlike label, will be a Baby Broccoli Blend, containing about 40% green vegetable soybeans, 60% broccoli, and perhaps small amounts of other vegetables. Freshlike is a Midwest regional brand, the one they use to do much of their original R&D. Birds Eye takes much more volume than Freshlike. Allan is very optimistic that the product will do well, because it sold very well in Minneapolis / St. Paul in retail grocery stores. He was amazed. It was sold almost exclusively in upscale and premium supermarket chains and grocery stores in Minneapolis/St. Paul, such as Byrelys and Lunds, which have a fresh deli, etc. For a while last winter in a couple of those stores, it was the fastest moving branded vegetable item on its slot in the frozen section.

Dean Foods is a huge and very diversified food company. They used to be in the ingredient and dairy businesses, and they have grown rapidly in recent years so that today they are probably a Fortune 500 company. They bought the Birds Eye company and label from Kraft General Foods about 2 years ago. They own quite a few vegetable companies. Dean's headquarters is in or near Chicago, Illinois, and their vegetable company is located in Green Bay, Wisconsin. Dean Foods Vegetable Company's product manager for Baby Broccoli Blend and Sweet Beans is David Sinkula in Green Bay (Phone: 414-435-5301). He will probably be involved in labeling and terminology decisions.

Allan agrees that green vegetable soybeans may be the easiest way for typical Americans to "get more soy into their diet" as a way of getting the nutritional benefits of soybeans. A key marketing tool in the future will be these benefits–especially the phytochemicals (such as isoflavones) and protein in soybeans. Last year at the various meetings of dietitians sponsored by the American Soybean Association around the country, Sweet Beans got the most attention of any food because all the dietitians could easily identify how they would work them into their menu–as in salads, soups, succotash, etc. Allan is pushing toward the goal of getting Sweet Beans into supermarkets across America. His main problem is that SunRich is not really a retail company with retail products. They sell more to food manufacturers.

Sweet Beans are not grown by farmers who are SunRich shareholders. Now they are moving their Sweet Bean production, so they will be working with all new growers. Mark Rose and Bob Ludtke were in charge of growing; Ludtke, who was very excited about the project, is no longer with SunRich. SunRich has its freezing plant in Jackson, Minnesota, and now it looks like the company will be working with Sno Pac Foods, a small organic vegetable company in Caledonia, Minnesota. They are similar to Cascadian Farms in mission and size. SunRich intends to do all their processing there. Hopefully Sno Pac will put SunRich's entire freezing line into the plant in Caledonia. Every vegetable has its own set of freezing requirements.

Allan agrees that "green vegetable soybeans" is the most descriptive name of this new crop. Dean Foods is now working on the package design for their vegetable blends. They wrote "Sweet Soybeans" across one corner of the front panel. They were going to leave the word "Soy" off, but the FDA told them that since there are people with allergies to soy, they had to include the word "Soy" where people could see it easily. Address: CEO, SunRich Inc., P.O. Box 128, Hope, Minnesota 56046. Phone: 1-800-342-6976 or 507-451-3316.

10313. Akasaka, Yukio. 1996. Effect of soybean methyl ester on fuel quality and exhaust emissions from the latest DI diesel engine in Japan. Toda city, Saitama prefecture, Japan. 16 p. May 6. 28 cm.

• ***Summary:*** Conclusions: (1) Cetane number of the SME (soybean methyl ester) is 46. So, the addition of the SME to commercial diesel fuel will not cause any ignition quality problems. (2) The SME-blended fuel needs to be changed to improve its cold flow properties; its cloud point is 1ºC. (3) Diesel fuel containing 20% SME shows the following changes in emissions: Unburned hydrocarbons (HC): 6% reduction. Carbon monoxide (CO): 3% reduction. Oxides of nitrogen (NOx): 3% increase. Particulate matter (PM): 9% reduction. Soluble organic fraction (SOF) of the particulate matter: 24% increase. (4) Diesel fuel containing 20% SME shows the following changes in performance: Fuel economy:

1.5% increase. Maximum torque: 1-3% reduction. Address: JOMO Technical Research Center, Niizo-Minami 3-17-5, Toda-shi, Saitama-ken, Japan.

10314. Mio, Art. 1996. Update on Morinaga Nutritional Foods (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** During Morinaga's last fiscal year (ended in March 1996), sales of Mori-Nu Tofu rose 20%. One reason for this was the introduction of Mori-Nu Lite tofu to supermarkets. Morinaga has tried to sell the Lite to supers in a shipper, which is a cardboard display that stands on the floor and holds 24 cases. With the shipper, the store must buy one case of Lite Firm and one case of Lite Extra Firm. But most supers don't allow shippers and don't like having to buy two cases.

Morinaga's biggest market is still the Asian-American market, which grew 50% last year. About 4 years ago Morinaga introduced their tofu in a Chinese-language carton; it usually sells well at Chinese New Year. The Chinese label is priced lower to suit the price-conscious Chinese-American consumer. Last year the Chinese label accounted for about 25% of the company's sales.

In supermarkets, Mori-Nu Regular (3 SKUs) accounts for 65% of sales and Lite (2 SKUs) accounts for 35%. In natural food stores Mori-Nu Regular accounts for about 52% of sales and Lite about 48%. Mori-Nu Soft is by far the slowest seller.

Northern California is Morinaga's biggest market and Safeway is Morinaga's best account in America. Mori-Nu tofu is usually sold in the produce section; in the Los Angeles area Hinoichi, the biggest competitor, is sold refrigerated.

Morinaga will add a genistein statement to its new 12 ounce package which will be filled in Oregon. The paper will be made in the USA.

Update from Art Mio. 1996. July 25. Morinaga recently purchased scanner data from Lucky, which is a major account. The data showed that 80% of the tofu sold by Lucky is made by Azumaya and 20% is made by Morinaga. Address: National Sales Manager, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8636.

10315. Mio, Art. 1996. Selling tofu in the produce section of supermarkets (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The produce section of a supermarket operates on completely different rules from the rest of the store; there might as well be a brick wall separating produce from the store. In the produce section: (1) There are different margins; (2) There are traditionally no slotting allowances; and (3) There is less rigid allocation of space. The grocery section, by contrast, is characterized by rigid merchandising governed by schematics (schematic diagrams) which specify the exact number of facings, on which shelf each will appear, etc. Art believes that it is largely for the above reasons that most tofu companies have fought so hard to stay in the produce section, even though the temperature is often unsafe, being higher than 4ºC which is required for a "potentially hazardous food."

One of the new trends in the produce section is "pre-cuts," or pre-cut vegetables and fruits, which could change some of the rules. Mori-Nu tofu is usually sold in the produce section; in the Los Angeles area Hinoichi, the biggest competitor, is sold refrigerated. Address: National Sales Manager, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504.

10316. Chang, Sam Kow-Ching. 1996. Re: Research on soybeans for making tofu. Letter to William Shurtleff at Soyfoods Center, May 29. 1 p. Handwritten.
• ***Summary:*** During the past 4 years, Dr. Chang's laboratory has been very active in tofu research, particularly in developing methodologies for evaluating which soybean varieties are best suited for making tofu and natto. They have compared tofu making using small (120 gm), medium (500 gm), and large (35 kg) methods. Approximately 10 scientific papers based on this research have been presented at various meetings. Some of them will appear in refereed journals in the near future. Most of their studies are concerned with what physical and chemical factors make a soybean suited for making tofu. They have an automated tofu machine imported from Taiwan for their tofu research. This may be the first such machine in a U.S. university.

During the past 4 years, Dr. Chang has visited more than 20 tofu and natto factories in Taiwan, Japan, China, and the USA. "I am very interested in promoting soyfoods in the United States." Address: Assoc. Prof. and Food Science Coordinator, Dep. of Food and Nutrition, North Dakota State Univ., Fargo, ND 58105. Phone: 701-231-7485.

10317. *Ag Retailer* (*St. Louis, Missouri*). 1996. Roundup Ready soybeans win two key approvals. May.
• ***Summary:*** "Regulatory approval to allow importation of whole Roundup Ready soybeans into Japan has been granted by the Japanese Ministry of Agriculture, Forestry and Fisheries (MAFF). That approval says that Roundup Ready soybeans can be imported into as well as cultivated in Japan, based on the safety evaluation by MAFF's Evaluation Expert Committee.

"Meanwhile, the European Commission has confirmed that it officially has cleared the way for Roundup Ready soybeans to be imported and marketed in the 15 member countries of the European Union. The decision, which is binding on all EU countries, says that because Roundup Ready soybeans are as safe as other soybeans, they can be handled without segregation or labeling. The decision covers only imported soybeans. No request was made for planting

© Copyright Soyinfo Center 2014

of Roundup Ready soybeans in Europe."

10318. Kotzsch, Ronald E. 1996. Erewhon at thirty: A pioneer and standard-setter in the natural foods industry celebrates an anniversary. Needham, Massachusetts: U.S. Mills. 7 p. May. Illust. 28 cm. [1 ref]
• ***Summary:*** A good, concise history of Erewhon.

"In April 1966 the Kushis opened a retail shop in a tiny basement storefront on Newbury Street in Boston. The store, run by transplanted New York actor Evan Root, was named after the novel *Erewhon* by British writer Samuel Butler. In *Erewhon* (an anagram for the word 'nowhere'), Butler describes an imaginary island in which lawbreakers are put in a hospital and where people who get sick are put in jail. Since the story reflected the Macrobiotic principle that each person was responsible for his or her health, the name seemed appropriate. In the rustic, cramped store, plank shelves resting on cinder blocks were filled with hand-lettered brown paper bags of rice, grains, flour, and beans. During the summer of 1967 when I tended the store, daily receipts averaged about twenty-five dollars."

In the fall of 1967 Paul Hawken and "several other veterans of the San Francisco 'Summer of Love' arrived in Boston to study and work with the Kushis. They took over the running of Erewhon, moved the store to larger, brighter quarters across the street, expanded the product line, and began a mail-order business. Idealistic, smart, energetic, and hard-working, these and other young men and women dedicated themselves to Erewhon as a means to improve the quality of the nation's food and thus to improve the national health and well-being. Over the next decade, Erewhon grew into a large and important retailer, manufacturer, and distributor of natural foods. In 1971, it had sales of about $500,000, and in 1977 it had gross sales of about $10 million. During this period the average age of Erewhon's employees was about twenty-two!"

One interesting illustration shows the front of the Erewhon Trading Co. store on Newbury Street in Boston, Massachusetts. This illustration appeared in the October 1980 issue of *Erewhon Monthly,* the newsletter of the Erewhon distribution company.

There follows a good discussion of Erewhon's contributions to the natural foods industry. Address: Massachusetts.

10319. Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease: September 15-18, 1996. Brussels Conference Center, Brussels–Belgium. 1996. American Soybean Assoc., Rue du Commerce 20-22 Box 4, 1010 Brussels, Belgium. 23 p. 30 cm.
• ***Summary:*** The cover of this attractive booklet has dark green ink on natural beige paper, with a square photo of soybeans in the middle. Contents: Invitation from the chairperson. The Second International Symposium On the Role of Soy in Preventing and Treating Chronic Disease: agenda. Satellite Symposium: agenda. Important deadlines and addresses. Instructions for abstracts. General information. Introducing Belgium and Brussels. Registration. Hotel accommodation. Social program. Symposium registration form. Hotel accommodation form. Social program form.

This symposium is being organized by Mark Messina, PhD (Chairman, USA), Roger Leysen, PhD (Secretary, Belgium), and Koen Descheemaeker, PhD (Scientific coordinator, Belgium). The international scientific advisory board consists of 12 members: Herman Adlercreutz, M.D. (Finland); Guiseppe D'Amico, M.D. (Italy); Stephen Barnes, PhD (USA); John Erdman, PhD (USA); Bernard Guy-Grand, M.D. (France); Takemichi Kanazawa, M.D. (Japan); Jean-Michel Lecerf, M.D. (France); Erik Muls, M.D. (Belgium); Marcel Roberfroid, PhD (Belgium); Risto Santti, M.D. (Finland); Cesare Sirtori, M.D. (Italy); Kurt Widhalm, M.D. (Austria).

Tentative agenda: Sunday, Sept. 15. Welcome and opening remarks. Overview of diet and cancer. Biotechnology of the soybean. Monday, Sept. 16. Soy and kidney function. Soy and bone health. Soy and heart disease: Hypocholesterolemic effects of soy (basic, mechanisms). Tuesday, Sept. 17. Soy and heart disease: Effects of independent cholesterol reduction. Soy and cancer: Animal studies, soybean anticarcinogens / anticancer mechanisms. Wednesday, Sept. 18. Soy and cancer: Human studies. Hormonal effects of soy.

Satellite symposium: A special satellite symposium will be held on Thursday, September 19, at the Sheraton Hotel, Place Rogier, Brussels; it will focus on two areas. The morning session on "Current understanding of soy and infant health" has been organized to better understand the effects of soy protein formula in infants and soyfoods in infants and young children–with particular emphasis on soybean isoflavones. The afternoon session on "Soybean isoflavones: measurement, levels in foods, and pharmacokinetics," will focus on isoflavone absorption and metabolism, and methodology for quantifying isoflavones in food and biological matrices.

The cost of both symposia, including lunches but hotel accommodations, for a non-student paid before Aug. 1 is about $439.

Sponsors contributing more than $15,000: Alpro natural soyfoods, American Soybean Association, Protein Technologies International, Nebraska Soybean Board, Sojaxa (The French Association for Soyfoods Promotion–Active members: Alpro, Nutrition et Soja, Sojasun, Sojinal), U.S. Foreign Agricultural Service, United Soybean Board, Ohio Soybean Board, Central Soya, ADM, Wyeth Nutrition International, Indiana Soybean Development Council.

Other sponsors: Illinois Soybean Association and Illinois Soybean Program Operating Board, American

Institute for Cancer Research, Monsanto Company, Ontario Soybean Growers' Marketing Board, Soyfoods Association of America, Minnesota Soybean Research and Promotion Council, Iowa Soybean Promotion Board, Michigan Soybean Promotion Committee, Indiana Soybean Development Council, Morinaga Nutritional Foods, Inc., and Functional Foods for Health Program. Address: Brussels, Belgium.

10320. Demos, Steve. 1996. Recent trip to Europe. What is vegetarianism? Cause marketing (Interview). *SoyaScan Notes.* June 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Steve greatly enjoyed meeting Bernard Storup of *Nutrition et Soja* in France, and discussing soyfoods. Steve was especially impressed with his soymilk production and packaging line. Bernard is making some interesting soy/dairy blends. Bernard's long term plan is not to stay with Sandoz. Now Bernard gets a bonus of $100,000 a year in addition to his salary just to stay with Sandoz.

In the UK, Steve met with Graham Keene, head of marketing and sales for the Haldane Group. Haldane makes yogurt under 3 brands, and one of them was the best soy yogurt Steve has ever tasted anywhere. Their yogurt has a pH of 3.8 to 4.0 which gives it a shelf life of 3-4 weeks; there appeared to be no special tricks involved. Steve would soon like to travel to East Asia to take a closer look at Okinawan fermented tofu (*Tofuyo*). Steve spent $100,000 to find out what people mean when they say "I am a vegetarian." They mean: "I avoid red meat."

Cause marketing is where a company puts its advertising dollars into a cause, such as saving the rain forests or promoting vegetarianism.

The largest investor in White Wave has the surname "Demos," and it is not Steve. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

10321. Elliott, Julia. 1996. Re: Proposed table of contents for second edition of her book on soy and menopause. Letter (fax) to William Shurtleff at Soyfoods Center, June 12. 1 p.
• ***Summary:*** The tentative book title is "Beating menopause with soy and its effects 3 years later." Proposed contents: Introduction. Menopause: Explanation–What's happening? Estrogen in the '80s: History and doses. Estrogen in the '90s: What we've learned–case studies, what has changed. Soy for estrogen replacement: Personal results–studies supporting values. Japanese culture & soy: Margaret Lock's book on Encounters with Aging in Japan. Osteoporosis and menopause. Weight management. Alternatives. Genistein & isoflavones from soy: Its role in the cancer programs. Premarin / Progestrin: Natural answer? Recipes. References. Address: 10 Guyton St., Kingston, New York 12401. Phone: 914-338-6368.

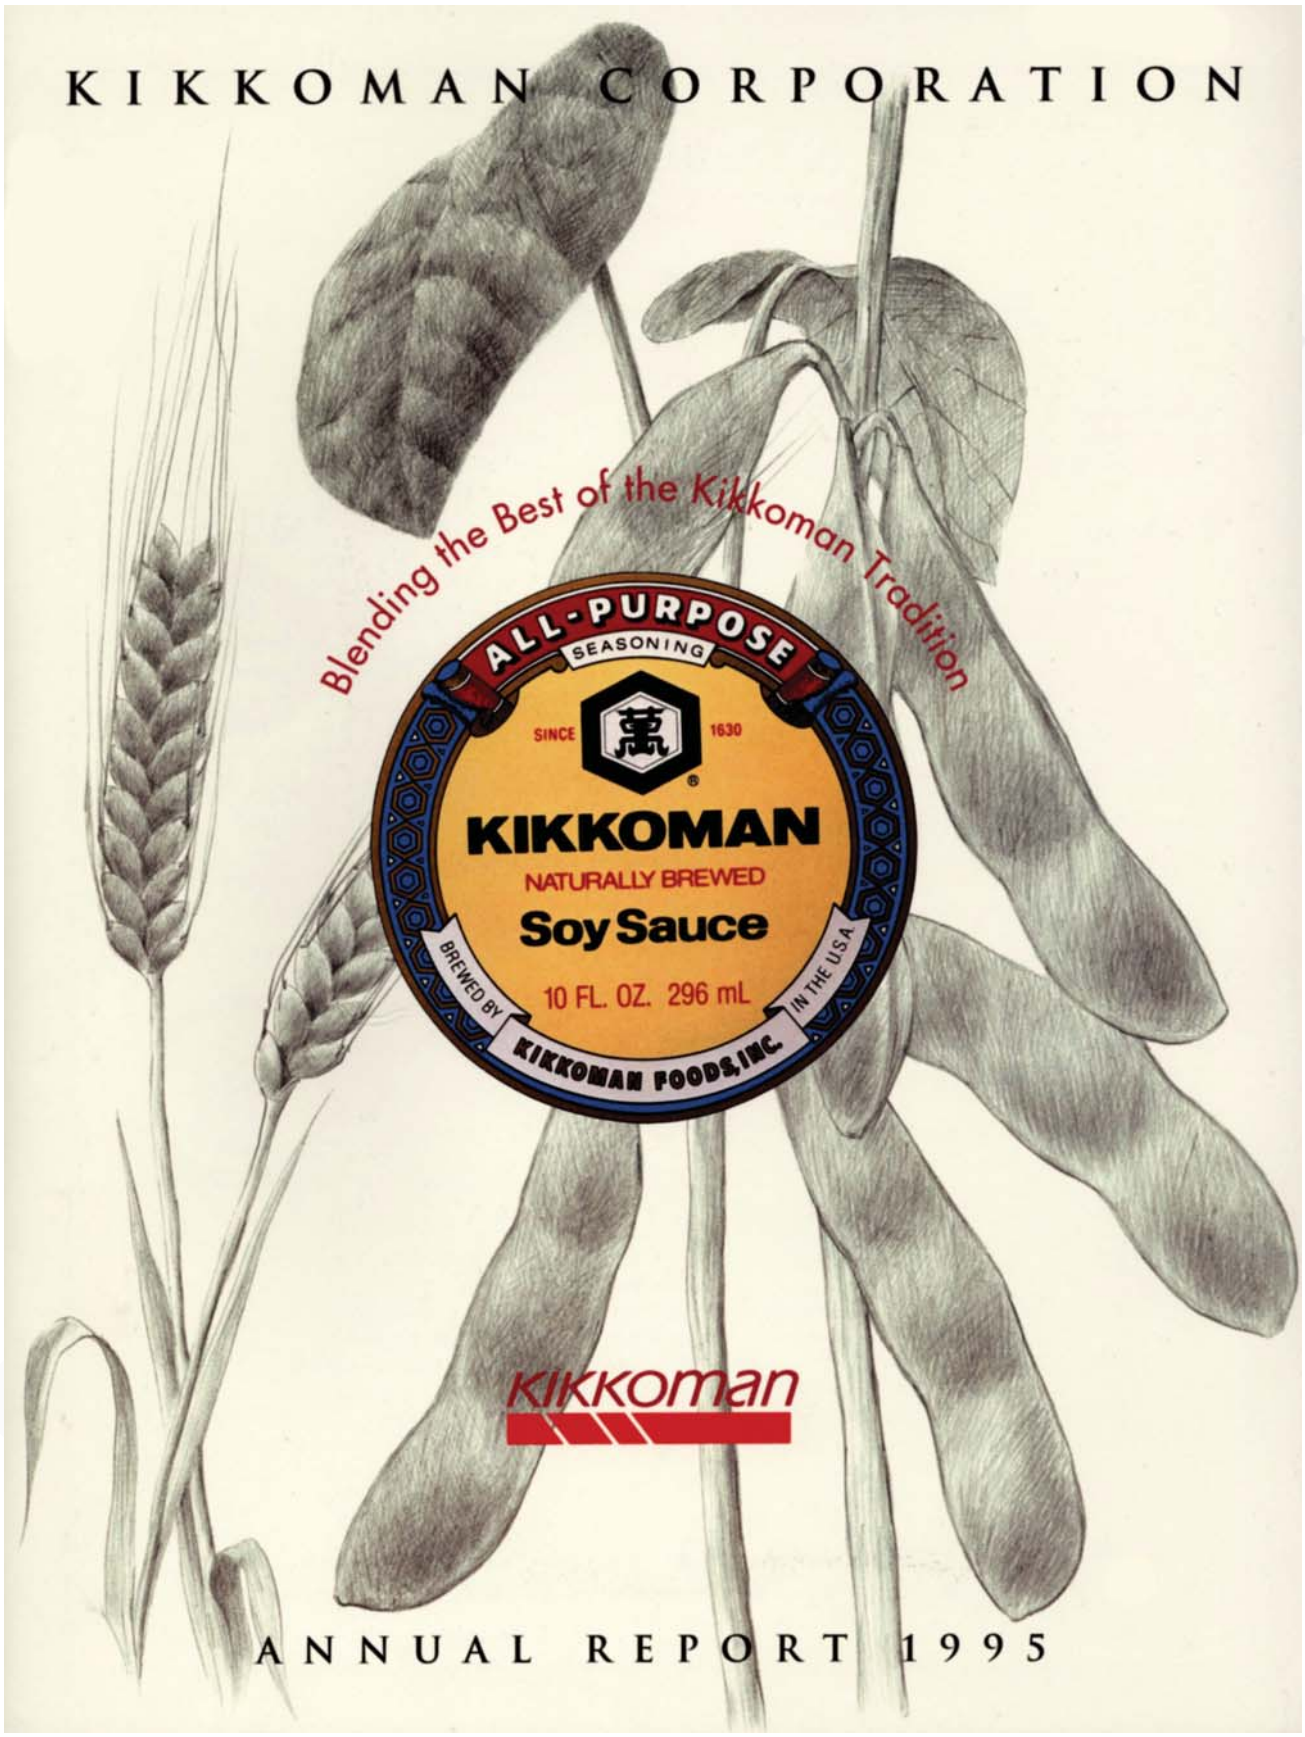
10322. Reed, M.H. 1996. In Pleasantville, serenity and sushi. *New York Times.* June 16. p. WC15.
• ***Summary:*** This is a review of the Japanese restaurant Hanada Sushi in Pleasantville, New York. Recommended dishes include: Seaweed salad, agedofu, and seafood teriyaki.

"Outstanding too was agedofu bathed in a gingery sauce, the silken tofu cube fried quickly and topped with broad shavings of bonito."

10323. Kikkoman Corporation. 1996. Annual report 1995. 339 Noda, Noda-shi, Chiba 278, Japan. 24 p. 28 cm. [Eng]
• ***Summary:*** The information in this English-language annual report is current as of April 1996. Contents: Financial highlights. Profile. A message from the president. Management strategy. Financial section. Corporate history. Global network. Board of directors and officers. Corporate data.

Kikkoman is the world's leading producer of soy sauce. The phrase "all-purpose seasoning" has come to be associated with Kikkoman soy sauce worldwide. However this phrase was first used in connection with Kikkoman soy

© Copyright Soyinfo Center 2014



© Copyright Soyinfo Center 2014

sauce in 1956 by the *San Francisco Chronicle* [California] when introducing the Japanese product to the American public. It was adopted by Kikkoman the following year.

During 1995, net sales rose 1.1% over the previous fiscal year to 203.3 billion yen, down from a peak of 211.7 billion yen in 1992 (See p. 12). Net income declined 32.8% to 4.4 billion yen, down from a peak of 6.6 billion yen in 1994. In 1993 net income was 4.7 billion, in 1992 it was 4.9 billion, and in 1991 it was 6.2 billion–very volatile. Kikkoman's financial performance was hurt by a very difficult financial for Japan as a whole, including the Great Hanshin Earthquake in Kobe in January. A recent trend in the Japanese food and beverage industry has been the proliferation of low-priced private brands. In response, Kikkoman is hoping that consumers will maintain their brand loyalty and is introducing value-added products such as *Tokusen Marudaizu Shoyu* (Deluxe Shoyu Made from Whole Soybeans), *Tokusen Marudaizu Gen-en Shoyu* (Deluxe Low-Sodium Shoyu Made from Whole Soybeans), Steak Shoyu, and Hon Tsuyu (a new concentrated soy sauce base). Kikkoman is also planning to build a second U.S. plant on the west coast of the United States, and a new plant in the Netherlands.

A bar chart (p. 6) shows that Kikkoman's net sales peaked in 1992 at 148.4 billion yen, dropping steadily to 140.2 billion yen in 1995. Sales of Kikkoman soy sauce have reflected this rise and fall. However overseas sales have grown steadily. A bar chart (p. 7) shows them rising from $330 million in 1991 to a record $434 million in 1995.

Page 22 gives a detailed chronology of Kikkoman from April 1925 to April 1996; it has been consolidated with later events to make a single, up-to-date chronology later in this book.

Letter (fax) from Tsutomu Kishi, Manager, Kikkoman General Affairs Dept. 1996. Sept. 2. This is the first English-language annual report that Kikkoman has ever published. Address: Noda, Japan.

10324. Kuhn, Mary Ellen. 1996. Courting crossover vegetarian consumers: Sales of meat, dairy alternatives skyrocket as companies boost taste appeal. *Food Processing* (*Chicago*) 57(6):26, 31-32. June.

• ***Summary:*** Crossover consumers (also called semi-vegetarians or transitional eaters) are those who are not vegetarians but who are reducing their intake of animal products for a variety of reasons. To reach this market, meat and dairy alternatives must taste good.

A sidebar titled "Bringing macrobiotics to the masses," shows and discusses the Kushi Cuisine line of 25 products. Address: Senior Editor.

10325. *Ontario Soybean Growers' Marketing Board Newsletter.* 1996. Profiles: Maple Leaf Foods, and Maple Leaf Foods International. June. p. 7.

• ***Summary:*** Maple Leaf Foods (MLF) in a 60-year-old, $3 billion-a-year company, perhaps best known to consumers for its Maple Leaf processed meats. However MLF is also a "key buyer of Ontario soybeans, as well as a leading exporter of food-quality soybeans to East Asia, a market that the company pioneered in 1973.

"Maple Leaf Foods is currently evaluating the possibility of manufacturing soybean based products, with an eye toward one day exporting such products to Asia."

In April 1995 the company was acquired and came under aggressive new management. The new chairman is Wallace McCain, who is promising shareholders 5% per year growth in sales, and 11.5% returns on net assets.

"Maple Leaf Foods International is the corporation's international marketing arm, and is Canada's largest food exporter. It does $300 million a year in sales to Japan alone, largely through a network of over 100 partnerships with suppliers, manufacturers and distributors. Ted Bilyea, president of MLFI, says one of the keys to reaching Maple Leaf's export goal will be to make sure Ontario farmers can earn a healthy profit growing food-quality soybeans."

Bilyea adds: "We have always treated soybeans as food, not grain. It's a very important distinction."

"Garth Baxter, trading manager for MLFI's soybean team (whose photo is shown) says, 'In the future, premiums will have less to do with compensation for lower yield, and more to do with the food quality of the variety. We are moving toward a true quality premium.' It's good news for growers, Baxter says."

"Baxter says identity preserved soybeans already make up about 35% of their soybean exports in terms of volume."

"While Bilyea expects Maple Leaf to one day ship processed soyfoods to the Pacific Rim, he says the company also views food-quality soybeans as a value-added export."

"'We have invested very heavily in soybean breeding in the last few years,' Bilyea says. 'These varieties are in the system now, and they're going to be there for growers for years to come.'" Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

10326. Root, Evan. 1996. A macrobiotic quest. *Macrobiotics Today* (*Oroville, California*). May/June. p. 37-39.

• ***Summary:*** A pioneer in the macrobiotic movement in the USA, Evan has focused on "attending to the present moment" since 1981.

10327. Messina, Mark J. 1996. Thoughts on the nutritional value of soybeans (Interview). *SoyaScan Notes.* July 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The negative article by Fallon and Enig titled "Soy products for dairy products? Not so fast" has generated a unusually large amount of attention, given how poor the article is and what a minor magazine it was published in. Gary Null wanted Mark to appear on his show just to rebut

© Copyright Soyinfo Center 2014

it. The soybean would probably be better nutritionally if it didn't contain phytates and trypsin inhibitors (other than the Bowman-Birk inhibitor). Phytates do inhibit zinc and iron absorption, and this is important; calcium inhibition is not much of a problem. The soybean plant stores much of its phosphorus in the form of phytates. Of the trypsin inhibitors, most of the focus has been on the Bowman-Birk inhibitor (BBI) as having possible anticancer activity. BBI inhibits both trypsin and chymotrypsin. The other trypsin inhibitors (such as the Kunitz) are not hypothesized to have anticancer activity. Dr. Walter Troll and Dr. Ann Kennedy have been the leaders in research in this field. Ann Kennedy, who is now doing most of the work with BBI, will be speaking at the international soy symposium in Brussels this September. Mark thinks that BBI does have anticancer activity, and that it has a lot of potential as a chemopreventive agent. But he wonders if there is enough BBI remaining in typical soyfoods (such as tofu) to exert benefits but not so much as to exert adverse effects. Ann Kennedy is very smart and a very interesting person to talk with. Mark often asks her about the practical significance of her findings concerning BBI. One serving of tofu has something like 10% of the BBI required to reduce cancer risk.

Mark thinks that Steve Barnes unquestionably is the most knowledgeable person in the USA on isoflavones and phytoestrogens. But the many exciting findings is this area must be divided into those of academic interest and those of practical importance. When Mark looks at the epidemiological data, what he finds most exciting is that all these studies showing soy's protective effect, show that one serving of a soy product (usually tofu) is enough. Mark thinks that if there really is a protective effect against cancer, it is either because of isoflavones or some other substance we are not yet aware of. Whatever it is must be very potent and very unique. Mark does not think the effect is due to a combination of substances in tofu, or to a total lifestyle which happens to include tofu. With cancer research, we already have grounds for a hypothesis, some animal data, and plausible biological mechanisms. So the next step is to show that soy actually has a protective effect in humans.

Flatulence factors might seem like a good candidate for removal, but recent research has shown that they might have benefits. They are more a social than a nutritional problem. Japanese animal studies using oligo sugars [oligosaccharides] indicate that they may help reduce colon cancer risk and promote longevity by stimulating the bifidobacteria. A lot of interesting hypotheses concerning these sugars are waiting to be tested. No single food can be all things to all people, and the source of all nutrients.

Mark is not personally excited by the cholesterol-lowering properties of soy protein. It applies only to a small group of people with very high cholesterol levels and one must eat too much soy to experience modest results. In the Framingham study, 50% of the heart attacks occurred in people with serum cholesterol below 240, and 20% had below 200. 150 is very low; Mark's was 177 last time he had it measured, which puts him close to syndrome x. Genetics plays a big role. If we find that soy inhibits cholesterol oxidation, or stimulates vasodilation, or inhibits platelet aggregation, then we are on to something important. This could be very relevant to the 37 million Americans whose cholesterol level is above 240, which is considered high. PTI (Protein Technologies International) sees those 37 million Americans as a huge potential market for its product Take Care. In the Framingham study, the really solid data showing a relationship between blood cholesterol and heart attacks, applies only to a small group of men, ages 35-54. There is no connection in women or in older men. Several years ago, Mark read two long and very well-done reviews on blood cholesterol and heart disease in excellent peer-reviewed journals, he came to think that the cholesterol hypothesis has more holes in it than Swiss cheese. For example, vegetarian women do hot have a decreased risk of heart disease compared to non-vegetarian women. This is probably because estrogen is so strongly protective.

Implicit in the word "phytochemicals" is some beneficial effect–even though most phytochemicals are a two-edged sword, with both benefits and disadvantages. Thus the oligosaccharides in the soybean (which are biologically active and cause flatulence) should probably not be called a type of phytochemical; Mark is not sure whether or not they actually supply calories and are therefore nutritive substances. If they do supply calories, they are not "non-nutritive" as phytochemicals must be. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

10328. Mio, Art. 1996. Morinaga is sponsoring coverage of the 1996 Summer Olympic Games, held in Atlanta, Georgia, on KNBR radio (Interview). *SoyaScan Notes.* July 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Morinaga is one of several sponsors of these radio broadcasts. The radio message states: "This Olympic update is brought to you by Mori-Nu Tofu..." This advertising is connected to a one-month sales promotion with Lucky supermarkets which started at the end of May. Address: National Sales Manager, Morinaga Nutritional Foods, 2050 W. 190th St., Suite 110, Torrance, California 90504.

10329. Chambers, Norm. 1996. Growing and selling low-lipoxygenase soybeans in Iowa for making improved tofu and soymilk (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Please begin by reading the July 1996 interview on this subject with Dr. Walt Fehr of Iowa State University. Norman and John Chambers, a father and son team, refer to the soybeans that they grow under license from Iowa State

© Copyright Soyinfo Center 2014

University in various ways: "low lipoxygenase soybeans," "low lipo (pronounced LAI-po) beans," "Laura beans," and 2001 beans. They grow these mostly under contract with end users, so each company or person who wants some places a firm order in the spring before planting time and receives the special soybeans in about September. Last year they grew about 50 acres of these special soybeans, with a yield of about 50 metric tons cleaned. Since 1 metric ton = 2,204.6 lb and a bushel of soybeans weighs 60 lb, there are 36.74 bushels in a metric ton, and 50 acres would yield about 1,837 bushels. The price last year was $13.00 per bushel FOB Iowa. They are sold in 30 kg (66 lb) bags. Fairview Farms always grows somewhat more than the amount contracted for; they presently have 107 bags and about 425 bushels unbagged in the bins available for sale.

All of their customers for these special soybeans are overseas. From last year's crop they sent one container to Slovakia (to Alfa Bio), one to Singapore, and one to Japan (*Taishi Shokuhin*). They did not sell any in the USA. Address: Fairview Farms, 2304 150th St., Corwith, Iowa 50430. Phone: 515-583-2198. Fax: 515-583-2192.

10330. Fehr, Walter R. 1996. Commercial sources of and information on soybeans specially bred to be low in lipoxygenase and to give tofu and soymilk with little or no "beany" flavor (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** There are 3 lipoxygenase enzymes in soybeans that cause beany flavors. Iowa State has developed several soybean varieties that lack lipoxygenase-2 (L-2), the most active lipoxygenase enzyme. These are now commercially available; Dr. Fehr thinks that the best and most widely tested of these is IA2011. Varieties that lack two, or all three lipoxygenase enzymes are also under development. Dr. Fehr has made tofu and soymilk using the soybean lacking L-2 and found that these products have no detectable beany flavor. To order these varieties, contact any of the suppliers, such as Norman and John Chambers (father & son team), Fairview Farms, 2304 150th St., Corwith, Iowa 50430. Phone: 515-583-2198 (office) or 515-583-2330 (home). Fax: 515-583-2192. They grow these varieties themselves and subcontract the rest out to farmers in the area. Fairview Farms has many Japanese customers; Dr. Fehr does not know if they have any U.S. customers. For a complete list of licensees for the lipoxygenase-free soybean varieties, contact Julie Gustafson at Iowa State University, phone 515-294-9442. This fall Iowa State will be releasing seed of a "triple null" variety with L-1, L-2, and L-3 all missing.

Roughly 6-10 studies have been published (mainly by Nielsen at Purdue Univ. (Indiana), Hymowitz at Univ. of Illinois, and Dr. Kitamura at Tsukuba, Japan) where these soybeans have been used on a laboratory scale to make tofu and soymilk, and the flavor of those products were compared with similar products made from typical soybeans. Japanese consumers do not particularly favor the absence of the lipoxygenase enzyme; they like tofu and soymilk with some (but not a lot of) so-called "beany" flavor. As far as Dr. Fehr knows, no one has ever tested these soybeans lacking lipoxygenase on American consumers–but the information system is very closed and confidential. Dr. Fehr's group has not published anything on lipoxygenase, although they have research underway.

A world leader in this area Dr. Kitamura at the National Agricultural Research Center, 3-1 Kannondai, Tsukuba, Ibaraki 305, Japan. His group developed the genotype (named something like Kyushu) which is absent of any of the 3 known lipoxygenase enzymes, then he shared this variety with U.S. soybean breeders working on this problem. Dr. Kitamura has a series of excellent of papers on this subject, but he has "not found a home for his special soybean in terms of the consumer market." Nor has anyone found any customers for the soybean from Iowa State missing L-2 enzyme. Address: Dep. of Agronomy, Iowa State Univ., Ames, Iowa. Phone: 515-294-6865.

• ***Summary:*** Kikkoman is moving its Tokyo headquarters at Kanka, Nishiki-cho to Nishi-Shinbashi on Saturday, August 10, 1996. They will be open for business on Monday, August 12, with a new address and telephone numbers. The new address: Kikkoman Corporation, 2-1-1, Nishi-Shinbashi, Minato-ku, Tokyo 105, Japan. Phone: 03-5521-5360. Fax: 03-5521-5359. Address: President and Chief Executive Officer, Kikkoman Corp., 1-25 Kanda Nishiki-cho, Chiyoda-ku, Tokyo 101, Japan. Phone: 03-3233-5605.

10334. Natural lifestyle magazine and mail-order market: Spring-summer '96. 1996. Asheville, North Carolina: Natural Lifestyle Supplies. 63 p. Catalog. 28 cm.
• ***Summary:*** A macrobiotic mail-order catalog with several nice articles, it sells many types of soyfoods and related products, including the full line of Kushi Cuisine, organic soybeans (yellow and black), azuki beans, amazake, Rice Dream soymilk, Edensoy soymilk, Westbrae Malteds, Nasoya Vegi-Dressings, Nayonaise, Farmhouse Tekka [miso], organic soy sauce, fresh tofu, snow-dried tofu, kuzu, and miso. Publisher: Tom Athos. Editor and graphic design: Debbie Athos. Address: 16 Lookout Drive, Asheville, North Carolina 28804-3330. Phone: 1-800-752-2775.

10335. Ono, Tomotada; Takeda, Motoyoshi; Guo, Shuntang. 1996. Interaction of protein particles with lipids in soybean milk. *Bioscience, Biotechnology, and Biochemistry* 60(7):1165-69. July. [14 ref]*
Address: 1. Dep. of Agro-Bioscience, Faculty of Agriculture, Iwate Univ. Ueda 3-18-8, Morioka, Japan.

10336. Takai Tofu & Soymilk Equipment Company. 1996. Catalog of small and medium-scale equipment. 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 8 p. 30 cm.
• ***Summary:*** This is a new edition of this catalog, printed with brown ink on glossy white paper. Across the top of the first page is written "The world's leading supplier of tofu & soymilk equipment."

Page 1 states: "During the 1960s and 1970s Takai gained a great deal of experience exporting our equipment to large and small Japanese- and Chinese-run manufacturers of tofu and soymilk in the United States, Europe and Southeast Asia. Then in early 1977, with the rapid growth of interest in soyfood products in the West, we began to work closely with William Shurtleff, author of *The Book of Tofu* and *Tofu & Soymilk Production,* to develop our first- and the world's first–English-language catalog, which appeared in August 1977. Since that time we have become the world's leading supplier of tofu and soymilk equipment. We have sold our equipment to hundreds of new and established companies worldwide, and we are constantly upgrading our equipment materials and quality (as with stainless steel) to meet the highest standards. To give you the widest possible choice of the best equipment available, we also include a number of items produced by other well-known Japanese manufacturers." Address: Ishikawa-ken, Japan. Phone: +81 76 294 1712.

• ***Summary:*** The inaugural LA [Los Angeles] Tofu Festival, organized by the Little Tokyo Service Center (LTSC), was a big hit with people of all ages and races.

10340. Rund, Stan. 1996. Re: Invitation to participate in "Foodbean Day II" in Minnesota. Letter to friends of

© Copyright Soyinfo Center 2014

soybeans in Minnesota, Aug. 12. 1 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** "On behalf of the Minnesota Soybean Growers Association, in cooperation with the Minnesota Research and Promotion Council and the International Marketing Division of the America Soybean Association, I would like to take this opportunity to invite you to participate in "Foodbean Day II" on Thursday, September 12, 1996 in Owatonna, Minnesota. Minnesota hosted its first "Foodbean Day" program in 1994. It met with so much success that plans were made to continue to offer this specialty soybean marketing opportunity to Minnesota producers and companies as often as possible.

"'Foodbean Day II' will bring representatives of 18 to 20 Japanese companies to Minnesota to interact directly with people, such as yourself, to help establish what we hope can be long term buyer/seller relationships in the area of food quality soybeans." If you are interested in participating, please call Mike Youngerberg at the Minnesota Soybean Office by Aug. 20. Address: Industry Information Committee, Minnesota Soybean Growers Assoc., 360 Pierce Ave., Suite 110, No. Mankato, MN 56003. Phone: (507) 388-1635.

10341. Roberts, Paul Craig. 1996. Fear in FBI's arsenal of inquiry. *Washington Times* (*DC*). Aug. 27.
• ***Summary:*** The author argues that the FBI has suffered great damage to its reputation, and become a political arm of the Clinton administration. A case in point is the FBI's three-year investigation of agribusiness giant ADM. In Nov. 1992 ADM notified the FBI of an illicit offer, reported by one of its executives, Mark Whitacre, from an employee of a Japanese firm to sell information to ADM for $10 million. "When ADM's top management informed the FBI, Mr. Whitacre, then head of ADM's BioProducts Division, had a fit of consternation, and objected to being interviewed by the FBI." Mr. Whitacre was later accused by ADM of embezzling millions of dollars from the company. "In retrospect, ADM executives believe the Japanese competitor's offer reported by Mr. Whitacre was in fact one of his own schemes to bilk the company. Mr. Whitacre might have feared that the FBI would find this out...

"His protests notwithstanding, Mr. Whitacre was forced to meet with the FBI. Less than two months later he signed a secret agreement with the U.S. Attorney of the Central District of Illinois 'to act in a covert capacity' as an agent against ADM 'solely at the direction and under the supervision of the FBI and this office.' In exchange, Mr. Whitacre was granted immunity.

"No one but the FBI and Mr. Whitacre knows why his story of the purported Japanese offer resulted in this secret agreement to create evidence against ADM."

"Mr. Whitacre agreed to orchestrate 'price-fixing' meetings that the FBI could secretly videotape. The FBI's case rests on these tapes." Address: Columnist, nationally syndicated.

10342. Gooderham, Melinda J.; Adlercreutz, H.; Ojala, S.T.; Wähälä, K.; Holub, B. 1996. A soy protein isolate rich in genistein and daidzein and its effects on plasma isoflavone concentrations, platelet aggregation, blood lipids and fatty acid composition of plasma phospholipid in normal men. *J. of Nutrition* 126(8):2000-06. Aug. [35 ref]
• ***Summary:*** The effects of consuming a soy protein isolate beverage (60 gm/day for 28 days) vs. a casein supplement was evaluated in 20 males. A dramatic rise in blood plasma isoflavone concentrations was observed in the soy protein group, the levels reaching 907 ± 245 nmol/liter for genistein (a 110-fold increase) and 498 ± 102 nmol/liter for daidzein (a 150-fold increase). These concentrations are higher than previously reported for the blood plasma of Japanese subjects consuming a traditional diet (276 and 107, respectively). It appears that this level of supplementation is not sufficient to counter heart disease risk factors such as high plasma cholesterol and platelet aggregation. Address: 1-2&5. Dep. of Chem., FIN-00014, Univ. of Helsinki, Finland.

10343. IITA. 1996. Annual report 1995. Ibadan, Nigeria: International Institute of Tropical Agriculture (IITA). 55 p. 28 cm.
• ***Summary:*** Postharvest utilization techniques have been developed for soybean, plantain, and banana (p. 5). "An efficient method to quantify nitrogen fixation was developed. The procedure will be integrated into the soybean breeding program in 1996. Computer simulation models were employed to study resource use and nitrogen fixation potentials of early, medium, and late maturing soybean lines (p. 10). Project on application of IPM to legumes (p. 11, 35).

Improving postharvest systems: "Studies confirmed that soybean products were being sold extensively..." (p. 13). CGIAR has initiated an "ecoregional program" which uses "a holistic approach." In the moist savanna zone, the major crops are maize, sorghum, millet, cowpea, cotton, cassava, soybean, and yam" (p. 21). Two pie charts (p. 40) show major resource allocation. In 1994 some 4.1% of the core budget was spent on cowpea and soybean, increasing to 4.6% in 1995. In 1995 IITA received $31.8 million in grants from various organizations and countries and had total revenues of $32.8 million. The leading donors to core funding (in million dollars) were: The World Bank $5.66, USAID $4.02, and Japan $3.59.

A map on the rear cover shows IITA's seven research stations: 1. Ibadan, Nigeria (Headquarters). 2. Onne, Nigeria. 3. Cotonou, Benin. 4. Kano, Nigeria. 5. Mbalmayo,

10344. Little Tokyo Service Center. 1996. The four seasons of tofu cookbook. Los Angeles, California. xiii + 82 p. Illust. No index. 14 x 22 cm. Spiral bound.
• ***Summary:*** Contents: Tofu: A 2,000-year-old health food miracle. History of tofu in China, Japan, and the West. Tofu tidbits: Q & A. Glossary (of Japanese ingredients). Spring menu: Appetizers, salads, side dishes, main dishes, desserts (a heart symbol = vegetarian recipe; of the 16 spring recipes, 13 are vegetarian). Summer menu. Autumn menu. Winter menu. On the rear cover is a full-page ad for Hinoichi tofu by House Foods America Corporation. The last page lists the names of companies participating in the 1996 L.A. Tofu Festival, incl. Beverly Soon Tofu Restaurant.

Talk with Margaret Endo. 1997. March 7. This cookbook was compiled for the Los Angeles Tofu Festival in August 1996 by the staff of the Little Tokyo Service Center (LTSC; from recipes they contributed and tested), published in English, and sold at the festival. Proceeds from sale of the cookbook benefit the LTSC's Nikkei Family Counseling Program and Emergency Caregivers Program to help the victims of domestic violence and their children. Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1600.

10345. Little Tokyo Service Center. 1996. First annual L.A. Tofu Festival. August 10-11, 1996. Los Angeles, California. 22 p. Illust. 28 cm.
• ***Summary:*** This program gives details about tofu and the festival, whose main sponsor was House Foods Corporation (Hinoichi Tofu). Details are given on each of the participating restaurants, incl. Beverly Soon Tofu Restaurant (established in Los Angeles June 1986). Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1600.

10346. McCord, Holly; Yeykal, Teresa A. 1996. Menopause naturally: Got hot flashes? get soy! *Prevention* (*Emmaus, Pennsylvania*). Aug. p. 65-70. [1 ref]
• ***Summary:*** About 75% of American post-menopausal women experience hot flashes and night sweats, along with sleep disturbances and mood swings. Until now, the only antidote for these unpleasant symptoms has been hormone-replacement therapy (HRT), a prescription medicine the replace the estrogen that women's bodies start making less of. But recently researchers have found that the foods made from the soybean may offer a practical alternative.

"The trail of evidence linking soy with a hot-flash-free menopause starts in Asia." There isn't even a word for hot flash in Japanese. Sherwood Gorbach, M.D., at Tufts University School of Medicine, in Boston, Massachusetts, was one of the first to suggest that the reason for this may lie in the Asian diet, which is rich in soyfoods that contain isoflavones–a natural plant form of estrogen. In one day, a typical Asian woman–who eats about a quarter pound of soyfoods–may be getting 30 to 50 milligrams of isoflavones from her food.

Three clinical studies are now under way to see if and how soy isoflavones work to relieve menopausal symptoms. At Bowman Gray School of Medicine of Wake Forest University (Winston-Salem, North Carolina), Gregory Burke, MD, heads a study of 240 women over age 45 experiencing hot flashes or night sweats. Every day for 2 years the women will drink an 8-ounce soy beverage containing either 1 mg, 34 mg, or 50 mg of isoflavones without knowing which level of isoflavones they're receiving. Researchers will see if more isoflavones relieve their menopausal symptoms or anxiety or mood swings.

Two studies at Tufts University, in Dr. Gorbach's department, are following 60 women with hot flashes. For 3 months, these women will eat either two specially designed almond- or chocolate-flavored soy breakfast bars that each contain 20 mg isoflavones (for a daily total of 40 mg isoflavones) or two placebo bars without isoflavones. Researchers will track the women's reports of hot flashes and night sweats, and their levels of estrogen and other hormones. Though these studies have not been completed, preliminary data look promising says Dr. Gorbach.

A table (p. 67) shows the amount of isoflavones (in mg) in a typical serving of various soyfoods. In descending order: Nutlettes breakfast cereal* (½ cup): 122 mg isoflavones + 140 calories. Beef(Not) textured soy protein granules* (¼ cup dry): 62 mg + 70 calories. Roasted soy nuts (¼ cup): 60 mg + 195 calories. Tempeh (½ cup): 35 mg + 165 calories. Low-fat tofu (½ cup): 35 mg + 54-75 calories. Regular tofu (½ cup): 35 mg + 105-120 calories. Take Care High Protein beverage powder (Protein Technologies International; 2 scoops): 35 mg + 100-130 calories. Regular soymilk (1 cup): 30 mg + 130-150 calories. * = Available from Dixie USA, 1-800-347-3494.

Even if this research doesn't show positive results, other studies show that soy lowers cholesterol and may prevent breast cancer and osteoporosis. "A serving of soy every day could turn out to be a good bet," says Dr. Gorbach. Researchers recommend consuming in the range of 30-50 mg/day of isoflavones. More than 100 mg/day could be harmful, so its is best to get your isoflavones from food instead of pills. Contains two recipes: Creamsicle Cooler (shake with soft tofu; 35 mg of isoflavones). Southwestern Skillet (with Beef(Not); 62 mg of isoflavones).

10348. Roberts, Paul Craig. 1996. Abetting U.S. competition. *Washington Times* (*DC*). Sept. 5 p. A15.
• ***Summary:*** The author alleges that the FBI has teamed up with ADM's competitors in the market for lysine, a feed additive. "Prior to ADM entering the business in 1990, the market was dominated by Japanese firms, Ajinomoto Co. and Kyowa Hakko Kogyo Co. In 1989 the price per pound was $1.73. ADM discovered a cheaper way to make lysine, and the company's entry into the market resulted in prices falling roughly in half. During the five-year period, 1991-1995, the purchasers of lysine enjoyed cumulative savings of more than $500 million dollars [sic]. ADM gained 40 percent of an expanded market and the big Japanese firms are licking their wounds."

The evidence shows a collapse in lysine prices, to $1.08/b in 1991, down to $0.82 in 1992, up a little to $0.90 in 1993, up to $1.14 in 1994, and down to $1.05 in 1995. "As ADM is the low cost producer, it can undersell its competitors and has nothing to gain from a price-fixing agreement that would limit its market share." Address: Columnist, nationally syndicated.

10349. Sprader, Darci. 1996. Successful use of green vegetable soybeans to treat menopausal symptoms (Interview). *SoyaScan Notes.* Sept. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Darci is a licensed acupuncturist who has had good results helping about ten women who have unpleasant menopausal symptoms by asking them to eat green vegetable soybeans as part of a wholistic treatment using acupuncture and herbs. She suggests that each woman consume about ½ cup 3 times a week. The green soybeans are sold locally at an Oriental food store named Midway Asian Foods. They seem to work better than tofu or other soyfoods. In Chinese medicine, soybeans are neutral to slightly cooling. They probably bring about some hormonal balancing and may enter the kidney channel, where they affect the adrenals. Darci, who is married, began studying acupuncture in about 1990 and has been practicing since 1993.

According to Kikko Matsumoto, a famous Japanese acupuncturist and author who practices in Boston, Japanese researchers have also found that green vegetable soybeans are beneficial in treating menopausal symptoms. She and her colleagues are widely respected for their advanced research and their "connective tissue theory" which attempts to explain how acupuncture works. In addition to her practice, Kikko gives seminars and is the author of two respected books: *Hara Diagnosis* and *Five Stems and Five Branches.* Kikko can be contacted at 8 Center Street, Nantucket, Massachusetts 01760. Phone: 508-651-1975. Or through Dale and Jackie of the Institute for Professional Development at 708-386-8822.

A friend of Darci's attended a workshop at Bastyr University (in Seattle, Washington) which trains naturopaths. The entire group seemed to be aware of the beneficial effects of green vegetable soybeans.

Update: Talk with Darci. 1997. June 6. Darci has now effectively treated about 50 women using green vegetable soybeans, acupuncture, and herbs. She notes that in Chinese medicine, diet is the most important, followed by herbs, and then needles. One good book on the importance of diet in Chinese medicine is *Healing with Acupuncture,* by Paul Pitchford; however he does not mention green vegetable soybeans. Address: Midwest Family Acupuncture Associates, 2423 American Lane, Madison, Wisconsin 53704. Phone: 608-246-8200.

10350. *SoyaScan Notes.* 1996. The top five tofu manufacturers in the USA (Overview). Sept. 17. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This ranking is based on educated guesses and discussions with industry insiders, but it is not based on solid research data. In descending order of pounds produced per month: 1. Nasoya (Leominster, Massachusetts; Owned by Vitasoy). 2. Azumaya (South San Francisco, California; owned by Vitasoy). 3. House Foods America Corp. (Hinoichi; Los Angeles, California and Japan). 4. Morinaga (Japan and Torrance, California). 5. White Wave (Boulder, Colorado).

10351. *ASA Today* (*St. Louis, Missouri*). 1996. ASA/Japan hosts 40th anniversary celebration. 2(10):1-2. Sept.
• ***Summary:*** An estimated 175 "Soycomplex Leaders" from throughout Japan attended the ASA [American Soybean Association] /Japan 40th Anniversary celebration in Tokyo, according to ASA/Japan Country Director Kent Nelson. In 1946 ASA started activities in Japan as a member of the Japanese American Soybean Institute (JASI), which included the Japan Oilseed Processors Association (JOPA), the Japan Oil and Fat Importers & Exporters Assoc. (JOFIEA), and the Japanese tofu, soy sauce, and miso associations.

A photo shows ASA Executive Officer George M. Strayer and Mrs. Strayer in October 1955 leaving Waterloo, Iowa, enroute to Japan on a trade mission.

One sidebar (p. 2) titled "Meeting Japan's needs now and in the future," states: Japan imports 97% of its soybeans. Nearly 25% of Japan's imported soybeans are used for food. Japan is projected to import its 5 billionth bushel of soybeans from the USA in the second half of the year 2000. "Japan remains the top single country market in the world (soymeal included) and is expected to remain the largest export market for US producers into the year 2000."

A second sidebar (p. 1) titled "ASA/Japan celebrates

© Copyright Soyinfo Center 2014

40th anniversary," notes that in 1956, Japan imported 536,000 metric tons of US soybeans. In 1995 Japan imported eight times that amount, over 4 million metric tons. This fall a unified trade team composed of JOPA processors and JOFIEA importers will meet with ASA and United Soybean Board leaders in St. Louis, Missouri, to discuss short, medium, and long-term goals.

10352. Callanan, Bob. 1996. Soya Bluebook: Celebrating 50 years of service to the soybean industry (Ad). *Soya Bluebook Plus* 1997. p. 13-21.
• ***Summary:*** On the top two-thirds of each page is a brief history of the soybean in America from 1900 to the present, with emphasis on the work of the American Soybean Association, which was founded on 3 Sept. 1920 as the National Soybean Growers' Association by more than 1,000 people who attended the first "Cornbelt Soybean Conference" on a farm owned by the three Fouts brothers near Camden, Indiana. It was renamed the American Soybean Association in 1929.

To the left and right of this story on each page are two reproductions of full-page advertisements from existing companies that appeared in the Bluebook. The first four ads are from Anderson International (1947), Archer Daniels Midland Co. (1947), French Oil Mill Machinery Co. (1947), and Ross & Rowe, Inc. (1947, now ADM Lecithin).

The story contains many photos related to the ASA and soybean production and trade. For example: (1) A farmer on a horse-drawn cultivator in a soybean field from the early 1900s. (2) The front of the ASA offices in Hudson, Iowa. (3) Henry Ford in 1940 testing the strength of a soy-based plastic trunk lid on a Ford car by swinging an ax against it. (4) Mr. & Mrs. George Strayer in Oct. 1955 leaving for Japan by air from Waterloo, Iowa. (5) The floor of the Chicago Board of Trade in Oct. 1936 as the new soybean futures market opens. (6) An oceangoing freighter in the 1940s docked next to Central Soya Company's elevators in Chicago. (7) W.L. Burlison and C.M. Woodworth inspecting soybean variety demonstration plots at the University of Illinois.

Accompanying this history, on the bottom one-third of each page is a chronology from 1900 to 1997 that highlights major events of the companies that advertise in the *Soya Bluebook Plus*–even though those events may be of relatively little importance in soybean history. For example: 1905–H.R. Williams Mill Supply Inc., Kansas City, Missouri is founded by Harry Richard Williams. 1914–Universal Oil Products Co. (UOP), Des Plaines, Illinois, is established. Address: Communications Director, American Soybean Assoc. Phone: 314-576-1770.

10353. Chen, Hua-Ming; Muramoto, Koji; Yamauchi, Fukmio; Nokihara, Kiyoshi. 1996. Antioxidant activity of designed peptides based on the antioxidative peptide isolated from digests of a soybean protein. *J. of Agricultural and Food Chemistry* 44(9):2619-23. Sept. [24 ref]
• ***Summary:*** Many hydrolyzed proteins have been shown to have antioxidative activities against the peroxidation of lipids or fatty acids. This paper is about an antioxidative peptide derived from the proteolytic digests of a soybean protein. Address: 1-3. Dep. of Applied Biological Chemistry, Faculty of Agriculture, Tohoku Univ., Sendai 981, Japan; 4. Central Research Lab. and Life Science Center, Shimadzu Corp., Kyoto 604, Japan.

10354. Franklin, Deborah. 1996. The healthiest women in the world [in Okinawa]. *Health.* Sept. p. 56-63.
• ***Summary:*** On average, American men now live to be 72, and American women 79. Not as good as the Japanese, where the ages are 76 and 83 respectively. But women in Okinawa live, on average, to age 84–longer than women in any other country or region of the world. Okinawa was annexed by Japan in 1879 and today it is a full-fledged Japanese state (the equivalent of a U.S. state). What is their secret? Kazuhiko Taira, a gerontologist at the University of the Ryukyus in Okinawa, thinks that much of it has to do with the Okinawan diet. In Okinawa there is a saying that "food is medicine." Traditionally Okinawans have eaten three times more meat (especially pork) than Japanese mainlanders, 50% more tofu, and–very important–40% less salt. In the decades before 1960, mainland Japanese adults typically consumed 6-9 bowls of miso soup each day, plus a few small servings of salty pickled vegetables and/or seaweed–all sources of salt. Yukio Yamori, who (for the last 15 years) has studied links between diet and longevity notes that Okinawans eat quite a bit of tofu and other soy products which are particularly rich in isoflavonoids–estrogen-like compounds that may reduce one's risk of osteoporosis. His "most recent study, of post-menopausal women in Japan and Hawaii, showed that women who consumed the most soy had the densest bones." This might explain why elderly Japanese–and especially Okinawan–women suffer far fewer bone fractures than American women, even though the Japanese consume much less calcium.

Another important key to a long and healthy life in Okinawa is *yuimaru,* a word written with the Japanese characters for "circle" and "connection." It expresses that sense of belonging and connectedness and feeling needed, which makes elderly people look forward to each new day. In Okinawa, the elderly are greatly respected. Address: Staff writer.

10355. Caton, Greg. 1996. New developments at Lumen Foods (Interview). *SoyaScan Notes.* Oct. 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Greg is working closely with Dr. Suzanne Paxton, a doctor of pharmacy, of PNC–Preventive Nutrition Consultants. Her late husband, Herb Pierson, worked with

© Copyright Soyinfo Center 2014

the National Cancer Institute and is credited with coining the term "Nutraceuticals." He was a pure scientist–not a promoter; he died at age 43, just 6 months ago–probably because of the many cancer-causing substances he was working with. He was especially interested in finding plant-based materials that were effective in curing cancer. On the health and medical benefits of garlic alone, he had something like 20,000 references. Many other people have come in and taken credit for his work. Herb and Suzanne's research *"made* Wakanaga, and their Kyolic garlic supplement." Wakanaga is a $200 million a year garlic company headquartered in Japan.

For Lumen Foods Suzanne has just written a 29-page booklet on the latest developments in soy phytopharmacology. "She was one of the first to publicize the benefits of soy in treating menopausal symptoms. I don't know anybody who knows more about phytopharmacology and the effects of soy and many other different vegetables. She is a world class authority–a very impressive person."

Greg has just run a full-page color ad for Heartline Meatless Meats in the September 16 issue of *Time* magazine, which was mailed to 1 million women. Nine years ago he ran a one-third page ad in the December 1987 issue of *Prevention* magazine that reached 4 million readers. It barely paid for itself.

Greg's business is still small, with sales projected to be about $1 million in 1996. But during his first year in business, in about 1986, the company grossed about $40,000. In the last few years the company's sales have grown for $350,000 to $782,000 last year. Most of his growth in sales is from mail order. Now mail order accounts for about half of his sales; it used to be much smaller.

His low-fat Heartline products (named Heartline Lite) do not sell nearly as well as their regular counterparts; a 2 ounce serving of the latter, reconstituted, contains 83 calories (with 27 calories from fat) and 3 grams of vegetable oil, with no saturated fat or cholesterol. Thus, 32.5% of the calories come from fat. There is a very low rate of repeat sales for the low-fat or nonfat products.

Greg was motivated to start his own business because ADM (with whom he worked from 1981 to 1983) denied that there was any problem with flatulence from their TVP products. This was long before soy protein concentrates became popular. GNC (General Nutrition Corp.) created many dinners using TVP at their plant in Fargo, North Dakota, but after several years they realized that consumers were complaining a lot about the gas; so GNC dropped ADM, who at that time was doing a promotional titled "Uncle Archie's"–which Greg was involved with. So Greg left ADM, did research on new soy products in 1985, then founded the company in 1986.

Greg's fastest growing product now, Stonewall's Jerquee, is a deep-fried product, which has much of the fat subsequently removed by centrifuging. "People who eat a snack want to be wowed. They are looking for an experience. More and more we realize that we are in the experience business. This in the only product we make that is purchased by meat-eaters as well as vegetarians.

Greg now owns five companies; one of these designs and develops Web pages. "If you have to work for a living, your life should be an adventure." Address: President, Lumen Food Corp., 409 Scott St., Lake Charles, Louisiana 70602-0350. Phone: 318-436-6748.

10356. Morinaga Nutritional Foods, Inc. 1996. Finally... a cabinet member you can trust (Ad). *Vegetarian Times.* Oct. p. 25.

• ***Summary:*** This full-page color ad shows 6 cartons of Mori-Nu Tofu and Mori-Nu Mates Chocolate Pudding & Pie Mix on a shelf in a kitchen cabinet or cupboard. "Stock your cupboard with Mori-Nu Silken Tofu–the tofu you can trust to stay "first day fresh" without refrigeration. Our modern aseptic* package guarantees Mori-Nu's freshness without preservatives or irradiation... Finally–a tofu you can trust. Mori-Nu. The low-fat tofu in the long-life package."

* = "aseptic packaging: Voted #1 food science innovation by the Institute of Food Technologists because it increases nutrient retention and flavor while protecting against bacterial contaminations."

Talk with Art Mio of Morinaga. 1996. Nov. 8. Tofu in the pantry shows its lack of need of refrigeration.

This ad also appeared in the Dec. 1996 issue (p. 23) of this magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10357. Sumi, Hiroyuki; Banba, Takeshi; Kishimoto, Noriaki. 1996. [Strong pro-urokinase activators proved in Japanese soybean cheese natto]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society of Food Science and Technology*) 43(10):1124-27. [9 ref. Eng; jap]
Address: Dep. of Nutrition, Faculty of Health and Welfare Science, Okayama Prefectural Univ., Kuboki 111, Soja-shi, Okayama 719-11, Japan.

10358. *SoyaScan Notes.* 1996. Black soybean varieties in North America: A brief early history (Overview). Nov. 3. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Since the late 1970s, almost all of the soybeans in the USA have had yellow seed coats. Most Americans, including soybean farmers, have never heard of soybeans that were black, green, brown, white, red, bicolored, or mottled. But have yellow soybeans always predominated in America?

"Previous to the numerous introductions by the United States Department of Agriculture beginning in 1898, not more than eight varieties of soy beans were grown in the United States, namely, Ito San, Mammoth, and Butterball,

© Copyright Soyinfo Center 2014

with yellow seeds; Buckshot and Kingston, with black seeds; Guelph or Medium Green, with green seeds; and Eda and Ogemaw, with brown seeds." Thus of these eight pre-1898 varieties, 3 varieties (37.5%) had yellow seeds, 2 varieties (25%) had black seeds, 2 varieties (25%) had brown seeds, and 1 variety (12.5%) had green seeds (Source: Piper & Morse 1910, "The soy bean: History, varieties, and field studies," p. 27).

In this same important 84-page report, the authors describe in great detail the 285 soybean varieties that have been introduced into the United States as of 1909. Of these 285 varieties, 152 varieties (53.3%) have yellow (straw-yellow or olive-yellow) seeds, 55 varieties (19.3%) have black seeds, 44 varieties (15.4%) have brown seeds, 24 varieties (8.4%) have green seeds, and 10 varieties (3.5%) are bicolored (p. 37-39).

Thus, as late as 1910, only about half of all soybean varieties in the United States had yellow seeds. But yellow soybeans were already coming to be preferred. Why? "Yellow or green seeds are preferable to darker colors, as the shattered seeds are more easily found by hogs pasturing the field or stubble" (p. 36).

The first black-seeded soybean was probably introduced to the USA from Japan in 1889 by Prof. W.P. Brooks of the Massachusetts Agricultural Experiment Station, who traveled to Japan to collect seeds. He had named this variety "Medium Black" by 1895 and in 1893 it was grown at the Rhode Island Agricultural Experiment Station, from which the U.S. Department of Agriculture received it in 1903 under the name "Japanese No. 15." By 1910 it had been officially named "Kingston" (p. 31).

In 1910 the following named, black-seeded (or partly black) soybeans (listed alphabetically) were being grown in the USA: Arlington, Auburn, Black Beauty, Brindle (brown and black), Buckshot, Chernie, Cloud, Early Black, Ebony, Extra Early Black, Fairchild, Flat King, Hankow (brown banded with black), Hongkong, Jet, Kingston, Large Black, Medium Black, Medium Early Black, Meyer (black and brown), Nigra, Nuttall, Peking, Pingsu, Riceland, Shanghai, Taha (black with olive saddle), Wilson, Wisconsin Black (p. 39-74).

In 1899 Walter Blasdale, Instructor in Chemistry at the University of California, studied the vegetables sold at Chinese markets in San Francisco. He reported that year in USDA OES Bulletin No. 68 that two varieties of soy beans were found, a yellow and a black. "The black is known as 'hak tau,' and is designated by the characters 'black' + 'bean.' Both varieties obtained from the Chinese market in San Francisco grew readily in Berkeley, attaining a height of about 3 feet, and in spite of a very dry season produced an abundant crop of seeds." In this bulletin, Blasdale included a good, full-page photo of "The upper portion of a plant of the black soy bean." He then analyzed the nutritional composition of both the original Chinese soy beans and their progeny grown in Berkeley, and presented his results in tabular form. On a dry-weight basis, the original black soy beans contained, on average, 0.35% more protein (39.62% vs. 39.27%) and 0.72% less fat (18.77% vs. 19.49%) than the yellow soy beans.

On 28 August 1906 the USDA, as part of its major seed and plant introduction, received the first black soybean [SPI #19184] noted for its food use. It came from Newchwang, Manchuria, from Plant Explorer Frank N. Meyer, who wrote: "A large variety of the black soy bean. This is a very rare variety and is used for food: also for making a superior oil."

The first American recipe for using black soybeans was published in May 1917, during World War I, in the *Wisconsin Agricultural College, Extension Circular* No. 79, titled "How to Cook Soy Beans," by the University of Wisconsin Home Economics Department. The one recipe titled "Black soy bean soup" called for "1 pint black soy beans." This same recipe appeared the next month, in the June issue of the *Journal of Home Economics* in an article titled "Soy Bean Cookery," by Nell Beaubien, of the University of Wisconsin Home Economics Department.

In 1960 the first recipe for black soybeans [called "black beans" after the Japanese term *kuro mamé* which means "black soybeans"] appeared in America in a cookbook, *Zen Macrobiotics,* by George Ohsawa. It was recipe No. 118 for Boiled soy beans. But the "black beans" were used only as an alternative ingredient. Most of the recipes for black soybeans in American cookbooks after 1960 were in macrobiotic cookbooks, where they were consistently called "black beans" rather than black soybeans–and one can only wonder if the authors realized that their recipes were really calling for black soybeans. The first macrobiotic recipe calling for "Black soy beans" was published in 1973 by Chico-San in a product catalog which contained many recipes. The first real macrobiotic cookbook to use the term "black soybeans" in a recipe title was *Aveline Kushi's Complete Guide to Macrobiotic Cooking,* published in 1985 by Warner Books (see p. 257-58).

The first packaged black soybeans sold in America for food use appeared in 1959 in New York City. They were imported from Japan by the Oriental Food Shop, and received a write-up in the May 1959 issue of *House Beautiful* magazine.

In 1962 Chico-San Inc., in Chico, California, one of America's first macrobiotic- and natural foods companies, began selling "Black Soybeans," imported from Japan. By January 1970, Erewhon Trading Co. in Boston had followed with a similar product named "Kuromame, a black soy bean import."

In August 1996 Eden Foods introduced America's first canned black soybeans–which were also organically grown in Michigan.

The following is a list of 65+ black soybean varieties introduced before about 1940 to North America, arranged

© Copyright Soyinfo Center 2014

alphabetically by name, with the earliest known date of introduction given in parentheses: Arlington (1910), Auburn (1910), Avoyelles (1931), Black (1900), Black Beauty (1910), Black Ebony (1918), Black Eyebrow (1915), Black Ontario (1927), Black Round (1902), Black Sable (1927), Bopp (1927), Buckshot (1907), Cayuga (1933), Chernie (1910), Claud (1914), Cloud (1909), Coker 31-15 (1934), Coker's Black Beauty (1931), Early Black (1902), Early Wilson (1927), Early Wisconsin Black (1927), Ebony (1907), Edna (1914), Essex (1927), Extra Early Black (1902), Extra Early Black Eyebrow (1927), Extra Select Sable (1927), Fairchild (1910), Flat Black (1904), Flat King (1907), Hiro (1936), Honkong / Hong Kong (1909), Jet (1909), Kingston (1907), Kingwa (1935), Kura (1936), Laredo (1920), Large Black (1907), Mammoth Black (1927), Medium Black (1894), Medium Early Black (1897), Medium Late Black (1897), Meyer (1907), Nigra (1910), Norredo (1935), Nuttall (1907), Oloxi (1937), Otootan / O-too-tan (1914), Pee Dee (1937), Peking / Pekin / Peking S (1910), Pekwa (1932), Pine Dell Perfection (1937?), Pingsu (1909), Red Sable (1927), Riceland (1907), Royal (Morse 1918), Sable (1914), Sato (1936), Shanghai (1910), Sooty (1912), Taha (1909), Tarheel / Tar-Heel / Tar Heel (1914), Tarheel Black (1915), Watson Black (1936), Wilson (1909), Wilson-Five (1918), Wing's Extra Select Sable (1911), Wing's Pedigree Sable (1916), Wing's Sable (1910), Wisconsin Early Black (1927), Wisconsin Black (1903), Wisconsin Pedigreed Black (1927).

10359. *Time.* 1996. Health report: The good news. Nov. 25. p. 23. [1 ref]
• ***Summary:*** This short article begins: "Women of a certain age may want to cultivate a taste for tofu." Research shows that hot flashes during menopause are less severe in women who eat soy protein daily. The soybean contains phytoestrogens, which resemble the female hormone estrogen that is widely prescribed symptoms of menopause. In Japan, where diets are rich in soy products, "hot flashes are so rare that there is no common word for them."

10360. Himelstein, Vicky. 1996. Amazing tofu diet to beat hot flashes: And here's how to make 'tasteless' health food really delicious. *Star.* Nov. 26. p. 1, 33.
• ***Summary:*** *Star* is a popular tabloid newspaper, sold at supermarket checkout stands, featuring sensational stories and celebrities. On the cover is a color photo of TV star Roseanne in a large rectangle. The text reads: "Roseanne's holiday diet: Eat what you want and lose weight, plus Tofu diet to beat hot flashes."

This article, based on an Associated Press story, begins: "If you're in the throes of menopause and suffer from uncomfortable hot flashes, take heart. You may be able to beat the heat by simply adding tofu to your diet. Startling new research reveals that tofu, a soybean-rich food, can cool the miseries of menopause fast, which may be the reason Asian women–whose diets are rich in soy–suffer fewer, less severe hot flashes and night sweating than American Women."

The article then summarizes a study by Dr. Gregory Burke, of Bowman Gray School of Medicine in Winston-Salem, North Carolina. Investigating the effects of soy on menopause, his 6-week study involved 43 women, ages 45-55. Tofu contains "phytoestrogen–the plant form of the female hormone estrogen." The Star adds: "Doctors are recommending that women eat tofu–a custard-like extract from soybeans–and drink soy milk. The challenge is now for cooks to make tofu taste good. 'Tofu is a white spongy cube that's very bland when you eat it raw,' says Star nutritionist Ann Newswanger. 'But it's cholesterol free, and absorbs flavor from other ingredients. The possibilities are endless–have it for meals and in desserts." Three recipes are given: Tofu raspberry mousse. Poppy seed dressing. Spicy tofu stir-fry with vegetables.

10361. *ASA Today* (*St. Louis, Missouri*). 1996. European response to genetically modified soybeans: Special update to ASA members. 3(1):3-4. Oct/Nov.
• ***Summary:*** "Special emphasis is placed on the current situation in the European Union, one of our key export markets.

"Background: The first commercially available variety of GMO soybeans, Roundup (R) Ready, have been approved for importation and processing by government regulatory agencies in the United States, Europe, Canada, Mexico, Argentina, and Japan. Regulatory bodies in these countries have declared these soybeans safe and the same as conventional soybeans in composition, nutritional profile and functionality. Because these GMO soybeans have been determined equivalent to conventional soybeans in safety and nutrition, government agencies have not required that they be segregated or labeled, either in the U.S. or abroad.

"Last spring regulatory approval was granted by the European Union allowing the importation and processing of Roundup Ready soybeans into food and feed. However, despite these approvals, consumer acceptance issues regarding biotechnology and GMO soybeans exist in parts of Europe which could affect U.S. soybeans exports to certain European markets. No significant consumer or market acceptance issues regarding GMO soybeans have surfaced outside Europe.

"Present situation: Greenpeace and other activist groups have mounted strident opposition to the introduction of GMO soybeans into Europe." Their efforts have raised concern among consumers and segments of the food industry in several European markets, including Germany, Austria, the United Kingdom, Switzerland and Scandinavia. Based on a consumer 'right to know' platform, these groups are advocating segregation of the GMO soybeans and the labeling of all products containing GMO soybeans. They

© Copyright Soyinfo Center 2014

are threatening a possible boycott of all U.S. soybeans and derivative products if their demands for segregation and labeling of GMO soybeans are not met.

"This campaign is particularly strong in Germany. Large-scale consumer research in Germany indicates that a significant percentage of the population currently is uncertain about the application of modern biotechnology. Greenpeace is exploiting this situation and has launched, with a few other organizations, a campaign attacking genetically modified crops in general and GMO soybeans in particular. The German media response has been strong, but even-handed, and German consumers' direct response has yet to be determined.

"As a result of the continued pressure by Greenpeace and other activists, Unilever-Germany, the largest consumer food company in Germany, recently announced that, while it supports biotechnology in general, it will not use soybean oil in their margarine and vegetable oil brands until Unilever-Germany is more confident of positive consumer attitudes. Nestle-Germany has announced a similar position.

"Because of this situation, some European purchasers are looking for supplies of soybeans guaranteed to be GMO free. At the current time, traditional exporters in the U.S. are not guaranteeing shipments of non-GMO soybeans. Greenpeace has identified some small and non-traditional suppliers who are reportedly offering supplies of non-GMO soybeans for export at 'modest' premiums. The grain trade knows little or nothing about these suppliers; it is believed that they could offer only limited supplies, and it is not clear how they would execute shipments.

"ASA actions: The American Soybean Association anticipated this controversy in Germany and, along with the United Soybean Board (USB) and industry stakeholders, has been monitoring and attempting to positively influence the situation since the beginning. ASA staff in Germany and Brussels are involved on a daily basis. We are listening to consumers and are working with industry partners in Germany and other European countries to address questions and help share information. We are also keeping close tabs on the possible spillover of the issue into other European countries.

"Since March, when regulatory approval was announced, ASA has carried out extensive industry educational programs in Germany and the European Union with market development funding provided by the U.S. Department of Agriculture and USB. These programs include the publication and distribution of written materials targeted at the food industry, a visit to Germany by ASA CEO Steve Censky and ASA and USB farmer leaders for discussions on the subject at top industry levels, and the support of videos and consumer magazine inserts developed to explain the safety and benefits of biotechnology and GMO soybeans. ASA is working closely with a coalition of German food processors, oilseed crushers, and others to disseminate factual, science-based information to retailers and consumers.

"In discussions with the trade and the press, ASA has maintained that segregation of GMO soybeans and non-genetically modified varieties is impractical and unnecessary, since they are no different in composition or safety.

"ASA supports modern biotechnology efforts and believes that farmers, consumers, the environment, and the entire ag-industry will benefit from biotechnology. We will continue to work to educate our customers on the benefits and safety of biotechnology.

"As marketers of U.S. soybeans, ASA and our members also must be responsive to our customers. Consumer attitude surveys indicate that German consumers are concerned about the inclusion of genetically modified ingredients in their food products. Whether real or imagined, their concerns are a reality. ASA will continue to work with industry partners to develop strategies and messages that protect the German market (7% of total U.S. soybean exports) and the European Union market at large (over 40% of total U.S. soybean exports)."

10362. Holin, Fae. 1996. Roundup Ready beans stir environmental boycott. *Soybean Digest.* Nov. p. 5.
• ***Summary:*** Jeremy Rifkin, president of the Foundation on Economic Trends, is leading this boycott in the USA and Europe of Monsanto's genetically engineered (transgenic) Roundup Ready soybeans by asking consumers to boycott foods in which these soybeans appear unlabeled–such as Green Giant Harvest Burgers, Similac infant formula, and McDonald's french fries (which may be fried in soybean oil).

Both the European Union and Japan recently approved the use of Roundup Ready soybeans in feed and food. "And one of Europe's largest soybean processors, Oelmuhle Hamburg AG [in Germany], says it will begin importing and processing genetically modified U.S. beans this fall, despite Greenpeace protests."

"Roundup Ready soybeans are being harvested for the first time this year from nearly 1 million acres. That's predicted to increase tenfold next year."

10363. Kikkoman International Inc. 1996. The art of soy sauce: Foodservice recipes, tips, and menu ideas. San Francisco, California. 36 p. Illust. No index. 15 x 22 cm. Spiral bound.
• ***Summary:*** Contents: Introduction–The art of soy sauce. What is soy sauce? Soy sauce and the secrets of flavor enhancement. Kikkoman and the art of soy sauce. Soy sauce infusions (with mushroom, garlic, ginger, shallot, chili). Meet the chefs (with a small portrait photo of each): Tim Cushman, Barbara Tropp, Lawrence Chu, Takayoshi Kawai. The recipes.

Each recipe yields 24 servings and is accompanied by a descriptive quotation from the chef who developed it.

© Copyright Soyinfo Center 2014

Many recipes are accompanied by a full-page color photo. The Introduction begins: "Right now, all across America, a new culinary style is evolving. So new, in fact, it has yet to be named. Some call it 'Asian-inspired.' Some call it Pan-Pacific.' Others simply call it brilliantly eclectic. It's a cuisine without boundaries that draws on the flavors of Asia, incorporating them into Western cooking to create fresh flavors and new ideas the world has never seen." The majority of the recipes in this book contain red meat, fish, or poultry. Address: San Francisco, California. Phone: 1-800-944-0600.

10364. Lane, Mick. 1996. New test identifies biotech beans and corn: Company claims. *Soybean Digest.* Nov. p. 19.
• ***Summary:*** The article begins: "A new test that identifies biotech-produced [genetically engineered] crops such as Roundup Ready soybeans could possibly stir up more problems than it solves. That's the concern of many biotech proponents, including farmers, in the U.S."

The European Union and Japan have now given the long-awaited green light to import these transgenic crops for feed and food uses. But antibiotech groups in Europe, especially in Germany, are waging a vigorous campaign "to keep biotech-produced food products out of the food chain."

Until recently, there has been no quick, simple test to show whether or not a sample of seeds contains any that have been genetically modified. But a new company named Genetic ID, in Fairfield, Iowa, has announced that it has developed test that can detect the presence of biotech-introduced genes in grains and foods.

Monsanto spokesperson Karen Marshall expressed concern that the test could not say what percentage of the beans in a ship or bin were actually Roundup Ready. She emphasized that there is no difference in the oil from Roundup Ready soybeans and only a minute difference in the protein.

Jeff Wells, general manager of Genetic Id, said that his company's test takes about 2 days, recognizes foreign DNA in an organism with complete accuracy, and costs about $500 per sample. He believes the test will help U.S. farmers who are willing to contract and market soybeans as not genetically altered.

Richard Godown, senior vice president of the Biotechnology Industry Organization in Washington, DC, is concerned that the test gives no information on the safety or health value of a food being tested. "People just want to know whether a product has been genetically engineered... We are concerned that the test, because it gives incomplete information, could be used by antibiotech groups for a biased purpose, and that is to stigmatize biotech foods."

10365. Pulmuone U.S.A. Inc. 1996. Update on Pulmuone (Brochure). South Gate, California. 3 p. 28 cm.
• ***Summary:*** This 3-page black-and-white brochure was inserted into the color Pulmunoe catalog in June 1997. Contents: Background. Situation analysis. Pulmuone's future. Why Pulmuone tofu for the general market? Sales and trade promotions. Distribution. Media plan. "Background: The success of Pulmuone in Korea stems from the original philosophy of naturally produced foods with respects to mother nature. This corporate culture is prominent in its employees and product line. From delivery personnel to the board of directors, Pulmuone identity is imbedded in the corporate and personal lives of all employees.

"In 1991, Pulmuone's dedication expanded across the Atlantic Ocean to the United States. Pulmuone had a far reaching dream to provide Korean Americans with natural ethnic products they could not find in the U.S. Pulmuone bean paste [miso] and pepper paste were the first products to come into the U.S. and minerals and supplemental foods followed thereafter. Then in June of 1995, Pulmuone opened its first tofu plant in South Gate, California.

"Thus began the history of Pulmuone USA.

"Situation Analysis: Currently, Pulmuone USA holds 70% of Korean tofu market. A market held for over 3 decades by a single Japanese company in the U.S., Pulmuone boldly and aggressively captured the Korean American market within 14 months. Once Pulmuone tofu was introduced to the market, Korean Americans immediately recognized the superior quality of Pulmuone Tofu over other brands.

"Pulmuone has also enjoyed success in the Japanese American market within a short span of time. Pulmuone currently produces private label tofu for Marukai, which is a very popular wholesale type market amongst the Japanese Americans. In the past, they carried two of the most popular brands, Hinoichi and Aloha. However, within a 3 month period, Marukai brand tofu sold both brands by a ratio of 3 to 1.

"We have a state of the art facility with complete automation. Our current production rate is 20,000 pounds of tofu per day running at single shift.

"Pulmuone Tofu's obvious superior qualities are attributed to the following: 1. Use of highest quality pure Vinton 81 soybeans; Vinton 81 soybeans are 30% more expensive than regular soy beans. 2. Quick Chill System for optimum freshness and flavor. 3. Lower pasteurization temperature without compromising taste or shelf stability. 4. Complete Manufacturing Plant Sanitation System on a daily basis."

The company has scheduled advertisements in *Vegetarian Times, Los Angeles Times Magazine* (in Korean), and *Super Market Business* for late 1996 and early 1997.

Letter from John Sim, marketing director of Pulmuone. 1997. June 17. This insert was printed on 17 Nov. 1996. Address: 4585 Firestone Blvd., South Gate, California 90280. Phone: 213-564-3000.

10366. Hansen, Asger Sommer. 1996. Re: Finally our soymilk business is taking off (Card). Letter to William and Akiko Shurtleff of Soyfoods Center, Dec. 1 p. Handwritten, with signature.
• ***Summary:*** Handwritten on an APV UNICEF Christmas card: "Finally our soymilk business is taking off. Plants sold in 1996: 3 for China. 1 for England. 1 for Japan.

"Kind regards, Asger S. Hansen." Address: APV Soya Sector, Europaplads 2, 8000 Aarhus C, Denmark. Phone: +45 86 12 41 55.

10367. House Foods America Corporation. 1996. Hinoichi products (Leaflet). Los Angeles, California. 1 p. Single sided. 28 cm.
• ***Summary:*** This single-sided leaflet (8½ by 11 inches) shows a photo and gives a brief description of each of the company's products, which fall into four categories: (1) Tofu: Regular tofu, 19 oz, water pack. Shelf life, refrigerated: 34 days. Regular tofu, 14 oz. Soft tofu (kinugoshi), 14 oz. Extra soft tofu, 14 oz. Firm tofu, 19 oz or 14 oz. Yaki tofu (broiled tofu), 9 oz. (Japanese label only)

(2) Age: Agé French fried tofu pouches, 6 pack (1.5 oz each). Oagesan 4-pack tofu pouches (1.1 oz each; Japanese label). Atsuage tofu cutlet (5 oz, Japanese label). Jumbo atsuage tofu cutlet (9 oz, Japanese label). Tofu fritter, large (Ganmodoki, 3 = 2.5 oz.). Tofu fritter, small (Ganmodoki, 8 = 2.5 oz.).

(3) Konnyaku: 6 products, incl. 3 Shirataki yam noodle [thin konnyaku noodles].

Natto: Natto fermented soybeans, 4 oz. Mamekozo natto fermented soybeans, 5.4 oz.

A separate but similar sheet shows foods made in Japan by House Foods and sold by House Foods America Corporation. These include Mabo Tofu Sauce (Medium hot or hot), Wasabi (horse radish paste), *Shichimi togarashi* (red pepper mix), *rayu* (hot sesame oil), *Mugicha* (barley tea), stew mixes (beef or cream), and several curry sauces. Address: 526 Stanford Ave., Los Angeles, California 90013. Phone: (213) 624-3615.

10368. Kluis, Alan. 1996. Global soybean demand continues to increase: A price rebound likely in 1997. *Soybean Digest.* Dec. p. 54.
• ***Summary:*** A table shows U.S. soybean exports to leading nations and regions from 1990/91 to 1995/96, with Northstar estimates for 1996/97. China began importing U.S. soybeans in 1995/96 with 12 million bushels, projected to rise to 26 million in 1996/97.

Europe is the largest market: European imports of U.S. soybeans rose from 212 million bu in 1990/91 to 339 million in 1995/96.

Japan is the 2nd largest market. Japan's imports of U.S. soybeans rose from 131 million bu in 1990/91 to 149 million in 1995/96.

Taiwan is the 3rd largest market. Taiwan's imports of U.S. soybeans rose from 69 million bu in 1990/91 to 96 million in 1995/96.

Mexico is the 4th largest market. Mexico's imports of U.S. soybeans rose from 59 million bu in 1990/91 to 95 million in 1995/96.

South Korea is the 5th largest market. South Korea's imports of U.S. soybeans rose from 32 million bu in 1990/91 to 51 million in 1995/96.

Indonesia's imports of U.S. soybeans rose from 3 million bu in 1990/91 to 25 million in 1995/96.

Israel's imports of U.S. soybeans rose from 15 million bu in 1990/91 to 16 million in 1995/96.

Total imports of U.S. soybeans rose from 557 million bu in 1990/91 to 845 million in 1995/96. Address: President, NorthStar Commodity Co.

10369. *Ontario Soybean Growers' Marketing Board Newsletter.* 1996. Canadian soybean exports and imports. Dec. p. 2.
• ***Summary:*** Gives comparative soybean statistics in metric tons (tonnes) for crop year 1994/95 and 1995/96.

Total soy [soybean] imports: Increased 12% from 62,539 to 69,900.

Exports to East Asia: Increased 11% from 110,251 to 122,176. The leading importers, in descending order of thousand tonnes imported in 1995/96, are: Japan (36.5), Hong Kong (31.2), Malaysia (21.3), Singapore (19.7), Indonesia (3.6), South Korea (2.5).

Exports to Europe: Increased 27% from 262,163 to 333,412. The leading importers, in descending order of thousand tonnes imported in 1995/96, are: Spain (100.7), Netherlands (88.2), Portugal (48.2), Belgium (44.0), Norway (28.3).

Exports to USA: Decreased 16% from 150,757 to 136,903.

Total soybean exports: Increased 11% from 528,102 to 586,621 tonnes.

Source: Statistics Canada. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

10370. *Ontario Soybean Growers' Marketing Board Newsletter.* 1996. Japan Tofu Association. Dec. p. 3.
• ***Summary:*** "In October, Ontario hosted a group of processors from Japan who were interested in buying Ontario soybeans for use in tofu production.

"The visiting delegation toured the Eastern Cereal & Oilseed Research Centre (Ottawa), where Dr. Harvey Voldeng and his colleagues are working on short season tofu varieties. The group also visited a grain facility in Quebec, the Greenhouse & Processing Crops Research Centre (Harrow), where Dr. Dick Buzzell and his colleagues are producing tofu in the lab, looking at tofu texture, firmness and carbohydrates. The Japanese group also observed the

© Copyright Soyinfo Center 2014

processing and cleaning of soybeans at several Ontario grain elevators.

"In Chatham, over forty people gathered to meet with this very important delegation. The Honourable Noble Villeneuve, Minister of Ontario Agriculture, Food & Rural Affairs, spoke to the group on the value of the Japanese tofu market. Having visited Japan last April, he knows first-hand the huge potential for Ontario soybeans in Japan." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

10371. *Ontario Soybean Growers' Marketing Board Newsletter.* 1996. Profile: Gord Pryde of Hensall District Co-operative (Ontario, Canada). Dec. p. 7.
• ***Summary:*** "Ontario's newest soybean exporter is planning to expand contract production of white hilum soybeans northward through Huron and Perth Counties.

"Hensall Co-op contracted with over 100 growers in 1996 to produce 10,000 tonnes of food quality soybeans, mainly for export to Japan and Hong Kong. For 1997, the cooperative will offer contracts for 150 farmers as it makes more inroads into the Pacific Rim market. "'Quality is the key,' says Gord Pryde, marketing manager for the cooperative, which has invested $4.5 million in processing equipment at its Hensall site within the last three years. Pryde says that in 1990, the cooperative faced a pivotal choice. Either it had to undertake a major upgrade in facilities to ship high-quality edible beans, or it had to quit that business.

"Very early in the discussions, directors saw the potential to enhance the return on their investments in equipment and human resources by expanding into soybeans. Now, the cooperative has world class receiving, cleaning and drying equipment, matched with a flexible high-quality storage network that lets it segregate beans and soybeans for distinct markets. Pryde says the equipment achieves precise size, colour and cleanliness standards, and allows them to ship soybeans in bulk or in poly or jute bags.

"Hensall Co-op has total sales over $100 million a year, with nine locations from Ilderton in Middlesex County to Londesborough in north Huron County. The cooperative markets farm inputs such as seed, fertilizer and feed, together with fuels and hardware. Hensall Co-op operates five elevators at Hensall, Seaforth, Exeter, Ilderton and Londesborough. The cooperative is a prominent player in Ontario's white bean industry, and also contracts a dozen kinds of edible beans, ranging from familiar kidney beans to two kinds that most Ontario consumers have probably never seen. These are otebo [*Phaseolus vulgaris* L.] and kintoki [azuki] beans, grown especially for Japan, and they're another reason that Hensall Co-op believes that it can sell food quality soybeans in the Pacific Rim.

"'We've already established a presence as a high quality niche market supplier in the region,' Pryde explains.

"Pryde says Hensall Co-op is building on the efforts of pioneers including John Thompson of W.G. Thompson & Sons, and Nap and Paul King of King Grain, and more recently Peter Hannam of First Line Seeds.

"'They have established a reputation for quality,' Pryde says. 'We don't see ourselves as competitors. We think we can complement their efforts by identifying our own niches.' He adds, 'We believe we are expanding Ontario's share of overseas markets.'

"Pryde says the co-op expects steady growth in contract production, especially with identity-preserved varieties. For its 1996 contracts signed last winter, the co-op offered a 20 cent at-harvest premium for white hilums, and 30 cents for identity preserved, rising to 60 cents for January delivery.

"Most current growers are in north Middlesex county, but Pryde sees potential for growth throughout its trading area as growers gain experience. Hensall Co-op lays out a production program, including weed control. Quality at the receiving platform, however, is heavily influenced by critical harvest decisions, including combine settings and harvest timing.

"'We see our involvement in soybeans five years from now to be completely different than today,' Pryde says. 'We're always going to have a base of regular white hilum soybeans, but the future is to source customers who have unique requirements that demand a niche approach.' That means more identity-preserved production. In fact, Pryde foresees the growth of unique niche marketing becoming so precise, buyers who live half a world away will want to know they're receiving beans grown by specific producers.

"'We built our edible bean business on niche marketing,' Pryde says. 'We will use the same approach in soybeans. We're definitely in this market for the long term.'"

A photo shows Gord Pryde of Hensall District Co-operative standing next to a large truck. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

10376. **Product Name:** [Tsumami Dry Natto for Snacks].
Foreign Name: Tsumami Nattô.
Manufacturer's Name: Koishiya Shokuhin K.K. KF. Japan Airlines (Marketer).
Manufacturer's Address: Ujike 2664, Ujike-machi, Shioya-gun, Tochigi prefecture, Japan. Phone: 0286-82-2220.
Date of Introduction: 1996.
Ingredients: Natto, kombu.
Wt/Vol., Packaging, Price: 80 gm.
How Stored: Shelf stable, 90-day shelf life.

New Product–Documentation: Product with Label sent from Japan by Jean Pearce, writer for the Japan Times. 1997. March. Sold in a cylindrical plastic tub, 3½ inches diameter by 1½ inches deep. Label on the top is self-adhesive, brown and red on yellow. "A natural food. Enriched with vitamin E. Kombu added."

This natto is in a dry from that can be used as either a snack or a topping. A *tsumami* is literally "a pinch,"–as of salt. *Beeru no tsumami* means a "side dish for beer."

Time period: 1983-87. Number of case subjects: 597 (169 in SF, 215 in LA, and 213 in Hawaii). Number of control subjects: 966 (310 in SF, 273 in LA, and 378 in Hawaii). Address: 1. Dep. of Epidemiology, Univ. of California at San Francisco (UCSF).

10380. Chichibu no Miya, Setsuko; Britton, Dorothy Guyver. 1996. The silver drum: a Japanese imperial memoir. Translated from the Japanese *Gin no bonbonieru* by Dorothy Britton. Folkestone, Kent: Global Oriental. xxvii + 210 p. Plus 8 unnumbered pages of plates. See p. 10. Illust. 23 cm.
• ***Summary:*** When I was about 9 years old, my nanny, Taka, severely scolded me for leaving one or two grains of rice in my lunch box after school.

"'Do you realize that the Aizu clan members in virtual exile on the Tonami Peninsula, and their wives and children, had to live on weeds and grass seeds and the tofu lees [okara] and leftover rice, usually fed to horses and oxen, which they were given by the local farmers...'" (p. 10).

"This is the story of a Japanese princess. It is the first autobiography by a member of the Japanese Imperial Family to be published in English. Her name was Setsuko, Princess Chichibu, who was born in Walton-on-Thames, England, in 1909, was educated at the Peeresses' School for Girls, Tokyo, and the Friends School, Washington, and was then invited to marry Prince Chichibu, younger brother of Emperor Hirohito and therefore next in line to the throne. She accepted... The marriage duly took place in September 1928. She died at the age of 85 in August 1995... Both the Prince (who spent some time studying in London and Oxford) and Princess had especially close links with England and the United States. When Japan entered the Second World War they both had to endure the unendurable: their mother country having declared war on their adopted countries. It was an appalling nightmare for them both. In the post-war years, the Princess made numerous trips to Europe in an attempt to rebuild old friendships. She was greatly loved and admired. There were no children" (from the publisher's description). Address: Japan.

soy: Opening frontiers, sowing cities]. Porto Alegre, Brazil: L&PM Editores S.A. 256 p. Illust. (some color). 32 x 28 cm. [Por; Eng]

• ***Summary:*** This spectacular and original book contains the best history of the soybean in Brazil seen to date. It was published to celebrate the 25th anniversary of Ceval Alimentos S.A. (best known as "Ceval"), a soybean crushing and processing company in Brazil. Founded on 4 April 1972 as *Cerais do Vale Ltda.* ("Valley Cereals") by the Hering Co. to benefit from tax incentives offered by the government of Santa Catarina, it began regular operations in Oct. 1972–but quickly transcended its origin and original name. In 1996 the company had nine soybean crushing plants throughout Brazil; three of these also contained soy oil refining capabilities.

The first half of this book is written in Portuguese, the second half in English. Issued in a case, it contains almost 100 pages of full-color photos plus 24 historical black-and-white photos (from the early 1900s to the present, each with a detailed caption) and excellent illustrations. Hasse, an expert in rural matters, conducted more than 150 interviews in the process of writing this book.

Contents: A Brazilian saga (how the book was created), by the publishers. The soy revolution (introduction), by Ivo Hering and Vilmar Schürmann of Ceval Alimentos. Before the fields, the school: Introduction, in the baggage of the Japanese, the reflection of North America, whole grain bread, the role of World War II, local industry. The foreign thrust (p. 202): Introduction, Communist help, the pool of exporters, "Zé Sojinha" (nickname of agronomist José Gomes da Silva, who continues the research of pioneer Neme Abdo Neme at the IAC), frost in coffee plantations (1955 in Parana), the weight of industry (Samrig in 1953, Bunge & Born, Antonio Mafuz, first Samrig crushing plant in 1956 at Porto Alegre, Institute for Soy Development of Rio Grande do Sul once had 42 members), planting news (Samrig, Nestle), butter vs. margarine (Primor soy oil and margarine), table showing soybean production in Brazil and four states, every five years from 1950 to 1970. The wheat lever: Introduction, a civic mission, the import addiction, the circle of mold, the technological package, paper wheat, the powerful CTRIN, swapping roles. The cooperative branch (p. 212): Introduction, the original sin (*Fecotrigo,* Oct. 1958), in the shadow of Banco do Brasil, victims of a giant, grass roots education, a summit decision, big shot, the charter flight to Chicago, the crisis of 1982, loss of credibility, the lessons of soy. The Chicago fever: Introduction, "It was impossible to compare," "Exceptional," kings and beggars (the price fever of 1973), the export model, state incentive, the theory of plenty. The conquest of the West (p. 222): Introduction, expanding frontiers, under the weight of the ax, from the other bank of the river, family subsistence, chronological duality, the march to the west, sowing cities, family memories, once upon a time, the transportation bottle-neck (building the Madeira river waterway). The agribusiness axis: Introduction, the role of the government, plenty of credit, the oil industry, the "poking" method, the boom of Santa Catarina, the dynamism of the Central-West region, the new paradigm, the revolution in transportation, the effect of the strike, grain trucks, machinery industry, the progressive Carazinho, Lodgemann–the land surveyor, Streich–the carpenter. A tropical adventure (p. 236): Introduction, a multinational legion, the metamorphosis, technical leadership, Santa Rosa, in the Mogiana region, the Campinas-Pelotas pioneers, Santa Maria, trailing behind producers, the queen of the cerrados, technical polarization, no frontiers, stories from the hinterland, Londrina–technical capital, the Nobel Prize, the retirement of the plow, farewell to one-crop farming, poor man's food (ITAL). A symbol of health: Introduction, the paradox of Esteio, forced diet, for the pigs and the poor, food and medicine, nutritious soft drink (soymilk, *leite de soja*), a secondary ingredient, flavor barrier (Ital {a public organization}, Vital soymilk {1977}, Sojal soymilk, Gestal soymilk, Roberto Moretti from 1977), the Mechanical Cow (Moretti's "cow" was awarded the "greatest Brazilian invention" prize by the governor of Sao Paulo; this started the cow on an outstanding public career), drops in the ocean, a standing taboo, in search of health, Oriental wisdom, anti-nutritional factors, therapeutic powers. The lessons of a revolution (p. 255): Conclusion. Chronology of the history of soy in Brazil.

On the two pages after the table of contents are full-page color maps which show: (1) Satellite photo of the Planalto Central (High Central Plains) region of Brazil. The city of Brasilia is at the center, and concentrated on the right are areas of soy plantations. The small circles between the plantations are "pivot" planted areas. (2) Map of Brazil showing the historical growth of the soybean crop, places of historical interest, and important cities and ports. There are five special symbols: (a) A brown soybean pod = Introduction of soybean cultivation, e.g., 1882 Bahia, 1980 Barreiras, 1989 Balsas. (b) A blue ship by an elevator = Ports that are outlets for soybean production. (c) Three silver elevators = Centers of cooperative wheat growing. (d) A red retort and a white book = Centers of education, training, and research. (e) A yellow factory with smokestack = Crushing or processing plants. Generally, the soybean has expanded into the northern and northwest parts of Brazil. The captions explain: 1882–Bahia–First cultivation of soybeans in Brazil. 1908–Japanese immigrants import soybeans to Brazil in their personal baggage. 1920–Santa Rosa, Rio Grande do Sul–Soybean seeds distributed to European colonists. They become the first regular cultivators of soy in the southern Brazil. 1923–Sao Simao, Sao Paulo–Henrique Lobbe starts to test American soybean varieties. 1938–Porto Alegre–The first exportation of soybeans from Brazil to Germany. 1958–Esteio–Brazil's first soy oil plant, started by Samrig. 1971–Rio Grande–Grain terminal starts operating. 1972–Gaspar,

© Copyright Soyinfo Center 2014

Santa Catararina–Ceval Alimentos begins operations. Dourados–Bridge of entry of soybeans into Mato Grosso do Sul. Territory of Brasiguaios–Planters of soya and wheat. Port cities (from south to north): Rio Grande, Sao Francisco, Paranagua, Santos, Vitoria, Ilheus, Ponta de Madeira: They play an important role in the exports of seeds and industrialized products.

Talk with Ted Hymowitz, Prof. of Plant Genetics, Univ. of Illinois. 2000. July 3. From 1964 through 1966, Dr. Hymowitz was employed as an agronomist by the IRI Research Institute, Campinas, Brazil–working with soybeans–as part of the Alliance for Progress. He was also a technical advisor to the Brazilian National Soybean Commission. When he read this book, he was struck by the fact that it did not mention the important U.S. role in the development of the soybean industry in Brazil in the 1960s. Address: 1. Journalist; 2. Photographer. Both: Brazil.

10382. Hasse, Geraldo; Bueno, Fernando. 1996. Captions of 24 historical photos of the soybean in Brazil (Document part). In: G. Hasse and F. Bueno. 1996. O Brasil da Soja: Abrindo Fronteiras, Semeando Cidades [The Brazil of Soy: Opening Frontiers, Sowing Cities]. Porto Alegre, Brazil: L&PM Editores S.A. 256 p. See p. 187-92. Illust. 32 x 28 cm. [Por; Eng]

• ***Summary:*** These historical photos and English-language captions appear on pages 187-92: 1. In the region of Santa Rosa, the center of soy in the first decades of the 20th century, German settlers gather at a celebration. 2. European immigrants established wood as the pioneer activity of the agricultural civilization in northern Rio Grande do Sul. 3. Beginning in 1908, Japanese immigrants arrive in Santos carrying the seeds of a new crop to be developed in South America in their luggage. 4. In the planting fields run by *Instituto Agronômico* of Campinas in the interior of Sao Paulo in 1920, soy plants were practically as tall as a man.

5. For almost a century, the *Instituto Agronômico* of Campinas, founded in 1887, was the main technical reference center on soy in Brazil. 6. The pioneer of soy cultivation in the South was the *Escola de Agronomia Eliseu Maciel* (Agronomy School), once called *Liceu Agricola Rio-Grandense,* in Pelotas. 7. *Sorol,* which began operation in the early 1950s in the harbor area of Pelotas, was one of the first oil factories of Brazil. 8. At the factory in Horizontina, farmer Carlos Sapiezinski removes the first threshing machine manufactured in the region of soy.

9. In the 1960s, before extensive mechanization, the fields previously dominated by the queen-of-the-meadow grass in *Planalto* region of Rio Grande do Sul were cultivated with a hoe. 10. In Sao Paulo, a technical meeting on soy. From right to left: Shiro Miyasaka, José Drummond Gonçalves, and José Gomes da Silva ("Zé Sojinha"). 11. Studies of soy adaptation to *cerrados* climate of Central Brazil began at the Federal University of Viçosa. 12. While gathering a sample of soybean plants before harvest, a worried farmer from Paraná evaluates the quality of beans.

13. In the 1970s, the boom of soy in the state of Paraná is shown through the lines of trucks in the harbor of Paranguá. 14. Taking advantage of the soy wave, *Olvebra,* a fusion of four small factories of the interior of Rio Grande, entered the stock market fever in 1972. 15. The settlement of Mato Grosso followed the same method used in the southern states for felling forests by offering official incentives. 16. The first SLC harvester [combine] was created in 1965 in the center of soy, based on a *John Deere* reaper-thresher, which had been imported 10 years earlier. Note: SLC is the name of a harvester manufacturer based in Horizontina.

17. At first, the super-harbor of Rio Grande was a wheat and soy terminal given to *Cotrijuí* by the government. 18. Since 1974, following the soy boom, serial manufacturing of trailers for bulk transport in Caxias do Sul was developed by *Randon.* 19. When *Ceval* was built in Gaspar during the first half of the 1970s to take advantage of tax incentives due to the *Hering* company, nobody imagined that it would become the largest company of Santa Catarina in the 90s, thanks to soy. 20. In Brazilian kitchens, soy oil slowly replaced peanut and cotton oils. After 30 years, it was a necessity in Brazilian kitchens.

21. Olacyr de Moraes, a pioneer in exploring virgin lands in Ponta Pora, was named the "king of soy" because of his extensive plantations in both states of Mato Grosso. 22. Since the 70s, the *Centro Nacional de Pesquisa da Soja* [CNPSo, National Soy Research Center] in Londrina has been the main agricultural reference on *Glycine max* in Brazil. 23. The *Centro Nacional de Pesquisa do Trigo* (Wheat Research National Center) in Passo Fundo. Soy helped the wheat crop in the 60s, just as wheat helped the soy crop in the 90s. 24. The no-tillage method, the latest stage of agriculture mechanization, is a planting technique which causes no erosion and preserves soil fertility. Address: 1. Journalist; 2. Photographer. Both: Brazil.

10383. Hasse, Geraldo; Bueno, Fernando. 1996. Chronology of the soybean in Brazil (Document part). In: G. Hasse and F. Bueno. 1996. O Brasil da Soja: Abrindo Fronteiras, Semeando Cidades [The Brazil of Soy: Opening Frontiers, Sowing Cities]. Porto Alegre, Brazil: L&PM Editores S.A. 256 p. See p. 198-99, 255-56. Illust. 32 x 28 cm. [Por; Eng]

• ***Summary:*** An excellent chronology: 1882–The earliest known planting of soybeans in Brazil, at Bahia. 1889–The first technical article on soybeans is published in *Instituto Agronômico* (Campinas, Sao Paulo). 1900–Experimental soybean plantations in Rio Grande do Sul. 1908–Japanese immigrants cultivate soybeans at home in the interior of Sao Paulo. 1914–In Porto Alegre, E.C. Craig teaches about soy. 1921–Seed is distributed to settlers of Santa Rosa, Rio Grande do Sul, by priest Albert Lehnbauer. 1923–Henrique Lobbe begins the testing of American varieties in Sao Simao,

© Copyright Soyinfo Center 2014

Sao Paulo.

1930–Planting and cooking in northeastern Rio Grande do Sul is taught by Czeslaw Biezanko. 1934–Seeds are brought from China to Minister Fernando Costa by actress Patrícia Galvao. 1935–Neme Abdo Neme begins his experiments in *Agronômico* from Campinas. 1938–The first shipment from Rio Grande do Sul to Germany is exported by Frederico Ortmann.

1941–Soy first enters agricultural statistical data of Rio Grande do Sul. 1945–Soy first enters agricultural statistical data of Sao Paulo. 1948–In order to add soy to *Patroa* cotton oil, Swift encourages planting in the interior of Sao Paulo.

1950–José Gomes da Silva begins the Soy Campaign in Sao Paulo, introducing new American varieties. 1951–Francisco de Jesus Vernetti begins to research soy at *Iapas,* Pelotas, Rio Grande do Sul; *Incobrasa* inaugurates its factory in Gravataí, Rio Grande do Sul, and launches the *Santa Rosa* oil, with technology brought by the Chinese who fled Mao Zhe Dong's revolution. 1952–*Sorol* produces soybean oil in Pelotas. 1955–Chinese entrepreneurs establish *Igol* in Santa Rosa and soy is planted to recover frosted coffee plantations in Paraná. 1957–In Porto Alegre, *Merlin* launches canned oil. 1958–*Samrig* inaugurates a factory in Esteio, Rio Grande do Sul, and launches the *Primor* oil and margarine; Shiro Miyasaka discovers a soybean variety that is less sensitive to the photoperiod in the Paraíba river valley; foundations of the *Federaçao das Cooperativas Tritícolas do Sul* (Southern Wheat Cooperatives Federation) (Fecotrigo).

1962–In Giruá, Rio Grande do Sul, Sadi Pilau establishes a factory. 1963–The Federal University of Viçosa, Minas Gerais, begins to study varieties adapted to the *cerrados.*

1966–Santa Rosa, the first great Brazilian variety, resulting from crosses of American strains, is launched at the First National Soy Festival. 1967–Operation Armadillo, in the interior of Rio Grande do Sul, a milestone of the couple wheat-soy, is financed by *Banco da Brasil*; first Soy Festival in Sao Joaquim da Barra, Sao Paulo. 1968–Romeu Kiihl returns from the U.S. after studying soy's ability to adapt to different latitudes. 1969–*Mineira* and *Viçoja* varieties launched by UFV.

1970–Soy begins to be planted in Mato Grosso (do Sul) and penetrates the *cerrados* of Goiás. 1971–*Olvebra* begins operation after the fusion of four factories from Rio Grande do Sul; the National Commission on Soy Research is established in the Ministry of Agriculture, which is responsible for launching BR seed varieties. 1972 April 4–*Ceval* is founded by the Hering company. Oct.–Begins regular operations in Gaspar, Santa Catarina. 1973–*Anderson Clayton, Cargill* and *Irmaos Pereira* factories are inaugurated in Ponta Grossa, Paraná. 1973–Soy prices boom in the international market. 1974–Settlers from Rio Grande do Sul visit the Chicago Stock Market.

1976–The National Center for Soy Research, of Embrapa, begins operation in Londrina, Paraná. The *Sadai* group, the biggest consumer of soybean meal, begins processing soy in a factory in Toledo, Paraná; *Perdigao* establishes a factory in Videira, Santa Catarina.

1980–Soy broadens the agricultural frontier to the *cerrados* in Bahia. 1981–*FT-Cristalina* variety is launched, suitable for the *cerrados.* 1982–The "Centralsul Scandal" exposes the crisis of the southern agriculture cooperatives; international credit to Brazil is cut by the International Monetary Fund. 1985–Beginning of the transference process of the soybean crushing industries to the Central-West.

1990–Soybean penetrates Maranhao and Piauí. 1994–National production record, consisting of more than 25 million tons.

1995–The established capacity of the soybean processing industry reaches 116,000 tons per day; soy businesses represent U.S. $7.5 billion–more than 1% of GNP. 1996–The federal government invests in waterways and railways to consolidate the agricultural frontiers of the Central-West. Address: 1. Journalist; 2. Photographer. Both: Brazil.

10384. Hosking, Richard. 1996. A dictionary of Japanese food: Ingredients & culture. Boston, Rutland, Vermont, Tokyo: Tuttle Publishing. 239 p. Illust. by Richard C. Parker. Index. 21 cm. [16 ref]

• ***Summary:*** This appears to be the same as the original 1972 edition. An excellent, accurate book. The basic entry for each word is given under its Japanese name (thus *daizu* rather than soybeans). Each entry includes the Japanese term in kana (usually hiragana) and (usually) kanji (Chinese characters). One hundred small illustrations are very helpful.

Here is a short example: "dengaku (hiragana, kanji) a preparation in which food such as eggplant, taro, konnyaku, or tofu are dressed with a sweetened miso topping and grilled on skewers. Fish *dengaku* is called *gyoden."*

An example of a longer entry is "yuba (hiragana, kanji) soy-milk skin. A specialty of Kyoto, this skin that is formed when soy milk (tônyû, 2 Chinese characters) is heated is not only delicious, but highly nutritious, being the richest source of protein known (over 52%). It is also high in natural sugars (12%) and polyunsaturated fats (24%) and therefore very high in energy. It is eaten both fresh and dried, being added to soups and used as a skin to roll up such things as cucumber and burdock. Nearly all yuba is made in Kyoto and it is fairly expensive. Much use is made of yuba in shojin ryôri."

Seventeen appendices (p. 197-235) give detailed discussions of the following important Japanese foods and related items: Chopsticks. Katsuobushi. The kitchen and its utensils. Kombu. The meal. Miso. Saké. Salt. Sansai. Soy sauce. Sushi. Tea. The tea ceremony. Umami and flavor (incl. MSG). Vegetarianism (incl. Buddhism, shôjin ryôri, and fucha ryôri). Wasabi. Wasanbon sugar.

10386. Kleiner, Art. 1996. The age of heretics: Heroes, outlaws, and the forerunners of corporate change. New York, NY: Currency Doubleday. xii + 414 p. See p. 273-89. Illust. Index. 24 cm.
• ***Summary:*** From the rear cover: "Art Kleiner has uncovered a kind of secret history that links the medieval monastic orders, the counterculture of the sixties, and the key agents of corporate change in the modern world. I think its a landmark for people both inside and outside the most influential institution of the modern age–the corporation"–by Howard Rheingold, author of *Virtual Reality, Virtual Communities and Tools for Thought.*

Chapter 8, titled "Millenarians," begins with a history of Erewhon Trading Company (p. 273-89), which makes it appear that Paul Hawken was the only important person in the company. Nevertheless, the history is full of interesting insights, many related to Erewhon's role as a pioneer in the countercultural natural foods industry and (for a while) the largest distributor of natural foods and macrobiotic foods in the United States. Kleiner is a engaging and insightful writer. Erewhon was started by Michio and Aveline Kushi who, in the 1950s, had met at La Maison Ignoramus [literally, The House of Ignorance], a macrobiotic institute founded by renegade philosopher George Ohsawa outside Tokyo. Ohsawa claimed to have cured himself of tuberculosis by eating a diet of brown rice, miso soup, and cooked vegetables (from both land and sea). Ohsawa came to believe that a good (macrobiotic) diet is the foundation of both personal and societal health. The first step is to change your own diet, then to help others change theirs. Ohsawa was a Japanese writer, had lived in Paris in the 1920s, and was deeply interested in world government–as well as in Zen. Ohsawa recruited the Kushis to go abroad (Michio was the first to leave Maison Ignoramus and to do so) to promote world government. Michio and Aveline fell in love in the United States and were married. They eventually started teaching young Americans in Cambridge, Massachusetts. Before long they were prosecuted for practicing acupuncture without a medical license–but they prevailed and stayed. In the mid-1960 macrobiotic diets called for staples that were rarely found in East Coast food stores: brown rice, miso, tamari, etc. The Kushis started to sell food and books out of their home in Cambridge. Then [in April 1966] they moved the little store out of their home into a basement retail space at 303-B Newbury Street–and named the fledgling company Erewhon. "... one of their students, Paul Hawken, took over as clerk"–or at least so says this book. Hawken was only eighteen, a lean young man from California. The rest of the story is how Hawken (apparently single-handedly) built Erewhon and the early natural foods movement.

From the publisher's description: "The author explores the nature of effective leadership in times of change and defines its importance to the corporation of the future. He describes a heretic as a visionary who creates change in large-scale companies, balancing the contrary truths they can't deny against their loyalty to their organizations. This book reveals how managers can get stuck in counterproductive ways of doing things and shows why it takes a heretical point of view to get past the deadlock and move forward." Address: Former editor of *The Whole Earth Catalog* and freelance business reporter during the 1980s, Oxford, Ohio.

10387. Palmer, R.G.; Hymowitz, T.; Nelson, R.L. 1996. Germplasm diversity within soybean. In: D.P.S. Verma and R.C. Shoemaker, eds. 1996. Soybean: Genetics, Molecular Biology, and Biotechnology. Wallingford, England: CAB International (Commonwealth Agricultural Bureaux). x + 270 p. See p. 1-36. Chap. 1. [234 ref]
• ***Summary:*** Contents: Introduction. Germplasm–Subgenus *Soja.* Germplasm–Subgenus *Glycine.* Germplasm–Characterization of diversity: Soybean breeding and loss of diversity, diversity for 'yield' traits within *G. max,* diversity for value-added traits within *G. max,* diversity for pest resistance/tolerance within *G. max,* diversity for physiological traits within *G. max,* soybean breeding and use of *G. soya,* diversity for cytogenetic and molecular traits within *G. max* and *G. soja.* Conclusions.

The introduction states: "There are more than 100,000 *Glycine max* accessions, probably less than 100,000 *Glycine soja* accessions, and approximately 3,500 accessions of perennial *Glycine* species in germplasm collections throughout the world. Inasmuch as the only worldwide survey of soybean collections is a decade old (Juvik et al., 1985), the exact numbers are unknown. Major *Glycine* collections exist in Australia, Brazil, China, Germany, India, Indonesia, Japan, Russia, South Korea, and the United States. Many other smaller but important collections exist throughout Asia and Europe."

Tables show: (1.1) List of species in the genus *Glycine* Willd., three-letter code, 2n, standard (PI), genome symbols and distribution. (1.2) Origin and number of accessions of *Glycine soja* in the USDA Soybean Germplasm Collection from China. (1.3) Origin and number of accessions of *Glycine soja* in the USDA Soybean Germplasm Collection from Japan. (1.4) Origin and number of accessions of *Glycine soja* in the USDA Soybean Germplasm Collection

• ***Summary:*** On page 666, under the character *tô* or *zu,* meaning bean or pea or (as prefix) miniature, are the following (with diacritics) related to soybeans: tônyû–soybean milk.

"mame(no)ko–soybean flour [*kinako* or "roasted soy flour"].

"tôfu–tofu, bean curd.

"mamema(ki)–bean-scattering ceremony [using soybeans].

"daizu–soybean.

"kôridôfu–frozen tofu.

"yakkodôfu–tofu cut into cubes.

"edamame–green soybeans.

"i(ri)mame–parched / popped beans.

"nattô–fermented soybeans.

"kuromame–black soybean.

"yudôfu–boiled tofu.

"ya(ki)dôfu–broiled tofu.

"nimame–boiled beans [usually soybeans].

"i(ri)dôfu–bean curd boiled dry and seasoned.

"shiomame–salted beans.

"mitsumame–boiled beans with molasses.

kôyadôfu–frozen tofu.

Also: "amanattô–adzuki-bean candy.

"nankinmame–peanuts.

On page 667, under the character *mi* or *aji,* meaning taste or flavor, are miso–miso (fermented soybean paste).

miso shiru–miso soup.

On page 787, under the character *kô, ô, ki* or *ko,* meaning yellow is: ki(na)ko–soybean flour.

On page 1391, under the character for *fun, kona,* or *ko* meaning flour or powder are: "mame(no)ko–soybean flour.

"ki(na)ko–soybean flour.

On the cover: "Over 47,000 Japanese character compounds." "Find any compound using any of its component characters."

A brief biography of the three authors, with photos of Spahn and Hadamitzky, appears on [unnumbered] p. 1750.

10389. Steinkraus, Keith H. ed. 1996. Handbook of indigenous fermented foods. 2nd ed., revised and expanded. New York, Basel, and Hong Kong: Marcel Dekker, Inc. xii + 776 p. Illust. Index. 26 cm. Food Science and Technology Series, Vol. 73. Index. 26 cm. [350 + soy ref]

• ***Summary:*** This 2nd edition is about 108 pages longer than the original 1983 edition. Contents: Introduction to indigenous fermented foods. (1) Indonesian tempe and related fermentations: Protein-rich vegetarian meat substitutes. (2) Indigenous fermented foods involving an acid fermentation: Preserving and enhancing organoleptic and nutritional qualities of fresh foods. (3) Indigenous fermented foods involving an alkaline fermentation. (4) Indigenous fermented foods in which ethanol is a major product: Type and nutritional significance of primitive wines and beers and related alcoholic foods (incl. Chinese koji (big *qu* {bricklike in shape and made from barley or wheat and soybeans, inoculated with *Aspergillus*} molds), and small *qu* ({spherical, plate-circular or rectangular in shape and made from rice or rice bran with various herbs, inoculated with *Mucor* and/or *Rhizopus* molds}, p. 449), Japanese amazake (p. 480-81).

(5) Indigenous amino acid / peptide sauces and pastes with meatlike flavors (p. 509-654): Introduction.

(A) Soy sauces: Japanese shoyu: Koikuchi, usukuchi, and tamari; Chinese chiang-yu, by Tamotsu Yokotsuka (p. 511-17). Biochemistry of *Saccharomyces* (*Zygosaccharomyces*) *rouxii,* by Steinkraus, Franta, and Ayres (p. 517-24). Umami flavor, by Kawamura and Kare (p. 524-28). Chinese fermented products related to soy sauce (big *qu,* small *qu,* and jiang, by Chen & Ho, p. 528). Taiwanese soy sauce, by Liu (p. 528-33). Malaysian soy sauce: Kicap, by Ong, Mercian, Poesponegoro and Tanuwidja (p. 531-39). Indonesian soy sauce: Kecap, by Saono, Poesponegoro and Tanuwidja (p. 539-43). Korean soy sauce, by Chang (incl. homemade kanjang and meju, p. 543-44). Taiwanese black bean sauce: Inyu, by Jan et al. (p. 544). Philippine taosi, by Steinkraus (p. 544-45).

(B) Fermented soybean pastes: Japanese miso, by Ebine, Shurtleff and Aoyagi (p. 545-56). Indonesian tauco, by Saono et al. and Winarno (p. 556-59). Korean Doenjang and

kochujang, by Chang, Shurtleff and Aoyagi (p. 559-64).

(C) Fermented fish-shrimp sauces and pastes (p. 565-606).

(D) Fish-soy sauce and fish-soy paste, by Ismail, p. 607-11).

(E) Miscellaneous Oriental fermentations. Japanese natto (itohiki natto), by Hayashi and Ota (p. 611-24). Japanese Hama-natto (hamanatto) and related products (incl. yukiwari natto, p. 624-26). Chinese red rice: Anka (Ang-kah), by Lin, Su and Wang, Sooksan and Gongsakdi, and Pichyangkura (p. 626-33). Chinese sufu, by Su and L.-P. Lin (p. 633-41). Preserved duck eggs / Century eggs, Chinese pidan (p. 641-42). Pidan are made by a chemical process, not by fermentation. Note: Chapter 5 contains about 240 references. Much of the text in this chapter is similar to that in the original 1983 edition, although this chapter is 7 pages longer and contains 3-4 new sections.

(6) Mushrooms: Producing single-cell (microbial) protein on lignocellulosic or other food and agricultural wastes.

(7) General papers related to indigenous fermented foods. Address: Inst. of Food Science, Cornell Univ., Geneva, New York.

10390. Tetsudo Unyukyoku. 1996. Shio sato shôyu miso ni kansuru chôsa [Survey concerning salt, sugar, shoyu, and miso]. Tokyo: Yushodo Shuppan. 23 cm. Series: Juyo Kamotsu Jokyo, no. 9. [Jap]*
Address: Japan.

10391. Verreault, Georges. 1996. Diary of prisoner of war in Japan, 1941-1945. Rimouski, Quebec, Canada: Vero. 288 p. See p. 157. Illust. Portraits. 23 cm. *
• ***Summary:*** "Yes we really had fish, cooked the traditional Japanese way, in sweet soya sauce. The three meals of the 6th day of the 10th month of the nineteen hundred and forty-fourth year, are over. Let's forget them!"

Note: The first French edition was published by Les éditions du Septentrion (in Quebec) in 1993. This is a translation of: *Journal d'un prisonnier de guerre au Japon, 1941-1945.* Georges Verreault lived 1920-1966; he died at about age 46.

10392. Hymowitz, Ted. 1997. Siebold & Co. in Leyden, Netherlands: A very early soybean seed dealer. Early European-language documents on the soybean in China from the years 1254, 1330, and 1346 (Interview). *SoyaScan Notes.* Jan. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bill Shurtleff called Ted Hymowitz on New Year's Eve to wish him a happy New Year and to tell Ted that he had just received from France a copy of the earliest Vilmorin seed catalog that listed the soybean; it was published in 1864. Bill asked Ted if he knew of any earlier record of soybean seeds being sold commercially. Ted said he would look.

After a few minutes, Ted called back and read the text of an 1856 article by J.J. Smith, titled "New and Valuable Trees and Fruits," published in the American journal *Horticulturist, and Journal of Rural Art and Rural Taste* (Albany, New York). It stated: "One of the most remarkable catalogs ever published has just appeared in Leyden [Netherlands]. It contains a price list of the Japanese plants actually cultivated in the nursery of Siebold and Co. of that place [Leyden]. He also offers seeds of the *Soja japonica,* the real plant from which the sauce called 'soy' is prepared." Note: In the mid-1840s, Philipp Franz von Siebold and Joseph G. Zuccarini first gave the soybean its present genus name, Glycine. They gave the wild soybean its present scientific name *Glycine soja.*

How did Ted find this document so fast? It was not in his computer. But he knows the contents of his collection and all of his early history documents are filed chronologically in file cabinets.

Ted then announces that his earliest European-language document on the soybean is from the year 1254, followed by 1330, then 1346. The first two are in Italian, and the third is unclear because Ted has only the translation. He also has one from the year 1583 titled "Summary of the Things of Japan" by Valignano (Tokyo, Sophia University, *Monumenta Nipponica* Monograph No. 9). It states: "The padre Alexandro Valignano of the Society of Jesus [Jesuit] visited Japan three times, 1590-1592, 1598, and 1603." Address: Prof. of Plant Genetics, Univ. of Illinois, Urbana, Illinois.

10393. Pearce, Jean. 1997. Getting things done: Starting out on soy. *Japan Times* (*Tokyo*). Jan. 12. p. 17. Wednesday. [Eng]
• ***Summary:*** "Last week's columns reported on recent research pointing to the dietary benefits of soybean products in relieving complaints associated with menopause." Discusses isoflavones and the isoflavone content (in micrograms per gram) of kinako (roasted soy flour, 2,589), roasted soybeans (1,625), edamame (1,354), natto (1,273), regular tofu (509), fried tofu (695), soy milk (357), miso (373), shoyu (16).

Gives several tofu recipes and recommends *The Book of Tofu* by Shurtleff & Aoyagi.

"And finally, kudos to Japan Airlines for creating natto in a palatable form, freeze-dried and flavored... It has been tremendously successful. In two years, total sales amounted to ¥56 million. Just think of all those isoflavones." A photo shows Jean Pearce.

Note: This article may have been published on 12 Feb. 1997 rather than 12 Jan. 1997. Address: Columnist.

10394. Hartz, Chris. 1997. The early history of Jacob Hartz Seed Co. (Interview). *SoyaScan Notes.* Jan. 13. Conducted by William Shurtleff of Soyfoods Center.

© Copyright Soyinfo Center 2014

• ***Summary:*** Chris' father is Jake Hartz, Jr. His grandfather, Jacob Hartz, Sr., founded the Jacob Hartz Seed Co. (JHSC), which Monsanto purchased on 21 April 1983. Chris had a 3-year contract, so he stopped working for the company in April 1986. He now runs a wholesale nursery, and does a little seed brokering.

When Jake, Jr., left the company, he left all his files and company history documents at the company; he took nothing with him. Chris did likewise. Chris called Keith Thompson and he said he would be glad to help in any way he could to get early historical documents. Keith said that Terry Hicks in the accounting department is the keeper of the early files. Terry is now in Kalamazoo involved with the Asgrow purchase. When the company was sold to Monsanto in 1983, the biggest story would have been in the *Arkansas Gazette* in Little Rock; it has since merged with the *Arkansas Democrat* to become the *Arkansas Democrat-Gazette***.** One interesting historical document was published by Monsanto on the 50th anniversary, probably in 1992. Chris has never seen any early seed catalogs. Chris and his father now share the same building, but Jake is seldom in the office.

When did JHSC first start to sell soybeans? Chris does not know. But if Jacob Hartz, Sr. first brought in 25 bushels of Laredo soybeans in 1926, it would probably have taken the company several years to develop enough seed stock to be able to sell some and keep the rest for seed multiplication.

Chris was responsible for focusing the company on breeding soybeans for food uses, starting in the late 1970s. It all started in about 1975-77 when a Japanese natto manufacturer, Mr. Yaichiro Mogi of Asahi Shokuhin, contacted JHSC and explained that he needed a soybean that was uniform in size and quality to run through his automated factory (that made only natto) to give a uniform product that he could sell as premium natto. He was getting soybeans from China, IOM, and Canada and he couldn't set up his cookers and fermenters to accommodate all the different soybeans he was getting. He was one of two automated natto manufacturers in Japan at the time. He gave Chris specifications for the natto beans he wanted. Chris happened to have 9 pounds of small-seeded soybeans with a brown hilum that Dr. Hartwig had sent him free of charge. It was a plant introduction with a PI number. The diameter was 5 mm or less. Hartz crossed that small-seeded soybean with Pickett to get rid of the high rate of shattering. They registered the resulting variety as Hartz 936–their first natto soybean. Hartz's breeding program got into high gear in 1976, when they hired Dr. Curtis Williams; that year they put in their first greenhouse. Prior to that one of Hartz's field reps, an agronomist named Jimmy Johnson, was doing the crossing; he now works for Stratton Seed Co. Chris hired Keith Thompson in about 1980 as a salesman. When Chris left in 1986, Keith took over the food side of the business.

Chris was never able to get used to Monsanto's way of making decisions. "Decisions took months instead of minutes, as they did in the family-run business. It was very frustrating." Dan Lamberth was the general manager after Monsanto took over; he and Chris did not get along well.

Concerning Roundup Ready soybeans: Chris has heard a number of farmers say that they are very good on fields where there is a weed problem, but if you don't have a weed problem it is very difficult to accept Monsanto's value-added pricing. Chris uses a huge amount of Roundup on his seed nursery. "It is a standby for us. We like it because it kills virtually all weeds but does not harm most of the plants he wants to raise. Our workers are careful with it, as with any chemical, but it is relatively problem-free." In Chris' opinion, from a human health viewpoint of his employees using herbicides on the nursery, there is less to worry about with Roundup than probably any other herbicide. "In addition, we can spray it on our woody ornamentals and it doesn't hurt them–as long as there is no new growth. But it does hurt the redwood and cypress plants.

As far as Chris knows, Hartz never operated a soybean crushing plant to make soybean oil and meal.

In June 1942 the company named Hartz-Thorell split up. Jacob Hartz took the seed side of the company and named it Jacob Hartz Seed Co.; Mr. Thorell took the implement side and named it Thorell Implement. After Mr. Thorell died, his implement company was sold to White Implement–headquartered in Houston, Texas. They handle McCormick-Deering farm machinery. It is now more a wholesale outlet than retail. Address: Stuttgart, Arkansas. Phone: 501-673-2242.

10395. Roller, Ron. 1997. New developments with organically grown soybeans in America (Interview). *SoyaScan Notes.* Jan. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The demand for organic soybeans in America is rising rapidly. Ron thinks this has nothing to do with concerns over genetically engineered (transgenic) soybeans such as Monsanto's Roundup Ready soybeans. "Soybeans have become, hands down, the main cash crop (the one that makes the most money) for organic farmers, at least those in the Midwest. Organic growers in the Dakotas and Montana still rely on wheat as their main cash crop, but the corn, wheat, and soybean growers everywhere else rely on soybeans." The demand for organic soybeans is growing faster than the supply–even though the supply is rising. Increasing prices have attracted more and more farmers to growing soybeans organically. The biggest demand is still from Japan, as it has been for the past 4-5 years. As interest in organic foods has grown in Japan, bigger food manufacturers (primarily of tofu and natto) have started to use organic soybeans. The American food companies that use organic soybeans are still relatively small and few. Ron's company (if you add the organic soybeans Ron exports) may be the single biggest.

© Copyright Soyinfo Center 2014

The demand for organic natto soybeans from Japan appeared suddenly and is now very large. Acreage that was used to grow organic soybeans for tofu or soymilk suddenly got switched to growing small-seeded organic natto soybeans. Because of that, the acreage used to grow organic soybeans for tofu and soymilk has decreased. Last year the organic soybean crop in the Midwest (especially Michigan and Ohio) was smaller than expected. So the combination of the export demand (mainly to Japan but also to Europe), the loss of acreage to natto beans, the bad crop, and the lack of new growers, has made the price of organic soybeans rise–by about 10%. But remember that the price of organic soybeans were already more than double, very often triple, that of non-organic beans. The highest prices are paid for Vintons and natto beans. It is these premium prices that are so attractive to the organic farmers. "This trend is of great concern to me, and especially the effect it could have on the price of soyfoods. In a free market economy, with lots of farmers looking for value-added crops, you would think that many more of them would start growing organic soybeans. But it is a difficult chasm to cross. A farmer must learn a whole new way of farming, and, he must wait for 3 years before that land can grow organic crops. That 3-year lead time is the big stumbling block; many farmers actually lose money on that land during those 3 years. Some big farmers are now starting to grow organic soybeans, but they getting involved on a gradual basis, adding 50 to 100 acres a year. Those large commercial growers, who have recently switched to growing soybeans organically, are sitting in the catbird seat, and doing extremely well."

In Ron's market, there have been very few questions from consumers about genetically engineered (transgenic) soybeans. "It hasn't become a problem at all for ASP; I think it will be an asset for us–because we don't use them and we can prove that we don't. However a lot of growers want to grow transgenic soybeans." Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

10396. Thompson, Keith. 1997. History of breeding soybeans for use in making natto at Jacob Hartz Seed Co. (Interview). *SoyaScan Notes.* Jan. 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Hartz got involved with natto and with food soybeans in 1975 when Yaichiro Mogi, founder and president of Asahi Shokuhin, a major Japanese natto manufacturer, contacted Continental Grain in Vancouver, BC, Canada. Bud Currie (phone: 604-684-7292) of Continental was there at the time and he knows the whole story in detail. Continental Grain then contacted Jacob Hartz Seed Co. in 1975 on behalf of Mr. Mogi. It was probably not until about 1979 or 1980 that Hartz's program to breed natto soybeans began to yield some results. The first natto soybean they bred successfully was their H-24. The small seeded soybeans they had before that shattered so badly (the seeds popped out of the pods before harvest) that after farmers grew it once, they refused to grow it again. Now Hartz has 6 natto varieties. Hartz was one of the first American seed companies to breed soybeans for food use. Hartz is still dealing with Mr. Mogi, as they did more than 20 years ago. He is buying more soybeans direct than anyone else in the business, because he does not go through all the multiple steps of purchasing (importer, then wholesaler) as is typical in Japan. In the early 1980s Hartz added a second customer for natto beans, as they started working with Mitsubishi. Today Mitsubishi and Continental sell natto soybeans bred by Hartz to other natto makers in Japan.

At a rather early date, Mr. Mogi decided that what made a soybean variety good for use in natto could be determined by scientific research. So, long ago, he established a research lab, and they started comparing soybean varieties, looking at several other characteristics (especially the chemical composition) in addition to seed size and hilum color. He communicated is research findings to Hartz, and they started screening based on the criteria that he desired. They started with small seed size and light hilum color, then tried to add more characteristics (such as high sucrose content) into the mix. Of course, Hartz would also like to get a high yield, but they have never been able to get good natto beans that yield well. So they end up sacrificing yield to get the other desired characteristics. "We think we've got the best natto breeding program in the world–by a long shot." Keith doesn't know of any other private company breeding natto soybeans and only a few universities (in Nebraska, Virginia, Minnesota, and South Dakota) are "tinkering around with natto beans." One major problem is that you must start with a very small germplasm pool–typically a southern pool because it is small seed size to begin with. There are some Midwestern and some Canadian natto varieties, yet at least 75% of all natto soybeans exported to Japan are grown in the South–by Hartz, James Dunn, and 2-3 others. Hartz is the largest supplier. Historically, Mr. Mogi has said that a particular soybean variety is good for making natto, many other natto makers start buying that variety. Once a natto manufacturer finds a variety he likes, he would prefer not to change it. Hartz has developed a natto variety that yields better, but Mr. Mogi has refused to accept it, so it probably will die. Hartz's competition (Asgrow, Pioneer, Northrup-King, smaller companies, etc.) are constantly trying to get better yield. The name of the game is to keep the desired natto characteristics but to constantly improve the yield.

Hartz sells two types of soybeans–food and commercial: 50% of its soybeans are sold to food manufactures and the remaining 50% (commercial) are sold to Southern farmers for planting and eventual use as oil and meal. The amount of soybeans sold for food use will continue to increase, but its percentage of the total will drop, because Hartz plans to rapidly expand its production of Monsanto's Roundup Ready

© Copyright Soyinfo Center 2014

soybeans, which are very profitable.

When Keith started in the soybean seed business in 1978, there were less than 10 soybean varieties in the southern United States–in 3 maturity groups. All of these were public varieties, bred at southern universities. Keith came to work for Hartz in 1983. Hartz introduced its first proprietary (private) commercial varieties (for planting by farmers) in 1984. The farmer is interested *only* in yield. Hartz is now looking to South America as an important new market. Address: Food and Export Manager, Hartz Seed, P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 800-932-7333.

10397. Brown, Lester R.; Flavin, C.; French, H.; et al. 1997. State of the world 1997: A Worldwatch Institute report on progress toward a sustainable society. New York, NY: W.W. Norton & Co. xiii + 229 p. Index. 24 cm. [300* ref]
• ***Summary:*** This 14th edition takes a realistic look at our progress toward sustainable development since the 1992 Rio Earth Summit. It shows how pervasive resource loss is at the root of the "new world disorder" and argues that if unsustainable trends continue, "the pressure on the earth's natural limits will undermine food security–now already evident in the decline of marine fisheries and the shrinking grain harvest per person. Indeed, food scarcity may be the first major manifestation of our environmentally unsustainable global economy.

"To reverse this situation, *State of the World 1997* calls for us to take urgent measures to build an environmentally sustainable economy, slow population growth, value the nonmonetary services nature provides, adopt the best of simpler and less consumptive lifestyles, and abandon taxpayer subsidies that encourage the consumption of natural resources such as water and fossil fuels."

Contents: A special tribute. Acknowledgments. List of tables and figures. Foreword. 1. The legacy of Rio, by Christopher Flavin: The road from Rio, eight environmental heavyweights, stabilizing the climate, conserving biological wealth, limiting human numbers and consumption, Rio plus five... and counting. 2. Facing the prospect of food scarcity, by Lester Brown: Food security trends, land and water scarcity, the fertilizer factor, the carrying capacity question, food security–the next generation, responding to the challenge. Graphs show: World grain production, 1950-96. World grain production per person, 1950-96 (it peaked in 1984 at 346 kg). World grain carryover stocks as days of consumption, 1961-96 (they have fallen from a peak of about 100 days in the mid-1980s to about 50 days consumption). World irrigated area, 1950-93. World fertilizer use, 1950-95 (after 1989 it began to decline). World grain harvested area and fertilizer use per person, 1950-95. World grain yield per hectare (it has grown steadily at about 2.3% a year, from 1.06 tons in 1950 to 2.54 tons in 1990).

3. Preserving global cropland, by Gary Gardner: Trends–from surplus to scarcity, expanding cities, degrading our future, import dependence–the case of Asia, a land-scarce world, land for the next generation. A graph shows: Grain harvested area per person and imports as a share of consumption in Japan, South Korea, and Taiwan, 1960-95. Imports now account for about 75% of consumption in these 3 countries! 4. Preventing chronic disease in developing countries. A graph shows Total dietary oils per capita in selected regions, 1965-95. North America is the highest, rising from 11 to 28. South Asia is the lowest, rising from 3 to 8. 5. Tracking the ecology of climate change. 6. Valuing nature's services. 7. Transforming security. 8. Reforming subsidies. 9. Learning from the ozone experience. Address: Worldwatch Inst., 1776 Massachusetts Ave., N.W., Washington DC 20036-1904. Phone: 202-452-1999.

epidemic cause many Japanese to temporarily stop eating in restaurants and to avoid fast food. Soy sauce was not itself implicated in the food poisoning, yet Kikkoman suffered a 22.1% decline in unconsolidated recurring profits. Address: Tokyo.

10402. House Foods America Corporation. 1997. Changing the way America eats–Hinoichi (Brochure). Garden Grove, California. 6 p. 28 cm.
• ***Summary:*** This is a stylish, glossy, 6-panel full-color brochure, with a white on red cover. Contents: The freshest ideas for healthy appetites: An ingredient full of innovation, two billion people can't be wrong, eating, feeling, and looking better, doctors and chefs now agree, making change so natural. The House behind the brand.

Photos show: A full-page shot of tofu in 4 dishes as part of an elegant dinner. Small shots of tofu in various dishes. The label of 3 types of Hinoichi tofu (regular, firm, and soft–kinugoshi). The outside of the company's new plant in Garden Grove. Rows of stainless steel pressing boxes inside the new plant. Address: 7351 Orangewood Ave., Garden Grove, California 92841. Phone: (714) 901-4350.

10403. House Foods America Corporation. 1997. House Foods America Corporation. Garden Grove, California. 12 p. 28 cm.
• ***Summary:*** This color booklet is written in 4 languages: English, Japanese, Korean, and Chinese. Thus four blocks of text, each with the same message, appear on each 2-page spread. Contents: Introduction. House Foods products. Tofu & tofu products. Restaurant–Curry House. Factory.

"House Foods Corporation is the biggest spice manufacturer in Japan, selling processed foodstuffs such as curry mix and stew mix products. In 1981, we established the Los Angeles office to introduce Japanese style curry... In 1983 we opened a curry restaurant in Little Tokyo, where our customers enjoy cuisine created with a Japanese sensibility. We also [in 1983] started manufacturing tofu, the healthy food low in fat and high in protein. Tofu has become increasingly popular in the United States and most grocery stores carry it. In 1997, we established House Foods America Corporation by merging the three enterprises: House Foods Los Angeles Office, which is in charge of the sales of House Foods' products from Japan, Curry House Restaurant, and Hinoichi Tofu manufacturing. The new entity allows us to provide better quality products to our customers. House Foods America Corporation aims to bring the rich Japanese food culture to the United States by providing high quality food products to American customers."

The new factory in Garden Grove makes 3 types of tofu, natto, fried bean curd, and konnyaku. "This factory features state-of-the-art equipment which can produce 150,000 packages of tofu per day." As of March 1997 there are five Curry House restaurants in the Los Angeles area.

Contains many color photos including: Two views of the outside of the new tofu factory in Garden Grove, California. Curry and Chinese Mabo Tofu Sauce packages. Packages of 3 types of Hinoichi Tofu (regular, firm, and soft kinugoshi) plus natto. The inside of a Curry House restaurant. Five views of the equipment in the new tofu factory, including an overview of the production area. Address: 7351 Orangewood Ave., Garden Grove, California 92841. Phone: (714) 901-4350.

10404. Kourebanas, Maria. 1997. Less is more: Dining on the light side–International bean soups. *Gourmet* 57(2):112, 143-45. Feb.
• ***Summary:*** Contains a recipe (p. 145) for Adzuki bean miso soup (from Japan), using ¼ cup white miso.

10405. Messina, Mark. 1997. Summary of findings: Heart disease. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 5(1):3. Winter. Special edition: Highlights of the *Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.* [4 ref]
• ***Summary:*** One obstacle to greater use of soy protein to lower blood cholesterol is the failure of scientists to understand the mechanism which causes this lowering–although there is no shortage of hypotheses. Dr. Cesare Sirtori, of the University of Milan, Italy, (a veteran researcher in this field and one of the keynote speakers) presented data showing that cholesterol reduction is due to enhanced LDL cholesterol degradation stimulated by peptides formed from the hydrolysis of the 7S globulin (a soy protein) by the liver. Dr. Shigeru Yamamoto and colleagues from the University of the Ryukyus in Japan, suggest it is the undigested peptides from soybean protein that lower cholesterol.

However, work by Ms. Mary Anthony and colleagues, from Bowman Gray Medical School in North Carolina, suggest that isoflavones, not protein, are the key. "Dr. Sirtori indicated that much of his clinical work demonstrating cholesterol reduction involved the feeding of soy products that contained minimal amounts of isoflavones, although his assertion met with some surprise."

"Elegant work presented by Dr. William Wong from the USDA's Agricultural Research Service (ARS) suggests that soy lowers cholesterol by enhancing cholesterol excretion through bile acid production, specifically via the chenodeoxycholic pathway.

"One of the most exciting findings of the symposium was the observation that soy increases HDL cholesterol. Relatively few dietary approaches have been shown to raise HDL cholesterol. Three human studies, by Susan Potter and colleagues from the University of Illinois [USA], Dr. Elzbieta Kurowska and colleagues from the University of Western Ontario [Canada], and Drs. Karin Nilausen and Hans Minertz from the University of Copenhagen [Denmark], indicated that HDL increases in response to

© Copyright Soyinfo Center 2014

soy consumption. In some individuals the results are quite dramatic with HDL increasing as much as 50 percent, although typical increases are more in the range of 5-10 percent. It appears that the lower the initial starting HDL cholesterol level, the greater the response to soy. The combined effect of a decreased LDL and an increased HDL strongly support the use of soy for reducing heart disease risk." Address: PhD, Symposium Chairperson, Port Townsend, Washington.

10406. Messina, Mark. 1997. Summary of findings: Menopause relief. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 5(1):3. Winter. Special edition: Highlights of the *Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.* [4 ref]
• ***Summary:*** "One hypothesis that appears with increasing frequency in the media is that soy foods may be useful in relieving menopause symptoms such as the inability to regulate body temperature which often manifests as night sweats and hot flashes. In support of such speculation is the reported low incidence of symptoms among Japanese women and the estrogenic effects of isoflavones. Much of the data presented at the symposium were preliminary and inconsistent.

"Research presented by Dr. Margo Woods and colleagues from Tufts University, and Dr. Fabian Dalais and colleagues from the Monash Medical Center in Australia suggest that, at best, soy has relatively little effect on the frequency of hot flashes. In contrast Dr. Claudia Harding, from the University Hospital of South Manchester, United Kingdom, indicated that the consumption of soyfoods providing 80 mg of isoflavones per day reduced the frequency of hot flashes ($P < 0.03$).

"Work presented by Dr. Gregory Burke and colleagues, from Bowman Gray Medical School [North Carolina], indicated that soy modestly reduced the severity of menopausal symptoms although frequency was not affected. (This research was highly publicized after it was also presented at the American Heart Association meeting on Nov. 9 [1996]).

"Upon the basis of the existing data, it is difficult to reach any definitive conclusions about the effects of soy intake on menopause symptoms. Several studies addressing this issue are currently underway. Soon it should be possible to make more definitive conclusions about the effects of soy on hot flashes." Address: PhD, Symposium Chairperson, Port Townsend, Washington.

10407. Pacific Nutritional Foods, Inc. 1997. Re: Invitation to open house (Folded card). Tualatin, Oregon. 4 panels.
• ***Summary:*** On the cover of this printed, folded invitation card (each panel is 6¼ by 4½ inches) is written "Pacific Nutritional Foods Incorporated." Above these words are two green waves. On the inside is written: "Pacific Nutritional Foods, Inc. cordially invites you to attend our Open House. 11:00 a.m. to 4:00 p.m. Tuesday, March 4, 1997, at our facility located in Tualatin. 9960 S.W. Potano. Dedication ceremony at 1:00 p.m.

Note: This new company and factory, Pacific Nutritional Foods, Inc., is a joint venture between Morinaga Nutritional Foods, Inc. and Pacific Foods of Oregon, Inc. It will make Mori-Nu Tofu. Address: Tualatin, Oregon.

10408. Pearce, Jean. 1997. Re: Japan Airlines (JAL) has created a good-tasting freeze-dried and flavored natto. Letter to William Shurtleff at Soyfoods Center, March 1. 1 p. Typed, with signature.
• ***Summary:*** Jean recently wrote an article about Japan Airlines creating natto a new type of natto–freeze-dried and flavored–which has been very successful. "When your letter arrived today, I had copies of the columns for you and the JAL natto. I also wanted to get the kind that is available at stores. You will have the package soon."

Note: The commercial product was, indeed, tasty and not sticky or stringy like regular stringy natto (itohiki natto). Address: Columnist for the Japan Times, Tokyo.

10409. Tsurata, Shizuka. 1997. From Mother Earth kitchen: Sifting through soybeans for a taste of tofu. *Japan Times* (*Tokyo*)**.** March 6. [Eng]
• ***Summary:*** "Tofu has now become a staple food in the West,..." Address: Columnist.

10410. Endo, Margaret. 1997. The Los Angeles Tofu Festival (Interview). *SoyaScan Notes***.** March 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This festival was held on 10-11 August 1996 in Los Angeles, in collaboration with the annual Nissei Week–which has been celebrated for more than 50 years. Nissei Week in Los Angeles resembles the week-long Cherry Blossom Festival in San Francisco. The goal is to draw outside people into Little Tokyo and to expose them to Japanese culture, businesses, etc. 10,000 people attended–6,000 the first day and 4,000 the second day. The idea came from Bill Watanabe, executive director of the Little Tokyo Service Center (LTSC), which is a non-profit community organization which provides a variety of social services for the Little Tokyo community. The staff of LTSC is mostly Japanese-American. The main sponsor to step forward was Hinoichi Tofu Co. Tofu recipes were served at restaurants and one tofu cookbook, titled *The Four Seasons of Tofu Cookbook*, was compiled in 1996 for the festival by the staff of the LTSC (from recipes they contributed and tested), published in English, and sold at the festival. Note: Patricia Greenberg of Los Angeles, head of The Fitness Gourmet, who is writing a soyfoods cookbook, visited this festival in 1996.

The second Tofu Festival will be held this year on

© Copyright Soyinfo Center 2014

August 9-10, the first weekend of Nissei Week. A Japanese-language edition of *The Four Seasons of Tofu,* will also be published. Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1600.

10411. Apodaca, Patrice. 1997. Curd is the word: Tofu–Nation's largest factory open in Garden Grove [southern California]. *Los Angeles Times.* March 13. p. D1, D5. Business section. [1 ref]
• ***Summary:*** Osaka-based House Foods opened America's largest tofu factory on Wednesday. A Shinto minister, the Rev. Alfred Y. Tsuyuki of Konko Church, Los Angeles, stood before a shrine and conducted the ceremony of blessing–as traditional to Japanese opening a new business as christening a ship is to Westerners. Rev. Konko has blessed Japanese buildings across America. "These plants have made millions off me," he quipped.

The fully automated, state-of-the-art, 130,000 square foot plant cost $21 million, and will more than double the company's tofu production capacity to 150,000 pounds/day. The old factory has been operating a full capacity for years. The new one will have 150 workers by the time it is fully operational next month. The new plant even has a test kitchen, where a resident home economist will test recipes and consult with dietitians. The firm's sales are currently about $10 million a year. House Foods is best known in this country as a maker of snack foods and curry powder.

House Foods is hoping that its U.S. expansion will help it withstand growing pressures at home. With about $1.7 billion in total sales, it has had among the highest profit margins in the Japanese food industry, according to Patricia Horvath, an analyst at UBS Std. in Tokyo. But House Foods' profits have decreased in the past few years due to increased competition, the Japanese recession, and a weaker yen which increases the cost of imported materials. In 1983 House Foods bought an interest in the Hinoichi tofu plant in Little Tokyo, Los Angeles, then purchased the rest of the company in 1993.

After the Shinto ceremony, before the guests were ushered away to a lunch of traditional fare and tofu lasagna, the company–leaving nothing to chance–finished with a typical American opening symbol. They cut a ribbon.

In America tofu has been championed by vegetarians as a meat substitute. "They've fought to overcome the typical American impression of tofu as soggy and tasteless by promoting its chameleon-like" versatility. Contains a quote from *The Book of Tofu* by Shurtleff & Aoyagi about how a traditional craftsman makes tofu.

Color photos show: Yellow soybeans. Soymilk being curded in a carousel curding machine with about 24 cylindrical vats. Rev. Tsuyuki in Shinto cap holding a bowl. Address: Times Staff Writer.

10412. Koda, Carole. 1997. Re: Soybeans, tofu and Japanese-Americans in the Central Valley of California. Letter to William Shurtleff at Soyfoods Center, March 17–in reply to inquiry. 2 p. Handwritten, with signature.
• ***Summary:*** Carole is writing an oral history on the maternal side of her family. Her mother, who married into the Koda family after World War II, doesn't think that the Kodas grew soybeans. She also asked her uncle, who has farmed in Livingston, California, all his life. He wasn't aware of any Japanese or Japanese-Americans who grew soybeans.

But Carole has a memory of tofu. "When I was a child visiting aunts and uncles in Livingston & Cressey, the tofu truck used to come to the houses delivering fresh tofu and various Japanese foods."

Note: Livingston is in the California's Central Valley between Modesto and Merced on Highway 99. Address: Kitkitdizze, 18442 Macnab Cypress Road, Nevada City, California 95959.

10413. DeBona, Don; Chaplin, Paul. 1997. Update on miso in Europe (Interview). *SoyaScan Notes.* March 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Don attended Biofach in Germany this month; this is the forth time he has attended. He has had two students who came from Europe to study miso-making with him at American Miso Co. in North Carolina. Jan (pronounced *Yon*) Kerremans, who worked at Lima Andiran in southern France, studied with Don for 2 months, Oct. 1984 to Nov. 1984. Jan was a minority partner with Pierre Gevaert. Jan now still works for Lima, but not as a miso maker; originally Flemish, he married a French woman, lives in Paris, and is Lima's sales rep.

Paul Chaplin from Wales studied with Jan Kerremans at Lima in France during May and June 1984, then with Don for 2 months, in October and November 1985. His miso manufacturing business in Wales is still tiny, but it is growing well. Total turnover (income) in fiscal 1996 (Nov. 1995 to Nov. 1996) was £28,000 (=$44,800). Paul's new address is: Source Foods (Organic Priority) 9 Cwm, Business Centre, Marine Street, Cwm, Ebbw vale, NP3 6TB, Wales, UK.

For both Jan and Paul, Don provided miso-making instruction, as well as room and board, free of charge. Barry Evans did not like Don to be teaching other people to make miso.

Pierre Gevaert was the founder of Lima. His son is named Daniel, and Daniel's wife is Valérie. Daniel studied miso-making with Jan Kerremans in southern France. In early 1990, after Pierre Gevaert died, Daniel and his wife took over Lima's miso company at Andiran in southern France. They changed the company name to Danival from Lima-Andiran. The two of them now make two types of miso, and they also sell shoyu and tamari–but it is not known if they make the latter two products or not. Lima and Danival

© Copyright Soyinfo Center 2014

are no longer in contact with one another because there are bad feelings between them; Lima purchases their miso from American Miso Co.–much to Danival's chagrin.

Other new miso companies in Europe: Noka, run by Karl Selgmann, in Alzey, Germany. Karl used to be with Mr. Hiroshi Kozaki of Kanta Kozaki in Urbach; that company started in 1990. Paul Chaplin has visited Noka.

Two new miso makers in Yugoslavia are Sladjan Randjelovic and his wife, Vladimirka, of Lion Health Food Co. (Zagorska 12/9, YU-11080 Zemun, Belgrade, Serbia / Yugoslavia). Their business card says: "Belgrade, London, and Beijing." Vladimirka is actively involved in the business. They are both very macrobiotic. They already make *mizuamé* (rice syrup or rice malt). Their miso was of fairly good quality. They also made an interesting miso with added shiitake and kombu.

Hans Weisseneder is making miso for Sojvita in Lichtenwoerth, Austria. He had photos of his vats which are in a wine cellar outside of Vienna.

In Europe, imports of miso from Japan are almost certainly larger than total European miso production. Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

10414. Hanamaruki K.K. 1997. Hanamaruki [Hanamaruki]. Nagano Prefecture, Japan. 21 p. 30 cm. [Jap]
• ***Summary:*** The first 13 pages of this color brochure are about the company, the next four pages are about the top management, and the last 3 pages show the company's miso products. Inserted into the back, and dated April 1999, is a chronology of the company from its founding in 1918. Address: Hirade 1560, Tatsuno-cho, Kamiina-gun, Nagano-ken 399-0422 Japan. Phone: 0266-41-1321.

10415. Macdonald, Bruce. 1997. The complex relationships between Eden Foods, Muso Shokuhin, Macrobiotic Company of America, Gold Mine Natural Food Co., Sierra Natural Foods, and Ohsawa Japan (Interview). *SoyaScan Notes.* April 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Oct. 1974, Michael Potter visited Yuko Okada at the Muso Company in Osaka, Japan, then decided to import Japanese food products exclusively from Muso. Then in Jan. 1984 (following major losses from the bankruptcy of Erewhon (in Nov. 1981) and other American natural foods distributors–including Shadowfax, Laurelbrook, and Good Food Company), the Muso Company of Japan appointed Eden Foods its General Agent for North America. But in subsequent years, as the value of the dollar continued to fall against the yen, making Japanese imports more expensive, Eden began to buy less expensive grades of some products (especially seaweeds and umeboshi) from Muso. In this way, Eden avoided price increases. But strains grew in the relationship. Muso did not like being dependent on one wholesaler in America and Eden wanted the freedom to shop around. So in the mid-1990s there was an above-board agreement that Muso no longer had to sell its products in the USA exclusively to Eden. But even before that, Yuko had been selling to other companies such as Republic of Tea, Smith & Hawken (Japanese tools), and Gold Mine Natural Food Co.

Jean Richardson of Gold Mine trademarked the name "Ohsawa," much to the chagrin of Ohsawa Japan. When Bruce working at MCOA, he thought of challenging this trademark, and he feels he could have done so successfully, but at a cost of at least $30,000 in legal fees. This is even more ironic because MCOA is the exclusive importer of products from Ohsawa Japan. So the trademark borders on misrepresentation. The Ohsawa Japan story goes back to Bob Kennedy, who had been dealing with Ohsawa Japan since the beginning. When Michio Kushi began importing, he did so from Muso–not from Ohsawa Japan. Several years later he also began to import from Mitoku; today Michio recommends only Mitoku products. When Bob Kennedy stopped importing foods from Japan, he sold his business (after Heinz returned the rights to him) to what had been the warehouse of Rainbow Foods. Rainbow started as a store in San Francisco, California, then they grew a wholesale business. A religious group ended up buying that wholesale business from them, and they renamed it Sierra Natural Foods. Sierra bought the rights to import from Ohsawa Japan from Bob Kennedy, then started importing containers. They had also gotten the Soken distributorship, and they started expanding so fast that they couldn't finance the rapid growth; this (and perhaps some mismanagement) soon led to their bankruptcy. At the time they owed Ohsawa Japan about $200,000. Ohsawa Japan decided to stop selling foods to America. So they asked Mitoku to be their sub-distributor for America. So even today Bruce buys his Ohsawa Japan products through Mitoku. But Gold Mine can't buy from Mitoku because Mitoku won't give out any more distributorships. Mitoku's main distributors now are U.S. Mills (Erewhon brand), Great Eastern Sun, Granum, and MCOA. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

10416. Andoh, Elizabeth. 1997. In Tokyo's ryotei, the art of service [omotenashi]. *New York Times.* April 20. p. XX6, XX24 (Sunday).
• ***Summary:*** Contains excellent reviews of five of Tokyo's fine, traditional (and often expensive) restaurants: Tatsumura, Tsukiji Tamura, Bon, Kocho, and Saryo Arai.

Bon serves a type of vegetarian cuisine called fucha, which traces its origins to the Buddhist temple food of China. Bon serves "ivory-colored spirals of nama yuba (silky, fresh soybean curd sheets)" and uses kudzu in some

© Copyright Soyinfo Center 2014

dishes. Address: Japan.

10417. Labbé, Max. 1997. Ces étonnants aliments végétaux fermentés et lacto-fermentés [Those astonishing fermented and lactic-fermented vegetable foods]. Auvers sur Oise, France: Published by the author. 116 p. Preface by Richard Hwei-Ming Bau. Illust. No index. 21 cm. [Fre]
• ***Summary:*** Part III of this popular book, titled "Asiatic Specialties," contains the following sections and subsections (p. 77-103): Chinese and Japanese fermented foods: Shoyu and tamari, miso, umeboshi, nuka pickles, natto, sufu. Characteristics and way of tempeh: Definition, preparation, arrangement of grains before inoculation. Indonesian tempeh: Preparation of the cakes, preparation of the inoculum. Javanese tapé (tapeh) and its culture. American-style tempeh. A color photo on the rear cover shows Max Labbé. Address: 3 rue Emile Level, F- 75017, Paris.

10418. Morinaga Nutritional Foods, Inc. 1997. The wonders of nature–in a perfect package (Ad). *Natural Foods Merchandiser.* April. 4-page insert glued in after page 18.
• ***Summary:*** This is an elegant 4-page color ad (8½ by 11 inches). On page 1 is the new package of Mori-Nu silken tofu (made in the USA) against a waterfall splashing down over rocks. Across the next 2 pages in large, soft-blue letters is written "tualatin, oregon. state of the art packaging." Page 2, titled "Pure tofu," begins: "Mori-Nu Tofu now arrives fresh from the Pacific Northwest, where the cool, clean currents of the Columbia meet the pure, sweet waters of the Willamette. Because quality tofu depends on quality water, Mori-Nu has found a new home in the little town of Tualatin, Oregon." Page 3, titled "perfect package," describes the new and larger 12.3 ounce "airtight package." "In fact, this state-of-the-art packaging was voted the "#1 food science innovation of the last fifty years" by the prestigious Institute of Food Technologists. Photos on these two pages show: Tofu dishes. Majestic Mt. Hood. An aseptic packaging line. Five different Mori-Nu tofu packages.

Across the top of page 4 is a collage of many magazine and newspaper headlines such as: "Tofu is healthy." "The one food that could save your life." "Foods that fight breast cancer. "Tofu seems to decrease breast cancer, hot flashes." "Tofu is a good source of protein in your diet." The text begins: "Low in saturated fat with no cholesterol, tofu is the primary source of protein for over one billion people every day. As more Americans recognize the benefits of eating soy, tofu is gaining popularity–and with good reason.

"Soybeans contain high levels of a unique type of *phytoestrogen* (a plant chemical) called *isoflavones;* researchers suggest *genistein,* the main isoflavone found in soyfoods, helps to inhibit the growth of cancer cells and to reduce the risk of osteoporosis. In fact, current studies suggest that soyfoods may play a significant role in lowering cholesterol levels; preventing many forms of cancer, heart disease and osteoporosis; and controlling diabetes. Recent research also indicates that soyfoods, like tofu, help to minimize the unpleasant hot flashes of menopause."

Visit the Mori-Nu website at http://www.morinu.com. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10419. Muramatsu, Kanako; Muraoka, Yasuhiko; Yasui, Akemi; Suzuki, Tadano; Kiuchi, Kan. 1997. *Bacillus subtilis* (*natto*) KFP 419 ni yoru erasutaaze no seisan [Study on the deterioration of itohiki natto (Formation of struvite)]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 44(4):285-89. [20 ref. Jap; eng]
• ***Summary:*** When itohiki-natto becomes old, white crystals develop on its surface and its quality as a food greatly deteriorates. The crystal, sold commercially as "struvite," is composed of magnesium, phosphorus, and ammonia. Address: 1. Kyoritsu Women's Univ., 2-2-1 Hitotsubashi, Chiyoda-ku, Tokyo 101, Japan.

10420. Gevaert, Valérie. 1997. Re: Brief history of Danival and current activities. Letter to William Shurtleff at Soyfoods Center, May 13–in reply to inquiry. 2 p. Typed, with signature. [Eng]
• ***Summary:*** "Daniel Gevaert purchased the Lima Andiran site in early 1990–but not the Lima trademark–and established Danival the same year in June. Our miso and shoyu, as well as our fruit and vegetable preserves are prepared with certified organic ingredients, and we also package unrefined Atlantic sea-salt. Our company name is indeed Danival." The address and phone and fax numbers are shown below.

"My full name is Valérie Fenech Saint Genieys. Daniel and I have been married for 15 years, and we have two sons, Benoît age 14 and Martin age 10.

"We began producing miso as soon as we bought the site, and put it on the market for the first time in 1992, after completing the first 18 month production cycle. Our shoyu products were launched the following year. All Danival's products are prepared on site. We buy 90% of our raw material in France (soya, vegetables, fruits and cereals), giving priority to local producers in our region in the south-west.

"Daniel's skills in preparing miso came to him from his father, who was in charge of miso production for Lima. At the time, Jan Kerremans was an employee whose task was to work on the miso recipe. Daniel himself has had the great privilege of receiving the teaching and guidance of the master-craftsman who is personally responsible for miso preparation within the imperial court of Japan, and who has imported his traditional skills and knowledge to Daniel while visiting Danival or during Daniel's frequent trips to Japan. We are both familiar with your publications and find them of

© Copyright Soyinfo Center 2014

great value."

Note 1. Near the top of the letterhead, below and to the left of the logo and company name, is written "Fabricant de père en fils." In the center of the stationary, in a light half-tone, is a line drawing of a traditional shoyu seller (which also appears in *The Book of Miso,* 2nd ed., by Shurtleff & Aoyagi, p. 262). A printed seal in the lower left corner shows that the company won special mention for the *Prix Écoproduit* 1992, in the "Enterprise and Environment" competition organized by the French Ministry of the Environment.

Note 2. Enclosed with the letter are five brochures and booklets, some of which are cited separately. Address: Moulin d'Andiran, 47170 Mézin, France. Phone: +33 5 5397 0023. Fax 5 5397 0010.

10421. Osho, Sidi M. 1997. Work with soyfoods in Nigeria (Interview). *SoyaScan Notes.* May 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Sidi Osho was born on 19 Aug. 1959 at Ibadan, Western Nigeria; ethnically she is Yoruba. The family spoke mostly Yoruba (but some English) at home; in Nigerian schools only English was spoken. Her first name, Sidi, means "Truth" in Yoruba. Her second name, Modupe, means "I thank God." She was the second child (and the first girl) in the family of 3 boys and 3 girls. Her father (born on 22 May 1927) was a civil engineer, educated in Lagos, Nigeria, at Yaba College of Technology; he has been in the construction business since 1959. Both of her parents believed strongly in the importance of education. They spent all of their money to educate their children, sending four of them to the United States for college and higher education. Sidi received no scholarships to help in her higher education. Today, with the change exchange rate between the U.S. dollar and the Nigerian naira, it is even more expensive for a Nigerian to get an education in America. "After we receive this education, he always reminds us–'Any education you have, if you don't apply it and offer other people opportunities, then it has been a waste of time.'" So Sidi decided to return to Nigeria after she earned her MSc degree at Ohio State University, and to look for work oriented toward development.

In Jan. 1983 she entered Nigeria's National Youth Service Corps (NYSC) as a volunteer. She was assigned to work at IITA (International Institute of Tropical Agriculture) at Ibadan as a biochemist in the root and tuber improvement program. Then from Jan. 1984 to Aug. 1985 she was employed as a Field Work Specialist with women's groups in Nigeria. She first got interested in soybeans in 1987. Many of the people with whom Sidi worked at IITA were not enthusiastic about her work to teach Africans food uses of soybeans. She always felt under pressure. "They believed that soybeans should be fed to animals. That was one of the reasons my contract was not reviewed. Now IITA is not doing anything on soybeans. Whatever you see in annual reports is descriptions of work they have done before that is just being repeated. The problem is not so much IITA as an organization as specific individuals within the organization; some of these are Americans.

Concerning the proceedings of the Second International Soybean Processing and Utilization Conference: The proceedings have not yet been published–but they probably will be soon. The editor is Alex Buchanan of Australia. The proceedings for the First such conference, held in China, were apparently never published. The second conference was better organized than the first.

Sidi is very interested in both tofu and tempeh. She and a Japanese researcher found a new coagulant to transform soymilk into tofu–the leaves of the *Calotropis proceara,* a bush which has long been used as a coagulant of animal milks to make cheese. This was a major discovery since calcium sulfate and nigari are not available in Nigeria, especially in the rural areas.

Sidi has set up a soybean processing center in a market in Ibadan. She would like to use this as a model and set it up in every market in Nigeria.

Chicken is now more expensive than red meat in Nigeria. Address: Forest Hill Estate, G.P.O. Box 38619, Ibadan, Nigeria. Phone: 234-2-241-3993.

10422. Ott, Katherine. 1997. The National Museum of American History (NMAH), at the Smithsonian Institution, has just approved the acquisition of materials related to macrobiotics, and especially the work of Michio and Aveline Kushi (Interview). *SoyaScan Notes.* May 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Smithsonian in Washington, DC, is the most prestigious and famous repository of documents and artifacts in America. Having this collection in the Smithsonian's museum and archives will allow scholars, researchers and writers to study the origins and development of macrobiotics and related food businesses for generations, probably centuries to come.

The approval was given on May 20 by the Collections Committee. The only objection or question was: "Will the food objects attract pests." Katherine is very excited about acquiring this collection; she has taken the initiative in developing interest and overcoming opposition. Craig Orr is the archivist who went to the Kushi's home in Brookline to examine the collection; he plans to go there again in early August to ship the materials.

The archival materials (documents) will be stored in the Archives Center. The three dimensional objects will be stored in her Division of Science, Medicine and Society at NMAH. Such objects may include packages of macrobiotic foods, eating utensils, etc. In the Collections Committee report, Katherine put macrobiotics in the 20th century context of "foodways" and the American diet, and showed

© Copyright Soyinfo Center 2014

its significance to the America experience. At the NMAH the broad subject of food and diet in America is often referred to as "foodways," which is sort of an anthropological term. It has to do with the preparation of food, the rituals, folklore and stories that go with it, family use of foods, and how food conveys identity–a much broader meaning than just nutrition and diet. The subject headings for the collection may be: Macrobiotics. Medicine and Health. Business and entrepreneurship (because it documents grass-roots activism and the networks of businesses that have grown up around macrobiotics. It reflects the wave of the future, showing how ideas spread internationally).

Note from Patricia Smith of Mill Valley, California, and a long-time friend of Michio and Aveline Kushi. 2003. Sept. 8. "Talked with Katherine Ott today by telephone. The Smithsonian is moving the Kushi family collection: location unknown." Address: PhD, Div. of Science, Medicine and Society, National Museum of American History, MRC 627, Smithsonian Institution, Washington, DC 20560. Phone: 202-357-2413.

10423. Liu, KeShun. 1997. Soybeans: Chemistry, technology, and utilization. Florence, Kentucky: Chapman & Hall. xxvi + 532 p. Illust. Index. 24 cm. [1255 ref]
• ***Summary:*** This is an excellent, original book, packed with useful information, plus 1,255 references, 138 figures (including 20 photos), and 66 tables. It is carefully researched, thoroughly documented and indexed, and well written. Unlike the few earlier comprehensive books of this type, it gives complete, balanced and accurate information about soyfoods–both traditional Asian and modern Western. If you want to buy just one book on this broad subject, buy this book!

Contents: Preface. Contributing authors (4). Reviewers (13). Abbreviations. 1. Agronomic characteristics, production, and marketing. 2. Chemistry and nutritional value of soybean components. 3. Biological and compositional changes during soybean maturation, storage, and germination. 4. Nonfermented oriental soyfoods. 5. Fermented oriental soyfoods. 6. Soybean oil extraction and processing. 7. Properties and edible applications of soybean oil. 8. Soybean protein products. 9. The second generation of soyfoods. 10. Soyfoods: their role in disease prevention and treatment. 11. Soybean improvements through plant breeding and genetic engineering.

Each chapter contains its own list of references at the end. Dr. Liu wrote 8 of the 11 chapters in this book. The remaining three chapters were written by experts (each with a PhD degree) in their respective fields: Dr. Mark Messina (Chap. 10), Andrew Proctor (6), and Navam Hettiarachchy and Uruthira Kalapathy (8). Each chapter was reviewed by 1 or 2 experts in the field and the reviewer's names and addresses are listed near the front of the book. Each chapter is cited separately and its contents and number of references is given. This book is favorably reviewed by Dr. Malcolm Bourne in *Food Technology* (Dec. 1997, p. 83).

About the author (autobiographical): Talk with, then letter from, Dr. KeShun Liu. 1998. March 17. Dr. Liu was born on 26 December 1958 in a rural village, Feixi county, Anhui province, eastern central China. His father was a farmer with 3 years of primary school education; his mother was illiterate. The family was very poor, with five children at that time. The third of five children, he was lucky to get any education; his two elder sisters had little chance to enter any school and they are basically illiterate. In 1965 he entered a primary school in the village, while continuing to care for the cattle on the commune to help earn family income. In 1966, when he was age 8, the Cultural Revolution began in China; his education was heavily interrupted–and remained interrupted for the next 10-12 years. After 5 years he managed to finish primary school, then entered a middle school (located 1½ miles from his village), where he boarded 5 days a week; the school featured a work-study program, the income from which allowed him to pay his school expenses. Three years later he was one of only 15% of his graduating classmates who made it into high school. In 1976, after two years, he graduated from high school with high honors. His health was very poor at the time due to severe malnutrition (he weighed only 93 lb at age 17). He returned to his village and worked as a farmer on the commune. He had no hope of entering college, since admission was based on family connections and power–not merit. However the next year, in 1977, Deng Xiaoping (Teng Hsiao-p'ing) returned to power and began to change the system of college entrance, basing admission on national examinations. KeShun decided to take this exam. He failed the first time (due to lack of preparation and intense competition) but succeeded the second time.

So in 1978 (at age 19) he entered Anhui Agricultural University, located in Hefei, the provincial capital (about 250 miles west of Shanghai, and 35 miles east of his village). During his first year he began to study English; the first word he learned was "flag," as instruction still had political overtones. In the Department of Horticulture, he studied pomology (fruit cultivation). After four years he graduated with very high honors and a BSc degree in pomology. In an English-language competition, he tied for first place out of about 500 students in the college. Immediately after graduation, in 1982, he took the National Graduate Entrance Examinations. Passing with high grades, he won a Chinese Ministry of Education scholarship to study in the United States. Entering the South China Agricultural University, in Guangzhou (Canton) he received 4 months of intensive English language training, and was given a year to take some science courses while applying to graduate schools in the USA.

In 1984 he entered the graduate school at Michigan State University. After two years, he received his MSc degree in food science, and after 3 more years (in 1989) he earned

© Copyright Soyinfo Center 2014

his PhD degree in the same field from the same university. Both his MSc and PhD research programs were related to soybean chemistry. His MSc research dealt with the effects of maturation and processing on certain antinutritional factors in soybeans. For his PhD program he worked on improvements in methods for measuring the activities of soybean trypsin inhibitors and chymotrypsin inhibitor, and discovered a link between limited protein hydrolysis and the order in which reagents were mixed during the assay for proteinase inhibitors. Six publications resulted from his MSc and PhD work.

After graduation, he went for a one-year internship at the Coca Cola Co. in Atlanta, Georgia. Then for 2½ years he worked at the University of Georgia Experimental Station (Griffin, Georgia), where he did postdoctoral research with five faculty members on a centuries-old problem: how and why do the seeds of certain legume species (they studied mainly cowpeas), after being stored for a certain length of time, become resistant to softening during cooking? This is known as the storage-induced hard-to-cook phenomenon or defect. His research discovered two new mechanisms that point to the involvement of both denaturation of intracellular storage proteins and beta-elimination of cell-wall pectin. Ten publications resulted from this work, including an invited review article on the subject.

In Sept. 1992 Dr. Liu began to work for Hartz Seed, a Unit of Monsanto Co. since 1983, in Stuttgart, Arkansas, first as a food chemist and then as a project leader. He currently oversees the company's Soyfoods Laboratory. Details of his major responsibilities in this lab are given elsewhere (see Liu, March 1998).

In Feb. 1998 he traveled to Japan where he visited many soyfoods companies as well as soy research labs in universities and research institutions. On the same trip, he also visited China, the third time back to his home town since he came to the U.S. in 1984. He taught about soyfoods at Anhui Agricultural University (where he had received his BSc degree in 1982).

Dr. Liu has been very involved in professional activities. He has organized three symposia and given more than 20 presentations at professional meetings. He has authored or co-authored more than 27 peer-reviewed papers in the area of legume chemistry, including one book chapter and one book review–prior to the publication of this book.

With his influence and help, KeShun's two younger brothers have entered colleges in China and come to the USA for graduate studies. One is a mechanical engineer working in Portland, Oregon; the other is a medical doctor doing research in Little Rock, Arkansas.

KeShun is married to Yan Li, who has a chemical engineering degree. They have a daughter, Sonya, age 5 and a son, Hans, age 2. Address: PhD, Soyfood Lab., Hartz Seed, a Unit of Monsanto, P.O. Box 946, Stuttgart, Arkansas 72160-0946. Phone: 870-673-8565.

10424. Liu, KeShun. 1997. Nonfermented Oriental soyfoods. In: KeShun Liu. 1997. Soybeans: Chemistry, Technology, and Utilization. Florence, Kentucky: Chapman & Hall. xxvi + 532 p. See p. 137-217. Chap. 4. Index. [125 ref]
• ***Summary:*** Contents: Introduction. Soymilk: Traditional soymilk preparation methods, chemistry of beany flavors, modern soymilk preparation methods (Cornell method, Illinois method, rapid hydration hydrothermal cooking, methods using defatted soy material, deodorization techniques, commercial methods, novel approaches), basic steps and principles of soymilk preparation (starting material, water incorporation, grinding, soymilk extraction, heat treatment, formulation and fortification, final processing and packaging, additional processing), other constraints (objectionable aftertaste, chalkiness, yields), standardization of soymilk.

Tofu: Tofu preparation methods (traditional methods, variations in tofu preparation methods), tofu varieties, quality and quantity attributes of tofu, factors affecting tofu making (soybean varieties and compositions, temperature of grinding soybeans, concentration of soymilk, heat processing of soymilk and tofu gelation mechanism, types of coagulants, concentration of coagulants, coagulation temperature, mode of adding coagulants, coagulation time, molding conditions, other factors, tofu made from full-fat soy flakes, novel treatments), microbiological safety.

Yuba: Preparation, chemical composition, varieties, utilization, mechanism of film formation, conditions for film formation and their optimization.

Other nonfermented soyfoods: Soybean sprouts, okara, roasted soybeans, soynuts, and soy flour (roasted soy flour, known in China as *dou fen* and in Japan as *kinako.* "In China, roasted soy flour may be mixed with lard and sugar and used as a filling or coating material for pastry... In Indonesia, the flour is mixed with spices, such as garlic and chili powders, and served with *longtong,* which is boiled rice wrapped in banana leaf"), cooked whole soybeans, immature soybeans [green vegetable soybeans]. Address: PhD, Soyfood Lab., Hartz Seed, a Unit of Monsanto, P.O. Box 946, Stuttgart, Arkansas 72160-0946. Phone: 870-673-8565.

10425. Liu, KeShun. 1997. Fermented Oriental soyfoods. In: KeShun Liu. 1997. Soybeans: Chemistry, Technology, and Utilization. Florence, Kentucky: Chapman & Hall. xxvi + 532 p. See p. 218-96. Chap. 5. Index. [127 ref]
• ***Summary:*** Contents: Introduction. Fermented soy paste (*jiang* and miso): Varieties of miso and jiang, koji and microorganisms involved, koji starter and its preparation, Chinese jiang preparation (traditional household method, pure culture method, enzymatic method), Japanese miso preparation (rice koji preparation, treatment of soybeans, mixing and mashing, fermentation, pasteurization and packaging), principles of jiang and miso preparation,

© Copyright Soyinfo Center 2014

major factors in jiang and miso making (raw materials, cooking temperature and time, conditions during koji preparation, proportions of ingredients, fermentation conditions, novel processing for special products). Soy sauce (*jiangyou* or shoyu): Varieties of soy sauce, soy sauce processing (traditional Chinese household method, modern Chinese method, processing of Japanese shoyu, comparison of soy sauce and *jiang* or miso preparations), principles of making soy sauce (action of koji enzymes, fermentation by lactic bacteria and yeasts, color and flavor formation, glutaminase and glutamic acid), chemical soy sauce, progress in soy sauce preparation (use of defatted soy grits or flakes, improvements in treating soybeans, development of an automatic koji-making system, application of microorganisms with specific activities, techniques to shorten production time, improvements in soy sauce clarification), chemical composition, quality attributes and standardization, mycotoxins. Tempeh: Varieties of tempeh, preparation (traditional method, pilot plant method, petri dish method), microorganisms involved, factors affecting tempeh fermentation (starter, dehulling and aeration, moisture, temperatures, acidity, losses of solids), changes during fermentation (general changes, protein, lipid, carbohydrates and other constituents), production of vitamins, storage, nutritional value. Natto: Preparation, microorganisms involved, factors affecting natto quality (raw material, soybean cooking conditions, storage), changes during fermentation, trends in research on natto and *B. natto* (development of novel strains of *B. subtilis,* purification and characterization of key enzymes, studies into genes encoding key enzymes of *B. subtilis,* studies of possible physiological roles of natto). Fermented black soybeans (douchi or hamanatto). Sufu: Preparation, types of sufu, microorganisms involved, effect of mold growth, effect of brine aging.

Figures show: (1) Photo of Chinese chiang, and Japanese red and white miso, each on one of three spoons in a shallow white bowl. (2) Flow chart of a Chinese method for making koji starter from whole soybeans and wheat bran. Adapted from Shi and Ren (1993). (3) Flow chart of a pure-culture method for making Chinese jiang from whole soybeans (65%) and wheat flour (35%). Adapted from Shi and Ren (1993). (4) Flow chart of an enzymatic method for making Chinese jiang from whole soybeans (65%) and wheat flour (35%). Adapted from Shi and Ren (1993). (5) Flow chart of the manufacturing process for Japanese rice miso [red miso]. Adapted from Fukushima (1981). (6) Diagram of the interactions of basic miso components during miso fermentation. From Shurtleff and Aoyagi (1983) who adapted it from Shibasaki and Hesseltine (1962). (7) Graph of trichloracetic acid (TCA)-soluble nitrogen (N) contents of miso samples prepared with soybeans cooked at different temperatures for 10 minutes, followed by 0 days or 25 days of fermentation. Adapted from Nikkuni et al. (1988). (8) Graph of temperature and time control curves for different types of Japanese miso during fermentation. Adapted from Shurtleff and Aoyagi (1983). (9) Photo of soy sauce in three different containers: dispenser, small Yamasa bottle, and large Chinese can (Soy, Superior Sauce). (10) Flow chart of a typical manufacturing process for koikuchi shoyu, the most widely used type of Japanese soy sauce. Adapted from Fukushima (1981). (11) Graph (salt content % vs. temperature) Of safety zone for enzymatic digestion of shoyu koji. Protein digestibility and amino acid content in Zone A are better than those in Zone B. From Yokotsuka (1986). (12) Graph of lactic acid fermentation of shoyu mash as a function of time. Adapted from Jose et al. (1976). (13) Flow chart of role of the proteolytic enzymes of koji mold in liberation of amino acids from proteins. Adapted from Fukushima (1985). (14) Chromatogram of organic acids in fermented and chemical [HVP] soy sauce manufactured in the United States. Optical densities vs. retention time. From Fukushima (1979a). (15) Flow chart of traditional Indonesian method for making tempeh from whole soybeans. Adapted from Winarno (1989). (16) Four superimposed graphs of change in pH and organic acids as a function of incubation time during accelerated acidification of soybeans at 30ºC. Shows acetic acid, lactic acid, citric acid, and pH. Adapted from de Reu et al. (1995a). (17) Graph of water soluble nitrogen content in the fermentation of soybeans with *Rhizopus oligosporus* during the traditional tempeh process at 25, 30, and 37ºC, and with the rotating drum reactor at 36ºC. (18) Photo of two chopsticks lifting some Japanese natto from a bowl full of natto; the thin strings connecting the natto above and below are clearly visible. (19) Flow chart of typical method for making Japanese natto from whole soybeans. (20) Photo of Chinese fermented black soybeans (*douchi*) on a white plate. (21) Flow chart of typical method for making Chinese fermented black soybeans from whole soybeans. (22) Photo of cubes of sufu (Chinese cheese) in a shallow white bowl. (23) Flow chart for making Chinese sufu from firm tofu.

Tables: (1) Proximate composition of some traditional soyfoods (both fermented and nonfermented). (2) Classification of major types of Japanese miso and their chemical composition. Adapted from Fukushima (1979a). (3) Types of soy sauce recognized by the Japanese government and their chemical composition. (4) Comparison between fermented soy sauce and protein chemical hydrolysate [HVP soy sauce]. Source: Yokotsuka (1986). (5) Relationship between cooking soybeans and nitrogen composition and yield of resultant soy sauce. Source: Fukushima (1979b). (6) Detailed composition of fermented Japanese soy sauce (Koikuchi shoyu). Source: Yokotsuka (1986). Includes inorganic components (minerals), organic components, amino acids, organic acids, sugars, solids, etc. (7) Selected enzymatic activities, soluble nitrogen content, and stringiness of natto samples prepared with soybeans cooked under a pressure of 1.5 kg per square cm for various periods.

Adapted from Matsumoto et al. 1995. (8) Major responsible microorganisms isolated from sufu made in different parts of China. Column 1 is the genus and species. Column 2 is areas where the sufu is made, including Taiwan and Hong Kong. Adapted from Shi and Ren (1993). Address: PhD, Soyfood Lab., Hartz Seed, a Unit of Monsanto, P.O. Box 946, Stuttgart, Arkansas 72160-0946. Phone: 870-673-8565.

10426. Messina, Mark J. 1997. Soyfoods: Their role in disease prevention and treatment. In: KeShun Liu. 1997. Soybeans: Chemistry, Technology, and Utilization. Florence, Kentucky: Chapman & Hall. xxvi + 532 p. See p. 442-77. Chap. 10. Index. [185 ref]
• ***Summary:*** Contents: Introduction. Diet, health and soyfoods. Macronutrients in soybeans: Protein, fat. Soy isoflavones: Isomer structure and occurrences, absorption and metabolism, estrogenic/antiestrogenic activity. Soy intake and cancer risk: Genistein as an anticarcinogen, breast cancer, prostate cancer, cancer treatment. Soy intake and osteoporosis: Protein, soy protein and bone health, isoflavones and bone health. Soy intake and kidney disease. Soy intake and heart disease: Serum cholesterol-lowering effect, role of isoflavones. Soy intake and menopause. Potential concerns related to soy consumption: oligosaccharides, phytate, saponins, trypsin inhibitors, isoflavones. Summary. References.

Breast cancer: Starting in the early 1990s, interest in the idea that increased soy intake might reduce cancer risk focused mainly on breast cancer. This hypothesis was based primarily on three observations: (1) The relatively low death rates from breast cancer in Asian countries where soy is traditionally consumed. In Japan, for example, the rate is ¼ the U.S. rate. (2) The potential antiestrogenic effect of isoflavones (Folman & Pope 1966), including soybean isoflavones (Mäkelä et al. 1995). (3) The relatively high blood isoflavone levels in Asian people (Adlercreutz et al. 1993).

Barnes et al. (1990, 1994) reported that rates fed diets containing soy developed fewer mammary tumors induced by 7,12-dimethylbenz(a)anthracene than those fed a control diet without soy or a diet containing soy from which the isoflavones had been chemically removed. Then in 1991 Lee et al. reported a case control study conducted in Singapore that found regular consumption of soyfoods was associated with a marked decrease in risk of breast cancer in premenopausal but not in postmenopausal women. These two studies did much to draw attention to the soy-breast cancer hypothesis. Overall, however, findings on the relationship between soy intake and breast cancer risk are equivocal. Three studies (Lee 1991, Yuan et al. 1995, and Hirose et al. 1995) are cited to show that there is some evidence indicating that soy consumption can decrease premenopausal breast cancer risk, but little if any suggesting soy consumption reduces risk of breast cancer in postmenopausal women. These findings are consistent with the notion that soybean isoflavones can function as antiestrogens when placed in the high estrogen environment found premenopausally, though genistein has been found to inhibit the growth of both estrogen-dependent and estrogen-independent cancer cells. Address: PhD, Nutrition Matters, Inc., 1543 Lincoln Street, Port Townsend, Washington 98368.

10427. Morinaga Nutritional Foods, Inc. 1997. Perfect food: Perfect package (Leaflet). Torrance, California. 4 panels each side. Each panel: 22 x 9 cm.
• ***Summary:*** This color leaflet contains 6 color photos. Contents: Cover. Perfect food. Perfect package. Perfect for everyone. Learn more about Mori-Nu tofu. Coupon and order form. Mori-Nu quick tips. Five recipes.

"In our factory in the town of Tualatin, Oregon, we blend wholesome soybeans with pure Cascadian water and a tiny amount of gluconolactone (Footnote: a non-dairy coagulant derived from food starch). Each package is hermetically sealed and gently heated, transforming the rich soymilk into creamy tofu."

A table shows the nutritional composition of 5 types of Mori-Nu Tofu.

Note: An updated version of this leaflet appeared in Sept. 2000. It had 5 panels on each side (instead of 4) and contained new information about: (1) Mori-Nu Tofu Hero–four seasoning mixes for making Eggless Salad, Italian Herb Medley, Garden Scrambler, and Shanghai Stir-Fry. (2) Mori-Nu Mates–mixes for puddings or pies in vanilla, lemon-creme, or chocolate flavors. (3) Mori-Nu Tofu is now made using only non-GMO soybeans. (4) Mori-Nu tofu and the FDA heart health claim. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 310-787-0200.

10428. [Shoyu and Holland]. 1997. Noda, Japan: Kikkoman International Institute for Food Culture. 14 p. May. Unpublished manuscript.
Address: Noda, Japan.

10429. Kikkoman Corporation. 1997. Annual report 1996. 339 Noda, Noda-shi, Chiba 278, Japan. 24 p. 28 cm. [Eng]
• ***Summary:*** The information in this English-language annual report is current as of April 1997. Contents: Financial highlights. Profile. A message from the president: The year in review, an emphasis on growth, principal management issues, looking ahead. Overseas operations–A world brand: The Americas, Europe, Asia and Oceania. Financial section. Corporate history. Global network (directory of Kikkoman names, addresses, and phone numbers worldwide). Board of directors and officers. Corporate data.

During fiscal 1996, ended 31 December 1996, consolidated net sales worldwide rose 1.3% over the previous fiscal year to 206.0 billion yen, down from a peak

© Copyright Soyinfo Center 2014

of 211.7 billion yen in 1992. Net income surged 63.8% to a record 7.3 billion yen, up from 4.4 billion yen in 1995. In 1993 net income was 4.7 billion, in 1992 it was 4.9 billion, and in 1991 it was 6.2 billion–very volatile.

Overseas sales jumped 21.8% in 1996 to 54.4 billion yen, and accounted for 26.4% of consolidated net sales, up 4.4 percentage points from fiscal 1995. "Although the declining value of the yen helped boost overseas sales, this impressive result mainly reflects the excellent performance of the company's subsidiaries in the United States." In Japan, difficult conditions resulted in a 4.4% decrease in sales.

During the past year: Kikkoman increased efforts to boost sales of its premium-quality *Marudaizu* Soy Sauce (made from whole soybeans rather than defatted soybean meal). July 1996–Kikkoman starts construction of its first soy sauce manufacturing plant in Europe, located in the city of Hoogezand-Sappemeer, in the northern Netherlands. Aug. 1996–Relocated its Tokyo Head Office to Nishi-Shinbashi in central Tokyo, in a move to expand the role of this office–and introduced E-mail. Feb. 1997 began constructing its second U.S. soy sauce manufacturing plant in Folsom, California, on a 52-acre site; the ground-breaking ceremony took place in March 1997. Feb. 1997–Launched a new *Yakiniku no Tare* (Steak Dipping Sauce) in *Akadare* (Red Label) and *Kurodare* (Black Label) flavors.

"The Americas." Kikkoman's new plant in Folsom, California, is scheduled to come on stream in autumn 1998 with an initial production capacity of 10,000 kiloliters per year (about 2.64 million gallons per year). The plant will be operated by Kikkoman Foods, Inc., the company's wholly-owned Wisconsin-based subsidiary, and approximately 25 local employees will be hired. The plant will supply Kikkoman *Koikuchi Shoyu* (regular soy sauce) to customers in the western United States and Canada. Kikkoman's first shoyu plant outside Japan began operation in Wisconsin in 1973. Kikkoman has increased the production capacity of that plant 10-fold to meet expanding demand. [Note: Since the initial capacity was about 10,000 kiloliters/year, the current capacity must be about 100,000 kiloliters/year or 26.4 million gallons/year.] Over the years, Kikkoman has captured approximately 50% of the market for soy sauce and soy sauce-related seasonings in the USA. A bar chart shows the relative production volume growth at the Wisconsin plant. It has increased 2.4 fold since 1986. In addition to its plant in Wisconsin, Kikkoman has four subsidiaries in the USA: (1) Kikkoman International Inc. (San Francisco, California), which markets a broad range of Japanese and Asian foodstuffs, primarily soy sauce, teriyaki sauce, noodle sauce, and tempura sauce. (2) JFC International Inc. (San Francisco), North America's largest importer and distributor of Japanese and other Asian foodstuffs. (3) Japan Food (Hawaii), Inc., which wholesales soy sauce plus other Japanese and Asian foodstuffs in Hawaii. (4) Japan Food Canada Inc., which wholesales soy sauce plus other Japanese and Asian foodstuffs in Canada.

In Europe, Kikkoman's plant in the Netherlands is expected to start deliveries of soy sauce in Oct. 1997. It has an initial production capacity of approximately 4,000 kiloliters per year. "Kikkoman currently supplies the European market with soy sauce produced at its Singapore plant. When operations commence at the Dutch plant, this volume will be available to meet the burgeoning demand for soy sauce in Asia and Oceania."

In Asia and Oceania: Kikkoman has two production plants, in Singapore (est. 1983) and Tainan, Taiwan (President Kikkoman Inc., which makes a sweet soy sauce developed for local tastes; it was established in Feb. 1990 as a joint venture company). "Marketing activities in Asia are performed by Kikkoman Trading (S) Pte. Ltd. of Singapore, and JFC Hong Kong Limited, while in the competitive markets of Australia and New Zealand, Kikkoman Australia Pty. Limited is enhancing the Kikkoman name. The latest addition to Kikkoman's Asian marketing network is Shanghai Kikkoman Trading Co. Ltd., which was established in December 1995" [in China]. Address: Noda, Japan.

10430. Marking, Syl. 1997. Bean growers build 'exciting' export markets: ASA's directors give progress reports. *Soybean Digest.* May/June. p. 28-29.

• ***Summary:*** Joseph Zack, the American Soybean Association's regional director in Belgium, discusses the controversy over Roundup Ready soybeans after the European Union improved their import. Opposition, led by consumer activist organizations such as Greenpeace, peaked in about mid-1996, and appears to be subsiding. "The campaign was fed by emotion and lacked scientific fact said Zack."

"Phillip Laney, ASA's country director in Beijing, China, described events in the world's most highly populated country as 'revolutionary.'

"'In a period of about three years, China has shifted from being a major exporter of soybeans, soy meal and soy oil to now being a major importer,' Laney said.

"'This past calendar year, there has been a dramatic occurrence,' he continued. 'China has imported 1.1. million metric tons of soybeans. And the U.S. industry got a very good 78% market share of those sales, plus a small share of soy meal sales. In this current marketing year, and we're only five months into it, we've already shipped 1.4 million metric tons of soybeans, 600,000 metric tons of meal and 300,000 of oil. The totals keep going up week by week.'"

Virgil Miedema, ASA's country director in India, noted that India has a huge population but soybean consumption is very low. ASA is focusing on the poultry industry, "which is growing about 15% a year. There is a huge and growing demand for meat and protein... The inclusion rate (the amount used in rations) for soybean meal is up to about 8%." "For now, ASA's educational efforts focus on increasing the

© Copyright Soyinfo Center 2014

inclusion rate for soybean meal and soon on the human food aspect."

Kent Nelson, ASA's country director in Japan, noted that for the USA, this is the oldest and largest soybean market. ASA opened its Tokyo office in 1956. Last year the U.S. exported about 150 million bushels of soybeans to Japan worth $1.2 billion. New opportunities? Replacing fish meal in rations. In biodiesel in the Tokyo metropolitan bus system. A newspaper in Kobe, with circulation of over 1 million, recently switched to using soy ink. A photo shows Phillip Laney (ASA, China).

10431. Morinaga Nutritional Foods, Inc. 1997. The wonders of nature–in a perfect package (Ad). *Vegetarian Times.* June. p. 5.

• ***Summary:*** This attractive full-page color ad is a condensed version of its 4-page counterpart that appeared 2 months earlier. Near the top is a large photo of a waterfall splashing down over rocks. To the left of that, and vertically, are five packages of Mori-Nu Tofu; the top 3 have a new design with a photo of a prepared tofu dish at the top of the front panel. At the bottom is a photo of a purple smoothie.

The text reads: "Quality tofu depends on quality water. From our new home in the little town of Tualatin, Oregon, we blend the finest soybeans with the pristine water of the Pacific Northwest to create the creamy, smooth texture and 'just made' taste of Mori-Nu Tofu." The logo is a red script M. Below it is written "Mori-Nu. Pure tofu. Perfect package." Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10432. Nagai, Toshirou; Koguchi, K.; Itoh, Y. 1997. Chemical analysis of poly-gamma-glutamic acid produced by plasmid-free *Bacillus subtilis* (*natto*)*:* Evidence that plasmids are not involved in poly-gamma-glutamic acid production. *J. of General and Applied Microbiology* (*Tokyo*) 43(3):139-43. June. [31 ref]

• ***Summary:*** A key discovery concerning the role of plasmids in the natto fermentation. "It has been postulated that the *psf* gene on a small plasmid, pUH1 (5.8 kb) regulates positively the synthesis of capsular poly-gamma-glutamic acid (gamma PGA) in *Bacillus subtilis* (*natto*) Asahikawa."

Note: In 1982 there were three known strains of *Bacillus subtilis* (*natto*)*:* Asahikawa, F, and M. Address: Div. of Applied Microbiology, National Food Research Inst. (NFRI), MAFF, Tsukuba 305, Japan.

10433. *SoyaScan Notes.* 1997. The soy protein isolate industry and market worldwide (Overview). July 14. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** The following statistics were compiled, with permission, from one or more very reliable sources, which have asked to remain anonymous.

Protein Technologies International (PTI) in the USA–70,000 tonnes/year.

PTI in Belgium–15,000 tonnes.

ADM–15,000-20,000 tonnes.

Fuji-PTI in Japan–10,000 tonnes.

Sanbra in Brazil–8,000 tonnes.

Others worldwide: 6,000 tonnes.

Total worldwide: 124,000 to 129,000 tonnes/year.

The soy protein isolate market worldwide is pretty stagnant–growing quite slowly. By contrast, the soy protein concentrate market is growing very rapidly, and is expected to double in the next 4-5 years.

10434. Andoh, Elizabeth. 1997. Tea and temple fare in Kamakura. *New York Times.* July 20. p. XX6, XX18 (Sunday).

• ***Summary:*** Contains reviews of restaurants in Kamakura. Saami serves dishes that include wheat gluten, and "soy foods," and a sweet tofu-based pâté known as gizei-dofu [gisei-dofu], plus "goma-dofu, creamy sesame pudding drizzled with soy sauce and topped with a dab of fiery wasabi horseradish."

Kintame uses traditional pickling mediums including "miso paste." Their "house soup is ozoni, a creamy, pale, a miso-thickened broth.

Fushiki An offers shojin ryori, temple-style vegetarian cuisine including goma-dofu and a "clear broth with cubes of silken bean curd..." The chirashi-zushi contained "soy-simmered koya-dofu bean curd..." Address: Tokyo, Japan.

10435. Buzzell, R.I.; Poysa, V. 1997. Two food quality soybean cultivars released by GPCRC. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 3(2):1. July.

• ***Summary:*** GPCRC is the Greenhouse and Processing Crops Research Centre (formerly Harrow Research Station). "These two cultivars, AC Onrei and OX756, have been introduced to complement Harovinton expand the export of Ontario soybeans into the premium Asian soyfood market. Harovinton, a tofu-type soybean cultivar developed at Harrow, has established Canadian soyfood soybeans as a premium quality product in Asia, where it is called 'Orient Pearl.'

"AC Onrei is a selection from the cross Vinton X Enrei. Enrei is a premium quality Japanese tofu cultivar which lacks the a4 protein sub-unit of the 11S glycinin (gy4/gy4). Enrei's superior tofu quality, especially the ability to make premium tofu using the 'nigari' (magnesium chloride) coagulant, is due to the lack of this a4 protein sub-unit. Vinton is Gy4/Gy4 and has the a4 protein sub-unit."

"OX756 was developed from the backcross of L2 X Harovinton. L2 is a backcross derived lx2/lx2 line of Century which lacks the L2 lipoxygenase isoenzyme... Harovinton is Lx2/Lx2 and has the L2 lipoxygenase isoenzyme."

© Copyright Soyinfo Center 2014

"OX756 is a low lipoxygenase (lx2/lx2), yellow hilum cultivar similar in yield but earlier maturing than Harovinton, the recurrent parent. The lack of the lx2 lipoxygenase enzyme should reduce the 'beany' flavours in tofu, soymilk, and other soyfood products made with OX756, thus promoting wider acceptance of soybeans as food ingredients. It was released to W.G. Thompson and Sons, Ltd."

A table shows agronomic performance and seed quality for these two new food varieties compared with Harovinton during 8-9 years. For each variety are given: Yield, plant height, lodging score, days to maturity, weight of 100 seeds, protein %, and oil %. Address: AAFC, GPCRC, Harrow, Ontario, Canada.

10436. Kikkoman International Inc. 1997. Build a better burger with Kikkoman: Foodservice menu ideas (Brochure). San Francisco, California. 4 p. 15 x 22 cm.
• ***Summary:*** Five burger recipes that use Kikkoman soy sauce. The Kikkoman slogan is now: "The true taste of soy sauce." Address: San Francisco, California. Phone: 1-800-944-0600.

10437. *Soyafoods* (*ASA, Europe*). 1997. Japanese soy sauce sales hit by food poisoning scare. 8(2):2. Summer.
• ***Summary:*** Kikkoman, the world's larger maker of soy sauce with 30% of the Japanese soy sauce market, suffered a 22.1% decline in unconsolidated recurring profits–in part because of an outbreak last summer of food poisoning (caused by *E. coli*) in Japan. Just over half of Kikkoman's total sales come from soy sauce. Soy sauce was not implicated in the poisoning, but its sales fell when many Japanese temporarily stopped eating in restaurants and avoided fast food.

10438. Tobar, Hector. 1997. A world of surprises at Tofu Festival: Little Tokyo event includes twists on dishes from burgers to chocolate mousse that belie the food's bland image. *Los Angeles Times.* Aug. 10. p. B3, B7. Metro News section.
• ***Summary:*** The article begins: "To the uninitiated, tofu is synonymous with bland. It comes in funny white blocks that float in water. All by itself, it doesn't taste like much. But the people attending the Tofu Festival in Little Tokyo this weekend know better. They'll tell you what with some imagination and expertise–and a lot of spices–tofu is a culinary delight." More than 20,000 people were expected at the event, on Saturday and Sunday. Twenty-six restaurants served up a variety of tofu dishes. One favorite dish was the tofu cheesecake offered by Ryo Sato, the chef *de cuisine* and owner of Chez Sateau restaurant in Arcadia. The exact recipe is secret but the ingredients include tofu (50% of total), cream cheese, sour cream, egg, and lemon juice.

Talk with Margaret Endo of Little Tokyo Service Center. 1997. Sept. 10. This year's Tofu Festival was much bigger and better than the first one last year. Close to 20,000 people attended; roughly 70% of these were Asian Americans (with the majority of those being Japanese-Americans, but with also many Chinese- and Korean-Americans), and the remaining 30% were Caucasian-Americans. Pat Greenberg was very involved. A new edition of *The Four Seasons of Tofu* cookbook was prepared for the festival, and about 1,000 copies were sold. Address: Times Staff Writer.

10439. Brody, Jane E. 1997. Diet may be one reason complaints about menopause are rare in Asia. *New York Times.* Aug. 27. p. B10. Health section (Natl).
• ***Summary:*** A table (from the scientific journal *Obstetrics and Gynecology*) shows the content of phytoestrogens (in milligrams) in various soyfoods: Roasted soybeans 165.2. Textured vegetable protein 138.2. Green soybeans 135.4. Soy flour 112.4. Tempeh 62.5. Tofu 33.7. Tofu yogurt 16.4. Soy hot dog 15.0. Soy noodles (dry) 8.5.

10440. Kushi, Michio; Kushi, Aveline. 1997. Re: Letter of congratulations to the Lima Team. Lima celebrates its 40th anniversary! Letter to the Lima Team in Maldegem, Belgium, Aug. 30. 5 p. Typed, with signature on letterhead.
• ***Summary:*** "We extend happy congratulations from our hearts to the Lima team on its 40th Anniversary.

"The Lima team has truly been a European pioneer in organic agriculture and distribution of organic food. Not only many of Europe's people, but also people who are in organic food production, distribution and consumption all around the world, are extending their gratitude to the Lima team which has shown such dedication to the health and well-being of humanity.

"As we well remember, Lima began in 1957. George Ohsawa and Lima Ohsawa visited France and Belgium, and stayed with the Gevaert family. As are we, they all were advocating the cause of world peace, especially the pursuit of the realization of a world federal government. The father of Pierre Gevaert was one of the prominent European leaders in this peace movement, as well as a well known artist / painter. The Gevaert family, after suffering during World War II, settled, and began organic agriculture. Pierre Gevaert led his brothers and sisters in the cause of natural health as the base for a peaceful society. George and Lima Ohsawa encouraged their cause and called for four young Japanese students who were experts in their respective fields of food production. With their participation and intensive labor contribution under the leadership of Pierre and other Gevaert family members, together with the spiritual and philosophical guidance from George and Lima Ohsawa, the company–using the name 'Lima' from the name of Mrs. Ohsawa–had begun!

"Though the four Japanese left after their initial contribution, the Lima company continued to encourage organic agriculture in Belgium, France and other areas.

© Copyright Soyinfo Center 2014

It produced bread, miso, and other macrobiotic products as well as importing–mainly from Japan through Mitoku Company, Ltd., and others–the best quality of soy sauce and other organic products which were processed through the most authentic methods.

"While many other companies arose in France, Spain, Italy, Portugal, Germany and other areas of Europe, under the influence of macrobiotic education and rising interest in organic natural food, as well as people's concern for better health through better eating, Lima has steadfastly remained one of the companies which are most conscientious and thoughtful of the health and well-being of humanity.

"We fondly recall visiting the Lima facilities many times, giving advice on several occasions on the qualities of food. We also remember giving lectures, talks, and discussions at the company on several occasions when we visited Europe.

"In addition to the operation of food production and distribution, Pierre Gevaert and other members of the Gevaert family, as well as macrobiotic and natural foods-related friends, made great contributions towards educating people in society and promoting natural health by holding conferences, forums, seminars, lectures and meetings on many occasions and in many cities.

"We sincerely extend our heartfelt thanks to all these founders, contributors, workers and participants in the operation of Lima.

"After the company was bought and its ownership changed, the spirit of its founders continued to remain. Marc Callebert, who continuously stayed until recently, had also carried forward its original spirit. We all know that though the ownership has changed, the spirit of Lima has never wavered, and shall continuously develop towards further realization of the endless dream of humankind: health and peace of the world. We sincerely trust the current owners and management, together with all Lima workers, are sharing the same spirit: to keep the company a symbolic leader in Europe of authentic, organic, natural and macrobiotic Food producers and distributors.

"While, with many friends' companies, the Lima team is spreading its contribution to maintain and develop human health in Europe, America has also been changing widely towards organic, natural and macrobiotic food production, distribution and consumption. There are many huge-scale natural food supermarkets which have been set up in every major city in America. The nutritional and eating pattern has greatly turned into one incorporating more whole grains, organic vegetables, beans and fruits, in addition to authentic macrobiotic products such as miso, soy sauce, tempeh, tofu, sea salt, umeboshi, sea vegetables, sourdough bread and many others.

"Food revolution has definitely begun, and we all know that will change the eating pattern throughout the entire world within a few decades.

"For the past five years, we have been pouring our energies into changing Japan and other Far Eastern countries. Although they are several years behind America and Europe, they are quickly awakening, and a large trend of organic, natural, macrobiotic food has been spreading through the participation of hotels, restaurants, food producers, farmers and consumers. This trend will spread to other Asian countries, and eventually towards the Middle East and Africa, and will enable the world to become a more healthy and peaceful society in the near future.

"We further wish to comment that this movement towards healthy food in general is closely associated with and has been inspiring alternative approaches to health care. Many areas of alternative medicine are dealing with healthy dietary practice, largely including a macrobiotic way of eating. Nutritional science has also been changing towards the reduction of animal food and increase of grains, vegetables, beans and other foods which we have been promoting.

"All of you are part of this wonderful positive movement in the world, and so, together with many friends, we again extend our congratulations to you on your 40th anniversary, and we pray from our hearts for your continuous contribution and success in the development of human health and well-being through the best quality of food. To the many people who have put their efforts into developing Lima as a symbolic existence in the industry: Thank you very much!

"In peace and love, Michio Kushi, Aveline Kushi, with many American macrobiotic, natural food friends."

10447. Hesser, Amanda. 1997. Miso goes beyond Japanese cooking. *New York Times.* Sept. 3. p. C1, C8 (NY City ed.); p. B1, B8 (Natl). Living Arts section. [1 ref]

• ***Summary:*** An excellent, long article. The version in the New York City edition (described below) is considerably longer than that in the national edition. Nina Simonds believes that miso is no longer an exotic food as it one was; it has now become much more mainstream. Many varieties of miso are now sold in America. William Shurtleff, co-author of *The Book of Miso,* notes that "It brings a savory flavor to vegetarian meals that is very hard to find. Miso provides a bridge between a steak and a vegetarian diet."

Katagiri & Company, on the Upper East Side of New York City, sells more than 20 varieties. In Japan, miso soup maintains a reputation as a cure-all, much like chicken soup is to westerners.

Contains three miso recipes. One sidebar, titled "The package says a lot," gives the name, address and phone number of six different sources for misos: The Health Nuts, Integral Yoga Natural Foods, Katagiri & Company, Whole Foods Market (all 4 in New York City), South River Miso Co. (Conway, Massachusetts), and Natural Lifestyle Supplies (Asheville, North Carolina–Sells Miso Master, Onozaki, Mitoku, and South River misos).

Photos show: Nine different brands of packaged miso. A bowl of miso soup, with chopsticks.

10448. Sandler, Richard. 1997. Recollections of early tofu cheesecakes in Boston and New York #2. The place of cheesecakes in Jewish culture (Interview). *SoyaScan Notes.* Sept. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Concerning the first tofu cheesecake in Boston, Richard's brother, Matthew Sandler, stated today: "The original recipe for the tofu cheesecake probably came from Connie Frank Sandler, the first wife of Matt's brother, Richard. Connie and Richard made a tofu cheesecake at Sanai restaurant in about 1966-67." But Richard says he has no recollection of any cheesecake in Boston. He suggests calling Connie Sandler (now Hanna Frank, who lives in Mexico). The recipe he best remembers developing with Connie was Rice Kayu Bread–which she invented.

"My first recollection of tofu cheesecake (or tofu pie) was 1969 in New York. The Caldron restaurant was started by Marty Schloss, his wife Glory, and his mother, Seena. I was the first cook at The Caldron; I set up the kitchen, the menu, the bookkeeping, etc. The Caldron first opened for business on 18 April 1969." About a month of two after The Caldron opened, its three founders started a natural-food grocery story and bakery right next door to the Caldron; it was named The Caldron's Well. Marty's mother, Seena, became the baker at The Caldron's Well roughly 6 months after April 1969. I think she invented and developed the tofu cheesecake that soon became very popular at The Caldron. A fellow named Danny Mount (who arrived after Richard and probably working with Seena) also made tofu cheesecakes at The Caldron. Before working at The Caldron, Danny had worked at the Good Karma Cafe in San Francisco, California. "I don't think Seena had any precedent for her discovery. My personal opinion is that, as in all great historical discoveries, there are often two or three people independently working on the same thing. It speaks to that fact that it is Nature that is producing this, speaking to a few minds. I firmly believe that.

"This is definitely my first recollection of seeing or tasting a tofu cheesecake anywhere. I lived in the Kushi's house in Boston and Aveline never made a tofu cheesecake. I was the cook at Sanae and neither I nor Evan Root, the first cook there, ever made it. I made desserts at Sanae every single day, but I definitely never made a tofu cheesecake. I moved to Boston on 1 Jan. 1968 and immediately went to work helping out with the construction of Sanae–which was already about 80% done. Sanae opened in about January or February 1968."

"In 1968 in Boston, the only tofu that even existed in this strict macrobiotic community was tofu from Chinatown. Tofu was always a suspect food. But cheesecake was something that always appealed to Jewish macrobiotics, trying to adapt the food to their traditions. Cheesecake is a very Jewish dessert–at least among secular Jews in the USA in the 1950s and 1960s. It is not quite as Jewish as lox and bagels, but it was definitely indicative of wealth in the Jewish community, or of a Jewish person climbing the ladder of success. It was like 'Oy–You got so much cheese you can make a cake! I can't believe it.'"

The laws of Kosher say that if you eat meat, you must wait about 4 hours before you eat dairy. Until about 50

© Copyright Soyinfo Center 2014

years ago, almost all Jews kept Kosher, but by the 1950s the majority of Jews probably were not Kosher. Yet many Jews who gave up Kosher laws, still kept meat and milk apart. There are two kinds of Kosher restaurants in New York City–Meat restaurants and dairy restaurants. The meat restaurants sold no dairy products and the dairy restaurants sold no meat products; the dairy restaurants sold dairy products but no meat. The Kosher dairy restaurants sold delicious cheesecakes.

Other people who might remember more about early tofu cheesecakes: (1) Hanna Frank (formerly Connie Sandler), Richard's first wife. She now lives in Mexico. (2) Wally Gorell, who lives in the Bay Area and has an encyclopedic memory and mind. He was in Boston for a short time in the early days, then soon left to go to Japan. Wally was seen as a prodigy in terms of cooking, and was greatly admired by everyone for his light touch and great creativity. In 1968 there were only two macrobiotic study houses in Brookline (Boston): The one that Michio and Aveline lived in, on Gardner Road, and the second one which was on University Road. Wally and Richard and Matt Sandler lived in the house on University Road. When Nahum and Beverly Stiskin moved out of the University Road House, Richard took their room. Later Connie, Richard and Wally moved into Michio's house on Gardner Road.

(3) Beverly Sky (formerly Stiskin; she is now single and lives in Boston). (4) Nahum Stiskin in New York City (he's involved in computer software and the financial world).

(5) Michelle = Maier Abehsera, who is now an Orthodox Jew and lives in Brooklyn with his wife Claude. His phone number is listed. He and his wife had a great, great macrobiotic restaurant in New York named *l'Épicerie.*

Note: For a previous interview with Richard Sandler on this subject, see SoyaScan Notes, 26 May 1992. Address: 251 East 10th St., Apt. 7 [East Village], New York, New York 10009. Phone: 212-777-7138.

10449. Bates, Caroline. 1997. California–Los Angeles area: *Spécialitiés de la maison. Gourmet* 57(9):32, 34. Sept.
• ***Summary:*** One of the three restaurants featured in this article is Jozu, a Japanese restaurant at 8360 Melrose Ave. in Los Angeles (phone: 213-655-5600), owned and run by Andy Nakano. One of the writer's favorite recipes is the fragrant Japanese eggplant in miso sauce. A photo shows the prepared dish.

10450. Fujii, T.; Nakamura, H. 1997. Method for producing solidified tofu lees and combustion of okara as fuel. *Fuel and Energy Abstracts* 38(5):326. Sept. *
• ***Summary:*** "Okara waste from tofu manufacture is mixed (100 parts) with urethane resin (5-70 parts by weight) at 5-50ºC in order to produce solidified okara. Water contained in the okara is exuded during the process, and the heating value grows."

10451. Ontario Soybean Growers' Marketing Board (OSGMB). 1997. Overview of the Canadian soyfoods market. Chatham, Ontario, Canada: OSGMB. 44 p. 28 cm.
• ***Summary:*** This excellent, complete, and accurate market study was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The field research was conducted between Jan. 15 and Aug. 31, 1997. The first study of the Canadian soyfoods market was published in March 1990 (vi + 40 pages).

Contents: Acknowledgments. Summary. Introduction. Research procedures: Methodology, limitations (of the 100 companies in this study, over 75% were visited, interviews were conducted in person, and product samples were collected). The Canadian soyfoods market: History, structure of the Canadian soyfood industry, market highlights by region (The Maritimes, Quebec, Ontario, the Prairies {Manitoba, Saskatchewan, and Alberta}, British Columbia), factors influencing the soyfoods market (A closer look at Canadian demographic trends, a closer look at Canadian immigration trends, a closer look at vegetarianism and family food expenditure trends, research on soyfoods and their health benefits, the American influence). Supply and demand of soybeans for use in soyfoods: Soybean production in Ontario, imports and exports of soybeans, imports and exports of soy products, the soybean crushing industry in Ontario, consumption of whole soybeans by soyfood processors. Opportunities in the Canadian soyfoods market. Soyfood processors and their needs. Market opportunities for food-grade soybeans. Summary comments. Bibliography.

Tables show: (1) Major soyfood companies established in the province of Quebec (p. 13). (2) Major soyfood companies established in the province of Ontario (p. 16). (3) Major soyfood companies established in the province of British Columbia (p. 19).

(4) Percentage of change in units and sales of soyfoods by product in grocery stores in Canada between 1994 and 1996 (soy sauce, soy flour, soy oil, soymilk, tofu and meat analogs). (p. 21). (5) Percentage distribution of population in Canada by province (p. 22. In 1996, 37.5% lived in Ontario and 24.6% in Quebec). (6) Percentage distribution of age groups–Canada (p. 22; In the 15-24 age group, 19% did not eat meat in 1992, down from 23% in 1986).

(7) Percentage of population who do not eat meat & share of budget spent on meat, Canada 1986 and 1992 (p. 28). (8) Canadian soybean: Supply and disposition (September–August crop year)–in metric tons (p. 31). (9) Canadian soybean exports by country of destination (p. 32. In 1997-98 some 325,000 tonnes went to the European Union, 145,000 to the USA, 85,000 to Japan, 40,000 to Hong Kong, 75,000 to other Asia, and 15,000 to other places).

(10) Imports and exports–All countries, dollar values (p.

© Copyright Soyinfo Center 2014

33. The leading imports are soybean meal $202.7 million, crude soybean oil $16.75 million, and whole soybeans for oil extraction $12.59 million. The leading exports are protein concentrates and textured protein substances $9.1 million, soybean meal 6.5 million, and brans, sharps and other residues $4.3 million).

(11) Soybean crushing facilities in Canada (p. 34. All are located in Ontario province; ADM Agri-Industries Ltd., Windsor. Capacity: 3,600 tonnes/day of raw soybeans. CanAmera Foods, Hamilton, 3,000. Helin Oil Packers, Whitby, 250. Started crushing in 1997. Cold Springs Farm Ltd., Thamesford, 100. Started 1995. Sunfield Oil Seeds, Wingham, 100. Started 1994. Dennis Jackson Seeds Services Ltd., Dresden, 40. Started 1994. Tri County Protein Corporation, Iroquois, 100. Not in operation yet).

(12) Estimated quantities of soybean utilized by soyfood processors–1996–metric tons (p. 35. Total volume of whole soybeans consumed: 9,650 tonnes, of which 4,780 are for soymilk, 4,775 are for tofu, and 95 are for other soyfood products). Total volume of whole soybeans consumed by province (by soyfood processors): British Columbia 3,825 tonnes, Ontario 3,050 (excluding crushing plants), the Maritimes and Quebec 2,535, and the Prairies 240.

(13) Major foreign companies in the Canadian soyfood market (p. 37. Soy cheese: Soyco Foods, Sharon's Finest, Cemac Foods Corp. {Nu-Tofu}. Frozen desserts: Tofutti Brands Inc. Tempeh: Turtle Island Foods Inc. Tetra Pak packaged soymilk: Westbrae Natural Foods, Cenat, Pacific Select, Vitasoy USA Inc., Eden Food Inc. Tofu: Mori-Nu, Vitasoy USA Inc. Soy sauce: Eden Foods Inc., Kikkoman Foods Inc.).

The Prairie Provinces (Manitoba, Saskatchewan, and Alberta) contained about 16.6% of Canada's population (4.5 million persons) in 1995. "The province of Alberta [Capital = Edmonton] is different from the other two Prairie provinces, due mainly to its larger population base, its growing Oriental population and its proximity to Vancouver. Calgary [a large city in Alberta province] and Edmonton have their own Chinatowns, including small Oriental-owned tofu and soymilk production facilities." Note: According to the Canadian Soyfoods Directory (1997, p. 14), there are 7 soyfoods companies in Alberta province, 2 in Manitoba, and none in Saskatchewan. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

10452. Fitzpatrick, Michael. 1997. Soy far, so good. *Guardian* (*England*). Oct. 25. p. B57.
• ***Summary:*** This article is mostly about soy sauce. "As for promoting longer life, reports of the Japanese press have declared soya beans to be anti-carcinogenic, especially the revolting fermented soya-bean concoction called natto."

American consumers already use vast amounts of soy sauce, but to promote it in Europe, Kikkoman sponsors an annual competition in the UK and Germany named "Kikkoman Masters." Kikkoman asks chefs in these two countries to make their own favorite recipes using Kikkoman soy sauce.

In the UK, Japanese soy sauces are definitely more expensive than their Chinese counterparts, and there are more varieties of Chinese soy sauce on the market to choose from. Yet there are an estimated 7,000 soy sauce makers in Japan–although many of the smaller ones sell only locally or regionally.

The Yamasa company makes and sells three types of soy sauce: regular, table number one with reduced salt, and one made especially for raw fish [sashimi]. Two other brands [owned by other companies] are Higashimaru (from Osaka) and Kurashi-more (declaring itself top grade and expensive).

10453. Golbitz, Peter. 1997. Soyfoods Expo '97 in Mexico City, 21-23 Oct. 1997 (Interview). *SoyaScan Notes.* Oct. 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The American Soybean Association (ASA) sponsored this expo and hired Peter and Soyatech to recruit American companies to participate. 824 people attended (many more than the last soyfoods expo in Mexico in 1994) and 28 companies exhibited at the U.S. Trade Center in Mexico City. The event started Tuesday, October 21, with a briefing by the Trade Center on how to import products into Mexico. Tuesday evening there was an opening VIP cocktail, attended by about 300 people. The booths were all set up; it and ended Thursday Oct. 23. One Wednesday and Thursday the Expo hall was open from 12:00 noon until 8:00 p.m. each day. The U.S. Trade Center arranged appointments for people, from 9-12 o'clock each morning, linking potential buyers and sellers. A great deal of business was conducted. In addition there were five seminars each day, from 12:30 to 6:00 p.m., with the speakers being mostly Americans, talking about new technologies, marketing, soymilk standards, products, etc. There was one seminar about current developments with soy in Guatemala. ASA put together a beautiful little color catalog as part of a big packet on the Expo, with all the seminars, speakers, attendees, etc. Peter will send a 5-page faxed recruitment packet announcing the event.

Cuba has exported an excellent soymilk plant to Mexico; the company, Biotek, owned by Dr. Javier Sandoval Pierres, is now in operation at: Km. 9 Carreterra Celaya, San Miquel Allende, Guanajuato state (GTO, south of Mexico City), Mexico. Phone: +91 415 5-0347 or 0348. Fax: 4-0349. The soymilk is delicious. The company is beginning to work with the Mexican government to get this soymilk into schools.

Mexico is now the third largest importer of U.S. soybeans after the Netherlands (#1) and Japan (#2; see *Soya*

© Copyright Soyinfo Center 2014

Bluebook, p. 348). This is largely attributed to NAFTA, the proximity of Mexico to the USA, and the fact that as imports from the USA have increased, Mexican soybean production has decreased. In addition, China is now exporting good quality food soybeans to importing nations in Asia.

ASA Mexico now produces a quarterly Spanish-language magazine titled *Soya.* For more information contact Adela Perez and Viki Braverman at ASA Mexico.

Note: A photo in *Bluebook Update* (March 1998, p. 6) shows U.S. participants in the Expo: Matt Renkoski of Optimum Quality Grains; Deb Wycoff of Devansoy; Rick Eluk of Clofine Food & Dairy; Teresa Isakson of SunRich; Lorne Broten of International ProSoya; Alberto Pico of ADM; and Peter Golbitz of Soyatech, Inc. Also shown are Adela Perez of ASA (Mexico) and some of her staff. Address: Soyatech, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

10454. Evans, D.E.; Tsukamoto, C.; Nielsen, N.C. 1997. A small scale method for production of tofu and silken tofu. *Crop Science* 37(5):1463-71. Sept/Oct. *

• ***Summary:*** 80 gm of ground soybean is used to make silken tofu. Glucono-delta-lactone is used as the coagulant. To evaluate the method, soymilk and tofu were made from 182 experimental, public, and private soybean cultivars grown in Indiana in 1990. Address: 1. Dep. of Plant Science, Univ. of Adelaide, Waite Campus, Glen Osmond, SA 5064, Australia; ; 2. Taishi Food Co., 68 Okinaka, Sannohe-Machi, Sonnohe-gun, Aomori, Japan 039-01; 3. 10456. Gonzalez-Watanabe, Yvonne; Watanabe, Joji. 1997. Introducing tofu to Hispanics. Visit to the House Foods America Corp. tofu factory in Garden Grove near Los Angeles (Interview). *SoyaScan Notes.* Nov. 9. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Yvonne and her husband Joji (who first contacted Soyfoods Center on 12 Sept. 1997) are interested in translating *The Book of Tofu* into Spanish and introducing tofu to the Hispanic community, starting in Los Angeles. Yvonne, age 24 was born in the USA, where her parents (who are both from Costa Rica) lived for 30-35 years; her father was a pharmacist. She learned to speak some Spanish at home. Her parents have returned to Costa Rica. Yvonne (who was raised a Catholic) now works in a real estate office and teaches vegan cooking classes at the Kanzeonji Non-Sectarian Buddhist Temple and Shiva Ashram Yoga Center at Mt. Washington in Los Angeles; there both she and Joji practice Zen meditation and yoga. Rev. Ryugen Watanabe, Joji's uncle, is a Soto Zen master, yoga teacher, and the head of this temple. Both Yvonne and Joji are vegetarians, and she is a vegan. Her sister is an editor for El International, a big Spanish language magazine located in Miami, Florida.

Yvonne got interested in vegetarianism and soyfoods through Rev. Watanabe. She had had severe migraine chronic headaches for many years. After trying every possible remedy to no avail, she told her uncle, Rev. Watanabe, about her problem. He said simply but forcefully, "It's your diet." She thought: "He's crazy. I have a great diet." In 1994, although she had been eating meat for 30 years, she tried the vegetarian diet he recommended and got quick relief. Following his advice, she began by giving up red meat and pork, then phased out chicken and fish until after 8-9 months she was consuming a vegan diet. As Yvonne began educating herself about vegetarian nutrition, she was looking for alternatives to meats as a source of protein. Rev. Watanabe told her about tofu, and even taught her how to make it at home from whole soybeans. Now Yvonne teaches other people how to make tofu at home.

Yvonne has great admiration for Rev. Watanabe. "He's really great. He's been teaching Zen and yoga for more than 20 years and he still charges the same, low prices–$2.00 for a yoga class. If you can pay, you pay. If you can't, how about rolling some incense. It's wonderful. I've never seen someone so committed to people."

Yvonne has been a vegan ever since and has not had a headache in almost five years. A friend of Yvonne's had migraine headaches that were so bad, she had to give herself shots. Yvonne suggested that she try switching to a vegetarian diet. She hasn't had a headache in a year. Over the years many of Yvonne's female relatives (her mother, sister, cousin, etc.) have become vegan–largely because they want to lose weight.

Joji, age 36, was born in Tokyo but has lived in the USA since age 6. He speaks Japanese and English and is a financial consultant. Joji graduated from USC, and now works in a corporate environment in real estate financing. His grandmother, Masa Miyai, lives with them. Four years ago they shut down their business selling medical supplies to Latin America. Now they are developing a project to introduce tofu to Hispanics.

On Oct. 18-19 Yvonne and Joji visited Soyfoods Center, where they talked with Bill Shurtleff about their project and book publishing. They photocopied many Spanish-language

© Copyright Soyinfo Center 2014

documents and recipes related to tofu. Upon returning to Los Angeles, they developed a one-page Spanish language brochure on tofu, visited with Margaret Endo in order to arrange for a booth in next summer's Tofu Festival, and began to do research.

Their first research project was a visit to the House Foods America Corp. tofu plant in Garden Grove, Southern California. After a brief meeting with employee Miyuki Nagano, she took them on a walking tour of the plant, so they were able to observe the entire tofu-making process. It is completely automated, except when a worker smooths the curds in the pressing trays before they are pressed. The company employs about 120 people at this facility. Of the 78 workers in the factory (including shipping and receiving), 98% are Hispanic men, but the office workers are all Japanese. The company has its own delivery trucks; its marketing is focused on California, in part because of increased competition from companies outside the state–as in Massachusetts [Nasoya Foods]. The company invites the Hispanic workers to take home tofu, but they don't–probably because they don't know what to do with it. The company has a full test kitchen and laboratory, and Miyuki is interested in developing tofu recipes that Hispanics will like. The company also makes natto at this plant.

Update: Talk with Yvonne. 1997. Nov. 23. Her cousin, Alejandra Jimenez, from Costa Rica has just arrived in Los Angeles to work with her on the tofu project. Alejandra's native language is Spanish but she also speaks perfect English and has a master's degree in English. Another cousin from Costa Rica is part of an all-male rock band, whose members are ages 30-37; all were born and raised in Costa Rica. She served them 3 tofu recipes–which they liked very much: (1) Tofu cubed in miso soup; (2) Chilled tofu, cubed with sesame oil, rice vinegar, and soy sauce; and (3) Crisp freshly deep-fried tofu cubes, with soy sauce. They are interested in using tofu as part of a weight-loss program.

They all went to a Chinese vegetarian restaurant in nearby San Gabriel named Vegetarian Delights. Run by a Chinese-American lady, it served a delicious dish named Roasted Black Bean Fish, that tasted remarkably like fish–but used tofu instead of fish. Yvonne made friends with the owner. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

10457. Schorow, Stephanie. 1997. Books–*Golden 'Geisha':* Brookline author's 'Memoirs' explores mysterious world of Japanese courtesans. *Boston Herald.* Nov. 12.
• ***Summary:*** *Memoirs of a Geisha,* by Arthur Golden has become a bestseller. "The Japanese call themselves a 'natto' society. A natto is a fermented bean that if you pick one up, they stick together so much, they won't separate."

"'Memoirs' explores this 'natto' world from the perspective of a girl raised" to be a geisha. Address: Massachusetts.

10458. Huang, H.T. (Hsing-Tsung). 1997. Early history of the concept of heating and cooling foods in China. Books on nutrition and medicine in Joseph Needham's *Science and Civilization in China.* (Interview). *SoyaScan Notes.* Nov. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Huang will not deal with the question of "heating and cooling foods" in his forthcoming volume in Joseph Needham's *Science and Civilization in China* series. That part was cut out because there was not enough room for it; he would have to devote more time to that subject in order to deal with it adequately. The tradition is ancient in China, but the concept seems to have been first written down in two sources from about the same time: First, in the *Yellow Emperor's Classic of Internal Medicine,* which contains material from before the Christian era, probably from the Warring States period (221-403 B.C.). Second, in the first Chinese pharmacopoeia, the *Shen Nung Pên Ts'ao Ching,* which defined drugs as heating and cooling, and also discussed their toxicity. Quite a lot of this latter book remains. For a long time it was considered lost, but it has been reconstituted, in part because fragments are preserved in the later pharmacopoeias. Most of the material is in the *Pen-Ts'ao Kang-Mu,* compiled by Li Shih-chen (1578-1597). It was copied and printed during the Sung dynasty. The Japanese have an almost complete copy; it was discovered during the early years of this century then brought back to China, where it created a great deal of interest and scholarship. Now there is a very nice edition of it in Chinese–but no single book in English.

Note concerning book burning in early China: In *East Asia: The Great Tradition,* Reischauer and Fairbank (1960, p. 87-88) explain that during the brief Ch'in dynasty, just after the Warring States and before the Former Han, China was first unified under the first emperor–*Ch'in Ssu Huang Ti.* In his attempt to control people's thought and get rid of outmoded or subversive books, he commanded his prime minister Li Ssu, in 213 B.C., to set about destroying "undesirable" books in a literary inquisition that has come to be known as the "Burning of the Books." The only books spared were utilitarian ones, such as works on medicine, divination and agriculture, and the historical records of the Ch'in itself. "For this desecration of the written word, Li Ssu has earned the undying hatred of Chinese historians. Unquestionably his effort to blot out dangerous doctrines did help to put an end to the golden age of Chinese thought. Other factors were the burning of the Ch'in imperial library when the dynasty fell..."

Dr. Huang continues: Many of the books were lost, but some were saved by people who hid them, and they were supposedly "rediscovered" during the Han dynasty.

There will be a small nutrition section in Dr. Huang's book. In it he deals almost exclusively with the Chinese treatment of nutritional deficiency diseases. That part is

© Copyright Soyinfo Center 2014

rather scientific. The earliest such treatment was for goiter, using seaweeds, described in the *Pen-Ts'ao Kang-Mu* (1578-1597)–long before Dr. James Lind in the West. Note: In 1747 James Lind proved that citrus fruits cure scurvy in the first controlled human dietary experiment. But it was not until 1796 (50 years later) that lemon juice was officially introduced into the British Navy to prevent scurvy.

In the Needham series, the subject of heating and cooling foods (and herbs/drugs) will probably be dealt with in the volume on *Materia Medica,* but the progress of that volume is now sort of bogged down. Joseph Needham wrote an entire volume focusing on the early history of medicine in China, which should be available in 1-2 years. An entire volume on acupuncture was published by Cambridge University Press in 1980; titled *The Celestial Lancets: A History and Rationale of Acupuncture and Moxa,* by Lu Gwei-Djen and Joseph Needham, it was originally intended to be part of the *Science and Civilization in China* series, and is probably still in print. To order (or for the latest catalog of Cambridge University Press in the USA), call 1-800-872-7423.

Dr. Huang has so much interesting material which he was unable to include in his *Science and Civilization* volume, that he is thinking of writing a popular book on the history and origin of food, nutrition, and food culture in China, from the technological viewpoint. It will probably include information on heating and cooling foods. The "hot-cold" principle is applied to foods even in Mexico. The old Western idea of the bodily humors is also related in that foods were related to these humors. This idea was popular at the time of the Thirteen Colonies and until the 19th century. Address: 309 Yoakum Parkway #403, Alexandria, Virginia 22304.

10459. Eden Foods, Inc. 1997. Eden soy sauces: Traditionally brewed shoyu & tamari (Ad). *Vegetarian Times.* Nov. p. 71.
• ***Summary:*** This 1/3-page color ad shows bottles of the following: Eden organic tamari (soy sauce; Purple label is "Naturally brewed" in the USA for about 6 months; Green label is "Traditionally brewed" for up to 2 years and imported from Japan). Eden organic shoyu. Eden selected shoyu (2 sizes). "Eden Soy Sauces are created just as they have been for centuries by master brewers who are truly artisan craftsmen. They are aged and tended for over two years, creating rare and versatile soy sauces." Address: Clinton, Michigan 49236. Phone: 1-800-248-0320.

10460. Lee, Jill. 1997. New soybeans fill tofu niche. *Agricultural Research* 45(11):13. Nov.
• ***Summary:*** Thomas E. "Tommy" Carter, at the USDA-ARS Soybean and Nitrogen Fixation Lab. (Raleigh, North Carolina) breeds special varieties of soybeans for use in making tofu. Although they have lower yields and demand extra care, they bring extra profits to farmers. "Tofu is gaining in popularity." USDA's Economic Research Service estimates that Japan uses about 20 million bushels each year for making a tofu; most of these are imported from China and the United States. But tofu is also made in the USA, where there are about 100 tofu makers, whose tofu has a retail value of about $130 to $150 million / year. All this tofu is made from soybeans grown in America.

"U.S. shoppers are doubling their consumption of tofu about every 3 to 4 years, according to the Soyfoods Center of Lafayette, California, which monitors such trends." Address: ARS.

10461. Lowenstein, Melissa. 1997. Natural alternatives for menopausal women: A panel discussion with the experts. *Vegetarian Times.* Nov. p. 86-90, 92.
• ***Summary:*** Several of these experts recommend the use of soyfoods. Tori Hudson, N.D., director of A Woman's Time Clinic in Portland, Oregon, was asked: "What foods do you suggest for women with menopausal symptoms?" Answer: "The best foods are those that contain high amounts of phytoestrogens, or plant estrogens. The very best sources of phytoestrogens are soy products and flaxseeds Ä not flax oil but the whole seed. A handful of roasted soy nuts, a cup of soymilk or a half-cup of tofu will give you 35 to 50 milligrams (mg.) of isoflavones, the phytoestrogen found in soy. I recommend at least 45 mg. a day, but the more, the better. Soy foods also decrease the 'bad' kind of cholesterol and increase the 'good' kind and can dramatically reduce breast cancer risk. Japanese women, who eat enough soy to get 100 mg. of isoflavones a day, are four to six times less likely to have breast cancer." Address: Santa Barbara, California.

10462. Morinaga Nutritional Foods, Inc. 1997. Perfect food. Perfect package (Ad). *Vegetarian Times.* Nov. p. 24.
• ***Summary:*** This attractive color ad (8½ by 11 inches) shows two aseptic packages of Mori-Nu tofu (Extra Form and Firm) on a wooden cutting board surrounded by fruits and vegetables–green beans, cherry tomatoes, tofu cubes, strawberries, cauliflower, raspberries, mushrooms, carrots, and leeks.

At the bottom of the latter ad, the reader is invited to order: "*The Art of Tofu,* featuring international recipes, by Akasha Richmond, a celebrated chef who has cooked for stars like Barbara Streisand and Michael Jackson." Call 1-800-793-9161. For more visit www.morinu.com.

This ad also appeared in the December issue (p. 24), and in the January 1998 issue (p. 47) of this magazine.

And in the Jan/Feb. 1998 (p. 79) and May/June (p. 85) issues of *Natural Health* magazine. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10463. Morinaga Nutritional Foods, Inc. 1997. New! Mori-Nu Mates pudding and pie mix now available in vanilla (Ad). *Natural Foods Merchandiser.* Nov. p. 51.
• ***Summary:*** This full-page color ad shows a large packet of Mori-Nu Mates Low-Fat Pudding Mix in vanilla flavor against a white background. Below it are packets in Lemon Creme and Chocolate flavors. Bold text across the bottom of each package proclaims that they are "All natural. Dairy-free. No refined sugar" Blend one packet of this mix with one package of Mori-Nu Lite Silken Tofu. For more: www.morinu.com. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10464. Muramatsu, Kanako; Nagai, Toshiro; Sato, Shizuko; Ochiai, Yuko; Kiuchi, Kan. 1997. [Stimulative effect of phytone on the production of sticky materials in *Bacillus subtilis* (*natto*)]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 44(11):812-15. [20 ref. Jap; eng]
• ***Summary:*** "The quality of natto depends on the quantity of sticky materials (SM) which are produced by the starter, *Bacillus subtilis* (*natto*) strain. In this study, we found that phytone, papain-digested soy protein, significantly enhanced the SM production by *B. subtilis* (*natto*). L-Glutamate was also found to exhibit the same effect" (from journal@rchive). Address: 1. Dep. of Food Science and Nutrition, Kyoritsu Women's Univ., 2-2-1 Hitotsubashi, Chiyoda-ku, Tokyo 101, Japan.

10465. Saio, Kyoko. 1997. Global soybean processing and utilization for the 21st century. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15, 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 22-27.
• ***Summary:*** Contents: Abstract. Introduction. From traditional to the future via modern: Development of food industry, key words for the 21st century. Conclusion.

The processing and marketing of soybeans in the modern world involves modernization and mechanization, larger scale, the mass market, sped, hygiene and novelty. "However in the 21st century the key words such as healthy, safety, and environment will be much more important..." (p. 22). She believes that our "priority for the 21st century is not always technology-oriented progress like the 20th century." People may prefer to have a more comfortable and peaceful life as human beings (p. 26-27). Note: This embodies the "Small is beautiful" idea of Schumacher and satisfying or fulfilling work. Address: Tokyo Metropolitan Food Technology Research Center, 9-1 Kanda-Sakuma-cho, Chiyoda-ku, Tokyo 101.

10466. Macdonald, Bruce. 1997. Macrobiotic Company of America is thriving and macrobiotics is making a making a comeback in America (Interview). *SoyaScan Notes.* Dec. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bruce's company focuses on high quality, macrobiotic foods. Company sales and number of accounts are growing rapidly. When he bought the company in Sept. 1993, they had about 900 accounts; this grew to about 2,500 in 1997 and 5,000 at present. The number of individual/personal accounts is growing the most rapidly. The main individual buyers seem to be aging baby boomers–those from the same generation as the people who founded the movement 30 years ago in the late 1960s and 1970s. Why are they buying? First, macrobiotics has been Americanized and de-mystified. Many of the teachers are now Americans and the heavy Japanese emphasis is disappearing. Second, the baby-boomers are realizing that they had better start eating well or they will soon pay the price in poor health and shorter longevity.

Bruce's best-selling macrobiotic products are kuzu, nori and wasabi powder (for people to make sushi at home), 4-year soy sauce (*nama shoyu*), and Johsen organic shoyu (in quarts or 10 oz bottles). He gets 100-200 catalog requests each week and does no advertising. Lenny Jacobs likes to say that macrobiotics is on the decline, but he doesn't know what he's talking about. Address: President, Macrobiotic Company of America, Asheville, North Carolina 28806. Phone: 704-252-1221.

10467. *SoyaScan Notes.* 1997. What is amé?–A traditional Japanese sweet or candy (Overview). Dec. 4. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** A good Japanese dictionary defines *amé* as: (1) *Mochigomé nado no denpun o bakuga de tôka saseta shokuhin.* (*2*) *Amae.* (*3*) *Amami.* Translated, this means: (1) A sweet food made by saccharifying the starch of glutinous rice or other grains using malt. (2) Sweet. (3) Sweetness.

The Modern Reader's Japanese-English Character Dictionary, by Andrew N. Nelson (1966) states (p. 966, #5160). *I* (Chinese reading) or *Ame* = rice jelly, candy. *amedama* = taffies, toffies. *ame-iro* = light-brown, amber. *ameuri* = candy vendor, candy store. *ameya* = candy vendor, candy store. *amembô* = stick of candy.

10468. Kamego, Marco. 1997. Re: History and present status of Kikko Corporation S.A., manufacturer of soy sauce and miso in Peru. Letter to William Shurtleff at Soyfoods Center, Dec. 29. 3 p. [Eng]
• ***Summary:*** Mr. Kamego filled out a 3-page company history form sent by Soyfoods Center. This company was founded in April 1957 in Peru by Mr. Manuel Toshihiko Kamego (Marco's father) and Mr. Alejandro Kioyasu Kamego (Manuel's brother). In 1957 the company, named Fabrica de Siyau Kikko Sociedad de Responsibilidad Limitada, was located at Av. Colombia 171, Pueblo Libre,

© Copyright Soyinfo Center 2014

Lima, Peru. Phone: 32-3754. The company's first two products, Kikko Siyau ("soy" sauce–but made with Peruvian common beans, *Phaseolus vulgaris,* instead of soybeans because the latter were not available) and Miso Kikko (both *shiro miso* {sweet white miso made with rice} and *aka miso* {red miso made with barley}) were both introduced in 1957. These products may have been the world's first shoyu and miso made with common beans instead of soybeans. In 1960 the company first began to use soybeans in its products; they were grown in Tumbes, on the northern coast of Peru.

From the beginning, the company was dedicated to the traditional, nearly hand-made production of sauces and foods to supply the restaurants and homes of Peruvians of Asian origin through the home delivery system. Marco writes: "We are the pioneers of soy sauce manufacturing in Peru. It is through our product that the Peruvian native people have come to know soy sauce, its use and quality. Our company has succeeded because of tenaciousness, as well as adaptation to the requirements of the Peruvian market." The Kamego family originated in Japan. The two Chinese characters (*kanji*) with which the family name are written, can also be pronounced "Kikko" and mean "turtle's shell." This explains the origin of the Kikko brand and emblem/logo. Note: The name and logo is very similar to that of Kikkoman, the world's leading manufacturer of soy sauce.

In 1964 the company introduced its third soy product, Mensi Kikko (in Chinese *mien shih* = sweet wheat-flour fermented black soybeans), obtained from fermentation of whole soybeans; it is known as *mianchi* (*mien shih*) in China and *doenjang* in Korea. In 1979 Ajinomoto, the world's leading manufacturer of seasonings and of MSG, began to produce soy sauce in Peru in competition with Fabrica de Siyau Kikko, but as of 1997 Kikko is still the leader in the Peruvian market, ahead of Ajinomoto.

In July 1994 the company moved its factory and offices to a new location, which is the present address: Jr. Alexander Fleming 432, Ate, Lima 03, Peru.

In 1995 the company was reorganized as Kikko Corporation Sociedad Anonima (S.A.). This new company was formed from the merger of the original company with Sazonadores S.R.L. Note: *Sazonadores* means "seasonings" in Spanish. At this time the company launched three new products: Kikko Shoyu: Salsa de Soya, Salsa Mensi (mensi / *mien shih* seasoned with spices), and Ajoikion (soy sauce seasoned with ginger and garlic; in Peruvian, *kión* means ginger–the Spanish word is *jengibre;* in Spanish, *ajo* means garlic).

Present status: The company now makes each week: 25,000 liters of soy sauce, 2,000 liters of Salsa Mensi, and 2,000 liters of Ajoikion. Their second best-selling product is sweet and sour sauce, but it contains no soy. They still make *shiro miso* (sweet white miso) fermented for 5 months, but have discontinued red miso. The company employs 51 people, including 5 in management, 36 production workers, and 10 office and others. The current owners are Manuel Kamego, Marco Kamego, and Alejando Kamego's heirs. Net sales last year were $1,500,000. The net worth of the business is about $115,000. The company's sales have grown, on average, at about 2% each year over the past 2-3 years. The building is 2,000 square meters in size: 1,800 for production and 200 for office space. As af late 1997 the factory is located at Robert Fulton 115, Lima 3, Peru. Most of the soybeans now used by the company come from Bolivia

Marco encloses attractive full-color labels for four products: Kikko Shoyu, Salsa Mensi, Ajoikion, and Kikko Siyau. Address: Jr. Alexander Fleming 432, Ate, Lima 03, Peru. Phone: +511 326-0870 or 1200.

10469. *SoyaScan Notes.* 1997. Chronology of major soy-related events and trends during 1997 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 1–Novartis Seeds (headquartered in Golden Valley, Minnesota) is formed through the blockbuster merger of Ciba Seeds and Northrup King Co. That merger was possible because of the mid-1996 merger of pharmaceutical giants Sandoz and Ciba-Geigy. Novartis Seeds is now America's second largest seed company after Pioneer Hi-Bred International.

Feb. 3–Monsanto completes its acquisition of Asgrow Seed Co. of Kalamazoo, Michigan, for $240 million. From May 1968 to 1994 Asgrow had been owned by The Upjohn Co., which built the company into one of America's largest soybean seed companies. When Monsanto bought Asgrow it was called the Asgrow Agronomics business of Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM), a multi-national agricultural company based out of Monterey, Mexico. of Mexico.

March 4–Morinaga Nutritional Foods' new tofu plant in Tualatin, Oregon holds its official grand opening. Mori-Nu Tofu, previously made in Japan, starts to be made in America for the first time. The plant, 65,000 square feet worth about $15 million, is on the same property as Pacific Foods of Oregon, but in a separate building.

March 12–House Foods America Corporation holds the opening ceremony for America's largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles. The new fully automated, state-of-the-art, 130,000 square foot plant cost $21 million, and will more than double the company's tofu production capacity to 150,000 pounds/day, from 70,000 in the old plant. The old factory has been operating a full capacity for years. The new plant will have three tofu production lines, and is located on 5 acres of land–which gives plenty of room for expansion.

Sept. Nasoya Foods (owned by Vitasoy) finishes moving into a much larger, state-of-the-art $13.5 million plant (125,00 square feet) in Ayer, Massachusetts, from its former location in Leominster. The first Vitasoy brand soymilk ever

© Copyright Soyinfo Center 2014

made in America starts to be shipped from the plant in mid-September. Nasoya's offices have now been moved to Ayer from Leominster, but tofu is still being made at the plant in Leominster.

Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc. Westbrae's new name becomes Hain Food Group–Westbrae. Westbrae will continue to be headquartered in Carson, California. Dec. 1–Phytoestrogens / isoflavones extracted from soybeans by ADM start to be sold commercially in the USA in pill form by supplement companies. ADM's name for the product is Mega Soy.

Dec. 3–DuPont purchases Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates), a wholly-owned subsidiary of the Ralston Purina Co. DuPont signed a letter of intent to acquire PTI on Aug. 24. PTI, which has offices worldwide, will continue to be headquartered in St. Louis, Missouri.

"How can I get more soy into my diet?" is the question most frequently asked by callers to Soyfoods Center. Soy appears to have a bright future.

10470. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*). 1997. Japan technical mission–September, 1997. 3(3):1-2. Dec.
• ***Summary:*** Tofu: Before the team of three professionals (representing industry, university, and government) left Canada, a series of questions concerning the different techniques and methods used in making tofu in Japan were submitted to the Science and Technology Section of the Canadian Embassy in Tokyo. These were sent to as many tofu manufacturers and researchers as possible in the hope of arriving at a consensus of opinion on the best way to make tofu. This Bulletin discusses times and temperatures for soaking the soybeans, water uptake, desired characteristics of the soymilk used to make tofu (percent solids, protein, fat, and sugar content, nitrogen, pH, and color), coagulants, times and temperatures in the coagulation process.

A sidebar titled "The GMO question" (p. 2) states: "If a common concern was established at all points of contact on the mission, it was the one concerning transgenics or Genetically Modified Organisms (GMO). The Japanese concern over this issue is one of the greatest to face the food production industry." According to Dr. Yukio Kawamura, a major reason for this aversion arises from the fact that "because Japan was the only nation to suffer from an atomic bomb, the people fear the effects of mutation from non-natural sources... Even though several departments of the Japanese government have OK'd the use of GMO in the food supply, there is a strong resistance to them... Mr. Ozawa, President of Fujishoji [Fuji Shoji], said that being able to label products as GMO-free will be as popular as those products who currently advertise that only organically grown beans are used in their manufacture. Wherever the team visited, this was the foremost topic of conversation. The Japanese are currently seeking a written documentation to accompany shipments stating that they are GMO free. Even though acceptance may be forthcoming in the future, this is a unique opportunity to protect and possibly increase market share in Japan."

10471. Honda, Kyoko. 1997. Tofu & soybean cooking: The Japanese healthy way. Translated by Kazuhiko Nagai. Tokyo: Graph-sha Ltd. 64 p. Dec. Illust. 26 cm. [Eng]
• ***Summary:*** This full-color Japanese-style cookbook is loaded with color photos showing both steps in the process of preparing recipes and the finished dishes. Contents: Basic preparations: Parboiling soybeans, draining tofu, reconstituting Koori-dofu ([Kôri-dofu], freeze-dried tofu), removing oil from abura-age (thin deep-fried tofu), toasting okara. 1. Soybean cooking (daizu = soybeans, aodaizu = green soybeans, edamame = young soybeans in pods, kuromame = black soybeans), abura-age, soybean sprouts. 2. Tofu & natto dishes (Koori-doofu, kouya-dofu, shimi-dofu, okara, yu-dofu = simmered tofu). Let's make momen-dofu (homemade tofu). Tofu dishes from Okinawa (Goya champuru, Ukarairichi, Ujira-tofu).

3. Other dishes from soybeans (Atsu-age, Chinese cheese–Furu [Fermented tofu], miso, soy milk, yuba, daizu moyashi = soybean sprouts, kinako). Articles (summary of four articles).

Note. This is the earliest English-language document seen (April 2013) that uses the term *Koori-dofu* or the term *kouya-dofu* to refer to dried-frozen tofu. Address: Sc.D. (Doctor of Science), nutritionist, and lecturer at Women's Junior College of Nippon College of Physical Education.

• ***Summary:*** This company grows a wide variety of vegetables in Taiwan and China. These include green vegetable soybeans, sold in the pods or shelled (without the pod). About six vegetable products are listed on each page. Below each color photo is a description of the product,

© Copyright Soyinfo Center 2014

its origin and varieties, written in English, Japanese, and Chinese.

The last page, titled "Organic Vegetables," states: "The company has been test growing organic vegetables in Taian and Weifang city of Shandong Province, Northern China." They are running into the 4th year in Taian and 2nd year in Weifang. "As of March 1997, the vegetables could be sold under the following label guided by Japan Ministry of Health and Welfare: 1. Organic vegetables (transition stage). 2. Low pesticide vegetables. 3. Low level chemical fertilizer vegetables. Farming land area: Taian city: 66,000 square meters. Weifang city: 66,000 square meters. Six organic products are currently available, incl. soy bean. The company has two organic certification organizations in China: One each in Beijing and Nanjing. They are applying for certification by "OFDC which is under the supervision of America's OCIA authority, and follows their standards and approval procedure." The inside rear cover states: "Instant freezing for lasting freshness, texture, and flavor."

Headquartered in Hong Kong (Asia Foods (H.K.) Ltd.), the company has three other regional offices: (1) Taiwan: Asia Frozen Food Corp, Kaohsiung, Taiwan. (2) Central and South China: Asia Foods (LongHai) Co., Ltd., LongHai City, Fujian, China. (3) North China: Asia Foods (H.K.) Ltd., Qingdao Rep Office, Qingdao, China.

Note: In May 1995 two inspectors from OCIA (Organic Crop Improvement Association) International (Krista Kennedy and Jodi Snyder of Lincoln, Nebraska) visited the Zhou Chanzhong Beicun Farm at Wanjiawhang, East of Wanguan Rd., Xujialou Township, Taishan District, Taian Municipality, Shandong Province, China. They issued organic certification for seven vegetable crops, including "Young Soybean" for Crop Year 06-10-99–06/10/2000. Member No. 14739. Certificate No. 14739-99. One certificate is written in English, the other in Chinese. Address: Suite 1508 Dominion Centre, No. 43-59 Queens Road East, Hong Kong. Phone: (852) 2865-3216.

10476. Cho, Sungsoo; DeVries, Jonathan W.; Prosky, Leon. 1997. Dietary fiber analysis and applications. Gaithersburg, Maryland: AOAC International. xv + 202 p. Illust. No index. 26 cm. [500+* ref]

• ***Summary:*** Contents: Preface. 1. The definition of dietary fiber. 2. The structure and chemistry of dietary fiber. 3. An overview of dietary fiber analytical methodology. 4. AOAC International approved dietary fiber methods. 5. The physico-chemical properties of dietary fiber. 6. Analytical methods for measuring the physico-chemical properties of dietary fiber. 7. Future needs for analytical methods for dietary fiber. 8. Dietary fiber content of foods.

In Chapter 8, table 8.4, "Dietary fiber data on foods of Japan, contains a section titled "Grain products" (p. 158-59) which gives values for TDF % (total dietary fiber), SDF % (soluble dietary fiber), and ISF % (insoluble dietary fiber) for the following foods: Miso, barley-koji. Miso, rice-koji, dark yellow type. Miso, rice-koji, light yellow type. Miso, rice-koji, sweet type. Miso, soybean-koji. Natto, Hikiwari, fermented soybean. Natto, Itohiki, fermented soybean. Okara. Tofu, Kinugoshi, soybean curd. Tofu, Kori-dofu, soybean curd. Tofu, Momen, soybean curd. Yuba, dried.

The three values for okara are 9.8%, 0.3%, 9.5%. Thus, most of the dietary fiber in okara is insoluble. Address: 1. Kellogg Co., 235 Porter St., Battle Creek, Michigan.

10477. Elovson, Rune. 1997. Algot Holmberg & Söner AB [Algot Holmberg & Sons Inc.]. In: Gösta Olsson, ed. 1997. *Den svenska växtförädlingens historia. Jordbruksväxternas utveckling sedan 1880-talet.* Stockholm: Kungl. Skogs- och lantbruksakad. 320 p. See p. 81-84. Illust. 25 cm. [5 ref. Swe]

• ***Summary:*** This history of plant breeding in Sweden contains a chapter about the work of Sven Holmberg and his father, Algot Holmberg, founder of the company Algot Holmberg & Söner AB.

The seed company Algot Holmberg and Sons at Fiskeby in Norrköping was by far one of Sweden's oldest in its category, and its roots go back as far as 1822 when Per Holmberg established a small country store in Norrköping. Eventually, it was taken over by his son P.J.A. Holmberg. However, it was his grandson Algot Holmberg from which the company got its name who upon his return from studies abroad gave the company its modern direction. From 1891, the company specialized entirely on producing and selling seeds and, in the beginning, the preservation and cultivation of local varieties and stocks from Östergötland and other parts of central Sweden, especially forage roots and leguminous plants. Eventually, the cultivation of potatoes and oil- and protein- yielding plants such as mustard, flax seed, sweet 'lupine' and above all soybeans was incorporated. Fairly soon the breeding of grains was also added.

After the death of Algot Holmberg in 1927 his work was continued by his sons Pehr A. and Sven A. Holmberg and the company's name was changed to Algot Holmberg and Sons Inc. Pehr A. Holmberg was the head of the company while Sven A. Holmberg was responsible for the breeding business.

In 1925 a close cooperation was initiated with the Danish breeding company Pajbjergfonden which would continue to exist for more than 40 years (Seed, 1965). The purpose of the breeding business at Fiskeby was primarily to produce varieties that were satisfactory to central Sweden's demands for gestation and cultivation dependability. The varieties from Pajbjergfonden would then render the business access also to varieties that suited the breeding demands of southern Sweden. The cooperation also meant that crossings performed at Holmberg's or Pajbjergfonden became the subject of choice at both of these breeding stations. At that time, the breeding expert at Pajbjergfonden, Henrik Bogh,

© Copyright Soyinfo Center 2014

periodically stayed at Fiskeby for this purpose.

During a period of time Professor Heribert-Nilsson was linked to the breeding business at Algot Holmberg and Sons, primarily for working with rye.

The demand for increased rationalization and to meet the mounting costs of breeding resulted in the sale of Algot Holmberg and Sons Seed and Breeding Company, including all the breeding material to W. Weibull and Company in 1966 (Weibullsholm, 1970). The buildings with the warehouses at Fiskeby outside of Norrköping, well known to all railroad travelers between Malmö and Stockholm, were sold to Fiskeby Bruk. The breeding of soybeans, however, continued under the administration of Weibull in the same place in localities rented by Fiskeby Bruk until 1984 at which time the lease expired (the warehouses were to be demolished), and the soybean breeding moved to Landskrona.

Breeding Results: In the beginning the greatest success was achieved in the root category and the first result was the 'Göta Turnip' which has its origin in the 'Östgöta Turnip', already grown in gardens for many years. Among other things it had good resistance against club root of cabbages disease. Thereafter, the focus was more on fodder beets and above all fodder sugar beets which were represented primarily by the varieties Svea Barres and Milka, respectively. The focus was especially aimed at raising the proportion of the total solids in the beets.

Of the leguminous plant Götaklöver is worth mentioning. It is a late common purple clover and one of the first bred clover families that has been released in Sweden (commissioned by the agricultural scientist Gösta Eriksson who during one period worked for the Holmberg company). Furthermore, the intermediate common purple clover Monark and the common white clover Milka from Pajbjergfonden were also introduced.

The work with potatoes resulted in a local varieties for Östergötland, Östergyllend which was commonly liked as potatoes for human consumption ("A few words about Algot Holmbergs Seed Breeding").

In the grain category one can largely depend on the varieties from Pajbjergfonden. The primary varieties were the spring barley varieties Kungs and Kron and the oats varieties Rex. The barley varieties were among other things known for their resistance to nematode. Certain success can be shown regarding Holmberg's wheat breeding which among other things was crossed with Finish material with the intention of developing early varieties with good resilience and resistance against spike germination. The spring wheat varieties 'Algot' was approved and incorporated into the Swedish list of varieties in 1969. It was a very early and on the whole a well balanced spring wheat varieties. But it was soon exceeded in yield by newer varieties and therefore never marketed. By and large the wheat material was taken over by and incorporated into Weibulls.

The breeding of soybeans: Since 1939 the operation at Holmberg's in Norrköping has largely consisted of the soybean breeding, and without doubt this operation has made the name Holmberg known, especially internationally. It was Sven Holmberg who initially got the idea of adapting the soybean to the Swedish climate. After having made several attempts with varieties mainly from Canada and Germany with poor results, in 1939-40 he made a journey for sample collections to northern Japan and Sakhalin in Eastern Siberia. These places have a summer climate similar to that of Sweden, and a long tradition of breeding soybeans. The basics for this type of soybeans which was developed by Sven Holmberg (Holmberg, 1946, 1973) consisted of crossings between early, hardy and low growing varieties from these parts, and more higher growing varieties, mainly from Germany (with its origin from Manchuria).

There are primarily three characteristics that distinguish the soybean varieties from Holmberg's breeding and that are entirely essential to the adaptation to the Swedish climate: (1) Adaptation to long-day-climate. (2) Tolerance against low summer temperatures. (3) Early ripening. Three varieties of soybeans from Sven Holmberg's breeding are or have been incorporated into the Swedish list of varieties, Fiskeby V, Bråvalla and Träff. Fiskeby V is the highest yielding and the tallest. It is also the most well known varieties, viewed internationally. Bråvalla and Träff are short and extremely early varieties. They ripen 8 and 12 days, respectively, earlier than Fiskeby V. / In spite of the breeding success, the soybean never attained common cultivation in Sweden, primarily because its yield was low and uncertain in comparison with other crops. Even if the breeding efforts in this respect seemed to have failed, they have probably, on a global scale, attained great value considering the invested resources. The soybean varieties from Fiskeby are well known among soybean growers all over the world, consisting of a source for early gestation and tolerance against low temperatures in breeding programs, wherever these characteristics were needed.

The soybean breeding has now been discontinued and the breeding material is stored at Nodiska Genbanken (The Nordic Gene Bank).

For his achievements in plant breeding, Sven Holmberg was given several awards, among other things A. W. Bergsten's Award and a silver plaque from the Royal Academy of Forestry and Agriculture.

An illustration (portrait) shows: (1) Algot Holmberg (1856-1927), founder of the seed company.

Photos show: (1) Holmberg's Seed Cleaning Establishment and Warehouse next to the railroad tracks in Norrköping, Sweden.

(2) Sven Holmberg, Doctor of Agricultural Science, holding out a bundle of soybean plants. He made significant contributions as breeder of soybeans through producing extremely early varieties. (3) Three soybean plants, shown with a playing card to indicate their size, against a white

10479. Grace, Eric S. 1997. Biotechnology unzipped: Promises and realities. Washington, DC: Joseph Henry Press. 248 p. Illust. Index. 22 cm. [31 ref]

• ***Summary:*** This is a well-written, fair and balanced treatment of a complex and controversial subject. Chapter 1 contains a good history of the development of biotechnology. Contents: Preface. 1. How biotechnology came about: What is biotechnology?, in the beginning, the voyager and the monk (a striking coincidence–Alfred Russel Wallace and Charles Darwin), colored bodies (fruit flies in the lab), let there be DNA, unraveling the double helix, how does DNA store information?, a copy in every cell, what do genes do?, protein primer (examples of proteins, proteins are us, the amino acids, genes, proteins, and your eyes), the genetic code (nature the expert packer), how genes make proteins, daring nucleotide adventures.

2. Tools in the genetic engineering workshop: Why bacteria?, hijackers and molecule snippers, first catch your DNA, making recombinant DNA, putting new genes into cells, gene expression, cloning plants, animals, and cells, monoclonal antibodies, DNA probes, DNA "fingerprinting", polymerase chain reaction.

3. Biotechnology and the body: new parts for old, it's all in the genes, the beginnings of gene therapy, the human genome project, the continuing story of gene therapy, the human genome project, the continuing story of gene therapy, microbes in medicine, medicines from plants, the interferon story, genes and vaccines, nature's magic bullets, designer drugs, a case study: tryptophan, closing thoughts.

4. Biotechnology on the farm: Milking it for all it's worth, let us spray, developing regulations, great expectations, pests and diseases, a versatile bacterium, weather and soil, farmer-ceuticals?, closing thoughts.

5. Biotechnology and the environment: Microbes clean up, microbes as monitors, finding the right microbes for the job, a quick reading, microbes and mines, golden harvest, a new angle to landscaping, fighting chemicals with chemicals, making new fuels, closing thoughts.

6. Biotechnology in seas and trees: An ocean of opportunity, foul is fair, underwater drugs, a cornucopia of chemicals, research and development, fuels from the sea, farming the seas, diseases and pollutions, frozen fish, the forest and the trees, a harvest of wood, building better trees, forests of the future, closing thoughts.

7. Ethical issues: Making opinions, life, patenting people, problems with patents, profiting from the poor, protecting consumers, health dilemmas, gene therapy revisited, pros and cons of gene therapy, Prometheus revisited.

Postscript. Glossary. Further reading. Internet resources. Photo credits & sources.

Biotechnology is the transplanting of genes from one species into another.

Subjects discussed include: Deaths from tryptophan made in Japan by Showa Denko (p. 88-90). Monsanto Co. (p. 97, 102, 107). IPM (Integrated Pest Management, p. 108, 120-21). Dr. John Fagan (molecular biologist at Maharishi University in Iowa and author of the book: *Genetic engineering: the hazards, Vedic engineering: the solutions.* He is opposed to much of biotechnology). Address: Victoria, British Columbia, Canada.

10487. Kittler, Pamela Goyan; Sucher, Kathryn P. 1997. Food and culture in America: a nutrition handbook. Belmont, California: West/Wadsworth. xiv + 535 p. Illust. (photos). Index. 26 cm. [100+* ref]
• ***Summary:*** What is American food anyway? Does it include sushi, soy sauce, miso soup, or tofu? How about Peking duck or pot stickers? How about enchiladas, chile rellenos, or tacos?

This excellent and original work is arranged in chapters by cultural groups or subcultures living in the USA.

The chapter on "Latinos" states under "Foreign influence" (p. 286) that the "demand for Asian ingredients by later immigrants resulted in the introduction of soybean products,..." Under "Regional variations" (p. 290) that Cubans like a chicken dish marinated in lime juice and soy sauce. Under "Meal composition and cycle" (p. 290) that West-African fritters are made from the meal of soybeans..."

The chapter on "Asians," under "Chinese," notes (p. 328-30) that "Soybeans are transformed into an amazing array of food products that are indispensible to Chinese cooking," including soy sauce, soy milk, bean curd or tofu, black beans ("made with cooked fermented soybeans preserved with salt and ginger. Black beans are usually added as a flavoring in dishes"), hoisin sauce, and oyster sauce. Soy oil is also used in Chinese cooking. The Hakkas enjoy tofu stuffed with meat (p. 332). Every Chinese meal aims for a good balance of *fan* (grain foods, such as rice or wheat) and *tsai* (side dishes). "The Chinese believe that a good diet is critical for physical and emotional harmony and necessary to strengthen the body against disease" (p. 334). During pregnancy, soy sauce may be avoided to prevent dark skin (p. 335). Chinese who avoid fresh dairy products because of lactose intolerance, may consume soybean curd and soy milk (if fortified with calcium) as alternatives.

Under "Japanese," soy sauce is a traditional food of Japan (photo, p. 341). Soybean products (p. 350) are an important part of the Japanese diet; they include tofu, shoyu (soy sauce), miso, and teriyaki sauce–to name just a few. Second-generation Japanese use more soy sauce than non-Asians (p. 354) but as their diet becomes Americanized, they fall prey to more diseases of affluence. The response to dairy products and lactose intolerance is similar to that of Chinese, with the use of tofu and soy milk.

Under "Koreans" (p. 363, 366) Soybean products are in important part of the diet; they include soy sauce, soy paste, and soybean curd or tobu [sic, *tubu*] (tofu).

Under "Southeast Asians and Pacific islanders." Adobo is a popular Filipino stew, seasoned with soy sauce (p. 389). Soy products include soy milk and tempeh (p. 399, 402, 404, 421-22).

The "Glossary of ethnic ingredients" mentions many soy products including (p. 490): "Black beans, fermented: Black soybeans salted and fermented to produce a piquant condiment. Used in Chinese cooking as a seasoning or combined with garlic, ginger, rice wine, and other ingredients to make black bean sauce." Address: 1. M.S., Food and nutrition education consultant; 2. • ***Summary:*** Soy-related subjects include (* = recipe): Soy sauce butter* (p. 77). Asian black bean sauce* (with "3 tablespoons preserved black beans" [fermented black soybeans], p. 83). Japanese wasabi soy sauce* (p. 83-84). Ginger soy sauce* (p. 84). Soy and sherry marinade* (p. 85). Description of miso soups and their role in the Japanese diet (p. 107-08). Light-colored miso soup with simmered vegetables and dark-colored miso soup with sautéed vegetables and Mongolian Hot Pot–a miso soup based dish* (p. 108). Ginger soy vinaigrette* (p. 238).

One long chapter is titled "Beans and Tofu" (p. 270-294). Lentils with spinach and soy sauce* (p. 280). The section titled "soybeans" (p. 287) discusses their nutritional value, health benefits ("They contain substances thought to help prevent breast and other cancers, as well as Omega-3 fatty acids, which reduce the risks of heart disease"), how to cook yellow and black soybeans, how to dry-roast [to make soynuts], many ways of processing, soy milk, okara, fermented black beans, soy sauce, tamari, miso, soy cream cheese, soy sour cream, and soy cheese. There are also

© Copyright Soyinfo Center 2014

substantial subsections describing the following soyfoods: (1) Soy milk, including a recipe for making it at home (p. 287-88). (2) Tofu, including silken tofu, cottage tofu, frozen tofu, sauteed or fried tofu, and smoked tofu (p. 288-89). Recipes containing tofu include: Szechuan spiced tofu, Southeast Asian curried vegetable stew, Smoked tofu burgers, and Brown rice tofu salad with orange sesame dressing (p. 289-90; the latter recipe calls for toasted sesame oil and adzuki beans, with smoked tofu being optional). (3) Tempeh, including recipes for Moo shu tempeh and Szechuan-style "hacked" tempeh. (4) About soy protein, describing textured vegetable protein and textured soy concentrate, with recipes for Dinner loaf Tex-Mex style and Lion's head (p. 292). This is followed by a subsection describing seitan and with recipes for Root vegetable and seitan stew, and Seitan kibbe (p. 293-94).

Asparagus with mustard miso* (p. 343-44). Baby bok choi with soy ginger sauce* (p. 349). Steamed scallops or shrimp with soy sauce* (p. 513). Grilled or broiled whole red snapper with ginger soy vinaigrette* (p. 548-49). Small fish, fillets, or steaks poached in soy sauce* (p. 555-56). Chinese soy-braised chicken* (p. 601-02). The chapter titled "Know your ingredients" (1059-87) includes short descriptions of bean sauce, Hoisin sauce, miso, nori, salted and fermented black beans, sesame oil, sesame paste, soy sauce, tamari, tonkatsu sosu (dark spicy sauce based on soy), wakame, wasabi, vinegars from fruit and grains, margarines (mentions trans fatty acids, but not soy), and shortenings (p. 1065-69).

Subjects related to vegetarianism include: Discussion of vegetarian diets (positive and accurate, in Chapter 1, p. 3). List of vegetarian side-dishes and main courses in this edition (27 recipes, p. 20). Vegetarian chili* (p. 283). Dairy-free chocolate cake* (vegan, p. 932). Ultra-orange cake* (vegan, p. 932-33).

Irma Rombauer (the grandmother of Ethan Becker) first wrote the *Joy of Cooking* in 1931, "when domestic help was fast becoming a thing of the past and women all over the country were once again heading to the kitchen."

Note: This cookbook was written by a committee of experts, put together by Maria Guarnaschelli. Many controversies and clashes of opinion arose out of this arrangement. Address: 3. Cockaign, Cincinnati, Ohio.

• ***Summary:*** Contents: Introduction. Production. Emerging vegetable soybean producers. Vegetable soybean and sustainable agriculture. Quality of vegetable soybean. Diversified products from Vegetable soybean. Future research issues.

Vegetable soybeans are specialty soybeans harvested between the R6 and R7 growth stages (Fehr 1971) and used green. Japan has long been and still is the major producer and consumer of vegetable soybean; since 1980 the area planted has remained at about 140,000 ha. The Tohoku and Kanto districts are the major producing areas. The annual demand is about 150,000 tonnes (metric tons). Of this, about 42,000 tonnes (27%) is supplied by Taiwan. During the past 5 years, China, Thailand, the Philippines, and Indonesia have been exploring the potential of vegetable soybeans for export and for the domestic market. The crop is also grown and consumed in Nepal. Address: Asian Vegetable Research and Development Center (AVRDC), P.O. Box 42, Shanhua, Tainan 741, Taiwan, Republic of China.

• ***Summary:*** This elegant color catalog, with striking graphic design and many photos, written entirely in Japanese (except for the cover and the page tabs and headings) describes the company and its products. It was picked up at FoodEx (a major food exposition in Japan) on 12 March 1997 and sent to Soyfoods Center, On the cover is a naked Japanese mother holding a naked baby in her arms to cover her breasts; over one arm is draped a white towel. The subtitle reads (in English): "We create new diet and value through our high-proteins & low-calorie soy processed foods, by positively

© Copyright Soyinfo Center 2014

and steadily pursuing the future of various possibilities."

Contents: What's new–The soybean story. Low calorie & high protein. Production. Distribution. Product branch. Research & development. Challenging spirits. For the next one. A note from the president. Company profile and chronology. Sales from 1987 (27.2–units not given) to 1996 (50.4).

Accompanying this main catalog are the following smaller (but equally elegant) full-color brochures and leaflets: (1) Progressive Tajimaya. 8-panel brochure. Shows color photos of all the company's soy products in packages on 4 pages: Agé (22 types). Tofu (22 types, including those fortified with vitamin E, beta-carotene, or yuzu, plus organic tofu, nigari tofu, grilled tofu, Hiya-yakko tofu). Okara (*unohana*). Tachikawa tofu (plain or with green tea added, in the form of noodles; The word "Tachikawa" is composed of two characters meaning waterfall + river). Tofurich.

(2) Frozen Tofu (4-page brochure). Includes color photos of the inside of the company's factory, and prepared tofu dishes. (3) Single-sided color leaflets, each with a large color photo and the following titles: Frozen momen. Frozen yaki-tofu (Grilled tofu). Tachikawa-dofu. Tezukuri-age. Warabi mochi-fu tofu shokuhin. Tofu pudding. Tofu bread. Address: Ikejiri 7-139, Itami-shi, Hyogo prefecture, Japan. Phone: (0727)-77-3939.

10497. Vavilov, Nicolay Ivanovich. 1997. Five continents. Translated from the Russian by Doris Löve. Rome, Italy: International Plant Genetic Resources Inst. xliii + 198 p. Illust. No index. 24 cm. [10 ref. Eng]

• ***Summary:*** This book, about the life and work of N.I. Vavilov (1887-1943), was published long after his death as a political prisoner. Unfortunately, the book has no index. The excellent introductory chapter titled "The Russian scientist Nicolay Vavilov," by Seymon Reznik and Yuri Vavilov (p. xvii-xxix) is a frank biography, including details of his conflict with arch-enemy Trofim Lysenko, his fall into disgrace by 1935, his arrest by the KGB on 7 Aug. 1940, and his death in prison in 1943.

In "The basic principle behind the expeditions" (p. 1-4) Vavilov notes that the seven basic geographical centers of origin, which cover only about 7% of the world's land area, are: (1) The tropical centre, in tropical India, IndoChina, and southern China. (2) The East Asiatic Centre, includes the central and western parts of China, Korea, Japan. and the major portion of Taiwan. (3) The Southwest Asiatic Centre. (4) The Mediterranean Centre, along the coast of the Mediterranean. (5) The Abyssinian Centre. (6) The Central American Centre, and (7) The Andean Centre. Maps show Vavilov's travels in each center. These centers were first outlined in his book *Centres of Origin of Cultivated Plants* (1926, Leningrad).

In the chapter titled "Expedition to Japan" (p. 58-61) he expresses his surprise at "the endless variety of plant types" including the "various preparations of soya beans and 'adzuki' beans (*Vigna angularis* [Willd. Ohwi & H. Obashi])." "There is perhaps no other country where the love of trees and flowers is so strongly expressed as in Japan. The care of flowers and plants has become a national characteristic of this country." "There is not a single weed in the fields or in vegetable gardens." In Japan he found "a multitude of dishes made of soyabeans (substituting for fat and including a cheese called 'tofu,' a soya product)..." He was impressed by the work of Ekiken Kaihara [Kaibara; 1630-1714]. A philosopher, man of letters, physician, geographer, historian, agronomist and naturalist, he wrote 270 volumes on 60 different themes, including a 5-volume work on garden plants and a 3-volume work on vegetable plants. In 1638 two gardens of pharmaceutical plants were established in Edo (Tokyo) and in 1720 another one in Komada.

In the chapter titled "Expedition in Korea" (p. 69-71) he again mentioned soyabeans and 'adzuki beans,' and noted: "Dozens of different foods are made from soyabeans, including the special cheese, tofu. Sprouts of soyabeans are rich in vitamins and are available in large amounts in all markets in Japan. Soya is used for seasoning meat and rice and of course, it produces an excellent oil, used for making margarine and for technical purposes. Although it is a crop exceptionally well suited to a monsoon climate, the soyabean has become the most important technical crop worldwide during the last couple of decades. Owing to the effect of European and American demands an enormous area has become planted to soyabeans. During the past two decades the plantations of soya in Manchuria have reached 7 million hectares and the world-wide area has exceeded 15 million hectares. It is difficult to imagine a more flexible plant in respect of the variation of both biological and other characteristics. The varieties of soyabeans can be counted by the thousands. The present American industry has introduced even more variety."

In Seoul, Vavilov unexpectedly met two colleagues, P.H. Dorsett and William Morse, known to him from Washington, DC. "Dr. Morse is the co-author of a well-known monograph on soyabeans, written by him and Dr. Charles Piper, another plant introducer from Vancouver, Canada. Morse was fanatically devoted to soyabeans throughout his life. In the course of some years, Piper studied in China, Korea, Manchuria and Japan on behalf of the U.S. Department of Agriculture, investigating crops of soyabeans, collecting seed material and forwarding it to the USA." Also discusses the agricultural explorations of Frank Meyer and Mark Carleton. Swingle "organized an extensive utilization of Chinese research, including the building up of a valuable library of Chinese literature and a whole staff of translators, who revealed the treasures of ancient Chinese agronomical science. The results of this endeavour have become obvious during the past couple of years. The similarity between the

© Copyright Soyinfo Center 2014

conditions of extensive parts of the territories of the USA and China make possible a wide utilization of soyabean crops, which during the last couple of years have amounted to as much as 1.5 million hectares."

"Quietly and modestly, Morse, who traveled with his family, wife and daughter, went from one city to another while staying in the best hotels."

Note: Soyfoods Center has a copy of the "Translator's Foreword" (p. xxx-xxxvi) which was typeset but later deleted from the book. Only the last two paragraphs were used. It tells the real story of Vavilov's work, his downfall at the hands of Trofim Denisovich Lysenko, several moving petitions by Vavilov asking that he be able to finish writing unfinished books, and details of his case history and death. Address: Head, All-Union Inst. of Plant Industry (VIR), Russian SSR.

10498. Kristof, Nicholas D. 1998. A lure for athletes and pilgrims: Nagano City, host of the Olympic Winter Games, is home to one of Japan's greatest temples. *New York Times.* Jan. 4. p. TR13.
• ***Summary:*** "Americans sometimes are put off by Japanese foods such as natto, fermented soy beans, or basashi, raw horsemeat, but it is difficult to find someone who does not like soba" [buckwheat noodles].

10499. Mukherjee, Anjali; Singh, Kanaka. 1998. Add years to your life–starting 1998. *Times of India* (*The*) (*Bombay*). Jan. 8. p. A4.
• ***Summary:*** Studies show that vegetarians are healthier and live longer than meat eaters; they have lower blood pressure and cholesterol levels, plus lower rates of heart attacks and cancer.

Eat more foods made from soybeans. That may be why the Japanese outlive the Americans. The soybean contains an arsenal of antidisease agents such as antioxidants, lecithin, phenols, genistein and phytates. Genistein has anti-cancer activity. "Soya foods boost the 'good' cholesterol and improve the HDL / LDL ratio." Soya foods and soya milk are also good sources of calcium. To derive the full benefit of soyabeans, it is best to eat "soya foods" every day. To incorporate them into your daily diet: (1) When making chappatis [chapatis], mix wheat flour with soya flour in a 2:1 proportion. This will ensure a steady intake of soya. (2) Use tofu in place of paneer whenever possible. Tofu has more antioxidant punch than casein, the protein in milk. Animal studies have shown that those fed soyabeans had a life span 10-15% longer than those fed casein. (3) Used roasted soyabeans [soynuts] as a tasty snack food. (4) Use textured soya protein products like Nutrinuggets or Nutrella, which come in granule or chunk form, together with mushrooms or green peas to vegetarian chilies or vegetable pulao

pilaf. (5) Whole dry soybeans can be cooked like other pulses to make rajhma / rajma [a north Indian vegetarian dish consisting of red kidney beans in a thick curry and lots of Indian whole spices] or channa / chana masala; serve with rice or chappatis [chapatis].

10500. Kikkoman International Inc. 1998. Talk about a signature sauce! The true taste of soy sauce (Ad). *Nation's Restaurant News* 32(3):47. Jan. 19.
• ***Summary:*** This full-page color ad, targeted at restaurateurs, shows the words "Kikkoman Soy Sauce" on a fish fillet. The text reads: "Don't use just any soy sauce. Start with Kikkoman. Because among leading brands, only Kikkoman is naturally brewed and aged for full flavor. *Your* flavor. Whether that fish dish is Asian or fresh from the American mainstream. Catch our latest recipe ideas. Call 1-800-944-0600."

"The true taste of soy sauce" is a registered trademark, printed in white letters on a red background.

10501. Early soyfoods in Japan–Chronological (SoyaScan database search report). 1998. 36 p. incl. index. Jan. 23. Unpublished manuscript. [20 ref]
• ***Summary:*** This carefully customized database search was conducted for Mark Messina to document the fact that soyfoods have been widely consumed for a long time in Japan. Among the 47 records are the earliest Japanese-language and English-language documents that mention or discuss soyfoods in Japan, with emphasis on tofu (27 records), soy sauce (26 records), miso (20 records), and soymilk (8 records). Also includes the earliest English-language records that give significant industry or market statistics on tofu, miso, or soy sauce in Japan.

10502. Schillinger, John A. 1998. History of Asgrow Seed Co. and of his work with the company: 1994 to present (Interview). *SoyaScan Notes.* Jan. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1994 Upjohn decided to sell Asgrow Seed Company to Empresas La Moderna (ELM), a multi-national agricultural company based out of Monterey, Mexico.

In 1995 the fault-line between the vegetable and agronomic sides of Asgrow, which had been growing ever wider since 1968, finally split, as ELM divided Asgrow into two separate divisions. The vegetable division, which was still larger in terms of total sales than the agronomic division, was merged with Petoseed and Ball Seed in 1995 to form Seminis Vegetable Seeds (still owned by ELM). The agronomic division of Asgrow was sold to Monsanto, the deal being finalized on 3 Feb. 1997.

Question: A recent survey conducted by Doane Marketing Service contains a ranking of U.S. soybean seed companies by quantity of seed sold (not value/dollars) The top two companies are: (1) Pioneer Hi-Bred, which has a little over 19% of the total market share, and (2) Asgrow (not including Hartz), which has just under 12% of the

© Copyright Soyinfo Center 2014

total market share. Do these figures seem accurate and fair? Schillinger: Hartz is a part of Asgrow, with offices in the same building in Des Moines, Iowa. If Hartz's numbers were included, Asgrow's total would be significantly higher. These figures also do not include seed saved by the farmer (saveseed), and Asgrow's surveys show that farmers save more Asgrow soybean seed than any other variety. So if saveseed was included, Asgrow's total would be even larger. There is a big difference between planted acres and newly purchased seed. If you look at planted acres, Asgrow has about 19.4% of the total. While this may still be somewhat less than Pioneer's total, the gap is smaller.

During the last 3 years, Asgrow's sales have skyrocketed. In the year just passed (calendar year 1997), Asgrow sold almost four times as many Roundup Ready soybean seeds as the previous year. Before January 1, 1998, Asgrow had already sold all of its soybean seed for the coming 1998 crop year. John thinks that this year, Asgrow's volume of sold-seed will exceed Pioneer's for the first time.

Question: Do you believe that profitably will be the main determinant of what type or variety of soybeans farmers plant in the future? Schillinger: Yes. Question: Do you have figures showing that Asgrow's Roundup Ready soybeans are more profitable to farmers now than non-Roundup Ready soybeans? Schillinger: Yes, we do have data and our researchers and our sales staff could provide it. There are two sets of data. When Roundup Ready soybeans are planted using our system with Roundup herbicide, there is a definite profit advantage to the Roundup Ready soybeans. But if you treat the Roundup Ready soybean as if it were an ordinary soybeans, the advantage is not nearly as great–but it is still there. Our research shows that there is long-term stunting of soybean plants from other popular herbicides such as Pursuit, but none from Roundup. When you spray soybean plants, even during stressful times, there is no effect on the plant growth and development. If our Roundup Ready soybeans were not the most profitable, why are farmers buying them faster than we can supply them? "Our biggest challenge right now is to tell our customers that we are very sorry we did not have enough supply for them. The orders came in so fast that we sold and oversold, particularly in areas like Illinois and Indiana. It was embarrassing. So were are instituting programs like going back to the farmers and saying 'You order right now what you want for next year, and we'll guarantee delivery.' The market clearly seems to be saying that there is a very high regard for Asgrow's Roundup Ready soybeans.

"Asgrow has an advantage and a lead because we were the first company to get the gene that protects soybeans from Roundup herbicide. That's because we worked with Monsanto in a collaborative project. In 1989-90 we were first able to shoot Roundup gene into our soybean variety 5403; in 1991 we began testing and growing out. So we were able to use a different protocol from other companies that did not get this gene until 2 or 3 years later. We just went through the normal variety development process. We didn't backcross into old varieties that would be outdated by the time they went to market. Rather, we proceeded with what we call 'forward crossing' which is crossing into other elite material and then selecting for yield and performance. Our first commercial soybean seed product containing the Roundup gene was on the market in 1996.

Question: In food uses, Roundup Ready soybeans contain no consumer health benefits. Some consumers are reluctant to consume these soybeans in foods. What is the main obstacle that needs to be overcome before these soybeans will be accepted. Schillinger: "I think we need to develop a strong message, based on science, that consumers and advocate groups can understand. We have to develop an education and communication system that will reveal the truth of what these product have and don't have. We need to answer questions about possible threats to humans as well as to the environment. I have four grandchildren that I love dearly. People ask me, 'Would you feed your grandchildren these soybeans?' I have no qualms at all; I would not hesitate to do that. I've eaten them since 1991. But still we have to communicate. I think that Greenpeace and others have communicated through psychological warfare some misunderstandings that are going to be difficult to overcome. But that's one of the key things we need to do. One consumer benefit is that we can produce soybeans cheaper. Our company supplies a major share of the tofu soybeans for Japan–roughly a million bushels a year to Japan just for making tofu. We grow the identity preserved soybeans containing the Roundup gene under contract, then clean them and sell them to Japan–not to farms but directly into the food system.

Roundup Ready soybeans have already played a major role in protecting the environment by enabling farmers to move to conservation tillage practices. These soybeans plus Roundup give them the tools they have needed to produce soybeans with a lot of crop residue on their land; this holds the soil and water, leads to less runoff. Roundup is probably the safest herbicide, because as soon as it hits the soil, it breaks down (decomposes) instantly into some very safe and naturally occurring compounds; it doesn't even get into the soil. "You could even drink it and it wouldn't hurt you. I wouldn't recommend it, but you can." The plant (weed) enzyme which the product binds to is not even present in any humans or animals.

Two years ago, Asgrow started to introduce consumer nutritional / health benefits into Roundup Ready soybeans–such high oleic acid. These soybeans should be on the market in 4-5 years. Address: Co-President, Asgrow Seed Co., 4140 114th St., Des Moines, Iowa 50322. Phone: 515-331-7111.

10503. Ota, Eileen. 1998. Update on Ota Family Tofu in Portland, Oregon (Interview). *SoyaScan Notes.* Jan. 28.

© Copyright Soyinfo Center 2014

Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ota Family Tofu has tofu making equipment that Eileen would like to sell; it has hardly been used. In about 1981 the company moved to a new location, 812 S.E. Stark St.; it had more than twice as many square feet as their previous location. When they moved Ko went to a soy conference and met Eddie Okita, who was selling tofu manufacturing equipment. Ko decided to buy new equipment. Eileen objected at the time, suggesting that he try it before he buys it–to be sure you get the product that you want. Ko said "No." He just wanted to buy it. Coincidentally, at the same time, a competitor (Dae Han Tofu) began making tofu in Portland. Before that, there was a small tofu maker in Salem that didn't last very long. Dae Han was planning to deliver their tofu, which Ota had never had to do before. So Ota lost a large portion of the Portland tofu market to Dae Han.

Ko used the new equipment for a while, but then it became apparent that the tofu and the agé were not coming out the same. He had less control over the more automated equipment. Their customers noticed the difference and did not like the change. Moreover, Ota no longer had the volume to support the new equipment. So they went back to their old machines.

One of the early tofu-makers was Saizo Ohta (not Seizo), but he was not one of the founders. Two brothers apparently started the company. At the time of the "Spanish flu" epidemic in 1918-19, one or both of them became ill and the business went to Saizo Ota, Matsuno Ota's father. Matsuno was an only child, and in those days there was the tradition of sending Japanese children in America back to Japan for education. So when she was 4-5 years old she went to Japan. She did not return to America until after World War II. During the war her father, Saizo, had died. Matsuno returned to the USA in the early 1950s. The Grandmother, Shina, had a stroke after they arrived in Portland. At that point, in about 1956-57, Ko's father (Matsuno's husband) took over the tofu business. Ko's father was trained as a medical technician in Japan, but he couldn't get a job in the USA because his certification didn't transfer. So he worked for a while as a janitor and then spent a lot of time helping the grandmother, Shina.

After Ota Tofu moved to its present location, there was a huge influx of Vietnamese people who wanted soymilk, so the company started making it.

Shurtleff tells Eileen of an early listing for Ota Tofu in Portland in a 1922 Japanese-language directory of Japanese in the United States.

10504. Smith, Sieglinda. 1998. Looking for the Ota family in the Polk's Portland city directories (Interview). *SoyaScan Notes.* Jan. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the 1915 city directory she finds: Ota Roy, student in dentistry and pharmacology. Also an Ohta F baths at 86½ 5th St. North. In 1916 the student appears again. In 1917 there is Ohta E restaurant at 67 6th North 6th North (which is today's 217 NW 6th St., between Davis and Everett on 6th). Also in 1917 there is "Ota Saijo (Shina) lndy [laundry] 266 Davis." In the 1918 city directory she finds: Ota E restaurant, 67 6th St. North. She called the city archives, but they have only a 6 year retention rate for business licenses. Then she called the Business Bureau which had a record for the Ota Family Tofu Co., founded in 1972. However in 1971 the city directory had Ota Soybean Cake Co. at the same address where they are now, on Stark.

The addresses in Portland changed in 1930. For example Ota baths at 86½ 5th North, which is now 322 NW 5th.

In the book *Issei,* by Kazuo Ito (1973) is an undated business map of oldtown Portland, 1915-1941. Below the map is handwritten: "90 Japanese business, 1935." On that Map Ohta Manufacturing appears on 5th between Everett and Flanders–which is where the family places it.

Siegfried just noticed that the name is spelled Ohta and she has been checking in the Polk's city directories under Ota. So she looks again: Nothing for Ohta in 1918. In the 1935 city directory there is an Oha Saizo baker wholesale 322 NW 5th Ave. Address: Reference Librarian, Oregon History Center, 1200 SW Park Ave., Portland, Oregon. Phone: 503-306-5240.

10505. Chen, Hua-Ming; Muramoto, K.; Yamauchi, F.; Fujimoto, K.; Nokihara, K. 1998. Antioxidative properties of histidine-containing peptides designed from peptide fragments found in the digests of a soybean protein. *J. of Agricultural and Food Chemistry* 46(1):49-53. Jan. [16 ref]
• ***Summary:*** Many hydrolyzed proteins have been shown to have antioxidative activities against the peroxidation of lipids or fatty acids. This paper is about the properties of 2 synthetic peptides containing histidine, which were designed on the basis of an antioxidative peptide derived from the proteolytic digests of a soybean protein. Address: 1-4. Dep. of Applied Biological Chemistry, Faculty of Agriculture, Tohoku Univ., Sendai 981, Japan; 5. Shimadzu Scientific Research Inc., Tokyo 101, Japan.

10506. Godfrey-June, Jean. 1998. Soy is unbelievably, fabulously healthy. *Elle* (*New York City*) 13(5):108. Jan.
• ***Summary:*** *Elle* is a woman's magazine. This short article begins: "Women who eat lots of it appear to be less likely to get breast cancer; it may also protect against heart disease."

"The actual food–the soybean–was unearthed by an *Elle* operative at an otherwise nondescript Japanese restaurant. It turns out that boiled, lightly salted soybeans are available at many Japanese restaurants, but are rarely on the menu. Fabulously called 'edamame' (they sound as if they'll be brought to the table by a jazz legend), they taste like fava beans and are addictive in much the way sunflower seeds are:

© Copyright Soyinfo Center 2014

You suck the beans out of the pods."

A color photo shows green vegetable soybeans in the pods. Address: Beauty Editor, Elle magazine.

10507. Kluis, Alan. 1998. Currency woes threaten ag exports: Devaluations have hurt some of our best customers. *Soybean Digest.* Jan. p. 108-09.
• ***Summary:*** The USA now grows about 50% of the world's soybeans. One graph shows the world's top soybean producing nations and states (in hundred million bushels): USA (280), Brazil (110), Argentina (55), Iowa (50), Illinois (40), Minnesota (28). A second graph shows U.S. soybean exports by country (in million bushels): Japan (145), Netherlands (125), Mexico (122), Taiwan (75), China (68), Brazil (62), Korea (55), Spain (55), and Germany (43). Address: President, NorthStar Commodity Investment Co.

10508. Lehnert, Dick. 1998. Specialty soybean varieties bring premiums for a price: Markets for food-grade varieties are growing. *Soybean Digest.* Jan. p. 64-65, 68.
• ***Summary:*** About 120,000 tons of specialty soybeans are now shipped from the USA to Japan each year–about 10% of the food-grade soybeans the Japanese buy. The soybeans must always be kept separate–"identity preserved." Growers typically get more dollars per bushel, but sometimes get fewer bushels per acre. The soybeans are made into foods such as tofu, tempeh, natto, or miso.

Kim Nill, deputy director for international marketing at the American Soybean Association, keeps tabs on the growing opportunities for specialty soybeans. He says seed companies are finding niche markets for food-grade soybeans.

Last year, DuPont introduced a variety that produces oil high in oleic acid (naturally lower in saturated fats and more heat stable without hydrogenation). DuPont is now working on a low stachyose bean. Pioneer Hi-Bred International grew 7,000 acres of low-linolenic oil beans for a market similar to that of high-oleic acid beans.

A photo shows a combine harvesting specialty soybeans that will be made into tofu.

10509. Morinaga Nutritional Foods, Inc. 1998. Mori-Nu Tofu and the dinner bell (Tear-off recipe pad). 2050 W. 190th St., Suite 110, Torrance, California 90504.
• ***Summary:*** This color tear-off recipe pad (6½ by 4 inches), developed by Susan Bucher of Bucher & Russell in Los Angeles, were introduced in Jan. 1998. On the front is a color photo of three green peppers stuffed with tofu and vegetables, in a tomato sauce in a tureen–which is surrounded by uncut vegetables. In the background is a pack of Mori-Nu Firm Tofu. On a diagonal yellow band (snipe) in the lower right corner is written in black: "Delicious vegetarian recipe on back".

On the back is a recipe for Stuffed Cajun Bells, plus a nutritional analysis, facts about Mori-NU Tofu, and an offer for additional free recipes. Address: Torrance, California. Phone: 1-800-669-8638.

10510. Frey, Jennifer. 1998. Temple opens 1,400 years of tradition to visitors: Winter Olympics–Nagano 1998. *Washington Post.* Feb. 4. p. C4.
• ***Summary:*** Zenkoji, a 1,400-year old wooden Buddhist temple, is the cultural center of Nagano. "Today is 'Setsubun' in Japan, an annual festival that marks what the Japanese consider the eve of the first day of spring. The Buddhist monks and priests–as well as Japanese dignitaries–toss toasted soybeans at the crowd in a ritual that is supposed to drive away evil and usher in a year of good luck." A small photo shows Zenkoji, designated a Japanese national treasure.

10511. Jones, Jacob. 1998. Thoughts on seed and plant introduction (Interview). *SoyaScan Notes.* Feb. 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The archival records of the Bureau of Plant Industry (Record Group 54) are now located at the second National Archives building in College Park, Maryland; they were moved there recently from the National Archives main building in Washington, DC.

During the late 1800s and early 1900s, when plant explorers scoured the globe for new or valuable species, it is quite remarkable that they were generally given whatever they asked for. One of Russia's biggest crops was durum wheat, used to make pasta. Yet Russia gave away these precious varieties to American explorers, enabling America to eventually pass Russia as the world leader in hard wheats.

Why were the Manchurians and Japanese so willing to give Dorsett and Morse all the soybeans they asked for? Were they short-sighted? Were they not afraid that the Americans would take over their soybean export business? In fact, they sometimes asked Dorsett and Morse about this. They key is to remember that at that time in the USA soybeans were grown largely as a forage crop–not for their seeds. It was not until 1941 that the acreage of soybeans harvested for beans (seeds; 5.889 million acres) surpassed the total of that harvested for hay (forage; 3.546 million acres) or grazed or plowed under (for green manure; 1.910 million acres). Moreover, since the Americans were not collecting germplasm in their own colonies, they cannot fairly be accused of imperialistic plant collecting. Nor were they involved in germplasm theft, since they were given what they requested.

The Division of Foreign Seed and Plant Introduction sent out something like fifty plant exploration expeditions, but they did not start keeping official trip reports until fairly late in the process. Jacob is not sure why. Maybe a politician demanded to know how the taxpayers' funds were being spent. Or maybe it took a long time for leaders of the

© Copyright Soyinfo Center 2014

Division to fully understand the importance of what they were doing and the need to document it fully.

David Fairchild continued to be a student of Barbour Lathrop's throughout their relationship. At the Fairchild archives in Miami, Florida, Jacob found several pocket notebooks that Fairchild kept for 60 years. One whole notebook is filled with detailed instructions that he wrote for himself, based on Lathrop's teachings, of how he should act under different circumstances in various countries around the world. For example: If you (Fairchild) are with a South American gentleman who is superior to you in age and rank, you should stand up, bow slightly when he is ready to leave, pick up his gloves and cane, present them graciously to him,... etc. Address: Graduate student, Purdue Univ., P.O. Box 132, Lafayette, Indiana. Phone: 765-742-8530.

10512. Marking, Syl. 1998. The checkoff-supported new-uses pay off begins: First products hit the market. *Soybean Digest.* Mid-Feb. p. 10-11.

• ***Summary:*** The United Soybean Board (USB) has set a goal to have 300 million bushels of soybeans incorporated into new-uses products by 2005. USB is presently funding/supporting a total of 48 research and commercialization projects.

Oct. 1997–The first product to hit the market was soy-based wood adhesives used to glue finger-jointed lumber at Willamina Lumber Co. in Oregon. This high-quality jointed lumber is then exported to Japan.

1997 Nov.–CytoSol, a proprietary formula based on soy methyl esters, dissolves crude oil or petroleum products from sand, rocks, and plant life on shorelines. Earlier in 1997 the CytoSol process was approved by EPA as an oilspill cleanup material for shoreline uses. In June the state of California issues a license for its use. In early November the West Coast Regional Response Team approved use of the CytoCulture bioremediation process to clean up a small oil spill in Humboldt Bay, northern California.

Also in 1997, concrete form release oil, used to prevent concrete from sticking to construction forms, saw its first commercial use. Color photos show: (1) Two pieces of finger-jointed lumber being glued. (2) A wooden floor, apparently glued with soy-based adhesive.

10513. Messina, Mark. 1998. Estrogen, phytoestrogens and cognitive function: November 1-2, 1998, Four Seasons Olympic Seattle–Council Room, Seattle, Washington (Portfolio). Seattle, Washington: United Soybean Board. Four inserts.

• ***Summary:*** The four documents enclosed in this portfolio (which has no cover) are: (1) Conference program, including reception on Sunday evening, breakfast on Monday morning, opening remarks and introductions, seven papers, plus discussion and research recommendations. For each paper is given: Title, author, author's address, and presentation time (2 pages). (2) Contact information: Speakers and attendees (1 p. 12 people). (3) Speaker biographies (3 p.) (4) Speaker abstracts (5 p.).

The following seven papers were presented: Soybean phytoestrogens: An overview of health effects, by Mark Messina. Estrogen replacement therapy and cognition, by Madeline Murguia Rice. Estrogen, tofu consumption, and cognitive change in older Japanese American women: the kame project, by Madeline Murguia Rice. Tofu consumption and brain atrophy, by Lon White. Phytoestrogens in brain: analytical and cognitive studies, by Timothy J. Maher. Of rats and monkeys, the cognitive effects of soy phytoestrogens, by Jay R. Kaplan. Modulation of Alzheimer's disease markers by dietary soy phytoestrogens, by Helen Kim.

The key paper in this symposium, and the one which caused it to be convened, was by Lon White and colleagues. In the speaker abstracts it appears as follows: "Brain aging and midlife tofu consumption, by Lon White, Helen Petrovich, G. Webster Ross, Kamal Masaki, John Hardman, Daron Davis, James Nelson, and William Marksberv. In a population-based study of aging Japanese men in Hawaii, midlife tofu consumption was associated with cognitive impairment assessed two decades later, and with low brain weight at autopsy. An increasing prevalence of cognitive impairment with increasing tofu intake was consistently observed in each age stratum. An increased prevalence of low brain weight with greater midlife tofu intake was apparent in men both below and above mean body mass index. The associations remained statistically significant in multivariant regression models after controlling for internal skull diameter, age at death, midlife blood pressure, and midlife tofu intake. The findings may reflect long-standing sub-optimal plasticity and accelerated brain aging due to repeated exposure during midlife to soy isoflavone phytoestrogens, and to lower levels of endogenous estrogen generated in adipose tissue in leaner men. This interpretation implies that estrogen-dependent plasticity mechanisms may ameliorate the erosive effects of aging in men as well as in women."

Lon White has MD and MPH degrees. His biography reads: "Lon White completed his medical education at the University of Washington in 1963, his pediatric residency at the University of Washington affiliated hospitals in 1969, and his MPH in epidemiology at the Johns Hopkins University School of Hygiene and Public Health in 1980. From 1964 to 1997 he served in the United States Public Health Service as a researcher with the National Institutes of Health, initially at the National Institute for Child Health and Human Development, later at the National Institute for Neurological Diseases, and, since 1981, at the National Institute of Aging. Prior to 1981 he conducted virologic, immunologic, and biochemical research related to persistent virus infections in animals and man, and to neurological diseases of uncertain cause (as Guamanian P-D and ALS) in the

© Copyright Soyinfo Center 2014

laboratory of G. Carleton Gajdusek, NINCDS. At the NIA he initiated a series of epidemiological studies of cognitive functioning and dementia, including the East Boston study, the Framingham dementia study, and the Honolulu-Asia Aging Study (HAAS). He designed and served as the on site Scientific Director of the HAAS from its beginning in 1991 until his retirement from federal service in August, 1998. He is currently a member of the faculties of the Schools of Medicine and Nursing at the University of Hawaii, research consultant to the Honolulu, VA [Veterans Administration], and the Senior Neuroepidemiologist for both the HAAS and the allied Neurotoxins and Neurodegenerative Disorders Project, based at the Pacific Health Research Institute in Honolulu. His current research is focused on brain aging and the pathogenesis of Alzheimer's disease, vascular dementia, Parkinsonism, cerebrovascular disease, and aging-related cerebral atrophy."

10514. Morinaga Nutritional Foods, Inc. 1998. Celebrity tofu (Ad). *Vegetarian Times.* Feb. p. 51.
• ***Summary:*** This full-page color ad shows a package of Mori-Nu Firm Lite Tofu next to a round white bowl of Australian-Pumpkin Soup and a square glass bowl of creamy Asparagus Bisque, surrounded by squash, pumpkins and asparagus.

At the bottom of this ad, the reader is invited to order: *"The Art of Tofu,* by Akasha Richmond. She is "the Health Food Chef to the Stars." The book is filled with delicious vegetarian gourmet recipes from around the world. "Every recipe is made with Mori-Nu Tofu, the prefect tofu in the perfect package."

This ad also appeared in the Feb. (p. 51), March (p. 29) and April (p. 49) issues of this magazine.

Note: On page 50 (the left hand page facing this page) is a 1/3 page ad for *The Art of Tofu,* by Akasha Richmond. Containing 50 gourmet recipes, it is on sale at $9.95 for *Vegetarian Times* readers. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504.

10515. Nagata, Chisato; Takatsuka, N.; Kurisu, Y.; Shimizu, H. 1998. Decreased serum total cholesterol concentration is associated with high intake of soy products in Japanese men and women. *J. of Nutrition* 128(2):209-13. Feb. [24 ref] Address: Dep. of Public Health, Gifu Univ. School of Medicine, Gifu 500, Japan.

10516. Yasuda, Masaaki; Sakaguchi, Maki. 1998. Degradation of soybean protein by an acid protease from *Monascus anka:* Note. *Food Science and Technology International* (*Tokyo*) 4(1):6-8. Feb. [12 ref. Eng]
• ***Summary:*** The role of the enzyme in the process of ripening tofuyo was investigated. "It was found that the digestion of soybean protein progressed as follows: initially, α'-, α-, and beta-subunits in beta-conglycin, and then, the acidic subunit in glycinin were degraded. However, the basic subunit of glycinin still remained, and some polypeptic bands (around 10 kDa [kilodaltons, a unit of molecular weight]) were formed during the enzyme reaction." The concentration of ethyl alcohol in the reaction mixtures affected the degradation rate of soybean protein by this enzyme. Address: Dep. of Bioscience and Biotechnology, Univ. of the Ryukyus, 1, Senbaru, Nishihara-cho, Okinawa 903-0213, Japan.

10517. Kikkoman International Inc. 1998. Asian noodles are surfacing everywhere (Ad). *Nation's Restaurant News.* March 2. p. 29.
• ***Summary:*** This full-page color ad, targeted at restaurateurs, shows a bowl of noodle soup. "They're profitable, they're different, and they're surprisingly easy to add to the menu. All it takes is a few good recipes and one essential seasoning: Kikkoman Soy Sauce. Some soy sauces are harsh and overpowering. But Kikkoman is naturally brewed and aged for full flavor, so it complements and balances all kinds of noodles from Pad Thai to Pasta Primavera and anything in between. For 21 unexpected recipes call 1-800-944-0600."

"The true taste of soy sauce" is a registered trademark, printed in white letters on a red background.

10518. *Los Angeles Times.* 1998. Obituaries: Herman Aihara–Pioneer in macrobiotic health programs. March 6. *
• ***Summary:*** Herman Aihara died on 25 Feb. 1998.

10519. Gonzalez-Watanabe, Yvonne; Watanabe, Joji. 1998. Update on introducing tofu to Hispanics in the Los Angeles area (Interview). *SoyaScan Notes.* Feb. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This summer the Little Tokyo Service Center will be organizing their third annual tofu festival in Los Angeles. Yvonne and Joji have reserved a double booth, where they will give away samples of food made with tofu, give lectures once an hour in Spanish on the nutritional benefits of tofu, and conduct cooking classes in Spanish at a demo area. Yvonne will talk in English and José will translate into Spanish. They have put together a pamphlet of tofu recipes including a coupon. They have gotten to know Pat Greenberg, who is on a festival committee.

Presently Yvonne is conducting tofu workshops (*tofu tajellar*), like cooking classes in Spanish at a community recreating center in Pasadena; only Spanish-speaking people attend, and they generally want to learn Asian-style (rather than traditional Hispanic) recipes. About 90% of the participants are women–of all ages, from 20 to 80. They come for health reasons–high blood pressure, elevated cholesterol levels, or overweight. An average class has about 12 people (range 4 to 30 people). Yvonne teaches them how to make tofu at home from whole soybeans, uses that tofu to prepare a number of Hispanic recipes, then gives them

© Copyright Soyinfo Center 2014

basic nutritional information. Miyuki, who is their contact at House Foods America Corp., plans to attend their next class. Yvonne greatly enjoys her work, but she needs some income and is planning to approach House Foods to ask for sponsorship of her workshops. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

10520. Kikkoman International Inc. 1998. Want to build a better burger? The true taste of soy sauce (Ad). *Nation's Restaurant News.* April 27. p. 48.

10521. Muramatsu, Kanako; Yamawake, Norio; Kiuchi, Kan. 1998. *Bacillus subtilis* (*natto*) KFP 419 ni yoru erasutaaze no seisan [Production of elastase by *Bacillus subtilis* (*natto*) KFP 419]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 45(8):494-98. [24 ref. Jap; eng]
• ***Summary:*** "Production of elastase by *Bacillus subtilis* (*natto*) KFP 419 was investigated to obtain enough enzyme for studying on physiological functionality of itohiki-natto... The maximum elastase activity was obtained at pH 7.0 after 24 hour fermentation" (from journal@rchive). Address: Kyoritsu Women's Univ., 2-2-1 Hitotsubashi, Chiyoda-ku, Tokyo 101, Japan.

10522. *Ontario Soybean Growers' Marketing Board Newsletter.* 1998. Profiles: Ikuo Fujimori, President of Takeya Miso Company Limited in Nagano, Japan. April. p. 7.
• ***Summary:*** In Feb. 1998, at the Nagano Winter Olympics, the Nagano Miso Cooperative Association fed miso soup to over 2,000 athletes and 1 million visitors from all over the world.

"Mr. Fujimori is President of the Takeya Miso Company Limited, located in Nagano, Japan. He is also the Chairman of the Nagano Miso Manufacturers Association and Vice Chairman of the Japan Miso Manufacturers Association. Takeya Miso is a family business with a long and rich heritage. The Fujimori family has been making miso commercially since 1872... Presently Takeya Miso employs over 100 people in two plants, producing over 50 different miso products."

"His company has been purchasing Ontario soybeans for over 23 years." A photo shows Ikuo Fujimori and Tom Lassaline examining some Takeya miso products. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

10523. Soyfoods Association of America. 1998. Soyfoods once a day for life! (Special advertising section). *Vegetarian Times.* April. 12-page color insert after p. 58.
• ***Summary:*** Contains large color ads by Nasoya (tofu and TofuMate), Morningstar Farms (Chik Nuggets), Eden Foods (organic black soy beans) Vitasoy (creamy original natural soy drink), Westbrae (Westsoy soymilks), Westbrae (Vigoraid nutritional drink), Sno Pac (frozen Sweet Beans–organic green vegetable soybeans), and GeniSoy (soy protein bars). On the rear cover are additional small ads (each with a logo) for Lightlife Foods, Lisanatti, Monsanto, Soyco Foods–Div. of Galaxy Foods Co., Soyfoods Association of North America, and United Soybean Board.

Interspersed with the ads is advertorial text and "Soy facts." The text on page 1 begins: "Miracle food. Health insurance in a pod. Nutritional powerhouse. The bean supreme. Nutritionists, physicians, researchers, chefs, and food experts of all kinds are raving about the healthfulness and great taste of soyfoods, and it's no wonder; soy truly is a nutritional and culinary gift from nature.

"Soyfoods are delicious, convenient, and versatile. At breakfast, soy can make an appearance in the form of soymilk, scrambled tofu 'eggs,' or soy 'sausages.' A soy shake or veggie burger makes a great lunch. Try a tempeh stir-fry, or perhaps a creamy tofu dessert.

"So dig in... with the huge variety of soyfoods available at your local natural foods store, it's easy to get your daily intake of soy, and reap the many benefits of the bean supreme."

The inner contents: Food as medicine. Heart health. Fighting cancer. Menopause? What menopause? Strawberry smoothie. Protein punch.

Soy cooking tips (p. 4): Easy ways to incorporate soy into your baking: Use soy flour in your baking. Be aware that soy flour contains no gluten, and therefore yeast breads will not rise without the addition of some gluten-containing flour. About ¼ cup of soy flour per cup of unbleached white flour is recommended for breads, pastas, and pastries. In place of olive oil, try adding a few ounces of Nasoya Silken Tofu and a dash of lemon juice to mashed potatoes. Try mashing miso into your root vegetables in place of butter. When adding miso to dishes, add roughly 1 tablespoon per four servings. Add GeniSoy Natural Vanilla Soy Powder to your baked goods such as muffins or pancakes. Buy Eden Organic Soybeans in a can and use them the same way you would any other canned bean: over rice, with pasta, in stir-frys, etc.

It's not only what you eat; its also what you don't eat. Making healthy eating taste great. Soy fact: soybeans were traditionally considered one of five sacred crops in China.

No time to cook? Try these quick ways of getting soy in your diet.

Strong bones... a matter of calcium retention. Miso.

Soy fact: there is no word for "hot flash" in Japan. Soy beverage.

Miraculous tofu. So soy convenient. Soy fact: Western culture discovered tempeh through the Dutch colonization of Indonesia. Soy fact: tofu was unknown to most people in the United States until Chinese immigrants came to this country in the 1800's. Tofu.

Tempeh. By the handful. Soy fact: miso was developed in China about 2,500 years ago. Where to find it. Address:

Washington, DC.

10524. Gonzalez-Watanabe, Yvonne. 1998. Introducing tofu and soymilk to Costa Rica. Update on soyfoods work in the Los Angeles area (Interview). *SoyaScan Notes.* May 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Yvonne just returned from a month (March 29 to April 24) in her native country of Costa Rica, where she was teaching about and studying tofu and soymilk. She gave 8 classes in people's homes, where she taught them how to make and use soymilk and tofu; about 30-40 people attended, and about half the people attended more than one class. During these classes she developed a recipe for tofu seviché (pronounced say-VEE-chay), which is traditionally made with marinated raw fish but occasionally with green plantain or avocadoes substituted for the fish. Yvonne used tofu in place of the fish, and it was a big hit.

Vegetarianism is now quite popular in San Jose, the capital of Costa Rica, but it goes under the name of macrobiotics. There are a number of "macrobiotic" restaurants in the capital; all serve only vegetarian food.

When Yvonne tried to interview the one existing Chinese-run tofu company, they were very uncooperative. It seemed like they might be going out of business because tofu is now being made on a small scale in many other places. Yohan, the big chain of Japanese-run food stores, now makes fresh tofu each day in the store. Many small Chinese food markets and restaurants also make their own tofu. Kikkoman Tofu, sold in aseptic packages, is fairly widely available.

Yvonne's booth and tofu recipe brochure for the LA Tofu Festival are progressing nicely. Margaret Endo has found advertisers for the booklet, which will enable Yvonne to expand its size. She has also found a Costa Rican celebrity to be the host at her booth–Lily Melgar, a well-known actress and friend of her cousin. Yvonne went to Lily's home and prepared her favorite tofu recipes, which Lily liked very much.

Update: Talk with Yvonne. 1998. July 8. The Southern California Gas Co. will be sponsoring Yvonne's booth at the LA Tofu Fair–which is now set for Saturday and Sunday, August 15-16. They will pay for all the bands, the music, and a Spanish-language flyer–largely because they are interested in reaching the Hispanic population in the Los Angeles area. Yvonne has been meeting a large number of people who are interested in tofu–some of them local celebrities. One Puerto Rican lady who is a musician, goes by the name "La India." Ricky Martin from Mexico is a pop music star. Yvonne has cooked Hispanic vegan tofu recipes for both of them.

Update: Talk with Yvonne. 1998 Dec. 10. She is now the guest chef on a TV show in Los Angeles (KCET–Channel 52) twice a month teaching cooking–vegetarian and soyfoods. She receives no pay for this, but it is very interesting and good exposure. Address: 6029 LaPrada St., Los Angeles, California 90042. Phone: 213-254-1712.

10525. Cohen, Misha Ruth. 1998. Tofu as seen by traditional Chinese medicine (Interview). *SoyaScan Notes.* May 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** From the viewpoint of traditional Chinese medicine (TCM), tofu is a *yin* food with three main healing properties: It is a cooling food, it moistens dry conditions (increases fluids), and it is a *yin* tonic. To say that tofu is simply a *yin* food (as some followers of macrobiotics do) is an oversimplification in the view of TCM. A *yin* food such as tofu is good/healing for some people but not good for others, depending on the person's constitution and particular health condition or problems.

Yin is more the water element, as opposed to yang which is more the fire element. A yin tonic increases the yin effect on or aspects of the body–including coolness and fluid; likewise, a ch'i tonic increases the amount of energy in the body. A person might need a yin tonic if they had dryness, hot flashes, and night sweats or afternoon sweats. TCM uses yin (and tofu) to treat perimenopausal symptoms.

A healthy body has yin and yang in balance. At this point it is important to distinguish four states of yin/yang imbalance: Yin deficiency, yang excess, yang deficiency, and yin excess. The latter condition (yin excess) is rare, except in dampness, as manifested by a "slippery pulse" and too much fluid in the body. A person (such as one with liver fire) could have a large yang excess plus some yin deficiency, which in TCM is called "yin deficient–yang excess." Such a person might have dry skin and the tip of their tongue might be red. Tofu would be a good food for this person to eat.

Seen from the Western viewpoint, tofu contains phytoestrogens. That means it is a "yin tonic" because estrogens are yin substances, which create the female (yin) character. As people get older, they gradually lose all of their hormones. As a yin tonic, tofu is good for older people, both men and women.

Concerning heating and cooling foods: If a woman comes to Misha with menopausal symptoms, such as hot flashes and night sweats, she would first look at her digestion. People who have very poor digestion find it hard to eat tofu–because it is too cooling. Americans typically have "cold digestion"–which is not true of most Japanese. Children usually have hot digestion, and their diarrhea is "hot diarrhea." Older people are generally constipated–they have yin deficiency; they don't tend to get loose stools. People who have loose stools and cold stomach conditions should not, generally, eat plain tofu. As Paul Pitchford says: "Its yin cooling quality needs to be altered by thorough cooking; adding warming spices such as ginger is particularly helpful for "cold persons." A person can have heat in many areas of the body (such as the spleen or liver) and still have a cold center and cold digestion. So the cooling properties of tofu can be changed by heating it. "I see a lot of women who are eating a lot of tofu and other soyfoods, and

© Copyright Soyinfo Center 2014

they are having problems with their digestion, including a lot of gas. So I tell them how to cook it, with ginger or garlic or things that are more warming, and all of a sudden they can enjoy the tofu without the digestive problems. But if a person is very hot and has good digestion, they can make a tofu shake." Note that in Japan and Hawaii, chilled tofu is very popular during the summer–when the weather is quite warm (*yang*). So a practitioner of TCM must look at many things (tongue, pulse, environment, etc.) before recommending a specific food and method of preparing it.

Question: The concept of heating and cooling foods goes back to the T'ang dynasty in China (A.D. 618-906) and is widely understood by typical people throughout Asia. Do you think that this must be explainable in terms of Western biochemistry and medicine, or is it possible that this is a concept that Western science has overlooked? Most post-menopausal women in the USA and Europe who have hot flashes and night sweats never think about using a cooling food (such as tofu, watermelon, wild chrysanthemum tea, or cucumbers) to help relieve the problem.

Answer: Misha is not sure, but she does think that if perimenopausal women were aware of and consumed cooling foods and yin tonics in an intelligent way, it could save them much suffering. These foods are described in Misha's book titled *The Chinese Way to Healing: Many Paths to Wholeness* (1996, Berkeley Publishing Group/ Perigee). Visiting an acupuncturist is a good way to deal with difficult menopausal problems (such as hot flashes and night sweats); the combination of acupuncture, herbs, and dietary recommendations often give surprisingly quick results. Hot flashes are usually a combination of yin deficiency and yang excess, but Misha has seen many kinds; some are more liver-heat hot flashes and others are more yin-deficient hot flashes. But tofu is one food that is almost always good for hot flashes because it tonifies yin, is cooling, and increases fluids. Historically, the Chinese have been extremely good at dealing with gynecological problems; women's health a major part of Chinese medicine. Address: O.M.D. (Doctor of Oriental Medicine), LAc, Chicken Soup Chinese Medicine, San Francisco. Phone: 415-861-1101.

10526. Messina, Mark J.; Messina, Virginia. 1998. Does consumption of soy increase or decrease a woman's risk of breast cancer (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Mark: In the area of possible adverse effects of soy (especially soy isoflavones), Mark's greatest concern is with soy and breast cancer. "It still bothers me tremendously." There have been 3-4 animal studies in which soybeans or isoflavones have been fed to animals and then they have been given a breast carcinogen. In none of these studies have scientists found an increase in the number of tumors or in the incidence of breast cancer. Several of the studies show "modest protective effects" from soy. So this is good news. The epidemiologic studies are not that supportive of the hypothesis that soy reduces the risk of breast cancer, but none of them have suggested that soy increases breast cancer risk. There were one or two studies showing that fried tofu increased risk of breast cancer, but that nonfried tofu did not. So within an individual study, one soyfood might pop up as being problematic. "But overall, you would not look at those kinds of studies and conclude that soy is risk factor for breast cancer." The fact that Japanese women have about one-fourth the incidence and mortality of breast cancer compared with American women is worth noting. Several basic facts about soy must be kept in mind. (1) It is clearly estrogenic, containing phytoestrogens. (2) When you add genistein to cancer cells that are estrogen receptor positive, it will stimulate their growth over the typical physiologic concentration, but at higher levels it will inhibit their growth. In the range at which it stimulates growth, this is probably due to an estrogenic effect, but at the higher range, genistein is probably inhibiting one of the enzymes that cause the cancer sells to stop growing. At least ten scientific papers have raised the question of what is happening with these isoflavones, and they sound a little cautionary note. The criticism of these studies, where a little genistein is added to cells growing in a petri dish, is that there is absolutely no estrogen in the medium, and that even in post-menopausal women estrogen is present. So some people would say the petri dish does not represent a physiologic condition–you need to add some estrogen. Mark has heard that a researcher in Minnesota has added estrogen to the medium and she still gets a 20% increase in breast cancer cell growth. So genistein may still be an estrogen in that situation. One animal study showed that if you implant estrogen receptor positive cancer cells into rats who don't have ovaries, then you give them a significant amount of genistein, it will stimulate the growth of those cancer cells (tumors). But one criticism of this design is that there is very little estrogen in these rats and fairly high doses of genistein were used.

It is the three human studies (two of which have been published) which are troubling, and cannot be ignored. One is "Stimulatory Influence of Soy Protein," by Nicholas Petrakis at UCSF (1996) in *Cancer Epidemiology, Biomarkers, and Prevention* (5:785). A second is an abstract from the 1997 Brussels symposium by McMichael Phillips. Third, McMichael Phillips told Mark about a study in England that was 4 months in duration. They looked at nipple aspirate fluid and also got an increase in estrogen-regulated gene products. Mark has not seen the actual study and it is a long way from being published. These studies are troubling not because they are scary, but because they do not make sense. Malcolm Pike, from UCLA, a leading endocrinologist, said after studying McMichael Phillips' actual paper (not the abstract), that his must be a short-term effect, because that kind of stimulus would cause an increase in breast cancer, as (for example) in the Japanese population.

© Copyright Soyinfo Center 2014

Given that the other epidemiology does not suggest that soy increases risk, and given that the animal studies don't either, and given that the Japanese have a low breast cancer mortality rate, there is probably something else that could explain this phenomenon. Again, it could be a short-term effect that is actually preventive in the long run. But if it was a short-term effect, it still might be possible that soy should not be given to a person who already had estrogen-receptor positive cancer. So Mark is very reluctant to think that soy could increase risk of breast cancer risk; for one thing, it is very hard to identify any kind of food that increases or decreases breast cancer risk. And it is so unlikely that such a food would be soy, because there is very little supporting evidence. Nevertheless, Mark has about 25 scientific studies at the end of which the authors have expressed a cautionary note. The latter range from "Wow! These soy isoflavones are stimulatory; we've got to find out what is going on here," to "It's clear that we need to understand more about the estrogenic / antiestrogenic effects of these compounds before we recommend them to the public."

Mark does not differentiate between soyfoods such as tofu and isoflavone pills in terms of toxicity. He asks: "Would anyone use the above studies to recommend that people stop consuming tofu? No! When you look at the data collectively, it's hard to conclude that soy would increase the risk of breast cancer–especially for normal women. On the other hand, if it weren't for the low breast cancer mortality rate in Japan, and we just had the animal studies and the individual case control studies (neither of which show that soy increases breast cancer risk) plus the human studies, there would be more of a movement to look into this." When Nick Petrakis' study was published, it didn't get much attention; Mark thinks there is a built-in bias to assume that soy is either beneficial or (at the worst) has no effect. It will be interesting to see what the response will be when McMichael Phillips' paper is published as a full paper as part of the proceedings of the Brussels symposium (in Sept. in a supplement to the *American J. of Clinical Nutrition*). It is quite powerful; they actually took biopsies and found an increase in DNA synthesis.

Virginia: Ginny is well aware of the research showing possible adverse effects of soy (especially soy isoflavones) on breast cancer. She definitely thinks about this in planning her diet–in part because she has a fairly high risk for breast cancer; she has had two biopsies. "This is uppermost in my mind almost every day." Ginny wasn't eating a lot of soy products before this new research was published (she probably ate them 3-4 times a week), so she has not reduced her consumption based on the new information. Because of the concern with soy and breast cancer, Ginny would not eat soy products 2 or 3 times a day. "I certainly still eat soy products and I do not feel that I need to avoid them."

Ginny eats soyfoods because she is a vegetarian, because she likes them, they are easy to include in the diet, and they are generally good, healthy foods. Ginny has never calculated how may milligrams of isoflavones she is consuming per day. "I'm really into food, into good, healthy, whole food, with lots of fruits and vegetables, and whole grains. I don't think about things like isoflavones, vitamin C. I just figure I eat a really good diet." Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

10527. Messina, Mark J. 1998. Soy phytoestrogens–Update (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The hottest area of current estrogen research is "selective estrogen receptor modulators" (SERMs). A selective estrogen can have an estrogenic effect on one site in the body and an antiestrogenic effect on another site. One key question is: Are isoflavones selective?

It has been known for several years that soy isoflavones inhibit angiogenesis. But this raises many interesting questions. Do they therefore inhibit nose bleeding? Josh Korzenik at Yale Univ. School of Medicine [in Connecticut] is conducting a study on patients who have a hereditary disease that causes their noses to bleed. They have a genetic defect which causes abnormal blood vessels to form. In this ongoing unpublished study, results to date on about 8 patients show that about 40-50% of those who take soy isoflavones experience a reduction in their nosebleeds. He found some benefit on gastrointestinal bleeding and a major benefit on migraine headaches. This confirms the finding that in petri dishes, genistein also inhibits blood vessel growth.

Do these isoflavones affect fertility? Mark thinks that fertility has more to do with ovulation. How about slowing wound healing? The key point seems to be that if soy isoflavones are potent enough to exert beneficial effects, why aren't they potent enough to exert adverse effects? For example, they may slow wound healing, but only by a few days. But if they chronically prevent angiogenesis in tumors, that would be an acceptable trade-off.

Many people who cite Japanese intake of isoflavones do not realize that the average Japanese level of isoflavone intake (about 30 mg/day) is far below the level needed to get benefits. The daily intake to get benefits in the area of bone health and reduced osteoporosis seems to be about 90 mg/day.

Concerning the exciting studies involving Raloxifene and prevention of osteoporosis and cancer announced this week: Mark uses Raloxifene in his demonstrations because it is antiestrogenic for the breast, and doesn't cause estrogenic effects on the endometrial tissue. But Raloxifene may cause "hot flashes" or make them worse, and it is probably not as effective for reducing risk of heart disease as estrogen is. "But that is an extremely beneficial trade-off; you can work on heart disease in many different ways, and weak bones are much more difficult to fix. As you know, I am a strong

© Copyright Soyinfo Center 2014

believer in the importance of food, nutrition, and prevention, but I think our greater understanding of molecular biochemistry and what on goes at the cellular level, and our ability to design drugs to specifically get estrogenic effects in some tissues and antiestrogenic effects in other ones–I think all that research is incredibly promising. They are using the isoflavones as a model and then designing better drugs from them, maximizing benefits and decreasing disadvantages." Mark believes that soy isoflavones will not be as potent as estrogen for bone health or heart disease–but the beauty of isoflavones is that there has never been any concern whatsoever about their safety. That is why it is so critically important to figure out some of the unexplained findings concerning soy and breast cancer. In addition, we must do the studies to see if soy isoflavones promote cognitive function (or delay impairment of it)–like estrogen probably does. If they do not, they won't be nearly as popular–because that is going to be such a big issue with an aging population.

Will people who raise concerns about adverse effects of soy isoflavones be invited to speak at the Third International Symposium? Mark thinks they will definitely be invited to participate, in part because he has chosen a large advisory board. However they may end up doing a poster session rather than a major speech–unless their data look extremely important. The politics of soy and isoflavones is still real and pervasive.

As an almost comic example of this, Mark heard of a man who is an M.D. and PhD in nutrition who was holding a small meeting about soy. He had been studying soy for 2 weeks. When Mark called him and asked if he could attend the meeting, the man yelled at him on the phone (quite arrogantly) for 10 minutes. He objected to some statements that Mark had made on possible adverse effects of soy. Mark said he would be happy to discuss the subject. The man said Mark could come to the meeting if he promised not to bring up that subject. Apparently he wants to make a name for himself in the field of soy. Address: PhD, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

10528. Gotoh, T.; Yamada, K.; Yin, H.; Ito, A.; Kataoka, T.; Dohi, K. 1998. Chemoprevention of N-nitroso N-methylurea-induced rat mammary carcinogenesis by miso and tamoxifen, alone and in combination. *Japanese J. of Cancer Research* (*Gann*) 89(5):487-95. May. *
• ***Summary:*** Diets containing either 10% soybeans or 10% miso reduced mammary tumor numbers (tumors/rat) by roughly 50%, although there was little effect on tumor incidence (percentage of rats in each treatment group developing tumors).

The combination of miso and tamoxifen strongly inhibited tumor development–more than either agent alone. Moreover, when treatment was delayed until mammary tumors were already established, the combination of miso and tamoxifen inhibited tumor growth by about 50%, whereas tamoxifen by itself was ineffective. Miso by itself was not studied.

10529. Sugawara, Etsuko; Yonekura, Yuichi. 1998. Comparison of aroma components in five types of miso. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 45(5):323-29. [13 ref. Jap]*
• ***Summary:*** The compositions of aroma components were compared in three types of rice miso, red salty rice miso (*sekishoku karakuchikei komemiso*), thin-colored salty rice miso (*tanshoku karakuchikei komemiso*), and weak-salty rice miso (*komeamamiso*) which were produced from soybeans and rice, barley miso (*mugimiso*) produced from soybeans and barley, and soybean miso (*mamemiso*) produced from soybeans only. Address: 1. Faculty of Education, Iwate Univ.; 2. Iwate Industrial Research Inst. Both: Iwate prefecture, Japan.

10530. *Rafu Shimpo* (*Los Angeles, California*). 1998. TV host Huell Howser named Tofu Festival celebrity chair. June 30. [Eng]
• ***Summary:*** The L.A. Tofu Festival will kick off the 58th annual Nisei Week celebration. "No longer just an Asian mainstay, tofu is fast becoming a cross-cultural 'super' food, packed with antioxidants, protein and calcium. Made of soybean curd, tofu is finding it's way into enchiladas, chocolate cheesecakes and *ceviche / seviche*–some of which will be offered at the weekend festival." A photo shows Huell Howser enjoying a tofu dish at Jozu restaurant.

10531. Anderson, Barb Baylor. 1998. A new-uses promotion of Olympic proportions: ASA project targets restaurants throughout Japan. *Soybean Digest.* May/June. p. 12.
• ***Summary:*** "Biodiesel is produced from the oil after being used in french fry vats or tempura shops. This can be used to power buses and trucks, generate electricity, and run heating and air conditioning units."

During the Winter Olympics in Nagano, a KFC [Kentucky Fried Chicken] franchise in Olympic Village was used by the American Soybean Association's Japan director Kent Nelson to launch "ECO 2000," a project to promote the idea of using biodiesel to generate electricity to run heating and air conditioning units at the KFC store and other locations. The goal is "to have at least one new corn or soy-based product in use at more than 2,000 restaurants in Japan by the year 2000."

10532. **Product Name:** [Momen Tofu (Nigari), Okara, Oboro Tofu, Atsuagé (Deep Fried), Yaki Dofu (Grilled), Fresh Yuba].
Foreign Name: Momen Tofu (Nigari), Okara, Oboro-dofu, Atsuagé, Yaki Dofu, Fresh Yuba.
Manufacturer's Name: Awayuki.

© Copyright Soyinfo Center 2014

Manufacturer's Address: Boerhaaveplein 2hs, 1091 AS Amsterdam, Netherlands. Phone: +31 (20) 468-5617.
Date of Introduction: 1998 June.
Nutrition: Tofu; SS-VA; USA; CSP; FibeOkIgûTofu; SS-VA; USA; CSP; FibeOkIg
New Product–Documentation: Letter from Mitsuo and Atsuko Kamada. 1998. Jan. 16. They plan to start a tofu shop making Japanese style momen tofu, yose-dofu, yaki-dofu, and atsuage. Present address: Gerrit van der Veenstraat 145/4, 1077 DZ Amsterdam. Company name: Awayuki–Japans Tofu en Delicatessen Produceren.

Letter from and form filled out by Mitsuo and Atsuko, husband and wife, founders and partners in Awayuki. 1999. Jan. 20. On 1 Jan. 1998 in Amsterdam they established a production and wholesale company named Awayuki. They began tofu production in June 1998. Their production is completely Japanese traditional style like Sangen-ya and uses nigari from Yoshikawa for curding. Equipment: Japanese stone mill, stainless steel cauldron 60 cm in diameter with gas cooking stove, Japanese hand press machine, and a deep forming box. They bought some equipment and special tools from Japan. All their products are now made from organic soybeans, which they buy from a Dutch company. Two books by Shurtleff & Aoyagi (*The Book of Tofu,* and *Tofu & Soymilk Production*) were very helpful to them. Everything they know they learned from these books, because now in Japan it is difficult to find traditional tofu production. They now make the following amounts of the following soy products: Nigari momen tofu, started June 1998, about 2,500 packs/month (each pack weighs 370 gm). Atsuagé (Deep Fried), started Sept. 1998, about 300 packs/month. Yaki Dofu (Grilled), started Nov. 1998, about 100 packs/month. Fresh Yuba, started Nov. 1998, by special order only. A letter to Akiko in Japanese says that her many detailed illustrations in the above books were very helpful. Everyone in Amsterdam says their tofu is the tastiest available.

Photos sent by Mitsuo and Atsuko. 1999. April 5. Eleven color photos show how they make traditional tofu in their shop in Amsterdam.

10533. Chajuss, Daniel. 1998. Soy protein concentrate: Current status. *Oils & Fats International* 14(3):35-36. June.
• ***Summary:*** The three main commercial soy products are (1) Full fat and defatted soya flours and textured soya flour–current world production and sales about 80,000 tonnes (metric tons). (2) Soya protein isolates–current world production and sales about 130,000 tonnes. (3) Soya protein concentrates–current world production and sales about 284,000 tonnes, and growing at about 15% a year. More than 75% of all concentrates are now used for human consumption, the rest being used in pet and animal feeds. In human foods, concentrates are used mainly in meat alternatives or extenders. In animal feed they are used in formulations for calves and piglets as a milk replacer, in pet foods and in special feedstuffs such as 'fish-flavour-free' bland fish seeds, and for mink and other animal feeds. Concentrates are devoid of the antigenic protein components present in most other soya products.

Production of soy protein concentrates worldwide is presently concentrated in the hands of two companies: ADM and Eridania Béghin-Say (Central Soya). About 95% of all soy protein concentrates worldwide are now made by the counter-current aqueous alcohol was system, originally developed in the late 1950s by the Hayes Company of Israel. A table shows estimates of world production (in metric tons) by company and country in 1998:

ADM, Netherlands 70,000 AAW (Aqueous alcohol wash).
ADM, USA 60,000 AAW.
Central Soya, USA (several factories) 60,000 AAW.
Central Soya, Aarhus, Denmark 50,000 AAW.
Sogip (Central Soya group), France 15,000 AAW.
Solbar Hatzor (formerly named Hayes Ashdod) (with Soya Mainz, an ADM subsidiary), Israel 15,000 AAW.
Sopropech, France 6,000 AWL (Acid/water leach).
Sanbra (Bunge), Brazil 5,000 Acid wash.
ADM, USA 3,000 Acid wash.
Lucas Ingredients, UK 2,000 (unconfirmed, Acid wash).
Total worldwide 284,000 metric tons.

The margins on soy protein concentrates are much more attractive than those from crushing soybeans into oil and meal–which in recent years have been either small or negative. The cost of making a tonne of concentrates ranges from US$459 to $600. For food applications, the sales price obtained by manufacturers for powder and small grits forms ranges from $1,200 to $1,600 per tonne, but for textured or functional forms this increases to $1,500 to $3,000 per tonne. The sales price for the pet food, milk replacer, and special feed industries ranges from $1,000 to $1,200.

Another high-value product, a potential source of additional income, is soya molasses, a by-product of making soy protein concentrates. It is a rich source of soya phytochemicals and soya oligosaccharides.

A second table shows estimates of world production (in metric tons) of soy protein isolates, with estimates for 1997 and forecasts for 1998.

Protein Technologies International (PTI, USA) 60,000 in 1997, 70,000 in 1998.
ADM, USA 15,000, 25,000.
PTI Belgium 15,000, 15,000.
Fuji-PTI Japan 10,000, 10,000.
Sanbra (Bunge) Brazil 5,000, 10,000.
Others worldwide 6,000, 8,000. Total worldwide 110,000, 138,000. Address: Managing Director, Hayes General Technology Co. Ltd., Misgav Dov 19, Mobile Post, Emek Sorek, 76867 Israel. Phone: +972-8-8592925.

10534. Dateline. 1998. Healthline: The joy of soy. Television

© Copyright Soyinfo Center 2014

broadcast. NBC. June 9.
• ***Summary:*** The announcer from Studio 3B in New York is Stone Phillips. He has four guests: Chief medical correspondent Dr. Bob Arnot, Bob McKeown, Keith Morrison, and chief consumer correspondent Lea Thompson. Mr. Phillips begins: "Most Americans don't know beans about soy, but that may soon change. The humble soybean is sprouting into the hottest new health food trend since oat bran, and for good reason. Scientists are learning that soy may help lower the risk of an amazing range of diseases."

Mr. Arnot then asks John Glaspy: "Which of these diseases could soy play a very positive preventive role? Heart disease?" Answer: Probably. Osteoporosis? Almost certainly. Menopause? Almost certainly. Breast cancer? Almost certainly.

Mr. Glaspy is most interested in breast cancer. He says that changing the way Americans eat could stop this killer. He believes that diet "could be a huge risk factor and could explain up to... 80 percent of breast cancer in the world."

Arnot adds that the first hint that soy may be a dietary factor begins in Japan. "Japanese women have one of the lowest breast cancer rates on earth. But when they move to Hawaii, leaving behind their native diet, their risk doubles. Doctors think the difference is soy."

Arnot says that "Debbie McCurdy is betting her future on soy. Diagnosed with breast cancer 2½ years ago, she has gone through surgery, chemotherapy, a bone marrow transplant and radiation. Now she's part of Dr. Glaspy's study to see if soy can protect her from a recurrence."

"Here's how doctors think soy works. In order for a breast cell to turn cancerous, it needs to be fed by strong hormones, like estroGen. But soy has what are called 'weak estrogens' that float through the blood and attach themselves to breast cells. That means, the strong, potentially harmful hormones have no place to attach to, and no way to turn a normal cell into a cancer cell."

"For the study, Debbie drank soy shakes three times a day and doctors took tissue samples to look for changes that might indicate the soy is working, but Debbie's not waiting for the results. Her family's menu has changed for good. They now eat lots of fruits and vegetables, as well as soy beans, miso soup, even tofu added to chili. And they seem to like it!"

10535. Japan Tariff Assoc. 1998. Exports of soy sauce (shoyu): No. 2103.10-000. *Japan Exports and Imports: Commodity by Country.* June. No. 618. p. 83. [Eng; jap]
• ***Summary:*** For each country, gives the quantity and value for the current month, and for the cumulative year to date. Address: 4-7-8, Kohji-machi, Chiyoda-ku, Tokyo 102-0083, Japan. Phone: 81-3-3263-7221.

10536. Japan Tariff Assoc. 1998. Exports of miso (bean paste): No. 2103.90-000. *Japan Exports and Imports: Commodity by Country.* June. No. 618. p. 83. [Eng; jap]
• ***Summary:*** For each country, gives the quantity and value for the current month, and for the cumulative year to date. Countries to which Japan exports large quantities of miso are (year to date in kg): USA 1,127,052. Taiwan 168,941. Hong Kong 156,221. South Korea 104,743. Total exported this year: 2,235,149 kg. 10537. Kikkoman Corporation. 1998. Annual report 1997. 339 Noda, Noda-shi, Chiba 278, Japan. 26 p. 28 cm. [Eng]
• ***Summary:*** The information in this English-language annual report is current as of April 1998. Contents: Financial highlights. Profile. A message from the president (Yuzaburo Mogi): The year in review, foundation, growth, and opportunity, serving a global market, toward the new century. A strong global operating presence: The Americas, Europe, Asia and Oceania, Japan. Operational review. Financial review. Financial section: Consolidated balance sheets, etc. Corporate history (chronology from April 1925 to October 1997). Global network (directory of Kikkoman names, addresses, and phone numbers worldwide). Board of directors and officers. Corporate data.

During fiscal 1997, ended 31 December 1997, consolidated net sales worldwide rose 4.0% over the previous fiscal year to 214.3 billion yen, breaking the record of 211.7 billion yen set in 1992. Yet income decreased by 21.6% to 5.711 billion yen.

Overseas sales expanded 10.6% in 1997 to 60.1 billion yen, and accounted for 28.0% of consolidated net sales.

The Americas: "In June 1998, Kikkoman Foods, Inc., the centerpiece of Kikkoman's expansion in North America, will celebrate 25 years of operations. The number of items produced at the plant has risen to more than 100, and the plant's production has expanded more than 10-fold."

"On April 17, 1998, Kikkoman commenced operations at its second U.S. plant, in Folsom, California. Built at a cost of US $46 million, the plant covers an area of approximately 210,000 square meters and has an initial annual production capacity of 10,000 kiloliters of soy sauce. In autumn 1998, the Company will begin delivering soy sauce produced at its second U.S. plant, in Folsom, California."

"Kikkoman's English-language Internet home page, opened in April 1997, receives approximately 100,000 hits a month, mainly from people in the United States. In particular, the recipes listed on the home page have attracted a great deal of interest, with site visitors frequently requesting further recipe information."

Europe: In Oct. 1997 Kikkoman Foods Europe B.V. began operation of its plant in the Netherlands.

Letter from Keiji Yamazaki of Kikkoman, San Francisco. 1998. Aug. 7. Kikkoman's annual reports are published in mid-June each year. Address: Noda, Japan.

10538. Shimbo-Beitchman, Hiroko. 1998. Magical miso. *Saveur* (*New York, NY*) No. 27. May/June. p. 100-08, 110, 112.

• ***Summary:*** A beautiful article, loaded with glossy color photographs (by Christopher Hirsheimer and Tom Wagner) and recipes. Photos show: (1) Shiromiso in a stylish bowl. (2) A Japanese worker, in clothing with traditional designs, stands on the rim of a miso vat and shovels what will become miso at Yamaki Jôzô, a miso brewery built in 1902 by the Kitani family, in Kamiizumi-mura, Honjô city, Saitama prefecture, 75 miles northwest of Tokyo, Japan (full page). *Yama* means "mountain, *ki* stands for Kitani, and *jôzô* means "brewery. Kazuhiko Morita is the brewery's director. The company has been making three basic types of miso, plus shoyu and tofu, since 1902. Yamaki partially automated in the mid-1980s and today makes about 400 tons of a miso a year; it is not pasteurized and no alcohol is added in packaging as a preservative. (3) Looking down into a bowl of miso soup with tofu and wakame (full page). (4) The exterior of Yamaki Jôzô; a tree bearing bright orange persimmons stands in front of several traditional wooden buildings. (4) Hiroko Shimbo-Beitchman. (5) Mr. Morita, in traditional clothing, smelling the koji in a large, automated, stainless-steel koji incubation room. (6) The man shoveling the finished koji out of the incubation room onto a conveyor belt. (7) Eggplant Dengaku (with red and white miso, full page). (8) Walnuts being ground to a paste in a suribachi. (9) Steaming the soybeans at Yamaki Jôzô; 5,300 pounds of whole soybeans are steamed at a time. The company has two giant steel pressure cookers. For akamiso, the beans are cooked for about 7 hours until soft and yellow. (10) Cooling the cooked soybean on a conveyor belt. Most of the miso's flavor comes from the beans; the aroma and sweetness come from the kôji. (11) Mixing the cooked soybeans and koji, with salt and a little spring water. Then the mixture is forced through a machine like a meat grinder to produce a smooth paste, which will ferment more easily than a chunky one. (12) Putting the ingredients for akamiso into 100-year-old cedar vats, which are covered with plastic sheeting then weighted. After several months it is moved to another set of barrels, then again a few months later. It can age for up to two years. (13) Three packages of commercial Japanese miso: akamiso, akadashi-miso, and shiro miso.

Recipes: Miso soup with tofu and wakame. Eggplant dengaku with two miso sauces. Green beans with miso dressing. Broiled miso-marinated black cod. Panfried miso-marinated beef. Steamed pork with mamemiso. A sidebar describes the different types of miso, with details on akamiso, mamemiso, and shiro miso. The company also makes brown rice miso (unpasteurized), and a kit (with koji and instructions) for making your own miso at home.

Traditionally miso made at home was the source of great family pride. *"Temae miso desu ga,"* one would say–meaning "I don't want to boast about my miso, *but..."* Today Japan's 50 largest miso manufacturers control about 90 percent of the market. But miso connoisseurs prefer miso made by smaller companies in the traditional way; these are painstakingly preserving old-fashioned techniques and regional miso styles. Address: Teacher of Japanese cooking, Hiroko's Kitchen, London, England. Phone: Fax: 44-171-289-0855.

10539. Tamang, J.P. 1998. Role of microorganisms in traditional fermented foods. *Indian Food Industry* (*Mysore, India*) 17(3):162-67. May/June. [32 ref]

• ***Summary:*** This article is mainly about the benefits of fermentation and fermented foods. Contents: Introduction (main microorganisms are filamentous fungi, yeasts and bacteria, especially LAB = lactic acid bacteria). Biopreservation. Bioenrichment. Microorganisms that produce enzymes. Microorganisms that destroy undesirable components. Enrichment of the diet. Mixed starter culture. Traditional fermented foods of medicinal value (koumiss, kvass). Conclusion.

The following fermented soyfoods are mentioned: Kinema, hawaijar, miso, natto, shoyu, tauco, and tempe [tempeh]. Koji is also mentioned.

"Fermented foods are defined as foods that have been subjected to the action of selected microorganisms by which a biochemically and organoleptically modified substrate is produced, resulting in an acceptable product for human consumption." Address: Microbiology Research Lab., Dep. of Botany, Sikkim Government College, Gangtok, Sikkim–737 102, India.

10540. **Product Name:** Certified Organic Soymilk (Sold in Quart Pure-Pak / Gable Top Cartons) [Regular, and Chocolate].
Manufacturer's Name: Wildwood Natural Foods (Marketer-Distributor).
Manufacturer's Address: 1560 Mansfield Ave., Suite D, Santa Cruz, CA 95062. Phone: 408-476-4448.
Date of Introduction: 1998 June.
Ingredients: Filtered water, whole non-genetically modified, certified organic soybeans*, certified organic brown rice syrup*, naturally occurring calcium carbonate, sea salt, carrageenan, xanthan gum, vitamin A palmitate, vitamin D-2, vitamin B-2 (riboflavin), vitamin B-12. * = Grown and processed without synthetically compounded herbicides or pesticides in accordance with the California Organic Foods Act of 1990.
Wt/Vol., Packaging, Price: 32 fl. oz (1 quart). Pure Pak carton. Retails for $2.29 (1998/07 California).
How Stored: Refrigerated.
New Product–Documentation: Talk with Billy Bramblett of Wildwood Natural Foods. 1998. June 24. Wildwood recently introduced a new fresh soymilk, sold in gable-top quart cartons. The flavor is excellent. Two packages with

© Copyright Soyinfo Center 2014

Labels sent by Billy Bramblett. Green, red, blue, and orange on white. The front panel states: "1% of sales donated to the Breast Cancer Fund. Low fat. Non-dairy drink. Calcium and vitamin enriched. Naturally lactose free." One side panel states: "A diet rich in soy contains a variety of beneficial phytonutrients including*: Isoflavones. Genistein. Phytoestrogens. * = Consult your physician concerning the role soy may play in effecting specific chronic diseases. Trusted purity since 1980: Naturally antibiotic and hormone free. Vegan–No animal products. Enjoy other Wildwood soy foods: Organic tofu. Wild Dogs. Vegie Burgers. Meltables. Talk to us at 1-800-499-Tofu." A second side panel, titled "The fresh approach to healthy eating," states that "1% of sales of this product goes to researching environmental causes of breast cancer."

Talk with Bill Bramblett. 1998. June 9. The original Wildwood soymilk was named Yo Soy! Ted Nordquist and his company TAN Industries, Inc. have played a major role in developing and making this soymilk. Jeremiah and Ted have been friends for many years, and recently they have been working together very closely on this soymilk. They used to call it the "Ted and Wally Show." Jeremiah went to Ted 4-5 years ago; Ted had a new technology for making non-beany soy base. Jeremiah and Ted came up with a formulation for the final product made from Ted's soy base. They had dreams of building a plant together, where Wildwood would do the tofu side and Ted would do the milk side. But in the end, Wildwood didn't have the funds or energy to go that direction, so Ted went to White Wave and told them about his great soymilk. Then White Wave came up with their own formulation (which was different from Wildwood's formulation), resulting in Silk. Ted makes his soymilk at a plant in southern California [Soyfoods of America], then another California company [Morningstar, formerly called Avoset] finishes and packages the product for Wildwood. Ted is in the process of developing a new yogurt, which is not yet on the market. He would like to make it for Wildwood, but Billy doesn't think it is ready. Also Ted wants the yogurt package to bear the words "Made with TAN soy base."

Talk with Jeremiah Ridenour of Wildwood. 1998. Oct. 20. This product was first sold in June 1998. It may be the first soymilk in America to have the word "Soymilk" in the product name–to test the FDA. Wildwood has nothing to do with the manufacture of packaging of the product; It is made at one place and packaged in another. White Wave's Silk is this product's main competitor. Jeremiah believes that Wildwood's formula is better. See also Oct. 1998 interview with Jeremiah on the early history of this product. This product states in the ingredient listing that it is GMO free, but Jeremiah thinks that the term "organic" is still more important to consumers than "GMO free."

Leaflet (single sided, 8½ by 11 inch, color) sent by Patricia Smith from Natural Products Expo West. 1999. March. "Introducing Wildwood Natural Foods Organic Soymilk. Low fat. Delicious non-dairy drink. Calcium & vitamin enriched. Naturally lactose free. 1% of sales donated to the Breast Cancer Fund. Available in Regular and Chocolate flavors."

Product (chocolate, quart) with Label purchased at Safeway supermarket in Lafayette, California. 2001. April 1. Both real vanilla and chocolate quarts are sold refrigerated in the Odwalla cooler in gable-top cartons for $1.99/quart. One side panel reads: "Wildwood has been making soymilk for over 20 years. As a pioneer in American soyfoods Wildwood has learned to make great tasting nutritious soymilks." The certified organic chocolate is produced from beans grown in a bio-diversity preserve in Costa Rica and Panama.

The back panel states: "Wildwood Natural Foods. Affecting dietary and agricultural change. Wildwood owners Jeremiah Ridenour and Billy Bramblett both grew up in Michigan, then migrated to California and became evangelists for soy. Jeremiah comes from a soybean farming family. While he was studying tofu production in Japan, his future partner Billy was concocting tofu delectables at the legendary Sleeping Lady Cafe in Fairfax, California. Wildwood Natural Foods started producing organic Soymilk and Tofu in 1980. Today these two lead their company's production of thirty-five delicious, premium, organic soy products. More organic choice means less chemicals in your environment..."

10541. Yates, Ronald E. 1998. Shinzaburo Mogi in America: Making shoyu in Denver, Colorado, and Toronto, Canada. Work with and investment in the Oriental Show-You Co. in Columbia City, Indiana. In: Ronald E. Yates. 1998. The Kikkoman Chronicles. New York, San Francisco & Washington, DC: McGraw-Hill. xviii + 206 p. See p. 125-32.
• ***Summary:*** "Somewhere in Denver, Colorado, are the remains of what is most likely the first Japanese-built and managed soy sauce plant in the continental United States." It is fairly certain that Shinzaburo Mogi went to Denver in 1892. He was barely 20 years old and had a bold idea–to produce shoyu in the USA (p. 125). "As the fifth son of the Kashiwa branch of the Mogi family, he did not join the family business in Japan. His older brother, Shichirouemon Mogi, became the first president of the Noda Shoyu Co." (p. 129).

Kenzaburo "Ken" Mogi (not to be confused with Yuzaburo Mogi's younger brother, also named Kenzaburo) traveled to Denver in the early 1980s in search of info about his great-granduncle. "Kenzaburo, the son of Katsumi Mogi, who served as Kikkoman's president from 1980 to 1985, had heard the stories of this little-known member of the Mogi clan for years–some of them from Keizaburo Mogi, who served as president of Kikkoman from 1962 to 1974, when he became chairman of the board. Ken Mogi managed to learn that "Shinzaburo Mogi had indeed managed a soy

© Copyright Soyinfo Center 2014

sauce plant in Denver in 1907. Unfortunately the operation was not successful, Kenzaburo learned after meeting with a man who apparently worked with Shinzaburo Mogi at the plant... But failure in Denver didn't stop Shinzaburo Mogi from pursuing his dream of making soy sauce in North America" (p. 130). After Denver, he apparently helped manage a soy sauce plant in Toronto, Canada. Eventually, he settled in Chicago where he was involved in the trading business–including the importing of Japanese (most likely Kikkoman) shoyu to the United States" (p. 130-31).

Note: As of Nov. 2004 Soyfoods Center is aware of very little evidence indicating that Shinzaburo Mogi ever started a plant making fermented soy sauce in Denver, Colorado, or anywhere in the United States. We believe that Kikkoman has spread this unfounded rumor. On 7 Feb. 2005 Kenzaburo Mogi IV, the first person from Kikkoman who tried to find evidence of these existence of this soy sauce plant in Denver, replied to a letter from William Shurtleff asking whether Ken thought the Denver soy sauce plant was a theory or a fact: "I also think it is unfortunate that the theory is told as a fact." Address: Head, Journalism Department, Univ. of Illinois (Urbana).

10542. Yates, Ronald E. 1998. The story of the origins of Kikkoman in a woman named Shige Maki (Document part). In: Ronald E. Yates. 1998. The Kikkoman Chronicles: A Global Company with a Japanese Soul. New York, San Francisco & Washington, DC: McGraw-Hill. xviii + 206 p. See p. x-xi, 13-19, 62.

• ***Summary:*** Before we recount this story, we would like to say that we question its authenticity. Why was Shige Maki not mentioned in Mark Fruin's classic 1983 history of Kikkoman titled *Kikkoman: Company, Clan and Community,* published by Harvard University Press? William Shurtleff asked Dr. Fruin in late 1998 if he had ever heard of Shige Maki and he replied "No." Why has Soyfoods Center never heard this story before? Why does Mr. Yates provide no documentation to support this story–or the story that Kikkoman traces its origins back to 1630–for which we have never seen any credible evidence. We find this all very suspicious.

According to Mr. Yates, Kikkoman now traces its origins back to a woman named Shige Maki, who in 1615 was living in the Shadow of Osaka Castle, where her husband, Yorinori, was a samurai warrior (retainer) serving the warlord Hideyori Toyotomi. Hideyori (1593-1615), whose archrival was Ieyasu Tokugawa, was the son of Hideyoshi Toyotomi, one of Japan's greatest warlords and a man credited with uniting Japan in 1590 by subjugating the five western provinces of Japan's main island, Honshu. In 1586 Hideyoshi built the magnificent Osaka Castle–the largest and most impressive castle in Japan. For the next 5 years, Hideyoshi continued to consolidate his power via a series of battles and castle sieges. In 1591 he issued an edict establishing four distinct classes of people. At the top were samurai, followed by farmers, artisans, and merchants. That rigid social order lasted until 1868, when Japan's emperor Meiji ended feudalism and ushered in the nation's modern era. In 1597 Hideyoshi invaded Korea; he died there in 1598 during the campaign. His Japanese forces withdrew and in 1600 Ieyasu Tokugawa, a senior general in Hideyoshi's army, seized power following the battle of Sekigahara when he defeated an army of Hideyoshi's former vassals and retainers. This move was viewed as betrayal by many of Hideyoshi's men. In 1603 Ieyasu was awarded the titled of shogun by the emperor; he was the first of Japan's powerful line of Tokugawa shoguns that would rule Japan virtually unchallenged until the mid-1800s when Commodore Matthew Perry of the United States and his squadron of black ships forced Japan to open its doors to global politics and commerce.

The Toyotomi family, now led by 19-year old Hideyori, vowed revenge on Ieyasu Tokugawa. Shige Maki and her husband, Yorinori, supported Hideyori. But in June 1615 Hideyori was defeated at Osaka Castle. Yorinori committed suicide; Shige Maki and her young son, Heizaburo, escaped from the castle and fled. For 15 years the two were on the run. "Eventually, Shige Maki and Heizaburo settled in the small farming community of Noda, about 30 miles north of Edo (now Tokyo). In the interim they had changed their name from Maki to Mogi, with Heizaburo altering his first name to Shichizaemon. No descriptions of Shige Maki exist, but she must have been one tough and resourceful lady. Not only did she survive the bloody battle of Osaka Castle and outwit the shogun's henchmen, but she spent years working in the rice fields of Noda" (p. 13-17).

On pages x-xi the author tells the end of this story somewhat differently: Because Shige Maki and "all others who had supported Toyotomi were on Tokugawa Ieyasu's death list, she changed her name to Mogi and blended in with the rice farmers in the area [of Noda]. For 15 years, she and her son cultivated rice and in the process learned the craft of brewing *shoyu*–the Japanese word for soy sauce... Using her new name of Mogi, the resourceful woman... made some refinements in the production process and more than 300 years ago began making the product that the world today knows as Kikkoman."

Continuing on p. 19: "Among the earliest recorded shoyu producers in Noda were Hyozaemon Takanashi and Shichizaemon Mogi [Shige Maki's son]. Local records show that Takanashi was producing fermented shoyu in 1661, while the Mogis were making miso [by 1662].

"A year later, on August 22, 1662, some 47 years after she had escaped from the ruins of Osaka Castle, Shige Maki died. There is no doubt that if Shige Maki had not been as intrepid and resourceful as she was, there would be no Kikkoman Corporation today."

On page 62 Yates tells this story with still another twist: "When Shige Mogi (nee Maki) and her son Schiroemon [sic,

© Copyright Soyinfo Center 2014

Heizaburo] began making miso and shoyu in Noda in the 1600s, it was still very much a farmhouse industry."

Note 1. Soyfoods Center believes, based on three detailed histories of Kikkoman published in Japanese, plus the excellent research of Mark Fruin and others, that Kikkoman cannot trace its connections with soy sauce back farther than 1661, when Hyozaemon Takanashi started to make shoyu in Noda. We want to emphasize that there was no connection between the Takanashi and Mogi families until 1768 (more than 110 years after Hyozaemon Takanashi started to make shoyu in 1661). Mr. Yates presents no evidence that Shige Maki or her son ever made soy sauce (shoyu).

Mr. Yates continues (p. 19-20): In 1768 the eldest son of the Hyozaemon Takanashi clan married the "daughter of the fifth generation of the Shiroemon [sic, Shichizaemon] Mogi line. This was to be only the first of a series of alliances between the Mogi and Takanashi families."

Note 2. According to Fruin (1983, p. 16) Shichizaemon Mogi started to make miso in Noda in 1662. This was the Mogi family's earliest connection with foods or condiments made from soybeans. Address: Head, Journalism Department, Univ. of Illinois (Urbana).

10543. Yates, Ronald E. 1998. History of Oriental Show-You Co. in Columbia City, Indiana (Document part). In: Ronald E. Yates. 1998. The Kikkoman Chronicles. New York, San Francisco & Washington, DC: McGraw-Hill. xviii + 206 p. See p. 131-32.

• ***Summary:*** Oriental Show-You Co. was founded by Shinzo Ohki. He was born in 1884 in Kamakura, Japan, the son of a shoemaker and one of eight children. As a boy, Ohki served an apprenticeship in his uncle's saké (rice wine) warehouse. In 1901, barely 17 years of age, he used the money he had saved to emigrate to the United States. He made his way to the Midwest, where he settled in Columbia City, Indiana. There he graduated from high school, later graduating from New York University.

From New York, he moved to Detroit, Michigan, where he established a business importing tea and bulk shoyu [Japanese-style soy sauce] from Japan. He bottled the soy sauce and sold it with his tea. Before long he discovered a large demand for soy sauce from the Asian community in that area.

Returning to Columbia City, Indiana, Ohki recruited a partner, established the Oriental Show-You Company, Inc., and went into business bottling his imported soy sauce in an old canning plant. As demand for his soy sauce continued to grow, Ohki realized he would be more successful if he learned how to make the product himself.

So in 1917 he returned to Japan, learned how to make shoyu, obtained a formula for the naturally fermented product, and (with a wife) returned to Columbia City, where he began to make shoyu.

He received some help from the U.S. Department of Agriculture in obtaining and culturing the necessary microorganisms needed to produce the koji required for traditional, natural shoyu. Soon his shoyu was sold in most Asian grocery stores in the area.

In the 1920s Shinzaburo Mogi (a descendant of Kikkoman's Mogi line), who was now working for the Yamato Trading Co. in Chicago, discovered Oriental Show-You in one such store. Intrigued by the idea of making traditional Japanese shoyu in America, "Mogi traveled to Columbia City to see the operation for himself." He found that Oriental Show-You Co. used a natural aging process that took about 24 months from start to finish. Impressed with Mr. Ohki and his shoyu operation, Mogi invested in the company and became a major stockholder, continuing as such until the start of "World War II when his property (as was the case with all Japanese immigrants) was seized by the U.S. government under the 'Alien Property Custodian Act' [sic].

"Mogi returned to Japan shortly before the beginning of World War II." He showed his daughter, Katsuko, the stock certificates she still owned from the Oriental Show-You Co. "They're worthless now," he said, and tore them up. Shinzaburo Mogi died in 1946 in Japan.

Oriental Show-You Co. continued to make shoyu until 1961, when it was acquired by Beatrice Foods, Inc. and became part of La Choy Food Products. The plant was eventually moved out of Columbia City and the fermentation process was discontinued in favor of the faster and less labor intensive HVP soy sauce process. Today the only evidence of the Oriental Show-You Co. in Columbia City is a few crumbling remnants of the factory's foundation.

At its peak, the Oriental Show-You Co. was making about 30,000 gallons per year of soy sauce. It was "perhaps the first successful Japanese shoyu operation on America's mainland" [sic].

Note: Early Japanese shoyu manufacturing companies were started on the West Coast of the USA in San Jose, California (1897 and 1907), Melrose, California (1908), Fruitvale, California (1908), Los Angeles, California (1908), Portland, Oregon (1909), Oakland, California (1909, two companies), and Stockton, California (1910). Source: Japanese-American Yearbooks.

Shinzaburo Mogi never worked for Noda Shoyu Co., Kikkoman's predecessor, and his efforts on behalf of shoyu in the United States were never sanctioned by Noda Shoyu Co.; his innovative activities abroad were completely independent. Address: Head, Journalism Department, Univ. of Illinois (Urbana).

10544. Cook, Anne. 1998. Kikkoman knows taste of success: Faculty member at UI writes book on soy sauce firm. *News-Gazette* (*Champaign, Illinois*). July 4. p. A3. [1 ref]

• ***Summary:*** Ron Yates, who is now head of the journalism

© Copyright Soyinfo Center 2014

department at the University of Illinois (Urbana) has recently written a book titled *Kikkoman Chronicles,* a history of the world's largest maker of soy sauce, published by McGraw Hill. For ten years, during the 1970s and 1980s, Ron Yates was the business correspondent for the *Chicago Tribune* in Japan. He speaks Japanese. Kikkoman's history started in 1630. This article states (incorrectly) that (1) shoyu had been brewed in Japan since the 6th century; (2) the founder of Kikkoman's plant in Walworth, Wisconsin, Yuzaburo Mogi, came to the United States in the early 1970s as a Columbia University student; he came to the U.S. even though he didn't speak English. The handwriting was on the wall in the 1960s in Japan. The market was saturated. Mogi said he needed to learn about America. A photo shows Ron Yates. Address: Staff writer.

10545. Bernard, Richard L. 1998. Thoughts on naming soybeans introduced from abroad (Interview). *SoyaScan Notes.* July 14. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Most of the important early soybean varieties grown in the USA were not developed here; they were introduced from abroad, then tested, and those that performed well were given a name. In talking about when an early soybean variety was first named, it is important to remember that most of these varieties already had names in the country from which they were imported to the USA. In some cases we kept that name (Eda Mame, Kanro) and in some cases we modified it only slightly (or renamed it), usually to make it shorter (Wase Eda Mame -> Waseda; Chusei O Saya Eda Mame (from Imperial Seed Co., Tokyo) -> Osaya; Chusei O Saya Eda Mame {from Yamato Seed Co., Tokyo} -> Chusei; Higan Mame -> Higan; Sousei O Saya Eda Mame -> Sousei; Shing Toa -> Shingto) (See Bernard, Juvik & Nelson 1987, p. 64-69).

If we do refer to a "year named," we should qualify that with a footnote such as: "The year that a soybean variety first appeared with this name in a U.S. publication." It might also be noted that a variety may be released commercially before or after it is first named in the USA.

Once a Japanese soybean breeder was being criticized by his boss who asked, "Why can't you develop high-protein soybean varieties like that Sioux variety that the Americans have developed?" It turns out that Sioux was a Japanese variety ('Aoshiro Eda Mame' introduced to the USA from Sapporo, Hokkaido, Japan, in 1929; PI 81.021); Dr. Bernard has heard that it was even developed in Japan at his station. When we send soybean varieties developed in the USA to foreign countries, we hope and expect that they will not rename them. Yet many soybean breeders write articles about newly discovered traits (such as resistance to a particular disease) in journals like *Crop Science* without even mentioning that soybean's country of origin, or when it was introduced, or its foreign name (if known). "That is criminal. We give them no credit at all. If people in other countries did that without our soybean varieties, we would be highly indignant. A breeder, who was here from Pakistan a few years ago, said the leading soybean variety there was Williams. They call it Williams–as they should. We should do the same." Address: USDA/ARS Soybean Germplasm Collection, Room 229 EASB, 1101 W. Peabody Drive, Univ. of Illinois, Urbana, IL 61801.

10546. Miles, Carol A. 1998. Re: Vegetable soybeans. Letter (e-mail) to Dana Jacobi in New York City, July 14. 1 p. [2 ref]

• ***Summary:*** Dana Jacobi sent Carol the rough draft of an article she is writing on green vegetable soybeans. Carol responded that she has been conducting vegetable soybean variety trials in southwest Washington state for the past 3 years. She has also been developing new vegetable soybean varieties which should be ready for release in several years. She has been working with Mark Musik [the farm advisor for the Pike Place Market] and Hmong farmers [rhymes with "mung." They are hill people from Laos] for the past year, and it looks like their work together next year will be ever better.

"I think it is important to state clearly that vegetable soybeans, although the same genus and species as field soybeans (*Glycine max*), are special varieties and they differ biochemically from field soybeans. Vegetable soybeans have different biochemical components which allow them to be eaten after boiling for only 5 minutes. If a person were to harvest field soybeans at the green stage and boil them for 5 minutes and eat them, they would get stomach cramps due to the indigestibility of the beans."

She has heard the SunRich did not pay close enough attention to this point and used field soybeans when developing their Sweet Beans. The company later got lots of complaints about the indigestibility of Sweet Beans.

Carol has a web page at http://agsyst.wsu.edu on which are several research-type papers that she has written about edamame. The information about biochemical differences between edamame and field soybeans is in these papers.

Talk with Carol Miles, PhD. 1998. Aug. 26. She got her PhD from Cornell University (Ithaca, New York) in vegetable crops, with a minor and dissertation in breeding sweet corn. Now she is working on edamame with Tom Lumpkin, who is at Washington State Univ. She has been there growing edamame for 4 years. She and her co-workers like edamame very much, as do her two young kids. Her information on biochemical differences between vegetable-type soybeans and field soybeans comes from a paper by Tom Lumpkin. They have a lower content of trypsin inhibitors and of indigestible oligosaccharides, and more vitamins. She has written some research reports on edamame, but no refereed journal articles. The Pike Place Market is the largest farmers' market in the Pacific

© Copyright Soyinfo Center 2014

Northwest. It is located in downtown Seattle on Pike Street. A farmer's market, by definition (largely for insurance purposes), is one in which at least 50% of the products must be produce sold by the people/farmers who grew it. The other 50% can be crafts, produce sold by people who did not grow it, etc. There is not yet a measurable acreage of green vegetable soybeans in Washington state; this is a new crop that is still in the development stage. Carol has a variety testing program in western Washington and down into Oregon where the climate is mild and the precipitation high. Most of this seed is imported from Japan and costs about $17/pound, which is prohibitive. So there is a big need for her program to have its own seed production and its own varieties. Therefore, she also has a variety development program, where she is plant breeder using conventional methods. Tom is trying to develop pod-shatter resistance. The major constraint to developing varieties is pod shatter during harvesting. Dr. Sundar Shanmugasundaram at AVRDC in Taiwan has found that pod-shattering is linked to one of the soybean's oils. He is trying to isolate these oils in vegetable-type soybeans. Carol was in Taiwan working with him in November and December of 1997. Another constraint is lack of good harvesting equipment; she has been trying for several years to get the vegetable processing industry interested in this problem since they have the equipment. She is aware that work has been done on this in Illinois and Colorado; Taiwan uses an FMC green bean harvester.

Carol believes that edamame must be adapted to American culture by serving it as a good, wholesome green vegetable, served on the table like green peas or used as an ingredient in other dishes such as a stir-fry–rather than as a snack food with beer as it is served in Japan. So she would sell edamame shelled, rather than in the pods. She heard a rumor that last year SunRich did not use vegetable-type soybeans for their Sweet Beans; they used field-type soybeans and they had some major consumer problems, as with indigestion.

The Hmong farmers comprise the largest single group of farmers selling through the Pike Place Market. Traditionally a roaming tribal, patriarchal group from Laos, they collaborated with the USA as "jungle guides" during the Vietnam war and so our country brought them here as refugees after the war about 15 years ago. A large community of Hmongs lives in the Seattle area. Few of the adults speak English, but the children are being raised in the American system. They traditionally grew green vegetable soybeans in Laos, but their seed, which was suited to a tropical climate, would not flower in the Seattle area, which has a cooler climate and a longer day-length. Carol has supplied the Hmong farmers with seed. She works mostly with seed companies from Japan, but she knows of two U.S. seed companies that sell vegetable-type soybeans: Johnny's Selected Seeds in Maine and Nichols Garden Nursery in Oregon. Nichols (located at 1190 North Pacific Highway, Albany, OR 97321-4580. Phone: 541-928-9280) started in 1997 to sell Buker's Favorite Soybean–a breeding line Carol has worked on. Dr. Robert J. Buker is a plant breeder who worked in Illinois, then overseas for 20 years. Now he works in Vancouver, Washington, which is just across the river from Portland, Oregon. He received his material from AVRDC several years before Carol got hers. Address: PhD, Washington State Univ., Extension Agricultural Systems, 360 NW North Street, Chehalis, Washington 98532. Phone: 360-740-1295.

10547. Doerge, Daniel R. 1998. Antithyroid factors in soybeans that can cause thyroid problems or goiter (Interview). *SoyaScan Notes.* July 21. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** Dan (whose surname is pronounced DOR-gee; rhymes with Porgy) and coworkers have done research showing that the isoflavones genistein and daidzein are the antithyroid principles in soybeans. They fractionated the soybean extract and showed that the genistein and daidzein peaks had essentially all of the antithyroid activity that was present in the extract. Then they did mass spectrometry to characterize substances. This is very interesting because isoflavones are not inactivated or destroyed by heat; they are not heat labile. Yet most of the literature shows that heating soy products destroys their anti-thyroid principles. Dan does not know how to explain this. He believes he is starting to understand the mechanisms and becoming able to make predictions in terms of thyroid status, iodine status, and potential for hazards in humans.

People are now promoting soy because of its health benefits and chemotherapeutic properties (which may be based on genistein and daidzein), and it may have some of these excellent properties, but it could also cause problems for people who are "thyroid compromised." A surprisingly large number of Americans have hypothyroidism or a thyroid problem, or are on the borderline of having a thyroid problem (clinically euthyroid), and they should not be consuming large amounts of genistein or daidzein–especially in the form of supplements. About 10% of American women over the age of 60 are hypothyroid (have low thyroid levels); this happens with a gradual reduction of autoimmune function.

Some data from soy-based infant formula makers show that 20-25% of American babies, infants and children are raised on soy formula. Research by Ken Setchell has shown that these kids have higher blood levels of genistein and daidzein than women who take soy/estrogen supplements. There is no direct evidence that there is a problem in kids–but this is the most important potential risk that should be addressed with further research.

In addition, there is evidence in the literature that kids on soy formula are more likely to go on autoimmune thyroiditis in their later lives. (See Fort, P., et all. 1990.

© Copyright Soyinfo Center 2014

"Breast and soy formula feeding in early infancy and the prevalence of autoimmune thyroid disease in children." *Journal of the American College of Nutrition* 9:164-67). "But let's be clear about this. I think there is a big difference between people eating soybeans or soybean products, and people taking genistein or isoflavone supplements. The level of estrogen of intake is much higher with the supplements, and that makes a great deal of difference."

Ishikawa and coworkers in Japan have done some good work on soy and thyroid function in about the 1970s or 1980s. Address: PhD., Dep. of Health and Human Services, Food and Drug Administration, National Center for Toxicological Research, Div. of Reproductive and Developmental Toxicology, Jefferson, Arkansas 72079-9502, and Dep. of Biochemistry, Univ. of Arkansas for Medical Sciences, Little Rock, AR 72205. Phone: 870-543-7000.

10548. *Rafu Shimpo* (*Los Angeles, California*). 1998. Tofu festival celebrates multicultural diversity. July 21. p. 1, 3. [Eng]

• ***Summary:*** A good preview of the festival, to be held Aug. 15-16. General Food tickets will be available for $1 each. Preferred seating will also be available for $25 per person. More than 30 Southern California restaurants will showcase an array of international cuisine ranging from tofu enchiladas and chocolate tofu cheesecakes to tofu ceviche / seviche. The new Children's Pavilion play area will offer face-painting, balloon-making, story-telling, break-dancing, puppet shows, arts and crafts, and many more activities.

"Proceeds from the L.A. Tofu Festival will benefit the Little Tokyo Service Center and the Japanese American Cultural and Community Center, two community-based nonprofit organizations." A photo shows participants in last year's Tofu Eating Contest.

10549. American Soy products. 1998. Official celebration guide: Invitation. Saline, Michigan. 12 p. 13 cm.

• ***Summary:*** This attractive passport-sized booklet states: "American Soy Products presents the opening of the largest soymilk processing facility in North America. Official opening ceremony: Wednesday, Sept. 9, 1998. Your invitation–VIP guest No. 01325024. Registration time: 11:15 to 11:30. Official ceremony: 12:00 noon to 12:45 p.m. Followed by light refreshments and hors d'oeuvres. Lunch: 2:00 to 3:00. Tours and demonstrations: 1:00 p.m., 2:00 p.m., 3:00 p.m., 4:00 p.m. RSVP by August 12.

"The event will honor the achievements of a unique joint venture partnership formed to produce Edensoy for the North American marketplace."

"Factory facts: Square footage by Aug. 1998–65,000 square feet. Expected annual output–4,000,000 + cases. Number of quality control checks–245 (4000 per day). Soymilk lines–(2) 8800 pounds per hour and 13,200 pounds per hour.

"Celebrate with us 'History in the making' as four international corporations send you their personal invitation to salute cooperation and unity at work."

The CEO of American Soy Products is Mr. Hiroyasu Iwatsuki. "Joint venture partners: Eden Foods, Inc., Clinton, Michigan, USA. Mr. Michael Potter, Chairman/ President. Kawasho International (USA) Inc., San Francisco, California, USA, Mr. Akio Ono, President. Marusan-Ai Company Ltd., Okazaki-City, Aichi-Prefecture, Japan, Mr. Hatsuji Shimomura, President. Muso Company Ltd., Osaka, Japan, Mr. Yuko Okada, President." Address: 1474 North Woodland Dr., Saline, Michigan 48176. Phone: 734-429-2310.

10550. Bramblett, Billy. 1998. Company history: Wildwood Natural Foods. Fairfax, California. 10 p. Unpublished typescript.

• ***Summary:*** Contents: The beginning (1978-1981). The evolution (1982 to 1998). \"The beginnings of Wildwood Natural Foods, Inc. evolved over 2 years starting in 1978 [or maybe 1977] and culminating with incorporation in April of 1980 and actual operations in August of 1980. "In 1978, Paul Duchesne was an employee of the Good Earth Natural Food Store in Fairfax, California. Among his duties were the squeezing and bottling of fresh beet and carrot juice and the making of fresh sandwiches, all of which would be sold in the store each day. During a routine inspection of the Good Earth by the Marin County Health Department inspectors, it was determined that this practice was illegal, since the Good Earth did not have a health department approved kitchen and, therefore, no license to produce these products on the premises. Mr. Duchesne approached the cooperative ownership of a neighboring vegetarian restaurant, The Sleeping Lady Cafe, to determine if space might be rented at their kitchen during the very early morning for the production of sandwiches and juices. The co-op agreed and soon Mr. Duchesne was producing these products each morning and then transporting them to the Good Earth for sale.

"After a few months, Mr. Duchesne started producing a sandwich of his own invention, the brown rice and tofu sandwich (BRT), at the Sleeping Lady, on his own and selling those sandwiches to the Good Earth and a few other local health food stores. By the late summer of 1978, Mr. Duchesne was producing hundreds of the sandwiches weekly and delivering them to seven locations in central Marin county.

"At that point Mr. Duchesne decided that he wanted to move to Boston, Massachusetts, to study macrobiotics with Michio Kushi and so he gave his fledgling, as yet unnamed, business to a fellow named Paul Watson [sic, Chris Smith]. This enterprising man expanded the business and was soon delivering to over fifteen locations in central and southern Marin County. During a routine inspection of

© Copyright Soyinfo Center 2014

one of the southern Marin locations, the health department inspector noticed that the labels on these sandwiches were in violation of the State of California's labeling laws and contacted Mr. Watson. One of the violations was that there was no company name on the label. Mr. Watson [sic, Chris Smith] came up with the name Wildwood Natural Foods. He asked the advice of Bill Bramblett, the founder and general manager of the Sleeping Lady, on the choice of that name. Mr. Bramblett looked up 'wildwood' in the dictionary and discovered the meaning to be 'natural or wild wood or forestland in its natural state.' Since this described the Fairfax area fairly accurately, Mr. Bramblett agreed that this was a good choice for Mr. Watson's company."

Note: Talk with Billy Bramblett. 1998. Oct. 14. Billy now agrees (after talking with several old-timers, and reading some old articles) that it was Chris Smith, not Paul Watson who took over the company when Paul Duchesne left for Boston and who coined the name Wildwood. Billy cannot recall what Chris Smith looked like. He clearly remembers Paul Watson, who made and/or delivered Wildwood sandwiches after Duchesne left for Boston.

"Sleeping Lady Cafe began in 1972 and served all kinds of food, including meat, for the first three years. In 1975 we stopped serving meat, but did serve eggs and dairy. We also went non-smoking at that time. This was in the days before "vegan." We made our own yogurt, and got the cleanest foods we could find back in those days.

"Our credo was good food from the best sources we could find at reasonable prices, a wide variety of music and performing arts each night (and sometimes during the daytime as well) and rotating local art on the walls. We made our own furniture, built everything ourselves. We were hippies having fun. We were able to last over 12 years because we paid cash for everything and paid ourselves last. An amazing adventure.

"By the spring of 1979, Mr. Duchesne had started his own version of the brown rice and tofu sandwich company in Boston, but had had a difficult winter and was weary of the East Coast. Mr. Watson longed to travel east and study macrobiotics with Mr. Kushi, and so the two traded places, Mr. Duchesne returning to Fairfax and Mr. Watson going to Boston. Since Mr. Duchesne had given Mr. Watson his business, Mr. Watson gave it right back to Mr. Duchesne. Suddenly Mr. Duchesne was an entrepreneur and was making 400 to 500 sandwiches each week and delivering them all over Marin County. He did most of the work himself, with his wife and children helping out on occasion. Each morning as Mr. Duchesne departed on his route, he would give a BRT sandwich to Mr. Bramblett, who was the breakfast cook at the Sleeping Lady. Mr. Bramblett loved these sandwiches and realized what a great potential there would be in the greater San Francisco Bay are for this product. One morning Mr. B mentioned to Mr. D that an investment of about $10K could likely put this product Bay Area wide. He outlined his plan for such a move, which included building a new kitchen somewhere else in Fairfax, hiring a few employees and getting another vehicle to use for the expanded delivery.

"Mr. D was astounded, He told Mr. B. that he had been chanting for just that amount, $10K, and that he had similar notions. After work, several days per week, Mr. B and Mr. D would smoke marijuana and plan for their business venture. They would be equal partners. Mr. B. would put in the $10K and Mr. D would put in his existing business. Then they decided if they were going to make brown rice and tofu sandwiches, why not make the tofu as well? So they got the *Book of Tofu, Volume II,* by Bill Shurtleff, and started making calculations. They figured they would need more like $30K to pull that one off, so Mr. D approached a couple of his macro-psychotic friends, Frank Rosenmayr, a developer, and Paul Orbuch, a photographer. Mr. B. approved of these two fellows and soon the four were talking to lawyers about incorporation. In the meanwhile a location in Fairfax had been found. While the partners went through the permit process with the town of Fairfax, the incorporation process ensued. In the meanwhile Mr. D continued to operate his sandwich business out of the Sleeping Lady.

"On August 8, 1980, Wildwood Natural Foods, Inc. officially began business at 135 Bolinas Road, Fairfax, California 94930, (415) 459-3919. Mr. B was the Tofu manager, Mr. D was the general manager, Mr. R had supervised and done most of the renovation of the property, and Mr. O was in charge of graphics and label art.

"During the first six months, several people were hired to make sandwiches, work in the kitchen during the daytime doing preparation work for the next night's sandwich shift as well as developing and producing various other products. Four other people also made tofu and there were three drivers/delivery person. But, alas, after six months this new little enterprise had lost over $16,000.00 and the owners were troubled. Each of the three money dudes kicked in an additional $2500 to keep things afloat and the Board of directors became the functional general manager. It was decided that the enormity of the job was too much for Mr. D and so the board go involved with all the day to day stuff. Mr. D remained in charge of the production and delivery, but was not happy about his demotion. It was soon clear that a divorce was in the air. One of the things that was being considered was the expansion of the business to deliver other small manufacturers products to help pay for the expense of delivery. At a BOD meeting in October of 1981, which was specifically called for the purpose of discussing this concept, Mr. D announced that he was leaving Wildwood and starting his own delivery service, called Cauldron Express. By early December, 1981, Mr. D was gone, as was his wife, the bookkeeper. Mr. B and Mr. O dropped what they were doing and jumped in, feet first to salvage the company." Continued. Address: Wildwood Natural Foods, 135 Bolinas Rd., Fairfax

10551. Leading Edge Group. 1998. The U.S. health and natural food market: Past performance, current trends, and strategies for the future. 2171 Jericho Turnpike, Suite 200, Commack, NY 11725. 330 p. July. Price $1,995.00. Illust. 29 cm. *
• ***Summary:*** Three past editions of this report have been published by Business Trends Analysts, Inc. (BTA), which is located at the same address as The Leading Edge Group. BTA is the parent company. Since it was founded 20 years ago, it had published reports under two brand names, each of which has a different style. Business Trends Analysts Reports tend to contain mostly secondary research, with an abundance of charts and graphs, and less text and analysis. Leading Edge Reports are conducted by a person with a specialty in that area. The report contains much more primary research and in-depth analysis, and is roughly twice as expensive. This report was conducted by Melina Laverty.

Chapter 5 of this report is titled "Soyfoods and alternative meat products: Market dynamics.

Overall report–Contents: 1. Executive summary. 2. Overall market dynamics (including Soyfoods). 3. The market for soy foods. 4. The market for herbal teas. 5. The market for dairy foods. 6. The market for grains and cereals. 7. The market for frozen foods. 8. The market for snack foods. 9. The market for groceries. 10. The health food consumer. 11. freshman at Schurr High School; he won one of two tofu-eating competitions last year, and hopes to win again this year. Contestants can't use their hands when eating the tofu; hands must be behind the back. The tofu is placed, unseasoned, in a dish on the table. Three photos show Stephen eating a cake of tofu.

10557. *SoyaScan Notes.* 1998. Chronology of Frank N. Meyer (1875-1918), USDA plant explorer in Asia. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1875 Nov. 29–Frans Meyer is born in Amsterdam, Netherlands. 1889–Meyer, age 14 becomes a gardener's helper, later a gardener at the Amsterdam Botanical Garden, and assistant to Prof. Hugo de Vries, the eminent Dutch botanist and geneticist, in his special experimental garden. Note: In 1900 de Vries was one of three scientists who, at a conference in London, England, "rediscovered" the work of Gregor Mendel, introducing modern genetics.

1901 Oct. 20–Meyer first arrives in the USA, in Washington, DC, with a letter of introduction from de Vries to Erwin F. Smith, one of the five plant pathologists who were working with Beverly T. Galloway at the USDA in 1889. Smith found Meyer a modest job as a gardener in the USDA greenhouses on the Mall at Washington, DC.; here Meyer worked from 23 Oct. 1901 to 31 Aug. 1902. He resigned 1 Sept. 1902. On 15 Sept. 1902 re-entered USDA service at the Plant Improvement Garden at Santa Ana, California. Resigned after 7 months on 1 April 1903 and became head gardener at a little nursery in Montecito, California.

1904 Jan. to March–In St. Louis, Missouri, attending the World's Fair and working at Armstrong's nursery. 1904 March to August–Made journeys of study in California (visited Luther Burbank in Santa Rosa), Mexico (took a steamer in March from San Francisco to San Blas, Mexico; walked across Mexico from San Blas to Guadalajara to Mexico City, then to Vera Cruz on the Gulf of Mexico), and Cuba. From Havana he took a ship to New Orleans, Louisiana, then on to St. Louis. 1904 Aug. 1–Began work at the Missouri Botanical Garden [called the Shaw Botanical Garden locally] in St. Louis. Was a member of the jury on Forestry at the World's Fair of 1904. Resigned Shaw Garden on 1 July 1905.

1905–In about early March, Adrian J. Pieters, a fellow Dutchman who had come to know and admire Meyer, tells Fairchild about Meyer's love of walking and deep interest in plants. On March 10 Fairchild asks Pieters to telegram Meyer to ask whether he would be interested in going to China as an agricultural explorer (Fairchild 1938, p. 315; Cunningham 1984, p. 21). The dream of Meyer's youth had come true. But 3 months passed before Meyer left St. Louis.

1905 July–Fairchild and Meyer first meet and instantly become mutual friends. For a detailed description of their first meeting see Fairchild 1938 (p. 314-16). On 10 July 1905 Meyer re-enters USDA service for the third time, now as an agricultural explorer in the Bureau of Plant Industry.

1905-1908–First expedition; mainly to China, but also to Japan, Korea, Manchuria, and Eastern Siberia. He collected nearly 2,000 plants and seeds. He left Washington, DC, on 27 July 1905 and returned on 7 July 1908.

1906 Feb. 23–Meyer's first soybean introduction, SPI 17852 from Peking was received in the USA; it was later named Peking.

1908 July 21–Meyer submits a Petition for Naturalization (now located at the U.S. Immigration and Naturalization Service, Dep. of Justice, Washington, DC).

1909-1912–Second Expedition.

1912-1915–Third Expedition.

1916-1918–Fourth Expedition.

1918 June 4–Telegram arrives in Washington at 4:00 p.m. from the Consul at Nanking "Frank Meyer, Department Agriculture, disappeared from steamer in this consular district en route Hankow to Shanghai, June 2nd." His death occurred at night. His body was recovered from the Yangtze River on June 5, about 30 miles above the little town of Wuhu, and buried on June 12 at the Bubbling Well Protestant Cemetery in Shanghai. His death remains a mystery to his friends; it is not known whether he died from accident or suicide. It was well known among his friends, and clearly indicated in his letters to David Fairchild, that he had been very much depressed by the wars in both Europe and China and by his long confinement in the city of Ichang.

In 1907 the U.S. only had 23 varieties of soybeans, whereas in 1919 the U.S. had 629 varieties; most of the new ones were introduced by the Office of Foreign Seed and Plant Introduction (OFSPI), many by Meyer. Named varieties introduced by Meyer (or selected directly from introduced by Meyer), in order of PI Number are: Meyer (PI 17852), Peking (17852 B, selected from the Meyer variety), Lexington (PI 17862), Wilson (PI 19183), Morse (PI 19186), Virginia (PI 19186 D, selected from Morse in 1909), Habaro (PI 20405), Chestnut (PI 20405 B, selected from Habaro), Duggar (PI 20798), and O.A.C. 211 (OAC 211, selected from Habaro), Biloxi (PI 23211, named by Dec. 1916), and Laredo (PI 40658, named by June 1920). Of these varieties Meyer introduced, Peking, introduced in 1906, proved to be the most important commercially in America.

10558. *SoyaScan Notes.* 1998. Chronology of David Fairchild (1869-1954), organizer and head of the USDA Section of Foreign Seed and Plant Introduction (FSPI). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1869 April 7–David Fairchild is born at Michigan State College, one of five children, in a family deeply interested in ideas. 1879–When David was age 10, his father, George T. Fairchild, accepts the presidency of fledgling Kansas State College of Agriculture–a position

© Copyright Soyinfo Center 2014

he held until 1897. Thus David grew up on agricultural college campuses. He later attended that college and took a strong interest in the new science of plant pathology. 1888–Graduated from Kansas State College of Agriculture. 1889–Goes to Washington, DC, to work for the USDA in Dr. Beverly Galloway's new "Section of Vegetable Pathology.

1893–Resigns his position at the USDA to continue his studies in Europe. On this trip he meets Mr. Barbour Lathrop. Lathrop offers to pay Fairchild's way to Java to continue his studies. Later, the two men discussed a broad plan for systematic plant introduction under the auspices of the USDA.

1897 fall–The Section of Foreign Seed and Plant Introduction (FSPI) is organized within the Seed Division of USDA in Washington, DC, with Fairchild in charge. Fairchild detests the inclusion of the superfluous words "Seed and" in the name of the organization.

1898 March 22–Congress allocates $20,000 for the collection, purchase, testing, and preparation of foreign seeds, plants, bulbs, shrubs, and trees. Fairchild serves as "Explorer in Charge" for the next 27 years. He spends much of his time from 1898 to 1903 travelling in search of new plants. He temporarily resigned from Oct. 1898–Aug. 1900, and in the position of "Special Agent" plant explorer he made a "quick reconnaissance of the world."

1900–Bureau of Plant Industry is organized within the USDA. 1901 July 1–The Bureau of Plant Industry is formally established; it includes the former Division of Seed and Plant Introduction. It was the first official agricultural organization of its kind devoted exclusively to plant introduction. 1901 March 1–The Section of FSPI is placed under the Bureau of Plant Industry; it was referred to successively as the Office of Foreign Seed and Plant Introduction and then the Office of Foreign Plant Introduction. 1904 June to Oct.–Grand tour of the USA visiting experiment stations and people testing plants being introduced by the USDA, including Charles Sprague Sargent, director of Harvard's famous Arnold Arboretum [Cambridge, Massachusetts], and P.H. Dorsett at the new USDA plant introduction garden in Chico, California. Adrian J. Pieters directed the Foreign Seed and Plant Introduction Office during the last months of Fairchild's travels. 1904 Nov.–Fairchild meets Marian Bell, daughter of Alexander Graham Bell, whose sister had married into the Grosvenor family of *National Geographic* fame. He quickly falls in love. 1905 March–Fairchild learns of Frank N. Meyer from fellow Dutchman Adrian Pieters and coworker Erwin F. Smith. Soon thereafter, on March 10 Fairchild asks Pieters to telegram Meyer in St. Louis, Missouri, to ask whether he would be interested in going to China as an agricultural explorer (Fairchild 1938, p. 315; Cunningham 1984, p. 21). The dream of Meyer's youth had come true. But 3 months would pass before Meyer left St. Louis for Washington, DC.

1905 April 25–Fairchild and Marion Bell are married at Twin Oaks in Maryland. Grosvenor becomes Fairchild's brother-in-law. Wanting to live as far out in the country as possible, they bought (that summer) a 40-acre tract of land in the woods near Kensington, Maryland, through which Rock Creek flowed. Beyond the suburbs of Maryland, it was 10 miles northwest Washington, DC, and a mile beyond the end of the Chevy Chase. They soon build a home and plant many Japanese cherry trees and a garden; Barbour Lathrop named the place "In the Woods."

1905 July–Fairchild and Meyer first meet in Washington, DC, and instantly become mutual friends.

1916–David and Marian Fairchild purchase a piece of property located in Coconut Grove on Biscayne Bay, Florida; they name it The Kampong. On the property were many fine old tropical trees.

1934 Feb. 9–The Division of Plant Exploration and Introduction is established by the merging of the former Division of Foreign Plant Introduction and the former Division of Botany. 1935–Fairchild retires from active service, and spends and increasing amount of time at The Kampong in Florida. 1954 Aug. 5–Fairchild dies of a cerebral hemorrhage in Miami, Florida.

10559. Albano, Leilani. 1998. Nisei Week kicks off in Little Tokyo. *Daily News* (*Los Angeles, California*). Aug. 17. p. 4.
• ***Summary:*** "Second generation Japanese-Americans began Nisei Week in 1935 as a way to honor the issei, or first-generation Japanese immigrants to the United States.

"The festival was suspended for seven years when Japanese-Americans were interned in camps during World War II, and the celebrations resumed in 1949.

"'The festival is in honor of what the issei had gone through,' said Wendy Fujihara Anderson, a spokeswoman for the festival.

"Soybean lovers got a taste of their favorite cuisine Saturday and Sunday at the Nisei Week tofu festival, part of the overall event.

"Thirty Southland restaurants participated in the two-day celebration that became a blend of the old and the new, with traditional Japanese tofu plates served alongside contemporary dishes that included tofu enchiladas, tofu cheesecake and tofu seviche."

A photo shows vendors in tents serving tofu dishes along the street side in Little Tokyo (Los Angeles). Note: Nisei Week opened with a taiko drum festival, by the Daion Taiko drummers of Anaheim.

10560. Liu, Jeff. 1998. Third Annual Tofu Festival dazzles: Thousands of tofu enthusiasts attend Nisei Week tribute to soy bean cake product at JACCC. *Rafu Shimpo* (*Los Angeles, California*). Aug. 18. p. 1, 5. [Eng]
• ***Summary:*** This is the best overview seen of the 1998 L.A. Tofu Festival. An "estimated crowd of between 40,000-50,000 hungry people streamed into Little Tokyo this past

© Copyright Soyinfo Center 2014

weekend for a tribute to all things tofu." Over 40 restaurants and food providers offered tofu dishes. This year's festival was the biggest ever, spilling from the Japanese American Cultural and Community Center (JACCC) Plaza into South San Pedro Street. Popular recipes included: Fried tofu with garlic (by Empress Pavilion). Tofu cheese mousse. Tofu cheesecake (Inn of the Seventh Ray), Iced mocha cappuccino with soy milk. Halo-halo and soy snowcones. Tofu coffee dessert (Jello-like). Tofutti Cuties. Hawaiian orange passion mango banana tofu smoothie (from King's Hawaiian; "a remarkable and refreshing fruit-soy shake that is a wonderment to the sense..."). Tofu curry. Smoked eel with tofu and soba. Tofu tuna poke salad. Mabo tofu. Tofu avocado seviche (by Coma Tofu, an outreach to the Latino community organized by Yvonne Gonzalez; "a potent blend of minced onions, chopped cilantro and lime in an all-vegetarian version that substitutes crumbled tofu for fish"). A photo shows an aerial view of one street, lined with tent-like booths and jammed with people. Address: Rafu staff writer.

10561. Endo, Margaret. 1998. The LA Tofu Festival of August 1998 (Interview). *SoyaScan Notes.* Aug. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This year's Tofu Festival was the biggest and most successful yet. Since there is no admission fee to the Tofu Festival, the Little Tokyo Service Center raises its money by selling food scrip tickets. Each ticket costs $1.00 and can be used at any of the booths, for food, drinks, or novelty items. This year sales of those tickets was $69,000, almost double the $37,000 dollar figure last year. Saturday they sold $33,000 in tickets compared with $16,000 last year. Sunday they sold $36,00 in tickets compared with $20,000 last year. There were 40 food booths and 3 drink booths, including one selling soymilk snow cones. Most of the food booths were run by restaurants that served tofu dishes. One restaurant sold chilled edamamé. There was one tofu boutique selling t-shirts, polo shirts, shorts, etc. and on each was written LA Tofu Festival. This year there was a children's pavilion with really cute tofu-related games, soy coloring books sent by the United Soybean Board, and 300 soy-based crayons sent by Dixon-Ticonderoga. They also raise money by having corporate sponsors, and selling their tofu cookbook (which was only slightly changed from last year). There was also a program booklet, that contained a history of tofu.

Rafu Shimpo did lots of good English-language articles this year, including highlights of each restaurant that participated. The LA Times did nothing. The crowd was more racially diverse than last year, with a larger percentage of non-Japanese Americans and non-Asian-Americans, including a lot more Chinese-Americans, and Hispanics.

They did a lot of work with Yvonne Dreyfus of the Latino Outreach. She was on KBEA–the Latino station. It worked out pretty well but it was a little bit difficult for Yvonne. Because she wasn't a restaurant, she had much fewer resources as an individual, so LTSC had to help a lot with things like ordering the food products. A little more maintenance was required–but it was well worth it because of the outreach and exposure to the Latino community. Margaret is hoping she will stay involved next year. People liked her Tofu Seviche.

In Los Angeles there is a program on PBS (KCET-TV–channel 28) titled "Visiting... with Huell Howser." This coming Saturday at 6:00 p.m. and Sunday at 7:00 p.m. in Los Angeles (channel 28) a 1-hour documentary he filmed on Saturday about the Tofu Festival–All You Wanted to Know about Tofu will air on this channel. He first visited a tofu factory (American Foods) to show how tofu is made, then shot footage at the festival. The program will not be aired outside the Los Angeles area. The phone number of Huell Howser Productions is 213-953-5380. Note: They sent Soyfoods Center a free copy of the 1-hour video. A PR company volunteers their time each year and puts together a media packet of all the articles etc. about the Festival. Margaret will ask them to send one packet to Soyfoods Center. Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1613.

Japan throughout the summer (they're available frozen in the U.S.) make great hors d'oeuvres. They're packed with protein and fun to eat. The slightly fuzzy green pods tickle your lips as you gently suck the beans into your mouth. Provide bowls for the empty pods." The only ingredients are: 1 pound bag of frozen edamame. Coarse salt to taste. Instructions: Fill a 5-quart kettle three quarters full with water. Bring to a boil. Have ready a bowl of icy cold water. Cook the frozen edamame until bright green–2-3 minutes. Transfer them to the ice water. Drain well. May be prepared 4 hours ahead and kept in a bowl, covered with a towel and plastic wrap at cool room temperature. Just before serving, toss with salt to taste. Note: Dropping the hot edamame into ice water helps to keep the green color as bright as possible.

Letter (fax) from Dana Jacobi of New York, who discovered this article. 1998. Aug. 22. "As I am teaching, I have dubbed edamame and Sweet Beans 'the Kiwi of the '90s'... a currently exotic item that will become common in supermarkets over a 5-10 year period, which is what it took kiwis to become a staple."

• ***Summary:*** Preface and dedication. Introduction. Part I: Review of the literature. 1. General information about soya and proteins: 1.1. The soybean (Botanical, origin and history, soybean production and commerce worldwide, soya in the Democratic Republic Republic of the Congo {Congo, formerly Zaire}, structure and composition of soybean seeds, utilization of soybeans {with diagram}, food uses of soybeans {oil and meal, soy flour (4 types), soy concentrates and isolates, textured soy proteins {TVP, thermoplastic extrusion, spun fibers}, soymilk, tofu, other uses (shoyu, miso, tempeh, yuba)}, industrial uses of soybeans {linoleum, plastics, paints, varnishes, etc.}). 1.2. Proteins (in the human body, in foods), the structure of proteins (amino acids, ionization and acid-base properties of amino acids), protein bonds, denaturation. 1.3. Soya proteins (glycinin or globulin 11S, globulin 7S, hemagglutinins or lectins, protein inhibitors and other antinutritional factors, amino acid composition of soy protein). 1.4 Factors affecting the food value of soya: Acceptability problem (food value of raw soybeans), intolerance to soy proteins, off-flavors in soya and their source, inactivation of lipoxygenase, other treatments affecting the food value of soya: Alkalis.

2. Preparation and properties of soymilk. 2.1. Properties. 2.2. Advantages and disadvantages of soymilk compared with cow's milk. 2.3. Preparation. 2.4. Commercial / industrial production using the Alfa-Laval process.

3. Reminder of certain operations required for the preparation of soymilk powder: 3.1. Homogenization. 3.2. pasteurization and sterilization. 3.3. Concentration by evaporation. 3.4. Drying by atomization. 3.5. economies of energy in dewatering operations.

4. Some ideas on the methods of sensory evaluation: 4.1. The different methods. 4.2. Results and interpretations.

5. Important ideas in the study of the market, in determining the capacity of production, and in the economic evaluation of a project: 5.1. Study of the market. 5.2. Determining the capacity of production. 5.3. Economic evaluation of a project, incl. estimating fixed capital by adding capital costs.

Part II: Experimental, industrial calculations, economic calculations. Introduction. 6. Origin and characterization of the raw materials, trials for inactivation of lipoxygenase. 7. Determination of the optimal conditions for the preparation of soymilk. 8. Results of pilot plant trials. 9. Market study and determination of the capacity of production. 10. Description and calculations for the installation. 11. Economic evaluation of the project. General conclusion.

Tables show: (1) Number of people that can be supported for 1 year by the production from one acre

devoted to certain crops and animals. Fewest: Beef 190. Pork 319. Poultry 457. Most: Potatoes 5,329. Split peas 6,901. Soybeans 9,075. Algae 43,200–154,000. Yeast 3,275,000. (1.1) Leading soya producing countries in 1985 (worldwide, with area, production, and yield; USA, Brazil, China, Argentina, India). (1.2) Leading soya producing continents in 1985 (North and Central America, South America, Asia, USSR, Europe, Africa, Oceania). (1.3) Leading soya trading countries in 1985. Importers: Japan, Netherlands, R.F.A. (Republique Federal Allemagne = Germany), Spain, Italy. Exporters: USA, Brazil, Argentina, China, Paraguay. (1.4) Production of soya in the Congo, by province 1970-1978 (the leading producer by far in 1978 was Western Kasai). (1.5) Production of soya in Katanga [formerly Shaba, before that Elisabethville] (1990-1994; by far the leading producer is Tanganyka). 1.6 Total production of soya in the Congo (1,000 metric tons) from 1970-1995 (increased from 1.7 in 1970-74 to 18 in 1995). (1.7) Average composition of different parts of the soybean seed. (1.8) Physico-chemical composition of soybean seed (ranges and average). (1.9). Mineral content of soybeans. (1.10). Vitamin content of mature soybean seeds and soybean meal. (1.11) Fatty acid composition of soybean oil. (1.11A) Enzymes in the soybean: Lipoxidase, urease, lipases, beta-amylase. (1.12) Properties and characteristics of the water-soluble fractions of soybean seeds. (1.12A) Variations in the solubility of proteins from defatted soy flour at various pH levels. (1.12B) Amino acid composition of soybean protein. Address: Lubumbashi, Katanga Province, Congo.

10568. Powell, Douglas. 1998. Genetically engineered soya. *Canadian Soybean Technical Bulletin* (*OSGMB, Chatham, Ontario, Canada*) 4(1):1-2. Aug.
• ***Summary:*** The article begins: "Genetically-engineered Roundup Ready soybeans must be considered the most successful product of agricultural biotechnology to date–if farmer acceptance is the measure.

"Monsanto estimates that more than 20 million acres of the transgenic soybeans were planted in the U.S. this year, up from 10 million in 1997 and 1 million in 1996. Next year, the number could easily double again to 40 million, out of a total of some 70 million U.S. acres. Similar ratios of genetically engineered soya are being planted in Canada.

"The rapid acceptance of herbicide-resistant Roundup Ready soybeans is linked to cost savings for farmers who can use fewer chemicals to keep weeds out of fields."

"But what if the measure is consumer support?... Around the globe consumers are asking the same questions: Why are you messing with nature? Why don't you label everything? Can you guarantee there won't be any long-term risks? Why are you playing God?

"One way to glimpse the public discussion of agriculture biotechnology is through the many public opinion surveys of biotechnology that has been conducted internationally over the past 20 years." Discusses approaches to and problems with labeling.

"Are there known health risks? Yes, in one instance, an allergen was transferred from one crop to another. Once discovered, the company acted responsibly and halted work at an experimental stage."

"In 1989 there was an outbreak in the U.S. of a new fatal blood disease, eosinophiliamyalgia syndrome (EMS). The outbreak killed at least 27 and sickened another 1,500. The cause was traced to certain batches of the amino acid, L-tryptophan, manufactured in Japan by Showa Denko and widely available in the U.S." Subsequent investigations by U.S. health authorities found that in 1989 the company had begun using a strain of *Bacillus amyloliquefaciens,* which had been genetically engineered to produce larger amounts of L-tryptophan. Address: Asst. Prof., Dep. of Plant Agriculture, Univ. of Guelph, Ontario, Canada.

10569. Sato, Satoru. 1998. Chef Sato's all-natural desserts: Delicious cakes, pies, pastries, and other irresistible sweets. Becket, Massachusetts: One Peaceful World Press. 96 p. Foreword by Aveline Kushi. Recipe index. 22 cm.
• ***Summary:*** This innovative little book contains "42 delicious, sugar-free, dairy free desserts." Soymilk is widely used in place of dairy milk (as in fillings), and tofu is used in many frostings. Maple syrup is used as the sweetener. Address: Great Barrington, Massachusetts.

10570. Eden Foods, Inc. 1998. Eden–The highest quality natural food (Catalog). Clinton, Michigan. 12 p. 28 cm.
• ***Summary:*** This 8-page color catalog, with four pages of inserts, introduces Eden Foods, its products, philosophy, and history. A timeline running across the bottom of each page lists 23 milestones in the company's history, which is said to have started in 1968. Note: The founders of this company all agree that it was not founded in any form until Nov. 1969.

Contents: Eden Foods–Thirty years of dedication: Macrobiotic understanding, tribute to Herman Aihara, Old World pasta–goodness of grain, maturing as an organic manufacturer, organic pioneers of the audit trail, Eden today (supporting 200 family farms with over 20,000 acres of organic land). Eden Foods–A dedicated network: Color maps show the source of products in the USA, Japan, and Europe. Intuitive imported foods, the Eden brand–fulfilling a promise, organic pest management, our GEO (genetically engineered organisms) policy (since 1993), preserving organic integrity. Edensoy creates a new food category. Eden in the next 30 years? Company goals (rear cover).

The first insert, dated Sept. 1998, is written and signed by Michael J. Potter, "leading Eden Foods for twenty-seven years" (i.e. since 1971). The second insert lists all or most of Eden's products. The third is a mailer inviting comments. Address: 701 Tecumseh Road, Clinton, Michigan 49236. Phone: 517-456-7424.

• ***Summary:*** "All 13 samples of Japanese barley miso accepted for the Kumamoto Prefecture Miso Competition of 1995 were assessed by tasting and by GC [Gas Chromatography] analysis using FID, SIM..."

On Kyushu, Japan's main southernmost island, barley miso is more widely produced and consumed than rice, miso. The salt-tolerant yeast *Zygosaccharomyces rouxii* is added and the mash is allowed to ferment for 3-6 months at room temperature. Address: 1-2. Kumamoto Industrial Research Inst., 3-11-38 Higashi, Kumamoto City, Kumamoto-ken 862, Japan.

10572. Morinaga Nutritional Foods, Inc. 1998. "You don't have to be a vegetarian to love Mori-Nu Tofu" (Ad). *Vegetarian Times.* Sept. p. 27.
• ***Summary:*** This full-page color ad shows a lovely red-haired lady dressed in a chef's uniform, with her right elbow resting on a huge whisk. Below the photo we read: "Alex Hilebronner, Reel Foods Productions, Los Angeles, California / Chef, Caterer, Part-Time Vegetarian."

The text reads: "I'm a caterer. My company does parties, business luncheons, film crew feeds, and custom meals. I've been cooking with tofu for 10 years and every day I get requests for tofu dishes. Maybe my clients eat tofu to stay trim. Or they've hears about the benefits of tofu–like fighting cancer, heart disease, high cholesterol, and even reducing the hot flashes of menopause. Whatever the reason, healthy, good tasting food is always important. That's why I choose creamy smooth Mori-Nu Tofu. It purées, marinates, and grills like no other tofu to create delicious low-fat dishes like tomato soup, pad thai, or chocolate pie. The airtight package keeps Mori-Nu fresh and ready to use without refrigeration... But don't just take my word for it. Visit www.morinu.com and try one of the recipes yourself."

A color photo in the lower right corner shows two packages of Mori-Nu Tofu (from and extra firm) on a small wooden cutting board, surrounded by fresh vegetables. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-NOW-TOFU or 310-787-0200.

10573. Morinaga Nutritional Foods, Inc. 1998. Surprise. It's Mori-Nu Tofu (Ad). *Natural Foods Merchandiser.* Sept. p. 62.
• ***Summary:*** This full-page color ad shows a package of Mori-Nu Silken Style tofu on a wooden cutting board surrounded by strawberries, raspberries, tofu cubes, carrots, and mushrooms. At the top right is a bowl of Creamy pumpkin soup. At the top left a plate of Fiesta burritos. Top center: Chinese un-chicken salad. Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638.

10574. Nakatomi & Associates. 1998. L.A. Tofu Festival media clips (Portfolio). Santa Monica, California. 53 inserts. 28 cm.
• ***Summary:*** This is a portfolio of 53 newspaper clippings, advertisements, news briefs, and articles related to the L.A. Tofu Festival, which took place in Los Angeles on 15-16 August 1998 (Saturday and Sunday). The dates range from August 7 to 21. The most popular source was *Rafu Shimpo* (an English-language newspaper for Japanese Americans) with 21 clips, followed by the Los Angeles Times (Food section, calendar section), with 6 clips, and the Daily News (incl. L.A. Life Weekend, 4). But clips from many other newspapers, spanning many ethnic groups, also appear: *Asian Journal, Chi-Am Daily News* (*3*), *Chinese Daily News, Downtown News, Gardena Valley News, KoreAm Journal, Korean Journal, La Opinion* (*Spanish*), *Lighthouse* (*2*), *Los Angeles Magazine* (*2*), *New Times Los Angeles, Pacific Asian Current, Pacific Citizen, Sing Tao Daily* (*Chinese*), *Vecinos del Valle* (*Spanish*), *and Viet Bao Kinhte* (*Vietnamese*).

These clips show how the Festival was promoted through and covered by the media in the greater Los Angeles area. Clearly the great success of this year's festival was due, in part, to the excellent public relations work of Nakatomi & Associates. A number of the clips in *Rafu Shimpo* featured individual restaurants that would be serving their favorite tofu dishes at the festival. This concept, starting on July 31, spotlighted 12 restaurants. Address: 1301 Montana Ave., Santa Monica, California 90403. Phone: 310-656-1616.

10575. *Soya & Oilseed Bluebook.* 1998--. Serial/periodical. Bar Harbor, Maine: Soyatech, Inc. Peter Golbitz, publisher and editor. Frequency: Annual.
• ***Summary:*** Preceded by Soya Bluebook Plus. A directory and information book for the soybean processing and production industries. The first issue (shipped Sept. 1998) is subtitled "The annual directory of the world oilseed industry." On the cover, below a map of the world is printed the date "1999" in large letters, followed by "A Soyatech Publication." Crops featured on the front cover and inside are "soya, corn, cottonseed, canola, rapeseed, sunflowerseed, palm kernel, palm, coconut, and peanut."

Contents (the four main sections are marked with a fold-out tab): Translations of oilseed terminology (English, German, French, Spanish, and Portuguese). Organizations and government agencies: Complete listings by country. Oilseeds and oilseed products: White pages (Index, individual crops), catalog pages, yellow pages (complete company listing by country). Equipment supplies and services. Oilseed statistics. Oilseed reference: Oilseed glossary, standards and specifications, oilseed technical

© Copyright Soyinfo Center 2014

charts and tables. Indexes: Comprehensive index, internet address index, brand name index, advertiser index.

Soy-related terms appearing in the translation section (p. 9-15) are: (1) Oilseeds and products: dairy analogs, lecithin–edible, lecithin industrial, meat analogs, miso, organic soy products, soy distillate, soy fiber, soy flakes–defatted–edible, soy flakes–full fat, soy flour–defatted, soy flour–enzyme active, soy flour–full fat, soy flour–low fat, soy flour–roasted, soy flour–textured, soy grits, soy isoflavones, soy livestock feed, soy oil margarine, soy oil shortening, soy oil–crude, soy oil–edible, soy oil–hydrogenated, soy oil–industrial, soy oil–refined, soy oil-based fuel, soy protein concentrate, soy protein isolate, soy protein–hydrolyzed, soy protein–industrial, soy sauce, soy sterols & tocopherols, soy-based foods–other, soybean fatty acids, soybean hulls, soybean meal, soybean meal–full fat, soybean seed breeder, soybean seed (for planting), soybean soapstock, soybeans–food grade, soybeans genetically modified, soybeans–green vegetable, soybeans–identity preserved, soybeans–non-gmo, soybeans–organic, soybeans, whole dry, soymilk beverages, soymilk powder, soynuts, tempeh, tempeh starter cultures, textured vegetable protein, tofu & tofu products, tofu powder. (2) Equipment & services: Coagulants for tofu, soymilk & tofu processing equipment, sprouting equipment. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

10576. Culbertson, Ewell. 1998. Growing edamamé (green vegetable soybeans) at Pachamama Organic Farm in Longmont, Colorado (Interview). *SoyaScan Notes.* Oct. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ewell and his wife, Lauren, began farming about five years ago. Before that he was in sales. They bought this Pachamama Organic Farm (a 38-acre farm in Longmont, Colorado) two years ago. The couple began growing edamamé (he uses that name) on their farm in 1997. That first year they tested six varieties (100 row feet of each variety) on a small plot of about one-tenth of an acre total. The experiment was suggested to him by Dwayne Johnson, a professor at Colorado State University and the "New Crops Specialist" in the Department of Soil and Crop Sciences. Dwayne's job is to introduce, develop, and sometimes breed new crops for Colorado. Ewell has known Dwayne for 5-6 years and has tested many new crops (such as vegetable quinoa) for him previously. Dwayne got these six varieties from Seedex, a Japanese seed company in Colorado; their main business is sugar beet seeds, but they are looking at edamamé as a possible new seed product. The varieties grew well, and they were well accepted by customers at local farmers' markets and natural food stores. The Culbertsons like several varieties in particular (Ewell does not know the varietal names), so over the winter they imported 60-70 lb of those varieties from Seedex.

This year they grew about 1¼ acres, starting their planting in May, then planting a new batch about every five days so that they would have a steady supply at harvest time about 100 days later from mid-August into late September. They planted nine different successions. "The harvest is very tricky. You have only a few days before the pods turn yellow and the seeds become starchy. Then they are no good." Ewell harvests when the seeds have their maximum solids content, and just as the green pods start to turn light green but before they start to turn yellow. The first year they lost some because they waited too long before harvest. When there were some they couldn't sell, they let the plants dry in the field and saved the seed–which is very expensive to buy. Next year they plan to expand again to about 2-3 acres, and to plant their entire crop from hand-harvested saved seed–of which they about 500 pounds. This year they did a lot of demos with their edamamé. Each Friday night before a farmers' market they would cook about 20 lb of edamamé to serve as samples. The flavor is best if they sell them cooled, the next morning (Saturday) at the farmers' market. "They are so sweet when served very fresh. I compare they to sweet corn." People find that his freshly cooked edamamé taste much better that those which have been frozen.

They cut off the soybean plants just above the ground with a pair of flower scissors, then bundle the plants–typically 2-3 plants per bundle (which weighs at least one pound, or a little more). One fresh bundle retails for $5.00 at the farmers' market or $5.99 at natural food stores. They attach a little hang tag to each bundle. It says "Pachamama Farm–Edamamé" on the front. On the back is an explanation of what they are, plus cooking instructions.

Dwayne Johnson has found that the temperature differential during the growing season between the hot days and cool or cold nights in Colorado causes the edamamé to sweeten. Dwayne has measured the sugar level in Brix and found it to be unusually high. Japanese customers who know this food say they have never tasted such sweet and delicious edamamé. In an area like the Midwest where the nights are warm, the plant continues to transpire and releases sugars. So where the plants are grown is as important to good flavor as what varieties are grown.

Ewell believes that edamamé will grow into a huge market in the United States. It should eventually surpass the broccoli market. People like edamamé much better than broccoli. "All you do is boil 'em up in a little salt water, then enjoy 'em with a beer. People flip over them. People are beating my doors down to buy these beans."

Another expert on edamamé is Prof. David Lang, a retired professor from the University of Nebraska (home phone: 402-796-2479). He did intensive and very promising research (about 3 years ago) for several years on edamamé in Nebraska, speaks some Japanese, and formerly had a student named Mr. Okada who did research on marketing edamamé. Okada still works for Daiei supermarkets in Japan. Address: Pachamama Organic Farm, 10771 North 49th St., Longmont,

Colorado 80503. Phone: 303-776-1924.

10577. Lang, David L. 1998. Work with edamamé at the University of Nebraska (Interview). *SoyaScan Notes.* Oct. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** David used to work with the University of Nebraska, Food Processing Center, HC Filley Hall, Lincoln, Nebraska 68588. He was involved with the marketing of this new product, and he saw Japan as the primary market. Before he retired from the University several years ago, he worked with organic farming and with new crops. He lived in Japan for about 4 years working in communications, and he still speaks a little Japanese. It was only after he joined the University that he got farm experience. He really got interested in edamamé. His group actually grew about 40 acres of commercial edamamé about 3 years ago. With financial help from a Japanese company, they sent one container to Japan for comparison and testing. There was very little difference between the American-grown edamamé and others consumed in Japan except the Americans did have the capability to put it in the kind of pretty package the Japanese wanted. But the flavor and appearance were excellent. David's group bought 1,000 pounds of seed one year from Daiei, who bought it from a Japanese seed company; they also used vegetable-type soybean seed that researchers at the University of Nebraska had developed. He has the varietal names in papers he wrote while at the university.

Mr. Okada had been a major marketer for Daiei corporation for 20 years or so before he came to America. He did work with edamamé in Thailand and Taiwan. A specialist in edamamé, he could look at and taste new varieties grown in new places and tell whether or not they could be sold in Japan. After he enrolled at the University of Nebraska, he was assigned to David's department to assist Nebraska companies in marketing their products in Japan. He is a very good friend of David's, and even stayed at David's house many times. David saw him in Japan last February. He's a wonderful guy.

David has written quite a bit about edamamé, and he sent much of that to Ewell Culbertson, who grows edamamé in Colorado. David wanted to visit him this year so he might work with him during the next growing season.

David believes edamamé have a very bright future in America. In part because of this, the whole experience in Nebraska was quite frustrating. His group was unable to find a processor who could handle the actual blanching and freezing process–without taking down a line of some company that was processing some other food. No company was willing to invest enough money to build even a small plant that could have made the product successful. David had no trouble selling the edamamé–"Everybody loved 'em. About three years ago we took edamamé to bars and taverns, county fairs and state fairs, everywhere. People thought they were just wonderful." He went to a small town north of Lincoln, Nebraska, and got together with several businesses that pitched in about $20,000 to David's project on about 3 farms outside their area. They wanted to do this very much, but they couldn't get together enough money to make it work.

Another group of soybean growers in southeast Iowa (not Iowa State University) has marketed 10-12 containers each season. He has names and addresses in his files. Address: 331 Hudkins, Malcolm, Nebraska 68402.

10578. Stromnes, John. 1998. Zen among us: Former Seattle teacher finds a peaceful existence in western Montana. *Missoulian* (*Missoula, Montana*). Oct. 5. p. A1, A8.
• ***Summary:*** Genki Takabayashi, age 66, a Zen master born in Japan, is teaching authentic Rinzai Zen Buddhist meditation at a temple located in a rented farmhouse near Ronan, Montana. He is one of only three native Japanese teachers of the Rinzai Zen school in America. He is married to an American named Leslie Gannon. Genki Roshi likes to make his own tofu, using a primitive, 300 year old hand-turned stone mill. As part of his daily practice, he grinds ten pounds of dried soybeans (which have been soaked) at a time. Large color photos show: (1) Roshi grinding soybeans–with Montana scenery in the background. The stone mill is inside a large, shallow galvanized metal bucket. (2) Roshi dressed in his formal brown robes, sitting zazen near his home altar.

Also included with this newspaper article: (1) A letter from Leslie Gannon, dated 15 Oct. 1999. She hopes to start a small commercial tofu shop as a source of income. (2) The Newsletter of Zen No Ji Farm (March 1999, Vol. 2, Issue 1). (3) A color photo of Roshi standing in his robes. (4) The June/July 1999 issue of Inspiring Times (Helena, Montana), which contains an article about Genki Roshi titled "Mountain Clay," by Bill Halinan (p. 6, 10). Roshi was born in 1933 in Japan, and entered the monastery at age 11. He has practiced Rinzai Zen for 55 years, many at Daitokuji in Kyoto, but the most recent 20 years were with the Seattle Monastery in Seattle, Washington. He and his new wife Leslie moved from Seattle to the Flathead Valley in the summer of 1997, drawn by the mountains and rural farm setting. Photos show: (1) The roshi making tofu. (2) Leslie Gannon and Genki Roshi in robes. Address: Staff reporter.

10579. Wannamaker, Luther B.; Wannamaker, Mary Joe. 1998. Memories of John E. Wannamaker, soybean developer and farmer from South Carolina (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John E. Wannamaker (pronounced WAN-uh-may-kur) was a minor seedsman and farmer from St. Matthews, South Carolina. He had a deep, lifelong interest in the soybean, and is best known for developing the soybean

© Copyright Soyinfo Center 2014

varieties named J.E.W., after his initials. John was a very far-sighted man, especially when it came to the potential and future of soybeans.

Luther's father and John Wannamaker were cousins. Mary Joe, who has a PhD degree, is Luther's daughter. Luther knew John Wannamaker quite well.

John had a nephew who died about 3 years ago. He lived as a hermit at the end of the woods. When his will was probated, it was discovered to everyone surprise, that he left all of his land to a land trust, that would set it aside for conservation and not develop it. His uncle, John, would have liked that!

Luther returned to the business in 1966 to work with his father. John E. had begun to sell soybean varieties by that time, and Luther continued this practice. Bragg was one of the varieties sold. Unfortunately the family no longer has any seed catalogs from that time period.

Luther grows mostly cottonseed, but for the last ten years he has grown a black soybean (*kuromamé*) variety named Tamba, as a specialty crop. It has a higher sugar content than most soybeans. He ships most of his black soybeans (mature/dry) to Japan, where they are boiled with sugar and served on New Year's Day (January 1). Now that the Japanese have discontinued their old rice-growing quotas, they are growing more soybeans in Japan. These compete with Luther's black soybeans, so he would like to try to sell his black soybeans to Asian Americans–especially on the West Coast.

This year, for the first time, Luther is growing (experimentally) a black natto soybean. The Japanese think that black means sweet. He is also considering harvesting his Tamba at the green vegetable stage (the seed is still green) to sell as edamamé. He thinks they would grow well since his latitude is similar to that where edamamé are grown in Japan. Moreover, he has a patented soybean picking machine. However he does not have a freezer or a cooker. Address: L.B. Wannamaker Seed Co., P.O. Box 497, St. Matthews, South Carolina, 29135. Phone: 803-874-3011.

10580. Lerner, Jane. 1998. Global Protein may be shut down: Valley Cottage tofu packager out of second chances, official says. *Journal News* (*The*) (*Valley Cottage, New York*). Oct. 25. p. 12A-13A.

• ***Summary:*** The article begins: "A Valley Cottage tofu-making company has one of the worst food safety and sanitation records in New York and could be shut down by the state any day because of its repeated failure to clean up.

"Global Protein Foods, which processes and packages tofu, bean sprouts and soy beans, has been charged with more violations–for roaches, rat droppings, dirty equipment–than any other establishment in Rockland, Westchester or Putnam counties.

"The company, which has been ordered to pay nearly $7,000 in fines since 1996, is among the worst offenders in the state, said Peter Gregg, spokesman for the state Department of Agriculture and Markets."

Records show that the company has failed 21 of 29 inspections by the Department since 1993. The company failed 8 of its last 10 inspections, the most recent of which took place on Oct. 14. "'Our file on them is as thick as the telephone book,' he said. 'This place continues and continues to ignore our laws and regulations.'"

Located at 707 Executive Blvd., in an otherwise spotless corporate park, the entrance to Global Protein Foods is heaped with garbage. The business has been in Valley Cottage for 7 years. Company president Haruhisa Tsuchitani, now on a business trip in Japan, was unavailable for comment.

10581. Archer Daniels Midland Co. 1998. Annual report: The nature of our business. P.O. Box 1470, Decatur, IL 62525. 40 p. Oct.

• ***Summary:*** Net sales and other operating income for 1998 (year ended June 30) were $16,109 million, up 16.3% from 1997. Net earnings for 1998 were $403.6 million, up 7.0% from 1997, but far below the recent peak of $796 million in 1995. Shareholders' equity (net worth) is $6,505 million, up 7.5% from 1997. Net earnings per common share: $0.68, up 7.9% from 1997. Number of shareholders: 32,539.

"We have moved rapidly toward a borderless world... Globalization of trade has changed the face of agriculture. The central focus for agriculture today is the emergence of consumer power. Consumer demand drives the entire food and fiber system" (p. 1).

One half-page color photo (p. 2) shows the factory where ADM makes isoflavones at Decatur, Illinois. High on one side is the huge green and black logo: "Novasoy–The power of soy." This is the world's first commercial isoflavone plant. A larger photo (p. 3) shows a bottle of Novasoy Soy isoflavones–a co-branded ingredient found in leading nutritional supplement products. "ADM is meeting the needs of health-conscious consumers by offering a wide range of health and nutrition products, including nutraceuticals, also known as functional foods.

"Among our nutraceutical products are soy-derived isoflavones, which have been shown in initial studies to stimulate bone formation (thus boosting the body's natural defenses against osteoporosis), to inhibit the growth of cancer cells, and to contribute to lower cholesterol levels. In addition, isoflavones are thought to play a role in alleviating the symptoms of menopause. ADM produces Novasoy isoflavones in the world's first commercial isoflavones plant."

ADM now has a major presence in the South American soybean market, with five crushing plants (that crush 5,600 tonnes/day), two Atlantic coast export facilities (incl. a new one at Tubarao, southern Santa Catarina state, Brazil), and nearly two million metric tons of storage capacity (p. 5).

© Copyright Soyinfo Center 2014

A world map (p. 6-7) titled "ADM's global network" shows ADM processing plants, partnerships, grain elevators, and A.C. Toepfer trading offices. The company owns 800 trucks, 13,000 railcars, and 2,250 river barges (p. 11).

"ADM Lecithin: Early in 1998, the Food and Nutrition Board of the Institute of Medicine established for the first time a Dietary Reference Intake (DRI) for choline, the principal component of lecithin. Ultralec, a deoiled lecithin made from an innovative ultrafiltration technology exclusive to ADM, is an excellent source of dietary choline. This plant has been completed in Decatur, Illinois. Acquisitions brought significant increases to production capacities in the past year. In the U.S. the acquisition of Moorman Manufacturing Co. included their lecithin production facilities at Quincy, Illinois and Helena, Arkansas. Production capacity was gained in Mainz, Germany through the acquisition of Soya Mainz GmbH" (p. 16). Note: Moorman Manufacturing Co. bought the Quincy Soybean Processing Co. (Quincy, Illinois) from Irving Rosen in 1961.

"ADM Research: Nutraceuticals (or 'functional foods') now in production include vitamin E, vitamin C, isoflavones, granular lecithin, and sterols (from vitamin E). Among ADM's forthcoming health and nutrition products are the antioxidants beta-carotene, oligosaccharides, and tocotrienols. Already in use in Japan, oligosaccharides are complex sugars that belong to the nutritional category of prebiotics that have been proven to decrease the risk of colon cancer and perhaps increase life expectancy" (p. 16).

Haldane Foods has four factories in England that make a variety of "meat and dairy alternatives... New products include meatless slices, including chicken, ham, and 'Vege-Bacon." Haldane also makes an outstanding dairy-free ice cream (p. 17).

Color photos show: (1) Dwayne Andreas shaking hands with Shimon Perez (facing p. 1). (2) A white plastic bottle of NovaSoy Soy Isoflavones (p. 3). (3) ADM's dock and export facility in the Atlantic port city of Tubarao, Brazil (p. 5).

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders." Address: Decatur, Illinois.

10582. Shurtleff, William; Aoyagi, Akiko. 1998. The book of tofu. 2nd ed. Revised. Berkeley, California: Ten Speed Press. 336 p. Oct. Illust. by Akiko Aoyagi Shurtleff. Index. 28 cm. [321 ref]

• ***Summary:*** This edition contains a completely new "Appendix B–Directory of Tofu Makers" (p. 313-316, updated to 1 Aug. 1998). The page "About the Authors" (autobiographical) has been updated, and the original photograph has been replaced with two more recent ones–reflecting the fact that Bill and Akiko separated in Nov. 1993 and their marriage ended in May 1995.

After the first printing in Oct. 1998, the Preface was quite extensively revised (but not updated) to include more about how this book came into being (early dates and names), including the important contributions on Jeffrey and Gretchen Broadbent, and of Nahum and Beverly Stiskin. These Preface changes first appeared in the second printing of May 1999.

On page 336 is "The Best of Vegetarian Cooking from Ten Speed Press" (descriptions of eight cookbooks, with price and ISBN).

The inside rear cover has been updated, and now includes current information about SoyaScan, the unique computerized database produced by Soyfoods Center. This database now contains more than 55,000 records from 1100 B.C. to the present, and more than 73% of all records have a summary / abstract averaging 128 words in length. A description of the four different types of records (published documents, commercial soy products, original interviews and overviews, and unpublished archival documents), and the number of each type, is given.

The front and rear covers, title page, table of contents, and the first page of each section have been redesigned to give the book a much more contemporary look. Still contains 500 vegetarian recipes–both Western and Eastern style.

Ten Speed Press gave this book a new ISBN: 1-58009-013-8. Yet despite the many changes described above, the authors preferred not to have this called a "new edition" or "revised edition." Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

10583. Noon, Ed. 1998. Importing frozen edamamé from China for Safeway (Interview). *SoyaScan Notes.* Nov. 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ed (who is a Caucasian American) runs a company (Noon International) that imports and exports frozen vegetables. He deals a lot with the Asian community and he travels frequently to East Asia, especially China, Taiwan and Japan. Wants to import frozen edamamé in the pods from China for Safeway, to package under their Select label. He is working with Janet Olson, who is in charge of Quality Assurance at Safeway. He has been interested in edamamé for years, but during the past 12-18 months he has noticed a big increase in awareness of this product in America, especially among Americans who eat at Japanese restaurants. There, edamamé are often given away as an hors d'oeuvre free of charge, in the pods, in little dishes or baskets, usually served cold–but sometimes warm. He has liked the product for years, and has brought in samples for his family and staff. They have all enjoyed it. Several years ago he visited SunRich, in Minnesota; they were growing edamamé. Ed has even tried growing edamamé in Honduras and Mexico–for the first time 2½ to 3 years ago, and most recently about 1½ years ago. He now sells some frozen shelled edamamé to a company named Logan–a big marketing company like the Birdseye of Australia; Logan sells them shelled under the name Green Soybeans.

Shelled edamamé is also a good product, but it has

© Copyright Soyinfo Center 2014

one big problem; it looks too much like a lima bean or green pea, and compared with those two foods, edamamé are much more expensive. Ideally, Ed would like to market this product to bars; they could sell it–as is done in Japan–as an hors d'oeuvre like peanuts–with beer or other alcoholic beverages. But the problem is that edamamé require considerably more care than peanuts–especially refrigeration–and there will be losses from spoiled products that are held too long.

Ed hasn't imported foods from Japan for about ten years, because of the appreciation of the Taiwan dollar vs. the American dollar. He imports many products from China, but since the Chinese have not devalued their currency, their price is not as low as in most other Asian countries. Address: Noon International, 3840 Blackhawk Road, Suite 100, Danville, California 94506. Phone: 925-736-6696.

10584. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*). 1998. Nattô kin to nattô no ito [*Bacillus subtilis* (*natto*) and natto's strings]. 45(11):710. [3 ref. Jap]

10585. Culbertson, Ewell. 1998. The work of Seedex Inc. in Longmont, Colorado, and its president Akio Suzuki Colorado (Interview). *SoyaScan Notes.* Dec. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Seedex is a Japanese seed company in Longmont, Colorado. Akio Suzuki, who is about age 60, was born and raised in Japan, but has a PhD in agriculture from North Carolina State University, is the company president. Seedex's main business is sugar beet seeds, but they are looking at edamamé as a possible new seed product. Seedex has a relationship with two seed companies in Japan that breed edamamé and are working on about 20 varieties. Seedex has also worked closely with Dwayne Johnson for the last 4-5 years in developing new varieties of edamamé. Last August (4 months ago) Seedex paid for Dwayne to go to Japan to study seed harvesting equipment for mature dry soybeans.

When a grower, such as Ewell, buys good quality edamamé seed from Japan it costs $12-$26 per pound. When seeded at the rate of 80 lb/acre this comes to $960 to $2,080 per acre just for the seed! Seedex now has excess edamamé seed that they would like to sell.

Ewell believes that edamamé has a bright future in America since consumption is now growing rapidly in various parts of the country. Mr. Suzuki seems to have a much less optimistic view of the crop and its future; therefore, Ewell feels, the pace of the Seedex development program is slow and somewhat half-hearted. Address: Pachamama Organic Farm, 10771 North 49th St., Longmont, Colorado 80503. Phone: 303-776-1924.

10586. Takai, Wataru. 1998. Re: Several manufacturers of tofu equipment have gone bankrupt in Japan during 1998. Letter (fax) to William Shurtleff at Soyfoods Center, Dec. 18. 1 p.
• ***Summary:*** These include: (1) Touffer Co., formerly named Takahashi Shoten (Nagoya). (2) Nakamuta Seisakujo (Kyushu). (3) Hoshitaka Co. The Japanese economy has been struggling for the past 8 years or so. Address: Takai Tofu & Soymilk Equipment Co., 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. Phone: 011-81-0762-48-1355.

10596. Wu, Anna H.; Ziegler, R.G.; Nomura, A.M.; West, D.W.; Kolonel, L.N.; Horn-Ross, P.L.; Hoover, R.N.; Pike, M.C. 1998. Soy intake and risk of breast cancer in Asians and Asian Americans. *American J. of Clinical Nutrition* 68(6S):1437S-43S. Supplement. Dec. [46 ref]
• ***Summary:*** The risk of breast cancer varies significantly throughout the world. Rates are highest among whites in the USA and Europe, and lowest among native Japanese and Chinese and other Asians in their homelands. The risk among the first group (whites) has historically been about 6 times as high as that of the risk among Asians. Migration studies have proved that this large difference in risk is not caused by genetic differences. Evidence from case-control studies suggests, but not entirely consistently, that soy intake may protect against breast cancer.

Two of three epidemiologic studies published before the 1990s suggested that intake of soy may protect against breast cancer (See: Nomura et al. 1978; Hirayama 1986). Since 1990, four case-control studies have evaluated the association between self-reported soy intake and breast cancer: See Lee et al. 1991, and 1992 (Conducted among Chinese in Singapore); Yuan et al. 1995 (Chinese in Shanghai and Tianjin, China); Hirose et al. 1995 (Japanese in Nagoya, Japan); Wu et al. 1996 (Asian-Americans {Chinese-, Japanese-, and Filipino Americans} residing in the San Francisco-Oakland metropolitan statistical area, Los Angeles County, and Oahu, Hawaii). This article compares those studies very carefully.

In groups consuming similar amounts of tofu, the tofu was more protective in Asians who migrated to the USA, than to Asians born in the USA. Address: Dep. of Preventive Medicine, Univ. of Southern California, Los Angeles; Environmental Epidemiology Branch, Div. of Cancer Etiology, National Cancer Inst., Bethesda, Maryland; Epidemiology Program, Cancer Research Center of Hawaii, Univ. of Hawaii, Honolulu; Northern California Cancer Center, Union City.

10600. Nikkan Keizai Tsûshin-sha (Nikkan Keizai News Agency). 1998. Miso no shuyô-meka [Japan's largest miso manufacturing companies]. Tokyo, Japan. 1 p. [1 ref. Jap]
• ***Summary:*** This table ranks Japan's top fifty miso manufacturers in descending order of volume produced. For each company it gives the company name, prefecture where the company is located, and tonnes (metric tons) of miso produced in 1993, 1994, 1995, 1996, and 1997.

The top ten companies (with their output in tonnes) for 1997 and 1998 are: (1) Marukome 77,000 / 81,500 (they do not export any). (2) Hanamaruki 38,800 39,200 (they export to Westbrae, Canada). (3) Kanesa 27,300 / 27,800. (4) Marusan-ai 26,230 / 26,800 (they export to Eden Foods). (5) Miyasaka Jozo 19,080 / 18,900. (6) Hikari Miso 14,700 / 16,000. (7) Yamajirushi 15,200 / 15,100 (they export to San-J). (8) Fundôkin Shoyu 13,900 / 14,100. (9) Ichibiki 13,100 / 13,000. (10) Takeya 12,000 / 11,500.

Also: (11) Marudai 11,300 / 11,400. (13) Nagano Miso 9,500 / 9,450. (16) San Jirushi Jozo 8,750 / 1,700. (25) Sendai Miso Shoyu 4,900 / ? (they export to Westbrae).

The total amount of miso produced in Japan by all companies was as follows by year (in tonnes): 1993–561,259. 1994–540,390. 1995–539,427. 1996–542,077. 1997–542,238. 1998–548,750. Address: Japan.

10601. Onozawa, M.; Fukuda, K.; Ohtani, M.; Akaza, H.; Sugimura, T.; Wakabayashi, K. 1998. Effects of soybean isoflavones on cell growth and apoptosis of the human prostatic cancer cell line LNCaP. *Japanese J. Clinical Oncology* 28:360-63. *

10602. **Product Name:** [Tofu-yo fermented tofu].
Foreign Name: Awa Beni Dôfu.
Manufacturer's Name: Otsuka Foods Co., Ltd.
Manufacturer's Address: Osaka, Japan.
Date of Introduction: 1998.
Ingredients: Tofu (non-genetically engineered), ethyl alcohol, rice koji, red rice koji (*beni-koji*), salt, tofu solidifier (no specifics are given), spices, enzymes.
Wt/Vol., Packaging, Price: Glass jar.
How Stored: Refrigerated.
New Product–Documentation: See next page. Product with Label and outside paperboard box brought to Soyinfo Center. 2011. Dec. 14. by Taro Mikuriya of Otsuka Pharmaceutical Co., Nutrition & Sante Group. The outer, nearly-cubic box is 3 by 3 by 3¼ inches high (7.5 x 7.5 x 8.5 cm). Red and black on beige. The front panel, which appears on 3 sides of the box, shows a square of tofu-yo on a small white dish. The characters "Beni-dofu" appear large and bright red against the tan background. The product description appears on one panel. Contents: 6 pieces (no weight is given).

The fermented tofu itself comes in a glass jar, immersed in alcohol thickened by red rice koji. Atop the jar, inside the outer box is a small brochure, full color on glossy paper; with 4 panels on each side. Each panel is 6.5 cm square. The inside 4 panels describe different ways of serving the product. One outside panel gives a brief history of tofu-yo from Okinawa. Taro says (e-mail of 21 Dec. 2011) that the product was launched in 1998 by Otsuka Foods Co., Ltd.

Soyinfo Center taste test: Taste and texture: Delicious, almost like Okinawan tofu-yo. However use of the word "awa" in the product name, a possible hint at the word "awamori" (an expensive and traditional Okinawan alcoholic beverage) when there is none in the product, seems deceptive.

10603. Sugiyama, Hideko; Kagawa, Sachiko; Kamiya, Hidehiro; Horio, Masayuki. 1998. Chlorine behavior in fluidized bed incineration of refuse-derived fuels. *Environmental Engineering Science* 15(1):97-105. *
• ***Summary:*** "The synthetic RDFs were made of newspaper and Tofu-lees or newspaper, Tofu-lees, and Polyvinylchloride (PVC) with and without calcium additives."

soy sauce, miso, salted / fermented black beans, yuba [bean curd skin], etc.

Contents: The flavors of Asia. Ingredients. The Asian kitchen. China. India. Indonesia. Japan. Malaysia & Singapore. Thailand. Vietnam. Appendix.

The "Ingredients" section includes: Bean curd (incl. cotton or momen tofu, silken bean curd, deep-fried bean curd or aburage, grilled bean curd or yakidofu, fermented bean curd or nam yee). Bean curd skin [yuba]. Black beans, salted (and fermented). Hoisin sauce ("A sweet sauce made of soy beans, with spicy and garlicky overtones"). Miso (incl. red miso and white miso). Salted soy beans (incl. "yellow bean sauce"). Soy sauce (incl. light soy sauce, black soy sauce, red soy sauce, Kikkoman, tamari, thick sweet soy sauce (kecap manis–Indonesian)). Tempeh. Also: Red beans (dried azuki). Seaweed (incl. dried kelp, golden kelp, mozuku, salted dried kelp, laver or nori, wakame). Sesame (black and white seeds, tahina {tahini}). Sesame oil. Sesame rice crackers.

Beancurd or bean curd is mentioned on pages 12, 29-30, 34, 36, 88, 94, 101, 155.

Fermented bean curd: p. 25.

• ***Summary:*** Contents: Definition and scope. Soybean koji: Raw materials (soybean wheat), koji preparation (Japanese soy sauce koji, miso-dama, koji produced by natural inoculation, preparation procedures, microorganisms involved, koji enzymes), application of soybean koji (soy sauce fermentation, soybean paste fermentation, sufu fermentation, fish sauce fermentation). Rice koji and similar products: Mould enzymes used in the fermentation of alcoholic foods and beverages (saké rice koji, preparation of rice koji, roles of rice koji in saké brewing, saccharolytic enzymes obtained by using starter cakes as inocula, and their applications, saccharolytic enzymes used in distilling industries in Thailand), ang-kak, miso rice koji. Seed inocula: Tane koji, production of seed inocula for soybean koji in Southeast Asia, preparation of flask-like plastic culture bags, types of seed koji, factory stock cultures, production of seed culture in other South East Asian countries, dry starter cakes (raw materials and method of preparation), spore mass produced on rice adhering to inside surface of flasks. Conclusion. Address: Dep. of Microbiology, Faculty of Science, Kasetsart Univ., 50 Paholyothin Rd., Jatujak, Bangkok 10900, Thailand.

10609. Ruiz, Hipólito. 1998. The journals of Hipólito Ruiz: Spanish botanist in Peru and Chile 1777–1788. Translated by Richard Evans Schultes and María José Nemry von Thenen de Jaramillo-Arango. Transcribed from the original manuscripts by Jaime Jaramillo-Arango. Portland, Oregon: Timber Press. 357 p. See p. 192. Illust. Index. 27 cm. [Eng]
• ***Summary:*** In Chapter 31, titled "Description of the village of Sayán," states that the valley of Huara stretches from Huara to Sayán. (Note: A modern map of Peru shows that Huara is a town on the seacoast about 80 miles northeast of Lima (the capital) and Callao, and just north of the seaport city of Huacho; Huara is about 30 miles inland, directly east.) In about Sept. 1781, the Spanish botanists and artists traveled a little southward along the coast to the province of Chancay. Note: Today the town of Chancay is on the coast about midway between Huara and Callao/Lima. In this province they collected and dried many plant specimens. For each, the author gives the scientific name (genus and species), local Spanish name; the translator adds the English name (if known). One of the plants collected (p. 192) is "*Dolichos soja?*, frijolillos (little beans); the seeds are eaten cooked and are very tasty. It is a cultivated plant. I have never seen it growing wild." Note 1. The question mark after "soja" probably means that Ruiz was unsure of the plant's identity. Note that two other plants mentioned on p. 192 also have a question mark after their scientific names. This question mark also appears after *Dolichos soja* in the index of this book (see p. 347). Why did the translator not give the English name?

Note 2. If Ruiz correctly identified *Dolichos soja,* an early scientific name for the soybean, this would be by far the earliest document seen concerning soybeans in Peru or South America or all of Latin America. And this document would contain the earliest date seen for soybeans in Peru, or South America, or South America.

Talk with Juan del Campo, historian at the Peruvian Embassy in Washington, DC. 2000. March 16. In 1777 Peru was a colony of Spain ruled by a Viceroy who represented the king of Spain–so more precisely it was the viceroyalty of Peru–which was established by Spain in 1542. But the phrase "Kingdoms of Peru and Chile" was widely used by the Spanish at the time.

During the 1600s and 1700s, Peru and Mexico were the two main Spanish dominions in the New World. Up until the 18th century, the viceroyalty of Peru included Panama and all of Spanish South America except Venezuela. The region now corresponding approximately to Bolivia was named "Upper Peru." In 1717 New Granada (now Colombia), and in 1776 Buenos Aires (La Plata; now Argentina) were made separate viceroyalties.

There was a very large seaport at Callao. Founded in 1537 and incorporated as a town in 1671, it is presently the chief port of Peru, on Callao Bay, 8 miles (13 km) west

© Copyright Soyinfo Center 2014

of Lima. The Spanish even built a large fort at Callao to fight against the English pirates Francis Drake (1543-1596) and John Hawkins (1532-1595). The Manila Galleons that went from the Philippines to Acapulco, Mexico, usually went next to Callao to trade. At the time, the Philippines (called Capitania General) was ruled by Spain from Mexico. During its peak of trade with Asia, for more than a century from about 1650 to 1760, Callao was the biggest port of the Spanish dominions in the Americas–much bigger even than Acapulco in its volume of trade. So anything (such as soybeans plants or seeds) that went on a Manila Galleon to Acapulco might very well have also gone to Callao.

The first Asian immigrants to Peru came from China in the early 1850s to work in agriculture and on the railroads. They continued to arrive until the 1880s. The first wave of Japanese immigration to Peru started in the late 1890s. In the Quechua language, the language of the indigenous Peruvians, several similarities have been found between Quechua words and Japanese words–which is amazing, and of great interest to linguistic researchers. One theory says there was trade with East Asia during the Incan empire, which ruled Peru from ca. 1230-1533, when it was conquered by Spanish explorer Francisco and fellow Spanish soldier Diego de Almagro.

Talk with Prof. Ted Hymowitz, Prof. of Plant Genetics, Univ. of Illinois. 2000. March 28. Richard Schultes started the field of ethnobotany; he is now approximately in his 80s. Ted thinks the plant that Ruiz was describing was probably the lima bean. Linnaeus first gave the name *Dolichos soja* to the soybean in 1753 (*Species plantarum.* Vol. II., p. 727). Ruiz had probably never seen a soybean but he may have had Linnaeus' manuscript or book with him.

Contains numerous interesting and early color maps, including one of Lima, Peru, and the coast, including Callao (facing p. 176) based on a survey conducted in May 1771. Address: Spain.

10610. Sinclair, Charles Gordon. comp. 1998. International dictionary of food and cooking. Chicago: Fitzroy Dearborn. 594 p. See p. 234. 24 cm. *

• ***Summary:*** Vietnamese: dau hu: Bean curd. dau hu chien: Fried bean curd. dau hu chung: Bean curd. dau hu ki: Dried [sic, pressed] bean curd (p. 161).

fu jook pin (Chinese): Bean curd sticks [dried yuba sticks] (p. 219).

"*gochujang* (Korean): A chilli paste similar to sambal olek" (p. 234).

Indonesian: Kecap asin is thick, salty, dark colored soy sauce used for coloring and flavor. Kecap bentang manis: See kecap manis. Kecap manis: A sweet, thick, dark colored aromatic soy sauce used as a seasoning and condiment, and for satay. "Also called ketjap sauce, kecap bentang manis, sweet soya sauce" (p. 292).

Ketjap (Ho [Holland, Dutch]) Ketchup. Ketjap sauce. See kecap manis.

The word "soya" appears on 100 pages in this book. For example: Aburage (Japanese): Soya bean pouches made by deep-frying slices of pressed bean curd.

For "soy bean" see "soya bean." For "soy bean oil" see "soya bean oil." For "soy sauce" see "soya sauce."

"Sweet bean paste. A thick brown sauce made from ground fermented soya beans mixed with sugar and brine. Popular in Taiwan as a condiment or seasoning" (p. 530).

10611. Solomon, Charmaine; Solomon, Nina. 1998. Charmaine Solomon's encyclopedia of Asian food. Boston, Massachusetts: Periplus Editions. xiv + 480 p. Color illust. ([28] p. of plates). 29 cm. [67* ref]

• ***Summary:*** An outstanding book; the color illustrations of many ingredients are spectacular and very informative. The author has an insatiable curiosity.

Contents: List of illustrations. Introduction. How to use the *Encyclopedia of Asian Food.* Acknowledgements. A-Z of Asian Food. Bibliography. Illustrated index of selective ingredients. Index of recipes. Index of alternative words and main entries.

Soy related entries: Bean curd (p. 26-28, incl. all the different types, yuba, deep-fried tofu types, fermented tofu incl. ch'ou doufu [chou doufu]: "Despite its overpowering aroma, slimy texture, unappetizing color and the unfortunate odor it leaves on the breath, those brave enough to partake of it consider it a delicacy").

Bean paste, sweet (p. 29. The three colors and types are red {from adzuki beans}, yellow {from mung beans, husked and split}, or black {from black soy beans}. "The pastes are usually available ready-made sweetened in cans. It is possible to make your own, starting out with dried beans." Name in Chinese: dow sa, tau sa {sweet bean paste}).

Bean paste, yellow (p. 29. Despite what the label says, this thick, salty condiment is brown, not yellow, in color).

Bean sauces (p. 29. "Made from fermented soy beans," they range in color from yellow to brown to black [sweet black bean paste]. Their consistency is more like pastes that must be spooned from the jar than pourable tomato ketchup).

Beans, salted yellow (p. 31. Canned yellow soybeans which have been salted and fermented).

Beef (p. 31-37 incl. Teriyaki steak, Sukiyaki, Beef with black bean sauce, incl. "2 tablespoons canned salted black beans [fermented black soybeans]").

Black bean (p. 43-44. Black soy beans which are fermented and salted. "Some are sold in cans in a salty liquid, others in plastic bags, covered with salt crystals." Also called "preserved black beans").

Flours & starches (p. 157-61). Incl. soy flour. "A high protein, low starch flour... used mostly in Japan [where it is called kinako] and China. In Korea roasted soy bean flour and fermented soy bean flour are used to make a variety of bean pastes."

© Copyright Soyinfo Center 2014

Note. This is the earliest English-language document seen (Nov. 2012) that uses the term "roasted soy bean flour" to refer to kinako.

Legumes & pulses (p. 206-18). A long and interesting section. All entries have a scientific name. Many have an illustration. Those found in many Asian countries (e.g., green bean, green pea) have the name in each country. Includes: Introduction, adzuki bean, asparagus bean (see winged bean), asparagus pea, black-eyed pea (a variety of cowpea), black gram, blue pea, broad bean, butter bean (see lima bean), chick pea, cowpea (see yard-long bean), fenugreek, green bean, green pea, hyacinth bean (see lablab bean), lablab bean, lentil, lima bean, long bean (see yard-long bean), moong bean (see mung bean), moth bean, mung bean, parkia, peanut, pigeon pea, red bean (see adzuki bean), red kidney bean, rice bean, sataw bean (see parkia), snow pea, soy bean (short entry), sugar snap pea, tamarind, white gram (see black gram), winged bean (China: su-ling dou; India: Goa bean; Indonesia: kecipir; Japan: shikakumame; Malaysia: kacang botor; Philippines: sigarilyas; Sri Lanka: dara-dhambala. Thailand: thua pu). Yard-long bean (this is the fresh bean known by a host of names). Recipes: Adzuki bean soup.

Master sauce (p. 232). "Also known as 'flavour pot' or 'lu,' this sauce has a base of soy sauce, water, sugar and Chinese wine or sherry, with a few variable additions..." Cooking with it is similar to 'red-cooking.'

Miso (see soy bean products). Mushrooms & fungi (p. 237-40, incl. recipe for Braised bean curd, cloud ear and vegetables, and Braised soy mushrooms). Natto (see soy bean products).

Oils (p. 258-59, incl. coconut oil, gingelly oil [sesame oil], mustard oil, palm oil, palm kernel oil, peanut oil, perilla oil, sesame oil). Note: Soy oil is not mentioned here! Okara (see soy bean products). Salads, incl. recipe for Indonesian vegetable salad (gado-gado), that calls for 4 oz. fried bean curd. Shoyu (see soy sauce).

Soy bean, dried (349). China: da dau, wong dau, hak dau, tai dau. Indonesia: kacang kedelai. Japan: daizu. Korea: jaa jang. Malaysia: kedelai. Philippines: utaw. Thailand: thua lueang.

Soy bean, fresh. China: mao dau. Indonesia: kacang soja. Japan: edamame. Malaysia: kacang soja. Recipe: Fresh soy beans with bean curd.

Soy bean products (p. 350): Miso (incl. recipe for miso soup). Natto. Soy bean paste (go). Soy milk (including okara). Tahuri (Philippine fermented tofu). Tokwa (tokwan; very firm square tofu).

Soy bean sprouts, with recipe for soy bean sprout salad. China: dai dau nga choi. India: bhat. Indonesia: kacang kedele, taugeh. Japan: daizu no moyashi. Korea: Kong namul. Malaysia: kacang soja, taugeh. Philippines: utaw. Thailand: thua-lueang.

Soy sauce (p. 351-52). Chinese soy sauce: Dark soy sauce. Light soy sauce ("Usually labeled 'superior soy'"). Mushroom soy sauce (Dark soy sauce that has been flavored with straw mushrooms). Japanese soy sauces: Koikuchi (regular shoyu), tamari, usukuchi. Korean soy sauce ("About the same colour as Chinese light soy sauce, but not as fiercely salty and with a sweet malted aroma"). Thick and flavoured soy sauces: Kecap asin ("A dark, salty soy sauce, from Indonesia, a little thicker than the dark soy of China"). Kecap manis (A thick, sweet soy sauce from Java, Indonesia). Kicap cair: "The Malaysian equivalent of light soy sauce." Kicap pekat: "The Malaysian equivalent of dark soy sauce, though thicker than the Chinese version, but not as thick as kecap manis." Ponzu shoyu. Toyo mansi (p. 352): "A soy sauce used in the Philippines soured with kalamansi juice."

Note: This is the earliest document seen (April 2012) that uses the term "Kicap cair" or the term "Kicap pekat" to refer to light and dark Malaysian soy sauces, respectively.

Tempeh (p. 386). Incl. recipes for Savoury Tempeh and Thai style tempeh. Tofu (see bean curd).

Also discusses: Adzuki bean, agar-agar (incl. almond bean curd, awayuki), almond, amaranth, cowpea, crab in black bean sauce (recipe at crab), daikon, millet, monosodium glutamate ("I would strongly recommend omitting it"), Nonya (pronounced 'Nyonya.' The unique cookery found in Malaysia and Singapore resulting from the fusion of Malay and Chinese cuisine during the last century), peanut, peanut sauce, sago (this palm flowers only once in its life, at about age 15. Just before flowering, it builds up a large reserve of starch in the pith. The tree is felled, the pith scooped out, ground and washed to make sago starch), seaweed (incl. agar-agar, hijiki, kombu / konbu, mozuku, nori / laver, wakame), sesame paste, sesame seed, vegetarian meals ("By far the most important vegetarian food in the Far East... is bean curd"). Address: Australia.

10612. Stacey, Jenny; Keller, Maureen. 1998. The soy sauce cookbook: Explore the flavor-enhancing power of Asia's magic ingredient. New York, Tokyo and London: Kodansha International. 80 p. Illust. Index. 29 x 15 cm.

• ***Summary:*** This stylish, vertically rectangular book, contains many excellent color photos on glossy paper–of both recipes and scenes related to soy sauce. Contents: Introduction–Soy sauce: Light and dark soy sauce, what is soy sauce?, the history of soy sauce, how soy sauce is produced (koji, non-brewed or HVP, Chinese-style), soy sauce today. Savory snacks. Poultry with pizzazz. Sizzling seafood. Rice, pasta, and noodles. Main meat dishes. Sensational salads. Vegetable variations.

Interesting color photos in the Introduction include: (1) A traditional soy sauce ceramic jar with the "Kikkoman" logo and the Chinese characters for "shoyu" on it. (2) A glass bowl of dark soy sauce. (3) Kikkoman's *Goyo-gura*, Noda, Japan. (4) Ancient Japanese illustration showing soy sauce

© Copyright Soyinfo Center 2014

production. (5) A glass bowl of light soy sauce. (6) Another ancient Japanese illustration showing soy sauce production. (7) Shoyu fermenting in vats inside the *Goyu-gura.* (8) Three small, modern soy sauce containers, two glass bottles and one glass dispenser. Note 1. Photos 1, 6 and 7 were courtesy of Kikkoman Corp.

Note 2. The recipes call for "light soy sauce," "dark soy sauce"–terminology that we find confusing. The book contains numerous other factual errors. Address: 1. U.K.; 2. Colorado.

10613. Tohata, Asako. 1998. Tohata Asako no karada ni oishii miso no hon: misoshiru kara wafû no miso ryôri made miso no kenkô itadakimasu! 10616. Watanabe, S. Assignor to Suzuyo Kogyo Co. Ltd. 1998. [Continuous fermentation system and fermentation room. Applicant]. *Japanese Patent* No. 2760380. [Jap]*

10617. Wise, Victoria. 1998. The vegetarian table: Japan. San Francisco: Chronicle Books; London: Hi Marketing. 156 p. Illust. (color photos by Deborah Jones). 22 x 21 cm. Series: The Vegetarian Table.
• ***Summary:*** Contents: Introduction. Basic ingredients and seasonings for the Japanese table. 1. Appetizers and condiments. 2. Soups. 3. Rice. 4. Noodles. 5. Vegetables. 6. Sweets. Table of equivalents.

Ingredients include: Soybeans, soy sauce, tofu (incl. silken tofu, tofu puffs, grilled tofu), miso (red, white, yellow, brown, barley), fresh soybeans, dried soybeans (incl. black soybeans), soybean sprouts, freeze-dried tofu, soybean milk skin (yuba), and soybean curd pulp [okara]. Azuki beans, sea greens [sea vegetables incl. agar, kombu, nori, wakame], sesame seeds, umeboshi (pickled plums), wasabi, saké.

Contains too many soy-related recipes to list them all. The color photos and food styling are superb–perhaps the most beautiful we have ever seen in a cookbook.

Note: Other books in this series (all published by Chronicle Books) are: France, India, Italy, Mexico, and North Africa. Address: Oakland, California.

10618. Yokotsuka, Tamotsu; Sasaki, Masaoki. 1998. Fermented protein foods in the Orient: shoyu and miso in Japan. In: Brian J.B. Wood, ed. 1998. Microbiology of Fermented Foods. 2nd ed. Vol. 1. London: Blackie Academic & Professional / Thompson Science. An imprint of Chapman & Hall. xx + 440 + 17 p. Illust. Index. 24 cm. [197 ref]
• ***Summary:*** Contents: Introduction. History: The history of fermented proteinaceous foods in China (chu / koji, chiang / jiang, shi [fermented black soybeans], chiang-yu / soy sauce / tou-yu, shi-tche [the juice or extract of shi]).

Note: "This section was based on material drawn from *Thirty-five Years History of Noda-Shoyu Company* (1955), *The History of Kikkoman* (1970), Sakaguchi (1979) and Wang & Fuang (1981)," the history of shoyu and miso in Japan (hishio or sho or soya or soy, miso or misho, tamari, miso-damari, tare-miso and usudare, shoyu, miso and shoyu of today). Fermented soybean foods in the Orient: shoyu, miso, tempeh and natto: Japanese shoyu (establishment of the Japanese Agricultural Standard {JAS} for shoyu in 1963, production methods, types and grades of shoyu by JAS, quality standard of shoyu exported from Japan, production [statistics], technological contributions by the Japanese government to the shoyu industry, soy sauce produced in Oriental countries other than Japan [Korea, Taiwan, Singapore, Malaysia, Indonesia], miso). Manufacture: Koikuchi shoyu (treatment of raw materials, koji making, mash-making and ageing, pressing of mash, refining), tamari shoyu, miso. Recent progress in shoyu and miso production in Japan: Soybeans and wheat as raw materials (soybeans, wheat), treatment of raw materials (soybeans, wheat), koji moulds, koji-making, mash fermentation (microbes in the mash, chemical changes in shoyu-mash fermentation, temperature of the mash, period of mash fermentation), refining (pressing of the mash, pasteurization), material balance in shoyu manufacture, product (color and clarity of koikuchi shoyu, flavour components of shoyu {HEMF, HDMF, HMMF, phenolic compounds, flavour constituents of the top note aroma of pasteurized shoyu}, formation of flavour components during heating for pasteurization, flavour components of shoyu worldwide, relationship between organoleptic evaluation of shoyu and its chemical constituents, nutritional concern about excessive salt intake, safety of fermented shoyu [aflatoxins], microbial stability of shoyu). Discussion.

In the *Ben-Chao-Gong Mu* [*Bencao gangmu,* The great pharmacopoeia, 1596] many types of shi are discussed. In more recent times these have apparently been classified into three types depending on the microorganism used in the fermentation: (1) *Aspergillus oryzae* type. (2) *Mucor* type, usually made in Szechwan. (3) *Bacillus* type. Soak and cook soybeans, then place them in a cloth bag. Cover with straw

© Copyright Soyinfo Center 2014

and ferment for 1-2 days at 25-30ºC. "When the beans are covered with viscous substances, Shui-tou-shi is prepared." Mix the sticky beans with ginger and salt, then pack tightly into jars; age for one week. The product [a sort of salted natto with ginger] is now ready to eat. "The organisms responsible for this fermentation have been identified as *Bacillus* species" (p. 356). Address: Research and Development Div., Kikkoman Co. Ltd., 339 Noda, Noda-shi, Chiba-ken, 278 Japan.

10619. Yonzan, H.; Tamang, J.P. 1998. Consumption pattern of traditional fermented foods in the Sikkim Himalaya. *J. of Hill Research* (*Sikkim*) 11(1):112-15. [6 ref]
• ***Summary:*** During 1996-97 a survey was conducted using a questionnaire in 270 randomly selected houses in three hill sub-divisions of the Darjeeling Hills of West Bengal and 315 houses in four districts of Sikkim representing the ethnic communities of the Nepalis, the Bhutia and the Lepcha. The amount of fermented foods consumed at every meal by each person was weighed directly using a portable balance and daily per capita consumption (in gm per day) was estimated. The frequency of eating fermented foods by each family (as a percentage) was also recorded. Annual home production of each fermented food was calculated on the basis of population based on Indian census records. A database was developed from the field data.

For kinema, the average consumption rate in the Darjeeling Hills was 80.6%, whereas it was 78.9% in Sikkim. Kinema was one of three foods that was not eaten daily; it was typically consumed 2-4 times a week as a source of plant protein. The survey showed that, in the Darjeeling Hills, 45.3% of the people prepared the fermented foods at home and only 28.3% purchased them from local markets, while in Sikkim 53.7% of the people prepared the fermented foods at home and only 18.8% purchased them from local markets.

Table 1 shows per capita consumption (gm per day) and annual home production (tons per year) of the various fermented foods. For kinema the figures show: In the Darjeeling Hills, the average per capita consumption was 3.3 gm/day (range 2.3 to 4.7) and the annual production for the entire area was 829 tonnes. In Sikkim, the average per capita consumption was 2.2 gm/day (range 0.7 to 3.7) and the annual production for the entire area was 327 tonnes. Address: Microbiology Research Lab., Dep. of Botany, Sikkim Government College, Tadong (near Gangtok), Sikkim 737 102, India.

10620. Miso Health Building Committee. 1998? What's miso? (Leaflet). Tokyo, Japan. 3 panels each side. Each panel: 21 x 10 cm. [Eng]
• ***Summary:*** Contents: Types and classification of miso. How miso is made. Small color photos of 13 types of rice miso, one type of soybean miso (*Tokai mame miso*), and 3 types of barley miso. Miso's value as a health food: Lowers blood pressure, increases survival rate of mucous membrane interstitial cells after X-rays. Miso in Japan. Recipes for using miso. Address: White Building 603, 1-4-8 Tsukiji, Chuo-ku, Tokyo 104, Japan. Phone: 03-5565-6461-62.

10621. Miyasaka Brewery Co., Ltd. 1998? A guide to Shinsyuichi Miso (Brochure). Tokyo, Japan. 4 p. 30 cm. [Eng; Jap]
• ***Summary:*** A color brochure describing, in English and Japanese, the company's main varieties of miso and instant miso-soup. Color photos show: (1) A red lacquerware bowl of miso soup. (2) Miso Dengaku. (3) Grilled salmon with miso. (4) Miso stew. (5) All 10 products. Address: 2-4-5 Nogata, Nakano-ku, Tokyo, Japan. Phone: 03-3385-2121.

10622. Taiwan Regional Association of Frozen Vegetable & Fruit Manufacturers. 1998? Effectiveness of green soybean (Brochure). Taiwan. 4 p. Undated. 26 cm. [1 ref. Eng; Jap; Chi]
• ***Summary:*** On the cover of this full-color brochure is one green soybean and full green pod against a purple marbled background. An article titled "The effectiveness of edamame," by Goaki Noriharu, Professor at Girls Nutrition University (from Economic News (Evening News), Japan, 15 Dec. 1997) is quoted on p. 2 in Japanese, p. 3 in Chinese, and the rear cover in English. It discusses the health benefits of edamame. On each page are large color photos of edamame in different forms: (1) Four Japanese-style dishes containing shelled green soybeans (*muki-mi*). (2) A gelled dessert made with pureed edamame and agar / kanten. (3) Edamame in five Chinese-style dishes, plus a drink, ice cream, and popsicles containing edamame. (4) A soybean plant loaded with many lush green pods. (5) A white bowl of edamame (in the pods) on a table next to two cups of tea and a tea pitcher. (6) A dish of edamame (half shelled, half in the pods) on a table next to two clear mugs of beer. (7) Edamame in a blender with water, behind a tall glass of a green drink made from edamame. Address: Taiwan.

10623. Jorgensen, Carl. 1999. Update on Genetic ID and the testing of genetically engineered foods (Interview). *SoyaScan Notes.* Jan. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Genetic ID had its first profitable quarter during the first quarter of 1998. When Carl arrived it was a start-up company. He was hired to perform a specific service (research, publish, and distribute their fax newsletter) and not to get deeply involved with company management. But as the company entered its most difficult, Carl ended up basically running the company–which was definitely not his plan. Jeff Wells, who had previously run the company, couldn't afford to work without pay, whereas Carl could. So Jeff left in the autumn of 1997. Carl hung in there and

© Copyright Soyinfo Center 2014

basically brought the company "over the hump" and through the painful transition period when it was ahead of the market and growing but not making money. Carl left in June 1998 (after Issue No. 21 of the Newsletter had been published) after Genetic ID was "over the hump" and able to hire new people to manage the company; an entrepreneur (he has started a number of companies) rather than a day-to-day manager, he had accomplished his objectives. Now the company is on solid ground and growing. During 1999 it is projected to grow from 9 to about 17 people. The company has about 40 paying customers mostly in the USA, Europe, and Japan. Most of the samples originate in North America.

Carl believes Genetic ID will be "hugely" successful–at least in the near future. Bill Witherspoon is the CEO who runs the company from day to day; Julia Wong is his administrative assistant. Genetic ID has decided to try to move worldwide very quickly. There was a need to bring in lots of new funds (which is happening) and new people. John Fagan is chairman of the company but does not do day-to-day management. He oversees the science and top-level decisions. He does not believe it is important it is important to keep a neutral philosophy on the goodness or badness of GMO. Carl believes strongly it is important to keep a neutral philosophy in order to maintain objectivity. If you are two strongly anti-GMO, your objectivity becomes suspect–even if it is unjustly suspect. John is by far the top scientist worldwide in the field if GMO detection. But he is also a man with a mission; he believes very, very strongly that agriculture is going down the wrong road with GMOs–and he's not afraid to say it. The big ongoing debate within Genetic ID is how closely the company should identify itself with an anti-GMO position. In the long run, strangely enough, foreign companies (in Europe and Japan) appreciated John's stand because they knew where the company stood on the basic issues. However the U.S. companies were uncomfortable with this close identification. The company was able to prove that the people who do the analysis (in a separate lab down the street) have no idea about the origin of the sample they are required to test.

Genetic ID has competitors in various countries, but Carl believes that Genetic ID has the best, most accurate and most reliable approach in terms of both sampling and detection. One key to accuracy is to use a large sample–a large number of soybeans taken from many different places in the lot. This costs more money.

Carl believes that genetic engineering of crop plants was one of the biggest stories of last year and of the late 20th century–but most Americans don't know what is going on and the American media isn't covering it. The little seed dealers Carl knows in Iowa know all about it and they think the Europeans and Japanese are crazy for not buying genetically engineered soybeans–or even being concerned about it.

Carl is the founder and owner of a company named Purely Organic Ltd. He is extremely busy importing organic foods from Italy, then selling them to natural foods stores and restaurants. Soon they will start selling them direct to consumers via a website on the Internet–where they can pay by credit card. That won't be up and running before the end of January.

Carl was the former editor of Genetic ID's outstanding newsletter. Another person who is a very skilled writer and researcher in this field is Susan Marcus; she contributed to the Mothers For Natural Law Newsletter–though she is no longer doing that. She knows the issue inside and out, but she does not understand how to send a newsletter to 500 people at once via e-mail or fax. Address: Owner, Purely Organic Ltd., P.O. Box 847, Fairfield, Iowa 52556. Phone: 515-472-7873.

10624. Poysa, Vaino. 1999. Food-grade soybeans in Canada (Interview). *SoyaScan Notes.* Jan. 5. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Poysa is a public soybean breeder, who was hired in 1996-97 to replace Dr. Richard Buzzell at the Harrow station. Like his predecessor, he specializes in breeding food-grade soybeans.

Canadians use the term "food-grade soybeans" for what Americans call "large-seeded vegetable-type soybeans." The term "food grade" implies both large-seeded and clear hilum. The corresponding term for the rest of the soybeans, which are typically crushed to make soybean oil and meal, is "commodity soybeans." By far the most widely used food-grade soybean in Canada, and by overseas customers of Canadian exporters, is Harovinton. It was developed by the Agriculture Canada Research Station at Harrow (mainly by Dr. Buzzell) and released in 1989 to Maple Leaf Foods. In Canada, the exclusive rights to grow and sell a particular food-grade soybean variety that is publicly developed are sold to one and only one private company.

Virtually all of the soybeans sold by Canadian companies to overseas food manufacturers are food grade and identity preserved (IP). Because they are IP, the Canadian companies can guarantee that they are also not genetically engineered, i.e. GMO-free.

Two newly released food-grade soybeans are AC-756 and AC-Onrei [derived from the Japanese variety Enrei]. The former was released to W.G. Thompson & Sons Ltd. and the latter was released to Maple Leaf Foods at the end of 1997. Neither of these two varieties have been registered. In fact most food-grade soybeans are no longer registered! Why? For basically two reasons: (1) Since they are developed mainly for their food properties, it is not considered important to give details about their agronomic properties. (2) The private seed breeders are applying pressure to stop registration of food-grade soybeans.

Note: This is the earliest English-language document seen (June 2009) that contains the term "commodity

© Copyright Soyinfo Center 2014

soybeans," which is used in contrast to "food-grade soybeans." Address: Soybean breeder, Agriculture Canada Research Station, Harrow, ON N0R 1G0, Canada.

10625. Broadbent, Gretchen Priest. 1999. Pioneering work with tofu in the USA and Japan, 1946 to Aug. 1971. Part I (Interview). *SoyaScan Notes.* Jan. 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Gretchen Priest was born on 29 Oct. 1946 in Boston, Massachusetts. She grew up in Marblehead, Massachusetts–which is located on the Atlantic Ocean 15 miles northeast of Boston. While in high school there she decided (entirely on her own, for reasons she no longer remembers) to become a vegetarian–even though she had never heard the word "vegetarian." She also began a lifelong interest in art. In Sept. 1964 she started to attended Goddard College (in Plainfield, Vermont) for one semester and was almost immediately introduced to the teachings of Kirpal Singh, an Indian Sikh master. "I went through a spiritual revolution, along with many friends." She was very sensitive and began to have spiritual experiences. At Goddard she met her husband to be, Jeffrey Broadbent, in an art class. Art is Gretchen's passion. They both found the first day of class boring, so separately they snuck out. Gretchen found the paints in the back of the room and, before they had met or spoken to each other, they ended up painting each other faces. When the teacher saw them after the class he exclaimed, "Now that's art!" At that point, Jeffrey and Gretchen introduced themselves to one another.

After the 3 months, Goddard had a work term. Gretchen went to California and experimented with psychedelics. Now all she wanted was to live a spiritual life.

Returning to Vermont in the early summer of 1965, she entered the Kirpal Ashram in Calais (pronounced KAL-us), Vermont. Only one person was living and meditating there at the time, Nina Gitana, age 37, the caretaker. The ashram was part of land and a trust that had been donated to Kirpal Singh for use as a retreat for his practices and teaching. Vegetarianism was a very important part of Kirpal Singh's teachings, so Nina was a vegetarian. But she did not know much about preparing vegetarian foods; a diet of fruits and juices was not giving her the strength she needed. The day Gretchen arrived, Nina left to go to Boston, where she met Michio Kushi (and maybe George Ohsawa) and began to study macrobiotics. When she returned to the ashram, she taught Gretchen what she had learned and they both began to follow a vegetarian macrobiotic diet. It felt good, and Nina's strength returned. Gretchen soon became the cook. She did not use any macrobiotic recipe books, though she did study a book of macrobiotic principles. Their first basic foods included brown rice and miso, but Gretchen also prepared lots of chapatis and brown rice croquettes (regular or deep-fried). During the cold months she cooked for the two of them (and often a neighbor), but during the summer she cooked and cared for 15-20 people. It was very difficult to get macrobiotic or natural foods in those days, so they would periodically make the 5-hour drive to buy food in Boston. They would buy most of their foods at Michio's house (where they were stored in little bags on plain wooden shelves), and in this way Gretchen came to know Michio and Aveline. But they would go to Boston's Chinatown to buy tofu; it was considered a very special treat at the ashram, served only 3-4 times a year. Considered an excellent source of protein and easy to digest, it quickly disappeared–in part since it was very perishable, but also because it balanced the very *yang* daily diet. One winter Gretchen moved to Boston to earn money (odd jobs, including work at a hospital) and study macrobiotics while Nina stayed at the freezing cold ashram. Michio Kushi gave a special series of Sunday classes to teach macrobiotic philosophy to Anne Lynn, her husband, one other person, and Gretchen; these were not cooking classes. Michio and Aveline visited the ashram for a day several times. On one visit, Michio brought his father and mother.

In 1971, after 6 years at Kirpal Ashram, Gretchen left to marry Jeffrey Broadbent. Jeffrey had been practicing Zen meditation for several years as a disciple of Suzuki roshi at Tassajara Zen Mountain Center, deep in the Santa Lucia Mountains south of Carmel Valley, California. One of Jeffrey's close friends and roommate at Tassajara was William Shurtleff, who was also a disciple of Suzuki Roshi. While he was at Tassajara, Katagiri roshi encouraged Jeffrey to go back to college and finish his education. So he enrolled at the University of California at Berkeley, where he studied Chinese language. At some point he switched from Chinese to Japanese at Suzuki roshi's recommendation. Then Jeffrey applied for U.C. Berkeley's Junior Year Abroad program in Japan. Right after he was accepted, he wrote Gretchen at the Vermont ashram: "I'm going to Japan. Please marry me and let's go together." She accepted. Jeffrey and Gretchen stayed together for a month and a half at the Berkeley Zendo, then were married on 13 June 1971 at the San Francisco Zen Center by Shunryu Suzuki roshi in a large ceremony.

Ten days after the marriage ceremony, Jeffrey and Gretchen arrived in Japan. He had been enrolled in the intensive Japanese language coarse for foreigners at International Christian University (ICU) in Mitaka, just east of Tokyo. Before the school year started, they participated in the ICU summer program, where all the new students traveled to the Kumano-Nachi shrine and Nachi waterfall at the southeastern tip of the Wakayama peninsula. The program was designed to introduce the foreigners to Japanese language and culture.

Soon after arriving at Nachi, they wrote William Shurtleff, who was now taking an intensive Japanese language course at the *Nihongo Gakko* (Japanese Language School) in Kyoto and living in the home of one of his Japanese teachers. They invited him to visit them for a

© Copyright Soyinfo Center 2014

week at Nachi when his school semester was finished. On 1 August 1971 Shurtleff hitchhiked south and they had a nice reunion, practicing meditation together and enjoying the beautiful mountain scenery for about a week. Then Jeffrey and Gretchen went to ICU near Tokyo and Shurtleff returned to Kyoto.

At ICU, Jeffrey and Gretchen rented a small and austere Japanese-style apartment located just off campus, about 10 minutes walk away, c/o Yoda Yoshiko, Koganei-shi, Higashi-cho 1-25-13, Tokyo, 184. The two-room apartment consisted of a small kitchen (with two table-top propane burners and a sink, but no refrigerator), a minuscule toilet chamber, and a combination living room / bedroom (6-8 tatami mats in size). Outside the sliding window was a tiny porch for airing bedding and drying clothes. Jeffrey recalls that there was one small kerosene heater in the apartment; it was used only on very cold days–to save money. But Gretchen recalls that there was no heater at all. Continued. Address: RFD 1, Box 100, East Calais, Vermont 05650. Phone: 802-456-7091.

10626. Broadbent, Gretchen Priest. 1999. Pioneering work with tofu in the USA and Japan, Aug. 1971 to Dec. 1972. Part II (Interview). *SoyaScan Notes.* Jan. 6. Followed by a letter from Gretchen dated Jan. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: In the fall of 1971 the Broadbents invited Shurtleff to be a guest at their apartment at ICU if he wanted to continue his Japanese studies at the university level. Shurtleff's year-long language course at *Nihongo Gakko* finished in early December 1971. He immediately packed all his meager belongings and caught an all-night car ride to Tokyo where, on December 4, he joined the Broadbents at ICU, and moved into their small apartment. Note: That same day (there was a full moon), Bill and Jeffrey's teacher, Suzuki roshi, died of cancer in San Francisco, California.

Together Bill and Jeffrey took the intensive course in written and spoken Japanese, five days a week with five 70-minute periods a day. They led a very simple, rather monastic life, rising early, meditating twice each day (first thing in the morning and just before bedtime), and studying Japanese intensively. During the day, Gretchen taught English in and around Tokyo to earn money, studied Japanese language by herself while riding on trains and buses (using books and tapes), and did the laundry (by hand at home in the kitchen sink), food shopping, and cooking.

The man who made tofu in the local shop sold his tofu throughout the neighborhood on a bicycle. He blew a little horn to announce his presence. When he came in front of our apartment, we would run down and buy various kinds of tofu; it was a regular part of our diet. Shurtleff, who liked tofu very much and had eaten it almost daily while in Kyoto, continued this practice in Tokyo. Gretchen was especially fond of the deep-fried tofu, and because we had no refrigerator, she would often deep-fry left-over regular tofu during the warm months to preserve it and/or freshen it.

In about February or March 1972 Shurtleff moved out of the Broadbents' apartment and went to live for a while in a large house with Steve and Marty Caldwell on the ICU campus. Not long thereafter, Gretchen grew so interested in tofu that she sought out and began to visit the local tofu shop. She has always had a deep interest in traditional crafts and in making food. She visited the shop about six times, walking there alone in the early morning, when it was still dark. She took notes in a little notebook. The tofu maker explained quantities and times for making regular (*momen*) and silken (*kinugoshi*) tofu, and Gretchen recorded this information in her notebook. Eventually she had enough information to make tofu. The tofu maker gave her some nigari (traditional tofu coagulant) and two nylon straining bags (one for regular and one for silken tofu), which she later took back to America; she still uses the bags in Vermont to make crab apple jelly. Jeffrey Broadbent, her husband at the time, vaguely recalls visiting a very small local tofu shop–but he is not sure he ever went there.

After watching the tofu master at work Gretchen felt that there was a great need to introduce tofu and tofu shops to America. In mid-April Shurtleff returned to live with the Broadbents. Not long after that Gretchen recalls discussing her growing interest in tofu with Shurtleff and invited him to join her in a visit to the local tofu shop. At this time, Gretchen was much more interested in and knowledgeable about tofu than Shurtleff was. She recalls (Jan. 1999): "When you returned to our apartment, you were excited that I was studying tofu. We had lively conversations and I explained what I was doing. I had a notebook which I showed you. You wanted to go too. I thought we went together, but I don't have an absolute picture that I can rely on." Shurtleff likewise does not have a clear memory of going to a local tofu shop at this time, nor did he mention any such visit in his journals, yet he acknowledges that he might have gone with Gretchen and simply forgotten it. But Gretchen remembers clearly that she planted the seeds of Shurtleff's interest in tofu, which later resulted in his writing (with Akiko Aoyagi) *The Book of Tofu.*

On 22 March 1999, after thinking about these past events for more than two months, Gretchen wrote Shurtleff the following: "I have an ongoing persistent focused memory of being together at the tofu shop on one occasion. You were carrying a notebook. The tofu maker was busy with his daily work. You asked many questions and were writing down the new vocabulary. I was concerned that the questions were interfering with his work..." Continued. Address: RFD 1, Box 100, East Calais, Vermont 05650. Phone: 802-456-7091.

10627. Broadbent, Gretchen Priest. 1999. Pioneering work with tofu in the USA and Japan, Aug. 1971 to Dec. 1972. Part III (Interview). *SoyaScan Notes.* Jan. 6. Followed by a

© Copyright Soyinfo Center 2014

letter from Gretchen dated Jan. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued:

On 25 December 1971 (Christmas eve) Shurtleff had met Kazuko Aoyagi, who was a student at ICU, through their mutual friend Travis Venters. Venters, an American from North Carolina, taught English at ICU and was Kazuko's English teacher. The next day Kazuko introduced Shurtleff to her sister, Akiko Aoyagi, and they soon became close friends. Kazuko likewise became very close to Travis, and soon they were engaged to be married.

Bill and Jeffrey's course in Japanese at ICU ended in June 1972. On June 11 Kazuko and Travis were married; their wedding ceremony was held at a hall on the ICU campus. Gretchen, a very creative cook interested in natural foods, volunteered to make all the food for the wedding party. The centerpiece of her creations, which everyone remembers clearly to this day (25 years later) was the wedding cake. It was a sensation. The icing / frosting was made of tofu! No one had ever seen anything like it. It was a round layered cake, with each layer being a fruitcake that was slightly smaller than the one below it. Made entirely of natural foods, it contained whole-wheat flour instead of white flour and honey or fruits instead of sugar. Thus, it was rather heavy. Gretchen made the icing / frosting–her own invention–by whipping firmly pressed tofu in a blender with honey. The cake even had a theme–evolution. Gretchen formed many small creatures out of dough, then deep-fried them. There were little crabs and starfish on the bottom layer, then little animals on the second layer, and finally on the top–guess what–human beings. Because Gretchen did not have an oven in her apartment, she baked the cake on the ICU campus in an oven at the home of Steve and Marty Caldwell. She recalls: "I was really into that cake!"

After the wedding, Shurtleff and Aoyagi left Tokyo and traveled around Japan, visiting Zen masters at their temples and practicing meditation. Jeffrey and Gretchen went to practice Zen at the temple of Noiri roshi in central Japan. Gretchen was asked to stay at Suzuki roshi's temple not far away, but it didn't work out. In August 1972 Gretchen left to study with the Indian boy Guru Maraji at Yamaguni north of Kyoto (Shurtleff and Akiko Aoyagi were also there), and then with a sculptor named Fushigi Nangoku near Lake Biwa.

On 22 Oct. 1972 Shurtleff and Aoyagi visited tofu master Toshio Arai at this shop named Sangen-ya in Nerima-ku, several hundred yards from the Aoyagi's home. Mr. Arai later became Shurtleff's teacher. This is the first clear memory Shurtleff has of going inside a tofu shop and studying the process. Then on Oct. 28 Shurtleff & Aoyagi went to study Zen meditation at the temple of Noiri roshi where Broadbent was already studying. This did not work out, since Noiri roshi suddenly became very ill, so they returned to Tokyo and lived at Travis and Kazuko's apartment (while they were in America) in Pine Lodge at ICU.

In early December Shurtleff began to write a booklet on tofu for Americans; he probably realized that Nahum and Beverly Stiskin, who he had known in Tokyo and who had founded Autumn Press in Japan, might well be interested in publishing it. On 22 Dec. 22 Shurtleff and Jeffrey Broadbent were talking by phone. Shurtleff mentioned that he was writing a booklet on tofu, and Broadbent mentioned that he and Gretchen had recently visited the Stiskins. He gave Shurtleff the Stiskins' new address and phone number in Hayama, south of Tokyo. Shurtleff called Nahum Stiskin, who said he was very interested in discussing the book proposal, and invited Shurtleff and Aoyagi to his home to discuss the matter. A meeting was arranged for 13 Jan. 1973.

The visit went very well. Nahum was deeply interested in foods and Japanese culture, and was looking for books about Japan to publish; he and Beverly liked tofu and he liked Shurtleff's book idea. After Stiskin looked at the proposed table of contents and a brief introductory chapter, they signed a formal book contract. There was no negotiation of terms and no advance.

Gretchen is not certain how she and Jeffrey met the Stiskins. She recalled in January 1999 that she and Beverly Stiskin had met first; the initial connection was probably related to food and macrobiotics. She may have met Beverly at one of Lima Ohsawa's cooking classes in Tokyo. Then the Stiskins invited Jeffrey and Gretchen Broadbent to dinner at their attractive home in Hayama, south of Tokyo. After that Jeffrey Broadbent got the inspiration to introduce Bill Shurtleff to Nahum Stiskin. Jeffrey may have called Nahum to check out the idea before suggesting such a meeting to Shurtleff. Address: RFD 1, Box 100, East Calais, Vermont 05650. Phone: 802-456-7091.

10628. Suzuki, Akio. 1999. The work of Seedex Inc. in Longmont, Colorado (Interview). *SoyaScan Notes.* Jan. 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Seedex is a Japanese seed company in Longmont, Colorado. Akio, the company founder and president, earned his PhD from North Carolina State University in 1968; his thesis concerned his basic research on tobacco genetics. Upon graduation he went to work for the Great Western Sugar Co. headquartered in Denver (owned by the Hunt brothers–the famous Texas speculators), where he worked for 17 years. In April 1985 he left Great Western (which he could see was on the verge of bankruptcy) and started to work for Mitsui Co., the Japanese trading company and conglomerate; Great Western went bankrupt 2 or 3 months later. His first job with Mitsui was to develop and establish a seed company in Colorado that focused on breeding sugar beets. He founded Seedex in 1987, with financial help from Mitsui which became the majority stockholder; Akio became and still is a minority stockholder.

© Copyright Soyinfo Center 2014

Mitsui is now the parent company of Seedex.

Akio believes that it would be difficult to export edamamé (even if they were of superior quality) from Colorado to Japan because Japan now buys most of their edamamé from China, and prices from China are currently very depressed (low). However Japanese are becoming increasingly interested in organically grown foods, so there may eventually be an opportunity to export organic edamamé to Japan.

Edamamé is listed as a typical garden vegetable (just like tomatoes or cucumbers) in most seed catalogs in Japan. The seed that is used has been specially bred over many centuries to produce delicious edamamé. Address: PhD, Founder and President, Seedex, Subsidiary of Mitsui & Co. (USA) Inc., 1350 Kansas Ave., Longmont, Colorado 80501. Phone: 303-678-7333.

10629. Johnson, Duane. 1999. Update on work with *edamamé* (green vegetable soybeans) in Colorado (Interview). *SoyaScan Notes.* Jan. 8. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** Duane considers there to be two basic types of large-seeded vegetable-type soybeans: Tofu-type beans and edamamé-type beans. Any good taste panel can tell the difference. Duane has never done any analyses of the composition of these two types, or of food-grade soybeans vs. commodity soybeans, but he had read that edamamé-type beans often contain only 6-7% oil vs. 16-17% oil in commodity-type soybeans. He would guess that there is also a difference in the composition of the sugars (edamamé-type beans taste sweeter) and of the volatiles–which contribute to subtle differences of flavor. Duane has seen many studies of volatiles in soy sauce but never a study on volatiles in edamamé. Tom Lumpkin in Washington state might know more about these questions of composition. Duane has applied to the United Soybean Board for funding to do more research on edamamé but they consider them to be a vegetable rather than a soybean!

Duane is aware of two programs to breed soybeans for edamamé run by state soybean boards, in Nebraska and Minnesota; unfortunately in both places they have used tofu-type beans rather than edamamé-type beans.

There are basically two types of harvesters used to pick edamamé in East Asia. In China, where labor is cheap, they use a single-plant harvester and thresher. In Japan they use a machine that harvests one row at a time, similar to the Pixall one-row green-bean picker. The Pixall is made by Oxbo, a U.S. company based in Wisconsin, with offices in various states. Duane has used a Pixall with pretty good results, but he must discard about 20% of the pods for use as shelled edamamé.

The best edamamé Duane has ever tasted are those grown by Ewell Culbertson at Pachamama Organic Farm in Longmont, Colorado. The farm is located at an altitude of about 5,500 feet, which is the upper limit for growing soybeans. The combination of cool or cold nights and warm days leads to an unusually high sugar content, which makes Ewell's edamamé taste delicious. Address: Dep. of Soil and Crop Sciences, PC118, Colorado State Univ., Fort Collins, CO 80523. Phone: 970-491-6438.

10630. Cooper, Kim. 1999. New developments with soybeans in Canada (Interview). *SoyaScan Notes.* Jan. 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The term "food-grade soybeans" is increasingly widely used by Canadian soybean exporters and their Asian customers to refer to all soybeans developed specifically for food use. Many are large seeded, but some are also small seeded–developed for sprouting (to have high germination) or natto. All have a white hilum. The biggest problem with this term is that all soybeans can be used for human food. About 5-10% of the soybeans exported from Canada are "food-grade."

Most overseas buyers of Canadian food-grade soybeans want them to be GMO-free. In addition, some overseas crushers now also want soybeans that are GMO-free, though they need not be food grade.

The genetically engineered soybeans grown in Canada are generally handled in two different ways. The great majority, which are used by Canada's two major soybean crushers (owned by the American companies ADM and Central Soya) are given no special treatment; they are simply sold by farmers to their local elevator, where they get mixed with other soybeans in "the stream." These two crushers have made it very clear that they do not want these GMO soybeans to be segregated or given any special treatment. However the genetically engineered soybeans purchased by soybean exporters are handled like any other identity preserved (IP) crop, primarily so that buyers in foreign countries who want GMO-free can be guaranteed what they want. For the past ten years, the Canadian soybean trade has been developing its system of IP varieties, especially to serve Japanese customers–who usually like specific varieties. Exporters would contract with farmers to grow these special varieties, then at harvest they would be stored in their own elevator, silo, tank, etc. and shipped with their identity preserved. Organically grown soybeans are handled in a quite similar way. So when GMO soybeans arrived, the export trade decided to handle them just like IP varieties–actually more like organic soybeans than like IP. Setting up such an IP system has that added benefit that if and when, in the future, consumer benefits are genetically engineered into soybeans, their identity will have to be preserved. An increasing percentage of the soybeans grown in Canada are grown under contract–perhaps about 10% at present.

Shurtleff notes: The U.S. soybean distribution system is based on bulk shipments; its ability to handle IP shipments is much less advanced than the Canadian system. For

© Copyright Soyinfo Center 2014

this reason, the U.S. exports of soybeans to Europe have decreased dramatically over the past year. In America, GMO soybeans simply took over the main soybean distribution system; they did so with hardly any discussion and probably based on the assumption that hardly anyone would care. It is the latter assumption that is highly questionable.

Kim: U.S. soybean exporters went to Europe several years ago and told their customers: "We have these genetically modified soybeans and we're going to be shipping them to you starting this fall." The European buyers explained that European consumers are different from American consumers, and may want to think about and discuss this new matter. The American's said, "Sorry, we can't wait. The soybeans are coming." The Europeans felt upset, like the Americans were trying to shove something down their throats.

In Canada, the problem is far from resolved. Consumers in Canada are starting to become aware of this issue, and they are just starting to sound the alarm. But more and more genetically modified products are coming onto store shelves, so Kim believes consumers will gradually develop confidence in them–but not in the next 1-2 years. Kim believes that there is essentially no chance that most consumers will reject genetically modified foods in the long run.

The international conference in Canada last September was attended by about 200 people; there would have been more but for an airline strike in Canada. Peter Golbitz presented an excellent keynote address. His paper and some others are posted on the OSGMB website. Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

10631. Lacina, Tom. 1999. Starting a tofu manufacturing company on his farm in Iowa, and making the tofu from soybeans he grows (Interview). *SoyaScan Notes.* Jan. 24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Tom is the founder and owner of Midwest Harvest Corp. He began making and selling tofu this month. His company currently makes only one product, firm tofu. His distributor to the health food market is Blooming Prairie. He is both a lawyer and a farmer (he started as a lawyer then became a farmer) so he grows many of the soybeans used to make the tofu on his own farm–without chemicals. He grew up on this farm, and both his father and grandfather farmed this land.

He has been growing identity-preserved soybeans for the Japanese market for about 7 years. He started with the Pioneer Better-Life program (no chemicals were allowed), then that company was bought out by North Country Seeds in Ormsby, Minnesota. The varieties he grew were LS301, then HP204 (HP stands for "high protein"). Now he sub-contracts out the organic soybeans, which he also uses in making tofu, to small organic farmers in the area. He is considering growing organic soybeans himself in the future.

When selecting a soybean variety to grow organically or without the use of chemicals, its agronomic properties are much more important than its characteristics that effect the final tofu flavor, texture, or yield of tofu. Tom basically looks for a soybean variety that will form a canopy quickly to block growth of weeds; this becomes the key determinant of soybean yield. His taste tests show that the effect of different food-grade soybeans on the tofu flavor is very subtle.

Organic certification in Iowa is presently a mess; growers are having great difficulty get the certifications conducted. OCIA is having big problems; they are notorious for not getting out to the fields on time and not getting their paperwork done. It is very confusing. OCIA split with the central certification organization. The good news is that demand for organic soybeans is very strong.

Yet organic does not necessarily mean value added; remember that soybeans are part of a 3-year or 5-year rotation, and some of that time the fields are planted to cover crops that create little or no income. Moreover, most organic growers get 40 bu/acre compared with about 60 bu/acre for most regular commercial growers.

Tom's packaging is unique–a paperboard sleeve over a plastic tub. On the sleeve is the story of how the soybeans are grown and the tofu is made. He uses a Takai system, that was ordered and installed for him by Bar N.A.; he did not want to deal with the problems of importing equipment, and he wanted some expertise to come with it. He watched tofu being made at both INTSOY in Illinois and on the self-contained Takai system at Iowa State University. He was been in contact with Walt Fehr, a soybean breeder, and Dr. Lester Wilson, who is "Doctor Tofu"–both at Iowa State. Dr. Wilson has visited his tofu plant on his farm. "Quite a few people in the state of Iowa are fascinated by the idea of a farmer doing this kind of value-added agriculture." His wife and sister, who are called the "soy sisters" work at the end of the tofu production line, doing the curding and controlling the quality at that end; they are also developing tofu recipes for the Midwest. Tom's brother-in-law is the operations manager.

Tom continues to work as a lawyer (partly to pay the bills), and he works in the tofu factory several days a week. Tom has no doubt that his business will survive; the big questions are (1) How much do they want to grow; from day one they have not been able to keep up with demand. (2) What will they do if ConAgra decides to set up a big tofu plant in Iowa.

Update: Talk with company representative. 2000. May 22. The company is doing "extremely well." They are looking for a source of organic calcium sulfate. Address: Midwest Harvest Corp., 3635 Hwy 146, Grinnell, Iowa 50112. Phone: 515-236-5170.

10632. Sky, Beverly Stiskin. 1999. Recollections of early

© Copyright Soyinfo Center 2014

work with macrobiotics in Boston. Part I (Interview). *SoyaScan Notes.* Jan. 31. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Beverly Siewerski was born on 15 Nov. 1947 in Austria; her family's roots were in Poland. Her mother was a Holocaust survivor. She came to the United States at age 10 and grew up in New York state. She has been friends with Richard Sandler since they were both young.

Beverly first went to Boston to study macrobiotics in 1967. At the time she was living in Philadelphia, Pennsylvania, age 19, and cooking at an early natural foods restaurant named The Commons; the early one in New York was The Paradox. At The Commons, they aspired to macrobiotics. Although nobody there had ever studied about it with a teacher, they cooked from the little *Zen Cookery* book. Several articles were written about the new restaurant, and in one of them Beverly talked about how they considered themselves a macrobiotic restaurant. About a week later, Beverly got a letter from Jim Ledbetter, a student of Michio and Aveline Kushi in Boston, inviting her to come to Boston to learn how to cook properly–before you call yourselves macrobiotic. The restaurant sent Beverly, who went for 10 days in the spring of 1967. She got very sick within the first 3 days that she was there–like many of her friends she was still smoking a good deal of pot and at the time Aveline was cooking extremely salty food; the combination of her being so yin and the yang diet made her so sick she had to stay in bed for most of the time. The Kushis were worried. At the time, Nahum Stiskin (born in 1945) was going to Brandeis University (in Waltham, Massachusetts). He moved in with the Kushis at their home on Gardner Road right after he graduated.

After 10 days of studying with Aveline, Beverly returned to Philadelphia and continued cooking at the restaurant. But now she realized that there was so much more to learn about macrobiotics in Boston, and to continue cooking in a community where everyone was still smoking pot, and dropping acid [using LSD] from time to time, just didn't feel like a healthy lifestyle. Beverly called Boston and asked if she could come there to study for a longer time. Fine. "So Nahum drove down to Philadelphia (I think because he liked me), picked me up, and by June, 1967, I was living at the Kushi house on Gardner Road. I arrived right after the 6-day war in Israel–which started on 5 June 1967. The five Kushi children were also living there." There were no study houses yet. Michio and Aveline had ten original disciples; Beverly and Nahum Stiskin were among the ten. Other students living at the Kushi's home were Jim Ledbetter, Evan Root, Peggy Taylor, Connie Frank (Richard Sandler's first wife–Beverly introduced Richard to Connie), Paul Hawken, Ty Smith, Peggy Winter (who is no longer living), and Rebecca Dubowsky. There was also a sizeable peripheral community also, including Joe Leis (rhymes with "lease"). Continued. Address: Boston, Massachusetts. Phone: 617-776-8749.

10633. Sky, Beverly Stiskin. 1999. Recollections of years in Japan from June 1969, starting Autumn Press in Kyoto, and meeting William Shurtleff in Kyoto. Part II (Interview). *SoyaScan Notes.* Jan. 31. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Stiskins arrived in Tokyo, Japan in June, 1969. Beverly, who was five months pregnant with her first child, Reuben, almost had a miscarriage from the airplane flight. They stayed for about a month in Tokyo and met Gary Peacock (who was a musician), and David and Cecile Levin–all of whom were interested in macrobiotics. Through David Levin, Nahum made a connection with the Takeda family in Kyoto. The Takedas allowed the Stiskins to live in their three-building compound, the *Higashiyama Sanso,* in eastern Kyoto, behind *Kiyomizu-dera.* They moved in in July, and Reuben was born in August. In September 1969 they both began to attend the *Nihongo Gakko* (Japanese language school) and Nahum began to study Shinto; he began to study with an esoteric Shinto sect that had preserved many old and beautiful rituals–and they were connected to Judaism. He also got involved with Japan-Israel Society whose aim was to teach Hebrew to Japanese.

After a year they moved to a small Japanese house in Uzumasa (near *Kitano-jinja*–Kitano Shrine), west of Kyoto. Ty Smith lived with the Stiskins for a while. Wally Gorell also lived in that part of Kyoto, but further west near Arashiyama.

Note: William Shurtleff arrived in Japan on 16 Jan. 1971, went straight to Kyoto and enrolled in the Japanese language school, the same one the Stiskins were already attending.

Beverly recalls that she and Nahum first met William Shurtleff at the *Nihongo Gakko.* Nahum and Beverly lived in Kyoto for 2 years. One night the Stiskins hosted an evening get-together and talk by Helen and Scott Nearing at their home near *Kitano-jinja.* Shurtleff was there, his first visit to their home. Beverly tells Shurtleff: "I remember you distinctly in Kyoto, and this will verify that that was where we met. First, we were macrobiotic and strictly vegetarian, so we were interested in tofu. You told us that you were very interested in tofu and you had just started or were about to start doing research on tofu–finding all the different ways that it is prepared, etc.

"You told us this because Nahum and I had already started Autumn Press in Kyoto. The Autumn Press logo, a sheaf of harvested brown rice, was symbolic of our mission which was to publish books to feed the mind and spirit. Erewhon was food for the body. Autumn Press was conceived of as harvesting the knowledge of Asian and American cultures to nourish the challenges of the new age. Our first book was Nahum's book, *The Looking-Glass God: Shinto, Ying-Yang, and a Cosmology for Today.* We published it ourselves because nobody else would. We borrowed

© Copyright Soyinfo Center 2014

$2,000 as 'seed money' from both our families (both sets of parents), did an initial printing in Japan of about 500 copies in 1971, and warehoused the books in our home west of Kyoto. Then we discovered that this book did not have copyright protection in the USA so in 1972 we published a much nicer hardcover edition with Weatherhill (New York and Tokyo). By 1972 we knew what we wanted to do in life–publish books. We had tapped into a very interesting resource for information–although none of the other publishing companies thought it was interesting. Who wants to know about Shinto? Brown rice? Forget it! Tofu? Are you crazy?

"You had a shaved head and a shoulder bag (for carrying books to school) that was made out of a big burlap bag and had the words "Kokomo Rice" [probably Kokuho Rose–a brand of short grain brown rice grown by Koda Bros. in Dos Palos, California] prominently on the side. I remember thinking that you were a unique character. I knew a little bit about you–that your family was fairly well off, but here you were living like a strict Buddhist monk, an itinerant monk from California. You wore very simple clothing, plus that rice bag–which I thought was the ultimate in humility. I think you were in Nahum's classes at the language school; you weren't in any of my classes.

"But the main point is this: Nahum and I had a publishing company and we were both interested in tofu–and potentially in a book about tofu. You knew this clearly when we were all in Kyoto in 1971, and we knew you were thinking about doing research and writing something about tofu. You might have first put pen a year or so later after you had moved to Tokyo, but the idea was already brewing while you were in Kyoto."

The Stiskins then left Kyoto and moved to Tokyo, where Nahum worked with a marketing company, turning their Japlish marketing studies into good English. Shurtleff left Kyoto on 4 Dec. 1971 to continue his Japanese language studies at International Christian University (ICU) on the outskirts of Tokyo. At ICU he stayed with Jeffrey and Gretchen Broadbent. Jeffrey and Bill took the same intensive Japanese language course. Gretchen was very interested in tofu, and by April 1972 was even studying tofu-making with a local tofu maker.

Beverly has no recollection of ever meeting Jeffrey or Gretchen Broadbent. "The Broadbents may have given you our new phone number in Hayama, south of Tokyo, but the important connection had already been established 6-9 months earlier in Kyoto."

"I remember the day you called Nahum, and I remember him getting off the phone and saying 'Guess who I just talked to.' We both remembered you from Kyoto, and I remember the call because we both liked the idea of a book on tofu very much. That was a turning point for us and Autumn Press."

Shurtleff then recalls that first meeting on 13 Jan. 1973 at the Stiskins' attractive home by the ocean in Hayama (2113 Isshiki, Hayama-shi, Kanagawa-ken, Japan 240-01). "I explained to Nahum that I thought a book about tofu would be interest to many people in America. He liked the idea immediately. I was astonished that anyone else shared my idea. He quickly looked over the table of contents and a few pages I had written by hand on the subject, then pulled a publishing contract out of his desk drawer and said 'please sign here.' I didn't even read the contract. There was no discussion of terms or of an advance–I didn't even know what an advance was. I signed, he signed it, we each took a copy and that was it. Before we left, Nahum showed me comments he had received from a professional cookbook editor who he had hired to edit the macrobiotic cookbook he was writing with Lima Ohsawa. I was very impressed that he would take such a professional approach. I remember him emphasizing that in a good cookbook, in the list of ingredients, the words 'teaspoon' and 'tablespoon' are always written out, never abbreviated as 't.' and 'T.' I found it remarkable that we had a meeting of the minds and signed a book contract in 1 or 2 hours."

This would be the sixth book that Autumn Press would publish: (1) *The Looking-Glass God,* by Nahum Stiskin (published in 1971 in Kyoto, revised ed. 1972). About Shinto–Japan's oldest religion. (2) *The Art of Just Cooking,* by Lima Ohsawa with Nahum Stiskin (1974, in Hayama, Kanagawa-ken, Japan). A macrobiotic cookbook. (3) *The Gayatri Mantra: Yoga for Beginners,* by Satyavan [S.K. Roy] (1974). A tiny, 50-page book. (4) *Cry of the People and Other Poems,* by Kim Chi-ha (1974). A translation into English of poems written from jail by a South Korean dissident poet, criticizing the country's dictator. (5) *Island of Dreams: Environmental Crisis in Japan,* by Norie Huddle, Michael Reich, and Nahum Stiskin (1975). A book about pollution in Japan. The Foreword was by Paul Ehrlich, and the Afterword by Ralph Nader.

Beverly continues: One of these books, *Cry of the People,* would later have a profound effect on both Autumn Press and *The Book of Tofu.* Bob Bernstein at Random House was well acquainted with Kim Chi-ha, his protest poetry and the fact the he was now in jail. Bob wanted to try to help him. When he heard that Kim's poems had been published, Bob said "I want to meet the publisher." When Nahum showed him Autumn Press' various books, Bob decided to include Autumn Press in Random House's small publishers distribution program. That quickly led to Ballantine Books (a Random House subsidiary) buying the mass market paperback rights to *The Book of Tofu* in 1978.

"Nahum was perfectionist–and so were you. This led to some problems and difficult compromises along the way, but in the end it led to a quality book... I remember one of the first times we met at Hayama, you showed up with Akiko and this box full of papers–which was supposed to be 'the manuscript.' It was very disorganized, with recipes and text all mixed up together. Nahum and I both remember

© Copyright Soyinfo Center 2014

that clearly and still laugh about it." Address: Boston, Massachusetts. Phone: 617-776-8749.

10634. Jones, Catherine. 1999. Shining examples: At East, the sushi sparkles. If only the service and everything else did. *New York Times.* Feb. 28. p. NJ14.
• ***Summary:*** This is a review of East Japanese Restaurant (1405 Teaneck Rd., Teaneck, New Jersey–a suburb of the New York metropolitan area, just west of Manhattan island, New York City). The mood was relaxing and the sushi was very good. "Finally the natto roll both surprised and perplexed my group. I love soybeans but have never tried them mixed with scallion in a roll; they are gummy, bland, salty, satisfying and curious all at the same time."

10635. Jack, Alex. 1999. Let food be thy medicine: 750 scientific studies, holistic reports, and personal accounts showing the physical, mental, and environmental benefits of whole foods. 3rd ed. Becket, Massachusetts: One Peaceful World Press. 304 p. Index. 23 cm. [8 ref]
• ***Summary:*** This book, organized alphabetically by subject, is a very original and creative source of information, with hundreds of interesting bibliographic references. The author believes in a natural, whole-foods diet. Includes the following subjects: Alternative medicine, amasake (amazake), Asia Diet Pyramid, azuki beans, bovine growth hormone, cancer, cholesterol, coffee, complex carbohydrates, dairy food, estrogen, evolution, exercise and fitness, fats, fiber, genetically engineered food, genetic model of health and disease, genistein, global warming, heart disease, hiziki, hunza diet, isoflavones, Japanese diet, kombu, kuzu, lignans, longevity, macrobiotics, Mad Cow Disease, meat, menopause, microwave cooking, miso, mochi, natto, nori, osteoporosis, Paleolithic diet, phytochemicals, phytoestrogens, polyps, potatoes, Price–Weston, prostate cancer, protein, rice, Schweitzer–Dr. Albert, sea vegetables, seitan, sesame, shoyu, soy foods, tempeh, tofu, umeboshi plum, vegans, vegetarians, wakame, wartime restricted (diets, incl. World War I and II), whole grains. Resources. About the author. Address: Box 10, Becket, Massachusetts 01223. Phone: (413) 623-5742.

10636. Morinaga Nutritional Foods, Inc. 1999. Help! Help! My tofu needs help! Never fear–New Tofu Helper is here! (Ad). *Natural Foods Merchandiser.* Feb. p. 19.
• ***Summary:*** This full-page color ad shows (at lower left) packages of four new varieties of Mori-Nu Tofu Helper: Italian Herb Medley, Shanghai Stir Fry, Eggless Salad, and Garden Scrambler. Across the very top of the ad is written: "Location: Expo West–Booth 755. A desperate cry is heard from the crowd. There's a blinding flash. And suddenly..." A Superman-type figure, with red cape, red-gloved right hand held out, and green uniform, is flying through the air over a fair maid who is crying for help. Below the packages is written: "Able to create great meals in a single pan. Faster than a hungry family. Defender of great taste everywhere. Introducing new Tofu Helper from Mori-Nu. All natural. Dairy-free. Vegan. For more info about new Tofu Helper call 1-800 Now Tofu." Website: www.morinu.com.

Note: The first product of this type with the name Tofu Helper was introduced by Larry Needleman in about 1980–but it was never commercialized.

This ad also appeared in *Vegetarian Times* (March, p. 41 and June, p. 65). Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638 (NOW TOFU).

10637. Nagai, Toshirou. 1999. [Breeding and genetic manipulation of *Bacillus subtilis* (*natto*)]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 46(2):39-44. [39 ref. Jap] Address: Genetic Resources Center, National Institute of Agrobiological Resources, Ministry of Agriculture, Forestry and Fisheries, Tsukuba-shi, Ibaraki prefecture 305-8602, Japan.

10638. Daniels, Nahum Stiskin. 1999. Recollections of publishing *The Book of Tofu* (Interview). *SoyaScan Notes.* March 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** "*The Book of Tofu* was one of those very special projects–almost timeless indeed. We did what we all set out to do, which was to communicate a very tangible idea to the West. It's very rare when people can get together and actually pull that off. It was a very exciting and very worthwhile project–something I'm always very proud of being involved in."

Nahum has always imagined [not true] that I [Shurtleff] went to speak to Weatherhill and Tuttle before coming to Autumn Press. "I thought you came to me as a last resort, after they rejected your idea... I remember the day that I took a phone call from you. We were living in Hayama. I remember picking up the phone and hearing your voice at the other end–much like to tonight. You said, "Hi Nahum, this is Bill Shurtleff." Yeah. "I'm thinking of doing a book on tofu" something like that. "I said to myself–it was just an instinctive 'Great!' I think I said 'I think that's a great idea.'" It triggered something–like a light bulb went on in my mind. "As soon as I heard it, I thought it was a fabulous idea." We were struggling to get our own little publishing company going.

Bill recalls: I remember that phone call too. And I remember thinking 'Amazing–There's somebody else in the world who thinks this is a good idea."

Nahum continues: "I had an image of you as this waiflike creature who had been in my peripheral vision in Kyoto. You were a free spirit, doing interesting and bizarre things. I didn't know you, but I had an instinct that when you

© Copyright Soyinfo Center 2014

set your mind to something, you were going to do it. Only much later did learn about your family; I still remember that your grandfather had his own railroad car."

The Book of Tofu was the sixth book that Autumn Press published, but we had never done anything of its magnitude before. Lima Ohsawa's book was very helpful in preparing me to do *The Book of Tofu.* Through one of the editors at Weatherhill I was introduced to a woman cookbook editor in America. She taught me the high style in cookbook editing.

"I remember just before *The Book of Tofu* was published, that your mom, may she rest in peace, loaned Autumn Press some money–about $5,000–to help pay for the first printing. This loan was very important and helpful to Autumn Press, to get us over the hump."

Kim Chi Ha and *The Book of Tofu:* In 1974 Autumn Press published *Cry of the People,* by Kim Chi Ha–Poems written from jail by a South Korean dissident poet. Some years later Robert L. "Bob" Bernstein, the President and CEO of Random House, was in Japan. He had a strong personal interest in free speech, and he spoke up for oppressed writers around the world. He knew of Kim Chi Ha, and knew he was in a dungeon in South Korea because he wrote and spoke publicly against the country's dictator and tyrant. In Japan, Bernstein's translator, who was a friend of the Stiskins, gave him a copy of *Cry of the People.* He said that he wanted to meet the people who had published this book. Bernstein called Nahum just as Nahum was preparing to leave Japan after seven years. Nahum didn't know who Bernstein was and said he was sorry but he was too busy to meet with him. Back in the states, after realizing the opportunity he had missed, Nahum called Bernstein and accepted an invitation to visit his office in New York City. He took copies of each of Autumn Press' books, including *The Book of Tofu,* which had just been published. They talked about publishing and Bernstein was very interested to see what kind of books Autumn Press was publishing. Before they parted Bernstein said that Random House would like to distribute Autumn Press' books. This was a huge break for Autumn Press. Random House soon noted that *The Book of Tofu* was selling very well. Several years later at a sales conference, Dick Krinsley, in charge of Ballantine Books, approached Nahum and said he would like to buy the paperback rights to *The Book of Tofu.* Thank you Kim Chi Ha.

In 1978 Autumn Press published *Nuclear Madness: What You Can Do,* by Helen Caldicott, a physician and anti-nuclear activist from Australia. The book sold very well and was eventually very influential. However it led to the downfall of Autumn Press, in a process filled with conflict, in which Helen eventually sued Autumn Press. Address: Stanford, Connecticut.

10639. Mukherjee, Anjali. 1999. Natural chemical stew. *Times of India* (*The*) (*Bombay*). March 4. p. A7.

• ***Summary:*** Scientists are rapidly learning about the nutritional and medical benefits of phytochemicals ("plant chemicals"). Foods which are brimming with phytochemicals include soyabeans.

The Japanese consume more "Soya foods" than any other population on earth; and they have a longer life expectancy than almost any other population. Compelling evidence suggests that something in Soya foods protects cells in the human body from free radicals and carcinogens. Scientific research has shown that Soya foods are an exceptionally rich source of phytochemicals with tongue twisting names like isoflavones, phytic acid, saponins, coumarins, genistein, etc. Genistein, for example, is known to thwart cancer at almost every stage of its development. People consuming as little as 50 gms of Soya foods every day can benefit from their cholesterol lowering properties.

A portrait photo shows Anjali Mukherjee. An illustration shows a sack of whole soybeans labeled "Soya food."

10640. Mahy, Dixie. 1999. Work at Now & Zen Bakery (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** For 25 years Dixie Mahy was head of the San Francisco and a teacher in the San Francisco school system. She has long eaten a vegan diet. When she retired, she invested much of her retirement funds in Now & Zen, a company founded and run by Japanese-American Miyoko Schinner which had a vegan restaurant and a bakery that made delectable vegan cakes, cookies and other desserts. One of their best-selling products in recent years (also made at their factory) has been their UnTurkey, a meatless turkey based on seitan, with a yuba skin. New products may include a Barbecue UnRibs, and a breast of UnChicken. She is now on the company's board of directors, and she is learning a lot about business and money. The company started on a shoestring and they are still running on a shoestring. Unfortunately, last year, in June 1998, they had to close the Now & Zen restaurant, because they could not keep both the restaurant and factory running at the same time. Part of the reason is that Miyoko now has two little girls.

Now & Zen supplies various vegan products (including chocolate chip cookies and cinnamon rolls) to United Airlines. Address: Now & Zen, Inc., 665 22nd St., San Francisco, California 94107. Phone: 415-695-2805.

10641. Efron, Sonni. 1999. Japanese choke on American biofood: Genetically altered produce reaps opposition. But moves to label it threaten $11 billion U.S. sales. *Los Angeles Times.* March 14. p. A1, A8.

• ***Summary:*** Japan is one of several nations that have proposed labeling "bioengineered food to give consumers the freedom to reject it." American trade groups say the Japanese are being protectionist. Address: Staff writer.

10643. House Foods America Corporation. 1999. Hinoichi Tofu (Leaflet). [Garden Grove, California]. 1 p. Front and back. 28 cm. [Eng; Jap]
• ***Summary:*** Printed with black ink on light green paper. On the front is a half-page introduction to tofu in English (top half) and Japanese (bottom half). On the rear is a recipe (in English) for Stir-fry tofu and vegetable (with "2 {14 oz.} pkgs. Hinoichi Regular Tofu"). Address: [7351 Orangewood Ave., Garden Grove, CA 92841].

10644. House Foods America Corporation. 1999. Tofu: The joy of soy (Leaflet). Garden Grove, California. 1 p. Single sided. 28 cm.
• ***Summary:*** See next page. Glossy color. Shows photos of the front of the package of four different types of Hinoichi-brand tofu (Soft, regular, firm, and extra-firm) and four different types of House-brand tofu (Organic soft, organic regular, organic firm, and organic extra-firm). For all types: "65 days of freshness guaranteed." Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

10645. Kushi Institute. 1999. Kushi Institute store: Food, books, kitchenware, bodycare, video, audio. Spring/summer 1999 (Mail-order catalog). Becket, Massachusetts. 40 p. 28 cm. [8 ref]
• ***Summary:*** A good new source of macrobiotic supplies. Includes: Amazake (from Kendall Food Co.), arame (sea vegetable), azuki beans (from Hokkaido {Japan} and organic), barley malt, black soybeans (from Hokkaido and USA), dulse, fu (dried wheat gluten), hato mugi [hatomugi], hijiki, kanten flakes, koji, kombu, kuzu, mirin, miso, mochi (organic, Kendall), natto (organic, Kendall), natto miso, nori, rice syrup, sea palm, sea vegetable kit (8 varieties), shoyu, suribachi, tamari, tekka, tofu–dried, tofu kit, umeboshi, umeboshi concentrate, wakame, yuba. Address: P.O. Box 500, Becket, Massachusetts 01223-0500. Phone: 1-800-645-8744.

10646. Liu, KeShun. 1999. Oriental soyfoods. In: C.Y.W. Ang, K. Liu, and Y-W. Huang, eds. 1999. Asian Foods: Science & Technology. Lancaster, Pennsylvania: Technomic Publishing Co., Inc. 546 p. See p. 139-99. Chap. 6. March. [60 ref]
• ***Summary:*** Contents: Introduction: Soybeans as a crop, composition and nutritional quality of soybeans, soyfoods–from the east to the west, soyfood classification.

Soymilk: Introduction, traditional soymilk, modern soymilk (techniques for reducing beany flavors, commercial methods, formulation and fortification, homogenization, thermal processing, and packaging), concentrated and powdered soymilk, fermented soymilk (with lactic acid bacteria), soymilk composition and standardization.

Tofu: Introduction, methods of tofu preparation, factors involved in tofu making (soybean varieties, concentration of soymilk, heat process of soymilk, types of coagulants, concentration of coagulants, coagulation temperature, coagulation time, process automation, packaging), varieties of tofu (silken tofu, regular and firm tofu, Chinese semidry tofu {*doufu gan*}, Chinese tofu sheets and tofu noodles, lactone tofu), varieties of tofu products (deep-fried tofu, Japanese grilled tofu, frozen tofu {"Made almost exclusively in rural farmhouses and temples by putting tofu outdoors in the cold weather, frozen tofu was never sold as a commodity in the past"}, Japanese dried-frozen tofu, Chinese savory tofu {"In China there are many specially made tofu varieties known as savory tofu"}, fermented tofu {Sufu or Chinese cheese, varieties of sufu, preparation methods, preparation principle}).

Soymilk film (yuba). Soybean sprouts. Green vegetable soybeans. Other non-fermented soyfoods: Okara, roasted soy powder. Concerning okara: In some parts of China, okara is salted and spiced and used as a pickle. Or it can be simply added to a dish with meat and vegetables. In other parts of China it is made into okara tempeh [called *mei-dou-zha* or meitauza].

Fermented soy paste (Jiang and miso): Koji, koji starter, and inoculum (koji, koji starter, inoculum), Chinese jiang (traditional household method, pure culture method, enzymatic method), Japanese miso (preparing rice koji, treating soybeans, mixing and mashing, fermenting, pasteurizing and packaging), principles of making jiang or miso.

Soy sauce (Jiangyou or shoyu): Chinese jiangyou (traditional household method, modern methods), Japanese shoyu (treatment of raw materials, koji making, brine fermentation, pressing, refining), principles of making soy sauce, chemical soy sauce (made by acid hydrolysis; heat with 18% hydrochloric acid for 8-12 hours, then neutralize with sodium carbonate and filter to remove insoluble materials), proximate composition of soy sauce, quality attributes and grades.

Japanese natto: Methods of preparation, principles of preparation.

Indonesian tempeh: Traditional method, pilot plant method, principles of tempeh preparation. Fermented black soybeans (Douchi or Hamanatto): Chinese douchi, Japanese Hamanatto.

Tables: (1) Names (English, Chinese, Japanese, Korean, Indonesian, Malay, Filipino) general description, and utilization of nonfermented Oriental soyfoods.

Soy sprouts: Chinese: Huang dou ya, Da dou ya. Japanese: Daizu no moyashi. Korean: Kong no mool.

Yuba: Chinese: Dou fu pi, Fu zhu. Japanese: Yuba.

© Copyright Soyinfo Center 2014

© Copyright Soyinfo Center 2014

Korean: Kong kook. Filipino: Fu chok.

Yuba (Soy pulp): Chinese: Dou zha / doufu zha. Japanese: Okara. Korean: Bejee. General: "Insoluble residue after filtration of soy slurry into soymilk."

Roasted soybeans (Soynuts): Chinese: Chao da dou. Japanese: Iri-mame. Korean: no name. Indonesian: no name

Roasted soy powder: Chinese: Chao dou fen, dou fen. Japanese: Kinako. Korean: Kong ka au. Indonesian: Bubuk kedelai. (2) Names (English, Chinese, Japanese, Korean, Indonesian, Malay, Filipino) general description, and utilization of fermented Oriental soyfoods. (3) Proximate composition (gm per 100 gm fresh weight) of some fermented soyfoods.

Figures show: (1) Flowchart: Traditional Chinese method for making soymilk and tofu (from whole soybeans). (2) A commercial processing method (Alfa-Laval) for making soybase and a subsequent product–soymilk. (3) Photo of homemade firm tofu. (4) Photo of a dish of tofu and mushrooms. (5) Photo of cubes of sufu (Chinese cheese) on a white plate. (6) Flowchart for making sufu from firm tofu. (7) Photo of two packages of dried yuba sticks (Chinese). (8) Photo of a bowl of soy sprouts. (9) Photo of Chinese chiang, and Japanese red and white miso, each on one of three spoons in a shallow white bowl. (10) Flowchart of a common method for making Japanese rice miso [red miso]. (11) Photo of soy sauce in three different containers: dispenser, small bottle, and large Chinese can. (12) Flowchart of a common method for making Japanese koikuchi shoyu (soy sauce). (13) Photo of two chopsticks lifting some Japanese natto from a bowl full of natto; the thin strings connecting the natto above and below are clearly visible. (14) Flowchart of a common method for making Japanese natto from whole soybeans. (15) Photo of tempeh made in the USA in perforated plastic bags (Courtesy of Mr. Seth Tibbott, Turtle Island Foods, Inc., Hood River, Oregon). (16) Flowchart of traditional Indonesian method for making tempeh from whole soybeans. (17) Photo of Chinese *douchi* (fermented black soybeans) on a white plate.

Note: For a biography of KeShun Liu PhD see p. 544. Address: PhD, Soyfoods Lab., Hartz Seed, A Unit of Monsanto, Stuttgart, Arkansas.

10647. Newman, Jacqueline M. 1999. Cultural aspects of Asian dietary habits. In: C.Y.W. Ang, K. Liu, and Y-W. Huang, eds. 1999. Asian Foods: Science & Technology. Lancaster, Pennsylvania: Technomic Publishing Co., Inc. 546 p. See p. 453-85. Chap. 15. [104 ref]

• ***Summary:*** Contents: Introduction. Foods of Bangladesh. Cambodian foods. Chinese foods: Food selection, eating behaviors, intracultural differences, feasts, holidays and special foods. Indian foods. Indonesian foods. Japanese foods. Korean foods. Laotian foods. Malaysian foods. Nepalese foods. Foods of Pakistan. Philippine foods. Thai foods. Vietnamese foods.

In each country and culture, the role and practice of vegetarianism is discussed.

Soyfoods are mentioned as follows: China (p. 458): "For breakfast, Northerners prefer warm soymilk and fried wheat-dough crullers." Vegetarians from both north and south get an important part of their protein "from a sophisticated cuisine based upon considerable use of gluten and tofu," made to look and taste like animal products.

Indonesia (p. 463): "... foods are preferred sweet; even the local soy sauce, kecap manis, is fermented sweetened."

Japan (p. 465): Mentions shoyu and tofu.

Korea (p. 468-69): Mentions tofu.

Malaysia (p. 472): Discusses Chinese who married Malay women (called Nonyas); "their families are called Peranakan or Straits Chinese and their cooking is called Nonya Cuisine. Straits Chinese live mostly in Penang, Malacca, and Singapore; practice Buddhism; and cook their Chinese food with a Malay influence. Their Nonya cuisine is eaten communally; all dishes are served at once,..."

Nepal (p. 473): "During Janai Purnima, a soup called *quantee* is essential; it is made from sprouted soy, chick pea, black beans,..."

Pakistan (p. 476): Pad Thai, a popular lunch dish, is made with tofu. Note: Pad Thai, based on rice noodles, is one of Thailand's national dishes. Address: PhD, R.D., Prof., the Dep. of Family, Nutrition and Exercise Sciences, Queens College-CUNY, Flushing, New York.

10648. **Product Name:** Nichimo Frozen Tofu [Dice Cutting, Stick Type, For Deep-Frying].
Manufacturer's Name: Nichimo (Importer Marketer). Made in Tanaba, Wakayama, Japan 646, by Tendre Co., Ltd.
Manufacturer's Address: USA: 1420 Princeton St., Santa Monica, CA 90404. Japan: Tokyo. Phone: 1-877-654-8638 (TOFU).
Date of Introduction: 1999 March.
Ingredients: Soy bean, water, gelatine, potato starch, calcium chloride.
Wt/Vol., Packaging, Price: 16 oz. foil Ziploc bag.
How Stored: Frozen.
New Product–Documentation: Talk with Mike Misawa of Nichimo. 1999. April 12. This new frozen tofu was introduced in March 1999. It comes in three forms, and each is individually quick frozen (IQF) and sold in a plastic bag. The dice cut comes in 300 gm or 450 gm, and the stick type in 80 gm. The third type is ready for deep frying. It was first sold at Trader Joe's. It is made by Tendre, a subsidiary of Nichimo, in Wakayama, Japan.

Label and leaflet sent by Mike Misawa. 1998. April 13. 11.5 by 7 inches. On the front is a color photo printed on the foil pouch, which shows a bowl of tofu & egg-flower consomme soup in front of a baguette. "Very handy. The tasty bite size frozen tofu." The logo is a bear holding a globe sitting atop the world. On the back are six small color

© Copyright Soyinfo Center 2014

photos showing serving suggestions: Tofu hamburger. Tofu consomme soup. Tofu steak. Tofu pizza. Tofu scrambled egg. Tofu Italian salad.

Leaflet: "Tendre frozen tofu is a product like no other." Two sided, color. Shows many of the same photos as on the label. On the back: "Give us a chance to increase your business profit." Photocopy brochure. "Frozen tofu: Revolutionary product developed by Nichimo Co." 5 p. Nichimo Corporate Overview. 1998/04. "Towards a boundless future: Being a company which contributes to an affluent life." 12 p. For 80 years Nichimo has been a fisheries business. Website: www.nichimo.co.jp. Address in Japan: 10th Floor Nippon Building, 6-3 Otemachi, 2-chome, Chiyoda-ku, Tokyo 100-0004, Japan.

10649. Santacruz, Cecilia; Santacruz, Nestor. 1999. Tofu and other soyfoods in Colombia (Interview). *SoyaScan Notes.* April 1. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** In June 1998 Cecilia and Nestor started the earliest known non-Asian tofu shop in Colombia that focused on traditional, hand-made tofu and made delicious products from tofu. Named Delisoya, it is located in a residential part of Bogota (the country's capital) high in the Andes mountains of Colombia at 8,500 feet altitude. They visited Soyfoods Center from Salinas, California, after being given an excellent tour of the Wildwood Natural Foods soyfoods plant in Santa Cruz. The main things they learned at Wildwood: (1) They can make a large amount of very tasty tofu using an open-top, stem-injection system (without pressure). Nestor would like to get this same kind of system. (3) Their many creative tofu products are delicious; the baked (not fried) tofu burgers were especially interesting. (3) The shop was very clean and sanitary.

Ceci speaks good English, since she lived for a year in Tennessee (with "Ami") during her high school years. This is the third time they have been to the USA.

Ceci and Nestor were both born in Colombia–Ceci on 3 December 1949 and Nestor on 28 Aug. 1955. They both attended the Colombian National University (*Universidad Nacional de Colombia*) where they studied chemistry and graduated in 1982. They were married that same year, shortly after graduation. Nestor got a job in Bogota with Canta Claro, a company that operates soybean crushing plant. They made animal nutrition products from the soybean meal and various foods from the soy oil. Ceci also worked for Canta Claro for 2-3 years in quality control, then she left and worked with her family who owns a small hotel about 150 km (93 miles, 4 hours by car) outside of Bogota. She also spent more time cooking and doing things she enjoyed, alone and with her mother (who has her own foundation and is a very civic-minded person). In 1992 Nestor and Ceci met a macrobiotic group named *Escuela de Educación Vitalicia* (The Life and Vitality Education School) run by students of Tomio Kikuchi, a well-known teacher of macrobiotics who lives mostly in Brazil; this group had been in Bogota since 1985. Later in 1992 Nestor left his job at the soybean crushing plant and began to work as an administrator in Ceci's family hotel. Slowly their lives began to change. In June 1993 they traveled to Brazil to attended the annual winter seminar by Tomio Kikuchi. They found him to be an excellent teacher and, at age 70, a man of remarkable vitality. Bernadette Kikuchi is Tomio's wife. Through her cooking lessons in Colombia and Brazil, in their school, they first made contact with Oriental cooking and foods. Through them they came to know about brown rice and tofu for the first time, 7 years ago. "They are remarkable human beings who left a deep impression on us."

In early 1996 Nestor and Ceci bought some tofu from a Chinese man in Bogota; it was quite hard and the flavor was not very good, so they started to make their own tofu. In late 1996 Nestor and Ceci began to pursue their interest in soyfoods more actively. They saw an article somewhere about Peter Golbitz of Soyatech in Maine, so they wrote him and he sent them a free copy of the 1996 *Soya Bluebook.* In that book they saw a Takai advertisement for tofu and soymilk equipment. Takai sent them a catalog and there they saw the address of Soyfoods Center–from which they ordered several books, including *The Book of Tofu* and *Tofu & Soymilk Production.*

They found that there were already two companies in Bogota that made tofu and other products. Named Hosanna and Sabyi, they each opened in about 1996-97, and were run by Colombians (non-Asians), but their focus was on products such as sausages made with tofu and soy flour, or pimento-flavored tofu, their tofu was not hand-made, and both Nestor and Ceci found the tofu to be very hard and not tasty. So in June 1998 Nestor and Ceci opened Delisoya. There they made traditional handmade tofu and soymilk, plus several tasty second generation soy products such as cheesecake, soy mayonnaise, and soy burgers. The interior is very attractive with a large deli case stretching across the room, and a list of products and prices written by hand on a blackboard on the wall. They gave Soyfoods Center three color slides showing the above views. This is a business with a philosophy and a social mission. They want to teach local people about the goodness of soyfoods and how to use them (including the okara), and they want the shop to eventually serve as a school where other Colombians can learn to make tofu, soymilk, and other soyfoods. Recently the International Monetary Fund (IMF) has demanded that Colombia quickly open its economy to foreign goods. The influx of cheap products has had a drastic effect, creating very high unemployment and widespread suffering. Nestor and Ceci are working to alleviate this crisis.

The soybeans used to make tofu at Delisoya are all grown in Colombia, at Cali, the capital of Valle de Cauca department at 3,327 ft, in western Colombia, bisected by

© Copyright Soyinfo Center 2014

the Cauca River. "Valle" is pronounced "Balle" in Spanish. There is a big Japanese community living in Cali, the area where the first Japanese settled in Colombia many years ago. Another center of soybean production in Colombia is Palmira, a city at altitude 3,000 feet, in Valle de Cauca department, in western Colombia, near the Cauca River. It is about 15 minutes by car from Cali, but 8 hours by car from Bogota.

Nestor now makes a little more 100 lb of tofu per week; more precisely, he makes about 100 cakes, each weighing 500 gm. He and Ceci are looking for a larger plant near their home in Bogota. He knows a lot about machines and mechanic, so he will make some of the equipment. At the plant they will hire people they know–who are simple and nice.

Ceci and Nestor are interested in translating *The Book of Tofu* into Spanish. They are trying to gain support for the project from Japanese cultural organizations in Colombia, such as JAICA (Japan International Cooperation Agency), and JETRO (Japan External Trade Organization). JAICA is Japanese governmental organization which assists developing countries, including financial support for some projects requested by local people. They send experts in various fields (such as agriculture, earthquakes, etc.) and also send local people to Japan for training. Ceci has a friend, Mrs. Tanaka, who is the wife of the president of JETRO in Bogota.

During the last presidential campaign in Colombia, soybeans were featured by the candidate who won (in June 1998), Pres. Andres Pastrana. In about Sept. 1997 his political campaign published a booklet titled "El Cambio" which means "Change!" It is said that the president's wife, Nohra Puyana de Pastrana, took the idea from people working with soyfoods in Caldas–a department in west central Colombia. Currently, soyfoods are promoted by the *Instituto Colombiano de Bienestar Familiar* (Columbian Institute for Family Well-Being). This institute, which has its headquarters in Bogota but branches in many Colombian cities, now offers free soyfoods cooking classes and printed information (incl. recipes and nutritional facts).

The Colombian government has been studying soyfoods for at least 20 years. The first major organization to do this was the *Instituto de Investigaciones Tecnologicas* (IIT–Institute for Technological Investigations). It existed 20 years ago but ceased operations about 10 years ago. Their purpose was to help industry develop and market new products. Their first soy product was Incaparina [production began in 1963], followed by Bienestarina [first manufactured in Jan. 1976]. IIT made soymilk and targeted local people.

One soy pioneer in Colombia was a man named Joaquin Molano, who was a chemist, is now age 90, and who founded Fundacion del Rio Magdalena. Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

10650. Smith, Patricia J. 1999. The Natural Products Expo at Anaheim and a macrobiotic award (Interview). *SoyaScan Notes.* April 19. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The Expo at Anaheim this year was the biggest ever, attracting some 30,000 people. It was so crowded, one could barely walk down the aisles. "The soyfoods category has just exploded. Everyone was excited; you could feel the buzz." Patricia collected lots of printed information for Soyfoods Center.

Patricia also organized the first "In the Spirit of Macrobiotics" award, which was presented to Tom DeSilva of Los Angeles, who was a pioneer with Erewhon, Los Angeles, and has continued to run a very successful natural foods retail store. Forty people came to honor him at drinks, and 16 stayed for dinner–including Chuck Verde of Erewhon, Lenny Jacobs, and Michael Potter. The award focuses on the business side of macrobiotics.

Update: 1999. Nov. 19. Patricia just received an e-mail from Norio Kushi saying that Lima Ohsawa died this month in Japan.

Update: 2000 May 2. There was a continuing explosion of soy products at the Natural Products Expo at Anaheim. She saw former macrobiotic friends, Rus Postel and Francis Pintel (who ran the Erewhon warehouse in Los Angeles). Jacques DeLangre has died, and his charming wife Yvette remarried to a childhood sweetheart and now lives in Louisiana, where she still runs the Grain and Salt Society. Patricia wishes that Trader Joe's would take a stand on genetically engineered foods. Address: Radical Food, P.O. Box 952, Mill Valley, California 94942-0952.

10651. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part I. 1976 to 1994 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** George was born on 1 Dec. 1946 in Toronto, Ontario, Canada. He went to high school in Toronto but did not graduate, and he never attended college. "I attended the school of hard knocks." He dropped out of high school at age 15 he began to work full-time. At age 17 he went to work for a textile firm until he was age 20. Then he started his own business in the fields of textiles and clothing. In 1967 he married Wendy Lynn Richardson–who was born on 27 Sept. 1948. In 1973 he received knowledge from Guru Maraji (via Guru Charanan) in Toronto, became his disciple, traveled throughout the United States and (in 1973) to the Houston Astrodome [in Texas] with Guru Charanan, and started a vegetarian diet and vegetarian restaurant. In 1977 he was one of the founding partners of Jolly Green Garden, a vegetarian restaurant in Toronto. He called it "Guru Maraji's restaurant" because many of the employees and customers were disciples of Guru Maraji. There he first got involved

© Copyright Soyinfo Center 2014

with soyfoods. He bought tofu and used it to make various products, such as patties, dressings, etc., which were served in the restaurant. George has been involved with soyfoods for more than 20 years, starting in Toronto.

In early 1979 George and his family moved to southern Alberta. He went to work for the Canadian federal government helping a group of native Blackfeet people there. He set up a company named Pe-Kun-nee Garments that manufactured textiles (garments), put 300 women through a training program, and ran it (with the title of General Manager) for about 4 years. George still has the full-beaded outfit and feathers that he got from the Blackfeet people he helped.

In 1984 George and his family moved to Saskatoon, Saskatchewan, where he started a computerized embroidery business. His wife and three children still run this as a family business. Today his company is one of the top software development firms in North America for computerized embroidery. He worked for a company named Jeffrey E. McPherson, headquartered in Nottingham, England, with North American offices in Greensboro, North Carolina and in Canada; George worked for the North Carolina company. They held the worldwide distribution rights for an embroidery machine made by a Japanese company named Barudan (pronounced buh-ROO-dun) who pioneered the electronic embroidery machine from Japan. The ancient Jacquard looms, which were programmed with punch cards, originated in Switzerland [sic]–which is why we refer to "Swiss embroidery." [Note: The French inventor, Joseph-Marie Jacquard (lived 1752-1834) invented the Jacquard loom at Lyons, France, in 1801 and was awarded a patent and medal by Napoleon in 1804]. The Japanese copied these looms. George was a salesman for their equipment, and he developed a collection of baseball caps because he was one of the first people to sell caps–whether it be importers of blank caps or embroiders of finished caps. George even called himself Captain Capman. He went around and set up embroidery companies to whom he sold his embroidery equipment (from Barudan in Japan) all over western Canada. George was one of the first people to embroider a baseball team insignia direct onto the blank hat–replacing the old crest that was stuck on the hat. It was much classier, and now its the only way they do it.

In 1992 he started another gourmet vegetarian (actually vegan) restaurant, this time named Sweet Carrot Café, located at 702 14th St. East, Saskatoon, Saskatchewan S7N 0P7. Actually, George bought the building for his embroidery business, then opened up a corner of one building on the corner as a lunchroom for his staff. It was an historical building, with three buildings in one. George bought an espresso machine for his lunchroom. Passersby thought it should be a coffee shop. George lined the walls of his lunchroom with his collection of embroidered baseball caps. He soon converted the lunchroom into a coffee bar, which he named it Caps Coffee Bar. A popular menu item was Cappuccino! There was a grand piano in the dining room. It was probably the only vegetarian or vegan restaurant ever to be written up in *Where to Eat in Canada*–two years in a row. In those days most people thought of vegetarian restaurants as places where hippies with beards and long hair sat on picnic benches and ate granola bars. Most people were afraid to eat in such places, so George made his restaurant into a fine dining room. One of the main focuses of George's life since the 1970s has been vegetarianism; his wife is a vegan and teaches tai-chi. In the restaurant George made his own tofu, soymilk, and related products, such as spreads, dressings, etc. In the early days, he made these products in the old fashioned way. The firm nigari tofu was very good tasting but the soymilk had a pronounced beany flavor. He was so busy, and making all these foods was such a chore, that he began looking for other technologies to expand his production. One day in early 1992, at about the time Raj Gupta started publishing his *SoyaCow Newsletter,* a young lady from the United Way in Ottawa came into the restaurant and commented on his organic tofu sandwich. She also tried his soymilk and told him about a soymilk making machine named the SoyaCow, developed by a company named ProSoya in Ontario. George asked for more information and the lady sent him a copy of the newsletter. George immediately phoned Raj Gupta, the inventor of the machine, and was on the next airplane to Ottawa. He ended up buying the only small SoyaCow (SC-20) Raj had. Articles about George, his stylish restaurant, and his new SoyaCow appeared in two early issues of the *SoyaCow Newsletter* (Jan/March and April/June 1993–Vol. 2, Nos. 1 and 2). He used the SoyaCow to make soymilk, which he sold at his restaurant–starting in early 1993. This was the first commercial soymilk ever produced by a SoyaCow. He sold the soymilk in 1 liter glass bottles, with the SoyaCow logo printed directly on the glass on each bottle. He and Frank Daller developed the bottle. So the name of the soymilk was "SoyaCow" and it was sold in seven flavors–including maple, chocolate, vanilla, original, chocolate-peanut butter, and nog (a delicious eggnog alternative made only at Christmas). Dusty Cunningham and Lorne Broten were both patrons of George's vegetarian restaurant in Saskatoon. A romance soon developed and they were called the "love birds." George was thinking about opening a winery in his restaurant. Since Lorne was an accountant, George started working with him on a business plan for the winery in about 1994. George liked Lorne and hired him as his bookkeeper and accountant for his two businesses–embroidery and vegetarian restaurant.

Soon, within his restaurant (which consisted of three buildings in one), George converted his Caps Coffee Bar into the SoyaCow Health Bar Deli, where he sold at least five soy products, both as part of the menu and for takeout: Soymilk (in six flavors), soy ice cream (many flavors, always

© Copyright Soyinfo Center 2014

changing), soy yogurt (several flavors), tofu, and Soyanaise. He also carried Yves Veggie Cuisine. He used his car to deliver some of the soymilk he made to three local stores; he never delivered his other soy products from the restaurant. He carried the glass bottles in milk crates. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

10652. Santacruz, Cecilia; Santacruz, Nestor. 1999. Re: Searching for the roots of soya in Colombia. New developments at Delisoya. Letter to William Shurtleff at Soyfoods Center, April. 2 p. Typed, with signature. [1 ref]
• ***Summary:*** In searching for the earliest documents about the soybean in Colombia, Cecilia and Nestor have had the opportunity to talk with some interesting people, such as Victor Manuel Patiño (age 87) who wrote several early Bulletins, among them No. 4, titled *Plantas Introducidas* (Introduced Plants), which tells the complete story of how the soybean, and different varieties, were introduced to Colombia. It is being sent to them from Cali. Victor says that the *Estación Agrícola Experimental de Palmira* (Palmira Agricultural Experiment Station) still exists, and he will ask a friend who lives in Cali to search for the Bulletin No. 1, which mentions soybeans. The station started in 1929, and that same year the first 18 Japanese arrived in Colombia. They included agricultural mechanics and experts in the handling of tractors, etc. They started to plant soybeans and Victor, who was a student at the time, kept the seeds for future trials since no one wanted them besides the Japanese. Soybean production started on a fairly large scale in the 1940s with the manufacture of vegetable oil by Grasas SA.

ASEJA (*Asociación de Exbecarios del Japon*) is an association of Colombians to whom the Japanese government has given a scholarship or supported in some way. Ceci and Nestor know several members including Camilo Ruiz, who is Ceci's teacher of Japanese language. He also assists Japanese missions that come to Colombia through JICA (Japan International Cooperation Agency). Camilo belongs to ASEJA and next week is taking a course at JICA on how to structure a project proposal and project. He thinks that translation of *The Book of Tofu* into Spanish is a good idea and may interest JICA.

At her Japanese class, Ceci saw a nice poster celebrating the 70th anniversary of the arrival of the first Japanese emigrants to Colombia (1929-1999). It contained old photos of the early pioneers. Ceci hopes to be able to get information from the Japanese themselves through Camilo Ruiz who is going to Cali.

On April 27 Ceci and Nestor were on Colombian television for 3-5 minutes with all their products nicely displayed on a table. The program is called "En Vivo" with Adriano and Darío. Nestor spoke very well and many people saw it. Address: Founders and owners of Delisoya, Calle 78 No. 12-03, Santafe de Bogota, Colombia. Phone: 346-2178.

10653. Yasuda, Masaaki; Aoyama, M.; Sakaguchi, M.; Nakachi, K.; Kobamoto, N. 1999. Purification and characterization of a soybean milk coagulating enzyme from *Bacillus pumilus* TYO-67. *Applied Microbiology and Biotechnology* 51(4):474-79. April. [25 ref. Eng]
• ***Summary:*** *Bacillus pumilus* TYO-67 has been isolated from tofuyo, a traditional fermented food made from soybean milk in Okinawa, Japan. This bacterium secretes a soybean-milk-coagulating enzyme (SMCE), which is essential for making tofuyo, however reports on this microbial enzyme are very limited, and its properties have not been sufficiently characterized.

This bacterium was found to be the best producer of SMCE, induced by the addition of soy protein to the growth medium. The enzyme was found to be a monomer with a molecular mass of about 30 kDa [kilodaltons] and an isoelectric point at 9.75. The optimum pH for the enzyme was 6.0 to 6.1 and the optimum temperature was 65ºC. The enzyme was significantly activated by the addition of various ions and its thermal stability was significantly increased by the addition of a Ca (2+) ion.

This enzyme can be applied for the production of various processed foods from soy milk, and may also be widely applicable to other food processing. Address: Dep. of Bioscience and Biotechnology, Univ. of the Ryukyus, 1 Senbaru, Nishihara-cho, Okinawa 903-213 Japan.

10654. Inobe, Dean. 1999. Okara is becoming a bigger and bigger nuisance in Japan (Interview). *SoyaScan Notes.* May 13. Conducted by William Shurtleff of Soyfoods Center. [1 ref. Eng]
• ***Summary:*** An article about okara appeared in the March 13, 1999 issue of the *Nihon Ryûtsû Keizai Shinbun* (in Japanese) stating that the Japanese Supreme Court declared tofu to be a public nuisance. The defendant was a tofu manufacturer from Osaka, who was accused of dumping okara without a permit. The court noted that the entire tofu Japanese industry was struggling with the problem of okara disposal.

Miki is a Japanese prune company, but Mr. Inobe is working with an American company that has developed a powder which can be used, instead of whole soybeans, to make tofu which has no okara as a by-product. This product is not yet on the market. It contains some additives and the soymilk must be homogenized before it is made into tofu. Address: Managing Director, Miki USA, 1333 N. California St., Room 570, Walnut Creek, California 94596. Phone: 925-932-3994.

10655. Boismenue, Clyde. 1999. New type of textured soy protein isolate made in Taiwan using extrusion (Interview). *SoyaScan Notes.* May 27. Conducted by William Shurtleff of

© Copyright Soyinfo Center 2014

Soyfoods Center.
• ***Summary:*** Making this product is now a boom industry in Taiwan. Japanese companies have solid patents on the process, yet that does not seem to defer at least three Taiwanese manufacturers. The product, made by extruding soy protein isolates and starch, is much less expensive than spun soy protein isolates. The starch melts away when fresh, leaving a fibrous texture. The result represents a major advance. Address: Basic Foods Co., P.O. Box 240070, Los Angeles, California 90024. Phone: 310-473-0719.

10656. Hijiya-Kirschnereit, Irmela. 1999. A cradle of Japan scholarship: The German Institute for Japanese Studies was founded just a decade ago, but already it has established itself as an international center of Japan-related scholarship. *Look Japan* (*Tokyo*). May. p. 26-28.
• ***Summary:*** The German Institute for Japanese Studies (DIJ) in Tokyo was founded in Dec. 1988 on the approval of Germany's Federal Ministry of Research and Technology. "The foundation itself, which is named after the German Japanologist Philipp Franz von Siebold (1796-1866), is financed by the federal government, but it maintains independence in all its research activities according to private law." Contains a color painting of Siebold by Kawahara Keiga ca. 1829. Address: Director, DIJ, Tokyo.

10657. Iijima, Akihiko; Sasaki, Hitoshi; Wakamatsu, Hiroyuki; Watanabe, Sugio; Maeda, Yoshimi. 1999. [Microcalorimetric analysis of fermentation of natto, a traditional Japanese food]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 46(5):279-84. [13 ref. Jap; eng]
Address: 1-3, 5. Iwaki Meisei Univ., 5-5-1 Chuohdai-iino, Iwaki-shi, Fukushima 970-8551.

10658. Matsumoto, Isao; Akimoto, Takashi; Imai, Seiichi. 1999. [Effect of soybean cooking condition on the quality of natto]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 46(5):338-43. [19 ref. Jap; eng]
• ***Summary:*** Natto was prepared from soybeans cooked under a steam pressure of 1.5 kg per square cm. for various time periods ranging from 1 to 60 minutes, and sensory evaluation, hardness, enzyme activities, components and stringiness of viscous substances of natto samples were investigated. From the results of sensory evaluation of natto samples, it was concluded that the optimum cooking time under this condition was 30-40 minutes. Address: Niigata Food Research Institute, 2-25 Shinei-cho, Kamo-shi, Niigata 959-13, Japan.

10659. Schinner, Miyoko Nishimoto. 1999. Japanese cooking: Contemporary & traditional–Simple, delicious, and vegan. Summertown, Tennessee: Book Publishing Co. 176 p. Illust. Index. 21 cm.
• ***Summary:*** Contents: Introduction (incl. Japanese attitudes towards nutrition, vegetarianism and animal rights, the recipes, the Japanese meal). Sample menus (by season). Glossary: Ingredients, kitchen concepts, and tools. Rice dishes. Soups and stews. Cooking with tofu. Fried dishes. Salads and cold vegetables. Noodles. Meals in a pot. Stewed and braised dishes. Meals in a bowl. Everyday favorites. Nouvelle Japanese cuisine.

Terms in the Glossary include: Abura-age, agar agar, atsu-age, azuki, fu (made from wheat gluten), goma (sesame seeds), goma-dofu (a tofu-like cake made from sesame butter), hijiki, Inari-zushi (sushi), kanten, konbu, kuzu & kuzu-ko, miso, mochi, natto, nori, okara, sesame oil (goma abura), shoyu, soba, soy sauce, tofu ("Perhaps the most misunderstood food in Japan... Americans might call it bland; the Japanese prefer to think of it as delicate in flavor"), umeboshi, wakame, yaki-dofu, yuba.

This vegan cookbook is filled with many soy-related recipes, both traditional and new. Examples of new: "Fishy Tempura Tempeh. Crispy Fried Tempeh (Kara-Age).

"Trying to dine out in a strictly vegan fashion in Japan can present challenges. Although dairy products are not found in traditional Japanese cuisine, fish-based stocks appear in a range of dishes from appetizers to soups to entrees... My advice to vegan or vegetarian visitors to Japan: find a temple or restaurant that serves traditional *kaiseki*-style *shojin-ryori* (Buddhist vegetarian cooking)–and splurge big time. You won't regret it" (p. 10).

On the rear cover is a biographical sketch of Miyoko. "She was born in Yokohama, Japan, and graduated from St. John's college in Maryland. Her bilingual bicultural background has endowed her with the creativity and originality of the West and the aesthetic sense of the East." She has been a vegetarian since age 12. Address: Owner, Now and Zen Bakery and Vegetarian Restaurant, San Francisco.

10660. Gorman, Christine. 1999. The joy of soy: Worried about high cholesterol? This versatile bean may be just what the doctor ordered. *Time.* June 7. p. 68-69.
• ***Summary:*** Begins with the story of a woman, age 67, who volunteered for a study to determine whether or not drinking a soy protein shake could lower blood cholesterol. She was delighted when her cholesterol level fell from 245 mg/dl to 205 mg/dl, and her LDL or "bad cholesterol" level fell from 170 mg/dl to 130 mg/dl. Now that the study is over, she still sprinkled soy protein on her breakfast and continues to see results–as more than 25 scientific studies have shown. Every little bit counts; a 1% drop in total cholesterol leads to a 2% drop in the risk of developing heart disease. For best results consume soy in minimally processed forms. Many Americans find boiled soybeans (edamame) to be delicious. Tofu is good if you find the right seasoning. Soy milk is nice

© Copyright Soyinfo Center 2014

on cereal but will ruin a cup of coffee. Miso soup contains quite a bit of salt. Soy powders (soy protein isolates) can be added to shakes or sprinkled on cereal. Soy isoflavone supplements are best avoided.

Many Americans are discovering that soybeans aren't just for vegetarians and livestock anymore. They may be able to fight cancer and build healthy bones. Later this summer or fall the FDA is expected to put soy on its short list of foods (like whole grains, and fiber-containing fruits and vegetables) that may actually reduce one's risk of heart disease.

Scientists are still not sure why soy lowers cholesterol levels. It may be the isoflavones or the soy protein or a combination of both.

In Japan, the incidence of breast cancer is much lower than in the USA [about one-sixth] and other industrialized countries. One reason may be the soy in the Japanese diet; the isoflavones in soy may act as antihormones, like the drug tamoxifen. Yet this is not yet clear. In the worst case, soy might even negate the protective effects of tamoxifen.

Photos show: Two large pods of edamame. A cake of tofu which is "a great source of nutrients." Japanese consume more than 50 lb of tofu per person per year.

10661. Murphy, Patricia A. 1999. A new database on the isoflavone levels in foods, commercial ingredients, and soybeans (Interview). *SoyaScan Notes.* June 24. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** In April 1999 a new database became available on the Internet at www.NAL.USDA.gov/FNIC/FoodComp / Data/Isoflav/Isolfav.html. There are several files which are downloadable. Data are given for 160 foods, most of which are soy-related. Many individual branded products are included, such as Gimme Lean! or Lightlife Lean Links or Mead Johnson's Prosobee (infant formula). Soy oil is also included–just to show that it contains no isoflavones.

For each food, data may be given for daidzein, genistein, glycitein (pronounced gly-SEE-tun; if available), and total isoflavones. For each of these four information may be given on: Average, mean, and maximum, standard error, sample size, confidence code (A=best, C=least). of all published data. Finally a list of the numbers of all the references used to get this data. So there might be 7 references used to generate the mean value for tofu.

Soybeans themselves are also included, with data given for food-type soybeans, commodity-type soybeans, plus reports from Japan, Korea, Taiwan, etc. But there is no data on individual soybean varieties. Supplements are not included. For each food, some data is given on the isoflavone content The information in the database comes from published scientific studies and from work at Iowa State University's project on national sampling of foods. The food composition lab people will be updating the data as it is collected. There is also a separate file for items which are more typical of clover and alfalfa, which have different isoflavones.

The person in charge of the project is Gary Beecher, in the USDA Beltsville Lab. [Maryland], food composition group. David Haytowitz is the statistician. The funding came from the U.S. Army, Medical Branch, Breast Cancer Research Initiative. This year Congress, "in its wisdom," couldn't give any more money to HHS (the U.S. Department of Health and Human Services), so they gave a large amount of money to the Defense Department for work that would typically be done by NIH (National Institutes of Health). But the army has run this huge program very well–perhaps better than some NIH programs.

Note: NIH is under the Public Health Service, within HHS. Address: 2312 Food Sciences Building, Food Sciences and Human Nutrition Dep., Iowa State Univ., Ames, IA 50011.

10662. Oka, Tadashi. 1999. An American island in a Japanese sea: At home, it was miso soup. *Christian Science Monitor.* June 24. p. 22 (The Home Forum). *

10663. *ASA Today* (*St. Louis, Missouri*). 1999. Non-GMO niche markets may offer premium opportunities. 5(8):4. June.
• ***Summary:*** Since 1997, Brazilian suppliers have received a premium of up to 50% for non-GMO soybeans. Countries importing non-GMO soybeans include Norway, Korea, and Japan. Last year ADM and other processors paid fairly substantial premiums for non-GMO beans. Farmers who want these premiums and plant both GMO and non-GMO beans must clean their combines and bins.

10664. *Canadian Soybean Bulletin* (*OSG, Chatham, Ontario, Canada*). 1999. Services of the Canadian Grain Commission–Export soybeans. 13(1):1-3. June.
• ***Summary:*** Contents: Introduction to the CGC. Inspection services: Vessel shipments, truck, rail and container shipments. Special analyses. Oil and protein content. Monitoring services. Entomology services (insects). Verification/audit services. Genetic testing. Weighing services.

Concerning genetic testing: "The Chatham office is in the process of implementing test procedures aimed at the identification and certification of GMO/non-GMO (Roundup Ready) soybean shipments. Initially, testing will involve an ELIZA based method which, after internal evaluation is known to provide reliable detection at levels above 0.3%. In the longer term, the CGC will explore and move to alternative methods that will enhance its abilities in this area."

A photo shows Jim Lowe of the CGC as he shows samples of Canadian soybeans to members of the Japanese Tofu Association.

10665. *Canadian Soybean Bulletin* (*OSGMB, Chatham, Ontario, Canada*). 1999. Canadian soybean exports. 13(1):4. June.
• ***Summary:*** A large table shows statistics on tonnes (metric tons) of soybeans exported to various countries, and regions, each year from 1994/95 to 1997/98. The countries are: In Asia–China, Hong Kong, Indonesia, Japan, Malaysia, Philippines, Singapore, South Korea, and Thailand. In Western Europe–Austria, Belgium, Denmark, France, Germany, Italy, Netherlands, Norway, Portugal, and Spain. By continent–Africa, Central America, Eastern Europe, Middle East, Oceania, South America, and United States.

In 1997/98 the countries to which the largest amount of Canadian soybean exports went were (in tonnes): Norway 159,000, United States 134,706, Japan 62,931, Portugal 58,465, Spain 34,759, Hong Kong 23,210, Belgium 20,687, and Malaysia 20,539.

10666. Hanamaruki K.K. 1999. Gyômu-yo seihin no go-annai [Introduction to our products for commercial use (Brochure)]. Nagano Prefecture, Japan. 8 p. 30 cm. [Jap]
• ***Summary:*** On the cover of this color brochure is a photo showing yellow soybeans, white rice, and salt. The inner 6 pages contain brief information in Japanese and a color photo showing each of the company's products–most of which are miso or miso-based. The information includes product name, ingredients, bar code, unit price, case size, and product description. On the rear cover is the address, phone number, and fax number of the company's headquarters, two miso factories (in Nagano and Gunma prefectures), research lab, and many sales offices. The website is hanamaruki.co.jp. Address: Hirade 1560, Tatsuno-cho, Kamiina-gun, Nagano-ken 399-0422 Japan. Phone: 0266-41-1321.

10667. Hanamaruki K.K. 1999. Seihin no go-annai [Introduction to our products]. Nagano Prefecture, Japan. 12 p. 30 cm. [Jap]
• ***Summary:*** This color brochure contains brief information in Japanese and a color photo showing each of the company's products–most of which are miso or miso-based. The information includes product name, ingredients, bar code, unit price, case size, and product description. Address: Hirade 1560, Tatsuno-cho, Kamiina-gun, Nagano-ken 399-0422 Japan. 10668. Kikkoman Corporation. 1999. Annual report 1998. 339 Noda, Noda-shi, Chiba 278, Japan. 30 p. 28 cm. [Eng]
• ***Summary:*** The information in this English-language annual report is current as of April 1999. Contents: Financial highlights. A message from the president (Yuzaburo Mogi): The year in review, dining pleasure and convenience, serving a global market, a source of variety, seeking new growth opportunities, promoting food culture. Global operations: The Americas, Europe, Asia and Oceania, Japan. Review of operations: Soy sauce, soy sauce derivative products, Del Monte, sake and wine. Research & development. Financial section: Consolidated balance sheets, etc. Corporate history (chronology from April 1925 to October 1998). Global network (directory of Kikkoman names, addresses, and phone numbers worldwide). Board of directors and officers. Corporate data.

Net sales were up slightly (7.1%), but net income was down for the second year in a row. Overseas sales (excluding exports from Japan) grew 15.8%, and have grown dramatically each year since 1994 (p. 16). In 1994 overseas sales accounted for about 15% of consolidated net sales; in 1998 about 28%. And operating income generated overseas accounted for 51% of Kikkoman's consolidated operating income.

In 1998 Kikkoman released *Akadare-to-Kurodare,* a steak dipping sauce based on a blend of their popular Akadare (miso based) and Kurodare (soy sauce based) dipping sauces.

"Serving a global market: In June 1998, Kikkoman Foods, Inc., our first overseas plant, celebrated 25 years of operation, thus marking a major milestone for our international activities. Over the past quarter century, the production capacity of the Kikkoman Foods plant–located in Wisconsin–has expanded more than tenfold. To further augment capacity, in October we commenced operations at our second plant in the United States, in Folsom, California, which is conveniently located near large markets on the West Coast. Similarly, in Europe, we raised the annual production capacity of our plant in the Netherlands to 5,000 kiloliters. Following these additions, total production of soy sauce and its derivative products at our overseas plants surpassed 100,000 kiloliters in 1998. This is approximately the same as the production capacity of the second largest soy sauce manufacturer in Japan."

Kikkoman's share of the soy sauce market in Japan is almost 3 times as large as that of its nearest competitor.

The Americas: On 6 Oct. 1998 Kikkoman had the formal opening of its second U.S. soy sauce manufacturing plant in Folsom, California. The 210,000 square meter facility was built at a cost of US$46 million and has an initial soy sauce production capacity of 10,000 liters per year. The plant began operating in April 1998 and shipments of soy sauce started in October. The Kikkoman plant in Walworth, Wisconsin, is now approaching its annual soy sauce production capacity of 80,000 kiloliters.

Color photos show: Yuzaburo Mogi (president and CEO). The opening ceremony and an outside view of the plant in Folsom, California. Most of the company's products (p. 8-13). Address: Noda, Japan.

10669. Morinaga Nutritional Foods, Inc. 1999. Input Mori-Nu :) (Ad). *Natural Foods Merchandiser.* June. p. 72.
• ***Summary:*** This full-page color ad shows many packages

© Copyright Soyinfo Center 2014

of Mori-Nu Tofu arranged to spell out "Y2K" against a large white background. The text reads: "Mori-Nu is the 'Perfect Tofu in the Perfect Package'–even for life's unexpected moments. With Y2K, your customers will be looking for convenient foods they can store in their cupboard. Mori-Nu is the answer." Address: 2050 W. 190th St., Suite 110, Torrance, California 90504. Phone: 1-800-669-8638 (NOW TOFU).

10670. U.S. Postal Service. 1999. We have more than 33,000 post offices to serve you (Postcard). Washington, DC. 1 p.
• ***Summary:*** This 4¼ by 6-inch card is printed blue on white. We cite it here to note that the number of tofu shops in Japan is approximately equal to the number of post offices in the USA. Address: Washington, DC.

10671. Nadeau, Daniel A. 1999. Oligosaccharides play important health role. *Soy Connection* (*The*) (*Jefferson City, Missouri*) 7(3):1, 3. Summer. [29 ref]
• ***Summary:*** The colon and the flora that inhabit it have a critical role to play in overall health. Many Americans are familiar with probiotics, a concept that was introduced in the early 1900s; live bacteria from products such as yogurt might offer health benefits. But Americans are generally less familiar with "prebiotics," a concept that originated in Japan in the mid-1970s; it states that non-digestible food ingredients (such as oligosaccharides) offer health benefits to the host by selectively stimulating the growth and/or activity of beneficial microflora in the intestines. Address: M.S., M.D., practicing endocrinologist.

10672. Bittman, Mark. 1999. Authentic Asian fare in L.A. [Los Angeles], with or without Formica. *New York Times.* Aug. 15. p. TR6.
• ***Summary:*** At Takao, a Japanese restaurant, he was served "dreamy tofu made with sesame paste" [often called "sesame tofu," or in Japanese, *goma-dofu*]. For a higher price, the sesame tofu was served with a sauce of sea urchin roe. Also: A raw spring roll of noodles, miso, shiso, crab, and vegetables. A dark miso soup that put the standard dish to shame.

At the Thai restaurant Talésai he enjoyed a plate of eggplant with black bean sauce, and fried tofu with a peanut dipping sauce.

The Chinese Islamic Restaurant served a tofu dish.

At the Empress Pavilion, a Chinese restaurant, he enjoyed "braised bean curd."

10673. Belleme, John. 1999. The story of how the Oak Feed Miso, Inc. was established, and its relationship to the Erewhon Miso Co. Part I. 1943 to 1978 (Interview). *SoyaScan Notes.* Aug. 22. Conducted by William Shurtleff of Soyfoods Center. With updates in Nov. 1999.
• ***Summary:*** Without John Belleme's perseverance and determination, the American Miso Co. would almost certainly never have come to be.

John was born on 3 Jan. 1943 in Union City, New Jersey–right across the Hudson River from the Empire State Building. His father died when he was young, so he and his brothers and sisters were raised by their mother. Years later John found that he was dyslexic–but in school this undiagnosed dyslexia caused him many problems and great frustration. He failed first, second, and third grades, so he was much older than his classmates. The frustration sent him to reform school at age 13½ and at age 14 he was "kicked out of New Jersey." His mother moved the family to Miami, Florida. He was old enough to drive a full-sized motor cycle to the sixth grade. He managed to graduate from high school (just short of age 21) in Miami, went to junior college in Miami for two years, then won a scholarship to the University of Miami. He had liked biology, science, and research since age nine, so once he settled down he became a good student–though because of dyslexia he could barely read or write when he started college. In the mid-1970s he graduated from the University of Miami after two years with high grades in science, and got a job at the Veteran's Administration (VA) hospital in downtown Miami. He was put on one of the first teams in the United States that used and did research using a Phillips electron microscope. Soon they were doing pioneering research. Soon John was quickly promoted to the position of research biologist, a title usually reserved for those with a PhD degree. Soon the team's research was being published in scientific journals. "It was very exciting." This job, which paid very good money, was mostly a photography job and the hospital had a huge, state-of-the-art darkroom. John worked with an amazing older man from Germany, who required him to carry a camera everywhere he went and to shoot and print his photos as a way of developing his photographic skills. Before long John was a very skilled photographer–and electron microscopist.

But after a while he was transferred to a chemotherapy, a job which he disliked. So he started graduate school to be a school psychologist–and first realized that he had dyslexia.

Sandy Pukel (pronounced pyu-KEL) was the center of a small but growing community of people interested in macrobiotics and natural foods in Coconut Grove, a suburb of Miami. Sandy had a tiny food store. John was with a girl who asked him to buy her some foods at this store. Before long, he was a regular shopper. Then he started to get interested in macrobiotics, and before long he found himself doing volunteer work at the little store on weekends. Sandy suggested that, to study macrobiotics in depth, he should go to Boston and study with Michio Kushi. After attending a few of Sandy's macrobiotic classes in Coconut Grove, John quit his VA job and left for Boston.

1976 July 4–John arrives in Boston and starts to live at the macrobiotic study house of Ken and Anne Burns. John wrote in 1987 that he "stayed for what was to be one of

© Copyright Soyinfo Center 2014

the most exciting years of my life." Ken is an exceptional teacher, and the house has a *dojo* atmosphere–like that of a martial arts practice place or Zen monastery. The temperature is kept at 40ºF during the winter, and life is spare but rich and deep. Through Ken, John and Jan got very interested in wild foods, and planned to publish a book on the subject. By the fall of 1976 John is interested in miso. He had read *The Book of Miso* by Shurtleff and Aoyagi and on Nov. 17 he attends an afternoon miso class and workshop they conduct at the Burnses' house. John is intrigued by the romance of going to Japan to learn how to do something. After the workshop he decides that he wants to travel to Japan, learn all he can about making miso in the traditional way, then come back to America and help to start a miso factory. John recalls: "I wanted to go to Japan and bring something back. I was going to do this or die."

After a year in Boston, John worked at Harvard Medical School for a while. Then he and Frank and Phyllis Head drove to Mexico in Frank's van with the idea of teaching the Mexican people about macrobiotics–with whole grain tortillas, etc. Living in a little village in rural Mexico in a house with no electricity and no running water, they managed to tough it out for one summer. Then multiple scorpion bites and general hardship drove them back to America. From Frank's father's estate in Texas, John phoned Sandy, who offered him a job.

1978–John had heard Michio Kushi talk about starting a shoyu factory in America. Michio hoped to involve Sendai Miso Shoyu Co., Erewhon, and some Oak Feed people such as Sandy Pukel and some of Sandy's investor friends. One day John–who was still a pretty small man on the totem pole–he said to Sandy, "Let's start a miso factory in America–rather than a shoyu factory." He then explained his idea about studying miso in Japan. Sandy's response was "Good! Michio and I have been wanting to do that for a long time too." John then started to take Japanese language lessons from Berlitz. Sandy established an Oak Feed Miso account on which John could write checks to pay for these lessons, for his travels related to miso in the USA, and for legal fees to form a corporation, etc. Sandy's main concern was running the Oak Feed Restaurant next to the store.

1978 Aug. 6–William Shurtleff is in Miami, Florida, visiting Robert Brooks and Mary Pung of Swan Foods, a soyfoods manufacturer. He presents a slide show (2-3 blocks from Oak Feed Store) on miso at which John Belleme, Sandy Pukel and one other person are present.

1978–Various groups come together in an attempt to start a miso company in America. The "Oak Feed group" initially consists of Sandy Pukel of Oak Feed Co., John and Jan Belleme, and a few other investors. The "Erewhon group" was composed of Michio and Aveline Kushi, Mitoku, Sendai Miso-Shoyu Co., and a few people from Erewhon. Michio communicated with the Japanese members of the "Erewhon group" (Mitoku, Sendai) by phone; they never attended meetings.

1978 Dec.–The Oak Feed and Erewhon groups meet shortly before Christmas at Michio and Aveline's home on 62 Buckminster Rd., Brookline (Boston), Massachusetts. Those present were Michio Kushi, Sandy Pukel, and John Belleme. They begin discussions about starting the "Erewhon Miso Co." Everybody agreed on that company name. John recalls: "It couldn't have been called anything else."

What was the need for a miso company in America? First, they wanted to have unpasteurized miso. All the miso being imported by Erewhon from Japan was pasteurized in sealed plastic bags. Cold Mountain miso, made near Los Angeles, California, was sold unpasteurized in 14 oz plastic tubs. So the people interested in the new company began to criticize this product as being made with machines, non-organic, etc. Where would the factory be located? What might it be called? How big might it be? Who might be involved from Japan?

Sandy, Michio, and John all deserve some credit for the original idea of starting a miso factory in America. During 1978 and 1979 every time that Sandy or John went to Boston, they would talk with Michio about the miso company idea. Continued. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

10674. Belleme, John. 1999. The story of how the Oak Feed Miso, Inc. was established, and its relationship to the Erewhon Miso Co. Part II. 1979 to 1980 (Interview). *SoyaScan Notes.* Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: 1979 Jan.–John Belleme in Coconut Grove, Florida, writes Bill Shurtleff in California on Oak Feed letterhead that he and Sandy are starting to look for land for the miso company. "Bill, If you were going to make miso in the U.S., based on climate, what state would you choose?" 1979 Feb.–Oak Feed Miso, Inc. is incorporated. Sandy Pukel and John Belleme are the principals.

1979 April–Barry Evans of Coconut Grove, Florida invests money and becomes an important shareholder in the new corporation and a member of the "Oak Feed group."

1979 spring–Members of the Oak Feed and Erewhon groups meet in North Carolina in the first attempt to locate a site for the miso plant. In attendance are Michio and Aveline Kushi, Sandy Pukel, John Belleme, Frank Head, and Junsei Yamazaki and his wife (both from California). Michio thought the Yamazakis should be there, so the group paid for their transportation. Junsei was tasting the soil, tasting the water–it was bizarre. Then Aveline insisted that they all rent a car and drive to Atlanta, Georgia, since she thought the miso factory should be near some big city like Atlanta. Every now and then Junsei would sniff the air or get out of the car and taste the soil. John recalls that this trip was disorganized, unsuccessful, and very frustrating.

Why were they looking for land in North Carolina?

© Copyright Soyinfo Center 2014

They knew some people who lived in North Carolina, and they knew a real estate man in North Carolina. But after the trip with Junsei Yamazaki, John began to think that it didn't really matter where they located the company. Sandy, who is from Coconut Grove (a suburb just south of Miami), Florida, does not like cold weather–not even as cold as North Carolina. John is also from Miami. Moreover, the miso factory was supposed to be a small part of the whole project, which was to be called the Oak Feed Land Project. That was Sandy's idea, and it was supposed to be an educational center, summer camp, Kushi Institute–similar to what ended up being at Becket. The Kushi's Ashburnham project had failed by this time. There is actually still a 4-by-8-foot sign on the property that says "Oak Feed Land Project." Sandy and John wanted a "land project" in a warmer climate that was closer to Miami. They learned that there is an isothermal belt in North Carolina, an unexplained warm stretch of land that runs through the Piedmont below the mountains in western North Carolina; this happens to be an excellent place to make miso because the warm climate brings the miso to maturity faster.

In mid-1979 Sandy Pukel, armed with this new information about the isothermal belt, went up to western North Carolina and bought one of the first pieces of land he was shown–129 acres. The land cost about $120,000 and the down payment was probably about $10,000 to $15,000. Rutherfordton, North Carolina, turned out to be the perfect location. "What would be a 2-year miso in Massachusetts using Mr. Onozaki's basic formula, was a 1-year miso in North Carolina." Moreover, Great Eastern Sun and the Macrobiotic Wholesale Company, and a large community of macrobiotic people in Asheville are in North Carolina because of this sequence of 'accidental' events born largely of ignorance.

After the land had been purchased, John and Jan rode to North Carolina from Miami on John's motorcycle and saw the land for the first time. They took $20,000 cash, which belonged to the new Oak Feed Miso, Inc., and deposited it in a safe-deposit box at the BB&T Bank near Rutherfordton; John kept the key. Sandy flew up to North Carolina while John was there. John and Jan, and Sandy and Jackie (his wife) all went together to the First Citizen's Bank in Tryon, North Carolina; after signing something, they returned to Miami. John purchased two round trip tickets to Japan, and set aside $5,000 for living expenses which he would take to Japan–using corporation funds from the safe-deposit box.

1979 Oct.–John and Jan Belleme (who have just been married) leave Florida to travel to Japan. On the way they visit Thom Leonard at his new Ohio Miso Co.; he has already made several thousand pounds of miso. Arriving in Japan in late October, they spend several weeks in Tokyo with Mr. Kazama "hanging around his office." The plan had been for the Bellemes to study miso making at Sendai Miso Shoyu, but basically John refused because he knew they had a big factory and he wanted to learn the more traditional way that he planned to use when he returned to America. After John handcuffs himself to Mr. Kazama's desk, he arranges for the Bellemes to study miso-making with the Onozaki family 10 miles north of Yaita city, in Tochigi prefecture, northern Japan–even though Mr. Kazama had not previously known the Onozaki family. Finally Mr. Kazama drives the Bellemes northward to visit Sendai Miso Shoyu Co. On the way back he drops them off in a country village outside Yaita at the home of the Onozaki family, who run a traditional koji and miso factory. Imagine their surprise when, out of the blue, two Americans appear intent on learning the traditional Japanese art of making miso!

In November John and Jan begin to study miso making at the *Onozaki Kôji-ten,* while living with the Onozaki family. They paid the family a certain monthly fee for room and board, and an additional fee for the teaching and training. He and Jan also received a small monthly wage. At one point John requested an additional $5,000 from the corporation. The Onozaki family made and sold both miso and koji. About half the koji was sold, mostly 1-2 pound bags to individuals who used it at home, mostly to make amazake. When John was there, the Onozaki family made much more miso than koji. The Bellemes' study and training continue until the next summer. While in Japan, John wrote many letters back to macrobiotic friends in America as part of campaign to (1) try to prevent Sandy from giving away the miso company to the "Japanese group," (2) show that he was learning how to make the real traditional Japanese miso, and (3) argue that much of the so-called "traditional" miso being imported from Japan was actually made in modern factories.

1980 April–A letter from John Belleme, titled "Making miso in Japan" is published in *GOMF News* (Oroville, California). It is the first published account of his experiences with the Onozaki family. 1980 May–According to Mitoku's records, the first shipment of Onozaki rice miso from Onozaki Koji-ten in Tochigi prefecture is sent by Mitoku to Oak Feed Store in Miami, Florida; 84 cartons and 4 kegs. John Belleme contacted Mr. Kazama and arranged this shipment. At the time, Oak Feed Store was importing Japanese products from Mitoku and distributing to stores across the USA. Michio Kushi set up the connection and it was all done with his blessing.

1980 May–After their apprenticeship with Mr. Onozaki, John and Jan spend 3-4 weeks at Sendai Miso Shoyu–at Michio's request. Mr. Kazama drove them to Sendai. John studied the process and took lots of photographs.

1980 June–John and Jan Belleme return from Japan. The Oak Feed and Erewhon groups meet at Oak Feed Co. in Florida to determine ownership of Erewhon Miso Co. There were various contracts. In one, for example, said that Sendai Miso Shoyu and Mitoku would each own 15% of the company–even though it was not clear what they would

© Copyright Soyinfo Center 2014

contribute to the venture. It is finally decided that each of the two groups would own 50%.

1980 summer–John starts to locate and order the miso equipment he needs, which falls into three categories: (1) Purchased from USA: He orders wooden vats from the Arrow Tank Co. in Buffalo, New York. The pressure cookers (for soybeans) and boiler also came from the USA–mostly New Jersey. (2) Purchased from Japan: Two steamers for rice and barley, a rice milling machine, an automatic koji inoculating machine ["rice rocket"] (which they never used until many years later; John did all inoculating by hand), soybean washing machine, soybean crusher (to grind and crush the cooked soybeans), miso mixer (to mix the crushed soybeans with the koji and salt), the foot-activated piston filling machine, which originally filled bulk tubs, and later filled coffee bags and small plastic tubs. (3) Designed by John and fabricated locally: The tilting cooling table to cool hot soybeans then dump them into the soybean crusher, the conveyor that transports raw miso from the miso mixer up into the tall wooden vats, the clam that would come down from the ceiling and lift 400-500 lb of finished miso out of the vats; John also used it to mix miso from one vat to another in mid-season. Everywhere (except in the koji-making process) that Japanese miso makers used intense labor, John tried to use machines.

1980 fall–John and Jan Belleme go on the Erewhon payroll at $400/week, break ground, and start construction of the miso plant in Rutherfordton, North Carolina. On Sept. 29 the land for the new factory is being leveled. John pays initial expenses using funds in the BB&T safe deposit box.

1980 late–John starts to make small, experimental batches of miso in his house, in the sauna room. In his spare time, John starts to grow shiitake mushrooms, behind the main house, up on the hill. He and Jan had brought shiitake plugs from Japan. They used a chain saw to cut oak trees into logs for growing. He sold small amounts to Great Eastern Sun, but he was too busy with other things for shiitake to become a business, as he had once hoped. Continued. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

10675. Belleme, John. 1999. The story of how the Oak Feed Miso, Inc. was established, and its relationship to the Erewhon Miso Co. Part III. 1981 (Interview). *SoyaScan Notes.* Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: 1981 Jan.–When it comes time to buy equipment and build buildings, the new company finds it has little or no money. It needs about $40,000. The person constructing the building, Doug Ashley, threatens to put a padlock on the building because John is unable to pay him. He also threatens to sue John. The project comes to a complete standstill for months as Barry and Sandy are trying to settle their conflict in Miami. During this time, when John has nothing else to do, he starts to write articles about his miso apprenticeship in Japan. And Jan corrects her dyslexic husband's multitude of misspelled words and prepares the stories for publication. Eventually he and Jan wrote over 100 published articles about Japan, Japanese foods, and miso. They contain some 400 of John's photographs.

During the conflict between Sandy and Barry, John finds himself in a very difficult position–in the middle and torn. At one point Sandy, who had been John's longtime close friend and macrobiotic mentor, decides that he no longer wants to be involved with Barry Evans and the miso company. Michio Kushi and Mr. Kazama of Mitoku go along with Sandy, dropping their crucial support for the project. John barely knows Barry, but now he finds himself trying to convince Barry not to abandon the miso project. Barry asked John: "If I'm going to trade my ownership in Oak Feed Store for the miso factory, what value does that factory have? It's a piece of land and part of a building, but can you make miso? How are we going to sell it? Is it a business with potential?" John has to answer all questions with a convincing "yes!" even though he has not yet made miso by himself and has no idea what the market was. But by building up the value of the miso and downplaying the value of Oak Feed Store, John strains his relationship with Sandy. If Barry had abandoned the miso project, all of John's work in Japan might have been in vain. Moreover it would have left the land and the new building unpaid for–a total mess.

Soon John finds that his role had changed from potential miso maker to miso promoter and educator. His articles must put the wind in the sails of a ship that has stalled in the doldrums. "Every one of those stories had all kinds of intricate purposes to it." And each is written for various audiences with different goals. John has to convince: (1) All his readers that he is an expert on miso and that his miso would be unique–the best available. (2) Potential macrobiotic customers that the lighter, sweeter misos are good tasting and good for health. He could never build a company solely on long-term salty miso. (3) Michio Kushi, and macrobiotic counselors and teachers, not to say bad things about his miso. "I kept putting pressure on them until some were afraid of me–the miso mafia." (4) Barry Evans that the company would succeed and be a good investment. John sent Barry a copy of everything he wrote. John was not sure that Barry was completely committed until about 1984.

1981 Jan.–John Belleme's first article about his miso studies in Japan, titled "The Master of Hoops," is published in *East West Journal.*

1981 April–John Belleme's second article, titled "The Miso Master's Apprentice," is published in *East West Journal.*

1981 July–John Belleme's third article, titled "The Miso Master with a Big Heart: Making Miso in a Japanese Village," is published in *Soyfoods* magazine.

1981 early spring–Increasingly, the much-needed money

© Copyright Soyinfo Center 2014

starts to arrive from Barry. At about this time, and perhaps again earlier, "Barry Evans' money saved the company–there is no doubt about it."

1981 May–All of the miso-making equipment has arrived in North Carolina.

1981 July–The two groups meet at the newly constructed Erewhon Miso Co. plant to have an opening ceremony and celebration. About 25 people are present. The Shinto ceremony is conducted by Michio, with salt, daikon, azuki beans, etc. He goes from door to door, putting Japanese symbols on each door. Evan Root, who was there, was deeply moved by this ceremony. The Kushi's stay on the land for 3-4 days. John remembers that there was a lot of stress during this time. Barry and Sandy were in the middle of resolving their problem.

1981 Aug.–John and Jan start full-time, large-scale production of Erewhon Miso. They have not made any miso on a large scale for more than a year. Erewhon Trading Co. contributed the soybeans, grains, and Lima seasalt (from Belgium); they probably arrived a month or two earlier. Money is still in short supply.

1981 Nov. 10–Michio Kushi files a petition for Erewhon for protection under Chapter 11 of the Bankruptcy Act at the federal in court Boston. This is a disaster for the new miso company. The Bellemes' paychecks and the miso ingredients stop arriving from Erewhon. The miso company's name is soon changed to Oak Feed Miso Inc., but the company now has no means of packaging or marketing its products. None of the Belleme's miso is ever sold under the Erewhon labels or the Oak Feed label. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

10676. Belleme, John. 1999. The story of how the Oak Feed Miso, Inc. was established, and its relationship to the Erewhon Miso Co. Part IV. 1982 to present (Interview). *SoyaScan Notes.* Aug. 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: 1982 Jan. 4–Barry changes the name of the company to American Miso Co. and announces that it is open for business.

1982 Jan. 31–Sandy Pukel and Barry Evans agree to an exchange of stock whereby Sandy gets out of Oak Feed Miso and Barry gets out of Oak Feed Store and Oak Feed Restaurant. They finalize the deal on Feb. 26, but it is retroactive to Jan. 31.

Barry starts The American Trading Co. (soon renamed Great Eastern Sun) to distribute their miso which would soon be ready for sale. For a while, Barry Evans and Sandy Pukel had been in a partnership in that import and distributing company. When Barry and Sandy split up, and Barry started Great Eastern Sun, Mr. Onozaki's miso started going to both companies. Marty Roth soon begins running GES.

1982 Jan.–At about the same time, during the first season, after John has made quite a bit of miso Mr. Onozaki visits the American Miso Co. in North Carolina for about 2-3 weeks at the Bellemes' invitation. They are interested in his comments on their miso plant and process, and they pay his way as a consultant and friend. He works with them making miso and gives them some very valuable suggestions (both big and subtle) for improvements–mainly in making the koji. Formal dinner is held in his honor.

1982 April–Mr. Onozaki's eldest daughter, Kaoru, and her husband, Haruo (Mr. Onozaki's adopted son), visit the miso factory and work for 3 months, living under the same roof as the Bellemes. Jan is pregnant when they arrive and the Belleme's son, Justin, is born on 24 May 1982 in North Carolina.

1982 April 24–Richard Leviton, editor and publisher of *Soyfoods* magazine, visits the American Miso Co. in Rutherfordton, North Carolina, and writes an in-depth cover story about the miso-making process, equipment, and company, published in the summer (July) 1982 edition of his magazine. The best, most detailed coverage to date. The color cover photo (taken by Leviton) shows John, Kaoru, and Haruo making miso.

1982 fall–The Bellemes' first miso is ready for sale. It is a red miso made, Onozaki style, with approximately equal parts soybeans and rice. It is sold only in bulk. The logo is two crossed sheaves of grain in a circle–drawn by an artist friend of John Troy's. This miso is shipped to Great Eastern Sun and sold in bulk under the American Miso label.

Prior to about 1983-1984 all of the company's miso was sold in bulk through Great Eastern Sun to stores. Over the years, John had been working on selling miso refrigerated in one-pound plastic bags, each having a pressure-release valve. The unique bag was designed for coffee and made in Italy. Finally, at a food show in Atlanta, Georgia, two big refrigerated distributors–Cornucopia and Tree of Life–decided to carry the new products. Soon refrigerated distribution trucks began stopping by the miso factory in North Carolina to pick up 7 varieties of miso in 1-pound bags. It was a breakthrough. Demand increased dramatically.

1983 Oct. 1–At John and Janet's request, Barry Evans buys all their shares (900 shares, 35-45% of the ownership) in the American Miso Company. John agrees to work as a consultant for 6 months and to train a person to take his place. John Fogg has been handling the marketing account for Great Eastern Sun. John Belleme asks him to design a retail marketing program, logo, and label for American Miso. He comes up with the idea of "Miso Master." John cringes, because it implies that he is a miso master, whereas he still considers himself a beginner, and he is developing many new types of sweet miso that he has definitely not yet "mastered." Peter Harris draws the Miso Master logo, an illustration showing the head and shoulders of a Japanese miso master, with a knotted headband, in front of a large wooden vat of miso.

1984 Feb.–At the time he sells his stock to Barry, John

© Copyright Soyinfo Center 2014

establishes a new marketing company named Just In Foods, Inc. (John's son is named Justin) for his miso and miso products. It is owned by John and Jan and Barry Evans. John is training Don DeBona to take his place at American Miso Co. His new responsibility will be to work as a marketing person between the miso factory and Great Eastern Sun (a distributor).

1985–John creates another entity named Institute of Fermented Foods (it was never registered or official) as part of his ongoing struggle with Barry Evans. The name appears on the label of many creative miso products Chick Peaso (Chick Pea Miso) and Mellow Ebony Miso (with Black Soybeans).

1985 Dec.–John and Jan leave the American Miso Co. due to ongoing conflicts with Barry Evans. Over the years, John had negotiated with Barry to give him more and more ownership in the company–because he was doing all the work. He eventually owned about 30% of the shares, which Barry bought back from him a year or two before he left–at John's request.

1985–John (who has nothing to do), with Sandy and Blake Rankin form a company named Granum East, based on Sandy's wholesale company in Florida. They plan to sell macrobiotic foods to distributors. It was nothing more than a telephone in John's home office. John would call up Great Eastern Sun (GES) customers and offer them a 10% larger discount than they could get from GES. Within 18 months the company had $700,000 worth of GES' business. Barry was forced to buy the company from them.

John reflects on Sandy's financial role in the company: Sandy has an incredible money karma; he lets it go out and come in without holding onto it, without any attachment. John was later in a seitan business with Sandy; it failed and lost about $300,000. When Sandy found out about these losses, he hardly batted an eyelash–and he's not a rich person. He helped people out all over Miami, and not only with money. He'd give them food, or whatever they needed. It was just amazing to see. Then all of a sudden a large amount of money or good fortune would just drop in his lap. Address: Honto Press, P.O. Box 457, Saluda, North Carolina 28773. Phone: 704-749-9537.

10677. Carmack, Robert. 1999. Soy sauce. *Australian Gourmet Traveller.* Aug. p. 78-83.

• ***Summary:*** Gives brief descriptions of the following types of soy sauce: Thick soy sauce, dark soy sauce, light or thin soy sauce, low-salt soy sauce, koikuchi, usukuchi, saishikomi, marudaizu, shiroshoyu [shiro shoyu], tamari. Most recipes contain meat. Address: Australia.

10678. IITA. 1999. Annual report 1998. Ibadan, Nigeria: International Institute of Tropical Agriculture (IITA). 94 p. 28 cm.

• ***Summary:*** A color photo (p. 3) shows Lucas Brader, Director General of IITA; he writes the introduction. A color outline map of Africa shows the three main agroecological zones in tropical Africa: Humid forest, moist savannah, and midaltitude. The very interesting section titled "IITA and Japan bring tofu to sub-Saharan Africa" (p. 8-10) states that "Tofu... is on its way to becoming an indigenous food in Nigeria, Africa's most populous country. The soy cheese is replacing the traditional dairy product, *wara,* made from cow's milk, which has become increasingly costly, making it out of reach of many consumers... Tofu is inexpensive, nutritious, and versatile in use. Because of its bland taste and porous texture, it can be used with virtually any food."

"Before IITA's Soybean Utilization Research Project initiating research on tofu, there was little information on tofu making and use in Nigeria. *Wara,* which is similar, was produced by housewives in the northern states and in some southwestern states. *Wara* is a simple, soft, white, unripened cheese made by coagulating unpasteurized cow's milk with the juice from sodom apple leaves. The food is popular in the diets of the poor and low-income groups. With the rise in cost of fresh cow's milk–a major source of protein–IITA realized that intervention was required.

"IITA turned to the Japanese International Cooperation Agency (JICA) for assistance and funding. Dr. O. Nakayama, a food technologist and tofu expert, was sent to IITA by JICA to work on tofu. He began by developing a method to make tofu using local food processing technologies; specifically, finding an inexpensive coagulant. In Asia, tofu is traditionally made with calcium sulphate or magnesium chloride. These chemicals are expensive and not readily available in Nigeria; especially in rural areas.

"Nakayama developed a procedure for making tofu using the same local coagulant (juice extract from sodom apple leaves) that housewives were using for making *wara.* He also found that other coagulants can be used, such as lime/lemon juice. Having been exposed to the tofu making process through their ingenuity, Nigerian tofu makers discovered that the fermenting liquor from cereal (maize, millet, and sorghum) wet processing, formed when preparing a fermented gruel, could be used as a coagulant, tamarind extract, was also being used.

"These coagulants have become very popular and are regularly used in Nigeria for making tofu. Nakayama later helped to improve on the yield of tofu based on these new coagulants and developed an alternative procedure–hot milk extraction. Now an emerging market is developing side by side with *wara.* Today, tofu consumption has increased in many parts of Nigeria. Tofu making has become an income generator for many housewives. It is fried and hawked on the streets and consumed as a snack or as a meat substitute in stews and soups.

"IITA provides training in production of tofu in many villages. It is envisaged that tofu making will develop into a cottage industry in Nigeria. With the scarcity and high

© Copyright Soyinfo Center 2014

cost of dairy products in Nigeria, consumption will likely diversify and displace the traditional *wara.* The future of tofu in Nigeria is bright."

Color photos show: (1) A Nigerian woman in Kano State, in tradition dress, slicing tofu with a knife. "Tofu making has become an income generator for many housewives. IITA provides training in its production in many villages." (2) A woman and her child seated in an outdoor market selling fried tofu. (3) The home page of IITA's website: www.cgiar.org/iita (p. 11).

On p. 94 is a list of acronyms appearing in this report. Address: PMB 5320, Oyo Road, Ibadan, Nigeria.

10679. Little Tokyo Service Center. 1999. Fourth Annual Tofu Festival–1999 (T-shirt). 231 East 3rd St., Los Angeles, CA 90013.

• ***Summary:*** This blue-green large T-shirt is 100% heavyweight cotton. On the front, over the left breast, is written "Tofu: Little Tokyo Service Center" next to the Center's logo. Above and to the right of the word "Tofu" are three stylized cakes of tofu, one chartreuse, one orange, and one purple.

On the back is written in much larger black letters: "Fourth Annual Tofu Festival–1999." The same three colorful cakes of tofu appear inside a vertical black rectangle. On the right sleeve is written "House Foods," a major Festival sponsor. Address: Los Angeles, California. Phone: 213-473-1602.

10680. *Vending Times* (*New York City*). 1999. House Foods tofu meets demands of vegetarians. Aug.

• ***Summary:*** Garden Grove, California–House Foods America Corp. provides tofu for the foodservice market in an array of patron-pleasing varieties.

"The company's tofu is available in extra-soft, soft, regular, firm and extra-firm varieties. Also available to add a special touch to vegetarian dishes are Tofu Cutlets and Tofu Fritters."

A photo shows Frank Hsu and Mariko Shibata, who prepared recipes using House Foods' many tofu varieties at the JFC International booth during the Fancy Food Show.

10681. Hesser, Amanda. 1999. Bet you can't eat just one soybean. *New York Times.* Sept. 8. p. F3. [1 ref]

• ***Summary:*** An excellent article on edamame (green vegetable soybeans), which are now becoming more popular in America. Trader Joes has been selling frozen green soybeans for 10 months. Sales at SunRich in Hope, Minnesota, have risen 25% in each of the last two years. Allan Routh, president, says he sells as many as he can grow. Recently SunRich began distributing the beans, grown mainly in Iowa and Minnesota, to mainstream grocery stores.

"Now that soy is being heralded for healthfulness," soybeans are seen as remarkable. But health is not the sole driving force behind the new interest in edamame. "Next to a bag of chips, soybeans in the pod happen to be the world's easiest hors d'ouevre." In Japan they are served in practically every bar. "In New York, edamame appears on the menus of most Japanese restaurants, usually among the appetizers. It also shows up on Korean and Chinese menus, as well as on ones that are not Asian"–such as Avenue [85th St. and Columbus Ave.] and Gourmet Garage [7th Ave. at 10th St.].

Most cooks and connoisseurs agree that fresh green soybeans are better than frozen. They have a sweeter and cleaner taste, and more snap when you bite into them. Frozen ones lack this sweetness and have a starchier, almost glutinous texture. The owner of two Chinese restaurants in New York City refuses to serve them frozen because freezing "ruins the texture."

Discusses which Asian-American restaurants in New York City serve green vegetable soybeans, and how they are served. Contains two recipes: Soybeans in the pod. Rice with edamame (*Mame gohan*). Color photos show: (1) A man picking green soybeans in a field; (2) A close-up of edamame pods.

10682. White, Nadia. 1999. Edamame memory: Boiled soybeans eaten like popcorn in Japan. *Daily Camera* (*Boulder, Colorado*). Sept. 8.

• ***Summary:*** During a year living with a Japanese family in Chogo, near Tokyo, she enjoyed many a bowl of edamame. Address: Camera staff writer.

10683. Iverson, Ron. 1999. Re: Signature Ingredients, LLC is a new company that plans to develop and market a good tasting, nutritious soy milk. Letter (fax) to William Shurtleff at Soyfoods Center, Sept. 16. 24 p. Typed, with signature on letterhead.

• ***Summary:*** "Enclosed is information on FSPGold, a powder that they claim makes good soy milk." FSP stands for "Fine Soy Powder" which is actually fine-mesh whole soy flour.

"Company profile–Start: Soy Protein Technologies (USA), LLC is a continuation of Toshoku Co., Ltd. established in Kyoto, Japan over 20 years ago by FSP inventor Zentaro Iwamoto. FSP has been produced and sold in Japan for over 15 years; however, due to the need to import soybeans and the economic infeasibility of production and infrastructure in Japan, the decision was made to transfer the business to the United States.

"In April of 1999, a partnership was established between newly established Iowa company Soy Protein Technologies (USA), LLC and World Food Processing, LLC to begin construction on a 58 acre site located in Oskaloosa, Iowa–aptly named World Food Park.

"Construction of the FSP plants is scheduled to be completed around April of the year 2000. The initial production capacity is approximately 6000 metric tons per year. The Oskaloosa site will have the capacity to grow as

© Copyright Soyinfo Center 2014

the level of business increases.

"Principals:

"The principals of Soy Protein Technologies (USA), LLC are as follows:

"Zentaro Iwamoto–President, Manager

"Harrison Copper–Vice President, Member

"Yoshinori Iwamoto–Vice President of Operations, Member

"The principals of World Food Processing, LLC are as follows:

"Jerry Lorenzen–President, Manager

"Duane Bushman–Vice President, Manager

"http://www.fspgold.com/prome/index.html.

"Infrastructure

"Soy Protein Technologies (USA), LLC will be located within World Food Park site in Oskaloosa, Iowa. The production facility will be adjacently located next to World Food Processing which is a large, super-sophisticated soybean cleaning facility equipped with chilled storage for soybeans. The proximity of the soybean cleaning and storage as well as the availability of state of the art equipment will enable Soy Protein Technologies (USA), LLC to always be readily supplied with soybeans which are handled well beyond the requirements of the most stringent grain handling / food safety laws.

"The production facility is located on a railroad spur which connects to a ramp in Newton, IA. Rail access will enable us to conveniently and economically ship to all regions in the United States as well as all major ports which facilitate export shipments.

"A highway is also being installed which connects to this facility and will greatly facilitate freight traffic efficiency to the production site."

Company goals: "... We intend to produce FSP with non-GMO varieties of soybeans, which may be grown organically, on a chemical free program, and commercially grown. By doing so we intend to create markets for soybeans grown in the midwest [sic. Midwest].

"Marketing: Soy Protein Technologies (USA), LLC has special ties with The North American Marketing Corp., which is a company designed for the sales and marketing of FSP in the North American market (USA, Canada, Mexico)..."

"Meet the inventor of FSP: Zentaro Iwamoto of Kyoto, Japan is the inventor of FSP Gold. In his facility at Yagi, he has produced and experimented with FSP for over 15 years. His initial inspiration to produce soy powder was the fact that soy food production was inefficient and that many nutrients were lost in the traditional methods of producing tofu and soy milk. This fact was especially significant for Zentaro Iwamoto because he experienced life in post-war Japan where food shortages were a major problem.

"Starting the end of 1999, Mr. Iwamoto will relocate to Oskaloosa, IA with his son Yoshinori Iwamoto to begin construction of the FSP facility. Mr. Iwamoto will hereafter be a resident in the United States..." Address: Chairman, 693 Ponce de Leon Dr., Tierra Verde, Florida 33715. Phone: (727) 865-1833.

10684. Tamura, Yoshiyuki; Takenaka, Tetsuo. 1999. [Antioxidative activity of water soluble extracts from okara fermented with *Bacillus natto* and *Rhizopus oligosporus*]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 46(9):561-69. [23 ref. Jap; eng]

• ***Summary:*** "Water-soluble materials (WSM) were prepared from okara unfermented (OK) and fermented with *Bacillus natto* (ON) or *Rhizopus oligosporus* (OT). The properties of antioxidative activity, hydrogen peroxide decomposition and iron-binding in WSMs were observed. The contents of phytic acid, saponin A, isoflavones, and amino acids associated with antioxidative activity were also determined...

"The fermentation of okara with *Bacillus natto* resulted in an increase in the yield of WSM and the contents of crude protein and amino acid in ON-WSM, but that with *Rhizopus oligosporus* provided only an increase in the amino acid content" (from journal@rchive). Address: Faculty of Agriculture, Tamagawa Univ., 6-1-1, Tamagawa Gakuen, Machida-shi, Tokyo 194-8610, Japan.

10685. **Product Name:** Frozen Tofu Cubes.
Manufacturer's Name: Tendore.
Manufacturer's Address: Wakayama prefecture, Japan.
Date of Introduction: 1999 September.
How Stored: Frozen.
New Product–Documentation: Talk with Christine, co-worker with Michio Kushi. 2000. Oct. 20. Tendore makes frozen tofu. They add starch, which enables it to stay soft when added to hot miso soup. Then they flash-freeze it for about 20 minutes. Trader Joe's has carried the product.

Talk with manager of Trader Joe's in Lafayette, California. 2000. Oct. 20. This product, imported from Japan, was sold on a one-time trial basis by Trader Joe's. They discontinued the product in about April 2000 because it did not sell very well.

10686. Iino, Ryoichi. 1999. The history of shoyu (Soy sauce) 1. *Food Culture* (*Kikkoman Inst. for International Food Culture, Noda, Japan*) No. 1. p. 12-15. Oct. 19. http://kiifc.kikkoman.co.jp. [14 ref]

• ***Summary:*** Contents: Shoyu (Soy sauce): The worldwide seasoning. Sho from China. The sho in *Qi Min Yao Shu.* Production of sho in Japan. Japanese sho, made from soybeans. Liquid or mash (moromi)? Sho for making pickles. Mash-style sho. Notes (14).

Note: "Born in Tokyo in 1938, Ryoichi Iino graduated from the department of English literature at Waseda University. He is also a graduate of the History-Geography

program at Meiji University." Address: Food historian, and teacher of food history, Hattori Nutrition College, Japan.

10687. Riccardi, Victoria Abbott. 1999. Enjoying soy: You know it's good for you. Now learn to like it. *Boston Globe.* Oct. 20.

• ***Summary:*** When people hear the word "soy," different images come to mind. "For devotees of sushi, it might be emerald green soybeans. For the Woodstock generation, it could be custardy blocks of tofu. And for juice bar addicts, it might be soy milk for smoothies." But whoever you are, soy has "likely crossed your radar screen. And pretty soon its going to be on every channel."

Peter Golbitz, president of Soyatech Inc. (Bar Harbor, Maine) has just completed a market study. In 1998 total soyfoods sales were $1.78 billion, up 18% from 1997. They are projected to be $2.6 billion by the year 2000.

Gives a good profile of two local mom-and-pop companies: Health-Trip Foods Inc. of Concord, owned by Eileen Moriarty and Dan Sanford, makes soynut butter. 21st Century Foods Inc. of Jamaica Plain, owned by Rudy and Lovin Canale, makes 800 lb/day of tofu. Before coming to the USA, Rudy ran a health food restaurant in Italy. He came here in 1977 to study macrobiotics at the Kushi Institute in Becket, Massachusetts. In 1981 he and an Italian friend started making tempeh in Brookline. Soon they added tofu products, using tofu made by another company. When the cost of the tofu became prohibitive, they started making their own. Now he and his wife, Lovin, do all the work and delivery. Last year they had $175,000 sales, and even with no advertising they make a profit.

10688. Fallon, Sally; Enig, Mary G. 1999. Nourishing traditions: The cookbook that challenges politically correct nutrition and the diet dictocrats. 2nd ed. Washington, DC: New Trends Publishing Inc. xvi + 668 p. Illust. by Marion Dearth. Subject index. Recipe index. Menu index. 26 cm. [200* ref]

• ***Summary:*** Contains over 700 recipes. Contents: Preface. Introduction: Politically correct nutrition, fats, carbohydrates, proteins, milk & milk products, vitamins, minerals, enzymes, salt, spices & additives, beverages, about food allergies and special diets, parting words, guide to food selection (nourishing traditional foods, compromise foods {such as tofu}, newfangled foods {such as soy protein isolates and commercial soy milk}), a word on equipment, kitchen tips & hints, references (188). Mastering the basics. Great beginnings. The main course. A catalog of vegetables. Luncheon and supper foods. Grains & legumes. Snacks and finger foods. Desserts. Beverages. Feeding babies. Tonics and superfoods. Appendixes (A-F). About the authors.

Some of the basic recommendations in this book fly in the face of modern nutritional science: Eat more meat. Eat dairy products made from raw milk; pasteurization harms the milk. The worst fats are *trans* fatty acids, produced by hydrogenation; cholesterol and saturated fats do not cause heart disease. Consume plenty of enzymes. Meat should be eaten raw, rare, or braised in stock. Moreover, the authors propose a conspiracy in which doctors, researchers, nutritionists, and spokesmen of various government agencies are giving bad nutritional advice to the American public (p. 2). The authors wish, sentimentally, for the return of the small American farm. Moreover, they do not examine some the non-dietary issues related to a diet based on meat and dairy products: What is its impact on the environment? How would it affect the ability of the Earth to feed more than 6 billion people? What right do humans have to kill animals?

However the authors also make a number of recommendations that many people would agree with: Eat more natural, traditional, fresh, and unrefined foods instead of refined and processed foods. Avoid sugar and hydrogenated fats. This book is strongly influenced by the observations of Dr. Weston Price, a dentist, whose important book *Nutrition and physical degeneration: A comparison of primitive and modern diets and their effects,* was published in 1939.

Concerning soyfoods, the authors favor the use of small amounts of fermented soyfoods (such as traditionally fermented soy sauce and miso) but are strongly opposed to the use of non-fermented soyfoods such as tofu and soymilk.

Soy-related recipes and information: Commercial soy formulas are low in saturated fats and devoid of cholesterol (p. 6). Today most of the fats in the American diet are polyunsaturated and derived from vegetable oils such as soy (p. 10). The cheapest oils, such as soy oil, are often hydrogenated; this creates *trans* fatty acids (p. 14-15). Cows lose valuable Activator X when fed high-protein soy-based feeds. Lecithin is found in butter (soy, the main source of lecithin worldwide, is not mentioned). Mother's milk is high in cholesterol because it is essential for growth and development (p. 16-17).

Omega-6 (bad) and omega-3 (good) fatty acids in soybean oil (p. 19). Fermented soy foods contain compounds that resemble vitamin B-12 but they are not absorbed by humans (p. 28). Isolated protein powders made from soy are usually obtained by a high-temperature process that over-denatures the proteins to such an extent that they become essentially useless, while increasing nitrates and other carcinogens. These isolated soy proteins can cause osteoporosis (p. 29).

Beef should not be fed soy meal for protein, but rather animal parts (p. 31). Avoid farm raised fish [aquaculture] that have been fed soy meal (p. 32). Cultured soybean products from Asia, such as natto and miso, are a good source of food enzymes if they are eaten unheated (p. 47). The natural glutamic acid in soy sauce and miso gives these foods their rich, meat-like taste (p. 49). Many processed foods contain MSG or hydrolyzed protein, "especially soy-based

© Copyright Soyinfo Center 2014

concoctions" (p. 50).

Heavily yeasted foods, such as soy sauce and Worcestershire sauce, often exacerbate the symptoms of chronic yeast [candida] infection (p. 56). Beans cause digestive problems because they contain two complex sugars, farrinose [sic, raffinose] and stachyose (p. 60). The macrobiotic diet and soybeans: Use only as fermented products like miso, natto, and tempeh. Problems with tofu, soy milk, and phytoestrogens in soy (p. 62). The sickening effect of soy on ruminants (p. 87). In Japan, a typical meal contains miso, soy sauce, and pickles, all fermented products. In Indonesia, they eat tempeh (p. 94).

Ode to naturally brewed tamari soy sauce and teriyaki sauce (p. 147). Soy products increase the body's need for vitamin B-12 (p. 164). Soy in Chinese history. Miso soup. Tofu in fish stock and soy sauce broth (p. 201). Macrobiotic diets (p. 343). Soy foods block zinc absorption (p. 348). Eat natural salmon; farm-raised salmon are fed inappropriate soy meal (p. 418). Problems with soy flour and modern soy products: phytates, antinutrients, omega-3 fatty acids, disagreeable taste, phytoestrogens, phytic acid, enzyme inhibitors (p. 477, 495).

Soybeans are low in two essential amino acids (p. 496). Textured soy protein contains three antinutrients: Phytic acid, trypsin inhibitors, and isoflavones (p. 502). Person fed soybean milk as an infant had a spleen filled with ceroid (p. 546). Infants should not be fed soy-based formulas which contain phytic acid and estrogen compounds (p. 599, 603-04).

Note: The first edition was apparently published in 1995 by ProMotion Publishing (San Diego, California). Address: California. Phone: (877) 707-1776.

10689. **Product Name:** SoyAct (Soy Isoflavones).
Manufacturer's Name: Kikkoman Corporation, Biochemicals Div.
Manufacturer's Address: 1204 Allanson Rd., Mundelein, IL 60060. Phone: 847-247-9319.
Date of Introduction: 1999 October.
Ingredients: Soy isoflavone aglycones (40%) and glucosides (60%).
Wt/Vol., Packaging, Price: Bulk.
How Stored: Shelf stable.
New Product–Documentation: Nutrition Business Journal. 1999. Oct/Nov. p. 5. Earlier in 1999 the Biochemicals Division of Kikkoman Corp. (Mundelein, Illinois) launched SoyAct, an isoflavone aglycone that contains genistein and daidzein. Kikkoman claims that its unique form of aglycone is more easily absorbed than the glucoside form of those isoflavones and has a higher antioxidant activity. SoyAct joins Novasoy (made by ADM) in competing for sales to the supplement and functional foods markets. Talk with Kikkoman Biochemicals Div. in Mundelein, Illinois. 1999. Dec. 8. This product was introduced in Oct. 1999. It is a white powder, packaged in bulk according to the customer's order. It contains 40% aglycones. It was developed in Japan, and is manufactured there.

10690. Kuda, Takashi; Tanaka, Chieko; Yano, Toshihiro. 1999. [Fermentation of autoclaved beans by *Bacillus subtilis* (*natto*)]. *Nippon Shokuhin Kagaku Kogaku Kaishi* (*J. of the Japanese Society for Food Science and Technology*) 46(10):669-71. [6 ref. Jap; eng]
• ***Summary:*** "We investigated the fermentation of six autoclaved (121ºC, 20 min) beans–soybeans (yellow and black), kidney beans (*taisho-kintoki* and *uzura-mame*), peas, azuki beans, and lotus seeds by *Bacillus natto* strain TF 1. During the fermentation, colony numbers of TF 1, the sticky material, called *itohiki* in Japan, ammonia and L-glutamic acid increased clearly in soybeans, particularly yellow soybeans. The increase in *itohiki* and ammonia concentration was observed in kidney beans, pea and lotus seeds, but not shown in azuki beans" (from journal@rchive). Address: Ishikawa Agricultural College, 1-308, Suematsu, Nonoichi-machi, Ishikawa 921-8836, Japan.

10691. Great Eastern Sun. 1999. Pricelist. Effective November 15, 1999 [Mail order]. Asheville, North Carolina. 24 + 6 p. 28 cm.
• ***Summary:*** Contents: Catalog information: I Ching reading (hexagram #43), ordering, billing, shipping. Miso Master organic misos (traditional, mellow, sweet, miso tamari). Sweet cloud organic sweeteners. Haiku organic Japanese teas. One world organic classic teas. Mandala organic herbal teas. Organic planet pasta. Emerald Cove sea vegetables. Emperor's Kitchen condiments (Organic Oriental sauces, condiments in bottles, condiments in jars, condiments in bags, Japanese kitchenware). GES variety packs. Also sells coarse nigari in 44 lb or 440 lb lots. Address: 92 McIntosh Road, Asheville, North Carolina 28806. Phone: 704-252-3090.

10692. Kawata, Ayumi. 1999. The LA Tofu Festival on 14-15 August 1999 (Interview). *SoyaScan Notes.* Nov. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This year's Tofu Festival was the biggest and most successful yet. More than 26,000 people came. The Little Tokyo Festival was part of the 59th Nisei Week Japanese Festival, the longest-running Japanese festival in the USA. Nisei Week began in 1934 during the Great Depression, when the Nisei (second-generation Japanese-American) community established the first festival to create goodwill in the local community and attract businesses to Little Tokyo. The festival continued until 1941, when West Coast Japanese were relocated to internment camps. Even though the Japanese community returned to the area in 1945, the festival didn't start again until 1949. It is now one of the leading ethnic festivals in the United States.

This year they created a lovely Tofu t-shirt. Ayumi will send the official program booklet and a packet of press clippings. Address: Little Tokyo Service Center (Resource Development Center), 231 East 3rd St., Los Angeles, California 90013. Phone: 213-473-1602.

10693. Creamer, Beverly. 1999. Tofu linked to dementia, study says: 2 servings a week may be harmful. *Honolulu Advertiser.* Nov. 20. p. A1, A5. [1 ref]
• ***Summary:*** "Eating tofu more than twice a week in midlife may diminish brain function in old age, and lead to Alzheimer's disease, according to ground-breaking research by Hawaii scientists." Alzheimer's affects 2% of America's 65-year-olds and up to 16% of 80-year-olds; this is the first time scientists believe they have found a risk factor for the disease.

The team, led by Dr. Lon White, draws its findings from a database of long-term information (starting in 1965)–that of the 3,734 Japanese-American men in the Honolulu Heart Program. White, who was invited to speak, presented his findings at a recent conference in Washington, DC, sponsored by the nation's soy industry. With funds from the National Institute on Aging, White has been working on the tofu connection for several years as part of the Honolulu-Asia Aging Study and the Honolulu Heart Program.

White compared the dietary habits of 3,734 Japanese-American men whose tofu consumption ranged from zero to many servings a week. He found that those who ate the most scored lower than those who ate little on a standard cognitive function test for determining dementia.

Moreover, autopsies conducted on the brains of 300 members of the study who have died showed that the brains of those who consumed two or more servings of tofu a week weighed less than those who consumed fewer than two servings.

These cause of the problem is not yet known. Dr. Helen Petrovich, a co-investigator, theorizes that tofu might be slowing down production of estrogen in the brain, or interfering with its natural binding in the brain. Yet moderate amounts of tofu are still thought to bring health benefits.

Note: White has submitted his research to various scientific journals, but none have accepted or published it. The journals *Nature* and *Science* turned it down. Address: Dr., Pacific Health Research Inst., Kusinki Medical Center, Hawaii.

10694. Pukel, Sandy. 1999. History of interest in macrobiotics and miso. Part I. 1945-1974 (Interview). *SoyaScan Notes.* Nov. 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sandy was born on 10 Sept. 1945 in Queens, New York City. In 1967 he graduated from the University of Wisconsin, majoring in political science, then went to law school at the University of Tulsa in Oklahoma. After two years he realized he did not want to be a lawyer, and dropped out–at a time when many other young Americans were also dropping out of college or "straight" jobs. For the next two years he passed his leisure time like many other young Americans. In August 1969 he was at Woodstock and appears in the movie–naked. Knowing he wanted to be an entrepreneur, he worked on Wall Street for a while.

In April 1970 a childhood friend from Queens, Willy Rosenfeld, introduced Sandy to macrobiotics. Willy had gone to Harper College (SUNY) at Binghamton, New York, where he met Michel Abehsera. Sandy went to a lecture in New York City by Rebecca Dubawsky. "From that night on I became macrobiotic; I went 'cold turkey.'" He stopped using psychedelics and quickly got interested in the philosophy of macrobiotics; he wanted to "turn the world on" and saw this as one way to do it. That summer he went to a macrobiotic summer camp / retreat at Awosting in upstate New York with 30-50 other people. There he first met Michio Kushi, who was in short pants and knee-sox. This deepened his interest.

In August 1970 Sandy and five of his closest friends decided move to the island of Jamaica, where they would live a simple life and practice macrobiotics–in paradise. They stopped by Greenberg's Natural Foods at 125 1st Ave. in New York City. Located on the lower east side of Manhattan, it probably had the largest selection of macrobiotic foods in America. There they bought provisions for the trip: a 100-lb sack of brown rice, a keg of Hatcho miso, aduki beans, and soba noodles. They got non-tourist visas, and settled down in a lovely rural spot. The dentists in the group had hoped to open a clinic. But it didn't work out; the local people saw them as white hippies so they kept trying (unsuccessfully) to sell them drugs. The local people just wouldn't let them alone, so after about 6 months, one by one, they returned to the United States. Sandy was the last to leave. He went to Coconut Grove to stay with one of his roommates in law school, Roger Schindler, who happened to live there. But there was no place to eat or to buy macrobiotic foods. So in Nov. 1970 Sandy and two of his close friends started Oak Feed Store. One partner was Leon Matsil, a dentist and Sandy's boyhood friend from Queens; the other was Joel Magazine, an attorney and public defender in Miami, who also went to law school with Sandy in Oklahoma and who Sandy turned on to macrobiotics. They just wanted to have food available. They did not go into it thinking it would be a business–Sandy's father lent them $4,000 to start the store. It was named Oak Feed Store because the law library was on Oak Avenue. The word "Feed" was used because the purpose of the store was "to feed the people the good food." They name came spontaneously; no one person thought of it. This was the first of many enterprises that Sandy would help to finance. It was located on the second floor walk-up of the law library of the lawyer of one of his friends. The room was about 10 by 15 feet. This was the first macrobiotic food store or organization in the greater Miami area. They

© Copyright Soyinfo Center 2014

ordered their foods via common carrier (truck) from Akin, a distributor in Jacksonville, Florida. Akin distributed many Erewhon products. They also ordered quite a bit of food via mail order direct. They carried relatively few foods: Bulk brown rice, almonds, miso, noodles, noodles, apple juice, plus one cosmetic (Oregene shampoo). "It was really a strict, strict macro kind of place." There was a commune in Coconut Grove named the Maya House, and its members were regular workers at Oak Feed Store. Sandy also worked there regularly.

Also in about 1970 Sandy and his two friends started another communal affiliation that they called LJZ Enterprises–Leon, Joel, and Zuni; Sandy's nickname was Zuni. Everything went into one pool and they shared everything 100%–totally. All money from Joel's law salary, all money from Leon's dental practice and investments, all money Sandy earned from the store went into this pool, and each person took whatever they needed. This included purchases of houses, cars, clothing–everything. This lasted for the next 7 years and worked very well. To this day, they are all still close friends.

Oak Feed Co. became increasingly popular. After about one year they moved to a street-level retail store in the same building. Then in late 1971 or early 1972 they moved around the corner to a bigger store at 3030 Grand Avenue–where they stayed for the next 20 years. By this time they were running a real business–in spite of themselves.

Sandy recalls: "Once I got into macrobiotics I was a zealot about it–preaching, teaching, everything." In 1972 he began to give the first macrobiotic cooking classes in the area out of a rented home in Coral Gables, where he and Leon lived. A macrobiotic community began to evolve, with Sandy at its center. Sandy got to know Neal Loeb, who had studied macrobiotics in Boston, Massachusetts, and was Michio Kushi's driver. He was planning to bring Michio to Florida for a seminar, but he "flaked out" and couldn't get it together, so in about 1973-74 Sandy organized the weekend seminar. Michio's students in Boston sent Sandy detailed information about how Michio was to be treated, where he was to stay (hotel or motel only), what he was to eat, his detailed schedule, etc. "They were incredibly protective." The seminar was very successful, with a good turnout at a local church or private school auditorium. Michio stayed at Sandy's house and did individual consultations. Sandy and Michio got along very well, and Sandy gave Michio all they money they collected–in part because he didn't care about the money. Soon he and Michio became lifelong very close friends, and Michio started to give seminars in the Miami area on a regular basis.

In about 1973 LJZ bought a very nice house, communally, in Pinecrest a very nice neighborhood of Miami; there the three friends continued living together for a year. Macrobiotic visitors and friends stayed in the guest house on the property. In 1974 Sandy bought his own house (with a lake in his back yard) on 63rd Avenue in Miami, about 4 miles from Oak Feed Store.

In about 1974 Sandy started the Macrobiotic Foundation of Florida. Its purpose was to spread macrobiotics. Edmund Benson was on the board of directors. The cooking classes continued at Sandy's house in Coral Gables. Anyone passing through Florida who knew macrobiotic cooking was invited to be a guest teacher at the cooking class. Tim Redmond taught the first class on macrobiotic desserts–featuring apple pie. Sandy's repertoire didn't include desserts, except perhaps those made from agar or kuzu. Jay Pinsky, from Philadelphia, Pennsylvania, asked if Sandy had any apple butter, peanut butter, or sesame butter; he didn't. "We still ate basically rice, vegetables, miso soup, and aduki beans. We were as close to a Number 7 diet as you can imagine." Continued. Address: Owner, Oak Feed Store and Restaurant, 4500 S.W. 63 Ave., Miami, Florida 33133. Phone: 305-446-9036.

10695. Pukel, Sandy. 1999. History of interest in macrobiotics, miso, and the Oak Feed Miso Co. Part II. 1975 to Aug. 1979 (Interview). *SoyaScan Notes.* Nov. 20. Conducted by William Shurtleff of Soyfoods Center. • ***Summary:*** Continued: Over the years Michio Kushi had talked about having a factory that made shoyu (natural Japanese-style soy sauce) in the United States. In about 1975, Sandy decided to do something about Michio's dream. He was increasingly an entrepreneur, but only in the sense that he liked to help make things happen. He still did not see himself as a businessman, in that he had little interest in money except insofar as it was important for making things happen. Oak Feed Co. was now a thriving enterprise. But why? "Because we didn't do it to make money, and because nobody took any money out of the company. So all the earnings were put back into the business. My job was to keep the philosophy going." Sandy's living expenses came from other investments. In the early 1970s, most young people Sandy knew who were interested in macrobiotics were dropouts with no money. He lived in a very nice house in Pinecrest (near Miami) and had the money he needed. In 1976 he began looking at the idea of a shoyu factory more seriously, but he soon realized that the complex equipment and buildings would make it too expensive.

Then John Belleme started coming to the macrobiotic cooking classes and other events at Sandy's house on 63rd Avenue. Though he came on his motorcycle, John had a "straight" job in electron microscopy at the Veterans Administration Hospital in Miami. Soon he was deeply interested in macrobiotics and wanted to learn more and more. So Sandy suggested that John go to Boston to study macrobiotics with Michio. John did that, moving into a Ken Burns' study house. He stayed for about a year, then went to Mexico with Frank Head, and finally returned to Miami.

He asked Sandy for a job at the Oak Feed Store, and

© Copyright Soyinfo Center 2014

Sandy said "Fine." He was a responsible and knowledgeable person. John soon became the store manager, while also taking macrobiotic cooking classes at Sandy's house, but he did not see his future in a retail food store, thus he wasn't very happy with the job–though he was a very good worker. John was more a creator than a manager, and he and Jan had become sweethearts–great people and good workers. Jan used to make delicious seitan there. One day in about late 1977 John went to Sandy and suggested they do some kind of a project together. One of the ideas that came out of their brainstorming session was starting a miso factory in America.

A new idea was born, and Sandy responded by making John a deal. If John would work in the Oak Feed Store, in retail, for a total of three years (1976-79), Sandy would take care of the money necessary for making a miso factory happen and he would pay John's expenses related to starting the factory, pay for John's trip to Japan to study traditional miso making, and pay for John's share of ownership in the new miso company–$25,000 in shares. John would be responsible for doing the research, learning how to make miso in Japan, etc. John accepted and began to manage the store.

In the fall of 1978 Sandy and John visited Michio in Boston to discuss the idea; Michio was very supportive, but he wanted the miso company to be in Massachusetts–perhaps on land at Becket or Ashburnham. Sandy didn't like the idea of Massachusetts–too much macrobiotic politics and the weather was too cold. Sandy put money from the Oak Feed Store into a separate account that John used to pay his miso-related expenses. Soon he began taking Japanese language lessons.

In 1977 Sandy started the Oak Feed Restaurant, and at about the same time Leon got married. These two events led to the three partners dividing up the properties of the communal LJZ Enterprises. Sandy ended up as the sole owner of the Oak Feed Store and his friends ended up with other businesses. Sandy took in partners in the restaurant; Michael Henry (a friend), and Wayne Neal and his wife. They invested and owned shares in the restaurant. Sandy got Yozo Masuda to be the chef at the restaurant. For many years Yozo had been the right-hand man of Hiroshi Hayashi at Sanae, an early macrobiotic restaurant in Boston. Sandy brought him and his whole family from Japan, and got him a green card so he could cook at the Oak Feed Restaurant.

1979 (early)–At some point, Sandy began looking for land for the miso company–using specifications related to the climate and temperature that John Belleme had given him. But he was also looking for land for another reason–the Oak Feed Land Project. This was Sandy's dream of a macrobiotic educational center where various people would build homes and apprentice with John at the miso plant, and where various macrobiotic retreats and workshops and a summer camp with classes could be held on the land. Sandy spent about two months looking at catalogs, talking to realtors, etc.

1979 Feb.–Oak Feed Miso, Inc. is incorporated. By this time two groups have formed and begun to discuss their potential ownership of shares in the miso company: The Oak Feed group and the Erewhon group. It was agreed that the company would be named the Erewhon Miso Company. In the Erewhon group were Michio and Aveline Kushi, Sendai Miso-Shoyu, and maybe Mr. Kazama of Mitoku. In the Oak feed group were Sandy and John Belleme. It was expected that the Japanese would play a very important role in this company; they would assist the Americans in making miso in the United States. Sandy recalls meeting only once with some representative of Sendai Miso-Shoyu, probably at some natural foods trade show. Michio had most of the contact with them. At about this time the first of many of drafts concerning ownership of shares was placed on the table. None of the drafts was ever signed.

1979 April–Barry Evans becomes a major investor in the miso company.

1979 summer–After extensive research, Sandy flies up to North Carolina (Asheville) alone, looks at several pieces of property that a real estate agent has suggested, finds exactly the piece of land and house he had been looking for, makes a deposit or down payment of $10,000 to $15,000, agrees to assume the mortgage of the previous owners at the Tryon National Bank, North Carolina, and flies home alone the same evening. The roughly 90-95 acres of land in Rutherfordton cost about $100,000 to $120,000. The mortgage payments were $500/month for 30 years. It was a lovely but very rural piece of property with rolling green hills. The Sears-style prefab 5-bedroom house on the property was basically thrown in free of charge. The land had become available because someone had died recently. With the new land and house, Sandy's Macrobiotic Foundation could do things that were impossible in metropolitan Florida.

1979 Aug. 7–Sandy closes / finalizes the purchase of the land for Oak Feed Miso in Rutherfordton, North Carolina. He and John Belleme both sign the closing documents. Now the new miso company would have to find the money to make the monthly mortgage payments, plus additional monthly payments to two officers of the bank totalling $23,000. Barry Evans' money was important in making these payments but it was not essential. The miso company definitely would have been able to pay for the land in Rutherfordton and send John and Jan to Japan without the money Barry invested at this time. The investments Barry made after construction of the factory began in mid-1980 and after Erewhon filed for bankruptcy were more important to the company's survival. Sandy put in the first money; Barry's came later. Sandy told John that if John took care of all the technical matters, Sandy would take care of all the financial matters to make the new company happen. Continued. 10696. Pukel, Sandy. 1999. History of interest in macrobiotics, miso, and the Oak Feed Miso Co. Part III. Aug. 1979 to 1982 (Interview). *SoyaScan Notes.* Nov. 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: 1979 Aug. 16–A "subscribers consent" agreement is signed at a meeting in Miami. The following people, all or most of whom were present, subscribe to buy shares in Oak Feed Miso, Inc. Sandy Pukel, John Belleme (he invested sweat equity, not money; Sandy put up John's share of the money), Barry Evans, Yozo Masuda (chef in the Oak Feed Restaurant), Edmund Benson (a friend of Sandy's involved in macrobiotics), and Jim Kenney (manager of the Oak Feed Store). All these people knew each other, and all but Barry lived near Coconut Grove. John signed as the secretary. Sandy also has the original by-laws of Oak Feed Miso–more than 10 pages of typewritten boilerplate-type language. They are not dated or signed, but they were almost certainly drafted in 1979. No names or shares are given. Frank Head was never a shareholder as long as Sandy was involved.

1979 Aug. (late)–After the land deal was closed, Joseph and Patricia Carpenter (married, with children, macrobiotic friends of Sandy's from his neighborhood) moved into the main house on the miso company land at Rutherfordton, North Carolina, and lived there, rent free and getting money, throughout the time the Belleme's were in Japan. Joseph was a carpenter and fix-it guy, and he was expected to make improvements to the house and land before the Belleme's returned. Joseph was also hired to be John's assistant and head worker in running the miso company. Joseph "seemed like a hard-working guy" and Patricia was "a sweetheart lady." Joseph now lives in California and Patricia (who now uses her maiden name, Roberts) lives in Boca Raton, Florida, where she owns an antique store. Her parents live in Lighthouse Point, Florida, and her brother, Brendon Roberts, lives in Boulder, Colorado. Things did not end up on nice terms between them and John. Because they didn't do the work that John had expected of them, he either fired them or kicked them off the land. Sandy doesn't know what they were supposed to do; John would know. The Carpenters then bought land nearby.

1979 Oct.–John Belleme (and his new wife, Jan) leave for Japan. All their expenses are paid from the Oak Feed account Sandy had established–not from the new corporation.

Michio was supposed to arrange for John's welcome in Japan and find a place for him to learn how to be a miso maker. But the people at Sendai Miso-Shoyu didn't want to share their secrets with John, so John ended up studying with the Onozaki family–kind of by accident. It turned out to be a blessing, because Sendai was too automated for John to learn traditional miso-making there. Moreover, Sendai Miso-Shoyu wanted to send one of their people to the USA to run the new Erewhon miso factory; John would have been his assistant.

1980 June–John and Jan Belleme return from Japan. Not long afterwards, there was an important meeting at Sandy's house in Miami. Now that it was becoming clear that a miso company was actually going to happen, people began to get serious about issues of ownership and money. At the meeting were Michio and Aveline Kushi, Sandy, John Belleme, and Joseph and Patricia Carpenter. Joe Carpenter had no money; he was a handyman who was going to be a worker. Sandy recalls it as a "pretty testy" meeting. Michio looked upon the miso company as "his baby." His contributions would be "in kind" rather than in money. He would supply the company name: Erewhon Miso Company. Moreover, since he owned Erewhon Trading Co., he stated that the Trading Company would buy all the miso, package it, and distribute it under the Erewhon brand. Barry Evans was not there. In short, Erewhon planned to play an essential role in the new miso company.

After John and Jan returned from Japan, they went right to work building the factory and purchasing equipment. John is a very talented photographer. He took many superb photographs of miso making in Japan then documented the rise of the new miso company on the land in North Carolina.

1981 Sept. 27–Sandy has the "Minutes of an Annual Stockholders Meeting of Oak Feed Miso" (3 pages). It is signed by directors John Belleme, Sanford Pukel, and Barry Evans, all of whom, of course, were in attendance. It refers to the Subscribers Consent Agreement of 16 Aug. 1979 and tells exactly who owns how many shares in the company. With the help of an attorney, Barry got his stock converted to Class A, which enabled him to vote for the first time; he also got on the board of directors. Barry and John together now own the majority of shares. Sandy was, alas, no longer in control. The company needed Barry's money, and his demands were reasonable. The changes seemed inevitable–but it hurt.

In 1981, when it became clear to Michio and Aveline that Erewhon Trading Company was in a financial crisis and needed cash quickly, they appealed to many of their close friends for help. Sandy responded by sending them $100,000. Nevertheless, on 19 Nov. 1981 Erewhon filed for bankruptcy protection under Chapter 11 of the Federal Bankruptcy Act. That left Sandy in need of money. Barry Evans invested a considerable sum in Oak Feed Store as part of a complex agreement. For Sandy, the Erewhon bankruptcy couldn't have come at a worse time.

1982 Feb. 26–Sandy Pukel and Barry Evans sign an agreement whereby Sandy gets out of Oak Feed Miso and Barry gets out of Oak Feed Store and Oak Feed Restaurant by an exchange of stock. Barry's financial strength won over, but this left Sandy upset and bitter at Barry. Sandy believes that there was no connection between this event and his lending $100,000 to Michio. John was torn–caught in the

© Copyright Soyinfo Center 2014

middle. On the one hand, he felt great loyalty and affection for Sandy, and hated to see him out of the new company. On the other hand, he had invested years in the miso company and wanted to see it through to the end. So John continued to work with Barry, and Barry made him an offer he couldn't resist. This conflict strained Sandy and John's relationship for years afterward. About 8-10 years later, Sandy received a beautiful present in the mail of a wooden keg of special miso. It was from John (who had made the miso), accompanied by a nice note as a peace offering, with the hope that the two could renew their friendship.

The idea of the Oak Feed Land Project disappeared when Barry Evans bought out Sandy's interest in the miso company. Sandy basically held a proxy for most of the other investors; when he left, they also left, selling their shares to Barry Evans.

One sidelight: In about 1993-94 Sandy formed a non-profit organization, an offshoot of the Macrobiotic Foundation of Florida, named The Ignoramus Club. Most of the members are people who have been involved with macrobiotics for many years. It had several hundred members who paid $100 each, including Michio, Herman Aihara, etc. No one had any authority over anyone else. At the meetings, some of which drew 50-100 people to Miami, everyone talked freely about macrobiotics. Resentment and criticisms, as well as gratitude came out. "A lot of people owe a lot to macrobiotics." The Club is no longer active. Address: Owner, Oak Feed Store and Restaurant, 4500 S.W. 63 Ave., Miami, Florida 33133. Phone: 305-446-9036.

10698. Oihankesni, Anpetu. 1999. Life story and work with the South River Miso Co. (Interview). *SoyaScan Notes.* Nov. 29. Followed by a 4-page handwritten letter of Nov. 29. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Anpetu (whose name was originally Jeffrey Zellich) was born into a Russian Jewish family and grew up in Philadelphia, Pennsylvania, but later in life, while living with the Lakota Sioux, he was given the name he now uses. He has been involved with macrobiotics since 1973. Before that, in 1971-72, he lived alone in a cabin in the woods in New Brunswick, Canada, gardening and using wild plants. He also lived in a tepee in northern Maine.

In 1973 he went to Boston to study macrobiotics. He lived for a while with Jack Garvey and Jack's first wife. He left to go to Mexico, where he lived for a while with indigenous people (Indians), then in 1974 returned to Boston, where he lived in Jamaica Plain. About 40% of the macrobiotic students in the Boston area at the time were Jewish. He met Hannah Bond through a mutual interest (shared also with Ken Burns) in wild plants. Hannah was older, and came from a Quaker background. She made pickles for Erewhon and was considered to be the best pickle-maker in Boston. He found her to be "the most intellectual woman I had ever met–wonderful." She had formerly been married to a professor of Greek. They went to his cabin in New Brunswick, Canada, she proposed to him, and they were married in 1982–the ceremony took place at the Elwell's land in Conway, Massachusetts. Christian and Gaella had both previously worked at East West Journal, she as an editor and he as an artist, who also illustrated several of Michio Kushi's earlier books. They had also both worked with Alan Chadwick, the legendary teacher of French intensive, biodynamic gardening at the University of California at Santa Cruz.

Anpetu was at the South River Miso Co. in about Oct. 1982 when Thom Leonard came for a month (on contract) to teach the Elwell's how to make miso and use the equipment. Christian and Gaella were married, had a daughter, and owned 64 acres of beautiful land on both sides of the South River. Christian was able to fund the company's start-up with his inheritance; he came from an affluent family and his father had died. He and his brother, Will, initially planned to start the miso company together, but later Will left. At one point the Elwell's approached Michio Kushi to see if he wanted to buy the company. Anpetu and Hannah lived in nearby Conway for 2 years, then on the Elwell's land in a trailer across the river. Another couple, Don and Martha Wheeler, lived upstairs in the miso shop after it was completed. Don and Martha loaned $10,000 to Christian for the miso company. Anpetu also loaned $10,000 to the miso company (though no papers were signed), and worked there making miso for 6-9 months; Hannah was not involved with making miso. During that time they published a flyer on miso (dated spring 1983) which Anpetu still has; he designed the logo showing 3 waves in a circle. The waves symbolized South River and the three stood for the three families who were joining together to create the miso company. He also took quite a few color photos, which he still has. Don and Martha decided to leave first. Then Anpetu's enthusiasm waned and he and Hannah decided to leave.

Anpetu recalls that many big problems took place after this decision. Christian wanted Anpetu and Hannah to leave promptly, and when they would not set a deadline for leaving, Christian took them to court to try to get them evicted. The case went before a local judge in Greenfield; he suggested they work the matter out among themselves, but said that Christian had the basic rights as a landowner. Anpetu and Hannah left one month later, in the fall of 1983. Christian paid him back the $10,000 without interest over the next ten years. Anpetu and Hannah separated after being

© Copyright Soyinfo Center 2014

married for 7 years.

Today Anpetu lives a very simple life in Hotchkiss/Cedaredge, Colorado, where he runs an heirloom seed company named Sourcepoint Organic Seeds and practices Vipassana meditation. His teacher is Goenka, of Burma.

Note: Anpetu contacted Soyfoods Center today to request a review copy of *The Book of Miso* as announced in the latest edition of *River Currents: News from South River Miso Company* (*Conway, Massachusetts*). Address: Founder and owner, Sourcepoint Organic Seeds, 1349 2900 Road, Hotchkiss, Colorado 81419. Phone: 970-872-4971.

10699. Morinaga Nutritional Foods, Inc. 1999. Lite'n your holidays with Mori-Nu Tofu (Ad). *Vegetarian Times.* Nov. p. 29.

• ***Summary:*** The top half of the ad is a color photo of the tofu pumpkin pie, surrounded by pumpkins and vegetables and one package of Mori-Nu Silken Firm Tofu.

The recipe for "Dairy-free, low-fat pumpkin pie" is given in the lower right quarter of the ad. In the lower left quarter is a color photo of 5 different packages of Mori-Nu Tofu. Plus an invitation to: "Create delicious, low-fat, dairy-free holiday dishes with Mori-Nu Lite Tofu. Creamy-smooth Mori-Nu Lite has only 1 gram of fat per serving, 50% less calories than regular tofu and it's an excellent source of cholesterol-free protein." Address: 2150 W. 190th St., Suite 110, Torrance, CA 90504.

10700. *Nutrition Business Journal* (*San Diego, California*). 1999. Sales of soy protein isolate set to grow. 4(10/11):21-22. Oct/Nov.

• ***Summary:*** The market for soy protein isolate is dominated by two manufacturers: Protein Technologies International Inc. (PTI, St. Louis, Missouri, a business of DuPont) and Archer Daniels Midland. PTI claims to have sales of $500 million in 1999 and to have captured about 75% of the soy protein isolates market. By extrapolation, this implies a U.S. market of $700 million/year.

About 40% of PTI's isolate sales are to meat and fish processors, 16% to nutritional and sports beverages, 10% to infant formulas, 9% to the paper industry, 5% to young animal feed (milk replacers), and 20% to "developing opportunities."

Other manufacturers of soy protein isolates are Santista of Brazil, and Fuji Oil of Japan.

A new PTI product is Supro XG, an isolate enriched with genistein. Top customers include Ross Laboratories (Ensure), Nestle, SlimFast, and Weider.

The second half of the article discusses ADM's efforts to educate mainstream consumers–in part is using the umbrella brand, Nutrisoy. This tradename will start appearing on supermarket shelves during the first quarter of 2000. Del Cahill, North American manager for ADM's specialty proteins, sees a new trend. The mainstream food industry, recognizing that the U.S. has an aging population, believes that the easiest way to prevent long-term chronic disease is through diet. These companies are now trying to develop and market better food choices.

10701. *Nutrition Business Journal* (*San Diego, California*). 1999. SunRich acquired by NASDAQ company [Stake Technology Ltd. of Ontario, Canada]. 4(10/11):22-23. Oct/Nov.

• ***Summary:*** In July 1999 Stake Technology Ltd. (Norval, Ontario, Canada) acquired SunRich Inc. in a stock-for-stock deal. Stake is an environmental company with technical expertise in steam explosion pulping, cleaning of metals, and recycling. In 1998 it had revenues of $14 million. SunRich, a $35 million niche producer, makes various soy products and contracts with 700 growers in the Midwest. Soy products comprise approximately 60% of SunRich's sales, and soymilk contributes approximately 20%, according to Allan Routh, president and CEO. SunRich makes three basic categories of soymilk: a standard [dried] product used as an ingredient in second generation products; several soy beverages; and soymilk with various protein and fat contents.

SunRich was founded [as Minnesota Waxy Corn Growers Export Inc.] in 1978, and changed its name to SunRich in 1994. Some 30-40% of SunRich's revenue's are international, primarily from Japan, reflecting its roots as an exporter. Less than a year ago, SunRich launched its own retail division, Hearty & Natural.

Note: Talk with Allan Routh of SunRich. 2001. Nov. 6. The acquisition was finalized on 1 Sept. 1999.

10703. Elwell, Christian. 1999. Chronology of South River Miso Co. Part I. 1946-1979 (Interview). *SoyaScan Notes.* Dec. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1946 Dec. 29–Christian is born at Martha's Vineyard, Massachusetts. His father is a vegetable farmer. When Christian is in grade school, he moves with his family to the Boston area and instead of vegetable farming his father opens a florist and nursery business.

1949 Aug. 3–Gaella (pronounced GAY-luh) is born Margaret B. Jett in Richmond, Virginia. Her family lives in Reedville, Virginia, on the Chesapeake Bay–where she grew up. Her father died when Gaella was 3 years old. Her mother, a school teacher in home economics, remarried to Jennings

© Copyright Soyinfo Center 2014

Butler, a professional fisherman with the menhaden fishing fleet of Reedville.

1969 June–Christian graduates from Cornell University (Ithaca, New York) in landscape architecture.

1969 July–Christian enters Peace Corps training in Morrison, Colorado. His group arrives in Teheran [Tehran], Iran, in Sept. 1969. He serves as a park designer for the municipal office of the Province of Esfahan, the 17th century capital of Persia. During this time, Christian's father dies of pancreatic cancer at age 51. This event, coupled with his immersion in the traditional aesthetic and religious culture of Iran, precipitated a shift in the main stream of his life. He had graduated from Cornell with ambitions of becoming a landscape architect; he was accepted to enroll at the Harvard graduate school of design upon his return from Iran. But he finished his two years of Peace Corps service in Iran "with an altogether new orientation, burning with questions about the meaning and purpose of life."

1973 spring–Christian returns to the United States for a year. He travels (to the French island of Saint-Barthelemy in the Caribbean for several months, then to California in a Volkswagen bus), studies with a portrait artist in Boston for several months, then studies the teachings of Sri Aurobindu at a center in the Catskill Mountains.

1974 spring–Christian travels to India, where he lives in Pondicherry in association with the Sri Aurobindu ashram and Auroville. After becoming ill with hepatitis, he begins to study alternative health care and healing. After a year in Auroville, he then travels west to Scotland.

1974 May-Sept.–While at the Findhorn community in northern Scotland, Christian meets former students of Michio Kushi (teacher of macrobiotics in Boston), reads the book *Healing Ourselves* by Noboru Muramoto (teacher of macrobiotics in California) and puts its teachings to use–successfully.

1974 Dec. 29–Christian (on his 28th birthday) first attends a lecture by Michio Kushi in Boston. The subject: Right Life. He settles into the macrobiotic community in nearby Brookline and starts to work with the East West Foundation (doing everything from chauffeuring Michio around to helping with their magazine layout and design), while starting Whole Life Arts, a company to distribute French flour mills in the USA.

1976 fall–Gaella arrives in Brookline to study macrobiotics. Works at *East West Journal* as secretary to editor Sherman Goldman.

1976 Nov. to 1977 April–Christian and Gaella first meet at a massage class given by Shizuko Yamamoto. They first talk about making miso for a livelihood at an Irish pub in Brookline Village. While living in Ken and Anne Burns' macrobiotic study house (at the same time as John Belleme; they were good friends) in Brookline, they attend a miso-making workshop by Bill Shurtleff and Akiko Aoyagi. Christian wanted to farm and it seemed that making miso in the traditional way (as he had read about it in *The Book of Miso* by Shurtleff & Aoyagi) would fit into the New England farm cycle as a source of work and income during the cold months. In early 1977 they moved from the Burns' study house to the home of Michio and Aveline Kushi across the street.

1977 late summer–Christian and Gaella go to Covelo, California and work with Alan Chadwick, the legendary teacher of French intensive, biodynamic gardening. He had already left the University of Santa Cruz and set up what he called "The Garden Project" in Covelo. Christian becomes an "apprentice gardener" (later poultry manager) and Gaella is the head cook. They stay for about 6 months, until late 1977. Chadwick "blew up one day–just lost it completely." After that the Project fell apart.

1978 Jan.–Christian and Gaella leave Chadwick's garden and go to study with Noboru Muramoto at the Asunaro Institute in Glen Ellen, California. He is offering a one week "Fermented Foods Workshop" with an emphasis on miso-making. They ended up staying until April, making miso with him. That spring they make 1,000 lb of miso and write an article about it titled "Making miso in America," published in *East West Journal* in Sept. 1978. There they first met Thom Leonard, who comes to visit. Thom had already made some miso and tofu in Arkansas. Though they were together for only 2-3 days, they greatly enjoyed talking about their many mutual interests. "It was a really good connection."

1978 Feb.–Article titled "Learn natural architecture: Conversation at Cornerstones" (with Charlie Wing), by Christian (with photos by William Elwell), published in *East West Journal.* The interview took place in the fall of 1977.

1978 April or May–Christian and Gaella return to western Massachusetts, and with Christian's brother, Will, look for land in the Pioneer Valley region–within the larger Connecticut Valley.

1978 July–Review (by Christian) of five books by Rudolf Steiner published in *East West Journal.*

1978 Aug.–With financial help from their mother, Christian and Will purchase 64 acres of undeveloped land in Conway, Massachusetts, for $50,000 cash. They name the place South River Farm; South River (20-40 feet wide) runs through the property. They buy the land with the intention of homesteading, that is building their own home, farming, leading a life that is as self-sufficient as possible. While living in a small apartment in the village of Conway, they first build a barn and several cabins, and get a pair of draft horses.

1978 Sept. 9–Christian and Gaella are married at the Old Brick Church in Old Deerfield, Mass. They learn that one of Christian's direct maternal ancestors, John Williams, was the first minister of that church in the early 1700s.

1979 March 15–Thom Leonard and Dick Kluding ladle the first batch of miso into their one-ton wooden vats at

© Copyright Soyinfo Center 2014

the Ohio Miso Co. in Monroeville, Ohio. They had begun construction of the shop the previous October.

1979 May 15–The Elwell's first child, Anna Deerfield Elwell ("Anni," a girl), is born. They are still living in their apartment in Conway.

1979 fall–The Elwells move onto the land from their apartment. They live in a 24-foot-long pink and white trailer. Will is already living on the land in a cabin they built next to the barn. Continued. Address: Founder and Owner, South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

10704. Elwell, Christian. 1999. Chronology of South River Miso Co. Part II. 1980-1982 (Interview). *SoyaScan Notes.* Dec. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: 1980 Jan.–The Elwells receive a letter from Thom Leonard informing them that the Ohio Miso Co. is for sale.

1980 spring–The Elwells get a $3,000 grant from the U.S. Department of Energy, Appropriate Technology small grants program–to build a rammed earth house on their property. Fred Hubbard, originally from Cape Cod, hears about this building project through his sister, who was a relative of Christian's, and offers to participate. Unmarried, he arrives in the early summer of 1980 and lives in a tent on the Elwell's land.

1980 May–The Elwells purchase the Ohio Miso Co. for $10,000 cash from Richard Kluding.

1980 summer and fall–Christian tries to "back out of the miso business." He feels overwhelmed by all the work that would be required. His brother, Will, who had just met his wife to be, is not sure he wants to be involved in the "miso making adventure." He decided that he would move off the land in the summer of 1981. Christian approaches Michio Kushi, who owned Erewhon, and talks about Erewhon buying the Ohio Miso company. Michio shows a sincere interest in buying the company and in going to Ohio to look at the equipment and miso–but that never happened. A year later, in Nov. 1981, Erewhon filed for Chapter 11 bankruptcy.

1980 Nov.–With the walls of the rammed earth building finished, Christian and Fred Hubbard drive to Monroeville, Ohio, where they "stuffed the entire Ohio Miso company, all the equipment and 13 tons of miso, into the back of a huge semi truck trailer which a trucking company had delivered." Each vat contains about 2,400 lb of miso. They empty all of the miso into 5-gallon buckets, then put the in-tact wooden vats into the truck, then put the 5-gallon buckets (still filled with miso) into the vats. It took 10-14 days to fill the truck. Christian and Fred drive back to South River Farm and a week later the trucking company delivers the trailer one day before a light snow storm. Christian and Fred, with help from neighbor Don Herzig and his tractor, unload the entire contents and store it in their barn–which was across the river.

1980 Dec.–Christian sends a form letter to Ohio Miso Company's former customers that begins: "Dear Friends, old and new: The Ohio Miso Company has changed ownership. As of November, 1980, the Elwell family has purchased and moved the equipment and present stock of miso to South River Farm in Conway, Massachusetts... Eventually we want to follow a full cycle by growing the grains and beans on our own farmland... We plan to have our new shop ready for the fall season of 1981..."

1981 winter (Feb/March)–Christian sells Ohio Miso out of the barn, loading it onto a horse-drawn sled, pulling it over a logging road through the woods (the river was impassable) to the road and then on to a UPS terminal in Springfield. One of their best customers is Western Mass. Co-ops–which later became Northeast Cooperatives.

1981 June–The Elwells and partners lay the foundation of their new miso shop–1,220 square feet–and begin building a timber frame (post-and-beam) miso shop on their land. The frame is made of big, heavy timbers which are joined together with wooden pegs–no nails. This is an old English and New England method of construction. Christian had planned to construct a less expensive cinder-block building until he met master timber framer Jerry Sawma, who lives in Conway. Christian and Fred work with Jerry all that summer and fall, helping him frame the building and put the shingles on the roof. Fred and Christian take over from there, putting on the walls, etc. They had not finish by winter, so they covered it with plastic sheeting to keep out the snow.

1981 Nov. 29–Christian writes an "Historical sketch" of the South River Miso Co. on its handsome new letterhead: "There, a new shop of traditional timber-frame construction, featuring a wood-fired masonry cooking stove was completed in 1981. Production capacity is 40,000 to 120,000 pounds of miso per year. Barley miso is the standard variety offered. Others include Brown Rice, Corn, and Black Soybean miso."

1982 Jan. 1–South River Miso Co. is incorporated.

1982 Feb. to spring–Christian was now thinking of running the miso company with two other families on a community basis; they would contribute money, labor, and community/social spirit. Christian's brother, Will, had left in the summer of 1981. Christian invites the other families to come and live on the land and work in the miso company. One couple, from the macrobiotic community in Boston, was Anpetu Oihankeshni and Hannah Bond; they were not married when they arrived but they had a wedding ceremony on the land. The other couple was Don and Marcia Wheeler, who were from families that had lived nearby in the Pioneer Valley for generations. These two couples invest $30,000 to finish the miso shop and get the company running.

1982 spring–Christian and Fred finish building the miso shop, assisted by Don Wheeler and Anpetu. The total cost of the building was about $80,000, including Jerry's labor expenses but not including Christian's and Fred's time. Jim

© Copyright Soyinfo Center 2014

Sadler later drew a nice illustration of the 5-part building from a photograph. The main center part, which has two stories, is where the miso is made; a living space is in the loft upstairs. The koji room protrudes out toward the front. To the right of the main part is the entryway to the shop where the shipping is now done. To the right of the entryway is a 36-foot-long storage building, where the miso vats are stored. Each vat, made of recycled virgin cypress, holds about 7,500 lb of miso. To the left of the main building, under a roof that slopes downward, is more of the miso shop plus storage for smaller miso barrels. To the far left is a firewood storage shed.

1982 Oct. 25–With the miso shop just finished Christian, Gaella, Don Wheeler, and Thom Leonard hold a dedication ceremony then begin to make the first miso (actually barley koji for a 2-year barley miso) at South River Miso Co.–according to the "Production Log" which still exists. Thom arrived (from Baldwin Hill Bakery, which is a 45-minute drive away in Phillipston, Mass.) about a week before this day and stayed for about 3 weeks afterward. Part of the agreement in the purchase of Ohio Miso was that Thom would come to Conway to help them get started and teach them as much as he could about miso-making. It was a friendly and informal arrangement. Christian had to keep telling Thom to wait because it took longer than expected to finish building the miso shop; he was very patient and understanding. The organic barley and soybeans used in the first batches of miso were from Living Farms in Tracy, Minnesota. From 1980-82 Thom had taught miso-making classes in Boston. Earlier in 1982 Christian attended one of Thom's classes at Baldwin Hill Bakery. As of December 1999 Thom has a very nice bakery in Salinas, Kansas, and he is very happy–part of a nice community. The first miso at South River is put into recycled oak whiskey barrels, purchased from Ohio Miso Co. Muramoto also used such barrels and Thom may have gotten the idea from him. The barrels had been burned on the inside so the charcoal would improve the flavor of the whiskey as it aged; the charcoal had to be scraped off before the barrels could be used for miso. Small batches went into the smaller whiskey barrels; larger batches went into cypress wood vats. Christian recalled in 1999: "Thom told me during the first week, as we were washing and soaking soybeans, 'Miso making is about creating order. That is the main thing to keep in mind here in the shop: to create and maintain order.' This was his way, in the spirit of Zen food craft, of breaking through the glamour and mystique of miso making."

Gradually the men used the two horses and cart to move the miso barrels and vats from the barn, across the river, and into the new storage building that was part of the miso shop. By that time Christian had sold most of the miso made in Ohio.

1982 winter–Anpetu and Hannah live above the shop that winter; the Elwells live across the river–before there was a bridge over it. Christian would walk through the ice cold water early each morning (until the river froze) to get the fires started each morning. Continued. Address: Founder and Owner, South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

10705. Elwell, Christian. 1999. Chronology of South River Miso Co. Part III. 1983-1999 (Interview). *SoyaScan Notes.* Dec. 16. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: 1983 spring–The miso company sends out a very interesting and poetic hand-lettered, dated leaflet and price list. The front panel, with a logo of three waves in a circle, announces the availability of three kinds of miso: Mellow Barley (6 weeks), Mellow Brown Rice (6 weeks), and Mellow Flint Corn (8 weeks). "South River Farm is the coming together of three families seeking common livelihood." A pie chart shows the company's costs.

1983 summer–The first in-depth story about the miso company, with five good photos, appears in *Soyfoods* magazine. The article states that the company (whose name is incorrectly given as "South River Farm Miso Company") is owned by three families, and the names of the six owners are given. Actually, however, Christian and Gaella were (and have always been) the company's only legal owners.

1983 fall–The community idea fails after one miso season (1982-83). The Wheelers leave first. Anpetu and Hannah leave in the fall of 1983; Anpetu writes a sad poem about falling leaves as they part. It takes the Elwells 10 years to repay the money the other two families had invested.

1983 Sept.–Christian goes to Charlie Kendall, who lives nearby, and asks if he can supply Charlie with rice koji for the amazake he makes. Charlie had been buying all his rice koji, dried and in bulk, from Miyako Oriental Foods in California. Christian offered to match Miyako's price and make the koji from organic rice. Christian was already making rice koji for his red miso and he needed more customers. After making many trial batches and building a koji dryer, Christian begins supplying Charlie with 900 pounds (three 300-lb batches) of koji at a time. Also that second miso season (1983-84) the first apprentice, Sonia Schloeman, works at the miso shop; Christian needs help and Sonia needs a place to stay. He pays her a salary and she stays in the loft above the shop. After Sonia leaves, the Elwells move into the loft above the shop. The second intern was Dan Hornack, who came all the way from Aspen, Colorado. From then on the arrangement was room (in the cabins across the river) and board plus a small stipend in exchange for the apprenticeship. Other apprentices who worked in the shop over the years have included (in chronological order) Rich Sweitzer and Susan Gribbon (later to marry), Michelle Gemme (Montreal, Canada), Don Phillips, Michael Dessen, Tim Langdon, John and Mary Granger, Caroline Wurts, Maggie Smith, Andrew Goodman,

© Copyright Soyinfo Center 2014

Tolly Gibbons (New Zealand), Anne Walsh Sullivan, Bobby (age 18 and white, from South Africa), Sean LePoutre, Maria Low, Kamil Bersky (a medical doctor from the Czech Republic), and Stephen Jannetta. Stephen worked at the shop for two seasons (Oct. 1990 to May 1991, and Sept. 1993 to May 1994), then helped others (Soyalab, and La Fonte della Vita) to start commercial miso production in Italy. His brother, Phil Jannetta, worked for Mitoku in Tokyo. Most apprentices stayed for one full miso season. Gaella cooked for everyone.

1983 Oct. 17–Isaiah, the Elwell's second child is born.

1983 Nov.–The company runs its first ad (1/3 page vertical) in *East West Journal*. The theme: "Wisely given miso gives its own wisdom." An illustration at the bottom shows the miso shop buildings. A logo at the top shows three waves in a circle.

1985–Starting this year, a group of students from the Kushi Institute at Becket, Massachusetts (which is about 1½ hours drive away) comes to visit to miso shop–even though Christian has had no personal connection with the macrobiotic movement for many years. Over the years, the number of groups has increased to 3-4 a year. In the early years, Christian would give a slide show and talk on miso-making. Now they usually come on a weekend and take a tour of the shop when it is not in production, and Christian will share with them what he has learned about miso.

1989-90–The Elwells, with the help of Fred Hubbard, design and begin building a timber-frame home located behind the miso shop–about 12 feet away from it. For the previous 5 years they had lived in the loft above the miso shop. Fred eventually built his own home in Conway, where he now resides as a carpenter and builder.

1991-92–The Elwells stop taking apprentices and start with paid workers. There was a difficult period of transition as Christian began to tire of working in the shop. Workers include Larry Glanz, a former student who worked with Muramoto-sensei and Stephen Jannetta.

1995 Aug.–Christian seriously considers selling his miso company to Barry Evans, owner of American Miso Co. and Great Eastern Sun in North Carolina. He had taken training to become a Waldorf School teacher. But this would require the Elwells to give up their land, and although it was quite isolated, they did not want to leave it.

1995 fall–Yukio Doyama begins to work at the miso company, a happy, hard-working man who enjoys making miso. At the same time, Steve Freiman comes to live above the miso shop and work with Yukio. Christian was now freed up for an extended time from day to day production and packing work; he began taking a more supervisory role and handled most of the office work and shipping. Andy Mathey followed in Steve Freiman's position, working with Yukio.

1996-97–This fiscal year the miso business is computerized. In late 1997 Christian decides not to sell the miso company, and to invest much more energy, time and resources in it–"to make it come alive again" after a period of hibernation. "When we clear up things inwardly, this is reflected by outward things." Quickly, all sorts of good new things begin to happen.

1998 Feb.–The first issue of *River Currents: News from South River Miso Company* is published. This attractive newsletter contains a catalog and order form, plus news about miso and the company.

1997-98 fall and winter–Three young people come to live at South River Farm to cultivate the land–and to work on forming a community. Arthur Lerner comes first, then his partner, Emily Kellert, and soon after, David Fisher. That winter these three also work part time in the miso shop. Robin Cole, a friend of many years, arrives in early spring of 1998 and creates the position of office manager/ administrative assistant.

June 1998–The Elwells and coworkers finalize a mission statement for the miso company after three months of weekly meetings. It is published in the winter (Dec.) 1998 issue of *River Currents*.

1999 Sept.–The apprenticeship program is reinstated; Maria Rossi is the first to fill the position.

1999 Dec. 16–Christian says that the miso company, about to enter its 21st year or adulthood, is taking on a life of its own. Gaella was never a regular miso maker in the shop. In the early years she was a full-time mother and cooked hundreds of meals for builders and then miso apprentices. Her role has always been one of moral support. This year she does work in the shop two afternoons a week on the packing crew. The many new people are contributing to the growth of the miso company as a "learning organization" (see *Fifth Discipline,* by Peter Senge).

South River Farm is now moving in the direction of being home to self-sustaining farmstead–"as the place in which South River Miso is planted." David Fisher has built a pole barn, gotten draft horses, pays a modest lease, and sells his organic produce. Address: Founder and Owner, South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

10706. Yoshihara, Lulu. 1999. Re: Update on Shin-Mei-Do Miso Company. Letter to William Shurtleff at Soyfoods Center, Dec. 17. 1 p. Handwritten, with signature.

• ***Summary:*** Last May, Lulu and Yoshi went to visit their miso mentors at Maruman Miso Company in Iida City, Nagano prefecture, Japan. Their factory was completely rebuilt. They also have a very attractive booklet describing research on the health benefits of miso–all in Japanese. Lulu is now in her third year of studies at the University of Victoria, working towards a degree in Pacific and Asian studies, with a concentration in Japanese. Their eldest son, Hikari, is at the University of California at San Francisco doing a PhD in molecular biology.

Yoshi continues to make miso the way he always has,

© Copyright Soyinfo Center 2014

slow and steady. Gradually Shin-Mei-Do has more Japanese customers seeking out their miso, but the health food stores are their mainstay. The company's new website is Shinmeidomiso.com.

Their friend Jerry Lewycky is "getting into miso in a big way. He should be very successful. Sincerely, Susan Marie (aka Lulu) Yoshihara."

Talk with Yasuo (nickname "Yoshi") Yoshihara. 2000. Jan. 13. Lulu's maiden name is Susan Marie Pritt. Jerry Lewycky (pronounced le-WIK-ee) used to run a wholesale company in Toronto that used to distribute Yasuo's miso. He sold his company, studied miso making with Yasuo for about a week, then started to make miso last summer in Claremont (near Toronto), Ontario. He wants to run a small company that makes miso in the traditional way. Yasuo does not consider Jerry a competitor. Address: Shin-Mei-Do Miso Co., 3906 Wren Rd., Denman Island, BC, Canada, V0R 1T0. Phone: 250-335-0253.

10707. Skiff, James. 1999. New Japanese law concerning labeling of foods made with genetically engineered ingredients (Interview). *SoyaScan Notes.* Dec. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim is aware of this Japanese law, which was passed in Oct. 1999 but does not take effect until 1 April 2001. Jim Echle, head of the American Soybean Association office in Tokyo, told Jim about the law; Echle is extremely receptive to the needs of his Japanese customers, such as tofu makers. ASA is also getting more involved with issues involving identity preserved (IP) soybeans; they are organizing an IP conference on Jan. 17 in St. Louis, Missouri.

Skiff then faxes Shurtleff a provisional translation of the labeling guidelines, in the form of a 1-page table. The translation was done by ASA-Tokyo and sent to Skiff by Jim Echle. There are three columns: (1) Classification of food: A. Not equivalent to conventional foods with regard to composition, nutrients, or intended use. B. Equivalent to conventional foods, but modified DNA or protein produced therefrom remains after the manufacturing process. C. Equivalent to conventional foods, but modified DNA or protein produced therefrom is removed or decomposed and no longer exists in the in the final food. (2) Examples of the three types of foods: A. High oleic acid soybean oil. B. Tofu and tofu products, soybean sprouts, natto, soymilk, miso, soybean flour, roasted soybeans, corn, popcorn, potatoes, etc. C. Soy sauce, soybean oil, high fructose corn syrup. (3) Method of labeling: "Soybean (genetically modified),..." Address: US Soy, 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

10708. *ASA Today* (*St. Louis, Missouri*). 1999. ASA supports growers' penchant for biotechnology. 6(2):2. Dec.
• ***Summary:*** Marc Curtis, president of the American Soybean Assoc., presented to the U.S. Senate Agriculture Committee a list of suggestions of what the federal government can do to "strengthen the commercial environment for biotechnology [genetically engineered] crops and products." U.S. soybean growers have lost sales in Europe this year.

"In Japan, a labeling law approved this year could affect up to 700,000 metric tons of soybeans shipped in bulk to the tofu market." Curtis believes it is "good news" that Japanese buyers are lining up Identity Preserved (IP) contracts with U.S. farmers.

Six suggestions are given. A video of Curtis' testimony is available at www.oilseeds.org.asa.video/.

Note: See interview with Jim Skiff, president of US Soy. Dec. 22.

10709. Fisher, Kate. 1999. Varieties yield big business: Food-grade soybeans fuel new enterprises. *Soybean Digest.* Dec. p. 16-17.
• ***Summary:*** About soybean breeder Jerry Lorenzen of Oskaloosa, Iowa. He started researching and breeding food-grade soybeans after he graduated from Iowa State University fifteen years ago.

Earlier this year Lorenzen, now president of FTE Genetics, joined with growers and processors in several new projects, which include a processing plant to make fine soy powder (FSP). FTE is looking for about 100,000 acres of soybeans, according to John Pape, director of specialty operations.

Lorenzen and FTE partnered with Japanese businessman Zentaro Iwamoto and a small group of investors to create a 56-acre industrial park near Oskaloosa named the World Food Park. It will be home to a $4 million state-of-the art soybean conditioning and processing facility named World Food Processing. Two separate facilities will take up about 23 acres of the site.

Some of the beans from the WFP conditioning facility will be made into tofu by Midwest Harvest at Grinnell, Iowa. The tofu will be used in Bratos, a tofu-pork bratwurst developed and marketed by FTE Genetics and Midland Genetics Group (Ottawa, Kansas). Bratos, which are said to be healthier than regular bratwurst, "will be served in 400 schools in Iowa."

Midland officials say that Bratos have some big advantages over regular bratwurst. "They have 50% less fat, 35% fewer calories, 24% less sodium, 17% more protein, and no MSG. And they're fully cooked.

"Bratos are also available in some of the larger chain grocery stores–primarily in Iowa for now."

Talk with soybean industry insider. 1999. Dec. 13. This looks to him like a scam. FTE says they can make a 1,000 mesh soy flour which is impossible. There is no way to sell soy flour from 100,000 acres of soybeans. FTE seems to have gotten some money from Iowa Economic Development.

10710. Key, T.J.; Sharp, G.B.; Appleby, P.N.; Beral, V.; Goodman, M.T.; Soda, M.; Mabuchi, K. 1999. Soya foods and breast cancer risk: a prospective study in Hiroshima and Nagasaki, Japan. *British J. of Cancer* 81(7):1248-56. Dec. [35 ref]

• ***Summary:*** The association between soya foods and breast cancer risk was investigated in a prospective study of 34,759 women in Hiroshima and Nagasaki, Japan. Women completed dietary questionnaires in 1969-1970 and/or in 1979-1981 and were followed for incident breast cancer until 1993. For miso soup, relative risks were 1.03 (0.81-1.31) for consumption two to four times per week and 0.87 (0.68-1.12) for consumption five or more times per week, relative to consumption once a week or less. Thus, women who consumed miso soup five or more times a week were 13% less likely to get breast cancer than those who consumed it once a week or less. The reason for this protective effect is not known. Address: 1. Imperial Cancer Research Fund Cancer Epidemiology Unit, Gibson Building, Radcliffe Informary, Oxford, OX2 6HE, UK.

10711. *River Currents: News from South River Miso Company* (*Conway, Massachusetts*)**.** 1999. Meet Yukio Doyama. Winter. p. 2. Dec.

• ***Summary:*** Yukio was born in Tokyo, Japan, in 1949. This fall marks his fifth consecutive season as a miso maker at South River. "This kind and energetic man has brought a great deal of stability and continuity to our company. If you are grateful for its existence, you can be sure he has a lot to do with it." A photo shows Yukio. A sidebar shows a small photo of Maria Rossi, who is now an apprentice at the company.

Other photos in this issue show: (1) The miso shop and the Elwell's house in the winter, decked with snow at evening. (2) Six steps in the miso-making process. (4) Six jars of different types of miso.

10712. *SoyaScan Notes.* 1999. Major soy-related company acquisitions and mergers worldwide 1990-1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1990 Jan.–Worthington Foods acquires La Loma Foods of Riverside, California (formerly Loma Linda Foods, owned by the Seventh-day Adventist Church).

1990 (early)–Daniel Gevaert purchases the Lima Andiran site at Andiran (near Mezin) in southern France from Lima Foods–but not the Lima trademark. In June 1990 Daniel and his wife, Valerie, established Danival.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy soymilk) acquires Nasoya Foods of Leominster, Massachusetts.

1990 Dec. 21–The Haldane Foods Group (a subsidiary of British Arkady Ltd., which is in turn owned by ADM) acquires Unisoy Milk 'n' By-Products Ltd. of Cheshire, England.

1991 Jan. 1–The Haldane Foods Group acquires Granose Foods Ltd. of Watford, Hertfordshire, England (formerly owned by the Seventh-day Adventist Church).

1991 Jan. 28–Tetra Pak International acquires Alfa-Laval AB.

1991 April–Huegli Naehrmittel A.G. acquires Soyastern Naturkost GmbH / Dorstener Tofu Produktions GmbH.

1991 Dec.–Specialty Food Ingredients (SFI) Europe BV acquires Solnuts BV (Netherlands) and Solnuts Inc. (Hudson, Iowa).

1992 Oct.–Central Soya Co. acquires the Protein Division of Aarhus Oliefabrik in Denmark.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California, for an estimated $4-$5 million. Vitasoy is now in the tofu business.

1993 June–21st Century Foods acquires Farm Foods from Barricini Foods.

1993–House Foods of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is named House Foods American Corporation.

1993 July–Nutrition et Santé (part of the Sandoz Group) acquires Société Soy of Saint-Chamond, France. The latter company was renamed Nutrition et Soja, and on 15 Oct. 1994 it moved into a new factory at Revel (near Toulouse), France.

1993 (mid)–B & K Holdings of Switzerland acquires Sojinal of Issenheim, France.

1993?–Kineret (pronounced kuh-NAIR-et) Acquisition Group acquires Farm Foods from 21st Century Foods, then in Nov. 1993 the Hain Food Group acquires Kineret plus some assets of Barricini Foods Inc.

1996 April 22–Alpro (Belgium) purchases Sojinal (France).

1995 April 21–Irene and Len Stuttman buy back control of their company, INARI Ltd. (dba. Sycamore Creek) from J. Charles Follett (former CEO) and Peter L. Pairitz (accountant).

1995 April–Quest International, a unit of Unilever, acquires A.E. Staley's Gunther Products Division.

1997 Feb. 3–Monsanto purchases Asgrow Seed Co. from Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM).

1997 Aug. 24–DuPont signs a letter of intent to acquire Protein Technologies International, a wholly-owned subsidiary of Ralston Purina Co.

1997 Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc., makers of soymilk. Westbrae's new name becomes Hain Food Group–Westbrae. 1997 Dec. 3–DuPont finalizes its purchase of Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates).

1998 Oct. 16–Worthington Foods purchases the Harvest

© Copyright Soyinfo Center 2014

Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

1999 Jan. 4–W.G. Thompson & Sons Ltd. of Blenheim, Ontario, Canada, purchases Sycamore Creek Co., a maker of soynuts and soynut butter (located in Mason, Michigan).

1999 Oct. 4–The Kellogg Co. (famous maker of breakfast cereals, Battle Creek, Michigan) buys Worthington Foods Inc., America's leading maker of meat alternatives.

10713. Sumi, Hiroyuki; Ohosugi, Tadanori. 1999. [Antibacterial component dipicolinic acid measured in natto and natto bacilli]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 73(12):1289-91. Dec. [15 ref. Jap; eng]

• ***Summary:*** "In commercially obtained natto and experimentally-prepared natto preparations, relatively high concentrations of dipicolinic acid, 20.55 ± 13.67 mg/100g natto (0.006-0.048%, wet weight) were detected, using a simple method combined with ion-exchange column and colorimetric assay procedures. These values were less than that of the previous data (0.06-0.20%, wet weight) reported 60 years ago. Dipicolinic acid was thought to be an intracellular component of natto bacilli and could be extracted in the water-soluble fraction by heat-treatment of the sample for 30 min at 120ºC. Furthermore, the partially purified material from natto bacilli caused very strong inhibition of the growth of sake yeasts (Kyokai 7 and Kyokai 9 mutant)" (from journal@rchive).

Note: The title of this journal is romanized (on p. 1289) as *Nippon Nogeikagaku Kaishi*. Address: Dep. of Physiological Chemistry, Kurashiki University of Science and the Arts, 2640 Tsurajima-cho, Kurashiki, Okayama prefecture 712-8505, Japan.

10714. Nikkan Keizai Shinbunsha Co. Ltd. (Nikkan Keizai Newspaper Co. Ltd.). 1999. [Output of natto]. *Monthly Statist. Beverages Foods* p. 40-45. [Jap]*
Address: Japan.

10715. Wolff, David. 1999. To the Harbin Station: The liberal alternative to Russian Manchuria, 1898-1914. Stanford, California: Stanford University Press. 276 p. Foreword by Nicholas V. Riasanovsky. Illust. Index. *

• ***Summary:*** This is the author's PhD thesis transformed into a book. From the publisher: "In 1898, near the projected intersection of the Chinese Eastern Railroad (the last leg of the Trans-Siberian) and China's Sungari River, Russian engineers founded the city of Harbin. Between the survey of the site and the profound dislocations of the 1917 revolution, Harbin grew into a bustling multiethnic urban center with over 100,000 inhabitants. In this area of great natural wealth, Russian, Chinese, Japanese, Korean, and American ambitions competed and converged, and sometimes precipitated vicious hostilities.

"Drawing on the archives, both central and local, of seven countries, this history of Harbin presents multiple perspectives on Imperial Russia's only colony. The Russian authorities at Harbin and their superiors in St. Petersburg intentionally created an urban environment that was tolerant not only toward their Chinese host, but also toward different kinds of 'Russians.' For example, in no other city of the Russian Empire were Jews and Poles, who were numerous in Harbin, encouraged to participate in municipal government. The book reveals how this liberal Russian policy changed the face and fate of Harbin."

"As the history of Harbin unfolds, the narrative covers a wide range of historiographic concerns from several national histories. These include: the role of the Russian finance minister Witte, the building of the Trans-Siberian Railroad, the origins of Stolypin's reforms, the development of Siberia and the Russian Far East, the 1905 Revolution, the use of ethnicity as a tool of empire, civil-military conflict, strategic area studies, Chinese nationalism, the Japanese decision for war against the Russians, Korean nationalism in exile, and the rise of the soybean as an international commodity. In all these concerns, Harbin was a vibrant source of creative, unorthodox policy and turbulent economic and political claims."

10716. Balough, Linda; Bartley, Betty. 1999. A pictorial history of Hendricks County, Indiana. Virginia Beach, Virginia: The Donning Co. 192 p. Illust. Index. 28 cm.

• ***Summary:*** Chapter 8, titled "Agriculture: Crops" contains a description (p. 132) of how Adrian A. Parsons was the first to grow soybeans in Hendricks County in 1886. He imported "soja" seed from Japan to grow on his farm as a feed for livestock. By 1900, Parsons and his sons were growing hundreds of acres of soybeans. A black-and-white photo shows Adrian Parsons with his son, Chet (born 1887), a veteran of World War I, in his uniform, just after he returned from the war.

Note: The first author's surname is pronounced BAY-low. Betty Bartley is the Hendricks County historian. The information in this entry is based on farm newspaper articles from 1930 and 1931, and the family history contributed by Lee Parsons to the 1976 Hendricks County history. Address: 2. Danville, Hendricks Co., Indiana.

10717. Bashô, Matsuo. 1999. The essential Bashô. Translated from the Japanese by Sam Hamill. Boston, Massachusetts, and London: Shambhala. xxiii + 184 p. See p. 94. Maps. 24 cm.

• ***Summary:*** The poem (in Romanization) reads as follows (p. 94):

"Niawashi ya.

© Copyright Soyinfo Center 2014

"Mamenoko meshi ni.

"Sakura gari."

Hamill's translation: "It's altogether / Fitting–bean-floured rice balls / while blossom hunting.

Note: "Mamenoko" is the early Japanese word for *kinako,* which is roasted whole soy flour, that is–a flour or powder made by grinding whole roasted soybeans.

10718. Bladholm, Linda. 1999. The Asian grocery store demystified: A food lover's guide to all the best ingredients. Los Angeles, California: Renaissance Books. 234 p. Foreword by Jonathan Eismann. Illust. Index. 23 x 13 cm. Series: A Take it With You Guide.

• ***Summary:*** An original, well-researched and well-written book–though some of the terminology (such as "beancurd") is outdated. Soyfood products include: Beancurd noodles (p. 38). Kinako (p. 47. "A Japanese soybean flour, that is a light tan powder made by roasting and grinding soybeans. This flour is mixed with sugar and used to coat mochi (pounded rice cakes), ohagi (rice balls), and wagashi (a type of confection [Japanese confections]). Look for the Shirakiku brand and Assi roasted soybean flour, both in 1-pound bags"). Soy sauce, mushroom soy sauce, kecap manis (p. 53). Hoisin sauce (p. 54).

Chapter 10, titled "Soybean products" (p. 93-99) includes: Black bean sauce, dried soybeans, tempeh, beancurd (pressed beancurd, deep-fried beancurd, savory grilled beancurd {yaki-tofu}, freeze-dried beancurd [sic] {koyadofu}, bean curd sheets {fu pei, yuba, fu jook; the latter are "rolled-up, long, rumpled, cream-colored sticks of bean curd skin, bent in two"}), fermented beans (preserved black beans {fermented black beans, tau see}, bean sauce, toen-jang, chili/hot bean sauce, fermented beancurd), okara, edamame, soybean sprouts, soy milk.

Note: This is the earliest English-language document seen (March 2009) that uses the word "toen-jang" (or "toen jang") to refer to Korean-style soybean jang (miso).

Concerning preserved black beans: "Also called salted or fermented black beans or 'tau see,' this is made by steaming small black soybeans, then fermenting them with salt and spices. Used in a variety of dishes to add a pleasant rich aroma and salty taste... Crush or mash beans slightly to release more flavor or mix with garlic, fresh ginger, or chilies. Available in small glass jars, cans, and plastic bags. They should feel soft and not be dried out... Look for Pearl River Bridge brand labeled 'Yang Jiang Preserved Beans' in a 1-pound yellow canister, and Koon Chun Sauce Factory, Double Parrot, and Zu Miao Trademark brands all in 8-ounce bags." Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "tau see" to refer to Chinese-style fermented black soybeans (preserved black beans).

Concerning bean sauce: "Varieties of this Asian staple include yellow bean sauce, brown bean sauce, bean paste (tau jeong), or sweet bean condiment. All are made from yellow or black soybeans, fermented with salt and in the sweet Northern Chinese type, with sugar-sweetened crushed yellow [soy] beans. Two forms are found: whole beans in a thick sauce and bean paste, which is mashed, ground or pureed beans. The whole bean type has a rounder flavor and adds texture, while the pastes are very salty and should be used sparingly... The yellow bean paste is tau cheo... Sold in glass jars and cans. Look for Koon Chun Sauce Factory, Kon Yick Wah Kee bean sauce, Amoy, or Yeo's.

Chapter 18, titled "Japanese food products" (p. 168-81) includes: Tsukemono (pickled in miso), miso paste, shiromiso, akamiso, mamemiso, natto, miso soup, noodle dipping sauce base (memmi), tamari sauce, teriyaki sauce, tonkatsu sauce.

Interesting non-soy products include: Sesame paste (p. 57). Satay sauce (with peanuts), gado-gado-dressing (p. 58). Peanut oil (p. 64). Sesame oil (p. 65). Amaranth (vegetable, p. 72). Winged beans (p. 76). Pickled wheat gluten (p. 108). Sesame seeds, peanuts, roasted peanuts (p. 118). Red/azuki beans, agar-agar (p. 121). Wheat gluten (p. 127). Sesame candy, peanut roll (p. 136). Sesame seed and peanut cookies (p. 137). Sweet red bean paste (azuki *an,* p. 139). Coix seed (Job's tears, p. 165). Japanese seaweed and kelp (p. 169-70). Umeboshi (p. 171). Fu (dried wheat gluten cakes), mochi (p. 177).

Note: Although angkak / ang-kak is not mentioned by name, under "red yeast rice" part of the description is "Did you ever admire those glowing red ducks and spare ribs in Chinese restaurants? The red color comes from powdered red yeast rice which is an ingredient in the marinade and barbecue sauce." Since this product is made with a mold (*Monascus purpureus*) and not a yeast, we prefer the term "red rice koji" in English. Address: Writer, designer, illustrator and photographer, Miami Beach, Florida.

10719. Davidson, Alan. 1999. The Oxford companion to food. New York, NY and Oxford, England: Oxford University Press. xviii + 892 p. Illust. by Soun Vannithone. Index. 29 cm. [1500+* ref]

• ***Summary:*** The 2,650 alphabetical entries in this excellent encyclopedia and cornucopia represent 20 years of Davidson's work. The 175 illustrations by Laotian artist Soun Vannithone are superb. There are 39 longer entries about staple foods such as rice, noodles, and apples. A comprehensive bibliography provides access to further information. The book does not contain recipes.

Soy-related entries include: Bean sprouts (p. 64). Black beans, fermented (*chi,* p. 79). Kecap (Indonesian soy sauce, made "basically from soya beans and palm sugar only." "The word 'kecap' has passed into the English language as catchup or catsup and then as Ketchup, which now means something quite different." p. 429). Ketchup ("probably via the Malay word *kechap,* now spelled *kecap,* which means soy sauce.

© Copyright Soyinfo Center 2014

The word was brought back to Europe by Dutch traders who also brought the oriental sauce itself. The sauce has changed far more than has the word, although the name has appeared in a large number of variations such as catchup and catsup."

Tomato ketchup is now the best known and widely used–in fact almost the only ketchup left. Whereas tomato ketchup contains much sugar and vinegar, mushroom ketchup contains neither, and is basically a salted mushroom extract with a liquid, transparent consistency. The British food historian, C. Anne Wilson (1973), believes that mushroom ketchup was the first kind of ketchup in Britain; she argues that people used to pickle mushrooms, intending to use the mushrooms, but then started using the pickle too, and finally began using the pickle by itself.

"Oysters, mussels, walnuts, and many other ingredients have been used to make ketchup, and cold be blended with spices, garlic or onions, wines and spirits to vary the flavour" p. 430-31). Koji (p. 435). Lecithin (p. 447). Miso (p. 509). Natto (p. 530). Soybean (p. 739). Soy milk (p. 739-40). Soy sauce (p. 740). Tempe (or tempeh, p. 788). Tofu (p. 798-99), including plain tofu (doufu in Chinese), pressed tofu (*doufu-kan,* sic, *doufu-gan*)*, wu-hsiang kan,* cotton tofu or momendofu, kinugoshi or silk tofu, sui-doufu, freeze-dried tofu [dried frozen tofu], smoked tofu. Cooked forms of tofu: Deep-fried tofu, doufu pok, cha-dofu, abura agé or deep-fried thin slices which can be opened to make Inari-zushi, ganmodoki or deep-fried tofu balls, yaki-dofu or tofu which has been grilled. Fermented tofu: The generic term is doufu-ru. The most popular type is white doufu-ru, and there is red doufu-ru, tsao-doufu, ch'ou doufu [chou doufu], chiang doufu. In the Philippines fermented tofu is called tausi [sic, tahuri, tahuli; tausi is fermented black soybeans]. Miscellaneous: A specialty of Japan is *umesutsuke,* "tofu pickled in plum vinegar with a purple exterior." Note: As of Oct. 2011 not one hit / result for umesutsuke can be found on Google. Nor have we ever heard of such a Japanese tofu product.

Dofu nao (literally "bean brain") or smooth curds, yuba or "bean curd skin" or "tofu skin," okara or "presscake" (pulped skins of soya beans) (p. 798-99). Yuba (p. 860-61).

Also discusses: Alfalfa (p. 10). Almond (p. 12-13, incl. "almond milk"). Amaranth (p. 13). American cookbooks, history (p. 15-17). Azuki beans (p. 44-45). Barley, barley breads, and barley sugar (p. 58-60). Beef–BSE (mad cow disease, p. 68). Chia (p. 166). Cowpea (p. 230-31). Chufa (p. 185). English cookery books, history (p. 276-80). Five grains of China (p. 305). Gluten (p. 341). Groundnuts (or peanuts, p. 356-57). Hemp (p. 377-78). Hydrogenation (p. 391). Japanese culinary terms (p. 415-17). Kudzu (p. 437). Linseed (p. 454-55). Lupin (p. 463). Margarine (p. 478-79). Mung bean (p. 518). Nori (p. 534). Noodles of China (p. 537, incl. "Gan si {soya bean noodles}" and "Fen si {also fen-szu} {mung bean vermicelli})." Oncom (p. 553-54). Quark (p. 644). Quinoa (p. 645). Seaweeds (incl. hijiki, kombu/konbu, nori, wakame, etc., p. 712). Sesame (p. 713). Shortening (p. 721-22). Sprouts (no listing). Tahini (p. 779). Toast (p. 797, incl. Melba toast). Ume and umeboshi (p. 817). Winged bean (p. 849).

The entry for "Fermentation" states that the two main reasons for subjecting a food to fermentation are: (1) To "convert it from a form that will not keep, such a milk, to one which will, such as cheese." (2) To "make foods which are indigestible in their original state, such as wheat or soya beans, digestible by turning them into products such as bread or tempe." Other benefits include improvements in flavour. Many do not realize that fermentation is part of the process of making coffee, cocoa, vanilla, and many kinds of sausage. A brief biography and nice portrait photo of Alan Davidson, a man of extraordinary knowledge in the world of food, appear on the rear dust jacket.

Note: The paperback edition of this book (2002) is titled *The Penguin companion to food.* Address: World's End, Chelsea, London, England.

10720. Hanamaruki Foods Inc. 1999. International cooking with miso (Leaflet). Nagano Prefecture, Japan. 1 p. Front and back. 30 cm. [Jap]

• ***Summary:*** The front of this color brochure is in English and the back is in Japanese. On each side are four recipes: Miso soup with nameko mushrooms and tofu bean curd. Tonjiru. Eggplant and pork fried in miso. Miso-flavored bouillabaisse. Address: Hirade 1560, Tatsuno-cho, Kamiina-gun, Nagano-ken 399-0422 Japan. Phone: 0266-41-1321.

10721. House Foods America Corp. 1999. Hinoichi Tofu: America's favorite tofu recipes. 4 vols. (Recipe cards). Garden Grove, California. 3 panels each side. Each panel: 7.6 x 12.6 cm. [Eng]

• ***Summary:*** These dated, glossy color cards each contain 3 recipes. The front three panels of each set are approximately the same: (1) Cover: "Hinoichi Tofu: California's number one tofu." (2) Our family of tofu varieties (7 SKUs): Organic soft. Organic regular. Organic firm. Organic extra firm. Soft. Regular. Firm. Extra firm. Tofu cutlets. (3) Hinoichi is California's number one tofu.

The recipes in Vol. 3 are: Soy-sational guacamole. Spicy tofu burritos. Peach sunshine smoothie (nondairy, with Hinoichi Soft Tofu).

The recipes in Vol. 4 are: Picante bean dip. Spinach fettucine alfredo. Tropical fruit pudding.

To the left of each recipe is a color photo of the ready-to-eat dish and nutritional information per serving. Address: 7351 Orangewood Ave., Garden Grove, CA 92841.

10722. Jue, Joyce. 1999. Asian flavors. Alexandria, Virginia: Time-Life Books; Menlo Park, California: Oxmoor House. 111 p. Illust. (photos by Richard Eskite, some color). 26 x 23 cm. Series: Williams-Sonoma Lifestyles.

© Copyright Soyinfo Center 2014

• ***Summary:*** An attractive, glossy color book with a full-page color photo facing every recipe. The "Welcome," by Chuck Williams (p. 7) begins: "Not so long ago, 'Asian food' meant Chinese food, more specifically the Cantonese-style cooking many Westerners grew up enjoying when they went out to eat."

Soy related recipes: Miso soup with tofu and mushrooms (p. 27). Sizzling rice cake soup with crab (with "½ lb {225 gm} firm tofu, finely diced," p. 35). Miso-glazed sea bass (p. 97).

The Glossary (p. 108-11) includes: Bonito flakes, dried. Red bean curd (also known as fermented bean curd or fermented tofu). Rice, sticky. Sesame oil, Asian (always made from toasted sesame seeds, almost always used as a seasoning). Soy sauces ("Soy sauces from Japan tend to have milder, sweeter, less salty flavors than Chinese products"). Tofu ("Chinese bean curd tends to have a firmer consistency than the Japanese variety").

Joyce Jue, who created the recipes, was born in 1947. Address: Native of San Francisco's Chinatown, and an internationally recognized authority on Chinese and Southeast Asian Cooking.

10723. Jûyô dôko chôsa hôkokusho: Shiyokuse–1998–Misosei [Research report on consumption trends: Saltiness characteristics–1998–Essence of miso]. 1999. Tokyo: Chushô Kigyô Jigyôdan Chôsa Kokusai-bu Chôsa-ka. 277 p. 30 cm. [Jap]*
Address: Japan.

10724. Kamachi, Noriko. 1999. Culture and customs of Japan. Westport, Connecticut: Greenwood Press. xxxii + 187 p. Illust. Maps. 25 cm. Series: Culture and customs of Asia. [65+* ref]
• ***Summary:*** Chapter 6, "Cuisine," focuses on typical Japanese meals today. Most urban Japanese today have a Western-style breakfast, which can be prepared more quickly. "The traditional breakfast requires cooking rice, making miso soup, drilling dried fish, and slicing pickled vegetables." Natto (fermented soybeans) was often served with raw egg. Also popular was raw egg seasoned with soy sauce poured over a bowl of steaming hot white rice.

In chapter 9, "Holidays, festivals, and annual events" is a section about "Setsubun (Celebration of new season)" (p. 142-43). In ancient times at Japan's imperial court, rituals to commemorate passage of the four seasons were observed. During the Heian period (794-1185), these were very serious concerns for the court nobles and aristocrats. The most important ritual, celebration of the beginning of spring, had spread among the commoners by the Edo / Tokugawa period (1600-1867) and was observed nationwide. However Setsubun is not designated as a national holiday and the custom is no longer observed in most households. However it is practiced in a big way in some Buddhist temples, where many people gather to participate in the ceremonies.

On the evening of *risshun* (the first day of spring, which falls on Feb. 3 or 4), a ritual took place in ancient times in the imperial court to chase out evil spirits. Long afterward, ordinary people adopted the ritual of scattering beans inside their house while shouting "Devils out, Good fortune in!" It is fun for children to scatter soybeans while wearing homemade masks of the devil or the goddess of fortune. During the period immediately after World War II when treats were scarce, eating roasted soybeans made this ritual doubly enjoyable. Address: Prof. of History, Univ. of Michigan, Dearborn.

10725. McEwen, Freeman; Morrison, Douglas; Rennie, Clare; Tanner, Jack. 1999. 125 years of achievements: OAC–A proud tradition, an exciting future, 1874-1999. Guelph, Ontario, Canada: University of Guelph. 132 p. Illust. 22 x 28 cm.
• ***Summary:*** Contents: 1. New beginnings. 2. Administration and co-ordination. 3. Teaching. 4. Research. 5. Extension and service. Within these are 125 achievements, each covered on one page; the page number is the same as the number of the achievement. Thus, achievement no. 56 appears on p. 56. The soybean is the subject of or mentioned in five of these achievements, all within Chapter 4, "Research" (p. 56-109) as follows:

OAC 211 soybean (p. 56): This is the first achievement described under "Research." A photo shows Charles Zavitz (seated at his desk), the pioneer in bringing soybeans to Canada. Zavitz graduated in OAC's the first degree class in 1888 and was hired by the College as an assistant experimentalist in charge of field plots. In 1893, the same year he was put in charge of all field research at OAC, Zavitz obtained five soybean varieties from Dr. C. Georgeson of Kansas State Univ. In 1898, after five years of trial, he reported that Early Yellow was the highest yielder. Over the next few years Zavitz introduced approximately 100 new soybean lines from Asia, and in 1901, through the Experimental Union, soybean seed was sent to farmers for evaluation. Like most plant introductions, these soybean lines were not pure lines, but contained some "off types," so Zavitz made pure-line selections from some of these lines. Initially Zavitz selected OAC 111 from Early Yellow. Then in 1918, he made 34 selections from 10,000 plants of the introduction, Harbaro [sic, Habaro] No. 10405. The progeny of 22 of these lines were tested under uniform conditions. The line that produced the highest yields was placed in regular variety trials in 1921; it beat all other varieties in grain yield and was second in fodder production. Designated OAC 211, it became the first soybean variety registered in Canada–on 26 Aug. 1925. During the years when Zavitz was evaluating soybean varieties, he was also researching soybean management techniques. The first commercial production of soybeans in Ontario took place in 1925 in

© Copyright Soyinfo Center 2014

Essex and Kent counties. By 1932 production in the province was almost 8,000 acres; by 1940 it was 10,000 to 11,000 acres, and by 1997 it had skyrocketed to 2.3 million acres, "the largest of any crop in Ontario. Zavitz would have been proud!"

Early OAC forage varieties (p. 57). About the work of Prof. O.M. McConkey, with a portrait photo. He joined the Field Husbandry Dept. in 1923.

Soybean expansion in Ontario (p. 65): Three men were pioneers in trying to expand soybean production in Ontario. Prof. George Jones, who joined the department in 1952, believed soybean production could be greatly expanded from the 200,000 acres then being grown. Prof. Jack Tanner joined the department in 1963, and Prof. David Hume arrived in 1966. But many problems stymied their efforts. Two events changed the environment for soybean expansion. First, as the corn crop expanded, it paved the way for soybeans (see p. 69). "Second, Dr. Harvey Voldeng, soybean breeder at the Central Experimental Farm in Ottawa, released the varieties Maple Arrow and Maple Glen." "These new varieties provided the final piece of the 'production package' which included varieties with a good yield potential, improved techniques for inoculating seed and improved herbicides for selective control of weeds. Confident that the production package was complete, Prof. Hume and his cohorts moved aggressively to promote it directly to farmers through farm meetings, field demonstrations, and FactSheets and indirectly through extension personnel and industry specialists. In 1997, approximately 2.3 million acres of soybeans were planted between Windsor and the Ottawa Valley and more land was planted in soybeans than in any other cash crop." A photo shows Prof. Hume discussing soybean varieties and management practices at a growers' meeting.

Zoning for crop variety recommendations (p. 72): Discusses the Crop Heat Unit System and shows two maps where climate zones are delineated by heat units. This heat unit system, used for hybrid corn recommendations since 1964, was now applied to soybean varieties.

Improved soybean varieties (p. 73): From 1980 to 1997 Ontario's soybean acreage increased fourfold. Improved varieties were developed by the OAC Department of Crop Science. Most important, they were higher yielding, but also more resistant to lodging, to *Phytophthora* root rot and to other diseases. Prior to 1983, only 3 soybean varieties had been released from OAC. Since then 44 have been registered. This highly effective soybean breeding program was started by Prof. Wally Beversdorf, then successively led by Profs. Jack Tanner and Bruce Luzzi. The best variety to date has been OAC Bayfield, which out-yielded existing varieties by 15%. In 1998 it was grown on 400,000 acres in Ontario–the biggest soybean acreage for a soybean variety in Ontario. Other important varieties have been OAC Eric and OAC Millennium. In 1997 the soybean crop in Ontario was worth $800 million. A photo shows Wally Beversdorf inspecting soybean plants.

Accommodating to Canada's cold climate (p. 83): In the late 1960s, Prof. J.W. Tanner began to study cold tolerance in soybeans. Prof. D.J. Hume researched the physiological basis for cold tolerance exhibited by some of the soybean varieties–developed by Dr. Harvey Voldeng of Agriculture Canada, Ottawa–which had the Swedish variety Fiskeby V as a parent. The gene for chilling tolerance had come from a soybean variety from Hokkaido, Japan, in the 1940s.

An improved soybean rhizobium: 532C (p. 93): Some Rhizobium strains are more effective that others in fixing atmospheric nitrogen. In the early 1980s Prof. David Hume, Dep. of Crop Science, began to screen for more effective strains of soybean rhizobia. He obtained a number of strains from Dr. Joe Burton of the Nitragin Company in Milwaukee, Wisconsin, and by 1988 found that one strain, 532C, supported better yields (7% higher) and higher protein contents than other strains tested. It was promoted to commercial inoculant companies in North America. By 1990, all the soybean inoculants sold in Canada contained 532C. It is estimated that 532C occupies about 30% of the soybean-growing soils in Ontario and most of Quebec. Address: Univ. of Guelph, Guelph, Ontario, Canada.

10726. Miso [Miso]. 1999. Tokyo: Shibata Shoten. 109 p. Illust. (some color). 24 cm. Series: Shibata Books. [10+ ref. Jap]*
Address: Japan.

Address: Japan.

10728. Mowe, Rosalind. ed. 1999. Southeast Asian specialties: A culinary journey through Singapore, Malaysia, and Indonesia. Cologne, Germany: Culinaria Koenemann. 319 p. Illust. (color photos by Günter Beer). Index. 26 x 22 cm.
• ***Summary:*** Translated from the German. Includes headings in Chinese. This book is a feast for the eyes, printed on glossy paper with informative color photos on almost ever page. The structure and content are also creative and very interesting; it has caught the heart and spirit and nuances of the culture. On some pages, however, the type is too small to read. The name of most recipes and ingredients is given in their native language. A 2-page map of Southeast Asia appears near the front. The basic structure: Singapore (p. 12-109). Malaysia (p. 110-215). Indonesia (p. 216-301). Glossary (p. 302-04). Introduction to Chinese nutritional

© Copyright Soyinfo Center 2014

theory, by Andrea Fülling (p. 305-06): Introduction, yin and yang, the three warmers, the warming effect of foods (the five energy states are hot, warm, neutral, refreshing, and cold), the five elements. Acknowledgements. Photo credits. Index.

The contents includes: Healing herbs (p. 26-29). Soup as medicine (p. 30-33). Soybean (in Singapore, p. 40-47): Introduction (familiar forms are sprouts, soy sauce, beancurd, tempeh; new disguises are "vegetable protein," emulsifier," "lecithin," "vegetable oil" which are found in dairy products, canned fish, candies, desserts, and much more), in the West soybeans are "often grown as monocultures, with the disadvantages that this entails, such as the use of chemical fertilizers and pesticides," and genetically engineered soybeans, great nutritional value yet rarely used as whole dry soybeans, most of the harvest in SE Asia is processed into beancurd and tempeh, importance of fermentation, soy milk resembles cow's milk and is an excellent substitute, soy sauce is used throughout this cuisine. Photo of green soybean plants with green pods.

Soybean sprouts: "Black soybeans are imported from Thailand and Myanmar (Burma)." After washing, the beans are spread out in deep baskets and kept in the dark for 6 days. "Before the baskets of sprouts can be sold, the top layer if green leaves is trimmed off. They are used as feed for chickens and ducks. One basket yields 154 lb (70 kg) and the output of a medium-sized business is 60 baskets a day." Soybean "sprouts should never be eaten raw, nor should they be cooked for too long." Mung bean sprouts are better known than soy sprouts, but both can be bought fresh.

Dou ban jiang ("Salted soya bean sauce." Photo of jar and Sinsin label). Dou chi ("Black bean sauce." Photo of jar and Sinsin label). Note 1. Typically Dou chi are named "Salted black beans." Photo of five glasses showing how dry soybeans are transformed into soymilk, then curds.

Tofu: Meat from the fields (p. 42-44). The best tofu is made from special types of soybeans that are different from those that are crushed to make oil and meal. Most of the tofu in Singapore is made from soybeans imported from Canada. Describes the basic process for making commercial pressed tofu or soft tofu, with 7 photos showing the steps. Implies that making yuba is part of the process for making tofu; it "is eventually sold as dried beancurd sticks (*fu chok*).

Soy milk products: Fu pei–dried tofu skin [yuba]. Fu chok–dried tofu sticks [dried yuba sticks]. Tim chok–sweet tofu pieces [sic, sweet dried yuba / ama-yuba].

Note 2. This is the earliest English-language document seen (Feb. 2012) that uses the term "Tim chok" to refer to sweet dried yuba, or that uses the term "dried tofu sticks" to refer to dried yuba sticks.

Tofu fa–soft tofu as a dessert [tofu curds]; a little tapioca flour may be added. "Served warm or cold with a syrup flavored with almond extract." Color photo shows yellow yuba atop hot soymilk, and a woman removing a slab pressed tofu from its mold.

Tofu recipes for every taste (p. 44-45): "Tofu on its own is rather bland in taste, but this is precisely its strength, since when it is combined with different ingredients and condiments it tastes new and different every time. Recipes: Niang dou fu (Fried beancurd pockets). Xia ren dou fu (Stir-fried beancurd with jumbo shrimp). Hong shao dou fu (Braised beancurd). Sui rou zheng dou fu (Steamed soft beancurd with ground pork). Dou hua (Sweet beancurd dessert). Zha fu pi juan (fried beancurd skin [yuba] roll). Color photos show the 2nd and last recipes.

Soy sauce (p. 46-47): A naturally fermented product made with mold cultures of *Aspergillus oryzae.* Describes the process for both light and dark soy sauce; the koji is made in shallow round trays, ready after 4 days. It is "then transferred into fiberglass tanks [or earthenware jars], covered with brine, and left to ferment for 3 months," after which the 1st extraction of crude soy sauce takes place [but not through pressure]. More brine is added and a second extraction takes place 1 month later; this process is repeated for the third extraction. "At this point, the paths of the different soy sauces diverge." The saltier, light-colored soy sauce is mixed with a preservative, pasteurized, "and stored in tanks to clarify before bottling." The dark soy sauce is mixed with both a preservative and caramel coloring, is allowed to mature for an additional 4 weeks, then is pasteurized and bottled. Note 3. What happens to the 2nd and third extractions? Color photos show five steps in the process, but a traditional earthenware vat is shown instead of the fiberglass tanks. Dark soy sauce is thicker than light. Recipes: Jiang you ji (Chicken in soy sauce, with marinade). Hong shao niu nan (Braised shoulder of beef).

Oyster sauce (contains no soy). Sesame oil (p. 49, with 7 photos).

Condiments (p. 50-51): Color photos show the front and label of 15 separate jars and bottles with a substantial description under each. Those containing soy are: Hoisin sauce. Dou chi (Fermented bean dried). Dou ban jiang (Tou cheong). Fu ru (Beancurd preserved). Jang qing (light soy sauce). Hei jiang you (Dark soy sauce). Tian jiang (Sweet sauce).

Peking duck (p. 62-65; soybean paste {no Chinese name is given} and Hoisin sauce are ingredients in the sauce). One key is the crisp skin. It is served in thin Mandarin pancakes.

Suckling pig (p. 86-87): Piglets are bred in Hunan province. Slaughtered at the age of 3-4 months. After a dead piglet has been patted dry, it is brushed with soy sauce, then coated with a marinade that includes fermented red bean curd and light soy sauce. As with Peking Duck, suckling pig is prized for its crisp, tasty skin. Six photos show the skewered baby pig.

Symbolic foods (p. 98-101): One of these is Moon Cakes from the mid-autumn festival (15th day of the 8th lunar month). "Traditional fillings include sweet black bean

© Copyright Soyinfo Center 2014

or lotus paste." Is the sweet black bean filling made from soy beans?

Instant cup noodles [instant ramen] (p. 48): Note 4. Wikipedia says at Momofuku Ando: ORS [Order of the Rising Sun], (lived March 5, 1910–Jan. 5, 2007) was the Taiwanese-Japanese businessman who founded Nissin Food Products Co., Ltd. He is famed as the inventor of instant noodles and cup noodles, which he launched on 25 Aug. 1958 (at age 48) under the name Chikin Ramen–after months of trial and error experimentation to perfect his flash-frying method. On 18 Sept. 1981 he launched his most famous product, Cup Noodle.

Beansprouts (p. 154-57): With a long introduction, a description of the process, beautiful photos, and recipes: Taugeh goreng kucai (Fried beansprouts with chives). Taugeh masak kerang (Fried beansprouts with baby clams). Tahu goreng (Fried tofu with beansprouts). Bihun goreng (Fried rice noodles). Urap taugeh (Fried beansprouts with grated coconut).

Nasi tumpeng (rice cone) (p. 220). Served with sambal goreng tempe (crisp-fried marinated strips of tempeh). Gudeg (rice with green jackfruit cooked in a sweet sauce, p. 221) is served with a side dish of tahu goreng bacem (tofu cooked with spices, then fried).

Tempeh (p. 228-29), soybeans fermented with *Rhizopus oligosporus* mold. Indonesians consume more tempeh than tofu. The process is described, with 4 color photos: Recipe: Tempe goreng (fried tempeh).

Glossary (p. 302-04) includes: Fermentation. Soy sauce ("Probably the best-known Asian seasoning agent,..."). Sticky rice (also known as glutinous rice). Tahu (Indonesian; tofu). Tempeh. Tofu (beancurd, incl. hard, soft, and smoked).

Netherlands) 25:147-59. AsEaJapa [32 ref]
• ***Summary:*** Data were analyzed from 1988 to 1991 based on 333 cases and 666 age-, sex- and residence matched controls. Findings: The greater the intake of miso soup, the higher the risk (test for trend: P = 0.001 for males; = 0.043 for females).

Frequent consumption of soybeans was associated with a decreased risk in men (adjusted odds ratio {OR} 0.63, 95% CI [confidence interval]: 0.40-0.98 for once or twice a week or more, relative to less than once a month). Daily consumers of tofu were at a reduced risk, particularly for squamous cell carcinoma [a type of nonmelanoma skin cancer]; the OR (95% CI) is 0.55 (0.34 to 0.89) in males and 0.14 in females. These findings suggest deleterious effects of preserved foods and protective effects of soyfoods rich in isoflavones.

Isoflavones could well be another relevant dietary factor. They have been considered to exert anti-estrogenic effects in premenopausal women and estrogenic effects in postmenopausal women and in men. Thereby, they reduce the risk of some hormone-related cancers such as those of the breast and prostate.

Yet isoflavones also have non-estrogenic biological activities that may inhibit carcinogenesis. These include inhibition of tyrosine protein kinases, DNA topoisomerases and ribosomal S6 kinase activity, inhibition of angiogenesis, antioxidative properties and induction of malignant cell differentiation. Therefore it seems reasonable to hypothesize that isoflavones could be protective against not only hormone-related cancers, but also a wider ranger of malignancies including lung cancer. Address: 1. 10737. Wakai, Kenji; Egami, Isuzu; Kato, Kumiko; et al. 1999. Dietary intake and sources of isoflavones among Japanese. *Nutrition and Cancer* 33(2):139-45. [35 ref]
• ***Summary:*** The dietary intake and sources of isoflavones (daidzein and genistein) among Japanese subjects were examined based on dietary records (DRs). The subjects comprised two groups: 1,232 who completed one-day DRs (Group 1) and 88 men and women who kept four four-day (16-day) DRs. For quantitative data on the level of daidzein and genistein in soy foods, the literature was thoroughly examined, particularly for Japanese soy foods, and adopted the median value for each food. The median intake of daidzein was 12.1 and 9.5 mg/day among Groups 1 and 2, respectively, while the corresponding values for genistein were 19.6 and 14.9 mg/day. About 90% of the daidzein and genistein in the Japanese diet comes from 3 soyfoods–tofu (including fried tofu), miso, and natto.

Table 2, titled "Estimated total daidzein and genistein contents of soy foods: Median values among results of food" lists these foods: Soybeans, dry. Soybeans, green [edamame]. Soybeans, boiled. Kinako (roasted and ground soybeans). Soybean sprouts. Tofu. Tofu, freeze dried ("kohri tofu"). Fried tofu, thin ("abura-age," deep-fried). Fried tofu, thick ("nama-age," fried briefly). Fried tofu and minced vegetables / seaweed ("ganmodoki"). Soy milk. Okara (tofu lees). Yuba (dried soy milk skim). Natto (fermented soybeans). Miso. Soy sauce. Address: Dep. of Preventive Medicine, Nagoya Univ. School of Medicine, 65 Tsuramai-cho, Showa-ku, Nagoya 466-8550, Japan.

• ***Summary:*** This is an article about New York-style cooking. If you want to understand American-style cooking, go to New York City–where all the different regional styles can be found and epitomized. Americans are becoming more health conscious–led by the people of New York City. This as led to an explosion of interest in Japanese food–a Japanese food boom! Americans now realize that soy is good for one's health. In 1999 the *New York Times* (Sept. 8., p. F3) introduced edamame and gave a recipe.

Note: The article was "Bet you can't eat just one," by Amanda Hesser. Address: Tokyo, Japan.

10740. Wright, Allison. 2000. FDA health claim about soy will grow tofu category, says Mori-Nu's Mio. *Produce News* (*Fort Lee, New Jersey*). Jan. 10.
• ***Summary:*** "Recent approval by the Food & Drug Administration of a health claim linking consumption of soy protein to a reduced risk of heart disease will being increased awareness to the health benefits of tofu and will grow the category, according to Art Mio, national sales manager for Morinaga Nutritional Foods Inc. of Japan.

"The FDA health claim is permitted on foods that contain at least 6.25 grams of soy protein per serving." Mori-Nu Extra Firm Tofu contains enough soy protein to carry the new health claim. Several other Mori-Nu tofu products contain 6 grams of soy protein per serving, just barely missing the 6.25 gram mark set by the agency.

10742. Burros, Marian. 2000. Eating well: Doubts cloud rosy news about soy. *New York Times.* Jan. 26. p. F1, F11.
• ***Summary:*** Sales of soyfoods have been skyrocketing recently because preliminary research suggests that soy has many health benefits, from reducing loss of bone density to easing some menopausal symptoms. In October the FDA "put its imprimatur on soy" when it granted food companies the right to claim that soy protein reduces cholesterol and the risk of heart disease. Although other claims are unproven, soy is strongly promoted by its marketers as a panacea, and the U.S. media has been "almost unanimous in praising its safety and efficacy."

"Against the backdrop of widespread praise, however, there is growing suspicion that soy–despite its undisputed benefits, may pose some health hazards. The scientific world is still divided over many of the claims for efficacy [is it really effective] and over some safety issues." There is agreement on two points: (1) Soy can reduce cholesterol, and (2) There may be an increased risk of cancer when consuming soy isoflavones in pill form–especially for post-menopausal women; and for these women there may also be hazards in adding soyfoods to their diets. The two main isoflavones, genistein and daidzein, are phytoestrogens, or weak plant estrogens. They act in much the same way as regular estrogens in that they can both inhibit and stimulate the growth of certain cells.

"Not one of the 18 scientists interviewed for this column was willing to say that taking isoflavones was risk free." There is a big difference between consuming soyfoods and components of the soybeans, like isoflavone supplements.

During the 12 months ending October 1999, sales of soyfoods in supermarket chains were $420 million, up 45% from the previous year, according to SPINS scanner data. The biggest increase was in soy isoflavone pills, whose sales were up 246% during the same 12-month period. These supplements, which can contain more than 85 mg of isoflavones in a single pill, have much higher levels of isoflavones than occur naturally in foods. And some makers advise taking two pills a day. Some soy protein concentrate powders have up to 160 mg of isoflavones per serving. Scientists are concerned that typical consumers don't distinguish isoflavones from soy protein, and that they will overdose on the isoflavones. For this reason, Dr. Daniel Sheehan of the FDA's National Center for Toxicological Research (in Jefferson, Arkansas) opposed the FDA's soy health claim. No one knows what the maximum safe dosage of isoflavones is, because no human studies have been conducted. However, if people consume soyfoods instead of supplements, they will not overdose on isoflavones. In Japan, for example [where women's breast cancer rates are one-forth to one-sixth of those in the USA] the typical daily consumption of isoflavones is 25-50 mg, and most people consume soyfoods throughout their lives.

Dr. William Helfreich, associate professor of nutrition at the University of Illinois who specializes in diet and breast cancer, is concerned about the risk of soy isoflavones for post-menopausal women with estrogen-dependent breast cancer. Given early in life, he notes, they will prevent, but given late they may promote. Unfortunately the research in this area is very limited and the results are unclear and far from definitive. Fortunately, a number of studies that answer these questions are now being underwritten by the National Cancer Institute.

Many large companies are developing new soy products in response to the growing soy demand: Kellogg's, General Mills, Campbell's Soup, and ConAgra.

This article was reprinted, under the title "Rush to embrace soy products raises warnings about downside," in the *Oregonian* (Portland, Oregon; Feb. 8, p. FD10). On the same page was a recipe for a "creamy, dreamy" Tofu Cheesecake.

10743. **Product Name:** Senbei (Rice Crackers) [Soy, Original (Lightly Salted), and Sun Dried Tomato].
Manufacturer's Name: Masuya Naturally (Importer). Made in Japan.
Manufacturer's Address: 730-999 Canada Place, Vancouver, BC, V6C 3E1. Phone: (604) 844-1913.
Date of Introduction: 2000 January.
Ingredients: Incl. glutinous rice flour and soy sauce.
How Stored: Shelf stable.
New Product–Documentation: Card sent by Patricia Smith from Natural Products Expo, Anaheim. 2000. March 27. This postcard advertises Masuya's senbei. On the front is a color illustration of the Buddhist monk Kobo Daishi (St. Kobo) kneeling by a long rectangular hibachi (*naga-hibachi*) and baking rice senbei using the ancient Japanese method. The back notes that Masuya sells three varieties of senbei and gives the company's address, phone, and website.

Talk with Brian R. Elliot at Masuya in Canada. 2000. March 31. This product was introduced in North America in Jan. 2000. It is made in Mie prefecture, Japan and packed in 4 oz foil bags for freshness. The company plans to switch from shoyu to tamari so that the product is free of wheat and gluten.

10744. *Hawaii Hoichi* (*Honolulu*). 2000. Wakayama a health-food hotbed. Feb. 1.
• ***Summary:*** Hiroaki Iwamoto is president of Tendre Corp., Tanabe City, Wakayama prefecture. He obtained a patent on his frozen tofu in 1995. Tendre now makes about 2,500 tons/year of frozen tofu, worth 700 million yen.

10745. Lewycky, Jerry. 2000. Starting a new miso company in Canada (Interview). *SoyaScan Notes.* Feb. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jerry (whose last name is pronounced luh-WIK-

© Copyright Soyinfo Center 2014

ee) learned how to make miso from Yasuo Yoshihara. He started making miso in April 1999 and now has about 20,000 lb "brewing" in vats, each of which contains about 7,000 lb of raw miso. He has two vats full of 2-year barley miso and one vat full of 2-year brown rice miso. These will be ready for sale in the fall of 2000. He would also like to make a short-term white miso. He has not yet decided the name of his company, but he is considering "Miso Tradition." Jerry also has another miso teacher–Don DeBona. He visited Don several times in North Carolina–after he was no longer employed by American Miso Co.–and Don visited Jerry once in Claremont, Canada; he has been very helpful. Don still lives in his house right beside the miso factory in Rutherfordton, and is now working as a forest ranger for the Forest Service in North Carolina, but he has expressed an interest in making miso again, perhaps with Jerry. Jerry has traveled to Japan several times when he was co-owner of Timbuktu Natural Foods. He sold the company for a good price to a guy who bought it hoping to make a lot of money; he ruined the company. Jerry plans to sell his miso in glass jars. He believes he can take over much of the Canadian miso market now owned by South River Miso Co., because their miso is very expensive in Canada. Address: R.R. #4-2090, Claremont, ON L1Y 1A1, Canada. Phone: 905-649-1988.

10746. Associated Press (AP). 2000. Iowa joint venture says soy's time is here: Japanese working with Americans. *Iowa Farmer Today* (*Cedar Rapids, Iowa*). Feb. 5. Weekly.
• ***Summary:*** Oskaloosa, Iowa–Two men who live far apart have become partners in a $22 million venture whose goal is to make foods containing soy more appetizing.

The factory to be built by Jerry Lorenzen, a soybean geneticist from Fremont, Iowa, and Zentaro Iwamoto, a Japanese entrepreneur, will grind soybeans to make a powder (called Fine Soy Powder, or FSP) that is five times finer than any now available. FSP is more easily mixed with liquids or other foods to make it more palatable.

Lorenzen has named the new Oskaloosa factory "The World Food Park." The 54,000 square foot plant, which is expected to be producing FSP by the end of spring, has the capacity to process up to 5 million bushels of soybeans a year.

"The project was made possible by a financial package that included $750,000 in state aid and nearly $1 million from local businesses and economic development groups. The rest comes from loans or investors who share Lorenzen's dream.

Lorenzen graduated with an agricultural degree from Iowa State University.

Note: In 1994 he started a company named Bee-Lor Inc. to make and sell pork & tofu sausages.

10747. Mueller, Ray. 2000. 'Food grade' soybeans earn premiums for grower group. *Wisconsin State Farmer* (*Waupaca, Wisconsin*). Feb. 11.
• ***Summary:*** In 1999 the roughly 150 members of the Rock County Grain Co. shared the $2.4 million worth of premiums from the "identity preserved" or "food grade" soybeans they grew and sold largely to overseas buyers in Japan, Germany, Italy, and some other Asian countries. These soybeans are used to make foods like tofu.

10748. Jessop, Doug; Mullin, John. 2000. How their Canadian miso won a prize in the Japanese miso contest (Interview). *SoyaScan Notes*. Feb. 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Canada has been working for many years to develop food-grade soybeans that are especially well suited for making Japanese soyfoods, such as miso. This year Doug and John entered their miso in the Japanese national contest and won two Special Participation awards. Dough explains: They started by making miso using three Canadian soybean varieties: Harovinton (released in 1989), AC Onrei (released in 1997; "AC" stands for Agriculture Canada), and AC 756 (a double lipoxygenase null variety). They made miso from each of these three soybean varieties and sent it for evaluation to the Nagano Research Institute. NRI said that, of these three, the miso made from the AC Onrei variety was the best, so they concentrated on making miso from that soybean for competition. AC Onrei is a very large-seeded, long-season, white hilum, buff colored soybean, one of whose parents is Enrei–a large-seeded Japanese variety. Most of the miso they entered was red miso; some of it was rough (unground) and some was finished/fine (smooth/ground). They entered their miso in two different contests: The All-Japan content and the Nagano contest, and they won an award for each. This was surprising because AC Onrei was not bred as a miso-type soybean; it has a high protein content and was originally developed as a soymilk and tofu bean. For miso soybeans, the Japanese always look for high sucrose–over 7%; AC Onrei has 6.8%. They also look for total free sugars, of which AC Onrei contains about 10.5-11% (about average). Even though about half the sugars are probably bound up in pectins or cellulose and have no effect on the miso flavor, they still like to know the total sugar content.

Entering and winning this contest was a new step forward for the Canadian soybean folks. "It's really something special." Doug has been taking Japanese language lessons. The miso group of which John is the project leader is now starting to log in soybean variables on a database, which has fields for sucrose, total free sugars, color, etc. For miso soybeans (including red miso or long-term soybean miso), the Japanese prefer a yellow color to a whiter color–which the tofu and soymilk makers look for.

John explains that he is a food scientist, not a soybean breeder. We talked about 6 years ago when he was starting to work on miso, and he ordered a search on miso from the

© Copyright Soyinfo Center 2014

SoyaScan database. The breeders are the key to the process; at Harrow they breed mostly food-type or food-grade soybeans rather than commodity-type or oilseed-types–which are bred mostly at Ottawa and Guelph.

John's miso group at Harrow has developed a close working relationship with the Food Research Institute in Nagano; they now work directly with one another. About two years ago, Mr. Fujimori, a miso maker with whom they have developed strong ties over the years, was in Canada on one of his trips. John gave him (for the first time) some homemade miso that his group had produced. He sniffed it and looked at it and said "This isn't too bad." He took it back to Japan, where it was evaluated and the results were sent to John–with Mr. Fujimori's interpretation. The conclusion was: "It's okay but... don't give up your day job." John wrote back asking how his group could improve the miso. That was they key! Mr. Fujimori came to Harrow again with another person, gave John's group a lot of technical information, suggested that he use that information to make more miso–and to enter the miso in the annual Japanese miso contest! Mr. Fujimori provided the koji and John got a microbiologist involved. John's group now made miso from three different soybeans (see above) and the scientists and judges at the FRI in Japan "were quite surprised." They said "This isn't bad." They chose the best one. So John's group made larger batches and sent them to Japan in October 1999 for entry in the annual contest. In November John went to Japan to be present at the contest–although nobody can observe the judging. He learned that this was the first miso ever entered by foreigners in the Japanese contest. He also learned that the Canadian miso was not being judged with or against the Japanese miso. They were judging it separately in a special category–of which it was the only entry. Both awards for an "E" for effort and for reaching a high standard. "Miso is kind of a religion in Japan and it for an upstart like us to come in might not go down too well. But we found it interesting that they used our presence there for publicity–in a big way." John also discovered that the koji in all miso entries *must* be made from Japanese rice–even though a lot of Thai rice is used in making commercial miso in Japan. "Our real mission there was to raise the profile of Canadian-grown soybeans and to increase exports of Canadian soybeans. We want to breed soybeans that are very well suited for making miso in Japan. We are not interested in making miso to sell to Japan. However there is a good possibility of developing a domestic market for miso in Canada."

John is also deeply involved in trying to understand "stone seeds" or hard-seeded soybeans that do not absorb water well. Part of the problem seems to be related to weather/environmental conditions during the growing season. John hopes to try to understand the problem at the genetic level. "We now have a very heavy experimental stone-seed line."

John enjoys miso at home and he has served miso soup at the research station on several occasions. Last week he had it served at the Rotary Club. In each case, everybody liked it. "Fermented foods add such a variety of textures and flavors that people enjoy." Address: 1. Food Processing Technologist; 2. Food Scientist: Both: Agriculture and Agri-Food Canada, Greenhouse and Processing Crops Research Centre (GPCRC), Highway 18 East, Harrow, ON N0R 1G0, Canada. Phone: 519-738-2251.

10749. Jaret, Peter. 2000. The joy of soy: Hailed as the king of all health foods, the mighty soybean has been touted as a weapon against heart disease and cancer. *Harper's Bazaar.* Feb. p. 152, 156.

• ***Summary:*** "Wonder foods come and go... But the new superfood of the moment promises to be different. Eventually it's going to get everyone's attention, because the health claims being made for it are just too big to ignore." "A stream of scientific papers have shown evidence that it can fight heart disease and cancer." Even those who hate tofu are finding that soy can taste pretty good. Many like edamame–those slightly furry green pods served at Japanese restaurants. You run them through your lips and suck out the smooth, slightly salty soybeans inside. "Edamame have become so popular, they're being sold in bulk stores from New York to California." At Trader Joe's, a nationwide retail chain, sales of frozen edamame now rival those of frozen corn and broccoli. Even soymilk is poised to go mainstream. A key reason for the health benefits of soybeans is that they are rich in isoflavones–substances that resemble the natural hormone estrogen. Isoflavones are also powerful antioxidants.

Color photos show: (1) Two large red chopsticks holding one cooked yellow soybean. The caption: "The soybean, Asian staple, may be a big reason why cancers of the breast and prostate are uncommon in Japan and China." (2) Edamame in the pods, topped with a sprinkling of coarse white salt, on a square bamboo tray. The caption: "Edamame, the salty finger food served at sushi bars, is so popular, specialty food markets are beginning to sell it by the pound."

10750. *Ontario Soybean Growers Newsletter.* 2000. Japanese miso awards presented. Feb. p. 3.

• ***Summary:*** "Agriculture and Agri-Food Canada scientists at the Greenhouse and Processing Crops Research Centre (GPCRC) in Harrow recently received two Special Participation Awards for the first foreign entries in miso competitions in Nagano and Tokyo, Japan... Japan requires approximately 160,000 tonnes of soybeans annually to produce miso, some of which comes from Canada.

"The miso production test program at the federal research centre at Harrow began in March 1998 to support the centre's soybean breeding program and to evaluate the suitability of Canadian soybeans for making miso."

"Dr. John Mullin, the miso project leader, said it was

© Copyright Soyinfo Center 2014

a great honour to receive the awards, which recognize the effort and progress that the Canadian researchers have made in making miso. Dr. Mullin traveled to Japan to submit the miso for competition and was on hand to accept the awards.

"The soybean breeding program at the GPCRC is known throughout the world for its research on food-grade soybeans. Harovinton was the first food-grade soybean variety developed in Canada for the Japanese tofu industry, and helped pave the way in establishing Canadian food-grade soybeans as a premium quality product in Asia."

A photo shows Dr. Jonn Mullin and Food Processing Technologist Doug Jessop, each holding a framed plaque (written in Japanese). On a table in front of them are samples of their award-winning miso. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

10751. Shurtleff, William; Aoyagi, Akiko. comps. 2000. Soy sprouts–Bibliography and sourcebook, 2nd century A.D. to 1999: Detailed information on 957 published documents (extensively annotated bibliography), 62 commercial soy sprout products, 59 original interviews (many full text) and overviews, 48 unpublished archival documents. Lafayette, California: Soyfoods Center. 408 p. Subject/geographical index. Author/company index. Language index. Printed 25 Oct. 1999. 28 cm. [1065 ref]

• ***Summary:*** This is the most comprehensive bibliography ever published on soy sprouts. It is also the single most current and useful source of information on this subject available today, since 88% of all references (and most of the current ones) contain a summary/abstract averaging 247 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 37 different document types, both published and unpublished, every known foreign language publication on the subject, extensive translations of many Japanese and European works, and many original interviews. Thus it is a powerful tool for understanding the development of this subject and related products from its earliest beginnings to the present, worldwide.

Compiled one record at a time over a period of 24 years, each reference in this bibliography features (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation, month and issue of publication, and the first author's first name (if given).

It also includes details on 60 commercial soy sprout products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

10752. *SoyaScan Notes.* 2000. Chronology of soy sprouts worldwide. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 100 A.D.–Soy sprouts are first mentioned in China in the *Shen-nung Pen-tsao Ching* [Classical pharmacopoeia of Shen Nung, the Heavenly Husbandman]. Four Chinese characters [yellow + curls + big + bean] are used to refer to soy sprouts, whose use is mentioned only as a medicine, not as a food. The use of soy sprouts as a food in China did not become popular until the Sung dynasty (A.D. 960-1127). This pharmacopoeia was compiled starting in the Early/Western Han Dynasty [206 B.C. to A.D. 8] from material that had existed long before. Today it is considered by Chinese authorities as a genuine work.

1767–Soy sprouts are first mentioned in an English-language publication or in the American colonies by Henry Yonge of Savannah, Georgia. Yonge got his information from Samuel Bowen, for whom he grew the first soybeans [called Chinese vetches] ever cultivated in North America in 1765. Bowen got his soybeans while traveling in China. Yonge writes:

"They put about two quarts of the vetches into a coarse bag, or hair-cloth bag, that will hold about a peck [2 gallons], and after keeping them in it a little time in warm water, they lay the bag on [a] flat grating, or a wooden lattice, placed about half way down a tub; then every four hours they pour water on them, and in about 36 or 40 hours they will have sprouted about three inches in length; they are then taken out and dressed with oil and vinegar, or boiled as other vegetables..." Mr. *Flint* and Mr. *Bowen* having found them an excellent antiscorbutic prepared in this manner, was a principal reason for his introducing them in *America,* as it would be a most valuable remedy to prevent or cure the scurvy amongst the seamen on board his majesty's ships." Note that in America, as in China, soy sprouts are first recommended for use as a medicine; It is their vitamin C that prevents or cures scurvy.

1830–Soy sprouts are first mentioned in Europe by Philipp Franz von Siebold, an early traveler in Japan, in his book on the economic plants of Japan. In a large fold-out table, he states that soybeans (*Sooja Japonica,* Sieb.) can

© Copyright Soyinfo Center 2014

be artificially germinated to make "Mogasi" [sic, Moyashi]. He includes the word *moyashi* written in both katakana and Chinese characters.

1871–Frederick Porter Smith, a medical missionary from England living in China, states in his book *Contributions toward the Materia Medica and Natural History of China,* that soy bean sprouts (*Tau-ya*) are "artificially raised in large quantities for food in the winter" when green vegetables are scarce in China. This is the second earliest English-language publication that mentions soy sprouts.

1905-06–Soy sprouts are first produced commercially in the United States by two Chinese food companies in California: Wing Chung Long in Los Angeles, and Quong Hop & Co. in San Francisco.

1911–Soy sprouts are first produced commercially in Europe by Li Yu-ying, a Chinese scholar and soybean expert, at his plant *Usine de la Caseo-Sojaine* at Valles, Colombes, northwest of Paris, France.

1914–D. Bois in France publishes the earliest illustration seen of a soy bean sprout.

1917-1918–During World War I, interest in soy sprouts in the United States grows. Yamei Kin, a Chinese-American woman with an M.D. degree from an American college, is sent to China in June 1917 to study and report back on soyfoods–including soy sprouts, which she says can be used in a nutritious salad with fermented tofu.

Writing in *Country Gentleman* (28 Sept. 1918), Sam Jordan of Missouri states: "Another dish which tastes as good as it looks or sounds is soy-bean sprouts. The smaller beans, of some yellow or green variety, are usually used." They are excellent because of "their use in the winter, acting as a green vegetable, and the fact that the vegetable can be had whenever wanted."

William Morse, the USDA's soybean expert, writes in the *Yearbook of the U.S. Department of Agriculture* (1918) in a special section titled "Soy-bean sprouts" that in China soy beans are widely used for sprouting. "Bean sprouts can be used as a home winter vegetable, for the dried beans are sprouted easily in a short time under proper conditions of heat and moisture. It is quite possible that sprouted soy beans utilized in various vegetable dishes would appeal to the American taste." A full-page photo shows a large basket of sprouted soy beans. Taken by Frank N. Meyer, it is the first photo of soy sprouts ever published.

1921–Dr. John Harvey Kellogg, in his book *The New Dietetics,* has a special section titled "Soy bean sprouts" in which he is the first to use the word "vitamins" in describing the nutritional benefits of soy sprouts, and the first to note that "Sprouted soy beans is one of the constituents of the famous chop suey."

1941-45–During World War II, awareness of soy sprouts again increases. Their champion is Prof. Clive McCay of Cornell University. His first brochure on the subject (April 1943) begins: "Our daily paper would surprise us if it carried an ad: 'WANTED: a vegetable that will grow in any climate, rivals meat in nutritive value, matures in 3 to 5 days, may be planted any day in the year, requires neither soil nor sunshine, rivals in vitamin C, has no waste (in preparation), can be cooked with as little fuel and as quickly as pork chop.' The Chinese discovered this vegetable centuries ago in sprouted soy beans."

Prof. McCay and his wife, Jeanette, worked closely with the New York State Emergency Food Commission, to publicize soy sprouts and other soyfoods during the war years. Governor Thomas E. Dewey hosted a famous "soy bean lunch" at the governor's mansion in Albany, New York, to demonstrate the value of mean substitutes. Soy sprouts were in two of the dishes served to the 67 media representatives.

1960s-2000–Soy sprouts benefit from the rapid growth of interest in all kinds of sprouts in the USA and Europe, and from the growing number of Asian-Americans.

10753. *To Your Health* (*Dr. John McDougall's Newsletter, Baltimore, Maryland*). 2000. Is the doctor in... Can soy make you sick? Feb. p. 6.

• ***Summary:*** This article begins with a question, apparently from a reader: "I read recently that studies have found a link between soy products and dementia. I thought tofu and other soy products were good for me. What's going on?" The response (from the unknown writer) discusses an article in the *Honolulu Advertiser* (Hawaii) on 26 Nov. 1999 (p. A1) discussing the work of Dr. Lon White of the Pacific Health Research Institute. While studying 3,734 Japanese-American men in the Honolulu Heart Study, he found that those age 45 or older were more likely to suffer cognitive loss if they ate tofu more than twice a week. White's study has not yet been published in a scientific journal.

White theorizes that the phytoestrogens in tofu may be interfering with the brain's ability to use human estrogen. Typically, human estrogen binds to brain cells. Estrogen has long been thought to improve brain function. White suggests that phytoestrogens may be clogging the brain's receptor sites, preventing human estrogen from attaching.

The writer adds that another possible reason for the association is the high aluminum content of soybeans. "Aluminum is the only known controllable source of Alzheimer's disease." Aluminum from the soil attaches to substances in the soybean, such as phytates, to make unabsorbable complexes. "However, the heating and processing of soybeans to make tofu may free up the aluminum so that it can be readily absorbed."

Readers are advised to go easy on soy products and use them only as condiments. One reason is that "tofu is 45 percent fat." Note: The writer intended to say that 54% of the calories in tofu come from fat. Tofu actually contains 4.3 to 5.3% fat, depending on the firmness. Thus, a 100 gm serving of tofu contains 4.3 to 5.3 gm of fat; this fat is vegetable oil,

© Copyright Soyinfo Center 2014

which is largely unsaturated.

• ***Summary:*** The rise of the soybean as an international commodity transformed Manchuria from China's least-developed province into an area of armed conflict between China, Japan, and Russia, and a province of great wealth and industrial innovation. Address: Visiting Asst. Prof. of East Asian History, Univ. of Chicago.

10755. Essoyan, Susan. 2000. Trouble for titan tofu: A study in Hawaii finds that the health food favorite may accelerate aging of the brain. But critics note that the research creates more questions than answers, and no causal connection has been made. *Los Angeles Times.* March 23. p. B2. Metro section.
• ***Summary:*** Results from the Honolulu-Asia Aging Study, some of which were presented by chief investigator Dr. Lon White (of the Pacific Health Research Inst.) at a symposium in Washington, DC, in Nov. 1999, are scheduled for publication in the April issue of the *Journal of the American College of Nutrition.*

The vice president of medical and scientific affairs for the National Alzheimer's Assn. in Chicago (Illinois), Bill Theis, "considers the findings too preliminary to support any conclusions."

A clinical trial is underway to examine the connection between estrogen and Alzheimer's; it follows a survey which showed that women who took hormone replacement therapy after menopause were at lower risk for getting Alzheimer's. Dr. Kenneth Setchell, prof. of pediatrics at the Univ. of Cincinnati's Children's Hospital Medical Center (Ohio), disputed White's conclusions. His research shows that isoflavones have a positive effect on the brain. He asked: If soy is so bad, why are there not high rates of Alzheimer's disease in Japan and China? And why is there no association with any other soyfood? And why don't vegetarians, who typically consume plenty of tofu, get Alzheimer's?

"In stark contrast to White's findings, a 1993 study of 272 Californians enrolled in the Adventist Health Study, matched for age, sex and ZIP Code, found that those who ate meat were more than twice as likely to become demented as their vegetarian counterparts."

This article concludes with some market statistics from a study titled "The U.S. Soyfoods Industry," by Soyatech Inc. and Senechal, Jorgensen & Hale Co. U.S. tofu sales have grown from $108 million in 1992 to $238 million (forecast) in 1999. U.S. sales of all types of soyfoods have grown from $852 million in 1992 to $2,140 million (forecast) in 1999. Address: Special to Times.

10756. Tokyo Abura Tonya Ichiba [Tokyo Oils & Fats Wholesalers Cooperative Union]. 2000. Tokyo Abura Tonya Shi: Abura sho no rutsu on tazuneru [History of the Tokyo Oils and Fats Wholesalers: Searching for the roots of the merchants of oils and fats]. Tokyo: Tokyo Oils & Fats Wholesalers Cooperative Union. vi + 158 p. Illust. (some color). No index. 26 cm. [5 ref. Jap]
• ***Summary:*** Contents: Part I: The oil and fats business–an account of its history (p. 11). Note that the members of this union market both vegetable oils and animal fats (lard from pigs and tallow from cattle). 1. Roots (origin) of oil (p. 13): Origin of oil (p. 14), merchants of middle ages (p. 23), commerce of the middle ages (p. 29).

2. Edo period–Thriving wholesale oil dealers (p. 34): Economy of the Edo period (p. 35), sea transportation during the Edo period (p. 41), innovations in pressing out oil (p. 47), establishment of a fellow trader of stocks (p. 50), policy of the military government of the Edo period for wholesale dealers (p. 62).

Part II: 100 year history of the Tokyo wholesale oil dealers market (p. 95). 1. The beginning of the Tokyo wholesale oil dealers market (p. 97). 2. Tribulations of the Taishô period (p. 116). 3. Talking about wholesale oil dealers–memories / stories (p. 124). 4. Leaping wholesale oil dealers of the Shôwa period (p. 129). 5. History (steps) of wholesale oil dealers after World War II (p. 137).

Photos show: (1) First color photo–Cover of both volumes of a Japanese-language book titled *Seiyuroku* [Records of making oils and fats / Records of the crushing industry], issued in the 19th century. It describes the history of crushing in Japan. The illustrations on page 22 are from this book.

(2) The 2nd page of color photos titled *Edo-jidai no Seiyu Dogu* [Instruments used for crushing in the Edo period {mostly in the 1800s}] contains 4 separate photos Top left is a receptacle for grinding seeds. Top right is an air blower like a bellows below the pan to steam the ground seeds. Bottom left is a wooden bucket and a furnace for steaming ground seeds. Bottom right is a wedge press named a *shimegi* in Japanese.

The 3rd page of color photos shows the cover of two books issued after World War II. The left one, titled *Kogane no Hana,* describes the history of rapeseed in Japan. *Kogane* means "golden" and *hana* means "blossoms." The book on the right is titled *Rikyu Hachimangu,* referring to a shrine in Kyoto. It is said that a priest from this shrine developed the first crushing instrument named *Chogi* in 859.

The 4th page of color photos shows two illustrations of famous places in Edo (the old name for Tokyo) in 1800s. The top one shows the Nihonbashi area where a long and famous bridge crosses the river crosses the Nihonbashi River. The bottom one shows Isemachi-Kashi Dori; the buildings were the warehouses of goods and the market place.

On page 1-5 are the names of five Japanese who are important figures in this book: (1) Mr. Tatsuaki Kaneda, the

© Copyright Soyinfo Center 2014

President of Tokyo Oils & Fats Wholesalers Cooperative Union in 2000.

(2) Mr. Keishiro Fukushima, Director General, Foods Policy Planning Bureau, Ministry of Agriculture, Forestry and Fisheries. Describes his congratulatory remarks for 100 Year Jubilee of the Union.

(3) Mr. Masaji Shima, the President of Japan Oilseed Processors Association (JOPA) in 2000. His congratulatory remarks are also described.

(4) Mr. Yukio Sakaguchi. He is the Honored Chairman of Council for *Sukei-kai,* which is the Adoration Group for *Yamazaki Rikyu Hachimangu.* He passed away in 2002 when he was 101 years old.

(5) Kinzaburo Shiraishi, the President of Japan Oils & Fats Wholesalers Association in 2000.

Page 22 shows 4 line drawings from the book *Seiyuroku,* mentioned above. The two on the left show the wedge press. The top right shows several instruments used for crushing. The bottom right shows instruments used for refining, or (more precisely) filtration.

Two books on page 76 also describe the history of the crushing industry in Japan. The left one, issued in 1810, describes the origin and history of crushing industry. The right one, issued in 1716, describes the history of mainly wholesalers of vegetable oils.

Note from Y. Komura, who sent this book as a gift to Soyinfo Center: The editor of this book is Mr. Takayoshi Shimada, the CEO of the wholesale cooperative union, and the writer is Mr. Takahashi Shirashi, a professor emeritus of Keio University and scholar of Japanese history. In the old days, merchants of oils & fats used to work as seed crushers, refiners, wholesalers and retailers. However, the current meaning of *abura tonya* is mainly a wholesaler. Therefore I express it as "Wholesale Business" in the title. The book was published in celebration of the 100th anniversary of the Tokyo Oils & Fats Wholesalers Cooperative Union though, the Union has no formal title of the book in English. Therefore I myself translate the title of the book into English. As you know, the center of policy, business and culture of Japan used to be Kyoto and Nara in the old days. At that time Tokyo was the countryside with no industrial development. It is said that the crushing industry originated in Kyoto in 859. The priest of Yamazaki Rikyu Hachimangu, a shrine, developed a crushing instrument named a *Chogi.* This indicates that the other businesses concerning with seed crushing also developed in or around these areas. Merchants of oils and fats initially developed in Kyoto and expanded throughout Japan. It is said that rapeseed was introduced into Japan from China or Korea in the 16th century when the Tokugawa era [1600-1867] started–or perhaps somewhat earlier. Since then crushing rapeseed became popular even in the Tokyo area. Compared with a long history of the oilseed crushing industry in Japan, Tokyo has a very short history of this industry. Address: Tokyo, Japan.

• ***Summary:*** Shows the front label of four organic bottled sauces: Garlic Tamari, Ginger Tamari, Wasabi Tamari, and Thai Soynut. The first three are 5 oz, the last is 10 oz. On each is a vegan logo. Address: P.O. Box 1326, Carpinteria, California 93014. Phone: 805-684-8500.

10758. *Food Trade Journal U.S.A.* (*Ikegawa Food Specialists*). 2000. FDA as well as media help Japanese food industry: Soy products and green tea are highlighted. 10(2):1, 3-4. March. [Eng; Jap]

• ***Summary:*** Each article in this newspaper is published in both English and Japanese. Last October, the FDA gave its approval for U.S. companies to begin using a health claim on foods containing at least 6.25 gm of protein per serving. Except for traditional soy products (such as tofu), each serving must contain no more than 3 gm of fat, 20 mg of cholesterol, and 480 mg of sodium. The FDA believes that adults who consume 25 gm/day of soy protein could experience a decrease in their blood cholesterol, which reduces their risk of heart disease. The mainstream soyfoods that benefited from this announcement are veggie burgers, soymilk, tofu, and soy cheese. But now edamame has emerged as a big seller at supermarkets since a few years ago. A Japanese-style cartoon shows two blonde girls seated at a table. A boy, who is standing, says "I show you how to eat Edamame." Holding a pod of edamame in his right hand, he is popping the beans into his mouth. A circular inset, showing how his fingers hold the pod, is titled "Squeeze." Another cartoon shows Takuji Kimura [Mr. edamame in America], drawn by his son.

The article gives lengthy excerpts from two recent American articles: (1) Hesser, Amanda. 1999. "Bet you can't eat just one soybean." *New York Times.* Sept. 8. p. F3. (2) Deane, Donna. 2000. "Get more soy in your life." *Los Angeles Times.* Jan. 12. p. H1, H3. Food section.

According to Shigeru Shirasaka, president of House Foods (a leading U.S. tofu maker), his company shipped 29 million pieces of tofu in 1999, which is a 70% increase over 1995.

The last page of this article is about edamame, by Takuji Kimura, America's leading edamame broker, Concord, California. Japanese restaurants have been the showrooms for edamame, and they are part of the reason for its growing popularity. Tak Kimura started trying to sell edamame in 1994 at several natural food stores, but nobody seemed interested. He contacted the produce manager of Whole Foods in Berkeley–a woman–without an appointment. When he asked her to try his edamame, she said that she knew what it was–an appetizer at sushi bars! She liked it very much and had tried to find a source, but the restaurants

© Copyright Soyinfo Center 2014

would not disclose their sources. During his first demo day at Whole Foods he sold only 8 packs in 8 hours. But after 2 weeks sales started to increase. Then he got permission to sell edamame at other Whole Foods Markets, and then at the Wild Oats chain of natural food stores. In 1998 sales started to increase rapidly. Now the FDA is supporting edamame and major newspapers are doing stories, so sales continue to grown.

10759. Skiff, James. 2000. A co-op in North Dakota is working to become a maker of roasted soynuts. US Soy is developing oil-roasted soynuts (Interview). *SoyaScan Notes.* March 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jim and Howard Weiner met these people at the Anaheim show. Their co-op is located north of Fargo, North Dakota, in the area that has been hard-hit by floods during the past few years. They are growing soybeans organically and are thinking of roasting them to make soynuts. The market for soynuts seems to have exploded during the past year. Jim's company is developing oil-roasted soynuts. At one time, Jim and Howard seriously considered buying the Sycamore Creek Co. from Len and Irene Stuttman. Soynuts are not a traditional soyfood in Japan and are largely unknown to this day. In February, Jim took oil-roasted soynuts to FoodEx, the food expo in Tokyo. He has talked with Kirin Brewing Co. (owned by Mitsubishi) about supplying them with his oil-roasted soynuts for use as a snack, and both Kirin and Mitsubishi seem very interested.

We also discuss use of the term GEO (genetically engineered organisms) in place of GMO (genetically modified organism). Address: US Soy, 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

• ***Summary:*** This study of Japanese men living in Hawaii found that those who ate tofu 2-4 times per week when they were around 45-65 years old had higher rates of mental deterioration (low brain weight, Alzheimer's disease, poorer cognitive function) in their later years when compared with men who ate less tofu. The authors speculate that isoflavones were responsible for the apparent adverse effect of tofu consumption.

Note 1. The statistical association or correlation found in this study does not prove cause and effect. In other words, this epidemiological study shows no causal

© Copyright Soyinfo Center 2014

relationship between soy and cognitive function, only a positive association or correlation. Even the director of the Alzheimer's Association (Chicago) was quoted as saying that the study does not warrant dietary changes. It is possible that other unknown factors affected brain function and that tofu consumption was associated with those factors and was not itself the risk factor.

Note 2. Lon White's study was rejected by two major journals before being published here. White was formerly employed by the National Institute on Aging, part of the National Institutes of Health. For more balance and perspective, see the editorial by Grodstein et al. published in this same issue. Address: 1-2. Pacific Health Research Inst., Hawaii.

10764. Pukel, Sandy. 2000. Why were Patricia and Joseph Carpenter kicked off the miso company land in Rutherfordton, North Carolina, and denied their share of ownership in the company? (Interview). *SoyaScan Notes.* May 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Sandy has just finished talking with John Belleme on the phone to compare their memories of this unpleasant incident. Their memories were exactly the same. "John remembered even more things that the Carpenters didn't do than I remembered." "If they were upset or felt they were owned money, why did they wait 20 years to tell me about it? That's pretty bizarre."

It was very clear to everyone else why they were kicked off the land. The miso company bought the land. Joseph was hired as a carpenter-handy man and paid a salary to build the factory there and to oversee things. They had their kid in private school, and they lived rent-free. "We paid for everything. John got back and nothing was done. They lived the life of Riley [a carefree, comfortable way of living] for a year."

Sandy says that his job was not at all to tell them what to do. Before he left for Japan, John gave them specific instructions for specific projects. It was very clear, and John is very meticulous. Anything he didn't tell them before he left, he certainly would have communicated to them from Japan. "When John got home, he totally freaked out. He absolutely had a heart attack. He couldn't believe it. They had done nothing. They knew very clearly what they were supposed to do and they didn't do it. No ifs, and, or buts about it." This put the miso company 6-12 months behind schedule. Moreover, "they got paid a serious salary to do it–and they lived rent-free, in a beautiful set-up there."

Question: "Why do you think Joseph didn't do the required work?" Sandy's answer: "I guess he wasn't motivated or he wasn't capable. I don't really know why. I haven't seen him in many, many years. He's a nice guy but I think he needed more direction." Patricia wanted to be part of the miso company more than Joseph did. "She's very outgoing and aggressive, and maybe she oversold him. He was more of a laid back hippie carpenter." Sandy made John Belleme a deal that if he went to Japan, learned how to make miso in the traditional way, then came back and made miso for the new company, Sandy would give him $25,000 in stock. He did what was expected, and got what he was promised. Actually John got his $25,000 in stock even before he left for Japan, because there was no question that he was going to do what he said he would do. Address: Owner, Oak Feed Store and Restaurant, 4500 S.W. 63 Ave., Miami, Florida 33133. Phone: 305-446-9036.

10765. Roberts, Patricia. 2000. History of interest in macrobiotics. Living on the Oak Feed Miso Co. land in Rutherfordton, North Carolina from 1979 to 1980. Part I (Interview). *SoyaScan Notes.* May 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1972–Patricia meets Joseph Carpenter (a native of California) in Oregon on a farm where she went to do yoga; she was very involved with yoga and meditation. Joseph is a very friendly and personable fellow, and he has an "incredible memory. Most people are in awe of his brain." They went together to Tucson, Arizona, to pick oranges. She was living on oranges and bananas, had lost much of her memory, and was very spaced out and emotional. They went into a place named The Granary, where they met Jack Garvey, who brought them into the macrobiotic community. She first met Michio Kushi in Tucson, when he came there to lecture.

1973 Sept. 15–Patricia and Joseph Carpenter are married in Arkansas. They were invited to Arkansas to do a little farming by some friends who had some property there. Their friends were deeply involved with Stephen Gaskin and The Farm in Summertown, Tennessee. They arrived with all of their macrobiotic "judgments" and that led to conflicts. They built a little house on the land in Arkansas, and Thom Leonard came to visit them there in 1973. He took care of their house for the winter when the Carpenters went to visit Patricia's parents in Florida.

1973 Nov. 11–Their first child, Yana, a girl, is born in Arkansas. They leave to go to "Snowflake," the first macrobiotic conference in Arizona. It was held on property near a Hopi reservation that a group of people in the macrobiotic community, including Michio, purchased.

1974–Patricia goes to a macrobiotic conference in Miami and meets Sandy Pukel for the first time. She becomes friends with Sandy and his wife, and saw Michio for the second time.

1975 fall–Patricia arrives (with her daughter, Yana) in Brookline, Massachusetts, and lives in the macrobiotic study house run by Ken and Ann Burns. After about 3 months she moves to another study house. Joseph arrives later, in about 1976, and lives in the study house run by Jack and Barbara Garvey, on the same street as the Burns' house.

© Copyright Soyinfo Center 2014

Joseph Carpenter was very close to Jack Garvey. They both have a close relationship with Michio and Aveline Kushi. For Patricia, who had a Catholic upbringing, Michio was a spiritual teacher. John Belleme arrived in Brookline about mid-1976 and lived in the Burns' study house; it was at about this time that Patricia first met John–though they never lived in the same study house. Joseph designed and built an addition to the Kushi's home at 62 Buckminster Road; it was for Aveline–the bathroom of her dreams on the second floor. One day Aveline came to see Patricia in her apartment. She liked a chopping block table that Joseph had built for Patricia. Joseph is an excellent carpenter. He did much of the finish carpentry on the original Erewhon retail store on Newbury St. in Brookline, including the wooden bins for grains and beans.

1977 Christmas–Patricia and Joseph go to Florida for Christmas, one of many trips they took there. Patricia's parents and many of her friends live in Florida; she loves to visit. In early 1978 Joseph worked as a carpenter for several months in Sandy Pukel's Oak Feed Restaurant in Coconut Grove, Florida. He had gotten to known Sandy because Patricia and Sandy were close friends. During this time Sandy came to realize that Joseph was a skilled carpenter.

1979 Feb. 12–Patricia's second child, Benjamin, is born in Brookline. At about this time Patricia's sister, Christine, moved up to Boston to be near Patricia. In the spring of 1979 Patricia went to Florida to visit her parents and show them her new baby. Sandy flew Joseph down to talk business. Sandy had now decided that he wanted the Carpenters to become part owners of the company–so he offered them a deal, which, as near as Patricia can remember, was as follows. He asked them to live on the land the miso company planned to purchase while the Bellemes were in Japan learning how to make miso. If they would live and work the land, become a presence in the community, and then become owners of and workers for the company, Sandy offered to pay their expenses and give them $25,000 worth of company shares for each year they stayed and worked on the land–including the first year, of course. But this agreement was verbal; nothing was put in writing. Back in those days, Patricia, recalls, people were less businesslike than they are today.

Looking back, Patricia believes that she and Joseph failed in their negotiation of this deal. Joseph is an artist, and he is much better at self expression than at negotiating agreements. Sandy is very good at negotiating.

1979 May–On Memorial Day weekend, at the end of May, after four years in Brookline (near Boston), the Carpenters leave and move to Florida for the summer, to be near Sandy, to work out the details of beginning the miso company. In leaving Boston, they were giving up a lot, including many friends ("We were very plugged in. My sister, Christine, was quite upset that we were leaving") and Joseph's good carpentry job. But they believed that Sandy's deal made the move worthwhile.

Patricia flew to Florida with her two young children. At Sandy's request, Joseph drove their van so that he could go to Hendersonville to meet with several real estate agents. The miso company property had not yet been decided on or purchased. The realtors took Joseph to visit several areas on the isothermal belt, but they didn't find the property at that time. The isothermal belt means "never too hot, never too cold." But it freezes and snows a little during the winter.

Patricia recalls that they bought the property from Bob Deakin. Joseph knew Bob Deakin. Bob was driving with his wife and daughter at about that time, on a holiday, to chimney rock. A truck was coming toward Bob's car and suddenly a bee flew into the cab of the truck. When the truck driver started to swat the bee, his truck swerved across the road and killed Bob Deakin's daughter. Bob kindly refrained from suing the truck driver or truck company, and somehow, because of the accident (or perhaps because of big hospital bills) he lost his property–which the miso company later purchased.

In Florida, Patricia and Joseph rented a place for the summer on Highland Beach near Boca Raton. They had visits with Sandy and learned more about his plans for the miso company. That summer, Michio came down and did a seminar, which they attended. Michio wanted the land to be used as a summer camp and a place to garden; he also wanted to build a dam and lake. John and Jan Belleme were preparing to go to Japan. Continued. Address: Grass Valley, California.

10766. Roberts, Patricia. 2000. History of interest in macrobiotics. Living on the Oak Feed Miso Co. land in Rutherfordton, North Carolina from 1979 to 1980. Part II (Interview). *SoyaScan Notes.* May 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: 1979 Aug. 1–A special election is held on alcoholic beverage control in the town of Rutherfordton, North Carolina. Called the ABC Referendum, it would decide whether alcoholic beverages in containers could be sold in special "ABC Stores" and whether off-premises sales of malt liquor (mostly beer) would be permitted. Note: Before that election, a person had to go to South Carolina to buy such beverages. To this day, all cities in Rutherford County except Rutherfordton and Lake Lure are "dry"–one cannot buy alcoholic beverages there. Throughout the county one cannot buy any alcoholic beverages (except wine) by the drink or glass. No sales of any alcoholic beverages are allowed on Sundays.

1979 Aug. (late)–The Carpenters and their two children arrive (in separate vehicles) in Rutherfordton from Florida and move onto the miso company land. Patricia remembers the date clearly because people in town were buying beer to celebrate the implementation of the ABC Referendum. The Carpenters were the first people to live on the land after it

© Copyright Soyinfo Center 2014

had been purchased by Oak Feed Miso.

Two months later, in Oct. 1979 John and Jan Belleme leave for Japan. Patricia recalls that the Bellemes stopped by the land briefly on their way to Japan and left some things in the house. Patricia recalls that there was no discussion at this time about the work that Joseph was supposed to do during the coming year. There was no list of things Joseph was supposed to do. John never asked: "Is everything clear? Do you have any questions?" "We were all in our twenties and we all had a dream. Nobody knew exactly how it was going to happen, but we had a very nice relationship with John at the time. We were close friends." It is also important to remember that Sandy was in charge of the miso company, not John.

During the time Patricia and Joseph lived on the land, they were very happy. Patricia recalls: "It was a wonderful time for us." Joseph worked hard every day, out on the land, while they were there. He cut down trees and cleared lots of land, for the miso factory and warehouse, for planting the soybeans, and for their own home. Then he spent days rototilling and planted many acres of soybeans on the land he had prepared. He worked with local soil and agricultural departments in preparation for a dam that was to be built on the property. He also worked with the Farm Bureau and the water department–to get the basic groundwork done for the miso company. But he didn't do any carpentry at all when he was on the land, because he was waiting for John Belleme to send the plans, measurements, kinds of wood, where to build, the orientation of the buildings (*Feng-shui*), etc. Patricia recalls no communication with the Bellemes after they were in Japan. Joseph was in regular communication with Sandy Pukel in Florida. Sandy would say "Hang on" but never sent the needed information.

In exchange for their work, the Carpenters got use of the house for free of charge plus the electricity and food expenses. Patricia taught cooking weekly classes to local people, and about 40 typical Americans came to class after class. Michio and Aveline Kushi came once to visit while the Carpenters were there; Patricia remembers his black suits, his cigarettes, and the fact that he liked her rice.

"Joseph is a very laid-back guy. He's an incredible artist. He's not threatening. He always follows through with things. He has a very unique constitution and spirit. He doesn't talk about other people; he's not a schmoozer."

1980 June–John and Jan Belleme return from Japan. Patricia recalls that "When John and Jan came back from Japan, they were very, very different people." John had been rigid in Boston, but now he was much more rigid. After several weeks of sharing their house with the Bellemes, the Carpenters are told to leave the land. Patricia thinks it was John Belleme who actually told them this, but she is quite sure that it was Sandy who made the decision. She recalls that Sandy phoned Joseph several times after the Bellemes returned to discuss problems. For example, the Carpenters had a new truck that was owned by the miso company but that was registered in Joseph's name. Patricia recalls that a settlement deal was made: "When you turn over all the legal papers, then we'll give you the money we promised you. They gave us $1,000, then they promised us an immediate $8,000 more upon receipt of the truck title." Patricia is sure that the amount promised was $8,000 but she does not know how that number was arrived at.

To this day, neither Patricia nor Joseph know why they were told to leave. She and Joseph were left in Rutherfordton without anything to do, and with two young children. Patricia was pregnant with their third child. They borrowed money from Patricia's father and bought a beautiful 50-acre farm in Rutherfordton. They had lived (uncomfortably) in the same house with the Bellemes for more than a month. Patricia recalls: "Losing the miso company was a disaster for Joseph. He never wanted to talk about it again. I think he never really got over it."

Not long thereafter, Jan Belleme come to visit Patricia and Joseph. She brought a basket of vegetables that the Carpenters had planted in the garden on the miso company land. As she arrived, Patricia clearly remembers thinking that she was bringing the money they were owed. "It was always expected."

1980 Nov. 23–The Carpenters' third child, Patrick, was born at that farm. After the birth, Patricia was thin and weak. Jack Garvey came to visit and directed her to eat differently. "It saved my life."

Patricia has nothing but good memories of the time she and Joseph lived on the miso company land. "Joseph was a very happy, healthy, and active man, with a lot of good energy, while we were living on that land." But she has bad memories from the time they were kicked off the land and not paid the money they were owed. Joseph also has very bad feelings and memories about the latter events. Joseph has an incredible memory for facts and details. Patricia notes that she doesn't hold onto things, but there was something about the way their agreement with the miso company ended that has been the only thing in her life that she has sadness about. She has tried to work it out, but she still feels badly about it. She still does not understand why John Belleme asked Joseph to leave the land. Continued. Address: Grass Valley, California.

10767. Elwell, Christian. 2000. Using barley to make miso (Interview). *SoyaScan Notes.* May 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Naked barley (called *hadaka mugi* in Japanese) is like wheat in that the outermost husk can be easily removed, whereas this husk tends to adhere to the bran layer of regular barley. However naked barley has a rubbery skin around the endosperm which the koji cannot penetrate. Of course, the consistency of this skin is different among varieties, yet none of the ones that Christian has tested have

© Copyright Soyinfo Center 2014

made good koji. Apparently naked barley was the more primitive and typical grain in some indigenous cultures. Tibetans grow naked barley and grind it to make their *tsampa* or barley cereal.

Before it can be used to make koji for barley miso, regular barley must be pearled; naked barley need not be pearled before it is eaten. Barley is sold after having been pearled to different degrees, meaning that different amounts of the bran layer have been removed. Pot barley (also called "hulled barley"), which Christian uses to make barley miso, has most or all of the outer husk removed but it is hardly pearled at all, so all or most of the bran layers remain around the endosperm.

Mugi-cha (Japanese barley tea) is made from barley from which the husk has not been removed. Address: Founder and Owner, South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

10768. Fallon, Sally W.; Enig, Mary G. 2000. Tragedy and hype: The Third International Soy Symposium. *Nexus* (*New Zealand*). April/May. p. 15-20, 69.
• ***Summary:*** Contents: Introduction. Marketing the 'perfect food.' Cinderella's dark side. Soy protein isolate: Not so friendly. FDA health claim challenged. Soy consumption and cancer. Phytoestrogens: Panacea or poison? Birth control pills for babies. Dissension in the ranks (Dr. Lon White of Hawaii on soy and Alzheimer's). Questions over GRAS status. The next asbestos?

The authors are highly critical of soyfoods. This 4-day [actually 2-day] symposium took place in Washington, DC, in Nov. 1999 [Nov. 12-13]. Several weeks earlier, on Oct. 25, the U.S. Food and Drug Administration announced a health claim for soy products which were low in saturated fat and cholesterol and 6.25 gm of soy protein per serving. Among the surprising statements in this article: Isolated soy protein is made from what was once considered a waste product–the defatted, high protein soy chips–which look and smell terrible. "Flavourings, preservatives, sweeteners, emulsifiers and synthetic nutrients have turned soy protein isolate, the food processors' ugly duckling, into a New Age Cinderella" (p. 15).

"The propaganda that has created the soy sales miracle is all the more remarkable because, only a few decades ago, the soybean was considered unfit to eat–even in Asia." Note: This is a preposterous and completely false statement. Read any Japanese or Chinese cookbook and you will find many tofu recipes. In the 1970s there were approximately 30,000 tofu manufacturers in Japan alone, plus many more in China, Korea, and Indonesia. In 1976 in Indonesia there were 41,201 tempeh manufacturers and 10,986 tofu manufacturers in Indonesia (Winarno 1976).

Note: No references appear with the printed version of this article, but 72 references are found with the article on the authors' website. Address: 1. M.A.; 2. PhD. Phone: 619-574-7763.

10769. Kato, Hiroko. 2000. How to eat at a Japanese restaurant the vegan way. *Vegetarian Journal* (*Baltimore, Maryland*). May/June. p. 20-23.
• ***Summary:*** Describes how to avoid fish and bonito extract and flakes. Traditional Japanese vegan cuisine, called *shojin ryori,* was created by Zen Buddhists; it is very easy to enjoy beautiful and delicious Japanese vegan dishes at such restaurants. Sushi can include *natto maki, yuba maki,* or *inari-zushi* (rice wrapped in season aburage). Tofu dishes may include *yu-dofu, hiya yakko, tofu dengaku, agedashi-dofu,* and *goma-dofu* (made of sesame seeds; no soy). Other dishes: Edamame, miso soup, vegetable tempura, or *gyoza.*

10770. Carpenter, Joseph. 2000. Living in Boston and on the Oak Feed Miso Co. land in Rutherfordton, North Carolina from 1979 to 1980. Part I (Interview). *SoyaScan Notes.* June 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Joseph was born on 5 Aug. 1948 in Oakland, California, at Providence Hospital. He lived with his family in Berkeley until he was age 10; his father, who was a carpenter by trade, died in 1954, when he was still a boy. He and his mother then moved to nearby El Sobrante (by the back gate of De Anza High School–where he graduated from high school). He attended Contra Costa Junior College for two years, moved up to Sonoma State for a year, then dropped out. At age 19-20 (1967-68), he took off to see the world. As a young man, he became a skilled carpenter, learning by doing. Several of the men he worked with were good teachers.

A hippie during the 1960s, he met Patricia Roberts who was born in March 1947 in Queens, New York, and grew up in Rockaway Beach in Queens. Her father was a New York City police officer and detective for 20-25 years. Her parents retired to Florida in the late 1960s or early 1970s. When the kids were at home, they lived in a nice big home at Whitehouse Point; after the kids were gone, they moved to Deerfield Beach. Soon after meeting Patricia, Joseph stopped using psychedelics drugs and alcohol. They picked apples together in Hood River, Oregon, and lived in an old picker's camp. Having been overweight, he lost about 80 pounds in less than 6 months–and felt great. He and Patricia and a girl friend of hers migrated to Tucson, Arizona, where they were planning to pick oranges for the winter. While looking for a place to stay, they came across a macrobiotic bakery, The Granary, run by Jack Garvey. That was their first introduction to macrobiotics. Because of their largely raw food diet, they were somewhat resistant at first, but soon became friends and students of Jack's. In 1973 Joseph and Patricia were married in Arkansas.

1977 Feb.–Joseph arrives in Boston from Northern California; he is very sure of this date. He met Charlie

© Copyright Soyinfo Center 2014

Kendall (a maker of traditional natto, amazake, and mochi), who had just bought a house in Brookline by the railroad tracks; Joseph helped him extensively remodel that building. Charlie's wife, Yoko, was Aveline's sister. Joseph soon became friends with Bill Painter, who was a house painter by trade and also had a small shop in the basement of the Kushi's house. Before long Joseph was working as a carpenter with Bill Eggloff, building a handsome grain bin for Erewhon's retail store on Newbury Street. Using red oak and Plexiglas, they worked on it in the basement, which had a garage door that opened onto the alley behind the store. Bill, who lived on Cape Cod, stopped working for Erewhon when the bin was finished. But the store needed more fixtures, so Joseph made a bid, signed a contract, then installed new check-out stands, new shelves, and units to hold the crocks of bulk tamari, barley malt, etc. Joseph had a family to support, and carpentry was his livelihood, so he was paid for all work he did in the Boston area. Later, over 4-day weekend, he worked to tear out old bathrooms and office spaces to open up the cramped front of the Erewhon store. He also did some work on a new Erewhon store in Brookline. After Erewhon moved out of their old 4-story brick warehouse, he worked on the huge modern warehouse that Erewhon moved into. The Kushi's house on 62 Buckminster Road had been the headmaster's house for a private school. Upstairs there was an institutional bathroom. Aveline asked Joseph to remodel it to make a private bathroom–with lots of tile. After about a year of working for the macrobiotic community (always for pay), Joseph got "burned out" and went to work for a regular contractor unconnected to macrobiotics.

1977 Christmas–Joseph and Patricia go to Florida for Christmas, one of many trips they took there. In early 1978 Joseph worked as a carpenter for several months in Sandy Pukel's Oak Feed Restaurant in Coconut Grove, Florida. He had gotten to known Sandy because his wife, Patricia, and Sandy were close friends; they had first met when they both went to a seminar Michio Kushi gave in Coconut Grove. After the restaurant opened, in about May 1978, Joseph and Patricia took a vacation to Jamaica. During the summer and fall of 1978 Sandy came to Boston several times. Each time he and Patricia and Joseph went out to dinner together. Sandy mentioned that he was thinking of starting a miso company and asked if they might be interested in getting involved. They expressed interest, but no definite plans or offers were made.

1979 Feb.–Joseph's second child, Benjamin, is born in Boston to his wife Patricia. The Carpenters took many trips to Florida, especially during the winter, to visit Patricia's parents. In about March 1979, over a long weekend, when Patricia and their two children were vacationing in Florida (visiting her parents), Sandy Pukel paid for Joseph to fly from Boston to South Florida for a meeting to discuss the part that the Carpenters might have in the development of the new miso company. Sandy knew Joseph's skills as a carpenter. Joseph recalls that the meeting was at Edmund Benson's house. Sandy said that he wanted Patricia and Joseph to become part of the miso company. In exchange for their labor, they would be given a share of the business ownership worth $25,000. Joseph does not recall whether they would receive the $25,000 once or each year that they worked–but he definitely recalls the $25,000 offer. Joseph recalls that the talk at this first meeting was very general in terms of what kind of carpentry or construction work he would do for the company.

1979 May (late)–Joseph leaves Boston in his van, headed for North Carolina–after handing over their house to the next renters. On the way, following Sandy's instructions, he stops in Hendersonville, North Carolina, for about a week to check out some real estate. With real estate agents that Sandy Pukel and/or Edmund Benson had found, Joseph looks at property the agents thought might be appropriate for the miso company in the Asheville area and in Rutherford County. As far as he knows, Joseph was the first person to actively look for land for the miso company. They found several properties that Joseph considered borderline, so Sandy (and probably John Belleme and Edmund) flew up from Florida and they all visited these sites together. Finding nothing that was suitable, they left. Joseph continued on to Florida in his van to be with Patricia and their children. Sandy continued to work with local realtors until he found a suitable piece of property. Joseph is quite sure that just before they finally purchased the land in Rutherfordton, Sandy, Michio and he (and perhaps a few other people) all went to see the property at the same time. They walked over the roughly 100 acres of land and through the beautiful house.

During the summer of 1979 Joseph and Patricia met with Sandy and Edmund several times to discuss their living on the miso company land while John and Jan Belleme were away studying miso-making in Japan. Though nothing was put into writing, Joseph and Patricia both recall clearly that their daily expenses would be taken care of, they would work on the land, and, at the end, they would own a part of this new business. They were not given any specific list of tasks or duties they were expected to accomplish. Continued. Address: 10655 Lakeshore Dr., Clear Lake, California 95422. Phone: 707-994-3218.

10771. Gonzales, Greg. 2000. Making miso and koji for American Miso Co. Inc. Part I (Interview). *SoyaScan Notes.* June 20-21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Greg was born in July 1959 in Torrance, near Los Angeles, California, in a middle-class Mexican-American Catholic family. Both his parents were born in the Los Angeles area and Greg grew up in that area. After graduating from high school at age 18-19 he became a

© Copyright Soyinfo Center 2014

professional dancer. In 1987 he went to Japan for 6 months to work as a dancer at a tourist hotel in a small, isolated Japanese town. He liked Japanese culture very much. During this time he wrote short stories, and decided it was time for a change of careers. After returning to the USA, he lived in Los Angeles, found several easy jobs, and went to L.A. Community College for a year to pursue his interest in writing. At that time, in 1989, he met Barry Evans who was living to Los Angeles. They met through a mutual friend, spent a lot of time together during the next year, and became good friends. Barry took a federal holiday and Greg moved to Sonoma County in northern California. There he met a woman named Manon Fancher who became his partner; she already had a child named Keith Fancher. Together they moved to a small lumber town in Plumas County, in the Sierra Nevada mountains, about 70 miles north of Lake Tahoe. Greg worked for the U.S. Forest Service on a timber salvage marketing crew and taught dance on the side. On 12 Aug. 1992 they had a baby boy named Devin.

One day, in 1995, after they had lived in mountains for about two years, Barry Evans called, said he lived and owned several businesses in and around Asheville, North Carolina, and offered Greg a job working at the miso factory; Don DeBona would be his boss. Greg said he would like to think about it, discuss it with Manon, and visit the company before making a final decision. He had enjoyed miso previously, but did not know how it was made. He liked Japanese food and culture, knew nothing about macrobiotics, and was not sure how he would like living in rural North Carolina. So Barry flew him out to North Carolina. Before his interview with Don DeBona, Greg read *The Book of Miso* to better prepare himself. He accepted the offer. He and Manon tied up loose ends in Plumas County, then drove with their kids across the country to North Carolina.

Arriving in Feb. 1995, Greg worked at Great Eastern Sun for about 8 weeks, then went to work with Don DeBona at American Miso Co. (AMC). Don had had trouble keeping workers; they were attracted by the romance of miso and making macrobiotic foods, but couldn't take the hard work or the rural environment.

Greg worked for Don for about 2½ years. When Don left the company, Greg had plenty of experience making miso but he had never made koji by himself. Greg recalls: "I suddenly found himself with the reigns in my hands. There was a lot of responsibility, and I felt tense at first." He had steamed and inoculated the rice, dug it, put it in the trays, put the trays in the koji room, etc., but he had never stayed with the koji during the night or had to make decisions about adjusting its temperature. Making koji is an art, based on being sensitive to the properties of the koji; it cannot be learned from a book. It takes a long time to "learn how to make koji happy. Newcomers always want to go by what the thermometer says, but it doesn't work that way."

About a month after Greg took over, Barry hired John Belleme, one day a week, to look carefully at the koji Greg had made the day before, and to give him tips on how to improve. John is still active in this role, which is working out very nicely for both John and Greg. "John loves this place."

Greg makes koji at least once a week; Wednesday is koji night, so Greg will be with the koji until midnight. He will check its progress every 60 to 90 minutes, depending on the season and outdoor temperature. A little after midnight, he goes to his cabin on the miso company land and sleeps until a little before 4:00 the next morning. Then he returns to the miso plant, checks the koji again, and starts cooking the soybeans. Because of the fermentation process, koji generates its own heat, and it creates increasingly more heat as it matures, and its mycelium expands and binds the rice into a cake. Each time Greg makes koji it is different, and different types of adjustments must be made. There are no thermostats in the koji room. All temperature adjustments are made by either opening or closing the koji room door or the vents in the ceiling. If the ceiling vents are opened too much, the heat will rise out but so will the humidity. Thus, the balance of opening the door vs. the ceiling vents is important in adjusting the koji room humidity. To add humidity, Greg may wet the floor of the room and close the room. He never uses a heater to heat the koji room, in part because it dries out the air. When inoculating the rice, Greg will use less inoculant in the summer than in the winter.

This koji is really made in the traditional way–all natural, nothing artificial. Most companies automate their process as their volume expands, but AMC has decided not to do that. Yuko Okada of Muso and Mr. Kazama of Mitoku (both Japanese natural food companies) told Barry Evans that they thought AMC was the largest maker of traditional koji in the world. The company makes about 300,000 lb/year of miso. Don DeBona increased the number of miso vats from 10 to about 45. Continued. Address: 4225 Maple Creek Rd., Rutherfordton, North Carolina 28139. Phone: 828-287-2940.

10772. *SoyaScan Notes.* 2000. One disaster after another leads to success: Brief history of American Miso Company (Overview). June 20. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** This story, with its many strange twists and turns, might be called "One disaster or failure after another leads to success" or "The perfection of imperfection."

1977 Aug. 2–It was a disaster for Bob and Karen Deakin of Rutherfordton, North Carolina, when a bee flew into the cabin of a big truck near their home. As the driver tried to swat it, his truck swerved across the road and smashed into a car driven by Bob Deakin, killing Bob's daughter (age 12½) and severely injuring Bob and his young son.

1979 Jan. 26–It was a second disaster for Bob and Karen Deakin when they were forced to give up the home they had built and the 92 acres of land they dearly loved in

© Copyright Soyinfo Center 2014

Rutherfordton because they could not make the mortgage payments. With Bob still injured from the car crash, the family had no steady income. The land was sold to Oak Feed Miso Co. on 7 Aug. 1979.

1979 Oct.–It was a disaster for John Belleme when he arrived in Japan to study miso and nobody knew who he was or why he was there. The arrangements that were supposed to have been made were never made.

1979 Oct.–It was a small disaster for Mr. Kazama of Mitoku when John Belleme handcuffed himself to Mr. Kazama's desk and said he would not leave until Mr. Kazama had located a miso master with whom John could learn the traditional art of making Japanese miso.

1979 Oct.–It was a disaster for miso master Takamichi Onozaki, of Yaita, Japan, when two foreigners arrived, without invitation, saying they wanted him to teach them how to make miso. He told them he was sorry, but they could not stay. They stayed in his house, under the same roof, for 6-8 months as they worked hard and learned how to make miso.

1979 Nov. 18–Barry Evans is in a disastrous bicycle accident, breaking 5 vertebrae and 9 ribs. After a 14-hour operation, he spends 6 months on his back in the hospital and 1 year in a full-body cast.

1980 June–It was a disaster for Joseph and Patricia Carpenter, who had lived on the miso company land for the past ten months and expected to be owners of the miso company, when they were told to leave and, in their opinion, not told why.

1981 Nov. 10–It was a disaster for Michio and Aveline Kushi when their company, Erewhon, is forced to file for Chapter 11 bankruptcy protection because of debts totaling $4.3 million. The Kushis also had to give up their dream of starting a miso company (named Erewhon Miso Co.) in America. It was also a disaster for the miso company which could no longer count on Erewhon to distribute its products.

1982 Jan. 31–It was a disaster for Sandy Pukel when he has to give up his stake in Oak Feed Miso, Inc. It was his "baby" and he, more than anyone else, was responsible for bringing it to this stage. Equally sad was the fact that his good relationship with John Belleme was strained for the rest of the 1980s; they didn't talk for years after this event.

1982 Jan.–It was a small disaster for Mr. Onozaki when John Belleme begged him to come to America from Japan to check John's koji-making. He didn't want to go. He spoke no English, had never been outside of Japan, and had a business to run at home. Yet he went to help a friend in need.

1983 Oct. 1–It was a disaster when John and Jan Belleme feel they must sell all of their ownership in the American Miso Co. (900 shares) to Barry Evans. They had devoted most of the last 4-5 years working to create and build this company.

1992 Jan.–It was a disaster for Barry Evans when he is forced to take a "federal vacation" in Santa Barbara, California, for 2½ years.

2000 July 4–American Miso Co. is the largest and most successful Caucasian-run miso manufacturer in the Western world. Who is and was responsible for this success? Most of the people named above.

Note: Some of the most interesting (juiciest) stories about this company remain untold, for reasons that cannot be disclosed at this time.

10773. Schaller, Lorenz K. 2000. Husked or covered barley vs. naked or hull-less barley (Interview). *SoyaScan Notes.* June 23. Preceded by a letter dated June 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The following is based on an article that Lorenz wrote in *The Cerealist,* Issue No. 1 (1989, p. 10-11, published by Kusa Research Foundation). All the different types of barley belong to the species *Hordeum vulgare.* This species is divided into two major groups: (1) Husked or covered barley, and (2) naked or hull-less barley. These two groups are not indicated as part of the scientific name, just as winter and spring wheat are not. However, if a scientist wants to indicate the naked form, he can write... var. *nudum.* Husked or covered barley, which has a husk "cemented" to the seed, is common in the West, where it is used for brewing and livestock feed. Naked or hull-less barley, of which the husk is easily removed (like the husk of wheat or rice) is more common in Asia (in Japan it is called *hadaka mugi; hadaka* = naked), especially in countries where barley is used as a food. Naked barley is the type generally used to make miso. "Naked barley closely resembles the free-threshing wheats, the naked grain sitting loosely in the spikelet between the lemma and palea, which show no adherence to the grain" (M.P. Charles. 1984. "Introductory remarks on the cereals." p. 29).

A mature barley plant bears a head or spike composed of individual spikelets. Each spikelet has glumes which completely enclose the seed in an envelope of fibrous husks.

The removal of the outer skins of the kernel is called "pearling." "Pearl barley" refers to barley that has been polished to remove the husk and outer bran layers. It is a word like "white rice." Husked or covered barley is more often pearled than naked barley. More than 99% of the barley available for food in modern developed countries is pearl barley. Scientists have found that naked barley is rich in beta glucones, phytochemicals that reduce "bad" cholesterol.

"Barley is the cereal most frequently mentioned in early Sanskrit records. It was introduced into India in ancient times and was probably the principal food grain during the Vedic Period (1600 B.C.–6000 B.C.)." "Barley, a sister crop of wheat, is the staple food of much of India's poor. In India, barley has been a poor man's crop, chiefly grown by small and marginal farmers in economically distressed areas." In the early 1980s, greatly improved hulless barley cultivars were developed by a brilliant Indian barley breeder, Dr.

Mahabal Ram.

"Caryopsis" is a morphological term, correctly applied only to the dried seeds of grasses. It's meaning is identical to "seed" or "grain."

The sunken black line running the length of a seed / kernel of barley (called *fundoshi* or "loincloth" in Japanese) is called the "crease" or, more precisely the "ventral groove" or "ventral crease" in English. "These terms are of immense utility to paleobotanists, persons who specialize in identifying ancient botanical remains, as they are sifting through archaeological debris and making attempts to identify plant part remains."

When Americans eat barley, they do so mainly in soups and stews. Address: Founder & Director, The Kusa Seed Research Foundation, P.O. Box 761, Ojai, California 93024. Phone: 805-646-0772.

10774. Troy, John. 2000. Update on Wizard's Cauldron and work with miso (Interview). *SoyaScan Notes.* June 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John's original organization was the Lindenself Foundation, a nonprofit organization involved with Eastern spirituality. The linden tree symbolized the heart. Out of this grew Linden's Elfworks, then Elf Works, Ltd., whose first product was a candy bar named Wizard Baldour's Power Pac introduced in 1976, and containing ginseng. Elf Works, Ltd. was created outside of the nonprofit corporation, and it existed only briefly (1981-1984).

In about 1980, John was first introduced to miso by Joel Dee of Edward & Sons who was introducing his Miso Cup, a dehydrated miso soup. Troy's next product was Wizard Baldour's Hot Stuff (in Regular or Blazing intensities); it was the company's first big success. It contained miso from the day it was launched. Troy first bought this miso from Erewhon (a fairly dark salty rice/red miso), but when Erewhon filed for Chapter 11 bankruptcy in Nov. 1981, Troy started buying his miso from Barry Evans of American Miso Co. It was John Belleme and Barry Evans who really got Troy interested in and involved with miso–before American Miso Co. had any miso for sale, but after their miso plant had been constructed. Troy can't remember how, where, or when he met Barry Evans. Belleme told him about going to Japan and apprenticing with Mr. Onozaki. Later Barry Evans introduced Troy to John Fogg in Charlotte. Troy later worked closely with Fogg; "at first I thought he was arrogant and fussy, but he ended up being a tremendous influence in my life, and taught me so much about marketing... To this day I still draw on the wisdom of John Fogg."

Troy now makes almost 100 different products for the natural food trade. Most of these contain miso and/or soy sauce. All of his business is private labeling, so he develops and manufactures products, which other companies market. Across the street from his office is a modern, high speed blending, bottling, labeling plant, with plenty of cold storage. He manufactures and bottles every product he develops. His company, The Wizard's Cauldron, Ltd., run small by a small team of leaders, now does about $2 million a year in annual sales. His products are now almost totally organic–200 ingredients. John has just a handful of customers. The biggest is Whole Foods Markets; he makes all the salad dressings and sauces sold under the Whole Foods label. Second biggest is Joel Dee of Edward & Sons. Troy makes four brands for Joel Dee: Premier Japan, The Wizard's, Troy's, and Rain Forest Organic. Joel's company owns the "Wizard" brand, which Troy gave him in 1987 as part of his "recovery plan" after American Natural Foods went down the tubes. Joel said, "You make it, I'll sell it." At about the same time, they also both developed the Premier Japan brand and line, which is still doing extremely well. In about July 1989 John developed "The Wizard's Worcestershire Sauce," a vegetarian sauce, for Joel Dee. It is now selling better than Hot Stuff. Ponzu is the Japanese equivalent of Worcestershire sauce; they use bonito instead of anchovies. But ponzu originated first, so "Worcestershire sauce is a Western 'knock-off' of ponzu." The Ginger Tamari is still a wonderful product that is doing very well.

Troy's third largest customer is Albert's Organics, America's largest organic produce distributor, for whom he makes a line of fresh, refrigerated organic dressings. Albert's Organics recently merged with UNFI (United Natural Foods, Inc., the collection of distributors that was Stow Mills, Cornucopia, Rainbow, Mountain People's Warehouse, etc.). UNFI is now a big publicly-owned company. Troy's favorite product developed for Albert's is Mellie's Miso Mustard Dressing, launched in 1998 with a mild miso from American Miso Co. Albert's daughter is named Mellie.

John is now developing a line of dressings under the Moosewood Restaurant brand for the people who own that restaurant. John's favorite is the Miso Ginger Salad Dressing. A few days ago he closed a deal with Robert Tepper (formerly of The Farm, in Summertown, Tennessee) to market his Simply Delicious brand of dressings. Robert now has his own company named Sunrise Management, which is a brand management company; Simply Delicious will be the first brand he owns. Robert worked for Natural Nectar, then Blue Sky, then Annie's (which he left in early 2000 to start his own company).

John's main work is still developing new products and naming his creations–the work he enjoys most of all things. "It's really fun." Blessed are those who find a way to do what they love most in life. Address: The Wizard's Cauldron, 8411 Hwy. NC 86 N, Cedar Grove, North Carolina 27231. Phone: 919-732-5294.

10775. Troy, John. 2000. Update on the Macrobiotic Company of America and Bruce Macdonald (Interview). *SoyaScan Notes.* June 26. Conducted by William Shurtleff of Soyfoods Center.

© Copyright Soyinfo Center 2014

• ***Summary:*** Bruce was recently kicked out of the company (MCOA), Norio Kushi is now running it, but Muso owns most of it. Bruce has filed a lawsuit against MCOA. Barry Evans and Norio are trying to work together, since Barry would like to slowly get out of the distribution business (he owns Great Eastern Sun) and move towards building branded products.

A few days ago John heard that Mr. Kazama had decided not to sell any more of his Mitoku products to MCOA. Rather, he will help Bruce start a new company in Asheville, and Mitoku will sell to Bruce.

John heard from Norio a few days ago that MCOA wants to come out with a line brandnamed "Kushi Organic" to take the place of Mitoku. They want John to develop a line of miso-based sauces, dressings, etc. for them. "Kushi" is now a registered trademark, owned by Michio Kushi, who is willing to assign it to his son, Norio. Address: The Wizard's Cauldron, 8411 Hwy. NC 86 N, Cedar Grove, North Carolina 27231. Phone: 919-732-5294.

10777. Evans, Barry. 2000. A visit with Mr. Onozaki in Japan: The story of the guests who decided to stay (Interview). *SoyaScan Notes.* June 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1984 Barry and John Belleme both traveled to Japan where they visited Mr. Takamichi Onozaki, with whom John and Jan Belleme had spent seven strenuous months studying miso-making in late 1979 and early 1980. Barry visited Mr. Onozaki again last month in Japan. At about age 70, he was still his same energetic self, very active and healthy and full of vitality, and his daughter and son-in-law were still there living 10 feet away (in Japanese fashion) and working hard making miso. Barry recalls: "He is a wonderful person. When we pulled up, got out of the car, and I saw him there, I broke down and started weeping. I hadn't seen him in 15 years. I think of him as the father of our miso company and I feel the same great affection and respect toward him that I do to my own father. It was very special." Mr. Onozaki then told Barry a story he had never heard before.

When the Belleme's showed up at his house, unannounced, in 1979, it was a disaster for him. He didn't want them to stay at all. He went out for a while, but when he came back he found to his dismay that they had moved all their baggage into the room of his daughter who was away at college, and made themselves at home. They begged him to let them stay overnight, so he relented and said okay, but only for one night. The next day they persuaded him to let them stay for one more night. The whole time they were there, he tried to get rid of them, over and over again–but they bamboozled him at every turn. They talked him into letting them stay for one week, then for one month, then for one more month, then for three months, then for two months more. At every juncture, they had to fight their way to stay the extra time. They would cry and moan. Of course, by end of their stay, television crews were coming up to cover the amazing story of Americans who had come to Japan to learn how to make miso.

But as he told the story it was clear that he was now quite proud of the fact that his disciples had started what is today the largest Caucasian-run miso factory in the Western world.

He then told Barry about how John seemed to have lost some confidence in his koji-making ability during the first season. John asked Mr. Onozaki if he would come to the United States and check that he was making the koji correctly. Mr. Onozaki said that he refused to come the first 3-4 times that John asked him. He had never been outside Japan before, and he has never left it since. He didn't want to go–at all. He didn't speak any English. How would he find his way? He had an active business to run at home. But John just kept insisting that he had to come. Mr. Onozaki said that eventually he remembered an old Japanese saying: "When a friend says he really needs your help, you've got to try to help!" So he felt that he just had to go, though he did so "kicking and screaming." Several months later, he sent his daughter and son-in-law in his place.

On the 1984 trip to Japan, after visiting Mr. Onozaki in northern Japan, John and Barry visited the Muso Company (*Muso Shokuhin*) in Osaka (south-central Japan), then the Fujiwara Brewing Company in Hiroshima (a manufacturer of equipment for making beer, soy sauce, miso, etc.; Barry was considering making shoyu in North Carolina), then the company that makes sweet white miso for Muso in Fukuoka (on Kyushu, Japan's southernmost island).

On a 1983 trip with Robbie Swinnerton of Mitoku (John Belleme was not along) Barry visited Sendai Miso-Shoyu Co. in northern Japan. Address: Owner, American Miso Co., Inc. and Great Eastern Sun, Asheville, North Carolina 28806. Phone: 704-252-3090.

10778. Kikkoman Corporation. 2000. Annual report 1999. 339 Noda, Noda-shi, Chiba 278, Japan. 33 p. 28 cm. [Eng]
• ***Summary:*** The information in this English-language annual report is current as of April 2000. Contents: Financial highlights. A message from the president (Yuzaburo Mogi): Overview of the fiscal year, principal developments, summary of business policy (business principles, medium-

© Copyright Soyinfo Center 2014

term business strategy, business organization, basic policy on distribution of profits, looking to the future, tasks for the coming years, in closing). Global operations: The Americas, Europe, Asia and Oceania, Japan. Review of operations: Soy sauce, soy sauce derivative products, Del Monte, sake and wine. Research & development. Financial section: Consolidated balance sheets, etc. Corporate history (chronology from April 1925 to Nov. 1999). Global network (directory of Kikkoman names, addresses, and phone numbers worldwide). Board of directors and officers. Corporate data.

Consolidated net sales fell 3.4%, but net income rose 1.3%. In 1999 overseas operations (excluding exports from Japan) accounted for about 27% of consolidated net sales and 49% of Kikkoman's consolidated operating income.

The Americas: Today more than 100 items are manufactured at Kikkoman's plant in Walworth, Wisconsin. The plant's annual soy sauce production capacity is 80,000 kiloliters. The new Folsom plant had an initial annual soy sauce production capacity of 10,000 kiloliters. There is room to expand this capacity fourfold. In the year 2000 production capacity is expected to reach 15,000 kiloliters. Annual per capita soy sauce consumption in the USA has increased to 700 milliliters, which is less than 8% of the estimated 9,000 milliliters per capita in Japan. U.S. consumption is expected to double within the next ten years.

Color photos show: Yuzaburo Mogi, Kikkoman's new headquarters in Noda, all company products. Address: Noda, Japan.

10779. Kono, Makoto. 2000. Life after the "Liefde": Dutch influence in Japan. *Look Japan* (*Tokyo*) 46(531):35-37. June.
• ***Summary:*** In 1600, the Dutch ship *Liefde* drifted ashore in Usuki Bay in Bungo Province (now Oita prefecture). Of the original 110 crew members, only 24 were still alive, and only six of these could walk ashore unassisted. The arrival of this ship marked the beginning of relations between Japan and the Netherlands, and the 400th anniversary of this key event is being celebrated in Japan this year. Two of the surviving crew were to earn important places in Japanese history: William Adams and Jan Joosten.

Adams, an Englishman, became Tokugawa Ieyasu's advisor on diplomacy and trade. He adopted the Japanese name Miura Anjin, married a Japanese woman, Oyuki, and was given the social rank of samurai. Two monuments and a festival commemorate the site of his residence in Tokyo and the grave of his wife. Jan Joosten became Ieyasu's advisor on military affairs. He, too was given a Japanese name, Yaôsu, and that name survives today in a slightly modified form as Yaesu, a district on the eastern side of Tokyo Station.

In 1633 the Tokugawa shogunate adopted a policy of national isolation which continued for 221 years until 1854 when the American Commodore Perry forced the country to open its doors to Western trade. During this time Japan maintained contact with only three nations: China, Korea, and the Netherlands. The Dutch were restricted to an artificial island named Dejima [Deshima], built by the shogunate in Nagasaki Harbor. This was the sole source of "Western Learning" which was more commonly called "Dutch Learning" (*rangaku*). The first area of interest to Japanese scholars was Western medicine, starting with anatomy. In 1774 a 5-volume anatomy was translated into Japanese by a team headed by Gempaku Sugita.

At the Dutch trading post in Dejima, three doctors were employed; each had a strong impact on the relationship between Japan and the West. Engelbert Kaempfer, a German, came to Japan early in the Edo period (1603-1867). Philipp Franz von Siebold, also a German, came in the middle years of the Edo period, and Carl Peter Thunberg, a Swede, came near the end. Besides medicine, all three taught natural history, focusing on the flora and fauna of Japan, and all three became well known in Europe for disseminating their knowledge of Japan.

10780. Ross, Brain; Allyn, Richard D. 2000. 20/20–Soy: The untold story. Television broadcast. Friday, June 9. Channel 7. 10:00 p.m. ABC (American Broadcasting Co.). (California). 10:00 p.m.
• ***Summary:*** This program segment was divided into several parts, all on the theme that soy may not be great for everyone: (1) FDA scientists Daniel Doerge and Daniel Sheehan have stepped forward to criticize their own agency's heart health claim. Their long, well documented letter is available on the 20/20 website. The two explain that while soy may be beneficial to the heart, excess consumption could be harmful to people with thyroid disorders, or women who are at risk for breast cancer, or babies consuming infant formula (they are concerned that phytoestrogens in soy could interfere with normal human sexual development).

(2) Debate over phytoestrogen levels in soy-based infant formulas: Dr. Claude Hughes, director of the Women's Health Center at Cedars-Sinai Medical Center in Los Angeles, recommends that mothers who don't breast feed, should use as milk-based formula, and chose soy as a last resort. But Dr. Kenneth Setchell, a pediatrics professor at Children's Hospital in Cincinnati, Ohio, contends that hundreds of thousands of infants have been raised on soy infant formula and many are now adults, yet few problems have been observed. (3) Soy and breast cancer: Dr. Hughes notes that some studies show soy protects against breast cancer. But other studies indicated that, for certain women, the phytoestrogens found in soy may enhance a widely-found kind of estrogen-feeding breast cancer. It can speed up division of those estrogen-dependent cells that are already cancer cells.

(3) Lon White's study on tofu and brain aging and shrinking among elderly Japanese-American men in Hawaii. The soy industry counters that White's study shows only an

© Copyright Soyinfo Center 2014

association between tofu consumption and brain aging, does not prove that tofu causes this aging, and is in conflict with other studies on Asian populations and animals.

The report concludes: "While the scientific research on soy is still emerging and is often contradictory, there are now some serious questions being raised about this miracle food, and some of its staunchest defenders acknowledge that these questions need to be answered."

10781. Stewart, Martha. 2000. Edamamé. Television broadcast. Tuesday, June 13. Martha Stewart's Living program.

• ***Summary:*** The first segment of this TV program is titled "Edamamé" (3 minutes, 20 seconds). Martha Stewart, one of the most famous women in America today and a leading authority on entertaining and cooking, begins by holding a package of Trader Joe's precooked, frozen edamamé and saying: "If you see edamamé in the freezer section of your grocery story, buy a package and try it. It's really fantastic. I'm always looking for healthy, easy-to-prepare snacks that are also nutritious–and these are just the answer." Inside the fuzzy green pods are soybeans. Soy sauce, miso, and tofu are among the many other yummy foods made from soybeans.
